

**UNITED STATES DISTRICT COURT
FOR THE DISTRICT OF NEW JERSEY**

ANN LEWANDOWSKI, on her own behalf
and on behalf of all others similarly situated,

Plaintiff,

v.

JOHNSON AND JOHNSON, THE
PENSION & BENEFITS COMMITTEE OF
JOHNSON AND JOHNSON, PETER
FASOLO, WARREN LUTHER, LISA
BLAIR DAVIS, and DOES 1-20.

Defendants.

Civil Action No. _____

JURY TRIAL DEMANDED

CLASS ACTION COMPLAINT

Plaintiff Ann Lewandowski, individually, and on behalf of all others similarly situated, brings this action under 29 U.S.C. § 1132 against Defendants Johnson and Johnson; The Pension & Benefits Committee of Johnson and Johnson; and the members of the Pension & Benefits Committee of Johnson and Johnson, including Peter Fasolo, Warren Luther, and Lisa Blair Davis, for breaches of fiduciary duties and other violations under the Employee Retirement Income Security Act (“ERISA”), 29 U.S.C. §§ 1001-1461, and states as follows:

1. Congress enacted ERISA in the wake of several high-profile scandals involving employers that mismanaged their employee benefits programs. This mismanagement had inflicted millions of dollars of harm on employees and their dependents. ERISA was designed to put an end to this mismanagement and to protect the interests of employee benefit plan participants. It does so by “establishing standards of conduct, responsibility, and obligation for fiduciaries of

employee benefit plans,” and by providing plan participants with “appropriate remedies, sanctions, and ready access to the Federal courts” when plan fiduciaries mismanage plan assets. 29 U.S.C. § 1001(b). Courts have referred to ERISA’s fiduciary duties as “the highest known to the law.”

2. ERISA subjects anyone with discretionary authority over an employee-benefits plan to fiduciary duties derived from the law of trusts. Most relevant here, ERISA’s “duty of prudence” requires fiduciaries to act “with the care, skill, prudence, and diligence under the circumstances then prevailing that a prudent man acting in a like capacity and familiar with such matters would use in the conduct of an enterprise of a like character and with like aims.” 29 U.S.C. § 1104(a)(1)(B). Among other things, ERISA’s duty of prudence requires plan fiduciaries to make a diligent effort to compare alternative service providers in the marketplace, seek the lowest level of costs for the services to be provided, and continuously monitor plan expenses to ensure that they remain reasonable under the circumstances.

3. This case principally involves mismanagement of prescription-drug benefits. Over the past several years, Defendants breached their fiduciary duties and mismanaged Johnson and Johnson’s prescription-drug benefits program, costing their ERISA plans and their employees millions of dollars in the form of higher payments for prescription drugs, higher premiums, higher deductibles, higher coinsurance, higher copays, and lower wages or limited wage growth. Defendants’ mismanagement is most evident in (but not limited to) the prices it agreed to pay one of its vendors—its Pharmacy Benefits Manager (“PBM”)—for many generic drugs that are widely available at drastically lower prices. For example, someone with a 90-pill prescription for the generic drug teriflunomide (the generic form of Aubagio, used to treat multiple sclerosis) could fill that prescription, *without even using their insurance*, at Wegmans for \$40.55, ShopRite for \$41.05, Walmart for \$76.41, Rite Aid for \$77.41, or from Cost Plus Drugs online pharmacy for

\$28.40. Defendants, however, agreed to make their ERISA plans and their beneficiaries pay **\$10,239.69**—not a typo—for each 90-pill teriflunomide prescription. The burden for that massive overpayment falls on Johnson and Johnson’s ERISA plans, which pay most of the agreed amount from plan assets, and on beneficiaries of the plans, who generally pay out-of-pocket for a portion of that inflated price. No prudent fiduciary would agree to make its plan and beneficiaries pay a price that is *two-hundred-and-fifty times* higher than the price available to any individual who just walks into a pharmacy and pays out-of-pocket.

Cash Price Using No Insurance

The screenshot displays a prescription for 14mg teriflunomide (90 tablets) with a list of pharmacies and their respective prices. To the right is a price calculator for Teriflunomide (Tablet, 14mg, 90 count) showing a price of \$28.40.

Pharmacy	Retail Price	Discount	Cash Price
Wegmans	\$18,799	Save 100%	\$40.55
ShopRite	\$946	Save 96%	\$41.05
Walmart	\$12,721	Save 99%	\$76.41 (One-time offer)
Rite Aid	\$9,564	Save 100%	\$77.41

Price Calculator: Teriflunomide, Tablet • 14mg • 90 count, Price: \$28.40

Price Using JnJ Plans

The screenshot shows a cost breakdown for Teriflunomide 14 Mg Tablet. It details the total medication cost, plan payment, and out-of-pocket cost, along with a note that the plan pays about 83% of the cost.

Category	Amount
Total medication cost:	\$ 10,239.69
Plan pays*:	\$ 8,514.69
You pay:	\$ 1,725.00
Applied to your deductible:	\$ 1,600.00
Applied to your out-of-pocket:	\$ 1,725.00
Cost per day:	\$ 19.17

Your plan pays about 83% of the cost for this medicine.

*The cost to your plan does not include any rebates or other incentives your plan may receive from your use of this medication. Express Scripts may retain or share some rebates with your plan. The cost your plan pays is an approximation and is subject to change.

4. The roughly \$10,000 (per-prescription) difference between what pharmacies pay to acquire teriflunomide and what Defendants agreed to make Johnson and Johnson's ERISA plans and beneficiaries pay for the exact same drug goes largely into the pockets of the PBM, at the expense of the ERISA plans and their beneficiaries.

5. Discrepancies like this exist for dozens of generic drugs under Johnson and Johnson's prescription-drug plans. For example, as explained in greater detail below, certain generic and branded drugs are designated as "specialty" drugs based on the conditions they treat or other factors. While Plaintiff's health plan declined to provide her with access the plan's drug formulary, an analysis of Defendants' prices for the generic drugs designated as specialty on a publicly available formulary managed by the same PBM reveals a pattern of unreasonable markups. Across all generic-specialty drugs on the formulary for which there is publicly available data on average acquisition costs, Defendants agreed to make the plans and their beneficiaries pay, on average, a markup of **498%** above what it costs pharmacies to acquire those drugs. In other words, Defendants agreed to make Johnson and Johnson's prescription-drug plans and their beneficiaries pay, on average, roughly **6 times** as much as the PBM (or a PBM-owned pharmacy) paid for those very same drugs. Not incidentally, Johnson and Johnson is a leading drug maker that earns billions of dollars a month selling drugs.

6. Defendants also agreed to terms under which plan beneficiaries are financially incentivized to obtain their prescriptions from the PBM's own mail-order pharmacy, even though that pharmacy's prices are routinely higher than the prices at other pharmacies. For example, a plan beneficiary seeking to fill a 90-day prescription of the generic drug bexarotene (used to treat a form of lymphoma) would pay less out-of-pocket by using the PBM's pharmacy instead of going to Walgreens, but Defendants' ERISA plans would pay thousands of dollars more due to the high

prices at the PBM's pharmacy. In short, Defendants are steering beneficiaries toward an option that, for many drugs, wastes thousands of dollars in plan assets while enriching the Plans' PBM by that same amount.

7. Defendants failed to exercise prudence at multiple steps in the process of administering prescription-drug benefits. Defendants failed to exercise prudence before selecting a PBM, failed to exercise prudence in agreeing to make its ERISA plans and beneficiaries pay unreasonable prices for prescription drugs, failed to exercise prudence in agreeing to contract terms with its PBM that needlessly allows the PBM to enrich itself at the expense of the company's ERISA plans and their beneficiaries, failed to actively manage and oversee key aspects of the company's prescription-drug program, and failed to take available steps to rein in its PBM's profiteering and protect plan assets and beneficiaries' interests.

8. These discrepancies exist despite well-known alternatives available to Defendants. To name just a few, Defendants could have used their bargaining power to obtain better rates from their own PBM or another traditional PBM; could have taken steps to steer beneficiaries toward the most cost-effective option instead of to the PBM's own pharmacy; could have moved all or parts of their prescription-drug plan to a "pass-through" PBM that bases its prices on actual pharmacy acquisition costs rather than inflated and manipulable benchmarks; could have directed substantial portions of its prescription-drug plan to a well-known online pharmacy that charges only a 15% markup above acquisition cost; or could have taken other steps detailed below. Yet the Pension and Benefits Committee of Johnson and Johnson—a major drug maker that itself profits from high drug prices—has instead chosen to force its benefits plans and employees to acquire drugs via some of the most expensive methods conceivable.

9. ERISA required Defendants to make a diligent and thorough comparison of alternative service providers in the marketplace, to seek the lowest level of costs for the services to be provided, and to continuously monitor plan expenses to ensure that they remain reasonable under the circumstances. Defendants did not do those things to the extent ERISA requires. Defendants breached their fiduciary duties by failing to engage in a prudent and reasoned decision-making process. If Defendants had engaged in a prudent and reasoned decision-making process, they would have known of, and adopted, any of numerous options that would have drastically lowered the cost of prescription drugs in general and generic-specialty drugs in particular, and would have resulted in other cost savings for the plans and their beneficiaries. Implementing those available options would have saved the plans and their beneficiaries millions of dollars over the proposed class period.

10. To remedy these fiduciary breaches, Plaintiff, individually and on behalf of all others similarly situated, brings this action under 29 U.S.C. § 1132 to enforce Defendants' liability under 29 U.S.C. § 1109, to enjoin Defendants from continuing to breach their fiduciary duties, to make good to the plans and their beneficiaries all losses resulting from each breach of fiduciary duty, and for other relief specified below.

I. PARTIES AND OTHER RELEVANT ENTITIES

11. Plaintiff Ann Lewandowski is a "participant" in the ERISA plans at issue here, within the meaning of ERISA § 3(7), 29 U.S.C. § 1002(7). She began employment with Johnson and Johnson in November 29, 2021 as a healthcare policy and advocacy director for Wisconsin and Minnesota. She remains employed by Johnson and Johnson but is currently on leave due to a dispute regarding a reasonable accommodation for a medical condition. She brings this lawsuit on behalf of herself and all others similarly situated, serving as a whistleblower to bring to light Defendants' mismanagement of the ERISA plans at issue here and to help recover the millions of

dollars in plan assets and beneficiaries' money that have been lost as a result of Defendants' fiduciary breaches.

12. Defendant Johnson and Johnson ("JnJ" or "Johnson and Johnson") is a medical technologies and pharmaceutical company headquartered in New Brunswick, New Jersey. JnJ earned approximately \$95 billion in revenue in the 2022-23 fiscal year, placing it 40th on the 2023 Fortune 500. It employs approximately 130,000 people worldwide, and provides many of its U.S. employees with healthcare benefits, including prescription-drug benefits. It also provides healthcare benefits, including prescription-drug benefits, to certain of its retirees.

13. JnJ sponsors the Salaried Medical Plan and Salaried Retiree Medical Plan for its current and former employees, and both of those plans are both part of the Group Health Benefits Plan of Johnson and Johnson and Affiliated Cos. (collectively, the "Plans"). The Plans are employee welfare benefit plans as defined at 29 U.S.C. § 1002(2)(A). The purpose of the Plans is to provide medical benefits to employees and retirees of JnJ and its affiliated companies, as well as to those employees' family members. The Plans' prescription-drug benefits are administered by a third-party service provider called Express Scripts.

14. All or most of the Plans' expenses are paid from the Johnson and Johnson Salary Medical VEBA (the "VEBA Trust"), which is an employer-sponsored trust established under I.R.C. 501(c)(9) for the payment of medical benefits under the Plans. The VEBA Trust's IRS Form 990 submission states: "The VEBA has been established and maintained as a means of funding and paying benefits and administrative expenses for eligible salaried employees (and their eligible and enrolled dependents) who are participants in certain medical plans maintained by J&J and its affiliated companies." The VEBA Trust is funded by a combination of employer and employee contributions, along with investment income. In the most recent year of reporting,

participants made approximately \$148.28 million in contributions to the VEBA Trust. The funds held by the VEBA Trust are assets of the Plans.

15. The Pension & Benefits Committee of Johnson and Johnson (the “Pension & Benefits Committee” or “Committee”) is the administrator of the Plans and a fiduciary of the Plans with general authority for the management and administration of the Plans.

16. Defendant Peter Fasolo is an Executive Vice President and Chief Human Resource Officer of Johnson and Johnson. Mr. Fasolo is a member of the Executive Committee and the Chairman of the Pension & Benefits Committee. Mr. Fasolo is a fiduciary of the Plans.

17. Defendant Warren Luther is a Vice President of Human Resources for Johnson and Johnson. Mr. Luther is a member of the Pension & Benefits Committee and is a fiduciary of the Plans.

18. Defendant Lisa Blair Davis is a Vice President of Human Resources for Johnson and Johnson. Ms. Davis is a member of the Pension & Benefits Committee and is a fiduciary of the Plans.

19. Does 1 through 20 are members of the Pension & Benefits Committee, all of whom are fiduciaries of the Plans.

20. Defendant Johnson & Johnson is the sponsor of the Plans and a fiduciary of the Plans. Johnson & Johnson is responsible for appointing and removing Committee members, and on information and belief, retains decisionmaking authority with respect to the Plans. Johnson & Johnson also has a fiduciary duty to monitor its appointed fiduciaries, and it failed to adopt or follow sufficient procedures to review and evaluate the performance of the Committee and to remove fiduciaries whose performance was inadequate. Johnson & Johnson is also liable for the other defendants’ fiduciary breaches because they were acting within the course and scope of their

employment when they committed the fiduciary breaches at issue and because Johnson & Johnson did not make reasonable efforts under the circumstances to remedy the breaches.

