Pursuant to that goal, we have created limited exceptions to the prohibition. First, a covered health care provider may condition research-related treatment of an individual on obtaining the individual's authorization to use or disclose protected health information created for the research. Second, except with respect to psychotherapy notes, a health plan may condition the individual's enrollment or eligibility in the health plan on obtaining an authorization for the use or disclosure of protected health information for making enrollment or eligibility determinations relating to the individual or for its underwriting or risk rating determinations. Third, a health plan may condition payment of a claim for specified benefits on obtaining an authorization under § 164.508(e) for disclosure to the plan of protected health information necessary to determine payment of the claim. Fourth, a covered entity may condition the provision of health care that is solely for the purpose of creating protected health information for disclosure to a third party (such as fitness-for-duty exams and physicals necessary to obtain life insurance coverage) on obtaining an authorization for the disclosure of the protected health information. We recognize that covered entities need protected health information in order to carry out these functions and provide services to the individual; therefore, we allow authorization for the disclosure of the protected health information to be a condition of obtaining the services.

We believe that we have prohibited covered entities from conditioning the services they provide to individuals on obtaining an authorization for uses and disclosures that are not essential to those services. Due to our limited authority, however, we cannot entirely prevent individuals from being coerced into signing these forms. We do not, for example, have the authority to prohibit an employer from requiring its employees to sign an authorization as a condition of employment. Similarly, a program such as the Job Corps may make such an authorization a condition of enrollment in the Job Corps program. While the Job Corps may include a health care component, the non-covered component of the Job Corps may require as a condition of enrollment that the individual authorize the health care component to disclose protected health information to the non-covered component. See § 164.504(b). However, we note that other nondiscrimination laws may limit the ability to condition these authorizations as well.

Comment: A Medicaid fraud control association stated that many states require or permit state Medicaid agencies to obtain an authorization for the use and disclosure of protected health information for payment purposes as a condition of enrolling an individual as a Medicaid recipient. The commenter, therefore, urged an exception to the prohibition on conditioning enrollment on obtaining an authorization.

Response: As explained above, under § 164.506(a)(4), health plans and other covered entities may seek the individual's consent for the covered entity's use and disclosure of protected health information to carry out treatment, payment, or health care operations. If the consent is sought in conjunction with enrollment, the health plan may condition enrollment in the plan on obtaining the individual's consent.

Under § 164.506(a)(5), we specify that a consent obtained by one covered entity is not effective to permit another covered entity to use or disclose protected health information for payment purposes. If state law requires a Medicaid agency to obtain the individual's authorization for providers to disclose protected health information to the Medicaid agency for payment purposes, the agency may do so under § 164.508(e). This authorization must not be a condition of enrollment or eligibility, but may be a condition of payment of a claim for specified benefits if the disclosure is necessary to determine payment of the claim.

Revocation of Authorizations

Comment: Many commenters supported the right to revoke an authorization. Some comments, however, suggested that we require authorizations to remain valid for a minimum period of time, such as one year or the duration of the individual's enrollment in a health plan.

Response: We retain the right for individuals to revoke an authorization at any time, with certain exceptions. We believe this right is essential to ensuring that the authorization is voluntary. If an individual determines that an authorized use or disclosure is no longer in her best interest, she should be able to withdraw the authorization and prevent any further uses or disclosures.

Comment: Several commenters suggested that we not permit individuals to revoke an authorization if the revocation would prevent an investigation of material misrepresentation or fraud. Other commenters similarly suggested that we not permit individuals to revoke an authorization prior to a claim for benefits if the insurance was issued in reliance on the authorization.

Response: To address this concern, we include an additional exception to the right to revoke an authorization. Individuals do not have the right to revoke an authorization that was obtained as a condition of insurance coverage during any contestability ***82659** period under other law. For example, if a life insurer obtains the individual's authorization for the use or disclosure of protected health information to determine eligibility or premiums under the policy, the individual does not have the right to revoke the authorization during any period of time in which the life insurer can contest a claim for benefits under the policy in accordance with state law. If an individual were able to revoke the authorization after enrollment but prior to making a claim, the insurer would be forced to pay claims without having the necessary information to determine whether the benefit is due. We believe the existing exception for covered entities that have acted in reliance on the authorization is insufficient to address this concern because it is another person, not the covered entity, that has acted in reliance on the authorization. In the life insurance example, it is the life insurer that has taken action (i.e., issued the policy) in reliance on the authorization. The life insurer is not a covered entity, therefore the covered entity exception is inapplicable.

Comment: Some comments suggested that a covered entity that had compiled, but not yet disclosed, protected health information would have already taken action in reliance on the authorization and could therefore disclose the information even if the individual revoked the authorization.

Response: We intend for covered entities to refrain from further using or disclosing protected health information to the maximum extent possible once an authorization is revoked. The exception exists only to the extent the covered entity has taken action in reliance on the authorization. If the covered entity has not yet used or disclosed the protected health information, it must refrain from doing so, pursuant to the revocation. If, however, the covered entity has already disclosed the information, it is not required to retrieve the information.

Comment: One comment suggested that the rule allow protected health information to be only rented, not sold, because there can be no right to revoke authorization for disclosure of protected health information that has been sold.

Response: We believe this limitation would be an unwarranted abrogation of covered entities' business practices and outside the scope of our authority. We believe individuals should have the right to authorize any uses or disclosures they feel are appropriate. We have attempted to create authorization requirements that make the individual's decisions as clear and voluntary as possible.

Comment: One commenter expressed concern as to whether the proposed rule's standard to protect the protected health information about a deceased individual for two years would interfere with the payment of death benefit claims. The commenter asked that the regulation permit the beneficiary or payee under a life insurance policy to authorize disclosure of protected health information pertaining to the cause of death of a decedent or policyholder. Specifically, the commenter explained that when substantiating a claim a beneficiary, such as a fiancee or friend, may be unable to obtain the authorization required to release information to the insurer, particularly if, for example, the decedent's estate does not require probate or if the beneficiary is not on good terms with the decedent's next of kin. Further, the commenter stated that particularly in cases where the policyholder dies within two years of the policy's issuance (within the policy's contestable period) and the cause of death is uncertain, the insurer's inability to access relevant protected health information would significantly interfere with claim payments and increase administrative costs.

Response: We do not believe this will be a problem under the final regulation, because we create an exception to the right to revoke an authorization if the authorization was obtained as a condition of obtaining insurance coverage and other applicable law provides the insurer that obtained the authorization with the right to contest a claim under the policy. Thus, if a policyholder dies within the two year contestability period, the authorization the insurer obtained from the policyholder prior to death could not be revoked during the contestability period.

Core Elements and Requirements

Comment: Many commenters raised concerns about the required elements for a valid authorization. They argued that the requirements were overly burdensome and that covered entities should have greater flexibility to craft authorizations that meet their business needs. Other commenters supported the required elements as proposed because the elements help to ensure that individuals make meaningful, informed choices about the use and disclosure of protected health information about them.

Response: As in the proposed rule, we define specific elements that must be included in any authorization. We draw on established laws and guidelines for these requirements. For example, the July 1977 Report of the Privacy Protection Study Commission recommended that authorizations obtained by insurance institutions include plain language, the date of authorization, and identification of the entities authorized to disclose information, the nature of the information to be disclosed, the entities authorized to receive information, the purpose(s) for which the information may be used by the recipients, and an expiration date.[FN13] The Commission made similar recommendations concerning the content of authorizations obtained by health care providers.[FN14] The National Association of Insurance Commissioners' Health Information Privacy Model Act requires authorizations to be in writing and include a description of the types of protected health information to be used or disclosed, the name and address of the person to whom the information is to be disclosed, the purpose of the authorization, the signature of the individual or the individual's representative, and a statement that the individual may revoke the authorization at any time, subject to the rights of any person that acted in reliance on the authorization prior to revocation and provided the revocation is in writing, dated, and signed. Standards of the American Society for Testing and Materials recommend that authorizations identify the subject of the protected health information to be disclosed; the name of the person or institution that is to release the information; the name of each individual or institution that is to receive the information; the purpose or need for the information; the information to be disclosed; the specific date, event, or condition upon which the authorization will expire, unless revoked earlier; and the signature and date signed. They also recommend the authorization include a statement that the authorization can be revoked or amended, but not retroactive to a release made in reliance on the authorization.[FN15]

Comment: Some commenters requested clarification that authorizations “initiated by the individual” include authorizations initiated by the individual's representative. ***82660**

Response: In the final rule, we do not classify authorizations as those initiated by the individual versus those initiated by a covered entity. Instead, we establish a core set of elements and requirements that apply to all authorizations and require certain additional elements for particular types of authorizations initiated by covered entities.

Comment: Some commenters urged us to permit authorizations that designate a class of entities, rather than specifically named entities, that are authorized to use or disclose protected health information. Commenters made similar recommendations with respect to the authorized recipients. Commenters suggested these changes to prevent covered entities from having to seek, and individuals from having to sign, multiple authorizations for the same purpose.

Response: We agree. Under § 164.508(c)(1), we require authorizations to identify both the person(s) authorized to use or disclose the protected health information and the person(s) authorized to receive protected health information. In both cases, we permit the authorization to identify either a specific person or a class of persons.

Comment: Many commenters requested clarification that covered entities may rely on electronic authorizations, including electronic signatures.

Response: All authorizations must be in writing and signed. We intend e-mail and electronic documents to qualify as written documents. Electronic signatures are sufficient, provided they meet standards to be adopted under HIPAA. In addition, we do not intend to interfere with the application of the Electronic Signature in Global and National Commerce Act.

Comment: Some commenters requested that we permit covered entities to use and disclose protected health information pursuant to verbal authorizations.

Response: To ensure compliance and mutual understanding between covered entities and individuals, we require all authorizations to be in writing.

Comment: Some commenters asked whether covered entities can rely on copies of authorizations rather than the original. Other comments asked whether covered entities can rely on the assurances of a third party, such as a government entity, that a valid authorization has been obtained to use or disclose protected health information. These commenters suggested that such procedures would promote the timely provision of benefits for programs that require the collection of protected health information from multiple sources, such as determinations of eligibility for disability benefits.

Response: Covered entities must obtain the individual's authorization to use or disclose protected health information for any purpose not otherwise permitted or required under this rule. They may obtain this authorization directly from the individual or from a third party, such as a government agency, on the individual's behalf. In accordance with the requirements of § 164.530(j), the covered entity must retain a written record of authorization forms signed by the individual. Covered entities must, therefore, obtain the authorization in writing. They may not rely on assurances from others that a proper authorization exists. They may, however, rely on copies of authorizations if doing so is consistent with other law.

Comment: We requested comments on reasonable steps that a covered entity could take to be assured that the individual who requests the disclosure is whom she or he purports to be. Some commenters stated that it would be extremely difficult to verify the identity of the person signing the authorization, particularly when the authorization is not obtained in person. Other comments recommended requiring authorizations to be notarized.

Response: To reduce burden on covered entities, we are not requiring verification of the identities of individuals signing authorization forms or notarization of the forms.

Comment: A few commenters asked for clarification regarding the circumstances in which a covered entity may consider a non-response as an authorization.

Response: Non-responses to requests for authorizations cannot be considered authorizations. Authorizations must be signed and have the other elements of a valid authorization described above.

Comment: Most commenters generally supported the requirement for an expiration date on the authorization. Commenters recommended expiration dates from 6 months to 3 years and/or proposed that the expiration be tied to an event such as duration of enrollment or when an individual changes health plans. Others requested no expiration requirement for some or all authorizations.

Response: We have clarified that an authorization may include an expiration date in the form of a specific date, a specific time period, or an event directly related to the individual or the purpose of the authorization. For example, a valid authorization could expire upon the individual's disenrollment from a health plan or upon termination of a research project. We prohibit an authorization from having an indeterminate expiration date.

These changes were intended to address situations in which a specific date for the termination of the purpose for the authorization is difficult to determine. An example may be a research study where it may be difficult to predetermine the length of the project.

Comment: A few commenters requested that the named insured be permitted to sign an authorization on behalf of dependents.

Response: We disagree with the commenter that a named insured should always be able to authorize uses and disclosures for other individuals in the family. Many dependents under group health plans have their own rights under this rule, and we do not assume that one member of a family has the authority to authorize uses or disclosures of the protected health information of other family members.

A named insured may sign a valid authorization for an individual if the named insured is a personal representative for the individual in accordance with § 164.502(g). The determination of whether an individual is a personal representative under this rule is based on other applicable law that determines when a person can act on behalf of an individual in making decisions related to health care. This rule limits a person's rights and authorities as a personal representative to only the protected health information relevant to the matter for which he or she is a personal representative under other law. For example, a parent may be a personal representative of a child for most health care treatment and payment decisions under state law. In that case, a parent, who is a named insured for her minor child, would be able to provide authorization with respect to most protected health information about her dependent child. However, a wife who is the named insured for her husband who is a dependent under a health insurance policy may not be a personal representative for her husband under other law or may be a personal representative only for limited purposes, such as for making decisions regarding payment of disputed claims. In this case, she may have limited authority to access protected health information related to the payment of disputed claims, but would not have the authority to authorize that her husband's information be used for ***82661** marketing purposes, absent any other authority to act for her husband. See § 164.502(g) for more information regarding personal representatives.

Comment: One commenter suggested that authorizations should be dated on the day they are signed.

Response: We agree and have retained this requirement in the final rule.

Additional Elements and Requirements for Authorizations Requested by the Covered Entity for Its Own Uses and Disclosures

Comment: Some commenters suggested that we should not require different elements in authorizations initiated by the covered entity versus authorizations initiated by the individual. The commenters argued the standards were unnecessary, confusing, and burdensome.

Response: The proposed authorization requirements are intended to ensure that an individual's authorization is truly voluntary. The additional elements required for authorizations initiated by the covered entity for its own uses and disclosures or for receipt of protected health information from other covered entities to carry out treatment, payment, or health care operations address concerns that are unique to these forms of authorization. (See above regarding requirements for research authorizations under § 164.508(f).)

First, when applicable, these authorizations must state that the covered entity will not condition treatment, payment, eligibility, or enrollment on the individual's providing authorization for the requested use or disclosure. This statement is not appropriate for authorizations initiated by the individual or another person who does not have the ability to withhold services if the individual does not authorize the use or disclosure.

Second, the authorization must state that the individual may refuse to sign the authorization. This statement is intended to signal to the individual that the authorization is voluntary and may not be accurate if the authorization is obtained by a person other than a covered entity.

Third, these authorizations must describe the purpose of the use or disclosure. We do not include this element in the core requirements because we understand there may be times when the individual does not want the covered entity maintaining the

protected health information to know the purpose for the use or disclosure. For example, an individual contemplating litigation may not want the covered entity to know that litigation is the purpose of the disclosure. If the covered entity is initiating the authorization for its own use or disclosure, however, the individual and the covered entity maintaining the protected health information should have a mutual understanding of the purpose of the use or disclosure. Similarly, when a covered entity is requesting authorization for a disclosure by another covered entity that may have already obtained the individual's consent for the disclosure, the individual and covered entity that maintains the protected health information should be aware of this potential conflict.

There are two additional requirements for authorizations requested by a covered entity for its own use or disclosure of protected health information it maintains. First, we require the covered entity to describe the individual's right to inspect or copy the protected health information to be used or disclosed. Individuals may want to review the information to be used or disclosed before signing the authorization and should be reminded of their ability to do so. This requirement is not appropriate for authorizations for a covered entity to receive protected health information from another covered entity, however, because the covered entity requesting the authorization is not the covered entity that maintains the protected health information and cannot, therefore, grant or describe the individual's right to access the information.

If applicable, we also require a covered entity that requests an authorization for its own use or disclosure to state that the use or disclosure of the protected health information will result in direct or indirect remuneration to the entity. Individuals should be aware of any conflicts of interest or financial incentives on the part of the covered entity requesting the use or disclosure. These statements are not appropriate, however, in relation to uses and disclosures to carry out treatment, payment, and health care operations. Uses and disclosures for these purposes will often involve remuneration by the nature of the use or disclosure, not due to any conflict of interest on the part of either covered entity.

We note that authorizations requested by a covered entity include authorizations requested by the covered entity's business associate on the covered entity's behalf. Authorizations requested by a business associate on the covered entity's behalf and that authorize the use or disclosure of protected health information by the covered entity or the business associate must meet the requirements in § 164.508(d). Similarly, authorizations requested by a business associate on behalf of a covered entity to accomplish the disclosure of protected health information to that business associate or covered entity as described in § 164.508(e) must meet the requirements of that provision.

We disagree that these elements are unnecessary, confusing, or burdensome. We require them to ensure that the individual has a complete understanding of what he or she is agreeing to permit.

Comment: Many commenters suggested we include in the regulation text a provision stated in the preamble that entities and their business partners must limit their uses and disclosures to the purpose(s) specified by the individual in the authorization.

Response: We agree. In accordance with § 164.508(a)(1), covered entities may only use or disclose protected health information consistent with the authorization. In accordance with § 164.504(e)(2), a business associate may not make any uses or disclosures that the covered entity couldn't make.

Comment: Some comments suggested that authorizations should identify the source and amount of financial gain, if any, resulting from the proposed disclosure. Others suggested that the proposed financial gain requirements were too burdensome and would decrease trust between patients and providers. Commenters recommended that the requirement either should be eliminated or should only require covered entities, when applicable, to state that direct and foreseeable financial gain to the covered entity will result. Others requested clarification of how the requirement for covered entities to disclose financial gain relates to the criminal penalties that accrue for offenses committed with intent to sell, transfer, or use individually identifiable health information for commercial advantage, personal gain, or malicious harm. Some commenters advocated use of the term “financial compensation” rather than “financial gain” to avoid confusion with in-kind compensation rules. Some comments additionally suggested excluding marketing uses and disclosures from the requirements regarding financial gain.

Response: We agree that clarification is warranted. In § 164.508(d)(1)(iv) of the final rule, we require a covered entity that asks an individual to sign an authorization for the covered entity's use or disclosure of protected health information and that will receive direct ***82662** or indirect remuneration from a third party for the use or disclosure, to state that fact in the authorization. Remuneration from a third party includes payments such as a fixed price per disclosure, compensation for the costs of compiling and sending the information to be disclosed, and, with respect to marketing communications, a percentage of any sales generated by the marketing communication. For example, a device manufacturer may offer to pay a fixed price per name and address of individuals with a particular diagnosis, so that the device manufacturer can market its new device to people with the diagnosis. The device manufacturer may also offer the covered entity a percentage of the profits from any sales generated by the marketing materials sent. If a covered entity seeks an authorization to make such a disclosure, the authorization must state that the remuneration will occur. We believe individuals should have the opportunity to weigh the covered entity's potential conflict of interest when deciding to authorize the covered entity's use or disclosure of protected health information. We believe that the term "remuneration from a third party" clarifies our intent to describe a direct, tangible exchange, rather than the mere fact that parties intend to profit from their enterprises.

Comment: One commenter suggested we require covered entities to request authorizations in a manner that does not in itself disclose sensitive information.

Response: We agree that covered entities should make reasonable efforts to avoid unintentional disclosures. In § 164.530(c)(2), we require covered entities to have in place appropriate administrative, technical, and physical safeguards to protect the privacy of protected health information.

Comment: Some commenters requested clarification that covered entities are permitted to seek authorization at the time of enrollment or when individuals otherwise first interact with covered entities. Similarly, commenters requested clarification that covered entities may disclose protected health information created after the date the authorization was signed but prior to the expiration date of the authorization. These commenters were concerned that otherwise multiple authorizations would be required to accomplish a single purpose. Other comments suggested that we prohibit prospective authorizations (i.e., authorizations requested prior to the creation of the protected health information to be disclosed under the authorization) because it is not possible for individuals to make informed decisions about these authorizations.

Response: We confirm that covered entities may act on authorizations signed in advance of the creation of the protected health information to be released. We note, however, that all of the required elements must be completed, including a description of the protected health information to be used or disclosed pursuant to the authorization. This description must identify the information in a specific and meaningful fashion so that the individual can make an informed decision as to whether to sign the authorization.

Comment: Some commenters suggested that the final rule prohibit financial incentives, such as premium discounts, designed to encourage individuals to sign authorizations.

Response: We do not prohibit or require financial incentives for authorizations. We have attempted to ensure that authorizations are entered into voluntary. If a covered entity chooses to offer a financial incentive for the individual to sign the authorization, and the individual chooses to accept it, they are free to do so.

Section 164.510—Uses and Disclosures Requiring an Opportunity for the Individual to Agree or to Object

Section 164.510(a)—Use and Disclosure for Facility Directories

Comment: Many hospital organizations opposed the NPRM's proposed opt-in approach to disclosure of directory information. These groups noted the preamble's statement that most patients welcomed the convenience of having their name, location, and general condition included in the patient directory. They said that requiring hospitals to obtain authorization before including patient information in the directory would cause harm to many patients' needs in an effort to serve the needs of the small number

of patients who may not want their information to be included. Specifically, they argued that the proposed approach ultimately could have the effect of making it difficult or impossible for clergy, family members, and florists to locate patients for legitimate purposes. In making this argument, commenters pointed to problems that occurred after enactment of privacy legislation in the State of Maine in 1999. The legislation, which never was officially implemented, was interpreted by hospitals to prohibit disclosure of patient information to directories without written consent. As a result, when hospitals began complying with the law based on their interpretation, family members and clergy had difficulty locating patients in the hospital.

Response: We share commenters' concern about the need to ensure that family members and clergy who have a legitimate need to locate patients are not prevented from doing so by excessively stringent restrictions on disclosure of protected health information to health care facilities' directories. Accordingly, the final rule takes an opt-out approach, stating that health care institutions may include the name, general condition, religious affiliation, and location of a patient within the facility in the facility's directory unless the patient explicitly objects to the use or disclosure of protected health information for directory purposes. To ensure that this opt-out can be exercised, the final rule requires facilities to notify individuals of their right not to be included in the directory and to give them the opportunity to opt out. The final rule indicates that the notice and opt-out may be oral. The final rule that allows health care facilities to disclose to clergy the four types of protected health information specified above without requiring the clergy to ask for the individual by name will allow the clergy to identify the members of his or her faith who are in the facility, thus ensuring that this rule will not significantly interfere with the exercise of religion, including the clergy's traditional religious mission to provide services to individuals.

Comment: A small number of commenters recommended requiring written authorization for all disclosures of protected health information for directory purposes. These commenters believed that the NPRM's proposed provision allowing oral agreement would not provide sufficient privacy protection; that it did not sufficiently hold providers accountable for complying with patient wishes; and that it could create liability issues for providers.

Response: The final rule does not require written authorization for disclosure of protected health information for directory purposes. We believe that requiring written authorization in these cases would increase substantially the administrative burdens and costs for covered health care providers and could lead to significant inconvenience for families and others attempting to locate individuals in health care institutions. Experience from the State of Maine suggests that requiring written authorization before patient information may be included in facility directories ***82663** can be disruptive for providers, families, clergy, and others.

Comment: Domestic violence organizations raised concerns that including information about domestic violence victims in health care facilities' directories could result in further harm to victims. The NPRM addressed the issue of potential danger to patients by stating that when patients were incapacitated, covered health care providers could exercise discretion —consistent with good medical practice and prior expression of patient preference—regarding whether to disclose protected health information for directory purposes. Several commenters recommended prohibiting providers from including information in a health care facility's directory about incapacitated individuals when the provider reasonably believed that the injuries to the individual could have been caused by domestic violence. These groups believed that such a prohibition was necessary to prevent abusers from locating and causing further harm to domestic violence patients.

Response: We share commenters' concerns about protecting victims of domestic violence from further abuse. We are also concerned, however, that imposing an affirmative duty on institutions not to disclose information any time injuries to the individual could have been the result of domestic violence would place too high a burden on health care facilities, essentially requiring them to rule out domestic violence as a potential cause of the injuries before disclosing to family members that an incapacitated person is in the institution.

We do believe, however, that it is appropriate to require covered health care providers to consider whether including the individual's name and location in the directory could lead to serious harm. As in the preamble to the NPRM, in the preamble to the final rule, we encourage covered health care providers to consider several factors when deciding whether to include an

incapacitated patient's information in a health care facility's directory. One of these factors is whether disclosing an individual's presence in the facility could reasonably cause harm or danger to the individual (for example, if it appeared that an unconscious patient had been abused and disclosing that the individual is in the facility could give the attacker sufficient information to seek out the person and repeat the abuse). Under the final rule, when the opportunity to object to uses and disclosures for a facility's directory cannot practicably be provided due to an individual's incapacity or an emergency treatment circumstance, covered health care providers may use or disclose some or all of the protected health information that the rule allows to be included in the directory, if the disclosure is: (1) consistent with the individual's prior expressed preference, if known to the covered health care provider; and (2) in the individual's best interest, as determined by the covered health care provider in the exercise of professional judgement. The rule allows covered health care providers making decisions about incapacitated patients to include some portions of the patient's information (such as name) but not other information (such as location in the facility) to protect patient interests.

Section 164.510(b)—Uses and Disclosures for Involvement in the Individual's Care and Notification Purposes

Comment: A number of comments supported the NPRM's proposed approach, which would have allowed covered entities to disclose protected health information to the individual's next of kin, family members, or other close personal friends when the individual verbally agreed to the disclosure. These commenters agreed that the presumption should favor disclosures to the next of kin, and they believed that health care providers should encourage individuals to share genetic information and information about transmittable diseases with family members at risk. Others agreed with the general approach but suggested the individual's agreement be noted in the medical record. These commenters also supported the NPRM's proposed reliance on good professional practices and ethics to determine when disclosures should be made to the next of kin when the individual's agreement could not practicably be obtained.

A few commenters recommended that the individual's agreement be in writing for the protection of the covered entity and to facilitate the monitoring of compliance with the individual's wishes. These commenters were concerned that, absent the individual's written agreement, the covered entity would become embroiled in intra-family disputes concerning the disclosures. Others argued that the individual's authorization should be obtained for all disclosures, even to the next of kin.

One commenter favored disclosures to family members and others unless the individual actively objected, as long as the disclosure was consistent with sound professional practice. Others believed that no agreement by the individual was necessary unless sensitive medical information would be disclosed or unless the health care provider was aware of the individual's prior objection. These commenters recommended that good professional practice and ethics determine when disclosures were appropriate and that disclosure should relate only to the individual's current treatment. A health care provider organization said that the ethical and legal obligations of the medical professional alone should control in this area, although it believed the proposed rule was generally consistent with these obligations.

Response: The diversity of comments regarding the proposal on disclosures to family members, next of kin, and other persons, reflects a wide range of current practice and individual expectations. We believe that the NPRM struck the proper balance between the competing interests of individual privacy and the need that covered health care providers may have, in some cases, to have routine, informal conversations with an individual's family and friends regarding the individual's treatment.

We do not agree with the comments stating that all such disclosures should be made only with consent or with the individual's written authorization. The rule does not prohibit obtaining the agreement of the individual in writing; however, we believe that imposing a requirement for consent or written authorization in all cases for disclosures to individuals involved in a person's care would be unduly burdensome for all parties. In the final rule, we clarify the circumstances in which such disclosures are permissible. The rule allows covered entities to disclose to family members, other relatives, close personal friends of the individual, or any other person identified by the individual, the protected health information directly relevant to such person's involvement with the individual's care or payment related to the individual's health care. In addition, the final rule allows covered entities to use or disclose protected health information to notify, or assist in the notification of (including identifying or locating) a family member, a personal representative of the individual, or another person responsible for the care of the

individual, of the individual's location, general condition, or death. The final rule includes separate provisions for situations in which the individual is present and for when the individual is not present at the time of disclosure. When the individual is present and can make his or her own decisions, a covered entity may disclose protected health information only if the covered entity: (1) Obtains the ***82664** individual's agreement to disclose to the third parties involved in the individual's care; (2) provides the individual with the opportunity to object to the disclosure, and the individual does not express an objection; or (3) reasonably infers from the circumstances, based on the exercise of professional judgement, that the individual does not object to the disclosure. The final rule continues to permit disclosures in circumstances when the individual is not present or when the opportunity to agree or object to the use or disclosure cannot practicably be provided due to the individual's incapacity or an emergency circumstance. In such instances, covered entities may, in the exercise of professional judgement, determine whether the disclosure is in the individual's best interests and if so, disclose only the protected health information that is directly relevant to the person's involvement with the individual's health care.

As discussed in the preamble for this section, we do not intend to disrupt most covered entities' current practices with respect to informing family members and others with whom a patient has a close personal relationship about a patient's specific health condition when a patient is incapacitated due to a medical emergency and the family member or close personal friend comes to the covered entity to ask about the patient's condition. To the extent that disclosures to family members and others in these situations currently are allowed under state law and covered entities' own rules, § 164.510(b) allows covered entities to continue making them in these situations, consistent with the exercise of professional judgement as to the patient's best interest. As indicated in the preamble above, this section is not intended to provide a loophole for avoiding the rule's other requirements, and it is not intended to allow disclosures to a broad range of individuals, such as journalists who may be curious about a celebrity's health status.

Comments: A few comments supported the NPRM approach because it permitted the current practice of allowing someone other than the patient to pick up prescriptions at pharmacies. One commenter noted that this practice occurs with respect to 25-40% of the prescriptions dispensed by community retail pharmacies. These commenters strongly supported the proposal's reliance on the professional judgement of pharmacists in allowing others to pick up prescriptions for bedridden or otherwise incapacitated patients, noting that in most cases it would be impracticable to verify that the person was acting with the individual's permission. Two commenters requested that the rule specifically allow this practice. One comment opposed the practice of giving prescriptions to another person without the individual's authorization, because a prescription implicitly could disclose medical information about the individual.

Response: As stated in the NPRM, we intended for this provision to authorize pharmacies to dispense prescriptions to family or friends who are sent by the individual to the pharmacy to pick up the prescription. We believe that stringent consent or verification requirements would place an unreasonable burden on numerous transactions. In addition, such requirements would be contrary to the expectations and preferences of all parties to these transactions. Although prescriptions are protected health information under the rule, we believe that the risk to individual privacy in allowing this practice to continue is minimal. We agree with the suggestion that the final rule should state explicitly that pharmacies have the authority to operate in this manner. Therefore, we have added a sentence to § 164.510(b)(3) allowing covered entities to use professional judgement and experience with common practice to make reasonable inferences of an individual's best interest in allowing a person to act on the individual's behalf to pick up filled prescriptions, medical supplies, X-rays, or other similar forms of protected health information. In such situations, as when making disclosures of protected health information about an individual who is not present or is unable to agree to such disclosures, covered entities should disclose only information which directly relates to the person's involvement in the individual's current health care. Thus, when dispensing a prescription to a friend who is picking it up on the patient's behalf, the pharmacist should not disclose unrelated health information about medications that the patient has taken in the past which could prove embarrassing to the patient.

Comment: We received a few comments that misunderstood the provision as addressing disclosures related to deceased individuals.

Response: We understand that use of the term next of kin in this section may cause confusion. To promote clarity in the final rule, we eliminate the term "next of kin," as well as the term's proposed definition. In the final rule, we address comments on next of kin and the deceased in the section on disclosure of protected health information about deceased individuals in § 164.512(g).

Comments: A number of commenters expressed concern for the interaction of the proposed section with state laws. Some of these comments interpreted the NPRM's use of the term next of kin as referring to individuals with health care power of attorney and thus they believed that the proposed rule's approach to next of kin was inappropriately informal and in conflict with state law. Others noted that some state laws did not allow health care information to be disclosed to family or friends without consent or other authorization. One commenter said that case law may be evolving toward imposing a more affirmative duty on health care practitioners to inform next of kin in a variety of circumstances. One commenter noted that state laws may not define clearly who is considered to be the next of kin.

Response: The intent of this provision was not to interfere with or change current practice regarding health care powers of attorney or the designation of other personal representatives. Such designations are formal, legal actions which give others the ability to exercise the rights of or make treatment decisions related to individuals. While persons with health care powers of attorney could have access to protected health information under the personal representatives provision (§ 164.502(g)), and covered entities may disclose to such persons under this provision, such disclosures do not give these individuals substantive authority to act for or on behalf of the individual with respect to health care decisions. State law requirements regarding health care powers of attorney continue to apply.

The comments suggesting that state laws may not allow the disclosures otherwise permitted by this provision or, conversely, that they may impose a more affirmative duty, did not provide any specifics with which to judge the affect of such laws. In general, however, state laws that are more protective of an individual's privacy interests than the rule by prohibiting a disclosure of protected health information continue to apply. The rule's provisions regarding disclosure of protected health information to family or friends of the individual are permissive only, enabling covered entities to abide by more stringent state laws without violating our rules. Furthermore, if the state law creates an affirmative and binding legal obligation on the covered entity to make disclosures to family or other persons under specific circumstances, the final rule allows covered entities to comply ***82665** with these legal obligations. See § 164.512(a).

Comments: A number of commenters supported the proposal to limit disclosures to family or friends to the protected health information that is directly relevant to that person's involvement in the individual's health care. Some comments suggested that this standard apply to all disclosures to family or friends, even when the individual has agreed to or not objected to the disclosure. One commenter objected to the proposal, stating that it would be too difficult to administer. According to this comment, it is accepted practice for health care providers to communicate with family and friends about an individual's condition, regardless of whether the person is responsible for or otherwise involved in the individual's care.

Other comments expressed concern for disclosures related to particular types of information. For example, two commenters recommended that psychotherapy notes not be disclosed without patient authorization. One commenter suggested that certain sensitive medical information associated with social stigma not be disclosed to family members or others without patient consent.

Response: We agree with commenters who advocated limiting permissible disclosures to relatives and close personal friends to information consistent with a person's involvement in the individual's care. Under the final rule, we clarify the NPRM provision to state that covered entities may disclose protected health information to family members, relatives, or close personal friends of an individual or any other person identified by the individual, to the extent that the information directly relates to the person's involvement in the individual's current health care. It is not intended to allow disclosure of past medical history that is not relevant to the individual's current condition. In addition, as discussed above, we do not intend to disrupt covered entities' current practices with respect to disclosing specific information about a patient's condition to family members or others when the individual is incapacitated due to a medical emergency and the family member or other individual comes to the covered

entity seeking specific information about the patient's condition. For example, this section allows a hospital to disclose to a family member the fact that a patient had a heart attack, and to provide updated information to the family member about the patient's progress and prognosis during his or her period of incapacity.

We agree with the recommendation to require written authorization for a disclosure of psychotherapy notes to family, close personal friends, or others involved in the individual's care. As discussed below, the final rule allows disclosure of psychotherapy notes without authorization in a few limited circumstances; disclosure to individuals involved in a person's care is not among those circumstances. See § 164.508 for a further discussion of the final rule's provisions regarding disclosure of psychotherapy notes.

We do not agree, however, with the suggestion to treat some medical information as more sensitive than others. In most cases, individuals will have the opportunity to prohibit or limit such disclosures. For situations in which an individual is unable to do so, covered entities may, in the exercise of professional judgement, determine whether the disclosure is in the individual's best interests and, if so, disclose only the protected health information that is directly relevant to the person's involvement with the individual's health care.

Comment: One commenter suggested that this provision should allow disclosure of protected health information to the clergy and to the Red Cross. The commenter noted that clergy have ethical obligations to ensure confidentiality and that the Red Cross often notifies the next of kin regarding an individual's condition in certain circumstances. Another commenter recommended allowing disclosures to law enforcement for the purpose of contacting the next of kin of individuals who have been injured or killed. One commenter sought clarification that “close personal friend” was intended to include domestic partners and same-sex couples in committed relationships.

Response: As discussed above, § 164.510(a) allows covered health care providers to disclose to clergy protected health information from a health care facility's directory. Under § 164.510(b), an individual may identify any person, including clergy, as involved in his or her care. This approach provides more flexibility than the proposed rule would have provided.

As discussed in the preamble of the final rule, this provision allows disclosures to domestic partners and others in same-sex relationships when such individuals are involved in an individual's care or are the point of contact for notification in a disaster. We do not intend to change current practices with respect to involvement of others in an individual's treatment decisions; informal information-sharing among persons involved; or the sharing of protected health information during a disaster. As noted above, a power of attorney or other legal relationship to an individual is not necessary for these informal discussions about the individual for the purpose of assisting in or providing a service related to the individual's care.

We agree with the comments noting that the Red Cross and other organizations may play an important role in locating and communicating with the family about individuals injured or killed in an accident or disaster situation. Therefore, the final rule includes new language, in § 164.510(b)(4), which allows covered entities to use or disclose protected health information to a public or private entity authorized by law or its charter to assist in disaster relief efforts, for the purpose of coordinating with such entities to notify, or assist in the notification of (including identifying or locating) a family member, an individual's personal representative, or another person responsible for the individual's care regarding the individual's location, general condition, or death. The Red Cross is an example of a private entity that may obtain protected health information pursuant to these provisions. We recognize the role of the Red Cross and similar organizations in disaster relief efforts, and we encourage cooperation with these entities in notification efforts and other means of assistance.

Comment: One commenter recommended stating that individuals who are mentally retarded and unable to agree to disclosures under this provision do not, thereby, lose their access to further medical treatment. This commenter also proposed stating that mentally retarded individuals who are able to provide agreement have the right to control the disclosure of their protected health information. The commenter expressed concern that the parent, relative, or other person acting in loco parentis may not have the individual's best interest in mind in seeking or authorizing for the individual the disclosure of protected health information.

Response: The final rule regulates only uses and disclosures of protected health information, not the delivery of health care. Under the final rule's section on personal representatives (§ 164.502(g)), a person with authority to make decisions about the health care of an individual, under applicable law, may make decisions about the protected health information of that individual, to the extent that the protected health information is relevant to such person's representation. ***82666**

In the final rule, § 164.510(b) may apply to permit disclosures to a person other than a personal representative. Under § 164.510(b), when an individual is present and has the capacity to make his or her own decisions, a covered entity may disclose protected health information only if the covered entity: (1) Obtains the individual's agreement to disclose protected health information to the third parties involved in the individual's care; (2) provides the individual with an opportunity to object to such disclosure, and the individual does not express an objection; or (3) reasonably infers from the circumstances, based on the exercise of professional judgment, that the individual does not object to the disclosure. These conditions apply to disclosure of protected health information about individuals with mental retardation as well as to disclosures about all other individuals. Thus we do not believe it is necessary to include in this section of the final rule any language specifically on persons with mental retardation.

Comments: A few commenters recommended that disclosures made in good faith to the family or friends of the individual not be subject to sanctions by the Secretary, even if the covered entity had not fully complied with the requirements of this provision. One commenter believed that a fear of sanction would make covered entities overly cautious, such that they would not disclose protected health information to domestic partners or others not recognized by law as next of kin. Another commenter recommended that sanctions not be imposed if the covered entity has proper policies in place and has trained its staff appropriately. According to this commenter, the lack of documentation of disclosures in a particular case or medical record should not subject the entity to sanctions if the information was disclosed in good faith.

Response: We generally agree with commenters regarding disclosure in good faith pursuant to this provision. As discussed above, the final rule expands the scope of individuals to whom covered entities may disclose protected health information pursuant to this section. In addition, we delete the term next of kin, to avoid the appearance of requiring any legal determination of a person's relationship in situations involving informal disclosures. Similarly, consistent with the informal nature of disclosures pursuant to this section, we do not require covered entities to document such disclosures. If a covered entity imposes its own documentation requirements and a particular covered health care provider does not follow the entity's documentation requirements, the disclosure is not a violation of this rule.

Comments: The majority of comments on this provision were from individuals and organizations concerned about domestic violence. Most of these commenters wanted assurance that domestic violence would be a consideration in any disclosure to the spouse or relatives of an individual whom the covered entity suspected to be a victim of domestic violence or abuse. In particular, these commenters recommended that disclosures not be made to family members suspected of being the abuser if to do so would further endanger the individual. Commenters believed that this limitation was particularly important when the individual was unconscious or otherwise unable to object to the disclosures.

Response: We agree with the comments that victims of domestic violence and other forms of abuse need special consideration in order to avoid further harm, and we provide for discretion of a covered entity to determine that protected health information not be disclosed pursuant to § 164.510(b). Section 164.510(b) of the final rule, disclosures to family or friends involved in the individual's care, states that when an individual is unable to agree or object to the disclosure due to incapacity or another emergency situation, a covered entity must determine based on the exercise of professional judgment whether it is in the individual's best interest to disclose the information. As stated in the preamble, we intend for this exercise of professional judgment in the individual's best interest to account for the potential for harm to the individual in cases involving domestic violence. These circumstances are unique and are best decided by a covered entity, in the exercise of professional judgment, in each situation rather than by a blanket rule.

Section 164.512—Uses and Disclosures for Which Consent, Authorization, or Opportunity to Agree or Object Is Not Required

Section 164.512(a)—Uses and Disclosures Required by Law

Comment: Numerous commenters addressed directly or by implication the question of whether the provision permitting uses and disclosures of protected health information if required by other law was necessary. Other commenters generally endorsed the need for such a provision. One such commenter approved of the provision as a needed fail-safe mechanism should the enumeration of permissible uses and disclosures of protected health information in the NPRM prove to be incomplete. Other commenters cited specific statutes which required access to protected health information, arguing that such a provision was necessary to ensure that these legally mandated disclosures would continue to be permitted. For example, some commenters argued for continued access to protected health information to investigate and remedy abuse and neglect as currently required by the Developmental Disabilities Assistance and Bill of Rights, 42 U.S.C. 6042, and the Protection and Advocacy for Mentally Ill Individuals Act, 42 U.S.C. 10801.

Some comments urged deletion of the provision for uses and disclosures required by other law. This concern appeared to be based on a generalized concern that the provision fostered government intrusion into individual medical information.

Finally, a number of commenters also urged that the required by law provision be deleted. These commenters argued that the proposed provision would have undermined the intent of the statute to preempt state laws which were less protective of individual privacy. As stated in these comments, the provision for uses and disclosures required by other law was "broadly written and could apply to a variety of state laws that are contrary to the proposed rule and less protective of privacy. (Indeed, a law requiring disclosure is the least protective of privacy since it allows for no discretion.) The breadth of this provision greatly exceeds the exceptions to preemption contained in HIPAA."

Response: We agree with the comments that proposed § 164.510(n) was necessary to harmonize the rule with existing state and federal laws mandating uses and disclosures of protected health information. Therefore, in the final rule, the provision permitting uses and disclosures as required by other law is retained. To accommodate other reorganization of the final rule, this provision has been designated as § 164.512(a).

We do not agree with the comments expressing concern for increased governmental intrusion into individual privacy under this provision. The final rule does not create any new duty or obligation to disclose protected health information. Rather, it permits covered entities to use or disclose protected health information when they are required by law to do so. ***82667**

We likewise disagree with the characterization of the proposed provision as inconsistent with or contrary to the preemption standards in the statute or Part 160 of the rule. As described in the NPRM, we intend this provision to preserve access to information considered important enough by state or federal authorities to require its disclosure by law.

The importance of these required uses or disclosures is evidenced by the legislative or other public process necessary for the government to create a legally binding obligation on a covered entity. Furthermore, such required uses and disclosures arise in a myriad of other areas of law, ranging from topics addressing national security (uses and disclosures to obtain security clearances), to public health (reporting of communicable diseases), to law enforcement (disclosures of gun shot wounds). Required uses and disclosures also may address broad national concerns or particular regional or state concerns. It is not possible, or appropriate, for HHS to reassess the legitimacy of or the need for each of these mandates in each of their specialized contexts. In some cases where particular concerns have been raised by legal mandates in other laws, we allow disclosure as required by law, and we establish additional requirements to protect privacy (for example, informing the individual as required in § 164.512(c)) when covered entities make a legally mandated disclosure.

We also disagree with commenters who suggest that the approach in the final rule is contrary to the preemption provisions in HIPAA. HIPAA provides HHS with broad discretion in fashioning privacy protections. Recognizing the legitimacy of existing

legal requirements is certainly within the Secretary's discretion. Additionally, given the variety of these laws, the varied contexts in which they arise, and their significance in ensuring that important public policies are achieved, we do not believe that Congress intended to preempt each such law unless HHS specifically recognized the law or purpose in the regulation.

Comment: A number of commenters urged that the provision permitting uses and disclosures required by other law be amended by deleting the last sentence which stated: “This paragraph does not apply to uses or disclosures that are covered by paragraphs (b) through (m) of this section.” Some commenters sought deletion of this sentence to avoid any inadvertent preemption of mandatory reporting laws, and requested clarification of the effect on specific statutes.

The majority of the commenters focused their concerns on the potential conflict between mandatory reporting laws to law enforcement and the limitations imposed by proposed § 164.510(f), on uses and disclosures to law enforcement. For example, the comments raised concerns that mandatory reporting to law enforcement of injuries resulting from violent acts and abuse require the health care provider to initiate such reports to local law enforcement or other state agencies, while the NPRM would have allowed such reporting on victims of crimes only in response to specific law enforcement requests for information. Similarly, mandatory reports of violence-related injuries may implicate suspected perpetrators, as well as victims, and compliance with such laws could be blocked by the proposed requirement that disclosures about suspects was similarly limited to a response to law enforcement inquiries for the specific purpose of identifying the suspect. The NPRM also would have limited the type of protected health information that could have been disclosed about a suspect or fugitive.

In general, commenters sought to resolve this overlap by removing the condition that the required-by-other-law provision applied only when no other national priority purpose addressed the particular use or disclosure. The suggested change would permit the covered entity to comply with legally mandated uses and disclosures as long as the relevant requirements of that law were met. Alternatively, other commenters suggested that the restrictions on disclosures to law enforcement be lifted to permit full compliance with laws requiring reporting for these purposes.

Finally, some comments sought clarification of when a use or disclosure was “covered by paragraphs (b) through (m).” These commenters were confused as to whether a particular use or disclosure had to be specifically addressed by another provision of the rule or simply within the scope of the one of the national priority purposes specified by proposed paragraphs (b) through (m).

Response: We agree with the commenters that the provision as proposed would have inadvertently interfered with many state and federal laws mandating the reporting to law enforcement or others of protected health information.

In response to these comments, we have modified the final rule to clarify how this section interacts with the other provisions in the rule.

Comment: A number of commenters sought expanded authority to use and disclosure protected health information when permitted by other law, not just when required by law. These comments specified a number of significant duties or potential societal benefits from disclosures currently permitted or authorized by law, and they expressed concern should these beneficial uses and disclosures no longer be allowed if not specifically recognized by the rule. For example, one commenter listed 25 disclosures of health records that are currently permitted, but not required, by state law. This commenter was concerned that many of these authorized uses and disclosures would not be covered by any of the national priority purposes specified in the NPRM, and, therefore, would not be a permissible use or disclosure under the rule. To preserve these important uses and disclosures, the comments recommended that provision be made for any use or disclosure which is authorized or permitted by other law.

Response: We do not agree with the comments that seek general authority to use and disclose protected health information as permitted, but not required, by other law. The uses and disclosures permitted in the final rule reflect those purposes and circumstances which we believe are of sufficient national importance or relevance to the needs of the health care system to warrant the use or disclosure of protected health information in the absence of either the individual's express authorization or

a legal duty to make such use or disclosure. In permitting specific uses and disclosures that are not required by law, we have considered the individual privacy interests at stake in each area and crafted conditions or limitations in each identified area as appropriate to balance the competing public purposes and individual privacy needs. A general rule authorizing any use or disclosure that is permitted, but not required, by other law would undermine the careful balancing in the final rule.

In making this judgment, we have distinguished between laws that mandate uses or disclosures and laws that merely permit them. In the former case, jurisdictions have determined that public policy purposes cannot be achieved absent the use of certain protected health information, and we have chosen in general not to disturb their judgments. On the other hand, where jurisdictions have determined that certain protected health information is not necessary to achieve ***82668** a public policy purpose, and only have permitted its use or disclosure, we do not believe that those judgments reflect an interest in use or disclosure strong enough to override the Congressional goal of protecting privacy rights.

Moreover, the comments failed to present any compelling circumstance to warrant such a general provision. Despite commenters' concerns to the contrary, most of the beneficial uses and disclosures that the commenters referenced to support a general provision were, in fact, uses or disclosures already permissible under the rule. For example, the general statutory authorities relied on by one state health agency to investigate disease outbreaks or to comply with health data-gathering guidelines for reporting to certain federal agencies are permissible disclosures to public health agencies.

Finally, in the final rule, we add new provisions to § 164.512 to address three examples raised by commenters of uses and disclosures that are authorized or permitted by law, but may not be required by law. First, commenters expressed concern for the states that provide for voluntary reporting to law enforcement or state protective services of domestic violence or of abuse, neglect or exploitation of the elderly or other vulnerable adults. As discussed below, a new section, § 164.512(c), has been added to the final rule to specifically address uses and disclosures of protected health information in cases of abuse, neglect, or domestic violence. Second, commenters were concerned about state or federal laws that permitted coordination and cooperation with organizations or entities involved in cadaveric organ, eye, or tissue donation and transplantation. In the final rule, we add a new section, § 164.512(h), to permit disclosures to facilitate such donation and transplantation functions. Third, a number of commenters expressed concern for uses and disclosure permitted by law in certain custodial settings, such as those involving correctional or detention facilities. In the final rule, we add a new subsection to the section on uses and disclosures for specialized government functions, § 164.512(k), to identify custodial settings in which special rules are necessary and to specify the additional uses and disclosures of the protected health information of inmates or detainees which are necessary in such facilities.

Comment: A number of commenters asked for clarification of the term “law” and the phrase “required by law” for purposes of the provision permitting uses or disclosures that are required by law. Some of the commenters noted that “state law” was a defined term in Part 160 of the NPRM and that the terms should be used consistently. Other commenters were concerned about differentiating between laws that required a use or disclosure and those that merely authorize or permit a use or disclosure. A number of commenters recommended that the final rule include a definitive list of the laws that mandate a use or disclosure of protected health information.

Response: In the final rule, we clarify that, consistent with the “state law” definition in § 160.202, “law” is intended to be read broadly to include the full array of binding legal authority, such as constitutions, statutes, rules, regulations, common law, or other governmental actions having the effect of law. However, for the purposes of § 164.512(a), law is not limited to state action; rather, it encompasses federal, state or local actions with legally binding effect, as well as those by territorial and tribal governments.

For more detail on the meaning of “required by law,” see § 164.501. Only where the law imposes a duty on the health care professional to report would the disclosure be considered to be required by law.

The final rule does not include a definitive list of the laws that contain legal mandates for disclosures of protected health information. In light of the breadth of the term "law" and number of federal, state, local, and territorial or tribal authorities that may engage in the promulgation of binding legal authority, it would be impossible to compile and maintain such a list. Covered entities have an independent duty to be aware of their legal obligations to federal, state, local and territorial or tribal authorities. The rule's approach is simply intended to avoid any obstruction to the health plan or covered health care provider's ability to comply with its existing legal obligations.

Comment: A number of commenters recommended that the rule compel covered entities to use or disclose protected health information as required by law. They expressed concern that covered entities could refuse or delay compliance with legally mandated disclosures by misplaced reliance on a rule that permits, but does not require, a use or disclosure required by other law.

Response: We do not agree that the final rule should require covered entities to comply with uses or disclosures of protected health information mandated by law. The purpose of this rule is to protect privacy, and to allow those disclosures consistent with sound public policy. Consistent with this purpose, we mandate disclosure only to the individual who is the subject of the information, and for purposes of enforcing the rule. Where a law imposes a legal duty on the covered entity to use or disclose protected health information, it is sufficient that the privacy rule permit the covered entity to comply with such law. The enforcement of that legal duty, however, is a matter for that other law.

Section 164.512(b)—Uses and Disclosures for Public Health Activities

Comment: Several non-profit entities commented that medical records research by nonprofit entities to ensure public health goals, such as disease-specific registries, would not have been covered by this provision. These organizations collect information without relying on a government agency or law. Commenters asserted that such activities are essential and must continue. They generally supported the provisions allowing the collection of individually identifiable health information without authorization for registries. One stated that both governmental and non-governmental cancer registries should be exempt from the regulation. They stated that "such entities, by their very nature, collect health information for legitimate public health and research purposes." Another, however, addressed its comments only to "disclosure to non-government entities operating such system as required or authorized by law."

Response: We acknowledge that such entities may be engaged in disease-specific or other data collection activities that provide a benefit to their members and others affected by a particular malady and that they contribute to the public health and scientific database on low incidence or little known conditions. However, in the absence of some nexus to a government public health authority or other underlying legal authority, it is unclear upon what basis covered entities can determine which registries or collections are "legitimate" and how the confidentiality of the registry information will be protected. Commenters did not suggest methods for "validating" these private registry programs, and no such methods currently exist at the federal level. It is unknown whether any states have such a program. Broadening the exemption could provide a loophole for private data collections for inappropriate ***82669** purposes or uses under a "public health" mask.

In this rule, we do not seek to make judgments as to the legitimacy of private entities' disease-specific registries or of private data collection endeavors. Rather, we establish the general terms and conditions for disclosure and use of protected health information. Under the final rule, covered entities may obtain authorization to disclose protected health information to private entities seeking to establish registries or other databases; they may disclose protected health information as required by law; or they may disclose protected health information to such entities if they meet the conditions of one of the provisions of §§ 164.510 or 164.512. We believe that the circumstances under which covered entities may disclose protected health information to private entities should be limited to specified national priority purposes, as reflected through the FDA requirements or directives listed in § 164.512(b)(iii), and to enable recalls, repairs, or replacements of products regulated by the FDA. Disclosures by covered health care providers who are workforce members of an employer or are conducting evaluations relating to work-related injuries or illnesses or workplace surveillance also may disclose protected health information to employers of findings of such evaluations that are necessary for the employer to comply with requirements under OSHA and related laws.

Comment: Several commenters said that the NPRM did not indicate how to distinguish between public health data collections and government health data systems. They suggested eliminating proposed § 164.510(g) on disclosures and uses for government health data systems, because they believed that such disclosures and uses were adequately covered by proposed § 164.510(b) on public health.

Response: As discussed below, we agree with the commenters who suggested that the proposed provision that would have permitted disclosures to government health data bases was overly broad, and we remove it from the final rule. We reviewed the important purposes for which some commenters said government agencies needed protected health information, and we believe that most of those needs can be met through the other categories of permitted uses and disclosures without authorization allowed under the final rule, including provisions permitting covered entities to disclose information (subject to certain limitations) to government agencies for public health, health oversight, law enforcement, and otherwise as required by law. For example, the final rule continues to allow collection of protected health information without authorization to monitor trends in the spread of infectious disease, morbidity and mortality.

Comment: Several commenters recommended expanding the scope of disclosures permissible under proposed § 164.510(b)(1)(iii), which would have allowed covered entities to disclose protected health information to private entities that could demonstrate that they were acting to comply with requirements, or at the direction, of a public health authority. These commenters said that they needed to collect individually identifiable health information in the process of drug and device development, approval, and post-market surveillance—activities that are related to, and necessary for, the FDA regulatory process. However, they noted that the specific data collections involved were not required by FDA regulations. Some commenters said that they often devised their own data collection methods, and that health care providers disclosed information to companies voluntarily for activities such as post-marketing surveillance and efficacy surveys. Commenters said they used this information to comply with FDA requirements such as reporting adverse events, filing other reports, or recordkeeping. Commenters indicated that the FDA encouraged but did not require them to establish other data collection mechanisms, such as pregnancy registries that track maternal exposure to drugs and the outcomes.

Accordingly, several commenters recommended modifying proposed § 164.510(b) to allow covered entities to disclose protected health information without authorization to manufacturers registered with the FDA to manufacture, distribute, or sell a prescription drug, device, or biological product, in connection with post-marketing safety and efficacy surveillance or for the entity to obtain information about the drug, device, or product or its use. One commenter suggested including in the regulation an illustrative list of examples of FDA-related requirements, and stating in the preamble that all activities taken in furtherance of compliance with FDA regulations are "public health activities."

Response: We recognize that the FDA conducts or oversees many activities that are critical to help ensure the safety or effectiveness of the many products it regulates. These activities include, for example, reporting of adverse events, product defects and problems; product tracking; and post-marketing surveillance. In addition, we believe that removing defective or harmful products from the market is a critical national priority and is an important tool in FDA efforts to promote the safety and efficacy of the products it regulates. We understand that in most cases, the FDA lacks statutory authority to require product recalls. We also recognize that the FDA typically does not conduct recalls, repairs, or product replacement surveillance directly, but rather, that it relies on the private entities it regulates to collect data, notify patients when applicable, repair and replace products, and undertake other activities to promote the safety and effectiveness of FDA-regulated products.

We believe, however, that modifying the NPRM to allow disclosure of protected health information to private entities as part of any data-gathering activity related to a drug, device, or biological product or its use, or for any activity that is consistent with, or that appears to promote objectives specified, in FDA regulation would represent an inappropriately broad exception to the general requirement to obtain authorization prior to disclosure. Such a change could allow, for example, drug companies to collect protected health information without authorization to use for the purpose of marketing pharmaceuticals. We do not agree that all activities taken to promote compliance with FDA regulations represent public health activities as that term is defined in this rule. In addition, we believe it would not be appropriate to include in the regulation text an "illustrative list"

of requirements "related to" the FDA. The regulation text and preamble list the FDA-related activities for which we believe disclosure of protected health information to private entities without authorization is warranted.

We believe it is appropriate to allow disclosure of protected health information without authorization to private entities only: For purposes that the FDA has, in effect, identified as national priorities by issuing regulations or express directions requiring such disclosure; or if such disclosure is necessary for a product recall. For example, we believe it is appropriate to allow covered health care providers to disclose to a medical device manufacturer recalling defective heart valves the names and last known addresses of patients in whom the provider implanted the valves. Thus, in the final rule, we allow covered entities to disclose protected health information to entities subject to FDA jurisdiction for the following activities: To report adverse events (or similar reports with ***82670** respect to food or dietary supplements), product defects or problems (including problems with the use or labeling of a product), or biological product deviations, if the disclosure is made to the person required or directed to report such information to the FDA; to track products if the disclosure is made to a person required or directed by the FDA to track the product; to enable product recalls, repairs, or replacement (including locating and notifying individuals who have received products of product recalls, withdrawals, or other problems); or to conduct post-marketing surveillance to comply with requirements or at the direction of the FDA. The preamble above provides further detail on the meaning of some of the terms in this list. Covered entities may disclose protected health information to entities for activities other than those described above only as required by law; with authorization; or if permissible under another section of this rule.

We understand that many private registries, such as pregnancy registries, currently obtain patient authorization for data collection. We believe the approach of § 164.512(b) strikes an appropriate balance between the objective of promoting patient privacy and control over their health information and the objective of allowing private entities to collect data that ultimately may have important public health benefits.

Comment: One commenter remarked that our proposal may impede fetal/infant mortality and child fatality reviews.

Response: The final rule permits a covered entity to disclose protected health information to a public health authority authorized by law to conduct public health activities, including the collection of data relevant to death or disease, in accordance with § 164.512(b). Such activities may also meet the definition of "health care operations." We therefore do not believe this rule impedes these activities.

Comment: Several comments requested that the final regulation clarify that employers be permitted to use and/or disclose protected health information pursuant to the requirements of the Occupational Safety and Health Act and its accompanying regulations ("OSHA"). A few comments asserted that the regulation should not only permit employers to use and disclose protected health information without first obtaining an authorization consistent with OSHA requirements, but also permit them to use and disclose protected health information if the use or disclosure is consistent with the spirit of OSHA. One commenter supported the permissibility of these types of uses and disclosures, but warned that the regulation should not grant employers unfettered access to the entire medical record of employees for the purpose of meeting OSHA requirements. Other commenters noted that OSHA not only requires disclosures to the Occupational Safety and Health Administration, but also to third parties, such as employers and employee representatives. Thus, this comment asked HHS to clarify that disclosures to third parties required by OSHA are also permissible under the regulation.

Response: Employers as such are not covered entities under HIPAA and we generally do not have authority over their actions. When an employer has a health care component, such as an on-site medical clinic, and the components meets the requirements of a covered health care provider, health plan or health care clearinghouse, the uses and disclosures of protected health information by the health care component, including disclosures to the larger employer entity, are covered by this rule and must comply with its provisions.

A covered entity, including a covered health care provider, may disclose protected health information to OSHA under § 164.512(a), if the disclosure is required by law, or if the disclosure is a discretionary one for public health activities, under

§ 164.512(b). Employers may also request employees to provide authorization for the employer to obtain protected health information from covered entities to conduct analyses of work-related health issues. See § 164.508.

We also permit covered health care providers who provide health care as a workforce member of an employer or at the request of an employer to disclose protected health information to the employer concerning work-related injuries or illnesses or workplace medical surveillance in situations where the employer has a duty to keep records on or act on such information under the OSHA or similar laws. We added this provision to ensure that employers are able to obtain the information that they need to meet federal and state laws designed to promote safer and healthier workplaces. These laws are vital to protecting the health and safety of workers and we permit specified covered health care providers to disclose protected health information as necessary to carry out these purposes.

Comment: A few comments suggested that the final regulation clarify how it would interact with existing and pending OSHA requirements. One of these comments requested that the Secretary delay the effective date of the regulation until reviews of existing requirements are complete.

Response: As noted in the "Relationship to Other Federal Laws" section of the preamble, we are not undertaking a complete review of all existing laws with which covered entities might have to comply. Instead we have described a general framework under which such laws may be evaluated. We believe that adopting national standards to protect the privacy of individually identifiable health information is an urgent national priority. We do not believe that it is appropriate to delay the effective date of this regulation.

Comment: One commenter asserted that the proposed regulation conflicted with the OSHA regulation requirement that when a designated representative (to whom the employee has already provided a written authorization to obtain access) requests a release form for access to employee medical records, the form must include the purpose for which the disclosure is sought, which the proposed privacy regulation does not require.

Response: We do not agree that this difference creates a conflict for covered entities. If an employer seeks to obtain a valid authorization under § 164.508, it may add a purpose statement to the authorization so that it complies with OSHA's requirements and is a valid authorization under § 164.508 upon which a covered entity may rely to make a disclosure of protected health information to the employer.

Comment: One commenter stated that access to workplace medical records by the occupational medical physicians is fundamental to workplace and community health and safety. Access is necessary whether it is a single location or multiple sites of the same company, such as production facilities of a national company located throughout the country.

Response: We permit covered health care providers who provide health care as a workforce member of an employer or at the request of an employer to disclose protected health information to the employer concerning work-related injuries or illnesses or workplace medical surveillance, as described in this paragraph. Information obtained by an employer under this paragraph would be available for it to use, consistent with other laws and regulations, as it chooses and throughout the national company. We do not regulate uses or disclosures of individually identifiable health ***82671** information by employers acting as employers.

Section 164.512(c)—Disclosures About Victims of Abuse, Neglect, or Domestic Violence

The NPRM did not include a paragraph specifically addressing covered entities' disclosures of protected health information regarding victims of abuse, neglect, or domestic violence. Rather, the NPRM addressed disclosures about child abuse pursuant to proposed § 164.510(b), which would have allowed covered entities to report child abuse to a public health authority or to another appropriate authority authorized by law to receive reports of child abuse or neglect. We respond to comments regarding victims of domestic violence or abuse throughout the final rule where relevant. (See responses to comments on §§ 164.502(g), 164.510(b), 164.512(f)(3), 164.522, and 164.524.)

Comment: Several commenters urged us to require that victims of domestic violence be notified about requests for or disclosures of protected health information about them, so that victims could take safety precautions.

Response: We agree that, in balancing the burdens on covered entities from such a notification requirement against the benefits to be gained, victims of domestic abuse merit heightened concern. For this reason, we generally require covered entities to inform the individual when they disclose protected health information to authorized government authorities. As the Family Violence Prevention Fund has noted in its Health Privacy Principles for Protecting Victims of Domestic Violence (October 2000), victims of domestic violence and abuse sometimes are subject to retaliatory violence. By informing a victim of abuse or domestic violence of a disclosure to law enforcement or other authorities, covered entities give victims the opportunity to take appropriate safety precautions. See the above preamble discussion of § 164.512(c) for more detail about the requirements for disclosing protected health information about victims of domestic violence.

Comment: Some commenters argued that a consent requirement should apply at a minimum to disclosures involving victims of crime or victims of domestic violence.

Response: We agree, and we modify the proposed rule to require covered entities to obtain an individual's agreement prior to disclosing protected health information in most instances involving victims of a crime or of abuse, neglect, or domestic violence. See the above preamble discussions of § 164.512(c), on disclosures about victims of abuse, neglect, or domestic violence, and § 164.512(f)(3), on disclosures to law enforcement about crime victims.

Section 164.512(d)—Uses and Disclosures for Health Oversight Activities

Comment: A couple of commenters supported the NPRM's approach to health oversight. Several other commenters generally supported the NPRM's approach to disclosure of protected health information for national priority purposes, and they recommended some clarification regarding disclosure for health oversight. Two commenters recommended clarifying in the final rule that disclosure is allowed to all federal, state, and local agencies that use protected health information to carry out legally mandated responsibilities.

Response: The final rule permits disclosures to public agencies that meet the definition of a health oversight agency and for oversight of the particular areas described in the statute. Section 164.512(a) of the final rule permits disclosures that are required by law. As discussed in the responses to comments of § 164.512(a), we do not in the final rule permit disclosures merely authorized by other laws that do not fit within the other public policy purposes recognized by the rule.

Comment: One commenter recommended clarifying in the final rule that covered entities are not required to establish business partner contracts with health oversight agencies or public health authorities to release individually identifiable information to them for purposes exempt from HIPAA and sanctioned by state law.

Response: The final rule does not require covered entities to establish business associate contracts with health oversight agencies when they disclose protected health information to these agencies for oversight purposes.

Comment: Two commenters recommended clarifying in the regulation text that the health oversight section does not create a new right of access to protected health information.

Response: We agree and include such a statement in the preamble of § 164.512(d) of the final rule.

Comment: Several commenters were concerned that the proposed oversight section allowed but did not require disclosure of protected health information to health oversight agencies for oversight activities.

Response: This rule's purpose is to protect the privacy of individually identifiable health information. Except to enforce the rule and to establish individuals' right to access their own protected health information (see § 164.502(a)(2)), we do not require

disclosure of protected health information to any person or entity. We allow such disclosure for situations in which other laws require disclosure.

Comment: Some commenters were concerned that the NPRM would have allowed health oversight agencies to re-use and redisclose protected health information to other entities, and they were particularly concerned about re-disclosure to and re-use by law enforcement agencies. One commenter believed that government agencies would use the label of health oversight to gain access to protected health information from covered entities—thereby avoiding the procedural requirements of the law enforcement section (proposed § 164.510(f)) and subsequently would turn over information to law enforcement officials. Thus, these groups were concerned that the potential for oversight access to protected health information under the rule to become the "back door" to law enforcement access to such information.

Based on their concerns, these commenters recommended establishing a general prohibition on the re-use and re-disclosure of protected health information obtained by health oversight agencies in actions against individuals. One health plan expressed general concern about re-disclosure among all of the public agencies covered in the proposed § 164.510. It recommended building safeguards into the rule to prevent information gathered for one purpose (for example, public health) from being used for another purpose (such as health oversight).

Many of the commenters concerned about re-disclosure of protected health information obtained for oversight purposes said that if the Secretary lacked statutory authority to regulate oversight agencies' re-disclosure of protected health information and the re-use of this information by other agencies covered in proposed § 164.510, the President should issue an Executive Order barring such re-disclosure and re-use. One of these groups specified that the Executive Order should bar re-use and re-disclosure of protected health information in actions against individuals.

In contrast, some commenters advocated information-sharing between law enforcement and oversight agencies. Most of these commenters recognized that the NPRM would have allowed re-use and re-disclosure of protected health information from oversight to law ***82672** enforcement agencies, and they supported this approach.

Response: We believe that the language we have added to the rule, at § 164.512(d)(2) and the corresponding explanation in the preamble, to clarify the boundary between disclosures for health oversight and for law enforcement purposes should partially address the concern expressed by some that oversight agencies will be the back door for access by law enforcement. In situations when the individual is the subject of an investigation or activity and the investigation or activity is not related to health care fraud, the requirements for disclosure to law enforcement must be met, and an oversight agency cannot request the information under its more general oversight authority.

We acknowledge, however, that there will be instances under the rule when a health oversight agency (or a law enforcement agency in its oversight capacity) that has obtained protected health information appropriately will be able to redisclose the information to a law enforcement agency for law enforcement purposes. Under HIPAA, we have the authority to restrict re-disclosure of protected health information only by covered entities. Re-disclosures by public agencies such as oversight agencies are not within the purview of this rule. We support the enactment of comprehensive privacy legislation that would govern such public agencies' re-use and re-disclosure of this information. Furthermore, in an effort to prevent health oversight provisions from becoming the back door to law enforcement access to protected health information, the President is issuing an Executive Order that places strict limitations on the use of protected health information gathered in the course of an oversight investigation for law enforcement activities. For example, such use will be subject to review by the Deputy Attorney General.

Comment: Several commenters recommended modifying the proposed oversight section to require health oversight officials to justify and document their need for identifiable information.

Response: We encourage covered entities to work with health oversight agencies to determine the scope of information needed for health oversight inquiries. However, we believe that requiring covered entities to obtain extensive documentation of health

oversight information needs could compromise health oversight agencies' ability to complete investigations, particularly when an oversight agency is investigating the covered entity from which it is seeking information.

Comment: Several commenters believed that health oversight activities could be conducted without access to individually identifiable health information. Some of these groups recommended requiring information provided to health oversight agencies to be de-identified to the extent possible.

Response: We encourage health oversight agencies to use de-identified information whenever possible to complete their investigations. We recognize, however, that in some cases, health oversight agencies need identifiable information to complete their investigations. For example, as noted in the preamble to the NPRM, to determine whether a hospital has engaged in fraudulent billing practices, it may be necessary to examine billing records for a set of individual cases. Similarly, to determine whether a health plan is complying with federal or state health care quality standards, it may be necessary to examine individually identifiable health information in comparison with such standards. Thus, to allow health oversight agencies to conduct the activities that are central to their mission, the final rule does not require covered entities to de-identify protected health information before disclosing it to health oversight organizations.

Comment: One commenter recommended requiring whistleblowers, pursuant to proposed § 164.518(a)(4) of the NPRM, to raise the issue of a possible violation of law with the affected covered entity before disclosing such information to an oversight agency, attorney, or law enforcement official.

Response: We believe that such a requirement would be inappropriate, because it would create the potential for covered entities that are the subject of whistleblowing to take action to evade law enforcement and oversight action.

Comment: One commenter recommended providing an exemption from the proposed rule's requirements for accounting for disclosures when such disclosures were for health oversight purposes.

Response: We recognize that in some cases, informing individuals that their protected health information has been disclosed to a law enforcement official or to a health oversight agency could compromise the ability of law enforcement and oversight officials to perform their duties appropriately. Therefore, in the final rule, we retain the approach of proposed § 164.515 of the NPRM. Section 164.528(a)(2) of the final rule states that an individual's right to receive an accounting of disclosures to a health oversight agency, law enforcement official, or for national security or intelligence purposes may be temporarily suspended for the time specified by the agency or official. As described in § 164.528(a)(2), for such a suspension to occur, the agency or official must provide the affected covered entity with a written request stating that an accounting to the individual would be reasonably likely to impede the agency's activity. The request must specify the time for which the suspension is required. We believe that providing a permanent exemption to the right to accounting for disclosures for health oversight purposes would fail to ensure that individuals are sufficiently informed about the extent of disclosures of their protected health information.

Comment: One commenter recommended making disclosures to health oversight agencies subject to a modified version of the NPRM's proposed three-part test governing disclosure of protected health information to law enforcement pursuant to an administrative request (as described in proposed § 164.510(f)(1)).

Response: We disagree that it would be appropriate to apply the procedural requirements for law enforcement to health oversight. We apply more extensive procedural requirements to law enforcement disclosures than to disclosures for health oversight because we believe that law enforcement investigations more often involve situations in which the individual is the subject of the investigation (and thus could suffer adverse consequences), and we believe that it is appropriate to provide greater protection to individuals in such cases. Health oversight involves investigations of institutions that use health information as part of business functions, or of individuals whose health information has been used to obtain a public benefit. These circumstances justify broader access to information.

Overlap Between Law Enforcement and Oversight

Comment: Some commenters expressed concern that the NPRM's provisions permitting disclosures for health oversight and disclosures for law enforcement overlapped, and that the overlap could create confusion among covered entities, members of the public, and government agencies. The commenters identified particular factors that could lead to confusion, including that (1) the phrase "criminal, civil, or administrative proceeding" appeared in the definitions of both law enforcement ***82673** and oversight; (2) the examples of oversight agencies listed in the preamble included a number of organizations that also conduct law enforcement activities; (3) the NPRM addressed the issue of disclosures to investigate health care fraud in the law enforcement section (§ 164.510(f)(5)), yet health care fraud investigations are central to the mission of some health care oversight agencies; (4) the NPRM established more stringent rules for disclosure of protected health information pursuant to an administrative subpoena issued for law enforcement than for disclosure pursuant to an oversight agency's administrative subpoena; and (5) the preamble, but not the NPRM regulation text, indicated that agencies conducting both oversight and law enforcement activities would be subject to the oversight requirements when conducting oversight activities.

Some commenters said that covered entities would be confused by the overlap between law enforcement and oversight and that this concern would lead to litigation over which rules should apply when an entity engaged in more than one of the activities listed under the exceptions in proposed § 164.510. Other commenters believed that covered entities could manipulate the NPRM's ambiguities in their favor, claim that the more stringent law enforcement disclosure rules always should apply, and thereby delay investigations. A few comments suggested that the confusion could be clarified by making the regulation text consistent with the preamble, by stating that when agencies conducting both law enforcement and oversight seek protected health information as part of their oversight activities, the oversight rules would apply.

Response: We agree that the boundary between disclosures for health oversight and disclosures for law enforcement proposed in the NPRM could have been more clear. Because many investigations, particularly investigations involving public benefit programs, have both health oversight and law enforcement aspects to them, and because the same agencies often perform both functions, drawing any distinction between the two functions is necessarily difficult. For example, traditional law enforcement agencies, such as the Federal Bureau of Investigation, have a significant role in health oversight. At the same time, traditional health oversight agencies, such as federal Offices of Inspectors General, often participate in criminal investigations.

To clarify the boundary between law enforcement and oversight for purposes of complying with this rule, we add new language in the final rule, at § 164.512(d)(2). This section indicates that health oversight activities do not include an investigation or activity in which the individual is the subject of the investigation or activity and the investigation or activity does not arise out of and is not directly related to health care fraud. In this rule, we describe investigations involving suspected health care fraud as investigations related to: (1) The receipt of health care; (2) a claim for public benefits related to health; or (3) qualification for, or receipt of public benefits or services where a patient's health is integral to the claim for public benefits or services. In such cases, where the individual is the subject of the investigation and the investigation does not relate to health care fraud, identified as investigations regarding issues (a) through (c), the rules regarding disclosure for law enforcement purposes (see § 164.512(f)) apply.

Where the individual is not the subject of the activity or investigation, or where the investigation or activity relates to health care fraud, a covered entity may make a disclosure pursuant to § 164.512(d)(1), allowing uses and disclosures for health oversight activities. For example, when the U.S. Department of Labor's Pension and Welfare Benefits Administration (PWBA) needs to analyze protected health information about health plan enrollees in order to conduct an audit or investigation of the health plan (i.e., the enrollees are not subjects of the investigation) to investigate potential fraud by the health plan, the health plan may disclose protected health information to the PWBA under the health oversight rules.

To clarify further that health oversight disclosure rules apply generally in health care fraud investigations (subject to the exception described above), in the final rule, we eliminate proposed § 164.510(f)(5)(i), which would have established requirements for disclosure related to health fraud for law enforcement purposes. All disclosures of protected health information that would have been permitted under proposed § 164.510(f)(5)(i) are permitted under § 164.512(d).

We also recognize that sections 201 and 202 of HIPAA, which established a federal Fraud and Abuse Control Program and the Medicare Integrity Program, identified health care fraud-fighting as a critical national priority. Accordingly, under the final rule, in joint law enforcement/oversight investigations involving suspected health care fraud, the health oversight disclosures apply, even if the individual also is the subject of the investigation.

We also recognize that in some cases, health oversight agencies may conduct joint investigations with other oversight agencies involved in investigating claims for benefits unrelated to health. For example, in some cases, a state Medicaid agency may be working with officials of the Food Stamps program to investigate suspected fraud involving Medicaid and Food Stamps. While this issue was not raised specifically in the comments, we add new language (§ 164.512(d)(3)) to provide guidance to covered entities in such situations. Specifically, we clarify that if a health oversight investigation is conducted in conjunction with an oversight activity related to a claim for benefits unrelated to health, the joint activity or investigation is considered health oversight for purposes of the rule, and the covered entities may disclose protected health information pursuant to the health oversight provisions.

Comment: An individual commenter recommended requiring authorization for disclosure of patient records in fraud investigations, unless the individual was the subject or target of the investigation. This commenter recommended requiring a search warrant for cases in which the individual was the subject and stating that fraud investigators should have access to the minimum necessary patient information.

Response: As described above, we recognize that in some cases, activities include elements of both law enforcement and health oversight. Because we consider both of these activities to be critical national priorities, we do not require covered entities to obtain authorization for disclosure of protected health information to law enforcement or health oversight agencies—including those oversight activities related to health care fraud. We believe that investigations involving health care fraud represent health oversight rather than law enforcement. Accordingly, as indicated above, we remove proposed § 164.510(f)(5)(i) from the law enforcement section of the proposed rule and clarify that all disclosures of protected health information for health oversight are permissible without authorization. As discussed in greater detail in § 164.514, the final rule's minimum necessary standard applies to disclosures under § 164.512 unless the disclosure is required by law under § 164.512(a). ***82674**

Comment: A large number of commenters expressed concern about the potential for health oversight agencies to become, in effect, the “back door” for law enforcement access to such information. The commenters suggested that health oversight agencies could use their relatively unencumbered access to protected health information to circumvent the more stringent process requirements that otherwise would apply to disclosures for law enforcement purposes. These commenters urged us to prohibit health oversight agencies from re-disclosing protected health information to law enforcement.

Response: As indicated above, we do not intend for the rule's permissive approach to health oversight or the absence of specific documentation to permit the government to gather large amounts of protected health information for purposes unrelated to health oversight as defined in the rule, and we do not intend for these oversight provisions to serve as a “back door” for law enforcement access to protected health information. While we do not have the statutory authority to regulate law enforcement and oversight agencies' re-use and re-disclosure of protected health information, we strongly support enactment of comprehensive privacy legislation that would govern public agencies' re-use and re-disclosure of this information. Furthermore, in an effort to prevent health oversight provisions from becoming the back door to law enforcement access to protected health information, the President is issuing an Executive Order that places strict limitations on the use of protected health information gathered in the course of an oversight investigation for law enforcement activities.

Comment: One commenter asked us to allow the requesting agency to decide whether a particular request for protected health information was for law enforcement or oversight purposes.

Response: As described above, we clarify the overlap between law enforcement disclosures and health oversight disclosures based on the privacy and liberty interests of the individual (whether the individual also is the subject of the official inquiry) and the nature of the public interest (whether the inquiry relates to health care fraud or to another potential violation of law). We believe it is more appropriate to establish these criteria than to leave the decision to the discretion of an agency that has a stake in the outcome of the investigation.

Section 164.512(e)—Disclosures for Judicial and Administrative Proceedings

Comment: A few commenters suggested that the final rule not permit disclosures without an authorization for judicial and administrative proceedings.

Response: We disagree. Protected health information is necessary for a variety of reasons in judicial and administrative proceedings. Often it may be critical evidence that may or may not be about a party. Requiring an authorization for all such disclosures would severely impede the review of legal and administrative claims. Thus, we have tried to balance the need for the information with the individual's privacy. We believe the approach described above provides individuals with the opportunity to object to disclosures and provides a mechanism through which their privacy interests are taken into account.

Comment: A few commenters sought clarification about the interaction between permissible disclosures for judicial and administrative proceedings, law enforcement, and health oversight.

Response: In the final rule, we state that the provision permitting disclosures without an authorization for judicial and administrative proceedings does not supersede other provisions in § 164.512 that would otherwise permit or restrict the use or disclosure of protected health information. Additionally, in the descriptive preamble of § 164.512, we provide further explanation of how these provisions relate to one another.

Comments: Many commenters urged the Secretary to revise the rule to state that it does not preempt or supersede existing rules and statutes governing judicial proceedings, including rules of evidence, procedure, and discovery. One commenter asserted that dishonest health care providers and others should not be able to withhold their records by arguing that state subpoena and criminal discovery statutes compelling disclosure are preempted by the privacy regulation. Other commenters maintained that there is no need to replace providers' current practice, which typically requires either a signed authorization from the patient or a subpoena to release medical information.

Response: These comments are similar to many of the more general preemption comments we received. For a full discussion of the Secretary's response on preemption issues, see part 160—subpart B.

Comment: One commenter stated that the proposed rule creates a conflict with existing rules and statutes governing judicial proceedings, including rules of evidence and discovery. This commenter stated that the rule runs afoul of state judicial procedures for enforcement of subpoenas that require judicial involvement only when a party seeks to enforce a subpoena.

Response: We disagree with this comment. The final rule permits covered entities to disclose protected health information for any judicial or administrative procedure in response to a subpoena, discovery request, or other lawful process if the covered entity has received satisfactory assurances that the party seeking the disclosure has made reasonable efforts to ensure that the individual has been given notice of the request or has made reasonable efforts to secure a qualified protective order from a court or administrative tribunal. A covered entity may disclose protected health information in response to a subpoena, discovery request, or other lawful process without a satisfactory assurance if it has made reasonable efforts to provide the individual with such notice or to seek a qualified protected order itself. These rules do not require covered entities or parties seeking the disclosure of protected health information to involve the judiciary; they may choose the notification option rather than seeking a qualified protective order.

Many states have already enacted laws that incorporate these concepts. In California, for instance, an individual must be given ten days notice that his or her medical records are being subpoenaed from a health care provider and state law requires that the party seeking the records furnishes the health care provider with proof that the notice was given to the individual. In Montana, a party seeking discovery or compulsory process of medical records must give notice to the individual at least ten days in advance of serving the request on a health care provider, Service of the request must be accompanied by written certification that the procedure has been followed. In Rhode Island, an individual must be given notice that his or her medical records are being subpoenaed and notice of his or her right to object. The party serving the subpoena on the health care provider must provide written certification to the provider that: (1) This procedure has been followed, (2) twenty days have passed from the date of service, and (3) no challenge has been made to the disclosure or the court has ordered disclosure after resolution of a legal court challenge. In Washington, an individual must be given at least fourteen days from the date of service of notice that his or her health information is the subject of a ***82675** discovery request or compulsory process to obtain a protective order. The notice must identify the health care provider from whom the information is sought, specify the health care information that is sought, and the date by which a protective order must be obtained in order to prevent the provider from disclosing the information.

Comment: A few commenters expressed concern that the rule would place unnecessary additional burdens on health care providers because when they receive a request for disclosure in connection with an administrative or judicial procedure, they would have to determine whether the litigant's health was at issue before they made the disclosure. A number of commenters complained that this requirement would make it too easy for litigants to obtain protected health information. One commenter argued that litigants should not be able to circumvent state evidentiary rules that would otherwise govern disclosure of protected health information simply upon counsel's statement that the other party's medical condition or history is at issue.

Other commenters, however, urged that disclosure without authorization should be permitted whenever a patient places his or her medical condition or history at issue and recommended requiring the request for information to include a certification to this effect. Only if another party to litigation has raised a medical question, do these commenters believe a court order should be required. Similarly, one commenter supported a general requirement that disclosure without authorization be permitted only with a court order unless the patient has placed his or her physical or mental condition at issue.

Response: We agree with the concerns expressed by several commenters about this provision and have eliminated this requirement from the final rule.

Comment: A number of commenters stated that the proposed rule should be modified to permit disclosure without authorization pursuant to a lawful subpoena. One commenter argued that the provision would limit the scope of the Inspector General's subpoena power for judicial and administrative proceedings to information concerning a litigant whose health condition or history is at issue, and would impose a requirement that the Inspector General provide a written certification to that effect. Other commenters stated that the proposed rule would seriously impair the ability of state agencies to conduct administrative hearings on physician licensing and disciplinary matters. These commenters stated that current practice is to obtain information using subpoenas.

Other commenters argued that disclosure of protected health information for judicial and administrative proceedings should require a court order and/or judicial review unless the subject of the information consents to disclosure. These commenters believed that an attorney's certification should not be considered sufficient authority to override an individual's privacy, and that the proposed rule made it too easy for a party to litigation to obtain information about the other party.

Response: As a general matter, we agree with these comments. As noted, the final rule deletes the provision that would permit a covered entity to disclose protected health information pursuant to an attorney's certification that the individual is a party to the litigation and has put his or her medical condition at issue. Under the final rule, covered entities may disclose protected health information in response to a court or administrative order, provided that only the protected health information expressly authorized by the order is disclosed. Covered entities may also disclose protected health information in response to a subpoena, discovery request, or other lawful process without a court order, but only if the covered entity receives satisfactory assurances

that the party seeking disclosure has made reasonable efforts to ensure that the individual has been notified of the request or that reasonable efforts have been made by the party seeking the information to secure a qualified protective order. Additionally, a covered entity may disclose protected health information in response to a subpoena, discovery request, or other lawful process without a satisfactory assurance if it makes reasonable efforts to provide the individual with such notice or to seek a qualified protected order itself.

We also note that the final rule specifically provides that nothing in Subchapter C should be construed to diminish the authority of any Inspector General, including authority provided in the Inspector General Act of 1978.

Comment: A number of commenters expressed concern that the proposed rule would not permit covered entities to introduce material evidence in proceedings in which, for example, the provisions of an insurance contract are at issue, or when a billing or payment issue is presented. They noted that although the litigant may be the owner of an insurance policy, he or she may not be the insured individual to whom the health information pertains. In addition, they stated that the medical condition or history of a deceased person may be at issue when the deceased person is not a party.

Response: We disagree. Under the final rule, a covered entity may disclose protected health information without an authorization pursuant to a court or administrative order. It may also disclose protected health information with an authorization for judicial or administrative proceedings in response to a subpoena, discovery request, or other lawful process without a court order, if the party seeking the disclosure provides the covered entity with satisfactory assurances that it has made reasonable efforts to ensure that the individual has been notified of the request or to seek a qualified protective order. Additionally, a covered entity may disclose protected health information in response to a subpoena, discovery request, or other lawful process without a satisfactory assurance if it makes reasonable efforts to provide the individual with such notice or to seek a qualified protected order itself. Therefore, a party may obtain the information even if the subject of the information is not a party to the litigation or deceased.

Comment: A few commenters argued that disclosure of protected health information should be limited only to those cases in which the individual has consented or a court order has been issued compelling disclosure.

Response: The Secretary believes that such an approach would impose an unreasonable burden on covered entities and the judicial system and that greater flexibility is necessary to assure that the judicial and administrative systems function smoothly. We understand that even those states that have enacted specific statutes to protect the privacy of health information have not imposed requirements as strict as these commenters would suggest.

Comment: Many commenters asked that the final rule require the notification of the disclosure be provided to the individual whose health information is subject to disclosure prior to the disclosure as part of a judicial or administrative proceeding. Most of these commenters also asked that the rule require that the individual who is the subject of a disclosure be given an opportunity to object to the disclosure. A few commenters suggested that patients be given ten days to object before requested information may be disclosed and recommend that the rule require the requester to provide a certification that notice has been provided and that ten days have passed ***82676** with no objection from the subject of the information. Some commenters suggested that if a subpoena for disclosure is not accompanied by a court order, the covered entities be prohibited from disclosing protected health information unless the individual has been given notice and an opportunity to object. Another commenter recommended requiring, in most circumstances, notice and an opportunity to object before a court order is issued and requiring the requestor of information to provide a signed document attesting the date of notification and forbid disclosure until ten days after notice is given.

Response: We agree that in some cases the provision of notice with an opportunity to object to the disclosure is appropriate. Thus, in the final rule we provide that a covered entity may disclose protected health information in response to a subpoena, discovery request or other lawful process that is not accompanied by a court order if it receives satisfactory assurance from the party seeking the request that the requesting party has made a good faith attempt to provide written notice to the individual that includes sufficient information about the litigation or proceeding to permit the individual to raise an objection to the court or

administrative tribunal and that the time for the individual to raise objections has elapsed (and that none were filed or all have been resolved). Covered entities may make reasonable efforts to provide such notice as well.

In certain instances, however, the final rule permits covered entities to disclose protected health information for judicial and administrative proceedings without notice to the individual if the party seeking the request has made reasonable efforts to seek a qualified protective order, as described in the rule. A covered entity may also make reasonable efforts to seek a qualified protective order in order to make the disclosure. Additionally, a covered entity may disclose protected health information for judicial and administrative proceedings in response to an order of a court or administrative tribunal provided that the disclosure is limited to only that information that is expressly authorized by the order. The Secretary believes notice is not necessary in these instances because a court or administrative tribunal is in the best position to evaluate the merits of the arguments of the party seeking disclosure and the party who seeks to block it before it issues the order and that imposing further procedural obstacles before a covered entity may honor that disclosure request is unnecessary.

Comment: Many commenters urged the Secretary to require specific criteria for court and administrative orders. Many of these commenters proposed that a provision be added to the rule that would require court and administrative orders to safeguard the disclosure and use of protected health information. These commenters urged that the information sought must be relevant and material, as specific and narrowly drawn as reasonably practicable, and only disclosed if de-identified information could not reasonably be used.

Response: The Secretary's authority is limited to covered entities. Therefore, we do not impose requirements on courts and administrative tribunals. However, we note that the final rule limits the permitted disclosures by covered entities in court or administrative proceedings to only that information which is specified in the order from a court or an administrative body should provide a degree of protection for individuals from unnecessary disclosure.

Comment: Several commenters asked that the “minimum necessary” standard not apply to disclosures made pursuant to a court order because individuals could then use the rule to contest the scope of discovery requests. However, many other commenters recommended that the rule permit disclosure only of information “reasonably necessary” to respond to a subpoena. These commenters raised concerns with applying the “minimum necessary” standard in judicial and administrative proceedings, but did not believe the holder of protected health information should have blanket authority to disclose all protected health information. Some of the commenters urged that disclosure of any information about third parties that may be included in the medical records of another person— for example, the HIV status of a partner—be prohibited. Finally, some commenters disagreed with the proposed rule because it did not require covered entities to evaluate the validity of subpoenas and discovery requests to determine whether these requests ask for the “minimum necessary” or “reasonably necessary” amount of information.

Response: Under the final rule, if the disclosure is pursuant to an order of a court or administrative tribunal, covered entities may disclose only the protected health information expressly authorized by the order. In these instances, a covered entity is not required to make a determination whether or not the order might otherwise meet the minimum necessary requirement.

If the disclosure is pursuant to a satisfactory assurance from the party seeking the disclosure, at least a good faith attempt has been made to notify the individual in writing of the disclosure before it is made or the parties have sought a qualified protective order that prohibits them from using or disclosing the protected health information for any purpose other than the litigation or proceeding for which the information was requested and that the information will be returned to the covered entity or destroyed at the end of the litigation or the proceeding. Alternatively, the covered entity may seek such notice or qualified protective order itself. This approach provides the individual with protections and places the burden on the parties to resolve their differences about the appropriateness and scope of disclosure as part of the judicial or administrative procedure itself before the order is issued, rather than requiring the covered entity to get involved in evaluating the merits of the dispute in order to determine whether or not the particular request is appropriate or too broad. In these cases, the covered entity must disclose only the protected health information that is the minimum amount necessary to achieve the purpose for which the information is sought.

We share the concern of the commenters that covered entities should redact any information about third parties before disclosing an individual's protected health information. During the fact-finding stage of our consideration of revisions to the proposed rule, we discussed this issue with representatives of covered entities. Currently, information about third parties is sometimes redacted by medical records personnel responding to requests for information. In particular, information regarding HIV status is treated with special sensitivity by these professionals. Although we considered including a special provision in the final rule prohibiting such disclosure, we decided that the revisions made to the proposed rule would provide sufficient protection. By restricting disclosure of protected health information to only that information specified in a court or administrative order or released pursuant to other types of lawful process only if the individual had notice and an opportunity to object or if the information was subject to a protective order, individuals who are concerned about disclosure of information concerning third parties will have the opportunity to raise that ***82677** issue prior to the request for disclosure being presented to the covered entity. We are reluctant to put the covered entity in the position of having to resolve disputes concerning the type of information that may be disclosed when that dispute should more appropriately be settled through the judicial or administrative procedure itself.

Comment: One commenter asked that the final regulation clarify that a court order is not required when disclosure would otherwise be permitted under the rule. This commenter noted that the preamble states that the requirement for a court order would not apply if the disclosure would otherwise be permitted under the rule. For example, disclosures of protected health information pursuant to administrative, civil, and criminal proceedings relating to “health oversight” are permitted, even if no court or administrative orders have been issued. However, the commenter was concerned that this principle only appeared in the preamble and not in the rule itself.

Response: Section 164.512(e)(4) of the final regulation contains this clarification.

Comment: One commenter was concerned that the rule is unclear as to whether governmental entities are given a special right to “use” protected health information that private parties do not have under the proposed regulation or whether governmental entities that seek or use protected health information are treated the same as private parties in their use of such information. This commenter urged that we clarify our intent regarding the use of protected health information by governmental entities.

Response: Generally governmental entities are treated the same as private entities under the rule. In a few clearly defined cases, a special rule applies. For instance, under § 164.504(e)(3), when a covered entity and its business associate are both governmental entities, they may enter into a memorandum of understanding or adopt a regulation with the force and effect of law that incorporates the requirements of a business associate contract, rather than having to negotiate a business associate contract itself.

Comment: One commenter recommended that final rule state that information developed as part of a quality improvement or medical error reduction program may not be disclosed under this provision. The commenter explained that peer review information developed to identify and correct systemic problems in delivery of care must be protected from disclosure to allow a full discussion of the root causes of such events so they may be identified and addressed. According to the commenter, this is consistent with peer review protections afforded this information by the states.

Response: The question of whether or not such information should be protected is currently the subject of debate in Congress and in the states. It would be premature for us to adopt a position on this issue until a clear consensus emerges. Under the final rule, no special protection against disclosure is provided for peer review information of the type the commenter describes. However, unless the request for disclosure fits within one of the categories of permitted or required disclosures under the regulation, it may not be disclosed. For instance, if disclosure of peer review information is required by another law (such as Medicare or a state law), covered entities subject to that law may disclose protected health information consistent with the law.

Comment: One commenter stated that the requirements of this section are in conflict with Medicare contractor current practices, as defined by the HCFA Office of General Counsel and suggested that the final rule include more specific guidelines.

Response: Because the commenter failed to indicate the nature of these conflicts, we are unable to respond.

Comment: One commenter stated that the rule should require rather than permit disclosure pursuant to court orders.

Response: Under the statutory framework adopted by Congress in HIPAA, a presumption is established that the data contained in an individual's medical record belongs to the individual and must be protected from disclosure to third parties. The only instance in which covered entities holding that information must disclose it is if the individual requests access to the information himself or herself. In the final rule (as in the proposed rule), covered entities may use or disclose protected health information under certain enumerated circumstances, but are not required to do so. We do not believe that this basic principle should be compromised merely because a court order has been issued. Consistent with this principle, we provide covered entities with the flexibility to deal with circumstances in which the covered entity may have valid reasons for declining to release the protected health information without violating this regulation.

Comment: One commenter noted that in some states, public health records are not subject to discovery, and that the proposed rule would not permit disclosure of protected health information pursuant to court order or subpoena if the disclosure is not allowed by state law. The commenter requested clarification as to whether a subpoena in a federal civil action would require disclosure if a state law prohibiting the release of public health records existed.

Response: As explained above, the final rule permits, but does not require, disclosure of protected health information pursuant to a court order. Under the applicable preemption provisions of HIPAA, state laws relating to the privacy of medical information that are more stringent than the federal rules are not preempted. To the extent that an applicable state law precludes disclosure of protected health information that would otherwise be permitted under the final rule, state law governs.

Comment: A number of commenters expressed concern that the proposed rule would negatively impact state and federal benefits programs, particularly social security and workers' compensation. One commenter requested that the final rule remove any possible ambiguity about application of the rule to the Social Security Administration's (SSA) evidence requests by permitting disclosure to all administrative level of benefit programs. In addition, several commenters stated that requiring SSA or states to provide the covered entity holding the protected health information with an individual's consent before it could disclose the information would create a huge administrative and paperwork burden with no added value to the individual. In addition, several other commenters indicated that states that make disability determinations for SSA also support special accommodation for SSA's determination process. They expressed concern that providers will narrowly interpret the HIPAA requirements, resulting in significant increases in processing time and program costs for obtaining medical evidence (especially purchased consultative examinations when evidence of record cannot be obtained). A few commenters were especially concerned about the impact on states and SSA if the final rule were to eliminate the NPRM's provision for a broad consent for “all evidence from all sources.”

Some commenters also note that it would be inappropriate for a provider to make a minimum necessary determination in response to a request from SSA because the provider usually will not know the legal parameters of SSA's programs, or have access to the ***82678** individual's other sources of evidence. In addition, one commenter urged the Secretary to be sensitive to these concerns about delay and other negative impacts on the timely determination of disability by SSA for mentally impaired individuals.

Response: Under the final rule, covered entities may disclose protected health information pursuant to an administrative order so the flow of protected health information from covered entities to SSA and the states should not be disrupted.

Although some commenters urged that special rules should be included for state and federal agencies that need protected health information, the Secretary rejects that suggestion because, wherever possible, the public and the private sectors should operate under the same rules regarding the disclosure of health information. To the extent the activities of SSA constitute an actual administrative tribunal, covered entities must follow the requirements of § 164.512(e), if they wish to disclose protected health information to SSA in those circumstances. Not all administrative inquiries are administrative tribunals, however. If SSA's

request for protected health information comes within another category of permissible exemptions, a covered entity, following the requirements of the applicable section, may disclose the information to SSA. For example, if SSA seeks information for purposes of health oversight, a covered entity that wishes to disclose the information to SSA may do so under § 164.512(d) and not § 164.512(e). If the disclosure does not come within one of the other permissible disclosures would a covered entity need to meet the requirements of § 164.512(e). If the SSA request does not come within another permissible disclosure, the agency will be treated like anyone else under the rules.

The Secretary recognizes that even under current circumstances, professional medical records personnel do not always respond unquestioningly to an agency's request for health information. During the fact finding process, professionals charged with managing provider response to requests for protected health information indicated to us that when an agency's request for protected health information is over broad, the medical records professional will contact the agency and negotiate a more limited request. In balancing the interests of individuals against the need of governmental entities to receive protected health information, we think that applying the minimum necessary standard is appropriate and that covered entities should be responsible for ensuring that they disclose only that protected health information that is necessary to achieve the purpose for which the information is sought.

Comment: In a similar vein, one commenter expressed concern that the proposed rule would adversely affect the informal administrative process usually followed in processing workers' compensation claims. Using formal discovery is not always possible, because some programs do not permit it. The commenter urged that the final rule must permit administrative agencies, employers, and workers' compensation carriers to use less formal means to obtain relevant medical evidence while the matter is pending before the agency. This commenter asked that the rule be revised to permit covered entities to disclose protected health information without authorization for purposes of federal or state benefits determinations at all levels of processing, from the initial application through continuing disability reviews.

Response: If the disclosure is required by a law relating to workers' compensation, a covered entity may disclose protected health information as authorized by and to the extent necessary to comply with that law under § 164.512(l). If the request for protected health information in connection with a workers' compensation claim is part of an administrative proceeding, a covered entity must meet the requirements set forth in § 164.512(e), and discussed above, before disclosing the information. As noted, one permissible manner by which a covered entity may disclose protected health information under § 164.512(e) is if the party seeking the disclosure makes reasonable efforts to provide notice to the individual as required by this provision. Under this method, the less formal process noted by the commenter would not be disturbed. Covered entity may disclose protected health information in response to other types of requests only as permitted by this regulation.

Section 164.512(f)—Disclosures for Law Enforcement Purposes

General Comments on Proposed § 164.510(f)

Comment: Some commenters argued that current law enforcement use of protected health information was legitimate and important. These commenters cited examples of investigations and prosecutions for which protected health information is needed, from white collar insurance fraud to violent assault, to provide incriminating evidence or to exonerate a suspect, to determine what charges are warranted and for bail decisions. For example, one commenter argued that disclosure of protected health information for law enforcement purposes should be exempt from the rule, because the proposed regulation would hamper Drug Enforcement Administration investigations. A few commenters argued that effective law enforcement requires early access to as much information as possible, to rule out suspects, assess severity of criminal acts, and for other purposes. A few commenters noted the difficulties criminal investigators and prosecutors face when fighting complex criminal schemes. In general, these commenters argued that all disclosures of protected health information to law enforcement should be allowed, or for elimination of the process requirements proposed in § 164.510(f)(1).

Response: The importance and legitimacy of law enforcement activities are beyond question, and they are not at issue in this regulation. We permit disclosure of protected health information to law enforcement officials without authorization in

some situations precisely because of the importance of these activities to public safety. At the same time, individuals' privacy interests also are important and legitimate. As with all the other disclosures of protected health information permitted under this regulation, the rules we impose attempt to balance competing and legitimate interests.

Comment: Law enforcement representatives stated that law enforcement agencies had a good track record of protecting patient privacy and that additional restrictions on their access and use of information were not warranted. Some commenters argued that no new limitations on law enforcement access to protected health information were necessary, because sufficient safeguards exist in state and federal laws to prevent inappropriate disclosure of protected health information by law enforcement.

Response: Disclosure of protected health information by law enforcement is not at issue in this regulation. Law enforcement access to protected health information in the first instance, absent any re-disclosure by law enforcement, impinges on individuals' privacy interests and must therefore be justified by a public purpose that outweighs individuals' privacy interests.

We do not agree that sufficient safeguards already exist in this area. We are not aware of, and the comments did ***82679** not provide, evidence of a minimum set of protections for individuals relating to access by law enforcement to their protected health information. Federal and state laws in this area vary considerably, as they do for other areas addressed in this final rule. The need for standards in this area is no less critical than in the other areas addressed by this rule.

Comment: Many commenters argued that no disclosures of protected health information should be made to law enforcement (absent authorization) without a warrant issued by a judicial officer after a finding of probable cause. Others argued that a warrant or subpoena should be required prior to disclosure of protected health information unless the disclosure is for the purposes of identifying a suspect, fugitive, material witness, or missing persons, as described in proposed § 164.510(f)(2). Some commenters argued that judicial review prior to release of protected health information to law enforcement should be required absent the exigent and urgent circumstances identified in the NPRM in § 164.510(f)(3) and (5), or absent "a compelling need" or similar circumstances.

Response: In the final rule, we attempt to match the level of procedural protection for privacy required by this rule with the nature of the law enforcement need for access, the existence of other procedural protections, and individuals' privacy interests. Where other rules already impose procedural protections, this rule generally relies on those protections rather than imposing new ones. Thus, where access to protected health information is granted after review by an independent judicial officer (such as a court order or court-ordered warrant, or a subpoena or summons issued by a judicial officer), no further requirements are necessary. Similarly, because information disclosed to a grand jury is vital to law enforcement purposes and is covered by secrecy protection, this rule allows disclosure with no further process.

We set somewhat stricter standards for disclosure of protected health information pursuant to administrative process, such as administrative subpoenas, summonses, and civil or authorized investigative demands. In these cases, the level of existing procedural protections is lower than for judicially-approved or grand jury disclosures. We therefore require a greater showing, specifically, the three-part test described in § 164.512(f)(1)(ii), before the covered entity is permitted to release protected health information. Where the information to be disclosed is about the victim of a crime, privacy interests are heightened and we require the victim's agreement prior to disclosure in most instances.

In the limited circumstances where law enforcement interests are heightened, we allow disclosure of protected health information without prior legal process or agreement, but we impose procedural protections such as limits on the information that may lawfully be disclosed, limits on the circumstances in which the information may be disclosed, and requirements for verifying the identity and authority of the person requesting the disclosures. For example, in some cases law enforcement officials may seek limited but focused information needed to obtain a warrant. A witness to a shooting may know the time of the incident and the fact that the perpetrator was shot in the left arm, but not the identity of the perpetrator. Law enforcement would then have a legitimate need to ask local emergency rooms whether anyone had presented with a bullet wound to the left arm near the time of the incident. Law enforcement may not have sufficient information to obtain a warrant, but instead would

be seeking such information. In such cases, when only limited identifying information is disclosed and the purpose is solely to ascertain the identity of a person, the invasion of privacy would be outweighed by the public interest. For such circumstances, we allow disclosure of protected health information in response to a law enforcement inquiry where law enforcement is seeking to identify a suspect, fugitive, material witness, or missing person, but allow only disclosure of a limited list of information.

Similarly, it is in the public interest to allow covered entities to take appropriate steps to protect the integrity and safety of their operations. Therefore, we permit covered entities on their own initiative to disclose to law enforcement officials protected health information for this purpose. However, we limit such disclosures to protected health information that the covered entity believes in good faith constitutes evidence of criminal conduct that occurred on the premises of the covered entity.

We shape the rule's provisions with respect to law enforcement according to the limited scope of our regulatory authority under HIPAA, which applies only to the covered entities and not to law enforcement officials. We believe the rule sets the correct standards for when an exception to the rule of non-disclosure is appropriate for law enforcement purposes. There may be advantages, however, to legislation that applies the appropriate standards directly to judicial officers, prosecutors in grand juries, and to those making administrative or other requests for protected health information, rather than to covered entities. These advantages could include measures to hold officials accountable if they seek or receive protected health information contrary to the legal standard. In Congressional consideration of law enforcement access, there have also been useful discussions of other topics, such as limits on re-use of protected health information gathered in the course of health oversight activities. The limitations on our regulatory authority provide additional reason to support comprehensive medical privacy legislation.

Comment: A few commenters cited existing sanctions for law enforcement officials who violate the rights of individuals in obtaining evidence, ranging from suppression of that evidence to monetary penalties, and argued that such sanctions are sufficient to protect patients' privacy interests.

Response: After-the-fact sanctions are important, but they are effective only when coupled with laws that establish the ground rules for appropriate behavior. That is, a sanction applies only where some other rule has been violated. This regulation sets such basic ground rules. Further, under the HIPAA statutory authority, we cannot impose sanctions on law enforcement officials or require suppression of evidence. We must therefore rely on rules that regulate disclosure of protected health information by covered entities in the first instance.

Comment: Several commenters argued that disclosure of protected health information under § 164.510(f) should be mandatory, not just permitted. Others argued that we should mandate disclosure of protected health information in response to Inspector General subpoenas. A few commenters argued that we should require all covered entities to include disclosure of protected health information to law enforcement in their required notice of privacy practices.

Response: The purpose of this regulation is to protect individuals' privacy interests, consistent with other important public activities. Other laws set the rules governing those public activities, including when health information is necessary for their effective operation. See discussion of § 164.512(a). ***82680**

Comment: Some commenters questioned whether the Secretary had statutory authority to directly or indirectly impose new procedural or substantive requirements on otherwise lawful legal process issued under existing federal and state rules. They argued that, while the provisions are imposed on “covered entities,” the rule would result in law enforcement officials being compelled to modify current practices to harmonize them with the requirements this rule imposes on covered entities. A number of state law enforcement agencies argued that the rule would place new burdens on state administrative subpoenas and requests that are intrusive in state functions. At least one commenter argued that the requirement for prior process places unreasonable restrictions on the right of the states to regulate law enforcement activities.

Response: This rule regulates the ability of health care clearinghouses, health plans, and covered health care providers to use and disclose health information. It does not regulate the behavior of law enforcement officials or the courts, nor does it prevent

states from regulating law enforcement officials. All regulations have some effects on entities that are not directly regulated. We have considered those effects in this instance and have determined that the provisions of the rule are necessary to protect the privacy of individuals.

Comment: One commenter argued that state licensing boards should be exempt from restrictions placed on law enforcement officials, because state licensing and law enforcement are different activities.

Response: Each state's law determines what authorities are granted to state licensing boards. Because state laws differ in this regard, we cannot make a blanket determination that state licensing officials are or are not law enforcement officials under this regulation. We note, however, that the oversight of licensed providers generally is included as a health oversight activity at § 164.512(d).

Relationship to Existing Rules and Practices

Comment: Many commenters expressed concern that the proposed rule would have expanded current law enforcement access to protected health information. Many commenters said that the NPRM would have weakened their current privacy practices with respect to law enforcement access to health records. For example, some of the commenters arguing that a warrant or subpoena should be required prior to disclosure of protected health information unless the disclosure is for the purposes of identifying a suspect, fugitive, material witness, or missing persons, did so because they believed that such a rule would be consistent with current state law practices.

Response: This regulation does not expand current law enforcement access to protected health information. We do not mandate any disclosures of protected health information to law enforcement officials, nor do we make lawful any disclosures of protected health information which are unlawful under other rules and regulations. Similarly, this regulation does not describe a set of "best practices." Nothing in this regulation should cause a covered entity to change practices that are more protective of privacy than the floor of protections provided in this regulation.

This regulation sets forth the minimum practices which a covered entity must undertake in order to avoid sanctions under the HIPAA. We expect and encourage covered entities to exercise their judgment and professional ethics in using and disclosing health information, and to continue any current practices that provide privacy protections greater than those mandated in this regulation.

Comment: Many commenters asserted that, today, consent or judicial review always is required prior to release of protected health information to law enforcement; therefore, they said that the proposed rule would have lessened existing privacy protections.

Response: In many situations today, law enforcement officials lawfully obtain health information absent any prior legal process and absent exigent circumstances. The comments we received on the NPRM, both from law enforcement and consumer advocacy groups, describe many such situations. Moreover, this rule sets forth minimum privacy protections and does not preempt more stringent, pre-existing standards.

Comment: Some commenters argued that health records should be entitled to at least as much protection as cable subscription records and video rental records.

Response: We agree. The Secretary, in presenting her initial recommendations on the protection of health information to the Congress in 1997, stated that, "When Congress looked at the privacy threats to our credit records, our video records, and our motor vehicle records, it acted quickly to protect them. It is time to do the same with our health care records' (Testimony of Donna E. Shalala, Secretary, U. S. Department of Health and Human Services, before the Senate Committee on Labor & Human Resources, September 11, 1997). However, the limited jurisdiction conferred on us by the HIPAA does not allow us to impose such restrictions on law enforcement officials or the courts.

Comment: At least one commenter argued that the regulation should allow current routine uses for law enforcement under the Privacy Act.

Response: This issue is discussed in the "Relationship to Other Federal Laws" preamble discussion of the Privacy Act.

Comment: A few commenters expressed concern that people will 8be less likely to provide protected health information for public health purposes if they fear the information could be used for law enforcement purposes.

Response: This regulation does not affect law enforcement access to records held by public health authorities, nor does it expand current law enforcement access to records held by covered entities. These agencies are for the most part not covered entities under HIPAA. Therefore, this regulation should not reduce current cooperation with public health efforts.

Relationship to Other Provisions of This Regulation

Comment: Several commenters pointed out an unintended interaction between proposed §§ 164.510(f) and 164.510(n). Because proposed § 164.510(n), allowing disclosures mandated by other laws, applied only if the disclosure would not fall into one of the categories of disclosures provided for in § 164.510 (b)-(m), disclosures of protected health information mandated for law enforcement purposes by other law would have been preempted.

Response: We agree, and in the final rule we address this unintended interaction. It is not our intent to preempt these laws. To clarify the interaction between these provisions, in the final rule we have specifically added language to the paragraph addressing disclosures for law enforcement that permits covered entities to comply with legal mandates, and have included a specific cross reference in the provision of the final rule that permits covered entities to make other disclosures required by law. See § 164.512(a).

Comment: Several commenters argued that, when a victim of abuse or of a crime has requested restrictions on disclosure, the restrictions should be communicated to any law enforcement officials who receive that protected health information.

Response: We do not have the authority to regulate law enforcement ***82681** use and disclosure of protected health information, and therefore we could not enforce any such restrictions communicated to law enforcement officials. For this reason, we determined that the benefits to be gained from requiring communication of restrictions would not outweigh the burdens such a requirement would place on covered entities. We expect that professional ethics will guide health care providers' communications to law enforcement officials about the welfare of victims of abuse or other crime.

Comment: Some commenters argued against imposing the "minimum necessary" requirement on disclosure of protected health information to law enforcement officials. Some law enforcement commenters expressed concern that the "minimum necessary" test could be "manipulated" by a covered entity that wished to withhold relevant evidence. A number of covered entities complained that they were ill-equipped to substitute their judgment for that of law enforcement for what was the minimum amount necessary, and they also argued that the burden of determining the "minimum necessary'information should be transferred to law enforcement agencies. Some commenters argued that imposing such "uninformed" discretion on covered entities would delay or thwart legitimate investigations, and would result in withholding information that might exculpate an individual or might be necessary to present a defendant's case. One comment suggested that covered entities have "immunity" for providing too much information to law enforcement.

Response: The "minimum necessary" standard is discussed at § 164.514.

Comment: A few commenters asked us to clarify when a disclosure is for a "Judicial or Administrative Proceeding" and when it is for "Law Enforcement" purposes.

Response: In the final rule we have clarified that § 164.512(e) relating to disclosures for judicial or administrative proceedings does not supersede the authority of a covered entity to make disclosures under other provisions of the rule.

Use of Protected Health Information After Disclosure to Law Enforcement

Comment: Many commenters recommended that we restrict law enforcement officials' re-use and re-disclosure of protected health information. Some commenters asked us to impose such restrictions, while other commenters noted that the need for such restrictions underscores the need for legislation. Another argued for judicial review prior to release of protected health information to law enforcement because this regulation cannot limit further uses or disclosures of protected health information once it is in the hands of law enforcement agencies.

Response: We agree that there are advantages to legislation that imposes appropriate restrictions directly on the re-use and re-disclosure of protected health information by many persons who may lawfully receive protected health information under this regulation, but whom we cannot regulate under the HIPAA legislative authority, including law enforcement agencies.

Comment: A few commenters expressed concern that protected health information about persons who are not suspects may be used in court and thereby become public knowledge. These commenters urged us to take steps to minimize or prevent such protected health information from becoming part of the public record.

Response: We agree that individuals should be protected from unnecessary public disclosure of health information about them. However, we do not have the statutory authority in this regulation to require courts to impose protective orders. To the extent possible within the HIPAA statutory authority, we address this problem in § 164.512(e), Judicial and Administrative Proceedings.

Comment: Some commenters argued that evidence obtained in violation of the regulation should be inadmissible at trial.

Response: In this regulation, we do not have the authority to regulate the courts. We can neither require nor prohibit courts from excluding evidence obtain in violation of this regulation.

Comments Regarding Proposed § 164.510(f)(1), Disclosures to Law Enforcement Pursuant to Process

Comments Supporting or Opposing a Requirement of Consent or Court Order

Comment: Some commenters argued that a rule that required a court order for every instance that law enforcement sought protected health information would impose substantial financial and administrative burdens on federal and state law enforcement and courts. Other commenters argued that imposing a new requirement of prior judicial process would compromise the time-sensitive nature of many investigations.

Response: We do not impose such a requirement in this regulation.

Comment: Many commenters argued that proposed § 164.510(f)(1) would have given law enforcement officials the choice of obtaining records with or without a court order, and that law enforcement "will choose the least restrictive means of obtaining records, those that do not require review by a judge or a prosecutor." Several commenters argued that this provision would have provided the illusion of barriers—but no real barriers—to law enforcement access to protected health information. A few argued that this provision would have allowed law enforcement to regulate itself.

Response: We agree with commenters that, in some cases, a law enforcement official may have discretion to seek health information under more than one legal avenue. Allowing a choice in these circumstances does not mean an absence of real limits. Where law enforcement officials choose to obtain protected health information through administrative process, they must meet the three-part test required by this regulation.

Comment: At least one commenter argued for judicial review prior to disclosure of health information because the rule will become the "de facto" standard for release of protected health information.

Response: We do not intend for this regulation to become the "de facto" standard for release of protected health information. Nothing in this regulation limits the ability of states and other governmental authorities to impose stricter requirements on law enforcement access to protected health information. Similarly, we do not limit the ability of covered entities to adopt stricter policies for disclosure of protected health information not mandated by other laws.

Comment: A few commenters expressed concern that proposed § 164.510(f)(1) would have overburdened the judicial system.

Response: The comments did not provide any factual basis for evaluating this concern.

Comment: Some commenters argued that, while a court order should be required, the standard of proof should be something other than "probable cause." For example, one commenter argued that the court should apply the three-part test proposed in § 164.510(f)(1)(i)(C). Another commenter suggested a three-part test: The information is necessary, the need cannot be met with non-identifiable information, and the need of law enforcement outweighs the privacy interest of the patient. Some commenters suggested that we impose a "clear and convincing" standard. Another suggested that we require clear and convincing evidence that: (1) The ***82682** information sought is relevant and material to a legitimate criminal investigation; (2) the request is as specific and narrow as is reasonably practicable; (3) de-identified information, for example coded records, could not reasonably be used; (4) on balance, the need for the information outweighs the potential harm to the individuals and to patient care generally; and (5) safeguards appropriate to the situation have been considered and imposed. This comment also suggested the following as such appropriate safeguard: granting only the right to inspect and take notes; allowing copying of only certain portions of records; prohibiting removing records from the premises; placing limits on subsequent use and disclosure; and requiring return or destruction of the information at the earliest possible time.) Others said the court order should impose a "minimum necessary" standard.

Response: We have not revised the regulation in response to comments suggesting that we impose additional standards relating to disclosures to comply with court orders. Unlike administrative subpoenas, where there is no independent review of the order, court orders are issued by an independent judicial officer, and we believe that covered entities should be permitted under this rule to comply with them. Court orders are issued in a wide variety of cases, and we do not know what hardships might arise by imposing standards that would require judicial officers to make specific findings related to privacy.

Comment: At least one commenter argued that the proposed rule would have placed too much burden on covered entities to evaluate whether to release information in response to a court order. This comment suggested that the regulation allow disclosure to attorneys for assessment of what the covered entity should release in response to a court order.

Response: This regulation does not change current requirements on or rights of covered entities with respect to court orders for the release of health information. Where such disclosures are required today, they continue to be required under this rule. Where other law allows a covered entity to challenge a court order today, this rule will not reduce the ability of a covered entity to mount such a challenge. Under § 164.514, a covered entity will be permitted to rely on the face of a court order to meet this rule's requirements for verification of the legal authority of the request for information. A covered entity may disclose protected health information to its attorneys as needed, to perform health care operations, including to assess the covered entity's appropriate response to court orders. See definition of "health care operations" under § 164.501.

Comment: Many commenters argued that the regulation should prohibit disclosures of protected health information to law enforcement absent patient consent.

Response: We disagree with the comment. Requiring consent prior to any release of protected health information to a law enforcement official would unduly jeopardize public safety. Law enforcement officials need protected health information for their investigations in a variety of circumstances. The medical condition of a defendant could be relevant to whether a crime was committed, or to the seriousness of a crime. The medical condition of a witness could be relevant to the reliability of that witness. Health information may be needed from emergency rooms to locate a fleeing prison escapee or criminal suspect who was injured and is believed to have stopped to seek medical care.

These and other uses of medical information are in the public interest. Requiring the authorization of the subject prior to disclosure could make apprehension or conviction of some criminals difficult or impossible. In many instances, it would not be possible to obtain such consent, for example because the subject of the information could not be located in time (or at all). In other instances, the covered entity may not wish to undertake the burden of obtaining the consent. Rather than an across-the-board consent requirement, to protect individuals' privacy interests while also promoting public safety, we impose a set of procedural safeguards (described in more detail elsewhere in this regulation) that covered entities must ensure are met before disclosing protected health information to law enforcement officials.

In most instances, such procedural safeguards consist of some prior legal process, such as a warrant, grand jury subpoena, or an administrative subpoena that meets a three-part test for protecting privacy interests. When the information to be disclosed is about the victim of a crime, privacy interests are heightened and we require the victim's agreement prior to disclosure in most instances. In the limited circumstances where law enforcement interests are heightened and we allow disclosure of protected health information without prior legal process or agreement, the procedural protections include limits on the information that may lawfully be disclosed, the circumstances in which the information may be disclosed, and requirements for verifying the identity and authority of the person requesting the disclosures.

We also allow disclosure of protected health information to law enforcement officials without consent when other law mandates the disclosures. When such other law exists, another public entity has made the determination that law enforcement interests outweigh the individual's privacy interests in the situations described in that other law, and we do not upset that determination in this regulation.

Comment: Several commenters recommended requiring that individuals receive notice and opportunity to contest the validity of legal process under which their protected health information will be disclosed, prior to disclosure of their records to law enforcement. Some of these commenters recommended adding this requirement to provisions proposed in the NPRM, while others recommended establishing this requirement as part of a new requirement for a judicial warrant prior to all disclosures of protected health information to law enforcement. At least one of these commenters proposed an exception to such a notice requirement where notice might lead to destruction of the records.

Response: Above we discuss the reasons why we believe it is inappropriate to require consent or a judicial order prior to any release of protected health information to law enforcement. Many of those reasons apply here, and they lead us not to impose such a notice requirement.

Comment: A few commenters believed that the proposed requirements in § 164.510(f)(1) would hinder investigations under the Civil Rights for Institutionalized Persons Act (CRIPA).

Response: We did not intend that provision to apply to investigations under CRIPA, and we clarify in the final rule that covered entities may disclose protected health information for such investigations under the health oversight provisions of this regulation (see § 164.512(d) for further detail).

Comments Suggesting Changes to the Proposed Three-Part Test

Comment: Many commenters argued for changes to the proposed three-part test that would make the test more difficult to meet. Many of these urged greater, but unspecified, restrictions. Others argued that the proposed test was too stringent, and

that it would have hampered criminal investigations and prosecutions. Some argued that it ***82683** was too difficult for law enforcement to be specific at the beginning of an investigation. Some argued that there was no need to change current practices, and they asked for elimination of the three-part test because it was "more stringent" than current practices and would make protected health information more difficult to obtain for law enforcement purposes. These commenters urged elimination of the three-part test so that administrative bodies could continue current practices without additional restrictions. Some of these argued for elimination of the three-part test for all administrative subpoenas; others argued for elimination of the three-part test for administrative subpoenas from various Inspectors General offices. A few commenters argued that the provisions in proposed § 164.510(f)(1) should be eliminated because they would have burdened criminal investigations and prosecutions but would have served "no useful public purpose."

Response: We designed the proposed three-part test to require proof that the government's interest in the health information was sufficiently important and sufficiently focused to overcome the individual's privacy interest. If the test were weakened or eliminated, the individual's privacy interest would be insufficiently protected. At the same time, if the test were significantly more difficult to meet, law enforcement's ability to protect the public interest could be unduly compromised.

Comment: At least one comment argued that, in the absence of a judicial order, protected health information should be released only pursuant to specific statutory authority.

Response: It is impossible to predict all the facts and circumstances, for today and into the future, in which law enforcement's interest in health information outweigh individuals' privacy interests. Recognizing this, states and other governments have not acted to list all the instances in which health information should be available to law enforcement officials. Rather, they specify some such instances, and rely on statutory, constitutional, and other limitations to place boundaries on the activities of law enforcement officials. Since the statutory authority to which the commenter refers does not often exist, many uses of protected health information that are in the public interest (described above in more detail) would not be possible under such an approach.

Comment: At least one commenter, an administrative agency, expressed concern that the proposed rule would have required its subpoenas to be approved by a judicial officer.

Response: This rule does not require judicial approval of administrative subpoenas. Administrative agencies can avoid the need for judicial review under this regulation by issuing subpoenas for protected health information only where the three-part test has been met.

Comment: Some commenters suggested alternative requirements for law enforcement access to protected health information. A few suggested replacing the three-part test with a requirement that the request for protected health information from law enforcement be in writing and signed by a supervisory official, and/or that the request "provide enough information about their needs to allow application of the minimum purpose rule."

Response: A rule requiring only that the request for information be in writing and signed fails to impose appropriate substantive standards for release of health information. A rule requiring only sufficient information for the covered entity to make a "minimum necessary" determination would leave these decisions entirely to covered entities' discretion. We believe that protection of individuals' privacy interests must start with a minimum floor of protections applicable to all. We believe that while covered entities may be free to provide additional protections (within the limits of the law), they should not have the ability to allow unjustified access to health information.

Comment: Some commenters argued that the requirement for an unspecified "finding" for a court order should be removed from the proposed rule, because it would have been confusing and would have provided no guidance to a court as to what finding would be sufficient.

Response: We agree that the requirement would have been confusing, and we delete this language from the final regulation.

Comment: A few commenters argued that the proposed three-part test should not be applied where existing federal or state law established a standard for issuing administrative process.

Response: It is the content of such a standard, not its mere existence, that determines whether the standard strikes an appropriate balance between individuals' privacy interests and the public interest in effective law enforcement activities. We assume that current authorities to issue administrative subpoena are all subject to some standards. When an existing standard provides at least as much protection as the three-part test imposed by this regulation, the existing standard is not disturbed by this rule. When, however, an existing standard for issuing administrative process provides less protection, this rule imposes new requirements.

Comment: Some covered entities said that they should not have been asked to determine whether the proposed three-part test has been met. Some argued that they were ill-equipped to make a judgment on whether an administrative subpoena actually met the three-part test, or that it was unfair to place the burden of making such determinations on covered entities. Some argued that the burden should have been on law enforcement, and that it was inappropriate to shift the burden to covered entities. Other commenters argued that the proposal would have given too much discretion to the record holders to withhold evidence without having sufficient expertise or information on which to make such judgments. At least one comment said that this aspect of the proposal would have caused delay and expense in the detection and prevention of health care fraud. The commenter believed that this delay and expense could be prevented by shifting to law enforcement and health care oversight the responsibility to determine whether standards have been met.

At least one commenter recommended eliminating the three-part test for disclosures of protected health information by small providers.

Some commenters argued that allowing covered entities to rely on law enforcement representation that the three-part test has been met would render the test meaningless.

Response: Because the statute does not bring law enforcement officials within the scope of this regulation, the rule must rely on covered entities to implement standards that protect individuals' privacy interests, including the three-part test for disclosure pursuant to administrative subpoenas. To reduce the burden on covered entities, we do not require a covered entity to second-guess representations by law enforcement officials that the three part test has been met. Rather, we allow covered entities to disclose protected health information to law enforcement when the subpoena or other administrative request indicates on its face that the three-part test has been met, or where a separate document so indicates. Because we allow such reliance, we do not believe that it is necessary or appropriate to reduce privacy protections for individuals who obtain care from small health care providers. ***82684**

Comment: Some commenters ask for modification of the three-part test to include a balancing of the interests of law enforcement and the privacy of the individual, pointing to such provisions in the Leahy-Kennedy bill.

Response: We agree with the comment that the balancing of these interests is important in this circumstance. We designed the regulation's three-part test to accomplish that result.

Comment: At least one commenter recommended that “relevant and material” be changed to “relevant,” because “relevant” is a term at the core of civil discovery rules and is thus well understood, and because it would be difficult to determine whether information is “material” prior to seeing the documents. As an alternative, this commenter suggested explaining what we meant by “material.”

Response: Like the term “relevant,” the term “material” is commonly used in legal standards and well understood.

Comment: At least one commenter suggested deleting the phrase "reasonably practical" from the second prong of the test, because, the commenter believed, it was not clear who would decide what is "reasonably practical" if the law enforcement agency and covered entity disagreed.

Response: We allow covered entities to rely on a representation on the face of the subpoena that the three-part test, including the "reasonably practical" criteria, is met. If a covered entity believes that a subpoena is not valid, it may challenge that subpoena in court just as it may challenge any subpoena that today it believes is not lawfully issued. This is true regardless of the specific test that a subpoena must meet, and is not a function of the "reasonably practical" criteria.

Comment: Some commenters requested elimination of the third prong of the test. One of these commenters suggested that the regulation should specify when de-identified information could not be used. Another recommended deleting the phrase "could not reasonably be used" from the third prong of the test, because the commenter believed it was not clear who would determine whether de-identified information "could reasonably be used" if the law enforcement agency and covered entity disagreed.

Response: We cannot anticipate in regulation all the facts and circumstances surrounding every law enforcement activity today, or in the future as technologies change. Such a rigid approach could not account for the variety of situations faced by covered entities and law enforcement officials, and would become obsolete over time. Thus, we believe it would not be appropriate to specify when de-identified information can or cannot be used to meet legitimate law enforcement needs.

In the final rule, we allow the covered entity to rely on a representation on the face of the subpoena (or similar document) that the three-part test, including the "could not reasonably be used" criteria, is met. If a covered entity believes that a subpoena is not valid, it may challenge that subpoena in court just as it may challenge today any subpoena that it believes is not lawfully issued. This is true regardless of the specific test that a subpoena must meet, and it is not a function of the "could not reasonably be used" criteria.

Comments Regarding Proposed § 164.510(f)(2), Limited Information for Identifying Purposes

Comment: A number of commenters recommended deletion of this provision. These commenters argued that the legal process requirements in proposed § 164.510(f)(1) should apply when protected health information is disclosed for identification purposes. At least one privacy group recommended that if the provision were not eliminated in its entirety, "suspects" should be removed from the list of individuals whose protected health information may be disclosed for identifying purposes. Many commenters expressed concern that this provision would allow compilation of large data bases of health information that could be use for purposes beyond those specified in this provision.

Response: We retain this provision in the final rule. We continue to believe that identifying fugitives, material witnesses, missing persons, and suspects is an important national priority and that allowing disclosure of limited identifying information for this purpose is in the public interest. Eliminating this provision—or eliminating suspects from the list of types of individuals about whom disclosure of protected health information to law enforcement is allowed—would impede law enforcement agencies" ability to apprehend fugitives and suspects and to identify material witnesses and missing persons. As a result, criminals could remain at large for longer periods of time, thereby posing a threat to public safety, and missing persons could be more difficult to locate and thus endangered.

However, as described above and in the following paragraphs, we make significant changes to this provision, to narrow the information that may be disclosed and make clear the limited purpose of the provision. For example, the proposed rule did not state explicitly whether covered entities would have been allowed to initiate—in the absence of a request from law enforcement—disclosure of protected health information to law enforcement officials for the purpose of identifying a suspect, fugitive, material witness or missing person. In the final rule, we clarify that covered entities may disclose protected health information for identifying purposes only in response to a request by a law enforcement official or agency. A "request by a law enforcement official or agency" is not limited to direct requests, but also includes oral or written requests by individuals acting on behalf of a law enforcement agency, such as a media organization broadcasting a request for the public's assistance in identifying a

suspect on the evening news. It includes "Wanted" posters, public announcements, and similar requests to the general public for assistance in locating suspects or fugitives.

Comment: A few commenters recommended additional restrictions on disclosure of protected health information for identification purposes. For example, one commenter recommended that the provision should either (1) require that the information to be disclosed for identifying purposes be relevant and material to a legitimate law enforcement inquiry and that the request be as specific and narrowly drawn as possible; or (2) limit disclosures to circumstances in which (a) a crime of violence has occurred and the perpetrator is at large, (b) the perpetrator received an injury during the commission of the crime, (c) the inquiry states with specificity the type of injury received and the time period during which treatment would have been provided, and (d) "probable cause" exists to believe the perpetrator received treatment from the provider.

Response: We do not agree that these additional restrictions are appropriate for disclosures of limited identifying information for purposes of locating or identifying suspects, fugitives, material witnesses or missing persons. The purpose of this provision is to permit law enforcement to obtain limited time-sensitive information without the process requirements applicable to disclosures for other purposes. Only limited information may be disclosed under this provision, and disclosure is permitted only in limited circumstances. We believe that these ***82685** safeguards are sufficient, and that creating additional restrictions would undermine the purpose of the provision and that it would hinder law enforcement's ability to obtain essential, time-sensitive information.

Comment: A number of law enforcement agencies recommended that the provision in the proposed rule be broadened to permit disclosure to law enforcement officials for the purpose of "locating" as well as "identifying" a suspect, fugitive, material witness or missing person.

Response: We agree with the comment and have changed the provision in the final rule. We believe that locating suspects, fugitives, material witnesses and missing persons is an important public policy priority, and that it can be critical to identifying these individuals. Further, efforts to locate suspects, fugitives, material witnesses, and missing persons can be at least as time-sensitive as identifying such individuals.

Comment: Several law enforcement agencies requested that the provision be broadened to permit disclosure of additional pieces of identifying information, such as ABO blood type and Rh factor, DNA information, dental records, fingerprints, and/or body fluid and tissue typing, samples and analysis. These commenters stated that additional identifying information may be necessary to permit identification of suspects, fugitives, material witnesses or missing persons. On the other hand, privacy and consumer advocates, as well as many individuals, were concerned that this section would allow all computerized medical records to be stored in a large law enforcement data base that could be scanned for matches of blood, DNA, or other individually identifiable information.

Response: The final rule seeks to strike a balance in protecting privacy and facilitating legitimate law enforcement inquiries. Specifically, we have broadened the NPRM's list of data elements that may be disclosed pursuant to this section, to include disclosure of ABO blood type and rh factor for the purpose of identifying or locating suspects, fugitives, material witnesses or missing persons. We agree with the commenters that these pieces of information are important to law enforcement investigations and are no more invasive of privacy than the other pieces of protected health information that may be disclosed under this provision.

However, as explained below, protected health information associated with DNA and DNA analysis; dental records; or typing, samples or analyses of tissues and bodily fluids other than blood (e.g., saliva) cannot be disclosed for the location and identification purposes described in this section. Allowing disclosure of this information is not necessary to accomplish the purpose of this provision, and would be substantially more intrusive into individuals' privacy. In addition, we understand commenters' concern about the potential for such information to be compiled in law enforcement data bases. Allowing disclosure

of such information could make individuals reluctant to seek care out of fear that health information about them could be compiled in such a data base.

Comment: Many commenters argued that proposed § 164.510(f)(2) should be deleted because it would permit law enforcement to engage in "fishing expeditions" or to create large data bases that could be searched for suspects and others.

Response: Some of this fear may have stemmed from the inclusion of the phrase "other distinguishing characteristic"—which could be construed broadly—in the list of items that could have been disclosed pursuant to this section. In the final rule, we delete the phrase "other distinguishing characteristic" from the list of items that can be disclosed pursuant to § 164.512(f)(2). In its place, we allow disclosure of a description of distinguishing physical characteristics, such as scars, tattoos, height, weight, gender, race, hair and eye color, and the presence or absence of facial hair such as a beard or moustache. We believe that such a change, in addition to the changes described in the paragraph above, responds to commenters' concern that the NPRM would have allowed creation of a government data base of personal identifying information. Further, this modification provides additional guidance to covered entities regarding the type of information that may be disclosed under this provision.

Comment: At least one commenter recommended removing social security numbers (SSNs) from the list of items that may be disclosed pursuant to proposed § 164.510(f)(2). The commenter was concerned that including SSNs in the (f)(2) list would cause law enforcement agencies to demand that providers collect SSNs. In addition, the commenter was concerned that allowing disclosure of SSNs could lead to theft of identity by unscrupulous persons in policy departments and health care organizations.

Response: We disagree. We believe that on balance, the potential benefits from use of SSNs for this purpose outweigh the potential privacy intrusion from such use of SSNs. For example, SSNs can help law enforcement officials identify suspects are using aliases.

Comments Regarding Proposed § 164.510(f)(3), Information About a Victim of Crime or Abuse

Comment: Some law enforcement organizations expressed concern that proposed § 164.510(f)(3) could inhibit compliance with state mandatory reporting laws.

Response: We recognize that the NPRM could have preempted such state mandatory reporting laws, due to the combined impact of proposed §§ 164.510(m) and 164.510(f). As explained in detail in § 164.512(a) above, we did not intend that result, and we modify the final rule to make clear that this rule does not preempt state mandatory reporting laws.

Comment: Many commenters, including consumer and provider groups, expressed concern that allowing covered entities to disclose protected health information without authorization to law enforcement regarding victims of crime, abuse, and other harm could endanger victims, particularly victims of domestic violence, who could suffer further abuse if their abuser learned that the information had been reported. Provider groups also expressed concern about undermining provider-patient relationships. Some law enforcement representatives noted that in many cases, health care providers' voluntary reports of abuse or harm can be critical for the successful prosecution of violent crime. They argued, that by precluding providers from voluntarily reporting to law enforcement evidence of potential abuse, the proposed rule could make it more difficult to apprehend and prosecute criminals.

Response: We recognize the need for heightened sensitivity to the danger facing victims of crime in general, and victims of domestic abuse or neglect in particular. As discussed above, the final rule includes a new section (§ 164.512(c)) establishing strict conditions for disclosure of protected health information about victims of abuse, neglect, and domestic violence.

Victims of crime other than abuse, neglect, or domestic violence can also be placed in further danger by disclosure of protected health information relating to the crime. In § 164.512(f)(3) of the final rule, we establish conditions for disclosure of protected health information in these circumstances, and we make significant modifications to the proposed rule's provision for such disclosures. Under the final rule, unless a state or other ***82686** government authority has enacted a law requiring disclosure

of protected health information about a victim to law enforcement officials, in most instances, covered entities must obtain the victim's agreement before disclosing such information to law enforcement officials. This requirement gives victims control over decision making about their health information where their safety could be at issue, helps promote trust between patients and providers, and is consistent with health care providers' ethical obligation to seek patient authorization whenever possible before disclosing protected health information.

At the same time, the rule strikes a balance between protecting victims and providing law enforcement access to information about potential crimes that cause harm to individuals, by waiving the requirement for agreement in two situations. In allowing covered entities to disclose protected health information about a crime victim pursuant to a state or other mandatory reporting law, we defer to other governmental bodies' judgments on when certain public policy objectives are important enough to warrant mandatory disclosure of protected health information to law enforcement. While some mandatory reporting laws are written more broadly than others, we believe that it is neither appropriate nor practicable to distinguish in federal regulations between what we consider overly broad and sufficiently focused mandatory reporting laws.

The final rule waives the requirement for agreement if the covered entity is unable to obtain the individual's agreement due to incapacity or other emergency circumstance, and (1) the law enforcement official represents that the information is needed to determine whether a violation of law by a person other than the victim has occurred and the information is not intended to be used against the victim; (2) the law enforcement official represents that immediate law enforcement activity that depends on the disclosure would be materially and adversely affected by waiting until the individual is able to agree to the disclosure; and (3) the covered entity determines, in the exercise of professional judgment, that the disclosure is in the individual's best interests. By allowing covered entities, in the exercise of professional judgment, to determine whether such disclosures are in the individual's best interests, the final rule recognizes the importance of the provider-patient relationship.

In addition, the final rule allows covered entities to initiate disclosures of protected health information about victims without the victim's permission to law enforcement officials only if such disclosure is required under a state mandatory reporting law. In other circumstances, plans and providers may disclose protected health information only in response to a request from a law enforcement official. We believe that such an approach recognizes the importance of promoting trust between victims and their health care providers. If providers could initiate reports of victim information to law enforcement officials absent a legal reporting mandate, victims may avoid give their providers health information that could facilitate their treatment, or they may avoid seeking treatment completely.

Comment: Many commenters believed that access to medical records pursuant to this provision should occur only after judicial review. Others believed that it should occur only with patient consent or after notifying the patient of the disclosure to law enforcement. Similarly, some commenters said that the minimum necessary standard should apply to this provision, and they recommended restrictions on law enforcement agencies' re-use of the information.

Response: As discussed above, the final rule generally requires individual agreement as a condition for disclosure of a victim's health information; this requirement provides greater privacy protection and individual control than would a requirement for judicial review. We also discuss above the situations in which this requirement for agreement may be waived, and why that is appropriate. The requirement that covered entities disclose the minimum necessary protected health information consistent with the purpose of the disclosure applies to disclosures of protected health information about victims to law enforcement, unless the disclosure is required by law. (See § 164.514 for more detail on the requirements for minimum necessary use and disclosure of protected health information.) As described above, HIPAA does not provide statutory authority for HHS to regulate law enforcement agencies' re-use of protected health information that they obtain pursuant to this rule.

Comment: A few commenters expressed concern that the NPRM would not have required law enforcement agencies' requests for protected health information about victims to be in writing. They believed that written requests could promote clarity in law enforcement requests, as well as greater accountability among law enforcement officials seeking information.

Response: We do not impose this requirement in the final rule. We believe that such a requirement would not provide significant new protection for victims and would unduly impede the completion of legitimate law enforcement investigations.

Comment: A provider group was concerned that it would be difficult for covered entities to evaluate law enforcement officials' claims that information is needed and that law enforcement activity may be necessary. Some comments from providers and individuals expressed concern that the proposed rule would have provided open-ended access by law enforcement to victims' medical records because of this difficulty in evaluating law enforcement claims of their need for the information.

Response: We modify the NPRM in several ways that reduce covered entities' decisionmaking burdens. The final rule clarifies that covered entities may disclose protected health information about a victim of crime where a report is required by state or other law, and it requires the victim's agreement for disclosure in most other instances. The covered entity must make the decision whether to disclose only in limited circumstances: when there is no mandatory reporting law; or when the victim is unable to provide agreement and the law enforcement official represents that: the protected health information is needed to determine whether a violation of law by a person other than the victim has occurred, that the information will not be used against the victim, and that immediate law enforcement activity that depends on such information would be materially and adversely affected by waiting until the individual is able to agree to the disclosure. In these circumstances, we believe it is appropriate to rely on the covered entity, in the exercise of professional judgment, to determine whether the disclosure is in the individual's best interests. Other sections of this rule allow covered entities to reasonably rely on certain representations by law enforcement officials (see § 164.514, regarding verification,) and require disclosure of the minimum necessary protected health information for this purpose. Together, these provisions do not allow open-ended access or place undue responsibility on providers.

Comments Regarding Proposed § 164.510(f)(4), Intelligence and National Security Activities

In the final rule, we recognize that disclosures for intelligence and national security activities do not always involve ***82687** law enforcement. Therefore, we delete the provisions of proposed § 164.510(f)(4), and we address disclosures for intelligence and national security activities in § 164.512(k), on uses and disclosures for specialized government functions. Comments and responses on these issues are included below, in the comments for that section.

Comments Regarding Proposed § 164.510(f)(5), Health Care Fraud, Crimes on the Premises, and Crimes Witnessed by the Covered Entity's Workforce

Comment: Many commenters noted that proposed § 164.510(f)(5)(i), which covered disclosures for investigations and prosecutions of health care fraud, overlapped with proposed § 164.510(c) which covered disclosures for health oversight activities.

