

UNITED STATES DISTRICT COURT  
FOR THE DISTRICT OF NEW JERSEY

NOVARTIS PHARMACEUTICALS  
CORPORATION,

*Plaintiff,*

v.

XAVIER BECERRA, In his official  
capacity as Secretary of the Department  
of Health and Human Services, *et al.*,

*Defendant.*

Case No. 3:23-cv-14221-ZNQ-DEA

**[PROPOSED] BRIEF OF THE CENTER FOR AMERICAN PROGRESS, THE  
CENTURY FOUNDATION, AND UNIDOSUS ACTION FUND AS *AMICI CURIAE* IN  
SUPPORT OF DEFENDANT'S CROSS-MOTION FOR SUMMARY JUDGMENT AND  
IN OPPOSITION TO PLAINTIFF'S MOTION FOR SUMMARY JUDGMENT**

**TABLE OF CONTENTS**

IDENTITY AND INTERESTS OF PROPOSED *AMICI CURIAE* ..... 1

I. INTRODUCTION ..... 1

II. ARGUMENT ..... 5

    A. The federal government’s ability to negotiate Medicare drug prices provides a critical tool for addressing health inequities. .... 5

        1. Socioeconomic inequities drive worse health outcomes among some Medicare beneficiaries. .... 5

        2. High prescription drug prices exacerbate existing health and financial burdens among these same groups of Medicare beneficiaries. .... 11

    B. The IRA’s Medicare drug price negotiations will advance health equity by lowering beneficiaries’ medication costs and strengthening the Medicare program overall..... 13

III. CONCLUSION..... 18

## **IDENTITY AND INTERESTS OF PROPOSED *AMICI CURIAE***<sup>1</sup>

Center for American Progress (CAP) is an independent, nonpartisan policy institute that focuses, in part, on developing and advocating for policies that strengthen health. The Century Foundation (TCF) is a progressive, independent think tank that conducts research, develops solutions, and drives policy change to make people’s lives better with a focus, in part, on advancing health equity. UnidosUS Action Fund (UnidosUSAF) is a Latino advocacy organization that works to expand the influence and political power of the Latino community work is lowering prescription drug costs for the millions of Latinos in America who rely on medication to treat chronic disease.

Amici submit this brief to provide the Court with the policy context necessary to understand the impact of the Inflation Reduction Act’s (IRA) Medicare prescription drug price negotiations on prescription drug affordability and health equity. This brief aims to provide an understanding of how these drug price negotiations will improve the health of vulnerable Medicare beneficiaries—including racial and ethnic minorities, women, the elderly, the Lesbian, Gay, Bisexual, Transgender, Queer, Intersex, plus (LGBTQI+) community, and disabled people.

### **I. INTRODUCTION**

As a matter of health equity, all individuals must have “a fair and just opportunity to access their optimal health regardless of race, ethnicity, disability, sexual orientation, gender identity, socioeconomic status, geography, preferred language, or other factors that affect access to care and health outcomes.”<sup>2</sup> But the reality of American health care falls far short of this

---

<sup>1</sup> Amici and their counsel are the sole authors of this brief. No party or counsel for a party authored any piece of this brief or contributed any money intended to fund its preparation or submission.

<sup>2</sup> *Health Equity*, CTRS. FOR MEDICARE & MEDICAID SERVS., <https://www.cms.gov/medicare/quality/nursing-home-improvement/value-based-purchasing/health-equity> (last visited Dec. 19, 2023).

goal. Socioeconomic status, historic and current discrimination and racism, disability status, and many other factors impede access to adequate health care.<sup>3</sup> In America, health care has never truly been equitable.<sup>4</sup>