II. JURISDICTION AND VENUE

21. This Court has exclusive subject-matter jurisdiction under 29 U.S.C. § 1132(e)(1) and 28 U.S.C. § 1331 because it is an action under 29 U.S.C. § 1132.

22. Venue is proper in this district under 29 U.S.C. § 1132(e)(2) and 28 U.S.C. § 1391(b) because it is the district in which the Plans are administered, where at least one alleged breach took place, and where Defendants reside or may be found.

23. This Court has general personal jurisdiction over defendant Johnson & Johnson because it is incorporated and headquartered in this State, over the Committee because it operates from and is headquartered in this State, and over any other defendants that reside in this State. This Court has specific personal jurisdiction over all Defendants because they took the actions described herein in this district through the management of the Plans, all of which were administered from this State.

III. FACTUAL AND LEGAL BACKGROUND

A. Prescription-Drug Plans and Fiduciary Duties Under ERISA

24. Employers are the principal source of health benefits in the United States. To provide those benefits, many employers sponsor employee benefit plans. The vast majority of employee health plans include coverage for prescription drugs. Broadly speaking, the prescription-drug portion of an employee health plan covers a substantial portion of the costs of an employee's prescription drugs. The employee typically is then responsible for a monthly premium and, after meeting a deductible, for a co-pay or co-insurance amount for each prescription. The employee's premium payments are based on the plan's projected costs for the next year, which are heavily influenced by the plan's actual costs in past years. The employee's

deductible, co-pay, and co-insurance amounts are set based on the plan documents and the plan's contractual arrangements with third party service providers, like PBMs, doctors, and pharmacies.

25. Prescription-drug plans (or the broader healthcare plans of which they are often a part), like other employee welfare benefit plans established by private-sector employers, are governed by ERISA. Congress enacted ERISA to address concerns that employee benefit plans were being mismanaged. ERISA protects the interests of employee benefit plan participants and their beneficiaries by establishing standards of conduct, responsibility, and obligations for fiduciaries of employee benefit plans. In ERISA terms, an employer who offers a welfare plan to its employees (and, typically, its employees' family members) is called a "plan sponsor."

26. Anyone who exercises any discretionary authority or discretionary control over the management of an employee-benefit plan, and anyone who exercises any authority or control respecting management or disposition of the assets of an employee-benefit plan, is a fiduciary of the plan.

27. ERISA imposes strict fiduciary duties of loyalty and prudence on the fiduciaries of employee-benefit plans, including healthcare plans and prescription-drug plans. The duty of loyalty requires fiduciaries to act "solely in the interest of the participants and beneficiaries," 29 U.S.C. § 1104(a)(1)(A), and the duty of prudence require fiduciaries to exercise the "care, skill, prudence, and diligence" that would be expected in managing a plan of similar scope, 29 U.S.C. § 1104(a)(1)(B). A fiduciary's process must bear the marks of loyalty, skill, and diligence expected of an expert in the field. Courts have described these fiduciary duties as "the highest known to the law."

28. Specifically, 29 U.S.C. § 1104(a) states, in relevant part, that:

(1) [A] fiduciary shall discharge his duties with respect to a plan solely in the interest of the participants and beneficiaries and—

(A) for the exclusive purpose of:

- (i) providing benefits to participants and their beneficiaries; and
- (ii) defraying reasonable expenses of administering the plan;

(B) with the care, skill, prudence, and diligence under the circumstances then prevailing that a prudent man acting in a like capacity and familiar with such matters would use in the conduct of an enterprise of a like character and with like aims.

29. Under ERISA, fiduciaries must act prudently and for the exclusive benefit of participants in the plan when they select service providers for the plan. Fiduciaries must conduct an independent investigation to initially determine and continue to monitor the prudence of each aspect of the plan. This duty of prudence developed in the common law of trusts, which informs ERISA’s fiduciary duties, and which emphasizes the duty to avoid unwarranted costs. The Restatement (Third) of Trusts explains, “[i]mplicit in a trustee’s fiduciary duties is a duty to be cost-conscious.”

30. Fiduciaries must also ensure that their agreements with service providers and the amounts they pay to those service providers are reasonable. Fiduciaries must make a diligent effort to compare alternative service providers in the marketplace, seek the lowest level of costs for the services to be provided, and continuously monitor plan expenses to ensure that they remain reasonable under the circumstances. Fiduciaries also cannot ignore the power their plans wield to obtain favorable rates. Put simply, wasting beneficiaries’ money is imprudent.

31. Fiduciaries cannot discharge their fiduciary duties simply by relying on the advice of third-party service providers, consultants, or experts. As the Restatement explains, “[a]fter obtaining advice or consultation, the trustee can properly take the information or suggestions into account but then ... must exercise independent, prudent, and impartial fiduciary judgment on the

matters involved.” Fiduciaries also cannot discharge their fiduciary duties simply by relying on the advice of third-party service providers, consultants, or experts who have conflicts of interest that may prevent them from providing advice solely for the benefit of the plan.

32. A plan fiduciary who breaches his fiduciary duty to the plan is personally liable to make good to the plan any losses to the plan resulting from the breach, as well as for other equitable or remedial relief. Specifically, 29 U.S.C. § 1109(a) provides:

Any person who is a fiduciary with respect to a plan who breaches any of the responsibilities, obligations, or duties imposed upon fiduciaries by this subchapter shall be personally liable to make good to such plan any losses to the plan resulting from each such breach, and to restore to such plan any profits of such fiduciary which have been made through use of assets of the plan by the fiduciary, and shall be subject to such other equitable or remedial relief as the court may deem appropriate, including removal of such fiduciary.

33. A plan participant or beneficiary may also obtain injunctive and equitable relief, including surcharge, from a plan fiduciary who breaches his fiduciary duty.

B. Management and Administration of Prescription-Drug Plans

34. Prescription-drug transactions work as follows: When a person with prescription-drug insurance goes to her pharmacy to buy a prescription drug, that person makes a claim on her prescription-drug plan to cover all or some of the drug’s cost. The pharmacist sends a query to the insured’s prescription-drug plan, which more or less instantaneously (*i.e.* while the insured is at the pharmacy counter) determines whether the drug is covered under the insured’s plan, communicates to the pharmacy whether the claim was approved or denied, and, if the claim was approved, notifies the pharmacy of any co-pay or co-insurance amount for which the insured is responsible. The pharmacy then collects the co-pay or co-insurance from the insured and dispenses the drug. In a later transaction, the prescription-drug plan pays the remainder of the drug’s cost to the pharmacy, at a rate negotiated between the plan and the pharmacy.

35. Accordingly, a prescription-drug plan's fiduciaries generally must negotiate rates with a network of pharmacies at which its beneficiaries may obtain prescription drugs; maintain a list of prescription drugs that will be covered by the plan; maintain a framework to determine how the cost of those drugs will be shared between the plan and its beneficiaries; process prescription-drug claims when beneficiaries are at the pharmacy counter; and reimburse pharmacies for the plan's portion of the negotiated rates.

36. The list of prescription drugs that are covered by a prescription-drug plan is called a "formulary." The formulary is analogous to a commercial health plan's list of covered procedures: just as a commercial health plan will provide different levels of coverage (or no coverage) depending on the specific medical procedure at issue, a prescription-drug plan will provide different levels of coverage (or no coverage) depending on the specific prescription drug at issue. Formularies are typically divided into multiple tiers—for example, a formulary might have different tiers and provide different levels of coverage for generic drugs, brand-name drugs, and so-called "specialty" drugs.

37. A generic drug is a pharmaceutical drug that contains the same chemical substance as a drug that was originally protected by chemical patents and sold under a brand name. Generics are identical to brand-name drugs, but tend to be significantly lower-cost because they are produced by multiple competing manufacturers. As the Food and Drug Administration explains, "generic medicines work in the same way and provide the same clinical benefit and risks as their brand-name counterparts. A generic medicine is required to be the same as a brand-name medicine in dosage, safety, effectiveness, strength, stability, and quality, as well as in the way it is taken. Generic medicines also have the same risks and benefits as their brand-name counterparts."

38. Formularies are powerful tools for plan fiduciaries to control the plan's prescription-drug costs. For example, when a lower-priced generic version of a drug becomes available, a prudent fiduciary may add the generic to its formulary and either remove the brand-name drug or disincentivize its use. This will result in beneficiaries receiving the lower-priced generic instead of the expensive (but chemically identical) brand-name drug, which in turn will lower costs for the plan. An independent assessment of each prescription drug is thus essential and required by ERISA to determine whether the drug should be included on the formulary and how it should be designated on the formulary.

39. The other aspects of administering a prescription-drug plan also offer cost-saving opportunities for prudent plan fiduciaries. For example, a prudent fiduciary will negotiate favorable drug prices and will implement systems to process claims efficiently and cheaply. A fiduciary of a sufficiently large plan may also be able to extract financial concessions from a drug manufacturer (often termed "rebates") in exchange for agreeing to include the manufacturer's drugs on its formulary and/or in a preferred tier on its formulary.

C. Pharmacy Benefit Managers and Brokers

1. General Background on PBMs

40. Many plan fiduciaries contract with third parties to help manage and administer the prescription-drug portion of their health plans. These third parties are called "pharmacy benefit managers" or, for short, "PBMs." PBMs offer various services to prescription-drug plans, including negotiating with pharmacies to establish pharmacy networks where plan beneficiaries can obtain prescription drugs; helping manage plans' formularies; processing beneficiaries' claims in real-time; and contracting with drug manufacturers to secure price reductions or other financial considerations.

41. As a general matter, the PBM handles the day-to-day management of its clients' prescription drug programs and serves as the middleman between a benefits plan and network pharmacies. Accordingly, when a plan beneficiary obtains a prescription drug from a pharmacy, the PBM pays the pharmacy for the cost of the drugs (less the beneficiary's out-of-pocket responsibility) and then collects payment from the plan. As noted in more detail below, however, the PBM may attempt to collect more money from the plan than it paid to the pharmacy, pocketing the difference.

42. PBMs are service providers to prescription-drug plans. They are profit-driven entities who seek to profit from their intermediary role in the prescription-drug ecosystem. The largest PBMs are owned by publicly traded companies and accordingly owe fiduciary duties to their shareholders to maximize their own profits. And as discussed in more detail below, many PBMs are part of vertically integrated companies that create obvious conflicts of interest and incentivize them to take actions that are not in the best interest of their plan clients.

43. There are two dominant pricing models for PBMs. "Traditional" PBMs typically make their money through a combination of spread pricing, rebates, and owning their own pharmacies, as described below. "Pass-Through" PBMs, in contrast, typically make their money only through administrative fees. They do not engage in spread pricing, they pass through the full amount of any negotiated rebates to their client plans, and they do not own pharmacies.

2. Traditional PBM Model

44. In the traditional PBM model, the prices that a prescription-drug plan pays for prescription drugs are determined in negotiations between plan fiduciaries and the PBM. Those prices can be determined in any number of ways, limited by only the parties' willingness to transact.

45. One common way that plan fiduciaries and PBMs structure their agreements is to set prices for groups of drugs by reference to a specific benchmark price, rather than negotiating a separate price for each drug.

46. One historically prevalent benchmark is called the “Average Wholesale Price” or “AWP.” In theory, the AWP for a drug is a benchmark that describes the average price that pharmacies pay to acquire that drug from wholesalers. In reality, as is widely understood (including by prudent plan fiduciaries), AWP is not a true representation of actual market prices for either generic or brand drug products, is highly manipulable by manufacturers and wholesalers, and often bears little to no relation to a pharmacy’s actual acquisition costs. (A common joke in the industry is that AWP stands for “Ain’t What’s Paid.”) The difference between the AWP and a pharmacy’s actual acquisition costs can be substantial, and sometimes arbitrarily so. Researchers have found several examples in which the AWP for a drug was 50, 70, or even 100 times higher than the drug’s actual cost to pharmacies.

47. Plan fiduciaries that decide to use a traditional PBM may negotiate a bundled price, relative to AWP, for all generic drugs; a bundled price, relative to AWP, for all brand-name drugs; and a bundled price, relative to AWP, for all “specialty” drugs. For example, a plan may agree to pay its PBM “AWP minus 85%” for generic drugs, “AWP minus 20%” for brand drugs, and “AWP minus 15%” for “specialty” drugs. These prices might vary further based on whether the prescription is for a 30-day supply or a 90-day supply or based on other factors, including whether the prescription is filled at the PBM’s own pharmacy. These prices are negotiable between the traditional PBM and the plan fiduciaries.

48. Critically, however, the prices the plan agrees to pay its traditional PBM for a prescription may not bear any relation to the price the PBM will pay the pharmacy for the same prescription. Any difference between those two amounts is known as the “spread.”

49. The “spread” can be a major revenue stream for traditional PBMs. “Spread pricing” is when a PBM negotiates a price with pharmacies that is lower than the price it charges the prescription-drug plan, and then instead of passing those savings on to its client plans, pockets the difference. For example, a PBM may negotiate with a pharmacy for a price of \$12 for each prescription of a certain drug, but then may try to separately negotiate with the plan fiduciaries for a price of \$20 for that same drug. When a beneficiary fills a prescription for that drug, the PBM will pay the pharmacy \$12 (less any out-of-pocket paid by the insured) but then bill the plan the full \$20. The \$8 “spread” between these two negotiated rates represents profit for the PBM, at the expense of the plan and its beneficiaries.