Response: As discussed more fully in § 164.512(d) of this preamble, above, we agree that proposed § 164.510(f)(5)(i) created confusion because all disclosures covered by that provision were already permitted under proposed § 164.510(c) without prior process. In the final rule, therefore, we delete proposed § 164.510(f)(5)(i).

Comment: One commenter was concerned the proposed provision would not have allowed an emergency room physician to report evidence of abuse when the suspected abuse had not been committed on the covered entity's premises.

Response: Crimes on the premises are only one type of crime that providers may report to law enforcement officials. The rules for reporting evidence of abuse to law enforcement officials are described in § 164.512(c) of the rule, and described in detail in § 164.512(c) of the preamble. An emergency room physician may report evidence of abuse if the conditions in § 164.512(c) are met, regardless of where the abuse occurred.

Comment: One commenter argued that covered entities should be permitted to disclose information that "indicates the potential existence" of evidence, not just information that "constitutes evidence" of crimes on the premises or crimes witnessed by a member of the covered entity's workforce.

Response: We agree that covered entities should not be required to guess correctly whether information will be admitted to court as evidence. For this reason, we include a good-faith standard in this provision. Covered entities may disclose information that it believes in good faith constitutes evidence of a crime on the premises. If the covered entity discloses protected health information in good faith but is wrong in its belief that the information is evidence of a violation of law, the covered entity will not be subject to sanction under this regulation.

Section 164.512(g)—Uses and Disclosures About Decedents

Coroners and Medical Examiners

Comment: We received several comments, for example, from state and county health departments, a private foundation, and a provider organization, in support of the NPRM provision allowing disclosure without authorization to coroners and medical examiners.

Response: The final rule retains the NPRM's basic approach to disclosure of coroners and medical examiners. It allows covered entities to disclose protected health information without authorization to coroners and medical examiners, for identification of a deceased person, determining cause of death, or other duties authorized by law.

Comment: In the preamble to the NPRM, we said we had considered but rejected the option of requiring covered entities to redact from individuals' medical records any information identifying other persons before disclosing the record to a coroner or medical examiner. We solicited comment on whether health care providers routinely identify other persons specifically in an individual's medical record and if so, whether in the final rule we should require health care providers to redact information about the other person before providing it to a coroner or medical examiner.

A few commenters said that medical records typically do not include information about persons other than the patient. One commenter said that patient medical records occasionally reference others such as relatives or employers. These commenters recommended requiring redaction of such information in any report sent to a coroner or medical examiner. On the other hand, other commenters said that redaction should not be required. These commenters generally based their recommendation on the burden and delay associated with redaction. In addition to citing the complexity and time involved in redaction of medical records provided to coroners, one commenter said that health plans and covered health care providers were not trained to determine the identifiable information necessary for coroners and medical examiners to do thorough investigations. Another commenter said that redaction should not be required because coroners and medical examiners needed some additional family information to determine what would be done with the deceased after their post-mortem investigation is completed.

Response: We recognize the burden associated with redacting medical records to remove the names of persons other than the patient. In addition, as stated in the preamble to the NPRM, we recognize that there is a limited time period after death within which an autopsy must be conducted. We believe that the delay associated with this burden could make it impossible to conduct a post-mortem investigation within the required time frame. In addition, we agree that health plans and covered health care providers may lack the training necessary to determine the identifiable information necessary for coroners and medical examiners to do thorough investigations. Thus, in the final rule, we do not require health plans or covered providers to redact information about persons other than the patient who may be identified in a patient's medical record before disclosing the record to a coroner or medical examiner.

Comment: One commenter said that medical records sent to coroners and medical examiners were considered their work product and thus were not released from their offices to anyone else. The commenter recommended that HHS establish regulations on how to dispose of medical records and that we create a “no re-release” statement to ensure that individual privacy is maintained without compromising coroners' or medical examiners' access to protected health information. The organization said that such a policy should apply regardless of whether the investigation was civil or criminal.

Response: HIPAA does not provide HHS with statutory authority to regulate coroners' or medical examiners' re-use or re-disclosure of protected health information unless the coroner or medical examiner is also a covered entity. However, we consistently have supported comprehensive privacy legislation to regulate disclosure and use of individually identifiable health information by all entities that have access to it.

Funeral Directors

Comment: One commenter recommended modifying the proposed rule to allow disclosure without authorization to funeral directors. To accomplish this change, the commenter suggested either: (1) Adding another subsection to proposed § 164.510 of the NPRM, to allow disclosure without authorization to funeral directors as needed to make arrangements for ***82688** funeral services and for disposition of a deceased person's remains; or (2) revising proposed § 164.510(e) to allow disclosure of protected health information to both coroners and funeral directors. According to this commenter, funeral directors often need certain protected health information for the embalming process, because a person's medical condition may affect the way in which embalming is performed. For example, the commenter noted, funeral directors increasingly receive bodies after organ and tissue donation, which has implications for funeral home staff duties associated with embalming.

Response: We agree with the commenter. In the final rule, we permit covered entities to disclose protected health information to funeral directors, consistent with applicable law, as necessary to carry out their duties with respect to a decedent. When necessary for funeral directors to carry out their duties, covered entities may disclose protected health information prior to and in reasonable anticipation of the individual's death.

Comment: One commenter recommended clarifying in the final rule that it does not restrict law enforcement agencies' release of medical information that many state records laws require to be reported, for example, as part of autopsy reports. The commenter recommended stating that law enforcement officials may independently gather medical information, that such information would not be covered by these rules, and that it would continue to be covered under applicable state and federal access laws.

Response: HIPAA does not give HHS statutory authority to regulate law enforcement officials' use or disclosure of protected health information. As stated elsewhere, we continue to support enactment of comprehensive privacy legislation to cover disclosure and use of all individually identifiable health information.

Comment: One commenter recommended prohibiting health plans and covered health care providers from disclosing psychotherapy notes to coroners or medical examiners.

Response: We disagree with the commenter who asserted that psychotherapy notes should only be used by or disclosed to coroners and medical examiners with authorization. Psychotherapy notes are sometimes needed by coroners and medical examiners to determine cause of death, such as in cases where suicide is suspected as the cause of death. We understand that several states require the disclosure of protected health information, including psychotherapy notes, to medical examiners and coroners. However, in the absence of a state law requiring such disclosure, we do not intend to prohibit coroners or medical examiners from obtaining the protected health information necessary to determine an individual's cause of death.

Section 164.512(h)—Uses and Disclosures for Organ Donation and Transplantation Purposes

Comment: Commenters noted that under the organ donation system, information about a patient is disclosed before seeking consent for donation from families. These commenters offered suggestions for ensuring that the system could continue to operate without consent for information sharing with organ procurement organizations and tissue banks. Commenters suggested that organ and tissue procurement organizations should be “covered entities” or that the procurement of organs and tissues be included in the definition of health care operations or treatment, or in the definition of emergency circumstances.

Response: We agree that organ and tissue donation is a special situation due to the need to protect potential donors' families from the stress of considering whether their loved one should be a donor before a determination has been made that donation

would be medically suitable. Rather than list the entities that are "covered entities" or modify the definitions of health care operations and treatment or emergency circumstances to explicitly include organ procurement organizations and tissue banks, we have modified § 164.512 to permit covered entities to use or disclose protected health information to organ procurement organizations or other entities engaged in the procurement, banking, or transplantation of cadaveric organs, eyes, or tissues.

Comment: Commenters asked that the rule clarify that organ procurement organizations are health care providers but not business partners of the hospitals.

Response: We agree that organ procurement organizations and tissue banks are generally not business associates of hospitals.

Disclosures and Uses for Government Health Data Systems

Comment: We received a number of comments supporting the exception for disclosure of protected health information to government health data systems. Some supporters stated a general belief that the uses of such information were important to improve and protect the health of the public. Commenters said that state agencies used the information from government health data systems to contribute to the improvement of the health care system by helping prevent fraud and abuse and helping improve health care quality, efficiency, and cost-effectiveness. Commenters asserted that state agencies take action to ensure that data they release based on these data systems do not identify individuals

We also received a large volume of comments opposed to the exception for use and disclosure of protected health information for government health data systems. Many commenters expressed general concern that the provision threatened their privacy, and many believed that their health information would be subject to abuse by government employees. Commenters expressed concern that the provision would facilitate collection of protected health information in one large, centralized government health database that could threaten privacy. Others argued that the proposed rule would facilitate law enforcement access to protected health information and could, in fact, become a database for law enforcement use.

Many commenters asserted that this provision would make individuals concerned about confiding in their health care providers. Some commenters argued that the government should not be allowed to collect individually identifiable health information without patient consent, and that the government could use de-identified data to perform the public policy analyses. Many individual commenters said that HHS lacked statutory and Constitutional authority to give the government access and control of their medical records without consent.

Many commenters believed that the NPRM language on government health data systems was too broad and would allow virtually any government collection of data to be covered. They argued that the government health data system exception was unnecessary because there were other provisions in the proposed rules providing sufficient authority for government agencies to obtain the information they need.

Some commenters were concerned that the NPRM's government health data system provisions would allow disclosure of protected health information for purposes unrelated to health care. These commenters recommended narrowing the provision to allow disclosure of protected health ***82689** information without consent to government health data systems in support of health care-related policy, planning, regulatory, or management functions. Others recommended narrowing the exception to allow use and disclosure of protected health information for government health databases only when a specific statute or regulation has authorized collection of protected health information for a specific purpose.

Response: We agree with the commenters who suggested that the proposed provision that would have permitted disclosures to government health data bases was overly broad, and we remove it from the final rule.

We reviewed the important purposes identified in the comments for government access to protected health information, and believe that the disclosures of protected health information that should appropriately be made without individuals' authorization can be achieved through the other disclosures provided for in the final rule, including provisions permitting covered entities

to disclose information (subject to certain limitations) to government agencies for public health, research, health oversight, law enforcement, and otherwise as required by law. For example, the final rule continues to allow a covered entity to disclose protected health information without authorization to a public health authority to monitor trends in the spread of infectious disease, morbidity, and mortality. Under the rule's health oversight provision, covered entities can continue to disclose protected health information to public agencies for purposes such as analyzing the cost and quality of services provided by covered entities; evaluating the effectiveness of federal, state, and local public programs; examining trends in health insurance coverage of the population; and analyzing variations in access to health coverage among various segments of the population. We believe that it is better to remove the proposed provision for government health data systems generally and to rely on other, more narrowly tailored provisions in the rule to authorize appropriate disclosures to government agencies.

Comment: Some provider groups, private companies, and industry organizations recommended expanding the exception for government health data systems to include data collected by private entities. These commenters said that such an expansion would be justified, because private entities often perform the same functions as public agencies collecting health data.

Response: We eliminate the exception for government health data systems because it was over broad and the uses and disclosures we were trying to permit are permitted by other provisions. We note that private organizations may use or disclose protected health information pursuant to multiple provisions of the rule.

Comment: One commenter recommended clarifying in the final rule that the government health data system provisions apply to: (1) Manufacturers providing data to HCFA and its contractors to help the agency make reimbursement and related decisions; and to (2) third-party payors that must provide data collected by device manufacturers to HCFA to help the agency make reimbursement and related decisions.

Response: The decision to eliminate the general provision permitting disclosures to government health data systems makes this issue moot with respect to such disclosures. We note that the information used by manufacturers to support coverage determinations often is gathered pursuant to patient authorization (as part of informed consent for research) or as an approved research project. There also are many cases in which information can be de-identified before it is disclosed. Where HCFA hires a contractor to collect such protected health information, the contractor may do so under HCFA's authority, subject to the business associate provisions of this rule.

Comment: One commenter recommended stating in the final rule that de-identified information from government health data systems can be disclosed to other entities.

Response: HHS does not have the authority to regulate re-use or re-disclosure of information by agencies or institutions that are not covered entities under the rule. However, we support the policies and procedures that public agencies already have implemented to de-identify any information that they redisclose, and we encourage the continuation of these activities.

Disclosures for Payment Processes

Proposed § 164.510(j) of the NPRM would have allowed disclosure of protected health information without authorization for banking and payment processes. In the final rule, we eliminate this provision. Disclosures that would have been allowed under it, as well as comments received on proposed § 164.510(j), are addressed under § 164.501 of the final rule, under the definition of "payment."

Section 164.512(i)—Uses and Disclosures for Research Purposes

Documentation Requirements of IRB or Privacy Board Approval of Waiver

Comment: A number of commenters argued that the proposed research requirements of § 164.510(j) exceeded the Secretary's authority under section 246(c) of HIPAA. In particular, several commenters argued that the Department was proposing to

extend the Common Rule and the use of the IRB or privacy boards beyond federally-funded research projects, without the necessary authority under HIPAA to do so. One commenter stated that, "Section 246(c) of HIPAA requires the Secretary to issue a regulation setting privacy standards for individually identifiable health information transmitted in connection with the transactions described in section 1173(a)," and thus concluded that the disclosure of health information to researchers is not covered. Some of these commenters also argued that the documentation requirements of proposed § 164.510(j), did not shield the NPRM from having the effect of regulating research by placing the onus on covered health care providers to seek documentation that certain standards had been satisfied before providing protected health information to researchers. These commenters argued that the proposed rule had the clear and intended effect of directly regulating researchers who wish to obtain protected health information from a covered entity.

Response: As discussed above, we do not agree with commenters that the Secretary's authority is limited to individually identifiable health information transmitted in connection with the transactions described in section 1173(a) of HIPAA. We also disagree that the proposed research documentation requirements would have constituted the unauthorized regulation of researchers. The proposed requirements established conditions for the use of protected health information by covered entities for research and the disclosure of protected health information by covered entities to researchers. HIPAA authorizes the Secretary to regulate such uses and disclosures, and the final rule retains documentation requirements similar to those proposed.

Comment: Several commenters believed that the NPRM was proposing either directly or indirectly to modify the Common Rule and, therefore, stated that such modification was beyond the Secretary's authority under HIPAA. Many of these commenters arrived at this conclusion because the waiver of ***82690** authorization criteria proposed in § 164.510(j) differed from the Common Rule's criteria for the waiver of informed consent (Common Rule, §_. 116(d)).

Response: We do not agree that the proposed provision relating to research would have modified the Common Rule. The provisions that we proposed and provisions that we include in the final rule place conditions that must be met before a covered entity may use or disclose protected health information. Those conditions are in addition to any conditions required of research entities under the Common Rule. Covered entities will certainly be subject to laws and regulations in addition to the rule, but the rule does not require compliance with these other laws or regulations. For covered health care providers and health plans that are subject to both the final rule and the Common Rule, both sets of regulations will need to be followed.

Comment: A few commenters suggested that the Common Rule should be extended to all research, regardless of funding source.

Response: We generally agree with the commenters on the need to provide protections to all human subjects research, regardless of funding source. HIPAA, however, did not provide the Department with authority to extend the Common Rule beyond its current purview. For research that relies on the use or disclosure of protected health information by covered entities without authorization, the final rule applies the Common Rule's principles for protecting research subjects by, in most instances, requiring documentation of independent board review, and a finding that specified criteria designed to protect the privacy of prospective research subjects have been met.

Comment: A large number of commenters agreed that the research use and disclosure of protected health information should not require authorization. Of these commenters, many supported the proposed rule's approach to research uses and disclosures without authorization, including many from health care provider organizations, the mental health community, and members of Congress. Others, while they agreed that the research use and disclosure should not require authorization disagreed with the NPRM's approach and proposed alternative models.

The commenters who supported the NPRM's approach to permitting researchers access to protected health information without authorization argued that it was appropriate to apply "Common Rule-like" provisions to privately funded research. In addition, several commenters explicitly argued that the option to use a privacy board, in lieu of an IRB, must be maintained because requiring IRB review to include all aspects of patient privacy could diffuse focus and significantly compromise an IRB's ability

to execute its primary patient protection role. Furthermore, several commenters believed that privacy board review should be permitted, but wanted equal oversight and accountability for privacy boards and IRBs.

Many other commenters agreed that the research use and disclosure should not require authorization, but disagreed with the proposed rule's approach and proposed alternative models. Several of these commenters argued that the final rule should eliminate the option for privacy board review and that all research to be subject to IRB review. These commenters stated that having separate and unequal systems to approve research based on its funding source would complicate compliance and go against the spirit of the regulations. Several of these commenters, many from patient and provider organizations, opposed the permitted use of privacy boards to review research studies and instead argued that IRB review should be required for all studies involving the use or disclosure of protected health information. These commenters argued that although privacy board requirements would be similar, they are not equitable; for example, only three of the Common Rule's six requirements for the membership of IRBs were proposed to be required for the membership on privacy boards, and there was no proposed requirement for annual review of ongoing research studies that used protected health information. Several commenters were concerned that the proposed option to obtain documentation of privacy board review, in lieu of IRB review, would perpetuate the divide in the oversight of federally-funded versus publically-funded research, rather than eliminate the differential oversight of publically- and privately-funded research, with the former still being held to a stricter standard. Some of these commenters argued that these unequal protections would be especially apparent for the disclosure of research with authorization, since under the Common Rule, IRB review of human subjects studies is required, regardless of the subject's consent, before the study may be conducted.

Response: Although we share the concern raised by commenters that the option for the documentation of privacy board approval for an alteration or waiver of authorization may perpetuate the unequal mechanisms of protecting the privacy of human research subjects for federally-funded versus publically-funded research, the final rule is limited by HIPAA to addressing only the use and disclosure of protected health information by covered entities, not the protection of human research subjects more generally. Therefore, the rule cannot standardize human subjects protections throughout the country. Given the limited scope of the final rule with regard to research, the Department believes that the option to obtain documentation of privacy board approval for an alteration or waiver of authorization in lieu of IRB approval provides covered entities with needed flexibility. Therefore, in the final rule we have retained the option for covered entities to rely on documentation of privacy board approval that specified criteria have been met.

We disagree with the rationale suggested by commenters who argued that the option for privacy board review must be maintained because requiring IRB review to include all aspects of patient privacy could diffuse focus and significantly compromise an IRB's ability to execute its primary patient protection role. For research that involves the use of individually identifiable health information, assessing the risk to the privacy of research subjects is currently one of the key risks that must be assessed and addressed by IRBs. In fact, we expect that it will be appropriate for many research organizations that have existing IRBs to rely on these IRBs to meet the documentation requirements of § 164.512(i).

Comment: One health care provider organization recommended that the IRB or privacy board mechanism of review should be applied to non-research uses and disclosures.

Response: We disagree. Imposing documentation of privacy board approval for other public policy uses and disclosures permitted by § 164.512 would result in undue delays in the use or disclosure of protected health information that could harm individuals and the public. For example, requiring that covered health care providers obtain third-party review before permitting them to alert a public health authority that an individual was infected with a serious communicable disease could cause delay appropriate intervention by a public health authority and could present a serious threat to the health of many individuals.

Comment: A number of commenters, including several members of Congress, ***82691** argued that since the research provisions in proposed § 164.510(j) were modeled on the existing system of human subjects protections, they were inadequate and would shatter public trust if implemented. Similarly, some commenters, asserted that IRBs are not accustomed to reviewing and approving utilization reviews, outcomes research, or disease management programs and, therefore, IRB review may not be an

effective tool for protecting patient privacy in connection with these activities. Some of these commenters noted that proposed § 164.510(j) would exacerbate the problems inherent in the current federal human subjects protection system especially in light of the recent GAO reports that indicate the IRB system is already over-extended. Furthermore, a few commenters argued that the Common Rule's requirements may be suited for interventional research involving human subjects, but is ill suited to the archival and health services research typically performed using medical records without authorization. Therefore, these commenters concluded that extending "Common Rule-like" provisions to the private sector would be inadequate to protect human subjects and would result in significant and unnecessary cost increases.

Response: While the vast majority of government-supported and regulated research adheres to strict protocols and the highest ethical standards, we agree that the federal system of human subjects protections can and must be strengthened. To work toward this goal, on May 23, the Secretary announced several additional initiatives to enhance the safety of subjects in clinical trials, strengthen government oversight of medical research, and reinforce clinical researchers' responsibility to follow federal guidelines. As part of this initiative, the National Institutes of Health have undertaken an aggressive effort to ensure IRB members and IRB staff receive appropriate training in bioethics and other issues related to research involving human subjects, including research that involves the use of individually identifiable health information. With these added improvements, we believe that the federal system of human subjects protections continues to be a good model to protect the privacy of individually identifiable health information that is used for research purposes. This model of privacy protection is also consistent with the recent recommendations of both the Institute of Medicine in their report entitled, "Protecting Data Privacy in Health Services Research," and the Joint Commission on Accreditation of Healthcare Organizations and the National Committee for Quality Assurance in their report entitled, "Protecting Personal Health Information: A Framework for Meeting the Challenges in a Managed Care Environment." Both of these reports similarly concluded that health services research that involves the use of individually identifiable health information should undergo IRB review or review by another board with sufficient expertise in privacy and confidentiality protection.

Furthermore, it is important to recognize that the Common Rule applies not only to interventional research, but also to research that uses individually identifiable health information, including archival research and health services research. The National Bioethics Advisory Commission (NBAC) is currently developing a report on the federal oversight of human subjects research, which is expected to address the unique issues raised by non-interventional human subjects research. The Department looks forward to receiving NBAC's report, and carefully considering the Commission's recommendations. This final rule is the first step in enhancing patients' privacy and we will propose modifications to the rule if changes are warranted by the Commission's findings and recommendations.

Comment: Many commenters argued that the proposed research provision would have a chilling affect on the willingness of health plans and covered providers to participate in research because of the criminal and civil penalties that could be imposed for failing to meet the requirements that would have been required by proposed § 164.510(j). Some of these commenters cautioned, that over time, research could be severely hindered if covered entities choose not to disclose protected health information to researchers. In addition, one commenter recommended that a more reasonable approach would be to require IRB or privacy board approval only if the results of the research were to be broadly published. Another commenter expressed concern that the privacy rule could influence IRBs or privacy boards to refuse to recognize the validity of decisions by other IRBs or privacy boards and specifically recommended that the privacy rule include a preamble statement that: (1) The "risk" balancing consider only the risk to the patient, not the risk to the institution, and (2) add a phrase that the decision by the initial IRB or privacy board to approve the research shall be given deference by other IRBs or privacy boards. This commenter also recommended that to determine whether IRBs or privacy boards were giving such deference to prior IRB or privacy board review, HHS should monitor the disapproval rate by IRB or privacy boards conducting secondary reviews.

Response: As the largest federal sponsor of medical research, we understand the important role of research in improving our Nation's health. However, the benefits of research must be balanced against the risks, including the privacy risks, for those who participate in research. An individual's rights and welfare must never be sacrificed for scientific or medical progress. We believe that the requirements for the use and disclosure of protected health information for research without authorization provides

an appropriate balance. We understand that some covered health care providers and health plans may conclude that the rule's documentation requirements for research uses and disclosures are too burdensome.

We rejected the recommendation that documentation of IRB or privacy board approval of the waiver of authorization should only be required if the research were to be "broadly published." Research findings that are published in de-identified form have little influence on the privacy interests of individuals. We believe that it is the use or disclosure of individually identifiable health information to a researcher that poses the greater risk to individuals' privacy, not publication of de-identified information.

We agree with the commenters that IRB or privacy board review should address the privacy interests of individuals and not institutions. This provision is intended to protect individuals from unnecessary uses and disclosures of their health information and does not address institutional privacy.

We disagree with the comment that documentation of IRB or privacy board approval of the waiver of authorization should be given deference by other IRBs or privacy boards conducting secondary reviews. We do not believe that it is appropriate to restrict the deliberations or judgments of privacy boards, nor do we have the authority under this rule to instruct IRBs on this issue. Instead, we reiterate that all disclosures for research purposes under § 164.512(i) are voluntary, and that institutions may choose to impose more stringent requirements for any use and disclosure permitted under § 164.512. ***82692**

Comment: Some commenters were concerned about the implications of proposed § 164.510(j) on multi-center research. These commenters argued that for multi-center research, researchers may require protected health information from multiple covered entities, each of whom may have different requirements for the documentation of IRB or privacy board review. Therefore, there was concern that documentation that may suffice for one covered entity, may not for another, thereby hindering multi-center research.

Response: Since § 164.512(i) establishes minimum documentation standards for covered health care providers and health plans using or disclosing protected health information for research purposes, we understand that some covered providers and health plans may choose to require additional documentation requirements for researchers. We note, however, that nothing in the final rule would preclude a covered health care provider or health plan from developing the consistent documentation requirements provided they meet the requirements of § 164.512(i).

Comment: One commenter who was also concerned that the minimum necessary requirements of proposed § 164.506(b) would negatively affect multi-center research because covered entities participating in multi-site research studies would no longer be permitted to rely upon the consent form approved by a central IRB, and nor would participating entities be permitted to report data to the researcher using the case report form approved by the central IRB to guide what data points to include. This commenter noted that the requirement that each site would need to undertake a separate minimum necessary review for each disclosure would erect significant barriers to the conduct of research and may compromise the integrity and validity of data combined from multiple sites. This commenter recommended that the Secretary absolve a covered entity of the responsibility to make its own individual minimum necessary determinations if the entity is disclosing information pursuant to an IRB or privacy board-approved protocol.

Response: The minimum necessary requirements in the final rule have been revised to permit covered entities to rely on the documentation of IRB or privacy board approval as meeting the minimum necessary requirements of § 164.514. However, we anticipate that much multi-site research, such as multi-site clinical trials, will be conducted with patients' informed consent as required by the Common Rule and FDA's protection of human subjects regulations, and that patients' authorization will also be sought for the use or disclosure of protected health information for such studies. Therefore, it should be noted that the minimum necessary requirements do not apply for uses or disclosures made with an authorization. In addition, the final rule allows a covered health care provider or health plan to use or disclose protected health information pursuant to an authorization that was approved by a single IRB or privacy board, provided the authorization met the requirements of § 164.508. The final rule

does not, however, require IRB or privacy board review for the use or disclosure of protected health information for research conducted with individuals' authorization.

Comment: Some commenters believed that proposed § 164.510(j) would have required documentation of both IRB and privacy board review before a covered entity would be permitted to disclose protected health information for research purposes without an individual's authorization.

Response: This is incorrect. Section 164.512(i)(1)(i) of the final rule requires documentation of alteration or waiver approval by either an IRB or a privacy board.

Comment: Some commenters believed that the proposed rule would have required that patients be notified whenever protected health information about themselves was disclosed for research purposes.

Response: This is incorrect. Covered entities are not required to inform individuals that protected health information about themselves has been disclosed for research purposes. However, as required in § 164.520 of the final rule, the covered entity must include research disclosures in their notice of information practices. In addition, as required by § 164.528 of the rule, covered health care providers and health plans must provide individuals, upon request, with an accounting of disclosures made of protected health information about the individual.

Comment: One commenter recommended that IRB and privacy boards also be required to be accredited.

Response: While we agree that the issue of accrediting IRBs and privacy boards deserves further consideration, we believe it is premature to require covered entities to ensure that the IRB or privacy board that approves an alteration or waiver of authorization is accredited. Currently, there are no accepted accreditation standards for IRBs or privacy boards, nor a designated accreditation body. Recognizing the need for and value of greater uniformity and public accountability in the review and approval process, HHS, with support from the Office of Human Research Protection, National Institutes of Health, Food and Drug Administration, Centers for Disease Control and Prevention, and Agency for Health Care Research and Quality, has engaged the Institute of Medicine to recommend uniform performance resource-based standards for private, voluntary accreditation of IRBs. This effort will draw upon work already undertaken by major national organizations to develop and test these standards by the spring of 2001, followed by initiation of a formal accreditation process before the end of next year. Once the Department has received the Institute of Medicine's recommended accreditation standards and process for IRBs, we plan to consider whether this accreditation model would also be applicable to privacy boards.

Comment: A few commenters also noted that if both an IRB and a privacy board reviewed a research study and came to conflicting decisions, proposed § 164.510(j) was unclear about which board's decision would prevail.

Response: The final rule does not stipulate which board's decision would prevail if an IRB and a privacy board came to conflicting decisions. The final rule requires covered entities to obtain documentation that one IRB or privacy board has approved of the alteration or waiver of authorization. The covered entity, however, has discretion to request information about the findings of all IRBs and/or privacy boards that have reviewed a research proposal. We strongly encourage researchers to notify IRBs and privacy boards of any prior IRB or privacy board review of a research protocol.

Comment: Many commenters noted that the NPRM included no guidance on how the privacy board should approve or deny researchers' requests. Some of these commenters recommended that the regulation stipulate that privacy boards be required to follow the same voting rules as required under the Common Rule.

Response: We agree that the Common Rule (§__.108(b)) provides a good model of voting procedures for privacy boards and incorporate such procedures to the extent they are relevant. In the final rule, we require that the documentation of alteration or waiver of authorization state that the alteration or waiver has been reviewed and approved by either (1) an IRB that has followed

the voting requirements of the Common Rule (§__.108(b)), or the expedited review ***82693** procedures of the Common Rule (§__.110); or (2) unless an expedited review procedure is used, a privacy board that has reviewed the proposed research at a convened meeting at which a majority of the privacy board members are present, including at least one member who is not affiliated with the covered entity, not affiliated with any entity conducting or sponsoring the research, and not related to any person who is affiliated with any such entities, and the alteration or waiver of authorization is approved by the majority of privacy board members present at the meeting.

Comment: A few commenters were concerned that the research provisions would be especially onerous for small non-governmental entities, furthering the federal monopoly on research.

Response: We understand that the documentation requirements of § 164.512(i), as well as other provisions in the final rule, may be more onerous for small entities than for larger entities. We believe, however, that when protected health information is to be used or disclosed for research without an individual's authorization, the additional privacy protections in § 164.512(i) are essential to reduce the risk of harm to the individual.

Comment: One commenter believed that it was paradoxical that, under the proposed rule, the disclosure of protected health information for research conducted with an authorization would have been more heavily burdened than research that was conducted without authorization, which they reasoned was far less likely to bring personal benefit to the research subjects.

Response: It was not our intent to impose more requirements on covered entities using or disclosing protected health information for research conducted with authorization than for research conducted without authorization. In fact, the proposed rule would have required only authorization as stipulated in proposed § 164.508 for research disclosures made with authorization, and would have been exempt from the documentation requirements in proposed § 164.510(j). We retain this treatment in the final rule. We disagree with the commenter who asserted that the requirements for research conducted with authorization are more burdensome for covered health care providers and plans than the documentation provisions of this paragraph.

Comment: A number of comments, mostly from the pharmaceutical industry, recommended that the final rule state that privacy boards be permitted to waive authorization only with respect to research uses of medical information collected in the course of treatment or health care operations, and not with respect to clinical research. Similarly, one commenter recommended that IRBs and privacy boards be authorized to review privacy issues only, not the entire research project. These commenters were concerned that by granting waiver authority to privacy boards and IRBs, and by incorporating the Common Rule waiver criteria into the waiver criteria included in the proposed rule, the Secretary has set the stage for privacy boards to review and approve waivers in circumstances that involve interventional research that is not subject to the Common Rule.

Response: We agree with the commenters who recommended that the final rule clarify that the documentation of IRB or privacy board approval of the waiver of authorization would be based only on an assessment of the privacy risks associated with a research study, not an assessment of all relevant risks to participants. In the final rule, we have amended the language in the waiver criteria to make clear that these criteria relate only to the privacy interests of the individual. We anticipate, however, that the vast majority of uses and disclosures of protected health information for interventional research will be made with individuals' authorization. Therefore, we expect it will be rare that a researcher will seek IRB or privacy board approval for the alteration or waiver of authorization, but seek informed consent for participation for the interventional component of the research study. Furthermore, we believe that interventional research, such as most clinical trials, could not meet the waiver criteria in the final rule (§ 164.512(i)(2)(ii)(C)), which states “the research could not practicably be conducted without the alteration or waiver.” If a researcher is to have direct contact with research subjects, the researcher should in virtually all cases be able to seek and obtain patients' authorization for the use and disclosure of protected health information about themselves for the research study.

Comment: A few commenters recommended that the rule explicitly state that covered entities would be permitted to rely upon an IRB or privacy boards' representation that the research proposal meets the requirements of proposed § 164.510(j).

Response: We agree with this comment. The final rule clarifies that covered health care providers and health plans are allowed to rely on an IRB's or privacy board's representation that the research proposal meets the requirements of § 164.512(i).

Comment: One commenter recommended that IRBs be required to maintain web sites with information on proposed and approved projects.

Response: We agree that it could be useful for IRBs and privacy boards to maintain web sites with information on proposed and approved projects. However, requiring this of IRBs and privacy boards is beyond the scope of our authority under HIPAA. In addition, this recommendation raises concerns that would need to be addressed, including concerns about protecting the confidentiality of research participants and propriety information that may be contained in research proposals. For these reasons, we decided not to incorporate this requirement into the final rule.

Comment: One commenter recommended that HHS collect data on research-related breaches of confidentiality and investigate existing anecdotal reports of such breaches.

Response: This recommendation is beyond HHS' legal authority, since HIPAA did not give us the authority to regulate researchers. Therefore, this recommendation was not included in the final rule.

Comment: A number of commenters were concerned that HIPAA did not give the Secretary the authority to protect information once it was disclosed to researchers who were not covered entities.

Response: The Secretary shares these commenters' concerns about the Department's limited authority under HIPAA. We strongly support the enactment of additional federal legislation to fill these crucial gaps in the Secretary's authority.

Comment: One commenter recommended that covered entities should be required to retain the IRB's or privacy board's documentation of approval of the waiver of individuals' authorization for at least six years from when the waiver was obtained.

Response: We agree with this comment and have included such a requirement in the final rule. See § 164.530(j).

Comment: One commenter recommended that whenever health information is used for research or administrative purposes, a plan is in place to evaluate whether to and how to feed patient-specific information back into the health system to benefit an individual or group of patients from whom the health information was derived.

Response: While we agree that this recommendation is consistent with the ***82694** responsible conduct of research, HIPAA did not give us the authority to regulate research. Therefore, this recommendation was not included in the final rule.

Comment: A few commenters recommended that contracts between covered entities and researcher be pursued. Comments received in favor of requiring contractual agreements argued that such a contract would be enforceable under law, and should prohibit secondary disclosures by researchers. Some of these commenters recommended that contracts between covered entities and researchers should be the same as, or modeled on, the proposed requirements for business partners. In addition, some commenters argued that contracts between covered entities and researchers should be required as a means of placing equal responsibility on the researcher for protecting protected health information and for not improperly re-identifying information.

Response: In the final rule, we have added an additional waiver criteria to require that there are adequate written assurances from the researcher that protected health information will not be re-used or disclosed to any other person or entity, except as required by law, for authorized oversight of the research project, or for other research for which the use or disclosure of protected health information would be permitted by this subpart. We believe that this additional waiver criteria provides additional assurance that protected health information will not be misused by researchers, while not imposing the additional burdens of a contractual

requirement on covered health care providers and health plans. We were not persuaded by the comments received that contractual requirements would provide necessary additional protections, that would not also be provided by the less burdensome waiver criteria for adequate written assurance that the researcher will not re-use or disclose protected health information, with few exceptions. Our intent was to strengthen and extend existing privacy safeguards for protected health information that is used or disclosed for research, while not creating unnecessary disincentives to covered health care providers and health plans who choose to use or disclose protected health information for research purposes.

Comment: Some commenters explicitly opposed requiring contracts between covered entities and researchers as a condition of permitting the use or disclosure of protected health information for research purposes. These commenters argued that such a contractual requirement would be too onerous for covered entities and researchers and would hinder or halt important research.

Response: We agree with the arguments raised by these commenters, and thus, the final rule does not require contracts between covered entities and researchers as a condition of using or disclosing protected health information for research purposes without authorization.

Comment: A large number of commenters strongly supported requiring patient consent before protected health information could be used or disclosed, including but not limited to use and disclosure for research purposes. These commenters argued that the unconsented-to use of their medical records abridged their autonomy right to decide whether or not to participate in research. A few referenced the Nuremberg Code in support of their view, noting that the Nuremberg Code required individual consent for participation in research.

Response: We agree that it is of foremost importance that individuals' privacy rights and welfare be safeguarded when protected health information about themselves is used or disclosed for research studies. We also strongly believe that continued improvements in the nation's health requires that researchers be permitted access to protected health information without authorization in certain circumstances. Additional privacy protections are needed, however, and we have included several in the final rule. If covered entities plan to disclose protected health without individuals' authorization for research purposes, individuals must be informed of this through the covered entity's notice to patients of their information practices. In addition, before covered health care providers or health plans may use or disclose protected health information for research without authorization, they must obtain documentation that an IRB or privacy board has found that specified waiver criteria have been met, unless the research will include protected health information about deceased individuals only, or is solely for reviews that are preparatory to research.

While it is true that the first provision of the Nuremberg Code states that “the voluntary consent of the human subject is absolutely essential,” it is important to understand the context of this important document in the history of protecting human subjects research from harm. The Nuremberg Code was developed for the Nuremberg Military Tribunal as standards by which to judge the human experimentation conducted by the Nazis, and was one of the first documents setting forth principles for the ethical conduct of human subjects research. The acts of atrocious cruelty that the Nuremberg Code was developed to address, focused on preventing the violations to human rights and dignity that occurred in the name of “medical advancement.” The Code, however, did not directly address the ethical conduct of non-interventional research, such as medical records research, where the risk of harm to participants can be unlike those associated with clinical research.

We believe that the our proposed requirements for the use or disclosure of protected health information for research are consistent with the ethical principles of “respect for persons,” “beneficence,” and “justice,” which were established by the Belmont Report in 1978, and are now accepted as the quintessential requirements for the ethical conduct of research involving human subjects, including research using individually identifiable health information. These ethical principles formed the foundation for the requirements in the Common Rule, on which our proposed requirements for research uses and disclosures were modeled.

Comment: Many commenters recommended that the privacy rule permit individuals to opt out of having their records used for the identified “important” public policy purposes in § 164.510, including for research purposes. These commenters asserted

that permitting the use and disclosure of their protected health information without their consent, or without an opportunity to "opt out" of having their information used or disclosed, abridged individuals' right to decide who should be permitted access to their medical records. In addition, one commenter argued that although the research community has been sharply critical of a Minnesota law that limits access to health records (Minnesota Statute Section 144.335 (1998)), researchers have cited a lack of response to mailed consent forms as the primary factor behind a decrease in the percentage of medical records available for research. This commenter argued that an opt-out provision would not be subject to this "nonresponder" problem.

Response: We believe that a meaningful right to "opt out" of a research study requires that individuals be contacted and informed about the study for which protected health information about themselves is being requested by a researcher. We concluded, therefore, that an "opt out" provision of this nature may suffer from ***82695** the same decliner bias that has been experienced by researchers who are subject to laws that require patient consent for medical records research. Furthermore, evidence on the effect of a mandatory "opt out" provision for medical records research is only fragmentary at this time, but at least one study has preliminarily suggested that those who refuse to consent for research access to their medical records may differ in statistically significant ways from those who consent with respect to variables such as age and disease category (SJ Jacobsen et al. "Potential Effect of Authorization Bias on Medical Records Research." Mayo Clin Proc 74: (1999) 330-338). For these reasons, we disagree with the commenters who recommended that an "opt out" provision be included in the final rule. In the final rule, we do require covered entities to include research disclosures in their notice of information practices. Therefore, individuals who do not wish for protected health information about themselves to be disclosed for research purposes without their authorization could select a health care provider or health plan on this basis. In addition, the final rule also permits covered health care providers or health plans to agree not to disclose protected health information for research purposes, even if research disclosures would otherwise be permitted under their notice of information practices. Such an agreement between a covered health care provider or health plan and an individual would not be enforceable under the final rule, but might be enforceable under applicable state law.

Comment: Some commenters explicitly recommended that there should be no provision permitting individuals to opt out of having their information used for research purposes.

Response: We agree with these commenters for the reasons discussed above.

IRB and Privacy Board Review

Comments: The NPRM imposed no requirements for the location or sponsorship of the IRB or privacy board. One commenter supported the proposed approach to permit covered entities to rely on documentation of a waiver by a IRB or privacy board that was convened by the covered entity, the researcher, or another entity.

In contrast, a few commenters recommended that the NPRM require that the IRB or privacy board be outside of the entity conducting the research, although the rationale for these recommendations was not provided. Several industry and consumer groups alternatively recommended that the regulation require that privacy boards be based at the covered entity. These comments argued that "if the privacy board is to be based at the entity receiving data, and that entity is not a covered entity, there will be little ability to enforce the regulation or study the effectiveness of the standards."

Response: We agree with the comment supporting the proposed rule's provision to impose no requirements for the location or sponsorship of the IRB or privacy board that was convened to review a research proposal for the alteration or waiver of authorization criteria. In the absence of a rationale, we were not persuaded by the comments asserting that the IRB or privacy board should be convened outside of the covered entity. In addition, while we agree with the comments that asserted HHS would have a greater ability to enforce the rule if a privacy board was established at the covered entity rather than an uncovered entity, we concluded that the additional burden that such a requirement would place on covered entities was unwarranted. Furthermore, under the Common Rule and FDA's protection of human subjects regulations, IRB review often occurs at the site of the recipient researchers' institution, and it was not our intent to change this practice. Therefore, in the final rule, we continue to impose no requirements for the location or sponsorship of the IRB or privacy board.

Privacy Board Membership

Comment: Some commenters were concerned that the proposed composition of the privacy board did not adequately address potential conflicts of interest of the board members, particularly since the proposed rule would have permitted the board's "unaffiliated" member to be affiliated with the entity disclosing the protected health information for research purposes. To address this concern, some commenters recommended that the required composition of privacy boards be modified to require "* * * at least one member who is not affiliated with the entity receiving or disclosing protected health information." These commenters believed that this addition would be more sound and more consistent with the Common Rule's requirements for the composition of IRBs. Furthermore, it was argued that this requirement would prohibit covered entities from creating a privacy board comprised entirely of its own employees.

Response: We agree with these comments. In the final rule we have revised the proposed membership for privacy board to reduce potential conflict of interest among board members. The final rule requires that documentation of alteration or waiver from a privacy board, is only valid under § 164.512(i) if the privacy board includes at least one member who is not affiliated with the covered entity, not affiliated with any entity conducting or sponsoring the research, and not related to a person who is affiliated with such entities.

Comment: One commenter recommended that privacy boards be required to include more than one unaffiliated member to address concerns about conflict of interest among members.

Response: We disagree that privacy boards should be required to include more than one unaffiliated member. We believe that the revised membership criterion for the unaffiliated member of the privacy board, and the criterion that requires that the board have no member participating in a review of any project in which the member has a conflict of interest, are sufficient to ensure that no member of the board has a conflict of interest in a research proposal under their review.

Comment: Many commenters also recommended that the membership of privacy boards be required to be more similar to that of IRBs. These commenters were concerned that privacy boards, as described in the proposed rule, would not have the needed expertise to adequately review and oversee research involving the use of protected health information. A few of these commenters also recommended that IRBs be required to have at least one member trained in privacy or security matters.

Response: We disagree with the comments asserting that the membership of privacy boards should be required be more similar to IRBs. Unlike IRBs, privacy boards only have responsibility for reviewing research proposals that involve the use or disclosure of protected health information without authorization. We agree, however, that the proposed rule may not have ensured that the privacy board had the necessary expertise to protect adequately individuals' privacy rights and interests. Therefore, in the final rule, we have modified one of the membership criteria for privacy board to require that the board has members with varying backgrounds and appropriate professional competency as necessary to review the effect of the research protocol on the individual's privacy rights and related interests.

Comment: Two commenters recommended that IRBs and privacy ***82696** boards be required to include patient advocates.

Response: The Secretary's legal authority under HIPAA does not permit HHS to modify the membership of IRBs. Moreover, we disagree with the comments recommending that IRBs and privacy board should be required to include patient advocates. We were not persuaded that patient advocates are the only persons with the needed expertise to protect patients' privacy rights and interests. Therefore, in the final rule, we do not require that patient advocates be included as members of a privacy board. However, under the final rule, IRBs and privacy board members could include patient advocates provided they met the required membership criteria in § 164.512(i).

Comment: A few commenters requested clarification of the term "conflict of interest" as it pertained to the proposed rule's criteria for IRB and privacy board membership. In particular, some commenters recommended that the final rule clarify what

degree of involvement in a research project by a privacy board member would constitute a conflict, thereby precluding that individual's participation in a review. One commenter specifically requested clarification about whether employment by the covered entity constituted a conflict of interest, particularly if the covered entity is receiving a financial gain from the conduct of the research.

Response: We understand that determining what constitutes conflict of interest can be complex. We do not believe that employees of covered entities or employees of the research institution requesting protected health information for research purposes are necessarily conflicted, even if those employees may benefit financially from the research. However, there are many factors that should be considered in assessing whether a member of an IRB has a conflict of interest, including financial and intellectual conflicts.

As part of a separate, but related effort to the final rule, during the summer of 2000, HHS held a conference on human subject protection and financial conflicts of interest. In addition, HHS solicited comments from the public about financial conflicts of interest associated with human subjects research for researchers, IRB members and staff, and research sponsors. The findings from the conference and the public comments received are forming the basis for guidance that HHS is now developing on financial conflicts of interest.

Privacy Training for IRB and Privacy Boards

Comment: A few commenters expressed support for training IRB members and chairs about privacy issues, recommending that such training either be required or that it be encouraged in the final rule.

Response: We agree with these comments and thus encourage institutions that administer IRBs and privacy boards to ensure that the members of these boards are adequately trained to protect the privacy rights and welfare of individuals about whom protected health information is used for research purposes. In the final rule, we require that privacy board members have varying backgrounds and appropriate professional competency as necessary to review the effect of the research protocol on the individual's privacy rights and related interests. We believe that this criterion for privacy board membership requires that members already have the necessary knowledge or that they be trained to address privacy issues that arise in the conduct of research that involves the use of protected health information. In addition, we note that the Common Rule (§__.107(a)) already imposes a general requirement that IRB members posses adequate training and experience to adequately evaluate the research which it reviews. IRBs are also authorized to obtain the services of consultants (§__.107(f)) to provide expertise not available on the IRB. We believe that these existing requirements in the Common Rule already require that an IRB have the necessary privacy expertise.

Waiver Criteria

Comment: A large number of comments supported the proposed rule's criteria for the waiver of authorization by an IRB or privacy board.

Response: While we agree that several of the waiver criteria should be retained in the final rule, we have made changes to the waiver criteria to address some of the comments we received on specific criteria. These reason for these changes are discussed in the response to comments below.

Comment: In addition to the proposed waiver criteria, several commenters recommended that the final rule also instruct IRBs and privacy boards to consider the type of protected health information and the sensitivity of the information to be disclosed in determining whether to grant a waiver, in whole or in part, of the authorization requirements.

Response: We agree with these comments, but believe that the requirement to consider the type and sensitivity of protected health information was already encompassed by the proposed waiver criteria. We encourage and expect that IRBs and privacy

boards will take into consideration the type and sensitivity of protected health information, as appropriate, in considering the waiver criteria included in the final rule.

Comment: Many commenters were concerned that the criteria were not appropriate in the context of privacy risks and recommended that the waiver criteria be rewritten to more precisely focus on the protection of patient privacy. In addition, some commenters argued that the proposed waiver criteria were redundant with the Common Rule and were confusing because they mix elements of the Common Rule's waiver criteria—some of which they argued were relevant only to interventional research. In particular, a number of commenters raised these concerns about proposed criterion (ii). Some of these commenters suggested that the word “privacy” be inserted before “rights.”

Response: We agree with these comments. To focus all of the criterion on individuals' privacy interests, in the final rule, we have modified one of the proposed waiver criteria, eliminated one proposed criterion, and added an additional criterion : (1) the proposed criterion which stated, “the waiver will not adversely affect the rights and welfare of the subjects,” has been revised in the final rule as follows: “the alteration or waiver will not adversely affect the privacy rights and the welfare of the individuals;” (2) the proposed criterion which stated, “whenever appropriate, the subjects will be provided with additional pertinent information after participation,” has been eliminated; and (3) a criterion has been added in the final rule which states, “there are adequate written assurances that the protected health information will not be re-used or disclosed to any other person or entity, except as required by law, for authorized oversight of the research project, or for other research for which the use or disclosure of protected health information would be permitted by this subpart.” In addressing these criteria, we expect that IRBs and privacy boards will not only consider the immediate privacy interests of the individual that would arise from the proposed research study, but also the possible implications from a loss of privacy, such as the loss of employment, loss or change in cost of health insurance, and social stigma. ***82697**

Comment: A number of commenters were concerned about the interaction between the proposed rule and the Common Rule. One commenter opposed the four proposed waiver criteria which differed from the Common Rule's criteria for the waiver of informed consent (§__.116(d)) on the grounds that the four criteria proposed in addition to the Common Rule's waiver criteria would apply only to the research use and disclosure of protected health information by covered entities. This commenter argued that this would lead to different standards for the protection of other kinds of individually identifiable health information used in research that will fall outside of the scope of the final rule. This commenter concluded that this inconsistency would be difficult for IRBs to administer, difficult for IRB members to distinguish, and would be ethically questionable. For these reasons, many commenters recommended that the final rule should permit the waiver criteria of the Common Rule, to be used in lieu of the waiver criteria identified in the proposed rule.

Response: We disagree with the comments recommending that the waiver criteria of the Common Rule should be permitted to be used in lieu of the waiver criteria identified in the proposed rule. The Common Rule's waiver criteria were designed to protect research subjects from all harms associated with research, not specifically to protect individuals' privacy interests. We understand that the waiver criteria in the final rule may initially cause confusion for IRBs and researchers that must attend to both the final rule and the Common Rule, but we believe that the additional waiver criteria adopted in the final rule are essential to ensure that individuals' privacy rights and welfare are adequately safeguarded when protected health information about themselves is used for research without their authorization. We agree that ensuring that the privacy rights and welfare of all human subjects—involved in all forms of research—is ethically required, and the new Office of Human Research Protection will immediately initiate plans to review the confidentiality provisions of the Common Rule.

In addition, at the request of the President, the National Bioethics Advisory Commission has begun an examination of the current federal human system for the protection of human subjects in research. The current scope of the federal regulatory protections for protecting human subjects in research is just one of the issues that will be addressed in the by the Commission's report, and the Department looks forward to receiving the Commission's recommendations.

Concerns About Specific Waiver Criteria

Comment: One commenter argued that the term "welfare" was vague and recommended that it be deleted from the proposed waiver of authorization criterion which stated, "the waiver will not adversely affect the rights and welfare of the subjects."

Response: We disagree with the comment recommending that the final rule eliminate the term "welfare" from this waiver criterion. As discussed in the National Bioethics Advisory Commission's 1999 report entitled, "Research Involving Human Biological Materials: Ethical Issues and Policy Guidance," "Failure to obtain consent may adversely affect the rights and welfare of subjects in two basic ways. First, the subject may be improperly denied the opportunity to choose whether to assume the risks that the research presents, and second, the subject may be harmed or wronged as a result of his or her involvement in research to which he or she has not consented * * *. Subjects' interest in controlling information about themselves is tied to their interest in, for example, not being stigmatized and not being discriminated against in employment and insurance." Although this statement by the Commission was made in the context of research involving human biological materials, we believe research that involves the use of protected health information similarly requires that social and psychological harms be considered when assessing whether an alteration or waiver will adversely affect the privacy rights and welfare of individuals. We believe it would be insufficient to attend only to individuals' privacy "rights" since some of the harms that could result from a breach of privacy, such as stigmatization, and discrimination in employment or insurance, may not be tied directly to an individuals' "rights," but would have a significant impact on their welfare. Therefore, in the final rule, we have retained the term "welfare" in this criterion for the alteration or waiver of authorization but modified the criterion as follows to focus more specifically on privacy concerns and to clarify that it pertains to alterations of authorization: "the alteration or waiver will not adversely affect the privacy rights and the welfare of the individual."

Comment: A few commenters recommended that the proposed waiver criteria that stated, "the research could not practicably be conducted without the waiver," be modified to eliminate the term "practicably." These commenters believed that determining "practicably" was subjective and that its elimination would facilitate IRBs' and privacy boards' implementation of this criterion. In addition, one commenter was concerned that this term could be construed to require authorization if enough weight is given to a privacy interest, and little weight is given to cost or administrative burden. This commenter recommended that the criterion be changed to allow a waiver if the "disclosure is necessary to accomplish the research or statistical purpose for which the disclosure is to be made."

Response: We disagree with the comments recommending that the term "practicability" be deleted from this waiver criterion. We believe that an assessment of practicability is necessary to account for research that may be possible to conduct with authorization but that would be impracticable if authorization were required. For example, in research study that involves thousands of records, it may be possible to track down all potential subjects, but doing so may entail costs that would make the research impracticable. In addition, IRBs have experience implementing this criterion since it is nearly identical to a waiver criterion in the Common Rule (§__.116(d)(3)).

We also disagree with the recommendation to change the criterion to state, "disclosure is necessary to accomplish the research or statistical purpose for which the disclosure is to be made." We believe it is essential that consideration be given as to whether it would be practicable for research to be conducted with authorization in determining whether a waiver of authorization is justified. If the research could practicably be conducted with authorization, then authorization must be sought. Authorization must not be waived simply for convenience.

Therefore, in the final rule, we have retained this criterion and clarified that it also applies to alterations of authorization. This waiver criterion in the final rule states, "the research could not practicably be conducted without the alteration or waiver."

Comment: Some commenters argued that the criterion which stated, "whenever appropriate, the subjects will be provided with additional pertinent information after participation," should be deleted. Some comments recommended that the criterion should be deleted for privacy reasons, arguing that it would be inappropriate to create a reason for the researcher to contact the individual ***82698** whose data were analyzed, without IRB review of the proposed contact as a patient intervention. Other commenters argued for the deletion of the criterion on grounds that requiring researchers to contact patients whose records were used for

archival research would be unduly burdensome, while adding little to the patient's base of information. Several commenters also argued that the criterion was not pertinent to non-interventional retrospective research requiring access to archived protected health information.

In addition, one commenter asserted that this criterion was inconsistent with the Secretary's rationale for prohibiting disclosures of "research information unrelated to treatment" for purposes other than research. This commenter argued that the privacy regulations should not mandate that a covered entity provide information with unknown validity or utility directly to patients. This commenter recommended that a patient's physician, not the researcher, should be the one to contact a patient to discuss the significance of new research findings for that individual patient's care.

Response: Although we disagree with the arguments made by commenters recommending that this criterion be eliminated in the final rule, we concluded that the criterion was not directly related to ensuring the privacy rights and welfare of individuals. Therefore, we eliminated this criterion in the final rule.

Comment: A few commenters recommended that the criterion, which required that "the research would be impracticable to conduct without access to and use of the protected health information," be deleted because it would be too subjective to be meaningful.

Response: We disagree with comments asserting that this proposed criterion would be too subjective. We believe that researchers should be required to demonstrate to an IRB or privacy board why protected health information is necessary for their research proposal. If a researcher could practicably use de-identified health information for a research study, protected health information should not be used or disclosed for the study without individuals' authorization. Therefore, we retain this criterion in the final rule. In considering this criterion, we expect IRBs and privacy boards to consider the amount of information that is needed for the study. To ensure the covered health care provider or health plan is informed of what information the IRB or privacy board has determined may be used or disclosed without authorization, the final rule also requires that the documentation of IRB or privacy board approval of the alteration or waiver describe the protected health information for which use or access has been determined to be necessary.

Comment: A large number of comments objected to the proposed waiver criterion, which stated that, "the research is of sufficient importance so as to outweigh the intrusion of the privacy of the individual whose information is subject to the disclosure." The majority of these commenters argued that the criterion was overly subjective, and that due to its subjectivity, IRBs and privacy boards would inevitably apply it inconsistently. Several commenters asserted that this criterion was unsound in that it would impose on reviewing bodies the explicit requirement to form and debate conflicting value judgments about the relative weights of the research proposal versus an individual's right to privacy. Furthermore these commenters argued that this criterion was also unnecessary because the Common Rule already has a requirement that deals with this issue more appropriately. In addition, one commenter argued that the rule eliminate this criterion because common purposes should not override individual rights in a democratic society. Based on these arguments, these commenters recommended that this criterion be deleted.

Response: We disagree that it is inappropriate to ask IRBs and privacy boards to ensure that there is a just balance between the expected benefits and risks to individual participants from the research. As noted by several commenters, IRBs currently conduct such a balancing of risks and benefits because the Common Rule contains a similar criterion for the approval of human subjects research (§__.111(a)(2)). However, we disagree with the comments asserting that the proposed criterion was unnecessary because the Common Rule already contains a similar criterion. The Common Rule does not explicitly address the privacy interests of research participants and does not apply to all research that involves the use or disclosure of protected health information. However, we agree that the relevant Common Rule criterion for the approval of human subjects research provides better guidance to IRBs and privacy boards for assessing the privacy risks and benefits of a research proposal. Therefore, in the final rule, we modeled the criterion on the relevant Common Rule requirement for the approval of human subjects research, and revised the proposed criterion to state: "the privacy risks to individuals whose protected health information is to be used or

disclosed are reasonable in relation to the anticipated benefits if any to the individuals, and the importance of the knowledge that may reasonably be expected to result from the research."

Comment: One commenter asserted that as long as the research organization has adequate privacy protections in place to keep the information from being further disclosed, it is unnecessary for the IRB or privacy board to make a judgment on whether the value of the research outweighs the privacy intrusion.

Response: The Department disagrees with the assertion that adequate safeguards of protected health information are sufficient to ensure that the privacy rights and welfare of individuals are adequately protected. We believe it is imperative that there be an assessment of the privacy risks and anticipated benefits of a research study that proposes to use protected health information without authorization. For example, if a research study was so scientifically flawed that it would provide no useful knowledge, any risk to patient privacy that might result from the use or disclosure of protected health information without individuals' authorization would be too great.

Comment: A few commenters asserted that the proposed criterion requiring "an adequate plan to destroy the identifiers at the earliest opportunity consistent with the conduct of the research, unless there is a health or research justification for retaining identifiers," conflicted with the regulations of the FDA on clinical record keeping (21 CFR 812.140(d)) and the International Standard Organization on control of quality records (ISO 13483, 4.16), which require that relevant data be kept for the life of a device.

In addition, one commenter asserted that this criterion could prevent follow up care. Similarly, other commenters argued that the new waiver criteria would be likely to confuse IRBs and may impair researchers' ability to go back to IRBs to request extensions of time for which samples or data can be stored if researchers are unable to anticipate future uses of the data.

Response: We do not agree with the comment that there is a conflict between either the FDA or the ISO regulations and the proposed waiver criteria in the rule. We believe that compliance with such recordkeeping requirements would be "consistent with the conduct of research" which is subject to such requirements. Nonetheless, to avoid any confusion, in the final rule we have added the phrase "or such retention is ***82699** otherwise required by law" to this waiver criterion.

We also disagree with the comments that this criterion would prevent follow up care to individuals or unduly impair researchers from retaining identifiers on data for future research. We believe that patient care would qualify as a "health * * * justification for retaining identifiers." In addition, we understand that researchers may not always be able to anticipate that the protected health information they receive from a covered health care provider or health plan for one research project may be useful for the conduct of future research studies. However, we believe that the concomitant risk to patient privacy of permitting researchers to retain identifiers they obtained without authorization would undermine patient trust, unless researchers could identify a health or research justification for retaining the identifiers. In the final rule, an IRB or privacy board is not required to establish a time limit on a researcher's retention of identifiers.

Additional Waiver Criteria

Comment: A few comments recommended that there be a additional waiver criterion to safeguard or limit subsequent use or disclosure of protected health information by the researcher.

Response: We agree with these comments. In the final rule, we include a waiver criterion requiring "there are adequate written assurances that the protected health information will not be re-used or disclosed to any other person or entity, except as required by law, for authorized oversight of the research project, or for other research for which the use or disclosure of protected health information would be permitted by this subpart."

Waiving Authorization, in Whole or in Part

Comment: A few commenters requested that the final rule clarify what "in whole or in part" means if authorization is waived or altered.

Response: In the proposed rule, it was HHS' intent to permit IRBs and privacy boards to either waive all of the elements for authorization, or alternatively, waive only some of the elements of authorization. Furthermore, we also intended to permit IRBs and privacy boards to alter the authorization requirements. Therefore, in the final rule, we clarify that the alteration to and waiver of authorization, in whole or in part, are permitted as stipulated in § 164.512(i).

Expedited Review

Comment: One commenter asserted that the proposed rule would prohibit expedited review as permitted under the Common Rule. Many commenters supported the proposal in the rule to incorporate the Common Rule's provision for expedited review, and strongly recommended that this provision be retained in the final rule. Several of these commenters argued that the expedited review mechanism provides IRBs with the much-needed flexibility to focus volunteer-IRB members' limited resources.

Response: We agree that expedited review should be available, and included a provision permitting expedited review under specified conditions. We understand that the National Bioethics Advisory Commission is currently developing a report on the federal oversight of human subjects research, which is expected to address the Common Rule's requirements for expedited review. HHS looks forward to receiving the National Bioethics Advisory Commission's report, and will modify the provisions for expedited review in the privacy rule if changes are warranted by the Commission's findings and recommendations.

Required Signature

Comment: A few commenters asserted that the proposed requirement that the written documentation of IRB or privacy board approval be signed by the chair of the IRB or the privacy board was too restrictive. Some commenters recommended that the final rule permit the documentation of IRB or privacy board approval to be signed by persons other than the IRB or privacy board chair, including: (1) Any person authorized to exercise executive authority under IRB's or privacy board's written procedures; (2) the IRB's or privacy board's acting chair or vice chair in the absence of the chair, if permitted by IRB procedures; and (3) the covered entity's privacy official.

Response: We agree with the commenters who argued that the final rule should permit the documentation of IRB or privacy board approval to be signed by someone other than the chair of the board. In the final rule, we permit the documentation of alteration or waiver of authorization to be signed by the chair or other member, as designated by the chair of the IRB or privacy board, as applicable.

Research Use and Disclosure With Authorization

Comment: Some commenters, including several industry and consumer groups, argued that the proposed rule would establish a two-tiered system for public and private research. Privately funded research conducted with an authorization for the use or disclosure of protected health information would not require IRB or privacy board review, while publically funded research conducted with authorization would require IRB review as required by the Common Rule. Many of these commenters argued that authorization is insufficient to protect patients involved in research studies and recommended that IRB or privacy board review should be required for all research regardless of sponsor. These commenters asserted that it is not sufficient to obtain authorization, and that IRBs and privacy boards should review the authorization document, and assess the risks and benefits to individuals posed by the research.

Response: For the reasons we rejected the recommendation that we eliminate the option for privacy board review and require IRB review for the waiver of authorization, we also decided against requiring documentation of IRB or privacy board approval for research conducted with authorization. HHS strongly agrees that IRB review is essential for the adequate protection of human subjects involved in research, regardless of whether informed consent and/or individuals' authorization is obtained.

In fact, IRB review may be even more important for research conducted with subjects' informed consent and authorization since such research may present greater than minimal risk to participants. However, HHS' authority under HIPAA is limited to safeguarding the privacy of protected health information, and does not extend to protecting human subjects more broadly. Therefore, in the final rule we have not required documentation of IRB or privacy board review for the research use or disclosure of protected health information conducted with individuals' authorization. As mentioned above, HHS looks forward to receiving the recommendations of the National Bioethics Advisory Commission, which is currently examining the current scope of federal regulatory protections for protecting human subjects in research as part of its overarching report on the federal oversight of human subjects protections.

Comment: Due to concern about several of the elements of authorization, many commenters recommended that the final rule stipulate that "informed consent" obtained pursuant to the Common Rule be deemed to meet the requirements for "authorization." These commenters argued that the NPRM's ***82700** additional authorization requirements offered no additional protection to research participants but would be a substantive impediment to research.

Response: We disagree with the comments asserting that the proposed requirements for authorization for the use or disclosure of protected health information would have offered research subjects no additional privacy protection. Because the purposes of authorization and informed consent differ, the proposed rule's requirements for authorization pursuant to a request from a researcher (§ 164.508) and the Common Rule's requirements for informed consent (Common Rule, §__.116) contain important differences. For example, unlike the Common Rule, the proposed rule would have required that the authorization include a description of the information to be used or disclosed that identifies the information in a specific and meaningful way, an expiration date, and where, use of disclosure of the requested information will result in financial gain to the entity, a statement that such gain will result. We believe that the authorization requirements provide individuals with information necessary to determine whether to authorize a specific use or disclosure of protected health information about themselves, that are not required by the Common Rule.

Therefore, in the final rule, we retain the requirement for authorization for all uses and disclosures of protected health information not otherwise permitted without authorization by the rule. Some of the proposed requirements for authorization were modified in the final rule as discussed in the preamble on § 164.508. The comments received on specific proposed elements of authorization as they would have pertained to research are addressed below.

Comment: A number of commenters, including several from industry and consumer groups, recommended that the final rule require patients' informed consent as stipulated in the Common Rule. These commenters asserted that the proposed authorization document was inadequate for research uses and disclosures of protected health information since it included fewer elements than required for informed consent under the Common Rule, including for example, the Common Rule's requirement that the informed consent document include: (1) A description of any reasonably foreseeable risks or discomforts to the subject; (2) a description of any benefits to the subject or to others which may reasonably be expected from the research (Common Rule, §__.116(a)).

Response: While we agree that the ethical conduct of research requires the voluntary informed consent of research subjects, as stipulated in the Common Rule, as we have stated elsewhere, the privacy rule is limited to protecting the confidentiality of individually identifiable health information, and not protecting human subjects more broadly. Therefore, we believe it would not be within the scope of the final rule to require informed consent as stipulated by the Common Rule for research uses and disclosures of protected health information.

Comment: Several commenters specifically objected to the authorization requirement for a "expiration date." To remedy this concern, many of these commenters proposed that the rule exempt research from the requirement for an expiration date if an IRB has reviewed and approved the research study. In particular, some commenters asserted that the requirement for an expiration date would be impracticable in the context of clinical trials, where the duration of the study depends on several different factors that cannot be predicted in advance. These commenters argued that determining an exact date would be impossible

due to the legal requirements that manufactures and the Food and Drug Administration be able to retrospectively audit the source documents when patient data are used in clinical trials. In addition, some commenters asserted that a requirement for an expiration date would force researchers to designate specific expiration dates so far into the future as to render them meaningless.

Response: We agree with commenters that an expiration date is not always possible or meaningful. In the final rule, we continue to require an identifiable expiration, but permit it to be a specific date or an event directly relevant to the individual or the purpose of the authorization (e.g., for the duration of a specific research study) in which the individual is a participant.

Comment: A number of commenters, including those from the pharmaceutical industry, were concerned about the authorization requirement that gave patients the right to revoke consent for participation in clinical research. These commenters argued that such a right to revoke authorization for the use of their protected health information would require complete elimination of the information from the record. Some stated that in the conduct of clinical trials, the retrieval of individually identifiable health information that has already been blinded and anonymized, is not only burdensome, but should this become a widespread practice, would render the trial invalid. One commenter suggested that the Secretary modify the proposed regulation to allow IRBs or privacy boards to determine the duration of authorizations and the circumstances under which a research participant should be permitted to retroactively revoke his or her authorization to use data already collected by the researcher.

Response: We agree with these concerns. In the final rule we have clarified that an individual cannot revoke an authorization to the extent that action has been taken in reliance on the authorization. Therefore, if a covered entity has already used or disclosed protected health information for a research study pursuant to an authorization obtained as required by § 164.508, the covered entity is not required under the rule, unless it agreed otherwise, to destroy protected health information that was collected, nor retrieve protected health information that was disclosed under such an authorization. However, once an individual has revoked an authorization, no additional protected health information may be used or disclosed unless otherwise permitted by this rule.

Comment: Some commenters were concerned that the authorization requirement to disclose "financial gain" would be problematic as it would pertain to research. These commenters asserted that this requirement could mislead patients and would make it more difficult to attract volunteers to participate in research. One commenter recommended that the statement be revised to state "that the clinical investigator will be compensated for the value of his/her services in administrating this clinical trial." Another commenter recommended that the authorization requirement for disclosure of financial gain be defined in accordance with FDA's financial disclosure rules.

Response: We strongly believe that a requirement for the disclosure of financial gain is imperative to ensure that individuals are informed about how and why protected health information about themselves will be used or disclosed. We agree, however, that the language of the proposed requirement could cause confusion, because most activities involve some type of financial gain. Therefore, in the final rule, we have modified the language to provide that when the covered entity initiates ***82701** the authorization and the covered entity will receive direct or indirect remuneration (rather than financial gain) from a third party in exchange for using or disclosing the health information, the authorization must include a statement that such remuneration will result.

Comment: A few commenters asserted that the requirement to include a statement in which the patient acknowledged that information used or disclosed to any entity other than a health plan or health care provider may no longer be protected by federal privacy law would be inconsistent with existing protections implemented by IRBs under the Common Rule. In particular they stated that this inconsistency exists because IRBs are required to consider the protections in place to protect patients' confidential information and that IRBs are charged with ensuring that researchers comply with the confidentiality provisions of the informed consent document.

Response: We disagree that this proposed requirement would pose a conflict with the Common Rule since the requirement was for a statement that the "information may no longer be protected by the federal privacy law." This statement does not pertain to the protections provided under the Common Rule. In addition, while we anticipate that IRBs and privacy boards will most often

waive all or none of the authorization requirements, we clarify an IRB or privacy board could alter this requirement, among others, if the documentation requirements of § 164.512(i) have been met.

Reviews Preparatory to Research

Comment: Some industry groups expressed concern that the research provision would prohibit physicians from using patient information to recruit subjects into clinical trials. These commenters recommended that researchers continue to have access to hospitals' and clinics' patient information in order to recruit patients for studies.

Response: Under the proposed rule, even if the researcher only viewed the medical record at the site of the covered entity and did not record the protected health information in a manner that patients could be identified, such an activity would have constituted a use or disclosure that would have been subject to proposed § 164.508 or proposed § 164.510. Based on the comments received and the fact finding we conducted with the research community, we concluded that documentation of IRB or privacy board approval could halt the development of research hypotheses that require access to protected health information before a formal protocol can be developed and brought to an IRB or privacy board for approval. To avoid this unintended result, the final rule permits covered health care providers and health plans to use or disclose protected health information for research if the covered entity obtains from the researcher representations that: (1) Use or disclosure is sought solely to review protected health information as necessary to prepare a research protocol or for similar purposes preparatory to research; (2) no protected health information is to be removed from the covered entity by the researcher in the course of the review; and (3) the protected health information for which use or access is sought is necessary for the research purposes.

Comment: A few commenters asserted that the final rule should eliminate the possibility that research requiring access to protected health information could be determined to be "exempt" from IRB review, as provided by the Common Rule (§__.101(b)(4)).

Response: The rule did not propose nor intend to modify any aspect of the Common Rule, including the provision that exempts from coverage, "research involving the collection or study of existing data, documents, records, pathological specimens, or diagnostic specimens, if these sources are publically available, or if the information is recorded by the investigator in such a manner that subjects cannot be identified, directly or indirectly through identifiers linked to the subjects' (§__.101(b)(4)). For the reasons discussed above, we have included a provision in the final rule for reviews preparatory to research that was modeled on this exemption to the Common Rule.

Deceased Persons Exception for Research

Comment: A few commenters expressed support for the proposal to allow use and disclosure of protected health information about decedents for research purposes without the protections afforded to the protected health information of living individuals. One commenter, for example, explained that it extensively uses such information in its research, and any restrictions were likely to impede its efforts. Alternately, a number of commenters provided arguments for eliminating the research exception for deceased persons. They commented that the same concerns regarding use and disclosure of genetic and hereditary information for other purposes apply in the research context. They believed that in many cases the risk of identification was greater in the research context because researchers may attempt to identify genetic and hereditary conditions of the deceased. Finally, they argued that while information of the deceased does not necessarily identify living relatives by name, living relatives could be identified and suffer the same harm as if their own medical records were used or disclosed for research purposes. Another commenter stated that the exception was unnecessary, and that existing research could and should proceed under the requirements in proposed § 164.510 that dictated the IRB/privacy board approval process or be conducted using de-identified information. This commenter further stated that in this way, at least there would be some degree of assurance that all reasonable steps are taken to protect deceased persons' and their families' confidentiality.

Response: Although we understand the concerns raised by commenters, we believe those concerns are outweighed by the need to keep the research-related policies in this rule as consistent as possible with standard research practice under the Common Rule,

which does not consider deceased persons to be "human subjects." Thus, we retain the exception in the final rule. With regard to the protected health information about a deceased individual, therefore, a covered entity is permitted to use or disclose such information for research purposes without obtaining authorization from a personal representative and absent approval by an IRB or privacy board as governed by § 164.512(i). We note that the National Bioethics Advisory Committee (NBAC) is currently considering revising the Common Rule's definition of "human subject" with regard to coverage of the deceased. However, at this time, NBAC's deliberations on this issue are not yet completed and any reliance on such discussions would be premature.

The final rule requires at § 164.512(i)(1)(iii) that covered entities obtain from the researcher (1) representation that the use or disclosure is sought solely for research on the protected health information of decedents; (2) documentation, at the request of the covered entity, of the death of such individuals; and (3) representation that the protected health information for which use or disclosure is sought is necessary for the research purposes. It is our intention with this change to reduce the burden and ambiguity on the part of the covered entity to determine whether or not the ***82702** request is for protected health information of a deceased individual.

Comment: Some commenters, in their support of the research exception, requested that HHS clarify in the final rule that protected health information obtained during the donation process of eyes and eye tissue could continue to be used or disclosed to or by eye banks for research purposes without an authorization and without IRB approval. They expressed concern over the impediments to this type of research these approvals would impose, such as added administrative burden and vulnerabilities to the time sensitive nature of the process.

Another commenter similarly expressed the position that, with regard to uses and disclosures of protected health information for tissue, fluid, or organ donation, the regulation should not present an obstacle to the transfer of donations unsuitable for transplant to the research community. However, they believed that consent can be obtained for such purposes since the donor or donor's family must generally consent to any transplant purposes, it would seem to be a minimal additional obligation to seek consent for research purposes at the same time, should the material be unsuitable for transplant.

Response: Protected health information about a deceased individual, including information related to eyes and eye tissue, can be used or disclosed further for research purposes by a covered entity in accordance with § 164.512(i)(1)(iii) without authorization or IRB or privacy board approval. This rule does not address whether organs unsuitable for transplant may be transferred to researchers with or without consent.

Modification of the Common Rule

Comment: We received a number of comments that interpreted the proposed rule as having unnecessarily and inappropriately amended the Common Rule. Assuming that the Common Rule was being modified, these comments argued that the rule was legally deficient under the Administrative Procedures Act, the Regulatory Flexibility Act, and other controlling Executive orders or laws.

In addition, one research organization expressed concern that, by involving IRBs in the process of approving a waiver of authorization for disclosure purposes and establishing new criteria for such waiver approvals, the proposed rule would have subjected covered entities whose IRBs failed to comply with the requirements for reviewing and approving research to potential sanctions under HIPAA. The comment recommended that the rule be changed to eliminate such a punitive result. Specifically, the comment recommended that the existing Common Rule structure be preserved for IRB-approved research, and that the waiver of authorization criteria for privacy purposes be kept separate from the other functions of the IRB.

Response: We disagree with the comments asserting the proposed rule attempted to change the Common Rule. It was not our intent to modify or amend the Common Rule or to regulate the activities of the IRBs with respect to the underlying research. We therefore reject the comments about legal deficiencies in the rule which are based on the mistaken perception that the Common Rule was being amended. The proposed rule established new requirements for covered entities before they could use or disclose protected health information for research without authorization. The proposed rule provided that one method by which a covered

entity could obtain the necessary documentation was to receive it from an IRB. We did not mandate IRBs to perform such reviews, and we expressly provided for means other than through IRBs for covered entities to obtain the required documentation.

In the final rule, we also have clarified our intent not to interfere with existing requirements for IRBs by amending the language in the waiver criteria to make clear that these criteria relate to the privacy interests of the individual and are separate from the criteria that would be applied by an IRB to any evaluation of the underlying research. Moreover, we have restructured the final rule to also make clear that we are regulating only the content and conditions of the documentation upon which a covered entity may rely in making a disclosure of protected health information for research purposes.

We cannot and do not purport to regulate IRBs or modify the Common Rule through this regulation. We cannot under this rule penalize an IRB for failure to comply with the Common Rule, nor can we sanction an IRB based on the documentation requirements in the rule. Health plans and covered health care providers may rely on documentation from an IRB or privacy board concerning the alteration or waiver of authorization for the disclosure of protected health information for research purposes, provided the documentation, on its face, meets the requirements in the rule. Health plans and covered health care providers will not be penalized for relying on facially adequate documentation from an IRB. Health plans and covered health providers will only be penalized for their own errors or omissions in following the requirements of the rule, and not those of the IRB.

Use Versus Disclosure

Comment: Many of the comments supported the proposed rule's provision that would have imposed the same requirements for both research uses and research disclosures of protected health information.

Response: We agree with these comments. In the final rule we retain identical use and disclosure requirements for research uses and disclosures of protected health information by covered entities.

Comment: In contrast, a few commenters recommended that there be fewer requirements on covered entities for internal research uses of protected health information.

Response: For the reasons discussed above in § 164.501 on the definition of “research,” we disagree that an individual's privacy interest is of less concern when covered entities use protected health information for research purposes than when covered entities disclose protected health information for research purposes. Therefore, in the final rule, the research-related requirements of § 164.512(i) apply to both uses and disclosures of protected health information for research purposes without authorization.

Additional Resources for IRBs

Comment: A few commenters recommended that HHS work to provide additional resources to IRBs to assist them in meeting their new responsibilities.

Response: This recommendation is beyond our statutory authority under HIPAA, and therefore, cannot be addressed by the final rule. However, we fully agree that steps should be taken to moderate the workload of IRBs and to ensure adequate resources for their activities. Through the Office for Human Research Protections, the Department is committed to working with institutions and IRBs to identify efficient ways to optimize utilization of resources, and is committed to developing guidelines for appropriate staffing and workload levels for IRBs.

Additional Suggested Requirements

Comment: One commenter recommended that the documentation of IRB or privacy board approval also be required to state that, “the health researcher has fully disclosed which of ***82703** the protected health information to be collected or created would

be linked to other protected health information, and that appropriate safeguards be employed to protect information against re-identification or subsequent unauthorized linkages."

Response: The proposed provision for the use or disclosure of protected health information for research purposes without authorization only pertained to individually identifiable health information. Therefore, since the information to be obtained would be individually identifiable, we concluded that it was illogical to require IRBs and privacy boards document that the researcher had "fully disclosed that * * * appropriate safeguards be employed to protect information against re-identification or subsequent unauthorized linkages." Therefore, we did not incorporate this recommendation into the final rule.

Section 164.512(j)—Uses and Disclosures To Avert a Serious Threat to Health or Safety

Comment: Several commenters generally stated support for proposed § 164.510(k), which was titled "Uses and Disclosures in Emergency Circumstances." One commenter said that "narrow exceptions to confidentiality should be permitted for emergency situations such as duty to warn, duty to protect, and urgent law enforcement needs." Another commented that the standard " * * * based on a reasonable belief that the disclosures are necessary to prevent or lessen a serious and imminent threat to the health or safety of an individual" would apply in only narrow treatment circumstances. Some commenters suggested that the provision be further narrowed, for example, with language specifically identifying "imminent threats" and a "chain-of-command clearance process," or by limiting permissible disclosures under this provision to "public health emergencies," or "national emergencies." Others proposed procedural requirements, such as specifying that such determinations may only be made by the patient's treating physician, a licensed mental health care professional, or as validated by three physicians. One commenter recommended stating that the rule is not intended to create a duty to warn or to disclose protected health information but rather permits such disclosure in emergency circumstances, consistent with other applicable legal or ethical standards.

Response: We agree with the commenters who noted that the proposed provision would apply in rare circumstances. We clarify, however, that we did not intend for the proposed provision to apply to emergency treatment scenarios as discussed below. In the final rule, to avoid confusion over the circumstances in which we intend this section to apply, we retitle it "Uses and Disclosures to Avert a Serious Threat to Health or Safety."

We do not believe it would be appropriate to narrow further the scope of permissible disclosures under this section to respond to specifically identified "imminent threats," a "public health emergency," or a "national emergency." We believe it would be impossible to enumerate all of the scenarios that may warrant disclosure of protected health information pursuant to this section. Such cases may involve a small number of people and may not necessarily involve a public health emergency or a national emergency.

Furthermore, in response to comments arguing that the proposed provision was too broad, we note that under both the NPRM and the final rule, we allow but do not require disclosures in situations involving serious and imminent threats to health or safety. Health plans and covered health care providers may make the disclosures allowed under § 164.512(j) consistent with applicable law and standards of ethical conduct.

As indicated in the preamble to the NPRM, the proposed approach is consistent with statutory and case law addressing this issue. The most well-known case on the topic is Tarasoff v. Regents of the University of California, 17 Cal. 3d 425 (1976), which established a duty to warn those at risk of harm when a therapist's patient made credible threats against the physical safety of a specific person. The Supreme Court of California found that the therapist involved in the case had an obligation to use reasonable care to protect the intended victim of his patient against danger, including warning the victim of the peril. Many states have adopted, in statute or through case law, versions of the Tarasoff duty to warn or protect. Although Tarasoff involved a psychiatrist, this provision is not limited to disclosures by psychiatrists or other mental health professionals. As stated in the preamble of the NPRM, we clarify that § 164.512(j) is not intended to create a duty to warn or disclose protected health information.

Comment: Several comments addressed the portion of proposed § 164.510(k) that would have provided a presumption of reasonable belief to covered entities that disclosed protected health information pursuant to this provision, when such disclosures were made in good faith, based on credible representation by a person with apparent knowledge or authority. Some commenters recommended that this standard be applied to all permissible disclosures without consent or to such disclosures to law enforcement officials.

Alternatively, a group representing health care provider management firms believed that the proposed presumption of reasonable belief would not have provided covered entities with sufficient protection from liability exposure associated with improper uses or disclosures. This commenter recommended that a general good-faith standard apply to covered entities' decisions to disclose protected health information to law enforcement officials. A health plan said that HHS should consider applying the standard of reasonable belief to all uses and disclosures that would have been allowed under proposed § 164.510. Another commenter questioned how the good-faith presumption would apply if the information came from a confidential informant or from a person rather than a doctor, law enforcement official, or government official. (The NPRM listed doctors, law enforcement officials, and other government officials as examples of persons who may make credible representations pursuant to this section.)

Response: As discussed above, this provision is intended to apply in rare circumstances—circumstances that occur much less frequently than those described in other parts of the rule. Due to the importance of averting serious and imminent threats to health and safety, we believe it is appropriate to apply a presumption of good faith to covered entities disclosing protected health information under this section. We believe that the extremely time-sensitive and urgent conditions surrounding the need to avert a serious and imminent threat to the health or safety are fundamentally different from those involved in disclosures that may be made pursuant to other sections of the rule. Therefore, we do not believe it would be appropriate to apply to other sections of the rule the presumption of good faith that applies in § 164.512(j). We clarify that we intend for the presumption of good faith to apply if the disclosure is made in good faith based upon a credible representation by any person with apparent knowledge or authority—not just by doctors, law enforcement or other government officials. Our listing of these persons in the NPRM was illustrative only, and it was not intended to limit the types of ***82704** persons who could make such a credible representation to a covered entity.

Comment: One commenter questioned under what circumstances proposed § 164.510(k) would apply instead of proposed § 164.510(f)(5), "Urgent Circumstances," which permitted covered entities to disclose protected health information to law enforcement officials about individuals who are or are suspected to be victims of a crime, abuse, or other harm, if the law enforcement official represents that the information is needed to determine whether a violation of law by a person other than the victim has occurred and immediate law enforcement activity that depends upon obtaining such information may be necessary.

Response: First, we note that inclusion of this provision as § 164.510(f)(5) was a drafting error which subsequently was clarified in technical corrections to the NPRM. In fact, proposed § 164.510(f)(3) addressed the identical circumstances, which in this subsection were titled "Information about a Victim of Crime or Abuse." The scenarios described under § 164.510(f)(3) may or may not involve serious and imminent threats to health or safety.

Second, as discussed in the main section of the preamble to § 164.512(j), we recognize that in some situations, more than one section of this rule potentially could apply with respect to a covered entity's potential disclosure of protected health information. We clarify that if a situation fits one section of the rule (e.g., § 164.512(j) on serious and imminent threats to health or safety), health plans and covered health care providers may disclose protected health information pursuant to that section, regardless of whether the disclosure also could be made pursuant to another section (e.g., §§ 164.512(f)(2) or 164.512(f)(3), regarding disclosure of protected health information about suspects or victims to law enforcement officials), except as otherwise stated in the rule.

Comment: A state health department indicated that the disclosures permitted under this section may be seen as conflicting with existing law in many states.

Response: As indicated in the regulation text for § 164.512(j), this section allows disclosure consistent with applicable law and standards of ethical conduct. We do not preempt any state law that would prohibit disclosure of protected health information in the circumstances to which this section applies. (See Part 160, Subpart B.)

Comment: Many commenters stated that the rule should require that any disclosures should not modify "duty to warn" case law or statutes.

Response: The rule does not affect case law or statutes regarding "duty to warn." In § 164.512(j), we specifically permit covered entities to disclose protected health information without authorization for the purpose of protecting individuals from imminent threats to health and safety, consistent with state laws and ethical obligations.

Section 164.512(k)—Uses and Disclosures for Specialized Government Functions

Military Purposes

Armed Forces Personnel and Veterans

Comment: A few comments opposed the proposed rule's provisions on the military, believing that they were too broad. Although acknowledging that the Armed Forces may have legitimate needs for access to protected health data, the commenters believed that the rule failed to provide adequate procedural protections to individuals. A few comments said that, except in limited circumstances or emergencies, covered entities should be required to obtain authorization before using or disclosing protected health information. A few comments also expressed concern over the proposed rule's lack of specific safeguards to protect the health information of victims of domestic violence and abuse. While the commenters said they understood why the military needed access to health information, they did not believe the rule would impede such access by providing safeguards for victims of domestic violence or abuse.

Response: We note that the military comprises a unique society and that members of the Armed Forces do not have the same freedoms as do civilians. The Supreme Court held in Goldman v. Weinberger, 475 US 503 (1986), that the military must be able to command its members to sacrifice a great many freedoms enjoyed by civilians and to endure certain limits on the freedoms they do enjoy. The Supreme Court also held in Parker v. Levy, 417 US 733 (1974), that the different character of the military community and its mission required a different application of Constitutional protections. What is permissible in the civilian world may be impermissible in the military. We also note that individuals entering military service are aware that they will not have, and enjoy, the same rights as others.

The proposed rule would have authorized covered entities to use and disclose protected health information about armed forces personnel only for activities considered necessary by appropriate military command authorities to assure the proper execution of the military mission. In order for the military mission to be achieved and maintained, military command authorities need protected health information to make determinations regarding individuals' medical fitness to perform assigned military duties.

The proposed rule required the Department of Defense (DoD) to publish a notice in the Federal Register identifying its intended uses and disclosures of protected health information, and we have retained this approach in the final rule. This notice will serve to limit command authorities' access to protected health information to circumstances in which disclosure of protected health information is necessary to assure proper execution of the military mission.

With respect to comments regarding the lack of procedural safeguards for individuals, including those who are victims of domestic violence and abuse, we note that the rule does not provide new authority for covered entities providing health care to individuals who are Armed Forces personnel to use and disclose protected health information. Rather, the rule allows the Armed Forces to use and disclose such information only for those military mission purposes which will be published separately in the Federal Register. In addition, we note that the Privacy Act of 1974, as implemented by the DoD, provides numerous protections to individuals.

We modify the proposal to publish privacy rules for the military in the Federal Register. The NPRM would have required this notice to include information on the activities for which use or disclosure of protected health information would occur in order to assure proper execution of the military mission. We believe that this proposed portion of the notice is redundant and thus unnecessary in light the rule's application to military services. In the final rule, we eliminate this proposed section of the notice, and we state that health plans and covered health care providers may use and disclose protected health information of Armed Forces personnel for activities considered necessary by appropriate military command authorities to assure the proper execution of a military mission, where the appropriate military authority has published a Federal Register notice identifying: (1) The appropriate military command authorities; and (2) the purposes for ***82705** which protected health information may be used or disclosed.

Comment: A few commenters, members of the affected beneficiary class, which numbers approximately 2.6 million (active duty and reserve military personnel), opposed proposed § 164.510(m) because it would have allowed a non-governmental covered entity to provide protected health information without authorization to the military. These commenters were concerned that military officials could use the information as the basis for taking action against individuals.

Response: The Secretary does not have the authority under HIPAA to regulate the military's re-use or re-disclosure of protected health information obtained from health plans and covered health care providers. This provision's primary intent is to ensure that proper military command authorities can obtain needed medical information held by covered entities so that they can make appropriate determinations regarding the individual's medical fitness or suitability for military service. Determination that an individual is not medically qualified for military service would lead to his or her discharge from or rejection for service in the military. Such actions are necessary in order for the Armed Forces to have medically qualified personnel, ready to perform assigned duties. Medically unqualified personnel not only jeopardize the possible success of a mission, but also pose an unacceptable risk or danger to others. We have allowed such uses and disclosures for military activities because it is in the Nation's interest.

Separation or Discharge from Military Service

Comment: The preamble to the NPRM solicited comments on the proposal to permit the DoD to transfer, without authorization, a service member's military medical record to the Department of Veterans Affairs (DVA) when the individual completed his or her term of military service. A few commenters opposed the proposal, believing that authorization should be obtained. Both the DoD and the DVA supported the proposal, noting that transfer allows the DVA to make timely determinations as to whether a veteran is eligible for benefits under programs administered by the DVA.

Response: We note that the transfer program was established based on recommendations by Congress, veterans groups, and veterans; that it has existed for many years; and that there has been no objection to, or problems associated with, the program. We also note that the Department of Transportation (DoT) and the Department of Veterans Affairs operate an analogous transfer program with respect to United States Coast Guard personnel, who comprise part of the U.S. Armed Forces. The protected health information involved the DoD/DVA transfer program is being disclosed and used for a limited purpose that directly benefits the individual. This information is covered by, and thus subject to the protections of, the Privacy Act. For these reasons, the final rule retains the DoD/DVA transfer program proposed in the NPRM. In addition, we expand the NPRM's proposed provisions regarding the Department of Veterans Affairs to include the DoT/DVA program, to authorize the continued transfer of these records.

Comment: The Department of Veterans Affairs supported the NPRM's proposal to allow it to use and disclose protected health information among components of the Department so that it could make determinations on whether an individual was entitled to benefits under laws administered by the Department. Some commenters said that the permissible disclosure pursuant to this section appeared to be sufficiently narrow in scope, to respond to an apparent need. Some commenters also said that the DVA's ability to make benefit determinations would be hampered if an individual declined to authorize release of his or her protected health information. A few commenters, however, questioned whether such an exchange of information currently occurs between

the components. A few commenters also believed the proposed rule should be expanded to permit sharing of information with other agencies that administer benefit programs.

Response: The final rule retains the NPRM's approach regarding use and disclosure of protected health information without authorization among components of the DVA for the purpose of making eligibility determinations based on commenters' assessment that the provision was narrow in scope and that an alternative approach could negatively affect benefit determinations for veterans. We modify the NPRM language slightly, to clarify that it refers to a health plan or covered health care provider that is a component of the DVA. These component entities may use or disclose protected health information without authorization among various components of the Department to determine eligibility for or entitlement to veterans' benefits. The final rule does not expand the scope of permissible disclosures under this provision to allow the DVA to share such information with other agencies. Other agencies may obtain this information only with authorization, subject to the requirements of § 164.508.

Foreign Military Personnel

Comments: A few comments opposed the exclusion of foreign diplomatic and military personnel from coverage under the rule. These commenters said that the mechanisms that would be necessary to identify these personnel for the purpose of exempting them from the rule's standards would create significant administrative difficulties. In addition, they believed that this provision would have prohibited covered entities from making disclosures allowed under the rule. Some commenters were concerned that implementation of the proposed provision would result in disparate treatment of foreign military and diplomatic personnel with regard to other laws, and that it would allow exploitation of these individuals' health information. These commenters believed that the proposed rule's exclusion of foreign military and diplomatic personnel was unnecessarily broad and that it should be narrowed to meet a perceived need. Finally, they noted that the proposed exclusion could be affected by the European Union's Data Protection Directive.

Response: We agree with the commenters' statement that the NPRM's exclusion of foreign military and diplomatic personnel from the rule's provisions was overly broad. Thus, the final rule's protections apply to these personnel. The rule covers foreign military personnel under the same provisions that apply to all other members of the U.S. Armed Forces, as described above. Foreign military authorities need access to protected health information for the same reason as must United States military authorities: to ensure that members of the armed services are medically qualified to perform their assigned duties. Under the final rule, foreign diplomatic personnel have the same protections as other individuals.

Intelligence Community

Comments: A few commenters opposed the NPRM's provisions regarding protected health information of intelligence community employees and their dependents being considered for postings overseas, on the grounds that the scope of permissible disclosure without authorization was too broad. While acknowledging that the intelligence community may have legitimate needs for its employees' protected health information, the commenters believed that the NPRM ***82706** failed to provide adequate procedural protections for the employees' information. A few comments also said that the intelligence community should be able to obtain their employees' health information only with authorization. In addition, commenters said that the intelligence community should make disclosure of protected health information a condition of employment.

Response: Again, we agree that the NPRM's provision allowing disclosure of the protected health information of intelligence community employees without authorization was overly broad. Thus we eliminate it in the final rule. The intelligence community can obtain this information with authorization (pursuant to § 164.508), for example, when employees or their family members are being considered for an oversees assignment and when individuals are applying for employment with or seeking a contract from an intelligence community agency.

National Security and Intelligence Activities and Protective Services for the President and Others

Comment: A number of comments opposed the proposed "intelligence and national security activities" provision of the law enforcement section (§ 164.510(f)(4)), suggesting that it was overly broad. These commenters were concerned that the provision lacked sufficient procedural safeguards to prevent abuse of protected health information. The Central Intelligence Agency (CIA) and the Department of Defense (DoD) also expressed concern over the provision's scope. The agencies said that if implemented as written, the provision would have failed to accomplish fully its intended purpose of allowing the disclosure of protected health information to officials carrying out intelligence and national security activities other than law enforcement activities. The CIA and DoD believed that the provision should be moved to another section of the rule, possibly to proposed § 164.510(m) on specialized classes, so that authorized intelligence and national security officials could obtain individuals' protected health information without authorization when lawfully engaged in intelligence and national security activities.

Response: In the final rule, we clarify that this provision does not provide new authority for intelligence and national security officials to acquire health information that they otherwise would not be able to obtain. Furthermore, the rule does not confer new authority for intelligence, national security, or Presidential protective service activities. Rather, the activities permissible under this section are limited to those authorized under current law and regulation (e.g., for intelligence activities, 50 U.S.C. 401, et seq., Executive Order 12333, and agency implementing regulatory authorities). For example, the provision regarding national security activities pertains only to foreign persons that are the subjects of legitimate and lawful intelligence, counterintelligence, or other national security activities. In addition, the provision regarding protective services pertains only to those persons who are the subjects of legitimate investigations for threatening or otherwise exhibiting an inappropriate direction of interest toward U.S. Secret Service protectees pursuant to 18 U.S.C. 871, 879, and 3056. Finally, the rule leaves intact the existing State Department regulations that strictly limit the disclosure of health information pertaining to employees (e.g., Privacy Issuances at State-24 Medical Records).

We believe that because intelligence/national security activities and Presidential/other protective service activities are discrete functions serving different purposes, they should be treated consistently but separately under the rule. For example, medical information is used as a complement to other investigative data that are pertinent to conducting comprehensive threat assessment and risk prevention activities pursuant to 18 U.S.C. 3056. In addition, information on the health of world leaders is important for the provision of protective services and other functions. Thus, § 164.512(k) of the final rule includes separate subsections for national security/intelligence activities and for disclosures related to protective services to the President and others.

We note that the rule does not require or compel a health plan or covered health care provider to disclose protected health information. Rather, two subsections of § 164.512(k) allow covered entities to disclose information for intelligence and national security activities and for protective services to the President and others only to authorized federal officials conducting these activities, when such officials are performing functions authorized by law.

We agree with DoD and CIA that the NPRM, by including these provisions in the law enforcement section (proposed § 164.510(f)), would have allowed covered entities to disclose protected health information for national security, intelligence, and Presidential protective activities only to law enforcement officials. We recognize that many officials authorized by law to carry out intelligence, national security, and Presidential protective functions are not law enforcement officials. Therefore, the final rule allows covered entities to disclose protected health information pursuant to this provision not only to law enforcement officials, but to all federal officials authorized by law to carry out the relevant activities. In addition, we remove this provision from the law enforcement section and include it in § 164.512(k) on uses and disclosures for specialized government functions

Medical Suitability Determinations

Comment: A few comments opposed the NPRM's provision allowing the Department of State to use protected health information for medical clearance determinations. These commenters believed that the scope of permissible disclosures under the proposed provision was too broad. While acknowledging that the Department may have legitimate needs for access to protected health data, the commenters believed that implementation of the proposed provision would not have provided adequate procedural safeguards for the affected State Department employees. A few comments said that the State Department should be able to obtain protected health information for medical clearance determinations only with authorization. A few comments also said that the

Department should be able to disclose such information only when required for national security purposes. Some commenters believed that the State Department should be subject to the Federal Register notice requirement that the NPRM would have applied to the Department of Defense. A few comments also opposed the proposed provision on the basis that it would conflict with the Rehabilitation Act of 1973 or that it appeared to represent an invitation to discriminate against individuals with mental disorders.

Response: We agree with commenters who believed that the NPRM's provision regarding the State Department's use of protected health information without authorization was unnecessarily broad. Therefore, in the final rule, we restrict significantly the scope of protected health information that the State Department may use and disclose without authorization. First, we allow health plans and covered health care providers that are a component of the State Department to use and disclose protected health information without authorization when making medical suitability determinations for security clearance purposes. For the purposes of a security investigation, these ***82707** components may disclose to authorized State Department officials whether or not the individual was determined to be medically suitable. Furthermore, we note that the rule does not confer authority on the Department to disclose such information that it did not previously possess. The Department remains subject to applicable law regarding such disclosures, including the Rehabilitation Act of 1973.

The preamble to the NPRM solicited comment on whether there was a need to add national security determinations under Executive Order 10450 to the rule's provision on State Department uses and disclosures of protected health information for security determinations. While we did not receive comment on this issue, we believe that a limited addition is warranted and appropriate. Executive Orders 10450 and 12968 direct Executive branch agencies to make certain determinations regarding whether their employees' access to classified information is consistent with the national security interests of the United States. Specifically, the Executive Orders state that access to classified information shall be granted only to those individuals whose personal and professional history affirmatively indicates, inter alia, strength of character, trustworthiness, reliability, and sound judgment. In reviewing the personal history of an individual, Executive branch agencies may investigate and consider any matter, including a mental health issue or other medical condition, that relates directly to any of the enumerated factors.

In the vast majority of cases, Executive agencies require their security clearance investigators to obtain the individual's express consent in the form of a medical release, pursuant to which the agency can conduct its background investigation and obtain any necessary health information. This rule does not interfere with agencies' ability to require medical releases for purposes of security clearances under these Executive Orders.

In the case of the Department of State, however, it may be impracticable or infeasible to obtain an employee's authorization when exigent circumstances arise overseas. For example, when a Foreign Service Officer is serving at an overseas post and he or she develops a critical medical problem which may or may not require a medical evacuation or other equally severe response, the Department's medical staff have access to the employee's medical records for the purpose of making a medical suitability determination under Executive Orders 10450 and 12968. To restrict the Department's access to information at such a crucial time due to a lack of employee authorization leaves the Department no option but to suspend the employee's security clearance. This action automatically would result in an immediate forced departure from post, which negatively would affect both the Department, due to the unexpected loss of personnel, and the individual, due to the fact that a forced departure can have a long-term impact on his or her career in the Foreign Service.

For this reason, the rule contains a limited security clearance exemption for the Department of State. The exemption allows the Department's own medical staff to continue to have access to an employee's medical file for the purpose of making a medical suitability determination for security purposes. The medical staff can convey a simple “yes” or “no” response to those individuals conducting the security investigation within the Department. In this way, the Department is able to make security determinations in exigent circumstances without disclosing any specific medical information to any employees other than the medical personnel who otherwise have routine access to these same medical records in an everyday non-security context.

Second, and similarly, the final rule establishes a similar system for disclosures of protected health information necessary to determine worldwide availability or availability for mandatory service abroad under sections 101(a)(4) and 504 of the Foreign Service Act. The Act requires that Foreign Service members be suitable for posting throughout the world and for certain specific assignments. For this reason, we permit a limited exemption to serve the purposes of the statute. Again, the medical staff can convey availability determinations to State Department officials who need to know if certain Foreign Service members are available to serve at post.

Third, and finally, the final rule recognizes the special statutory obligations that the State Department has regarding family members of Foreign Service members under sections 101(b)(5) and 904 of the Foreign Service Act. Section 101(b)(5) of the Foreign Service Act requires the Department of State to mitigate the impact of hardships, disruptions, and other unusual conditions on families of Foreign Service Officers. Section 904 requires the Department to establish a health care program to promote and maintain the physical and mental health of Foreign Service member family members. The final rule permits disclosure of protected health information to officials who need protected health information to determine whether a family member can accompany a Foreign Service member abroad.

Given the limited applicability of the rule, we believe it is not necessary for the State Department to publish a notice in the Federal Register to identify the purposes for which the information may be used or disclosed. The final rule identifies these purposes, as described above.

Correctional Institutions

Comments about the rule's application to correctional institutions are addressed in § 164.501, under the definition of "individual."

Section 164.512(l)—Disclosures for Workers' Compensation

Comment: Several commenters stated that workers' compensation carriers are excepted under the HIPAA definition of group health plan and therefore we have no authority to regulate them in this rule. These commenters suggested clarifying that the provisions of the proposed rule did not apply to certain types of insurance entities, such as workers' compensation carriers, and that such non-covered entities should have full access to protected health information without meeting the requirements of the rule. Other commenters argued that a complete exemption for workers' compensation carriers was inappropriate.

Response: We agree with commenters that the proposed rule did not intend to regulate workers' compensation carriers. In the final rule we have incorporated a provision that clarifies that the term "health plan" excludes "any policy, plan, or program to the extent that it provides, or pays for the cost of, excepted benefits as defined in section 2791(c)(1) of the PHS Act." See discussion above under the definition of "health plan" in § 164.501.

Comment: Some commenters argued that the privacy rule should defer to other laws that regulate the disclosure of information to employers and workers' compensation carriers. They commented that many states have laws that require sharing of information —without consent—between providers and employers or workers' compensation carriers.

Response: We agree that the privacy rule should permit disclosures necessary for the administration of state and other workers' compensation systems. To assure that workers' compensations systems are not disrupted, we have added a new ***82708** provisions to the final rule. The new § 164.512(l) permits covered entities to disclose protected health information as authorized by and to the extent necessary to comply with workers' compensation or other similar programs established by law that provide benefits for work-related injuries or illnesses without regard to fault. We also note that where a state or other law requires a use or disclosure of protected health information under a workers' compensation or similar scheme, the disclosure would be permitted under § 164.512(a).

Comment: Several commenters stated that if workers' compensation carriers are to receive protected health information, they should only receive the minimum necessary as required in § 164.514. The commenters argued that employers and workers' compensation carriers should not have access to the entire medical history or portions of the medical history that have nothing to do with the injury in question. Further, the covered provider and not the employer or carrier should determine minimum necessary since the provider is a covered entity and only covered entities are subject to sanctions for violations of the rule. These commenters stated that the rule should clearly indicate the ability of covered entities to refuse to disclose protected health information if it went beyond the scope of the injury. Workers' compensation carriers, on the other hand, argued that permitting providers to determine the minimum necessary was inappropriate because determining eligibility for benefits is an insurance function, not a medical function. They stated that workers' compensation carriers need access to the full range of information regarding treatment for the injury underlying the claim, the claimants' current condition, and any preexisting conditions that can either mitigate the claim or aggravate the impact of the injury.

Response: Under the final rule, covered entities must comply with the minimum necessary provisions unless the disclosure is required by law. Our review of state workers' compensation laws suggests that many of these laws address the issue of the scope of information that is available to carriers and employers. The rule permits a provider to disclose information that is authorized by such a law to the extent necessary to comply with such law. Where the law is silent, the workers' compensation carrier and covered health care provider will need to discuss what information is necessary for the carrier to administer the claim, and the health care provider may disclose that information. We note that if the workers' compensation insurer has secured an authorization from the individual for the release of protected health information, the covered entity may release the protected health information described in the authorization.

Section 164.514 Requirements for Uses and Disclosures

Section 164.514(a)-(c)—De-identification

General Approach

Comments: The comments on this topic almost unanimously supported the concept of de-identification and efforts to expand its use. Although a few comments suggested deleting one of the proposed methods or the other, most appeared to support the two method approach for entities with differing levels of statistical expertise.

Many of the comments argued that the standard for creation of de-identified information should be whether there is a "reasonable basis to believe" that the information has been de-identified. Others suggested that the "reasonable basis" standard was too vague.

A few commenters suggested that we consider information to be de-identified if all personal identifiers that directly reveal the identity of the individual or provide a direct means of identifying individuals have been removed, encrypted or replaced with a code. Essentially, this recommendation would require only removal of "direct" identifiers (e.g., name, address, and ID numbers) and allow retention of all "indirect" identifiers (e.g., zip code and birth date) in "de-identified" information. These comments did not suggest a list or further definition of what identifiers should be considered "direct" identifiers.

Some commenters suggested that the standard be modified to reflect a single standard that applies to all covered entities in the interest of reducing uncertainty and complexity. According to these comments, the standard for covered entities to meet for de-identification of protected health information should be generally accepted standards in the scientific and statistical community, rather than focusing on a specified list of identifiers that must be removed.

A few commenters believed that no record of information about an individual can be truly de-identified and that all such information should be treated and protected as identifiable because more and more information about individuals is being made available to the public, such as voter registration lists and motor vehicle and driver's license lists, that would enable someone to match (and identify) records that otherwise appear to be not identifiable.

Response: In the final rule, we reformulate the method for de-identification to more explicitly use the statutory standard of "a reasonable basis to believe that the information can be used to identify the individual"—just as information is "individually identifiable" if there is a reasonable basis to believe that it can be used to identify the individual, it is "de-identified" if there is no reasonable basis to believe it can be so used. We also define more precisely how the standard should be applied.

We did not accept comments that suggested that we allow only one method of de-identifying information. We find support for both methods in the comments but find no compelling logic for how the competing interests could be met cost-effectively with only one method.

We also disagree with the comments that advocated using a standard which required removing only the direct identifiers. Although such an approach may be more convenient for covered entities, we judged that the resulting information would often remain identifiable, and its dissemination could result in significant violations of privacy. While we encourage covered entities to remove direct identifiers whenever possible as a method of enhancing privacy, we do not believe that the resulting information is sufficiently blinded as to permit its general dissemination without the protections provided by this rule.

We agree with the comments that said that records of information about individuals cannot be truly de-identified, if that means that the probability of attribution to an individual must be absolutely zero. However, the statutory standard does not allow us to take such a position, but envisions a reasonable balance between risk of identification and usefulness of the information.

We disagree with those comments that advocated releasing only truly anonymous information (which has been changed sufficiently so that it no longer represents actual information about real individuals) and those that supported using only sophisticated statistical analysis before allowing uncontrolled disclosures. Although these approaches would provide a marginally higher level of privacy protection, they would preclude many of the laudable and valuable uses discussed in the NPRM (in § 164.506(d)) and would impose too great a burden on ***82709** less sophisticated covered entities to be justified by the small decrease in an already small risk of identification.

We conclude that compared to the alternatives advanced by the comments, the approach proposed in the NPRM, as refined and modified below in response to the comments, most closely meets the intent of the statute.

Comments: A few comments complained that the proposed standards were so strict that they would expose covered entities to liability because arguably no information could ever be de-identified.

Response: In the final rule we have modified the mechanisms by which a covered entity may demonstrate that it has complied with the standard in ways that provide greater certainty. In the standard method for de-identification, we have clarified the professional standard to be used, and anticipate issuing further guidance for covered entities to use in applying the standard. In the safe harbor method, we reduced the amount of judgment that a covered entity must apply. We believe that these mechanisms for de-identification are sufficiently well-defined to protect covered entities that follow them from undue liability.

Comments: Several comments suggested that the rule prohibit any linking of de-identified data, regardless of the probability of identification.

Response: Since our methods of de-identification include consideration of how the information might be used in combination with other information, we believe that linking de-identified information does not pose a significantly increased risk of privacy violations. In addition, since our authority extends only to the regulation of individually identifiable health information, we cannot regulate de-identified information because it no longer meets the definition of individually identifiable health information. We also have no authority to regulate entities that might receive and desire to link such information yet that are not covered entities; thus such a prohibition would have little protective effect.

Comments: Several commenters suggested that we create incentives for covered entities to use de-identified information. One commenter suggested that we mandate an assessment to see if de-identified information could be used before the use or disclosure of identified information would be allowed.

Response: We believe that this final rule establishes a reasonable mechanism for the creation of de-identified information and the fact that this de-identified information can be used without having to follow the policies, procedures, and documentation required to use individually identifiable health information should provide an incentive to encourage its use where appropriate. We disagree with the comment suggesting that we require an assessment of whether de-identified information could be used for each use or disclosure. We believe that such a requirement would be too burdensome on covered entities, particularly with respect to internal uses, where entire records are often used by medical and other personnel. For disclosures, we believe that such an assessment would add little to the protection provided by the minimum necessary requirements in this final rule.

Comments: One commenter asked if de-identification was equivalent to destruction of the protected health information (as required under several of the provisions of this final rule).

Response: The process of de-identification creates a new dataset in addition to the source dataset containing the protected health information. This process does not substitute for actual destruction of the source data.

Modifications to the Proposed Standard for De-Identification

Comments: Several commenters called for clarification of proposed language in the NPRM that would have permitted a covered entity to treat information as de-identified, even if specified identifiers were retained, as long as the probability of identifying subject individuals would be very low. Commenters expressed concern that the "very low" standard was vague. These comments expressed concern that covered entities would not have a clear and easy way to know when information meets this part of the standard.

Response: We agree with the comments that covered entities may need additional guidance on the types of analyses that they should perform in determining when the probability of re-identification of information is very low. We note that in the final rule, we reformulate the standard somewhat to require that a person with appropriate knowledge and experience apply generally accepted statistical and scientific methods relevant to the task to make a determination that the risk of re-identification is very small. In this context, we do not view the difference between a very low probability and a very small risk to be substantive. After consulting representatives of the federal agencies that routinely de-identify and anonymize information for public release[FN16] we attempt here to provide some guidance for the method of de-identification.

As requested by some commenters, we include in the final rule a requirement that covered entities (not following the safe harbor approach) apply generally accepted statistical and scientific principles and methods for rendering information not individually identifiable when determining if information is de-identified. Although such guidance will change over time to keep up with technology and the current availability of public information from other sources, as a starting point the Secretary approves the use of the following as guidance to such generally accepted statistical and scientific principles and methods:

(1) Statistical Policy Working Paper 22—Report on Statistical Disclosure Limitation Methodology (http://www.fcsm.gov/working-papers/wp22.html) (prepared by the Subcommittee on Disclosure Limitation Methodology, Federal Committee on Statistical Methodology, Office of Management and Budget); and

(2) The Checklist on Disclosure Potential of Proposed Data Releases (http:// www.fcsm.gov/docs/checklist_799.doc) (prepared by the Confidentiality and Data Access Committee, Federal Committee on Statistical Methodology, Office of Management and Budget).

We agree with commenters that such guidance will need to be updated over time and we will provide such guidance in the future.

According to the Statistical Policy Working Paper 22, the two main sources of disclosure risk for de-identified records about individuals are the existence of records with very unique characteristics (e.g., unusual occupation or very high salary or age) and the existence of external sources of records with matching data elements which can be used to link with the de-identified information and identify individuals (e.g., voter registration records or driver's license records). The risk of disclosure increases as the number of variables common to both types of records increases, as the accuracy or resolution of the data increases, and as the number of external sources increases. As outlined in Statistical Policy Working Paper 22, an expert disclosure analysis would also consider the probability that an individual who is the target of an attempt at re-identification is represented on both ***82710** files, the probability that the matching variables are recorded identically on the two types of records, the probability that the target individual is unique in the population for the matching variables, and the degree of confidence that a match would correctly identify a unique person.

Statistical Policy Working Paper 22 also describes many techniques that can be used to reduce the risk of disclosure that should be considered by an expert when de-identifying health information. In addition to removing all direct identifiers, these include the obvious choices based on the above causes of the risk; namely, reducing the number of variables on which a match might be made and limiting the distribution of the records through a “data use agreement” or “restricted access agreement” in which the recipient agrees to limits on who can use/receive the data. The techniques also include more sophisticated manipulations: recoding variables into fewer categories to provide less precise detail (including rounding of continuous variables); setting top-codes and bottom-codes to limit details for extreme values; disturbing the data by adding noise by swapping certain variables between records, replacing some variables in random records with mathematically imputed values or averages across small random groups of records, or randomly deleting or duplicating a small sample of records; and replacing actual records with synthetic records that preserve certain statistical properties of the original data.

Modifications to the “Safe Harbor”

Comments: Many commenters argued that stripping all 19 identifiers is unnecessary for purposes of de-identification. They felt that such items as zip code, city (or county), and birth date, for example, do not identify the individual and only such identifiers as name, street address, phone numbers, fax numbers, email, Social Security number, driver's license number, voter registration number, motor vehicle registration, identifiable photographs, finger prints, voice prints, web universal resource locator, and Internet protocol address number need to be removed to reasonably believe that data has been de-identified.

Other commenters felt that removing the full list of identifiers would significantly reduce the usefulness of the data. Many of these comments focused on research and, to a lesser extent, marketing and undefined “statistical analysis.” Commenters who represented various industries and research institutions expressed concern that they would not be able to continue current activities such as development of service provider networks, conducting “analysis” on behalf of the plan, studying use of medication and medical devices, community studies, marketing and strategic planning, childhood immunization initiatives, patient satisfaction surveys, and solicitation of contributions. The requirements in the NPRM to strip off zip code and date of birth were of particular concern. These commenters stated that their ability to do research and quality analysis with this data would be compromised without access to some level of information about patient age and/or geographic location.

Response: While we understand that removing the specified identifiers may reduce the usefulness of the resulting data to third parties, we remain convinced by the evidence found in the MIT study that we referred to in the preamble to the proposed rule[FN17] and the analyses discussed below that there remains a significant risk of identification of the subjects of health information from the inclusion of indirect identifiers such as birth date and zip code and that in many cases there will be a reasonable basis to believe that such information remains identifiable. We note that a covered entity not relying on the safe harbor may determine that information from which sufficient other identifiers have been removed but which retains birth date or zip code is not reasonably identifiable. As discussed above, such a determination must be made by a person with appropriate knowledge and expertise applying generally accepted statistical and scientific methods for rendering information not identifiable.

Although we have determined that all of the specified identifiers must be removed before a covered entity meets the safe harbor requirements, we made modifications in the final rule to the specified identifiers on the list to permit some information about age and geographic area to be retained in de-identified information.

For age, we specify that, in most cases, year of birth may be retained, which can be combined with the age of the subject to provide sufficient information about age for most uses. After considering current and evolving practices and consulting with federal experts on this topic, including members of the Confidentiality and Data Access Committee of the Federal Committee on Statistical Methodology, Office of Management and Budget, we concluded that in general, age is sufficiently broad to be allowed in de-identified information, although all dates that might be directly related to the subject of the information must be removed or aggregated to the level of year to prevent deduction of birth dates. Extreme ages—90 and over—must be aggregated further (to a category of 90+, for example) to avoid identification of very old individuals (because they are relatively rare). This reflects the minimum requirement of the current recommendations of the Bureau of the Census.[FN18] For research or other studies relating to young children or infants, we note that the rule would not prohibit age of an individual from being expressed as an age in months, days, or hours.

For geographic area, we specify that the initial three digits of zip codes may be retained for any three-digit zip code that contains more than 20,000 people as determined by the Bureau of the Census. As discussed more below, there are currently only 18 three-digit zip codes containing fewer than 20,000 people. We note that this number may change when information from the 2000 Decennial Census is analyzed.

In response to concerns expressed in the comments about the need for information on geographic area, we investigated the potential of allowing 5-digit zip codes or 3-digit zip codes to remain in the de-identified information. According to 1990 Census data, the populations in geographical areas delineated by 3-digit zip codes vary a great deal, from a low of 394 to a high of 3,006,997, with an average size of 282,304. There are two 3-digit zip codes containing fewer than 500 people and six 3-digit zip codes containing fewer than 10,000 people each.[FN19] Of the total of 881 3-digit zip codes, there are 18 with fewer than 20,000 people, 71 with fewer than 50,000 people, and 215 containing fewer than 100,000 population. We also looked at two-digit zip codes (the first 2 digits of the 5-digit zip code) and found that the smallest of the 98 2-digit zip codes contains 188,638 people.

We also investigated the practices of several other federal agencies which are mandated by Congress to release data ***82711** from national surveys while preserving confidentiality and which have been dealing with these issues for decades. The problems and solutions being used by these agencies are laid out in detail in the Statistical Policy Working Paper 22 cited earlier.

To protect the privacy of individuals providing information to the Bureau of Census, the Bureau has determined that a geographical region must contain at least 100,000 people.[FN20] This standard has been used by the Bureau of the Census for many years and is supported by simulation studies using Census data.[FN21] These studies showed that after a certain point, increasing the size of a geographic area does not significantly decrease the percentage of unique records (i.e., those that could be identified if sampled), but that the point of diminishing returns is dependent on the number and type of demographic variables on which matching might occur. For a small number of demographic variables (6), this point was quite low (about 20,000 population), but it rose quickly to about 50,000 for 10 variables and to about 80,000 for 15 variables. The Bureau of the Census releases sets of data to the public that it considers safe from re-identification because it limits geographical areas to those containing at least 100,000 people and limits the number and detail of the demographic variables in the data. At the point of approximately 100,000 population, 7.3% of records were unique (and therefore potentially identifiable) on 6 demographic variables from the 1990 Census Short Form: Age in years (90 categories), race (up to 180 categories), sex (2 categories), relationship to householder (14 categories), Hispanic (2 categories), and tenure (owner vs. renter in 5 categories). Using 6 variables derived from the Long Form data, age (10 categories), race (6 categories), sex (2 categories), marital status (5 categories), occupation (54 categories), and personal income (10 categories), raised the percentage to 9.8%.

We also examined the results of an NCHS simulation study using national survey data[FN22] to see if some scientific support could be found for a compromise. The study took random samples from populations of different sizes and then compared the

samples to the whole population to see how many records were identifiable, that is, matched uniquely to a unique person in the whole population on the basis of 9 demographic variables: Age (85 categories), race (4 categories), gender (2 categories), ethnicity (2 categories), marital status (3 categories), income (3 categories), employment status (2 categories), working class (4 categories), and occupation (42 categories). Even when some of the variables are aggregated or coded, from the perspective of a large statistical agency desiring to release data to the public, the study concluded that a population size of 500,000 was not sufficient to provide a reasonable guarantee that certain individuals could not be identified. About 2.5 % of the sample from the population of 500,000 was uniquely identifiable, regardless of sample size. This percentage rose as the size of the population decreased, to about 14% for a population of 100,000 and to about 25% for a population of 25,000. Eliminating the occupation variable (which is less likely to be found in health data) reduced this percentage significantly to about 0.4 %, 3%, and 10% respectively. These percentages of unique records (and thus the potentials for re-identification) are highly dependent on the number of variables (which must also be available in other databases which are identified to be considered in a disclosure risk analysis), the categorical breakdowns of those variables, and the level of geographic detail included.

With respect to how we might clarify the requirement to achieve a "low probability" that information could be identified, the Statistical Policy Working Paper 22 referenced above discusses the attempts of several researchers to define mathematical measures of disclosure risk only to conclude that "more research into defining a computable measure of risk is necessary." When we considered whether we could specify a maximum level of risk of disclosure with some precision (such as a probability or risk of identification of @0.01), we concluded that it is premature to assign mathematical precision to the "art" of de-identification.

After evaluating current practices and recognizing the expressed need for some geographic indicators in otherwise de-identified databases, we concluded that permitting geographic identifiers that define populations of greater than 20,000 individuals is an appropriate standard that balances privacy interests against desirable uses of de-identified data. In making this determination, we focused on the studies by the Bureau of Census cited above which seemed to indicate that a population size of 20,000 was an appropriate cut off if there were relatively few (6) demographic variables in the database. Our belief is that, after removing the required identifiers to meet the safe harbor standards, the number of demographic variables retained in the databases will be relatively small, so that it is appropriate to accept a relatively low number as a minimum geographic size.

In applying this provision, covered entities must replace the (currently 18) forbidden 3-digit zip codes with zeros and thus treat them as a single geographic area (with >20,000 population). The list of the forbidden 3-digit zip codes will be maintained as part of the updated Secretarial guidance referred to above. Currently, they are: 022, 036, 059, 102, 203, 555, 556, 692, 821, 823, 830, 831, 878, 879, 884, 893, 987, and 994. This will result in an average 3-digit zip code area population of 287,858 which should result in an average of about 4% unique records using the 6 variables described above from the Census Short Form. Although this level of unique records will be much higher in the smaller geographic areas, the actual risk of identification will be much lower because of the limited availability of comparable data in publically available, identified databases, and will be further reduced by the low probability that someone will expend the resources to try to identify records when the chance of success is so small and uncertain. We think this compromise will meet the current need for an easy method to identify geographic area while providing adequate protection from re-identification. If a greater level of geographical detail is required for a particular use, the information will have to be obtained through another permitted mechanism or be subjected to a specific de-identification determination as described above. We will monitor the availability of identified public data and the concomitant re-identification risks, both theoretical and actual, and adjust this safe harbor in the future as necessary.

As we stated above, we understand that many commenters would prefer a looser standard for determining when information is de-identified, both generally and with respect to the standards for identifying geographic ***82712** area. However, because public databases (such as voter records or driver's license records) that include demographic information about a geographically defined population are available, a surprisingly large percentage of records of health information that contain similar demographic information can be identified. Although the number of these databases seems to be increasing, the number of demographic variables within them still appears to be fairly limited. The number of cases of privacy violation from health records which have been identified in this way is small to date. However, the risk of identification increases with decreasing population size, with increasing amounts of demographic information (both in level of detail and number of variables), and with the uniqueness

of the combination of such information in the population. That is, an 18-year-old single white male student is not at risk of identification in a database from a large city such as New York. However, if the database were about a small town where most of the inhabitants were older, retired people of a specific minority race or ethnic group, that same person might be unique in that community and easily identified. We believe that the policy that we have articulated reaches the appropriate balance between reasonably protecting privacy and providing a sufficient level of information to make de-identified databases useful.

Comments: Some comments noted that identifiers that accompany photographic images are often needed to interpret the image and that it would be difficult to use the image alone to identify the individual.

Response: We agree that our proposed requirement to remove all photographic images was more than necessary. Many photographs of lesions, for example, which cannot usually be used alone to identify an individual, are included in health records. In this final rule, the only absolute requirement is the removal of full-face photographs, and we depend on the "catch-all" of "any other unique * * * characteristic * * * " to pick up the unusual case where another type of photographic image might be used to identify an individual.

Comments: A number of commenters felt that the proposed bar for removal had been set too high; that the removal of these 19 identifiers created a difficult standard, since some identifiers may be buried in lengthy text fields.

Response: We understand that some of the identifiers on our list for removal may be buried in text fields, but we see no alternative that protects privacy. In addition, we believe that such unstructured text fields have little or no value in a de-identified information set and would be removed in any case. With time, we expect that such identifiers will be kept out of places where they are hard to locate and expunge.

Comments: Some commenters asserted that this requirement creates a disincentive for covered entities to de-identify data and would compromise the Secretary's desire to see de-identified data used for a multitude of purposes. Others stated that the "no reason to believe" test creates an unreasonable burden on covered entities, and would actually chill the release of de-identified information, and set an impossible standard.

Response: We recognize that the proposed standards might have imposed a burden that could have prevented the widespread use of de-identified information. We believe that our modifications to the final rule discussed above will make the process less burdensome and remove some of the disincentive. However, we could not loosen the standards as far as many commenters wanted without seriously jeopardizing the privacy of the subjects of the information. As discussed above, we modify the "no reason to know" standard that was part of the safe harbor provision and replace it in the final rule with an "actual knowledge" standard. We believe that this change provides additional certainty to covered entities using the safe harbor and should eliminate any chilling effect.

Comments: Although most commenters wanted to see data elements taken off the list, there were a small number of commenters that wanted to see data items added to the list. They believed that it is also necessary to remove clinical trial record numbers, device model serial numbers, and all proper nouns from the records.

Response: In response to these requests, we have slightly revised the list of identifiers that must be removed under the safe harbor provision. Clinical trial record numbers are included in the general category of "any other unique identifying number, characteristic, or code." These record numbers cannot be included with de-identified information because, although the availability of clinical trial numbers may be limited, they are used for other purposes besides de-identification/re-identification, such as identifying clinical trial records, and may be disclosed under certain circumstances. Thus, they do not meet the criteria in the rule for use as a unique record identifier for de-identified records. Device model serial numbers are included in "any device identifier or serial number" and must be removed. We considered the request to remove all proper nouns to be very burdensome to implement for very little increase in privacy and likely to be arbitrary in operation, and so it is not included in the final rule.

Re-Identification

Comments: One commenter wanted to know if the rule requires that covered entities retain the ability to re-identify de-identified information.

Response: The rule does not require covered entities to retain the ability to re-identify de-identified information, but it does allow them to retain this ability.

Comments: A few commenters asked us to prohibit anyone from re-identifying de-identified health information.

Response: We do not have the authority to regulate persons other than covered entities, so we cannot affect attempts by entities outside of this rule to re-identify information. Under the rule, we permit the covered entity that created the de-identified information to re-identify it. However, we include a requirement that, when a unique record identifier is included in the de-identified information, such identifier must not be such that someone other than the covered entity could use it to identify the individual (such as when a derivative of the individual's name is used as the unique record identifier).

Section 164.514(d)—Minimum Necessary

Comment: A large number of commenters objected to the application of the proposed "minimum necessary" standard for uses and disclosures of protected health information to uses and disclosures for treatment purposes. Some suggested that the final regulation should establish a good faith exception or safe harbor for disclosures made for treatment.

The overwhelming majority of commenters, generally from the medical community, argued that application of the proposed standard would be contrary to sound medical practice, increase medical errors, and lead to an increase in liability. Some likened the standard to a "gag clause" in that it limited the exchange of information critical for quality patient care. They found the standard unworkable in daily treatment situations. They argued that this standard would be potentially dangerous in that it could cause practitioners to withhold information that could be essential for later care. Commenters asserted that caregivers need to be able to give and receive a ***82713** complete picture of the patient's health to make a diagnosis and develop a treatment plan.

Other commenters noted that the complexity of medicine is such that it is unreasonable to think that anyone will know the exact parameters of the information another caregiver will need for proper diagnosis and treatment or that a plan will need to support quality assurance and improvement activities. They therefore suggested that the minimum necessary standard be applied instead as an administrative requirement.

Providers also emphasized that they already have an ethical duty to limit the sharing of unnecessary medical information, and most already have well-developed guidelines and practice standards in place. Concerns were also voiced that attempts to provide the minimum necessary information in the treatment setting would lead to multiple editions of a record or creation of summaries that turn out to omit crucial information resulting in confusion and error.

Response: In response to these concerns, we substantially revise the minimum necessary requirements. As suggested by certain commenters, we provide, in § 164.502(b), that disclosures of protected health information to or requests by health care providers for treatment are not subject to the minimum necessary standard. We also modify the requirements for uses of protected health information. This final rule requires covered entities to make determinations of minimum necessary use, including use for treatment purposes, based on the role of the person or class of workforce members rather than at the level of specific uses. A covered entity must establish policies and procedures that identify the types of persons who are to have access to designated categories of information and the conditions, if any, of that access. We establish no requirements specific to a particular use of information. Covered entities are responsible for establishing and documenting these policies and procedures. This approach is consistent with the argument of many commenters that guidelines and practice standards are appropriate means for protecting the privacy of patient information.

Comment: Some commenters argued that the standard should be retained in the treatment setting for uses and disclosures pertaining to mental health information. Some of these commenters asserted that other providers do not need to know the mental status of a patient for treatment purposes.

Response: We agree that the standard should be retained for uses of mental health information in the treatment setting. However, we believe that the arguments for excepting disclosures of protected health information for treatment purposes from application of the minimum necessary standard are also persuasive with respect to mental health information. An individual's mental health can interact with proper treatment for other conditions in many ways. Psychoactive medications may have harmful interactions with drugs routinely prescribed for other purposes; an individual's mental health history may help another health care provider understand the individual's ability to abide by a complicated treatment regimen. For these reasons, it is also not reasonable to presume that, in every case, a health care provider will not need to know an individual's mental health status to provide appropriate treatment.

Providers' comments noted existing ethical duties to limit the sharing of unnecessary medical information, and well-developed guidelines and practice standards for this purpose. Under this rule, providers may use these tools to guide their discretion in disclosing health information for treatment.

Comment: Several commenters urged that covered entities should be required to conspicuously label records to show that they are not complete. They argued that absent such labeling, patient care could be compromised.

Response: We believe that the final policy to except disclosures of protected health information for treatment purposes from application of the minimum necessary standard addresses these commenters' concerns.

Comment: Some commenters argued that the audit exception to the minimum necessary requirements needs to be clarified or expanded, because “audit” and “payment” are essentially the same thing.

Response: We eliminate this exception. The proposed exclusion of disclosures to health plans for audit purposes is replaced with a general requirement that covered entities must limit requests to other covered entities for individually identifiable health information to what is reasonably necessary for the purpose intended.

Comment: Many commenters argued that the proposed standard was unworkable as applied to “uses” by a covered entity's employees, because the proposal appeared not to allow providers to create general policy as to the types of records that particular employees may have access to but instead required that each decision be made “individually,” which providers interpret as “case-by-case.” Commenters argued that the standard with regard to “uses” would be impossible to implement and prohibitively expensive, requiring both medical and legal input to each disclosure decision.

Some commenters recommended deletion of the minimum necessary standard with regard to “uses.” Other commenters specifically recommended deletion of the requirement that the standard be applied on an individual, case-by-case basis. Rather, they suggested that the covered entity be allowed to establish general policies to meet the requirement. Another commenter similarly urged that the standard not apply to internal disclosures or for internal health care operations such as quality improvement/assurance activities. The commenter recommended that medical groups be allowed to develop their own standards to ensure that these activities are carried out in a manner that best helps the group and its patients.

Other commenters expressed confusion and requested clarification as to how the standard as proposed would actually work in day-to-day operations within an entity.

Response: Commenters' arguments regarding the workability of this standard as proposed were persuasive, and we therefore make significant modification to address these comments and improve the workability of the standard. For all uses and many disclosures, we require covered entities to include in their policies and procedures (see § 164.530), which may be standard

protocols, for "minimum necessary" uses and disclosures. We require implementation of such policies in lieu of making the "minimum necessary" determination for each separate use and disclosure.

For uses, covered entities must implement policies and procedures that restrict access to and use of protected health information based on the specific professional roles of members of the covered entity's workforce. The policies and procedures must identify the persons or classes of persons in the entity's workforce who need access to protected health information to carry out their duties and the category or categories of protected health information to which such persons or classes need access. These role-based access rules must also identify the conditions, as appropriate, that would apply to such access. For example, an institutional health care provider could allow physicians access to all records under the condition that the viewing of medical records of patients not under their care is recorded and reviewed. Other health professionals' access could ***82714** be limited to time periods when they are on duty. Information available to staff who are responsible for scheduling surgical procedures could be limited to certain data. In many instances, use of order forms or selective copying of relevant portions of a record may be appropriate policies to meet this requirement.

Routine disclosures also are not subject to individual review; instead, covered entities must implement policies and procedures (which may be standard protocols) to limit the protected health information in routine disclosures to the minimum information reasonably necessary to achieve the purpose of that type of disclosure. For non-routine disclosures, a covered entity must develop reasonable criteria to limit the protected health information disclosed to the minimum necessary to accomplish the purpose for which disclosure is sought, and to implement procedures for review of disclosures on an individual basis.

We modify the proposed standard to require the covered entity to make "reasonable efforts" to meet the minimum necessary standard (not "all'reasonable efforts, as proposed). What is reasonable will vary with the circumstances. When it is practical to use order forms or selective copying of relevant portions of the record, the covered entity is required to do so. Similarly, this flexibility in the standard takes into account the ability of the covered entity to configure its record system to allow selective access to only certain fields, and the practicality of organizing systems to allow this capacity. It might be reasonable for a covered entity with a highly computerized information system to implement a system under which employees with certain functions have access to only limited fields in a patient records, while other employees have access to the complete records. Such a system might not be reasonable for a covered entity with a largely paper records system.

Covered entities' policies and procedures must provide that disclosure of an entire medical record will not be made except pursuant to policies which specifically justify why the entire medical record is needed.

We believe that these modifications significantly improve the workability of this standard. At the same time, we believe that asking covered entities to assess their practices and establish rules for themselves will lead to significant improvements in the privacy of health information. See the preamble for § 164.514 for a more detailed discussion.

Comment: The minimum necessary standard should not be applied to uses and disclosures for payment or health care operations.

Response: Commenter's arguments for exempting these uses and disclosures from the minimum necessary standard were not compelling. We believe that our modifications to application of the minimum necessary standard to internal uses of protected health information, and to routine disclosures, address many of the concerns raised, particularly the concerns about administrative burdens and the concerns about having the information necessary for day-to-day operations. We do not eliminate this standard in part because we also remain concerned that covered entities may be tempted to disclose an entire medical record when only a few items of information are necessary, to avoid the administrative step of extracting the necessary information (or redacting the unnecessary information). We also believe this standard will cause covered entities to assess their privacy practices, give the privacy interests of their patients and enrollees greater attention, and make improvements that might otherwise not have been made. For this reason, the privacy benefits of retaining the minimum necessary standard for these purposes outweigh the burdens involved. We note that the minimum necessary standard is tied to the purpose of the disclosure; thus, providers may disclose protected health information as necessary to obtain payment.

Comment: Other commenters urged us to apply a "good faith" provision to all disclosures subject to the minimum necessary standard. Commenters presented a range of options to modify the proposed provisions which, in their view, would have mitigated their liability if they failed to comply with minimum necessary standard.

Response: We believe that the modifications to this standard, described above, substantially address these commenters' concerns. In addition to allowing the covered entity to use standard protocols for routine disclosures, we modify the standard to require a covered entity to make "reasonable efforts," not "all" reasonable efforts as proposed, in making the "minimum necessary" disclosure.

Comments: Some commenters complained that language in the proposed rule was vague and provided little guidance, and should be abandoned.

Response: In the preamble for § 164.504 and these responses to comments, we provide further guidance on how a covered entity can develop its policies for the minimum necessary use and disclosure of protected health information. We do not abandon this standard for the reasons described above. We remain concerned about the number of persons who have access to identifiable health information, and believe that causing covered entities to examine their practices will have significant privacy benefits.

Comment: Some commenters asked that the minimum necessary standard should not be applied to disclosures to business partners. Many of these commenters articulated the burdens they would bear if every disclosure to a business partner was required to meet the minimum necessary standard.

Response: We do not agree. In this final rule, we minimize the burden on covered entities in the following ways: in circumstances where disclosures are made on a routine, recurring basis, such as in on-going relationships between covered entities and their business associates, individual review of each routine disclosure has been eliminated; covered entities are required only to develop standard protocols to apply to such routine disclosures made to business associates (or types of business associates). In addition, we allow covered entities to rely on the representation of a professional hired to provide professional services as to what information is the minimum necessary for that purpose.

Comment: Some commenters were concerned that applying the standard in research settings will result in providers declining to participate in research protocols.

Response: We have modified the proposal to reduce the burden on covered entities that wish to disclose protected health information for research purposes. The final rule requires covered entities to obtain documentation or statements from persons requesting protected health information for research that, among other things, describe the information necessary for the research. We allow covered entities to reasonably rely on the documentation or statements as describing the minimum necessary disclosure.

Comment: Some commenters argued that government requests should not be subject to the minimum necessary standard, whether or not they are "authorized by law."

Response: We found no compelling reason to exempt government requests from this standard, other than when a disclosure is required by law. (See preamble to § 164.512(a) for the ***82715** rationale behind this policy). When a disclosure is required by law, the minimum necessary standard does not apply, whether the recipient of the information is a government official or a private individual.

At the same time, we understand that when certain government officials make requests for protected health information, some covered entities might feel pressure to comply that might not be present when the request is from a private individuals. For

this reason, we allow (but do not require) covered entities to reasonably rely on the representations of public officials as to the minimum necessary information for the purpose.

Comment: Some commenters argued that requests under proposed § 164.510 should not be subject to the minimum necessary standard, whether or not they are "authorized by law." Others argued that for disclosures made for administrative proceedings pursuant to proposed § 164.510, the minimum necessary standard should apply unless they are subject to a court order.

Response: We found no compelling reason to exempt disclosures for purposes listed in the regulation from this standard, other than for disclosures required by law. When there is no such legal mandate, the disclosure is voluntary on the part of the covered entity, and it is therefore reasonable to expect the covered entity to make some effort to protect privacy before making such a disclosure. If the covered entity finds that redacting unnecessary information, or extracting the requested information, prior to making the disclosure, is too burdensome, it need not make the disclosure. Where there is ambiguity regarding what information is needed, some effort on the part of the covered entity can be expected in these circumstances.

We also found no compelling reason to limit the exemption for disclosures "required by law" to those made pursuant to a court order. The judgment of a state legislature or regulatory body that a disclosure is required is entitled to no less deference than the same decision made by a court. For further rationale for this policy, see the preamble to § 164.512(a).

Comment: Some commenters argued that, in cases where a request for disclosure is not required by law, covered entities should be permitted to rely on the representations by public officials, that they have requested no more than the minimum amount necessary.

Response: We agree, and retain the proposed provision which allows reasonable reliance on the representations of public officials.

Comment: Some commenters argued that it is inappropriate to require covered entities to distinguish between disclosures that are "required by law" and those that are merely "authorized by law," for the purposes of determining when the standard applies.

Response: We do not agree. Covered entities have an independent duty to be aware of their legal obligations to federal, state, local and territorial or tribal authorities. In addition, § 164.514(h) allows covered entities to reasonably rely on the oral or written representation of public officials that a disclosure is required by law.

Comment: The minimum necessary standard should not be applied to pharmacists, or to emergency services.

Response: We believe that the final rule's exemption of disclosures of protected health information to health care providers for treatment purposes from the minimum necessary standard addresses these commenters concerns about emergency services. Together with the other changes we make to the proposed standard, we believe we have also addressed most of the commenters' concerns about pharmacists. With respect to pharmacists, the comments offered no persuasive reasons to treat pharmacists differently from other health care providers. Our reasons for retaining this standard for other uses and disclosures of protected health information are explained above.

Comment: A number of commenters argued that the standard should not apply to disclosures to attorneys, because it would interfere with the professional duties and judgment of attorneys in their representation of covered entities. Commenters stated that if a layperson within a covered entity makes an improper decision as to what the minimum necessary information is in regard to a request by the entity's attorney, the attorney may end up lacking information that is vital to representation. These commenters stated that attorneys are usually going to be in a better position to determine what information is truly the minimum necessary for effective counsel and representation of the client.

Response: We found no compelling reason to treat attorneys differently from other business associates. However, to ensure that this rule does not inadvertently cause covered entities to second-guess the professional judgment of the attorneys and other professionals they hire, we modify the proposed policies to explicitly allow covered entities to rely on the representation of a professional hired to provide professional services as to what information is the minimum necessary for that purpose.

Comment: Commenters from the law enforcement community expressed concern that providers may attempt to misuse the minimum necessary standard as a means to restrict access to information, particularly with regard to disclosures for health oversight or to law enforcement officials.

Response: The minimum necessary standard does not apply to disclosures required by law. Since the disclosures to law enforcement officials to which this standard applies are all voluntary, there would be no need for a covered entity to "manipulate" the standard; it could decline to make the disclosure.

Comment: Some commenters argued that the only exception to the application of the standard should be when an individual requests access to his or her own information. Many of these commenters expressed specific concerns about victims of domestic violence and other forms of abuse.

Response: We do not agree with the general assertion that disclosure to the individual is the only appropriate exception to the minimum necessary standard. There are other, limited, circumstances in which application of the minimum necessary standard could cause significant harm. For reasons described above, disclosures of protected health information for treatment purposes are not subject to this standard. Similarly, as described in detail in the preamble to § 164.512(a), where another public body has mandated the disclosure of health information, upsetting that judgment in this regulation would not be appropriate.

The more specific concerns expressed about victims of domestic violence and other forms of abuse are addressed in a new provision regarding disclosure of protected health information related to domestic violence and abuse (see § 164.512(c)), and in new limitations on disclosures to persons involved in the individual's care (see § 164.510(b)). We believe that the limitations we place on disclosure of health information in those circumstances address the concerns of these commenters.

Comment: Some commenters argued that disclosures to next of kin should be restricted to minimum necessary protected health information, and to protected health information about only the current medical condition.

Response: In the final regulation, we change the proposed provision regarding "next of kin" to more clearly focus on the disclosures we intended to target: Disclosures to persons involved ***82716** in the individual's care. We allow such disclosure only with the agreement of the individual, or where the covered entity has offered the individual the opportunity to object to the disclosure and the individual did not object. If the opportunity to object cannot practicably be provided because of the incapacity of the individual or other emergency, we require covered entities to exercise professional judgment in the best interest of the patient in deciding whether to disclose information. In such cases, we permit disclosure only of that information directly relevant to the person's involvement with the individual's health care. (This provision also includes limited disclosure to certain persons seeking to identify or locate an individual.) See § 164.510(b).

Some additional concerns expressed about victims of domestic violence and other forms of abuse are also addressed in a new section on disclosure of protected health information related to domestic violence and abuse. See § 164.512(c). We believe that the limitations we place on disclosure of health information in these provisions address the concerns of these commenters.

Comment: Some commenters argued that covered entities should be required to determine whether de-identified information could be used before disclosing information under the minimum necessary standard.