For decades, high drug prices have been a driver of such inequitable health care access.<sup>5</sup> Roughly three in ten American adults report not being able to afford to take their medications as prescribed,<sup>6</sup> and historically marginalized populations are among those most likely to face these affordability challenges.<sup>7</sup> Further, as medication costs increase, prescription adherence drops: a 2020 study found prescription abandonment rates were less than five percent when a prescription carried no out-of-pocket expense but jumped to 45 percent when out-of-pocket costs were over \$125.<sup>8</sup> Abandonment rates jumped further still—to 60 percent—when the out-of-pocket cost was over \$500.<sup>9</sup> This is not a personal failing: people cannot buy and take drugs they cannot afford. And a lack of prescription adherence (predictably) hastens more serious,

<sup>9</sup> *Id.*

costly, and painful health outcomes. For example, non-adherence to heart failure medication is associated with increased heart failure symptoms, such as shortness of breath, the progression of heart failure, hospitalization, and increased mortality.<sup>10</sup> Such outcomes worsen (or prematurely end) individual lives. Higher drug costs feed a vicious cycle of increased health care spending for avoidably poor health outcomes.<sup>11</sup> And those poor outcomes fall disproportionately on low-income people, people of color, women, LGBTQI+, and people with disabilities.<sup>12</sup> Simply put, higher drug prices transform a disparity in wealth into a disparity in health and deepen existing health inequities.

The plaintiff in the instant action, Novartis Pharmaceuticals Corporation (Novartis), manufactures Entresto—a drug used to treat heart failure.<sup>13</sup> According to Novartis, Entresto is a first choice therapy for heart failure.<sup>14</sup> Fifteen percent of Medicare beneficiaries have been diagnosed with heart failure.<sup>15</sup> As a result, it is unsurprising that, in 2022, more than 520,000

<sup>15</sup> *Entresto: Medicare Enrollee Use and Spending*, *supra* note 13.

Part D beneficiaries filled prescriptions for Entresto.<sup>16</sup> With respect to health equity, heart failure disproportionately affects some racial and ethnic minority Medicare beneficiaries and low-income people.<sup>17</sup>

The Inflation Reduction Act of 2022 has provided the federal government with a powerful tool to improve health outcomes. Combined with other critical IRA elements—including an insulin cost cap of \$35 per month for Medicare beneficiaries, a cost-sharing redesign for Medicare Part D benefits, and inflation rebates for Medicare Part B and D prescription drugs—the new Medicare drug price negotiations will cut the cost of prescription drugs.<sup>18</sup> These price cuts will save the Medicare program billions, enabling it to divert resources towards improving health outcomes for those most in need.<sup>19</sup> Through this brief, amici seek to provide the Court with an understanding of how high drug prices and costs exacerbate existing health inequities. Amici then explain how the IRA’s Medicare drug price negotiations will help to alleviate that unfairness, bringing the United States closer to the goal

---

<sup>16</sup> *Id.*

<sup>17</sup> See Office of Minority Health, *Heart Failure Disparities in Medicare Fee-For-Service Beneficiaries*, CTRS. FOR MEDICARE & MEDICAID SERVS. 1 (Sept. 2020) (“[P]revalence of heart failure is highest among Black/African American beneficiaries (17%), followed by American Indian/Alaska Native (15%), White (14%), Hispanic (13%), and Asian/Pacific Islander (11%) beneficiaries.”); Nathaniel M. Hawkins et al., *Heart Failure and Socioeconomic Status: Accumulating Evidence of Inequality*, 14 EUROPEAN J. HEART FAILURE 138, 139 (2012). There is no set definition for “low income” because it is dependent on the geographic area and median income in that area. The federal government uses several different measurements. HUD calculates “low income” as families earning 50-80 percent of the “area median income,” HUD also maintains a database of “state median income,” where low income families earn 50-80 percent below the state’s median income. The U.S. government calculates eligibility for federal aid based on the “federal poverty level” determined by the U.S. Department of Health and Human Services’ poverty guidelines for household size. of achieving health equity.

## II. ARGUMENT

### A. The federal government’s ability to negotiate Medicare drug prices provides a critical tool for addressing health inequities.