50. For generic drugs, there is often even more of a disconnect between an AWP-based price paid by a plan to the PBM and the price then paid by the PBM to a pharmacy. This is because the prices that PBMs pay to pharmacies for generic drugs are generally not based on AWP. Instead, PBMs pay pharmacies for generic drugs based on prices listed on the PBM’s proprietary “Maximum Allowable Cost” or “MAC” list. A “MAC” list is a PBM-generated list that includes

the maximum amount the PBM will pay a pharmacy for generic drugs. PBMs have essentially free reign to determine their own pricing methodologies for their MAC lists, so long as the prices are not so low that pharmacies will refuse to do business or refuse to stock a drug. One recent study observed that “proprietary PBM prices (i.e., maximum allowable cost, or MAC) were ... highly variable and disconnected from the manufacturer or pharmacy established price for the medication.” PBMs may also have different MAC lists corresponding to different pharmacies (*e.g.*, the MAC prices may be far higher at the pharmacies they own) and different payers.

51. Traditional PBMs engaging in spread pricing try to exploit the disconnect between the prices they receive from plans and the prices they pay to pharmacies, pocketing the difference between the two prices.

52. Because of this dynamic, traditional PBMs benefit the most when plan beneficiaries are prescribed drugs with the highest cost to the plan relative to the actual drug acquisition cost, as this maximizes the “spread” retained by the PBM: the higher the cost to the plan, the more the PBM receives as revenue; the lower the drug acquisition cost, the less the PBM must pay to the pharmacy. PBMs in such an arrangement are financially motivated not to make formulary decisions based on which drugs have the lowest cost to the plan and beneficiaries, but rather based on which drugs allow them to pocket the largest spread. Prudent fiduciaries therefore closely supervise their formularies and carefully negotiate their payment structures to ensure that PBMs are not acting based on considerations that run contrary to the interests of the plan and its beneficiaries.

53. Another potential revenue stream for traditional PBMs is through “rebates” and other financial concessions from drug manufacturers related to branded drugs. PBMs can use the threat of removing a drug from their clients’ formularies to secure price concessions from drug

manufacturers, who may be willing to pay “rebates” or other considerations in exchange for securing their drugs’ inclusion on formularies or in exchange for having their drugs placed in a higher “tier” on the formularies. These “rebates” are generally based on the quantity of drugs dispensed under the plans administered by the PBM, and are paid on a recurring basis from the manufacturer to the PBM. For example, a drug manufacturer, in exchange for preferred formulary placement for a certain drug, may offer a rebate of \$10 for every prescription of that drug dispensed to a plan beneficiary.

54. Plans and traditional PBMs negotiate over how much of any such rebate or price concession will be retained by the PBM and how much will be passed through to the plan (represented either as a percentage or a flat amount per prescription). Traditional PBMs may attempt to denominate rebates by other names to obscure their nature and try to reduce the amounts they are contractually obligated to pass on to their client plans. Any amount the PBM retains is revenue for the PBM.

55. Prudent fiduciaries negotiate with their PBMs to minimize or eliminate any portion of rebates or other financial concessions from manufacturers that the PBM retains instead of passing through to the plan. Prudent fiduciaries likewise ensure that their PBM contract is written with sufficient precision that the PBM cannot hide or obscure these rebates to avoid passing them through to the plan.

56. Some traditional PBMs also earn revenue through ownership of their own pharmacies. Express Scripts, for example, is a PBM that is vertically integrated with the specialty pharmacy Accredo. When PBMs own their own pharmacies, they may attempt to steer beneficiaries of their clients’ prescription-drug plans to those pharmacies, including by requiring beneficiaries to pay more out-of-pocket at competitors’ pharmacies or by refusing to cover

prescriptions obtained at competitors' pharmacies. In addition, traditional PBMs may "agree" to excessively high reimbursement rates with the pharmacies they own (*i.e.*, reimbursement rates that greatly exceed the pharmacy's actual acquisition costs)—rates that the PBM would never agree to pay in a truly market-based transaction. Through this arrangement, PBMs can misleadingly represent to plans that they are not engaging in spread pricing (*i.e.*, they can promise that they are charging the plan the same amount they are paying the pharmacy), even though that is technically true only because the PBM "agreed" to pay its own pharmacy excessive amounts. In reality, the mechanism is the same as spread pricing—*i.e.*, the traditional PBM charges the plan far more than the drug actually costs, and then the PBM or its pharmacy pockets the difference.

57. There are several traditional PBMs in the marketplace that are capable of providing a high level of service and who will vigorously compete to win a PBM contract from a Fortune 50 company like Johnson and Johnson. To ensure that they are continuing to manage the plan's costs and incur only reasonable expenses, prudent fiduciaries conduct open RFP processes to obtain competitive bids for PBM services at regular intervals and ensure that the rates and terms to which they agree continue to reflect the best rates and terms available in light of the plan's size, bargaining power, and other characteristics.

3. The "Pass-Through" PBM Model

58. The payment structure is different in the pass-through PBM model. In the pass-through PBM model, the amount that the PBM bills the plan is equal to the amount the PBM pays the pharmacy. In this model, the PBM does not engage in spread pricing and commits to passing through all discounts and rebates, however denominated, to the plan. The pass-through PBM earns revenue based only a flat administrative fee it charges to the plan, usually assessed on a per-member, per-month basis. Pass-through PBMs still negotiate for rebates and discounts from manufacturers, but they pass those rebates and discounts through to their clients instead of keeping

them for themselves. This keeps incentives aligned. The rebates and discounts that many pass-through PBMs negotiate are comparable, and in some cases identical, to the rebates and discounts available to traditional PBMs. In fact, some pass-through PBMs are members of the same group purchasing organizations as traditional PBMs, and these group purchasing organizations negotiate with manufacturers for rebates and discounts collectively.

59. Because pass-through PBMs do not benefit from rebates or spread pricing, they have no incentive to favor drugs on any factor other than what is in the best interest of the plan and its beneficiaries. Whereas a traditional PBM is typically incentivized to select drugs with higher rebates and/or that allow for higher spreads—even if those drugs have higher net costs for the plan—pass-through PBMs have no such incentives or conflicts of interest.

60. Using a pass-through PBM does not negatively affect the patient experience in material ways compared to a traditional PBM, and in many cases improves the experience. Most pass-through PBMs have network agreements with many or all major pharmacies, allowing plan beneficiaries to obtain their prescriptions from a wide range of pharmacies, including most or all of the pharmacies that are in-network for traditional PBMs. For example, the pass-through PBM Navitus has network agreements with CVS, Walgreens, Walmart, Rite Aid, Giant, Stop & Shop, Wegman's, Publix, Kroger, Costco, and many others. Similarly, the pass-through PBM Capital Rx “maintains a national network of more than 65,000 pharmacies, including all national chains and most independent pharmacies.” Pass-through PBMs also partner with mail-order pharmacies, including for specialty drugs, that can provide plan beneficiaries with the same (or greater) level of convenience as a traditional PBM's mail-order pharmacy.

61. Pass-through PBMs are able to obtain the same drugs from manufacturers as traditional PBMs. Any prescription-drug plan that wants to include or exclude any specific drug

on its formulary can do so with either a pass-through PBM or a traditional PBM. Pass-through PBMs also offer the same types of services—and, if anything, more personalized services—than traditional PBMs.

62. There are numerous pass-through PBMs in the marketplace that are capable of providing a high level of service and will vigorously compete to win a PBM contract from a Fortune 50 company like Johnson and Johnson. To ensure that they are continuing to manage the plan's costs and incur only reasonable expenses, prudent fiduciaries conduct open RFP processes to obtain competitive bids for PBM services at regular intervals from both traditional PBMs and pass-through PBMs, and ensure that the rates and terms to which they agree continue to reflect the best rates and terms available in light of the plan's size, bargaining power, and other characteristics.

63. Prudent fiduciaries select carefully among PBMs, analyzing their member base and each PBM's offerings to decide which PBM and which payment model will be most beneficial and most cost-effective for the plan. Prudent fiduciaries also negotiate favorable terms with PBMs and continually supervise their PBM's actions to ensure that the plan is minimizing costs and maximizing outcomes for beneficiaries. Prudent fiduciaries retain sufficient control over their plans' formularies to prevent the PBM from making formulary decisions that serve the PBM's interests but not the plan's interests. Prudent fiduciaries also periodically attempt to renegotiate their PBM contracts and/or conduct an open RFP process to solicit proposals from other PBMs and ensure that they have the best possible deal for the plan and plan beneficiaries.

4. Brokers

64. Many plan sponsors hire consultants or brokers to assist them with soliciting bids from, selecting, and negotiating with a PBM. The consultants and brokers are often referred to as "employee benefit consultants" ("EBCs") or "PBM reseller coalitions." EBCs are service

providers to prescription-drug plans. They are profit-driven entities who seek to profit from their intermediary role in the prescription-drug ecosystem.

65. Some EBCs, while purporting to act in the interest of prescription-drug plans, are in fact being paid by PBMs in ways that incentivize them to act against the plan's interests. For example, PBMs may promise to pay an EBC a commission on every prescription if the EBC recommends the PBM to its client plans. As one media outlet reported, “[c]onsulting firms can collect at least \$1 per prescription from the largest PBMs, according to more than a dozen independent drug benefits, consultants, and attorneys involved with employers’ PBM contracts. That can go as high as \$5 per prescription in extreme cases, three of those people said. Consulting firms and brokerages may receive a certain dollar amount for each covered employee and member. Or they may share in the rebates that the PBMs pluck from pharmaceutical manufacturers — money that otherwise could be used by employers to lower premiums for their workers.”

66. According to one report, an EBC managing an RFP process refused to allow a PBM to even enter a bid for a plan's contract unless the PBM agreed to pay the EBC \$6.50 per prescription. In an apparent attempt to hide the payment, the EBC asked the PBM to mail the payments quarterly to a PO box in another state.

67. Industry experts have warned that many EBCs or brokers “not only give[s] bad advice to the employer that's in the broker's self-interest, but the broker also allows the big PBM to write crazy terms into a contract.”

68. Some EBCs, while purporting to manage an open RFP process for their client prescription-drug plans, will refuse to solicit bids from PBMs that decline to offer the EBC kickbacks or other forms of indirect compensation.

69. Prudent fiduciaries ensure that any EBC they hire to help them select and negotiate with a PBM does not have conflicts of interest that would prevent it from offering objective advice to the plan and operating a truly open RFP process. Prudent fiduciaries would not hire an EBC who was receiving kickbacks or other forms of compensation from the PBM it was selecting or negotiating with, or who would refuse to solicit bids or accept offers from PBMs who were not paying kickbacks or providing other forms of compensation. As one media outlet put it, “[e]mployers ... may be neglecting their legal duty by not asking their consultants and brokers to disclose all the sources of their revenue.”

70. Prudent fiduciaries exercise—and are required to exercise—independent, prudent, and impartial fiduciary judgment even on matters for which they receive advice from EBCs.

71. Section 202 of the 2021 Consolidated Appropriations Act prohibits covered plans from entering into a contract, renewal, or extension of services for the plan with “covered service providers,” which includes EBCs, without first requiring the covered service provider to disclose, in writing, any and all direct and indirect compensation in excess of \$1,000 they receive for providing services to the plan. A covered plan’s failure to obtain the required disclosures from a covered service provider under Section 202 makes its contract with that service provider a prohibited transaction under ERISA. Prudent fiduciaries obtain the required disclosures from their EBCs and ensure that the disclosures are sufficiently clear and unambiguous, and that no conflict of interest exists, before entering into, renewing, or extending their contract.

5. Fiduciary responsibilities with respect to PBMs and EBCs

72. The fiduciaries of a prescription-drug plan have control over the plan’s expenses, formulary, and choice of third-party service providers (including PBMs and EBCs). The fiduciaries have control over the formulary, including which drugs will be covered by the plan and which tier of the formulary any covered drug will be placed. The fiduciaries are responsible for

hiring third-party service providers, for negotiating the terms of their agreements with the third-party service providers (including drug prices), and for exercising continued oversight over any aspect of the plan for which a third-party service provider is contractually responsible.

73. These fiduciary decisions have the potential to dramatically affect the amount of money the plan pays for prescription drugs. Accordingly, fiduciaries of prescription-drug plans must engage in a rigorous process to manage the plan's formulary, oversee any formulary management performed by a third-party vendor, and ensure that the plan pays no more than reasonable amounts for prescription drugs. This is particularly true for Fortune 50 companies like Johnson and Johnson with tens of thousands of employees on their plans, which have the bargaining power to obtain the most favorable terms from its third-party vendors.

74. When fiduciaries agree to overpay for prescription drugs, employees—and especially the sickest employees—bear much of the burden.

75. First, employees may be responsible for the entire cost of their prescription drugs until they meet their deductible, and then may be responsible for a co-pay or co-insurance amount thereafter. Accordingly, if plan fiduciaries agree to inflated prices for prescription drugs, the employees or beneficiaries receiving those drugs may be required to pay some or all of those inflated prices out-of-pocket. Moreover, a co-insurance amount is often calculated as a percentage of the *pre-rebate* (gross) price, so the employee's out-of-pocket responsibility ends up being a higher percentage of the net price than stated in the plan documents.