Response: We believe that requiring covered entities' policies and procedures for minimum necessary disclosures to address whether de-identified information could be used in all instances would impose burdens on some covered entities that could

outweigh the benefits of such a requirement. There is significant variation in the sophistication of covered entities' information systems. Some covered entities can reasonably implement policies and procedures that make significant use of de-identified information; other covered entities would find such a requirement excessively burdensome. For this reason, we chose instead to require "reasonable efforts," which can vary according to the situation of each covered entity.

In addition, we believe that the fact that we allow de-identified information to be disclosed without regard to the policies, procedures, and documentation required for disclosure of identifiable health information will provide an incentive to encourage its use where appropriate.

Comment: Several commenters argued that standard transactions should not be subject to the standard.

Response: We agree that data elements that are required or situationally required in the standard transactions should not be, and are not, subject to this standard. However, in many cases, covered entities have significant discretion as to the information included in these transactions. Therefore, this standard does apply to those optional data elements.

Comment: Some commenters asked for clarification to understand how the minimum necessary standard is intended to interact with the security NPRM.

Response: The proposed Security Rule included requirements for electronic health information systems to include access management controls. Under this regulation, the covered entity's privacy policies will determine who has access to what protected health information. We will make every effort to ensure consistency prior to publishing the final Security Rule.

Comment: Many commenters, representing health care providers, argued that if the request was being made by a health plan, the health plan should be required to request only the minimum protected health information necessary. Some of these commenters stated that the requestor is in a better position to know the minimum amount of information needed for their purposes. Some of these commenters argued that the minimum necessary standard should be imposed only on the requesting entity. A few of these commenters argued that both the disclosing and the requesting entity should be subject to the minimum necessary standard, to create "internal tension" to assure the standard is honored.

Response: We agree, and in the final rule we require that a request for protected health information made by one covered entity to another covered entity must be limited to the minimum amount necessary for the purpose. As with uses and disclosures of protected health information, covered entities may have standard protocols for routine requests. Similarly, this requirement does not apply to requests made to health care providers for treatment purposes. We modify the rule to balance this provision; that is, it now applies both to disclosure of and requests for protected health information. We also allow, but do not require, the covered entity releasing the information to reasonably rely on the assertion of a requesting covered entity that it is requesting only the minimum protected health information necessary.

Comment: A few commenters suggested that there should be a process for resolving disputes between covered entities over what constitutes the "minimum necessary" information.

Response: We do not intend that this rule change the way covered entities currently handle their differences regarding the disclosure of health information. We understand that the scope of information requested from providers by health plans is a source of tension in the industry today, and we believe it would not be appropriate to use this regulation to affect that debate. As discussed above, we require both the requesting and the disclosing covered entity to take privacy concerns into account, but do not inject additional tension into the on-going discussions.

Section 164.514(e)—Marketing

Comment: Many commenters requested clarification of the boundaries between treatment, payment, health care operations, and marketing. Some of these commenters requested clarification of the apparent inconsistency between language in proposed

§ 164.506(a)(1)(i) (a covered entity is permitted to use or disclose protected health information without authorization "to carry out" treatment, payment, or health care operations) and proposed § 164.508(a)(2)(A) (a covered entity must obtain an authorization for all uses and disclosures that are not "compatible with or directly related to" treatment, payment, and health care operations). They suggested retaining the language in proposed § 164.508(a)(2)(A), which would permit a broader range of uses and disclosures without authorization, in order to engage in health promotion activities that might otherwise be considered marketing.

Response: In the final rule, we make several changes to the definitions of treatment, payment, and health care operations that are intended to clarify the uses and disclosures of protected health information that may be made for each purpose. See § 164.501 and the corresponding preamble discussion regarding the definitions of these terms. We also have added a definition of the term "marketing" to help establish the boundary between marketing and treatment, payment, and health care operations. See § 164.501. We also clarify the conditions under which authorization is or is not required for uses and disclosures of protected health information for marketing purposes. See § 164.514(e). Due to these changes, we believe it is appropriate to retain the wording from proposed § 164.506(a)(1)(i). ***82717**

Comment: We received a wide variety of suggestions with respect to authorization for uses and disclosures of protected health information for marketing purposes. Some commenters supported requiring authorization for all such uses and disclosures. Other commenters suggested permitting all such uses and disclosures without authorization.

Some commenters suggested we distinguish between marketing to benefit the covered entity and marketing to benefit a third party. For example, a few commenters suggested we should prohibit covered entities from seeking authorization for any use or disclosure for marketing purposes that benefit a third party. These commenters argued that the third parties should be required to obtain the individual's authorization directly from the individual, not through a covered entity, due to the potential for conflicts of interest.

While a few commenters suggested that we require covered entities to obtain authorization to use or disclose protected health information for the purpose of marketing its own products and services, the majority argued these types of marketing activities are vital to covered entities and their customers and should therefore be permitted to occur without authorization. For example, commenters suggested covered entities should be able to use and disclose protected health information without authorization in order to provide appointment reminders, newsletters, information about new initiatives, and program bulletins.

Finally, many commenters argued we should not require authorization for the use or disclosure of protected health information to market any health-related goods and services, even if those goods and services are offered by a third party. Some of these commenters suggested that individuals should have an opportunity to opt out of these types of marketing activities rather than requiring authorization.

Response: We have modified the final rule in ways that address a number of the issues raised in the comments. First, the final rule defines the term marketing, and excepts certain communications from the definition. See § 164.501. These exceptions include communications made by covered entities for the purpose of describing network providers or other available products, services, or benefits and communications made by covered entities for certain treatment-related purposes. These exceptions only apply to oral communications or to written communications for which the covered entity receives no third-party remuneration. The exceptions to the definition of marketing fall within the definitions of treatment and/or health care operations, and therefore uses, or disclosures to a business associate, of protected health information for these purposes are permissible under the rule without authorization.

The final rule also permits covered entities to use protected health information to market health-related products and services, whether they are the products and services of the covered entity or of a third party, subject to a number of limitations. See § 164.514(e). We permit these uses to allow entities in the health sector to inform their patients and enrollees about products that may benefit them. The final rule contains significant restrictions, including requirements that the covered entity disclose

itself as the source of a marketing communication, that it disclose any direct or indirect remuneration from third parties for making the disclosure, and that, except in the cases of general communications such as a newsletter, the communication disclose how the individual can opt-out of receiving additional marketing communications. Additional requirements are imposed if the communication is targeted based on the health status or condition of the proposed recipients.

We believe that these modifications address many of the issues raised by commenters and provide a substantial amount of flexibility as to when a covered entity may communicate about a health-related product or service to a patient or enrollee. These communications may include appointment reminders, newsletters, and information about new health products. These changes, however, do not permit a covered entity to disclose protected health information to third parties for marketing (other than to a business associate to make a marketing communication on behalf of the covered entity) without authorization under § 164.508.

Comment: A few commenters suggested we prohibit health care clearinghouses from seeking authorization for the use or disclosure of protected health information for marketing purposes.

Response: We do not prohibit clearinghouses from seeking authorizations for these purposes. We believe, however, that health care clearinghouses will almost always create or obtain protected health information in a business associate capacity. Business associates may only engage in activities involving the use or disclosure of protected health information, including seeking or acting on an authorization, to the extent their contracts allow them to do so. When a clearinghouse creates or receives protected health information other than as a business associate of a covered entity, it is permitted and required to obtain authorizations to the same extent as any other covered entity.

Comment: A few commenters suggested we require covered entities to publicly disclose, on the covered entity's website or upon request, all of their marketing arrangements.

Response: While we agree that such a requirement would provide individuals with additional information about how their information would be used, we do not feel that such a significant intrusion into the business practices of the covered entity is warranted.

Comment: Some commenters argued that if an activity falls within the scope of payment, it should not be considered marketing. Commenters strongly supported an approach which would bar an activity from being construed as “marketing” even if performing that activity would result in financial gain to the covered entity. In a similar vein, we were urged to adopt the position that if an activity was considered payment, treatment or health care operations, it could not be further evaluated to determine whether it should be excluded as marketing.

Response: We considered the approach offered by commenters but decided against it. Some activities, such as the marketing of a covered entity's own health-related products or services, are now included in the definition of health care operations, provided certain requirements are met. Other types of activities, such as the sale of a patient list to a marketing firm, would not be permitted under this rule without authorization from the individual. We do not believe that we can envision every possible disclosure of health information that would violate the privacy of an individual, so any list would be incomplete. Therefore, whether or not a particular activity is considered marketing, payment, treatment or health care operations will be a fact-based determination based on the activity's congruence with the particular definition.

Comment: Some industry groups stated that if an activity involves selling products, it is not disease management. They suggested we adopt a definition of disease management that differentiates use of information for the best interests of patient from uses undertaken for “ulterior purposes” such as advertising, marketing, or promoting separate products. ***82718**

Response: We agree in general that the sale of unrelated products to individuals is not a population-based activity that supports treatment and payment. However, in certain circumstances marketing activities are permitted as a health care operation; see the definition of “health care operations” in § 164.501 and the related marketing requirements of § 164.514.

Comment: Some commenters complained that the absence of a definition for disease management created uncertainty, in view of the proposed rule's requirement to get authorization for marketing. They expressed concern that the effect would be to require patient consent for many activities that are desirable, not practicably done if authorization is required, and otherwise classifiable as treatment, payment, or health care operations. Examples provided include reminders for appointments, reminders to get preventive services like mammograms, and information about home management of chronic illnesses. They also stated that the proposed rule would prevent many disease management and preventive health activities.

Response: We agree that the distinction in the NPRM between disease management and marketing was unclear. Rather than provide a definition of disease management, this final rule defines marketing. We note that overlap between disease management and marketing exists today in practice and they cannot be distinguished easily with a definitional label. However, for purposes of this rule, the revised language makes clear for what activities an authorization is required. We note that under this rule many of the activities mentioned by commenters will not require authorizations under most circumstances. See the discussion of disease management under the definition of "treatment" in § 164.501.

Section 164.514(f)—Fundraising

Comment: Many comments objected to the requirement that an authorization from the individual be obtained for use and disclosure of protected health information for fundraising purposes. They argued that, in the case of not-for-profit health care providers, having to obtain authorization would be time consuming and costly, and that such a requirement would lead to a decrease in charitable giving. The commenters also urged that fundraising be included within the definition of health care operations. Numerous commenters suggested that they did not need unfettered access to patient information in order to carry out their fundraising campaigns. They stated that a limited data set restricted to name, address, and telephone number would be sufficient to meet their needs. Several commenters suggested that we create a voluntary opt-out provision so people can avoid solicitations.

Response: We agree with commenters that our proposal could have adversely effected charitable giving, and accordingly make several modifications to the proposal. First, the final rule allows a covered entity to use or disclose to a business associate protected health information without authorization to identify individuals for fundraising for its own benefit. Permissible fundraising activities include appeals for money, sponsorship of events, etc. They do not include royalties or remittances for the sale of products of third parties (except auctions, rummage sales, etc).

Second, the final rule allows a covered entity to disclose protected health information without authorization to an institutionally related foundation that has as its mission to benefit the covered entity. This special provision is necessary to accommodate tax code provisions which may not allow such foundations to be business associates of their associated covered entity.

We also agree that broad access to protected health information is unnecessary for fundraising and unnecessarily intrudes on individual privacy. The final rule limits protected health information to be used or disclosed for fundraising to demographic information and the date that treatment occurred. Demographic information is not defined in the rule, but will generally include in this context name, address and other contact information, age, gender, and insurance status. The term does not include any information about the illness or treatment.

We also agree that a voluntary opt-out is an appropriate protection, and require in § 164.520 that covered entities provide information on their fundraising activities in their "Notice of Information Practices." As part of the notice and in any fundraising materials, covered entities must provide information explaining how individuals may opt out of fundraising communications.

Comment: Some commenters stated that use and disclosure of protected health information for fundraising, without authorization should be limited to not-for-profit entities. They suggested that not-for-profit entities were in greater need of charitable contributions and as such, they should be exempt from the authorization requirement while for-profit organizations should have to comply with the requirement.

Response: We do not agree that the profit status of a covered entity should determine its allowable use of protected health information for fundraising. Many for-profit entities provide the same services and have similar missions to not-for-profit entities. Therefore, the final rule does not make this distinction.

Comment: Several commenters suggested that the final rule should allow the internal use of protected health information for fundraising, without authorization, but not disclosure for fundraising. These commenters suggested that by limiting access of protected health information to only internal development offices concerns about misuse would be reduced.

Response: We do not agree. A number of commenters noted that they have related charitable foundations that raise funds for the covered entity, and we permit disclosures to such foundations to ensure that this rule does not interfere with charitable giving.

Comment: Several commenters asked us to address the content of fundraising letters. They pointed out that disease or condition-specific letters requesting contributions, if opened by the wrong person, could reveal personal information about the intended recipient.

Response: We agree that such communications raise privacy concerns. In the final rule, we limit the information that can be used or disclosed for fundraising, and exclude information about diagnosis, nature of services, or treatment.

Section 164.514(g)—Verification

Comment: A few commenters suggested that verification guidelines may need to be different as they apply to emergency clinical situations as opposed to routine data collection where delays do not threaten health.

Response: We agree, and make special provisions in §§ 164.510 and 164.512 for disclosures of protected health information by a covered entity without authorization where the individual is unable to agree or object to disclosure due to incapacity or other emergency circumstance.

For example, a health care provider may need to make disclosures to family members, close personal friends, and others involved in the individual's care in emergency situations. Similarly, a health care provider may need to respond to a request from a hospital seeking protected health information in ***82719** a circumstance described as an emergency. In each case, we require only that the covered entity exercise professional judgment, in the best interest of the patient, in deciding whether to make a disclosure. Based on the comments and our fact finding, this reflects current practice.

Comment: A few commenters stated the rules should include provisions for electronic verification of identity (such as Public Key Infrastructure (PKI)) as established in the regulations on Security and Electronic Signatures. One commenter suggested that some kind of PKI credentialing certificate should be required.

Response: This regulation does not address specific technical protocols utilized to meet the verification requirements. If the requirements of the rule are otherwise met, the mechanism for meeting them can be determined by the covered entity.

Comment: A few commenters wanted more clarification on the verification procedures. One commenter wanted to know if contract number is enough for verification. A few commenters wanted to know if a callback or authorization on a letterhead is acceptable. A few commenters wanted to know if plans are considered to “routinely do business” with all of their members.

Response: In the final rule, we modify the proposed provision and require covered entities to have policies and procedures reasonably designed to verify the identify and authority of persons requesting protected health information. Whether knowledge of a contract number is reasonable evidence of authority and identity will depend on the circumstances. Call-backs and letterhead are typically used today for verification, and are acceptable under this rule if reasonable under the circumstances. For communications with health plan members, the covered entity will already have information about each individual, collected

during enrollment, that can be used to establish identity, especially for verbal or electronic inquiries. For example, today many health plans ask for the social security or policy number of individuals seeking information or assistance by telephone. How this verification is done is left up to the covered entity.

Comment: One commenter expressed the need for consistency on verification requirements between this rule and the Security regulation.

Response: We will make every effort to ensure consistency prior to publishing the final Security Rule.

Comment: One commenter stated that the verification language in proposed § 164.518(c)(2)(ii)(B)(1) would have created a presumption that "a request for disclosure made by official legal process issued by a[n] administrative body" is reasonable legal authority to disclose the protected health information. The commenter was concerned that this provision could be interpreted to permit a state agency to demand the disclosure of protected health information merely on the basis of a letter signed by an agency representative. The commenter believed that the rule specifically should defer to state or federal law on the disclosure of protected health information pursuant to legal process.

Response: The verification provisions in this rule are minimum requirements that covered entities must meet before disclosing protected health information under this regulation. They do not mandate disclosure, nor do they preempt state laws which impose additional restrictions on disclosure. Where state law regarding disclosures is more stringent, the covered entity must adhere to state law.

Comment: A few commenters wanted the verification requirements to apply to disclosures of protected health information for treatment, payment and operations purposes.

Response: We agree. This verification requirement applies to all disclosures of protected health information permitted by this rule, including for treatment, payment and operations, where the identity of the recipient is not known to the covered entity. Routine communications between providers, where existing relationships have been established, do not require special verification procedures.

Comment: A few commenters were concerned that a verbal inquiry for next of kin verification is not consistent with the verification guidelines of this verification subsection and that verbal inquiry would create problems because anyone who purports to be a next of kin could easily obtain information under false pretenses.

Response: In the final rule in § 164.514, we require the covered entity to verify the identity and authority of persons requesting protected health information, where the identity and authority of such person is not known to the covered entity. This applies to next of kin situations. Procedures for disclosures to next of kin, other family members and persons assisting in an individual's care are also discussed in § 164.510(b), which allows the covered entity to exercise professional judgment as to whether the disclosure is in the individual's best interest when the individual is not available to agree to the disclosure or is incapacitated. Requiring written proof of identity in many of these situations, such as when a family member is seeking to locate a relative in an emergency or disaster situation, would create enormous burden without a corresponding enhancement of privacy, and could cause unnecessary delays in these situations. We therefore believe that reliance on professional judgment provides a better framework for balancing the need for privacy with the need to locate and identify individuals.

Comment: A few commenters stated that the verification requirements will provide great uncertainty to providers who receive authorizations from life, disability income and long-term care insurers in the course of underwriting and claims investigation. They are unaware of any breaches of confidentiality associated with these circumstances and believe the rule creates a solution to a non-existent problem. Another commenter stated that it is too burdensome for health care providers to verify requests that are normally received verbally or via fax.

Response: This rule requires covered health care providers to adhere to current best practices for verification. That is, when the requester is not known to the covered provider, the provider makes a reasonable effort to determine that the protected health information is being sent to the entity authorized to receive it. Our fact finding reveals that this is often done by sending the information to a recognizable organizational address or if being transmitted by fax or phone by calling the requester back through the main organization switchboard rather than through a direct phone number. We agree that these procedures seem to work reasonably well in current practice and are sufficient to meet the relevant requirements in the final rule.

Comments: One comment suggested requiring a form of photo identification such as a driver's license or certain personal information such as date of birth to verify the identity of the individual.

Response: These are exactly the types of standard procedures for verifying the identity of individuals that are envisioned by the final rule. Most health care entities already conduct such procedures successfully. However, it is unwise to prescribe specific means of verification for all situations. Instead, we require policies and procedures reasonably designed for purposes of verification.

Comment: One professional association said that the example procedure described in the NPRM for asking questions to verify that an adult ***82720** acting for a young child had the requisite relationship to the child would be quite complex and difficult in practice. The comment asked for specific guidance as to what questions would constitute an adequate attempt to verify such a relationship.

Response: The final rule requires the covered entity to implement policies and procedures that are reasonably designed to comply with the verification requirement in § 164.514. It would not be possible to create the requested specific guidance which could deal with the infinite variety of situations that providers must face, especially the complex ones such as that described by the commenter. As with many of the requirements of this final rule, health care providers are given latitude and expected to make decisions regarding disclosures, based on their professional judgment and experience with common practice, in the best interest of the individual.

Comment: One commenter asserted that ascertaining whether a requestor has the appropriate legal authority is beyond the scope of the training or expertise of most employees in a physician's office. They believe that health care providers must be able to reasonably rely on the authority of the requestor.

Response: In the final regulation we require covered entities to have policies and procedures reasonably designed to verify the identify and authority of persons requesting health information. Where the requester is a public official and legal authority is at issue, we provide detailed descriptions of the acceptable methods for such verification in the final rule. For others, the covered entity must implement policies and procedures that are reasonably designed to comply with the requirement to verify the identity and authority of a requestor, but only if the requestor is unknown to the covered entity. As described above, we expect these policies and procedures to document currently used best practices and reliance on professional judgment in the best interest of the individual.

Comment: One commenter expressed concern that the verification/identification procedures may eliminate or significantly reduce their ability to utilize medical records copy services. As written, they believe the NPRM provides the latitude to set up copy service arrangements, but any change that would add restrictions would adversely affect their ability to process an individual's disability claim.

Response: The covered entity can establish reasonable policies and procedures to address verification in routine disclosures under business associate agreements, with, for example, medical records copy services. Nothing in the verification provisions would preclude those activities, nor have we significantly modified the NPRM provision on this issue.

Section 164.520—Notice of Privacy Practices for Protected Health Information

Comment: Many commenters supported the proposal to require covered entities to produce a notice of information practices. They stated that such notice would improve individuals' understanding of how their information may be used and disclosed and would help to build trust between individuals and covered entities. A few comments, however, argued that the notice requirement would be administratively burdensome and expensive without providing significant benefit to individuals.

Response: We retain the requirement for covered health care providers and health plans to produce a notice of information practices. We additionally require health care clearinghouses that create or receive protected health information other than as a business associate of another covered entity to produce a notice. We believe the notice will provide individuals with a clearer understanding of how their information may be used and disclosed and is essential to inform individuals of their privacy rights. The notice will focus individuals on privacy issues, and prompt individuals to have discussions about privacy issues with their health plans, health care providers, and other persons.

The importance of providing individuals with notice of the uses and disclosures of their information and of their rights with respect to that information is well supported by industry groups, and is recognized in current state and federal law. The July 1977 Report of the Privacy Protection Study Commission recommended that "each medical-care provider be required to notify an individual on whom it maintains a medical record of the disclosures that may be made of information in the record without the individual's express authorization."[FN23] The Commission also recommended that "an insurance institution * * * notify (an applicant or principal insured) as to: * * * the types of parties to whom and circumstances under which information about the individual may be disclosed without his authorization, and the types of information that may be disclosed; [and] * * * the procedures whereby the individual may correct, amend, delete, or dispute any resulting record about himself."[FN24] The Privacy Act (5 U.S.C. 552a) requires government agencies to provide notice of the routine uses of information the agency collects and the rights individuals have with respect to that information. In its report "Best Principles for Health Privacy," the Health Privacy Working Group stated, "Individuals should be given notice about the use and disclosure of their health information and their rights with regard to that information."[FN25] The National Association of Insurance Commissioners' Health Information Privacy Model Act requires carriers to provide a written notice of health information policies, standards, and procedures, including a description of the uses and disclosures prohibited and permitted by the Act, the procedures for authorizing and limiting disclosures and for revoking authorizations, and the procedures for accessing and amending protected health information.

Some states require additional notice. For example, Hawaii requires health care providers and health plans, among others, to produce a notice of confidentiality practices, including a description of the individual's privacy rights and a description of the uses and disclosures of protected health information permitted under state law without the individual's authorization. (HRS section 323C-13)

Today, health plan hand books and evidences of coverage include some of what is required to be in the notice. Industry and standard-setting organizations have also developed notice requirements. The National Committee for Quality Assurance accreditation guidelines state that an accredited managed care organization "communicates to prospective members its policies and practices regarding the collection, use, and disclosure of medical information [and] * * * informs members * * * of its policies and procedures on * * * allowing members access to their medical records."[FN26] Standards of the American Society for Testing and Materials state, ***82721** "Organizations and individuals who collect, process, handle, or maintain health information should provide individuals and the public with a notice of information practices." They recommend that the notice include, among other elements, "a description of the rights of individuals, including the right to inspect and copy information and the right to seek amendments [and] a description of the types of uses and disclosures that are permitted or required by law without the individual's authorization."[FN27] We build on this well-established principle in this final rule.

Comment: We received many comments on the model notice provided in the proposed rule. Some commenters argued that patients seeing similar documents would be less likely to become disoriented when examining a new notice. Other commenters, however, opposed the inclusion of a model notice or expressed concern about particular language included in the model. They maintained that a uniform model notice would never capture the varying practices of covered entities. Many commenters

opposed requirements for a particular format or specific language in the notice. They stated that covered entities should be afforded maximum flexibility in fashioning their notices. Other commenters requested inclusion of specific language as a header to indicate the importance of the notice. A few commenters recommended specific formatting requirements, such as font size or type.

Response: On the whole, we found commenters' arguments for flexibility in the regulation more persuasive than those arguing for more standardization. We agree that a uniform notice would not capture the wide variation in information practices across covered entities. We therefore do not include a model notice in the final rule, and do not require inclusion of specific language in the notice (except for a standard header). We also do not require particular formatting. We do, however, require the notice to be written in plain language. (See above for guidance on writing documents in plain language.) We also agree with commenters that the notice should contain a standard header to draw the individual's attention to the notice and facilitate the individual's ability to recognize the notice across covered entities.

We believe that post-publication guidance will be a more effective mechanism for helping covered entities design their notices than the regulation itself. After the rule is published, we can provide guidance on notice content and format tailored to different types of health plans and providers. We believe such specially designed guidance will be more useful than a one-size-fits-all model notice we might publish with this regulation.

Comment: Commenters suggested that the rule should require that the notice regarding privacy practices include specific provisions related to health information of unemancipated minors.

Response: Although we agree that minors and their parents should be made aware of practices related to confidentiality of protected health information of unemancipated minors, we do not require covered entities that treat minors or use their protected health information to include provisions in their notice that are not required of other covered entities. In general, the content of notice requirements in § 164.520(b) do not vary based on the status of the individual being served. We have decided to maintain consistency by declining to prescribe specific notice requirements for minors. The rule does permit a covered entity to provide individuals with notice of its policies and procedures with respect to anticipated uses and disclosures of protected health information (§ 164.520(b)(2)), and providers are encouraged to do so.

Comment: Some commenters argued that covered entities should not be required to distinguish between those uses and disclosures that are required by law and those that are permitted by law without authorization, because these distinctions may not always be clear and will vary across jurisdictions. Some commenters maintained that simply stating that the covered entity would make all disclosures required by law would be sufficient. Other comments suggested that covered entities should be able to produce very broadly stated notices so that repeated revisions and mailings of those revisions would not be necessary.

Response: While we believe that covered entities have an independent duty to understand the laws to which they are subject, we also recognize that it could be difficult to convey such legal distinctions clearly and concisely in a notice. We therefore eliminate the proposed requirement for covered entities to distinguish between those uses and disclosures that are required by and those that are permitted by law. We instead require that covered entities describe each purpose for which they are permitted or required to use or disclose protected health information under this rule and other applicable law without individual consent or authorization. Specifically, covered entities must describe the types of uses and disclosures they are permitted to make for treatment, payment, and health care operations. They must also describe each of the purposes for which the covered entity is permitted or required by this subpart to use or disclose protected health information without the individual's written consent or authorization (even if they do not plan to make a permissive use or disclosure). We believe this requirement provides individuals with sufficient information to understand how information about them can be used and disclosed and to prompt them to ask for additional information to obtain a clearer understanding, while minimizing covered entities' burden.

A notice that stated only that the covered entity would make all disclosures required by law, as suggested by some of these commenters, would fail to inform individuals of the uses and disclosures of information about them that are permitted, but not

required, by law. We clarify that each and every disclosure required by law need not be listed on the notice. Rather, the covered entity can include a general statement that disclosures required by law will be made.

Comment: Some comments argued that the covered entity should not have to provide notice about uses and disclosures that are permitted under the rule without authorization. Other comments suggested that the notice should inform individuals about all of the uses and disclosures that may be made, with or without the individual's authorization.

Response: When the individual's permission is not required for uses and disclosures of information, we believe providing the required notice is the most effective means of ensuring that individuals are aware of how information about them may be shared. The notice need not describe uses and disclosures for which the individual's permission is required, because the individual will be informed of these at the time permission to use or disclose the information is requested.

We additionally require covered entities, even those required to obtain the individual's consent for use and disclosure of protected health information for treatment, payment, and health care operations, to describe those uses and disclosures in their notice. (See § 164.506 and the corresponding preamble discussion regarding consent requirements.) We require these uses ***82722** and disclosures to be described in the notice in part in order to reduce the administrative burden on covered providers that are required to obtain consent. Rather than obtaining a new consent each time the covered provider's information policies and procedures are materially revised, covered providers may revise and redistribute their notice. We also expect that the description of how information may be used to carry out treatment, payment, and health care operations in the notice will be more detailed than in the more general consent document.

Comment: Some commenters argued that covered entities should not be required to provide notice of the right to request restrictions, because doing so would be burdensome to the covered entity and distracting to the individual; because individuals have the right whether they are informed of such right or not; and because the requirement would be unlikely to improve patient care.

Response: We disagree. We believe that the ability of an individual to request restrictions is an important privacy right and that informing people of their rights improves their ability to exercise those rights. We do not believe that adding a sentence to the notice is burdensome to covered entities.

Comment: We received comments supporting inclusion of a contact point in the notice, so that individuals will not be forced to make multiple calls to find someone who can assist them with the issues in the notice.

Response: We retain the requirement, but clarify that the title of the contact person is sufficient. A person's name is not required.

Comment: Some commenters argued that we could facilitate compliance by requiring the notice to include the proposed requirement that covered entities use and disclose only the minimum necessary protected health information.

Response: We do not agree that adding such a requirement would strengthen the notice. The purpose of the notice is to inform individuals of their privacy rights, and of the purposes for which protected health information about them may be used or disclosed. Informing individuals that covered entities may use and disclose only the minimum necessary protected health information for a purpose would not increase individuals' understanding of their rights or the purposes for which information may be used or disclosed.

Comment: A few commenters supported allowing covered entities to apply changes in their information practices to protected health information obtained prior to the change. They argued that requiring different protections for information obtained at different times would be inefficient and extremely difficult to administer. Some comments supported requiring covered entities to state in the notice that the information policies and procedures are subject to change.

Response: We agree. In the final rule, we provide a mechanism by which covered entities may revise their privacy practices and apply those revisions to protected health information they already maintain. We permit, but do not require, covered entities to reserve the right to change their practices and apply the revised practices to information previously created or obtained. If a covered entity wishes to reserve this right, it must make a statement to that effect in its notice. If it does not make such a statement, the covered entity may still revise its privacy practices, but it may apply the revised practices only to protected health information created or obtained after the effective date of the notice in which the revised practices are reflected. See § 164.530(i) and the corresponding preamble discussion of requirements regarding changes to information policies and procedures.

Comment: Some commenters requested clarification of the term "material changes" so that entities will be comfortable that they act properly after making changes to their information practices. Some comments stated that entities should notify individuals whenever a new category of disclosures to be made without authorization is created.

Response: The concept of "material change" appears in other notice laws, such as the ERISA requirements for summary plan descriptions. We therefore retain the "materiality" condition for revision of notices, and encourage covered entities to draw on the concept as it has developed through those other laws. We agree that the addition of a new category of use or disclosure of health information that may be made without authorization would likely qualify as a material change.

Comment: We proposed to permit covered entities to implement revised policies and procedures without first revising the notice if a compelling reason existed to do so. Some commenters objected to this proposal because they were concerned that the "compelling reason" exception would give covered entities broad discretion to engage in post hoc violations of its own information practices.

Response: We agree and eliminate this provision. Covered entities may not implement revised information policies and procedures before properly documenting the revisions and updating their notice. See § 164.530(i). Because in the final rule we require the notice to include all disclosures that may be made, not only those the covered entity intends to make, we no longer need this provision to accommodate emergencies.

Comment: Some comments suggested that we require covered entities to maintain a log of all past notices, with changes from the previous notice highlighted. They further suggested we require covered entities to post this log on their web sites.

Response: In accordance with § 164.530(j)(2), a covered entity must retain for six years a copy of each notice it issues. We do not require highlighting of changes to the notice or posting of prior notices, due to the associated administrative burdens and the complexity such a requirement would build into the notice over time. We encourage covered entities, however, to make such materials available upon request.

Comment: Several commenters requested clarification about when, relative to the compliance date, covered entities are required to produce their notice. One commenter suggested that covered entities be allowed a period not less than 180 days after adoption of the final rule to develop and distribute the notice. Other comments requested that the notice compliance date be consistent with other HIPAA regulations.

Response: We require covered entities to have a notice available upon request as of the compliance date of this rule (or the compliance date of the covered entity if such date is later). See § 164.534 and the corresponding preamble discussion of the compliance date.

Comment: Some commenters suggested that covered entities, particularly covered health care providers, should be required to discuss the notice with individuals. They argued that posting a notice or otherwise providing the notice in writing may not achieve the goal of informing individuals of how their information will be handled, because some individuals may not be literate or able to function at the reading level used in the notice. Others argued that entities should have the flexibility to choose alternative modes of communicating the information in the notice, including voice disclosure. In contrast, some commenters

were concerned that requirements to provide the notice in plain language or in languages other than English would be overly burdensome. ***82723**

Response: We require covered entities to write the notice in plain language so that the average reader will be able to understand the notice. We encourage, but do not require, covered entities to consider alternative means of communicating with certain populations. We note that any covered entity that is a recipient of federal financial assistance is generally obligated under Title VI of the Civil Rights Act of 1964 to provide material ordinarily distributed to the public in the primary languages of persons with limited English proficiency in the recipients' service areas. While we believe the notice will prompt individuals to initiate discussions with their health plans and health care providers about the use and disclosure of health information, we believe this should be a matter left to each individual and that requiring covered entities to initiate discussions with each individual would be overly burdensome.

Comment: Some commenters suggested that covered entities, particularly health plans, should be permitted to distribute their notice in a newsletter or other communication with individuals.

Response: We agree, so long as the notice is sufficiently separate from other important documents. We therefore prohibit covered entities from combining the notice in a single document with either a consent (§ 164.506) or an authorization (§ 164.508), but do not otherwise prohibit covered entities from including the notice in or with other documents the covered entity shares with individuals.

Comment: Some comments suggested that covered entities should not be required to respond to requests for the notice from the general public. These comments indicated that the requirement would place an undue burden on covered entities without benefitting individuals.

Response: We proposed that the notice be publicly available so that individuals may use the notice to compare covered entities' privacy practices and to select a health plan or health care provider accordingly. We therefore retain the proposed requirement for covered entities to provide the notice to any person who requests a copy, including members of the general public.

Comment: Many commenters argued that the distribution requirements for health plans should be less burdensome. Some suggested requiring distribution upon material revision, but not every three years. Some suggested that health plans should only be required to distribute their notice annually or upon re-enrollment. Some suggested that health plans should only have to distribute their notice upon initial enrollment, not re-enrollment. Other commenters supported the proposed approach.

Response: We agree that the notice distribution requirements for health plans can be less burdensome than in the NPRM while still being effective. In the final rule, we reduce health plans' distribution burden in several ways. First, we require health plans to remind individuals every three years of the availability of the notice and of how to obtain a copy of the notice, rather than requiring the notice to be distributed every three years as proposed. Second, we clarify that health plans only have to distribute the notice to new enrollees on enrollment, not to current members of the health plan upon re-enrollment. Third, we specifically allow all covered entities to distribute the notice electronically in accordance with § 164.520(c)(3).

We retain the requirement for health plans to distribute the notice within 60 days of a material revision. We believe the revised distribution requirements will ensure that individuals are adequately informed of health plans' information practices and any changes to those procedures, without unduly burdening health plans.

Comment: Many commenters argued that health plans should not be required to distribute their notice to every person covered by the plan. They argued that distributing the notice to every family member would be unnecessarily duplicative, costly, and difficult to administer. They suggested that health plans only be required to distribute the notice to the primary participant or to each household with one or more insured individuals.

Response: We agree, and clarify in the final rule that a health plan may satisfy the distribution requirement by providing the notice to the named insured on behalf of the dependents of that named insured. For example, a group health plan may satisfy its notice requirement by providing a single notice to each covered employee of the plan sponsor. We do not require the group health plan to distribute the notice to each covered employee and to each covered dependent of those employees.

Comment: Many comments requested clarification about health plans' ability to distribute the notice via other entities. Some commenters suggested that group health plans should be able to satisfy the distribution requirement by providing copies of the notice to plan sponsors for delivery to employees. Others requested clarification that covered health care providers are only required to distribute their own notice and that health plans should be prohibited from using their affiliated providers to distribute the health plan's notice.

Response: We require health plans to distribute their notice to individuals covered by the health plan. Health plans may elect to hire or otherwise arrange for others, including group health plan sponsors and health care providers affiliated with the health plan, to carry out this distribution. We require covered providers to distribute only their own notices, and neither require nor prohibit health plans and health care providers from devising whatever arrangements they find suitable to meet the requirements of this rule. However, if a covered entity arranges for another person or entity to distribute the covered entity's notice on its behalf and individuals do not receive such notice, the covered entity would be in violation of the rule.

Comment: Some comments stated that covered providers without direct patient contact, such as clinical laboratories, might not have sufficient patient contact information to be able to mail the notice. They suggested we require or allow such providers to form agreements with referring providers or other entities to distribute notices on their behalf or to include their practices in the referring entity's own notice.

Response: We agree with commenters' concerns about the potential administrative and financial burdens of requiring covered providers that have indirect treatment relationships with individuals, such as clinical laboratories, to distribute the notice. Therefore, we require these covered providers to provide the notice only upon request. In addition, these covered providers may elect to reach agreements with other entities distribute their notice on their behalf, or to participate in an organized health care arrangement that produces a joint notice. See § 164.520(d) and the corresponding preamble discussion of joint notice requirements.

Comment: Some commenters requested that covered health care providers be permitted to distribute their notice prior to an individual's initial visit so that patients could review the information in advance of the visit. They suggested that distribution in advance would reduce the amount of time covered health care providers' staff would have to spend explaining the notice to patients in the office. Other comments argued that providers should ***82724** distribute their notice to patients at the time the individual visits the provider, because providers lack the administrative infrastructure necessary to develop and distribute mass communications and generally have difficulty identifying active patients.

Response: In the final rule, we clarify that covered providers with direct treatment relationships must provide the notice to patients no later than the first service delivery to the patient after the compliance date. For the reasons identified by these commenters, we do not require covered providers to send their notice to the patient in advance of the patient's visit. We do not prohibit distribution in advance, but only require distribution to the patient as of the time of the visit. We believe this flexibility will allow each covered provider to develop procedures that best meet its and its patients' needs.

Comment: Some comments suggested that covered providers should be required to distribute the notice as of the compliance date. They noted that if the covered provider waited to distribute the notice until first service delivery, it would be possible (pursuant to the rule) for a use or disclosure to be made without the individual's authorization, but before the individual receives the notice.

Response: Because health care providers generally lack the administrative infrastructure necessary to develop and distribute mass communications and generally have difficulty identifying active patients, we do not require covered providers to distribute the notice until the first service delivery after the compliance date. We acknowledge that this policy allows uses and disclosure of health information without individuals' consent or authorization before the individual receives the notice. We require covered entities, including covered providers, to have the notice available upon request as of the compliance date of the rule. Individuals may request a copy of the notice from their provider at any time.

Comment: Many commenters were concerned with the requirement that covered providers post their notice. Some commenters suggested that covered hospital-based providers should be able to satisfy the distribution requirements by posting their notice in multiple locations at the hospital, rather than handing the notice to patients—particularly with respect to distribution after material revisions have been made. Some additionally suggested that these covered providers should have copies of the notice available on site. Some commenters emphasized that the notice must be clear and conspicuous to give individuals meaningful and effective notice of their rights. Other commenters noted that posting the notice will not inform former patients who no longer see the provider.

Response: We clarify in the final rule that the requirement to post a notice does not substitute for the requirement to give individuals a notice or make notices available upon request. Covered providers with direct treatment relationships, including covered hospitals, must give a copy of the notice to the individual as of first service delivery after the compliance date. After giving the individual a copy of the notice as of that first visit, the covered provider has no other obligation to actively distribute the notice. We believe it is unnecessarily burdensome to require covered providers to mail the notice to all current and former patients each time the notice is revised, because unlike health plans, providers may have a difficult time identifying active patients. All individuals, including those who no longer see the covered provider, have the right to receive a copy of the notice on request.

If the covered provider maintains a physical delivery site, it must also post the notice (including revisions to the notice) in a clear and prominent location where it is reasonable to expect individuals seeking service from the covered provider to be able to read the notice. The covered provider must also have the notice available on site for individuals to be able to request and take with them.

Comment: Some comments requested clarification about the distribution requirements for a covered entity that is a health plan and a covered health care provider.

Response: Under § 164.504(g), discussed above, covered entities that conduct multiple types of covered functions, such as the kind of entities described in the above comments, are required to comply with the provisions applicable to a particular type of health care function when acting in that capacity. Thus, in the example described above, the covered entity is required by § 164.504(g) to follow the requirements for health plans with respect to its actions as a health plan and to follow the requirements for health care providers with respect to its actions as a health care provider.

Comment: We received many comments about the ability of covered entities to distribute their notices electronically. Many commenters suggested that we permit covered entities to distribute the notice electronically, either via a web site or e-mail. They argued that covered entities are increasingly using electronic technology to communicate with patients and otherwise administer benefits. They also noted that other regulations permit similar documents, such as ERISA-required summary plan descriptions, to be delivered electronically. Some commenters suggested that electronic distribution should be permitted unless the individual specifically requests a hard copy or lacks electronic access. Some argued that entities should be able to choose a least-cost alternative that allows for periodic changes without excessive mailing costs. A few commenters suggested requiring covered entities to distribute notices electronically.

Response: We clarify in the final rule that covered entities may elect to distribute their notice electronically, provided the individual agrees to receiving the notice electronically and has not withdrawn such agreement. We do not require any particular

form of agreement. For example, a covered provider could ask an individual at the time the individual requests a copy of the notice whether she prefers to receive it in hard copy or electronic form. A health plan could ask an individual applying for coverage to provide an e-mail address where the health plan can send the individual information. If the individual provides an e-mail address, the health plan can infer agreement to obtain information electronically.

An individual who has agreed to receive the notice electronically, however, retains the right to request a hard copy of the notice. This right must be described in the notice. In addition, if the covered entity knows that electronic transmission of the notice has failed, the covered entity must produce a hard copy of the notice. We believe this provision allows covered entities flexibility to provide the notice in the form that best meets their needs without compromising individuals' right to adequate notice of covered entities' information practices.

We note that covered entities may also be subject to the Electronic Signatures in Global and National Commerce Act. This rule is not intended to alter covered entities' requirements under that Act.

Comment: Some commenters were concerned that covered providers with “face-to-face” patient contact would have a competitive disadvantage against covered internet-based providers, because the face-to-face providers would be required to distribute the notice in hard copy while internet-based providers could satisfy the requirement ***82725** by requiring review of the notice on the web site before processing an order. They suggested allowing face-to-face covered providers to satisfy the distribution requirement by asking patients to review the notice posted on site.

Response: We clarify in the final rule that covered health care providers that provide services to individuals over the internet have direct treatment relationships with those individuals. Covered internet-based providers, therefore, must distribute the notice at the first service delivery after the compliance date by automatically and contemporaneously providing the notice electronically in response to the individual's first request for service, provided the individual agrees to receiving the notice electronically.

Even though we require all covered entity web sites to post the entity's notice prominently, we note that such posting is not sufficient to meet the distribution requirements. A covered internet-based provider must send the notice electronically at the individual's first request for service, just as other covered providers with direct treatment relationships must give individuals a copy of the notice as of the first service delivery after the compliance date.

We do not intend to create competitive advantages among covered providers. A web-based and a non-web-based covered provider each have the same alternatives available for distribution of the notice. Both types of covered providers may provide either a paper copy or an electronic copy of the notice.

Comment: We received several comments suggesting that some covered entities should be exempted from the notice requirement or permitted to combine notices with other covered entities. Many comments argued that the notice requirement would be burdensome for hospital-based physicians and result in numerous, duplicative notices that would be meaningless or confusing to patients. Other comments suggested that multiple health plans offered through the same employer should be permitted to produce a single notice.

Response: We retain the requirement for all covered health care providers and health plans to produce a notice of information practices. Health care clearinghouses are required to produce a notice of information practices only to the extent the clearinghouse creates or receives protected health information other than as a business associate of a covered entity. See § 164.500(b)(2). Two other types of covered entities are not required to produce a notice: a correctional institution that is a covered entity and a group health plan that provides benefits only through one or more contracts of insurance with health insurance issuers or HMOs.

We clarify in § 164.504(d), however, that affiliated covered entities under common ownership or control may designate themselves as a single covered entity for purposes of this rule. An affiliated covered entity is only required to produce a single notice.

In addition, covered entities that participate in an organized health care arrangement—which could include hospitals and their associated physicians—may choose to produce a single, joint notice, if certain requirements are met. See § 164.501 and the corresponding preamble discussion of organized health care arrangements.

We clarify that each covered entity included in a joint notice must meet the applicable distribution requirements. If any one of the covered entities, however, provides the notice to a given individual, the distribution requirement with respect to that individual is met for all of the covered entities included in the joint notice. For example, a covered hospital and its attending physicians may elect to produce a joint notice. When an individual is first seen at the hospital, the hospital must provide the individual with a copy of the joint notice. Once the hospital has done so, the notice distribution requirement for all of the attending physicians that provide treatment to the individual at the hospital and that are included in the joint notice is satisfied.

Comment: We solicited and received comments on whether to require covered entities to obtain the individual's signature on the notice. Some commenters suggested that requiring a signature would convey the importance of the notice, would make it more likely that individuals read the notice, and could have some of the same benefits of a consent. They noted that at least one state already requires entities to make a reasonable effort to obtain a signed notice. Other comments noted that the signature would be useful for compliance and risk management purposes because it would document that the individual had received the notice.

The majority of commenters on this topic, however, argued that a signed acknowledgment would be administratively burdensome, inconsistent with the intent of the Administrative Simplification requirements of HIPAA, impossible to achieve for incapacitated individuals, difficult to achieve for covered entities that do not have direct contact with patients, inconsistent with other notice requirements under other laws, misleading to individuals who might interpret their signature as an agreement, inimical to the concept of permitting uses and disclosures without authorization, and an insufficient substitute for authorization.

Response: We agree with the majority of commenters and do not require covered entities to obtain the individual's signed acknowledgment of receipt of the notice. We believe that we satisfied most of the arguments in support of requiring a signature with the new policy requiring covered health care providers with direct treatment relationships to obtain a consent for uses and disclosures of protected health information to carry out treatment, payment, and health care operations. See § 164.506 and the corresponding preamble discussion of consent requirements. We note that this rule does not preempt other applicable laws that require a signed notice and does not prohibit a covered entity from requesting an individual to sign the notice.

Comment: Some commenters supported requiring covered entities to adhere to their privacy practices, as described in their notice. They argued that the notice is meaningless if a covered entity does not actually have to follow the practices contained in its notice. Other commenters were concerned that the rule would prevent a covered entity from using or disclosing protected health information in otherwise lawful and legitimate ways because of an intentional or inadvertent omission from its published notice. Some of these commenters suggested requiring the notice to include a description of some or all disclosures that are required or permitted by law. Some commenters stated that the adherence requirement should be eliminated because it would generally inhibit covered entities' ability to innovate and would be burdensome.

Response: We agree that the value of the notice would be significantly diminished absent a requirement that covered entities adhere to the statements they make in their notices. We therefore retain the requirement for covered entities to adhere to the terms of the notice. See § 164.502(i).

Many of these commenters' concerns regarding a covered entity's inability to use or disclose protected health information due to an intentional or inadvertent omission from the notice are addressed in our revisions to the proposed content requirements for the notice. Rather than require covered entities to describe only those uses and ***82726** disclosures they anticipate making,

as proposed, we require covered entities to describe all uses and disclosures they are required or permitted to make under the rule without the individual's consent or authorization. We permit a covered entity to provide a statement that it will disclose protected health information that is otherwise required by law, as permitted in § 164.512(a), without requiring them to list all state laws that may require disclosure. Because the notice must describe all legally permissible uses and disclosures, the notice will not generally preclude covered entities from making any uses or disclosures they could otherwise make without individual consent or authorization. This change will also ensure that individuals are aware of all possible uses and disclosures that may occur without their consent or authorization, regardless of the covered entity's current practices.

We encourage covered entities, however, to additionally describe the more limited uses and disclosures they actually anticipate making in order to give individuals a more accurate understanding of how information about them will be shared. We expect that certain covered entities will want to distinguish themselves on the basis of their privacy protections. We note that a covered entity that chooses to exercise this option must clearly state that, at a minimum, the covered entity may make disclosures that are required by law and that are necessary to avert a serious and imminent threat to health or safety.

Section 164.522—Rights To Request Privacy Protection for Protected Health Information

Section 164.522(a)—Right of an Individual To Request Restriction of Uses and Disclosures

Comment: Several commenters supported the language in the NPRM regarding the right to request restrictions. One commenter specifically stated that this is a balanced approach that addresses the needs of the few who would have reason to restrict disclosures without negatively affecting the majority of individuals. At least one commenter explained that if we required consent or authorization for use and disclosure of protected health information for treatment, payment, and health care operations then we must also have a right to request restrictions of such disclosure in order to make the consent meaningful.

Many commenters requested that we delete this provision, claiming it would interfere with patient care, payment, and data integrity. Most of the commenters that presented this position asserted that the framework of giving patients control over the use or disclosure of their information is contrary to good patient care because incomplete medical records may lead to medical errors, misdiagnoses, or inappropriate treatment decisions. Other commenters asserted that covered entities need complete data sets on the populations they serve to effectively conduct research and quality improvement projects and that restrictions would hinder research, skew findings, impede quality improvement, and compromise accreditation and performance measurement.

Response: We acknowledge that widespread restrictions on the use and disclosure of protected health information could result in some difficulties related to payment, research, quality assurance, etc. However, in our efforts to protect the privacy of health information about individuals, we have sought a balance in determining the appropriate level of individual control and the smooth operation of the health care system. In the final rule, we require certain covered providers and permit all covered entities to obtain consent from individuals for use and disclosure of protected health information for treatment, payment, and health care operations (see § 164.506). In order to give individuals some control over their health information for uses and disclosures of protected health information for treatment, payment, and health care operations, we provide individuals with the opportunity to request restrictions of such uses and disclosures.

Because the right to request restrictions encourages discussions about how protected health information may be used and disclosed and about an individual's concerns about such uses and disclosures, it may improve communications between a provider and patient and thereby improve care. According to a 1999 survey on the Confidentiality of Medical Records by the California HealthCare Foundation, one out of every six people engage in behavior to protect themselves from unwanted disclosures of health information, such as lying to providers or avoiding seeking care. This indicates that, without the ability to request restrictions, individuals would have incentives to remain silent about important health information that could have an effect on their health and health care, rather than consulting a health care provider.

Further, this policy is not a dramatic change from the status quo. Today, many state laws restrict disclosures for certain types of health information without patient's authorization. Even if there is no mandated requirement to restrict disclosures of health

information, providers may agree to requests for restrictions of disclosures when a patient expresses particular sensitivity and concern for the disclosure of health information.

We agree that there may be instances in which a restriction could negatively affect patient care. Therefore, we include protections against this occurrence. First, the right to request restrictions is a right of individuals to make the request. A covered entity may refuse to restrict uses and disclosures or may agree only to certain aspects of the individual's request if there is concern for the quality of patient care in the future. For example, if a covered provider believes that it is not in the patient's best medical interest to have such a restriction, the provider may discuss the request for restriction with the patient and give the patient the opportunity to explain the concern for disclosure. Also, a covered provider who is concerned about the implications on future treatment can agree to use and disclose sensitive protected health information for treatment purposes only and agree not to disclose information for payment and operation purposes. Second, a covered provider need not comply with a restriction that has been agreed to if the individual who requested the restriction is in need of emergency treatment and the restricted protected health information is needed to provide the emergency treatment. This exception should limit the harm to health that may otherwise result from restricting the use or disclosure of protected health information. We encourage covered providers to discuss with individuals that the information may be used or disclosed in emergencies. We require that the covered entity that discloses restricted protected health information in an emergency request that the health care provider that receives such information not further use or re-disclose the information.

Comment: Some health plans stated that an institutionalized right to restrict can interfere with proper payment and can make it easier for unscrupulous providers or patients to commit fraud on insurance plans. They were concerned that individuals could enter into restrictions with providers to withhold information to insurance companies so that the insurance company would not know about certain conditions when underwriting a policy. ***82727**

Response: This rule does not enhance the ability of unscrupulous patients or health care providers to engage in deceptive or fraudulent withholding of information. This rule grants a right to request a restriction, not an absolute right to restrict. Individuals can make such requests today. Other laws criminalize insurance fraud; this regulation does not change those laws.

Comment: One commenter asserted that patients cannot anticipate the significance that one aspect of their medical information will have on treatment of other medical conditions, and therefore, allowing them to restrict use or disclosure of some information is contrary to the patient's best interest.

Response: We agree that patients may find it difficult to make such a calculus, and that it is incumbent on health care providers to help them do so. Health care providers may deny requests for or limit the scope of the restriction requested if they believe the restriction is not in the patient's best interest.

Comment: One commenter asked whether an individual's restriction to disclosure of information will be a bar to liability for misdiagnosis or failure to diagnose by a covered entity who can trace its error back to the lack of information resulting from such restriction.

Response: Decisions regarding liability and professional standards are determined by state and other law. This rule does not establish or limit liability for covered entities under those laws. We expect that the individual's request to restrict the disclosure of their protected health information would be considered in the decision of whether or not a covered entity is liable.

Comment: One commenter requested that we allow health plans to deny coverage or reimbursement when a covered health care provider's agreement to restrict use or disclosure prevents the plan from getting the information that is necessary to determine eligibility or coverage.

Response: In this rule, we do not modify insurers' rules regarding information necessary for payment. We recognize that restricting the disclosure of information may result in a denial of payment. We expect covered providers to explain this possibility

to individuals when considering their requests for restrictions and to make alternative payment arrangements with individuals if necessary.

Comment: Some commenters discussed the administrative burden and cost of the requirement that individuals have the right to request restrictions and that trying to segregate certain portions of information for protection may be impossible. Others stated that the administrative burden would make providers unable to accommodate restrictions, and would therefore give patients false expectations that their right to request restrictions may be acted upon. One commenter expressed concern that large covered providers would have a particularly difficult time establishing a policy whereby the covered entity could agree to restrictions and would have an even more difficult time implementing the restrictions since records may be kept in multiple locations and accessed by multiple people within the organization. Still other commenters believed that the right to request restrictions would invite argument, delay, and litigation.

Response: We do not believe that this requirement is a significant change from current practice. Providers already respond to requests by patients regarding sensitive information, and are subject to state law requirements not to disclose certain types of information without authorization. This right to request is permissive so that covered entities can balance the needs of particular individuals with the entity's ability to manage specific accommodations.

Comment: Some commenters were concerned that a covered entity would agree to a restriction and then realize later that the information must be disclosed to another caregiver for important medical care purposes.

Response: Some individuals seek treatment only on the condition that information about that treatment will not be shared with others. We believe it is necessary and appropriate, therefore, that when a covered provider agrees to such a restriction, the individual must be able to rely on that promise. We strongly encourage covered providers to consider future treatment implications of agreeing to a restriction. We encourage covered entities to inform others of the existence of a restriction when appropriate, provided that such notice does not amount to a de facto disclosure of the restricted information. If the covered provider subject to the restriction believes that disclosing the protected health information that was created or obtained subject to the restriction is necessary to avert harm (and it is not for emergency treatment), the provider must ask the individual for permission to terminate or modify the restriction. If the individual agrees to the termination of the restriction, the provider must document this termination by noting this agreement in the medical record or by obtaining a written agreement of termination from the individual and may use or disclose the information for treatment. If the individual does not agree to terminate or modify the restriction, however, the provider must continue to honor the restriction with respect to protected health information that was created or received subject to the restriction. We note that if the restricted protected health information is needed to provide emergency treatment to the individual who requested the restriction, the covered entity may use or disclose such information for such treatment.

Comment: Commenters asked that we require covered entities to keep an accounting of the requests for restrictions and to report this information to the Department in order for the Department to determine whether covered entities are showing “good faith” in dealing with these requests.

Response: We require that covered entities that agree to restrictions with individuals document such restrictions. A covered entity must retain such documentation for six years from the date of its creation or the date when it last was in effect, whichever is later. We do not require covered entities to keep a record of all requests made, including those not agreed to, nor that they report such requests to the Department. The decision to agree to restrictions is that of the covered entity. Because there is no requirement to agree to a restriction, there is no reason to impose the burden to document requests that are denied. Any reporting requirement could undermine the purpose of this provision by causing the sharing, or appearance of sharing, of information for which individuals are seeking extra protection.

Comment: One commenter asserted that providers that currently allow such restrictions will choose not to do so under the rule based on the guidance of legal counsel and loss prevention managers, and suggested that the Secretary promote competition among providers with respect to privacy by developing a third-party ranking mechanism.

Response: We believe that providers will do what is best for their patients, in accordance with their ethics codes, and will continue to find ways to accommodate requested restrictions when they believe that it is in the patients' best interests. We anticipate that providers who find such action to be of commercial benefit will notify consumers of their willingness to be responsive to such requests. Involving third parties could undermine the purpose of this provision, by causing the sharing, or appearance of sharing, of information for which individuals are seeking extra protection. ***82728**

Comment: One commenter said that any agreement regarding patient-requested restrictions should be in writing before a covered provider would be held to standards for compliance.

Response: We agree that agreed to restrictions must be documented in writing, and we require that covered entities that agree to restrictions document those restrictions in accordance with § 164.530(j). The writing need not be formal; a notation in the medical record will suffice. We disagree with the request that an agreed to restriction be reduced to writing in order to be enforced. If we adopted the requested policy, a covered entity could agree to a restriction with an individual, but avoid being held to this agreed to restriction under the rule by failing to document the restriction. This would give a covered entity the opportunity to agree to a restriction and then, at its sole discretion, determine if it is enforceable by deciding whether or not to make a note of the restriction in the record about the individual. Because the covered entity has the ability to agree or fail to agree to a restriction, we believe that once the restriction is agreed to, the covered entity must honor the agreement. Any other result would be deceptive to the individual and could lead an individual to disclose health information under the assumption that the uses and disclosures will be restricted. Under § 164.522, a covered entity could be found to be in violation of the rule if it fails to put an agreed-upon restriction in writing and also if it uses or discloses protected health information inconsistent with the restriction.

Comment: Some commenters said that the right to request restrictions should be extended to some of the uses and disclosures permitted without authorization in § 164.510 of the NPRM, such as disclosures to next of kin, for judicial and administrative proceedings, for law enforcement, and for governmental health data systems. Other commenters said that these uses and disclosures should be preserved without an opportunity for individuals to opt out.

Response: We have not extended the right to request restrictions under this rule to disclosures permitted in § 164.512 of the final rule. However, we do not preempt other law that would enforce such agreed-upon restrictions. As discussed in more detail, above, we have extended the right to request restrictions to disclosures to persons assisting in the individual's care, such as next of kin, under § 164.510(b). Any restriction that a covered entity agrees to with respect to persons assisting in the individual's care in accordance with the rule will be enforceable under the rule.

Comment: A few commenters raised the question of the effect of a restriction agreed to by one covered entity that is part of a larger covered entity, particularly a hospital. Commenters were also concerned about who may speak on behalf of the covered entity.

Response: All covered entities are required to establish policies and procedures for providing individuals the right to request restrictions, including policies for who may agree to such restrictions on the covered entity's behalf. Hospitals and other large entities that are concerned about employees agreeing to restrictions on behalf of the organization will have to make sure that their policies are communicated appropriately to those employees. The circumstances under which members of a covered entity's workforce can bind the covered entity are a function of other law, not of this regulation.

Comment: Commenters expressed confusion about the intended effect of any agreed-upon restrictions on downstream covered entities. They asserted that it would be extremely difficult for a requested restriction to be followed through the health care

system and that it would be unfair to hold covered entities to a restriction when they did not agree to such restriction. Specifically, commenters asked whether a covered provider that receives protected health information in compliance with this rule from a physician or medical group that has agreed to limit certain uses of the information must comply with the original restriction. Other commenters expressed concern that not applying a restriction to downstream covered entities is a loophole and that all downstream covered providers and health plans should be bound by the restrictions.

Response: Under the final rule, a restriction that is agreed to between an individual and a covered entity is only binding on the covered entity that agreed to the restriction and not on downstream entities. It would also be binding on any business associate of the covered entity since a business associate can not use or disclose protected health information in any manner that a covered entity would not be permitted to use or disclose such information. We realize that this may limit the ability of an individual to successfully restrict a use or disclosure under all circumstances, but we take this approach for two reasons. First, we allow covered entities to refuse individuals' requests for restrictions. Requiring downstream covered entities to abide by a restriction would be tantamount to forcing them to agree to a request to which they otherwise may not have agreed. Second, some covered entities have information systems which will allow them to accommodate such requests, while others do not. If the downstream provider is in the latter category, the administrative burden of such a requirement would be unmanageable.

We encourage covered entities to explain this limitation to individuals when they agree to restrictions, so individuals will understand that they need to ask all their health plans and providers for desired restrictions. We also require that a covered entity that discloses protected health information to a health care provider for emergency treatment, in accordance with § 164.522(a)(iii), to request that the recipient not further use or disclose the information.

Comment: One commenter requested that agreed-to restrictions of a covered entity not be applied to business associates.

Response: As stated in § 164.504(e)(2), business associates are acting on behalf of, or performing services for, the covered entity and may not, with two narrow exceptions, use or disclose protected health information in a manner that would violate this rule if done by the covered entity. Business associates are agents of the covered entity with respect to protected health information they obtain through the business relationship. If the covered entity agrees to a restriction and, therefore, is bound to such restriction, the business associate will also be required to comply with the restriction. If the covered entity has agreed to a restriction, the satisfactory assurances from the business associate, as required in § 164.504(e), must include assurances that protected health information will not be used or disclosed in violation of an agreed to restriction.

Comment: One commenter requested clarification that the right to request restrictions cannot be used to restrict the creation of de-identified information.

Response: We found no reason to treat the use of protected health information to create de-identified information different from other uses of protected health information. The right to request restriction applies to any use or disclosure of protected health information to carry out treatment, payment, or health care operations. If the covered entity uses protected health information to create de-identified information, the covered entity need not agree to a restriction of this use. ***82729**

Comment: Some commenters stated that individuals should be given a true right to restrict uses and disclosures of protected health information in certain defined circumstances (such as for sensitive information) rather than a right to request restrictions.

Response: We are concerned that a right to restrict could create conflicts with the professional ethical obligations of providers and others. We believe it is better policy to allow covered entities to refuse to honor restrictions that they believe are not appropriate and leave the individual with the option of seeking service from a different covered entity. In addition, many covered entities have information systems that would make it difficult or impossible to accommodate certain restrictions.

Comment: Some commenters requested that self-pay patients have additional rights to restrict protected health information. Others believed that this policy would result in de facto discrimination against those patients that could not afford to pay out-of-pocket.

Response: Under the final rule, the decision whether to tie an agreement to restrict to the way the individual pays for services is left to each covered entity. We have not provided self-pay patients with any special rights under the rule.

Comment: Some commenters suggested that we require restrictions to be clearly noted so that insurers and other providers would be aware that they were not being provided with complete information.

Response: Under the final rule, we do not require or prohibit a covered entity to note the existence of an omission of information. We encourage covered entities to inform others of the existence of a restriction, in accordance with professional practice and ethics, when appropriate to do so. In deciding whether or not to disclose the existence of a restriction, we encourage the covered entity to carefully consider whether disclosing the existence is tantamount to disclosure of the restricted protected health information so as to not violate the agreed to restriction.

Comment: A few commenters said that covered entities should have the right to modify or revoke an agreement to restrict use or disclosure of protected health information.

Response: We agree that, as circumstances change, covered entities should be able to revisit restrictions to which they had previously agreed. At the same time, individuals should be able to rely on agreements to restrict the use or disclosure of information that they believe is particularly sensitive. If a covered entity would like to revoke or modify an agreed-upon restriction, the covered entity must renegotiate the agreement with the individual. If the individual agrees to modify or terminate the restriction, the covered entity must get written agreement from the individual or must document the oral agreement. If the individual does not agree to terminate or modify the restriction, the covered entity must inform the individual that it is modifying or terminating its agreement to the restriction and any modification or termination would apply only with respect to protected health information created or received after the covered entity informed the individual of the termination. Any protected health information created or received during the time between when the restriction was agreed to and when the covered entity informed the individual or such modification or termination remains subject to the restriction.

Comment: Many commenters advocated for stronger rights to request restrictions, particularly that victims of domestic violence should have an absolute right to restrict disclosure of information.

Response: We address restrictions for disclosures in two different ways, the right to request restrictions (§ 164.522(a)) and confidential communications (§ 164.522(b)). We have provided all individuals with a right to request restrictions on uses or disclosures of treatment, payment, and health care operations. This is not an absolute right to restrict. Covered entities are not required to agree to requested restrictions; however, if they do, the rule would require them to act in accordance with the restrictions. (See the preamble regarding § 164.522 for a more comprehensive discussion of the right to request restrictions.)

In the final rule, we create a new provision that provides individuals with a right to confidential communications, in response to these comments. This provision grants individuals with a right to restrict disclosures of information related to communications made by a covered entity to the individual, by allowing the individual to request that such communications be made to the person at an alternative location or by an alternative means. For example, a woman who lives with an abusive man and is concerned that his knowledge of her health care treatment may lead to additional abuse can request that any mail from the provider be sent to a friend's home or that telephone calls by a covered provider be made to her at work. Other reasonable accommodations may be requested as well, such as requesting that a covered provider never contact the individual by a phone, but only contact her by electronic mail. A provider must accommodate an individual's request for confidential communications, under this section, without requiring an explanation as to the reason for the request as a condition of accommodating the request. The individual does not need to be in an abusive situation to make such requests of a covered provider. The only conditions that a covered

provider may place on an individual is that the request be reasonable with respect to the administrative burden on the provider, the request to be in writing, the request specify an alternative address or other method of contact, and that (where relevant) the individual provide information about how payment will be handled. What is reasonable may vary by the size or type of covered entity; however, additional modest cost to the provider would not be unreasonable.

An individual also has a right to restrict communications from a health plan. The right is the same as with covered providers except it is limited to cases where the disclosure of information could endanger the individual. A health plan may require an individual to state this fact as a condition of accommodating the individual's request for confidential communications. This would provide victims of domestic violence the right to control such disclosures.

Comment: Commenters opposed the provision of the NPRM (§ 164.506(c)(1)(ii)(B)) stating that an individual's right to request restrictions on use or disclosure of protected health information would not apply in emergency situations as set forth in proposed § 164.510(k). Commenters asserted that victims who have been harmed by violence may first turn to emergency services for help and that, in such situations, the victim should be able to request that the perpetrator not be told of his or her condition or whereabouts.

Response: We agree with some of the commenters' concerns. In the final rule, the right to request restrictions is available to all individuals regardless of the circumstance or the setting in which the individual is obtaining care. For example, an individual that seeks care in an emergency room has the same right to request a restriction as an individual seeking care in the office of a covered physician.

However, we continue to permit a covered entity to disclose protected health information to a health care ***82430** provider in an emergency treatment situation if the restricted protected health information is needed to provide the emergency treatment or if the disclosure is necessary to avoid serious and imminent threats to public health and safety. Although we understand the concern of the commenters, we believe that these exceptions are limited and will not cause a covered entity to disclose information to a perpetrator of a crime. We are concerned that a covered provider would be required to delay necessary care if a covered entity had to determine if a restriction exists at the time of such emergency. Even if a covered entity knew that there was a restriction, we permitted this limited exception for emergency situations because, as we had stated in the preamble for § 164.506 of the NPRM, an emergency situation may not provide sufficient opportunity for a patient and health care provider to discuss the potential implications of restricting use and disclosure of protected health information on that emergency. We also believe that the importance of avoiding serious and imminent threats to health and safety and the ethical and legal obligations of covered health care providers' to make disclosures for these purposes is so significant that it is not appropriate to apply the right to request restrictions on such disclosures.

We note that we have included other provisions in the final rule intended to avoid or minimize harm to victims of domestic violence. Specifically, we include provisions in the final rule that allow individuals to opt out of certain types of disclosures and require covered entities to use professional judgment to determine whether disclosure of protected health information is in a patient's best interest (see § 164.510(a) on use and disclosure for facility directories and § 164.510(b) on uses and disclosures for assisting in an individual's care and notification purposes). Although an agreed to restriction under § 164.522 would apply to uses and disclosures for assisting in an individual's care, the opt out provision in § 164.510(b) can be more helpful to a person who is a victim of domestic violence because the individual can opt out of such disclosure without obtaining the agreement of the covered provider. We permit a covered entity to elect not to treat a person as a personal representative (see § 164.502(g)) or to deny access to a personal representative (see § 164.524(a)(3)(iii)) where there are concerns related to abuse. We also include a new § 164.512(c) which recognizes the unique circumstances surrounding disclosure of protected health information about victims of abuse, neglect, and domestic violence.

Section 164.522(b)—Confidential Communications Requirements

Comment: Several commenters requested that we add a new section to prevent disclosure of sensitive health care services to members of the patient's family through communications to the individual's home, such as appointment notices, confirmation

or scheduling of appointments, or mailing a bill or explanation of benefits, by requiring covered entities to agree to correspond with the patient in another way. Some commenters stated that this is necessary in order to protect inadvertent disclosure of sensitive information and to protect victims of domestic violence from disclosure to an abuser. A few commenters suggested that a covered entity should be required to obtain an individual's authorization prior to communicating with the individual at the individual's home with respect to health care relating to sensitive subjects such as reproductive health, sexually transmissible diseases, substance abuse or mental health.

Response: We agree with commenters' concerns regarding covered entities' communications with individuals. We created a new provision, § 164.522(b), to address confidential communications by covered entities. This provision gives individuals the right to request that they receive communications from covered entities at an alternative address or by an alternative means, regardless of the nature of the protected health information involved. Covered providers are required to accommodate reasonable requests by individuals and may not require the individual to explain the basis for the request as a condition of accommodation. Health plans are required to accommodate reasonable requests by individuals as well; however, they may require the individual to provide a statement that disclosure of the information could endanger the individual, and they may condition the accommodation on the receipt of such statement.

Under the rule, we have required covered providers to accommodate requests for communications to alternative addresses or by alternative means, regardless of the reason, to limit risk of harm. Providers have more frequent one-on-one communications with patients, making the safety concerns from an inadvertent disclosure more substantial and the need for confidential communications more compelling. We have made the requirement for covered providers absolute and not contingent on the reason for the request because we wanted to make it relatively easy for victims of domestic violence, who face real safety concerns by disclosures of health information, to limit the potential for such disclosures.

The standard we created for health plans is different from the requirement for covered providers, in that we only require health plans to make requested accommodations for confidential communications when the individual asserts that disclosure could be dangerous to the individual. We address health plan requirements in this way because health plans are often issued to a family member (the employee), rather than to each individual member of a family, and therefore, health plans tend to communicate with the named insured rather than with individual family members. Requiring plans to accommodate a restriction for one individual could be administratively more difficult than it is for providers that regularly communicate with individuals. However, in the case of domestic violence or potential abuse, the level of harm that can result from a disclosure of protected health information tips the balance in favor of requiring such restriction to prevent inadvertent disclosure. We have adopted the policy recommended by the National Association of Insurance Commissioners in the Health Information Policy Model Act (1998) as this best reflects the balance of the appropriate level of regulation of the industry compared with the need to protect individuals from harm that may result from inadvertent disclosure of information. This policy is also consistent with recommendations made in the Family Violence Prevention Fund's publication “Health Privacy Principles for Protecting Victims of Domestic Violence” (October 2000). Of course, health plans may accommodate requests for confidential communications without requiring a statement that the individual would be in danger from disclosure of protected health information.

Comment: One commenter requested that we create a standard that all information from a health plan be sent to the patient and not the policyholder or subscriber.

Response: We require health plans to accommodate certain requests that information not be sent to a particular location or by particular means. A health plan must accommodate reasonable requests by individuals that protected health information about them be sent directly to them and not to a policyholder or subscriber, if the ***82731** individual states that he or she may be in danger from disclosure of such information. We did not generally require health plans to send information to the patient and not the policyholder or subscriber because we believed it would be administratively burdensome and because the named insured may have a valid need for such information to manage payment and benefits.

Sensitive Subjects

Comment: Many commenters requested that additional protections be placed on sensitive information, including information regarding HIV/AIDS, sexually transmitted diseases, mental health, substance abuse, reproductive health, and genetics. Many requested that we ensure the regulation adequately protects victims of domestic violence. They asserted that the concern for discrimination or stigma resulting from disclosure of sensitive health information could dissuade a person from seeking needed treatment. Some commenters noted that many state laws provide additional protections for various types of information. They requested that we develop federal standards to have consistent rules regarding the protection of sensitive information to achieve the goals of cost savings and patient protection. Others requested that we require patient consent or special authorization before certain types of sensitive information was disclosed, even for treatment, payment, and health care operations, and some thought we should require a separate request for each disclosure. Some commenters requested that the right to request restrictions be replaced with a requirement for an authorization for specific types of sensitive information. There were recommendations that we require covered entities to develop internal policies to address sensitive information.

Other commenters argued that sensitive information should not be segregated from the record because it may limit a future provider's access to information necessary for treatment of the individual and it could further stigmatize a patient by labeling him or her as someone with sensitive health care issues. These commenters further maintained that segregation of particular types of information could negatively affect analysis of community needs, research, and would lead to higher costs of health care delivery.

Response: We generally do not differentiate among types of protected health information, because all health information is sensitive. The level of sensitivity varies not only with the type of information, but also with the individual and the particular situation faced by the individual. This is demonstrated by the different types of information that commenters singled out as meriting special protection, and in the great variation among state laws in defining and protecting sensitive information. Most states have a law providing heightened protection for some type of health information. However, even though most states have considered the issue of sensitive information, the variation among states in the type of information that is specially protected and the requirements for permissible disclosure of such information demonstrates that there is no national consensus.

Where, as in this case, most states have acted and there is no predominant rule that emerges from the state experience with this issue, we have decided to let state law predominate. The final rule only provides a floor of protection for health information and does not preempt state laws that provide greater protection than the rule. Where states have decided to treat certain information as more sensitive than other information, we do not preempt those laws.

To address the variation in the sensitivity of protected health information without defining specially sensitive information, we incorporate opportunities for individuals and covered entities to address specific sensitivities and concerns about uses and disclosures of certain protected health information that the patient and provider believe are particularly sensitive, as follows:

- Covered entities are required to provide individuals with notice of their privacy practices and give individuals the opportunity to request restrictions of the use and disclosure of protected health information by the covered entity. (See § 164.522(a) regarding right to request restrictions.)

- Individuals have the right to request, and in some cases require, that communications from the covered entity to them be made to an alternative address or by an alternative means than the covered entity would otherwise use. (See § 164.522(b) regarding confidential communications.)

- Covered entities have the opportunity to decide not to treat a person as a personal representative when the covered entity has a reasonable belief that an individual has been subjected to domestic violence, abuse, or neglect by such person or that treating such person as a personal representative could endanger the individual. (See § 164.502(g)(5) regarding personal representatives.)

- Covered entities may deny access to protected health information when there are concerns that the access may result in varying levels of harm. (See § 164.524(a)(3) regarding denial of access.)

- Covered health care providers may, in some circumstances and consistent with any known prior preferences of the individual, exercise professional judgment in the individual's best interest to not disclose directory information. (See § 164.510(a) regarding directory information.)

- Covered entities may, in some circumstances, exercise professional judgment in the individual's best interest to limit disclosure to persons assisting in the individual's care. (See § 164.510(b) regarding persons assisting in the individual's care.)

This approach allows for state law and personal variation in this area.

The only type of protected health information that we treat with heightened protection is psychotherapy notes. We provide a different level of protection because they are unique types of protected health information that typically are not used or required for treatment, payment, or health care operations other than by the mental health professional that created the notes. (See § 164.508(a)(2) regarding psychotherapy notes.)

Section 164.524—Access of Individuals to Protected Health Information

Comment: Some commenters recommended that there be no access to disease registries.

Response: Most entities that maintain disease registries are not covered entities under this regulation; examples of such non-covered entities are public health agencies and pharmaceutical companies. If, however, a disease registry is maintained by a covered entity and is used to make decisions about individuals, this rule requires the covered entity to provide access to information about a requesting individual unless one of the rule's conditions for denial of access is met. We found no persuasive reasons why disease registries should be given special treatment compared with other information that may be used to make decisions about an individual.

Comment: Some commenters stated that covered entities should be held accountable for access to information held by business partners so that individuals would not have the burden of tracking down their protected health information from a business partner. Many commenters, including insurers ***82732** and academic medical centers, recommended that, to reduce burden and duplication, only the provider who created the protected health information should be required to provide individuals access to the information. Commenters also asked that other entities, including business associates, the Medicare program, and pharmacy benefit managers, not be required to provide access, in part because they do not know what information the covered entity already has and they may not have all the information requested. A few commenters also argued that billing companies should not have to provide access because they have a fiduciary responsibility to their physician clients to maintain the confidentiality of records.

Response: A general principle in responding to all of these points is that a covered entity is required to provide access to protected health information in accordance with the rule regardless of whether the covered entity created such information or not. Thus, we agree with the first point: in order to meet its requirements for providing access, a covered entity must not only provide access to such protected health information it holds, but must also provide access to such information in a designated record set of its business associate, pursuant to its business associate contract, unless the information is the same as information maintained directly by the covered entity. We require this because an individual may not be aware of business associate relationships. Requiring an individual to track down protected health information held by a business associate would significantly limit access. In addition, we do not permit a covered entity to limit its duty to provide access by giving protected health information to a business associate.

We disagree with the second point: if the individual directs an access request to a covered entity that has the protected health information requested, the covered entity must provide access (unless it may deny access in accordance with this rule). In order to assure that an individual can exercise his or her access rights, we do not require the individual to make a separate request to

each originating provider. The originating provider may no longer be in business or may no longer have the information, or the non-originating provider may have the information in a modified or enhanced form.

We disagree with the third point: other entities must provide access only if they are covered entities or business associates of covered entities, and they must provide access only to protected health information that they maintain (or that their business associates maintain). It would not be efficient to require a covered entity to compare another entity's information with that of the entity to which the request was addressed. (See the discussion regarding covered entities for information about whether a pharmacy benefit manager is a covered entity.)

We disagree with the fourth point: a billing company will be required by its business associate contract only to provide the requested protected health information to its physician client. This action will not violate any fiduciary responsibility. The physician client would in turn be required by the rule to provide access to the individual.

Comment: Some commenters asked for clarification that the clearinghouse function of turning non-standardized data into standardized data does not create non-duplicative data and that "duplicate" does not mean "identical." A few commenters suggested that duplicated information in a covered entity's designated record set be supplied only once per request.

Response: We consider as duplicative information the same information in different formats, media, or presentations, or which have been standardized. Business associates who have materially altered protected health information are obligated to provide individuals access to it. Summary information and reports, including those of lab results, are not the same as the underlying information on which the summaries or reports were based. A clean document is not a duplicate of the same document with notations. If the same information is kept in more than one location, the covered entity has to produce the information only once per request for access.

Comment: A few commenters suggested requiring covered entities to disclose to third parties without exception at the requests of individuals. It was argued that this would facilitate disability determinations when third parties need information to evaluate individuals' entitlement to benefits. Commenters argued that since covered entities may deny access to individuals under certain circumstances, individuals must have another method of providing third parties with their protected health information.

Response: We allow covered entities to forward protected health information about an individual to a third party, pursuant to the individual's authorization under § 164.508. We do not require covered entities to disclose information pursuant to such authorizations because the focus of the rule is privacy of protected health information. Requiring disclosures in all circumstances would be counter to this goal. In addition, a requirement of disclosing protected health information to a third party is not a necessary substitute for the right of access to individuals, because we allow denial of access to individuals under rare circumstances. However, if the third party is a personal representative of the individual in accordance with § 164.502(g) and there is no concern regarding abuse or harm to the individual or another person, we require the covered entity to provide access to that third party on the individual's behalf, subject to specific limitations. We note that a personal representative may obtain access on the individual's behalf in some cases where covered entity may deny access to the individual. For example, an inmate may be denied a copy of protected health information, but a personal representative may be able to obtain a copy on the individual's behalf. See § 164.502(g) and the corresponding preamble discussion regarding the ability of a personal representative to act on an individual's behalf.

Comment: The majority of commenters supported granting individuals the right to access protected health information for as long as the covered entity maintains the protected health information; commenters argued that to do otherwise would interfere with existing record retention laws. Some commenters advocated for limiting the right to information that is less than one or two years old. A few commenters explained that frequent changes in technology makes it more difficult to access stored data. The commenters noted that the information obtained prior to the effective date of the rule should not be required to be accessible.

Response: We agree with the majority of commenters and retain the proposal to require covered entities to provide access for as long as the entity maintains the protected health information. We do not agree that information created prior to the effective date of the rule should not be accessible. The reasons for granting individuals access to information about them do not vary with the date the information was created.

Comment: A few commenters argued that there should be no grounds for denying access, stating that individuals should always have the right to inspect and copy their protected health information. ***82733**

Response: While we agree that in the vast majority of instances individuals should have access to information about them, we cannot agree that a blanket rule would be appropriate. For example, where a professional familiar with the particular circumstances believes that providing such access is likely to endanger a person's life or physical safety, or where granting such access would violate the privacy of other individuals, the benefits of allowing access may not outweigh the harm. Similarly, we allow denial of access where disclosure would reveal the source of confidential information because we do not want to interfere with a covered entity's ability to maintain implicit or explicit promises of confidence.

We create narrow exceptions to the rule of open access, and we expect covered entities to employ these exceptions rarely, if at all. Moreover, we require covered entities to provide access to any protected health information requested after excluding only the information that is subject to a denial. The categories of permissible denials are not mandatory, but are a means of preserving the flexibility and judgment of covered entities under appropriate circumstances.

Comment: Many commenters supported our proposal to allow covered entities to deny an individual access to protected health information if a professional determines either that such access is likely to endanger the life or physical safety of a person or, if the information is about another person, access is reasonably likely to cause substantial harm to such person.

Some commenters requested that the rule also permit covered entities to deny a request if access might be reasonably likely to cause psychological or mental harm, or emotional distress. Other commenters, however, were particularly concerned about access to mental health information, stating that the lack of access creates resentment and distrust in patients.

Response: We disagree with the comments suggesting that we expand the grounds for denial of access to an individual to include a likelihood of psychological or mental harm of the individual. We did not find persuasive evidence that this is a problem sufficient to outweigh the reasons for providing open access. We do allow a denial for access based on a likelihood of substantial psychological or mental harm, but only if the protected health information includes information about another person and the harm may be inflicted on such other person or if the person requesting the access is a personal representative of the individual and the harm may be inflicted on the individual or another person.

We generally agree with the commenters concerns that denying access specifically to mental health records could create distrust. To balance this concern with other commenters' concerns about the potential for psychological harm, however, we exclude psychotherapy notes from the right of access. This is the only distinction we make between mental health information and other types of protected health information in the access provisions of this rule. Unlike other types of protected health information, these notes are not widely disseminated through the health care system. We believe that the individual's privacy interests in having access to these notes, therefore, are outweighed by the potential harm caused by such access. We encourage covered entities that maintain psychotherapy notes, however, to provide individuals access to these notes when they believe it is appropriate to do so.

Comment: Some commenters believed that there is a potential for abuse of the provision allowing denial of access because of likely harm to self. They questioned whether there is any experience from the Privacy Act of 1974 to suggest that patients who requested and received their records have ever endangered themselves as a result.

Response: We are unaware of such problems from access to records that have been provided under the Privacy Act but, since these are private matters, such problems might not come to our attention. We believe it is more prudent to preserve the flexibility and judgment of health care professionals familiar with the individuals and facts surrounding a request for records than to impose the blanket rule suggested by these commenters.

Comment: Commenters asserted that the NPRM did not adequately protect vulnerable individuals who depend on others to exercise their rights under the rule. They requested that the rule permit a covered entity to deny access when the information is requested by someone other than the subject of the information and, in the opinion of a licensed health care professional, access to the information could harm the individual or another person.

Response: We agree with the commenters that such protection is warranted and add a provision in § 164.524(a)(3), which permits a covered health care provider to deny access if a personal representative of the individual is making the request for access and a licensed health care professional has determined, in the exercise of professional judgment, that providing access to such personal representative could result in substantial harm to the individual or another person. Access can be denied even if the potential harm may be inflicted by someone other than the personal representative.

This provision is designed to strike a balance between the competing interests of ensuring access to protected health information and protecting the individual or others from harm. The "substantial harm" standard will ensure that a covered entity cannot deny access in cases where the harm is de minimus.

The amount of discretion that a covered entity has to deny access to a personal representative is generally greater than the amount of discretion that a covered entity has to deny access to an individual. Under the final rule, a covered entity may deny access to an individual if a licensed health care professional determines that the access requested is reasonably likely to endanger the life or physical safety of the individual or another person. In this case, concerns about psychological or emotional harm would not be sufficient to justify denial of access. We establish a relatively high threshold because we want to assure that individuals have broad access to health information about them, and due to the potential harm that comes from denial of access, we believe denials should be permitted only in limited circumstances.

The final rule grants covered entities greater discretion to deny access to a personal representative than to an individual in order to provide protection to those vulnerable people who depend on others to exercise their rights under the rule and who may be subjected to abuse or neglect. This provision applies to personal representatives of minors as well as other individuals. The same standard for denial of access on the basis of potential harm that applies to personal representatives also applies when an individual is seeking access to his or her protected health information, and the information makes reference to another person. Under these circumstances, a covered entity may deny a request for access if such access is reasonably likely to cause substantial harm to such other person. The standard for this provision and for the provision regarding access by personal representatives is the same because both circumstances involve one person obtaining information about another person, and in both cases the covered entity is balancing the right of access of one person against the right of ***82734** a second person not to be harmed by the disclosure.

Under any of these grounds for denial of access to protected health information, the covered entity is not required to deny access to a personal representative under these circumstances, but has the discretion to do so.

In addition to denial of access rights, we also address the concerns raised by abusive or potentially abusive situations in the section regarding personal representatives by giving covered entities discretion to not recognize a person as a personal representative of an individual if the covered entity has a reasonable belief that the individual has been subjected to domestic violence, abuse, or neglect by or would be in danger from a person seeking to act as the personal representative. (See § 164.502(g))

Comment: A number of commenters were concerned that this provision would lead to liability for covered entities if the release of information results in harm to individuals. Commenters requested a "good faith" standard in this provision to relieve covered entities of liability if individuals suffer harm as a result of seeing their protected health information or if the information is found to be erroneous. A few commenters suggested requiring providers (when applicable) to include with any disclosure to a third party a statement that, in the provider's opinion, the information should not be disclosed to the patient.

Response: We do not intend to create a new duty to withhold information nor to affect other laws on this issue. Some state laws include policies similar to this rule, and we are not aware of liability arising as a result.

Comment: Some commenters suggested that both the individual's health care professional and a second professional in the relevant field of medicine should review each request. Many commenters suggested that individuals have a right to have an independent review of any denial of access, e.g., review by a health care professional of the individual's choice.

Response: We agree with the commenters who suggest that denial on grounds of harm to self or others should be determined by a health professional, and retain this requirement in the final rule. We disagree, however, that all denials should be reviewed by a professional of the individual's choice. We are concerned that the burden such a requirement would place on covered entities would be significantly greater than any benefits to the individual. We believe that any health professional, not just one of the individual's choice, will exercise appropriate professional judgment. To address some of these concerns, however, we add a provision for the review of denials requiring the exercise of professional judgment. If a covered entity denies access based on harm to self or others, the individual has the right to have the denial reviewed by another health care professional who did not participate in the original decision to deny access.

Comment: A few commenters objected to the proposal to allow covered entities to deny a request for access to health information if the information was obtained from a confidential source that may be revealed upon the individual's access. They argued that this could be subject to abuse and the information could be inherently less reliable, making the patient's access to it even more important.

Response: While we acknowledge that information provided by confidential sources could be inaccurate, we are concerned that allowing unfettered access to such information could undermine the trust between a health care provider and patients other than the individual. We retain the proposed policy because we do not want to interfere with a covered entity's ability to obtain important information that can assist in the provision of health care or to maintain implicit or explicit promises of confidence, which may be necessary to obtain such information. We believe the concerns raised about abuse are mitigated by the fact that the provision does not apply to promises of confidentiality made to a health care provider. We note that a covered entity may provide access to such information.

Comment: Some commenters were concerned that the NPRM did not allow access to information unrelated to treatment, and thus did not permit access to research information.

Response: In the final rule, we eliminate the proposed special provision for "research information unrelated to treatment." The only restriction on access to research information in this rule applies where the individual agrees in advance to denial of access when consenting to participate in research that includes treatment. In this circumstance, the individual's right of access to protected health information created in the course of the research may be suspended for as long as the research is in progress, but access rights resume after such time. In other instances, we make no distinction between research information and other information in the access provisions in this rule.

Comment: A few commenters supported the proposed provision temporarily denying access to information obtained during a clinical trial if participants agreed to the denial of access when consenting to participate in the trial. Some commenters believed there should be no access to any research information. Other commenters believed denial should occur only if the trial would be compromised. Several recommended conditioning the provision. Some recommended that access expires upon completion

of the trial unless there is a health risk. A few commenters suggested that access should be allowed only if it is included in the informed consent and that the informed consent should note that some information may not be released to the individual, particularly research information that has not yet been validated. Other commenters believed that there should be access if the research is not subject to IRB or privacy board review or if the information can be disclosed to third parties.

Response: We agree with the commenters that support temporary denial of access to information from research that includes treatment if the subject has agreed in advance, and with those who suggested that the denial of access expire upon completion of the research, and retain these provisions in the final rule. We disagree with the commenters who advocate for further denial of this information. These comments did not explain why an individual's interest in access to health information used to make decisions about them is less compelling with respect to research information. Under this rule, all protected health information for research is subject either to privacy board or IRB review unless a specific authorization to use protected health information for research is obtained from the individual. Thus, this is not a criterion we can use to determine access rights.

Comment: A few commenters believed that it would be “extremely disruptive of and dangerous” to patients to have access to records regarding their current care and that state law provides sufficient protection of patients' rights in this regard.

Response: We do not agree. Information about current care has immediate and direct impact on individuals. Where a health care professional familiar with the circumstances believes that it is reasonably likely that access to records would endanger the life or physical safety of the individual or another ***82735** person, the regulation allows the professional to withhold access.

Comment: Several commenters requested clarification that a patient not be denied access to protected health information because of failure to pay a bill. A few commenters requested clarification that entities may not deny requests simply because producing the information would be too burdensome.

Response: We agree with these comments, and confirm that neither failure to pay a bill nor burden are lawful reasons to deny access under this rule. Covered entities may deny access only for the reasons provided in the rule.

Comment: Some commenters requested that the final rule not include detailed procedural requirements about how to respond to requests for access. Others made specific recommendations on the procedures for providing access, including requiring written requests, requiring specific requests instead of blanket requests, and limiting the frequency of requests. Commenters generally argued against requiring covered entities to acknowledge requests, except under certain circumstances, because of the potential burden on entities.

Response: We intend to provide sufficient procedural guidelines to ensure that individuals have access to their protected health information, while maintaining the flexibility for covered entities to implement policies and procedures that are appropriate to their needs and capabilities. We believe that a limit on the frequency of requests individuals may make would arbitrarily infringe on the individual's right of access and have, therefore, not included such a limitation. To limit covered entities' burden, we do not require covered entities to acknowledge receipt of the individuals' requests, other than to notify the individual once a decision on the request has been made. We also permit a covered entity to require an individual to make a request for access in writing and to discuss a request with an individual to clarify which information the individual is actually requesting. If individuals agree, covered entities may provide access to a subset of information rather than all protected health information in a designated record set. We believe these changes provide covered entities with greater flexibility without compromising individuals' access rights.

Comment: Commenters offered varying suggestions for required response time, ranging from 48 hours because of the convenience of electronic records to 60 days because of the potential burden. Others argued against a finite time period, suggesting the response time be based on mutual convenience of covered entities and individuals, reasonableness, and exigencies. Commenters also varied on suggested extension periods, from one 30-day extension to three 30-day extensions to one 90-day extension, with special provisions for off-site records.

Response: We are imposing a time limit because individuals are entitled to know when to expect a response. Timely access to protected health information is important because such information may be necessary for the individual to obtain additional health care services, insurance coverage, or disability benefits, and the covered entity may be the only source for such information. To provide additional flexibility, we eliminate the requirement that access be provided as soon as possible and we lengthen the deadline for access to off-site records. For on-site records, covered entities must act on a request within 30 days of receipt of the request. For off-site records, entities must complete action within 60 days. We also permit covered entities to extend the deadline by up to 30 days if they are unable to complete action on the request within the standard deadline. These time limits are intended to be an outside deadline rather than an expectation. We expect covered entities to be attentive to the circumstances surrounding each request and respond in an appropriate time frame.

Comment: A few commenters suggested that, upon individuals' requests, covered entities should be required to provide protected health information in a format that would be understandable to a patient, including explanations of codes or abbreviations. The commenters suggested that covered entities be permitted to provide summaries of pertinent information instead of full copies of records; for example, a summary may be more helpful for the patient's purpose than a series of indecipherable billing codes.

Response: We agree with these commenters' point that some health information is difficult to interpret. We clarify, therefore, that the covered entity may provide summary information in lieu of the underlying records. A summary may only be provided if the covered entity and the individual agree, in advance, to the summary and to any fees imposed by the covered entity for providing such summary. We similarly permit a covered entity to provide an explanation of the information. If the covered entity charges a fee for providing an explanation, it must obtain the individual's agreement to the fee in advance.

Comment: Though there were recommendations that fees be limited to the costs of copying, the majority of commenters on this topic requested that covered entities be able to charge a reasonable, cost-based fee. Commenters suggested that calculation of access costs involve factors such as labor costs for verification of requests, labor and software costs for logging of requests, labor costs for retrieval, labor costs for copying, expense costs for copying, capital cost for copying, expense costs for mailing, postal costs for mailing, billing and bad-debt expenses, and labor costs for refiling. Several commenters recommended specific fee structures.

Response: We agree that covered entities should be able to recoup their reasonable costs for copying of protected health information, and include such provision in the regulation. We are not specifying a set fee because copying costs could vary significantly depending on the size of the covered entity and the form of such copy (e.g., paper, electronic, film). Rather, covered entities are permitted to charge a reasonable, cost-based fee for copying (including the costs of supplies and labor), postage, and summary or explanation (if requested and agreed to by the individual) of information supplied. The rule limits the types of costs that may be imposed for providing access to protected health information, but does not preempt applicable state laws regarding specific allowable fees for such costs. The inclusion of a copying fee is not intended to impede the ability of individuals to copy their records.

Comment: Many commenters stated that if a covered entity denies a request for access because the entity does not hold the protected health information requested, the covered entity should provide, if known, the name and address of the entity that holds the information. Some of these commenters additionally noted that the Uniform Insurance Information and Patient Protection Act, adopted by 16 states, already imposes this notification requirement on insurance entities. Some commenters also suggested requiring providers who leave practice or move offices to inform individuals of that fact and of how to obtain their records.

Response: We agree that, when covered entities deny requests for access because they do not hold the protected health information requested, they should inform individuals of the holder of the information, if known; we include this provision in the final rule. We do not require health care providers to ***82736** notify all patients when they move or leave practice, because the volume of such notifications would be unduly burdensome.

Section 164.526—Amendment of Protected Health Information

Comment: Many commenters strongly encouraged the Secretary to adopt “appendment” rather than “amendment and correction” procedures. They argued that the term “correction” implies a deletion of information and that the proposed rule would have allowed covered entities to remove portions of the record at their discretion. Commenters indicated that appendment rather than correction procedures will ensure the integrity of the medical record and allow subsequent health care providers access to the original information as well as the appended information. They also indicated appendment procedures will protect both individuals and covered entities since medical records are sometimes needed for litigation or other legal proceedings.

Response: We agree with commenters' concerns about the term “correction.” We have revised the rule and deleted “correction” from this provision in order to clarify that covered entities are not required by this rule to delete any information from the designated record set. We do not intend to alter medical record retention laws or current practice, except to require covered entities to append information as requested to ensure that a record is accurate and complete. If a covered entity prefers to comply with this provision by deleting the erroneous information, and applicable record retention laws allow such deletion, the entity may do so. For example, an individual may inform the entity that someone else's X-rays are in the individual's medical record. If the entity agrees that the X-ray is inaccurately filed, the entity may choose to so indicate and note where in the record the correct X-ray can be found. Alternatively, the entity may choose to remove the X-ray from the record and replace it with the correct X-ray, if applicable law allows the entity to do so. We intend the term “amendment” to encompass either action.

We believe this approach is consistent with well-established privacy principles, with other law, and with industry standards and ethical guidelines. The July 1977 Report of the Privacy Protection Study Commission recommended that health care providers and other organizations that maintain medical-record information have procedures for individuals to correct or amend the information.[FN28] The Privacy Act (5 U.S.C. 552a) requires government agencies to permit individuals to request amendment of any record the individual believes is not accurate, relevant, timely, or complete. In its report “Best Principles for Health Privacy,” the Health Privacy Working Group recommended, “An individual should have the right to supplement his or her own medical record. Supplementation should not be implied to mean deletion or alteration of the medical record.”[FN29] The National Association of Insurance Commissioners' Health Information Privacy Model Act establishes the right of an individual who is the subject of protected health information to amend protected health information to correct any inaccuracies. The National Conference of Commissioners on Uniform State Laws' Uniform Health Care Information Act states, “Because accurate health-care information is not only important to the delivery of health care, but for patient applications for life, disability and health insurance, employment, and a great many other issues that might be involved in civil litigation, this Act allows a patient to request an amendment in his record.”

Some states also establish a right for individuals to amend health information about them. For example, Hawaii law (HRS section 323C-12) states, “An individual or the individual's authorized representative may request in writing that a health care provider that generated certain health care information append additional information to the record in order to improve the accuracy or completeness of the information; provided that appending this information does not erase or obliterate any of the original information.” Montana law (MCA section 50-16-543) states, “For purposes of accuracy or completeness, a patient may request in writing that a health care provider correct or amend its record of the patient's health care information to which he has access.” Connecticut, Georgia, and Maine provide individuals a right to request correction, amendment, or deletion of recorded personal information about them maintained by an insurance institution. Many other states have similar provisions.

Industry and standard-setting organizations have also developed policies for amendment of health information. The National Committee for Quality Assurance and the Joint Commission on Accreditation of Healthcare Organizations issued recommendations stating, “The opportunity for patients to review their records will enable them to correct any errors and may provide them with a better understanding of their health status and treatment. Amending records does not erase the original information. It inserts the correct information with a notation about the date the correct information was available and any explanation about the reason for the error.”[FN30] Standards of the American Society for Testing and Materials state, “An individual has a right to amend by adding information to his or her record or database to correct inaccurate information in his or her patient record and in secondary records and databases which contain patient identifiable health information.”[FN31] We build on this well-established principle in this final rule.

Comment: Some commenters supported the proposal to allow individuals to request amendment for as long as the covered provider or plan maintains the information. A few argued that the provision should be time-limited, e.g., that covered entities should not have to amend protected health information that is more than two years old. Other comments suggested that the provision should only be applied to protected health information created after the compliance date of the regulation.

Response: The purpose of this provision is to create a mechanism whereby individuals can ensure that information about them is as accurate as possible as it travels through the health care system and is used to make decisions, including treatment decisions, about them. To achieve this result, individuals must have the ability to request amendment for as long as the information used to make decisions about them exists. We therefore retain the proposed approach. For these reasons, we also require covered entities to address requests for amendment of all protected health information within designated record sets, including information created or obtained prior to ***82737** the compliance date, for as long as the entity maintains the information.

Comment: A few commenters were concerned that the proposal implied that the individual is in control of and may personally change the medical record. These commenters opposed such an approach.

Response: We do not give individuals the right to alter their medical records. Individuals may request amendment, but they have no authority to determine the final outcome of the request and may not make actual changes to the medical record. The covered entity must review the individual's request and make appropriate decisions. We have clarified this intent in § 164.526(a)(1) by stating that individuals have a right to have a covered entity amend protected health information and in § 164.526(b)(2) by stating that covered entities must act on an individual's request for amendment.

Comment: Some comments argued that there is no free-text field in some current transaction formats that would accommodate the extra text required to comply with the amendment provisions (e.g., sending statements of disagreement along with all future disclosures of the information at issue). Commenters argued that this provision will burden the efficient transmission of information, contrary to HIPAA requirements.

Response: We believe that most amendments can be incorporated into the standard transactions as corrections of erroneous data. We agree that some of the standard transactions cannot currently accommodate additional material such as statements of disagreement and rebuttals to such statements. To accommodate these rare situations, we modify the requirements in § 164.526(d)(iii). The provision now states that if a standard transaction does not permit the inclusion of the additional material required by this section, the covered entity may separately transmit the additional material to the recipient of the standard transaction. Commenters interested in modifying the standard transactions to allow the incorporation of additional materials may also bring the issue up for resolution through the process established by the Transactions Rule and described in its preamble.

Comment: The NPRM proposed to allow amendment of protected health information in designated record sets. Some commenters supported the concept of a designated record set and stated that it appropriately limits the type of information available for amendment to information directly related to treatment. Other commenters were concerned about the burden this provision will create due to the volume of information that will be available for amendment. They were primarily concerned with the potential for frivolous, minor, or technical requests. They argued that for purposes of amendment, this definition should be limited to information used to make medical or treatment decisions about the individual. A few commenters requested clarification that individuals do not have a right to seek amendment unless there is verifiable information to support their claim or they can otherwise convince the entity that the information is inaccurate or incomplete.

Response: We believe that the same information available for inspection should also be subject to requests for amendment, because the purpose of these provisions is the same: To give consumers access to and the chance to correct errors in information that may be used to make decisions that affect their interests. We thus retain use of the “designated record set” in this provision. However, we share commenters” concerns about the potential for minor or technical requests. To address this concern, we have

clarified that covered entities may deny a request for amendment if the request is not in writing and does not articulate a reason to support the request, as long as the covered entity informs the individual of these requirements in advance.

Comment: Many commenters noted the potentially negative impact of the proposal to allow covered entities to deny a request for amendment if the covered entity did not create the information at issue. Some commenters pointed out that the originator of the information may no longer exist or the individual may not know who created the information in question. Other commenters supported the proposal that only the originator of the information is responsible for amendments to it. They argued that any extension of this provision requiring covered entities to amend information they have not created is administratively and financially burdensome.

Response: In light of the comments, we modify the rule to require the holder of the information to consider a request for amendment if the individual requesting amendment provides a reasonable basis to believe that the originator of the information is no longer available to act on a request. For example, if a request indicates that the information at issue was created by a hospital that has closed, and the request is not denied on other grounds, then the entity must amend the information. This provision is necessary to preserve an individual's right to amend protected health information about them in certain circumstances.

Comment: Some commenters stated that the written contract between a covered entity and its business associate should stipulate that the business associate is required to amend protected health information in accordance with the amendment provisions. Otherwise, these commenters argued, there would be a gap in the individual's right to have erroneous information corrected, because the covered entity could deny a request for amendment of information created by a business associate.

Response: We agree that information created by the covered entity or by the covered entity's business associates should be subject to amendment. This requirement is consistent with the requirement to make information created by a business associate available for inspection and copying. We have revised the rule to require covered entities to specify in the business associate contract that the business associate will make protected health information available for amendment and will incorporate amendments accordingly. (See § 164.504(e).)

Comment: One commenter argued that covered entities should be required to presume information must be corrected where an individual informs the entity that an adjudicative process has made a finding of medical identity theft.

Response: Identity theft is one of many reasons why protected health information may be inaccurate, and is one of many subjects that may result in an adjudicative process relevant to the accuracy of protective health information. We believe that this provision accommodates this situation without a special provision for identity theft.

Comment: Some commenters asserted that the proposed rule's requirement that action must be taken on individuals' requests within 60 days of the receipt of the request was unreasonable and burdensome. A few commenters proposed up to three 30-day extensions for “extraordinary” (as defined by the entity) requests.

Response: We agree that 60 days will not always be a sufficient amount of time to adequately respond to these requests. Therefore, we have revised this provision to allow covered entities the option of a 30-day extension to deal with requests that require additional response time. However, we expect that 60 days will be adequate for most cases.

Comment: One commenter questioned whether a covered entity could ***82738** appropriately respond to a request by amending the record, without indicating whether it believes the information at issue is accurate and complete.

Response: An amendment need not include a statement by the covered entity as to whether the information is or is not accurate and complete. A covered entity may choose to amend a record even if it believes the information at issue is accurate and complete. If a request for amendment is accepted, the covered entity must notify the individual that the record has been amended.

This notification need not include any explanation as to why the request was accepted. A notification of a denied request, however, must contain the basis for the denial.

Comment: A few commenters suggested that when an amendment is made, the date should be noted. Some also suggested that the physician should sign the notation.

Response: We believe such a requirement would create a burden that is not necessary to protect individuals' interests, and so have not accepted this suggestion. We believe that the requirements of § 164.526(c) regarding actions a covered entity must take when accepting a request will provide an adequate record of the amendment. A covered entity may date and sign an amendment at its discretion.

Comment: The NPRM proposed that covered entities, upon accepting a request for amendment, make reasonable efforts to notify those persons the individual identifies, and other persons whom the covered entity knows have received the erroneous or incomplete information and who may have relied, or could foreseeably rely, on such information to the detriment of the individual. Many commenters argued that this notification requirement was too burdensome and should be narrowed. They expressed concern that covered entities would have to notify anyone who might have received the information, even persons identified by the individual with whom the covered entity had no contact. Other commenters also contended that this provision would require covered entities to determine the reliance another entity might place on the information and suggested that particular part of the notification requirements be removed. Another commenter suggested that the notification provision be eliminated entirely, believing that it was unnecessary.

Response: Although there is some associated administrative burden with this provision, we believe it is a necessary requirement to effectively communicate amendments of erroneous or incomplete information to other parties. The negative effects of erroneous or incomplete medical information can be devastating. This requirement allows individuals to exercise some control in determining recipients they consider important to be notified, and requires the covered entity to communicate amendments to other persons that the covered entity knows have the erroneous or incomplete information and may take some action in reliance on the erroneous or incomplete information to the detriment of the individual. We have added language to clarify that the covered entity must obtain the individual's agreement to have the amendment shared with the persons the individual and covered entity identifies. We believe these notification requirements appropriately balance covered entities' burden and individuals' interest in protecting the accuracy of medical information used to make decisions about them. We therefore retain the notification provisions substantially as proposed.

Comment: Some commenters argued against the proposed provision requiring a covered entity that receives a notice of amendment to notify its business associates, “as appropriate,” of necessary amendments. Some argued that covered entities should only be required to inform business associates of these changes if the amendment could affect the individual's further treatment, citing the administrative and financial burden of notifying all business associates of changes that may not have a detrimental effect on the patient. Other commenters suggested that covered entities should only be required to inform business associates whom they reasonably know to be in possession of the information.

Response: We agree with commenters that clarification is warranted. Our intent is that covered entities must meet the requirements of this rule with respect to protected health information they maintain, including protected health information maintained on their behalf by their business associates. We clarify this intent by revising the definition of designated record set (see § 164.501) to include records maintained “by or for” a covered entity. Section 164.526(e) requires a covered entity that is informed of an amendment made by another covered entity to incorporate that amendment into designated record sets, whether the designated record set is maintained by the covered entity or for the covered entity by a business associate. If a business associate maintains the record at issue on the covered entity's behalf, the covered entity must fulfill its requirement by informing the business associate of the amendment to the record. The contract with the business associate must require the business associate to incorporate any such amendments. (See § 164.504(e).)

Comment: Some commenters supported the proposal to require covered entities to provide notification of the covered entity's statement of denial and the individual's statement of disagreement in any subsequent disclosures of the information to which the dispute relates. They argued that we should extend this provision to prior recipients of disputed information who have relied on it. These commenters noted an inconsistency in the proposed approach, since notification of accepted amendments is provided to certain previous recipients of erroneous health information and to recipients of future disclosures. They contended there is not a good justification for the different treatment and believed that the notification standard should be the same, regardless of whether the covered entity accepts the request for amendment.

These commenters also recommended that the individual be notified of the covered entity's intention to rebut a statement of disagreement. They suggested requiring covered entities to send a copy of the statement of rebuttal to the individual.

Response: Where a request for amendment is accepted, the covered entity knows that protected health information about the individual is inaccurate or incomplete or the amendment is otherwise warranted; in these circumstances, it is reasonable to ask the covered entity to notify certain previous recipients of the information that reliance on such information could be harmful. Where, however, the request for amendment is denied, the covered entity believes that the relevant information is accurate and complete or the amendment is otherwise unacceptable. In this circumstance, the burden of prior notification outweighs the potential benefits. We therefore do not require notification of prior recipients.

We agree, however, that individuals should know how a covered entity has responded to their requests, and therefore add a requirement that covered entities also provide a copy of any rebuttal statements to the individual.

***82739 Section 164.528—Accounting of Disclosures of Protected Health Information**

Comment: Many commenters expressed support for the concept of the right to receive an accounting of disclosures. Others opposed even the concept. One commenter said that it is likely that some individuals will request an accounting of disclosures from each of his or her health care providers and payors merely to challenge the disclosures that the covered entity made.

Some commenters also questioned the value to the individual of providing the right to an accounting. One commenter stated that such a provision would be meaningless because those who deliberately perpetrate an abuse are unlikely to note their breach in a log.

Response: The final rule retains the right of an individual to receive an accounting of disclosures of protected health information. The provision serves multiple purposes. It provides a means of informing the individual as to which information has been sent to which recipients. This information, in turn, enables individuals to exercise certain other rights under the rule, such as the rights to inspection and amendment, with greater precision and ease. The accounting also allows individuals to monitor how covered entities are complying with the rule. Though covered entities who deliberately make disclosures in violation of the rule may be unlikely to note such a breach in the accounting, other covered entities may document inappropriate disclosures that they make out of ignorance and not malfeasance. The accounting will enable the individual to address such concerns with the covered entity.

We believe this approach is consistent with well-established privacy principles, with other law, and with industry standards and ethical guidelines. The July 1977 Report of the Privacy Protection Study Commission recommended that a health care provider should not disclose individually-identifiable information for certain purposes without the individual's authorization unless “an accounting of such disclosures is kept and the individual who is the subject of the information being disclosed can find out that the disclosure has been made and to whom.”[FN32] With certain exceptions, the Privacy Act (5 U.S.C. 552a) requires government agencies to “keep an accurate accounting of * * * the date, nature, and purpose of each disclosure of a record to any person or to another agency * * * and * * * the name and address of the person or agency to whom the disclosure is made.” The National Association of Insurance Commissioners' Health Information Privacy Model Act requires carriers to provide to individuals on request “information regarding disclosure of that individual's protected health information that is sufficient to exercise the right to amend the information.” We build on these standards in this final rule.

Comment: Many commenters disagreed with the NPRM's exception for treatment, payment, and health care operations. Some commenters wanted treatment, payment, and health care operations disclosures to be included in an accounting because they believed that improper disclosures of protected health information were likely to be committed by parties within the entity who have access to protected health information for treatment, payment, and health care operations related purposes. They suggested that requiring covered entities to record treatment, payment, and health care operations disclosures would either prevent improper disclosures or enable transgressions to be tracked.

One commenter reasoned that disclosures for treatment, payment, and health care operations purposes should be tracked since these disclosures would be made without the individual's consent. Others argued that if an individual's authorization is not required for a disclosure, then the disclosure should not have to be tracked for a future accounting to the individual.

One commenter requested that the provision be restated so that no accounting is required for disclosures "compatible with or directly related to" treatment, payment or health care operations. This comment indicated that the change would make § 164.515(a)(1) of the NPRM consistent with § 164.508(a)(2)(i)(A) of the NPRM.

Response: We do not accept the comments suggesting removing the exception for disclosures for treatment, payment, and health care operations. While including all disclosures within the accounting would provide more information to individuals about to whom their information has been disclosed, we believe that documenting all disclosures made for treatment, payment, and health care operations purposes would be unduly burdensome on entities and would result in accountings so voluminous as to be of questionable value. Individuals who seek treatment and payment expect that their information will be used and disclosed for these purposes. In many cases, under this final rule, the individual will have consented to these uses and disclosures. Thus, the additional information that would be gained from including these disclosures would not outweigh the added burdens on covered entities. We believe that retaining the exclusion of disclosures to carry out treatment, payment, and health care operations makes for a manageable accounting both from the point of view of entities and of individuals. We have conformed the language in this section with language in other sections of the rule regarding uses and disclosures to carry out treatment, payment, and health care operations. See § 164.508 and the corresponding preamble discussion regarding our decision to use this language.

Comments: A few commenters called for a record of all disclosures, including a right of access to a full audit trail where one exists. Some commenters stated while audit trails for paper records are too expensive to require, the privacy rule should not discourage audit trails, at least for computer-based records. They speculated that an important reason for maintaining a full audit trail is that most abuses are the result of activity by insiders. On the other hand, other commenters pointed out that an enormous volume of records would be created if the rule requires recording all accesses in the manner of a full audit trail.

One commenter supported the NPRM's reference to the proposed HIPAA Security Rule, agreeing that access control and disclosure requirements under this rule should be coordinated with the final HIPAA Security Rule. The commenter recommended that HHS add a reference to the final HIPAA Security Rule in this section and keep specific audit log and reporting requirements generic in the privacy rule.

Response: Audit trails and the accounting of disclosures serve different functions. In the security field, an audit trail is typically a record of each time a sensitive record is altered, how it was altered and by whom, but does not usually record each time a record is used or viewed. The accounting required by this rule provides individuals with information about to whom a disclosure is made. An accounting, as described in this rule, would not capture uses. To the extent that an audit trail would capture uses, consumers reviewing an audit trail may not be able to distinguish between ***82740** accesses of the protected health information for use and accesses for disclosure. Further, it is not clear the degree to which the field is technologically poised to provide audit trails. Some entities could provide audit trails to individuals upon their request, but we are concerned that many could not.

We agree that it is important to coordinate this provision of the privacy rule with the Security Rule when it is issued as a final rule.

Comments: We received many comments from researchers expressing concerns about the potential impact of requiring an accounting of disclosures related to research. The majority feared that the accounting provision would prove so burdensome that many entities would decline to participate in research. Many commenters believed that disclosure of protected health information for research presents little risk to individual privacy and feared that the accounting requirement could shut down research.

Some commenters pointed out that often only a few data elements or a single element is extracted from the patient record and disclosed to a researcher, and that having to account for so singular a disclosure from what could potentially be an enormous number of records imposes a significant burden. Some said that the impact would be particularly harmful to longitudinal studies, where the disclosures of protected health information occur over an extended period of time. A number of commenters suggested that we not require accounting of disclosures for research, registries, and surveillance systems or other databases unless the disclosure results in the actual physical release of the patient's entire medical record, rather than the disclosure of discrete elements of information contained within the record.

We also were asked by commenters to provide an exclusion for research subject to IRB oversight or research that has been granted a waiver of authorization pursuant to proposed § 164.510, to exempt "in-house" research from the accounting provision, and to allow covered entities to describe the type of disclosures they have made to research projects, without specifically listing each disclosure. Commenters suggested that covered entities could include in an accounting a listing of the various research projects in which they participated during the time period at issue, without regard to whether a particular individual's protected health information was disclosed to the project.

Response: We disagree with suggestions from commenters that an accounting of disclosures is not necessary for research. While it is possible that informing individuals about the disclosures made of their health information may on occasion discourage worthwhile activities, we believe that individuals have a right to know who is using their health information and for what purposes. This information gives individuals more control over their health information and a better base of knowledge from which to make informed decisions.

For the same reasons, we also do not believe that IRB or privacy board review substitutes for providing individuals the right to know how their information has been disclosed. We permit IRBs or privacy boards to determine that a research project would not be feasible if authorization were required because we understand that it could be virtually impossible to get authorization for archival research involving large numbers of individuals or where the location of the individuals is not easy to ascertain. While providing an accounting of disclosures for research may entail some burden, it is feasible, and we do not believe that IRBs or privacy boards would have a basis for waiving such a requirement. We also note that the majority of comments that we received from individuals supported including more information in the accounting, not less.

We understand that requiring covered entities to include disclosures for research in the accounting of disclosures entails some burden, but we believe that the benefits described above outweigh the burden.

We do not agree with commenters that we should exempt disclosures where only a few data elements are released or in the case of data released without individuals' names. We recognize that information other than names can identify an individual. We also recognize that even a few data elements could be clues to an individual's identity. The actual volume of information released is not an appropriate indicator of whether an individual could have a concern about privacy.

We disagree with comments that suggested that it would be sufficient to provide individuals with a general list of research projects to which information has been disclosed by the covered entity. We believe that individuals are entitled to a level of specificity about disclosures of protected health information about them and should know to which research projects their protected health information has been disclosed, rather than to which projects protected health information may have been disclosed. However, we have added a provision allowing for a summary accounting of recurrent disclosures. For multiple disclosures to the same recipient pursuant to a single authorization or for a single purpose permitted under the rule without authorization, the covered entity may provide a summary accounting addressing the series of disclosures rather than a detailed

accounting of each disclosure in the series. This change is designed to ease the burden on covered entities involved in longitudinal projects.

With regard to the suggestion that we exempt "in-house" research from the accounting provision, we note that only disclosures of protected health information must appear in an accounting.

Comments: Several commenters noted that disclosures for public health activities may be of interest to individuals, but add to the burden imposed on entities. Furthermore, some expressed fear that priority public health activities would be compromised by the accounting provision. One commenter from a health department said that covered entities should not be required to provide an accounting to certain index cases, where such disclosures create other hazards, such as potential harm to the reporting provider. This commenter also speculated that knowing protected health information had been disclosed for these public health purposes might cause people to avoid treatment in order to avoid being reported to the public health department.

A provider association expressed concern about the effect that the accounting provision might have on a non-governmental, centralized disease registry that it operates. The provider organization feared that individuals might request that their protected health information be eliminated in the databank, which would make the data less useful.

Response: As in the discussion of research above, we reject the contention that we should withhold information from individuals about where their information has been disclosed because informing them could occasionally discourage some worthwhile activities. We also believe that, on balance, individuals' interest in having broad access to this information outweighs concerns about the rare instances in which providing this information might raise concerns about harm to the person who made the disclosure. As we stated above, we believe that individuals have ***82741** a right to know who is using their health information and for what purposes. This information gives individuals more control over their health information and a better base of knowledge from which to make informed decisions.

Comment: We received many comments about the proposed time-limited exclusion for law enforcement and health oversight. Several commenters noted that it is nearly impossible to accurately project the length of an investigation, especially during its early stages. Some recommended we permit a deadline based on the end of an event, such as conclusion of an investigation. One commenter recommended amending the standard such that covered entities would never be required to give an accounting of disclosures to health oversight or law enforcement agencies. The commenter noted that there are public policy reasons for limiting the extent to which a criminal investigation is made known publicly, including the possibility that suspects may destroy or falsify evidence, hide assets, or flee. The commenter also pointed out that disclosure of an investigation may unfairly stigmatize a person or entity who is eventually found to be innocent of any wrongdoing.

On the other hand, many commenters disagreed with the exemption for recording disclosures related to oversight activities and law enforcement. Many of these commenters stated that the exclusion would permit broad exceptions for government purposes while holding disclosures for private purposes to a more burdensome standard.

Some commenters felt that the NPRM made it too easy for law enforcement to obtain an exception. They suggested that law enforcement should not be excepted from the accounting provision unless there is a court order. One commenter recommended that a written request for exclusion be dated, signed by a supervisory official, and contain a certification that the official is personally familiar with the purpose of the request and the justification for exclusion from accounting.

Response: We do not agree with comments suggesting that we permanently exclude disclosures for oversight or law enforcement from the accounting. We believe generally that individuals have a right to know who is obtaining their health information and for what purposes.

At the same time, we agree with commenters that were concerned that an accounting could tip off subjects of investigations. We have retained a time-limed exclusion period similar to that proposed in the NPRM. To protect the integrity of investigations,

in the final rule we require covered entities to exclude disclosures to a health oversight agency or law enforcement official for the time specified by that agency or official, if the agency or official states that including the disclosure in an accounting to the individual would be reasonably likely to impede the agency or official's activities. We require the statement from the agency or official to provide a specific time frame for the exclusion. For example, pursuant to a law enforcement official's statement, a covered entity could exclude a law enforcement disclosure from the accounting for a period of three months from the date of the official's statement or until a date specified in the statement.

In the final rule, we permit the covered entity to exclude the disclosure from an accounting to an individual if the agency or official makes the statement orally and the covered entity documents the statement and the identify of the agency or official that made the statement. We recognize that in urgent situations, agencies and officials may not be able to provide statements in writing. If the agency or official's statement is made orally, however, the disclosure can be excluded from an accounting to the individual for no longer than 30 days from the oral statement. For exclusions longer than 30 days, a covered entity must receive a written statement.

We believe these requirements appropriately balance individuals' rights to be informed of the disclosures of protected health information while recognizing the public's interest in maintaining the integrity of health oversight and law enforcement activities.

Comment: One commenter stated that under Minnesota law, providers who are mandated reporters of abuse are limited as to whom they may reveal the report of abuse (generally law enforcement authorities and other providers only). This is because certain abusers, such as parents, by law may have access to a victim's (child's) records. The commenter requested clarification as to whether these disclosures are exempt from the accounting requirement or whether preemption would apply.

Response: While we do not except mandatory disclosures of abuse from the accounting for disclosure requirement, we believe the commenter's concerns are addressed in several ways. First, nothing in this regulation invalidates or limits the authority or procedures established under state law providing for the reporting of child abuse. Thus, with respect to child abuse the Minnesota law's procedures are not preempted even though they are less stringent with respect to privacy. Second, with respect to abuse of persons other than children, we allow covered entities to refuse to treat a person as an individual's personal representative if the covered entity believes that the individual has been subjected to domestic violence, abuse, or neglect from the person. Thus, the abuser would not have access to the accounting. We also note that a covered entity must exclude a disclosure, including disclosures to report abuse, from the accounting for specified period of time if the law enforcement official to whom the report is made requests such exclusion.

Comment: A few comments noted the lack of exception for disclosures made to intelligence agencies.

Response: We agree with the comments and have added an exemption for disclosures made for national security or intelligence purposes under § 164.512(k)(2). Individuals do not have a right to an accounting of disclosures for these purposes.

Comment: Commenters noted that the burden associated with this provision would, in part, be determined by other provisions of the rule, including the definitions of “individually identifiable,” “treatment,” and “health care operations.” They expressed concern that the covered entity would have to be able to organize on a patient by patient basis thousands of disclosures of information, which they described as “routine.” These commenters point to disclosures for patient directory information, routine banking and payment processes, uses and disclosures in emergency circumstances, disclosures to next of kin, and release of admissions statistics to a health oversight agency.

Response: We disagree with the commenters that ambiguity in other areas of the rule increase the burden associated with maintaining an accounting. The definitions of treatment, payment, and health operations are necessarily broad and there is no accounting required for disclosures for these purposes. These terms cover the vast majority of routine disclosures for health care purposes. (See § 164.501 and the associated preamble for a discussion of changes made to these definitions.)

The disclosures permitted under § 164.512 are for national priority purposes, and determining whether a disclosure fits within the section is necessary before the disclosure can be ***82742** made. There is no additional burden, once such a determination is made, in determining whether it must be included in the accounting.

We agree with the commenters that there are areas where we can reduce burden by removing additional disclosures from the accounting requirement, without compromising individuals' rights to know how their information is being disclosed. In the final rule, covered entities are not required to include the following disclosures in the accounting: disclosures to the individual, disclosures for facility directories under § 164.510(a), or disclosures to persons assisting in the individual's care or for other notification purposes under § 164.510(b). For each of these types of disclosures, the individual is likely to already know about the disclosure or to have agreed to the disclosure, making the inclusion of such disclosures in the accounting less important to the individual and unnecessarily burdensome to the covered entity.

Comment: Many commenters objected to requiring business partners to provide an accounting to covered entities upon their request. They cited the encumbrance associated with re-contracting with the various business partners, as well as the burden associated with establishing this type of record keeping.

Response: Individuals have a right to know to whom and for what purpose their protected health information has been disclosed by a covered entity. The fact that a covered entity uses a business associate to carry out a function does not diminish an individual's right to know.

Comments: One commenter requested clarification as to how far a covered entity's responsibility would extend, asking whether an entity had to track only their direct disclosures or subsequent re-disclosures.

Response: Covered entities are required to account for their disclosures, as well as the disclosures of their business associates, of protected health information. Because business associates act on behalf of covered entities, it is essential that their disclosures be included in any accounting that an individual requests from a covered entity. Covered entities are not responsible, however, for the actions of persons who are not their business associates. Once a covered entity has accounted for a disclosure to any person other than a business associate, it is not responsible for accounting for any further uses or disclosures of the information by that other person.

Comments: Some commenters said that the accounting provision described in the NPRM was ambiguous and created uncertainty as to whether it addresses disclosures only, as the title would indicate, or whether it includes accounting of uses. They urged that the standard address disclosures only, and not uses, which would make implementation far more practicable and less burdensome.

Response: The final rule requires disclosures, not uses, to be included in an accounting. See § 164.501 for definitions of “use” and “disclosure.”

Comments: We received many comments from providers and other representatives of various segments of the health care industry, expressing the view that a centralized system of recording disclosures was not possible given the complexity of the health care system, in which disclosures are made by numerous departments within entities. For example, commenters stated that a hospital medical records department generally makes notations regarding information it releases, but that these notations do not include disclosures that the emergency department may make. Several commenters proposed that the rule provide for patients to receive only an accounting of disclosures made by medical records departments or some other central location, which would relieve the burden of centralizing accounting for those entities who depend on paper records and tracking systems.

Response: We disagree with commenters' arguments that covered entities should not be held accountable for the actions of their subdivisions or workforce members. Covered entities are responsible for accounting for the disclosures of protected health

information made by the covered entity, in accordance with this rule. The particular person or department within the entity that made the disclosure is immaterial to the covered entity's obligation. In the final rule, we require covered entities to document each disclosure that is required to be included in an accounting. We do not, however, require this documentation to be maintained in a central registry. A covered hospital, for example, could maintain separate documentation of disclosures that are made from the medical records department and the emergency department. At the time an individual requests an accounting, this documentation could be integrated to provide a single accounting of disclosures made by the covered hospital. Alternatively, the covered hospital could centralize its processes for making and documenting disclosures. We believe this provision provides covered entities with sufficient flexibility to meet their business needs without compromising individuals' rights to know how information about them is disclosed.

Comments: Commenters stated that the accounting requirements placed undue burden on covered entities that use paper, rather than electronic, records.

Response: We do not agree that the current reliance on paper records makes the accounting provision unduly burdensome. Covered entities must use the paper records in order to make a disclosure, and have the opportunity when they do so to make a notation in the record or in a separate log. We require an accounting only for disclosures for purposes other than treatment, payment, and health care operations. Such disclosures are not so numerous that they cannot be accounted for, even if paper records are involved.

Comments: The exception to the accounting provision for disclosures of protected health information for treatment, payment, and health care operations purposes was viewed favorably by many respondents. However, at least one commenter stated that since covered entities must differentiate between disclosures that require documentation and those that do not, they will have to document each instance when a patient's medical record is disclosed to determine the reason for the disclosure. This commenter also argued that the administrative burden of requiring customer services representatives to ask in which category the information falls and then to keep a record that they asked the question and record the answer would be overwhelming for plans. The commenter concluded that the burden of documentation on a covered entity would not be relieved by the stipulation that documentation is not required for treatment, payment, and health care operations.

Response: We disagree. Covered entities are not required to document every disclosure in order to differentiate those for treatment, payment, and health care operations from those for purposes for which an accounting is required. We require that, when a disclosure is made for which an accounting is required, the covered entity be able to produce an accounting of those disclosures upon request. We do not require a covered entity to be able to account for every disclosure. In addition, we believe that we have addressed many of the commenters' concerns by clarifying in the final rule that disclosures to the ***82743** individual, regardless of the purpose for the disclosure, are not subject to the accounting requirement.

Comments: An insurer explained that in the context of underwriting, it may have frequent and multiple disclosures of protected health information to an agent, third party medical provider, or other entity or individual. It requested we reduce the burden of accounting for such disclosures.

Response: We add a provision allowing for a summary accounting of recurrent disclosures. For multiple disclosures to the same recipient pursuant to a single authorization or for a single purpose permitted under the rule without authorization, the covered entity may provide a summary accounting addressing the series of disclosures rather than a detailed accounting of each disclosure in the series.

Comment: Several commenters said that it was unreasonable to expect covered entities to track disclosures that are requested by the individual. They believed that consumers should be responsible for keeping track of their own requests.

Other commenters asked that we specify that entities need not retain and provide copies of the individual's authorization to disclose protected health information. Some commenters were particularly concerned that if they maintain all patient information on a computer system, it would be impossible to link the paper authorization with the patient's electronic records.

Another commenter suggested we allow entities to submit copies of authorizations after the 30-day deadline for responding to the individual, as long as the accounting itself is furnished within the 30-day window.

Response: In the final rule we do not require disclosures to the individual to be included in the accounting. Other disclosures requested by the individual must be included in the accounting, unless they are otherwise excepted from the requirement. We do not agree that individuals should be required to track these disclosures themselves. In many cases, an authorization may authorize a disclosure by more than one entity, or by a class of entities, such as all physicians who have provided medical treatment to the individual. Absent the accounting, the individual cannot know whether a particular covered entity has acted on the authorization.

We agree, however, that it is unnecessarily burdensome to require covered entities to provide the individual with a copy of the authorization. We remove the requirement. Instead, we require the accounting to contain a brief statement describing the purpose for which the protected health information was disclosed. The statement must be sufficient to reasonably inform the individual of the basis for the disclosure. Alternatively, the covered entity may provide a copy of the authorization or a copy of the written request for disclosure, if any, under §§ 164.502(a)(2)(ii) or 164.512.

Comments: We received many comments regarding the amount of information required in the accounting. A few commenters requested that we include additional elements in the accounting, such as the method of transmittal and identity of the employee who accessed the information.

Other commenters, however, felt that the proposed requirements went beyond what is necessary to inform the individual of disclosures. Another commenter stated that if the individual's right to obtain an accounting extends to disclosures that do not require a signed authorization, then the accounting should be limited to a disclosure of the manner and purpose of disclosures, as opposed to an individual accounting of each entity to whom the protected health information was disclosed. An insurer stated that this section of the proposed rule should be revised to provide more general, rather than detailed, guidelines for accounting of disclosures. The commenter believed that its type of business should be allowed to provide general information regarding the disclosure of protected health information to outside entities, particularly with regard to entities with which the insurer maintains an ongoing, standard relationship (such as a reinsurer).

Response: In general, we have retained the proposed approach, which we believe strikes an appropriate balance between the individual's right to know to whom and for what purposes their protected health information has been disclosed and the burden placed on covered entities. In the final rule, we clarify that the accounting must include the address of the recipient only if the address is known to the covered entity. As noted above, we also add a provision allowing for a summary accounting of recurrent disclosures. We note that some of the activities of concern to commenters may fall under the definition of health care operations (see § 164.501 and the associated preamble).

Comment: A commenter asked that we limit the accounting to information pertaining to the medical record itself, as opposed to protected health information more generally. Similarly, commenters suggested that the accounting be limited to release of the medical record only.

Response: We disagree. Protected health information exists in many forms and resides in many sources. An individual's right to know to whom and for what purposes his or her protected health information has been disclosed would be severely limited if it pertained only to disclosure of the medical record, or information taken only from the record.

Comment: A commenter asked that we make clear that only disclosures external to the organization are within the accounting requirement.

Response: We agree. The requirement only applies to disclosures of protected health information, as defined in § 164.501.

Comment: Some commenters requested that we establish a limit on the number of times an individual could request an accounting. One comment suggested we permit individuals to request one accounting per year; another suggested two accountings per year, except in "emergency situations." Others recommended that we enable entities to recoup some of the costs associated with implementation by allowing the entity to charge for an accounting.

Response: We agree that covered entities should be able to defray costs of excessive requests. The final rule provides individuals with the right to receive one accounting without charge in a twelve-month period. For additional requests by an individual within a twelve-month period, the covered entity may charge a reasonable, cost-based fee. If it imposes such a fee, the covered entity must inform the individual of the fee in advance and provide the individual with an opportunity to withdraw or modify the request to avoid or reduce the fee.

Comment: In the NPRM, we solicited comments on the appropriate duration of the individual's right to an accounting. Some commenters supported the NPRM's requirement that the right exist for as long as the covered entities maintains the protected health information. One commenter, however, noted that most audit control systems do not retain data on activity for indefinite periods of time.

Other commenters noted that laws governing the length of retention of clinical records vary by state and by provider type and suggested that entities be allowed to adhere to state laws or policies established by professional organizations or accrediting bodies. Some commenters suggested that the ***82744** language be clarified to state that whatever minimum requirements are in place for the record should also guide covered entities in retaining their capacity to account for disclosures over that same time, but no longer.

Several commenters asked us to consider specific time limits. It was pointed out that proposed § 164.520(f)(6) of the NPRM set a six-year time limit for retaining certain information including authorization forms and contracts with business partners. Included in this list was the accounting of disclosures, but this requirement was inconsistent with the more open-ended language in § 164.515. Commenters suggested that deferring to this six-year limit would make this provision consistent with other record retention provisions of the standard and might relieve some of the burden associated with implementation. Other specific time frames suggested were two years, three years, five years, and seven years.

Another option suggested by commenters was to keep the accounting record for as long as entities have the information maintained and "active" on their systems. Information permanently taken off the covered entity's system and sent to "dead storage" would not be covered. One commenter further recommended that we not require entities to maintain records or account for prior disclosures for members who have "disenrolled."

Response: We agree with commenters who suggested we establish a specific period for which an individual may request an accounting. In the final rule, we provide that individuals have a right to an accounting of the applicable disclosures that have been made in the six-year period prior to a request for an accounting. We adopt this time frame to conform with the other documentation retention requirements in the rule. We also note that an individual may request, and a covered entity may then provide, an accounting of disclosures for a period of time less than six years from the date of the request. For example, an individual could request an accounting only of disclosures that occurred during the year prior to the request. In addition, we note that covered entities do not have to account for disclosures that occurred prior to the compliance date of this rule.

Comments: Commenters asked that we provide more time for entities to respond to requests for accounting. Suggestions ranged from 60 days to 90 days. Another writer suggested that entities be able to take up to three 30-day extensions from the original

30-day deadline. Commenters raised concerns about the proposed requirement that a covered health care provider or health plan act as soon as possible.

Response: We agree with concerns raised by commenters and in the final rule, covered entities are required to provide a requested accounting no later than 60 days after receipt of the request. We also provide for one 30 day extension if the covered entity is unable to provide the accounting within the standard time frame. We eliminate the requirement for a covered entity to act as soon as possible.

We recognize that circumstances may arise in which an individual will request an accounting on an expedited basis. We encourage covered entities to implement procedures for handling such requests. The time limitation is intended to be an outside deadline, rather than an expectation. We expect covered entities always to be attentive to the circumstances surrounding each request and to respond in an appropriate time frame.

Comment: A commenter asked that we provide an exemption for disclosures related to computer upgrades, when protected health information is disclosed to another entity solely for the purpose of establishing or checking a computer system.

Response: This activity falls within the definition of health care operations and is, therefore, excluded from the accounting requirement.

Section 164.530—Administrative Requirements

Section 164.530(a)—Designation of a Privacy Official and Contact Person

Comment: Many of the commenters on this topic objected to the cost of establishing a privacy official, including the need to hire additional staff, which might need to include a lawyer or other highly paid individual.

Response: We believe that designation of a privacy official is essential to ensure a central point of accountability within each covered entity for privacy-related issues. The privacy official is charged with developing and implementing the policies and procedures for the covered entity, as required throughout the regulation, and for compliance with the regulation generally. While the costs for these activities are part of the costs of compliance with this rule, not extra costs associated with the designation of a privacy official, we do anticipate that there will be some cost associated with this requirement. The privacy official role may be an additional responsibility given to an existing employee in the covered entity, such as an office manager in a small entity or an information officer or compliance official in a larger institution. Cost estimates for the privacy official are discussed in detail in the overall cost analysis.

Comment: A few commenters argued for more flexibility in meeting the requirement for accountability. One health care provider maintained that covered entities should be able to establish their own system of accountability. For example, most physician offices already have the patient protections incorporated in the proposed administrative requirements—the commenter urged that the regulation should explicitly promote the application of flexibility and scalability. A national physician association noted that, in small offices, in particular, responsibility for the policies and procedures should be allowed to be shared among several people. A major manufacturing corporation asserted that mandating a privacy official is unnecessary and that it would be preferable to ask for the development of policies that are designed to ensure that processes are maintained to assure compliance.

Response: We believe that a single focal point is needed to achieve the necessary accountability. At the same time, we recognize that covered entities are organized differently and have different information systems. We therefore do not prescribe who within a covered entity must serve as the privacy official, nor do we prohibit combining this function with other duties. Duties may be delegated and shared, so long as there is one point of accountability for the covered entity's policies and procedures and compliance with this regulation.

Comment: Some commenters echoed the proposal of a professional information management association that the regulation establish formal qualifications for the privacy official, suggesting that this should be a credentialed information management professional with specified minimum training standards. One commenter emphasized that the privacy official should be sufficiently high in management to have influence.

Response: While there may be some advantages to establishing formal qualifications, we concluded the disadvantages outweigh the advantages. Since the job of privacy official will differ substantially among organizations of varying size and function, specifying a single set of qualifications would sacrifice flexibility and scalability in implementation. ***82745**

Comment: A few commenters suggested that we provide guidance on the tasks of the privacy official. One noted that this would reduce the burden on covered entities to clearly identify those tasks during the initial HIPAA implementation phase.

Response: The regulation itself outlines the tasks of the privacy official, by specifying the policies and procedures required, and otherwise explaining the duties of covered entities. Given the wide variation in the function and size of covered entities, providing further detail here would unnecessarily reduce flexibility for covered entities. We will, however, provide technical assistance in the form of guidance on the various provisions of the regulation before the compliance date.

Comment: Some comments expressed concern that the regulation would require a company with subsidiaries to appoint a privacy official within each subsidiary. Instead they argued that the corporate entity should have the option of designating a single corporate official rather than one at each subsidiary.

Response: In the final regulation, we give covered entities with multiple subsidiaries that meet the definition of covered entities under this rule the flexibility to designate whether such subsidiaries are each a separate covered entity or are together a single covered entity. (See § 164.504(b) for the rules requiring such designation.) If only one covered entity is designated for the subsidiaries, only one privacy officer is needed. Further, we do not prohibit the privacy official of one covered entity from serving as the privacy official of another covered entity, so long as all the requirements of this rule are met for each such covered entity.

Section 164.530(b)—Training

Comment: A few commenters felt that the proposed provision was too stringent, and that the content of the training program should be left to the reasonable discretion of the covered entity.

Response: We clarify that we do not prescribe the content of the required training; the nature of the training program is left to the discretion of the covered entity. The scenarios in the NPRM preamble of potential approaches to training for different sized covered entities were intended as examples of the flexibility and scalability of this requirement.

Comment: Most commenters on this provision asserted that recertification/retraining every three years is excessive, restrictive, and costly. Commenters felt that retraining intervals should be left to the discretion of the covered entity. Some commenters supported retraining only in the event of a material change. Some commenters supported the training requirement as specified in the NPRM.

Response: For the reasons cited by the commenters, we eliminate the triennial recertification requirements in the final rule. We also clarify that retraining is not required every three years. Retraining is only required in the case of material changes to the privacy policies and procedures of the covered entity.

Comment: Several commenters objected to the burden imposed by required signatures from employees after they are trained. Many commenters suggested that electronic signatures be accepted for various reasons. Some felt that it would be less costly than manually producing, processing, and retaining the hard copies of the forms. Some suggested sending out the notice to the personal workstation via email or some other electronic format and having staff reply via email. One commenter suggested that the covered entity might opt to give web based training instead of classroom or some other type. The commenter indicated that

with web based training, the covered entity could record whether or not an employee had received his or her training through the use of a guest book or registration form on the web site. Thus, a physical signature should not be required.

Response: We agree that there are many appropriate mechanisms by which covered entities can implement their training programs, and therefore remove this requirement for signature. We establish only a general requirement that covered entities document compliance with the training requirement.

Comment: Some commenters were concerned that there was no proposed requirement for business associates to receive training and/or to train their employees. The commenters believed that if the business associate violated any privacy requirements, the covered entity would be held accountable. These commenters urged the Secretary to require periodic training for appropriate management personnel assigned outside of the component unit of the covered entity, including business associates. Other commenters felt that it would not be fair to require covered entities to impose training requirements on business associates.

Response: We do not have the statutory authority directly to require business associates to train their employees. We also believe it would be unnecessarily burdensome to require covered entities to monitor business associates' establishment of specific training requirements. Covered entities' responsibility for breaches of privacy by their business associates is described in §§ 164.504(e) and 164.530(f). If a covered entity believes that including a training requirement in one or more of its business associate contracts is an appropriate means of protecting the health information provided to the business associate, it is free to do so.

Comments: Many commenters argued that training, as well as all of the other administrative requirements, are too costly for covered entities and that small practices would not be able to bear the added costs. Commenters also suggested that HHS should provide training materials at little, or no, cost to the covered entity.

Response: For the final regulation, we make several changes to the proposed provisions. We believe that these changes address the issue of administrative cost and burden to the greatest extent possible, consistent with protecting the privacy of health information. In enforcing the privacy rule, we expect to provide general training materials. We also hope to work with professional associations and other groups that target classes of providers, plans and patients, in developing specialized material for these groups.

We note that, under long-standing legal principles, entities are generally responsible for the actions of their workforce. The requirement to train workforce members to implement the covered entity's privacy policies and procedures, and do such things as pass evidence of potential problems to those responsible, is in line with these principles. For example, the comments and our fact finding indicate that, today, many hospitals require their workforce members to sign a confidentiality agreement, and include confidentiality matters in their employee handbooks.

Section 164.530(c)—Safeguards

Comments: A few comments assert that the rule requires some institutions that do not have adequate resources to develop costly physical and technical safeguards without providing a funding mechanism to do so. Another comment said that the vague definitions of adequate and appropriate safeguards could be interpreted by HHS to require the purchase of new computer systems and reprogram many old ones. A few other comments suggested that the safeguards language was vague and asked for more specifics.

Response: We require covered entities to maintain safeguards adequate for their operations, but do not require that ***82746** specific technologies be used to do so. Safeguards need not be expensive or high-tech to be effective. Sometimes, it is an adequate safeguard to put a lock on a door and only give the keys to those who need access. As described in more detail in the preamble discussion of § 164.530, we do not require covered entities to guarantee the safety of protected health information against all assaults. This requirement is flexible and scalable to allow implementation of required safeguards at a reasonable cost.