#### 1. Socioeconomic inequities drive worse health outcomes among some Medicare beneficiaries.

*First*, Medicare enrollees who are Black, Latino, women, disabled, and/or LGBTQI+ are “more likely to have less money saved, lower incomes, and a greater likelihood of poverty . . . .”<sup>20</sup> Racial wealth disparities between Black and Hispanic Medicare beneficiaries and white beneficiaries are particularly staggering. As of 2019, the median savings of white Medicare beneficiaries was *over eight times higher* than that of Black beneficiaries and *twelve times higher* than that of Hispanic beneficiaries.<sup>21</sup> These disparities reflect, in part, “fewer opportunities among Black and Hispanic adults to accumulate wealth and transfer wealth from

<sup>21</sup> Nancy Ochieng et al., *Racial and Ethnic Health Inequities and Medicare*, KAISER FAMILY FOUND. 10 (Feb. 2021), <https://www.kff.org/medicare/report/racial-and-ethnic-health-inequities-and-medicare/> (“Median per capita savings among White beneficiaries (\$117,803) was more than eight times higher than savings among Black beneficiaries (\$14,523) and about twelve times higher than savings among Hispanic beneficiaries (\$9,634). Median per capita home equity was more than five times higher among White beneficiaries (\$95,001) than among Black beneficiaries (\$18,454) or Hispanic beneficiaries (\$16,494).”).

one generation to the next.”<sup>22</sup> Such disparities mean that high medication costs hit Black and Hispanic Medicare enrollees harder—turning the underlying financial inequity into a health inequity.<sup>23</sup>

The same is true of women, the LGBTQI+ community, and disabled people, who are also more likely to have lower incomes, creating barriers to prescription access.<sup>24</sup> The median savings of women enrolled in Medicare was only 72 percent of their male counterparts.<sup>25</sup> And women who are Medicare beneficiaries spend 13 percent more on out-of-pocket costs for medical care.<sup>26</sup> Additionally, 19 percent of LGBT adults over 65 live under the federal poverty line compared to 15 percent of straight and cisgender adults over 65.<sup>27</sup> For disabled Medicare enrollees under the age of 65 in 2016, the median income was \$17,950—lower than the median income for Medicare beneficiaries (\$26,200).<sup>28</sup>

*Second*, it is well-documented that stress, racism, and discrimination drive poor health outcomes.<sup>29</sup> Black and Hispanic people, as well as lower-income individuals, report higher levels

PSYCH. ASS’N 5 (2017).

of stress than their white and more affluent counterparts.<sup>30</sup> Numerous studies demonstrate that repeated exposure to stress leads to greater allostatic load—accumulated wear and tear on the body, such as elevated blood pressure that can lead to adverse cardiovascular outcomes.<sup>31</sup> The link between stress and cardiovascular disease, in particular, is “fairly robust.”<sup>32</sup> As an example of this link, one study found that self-reported interpersonal racism in employment, housing, and interactions with the police was associated with a 26 percent higher risk of heart disease for Black women.<sup>33</sup> Finally, stress suppresses the immune system, leaving individuals more susceptible to disease.<sup>34</sup>

Discrimination and a lack of access to culturally responsive care also deters some populations from obtaining needed medical treatment. For racial and ethnic minorities, 32 percent of Black patients, 23 percent of Native American patients, and 20 percent of Latino patients report experiencing racial discrimination while receiving medical care.<sup>35</sup> As a result of

concern about discrimination or poor treatment due to race, 22 percent of Black Americans, 17 percent of Latinos, and 15 percent of Native Americans have avoided seeking medical care for themselves or a member of their family, compared to nine percent of Asian Americans and only three percent of whites.<sup>36</sup> LGBTQ people similarly lack access to culturally responsive care. For example, eight percent of LGBTQ people reported avoiding or postponing “needed medical care because of disrespect or discrimination from health care staff,” with the number rising to 22 percent for transgender respondents.<sup>37</sup> Inability to obtain responsive care affects detection and treatment of disease, which, in turn, increases health inequity.<sup>38</sup> In short, racism and other forms of discrimination drive poor health outcomes and prevent their treatment, trapping individuals in a vicious cycle of deteriorating health.