76. Second, the amounts that a health plan spends on prescription drugs directly affects the premiums that all plan members must pay for the prescription-drug portion of their benefit plans. Accordingly, if plan fiduciaries agree to inflated prices for prescription drugs, they pass

those inflated prices on to all employees and plan members—even those who did not receive any prescription drugs—through increased premiums.

77. Third, employers often pass higher healthcare costs on to their employees in the form of depressed wages. In a recent report, the Congressional Budget Office noted that “[e]mployers’ spending on health insurance represents a large part of their employees’ nonwage compensation, so employers generally take actions to offset increases in health insurance spending in order to maintain their profits.” The CBO also cited a recent study finding that increased healthcare spending by employers was “associated with a rise in employees’ out-of-pocket costs, an increase in the use of high-deductible health plans, and slower wage growth for employees.” UC Berkeley researchers summarized recent academic research on this topic: “Increases in health care costs are coming out of workers’ pockets one way or another. . . . When health care costs rise, employers can respond in a variety of ways, such as by increasing worker premium contributions, increasing deductibles or copayment amounts, reducing employment, or increasing their own premium contributions while reducing or limiting wage growth accordingly.”

D. Specialty Drugs

78. Some drugs, whether brand or generic, are classified as “specialty” drugs. As originally envisioned, the “specialty” designation referred to expensive branded drugs used to treat complex or rare chronic conditions, required special handling or care, and historically were available only at hospitals, doctors’ offices, or specialty pharmacy locations where the patient could receive specialized instruction from a medical professional.

79. Today, however, the “specialty” designation is largely arbitrary. There is no universal standard or agreement regarding what qualifies as a “specialty” drug. Indeed, the three largest PBMs disagree about whether any particular drug is a “specialty” drug about 50% of the time:

80. However defined, there is no question that specialty drugs are a major driver of prescription-drug spending. According to numerous industry experts, specialty drugs account for approximately half of all pharmacy spending, with total non-discounted spending in 2022 at approximately \$324 billion (compared to \$311 billion for non-specialty).

81. The classification of a generic drug as a “specialty” drug can have a major impact on the price the plan will be required to pay for that drug because, as suggested in the pricing example above, many plans agree to pay to traditional PBMs rates for “specialty” drugs that are higher (*i.e.*, have a lower discount from AWP) than the prices they pay for non-specialty drugs. Because there is no definitive set of objective factors to determine whether any given drug is a specialty drug, the classification of a drug as “specialty” can be the subject of negotiations between plan fiduciaries and PBMs, as is the relative roles of the plan fiduciaries and the PBM in making those classification decisions.

82. Many traditional PBMs also own their own mail-order “specialty” pharmacies. For example, the PBM CVS Caremark owns CVS Specialty, the PBM Express Scripts owns Accredo, and the PBM OptumRx owns Optum Specialty Pharmacy. These PBM-owned “specialty”

pharmacies are typically mail-order pharmacies that do not provide the kind of in-person support that a medical professional would offer at a traditional specialty pharmacy. Instead, the defining feature of these PBM-owned “specialty” pharmacies is merely (and circularly) that they dispense the drugs that the PBM itself deems “specialty.”

83. An arrangement in which a plan’s members are incentivized or required to obtain “specialty” drugs only from the PBM’s own “specialty” pharmacy provides powerful incentives for PBMs to designate generic drugs as “specialty” drugs and/or to inflate the prices of specialty drugs. The PBM’s costs are limited to its pharmacy’s actual acquisition cost of the drug from the wholesaler (which is typically even lower than the MAC price), and yet it can continue to charge the plan the high AWP-based price designated for “specialty” drugs.

84. This model also incentivizes traditional PBMs to favor generic “specialty” drugs with higher AWPs relative to their actual acquisition costs. If two similar generic “specialty” drugs cost roughly the same for the PBM’s pharmacy to acquire, the PBM will be incentivized to favor the one with a higher AWP, as that will maximize the spread between the AWP-based price it receives from the plan and its actual acquisition cost. The PBM thus might include only the drug with the higher AWP on its formulary, forcing the plan and its members to pay more but offering no benefit other than profit for the PBM.

85. “Specialty” drugs can be a major driver of costs for a prescription-drug plan. While specialty drugs make up a small percentage of overall prescriptions, they often account for about 50% of a prescription-drug plan’s overall spend. Prudent fiduciaries negotiate favorable contract terms regarding specialty drugs to avoid paying excessive amounts for generic-specialty drugs, closely manage their specialty drug expenditures, closely supervise their PBMs’ treatment and

designation of specialty drugs, and make changes to their prescription-drug plans as necessary to fulfill their fiduciary obligations.

86. Some PBMs offer services focused specifically on specialty drugs. In this kind of arrangement, a plan uses a traditional PBM for most of its prescription-drug needs, but carves out management of all specialty drugs to a specialty-focused PBM. In the specialty PBM carve-out model, responsibility for the entire specialty benefit is carved out to a PBM with a focus on, and expertise in, management of specialty drugs. These specialty PBMs—who typically use the pass-through model—can incorporate all aspects of specialty drug management, including claims processing, specialty formulary, and specialty pharmacy network management. Specialty carve-out PBMs do not need to own a specialty pharmacy and have no financial incentive to artificially promote greater or more expensive drug use—and, as a result, offer substantial savings to plan and beneficiaries. Many large companies use the specialty carve-out model for their prescription-drug plans. For example, DuPont carved out specialty drugs from its contract with CVS Caremark, and contracted with the pass-through PBM Archimedes to manage its specialty-drug program. Similarly, Signet Jewelers carved out specialty drugs from its contract with the traditional PBM OptumRx and contracted with Archimedes to manage its specialty-drug program.

87. Plan fiduciaries must be cognizant of PBMs' self-interest in maximizing their own profits, and not simply accede to PBMs' preferences without conducting an independent investigation or considering alternatives. For example, instead of accepting a PBM's request that beneficiaries be steered to fill their "specialty" drug prescriptions at the PBM's own pharmacy, fiduciaries must consider whether beneficiaries (and the plan writ large) would be better off if they were permitted or encouraged to fill their prescriptions at a broader range of pharmacies. Plan

fiduciaries must also engage in a prudent decision-making process with respect to whether to carve out their specialty-drug program from their broader PBM contract.

E. Formulary Management - Brand vs. Generic

88. When a pharmaceutical company discovers or designs a potential new drug, it incurs significant cost in doing research, development, and clinical trials. As part of the process, the pharmaceutical company obtains a patent for the drug. In the United States, patents for brand-name drugs generally last 20 years. When the brand-name drug is the only version available on the market, the price is often quite high because the pharmaceutical company seeks to cover the cost of the research, development, and clinical trials of the drug, and then turn a profit.

89. Once the patent on the brand-name drug expires, other pharmaceutical companies may produce their own version of the drug. These versions are known as the “generic” versions. The companies that produce generic versions of a drug are able to sell them for much less than the brand-name drug, as they did not incur any costs for research or clinical trials. There is no limit to the number of generic versions of a drug that can be produced, so there are often several pharmaceutical companies that will produce generic versions of a brand-name drug. This creates competition in the market and drives prices lower.

90. Prudent fiduciaries of prescription-drug plans will replace brand-name drugs on the formulary when lower-cost, FDA-approved generics become available. Alternatively, prudent fiduciaries will add the generics to the formulary at lower prices and then incentivize plan beneficiaries to obtain these lower-cost generics instead of the more expensive brand-name drugs. As CVS’s chief medical officer has put it, “[i]n situations where the medications are equivalent, from a medical point of view it makes sense to do this in order to reduce cost.”

91. Prudent fiduciaries are aware of the conflicts of interest that PBMs have in making formulary decisions. The manufacturers of brand-name drugs typically pay rebates or other

financial concessions to PBMs when their drugs are included on formularies and dispensed by the PBM's prescription-drug plan clients. PBMs may pass some of these rebates through to the plan, but any retained amounts represent revenue for the PBM. From the PBM's perspective, an expensive brand-name drug from which the PBM is paid a rebate or other financial concession is more lucrative than a generic drug for which the manufacturer pays no rebate or a smaller rebate. PBMs therefore may be incentivized to include higher-priced drugs on a plan's formulary to maximize their own profits, even when including a lower-priced drug (*e.g.*, a generic) would be more cost-effective for the plan. Prudent plan fiduciaries are aware of these dynamics and ensure that formulary decisions are being made in the interest of the plan and its beneficiaries rather than third-party vendors with conflicts of interest.

IV. DEFENDANTS BREACHED THEIR FIDUCIARY DUTIES

A. Defendants Mismanaged The Plans' Specialty-Drug Program

92. Defendants imprudently managed the Plan's specialty-drug program, particularly with respect to generic-specialty drugs. Based on a detailed analysis of standard formularies, pharmacy benefit expert opinions, and public reporting, generic-specialty drugs account for a very substantial portion of prescription-drug spending.

93. Defendants' mismanagement has caused the Plans and their beneficiaries to vastly overpay for generic-specialty drugs and has cost the Plans and their beneficiaries millions of dollars over the Class Period.

94. On one or more occasions during the class period, Defendants entered into and/or renewed a contract with Express Scripts, a traditional PBM, under which Express Scripts agreed to serve as the Plans' PBM and Defendants agreed (or caused the Plans to agree) to various terms regarding drug prices, formulary management, pharmacy networks, and administrative services.

95. On information and belief, the process by which Defendants chose Express Scripts as the Plans' PBM was not an open RFP process and did not consider the full range of available options for PBM services.

96. On information and belief, Defendants used Aon (previously known as Aon Hewitt) as their broker, or EBC. According to public reporting, Aon receives indirect compensation from certain PBMs in connection with Aon's clients use of those PBMs. Accordingly, Defendants allowed their selection of a PBM for the Plans to be guided or managed by a broker with a potential conflict of interest—*i.e.*, a financial interest in steering Defendants toward certain PBMs or including certain provisions in the PBM contract, in ways not necessarily correlated with the financial and other interests of the Plans and their beneficiaries.

97. The contract between the Plans and Express Scripts is not public. However, an analysis of the prices that Defendants agreed to make the Plans and their beneficiaries pay for generic-specialty drugs reveals a staggering markup from acquisition costs for those drugs, a staggering markup from the prices that would be charged by a "pass-through" PBM, and a staggering markup from prices charged to comparable plans by other traditional PBMs. These prices greatly exceed the prices that any prudent fiduciary would agree to pay.

98. As described in more detail below, on average, Defendants agreed to make the Plans and their beneficiaries pay a markup of **498%** above what it costs for a pharmacy to acquire those same generic-specialty drugs. Most of these markups represent profit for the PBM, with no corresponding benefit for the Plans or their beneficiaries. That average markup is substantially higher than what a pass-through PBM would charge and substantially higher than even traditional PBMs provide to their other clients. Indeed, Defendants squandered their bargaining power and, for many drugs, agreed to make the Plans and their beneficiaries pay more than someone would

pay if they just walked into a retail pharmacy and filled the same prescription *without* using insurance. Put another way, it would be more prudent for Defendants to tell employees *not* to use their insurance and instead to give them a company credit card that the Plans were responsible for paying. This despite Defendants having significant bargaining power as a Fortune 50 company with over 50,000 U.S. employees.

99. The federal government's Centers for Medicare and Medicaid Services compiles the National Average Drug Acquisition Cost ("NADAC") database. The NADAC database uses survey data to determine the average "acquisition cost" for many prescription drugs. The "acquisition cost" is the amount that a pharmacy pays to acquire prescription drugs from their suppliers (typically wholesalers who purchase directly from manufacturers). A prescription drug's NADAC is a widely-accepted benchmark that describes the average price that pharmacies pay to acquire that drug. Accordingly, the difference between a prescription drug's NADAC and the price that a prescription-drug plan and its beneficiaries pay for that prescription drug represents the markup to which the plan's fiduciaries have agreed.

100. Abacavir-lamivudine is a generic HIV antiviral drug. According to the NADAC database, the acquisition cost for pharmacies for abacavir-lamivudine is \$2.01 per tablet, or \$180.90 for a 90-unit prescription. Defendants, however, agreed to make the Plans and their beneficiaries pay Express Scripts **\$1,629.40** for each 90-unit abacavir-lamivudine prescription. This price reflects an **800.72%** markup.

101. Abacavir-lamivudine is widely available at retail (non-specialty) pharmacies, including Rite Aid, Walmart, ShopRite, Wegmans, Costco, Walgreens, Duane Reade, CVS, Target, and others. The cash price (*i.e.*, the price a person would pay if she did not use insurance) for an abacavir-lamivudine prescription at *every one* of these pharmacies is lower than the price

Defendants agreed to make the Plans and their beneficiaries pay. While Defendants agreed to a price of **\$1,629.40** for each 90-day abacavir-lamivudine prescription, the same prescription is available from Rite Aid for \$123.82, Walmart for \$127.32, ShopRite for \$154.70, Wegmans for \$175.47, or from Cost Plus Drugs online pharmacy for \$210. No prudent fiduciary would agree to make its plan and beneficiaries pay a price that is thirteen times higher than the price at which the drug is widely available.

102. Abiraterone acetate is a generic drug used to treat prostate cancer. According to the NADAC database, the average acquisition cost for pharmacies for abiraterone acetate is \$0.92 per 250mg tablet, or \$82.80 for a 90-unit prescription. Defendants, however, agreed to make the Plans and their beneficiaries pay Express Scripts **\$5,375.26** for each 90-unit abiraterone acetate prescription. This price reflects a **6,391.86%** markup.