Comments: A few commenters noted that once protected health information becomes non-electronic, by being printed for example, it escapes the protection of the safeguards in the proposed Security Rule. They asked if this safeguards requirement is intended to install similar security protections for non-electronic information.

Response: This provision is not intended to incorporate the provisions in the proposed Security regulation into this regulation, or to otherwise require application of those provisions to paper records.

Comments: Some commenters said that it was unclear what "appropriate" safeguards were required by the rule and who establishes the criteria for them. A few noted that the privacy safeguards were not exactly the same as the security safeguards, or that the "other safeguards" section was too vague to implement. They asked for more clarification of safeguards requirements and flexible solutions.

Response: In the preamble discussion of § 164.530, we provide examples of types of safeguards that can be appropriate to satisfy this requirement. Other sections of this regulation require specific safeguards for specific circumstances. The discussion of the requirements for "minimum necessary" uses and disclosures of protected health information includes related guidance for developing role-based access policies for a covered entity's workforce. The requirements for "component entities" include requirements for firewalls to prevent access by unauthorized persons. The proposed Security Rule included further details on what safeguards would be appropriate for electronic information systems. The flexibility and scalability of these rules allows covered entities to analyze their own needs and implement solutions appropriate for their own environment.

Comments: A few comments asked for a requirement for a firewall between a health care component and the rest of a larger organization as another appropriate safeguard.

Response: We agree, and have incorporated such a requirement in § 164.504.

Comments: One commenter agreed with the need for administrative, physical, and technical safeguards, but took issue with our specification of the type of documentation or proof that the covered entity is taking action to safeguard protected health information.

Response: This privacy rule does not require specific forms of proof for safeguards.

Comments: A few commenters asked that, for the requirement for a signed certification of training and the requirements for verification of identity, we consider the use of electronic signatures that meet the requirements in the proposed security regulation to meet the requirements of this rule.

Response: In this final rule, we drop the requirements for signed certifications of training. Signatures are required elsewhere in this regulation, for example, for a valid authorization. In the relevant sections we clarify that electronic signatures are sufficient provided they meet standards to be adopted under HIPAA. In addition, we do not intend to interfere with the application of the Electronic Signature in Global and National Commerce Act.

Comments: A few commenters requested that the privacy requirements for appropriate administrative, technical, and physical safeguards be considered to have been met if the requirements of the proposed Security Rule have been met. Others requested that the safeguards requirements of the final Privacy Rule mirror or be harmonized with the final Security Rule so they do not result in redundant or conflicting requirements.

Response: Unlike the proposed regulation, the final regulation covers all protected health information, not just information that had at some point been electronic. Thus, these commenters' assumption that the proposed Privacy Rule and the proposed Security Rule covered the same information is not the case, and taking the approach suggested by these comments would leave

a significant number of health records unprotected. The safeguards required by this regulation are appropriate for both paper and electronic information. We will take care to ensure that the final Security Rule works in tandem with these requirements.

Comments: One commenter requested that the final privacy rule be published before the final Security Rule, recognizing that the privacy policies must be in place before the security technology used to implement them could be worked out. Another commenter asked that the final Security Rule be published immediately and not wait for an expected delay while privacy policies are worked out.

Response: Now that this final privacy rule has been published in a timely manner, the final Security Rule can be harmonized with it and published soon.

Comments: Several commenters echoed an association recommendation that, for those organizations that have implemented a computer based patient record that is compliant with the requirements of the proposed Security Rule, the minimum necessary rule should be considered to have been met by the implementation of role-based access controls.

Response: The privacy regulation applies to paper records to which the proposed Security Rule does not apply. Thus, taking the approach suggested by these comments would leave a significant number of health records unprotected. Further, since the final Security Rule is not yet published and the number of covered entities that have implemented this type of computer-based patient record systems is still small, we cannot make a blanket statement. We note that this regulation requires covered entities to develop role-based access rules, in order to implement the requirements for "minimum necessary" uses and disclosures of protected health information. Thus, this regulation provides a foundation for the type of electronic system to which these comments refer.

Section 164.530(d)*—*Complaints to the Covered Entity

Comment: Several commenters felt that some form of due process is needed when it comes to internal complaints. Specifically, they wanted to be assured that the covered entity actually hears the complaints made by the individual and that the covered entity resolves the complaint within a reasonable time frame. Without due process the commenters felt that the internal complaint process is open ended. Some commenters wanted the final rule to include an appeals process for individuals if a covered entity's determination in regards to the complaint is unfavorable to the individual.

Response: We do not require covered entities to implement any particular due process or appeals process for complaints, because we are concerned about the burden this could impose on covered entities. We provide individuals with an alternative to take their complaints to the Secretary. We believe that this provides incentives for ***82747** covered entities to implement a complaint process that resolves complaints to individuals' satisfaction.

Comment: Some commenters felt that the individual making the complaint should exhaust all other avenues to resolve their issues before filing a complaint with the Secretary. A number of commenters felt that any complaint being filed with the Secretary should include documentation of the reviews done by the covered entity.

Response: We reject these suggestions, for two reasons. First, we want to avoid establishing particular process requirements for covered entities' complaint programs. Also, this rule does not require the covered entity to share any information with the complainant, only to document the receipt of the complaint and the resolution, if any. Therefore, we cannot expect the complainant to have this information available to submit to the Secretary. Second, we believe the individual making the complaint should have the right to share the complaint with the Secretary at any point in time. This approach is consistent with existing civil rights enforcement programs for which the Department is responsible. Based on that experience, we believe that most complaints will come first to covered entities for disposition.

Comment: Some commenters wanted the Department to prescribe a minimum amount of time before the covered entity could dispose of the complaints. They felt that storing these complaints indefinitely would be cumbersome and expensive.

Response: We agree, and in the final rule require covered entities to keep all items that must be documented, including complaints, for at least six years from the date of creation.

Comments: Some commenters objected to the need for covered entities to have at least one employee, if not more, to deal with complaints. They felt that this would be costly and is redundant in light of the designation of a contact person to receive complaints.

Response: We do not require assignment of dedicated staff to handle complaints. The covered entity can determine staffing based on its needs and business practices. We believe that consumers need one clear point of contact for complaints, in order that this provision effectively inform consumers how to lodge complaints and so that the compliant will get to someone who knows how to respond. The contact person (or office) is for receipt of complaints, but need not handle the complaints.

Section 164.530(e)—Sanctions

Comment: Commenters argued that most covered entities already have strict sanctions in place for violations of a patient's privacy, either due to current laws, contractual obligations, or good operating practices. Requiring covered entities to create a formal sanctioning process would be superfluous.

Response: We believe it is important for the covered entity to have these sanction policies and procedures documented so that employees are aware of what actions are prohibited and punishable. For entities that already have sanctions policies in place, it should not be problematic to document those policies. We do not define the particular sanctions that covered entities must impose.

Comment: Several commenters agreed that training should be provided and expectations should be clear so that individuals are not sanctioned for doing things that they did not know were wrong or inappropriate. A good faith exception should be included in the final rule to protect these individuals.

Response: We agree that employees should be trained to understand the covered entity's expectations and understand the consequences of any violation. This is why we are requiring each covered entity to train its workforce. However, we disagree that a good faith exception is explicitly needed in the final rule. We leave the details of sanctions policies to the discretion of the covered entity. We believe it is more appropriate to leave this judgment to the covered entity that will be familiar with the circumstances of the violation, rather than to specify such requirements in the regulation.

Comment: Some commenters felt that the sanctions need to reach business partners as well, not just employees of the covered entities. These commenters felt all violators should be sanctioned, including government officials and agencies.

Response: All members of a covered entity's workforce are subject to sanctions for violations, including government officials who are part of a covered entity's workforce. Requirements for addressing privacy violations by business associates are discussed in §§ 164.504(e) and 164.530(f).

Comments: Many commenters appreciated the flexibility left to the covered entities to determine sanctions. However, some were concerned that the covered entity would need to predict each type of violation and the associated sanction. They argue that, if the Department could not determine this in the NPRM, then the covered entities should be allowed to come up with sanctions as appropriate at the time of the violation. Some commenters wanted a better explanation and understanding of what HHS' expectation is of when is it appropriate to apply sanctions. Some commenters felt that the sanctioning requirement is nebulous and requires independent judgment of compliance; as a result it is hard to enforce. Offending individuals may use the vagueness of the standard as an defense.

Response: We agree with the commenters that argue that covered entities should be allowed to determine the specific sanctions as appropriate at the time of the violation. We believe it is more appropriate to leave this judgment to the covered entity, because the covered entity will be familiar with the circumstances of the violation and the best way to improve compliance.

Comment: A commenter felt that the self-imposition of this requirement is an inadequate protection, as there is an inherent conflict of interest when an entity must sanction one of its own.

Response: We believe it is in the covered entity's best interests to appropriately sanction those individuals who do not follow the outlined policies and procedures. Allowing violations to go unpunished may lead bigger problems later, and result in complaints being registered with the Department by aggrieved parties and/or an enforcement action.

Comment: This provision should cover all violations, not just repeat violations.

Response: We do not limit this requirement to repeat offenses.

Section 164.530(f)—Duty To Mitigate

Comments: A few commenters felt that any duty to mitigate would be onerous, especially for small entities. One commenter supported an affirmative duty to mitigate for employees of the covered entity, as long as there is no prescribed mitigation policy. One commenter stated that a requirement for mitigation is unnecessary because any prudent entity would do it.

Some practitioner organizations as well as a health plan, expressed concern about the obligation to mitigate in the context of the business associate relationship. Arguing that it is unnecessary for the regulation to explicitly extend the duty to mitigate to business associates, commenters noted that: Any prudent entity would discipline a vendor or employee that violates a regulation; that the matter is best left to the terms of the contract, and that it is difficult and expensive for a ***82748** business associate to have a separate set of procedures on mitigation for each client/provider. One commenter suggested that the federal government should fund the monitoring needed to administer the requirement.

Response: Eliminating the requirement to mitigate harm would undermine the purposes of this rule by reducing covered entities' accountability to their patients for failure to protect their confidential data. To minimize burden, we do not prescribe what mitigation policies and procedures must be implemented. We require only that the covered entity mitigate harm. We also assume that violations will be rare, and so the duty to mitigate harm will rarely be triggered. To the extent a covered entity already has methods for mitigating harm, this rule will not pose significant burden, since we don't require the covered entity to follow any prescribed method or set of rules.

We also modify the NPRM to impose the duty to mitigate only where the covered entity has actual knowledge of harm. Further reducing burden, the rule requires mitigation “to the extent practicable.” It does not require the covered entity to eliminate the harm unless that is practicable. For example, if protected health information is advertently provided to a third party without authorization in a domestic abuse situation, the covered entity would be expected to promptly contact the patient as well as appropriate authorities and apprize them of the potential danger.

The harm to the individual is the same, whether the privacy breach was caused by a member of the covered entity's workforce, or by a contractor. We believe the cost of this requirement to be minimal for covered entities that engage in prudent business practices for exchanging protected health information with their business associates.

Comment: A few commenters noted that it is difficult to determine whether a violation has resulted in a deleterious effect, especially as the entity cannot know all places to which information has gone and uses that have been made of it. Consequently, there should be a duty to mitigate even if a deleterious effect cannot be shown, because the individual has no other redress.

Response: As noted above, this provision only applies if the covered entity has actual knowledge of the harm, and requires mitigation "to the extent practicable." The covered entity is expected to take reasonable steps based on knowledge of where the information has been disclosed, how it might be used to cause harm to the patient or another individual, and what steps can actually have a mitigating effect in that specific situation.

Comments: Commenters stated that the language of the regulation was in some places vague and imprecise thus providing covered entities with insufficient guidance and allowing variation in interpretation. Commenters also noted that this could result in inconsistency in implementation as well as permitting such inconsistency to be used as a defense by an offending entity. Particular language for which at least one commenter requested clarification included "reasonable steps" and what is entailed in the duty to mitigate.

Response: We considered ways in which we might increase specificity, including defining "to the extent practicable" and "reasonable steps" and relating the mitigating action to the deleterious impact. While this approach could remove from the covered entity the burden of decision-making about actions that need to be taken, we believe that other factors outweighed this potential benefit. Not only would there be a loss of desirable flexibility in implementation, but it would not be possible to define "to the extent practicable" in a way that makes sense for all types of covered entities. We believe that allowing flexibility and judgment by those familiar with the circumstances to dictate the approach is the best approach to mitigating harm.

Section 164.530(g)—Refraining From Intimidating or Retaliatory Acts

Comment: Several commenters stated that the regulation should prohibit covered entities from engaging in intimidating or retaliatory acts against any person, not just against the "individual," as proposed. They suggested adding "or other person or entity" after "any individual."

Response: We agree, and allow any person to file a compliant with the Secretary. "Person" is not limited to natural persons, but includes any type of organization, association or group such as other covered entities, health oversight agencies and advocacy groups.

Comment: A few commenters suggested deleting this provision in its entirety. One commenter indicated that the whistleblower and retaliation provisions could be inappropriately used against a hospital and that the whistleblower's ability to report numerous violations will result in a dangerous expansion of liability. Another commenter stated that covered entities could not take action against an employee who had violated the employer's privacy provisions if this employee files a complaint with the Secretary.

Several commenters suggested deleting "in any manner" and "or opposing any act or practice made unlawful by this subpart" in § 164.522(d)(4). The commenters indicated that, as proposed, the rule would make it difficult to enforce compliance within the workforce. One commenter stated that the proposed 164.522(d)(4) "is extremely broad and may allow an employee to reveal protected health information to fellow employees, the media and others (e.g., an employee may show a medical record to a friend or relative before filing a complaint with the Department). This commenter further stated that covered entities will "absolutely be prevented from prohibiting such conduct." One commenter suggested adding that a covered entity may take disciplinary action against any member of its work force or any business partner who uses or discloses individually identifiable health information in violation of this subpart in any manner other than through the processes set forth in the regulation.

Response: To respond to these comments, we make several changes to the proposed provision.

First, where the activity does not involve the filing of a complaint under § 160.306 of this part or participation in an investigation or proceeding initiated by the government under the rule, we delete the phrase "in any manner" and add a requirement that the individual's opposition to "any act or practice" made unlawful by this subpart be in good faith, and that the expression of that opposition must be reasonable. Second, we add a requirement that the individual's opposition to "any act or practice" made unlawful by this subpart must not involve a disclosure of protected health information that is in violation of this subpart. Thus, the employee who discloses protected health information to the media or friends is not protected. In providing interpretations

of the retaliation provision, we will consider existing interpretations of similar provisions such as the guidance issued by EEOC in this regard.

Section 164.530(h)—Waiver of Rights

There are no comments directly about this section because it was not included in the proposed rule.

Section 164.530(i)—Policies and Procedures and § 164.530(j)—Documentation Requirements

Comments: Many of the comments to this provision addressed the costs and ***82749** complexity of the regulation as a whole, not the additional costs of documenting policies and procedures per se. Some did, either implicitly or explicitly, object to the need to develop and document policies and procedures as creating excessive administrative burden. Many of these commenters also asserted that there is a contradiction between the administrative burden of this provision and one of the statutory purposes of this section of the HIPAA to reduce costs through administrative simplification. Suggested alternatives were generally reliance on existing regulations and ethical standards, or on current business practices.

Response: A specific discussion of cost and burden is found in the Regulatory Impact Analysis of this final rule.

We do not believe there is a contradiction between the administrative costs of this provision and of the goal of administrative simplification. In the Administrative Simplification provisions of the HIPAA, Congress combined a mandate to facilitate the efficiencies and cost savings for the health care industry that the increasing use of electronic technology affords, with a mandate to improve privacy and confidentiality protections. Congress recognized, and we agree, that the benefits of electronic commerce can also cause increased vulnerability to inappropriate access and use of medical information, and so must be balanced with increased privacy protections. By including the mandate for privacy standards in section 264 of the HIPAA, Congress determined that existing regulations and ethical standards, and current business practices were insufficient to provide the necessary protections.

Congress mandated that the total benefits associated with administrative simplification must outweigh its costs, including the costs of implementing the privacy regulation. We are well within this mandate.

Comments: Several commenters suggested that the documentation requirements not be established as a standard under the regulation, because standards are subject to penalties. They recommend we delete the documentation standards and instead provide specific guidance and technical assistance. Several commenters objected to the suggestion in the NPRM that professional associations assist their members by developing appropriate policies for their membership. Several commentators representing professional associations believed this to be an onerous and costly burden for the associations, and suggested instead that we develop specific models which might require only minor modification. Some of these same associations were also concerned about liability issues in developing such guidelines. One commenter argued that sample forms, procedures, and policies should be provided as part of the Final Rule, so that practitioners would not be overburdened in meeting the demands of the regulations. They urged us to apply this provision only to larger entities.

Response: The purpose of requiring covered entities to develop policies and procedures for implementing this regulation is to ensure that important decisions affecting individuals' rights and privacy interests are made thoughtfully, not on an ad hoc basis. The purpose of requiring covered entities to maintain written documentation of these policies is to facilitate workforce training, and to facilitate creation of the required notice of information practices. We further believe that requiring written documentation of key decisions about privacy will enhance accountability, both within the covered entity and to the Department, for compliance with this regulation.

We do not include more specific guidance on the content of the required policies and procedures because of the vast difference in the size of covered entities and types of covered entities' businesses. We believe that covered entities should have the flexibility to design the policies and procedures best suited to their business and information practices. We do not exempt smaller entities,

because the privacy of their patients is no less important than the privacy of individuals who seek care from large providers. Rather, to address this concern we ensure that the requirements of the rule are flexible so that smaller covered entities need not follow detailed rules that might be appropriate for larger entities with complex information systems.

We understand that smaller covered entities may require some assistance, and intend to provide such technical assistance after publication of this rule. We hope to work with professional associations and other groups that target classes of providers, plans and patients, in developing specialized material for these groups. Our discussions with several such organizations indicate their intent to work on various aspects of model documentation, including forms. Because the associations' comments regarding concerns about liability did not provide sufficient details, we cannot address them here.

Comment: Many commenters discussed the need for a recognition of scalability of the policies and procedures of an entity based on size, capabilities, and needs of the participants. It was noted that the actual language of the draft regulations under § 164.520 did not address scalability, and suggested that some scalability standard be formally incorporated into the regulatory language and not rely solely on the NPRM introductory commentary.

Response: In § 164.530(i)(1) of the final rule, we specify that we require covered entities to implement policies and procedures that take into account the size of the covered entity and the types of activities that relate to protected health information undertaken by the covered entity.

Comment: One commenter objected to our proposal to allow covered entities to make uses or disclosures not permitted by their current notice if a compelling reason exists to make the use or disclosure and the entity documents the reasons and changes its policies within 30 days of the use or disclosure. The commenter argued that the subjective language of the regulation might give entities the ability to engage in post hoc justifications for violations of their own information practices and policies. The commenter suggested that there should be an objective standard for reviewing the covered entity's reasons before allowing the covered entity to amend its policies.

Response: We eliminate this provision from the final rule. The final rule requires each covered entity to include in its notice of information practices a statement of all permitted uses under this rule, not just those in which the covered entity actually engages in at the time of that notice.

Comment: Some commenters expressed concern that the required retention period in the NPRM applied to the retention of medical records.

Response: The retention requirement of this regulation only applies to the documentation required by the rule, for example, keeping a record of accounting for disclosures or copies of policies and procedures. It does not apply to medical records.

Comments: Comments on the six year retention period were mixed. Some commenters endorsed the six-year retention period for maintaining documentation. One of the comments stated this retention period would assist physicians legally. Other commenters believed that the retention period would be an undue burden. One commenter noted that most State Board of Pharmacy regulations require ***82750** pharmacies to keep records for two years, so the six year retention period would triple document retention costs.

Response: We established the retention period at six years because this is the statute of limitations for the civil monetary penalties. This rule does not apply to all pharmacy records, but only to the documentation required by this rule.

Section 164.530(k)—Group Health Plans

There were no comments directly about this section because it was not included in the proposed rule.

Section 164.532—Transition Provisions

Comment: Commenters urged the Department to clarify whether the "reach of the transition requirement" is limited to a particular time frame, to the provider's activities in a particular job, or work for a particular employer. For example, one commenter questioned how long a nurse is a covered entity after she moves from a job reviewing files with protected health information to an administrative job that does not handle protected health information; or whether an occupational health nurse who used to transmit first reports of injury to her company's workers' compensation carrier last year but no longer does so this year because of a carrier change still is a covered entity.

Response: Because this comment addresses a question of enforcement, we will address it in the enforcement regulation.

Comment: Several commenters sought clarification as to the application of the privacy rule to research already begun prior to the effective date or compliance date of the final rule. These commenters argued that applying the privacy rule to research already begun prior the rule's effective date would substantially overburden IRBs and that the resulting research interruptions could harm participants and threaten the reliability and validity of conclusions based upon clinical trial data. The commenters recommended that the rule grandfather in any ongoing research that has been approved by and is under the supervision of an IRB.

Response: We generally agree with the concerns raised by commenters. In the final rule, we have provided that covered entities may rely upon consents, authorizations, or other express legal permissions obtained from an individual for a specific research project that includes the treatment of individuals to use or disclose protected health information the covered entity obtained before or after the applicable compliance date of this rule as long as certain requirements are met. These consents, authorizations, or other express legal permissions may specifically permit a use or disclosure of individually identifiable health information for purposes of the project or be a general consent of the individual to participate in the project. A covered entity may use or disclose protected health information it created or received before or after the applicable compliance date of this rule for purposes of the project provided that the covered entity complies with all limitations expressed in the consent, authorization, or permission.

In regard to research projects that include the treatment of individuals, such as clinical trials, covered entities engaged in these projects will have obtained at least an informed consent from the individual to participate in the project. In some cases, the researcher may also have obtained a consent, authorization, or other express legal permission to use or disclose individually identifiable health information in a specific manner. To avoid disrupting ongoing research and because the participants have already agreed to participate in the project (which expressly permits or implies the use or disclosure of their protected health information), we have grandfathered in these consents, authorizations, and other express legal permissions.

It is unlikely that a research project that includes the treatment of individuals could proceed under the Common Rule with a waiver of informed consent. However, to the extent such a waiver has been granted, we believe individuals participating in the project should be able to determine how their protected health information is used or disclosed. Therefore, we require researchers engaged in research projects that include the treatment of individuals who obtained an IRB waiver of informed consent under the Common Rule to obtain an authorization or a waiver of such authorization from an IRB or a privacy board under § 164.512(i) of this rule.

If a covered entity obtained a consent, authorization, or other express legal permission from the individual who is the subject of the research, it would be able to rely upon that consent, authorization, or permission, consistent with any limitations it expressed, to use or disclose the protected health information it created or received prior to or after the compliance date of this regulation. If a covered entity wishes to use or disclose protected health information but no such consent, authorization, or permission exists, it must obtain an authorization pursuant to § 164.508 or obtain a waiver of authorization under § 164.512(i). To the extent such a project is ongoing and the researchers are unable to locate the individuals whose protected health information they are using or disclosing, we believe the IRB or privacy board under the criteria set forth in § 164.512(i) will be able to take that circumstance into account when conducting its review. In most instances, we believe this type of research will be able to obtain a waiver of authorization and be able to continue uninterrupted.

Comment: Several comments raised questions about the application of the rule to individually identifiable information created prior to (1) the effective date of the rule, and (2) the compliance dates of the rule. One commenter suggested that the rule should apply only to information gathered after the effective date of the final rule. A drug manufacturer asked what would be the effect of the rule on research on records compiled before the effective date of the rule.

Response: We disagree with the commenter's suggestion. The requirements of this regulation apply to all protected health information held by a covered entity, regardless of when or how the covered entity obtained the information. Congress required us to adopted privacy standards that apply to individually identifiable health information. While it limited the compliance date for health plans, covered health care providers, and healthcare clearinghouses, it did not provide similar limiting language with regard to individually identifiable health information. Therefore, uses and disclosures of protected health information made by a covered entity after the compliance date of this regulation must meet the requirements of these rules. Uses or disclosures of individually identifiable health information made prior to the compliance date are not affected; covered entities will not be sanctioned under this rule based on past uses or disclosures that are inconsistent with this regulation.

Consistent with the definition of individually identifiable health information in HIPAA, of which protected health information is a subset, we do not distinguish between protected health information in research records and protected health information in other records. Thus, a covered entity's research records are subject to this regulation to the extent they contain protected health information. ***82751**

Section 164.534—Effective Date and Compliance Date

Section 1175(b)(1)(A) of the Act requires all covered entities other than small health plans to comply with a standard or implementation specification "not later than 24 months after the date on which an initial standard or implementation specification is adopted or established"; section 1175(b)(1)(B) provides that small health plans must comply not later than 36 months after that date. The proposed rule provided, at proposed § 164.524 (which was titled "Effective date"), that a covered entity was required to be in compliance with the proposed subpart E not later than 24 months following the effective date of the rule, except that small health plans were required to be in compliance not later than 36 months following the effective date of the rule.

The final rules retain these dates in the text of Subpart E, but denominate them as "compliance dates," to distinguish the statutory dates from the date on which the rules become effective. The effective date of the final rules is 60 days following publication in the Federal Register.

Meaning of Effective Date

Comment: A number of commenters expressed confusion about the difference between the effective date of the rule and the effective date on which compliance was required (the statutory compliance dates set out at section 1175(b)(1), summarized above).

Response: The Department agrees that the title of proposed § 164.524 was confusing. Similar comments were received on the Transactions Rule. Those comments were addressed by treating the "effective date" of the rule as the date on which adoption takes effect (the "Effective Date" heading at the beginning of the preamble), while the dates provided for by section 1175(b)(1) of the statute were denominated as "compliance dates." These changes are reflected in the definition of "compliance date" in § 160.103 below (initially published as part of the Transactions Rule) and are also reflected at § 164.524 below. Section 164.524 below has also been reorganized to follow the organization of the analogous provisions of the Transactions Rule. The underlying policy, however, remains as proposed.

Extend the Compliance Date

Comment: Some commenters recommended that the compliance date be extended. A number of comments objected that the time frame for compliance with the proposed standards is unrealistically short. It was pointed out that providers and others would have

to do the following, among other things, prior to the applicable compliance date: assess their current systems and departments, determine which state laws were preempted and which were not, update and reprogram computer systems, train workers, create and implement the required privacy policies and procedures, and create or update contracts with business partners. One comment also noted that the task of coming into compliance during the same time period with the other regulations being issued under HIPAA would further complicate the task. These comments generally supported an extension of the compliance dates by one or more years. Other comments supported extending the compliance dates on the ground that the complexity of the tasks involved in implementing the regulation would be a heavy financial burden for providers and others, and that they should be given more time to comply, in order to spread the associated capital and workforce costs over a longer period. It was also suggested that there be provision for granting extensions of the compliance date, based on some criteria, such as a good faith effort to comply or that the compliance dates be extended to two years following completion of a "state-by-state preemption analysis" by the Department.

Response: The Secretary acknowledges that covered entities will have to make changes to their policies and procedures during the period between the effective date of the rules below and the applicable compliance dates. The delayed compliance dates which the statute provides for constitute a recognition of the fact changes will be required and are intended to permit covered entities to manage and implement these changes in an orderly fashion. However, because the time frames for compliance with the initial standards are established by statute, the Secretary has no discretion to extend them: Compliance is statutorily required "not later than" the applicable compliance date. Nor do we believe that it would be advisable to accomplish this result by delaying the effective date of the final rules beyond 60 days. Since the Transactions Rule is now in effect, it is imperative to bring the privacy protections afforded by the rules below into effect as soon as possible. Retaining the delayed effective date of 60 days, as originally contemplated, will minimize the gap between transactions covered by those rules and not also afforded protection under the rules below.

Phase-in Requirements

Comment: Several comments suggested that the privacy standards be phased in gradually, to ease the manpower and cost burdens of compliance. A couple of equipment manufacturing groups suggested that updating of various types of equipment would be necessary for compliance purposes, and suggested a phased approach to this—for example, an initial phase consisting of preparation of policies, plans, and risk assessments, a second phase consisting of bringing new equipment into compliance, and a final phase consisting of bringing existing equipment into compliance.

Response: As noted in the preceding response, section 1175(b)(1) does not allow the Secretary discretion to change the time frame within which compliance must be achieved. Congress appears to have intended the phasing in of compliance to occur during the two-year compliance period, not thereafter.

Compliance Gap Vis-a2-Vis State Laws and Small Health Plans

Comment: Several comments stated that, as drafted, the preemption provisions would be effective as of the rule's effective date (i.e., 60 days following publication), even though covered entities would not be required to comply with the rules for at least another two years. According to these comments, the "preempted" state laws would not be in effect in the interim, so that the actual privacy protection would decrease during that period. A couple of comments also expressed concern about how the preemption provisions would work, given the one-year difference in applicable compliance dates for small health plans and other covered entities. A state medical society pointed out that this gap would also be very troublesome for providers who deal with both "small health plans" and other health plans. One comment asked what entities that decided to come into compliance early would have to do with respect to conflicting state laws and suggested that, since all parties "need to know with confidence which laws govern at the moment, * * * [t]here should be uniform effective dates."

Response: We agree that clarification is needed with respect to the applicability of state laws in the interim between the effective date and the compliance dates. What the comments summarized above appeared to assume is that the preemption provisions of section 1178 operate to broadly and generally invalidate any state law that comes within their ambit. We do not agree that

this is the effect of section ***82752** 1178. Rather, what section 1178 does—where it acts to preempt—is to preempt the state law in question with respect to the actions of covered entities to which the state law applies. Thus, if a provision of state law is preempted by section 1178, covered entities within that state to which the state law applies do not have to comply with it, and must instead comply with the contrary federal standard, requirement, or implementation specification. However, as compliance with the contrary federal standard, requirement, or implementation specification is not required until the applicable compliance date, we do not view the state law in question as meeting the test of being "contrary." That is, since compliance with the federal standard, requirement, or implementation standard is not required prior to the applicable compliance date, it is possible for covered entities to comply with the state law in question. See § 160.202 (definition of "contrary"). Thus, since the state law is not "contrary" to an applicable federal standard, requirement, or implementation specification in the period before which compliance is required, it is not preempted.

Several implications of this analysis should be spelled out. First, one conclusion that flows from this analysis is that preemption is specific to covered entities and does not represent a general invalidation of state law, as suggested by many commenters. Second, because preemption is covered entity-specific, preemption will occur at different times for small health plans than it will occur for all other covered entities. That is, the preemption of a given state law for a covered entity, such as a provider, that is covered by the 24-month compliance date of section 1175(b)(1)(A) will occur 12 months earlier than the preemption of the same state law for a small health plan that is covered by the 36-month compliance date of section 1175(b)(1)(B). Third, the preemption occurs only for covered entities; a state law that is preempted under section 1178(a)(1) would not be preempted for persons and entities to which it applies who are not covered entities. Thus, to the extent covered entities or non-covered entities follow the federal standards on a voluntary basis (i.e., the covered entity prior to the applicable compliance date, the non-covered entity at any time), the state law in question will not be preempted for them.

Small Health Plans

Comment: Several comments, pointing to the "Small Business" discussion in the preamble to the proposed rules, applauded the decision to extend the compliance date to three years for small businesses. It was requested that the final rules clarify that the three year compliance date applies to small doctors offices and other small entities, as well as to small health plans.

Response: We recognize that our discussion in the preamble to the proposed rules may have suggested that more covered entities came within the 36 month compliance date than is in fact the case. Again, this is an area in which we are limited by statute. Under section 1175(b) of the Act, only small health plans have three years to come into compliance with the standards below. Thus, other "small businesses" that are covered entities must comply by the two-year compliance date.

Coordination With the Security Standard

Comment: Several comments suggested that the security standard be issued either with or after the privacy standards. It was argued that both sets of standards deal with protecting health information and will require extensive personnel training and revisions to business practices, so that coordinating them would make sense. An equipment manufacturers group also pointed out that it would be logical for covered entities and their business partners to know what privacy policies are required in purchasing security systems, and that "the policies on privacy are implemented through the security standards rather than having already finalized security standards drive policy."

Response: We agree with these comments, and are making every effort to coordinate the final security standards with the privacy standards below. The privacy standards below are being published ahead of the security standards, which is also responsive to the stated concerns.

Prospective Application

Comment: Several comments raised questions about the application of the rule to individually identifiable information created prior to (1) the effective date of the rule, and (2) the compliance dates of the rule. One provider group suggested that the rule

should apply only to information gathered after the effective date of the final rule. A drug manufacturer asked what would be the effect of the rule on research on records compiled before the effective date of the rule.

Response: These comments are addressed in connection with the discussion of § 164.532 above.

Impact Analyses

Cost/Benefit Analysis

Comment: Many commenters made general statements to the effect that the cost estimates for implementing the provisions of the proposed regulation were incomplete or greatly understated.

Response: The proposal, including the cost analysis, is, in effect, a first draft. The purpose of the proposal was to solicit public comment and to use those comments to refine the final regulation. As a result of the public comment, the Department has significantly refined our initial cost estimates for implementing this regulation. The cost analysis below reflects a much more complete analysis of the major components of the regulation than was presented in the proposal.

Comment: Numerous commenters noted that significant areas of potential cost had not been estimated and that if they were estimated, they would greatly increase the total cost of the regulation. Potential cost areas identified by various respondents as omitted from the analyses include the minimum disclosure requirements; the requisite monitoring by covered entities of business partners with whom they share private health information; creation of de-identified information; internal complaint processes; sanctions and enforcement; the designation of a privacy official and creation of a privacy board; new requirements for research/optional disclosures; and future litigation costs.

Response: We noted in the proposed rule that we did not have data from which to estimate the costs of many provisions, and solicited comments providing such data. The final analysis below reflects the best estimate possible for these areas, based on the information available. The data and the underlying assumptions are explained in the cost analysis section below.

Comment: A number of comments suggested that the final regulation be delayed until more thorough analyses could be undertaken and completed. One commenter stated that the Department should refrain from implementing the regulation until a more realistic assessment of costs could be made and include local governments in the process. Similarly, a commenter requested that the Department assemble an outside panel of health industry experts, including systems analysts, legal counsel, and management consultants to develop stronger estimates.

Response: The Department has engaged in extensive research, data collection and fact-finding to improve ***82753** the quality of its economic analysis. This has included comments from and discussions with the kinds of experts one commenter suggested. The estimates represent a reasonable assessment of the policies proposed.

Comment: Several commenters indicated that the proposed regulation would impose significant new costs on providers' practices. Furthermore, they believe that it runs counter to the explicit statutory intent of HIPAA's Administrative Simplification provisions which require that "any standard adopted * * * shall be consistent with the objective of reducing the administrative costs of providing and paying for health care."

Response: As the Department explained in the Transactions Rule, this provision applies to the administrative simplification regulations of HIPAA in the aggregate. The Transactions Rule is estimated to save the health care system $29.9 billion in nominal dollars over ten years. Other regulations published pursuant to the administrative simplification authority in HIPAA, including the privacy regulation, will result in costs, but these costs are within the statutory directive so long as they do not exceed the $29.9 billion in estimated savings. Furthermore, as explained in the Transactions Rule, and the preamble to this rule, assuring privacy is essential to sustaining many of the advances that computers will provide. If people do not have confidence

that their medical privacy will be protected, they will be much less likely to allow their records to be used for any purpose or might even avoid obtaining necessary medical care.

Comment: Several commenters criticized the omission of aggregate, quantifiable benefit estimates in the proposed rule. Some respondents argued that the analysis in the proposed rule used "de minimis" cost estimates to argue only that benefits would certainly exceed such a low barrier. These commenters further characterized the benefits analysis in the Notice of Proposed Rulemaking as "hand waving" used to divert attention from the fact that no real cost-benefit comparison is presented. Another commenter stated that the benefit estimates rely heavily on anecdotal and unsubstantiated inferences. This respondent believes that the benefit estimates are based on postulated, but largely unsubstantiated causal linkages between increased privacy and earlier diagnosis and medical treatment.

Response: The benefits of privacy are diffused and intangible but real. Medical privacy is not a good people buy or sell in a market; therefore, it is very difficult to quantify. The benefits discussion in the proposal reflects this difficulty. The examples presented in the proposal were meant to be illustrative of the benefits based on a few areas of medicine where some relevant data was available. Unfortunately, no commenters provided either a better methodological approach or better data for assessing the overall benefits of privacy. Therefore, we believe the analysis in the proposal represents a valid illustration of the benefits of privacy, and we do not believe it is feasible to provide an overall dollar estimate of the benefits of privacy in the aggregate.

Comment: One commenter criticized the benefit analysis as being incomplete because it did not consider the potential cost of new treatments that might be engendered by increased confidence in medical privacy resulting from the regulation.

Response: There is no data or model to reliably assess such long-term behavioral and scientific changes, nor to determine what portion of the increasingly rapid evolution of new improved treatments might stem from improved privacy protections. Moreover, to be complete, such analysis would have to include the savings that might be realized from earlier detection and treatment. It is not possible at this time to project the magnitude or even the direction of the net effects of the response to privacy that the commenter suggests.

Scope of the Regulation

Comment: Numerous commenters noted the potential cost and burden of keeping track in medical records of information which had been transmitted electronically, which would be subject to the rule, as opposed to information that had only been maintained in paper form.

Response: This argument was found to have considerable merit and was one of the reasons that the Department concluded that the final regulation should apply to all medical records maintained by covered entities, including information that had never been transmitted electronically. The costs analysis below reflects the change in scope.

Notice Requirements

Comment: Several commenters expressed their belief that the administrative and cost burdens associated with the notice requirements were understated in the proposed rule. While some respondents took issue with the policy development cost estimates associated with the notice, more were focused on its projected implementation and production costs. For example, one respondent stated that determining "first service" would be an onerous task for many small practices, and that provider staff will now have to manually review each patient's chart or access a computer system to determine whether the patient has been seen since implementation of the rule.

Response: The policy in the final rule has been changed to make the privacy policy notice to patients less burdensome. Providers will be able to distribute the notice when a patient is seen and will not have to distribute it to a patient more than once, unless substantive changes are made in the notice. This change will significantly reduce the cost of distributing the privacy notices.

Comment: Some commenters also took issue with the methodology used to calculate the cost estimates for notices. These respondents believe that the survey data used in the proposed rule to estimate the costs (i.e., "encounters," "patients," and "episodes" per year) are very different concepts that, when used together, render the purported total meaningless. Commenters further stated that they can verify the estimate of 543 million patients cited as being seen at least once every five years.

Response: In the course of receiving treatment, a patient may go to a number of medical organizations. For example, a person might see a doctor in a physician's office, be admitted to a hospital, and later go to a pharmacy for medication. Each time a person "encounters" a facility, a medical record may be started or additions made to an existing record. The concept in the proposal was to identify the number of record sets that a person might have for purposes of estimating notice and copying costs. For example, whether a person made one or ten visits in the course of a year to a specific doctor would, for our purposes, be one record set because in each visit the doctor would most likely be adding information to an existing medical record. The comments demonstrated that we had not explained the concept well. As explained below we modified the concept to more effectively measure the number of record sets that exist and explain it more clearly.

Comment: Several commenters criticized the lack of supporting evidence for the cost estimates of notice development and dissemination. Another opinion voiced in the comments is that the estimated cost for plans of $0.75 per insured person is so low that it may cover postage, but it ***82754** cannot include labor and capital usage costs.

Response: Based on comments and additional fact finding, the Department was able to gain a better understanding of how covered entities would develop policies and disseminate information. The cost analysis below explains more fully how we derived the final cost estimates for these areas.

Comment: A commenter noted that privacy policy costs assume that national associations will develop privacy policies for members but HHS analysis does not account for the cost to the national associations. A provider cost range of $300-$3,000 is without justification and seems low.

Response: The cost to the national associations was included in the proposal estimates, and it is included in the final analysis (see below).

Comment: A commenter states that the notice costs discussion mixes the terms "patients", "encounters" and "episodes" and 397 million encounter estimate is unclear.

Response: A clearer explanation of the concepts employed in this analysis is provided below.

Systems Compliance Costs

Comment: Numerous commenters questioned the methodology used to estimate the systems compliance cost and stated that the ensuing cost estimates were grossly understated. Some stated that the regulation will impose significant information technology costs to comply with requirement to account for disclosures, additional costs for hiring new personnel to develop privacy policies, and higher costs for training personnel.

Response: Significant comments were received regarding the cost of systems compliance. In response, the Department retained the assistance of consultants with extensive expertise in health care information technology. We have relied on their work to revise our estimates, as described below. The analysis does not include "systems compliance" as a cost item, per se. Rather, in the final analysis we organized estimates around the major policy provisions so the public could more clearly see the costs associated with them. To the extent that the policy might require systems changes (and a number of them do), we have incorporated those costs in the provision's estimate.

Comment: Items explicitly identified by commenters as significantly adding to systems compliance costs include tracking disclosures of protected health information and patient authorizations; restricting access to the data; accommodating minimum

disclosure provisions; installing notices and disclaimers; creating de-identified data; tracking uses of protected health information by business partners; tracking amendments and corrections; increased systems capacity; and annual systems maintenance. The commenters noted that some of the aforementioned items are acknowledged in the proposed rule as future costs to covered entities, but several others are singularly ignored.

Response: The Department recognizes the validity of much of this criticism. Unfortunately, other than general criticism, commenters provided no specific data or methodological information which might be used to improve the estimates. Therefore, the Department retained consultants with extensive expertise in these areas to assess the proposed regulation, which helped the Department refine its policies and cost estimates.

In addition, it is important to note that the other HIPAA administrative simplification regulations will require systems changes. As explained generally in the cost analysis for the electronic Transactions rule, it is assumed that providers and vendors will undertake systems changes for these regulations collectively, thereby minimizing the cost of changes.

Inspection and Copying

Comment: Numerous commenters disagreed with the cost estimates in the NPRM for inspection and copying of patient records, believing that they were too low.

Response: The Department has investigated the potential costs through a careful reading of the comments and subsequent factfinding discussions with a variety of providers. We believe the estimates, explained more fully below, represent a reasonable estimate in the aggregate. It is important to note, however, that this analysis is not measuring the cost of all inspection and copying because a considerable amount of this already occurs. The Department is only measuring the incremental increase likely to occur as a result of this regulation.

Comment: One commenter speculates that, even at a minimum charge of $.50/page, (and not including search and retrieval charges), costs could run as high as $450 million annually.

Response: The $0.50 per page in the proposal represent an average of several data sources. Subsequently, an industry commenter, which provided extensive medical records copying, stated that this was a reasonable average cost. Hence, we retained the number for the final estimate.

Comment: One respondent states that, since the proposed rules give patients the right to inspect and copy their medical records regardless of storage medium, HHS must make a distinction in its cost estimates between records stored electronically and those which must be accessed by manual means, since these costs will differ.

Response: The cost estimates made for regulations are not intended to provide such refined gradations; rather, they are intended to show the overall costs for the regulation as a whole and its major components. For inspections and copying (and virtually all other areas for which estimates are made) estimates are based on averages; particular providers may experience greater or lesser costs than the average cost used in this analysis.

Comment: Several commenters noted that the Department did not appear to include the cost of establishing storage systems, retrieval fees and the cost of searching for records, and that these costs, if included, would significantly increase the Department's estimate.

Response: Currently, providers keep and maintain medical records and often provide copies to other providers and patients. Therefore, much of the cost of maintaining records already exists. Indeed, based on public comments, the Department has concluded that there will be relatively few additional copies requested as the result of this regulation (see below). We have measured and attributed to this regulation the incremental cost, which is the standard for conducting this kind of analysis.

Comment: A federal agency expressed concern over the proposal to allow covered entities to charge a fee for copying personal health information based on reasonable costs. The agency requests personal health information from many covered entities and pays a fee that it establishes. Allowing covered entities to establish the fee, the agency fears, may cost them significantly more than the current amounts they pay and as a result, could adversely affect their program.

Response: The proposal and the final rule establish the right to access and copy records only for individuals, not other entities; the "reasonable fee" is only applicable to the individual's request. The Department's expectation is that other existing practices regarding fees, if any, for the exchange of records not requested by an individual will not be affected by this rule. ***82755**

Appending Records (Amendment and Correction)

Comment: The proposed rule estimated the cost of amending and correcting patients' records at $75 per instance and $260 million per year for small entities. At least one commenter stated that such requests will rise significantly upon implementation of the regulations and increase in direct proportion to the number of patients served. Another commenter described the more subtle costs associated with record amendment and correction, which would include a case-by-case clinical determination by providers on whether to grant such requests, forwarding the ensuing record changes to business partners, and issuing written statements to patients on the reasons for denials, including a recourse for complaints.

Response: The comments were considered in revising the proposal, and the decision was made to clarify in the final regulation that providers must only append the record (the policy is explained further in the preamble and the regulation text). The provider is now only required to note in the medical record any comments from the patient; they may, but are not required to, correct any errors. This change in policy significantly reduces the cost from the initial proposal estimate.

Comment: Several commenters criticized the proposed rule's lack of justification for assumptions regarding the percentage of patients who request inspection and copying, who also request amendment and correction. Another commenter pointed out that the cost estimate for amendment and correction is dependent on a base assumption that only 1.5 percent of patients will request inspection of their records. As such, if this estimate were too low by just one percentage point, then the estimates for inspection and copying plus the costs for amendment and correction could rise by 67 percent.

Response: Based on information and data received in the public comments, the estimate for the number of people requesting inspection and copying has been revised. No commenter provided specific information on the number of amended record requests that might result, but the Department subsequently engaged in fact-finding and made appropriate adjustments in its estimates. The revisions are explained further below.

Consent and Authorizations

Comment: One respondent indicated that the development, collection, and data entry of all the authorizations will create a new transaction type for employers, health plans, and providers, and result in duplicated efforts among them. This commenter estimates that the costs of mailing, re-mailing, answering inquiries, making outbound calls and performing data entry in newly created authorization computer systems could result in expenses of close to $2.0 billion nationally. Another commenter indicated that authorization costs will be at least double the notice dissemination costs due to the cost of both outbound and return postage.

Response: Public commenters and subsequent factfinding clearly indicate that most providers with patient contact already obtain authorizations for release of records, so for them there is virtually no new cost. Further, this comment does not reflect the actual regulatory requirement. For example, there is no need to engage in mailing and re-mailing of forms, and we do not foresee any reason why there should be any significant calls involved.

Comment: A commenter criticized the percentage (1%) that we used to calculate the number of health care encounters expected to result in requests to withhold the release of protected information. This respondent postulates that even if one in six patients

who encounter the U.S. health care system opt to restrict access to their records, the total expected national cost per year could rise to $900 million.

Response: The final regulation requirements regarding the release of protected health information has been substantially changed, thereby greatly reducing the potential cost burden. A fuller explanation of the cost is provided below in the regulatory impact analysis.

Comment: An additional issue raised by commenters was the added cost of seeking authorizations for health promotion and disease management activities, health care operations that traditionally did not require such action.

Response: In the final regulation, a covered entity can use medical information collected for treatment or operations for its own health promotion and disease management efforts without obtaining additional authorization. Therefore, there is no additional cost incurred.

Business Associates

Comment: A number of commenters were concerned about the cost of monitoring business partners. Specifically, one commenter stated that the provisions of the proposed regulation pertaining to business partners would likely force the discontinuation of outsourcing for some functions, thereby driving up the administrative cost of health care.

Response: The final regulation clarifies the obligations of the business associates in assuring privacy. As explained in the preamble, business associates must take reasonable steps to assure confidentiality of health records they may have, and the covered entity must take appropriate action if they become aware of a violation of the agreement they have with the business associate. This does not represent an unreasonable burden; indeed, the provider is required to take the same kind of precautions and provide the same kind of oversight that they would in many other kinds of contractual relationships to assure they obtain the quality and level of performance that they would expect from a business associate.

Comment: HHS failed to consider enforcement costs associated with monitoring partners and litigation costs arising from covered entities seeking restitution from business partners whose behavior puts the covered entity at risk for noncompliance.

Response: The Department acknowledged in the proposal that it was not estimating the cost of compliance with the business associates provision because of inadequate information. It requested information on this issue, but no specific information was provided in the comments. However, based on revisions in the final policy and subsequent factfinding, the Department has provided an estimate for this requirement, as explained below.

Training

Comment: Many of the commenters believe that the Department used unrealistic assumptions in the development of the estimated cost of the training provisions and they provided their own estimates.

Response: The commenters' estimates varied widely, and could not be used by the Department in revising its analysis because there was inadequate explanation of how the estimates were made.

Comment: Several commenters argued that if even an hour of time of each of the entity's employees is spent on training instead of “work” and they are paid the minimum wage, an entity would incur $100 of cost for training no more than 20 employees. The commenters noted that the provision of health care services is a labor-intensive enterprise, and many covered entities have thousands of employees, most of whom make well in excess of minimum ***82756** wage. They questioned whether the estimates include time taken from the employee's actual duties (opportunity cost) and the cost of a trainer and materials.

Response: As explained in more detail below, the Department made extensive revisions in its training estimate, including the number of workers in the health care sector, the cost of workers in training based on average industry wages, and training costs (instructors and materials). The revised estimate is a more complete and accurate estimate of the costs likely to be borne as a result of the final regulation.

Comment: One commenter estimated that simply training an employee could have a burdensome impact on his company. He argued, for example, a 10-hour annual requirement takes 0.5% of an employee's time if they work a 2000-hour year, but factoring in sick and vacation leave, the effects of industry turnover could significantly increase the effect.

Response: In the analysis below, the Department has factored in turnover rates, employment growth and greater utilization based on data obtained from broad-based surveys and a public comment.

Comment: Some commenters felt that the regulatory training provisions are overly burdensome. Specific concerns centered around the requirement to train all individuals who may come in contact with protected health information and the requirement to have such individuals sign a new certifying statement at least every three years. Some commenters felt that the content of the training program should be left to the discretion of the covered entity.

Response: Changes and clarifications in the training requirements are made in the final regulation, explained below. For example, the certification requirement has been eliminated. As in the NPRM, the content of the training program is left to the discretion of the covered entity. These changes are expected to lessen the training burden and are reflected in the final cost estimates.

Compliance and Enforcement

Comment: A Member of Congress and a number of privacy and consumer groups expressed their concern with whether the Office for Civil Rights (OCR) in HHS has adequate funding to carry out the major responsibility of enforcing the complaint process established by this rule. The Member stated that "[d]ue to the limited enforcement ability allowed for in this rule by HIPAA, it is essential that OCR have the capacity to enforce the regulations. Now is the time for The Secretary to begin building the necessary infrastructure to enforce the regulation effectively."

Response: The Secretary agrees with the commenters and is committed to an effective enforcement program. We will work with Congress to ensure that the Department has the necessary funds to secure voluntary compliance through education and technical assistance, to investigate complaints and conduct compliance reviews, to provide states with exception determinations and to use civil and criminal penalties when necessary.

Economic Effect on Small Entities

Comment: Many commenters stated that the cost estimates on the effect of the proposed regulation on small businesses were understated or incomplete.

Response: The Department conducted a thorough review of potential data sources that would improve the quality of the analysis of the effects on small business. The final regulatory flexibility analysis below is based on the best data available (much of it from the Small Business Administration) and represents a reliable estimate for the effects on small entities in various segments of the health care industry. It is important to note that the estimates are for small business segments in the aggregate; the cost to individual firms will vary, perhaps considerably, based on its particular circumstances.

Comment: The cost of implementing privacy regulations, when added to the cost of other required HIPAA regulations, could increase overhead significantly. As shown in the 1993 Workgroup on Electronic Data Interchange (WEDI) Report, providers will bear the larger share of implementation costs and will save less than payors.

Response: The regulatory flexibility analysis below shows generally the marginal effect of the privacy regulation on small entities. Collectively, the HIPAA administrative standards will save money in the health care system. As important, given the rapid expansion of electronic commerce, it is probable that small entities would need to comply with standards for electronic commerce in order to complete effectively, even if the standards were voluntary. The establishment of uniform standards through regulation help small entities because they will not have to invest in multiple systems, which is what they would confront if the system remained voluntary.

Comment: One respondent believed that the initial and ongoing costs for small provider offices could be as much as 11 times higher than the estimates provided in the proposed rule. Other commenters stated that the estimates for small entities are "absurdly low".

Response: Although there were a number of commenters highly critical of the small business analysis, none provided alternative estimates or even provided a rationale for their statements. Many appeared to assume that all costs associated with medical record confidentiality should be estimated. This represents a misunderstanding of the purpose of the analysis: to estimate the incremental effects of this regulation, i.e., the new costs (and savings) that will result from changes required by the regulation. The Department has made substantial changes in the final small entities analysis (below), reflecting policy changes in the final rule and additional information and data collected by the Department since the issuance of the proposal last fall. We believe that these estimates reasonably reflect the costs that various types of small entities will experience in general, though the actual costs of particular providers might vary considerably based on their current practices and technology.

Comment: A respondent expressed the belief that small providers would bear a disproportionate share of the regulation's administrative burden because of the likelihood of larger companies incurring fewer marginal costs due to greater in-house resources to aid in the legal and technical analysis of the proposed rule.

Response: As explained below, the Department does not agree with the assertion that small entities will be disproportionately affected. Based on discussions with a number of groups, the Department expects many professional and trade associations to provide their members with analysis of the regulation, including model policies, statements and basic training materials. This will minimize the cost for most small entities. Providers that use protected health information for voluntary practices, such as marketing or research, are more likely to need specific legal and technical assistance, but these are likely to be larger providers.

Comment: Several commenters took issue with the "top-down" approach that we used to estimate costs for small businesses, believing that this methodology provided only a single point estimate, gave no indication of the variation around the estimate, and was subject to numerous methodological errors since the entities to which the numerator pertained may not have been ***82757** the same as the denominator. These respondents further recommended that we prepare a "bottom-up" analysis using case studies and/or a survey of providers to refine the estimates.

Response: The purpose of the regulatory flexibility analysis is to provide a better insight into the relative burden of small businesses compared to larger firms in complying with a regulation. There may be considerable variance around average costs within particular industry sectors, even among small businesses within them. The estimates are based on the best data available, including information from the Small Business Administration, the Census Bureau, and public comments.

Comment: A commenter stated that the proposal's cost estimate does not account for additional administrative costs imposed on physicians, such as requirements to rewrite contracts with business partners.

Response: Such costs are included in the analysis below.

Comment: Numerous public comments were directed specifically at the systems compliance cost estimates for small businesses. One respondent maintained that the initial upgrade cost alone would range from $50 thousand to more than $1 million per covered entity.

Response: The cost estimates for systems compliance varied enormously; unfortunately, none of the commenters provided documentation of how they made their estimates, preventing us from comparing their data and assumptions to the Department's. Because of concern about the costs in this area, however, the Department retained an outside consultant to provide greater expertise and analysis. The product of this effort has been incorporated in the analysis below.

Comment: One commenter stated that just the development and documentation of new health information policies and procedures (which would require an analysis of the federal regulations and state law privacy provisions), would cost far more than the $396 cited in the Notice of Proposed Rulemaking as the average start-up cost for small businesses.

Response: As explained below in the cost analysis, the Department anticipates that most of the policies and procedures that will be required under the final rule will be largely standardized, particularly for small businesses. Thus, much of the work and cost can be done by trade associations and professional groups, thereby minimizing the costs and allowing it to be spread over a large membership base.

Comment: A number of comments criticized the initial estimates for notices, inspection and copying, amendments and correction, and training as they relate to small businesses.

Response: The Department has made substantial revisions in its estimates for all of these areas which is explained below in the regulatory flexibility analysis.

Comment: One commenter noted that there appeared to be a discrepancy in the number of small entities cited. There is no explanation for the difference and no explanation for difference between “establishments” and “entities.”

Response: There are discrepancies among the data bases on the number of “establishments” and “entities” or “firms”. The problem arises because most surveys count (or survey) establishments, which are physical sites. A single firm or entity may have many establishments. Moreover, although an establishment may have only a few employees, the firm may have a large number of workers (the total of all its various establishments) and therefore not be a small entity.

As discussed below, there is some discrepancy between the aggregate numbers we use for the regulatory impact analysis (RIA) and the regulatory flexibility analysis (RFA). We concluded that for purposes of the RFA, which is intended to measure the effects on small entities, we would use Small Business Administration data, which defines entities based on revenues rather than physical establishments to count the number of small entities in various SIC. This provides a more accurate estimate of small entities affected. For the RIA, which is measuring total effects, we believe the establishment based surveys provide a more reliable count.

Comment: Because small businesses must notify patients of their privacy policies on patients' first visit after the effective date of the regulation, several commenters argued that staff would have to search records either manually or by computer on a daily basis to determine if patients had been seen since the regulation was implemented.

Response: Under the final regulation, all covered entities will have to provide patients copies of their privacy policy at the first visit after the effective date of the regulation. The Department does not view this as burdensome. We expect that providers will simply place a note or marker at the beginning of a file (electronic or paper) when a patient is given the notice. This is neither time-consuming nor expensive, and it will not require constant searches of records.

Comment: A commenter stated that the definitions of small business, small entity, and a small health plan are inconsistent because the NPRM includes firms with annual receipts of $5 million or less and non-profits.

Response: The Small Business Administration, whose definitions we use for this analysis, includes firms with $5 million or less in receipts and all non-profits as "small businesses." We recognize that some health plans, though very large in terms of receipts (and insured lives), nonetheless would be considered "small businesses" under this definition because they are non-profits. In the final regulatory flexibility analysis, we generally have maintained the Small Business Administration definitions because it is the accepted standard for these analyses. However, we have added several categories, such as IRBs and employer sponsored group health plans, which are not small entities, per se, but will be effected by the final rule and we were able to identify costs imposed by the regulation on them.

Comment: The same commenter wanted clarification that all non-profit organizations are small entities and that the extended effective date for compliance applies to them.

Response: For purposes of the regulatory flexibility analysis, the Department is utilizing the Small Business Administration guidelines. However, under HIPAA the Secretary may extend the effective compliance date from 24 months to 36 months for "small health plans". The Secretary is given the explicit discretion of defining the term for purposes of compliance with the regulation. For compliance purposes, the Secretary has decided to define "small health plans" as those with receipts of $5 million or less, regardless of their tax status. As noted above, some non-profit plans are large in terms of revenues (i.e., their revenues exceed $5 million annually). The Department determined that such plans do not need extra time for compliance.

Comment: Several commenters requested that "small providers" [undefined] be permitted to take 36 months to come into compliance with the final regulation, just as small health plans will be permitted to do so.

Response: Congress specified small health plans, but not small providers, as needing extra time to comply. The majority of providers affected by the regulation are "small", based on the SBA definitions; in other words, granting the delay would be tantamount to make the effective date three years rather than two. In making policy decisions for the final regulation, extensive consideration was given to minimizing the cost and administrative burden associated with implementing ***82758** the rule. The Department believes that the requirements of the final rule will not be difficult to fulfill, and therefore, it has maintained the two year effective date.

External Studies

Comment: One commenter submitted a detailed analysis of privacy legislation that was pending and concluded that they might cost over $40 billion.

Response: The study did not analyze the policies in the proposal, and therefore, the estimates do not reflect the costs that would have been imposed by the proposed regulation. In fact, the analysis was prepared before the Administration's proposed privacy regulation was even published. As a result, the analysis is of limited relevance to the regulation actually proposed.

The following are examples of assumptions and costs in the analysis that do not match privacy policies or requirements stated in the proposed rule.

1. Authorizations: The study assumed rules requiring new authorizations from current subscribers to use their data for treatment, payment of claims, or other health plan operations. The proposed rule would have prohibited providers or plans from obtaining patient authorization to use data for treatment, payment or health care operations, and the final rule makes obtaining consent for these purposes voluntary for all health plans and for providers that do not have direct treatment relationships with individuals.

2. Disclosure History: The study assumes that providers, health plans, and clearinghouses would have to track all disclosures of health information. Under the NPRM and the final rule, plans, providers and clearinghouses are only required to account for disclosures that are not for treatment, payment, and health care operations, a small minority of all disclosures.

3. Inspection, Copying, and Amendment: The study assumed requirements to allow patients and their subscribers to inspect, copy, and amend all information that includes their name, social security number or other identifying feature (e.g. customer service calls, internal memorandum, claim runs). However, the study assumed broader access than provided in the rule, which requires access only to information in records used to make decisions about individuals, not all records with identifiable information.

4. Infrastructure development: The study attributed significant costs to infrastructure implementation of (computer systems, training, and other compliance costs). As explained below, the compliance requirements are much less extensive than assumed in this study. For example, many providers and plans will not be required to modify their privacy systems but will only be required to document their practices and notify patients of these practices, and others will be able to purchase low-cost, off-the-shelf software that will facilitate the new requirements. The final regulation will not require massive capital expenditures; we assumed, based on our consultants' work, that providers will rely on low-cost incremental adjustments initially, and as their technology becomes outdated, they will replace it with new systems that incorporate the HIPAA standard requirements.

Although many of the policy assumptions in the study are fundamentally different than those in the proposed or final regulation, the study did provide some assistance to the Department in preparing its final analysis. The Department compared data, methodologies and model assumptions, which helped us think more critically about our own analysis and enhanced the quality of our final work.

Comment: One commenter submitted a detailed analysis of the NPRM Regulatory Impact Analysis and concluded that it might cost over $64 billion over 5 years. This analysis provided an interesting framework for analyzing the provision for the rule. More precisely, the analysis generally attempted to identify the number of entities would be required to comply with each of the significant provision of the proposed rule, then estimated the numbers of hours required to comply per entity, and finally, estimated an hourly wage.

Response: HHS adopted this general structure for the final RIA because it provided a better framework for analysis than what the Department had done in the NPRM. However, HHS did not agree with many of the specific assumptions used by in this analysis, for several reasons. First, in some instances the assumptions were no longer relevant because the requirements of the NPRM were altered in the final rule. For other assumptions, HHS found more appropriate data sources for the number of covered entities, wages rates and trend rates or other factors affecting costs. In addition, HHS believes that in a few instances, this analysis over-estimated what is required of covered entities to comply. Based on public comments and its own factfinding, the Department believes many of its assumptions used in the final analysis more accurately reflect what is likely to be the real cost of the regulation.

IV. Final Regulatory Impact Analysis

5 U.S.C. 804(2) (as added by section 251 of Pub. L. 104-21), specifies that a “major rule” is any rule that the Office of Management and Budget finds is likely to result in:

- An annual effect on the economy of $100 million or more;

- A major increase in costs or prices for consumers, individual industries, federal, state, or local government agencies, or geographic regions; or

- Significant adverse effects in competition, employment, investment productivity, innovation, or on the ability of United States based enterprises to compete with foreign-based enterprises in domestic and export markets. The impact of this final rule will be over $1 billion in the first year of implementation. Therefore, this rule is a major rule as defined in 5 U.S.C. 804(2).

Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public

health and safety effects; distributive impacts; and equity). According to Executive Order 12866, a regulatory action is "significant" if it meets any one of a number of specified conditions, including having an annual effect on the economy of $100 million or more adversely affecting in a material way a sector of the economy, competition, or jobs, or if it raises novel legal or policy issues. The purpose of the regulatory impact analysis is to assist decision-makers in understanding the potential ramifications of a regulation as it is being developed. The analysis is also intended to assist the public in understanding the general economic ramifications of a regulation, both in the aggregate as well as the major policy areas of a regulation and how they are likely to affect the major industries or sectors of the economy covered by it.

In accordance with the Small Business Regulatory Enforcement and Fairness Act (Pub. L. 104-121), the Administrator of the Office of Information and Regulatory Affairs of the Office of Management and Budget (OMB) has determined that this rule is a major rule for the purpose of congressional review.

The proposal for the privacy regulation included a preliminary regulatory impact analysis (RIA) which estimated the cost of the rule at $3.8 billion over five years. The preliminary ***82759** analysis also noted that a number of significant areas were not included in the estimate due to inadequate information. The proposal solicited public comment on these and all other aspects of the analysis. In this preamble, the Department has summarized the public comments pertinent to the cost analysis and its response to them. However, because of the extensive policy changes incorporated in the final regulation, additional data collected from the public comments and the Department's fact-finding, and changes in the methodology underlying the estimates, the Department is setting forth in this section a more complete explanation of its revised estimates and how they were obtained. This will facilitate a better understanding by the public of how the estimates were developed and provide more insight into how the Department believes the regulation will ultimately affect the health care sector.

The impact analysis measures the effect of the regulation on current practices. In the case of privacy, as discussed in the preamble, there already exists considerable, though quite varied, efforts to protect the confidentiality of medical information. The RIA is measuring the change in these current practices and the cost of new and additional responsibilities that are required to conform to the new regulation.

To achieve a reasonable level of privacy protection, the Department defined three objectives for the final rule: (1) To establish national baseline standards, implementation specifications, and requirements for health information privacy protection, (2) to protect the privacy of individually identifiable health information maintained or transmitted by covered entities, and (3) to protect the privacy of all individually identifiable health information within covered entities, regardless of its form.

Establishing minimum standards, implementation specifications, and requirements for health information privacy protection creates a level baseline of privacy protection for patients across states. The Health Privacy Project's report, The State of Health Privacy: An Uneven Terrain[FN33] makes it clear that under the current system of state laws, privacy protection is extremely variable. The Department's statutory authority under HIPAA which allows the privacy regulation to preempt any state law if such law is contrary to and not more stringent than privacy protection pursuant to this regulation. This sets a floor, but permits a state to create laws that are more protective of privacy. We discuss preemption in greater detail in other parts of the preamble.

The second objective is to establish a uniform base of privacy protection for individually identifiable health information maintained or transmitted by covered entities. HIPAA restricts the type of entities covered by the rule to three broad categories: health care providers that transmit health information in HIPAA standard transactions, health plans, and health care clearinghouses. However, there are similar public and private entities that are not within the Department's authority to regulate under HIPAA. For example, life insurance companies are not covered by this rule but may have access to a large amount of individually identifiable health information.

The third objective is to protect the privacy of all individually identifiable health information held by covered entities, including their business associates. Health information is currently stored and transmitted in multiple forms, including electronic, paper, and oral forms. To provide consistent protection to information, and to avoid requiring covered entities from distinguishing

between health information that has been transmitted or maintained electronically and that which has not, this rule covers all individually identifiable health information in any form maintained or transmitted by a covered entity.

For purposes of this cost analysis, the Department has assumed all health care providers will be affected by the rule. This results in an overestimation of costs because there are providers that do not engage in any HIPAA standard transactions, and therefore, are not affected. The Department could not obtain any reliable data on the number of such providers, but the available data suggest that there are very few such entities, and given the expected increase in all forms of electronic health care in the coming decade, the number of paper-only providers is likely to decrease.

A. Relationship of This Analysis to Analyses in Other HIPAA Regulations

Congress has recognized that privacy standards, implementation specifications and requirements must accompany the electronic data interchange standards, implementation specifications and requirements because the increased ease of transmitting and sharing individually identifiable health information will result in an increase in concern regarding privacy and confidentiality of such information. The bulk of the first Administrative Simplification section that was debated on the floor of the Senate in 1994 (as part of the Health Security Act) was made up of privacy provisions. The requirement for the issuance of concomitant privacy measures remained a part of the HIPAA bill passed by the House of Representatives in 1996, but the requirement for privacy measures was removed in conference. Instead, Congress added section 264 to Title II of HIPAA, which directs the Secretary to develop and submit to Congress recommendations addressing at least the following:

(1) The rights that an individual who is a subject of individually identifiable health information should have.

(2) The procedures that should be established for the exercise of such rights.

(3) The uses and disclosures of such information that should be authorized or required. The Secretary's Recommendations were submitted to Congress on September 11, 1997, and are summarized below. Section 264(c)(1) of HIPAA provides that: If legislation governing standards with respect to the privacy of individually identifiable health information transmitted in connection with the transactions described in section 1173(a) of the Social Security Act (as added by section 262) is not enacted by (August 21, 1999), the Secretary of Health and Human Services shall promulgate final regulations containing such standards not later than (February 21, 2000). Such regulations shall address at least the subjects described in subsection (regarding recommendations).

Because the Congress did not enact legislation governing standards with respect to the privacy of individually identifiable health information prior to August 21, 1999, the Department has, in accordance with this statutory mandate, developed final rules setting forth standards to protect the privacy of such information.

Title II of the Health Insurance Portability and Accountability Act (HIPAA) also provides a statutory framework for the promulgation of other administrative simplification regulations. On August 17, 2000, the Transactions Rule was published. Proposals for health care provider identifier (May 1998), employer identifier (June 1998), and security and electronic signature standards (August 1998) have also been published. These ***82760** regulations are expected to be made final in the foreseeable future.

HIPAA states that, “any standard adopted under this part shall be consistent with the objective of reducing the administrative costs of providing and paying for health care.” (Section 1172 (b)). This provision refers to the administrative simplification regulations in their totality, including this rule regarding privacy standards. The savings and costs generated by the various standards should result in a net savings to the health care system. The Transactions Rule shows a net savings of $29.9 billion over ten years (2002-2011), or a net present value savings of $19 billion. This estimate does not include the growth in “e-health” and “e-commerce” that may be spurred by the adoption of uniform codes and standards.

This final Privacy Rule is estimated to produce net costs of $18.0 billion, with net present value costs of $11.8 billion (2003 dollars) over ten years (2003-2012). This estimate is based on some costs already having been incurred due to the requirements of the Transactions Rule, which included an estimate of a net savings to the health care system of $29.9 billion over ten years (2002 dollars) and a net present value of $19.1 billion. The Department expects that the savings and costs generated by all administrative simplification standards should result in a net savings to the health care system.

B. Summary of Costs and Benefits

Measuring both the economic costs and benefits of health information privacy is difficult. Traditionally, privacy has been addressed by state laws, contracts, and professional practices and guidelines. Moreover, these practices have been evolving as computers have dramatically increased the potential use of medical data; the scope and form of health information is likely to be very different ten years from now than it is today. This final regulation is both altering current health information privacy practice and shaping its evolution as electronic uses expand.

To estimate costs, the Department used information from published studies, trade groups and associations, public comments to the proposed regulation, and fact-finding by staff. The analysis focused on the major policy areas in the regulation that would result in significant costs. Given the vast array of institutions affected by this regulation and the considerable variation in practices, the Department sought to identify the "typical" current practice for each of the major policy areas and estimate the cost of change resulting from the regulation. Because of the paucity of data and incomplete information on current practices, the Department has consistently made conservative assumptions (that is, given uncertainty, we have made assumptions that, if incorrect, are more likely to overstate rather than understate the true cost).

Benefits are difficult to measure because people conceive of privacy primarily as a right, not as a commodity. Furthermore, a wide gap appears to exist between what people perceive to be the level of privacy afforded health information about them and what actually occurs with the use of such information today. Arguably, the "cost" of the privacy regulation is the amount necessary to bring health information privacy to these perceived levels.

The benefits of enhanced privacy protections for individually identifiable health information are significant, even though they are hard to quantify. The Department solicited comments on this issue, but no commenters offered a better alternative. Therefore, the Department is essentially reiterating the analysis it offered in the proposed Privacy Rule. The illustrative examples set forth below, using existing data on mental health, cancer screening, and HIV/AIDS patients, suggest the level of economic and health benefits that might accrue to individuals and society. Moreover, the benefits of improved privacy protection are likely to increase in the future as patients gain trust in health care practitioners' ability to maintain the confidentiality of their health information.

The estimated cost of compliance with the final rule is $17.6 billion over the ten year period, 2003-2012.[FN34] This includes the cost of all the major requirements for the rule, including costs to federal, state and local governments. The net present value of the final rule, applying a 11.2 percent discount rate[FN35], is $11.8 billion.[FN36]

The first year estimate is $3.2 billion (this includes expenditures that may be incurred before the effective date in 2003). This represents about 0.23 percent of projected national health expenditures for 2003.[FN37] By 2008, seven years after the rule's effective date, the rule is estimated to cost 0.07 percent of projected national health expenditures.

The largest cost items are the requirement to have a privacy official, $5.9 billion over ten years, and the requirement that disclosures of protected health information only involve the minimum amount necessary, $5.8 billion over ten years (see Table 1). These costs reflect the change that affected organizations will have to undertake to implement and maintain compliance with the requirements of the rule and achieve enhanced privacy of protected health information. ***82761**

Table 1.—The Cost of Complying With the Proposed Privacy Regulation

[In dollars]

Provision	Initial or first year cost (2003, $million)	Average annual cost ($million, years 2-10)	Ten year cost (2003-2012) ($million)
Policy Development	597.7	0	597.7
Minimum Necessary	926.2	536.7	5,756.7
Privacy Officials	723.2	575.8	5,905.8
Disclosure Tracking/History	261.5	95.9	1,125.1
Business Associates	299.7	55.6	800.3
Notice Distribution	50.8	37.8	391.0
Consent	166.1	6.8	227.5
Inspection/Copying	1.3	1.7	16.8
Amendment	5.0	8.2	78.8
Requirements on Research	40.2	60.5	584.8
Training	287.1	50.0	737.2
De-Identification of Information	124.2	117.0	1,177.4
Employers with Insured Group Health Plans	52.4	0	52.4
Internal Complaints	6.6	10.7	103.2
Total *	3,242.0	1,556.9	17,554.7
Net Present Value	3,242.0	917.8	11,801.8

C. Need for the Final Rule

The need for a national health information privacy framework is described in detail in Section I of the preamble above. In short, privacy is a necessary foundation for delivery of high quality health care—the entire health care system is built upon the willingness of individuals to share the most intimate details of their lives with their health care providers. At the same time, there is increasing public concern about loss of privacy generally, and health privacy in particular. The growing use of interconnected electronic media for business and personal activities, our increasing ability to know an individual's genetic make-up, and the increasing complexity of the health care system each bring the potential for tremendous benefits to individuals and society, but each also brings new potential for invasions of our privacy.

Concerns about the lack of attention to information privacy in the health care industry are not merely theoretical. Section I of the preamble, above, lists numerous examples of the kinds of deliberate or accidental privacy violations that call for a national legal framework of health privacy protections. Disclosure of health information about an individual can have significant implications well beyond the physical health of that person, including the loss of a job, alienation of family and friends, the loss of health

insurance, and public humiliation. The answer to these concerns is not for consumers to withdraw from the health care system, but for society to establish a clear national legal framework for privacy.

This section adds to the discussion in Section I, above, a discussion of the market failures inherent in the current system which create additional and compelling reasons to establish national health information privacy standards. Market failures will arise to the extent that privacy is less well protected than the parties would have agreed to, if they were fully informed and had the ability to monitor and enforce contracts. The chief market failures with respect to privacy of health information concern information, negotiation, and enforcement costs between the entity and the individual. The information costs arise because of the information asymmetry between the company and the patient—the company typically knows far more than the patient about how the protected health information will be used by that company. A health care provider or plan, for instance, knows many details about how protected health information may be generated, combined with other databases, or sold to third parties.

Absent this regulation, patients face at least two layers of cost in learning about how their information is used. First, as with many aspects of health care, patients face the challenge of trying to understand technical medical terminology and practices. A patient generally will have difficulty understanding medical records and the implications of transferring health information about them to a third party. Second, in the absence of consistent national rules, patients may face significant costs in trying to learn and understand the nature of a company's privacy policies.

The costs of learning about companies' policies are magnified by the difficulty patients face in detecting whether companies, in fact, are complying with those policies. Patients might try to adopt strategies for monitoring whether companies have complied with their announced policies. These sorts of strategies, however, are both costly (in time and effort) and likely to be ineffective. In addition, modern health care often requires protected health information to flow legitimately among multiple entities for purposes of treatment, payment, health care operations, and other necessary uses. Even if the patient could identify the provider whose data ultimately leaked, the patient could not easily tell which of those multiple entities had impermissibly transferred her information. Therefore, the cost and ineffectiveness of monitoring leads to less than optimal protection of individually identifiable health information.

The incentives facing a company that acquires individually identifiable health information also discourage privacy protection. A company gains the full benefit of using such information, including its own marketing efforts or its ability to sell the information to third parties. The company, however, does not suffer the losses from disclosure of protected health information; the patient does. Because of imperfect monitoring, customers often will not ***82762** learn of, and thus not be able to take efficient action to prevent uses or disclosures of sensitive information. Because the company internalizes the gains from using the information, but does not bear a significant share, if any, of the cost to patients (in terms of lost privacy), it will have a systematic incentive to over-use individually identifiable health information. In market failure terms, companies will have an incentive to use individually identifiable health information where the patient would not have freely agreed to such use.

These difficulties are exacerbated by the third-party nature of many health insurance and payment systems. Even where individuals would wish to bargain for privacy, they may lack the legal standing to do so. For instance, employers often negotiate the terms of health plans with insurers. The employee may have no voice in the privacy or other terms of the plan, facing a take-it-or-leave-it choice of whether to be covered by insurance. The current system leads to significant market failures in bargaining privacy protection. Many privacy-protective agreements that patients would wish to make, absent barriers to bargaining, will not be reached.

The economic arguments become more compelling as the medical system shifts from predominantly paper to predominantly electronic records. Rapid changes in information technology should result in increased market failures in the markets for individually identifiable health information. Improvements in computers and networking mean that the costs of gathering, analyzing, and disseminating electronic data are plunging. Market forces are leading many health care providers and health plans to shift from paper to electronic records, due both to lower cost and the increased functionality provided by having information in electronic form. These market changes will be accelerated by the administrative simplification implemented by the other

regulations promulgated under HIPAA. A chief goal of administrative simplification, in fact, is to create a more efficient flow of medical information, where appropriate. This privacy regulation is an integral part of the overall effort of administrative simplification; it creates a framework for more efficient flows for certain purposes, including treatment and payment, while restricting flows in other circumstances except where appropriate institutional safeguards exist.

If the medical system shifts predominantly to electronic records in the near future, accompanying privacy rules will become more critical to prevent unanticipated, inappropriate, or unnecessary uses or disclosures of individually identifiable health information without patient consent and without effective institutional controls against further dissemination. In terms of the market failure, it will become more difficult for patients to know how their health provider or health plan is using health information about them. It will become more difficult to monitor the subsequent flows of individually identifiable health information, as the number of electronic flows and possible points of leakage both increase. Similarly, the costs and difficulties of bargaining to get the patients' desired level of use will likely rise due to the greater number and types of entities that receive protected health information.

As the benefits section, below, discusses in more detail, the protection of privacy and correcting the market failure also have practical implications. Where patients are concerned about lack of privacy protections, they might fail to get medical treatment that they would otherwise seek. This failure to get treatment may be especially likely for certain conditions, including mental health, and HIV. Similarly, patients who are concerned about lack of privacy protections may report health information inaccurately to their providers when they do seek treatment. For instance, they might decide not to mention that they are taking prescription drugs that indicate that they have an embarrassing condition. These inaccurate reports may lead to mis-diagnosis and less-than-optimal treatment, including inappropriate additional medications. In short, the lack of privacy safeguards can lead to efficiency losses in the form of forgone or inappropriate treatment.

In summarizing the economic arguments supporting the need for this regulation, the discussion here has emphasized the market failures that will be addressed by this regulation. These arguments become considerably stronger with the shift from predominantly paper to predominantly electronic records. As discussed in the benefits section below, the proposed privacy protections may prevent or reduce the risk of unfair treatment or discrimination against vulnerable categories of persons, such as those who are HIV positive, and thereby, foster better health. The proposed regulation may also help educate providers, health plans, and the general public about how protected health information is used. This education, in turn, may lead to better information practices in the future.

D. Baseline Privacy Protections

An analysis of the costs and benefits of the regulation requires a baseline from which to measure the regulation's effects. For some regulations, the baseline is relatively straightforward. For instance, an industry might widely use a particular technology, but a new regulation may require a different technology, which would not otherwise have been adopted by the industry. In this example, the old and widely used technology provides the baseline for measuring the effects of the regulation. The costs and the benefits are the difference between keeping the old technology and implementing the new technology.

Where the underlying technology and industry practices are rapidly changing, however, it can be far more difficult to determine the baseline and thereby measure the costs and benefits of a regulation. There is no simple way to know what technology industry would have chosen to introduce if the regulation had never existed, nor how industry practices would have evolved.

Today, the entities covered by the HIPAA privacy regulation are in the midst of a shift from primarily paper records to electronic records. As covered entities spend significant resources on hardware, software, and other information technology costs, questions arise about which of these costs are fairly attributable to the privacy regulations as opposed to costs that would have been expended even in the absence of the regulations. Industry practices generally are rapidly evolving, as described in more detail in Part I of this preamble. New technological or other measure taken to protect privacy are in part attributable to the expected expense of shifting to electronic medical records, rather than being solely attributable to the new regulations. In addition, the existence of privacy rules in other sectors of the economy help set a norm for what practices will be considered good practices for health information. The level of privacy protection that would exist in the health care sector, in the absence

of regulations, thus would likely be affected by regulatory and related developments in other sectors. In short, it is therefore difficult to project a cost or benefits baseline for this rule.

The common security practice of using "firewalls" illustrates how each of the three baselines might apply. Under the first baseline, the full cost of implementing firewalls should be included in a Regulatory Impact ***82763** Analysis for a rule that expects entities to have firewalls. Because current law has not required firewalls, a new rule expecting this security measure must include the full cost of creating firewalls. This approach, however, would seem to overstate the cost of such a regulation. Firewalls would seem to be an integral part of the decision to move to an on-line, electronic system of records. Firewalls are also being widely deployed by users and industries where no binding security or privacy regulations have been proposed.

Under the second baseline, the touchstone is the level of risk of security breaches for individually identifiable health information under current practices. There is quite possibly a greater risk of breach for an electronic system of records, especially where such records are accessible globally through the Internet, than for patient records dispersed among various doctors' offices in paper form. Using the second baseline, the costs of firewalls for electronic systems should not be counted as a cost of the regulation except where firewalls create greater security than existed under the previous, paper-based system.

Finally, the third baseline would require an estimate of the typical level of firewall protections that covered entities would adopt in the absence of regulation, and include in the Regulatory Impact Analysis only the costs that exceed what would otherwise have been adopted. For this analysis, the Department has generally assumed that the status quo would otherwise exist throughout the ten-year period (in a few areas we explicitly discuss likely changes). We made this decision for two reasons. First, predicting the level of change that would otherwise occur is highly problematic. Second, it is a "conservative" assumption—that is, any error will likely be an overstatement of the true costs of the regulation.

Privacy practices are most often shaped by professional organizations that publish ethical codes of conduct and by state law. On occasion, state laws defer to professional conduct codes. At present, where professional organizations and states have developed only limited guidelines for privacy practices, an entity may implement privacy practices independently. However, it is worth noting that changes in privacy protection continue to increase in various areas. For example, European Union countries may only send individually identifiable information to companies, including U.S. firms, that comply with their privacy standards, and the growing use of health data in other areas of commerce, such as finance and general commercial marketing, have also increased the demand for privacy in ways that were not of concern in the past.

1. Professional Codes of Ethics

The Department examined statements issued by five major professional groups, one national electronic network association and a leading managed care association.[FN38] There are a number of common themes that all the organizations appear to subscribe to:

- The need to maintain and protect an individual's health information;

- The development of policies to ensure the confidentiality of individually identifiable health information;

- A restriction that only the minimum necessary information should be released to accomplish the purpose for which the information is sought.

Beyond these principles, the major associations differ with respect to the methods used to protect individually identifiable health information. There is no common professional standard across the health care field with respect to the protection of individually identifiable health information. One critical area of difference is the extent to which professional organizations should release individually identifiable health information. A major mental health association advocates the release of identifiable patient information "* * * only when de-identified data are inadequate for the purpose at hand." A major association of physicians counsels members who use electronically maintained and transmitted data to require that they and their patients know in advance

who has access to protected patient data, and the purposes for which the data will be used. In another document, the association advises physicians not to “sell” patient information to data collection companies without fully informing their patients of this practice and receiving authorization in advance to release of the information.

Only two of the five professional groups state that patients have the right to review their medical records. One group declares this as a fundamental patient right, while the second association qualifies its position by stating that the physician has the final word on whether a patient has access to his or her health information. This association also recommends that its members respond to requests for access to patient information within ten days, and recommends that entities allow for an appeal process when patients are denied access. The association further recommends that when a patient contests the accuracy of the information in his or her record and the entity refuses to accept the patient's change, the patient's statement should be included as a permanent part of the patient's record.

In addition, three of the five professional groups endorse the maintenance of audit trails that can track the history of disclosures of individually identifiable health information.

The one set of standards that we reviewed from a health network association advocated the protection of individually identifiable health information from disclosure without patient authorization and emphasized that encrypting information should be a principal means of protecting individually identifiable health information. The statements of a leading managed care association, while endorsing the general principles of privacy protection, were vague on the release of information for purposes other than treatment. The association suggested allowing the use of protected health information without the patient's authorization for what they term “health promotion.” It is possible that the use of protected health information for “health promotion” may be construed under the rule as part of marketing activities.

Based on the review of the leading association standards, we believe that the final rule embodies most or all of the major principles expressed in the standards. However, there are some major areas of difference between the rule and the professional standards reviewed. The final rule generally provides stronger, more consistent, and more comprehensive guarantees of privacy for individually identifiable health information than the professional standards. The differences between the rule and the professional codes include the individual's right of access to health information in the covered entity's possession, relationships between contractors and covered entities, and the requirement that covered entities make their privacy policies and practices available to patients through a notice ***82764** and the ability to respond to questions related to the notice. Because the regulation requires that (with a few exceptions) patients have access to their protected health information that a covered entity possesses, large numbers of health care providers may have to modify their current practices in order to allow patient access, and to establish a review process if they deny a patient access. Also, none of the privacy protection standards reviewed require that health care providers or health plans prepare a formal statement of privacy practices for patients (although the major physician association urges members to inform patients about who would have access to their protected health information and how their health information would be used). Only one HMO association explicitly made reference to information released for legitimate research purposes. The regulation allows for the release of protected health information for research purposes without an individual's authorization, but only if the research where such authorization is waived by an institutional research board or an equivalent privacy board. This research requirement may cause some groups to revise their disclosure authorization standards.

2. State Laws

The second body of privacy protections is found in a complex, and often confusing, myriad of state laws and requirements. To determine whether or not the final rule would preempt a state law, first we identified the relevant laws, and second, we addressed whether state or federal law provides individuals with greater privacy protection.

Identifying the Relevant State Statutes: Health information privacy provisions can be found in laws applicable to many issues including insurance, worker's compensation, public health, birth and death records, adoptions, education, and welfare. In many cases, state laws were enacted to address a specific situation, such as the reporting of HIV/AIDS, or medical conditions that would impair a person's ability to drive a car. For example, Florida has over 60 laws that apply to protected health information.

According to the Georgetown Privacy Project,[FN39] Florida is not unique. Every state has laws and regulations covering some aspect of medical information privacy. For the purpose of this analysis, we simply acknowledge the variation in state requirements.

We recognize that covered entities will need to learn the laws of their states in order to comply with such laws that are not contrary to the rule, or that are contrary to and more stringent than the rule. This analysis should be completed in the context of individual markets; therefore, we expect that professional associations or individual businesses will complete this task.

Recognizing the limits of our ability to effectively summarize state privacy laws, we discuss conclusions generated by the Georgetown University Privacy Project's report, The State of Health Privacy: An Uneven Terrain. The Georgetown report is among the most comprehensive examination of state health privacy laws currently published, although it is not exhaustive. The report, which was completed in July 1999, is based on a 50-state survey.

To facilitate discussion, we have organized the analysis into two sections: access to health information and disclosure of health information. Our analysis is intended to suggest areas where the final rule appears to preempt various state laws; it is not designed to be a definitive or wholly comprehensive state-by-state comparison.

Access to Subject's Information: In general, state statutes provide individuals with some access to medical records about them. However, only a few states allow individuals access to health information held by all their health care providers and health plans. In 33 states, individuals may access their hospital and health facility records. Only 13 states guarantee individuals access to their HMO records, and 16 states provide individuals access to their medical information when it is held by insurers. Seven states have no statutory right of patient access; three states and the District of Columbia have laws that only assure individuals' right to access their mental health records. Only one state permits individuals access to records about them held by health care providers, but it excludes pharmacists from the definition of provider. Thirteen states grant individuals statutory right of access to pharmacy records.

The amount that entities are allowed to charge for copying of individuals' records varies widely from state to state. A study conducted by the American Health Information Management Association[FN40] found considerable variation in the amounts, structure, and combination of fees for search and retrieval, and the copying of the record.

In 35 states, there are laws or regulations that set a basis for charging individuals inspecting and copying fees. Charges vary not only by state, but also by the purpose of the request and the facility holding the health information. Also, charges vary by the number of pages and whether the request is for X-rays or for standard medical information.

Of the 35 states with laws regulating inspection and copying charges, seven states either do not allow charges for retrieval of records or require that the entity provide the first copy free of charge. Some states may prohibit hospitals from charging patients a retrieval and copying fee, but allow clinics to do so. Many states allow fee structures, while eleven states specify only that the record holder may charge “reasonable/actual costs.”

According to the report by the Georgetown Privacy Project, among states that do grant access to patient records, the most common basis for denying individuals access is concern for the life and safety of the individual or others.

The amount of time an entity is given to supply the individual with his or her record varies widely. Many states allow individuals to amend or correct inaccurate health information, especially information held by insurers. However, few states provide the right to insert a statement in the record challenging the covered entity's information when the individual and entity disagree.[FN41]

Disclosure of Health Information: State laws vary widely with respect to disclosure of individually identifiable health information. Generally, states have applied restrictions on the disclosure of health information either to specific entities or for specific health conditions. Only three state laws place broad limits on disclosure of individually identifiable health information

without regard for policies and procedures developed by covered entities. Most states require patient authorization before an entity may disclose health information to certain recipients, but the patient often does not have an opportunity to object to any disclosures.[FN42]

It is also important to point out that none of the states appear to offer individuals the right to restrict disclosure of their health information for treatment. ***82765**

State statutes often have exceptions to requiring authorization before disclosure. The most common exceptions are for purposes of treatment, payment, or auditing and quality assurance functions. Restrictions on re-disclosure of individually identifiable health information also vary widely from state to state. Some states restrict the re-disclosure of health information, and others do not. The Georgetown report cites state laws that require providers to adhere to professional codes of conduct and ethics with respect to disclosure and re-disclosure of protected health information.

Most states have adopted specific measures to provide additional protections for health information regarding certain sensitive conditions or illnesses. The conditions and illnesses most commonly afforded added privacy protection are:

- Information derived from genetic testing;

- Communicable and sexually-transmitted diseases;

- Mental health; and

- Abuse, neglect, domestic violence, and sexual assault.

Some states place restrictions on releasing condition-specific health information for research purposes, while others allow release of information for research without the patient's authorization. States frequently require that researchers studying genetic diseases, HIV/AIDS, and other sexually transmitted diseases have different authorization and privacy controls than those used for other types of research. Some states require approval from an IRB or agreements that the data will be destroyed or identifiers removed at the earliest possible time. Another approach has been for states to require researchers to obtain sensitive, identifiable information from a state public health department. One state does not allow automatic release of protected health information for research purposes without notifying the subjects that their health information may be used in research and allowing them an opportunity to object to the use of their information.[FN43]

Comparing state statutes to the final rule: The variability of state law regarding privacy of individually identifiable health information and the limitations of the applicability of many such laws demonstrates the need for uniformity and minimum standards for privacy protection. This regulation is designed to meet these goals while allowing stricter state laws to be enacted and remain effective. A comparison of state privacy laws with the final regulation highlights several of the rule's key implications:

- No state law requires covered entities to make their privacy and access policies available to patients. Thus, all covered entities that have direct contact with patients will be required by this rule to prepare a statement of their privacy protection and access policies. This necessarily assumes that entities have to develop procedures if they do not already have them in place.

- The rule will affect more entities than are covered or encompassed under many state laws.

- Among the three categories of covered entities, it appears that health plans will be the most significantly affected by the access provisions of the rule. Based on the Health Insurance Association of America (HIAA) data[FN44], there are approximately 94.7 million non-elderly persons with private health insurance in the 35 states that do not provide patients a legal right to inspect and copy their records.

- Under the rule, covered entities will have to obtain an individual's authorization before they could use or disclose their information for purposes other than treatment, payment, and health care operations—except in the situations explicitly defined as allowable disclosures without authorization. Although the final rule would establish a generally uniform disclosure and re-disclosure requirement for all covered entities, the entities that currently have the greatest ability and economic incentives to use and disclose protected health information for marketing services to both patients and health care providers without individual authorization.

- While the final rule appears to encompass many of the requirements found in current state laws, it also is clear that within state laws, there are many provisions that cover specific cases and health conditions. Certainly, in states that have no restrictions on disclosure, the rule will establish a baseline standard. But in states that do place conditions on the disclosure of protected health information, the rule may place additional requirements on covered entities.

3. Other Federal Laws

The relationship with other federal statutes is discussed above in the preamble.

E. Costs

Covered entities will be implementing the privacy final rules at the same time many of the administrative simplification standards are being implemented. As described in the overall impact analysis for the Transactions Rule, the data handling change occurring due to the other HIPAA standards will have both costs and benefits. To the extent the changes required for the privacy standards, implementation specifications, and requirements can be made concurrently with the changes required by the other regulations, costs for the combined implementation should be only marginally higher than for the administrative simplification standards alone. The extent of this incremental cost is uncertain, in the same way that the costs associated with each of the individual administrative simplification standards is uncertain.

The costs associated with implementing the requirements under this Privacy Rule will be directly related to the number of affected entities and the number of affected transactions in each entity. There are approximately 12,200 health plans (including self-insured employer and government health plans that are at least partially self-administered)[FN45], 6480 hospitals, and 630,000 non-hospital providers that will bear implementation costs under the final rule.

The relationship between the HIPAA security and privacy standards is particularly relevant. On August 17, 2000, the Secretary published a final rule to implement the HIPAA standards on electronic transactions. That rule adopted standards for eight electronic code sets to be used for those transactions. The proposed rule for security and electronic signature standards was published on August 12, 1998. That proposal specified the security requirements for covered entities that transmit and store information specified in Part C, Title II of the Act. In general, that proposed rule proposed administrative and technical standards for protecting "* * * any health information pertaining to an individual that is electronically ***82766** maintained or transmitted." (63 FR 43243). The final Security Rule will detail the system and administrative requirements that a covered entity must meet in order to assure itself and the Secretary that health information is safe from destruction and tampering from people without authorization for its access.

By contrast, the Privacy Rule describes the requirements that govern the circumstances under which protected health information must be used or disclosed with and without patient involvement and when a patient may have access to his or her protected health information.

While the vast majority of health care entities are privately owned and operated, we note that federal, state, and local government providers are reflected in the total costs as well. Federal, state, and locally funded hospitals represent approximately 26 percent of hospitals in the United States. This is a significant portion of hospitals, but it represents a relatively small proportion of all provider entities. We estimated that the number of government providers who are employed at locations other than government

hospitals is significantly smaller (approximately two percent of all providers). Weighting the relative number of government hospital and non-hospital providers by the revenue these types of providers generate, we estimate that health care services provided directly by government entities represent 3.4 percent of total health care services. Indian Health Service and tribal facilities costs are included in the total, since the adjustments made to the original private provider data to reflect federal providers included them. In developing the rule, the Department consulted with states, representatives of the National Congress of American Indians, representatives of the National Indian Health Board, and a representative of the self-governance tribes. During the consultation we discussed issues regarding the application of Title II of HIPAA to the states and tribes.

The costs associated with this final rule involve, for each provision, consideration of both the degree to which covered entities must modify their existing records management systems and privacy policies under the final rule, and the extent to which there is a change in behavior by both patients and the covered entities as a result of the final rule. The following sections examine these provisions as they apply to the various covered entities under the final rule. The major costs that covered entities will incur are one-time costs associated with implementation of the final rules, and ongoing costs that result in continuous requirements in the final rule.

The Department has quantified the costs imposed by the final regulation to the extent possible. The cost of many provisions were estimated by first using data from the Census Bureau's Statistics of U.S. Business to identify the number of non-hospital health care providers, hospitals and health plans. Then, using the Census Bureau's Current Population Survey (CPS) wage data for the classes of employees affected by the rule, the Department identified the hourly wage of the type of employee assumed to be mostly likely responsible for compliance with a given provision. Where the Department believed a number of different types of employees might be responsible for complying with a certain provision, as is often expected to be the case, the Department established a weighted-average wage based on the types of employees involved. Finally, the Department made assumptions regarding the number of person-hours per institution required to comply with the rule.

The Department cannot determine precisely how many person-hours per institution will be required to comply with a given provision, however, the Department attempted to establish reasonable estimates based on fact-finding discussions with private sector health care providers, the advice of the Department's consultants, and the Department's own best judgement of the level of burden required to comply with a given provision. Moreover, the Department recognizes that the number of hours required to comply with a given requirement of the rule will vary from provider to provider and health plan to health plan, particularly given the flexibility and scalability permitted under the rule. Therefore, the Department considers the estimates to be averages across the entire class of health care providers, hospitals, or health plans in question.

Underlying all annual cost estimates are growth projections. For growth in the number of patients, the Department used data from the National Ambulatory Medical Care Survey, the National Hospital Ambulatory Medical Care Survey, the National Home and Hospice Survey, the National Nursing Home Survey, and information from the American Hospital Association. For growth in the number of health care workers, the Department used data from the Bureau of Health Professions in the Department's Health Resources Services Administration (HRSA). For insurance coverage growth (private and military coverage), we used a five-year average annual growth rate in employer-sponsored, individual, military, and overall coverage growth from the Census Bureau's CPS, 1995-1999. To estimate growth in the number of Medicare and Medicaid enrollees, the Department used the enrollment projections of the Health Care Financing Administration's Office of the Actuary. For growth in the number of hospitals, health care providers and health plans, trend rates were derived from the Census Bureau's Statistics of U.S. Businesses, using SIC code-specific five-year annual average growth rate from 1992-1997 (the most recent data available). For wage growth, the Department used the same assumptions made in the Medicare Trustees' Hospital Insurance Trust Fund report for 2000.

In some areas, the Department was able to obtain very reliable data, such as survey data from the Statistics of U.S. Businesses and the Medical Expenditures Panel Survey (MEPS). In numerous areas, however, there was too little information or data to support quantitative estimates. As a result, the Department relied on data provided in the public comments or subsequent fact-finding to provide a basis for making key assumptions. We were able to provide a reasonable cost estimate for virtually all aspects of the regulation, except law enforcement. In this latter area, the Department was unable to obtain sufficient data

about current practices (e.g., the number of criminal and civil investigations that may involve requests for protected health information, the number of subpoenas for protected health information, etc.) to determine the marginal effects of the regulation. As discussed more fully below, the Department believes the effects of the final rule are marginal because the policies adopted in the final rule appear to largely reflect current practice.

The NPRM included an estimate of $3.8 billion for the privacy proposal. The estimate for the final rule is $18.0 billion. Much of the difference can be explained by two factors. First, the NPRM estimate was for five years; the final rule estimate is for ten years. The Department chose the longer period for the final rule because ten years was also the period of analysis in the Transactions Rule RIA, and we wanted to facilitate comparisons, given that the net benefits and costs of the administrative simplification rules should be considered together. Second, the final impact analysis includes cost estimates for a number of key provisions that were not estimated in the NPRM because the Department did not have adequate information at the time. ***82767** Although we received little useable data in the public comments (see comment and response section), the Department was able to undertake more extensive fact-finding and collect sufficient information to make informed assumptions about the level of effort and time various provisions of the final rule are likely to impose on different types of affected entities.

The estimate of $18.0 billion represents a gross cost, not a net cost. As discussed more fully below in the benefits section, the benefits of enhanced privacy and confidentiality of personal health information are very significant. If people believe their information will be used properly and not disseminated beyond certain bounds without their knowledge and consent, they will be much more likely to seek proper health care, provide all relevant health information, and abide by their providers' recommendations. In addition, more confidence by individuals and covered entities that privacy will be maintained will lead to an increase in electronic transactions and the efficiencies and cost savings that stem from such action. The benefits section quantifies some examples of benefits. The Department was not able to identify data sources or models that would permit us to measure benefits more broadly or accurately. The inability to quantify benefits, however, does not lessen the importance or value that is ultimately realized by having a national standard for health information privacy.

The largest initial costs resulting from the final Privacy Rule stem primarily from the requirement that covered entities use and disclose only the minimum necessary protected health information, that covered entities develop policies and codify their privacy procedures, and that covered entities designate a privacy official and train all personnel with access to individually identifiable health information. The largest ongoing costs will result from the minimum necessary provisions pertaining internal uses of individually identifiable health information, and the cost of a privacy official. In addition, covered entities will have recurring costs for training, disclosure tracking and notice requirements. A smaller number of large entities may have significant costs for de-identification of protected health information and additional requirements for research.

The privacy costs are in addition to the Transactions Rule estimates. The cost of complying with the regulation represents approximately 0.23 percent of projected national health expenditures the first year the regulation is enacted. The costs for the first eight years of the final regulation represents 0.07 percent of the increase in national health care costs experienced over the same period.[FN46]

Minimum Necessary

The “minimum necessary” policy in the final rule has essentially three components: first, it does not pertain to certain uses and disclosures including treatment-related exchange of information among health care providers; second, for disclosures that are made on a routine and recurring basis, such as insurance claims, a covered entity is required to have policies and procedures for governing such exchanges (but the rule does not require a case-by-case determination); and third, providers must have a process for reviewing non-routine requests on a case-by-case basis to assure that only the minimum necessary information is disclosed.

Based on public comments and subsequent fact-finding, the Department has concluded that the requirements of the final rule are generally similar to the current practice of most providers. For standard disclosure requests, for example, providers generally have established procedures for determining how much health information is released. For non-routine disclosures, providers have indicated that they currently ask questions to discern how much health information is necessary for such disclosure. Under

the final rule, we anticipate providers will have to be more thorough in their policies and procedures and more vigilant in their oversight of them; hence, the costs of this provision are significant.

To make the final estimates for this provision, the Department considered the minimum necessary requirement in two parts. First, providers, hospitals, and health plans will need to establish policies and procedures which govern uses and disclosures of protected health information. Next, these entities will need to adjust current practices that do not comply with the rule, such as updating passwords and making revisions to software.

To determine the policies and procedures for the minimum necessary requirement, the Department assumed that each hospital would spend 160 hours, health plans would spend 107 hours, and non-hospital providers would spend 8 hours. As noted above, the time estimates for this and other provisions of the rule are considered an average number of person-hours for the institutions involved. An underlying assumption is that some hospitals, and to a lesser extent health plans, are part of chains or larger entities that will be able to prepare the basic materials at a corporate level for a number of covered entities.

Once the policies and procedures are established, the Department estimates there will be costs resulting from implementing the new policies and procedures to restrict internal uses of protected health information to the minimum necessary. Initially, this will require 560 hours for hospitals, 160 hours for health plans, and 12 hours for non-hospital providers.[FN47] The wage for health care providers and hospitals is estimated at $47.28, a weighted average of various health care professionals based on CPS data; the wage for health plans is estimated to be $33.82, based on average wages in the insurance industry (note that all wage assumptions in this impact analysis assume a 39 percent load for benefits, the standard Bureau of Labor Statistics assumption). In addition, there will be time required on an annual basis to ensure that the implemented practices continue to meet the requirements of the rule. Therefore, the Department estimates that on an annual ongoing basis (after the first year), hospitals will require 320 hours, health plans 100 hours, and non-hospital providers 8 hours to comply with this provision.

The initial cost attributable to the minimum necessary provision is $926 million. The total cost of the provision is $5.757 billion. (These estimates are for the cost of complying with the minimum necessary provisions that restrict internal uses to the minimum necessary. The Department has estimated in the business associates section below the requirement limiting disclosures outside the covered entity to the minimum amount necessary.)

Privacy Official

The final rule requires entities to designate a privacy official who will be responsible for the development and implementation of privacy policies and procedures. In this cost analysis, the Department has estimated each of the primary administrative requirements of the rule (e.g., training, policy and ***82768** procedure development, etc), including the development and implementation costs associated with each specific requirement. These activities will certainly involve the privacy official to some degree; thus, some costs for the privacy official, particularly in the initial years, are subsumed in other cost requirements. Nonetheless, we anticipate that there will be additional ongoing responsibilities that the privacy official will have to address, such as coordinating between departments, evaluating procedures and assuring compliance. To avoid double-counting, the cost calculated in this section is only for the ongoing, operational functions of a privacy official (e.g., clarifying procedures for staff) that are in addition to items discussed in other sections of this impact analysis.

The Department assumes the privacy official role will be an additional responsibility given to an existing employee in the covered entity, such as an office manager in a small entity or a compliance official in a larger institution. Moreover, today any covered entity that handles individually identifiable health information has one or more people with responsibility for handling and protecting the confidentiality of such information. As a result of the specific requirement for a privacy official, the Department assumes covered entities will centralize this function, but the overall effort is not likely to increase significantly. Specifically, the Department has assumed non-hospital providers will need to devote, on average, an additional 30 minutes per week of an official's time (i.e., 26 hours per year) to compliance with the final regulation for the first two years and 15 minutes per week for the remaining eight years (i.e., 13 hours per year). For hospitals and health plans, which are more likely to have a

greater diversity of activities involving privacy issues, we have assumed three hours per week for the first two years (i.e., 156 hours per year), and 1.5 hours per week for the remaining eight years (i.e., 78 hours per year).

For non-hospital providers, the time was calculated at a wage of $34.13 per hour, which is the average wage for managers of medicine and health according to the CPS. For hospitals, we used a wage of $79.44, which is the rate for senior planning officers.[FN48] For health plans, the Department assumed a wage of $88.42 based on the wage for top claims executives.[FN49] Although individual hospitals and health plans may not necessarily select their planning officers or claims executives to be their privacy officials, we believe they will be of comparable responsibility, and therefore comparable pay, in larger institutions.

The initial year cost for privacy officials will be $723 million; the ten-year cost will be $5.9 billion.

Internal Complaints

The final rule requires each covered entity to have an internal process to allow an individual to file a complaint concerning the covered entity's compliance with its privacy policies and procedures. The requirement includes designating a contact person or office responsible for receiving complaints and documenting the disposition of them, if any. This function may be performed by the privacy official, but because it is a distinct right under the final rule and may be performed by someone else, we are costing it separately.

The covered entity only is required to receive and document a complaint (no response is required), which we assume will take, on average, ten minutes (the complaint can be oral or in writing). The Department believes that such complaints will be uncommon. We have assumed that one in every thousand patients will file a complaint, which is approximately 10.6 million complaints over ten years. Based on a weighted-average hourly wage of $47.28 at ten minutes per complaint, the cost of this policy is $6.6 million in the first year. Using wage growth and patient growth assumptions, the cost of this policy is $103 million over ten years.

Disclosure Tracking and History

The final rule requires providers to be able to produce a record of all disclosures of protected health information, except in certain circumstances. The exceptions include disclosures for treatment, payment, health care operations, or disclosures to an individual. This requirement will require a notation in the record (electronic or paper) of when, to whom, and what information was disclosed, as well as the purpose of such disclosure or a copy of an individual's written authorization or request for a disclosure.

Based on information from several hospital sources, the Department assumes that all hospitals already track disclosures of individually identifiable health information and that 15 percent of all patient records held by a hospital will have an annual disclosure that will have to be recorded in an individual's record. It was more difficult to obtain a reliable estimate for non-hospital providers, though it appears that they receive many fewer requests. The Department assumed a ten percent rate for ambulatory care patients and five percent, for nursing homes, home health, dental and pharmacy providers. (It was difficult to obtain any reliable data for these latter groups, but those we talked to said that they had very few, and some indicated that they currently keep track of them in the records.) These estimated percentages represent about 63 million disclosures that will have to be recorded in the first year, with each recording estimated to require two minutes. At the average nurse's salary of $30.39 per hour, the cost in the first year is $25.7 million. For health plans, the Department assumed that disclosures of protected health information are more rare than for health care providers. Therefore, the Department assumed that there will be disclosures of protected health information for five percent of covered lives. At the average wage for the insurance industry of $33.82 per hour, the initial cost for health plans is $6.8 million. Using our standard growth rates for wages, patients, and covered entities, the ten-year cost for providers and health plans is $519 million.

In addition, although hospitals generally track patient disclosures today, the Department assumes that hospitals will seek to update software systems to assure full compliance. Based on software upgrade costs provided by the Department's private sector

consultants with expertise in the area (the Gartner Group), the Department assumed that each upgrade would cost $35,000 initially and $6,300 annually thereafter, for a total cost of $572 million over ten years.

The final rule also requires covered entities to provide individuals with an accounting of disclosures upon request. The Department assumes that few patients will request a history of disclosures of their protected medical information. Therefore, we estimate that one in a thousand patients will request such an accounting each year, which is approximately 850,000 requests. If it takes an average of five minutes to copy any disclosures and the work is done by a nurse, the cost for the first year will be $2.1 million. The total ten-year cost is $33.8 million. ***82769**

De-Identification of Information

The rule allows covered entities to determine that health information is de-identified (i.e., that it is not individually identifiable health information) if certain conditions are met. Currently, some entities release de-identified information for research purposes. De-identified information may originate from automated systems (such as records maintained by pharmacy benefit managers) and non-automated systems (such as individual medical records maintained by providers). As compared with current practice, the rule requires that an expanded list of identifiers be removed for the data (such as driver's license numbers, and detailed geographic and certain age information). For example, as noted in a number of public comments, currently complete birth dates (day, month, and year) and zip codes are often included in de-identified information. The final rule requires that only the year of birth (except in certain circumstances) and the first three digits of the zip code can be included in de-identified information.

These changes will not require extensive change from current practice. Providers generally remove most of the 19 identifiers listed in the final rule. The Department relied on Gartner Group estimates that some additional programmer time will be required by covered entities that produce de-identified information to make revisions in their procedures to eliminate additional identifiers. Entities that de-identify information will have to review existing and future data flows to assure compliance with the final rule. For example, an automated system may need to be re-programmed to remove additional identifiers from otherwise protected health information. (The costs of educating staff about the de-identification requirements are included in the cost estimate for training staff on privacy policies.)

The Department was not able to obtain any reliable information on the volume of medical data that is currently de-identified. To provide some measure of the potential magnitude, we assumed that health plans and hospitals would have an average of two existing agreements that would need to be reviewed and modified. Based on information provided by our consultants, we estimate that these agreements would require an average of 152 hours by hospitals and 116 hours by health plans to review and revise existing agreements to conform to the final rule. Using the weighted average wage of $47.28, the initial costs will be $124 million. Using our standard growth rates for wages, patients, and covered entities, the total cost of the provision is $1.1 billion over ten years.

The Department expects that the final rule and the increasing trend toward computerization of large record sets will result over time in de-identification being performed by relatively few firms or associations. Whether the covered entity is a small provider with relatively few files or a hospital or health plan with large record files, it will be more efficient to contract with specialists in these firms or associations (as “business associates” of the covered entity) to de-identify files. The process will be different but the ultimate cost is likely to be the same or only slightly higher, if at all, than the costs for de-identification today. The estimate is for the costs required to conform existing and future agreements to the provisions of the rule. The Department has not quantified the benefits that might arise from changes in the market for de-identified information because the centralization and efficiency that will come from it will not be fully realized for several years, and we do not have a reliable means of estimating such changes.

Policy and Procedures Development

The final regulation imposes a variety of requirements which collectively will necessitate entities to develop policies and procedures (henceforth in this section to be referred to as policies) to establish and maintain compliance with the regulation. These include policies such as those for inspection and copying, amending records, and receiving complaints.[FN50] In

developing the final regulations, simplifying the administrative burden was a significant consideration. To the extent practical, consistent with maintaining adequate protection of protected health information, the final rule is designed to encourage the development of policies by professional associations and others, that will reduce costs and facilitate greater consistency across providers and other covered entities.

The development of policies will occur at two levels: first, at the association or other large scale levels; and second, at the entity level. Because of the generic nature of many of the final rule's provisions, the Department anticipates that trade, professional associations, and other groups serving large numbers of members or clients will develop materials that can be used broadly. These will likely include the model privacy practice notice that all covered entities will have to provide patients; general descriptions of the regulation's requirements appropriate for various types of health care providers; checklists of steps entities will have to take to comply; training materials; and recommended procedures or guidelines. The Department spoke with a number of professional associations, and they confirmed that they would expect to provide such materials for their members at either the federal or state level.

Using Faulkner and Gray's Health Data Directory 2000, we identified 216 associations that would be likely to provide guidance to members. In addition, we assume three organizations (i.e., one for hospitals, health plans, and other health care providers) in each state would also provide some additional services to help covered entities coordinate the requirements of this rule with state laws and requirements. The Department assumed that these associations would each provide 320 hours of legal analysis at $150 per hour, and 640 hours of senior analysts time at $50 per hour. This equals $17.3 million. Hourly rates for legal council are the average billing rate for a staff attorney.[FN51] The senior analysts rates are based on a salary of $75,000 per year, plus benefits, which was provided by a major professional association.

For larger health care entities such as hospitals and health plans, the Department assumed that the complexity of their operations would require them to seek more customized assistance from outside council or consultants. Therefore, the Department assumes that each hospital and health plan (including self-administered, self-insured health plans) will, on average, require 40 hours of outside assistance. The resulting cost for external policy development is estimated to be $112 million.

All covered entities are expected to require some time for internal policy development beyond what is provided by associations or outside consultants. For most non-hospital providers, the external assistance will provide most of the necessary information. Therefore, we expect these health care providers will need only eight hours to adapt these policies for their specific use (training cost is estimated separately in the impact analysis). Hospitals and ***82770** health plans, which employ more individuals and are involved in a wider array of endeavors, are likely to require more specific policies tailored to their operations to comply with the final rule. For these entities, we assume an average of 320 hours of policy development per institution. The total cost for internal policy development is estimated to be $468 million.

The total cost for policy, plan, and procedures development for the final regulation is estimated to be $598 million. All of these costs are initial costs.

Training

The final regulation's requirements provide covered entities with considerable flexibility in how to best fulfill the necessary training of their workforce. As a result, the actual practices may vary substantially based on such factors as the number of members of the workforce, the types of operations, worker turnover, and experience of the workforce. Training is estimated to cost $737 million over ten years. The Department estimates that at the time of the effective date, approximately 6.7 million health care workers will have to be trained, and in the subsequent ten years, 7 million more will have to be trained because of worker turnover. The estimate of employee numbers are based on 2000 CPS data regarding the number of health care workers who indicated they worked for a health care institution. To estimate a workforce turnover rate, the Department relied on a study submitted in the public comments which used a turnover rate of ten percent or less, depending on the labor category. To be conservative, the Department assumed ten percent for all categories.

Covered entities will need to provide members of the workforce with varying amounts of training depending on their responsibilities, but on average, the Department estimates that each member of the workforce who is likely to have access to protected health information will require one hour of training in the policies and procedures of the covered entity. The initial training cost estimate is based on teacher training with an average class size of ten. After the initial training, the Department expects some training (for example, new employees in larger institutions) will be done by videotape, video conference, or computer, all of which are likely to be less expensive. Training materials were assumed to cost an average of $2 per worker. The opportunity cost for the training time is based on the average wage for each health care labor category listed in the CPS, plus a 39 percent load for benefits. Wages were increased based on the wage inflation factor utilized for the short-term assumptions (which covers ten years) in the Medicare Trustees' Annual Report for 1999.

Notice

This section describes only the cost associated with the production and provision of a notice. The cost of developing the policy stated in the notice is covered under policies and procedures, above.

Covered health care providers with direct treatment relationships are required to provide a notice of privacy practices no later than the date of the first service delivery to individuals after the compliance date for the covered health care provider. The Department assumed that for most types of health care providers (such as physicians, dentists, and pharmacists) one notice would be distributed to each patient during his or her first visit following the compliance date for the covered provider, but not for subsequent visits. For hospitals, however, the Department assumed that a notice would be provided at each admission, regardless of how many visits an individual has in a given year. In subsequent years, the Department assumed that non-hospital providers would only provide notices to their new patients, because it is assumed that providers can distinguish between new and old patients, although hospitals will continue to provide a notice for each admission. The total number of notices provided in the initial year is estimated to be 816 million.

Under the final rule, only providers that have direct treatment relationships with individuals are required to provide notices to them. To estimate the number of visits that trigger a notice in the initial year and in subsequent years, the Department relied on the Medical Expenditure Panel Survey (MEPS, 1996 data) conducted by the Department's Agency for Healthcare Quality and Research. This data set provides estimates for the number of total visits to a variety of health care providers in a given year and estimates of the number of patients with at least one visit to each type of each care provider. To estimate the number of new patients in a given year, the Department used the National Ambulatory Medical Care Survey and the National Hospital Ambulatory Medical Care Survey, which indicate that for ambulatory care visits to physician offices and hospital ambulatory care departments, 13 percent of all patients are new. This data was used as a proxy for other types of providers, such as dentists and nursing homes, because the Department did not have estimates for new patients for other types of providers. The number of new patients was increased over time to account for growth in the patient population. Therefore, the number of notices provided in years 2004 through 2012 is estimated to be 5.3 billion.

For health plans, the Department estimated the number of notices by trending forward the average annual rate of growth from 1995 through 1998 (the most recent data available) of private policy holders using the Census Bureau's Current Population Survey, and also by using Health Care Financing Administration Office of the Actuary's estimates for growth in Medicare and Medicaid enrollment. It should be noted that the regulation does not require that the notice be mailed to individuals. Therefore, the Department assumed that health plans would include their privacy policy in the annual mailings they make to members, such as by adding a page to an existing information booklet.

Since clinical laboratories generally do not have direct contact with patients, they would not normally be required to provide notices. However, there are some laboratory services that involve direct patient contact, such as patients who have tests performed in a laboratory or at a health fair. We found no data from which we could estimate the number of such visits. Therefore, we have assumed that labs would incur no costs as a result of this requirement.

The printing cost of the policy is estimated to be $0.05, based on data obtained from the Social Security Administration, which does a significant number of printings for distribution. Some large bulk users, such as health plans, can probably reproduce the document for less, and small providers simply may copy the notice, which would also be less than $0.05. Nonetheless, at $0.05, the total cost of the initial notice is $50.8 million.

Using our standard growth rate for patients, the total cost for notices is estimated to be $391 million for the ten-year period.

Requirements on Use and Disclosure for Research

The final regulation places certain requirements on covered entities that supply individually identifiable health information to researchers. As a result of these requirements, researchers who seek such health information and the Institutional Review Boards (IRBs) that review research projects will have additional responsibilities. Moreover, a covered entity doing research, or another entity requesting disclosure of ***82771** protected health information for research that is not currently subject to IRB review (research that is 100 percent privately funded and which takes place in institutions which do not have "multiple project assurances") may need to seek IRB or privacy board approval if they want to avoid the requirement to obtain authorization for use or disclosure of protected health information for research, thereby creating the need for additional IRBs and privacy boards that do not currently exist.

To estimate the additional requirements placed on existing IRBs, the Department relied on a survey of IRBs conducted by James Bell Associates on behalf of NIH and on estimates of the total number of existing IRBs provided by NIH staff. Based on this information, the Department concluded that of the estimated 4,000 IRBs in existence, the median number of initial current research project reviews is 133 per IRB, of which only ten percent do not receive direct consent for the use of protected health information. (Obtaining consent nullifies the need for IRB privacy scrutiny.) Therefore, in the first year of implementation, there will be 76,609 initial reviews affected by the regulation, and the Department assumes that the requirement to consider the privacy protections in the research protocols under review will add an average of 1 hour to each review. The cost to researchers for having to develop protocols which protect protected health information is difficult to estimate, but the Department assumes that each of the affected 76,609 studies will require an average of an additional 8 hours of time for protocol development and implementation. At the average medical scientist hourly wage of $46.61, the initial cost is $32.1 million; the total ten-year cost of these requirements is $468 million over ten years.

As stated above, some privately funded research not subject to any IRB review currently may need to obtain IRB or privacy board approval under the final rule. Estimating how much research exists which does not currently go through any IRB review is highly speculative, because the experts consulted by the Department all agree that there is no data on the volume of privately funded research. Likewise, public comments on this subject provided no useful data. However, the Department assumed that most research that takes place today is subject to IRB review, given that so much research has some government funding and many large research institutions have multiple project assurances. As a result, the Department assumed that the total volume of non-IRB reviewed research is equal to 25 percent of all IRB-reviewed research, leading to 19,152 new IRB or privacy board reviews in the first year of the regulation. Using the same assumptions as used above for wages, time spent developing privacy protection protocols for researchers, and time spent by IRB and privacy board members, the total one-year cost for new IRB and privacy board reviews is $8 million.

For estimating total ten-year costs, the Department used the Bell study, which showed an average annual growth rate of 3.7 percent in the number of studies reviewed by IRBs. Using this growth rate, the total ten-year cost for the new research requirements is $117 million.

Consent

Under the final rule, a covered health care provider with direct treatment relationships must obtain an individual's consent for use or disclosure of protected health information for treatment, payment, or health care operations. Covered providers with indirect treatment relationships and health plans may obtain such consent if they so choose. Providers and health plans that

seek consent under this rule can condition treatment or enrollment upon provision of such consent. Based on public comments and discussions with a wide array of health care providers, it is apparent that most currently obtain written consent for use and disclosure of individually identifiable health information for payment. Under the final rule, they will have to obtain consent for treatment and health care operations, as well, but this may entail only minor changes in the language of the consent to incorporate these other categories and to conform to the rule.

Although the Department was unable to obtain any systematic data, the anecdotal evidence suggests that most non-hospital providers and virtually all hospitals follow this practice. For the cost analysis, the Department assumes that 90 percent of the non-hospital providers and all hospitals currently obtain some consent for use and disclosure of individually identifiable health information. For providers that currently obtain written consent, there is only a nominal cost for changing the language on the document to conform to the rule. For this activity, we assumed $0.05 cost per document for revising existing consent documents.

For the ten percent of treating providers who currently do not obtain consent, there is the cost of creating consent documents (which will be standardized), which is also assumed to be $0.05 per document. It is assumed that all providers required to obtain consent under the rule will do so upon the first visit, so there will be no mailing cost. For non-hospital providers, we assume the consent will be maintained in paper form, which is what most providers currently do (electronic form, if available, is cheaper to maintain). There is no new cost for records maintenance because the consent will be kept in active files (paper or electronic).

The initial cost of the consent requirement is estimated to be $166 million. Using our standard assumptions for patient growth, the total costs for the ten years is estimated to be $227 million.

Authorizations

Patient authorizations are required for uses or disclosures of protected health information that are not otherwise explicitly permitted under the final rule with or without consent. In addition to uses and disclosures of protected health information for treatment, payment, and health care operations with or without consent, the rule also permits certain uses of protected health information, such as fund-raising for the covered entity and certain types of marketing activity, without prior consent or authorization. Authorizations are generally required if a covered entity wants to provide protected health information to third party for use by the third party for marketing or for research that is not approved by an IRB or privacy board.

The requirement for obtaining authorizations for use or disclosure of protected health information for most marketing activity will make direct third-party marketing more difficult because covered entities may not want to obtain and track such authorizations, or they may obtain too few to make the effort economically worthwhile. However, the final rule permits an alternative arrangement: the covered entity can engage in health-related marketing on behalf of a third party, presumably for a fee. Moreover, the covered entity could retain another party, through a business associate relationship, to conduct the actual health-related marketing, such as mailings or telemarketing, under the covered entity's name. The Department is unable to estimate the cost of these changes because there is no credible data on the extent of current third party marketing practices or the price that third party marketers currently pay for information from covered entities. The effect of the final rule is to change the ***82772** arrangement of practices to enhance accountability of protected health information by the covered entity and its business associates; however, there is nothing inherently costly in these changes.

Examples of other circumstances in which authorizations are required under the final rule include disclosure of protected health information to an employer for an employment physical, pre-enrollment underwriting for insurance, or the sharing of protected health insurance information by an insurer with an employer. The Department assumes there is no new cost associated with these requirements because providers have said that obtaining authorization under such circumstances is current practice.

To use or disclose psychotherapy notes for most purposes (including for treatment, payment, or health care operations), a covered entity must obtain specific authorization by the individual that is distinct from any authorization for use and disclosure of other protected health information. This is current practice, so there is no new cost associated with this provision.

Confidential Communications

The final rule permits individuals to receive communications of protected health information from a covered health care provider or a health plan by an alternative means or at an alternative address. A covered provider and a health plan must accommodate reasonable requests; however, a health plan may require the individual to state that disclosure of such information may endanger the individual. A number of providers and health plans indicated that they currently provide this service for patients who request it. For providers and health plans with electronic records system, maintaining separate addresses for certain information is simple and inexpensive, requiring little or no change in the system. For providers with paper records, the cost may be higher because they will have to manually check records to determine which information must be treated in accordance with such requests. Although some providers currently provide this service, the Department was unable to obtain any reliable estimate of the number of such requests today or the number of providers who perform this service. The cost attributable to this requirement to send materials to alternate addresses does not appear to be significant.

Employers With Insured Group Health Plans

Some group health plans will use or maintain protected health information, particularly group health plans that are self-insured. Also, some plan sponsors that perform administrative functions on behalf of their group health plans, may need protected health information. The final rule permits a group health plan, or a health insurance issuer or HMO that provides benefits on behalf of the group health plan, to disclose protected health information to a plan sponsor who performs administrative functions on its behalf for certain purposes and if certain requirements are met. The plan documents must be amended to: describe the permitted uses and disclosures of protected health information by the plan sponsor; specify that disclosure is permitted only upon receipt of a certification by the plan sponsor that the plan documents have been amended and the plan sponsor agrees to certain restrictions on the use of protected health information; and provide for adequate firewalls to assure unauthorized personnel do not have access to individually identifiable health information.

Some plan sponsors may need information, not to administer the group health plan, but to amend, modify, or terminate the plan. ERISA case law describes such activities as settlor functions. For example, a plan sponsor may want to change its contract from a preferred provider organization to a health maintenance organization (HMO). In order to obtain premium information, the plan sponsor may need to provide the HMO with aggregate claims information. Under the rule, the plan sponsor can obtain summary information with certain identifiers removed, in order to provide it to the HMO and receive a premium rate.

The Department assumes that most plan sponsors who are small employers (those with 50 or fewer employees) will elect not to receive protected health information because they will have little, if any, need for such data. Any needs that plan sponsors of small group health plans may have for information can be accomplished by receiving the information in summary form. The Department has assumed that only 5 percent of plan sponsors of small group health plans that provide coverage through a contract with an issuer will actually take the steps necessary to receive protected health information. This is approximately 96,900 firms. For these firms, the Department assumes it will take one hour to determine procedural and organization issues and an additional ⅓ hour of an attorney's time to make plan document changes, which will be simple and essentially standardized. This will cost $7.1 million.

Plan sponsors who are employers of medium (51-199 employees) and large (over 200 employees) firms that provide health benefits through contracts with issuers are more likely to want access to protected health information for plan administration, for example to use it to audit claims or perform quality assurance functions on behalf of the group health plan. The Department assumes that 25 percent of plan sponsors of medium sized firms and 75 percent of larger firms will want to receive protected health information. This is approximately 38,000 medium size firms and 27,000 larger firms. To provide access to protected health information by the group health plan, a plan sponsor will have to assess the current flow of protected health information from their issuer and determine what information is necessary and appropriate. The plan sponsors may then have to make internal organizational changes to assure adequate protection of protected health information so that the relevant requirements are met for the group health plan. We assume that medium size firms will take 16 work hours to complete organizational changes, plus one hour of legal time to make changes to plan documents and certify to the insurance carrier that the firm is eligible to receive

protected health information. We assume that larger firms will require 32 hours of internal organizational work and one hour of legal time. This will cost $52.4 million and is a one-time expense.

Business Associates

The final rule requires a covered entity to have a written contract or other arrangement that documents satisfactory assurance that business associate will appropriately safeguard protected health information in order to disclose it to a business associate based on such an arrangement. The Department expects business associate contracts to be fairly standardized, except for language that will have to be tailored to the specific arrangement between the parties, such as the allowable uses and disclosures of information. The Department assumes the standard language initially will be developed by trade and professional associations for their members. Small providers are likely to simply adopt the language or make minor modifications, while health plans and hospitals may start with the prototype language but may make more specific changes to ***82773** meet their institutional needs. The regulation includes a requirement that the covered entity take steps to correct, and in some cases terminate, a contract, if necessary, if they know of violations by a business associate. This oversight requirement is consistent with standard oversight of a contract.

The Department could not derive a per entity cost for this work directly. In lieu of this, we have assumed that the trade and professional associations' work plus any minor tailoring of it by a covered entity would amount to one hour per non-hospital provider and two hours for hospitals and health plans. The larger figure for hospitals and health plans reflects the fact that they are likely to have a more extensive array of relationships with business associates.

The cost for the changes in business associate contracts is estimated to be $103 million. This will be an initial year cost only because the Department assumes that this contract language will become standard in future contracts.

In addition, the Department has estimated the cost for business associates to comply with the minimum necessary provisions. As part of the minimum necessary provisions, covered entities will have to establish policies to ensure that only the minimum necessary protected health information is shared with business associates. To the extent that data are exchanged, covered entities will have to review the data and systems programs to assure compliance.

For non-hospital providers, we estimate that the first year will require an average of three hours to review existing agreements, and thereafter, they will require an additional hour to assure business associate compliance. We estimate that hospitals will require an additional 200 hours the first year and 16 hours in subsequent years; health plans will require an additional 112 hours the first year and 8 hours in subsequent years. As in other areas, we have assumed a weighted average wage for the respective sectors.

The cost of the covered entities assuring business associates' complying with the minimum necessary is $197 million in the first year, and a total of $697 million over ten years. (These estimates include the both the cost for the covered entity and the business associates.)

Inspection and Copying

In the NPRM estimate, inspection and copying were a major cost. Based on data and information from the public comments and further fact-finding, however, the Department has re-estimated these policies and found them to be much less expensive.

The public comments demonstrate that copying of records is wide-spread today. Records are routinely copied, in whole or in part, as part of treatment or when patients change providers. In addition, copying occurs as part of legal proceedings. The amount of inspection and copying of medical records that occurs for these purposes is not expected to change measurably as a result of the final regulation.

The final regulation establishes the right of individuals to access, that is to inspect and obtain a copy of, protected health information about them in designated record sets. Although this is an important right, the Department does not expect it to result in dramatic increases in requests from individuals. The Georgetown report on state privacy laws indicates that 33 states currently give patients some right to access medical information. The most common right of access granted by state law is the right to inspect personal information held by physicians and hospitals. In the process of developing estimates for the cost of providing access, we assumed that most providers currently have procedures for allowing patients to inspect and obtain a copy of individually identifiable health information about themselves. The economic impact of requiring entities to allow individuals to access their records should be relatively small. One public commenter addressed this issue and provided specific data which supports this conclusion.

Few studies address the cost of providing medical records to patients. The most recent was a study in 1998 by the Tennessee Comptroller of the Treasury. It found an average cost of $9.96 per request, with an average of 31 pages per request. The cost per page of providing copies was $0.32 per page. This study was performed on hospitals only. The cost per request may be lower for other types of providers, since those seeking hospital records are more likely to have more complicated records than those in a primary care or other types of offices. An earlier report showed much higher costs than the Tennessee study. In 1992, Rose Dunn published a report based on her experience as a manager of medical records. She estimated a 10-page request would cost $5.32 in labor costs only, equaling labor cost per page of $0.53. However, this estimate appears to reflect costs before computerization. The expected time spent per search was 30.6 minutes; 85 percent of this time could be significantly reduced with computerization (this includes time taken for file retrieval, photocopying, and re-filing; file retrieval is the only time cost that would remain under computerization).

In estimating the cost of copying records, the Department relied on the public comment from a medical records outsourcing industry representative, which submitted specific volume and cost data from a major firm that provides extensive medical record copying services. According to these data, 900 million pages of medical records are copied each year in the U.S., the average medical record is 31 pages, and copying costs are $0.50 per page. In addition, the commenter noted that only 10 percent of all requests are made directly from patients, and of those, the majority are for purposes of continuing care (transfer to another provider), not for purposes of individual inspection. The Department assumed that 25 percent of direct patient requests to copy medical records are for purposes of inspecting their accuracy (i.e., 2.5 percent of all copy requests) or 850,000 in 2003 if the current practice remained unchanged.

To estimate the marginal increase in copying that might result from the regulation, the Department assumed that as patients gained more awareness of their right to inspect and copy their records, more requests will occur. As a result, the Department assumed a ten percent increase in the number of requests to inspect and copy medical records over the current baseline, which would amount to a little over 85,000 additional requests in 2003 at a cost of $1.3 million. Allowing for a 5.3 percent increase in records based on the increase in ambulatory care visits, the highest growth rate among health service sectors (the National Ambulatory Medical Care Survey, 1998), the total cost for the ten-year period would be $16.8 million.

The final rule allows a provider to deny an individual the right to inspect or obtain a copy of protected health information in a designated record set under certain circumstances, and it provides, in certain circumstances, that the patient can request the denial to be reviewed by another licensed health care professional. The initial provider can choose a licensed health care professional to render the second review.

The Department assumes denials and subsequent requests for reviews will be extremely rare. The Department estimates there are about 932,000 annual requests for inspections (i.e., base plus new requests resulting from the regulation), or approximately 11 million over the ten-year period. If one- ***82774** tenth of one percent of these requests were to result in a denial in accordance with the rule, the result would be 11,890 cases. Not all these cases would be appealed. If 25 percent were appealed, the result would be 2,972 cases. If a second provider were to spend 15 minutes reviewing the case, the cost would be $6,000 in the first year and $86,360 over ten years.

Amendments to Protected Health Information

Many providers and health plans currently allow patients to amend the information in their medical record, where appropriate. If an error exists, both the patient and the provider or health plan benefit from the correction. However, as with inspection and copying, many states do not provide individuals with the right to request amendment to protected health information about themselves. Based on these assumptions, the Department concludes that the principal economic effect of the final rule would be to expand the right to request amendments to protected health information held by a health plan or provider to those who are not currently covered by amendment requirements under state laws or codes of conduct. In addition, the rule may draw additional attention to the issue of inaccuracies in information and may stimulate patient demand for amendment of medical records, including in those states that currently provide a right to amend medical records.

Under the final regulation, if a patient requests an amendment to his or her medical record, the provider must either accept the amendment or provide the individual with the opportunity to submit a statement disagreeing with the denial. The provider must acknowledge the request and inform the patient of his action.

The cost calculations assume that individuals who request an opportunity to amend their medical record have already obtained a copy of it. Therefore, the administrative cost of amending the patient's record is completely separate from inspection and copying costs.

Based on fact-finding discussions with a variety of providers, the Department assumes that 25 percent of the projected 850,000 people who request to inspect their records will seek to amend them. This number is the existing demand plus the additional requests resulting from the rule. Over ten years, the number of expected amendment requests will be 2.7 million. Unlike inspections, which currently occur in a small percentage of cases, our fact-finding suggests that patients very rarely seek to amend their records, but that the establishment of this right in the rule will spur more requests. The 25 percent appears to be high based on our discussions with providers but it is being used to avoid an underestimation of the cost.

As noted, the provider or health plan is not required to evaluate any amendment requests, only to append or otherwise link to the request in the record. We expect the responses will vary: sometimes an assistant will only make the appropriate notation in the record, requiring only a few minutes; other times a provider or manager will review the request and make changes if appropriate, which may require as much as an hour. To be conservative in its estimate, the Department has assumed, on average, 30 minutes for each amendment request at a cost of $47.28 per hour (2000 CPS).

The first-year cost for the amendment policy is estimated to be $5 million. The ten-year cost of this provision is $78.8 million.

Law Enforcement and Judicial and Administrative Proceedings

The law enforcement provisions of the final rule allow disclosure of protected health information without patient authorization under four circumstances: (1) Pursuant to legal process or as otherwise required by law; (2) to locate or identify a suspect, fugitive, material witness, or missing person; (3) under specified conditions regarding a victim of crime; and (4) and when a covered entity believes the protected health information constitutes evidence of a crime committed on its premises. As under current law and practice, a covered entity may disclose protected health information to a law enforcement official if such official.

Based on our fact finding, we are not able to estimate any additional costs from the final rule regarding disclosures to law enforcement officials. The final rule makes clear that current court orders and grand jury subpoenas will continue to provide a basis for covered entities to disclose protected health information to law enforcement officials. The three-part test, which covered entities must use to decide whether to disclose information in response to an administrative request such as an administrative subpoena, represents a change from current practice. There will be only minimal costs to draft the standard language for such subpoenas. We are unable to estimate other costs attributable to the use of administrative subpoenas. We have not been able to discover any specific information about the costs to law enforcement of establishing the predicates for issuing the administrative

subpoena, nor have we been able to estimate the number of such subpoenas that will likely be issued once the final rule is implemented.

A covered entity may disclose protected health information in response to an order in the course of a judicial or administrative proceeding if reasonable efforts have been made to give the individual, who is the subject of the protected health information, notice of and an opportunity to object to the disclosure or to secure a qualified protective order.

The Department was unable to estimate any additional costs due to compliance with the final rule's provisions regarding judicial and administrative proceedings. The provision requiring a covered entity to make efforts to notify an individual that his or her records will be used in proceedings is similar to current practice; attorneys for plaintiffs and defendants agreed that medical records are ordinarily produced after the relevant party has been notified. With regard to protective orders, we believe that standard language for such orders can be created at minimal cost. The cost of complying with such protective orders will also likely be minimal, because attorney's client files are ordinarily already treated under safeguards comparable to those contemplated under the qualified protective orders. The Department was unable to make an estimate of how many such protective orders might be created annually.

We thus do not make any estimate of the initial or ongoing costs for judicial, administrative, or law enforcement proceedings.

Costs to the Federal Government

The rule will have a cost impact on various federal agencies that administer programs that require the use of individual health information. The federal costs of complying with the regulation and the costs when federal government entities are serving as providers are included in the regulation's total cost estimate outlined in the impact analysis. Federal agencies or programs clearly affected by the rule are those that meet the definition of a covered entity. However, non-covered agencies or programs that handle medical information, either under permissible exceptions to the disclosure rules or through an individual's expressed authorization, will likely incur some costs complying with provisions of this rule. A sample of federal agencies encompassed by the ***82775** broad scope of this rule include the: Department of Health and Human Services, Department of Defense, Department of Veterans Affairs, Department of State, and the Social Security Administration.

The greatest cost and administrative burden on the federal government will fall to agencies and programs that act as covered entities, by virtue of being either a health plan or provider. Examples include the Medicare, Medicaid, Children's Health Insurance and Indian Health Service programs at the Department of Health and Human Services; the CHAMPVA health program at the Department of Veterans Affairs; and the TRICARE health program at the Department of Defense. These and other health insurance or provider programs operated by the federal government are subject to requirements placed on covered entities under this rule, including, but not limited to, those outlined in Section D of the impact analysis. While many of these federal programs already afford privacy protections for individual health information through the Privacy Act and standards set by the Departments and implemented through their contracts with providers, this rule is nonetheless expected to create additional requirements. Further, we anticipate that most federal health programs will, to some extent, need to modify their existing practices to comply fully with this rule. The cost to federal programs that function as health plans will be generally the same as those for the private sector.

A unique cost to the federal government will be in the area of enforcement. The Office for Civil Rights (OCR), located at the Department of Health and Human Services, has the primary responsibility to monitor and audit covered entities. OCR will monitor and audit covered entities in both the private and government sectors, will ensure compliance with requirements of this rule, and will investigate complaints from individuals alleging violations of their privacy rights. In addition, OCR will be required to recommend penalties and other remedies as part of their enforcement activities. These responsibilities represent an expanded role for OCR. Beyond OCR, the enforcement provisions of this rule may have additional costs to the federal government through increased litigation, appeals, and inspector general oversight.

Examples of other unique costs to the federal government may include such activities as public health surveillance at the Centers for Disease Control and Prevention, health research projects at the Agency for Healthcare Research and Quality, clinical trials at the National Institutes of Health, and law enforcement investigations and prosecutions by the Federal Bureau of Investigations. For these and other activities, federal agencies will incur some costs to ensure that protected health information is handled and tracked in ways that comply with the requirements of this title.

We estimate that federal costs under this rule will be approximately $196 million in 2003 and $1.8 billion over ten years. The ten-year federal cost estimate represents about 10.2 percent of the privacy regulation's total cost. This estimate was derived in two steps.

First, we assumed that the proportion of the privacy regulation's total cost accruing to the federal government in a given year will be equivalent to the proportion of projected federal costs as a percentage of national health expenditures for that year. To estimate these proportions, we used the Health Care Financing Administration's November 1998 National Health Expenditure projections (the most recent data available) of federal health expenditures as a percent of national health expenditures from 2003 through 2008, trended forward to 2012. We then adjusted these proportions to exclude Medicare and Medicaid spending, reflecting the fact that the vast majority of participating Medicare and Medicaid providers will not be able to pass through the costs of complying with this rule to the federal government because they are not reimbursed under cost-based payment systems. This calculation yields a partial federal cost of $166 million in 2003 and $770 million over ten years.

Second, we add the Medicare and federal Medicaid costs resulting from the privacy regulation that HCFA's Office of the Actuary project can be passed through to the federal government. These costs reflect the actuaries' assumption regarding how much of the total privacy regulation cost burden will fall on participating Medicare and Medicaid providers, based on the November 1998 National Health Expenditure data. Then the actuaries estimate what percentage of the total Medicare and federal Medicaid burden could be billed to the programs, assuming that (1) only 3 percent of Medicare providers and 5 percent of Medicaid providers are still reimbursed under cost-based payment systems, and (2) over time, some Medicaid costs will be incorporated into the state's Medicaid expenditure projections that are used to develop the federal cost share of Medicaid spending. The results of this actuarial analysis add another $30 million in 2003 and $1.0 billion over ten years to the federal cost estimate. Together, these three steps constitute the total federal cost estimate of $236 million in 2003 and $2.2 billion over ten years.

Costs to State and Local Governments

The rule will also have a cost effect on various state and local agencies that administer programs requiring the use of individually identifiable health information. State and local agencies or programs clearly affected by the rule are those that meet the definition of a covered entity. The costs when government entities are serving as providers are included in the total cost estimates. However, non-covered agencies or programs that handle individually identifiable health information, either under permissible exceptions to the disclosure rules or through an individual's expressed authorization, will likely incur some costs complying with provisions of this rule. Samples of state and local agencies or programs encompassed by the broad scope of this rule include: Medicaid, State Children's Health Insurance Programs, county hospitals, state mental health facilities, state or local nursing facilities, local health clinics, and public health surveillance activities, among others. We have included state and local costs in the estimation of total costs in this section.