*Third*, where individuals live plays a critical role in health care and prescription drug access.<sup>39</sup> For example, Black and Hispanic Medicare beneficiaries are more likely to live in medical deserts—areas with fewer primary care physicians and high-quality hospitals—making it harder for these individuals to access health care.<sup>40</sup> Ten percent of Black and 11 percent of

<sup>40</sup> Yearby, Clark, & Figueroa, *supra* note 4, at 192 (“One reason racial and ethnic minority communities are underserved is that they have been drained of vital health resources through public hospital closures and the flight of nonprofit hospitals from minority communities to predominantly White communities.”).

Hispanic Medicare beneficiaries reported trouble accessing needed care, compared to six percent of white beneficiaries.<sup>41</sup> In large cities, where the majority of Black and Latino people live, Black and Latino people are more likely to live in pharmacy deserts—neighborhoods where the average distance to a pharmacy is one mile or more—which means they experience greater geographic barriers to filling their prescriptions.<sup>42</sup> Black and Hispanic Medicare beneficiaries are also more likely to live in areas with low quality hospitals.<sup>43</sup> A general shortage of physicians, including a nationwide shortage of over 17,500 primary care doctors, will continue to exacerbate this trend.<sup>44</sup> For heart failure treatment, 16.8 million Black Americans live in areas with limited or no access to a cardiologist, and nearly 2.5 million Black Americans live in a county with no cardiologist.<sup>45</sup> Quality medical care is something that people tend to have only when they also have a lot of other things.

*Fourth*, and especially relevant in a case concerning the cost of Entresto, heart disease disproportionately impacts some racial and ethnic minorities, LGBTQ+ people, disabled people, and people with low incomes.<sup>46</sup> Heart disease is the leading causing of death for Americans

heart disease compared with 3.4 percent of adults without a disability.<sup>53</sup> Studies have also found elevated rates of risk factors for heart disease in the LGBTQ+ community, including higher rates of smoking, alcohol consumption, and poor mental health.<sup>54</sup> Low-income people also have a higher risk of heart failure<sup>55</sup> and a greater risk of hospitalization and a higher rate of one-year mortality from heart failure.<sup>56</sup>

**2. High prescription drug prices exacerbate existing health and financial burdens among these same groups of Medicare beneficiaries.**

Placing a high price tag on medications—and preventing the federal government from negotiating down that price for the Medicare population—drives poor health outcomes within the same populations predisposed to worse health outcomes. The Centers for Disease Control and Prevention has shown that people that do not fill their prescriptions because of cost employ strategies like “skipping doses, taking less than the prescribed dose, or delaying filling a prescription.”<sup>57</sup> These cost-saving strategies can result in more serious illnesses, more expensive treatments, and even death.<sup>58</sup> For example, a 2021 working paper from the National

<sup>58</sup> *Id.*; Nicole Rapfogel, Maura Calsyn, & Colin Seeberger, *7 Ways Drug Pricing Legislative Proposals Would Lower Costs for Consumers and Business*, CTR. FOR AM. PROGRESS (July 26, 2021), <https://www.americanprogress.org/article/7-ways-drug-pricing-legislative-proposals-lower-costs-consumers-businesses/>.

Bureau of Economic Research found that an increase in Medicare Part D recipients' out-of-pocket liability for prescription drugs of \$100 per month resulted in 13.9 percent higher mortality compared to other patients with greater coverage.<sup>59</sup> That same study found that patients who had the greatest need for treatment were more likely to interrupt their prescription regimen due to cost.<sup>60</sup> For example, patients at greatest risk of stroke and heart attack were four times more likely to interrupt their cardiovascular drugs after an increase in costs than patients at a lower risk of such conditions.<sup>61</sup> Simply put, when the sickest patients are among the least-resourced, high drug prices can be dangerous.