103. Abiraterone acetate is widely available at retail (non-specialty) pharmacies, including Rite Aid, Walmart, ShopRite, Wegmans, Costco, Walgreens, Duane Reade, CVS, Target, and other pharmacies. The cash price for an abiraterone acetate prescription at *every one* of these pharmacies is lower than the price Defendants agreed to make the Plans and their beneficiaries pay to Express Scripts. While Defendants agreed to a price of **\$5,375.26** for each 90-unit abiraterone acetate prescription, the same prescription is available from Rite Aid for \$105.87, Walmart for \$111.19, Wegmans for \$115.30, or from Cost Plus Drugs online pharmacy for \$90.50. No prudent fiduciary would agree to make its plan and beneficiaries pay a price that is almost sixty times higher than the price at which the drug is widely available.

104. Imatinib is a generic oral therapy medication used to treat certain types of leukemia and bone marrow disorders. According to the NADAC database, the average acquisition cost for pharmacies for imatinib is \$1.88 per 400mg tablet, or \$169.20 for a standard 30-unit prescription. Defendants, however, agreed to make the Plans and their beneficiaries pay Express Scripts **\$16,398.17** for each 90-unit imatinib prescription. This price reflects an **9,591.59%** markup.

105. Imatinib is widely available at retail (non-specialty) pharmacies, including Rite Aid, ShopRite, Wegmans, Acme, Costco, Walgreens, Duane Reade, CVS, Target, and other pharmacies. The cash price for an imatinib prescription at *every one* of these pharmacies is lower than the price Defendants agreed to make the Plans and their beneficiaries pay to Express Scripts. While Defendants agreed to a price of **\$16,398.17** for each 90-unit imatinib prescription, the same prescription is available from Rite Aid for \$155.42, ShopRite for \$249.83, Wegmans for \$249.83, Acme for \$261.08, or from Cost Plus Drugs online pharmacy for \$94.10. No prudent fiduciary

would agree to make its plan and beneficiaries pay a price that is one-hundred times higher than the price at which the drug is widely available.

106. Fingolimod is a generic medication used to treat multiple sclerosis. According to the NADAC database, the average acquisition cost for pharmacies for fingolimod is \$9.74 per 0.5mg capsule, or \$876.60 for a 90-unit prescription. Defendants, however, agreed to make the

Plans and their beneficiaries pay Express Scripts **\$13,325.83** for each 90-unit Fingolimod prescription. This price reflects an **1,420.7%** markup.

107. Fingolimod is widely available at retail (non-specialty) pharmacies, including Wegmans, ShopRite, Rite Aid, Walmart, Costco, Acme, Walgreens, Duane Reade, CVS, Target, and other pharmacies. The cash price for a fingolimod prescription at *every one* of these pharmacies is lower than the price Defendants agreed to make the Plans and their beneficiaries pay to Express Scripts. While Defendants agreed to a price of **\$13,325.83** for each 90-unit fingolimod prescription, the same prescription is available from Wegmans for \$648, ShopRite for \$677.68, Rite Aid for \$891.63, Walmart for \$895.63, or from Cost Plus Drugs online pharmacy for \$875.09. No prudent fiduciary would agree to make its plan and beneficiaries pay a price that is twenty times higher than the price at which the drug is widely available.

108. Temozolomide is a generic cancer drug. According to the NADAC database, the average acquisition cost for pharmacies for temozolomide is \$13.84 per 140mg capsule, or \$1,245.60 for a 90-unit prescription. Defendants, however, agreed to make the Plans and their beneficiaries pay Express Scripts **\$15,332.32** for each 90-unit temozolomide prescription. This price reflects an **1,130.92%** markup.

109. Temozolomide is widely available at retail (non-specialty) pharmacies, including Wegmans, ShopRite, Rite Aid, Costco, Acme, Walgreens, Duane Reade, CVS, Target, and other pharmacies. The cash price for a temozolomide prescription at *every one* of these pharmacies is lower than the price Defendants agreed to make the Plans and their beneficiaries pay to Express Scripts. While Defendants agreed to a price of **\$15,332.32** for each 90-unit temozolomide prescription, the same prescription is available from ShopRite for \$1,085, Wegmans for \$1,086, Costco for \$1,348, Rite Aid for \$2,543, or from Cost Plus Drugs online pharmacy for \$371.30. No prudent fiduciary would agree to make its plan and beneficiaries pay a price that is forty times higher than the price at which the drug is widely available.

110. Teriflunomide is a generic drug used to treat certain forms of multiple sclerosis. According to the NADAC database, the average acquisition cost for pharmacies for generic teriflunomide is \$0.91 per 14mg tablet, or \$81.90 for a 90-unit prescription. Defendants, however, agreed to make the Plans and their beneficiaries pay Express Scripts **\$10,239.69** for each 90-unit teriflunomide prescription. This price reflects an **12,403%** markup.

111. Teriflunomide is widely available at retail (non-specialty) pharmacies, including Wegmans, ShopRite, Walmart, Rite Aid, Costco, Acme, Walgreens, Duane Reade, CVS, Target, and other pharmacies. The cash price for a teriflunomide prescription at *every one* of these pharmacies is lower than the price Defendants agreed to make the Plans and their beneficiaries pay to Express Scripts. While Defendants agreed to a price of **\$10,239.69** for each 90-unit teriflunomide prescription, the same prescription is available from Wegmans for \$40.55, ShopRite for \$41.05, Walmart for \$76.41, Rite Aid for \$77.41, or from Cost Plus Drugs online pharmacy for \$28.40. No prudent fiduciary would agree to make its plan and beneficiaries pay a price that is three-hundred times higher than the price at which the drug is widely available.

112. The examples above are among the worst instances of Defendants' mismanagement, but they are illustrative of Defendants' failure to negotiate with Express Scripts for prices that are anywhere close to acquisition cost. In an effort to measure aggregate overcharges of generic-specialty drugs, Plaintiff requested the formulary used by her prescription-drug benefits plan, administered by Express Scripts. Plaintiff was informed that she was not allowed access to her formulary. Accordingly, a publicly available Express Scripts formulary was used. That formulary listed a total of 95 generic drugs that were classified as specialty (including each of the above). CMS has published a recent NADAC for 42 of those drugs (44%), providing a standardized benchmark against which to assess the prices that Defendants negotiated on behalf of the Plans and their beneficiaries. Across those 42 drugs, Defendants' negotiated prices reflect, on average, a markup of **498%** above pharmacy acquisition cost. Put another way, the total acquisition cost for one 90-day prescription of each of the 42 drugs is \$28,050.53, but Defendants agreed to prices that would result in one 90-day prescription of each of the 42 drugs costing the Plans and their beneficiaries *six times as much*, or \$167,604.88. No prudent fiduciary would agree to pay their PBM an average 498% markup above cost.

113. The following table lists the 42 generic-specialty drugs on the Express Scripts formulary for which the NADAC is publicly available, and then compares the prices Defendants agreed to make the Plans and their beneficiaries pay for a 90-day supply with the acquisition cost of the same drug, quantity, and dosage for the average pharmacy:

<u>Generic Drug Name</u>	<u>Quantity</u>	<u>Pharmacy Acquisition Cost</u>	<u>Price J&J Agreed To Pay</u>	<u>Markup %</u>

114. Defendants' prices for the generic-specialty drugs for which CMS *does not* publish a NADAC (i.e., those not in the table above) are just as unreasonable. While NADAC is not available as a benchmark for average pharmacy acquisition costs, many of those drugs are available at retail or online pharmacies for prices far, far lower than Defendants agreed to make the Plans and their beneficiaries pay, indicating that the acquisition costs are far, far lower as well, and that Defendants agreed to unreasonable markups for those drugs. Four examples follow:

115. A 90-day supply of bexarotene gel (generic for Targretin) is available for a cash price (*i.e.*, without using insurance) of \$11,241 at Rite Aid, \$12,378 at Wegmans, \$21,708 at Walgreens, and \$30,920.21 at Cost Plus Drugs. Defendants agreed to make the Plans and their beneficiaries pay \$80,028.50.

116. A 90-day prescription of fosamprenavir (generic for Lexiva) is available for a cash price of \$457.14 at Rite Aid, \$476.94 at Wegmans, \$840.12 at Walgreens, and \$1,217.80 at Cost Plus Drugs. Defendants agreed to make the Plans and their beneficiaries pay \$2,304.97.

117. A 90-day supply of betaine powder (generic for Cystadane) is available for a cash price of \$742.04 at Wegmans, \$1,315 at Walgreens, \$1,517 at Rite Aid, and \$1,784 at CVS. Defendants agreed to make the Plans and their beneficiaries pay \$4,438.24.

118. A 300-tablet prescription of tiopronin (generic for Thiola) is available for a cash price of \$1,208 at Wegmans, \$2,142 at Walgreens, \$2,260 at CVS, and \$2,469 at Rite Aid. Defendants agreed to make the Plans and their beneficiaries pay \$7,910.99 if they obtain the

prescription at Accredo, and \$7,165.24 if they obtain it at Walgreens. To repeat: if a beneficiary of the Plans fills a prescription for tiopronin at Walgreens and *does not use her insurance*, Walgreens will charge only \$2,142. But if she fills the exact same prescription at the exact same Walgreens and *uses her Johnson and Johnson health insurance*, Defendants agreed to make her and the Plans pay a combined \$7,165.

119. For many or most of the generic-specialty drugs on the Plans' formulary, there is no medical necessity for that designation. As demonstrated above, most of these drugs are available at traditional retail pharmacies, do not require handling that traditional retail pharmacies are unable to provide, and do not require the kinds of medical services traditionally provided by specialty pharmacies. For many or most of the generic-specialty drugs on the Plans' formulary, no special handling is provided by the pharmacies at which plan beneficiaries obtain generic-specialty drugs, including at Accredo, which is owned by Express Scripts. The "specialty" designation serves little purpose other than to enrich the Plans' PBM at the expense of the Plans and their beneficiaries.

120. The Plans' extraordinarily high prices for generic-specialty drugs are not offset by special discounts from Express Scripts for other kinds of drugs. For the 50 most common high-cost *branded* drugs (including Humira, Ozempic, Trulicity, Xarelto, and many more), Defendants agreed to a roughly 2% markup over pharmacy acquisition cost for those drugs. These prices, while reasonable, are consistent with industry standards and do not reflect special discounts that would offset or justify the atypical and extraordinary overcharges for generic specialty drugs under the Plans. On information and belief, Defendants' failure to act prudently in negotiating the prices of generic-specialty drugs has cost the Plans millions of dollars each year, which has not been offset by any corresponding discounts on other drugs.

B. Defendants Mismanaged Other Aspects of Their Prescription-Drug Program

121. Defendants have also mismanaged other aspects of their prescription-drug program, to the detriment of the Plans and their beneficiaries.

122. One way in which Defendants have mismanaged the Plans is by agreeing to steer beneficiaries toward Express Scripts’ mail-order pharmacy Accredo, even though Accredo’s prices are routinely higher than retail pharmacies charge for the same drugs. On information and belief, this resulted from Defendants’ lack of oversight of Express Scripts and the foreseeable ways in which it would attempt to enrich itself and its own pharmacy at the Plans’ expense. A prudently administered plan would steer beneficiaries toward the option with a lower overall price, or at least would not allow a plan vendor (*i.e.*, Express Scripts) to self-interestedly steer beneficiaries toward the option with a higher overall price.

123. For example, when a beneficiary searches the Plans’ online portal for bexarotene, she is told that her out-of-pocket responsibility for one 90-day prescription would be \$1,975 if she fills the prescription at Walgreens, but \$250 cheaper if she instead fills the prescription through Accredo. The cost to the Plans, however, is almost \$6,000 higher through Accredo. Even setting aside that the prices Defendants agreed to pay to Walgreens and Accredo are both excessive for a generic drug, Defendants imprudently steer beneficiaries toward an option that costs the Plans almost \$6,000 more per prescription while enriching the Plans’ PBM by roughly that same amount.

Bexarotene 75 Mg Capsule	
Pharmacy: Walgreens #03291	
Days supply: 90	
Quantity: 90	
Total medication cost:	\$ 13,716.14
Plan pays*:	\$ 11,741.14
You pay:	\$ 1,975.00

*The cost to your plan does not include any rebates or other incentives your plan may receive from your use of this medication. Express Scripts may retain or share some rebates with your plan. The cost your plan pays is an approximation and is subject to change.	

124. This discrepancy is even more pronounced for bexarotene in gel form, where beneficiaries are disincentivized to order through Walgreens at a total cost of \$23,587.56 and instead incentivized to order from Accredo at a total cost of \$80,028.50 for one 90-day prescription:

Bexarotene 1% Gel (60 g)

*The cost to your plan does not include any rebates or other incentives your plan may receive from your use of this medication. Express Scripts may retain or share some rebates with your plan. The cost your plan pays is an approximation and is subject to change.	

125. Put differently, Defendants encourage an employee who is prescribed this form of bexarotene to select an option that would cost the Plan an additional \$56,440.94 *per quarter*—most if not all of which will Express Scripts will simply pocket as revenue—with no cognizable benefit to the Plans or their beneficiaries.

126. The same is true for tiopronin, a generic drug used to help prevent kidney stones. Defendants steer beneficiaries toward Accredo, even though a 90-day prescription through Accredo is more expensive. Defendants imprudently steer beneficiaries toward an option that costs the Plans almost \$750 more per prescription while enriching the Plans’ PBM by that same amount.