The greatest cost and administrative burden on the state and local government will fall to agencies and programs that act as covered entities, by virtue of being either a health plan or provider, such as Medicaid, State Children's Health Insurance Programs, and county hospitals. These and other health insurance or provider programs operated by state and local government are subject to requirements placed on covered entities under this rule, including, but not limited to, those outlined in this section (Section E) of the impact analysis. Many of these state and local programs already afford privacy protections for individually identifiable health information through the Privacy Act. For example, state governments often become subject to Privacy Act requirements when they contract with the federal government. This rule is expected to create additional requirements beyond those covered by the Privacy Act. Furthermore, we anticipate that most state and local health programs will, to some extent,

need to modify their existing Privacy Act practices to fully comply with this rule. The cost to state ***82776** and local programs that function as health plans will be different than the private sector, much as the federal costs vary from private health plans.

A preliminary analysis suggests that state and local government costs will be on the order of $460 million in 2003 and $2.4 billion over ten years. We assume that the proportion of the privacy regulation's total cost accruing to state and local governments in a given year will be equivalent to the proportion of projected state and local costs as a percentage of national health expenditures for that year. To estimate these proportions, we used the Health Care Financing Administration's November 1998 National Health Expenditure projections of state and local health expenditures as a percent of national health expenditures from 2003 through 2008, trended forward to 2012. Based on this approach, we assume that over the entire 2003 to 2012 period, 13.6 percent, or $2.4 billion, of the privacy regulation's total cost will accrue to state and local governments. Of the $2.4 billion state and local government cost, 19 percent will be incurred in the regulation's first year (2003). In each of the out-years (2004-2012), the average percent of the total cost incurred will be about nine percent per year. These state and local government costs are included in the total cost estimates discussed in the regulatory impact analysis.

F. Benefits

There are important societal benefits associated with improving health information privacy. Confidentiality is a key component of trust between patients and providers, and some studies indicate that a lack of privacy may deter patients from obtaining preventive care and treatment.[FN52] For these reasons, traditional approaches to estimating the value of a commodity cannot fully capture the value of personal privacy. It may be difficult for individuals to assign value to privacy protection because most individuals view personal privacy as a right. Therefore, the benefits of the proposed regulation are impossible to estimate based on the market value of health information alone. However, it is possible to evaluate some of the benefits that may accrue to individuals as a result of proposed regulation, and these benefits, alone, suggest that the regulation is warranted. Added to these benefits is the intangible value of privacy, the security that individuals feel when personal information is kept confidential. This benefit is very real and very significant but there are no reliable means of measuring dollar value of such benefit.

As noted in the comment and response section, a number of commenters raised legitimate criticisms of the Department's approach to estimating benefits. The Department considered other approaches, including attempts to measure benefits in the aggregate rather than the specific examples set forth in the NPRM. However, we were unable to identify data or models that would provide credible measures. Privacy has not been studied empirically from an economic perspective, and therefore, we concluded that the approach taken in the NPRM is still the most useful means of illustrating that the benefits of the regulation are significant in relation to the economic costs.

Before beginning the discussion of the benefits, it is important to create a framework for how the costs and benefits may be viewed in terms of individuals rather than societal aggregates. We have estimated the value an insured individual would need to place on increased privacy to make the privacy regulation a net benefit to those who receive health insurance. Our estimates are derived from data produced by the 1998 Current Population Survey from the Census Bureau (the most recent available at the time of the analysis), which show that 220 million persons are covered by either private or public health insurance. Joining the Census Bureau data with the costs calculated in Section E, we have estimated the cost of the regulation to be approximately $6.25 per year (or approximately $0.52 per month) for each insured individual (including people in government programs). If we assume that individuals who use the health care system will be willing to pay more than this per year to improve health information privacy, the benefits of the proposed regulation will outweigh the cost.

This is a conservative estimate of the number of people who will benefit from the regulation because it assumes that only those individuals who have health insurance or are in government programs will use medical services or benefit from the provisions of the proposed regulation. Currently, there are 42 million Americans who do not have any form of health care coverage. The estimates do not include those who pay for medical care directly, without any insurance or government support. By lowering the number of users in the system, we have inflated our estimate of the per-person cost of the regulation; therefore, we assume that our estimate represents the highest possible cost for an individual.

An alternative approach to determining how people would have to value increased privacy for this regulation to be beneficial is to look at the costs divided by the number of encounters with health care professionals annually. Data from the Medical Expenditure Panel Survey (MEPS) produced by the Agency for Healthcare Policy Research (AHCPR) show approximately 776.3 million health care visits (e.g., office visits, hospital and nursing home stays, etc.) in the first year (2003). As with the calculation of average annual cost per insured patient, we divided the total cost of complying with the regulation by the total annual number of health care visits. The cost of instituting requirements of the proposed regulation is $0.19 per health care visit. If we assume that individuals would be willing to pay more than $0.19 per health care visit to improve health information privacy, the benefits of the proposed regulation outweigh the cost.

Qualitative Discussion

A well designed privacy standard can be expected to build confidence among the public about the confidentiality of their medical records. The seriousness of public concerns about privacy in general are shown in the 1994 Equifax-Harris Consumer Privacy Survey, where "84 percent of Americans are either very or somewhat concerned about threats to their personal privacy."[FN53] A 1999 report, "Promoting Health and Protecting Privacy" notes "* * * many people fear their personal health information will be used against them: to deny insurance, employment, and housing, or to expose them to unwanted judgements and scrutiny."[FN54] These concerns would be partly allayed by the privacy standard.

Fear of disclosure of treatment is an impediment to health care for many Americans. In the 1993 Harris-Equifax Health Information Privacy Survey, seven percent of respondents said they or a member of their immediate family had chosen not to seek medical services due to fear of harm to job prospects or other life opportunities. About two percent reported having chosen not to file an insurance claim because of concerns of lack of privacy or confidentiality.[FN55] Increased confidence ***82777** on the part of patients that their privacy would be protected would lead to increased treatment among people who delay or never begin care, as well as among people who receive treatment but pay directly (to the extent that the ability to use their insurance benefits will reduce cost barriers to more complete treatment). It will also change the dynamic of current payments. Insured patients currently paying out-of-pocket to protect confidentiality will be more likely to file with their insurer and to seek all necessary care. The increased utilization that would result from increased confidence in privacy could be beneficial under many circumstances. For many medical conditions, early and comprehensive treatment can lead to lower costs.

The following are four examples of areas where increased confidence in privacy would have significant benefits. They were chosen both because they are representative of widespread and serious health problems, and because they are areas where reliable and relatively complete data are available for this kind of analysis. The logic of the analysis, however, applies to any health condition, including relatively minor conditions. We expect that some individuals might be concerned with maintaining privacy even if they have no significant health problems because it is likely that they will develop a medical condition in the future that they will want to keep private.

Cancer

The societal burden of disease imposed by cancer is indisputable. Cancer is the second leading cause of death in the US,[FN56] exceeded only by heart disease. In 2000, it is estimated that 1.22 million new cancer cases will be diagnosed.[FN57] The estimated prevalence of cancer cases (both new and existing cases) in 1999 was 8.37 million.[FN58] In addition to mortality, incidence, and prevalence rates, the other primary methods of assessing the burden of disease are cost-of-illness and quality of life measures.[FN59] Cost of illness measures the economic costs associated with treating the disease (direct costs) and lost income associated with morbidity and mortality (indirect costs). The National Institutes of Health estimates that the overall annual cost of cancer in 1990 was $96.1 billion; $27.5 billion in direct medical costs and $68.7 billion for lost income due to morbidity and mortality.[FN60] Health-related quality of life measures integrate the mortality and morbidity effects of disease to produce health status scores for an individual or population. For example, the Quality Adjusted Life Year (QALY) combines the pain, suffering, and productivity loss caused by illness into a single measure. The Disability Adjusted Life Year (DALY) is based on the sum of life years lost to premature mortality and years that are lived, adjusted for disability.[FN61] The analysis below is based on the cost-of-illness measure for cancer, which is more developed than the quality of life measure.

Among the most important elements in the fight against cancer are screening, early detection and treatment of the disease. However, many patients are concerned that cancer detection and treatment will make them vulnerable to discrimination by insurers or employers. These privacy concerns have been cited as a reason patients do not seek early treatment for diseases such as cancer. As a result of forgoing early treatment, cancer patients may ultimately face a more severe illness and/or premature death.

Increasing people's confidence in the privacy of their medical information would encourage more people with cancer to seek cancer treatment earlier, which would increase cancer survival rates and thus reduce the lost wages associated with cancer. For example, only 24 percent of ovarian cancers are diagnosed in the early stages. Of these, approximately 90 percent of patients survive treatment. The survival rate of women who detect breast cancer early is similarly high; more than 90 percent of women who detect and treat breast cancer in its early stages will survive.[FN62]

We have attempted to estimate the annual savings in foregone wages that would result from earlier treatment due to enhanced protection of the privacy of medical records. We do not assume there would be increased medical costs from earlier treatment because the costs of earlier and longer cancer treatment are probably offset by the costs of treating late-stage cancer among people who would otherwise not be treated until their cases had progressed.

Although figures on the number of individuals who avoid cancer treatment due to privacy concerns do not exist, some indirect evidence is available. A 1993 Harris-Equifax Health Information Privacy Survey (noted earlier) found that seven percent of respondents reported that they or a member of their immediate family had chosen not to seek services for a physical or mental health condition due to fear of harm to job prospects or other life opportunities. It should be noted that this survey is somewhat dated and represents only one estimate. Moreover, given the wording of the question, there are other reasons aside from privacy concerns that led these individuals to respond affirmatively. However, for the purposes of this estimate, we assume that privacy concerns were responsible for the majority of positive responses.

Based on the Harris-Equifax survey estimate that seven percent of people did not seek services for physical or mental health conditions due to fears about job prospects or other opportunities, we assume that the proportion of people diagnosed with cancer who did not seek earlier treatment due to these fears is also seven percent. Applying this seven percent figure to the estimated number of total cancer cases (8.37 million) gives us an estimate of 586,000 people who did not seek earlier cancer treatment due to privacy concerns. We estimate annual lost wages due to cancer morbidity and mortality per cancer patient by dividing total lost wages ($68.7 billion) by the number of cancer patients (8.37 million), which rounds to $8,200. We then assume that cancer patients who seek earlier treatment would achieve a one-third reduction in cancer mortality and morbidity due to earlier treatment. The assumption of a one-third reduction in mortality and morbidity is derived from a study showing a one-third reduction in colorectal cancer mortality due to colorectal cancer screening.[FN63] We could have chosen a lower or higher treatment success rate. By multiplying 586,000 by $8,200 by one-third, we calculate that $1.6 billion in lost wages could be saved each year by encouraging more people to seek early cancer treatment through enhanced privacy protections. This estimate illustrates the potential savings ***82778** in lost wages due to cancer that could be achieved with greater privacy protections.

HIV/AIDS

Early detection is essential for the survival of a person with HIV (Human Immunodeficiency Virus). Concerns about the confidentiality of HIV status would likely deter some people from getting tested. For this reason, each state has passed some sort of legislation regarding confidentiality of an individual's HIV status. However, HIV status can be revealed indirectly through disclosure of HAART (Highly Active Anti-Retroviral Therapy) or similar HIV treatment drug use. In addition, since HIV/AIDS (Acquired Immune Deficiency Syndrome) is often the only specially protected condition, “blacked out” information on medical charts could indicate HIV positive status.[FN64] Strengthening privacy protections beyond this disease could increase confidence in privacy regarding HIV as well. Drug therapy for HIV positive persons has proven to be a life-extending, cost-effective tool.[FN65] A 1998 study showed that beginning treatment with HAART in the early asymptomatic stage is more cost-effective than beginning it late. After five years, only 15 percent of patients with early treatment are estimated to develop

an ADE (AIDS-defining event), whereas 29 percent would if treatment began later. Early treatment with HAART prolongs survival (adjusted for quality of life) by 6.2 percent. The overall cost of early HAART treatment is estimated at $23,700 per quality-adjusted year of life saved.[FN66]

Other Sexually Transmitted Diseases

It is difficult to know how many people are avoiding testing for STDs despite having a sexually transmitted disease. A 1998 study by the Kaiser Family Foundation found that the incidence of disease was 15.3 million in 1996, though there is great uncertainty due to under-reporting.[FN67] For a potentially embarrassing disease such as an STD, seeking treatment requires trust in both the provider and the health care system for confidentiality of such information. Greater trust should lead to more testing and greater levels of treatment. Earlier treatment for curable STDs can mean a decrease in morbidity and the costs associated with complications. These include expensive fertility problems, fetal blindness, ectopic pregnancies, and other reproductive complications.[FN68] In addition, there could be greater overall savings if earlier treatment translates into reduced spread of infections.

Mental Health Treatment

When individuals have a better understanding of the privacy practices that we are requiring in this proposed rule, some will be less reluctant to seek mental health treatment. One way that individuals will receive this information is through the notice requirement. Increased use of mental health and services would be expected to be beneficial to the persons receiving the care, to their families, and to society at large. The direct benefit to the individual from treatment would include improved quality of life, reduced disability associated with mental conditions, reduced mortality rate, and increased productivity associated with reduced disability and mortality. The benefit to families would include quality of life improvements and reduced medical costs for other family members associated with abusive behavior by the treated individual.

The potential economic benefits associated with improving privacy of individually identifiable health information and thus encouraging some portion of individuals to seek initial mental health treatment or increase service use are difficult to quantify well. Nevertheless, using a methodology similar to the one used above to estimate potential savings in cancer costs, one can lay out a range of possible benefit levels to illustrate the possibility of cost savings associated with an expansion of mental health and treatment to individuals who, due to protections offered by the privacy regulation, might seek treatment that they otherwise would not have. This can be illustrated by drawing upon existing data on the economic costs of mental illness and the treatment effectiveness of interventions.

The 1998 Substance Abuse and Mental Health Statistics Source Book from the Substance Abuse and Mental Health Services Administration (SAMHSA) estimates that the economic cost to society of mental illness in 1994 was about $204.4 billion. About $91.7 billion was due to the cost of treatment and medical care and $112.6 billion (1994 dollars) was due to loss of productivity associated with morbidity and mortality and other related costs, such as crime.[FN69] Evidence suggests that appropriate treatment of mental health disorders can result in 50-80 percent of individuals experiencing improvements in these types of conditions. Improvements in patient functioning and reduced hospital stays could result in hundreds of millions of dollars in cost savings annually.

Although figures on the number of individuals who avoid mental health treatment due to privacy concerns do not exist, some indirect evidence is available. As noted in the cancer discussion, the 1993 Harris-Equifax Health Information Privacy Survey found that 7 percent of respondents reported that they or a member of their immediate family had chosen not to seek services for a physical or mental health condition due to fear of harm to job prospects or other life opportunities. (See above for limitations to this data).

We assume that the proportion of people with a mental health disorder who did not seek treatment due to fears about job prospects or other opportunities is the same as the proportion in the Harris-Equifax survey sample who did not seek services for physical or mental health conditions due to the same fears (7 percent). The 1999 Surgeon General's Report on Mental Health

estimates that 28 percent of the U.S. adult population has a diagnosable mental and/or substance abuse disorder and 20 percent of the population has a mental and/or substance abuse disorder for which they do not receive treatment.[FN70] Based on the Surgeon General's Report, we estimate that 15 percent of the adult population has a mental disorder for which they do not seek treatment.[FN71] Assuming that 7 ***82779** percent of those with mental disorders did not seek treatment due to privacy concerns, we estimate that 1.05 percent of the adult population[FN72] (15 percent multiplied by 7 percent), or 2.07 million people, did not seek treatment for mental illness due to privacy fears.

The indirect (non-treatment) economic cost of mental illness per person with mental illness is $2,590 ($112.6 billion divided by 43.4 million people with mental illness).[FN73] The treatment cost of mental illness per person with mental illness is $2,110 ($91.7 billion divided by 43.4 million individuals). If we assume that indirect economic costs saved by encouraging more individuals with mental illness to enter treatment are offset by the additional treatment costs, the net savings is about $480 per person.

As stated above, appropriate treatment of mental health disorders can result in 50-80 percent of individuals experiencing improvements in these types of conditions. Therefore, we multiply the number of individuals with mental disorders who would seek treatment with greater privacy protections (2.07 million) by the treatment effectiveness rate by the net savings per effective treatment ($480). Assuming a 50 percent success rate, this equation yields annual savings of $497 million. Assuming an 80 percent success rate, this yields annual savings of $795 million.

Given the existing data on the annual economic costs of mental illness and the rates of treatment effectiveness for these disorders, coupled with assumptions regarding the percentage of individuals who would seek mental health treatment with greater privacy protections, the potential net economic benefits could range from approximately $497 million to $795 million annually.

V. Final Regulatory Flexibility Analysis

A. Introduction

Pursuant to the Regulatory Flexibility Act 5 U.S.C. 601 et seq., the Department must prepare a regulatory flexibility analysis if the Secretary certifies that a final rule would have a significant economic impact on a substantial number of small entities.[FN74]

This analysis addresses four issues: (1) The need for, and objective of, the rule; (2) a summary of the public comments to the NPRM and the Department's response; (3) a description and estimate of the number of small entities affected by the rule; and (4) a description of the steps the agency has taken to minimize the economic impact on small entities, consistent with the law and the intent of the rule. The following sections provide details on each of these issues. A description of the projected reporting and record keeping requirements of the rule are included in Section IX, below.

B. Reasons for Promulgating the Rule

This proposed rule is being promulgated in response to a statutory mandate to do so under section 264 of Public Law 104-191. Additional information on the reasons for promulgating the rule can be found in earlier preamble discussions (see Section I. B. above).

1. Objectives and Legal Basis

This information can be found in earlier preamble discussions (See I. C. and IV., above).

2. Relevant Federal Provisions

This information can be found in earlier preamble discussions (See I. C., above).

C. Summary of Public Comments

The Department received only a few comments regarding the Initial Regulatory Flexibility Analysis (IRFA) contained in the NPRM. A number of commenters argued that the estimates IRFA were too low or incomplete. The estimates were incomplete to the extent that a number of significant policy provisions in the proposal were not estimated because of too little information at the time. In the final IRFA we have estimates for these provisions. As for the estimates being too low, the Department has sought as much information as possible. The methodology employed for allocating costs to the small business sectors is explained in the following section.

Most of the other comments pertaining to the IRFA criticized specific estimates in the NPRM. Generally, the commenters argued that certain cost elements were not included in the cost estimates presented in the NPRM. The Department has expanded our description of our data and methodology in both the final RIA and this final RFA to try to clarify the data and assumptions made and the rationale for using them.

Finally, a number of commenters suggested that small entities be exempted from coverage from the final rule, or that they be given more time to comply. As the Department has explained in the Response to Comment section above, such changes were considered but rejected. Small entities constitute the vast majority of all entities that are covered; to exempt them would essentially nullify the purpose of the rule. Extensions were also considered but rejected. The rule does not take effect for two years, which is ample time for small entities to learn about the rule and make the necessary changes to come into compliance.

D. Economic Effects on Small Entities

1. Number and Types of Small Entities Affected

The Small Business Administration defines small businesses in the health care sector as those organizations with less than $5 million in annual revenues. Nonprofit organizations are also considered small entities;[FN75] however, individuals and states are not included in the definition of a small entity. Similarly, small government jurisdictions with a population of less than 50,000 are considered small entities.[FN76]

Small business in the health care sector affected by this rule may include such businesses as: Nonprofit health plans, hospitals, and skilled nursing facilities (SNFs); small businesses providing health coverage; small physician practices; pharmacies; laboratories; durable medical equipment (DME) suppliers; health care clearinghouses; billing companies; and vendors that supply software applications to health care entities.

The U.S. Small Business Administration reports that as of 1997, there were 562,916 small health care entities[FN77] classified within the SIC ***82780** codes we have identified as being covered establishments (Table A).

Table A.—Number of Health Care Establishments That Meet SBA Size Standards, 1997[1]

Standard Industrial Code (SIC)	Industry	Total Number of Health Care Establishments	Number of Establishments that Meet SBA Size Standards[2] or RFA non-profit standard	% of Establishments that Meet SBA Size Standards[2] or RFA non-profit standard
5910	Drug Stores & Proprietary Stores	48,147	23,925	49.7%
6320	Accident & Health Insurance & Medical Service Plans	8,083	665	8.2%
7352	Medical Equipment Rental and Leasing	3,346	1,836	54.9%
8010	Offices & Clinics Of Doctors Of Medicine	190,233	170,962	89.9%
8020	Offices & Clinics Of Dentists	115,020	113,864	99.0%
8030	Offices & Clinics Of Doctors Of Osteopathy	9,143	8,850	96.8%
8040	Offices & Clinics Of Other Health Practitioners	89,462	86,596	96.8%
8050	Nursing & Personal Care Facilities	33,178	17,727	53.4%
8060	Hospitals	6,991	3,485	49.8%
8070	Medical & Dental Laboratories	17,586	13,015	74.0%
8080	Home Health Care Services	19,562	12,841	65.6%
8090	Miscellaneous Health & Allied Services	22,145	11,219	50.7%
n/a	Fully Insured ERISA[3]	2,125,000	0	NA
n/a	Institutional Review Boards (IRB)[3]	450,000	0	NA
n/a	Total[3]	562,916	464,983	82.6%

[1] Source: Office of Advocacy, U.S. Small Business Administration, from data provided by the Bureau of the Census, Statistics of U.S. Businesses, 1997. Establishments that have less than $5,000,000 in annual revenue are considered small businesses here, as are non-profit establishments (regardless of revenue). We have non-profit data for the following SICs: 8050, 8060, and 8080 and have included the number of non-profits in each category into the table.

[2] We have not included the number of fully insured ERISA plans or institutional review boards (IRB) in the total number of health care establishments or the number of establishments that meet SBA standards for small entities, since these are not separate businesses with SIC codes and we do not have sufficient data to impute revenues to them.

[3] We have included self-insured, self-administered plans and third party administrators in the total number of health plans, even though neither has individual SIC codes because we have the ability to impute revenues to them. Therefore, the number of health plans in SIC 6320 is greater than the figure usually reported in the Statistics of U.S. Businesses.

These small businesses represent 82.6% of all health care establishments examined.[FN78] Small businesses represent a significant portion of the total number of health care establishments but a small portion of the revenue stream for all health care establishments. In 1997, the small health care businesses represented generated approximately $430 billion in annual receipts, or 30.2% of the total revenue generated by health care establishments (Table B).[FN79] The following sections provide estimates of the number of small health care establishments that will be required to comply with the rule. Note, however, that the SBA's published annual receipts of health care industries differ from the National Health Expenditure data that the Health Care Financing Administration (HCFA) maintains. ***82781** These data do not provide the specific revenue data required for a RFA; only the SBA data has the requisite establishment and revenue data for this analysis.

Table B.—Annual Receipts of Health Care Entities, 1997[1]

Standard Industrial Code (SIC)	Industry	Total Revenue	Revenue Generated by Small Entities	% of Total Revenue Generated by Small Entities
5910	Drug Stores & Proprietary Stores	$100,302,441,000	$25,620,978,000	25.5%
6320	Accident & Health Insurance & Medical Service Plans (SIC 6320), Self-Insured/ Self Administered (no SIC), Third Party Administrators (no SIC)2	$312,111,493,027	$657,074,000	0.1%
7352	Medical Equipment Rental & Leasing	$4,040,646,000	$1,193,345,000	29.5%
8010	Offices & Clinics Of Doctors Of Medicine	$182,148,148,000	$105,334,031,000	57.8%
8020	Offices & Clinics Of Dentists	$48,766,434,000	$47,218,844,000	96.8%
8030	Offices & Clinics Of Doctors Of Osteopathy	$4,613,192,000	$4,039,868,000	87.6%

1 Source: Office of Advocacy, U.S. Small Business Administration, from data provided by the Bureau of the Census, Statistics of U.S. Businesses, 1997. Entities that have less than $5,000,000 in annual revenue are considered small businesses here, as are non-profit entities (regardless of revenue). We have non-profit data for the following SICs: 8050, 8080, and 8060 and have included the number of non-profits in each category into the table.

2 We have included self-insured/self-administered plans and third party administrators in the total number of health plans, even though neither has individual SIC codes because we have the ability to impute revenues to them.

***82782** The Small Business Administration reports that approximately 74 percent of the 18,000 medical laboratories and dental laboratories in the U.S. are small entities.[FN80] Furthermore, based on SBA data, 55 percent of the 3,300 durable medical equipment suppliers that are not part of drug and proprietary stores in the U.S. are small entities. Over 90 percent of health practitioner offices are small businesses.[FN81] Doctor offices (90%), dentist offices (99%), osteopathy (97%) and other health practitioner offices (97%) are primarily considered small businesses.

There are also a number of hospitals, home health agencies, non-profit nursing facilities, and skilled nursing facilities that will be affected by the proposed rule. According to the American Hospital Association, there are approximately 3,131 nonprofit hospitals nationwide. Additionally, there are 2,788 nonprofit home health agencies in the U.S. and the Health Care Financing Administration reports that there are 591 nonprofit nursing facilities and 4,280 nonprofit skilled nursing facilities.[FN82]

Some contractors that are not covered entities but that work with covered health care entities will be required to adopt policies and procedures to protect information. We do not expect that the additional burden placed on contractors will be significant. We have not estimated the effect of the proposed rule on these entities because we cannot reasonably anticipate the number or type of contracts affected by the proposed rule. We also do not know the extent to which contractors would be required to modify their policy practices as a result of the rule.

2. Activities and Costs Associated With Compliance

This section summarizes specific activities that covered entities must undertake to comply with the rule's provisions and options considered by the Department that would reduce the burden to small entities. In developing this rule, the Department considered a variety of alternatives for minimizing the economic burden that it will create for small entities. We did not exempt small

businesses from the rule because they represent such a large and critical proportion of the health care industry (82.6 percent); a significant portion of individually identifiable health information is generated or held by these small businesses.

The guiding principle in our considerations of how to address the burden on small entities has been to make provisions performance rather than specification oriented—that is, the rule states the standard to be achieved but allows institutions flexibility to determine how to achieve the standard within certain parameters. Moreover, to the extent possible, we have allowed entities to determine the extent to which they will address certain issues. This ability to adapt provisions to minimize burden has been addressed in the regulatory impact analysis above, but it will be briefly discussed again in the following section.

Before discussing specific provisions, it is important to note some of the broader questions that were addressed in formulating this rule. The Department considered extending the compliance period for small entities but concluded that it did not have the legal authority to do so (see discussion above). The rule, pursuant to HIPAA, creates an extended compliance time of 36 months (rather than 24 months) only for small health plans and not for other small entities. The Department also considered giving small entities longer response times for time limits set forth in the rule, but decided to establish standard time limits that we believe are reasonable for covered entities of all sizes, with the understanding that larger entities may not need as much time as they have been allocated in certain situations. This permits each covered entity the flexibility to establish policies regarding time limits that are consistent with the entity's current practices.

Although we considered the needs of small entities during our discussions of all provisions for this final rule, we are highlighting the most significant discussions in the following sections:

Scalability

Wherever possible, the final rule provides a covered entity with flexibility to create policies and procedures that are best suited to the entity's current practices in order to comply with the standards, implementation specifications, and requirements of the rule. This allows the covered entity to assess its own needs in devising, implementing, and maintaining appropriate privacy policies, procedures, and documentation to address these regulatory requirements. It also will allow a covered entity to take advantage of developments and methods for protecting privacy that will evolve over time in a manner that is best suited to that institution. This approach allows covered entities to strike a balance between protecting privacy of individually identifiable health information and the economic cost of doing so within prescribed boundaries set forth in the rule. Health care entities must consider both factors when devising their privacy solutions. The Department assumes that professional and trade associations will provide guidance to their members in understanding the rule and providing guidance on how they can best achieve compliance. This philosophy is similar to the approach in the Transactions Rule.

The privacy standard must be implemented by all covered entities, regardless of size. However, we believe that the flexible approach under this rule is more efficient and appropriate then a single approach to safeguarding health information privacy. For example, in a small physician practice, the office manager might be designated to serve as the privacy official as one of many of her duties. In a large health plan, the privacy official position may require more time and greater privacy experience, or the privacy official may have the regular support and advice of a privacy staff or board. The entity can decide how to implement this privacy official requirement based on the entity's structure and needs.

The Department decided to use this scaled approach to minimize the burden on all entities, with an emphasis on small entities. The varying needs and capacities of entities should be reflected in the policies and procedures adopted by the organization and the overall approach it takes to achieve compliance.

Minimum Necessary

The “minimum necessary” policy in the final rule has essentially three components: first, it does not pertain to certain uses and disclosures including treatment-related exchange of information among health care providers; second, for disclosures that are made on a routine basis, such as insurance claims, a covered entity is required to have policies and procedures governing such

exchanges (but the rule does not require a case-by-case determination in such cases); and third, providers must have a process for reviewing non-routine requests on a case-by-case basis to assure that only the minimum necessary information is disclosed. The final rule makes changes to the NPRM that reduce the burden of compliance on small businesses.

Based on public comments and subsequent fact-finding, the Department sought to lessen the burden of this ***82783** provision. The NPRM proposed applying the minimum necessary standard to disclosures to providers for treatment purposes and would have required individual review of all uses of protected health information. The final rule exempts disclosures of protected health information from a covered entity to a health care provider for treatment from the minimum necessary provision and eliminates the case-by-case determinations that would have been necessary under the NPRM. The Department has concluded that the requirements of the final rule are similar to the current practice of most health care providers. For standard disclosure requests, for example, providers generally have established procedures. Under the final rule providers will have to have policies and procedures to determine the minimum amount of protected health information to disclose for standard disclosure requests as well, but may need to review and revise existing procedures to make sure they are consistent with the final rule. For non-routine disclosures, providers have indicated that they currently ask questions to discern how much information should be disclosed. In short, the minimum necessary requirements of this rule are similar to current practice, particularly among small providers.

Policy and Procedures

The rule requires that covered entities develop and document policies and procedures with respect to protected health information to establish and maintain compliance with the regulation. Through the standards, requirements, and implementation specifications, we are proposing a framework for developing and documenting privacy policies and procedures rather than adopting a rigid, prescriptive approach to accommodate entities of different sizes, type of activities, and business practices. Small providers will be able to develop more limited policies and procedures under the rule, than will large providers and health plans, based on the volume of protected health information. We also expect that provider and health plan associations will develop model policies and procedures for their members, which will reduce the burden on small businesses.

Privacy Official

The rule requires covered entities to designate a privacy official who will be responsible for the development and implementation of privacy policies and procedures. The implementation of this requirement may vary based on the size of the entity. For example, a small physician's practice might designate the office manager as the privacy official in addition to her broader administrative responsibilities. Once the privacy official has been trained, the time required to accomplish the duties imposed on such person is not likely to be much more than under current practice. Therefore, the requirement imposes a minimal burden on small businesses.

Internal Complaints

The final rule requires covered entities to have an internal process for individuals to make complaints regarding the covered entities' privacy policies and procedures required by the rule and its compliance with such policies. The requirement includes identifying a contact person or office responsible for receiving complaints and documenting all complaints received and the disposition of such complaints, if any. The covered entity only is required to receive and document a complaint (the complaint can be oral or in writing), which should take a short amount of time. The Department believes that complaints about a covered entity's privacy policies and procedures will be uncommon. Thus, the burden on small businesses should be minimal.

Training

In developing the NPRM, the Department considered a number of alternatives for training, including requiring specific training materials, training certification, and periodic retraining. In the NPRM, the Department recommended flexibility in the materials and training method used, but proposed recertification every three years and retraining in the event of material changes in policy.

Based on public comment, particularly from small businesses, the Department has lessened the burden in the final rule. As in the proposal, the final rule requires all employees who are likely to have contact with protected health information to be trained. Covered entities will have to train employees by the compliance date specific to the type of covered entity and train new employees within a reasonable time of initial employment. In addition, a covered entity will have to train each member of its workforce whose functions are affected by a material change in the policies or procedures of such entity. However, the final rule leaves to the employer the decisions regarding the nature and method of training to achieve this requirement. The Department expects a wide variety of options to be made available by associations, professional groups, and vendors. Methods might include classroom instruction, videos, booklets, or brochures tailored to particular levels of need of workers and employers. Moreover, the recertification requirement of the NPRM has been dropped to ease the burden on small entities.

Consent

The NPRM proposed prohibiting covered entities from requiring individuals to provide written consent for the use and disclosure of protected health information for treatment, payment, and health care operations purposes. The final rule requires certain health care providers to obtain written consent before using or disclosing protected health information for treatment, payment, and health care operations, with a few exceptions. This requirement was included in the final rule in response to comments that this reflects current practice of health care providers health care providers with direct treatment relationships. Because providers are already obtaining such consent, this requirement represents a minimal burden.

Notice of Privacy Rights

The rule requires covered entities to prepare and make available a notice that informs individuals about uses and disclosures of protected health information that may be made by the covered entity and that informs of the individual's rights and covered entity's legal duties with respect to protected health information. The final rule makes changes to the NPRM that reduce the burden of this provision on covered entities and allows flexibility. The NPRM proposed that the notice describe the uses and disclosures of information that the entity expected to make without individual authorization. The final rule only requires that the notice describe uses and disclosures that the entity is permitted or required to make under the rule without an individual's written consent or authorization. This change will allow entities to use standardized notice language within a given state, which will minimize the burden of each covered entity preparing a notice. Professional associations may develop model language to assist entities in developing notices required by the rule. While the final rule specifies minimum notice requirements, it allows entities flexibility to add more detail about a covered entity's privacy policies.

The NPRM also proposed that health plans distribute the notice every three years. The final rule reduced this ***82784** burden by requiring health plans (in addition to providing notice to individuals at enrollment and prior to the compliance date of this rule) to inform individuals at least once every three years about the availability of the notice and how to obtain a copy rather than to distribute a copy of the notice.

In discussing the requirement for covered entities to prepare and make available a notice, we considered exempting small businesses (83 percent of entities) or extremely small entities (fewer than 10 employees). The Department decided that informing consumers of their privacy rights and of the activities of covered entities with which they conduct business was too important a goal of this rule to exempt any entities.

In addition to requiring a basic notice, we considered requiring a longer more detailed notice that would be available to individuals on request. However, we decided that it would be overly burdensome to all entities, especially small entities, to require two notice.

We believe that the proposed rule appropriately balances the benefits of providing individuals with information about uses and disclosures of protected health information with covered entities' need for flexibility in describing such information.

Access to Protected Health Information

The public comments demonstrate that inspection and copying of individually identifiable health information is wide-spread today. Individuals routinely request copies of such information, in whole or in part, for purposes that include providing health information to another health care provider or as part of legal proceedings. The amount of inspection and copying of individually identifiable health information that occurs for these purposes is not expected to change as a result of the final regulation.

The final regulation establishes the right of individuals to inspect and copy protected health information about them. Although this is an important right, the Department does not expect it to result in dramatic increases in requests from individuals. We assume that most health care providers currently have procedures for allowing patients to inspect and copy this information. The economic impact on small businesses of requiring covered entities to provide individuals with access to protected health information should be relatively small. Moreover, entities can recoup the costs of copying such information by charging reasonable cost-based fees.

Amendments to Protected Health Information

Many health care providers and health plans currently make provisions to help patients expedite amendments and corrections of their medical record where appropriate. If an error exists, both the patient and the health care provider on health plan benefit from the correction. However, as with inspection and copying, a person's right to request amendment and correction of individually identifiable health information about them is not guaranteed by all states. Based on these assumptions, the Department concludes that the principal economic effect of the final rule will be to expand the right to request amendments to protected health information held by health plans and covered health care providers to those who are currently granted such right by state law. In addition, the rule may draw additional attention to the issue of record inaccuracies and stimulate patient demand for amendment of medical records.

Under the final regulation, if an individual requests an amendment to protected health information about him or her, the health care provider must either accept the amendment or provide the individual with the opportunity to submit a statement disagreeing with the denial. We expect the responses to requests will vary; sometimes an assistant will only make the appropriate notation in the record, requiring only a few minutes; other times a health care provider or manager will review the request and make changes if appropriate, which may require as much as an hour.

Unlike inspections, which currently occur in a small percentage of cases, fact-finding suggests that individuals rarely seek to amend their records today, but the establishment of this right in the rule may spur more requests, including among those who in the past would have only sought to inspect their records. Nevertheless, we expect that the absolute number of additional amendment requests caused by the rule to be small (about 200,000 per per spread over more than 600,000 entities), which will impose only a minor burden on small businesses.

Accounting for Disclosures

The rule grants individuals the right to receive an accounting of disclosures made by a health care provider or plan for purposes other than treatment, payment, or health care operations, with certain exceptions such as disclosures to the individual. The individual may request an accounting of disclosures made up to six years prior to the request. In order to fulfill such requests, covered health care providers and health plans may track disclosures by making a notation in the individual's medical record regarding the (manual or electronic) when a disclosure is made. We have learned through fact-finding that some health care providers currently track various types of disclosures. Moreover, the Department does not expect many individuals will request an accounting of disclosures. Thus, this requirement will impose a minor burden on small businesses.

De-Identification of Information

In this rule, the Department allows covered entities to determine that health information is de-identified (i.e. that it is not individually identifiable health information), if certain conditions are met. Moreover, information that has been de-identified in accordance with the rule is not considered individually identifiable information and may be used or disclosed without regard to the requirements of the regulation. The covered entity may assign a code or other means of record identification to allow de-identified information to be re-identified if requirements regarding derivation and security are met.

As with other components of this rule, the approach used to remove identifiers from data can be scaled to the size of the entity. Individually identifiable health information can be de-identified in one of two ways; by either removing each of the identifiers listed in the rule or by engaging in a statistical and scientific analysis to determine that information is very unlikely to identify an individual. Small entities without the resources to conduct such an analysis can create de-identified information by removing the full list of possible identifiers set forth in this regulation. Unless the covered entity knows that the information could still identify an individual, the requirement of this rule would be fulfilled. However, larger, more sophisticated covered entities may close to determine independently what information needs to be removed based on sophisticated statistical and scientific analysis.

Efforts to remove identifiers from information are optional. If a covered entity can not use or disclose protected health information for a particular purpose but believes that removing identifiers is excessively burdensome, it can choose not to release the protected health information, or it can seek an authorization from individuals for the use or disclosure of protected health ***82785** information including some or all of the identifiers.

Finally, as discussed in the Regulatory Impact Analysis, the Department believes that very few small entities engage in de-identification currently. Fewer small entities are expected to engage in such activity in the future because the increasing trend toward computerization of large record sets will result in de-identification being performed by relatively few firms or associations over time. We expect that a small covered entity will find it more efficient to contract with specialists in large firms to de-identify protected health information. Larger entities are more likely to have both the electronic systems and the volume of records that will make them attractive for this business.

Monitoring Business Associates

The final rule requires a covered entity with a business associate to have a written contract or other arrangement that documents satisfactory assurance that the business associate will appropriately safeguard protected health information. The Department expects business associate contracts to be fairly standardized, except for language that will have to be tailored to the specific arrangement between the parties, such as the allowable uses and disclosures of information. The Department assumes the standard language initially will be developed by trade and professional associations for their members. Small health care providers are likely to simply adopt the language or make minor modifications. The regulation includes a requirement that the covered entity take steps to correct, and in some cases terminate, a contract, if necessary, if they know of violations by a business associate. This oversight requirement is consistent with standard oversight of a contract. The Department expects that most entities, particularly smaller ones, will utilize standard language that restricts uses and disclosures of individually identifiable health information their contracts with business associates. This will limit the burden on small businesses.

The NPRM proposed that covered entities be held accountable for the uses and disclosures of individually identifiable health information by their business associates. An entity would have been in violation of the rule if it knew of a breach in the contract by a business associate and failed to cure the breach or terminate the contract. The final rule reduces the extent to which an entity must monitor the actions of its business associates. The entity no longer has to “ensure” that each business associate complies with the rule's requirements. Entities will be required to cure a breach or terminate a contract for business associate actions only if they knew about a contract violation. The final rule is consistent with the oversight a business would provide for any contract, and therefore, the changes in the final rule will impose no new significant cost for small businesses in monitoring their business associates' behavior.

Employers With Insured Group Health Plans

Some group health plans will use or maintain individually identifiable health information, particularly group health plans that are self-insured. Also, some plan sponsors that perform administrative functions on behalf of their group health plans may need protected health information. The final rule permits a group health plan, or a health insurance issuer or HMO that provides benefits on behalf of the group health plan, to disclose protected health information to a plan sponsor who performs administrative functions on its behalf for certain purposes and if certain requirements are met. The plan documents must be amended to: describe the permitted uses and disclosures of protected health information by the plan sponsor; specify that disclosure is permitted only upon receipt of a certification by the plan sponsor that the plan documents have been amended and the plan sponsor agrees to certain restrictions on the use of protected health information; and provide for adequate firewalls to assure unauthorized personnel do not have access to individually identifiable health information.

Some plan sponsors may need information, not to administer the group health plan, but to amend, modify, or terminate the health plan. ERISA case law describes such activities as settlor functions. For example a plan sponsor may want to change its contract from a preferred provider organization to a health maintenance organization (HMO). In order to obtain premium information, the health plan sponsor may need to provide the HMO with aggregate claims information. Under the rule, the health plan sponsor can obtain summary information with certain identifiers removed, in order to provide it to the HMO and receive a premium rate.

The Department assumes that most health plan sponsors who are small employers (those with 50 or fewer employees) will elect not to receive individually identifiable health information because they will have little, if any, need for such data. Any needs that sponsors of small group health plans may have for information can be accomplished by receiving the information in summary form from their health insurance issuers.

3. The Burden on a Typical Small Business

The Department expects small entities to face a cost burden as a result of complying with the proposed regulation. We estimate that the burden of developing privacy policies and procedures is lower in dollar terms for small businesses than for large businesses, but we recognize that the cost of implementing privacy provisions could be a larger burden to small entities as a proportion of total revenue. Due to these concerns, we have relied on the principle of scalability throughout the rule, and have based our cost estimates on the expectation that small entities will develop less expensive and less complex privacy measures that comply with the rule than large entities.

In many cases, we have specifically considered the impact that rule may have on solo practitioners or rural health care providers. If a health care provider only maintains paper records and does not engage in any electronic transactions, the regulation would not apply to such provider. We assume that those providers will be small health care providers. For small health care providers that are covered health care providers, we expect that they will not be required to change their business practices dramatically, because we based many of the standards, implementation specifications, and requirements on current practice and we have taken a flexible approach to allow scalability based on a covered entity's activities and size. In developing policies and procedures to comply with the proposed regulation, scalability allows entities to consider their basic functions and the ways in which protected health information is used or disclosed. All covered entities must take appropriate steps to address privacy concerns, and in determining the scope and extent of their compliance activities, businesses should weigh the costs and benefits of alternative approaches and should scale their compliance activities to their structure, functions, and capabilities within the requirements of the rule.

Cost Assumptions

To determine the cost burden to small businesses of complying with the final rule, we used as a starting point the overall cost of the regulation determined ***82786** in the regulatory impact analysis (RIA). Then we adopted a methodology that apportions the costs found in the RIA to small business by using Census Bureau's Statistics of U.S. Businesses. This Census Bureau survey contains data on the number and proportion of establishments, by Standard Industrial Classification Code (SIC code), that have revenues of less than $5 million, which meets the Small Business Administration's definition of a small business in the health care sector. This data permitted us to calculate the proportion of the cost of each requirement in the rule that is

attributable to small businesses. This methodology used for the regulatory flexibility analysis (RFA) section is therefore based on the methodology used in the (RIA), which was discussed earlier.

The businesses accounted for in the SIC codes contain three groups of covered entities: non-hospital health care providers, hospitals, and health plans. Non-hospital health care providers include: drug stores, offices and clinics of doctors, dentists, osteopaths, and other health practitioners, nursing and personal care facilities, medical and dental laboratories, home health care services, miscellaneous health and allied services, and medical equipment rental and leasing establishments. Health plans include accident and health insurance and medical service plans.

Data Adjustments

Several adjustments were made to the SIC code data to more accurately determine the cost to small and non-profit businesses. For health plans (SIC code 6320), we adjusted the SIC data to include self-insured, self-administered health plans because these health plans are not included in any SIC code, though they are covered entities under the rule. Similarly, we have added third-party administrators (TPAs) into this SIC. Although they are not covered entities, TPAs are likely to be business associates of covered entities. For purposes of the regulatory analyses, we have assumed that TPAs would bear many of the same costs of the health plans to assure compliance for the covered entity. To make this adjustment, we assumed the self-insured/self administered health plans and TPAs have the average revenue of the health plans contained in the SIC code, and then added those assumed revenues to the SIC code and to the total of all health care expenditures. Moreover, we needed to account for the cost to non-profit institutions that might receive more than $5 million in revenue, because all non-profit institutions are small businesses regardless of revenue. To make this adjustment for hospitals, nursing homes, and home health agencies, we used data on the number of non-profit institutions from industry sources and from data reported to HCFA. With this data, we assumed the current count of establishments in the SIC codes includes these non-profit entities and that non-profits have the same distribution of revenues as all establishments reported in the applicable SIC codes. The proportions discussed below, which determine the cost for small business, therefore include these non-profit establishments in SIC codes 8030, 8060, and 8080.

The SIC code tables provided in this RFA do not include several categories of businesses that are included in the total cost to small businesses. Claims clearinghouses are not included in the table because claims clearinghouses report their revenues under the SIC 7374 “Computer Processing and Data Preparation,” and the vast majority of businesses in this SIC code are involved in non-medical claims data processing. In addition, claims processing is often just one business-line of companies that may be involved in multiple forms of data processing, and therefore, even if the claims processing line of the business generates less than $5 million in revenue, the company in total may exceed the SBA definition for a small business (the total firm revenue, not each line of business, is the standard for inclusion). Similarly, fully-insured ERISA health plans sponsored by employers are not identified as a separate category in the SIC code tables because employers in virtually all SIC codes may sponsor fully-insured health plans. We have identified the cost for small fully-insured ERISA health plans by using the Department of Labor definition of a small ERISA plan, which is a plan with fewer than 100 insured participants. Using this definition, the initial cost for small fully-insured ERISA health plans is $7.1 million. Finally, Institutional Review Boards (IRBs) will not appear in a separate SIC code because IRBs are not “businesses”; rather, they are committees of researchers who work for institutions where medical research is conducted, such as universities or teaching hospitals. IRB members usually serve as a professional courtesy or as part of their employment duties and are not paid separately for their IRB duties. Although IRBs are not “businesses” that generate revenues, we have treated them as small business for illustrative purposes in this RFA to demonstrate the additional opportunity costs that will be faced by those researchers who sit on IRBs. Therefore, assuming IRBs are small businesses, the initial costs are $.089 million and ongoing costs are approximately $84.2 million over 9 years.

The Cost Model Methodology

The RIA model employs two basic methodologies to determine the costs to small businesses that are covered entities. As stated above, the RFA determines the cost to small businesses by apportioning the total costs in the RIA using SIC code data. In places where the cost of a given provision of the final rule is a function of the number of covered entities, we determined the proportion of entities in each SIC code that have less than $5 million in revenues (see Table A). We then multiplied this proportion by the

per-entity cost estimate of a given provision as determined in the RIA. For example, the cost of the privacy official provision is based on the fact that each covered entity will need to have a privacy official. Therefore, we multiplied the total cost of the privacy official, as determined in the RIA, by the proportion of small businesses in each SIC code to determine the small business cost. Using hospitals for illustrative purposes, because small and non-profit hospitals account for 50 percent of all hospitals, our methodology assigned 50 percent of the cost to small hospitals.

We used a second, though similar, method when the cost of a given provision in the RIA did not depend on the number of covered entities. For example, the requirement to provide notice of the privacy policy is a direct function of the number of patients in the health care system because the actual number of notices distributed depends on how many patients are seen. Therefore, for provisions like the notice requirement, we used SIC code revenue data in a two-step process. First, we apportioned the cost of each provision among sectors of the health care industry by SIC code. For example, because hospital revenue accounts for 27 percent of all health care revenue, we multiplied the total cost of each such provision by 27 percent to determine the cost for the hospital sector in total. Then to determine the cost for small hospitals specifically, we calculated the proportion by the overall cost. For example, 45.1 percent of all hospital revenue is generated by small hospital, therefore, the cost to small hospitals was assumed to account for 45.1 percent of all hospital costs. Estimates, by nature ***82787** are inexact. However, we feel this is a reasonable way to determine the small business costs attributable to this regulation given the limited data from which to work.

Total Costs and Costs Per Establishment for Small Business

Based on the methodology described above, the total cost of complying with the final rule in the initial year of 2003 is $1.9 billion. The ongoing costs to small business from 2004 to 2012 is $9.3 billion. Table C presents the initial and ongoing costs to small business by each SIC code. According to this table, small doctors offices, small dentists offices and small hospitals will face the highest cost of complying with the final rule. However, much of the reason for the higher costs faced by these three groups of small health care providers is explained by the fact that there are a significant number of health care providers in these categories.

BILLING CODE 4150-04-P

Table C.--Annual Cost to Small Business of Implementing Provisions of the Proposed Privacy Regulation[1]

SIC	Industry	Initial Cost (Year 1)[2]	Ongoing Cost (Year 2-10)	Total Costs
5910	Drug Stores & Proprietary Stores	$153,976,159	$780,573,862	$934,550,021
6320	Accident & Health Insurance & Medical Service Plans[3]	$41,348,527	$169,540,638	$210,889,164
7353	Medical Equipment Rental & Leasing	$7,171,728	$36,356,688	$43,528,416
8010	Offices & Clinics of Doctors of Medicine	$633,033,192	$3,209,127,747	$3,842,160,938
8120	Offices & Clinics of Dentists	$283,774,344	$1,438,578,786	$1,722,353,130
8030	Offices & Clinics of Doctors of Osteopathy	$24,278,673	$123,079,430	$147,358,103
8040	Offices & Clinics of Other Health Practitioners	$139,251,750	$705,929,263	$845,181,013
8050	Nursing & Personal Care Facilities	$147,143,775	$745,937,461	$893,081,236
8060	Hospitals	$355,459,094	$1,199,498,063	$1,554,957,157
8070	Medical & Dental Laboratories	$41,242,809	$209,078,203	$250,321,012
8080	Home Health Care Services	$72,632,601	$368,207,067	$440,839,668
8090	Misc Health & And Allied Services	$40,938,582	$207,535,943	$248,474,525
n/a	Fully Insured/ ERISA	$7,137,028	$0	$7,137,028
n/a	IRBs	$88,813	$84,162,446	$84,251,259
n/a	Total Cost For Small Business	$1,947,477,073	$9,277,605,598	$11,225,082,671

[1] Source: Office of Advocacy, U.S. Small Business Administration, from data provided by the Bureau of the Census, Statistics of U.S. Businesses, 1997. Entities that have less than $5,000,000 in annual revenue are considered small businesses here, as are non-profit entities (regardless of revenue). We have non-profit data for the following SICs: 8050, 8080, and 8060 and have included the number of non-profits in each category into the table.

[2] The initial costs include all costs in the first year, including costs that recur in subsequent years.

[3] We have included self-insured/self-administered health plans and third party administrators in the total number of health plans, even though neither has individual SIC codes because we have the ability to impute revenues to them.

***82789** On a per-establishment basis, Table D demonstrates that the average cost for small business of complying with the proposed rule in the first year is $4,188 per-establishment. The ongoing costs of privacy compliance are approximately $2,217 each year thereafter. We estimate that the average cost of compliance in the first year for each small non-hospital health care provider is approximately 0.6 percent of per-establishment revenues. In subsequent years, per-establishment costs about 0.3 percent of per-establishment revenues. For small hospitals and health plans, the per-establishment cost of compliance in the first year is 0.2 percent and 6.3 percent of per-establishment revenues respectively. For subsequent years, the cost is only 0.1 percent and 2.9 percent of pre-establishment revenues respectively. These costs may be offset in many firms by the savings realized through requirements of the Transactions Rule.

Table D.--Average Annual per Establishment Privacy Costs[1]

SIC	Industry	Year 1 Privacy Costs Per Establishment	Average Year 2-10 Privacy Costs per Establishment
5910	Drug Stores & Proprietary Stores	$6,436	$1,623
6320	Accident & Health Insurance & Medical Service Plans[2]	$62,162	$28,320
7353	Medical Equipment Rental & Leasing	$3,906	$2,200
8010	Offices & Clinics of Doctors of Medicine	$3,703	$2,086
8120	Offices & Clinics of Dentists	$2,492	$1,404
8030	Offices & Clinics of Doctors of Osteopathy	$2,743	$1,545
8040	Offices & Clinics of Other Health Practitioners	$1,608	$906
8050	Nursing & Personal Care Facilities	$8,301	$4,676
8060	Hospitals	$101,999	$58,244
8070	Medical & Dental Laboratories	$3,169	$1,785
8080	Home Health Care Services	$5,656	$3,186
8090	Misc Health & And Allied Services	$3,649	$2,055
n/a	Fully Insured/ ERISA[3]	N/A	N/A
n/a	IRB[3]	N/A	N/A
n/a	Average for All Small Business	$4,188	$2,217

[1] Source: Office of Advocacy, U.S. Small Business Administration, from data provided by the Bureau of the Census, Statistics of U.S. Businesses, 1997. Entities that have less than $5,000,000 in annual revenue are considered small businesses here, as are non-profit entities (regardless of revenue). We have non-profit data for the following SICs: 8050, 8080, and 8060 and have included the number of non-profits in each category into the table.

[2] We have included self-insured/self-administered health plans and third party administrators in the total number of health plans, even though neither has individual SIC codes because we have the ability to impute revenues to them.

[3] We have not included the number of fully insured ERISA health plans or institutional review boards (IRB) in the total number of health care entities or the number of entities that meet SBA standards for small entities, since these are not separate businesses with SIC codes and we do not have sufficient data to impute revenues to them.

***82791** Table E shows the cost to each SIC code of the major cost items of the final rule. Listed are the top-five most costly provisions of the rule (to small business) and then the cost of all other remaining provisions. The costs of the most expensive five provisions represent 90 percent of the cost of the ongoing costs to small business, while the remaining provisions only represent 7 percent.

***82792 Table E.—Average Annual Ongoing Cost to Small Business of Implementing Provisions of the Privacy Regulation, After the First Year [1]**

Industry	Average Annual Ongoing Cost for Privacy Official, per Industry Sector	Average Annual Ongoing Cost for Minimum Necessary, per Industry Sector	Average Annual Ongoing Cost for Disclosure Tracking, per Industry Sector	Average Annual Ongoing Cost for De-Identification, per Industry Sector	Average Annual Ongoing Cost for Training, per Industry Sector	Average Annual Ongoing Cost for All Other Provisions, per Industry Sector
Drug Stores & Proprietary Stores	$37,997,168	$30,008,085	$3,597,262	$3,751,031	$4,083,677	$7,293,227
Accident & Health Insurance & Medical Service plans (including Self Insured/ Self Administered Health plans, & TPAs)[7]	$5,920,267	$5,395,070	$985,072	$3,614,697	$59,086	$2,863,657

IRB	N/A	N/A	N/A	N/A	N/A	$0
Total	$412,275,964	$362,806,784	$56,602,625	$55,367,822	$41,303,067	$102,488,804

[1] Source: Office of Advocacy, U.S. Small Business Administration, from data provided by the Bureau of the Census, Statistics of U.S. Businesses, 1997. Entities that have less than $5,000,000 in annual revenue are considered small businesses here, as are

[2] We have included self-insured, self-administered health plans and third party administrators in the total number of health plans, even though neither has individual SIC codes because we have the ability to impute revenues to them.

***82794 VI. Unfunded Mandates**

The Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4) requires cost-benefit and other analyses for rules that would cost more than $100 million in a single year. The rule qualifies as a significant rule under the statute. The Department has carried out the cost-benefit analysis in sections D and E of this document, which includes a discussion of unfunded costs to state and

local governments resulting from this regulation. In developing this regulation, the Department adopted the least burdensome alternatives, consistent with achieving the rule's goals.

A. Future Costs

The Department estimates some of the future costs of the rule in Section E of the Preliminary Regulatory Impact Analysis of this document. The estimates made include costs for the ten years after the effective date. As discussed in section E, state and local government costs will be in the order of $460 million in 2003 and $2.4 billion over ten years. Estimates for later years are not practical. The changes in technology are likely to alter the nature of medical record-keeping, and the uses of medical data are likely to vary dramatically over this period. Therefore, any estimates for years beyond 2012 are not feasible.

B. Particular Regions, Communities, or Industrial Sectors

The rule applies to the health care industry and would, therefore, affect that industry disproportionately. Any long-run increase in the costs of health care services would largely be passed on to the entire population of consumers. However, as discussed in the administrative implication regulation, the Transactions Rule is estimated to save the health care industry nearly $30 billion over essentially the same time period. This more than offsets the costs of the Privacy Rule; indeed, as discussed above, the establishment of consistent, national standards for the protection of medical information is essential to fully realize the savings from electronic transactions standards and other advances that may be realized through “e-health” over the next decade. Without strong privacy rules, patients and providers may be very reluctant to fully participate in electronic and e-health opportunities.

C. National Productivity and Economic Growth

The rule is not expected to substantially affect productivity or economic growth. It is possible that productivity and growth in certain sectors of the health care industry could be slightly lower than otherwise because of the need to divert research and development resources to compliance activities. The diversion of resources to compliance activities would be temporary. Moreover, the Department anticipates that, because the benefits of privacy are large, both productivity and economic growth would be higher than in the absence of the final rule. In section I.A. of this document, the Department discusses its expectation that this rule will increase communication among consumers, health plans, and providers and that implementation of privacy protections will lead more people to seek health care. The increased health of the population will lead to increased productivity and economic growth.

D. Full Employment and Job Creation

Some of the human resources devoted to the delivery of health care services will be redirected by rule. The rule could lead to some short-run changes in employment patterns as a result of the structural changes within the health care industry. The growth of employment (job creation) for the roles typically associated with health care profession could also temporarily change but be balanced by an increased need for those who can assist entities with complying with this rule. Therefore, while there could be a temporary slowing of growth in traditional health care professions, that will be offset by a temporary increase in growth in fields that may assist with compliance with this rule (e.g. worker training, and management consultants).

E. Exports

Because the rule does not mandate any changes in products, current export products will not be required to change in any way.

The Department consulted with state and local governments, and Tribal governments. See sections X and XI, below.

VII. Environmental Impact

The Department has determined under 21 CFR 25.30(k) that this action is of a type of does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

VIII. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 PRA), agencies are required to provide a 30-day notice in the Federal Register and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the PRA requires that we solicit comment on the following issues:

- Whether the information collection is necessary and useful to carry out the proper functions of the agency;

- The accuracy of the agency's estimate of the information collection burden;

- The quality, utility, and clarity of the information to be collected; and

- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

Under the PRA, the time, effort, and financial resources necessary to meet the information collection requirements referenced in this section are to be considered. Due to the complexity of this regulation, and to avoid redundancy of effort, we are referring readers to Section V (Final Regulatory Impact Analysis) above, to review the detailed cost assumptions associated with these PRA requirements. We explicitly seek, and will consider, public comment on our assumptions as they relate to the PRA requirements summarized in this section.

Section 160.204—Process for Requesting Exception Determinations

Section 160.204 would require persons requesting to except a provision of state law from preemption under § 160.203(a) to submit a written request, that meets the requirements of this section, to the Secretary to except a provision of state law from preemption under § 160.203. The burden associated with these requirements is the time and effort necessary for a state to prepare and submit the written request for an exception determination to the Secretary for approval. On an annual basis it is estimated that it will take 40 states 16 hours each to prepare and submit a request. The total annual burden associated with this requirement is 640 hours. The Department solicits public comment on the number of requests and hours for others likely to submit requests.

Section 160.306—Complaints to the Secretary

A person who believes that a covered entity is not complying with the applicable requirements of part 160 or the applicable standards, requirements, ***82795** and implementation specifications of Subpart E of part 164 of this subchapter may file a complaint with the Secretary. This requirement is exempt from the PRA as stipulated under 5 CFR 1320.4(a)(2), an audit/ administrative action exemption.

Section 160.310—Responsibilities of Covered Entities

A covered entity must keep such records and submit such compliance reports, in such time and manner and containing such information, necessary to enable the Secretary to ascertain whether the covered entity has complied or is complying with the applicable requirements of part 160 and the applicable standards, requirements, and implementation specifications of subpart E of part 164. Refer to § 164.530 for discussion.

Section 164.502—Uses and Disclosures of Protected Health Information: General Rules

A covered entity is permitted to disclose protected health information to an individual, and is required to provide and individual with access to protected health information, in accordance with the requirements set forth under § 164.524. Refer to § 164.524 for discussion.

Section 164.504—Uses and Disclosures—Organizational Requirements

Except for disclosures of protected health information by a covered entity that is a health care provider to another health care provider for treatment purposes, § 164.504 requires a covered entity to maintain documentation demonstrating that it meets the requirements set forth in this section and to demonstrate that it has obtained satisfactory assurance from business associates that meet the requirements of this part with each of its business associates. The burden is 5 minutes per entity times an annual average of 764,799 entities for a total burden of 63,733 burden hours.

Section 164.506—Consent for Treatment, Payment, and Health Care Operations

Except in certain circumstances, a covered health care provider that has a direct treatment relationship must obtain an individual's consent for use or disclosure of protected health information for treatment, payment, or health care operations. While this requirement is subject to the PRA, we believe that the burden associated with this requirement is exempt from the PRA as stipulated under 5 CFR 1320.3(b)(2).

Section 164.508—Uses and Disclosures for Which Individual Authorization Is Required

Under this section, a covered entity will need to obtain a written authorization from an individual, before it uses or discloses protected health information of the individual if the use or disclosure is not otherwise permitted or required under the rule without authorization. The burden associated with these requirements is the time and effort necessary for a covered entity to obtain written authorization prior to the disclosure of individually identifiable health information. On an annual basis, we estimate that it will take 764,799 entities, an annual average burden per entity of one hour for a total annual burden of 764,799 burden hours.

Section 164.510—Uses and Disclosures Requiring an Opportunity for the Individual To Agree or To Object

Section 164.510 allows, but does not require, covered entities to use or disclose protected health information: (1) for health care institutions, directories; and (2) to family members, close friends, or other persons assisting in an individual's care, as well as government agencies and disaster relief organizations conducting disaster relief activities. This section of the rule addresses situations in which the interaction between the covered entity and the individual is relatively informal, and agreements may be made orally, without written authorizations for use or disclosure. In general, to disclose protected health information for these purposes, covered entities must inform individuals in advance and must provide a meaningful opportunity for the individual to prevent or restrict the disclosure. In certain circumstances, such as in an emergency, when this informal discussion cannot practicably occur, covered entities can make decisions about disclosure or use, in accordance with the requirements of this section based on their professional judgment of what is in the patient's best interest. While these provisions are subject to the PRA, we believe that the burden associated with this requirement is exempt from the PRA as stipulated under 5 CFR 1320.3(b)(2).

Section 164.512—Uses and Disclosures for Which Consent, Individual Authorization, or Opportunity To Agree or Object Is Not Required

Section 164.1512 includes provisions that allow, but that do not require, covered entities to disclose protected health information without individual authorization for a variety of purposes which represent important national priorities. Pursuant to § 164.512, covered entities may disclose protected health information for specified purposes as follows: as required by law; for public health activities; to public officials regarding victims of abuse, neglect, or domestic violence; for health oversight; for judicial and administrative proceedings; for law enforcement; for specified purposes regarding decedents; for organ donation and transplantation; for research; to avert an imminent threat to health or safety; for specialized government functions (such as for intelligence and national security activities); and to comply with workers' compensation laws. While these provisions are

subject to the PRA, we believe that the burden associated with this requirement is exempt from the PRA as stipulated under 5 CFR 1320.3(b)(2).

For research, if a covered entity wants to use or disclose protected health information without individual authorization, it must obtain documentation that a waiver, in whole or in part, of the individual authorization required by § 164.508 for use or disclosure of protected health information has been approved by either an Institutional Review Board (IRB), established in accordance with 7 CFR 1c.107, 10 CFR 745.107, 14 CFR 1230.107, 15 CFR 27.107, 16 CFR 1028.107, 21 CFR 56.107, 22 CFR 225.107, 28 CFR 46.107, 32 CFR 219.107, 34 CFR 97.107, 38 CFR 16.107, 40 CFR 26.107, 45 CFR 46.107, 45 CFR 690.107, or 49 CFR 11.107; or a privacy board. The burden associated with these requirements is the time and effort necessary for a covered entity to maintain documentation demonstrating that they have obtained IRB or privacy board approval, which meet the requirements of this section. On an annual basis it is estimated that these requirements will affect 113,524 IRB reviews. We further estimate that it will take an average of 5 minutes per review to meet these requirements on an annual basis. Therefore, the total estimated annual burden associated with this requirement is 9,460 hours.

Section 164.514—Other Procedural Requirements Relating to Uses and Disclosures of Protected Health Information

Prior to any disclosure permitted by this subpart, a covered entity must verify the identity and authority of persons requesting protected health information, if the identity or authority of such person is not known to the ***82796** covered entity, and obtain any documentation, statements, or representations from the person requesting the protected health information that is required as a condition of the disclosure. In addition, a covered entity must retain any signed consent pursuant to § 164.506 and any signed authorization pursuant to § 164.508 for documentation purposes as required by § 164.530(j). This requirement is exempt from the PRA as stipulated under 5 CFR 1320.4(a)(1) and (1)(2).

Section 164.520—Notice of Privacy Practices for Protected Health Information

Except in certain circumstances set forth in this section, individuals have a right to adequate notice of the uses and disclosures of protected health information that may be made by the covered entity, and of the individual's rights and the covered entity's legal duties with respect to protected health information. To comply with this requirement a covered entity must provide a notice, written in plain language, that includes the elements set forth in this section. For health plans, there will be an average of 160.2 million notices each year. We assume that the most efficient means of distribution for health plans will be to send them out annually as part of the materials they send to current and potential enrollees, even though it is not required by the regulation. The number of notices per health plan per year would be about 10,570. We further estimate that it will require each health plan, on average, only 10 seconds to disseminate each notice. The total annual burden associated with this requirement is calculated to be 267,000 hours. Health care providers with direct treatment relationships would provide a copy of the notice to an individual at the time of first service delivery to the individual, make the notice available at the service delivery site for individuals to request and take with them, whenever the content of the notice is revised, make the notice available upon request and post the notice, if required by this section, and post a copy of the notice in a location where it is reasonable to expect individuals seeking services from the provider to be able to read the notice. The annual number of notices disseminated by all providers is 613 million. We further estimate that it will require each health provider, on average, 10 seconds to disseminate each notice. This estimate is based upon the assumption that the required notice will be incorporated into and disseminated with other patient materials. The total annual burden associated with this requirement is calculated to be 1 million hours.

In addition, a covered entity must document compliance with the notice requirements by retaining copies of the notices issued by the covered entity. Refer to § 164.530 for discussion.

Section 164.522—Rights To Request Privacy Proteciton for Protected Health Information

Given that the burden associated with the following information collection requirements will differ significantly, by the type and size of health plan or health care provider, we are explicitly soliciting comment on the burden associated with the following requirements; as outlined and required by this section, covered entities must provide individuals with the opportunity to request

restrictions related to the uses or disclosures of protected health information for treatment, payment, or health care operations. In addition, covered entities must accommodate requests for confidential communications in certain situations.

Section 164.524—Access of Individuals to Protected Health Information

As set forth in this section, covered entities must provide individuals with access to inspect and obtain a copy of protected health information about them in designated record sets, for so long as the protected health information is maintained in the designated record sets. This includes such information in a business associate's designated record set that is not a duplicate of the information held by the health care provider or health plan for so long as the information is maintained. Where the request is denied in whole or in part, the covered entity must provide the individual with a written statement of the basis for the denial and a description of how the individual may complain to the covered entity pursuant to the complaint procedures established in § 164.530 or to the Secretary pursuant to the procedures established in § 160.306 of this subpart. In certain cases, the covered entity must provide the individual the opportunity to have another health care professional review the denial. Pursuant to public comment, we estimate that each disclosure will contain 31 pages and that 150,000 disclosures will be made on an annual basis at three minutes per disclosure for a total burden of 7,500 hours. Refer to section V.E. for detailed discussion related to the costs associated with meeting these requirements.

Section 164.526—Amendment of Protected Health Information

Given that burden associated with the following information collection requirements will differ significantly, by the type and size of health plan or health care provider, we are explicitly soliciting comment on the burden associated with the following requirements: Individuals have the right to request amendment of protected health information about them in designated record sets created by a covered entity. Where the request is denied, a covered entity must provide the individual with a written statement of the basis for the denial and an explanation of how the individual may pursue the matter, including how to file a complaint with the Secretary pursuant to § 160.306 of this subpart. As appropriate, a covered entity must identify the protected health information in the designated record set that is the subject of the disputed amendment and append or otherwise link the individual's request for an amendment, the covered entity's denial of the request, the individual's statement of disagreement, if any, and the covered entity's rebuttal, if any, to the designated record set.

Section 164.528—Accounting for Disclosures of Protected Health Information

Based upon public comment it is assumed that it will take 5 minutes per request times 1,081,000 requests for an annual burden of 90,083 hours. An individual may request that a covered entity provide an accounting for disclosure for a period of time less than six years from the date of the individual's request, as outlined in this section.

Section 164.530—Administrative Requirements

A covered entity must maintain such policies and procedures in written or electronic form where policies or procedures with respect to protected health information are required by this subpart. Where a communication is required by this subpart to be in writing, a covered entity must maintain such writing, or an electronic copy, as documentation; and where an action or activity is required by this subpart to be documented, it must maintain a written or electronic record of such action or activity. While these requirements are subject to the PRA, we believe the burden associated with these requirements is exempt from the PRA as stipulated under 5 CFR 1320.3(b)(2). ***82797**

We have submitted a copy of this rule to OMB for its review of the information collection requirements in §§ 160.204, 160.306, 160.310, 164.502, 164.504, 164.506, 164.508, 164.510, 164.512, 164.514, 164.520, 164.522, 164.524, 164.526, 164.528, and Sec. 164.530. These requirements are not effective until they have been approved by OMB. If you comment on any of these information collection and record keeping requirements, please mail copies directly to the following: Health Care Financing Administration, Office of Information Services, Division of HCFA Enterprise Standards, Room N2-14-26, 7500 Security Boulevard, Baltimore, MD 21244-1850. ATTN: John Burke and to the Office of Information and Regulatory Affairs, Office

of Management and Budget, Room 10235, New Executive Office Building, Washington, DC 20503. ATTN: Allison Herron Eydt, HCFA Desk Officer.

IX. Executive Order 13132: Federalism

The Department has examined the effects of provisions in the final privacy regulation on the relationship between the federal government and the states, as required by Executive Order 13132 on "Federalism." Our conclusion is that the final rule does have federalism implications because the rule has substantial direct effects on states, on the relationship between the national government and states, and on the distribution of power and responsibilities among the various levels of government. The federalism implications of the rule, however, flow from, and are consistent with the underlying statute. The statute allows us to preempt state or local rules that provide less stringent privacy protection requirements than federal law is consistent with this Executive Order. Overall, the final rule attempts to balance both the autonomy of the states with the necessity to create a federal benchmark to preserve the privacy of personally identifiable health information.

It is recognized that the states generally have laws that relate to the privacy of individually identifiable health information. The HIPAA statue dictates the relationship between state law and this final rule. Except for laws that are specifically exempted by the HIPAA statute, state laws continue to be enforceable, unless they are contrary to Part C of Title XI of the standards, requirements, or implementation specifications adopted or pursuant to subpart x. However, under section 264(c)(2), not all contrary provisions of state privacy laws are preempted; rather, the law provides that contrary provisions of state law relating to the privacy of individually identifiable health information that are also "more stringent" than the federal regulatory requirements or implementation specifications will continue to be enforceable.

Section 3(b) of Executive Order 13132 recognizes that national action limiting the policymaking discretion of states will be imposed "* * * only where there is constitutional and statutory authority for the action and the national activity is appropriate in light of the presence of a problem of national significance." Personal privacy issues are widely identified as a national concern by virtue of the scope of interstate health commerce. HIPAA's provisions reflect this position. HIPAA attempts to facilitate the electronic exchange of financial and administrative health plan transactions while recognizing challenges that local, national, and international information sharing raise to confidentiality and privacy of health information.

Section 3(d)(2) of the Executive Order 13132 requires the federal government defer to the states to establish standards where possible. HIPAA requires the Department to establish standards, and we have done so accordingly. This approach is a key component of the final Privacy Rule, and it adheres to section 4(a) of Executive Order 13132, which expressly contemplates preemption when there is a conflict between exercising state and federal authority under federal statute. Section 262 of HIPAA enacted Section 1178 of the Social Security Act, developing a "general rule" that state laws or provisions that are contrary to the provisions or requirements of Part C of Title XI, or the standards or implementation specifications adopted, or established thereunder are preempted. Several exceptions to this rule exist, each of which is designed to maintain a high degree of state autonomy.

Moreover, section 4(b) of the Executive Order authorizes preemption of state law in the federal rule making context when there is "the exercise of state authority is directly conflicts with the exercise of federal authority under federal statute * * *." Section 1178 (a)(2)(B) of HIPAA specifically preempts state laws related to the privacy of individually identifiable health information unless the state law is more stringent. Thus, we have interpreted state and local laws and regulations that would impose less stringent requirements for protection of individually identifiable health information as undermining the agency's goal of ensuring that all patients who receive medical services are assured a minimum level of personal privacy. Particularly where the absence of privacy protection undermines an individual's access to health care services, both the personal and public interest is served by establishing federal rules.

The final rule would establish national minimum standards with respect to the collection, maintenance, access, use, and disclosure of individually identifiable health information. The federal law will preempt state law only where state and federal laws are "contradictory" and the federal regulation is judged to establish "more stringent" privacy protections than state laws.

As required by the previous Executive Order (E.O. 13132), states and local governments were given, through the notice of proposed rule making, an opportunity to participate in the proceedings to preempt state and local laws (section 4(e)). The Secretary also provided a review of preemption issues upon requests from states. In addition, anticipating the promulgation of the Executive Order, appropriate officials and organizations were consulted before this proposed action is implemented (Section 3(a) of Executive Order 13132).

The same section also includes some qualitative discussion of costs that would occur beyond that time period. Most of the costs of proposed rule, however, would occur in the years immediately after the publication of a final rule. Future costs beyond the ten year period will continue but will not be as great as the initial compliance costs.

Finally, we have considered the cost burden that this proposed rule would impose on state and local health care programs, such as Medicaid, county hospitals, and other state health benefits programs. As discussed in Section E of the Regulatory Impact Analysis of this document, we estimate state and local government costs will be in the order of $460 million in 2003 and $2.4 billion over ten years.

The agency concludes that the policy in this final document has been assessed in light of the principles, criteria, and requirements in Executive Order 13132; that this policy is not inconsistent with that Order; that this policy will not impose significant additional costs and burdens on the states; and that this policy will not affect the ability of the states to discharge traditional state governmental functions.

During our consultation with the states, representatives from various state agencies and offices expressed concern that the final regulation would preempt ***82798** all state privacy laws. As explained in this section, the regulation would only preempt state laws where there is a direct conflict between state laws and the regulation, and where the regulation provides more stringent privacy protection than state law. We discussed this issue during our consultation with state representatives, who generally accepted our approach to the preemption issue. During the consultation, we requested further information from the states about whether they currently have laws requiring that providers have a “duty to warn” family members or third parties about a patient's condition other than in emergency circumstances. Since the consultation, we have not received additional comments or questions from the states.

X. Executive Order 13086; Consultation and Coordination With Indian Tribal Governments

In drafting the proposed rule, the Department consulted with representatives of the National Congress of American Indians and the National Indian Health Board, as well as with a representative of the self-governance Tribes. During the consultation, we discussed issues regarding the application of Title II of HIPAA to the Tribes, and potential variations based on the relationship of each Tribe with the IHS for the purpose of providing health services. Participants raised questions about the status of Tribal laws regarding the privacy of health information.

List of Subjects

45 CFR Part 160

Electronic transactions, Employer benefit plan, Health, Health care, Health facilities, Health insurance, Health records, Medicaid, Medical research, Medicare, Privacy, Reporting and record keeping requirements.

45 CFR Part 164

Electronic transactions, Employer benefit plan, Health, Health care, Health facilities, Health insurance, Health records, Medicaid, Medical research, Medicare, Privacy, Reporting and record keeping requirements.

Note: to reader: This final rule is one of several proposed and final rules that are being published to implement the Administrative Simplification provisions of the Health Insurance Portability and Accountability Act of 1996.45 CFR subchapter C consisting of Parts 160 and 162 was added at 65 FR 50365, Aug. 17, 2000. Part 160 consists of general provisions, Part 162 consists of the various administrative simplification regulations relating to transactions and identifiers, and new Part 164 consists of the regulations implementing the security and privacy requirements of the legislation.

Dated: December 19, 2000.

Donna Shalala,

Secretary,

For the reasons set forth in the preamble, 45 CFR Subtitle A, Subchapter C, is amended as follows:

1. Part 160 is revised to read as follows:

PART 160—GENERAL ADMINISTRATIVE REQUIREMENTS

Subpart A—General Provisions

160.101 Statutory basis and purpose.

160.102 Applicability.

160.103 Definitions.

160.104 Modifications.

Subpart B—Preemption of State Law

160.201 Applicability.

160.202 Definitions.

160.203 General rule and exceptions.

160.204 Process for requesting exception determinations.

160.205 Duration of effectiveness of exception determinations.

Subpart C—Compliance and Enforcement

160.300 Applicability.

160.302 Definitions.

160.304 Principles for achieving compliance.

160.306 Complaints to the Secretary.

160.308 Compliance reviews.

160.310 Responsibilities of covered entities.

160.312 Secretarial action regarding complaints and compliance reviews.
Authority: Sec. 1171 through 1179 of the Social Security Act, (42 U.S.C. 1320d-1329d-8) as added by sec. 262 of Pub. L. 104-191, 110 Stat. 2021-2031 and sec. 264 of Pub. L. 104-191 (42 U.S.C. 1320d-2(note)).

Subpart A—General Provisions
45 CFR § 160.101

§ 160.101 Statutory basis and purpose.
The requirements of this subchapter implement sections 1171 through 1179 of the Social Security Act (the Act), as added by section 262 of Public Law 104-191, and section 264 of Public Law 104-191.
45 CFR § 160.102

§ 160.102 Applicability.
(a) Except as otherwise provided, the standards, requirements, and implementation specifications adopted under this subchapter apply to the following entities:

(1) A health plan.

(2) A health care clearinghouse.

(3) A health care provider who transmits any health information in electronic form in connection with a transaction covered by this subchapter.

(b) To the extent required under section 201(a)(5) of the Health Insurance Portability Act of 1996, (Pub. L. 104-191), nothing in this subchapter shall be construed to diminish the authority of any Inspector General, including such authority as provided in the Inspector General Act of 1978, as amended (5 U.S.C. App.).
45 CFR § 160.103

§ 160.103 Definitions.
Except as otherwise provided, the following definitions apply to this subchapter:

Act means the Social Security Act.

ANSI stands for the American National Standards Institute.

Business associate: (1) Except as provided in paragraph (2) of this definition, business associate means, with respect to a covered entity, a person who:

(i) On behalf of such covered entity or of an organized health care arrangement (as defined in § 164.501 of this subchapter) in which the covered entity participates, but other than in the capacity of a member of the workforce of such covered entity or arrangement, performs, or assists in the performance of:

(A) A function or activity involving the use or disclosure of individually identifiable health information, including claims processing or administration, data analysis, processing or administration, utilization review, quality assurance, billing, benefit management, practice management, and repricing; or

(B) Any other function or activity regulated by this subchapter; or

(ii) Provides, other than in the capacity of a member of the workforce of such covered entity, legal, actuarial, accounting, consulting, data aggregation (as defined in § 164.501 of this subchapter), management, administrative, accreditation, or financial services to or for such covered entity, or to or for an organized health care arrangement in which the covered entity participates, where the provision of the service involves the disclosure of individually identifiable health information from such covered entity or arrangement, or from another business associate of such covered entity or arrangement, to the person.

(2) A covered entity participating in an organized health care arrangement that performs a function or activity as described by paragraph (1)(i) of this definition for or on behalf of such organized health care arrangement, or that provides a service as described in paragraph (1)(ii) of this definition to or for such organized health care arrangement, does not, simply through the performance of such function or activity or the provision of such service, ***82799** become a business associate of other covered entities participating in such organized health care arrangement.

(3) A covered entity may be a business associate of another covered entity.

Compliance date means the date by which a covered entity must comply with a standard, implementation specification, requirement, or modification adopted under this subchapter.

Covered entity means:

(1) A health plan.

(2) A health care clearinghouse.

(3) A health care provider who transmits any health information in electronic form in connection with a transaction covered by this subchapter.

Group health plan (also see definition of health plan in this section) means an employee welfare benefit plan (as defined in section 3(1) of the Employee Retirement Income and Security Act of 1974 (ERISA), 29 U.S.C. 1002(1)), including insured and self-insured plans, to the extent that the plan provides medical care (as defined in section 2791(a)(2) of the Public Health Service Act (PHS Act), 42 U.S.C. 300gg-91(a)(2)), including items and services paid for as medical care, to employees or their dependents directly or through insurance, reimbursement, or otherwise, that:

(1) Has 50 or more participants (as defined in section 3(7) of ERISA, 29 U.S.C. 1002(7)); or

(2) Is administered by an entity other than the employer that established and maintains the plan.

HCFA stands for Health Care Financing Administration within the Department of Health and Human Services.

HHS stands for the Department of Health and Human Services.

Health care means care, services, or supplies related to the health of an individual. Health care includes, but is not limited to, the following:

(1) Preventive, diagnostic, therapeutic, rehabilitative, maintenance, or palliative care, and counseling, service, assessment, or procedure with respect to the physical or mental condition, or functional status, of an individual or that affects the structure or function of the body; and

(2) Sale or dispensing of a drug, device, equipment, or other item in accordance with a prescription.

Health care clearinghouse means a public or private entity, including a billing service, repricing company, community health management information system or community health information system, and "value-added" networks and switches, that does either of the following functions:

(1) Processes or facilitates the processing of health information received from another entity in a nonstandard format or containing nonstandard data content into standard data elements or a standard transaction.

(2) Receives a standard transaction from another entity and processes or facilitates the processing of health information into nonstandard format or nonstandard data content for the receiving entity.

Health care provider means a provider of services (as defined in section 1861(u) of the Act, 42 U.S.C. 1395x(u)), a provider of medical or health services (as defined in section 1861(s) of the Act, 42 U.S.C. 1395x(s)), and any other person or organization who furnishes, bills, or is paid for health care in the normal course of business.

Health information means any information, whether oral or recorded in any form or medium, that:

(1) Is created or received by a health care provider, health plan, public health authority, employer, life insurer, school or university, or health care clearinghouse; and

(2) Relates to the past, present, or future physical or mental health or condition of an individual; the provision of health care to an individual; or the past, present, or future payment for the provision of health care to an individual.

Health insurance issuer (as defined in section 2791(b)(2) of the PHS Act, 42 U.S.C. 300gg-91(b)(2) and used in the definition of health plan in this section) means an insurance company, insurance service, or insurance organization (including an HMO) that is licensed to engage in the business of insurance in a State and is subject to State law that regulates insurance. Such term does not include a group health plan.

Health maintenance organization (HMO) (as defined in section 2791(b)(3) of the PHS Act, 42 U.S.C. 300gg-91(b)(3) and used in the definition of health plan in this section) means a federally qualified HMO, an organization recognized as an HMO under State law, or a similar organization regulated for solvency under State law in the same manner and to the same extent as such an HMO.

Health plan means an individual or group plan that provides, or pays the cost of, medical care (as defined in section 2791(a)(2) of the PHS Act, 42 U.S.C. 300gg-91(a)(2)).

(1) Health plan includes the following, singly or in combination:

(i) A group health plan, as defined in this section.

(ii) A health insurance issuer, as defined in this section.

(iii) An HMO, as defined in this section.

(iv) Part A or Part B of the Medicare program under title XVIII of the Act.

(v) The Medicaid program under title XIX of the Act, 42 U.S.C. 1396, et seq.

(vi) An issuer of a Medicare supplemental policy (as defined in section 1882(g)(1) of the Act, 42 U.S.C. 1395ss(g)(1)).

(vii) An issuer of a long-term care policy, excluding a nursing home fixed-indemnity policy.

(viii) An employee welfare benefit plan or any other arrangement that is established or maintained for the purpose of offering or providing health benefits to the employees of two or more employers.

(ix) The health care program for active military personnel under title 10 of the United States Code.

(x) The veterans health care program under 38 U.S.C. chapter 17.

(xi) The Civilian Health and Medical Program of the Uniformed Services (CHAMPUS) (as defined in 10 U.S.C. 1072(4)).

(xii) The Indian Health Service program under the Indian Health Care Improvement Act, 25 U.S.C. 1601, et seq.

(xiii) The Federal Employees Health Benefits Program under 5 U.S.C. 8902, et seq.

(xiv) An approved State child health plan under title XXI of the Act, providing benefits for child health assistance that meet the requirements of section 2103 of the Act, 42 U.S.C. 1397, et seq.

(xv) The Medicare+Choice program under Part C of title XVIII of the Act, 42 U.S.C. 1395w-21 through 1395w-28.

(xvi) A high risk pool that is a mechanism established under State law to provide health insurance coverage or comparable coverage to eligible individuals.

(xvii) Any other individual or group plan, or combination of individual or group plans, that provides or pays for the cost of medical care (as defined in section 2791(a)(2) of the PHS Act, 42 U.S.C. 300gg-91(a)(2)).

(2) Health plan excludes:

(i) Any policy, plan, or program to the extent that it provides, or pays for the cost of, excepted benefits that are listed in section 2791(c)(1) of the PHS Act, 42 U.S.C. 300gg-91(c)(1); and

(ii) A government-funded program (other than one listed in paragraph (1)(i)-(xvi) of this definition):

(A) Whose principal purpose is other than providing, or paying the cost of, health care; or ***82800**

(B) Whose principal activity is:

(1) The direct provision of health care to persons; or

(2) The making of grants to fund the direct provision of health care to persons.

Implementation specification means specific requirements or instructions for implementing a standard.

Modify or modification refers to a change adopted by the Secretary, through regulation, to a standard or an implementation specification.

Secretary means the Secretary of Health and Human Services or any other officer or employee of HHS to whom the authority involved has been delegated.

Small health plan means a health plan with annual receipts of $5 million or less.

Standard means a rule, condition, or requirement:

(1) Describing the following information for products, systems, services or practices:

(i) Classification of components.

(ii) Specification of materials, performance, or operations; or

(iii) Delineation of procedures; or

(2) With respect to the privacy of individually identifiable health information.

Standard setting organization (SSO) means an organization accredited by the American National Standards Institute that develops and maintains standards for information transactions or data elements, or any other standard that is necessary for, or will facilitate the implementation of, this part.

State refers to one of the following:

(1) For a health plan established or regulated by Federal law, State has the meaning set forth in the applicable section of the United States Code for such health plan.

(2) For all other purposes, State means any of the several States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, and Guam.

Trading partner agreement means an agreement related to the exchange of information in electronic transactions, whether the agreement is distinct or part of a larger agreement, between each party to the agreement. (For example, a trading partner agreement may specify, among other things, the duties and responsibilities of each party to the agreement in conducting a standard transaction.)

Transaction means the transmission of information between two parties to carry out financial or administrative activities related to health care. It includes the following types of information transmissions:

(1) Health care claims or equivalent encounter information.

(2) Health care payment and remittance advice.

(3) Coordination of benefits.

(4) Health care claim status.

(5) Enrollment and disenrollment in a health plan.

(6) Eligibility for a health plan.

(7) Health plan premium payments.

(8) Referral certification and authorization.

(9) First report of injury.

(10) Health claims attachments.

(11) Other transactions that the Secretary may prescribe by regulation.

Workforce means employees, volunteers, trainees, and other persons whose conduct, in the performance of work for a covered entity, is under the direct control of such entity, whether or not they are paid by the covered entity.

45 CFR § 160.104

§ 160.104 Modifications.

(a) Except as provided in paragraph (b) of this section, the Secretary may adopt a modification to a standard or implementation specification adopted under this subchapter no more frequently than once every 12 months.

(b) The Secretary may adopt a modification at any time during the first year after the standard or implementation specification is initially adopted, if the Secretary determines that the modification is necessary to permit compliance with the standard or implementation specification.

(c) The Secretary will establish the compliance date for any standard or implementation specification modified under this section.

(1) The compliance date for a modification is no earlier than 180 days after the effective date of the final rule in which the Secretary adopts the modification.

(2) The Secretary may consider the extent of the modification and the time needed to comply with the modification in determining the compliance date for the modification.

(3) The Secretary may extend the compliance date for small health plans, as the Secretary determines is appropriate.

Subpart B—Preemption of State Law

45 CFR § 160.201

§ 160.201 Applicability.

The provisions of this subpart implement section 1178 of the Act, as added by section 262 of Public Law 104-191.

45 CFR § 160.202

§ 160.202 Definitions.

For purposes of this subpart, the following terms have the following meanings:

Contrary, when used to compare a provision of State law to a standard, requirement, or implementation specification adopted under this subchapter, means:

(1) A covered entity would find it impossible to comply with both the State and federal requirements; or

(2) The provision of State law stands as an obstacle to the accomplishment and execution of the full purposes and objectives of part C of title XI of the Act or section 264 of Pub. L. 104-191, as applicable.

More stringent means, in the context of a comparison of a provision of State law and a standard, requirement, or implementation specification adopted under subpart E of part 164 of this subchapter, a State law that meets one or more of the following criteria:

(1) With respect to a use or disclosure, the law prohibits or restricts a use or disclosure in circumstances under which such use or disclosure otherwise would be permitted under this subchapter, except if the disclosure is:

(i) Required by the Secretary in connection with determining whether a covered entity is in compliance with this subchapter; or

(ii) To the individual who is the subject of the individually identifiable health information.

(2) With respect to the rights of an individual who is the subject of the individually identifiable health information of access to or amendment of individually identifiable health information, permits greater rights of access or amendment, as applicable; provided that, nothing in this subchapter may be construed to preempt any State law to the extent that it authorizes or prohibits disclosure of protected health information about a minor to a parent, guardian, or person acting in loco parentis of such minor.

(3) With respect to information to be provided to an individual who is the subject of the individually identifiable health information about a use, a disclosure, rights, and remedies, provides the greater amount of information.

(4) With respect to the form or substance of an authorization or consent for use or disclosure of individually identifiable health information, provides requirements that narrow the scope or duration, increase the privacy protections afforded (such as by expanding the criteria for), or reduce the coercive effect of the circumstances surrounding the authorization or consent, as applicable.

(5) With respect to recordkeeping or requirements relating to accounting of disclosures, provides for the retention or reporting of more detailed information or for a longer duration. ***82801**

(6) With respect to any other matter, provides greater privacy protection for the individual who is the subject of the individually identifiable health information.

Relates to the privacy of individually identifiable health information means, with respect to a State law, that the State law has the specific purpose of protecting the privacy of health information or affects the privacy of health information in a direct, clear, and substantial way.

State law means a constitution, statute, regulation, rule, common law, or other State action having the force and effect of law.
45 CFR § 160.203

§ 160.203 General rule and exceptions.
A standard, requirement, or implementation specification adopted under this subchapter that is contrary to a provision of State law preempts the provision of State law. This general rule applies, except if one or more of the following conditions is met:

(a) A determination is made by the Secretary under § 160.204 that the provision of State law:

(1) Is necessary:

(i) To prevent fraud and abuse related to the provision of or payment for health care;

(ii) To ensure appropriate State regulation of insurance and health plans to the extent expressly authorized by statute or regulation;

(iii) For State reporting on health care delivery or costs; or

(iv) For purposes of serving a compelling need related to public health, safety, or welfare, and, if a standard, requirement, or implementation specification under part 164 of this subchapter is at issue, if the Secretary determines that the intrusion into privacy is warranted when balanced against the need to be served; or

(2) Has as its principal purpose the regulation of the manufacture, registration, distribution, dispensing, or other control of any controlled substances (as defined in 21 U.S.C. 802), or that is deemed a controlled substance by State law.

(b) The provision of State law relates to the privacy of health information and is more stringent than a standard, requirement, or implementation specification adopted under subpart E of part 164 of this subchapter.

(c) The provision of State law, including State procedures established under such law, as applicable, provides for the reporting of disease or injury, child abuse, birth, or death, or for the conduct of public health surveillance, investigation, or intervention.

(d) The provision of State law requires a health plan to report, or to provide access to, information for the purpose of management audits, financial audits, program monitoring and evaluation, or the licensure or certification of facilities or individuals.
45 CFR § 160.204

§ 160.204 Process for requesting exception determinations.
(a) A request to except a provision of State law from preemption under § 160.203(a) may be submitted to the Secretary. A request by a State must be submitted through its chief elected official, or his or her designee. The request must be in writing and include the following information:

(1) The State law for which the exception is requested;

(2) The particular standard, requirement, or implementation specification for which the exception is requested;

(3) The part of the standard or other provision that will not be implemented based on the exception or the additional data to be collected based on the exception, as appropriate;

(4) How health care providers, health plans, and other entities would be affected by the exception;

(5) The reasons why the State law should not be preempted by the federal standard, requirement, or implementation specification, including how the State law meets one or more of the criteria at § 160.203(a); and

(6) Any other information the Secretary may request in order to make the determination.

(b) Requests for exception under this section must be submitted to the Secretary at an address that will be published in the Federal Register. Until the Secretary's determination is made, the standard, requirement, or implementation specification under this subchapter remains in effect.

(c) The Secretary's determination under this section will be made on the basis of the extent to which the information provided and other factors demonstrate that one or more of the criteria at § 160.203(a) has been met.
45 CFR § 160.205

§ 160.205 Duration of effectiveness of exception determinations.
An exception granted under this subpart remains in effect until:

(a) Either the State law or the federal standard, requirement, or implementation specification that provided the basis for the exception is materially changed such that the ground for the exception no longer exists; or

(b) The Secretary revokes the exception, based on a determination that the ground supporting the need for the exception no longer exists.

Subpart C—Compliance and Enforcement
45 CFR § 160.300

§ 160.300 Applicability.
This subpart applies to actions by the Secretary, covered entities, and others with respect to ascertaining the compliance by covered entities with and the enforcement of the applicable requirements of this part 160 and the applicable standards, requirements, and implementation specifications of subpart E of part 164 of this subchapter.
45 CFR § 160.302

§ 160.302 Definitions.
As used in this subpart, terms defined in § 164.501 of this subchapter have the same meanings given to them in that section.
45 CFR § 160.304

§ 160.304 Principles for achieving compliance.
(a) Cooperation. The Secretary will, to the extent practicable, seek the cooperation of covered entities in obtaining compliance with the applicable requirements of this part 160 and the applicable standards, requirements, and implementation specifications of subpart E of part 164 of this subchapter.

(b) Assistance. The Secretary may provide technical assistance to covered entities to help them comply voluntarily with the applicable requirements of this part 160 or the applicable standards, requirements, and implementation specifications of subpart E of part 164 of this subchapter.
45 CFR § 160.306

§ 160.306 Complaints to the Secretary.
(a) Right to file a complaint. A person who believes a covered entity is not complying with the applicable requirements of this part 160 or the applicable standards, requirements, and implementation specifications of subpart E of part 164 of this subchapter may file a complaint with the Secretary.

(b) Requirements for filing complaints. Complaints under this section must meet the following requirements:

(1) A complaint must be filed in writing, either on paper or electronically.

(2) A complaint must name the entity that is the subject of the complaint and describe the acts or omissions believed to be in violation of the applicable requirements of this part 160 or the applicable standards, requirements, and implementation specifications of subpart E of part 164 of this subchapter.

(3) A complaint must be filed within 180 days of when the complainant knew or should have known that the act or omission complained of occurred, unless this time limit is waived by the Secretary for good cause shown. ***82802**

(4) The Secretary may prescribe additional procedures for the filing of complaints, as well as the place and manner of filing, by notice in the Federal Register.

(c) Investigation. The Secretary may investigate complaints filed under this section. Such investigation may include a review of the pertinent policies, procedures, or practices of the covered entity and of the circumstances regarding any alleged acts or omissions concerning compliance.
45 CFR § 160.308

§ 160.308 Compliance reviews.

The Secretary may conduct compliance reviews to determine whether covered entities are complying with the applicable requirements of this part 160 and the applicable standards, requirements, and implementation specifications of subpart E of part 164 of this subchapter.

45 CFR § 160.310

§ 160.310 Responsibilities of covered entities.

(a) Provide records and compliance reports. A covered entity must keep such records and submit such compliance reports, in such time and manner and containing such information, as the Secretary may determine to be necessary to enable the Secretary to ascertain whether the covered entity has complied or is complying with the applicable requirements of this part 160 and the applicable standards, requirements, and implementation specifications of subpart E of part 164 of this subchapter.

(b) Cooperate with complaint investigations and compliance reviews. A covered entity must cooperate with the Secretary, if the Secretary undertakes an investigation or compliance review of the policies, procedures, or practices of a covered entity to determine whether it is complying with the applicable requirements of this part 160 and the standards, requirements, and implementation specifications of subpart E of part 164 of this subchapter.

(c) Permit access to information. (1) A covered entity must permit access by the Secretary during normal business hours to its facilities, books, records, accounts, and other sources of information, including protected health information, that are pertinent to ascertaining compliance with the applicable requirements of this part 160 and the applicable standards, requirements, and implementation specifications of subpart E of part 164 of this subchapter. If the Secretary determines that exigent circumstances exist, such as when documents may be hidden or destroyed, a covered entity must permit access by the Secretary at any time and without notice.

(2) If any information required of a covered entity under this section is in the exclusive possession of any other agency, institution, or person and the other agency, institution, or person fails or refuses to furnish the information, the covered entity must so certify and set forth what efforts it has made to obtain the information.

(3) Protected health information obtained by the Secretary in connection with an investigation or compliance review under this subpart will not be disclosed by the Secretary, except if necessary for ascertaining or enforcing compliance with the applicable requirements of this part 160 and the applicable standards, requirements, and implementation specifications of subpart E of part 164 of this subchapter, or if otherwise required by law.

45 CFR § 160.312

§ 160.312 Secretarial action regarding complaints and compliance reviews.

(a) Resolution where noncompliance is indicated. (1) If an investigation pursuant to § 160.306 or a compliance review pursuant to § 160.308 indicates a failure to comply, the Secretary will so inform the covered entity and, if the matter arose from a complaint, the complainant, in writing and attempt to resolve the matter by informal means whenever possible.

(2) If the Secretary finds the covered entity is not in compliance and determines that the matter cannot be resolved by informal means, the Secretary may issue to the covered entity and, if the matter arose from a complaint, to the complainant written findings documenting the non-compliance.

(b) Resolution when no violation is found. If, after an investigation or compliance review, the Secretary determines that further action is not warranted, the Secretary will so inform the covered entity and, if the matter arose from a complaint, the complainant in writing.

2. A new Part 164 is added to read as follows:

PART 164—SECURITY AND PRIVACY

Subpart A—General Provisions

Sec.

Subparts B-D—[Reserved]

Subpart E—Privacy of Individually Identifiable Health Information

Authority: 42 U.S.C. 1320d-2 and 1320d-4, sec. 264 of Pub. L. 104-191, 110 Stat. 2033-2034 (42 U.S.C. 1320(d-2(note)).

Subpart A—General Provisions
45 CFR § 164.102

§ 164.102 Statutory basis.

The provisions of this part are adopted pursuant to the Secretary's authority to prescribe standards, requirements, and implementation standards under part C of title XI of the Act and section 264 of Public Law 104-191.
45 CFR § 164.104

§ 164.104 Applicability.
Except as otherwise provided, the provisions of this part apply to covered entities: health plans, health care clearinghouses, and health care providers who transmit health information in electronic form in connection with any transaction referred to in section 1173(a)(1) of the Act.
45 CFR § 164.106

§ 164.106 Relationship to other parts.
In complying with the requirements of this part, covered entities are required to comply with the applicable provisions of parts 160 and 162 of this subchapter.

Subpart B-D—[Reserved]

Subpart E—Privacy of Individually Identifiable Health Information
45 CFR § 164.500

§ 164.500 Applicability.
(a) Except as otherwise provided herein, the standards, requirements, and ***82803** implementation specifications of this subpart apply to covered entities with respect to protected health information.

(b) Health care clearinghouses must comply with the standards, requirements, and implementation specifications as follows:

(1) When a health care clearinghouse creates or receives protected health information as a business associate of another covered entity, the clearinghouse must comply with:

(i) Section 164.500 relating to applicability;

(ii) Section 164.501 relating to definitions;

(iii) Section 164.502 relating to uses and disclosures of protected health information, except that a clearinghouse is prohibited from using or disclosing protected health information other than as permitted in the business associate contract under which it created or received the protected health information;

(iv) Section 164.504 relating to the organizational requirements for covered entities, including the designation of health care components of a covered entity;

(v) Section 164.512 relating to uses and disclosures for which consent, individual authorization or an opportunity to agree or object is not required, except that a clearinghouse is prohibited from using or disclosing protected health information other than as permitted in the business associate contract under which it created or received the protected health information;

(vi) Section 164.532 relating to transition requirements; and

(vii) Section 164.534 relating to compliance dates for initial implementation of the privacy standards.

(2) When a health care clearinghouse creates or receives protected health information other than as a business associate of a covered entity, the clearinghouse must comply with all of the standards, requirements, and implementation specifications of this subpart.

(c) The standards, requirements, and implementation specifications of this subpart do not apply to the Department of Defense or to any other federal agency, or non-governmental organization acting on its behalf, when providing health care to overseas foreign national beneficiaries.

45 CFR § 164.501

§ 164.501 Definitions.

As used in this subpart, the following terms have the following meanings:

Correctional institution means any penal or correctional facility, jail, reformatory, detention center, work farm, halfway house, or residential community program center operated by, or under contract to, the United States, a State, a territory, a political subdivision of a State or territory, or an Indian tribe, for the confinement or rehabilitation of persons charged with or convicted of a criminal offense or other persons held in lawful custody. Other persons held in lawful custody includes juvenile offenders adjudicated delinquent, aliens detained awaiting deportation, persons committed to mental institutions through the criminal justice system, witnesses, or others awaiting charges or trial.

Covered functions means those functions of a covered entity the performance of which makes the entity a health plan, health care provider, or health care clearinghouse.

Data aggregation means, with respect to protected health information created or received by a business associate in its capacity as the business associate of a covered entity, the combining of such protected health information by the business associate with the protected health information received by the business associate in its capacity as a business associate of another covered entity, to permit data analyses that relate to the health care operations of the respective covered entities.

Designated record set means:

(1) A group of records maintained by or for a covered entity that is:

(i) The medical records and billing records about individuals maintained by or for a covered health care provider;

(ii) The enrollment, payment, claims adjudication, and case or medical management record systems maintained by or for a health plan; or

(iii) Used, in whole or in part, by or for the covered entity to make decisions about individuals.

(2) For purposes of this paragraph, the term record means any item, collection, or grouping of information that includes protected health information and is maintained, collected, used, or disseminated by or for a covered entity.

Direct treatment relationship means a treatment relationship between an individual and a health care provider that is not an indirect treatment relationship.

Disclosure means the release, transfer, provision of access to, or divulging in any other manner of information outside the entity holding the information.

Health care operations means any of the following activities of the covered entity to the extent that the activities are related to covered functions, and any of the following activities of an organized health care arrangement in which the covered entity participates:

(1) Conducting quality assessment and improvement activities, including outcomes evaluation and development of clinical guidelines, provided that the obtaining of generalizable knowledge is not the primary purpose of any studies resulting from

such activities; population-based activities relating to improving health or reducing health care costs, protocol development, case management and care coordination, contacting of health care providers and patients with information about treatment alternatives; and related functions that do not include treatment;

(2) Reviewing the competence or qualifications of health care professionals, evaluating practitioner and provider performance, health plan performance, conducting training programs in which students, trainees, or practitioners in areas of health care learn under supervision to practice or improve their skills as health care providers, training of non-health care professionals, accreditation, certification, licensing, or credentialing activities;

(3) Underwriting, premium rating, and other activities relating to the creation, renewal or replacement of a contract of health insurance or health benefits, and ceding, securing, or placing a contract for reinsurance of risk relating to claims for health care (including stop-loss insurance and excess of loss insurance), provided that the requirements of § 164.514(g) are met, if applicable;

(4) Conducting or arranging for medical review, legal services, and auditing functions, including fraud and abuse detection and compliance programs;

(5) Business planning and development, such as conducting cost-management and planning-related analyses related to managing and operating the entity, including formulary development and administration, development or improvement of methods of payment or coverage policies; and

(6) Business management and general administrative activities of the entity, including, but not limited to:

(i) Management activities relating to implementation of and compliance with the requirements of this subchapter;

(ii) Customer service, including the provision of data analyses for policy holders, plan sponsors, or other customers, provided that protected health information is not disclosed to such policy holder, plan sponsor, or customer.

(iii) Resolution of internal grievances; ***82804**

(iv) Due diligence in connection with the sale or transfer of assets to a potential successor in interest, if the potential successor in interest is a covered entity or, following completion of the sale or transfer, will become a covered entity; and

(v) Consistent with the applicable requirements of § 164.514, creating de-identified health information, fundraising for the benefit of the covered entity, and marketing for which an individual authorization is not required as described in § 164.514(e)(2).

Health oversight agency means an agency or authority of the United States, a State, a territory, a political subdivision of a State or territory, or an Indian tribe, or a person or entity acting under a grant of authority from or contract with such public agency, including the employees or agents of such public agency or its contractors or persons or entities to whom it has granted authority, that is authorized by law to oversee the health care system (whether public or private) or government programs in which health information is necessary to determine eligibility or compliance, or to enforce civil rights laws for which health information is relevant.

Indirect treatment relationship means a relationship between an individual and a health care provider in which:

(1) The health care provider delivers health care to the individual based on the orders of another health care provider; and

(2) The health care provider typically provides services or products, or reports the diagnosis or results associated with the health care, directly to another health care provider, who provides the services or products or reports to the individual.

Individual means the person who is the subject of protected health information.

Individually identifiable health information is information that is a subset of health information, including demographic information collected from an individual, and:

(1) Is created or received by a health care provider, health plan, employer, or health care clearinghouse; and

(2) Relates to the past, present, or future physical or mental health or condition of an individual; the provision of health care to an individual; or the past, present, or future payment for the provision of health care to an individual; and

(i) That identifies the individual; or

(ii) With respect to which there is a reasonable basis to believe the information can be used to identify the individual.

Inmate means a person incarcerated in or otherwise confined to a correctional institution.

Law enforcement official means an officer or employee of any agency or authority of the United States, a State, a territory, a political subdivision of a State or territory, or an Indian tribe, who is empowered by law to:

(1) Investigate or conduct an official inquiry into a potential violation of law; or

(2) Prosecute or otherwise conduct a criminal, civil, or administrative proceeding arising from an alleged violation of law.

Marketing means to make a communication about a product or service a purpose of which is to encourage recipients of the communication to purchase or use the product or service.

(1) Marketing does not include communications that meet the requirements of paragraph (2) of this definition and that are made by a covered entity:

(i) For the purpose of describing the entities participating in a health care provider network or health plan network, or for the purpose of describing if and the extent to which a product or service (or payment for such product or service) is provided by a covered entity or included in a plan of benefits; or

(ii) That are tailored to the circumstances of a particular individual and the communications are:

(A) Made by a health care provider to an individual as part of the treatment of the individual, and for the purpose of furthering the treatment of that individual; or

(B) Made by a health care provider or health plan to an individual in the course of managing the treatment of that individual, or for the purpose of directing or recommending to that individual alternative treatments, therapies, health care providers, or settings of care.

(2) A communication described in paragraph (1) of this definition is not included in marketing if:

(i) The communication is made orally; or

(ii) The communication is in writing and the covered entity does not receive direct or indirect remuneration from a third party for making the communication.

Organized health care arrangement means:

(1) A clinically integrated care setting in which individuals typically receive health care from more than one health care provider;

(2) An organized system of health care in which more than one covered entity participates, and in which the participating covered entities:

(i) Hold themselves out to the public as participating in a joint arrangement; and

(ii) Participate in joint activities that include at least one of the following:

(A) Utilization review, in which health care decisions by participating covered entities are reviewed by other participating covered entities or by a third party on their behalf;

(B) Quality assessment and improvement activities, in which treatment provided by participating covered entities is assessed by other participating covered entities or by a third party on their behalf; or

(C) Payment activities, if the financial risk for delivering health care is shared, in part or in whole, by participating covered entities through the joint arrangement and if protected health information created or received by a covered entity is reviewed by other participating covered entities or by a third party on their behalf for the purpose of administering the sharing of financial risk.

(3) A group health plan and a health insurance issuer or HMO with respect to such group health plan, but only with respect to protected health information created or received by such health insurance issuer or HMO that relates to individuals who are or who have been participants or beneficiaries in such group health plan;

(4) A group health plan and one or more other group health plans each of which are maintained by the same plan sponsor; or

(5) The group health plans described in paragraph (4) of this definition and health insurance issuers or HMOs with respect to such group health plans, but only with respect to protected health information created or received by such health insurance issuers or HMOs that relates to individuals who are or have been participants or beneficiaries in any of such group health plans.

Payment means:

(1) The activities undertaken by:

(i) A health plan to obtain premiums or to determine or fulfill its responsibility for coverage and provision of benefits under the health plan; or

(ii) A covered health care provider or health plan to obtain or provide reimbursement for the provision of health care; and

(2) The activities in paragraph (1) of this definition relate to the individual to whom health care is provided and include, but are not limited to: ***82805**

(i) Determinations of eligibility or coverage (including coordination of benefits or the determination of cost sharing amounts), and adjudication or subrogation of health benefit claims;

(ii) Risk adjusting amounts due based on enrollee health status and demographic characteristics;

(iii) Billing, claims management, collection activities, obtaining payment under a contract for reinsurance (including stop-loss insurance and excess of loss insurance), and related health care data processing;

(iv) Review of health care services with respect to medical necessity, coverage under a health plan, appropriateness of care, or justification of charges;

(v) Utilization review activities, including precertification and preauthorization of services, concurrent and retrospective review of services; and

(vi) Disclosure to consumer reporting agencies of any of the following protected health information relating to collection of premiums or reimbursement:

(A) Name and address;

(B) Date of birth;

(C) Social security number;

(D) Payment history;

(E) Account number; and

(F) Name and address of the health care provider and/or health plan.

Plan sponsor is defined as defined at section 3(16)(B) of ERISA, 29 U.S.C. 1002(16)(B).

Protected health information means individually identifiable health information:

(1) Except as provided in paragraph (2) of this definition, that is:

(i) Transmitted by electronic media;

(ii) Maintained in any medium described in the definition of electronic media at § 162.103 of this subchapter; or

(iii) Transmitted or maintained in any other form or medium.

(2) Protected health information excludes individually identifiable health information in:

(i) Education records covered by the Family Educational Right and Privacy Act, as amended, 20 U.S.C. 1232g; and

(ii) Records described at 20 U.S.C. 1232g(a)(4)(B)(iv).

Psychotherapy notes means notes recorded (in any medium) by a health care provider who is a mental health professional documenting or analyzing the contents of conversation during a private counseling session or a group, joint, or family counseling session and that are separated from the rest of the individual's medical record. Psychotherapy notes excludes medication prescription and monitoring, counseling session start and stop times, the modalities and frequencies of treatment furnished, results of clinical tests, and any summary of the following items: Diagnosis, functional status, the treatment plan, symptoms, prognosis, and progress to date.

Public health authority means an agency or authority of the United States, a State, a territory, a political subdivision of a State or territory, or an Indian tribe, or a person or entity acting under a grant of authority from or contract with such public agency, including the employees or agents of such public agency or its contractors or persons or entities to whom it has granted authority, that is responsible for public health matters as part of its official mandate.

Required by law means a mandate contained in law that compels a covered entity to make a use or disclosure of protected health information and that is enforceable in a court of law. Required by law includes, but is not limited to, court orders and court-ordered warrants; subpoenas or summons issued by a court, grand jury, a governmental or tribal inspector general, or an administrative body authorized to require the production of information; a civil or an authorized investigative demand; Medicare conditions of participation with respect to health care providers participating in the program; and statutes or regulations that require the production of information, including statutes or regulations that require such information if payment is sought under a government program providing public benefits.

Research means a systematic investigation, including research development, testing, and evaluation, designed to develop or contribute to generalizable knowledge.

Treatment means the provision, coordination, or management of health care and related services by one or more health care providers, including the coordination or management of health care by a health care provider with a third party; consultation between health care providers relating to a patient; or the referral of a patient for health care from one health care provider to another.

Use means, with respect to individually identifiable health information, the sharing, employment, application, utilization, examination, or analysis of such information within an entity that maintains such information.
45 CFR § 164.502

§ 164.502 Uses and disclosures of protected health information: general rules.
(a) Standard. A covered entity may not use or disclose protected health information, except as permitted or required by this subpart or by subpart C of part 160 of this subchapter.

(1) Permitted uses and disclosures. A covered entity is permitted to use or disclose protected health information as follows:

(i) To the individual;

(ii) Pursuant to and in compliance with a consent that complies with § 164.506, to carry out treatment, payment, or health care operations;

(iii) Without consent, if consent is not required under § 164.506(a) and has not been sought under § 164.506(a)(4), to carry out treatment, payment, or health care operations, except with respect to psychotherapy notes;

(iv) Pursuant to and in compliance with a valid authorization under § 164.508;

(v) Pursuant to an agreement under, or as otherwise permitted by, § 164.510; and

(vi) As permitted by and in compliance with this section, § 164.512, or § 164.514(e), (f), and (g).

(2) Required disclosures. A covered entity is required to disclose protected health information:

(i) To an individual, when requested under, and required by § 164.524 or § 164.528; and

(ii) When required by the Secretary under subpart C of part 160 of this subchapter to investigate or determine the covered entity's compliance with this subpart.

(b) Standard: Minimum necessary. (1) Minimum necessary applies. When using or disclosing protected health information or when requesting protected health information from another covered entity, a covered entity must make reasonable efforts to limit protected health information to the minimum necessary to accomplish the intended purpose of the use, disclosure, or request.

(2) Minimum necessary does not apply. This requirement does not apply to:

(i) Disclosures to or requests by a health care provider for treatment;

(ii) Uses or disclosures made to the individual, as permitted under paragraph (a)(1)(i) of this section, as required by paragraph (a)(2)(i) of this section, or pursuant to an authorization under § 164.508, except for authorizations requested by the covered entity under § 164.508(d), (e), or (f);

(iii) Disclosures made to the Secretary in accordance with subpart C of part 160 of this subchapter; ***82806**

(iv) Uses or disclosures that are required by law, as described by § 164.512(a); and

(v) Uses or disclosures that are required for compliance with applicable requirements of this subchapter.

(c) Standard: Uses and disclosures of protected health information subject to an agreed upon restriction. A covered entity that has agreed to a restriction pursuant to § 164.522(a)(1) may not use or disclose the protected health information covered by the restriction in violation of such restriction, except as otherwise provided in § 164.522(a).

(d) Standard: Uses and disclosures of de-identified protected health information.

(1) Uses and disclosures to create de-identified information. A covered entity may use protected health information to create information that is not individually identifiable health information or disclose protected health information only to a business associate for such purpose, whether or not the de-identified information is to be used by the covered entity.

(2) Uses and disclosures of de-identified information. Health information that meets the standard and implementation specifications for de-identification under § 164.514(a) and (b) is considered not to be individually identifiable health information, i.e., de-identified. The requirements of this subpart do not apply to information that has been de-identified in accordance with the applicable requirements of § 164.514, provided that:

(i) Disclosure of a code or other means of record identification designed to enable coded or otherwise de-identified information to be re-identified constitutes disclosure of protected health information; and

(ii) If de-identified information is re-identified, a covered entity may use or disclose such re-identified information only as permitted or required by this subpart.

(e)(1) Standard: Disclosures to business associates. (i) A covered entity may disclose protected health information to a business associate and may allow a business associate to create or receive protected health information on its behalf, if the covered entity obtains satisfactory assurance that the business associate will appropriately safeguard the information.

(ii) This standard does not apply:

(A) With respect to disclosures by a covered entity to a health care provider concerning the treatment of the individual;

(B) With respect to disclosures by a group health plan or a health insurance issuer or HMO with respect to a group health plan to the plan sponsor, to the extent that the requirements of § 164.504(f) apply and are met; or

(C) With respect to uses or disclosures by a health plan that is a government program providing public benefits, if eligibility for, or enrollment in, the health plan is determined by an agency other than the agency administering the health plan, or if the protected health information used to determine enrollment or eligibility in the health plan is collected by an agency other than the agency administering the health plan, and such activity is authorized by law, with respect to the collection and sharing of individually identifiable health information for the performance of such functions by the health plan and the agency other than the agency administering the health plan.

(iii) A covered entity that violates the satisfactory assurances it provided as a business associate of another covered entity will be in noncompliance with the standards, implementation specifications, and requirements of this paragraph and § 164.504(e).

(2) Implementation specification: documentation. A covered entity must document the satisfactory assurances required by paragraph (e)(1) of this section through a written contract or other written agreement or arrangement with the business associate that meets the applicable requirements of § 164.504(e).

(f) Standard: Deceased individuals. A covered entity must comply with the requirements of this subpart with respect to the protected health information of a deceased individual.

(g)(1) Standard: Personal representatives. As specified in this paragraph, a covered entity must, except as provided in paragraphs (g)(3) and (g)(5) of this section, treat a personal representative as the individual for purposes of this subchapter.

(2) Implementation specification: adults and emancipated minors. If under applicable law a person has authority to act on behalf of an individual who is an adult or an emancipated minor in making decisions related to health care, a covered entity must treat such person as a personal representative under this subchapter, with respect to protected health information relevant to such personal representation.

(3) Implementation specification: unemancipated minors. If under applicable law a parent, guardian, or other person acting in loco parentis has authority to act on behalf of an individual who is an unemancipated minor in making decisions related to health care, a covered entity must treat such person as a personal representative under this subchapter, with respect to protected health information relevant to such personal representation, except that such person may not be a personal representative of an unemancipated minor, and the minor has the authority to act as an individual, with respect to protected health information pertaining to a health care service, if:

(i) The minor consents to such health care service; no other consent to such health care service is required by law, regardless of whether the consent of another person has also been obtained; and the minor has not requested that such person be treated as the personal representative;

(ii) The minor may lawfully obtain such health care service without the consent of a parent, guardian, or other person acting in loco parentis, and the minor, a court, or another person authorized by law consents to such health care service; or

(iii) A parent, guardian, or other person acting in loco parentis assents to an agreement of confidentiality between a covered health care provider and the minor with respect to such health care service.

(4) Implementation specification: Deceased individuals. If under applicable law an executor, administrator, or other person has authority to act on behalf of a deceased individual or of the individual's estate, a covered entity must treat such person

as a personal representative under this subchapter, with respect to protected health information relevant to such personal representation.

(5) Implementation specification: Abuse, neglect, endangerment situations. Notwithstanding a State law or any requirement of this paragraph to the contrary, a covered entity may elect not to treat a person as the personal representative of an individual if:

(i) The covered entity has a reasonable belief that:

(A) The individual has been or may be subjected to domestic violence, abuse, or neglect by such person; or

(B) Treating such person as the personal representative could endanger the individual; and

(ii) The covered entity, in the exercise of professional judgment, decides that it is not in the best interest of the individual to treat the person as the individual's personal representative.

(h) Standard: Confidential communications. A covered health care provider or health plan must comply with the applicable requirements of § 164.522(b) in communicating protected health information. ***82807**

(i) Standard: Uses and disclosures consistent with notice. A covered entity that is required by § 164.520 to have a notice may not use or disclose protected health information in a manner inconsistent with such notice. A covered entity that is required by § 164.520(b)(1)(iii) to include a specific statement in its notice if it intends to engage in an activity listed in § 164.520(b)(1)(iii)(A)-(C), may not use or disclose protected health information for such activities, unless the required statement is included in the notice.

(j) Standard: Disclosures by whistleblowers and workforce member crime victims.

(1) Disclosures by whistleblowers. A covered entity is not considered to have violated the requirements of this subpart if a member of its workforce or a business associate discloses protected health information, provided that:

(i) The workforce member or business associate believes in good faith that the covered entity has engaged in conduct that is unlawful or otherwise violates professional or clinical standards, or that the care, services, or conditions provided by the covered entity potentially endangers one or more patients, workers, or the public; and

(ii) The disclosure is to:

(A) A health oversight agency or public health authority authorized by law to investigate or otherwise oversee the relevant conduct or conditions of the covered entity or to an appropriate health care accreditation organization for the purpose of reporting the allegation of failure to meet professional standards or misconduct by the covered entity; or

(B) An attorney retained by or on behalf of the workforce member or business associate for the purpose of determining the legal options of the workforce member or business associate with regard to the conduct described in paragraph (j)(1)(i) of this section.

(2) Disclosures by workforce members who are victims of a crime. A covered entity is not considered to have violated the requirements of this subpart if a member of its workforce who is the victim of a criminal act discloses protected health information to a law enforcement official, provided that:

(i) The protected health information disclosed is about the suspected perpetrator of the criminal act; and

(ii) The protected health information disclosed is limited to the information listed in § 164.512(f)(2)(i).

45 CFR § 164.504

§ 164.504 Uses and disclosures: Organizational requirements.

(a) Definitions. As used in this section:

Common control exists if an entity has the power, directly or indirectly, significantly to influence or direct the actions or policies of another entity.

Common ownership exists if an entity or entities possess an ownership or equity interest of 5 percent or more in another entity.

Health care component has the following meaning:

(1) Components of a covered entity that perform covered functions are part of the health care component.

(2) Another component of the covered entity is part of the entity's health care component to the extent that:

(i) It performs, with respect to a component that performs covered functions, activities that would make such other component a business associate of the component that performs covered functions if the two components were separate legal entities; and

(ii) The activities involve the use or disclosure of protected health information that such other component creates or receives from or on behalf of the component that performs covered functions.

Hybrid entity means a single legal entity that is a covered entity and whose covered functions are not its primary functions.

Plan administration functions means administration functions performed by the plan sponsor of a group health plan on behalf of the group health plan and excludes functions performed by the plan sponsor in connection with any other benefit or benefit plan of the plan sponsor.

Summary health information means information, that may be individually identifiable health information, and:

(1) That summarizes the claims history, claims expenses, or type of claims experienced by individuals for whom a plan sponsor has provided health benefits under a group health plan; and

(2) From which the information described at § 164.514(b)(2)(i) has been deleted, except that the geographic information described in § 164.514(b)(2)(i)(B) need only be aggregated to the level of a five digit zip code.

(b) Standard: Health care component. If a covered entity is a hybrid entity, the requirements of this subpart, other than the requirements of this section, apply only to the health care component(s) of the entity, as specified in this section.

(c)(1) Implementation specification: Application of other provisions. In applying a provision of this subpart, other than this section, to a hybrid entity:

(i) A reference in such provision to a “covered entity” refers to a health care component of the covered entity;

(ii) A reference in such provision to a “health plan,” “covered health care provider,” or “health care clearinghouse” refers to a health care component of the covered entity if such health care component performs the functions of a health plan, covered health care provider, or health care clearinghouse, as applicable; and

(iii) A reference in such provision to “protected health information” refers to protected health information that is created or received by or on behalf of the health care component of the covered entity.

(2) Implementation specifications: Safeguard requirements. The covered entity that is a hybrid entity must ensure that a health care component of the entity complies with the applicable requirements of this subpart. In particular, and without limiting this requirement, such covered entity must ensure that:

(i) Its health care component does not disclose protected health information to another component of the covered entity in circumstances in which this subpart would prohibit such disclosure if the health care component and the other component were separate and distinct legal entities;

(ii) A component that is described by paragraph (2)(i) of the definition of health care component in this section does not use or disclose protected health information that is within paragraph (2)(ii) of such definition for purposes of its activities other than those described by paragraph (2)(i) of such definition in a way prohibited by this subpart; and

(iii) If a person performs duties for both the health care component in the capacity of a member of the workforce of such component and for another component of the entity in the same capacity with respect to that component, such workforce member must not use or disclose protected health information created or received in the course of or incident to the member's work for the health care component in a way prohibited by this subpart.

(3) Implementation specifications: Responsibilities of the covered entity. A covered entity that is a hybrid entity has the following responsibilities:

(i) For purposes of subpart C of part 160 of this subchapter, pertaining to compliance and enforcement, the covered entity has the responsibility to comply with this subpart.

(ii) The covered entity has the responsibility for complying with ***82808** § 164.530(i), pertaining to the implementation of policies and procedures to ensure compliance with this subpart, including the safeguard requirements in paragraph (c)(2) of this section.

(iii) The covered entity is responsible for designating the components that are part of one or more health care components of the covered entity and documenting the designation as required by § 164.530(j).

(d)(1) Standard: Affiliated covered entities. Legally separate covered entities that are affiliated may designate themselves as a single covered entity for purposes of this subpart.

(2) Implementation specifications: Requirements for designation of an affiliated covered entity. (i) Legally separate covered entities may designate themselves (including any health care component of such covered entity) as a single affiliated covered entity, for purposes of this subpart, if all of the covered entities designated are under common ownership or control.

(ii) The designation of an affiliated covered entity must be documented and the documentation maintained as required by § 164.530(j).

(3) Implementation specifications: Safeguard requirements. An affiliated covered entity must ensure that:

(i) The affiliated covered entity's use and disclosure of protected health information comply with the applicable requirements of this subpart; and

(ii) If the affiliated covered entity combines the functions of a health plan, health care provider, or health care clearinghouse, the affiliated covered entity complies with paragraph (g) of this section.

(e)(1) Standard: Business associate contracts. (i) The contract or other arrangement between the covered entity and the business associate required by § 164.502(e)(2) must meet the requirements of paragraph (e)(2) or (e)(3) of this section, as applicable.

(ii) A covered entity is not in compliance with the standards in § 164.502(e) and paragraph (e) of this section, if the covered entity knew of a pattern of activity or practice of the business associate that constituted a material breach or violation of the business associate's obligation under the contract or other arrangement, unless the covered entity took reasonable steps to cure the breach or end the violation, as applicable, and, if such steps were unsuccessful:

(A) Terminated the contract or arrangement, if feasible; or

(B) If termination is not feasible, reported the problem to the Secretary.

(2) Implementation specifications: Business associate contracts. A contract between the covered entity and a business associate must:

(i) Establish the permitted and required uses and disclosures of such information by the business associate. The contract may not authorize the business associate to use or further disclose the information in a manner that would violate the requirements of this subpart, if done by the covered entity, except that:

(A) The contract may permit the business associate to use and disclose protected health information for the proper management and administration of the business associate, as provided in paragraph (e)(4) of this section; and

(B) The contract may permit the business associate to provide data aggregation services relating to the health care operations of the covered entity.

(ii) Provide that the business associate will:

(A) Not use or further disclose the information other than as permitted or required by the contract or as required by law;

(B) Use appropriate safeguards to prevent use or disclosure of the information other than as provided for by its contract;

(C) Report to the covered entity any use or disclosure of the information not provided for by its contract of which it becomes aware;

(D) Ensure that any agents, including a subcontractor, to whom it provides protected health information received from, or created or received by the business associate on behalf of, the covered entity agrees to the same restrictions and conditions that apply to the business associate with respect to such information;

(E) Make available protected health information in accordance with § 164.524;

(F) Make available protected health information for amendment and incorporate any amendments to protected health information in accordance with § 164.526;

(G) Make available the information required to provide an accounting of disclosures in accordance with § 164.528;

(H) Make its internal practices, books, and records relating to the use and disclosure of protected health information received from, or created or received by the business associate on behalf of, the covered entity available to the Secretary for purposes of determining the covered entity's compliance with this subpart; and

(I) At termination of the contract, if feasible, return or destroy all protected health information received from, or created or received by the business associate on behalf of, the covered entity that the business associate still maintains in any form and retain no copies of such information or, if such return or destruction is not feasible, extend the protections of the contract to the information and limit further uses and disclosures to those purposes that make the return or destruction of the information infeasible.

(iii) Authorize termination of the contract by the covered entity, if the covered entity determines that the business associate has violated a material term of the contract.

(3) Implementation specifications: Other arrangements. (i) If a covered entity and its business associate are both governmental entities:

(A) The covered entity may comply with paragraph (e) of this section by entering into a memorandum of understanding with the business associate that contains terms that accomplish the objectives of paragraph (e)(2) of this section.

(B) The covered entity may comply with paragraph (e) of this section, if other law (including regulations adopted by the covered entity or its business associate) contains requirements applicable to the business associate that accomplish the objectives of paragraph (e)(2) of this section.

(ii) If a business associate is required by law to perform a function or activity on behalf of a covered entity or to provide a service described in the definition of business associate in § 160.103 of this subchapter to a covered entity, such covered entity may disclose protected health information to the business associate to the extent necessary to comply with the legal mandate without meeting the requirements of this paragraph (e), provided that the covered entity attempts in good faith to obtain satisfactory assurances as required by paragraph (e)(3)(i) of this section, and, if such attempt fails, documents the attempt and the reasons that such assurances cannot be obtained.

(iii) The covered entity may omit from its other arrangements the termination authorization required by paragraph (e)(2)(iii) of this section, if such authorization is inconsistent with the statutory obligations of the covered entity or its business associate.

(4) Implementation specifications: Other requirements for contracts and other arrangements. (i) The contract or other arrangement between the covered entity and the business associate may ***82809** permit the business associate to use the information received by the business associate in its capacity as a business associate to the covered entity, if necessary:

(A) For the proper management and administration of the business associate; or

(B) To carry out the legal responsibilities of the business associate.

(ii) The contract or other arrangement between the covered entity and the business associate may permit the business associate to disclose the information received by the business associate in its capacity as a business associate for the purposes described in paragraph (e)(4)(i) of this section, if:

(A) The disclosure is required by law; or

(B)(1) The business associate obtains reasonable assurances from the person to whom the information is disclosed that it will be held confidentially and used or further disclosed only as required by law or for the purpose for which it was disclosed to the person; and

(2) The person notifies the business associate of any instances of which it is aware in which the confidentiality of the information has been breached.

(f)(1) Standard: Requirements for group health plans. (i) Except as provided under paragraph (f)(1)(ii) of this section or as otherwise authorized under § 164.508, a group health plan, in order to disclose protected health information to the plan sponsor or to provide for or permit the disclosure of protected health information to the plan sponsor by a health insurance issuer or HMO with respect to the group health plan, must ensure that the plan documents restrict uses and discloses of such information by the plan sponsor consistent with the requirements of this subpart.

(ii) The group health plan, or a health insurance issuer or HMO with respect to the group health plan, may disclose summary health information to the plan sponsor, if the plan sponsor requests the summary health information for the purpose of :

(A) Obtaining premium bids from health plans for providing health insurance coverage under the group health plan; or

(B) Modifying, amending, or terminating the group health plan.

(2) Implementation specifications: Requirements for plan documents. The plan documents of the group health plan must be amended to incorporate provisions to:

(i) Establish the permitted and required uses and disclosures of such information by the plan sponsor, provided that such permitted and required uses and disclosures may not be inconsistent with this subpart.

(ii) Provide that the group health plan will disclose protected health information to the plan sponsor only upon receipt of a certification by the plan sponsor that the plan documents have been amended to incorporate the following provisions and that the plan sponsor agrees to:

(A) Not use or further disclose the information other than as permitted or required by the plan documents or as required by law;

(B) Ensure that any agents, including a subcontractor, to whom it provides protected health information received from the group health plan agree to the same restrictions and conditions that apply to the plan sponsor with respect to such information;

(C) Not use or disclose the information for employment-related actions and decisions or in connection with any other benefit or employee benefit plan of the plan sponsor;

(D) Report to the group health plan any use or disclosure of the information that is inconsistent with the uses or disclosures provided for of which it becomes aware;

(E) Make available protected health information in accordance with § 164.524;

(F) Make available protected health information for amendment and incorporate any amendments to protected health information in accordance with § 164.526;

(G) Make available the information required to provide an accounting of disclosures in accordance with § 164.528;

(H) Make its internal practices, books, and records relating to the use and disclosure of protected health information received from the group health plan available to the Secretary for purposes of determining compliance by the group health plan with this subpart;

(I) If feasible, return or destroy all protected health information received from the group health plan that the sponsor still maintains in any form and retain no copies of such information when no longer needed for the purpose for which disclosure was

made, except that, if such return or destruction is not feasible, limit further uses and disclosures to those purposes that make the return or destruction of the information infeasible; and

(J) Ensure that the adequate separation required in paragraph (f)(2)(iii) of this section is established.

(iii) Provide for adequate separation between the group health plan and the plan sponsor. The plan documents must:

(A) Describe those employees or classes of employees or other persons under the control of the plan sponsor to be given access to the protected health information to be disclosed, provided that any employee or person who receives protected health information relating to payment under, health care operations of, or other matters pertaining to the group health plan in the ordinary course of business must be included in such description;

(B) Restrict the access to and use by such employees and other persons described in paragraph (f)(2)(iii)(A) of this section to the plan administration functions that the plan sponsor performs for the group health plan; and

(C) Provide an effective mechanism for resolving any issues of noncompliance by persons described in paragraph (f)(2)(iii)(A) of this section with the plan document provisions required by this paragraph.

(3) Implementation specifications: Uses and disclosures. A group health plan may:

(i) Disclose protected health information to a plan sponsor to carry out plan administration functions that the plan sponsor performs only consistent with the provisions of paragraph (f)(2) of this section;

(ii) Not permit a health insurance issuer or HMO with respect to the group health plan to disclose protected health information to the plan sponsor except as permitted by this paragraph;

(iii) Not disclose and may not permit a health insurance issuer or HMO to disclose protected health information to a plan sponsor as otherwise permitted by this paragraph unless a statement required by § 164.520(b)(1)(iii)(C) is included in the appropriate notice; and (iv) Not disclose protected health information to the plan sponsor for the purpose of employment-related actions or decisions or in connection with any other benefit or employee benefit plan of the plan sponsor.

(g) Standard: Requirements for a covered entity with multiple covered functions.

(1) A covered entity that performs multiple covered functions that would make the entity any combination of a health plan, a covered health care provider, and a health care clearinghouse, must comply with the standards, requirements, and implementation specifications of this subpart, as applicable to the health plan, health care provider, or health care clearinghouse covered functions performed. ***82810**

(2) A covered entity that performs multiple covered functions may use or disclose the protected health information of individuals who receive the covered entity's health plan or health care provider services, but not both, only for purposes related to the appropriate function being performed.

45 CFR § 164.506

§ 164.506 Consent for uses or disclosures to carry out treatment, payment, or health care operations.

(a) Standard: Consent requirement. (1) Except as provided in paragraph (a)(2) or (a)(3) of this section, a covered health care provider must obtain the individual's consent, in accordance with this section, prior to using or disclosing protected health information to carry out treatment, payment, or health care operations.

(2) A covered health care provider may, without consent, use or disclose protected health information to carry out treatment, payment, or health care operations, if:

(i) The covered health care provider has an indirect treatment relationship with the individual; or

(ii) The covered health care provider created or received the protected health information in the course of providing health care to an individual who is an inmate.

(3)(i) A covered health care provider may, without prior consent, use or disclose protected health information created or received under paragraph (a)(3)(i)(A)-(C) of this section to carry out treatment, payment, or health care operations:

(A) In emergency treatment situations, if the covered health care provider attempts to obtain such consent as soon as reasonably practicable after the delivery of such treatment;

(B) If the covered health care provider is required by law to treat the individual, and the covered health care provider attempts to obtain such consent but is unable to obtain such consent; or

(C) If a covered health care provider attempts to obtain such consent from the individual but is unable to obtain such consent due to substantial barriers to communicating with the individual, and the covered health care provider determines, in the exercise of professional judgment, that the individual's consent to receive treatment is clearly inferred from the circumstances.

(ii) A covered health care provider that fails to obtain such consent in accordance with paragraph (a)(3)(i) of this section must document its attempt to obtain consent and the reason why consent was not obtained.

(4) If a covered entity is not required to obtain consent by paragraph (a)(1) of this section, it may obtain an individual's consent for the covered entity's own use or disclosure of protected health information to carry out treatment, payment, or health care operations, provided that such consent meets the requirements of this section.

(5) Except as provided in paragraph (f)(1) of this section, a consent obtained by a covered entity under this section is not effective to permit another covered entity to use or disclose protected health information.

(b) Implementation specifications: General requirements. (1) A covered health care provider may condition treatment on the provision by the individual of a consent under this section.

(2) A health plan may condition enrollment in the health plan on the provision by the individual of a consent under this section sought in conjunction with such enrollment.

(3) A consent under this section may not be combined in a single document with the notice required by § 164.520.

(4)(i) A consent for use or disclosure may be combined with other types of written legal permission from the individual (e.g., an informed consent for treatment or a consent to assignment of benefits), if the consent under this section:

(A) Is visually and organizationally separate from such other written legal permission; and

(B) Is separately signed by the individual and dated.

(ii) A consent for use or disclosure may be combined with a research authorization under § 164.508(f).

(5) An individual may revoke a consent under this section at any time, except to the extent that the covered entity has taken action in reliance thereon. Such revocation must be in writing.

(6) A covered entity must document and retain any signed consent under this section as required by § 164.530(j).

(c) Implementation specifications: Content requirements. A consent under this section must be in plain language and:

(1) Inform the individual that protected health information may be used and disclosed to carry out treatment, payment, or health care operations;

(2) Refer the individual to the notice required by § 164.520 for a more complete description of such uses and disclosures and state that the individual has the right to review the notice prior to signing the consent;

(3) If the covered entity has reserved the right to change its privacy practices that are described in the notice in accordance with § 164.520(b)(1)(v)(C), state that the terms of its notice may change and describe how the individual may obtain a revised notice;

(4) State that:

(i) The individual has the right to request that the covered entity restrict how protected health information is used or disclosed to carry out treatment, payment, or health care operations;

(ii) The covered entity is not required to agree to requested restrictions; and

(iii) If the covered entity agrees to a requested restriction, the restriction is binding on the covered entity;

(5) State that the individual has the right to revoke the consent in writing, except to the extent that the covered entity has taken action in reliance thereon; and

(6) Be signed by the individual and dated.

(d) Implementation specifications: Defective consents. There is no consent under this section, if the document submitted has any of the following defects:

(1) The consent lacks an element required by paragraph (c) of this section, as applicable; or

(2) The consent has been revoked in accordance with paragraph (b)(5) of this section.

(e) Standard: Resolving conflicting consents and authorizations. (1) If a covered entity has obtained a consent under this section and receives any other authorization or written legal permission from the individual for a disclosure of protected health information to carry out treatment, payment, or health care operations, the covered entity may disclose such protected health information only in accordance with the more restrictive consent, authorization, or other written legal permission from the individual.

(2) A covered entity may attempt to resolve a conflict between a consent and an authorization or other written legal permission from the individual described in paragraph (e)(1) of this section by:

(i) Obtaining a new consent from the individual under this section for the disclosure to carry out treatment, payment, or health care operations; or

(ii) Communicating orally or in writing with the individual in order to determine the individual's preference in resolving the conflict. The covered entity must document the individual's preference and may only disclose protected health information in accordance with the individual's preference. ***82811**

(f)(1) Standard: Joint consents. Covered entities that participate in an organized health care arrangement and that have a joint notice under § 164.520(d) may comply with this section by a joint consent.

(2) Implementation specifications: Requirements for joint consents. (i) A joint consent must:

(A) Include the name or other specific identification of the covered entities, or classes of covered entities, to which the joint consent applies; and

(B) Meet the requirements of this section, except that the statements required by this section may be altered to reflect the fact that the consent covers more than one covered entity.

(ii) If an individual revokes a joint consent, the covered entity that receives the revocation must inform the other entities covered by the joint consent of the revocation as soon as practicable.
45 CFR § 164.508

§ 164.508 Uses and disclosures for which an authorization is required.
(a) Standard: Authorizations for uses and disclosures. (1) Authorization required: General rule. Except as otherwise permitted or required by this subchapter, a covered entity may not use or disclose protected health information without an authorization that is valid under this section. When a covered entity obtains or receives a valid authorization for its use or disclosure of protected health information, such use or disclosure must be consistent with such authorization.

(2) Authorization required: psychotherapy notes. Notwithstanding any other provision of this subpart, other than transition provisions provided for in § 164.532, a covered entity must obtain an authorization for any use or disclosure of psychotherapy notes, except:

(i) To carry out the following treatment, payment, or health care operations, consistent with consent requirements in § 164.506:

(A) Use by originator of the psychotherapy notes for treatment;

(B) Use or disclosure by the covered entity in training programs in which students, trainees, or practitioners in mental health learn under supervision to practice or improve their skills in group, joint, family, or individual counseling; or

(C) Use or disclosure by the covered entity to defend a legal action or other proceeding brought by the individual; and

(ii) A use or disclosure that is required by § 164.502(a)(2)(ii) or permitted by § 164.512(a); § 164.512(d) with respect to the oversight of the originator of the psychotherapy notes; § 164.512(g)(1); or § 164.512(j)(1)(i).

(b) Implementation specifications: General requirements.—(1) Valid authorizations.

(i) A valid authorization is a document that contains the elements listed in paragraph (c) and, as applicable, paragraph (d), (e), or (f) of this section.

(ii) A valid authorization may contain elements or information in addition to the elements required by this section, provided that such additional elements or information are not be inconsistent with the elements required by this section.

(2) Defective authorizations. An authorization is not valid, if the document submitted has any of the following defects:

(i) The expiration date has passed or the expiration event is known by the covered entity to have occurred;

(ii) The authorization has not been filled out completely, with respect to an element described by paragraph (c), (d), (e), or (f) of this section, if applicable;

(iii) The authorization is known by the covered entity to have been revoked;

(iv) The authorization lacks an element required by paragraph (c), (d), (e), or (f) of this section, if applicable;

(v) The authorization violates paragraph (b)(3) of this section, if applicable;

(vi) Any material information in the authorization is known by the covered entity to be false.