Some populations within Medicare are more likely to experience affordability problems and forgo their prescribed medications due to cost. Of Medicare beneficiaries older than 65, 6.6 percent reported affordability problems with prescriptions, and 2.3 million seniors did not get needed prescriptions due to cost.<sup>62</sup> Female Medicare beneficiaries over 65 are more likely to experience prescription drug affordability problems than men.<sup>63</sup> In 2019, Latino and Black adults over 65 were 1.5 times more likely to have affordability problems and two times more likely not to get a prescription due to cost as white adults over 65.<sup>64</sup> In 2016, 14 percent of

<sup>64</sup> Tarazi, *supra* note 70, at 3.

adults with disabilities over 65 did not take their medications due to cost.<sup>65</sup> Younger Medicare beneficiaries with disabilities are 3.5 times more likely to report medication affordability issues compared with the general Medicare population.<sup>66</sup> A study of California adults over 60 showed that over 21 percent of lesbian, gay, and bisexual adults over 60 delayed or did not fill prescriptions because of cost compared to 9.8 percent of straight adults over 60.<sup>67</sup> High prescription drug costs lead to non-adherence and associated adverse health impacts, and those outcomes are disproportionately felt and borne by historically marginalized communities.

**B. The IRA’s Medicare drug price negotiations will advance health equity by lowering beneficiaries’ medication costs and strengthening the Medicare program overall.**

Access to more affordable medication is necessary to reduce the health and wealth disparities outlined above. Medicare’s new drug price negotiation authority makes significant inroads toward this goal by lowering drug costs for the program as a whole.<sup>68</sup>

Historically, Medicare has “has helped to mitigate racial and ethnic inequities in health care in its role as both a regulator and the largest single purchaser of personal health care in the U.S.”<sup>69</sup> Medicare currently provides health insurance to 65 million Americans, with 53 million Americans enrolled in Medicare Part D, which covers outpatient prescription drugs.<sup>70</sup>

<sup>70</sup> *Fact Sheet: Inflation Reduction Act Research Series—Medicare Enrollees’ Use and Out-of-Pocket Expenditures for Drugs Selected for Negotiation under the Medicare Drug Price Negotiation Program*, OFF. OF THE ASSISTANT SEC’Y FOR PLAN. & EVALUATION 2 (Sep. 13, 2023).

In 2018, Medicare Part D enrollment rates were higher among Black beneficiaries (72 percent) and Hispanic beneficiaries (75 percent) than among white beneficiaries (70 percent).<sup>71</sup> In 2019, Medicare Part D enrollment rates were also higher among women (57 percent) than among men (43 percent).<sup>72</sup> Also in 2019, roughly 14 percent of Medicare Part D enrollees were disabled.<sup>73</sup>

While Medicare Part D helps cover the costs of prescription drugs, beneficiaries must still pay part of those costs and, historically, Part D patient out-of-pocket expenses have been significant. In 2019, the median income of Medicare beneficiaries 65 and older was around \$31,000, and one in four beneficiaries had an income below \$18,150.<sup>74</sup> Households in which all members are covered by Medicare also spend a greater percentage of their household spending on health care-related expenses; in 2021, one in three Medicare households spent 20 percent or more of their household spending on health-related expenses compared with one in 14 non-Medicare households.<sup>75</sup> A poll conducted by Gallup found that one in four adults 65 and older cut back on necessities like medication, food, utilities, and clothing due to health care costs.<sup>76</sup> Put simply, the high costs of prescription medications harm individual beneficiaries, especially