Tiopronin 100 Mg Tablet (100 each)	
Pharmacy: Walgreens #03291	
Days supply: 90	
Quantity: 300

Applied to your out-of-pocket:	\$ 1,725.00
<hr/>	
Cost per day:	\$ 19.17
Your plan pays about 78% of the cost for this medicine.	

127. The same holds true even for lower-priced drugs. After a beneficiary of the Plans meets her annual deductible, she remains responsible for a co-insurance percentage that differs based on where she fills the prescription. Plan documents notify her that if she fills the prescription from Accredo, her co-insurance will amount to 15% of the drug's cost, while if she fills the prescription from a retail pharmacy, her co-insurance will increase to 20%. Defendants thus steer beneficiaries to Accredo pharmacy by advertising that their coinsurance responsibility will be lower. For many drugs, however, this is a bad deal for both the Plan and the beneficiaries, because Accredo's prices are often substantially higher than retail pharmacies. For example, if Plaintiff filled a 90-day prescription of Zidovudine (100mg) from Accredo, the Plans would pay about \$116 for (after accounting for the beneficiary's share), but if she filled it at her local Hometown Pharmacy, the Plans would pay only \$70.52.

128. Another way in which Defendants have mismanaged the plan is by failing to disincentivize the use of high-priced branded drugs on the Plans' formulary in favor of lower-priced generics. On information and belief, Defendants made these decisions based in whole or in part on their PBM's conflicted recommendations—which were often based on which drugs would be most profitable for the PBM rather than which drugs would be most cost-effective for the Plans—and not based on their own independent and ongoing assessment of the formulary. As a result, the Plans and its beneficiaries suffered losses compared to prudent alternatives.

129. Teriflunomide is the generic form of the branded drug Aubagio. As noted above, the acquisition cost for pharmacies for generic teriflunomide is \$0.91 per 14mg tablet, or \$81.90 for a 90-unit prescription. Defendants, however, agreed to make the Plans and their beneficiaries pay Express Scripts **\$10,239.69** for each 90-unit generic teriflunomide prescription. Defendants agreed to make the Plans and their beneficiaries pay even higher amounts for branded Aubagio,

which is chemically identical: The Plans and their beneficiaries must pay \$27,672.82 for a 90-day prescription of Aubagio. Even setting aside that neither price is particularly good, a prudent fiduciary would steer beneficiaries toward the lower-priced generic by, *e.g.*, offering a lower out-of-pocket responsibility for the generic or replacing Aubagio on the formulary. Instead, however, both drugs are covered on the formulary and beneficiaries’ out-of-pocket responsibilities are the same for both drugs.

Express Scripts may retain or share some rebates with your plan. The cost your plan pays is an approximation and is subject to change.	

130. The same is true for the drug dimethyl fumarate, which is the generic form of the branded drug Tecfidera. Dimethyl fumarate is inexpensive. According to the NADAC database, the average acquisition cost for pharmacies for generic dimethyl fumarate is \$0.67 per 240mg tablet, or \$120.60 for a 180-unit prescription. Defendants, however, agreed to make the Plans and their beneficiaries pay Express Scripts \$89.28 per 240mg tablet, or **\$16,070.94** for each 180-unit prescription. This price reflects an **13,225%** markup. Defendants agreed to make the Plans and their beneficiaries pay even higher amounts for branded Tecfidera, which is chemically identical: The Plans and their beneficiaries must pay \$27,626.21 for a 180-unit prescription of Tecfidera. Even setting aside that neither price is particularly good, a prudent fiduciary would steer beneficiaries toward the lower-priced generic by, *e.g.*, offering a lower out-of-pocket responsibility

for the generic or replacing Tecfidera on the formulary. Instead, however, both drugs are covered on the formulary and beneficiaries’ out-of-pocket responsibilities are the same for both drugs.

Dimethyl Fumarate 240 Mg Capsule,Delayed Release (enteric coated)	
Pharmacy: Delivery	
Days supply: 90	
Quantity: 180

131. The same is true for the drug ambrisentan, which is the generic form of the branded drug Letairis, which is used to treat pulmonary arterial hypertension. Defendants agreed to make the Plans and their beneficiaries pay Express Scripts \$22,989.78 for each 90-unit ambrisentan prescription but even more—\$37,968.16—for a 90-unit prescription of Letairis, which is chemically identical. Even setting aside that neither price is particularly good, a prudent fiduciary would steer beneficiaries toward the lower-priced generic by, *e.g.*, offering a lower out-of-pocket responsibility for the generic or replacing Letairis on the formulary. Instead, however, both drugs are covered on the formulary and beneficiaries’ out-of-pocket responsibilities are the same for both drugs.

C. Defendants' Fiduciary Violations

132. Defendants failed to engage in a prudent and reasoned decision-making process before agreeing to a PBM contract that requires the Plans and their beneficiaries to pay Express Scripts the above-described prices. Prudent plan fiduciaries would have taken any of several available steps to reduce the plan's costs. Because of the extraordinarily high prices to which Defendants agreed, the Plans paid substantially more for prescription drugs than they would have absent the conduct described herein. Likewise, beneficiaries of the Plans paid more in premiums and out-of-pocket costs than they would have absent the conduct described herein.

133. *First*, even setting aside whether prudent fiduciaries would have contracted with Express Scripts for all of their prescription-drug benefits, Defendants failed to adequately negotiate the Plans' contract with Express Scripts and failed to prudently exercise their rights under that contract. As a Fortune 50 employer with tens of thousands of employees, JnJ has substantial bargaining power with vendors, including PBMs. Prudent fiduciaries would have—and other similarly sized companies' plan fiduciaries have—used that bargaining power to demand and obtain substantially better contractual terms, including prices. Prudent fiduciaries also would have—and Defendants could have—more closely supervised Express Scripts' formulary management and more effectively exercised their own rights to make decisions about formulary inclusion and placement. Had Defendants adequately negotiated with Express Scripts and exercised their rights under the Plans' contracts, the Plans and their beneficiaries would have saved millions of dollars.

134. *Second*, Defendants failed to adequately consider contracting with a different traditional PBM or a pass-through PBM, instead of Express Scripts, for all of the Plans' prescription-drug needs. Fiduciaries of similar plans across the country have conducted comprehensive plan reviews and concluded that their plans' interests were best served by

switching from a traditional PBM to a pass-through PBM. This option was equally available to Defendants. Given the extremely high prices that Defendants agreed to pay, they too would have been better served by switching from a traditional PBM to a pass-through PBM, and those benefits would have been clear at the time of contracting. Defendants failed to adequately solicit bids from pass-through PBMs or did solicit such bids but failed to act in the best interests of the Plans and their beneficiaries when choosing among competing bids. A prudent process would have made clear that the Plans would save a substantial amount of money by contracting with one or more pass-through PBMs instead of entering into and/or renewing their contract with Express Scripts, without meaningfully (or at all) sacrificing availability of drugs, scope of pharmacy network, quality of service, convenience, or any other factor. Had Defendants adequately considered alternative PBMs and made the prudent choice at the outset, the Plans and their beneficiaries would have saved millions of dollars.

135. *Third*, Defendants failed to adequately consider carving out their specialty-drug program from their broader contract with Express Scripts. As described below, fiduciaries of similar plans across the country have conducted comprehensive plan reviews and concluded that their plans' interests were best served by carving out specialty pharmacy benefits from their overall PBM contract. This option was equally available to Defendants. A prudent process would have revealed that the Plans would save money by carving out the specialty-drug program from the Plans' contract with Express Scripts. Had Defendants adequately considered this option and made the prudent choice at the outset, the Plans and their beneficiaries would have saved millions of dollars.

D. A Prudent Decision-Making Process Would Have Prevented Defendants' Fiduciary Breaches.

136. Prominent media outlets, industry publications, governmental entities, and research organizations have long reported on the PBM tactics and conflicts of interest detailed above, and have warned plan administrators about the financial harms that result when they fail to act prudently and instead allow PBMs to enrich themselves at the expense of the plans and their beneficiaries. Prudent fiduciaries would heed this advice—and many prominent companies' fiduciaries have heeded this advice—by taking steps to protect their plans from these widely reported tactics. Defendants knew or should have known that their PBM contracts unreasonably failed to heed these warnings and failed to protect the Plans from these widely reported tactics, despite having ample bargaining power. Defendants' failure to act prudently and their decision to enter into unreasonable arrangements with their PBM cost the Plans and their beneficiaries millions of dollars during the class period.

137. As early as 2010, the International Foundation of Employee Benefit Plans was reporting on the ways in which PBMs use specialty drugs to extract profits from plans. One notable article written by a PBM expert warned that “most PBMs increase their profit margins by buying specialty drugs at low prices and selling them at far higher prices, rather than using their marketplace leverage to decrease their clients' costs.” The article advised plans to “require your PBM to provide pass-through pricing for every specialty drug dispensed” and to “invoice your plan based on the PBM's actual acquisition cost.” The article also recommended that plans “can—and should—position [themselves] contractually to carve out specialty drugs after the contract begins, ensuring that you can consistently obtain the best minimum guaranteed discount available, throughout the life of the contract.” The article advised plans that they should “make sure to eliminate ... exclusivity provisions and replace them with provisions that allow you to carve out

specified services, including the provision of some or all specialty drugs, and the right to negotiate contracts with alternative specialty drug pharmacies.”

138. A 2013 article in Fortune Magazine reported that traditional PBMs “effectively pad bills by \$8 to \$10 a prescription” and, quoting a consultant who had audited more than 100 PBM contracts, that “[t]he nation’s employers are being taken for a ride” by traditional PBMs.

139. A 2017 article reported that “[c]ontrolling the formulary gives PBMs a crucial point of leverage over the system” and warned that “PBMs place drugs on their formularies based on how high a rebate they obtain, rather than the lowest cost or what is most effective for the patient.” The same article warned that “[t]he MAC list that goes to the pharmacy does not necessarily match the one for the health plan. By charging the plan sponsor more than they pay the pharmacy in a reimbursement, PBMs can make anywhere from \$5 to \$200 per prescription.”

140. A 2017 article from Bloomberg titled “Drug Costs Too High? Fire the Middleman” reported that PBMs “keep about 10 percent of the rebates from manufacturers vying to get their medicines covered; they sometimes charge health-plan clients more for generics than they reimburse the pharmacies dispensing them; and they channel clients to their own specialty or mail-order pharmacies.” The article recounted numerous success stories of companies that had moved away from the traditional PBM model and delivered millions of dollars in savings to their plans and their employees.

141. A 2018 article from Axios reported that PBM contracts are often “written with the PBM’s financial interests in mind” and that “those kinds of provisions can result in lost savings for everyone, especially for small companies and their employees.” The article warned that “[e]ven some of the largest companies think they are protected because they have in-house and outside attorneys vetting contracts, yet that’s not necessarily the case.” The article warns that “a

major tactic to maximize profits” by PBMs is controlling how different drugs are designated on the formulary.

142. A 2018 article from Axios quoted a prominent consultant who warned that “One of the key components of the system is that transition of brand-name drug to generic drug ... [a]nd if you would allow a PBM or any third-party vendor to over-inflate that amount ... you are being set up to lose every time.”

143. A 2018 report by drug price nonprofit 46Brooklyn Research detailed PBMs’ use of spread pricing to reap massive profits, at the expense of payers, on generic imatinib mesylate. As that report explained, payers who agree to pay prices that are determined independently of what PBMs pay to pharmacies “lose all visibility into what their underlying drugs actually cost, handing the keys over to the PBM,” while “the PBM can effectively just sit back as generic prices plummet, knowing that it is under no requirement whatsoever to pass the full extent of those savings back” to the payer.

144. An extensive probe by the Columbus Dispatch, reporting on which began in 2018, revealed “that CVS Caremark routinely billed the state [of Ohio] for drugs at a far higher amount than it paid pharmacies to fill the prescriptions,” retaining “tens of millions of dollars” in spread pricing. Among many other things, the Dispatch reported that the traditional PBM “system has a built-in incentive for CVS Caremark and other PBMs to maximize the price spreads: They get to keep the money” and that “the largest spreads occurred among generic drugs.” The Dispatch’s reporting was picked up and widely reported by national outlets.

145. A 2018 USA Today article about PBMs quoted a prominent consultant describing a supposedly new pricing model by CVS Caremark as follows: “CVS Caremark is using different language only to make it appear that it is being more transparent. And the new pricing approach

also doesn't eliminate rebates on brand-name drugs or spread pricing. When negotiating contracts with manufacturers, CVS Caremark can label manufacturers' payments with whatever labels Caremark wants: rebates, manufacturer fees, health management fees, etc. Therefore, the question is what percentage of total manufacturer payments Caremark passes through."

146. A 2019 article quoted a prominent consultant who identified "[a] lack of clear definitions of types of drugs" as an important issue, and explained that "PBMs often play with the definitions of [specialty] drugs in ways that promote the health of their own bottom line." The consultant advised that a payer "should make its own list of specialty drugs" and "set minimum guaranteed discounts off public prices for each." The same consultant stated: "If you write a better contract, you can eliminate a lot of this stuff."

147. A 2020 report commissioned by The Florida Pharmacy Association and American Pharmacy Cooperative, Inc. warned that "as more brand name specialty drugs ... lose patent exclusivity in the coming years, there is growing risk that the extreme pricing manipulation and steering we have identified on imatinib mesylate could become more commonplace," and recommended moving "to an acquisition cost-based model to mitigate the risk of a dramatic rise in price exploitation on specialty generic drugs."