(3) Compound authorizations. An authorization for use or disclosure of protected health information may not be combined with any other document to create a compound authorization, except as follows:

(i) An authorization for the use or disclosure of protected health information created for research that includes treatment of the individual may be combined as permitted by § 164.506(b)(4)(ii) or paragraph (f) of this section;

(ii) An authorization for a use or disclosure of psychotherapy notes may only be combined with another authorization for a use or disclosure of psychotherapy notes;

(iii) An authorization under this section, other than an authorization for a use or disclosure of psychotherapy notes may be combined with any other such authorization under this section, except when a covered entity has conditioned the provision of treatment, payment, enrollment in the health plan, or eligibility for benefits under paragraph (b)(4) of this section on the provision of one of the authorizations.

(4) Prohibition on conditioning of authorizations. A covered entity may not condition the provision to an individual of treatment, payment, enrollment in the health plan, or eligibility for benefits on the provision of an authorization, except:

(i) A covered health care provider may condition the provision of research-related treatment on provision of an authorization under paragraph (f) of this section;

(ii) A health plan may condition enrollment in the health plan or eligibility for benefits on provision of an authorization requested by the health plan prior to an individual's enrollment in the health plan, if:

(A) The authorization sought is for the health plan's eligibility or enrollment determinations relating to the individual or for its underwriting or risk rating determinations; and

(B) The authorization is not for a use or disclosure of psychotherapy notes under paragraph (a)(2) of this section;

(iii) A health plan may condition payment of a claim for specified benefits on provision of an authorization under paragraph (e) of this section, if:

(A) The disclosure is necessary to determine payment of such claim; and

(B) The authorization is not for a use or disclosure of psychotherapy notes under paragraph (a)(2) of this section; and

(iv) A covered entity may condition the provision of health care that is solely for the purpose of creating protected health information for disclosure to a third party on provision of an authorization for the disclosure of the protected health information to such third party.

(5) Revocation of authorizations. An individual may revoke an authorization provided under this section at any time, provided that the revocation is in writing, except to the extent that:

(i) The covered entity has taken action in reliance thereon; or

(ii) If the authorization was obtained as a condition of obtaining insurance coverage, other law provides the insurer with the right to contest a claim under the policy.

(6) Documentation. A covered entity must document and retain any signed authorization under this section as required by § 164.530(j).

(c) Implementation specifications: Core elements and requirements. (1) Core elements. A valid authorization under this section must contain at least the following elements:

(i) A description of the information to be used or disclosed that identifies the information in a specific and meaningful fashion;
***82812**

(ii) The name or other specific identification of the person(s), or class of persons, authorized to make the requested use or disclosure;

(iii) The name or other specific identification of the person(s), or class of persons, to whom the covered entity may make the requested use or disclosure;

(iv) An expiration date or an expiration event that relates to the individual or the purpose of the use or disclosure;

(v) A statement of the individual's right to revoke the authorization in writing and the exceptions to the right to revoke, together with a description of how the individual may revoke the authorization;

(vi) A statement that information used or disclosed pursuant to the authorization may be subject to redisclosure by the recipient and no longer be protected by this rule;

(vii) Signature of the individual and date; and

(viii) If the authorization is signed by a personal representative of the individual, a description of such representative's authority to act for the individual.

(2) Plain language requirement. The authorization must be written in plain language.

(d) Implementation specifications: Authorizations requested by a covered entity for its own uses and disclosures. If an authorization is requested by a covered entity for its own use or disclosure of protected health information that it maintains, the covered entity must comply with the following requirements.

(1) Required elements. The authorization for the uses or disclosures described in this paragraph must, in addition to meeting the requirements of paragraph (c) of this section, contain the following elements:

(i) For any authorization to which the prohibition on conditioning in paragraph (b)(4) of this section applies, a statement that the covered entity will not condition treatment, payment, enrollment in the health plan, or eligibility for benefits on the individual's providing authorization for the requested use or disclosure;

(ii) A description of each purpose of the requested use or disclosure;

(iii) A statement that the individual may:

(A) Inspect or copy the protected health information to be used or disclosed as provided in § 164.524; and

(B) Refuse to sign the authorization; and

(iv) If use or disclosure of the requested information will result in direct or indirect remuneration to the covered entity from a third party, a statement that such remuneration will result.

(2) Copy to the individual. A covered entity must provide the individual with a copy of the signed authorization.

(e) Implementation specifications: Authorizations requested by a covered entity for disclosures by others. If an authorization is requested by a covered entity for another covered entity to disclose protected health information to the covered entity requesting the authorization to carry out treatment, payment, or health care operations, the covered entity requesting the authorization must comply with the following requirements.

(1) Required elements. The authorization for the disclosures described in this paragraph must, in addition to meeting the requirements of paragraph (c) of this section, contain the following elements:

(i) A description of each purpose of the requested disclosure;

(ii) Except for an authorization on which payment may be conditioned under paragraph (b)(4)(iii) of this section, a statement that the covered entity will not condition treatment, payment, enrollment in the health plan, or eligibility for benefits on the individual's providing authorization for the requested use or disclosure; and

(iii) A statement that the individual may refuse to sign the authorization.

(2) Copy to the individual. A covered entity must provide the individual with a copy of the signed authorization.

(f) Implementation specifications: Authorizations for uses and disclosures of protected health information created for research that includes treatment of the individual.

(1) Required elements. Except as otherwise permitted by § 164.512(i), a covered entity that creates protected health information for the purpose, in whole or in part, of research that includes treatment of individuals must obtain an authorization for the use or disclosure of such information. Such authorization must:

(i) For uses and disclosures not otherwise permitted or required under this subpart, meet the requirements of paragraphs (c) and (d) of this section; and

(ii) Contain:

(A) A description of the extent to which such protected health information will be used or disclosed to carry out treatment, payment, or health care operations;

(B) A description of any protected health information that will not be used or disclosed for purposes permitted in accordance with §§ 164.510 and 164.512, provided that the covered entity may not include a limitation affecting its right to make a use or disclosure that is required by law or permitted by § 164.512(j)(1)(i); and

(C) If the covered entity has obtained or intends to obtain the individual's consent under § 164.506, or has provided or intends to provide the individual with a notice under § 164.520, the authorization must refer to that consent or notice, as applicable, and state that the statements made pursuant to this section are binding.

(2) Optional procedure. An authorization under this paragraph may be in the same document as:

(i) A consent to participate in the research;

(ii) A consent to use or disclose protected health information to carry out treatment, payment, or health care operations under § 164.506; or

(iii) A notice of privacy practices under § 164.520.

45 CFR § 164.510

§ 164.510 Uses and disclosures requiring an opportunity for the individual to agree or to object.

A covered entity may use or disclose protected health information without the written consent or authorization of the individual as described by §§ 164.506 and 164.508, respectively, provided that the individual is informed in advance of the use or disclosure and has the opportunity to agree to or prohibit or restrict the disclosure in accordance with the applicable requirements of this section. The covered entity may orally inform the individual of and obtain the individual's oral agreement or objection to a use or disclosure permitted by this section.

(a) Standard: use and disclosure for facility directories. (1) Permitted uses and disclosure. Except when an objection is expressed in accordance with paragraphs (a)(2) or (3) of this section, a covered health care provider may:

(i) Use the following protected health information to maintain a directory of individuals in its facility:

(A) The individual's name;

(B) The individual's location in the covered health care provider's facility;

(C) The individual's condition described in general terms that does not communicate specific medical information about the individual; and

(D) The individual's religious affiliation; and

(ii) Disclose for directory purposes such information:

(A) To members of the clergy; or ***82813**

(B) Except for religious affiliation, to other persons who ask for the individual by name.

(2) Opportunity to object. A covered health care provider must inform an individual of the protected health information that it may include in a directory and the persons to whom it may disclose such information (including disclosures to clergy of information regarding religious affiliation) and provide the individual with the opportunity to restrict or prohibit some or all of the uses or disclosures permitted by paragraph (a)(1) of this section.

(3) Emergency circumstances. (i) If the opportunity to object to uses or disclosures required by paragraph (a)(2) of this section cannot practicably be provided because of the individual's incapacity or an emergency treatment circumstance, a covered health care provider may use or disclose some or all of the protected health information permitted by paragraph (a)(1) of this section for the facility's directory, if such disclosure is:

(A) Consistent with a prior expressed preference of the individual, if any, that is known to the covered health care provider; and

(B) In the individual's best interest as determined by the covered health care provider, in the exercise of professional judgment.

(ii) The covered health care provider must inform the individual and provide an opportunity to object to uses or disclosures for directory purposes as required by paragraph (a)(2) of this section when it becomes practicable to do so.

(b) Standard: uses and disclosures for involvement in the individual's care and notification purposes. (1) Permitted uses and disclosures. (i) A covered entity may, in accordance with paragraphs (b)(2) or (3) of this section, disclose to a family member, other relative, or a close personal friend of the individual, or any other person identified by the individual, the protected health information directly relevant to such person's involvement with the individual's care or payment related to the individual's health care.

(ii) A covered entity may use or disclose protected health information to notify, or assist in the notification of (including identifying or locating), a family member, a personal representative of the individual, or another person responsible for the care of the individual of the individual's location, general condition, or death. Any such use or disclosure of protected health information for such notification purposes must be in accordance with paragraphs (b)(2), (3), or (4) of this section, as applicable.

(2) Uses and disclosures with the individual present. If the individual is present for, or otherwise available prior to, a use or disclosure permitted by paragraph (b)(1) of this section and has the capacity to make health care decisions, the covered entity may use or disclose the protected health information if it:

(i) Obtains the individual's agreement;

(ii) Provides the individual with the opportunity to object to the disclosure, and the individual does not express an objection; or

(iii) Reasonably infers from the circumstances, based the exercise of professional judgment, that the individual does not object to the disclosure.

(3) Limited uses and disclosures when the individual is not present. If the individual is not present for, or the opportunity to agree or object to the use or disclosure cannot practicably be provided because of the individual's incapacity or an emergency circumstance, the covered entity may, in the exercise of professional judgment, determine whether the disclosure is in the best interests of the individual and, if so, disclose only the protected health information that is directly relevant to the person's involvement with the individual's health care. A covered entity may use professional judgment and its experience with common practice to make reasonable inferences of the individual's best interest in allowing a person to act on behalf of the individual to pick up filled prescriptions, medical supplies, X-rays, or other similar forms of protected health information.

(4) Use and disclosures for disaster relief purposes. A covered entity may use or disclose protected health information to a public or private entity authorized by law or by its charter to assist in disaster relief efforts, for the purpose of coordinating with such entities the uses or disclosures permitted by paragraph (b)(1)(ii) of this section. The requirements in paragraphs (b)(2) and (3) of this section apply to such uses and disclosure to the extent that the covered entity, in the exercise of professional judgment, determines that the requirements do not interfere with the ability to respond to the emergency circumstances.
45 CFR § 164.512

§ 164.512 Uses and disclosures for which consent, an authorization, or opportunity to agree or object is not required.

A covered entity may use or disclose protected health information without the written consent or authorization of the individual as described in §§ 164.506 and 164.508, respectively, or the opportunity for the individual to agree or object as described in § 164.510, in the situations covered by this section, subject to the applicable requirements of this section. When the covered entity is required by this section to inform the individual of, or when the individual may agree to, a use or disclosure permitted by this section, the covered entity's information and the individual's agreement may be given orally.

(a) Standard: Uses and disclosures required by law. (1) A covered entity may use or disclose protected health information to the extent that such use or disclosure is required by law and the use or disclosure complies with and is limited to the relevant requirements of such law.

(2) A covered entity must meet the requirements described in paragraph (c), (e), or (f) of this section for uses or disclosures required by law.

(b) Standard: uses and disclosures for public health activities. (1) Permitted disclosures. A covered entity may disclose protected health information for the public health activities and purposes described in this paragraph to:

(i) A public health authority that is authorized by law to collect or receive such information for the purpose of preventing or controlling disease, injury, or disability, including, but not limited to, the reporting of disease, injury, vital events such as birth or death, and the conduct of public health surveillance, public health investigations, and public health interventions; or, at the direction of a public health authority, to an official of a foreign government agency that is acting in collaboration with a public health authority;

(ii) A public health authority or other appropriate government authority authorized by law to receive reports of child abuse or neglect;

(iii) A person subject to the jurisdiction of the Food and Drug Administration:

(A) To report adverse events (or similar reports with respect to food or dietary supplements), product defects or problems (including problems with the use or labeling of a product), or biological product deviations if the disclosure is made to the person required or directed to report such information to the Food and Drug Administration;

(B) To track products if the disclosure is made to a person required or directed by the Food and Drug Administration to track the product;

(C) To enable product recalls, repairs, or replacement (including locating and ***82814** notifying individuals who have received products of product recalls, withdrawals, or other problems); or

(D) To conduct post marketing surveillance to comply with requirements or at the direction of the Food and Drug Administration;

(iv) A person who may have been exposed to a communicable disease or may otherwise be at risk of contracting or spreading a disease or condition, if the covered entity or public health authority is authorized by law to notify such person as necessary in the conduct of a public health intervention or investigation; or

(v) An employer, about an individual who is a member of the workforce of the employer, if:

(A) The covered entity is a covered health care provider who is a member of the workforce of such employer or who provides a health care to the individual at the request of the employer:

(1) To conduct an evaluation relating to medical surveillance of the workplace; or

(2) To evaluate whether the individual has a work-related illness or injury;

(B) The protected health information that is disclosed consists of findings concerning a work-related illness or injury or a workplace-related medical surveillance;

(C) The employer needs such findings in order to comply with its obligations, under 29 CFR parts 1904 through 1928, 30 CFR parts 50 through 90, or under state law having a similar purpose, to record such illness or injury or to carry out responsibilities for workplace medical surveillance;

(D) The covered health care provider provides written notice to the individual that protected health information relating to the medical surveillance of the workplace and work-related illnesses and injuries is disclosed to the employer:

(1) By giving a copy of the notice to the individual at the time the health care is provided; or

(2) If the health care is provided on the work site of the employer, by posting the notice in a prominent place at the location where the health care is provided.

(2) Permitted uses. If the covered entity also is a public health authority, the covered entity is permitted to use protected health information in all cases in which it is permitted to disclose such information for public health activities under paragraph (b)(1) of this section.

(c) Standard: Disclosures about victims of abuse, neglect or domestic violence. (1) Permitted disclosures. Except for reports of child abuse or neglect permitted by paragraph (b)(1)(ii) of this section, a covered entity may disclose protected health information about an individual whom the covered entity reasonably believes to be a victim of abuse, neglect, or domestic violence to a government authority, including a social service or protective services agency, authorized by law to receive reports of such abuse, neglect, or domestic violence:

(i) To the extent the disclosure is required by law and the disclosure complies with and is limited to the relevant requirements of such law;

(ii) If the individual agrees to the disclosure; or

(iii) To the extent the disclosure is expressly authorized by statute or regulation and:

(A) The covered entity, in the exercise of professional judgment, believes the disclosure is necessary to prevent serious harm to the individual or other potential victims; or

(B) If the individual is unable to agree because of incapacity, a law enforcement or other public official authorized to receive the report represents that the protected health information for which disclosure is sought is not intended to be used against the individual and that an immediate enforcement activity that depends upon the disclosure would be materially and adversely affected by waiting until the individual is able to agree to the disclosure.

(2) Informing the individual. A covered entity that makes a disclosure permitted by paragraph (c)(1) of this section must promptly inform the individual that such a report has been or will be made, except if:

(i) The covered entity, in the exercise of professional judgment, believes informing the individual would place the individual at risk of serious harm; or

(ii) The covered entity would be informing a personal representative, and the covered entity reasonably believes the personal representative is responsible for the abuse, neglect, or other injury, and that informing such person would not be in the best interests of the individual as determined by the covered entity, in the exercise of professional judgment.

(d) Standard: Uses and disclosures for health oversight activities. (1) Permitted disclosures. A covered entity may disclose protected health information to a health oversight agency for oversight activities authorized by law, including audits; civil, administrative, or criminal investigations; inspections; licensure or disciplinary actions; civil, administrative, or criminal proceedings or actions; or other activities necessary for appropriate oversight of:

(i) The health care system;

(ii) Government benefit programs for which health information is relevant to beneficiary eligibility;

(iii) Entities subject to government regulatory programs for which health information is necessary for determining compliance with program standards; or

(iv) Entities subject to civil rights laws for which health information is necessary for determining compliance.

(2) Exception to health oversight activities. For the purpose of the disclosures permitted by paragraph (d)(1) of this section, a health oversight activity does not include an investigation or other activity in which the individual is the subject of the investigation or activity and such investigation or other activity does not arise out of and is not directly related to:

(i) The receipt of health care;

(ii) A claim for public benefits related to health; or

(iii) Qualification for, or receipt of, public benefits or services when a patient's health is integral to the claim for public benefits or services.

(3) Joint activities or investigations. Nothwithstanding paragraph (d)(2) of this section, if a health oversight activity or investigation is conducted in conjunction with an oversight activity or investigation relating to a claim for public benefits not related to health, the joint activity or investigation is considered a health oversight activity for purposes of paragraph (d) of this section.

(4) Permitted uses. If a covered entity also is a health oversight agency, the covered entity may use protected health information for health oversight activities as permitted by paragraph (d) of this section.

(e) Standard: Disclosures for judicial and administrative proceedings.

(1) Permitted disclosures. A covered entity may disclose protected health information in the course of any judicial or administrative proceeding:

(i) In response to an order of a court or administrative tribunal, provided that the covered entity discloses only the protected health information expressly authorized by such order; or

(ii) In response to a subpoena, discovery request, or other lawful process, that is not accompanied by an order of a court or administrative tribunal, if:

(A) The covered entity receives satisfactory assurance, as described in paragraph (e)(1)(iii) of this section, from the party seeking the information that reasonable efforts have been made by ***82815** such party to ensure that the individual who is the subject of the protected health information that has been requested has been given notice of the request; or

(B) The covered entity receives satisfactory assurance, as described in paragraph (e)(1)(iv) of this section, from the party seeking the information that reasonable efforts have been made by such party to secure a qualified protective order that meets the requirements of paragraph (e)(1)(v) of this section.

(iii) For the purposes of paragraph (e)(1)(ii)(A) of this section, a covered entity receives satisfactory assurances from a party seeking protecting health information if the covered entity receives from such party a written statement and accompanying documentation demonstrating that:

(A) The party requesting such information has made a good faith attempt to provide written notice to the individual (or, if the individual's location is unknown, to mail a notice to the individual's last known address);

(B) The notice included sufficient information about the litigation or proceeding in which the protected health information is requested to permit the individual to raise an objection to the court or administrative tribunal; and

(C) The time for the individual to raise objections to the court or administrative tribunal has elapsed, and:

(1) No objections were filed; or

(2) All objections filed by the individual have been resolved by the court or the administrative tribunal and the disclosures being sought are consistent with such resolution.

(iv) For the purposes of paragraph (e)(1)(ii)(B) of this section, a covered entity receives satisfactory assurances from a party seeking protected health information, if the covered entity receives from such party a written statement and accompanying documentation demonstrating that:

(A) The parties to the dispute giving rise to the request for information have agreed to a qualified protective order and have presented it to the court or administrative tribunal with jurisdiction over the dispute; or

(B) The party seeking the protected health information has requested a qualified protective order from such court or administrative tribunal.

(v) For purposes of paragraph (e)(1) of this section, a qualified protective order means, with respect to protected health information requested under paragraph (e)(1)(ii) of this section, an order of a court or of an administrative tribunal or a stipulation by the parties to the litigation or administrative proceeding that:

(A) Prohibits the parties from using or disclosing the protected health information for any purpose other than the litigation or proceeding for which such information was requested; and

(B) Requires the return to the covered entity or destruction of the protected health information (including all copies made) at the end of the litigation or proceeding.

(vi) Nothwithstanding paragraph (e)(1)(ii) of this section, a covered entity may disclose protected health information in response to lawful process described in paragraph (e)(1)(ii) of this section without receiving satisfactory assurance under paragraph (e)(1)(ii)(A) or (B) of this section, if the covered entity makes reasonable efforts to provide notice to the individual sufficient

to meet the requirements of paragraph (e)(1)(iii) of this section or to seek a qualified protective order sufficient to meet the requirements of paragraph (e)(1)(iv) of this section.

(2) Other uses and disclosures under this section. The provisions of this paragraph do not supersede other provisions of this section that otherwise permit or restrict uses or disclosures of protected health information.

(f) Standard: Disclosures for law enforcement purposes. A covered entity may disclose protected health information for a law enforcement purpose to a law enforcement official if the conditions in paragraphs (f)(1) through (f)(6) of this section are met, as applicable.

(1) Permitted disclosures: Pursuant to process and as otherwise required by law. A covered entity may disclose protected health information:

(i) As required by law including laws that require the reporting of certain types of wounds or other physical injuries, except for laws subject to paragraph (b)(1)(ii) or (c)(1)(i) of this section; or

(ii) In compliance with and as limited by the relevant requirements of:

(A) A court order or court-ordered warrant, or a subpoena or summons issued by a judicial officer;

(B) A grand jury subpoena; or

(C) An administrative request, including an administrative subpoena or summons, a civil or an authorized investigative demand, or similar process authorized under law, provided that:

(1) The information sought is relevant and material to a legitimate law enforcement inquiry;

(2) The request is specific and limited in scope to the extent reasonably practicable in light of the purpose for which the information is sought; and

(3) De-identified information could not reasonably be used.

(2) Permitted disclosures: Limited information for identification and location purposes. Except for disclosures required by law as permitted by paragraph (f)(1) of this section, a covered entity may disclose protected health information in response to a law enforcement official's request for such information for the purpose of identifying or locating a suspect, fugitive, material witness, or missing person, provided that:

(i) The covered entity may disclose only the following information:

(A) Name and address;

(B) Date and place of birth;

(C) Social security number;

(D) ABO blood type and rh factor;

(E) Type of injury;

(F) Date and time of treatment;

(G) Date and time of death, if applicable; and

(H) A description of distinguishing physical characteristics, including height, weight, gender, race, hair and eye color, presence or absence of facial hair (beard or moustache), scars, and tattoos.

(ii) Except as permitted by paragraph (f)(2)(i) of this section, the covered entity may not disclose for the purposes of identification or location under paragraph (f)(2) of this section any protected health information related to the individual's DNA or DNA analysis, dental records, or typing, samples or analysis of body fluids or tissue.

(3) Permitted disclosure: Victims of a crime. Except for disclosures required by law as permitted by paragraph (f)(1) of this section, a covered entity may disclose protected health information in response to a law enforcement official's request for such information about an individual who is or is suspected to be a victim of a crime, other than disclosures that are subject to paragraph (b) or (c) of this section, if:

(ii) The individual agrees to the disclosure; or

(iii) The covered entity is unable to obtain the individual's agreement because of incapacity or other emergency circumstance, provided that:

(A) The law enforcement official represents that such information is needed to determine whether a violation of law by a person other than the victim has occurred, and such information is not intended to be used against the victim;

(B) The law enforcement official represents that immediate law enforcement activity that depends upon the disclosure would be materially and ***82816** adversely affected by waiting until the individual is able to agree to the disclosure; and

(C) The disclosure is in the best interests of the individual as determined by the covered entity, in the exercise of professional judgment.

(4) Permitted disclosure: Decedents. A covered entity may disclose protected health information about an individual who has died to a law enforcement official for the purpose of alerting law enforcement of the death of the individual if the covered entity has a suspicion that such death may have resulted from criminal conduct.

(5) Permitted disclosure: Crime on premises. A covered entity may disclose to a law enforcement official protected health information that the covered entity believes in good faith constitutes evidence of criminal conduct that occurred on the premises of the covered entity.

(6) Permitted disclosure: Reporting crime in emergencies. (i) A covered health care provider providing emergency health care in response to a medical emergency, other than such emergency on the premises of the covered health care provider, may disclose protected health information to a law enforcement official if such disclosure appears necessary to alert law enforcement to:

(A) The commission and nature of a crime;

(B) The location of such crime or of the victim(s) of such crime; and

(C) The identity, description, and location of the perpetrator of such crime.

(ii) If a covered health care provider believes that the medical emergency described in paragraph (f)(6)(i) of this section is the result of abuse, neglect, or domestic violence of the individual in need of emergency health care, paragraph (f)(6)(i) of this section does not apply and any disclosure to a law enforcement official for law enforcement purposes is subject to paragraph (c) of this section.

(g) Standard: Uses and disclosures about decedents. (1) Coroners and medical examiners. A covered entity may disclose protected health information to a coroner or medical examiner for the purpose of identifying a deceased person, determining a cause of death, or other duties as authorized by law. A covered entity that also performs the duties of a coroner or medical examiner may use protected health information for the purposes described in this paragraph.

(2) Funeral directors. A covered entity may disclose protected health information to funeral directors, consistent with applicable law, as necessary to carry out their duties with respect to the decedent. If necessary for funeral directors carry out their duties, the covered entity may disclose the protected health information prior to, and in reasonable anticipation of, the individual's death.

(h) Standard: Uses and disclosures for cadaveric organ, eye or tissue donation purposes. A covered entity may use or disclose protected health information to organ procurement organizations or other entities engaged in the procurement, banking, or transplantation of cadaveric organs, eyes, or tissue for the purpose of facilitating organ, eye or tissue donation and transplantation.

(i) Standard: Uses and disclosures for research purposes. (1) Permitted uses and disclosures. A covered entity may use or disclose protected health information for research, regardless of the source of funding of the research, provided that:

(i) Board approval of a waiver of authorization. The covered entity obtains documentation that an alteration to or waiver, in whole or in part, of the individual authorization required by § 164.508 for use or disclosure of protected health information has been approved by either:

(A) An Institutional Review Board (IRB), established in accordance with 7 CFR lc .107, 10 CFR 745.107, 14 CFR 1230.107, 15 CFR 27.107, 16 CFR 1028.107, 21 CFR 56.107, 22 CFR 225.107, 24 CFR 60.107, 28 CFR 46.107, 32 CFR 219.107, 34 CFR 97.107, 38 CFR 16.107, 40 CFR 26.107, 45 CFR 46.107, 45 CFR 690.107, or 49 CFR 11.107; or

(B) A privacy board that:

(1) Has members with varying backgrounds and appropriate professional competency as necessary to review the effect of the research protocol on the individual's privacy rights and related interests;

(2) Includes at least one member who is not affiliated with the covered entity, not affiliated with any entity conducting or sponsoring the research, and not related to any person who is affiliated with any of such entities; and

(3) Does not have any member participating in a review of any project in which the member has a conflict of interest.

(ii) Reviews preparatory to research. The covered entity obtains from the researcher representations that:

(A) Use or disclosure is sought solely to review protected health information as necessary to prepare a research protocol or for similar purposes preparatory to research;

(B) No protected health information is to be removed from the covered entity by the researcher in the course of the review; and

(C) The protected health information for which use or access is sought is necessary for the research purposes.

(iii) Research on decedent's information. The covered entity obtains from the researcher:

(A) Representation that the use or disclosure is sought is solely for research on the protected health information of decedents;

(B) Documentation, at the request of the covered entity, of the death of such individuals; and

(C) Representation that the protected health information for which use or disclosure is sought is necessary for the research purposes.

(2) Documentation of waiver approval. For a use or disclosure to be permitted based on documentation of approval of an alteration or waiver, under paragraph (i)(1)(i) of this section, the documentation must include all of the following:

(i) Identification and date of action. A statement identifying the IRB or privacy board and the date on which the alteration or waiver of authorization was approved;

(ii) Waiver criteria. A statement that the IRB or privacy board has determined that the alteration or waiver, in whole or in part, of authorization satisfies the following criteria:

(A) The use or disclosure of protected health information involves no more than minimal risk to the individuals;

(B) The alteration or waiver will not adversely affect the privacy rights and the welfare of the individuals;

(C) The research could not practicably be conducted without the alteration or waiver;

(D) The research could not practicably be conducted without access to and use of the protected health information;

(E) The privacy risks to individuals whose protected health information is to be used or disclosed are reasonable in relation to the anticipated benefits if any to the individuals, and the importance of the knowledge that may reasonably be expected to result from the research;

(F) There is an adequate plan to protect the identifiers from improper use and disclosure;

(G) There is an adequate plan to destroy the identifiers at the earliest opportunity consistent with conduct of the research, unless there is a health or research justification for retaining the identifiers, or such retention is otherwise required by law; and

(H) There are adequate written assurances that the protected health ***82817** information will not be reused or disclosed to any other person or entity, except as required by law, for authorized oversight of the research project, or for other research for which the use or disclosure of protected health information would be permitted by this subpart.

(iii) Protected health information needed. A brief description of the protected health information for which use or access has been determined to be necessary by the IRB or privacy board has determined, pursuant to paragraph (i)(2)(ii)(D) of this section;

(iv) Review and approval procedures. A statement that the alteration or waiver of authorization has been reviewed and approved under either normal or expedited review procedures, as follows:

(A) An IRB must follow the requirements of the Common Rule, including the normal review procedures (7 CFR 1c.108(b), 10 CFR 745.108(b), 14 CFR 1230.108(b), 15 CFR 27.108(b), 16 CFR 1028.108(b), 21 CFR 56.108(b), 22 CFR 225.108(b), 24 CFR 60.108(b), 28 CFR 46.108(b), 32 CFR 219.108(b), 34 CFR 97.108(b), 38 CFR 16.108(b), 40 CFR 26.108(b), 45 CFR 46.108(b), 45 CFR 690.108(b), or 49 CFR 11.108(b)) or the expedited review procedures (7 CFR 1c.110, 10 CFR 745.110, 14

CFR 1230.110, 15 CFR 27.110, 16 CFR 1028.110, 21 CFR 56.110, 22 CFR 225.110, 24 CFR 60.110, 28 CFR 46.110, 32 CFR 219.110, 34 CFR 97.110, 38 CFR 16.110, 40 CFR 26.110, 45 CFR 46.110, 45 CFR 690.110, or 49 CFR 11.110);

(B) A privacy board must review the proposed research at convened meetings at which a majority of the privacy board members are present, including at least one member who satisfies the criterion stated in paragraph (i)(1)(i)(B)(2) of this section, and the alteration or waiver of authorization must be approved by the majority of the privacy board members present at the meeting, unless the privacy board elects to use an expedited review procedure in accordance with paragraph (i)(2)(iv)(C) of this section;

(C) A privacy board may use an expedited review procedure if the research involves no more than minimal risk to the privacy of the individuals who are the subject of the protected health information for which use or disclosure is being sought. If the privacy board elects to use an expedited review procedure, the review and approval of the alteration or waiver of authorization may be carried out by the chair of the privacy board, or by one or more members of the privacy board as designated by the chair; and

(v) Required signature. The documentation of the alteration or waiver of authorization must be signed by the chair or other member, as designated by the chair, of the IRB or the privacy board, as applicable.

(j) Standard: Uses and disclosures to avert a serious threat to health or safety. (1) Permitted disclosures. A covered entity may, consistent with applicable law and standards of ethical conduct, use or disclose protected health information, if the covered entity, in good faith, believes the use or disclosure:

(i)(A) Is necessary to prevent or lessen a serious and imminent threat to the health or safety of a person or the public; and

(B) Is to a person or persons reasonably able to prevent or lessen the threat, including the target of the threat; or

(ii) Is necessary for law enforcement authorities to identify or apprehend an individual:

(A) Because of a statement by an individual admitting participation in a violent crime that the covered entity reasonably believes may have caused serious physical harm to the victim; or

(B) Where it appears from all the circumstances that the individual has escaped from a correctional institution or from lawful custody, as those terms are defined in § 164.501.

(2) Use or disclosure not permitted. A use or disclosure pursuant to paragraph (j)(1)(ii)(A) of this section may not be made if the information described in paragraph (j)(1)(ii)(A) of this section is learned by the covered entity:

(i) In the course of treatment to affect the propensity to commit the criminal conduct that is the basis for the disclosure under paragraph (j)(1)(ii)(A) of this section, or counseling or therapy; or

(ii) Through a request by the individual to initiate or to be referred for the treatment, counseling, or therapy described in paragraph (j)(2)(i) of this section.

(3) Limit on information that may be disclosed. A disclosure made pursuant to paragraph (j)(1)(ii)(A) of this section shall contain only the statement described in paragraph (j)(1)(ii)(A) of this section and the protected health information described in paragraph (f)(2)(i) of this section.

(4) Presumption of good faith belief. A covered entity that uses or discloses protected health information pursuant to paragraph (j)(1) of this section is presumed to have acted in good faith with regard to a belief described in paragraph (j)(1)(i) or (ii) of this section, if the belief is based upon the covered entity's actual knowledge or in reliance on a credible representation by a person with apparent knowledge or authority.

(k) Standard: Uses and disclosures for specialized government functions. (1) Military and veterans activities. (i) Armed Forces personnel. A covered entity may use and disclose the protected health information of individuals who are Armed Forces personnel for activities deemed necessary by appropriate military command authorities to assure the proper execution of the military mission, if the appropriate military authority has published by notice in the Federal Register the following information:

(A) Appropriate military command authorities; and

(B) The purposes for which the protected health information may be used or disclosed.

(ii) Separation or discharge from military service. A covered entity that is a component of the Departments of Defense or Transportation may disclose to the Department of Veterans Affairs (DVA) the protected health information of an individual who is a member of the Armed Forces upon the separation or discharge of the individual from military service for the purpose of a determination by DVA of the individual's eligibility for or entitlement to benefits under laws administered by the Secretary of Veterans Affairs.

(iii) Veterans. A covered entity that is a component of the Department of Veterans Affairs may use and disclose protected health information to components of the Department that determine eligibility for or entitlement to, or that provide, benefits under the laws administered by the Secretary of Veterans Affairs.

(iv) Foreign military personnel. A covered entity may use and disclose the protected health information of individuals who are foreign military personnel to their appropriate foreign military authority for the same purposes for which uses and disclosures are permitted for Armed Forces personnel under the notice published in the Federal Register pursuant to paragraph (k)(1)(i) of this section.

(2) National security and intelligence activities. A covered entity may disclose protected health information to authorized federal officials for the conduct of lawful intelligence, counter-intelligence, and other national security activities authorized by the National Security Act (50 U.S.C. 401, et seq.) and implementing authority (e.g., Executive Order 12333).

(3) Protective services for the President and others. A covered entity may disclose protected health ***82818** information to authorized federal officials for the provision of protective services to the President or other persons authorized by 18 U.S.C. 3056, or to foreign heads of state or other persons authorized by 22 U.S.C. 2709(a)(3), or to for the conduct of investigations authorized by 18 U.S.C. 871 and 879.

(4) Medical suitability determinations. A covered entity that is a component of the Department of State may use protected health information to make medical suitability determinations and may disclose whether or not the individual was determined to be medically suitable to the officials in the Department of State who need access to such information for the following purposes:

(i) For the purpose of a required security clearance conducted pursuant to Executive Orders 10450 and 12698;

(ii) As necessary to determine worldwide availability or availability for mandatory service abroad under sections 101(a)(4) and 504 of the Foreign Service Act; or

(iii) For a family to accompany a Foreign Service member abroad, consistent with section 101(b)(5) and 904 of the Foreign Service Act.

(5) Correctional institutions and other law enforcement custodial situations. (i) Permitted disclosures. A covered entity may disclose to a correctional institution or a law enforcement official having lawful custody of an inmate or other individual

protected health information about such inmate or individual, if the correctional institution or such law enforcement official represents that such protected health information is necessary for:

(A) The provision of health care to such individuals;

(B) The health and safety of such individual or other inmates;

(C) The health and safety of the officers or employees of or others at the correctional institution;

(D) The health and safety of such individuals and officers or other persons responsible for the transporting of inmates or their transfer from one institution, facility, or setting to another;

(E) Law enforcement on the premises of the correctional institution; and

(F) The administration and maintenance of the safety, security, and good order of the correctional institution.

(ii) Permitted uses. A covered entity that is a correctional institution may use protected health information of individuals who are inmates for any purpose for which such protected health information may be disclosed.

(iii) No application after release. For the purposes of this provision, an individual is no longer an inmate when released on parole, probation, supervised release, or otherwise is no longer in lawful custody.

(6) Covered entities that are government programs providing public benefits. (i) A health plan that is a government program providing public benefits may disclose protected health information relating to eligibility for or enrollment in the health plan to another agency administering a government program providing public benefits if the sharing of eligibility or enrollment information among such government agencies or the maintenance of such information in a single or combined data system accessible to all such government agencies is required or expressly authorized by statute or regulation.

(ii) A covered entity that is a government agency administering a government program providing public benefits may disclose protected health information relating to the program to another covered entity that is a government agency administering a government program providing public benefits if the programs serve the same or similar populations and the disclosure of protected health information is necessary to coordinate the covered functions of such programs or to improve administration and management relating to the covered functions of such programs.

(l) Standard: Disclosures for workers' compensation. A covered entity may disclose protected health information as authorized by and to the extent necessary to comply with laws relating to workers' compensation or other similar programs, established by law, that provide benefits for work-related injuries or illness without regard to fault.
45 CFR § 164.514

§ 164.514 Other requirements relating to uses and disclosures of protected health information.
(a) Standard: de-identification of protected health information. Health information that does not identify an individual and with respect to which there is no reasonable basis to believe that the information can be used to identify an individual is not individually identifiable health information.

(b) Implementation specifications: requirements for de-identification of protected health information. A covered entity may determine that health information is not individually identifiable health information only if:

(1) A person with appropriate knowledge of and experience with generally accepted statistical and scientific principles and methods for rendering information not individually identifiable:

(i) Applying such principles and methods, determines that the risk is very small that the information could be used, alone or in combination with other reasonably available information, by an anticipated recipient to identify an individual who is a subject of the information; and

(ii) Documents the methods and results of the analysis that justify such determination; or

(2)(i) The following identifiers of the individual or of relatives, employers, or household members of the individual, are removed:

(A) Names;

(B) All geographic subdivisions smaller than a State, including street address, city, county, precinct, zip code, and their equivalent geocodes, except for the initial three digits of a zip code if, according to the current publicly available data from the Bureau of the Census:

(1) The geographic unit formed by combining all zip codes with the same three initial digits contains more than 20,000 people; and

(2) The initial three digits of a zip code for all such geographic units containing 20,000 or fewer people is changed to 000.

(C) All elements of dates (except year) for dates directly related to an individual, including birth date, admission date, discharge date, date of death; and all ages over 89 and all elements of dates (including year) indicative of such age, except that such ages and elements may be aggregated into a single category of age 90 or older;

(D) Telephone numbers;

(E) Fax numbers;

(F) Electronic mail addresses;

(G) Social security numbers;

(H) Medical record numbers;

(I) Health plan beneficiary numbers;

(J) Account numbers;

(K) Certificate/license numbers;

(L) Vehicle identifiers and serial numbers, including license plate numbers;

(M) Device identifiers and serial numbers;

(N) Web Universal Resource Locators (URLs);

(O) Internet Protocol (IP) address numbers;

(P) Biometric identifiers, including finger and voice prints;

(Q) Full face photographic images and any comparable images; and

(R) Any other unique identifying number, characteristic, or code; and ***82819**

(ii) The covered entity does not have actual knowledge that the information could be used alone or in combination with other information to identify an individual who is a subject of the information.

(c) Implementation specifications: re-identification. A covered entity may assign a code or other means of record identification to allow information de-identified under this section to be re-identified by the covered entity, provided that:

(1) Derivation. The code or other means of record identification is not derived from or related to information about the individual and is not otherwise capable of being translated so as to identify the individual; and

(2) Security. The covered entity does not use or disclose the code or other means of record identification for any other purpose, and does not disclose the mechanism for re-identification.

(d)(1) Standard: minimum necessary requirements. A covered entity must reasonably ensure that the standards, requirements, and implementation specifications of § 164.502(b) and this section relating to a request for or the use and disclosure of the minimum necessary protected health information are met.

(2) Implementation specifications: minimum necessary uses of protected health information. (i) A covered entity must identify:

(A) Those persons or classes of persons, as appropriate, in its workforce who need access to protected health information to carry out their duties; and

(B) For each such person or class of persons, the category or categories of protected health information to which access is needed and any conditions appropriate to such access.

(ii) A covered entity must make reasonable efforts to limit the access of such persons or classes identified in paragraph (d)(2)(i)(A) of this section to protected health information consistent with paragraph (d)(2)(i)(B) of this section.

(3) Implementation specification: Minimum necessary disclosures of protected health information. (i) For any type of disclosure that it makes on a routine and recurring basis, a covered entity must implement policies and procedures (which may be standard protocols) that limit the protected health information disclosed to the amount reasonably necessary to achieve the purpose of the disclosure.

(ii) For all other disclosures, a covered entity must:

(A) Develop criteria designed to limit the protected health information disclosed to the information reasonably necessary to accomplish the purpose for which disclosure is sought; and

(B) Review requests for disclosure on an individual basis in accordance with such criteria.

(iii) A covered entity may rely, if such reliance is reasonable under the circumstances, on a requested disclosure as the minimum necessary for the stated purpose when:

(A) Making disclosures to public officials that are permitted under § 164.512, if the public official represents that the information requested is the minimum necessary for the stated purpose(s);

(B) The information is requested by another covered entity;

(C) The information is requested by a professional who is a member of its workforce or is a business associate of the covered entity for the purpose of providing professional services to the covered entity, if the professional represents that the information requested is the minimum necessary for the stated purpose(s); or

(D) Documentation or representations that comply with the applicable requirements of § 164.512(i) have been provided by a person requesting the information for research purposes.

(4) Implementation specifications: Minimum necessary requests for protected health information. (i) A covered entity must limit any request for protected health information to that which is reasonably necessary to accomplish the purpose for which the request is made, when requesting such information from other covered entities.

(ii) For a request that is made on a routine and recurring basis, a covered entity must implement policies and procedures (which may be standard protocols) that limit the protected health information requested to the amount reasonably necessary to accomplish the purpose for which the request is made.

(iii) For all other requests, a covered entity must review the request on an individual basis to determine that the protected health information sought is limited to the information reasonably necessary to accomplish the purpose for which the request is made.

(5) Implementation specification: Other content requirement. For all uses, disclosures, or requests to which the requirements in paragraph (d) of this section apply, a covered entity may not use, discloses or request an entire medical record, except when the entire medical record is specifically justified as the amount that is reasonably necessary to accomplish the purpose of the use, disclosure, or request.

(e)(1) Standard: Uses and disclosures of protected health information for marketing. A covered entity may not use or disclose protected health information for marketing without an authorization that meets the applicable requirements of § 164.508, except as provided for by paragraph (e)(2) of this section.

(2) Implementation specifications: Requirements relating to marketing. (i) A covered entity is not required to obtain an authorization under § 164.508 when it uses or discloses protected health information to make a marketing communication to an individual that:

(A) Occurs in a face-to-face encounter with the individual;

(B) Concerns products or services of nominal value; or

(C) Concerns the health-related products and services of the covered entity or of a third party and the communication meets the applicable conditions in paragraph (e)(3) of this section.

(ii) A covered entity may disclose protected health information for purposes of such communications only to a business associate that assists the covered entity with such communications.

(3) Implementation specifications: Requirements for certain marketing communications. For a marketing communication to qualify under paragraph (e)(2)(i) of this section, the following conditions must be met:

(i) The communication must:

(A) Identify the covered entity as the party making the communication;

(B) If the covered entity has received or will receive direct or indirect remuneration for making the communication, prominently state that fact; and

(C) Except when the communication is contained in a newsletter or similar type of general communication device that the covered entity distributes to a broad cross-section of patients, enrollees, or other broad groups of individuals, contain instructions describing how the individual may opt out of receiving future such communications.

(ii) If the covered entity uses or discloses protected health information to target the communication to individuals based on their health status or condition:

(A) The covered entity must make a determination prior to making the communication that the product or service being marketed may be beneficial to the health of the type or class of individual targeted; and

(B) The communication must explain why the individual has been targeted ***82820** and how the product or service relates to the health of the individual.

(iii) The covered entity must make reasonable efforts to ensure that individuals who decide to opt out of receiving future marketing communications, under paragraph (e)(3)(i)(C) of this section, are not sent such communications.

(f)(1) Standard: Uses and disclosures for fundraising. A covered entity may use, or disclose to a business associate or to an institutionally related foundation, the following protected health information for the purpose of raising funds for its own benefit, without an authorization meeting the requirements of § 164.508:

(i) Demographic information relating to an individual; and

(ii) Dates of health care provided to an individual.

(2) Implementation specifications: Fundraising requirements. (i) The covered entity may not use or disclose protected health information for fundraising purposes as otherwise permitted by paragraph (f)(1) of this section unless a statement required by § 164.520(b)(1)(iii)(B) is included in the covered entity's notice;

(ii) The covered entity must include in any fundraising materials it sends to an individual under this paragraph a description of how the individual may opt out of receiving any further fundraising communications.

(iii) The covered entity must make reasonable efforts to ensure that individuals who decide to opt out of receiving future fundraising communications are not sent such communications.

(g) Standard: Uses and disclosures for underwriting and related purposes. If a health plan receives protected heath information for the purpose of underwriting, premium rating, or other activities relating to the creation, renewal, or replacement of a contract of health insurance or health benefits, and if such health insurance or health benefits are not placed with the health plan, such health plan may not use or disclose such protected health information for any other purpose, except as may be required by law.

(h)(1) Standard: Verification requirements. Prior to any disclosure permitted by this subpart, a covered entity must:

(i) Except with respect to disclosures under § 164.510, verify the identity of a person requesting protected health information and the authority of any such person to have access to protected health information under this subpart, if the identity or any such authority of such person is not known to the covered entity; and

(ii) Obtain any documentation, statements, or representations, whether oral or written, from the person requesting the protected health information when such documentation, statement, or representation is a condition of the disclosure under this subpart.

(2) Implementation specifications: Verification. (i) Conditions on disclosures. If a disclosure is conditioned by this subpart on particular documentation, statements, or representations from the person requesting the protected health information, a covered entity may rely, if such reliance is reasonable under the circumstances, on documentation, statements, or representations that, on their face, meet the applicable requirements.

(A) The conditions in § 164.512(f)(1)(ii)(C) may be satisfied by the administrative subpoena or similar process or by a separate written statement that, on its face, demonstrates that the applicable requirements have been met.

(B) The documentation required by § 164.512(i)(2) may be satisfied by one or more written statements, provided that each is appropriately dated and signed in accordance with § 164.512(i)(2)(i) and (v).

(ii) Identity of public officials. A covered entity may rely, if such reliance is reasonable under the circumstances, on any of the following to verify identity when the disclosure of protected health information is to a public official or a person acting on behalf of the public official:

(A) If the request is made in person, presentation of an agency identification badge, other official credentials, or other proof of government status;

(B) If the request is in writing, the request is on the appropriate government letterhead; or

(C) If the disclosure is to a person acting on behalf of a public official, a written statement on appropriate government letterhead that the person is acting under the government's authority or other evidence or documentation of agency, such as a contract for services, memorandum of understanding, or purchase order, that establishes that the person is acting on behalf of the public official.

(iii) Authority of public officials. A covered entity may rely, if such reliance is reasonable under the circumstances, on any of the following to verify authority when the disclosure of protected health information is to a public official or a person acting on behalf of the public official:

(A) A written statement of the legal authority under which the information is requested, or, if a written statement would be impracticable, an oral statement of such legal authority;

(B) If a request is made pursuant to legal process, warrant, subpoena, order, or other legal process issued by a grand jury or a judicial or administrative tribunal is presumed to constitute legal authority.

(iv) Exercise of professional judgment. The verification requirements of this paragraph are met if the covered entity relies on the exercise of professional judgment in making a use or disclosure in accordance with § 164.510 or acts on a good faith belief in making a disclosure in accordance with § 164.512(j).

45 CFR § 164.520

§ 164.520 Notice of privacy practices for protected health information.

(a) Standard: notice of privacy practices. (1) Right to notice. Except as provided by paragraph (a)(2) or (3) of this section, an individual has a right to adequate notice of the uses and disclosures of protected health information that may be made by the covered entity, and of the individual's rights and the covered entity's legal duties with respect to protected health information.

(2) Exception for group health plans. (i) An individual enrolled in a group health plan has a right to notice:

(A) From the group health plan, if, and to the extent that, such an individual does not receive health benefits under the group health plan through an insurance contract with a health insurance issuer or HMO; or

(B) From the health insurance issuer or HMO with respect to the group health plan through which such individuals receive their health benefits under the group health plan.

(ii) A group health plan that provides health benefits solely through an insurance contract with a health insurance issuer or HMO, and that creates or receives protected health information in addition to summary health information as defined in § 164.504(a) or information on whether the individual is participating in the group health plan, or is enrolled in or has disenrolled from a health insurance issuer or HMO offered by the plan, must:

(A) Maintain a notice under this section; and

(B) Provide such notice upon request to any person. The provisions of paragraph (c)(1) of this section do not apply to such group health plan. ***82821**

(iii) A group health plan that provides health benefits solely through an insurance contract with a health insurance issuer or HMO, and does not create or receive protected health information other than summary health information as defined in § 164.504(a) or information on whether an individual is participating in the group health plan, or is enrolled in or has disenrolled from a health insurance issuer or HMO offered by the plan, is not required to maintain or provide a notice under this section.

(3) Exception for inmates. An inmate does not have a right to notice under this section, and the requirements of this section do not apply to a correctional institution that is a covered entity.

(b) Implementation specifications: content of notice.

(1) Required elements. The covered entity must provide a notice that is written in plain language and that contains the elements required by this paragraph.

(i) Header. The notice must contain the following statement as a header or otherwise prominently displayed: “THIS NOTICE DESCRIBES HOW MEDICAL INFORMATION ABOUT YOU MAY BE USED AND DISCLOSED AND HOW YOU CAN GET ACCESS TO THIS INFORMATION. PLEASE REVIEW IT CAREFULLY.”

(ii) Uses and disclosures. The notice must contain:

(A) A description, including at least one example, of the types of uses and disclosures that the covered entity is permitted by this subpart to make for each of the following purposes: treatment, payment, and health care operations.

(B) A description of each of the other purposes for which the covered entity is permitted or required by this subpart to use or disclose protected health information without the individual's written consent or authorization.

(C) If a use or disclosure for any purpose described in paragraphs (b)(1)(ii)(A) or (B) of this section is prohibited or materially limited by other applicable law, the description of such use or disclosure must reflect the more stringent law as defined in § 160.202 of this subchapter.

(D) For each purpose described in paragraph (b)(1)(ii)(A) or (B) of this section, the description must include sufficient detail to place the individual on notice of the uses and disclosures that are permitted or required by this subpart and other applicable law.

(E) A statement that other uses and disclosures will be made only with the individual's written authorization and that the individual may revoke such authorization as provided by § 164.508(b)(5).

(iii) Separate statements for certain uses or disclosures. If the covered entity intends to engage in any of the following activities, the description required by paragraph (b)(1)(ii)(A) of this section must include a separate statement, as applicable, that:

(A) The covered entity may contact the individual to provide appointment reminders or information about treatment alternatives or other health-related benefits and services that may be of interest to the individual;

(B) The covered entity may contact the individual to raise funds for the covered entity; or

(C) A group health plan, or a health insurance issuer or HMO with respect to a group health plan, may disclose protected health information to the sponsor of the plan.

(iv) Individual rights. The notice must contain a statement of the individual's rights with respect to protected health information and a brief description of how the individual may exercise these rights, as follows:

(A) The right to request restrictions on certain uses and disclosures of protected health information as provided by § 164.522(a), including a statement that the covered entity is not required to agree to a requested restriction;

(B) The right to receive confidential communications of protected health information as provided by § 164.522(b), as applicable;

(C) The right to inspect and copy protected health information as provided by § 164.524;

(D) The right to amend protected health information as provided by § 164.526;

(E) The right to receive an accounting of disclosures of protected health information as provided by § 164.528; and

(F) The right of an individual, including an individual who has agreed to receive the notice electronically in accordance with paragraph (c)(3) of this section, to obtain a paper copy of the notice from the covered entity upon request.

(v) Covered entity's duties. The notice must contain:

(A) A statement that the covered entity is required by law to maintain the privacy of protected health information and to provide individuals with notice of its legal duties and privacy practices with respect to protected health information;

(B) A statement that the covered entity is required to abide by the terms of the notice currently in effect; and

(C) For the covered entity to apply a change in a privacy practice that is described in the notice to protected health information that the covered entity created or received prior to issuing a revised notice, in accordance with § 164.530(i)(2)(ii), a statement that it reserves the right to change the terms of its notice and to make the new notice provisions effective for all protected health information that it maintains. The statement must also describe how it will provide individuals with a revised notice.

(vi) Complaints. The notice must contain a statement that individuals may complain to the covered entity and to the Secretary if they believe their privacy rights have been violated, a brief description of how the individual may file a complaint with the covered entity, and a statement that the individual will not be retaliated against for filing a complaint.

(vii) Contact. The notice must contain the name, or title, and telephone number of a person or office to contact for further information as required by § 164.530(a)(1)(ii).

(viii) Effective date. The notice must contain the date on which the notice is first in effect, which may not be earlier than the date on which the notice is printed or otherwise published.

(2) Optional elements. (i) In addition to the information required by paragraph (b)(1) of this section, if a covered entity elects to limit the uses or disclosures that it is permitted to make under this subpart, the covered entity may describe its more limited uses or disclosures in its notice, provided that the covered entity may not include in its notice a limitation affecting its right to make a use or disclosure that is required by law or permitted by § 164.512(j)(1)(i).

(ii) For the covered entity to apply a change in its more limited uses and disclosures to protected health information created or received prior to issuing a revised notice, in accordance with § 164.530(i)(2)(ii), the notice must include the statements required by paragraph (b)(1)(v)(C) of this section.

(3) Revisions to the notice. The covered entity must promptly revise and distribute its notice whenever there is a material change to the uses or disclosures, the individual's rights, the covered entity's legal duties, or other privacy practices stated in the notice. Except when required by law, a material change to any term of the notice may not be implemented prior to the effective date of the notice in which such material change is reflected.

(c) Implementation specifications: Provision of notice. A covered entity must make the notice required by this ***82822** section available on request to any person and to individuals as specified in paragraphs (c)(1) through (c)(4) of this section, as applicable.

(1) Specific requirements for health plans. (i) A health plan must provide notice:

(A) No later than the compliance date for the health plan, to individuals then covered by the plan;

(B) Thereafter, at the time of enrollment, to individuals who are new enrollees; and

(C) Within 60 days of a material revision to the notice, to individuals then covered by the plan.

(ii) No less frequently than once every three years, the health plan must notify individuals then covered by the plan of the availability of the notice and how to obtain the notice.

(iii) The health plan satisfies the requirements of paragraph (c)(1) of this section if notice is provided to the named insured of a policy under which coverage is provided to the named insured and one or more dependents.

(iv) If a health plan has more than one notice, it satisfies the requirements of paragraph (c)(1) of this section by providing the notice that is relevant to the individual or other person requesting the notice.

(2) Specific requirements for certain covered health care providers. A covered health care provider that has a direct treatment relationship with an individual must:

(i) Provide the notice no later than the date of the first service delivery, including service delivered electronically, to such individual after the compliance date for the covered health care provider;

(ii) If the covered health care provider maintains a physical service delivery site:

(A) Have the notice available at the service delivery site for individuals to request to take with them; and

(B) Post the notice in a clear and prominent location where it is reasonable to expect individuals seeking service from the covered health care provider to be able to read the notice; and

(iii) Whenever the notice is revised, make the notice available upon request on or after the effective date of the revision and promptly comply with the requirements of paragraph (c)(2)(ii) of this section, if applicable.

(3) Specific requirements for electronic notice. (i) A covered entity that maintains a web site that provides information about the covered entity's customer services or benefits must prominently post its notice on the web site and make the notice available electronically through the web site.

(ii) A covered entity may provide the notice required by this section to an individual by e-mail, if the individual agrees to electronic notice and such agreement has not been withdrawn. If the covered entity knows that the e-mail transmission has failed, a paper copy of the notice must be provided to the individual. Provision of electronic notice by the covered entity will satisfy the provision requirements of paragraph (c) of this section when timely made in accordance with paragraph (c)(1) or (2) of this section.

(iii) For purposes of paragraph (c)(2)(i) of this section, if the first service delivery to an individual is delivered electronically, the covered health care provider must provide electronic notice automatically and contemporaneously in response to the individual's first request for service.

(iv) The individual who is the recipient of electronic notice retains the right to obtain a paper copy of the notice from a covered entity upon request.

(d) Implementation specifications: Joint notice by separate covered entities. Covered entities that participate in organized health care arrangements may comply with this section by a joint notice, provided that:

(1) The covered entities participating in the organized health care arrangement agree to abide by the terms of the notice with respect to protected health information created or received by the covered entity as part of its participation in the organized health care arrangement;

(2) The joint notice meets the implementation specifications in paragraph (b) of this section, except that the statements required by this section may be altered to reflect the fact that the notice covers more than one covered entity; and

(i) Describes with reasonable specificity the covered entities, or class of entities, to which the joint notice applies;

(ii) Describes with reasonable specificity the service delivery sites, or classes of service delivery sites, to which the joint notice applies; and

(iii) If applicable, states that the covered entities participating in the organized health care arrangement will share protected health information with each other, as necessary to carry out treatment, payment, or health care operations relating to the organized health care arrangement.

(3) The covered entities included in the joint notice must provide the notice to individuals in accordance with the applicable implementation specifications of paragraph (c) of this section. Provision of the joint notice to an individual by any one of the covered entities included in the joint notice will satisfy the provision requirement of paragraph (c) of this section with respect to all others covered by the joint notice.

(e) Implementation specifications: Documentation. A covered entity must document compliance with the notice requirements by retaining copies of the notices issued by the covered entity as required by § 164.530(j).

45 CFR § 164.522

§ 164.522 Rights to request privacy protection for protected health information.

(a)(1) Standard: Right of an individual to request restriction of uses and disclosures. (i) A covered entity must permit an individual to request that the covered entity restrict:

(A) Uses or disclosures of protected health information about the individual to carry out treatment, payment, or health care operations; and

(B) Disclosures permitted under § 164.510(b).

(ii) A covered entity is not required to agree to a restriction.

(iii) A covered entity that agrees to a restriction under paragraph (a)(1)(i) of this section may not use or disclose protected health information in violation of such restriction, except that, if the individual who requested the restriction is in need of emergency treatment and the restricted protected health information is needed to provide the emergency treatment, the covered entity may use the restricted protected health information, or may disclose such information to a health care provider, to provide such treatment to the individual.

(iv) If restricted protected health information is disclosed to a health care provider for emergency treatment under paragraph (a)(1)(iii) of this section, the covered entity must request that such health care provider not further use or disclose the information.

(v) A restriction agreed to by a covered entity under paragraph (a) of this section, is not effective under this subpart to prevent uses or disclosures permitted or required under §§ 164.502(a)(2)(i), 164.510(a) or 164.512.

(2) Implementation specifications: Terminating a restriction. A covered entity may terminate its agreement to a restriction, if :

(i) The individual agrees to or requests the termination in writing;

(ii) The individual orally agrees to the termination and the oral agreement is documented; or

(iii) The covered entity informs the individual that it is terminating its ***82823** agreement to a restriction, except that such termination is only effective with respect to protected health information created or received after it has so informed the individual.

(3) Implementation specification: Documentation. A covered entity that agrees to a restriction must document the restriction in accordance with § 164.530(j).

(b)(1) Standard: Confidential communications requirements. (i) A covered health care provider must permit individuals to request and must accommodate reasonable requests by individuals to receive communications of protected health information from the covered health care provider by alternative means or at alternative locations.

(ii) A health plan must permit individuals to request and must accommodate reasonable requests by individuals to receive communications of protected health information from the health plan by alternative means or at alternative locations, if the individual clearly states that the disclosure of all or part of that information could endanger the individual.

(2) Implementation specifications: Conditions on providing confidential communications.

(i) A covered entity may require the individual to make a request for a confidential communication described in paragraph (b)(1) of this section in writing.

(ii) A covered entity may condition the provision of a reasonable accommodation on:

(A) When appropriate, information as to how payment, if any, will be handled; and

(B) Specification of an alternative address or other method of contact.

(iii) A covered health care provider may not require an explanation from the individual as to the basis for the request as a condition of providing communications on a confidential basis.

(iv) A health plan may require that a request contain a statement that disclosure of all or part of the information to which the request pertains could endanger the individual.
45 CFR § 164.524

§ 164.524 Access of individuals to protected health information.
(a) Standard: Access to protected health information. (1) Right of access. Except as otherwise provided in paragraph (a)(2) or (a)(3) of this section, an individual has a right of access to inspect and obtain a copy of protected health information about the individual in a designated record set, for as long as the protected health information is maintained in the designated record set, except for:

(i) Psychotherapy notes;

(ii) Information compiled in reasonable anticipation of, or for use in, a civil, criminal, or administrative action or proceeding; and

(iii) Protected health information maintained by a covered entity that is:

(A) Subject to the Clinical Laboratory Improvements Amendments of 1988, 42 U.S.C. 263a, to the extent the provision of access to the individual would be prohibited by law; or

(B) Exempt from the Clinical Laboratory Improvements Amendments of 1988, pursuant to 42 CFR 493.3(a)(2).

(2) Unreviewable grounds for denial. A covered entity may deny an individual access without providing the individual an opportunity for review, in the following circumstances.

(i) The protected health information is excepted from the right of access by paragraph (a)(1) of this section.

(ii) A covered entity that is a correctional institution or a covered health care provider acting under the direction of the correctional institution may deny, in whole or in part, an inmate's request to obtain a copy of protected health information, if obtaining such copy would jeopardize the health, safety, security, custody, or rehabilitation of the individual or of other inmates, or the safety of any officer, employee, or other person at the correctional institution or responsible for the transporting of the inmate.

(iii) An individual's access to protected health information created or obtained by a covered health care provider in the course of research that includes treatment may be temporarily suspended for as long as the research is in progress, provided that the individual has agreed to the denial of access when consenting to participate in the research that includes treatment, and the covered health care provider has informed the individual that the right of access will be reinstated upon completion of the research.

(iv) An individual's access to protected health information that is contained in records that are subject to the Privacy Act, 5 U.S.C. 552a, may be denied, if the denial of access under the Privacy Act would meet the requirements of that law.

(v) An individual's access may be denied if the protected health information was obtained from someone other than a health care provider under a promise of confidentiality and the access requested would be reasonably likely to reveal the source of the information.

(3) Reviewable grounds for denial. A covered entity may deny an individual access, provided that the individual is given a right to have such denials reviewed, as required by paragraph (a)(4) of this section, in the following circumstances:

(i) A licensed health care professional has determined, in the exercise of professional judgment, that the access requested is reasonably likely to endanger the life or physical safety of the individual or another person;

(ii) The protected health information makes reference to another person (unless such other person is a health care provider) and a licensed health care professional has determined, in the exercise of professional judgment, that the access requested is reasonably likely to cause substantial harm to such other person; or

(iii) The request for access is made by the individual's personal representative and a licensed health care professional has determined, in the exercise of professional judgment, that the provision of access to such personal representative is reasonably likely to cause substantial harm to the individual or another person.

(4) Review of a denial of access. If access is denied on a ground permitted under paragraph (a)(3) of this section, the individual has the right to have the denial reviewed by a licensed health care professional who is designated by the covered entity to act as a reviewing official and who did not participate in the original decision to deny. The covered entity must provide or deny access in accordance with the determination of the reviewing official under paragraph (d)(4) of this section.

(b) Implementation specifications: requests for access and timely action. (1) Individual's request for access. The covered entity must permit an individual to request access to inspect or to obtain a copy of the protected health information about the individual that is maintained in a designated record set. The covered entity may require individuals to make requests for access in writing, provided that it informs individuals of such a requirement.

(2) Timely action by the covered entity. (i) Except as provided in paragraph (b)(2)(ii) of this section, the covered entity must act on a request for access no later than 30 days after receipt of the request as follows.

(A) If the covered entity grants the request, in whole or in part, it must inform the individual of the acceptance of the request and provide the access requested, in accordance with paragraph (c) of this section. ***82824**

(B) If the covered entity denies the request, in whole or in part, it must provide the individual with a written denial, in accordance with paragraph (d) of this section.

(ii) If the request for access is for protected health information that is not maintained or accessible to the covered entity on-site, the covered entity must take an action required by paragraph (b)(2)(i) of this section by no later than 60 days from the receipt of such a request.

(iii) If the covered entity is unable to take an action required by paragraph (b)(2)(i)(A) or (B) of this section within the time required by paragraph (b)(2)(i) or (ii) of this section, as applicable, the covered entity may extend the time for such actions by no more than 30 days, provided that:

(A) The covered entity, within the time limit set by paragraph (b)(2)(i) or (ii) of this section, as applicable, provides the individual with a written statement of the reasons for the delay and the date by which the covered entity will complete its action on the request; and

(B) The covered entity may have only one such extension of time for action on a request for access.

(c) Implementation specifications: Provision of access. If the covered entity provides an individual with access, in whole or in part, to protected health information, the covered entity must comply with the following requirements.

(1) Providing the access requested. The covered entity must provide the access requested by individuals, including inspection or obtaining a copy, or both, of the protected health information about them in designated record sets. If the same protected health information that is the subject of a request for access is maintained in more than one designated record set or at more than one location, the covered entity need only produce the protected health information once in response to a request for access.

(2) Form of access requested. (i) The covered entity must provide the individual with access to the protected health information in the form or format requested by the individual, if it is readily producible in such form or format; or, if not, in a readable hard copy form or such other form or format as agreed to by the covered entity and the individual.

(ii) The covered entity may provide the individual with a summary of the protected health information requested, in lieu of providing access to the protected health information or may provide an explanation of the protected health information to which access has been provided, if:

(A) The individual agrees in advance to such a summary or explanation; and

(B) The individual agrees in advance to the fees imposed, if any, by the covered entity for such summary or explanation.

(3) Time and manner of access. The covered entity must provide the access as requested by the individual in a timely manner as required by paragraph (b)(2) of this section, including arranging with the individual for a convenient time and place to inspect or obtain a copy of the protected health information, or mailing the copy of the protected health information at the individual's request. The covered entity may discuss the scope, format, and other aspects of the request for access with the individual as necessary to facilitate the timely provision of access.

(4) Fees. If the individual requests a copy of the protected health information or agrees to a summary or explanation of such information, the covered entity may impose a reasonable, cost-based fee, provided that the fee includes only the cost of:

(i) Copying, including the cost of supplies for and labor of copying, the protected health information requested by the individual;

(ii) Postage, when the individual has requested the copy, or the summary or explanation, be mailed; and

(iii) Preparing an explanation or summary of the protected health information, if agreed to by the individual as required by paragraph (c)(2)(ii) of this section.

(d) Implementation specifications: Denial of access. If the covered entity denies access, in whole or in part, to protected health information, the covered entity must comply with the following requirements.

(1) Making other information accessible. The covered entity must, to the extent possible, give the individual access to any other protected health information requested, after excluding the protected health information as to which the covered entity has a ground to deny access.

(2) Denial. The covered entity must provide a timely, written denial to the individual, in accordance with paragraph (b)(2) of this section. The denial must be in plain language and contain:

(i) The basis for the denial;

(ii) If applicable, a statement of the individual's review rights under paragraph (a)(4) of this section, including a description of how the individual may exercise such review rights; and

(iii) A description of how the individual may complain to the covered entity pursuant to the complaint procedures in § 164.530(d) or to the Secretary pursuant to the procedures in § 160.306. The description must include the name, or title, and telephone number of the contact person or office designated in § 164.530(a)(1)(ii).

(3) Other responsibility. If the covered entity does not maintain the protected health information that is the subject of the individual's request for access, and the covered entity knows where the requested information is maintained, the covered entity must inform the individual where to direct the request for access.

(4) Review of denial requested. If the individual has requested a review of a denial under paragraph (a)(4) of this section, the covered entity must designate a licensed health care professional, who was not directly involved in the denial to review the decision to deny access. The covered entity must promptly refer a request for review to such designated reviewing official. The designated reviewing official must determine, within a reasonable period of time, whether or not to deny the access requested based on the standards in paragraph (a)(3) of this section. The covered entity must promptly provide written notice to the individual of the determination of the designated reviewing official and take other action as required by this section to carry out the designated reviewing official's determination.

(e) Implementation specification: Documentation. A covered entity must document the following and retain the documentation as required by § 164.530(j):

(1) The designated record sets that are subject to access by individuals; and

(2) The titles of the persons or offices responsible for receiving and processing requests for access by individuals.
45 CFR § 164.526

§ 164.526 Amendment of protected health information.
(a) Standard: Right to amend. (1) Right to amend. An individual has the right to have a covered entity amend protected health information or a record about the individual in a designated record set for as long as the protected health information is maintained in the designated record set.

(2) Denial of amendment. A covered entity may deny an individual's request for amendment, if it determines that the protected health information or record that is the subject of the request:

(i) Was not created by the covered entity, unless the individual provides a reasonable basis to believe that the ***82825** originator of protected health information is no longer available to act on the requested amendment;

(ii) Is not part of the designated record set;

(iii) Would not be available for inspection under § 164.524; or

(iv) Is accurate and complete.

(b) Implementation specifications: requests for amendment and timely action. (1) Individual's request for amendment. The covered entity must permit an individual to request that the covered entity amend the protected health information maintained in the designated record set. The covered entity may require individuals to make requests for amendment in writing and to provide a reason to support a requested amendment, provided that it informs individuals in advance of such requirements.

(2) Timely action by the covered entity. (i) The covered entity must act on the individual's request for an amendment no later than 60 days after receipt of such a request, as follows.

(A) If the covered entity grants the requested amendment, in whole or in part, it must take the actions required by paragraphs (c)(1) and (2) of this section.

(B) If the covered entity denies the requested amendment, in whole or in part, it must provide the individual with a written denial, in accordance with paragraph (d)(1) of this section.

(ii) If the covered entity is unable to act on the amendment within the time required by paragraph (b)(2)(i) of this section, the covered entity may extend the time for such action by no more than 30 days, provided that:

(A) The covered entity, within the time limit set by paragraph (b)(2)(i) of this section, provides the individual with a written statement of the reasons for the delay and the date by which the covered entity will complete its action on the request; and

(B) The covered entity may have only one such extension of time for action on a request for an amendment.

(c) Implementation specifications: Accepting the amendment. If the covered entity accepts the requested amendment, in whole or in part, the covered entity must comply with the following requirements.

(1) Making the amendment. The covered entity must make the appropriate amendment to the protected health information or record that is the subject of the request for amendment by, at a minimum, identifying the records in the designated record set that are affected by the amendment and appending or otherwise providing a link to the location of the amendment.

(2) Informing the individual. In accordance with paragraph (b) of this section, the covered entity must timely inform the individual that the amendment is accepted and obtain the individual's identification of and agreement to have the covered entity notify the relevant persons with which the amendment needs to be shared in accordance with paragraph (c)(3) of this section.

(3) Informing others. The covered entity must make reasonable efforts to inform and provide the amendment within a reasonable time to:

(i) Persons identified by the individual as having received protected health information about the individual and needing the amendment; and

(ii) Persons, including business associates, that the covered entity knows have the protected health information that is the subject of the amendment and that may have relied, or could foreseeably rely, on such information to the detriment of the individual.

(d) Implementation specifications: Denying the amendment. If the covered entity denies the requested amendment, in whole or in part, the covered entity must comply with the following requirements.

(1) Denial. The covered entity must provide the individual with a timely, written denial, in accordance with paragraph (b)(2) of this section. The denial must use plain language and contain:

(i) The basis for the denial, in accordance with paragraph (a)(2) of this section;

(ii) The individual's right to submit a written statement disagreeing with the denial and how the individual may file such a statement;

(iii) A statement that, if the individual does not submit a statement of disagreement, the individual may request that the covered entity provide the individual's request for amendment and the denial with any future disclosures of the protected health information that is the subject of the amendment; and

(iv) A description of how the individual may complain to the covered entity pursuant to the complaint procedures established in § 164.530(d) or to the Secretary pursuant to the procedures established in § 160.306. The description must include the name, or title, and telephone number of the contact person or office designated in § 164.530(a)(1)(ii).

(2) Statement of disagreement. The covered entity must permit the individual to submit to the covered entity a written statement disagreeing with the denial of all or part of a requested amendment and the basis of such disagreement. The covered entity may reasonably limit the length of a statement of disagreement.

(3) Rebuttal statement. The covered entity may prepare a written rebuttal to the individual's statement of disagreement. Whenever such a rebuttal is prepared, the covered entity must provide a copy to the individual who submitted the statement of disagreement.

(4) Recordkeeping. The covered entity must, as appropriate, identify the record or protected health information in the designated record set that is the subject of the disputed amendment and append or otherwise link the individual's request for an amendment, the covered entity's denial of the request, the individual's statement of disagreement, if any, and the covered entity's rebuttal, if any, to the designated record set.

(5) Future disclosures. (i) If a statement of disagreement has been submitted by the individual, the covered entity must include the material appended in accordance with paragraph (d)(4) of this section, or, at the election of the covered entity, an accurate summary of any such information, with any subsequent disclosure of the protected health information to which the disagreement relates.

(ii) If the individual has not submitted a written statement of disagreement, the covered entity must include the individual's request for amendment and its denial, or an accurate summary of such information, with any subsequent disclosure of the protected health information only if the individual has requested such action in accordance with paragraph (d)(1)(iii) of this section.

(iii) When a subsequent disclosure described in paragraph (d)(5)(i) or (ii) of this section is made using a standard transaction under part 162 of this subchapter that does not permit the additional material to be included with the disclosure, the covered entity may separately transmit the material required by paragraph (d)(5)(i) or (ii) of this section, as applicable, to the recipient of the standard transaction.

(e) Implementation specification: Actions on notices of amendment. A covered entity that is informed by another covered entity of an amendment to an individual's protected health information, in accordance with paragraph (c)(3) of this section, must amend the protected health information in designated record sets as provided by paragraph (c)(1) of this section.

(f) Implementation specification: Documentation. A covered entity must document the titles of the persons or ***82826** offices responsible for receiving and processing requests for amendments by individuals and retain the documentation as required by § 164.530(j).

45 CFR § 164.528

§ 164.528 Accounting of disclosures of protected health information.

(a) Standard: Right to an accounting of disclosures of protected health information. (1) An individual has a right to receive an accounting of disclosures of protected health information made by a covered entity in the six years prior to the date on which the accounting is requested, except for disclosures:

(i) To carry out treatment, payment and health care operations as provided in § 164.502;

(ii) To individuals of protected health information about them as provided in § 164.502;

(iii) For the facility's directory or to persons involved in the individual's care or other notification purposes as provided in § 164.510;

(iv) For national security or intelligence purposes as provided in § 164.512(k)(2);

(v) To correctional institutions or law enforcement officials as provided in § 164.512(k)(5); or

(vi) That occurred prior to the compliance date for the covered entity.

(2)(i) The covered entity must temporarily suspend an individual's right to receive an accounting of disclosures to a health oversight agency or law enforcement official, as provided in § 164.512(d) or (f), respectively, for the time specified by such agency or official, if such agency or official provides the covered entity with a written statement that such an accounting to the individual would be reasonably likely to impede the agency's activities and specifying the time for which such a suspension is required.

(ii) If the agency or official statement in paragraph (a)(2)(i) of this section is made orally, the covered entity must:

(A) Document the statement, including the identity of the agency or official making the statement;

(B) Temporarily suspend the individual's right to an accounting of disclosures subject to the statement; and

(C) Limit the temporary suspension to no longer than 30 days from the date of the oral statement, unless a written statement pursuant to paragraph (a)(2)(i) of this section is submitted during that time.

(3) An individual may request an accounting of disclosures for a period of time less than six years from the date of the request.

(b) Implementation specifications: Content of the accounting. The covered entity must provide the individual with a written accounting that meets the following requirements.

(1) Except as otherwise provided by paragraph (a) of this section, the accounting must include disclosures of protected health information that occurred during the six years (or such shorter time period at the request of the individual as provided in paragraph (a)(3) of this section) prior to the date of the request for an accounting, including disclosures to or by business associates of the covered entity.

(2) The accounting must include for each disclosure:

(i) The date of the disclosure;

(ii) The name of the entity or person who received the protected health information and, if known, the address of such entity or person;

(iii) A brief description of the protected health information disclosed; and

(iv) A brief statement of the purpose of the disclosure that reasonably informs the individual of the basis for the disclosure; or, in lieu of such statement:

(A) A copy of the individual's written authorization pursuant to § 164.508; or

(B) A copy of a written request for a disclosure under §§ 164.502(a)(2)(ii) or 164.512, if any.

(3) If, during the period covered by the accounting, the covered entity has made multiple disclosures of protected health information to the same person or entity for a single purpose under §§ 164.502(a)(2)(ii) or 164.512, or pursuant to a single authorization under § 164.508, the accounting may, with respect to such multiple disclosures, provide:

(i) The information required by paragraph (b)(2) of this section for the first disclosure during the accounting period;

(ii) The frequency, periodicity, or number of the disclosures made during the accounting period; and

(iii) The date of the last such disclosure during the accounting period.

(c) Implementation specifications: Provision of the accounting. (1) The covered entity must act on the individual's request for an accounting, no later than 60 days after receipt of such a request, as follows.

(i) The covered entity must provide the individual with the accounting requested; or

(ii) If the covered entity is unable to provide the accounting within the time required by paragraph (c)(1) of this section, the covered entity may extend the time to provide the accounting by no more than 30 days, provided that:

(A) The covered entity, within the time limit set by paragraph (c)(1) of this section, provides the individual with a written statement of the reasons for the delay and the date by which the covered entity will provide the accounting; and

(B) The covered entity may have only one such extension of time for action on a request for an accounting.

(2) The covered entity must provide the first accounting to an individual in any 12 month period without charge. The covered entity may impose a reasonable, cost-based fee for each subsequent request for an accounting by the same individual within the 12 month period, provided that the covered entity informs the individual in advance of the fee and provides the individual with an opportunity to withdraw or modify the request for a subsequent accounting in order to avoid or reduce the fee.

(d) Implementation specification: Documentation. A covered entity must document the following and retain the documentation as required by § 164.530(j):

(1) The information required to be included in an accounting under paragraph (b) of this section for disclosures of protected health information that are subject to an accounting under paragraph (a) of this section;

(2) The written accounting that is provided to the individual under this section; and

(3) The titles of the persons or offices responsible for receiving and processing requests for an accounting by individuals.
45 CFR § 164.530

§ 164.530 Administrative requirements.
(a)(1) Standard: Personnel designations. (i) A covered entity must designate a privacy official who is responsible for the development and implementation of the policies and procedures of the entity.

(ii) A covered entity must designate a contact person or office who is responsible for receiving complaints under this section and who is able to provide further information about matters covered by the notice required by § 164.520.

(2) Implementation specification: Personnel designations. A covered entity must document the personnel designations in paragraph (a)(1) of this section as required by paragraph (j) of this section.

(b)(1) Standard: Training. A covered entity must train all members of its workforce on the policies and procedures with respect to protected health information required by this subpart, as necessary and appropriate for the members of the workforce to ***82827** carry out their function within the covered entity.

(2) Implementation specifications: Training. (i) A covered entity must provide training that meets the requirements of paragraph (b)(1) of this section, as follows:

(A) To each member of the covered entity's workforce by no later than the compliance date for the covered entity;

(B) Thereafter, to each new member of the workforce within a reasonable period of time after the person joins the covered entity's workforce; and

(C) To each member of the covered entity's workforce whose functions are affected by a material change in the policies or procedures required by this subpart, within a reasonable period of time after the material change becomes effective in accordance with paragraph (i) of this section.

(ii) A covered entity must document that the training as described in paragraph (b)(2)(i) of this section has been provided, as required by paragraph (j) of this section.

(c)(1) Standard: Safeguards. A covered entity must have in place appropriate administrative, technical, and physical safeguards to protect the privacy of protected health information.

(2) Implementation specification: Safeguards. A covered entity must reasonably safeguard protected health information from any intentional or unintentional use or disclosure that is in violation of the standards, implementation specifications or other requirements of this subpart.

(d)(1) Standard: Complaints to the covered entity. A covered entity must provide a process for individuals to make complaints concerning the covered entity's policies and procedures required by this subpart or its compliance with such policies and procedures or the requirements of this subpart.

(2) Implementation specification: Documentation of complaints. As required by paragraph (j) of this section, a covered entity must document all complaints received, and their disposition, if any.

(e)(1) Standard: Sanctions. A covered entity must have and apply appropriate sanctions against members of its workforce who fail to comply with the privacy policies and procedures of the covered entity or the requirements of this subpart. This standard does not apply to a member of the covered entity's workforce with respect to actions that are covered by and that meet the conditions of § 164.502(j) or paragraph (g)(2) of this section.

(2) Implementation specification: Documentation. As required by paragraph (j) of this section, a covered entity must document the sanctions that are applied, if any.

(f) Standard: Mitigation. A covered entity must mitigate, to the extent practicable, any harmful effect that is known to the covered entity of a use or disclosure of protected health information in violation of its policies and procedures or the requirements of this subpart by the covered entity or its business associate.

(g) Standard: Refraining from intimidating or retaliatory acts. A covered entity may not intimidate, threaten, coerce, discriminate against, or take other retaliatory action against:

(1) Individuals. Any individual for the exercise by the individual of any right under, or for participation by the individual in any process established by this subpart, including the filing of a complaint under this section;

(2) Individuals and others. Any individual or other person for:

(i) Filing of a complaint with the Secretary under subpart C of part 160 of this subchapter;

(ii) Testifying, assisting, or participating in an investigation, compliance review, proceeding, or hearing under Part C of Title XI; or

(iii) Opposing any act or practice made unlawful by this subpart, provided the individual or person has a good faith belief that the practice opposed is unlawful, and the manner of the opposition is reasonable and does not involve a disclosure of protected health information in violation of this subpart.

(h) Standard: Waiver of rights. A covered entity may not require individuals to waive their rights under § 160.306 of this subchapter or this subpart as a condition of the provision of treatment, payment, enrollment in a health plan, or eligibility for benefits.

(i)(1) Standard: Policies and procedures. A covered entity must implement policies and procedures with respect to protected health information that are designed to comply with the standards, implementation specifications, or other requirements of this subpart. The policies and procedures must be reasonably designed, taking into account the size of and the type of activities that relate to protected health information undertaken by the covered entity, to ensure such compliance. This standard is not to be construed to permit or excuse an action that violates any other standard, implementation specification, or other requirement of this subpart.

(2) Standard: Changes to policies or procedures. (i) A covered entity must change its policies and procedures as necessary and appropriate to comply with changes in the law, including the standards, requirements, and implementation specifications of this subpart;

(ii) When a covered entity changes a privacy practice that is stated in the notice described in § 164.520, and makes corresponding changes to its policies and procedures, it may make the changes effective for protected health information that it created or received prior to the effective date of the notice revision, if the covered entity has, in accordance with § 164.520(b)(1)(v)(C), included in the notice a statement reserving its right to make such a change in its privacy practices; or

(iii) A covered entity may make any other changes to policies and procedures at any time, provided that the changes are documented and implemented in accordance with paragraph (i)(5) of this section.

(3) Implementation specification: Changes in law. Whenever there is a change in law that necessitates a change to the covered entity's policies or procedures, the covered entity must promptly document and implement the revised policy or procedure. If the change in law materially affects the content of the notice required by § 164.520, the covered entity must promptly make the appropriate revisions to the notice in accordance with § 164.520(b)(3). Nothing in this paragraph may be used by a covered entity to excuse a failure to comply with the law.

(4) Implementation specifications: Changes to privacy practices stated in the notice. (i) To implement a change as provided by paragraph (i)(2)(ii) of this section, a covered entity must:

(A) Ensure that the policy or procedure, as revised to reflect a change in the covered entity's privacy practice as stated in its notice, complies with the standards, requirements, and implementation specifications of this subpart;

(B) Document the policy or procedure, as revised, as required by paragraph (j) of this section; and

(C) Revise the notice as required by § 164.520(b)(3) to state the changed practice and make the revised notice available as required by § 164.520(c). The covered entity may not implement a change to a policy or procedure prior to the effective date of the revised notice.

(ii) If a covered entity has not reserved its right under § 164.520(b)(1)(v)(C) to change a privacy practice that is stated in the notice, the covered entity is bound by the privacy practices as stated ***82828** in the notice with respect to protected health information created or received while such notice is in effect. A covered entity may change a privacy practice that is stated in the notice, and the related policies and procedures, without having reserved the right to do so, provided that:

(A) Such change meets the implementation the requirements in paragraphs (i)(4)(i)(A)-(C) of this section; and

(B) Such change is effective only with respect to protected health information created or received after the effective date of the notice.

(5) Implementation specification: Changes to other policies or procedures. A covered entity may change, at any time, a policy or procedure that does not materially affect the content of the notice required by § 164.520, provided that:

(i) The policy or procedure, as revised, complies with the standards, requirements, and implementation specifications of this subpart; and

(ii) Prior to the effective date of the change, the policy or procedure, as revised, is documented as required by paragraph (j) of this section.

(j)(1) Standard: Documentation. A covered entity must:

(i) Maintain the policies and procedures provided for in paragraph (i) of this section in written or electronic form;

(ii) If a communication is required by this subpart to be in writing, maintain such writing, or an electronic copy, as documentation; and

(iii) If an action, activity, or designation is required by this subpart to be documented, maintain a written or electronic record of such action, activity, or designation.

(2) Implementation specification: Retention period. A covered entity must retain the documentation required by paragraph (j)(1) of this section for six years from the date of its creation or the date when it last was in effect, whichever is later.

(k) Standard: Group health plans. (1) A group health plan is not subject to the standards or implementation specifications in paragraphs (a) through (f) and (i) of this section, to the extent that:

(i) The group health plan provides health benefits solely through an insurance contract with a health insurance issuer or an HMO; and

(ii) The group health plan does not create or receive protected health information, except for:

(A) Summary health information as defined in § 164.504(a); or

(B) Information on whether the individual is participating in the group health plan, or is enrolled in or has disenrolled from a health insurance issuer or HMO offered by the plan.

(2) A group health plan described in paragraph (k)(1) of this section is subject to the standard and implementation specification in paragraph (j) of this section only with respect to plan documents amended in accordance with § 164.504(f).
45 CFR § 164.532

§ 164.532 Transition provisions.
(a) Standard: Effect of prior consents and authorizations. Notwithstanding other sections of this subpart, a covered entity may continue to use or disclose protected health information pursuant to a consent, authorization, or other express legal permission obtained from an individual permitting the use or disclosure of protected health information that does not comply with §§ 164.506 or 164.508 of this subpart consistent with paragraph (b) of this section.

(b) Implementation specification: Requirements for retaining effectiveness of prior consents and authorizations. Notwithstanding other sections of this subpart, the following provisions apply to use or disclosure by a covered entity of protected health information pursuant to a consent, authorization, or other express legal permission obtained from an individual permitting the use or disclosure of protected health information, if the consent, authorization, or other express legal permission was obtained from an individual before the applicable compliance date of this subpart and does not comply with §§ 164.506 or 164.508 of this subpart.

(1) If the consent, authorization, or other express legal permission obtained from an individual permits a use or disclosure for purposes of carrying out treatment, payment, or health care operations, the covered entity may, with respect to protected health information that it created or received before the applicable compliance date of this subpart and to which the consent, authorization, or other express legal permission obtained from an individual applies, use or disclose such information for purposes of carrying out treatment, payment, or health care operations, provided that:

(i) The covered entity does not make any use or disclosure that is expressly excluded from the a consent, authorization, or other express legal permission obtained from an individual; and

(ii) The covered entity complies with all limitations placed by the consent, authorization, or other express legal permission obtained from an individual.

(2) If the consent, authorization, or other express legal permission obtained from an individual specifically permits a use or disclosure for a purpose other than to carry out treatment, payment, or health care operations, the covered entity may, with respect to protected health information that it created or received before the applicable compliance date of this subpart and to which the consent, authorization, or other express legal permission obtained from an individual applies, make such use or disclosure, provided that:

(i) The covered entity does not make any use or disclosure that is expressly excluded from the consent, authorization, or other express legal permission obtained from an individual; and

(ii) The covered entity complies with all limitations placed by the consent, authorization, or other express legal permission obtained from an individual.

(3) In the case of a consent, authorization, or other express legal permission obtained from an individual that identifies a specific research project that includes treatment of individuals:

(i) If the consent, authorization, or other express legal permission obtained from an individual specifically permits a use or disclosure for purposes of the project, the covered entity may, with respect to protected health information that it created or received either before or after the applicable compliance date of this subpart and to which the consent or authorization applies, make such use or disclosure for purposes of that project, provided that the covered entity complies with all limitations placed by the consent, authorization, or other express legal permission obtained from an individual.

(ii) If the consent, authorization, or other express legal permission obtained from an individual is a general consent to participate in the project, and a covered entity is conducting or participating in the research, such covered entity may, with respect to protected health information that it created or received as part of the project before or after the applicable compliance date of this subpart, make a use or disclosure for purposes of that project, provided that the covered entity complies with all limitations placed by the consent, authorization, or other express legal permission obtained from an individual.

(4) If, after the applicable compliance date of this subpart, a covered entity agrees to a restriction requested by an individual under § 164.522(a), a subsequent use or disclosure of ***82829** protected health information that is subject to the restriction based on a consent, authorization, or other express legal permission obtained from an individual as given effect by paragraph (b) of this section, must comply with such restriction.
45 CFR § 164.534

§ 164.534 Compliance dates for initial implementation of the privacy standards.
(a) Health care providers. A covered health care provider must comply with the applicable requirements of this subpart no later than February 26, 2003.

(b) Health plans. A health plan must comply with the applicable requirements of this subpart no later than the following date, as applicable:

(1) Health plans other than small health plans—February 26, 2003.

(2) Small health plans—February 26, 2004.

(c) Health care clearinghouses. A health care clearinghouse must comply with the applicable requirements of this subpart no later than February 26, 2003.

34 The proposed privacy rule provided an estimate for a five-year period. However, the Transactions Rule provided a cost estimate for a ten year period. The decision was made to provide the final privacy estimates in a ten year period so that it would be possible to compare the costs and benefits of the two regulations.

FN35 This based on a seven percent real discount rate, explained in OMB Circular A-94, and a projected 4.2 percent inflation rate projected over the ten-year period covered by this analysis.

FN36 The regulatory impact analysis in the Transactions Rule showed a net savings of $29.9 billion (net present value of $19.1 billion in 2002 dollars). The cost estimates included all electronic systems changes that would be necessitated by the HIPAA administrative standards (e.g., security, safeguards, and electronic signatures; eligibility for a health plan; and remittance advice and payment claim status), except privacy. At the time the Transactions Rule was developed, the industry provided estimates for the systems changes in the aggregate. The industry argued that affected parties would seek to make all electronic changes in one effort because that approach would be the most cost-efficient. The Department agreed, and therefore, it "bundled" all the system change cost in the Transactions Rule estimate. Privacy was not included because at the time the Department had not made a decision to develop a privacy rule. As the Department develops other HIPAA administrative simplification standards, there may be additional costs and savings due to the non-electronic components of those regulations, and they will be identified in regulatory impact analyses that accompany those regulations. The Department anticipates that such costs and savings will be relatively small compared to the privacy and Transactions rules. The Department anticipates that the net economic impact of the rules will be a net savings to the health care system.

69 Substance Abuse and Mental Health Services Administration. http:// www.samhsa.gov/oas/srcbk/costs-02htm. Source of data: DP Rice, Costs of Mental Illness (unpublished data).

70 Department of Health and Human Services, Mental Health: A Report of the Surgeon General. Rockville, MD: 1999, page 408.

FN71 According to the Surgeon General's Report, 28 percent of the adult population have either a mental or addictive disorder, whether or not they receive services: 19 percent have a mental disorder alone, 6 percent have a substance abuse disorder alone, and 3 percent have both. Subtracting the 3 percent who have both, about three-quarters of the population with either a mental or addictive disorder have a mental disorder and one-quarter have a substance abuse disorder. We assume that this ratio (three-quarter to one-quarter) is the same for the adult population with either a mental or addictive disorder who do not receive services. [Thus, we assume that 15 percent of the population have an untreated mental disorder (three-quarters of 20 percent) and 5 percent have an untreated addictive disorder (one-quarter of 20 percent).

FN72 According to the Population Estimates Program, Population Division, U.S. Census Bureau, the U.S. population age 20 and older is 197.1 million on Sept. 1, 2000. This estimate of the adult population is used throughout this section.

73 The number of adults with mental illness is calculated by multiplying the U.S. Census Bureau estimate of the U.S. adult population—197.1 million—by the percent of the adult population with mental illness—22 percent, according to the Surgeon General's Report on Mental Health, which says that 19 percent of the population have a mental disorder alone and three percent have a mental and substance abuse disorder.

74 "Entities" and "establishments" are synonymous in this analysis.

75 "Entities" and "establishments" are used synonymously in this RFA.

FN76 "Small governments" were not included in this analysis directly; rather we have included the kinds of institutions within those governments that are likely to incur costs, such as government hospitals and clinics.

77 Entities are the physical location where an enterprise conducts business. An enterprise may conduct business in more than one establishment.

RIN 0945-AA20

HIPAA Privacy Rule To Support Reproductive Health Care Privacy

Friday, April 26, 2024

AGENCY: Office for Civil Rights (OCR), Office of the Secretary, Department of Health and Human Services.

***32976** ACTION: Final rule.

SUMMARY: The Department of Health and Human Services (HHS or "Department") is issuing this final rule to modify the Standards for Privacy of Individually Identifiable Health Information ("Privacy Rule") under the Health Insurance Portability and Accountability Act of 1996 (HIPAA) and the Health Information Technology for Economic and Clinical Health Act of 2009 (HITECH Act). The Department is issuing this final rule after careful consideration of all public comments received in response to the notice of proposed rulemaking (NPRM) for the HIPAA Privacy Rule to Support Reproductive Health Care Privacy ("2023 Privacy Rule NPRM") and public comments received on proposals to revise provisions of the HIPAA Privacy Rule in the NPRM for the Confidentiality of Substance Use Disorder (SUD) Patient Records ("2022 Part 2 NPRM").

DATES:

Effective date: This final rule is effective on June 25, 2024.

Compliance date: Persons subject to this regulation must comply with the applicable requirements of this final rule by December 23, 2024, except for the applicable requirements of 45 CFR 164.520 in this final rule. Persons subject to this regulation must comply with the applicable requirements of 45 CFR 164.520 in this final rule by February 16, 2026.

FOR FURTHER INFORMATION CONTACT: Marissa Gordon-Nguyen at (202) 240-3110 or (800) 537-7697 (TDD), or by email at OCRPrivacy@hhs.gov.

I. Executive Summary

A. Overview

In this final rule, the Department of Health and Human Services (HHS or "Department") modifies certain provisions of the Standards for Privacy of Individually Identifiable Health Information ("Privacy Rule"), issued pursuant to section 264 of the Administrative Simplification provisions of title II, subtitle F, of the Health Insurance Portability and Accountability Act of 1996 (HIPAA).[FN1] The Privacy Rule [FN2] is one of several rules, collectively known as the HIPAA Rules,[FN3] that protect the privacy and security of individuals' protected health information [FN4] (PHI), which is individually identifiable health information [FN5] (IIHI) transmitted by or maintained in electronic media or any other form or medium, with certain exceptions.[FN6]

The Privacy Rule requires the disclosure of PHI only in the following circumstances: when required by the Secretary to investigate a regulated entity's compliance with the Privacy Rule and to the individual pursuant to the individual's right of access and the individual's right to an accounting of disclosures.[FN7] Any other uses or disclosures described in the Privacy Rule are either permitted or prohibited, as specified in the Privacy Rule. For example, the Privacy Rule permits, but does not require, a regulated entity to disclose PHI to conduct quality improvement activities when applicable conditions are met, and it prohibits a regulated entity from selling PHI except pursuant to and in compliance with 45 CFR 164.508(a)(4).[FN8]

In accordance with its statutory mandate, the Department promulgated the Privacy Rule and continues to administer and enforce it to ensure that individuals are not afraid to seek health care from, or share important information with, their health care providers because of a concern that their sensitive information will be disclosed outside of their relationship with their health care provider. Protecting privacy promotes trust between health care providers and individuals, advancing access to and improving the quality of health care. To achieve this goal, the Department generally has applied the same privacy standards to nearly all PHI, regardless of the type of health care at issue. Notably, special protections were given to psychotherapy notes, owing in part to the particularly ***32978** sensitive information those notes contain.[FN9]

Under its statutory authority to administer and enforce the HIPAA Rules, the Department may modify the HIPAA Rules as needed.[FN10] The Supreme Court decision in Dobbs v. Jackson Women's Health Organization [FN11] (Dobbs) overturned precedent that protected a constitutional right to abortion and altered the legal and health care landscape. This decision has far-reaching implications for reproductive health care beyond its effects on access to abortion.[FN12] This changing legal landscape increases the likelihood that an individual's PHI may be disclosed in ways that cause harm to the interests that HIPAA seeks to protect, including the trust of individuals in health care providers and the health care system.[FN13] The threat that PHI will be disclosed and used to conduct such an investigation against, or to impose liability upon, an individual or another person is likely to chill an individual's willingness to seek lawful health care treatment or to provide full information to their health care providers when obtaining that treatment, and on the willingness of health care providers to provide such care.[FN14] These developments in the legal environment increase the potential that use and disclosure of PHI about an individual's reproductive health will undermine access to and the quality of health care generally.

In order to continue to protect privacy in a manner that promotes trust between individuals and health care providers and advances access to, and improves the quality of, health care, we have determined that the Privacy Rule must be modified to limit the circumstances in which provisions of the Privacy Rule permit the use or disclosure of an individual's PHI about reproductive health care for certain non-health care purposes, where such use or disclosure could be detrimental to privacy of the individual or another person or the individual's trust in their health care providers. This determination was informed by our expertise in administering the Privacy Rule, questions we have received from members of the public and Congress, comments we received on the 2023 HIPAA Privacy Rule to Support Reproductive Health Care Privacy notice of proposed rulemaking (NPRM) ("2023 Privacy Rule NPRM"),[FN15] and our analysis of the state of privacy for IIHI.

This final rule ("2024 Privacy Rule") amends provisions of the Privacy Rule to strengthen privacy protections for highly sensitive PHI about the reproductive health care of an individual, and directly advances the purposes of HIPAA by setting minimum protections for PHI and providing peace of mind that is essential to individuals' ability to obtain lawful reproductive health care. This final rule balances the interests of society in obtaining PHI for non-health care purposes with the interests of the individual, the Federal Government, and society in protecting individual privacy, thereby improving the effectiveness of the health care system by ensuring that persons are not deterred from seeking, obtaining, providing, or facilitating reproductive health care that is lawful under the circumstances in which such health care is provided.

The Department carefully analyzed state prohibitions and restrictions on an individual's ability to obtain high-quality health care and their effects on health information privacy and the relationships between individuals and their health care providers after Dobbs; assessed trends in state legislative activity with respect to the privacy of PHI; and conducted a thorough review of the text, history, and purposes of HIPAA and the Privacy Rule. The Department also engaged in extensive discussions with HHS agencies and other Federal departments, including the Department of Justice; consulted with the National Committee on Vital and Health Statistics (NCVHS) and the Attorney General as required by section 264(d) of HIPAA, and with Indian Tribes as required by Executive Order 13175; [FN16] held listening sessions with and reviewed correspondence from stakeholders, including covered entities, states, individuals, and patient advocates; and reviewed correspondence to HHS from Members of Congress.[FN17] The modifications made to the Privacy Rule by this final rule are the result of this work.

B. Effective and Compliance Dates

1. 2023 Privacy Rule NPRM

In the 2023 Privacy Rule NPRM, the Department proposed an effective date for a final rule that would occur 60 days after publication, and a compliance date that would occur 180 days after the effective date.[FN18] Taken together, the two dates would give entities 240 days after publication to implement compliance measures. In the preamble to the proposed rule, the Department stated that it did not believe that the proposed rule would pose unique implementation challenges that would justify an extended compliance period (i.e., a period longer than the standard 180 days provided in 45 CFR 160.105).[FN19] The Department also asserted that adherence to the standard compliance period is necessary to timely address the circumstances described in the 2023 Privacy Rule NPRM.

2. Overview of Comments

A commenter urged the Department to move quickly to issue the final rule and to provide a 180-day compliance period ***32979** as proposed. Some commenters requested that the Department provide additional time for regulated entities to comply with the proposed modifications to the Privacy Rule. Several commenters requested that the Department coordinate compliance deadlines across its rulemakings, while a few commenters specifically encouraged the Department to provide additional time for compliance with the modifications to the Notice of Privacy Practices (NPP) requirements proposed in the 2023 Privacy Rule NPRM.

3. Final Rule

This final rule is effective on June 25, 2024. Covered entities and business associates of all sizes will have 180 days beyond the effective date of the final rule to comply with the final rule's provisions, with the exception of the NPP provisions, which we address separately below. We understand that some covered entities and business associates remain concerned that a 180-day period may not provide sufficient time to come into compliance with the modified requirements. However, we believe that providing a 180-day compliance period best comports with section 1175(b)(2) of the Social Security Act of 1935 (SSA), 42 U.S.C. 1320d-4, and our implementing provision at 45 CFR 160.104(c)(1), which require the Secretary to provide at least a 180-day period for covered entities to comply with modifications to standards and implementation specifications in the HIPAA Rules, and also that providing a 180-day compliance period best protects the privacy and security of individuals' PHI in a timely manner that reflects the urgency of addressing the changes in the legal landscape and their effects on individuals, regulated entities, and other persons, while balancing the burden imposed upon regulated entities of implementing this final rule.

Section 160.104(a) permits the Department to adopt a modification to a standard or implementation specification adopted under the Privacy Rule no more frequently than once every 12 months.[FN20] As discussed above, we are required to provide a minimum of a 180-day compliance period when adopting a modification, but we are permitted to provide a longer compliance period based on the extent of the modification and the time needed to comply with the modification in determining the compliance date for the modification.[FN21] The Department makes every effort to consider the burden and cost of implementation for regulated entities when determining an appropriate compliance date.

While we recognize that regulated entities will need to revise and implement changes to their policies and procedures in response to the modifications in this final rule, we do not believe that these changes are so significant as to require more than a 180-day compliance period. This final rule narrowly tailors the application of its changes to certain limited circumstances involving lawful reproductive health care and clarifies that regulated entities are not expected to know or be aware of laws other than those with which they are required to comply. While it adds a condition to certain requests for uses and disclosures, the affected requests already require careful review by regulated entities for compliance with previously imposed conditions. Thus, we do not believe it will be difficult for regulated entities to adjust their policies and procedures to accommodate this new requirement. The other modifications finalized in this rule are in service of implementing the two changes above and impose minimal burden on regulated entities. Additionally, the Department believes, based on its evaluation of the evolving privacy landscape, that the changes made by this final rule are of particular urgency. Accordingly, we believe that a 180-day compliance period, combined

with a 60-day effective date, is sufficient for regulated entities to make the changes required by most of the modifications in this final rule, with the exception of the NPP provisions.

We separately consider the question of the compliance date for the modifications to the NPP provisions. In the 2022 Confidentiality of Substance Use Disorder (SUD) Patient Records NPRM ("2022 Part 2 NPRM"),[FN22] the Department proposed, among other things, to revise 45 CFR 164.520 as required by section 3221 of the Coronavirus Aid, Relief, and Economic Security (CARES) Act.[FN23] The Department proposed to provide the same compliance date for both the proposed modifications to 45 CFR 164.520 and the more extensive modifications to 42 CFR part 2 ("Part 2").[FN24] The 2024 Confidentiality of Substance Use Disorder (SUD) Patient Records Final Rule ("2024 Part 2 Rule") explicitly noted that the Department was not finalizing the proposed modifications to the NPP provisions at that time, but that we planned to do so in a future HIPAA final rule.[FN25] The Department also acknowledged that some covered entities might have NPPs that would not reflect updated changes to policies and procedures addressing how Part 2 records are used and disclosed. Rather than requiring covered entities to revise their NPPs twice in a short period of time, the Department announced in the 2024 Part 2 Rule that it would exercise enforcement discretion related to the requirement that covered entities update their NPPs whenever material changes are made to privacy practices until the compliance date established by a future HIPAA final rule.[FN26] The Department is finalizing the modifications to the NPP required by section 3221 of the CARES Act in this rule and aligning the effective and compliance dates for all of the modified NPP requirements with those of the 2024 Part 2 Rule.

The compliance date of the 2024 Part 2 Rule is February 16, 2026, substantially later than the compliance date for most of this final rule, because of the significant changes required for compliance with the 2024 Part 2 Rule. Accordingly, in compliance with 45 CFR 160.104 and consistent with the NPP proposals included in the 2022 Part 2 NPRM and public comment, we are aligning the compliance date for the NPP changes required by this final rule with the compliance date for the 2024 Part 2 Rule so that covered entities regulated under both rules can implement all changes to their NPPs at the same time. Covered entities are expected to be in compliance with the modifications to 45 CFR 164.520 on February 16, 2026.

4. Response to Public Comments

Comment: One commenter expressed support for the proposal in the 2023 Privacy Rule NPRM to establish a 180-day compliance date and urged the Department to issue a final rule quickly. Some commenters sought an extension of the compliance date for twelve to eighteen months, explaining that extensive policy and legal work, process and software changes, documentation and training would be required to implement the 2023 Privacy Rule NPRM.

One commenter suggested phasing in the attestation requirement so that "downstream" regulated entities, such as business associates and managed care organizations, would have a later compliance date than health care providers.

***32980** Response: We appreciate the commenters' suggestions, but as discussed above, based on our assessment, we do not believe the modifications required by this final rule will require longer to implement.

Comment: Some commenters requested that the Department coordinate compliance deadlines of final rules that revise the Privacy Rule or publish one final rule addressing the proposals in the NPRMs to enable regulated entities to leverage the resources required to implement the changes to achieve compliance with all of the new requirements at one time.

One commenter explained that each NPRM would involve operational changes requiring significant resources and effort and expressed their belief that a single comprehensive final rule would allow regulated entities to make all of the required changes, including revisions to policies and procedures, development of new or revised workflows, electronic health record (EHR) updates, and technology enhancements.

Response: We appreciate the commenters' suggestion, but we do not believe that it is necessary to fully align the compliance dates for the 2024 Part 2 Rule and the 2024 Privacy Rule. By imposing separate compliance deadlines, we are able to act more quickly to protect the privacy of PHI.

However, consistent with 45 CFR 160.104 and as requested by public comment, we are applying the same compliance date for covered entities to revise their NPPs to address modifications made to 45 CFR 164.520 in response to and consistent with the CARES Act and to support reproductive health care privacy. The compliance date for the NPP provisions is February 16, 2026. [FN27] Part 2 programs, including those that are covered entities, can choose to implement the changes to their NPPs that are required by the 2024 Part 2 Rule prior to the compliance date, but there is no requirement that they do so.

II. Statutory and Regulatory Background

A. Statutory Authority and History

1. Health Insurance Portability and Accountability Act of 1996 (HIPAA)

In 1996, Congress enacted HIPAA [FN28] to reform the health care delivery system to "improve portability and continuity of health insurance coverage in the group and individual markets." [FN29] To enable health care delivery system reform, Congress included in HIPAA requirements for standards to support the electronic exchange of health information. According to section 261, "[i]t is the purpose of this subtitle to improve [. . .] the efficiency and effectiveness of the health care system, by encouraging the development of a health information system through the establishment of standards and requirements for the electronic transmission of certain health information [. . .]." [FN30] Congress applied the Administrative Simplification provisions directly to three types of entities known as "covered entities"—health plans, health care clearinghouses, and health care providers who transmit information electronically in connection with a transaction for which HHS has adopted a standard.[FN31]

Section 262(a) of HIPAA required the Secretary to adopt uniform standards "to enable health information to be exchanged electronically." [FN32] Congress directed the Secretary to adopt standards for unique identifiers to identify individuals, employers, health plans, and health care providers across the nation [FN33] and standards for, among other things, transactions and data elements relating to health information,[FN34] the security of that information,[FN35] and verification of electronic signatures.[FN36]

Congress recognized that the standardization of certain electronic health care transactions required by HIPAA posed risks to the privacy of confidential health information and viewed individual privacy, confidentiality, and data security as critical for orderly administrative simplification.[FN37] Thus, as explained in the preamble to the 2023 Privacy Rule NPRM,[FN38] Congress provided the Department with the authority to regulate the privacy of IIHI. According to one Member of Congress, privacy standards would create an additional layer of protection beyond the oath pledged by health care providers to keep information secure and, as described by another Member, would further protect information from being used in a "malicious or discriminatory manner." [FN39] Congress intended for the law to enhance individuals' trust in health care providers, which required that the law provide additional protection for the confidentiality of IIHI. As described by a Member of Congress: "The bill would also establish strict security standards for health information because Americans clearly want to make sure that their health care records can only be used by the medical professionals that treat them. Often, we assume that because doctors take an oath of confidentiality that in fact all who touch their records operate by the same standards. Clearly, they do not." [FN40] Moreover, Congress considered that health care reform required an approach that would not compromise privacy as health information became more accessible.[FN41]

Accordingly, section 264(a) directed the Secretary to submit to Congress detailed recommendations for Federal "standards with respect to the privacy of [IIHI]" nationwide within one year of HIPAA's enactment.[FN42] The statute made clear that the Secretary had the authority to promulgate regulations if Congress did not enact legislation covering these matters within three years.[FN43] Congress directed the Secretary to ensure that the regulations promulgated "address at least" the following three subjects: (1) the rights that an individual who is a subject of IIHI should have; (2) the procedures that should be established for the exercise of such rights; and (3) the uses and disclosures of such information that should be authorized or required.[FN44]

Additionally, Congress provided a clear statement that HIPAA's provisions would "supersede any contrary ***32981** provision of State law," with certain limited exceptions.[FN45] One exception to this general preemption authority is for "state privacy laws that are contrary to and more stringent than the corresponding federal standard, requirement, or implementation specification." [FN46] Thus, Congress intended for the Department to create privacy standards to safeguard health information while respecting the ability of states to provide individuals with additional health information privacy.

Congress required the Secretary to consult with the NCVHS,[FN47] thereby ensuring that the Secretary's decisions reflected public and expert involvement and advice in carrying out the requirements of section 264.[FN48] NCVHS sent its initial recommendations to the Secretary in a letter to the Secretary on June 27, 1997. Importantly, NCVHS advised that "strong substantive and procedural protections" should be imposed if health information were to be disclosed to law enforcement, and, where identifiable health information would be made available for non-health purposes, individuals should be afforded assurances that their data would not be used against them.[FN49] Additionally, NCVHS "unanimously" recommended that "[. . .] the Secretary and the Administration assign the highest priority to the development of a strong position on health privacy that provides the highest possible level of protection for the privacy rights of patients." [FN50] NCVHS further noted that failure to do so would "undermine public confidence in the health care system, expose patients to continuing invasions of privacy, subject record keepers to potentially significant legal liability, and interfere with the ability of health care providers and others to operate the health care delivery and payment system in an effective and efficient manner," which would undermine what Congress intended.[FN51]

NCVHS further recommended that "any rules regulating disclosures of identifiable health information be as clear and as narrow as possible. Each group of users must be required to justify their need for health information and must accept reasonable substantive and procedural limitations on access." [FN52] According to NCVHS, this would allow for the disclosures that society deemed necessary and appropriate while providing individuals with clear expectations regarding their health information privacy.

As we noted in the 2023 Privacy Rule NPRM,[FN53] Congress contemplated that the Department's rulemaking authorities under HIPAA would not be static. Congress specifically built in a mechanism to adapt such regulations as technology and health care evolve, directing that the Secretary review and modify the Administrative Simplification standards as determined appropriate, but not more frequently than once every 12 months.[FN54] That statutory directive complements the Secretary's general rulemaking authority to "make and publish such rules and regulations, not inconsistent with this chapter, as may be necessary to the efficient administration of the functions with which each is charged under this chapter." [FN55]

2. Health Information Technology for Economic and Clinical Health (HITECH) Act

On February 17, 2009, Congress enacted the Health Information Technology for Economic and Clinical Health Act of 2009 (HITECH Act) [FN56] to promote the widespread adoption and standardization of health information technology (health IT). The HITECH Act included additional HIPAA privacy and security requirements for covered entities and business associates and expanded certain rights of individuals with respect to their PHI.

Congress understood the importance of a relationship between a connected health IT landscape, "a necessary and vital component of health care reform," [FN57] and privacy and security standards when it enacted the HITECH Act. The Purpose statement of an accompanying House of Representatives report [FN58] on the Energy and Commerce Recovery and Reinvestment Act [FN59] recognizes that "[i]n addition to costs, concerns about the security and privacy of health information have also been regarded as an obstacle to the adoption of [health IT]." The Senate Report for S. 336 [FN60] similarly acknowledges that "[i]nformation technology systems linked securely and with strong privacy protections can improve the quality and efficiency of health care while producing significant cost savings." [FN61] As the Department explained in the 2013 regulation referred to as the "Omnibus Rule" [FN62] and discussed in greater detail below, the HITECH Act's additional HIPAA privacy and security requirements [FN63] supported Congress' goal of promoting widespread adoption and interoperability of health IT by "strengthen[ing] the privacy and security protections for health information established by HIPAA." [FN64]

In passing the HITECH Act, Congress instructed the Department that any new health IT standards adopted under section 3004 of the Public Health Service Act (PHSA) must take into account the privacy and security requirements of the HIPAA Rules.[FN65] Congress also affirmed that the existing HIPAA Rules were to remain in effect to the extent that they are consistent with the HITECH Act and directed the Secretary to revise the HIPAA Rules as necessary for consistency with the ***32982** HITECH Act.[FN66] Congress confirmed that the new law was not intended to have any effect on authorities already granted under HIPAA to the Department, including section 264 of that statute and the regulations issued under that provision.[FN67] Congress thus affirmed the Secretary's ongoing rulemaking authority to modify the Privacy Rule's standards and implementation specifications as often as every 12 months when appropriate, including to strengthen privacy and security protections for IIHI.

B. Regulatory History

The Secretary has delegated the authority to administer the HIPAA Rules and to make decisions regarding their implementation, interpretation, and enforcement to the HHS Office for Civil Rights (OCR).[FN68] Since the enactment of the HITECH Act, the Department has exercised its authority to modify the Privacy Rule several times—in 2013, 2014, and 2016.[FN69]

1. 2000 Privacy Rule

As directed by HIPAA, the Department provided a series of recommendations to Congress for a potential new law that would address the confidentiality of IIHI.[FN70] Congress did not act within its three-year self-imposed deadline. Accordingly, the Department published a proposed rule on November 3, 1999,[FN71] and issued the first final rule establishing "Standards for Privacy of Individually Identifiable Health Information" ("2000 Privacy Rule") on December 28, 2000.[FN72]

The primary goal of the Privacy Rule was to provide greater protection to individuals' privacy to engender a trusting relationship between individuals and health care providers. As announced, the final rule set standards to protect the privacy of IIHI to "begin to address growing public concerns that advances in electronic technology and evolution in the health care industry are resulting, or may result, in a substantial erosion of the privacy surrounding" health information.[FN73] On the eve of that rule's issuance, the President issued an Executive Order recognizing the importance of protecting individual privacy, explaining that "[p]rotecting the privacy of patients' protected health information promotes trust in the health care system. It improves the quality of health care by fostering an environment in which patients can feel more comfortable in providing health care professionals with accurate and detailed information about their personal health." [FN74]

Since its promulgation, the Privacy Rule has protected PHI by limiting the circumstances under which covered entities and their business associates (collectively, "regulated entities") are permitted or required to use or disclose PHI and by requiring covered entities to have safeguards in place to protect the privacy of PHI. In adopting these regulations, the Department acknowledged the need to balance several competing factors, including existing legal expectations, individuals' privacy expectations, and societal expectations.[FN75] The Department noted in the preamble that the large number of comments from individuals and groups representing individuals demonstrated the deep public concern about the need to protect the privacy of IIHI and constituted evidence of the importance of protecting privacy and the potential adverse consequences to individuals and their health if such protections are not extended.[FN76] Through its policy choices in the 2000 Privacy Rule, the Department struck a balance between competing interests—the necessity of protecting privacy and the public interest in using identifiable health information for vital public and private purposes—in a way that was also workable for the varied stakeholders.[FN77]

In the 2000 Privacy Rule, the Department established "general rules" for uses and disclosures of PHI, codified at 45 CFR 164.502.[FN78] The 2000 Privacy Rule also specified the circumstances in which a covered entity was required to obtain an individual's consent,[FN79] authorization,[FN80] or the opportunity for the individual to agree or object.[FN81] Additionally, it established rules for when a covered entity is permitted to use or disclose PHI without an individual's consent, authorization, or opportunity to agree or object.[FN82] In particular, the Privacy Rule permits certain uses and disclosures of PHI, without the individual's authorization, for identified activities that benefit the community, such as public health activities, judicial and administrative proceedings, law enforcement purposes, and research.[FN83]

The Privacy Rule also established the rights of individuals with respect to their PHI, including the right to receive adequate notice of a covered entity's privacy practices, the right to request restrictions of uses and disclosures, the right to access (i.e., to inspect and obtain a copy of) their PHI, the right to request an amendment of their PHI, and the right to receive an accounting of disclosures.[FN84]

In the 2000 Privacy Rule, the Secretary exercised her statutory authority to adopt 45 CFR 160.104(a), which reserves the Secretary's ability to modify any standard or implementation specification adopted under the Administrative Simplification provisions.[FN85] The Secretary first invoked this modification authority to amend the Privacy Rule in 2002 [FN86] and made additional modifications in 2013,[FN87] and 2016,[FN88] as described below.

2. 2002 Privacy Rule

After publication of the 2000 Privacy Rule, the Department received many inquiries and unsolicited comments about the Privacy Rule's effects and operation. As a result, the Department opened the 2000 Privacy Rule for further comment in February 2001, less than one month before the effective date and 25 months before the compliance date for most covered entities, and issued clarifying guidance on its implementation.[FN89] NCVHS' Subcommittee on Privacy, Confidentiality and Security held public ***32983** hearings about the 2000 Privacy Rule. From those hearings, the Department obtained additional information about concerns related to key provisions and their potential unintended consequences for health care quality and access.[FN90] On March 27, 2002, the Department proposed modifications to the 2000 Privacy Rule to clarify the requirements and correct potential problems that could threaten access to, or quality of, health care.[FN91]

In response to comments on the proposed rule, the Department finalized modifications to the Privacy Rule on August 14, 2002 (“2002 Privacy Rule”).[FN92] This final rule clarified HIPAA's requirements while maintaining strong protections for the privacy of IIHI.[FN93] These modifications addressed certain workability issues, including but not limited to clarifying distinctions between health care operations and marketing; modifying the minimum necessary standard to exclude disclosures authorized by individuals and clarify its operation; eliminating the consent requirement for uses and disclosures of PHI for treatment, payment, or health care operations (TPO), and to otherwise clarify the role of consent in the Privacy Rule; and making other modifications and conforming amendments consistent with the proposed rule. The Department also included modifications to the provisions permitting the use or disclosure of PHI for public health activities and for research activities without consent, authorization, or an opportunity to agree or object.

3. 2013 Omnibus Rule

Following the enactment of the HITECH Act, the Department issued an NPRM, entitled “Modifications to the HIPAA Privacy, Security, and Enforcement Rules Under the Health Information Technology for Economic and Clinical Health [HITECH] Act” (“2010 NPRM”),[FN94] which proposed to implement certain HITECH Act requirements. In 2013, the Department issued the final rule, Modifications to the HIPAA Privacy, Security, Enforcement, and Breach Notification Rules Under the Health Information Technology for Economic and Clinical Health [HITECH] Act and the Genetic Information Nondiscrimination Act, and Other Modifications to the HIPAA Rules (“2013 Omnibus Rule”),[FN95] which implemented many of the new HITECH Act requirements, including strengthening individuals' privacy rights related to their PHI.

The Department also finalized regulatory provisions that were not required by the HITECH Act, but were necessary to address the workability and effectiveness of the Privacy Rule and to increase flexibility for and decrease burden on regulated entities.[FN96] In the 2010 NPRM, the Department noted that it had not amended the Privacy Rule since 2002.[FN97] It further explained that information gleaned from contact with the public since that time, enforcement experience, and technical corrections needed to eliminate ambiguity provided the impetus for the Department's actions to make certain regulatory changes.[FN98]

For example, the Department modified its prior interpretation of the Privacy Rule requirement at 45 CFR 164.508(c)(1)(iv) that a description of a research purpose must be study specific.[FN99] The Department explained that, under its new interpretation,

the research purposes need only be described adequately such that it would be reasonable for an individual to expect that their PHI could be used or disclosed for such future research.[FN100] In the 2013 Omnibus Rule, the Department explained that this change was based on the concerns expressed by covered entities, researchers, and other commenters on the 2010 NPRM that the former requirement did not represent current research practices. The Department provided a similar explanation for its modifications to the Privacy Rule that permit certain disclosures of student immunization records to schools without an authorization.[FN101] Additionally, based on a recommendation made at an NCVHS meeting, the Department requested comment on and finalized proposed revisions to the definition of PHI to exclude information regarding an individual who has been deceased for more than 50 years.[FN102] For the latter, the Department noted that it was balancing the privacy interests of decedents' living relatives and other affected individuals against the legitimate needs of public archivists to obtain records.[FN103]

None of the changes described in the paragraph above were required by the HITECH Act. Rather, the Department determined that it was necessary to promulgate these changes pursuant to its existing general rulemaking authority under HIPAA. NCVHS and the public also recommended other changes between the publication of the 2002 Privacy Rule and the 2013 Omnibus Rule, including the creation of specific categories of PHI, such as “Sexuality and Reproductive Health Information” that would allow for special protections of such PHI.[FN104] The Department declined to propose specific protections for certain categories of PHI at that time because of concerns about the ability of regulated entities to segment PHI and the effects on care coordination. Many of those concerns are still present and so, the Department did not propose and determined not to establish a specific category of particularly sensitive PHI in this rulemaking. Instead, as discussed more fully below, the Department is finalizing a purpose-based prohibition against certain uses and disclosures.

***32984 4. 2024 Privacy Rule**

On April 17, 2023, the Department issued an NPRM [FN105] to modify the Privacy Rule for the purpose of prohibiting uses and disclosures of PHI for criminal, civil, or administrative investigations or proceedings against persons for seeking, obtaining, providing, or facilitating reproductive health care that is lawful under the circumstances in which it is provided. To properly execute the HIPAA statutory mandate, and in accordance with the regulatory authority granted to it by Congress, the Department continually monitors and evaluates the evolving environment for health information privacy nationally, including the interaction of the Privacy Rule and state statutes and regulations governing the privacy of health information. In keeping with the Department's practice, this final rule accommodates state autonomy to the extent consistent with the need to maintain rules for health information privacy that serve HIPAA's objectives. The regulation thus preempts state law only to the extent necessary to achieve Congress' directive to establish a standard for the privacy of IIHI for the purpose of improving the effectiveness of the health care system. As discussed below, achieving that objective requires individuals to trust that their health care providers will maintain privacy of PHI about lawful reproductive health care. In addition, NCVHS held a virtual public meeting that included a discussion about the proposed rule on June 14, 2023,[FN106] and provided recommendations to the Department based on this discussion, briefings at their July 2022 [FN107] and December 2022 [FN108] meetings, and the expertise of its members.[FN109] The resultant public record and subsequent recommendations submitted to the Department by NCVHS, along with other public comments on the 2023 Privacy Rule NPRM, informed the development of these modifications.

III. Justification for This Rulemaking

A. HIPAA Encourages Trust and Confidence by Carefully Balancing Individuals' Privacy Interests With Others' Interests in Using or Disclosing PHI

1. Privacy Protections Ensure That Individuals Have Access to, and Are Comfortable Accessing, High-Quality Health Care

The goal of a functioning health care system is to provide high-quality health care that results in the best possible outcomes for individuals. To achieve that goal, a functioning health care system depends in part on individuals trusting health care providers. Thus, trust between individuals and health care providers is essential to an individual's health and well-being.[FN110] Protecting

the privacy of an individual's health information is "a crucial element for honest health discussions." [FN111] The original Hippocratic Oath required physicians to pledge to maintain the confidentiality of health information they learn about individuals. [FN112] Without confidence that private information will remain private, individuals—to their own detriment—are reluctant to share information with health care providers.

When proposing the 2000 Privacy Rule, the Department recognized that individuals may be deterred from seeking needed health care if they do not trust that their sensitive information will be kept private.[FN113] The Department described its policy choices as stemming from a motivation to develop and maintain a relationship of trust between individuals and health care providers. The Department explained that a fundamental assumption of the 2000 Privacy Rule was that the greatest benefits of improved privacy protection would be realized in the future as individuals gain increasing trust in their health care provider's ability to maintain the confidentiality of their health information.[FN114] As a result, the Privacy Rule strengthened protections for health information privacy, including the right of individuals to determine who has access to their health information.

Despite the Privacy Rule's rights and protections, individuals do not have confidence that their IIHI is being protected adequately. In a 2022 survey on patient privacy, the American Medical Association (AMA) found that, of 1,000 patients surveyed: (1) nearly 75% were concerned about protecting the privacy of their own health information; and (2) 59% of patients worried about health data being used by companies to discriminate against them or their loved ones.[FN115] According to the AMA, a lack of health information privacy raises many questions about circumstances that could put individuals and health care providers in legal peril, and that the "primary purpose of increasing [health information] privacy is to build public trust, not inhibit data exchange." [FN116]

The Federal Government also has a strong interest in ensuring that individuals have access to high-quality health care.[FN117] This is true at both an ***32985** individual and population level. In the 2000 Privacy Rule, the Department noted that high-quality health care depends on an individual being able to share sensitive information with their health care provider based on the trust that the information shared will be protected and kept confidential.[FN118] An effective health care system requires an individual to share sensitive health information with their health care providers. They do so with the reasonable expectation that this information is going to be used to treat them. The prospect of the disclosure of highly sensitive PHI by regulated entities can result in medical mistrust and the deterioration of the confidential, safe environment that is necessary to provide high-quality health care, operate a functional health care system, and improve the public's health generally.[FN119] High-quality health care cannot be attained without patient candor. Health care providers rely on an individual's health information to diagnose them and provide them with appropriate treatment options and may not be able to reach an accurate diagnosis or recommend the best course of action for the individual if the individual's medical records lack complete information about their health history. However, an individual may be unwilling to seek treatment or share highly sensitive PHI when they are concerned about the confidentiality and security of PHI provided to treating health care providers.[FN120] The Department has long recognized that health care professionals who lose the trust of their patients cannot deliver high-quality care.[FN121] Similarly, if a health care provider does not trust that the PHI they include in an individual's medical records will be kept private, the health care provider may leave gaps or include inaccuracies when preparing medical records, creating a risk that ongoing or future health care would be compromised. In contrast, heightened confidentiality and privacy protections enable a health care provider to feel confident maintaining full and complete medical records.

Incomplete medical records and health care avoidance not only inhibit the quality of health care an individual receives; they are also detrimental to efforts to improve public health. The objective of public health is to prevent disease in and improve the health of populations. Barriers that undermine the willingness of individuals to seek health care in a timely manner or to provide complete and accurate health information to their health care providers undermine the overall objective of public health. For example, individuals who are not candid with their health care providers because of concerns about potential negative consequences of a loss of privacy may withhold information about a variety of health matters that have public health implications, such as communicable diseases or vaccinations.[FN122] Experience also shows that medical mistrust—especially in communities of color and other communities that have been marginalized or negatively affected by historical and current

health care disparities—can create damaging and chilling effects on individuals' willingness to seek appropriate and lawful health care for medical conditions that can worsen without treatment.[FN123]

2. The Department's Approach to the Privacy Rule Has Long Sought To Balance the Interests of Individuals and Society

While recognizing the importance of preserving individuals' trust, the Department has consistently taken the approach of balancing the interests of the individual in the privacy of their PHI with society's interests, including in the free flow of information that enables the provision of effective and efficient health care services. Such an approach derives from Congress's direction, in 1996, to improve the efficiency and effectiveness of the health care system by encouraging the development of a health information system while taking into account the privacy of IIHI and the uses and disclosures of such information that should be authorized or required.[FN124] In past rulemakings, the Department has made revisions to the Privacy Rule to balance an individual's privacy expectations with a covered entity's need for information for reimbursement and quality purposes.[FN125] As the Department previously explained, "Patient privacy must be balanced against other public goods, such as research and the risk of compromising such research projects if researchers could not continue to use such data." [FN126] The 2000 Privacy Rule included permissions for regulated entities to disclose PHI under certain conditions, including for judicial and administrative proceedings and law enforcement purposes, because an individual's right to privacy in information about themselves is not absolute. For example, it does not prevent reporting of public health information on communicable diseases, nor does it prevent law enforcement ***32986** from obtaining information when due process has been observed.[FN127]

In more recent rulemakings revising the Privacy Rule, the Department has continued its efforts to build and maintain individuals' trust in the health care system while balancing the interests of individuals with those of others. For example, in explaining revisions made as part of the 2013 Omnibus Rule, the Department recognized that covered entities must balance protecting the privacy of health information with sharing health information with those responsible for ensuring public health and safety. [FN128] The Privacy Rule was also revised in 2016 ("2016 Privacy Rule") in accordance with an administration-wide effort to curb gun violence across the nation.[FN129] The 2016 Privacy Rule was tailored to authorize the disclosure of a limited set of PHI [FN130] for a narrow, specific purpose, that is, to permit only regulated entities that are state agencies or other entities designated by a state to collect and report information to the National Instant Criminal Background Check System (NICS) or a lawful authority making an adjudication or commitment as described by 18 U.S.C. 922(g)(4) to disclose to NICS the identities of individuals who are subject to a Federal "mental health prohibitor," that disqualifies them from shipping, transporting, possessing, or receiving a firearm. As explained in the 2016 Privacy Rule, the Federal mental health prohibitor applies only to the extent that the individual is involuntarily committed or determined by a court or other lawful authority to be a danger to self or others, or is unable to manage their own affairs because of a mental illness or condition.[FN131] Similar to this final rule, the 2016 Privacy Rule balanced public safety goals with individuals' privacy interests by clearly limiting permissible disclosures to those that are necessary to ensure that individuals are not discouraged from seeking lawful health care, in this case, voluntary treatment for mental health needs.[FN132] In the 2013 Omnibus Rule and 2016 Privacy Rule, the Department ensured that the disclosures were necessary for the public good and were not for the purpose of harming the individual. This approach is consistent with the NCVHS recommendations to the Secretary relating to health information privacy: "The Committee strongly supports limiting use and disclosure of identifiable information to the minimum amount necessary to accomplish the purpose. The Committee also strongly believes that when identifiable health information is made available for non-health uses, patients deserve a strong assurance that the data will not be used to harm them." [FN133]

Consistent with Congress's directive to promulgate "standards with respect to the privacy of [IIHI]" that, among other things, address the "uses and disclosures of such information that should be authorized or required," [FN134] the Department recognizes a variety of interests with respect to health information. These include individuals' interests in the privacy of their health information, society's interests in ensuring the effectiveness of the health care system, and other interests of society in using IIHI for certain non-health care purposes. As part of balancing these interests, the Department has also recognized that it may be necessary to afford additional protection to certain types of health information because those types of information are particularly sensitive and often involve highly personal health care decisions. For example, the Department affords special privacy protections to psychotherapy notes. These protections are afforded in part because of the particularly sensitive information those notes contain and in part because of the unique function of these records, which are by definition maintained

separately from an individual's medical record.[FN135] As we previously explained, the primary value of psychotherapy notes is to the specific provider, and the promise of strict confidentiality helps to ensure that the patient will feel comfortable freely and completely disclosing very personal information essential to successful treatment.[FN136] The Department elaborated that even the possibility of disclosure may impede development of the confidential relationship necessary for successful treatment because of the sensitive nature of the problems for which individuals consult psychotherapists and the potential embarrassment that may be engendered by the disclosure of confidential communications made during counseling sessions.[FN137] Therefore, to support the development and maintenance of an individual's trust and protect the relationship between an individual and their therapist, the Privacy Rule permits the disclosure of psychotherapy notes without an individual's authorization only in limited circumstances, such as to avert a serious and imminent threat to health or safety. Those limited circumstances do not include judicial and administrative proceedings or law enforcement purposes unless the disclosure is "necessary to prevent or lessen a serious and imminent threat to the health or safety of a person or the public." [FN138]

Information about an individual's reproductive health and associated health care is also especially sensitive and has long been recognized as such. As stated in the AMA's Principles of Medical Ethics, the "decision to terminate a pregnancy should be made privately within the relationship of trust between patient and physician in keeping with the patient's unique values and needs and the physician's best professional judgment." [FN139] NCVHS first noted reproductive health information as an example of a category of health information commonly considered to contain sensitive information in ***32987** 2006.[FN140] Between 2005 and 2010, NCVHS held nine hearings that addressed questions about sensitive information in medical records and identified additional categories of sensitive information beyond those addressed in Federal and state law, including "sexuality and reproductive health information." In several letters to the Secretary during that period, NCVHS recommended that the Department identify and define categories of sensitive information, including "reproductive health." [FN141] In a 2010 letter to the Secretary, NCVHS elaborated that, after extensive testimony on sensitive categories of health information, "reproductive health" should be expanded to "sexuality and reproductive health information," because:

Information about sexuality and reproductive history is often very sensitive. Some reproductive issues may expose people to political controversy (such as protests from abortion proponents), and public knowledge of an individual's reproductive history may place [them] at risk of stigmatization." Additionally, individuals may wish to have their reproductive history segmented so that it is not viewed by family members who otherwise have access to their records. Parents may wish to delay telling their offspring about adoption, gamete donation, or the use of other forms of assisted reproduction technology in their conception, and, thus, it may be important to have the capacity to segment these records.[FN142]

The Department did not provide specific protections for certain categories of PHI upon receipt of the recommendation or as part of the 2013 Omnibus Rule because of concerns about the ability of regulated entities to segment PHI and the effects on care coordination. While we recognized the sensitive nature of reproductive health information before this rulemaking, the Department believed that the Supreme Court's recognition of a constitutional right to abortion coupled with the privacy protections afforded by the HIPAA Rules provided the necessary trust to promote access to and quality of health care. As a result of the changed legal landscape for reproductive health care broadly, including abortion, the range of circumstances in which PHI about legal reproductive health care could be sought and used in investigations or to impose liability expanded significantly. Now that states have much broader power to criminalize and regulate reproductive choices—and that some states have already exercised that power in a variety of ways [FN143]—individuals legitimately have a far greater fear that especially sensitive information about lawful health care will not be kept private. This changed environment requires additional privacy protections to help restore the Privacy Rule's carefully-struck balance between individual and societal interests. Because the concerns regarding segmentation and the negative impact on care coordination remain, the Department did not propose and is not establishing a new category of particularly sensitive PHI in this final rule. Instead, as discussed more fully below, the Department is finalizing its proposed purpose-based prohibition against certain uses and disclosures.

B. Developments in the Legal Environment Are Eroding Individuals' Trust in the Health Care System

The Supreme Court's decision in Dobbs overturned Roe v. Wade [FN144] and Planned Parenthood of Southeastern Pennsylvania v. Casey,[FN145] thereby enabling states to significantly restrict access to abortion.[FN146] Following the Supreme Court's

decision, the legal landscape has shifted as laws significantly restricting access to abortion have in fact become effective in some jurisdictions. This change has also led to questions about both the current and future lawfulness of other types of reproductive health care, and therefore, the ability of individuals to access such health care.[FN147] Thus, this shift may interfere with the longstanding expectations of individuals, established by HIPAA and the Privacy Rule, with respect to the privacy of their PHI.[FN148] For example, while the Privacy Rule currently permits, but does not require, uses and disclosures of PHI for certain purposes,[FN149] including when another law requires a regulated entity to make the use or disclosure,[FN150] regulated entities after Dobbs may feel compelled by other applicable law to use or disclose PHI to law enforcement or other persons who may use that health information against an individual, a regulated entity, or another person who has sought, obtained, provided, or facilitated reproductive health care, even when such health care is lawful in the circumstances in which the health care is obtained.[FN151]

As a consequence of these developments in Federal and state law, an individual's expectation of privacy of their health information (irrespective of whether an individual is or was pregnant) is threatened by the potential use or disclosure of PHI to identify persons who seek, obtain, provide, or facilitate lawful reproductive health care. Thus, these developments have created an environment in which individuals are more likely to fear that their PHI will be requested from regulated entities for use against individuals, health care providers, and others, merely because such persons sought, obtained, provided, or facilitated lawful reproductive health care.[FN152] The potential increased demand for PHI for these purposes is not limited to states in which providing or obtaining certain reproductive health care is no longer legal. Rather, the changes in the legal landscape have nationwide implications, not only because of their effects on the relationship between health care providers and individuals, but also because of the potential effects on the flow of health information across state lines. For example, an individual who travels out-of-state to obtain reproductive health care that is lawful under the circumstances in which it is provided may now be reluctant to have that information disclosed to a health care provider in their home state if they ***32988** fear that it may then be used against them or a loved one in their home state. A health care provider may be unable to provide appropriate health care if they are unaware of the individual's recent health history, which could have significant negative health consequences. Individuals and health care providers may also be reluctant to disclose PHI to health plans with a multi-state presence because of concerns that one of those states will seek to obtain that PHI to investigate or impose liability on the individual or the health care provider, even if there is no nexus with that state other than the presence of the health plan in that state. Such reluctance may have significant ramifications for access to reproductive health care, given the cost associated with obtaining such health care, and health care generally.

Additionally, PHI is more likely to be transmitted across state lines as the electronic exchange of PHI increases because it is easier and more efficient to send information electronically. For instance, the Trusted Exchange Framework and Common Agreement (TEFCA) initiative established under the 21st Century Cures Act and the Centers for Medicare & Medicaid Services (CMS) Interoperability and Prior Authorization Final Rule will spur greater use and disclosure of PHI by regulated entities and to health apps and others.[FN153] Different components of a health information exchange/health information network (HIE/HIN) may be located in different states, meaning that the PHI may be transmitted across state lines, and thus affected by laws severely restricting access to reproductive health care, even where both the health care and the recipient of the PHI are located in states where access to such health care is not substantially restricted.

According to commenters, individuals are increasingly concerned about the confidentiality of discussions with their health care providers. As a result, some individuals are not confiding fully in their health care providers, increasing the risk that their medical records will not be complete and accurate, leading to decreases in health care quality and safety. This lack of openness is also likely to affect the information and treatment recommendations health care providers provide to individuals because health care providers will not be sufficiently informed to provide thorough and accurate information and guidance.[FN154]

Individuals are not alone in their fears. Indeed, according to commenters, some health care providers are afraid to provide lawful health care because they are concerned that in doing so, they risk being subjected to investigation and possible liability.[FN155] The Department is aware that some health care providers, such as clinicians and pharmacies, are hesitant to provide lawful health care or lawfully prescribe or fill prescriptions for medications that can result in pregnancy loss, even when the health care or

those prescriptions are intended to treat individuals for other health matters, because of fear of law enforcement action.[FN156] Some health care providers are also not providing individuals with information to address concerns about their reproductive health, even where their communications would be lawful, out of fear of criminal prosecution, civil suit, or loss of their clinical license.[FN157] This may result in individuals making decisions about their health care with incomplete information, which could have serious implications for health outcomes. These fears also increase the risk that individual medical records will not be maintained with completeness and accuracy, which will in turn affect the quality of health care provided to individuals and their safety. Fears about potential prosecution, even when Federal law protects the actions of health care providers, are likely to negatively affect the accuracy of medical records maintained by health care providers and thereby harm individuals.

As explained by commenters and supported by research, these impingements on the privacy of health information about reproductive health care are likely to have a disproportionately greater effect on women, individuals of reproductive age, and individuals from communities that have been historically underserved, marginalized, or subject to discrimination or systemic disadvantage by virtue of their race, disability, social or economic status, geographic location, or environment.[FN158] Historically ***32989** underserved and marginalized individuals are also more likely to be the subjects of investigations and other activities to impose liability for seeking or obtaining reproductive health care, even where such health care is lawful under the circumstances in which it is provided.[FN159] They are also less likely to have adequate access to legal counsel to defend themselves from such actions.[FN160] These inequities may be exacerbated where individuals face multiple, intersecting disparities, such as having limited English proficiency [FN161] and disability.[FN162] Such individuals are thus especially likely to be concerned that information they share with their health care providers about their reproductive health care will not remain private. This is particularly true considering the historic lack of trust, negative experiences, and fear of discrimination that many members of historically underrepresented and marginalized communities and communities of color have in the health care system; [FN163] such individuals are more likely to be deterred from seeking or obtaining health care—or from giving their health care providers full information.

Congress contemplated that the Department would need to modify standards adopted under HIPAA's Administrative Simplification provisions and directed the Secretary to review standards adopted under 42 U.S.C. 1320d-2 periodically.[FN164] In accordance with this directive and based on the Department's expertise and analysis and the recent developments in the legal landscape, there is a compelling need to provide additional protections to PHI about lawful reproductive health care. Accordingly, consistent with Congress's directions to the Department, in HIPAA, as amended by Genetic Information Nondiscrimination Act (GINA) and the HITECH Act, to establish standards and requirements for the electronic transmission of certain health information, including the privacy thereof, for the development of a health information system, the Department is restricting certain uses and disclosures of PHI for particular non-health care purposes to provide such protections.

C. To Protect the Trust Between Individuals and Health Care Providers, the Department Is Restricting Certain Uses and Disclosures of PHI for Particular Non-Health Care Purposes

As discussed above, Congress enacted HIPAA to improve the efficiency and effectiveness of the health care system, which includes ensuring that individuals have trust in the health care system. Congress also directed the Department to develop standards with respect to the privacy of IIHI as part of its decision to encourage the development of a health information system. To preserve such trust, and to encourage the development and use of a nationwide health information system, it is appropriate and necessary for Federal law and policy to protect the confidentiality of medical records, especially those that are highly sensitive. Accordingly, to protect the trust between individuals and health care providers, this rule restricts certain uses and disclosures of PHI for particular non-health care purposes, i.e., for using or disclosing PHI to conduct a criminal, civil, or administrative investigation into or to impose criminal, civil, or administrative liability on any person for the mere act of seeking, obtaining, providing, or facilitating ***32990** lawful reproductive health care, or to identify any person to initiate such activities.