when they take more than one medication.<sup>77</sup>

As the government explained in its briefing,<sup>78</sup> the IRA empowers the Secretary of Health and Human Services, on behalf of the Medicare program, to directly negotiate lower prices for certain medications that are responsible for high aggregate Medicare spending and do not have a generic or biosimilar competitor.<sup>79</sup> Between June 2022 and May 2023, Medicare spent \$50.5 billion on the 10 drugs selected for negotiation, and about *\$2.9 billion on Entresto alone*.<sup>80</sup> Medicare's staggering spending on Entresto is in part due to Novartis's relentless price hikes: since 2015, Novartis has raised the price of Entresto by 78 percent—just under 3 times the rate of inflation.<sup>81</sup> Between just 2018 and 2022, the total annual Medicare Part D spending per enrollee taking Entresto rose from \$3,126 to \$4,780, a 51 percent increase.<sup>82</sup>

By allowing the federal government to negotiate the purchase price of essential medicines for Medicare, the IRA's drug price negotiation program is projected to reduce the federal budget deficit by nearly *\$100 billion by 2031*.<sup>83</sup> The CBO has further estimated that net

prices for the drugs selected for negotiation will decrease by 50 percent on average.<sup>84</sup>

These savings buy the federal government room to drastically improve Medicare affordability and access. The IRA's Medicare drug price negotiations will directly enable the Medicare program to both expand subsidized care and lower beneficiary out-of-pocket drug costs, thereby reducing health inequities. For example, this year, CMS will implement IRA Section 11404, expanding the Medicare Part D low-income subsidy (LIS) program (also known as "Extra Help") for people with incomes up to 150 percent of the federal poverty level.<sup>85</sup> LIS generally limits out-of-pocket costs to \$4.50 for generic drugs and \$11.20 for brand drugs.<sup>86</sup> The expansion of LIS will cover 300,000 more low-income Medicare beneficiaries.<sup>87</sup> As of 2024, the IRA also eliminates the five percent coinsurance requirement in the catastrophic coverage phase from its Medicare Part D benefit design, and beginning in 2025, the IRA will also cap Part D out-of-pocket expenses at \$2,000 for all Medicare beneficiaries, a major improvement over the current Part D benefit design.<sup>88</sup> Finally, the IRA includes a provision that institutes a \$35 out-of-pocket cap for a month's supply of Medicare-covered insulin products, which was made effective January 2023 for Part D beneficiaries and July 2023 for Part

B beneficiaries.<sup>89</sup> Experts have concluded that the IRA’s drug price negotiation program, as well as the IRA’s inflation rebates, are what make these affordability measures possible.<sup>90</sup>

Finally, as to Entresto specifically, the Medicare drug price negotiations should bring down Medicare beneficiary out-of-pocket spending on that medication. From 2018 to 2022, the average out-of-pocket spending per enrollee on Entresto increased from \$315 to \$357—an increase of 13 percent in just four years.<sup>91</sup> While the exact decline in price for Entresto cannot be predicted, the CBO estimates a reduction of \$7 billion in out-of-pocket costs for Medicare beneficiaries by 2031 based on the overall lower prices and premium decreases.<sup>92</sup> Indeed, the Medicare drug price negotiations could potentially even lower prices such that Part D plans

may be able to offer a fixed, low co-pay for the negotiated drugs rather than requiring patients to pay coinsurance.<sup>93</sup>

### III. CONCLUSION

Lowering Medicare drug prices will work to ameliorate some of the systematic and persistent inequities that have prevented many Americans from obtaining the care needed to achieve good health outcomes. By enabling the expansion of subsidized care for low-income and historically marginalized communities and reducing Medicare beneficiaries' out-of-pocket costs, the IRA's drug price negotiation program will improve health equity. Lower out-of-pocket costs and improved subsidized coverage will increase patient prescription drug adherence, leading to reduced complications and better health outcomes. More affordable prescription drugs will also serve to close the treatment gap, helping to reduce inequity in the American health care system. For these reasons, amici respectfully request that the Court take health equity into consideration when making its decision.