148. A 2020 report on pharmacy benefits advised that traditional PBMs have "misaligned incentives which can lead to price increases without providing equivalent value for the purchasers of benefits" and advised that "Employers need to: • Think differently about how to manage the pharmacy benefit. • Take action on addressing waste, low-value drugs and excess costs often caused by PBMs and other pharmacy benefit middlemen. • Make ethical and logical decisions over what a drug is worth and the employer's ability to pay – as plan sponsor and

fiduciary, it's critical that dollars are used efficiently for plan beneficiaries. • Focus on innovative approaches to specialty drug management.”

149. A 2021 report prepared by the House Committee on Oversight and Reform Minority Staff warned that “PBMs engage in a number of questionable practices, one of which is spread pricing, in which PBMs pay a pharmacy a lower amount than they report to a health plan sponsor.” The report further stated that PBMs use their control of formularies to “drive patients to more expensive drugs.”

150. A 2022 BenefitsPro article directed at human resources officers advised that “plan sponsors have more power than they may realize when evaluating a PBM,” that “your PBM contract must be free of any ambiguities regarding the PBM’s obligation to act in your best interests at all times,” that plan fiduciaries should “prohibit the PBM from using any internal ‘proprietary’ algorithm that determines whether a drug will be priced as a brand or generic drug,” that plan fiduciaries should “prohibit the MAC Game by requiring the PBM to use the same MAC List to pay the pharmacy and to bill you for generic drugs,” that plan fiduciaries should “make it clear that ... the PBM must pass through and not retain any rebates” and “define the term ‘rebate’ to include any and all remuneration that the PBM receives from drug manufacturers based on your plan’s utilization,” that plan fiduciaries should “require the PBM to ... place drugs on your formulary based on efficacy, safety and the true net cost of the drugs,” and that plan fiduciaries should “audit your PBM to confirm that the PBM has delivered the contracted pricing and has implemented your plan designs correctly.”

151. A February 2022 white paper on specialty drug management reported that “the savings with Specialty PBM Carve-Out can be quite substantial, with savings ranging from 25-50%. Sources of savings go beyond the supply chain elements of rebates and drug discounts to

incorporate benefits of the clinical and coverage model, including a more cost-effective formulary, health economics-based coverage, more rigorous [prior authorization], and more robust copay assistance programs.”

152. A 2022 white paper from the University of Southern California (USC) reported that “U.S. consumers and employers and the government often overpay for generics as pharmacy benefit managers (PBMs) and their affiliated insurer companies game opaque and arcane pricing practices to pad profits.” The paper continues: “Commercial tactics such as spread pricing, copay clawbacks and formularies that advantage branded drugs over less expensive generics have funneled the savings from low-cost generics into intermediaries’ pockets, rather than the pockets of patients.”

153. A 2023 report documented that PBMs regularly decline to replace expensive brand-name drugs on formularies with newly released generics, stating that “PBMs are persistently excluding generic competition from the market, resulting in higher prices and less choice for patients and the healthcare system.” The report explained that “PBMs prefer the high-list price, high-rebate drugs because they benefit from it.”

154. A 2023 article reported on the “flow of money between major consulting conglomerates and PBMs,” and quoted an industry attorney’s statement that “[t]he broker not only gives bad advice to the employer that’s in the broker’s self-interest, but the broker also allows the big PBM to write crazy terms into a contract.” The article further warned employers that “PBMs ... favor brand-name drugs over generic equivalents, delay coverage of new generics and biosimilars, mark up prices of generic drugs, and require employers to use the PBM’s mail-order pharmacy,” all to “boost the PBM’s bottom line.”

155. JnJ has itself made numerous public statements that reveal its knowledge regarding PBM practices and the pharmaceutical industry. In a 2022 court filing, JnJ explained that PBMs “serve as middlemen with an aim towards increasing insurers’ and their own profits by determining which drugs a plan will cover and to what extent they will be covered.”

156. In 2019, a JnJ executive testified to the U.S. Senate that one reason patient out-of-pocket spending on medicines had grown by 54% from 2006 to 2016 was “due to changes in how health insurance is designed and, specifically, how pharmaceutical benefits are managed.” She continued: “[T]oo often these rebates and discounts are not shared with patients, leaving the sickest patients paying higher out-of-pocket costs. We anticipate eliminating rebates could result in lower list prices, provided these rebates and discounts are not replaced with equally high fees or other payments demanded by middlemen. We also strongly advocate that beneficiary copays be based on net price.”

157. In 2023, JnJ wrote to the Pennsylvania Department of Insurance about a practice through which PBMs and health plans alter specialty drugs classifications to avoid regulatory caps on patient out-of-pocket expenses. The letter explained that “PBMs carve out a list of specialty drugs for third-party companies to manage. These third party companies can increase the patient’s copay for the given drug to an artificially high amount—often thousands of dollars per dose.” Yet that is precisely the fate to which Defendants consigned the Plans and JnJ’s tens of thousands of employees.

158. This was avoidable. Throughout the class period, the fiduciaries of other prescription-drug plans took one or more of the steps detailed above and saved their plans and their beneficiaries millions of dollars, with savings that far outweighed any costs (financial or otherwise) of implementation. These options were equally available to Defendants and, on

information and belief, would have likewise resulted in substantial savings for the Plans (in the form of lower payments for prescription drugs) and their beneficiaries (in the form of lower premiums, lower deductibles, lower coinsurance, lower copays, and/or higher wages or greater wage growth).

159. The following examples are illustrative and taken from public reporting. Dozens or hundreds of other companies have taken similar steps and achieved similar results.

160. PepsiCo, Inc. is a multinational food, snack, and beverage corporation that provides prescription-drug benefits for thousands of employees and their dependents. In 2018, PepsiCo joined the National Drug Purchasing Coalition, which reports described as a “group of the nation’s largest, most forward-thinking employers that use their collective purchasing power to negotiate high quality, cost-effective and innovative solutions for managing pharmacy benefits.” PepsiCo continues to use Express Scripts as its PBM, but it has used its bargaining power to secure prices for generic-specialty drugs that are far lower than Defendants’ prices. For the generic-specialty drugs described above, Defendants agreed to make the Plans and their beneficiaries pay, on average, 2.3x more than PepsiCo’s plan and beneficiaries pay for the same drugs.

161. Caterpillar Inc. is an equipment manufacturer that provides prescription-drug benefits for approximately 100,000 employees and their dependents. In 2010, Caterpillar began exercising full control over its formulary instead of deferring to the formulary recommendations of its traditional PBM, and used that control to ensure that decisions about formulary inclusion and placement were being made in the interests of its plan rather than its PBM. Since making these changes, Caterpillar has saved millions of dollars per year on its prescription-drug costs, with far lower per-patient and per-prescription costs. Bloomberg News reported on Caterpillar’s success in exercising formulary control, reporting that “Caterpillar has saved tens of millions of dollars a

year” and quoting the company’s global benefits manager stating that Caterpillar’s “model is as successful today as it’s ever been.”

162. Wayne Farms is a poultry producer that provides prescription-drug benefits for approximately 12,000 employees and their dependents. In August 2020, Wayne Farms carved out specialty drugs from its traditional PBM contract and implemented a pass-through PBM model for its specialty drugs through Archimedes, a pass-through PBM. This change resulted in substantial savings for Wayne Farms: When comparing the first six months of the specialty carve-out program to the same time period in the year prior, Wayne Farms’ expenditures on specialty drugs decreased from \$26.75 to \$16.03 in per-member per-month costs (“PMPM,” a common cost metric for prescription-drug plans), representing a 40% decrease in plan spend. Net of fees, Wayne Farms experienced a 31% decrease in plan spend for the first six months compared to the same period the prior year. This change in plans was implemented with negligible member disruption. Wayne Farms’s Director of Compensation and Benefits stated: “Implementing this program was one of the best decisions our team has made. The savings are exceeding projections and our members are extremely happy.”

163. American Casino & Entertainment Properties LLC (“ACEP”) was a gaming company (which has since been acquired by a larger gaming company) that provided prescription-drug benefits for thousands of employees and their dependents. In 2012, ACEP dropped its traditional PBM and switched to Navitus, a pass-through PBM. Its prescription-drug costs decreased by 28 percent as a result of the switch. ACEP’s Corporate Vice President of Human Resources stated that the company was able to “maintain excellent coverage while providing substantial savings to our employees.”

164. Dean Foods was a food and beverage company (which has since been acquired by another company) that provided prescription-drug benefits for approximately 15,000 employees and their dependents. In 2019, Dean Foods carved out all specialty drugs from its traditional PBM contract, and Vivio, a pass-through PBM, began managing all specialty drug benefits under Dean Foods' prescription-drug plan. Prior to carving out specialty drugs, Dean Foods was projected to spend approximately \$8.798 million on specialty drugs in 2019. But after carving out specialty drugs, Dean Foods spent only \$5.569 million in specialty drugs in 2019, for a savings of \$4.35 million in a single year.

165. Self-Insured Schools of California (SISC) is a public school Joint Powers Authority that provides health care benefits to staff and their families at over 400 school districts in California, covering approximately 330,000 total members. In 2014, SISC engaged in a comprehensive review of its prescription-drug benefit and concluded that it could save money by no longer deferring to its traditional PBM's formulary management decisions (which SISC recognized were favoring more expensive drugs with large rebates over cheaper drugs without rebates) and by identifying a PBM that was not focused on driving usage of its own mail-order pharmacy. SISC conducted a prudent process, hired a non-conflicted consultant, and eventually contracted a pass-through PBM. By working with its pass-through PBM to design a custom formulary, and through the more favorable pricing model of pass-through PBMs, SISC achieved substantial savings with minimal member disruption. SISC's Deputy Executive Officer stated: "We were very surprised with what we were uncovering and confident that we weren't cutting into effectiveness, just trimming waste. Clinical effectiveness and safety always came first."

166. The University of Southern California (USC) is a private research university that provides prescription-drug benefits for more than 20,000 employees and their dependents. By

refusing to accept the formularies offered by its PBM and designing its own higher-value formulary, USC reduced its drug spend by 40 percent in one year.

167. Golden Entertainment, Inc. is a gaming company that provides prescription-drug benefits for more than 5,000 employees and their dependents. In or around 2019, Golden Entertainment switched from a traditional PBM to a pass-through PBM. Just four months after implementation of its new approach, Golden Entertainment achieved overall plan and member savings of 33.5%, including a 24% decrease in member cost and a 29% decrease in PMPM costs.

168. The city of Kenosha, Wisconsin provides prescription-drug benefits for approximately 2,400 employees and their dependents. In 2018, Kenosha replaced its traditional PBM with a pass-through PBM. In its first three years with the pass-through PBM, Kenosha saved \$2.3 million in pharmacy costs, achieved a 38% decrease in net plan PMPM costs, and achieved a 318% increase in rebates received. Kenosha's Director of Human Resources referred to the move to a pass-through PBM as "a rousing success" with "complete transparency and significant cost savings," and reported that "the City's pharmacy costs have dropped 38 percent, resulting in more than \$2.3 million in cumulative savings."

169. The Montana Credit Union League (MCUL) Group Benefit Trust provides health and life insurance benefits to nearly half of the 45 credit unions in the state of Montana. In 2021, MCUL issued an RFP for a new pharmacy benefits manager and contracted with a pass-through PBM. By making the change, MCUL achieved significant reductions in PMPM costs, from \$143 in 2021 to \$88 in 2022.

170. Foot Locker is a sportswear and footwear retailer that provides prescription-drug benefits for approximately 8,500 employees and their dependents. In 2021, Foot Locker switched

from a traditional PBM to Navitus, a pass-through PBM. During the first year after the switch, spending on drugs dropped 5%.

171. Phifer Incorporated is a fabrics company that provides prescription-drug benefits for approximately 1,000 employees and their dependents. At the end of 2022, Phifer dropped its traditional PBM in favor of MedOne Pharmacy Benefit Solutions. According to Phifer's vice president of human resources, Phifer was able to hold its premiums for 2024 flat because of the money it saved on drug spending.

172. The Teamsters Health and Welfare Trust Fund of Philadelphia and Vicinity, a union fund that provides prescription-drug benefits for approximately 16,000 employees and their dependents, replaced their traditional PBM with Capital Rx in 2019. The fund saved 17% on drug spending in its first year away from its traditional PBM, and has saved more on drug spending each year than it projected. The executive director of the fund referred to the fund's decision to move away from a traditional PBM as the "best decision ever."

V. ADDITIONAL FACTS REGARDING NAMED PLAINTIFF

173. Plaintiff is enrolled in the Salaried Medical Plan and has paid co-pays, co-insurance amounts, and deductibles attributable to her use of prescription drugs. She has also paid premiums for her health insurance coverage, part of which is for prescription-drug coverage.

174. Plan documents state that the Summary Plan Description for the Salaried Medical Plan consists of several separate documents, including a "General/Administrative Information Plan Details" document.

175. Plan documents state that the "General/Administrative Information Plan Details" document is available on Johnson & Johnson's "For Your Benefit (FYB) Website." However, the "General/Administrative Information Plan Details" document is not accessible to Plaintiff at that website or, to her knowledge, at any other website.

176. On December 20, 2023, Plaintiff requested through the Alight online portal established by Defendants that all plan documents, including the “General/Administrative Information Plan Details” document, be mailed to her.