Information about reproductive health care is particularly sensitive and requires heightened privacy protection. The Department's approach is consistent with efforts across the Federal Government. For example, the Department of Defense (DOD) has recognized such privacy concerns. In a memorandum to DOD leaders, the Secretary of Defense directed the DOD to "[e]stablish additional privacy protections for reproductive health care information" for service members and "[d]isseminate

guidance that directs Department of Defense health care providers that they may not notify or disclose reproductive health information to commanders unless this presumption is overcome by specific exceptions set forth in policy." [FN165] The Federal Trade Commission (FTC) has also recognized that information about personal reproductive matters is "particularly sensitive" and has committed to using the full scope of its authorities to protect consumers' privacy, including the privacy of their health information and other sensitive data.[FN166] In business guidance, the FTC explained that "[t]he exposure of health information and medical conditions, especially data related to sexual activity or reproductive health, may subject people to discrimination, stigma, mental anguish, or other serious harms." [FN167]

As discussed above, the Department has long provided special protections for psychotherapy notes because of the sensitivity around this information. However, unlike psychotherapy notes, which by their very nature are easily segregated, reproductive health information is not easily segregated. Additionally, regulated entities generally do not have the ability to segment certain PHI such that regulated entities could afford special protections for specific categories of PHI.[FN168] Where such technology is available, it is generally cost prohibitive and burdensome to implement.[FN169] Therefore, the Department did not propose, and is not finalizing, a newly defined subset of PHI. Creating such a subset would create barriers to disclosing PHI for care coordination because the PHI would need to be segregated from the remaining medical record. Instead, consistent with the Privacy Rule's longstanding overall approach,[FN170] the Department is finalizing a purpose-based prohibition against certain uses and disclosures. This rule seeks to protect individuals' privacy interests in their PHI about reproductive health care and the interests of society in an effective health care system by enabling individuals and licensed health care professionals to make decisions about reproductive health care based on a complete medical record, while balancing those interests with other interests of society in obtaining PHI for certain non-health care purposes.

To assist in effectuating this prohibition, the Department is also requiring regulated entities to obtain an attestation in certain circumstances from the person requesting the use or disclosure stating that the use or disclosure is not for a prohibited purpose. A person (including a regulated entity or someone who requests PHI) who knowingly and in violation of the Administrative Simplification provisions obtains or discloses IIHI relating to another individual would be subject to potential criminal liability.[FN171] Thus, a person who knowingly and in violation of HIPAA falsifies an attestation (e.g., makes a material misrepresentation about the intended uses of the PHI requested) to obtain (or cause to be disclosed) an individual's IIHI could be subject to the criminal penalties provided by the statute.[FN172] Additionally, a regulated entity is subject to potential civil penalties for violations of the HIPAA Rules, including a failure to obtain a valid attestation before disclosing PHI, where an attestation is required.[FN173] The purpose-based prohibition, in concert with the attestation, will restrict the use and disclosure of PHI about lawful reproductive health care where the use or disclosure could harm HIPAA's overall goals of increasing trust in the health care system, improving health care quality, and protecting individual privacy. At the same time, it will allow uses and disclosures that either support those goals or do not substantially interfere with their achievement.

Consistent with the Privacy Rule's approach, the Department is clarifying that the purpose-based prohibition applies only in certain circumstances, recognizing the interests of both the Federal Government and states while also protecting the information privacy interests of persons who seek, obtain, provide, or facilitate lawful reproductive health care. Thus, the Department is finalizing a Rule of ***32991** Applicability that balances the privacy interests of individuals and the interests of society in an effective health care system with those of society in the use of PHI for other non-health care purposes by limiting the new prohibition to certain circumstances.

The Department's experience administering the Privacy Rule, research cited below, our assessment of the needs of individuals and health care providers in light of recent developments to the legal landscape, public comments, and the Regulatory Impact Analysis, in Section VI below, all provide support for the changes finalized in this rulemaking. These changes will improve individuals' confidence in the confidentiality of their PHI and their trust in the health care system, creating myriad benefits for the health care system. Balancing the privacy interests of individuals and the use of PHI for other societal priorities will continue to support an effective health care system, as Congress intended. This final rule will deter the creation of inaccurate and incomplete medical records, which will help to support the provision of appropriate lawful health care. Health care providers base their treatment recommendations on PHI contained within existing medical records, as well as information shared with them

directly by the individual. Thus, where individuals withhold information from their health care providers about lawful health care, health care providers may not be in possession of all of the necessary information to make an informed recommendation for an appropriate treatment plan, which may result in negative health outcomes at both the individual and population level. It will also improve the confidence of individuals, including among the Nation's most vulnerable communities, that they can securely seek or obtain or share that they sought or obtained lawful reproductive health care without that information being used or disclosed for the purpose of investigating or imposing liability on them for seeking or obtaining that lawful health care. By improving individuals' confidence and trust in their relationships with their health care providers, it will make individuals more likely to, for example, comply with preventative health screening recommendations, which will protect against a decline in individual and population health outcomes related to missed preventative health screenings. Additional intangible benefits from increased privacy protections in this area include enhanced support for survivors of rape, incest, and sex trafficking. The new attestation requirement discussed in greater detail below will help to assure regulated entities of their ability to operationalize these changes and avoid exposure to HIPAA liability for impermissible disclosures.

IV. General Discussion of Public Comments

The Department received more than 25,900 comments in response to its proposed rule. Overall, these comments represent the views of approximately 51,500 individuals and 350 organizations. Slightly more than half of the individuals and organizations who shared their views expressed general support for the 2023 Privacy Rule NPRM and its objectives. Less than one percent expressed mixed views. Organizational commenters included professional and trade associations, including those representing medical professionals, health plans, health care providers, health information management professionals, health information management system vendors, release-of-information vendors, employers, epidemiologists, and attorneys. The Department also received comments from advocacy organizations, including those representing patients, privacy advocates, faith-based organizations, and civil rights organizations. The NCVHS also provided comments, as did members of Congress, state, local, and Tribal government officials and public health authorities. Other commenters included health care systems, hospitals, and health care professionals.

A. General Comments in Support of the Proposed Rule

Comment: Many commenters expressed general support for the proposed rule and urged the Department to protect the privacy of individuals by limiting uses and disclosures of PHI for certain purposes where the use or disclosure of information is about reproductive health care that is lawful under the circumstances in which such health care is provided.

Many health care providers and individuals emphasized the importance of trusting relationships between individuals and their health care providers. According to individual commenters, a trusting relationship permits individuals to participate in sensitive and difficult conversations with their health care providers and enables health care providers to furnish high-quality and appropriate health care and to maintain accurate and complete medical records, including records that contain information about reproductive health care.

Many organizations also submitted comments that expressed agreement with the Department's position on the importance of the relationship between HIPAA and the HIPAA Rules and trust between individuals and health care providers. For example, an organization commented that privacy has long been a “hallmark” of medical care and agreed with the Department that Congress recognized this principle when it enacted HIPAA. Some organizations commented that the HIPAA framework of law and rules provides individuals with the necessary trust and confidence to seek reproductive health care without fear of being prosecuted or targeted by law enforcement, including in medical emergencies.

Other commenters stated that a trusting confidential relationship between an individual and a health care provider is an essential prerequisite to the delivery of high-quality health care. They also asserted that protective privacy laws, including HIPAA, help to ensure that individuals do not forgo health care.

Many individuals asserted that the proposed safeguards are urgently needed to provide individuals with the confidence to seek health care. According to the commenters, the proposal would increase the likelihood that pregnant individuals would receive essential health care, thus improving their overall well-being. One commenter expressed support for the proposal because they believe people should not be held liable or face punishment for seeking, obtaining, providing, or facilitating lawful health care. Another commenter expressed concerns that the increase in state legislation targeting reproductive health care has placed significant burdens on physicians and increased the risk of maternal morbidity and mortality for individuals.

A few commenters also expressed agreement with the Department's assertion that the proposed restrictions would clarify legal obligations of regulated entities with respect to the disclosure of PHI for certain non-health related purposes and would enable persons requesting PHI, including health plans, to better understand when such disclosures are permitted.

Response: The Department appreciates these comments and is finalizing the proposed rule with modification, as described in greater detail below. Consistent with HIPAA's goals, this final rule will support the development and maintenance of trust between individuals and their health care providers, encouraging individuals ***32992** to be forthright with health care providers regarding their health history and providing valuable clarity to the regulated community and individuals concerning their privacy rights with respect to lawfully provided health care. In so doing, the Department helps to support access to health care by increasing individuals' confidence in the privacy of their PHI about lawfully provided reproductive health care. We are taking these actions as a result of our ongoing evaluation of the environment, including the legal landscape, and consistent with the Privacy Rule's longstanding balance of individual privacy and societal interests in PHI for non-health care purposes.

Comment: A wide cross-section of commenters, including individuals, health care providers, patient advocacy organizations, reproductive rights organizations, state law enforcement agencies, and others all agreed that individuals who frequently experience discrimination generally also experience it when seeking health care.

Many of these commenters urged the Department to recognize that there is a trust deficit in relationships between individuals and health care providers in communities that frequently experience discrimination. Many commenters cited scholarly journals and research articles showing that women of color especially suffer poorer medical outcomes, including higher maternal mortality and denial of medical interventions or treatments.

Commenters who answered the Department's request for comment about whether members of “historically underserved and minority communities” are more likely to be the subject of investigations into or proceedings against persons in connection with seeking, obtaining, providing, or facilitating lawful reproductive health care unanimously responded in the affirmative. Some commenters expressed concern about the current legal environment's disproportionately negative effect on the privacy of women and members of marginalized and historically underserved communities and communities of color, such as immigrants who might avoid obtaining health care because of fears that their PHI could be shared with government officials. In general, commenters encouraged the Department to consider the likely negative implications of reduced health information privacy when combined with these disparities on health outcomes for members of marginalized and historically underserved communities and communities of color when crafting the final rule.

Some commenters expressed concern about the current legal environment's disproportionately negative effect on the privacy of members of marginalized and historically underserved communities and communities of color, such as women of color, immigrants and American Indians and Alaska Natives, who might withhold information from health care providers or avoid obtaining health care because of fears that their PHI could be shared with government officials or used to investigate or impose liability on them.

Among commenters that addressed this topic, many supported the Department's proposed purpose-based prohibition. Commenters stated that the proposed rule would help to mitigate medical mistrust of individuals in marginalized and historically underserved communities and communities of color and reduce the racial disparities that result from the increased criminalization of reproductive health care.

Several commenters also addressed the issue of the availability of legal counsel among these communities. A few commenters asserted that individuals who are members of marginalized and historically underserved communities and communities of color are less likely to have access to legal counsel, despite being more likely to be subjects of investigations into or proceedings against persons in connection with obtaining providing or facilitating lawful sexual and reproductive health care and cited to related studies.

Response: We appreciate these comments and thank commenters for sharing these important considerations. As we discussed in the 2023 Privacy Rule NPRM and again here, the experiences of individuals from communities that have been historically underserved, marginalized, or subject to discrimination or systemic disadvantage by virtue of their race, disability, social or economic status, geographic location, or environment have significant negative effects on their relationships with health care providers and their willingness to seek necessary health care. We agree that the current legal landscape has exacerbated the health inequities that these individuals encounter when seeking reproductive health care services. The Department expects that the steps we have taken in this rule will meaningfully strengthen the privacy of PHI about lawful reproductive health care, and as a result, will help to mitigate the exacerbation of health disparities for members of marginalized and historically underserved communities and communities of color.

The Department is actively working to reduce health disparities. In recent months, we released a new plan to address language barriers and strengthen language access in health care,[FN174] and issued three proposed rules to address health disparities: one to revise existing regulations to strengthen prohibitions against discrimination on the basis of a disability in health care and human services programs; [FN175] another to issue new regulations to advance non-discrimination in health and human service programs for the LGBTQI+ community; [FN176] and a third to revise existing regulations to prohibit discrimination on the basis of race, color, national origin, sex, age, and disability in a range of health programs.[FN177] The Department will continue to work to address these concerns, ensure that individuals have access to and do not forgo necessary health care, and build individuals' trust that health care providers can and will protect the privacy of individuals' sensitive health information.

Comment: A few commenters agreed with the Department's position that the proposed rule would appropriately protect individuals against growing threats to their privacy with respect to PHI about reproductive health care while permitting states to conduct law enforcement activities.

Response: The Privacy Rule always has and continues to balance privacy interests and other societal interests by permitting disclosures of PHI to support ***32993** public policy goals, including disclosures to support certain criminal, civil, and administrative law enforcement activities; the operation of courts and tribunals; health oversight activities; the duties of coroners and medical examiners; and the reporting of child abuse, domestic violence, and neglect to appropriate authorities. We appreciate these comments that recognized the growing threat to the privacy of PHI and the need to strike an appropriate balance between ensuring health care privacy and conducting law enforcement activities. We are finalizing the proposed rule with modification as described in greater detail below.

B. General Comments in Opposition to the Proposed Rule

Comment: Several commenters generally opposed the proposed rule because of their opposition to certain types of reproductive health care. Many commenters opposed the proposed rule generally because they believed that it would harm women and children. Other commenters expressed concern that the proposals would increase administrative burdens and costs for health care providers; impede parental rights; prevent mandatory reporting of child abuse or abuse, domestic violence, and neglect; infringe upon states' rights; thwart law enforcement investigations; inhibit disclosures for public health activities; and protect those who engage in unlawful activities.

Response: The modifications to the Privacy Rule in this final rule directly advance Congress' directive in HIPAA to improve the efficiency and effectiveness of the health care system by encouraging the development of a health information system through the establishment of standards and requirements for the electronic transmission of certain health information,[FN178] including

a standard for the privacy of IIHI that, among other things, addresses the "uses and disclosures of such information that should be authorized or required." [FN179] As discussed in greater detail elsewhere in this final rule, a trusting relationship between individuals and health care providers is the foundation of effective health care. A primary goal of the Privacy Rule is to ensure the privacy of an individual's PHI while permitting necessary uses and disclosures of PHI that enable high-quality health care and protect the health and well-being of all individuals, including women and children, and the public.

From the outset, the Department structured the Privacy Rule to ensure that individuals do not forgo lawful health care when needed—or withhold important information from their health care providers that may affect the quality of health care they receive out of a fear that their sensitive information would be revealed outside of their relationship with their health care provider. The Department has long been committed to protecting the privacy of PHI and providing the opportunity for an authentic, trusting relationship between individuals and health care providers. As we discussed in the 2023 Privacy Rule NPRM and again here, this final rule will help engender trust between individuals and health care providers and confidence in the health care system. We believe that this confidence will eliminate some of the burdens health care providers face in providing high-quality health care, encourage health care providers to accurately document PHI in an individual's medical record, and encourage individuals to provide health care providers with their complete and accurate health history, all of which will ultimately support better health outcomes. Nothing in this final rule sets forth a particular standard of care or affects the ability of health care providers to exercise their professional judgment.

This final rule protects the relationship between individuals and health care providers by protecting the privacy of PHI in circumstances where recent legal developments have increased concerns about that information being used and disclosed to harm persons who seek, obtain, provide, or facilitate reproductive health care under circumstances in which such health care is lawful, while continuing to permit uses and disclosures that confer other social benefits. It is narrowly tailored and respects the interests of both states and the Department. The final rule continues to permit regulated entities to use or disclose PHI to comply with certain mandatory reporting laws, for public health activities, and for law enforcement purposes when the uses and disclosures are compliant with the applicable provisions of the Privacy Rule.

Further, consistent with the longstanding operation of the Privacy Rule, this final rule requires that, in certain circumstances, regulated entities obtain information from persons requesting PHI, such as law enforcement, before the regulated entities may use or disclose the requested PHI. The Department recognizes that this final rule may increase the burden on those persons making requests for PHI, such as federal and state law enforcement officials, by requiring, in certain circumstances, that regulated entities obtain more information from such persons than previously required, and may, at times, prevent regulated entities from using or disclosing PHI that they previously would have been permitted to use or disclose. For example, the Department recognizes that situations may arise where a regulated entity reasonably determines that reproductive health care was lawfully provided, while at the same time, the person requesting the PHI (e.g., law enforcement) reasonably believes otherwise. In such circumstances, where the regulated entity provided the reproductive health care, and upon receiving a request for the PHI for a purpose that implicates the prohibition, reasonably determines that the provision of reproductive health care was lawful, the final rule would prohibit the regulated entity from disclosing PHI for certain types of investigations into the provision of such health care. This constitutes a change from the current Privacy Rule, under which a regulated entity is permitted, but not required, to make a use or disclosure under 45 CFR 164.512(f) of information that is "relevant and material to a legitimate" law enforcement inquiry, provided that certain conditions are met; these conditions include, for example, that the request is specific and limited in scope to the extent reasonably practicable given the purpose for which the information is sought.[FN180] Similarly, the Department acknowledges that, where the regulated entity did not provide the reproductive health care that is the subject of the investigation or imposition of liability, the Rule of Applicability and Presumption, discussed below, may require regulated entities to obtain additional information, that is, factual information that demonstrates to the regulated entity a substantial factual basis that the reproductive health care was not lawful under the specific circumstances in which it was provided, from persons requesting PHI before using or disclosing the requested PHI.

Consistent with HIPAA and the Department's longstanding approach in the Privacy Rule, the Department is finalizing an approach that strikes an appropriate balance between the privacy interests of individuals and the interests of law enforcement,

and private parties afforded legal rights of action, in ***32994** obtaining PHI for certain non-health care purposes. While this approach may adversely affect particular interests of law enforcement, and private parties afforded legal rights of action, in some cases, the Department believes that the final rule best balances these competing interests by enhancing privacy protections without unduly interfering with legitimate law enforcement activities and does so in a manner that is consistent with the approach taken elsewhere in the Privacy Rule. As explained above, individual privacy interests are especially strong where individuals seek lawful reproductive health care. In particular, individuals may forgo lawful health care or avoid disclosing previous lawful health care to providers because they fear that their PHI will be disclosed. The Department believes these concerns are exacerbated by the prospect of state investigations into, and resulting intimidation and criminalization of, health care providers for providing lawful reproductive health care, as well as state laws encouraging state residents to sue persons who facilitate individuals' access to legal health care. The final rule addresses these interests by protecting privacy in situations where the reproductive health care at issue is especially likely to be lawful under the circumstances in which such health care was provided. Where a regulated entity receives a request for PHI about reproductive health care that the regulated entity provided, such health care is likely to be lawful where the regulated entity reasonably determines, based on all information in its possession, that such health care was lawful under the circumstances in which it was provided. Similarly, where a regulated entity receives a request for PHI about reproductive health care that the regulated entity did not provide, such health care is likely to be lawful where law enforcement is unable to provide factual information that demonstrates to the regulated entity a substantial factual basis that the reproductive health care was not lawful under the specific circumstances in which such health care was provided.

The Department recognizes that, in some cases, the approach adopted in this final rule may inadvertently prohibit the disclosure of PHI about reproductive health care that was unlawfully provided, such as where a health care provider reasonably but incorrectly determines that the reproductive health care it provided was lawful under the circumstances in which such health care was provided. This is similar to how the Privacy Rule has always potentially prevented the use or disclosure of PHI that could be useful to law enforcement in certain circumstances because the request for PHI does not meet the conditions of the applicable permission. Nevertheless, given the importance of protecting individual privacy in this area, the Department has determined that the final rule adopts the appropriate balance between individual privacy and the interests of other persons, such as law enforcement. Specifically, the Department believes that the benefits to individual privacy of a broadly protective rule outweigh the benefits to societal interests in the use or disclosure of PHI from a narrower rule. While a narrower rule would more broadly permit disclosures related to PHI that might concern reproductive health care that is not lawful under the circumstances in which it is provided, such a rule would inadvertently permit more disclosures of PHI about lawful reproductive health care. Accordingly, the Department concludes that the final rule must be sufficiently broad to protect against such disclosures, given the paramount importance of individual privacy in this area.

Moreover, as explained above, individual privacy interests are paramount to promote free and open communication between individuals and their health care providers, thereby ensuring that individuals receive high-quality care based on their accurate medical history. Society has long recognized that information exchanged as part of a specific relationship for which trust is paramount should be entitled to heightened protection (e.g., marital privilege, attorney-client privilege, doctor-patient privilege). Similarly, this final rule seeks to address situations where privacy interests are especially important, based both on the content of the information that is protected from disclosure (concerning lawful reproductive health care) and the context in which that information is shared (concerning a trust-based relationship between individuals and their health care providers).

In contrast, the potential adverse effects of this final rule on other interests, such as those of law enforcement, are limited by the narrow scope of this final rule. This final rule does not seek to prohibit disclosures of PHI where the request is for reasons other than investigating or imposing liability on persons for the mere act of seeking, obtaining, providing, or facilitating reproductive health care that is lawful under the circumstances in which such health care is provided. For example, as explained in the NPRM and below, the final rule does not prohibit the use or disclosure of PHI for investigating alleged violations of the Federal False Claims Act or a state equivalent; conducting an audit by an Inspector General aimed at protecting the integrity of the Medicare or Medicaid program where the audit is not inconsistent with this final rule; investigating alleged violations of Federal nondiscrimination laws or abusive conduct, such as sexual assault, that occur in connection with reproductive health care; or determining whether a person or entity violated 18 U.S.C. 248 regarding freedom of access to clinic entrances. In each of these

cases, the request is not made for the purpose of investigating or imposing liability on any person for the mere act of seeking, obtaining, providing, or facilitating reproductive health care.

Even when the request is for the purpose of investigating or imposing liability on the mere act of seeking, obtaining, providing, or facilitating reproductive health care, this final rule does not seek to prohibit disclosures of PHI about reproductive health care that is not lawful under the circumstances in which it was provided. Thus, in most situations involving reproductive health care that is not lawful under the circumstances in which it is provided, this final rule will not prevent the use or disclosure of PHI to investigate or impose liability on persons for such legal violations, provided such disclosures are otherwise permitted by the Privacy Rule. Moreover, where a regulated entity did not provide the reproductive health care at issue, this final rule prohibits the use or disclosure of PHI where the person making the request does not provide sufficient information to overcome the presumption of legality. In such cases, law enforcement agencies and other persons have a reduced interest in obtaining such PHI where the information does not demonstrate to the regulated entity a substantial factual basis that the reproductive health care was not lawful under the circumstances in which such health care was provided.

This final rule does not prohibit the use or disclosure of PHI to investigate or impose liability on persons where reproductive health care is unlawful under the circumstances in which it is provided. Instead, the final rule prohibits the use or disclosure of PHI in narrowly tailored circumstances (i.e., where the use or disclosure is to conduct an investigation or impose liability on a person for the mere act of seeking, obtaining, providing, or facilitating reproductive health care that ***32995** is lawful under the circumstances in which such health care is provided, or to identify a person for such activities). For example, once this final rule is in effect, a covered health care provider may still disclose PHI to a medical licensing board investigating a health care provider's actions related to their obligation to report suspected elder abuse, assuming the disclosure meets the conditions of an applicable Privacy Rule permission. This is because the final rule does not bar the use or disclosure of PHI for health oversight purposes, which is unrelated to the mere act of seeking, obtaining, providing, or facilitating reproductive health care.

Additionally, even where the final rule prohibits the use or disclosure of PHI to investigate potentially unlawful reproductive health care (i.e., where a regulated entity reasonably determines that the reproductive health care they provided was lawful, or where the presumption of legality is not overcome), law enforcement retains other ways of investigating reproductive health care that they suspect may have been unlawfully provided. For example, law enforcement retains the use of other traditional and otherwise lawful investigatory means for obtaining information, such as conducting witness interviews and accessing other sources of information not covered by HIPAA. The final rule is therefore tailored to protect the relationship between individuals and their health care providers specifically, while leaving unaffected law enforcement's ability to conduct investigations using information from other sources.

With respect to commenters' concerns about parental rights, this final rule also does not interfere with the ability of states to define the nature of the relationship between a minor and a parent or guardian.

Comment: A few commenters that expressed negative views asserted that the proposed rule exceeded the Department's statutory authority under HIPAA or was beyond the Department's rulemaking authority. Some commenters stated that the rulemaking was arbitrary and capricious and would make it difficult for law enforcement to investigate reproductive health care and engage in health oversight activities and would require health care providers to provide certain types of health care against which they have objections. Some commenters expressed concern about the balance of powers between the states and the federal government. Other commenters suggested that the proposals preempt state laws serving public health, safety, and welfare.

Response: As discussed above, Congress explicitly stated that the purpose of HIPAA's Administrative Simplification provisions was to improve the efficiency and effectiveness of the health care system. For the health care system to be effective, individuals must trust that information that they share with health care providers about lawful health care will remain private. Accordingly, since their inception, the HIPAA Rules have required that regulated entities narrowly tailor disclosures to law enforcement to protect an individual's privacy.[FN181] While the Department is adopting an approach in this final rule that is more protective of privacy interests than the current Privacy Rule in certain circumstances, these changes are necessary to appropriately

balance privacy interests and the interests of law enforcement, and private parties afforded legal rights of action, in light of the changing legal environment. This is discussed in detail above. In both the 2023 Privacy Rule NPRM and this final rule, the Department cited to multiple studies documenting the real-world harm to health and health care in the changing legal environment. As explained above, the Department acknowledges that this final rule may affect certain state interests in obtaining PHI to investigate potentially unlawful reproductive health care, but the Department has tailored the final rule to strike the appropriate balance between privacy interests and state interests. This final rule limits the potential harm to individuals, health care providers, and others resulting from the disclosure of PHI to investigate or punish individuals for the mere act of seeking, obtaining, providing, or facilitating reproductive health care that is lawful under the circumstances in which such health care is provided. We emphasize that nothing in this rule or any of the HIPAA Rules requires a health care provider to provide any type of health care, including any type of reproductive health care.

Comment: Several commenters asserted that the proposed rule would impede states' enforcement of their own laws, including those concerning sexual assault and sex trafficking. Many commenters opposed the proposed rule because they believed it would inhibit the ability of states to investigate or enforce laws prohibiting minors from obtaining certain types of health care and prevent the commenters from reporting minors who they believe are coerced into obtaining such health care to authorities.

Response: This rule does not prohibit the disclosure of PHI for investigating allegations of or imposing liability for sexual assault, sex trafficking, or coercing minors into obtaining reproductive health care. Rather, this final rule modifies the existing HIPAA Privacy Rule standards by prohibiting uses and disclosures of PHI to investigate or impose liability on individuals, regulated entities, or other persons for the mere act of seeking, obtaining, providing, or facilitating reproductive health care that is lawful under the circumstances in which such reproductive health care is provided, or to identify any person to investigate or impose liability on them for such purposes. Accordingly, requests for the disclosure of PHI to investigate such allegations of or impose liability for such crimes do not fall within the final rule's prohibition, and the presumption of lawfulness likewise would not be triggered because the prohibition would not apply. A regulated entity therefore would not be prohibited from disclosing an individual's PHI when subpoenaed by law enforcement for the purpose of investigating such allegations, assuming that law enforcement provided a valid attestation and met the other conditions of the applicable permission.

Moreover, as explained above, the final rule is tailored to prohibit disclosures related to lawful reproductive health care, thereby reducing the interference with law enforcement interests to create an appropriate balance with privacy interests.

Comment: Some states expressed concern that the proposed rule would intrude into areas where the HIPAA Rules have previously acknowledged state control, such as enforcement of state and local laws, regulation of the practice of health care, and reporting of abuse.

Response: This final rule balances the interests of individuals in the privacy of their PHI and of society in an effective health care system with those of society in obtaining PHI for certain non-health care purposes. The Privacy Rule always has and continues to permit disclosures of PHI to support public policy goals, including disclosures to support criminal, civil, and administrative law enforcement activities; the operation of courts and tribunals; health oversight activities; the duties of coroners and medical examiners; and the reporting of child abuse, domestic violence, and neglect to appropriate authorities. As explained above, while the final rule adopts an approach that is more ***32996** protective of privacy interests in certain circumstances than the previous Privacy Rule, the final rule continues to balance the interests that HIPAA Rules have long sought to protect with those of society in PHI.

C. Other General Comments on the Proposed Rule

Comment: Commenters urged the Department to provide enhanced privacy protections for health information that is not covered by existing frameworks or specifically addressed in the proposed rule. A few professional associations expressed support for revising the Privacy Rule to provide stronger protection for the privacy of reproductive health care information and urged the Department to modify the Privacy Rule to provide even stronger protections than those proposed in the 2023 Privacy Rule NPRM.

Response: The Department's authority under HIPAA is limited to protecting the privacy of IIHI that is maintained or transmitted by covered entities and, in some cases, their business associates. Specific modifications to the Privacy Rule to protect the privacy of PHI are described in greater detail below. Consistent with the Department's longstanding approach with respect to the Privacy Rule, the modifications we are finalizing in this rule strike a balance between protecting an individual's right to health information privacy with the interests of society in permitting the disclosure of PHI to support the investigation or imposition of liability for unlawful conduct. In particular, the final rule does not prohibit the disclosure of PHI about reproductive health care that was unlawfully provided, because an individual's privacy interests in reproductive health care that is not lawful (e.g., a particular type of reproductive health care that is provided by a nurse practitioner in a state that requires that type of reproductive health care to be provided by a physician) are comparatively lower than a state's interests in investigating and imposing liability on persons for unlawful reproductive health care. We will continue to monitor legal developments and their effects on individual privacy as we consider the need for future modifications to the Privacy Rule.

Comment: Several commenters questioned how the proposed rule would affect their current business associate and data exchange agreements.

Response: The modifications in this final rule may require regulated entities to revise existing business associate agreements where such agreements permit regulated entities to engage in activities that are no longer permitted under the revised Privacy Rule. Regulated entities must be in compliance with the provisions of this rule by December 23, 2024.

Comment: A few commenters requested clarification of whether minors and legal adults have the same protections under the Privacy Rule and whether this rule would alter existing protections.

Response: The final rule does not change how the Privacy Rule applies to adults and minors. Thus, all of the protections provided to PHI by this final rule apply equally to adults and minors. For example, under this final rule, a regulated entity is prohibited from using or disclosing a minor's PHI for the purposes prohibited under 45 CFR 164.502(a)(5)(iii). The Privacy Rule generally permits a parent to have access to the medical records about their child as their minor child's personal representative when such access is consistent with state or other law, with limited exceptions.[FN182] Additional information about how the Privacy Rule applies to minors can be found at 45 CFR 164.502(g) and on the OCR website.[FN183]

Comment: Many commenters urged the Department to take an educational approach, rather than a punitive one, with respect to enforcement against regulated entities. In addition, many commenters addressed the need for resources and education for successful implementation of the proposed changes to the Privacy Rule. They called for the Department to collaborate with and educate regulated entities, individuals, and others affected by the proposed revisions, such as law enforcement, as well as for the Department to partner with other Federal agencies and state governments to conduct the education. Some suggested that educational resources should include multiple media formats and a centralized platform.

Response: The Department frequently issues non-binding guidance and conducts outreach to help regulated entities achieve compliance. We appreciate these recommendations and will consider these topics for future guidance. Regulated entities are expected to comply with the Privacy Rule as revised once the compliance date has passed.

V. Summary of Final Rule Provisions and Public Comments and Responses

The Department is modifying the Privacy Rule to strengthen privacy protections for individuals' PHI by adding a new category of prohibited uses and disclosures of PHI. This final rule prohibits a regulated entity from using or disclosing an individual's PHI for the purpose of conducting a criminal, civil, or administrative investigation into or imposing criminal, civil, or administrative liability on any person for the mere act of seeking, obtaining, providing, or facilitating reproductive health care that is lawful under the circumstances in which it is provided, meaning that it is either: (1) lawful under the circumstances in which such health care is provided and in the state in which it is provided; or (2) protected, required, or authorized by Federal law, including the United States Constitution, regardless of the state in which such health care is provided. In both of these circumstances,

as explained above, the interests of the individual in the privacy of their PHI and of society in ensuring an effective health care system outweighs those of society in the use of PHI for non-health care purposes. To operationalize this modification, the Department is revising or clarifying certain definitions and terms that apply to the Privacy Rule, as well as other HIPAA Rules. This final rule also prohibits a regulated entity from using or disclosing an individual's PHI for the purpose of identifying an individual, health care provider, or other person for the purpose of initiating such an investigation or proceeding against the individual, a health care provider, or other person in connection with seeking, obtaining, providing, or facilitating reproductive health care that is lawful under the circumstances in which it is provided.

To effectuate these proposals, the Department is finalizing conforming and clarifying changes to the HIPAA Rules. These changes include, but are not limited to, clarifying the definition of "person" to reflect longstanding statutory language defining the term; adopting new definitions of "public health" surveillance, investigation, or intervention, and "reproductive health care"; adding a new category of prohibited uses and disclosures; clarifying that a regulated entity may not decline to recognize a person as a personal representative for the purposes of the Privacy Rule because they provide or facilitate reproductive health care for an individual; imposing a new ***32997** requirement that, in certain circumstances, regulated entities must first obtain an attestation that a requested use or disclosure is not for a prohibited purpose; and requiring modifications to covered entities' NPPs to inform individuals that their PHI may not be used or disclosed for a purpose prohibited under this final rule.

The Department's section-by-section description of the final rule is below.

A. Section 160.103 Definitions

1. Clarifying the Definition of "Person"

HIPAA does not define the term "person." [FN184] The HIPAA Rules have long defined "person" to mean "a natural person, trust or estate, partnership, corporation, professional association or corporation, or other entity, public or private." [FN185] This meaning was based on the definition of "person" adopted by Congress in the original SSA, as an "individual, a trust or estate, a partnership, or a corporation." [FN186]

In 2002, Congress enacted 1 U.S.C. 8, which defines "person," "human being," "child," and "individual." [FN187] The statute specifies that these definitions shall apply when "determining the meaning of any Act of Congress, or of any ruling, regulation, or interpretation of the various administrative bureaus and agencies of the United States." [FN188] The Department understands 1 U.S.C. 8 to provide definitions of "person," "individual," and "child" that do not include a fertilized egg, embryo, or fetus, and are consistent with the Department's understanding of those terms, as used in the SSA, HIPAA, and the HIPAA Rules.

The Department proposed to clarify the term "natural person" in a manner consistent with 1 U.S.C. 8.[FN189] Thus, the Department proposed to clarify that all terms subsumed within the definition of "natural person," such as "individual," [FN190] are limited to the confines of the term "person." [FN191] As discussed in the 2023 Privacy Rule NPRM, the purpose of this proposal was to better explain to regulated entities and other stakeholders the parameters of an "individual" whose PHI is protected by the HIPAA Rules.

Many individuals and organizations commented on the proposal to clarify the definition "person." Organizational commenters, including professional associations representing health care providers, advocacy groups, and academic departments, generally supported the proposal. Several commenters applauded the proposed clarification because they believed it would limit disclosures of PHI in cases where no individual has been harmed.

Most opponents of the proposed clarification were individuals participating in form letter campaigns who expressed concern that the proposal might diminish access to prenatal care. Others asserted that the proposed clarification would contradict or conflict with existing laws, such as mandatory reporting laws and Federal statutes that rely upon a different definition of "person."

The final rule adopts the proposed clarification of the definition of person, to mean a "natural person (meaning a human being who is born alive), trust or estate, partnership, corporation, professional association or corporation, or other entity, public or private." Therefore, an "individual," "child," or "victim" (e.g., a victim of crime) under the HIPAA Rules must be a natural person. As we explained in the 2023 Privacy Rule NPRM, this clarification is consistent with the SSA, HIPAA, and 1 U.S.C. 8. This clarification applies only to regulations issued pursuant to the Administrative Simplification provisions of HIPAA.[FN192]

This clarification is consistent with the Privacy Rule's longstanding definitions of "person" [FN193] and "individual," [FN194] as applied to Privacy Rule provisions permitting certain types of reports or other disclosures of PHI. For example, a regulated entity is permitted to disclose PHI about an individual who the regulated entity reasonably believes to be a victim of abuse, neglect, or domestic violence only where the individual is a "natural person." [FN195] In addition, because a "victim" necessarily is a natural person, the permission to disclose PHI to avert a serious threat to health or safety at 45 CFR 164.512(j)(i) does not permit disclosures when the perceived threat does not involve the health or safety of a natural person or the public, or when an individual has not caused serious physical harm to a natural person.

Comment: Many organizational commenters expressed support for the proposal to clarify the definition of "person."

One commenter stated that this clarification should prevent law enforcement from attempting to avoid the proposed prohibition. According to another commenter, this proposed clarification is crucial as stakeholders adapt to the current reproductive health landscape.

Several commenters expressed support for the Department's proposal but requested additional clarifications. For example, one commenter recommended that the Department clarify whether the definition would preempt state laws.

Response: We take the opportunity to emphasize here that the clarification only applies to the HIPAA Rules and explains certain terms that apply to the permissions for uses and disclosures of PHI by regulated entities. We do not believe it is necessary to further clarify the final regulatory text because the current definition remains unchanged other than to incorporate the plain wording of 1 U.S.C. 8.

Comment: A few commenters expressed opposition to the Department's proposed clarification of "person" as tantamount to eliminating legal protections for and recognition of categories of human beings based on developmental stage. Some commenters maintained that the proposed clarification of "person" was inaccurate.

Several commenters opposed the proposed clarification of "person" because it would affect the provision of prenatal care.

A few commenters asserted that the proposed clarification would prevent the collection of medical information about reproductive health care for ***32998** important purposes, such as public health and research.

Response: We are clarifying the definition of person consistent with applicable Federal law only for the purpose of applying HIPAA's Administrative Simplification provisions. This clarification will not affect how the term "person" is applied for purposes of other laws, affect any rights or protections provided by any other law, or affect standards of health care, including prenatal care.

This final rule does not affect the reporting of vital statistics, nor does it affect the ability of regulated entities to use and disclose PHI for research. The Privacy Rule's standards for uses and disclosures for public health surveillance, investigations, and interventions, or for health oversight activities, are discussed elsewhere.

Comment: Several commenters requested additional clarifications to the Department's proposed clarification of "person." A few commenters asserted that the proposed clarification would be overly expansive. Most of these same commenters disagreed with

the Department's interpretation of 1 U.S.C. 8.[FN196] Commenters asserted that the clarification was inconsistent or conflicted with other laws.

Response: The clarified definition of person that we are finalizing in this rule does not change the Department's interpretation of the term or change definitions under other law, such as state law. It also is consistent with Federal law, including 1 U.S.C. 8, which specifically applies to Federal regulations, and other examples cited by commenters. For example, both GINA and the Privacy Rule protect the genetic information of a fetus carried by a pregnant individual as the PHI of the pregnant individual.[FN197]

The other laws cited by commenters address policy concerns that are different from those health information privacy issues addressed under HIPAA and do not address personhood. Even if those statutes did adopt different understandings of who is a "person," the Department has the authority to clarify or define terms that apply to the Administrative Simplification regulations issued pursuant to HIPAA. Additionally, the definition in the final rule of 1 U.S.C. 8 is appropriate because it is consistent with the Department's longstanding interpretation of the term in the context of HIPAA's Administrative Simplification provisions and associated regulations. Many Federal and state laws operate with differing definitions of common terms, to which existing legal standards that govern how such differences are to be interpreted would apply.[FN198]

Comment: A few commenters asserted that the proposal would expand minors' access to hormone therapy or surgeries without requiring parental consent.

Response: The final rule's clarification to define the term "person" does not affect the ability of a parent to make decisions related to health care for an individual who is an unemancipated minor,[FN199] and nothing in this rule dictates a standard of care. The application of this definition is limited to the HIPAA Rules.

Comment: A few commenters asserted that the proposed clarification would help to prevent the misapplication of child abuse laws to individuals who engage in certain behaviors while pregnant (e.g., use of an illicit substance or alcohol). Several other commenters expressed concern that this definition would limit the ability of a regulated entity to apply the Privacy Rule permission to use or disclose PHI to prevent a serious and imminent threat to a fertilized egg, embryo, or fetus.

Response: Under this final rule, a regulated entity would continue to be permitted to disclose PHI about an individual who the covered entity reasonably believes is a victim of child abuse or neglect, consistent with 45 CFR 164.512(b)(1)(ii), or a victim of abuse, neglect, or domestic violence, consistent with 45 CFR 164.512(c), to a government authority, including a social service or protective services agency, authorized by law to receive reports of such abuse, neglect, or domestic violence under the circumstances set forth under 45 CFR 164.512(c) where the individual meets the clarified definition of person. The Privacy Rule permission concerning serious and imminent threats [FN200] applies to threats to a person, consistent with the definition as clarified by this final rule, or the public.

2. Interpreting Terms Used in Section 1178(b) of the Social Security Act Reporting of Disease or Injury, Birth, or Death

Section 1178(a) of the SSA provides that HIPAA generally preempts contrary state laws with certain limited exceptions, such as those described in section 1178(b).[FN201] Specifically, section 1178(b) excepts from HIPAA's general preemption authority laws that provide for certain public health reporting, such as the reporting of disease or injury, birth, or death.[FN202] HIPAA does not define the terms in section 1178(b) that govern the scope of this exception to HIPAA's general preemption authority, nor has the Department previously defined such terms through rulemaking.

The Department recognizes that such public health reporting activities are an important means of identifying threats to the health and safety of the public. Accordingly, when a public health authority [FN203] has furnished documentation of its authority [FN204] to collect or receive such information, the Privacy Rule permits a regulated entity, without an individual's authorization, to use or disclose PHI to specified persons for public health activities.[FN205] These activities include all of the vital statistics reporting activities described in section 1178(b), including reporting of diseases and injuries, birth, or death.[FN206]

The Department proposed to interpret in preamble key terms used in section 1178(b) to clarify when HIPAA's general preemption authority applies. Specifically, the Department proposed an interpretation of section 1178(b) that would clarify that HIPAA's general preemption authority applies to laws that require regulated entities to use or disclose PHI for a purpose that would be prohibited under the proposed rule. Under this interpretation, the Privacy Rule permission to use or disclose PHI without an individual's authorization for the reporting of disease or injury, birth, or death [FN207] would not permit the use or disclosure of PHI for a criminal, civil, or administrative investigation into or proceeding against a person in connection with seeking, obtaining, ***32999** providing, or facilitating reproductive health care. The Department did not intend this clarification to prevent disclosures of PHI from regulated entities to public health authorities for public health purposes that have been and continue to be permitted under the Privacy Rule. Nor did the Department intend for this proposed clarification to prevent disclosures of PHI by regulated entities under other permissions in the Privacy Rule, such as for law enforcement purposes,[FN208] when made consistent with the conditions of the relevant permission and where the purpose of the disclosure is not one for which a use or disclosure would have been prohibited under 45 CFR 164.502(a)(5)(iii) as proposed.

The Department did not propose to define “disease or injury,” “birth,” or “death,” because we believed that these terms, when read with the definition of “person” and in the broader context of HIPAA, would exclude information about reproductive health care without the need for further clarification.[FN209] However, the Department invited public comment on whether it would be beneficial to make such clarification.

Few commenters addressed interpretation of these terms. Some commenters expressed concern that the Department's interpretation would prevent beneficial public health reporting about certain types of reproductive health care, while others requested that the Department prohibit public health reporting about certain types of reproductive health care. Some commenters on this issue agreed with the Department's interpretation and clarification of the terms used in 1178(b). Several of these commenters requested that the Department define or clarify these terms because reporting standards are inconsistent across states.

The Department declines to add definitions for “disease or injury,” “birth,” or “death” to the Privacy Rule in this final rule. However, we offer the discussion below to provide additional context on our interpretation of these terms.

At the time of HIPAA's enactment, state laws provided for the reporting of disease or injury, birth, or death by covered health care providers and other persons.[FN210] State public health reporting systems were well established and involved close collaboration between the state, local, or territorial jurisdiction and the Federal Government.[FN211] Reports generally were made to public health authorities or, in some specific cases, law enforcement (e.g., reporting of gunshot wounds).[FN212] Similar public health reporting systems continue to exist today.

Reporting of “disease or injury” commonly refers to diagnosable health conditions reported for limited purposes such as workers' compensation, tort claims, or communicable or other disease or injury tracking efforts. States, territories, and Tribal governments require health care providers (e.g., physicians, laboratories) and some others (e.g., medical examiners, coroners, veterinarians, [FN213] local boards of health) to report cases of certain diseases or conditions that affect public health, such as coronavirus disease 2019 (COVID-19), malaria, and foodborne illnesses.[FN214] Such reporting enables public health practitioners to study and explain diseases and their spread, along with determining appropriate actions to prevent and respond to outbreaks.[FN215] States also require health care providers to report incidents of certain types of injuries, such as those caused by gunshots, knives, or burns.[FN216] Various Federal statutes use the phrase “disease or injury” similarly to refer to events such as workplace injuries for purposes of compensation.[FN217]

The limited meaning given to the terms “disease” and “injury” for purposes of public health reporting is clear from HIPAA's broader context. For instance, interpreting “injury” reporting to include disclosures about all instances of suspected criminal abuse would render the specific permission to report “child abuse” superfluous.[FN218] And interpreting “disease” reporting to include disclosures about any sort of disease for any purpose would both eviscerate HIPAA's general provisions protecting

PHI and make superfluous the statutory requirement to not invalidate laws providing for public health surveillance, or public health investigation or intervention. For example, "disease management activities" constitute "health care" under the Privacy Rule. As such, a broad interpretation of "disease or injury" reporting could make potentially all the health records detailing a particular individual's treatment for any disease or injury disclosable to a public health authority or others unrelated to the health care.[FN219] Consequently, the Department has long understood "disease or injury" to narrowly refer to diagnosable health conditions reported for limited purposes such as workers' compensation, tort claims or in compliance with Federal laws that require states to conduct surveillance of specific diseases and injuries related to public health or Federal funding.[FN220]

With respect to reporting of "births" and "deaths," such vital statistics are reported by health care providers to the vital registration systems operated in ***33000** various jurisdictions [FN221] legally responsible for the registration of vital events. [FN222] State laws require birth certificates to be completed for all births, and Federal law mandates the national collection and publication of births and other vital statistics data.[FN223] Tracking and reporting death is a complex and decentralized process with a variety of systems used by more than 6,000 local vital registrars.[FN224] When HIPAA was enacted, the Model State Vital Statistics Act and Regulations, which is followed by most states,[FN225] included distinct categories for "live births," "fetal deaths," and "induced terminations of pregnancy," with instructions that abortions "shall not be reported as fetal deaths." [FN226] In light of that common understanding at the time of HIPAA's enactment, it is clear that the reporting of abortions is not included in the category of reporting of deaths for the purposes of HIPAA and does not fall within the scope of state death reporting activities that Congress specifically designated as excepted from preemption by HIPAA.

More generally, while Congress exempted certain "[p]ublic health" laws from preemption,[FN227] Congress chose not to create a general exception for criminal laws or other laws that address the disclosure of information about similar types of activities outside of the public health context.

For all these reasons, state laws requiring the use or disclosure of PHI for the purpose of investigating or imposing liability on a person for the mere act of seeking, obtaining, providing, or facilitating health care, or identifying a person for such activities, are subject to HIPAA's general preemption provision. Similarly, the Privacy Rule's public health provisions that permit the disclosure of PHI for the reporting of disease or injury, birth, or death do not include permission to use or disclose PHI for the purpose of investigating or imposing liability on a person for the mere act of seeking, obtaining, providing, or facilitating health care, or identifying a person for such activities. This general distinction between public health activities and investigation and enforcement activities is not limited to reproductive health care. Nevertheless, as discussed elsewhere in this final rule, the Department has chosen to strike a balance between privacy interests and other public policy interests. Consistent with the Department's longstanding approach that has allowed disclosures for law enforcement purposes in certain circumstances, the new prohibitions set forth in this rule apply only to lawful reproductive health care. State authorities cannot rely on the Privacy Rule's permissions for disclosures related to disease or injury, birth, or death to obtain PHI for the purpose of investigating or imposing liability for the provision of reproductive health care. However, as discussed above, state authorities may be able to invoke other permissions, such as the permission for disclosures for law enforcement purposes, to obtain such PHI where such disclosure is to investigate or impose liability on a person when the reproductive health care at issue is unlawful under the circumstances in which it is provided.

Comment: A few commenters expressed support for the Department's interpretation and clarification of the terms used in section 1178(b) of the SSA. A few commenters recommended that the Department define, rather than clarify, these terms. Some commenters requested that the Department further clarify the terms "disease or injury," "birth," and "death," to explicitly exclude information about reproductive health care. Other commenters expressed opposition to the Department's clarifications.

Response: We decline to define "disease or injury," "birth," or "death" in this final rule. The Department's understanding of these terms is consistent with the Model State Vital Statistics Act and Regulations and its application in the context of the passage of HIPAA. We believe that the 2023 Privacy Rule NPRM preamble discussion is sufficient to clarify that such reporting does not include the use or disclosure of PHI for investigating or imposing liability on a person for the mere act of seeking, obtaining, providing, or facilitating health care, including reproductive health care, or to identify a person for such activities.

Defining "Public health," as used in the terms "public health surveillance," "public health investigation," and "public health intervention."

Section 1178(b) also excepts state laws providing for "public health surveillance, or public health investigation or intervention" from HIPAA's general preemption authority.[FN228] Neither HIPAA nor the Privacy Rule currently defines "public health surveillance" or "public health investigation or intervention." Consistent with the statute, the Privacy Rule expressly permits a regulated entity to use or disclose PHI for "public health" surveillance, investigation, or intervention.[FN229] The Department proposed to define public health, as used in the terms "public health surveillance," "public health investigations," and "public health interventions," to mean population-level activities to prevent disease and promote health of populations. In preamble to the 2023 Privacy Rule NPRM, the Department described public health surveillance as the ongoing, systematic collection, analysis, and interpretation of health-related data essential to planning, implementation, and evaluation of public health practice.[FN230] The Department explained that public health investigations or interventions include monitoring real-time health status and identifying patterns to develop strategies to address chronic diseases and injuries, as well as using real-time data to identify and respond to acute outbreaks, emergencies, and other health hazards.[FN231] Public health surveillance, investigations, or interventions safeguard the health of the community by addressing ongoing or prospective population-level issues such as the spread of communicable diseases, even where these activities involve ***33001** individual-level investigations or interventions.

The Department also proposed to expressly exclude certain activities from the definition of public health to distinguish between public health activities and certain criminal investigations. Specifically, the Department proposed to provide in regulatory text that the Privacy Rule's permissions to use and disclose PHI for the "public health" activities of surveillance, investigations, or interventions do not include criminal, civil, or administrative investigations into, or proceedings against, any person in connection with seeking, obtaining, providing, or facilitating reproductive health care, nor do they include identifying any person for the purpose of initiating such investigations or proceedings. The Department stated that any such actions are not public health activities that would be subject to the exception to HIPAA's general preemption authority for state laws providing for "public health surveillance, or public health investigation or intervention." [FN232]

Commenters expressed mixed views on the proposal to define "public health" in the context of "public health surveillance," "public health investigations" or "public health interventions." Commenters expressing opposition to the proposal either disagreed with the Department's assertion that public health activities do not involve uses and disclosures that would be prohibited by the rule or asserted that the proposal would prevent public health reporting of reproductive health care. Some commenters generally supported the goal of the proposal but expressed concern that inclusion of the proposed language about "population-level" activities could prevent essential public health activities that involve specific persons, such as reporting data about specific health care services provided to specific persons that have a "population-level" effect and investigating the spread of communicable diseases.

Some commenters asserted that the proposal would frustrate states' ability to enforce their laws not related to public health, such as laws banning health care such as abortion. Supporters asserted that the proposal would help to prevent PHI from being disclosed for a purpose that would be prohibited under the proposed rule. Supportive commenters also expressed concern about states obtaining PHI based on an interpretation of "public health investigations" that includes the mandatory reporting of pregnant individuals who engage in certain activities, such as substance use. Other commenters asserted that disclosures of PHI to public health authorities should be limited because of the potential for PHI to be redisclosed for purposes that otherwise would be prohibited under the Privacy Rule.

The final rule adopts the proposed definition with some modifications. The final rule maintains the proposed rule's focus on activities aimed at preventing disease and improving the health of populations. This definition does not prevent disclosures of PHI by covered entities to public health authorities for public health activities that have long been permitted under the Privacy Rule. As discussed in the 2023 Privacy Rule NPRM, since the time of HIPAA's enactment, public health activities related to surveillance, investigation, or intervention have been widely understood to refer to activities aimed at improving the health of a

population. For example, legal dictionaries define "public health" as "[t]he health of the community at large," or "[t]he healthful or sanitary condition of the general body of people or the community en masse; esp., the methods of maintaining the health of the community, as by preventive medicine or organized care for the sick." [FN233] Stedman's Medical Dictionary defines "public health" as "the art and science of community health, concerned with statistics, epidemiology, hygiene, and the prevention and eradication of epidemic diseases; an effort organized by society to promote, protect, and restore the people's health; public health is a social institution, a service, and a practice." [FN234] The Centers for Disease Control and Prevention (CDC) and the Agency for Toxic Substances and Disease Registry have described "public health surveillance" as "the ongoing systematic collection, analysis and interpretation of outcome-specific data for use in the planning, implementation, and evaluation of public health practice." [FN235] And many states similarly define "public health" to mean activities to support population health.[FN236] The Department likewise has used the term public health in this way since it first adopted the Privacy Rule.[FN237]

Public health surveillance, public health investigations, and public health interventions are activities that address population health concerns and have generalized public benefit [FN238] to the health of a population, including activities that involve specific persons. Examples of activities that prevent disease in and promote the health of populations include vaccination campaigns to eradicate communicable disease, surveillance of a community's use of emergency services after a natural disaster to improve allocation of resources to meet health needs, and investigation of the source of an outbreak of food poisoning. As explained in the preamble to the 2023 Privacy Rule NPRM,[FN239] there is a widely recognized distinction between public health activities, which primarily focus on improving the health of populations, and criminal investigations, which primarily focus on identifying and imposing liability on persons who have ***33002** violated the law.[FN240] States and other local governing authorities maintain criminal codes that are distinct and separate from public health reporting laws,[FN241] although some jurisdictions enforce required public health reporting through criminal statutes. Different governmental bodies are responsible for enforcing these separate codes, and public health officials do not typically investigate activities enforced under criminal statutes or laws.[FN242] Federal laws also generally treat public health investigations as distinct from criminal investigations.[FN243] Maintaining a clear distinction between public health investigations and criminal investigations serves HIPAA's broader purposes.[FN244]

The Department concludes that neither section 1178(b) nor the Privacy Rule's permissions to use and disclose PHI for the "public health" activities of surveillance, investigation, or intervention include conducting criminal, civil, or administrative investigations into, or imposing criminal, civil, or administrative liability on any person for the mere act of seeking, obtaining, providing, or facilitating health care, including reproductive health care, nor do they include the identification of any person for such purposes. Such actions are not public health activities. As described above, this distinction between public health activities and other investigation and enforcement activities is not limited to reproductive health care. Public health surveillance, investigations, or interventions ensure the health of the community as a whole by addressing ongoing or prospective population-level issues such as the spread of communicable diseases, even where they involve interventions involving specific individuals. Such surveillance systems provide the necessary data to examine and potentially develop interventions to improve the public's health, such as providing education or resources to support individuals' access to health care and improve health outcomes and are not affected by this final rule.[FN245] U.S. states, territories, and Tribal governments participate in bilateral agreements with the Federal Government to share data on conditions that affect public health.[FN246] The CDC's Division of Reproductive Health collects reproductive health data in support of national and state-based population surveillance systems to assess maternal complications, mortality and pregnancy-related disparities, and the numbers and characteristics of individuals who obtain legal induced abortions.[FN247] This final rule does not affect CDC's ability to collect this information now or in the future. Importantly, disclosures to public health authorities permitted by the Privacy Rule are limited to the "minimum necessary" to accomplish the public health purpose.[FN248] In some cases, regulated entities need disclose only de-identified data [FN249] to meet the public health purpose.

By contrast, efforts to conduct criminal, civil, and administrative investigations or impose criminal, civil, and administrative liability on any person for the mere act of seeking, obtaining, providing, or facilitating health care generally target specific persons for particular conduct; they are not designed to address population-level health concerns and are not limited to information authorized to be collected by a public health or similar government authority for a public health activity. Thus, the

exceptions in section 1178(b) for "public health" investigations, interventions, or surveillance do not limit the Department's ability to prohibit uses or disclosures of PHI for other purposes, such as judicial and administrative proceedings or law enforcement purposes. While the Department has chosen as a policy matter to continue to permit uses or disclosures of PHI for law enforcement and other purposes in certain contexts, it is adopting a different balance where such uses or disclosures are about reproductive health care that is lawful under the circumstances in which it was provided.

While retaining the focus on activities to prevent disease and promote the health of populations, this final rule clarifies that population-level activities "include identifying, monitoring, preventing, or mitigating ongoing or prospective threats to the health or safety of a population, which may involve the collection of protected health information." This clarification addresses commenters' concerns that regulated entities would no longer be able to report information that states need to conduct public health functions intended to protect against prospective or ongoing threats at the population level, even if at times they necessarily will focus on individuals while doing so (through contact tracing, quarantine or isolation, and the like). The Department does not intend this clarification to prevent disclosures of PHI from covered entities to public health authorities for public health activities that have long been and continue to be permitted under the Privacy Rule. These changes clarify that public health, as used in the specified terms, broadly includes activities to prevent disease in and promote the health of populations. The changes also confirm that the Department does not require a public health authority to supply an attestation to a covered entity to receive PHI of an individual where that disclosure is intended to prevent disease in or promote the health of populations.

The intended purpose of including "population-level" was to facilitate ***33003** public health activities that protect large numbers of people from epidemics, environmental hazards, and the like. However, we believe that the language that clarifies that population-level activities "include identifying, monitoring, preventing, or mitigating ongoing or prospective threats to the health or safety of a population, which may involve the collection of protected health information," sufficiently serves this purpose of addressing uses and disclosures of PHI that are necessary to accomplish the overarching goals of public health.

The last sentence of the proposed definition, which described what are not public health activities, is also revised in the final rule for consistency with the general distinction between activities of public health surveillance, investigation, and intervention and activities of investigating or imposing liability on a person for the mere act of seeking, obtaining, providing, or facilitating health care, or identifying a person for such activities, as well as the standard the Department is adopting at 45 CFR 164.502(a)(5)(iii), which is discussed further in that section of this rule. Thus, while a state might assert that investigating or imposing liability on persons for the mere act of seeking, obtaining, providing, or facilitating health care satisfies the definition of "public health," their interpretation would not supersede the definition of "public health" in the context of public health surveillance, investigations, or interventions that the Department is adopting under its own Federal statutory authority to administer the HIPAA Rules.

Comment: A few organizations expressed support for the proposed definition of "public health" without further elaboration. Several commenters expressed support for the proposed definition of "public health" because it would prevent PHI from being disclosed for a prohibited purpose. A few commenters expressed support for the proposal because they believed that information reported for public health purposes could be requested, re-identified (in the case of de-identified information), or further disclosed to law enforcement for purposes for which the Department proposed to prohibit uses and disclosures.

Several commenters expressed support for the proposed definition of "public health" and the existing standard that limits public health disclosures of PHI to the minimum necessary information to achieve the purpose.

Response: Consistent with the NPRM, the Department agrees with the commenters who stated that it is important to define "public health" in the context of public health surveillance, investigation, or intervention to ensure that PHI is not disclosed for a purpose prohibited under 45 CFR 164.502(a)(5)(iii). Disclosures of PHI for public health purposes continue to be subject to the minimum necessary standard, which limits the use and disclosure of PHI to the minimum necessary to achieve the specified purpose; in some circumstances, de-identified information may suffice. However, many public health activities do

require identifiable data, such as for interventions involving individuals, to protect against prospective or ongoing threats to health or safety at the population level, and the Privacy Rule does not prohibit such uses and disclosures.

When making disclosures to public officials that are permitted under 45 CFR 164.512, if the public official represents that the information requested is the minimum necessary for the stated purpose, regulated entities are permitted, but not required, to rely on that representation, if such reliance is reasonable under the circumstances.[FN250] Such reliance may not be reasonable where the request appears to be overly broad when compared to the stated purpose of the request (e.g., where a public health authority requests the disclosure of PHI of all individuals who received treatment for uterine bleeding when the stated purpose is to investigate infection control practices by an obstetrician/gynecologist in a state where law enforcement has publicly announced its intention to investigate individuals for traveling out of state to seek or obtain reproductive health care that is lawful under the circumstances in which it is provided).

Comment: A few commenters asserted that law enforcement generally interprets public health investigations to include criminal investigations and prosecutions and the NPRM proposed definition would complicate such investigations by limiting the amount of PHI that could be disclosed to law enforcement.

Response: The Department has adopted a definition of "public health" in the context of public health surveillance, investigation, and intervention that sets clear parameters between such activities and law enforcement activities conducted to impose liability for the mere act of seeking, obtaining, providing, or facilitating health care. Public health surveillance, investigation, and intervention do not include efforts to attach liability to persons for specific acts of seeking, obtaining, providing, or facilitating health care.

This definition is consistent with the longstanding distinction made by the Department between public health activities and law enforcement activities as described above.

Comment: Several commenters expressed support for the Department's proposal generally but recommended further clarifications or revisions to it, especially regarding the limitation to "population-level" activities. A few commenters raised questions about the difference between the proposed definition of "public health" and the permission for public health activities under 45 CFR 164.512(b)(1)(i) and recommended that the Department clarify the definition to ensure that public health agencies are able to obtain health information for administrative or civil proceedings, such as quarantine or isolation in cases involving infectious diseases.

Response: The Department has modified the definition of "public health" in the context of public health surveillance, investigation, or intervention to clarify that such activities include identifying, monitoring, preventing, or mitigating ongoing or prospective threats to the health or safety of a population, which may involve the collection of PHI. This change addresses commenters' concerns that under the proposed definition, regulated entities would no longer be able to report PHI that is required to address population-level concerns.

Comment: Several commenters raised concerns that the proposed definition of "public health" would circumvent states' interests related to public health. A few commenters expressed opposition to the Department's clarification of public health because they believed that states should have the ability to conduct surveillance, investigations, or interventions concerning certain types of health care for public health purposes. Several commenters asserted that the proposal would frustrate the ability of states to enforce their laws prohibiting access to certain types of health care. Conversely, a commenter requested that the Department explicitly exclude reproductive health care from the proposed definition of "public health," so it would not be reportable to public health agencies.

Response: We disagree with commenters' assertions that this final rule will prevent the reporting of vital statistics or other public health ***33004** activities. A covered entity may continue to use or disclose PHI for all the public health activities and purposes listed in section 1178(b). We also decline to explicitly exclude reproductive health care from the definition of "public health"

because doing so could hinder beneficial public health activities. Instead, this definition supports this final rule's prohibition against certain uses and disclosures of PHI by clarifying that public health surveillance, investigation, and intervention exclude conducting a criminal, civil, or administrative investigation into any person, or the imposing criminal, civil, or administrative liability on any person for the mere act of seeking, obtaining, providing, or facilitating health care, or identifying any person for such activities. Such excluded activities include those with the purposes that are prohibited at 45 CFR 164.502(a)(5)(iii).

Comment: A few commenters believed that defining "investigation," "intervention," or "surveillance" was unnecessary or recommended against doing so and requested that the Department clarify that such terms do not encompass any prohibited purposes. One commenter requested that the Department define these terms to expressly exclude information related to reproductive health care.

Response: We are not defining the terms "investigation," "intervention," or "surveillance" in this rule. However, we are providing extensive interpretation in the preamble to clarify that such activities in the public health context do not encompass conducting a criminal, civil, or administrative investigation into any person, or imposing criminal, civil, or administrative liability on any person for the mere act of seeking, obtaining, providing, or facilitating health care, or identifying any person for such activities, including those for which use or disclosure of PHI is prohibited by 45 CFR 164.502(a)(5)(iii).

Reporting of Child Abuse

In accordance with section 1178(b) of HIPAA, the Privacy Rule permits a regulated entity to use or disclose PHI to report known or suspected child abuse or neglect if the report is made to a public health authority or other appropriate government authority that is authorized by law to receive such reports.[FN251] The Privacy Rule limits disclosures of PHI made pursuant to this permission to the minimum necessary to make the report.[FN252]

As the Department explained in the 2023 Privacy Rule NPRM, at the time HIPAA was enacted, "most, if not all, states had laws that mandated reporting of child abuse or neglect to the appropriate authorities." [FN253] Additionally, when Congress enacted HIPAA, it had already addressed child abuse reporting in other laws, such as the Victims of Child Abuse Act of 1990 [FN254] and the Child Abuse Prevention and Treatment Act.[FN255] For example, 34 U.S.C. 20341(a)(1), a provision of the original Victims of Child Abuse Act of 1990 that is still in place today, requires certain professionals to report suspected abuse when working on Federal land or in a federally operated (or contracted) facility.[FN256] As used in these statutes, the term "child abuse" does not include activities related to reproductive health care, such as abortion.

In the 2023 Privacy Rule NPRM, the Department discussed that it has long interpreted "child abuse," as used in the Privacy Rule and section 1178(b) of HIPAA, to exclude conduct based solely on a person seeking, obtaining, providing, or facilitating reproductive health care.[FN257] This interpretation is consistent with the public health aims of improving access to health care for individuals, including reproductive health care, and with relevant statutes at the time HIPAA was enacted, as described above. The Department also stated that this interpretation prohibits a regulated entity from disclosing PHI in reliance on the permission for reporting "child abuse" where the alleged victim does not meet the definition of "person" or "child," consistent with both 1 U.S.C. 8 and section 1178(b). Additionally, consistent with previous rulemaking under HIPAA, the Department clarified in the preamble that it did not intend for the interpretation to disrupt longstanding state or Federal child abuse reporting requirements that apply to regulated entities.[FN258]

The Department also made several clarifications in preamble concerning our interpretation of section 1178(b) and the Privacy Rule's public health permission and how we distinguish between public health reporting and disclosures for law enforcement purposes or judicial and administrative proceedings.

Comment: Many commenters supported the Department's clarification and agreed that it would preserve trust between individuals and health care providers, but also requested additional clarification from the Department on its implementation. Few opposed the clarification; those who did expressed concerns about the potential for the clarification to prevent state-mandated reporting in certain circumstances. Many commenters expressed mixed views about the Department's interpretation.

Response: The Department is moving forward with its interpretation as described in the NPRM. As noted above, this final rule does not alter the Privacy Rule's reliance on other applicable law with respect to determining who has the authority to act on behalf of an individual who is an unemancipated minor in making decisions related to health care, including lawful reproductive health care.[FN259] The Privacy Rule does not permit a regulated entity to disclose PHI as part of a report of suspected child abuse based solely on the fact that a parent seeks reproductive health care (e.g., treatment for a sexually transmitted infection) for a child. However, the regulated entity is permitted to make such disclosure where there is suspicion of sexual abuse that could be the basis of permitted reporting.

Congress defined the term “child” in 1 U.S.C. 8, and the term “child” in the Privacy Rule is consistent with that definition. As such, the Department believes that to the extent this clarification prohibits a regulated entity from disclosing PHI to report “child abuse” under this permission in the Privacy Rule where the alleged victim does not meet the definition of “person,” it is consistent with both 1 U.S.C. 8 and section 1178(b).

The Department also reaffirms its clarification that the Privacy Rule permission to report known or suspected child abuse or neglect permits a disclosure only for the purpose of making a report, and the PHI disclosed must be limited to the minimum necessary information for the purpose of making a report.[FN260] These provisions do not permit the covered entity to disclose PHI in response to a request for the use or disclosure of PHI to conduct a criminal, civil, or administrative investigation into or impose criminal, civil, or administrative liability on a ***33005** person based on suspected child abuse. Instead, as we explained in the 2023 Privacy Rule NPRM, any disclosure of PHI in response to this type of request from an investigator, must meet the applicable Privacy Rule conditions for disclosures for judicial and administrative proceedings or law enforcement purposes, as applicable.[FN261] That is the case whether such disclosure is in follow up to the report made by the covered entity (other than to clarify the PHI provided on the report) or part of an investigation initiated based on an allegation or report made by a person other than the covered entity.[FN262]

Moreover, this clarification does not affect the ability of state authorities to invoke other permissions for disclosure under the Privacy Rule, such as the permission for disclosures for law enforcement purposes, where they are seeking PHI related to unlawful reproductive health care.[FN263] Thus, the Department's interpretation of “child abuse” continues to support the protection of children while also serving HIPAA's objectives of protecting the privacy of PHI to promote individuals' trust in the health care system and preserving the relationship between individuals and their health care providers.

Comment: A few commenters recommended that the Department expand the clarification of child abuse to broadly address providing or facilitating all health care, rather than just reproductive health care.

Response: It is beyond the scope of this rule making to expand the clarification to include the provision or facilitation of all lawful health care. We appreciate the recommendations of commenters and will take them under advisement for potential future rulemaking.

3. Adding a Definition of “Reproductive Health Care”

Section 160.103 of the HIPAA Rules defines “health care” as “care, services, or supplies related to the health of an individual.” [FN264] The definition clarifies that the term “includes but is not limited to” several identified types of care, services, and procedures [FN265] and includes examples such as therapeutic, rehabilitative, or maintenance care, as well as sale or dispensing of drugs or devices.

The Department proposed to add and define a new term, “reproductive health care,” that would be a subset of the term “health care.” [FN266] The Department proposed to define “reproductive health care” as “care, services, or supplies related to the reproductive health of the individual.” The Department noted in the NPRM preamble that the HIPAA Rules define “health care” broadly.[FN267]

Consistent with the definition of "health care" in the HIPAA Rules, the proposed definition of "reproductive health care" would have applied broadly and included not only reproductive health care and services furnished by a health care provider and supplies furnished in accordance with a prescription, but also care, services, or supplies furnished by other persons and non-prescription supplies purchased in connection with an individual's reproductive health. The Department proposed to use the term "reproductive health care" rather than "reproductive health services" to ensure that the term was interpreted broadly to capture all health care that could be furnished to address reproductive health, including the provision of medications and devices, whether prescription or over-the-counter.

The Department discussed in preamble some of the types of care, services, and supplies that were included in the proposed term. In keeping with the Department's intention for "reproductive health care" to be inclusive of all types of health care related to an individual's reproductive system, the 2023 Privacy Rule NPRM preamble indicated that the term would include, but not be limited to: contraception, including emergency contraception; pregnancy-related health care; fertility or infertility-related health care; and other types of care, services, or supplies used for the diagnosis and treatment of conditions related to the reproductive system. We also provided a non-exhaustive list of examples of health care within each of these categories of reproductive health care.

Consistent with the definition of "health care" adopted in 2000 in the HIPAA Rules, the Department did not propose a specific definition of "reproductive health" but invited comment on whether including a particular definition of "reproductive health" would be beneficial.

Many commenters supported the proposal and agreed that it would provide the necessary protections for individuals and others. Some referenced existing definitions used by other legal authorities and recommended the Department consider adopting or incorporating them in some manner.

Some commenters opposed the proposal to provide an inclusive definition of reproductive health care. Some commenters asserted that the proposal lacked clarity and was too open-ended, making it difficult to operationalize. Other commenters expressed concern that the proposed definition would permit minors to consent to reproductive health care without parental consent.

The final rule adopts the new term "reproductive health care" and definition with three modifications. First, we replace "care, services, or supplies related to the reproductive health of the individual" with "health care" and add a citation to the HIPAA Rules' definition of that term to clarify that reproductive health care is a subset of "health care."

Second, we specify that the term means health care "that affects the health of the individual in all matters relating to the reproductive system and to its functions and processes." In keeping with the Department's intention for "reproductive health care" to be interpreted broadly and inclusive of all types of health care related to an individual's reproductive system, this additional language clarifies that the definition encompasses the full range of health care related to an individual's reproductive health.

Third, we add a statement reaffirming that the definition should not be construed to establish a standard of care for or regulate what constitutes clinically appropriate reproductive health care.

As discussed in the NPRM, this approach is consistent with the approach the Department took when it adopted the definition of "health care" in the HIPAA Rules. At that time, the Department explained that listing specific activities would create the risk that important activities would be left out and could also create confusion.[FN268]

By describing more fully the breadth of reproductive health care, the definition may decrease the perceived burden to regulated entities of complying with the rule by helping them determine whether a request for ***33006** the use or disclosure of PHI includes PHI that is implicated by this final rule.

To further clarify what is included in reproductive health care for regulated entities, we provide a non-exclusive list of examples that fit within the definition: contraception, including emergency contraception; preconception screening and counseling; management of pregnancy and pregnancy-related conditions, including pregnancy screening, prenatal care, miscarriage management, treatment for preeclampsia, hypertension during pregnancy, gestational diabetes, molar or ectopic pregnancy, and pregnancy termination; fertility and infertility diagnosis and treatment, including assisted reproductive technology and its components [FN269] (e.g., in vitro fertilization (IVF)); diagnosis and treatment of conditions that affect the reproductive system (e.g., perimenopause, menopause, endometriosis, adenomyosis); and other types of care, services, and supplies used for the diagnosis and treatment of conditions related to the reproductive system (e.g., mammography, pregnancy-related nutrition services, postpartum care products).

Additionally, the language in the definition stating that the definition should not be construed to set forth a standard of care or regulate what constitutes clinically appropriate reproductive health care should not be read as limiting "reproductive health care" to only health care that is determined to be appropriate by a health care professional. Rather, it may be the individual who determines whether the health care they receive, such as over-the-counter contraceptives, is appropriate. Like the definition of "health care," the definition of reproductive health care is intended to be broad. Finally, we clarify that meeting the definition is not sufficient for information about such health care to be protected under the HIPAA Rules or this final rule. Rather, the information about such health care still needs to meet the definition of PHI.[FN270]

Comment: Some commenters expressed support for the proposed definition of "reproductive health care." Several commenters specifically expressed their support for a broad definition of the term for various reasons, including: ensuring that providers of reproductive health care can continue to serve vulnerable communities and reduce health care disparities; providing clarity; and mitigating the need for clinical expertise and interpretation for each request for reproductive health information. Other commenters expressed support for the term because it would improve access to care and better reflect the breadth of services that support an individual's reproductive health, enable health care providers to continue to maintain appropriate data safeguards, and enable individuals to feel comfortable disclosing their information without fear of incrimination.

Many other commenters expressed opposition to the proposed definition because it was too expansive and would encompass procedures that they did not consider to be reproductive health care. Many commenters explicitly requested that the definition exclude certain types of health care. A few commenters recommended that the Department narrow the proposed definition to apply only to records directly involving certain specified services and clarify that the final definition does not include other procedures or treatments related to pregnancy or contraception. Another commenter expressed opposition to the proposed definition of "reproductive health care" because they believe that reproductive health information is no more sensitive than other medical information and should not be treated differently.

One commenter opposed the proposed definition of "reproductive health care" because they thought it would prevent health care providers from disclosing PHI to other health care providers for treatment, which would erode individual trust.

Several commenters requested that the Department expand the proposed definition, be more specific in its meaning (e.g., provide additional information about the types of care, services, or supplies included in the definition), or replace it with a more expansive term (e.g., "sensitive personal health care" meaning "care, services, or supplies related to the health of the individual which could expose any person to civil or criminal liability for the mere act of seeking, obtaining, providing, or facilitating such health care"). A commenter urged the Department to define the term "sexual and reproductive health care" to ensure that individuals have reproductive health care privacy, regardless of their sexual orientation or gender identity.

Commenters offered several alternative definitions or terms, such as "including but not limited to services related to contraception, sterilization, preconception care, maternity care, abortion care, and counseling regarding reproductive health care"; the definition of "reproductive health care services" at 18 U.S.C. 248(e)(5); "reproductive and sexual health care services" as defined in California Health and Safety Code section 1367.31; and limiting the definition to capture only health care that

is at risk of being investigated or prosecuted because of Dobbs. Other commenters requested additional precision or clarity in the definition. For example, a commenter recommended that the definition include the specific codes and data points that would constitute reproductive health care that would be prohibited from disclosure under the proposed rule (e.g., International Classification of Diseases (ICD) codes related to reproductive health, ABO blood type and Rh factor).

Several commenters urged the Department to narrow the proposed definition because of operational concerns, including the redirection of resources to making or obtaining legal determinations about whether a particular type of care was reproductive health care. Some explained that health information management staff generally do not have the clinical expertise to determine what would constitute "reproductive health care," while another stated that physicians would also have trouble discerning what health care would meet the proposed definition. Another commenter recommended that the Department include only PHI that is already reliably segregated in EHRs in the definition.

Many commenters requested that the Department further explain the proposed definition either in preamble or the regulatory text. One commenter suggested that in lieu of a definition of "reproductive health care," the Department include an extensive discussion of examples in the preamble and provide entities flexibility to implement policies or procedures that may be affected by the definition of "reproductive health care" in accordance with their operational structures. A few commenters also recommended that the Department provide examples in preamble discussion, rather than regulatory text. One commenter recommended that the Department provide specific examples to illustrate its meaning where there could be ambiguity. Several commenters recommended that examples be included in the regulatory text and provided specific examples of the types ***33007** of health care they thought should be included. Some commenters recommended the Department include examples but did not specify whether they should be in the preamble or in the regulatory text, while other commenters requested that the Department include a non-exhaustive list of examples of reproductive health care in both the regulation and preamble.

Response: After consideration, we have finalized a definition grounded in the Privacy Rule's long-established term "health care." We provide a non-exhaustive list of examples in preamble above. We do not explicitly address all of the many types of health care suggested in comments to avoid creating the impression of a complete list. This is also consistent with our approach regarding the definition of "health care." We emphasize that this definition does not set or affect standards of care, nor does it affect uses and disclosures of PHI for treatment purposes. Operational concerns expressed by some commenters are addressed in response to comments on the prohibition.

4. Whether the Department Should Define Any Additional Terms

The Department requested comments about whether it would be helpful for the Department to define "reproductive health" or any additional terms.[FN271]

Comment: Several commenters recommended that the Department define "reproductive health" because it would ensure that all covered entities would be required to implement changes, or that the PHI of individuals receiving certain types of health care would not be disclosed to states where individuals who receive such health care is being penalized.

Several commenters urged the Department to add the definition of reproductive health adopted by the United Nations and World Health Organization, while others recommended the adoption of the definition articulated by the International Conference on Population and Development in 1994. One commenter expressed opposition to adding a definition of reproductive health as unnecessary, and another instead recommended adoption of a precise definition of "reproductive health care."

Another commenter recommended expanding the definition of PHI to include certain digital data of entities not regulated under HIPAA (e.g., information from period tracking apps). One commenter recommended revising the definition of "health oversight agency" to exclude agencies that investigate or prosecute activities related to reproductive health care. Some commenters requested that the Department define additional terms or clarify existing terms.

Rather than define additional terms, one commenter recommended that the Department ensure that all the proposed definitions would be aligned with the Office of the National Coordinator for Health Information Technology (ONC) and CMS-mandated data elements for Certified Electronic Health Record Technology products and in the electronic clinical quality measures that health care providers are required to report to CMS.

Response: We appreciate the feedback from commenters, but upon further consideration, have concluded that defining any of the additional terms or clarifying additional existing ones is not necessary to support the implementation of this final rule. We also clarify that because HIPAA only authorizes the Department to protect IIHI used or disclosed by covered entities and their business associates, we are not able to regulate information that individuals themselves store and share using consumer health apps.

B. Section 164.502—Uses and Disclosures of Protected Health Information: General Rules

Section 164.502 of the Privacy Rule contains the general rules governing uses and disclosures of PHI. Paragraph (a)(1) of this section sets forth the list of permitted uses and disclosures.

1. Clarifying When PHI May Be Used or Disclosed by Regulated Entities

Section 164.502(a)(1)(iv) generally permits a regulated entity to use or disclose PHI pursuant to and in compliance with a valid authorization under 45 CFR 164.508, except for uses and disclosures of genetic information by a health plan for underwriting purposes prohibited under 45 CFR 164.502(a)(5)(i). Thus, an authorization that purports to allow a health plan to use or disclose PHI for that prohibited purpose is not valid under the Privacy Rule.

The Department proposed to modify 45 CFR 164.502(a)(1)(iv) to incorporate an additional limitation on the ability of a regulated entity to use and disclose PHI pursuant to an individual's authorization.[FN272] Specifically, the Department's proposal would prohibit a regulated entity from using or disclosing PHI pursuant to an individual's authorization where the purpose of the disclosure is for a criminal, civil, or administrative investigation or proceeding against any person in connection with seeking, obtaining, providing, or facilitating reproductive health care that is lawful under the circumstances in which such health care is provided, or to identify any person for the purpose of initiating such activities. As explained in the 2023 Privacy Rule NPRM, the proposed modification was intended to prevent the misuse of the general permission for a regulated entity to use or disclose PHI pursuant to an individual's authorization to bypass the proposed prohibition against using and disclosing PHI for purposes that would be prohibited by proposed 45 CFR 164.502(a)(5)(iii).

The Department explained in the proposed rule that this change to the authorization permission was necessary to protect individuals' privacy by precluding any possibility that a third party, such as a law enforcement official, could coerce or attempt to coerce an individual into signing an authorization, thereby enabling the third party to circumvent the prohibition proposed at 45 CFR 164.502(a)(5)(iii).

The Department also proposed to modify the general rules in 45 CFR 164.502(a)(1)(vi) to expressly condition certain uses and disclosures made under 45 CFR 164.512 on the receipt of an attestation pursuant to proposed 45 CFR 164.509, which is discussed below in greater detail. For clarity, the Department proposed to revise 45 CFR 164.502(a)(1)(vi) by replacing the sentence containing the conditions for certain permitted uses and disclosures with a lettered list.

Public comments about the use of authorization to use and disclose PHI for the purposes the Department proposed to prohibit in the 2023 Privacy Rule NPRM were generally divided between opposing views and supportive views, although only a few comments expressed full support for the proposal, as drafted. While many commenters shared the Department's concerns about the potential for individuals to be coerced into providing an authorization, some of these commenters nonetheless opposed the proposal because it could limit beneficial disclosures, cause uncertainty about the validity of an authorization, increase the burden on regulated entities, or seem to conflict with state laws that permit the disclosure of certain health information with the individual's explicit written consent.

The Department received no comments on its proposal to replace the ***33008** sentence at 45 CFR 164.502(a)(1)(vi) with a lettered list. Comments on the Department's proposal to condition certain disclosures made under 45 CFR 164.512 on the receipt of an attestation as required by proposed 45 CFR 164.509 are discussed below in greater detail.

The Department is not finalizing its proposal to prohibit a regulated entity from using or disclosing an individual's PHI for the specified purposes pursuant to and in compliance with an individual's authorization. We agree with the majority of public comments discussed in detail below that generally expressed the view that the Privacy Rule's authorization requirements empower individuals to make decisions about who has access to their PHI. We acknowledge that maintaining the permission for regulated entities to obtain an individual's authorization to use and disclose PHI could leave an individual exposed to the potential for duress or coercion by a third party. It could also expose a health care provider or other person who provides or facilitates reproductive health care to liability in the event the authorization is used to affect a disclosure for a prohibited purpose in connection with lawful reproductive health care. However, we believe that continuing to permit uses and disclosures pursuant to an individual's authorization best preserves individual autonomy concerning uses and disclosures of their PHI. Consistent with our practice described above, the Department will monitor closely the interaction of the revised Privacy Rule and the evolving legal landscape to ensure an appropriate balance of protecting the privacy interests of individuals and permitting access to PHI for non-health care purposes.

As we discussed in the proposed rule, there is a relationship between the provision allowing an individual to authorize a regulated entity to use or disclose the individual's PHI to a third party and the HITECH Act requirement that a regulated entity comply with an individual's direction to transmit to another person an electronic copy of the individual's PHI in an EHR ("individual access right to direct").[FN273] Both enhance an individual's autonomy by providing them with the ability to determine who can access the individual's PHI as specified in the authorization or access request. Both also create an opportunity for coercion or attempted coercion of an individual by another person (e.g., a law enforcement official could attempt to coerce an individual into providing the law enforcement official with access to the individual's PHI by offering the individual a reduced sentence for an alleged crime). And while we remain concerned about the potential for coercion or attempted coercion, even if the Department were to finalize the proposed limitation on uses and disclosures with an authorization, the individual would retain the individual access right to direct, which is enshrined in statute. We also believe it would be inconsistent with the spirit of individual access right to direct for the Department to limit the ability of an individual to authorize a regulated entity to disclose their PHI to another person.

For the foregoing reasons, we are not finalizing this proposal, and the language in 45 CFR 164.502(a)(1)(iv) remains unchanged.

Comment: While some commenters expressed concern about the potential for coercion described in the proposed rule, they did not all agree that it would be appropriate to address this concern by prohibiting such disclosures pursuant to an authorization. Some commenters asserted that coercion concerns would not be eliminated by curtailing the ability of individuals to authorize disclosures of their PHI in certain circumstances.

Some commenters explained that prohibiting individuals from requesting disclosures of their PHI pursuant to an authorization for prohibited purposes would create a significant burden for regulated entities, primarily because of the frequent failure of persons requesting the use or disclosure of PHI to provide sufficient detail regarding the purpose of the request to allow them to determine if it would be for a prohibited purpose.

A few commenters asserted that a HIPAA authorization is the safest approach to ensuring an individual is aware of and agrees to the use or disclosure of their PHI. One of those commenters recommended that the Department permit a regulated entity to disclose PHI pursuant to a valid authorization unless the covered entity has actual knowledge that an authorization was not voluntary. A commenter recommended adding a disclaimer or warning to the authorization to provide assurances that an individual was not coerced into disclosing their PHI to law enforcement or other third party that might seek to use the PHI for improper purposes. Still another commenter recommended that the Department require the authorization to indicate the types

of sensitive information the individual intends to share. One commenter recommended that certain disclosures be accompanied by a notice of the individual's rights under the Privacy Rule.

Response: We appreciate comments concerning this proposal and the restriction of individuals' ability to maintain control over their PHI by prohibiting the use of written authorization. The Privacy Rule's written authorization requirements are the most objective means by which an individual can provide direction to a regulated entity about the use and disclosure of their PHI known to a regulated entity. The right of individuals to access their PHI and choose to disclose their PHI to another person is a cornerstone of HIPAA, and as such, we are not proceeding with this proposal. The Department will continue to monitor complaints we receive and the outcome of enforcement actions to identify potential coercion and the effect of permitting individuals to authorize the disclosure of PHI for purposes that are prohibited under 45 CFR 164.502(a)(5)(iii) on the relationship between health care providers and individuals.

We also appreciate the comments that asserted that restricting the ability of regulated entities to use an authorization to obtain PHI for the purposes prohibited in this rulemaking could create a burden for the regulated entities.

To the extent that individuals wish to authorize the use and disclosure of their PHI, particularly when a request is not clear, or when a request seeks only partial parts of a record, a written authorization provides the regulated entity with the opportunity to clarify, with both the individual and the person requesting the disclosure, the PHI that will be disclosed. State laws that require regulated entities to obtain an individual's written consent are generally considered more privacy protective, and thus are not preempted.

Comment: Several commenters expressed support for eliminating the ability of regulated entities to use or disclose PHI pursuant to an authorization in certain circumstances because of the potential for harm to individuals as proposed. One commenter described the potential negative effects of permitting uses and disclosures pursuant to an authorization in certain circumstances on individuals from historically marginalized communities. Another commenter asserted that individuals frequently do not read consent forms provided to them for signature for a variety of reasons, including proficiency. Some commenters expressed concerns that individuals who are the subject of a ***33009** criminal investigation or prosecution would be placed in situations where it would not be possible to obtain a voluntary authorization (e.g., a custodial situation), or that law enforcement could seek to persuade an individual to provide them with access to the individual's PHI through improper means.

Response: We continue to share the concern expressed by commenters about the potential for coercion or harassment of individuals, particularly those in marginalized or underserved communities, to provide authorization for the use or disclosure of their PHI. According to many reports and data cited by the Department and commenters, such individuals more often experience negative interactions with law enforcement or other prosecutorial authorities. We urge HIPAA regulated entities to be mindful of Privacy Rule requirements that could help mitigate the potential for harm resulting from coercion or difficulties individuals may experience in understanding an authorization. For example, 45 CFR 164.508(b)(2)(v) holds invalid authorizations that include "material information [. . .] known by the covered entity to be false"; 45 CFR 164.508(c)(1)(iv) requires that every authorization include a description of each purpose of the requested use or disclosure; and 45 CFR 164.508(c)(3), requires the authorization be written in plain language.[FN274] The Department will continue to monitor complaints, questions, and enforcement outcomes for potential harm from disclosures resulting from authorizations.

Comment: A few commenters requested clarifications of how the proposal would affect other disclosures made pursuant to the Privacy Rule, including disclosures to the individual's attorney, and whether the Department intended it to apply to other consumer-initiated requests, such as part of an Application Programming Interface (API).

A commenter recommended that health care providers be permitted to refuse to release PHI to any consumer health app when the information could lead to civil or criminal repercussions for the health care provider unless the app developer signs a binding agreement that protects them.

Response: We are not finalizing the proposal, but state here that the Department did not intend to affect or disrupt the ability of covered entities to make other disclosures of PHI pursuant to a written authorization under the Privacy Rule. Additionally, as discussed above, individuals have the right to obtain a copy of their PHI and the individual access right to direct, which could involve releasing PHI to a consumer health app or an API. With respect to EHR and technology vendors and other third parties who facilitate the exchange of PHI on behalf of covered entities, we continue to stress that valid business associate agreements are required by the Privacy Rule and necessary to protect the privacy of the individuals who are the subject of the PHI. ONC also has made clear that it intends to advance technologies that support requirements already extant under the HIPAA Privacy Rule. [FN275] Additionally, the Department continues to urge covered entities that have direct contact with individuals to educate such individuals on the risks of disclosing their PHI to persons that are not regulated by HIPAA.[FN276] We will continue to ensure that regulated entities enter into business associate agreements as required by the Privacy Rule.[FN277] We will continue to monitor complaints, questions, and enforcement outcomes.

Comment: Many commenters addressed the relationship between the Department's proposal to eliminate the option for an individual to request disclosure of their information for the prohibited purposes pursuant to an authorization and the individual right of access, particularly, the right of an individual to direct a regulated entity to transmit to a third party an electronic copy of their PHI in an EHR. Several commenters recommended that the Department curtail the individual access right to direct. Some commenters expressed concern about the potential for individuals to be coerced into providing access to their PHI to third parties. A few commenters expressed concerns that some third parties sell PHI for purposes adverse to individuals' interests, including some of the purposes described in the 2023 Privacy Rule NPRM.

A few commenters provided recommendations for ways to educate individuals regarding their rights under the Privacy Rule.

Response: Although we appreciate the comments on this topic, any modifications to the individual access right to direct are beyond the scope of this rulemaking. We reiterate here that covered entities and their technology vendors that meet the definition of business associates must ensure that valid business associate agreements are in place,[FN278] and we urge them to facilitate individuals' awareness of the risks of using third-party consumer apps that are not regulated by HIPAA.[FN279] The Department continues to appreciate the identification of better education resources for individuals and health care providers and commits to providing educational resources through its website, regional offices, and webinars.

2. Adding a New Category of Prohibited Uses and Disclosures

Generally, the Privacy Rule prohibits the use or disclosure of PHI except as permitted or required by the Privacy Rule. Paragraph (a)(5) of section 164.502 contains specific purposes for which the Privacy Rule explicitly prohibits the use and disclosure of PHI. Section 164.502(a)(5)(i) prohibits most health plans from using or disclosing PHI that is genetic information for underwriting purposes, while 45 CFR 164.502(a)(5)(ii) prohibits a regulated entity from selling PHI, except when they have obtained a valid authorization from the individual who is the subject of the PHI.

The Department proposed to add a new paragraph, 45 CFR 164.502(a)(5)(iii), to prohibit regulated entities from using or disclosing an individual's PHI for certain additional purposes, and to describe the scope, applicability, and limitations of the prohibition. Similar to most other ***33010** prohibitions within the Privacy Rule, this prohibition would be purpose-based, rather than a blanket prohibition against uses and disclosures of certain types of PHI.[FN280] The Department's rationale for this approach was four-fold: (1) to be consistent with the existing Privacy Rule permissible use and disclosure structure with which regulated entities are familiar, including the permission to disclose to law enforcement for certain purposes; (2) to avoid imposing a requirement on regulated entities that would necessitate the adoption and implementation of costly technology upgrades to enable data segmentation; [FN281] (3) to recognize that PHI about an individual's reproductive health care may be used or disclosed for a wide variety of purposes, and permitting the use or disclosure of PHI for some of those purposes would erode individuals' ability to trust in the health care system; and (4) to avoid any misperception that the Department is setting a standard of care or substituting its judgment for that of individuals and licensed health care professionals.

Proposed 45 CFR 164.502(a)(5)(iii)(A) would establish a new prohibition against the use or disclosure of PHI. Section (a)(5)(iii)(A)(1) would prohibit the use or disclosure of PHI where the use or disclosure is for a criminal, civil, or administrative investigation into or proceeding against any person in connection with seeking, obtaining, providing, or facilitating reproductive health care. Section 164.502(a)(5)(iii)(A)(2) would prohibit the use or disclosure of PHI to identify any person for the purpose of initiating a criminal, civil, or administrative investigation into or proceeding against any person in connection with seeking, obtaining, providing, or facilitating reproductive health care.

The Department proposed 45 CFR 164.502(a)(5)(iii)(B) to explain that "seeking, obtaining, providing, or facilitating" would include, but not be limited to, expressing interest in, inducing, using, performing, furnishing, paying for, disseminating information about, arranging, insuring, assisting, or otherwise taking action to engage in reproductive health care; or attempting any of the same. As the Department explained in the 2023 Privacy Rule NPRM, the proposed prohibition would apply to any request for PHI to facilitate a criminal, civil, or administrative investigation or proceeding against any person, or to identify any person to initiate an investigation or proceeding, where the basis for the investigation, proceeding, or identification is that the person sought, obtained, provided, or facilitated reproductive health care that is lawful under the circumstances in which such health care is provided. The Department further explained that, consistent with its HIPAA authority, the prohibition would preempt state or other laws requiring a regulated entity to use or disclose PHI in response to a court order or other type of legal process for a purpose prohibited under the proposed rule. Conversely, the prohibition would not preempt laws that require the use or disclosure of PHI for other purposes, such as: public health activities; [FN282] investigations of sexual assault committed against an individual where such use or disclosure is conditioned upon the receipt of an attestation; or investigations into human and sex trafficking, child abuse, or professional misconduct or licensing inquiries.[FN283]

The Department also proposed to subject this prohibition to a Rule of Applicability in 45 CFR 164.502(a)(5)(iii)(C). As the Department explained, the proposed prohibition in 45 CFR 164.502(a)(5)(iii) would prohibit a regulated entity from using or disclosing PHI for certain purposes against any person in connection with seeking, obtaining, providing, or facilitating reproductive health care that is "lawful under the circumstances in which such health care is provided." [FN284] The Department further explained that it proposed a framework for regulated entities to determine whether the reproductive health care at issue was lawful under the circumstances in which such health care was provided. The proposed language of the Rule of Applicability under this rule would apply where one or more of three specified conditions exist.

The first condition, as proposed in 45 CFR 164.502(a)(5)(iii)(C)(1), addressed reproductive health care provided outside of the state that authorized the investigation or proceeding where such health care is lawful in the state where it is provided. In the proposed rule, we also clarified that the proposal would apply the prohibition in a situation in which the health care is ongoing, has been completed, or has not yet been obtained, provided, or facilitated. The proposed prohibition would recognize that any interest of society in conducting an investigation or proceeding against a person would require balancing with, and generally be outweighed by, the interests of society in protecting the privacy interests of individuals when they access lawful health care. As discussed above, privacy interests are heightened with respect to reproductive health care that is lawful under the circumstances in which it is provided as compared to the interests of law enforcement, and private parties afforded legal rights of action, in investigating or imposing liability for actions related to lawful reproductive health care.

The second condition, proposed in 45 CFR 164.502(a)(5)(iii)(C)(2), addressed reproductive health care protected, required, or authorized by Federal law, regardless of the state in which such health care is provided. It would apply the prohibition to reproductive health care that is lawful under the applicable Federal law and where the investigation or proceeding is against any person in connection with seeking, obtaining, providing, or facilitating reproductive health care. It would apply, for example, where the underlying reproductive health care continues to be protected by the Constitution, such as contraception, or is expressly required or authorized under Federal law.[FN285]

The third condition, proposed in 45 CFR 164.502(a)(5)(iii)(C)(3), would apply the prohibition when the relevant criminal, civil, or administrative investigation or proceeding is in connection with any person seeking, obtaining, providing, or facilitating reproductive health care that is provided in a state consistent with and permitted by the law of that same state.

The Department also proposed a Rule of Construction in 45 CFR 164.502(a)(5)(iii)(D) that provided that the proposed prohibition should not be construed to prohibit a use or disclosure of PHI otherwise permitted by the Privacy Rule unless such use or disclosure is primarily for the purpose of investigating or imposing liability on any person for the mere act of seeking, obtaining, providing, or facilitating reproductive health care.[FN286] The Department proposed the Rule of Construction to avoid an erroneous interpretation of the prohibition ***33011** standard, which otherwise could have been construed to prevent regulated entities from using or disclosing PHI for the purpose of defending themselves or others against allegations that they sought, obtained, provided, or facilitated reproductive health care that was not lawful under the circumstances in which it was provided.

Most of the comments addressing the proposed prohibition expressed support for the Department's purpose-based approach and the principle that the Privacy Rule should prohibit the use and disclosure of PHI for a criminal, civil, or administrative investigation into or proceeding against any person, or to identify any person to initiate a criminal, civil, or administrative investigation into or proceeding against any person, in connection with seeking, obtaining, providing, or facilitating lawful reproductive health care. At the same time, the Department received many comments that expressed concern about the proposal's clarity and regulated entities' ability to operationalize the Rule of Applicability and Rule of Construction. For example, commenters asserted that to the extent the proposed rule would require regulated entities to determine whether the requested PHI was about reproductive health care that was lawful under the circumstances in which it was provided, making such a determination could be unduly burdensome when the request was about reproductive health care that was not provided by the regulated entity that received the request and could expose them to legal risk in the absence of additional guidance or a safe harbor. Other commenters expressed concern that applying the prohibition would undermine the ability of states to enforce their own health care laws.

Commenters who addressed the proposed Rule of Construction also expressed confusion about how the Department intended "primarily" or "primarily for the purpose of" to be interpreted. Many either requested examples of uses and disclosures that were "primarily" for the underlying prohibited purposes. In lieu of the proposal to avoid liability based on "the mere act of" seeking, obtaining, providing, or facilitating reproductive health care, a few commenters suggested expanding the proposed definition or modifying existing permissions to explicitly exclude conduct based solely on seeking, obtaining, providing, or facilitating certain types of health care.

The Department is finalizing the proposed prohibition that restricts the ability of regulated entities to use or disclose PHI for activities with the purpose of investigating or imposing liability on any person for the mere act of seeking, obtaining, providing, or facilitating reproductive health care that is lawful under the circumstances in which it was provided, or to identify any person for such purposes, with modifications to improve clarity and ease implementation for regulated entities.

The Department is retaining its purpose-based approach in the final rule in light of concerns about the ability of regulated entities to segment certain types of data and in recognition that PHI about an individual's reproductive health may be reflected throughout an individual's longitudinal health record, in addition to being maintained by a wide variety of regulated entities.

As we discussed in the 2023 Privacy Rule NPRM, the Department recognizes that diseases and conditions that are not directly related to an individual's reproductive health may be affected by or have bearing on the individual's reproductive health and the reproductive health care they are eligible to receive, and vice versa. Thus, it may be necessary for all types of health care providers to maintain complete and accurate medical records to ensure that subsequent health care providers are adequately informed in making diagnoses or recommending courses of treatment. For example, an individual with a chronic cardiac or endocrine condition may become pregnant, placing additional strain on the individual's cardiovascular or endocrine system. In such cases, it is essential that their cardiologist or endocrinologist be informed of the pregnancy and consulted as necessary to ensure appropriate health care is provided to the individual because such conditions may have bearing on their pregnancy.

Additionally, the final rule revises the prohibition standard at 45 CFR 164.502(a)(5)(iii) by incorporating language from the proposed Rule of Construction to clarify the purposes for which the Department prohibits uses or disclosures of PHI. In 45 CFR 164.502(a)(5)(iii)(A)(1) and (2), the Department incorporates the "mere act of" language of the proposed Rule of Construction to clarify that the prohibited uses and disclosures of PHI are tied to imposing criminal, civil, or administrative liability for the "mere act of" seeking, obtaining, providing, or facilitating reproductive care and not just "in connection to" such acts.[FN287] Section 164.502(a)(5)(iii)(A)(1) combines the criminal, civil, or administrative investigations language from the proposed prohibition standard with the proposed Rule of Construction to prohibit regulated entities from using or disclosing PHI for activities conducted for the purpose of a criminal, civil, or administrative investigation into any person for the mere act of seeking, obtaining, providing, or facilitating reproductive health care. Section 164.502(a)(5)(iii)(A)(2) separates and replaces the "or proceeding against" language from the first condition of the proposed prohibition standard with "to impose criminal, civil, or administrative liability on" and incorporates language from the proposed Rule of Construction to prohibit regulated entities from using or disclosing PHI for activities conducted for the purpose of imposing criminal, civil, or administrative liability on any person for the mere act of seeking, obtaining, providing, or facilitating reproductive health care. Similar to proposed 45 CFR 164.502(a)(5)(iii)(A)(2), 45 CFR 164.502(a)(5)(iii)(A)(3) now addresses the use or disclosure of PHI to identify any person for the activities described in the other conditions of the prohibition standard. To the extent the purpose in 45 CFR 164.502(a)(5)(iii)(A)(1) relates to activities conducted for an investigation, the purpose in 45 CFR 164.502(a)(5)(iii)(A)(2) relates to the activities to impose liability, including activities that would flow from that investigation, whether it be in the form of proceedings to consider censure, medical license revocation, the imposition of fines or other penalties, or detainment or imprisonment, or the actual imposition of such liability.

The prohibition against the uses and disclosures of PHI finalized in 45 CFR 164.502(a)(5)(iii)(A) is subject to the Rule of Applicability that the Department is finalizing in 45 CFR 164.502(a)(5)(iii)(B). As discussed in the proposed rule and finalized herein, the Rule of Applicability modifies the prohibition standard to make clear that the prohibition encompasses the use or disclosure of PHI for any activities conducted for the purpose of investigating or imposing liability on any person for the mere act of seeking, obtaining, providing, or facilitating reproductive health care that the regulated entity that has received the request for PHI has reasonably determined is lawful under the circumstances in which such health care is provided. The prohibition's ***33012** reference to the "mere act" of seeking, obtaining, providing, or facilitating lawful reproductive health care includes the reasons that the reproductive health care was sought or provided (e.g., an investigation into whether a particular abortion was necessary to save a pregnant person's life would constitute an investigation into the "mere act" of seeking, obtaining, providing, or facilitating reproductive health care). The reference to "mere act" operates the same way with respect to activities conducted to identify any individual for the purposes described above. This includes but is not limited to law enforcement investigations, third party investigations in furtherance of civil proceedings, state licensure proceedings, criminal prosecutions, and family law proceedings. Examples of criminal, civil, or administrative investigations or activities to impose liability for which regulated entities would be prohibited from using or disclosing PHI would also include a civil suit brought by a person exercising a private right of action provided for under state law against an individual or health care provider who obtained, provided, or facilitated a lawful abortion, or a law enforcement investigation into a health care provider for lawfully providing or facilitating the disposal of an embryo at the direction of the individual.

The Department acknowledges that this final rule will not prohibit the use or disclosure of PHI in all instances in which persons request the use or disclosure of PHI for an investigation or to impose liability on a person for seeking, obtaining, providing, or facilitating reproductive health care. As discussed extensively in Section III of this rule, the Privacy Rule has long balanced the privacy interests of individuals with that of society in obtaining PHI for certain non-health care purposes. Accordingly, we acknowledge that in some circumstances, an individual's privacy interest in obtaining lawful care will outweigh law enforcement's interests in the PHI for certain non-health care purposes, while in others, law enforcement's interests in the PHI will outweigh the privacy interests of individuals. As we discussed above in Section III and in the proposed rule, recent developments in the legal landscape have made information about an individual's reproductive health more likely to be sought for punitive non-health care purposes, such as targeting individuals for seeking lawful reproductive health care outside of their home state, and therefore more likely to be subject to disclosure by regulated entities if the requested disclosure is permitted under the Privacy Rule. The Department's approach in this rulemaking limits the application of the prohibition to situations in

which reproductive health care meets one of the conditions of the Rule of Applicability. Accordingly, the prohibition applies only where individuals' privacy interests outweigh the interests of law enforcement, and private parties afforded legal rights of action, in obtaining individuals' PHI for the non-health care purpose of investigating or imposing liability for reproductive health care that was not lawful under the circumstances in which it was provided.

We also acknowledge, as we did in the proposed rule, that in some circumstances, the Privacy Rule imposes greater restrictions on uses and disclosures of PHI than state privacy laws, and the prohibition may delay or hamper enforcement of certain other state laws (e.g., laws governing access to reproductive health care). Such circumstances were contemplated by Congress when it enacted HIPAA.[FN288] For example, a state law might require a covered entity to disclose PHI to law enforcement in furtherance of an investigation, while the final rule may prohibit such a disclosure. In such cases, the provisions of the Privacy Rule would preempt the application of contrary provisions of state law, and the regulated entity could not disclose the PHI.[FN289] However, as discussed above in section III, we reiterate that not all methods to investigate the lawfulness of reproductive health care are foreclosed by this rule.

The Department emphasizes that the prohibition does not apply in circumstances that fall outside of its terms. Where a person requesting PHI identifies a legal basis for the request beyond the mere act of a person having sought, obtained, provided, or facilitated reproductive health care that was lawful under the circumstances in which it was provided, the prohibition at 45 CFR 164.502(a)(5)(iii) would not apply. Similarly, if a person obtains reproductive health care that was unlawful, such health care would not be lawful under the circumstances in which it was provided, and the prohibition would not apply. Where the prohibition does not apply, the Privacy Rule permits the requested PHI to be used or disclosed, provided that the use or disclosure is otherwise permitted by the Privacy Rule (i.e., the request meets the requirements of an applicable permission and is accompanied by a valid attestation as described by 45 CFR 164.509, where required). The Department reminds the public that persons who request PHI under false pretenses may be subject to criminal penalties under HIPAA.[FN290]

The Rule of Applicability, as discussed below, vests the determination of whether the reproductive health care was lawful under the circumstances it was provided with the regulated entity that receives the request for PHI and requires that such determination be reasonable. The regulatory presumption, also discussed below, replaces the proposed requirement that a regulated entity make a determination regarding the lawfulness of the reproductive health care where someone other than the regulated entity that receives the request provided such health care. The new language requires that the reproductive health care at issue be presumed lawful under the circumstances in which such health care is provided when provided by a person other than the regulated entity receiving the request. This helps to ensure that the regulated entity is not required to make a determination about the lawfulness of such health care. The presumption may be overcome if certain conditions are met.

In the proposed rule, the Department provided examples that remain helpful in illustrating the operation of the clarified prohibition and how it continues to permit uses and disclosures for legitimate interests.[FN291] For example, the prohibition does not restrict a regulated entity from using or disclosing PHI to a health oversight agency conducting health oversight activities, such as investigating whether reproductive health care was actually provided or appropriately billed in connection with a claim for such services, or investigating substandard medical care or patient abuse.[FN292] However, as discussed above, investigating substandard medical care ***33013** or patient abuse may not be used as a pretext for investigating reproductive health care for purposes that are otherwise prohibited by this final rule. In another example, the rule does not bar a regulated entity from using or disclosing PHI to investigate an alleged violation of the Federal False Claims Act or a state equivalent based on unusual prescribing or billing patterns for erectile dysfunction medication.

This final rule also does not prohibit the use or disclosure of PHI where the PHI is sought to investigate or impose liability on a person for submitting a false claim for reproductive health care for payment to the government. In such a case, the request is not made for the purpose of investigating or imposing liability on a person for the mere act of seeking, obtaining, providing, or facilitating reproductive health care. Instead, the purpose of the request for PHI is to investigate or impose liability on a person for an alleged violation of the Federal False Claims Act or a state equivalent.[FN293] As another example, the revised prohibition standard generally does not prohibit the disclosure of PHI to an Inspector General where the PHI is sought to conduct

an audit aimed at protecting the integrity of the Medicare or Medicaid Program where the audit is not inconsistent with this final rule. This is because the request is generally not being made for the purpose of investigating or imposing liability on a person for the mere act of providing the reproductive health care itself. The prohibition also makes clear that the use or disclosure of PHI is permitted where the purpose of the use or disclosure is to investigate alleged violations of Federal nondiscrimination laws or abusive conduct, such as sexual assault, that may occur in connection with reproductive health care. The prohibition likewise makes clear that the use or disclosure of PHI is permitted where the purpose of the use or disclosure is to penalize the provision of reproductive health care that is not lawful, as defined by the Rule of Applicability at 45 CFR 164.502(a)(5)(iii)(B), as long as a Privacy Rule permission applies.

Under the prohibition, a regulated entity could respond to a request for relevant records in a criminal or civil investigation pursuant to 18 U.S.C. 248 regarding freedom of access to clinic entrances. Investigations under this provision are conducted for the purpose of determining whether a person physically obstructed, intimidated, or interfered with persons providing "reproductive health services," [FN294] or attempted to do so. Thus, they do not involve investigating or imposing liability on a person for the mere act of seeking, obtaining, providing, or facilitating reproductive health care that was reasonably determined to be lawful under the circumstances in which such health care was provided by the regulated entity that received the request for PHI.

The final rule retains the proposal's prohibition against the use or disclosure of PHI for activities conducted for the purpose of investigating or imposing liability on "any person" for the mere act of seeking, obtaining, providing, or facilitating reproductive health care that is lawful under the circumstances in which such health care is provided, or for identifying "any person" for such activities. "Any person" means, based on the HIPAA Rules' definition of "person," [FN295] that the prohibition is not limited to use or disclosure of PHI for use against the individual; rather, the prohibition applies to the use or disclosure of PHI against a regulated entity, or any other person, including an individual or entity, who may have obtained, provided, or facilitated lawful reproductive health care.[FN296]

The Department has always and continues to recognize that there may be a public interest and benefit in disclosing PHI for limited non-health care purposes, including enforcing duly enacted laws. The Department has also always sought to balance competing interests in individual privacy and the use and disclosure of PHI for particular purposes in the Privacy Rule. We balance these competing interests by considering both the harm to individuals that results from the use or disclosure of PHI (e.g., loss of trust in the health care system, potential for financial liability or detainment) and the countervailing interests in disclosure. As discussed above, the Department finds that the final rule reflects the appropriate balance between these interests by prohibiting the use and disclosure of PHI for activities conducted for the purpose of investigating or imposing liability on "any person" for the mere act of seeking, obtaining, providing, or facilitating reproductive health care that is lawful under the circumstances in which such health care is provided, or for identifying "any person" for such activities.

Accordingly, the final rule adopts, with modifications discussed below, the proposed Rule of Applicability and re-designates it as 45 CFR 164.502(a)(5)(iii)(B). The final rule text also adds the word "only" in 45 CFR 164.502(a)(5)(iii)(B) to make clear that the prohibition's application is limited to the use or disclosure of PHI "only" where one or more of the conditions set forth in the Rule of Applicability exists.

To address concerns from commenters about how to determine whether reproductive health care is "lawful," the Department finalizes a revised Rule of Applicability at 45 CFR 164.502(a)(5)(iii)(B). Specifically, the Rule of Applicability, as finalized, requires that a regulated entity that receives a request for PHI make a reasonable determination about the lawfulness of the reproductive health care in the circumstances in which such health care was provided, where lawfulness is described by 45 CFR 164.502(a)(5)(iii)(B)(1)-(3). Thus, a regulated entity that receives the request for PHI must decide whether it would be reasonable for a similarly situated regulated entity to determine, as provided in the Rule of Applicability, that the reproductive health care is lawful under the circumstances in which such health care is provided.

To make the reasonableness determination, that is, to determine whether it would be reasonable for a similarly situated regulated entity to determine that one or more of the conditions of the Rule of Applicability applies, a regulated entity receiving the request for PHI must evaluate the facts and circumstances under which the reproductive health care was provided. Such facts and circumstances include but are not limited to the individual's diagnosis and prognosis, the time such health care was provided, the location where such health care was provided, and the particular health care provider who provided the health care. This approach is consistent with the current and longstanding practice under the Privacy Rule, whereby a covered entity is responsible for determining whether a requested use or disclosure is permitted under one or more of the permissions set forth in the Privacy Rule. For example, a regulated entity is permitted to make a use or disclosure of PHI where "required by law" pursuant to 45 CFR 164.512(a). To make a use or disclosure under that permission, the regulated entity cannot rely on assertions from the person making the request, but rather, must itself evaluate the relevant law to determine whether ***33014** the use or disclosure is "required by law" and thus permitted under that permission. As discussed above, the Department recognizes that this approach may prevent uses or disclosures in support of some law enforcement investigations (e.g., where a health care provider reasonably determines that its provision of reproductive health care was lawful, but where law enforcement reasonably disagrees or does not provide sufficient factual information for a regulated entity to determine that there is a substantial factual basis that the reproductive health care was not lawful under the circumstances in which such health care was provided). However, we believe that, in these narrow circumstances, the interests of law enforcement, and private parties afforded legal rights of action, are outweighed by privacy interests and that the current approach strikes the appropriate balance between these competing interests.

The Department is retaining the proposed framework for identifying the circumstances in which reproductive health care is lawful, and thus the prohibition applies. However, we are modifying the regulatory text of the Rule of Applicability to clarify its conditions. As revised, the regulatory text combines the first and third conditions of the Rule of Applicability into a revised 45 CFR 164.502(a)(5)(iii)(B)(1) that focuses on whether the reproductive health care at issue is lawful under the circumstances in which such health care is provided. Under the revised condition, the circumstances in which the prohibition applies are determined by the law of the state in which the health care is provided.

As proposed in the 2023 Privacy Rule NPRM, the first and third conditions, when considered together, would have given the impression that the Department was drawing a distinction between reproductive health care provided in-state or out-of-state, although outcomes would have been the same. As the Department explained in the proposed rule, both the first and third conditions would have prohibited a regulated entity from using or disclosing PHI where the reproductive health care was permitted by the law of the state in which it was provided (e.g., for pregnancy termination that occurs before a state-specific gestational limit or under a relevant exception in a state law restricting pregnancy termination such as when the pregnancy is the result of rape or incest or because the life of the pregnant individual is endangered, for reproductive health care that is generally permitted but must be provided by a specific type of health care professional or in a certain place of service). The outcome of the analysis remains the same under this final rule, which combines the first and third conditions of the Rule of Applicability into one condition. Thus, the revision improves the clarity of the Rule of Applicability by focusing solely on whether the reproductive health care was lawful under the circumstances in which it was provided.

Additionally, the final rule modifies the regulatory text in 45 CFR 164.502(a)(5)(iii)(B)(2) to include an express reference to the U.S. Constitution as a source of Federal law for determining whether reproductive health care is lawful under the circumstances in which such health care is provided. The Department has always intended to include the U.S. Constitution as a source of Federal law, and the final regulatory text now explicitly reflects this. The regulatory text also makes clear that the U.S. Constitution is not the sole source of Federal law and that Federal statutes, regulations, and policies may be the relevant legal authority for determining whether the reproductive health care is protected, required, or authorized under Federal law. This final rule in no way supersedes applicable state law pertaining to the lawfulness of reproductive health care.

To address commenters' concerns about obligating regulated entities to determine whether reproductive health care that occurred outside of the regulated entity is lawful, the Department is adding a new presumption provision at 45 CFR 164.502(a)(5)(iii)(C). It presumes the reproductive health care at issue was lawful under the circumstances in which such health care was provided when it was provided by a person other than the regulated entity receiving the request. The presumption can be overcome

where the regulated entity has either actual knowledge, or factual information supplied by the person requesting the use or disclosure, that demonstrates a substantial factual basis that the reproductive health care was not lawful under the specific circumstances in which it was provided. The first ground to overcome the presumption—concerning "actual knowledge"—accounts for situations where the regulated entity has actual knowledge that the reproductive health care was not lawful. The second ground to overcome the presumption—concerning "factual information"—accounts for situations where the person making the request has demonstrated to the regulated entity that there is a substantial factual basis that the reproductive health care was unlawful under the circumstances in which such health care was provided. To satisfy the second ground, the regulated entity must obtain from the person making the request sufficient threshold factual evidence that demonstrates to the regulated entity a substantial factual basis that the reproductive health care was not lawful under the circumstances in which such health care was provided.

For example, an investigator requests information from a health plan about claims for coverage of certain reproductive health care provided by a particular health care provider. The health plan must presume that the reproductive health care was lawful unless the health plan has actual knowledge that the reproductive health care was not lawful or the investigator supplied information that demonstrates a substantial factual basis to believe that the reproductive health care was not lawful under these circumstances. The latter condition could be met where the investigator provides the regulated entity with various types of documentation. For example, persons requesting PHI could provide the regulated entity with affidavits supplied by complainants that contain the circumstances under which the reproductive health care was provided. In this example, the presumption would be overcome, and the health plan would be permitted to use or disclose the PHI, assuming that all applicable conditions of the Privacy Rule were otherwise met. In contrast, if the investigator requests the same information but only provides an anonymous report of a particular health care provider providing reproductive health care that is not lawful under the circumstances in which it is provided, the health plan would not have a substantial factual basis to believe that the reproductive health care was not lawful. Accordingly, this final rule would prohibit the health plan from disclosing the requested PHI unless the investigator provides sufficient information to overcome the presumption and the use or disclosure is otherwise permitted by the Privacy Rule. The conditions of making the use or disclosure would include, as described elsewhere in this final rule, obtaining a valid attestation if the relevant permission requires one.

The Department emphasizes that, as demonstrated by the numerous comments on this issue, this regulatory presumption is necessary for workability by the regulated entities subject to this final rule. We recognize that when a regulated entity did not provide the reproductive health care at ***33015** issue, it may not have access to all of the relevant information, including medical records with the necessary information, to determine whether prior reproductive health care obtained by an individual was lawful. We clarify that regulated entities are not expected to conduct research or perform an analysis of an individual's PHI to determine whether prior reproductive health care was lawful under the circumstances in which it was provided when such health care was provided by someone other than the regulated entity that receives the request for the use or disclosure of PHI.

We also reiterate that this final rule is intended to support and clarify the privacy interests of individuals availing themselves of lawful reproductive health care, and not to thwart the interests of states in conducting lawful investigations or imposing liability on the provision of unlawful reproductive health care. While this new regulatory presumption may make it more difficult for a state to investigate whether reproductive health care was unlawful under the circumstances in which it was provided (e.g., when other sources of information that is not PHI are unavailable), as discussed above, the Department has considered those interests and determined that the effects are justified by countervailing privacy benefits. Moreover, as also explained above, society's interest in obtaining PHI in such circumstances is reduced, particularly in light of its continued ability to obtain information from other sources. The Department also emphasizes that it is not applying a blanket presumption that all reproductive health care reflected in a regulated entity's records was lawful under the circumstances in which it was provided. Instead, the presumption applies only where the reproductive health care at issue is provided by someone other than the regulated entity that received the request for the use or disclosure of PHI, and it may be overcome in the circumstances identified above.

In contrast, where a request for PHI is made to the regulated entity that provided the relevant reproductive health care, the regulated entity is responsible for determining whether it provided reproductive health care that was lawful under the

circumstances in which it was provided, including, as discussed above, a review of all available relevant evidence bearing on whether the reproductive health care was lawful under the circumstances in which it was provided. If the regulated entity reasonably determines that the health care was lawfully provided, the prohibition applies, and the regulated entity may not make the use or disclosure.

To illustrate how the presumption would apply, consider a hospital that has PHI about the provision of reproductive health care by a different facility. The hospital is not expected to conduct research or perform analysis into whether reproductive health care obtained at a different facility from another health care provider was lawful under the circumstances in which such health care was provided. Accordingly, the regulated entity, if they receive a request for PHI to which the prohibition at 45 CFR 164.502(a)(5)(iii) may apply, is not expected to review the individual's PHI to determine the lawfulness of the prior reproductive health care. In such situations, the regulated entity is also not expected to research other states' laws to determine whether the reproductive health care was lawful under the circumstances in which it was provided, nor are they expected to consult with an attorney to do the same. Rather, the presumption standard allows the regulated entity to limit their review to information supplied by the person making the request for the use or disclosure of PHI where the request addresses reproductive health care provided by someone other than the regulated entity receiving the request. Thus, a regulated entity that did not provide the reproductive health care must presume that the reproductive health care was lawful under the circumstances in which it was provided unless the conditions of rebutting the presumption are met.

Consider a different example in which a law enforcement official from State A issues a subpoena to a hospital in State A to request the PHI of an individual from State A who is suspected of obtaining reproductive health care in State B that would have been unlawful under the law of State A if provided there. The hospital did not provide the reproductive health care in question, nor did the individual provide information to the hospital about who may have provided such health care. At the time the law enforcement official issues the subpoena, the individual is no longer in the hospital, nor is the individual receiving treatment at the hospital. Additionally, the law enforcement official provided no information in the subpoena that would make it reasonable for the hospital to determine that the reproductive health care at issue was not lawful in the circumstances in which it was provided, that is, to determine that the reproductive health care was not lawful under the law of State B or was not protected, required, or authorized by Federal law. In this case, the hospital did not have actual knowledge that, nor did the information supplied to it by the law enforcement official making the request demonstrate to the hospital a substantial factual basis that, the individual had previously received unlawful reproductive health care; therefore, the reproductive health care is presumed to have been provided under circumstances in which it was lawful to provide such health care. Accordingly, this final rule would prohibit the hospital from disclosing the requested PHI unless the law enforcement official provides sufficient information to overcome the presumption and the use or disclosure is otherwise permitted by the Privacy Rule. This includes, as described elsewhere in this final rule, receipt of a valid attestation if the relevant permission requires one.

Conversely, if the hospital is provided with factual information that demonstrates a substantial factual basis that the reproductive health care at issue was not lawful under the specific circumstances in which such health care was provided, the presumption would be overcome. When a presumption is overcome or rebutted, the Rule of Applicability at 45 CFR 164.502(a)(5)(iii)(B) cannot be satisfied (i.e., the regulated entity has actual knowledge, or has received factual information from the person requesting the PHI to determine that there is substantial factual basis to believe, that the reproductive health care was not lawful under the circumstances in which it was provided), and thus, the use or disclosure would not be prohibited under the final rule. As such, the Privacy Rule would permit, but would not require, the hospital to disclose the PHI in response to the subpoena where the use or disclosure meets the requirements of an applicable permission, including the receipt of a valid attestation where required.

In another example, a law enforcement agency presents a covered entity's business associate, such as a cloud service provider, with a subpoena for the PHI of an individual who received reproductive health care as part of its investigation into the health care provider who provided such health care for the provision of that health care. The PHI is encrypted, and the business associate does not have the key to decrypt it or is not permitted under the terms of its business associate agreement with the covered entity to decrypt the PHI. Thus, the business associate lacks a complete view of the individual's PHI and did not provide ***33016** the underlying reproductive health care. Additionally, the business associate has no actual knowledge that the reproductive health

care was unlawful, nor did the person requesting the PHI supply it with information that demonstrates to the business associate a substantial factual basis that the reproductive health care was not lawful under the specific circumstances in which such health care was provided. In such a case, the presumption that the reproductive health care at issue was lawful applies. If the law enforcement agency does not present more information to overcome the presumption, the Privacy Rule prohibits the business associate from disclosing the requested PHI in response to the subpoena, even if the law enforcement agency has provided an attestation; in this circumstance, the attestation would not be valid because the disclosure is for a purpose that is prohibited by 45 CFR 164.502(a)(5)(iii).

The presumption serves a different purpose than the attestation, which is required when there is a request for PHI potentially related to reproductive health care for certain permitted purposes under the Privacy Rule, as discussed further below. In contrast with the attestation, the presumption applies only where a request for PHI involves a purpose prohibited under 45 CFR 164.502(a)(5)(iii) and the reproductive health care at issue was provided by someone other than the regulated entity that received the request for PHI, so the regulated entity does not have first-hand knowledge of the circumstances in which the reproductive health care was provided. Because the situations in which the presumption applies involve purposes prohibited under 45 CFR 164.502(a)(5)(iii), it is not reasonable for a regulated entity to rely, without additional information, on a statement from the person requesting the use or disclosure, including the statement required in the attestation by 45 CFR 164.509(b)(1)(ii), that the request is not made for a prohibited purpose or that the underlying reproductive health care was unlawful. Thus, such statement alone does not satisfy 45 CFR 164.502(a)(5)(iii)(C)(2). However, if a person requesting the use or disclosure of PHI provides the regulated entity with sufficient information, separate and distinct from the attestation itself, that demonstrates to the regulated entity a substantial factual basis that the reproductive health care was not lawful under the specific circumstances in which such health care was provided, the presumption would be overcome; in this scenario, the Privacy Rule would permit, but would not require, the regulated entity to disclose the PHI in response to the subpoena. The presumption may also be overcome by, for example, a spontaneous statement from the individual about the circumstances under which they obtained reproductive health care.

As we explained above, this final rule, consistent with the Department's longstanding approach to the Privacy Rule, balances competing interests between the privacy expectations of individuals and society's interests in PHI for certain non-health care purposes. For example, since its inception, the Privacy Rule has permitted a covered entity to rely, if such reliance is reasonable under the circumstances, on a requested disclosure as the minimum necessary for the stated purpose when making disclosures to public officials that are permitted under 45 CFR 164.512, if the public official represents that the information requested is the minimum necessary for the stated purpose(s).[FN297] Elsewhere in the Privacy Rule, covered entities are required to make a determination of whether it is “reasonable under the circumstances” to rely on documentation, statements, or representations from a person requesting PHI to verify the identity of the person requesting PHI and the authority of the person to access the PHI.[FN298] In the case of public officials, we have previously explained that covered entities must verify the identity of the request by examination of reasonable evidence, such as written statement of identity on agency letterhead, an identification badge, or similar proof of official status. In addition, where explicit written evidence of legal process or other authority is required before disclosure may be made, a public official's proof of identity and oral statement that the request is authorized by law are not sufficient to constitute the required reasonable evidence of the legal process or authority.[FN299] In both instances, the Privacy Rule permits regulated entities to rely on representations made by public officials where it is reasonable to do so but makes clear that in some instances, documentary or other evidentiary proof is needed.[FN300]

In this final rule, the Department has enshrined the requirement that a regulated entity make a reasonable determination of whether PHI should be disclosed in response to a request from law enforcement, or other official, in regulatory text and determined that is not reasonable to rely solely on representations of law enforcement or other officials without a written attestation. This approach is due to the high potential for harm to the individual who is the subject of the PHI or to persons who are subject to liability for the mere act of seeking, obtaining, providing or facilitating reproductive health care.

Further, as we discussed above, even in the scenario where a state official seeks PHI to investigate whether the underlying reproductive health care was unlawful, a regulated entity's reasonable determination that the conditions of the prohibition set

forth in the Rule of Applicability are met means that the prohibition applies and the regulated entity is prohibited from using or disclosing the PHI. This does not foreclose the ability of state officials to investigate the circumstances surrounding the provision of the reproductive health care, including through the collection of information from sources that are not regulated under HIPAA, to determine whether a health care provider or other person may have acted unlawfully. Rather, this final rule prohibits the use or disclosure of PHI when it is being used to investigate or impose liability on a person for the mere act of seeking, obtaining, providing, or facilitating lawful reproductive health care, or to identify any person to initiate such activities. Indeed, the individual's privacy interests are especially strong where individuals seek lawful reproductive health care and risk either avoiding such lawful health care or being less than truthful with their health care providers because they fear that their PHI will be disclosed.

The Department is re-designating proposed 45 CFR 164.502(a)(5)(iii)(B) as 45 CFR 164.502(a)(5)(iii)(D) and modifying it in response to the ***33017** commenters who provided examples of situations where they could reasonably expect to receive a request for PHI that might relate to "seeking, obtaining, providing, or facilitating reproductive health care." To address these concerns, the Department is revising the list of activities in 45 CFR 164.502(a)(5)(iii)(D) that explain the scope of actions taken by persons that the Department is protecting against impermissible requests for PHI. Specifically, the Department is adding the terms "administering," "authorizing," "providing coverage for," "approving," and "counseling about" to the current list of descriptive activities in the proposed rule and removing "inducing" from the list. We are removing "inducing" from the list in response to concerns from commenters that the prohibition might apply in circumstances where individuals are coerced to obtain reproductive health care. It was never the Department's intention for the prohibition on the use or disclosure of PHI to apply in such circumstances. Rather, we intended it to refer to situations in which a health care provider "induces" labor under circumstances in which such health care is lawful; however, we believe our intended meaning of "inducing" is encompassed in other terms in the list. The revised list better explains the type of activities in which a person may be engaged and about which the Department intends to prevent the use or disclosure of PHI.

The Department is not finalizing a separate Rule of Construction because the need is obviated by incorporating the key content into the prohibition itself at 45 CFR 164.502(a)(5)(iii). The Department proposed the Rule of Construction to clarify that 45 CFR 164.502(a)(5)(iii) should not be construed to prohibit a use or disclosure of PHI otherwise permitted by the Privacy Rule unless such use or disclosure is "primarily for the purpose of" investigating or imposing liability on any person for the mere act of seeking, obtaining, providing, or facilitating reproductive health care. By incorporating the Rule of Construction into the main standard and removing the proposed "primarily for the purpose of" language, the Department now more clearly conveys its intent to prohibit the use and disclosure of PHI for the specified purposes only when it relates to the "mere act of" seeking, obtaining, providing, or facilitating reproductive health care. As discussed in greater detail below in our responses to comments, this change is designed to reduce confusion for regulated entities about how to reconcile and apply the Rule of Construction with the main prohibition standard and does not change the scope of the prohibition as proposed. The revisions and restructuring of regulatory text formerly included in the Rule of Construction improve readability and reduce redundancy. Likewise, the final rule incorporates other minor wording changes to improve readability and updates regulatory text references to other paragraphs to accurately reflect the organization of this section.

Comment: Many commenters expressed support for the Department's proposal to create a new category of prohibited uses and disclosures about reproductive health care. A few of these commenters explained the rationale for their support as based on the proposed approach's balance of preventing harm to individuals from certain uses and disclosures and permitting beneficial uses and disclosures, while providing regulated entities with clarity with respect to when uses and disclosures of PHI would be permitted.

A few commenters agreed with the Department's view that a purpose-based prohibition is preferable to other approaches to protecting the privacy of individuals that would require labeling or segmenting of PHI. Other commenters focused on how the proposal would better facilitate HIPAA's goals of providing high-quality health care and encouraging the flow of information to covered entities.

Response: The approach we are taking in this final rule preserves the ability of regulated entities to use and disclose PHI for permitted purposes while also enhancing protections for PHI, to strike the appropriate balance between privacy interests and other societal interests, including law enforcement. As discussed above, the Department's approach will lead to numerous benefits associated with enhanced privacy protections.

Comment: A few commenters asserted that the Department's proposal would provide a consistent standard for all states to follow.

Response: The Department believes this final rule will provide clear standards for regulated entities, especially health care providers, by incorporating the prohibition into the Privacy Rule. However, we stress that the prohibition attaches to only requests for uses and disclosures that are for a prohibited purpose where the reproductive health care is lawful under the circumstances in which such health care is provided. Different states and localities have promulgated different standards for the lawfulness of reproductive health care.

Comment: A few commenters expressed their appreciation that the proposal encompassed a broad range of reproductive health care and explained the importance of ensuring that a final rule protects any health information about reproductive health care.

Response: As the Department acknowledged in the 2023 Privacy Rule NPRM, many routine medical examinations and treatments could involve PHI about an individual's reproductive health or reproductive organs and systems. This final rule is not limited to PHI about abortion. The Department recognized the impracticability of attempting to parse out the types of reproductive health care that should be subject to the prohibition and those that should not be. For this reason, and in keeping with the existing scheme of the Privacy Rule, the Department proposed and is finalizing a purpose-based approach to prohibiting the use and disclosure of any PHI for use against any person for seeking, obtaining, providing, or facilitating reproductive health care that is lawful under the circumstances in which such health care is provided. A regulated entity that receives a request for PHI is charged with making a reasonable determination of whether the conditions of lawfulness set forth in the Rule of Applicability apply. To further assist regulated entities in understanding the broad scope of "reproductive health care," we provide in the preamble a non-exclusive list of examples that fit within the definition.

Comment: Some commenters expressed opposition to this proposal, asserting that the proposed new category would interfere with the enforcement of state laws that restrict or regulate abortion or that the proposal would make it more difficult for regulated entities to determine whether a requested use or disclosure of PHI is permitted under the Privacy Rule because it lacked sufficient specificity.

Response: The Department is finalizing a narrowly tailored prohibition that will only apply when an individual's privacy interest in lawfully obtained reproductive health care outweighs society's interest in obtaining PHI for non-health care purposes. As discussed above, the Department has adopted an approach that strikes the appropriate balance between privacy interests and other interests, including law enforcement interests in accessing PHI to investigate or impose liability on persons for seeking, obtaining, providing, or facilitating reproductive health care that ***33018** is unlawful under the circumstances in which such health care is provided. To help regulated entities operationalize the prohibition, the Department is finalizing an attestation requirement in 45 CFR 164.509 in which persons requesting PHI under a permission that is mostly likely to be used to request PHI for a purpose prohibited by 45 CFR 164.502(a)(5)(iii) must attest that the request is not subject to the prohibition. The Department acknowledges that requests for a purpose prohibited by 45 CFR 164.502(a)(5)(iii) may be made pursuant to another applicable permission and reminds regulated entities that they must evaluate all requests made by a third party for the use or disclosure of PHI to ensure that they are not for a prohibited purpose. Requests not subject to the prohibition would still be subject to the conditions of the relevant permissions in the Privacy Rule. When requests for PHI meet the conditions for permissions in the Privacy Rule, including conditions specified in 45 CFR 164.512, regulated entities are permitted to use and disclose PHI in accordance with such permissions.

Moreover, as we describe above, the Department is modifying the final rule to clarify that the prohibition restricts the use and disclosure of PHI for the enumerated purposes when connected to the "mere act of" seeking, obtaining, providing, or facilitating

reproductive health care. Thus, the prohibition does not prevent the use or disclosure of the PHI about reproductive health care obtained by an individual in all circumstances. Rather, it prevents the use or disclosure of PHI when the purpose of the disclosure is to investigate or impose liability on a person because they sought, obtained, provided, or facilitated reproductive health care that was lawful under the circumstances in which such health care was provided, as determined by the regulated entity that received the request for PHI. For example, a regulated entity would not be prohibited from disclosing an individual's PHI when subpoenaed by law enforcement for the purpose of investigating allegations of sexual assault by or of the individual, assuming that law enforcement provided a valid attestation and met the other conditions of the permission under which the request was made.

Comment: A commenter expressed opposition to the proposal and asserted that it relied on the assumption that it would be readily apparent or ascertainable whether particular reproductive health care was lawfully provided. According to this commenter, persons who violate the law have an interest in concealing their activity, and the proposal would impede law enforcement investigations to determine whether lawbreaking has occurred. Additionally, the commenter expressed their concern that the proposal would represent a departure from the Privacy Rule's existing approach to law enforcement investigations and proceedings.

Response: The Department is finalizing a regulatory presumption to address the narrow circumstance of when lawfulness is not readily apparent to a regulated entity who is the recipient of a request for the use or disclosure PHI when the regulated entity did not provide the underlying reproductive health care. As we explained above, this final rule is intended to support and clarify the privacy interests of individuals availing themselves of lawful reproductive health care, and not to thwart the interests of states and the Federal government in conducting lawful investigations or imposing liability on the provision of unlawful reproductive health care. While this new regulatory presumption may make it more difficult for law enforcement officials to investigate whether reproductive health care was unlawful under the circumstances in which it was provided (e.g., when other sources of information that is not PHI are unavailable), the Department has considered those interests and determined that the effects are justified by countervailing privacy benefits. We also reiterate here that the presumption is not a blanket presumption. It only applies where the reproductive health care at issue is provided by someone other than the regulated entity that received the request for the use or disclosure of PHI, and it may be overcome in the circumstances identified above.

We note that the Privacy Rule has always and continues to permit regulated entities to disclose PHI for law enforcement purposes, subject to certain conditions or limitations. In this final rule, the Department has found that changes in the legal landscape now necessitate codifying a prohibition against uses and disclosures for the purposes specified in 45 CFR 164.502(a)(5)(iii)(A), subject to the Rule of Applicability in 45 CFR 164.502(a)(5)(iii)(B). The Department is not otherwise changing the existing permissions in the Privacy Rule that permit regulated entities to use or disclose PHI for law enforcement purposes and other important non-health care purposes, except as discussed elsewhere in this rule. These purposes include when PHI is required by law to be disclosed for purposes other than those prohibited by this final rule, for public health and health oversight activities, for other law enforcement purposes not in conflict with this rulemaking, for reports of child abuse, about decedents when not prohibited by this final rule, and other purposes specified in the Privacy Rule.

In particular, in the 2023 Privacy Rule NPRM, the Department discussed the interaction of this rule with HIPAA's statutory preemption provisions [FN301] and explained that it was necessary to preempt state laws that require the use and disclosure of PHI for the purposes prohibited by this rule to give effect to the prohibition consistent with HIPAA. As discussed above, to achieve the purpose for which HIPAA was enacted, to enable the electronic exchange of identifiable health information, we must protect the privacy of that information to further individuals' trust in the health care system. As finalized, the prohibition is limited only to circumstances in which the privacy interests of an individual and the interests of society in an effective health care system outweigh society's interest in obtaining PHI for non-health care purposes.

Comment: A commenter stated that, to the extent the ability of a state to determine whether to investigate or bring a proceeding is based on information in the possession of a regulated entity, the proposed rule did not adequately address a state's need to regulate the medical profession and health care facilities.

Response: As finalized, the prohibition prevents the use and disclosure of PHI for certain purposes where a person sought, obtained, provided, or facilitated reproductive health care that is lawful under the circumstances in which such health care is provided. As discussed above, the final rule strikes the appropriate balance between privacy interests and other interests. Public officials remain free to investigate the provision of health care by seeking information from non-covered entities. Moreover, the prohibition does not prevent a state from enforcing its laws. Instead, it protects the privacy of individuals' PHI in certain circumstances.

Comment: A few commenters expressed concern that the proposed prohibition may also affect the enforcement of Federal laws.

Response: The Department has consulted extensively with other Federal agencies and officials in the ***33019** development of this rule, including the Attorney General, and does not believe that this rule will impede the enforcement of Federal laws. As discussed above, this rule carefully balances privacy and other interests, applying only in certain narrowly tailored situations.

Comment: Numerous commenters recommended that the Department expand the scope of the proposed prohibition to include other or all types of stigmatized health care. A few commenters recommended expanding the proposed prohibition to all health care or to provide individuals the ability to prevent the disclosure of their PHI through HIEs.

Generally, commenters supporting expansion of the proposal's scope expressed the belief that it was necessary for HIPAA to promote trust between individuals and health care providers and to improve health care quality and outcomes.

Several commenters explained that persons seeking, obtaining, providing, or facilitating other types of health care are facing the same challenges as described in the proposal with respect to reproductive health care, including health care obtained outside of the health care system, and provided examples of such challenges. Many commenters also made recommendations for how the Department should address those challenges.

Response: The Department is issuing this final rule to protect the privacy of PHI when it is sought for activities to investigate or impose liability on persons for the mere act of seeking, obtaining, providing, or facilitating lawful reproductive health care. Lawfulness is based on a reasonable determination made by a regulated entity that has received a request for PHI for one of the purposes specified at 45 CFR 164.502(a)(5)(iii)(A) that at least one of the conditions in the Rule of Applicability applies. We are finalizing a prohibition that is not specific to certain procedures, laws, or types of providers. Rather, the prohibition we finalize here requires regulated entities to consider the purpose of the requested use or disclosure. To the extent that the specific types of health care referenced by commenters above meet the definition of reproductive health care, this final rule will prevent the disclosure of PHI where it is sought for activities with the purpose of investigating or imposing liability on any person for the mere act of seeking, obtaining, providing, or facilitating reproductive health care that is lawful under the circumstances in which it is provided. In adopting a purpose-based prohibition, the Department has chosen an administrable standard that reflects the appropriate balance between protecting individuals' privacy interests and allowing the use or disclosure of PHI in support of other important societal interests. Additional privacy protections for information about SUD treatment may be afforded to PHI in Part 2 records under Part 2.[FN302]

Comment: In response to the Department's specific request about whether it should require a regulated entity to obtain an individual's authorization for any uses and disclosures of “highly sensitive PHI” or otherwise address such a defined category of PHI in the Privacy Rule, a few commenters urged the Department to expand the proposed prohibition to protect all people at risk of criminal or other investigation for use of essential health care or care, services, or supplies related to the health of the individual that could expose any person to civil or criminal liability. Several commenters recommended that the Department expand the scope of the proposed prohibition to, variously, all “highly sensitive health information,” “sensitive personal health care,” “highly sensitive PHI,” or “highly sensitive PHI and restricted health care service” because of the potential harms that could result if such health information were to be disclosed without stringent privacy safeguards.

Several commenters asserted that creating a category of or separate standard for "highly sensitive PHI" would cause significant confusion because it would be difficult to define in a commonly understood manner. According to these commenters, this would make compliance more challenging and costly and further decrease the individual's privacy. A few commenters expressed concern that creating a special category of highly sensitive PHI would further stigmatize certain types of health care.

Several commenters expressed concern that prohibiting or limiting uses or disclosures of highly sensitive PHI for certain purposes may negatively affect efforts to eliminate the need for data segmentation, such as efforts to align the Privacy Rule and Part 2; reduce or eliminate stigmatization of certain health conditions and diagnoses; and improve health care management and health care coordination.

Response: We appreciate these comments and generally agree with commenters who expressed concern that the Privacy Rule should address the shifting legal landscape to ensure that it continues to protect PHI, regardless of how the PHI is transmitted or maintained. We also agree that to the extent possible, the Privacy Rule should promote administrative efficiency and disincentivize adverse actions by health care providers grounded in fear of prosecution or legal risks borne from providing lawful health care to individuals, which may erode patients' trust and confidence in the health care system and deter them from seeking lawful health care. The Department's approach to promulgating a narrowly tailored prohibition focused on clarifying the use and disclosure of PHI for the purposes prohibited by this final rule accomplishes these goals. As we explained in the 2023 Privacy Rule NPRM and re-affirm in this final rule, recent developments in the legal environment have made information about lawful reproductive health care sought by or provided to an individual more likely to be of interest for punitive non-health care purposes, and thus more likely to be used or disclosed if sought for a purpose permitted under the Privacy Rule today. As explained, the Department has identified concerns that the use or disclosure of PHI for the prohibited purposes in this rule would erode individuals' trust in the privacy of legal reproductive health care. Such erosion would negatively affect relationships between individuals and their health care providers, result in individuals forgoing needed treatment, and make individuals less likely to share pertinent health concerns with their health care providers. Modifying the Privacy Rule to focus on and address this shifting landscape is the most efficient way to return to a regulatory landscape that is balanced and consistent with the goals of HIPAA.