177. On January 8, 2024, Plaintiff received in the mail a document for a different health plan in which she is not enrolled, titled “Local 809 Depuy, Inc. Other Important Information Summary Plan Description.”

178. To date, Plaintiff has not received the “General/Administrative Information Plan Details” document she requested.

179. Plaintiff has had multiple other experiences with her employer-sponsored health care that suggest broader failures in Defendants’ overall health plan administration.

180. Plaintiff has two complex chronic health conditions. One requires regular infusions of a prescription drug at a medical facility. Before switching from her spouse’s health insurance to the Salaried Medical Plan, Plaintiff received this treatment at an outpatient hospital location. She wanted to continue receiving the treatment at that site when she joined the Salaried Medical Plan, and representatives from Johnson & Johnson’s health plan assured her that she could continue to do so upon starting her employment and would owe only \$300 out-of-pocket for the treatment.

181. Neither of these things were true. In May 2022, just 3 days before a scheduled infusion at the outpatient hospital location, Plaintiff’s health plan redirected her to a different administration site, at a community cancer center owned by an academic center, and delayed the infusion by several days.

182. According to the documentation Plaintiff received, her health plan paid approximately \$78,331.82 for the treatment from the cancer center, even though the average sales

price (“ASP,” a measure used for drugs covered by Medicare Part B) reported by CMS for the infused drugs was only approximately \$35,000. Plaintiff, moreover, was charged \$1,685.42 out-of-pocket. When Plaintiff asked if the health plan had reviewed cost prior to disrupting her care and directing her to the cancer center, they declined to provide any evidence that the cancer center was lower-priced than her original treatment site, and on information and belief, it was not.

183. Plaintiff searched for a less expensive site to receive the same treatment, and found an out-of-network site that offered to provide the treatment for approximately \$40,000—about half the price of the center to which her plan previously directed her.

184. Plaintiff delivered this good news to her health plan and requested in-network parity—*i.e.*, that her out-of-pocket responsibility be the same as it would be at an in-network facility. Approving the request would have saved the health plan tens of thousands of dollars on every infusion. Nevertheless, the plan denied her request, going so far as to tell Plaintiff that “saving money is not a reason to go out of network.” Plaintiff continues to receive her infusions at the more expensive site of care, with the Johnson & Johnson health plan wasting tens of thousands of dollars of plan assets on each of her visits.

185. In other instances, Plaintiff has taken on additional financial burdens to save money for the health plan in ways that the health plan could have adopted for itself. For example, Plaintiff independently contracted with direct primary care, which is an arrangement in which the patient pays a flat membership fee to a healthcare provider in exchange for unlimited and direct access to the provider without separate fee-for-service charges. Plaintiff’s health plan does not cover this membership fee or otherwise encourage the use of direct primary care. The health plan’s negotiated rates for its current fee-for-service contracts are so high that just four visits to an in-network provider (or a single emergency room trip) would cost the plan more than if it had just

covered the membership fee that provides Plaintiff with unlimited appointments and 24/7 provider access.

186. Plaintiff has also experienced instances in which providers refuse to appeal claim denials. With respect to one claim denial, her health plan told her that even though she was appealing, she would have to pay the hospital the disputed amount pending appeal, wait until her appeal was granted, and wait until her health plan *also* paid the disputed amount—and only then could she seek reimbursement from the now twice-paid hospital. The health plan’s decision to agree to this appeal structure with providers puts participants at significant financial risk for undisclosed costs and surprise medical bills, and it removes any incentive for the provider to seek prior authorization to confirm services are covered because they can just immediately bill the patient.

CLASS ACTION ALLEGATIONS

187. Plaintiff brings this action pursuant to Federal Rule of Civil Procedure 23, as a class action on behalf of the following:

All persons who were participants in or beneficiaries of any of the Plans from the beginning of the statute of limitations period through judgment in this matter (the “Class Period”).

188. The members of the putative class are so numerous that joinder of all potential class members is impracticable. Plaintiff does not know the exact size of the class but are informed and believe that the Proposed Class includes over 1,000 members residing across the United States.

189. Plaintiff’s claims are typical of the claims of other members of the Proposed Class. Like other Class members, Plaintiff participated in one or more of the Plans and has suffered injuries as a result of Defendants’ mismanagement of the Plans. Defendants treated Plaintiff consistently with other Class members. Plaintiff’s claims and the claims of all Class members arise out of the same conduct, policies, and practices of Defendants as alleged herein, and all

members of the Class have been similarly affected by Defendants' wrongful conduct. Plaintiff and the Proposed Class have sustained similar types of damages as a result of these common practices.

190. There are questions of law or fact common to the class that predominate over any individual issues that might exist. Common questions include, but are not limited to, whether the Defendants are fiduciaries of the Plans; whether Defendants breached their fiduciary duties by engaging in the conduct described in this Complaint; whether the breaches caused the Plans and the Proposed Class to overpay for prescription drugs; and whether Plaintiff and the Proposed Class are entitled to damages, injunctive, and equitable relief.

191. Plaintiff will fairly and adequately protect the interests of class members. Plaintiff has no interests antagonistic to those of other members of the Class. Plaintiff is committed to the vigorous prosecution of this action, and anticipates no difficulty in the management of this litigation as a class action. In addition, Plaintiff has retained counsel competent and experienced in class-action litigation.

192. A class action is superior to other available methods for the fair and efficient adjudication of this controversy because numerous identical lawsuits alleging similar or identical causes of action would not serve the interests of judicial economy and would create a risk of inconsistent or varying adjudications with respect to individual potential class members that would establish incompatible standards of conduct. A class action would save time, effort, and expense and assure uniformity of decision for persons similarly situated without sacrificing procedural unfairness or any undesirable result.

193. Plaintiff is unaware of any members of the putative class who are interested in presenting their claims in a separate action.

194. This class action will not be difficult to manage due to the uniformity of claims among the class members and the susceptibility of the claims to class litigation and the use of representative testimony and representative documentary evidence. The Proposed Class has a high degree of cohesion.

CAUSES OF ACTION

COUNT ONE

Breach of Fiduciary Duties – 29 U.S.C. §§ 1104(a), 1132(a)(2) (on behalf of Plaintiff and the Class against All Defendants)

195. Plaintiff, on behalf of herself and all others similarly situated, incorporates by reference all previous paragraphs of this Complaint as if fully re-written herein.

196. Defendants were required to discharge their duties with respect to the Plans solely in the interest of, and for the exclusive purpose of providing benefits to, the Plans' participants and beneficiaries, defraying reasonable expenses of administering the Plans, and acting with the care, skill, prudence, and diligence required by ERISA.

197. These duties required Defendants to prudently manage the Plans' prescription-drug benefit, to ensure that the Plans agree to pay only reasonable amounts for each prescription drug, and to independently assess the formulary placement of each drug and not simply follow the conflicted advice of an EBC or PBM. In making decisions about the prescription-drug program, Defendants were required to consider all relevant factors and options under the circumstances, including alternative arrangements that were available to the Plans, the conflicts of interest of its vendors, whether the prices of drugs under its contract were reasonable, and steps taken by other companies that successfully lowered their prescription-drug costs.

198. Rather than prudently manage the Plans' prescription-drug program, Defendants agreed to make the Plans and their beneficiaries pay extraordinarily high prices for prescription drugs, ceded control of the Plans' formulary to conflicted third parties, failed to supervise those

conflicted third parties or otherwise ensure that decisions were made in the best interests of the Plans and their beneficiaries, failed to conduct adequate reviews of the Plans' prescription-drug costs, failed to steer beneficiaries to lower-cost options, failed to engage in a prudent process for monitoring the Plans' formulary, and failed to take available steps that would have saved the Plans and their beneficiaries millions of dollars. Harms to the Plans have taken the form of excessive payments for prescription drugs. Harms to beneficiaries have taken the form of higher premiums, higher deductibles, higher coinsurance, higher copays, and lower wages or limited wage growth.

199. Total losses to the Plans will be determined after complete discovery in this case and are continuing.

200. Defendants are personally liable under 29 U.S.C. § 1109(a) to make good to the Plans any losses to the Plans resulting from the breaches of fiduciary duties alleged in this Count and are subject to other equitable and remedial relief as appropriate.

201. Pursuant to 29 U.S.C. § 1132(a)(2), Plaintiff is entitled to obtain relief under 29 U.S.C. § 1109(a), including: (i) to recover any losses of Plan assets on behalf of the Plans from any breaching fiduciaries; (ii) to recover profits or disgorgement of profits resulting from any such breaches; and (iii) other equitable or remedial relief as the Court deems appropriate, such as permanent injunctive relief and/or the removal of the current fiduciaries and appointment of an independent fiduciary.

COUNT TWO

Breach of Fiduciary Duties – 29 U.S.C. §§ 1104(a), 1132(a)(3) (on behalf of Plaintiff and the Class against All Defendants)

202. Plaintiff, on behalf of herself and all others similarly situated, incorporates by reference all previous paragraphs of this Complaint as if fully re-written herein.

203. Defendants were required to discharge their duties with respect to the Plans solely in the interest of, and for the exclusive purpose of providing benefits to, the Plans' participants and beneficiaries, defraying reasonable expenses of administering the Plans, and acting with the care, skill, prudence, and diligence required by ERISA.

204. These duties required Defendants to prudently manage the Plans' prescription-drug benefit, to ensure that the Plans agree to pay only reasonable amounts for each prescription drug, and to independently assess the formulary placement of each drug and not simply follow the conflicted advice of an EBC or PBM. In making decisions about the prescription-drug program, Defendants were required to consider all relevant factors and options under the circumstances, including alternative arrangements that were available to the Plans, the conflicts of interest of its vendors, whether the high prices of drugs under its contract were justified by any other features of its PBM agreement, and steps taken by other companies that successfully lowered their prescription-drug costs.

205. Rather than prudently manage the Plans' prescription-drug program, Defendants agreed to pay extraordinarily high prices for prescription drugs, ceded control of the Plans' formulary to conflicted third parties, failed to supervise those conflicted third parties or otherwise ensure that decisions were made in the best interests of the Plans and their beneficiaries, failed to conduct adequate reviews of the Plans' prescription-drug costs, failed to steer beneficiaries to lower-cost options, failed to engage in a prudent process for monitoring the Plans' formulary, and failed to take available steps that would have saved the Plans and their beneficiaries millions of dollars.

206. Defendants' breaches of fiduciary duty increased the amounts that Plaintiff and members of the class were required to pay in premiums, deductibles, co-pays, and co-insurance, and resulted in lower wages or limited wage growth.

207. Pursuant to 29 U.S.C. § 1132(a)(3), Plaintiff and members of the class are entitled to injunctive relief and equitable relief including, without limitation, surcharge, the removal of the current fiduciary, and appointment of an independent fiduciary.

COUNT THREE
Failure to Provide Plan Documents – 29 U.S.C. § 1132(c)
(on behalf of Plaintiff against the Committee)

208. Plaintiff incorporates by reference all previous paragraphs of this Complaint as if fully re-written herein.

209. Under 29 U.S.C. § 1132(c)(1), any plan administrator “who fails or refuses to comply with a request for any information which such administrator is required by [ERISA] to furnish to a participant or beneficiary ... within 30 days after such request may in the court’s discretion be personally liable to such participant or beneficiary in the amount of up to \$100 a day from the date of such failure or refusal, and the court may in its discretion order such other relief as it deems proper.” By regulation, the penalty has been increased to \$110 per day. *See* 29 C.F.R. § 2575.502c-1.

210. Defendant the Pension & Benefits Committee of Johnson and Johnson failed to comply with Plaintiff’s request for the “General/Administrative Information Plan Details” document, which ERISA required the Committee to furnish to Plaintiff upon request.

211. Pursuant to 29 U.S.C. § 1132(c)(1), the Committee is liable to plaintiff for a penalty to of \$110 a day for each day since January 19, 2024 and to other relief the court deems proper.

JURY DEMAND

212. Plaintiff demands a trial by jury.

DEMAND FOR JUDGMENT

WHEREFORE, Plaintiff respectfully requests that this Court enter judgment on her behalf and that of the Proposed Class as follows:

213. Certifying and maintaining this action as a class action, with Plaintiff designated as class representative and with her counsel appointed as class counsel;

214. Find and declare that Defendants have breached their fiduciary duties as described above;

215. Enjoin Defendants from any further violations of their ERISA fiduciary responsibilities, obligations, and duties;

216. Order Defendants to make good to the Plans all losses to the Plans resulting from each breach of fiduciary duty, and to otherwise restore the Plans to the position they would have occupied but for the breaches of fiduciary duty;

217. Award actual damages in the amount of any losses the Plans suffered;

218. Award surcharge or other make-whole equitable relief to Plaintiff and members of the class to remedy all losses resulting from Defendants' breaches of fiduciary duty, including but not limited to amounts paid in premiums, claim payments, co-insurance, deductibles, and lost wages attributable to the conduct described above;

219. Award statutory penalties to Plaintiff;

220. Remove the Plans' fiduciary or fiduciaries and appoint an independent fiduciary or fiduciaries to run the Plans;

221. Award, as appropriate, other forms of monetary, injunctive, and equitable relief;

222. Award pre-judgment, post-judgment, and statutory interest;

223. Award attorneys' fees;

224. Award costs;

225. Award such other and further relief as the Court may deem just and proper.

Respectfully Submitted,

WHEELER, DIULIO & BARNABEI, P.C