We do not believe that it is necessary to modify the Privacy Rule to prohibit the use and disclosure of PHI for any criminal, civil, or administrative investigation or effort to impose criminal, civil, or administrative liability related to all health care, services, or supplies. Sections 164.512(e) and (f) already set forth the specified conditions under which regulated entities may disclose PHI for judicial and administrative proceedings and law enforcement purposes.

We decline to modify the prohibition to apply it to the use and disclosure of "highly sensitive PHI." We are persuaded by commenters who voiced concern about the feasibility of defining the phrase such that regulated entities would be able to understand and ***33020** operationalize it. We also find persuasive comments about the compliance burden that would result from implementing such a prohibition. While PHI about reproductive health care may be found throughout an individual's record and may be collected or maintained by multiple types of providers, the term "reproductive health care" is defined in a manner that is clearly connected to the reproductive system, its functions, and processes.[FN303]

In contrast, applying the prohibition to all "highly sensitive PHI" or any use or disclosure of PHI that results in harm, stigma, or adverse result for an individual would be unworkable because of lack of consensus about how to define such categories and would likely create the issues with segmentation and care coordination discussed above. As discussed above, the purpose of this final rule and narrowly crafted prohibition is to adopt the appropriate balance in the Privacy Rule between protecting individuals' privacy and permitting PHI to be used and disclosed for other societal benefits. The commenters' objectives reflect a desire to protect individuals, but their discussion does not properly account for other societal interests that are supported by certain disclosures of PHI, interests that the Privacy Rule has balanced since its inception.

Comment: A commenter requested that the Department clarify that state laws may protect the privacy of health information when the Privacy Rule does not apply, such as when individuals' health information is in the possession of a person that is not a regulated entity, such as a friend or family member, or is stored on a personal cellular phone or tablet.

Response: HIPAA provides the Department with the authority to protect the privacy and security of IIHI that is maintained or transmitted by covered entities, and in some cases, their business associates. Other laws may apply where the HIPAA Rules do not. Guidance on protecting the privacy and security of health information when using a personal cell phone or tablet is available on OCR's website.[FN304]

Comment: Many commenters cited potential operational challenges with the proposed prohibition and confirmed that current health IT generally does not provide regulated entities with the ability to segment PHI into specific categories afforded special protections. A few commenters recommended that the Department work with EHR vendors to modernize health care data management platforms to better address data segmentation, while others recommended that the Department ensure interagency coordination of data segmentation policies and provide individuals with granular level of control over their PHI.

A few commenters requested that the Department address concerns about the interaction between the minimum necessary standard and this final rule.

A commenter asserted that privacy protections that do not account for individual privacy preferences would result in individuals withholding information from their health care providers, and some health care providers electing not to generate or document certain information from or about individuals.

Response: The prohibition, as finalized, should not implicate additional data segmentation concerns beyond those that already exist. We acknowledge the low adoption rate of data segmentation standards and challenges related to the technical and administrative feasibility of data segmentation (e.g., costs), and as discussed above, are finalizing a purpose-based approach to address such concerns. The Department continues its active engagement, particularly through ONC, to identify robust data sharing standards that facilitate appropriate privacy controls.

With respect to concerns about the Privacy Rule minimum necessary standard, we do not anticipate that this final rule will affect the ability of regulated entities subject to the standard to comply. First, the prohibition is applicable only for the purposed uses and disclosures specified in 45 CFR 164.502(a)(5)(iii). Regulated entities must make reasonable efforts to limit the use or disclosure of PHI pursuant to 45 CFR 164.512, other than 45 CFR 164.512(a), to the minimum amount of PHI necessary to accomplish the intended purpose of the use, disclosure, or request.[FN305] Regulated entities are required to have in place policies and procedures that outline how the entity complies with the standard.[FN306]

Comment: A few commenters requested that the Department clarify the roles and responsibilities of covered entities and business associates with respect to compliance with the proposed prohibition and attestation requirements and whether business associate agreements would need to be amended to reflect the requirements of the final rule.

Response: The prohibition standard finalized in 45 CFR 164.502(a)(5)(iii)(A) applies directly to all regulated entities; meaning, all HIPAA covered entities and business associates. We also note that the finalized presumption of lawfulness for the underlying health care, when applicable, directly applies to business associates, as does the attestation requirement in 45 CFR 164.509. As such, business associates of covered entities that hold PHI by virtue of their business associate relationship with the covered entity are subject to the express prohibition on using or disclosing PHI for the specified purposes, regardless of whether the prohibition is specified in the business associate agreement. The attestation requirement and its application to business associates are discussed in greater detail below.

Comment: A commenter expressed support for the application of the proposal to health care providers, but also recognized states' interest in ensuring that health care providers render health care in accordance with the standard of care in that state. Another commenter questioned the Department's authority under HIPAA to implement this provision.

Response: The Department is modifying the proposed definition of "Reproductive health care" to explicitly clarify that the definition does not set a standard of care for or determine what constitutes clinically appropriate reproductive health care. Additionally, as discussed above, the application of this rule is limited to reproductive health care that is lawful under the circumstances in which such health care is provided as described at 45 CFR 164.502(a)(5)(iii)(B). Lawfulness is determined by the regulated entity that receives the request for PHI, after a reasonable determination that at least one of the conditions in the Rule of Applicability apply. As explained above, the prohibition is carefully tailored to protect the privacy of individuals' health information in circumstances where the reproductive health care at issue was lawful under the circumstances such care was provided, reflecting the appropriate balance between privacy interests and other societal interests.

Comment: Many commenters recommended alternative or additional ***33021** approaches to the purpose-based prohibition, such as eliminating or narrowing the permissions for use or disclosure of PHI without an individual's authorization or limiting disclosures to third parties subject to an individual's authorization.

A few commenters recommended that the Department revise specific Privacy Rule permissions to clarify the use and disclosure of PHI for certain administrative or law enforcement requests, instead of promulgating a new prohibition.

Response: The Department's approach to prohibit the uses and disclosures of PHI for the purposes described in this final rule is consistent with the Privacy Rule's longstanding balancing of individual privacy interests with society's interests in PHI for non-health care purposes. Adopting the correct balance is necessary to preserve and promote trust between individuals and health care providers. Instead of modifying specific permissions at 45 CFR 164.512, we are finalizing modifications that prohibit the use or disclosure of PHI to ensure the correct balance, instead of modifying specific permissions at 45 CFR 164.512. Recognizing that requests that fall under these permissions represent important public policy objectives (e.g., health oversight, law enforcement, protection of individuals subject to abuse), the Department is imposing a new attestation requirement, as described in greater detail below, to protect against harm that may arise from the use or disclosure of PHI for a purpose prohibited under 45 CFR 164.502(a)(5)(iii), which is more likely to occur when a person requesting the use or disclosure of PHI relies on certain permissions. The new attestation condition will also provide a mechanism that will enable a regulated entity to better evaluate the request. The Department declines to make additional changes at this time and will consider these topics for future guidance. The Department also declines to finalize its proposal to prevent an individual from requesting that a regulated entity use or disclose PHI pursuant to a valid authorization.

Comment: A few commenters questioned the ability of regulated entities to use or disclose PHI in compliance with mandatory reporting laws, such as laws requiring the reporting of suspected child abuse or domestic violence.

A few of these commenters questioned whether mandatory reporting requirements would change a regulated entity's duty to apply the minimum necessary standard.

A few commenters asserted that mandatory reporting laws dissuade individuals from seeking health care, prevent the development of trust between individuals and health care providers, and generally are implemented in an inequitable fashion that disproportionately apply to individuals from marginalized or historically underserved communities or communities of color.

Response: The Department acknowledges that there may be some mandatory reporting laws that require a regulated entity to determine whether a request for PHI is for a purpose prohibited by this rule. However, whether in response to a mandatory reporting law or routine request, the final rule's operation remains the same, that is, it prohibits a regulated entity from using or disclosing PHI for a prohibited purpose when the reproductive health care under investigation or at the center of the activity to impose liability is lawful under the circumstances that it was provided.

To the extent mandatory reporting requirements apply to the reporting of PHI to public health authorities for public health purposes, including PHI about reproductive health care, this final rule does not prevent a regulated entity from complying with such mandate.

To aid stakeholders in understanding how the prohibition operates with respect to public health reporting, the Department is clarifying that the term "Public health," as used in public health surveillance, investigation, and intervention, includes identifying, monitoring, preventing, or mitigating ongoing or prospective threats to the health or safety of a population, which may involve the collection of PHI. In so doing, we are clarifying that public health surveillance, investigation, and intervention are outside of the scope of activities prohibited by 45 CFR 164.502(a)(5)(iii). These changes will offer additional protection to individuals who would otherwise be subject to having their PHI disclosed for a prohibited purpose because the underlying mandatory reporting requirement did not clearly specify its relationship to public health. This final rule does not change the minimum necessary standard or the circumstances in which the Privacy Rule requires a regulated entity to apply the minimum necessary standard.

Comment: Many commenters expressed concern that the purposes for which the Department proposed to prohibit uses or disclosures would interfere with the ability of law enforcement to conduct investigations, including into coercion, child abuse, and sex trafficking and assault, would prevent states from verifying state licensure requirements, and would hamper the ability of health care professionals to report illegal behavior by other health care professionals.

Response: As discussed above, the prohibition applies only to activities conducted for the purpose of investigating or imposing liability on a person for the mere act of seeking, obtaining, providing, or facilitating reproductive health care that is provided under circumstances in which such health care is lawful. A regulated entity is permitted to disclose PHI to a person who requests PHI for other purposes if a permission applies and the underlying conditions of the relevant permission are met, including the attestation condition, if applicable.

Comment: A few commenters recommended that the Department establish a safe harbor for the use or disclosure of PHI by regulated entities for TPO.

Response: We appreciate the comment but do not believe such a safe harbor is necessary. The Privacy Rule permits the disclosure of an individual's PHI for TPO when the conditions set forth in the TPO provisions of the rule are met.[FN307] The prohibited uses and disclosures codified in this rulemaking would rarely intersect with uses and disclosures that qualify as TPO activities. As explained above, to the extent a person requesting the use or disclosure of PHI reasonably articulates a basis for a request that is not related to the mere act of seeking, obtaining, providing, or facilitating reproductive health care, a regulated entity may use or disclose the PHI where otherwise permitted by the Privacy Rule.

Comment: A commenter recommended that the Department clarify that the prohibition applies to the activities of insurers and third-party administrators of self-funded plans by adding "administering, authorizing, covering, approving, or gathering or providing information about" to the explanation of "seeking, obtaining, providing, or facilitating."

Response: The prohibition applies to all activities that a person could reasonably be expected to engage in with a regulated entity that could result in a use or disclosure of PHI that might be sought for prohibited purposes, including activities conducted or performed by or on behalf of a health ***33022** plan, including a group health plan.[FN308] Accordingly, the Department has modified the scope of activities initially proposed in the 2023 Privacy Rule NPRM to better explain what it meant by seeking, obtaining, providing, or facilitating reproductive health care. The modified text is finalized at 45 CFR 164.502(a)(5)(iii)(D), [FN309] and adds administering, authorizing, providing coverage for, approving, counseling about to the non-exhaustive list of example activities.

Comment: Several commenters expressed support for the proposed Rule of Applicability. A few commenters expressed support for the proposed Rule of Applicability because it would reassure residents of the state in which the lawful health care is provided and individuals who travel to such states for lawful health care that their medical records will not be disclosed for prohibited purposes.

Response: We are finalizing a modified Rule of Applicability as described above.

Comment: Some comments expressed varying levels of support for the Department's references to "substantial interests" by states or superseding state laws. A few commenters disagreed with the Department's assertion that states lack a legitimate interest in conducting a criminal, civil, or administrative investigation or proceeding into lawful reproductive health care where the investigation is based on the mere fact that reproductive health care was or is being provided. Others asserted that the proposed rule would be unworkable and would assign health care providers and the Department the power to determine whether reproductive health care was provided lawfully, thereby affording them the authority to enforce certain state laws.

Response: As explained above, the Rule of Applicability reflects the Department's careful balancing of privacy interests and other societal interests. For the reasons explained above, the Department has determined that the privacy interest of an individual and the interest of society in an effective health care system outweigh the interests of society in seeking the use of PHI for non-health care purposes that could result in harm to the individual where a regulated entity that receives a request for PHI reasonably determines that at least one of the conditions in the Rule of Applicability applies. To help clarify this discussion further, the Department provides examples where the Rule of Applicability applies in this section of this final rule.

Comment: Several commenters recommended that the Department eliminate the distinction between health care that is lawful and health care that is not and that all forms of reproductive health care should be protected from criminalization and government investigation.

Several commenters stated that the term "lawful" would incorrectly suggest that receiving certain types of reproductive health care could be unlawful, even though most prohibitions on reproductive health care apply to providing or performing the health care, rather than receiving it. They also questioned whether the proposed Rule of Applicability would protect individuals who obtained reproductive health care in another state.

Response: We are finalizing a Rule of Applicability at 45 CFR 164.502(a)(5)(iii)(B) that ensures the privacy of PHI when it is sought to conduct an investigation into or impose liability on any person for the mere act of seeking, obtaining, providing or facilitating reproductive health care that is lawful under the circumstances in which such health care is provided, consistent with applicable Federal or state law. A regulated entity that receives a request for PHI must make a reasonable determination that at least one of the conditions in the Rule of Applicability applies. As discussed above, this approach reflects a careful balance between privacy interests and other societal interests.

Comment: Some commenters asserted that medical records should not be used for purposes outside of the health care setting in ways that could harm the subject of the records, particularly for law enforcement or other governmental purposes. One commenter expressed concern that disclosures of PHI would not be limited for all purposes, and that the proposal would not prevent a state from pursuing actions where the health care is later found to be unlawful. Another commenter asserted that disclosing PHI to law enforcement in connection with an investigation into reproductive health care is a secondary use of PHI that would be directly at odds with the purpose for which the PHI was collected, while others stated that the proposal risks deterring individuals from seeking or obtaining necessary health care.

A few commenters expressed concerns that health care providers could be inhibited from providing necessary health care, fully educating individuals about their options, or documenting the health care provided.

Response: When the Department promulgated the 2000 Privacy Rule, we acknowledged that the rule balanced the privacy interests of individuals with the interests of the public in ensuring PHI was available for non-health purposes. As we explained in the 2023 Privacy Rule NPRM, "individuals' right to privacy in information about themselves is not absolute. It does not, for instance, prevent reporting of public health information on communicable diseases or stop law enforcement from getting information when due process has been observed." [FN310] At the same time, in the 2023 Privacy Rule NPRM, the Department acknowledged that adverse consequences do result when individuals question the privacy of their health information and explained that the purpose of HIPAA is to protect the privacy of information and promote trust in the health care system to ensure that individuals do not forgo lawful health care when needed or withhold important information that may affect the quality of their health care.[FN311]

Accordingly, the Privacy Rule provides a clear framework to operationalize these principles, and this final rule is intended to balance these interests. The Privacy Rule does not protect information received or maintained by entities other than those that are regulated under HIPAA, including information that is used for a purpose other than the purpose for which it was initially requested. This final rule provides heightened protection, as necessary, to the privacy of PHI where its use or disclosure may result in harm to a person in connection with seeking, obtaining, providing, or facilitating reproductive health care that is lawful under the circumstances in which such health care is provided. With respect to other disclosures to law enforcement or to other governmental interests, the Privacy Rule includes other carefully crafted permissions that specify the conditions under which such disclosures must be made to ensure a reasonable balance between privacy and the public policies that disclosure would serve.

Comment: Several commenters asserted that the proposed Rule of Applicability would not protect all PHI pertaining to lawful health care. For example, commenters suggested that the proposed Rule of Applicability would be unlikely to protect individuals who ***33023** obtain care outside of the health care system and urged the Department to clarify the final rule to strengthen protections for individuals who receive care in this manner. As another example, a commenter expressed concern that the proposal would not protect PHI for individuals who obtain legal reproductive health care, but as a result of complications, subsequently access health care in a state where the same reproductive health care is illegal.

Response: The definition of "reproductive health care" is discussed in greater detail above. As noted above, this final rule does not establish a standard of care, nor does it regulate what constitutes clinically appropriate health care.

Commenters who point out that different results may arise in different states are correct, but this has been true since the inception of the Privacy Rule because it sets a national floor for privacy standards, rather than a universal rule. The prohibition applies, and therefore liability attaches, when the prohibition is violated, based on the "circumstances in which such health care is provided." Thus, a regulated entity is not permitted to disclose PHI about reproductive health care that was provided in another state where such health care was provided under circumstances in which it was lawful to provide such health care, even where the individual subsequently accesses related health care in a state where it would have been unlawful to provide the underlying health care under the circumstances in which such health care was provided. HIPAA liability attaches in cases where attempts to circumvent the Privacy Rule result in impermissible or wrongful uses or disclosures.[FN312]

We remind regulated entities that the Privacy Rule permits the use or disclosure of PHI, without an individual's signed authorization, only as expressly permitted or required by the Privacy Rule. For example, where state or other applicable law prohibits certain reproductive health care but does not expressly require a regulated entity to report that an individual obtained the prohibited health care, the Privacy Rule would not permit a disclosure to law enforcement or other investigative body pursuant to the "required by law" permission (but could potentially allow it pursuant to other provisions).[FN313]

Comment: One commenter recommended the Department add language to the proposed Rule of Applicability or elsewhere to ensure that there would be protections for PHI where a health care provider believes the health care is legal, even when the person requesting the use or disclosure of PHI disputes the legality. A few commenters asserted that the health care provider

making the decision could be a party to the reproductive health care at issue, making it a conflict of interest for the health care provider to make the determination regarding the lawfulness of the reproductive health care.

Response: We do not believe additional language is necessary because, under the prohibition, the regulated entity—and not the person making the request—is responsible for reasonably determining whether health care was lawful before making a disclosure. As explained above, this framework is consistent with how the Privacy Rule's permissions are administered, whereby regulated entities must determine whether a use or disclosure is permitted under the relevant permission. For example, when evaluating whether a use or disclosure of PHI is permitted because the use or disclosure is required by law, the regulated entity must look to the relevant law to determine whether the use or disclosure falls within that permission.[FN314] Furthermore, as with other use and disclosure provisions in the Privacy Rule, regulated entities remain subject to HIPAA liability for impermissible or wrongful disclosures. Neither the statute nor the Privacy Rule provides an exception to such liability for circumstances involving conflicts of interest.

Comment: Many commenters expressed concern regarding the burden imposed upon and resources that would be required for regulated entities to determine whether the reproductive health care at issue was lawful if they did not provide the health care at issue, particularly considering the evolving nature of state law in this area. Several commenters expressed concern that the proposal incorrectly assumes that regulated entities would know where the reproductive health care at issue occurred and inquired about specific scenarios, such as where requests for PHI are received by clinical laboratories that have no face-to-face interaction with individuals and that rely on information provided by other covered entities. A few commenters asserted that requiring regulated entities to make the required legal determinations would not be conducive to building a trusting relationship between individuals and health care providers.

Some commenters offered recommendations to the Department, such as providing guidance for health care providers regarding their rights and responsibilities under a final rule, revising the proposal to clarify that there would be a presumption that reproductive health care occurred under lawful circumstances, absent compelling evidence to the contrary, particularly when an individual travels for health care, and clarifying the Rule of Applicability by including examples in the regulatory text.

Some commenters asserted that regulated entities in different states or with different interpretations of certain state requirements could reach different determinations about whether the reproductive health care was provided lawfully, in part because of the lack of clarity or consistency in the interpretation in these laws. Yet another commenter recommended that the Department add an express directive that, in the event of any ambiguity or unsettled law, the scope of what is considered lawful should be interpreted consistently with the intent of the rule to protect the privacy of PHI to the maximum extent possible. A commenter recommended that where the regulated entity decides in good faith, it should not be subject to penalties or enforcement action if their determination is incorrect or if the Department disagrees with the determination. Another commenter recommended that the Department clarify that regulated entities may use a reasonableness standard when making the determination about whether state laws conflict with the Privacy Rule and are therefore preempted by HIPAA.

A few commenters expressed concern about the potential interpretation or application of the proposed Rule of Applicability, particularly when the laws at issue are ambiguous. Commenters recommended inclusion of language that PHI need not be disclosed to a government agency or law enforcement if the health care provider deems, in good faith, that the reproductive health care is lawful under the circumstances in which it is provided, and that the Department clarify the application of preemption or provide in preamble examples of each condition of the proposed Rule of Applicability.

Response: We appreciate the many comments the Department received in response to its inquiry asking whether the proposed Rule of Applicability would be sufficiently clear to individuals and covered entities, and ***33024** whether the provision should be made more specific or otherwise modified. Considering the many comments expressing concern about the burden associated with, the difficulty of, or the liability that could attach when someone other than the person who provided the health care must determine whether the underlying reproductive health care is lawful, the Department is adding a regulatory presumption in the final rule.

As discussed above, the regulatory presumption in 45 CFR 164.502(a)(5)(iii)(C) will permit a regulated entity receiving a PHI request that may be subject to the prohibition to presume the reproductive health care at issue was lawful under the circumstances in which such health care was provided when provided by a person other than the regulated entity receiving the request. The presumption includes a knowledge requirement such that the regulated entity must not have actual knowledge that the reproductive health care was unlawful under the circumstances in which such health care was provided or factual information supplied by the person requesting the use or disclosure of PHI that demonstrates to the regulated entity a substantial factual basis that the reproductive health care was not lawful under the specific circumstances in which such health care was provided.

Comment: A commenter asserted that the proposed rule would unlawfully thwart enforcement of Federal criminal laws on reproductive health care because the proposed rule would be limited to circumstances where reproductive health care is permitted by state law, thereby prohibiting disclosures for the purpose of enforcing Federal laws pertaining to reproductive health care when they conflict with state law. A few commenters expressed their support for the Department's proposal that the prohibition against the use or disclosure of PHI apply where certain Federal laws apply. A few commenters requested greater specificity with respect to the application of Federal and state laws on abortion.

Response: Federal laws that involve reproductive health care form the underlying basis for examining whether reproductive health care was protected, required, or authorized by Federal law under the circumstances in which it was provided, pursuant to the 45 CFR 164.502(a)(5)(iii)(B)(2). Under this final rule, Federal and state authorities retain the ability to investigate or impose liability on persons where the investigation or imposition of liability is centered upon the provision of reproductive health care that is unlawful under the circumstances in which it is provided. As discussed above, this rule reflects a careful balance between privacy interests and other societal interests, and the prohibition is tailored to cover situations where the reproductive health care was lawfully provided, whether state or Federal law is at issue.

Comment: A few commenters provided examples of and expressed concerns about the electronic availability of PHI about health care lawfully provided in one state to health care providers in another state where such health care would not have been lawful.

A few commenters requested that the Department clarify that clinical laboratory testing involving a validated laboratory-developed test used within a single laboratory certified pursuant to the Clinical Laboratory Improvement Amendments of 1988 [FN315] (CLIA) and the implementing regulations, an in vitro diagnostic test cleared or approved by the Food and Drug Administration (FDA), or a validated laboratory-developed test that is an in vitro diagnostic test cleared or approved by the FDA and used within a single CLIA-certified laboratory would fall within the scope of reproductive health care that would be "authorized by Federal law" for the purposes of the Rule of Applicability. The commenters also recommended that a clinical laboratory test furnished under the authority of a state with legal requirements that are equal to or more stringent than CLIA's statutory and regulatory requirements, and is therefore exempt from CLIA requirements, also be considered "authorized by Federal law" for the purposes of the Rule of Applicability.

Response: We interpret the language "authorized by Federal law" in the Rule of Applicability to include activities, including clinical laboratory activities, that are conducted as allowed under applicable Federal law, in circumstances where there is no conflicting state restriction on the Federally authorized activity or where applicable Federal law preempts a contrary state restriction. In such circumstances, these activities are lawfully conducted because there either is no relevant state restriction or Federal law preempts a contrary state restriction. This provision thus reflects the Department's careful balancing of privacy interests and other societal interests in disclosure. As explained above, in circumstances where reproductive health care is lawfully provided, privacy interests are heightened while other societal interests in disclosure are reduced. This final rule and the operation of HIPAA's general preemption authority do not supersede applicable state law pertaining to the lawfulness of reproductive health care.

Comment: One commenter expressed support for including the phrase "based primarily" to clarify that the proposed Rule of Construction would only address situations where the purpose of the disclosure is to investigate or impose liability because

reproductive health care was provided, rather than for an issue related to, but not focused on the provision of such health care, such as the quality of the health care provided or whether claims for certain health care were submitted appropriately.

All other commenters recommended removing "primarily" to ensure that there is consistent implementation. In the alternative, the commenters recommended that the Department provide additional examples of scenarios in which a situation would and would not be considered "primarily for the purposes of" or "primarily based on" the provision of reproductive health care. One commenter asserted that the definition is uncertain and could be interpreted as permitting secondary or additional uses or disclosures. Another commenter explained that permitting a use or disclosure where conducting the investigation or imposing liability is only for a secondary or incidental purpose would create too much risk for individuals and health care providers and would undermine the intent of the proposed prohibition. And another stated it is foreseeable that a requesting entity could still use the PHI for one of the purposes for which the Department proposed to prohibit uses or disclosures of PHI once they have it if it was not the primary purpose of their request. A commenter expressed concern that the language could be exploited to manufacture a "primary" purpose that would be permissible to permit PHI to be used or disclosed for a prohibited purpose, particularly because the PHI would lose the protections of the Privacy Rule once it is disclosed to another person, unless that person is also a regulated entity. Another commenter asserted that the proposed rule did not define "primarily" or "mere act," nor did it provide sufficient examples to provide regulated entities with sufficient information to understand the proposal.

A commenter explained that a request for PHI is often for multiple purposes ***33025** and recommended that the Department revise the proposed Rule of Construction to allow the proposed prohibition to apply where at least one of the purposes for which PHI is sought is to use or disclose the information for a prohibited purpose. Similarly, this commenter recommended the proposed attestation requirement in 45 CFR 164.509(b)(1) be revised to state that "one of the uses or disclosures" is not prohibited by 45 CFR 164.502(a)(5)(iii).

Response: We agree with the commenter that explained that a request for PHI may be multi-purposed. We also agree with commenters that pointed out that as proposed, the regulatory Rule of Construction appeared to create a secondary standard to consider whether a regulated entity should be prohibited from using or disclosing PHI. As discussed above, the Department is not finalizing a separate Rule of Construction and is not incorporating the phrase "primarily for the purpose of" originally proposed in 45 CFR 164.502(a)(5)(iii)(D) into the final prohibition standard. The modified prohibition standard more clearly conveys that it only prohibits the use and disclosure of PHI for the specified purposes when it relates to the mere act of seeking, obtaining, providing, or facilitating lawful reproductive health care in certain circumstances.

Comment: Commenters also recommended that the proposed Rule of Construction prohibit health care providers from reporting individuals for the sole reason of having received health care in a state where it was not lawful. They described concerns about the effect of interoperability and data sharing rules that give health care providers ready access to individuals' full medical records and urged the Department to expand the proposed Rule of Construction to mitigate the risks created by the electronic exchange of PHI.

Response: The prohibition, as finalized, is narrowly tailored to operate in a manner that protects the interests of individuals and society in protecting the privacy of PHI while still allowing the use or disclosure of PHI for certain non-health care purposes. We remind regulated entities that they are generally prohibited from disclosing PHI unless there is a specific provision of the Privacy Rule that permits (or, in limited instances, requires) such disclosure. For example, the Privacy Rule permits but does not require regulated entities to disclose PHI about an individual, without the individual's authorization, when such disclosure is required by another law and the disclosure complies with the requirements of the other law.[FN316] The permission to disclose PHI as "required by law" is limited to a "mandate contained in law that compels an entity to use or disclose PHI and that is enforceable in a court of law." [FN317] Further, where a disclosure is required by law, the disclosure is limited to the relevant requirements of such law.[FN318] Disclosures that do not meet the "required by law" definition of the HIPAA Rules,[FN319] or that exceed what is required by such law," [FN320] are not permissible disclosures under the required by law permission. Accordingly, regulated entities are prohibited from proactively disclosing PHI under the required by law permission at 45 CFR 164.512(a) absent a law requiring mandatory reporting of such PHI.

Comment: A few commenters asserted that the Department should modify the regulatory text of the proposed prohibition to eliminate the need for the proposed Rule of Construction because it is confusing and appears to set forth two different standards.

Response: For the reasons discussed above, we agree and have incorporated the Rule of Construction into the prohibition standard as described above.

Comment: A commenter expressed concerns that beneficial uses or disclosures, such as for conducting investigations into health care fraud, would be too limited and would not address criminal, civil and administrative proceedings, which are not related to receiving, obtaining, facilitating, or providing reproductive health services where the receipt or provision of these services could serve as evidence of another crime.

Response: We disagree with concerns that beneficial uses or disclosures would be too limited under the changes. If PHI is requested for a purpose that is not prohibited and the request complies with the conditions of an applicable permission, including the requirements of the attestation condition are met, where applicable, the regulated entity is permitted to comply with the request.

Comment: Another commenter cited studies to assert that the proposed Rule of Construction would continue to permit health care providers to proactively report on individuals. The commenter also stated that the proposed rule would not clarify how it would interact with mandatory reporting laws that could expose individuals and health care providers to investigations based on the provision of reproductive health care.

Response: The Privacy Rule does not permit a regulated entity to disclose PHI for law enforcement purposes, proactively or otherwise, without an individual's authorization when the disclosure is not made pursuant to process or as otherwise required by law.[FN321] This is true currently and remains true under this final rule.

As discussed above, HIPAA generally preempts state laws requiring the use or disclosure of PHI, except in limited circumstances. Where such mandatory reporting laws are not preempted by HIPAA, regulated entities are limited to disclosing the minimum amount of PHI necessary to comply with the mandatory reporting requirement or the relevant requirements of such law.[FN322]

Comment: Several commenters responded to the question about whether it would be beneficial for the Department to further clarify or provide examples of uses or disclosures of PHI that would be permitted under a final rule. All of these commenters agreed that it would be beneficial for the Department to do so. Of those, several commenters specified that the Department should provide such examples in the final regulatory text. A few commenters who requested examples be provided within the regulatory text also recommended that the language make clear that the examples are illustrative.

Response: The Department declines to include examples of uses or disclosures of PHI that would be permitted in this rule, in regulatory text. We have provided illustrative examples above.

3. Clarifying Personal Representative Status in the Context of Reproductive Health Care

Section 164.502(g) of the Privacy Rule contains the standard for personal ***33026** representatives and generally requires a regulated entity to treat an individual's personal representative as the individual if that person has authority under applicable law (e.g., state law, court order) to act on behalf of the individual in making decisions related to health care.[FN323] For example, the Privacy Rule would treat a legal guardian of an individual who has been declared incompetent by a court as the personal representative of that individual, if consistent with applicable law.[FN324] In this and certain other provisions, the Department seeks to maintain the longstanding balance HIPAA strikes between the interest of a state or other authorities to regulate health and safety and protect vulnerable individuals [FN325] with the goal of maintaining the privacy protections established in the Privacy Rule.[FN326]

In the 2023 Privacy Rule NPRM, the Department expressed concern that some regulated entities may interpret the Privacy Rule as providing them with the ability to refuse to recognize as an individual's personal representative a person who makes reproductive health care decisions, on behalf of the individual, with which the regulated entity disagrees.[FN327] Under these circumstances, current section 45 CFR 164.502(g)(5) of the Privacy Rule could be interpreted to permit a regulated entity to assert that, by virtue of the personal representative's involvement in the reproductive health care of the individual, the regulated entity believes that the personal representative is subjecting the individual to abuse. Further, this regulated entity might exercise its professional judgment and decide that it is in the best interest of the individual to not recognize the personal representative's authority to make health care decisions for that individual.

To protect the balance of interests struck by the Privacy Rule, the Department proposed to modify 45 CFR 164.502 by adding a new paragraph (g)(5)(iii). Proposed 45 CFR 164.502(g)(5)(iii) would ensure that a regulated entity could not deny personal representative status to a person where such status would otherwise be consistent with state and other applicable law primarily because that person provided or facilitated reproductive health care for an individual. The Department expressed its belief that this proposal was narrowly tailored and respected the interests of states and the Department by not unduly interfering with the ability of states to define the nature of the relationship between an individual and another person, including between a minor and a parent, upon whom the state deems it appropriate to bestow personal representative status. The proposal would, however, maintain the existing HIPAA standard by ensuring personal representative status, when otherwise consistent with state law, would not be affected by the type of underlying health care sought.

Several commenters supported the Department's proposal to clarify that the covered entity's reasonable basis for electing not to treat a person as a personal representative of an individual, despite state law or other requirements of the Privacy Rule, cannot be primarily because the person has provided or facilitated reproductive health care. Other commenters expressed concern about their ability to determine what constitutes reproductive health care, as would be required to ascertain whether the covered entity had a reasonable basis to elect not to treat a person as an individual's personal representative. These commenters requested that the Department provide additional clarity in regulatory text or through examples. Other commenters questioned how the Department's proposal would align with existing state law on parental rights.

As discussed throughout this final rule, reproductive health care is uniquely sensitive and must be treated accordingly. Thus, we are finalizing 45 CFR 164.502(g)(5) with additional modifications as follows. This final rule precludes the denial of personal representative status where the basis of the denial is that the person provided or facilitated reproductive health care instead of the proposed standard that would have precluded denial “primarily” based on these actions. This change clarifies that the covered entity does not have to determine whether the reproductive health care is the “primary” basis for denying a person personal representative status. Additionally, the final rule adds the term “reasonable” before “belief” to align with 45 CFR 164.502(g)(5)(i)(A), clarifying that the basis of the covered entity's belief must be reasonable in the circumstances. We are also renumbering paragraphs. Collectively, these changes clarify that it is not reasonable to elect not to treat a person as an individual's personal representative because the person provides or facilitates reproductive health care for and at the request of the individual. The Department is making these changes in response to comments received on the 2023 Privacy Rule NPRM, which are further discussed below.

Comment: Several commenters supported the Department's proposal to clarify that the covered entity's basis for electing not to treat a person as a personal representative of an individual, despite state law or other requirements of the Privacy Rule, cannot be primarily because the person has provided or facilitated reproductive health care.

Response: As explained throughout this final rule, reproductive health care is uniquely sensitive and must be treated as such. Accordingly, we are finalizing this proposal with modifications as described above.

Comment: A commenter expressed concerns that regulated entities would have difficulty determining whether the “primary” basis for the belief that the individual has been or may be subjected to domestic violence, abuse, or neglect by such person, or

that treating such person as the personal representative could endanger the individual related to the provision or facilitation of the reproductive health care, in some circumstances. The commenter requested that the Department provide additional clarity in the regulatory text or through examples.

Response: As discussed above, we have removed the term "primary" before "basis" and reorganized the provision. We believe this change clarifies that the covered entity does not have to determine whether the provision or facilitation of reproductive health care is the "primary" basis for believing that a person who is an individual's personal representative under applicable law has abused, neglected, or endangered the individual, or may do so in the future, such that the covered entity would be permitted to deny the person personal representative status.

Comment: A few commenters requested that the Department clarify that other existing provisions pertaining to personal representatives continue to apply, including the provision that a covered entity should not treat a parent or guardian as a personal representative where state law does not require a minor to obtain parental consent to lawfully obtain health care.

Response: As discussed above, the Privacy Rule generally requires a covered entity to treat a person who, under applicable law, has the authority to act on behalf of an individual in making decisions related to health care ***33027** as the individual's personal representative with respect to PHI relevant to such personal representation, with limited exception.[FN328] In this final rule, we are clarifying those limited exceptions apply to this general rule.[FN329] We did not propose, nor are we making any additional changes to the Privacy Rule's provisions on personal representatives. Nothing in this final rule is intended to alter any other use or disclosure permissions for personal representatives, nor does it interfere with the ability of states to define the nature of the relationship between a minor and a parent or guardian.

Comment: A commenter asserted that the proposal could lead to situations in which someone pretending to be a personal representative of the individual would consent to reproductive health care for the individual. According to a few commenters, the proposal would make it easier for a person abusing an individual to obtain access to an individual's PHI because of the limits imposed on the reasonable belief provisions by the proposal. Another commenter asserted that the proposal would hinder state investigations into crimes that affect an individual's reproductive health where such crimes are committed by a person meeting a state's definition of a personal representative.

Response: The Department has no reason to believe, and commenters provided no evidence to suggest, that the final rule will lead to abuse or undermine parental consent. Rather, the final rule will protect sensitive PHI by clarifying that a regulated entity must treat a person as a personal representative of an individual with respect to PHI relevant to such personal representation if such person is, under applicable law, authorized to act on behalf of the individual in making decisions related to health care. This includes a court-appointed guardian, a person with a power of attorney, or other persons with legal authority to make health care decisions. Further, under 45 CFR 164.514(h), a covered entity must verify the identity of a person requesting PHI and the authority of any such person to have access to PHI, if the identity is not already known to the covered entity.

Additionally, the final rule allows a covered entity to elect not to treat a person as a personal representative of an individual if the covered entity, in the exercise of professional judgment, has a reasonable belief that the individual has been or may be subjected to domestic violence, abuse, or neglect by such person, or that treating such person as the personal representative could endanger the individual. The final rule only clarifies that the reasonable basis cannot be the provision or facilitation of reproductive health care by the person authorized by applicable law.

Comment: A few commenters recommended that the Department define and interpret personal representative status in the context of reproductive health care consistent with its current interpretation.

Response: We appreciate the comments but decline to specifically define "personal representative" in the context of reproductive health care. We are reducing compliance burdens by eliminating the need for covered entities to determine whether the provision or facilitation of reproductive health care was the "primary" basis for their belief that an individual has been or may be

subjected to domestic violence, abuse, or neglect, or may be endangered by a person authorized by applicable law to act as an individual's personal representative if the covered entity treats the person as such, with respect to PHI relevant to such personal representation.

Comment: A covered entity recommended that the Department set reasonable threshold standards that covered entities would be required to meet if they deny personal representative status to a person because of any legal, social, or professional liability that could attach based on such denials. The commenter further recommended that the Department set objective universal thresholds for denials that are clear, concise, and easily defined.

Response: We appreciate the comment but decline to set a reasonable threshold standard that covered entities would be required to meet if they deny personal representative status to a person. As discussed above, the Department gives covered entities discretion to elect not to treat a person as a personal representative of an individual if the covered entity has a reasonable belief that the individual has been subjected to domestic violence, abuse, or neglect by or would be in danger from a person seeking to act as the personal representative, except where the basis of the denial is that the person provided or facilitated reproductive health care.

Response: As discussed above, a personal representative, with authority under applicable law, stands in the shoes of the individual and has the ability to act for the individual and exercise the individual's rights. Thus, with very limited exceptions, covered entities must provide the personal representative access to the individual's PHI in accordance with 45 CFR 164.524 to the extent such information is relevant to such representation.

4. Request for Comments

The Department requested comment on whether to eliminate or narrow any existing permissions to use or disclose "highly sensitive PHI." [FN330] Most of the comments on this question are discussed in the context of the prohibition.

C. Section 164.509—Uses and Disclosures for Which an Attestation Is Required

1. Current Provision

The Privacy Rule currently separates uses and disclosures into three categories: required, permitted, and prohibited. Permitted uses and disclosures are further subdivided into those to carry out TPO; [FN331] those for which an individual's authorization is required; [FN332] those requiring an opportunity for the individual to agree or object; [FN333] and those for which an authorization or opportunity to agree or object is not required.[FN334] For an individual's authorization to be valid, the Privacy Rule requires that it contain certain specific information to ensure that an individual authorizing a regulated entity to use or disclose their PHI to another person knows and understands to what it is they are agreeing.[FN335]

2. Proposed Rule

As we described in the 2023 Privacy Rule NPRM, a regulated entity presented with a request for PHI would need to discern whether using or disclosing PHI in response to the request would be prohibited. To facilitate compliance with the proposed prohibition at 45 CFR 164.502(a)(5)(iii) while also providing a pathway for regulated entities to disclose PHI for certain permitted purposes, the Department proposed to require that a covered entity obtain an attestation from a person requesting the use or disclosure of PHI in certain circumstances.[FN336]

***33028** Specifically, the Department proposed to add a new section 45 CFR 164.509, "Uses and disclosures for which an attestation is required." This proposed condition would require a regulated entity to obtain certain assurances from the person requesting PHI potentially related to reproductive health care before the PHI is used or disclosed, in the form of a signed and dated written statement attesting that the use or disclosure would not be for a purpose prohibited under 45 CFR 164.502(a)(5)(iii), where the person is making the request under the Privacy Rule permissions at 45 CFR 164.512(d) (disclosures for

health oversight activities), (e) (disclosures for judicial and administrative proceedings), (f) (disclosures for law enforcement purposes), or (g)(1) (disclosures about decedents to coroners and medical examiners).

The proposed new section included a description of the proposed attestation contents, including a statement that the use or disclosure is not for a purpose the Department proposed to prohibit as described at 45 CFR 164.502(a)(5)(iii). The 2023 Privacy Rule NPRM also included a discussion about how the Department anticipated the proposed attestation requirement would work in concert with Privacy Rule permissions. Additionally, the proposed attestation provision would also include the general requirements for a valid attestation, and defects of an invalid attestation.[FN337] The Department also proposed to require that an attestation be written in plain language [FN338] and to prohibit it from being "combined with" any other document. Further, the Department's proposal would explicitly permit the attestation to be in an electronic format, as well as electronically signed by the person requesting the disclosure.[FN339] Under the proposal, the attestation would be facially valid when the document meets the required elements of the attestation proposal and includes an electronic signature that is valid under applicable Federal and state law.[FN340]

Additionally, the proposal specified that each use or disclosure request would require a new attestation.

The Department proposed that a regulated entity would be able to rely on the attestation provided that it is objectively reasonable under the circumstances for the regulated entity to believe the statement required by 45 CFR 164.509(c)(1)(iv) that the requested disclosure of PHI is not for a purpose prohibited by 45 CFR 164.502(a)(5)(iii), rather than requiring a regulated entity to investigate the validity of an attestation.[FN341] We explained that it would not be objectively reasonable for a regulated entity to rely on the representation of the person requesting PHI about whether the reproductive health care was provided under circumstances in which it was lawful to provide such health care. This is because we believed that the regulated entity, not the person requesting the disclosure of PHI, has the information about the provision of such health care that is necessary to make this determination. Therefore, we explained that this determination would need to be made by the regulated entity prior to using or disclosing PHI in response to a request for a use or disclosure of PHI that would require an attestation under the proposal.

The attestation proposal also would require a regulated entity to cease use or disclosure of PHI if the regulated entity develops reason to believe, during the course of the use or disclosure, that the representations contained within the attestation were materially incorrect, leading to uses or disclosures for a prohibited purpose.[FN342] Relatedly, the 2023 Privacy Rule NPRM included a discussion of the consequences of material misrepresentations that cause the impermissible use or disclosure of IIHI relating to another individual under HIPAA.

To reduce the burden on regulated entities implementing this proposed attestation, the Department requested comment on whether it should develop a model attestation that a regulated entity may use when developing its own attestation templates. The Department did not propose to require that regulated entities use the model attestation.

3. Overview of Public Comments

Most commenters expressed support for the proposal to require an attestation for certain uses and disclosures. Some commenters questioned why the Department did not extend the attestation requirement directly to business associates, consistent with the general prohibition and recommended that the attestation requirements be applied to business associates.

Some of those commenters that supported the proposal to require an attestation expressed concern or made additional recommendations about its components, content, and scope, and the consequences for covered entities that make inadvertent disclosures of PHI without an attestation. A small number of opposing commenters also expressed concerns about the effectiveness and administrative burden of the proposed attestation requirement.

About half of the commenters concerned about the administrative burden of the attestation expressed support for limiting the applicability of the proposed attestation to certain types of uses and disclosures of information, while the other half recommended

expanding the scope of the proposed attestation requirement to mitigate burdens on covered entities or to increase privacy protections for individuals.

Many commenters expressed concern about the Department's statement in the 2023 Privacy Rule NPRM that it would not be objectively reasonable for a regulated entity to rely on the representation of a person requesting the use or disclosure of PHI about whether the PHI sought was related to lawful health care. Specifically, commenters asserted that regulated entities may have difficulties determining whether an attestation is "objectively reasonable" and were unlikely to possess the information necessary to determine the purpose of a person's request for the use or disclosure of PHI.

***33029** Most commenters urged the Department to expand the proposal beyond requests for PHI potentially related to reproductive health care to requests for any PHI because of the associated administrative burden of identifying and segmenting PHI about reproductive health care from other types of PHI. These commenters asserted that the burden would be significant because such PHI can be found throughout the medical record. Commenters also expressed concerns about the ability of EHRs to segment data.

Most commenters recommended that the Department add to or modify the content of the proposed attestation, including to add a statement that the recipient pledges not to redisclose PHI to another party for any of the prohibited purposes or that the request is for the minimum amount of information necessary. Many supported the inclusion of a signed declaration under penalty of perjury and a statement regarding the penalties for perjury to add a layer of accountability.

4. Final Rule

As we explained in the 2023 Privacy Rule NPRM, it may be difficult for regulated entities to distinguish between requests for the use and disclosure of PHI based on whether the request is for a permitted or prohibited purpose, which could lead regulated entities to deny use or disclosure requests for permitted purposes. Additionally, absent an enforcement mechanism, it is likely that persons requesting the use or disclosure of PHI could seek to use Privacy Rule permissions for purposes that are prohibited under the new 45 CFR 164.502(a)(5)(iii). Accordingly, the Department is finalizing the proposed attestation requirement, with modification, as described below. We intend to publish a model attestation prior to the compliance date for this final rule.

First, the Department is renumbering the attestation provision such that the requirement is now 45 CFR 164.509(a)(1) and modifying that requirement to hold business associates directly liable for compliance with the attestation requirement. This change was made to address concerns raised by commenters who questioned why the Department did not extend the attestation requirement directly to business associates, consistent with the general prohibition and with revisions made to the HIPAA Rules in the 2013 Omnibus Rule, as required by the HITECH Act. The Department has authority to take enforcement action against business associates only for requirements for which the business associate is directly liable.[FN343] Thus, under the proposed attestation requirement, a business associate would only have been required to comply with the proposed 45 CFR 164.509 if such obligation was explicitly included within its business associate agreement.[FN344]

Both covered entities and business associates process requests for PHI. The Privacy Rule permits regulated entities to determine whether a business associate can respond to such requests or whether they are required to defer to the covered entity.[FN345] As noted by commenters, while many PHI requests processed by a business associate pursuant to 45 CFR 164.512(d)-(g)(1) are processed on behalf of the covered entity, persons may elect to request PHI directly from the business associate. Thus, the Department has determined that it is appropriate to hold both covered entities and business associates directly liable for compliance with the attestation requirement. Expanding the attestation requirement to apply to business associates will ensure that the business associate is directly liable for compliance with it, regardless of whether compliance with 45 CFR 164.509 is explicitly included in a BAA.

The Department is also adopting the proposed attestation requirement that a regulated entity obtain an attestation only for PHI "potentially related to reproductive health care." As discussed in the 2023 Privacy Rule NPRM, this will limit the number of requests that require an attestation, and therefore, the burden of the attestation requirement on regulated entities

and persons requesting PHI. The Department reminds regulated entities that they are permitted, but not required, to respond to law enforcement requests for PHI where the purpose of the request is not one for which regulated entities are prohibited from disclosing PHI. By narrowing the scope of the attestation to PHI "potentially related to reproductive health care," the attestation requirement will not unnecessarily interfere with or delay law enforcement investigations that do not involve PHI "potentially related to reproductive health care." While in practice this scope may be wide, we believe the privacy interests of individuals who have obtained reproductive health care necessitates the inclusion of "potentially related" PHI. We are concerned that extending the attestation requirement to all PHI could unnecessarily delay law enforcement investigations that are not for a purpose prohibited under 45 CFR 164.502(a)(5)(iii). We acknowledge commenters' concerns about the ability of regulated entities to operationalize the attestation condition and note that the requirement to obtain an attestation applies where the request is for PHI "potentially related to reproductive health care," as opposed to PHI "related to reproductive health care." Consistent with the Department's instructions to regulated entities since the Privacy Rule's inception, we have taken a flexible approach to allow scalability based on a regulated entity's activities and size. All regulated entities must take appropriate steps to address privacy concerns. Regulated entities should weigh the costs and benefits of alternative approaches when determining the scope and extent of their compliance activities, including when developing policies and procedures to comply with the Privacy Rule.[FN346] The Department will assess the progress of regulated entities' compliance with this requirement and promulgate guidance as appropriate. The Department also notes that with limited exceptions, the Privacy Rule generally permits but does not require the use or disclosure of PHI when the conditions set by the Privacy Rule for the specific use or disclosure of PHI are met.

The Department is adopting the proposed requirement that an attestation be obtained where a request is made under the Privacy Rule permissions at 45 CFR 164.512(d) (disclosures for health oversight activities), (e) (disclosures for judicial and administrative proceedings), (f) (disclosures for law enforcement purposes), or (g)(1) (disclosures about decedents to coroners and medical examiners). This requirement will help ensure that these Privacy Rule permissions cannot be used to circumvent the new prohibition at 45 ***33030** CFR 164.502(a)(5)(iii) and continue permitting essential disclosures, while also limiting the attestation's burden on regulated entities by providing a standard mechanism by which the regulated entity can ascertain whether a requested use or disclosure is prohibited under this final rule. The attestation requirement is intended to reduce the burden of determining whether the PHI request is for a purpose prohibited under 45 CFR 164.502(a)(5)(iii), but it does not absolve regulated entities of the responsibility of making this determination, nor does it absolve regulated entities of the responsibility for ensuring that such requests meet the other conditions of the relevant permission.

We are modifying the proposal by revising 45 CFR 164.509(a)(1) to clarify that a regulated entity may not use or disclose PHI where the use or disclosure does not meet all of the Privacy Rule's applicable conditions, including the attestation requirement. While this is consistent with the existing requirements of the Privacy Rule, we determined that it was necessary to reiterate this requirement here based on comments we received. Thus, when this final rule is read holistically, a regulated entity is not permitted to use or disclose PHI where such disclosure does not meet all of the Privacy Rule's applicable conditions, including the attestation requirement.

We are also modifying the proposal by adding 45 CFR 164.509(a)(2) to clarify that the use or disclosure of PHI based on a defective attestation does not meet the attestation requirement. For example, the attestation requirement would not be met if a regulated entity relies on an attestation where it is not reasonable to do so because the attestation would be defective under 45 CFR 164.509(b)(2)(v). Accordingly, it would be a violation of the Privacy Rule if the regulated entity makes a use or disclosure in response to a defective attestation.

The Department is modifying the proposal to prohibit inclusion in the attestation of any elements that are not specifically required by 45 CFR 164.509(c). This provision addresses concerns that regulated entities might require persons requesting PHI to provide information beyond that which is required under 45 CFR 164.509(c). Such additional requirements could make it burdensome for persons requesting PHI to submit a valid attestation when they make a request pursuant to 45 CFR 164.512(d), (e), (f), or (g)(1). Additionally, a person requesting PHI is not required to use the specific attestation form provided by a regulated entity, as long as the attestation provided by such person is compliant with the requirements of 45 CFR 164.509.

Additionally, the Department is modifying the proposed prohibition on compound attestations. Specifically, the final rule prohibits the attestation from being "combined with" any other document. The modification clarifies that while an attestation may not be combined with other "forms," additional documentation to support the information provided in the attestation may be submitted. This additional documentation may not replace or substitute for any of the attestation's required elements. The attestation itself must be clearly labeled, distinct from any surrounding text, and completed in its entirety, but documentation to support the statement at 45 CFR 164.509(c)(1)(iv) or to overcome the presumption at 45 CFR 164.502(a)(5)(iii)(C) may be appended to the attestation. Thus, a regulated entity must ensure that the required elements of the attestation are met, and should review any additional documents provided by the person making the request when making the required determinations.

A regulated entity may use this information—the information on the attestation combined with any additional documentation provided by the person making the request for PHI—to make a reasonable determination that the attestation is true, consistent with 45 CFR 164.509(b)(2)(v). For example, an attestation would not be impermissibly "combined with" a subpoena if it is attached to it, provided that the attestation is clearly labeled as such. As another example, an electronic attestation would not be impermissibly "combined with" another document where the attestation is on the same screen as the other document, provided that the attestation is clearly and distinctly labeled as such.

The Department is finalizing the proposed content requirements with modifications as follows. Specifically, the Department is finalizing the proposal that an attestation must include that the person requesting the disclosure confirm the types of PHI that they are requesting; clearly identify the name of the individual whose PHI is being requested, if practicable, or if not practicable, the class of individuals whose PHI is being requested; and confirm, in writing, that the use or disclosure is not for a purpose prohibited under 45 CFR 164.502(a)(5)(iii). For purposes of the "class of individuals" described in 45 CFR 164.509(c)(1)(i)(B), the Department clarifies that the requesting entity may describe such a class in general terms—for example, as all individuals who were treated by a certain health care provider or for whom a certain health care provider submitted claims, all individuals who received a certain procedure, or all individuals with given health insurance coverage.

As we proposed, we are finalizing a requirement that the attestation include a clear statement that the use or disclosure is not for a purpose prohibited under 45 CFR 164.502(a)(5)(iii). This requirement may be satisfied with a series of checkboxes that identifies why the use or disclosure is not prohibited under 45 CFR 164.502(a)(5)(iii) (i.e., the use or disclosure is not for a purpose specified in 45 CFR 164.502(a)(5)(iii)(A); or the use or disclosure is for a purpose that would be prohibited under 45 CFR 164.502(a)(5)(iii)(A), but the reproductive health care at issue was not lawful under the circumstances in which it was provided so the Rule of Applicability is not satisfied, and thus the prohibition does not apply).

The Department is adding another new required element, a statement that the attestation is signed with the understanding that a person who knowingly and in violation of HIPAA obtains or discloses IIHI relating to another individual, or discloses IIHI to another person, may be subject to criminal liability.[FN347] We believe that adding this language satisfies the intent that led us to consider including a penalty of perjury requirement and with applicable law. The statement does not impose new liability on persons who sign an attestation; instead, including the statement in the attestation ensures that persons who request the use or disclosure of PHI for which an attestation is required are on notice of and acknowledge the consequences of making such requests under false pretenses.

The Department is also finalizing the proposed requirement that the attestation must be written in plain language. Additionally, the Department is finalizing its proposal to permit the attestation to be in electronic format and for it to be electronically signed by the person requesting the disclosure where such electronic signature is valid under applicable law.[FN348] The Department declines to mandate a specific electronic format for the attestation.

As we proposed, an attestation will be limited to the specific use or disclosure. Accordingly, each use or disclosure ***33031** request for PHI will require a new attestation.

There is no exception to the minimum necessary standard for uses and disclosures made pursuant to an attestation under 45 CFR 164.509.[FN349] Thus, a regulated entity will have to limit a use or disclosure to the minimum necessary when provided in response to a request that would be subject to the proposed attestation requirement, unless one of the specified exceptions to the minimum necessary standard in 45 CFR 164.502(b)(2) applies. Where the person requesting the PHI is also a regulated entity, that person will also need to make reasonable efforts to limit their request to the minimum necessary to accomplish the intended purpose of the use, disclosure, or request.[FN350]

The Department is not requiring a regulated entity to investigate the validity of an attestation provided by a person requesting a use or disclosure of PHI. Rather, a regulated entity is generally permitted to rely on the attestation if, under the circumstances, a regulated entity reasonably determines that the request is not for investigating or imposing liability for the mere act of seeking, obtaining, providing, or facilitating allegedly unlawful reproductive health care. In addition, a regulated entity is generally permitted to rely on the attestation and any accompanying material if, under the circumstances, a regulated entity reasonably could conclude (e.g., upon examination of adequate supporting documentation provided by the person making the request) that the requested disclosure of PHI is not for a purpose prohibited by 45 CFR 164.502(a)(5)(iii), consistent with the approach taken in the Privacy Rule [FN351] and elsewhere in this final rule. If such reliance is not reasonable, then the regulated entity may not rely on the attestation. This is a change from the proposed language, which permitted reliance based on an "objectively reasonable" standard. The proposed standard was modified because a reasonable person standard is inherently objective.[FN352] Thus, including "objectively" in the description of the standard was redundant.

For requests involving allegedly unlawful reproductive health care, the extent to which a regulated entity may reasonably rely on an attestation depends in part on whether the regulated entity provided the reproductive health care at issue. Under the final rule, it would not be reasonable for a regulated entity to rely on the representation made by a person requesting the use or disclosure of PHI that the reproductive health care was unlawful under the circumstances in which it was provided unless such representation meets the conditions set forth in the presumption at 45 CFR 164.502(a)(5)(iii)(C). As discussed above, under the presumption, reproductive health care is presumed to be lawful under the circumstances in which such health care is provided unless a regulated entity has actual knowledge, or information from the person making the request that demonstrates to the regulated entity a substantial factual basis that the reproductive health care was not lawful under the specific circumstances in which such health care was provided. Where the reproductive health care at issue was provided by a person other than the regulated entity receiving the request for the use or disclosure of PHI and the presumption is overcome, the regulated entity is permitted to use or disclose PHI in response to the request upon receipt of an attestation where it is reasonable to rely on the representations made in the attestation. It is not reasonable for the regulated entity to rely solely on a statement of the person requesting the use or disclosure of PHI that the reproductive health care was unlawful under the circumstances in which such health care was provided. Instead, the person requesting the use or disclosure of PHI must provide the regulated entity with information such that it would constitute actual knowledge or that demonstrates to the regulated entity a substantial factual basis that the reproductive health care was not lawful under the specific circumstances in which such health care was provided. A regulated entity that receives a request for PHI involving reproductive health care provided by that regulated entity should review the relevant PHI in its possession and other related information (e.g., license of health care provider that provided the health care, operating license for the facility in which such health care was provided) to determine whether the reproductive health care was lawful under the circumstances in which it was provided prior to using or disclosing PHI in response to a request for PHI that requires an attestation. Where the request is about reproductive health care that is provided by the regulated entity receiving the request, it would not be reasonable for a regulated entity to automatically rely on a representation made by a person requesting the use or disclosure of PHI about whether the reproductive health care was provided under the circumstances in which it was lawful to provide such health care. Rather, the regulated entity must review the individual's PHI to consider the circumstances under which it provided the reproductive health care to determine whether such reliance is reasonable. Therefore, where the request involves the use or disclosure of PHI potentially related to reproductive health care that was provided by the recipient of the request, the regulated entity must make the determination about whether it provided the health care lawfully prior to using or disclosing PHI in response to a request that requires an attestation.

For example, if a law enforcement official requested PHI potentially related to reproductive health care to investigate a person for the mere act of seeking, obtaining, providing or facilitating allegedly unlawful reproductive health care, it would not be reasonable for a regulated entity that receives such a request to rely solely on a signed attestation that states that the reproductive health care was not lawful under the circumstances in which it was provided, as set forth in 45 CFR 164.502(a)(5)(iii)(B), and therefore, that the requested disclosure is not for a purpose prohibited under 45 CFR 164.502(a)(5)(iii)(A). This is regardless of whether the regulated entity receiving the request for PHI provided the reproductive health care at issue. Assuming that the attestation is not facially deficient, a regulated entity must consider the totality of the circumstances surrounding the attestation and whether it is reasonable to rely on the attestation in those circumstances. To determine whether it is reasonable to rely on the attestation, a regulated entity should consider, among other things: who is requesting the use or disclosure of PHI; the permission upon which the person making the request is relying; the ***33032** information provided to satisfy other conditions of the relevant permission; the PHI requested and its relationship to the stated purpose of the request; and, where the reproductive health care was supplied by another person, whether the regulated entity has: (1) actual knowledge that the reproductive health care was not lawful under the circumstances in which it was provided; or (2) factual information supplied by the person requesting the use or disclosure of PHI that would demonstrate to a reasonable regulated entity a substantial factual basis that the reproductive health care was not lawful under the specific circumstances in which such health care was provided.

For example, a regulated entity receives an attestation from a Federal law enforcement official, along with a court ordered warrant demanding PHI potentially related to reproductive health care. The law enforcement official represents that the request is about reproductive health care that was not lawful under the circumstances in which such health care was provided, but the official will not divulge more information because they allege that doing so would jeopardize an ongoing criminal investigation. In this example, if the regulated entity itself provided the reproductive health care and, based on the information in its possession, reasonably determines that such health care was lawful under the circumstances in which it was provided, the regulated entity may not disclose the requested PHI.

If the regulated entity did not provide the reproductive health care, it may not disclose the requested PHI absent additional factual information because the official requesting the PHI has not provided sufficient information to overcome the presumption at 45 CFR 164.502(a)(5)(iii)(C). Further, it also would not be reasonable under the circumstances for the regulated entity to rely on the attestation that the information would not be used for a purpose prohibited by 45 CFR 164.502(a)(5)(iii) because of the presumption that the reproductive health care was lawfully provided.

However, in cases where the presumption of lawfulness applies, the regulated entity would be permitted to make the disclosure, for example, where the law enforcement official provides additional factual information for the regulated entity to determine that there is a substantial factual basis that the reproductive health care was not lawful under the circumstances in which such health care was provided. As another example, a regulated entity could rebut the presumption of lawfulness by relying on a sworn statement by a law enforcement official that the PHI is necessary for an investigation into violations of specific criminal codes unrelated to the provision of reproductive health care (e.g., billing fraud) or an affidavit from an individual that the individual obtained unlawful reproductive health care from a different health care provider and the requested PHI is relevant to that investigation. Similarly, if a regulated entity receives an attestation from a Federal law enforcement official, along with a court-ordered warrant demanding PHI potentially related to reproductive health care, that both specify that the purpose of the request is not for a purpose prohibited by 45 CFR 164.502(a)(5)(iii), the regulated entity may rely on the attestation and warrant, subject to the requirements of 45 CFR 164.512(f)(1)(ii)(A).

Lastly, this final rule requires a regulated entity to cease use or disclosure of PHI if the regulated entity, during the course of the use or disclosure, discovers information reasonably showing that the representations contained within the attestation are materially incorrect, leading to uses or disclosures for a prohibited purpose.[FN353] As we explained in the 2023 Privacy Rule NPRM, pursuant to HIPAA, a person who knowingly and in violation of the Administrative Simplification provisions obtains or discloses IIHI relating to another individual or discloses IIHI to another person would be subject to criminal liability. [FN354] Thus, a person who knowingly and in violation of HIPAA [FN355] falsifies an attestation (e.g., makes material misrepresentations about the intended uses of the PHI requested) to obtain (or cause to be disclosed) an individual's IIHI could

be subject to criminal penalties as outlined in the statute.[FN356] Additionally, a disclosure made based on an attestation that contains material misrepresentations after the regulated entity becomes aware of such misrepresentations constitutes an impermissible disclosure, which requires notifications of a breach to the individual, the Secretary, and in some cases, the media. [FN357]

The attestation requirement does not replace the conditions of the Privacy Rule's permissions for a regulated entity to disclose PHI, including in response to a subpoena, discovery request, or other lawful process, or administrative request. Instead, the attestation is designed to work with the permissions and their requirements. If PHI is disclosed pursuant to 45 CFR 164.512(e)(1)(ii) or (f)(1)(ii)(C), a regulated entity will need to verify that the requirements of each provision are met, in addition to satisfying the requirements of the new attestation provision under 45 CFR 164.509. Furthermore, the requirements of 45 CFR 164.528, the right to an accounting of disclosures of PHI made by a covered entity, are not affected by the attestation requirement. Thus, disclosures made pursuant to a permission under 45 CFR 164.512(d), (e), (f), or (g) must be included in the accounting, including when they are made pursuant to an attestation.

5. Responses to Public Comments

Comment: Most commenters supported the proposal to require an attestation for certain uses and disclosures. A few commenters recognized the benefits of the attestation requirement, despite the potential increase in administrative burden for regulated entities.

Many commenters opposed the proposal for what they described as administrative burden, questionable effectiveness, and lack of clarity. A few commenters stated that the requirements imposed an inappropriate compliance burden on covered entities that would need to determine whether a PHI request was "potentially related" to sensitive personal health care, and, along with a health care provider who otherwise supported the attestation, they recommended instead that the Department impose requirements on the person requesting the use or disclosure of PHI. Many commenters expressed concerns about the ability of covered entities to operationalize the proposed requirement with the limitation to PHI potentially related to reproductive health care because it would require the ability to segment PHI, which the Department previously acknowledged is generally unavailable. A few commenters questioned the effectiveness of the proposed attestation ***33033** requirement, as compared to its potential burden, enforceability, and effects on access to maternal and specialty health care.

Response: We agree with commenters that the attestation requirement will bolster the privacy of PHI and acknowledge that implementation of this important safeguard requires additional administrative activities by regulated entities. The Department considered removing the limitation on the application of the attestation condition to PHI "potentially related to reproductive health care," but we are concerned that expanding it to apply to all requests for PHI made for specified purposes would impose even more burden on regulated entities. The requirement is to determine whether the requested PHI is "potentially related to reproductive health care," not whether it is "related to reproductive health care." Thus, regulated entities are not required to make an affirmative determination that the requested PHI is in fact related to reproductive health care before requiring a person requesting PHI to provide an attestation. We note that the focus of the attestation requirement has been limited to PHI potentially related to reproductive health care because the changes to the legal landscape have heighted privacy concerns about reproductive health care that is lawful under the circumstances in which such health care is provided. We also note that the provision of an attestation itself is not determinant of whether the request is for a prohibited purpose. Rather, regulated entities must consider whether a request for PHI is for a prohibited purpose, regardless of whether the request is made for a purpose for which the Privacy Rule requires an attestation.

The Department is limited to applying the HIPAA Rules to those entities covered by HIPAA (i.e., health plans, health care clearinghouses, and health care providers that conduct covered transactions) and to business associates, as provided under the HITECH Act. Accordingly, the Department is limited to imposing obligations on persons requesting the use or disclosure of PHI to those who are also regulated entities.

The attestation condition has been drafted to promote the privacy of information about lawful reproductive health care, including maternal and specialty health care, while still permitting certain uses of PHI. Regulated entities, including covered entities that specialize in providing reproductive health care may determine, based on their assessment of what PHI is potentially related to reproductive health care, that an attestation must accompany all requests they receive for the use or disclosure of any PHI made pursuant to and in compliance with 45 CFR 164.512(d)-(g)(1). Further, the attestation requirement only applies to the specified requests for PHI and should not affect any intake of new patients or provision of maternal health care.

The Department is not requiring a regulated entity to investigate the veracity of the information provided in support of an attestation because doing so would impose a significant administrative burden on regulated entities and persons requesting the use or disclosure of PHI without proportional benefit. Additionally, requiring such an investigation by the regulated entity may cause unnecessary delays to law enforcement activities. Rather, the Department is finalizing a regulated entity's ability to rely on the attestation provided that it is reasonable under the circumstances for the regulated entity to believe the statement required by 45 CFR 164.509(c)(1)(iv) that the requested disclosure of PHI is not for a purpose prohibited by 45 CFR 164.502(a)(5)(iii). If such reliance is not reasonable, then the regulated entity may not rely on the attestation.

A regulated entity that receives a request for PHI potentially related to reproductive health care for purposes specified in 45 CFR 164.512(d), (e), (f), or (g)(1) may accept information, in addition to the attestation, from the person requesting the PHI to support its ability to make the determinations required by 45 CFR 164.502(a)(5)(iii) and 45 CFR 164.509(b)(v).

For example, it likely would not be reasonable for a regulated entity to rely on an attestation from a public official who represents that their request is for a purpose that is not prohibited, if the request for PHI is overly broad for its purported purpose and the public official has publicly stated that they will be investigating health care providers for providing reproductive health care. In such cases, regulated entities should consider the circumstances surrounding an attestation to determine whether they can reasonably rely on the attestation. Although we have modified the regulatory text by removing “objectively,” the standard remains unchanged in practice because a reasonableness standard is an objective standard. As we also discussed above, it is not reasonable for a regulated entity that provided the reproductive health care at issue to rely on a representation made by a person requesting the use or disclosure of PHI that the reproductive health care at issue was unlawful under the circumstance in which such health care was provided. A regulated entity that makes a disclosure where it was not reasonable to rely on the representation made by the person requesting the use or disclosure may be subject to enforcement action by OCR.

Additionally, as discussed in greater detail above, a person who knowingly and in violation of the Administrative Simplification provisions obtains or discloses IIHI relating to another individual or discloses IIHI to another person would be subject to criminal liability.[FN358] We believe that this provision serves as a deterrent for those who otherwise might request PHI in violation of this final rule. It also will continue to permit essential disclosures while ensuring that Privacy Rule permissions cannot be used to circumvent the new prohibition, thereby enhancing the privacy of individuals' PHI and protecting other important interests.

Comment: Several commenters opposed the attestation proposal because they believed that the proposal would make it more difficult for law enforcement to request PHI and for entities to respond to such requests, potentially putting them in situations where they need to choose between complying with a court order and impermissibly disclosing PHI. A few individuals stated that the proposal would have a chilling effect on the ability of a state to conduct investigations or proceedings for which the use or disclosure of PHI could be beneficial, particularly in cases involving rape, incest, sex trafficking, domestic violence, abuse, and neglect.

Response: We acknowledge that the attestation provision may require regulated entities to obtain additional information from persons requesting PHI in certain circumstances. As discussed above, this condition is consistent with the operation of the Privacy Rule since its inception, which has always required regulated entities to obtain additional information from persons requesting PHI in certain circumstances, such as where the use or disclosure is one for which an authorization or opportunity to agree or object is not required.[FN359] However, as also discussed above, any burden the attestation may impose on persons requesting PHI is outweighed by the privacy interests that this final rule is designed to protect.

A person requesting PHI pursuant to 45 CFR 164.512(d)-(g)(1) may elect to provide an attestation with their request, even if a determination has not ***33034** yet been made concerning whether such request is for PHI potentially related to reproductive health care. Similarly, the Privacy Rule does not require a regulated entity to respond to requests for PHI.

Comment: Some commenters were concerned about the effect of the attestation requirement on the electronic exchange of PHI and recommended approaches for incorporating attestations into a HIE environment. A commenter expressed concern that the requirement for an attestation would delay or prevent automated data exchange using Fast Healthcare Interoperability Resources® (FHIR®) APIs and might impede innovation. They requested guidance on how to implement the attestation condition in an HIE environment without impeding regulated exchanges or industry innovations using extensive data exchange via FHIR APIs. Commenters also recommended that the Department issue guidance on implementing attestation policies in circumstances not required by this rule that would not constitute information blocking. A commenter encouraged the Department to implement processes that limit the liability of health care providers for the actions of third parties. For example, the commenter requested that the Department clarify that a refusal to disclose PHI absent an attestation is protected from a finding of information blocking.

Response: We do not believe that this final rule prevents the disclosure of PHI via a HIE. We disagree that this requirement prevents the exchange of data using FHIR APIs under these permissions or for automated health data exchange more broadly. PHI can be disclosed as requested if the regulated entity obtains a valid attestation and the request meets the conditions of an applicable permission. The attestation requirement does not affect any requests via FHIR API that fall outside of the 45 CFR 164.512(d)-(g)(1) permissions. For example, a disclosure of PHI from a covered health care provider to another health care provider for care coordination purposes would not require an attestation because the disclosure would not be for a purpose addressed by 45 CFR 164.512(d)-(g)(1). The importance of ensuring the protection of an individual's interests in the privacy of their PHI and society in improving the effectiveness of the health care system far outweigh any potential administrative burdens or delays in the electronic exchange of PHI for non-health care purposes. Further, compliance with applicable law does not constitute information blocking.[FN360] Thus, we do not believe additional regulatory language is necessary at this time. OCR regularly collaborates with other Federal agencies, including ONC, to develop guidance on compliance with Federal standards and to address questions that arise about the ability of regulated entities to comply with applicable laws.

The permissions for which the Department is requiring that a regulated entity obtain an attestation prior to using or disclosing PHI are already conditioned upon meeting certain requirements, which generally require manual review. The Department acknowledges that certain persons may need to adjust their workflows to account for the attestation requirement. While there may be some delays until new processes are implemented, any disruptions will decrease over time. Thus, we do not anticipate that this final rule will contribute to additional delays in the disclosure of PHI.

The Department is finalizing a new regulatory presumption that permits a regulated entity to presume reproductive health care provided by another person was lawful unless the regulated entity has actual knowledge or factual information supplied by the person requesting the use or disclosure of PHI that demonstrates to the regulated entity a substantial factual basis that the reproductive health care was not lawful under the specific circumstances in which such health care was provided. This presumption will facilitate the determination by the regulated entity about whether a request for the use or disclosure of PHI would be subject to the prohibition, and thus will reduce the risk of an impermissible use or disclosure of the requested PHI, thereby reducing the liability of regulated entities that receive requests for PHI to which the prohibition may apply, but where they did not provide the reproductive health care at issue.

Comment: Many commenters questioned the Department's rationale for not extending the attestation requirement directly to business associates, consistent with the general prohibition. Some commenters recommended that the attestation requirement be applied to business associates because persons requesting the use or disclosure of PHI may directly approach a business associate for this PHI (and the business associate agreement may permit such disclosures or be silent regarding whether the business

associate may respond to them). Commenters also requested clarification of the responsibilities of business associates with respect to attestations and questioned whether the proposal would require amendment of their business associate agreements.

Response: As discussed above, we agree with the commenters that the attestation requirement should apply directly to business associates because they receive direct requests for PHI and are subject to the general prohibition in the same manner as covered entities. Therefore, we are modifying 45 CFR 164.509 to ensure that it expressly applies to both covered entities and their business associates.

Comment: Although a few commenters expressed support for limiting the attestation condition to requests regarding "PHI potentially related to reproductive health care," many commenters recommended that the proposed requirement to obtain an attestation be broadly applied to requests for any PHI. Many stated that it would be easier and more efficient for regulated entities if all requests related to a prohibited purpose required the attestation, regardless of the PHI being requested. According to these commenters, this would allow the regulated entity to avoid making any determinations regarding the PHI. A few explained that expanding the requirement to all PHI would appropriately place the burden of demonstrating that the requested disclosure was permissible on the person making request.

Several commenters asserted that information related to reproductive health care is potentially found in every department, record, and system, including those that may not have a readily apparent relationship to reproductive health care. As a result, according to these commenters, it would be onerous and costly to separate different types of health information in a medical record. According to other commenters, the volume of records requests received by health systems would render any requirement on a health care provider to redact PHI from an individual's medical record in the absence of an attestation overly burdensome and increase the risk of unauthorized disclosure. Some ***33035** commenters explained that staff managing health information generally do not have the legal or medical training to determine whether a PHI request may be for PHI potentially related to reproductive health care, particularly given the breadth of most requests (e.g., for all medical records of an entity, of a particular health care provider or a particular individual). These commenters also raised concerns that the lack of legal or medical training could lead to inconsistent application of the rule, the inadvertent disclosure of PHI potentially related to reproductive health care, or delay the use or disclosure of PHI, even when the individual has not sought or obtained reproductive health care. Many commenters asserted that determining whether a request for the use or disclosure of PHI includes PHI potentially related to reproductive health care is difficult and a significant burden on health information professionals, particularly where the covered entity did not provide or facilitate the health care. According to some commenters, some business associates, such as cloud services providers, may not have the ability to determine whether the PHI that they maintain includes PHI potentially related to reproductive health care.

Some commenters posited that the result of this requirement would be that health care providers would refuse to provide any PHI in response to a request for the use or disclosure PHI on any matter that could possibly be construed as potentially related to reproductive health care. They and others stated that limiting the proposed prohibition to one category of PHI would require regulated entities to label or segment certain PHI within medical records, which would be impractical and costly because EHRs are unable to reliably segregate or flag PHI retrospectively.

Response: We acknowledge the comments from regulated entities that expressed concerns about the effects of the limitation of the attestation requirement to PHI potentially related to reproductive health care. However, the Department is concerned that extending the attestation requirement to all PHI could result in unintended consequences, such as the potential delay of law enforcement investigations that do not require PHI potentially related to reproductive health care. By contrast, an attestation requirement is necessary for PHI potentially related to reproductive health care because of recent changes to the legal landscape that make it more likely that PHI will be sought for punitive non-health care purposes, and thus more likely to be subject to disclosure by regulated entities if the requested disclosure is permissible under the Privacy Rule, thereby harming the interests that HIPAA seeks to protect. Accordingly, the Department is not modifying the attestation requirement that a regulated entity obtain an attestation only for PHI potentially related to reproductive health care.

The Department acknowledges that the attestation requirement may increase the burden on regulated entities, but we disagree that regulated entities are unable to make the required assessments of attestations. Regulated entities currently conduct similar assessments when determining whether PHI may be disclosed to a personal representative, when making disclosures that are required by law or for public health purposes, and for various other permitted purposes. Regulated entities also regularly review medical records to comply with minimum necessary requirements. The Department is cognizant that an expanded attestation requirement could significantly increase burden if it were to expand this requirement to all disclosures in the absence of the sensitivities described in this final rule.

Comment: Many commenters supported the proposal to limit the requirement to obtain an attestation with a request for uses and disclosures for certain permissions, namely that have the greatest potential to be connected with a purpose for which the Department proposed to prohibit the use and disclosure of PHI. Some commenters expressed their belief that the Department had identified the appropriate permissions for which the attestation would provide additional safeguards.

Many commenters suggested modifications, primarily expansions or clarifications of the types of permitted uses and disclosures that would be subject to the attestation. Generally, commenters explained their belief that their recommended modifications would either mitigate the burden of the requirement to ascertain the purposes of the requested disclosure or increase privacy protections for individuals.

Commenters recommended multiple ways to expand the attestation requirement, such as extending it to all permissions in 45 CFR 164.512; disclosures required by law, for public health activities, and to avert a serious threat to health or safety; disclosures for treatment purposes to a person not regulated by HIPAA or disclosures to any person who might use the PHI for a prohibited purpose; and any disclosure at the discretion of the covered entity.

Response: The Department declines to expand the permissions for which an attestation is required at this time. The Department specifically chose to limit the attestation condition to the permissions at 45 CFR 164.512(d)-(g)(1) because these permissions have the greatest potential to result in the use or disclosure of an individual's PHI for a purpose prohibited at 45 CFR 164.502(a)(5)(iii). In the context of other permissions, where the risk of improper use or disclosure is less, the benefits of an attestation condition would be outweighed by the administrative burden of compliance. Accordingly, any disclosures made pursuant to 45 CFR 164.512(b), which includes disclosures for public health surveillance, investigations, or interventions, do not require an attestation. However, we note that requests made pursuant to other permissions of the rule remain subject to and must be evaluated for compliance with the prohibition at 45 CFR 164.502(a)(5)(iii).

Comment: A commenter stated that no attestation should be needed for judicial and administrative proceedings because current requirements are adequate. Instead, the commenter requested that the Department consider expanding procedural protections.

Response: We are finalizing the requirement that regulated entities obtain an attestation as a condition of a use or disclosure of PHI for judicial and administrative proceedings. As previously discussed, the attestation requirement ensures that certain Privacy Rule permissions are not used to circumvent the prohibition. The attestation requirement also reduces the burden on regulated entities because it is specifically designed to facilitate compliance with the prohibition under 45 CFR 164.502(a)(5)(iii) by helping regulated entities determine whether the use or disclosure of the requested PHI is permitted. Although a court order, qualified protective order, satisfactory assurance, or subpoena may have a restriction that prevents information requested from being further disclosed, it protects PHI only after it has been used or disclosed. Thus, the regulated entity's use or disclosure of PHI could still violate the prohibition at 45 CFR 164.502(a)(5)(iii), even if that disclosure is made in response to a court order, qualified protective order, satisfactory assurance, or subpoena. The attestation requirement helps to mitigate the risk of violations in these circumstances.

Comment: A few commenters expressed concerns about their ability to implement the attestation requirement ***33036** in circumstances where the use or disclosure is triggered by a mandatory reporting law or verbal request and recommended that no attestation should be required in any case where disclosure of PHI is required by law. According to the commenters, an

attestation requirement could require a significant change to operational workflows for permitted disclosures and significantly impede operations for state and local agencies that conduct death investigations and perform public health studies and initiatives.

Response: The Privacy Rule at 45 CFR 164.512(a) permits certain uses and disclosures of PHI that are required by law, including notification of certain deaths by a covered health care provider to a medical examiner, when those uses and disclosures are limited to the requirements of such law. The attestation condition does not apply to the mandatory disclosures made pursuant to 45 CFR 164.512(a). Other mandatory reporting that is subject to 45 CFR 164.512(a)(2) has always been subject to the additional requirements of 45 CFR 164.512(c), (e), or (f). Further, mandatory reporting for public health activities pursuant to 45 CFR 164.512(b) do not require an attestation.

The attestation condition applies if the regulated entity is making a use or disclosure to a coroner or medical examiner pursuant to 45 CFR 164.512(g)(1). We understand that this may require regulated entities to adjust their workflows to comply with this requirement. For example, regulated entities could consider having an electronic attestation form readily available for persons that request the use or disclosure of PHI potentially related to reproductive health care because doing so may reduce delays in the regulated entity's response time related to the attestation condition. Thus, this condition will not significantly impede operations for persons who request information because the interruptions will decrease as they adjust their workflows to accommodate the new condition.

We remind regulated entities that the prohibition in 45 CFR 164.502(a)(5)(iii) applies, regardless of whether the request for PHI is made pursuant to a permission for which an attestation is required or another permission.

Comment: Many commenters urged the Department to implement a reasonable, good faith standard or a safe harbor for situations in which a regulated entity discloses PHI and the person requesting the PHI either uses or rediscloses it for a purpose that would be prohibited under the proposed rule. Some commenters were concerned that a covered entity will be liable for inadvertent disclosures of PHI and sought the benefit of the affirmative defense afforded at 45 CFR 160.410(b)(2).

Response: The Department declines to add a “good faith” standard or safe harbor to this final rule. As discussed above, the Department is not finalizing a separate Rule of Construction and is not incorporating the phrase “primarily for the purpose of” into the final prohibition standard.

As we explained in the 2023 Privacy Rule NPRM, 45 CFR 164.509 requires a new attestation for each use or disclosure request; a single attestation would not be sufficient to permit multiple uses or disclosures. This requirement is unlike the authorization, where generally, when a regulated entity receives a valid authorization, they may continue to use or disclose PHI to the person requesting the use or disclosure of PHI pursuant to that authorization after the initial disclosure, provided that such subsequent uses and disclosures are valid and related to that authorization. We understand that this may constitute an additional administrative burden for both the regulated entity and the person or entity requesting the information; however, requiring an attestation for each use or disclosure is necessary to ensure that certain Privacy Rule permissions are not used to circumvent the new prohibition at 45 CFR 164.502(a)(5)(iii), and to permit essential disclosures.

Comment: Some commenters expressed support for permitting a regulated entity to rely on an attestation if “it appears objectively reasonable” or “when objectively reasonable” and not requiring covered entities to investigate the accuracy of an attestation, thereby mitigating liability to the regulated entity, if not fully protecting an individual. Many commenters expressed concern that it would not be objectively reasonable for a regulated entity to rely on a representation made by the person requesting the use or disclosure of PHI that the PHI sought was related to unlawful health care. The commenters requested a guarantee that a health care provider's reliance on a “facially valid” attestation would be objectively reasonable without requiring the entity to investigate the intentions of the person requesting the use or disclosure of PHI and the validity of their attestation. A commenter recommended that the final rule direct regulated entities to take attestations at face value and hold harmless regulated entities in the event of a false attestation.

Commenters offered several reasons for these recommendations, including the burden on covered entities where they are required to determine: (1) the veracity of every attestation; (2) whether an attestation is required; and (3) whether the statement that the request for the use or disclosure is not for a purpose prohibited under 45 CFR 164.502(a)(5)(iii) is objectively reasonable.

Response: To assist in effectuating the prohibition, this Final Rule requires an attestation in some circumstances. We recognize the potential burden on regulated entities to investigate the validity of every attestation and do not require that they conduct a full investigation in each instance. However, as discussed above, if an attestation, on its face, meets the requirements at 45 CFR 164.509(c), a regulated entity must consider the totality of the circumstances surrounding the attestation and whether it is reasonable to rely on the attestation in those circumstances. To determine whether it is reasonable to rely on the attestation, a regulated entity should consider, among other things: who is requesting the use or disclosure of PHI; the permission upon which the person making the request is relying; the information provided to satisfy other conditions of the relevant permission; the PHI requested and its relationship to the purpose of the request (i.e., does the request meet the minimum necessary standard in relation to the purpose of the request); and, where the presumption at 45 CFR 164.502(a)(5)(iii)(C) applies, information provided by the person requesting the use or disclosure of PHI to overcome that presumption.

For example, as discussed above, it may not be reasonable for a regulated entity to rely on an attestation filed by a public official that a request for PHI potentially related to reproductive health care is not for a prohibited purpose when that public official has publicly stated their interest in investigating or imposing liability on those who seek, obtain, provide, or facilitate certain types of lawful reproductive health care. If a regulated entity concludes that it would not reasonable to rely on the attestation in this instance, the regulated entity would be prohibited from disclosing the requested PHI unless and until the public official provided additional information that enables the regulated entity to assess the veracity of its attestation. In contrast, it may be reasonable to rely on the representation of a public official that a request for PHI potentially related to reproductive ***33037** health care is not for a prohibited purpose if the stated purpose for the request is to investigate insurance fraud and the public official making the request is expressly authorized by law to conduct insurance fraud investigations as part of their legal mandate. Therefore, as discussed above, the Department is balancing these considerations by finalizing language that generally permits a regulated entity to rely on the attestation if it is reasonable for the regulated entity to believe the statement that the requested disclosure of PHI is not for a purpose prohibited by 45 CFR 164.502(a)(5)(iii).[FN361] To further assist regulated entities in determining whether it is reasonable to rely on the attestation, the requirement that the attestation include a clear statement that the use or disclosure is not for a prohibited purpose under 45 CFR 164.502(a)(5)(iii) may be satisfied with a statement that identifies why the use or disclosure is not prohibited, which could be checkboxes that indicate that the use or disclosure is not for a purpose described in 45 CFR 164.502(a)(5)(iii)(A), or that the reproductive health care does not satisfy the Rule of Applicability at 45 CFR 164.502(a)(5)(iii)(B).

Where the request for the use or disclosure of PHI is made of the regulated entity that provided the reproductive health care at issue, the regulated entity should ensure that the reproductive health care was not lawful under the circumstances in which such health care was provided before using or disclosing the requested PHI. If the reproductive health care at issue was provided under circumstances in which such health care was lawful, the regulated entity must obtain an attestation and determine whether it is reasonable to rely on the attestation that the use or disclosure is not being requested to conduct an investigation into or impose liability on any person for the mere act of seeking, obtaining, providing, or facilitating such reproductive health care. If the reproductive health care at issue was provided under circumstances in which such health care was unlawful, the regulated entity is permitted, but not required, to disclose the PHI if the disclosure is meets the conditions of an applicable Privacy Rule permission, which may include an attestation.

Regulated entities will not generally be held liable for disclosing PHI to a person who signed the attestation under false pretenses, provided that the requirements of 45 CFR 164.509 are met, and it is reasonable under the circumstances for the regulated entity to believe the statement that the requested disclosure of PHI is not for a purpose prohibited by 45 CFR 164.502(a)(5)(iii).

Comment: A commenter recommended that the rule clarify the relationship between the attestation and 45 CFR 164.514(h) regarding verification requirements. They requested that the Department consider making explicit in the Final Rule that reliance on legal process would not be appropriate in the absence of an attestation.

Response: The verification requirement under 45 CFR 164.514(h) [FN362] is separate from the attestation requirement, and a regulated entity must still comply with 45 CFR 164.514(h) when processing an attestation. The final rule makes clear that the attestation requirement will apply if the request for PHI potentially related to reproductive health care is made pursuant to permissions under 45 CFR 164.512(d)-(g)(1), which may include disclosing PHI pursuant to a legal process.

Comment: Some commenters stated that it is difficult to determine the purpose of a request for the use or disclosure of PHI because many requests include only a general purpose. A commenter asserted that staff would need to screen all incoming requests, a task that may require legal or clinical expertise. Further, some commenters stated that regulated entities may experience conflict with persons requesting the use or disclosure of PHI about signing the form.

Response: This final rule prohibits the use and disclosure of PHI for certain purposes and conditions disclosures for certain purposes upon the receipt of an attestation. Thus, it is incumbent upon the regulated entity receiving the request to determine whether disclosure is in compliance with the Privacy Rule. To help the regulated entity make such a determination, the Department is adding to the required elements of the attestation a description of the purpose of the request that is sufficient for the regulated entity to determine whether the prohibition at 45 CFR164.502(a)(5)(iii) may apply to the request. Requests for the use or disclosure of PHI for the specified purposes are likely subject to heightened scrutiny by the regulated entity currently because of other conditions imposed upon such disclosures by the Privacy Rule, so additional expertise will not always be required when processing a request for the use or disclosure of PHI and the accompanying attestation. For example, under the Privacy Rule, a regulated entity must determine whether a request for the use or disclosure of PHI for a judicial or administrative proceeding made using a subpoena, discovery request, or other lawful process, that is not accompanied by an order of a court or administrative tribunal contains "satisfactory assurances" that reasonable efforts have been made by the person making the request either: (1) to ensure that the individual who is the subject of the PHI that has been requested has been given notice of the request; [FN363] or (2) to secure a qualified protective order that meets certain requirements specified in the Privacy Rule.[FN364] The Privacy Rule further details how regulated entities are to determine whether they have received "satisfactory assurances" for both options described above.[FN365] Such requirements ensure that a regulated entity must already carefully review requests for such purposes, such that the attestation condition likely poses minimal additional burden for such requests. In any event, the Department believes that these administrative burdens are outweighed by the privacy interests that this final rule seeks to protect.

Comment: Many commenters asserted that it would be reasonable to require affirmative verification under penalty of perjury that the request for the use or disclosure of PHI is not for a purpose prohibited under 45 CFR 164.502(a)(5)(iii) because it would signal an intent to penalize requests ***33038** made to contravene the prohibition; would incentivize persons requesting the use or disclosure of PHI to consider whether their request is for a purpose prohibited under 45 CFR 164.502(a)(5)(iii); deter unlawful "fishing expeditions" or conceal improper intent; and add a layer of accountability. Another commenter stated this heightened standard would enable the covered entity to reasonably rely in good faith on the substance of the attestation without further investigation, delay, cost, burden, or dispute. According to the commenter, a person making a request for the use or disclosure of PHI in good faith should have minimal to no concern when providing a statement signed under penalty of perjury. Another commenter supported a requirement that a person requesting the use or disclosure of PHI provide an affirmative verification made under penalty of perjury that the use or disclosure is not for purpose prohibited under 45 CFR 164.502(a)(5)(iii) because it would suggest that evidence obtained falsely would not be admissible in a legal proceeding. A commenter asserted that it is important to ensure that the proposed attestations would be as effective as possible, and including a signed declaration made under penalty of perjury is critical to ensuring their effectiveness in the current legal environment. A commenter endorsed adding a statement regarding perjury to the proposed attestation because it would place the person requesting the use or disclosure of PHI on notice of the criminal penalties if the person were to violate the proposed requirement.

A commenter asserted that the penalty of perjury requirement is a common signature standard for legal and administrative proceedings and expressed support for expanding it to other proceedings. The commenter also expressed support for considering other options because of concerns that the application and consequences of making a statement under a penalty of perjury may lack clarity outside of certain proceedings.

Response: We appreciate commenters' suggestions; however, the Department ultimately decided that the addition of a penalty of perjury would be unnecessary in light of the statutory criminal and civil penalties under HIPAA. 42 U.S.C. 1320d-6 provides that any person who knowingly and in violation of the Administrative Simplification provisions obtains IIHI relating to another individual or discloses IIHI to another person is subject to criminal liability.[FN366] A regulated entity is also subject to civil penalties for violations of requirements of the HIPAA Rules.[FN367] Thus, a person that requests PHI who knowingly falsifies an attestation (e.g., makes material misrepresentations as to the intended uses of the PHI requested) to obtain PHI or cause PHI to be disclosed would be in violation of HIPAA and could be subject to criminal penalties.[FN368]

Comment: Some commenters expressed support for requiring that the attestation include a statement that a person signing an attestation is doing so under penalty of perjury, but they also questioned its ability to prevent a person from requesting the use or disclosure of PHI for a purpose prohibited under 45 CFR 164.502(a)(5)(iii) and recommended additional requirements or alternatives. One commenter expressed concern that there would be no disincentive for the recipient to submit an attestation signed under false pretenses in the absence of enforceable penalties. A different commenter questioned the efficacy of a penalty of perjury requirement because the person requesting the use or disclosure may not be the person that uses the PHI for a purpose prohibited under 45 CFR 164.502(a)(5)(iii); it might be another person who uses the information for a purpose prohibited under that provision. According to the commenter, no criminal or other penalty would attach because that other person did not sign the attestation. The commenter also expressed concern that an attestation signed on behalf of an entity may not be enforceable because the person who signed the attestation did not have authority to bind the entity.

Commenters variously recommended that the Department include language that the person requesting the use or disclosure of PHI would not further use or disclose the PHI for a purpose prohibited under 45 CFR 164.502(a)(5)(iii) and that the requested information is the minimum necessary, or require a search warrant or data use agreement instead of an attestation. A commenter recommended that the Department provide individuals with an actionable remedy, such as the right to receive a portion of any civil money penalty assessed to the regulated entity or the right to “claw back” the disclosure from the receiving entity if the party that signed the attestation later violates its terms.

Response: The Department understands and shares commenters' concerns about redisclosures that would be prohibited by this rule if the disclosure was made by a regulated entity. However, HIPAA limits the Department's authority to regulating PHI maintained or transmitted by a regulated entity, that is a covered entity or their business associate. Accordingly, a person that is not a regulated entity generally may use or disclose such information without further limitation by the HIPAA Rules.

Requiring search warrants or data use agreements as a condition of the use or disclosure of PHI is beyond the scope of this final rule.

With respect to the commenter's concern about situations in which a person who does not have the appropriate authority requests PHI on behalf of a public official, the Privacy Rule generally requires that a regulated entity verify the identity and legal authority of persons requesting PHI prior to making the disclosure.[FN369] Where a disclosure of PHI is to a public official or person acting on behalf of a public official who has the authority to request the information, a regulated entity may verify the authority of that public official by relying on, if reliance is reasonable under the circumstances, either a written statement of legal authority under which the information is requested (or an oral statement, if the written statement is impracticable).[FN370] Alternatively, a regulated entity may presume the public official's legal authority if a request is made pursuant to legal process, warrant, subpoena, order, or other legal process issued by a grand jury or judicial administrative tribunal.[FN371] We remind regulated entities that a determination that a public official has the authority to make a request for the use or disclosure does not mean that the Privacy Rule permits them to obtain any and all information that the official requests. In such circumstances,

the regulated entity should carefully review the conditions of the applicable permission to ensure that they are met. Where the condition involves a warrant, subpoena, or similar instrument, the regulated entity must also review the scope of the authority granted by the warrant, subpoena, or order to determine the extent of the PHI that it is permitted to disclose.[FN372] Further, a regulated entity may rely, if such reliance is reasonable under the ***33039** circumstances, on a requested disclosure by a public official as the minimum necessary if the public official represents that the requested PHI is the minimum necessary for the stated purpose.[FN373]

HIPAA specifies the remedies available to the Federal Government where persons violate the statute's Administrative Simplification provisions: civil monetary penalties [FN374] and criminal fines and imprisonment.[FN375] HIPAA does not include a private right of action.

Comment: One commenter asked the Department to clarify that anyone providing a false attestation would be held accountable for false statements with appropriate or significant civil fines or criminal penalties for the material misrepresentation. Another commenter specifically recommended that the Department consider it a material misrepresentation for a person to sign an attestation without an objectively reasonable basis to suspect that the reproductive health care of interest was unlawful under the circumstances in which such health care was provided. The commenter asserted that the attestation should include specific language that any person who is requesting the use or disclosure of PHI because they believe the reproductive health care was not lawful under the circumstances in which such health care was provided must have a reasonable basis for that belief (e.g., a statement from a witness) and that the absence of an articulable, fact-based reasonable suspicion would constitute a material misrepresentation. According to the commenter, such a requirement would prevent fishing expeditions because persons requesting the use or disclosure of PHI would be required to have an actual, objective reason for believing that a person provided health care in violation of state or Federal law.

Response: The Department agrees that it would be a material misrepresentation if a person who signs an attestation does not have an objectively reasonable basis to suspect that the reproductive health care was provided under circumstances in which it was unlawful, and that an objectively reasonable basis of suspicion requires specific and articulable facts associated with the individual whose PHI is requested and the health care they received. We decline to include a statement of this position on the attestation because it is encompassed in the language that requires persons making a request for PHI to attest that they are not making the request for a prohibited purpose and the language ensuring that persons making such requests are aware of the potential liability for knowingly and in violation of HIPAA obtaining IIHI relating to an individual or disclosing IIHI to another person.

Comment: Some commenters urged the Department to include additional provisions to monitor and enforce the attestation condition, including requiring that a court order, written attestation, or valid authorization accompany requests for the use or disclosure of PHI for legal or administrative proceedings or law enforcement investigations.

Response: The attestation condition does not replace the conditions of the Privacy Rule's permissions for a regulated entity to disclose PHI in response to a subpoena, discovery request, or other lawful process,[FN376] or administrative request.[FN377] Instead, it is designed to work with these permissions and associated condition. For PHI to be disclosed pursuant to 45 CFR 164.512(e)(1)(ii) and (f)(1)(ii)(C), a regulated entity must verify that the relevant conditions are met and also satisfy the attestation condition at 45 CFR 164.509. We do not believe it is necessary to include additional requirements to monitor and enforce implementation of the attestation condition because a person who knowingly and in violation of the Administrative Simplification provisions obtains or discloses IIHI relating to another individual or discloses IIHI to another person would be subject to criminal liability.[FN378]

Comment: Almost all commenters responding to the Department's request for comment expressed support for a Department-developed model attestation or sample language that could be used by regulated entities to reduce the implementation burden of the attestation condition. A large health care provider expressed appreciation for options that would simplify the process for reviewing requests for the use or disclosure of PHI made pursuant to 45 CFR 164.512(d)-(g)(1). Other commenters asserted

that a standard form would reduce unnecessary variation, support a consistent approach, decrease implementation costs, and make it easier for a regulated entity to identify requests for the use or disclosure of PHI for purposes prohibited under 45 CFR 164.502(a)(5)(iii).

Several commenters suggested that a universal or standardized attestation form would reduce the burden of the attestation requirement, especially for smaller health care providers, and reduce delays in the disclosure of PHI resulting from the need for legal review or unfamiliarity with the format of an attestation provided by a person requesting the use or disclosure of PHI. One of these commenters stated this would also support electronic data exchange by standardizing attestation fields and the format. Most commenters expressed opposition to a Department-required format and recommended that the Department permit covered entities to modify the language of the attestation.

Some commenters requested that the model attestation include a plain language explanation and a tip sheet or guidance for completion. They also requested that the model be an electronic, fillable form with a clear heading and that the editing capabilities be limited to the specific required fields. Some commenters recommended that the model attestation contain an outline of penalties for misuse of PHI.

A commenter requested that the Department guarantee that a health care provider's good faith reliance on a model attestation form would be objectively reasonable.

Response: We appreciate these recommendations and intend to publish model attestation language before the compliance date of this final rule. As discussed above, if an attestation, on its face, meets the requirements at 45 CFR 164.509(c), a regulated entity must consider the totality of the circumstances surrounding the attestation and whether it is reasonable to rely on the attestation in those circumstances.

Comment: In response to the Department's request for comment on how the proposed attestation would affect a regulated entity's process for responding to regular or routine requests from certain persons, a few commenters explained their current workflows and the resource requirements for managing these requests.

Some commenters suggested that an attestation requirement might require changes to workflows and discussed the changes that might be made.

Response: The Department appreciates these insights into how regulated entities currently respond to certain requests for the use or disclosure of PHI. We confirm that a person requesting the use or disclosure of PHI ***33040** pursuant to 45 CFR 164.512(d), (e), (f), or (g)(1) must provide the regulated entity a signed and truthful attestation where the request is for PHI potentially related to reproductive health care before the regulated entity is permitted to use or disclose the requested PHI. The Department will consider developing guidance and technical assistance as needed on these topics in the future as necessary to ensure compliance with the Privacy Rule, including both the prohibition at 45 CFR 164.502(a)(5)(iii) and 164.509. It may benefit a regulated entity to require such documentation where the requested use or disclosure is for TPO or in response to a valid authorization or individual right of access request.

Comment: A few commenters recommended imposing obligations to limit redisclosures of PHI for certain purposes.

A few commenters stated that a person requesting the use or disclosure of PHI could seek a court order or provide a written attestation to permit the regulated entity to make the disclosure in question in the event they were unable to obtain an authorization.

Response: While we understand commenters' concerns regarding the uses and disclosures of health information by entities not covered by the Privacy Rule, the Department is limited to applying the HIPAA Rules to those entities covered by HIPAA (i.e.,

health plans, health care clearinghouses, and health care providers that conduct covered transactions) and to business associates, as provided under the HITECH Act.

In the 2023 Privacy Rule NPRM, the Department considered permitting regulated entities to make uses or disclosures of PHI only after obtaining a valid authorization. However, the Department rejected the approach because requiring an authorization in all circumstances would not reflect the appropriate balance between individual privacy interests and other societal interests in disclosure. In particular, individuals may decline to authorize disclosure of PHI even in circumstances where their privacy interests are reduced and societal interests in disclosure are heightened, such as where the reproductive health care was unlawful under the circumstances in which it was provided.

Comment: Some commenters requested that the Department provide educational resources for regulated entities to implement the attestation. A commenter encouraged the Department to strongly enforce the attestation provision.

Response: We appreciate these recommendations and commit to providing additional resources to assist regulated entities with implementation of this rule.

Comment: In response to the Department's request for comment on alternative documentation that could assist regulated entities in complying with the proposed limitations on the use and disclosure of PHI, some commenters recommended that an attestation always be required, even if additional documentation is mandated, because the attestation would place the person requesting the use or disclosure of PHI on notice of the prohibition and to hold them accountable if they use the PHI for a purpose prohibited by 45 CFR 164.502(a)(5)(iii), in addition to helping a covered entity to determine whether the PHI is being requested for a legitimate or prohibited purpose. Others agreed because of the risk of coercion when authorizations are sought from individuals for certain purposes.

Some commenters suggested that the Department require that a court order, written attestation, or valid authorization accompany a request for the use or disclosure of any PHI for legal or administrative proceedings or law enforcement investigations because there are circumstances under which it would be unlikely for a person to obtain an authorization. Some commenters recommended that the Department not require an attestation when the disclosure of PHI is required by law, or when so ordered by a court of competent jurisdiction. A commenter proposed that the Department permit regulated entities to make the specified uses and disclosures with a written attestation, a HIPAA authorization, or alternative documentation described by the Department, including a court order, to minimize the administrative burden.

Response: The Department appreciates the approaches recommended by commenters to ensure that PHI requested is not for a prohibited purpose. We also believe that the attestation will place the person requesting the use or disclosure of PHI on notice of the prohibition and serve to hold them accountable if they use the PHI for a purpose prohibited by 45 CFR 164.502(a)(5)(iii). However, we have limited the attestation requirement to requests for PHI that is potentially related to reproductive health care. In addition, as discussed above, because the Privacy Rule's authorization requirements empower individuals to make decisions about who has access to their PHI, we are not adopting the proposed exception to the permission to use or disclose PHI pursuant to a valid authorization, nor are we adopting the other recommendations made by commenters. The Department is not finalizing its proposal to prohibit the disclosure of PHI for a purpose prohibited by 45 CFR 164.502(a)(5)(iii) pursuant to an authorization. Accordingly, the final rule permits the disclosure of an individual's PHI to another person pursuant to a valid authorization, even if the disclosure would otherwise be prohibited under this rule. Therefore, a regulated entity may disclose PHI for a purpose that otherwise would be prohibited under 45 CFR 164.502(a)(5)(iii) by obtaining a valid authorization or pursuant to the individual right of access. We reiterate that in all cases, the conditions of the underlying permission must be met before a regulated entity is permitted to use or disclose the requested PHI.

D. Section 164.512—Uses and Disclosures for Which an Authorization or Opportunity To Agree or Object Is Not Required

1. Applying the Prohibition and Attestation Condition to Certain Permitted Uses and Disclosures

Section 164.512 of the Privacy Rule contains the standards for uses and disclosures for which an authorization or opportunity to agree or object is not required. Many of the uses and disclosures addressed by 45 CFR 164.512 relate to government or administrative functions and are described in the 2000 Privacy Rule preamble as "national priority purposes." [FN379] These permissions for uses and disclosures were not required by HIPAA; instead they represented the Secretary's previous balancing of the privacy interests and expectations of individuals and the interests of communities in making certain information available for community purposes, such as for certain public health, health care oversight, and research purposes.[FN380] As discussed previously, the Department, in its implementation of HIPAA, has sought to ensure that individuals do not forgo health care when needed—or withhold important information from their health care providers that may affect the quality of health care they receive—out of a fear that their sensitive information would be revealed outside of their relationships with their health care providers.

To clarify that the proposal at 45 CFR 164.502(a)(5)(iii) would prohibit the use and disclosure of PHI in some ***33041** circumstances where such uses or disclosures are currently permitted, the Department proposed to cite the proposed prohibition at the beginning of the introductory text of 45 CFR 164.512 and condition certain disclosures on the receipt of the attestation proposed at 45 CFR 164.509.[FN381] The proposed modification would add the clause, "Except as provided by 45 CFR 164.502(a)(5)(iii), [. . .]" and add "and 45 CFR 164.509" to "subject to the applicable requirements of this section." This would create a new requirement to obtain an attestation from the person requesting the use and disclosure of PHI as a condition of making certain types of permitted uses and disclosures of PHI. Thus, under the proposal and subject to the Department finalizing the prohibition at paragraph (a)(5)(iii) of 45 CFR 164.502, uses and disclosures of PHI for certain purposes would be prohibited unless a regulated entity first obtained an attestation from the person requesting the use and disclosure under proposed 45 CFR 164.509.

The Department also proposed to replace "orally" with "verbally" at the end of the introductory paragraph for clarity.

Overview of Public Comments

While many commenters addressed the proposals to add a prohibition on the use and disclosure of PHI and to require an attestation in certain circumstances, few commenters addressed the proposal to modify the introductory paragraph to 45 CFR 164.512. Such commenters either expressed support for it or requested additional guidance on the Department's intention or the proposal's operation.

The Department is adopting its proposal without modification. As discussed above, this change creates a new requirement for a regulated entity to obtain an attestation from a person requesting the use or disclosure of PHI as a condition of making certain types of permitted uses and disclosures of PHI. For example, the Privacy Rule currently permits uses and disclosures for health care oversight,[FN382] judicial and administrative proceedings,[FN383] law enforcement purposes,[FN384] and about decedents to coroners and medical examiners,[FN385] provided specified conditions are met. When read in conjunction with the new prohibition at 45 CFR 164.502(a)(5)(iii), uses and disclosures of PHI for these purposes will be subject to an additional condition that the regulated entity first obtain an attestation from the person requesting the use and disclosure under the new attestation requirement at 45 CFR 164.509.

The Department assumes that there will be instances in which state or other law requires a regulated entity to use or disclose PHI for health care oversight, judicial and administrative proceedings, law enforcement purposes, or about decedents to coroners and medical examiners for a purpose not related to one of the prohibited purposes in 45 CFR 164.502(a)(5)(iii). The Department believes that a regulated entity will be able to comply with such laws and the attestation requirement. For example, a regulated entity may continue to disclose PHI without an individual's authorization to a state medical board, a prosecutor, or a coroner, in accordance with the Privacy Rule, when the request is accompanied by the required attestation. As a result, a regulated entity generally may continue to assist the state in carrying out its health care oversight, judicial and administrative functions, law enforcement, and coroner duties with the use or disclosure of PHI once a facially valid attestation has been provided to the regulated entity from whom PHI is sought. However, where an attestation is required but not obtained, a state seeking information about an individual's reproductive health or reproductive health care would need to obtain such information from

an entity not regulated under the Privacy Rule [FN386] or demonstrate that the regulated entity has actual knowledge that the reproductive health care was not lawful under the circumstances in which such health care was provided, thereby reversing the presumption described at 45 CFR 164.502(a)(5)(iii)(C).

Additionally, we are replacing "orally" with "verbally" for clarity. No substantive change is intended.

Comment: One commenter expressed support for the Department's proposed revision to 45 CFR 164.512, while another commenter requested additional examples or detail in preamble about what the Department intends by this revision.

Response: The Department intends that the uses and disclosures of PHI made in accordance with 45 CFR 164.512 would be subject to both the 45 CFR 164.502(a)(5)(iii) prohibition and the 45 CFR 164.509 attestation, when applicable, specifically uses or disclosures made for health oversight activities,[FN387] judicial and administrative proceedings,[FN388] law enforcement purposes,[FN389] and about decedents to coroners and medical examiners.[FN390] For example, a regulated entity may disclose PHI for law enforcement purposes, subject to the conditions of the permission at 45 CFR 164.512(f), where the purpose of the request for the use or disclosure is to investigate a sexual assault and the person requesting the PHI provides the regulated entity with a valid attestation signifying that the purpose of the request is not for a prohibited purpose. Similarly, where a request meets the requirements of 45 CFR 164.502(a)(5)(iii), a regulated entity may disclose PHI for law enforcement purposes, subject to the conditions of the permission at 45 CFR 164.512(f), where the purpose of the request for the use or disclosure is to investigate the unlawful provision of reproductive health care with a valid attestation signifying that the purpose of the request is not one that is prohibited (i.e., that the purpose of the use or disclosure is not to investigate or impose liability on any person for the lawful provision of reproductive health care). As another example, a regulated entity may disclose PHI to a state Medicaid agency in accordance with 45 CFR 164.512(d) where the purpose of the request is to ensure that the regulated entity is providing the reproductive health care for which the regulated entity has submitted claims for payment to Medicaid after obtaining an attestation that meets the requirements of 45 CFR 164.509 from the state Medicaid agency.

Comment: One commenter requested clarification regarding the intersection between the Department's proposed Rule of Construction at 45 CFR 164.502(a)(5)(iii)(D) and its proposal at 45 CFR 164.512.

Response: The Department is not adopting the proposed Rule of Construction. Rather, the language of the proposal has been integrated into the prohibition standard at 45 CFR 164.502(a)(5)(iii)(A). The finalized prohibition standard requires a ***33042** regulated entity to ensure that they obtain a valid attestation from a person requesting the use or disclosure of PHI for health oversight activities, judicial and administrative proceedings, law enforcement purposes, or about decedents to coroners or medical examiners, assuring the regulated entity that the purpose of the request is not for a purpose prohibited under 45 CFR 164.502(a)(5)(iii).

2. Making a Technical Correction to the Heading of 45 CFR 164.512(c) and Clarifying That Providing or Facilitating Reproductive Health Care Is Not Abuse, Neglect, or Domestic Violence

Paragraph (c) of 45 CFR 164.512 permits a regulated entity to disclose PHI, under specified conditions, to an authorized government agency where the regulated entity reasonably believes the individual is a victim of abuse, neglect, or domestic violence. The regulatory text includes a serial comma, which clearly indicates that the provision addresses victims of three different types of crimes, but the heading of this standard does not include the serial comma.

For grammatical clarity, the Department proposed to add the serial comma after the word "neglect" in the heading of the standard contained at 45 CFR 164.512(c).[FN391]

The Department also proposed to add a new paragraph (c)(3) to 45 CFR 164.512(c), with the heading "Rule of construction," to clarify that the permission to use or disclose PHI in reports of abuse, neglect, or domestic violence does not permit uses or disclosures based primarily on the provision or facilitation of reproductive health care to the individual.[FN392] The Department intended the proposed provision to safeguard the privacy of individuals' PHI against claims that uses and disclosures of that PHI

are warranted because the provision or facilitation of reproductive health care, in and of itself, may constitute abuse, neglect, or domestic violence.

A few commenters supported the proposal because it would clarify that providing or facilitating access to health care is not itself abuse, neglect, or violence, while others expressed opposition to the proposal because they believed it would prevent health care providers from reporting abuse based on the provision of reproductive health care, including potentially coerced reproductive health care. Commenters both supported and opposed the inclusion of the phrase "based primarily."

The Department is finalizing the proposal to add the serial comma after the word "neglect" in the heading of the standard contained at 45 CFR 164.512(c).

As we explained in the 2023 Privacy Rule NPRM, the Department is concerned that recent state actions may lead regulated entities to believe that they are permitted to make disclosures of PHI when they believe that persons who provide or facilitate access to reproductive health care are perpetrators of a crime simply because they provide or facilitate access to reproductive health care. Thus, the Department is clarifying that providing or facilitating access to lawful reproductive health care itself is not abuse, neglect, or domestic violence for purposes of the Privacy Rule. This is consistent with the Department's understanding that the provision or facilitation of lawful health care is not itself abuse, neglect, or domestic violence. Such clarification has not previously been required, but recent developments in the legal landscape have made it necessary for us to codify this interpretation in the context of reproductive health care.

Accordingly, the Department is finalizing the proposed Rule of Construction at 45 CFR 164.512(c)(3), with modification as follows. The modification clarifies the circumstances under which regulated entities that are mandatory reporters of abuse, neglect, or domestic violence are permitted to make such reports. Specifically, we are replacing "based primarily on" with language specifying that the prohibition at 45 CFR 164.502(a)(5)(iii) cannot be circumvented by the permission to use or disclose PHI to report abuse, neglect, or domestic violence where the "sole basis of" the report is the provision or facilitation of reproductive health care. Thus, the Department makes clear that it may be reasonable for a covered entity that is a mandatory reporter to believe that an individual is the victim of abuse, neglect, or domestic violence and to make such report to the government authority authorized by law to receive such reports in circumstances where the provision of reproductive health care to the individual is but one factor prompting the suspicion. For example, it would not be reasonable for a covered entity to believe that an individual is the victim of domestic violence solely because the individual's spouse facilitated the covered entity's provision of reproductive health care to the individual.

Comment: A few commenters supported the Department's proposal. One commenter asserted that providing or facilitating access to any type of health care is not in and of itself abuse, neglect, or domestic violence and urged the Department to expand the scope of this language, particularly if the prohibition is similarly expanded in the final rule.

Response: The Department appreciates the comments about the modifications to 45 CFR 164.512(c). As discussed above, the scope of the prohibition is limited to reproductive health care. The proposed and final regulations are narrowly tailored and limited in scope to not increase regulatory burden beyond appropriate public policy objectives. Thus, we decline to expand the scope of this provision, as well.

Comment: A large coalition expressed concerns about mandatory domestic violence and sexual assault reporting laws. According to the coalition, mandatory reporting laws reduce the willingness of domestic violence survivors to seek help, including health care, and that the reports themselves worsen the situation for most survivors. The coalition asserted that permitting the disclosure of PHI to law enforcement and other agencies for reports of abuse, neglect, or domestic violence isolates survivors of such abuse and puts them at risk of losing their children. These commenters recommended that the Department prevent such disclosures.

Some commenters expressed opposition to the proposal because they believe it would put victims of domestic abuse at risk because it would prevent health care providers from reporting abuse, including child abuse, based on the provision or facilitation of reproductive health care. A commenter asserted that the proposal would circumvent the exception prohibiting disclosures to abusive persons at 45 CFR 164.512(b)(1)(ii). According to another commenter, the change would chill the willingness of covered entities to cooperate with investigations and judicial proceedings concerning individuals who may have used reproductive health care, regardless of the matter being adjudicated.

According to another commenter, the proposal is aimed at undermining state laws and shielding persons who provide or facilitate reproductive health care. Commenters expressed concern that the proposal would prohibit reports of abuse, neglect, or domestic violence because such reports are made for the purpose of investigating or prosecuting a person for providing or facilitating ***33043** unlawful reproductive health care, and for committing sexual assault.

Response: The Department appreciates the concerns raised by the commenters. Since publication of the final Privacy Rule in 2000, the Department has acknowledged that covered entities, including covered health care providers, may have legal obligations to report PHI in certain circumstances, including about suspected victims of abuse, neglect, or domestic violence. The Department did not propose to modify the Privacy Rule's permission to disclose PHI at 45 CFR 164.512(c). The Department declines to expand its proposal to eliminate the permission for covered entities to disclose PHI to public health authorities, law enforcement, and other government authority authorized by law to receive reports of abuse, neglect, or domestic violence.

Additionally, the Department does not agree that covered entities will be prevented from reporting PHI about victims of abuse, neglect, or domestic violence. The new language at 45 CFR 164.512(c)(3) is narrowly tailored to reduce the conflation between lawfully provided reproductive health care and the view that such lawful health care, on its own, is abuse. Readers are referred to the preamble discussion of 45 CFR 164.502(a)(5)(iii) that describes the scope of disclosure changes which are being made applicable to 45 CFR 164.512(c).

The Department does not agree that the modifications circumvent the exception prohibiting disclosures to abusive persons at 45 CFR 164.512(b)(1)(ii). The new language at 45 CFR 164.512(c)(3) does not modify or change the current Privacy Rule provision for disclosures to a public health authority or other appropriate government authority authorized by law to receive reports of child abuse or neglect. We believe the commenter is referring to 45 CFR 164.512(c)(2), which requires a covered entity to inform an individual that a report has been or will be made, and 45 CFR 164.512(c)(2)(ii), which removes the requirement to inform the individual when the covered entity would be informing a personal representative and the covered entity reasonably believes the personal representative is responsible for the abuse, neglect, or other injury, and that informing such person would not be in the best interests of the individual as determined by the covered entity, in the exercise of professional judgment. Because the new language at 45 CFR 164.512(c)(3) operates as a limitation on disclosure, it is not possible for the new provision to permit disclosures in more circumstances than previously permitted, and therefore does not circumvent the existing provision.

Comment: A commenter recommended that the Department clarify that the proposed Rule of Applicability would not prohibit disclosure and use of such records when they are sought for a defensive purpose by revising the proposed Rule of Construction at 45 CFR 164.512(c)(3) to more explicitly state that it permits such use or disclosure.

Response: The adopted Rule of Construction at 45 CFR 164.512(c)(3) applies to disclosures permitted by 45 CFR 164.512(c), which are explicitly to a government authority, including a social service or protective services agency, authorized by law to receive reports of abuse, neglect, or domestic violence. The Department is not aware of a disclosure that otherwise meets the requirements specified at 45 CFR 164.512(c)(1) that would constitute a disclosure for defensive purposes. Rather, disclosures of PHI for defensive purposes, such as a disclosure to defend against a prosecution for criminal prosecution for allegations of providing unlawful health care, are permitted by 45 CFR 164.512(f), as well as for health care operations when obtaining legal services. To the extent that a disclosure for a defensive purpose meets the applicable requirements and is permitted, the Department confirms that the final rule language generally would not prohibit a disclosure.

Comment: A few commenters requested clarification of the standard for determining what would constitute a report of abuse, neglect, or domestic violence that is based primarily on the provision of reproductive health care. Commenters also requested clarification about the interaction between the proposed prohibition and the permission at 45 CFR 164.512(c).

Response: The Privacy Rule permits but does not require the reporting of abuse, neglect, or domestic violence under certain conditions.[FN393] Under the final rule, the Department is clarifying that this permission does not apply where the sole basis of the report is the provision or facilitation of reproductive health care. With this modification, the Department makes clear that it may be reasonable for a covered entity that is a mandatory reporter to believe that an individual is the victim of abuse, neglect, or domestic violence and to make such report to the government authority authorized by law to receive such reports in circumstances where the provision or facilitation of reproductive health care is but one factor prompting the suspicion. We also note, as discussed above with respect to 45 CFR 164.512(b)(1)(i), this permission allows a covered entity to report known or suspected abuse, neglect, or domestic violence only for the purpose of making a report. The PHI disclosed must be limited to the minimum necessary information for the purpose of making a report.[FN394] These provisions do not permit the covered entity to disclose PHI in response to a request for the use or disclosure of PHI to conduct a criminal, civil, or administrative investigation into or impose criminal, civil, or administrative liability on a person based on suspected abuse, neglect, or domestic violence. Thus, any disclosure of PHI in response to a request from an investigator, whether in follow up to the report made by the covered entity (other than to clarify the PHI provided on the report) or as part of an investigation initiated based on an allegation or report made by a person other than the covered entity, must meet the conditions of disclosures for law enforcement purposes or judicial and administrative proceedings.[FN395]

3. Clarifying the Permission for Disclosures Based on Administrative Processes

Under 45 CFR 164.512(f)(1), a regulated entity may disclose PHI pursuant to an administrative request, provided that: (1) the information sought is relevant and material to a legitimate law enforcement inquiry; (2) the request is specific and limited in scope to the extent reasonably practicable in light of the purpose for which the information is sought; and (3) de-identified information could not reasonably be used. Examples of administrative requests include administrative subpoena or summons, a civil or an authorized investigative demand, or similar process authorized under law. The examples of administrative requests provided in the regulatory text include only requests that are enforceable in a court of law, and the catchall "or similar process authorized by law" similarly is intended to include only requests that, by law, require a response. This interpretation is consistent with the Privacy Rule's definition of "required by law," which enumerates these and other examples of administrative requests that constitute "a mandate contained in law that compels an entity to make a use or disclosure of protected health ***33044** information and that is enforceable in a court of law."

As we explained in the 2023 Privacy Rule NPRM, the Department has become aware that some regulated entities may be interpreting 45 CFR 164.512(f)(1) in a manner that is inconsistent with the Department's intent. Therefore, the Department proposed to clarify the types of administrative processes that this provision was intended to address.[FN396]

Specifically, the Department proposed to insert language to clarify that the administrative processes that give rise to a permitted disclosure include only requests that, by law, require a regulated entity to respond. Accordingly, the proposal would specify that PHI may be disclosed pursuant to an administrative request "for which a response is required by law." The Department does not consider this to be a substantive change because the proposal was consistent with express language of the preamble discussion on this topic in the 2000 Privacy Rule.[FN397] The Department intends that the express inclusion of this language will ensure that regulated entities more fully appreciate the permitted uses and disclosures pursuant to 45 CFR 164.512(f)(1)(ii)(C).

The Department received few comments on the proposal to clarify the permission at 45 CFR 164.512(f)(1)(ii)(C). Comments were mixed, with some support, some opposition, and some requesting additional modifications or additional examples or guidance.

While the Department received few comments on this clarification, the Department is aware of reports that covered entities are misinterpreting the intention of the requirements of 45 CFR 164.512(f)(1)(ii)(C) that disclosures of PHI to law enforcement be

necessary and limited in scope. For example, a congressional inquiry recently highlighted concerns about disclosures of PHI to law enforcement from retail pharmacy chains. The inquiry found that some pharmacy staff are providing PHI directly to law enforcement without advice from their legal departments in part because their staff "face extreme pressure to immediately respond to law enforcement demands." [FN398] Based on this inquiry, these disclosures often are made without a warrant or subpoena issued by a court.[FN399]

The Department is adopting the clarification as proposed because regulated entities are misinterpreting the requirements of 45 CFR 164.512(f)(1)(ii)(C) that ensure that disclosures of PHI to law enforcement are necessary and limited in scope. Accordingly, the Department is adding to 45 CFR 164.512(f)(1)(ii)(C) language that specifies that PHI may be disclosed pursuant to an administrative request "for which a response is required by law." Thus, the regulatory text now clearly states that the administrative processes for which a disclosure is permitted are limited to only requests that, by law, require a regulated entity to respond, consistent with preamble discussion on this topic in the 2000 Privacy Rule.[FN400]

Comment: A few commenters supported the Department's proposed clarification of 45 CFR 164.512(f)(1)(ii)(C). A commenter recommended that the Department revise the language to refer to an administrative subpoena or summons, a civil or other "expressly" authorized demand, or other similar process. The commenter recommended that, at a minimum, the Department prohibit disclosures in response to oral requests, require all informal administrative requests be in writing, and require qualifying administrative requests to obtain express supervisory approval.

A commenter asserted, without providing examples, that there are many disclosures currently made under Federal agencies' interpretations of the Privacy Act of 1974 [FN401] that would not be permitted under the NPRM proposal.

Response: The Department appreciates the comments on this clarification. The Department understands the commenter's request to add language identifying specific processes but declines to make the suggested modification at this time. The Department is concerned that references to specific items or actions could be understood to not apply to similarly situated administrative requests understood by different names. In guidance for law enforcement, the Department has provided its interpretation that administrative requests must be accompanied by a written statement.[FN402]

In addition, the Department does not control whether a verbal or other non-written request is sufficient to meet the standards of various jurisdictions for an administrative process that would require a responding covered entity to be legally required to respond. The Department understands that valid, justiciable reasons for responding to a verbal or other non-written request may exist, such as an emergent situation that requires an immediate response to avoid an adverse outcome. The Department believes the additional text sufficiently clarifies the misunderstandings of some regulated entities about what constitutes administrative process for the purposes of this permission.

4. Request for Information on Current Processes for Receiving and Addressing Requests Pursuant to 164.512(d) Through (g)(1)

The Department requested information and comments on certain considerations to help inform development of the final rule.[FN403] In particular, the Department asked how regulated entities currently receive and address requests for PHI when requested pursuant to the Privacy Rule permissions at 45 CFR 164.512(d), (e), (f), or (g)(1), and what effect expanding the scope of the proposed prohibition to include any health care would have on the proposed attestation requirement and the ability of regulated entities to implement it. Comments submitted in response to the question about the effects of expanding the scope of the proposed prohibition have been included in prior discussions of the specific policy issues elsewhere, as applicable.

Comment: Several commenters responded to this request for information concerning current processes for receiving certain requests pursuant to 45 CFR 164.512 by providing specific information about how they receive such requests. Some requests for PHI are received in hard copy, either by mail or hand delivery, while others are received via email. Still ***33045** others are received through the regulated entities online portal or facsimile. In emergency circumstances, such requests may be received verbally. Commenters generally receive assurances through hard copy, email, their patient portal, and fax. A few commenters

seek assurances for every subsequent related request, while another commenter stated that it does not require or obtain assurances for every subsequent related request if the subsequent request is related to the initial request for which the initial assurance was received.

A commenter asserted that the privacy interests at stake outweigh potential administrative burdens and provided examples of state laws that are more privacy protective than the Privacy Rule. The commenter explained that the privacy landscape is constantly evolving, as do the HIPAA Rules, and as such, regulated entities must adapt in response.

Response: The Department appreciates the information provided by commenters explaining the processes by which regulated entities currently receive requests for the use or disclosure of PHI for certain purposes and the workflows of regulated entities to ensure that such requests comply with the conditions of the applicable Privacy Rule permissions. We reviewed and considered this information when evaluating the burden of the proposed modifications to the Privacy Rule during the development of this final rule.

E. Section 164.520—Notice of Privacy Practices for Protected Health Information

1. Current Provision

The Privacy Rule generally requires that a covered entity provide individuals with an NPP to ensure that they understand how a covered entity may use and disclose their PHI, as well as their rights and the covered entity's legal duties with respect to PHI. [FN404] Section 164.520(b)(1)(ii) of the Privacy Rule describes the required contents of the NPP, including descriptions of the types of permitted uses and disclosures of their PHI. More specifically, the NPP must describe the ways in which the covered entity may use and disclose PHI for TPO, as well as each of the other purposes for which the covered entity is permitted or required to use or disclose PHI without the individual's written authorization. Additionally, the NPP must state the covered entity's duties to protect privacy, provide a copy of the NPP, and abide by the terms of the current notice. The NPP must also describe individuals' rights, including the right to complain to HHS and to the covered entity if they believe their privacy rights have been violated, as well as other statements if the covered entity uses PHI for certain activities, such as fundraising. The Privacy Rule does not, however, currently require a covered entity to provide information about specific prohibited uses and disclosures of PHI.

2. CARES Act

Section 3221(i) of the CARES Act directs the Secretary to modify the NPP provisions at 45 CFR 164.520 to include new requirements for covered entities that create or maintain PHI that is also a record of SUD treatment provided by a Part 2 program (i.e., covered entities that are Part 2 programs and covered entities that receive Part 2 records from a Part 2 program). The CARES Act amended 42 U.S.C. 290dd-2 to require the Department to revise Part 2 to more closely align with the Privacy Rule.

3. Proposals in 2022 Part 2 NPRM and 2023 Privacy Rule NPRM

The Department proposed in December 2022 to modify both the Patient Notice requirements at 42 CFR 2.22 and the NPP requirements at 45 CFR 164.520 to provide consistent notice requirements for all Part 2 records. Revisions to the Patient Notice requirements were addressed and finalized in the 2024 Part 2 Rule, while modifications to the NPP provisions proposed in the 2022 Part 2 NPRM were deferred to a future rulemaking. The Department also separately proposed to modify the NPP provisions to support reproductive health care privacy as part of the 2023 Privacy Rule NPRM.

As part of the 2022 Part 2 NPRM, the Department proposed several changes to the NPP provisions. We proposed in a new paragraph (2) to 45 CFR 164.520(a) that individuals with Part 2 records that are created or maintained by covered entities would have a right to adequate notice of uses and disclosures, their rights, and the responsibilities of covered entities with respect to such records. The Department also proposed to remove 45 CFR 164.520(a)(3), the exception for providing inmates a copy of the NPP, which would require covered entities that serve correctional facilities to provide inmates with a copy of the NPP.

Additionally, the Department proposed revising 45 CFR 164.520(b)(1) to specifically clarify that covered entities that maintain or receive Part 2 records would need to provide an NPP that is written in plain language and contains the notice's required elements. We also proposed to modify 45 CFR 164.520(b)(1)(i) to replace “medical” with “health” information.

The Department also proposed in the 2022 Part 2 NPRM to incorporate changes proposed to the NPP requirements in the 2021 Privacy Rule NPRM,[FN405] such as adding a requirement to include the email address for a designated person who would be available to answer questions about the covered entity's privacy practices; adding a permission for a covered entity to provide information in its NPP concerning the individual access right to direct copies of PHI to third parties when the PHI is not in an EHR and the ability to request the transmission using an authorization; and removing the requirement for a covered entity to obtain a written acknowledgment of receipt of the NPP. The Department is finalizing certain changes proposed in the 2022 Part 2 NPRM and the 2023 Privacy Rule NPRM that directly support the two final rules.

In both the 2022 Part 2 NPRM and 2023 Privacy Rule NPRM, the Department proposed to modify 45 CFR 164.520(b)(1)(ii), which requires covered entities to describe for individuals the purposes for which a covered entity is permitted to use and disclose PHI. Consistent with the CARES Act, we proposed in the 2022 Part 2 NPRM to modify paragraph (C) to clarify that where uses and disclosures are prohibited or materially limited by other applicable law, “other applicable law” would include Part 2, while the Department proposed to clarify at paragraph (D) that the requirement for a covered entity to include in the NPP sufficient detail to place an individual on notice of the uses and disclosures that are permitted or required by the Privacy Rule and other applicable laws, including Part 2.

The Department further proposed to require in 45 CFR 164.520(b)(1)(iii), which requires covered entities to include descriptions of certain activities in which the covered entity intends to engage, in a new paragraph (D) the inclusion of a statement that Part 2 records created or maintained by the covered entity will not be used in certain proceedings against the individual without the individual's written consent or a court order consistent with 42 CFR part 2. Additionally, we proposed to require in a new paragraph (E) that covered entities that intend to use Part 2 records for fundraising include a statement that ***33046** such records may be used or disclosed for fundraising purposes only if the individual grants written consent as provided in 42 CFR 2.31.

In 45 CFR 164.520(b)(1)(v)(C), which addresses a covered entity's right to change the terms of its notice, we also proposed to simplify and modify the regulatory text to clarify that this right is limited to circumstances where such changes are not material or contrary to law. The Department also proposed to add a new paragraph (4) to 45 CFR 164.520(d) to prohibit construing permissions for covered entities participating in organized health care arrangements [FN406] (OHCAs) to disclose PHI between participants as negating obligations relating to Part 2 records.

The 2023 Privacy Rule NPRM also proposed modifications to the NPP requirements.[FN407] Specifically, the Department proposed to modify 45 CFR 164.520(b)(1)(ii) by adding a new paragraph (F) to require a covered entity to describe and provide an example of the types of uses or disclosures prohibited by 45 CFR 164.502(a)(5)(iii), and to do so in sufficient detail for an individual to understand the prohibition. We also proposed adding a new paragraph (G) to 45 CFR 164.502(b)(1)(ii) to describe each type of use and disclosure for which an attestation is required under 45 CFR 164.509, with an example. Additionally, the Department requested comment on whether it would benefit individuals for the Department to require that covered entities include a statement in the NPP that would explain that the recipient of the PHI would not be bound by the proposed prohibition because the Privacy Rule would no longer apply after PHI is disclosed for a permitted purpose to an entity other than a regulated entity (e.g., disclosed to a non-covered health care provider for treatment purposes).

4. Overview of Public Comments

We received many comments on the proposed NPP changes in both the 2022 Part 2 NPRM and the 2023 Privacy Rule NPRM. Some of the comments on the 2022 Part 2 NPRM addressed both the NPP and the Patient Notice. Comments concerning the Patient Notice are discussed in the 2024 Part 2 Rule.[FN408] Commenters on the NPP proposals in the 2022 Part 2 NPRM urged the Department to coordinate revisions to the NPP provisions across its proposed and final rules. Commenters also requested guidance about their ability to use a single form to satisfy both the NPP and Patient Notice requirements. Commenters

generally expressed support for the Department's proposals to modify 45 CFR 164.520(a) and 164.520(b)(1) to apply the NPP requirements to certain entities, in coordination with changes required by the CARES Act and consistent with Part 2.

Commenters to the 2022 Part 2 NPRM generally did not express opposition to the Department's proposed changes to paragraph (b)(iii) of 45 CFR 164.520, although some did request additional guidance. We received no comments on our proposed modifications to add a new paragraph concerning OHCAs to 45 CFR 164.520(d).

Most commenters expressed support for the Department's 2023 Privacy Rule NPRM proposals to revise the NPP requirements. Many also recommended additional modifications to the NPP requirements or clarifications to the requirements. Most also recommended that the Department add a requirement that NPPs include a statement that would explain that the recipient of PHI would not be bound by the proposed prohibition because the Privacy Rule would no longer apply after PHI is disclosed for a permitted purpose to an entity other than a regulated entity (e.g., disclosed to a non-covered health care provider for treatment purposes).

5. Final Rule

The Department published the 2024 Part 2 Rule on February 16, 2024. It included modifications to the Patient Notice in 42 CFR 2.22 and reserved modifications to the HIPAA NPP for a forthcoming HIPAA rule. We address the modifications proposed in the 2022 Part 2 NPRM here, in concert with the modifications proposed in the 2023 Privacy Rule NPRM.

As required by the CARES Act and in alignment with the Privacy Rule, we are modifying the NPP provisions in multiple ways. First, we are requiring in 45 CFR 164.520(a)(2) that covered entities that create or maintain Part 2 records provide notice to individuals of the ways in which those covered entities may use and disclose such records, and of the individual's rights and the covered entities' responsibilities with respect to such records. Second, we are revising 45 CFR 164.520(b)(1) to clarify that a covered entity that receives or maintains records subject to Part 2 must provide an NPP that is written in plain language and that contains the elements required. For clarity, we have reordered wording within this paragraph to refer to “receiving or maintaining” records, rather than “maintaining or receiving” records as initially proposed.

Third, the Department is modifying 45 CFR 164.520(b)(1)(ii) to revise paragraphs (C) and (D), and to add paragraphs (F), (G), and (H) to clarify certain statements and add new statements that must be included in an NPP. Consistent with the CARES Act, we are modifying paragraph (C) to clarify that where NPP's descriptions of uses or disclosures that are permitted for TPO or without an authorization must reflect “other applicable law” that is more stringent than the Privacy Rule, other applicable law includes Part 2. Likewise, we are modifying paragraph (D) to clarify that Part 2 is specifically included in the “other applicable law” referenced in the requirement to describe uses and disclosures that are permitted for TPO or without an authorization sufficiently to place an individual on notice of the uses and disclosures that are permitted or required by the Privacy Rule and other applicable law.

New paragraphs (F) and (G) provide individuals with additional information about how their PHI may or may not be disclosed for purposes addressed in this rule, furthering trust in the relationship between regulated entities and individuals by ensuring that individuals are aware that certain uses and disclosures of PHI are prohibited. Specifically, paragraph (F) requires that the NPP contain a description, including at least one example, of the types of uses and disclosures prohibited under 45 CFR 164.502(a)(5)(iii) in sufficient detail for an individual to understand the prohibition, while paragraph (G) requires that the NPP contain a description, including at least one example, of the types of uses and disclosures for which an attestation is required under new 45 CFR 164.509.

Additionally, based on feedback from commenters, we are requiring in a new paragraph (H) that covered entities include a statement explaining to individuals that PHI disclosed pursuant to the Privacy Rule may be subject to redisclosure and no longer protected by the Privacy Rule.This will help individuals to make informed decisions about to whom they provide access to or authorize the disclosure of their PHI.

Under new paragraph (D) of 45 CFR 164.520(b)(1)(iii), the Department is requiring that covered entities provide notice to individuals that a Part 2 record, or testimony relaying the content of such record, may not be used or disclosed in a civil, criminal, administrative, or legislative proceeding against the individual absent written ***33047** consent from the individual or a court order, consistent with the requirements of 42 CFR part 2.

The Department is also finalizing a requirement at 45 CFR 164.520(b)(1)(iii)(E) that a covered entity must provide individuals with a clear and conspicuous opportunity to elect not to receive any fundraising communications before using Part 2 records for fundraising purposes for the benefit of the covered entity.

Lastly, we are finalizing our proposal to add a new paragraph (4) in 45 CFR 164.520(d) regarding joint notice by separate covered entities. This modification clarifies that Part 2 requirements continue to apply to Part 2 records maintained by covered entities that are part of OHCAs.

We are not finalizing in this rule the proposal to remove the exception to the NPP requirements for inmates of correctional facilities in this rule because it would be better addressed within the context of care coordination.

6. Responses to Public Comments

Comment: Commenters on both the 2022 Part 2 NPRM and the 2023 Privacy Rule NPRM urged the Department to coordinate any changes made to the NPP provisions based on proposals made in the separate rulemakings. According to the commenters, coordinating the changes to the NPP requirements would help to ensure consistency, reduce the administrative burden on covered entities, and ensure individual understanding of the permitted uses and disclosures of their PHI, including PHI that is also a Part 2 record. A few commenters on the 2022 Part 2 NPRM explained the different concerns that updates to the NPP pose to covered entities of differing sizes, based on resource constraints directly related to their size. Several commenters on the 2023 Privacy Rule NPRM requested that the Department provide sample language and examples or provide an updated model NPP.

Response: As part of this rulemaking, the Department is finalizing modifications to certain NPP requirements that were proposed in the 2022 Part 2 NPRM and the 2023 Privacy Rule NPRM. Thus, these changes serve to implement certain requirements of the CARES Act and to support reproductive health care privacy. The Department appreciates the recommendations and will consider them for future guidance.

Comment: A few commenters on the 2022 Part 2 NPRM requested that the Department clarify whether they would be permitted to use a single document or form when providing notice statements to individuals to ensure compliance by regulated entities and understanding of the notices by individuals. A few commenters agreed that a single NPP would reduce the administrative burden on regulated entities or be the most effective way to convey privacy information to individuals and asked for confirmation that this was permitted. A commenter requested that the Department update the Patient Notice in a manner such that the NPP header may be used in the combined notice if they are permitted to use a combined NPP/Patient Notice.

Response: As we have provided previously in guidance on the Privacy Rule and Part 2, notices issued by covered entities for different purposes may be separate or combined, as long as all of the required elements for both are included.[FN409] Thus, it is acceptable under both the Privacy Rule and Part 2 to meet the notice requirements of the Privacy Rule, Part 2, and state law by either providing separate notices or combining the required notices into a single notice, as long as all of the required elements are included.

Comment: A few commenters on the 2022 Part 2 NPRM and most of the commenters on the 2023 Privacy Rule NPRM suggested the proposed approach to modifying both the Patient Notice and NPP would bolster transparency and the public's understanding of how their health information is used or disclosed and collected. Many commenters on the 2023 Privacy Rule NPRM provided recommendations for ways in which the Department could improve the NPP, including requiring that the NPP be in plain language.

Response: The Department appreciates the comments on its proposal to modify the NPP to align with changes made in the Patient Notice and in support of reproductive health care privacy. The modifications will bolster transparency and public understanding of how information is used, disclosed, and protected. Covered entities have long been required under 45 CFR 164.520(b)(1) to provide an NPP that is written in plain language. Discussion of this requirement can be found in the preamble to the 2000 Privacy Rule.[FN410] The Department's model NPP forms, available in both English and Spanish, provide one example of how the plain language requirement may be met.[FN411]As discussed above, we are modifying 45 CFR 164.520 to clarify that this requirement applies to covered entities that use and disclose Part 2 records. Additional resources on writing in plain language can be found at https://plainlanguage.gov. Additionally, covered entities are required to comply with all Federal nondiscrimination laws, including laws that address language access requirements. Information about such requirements is available at www.hhs.gov/hipaa.

Comment: Commenters expressed concerns about the interplay of the Part 2 Patient Notice requirements with the NPP, the burden on covered entities to modify the NPP, and including the attestation requirement in the NPP.

Response: We have sought to align the requirements for the Patient Notice as closely as possible with the NPP requirements and to modify the NPP requirements to allow for a combined Patient Notice and NPP. The changes the Department is making to the NPP empower the individual and improve health outcomes by improving the likelihood that health care providers will make accurate diagnoses and informed treatment recommendations to individuals. These changes to the NPP provide the individual with clear information and reassurance about their privacy rights and their ability to discuss their reproductive health and related health care because they inform an individual that their PHI may not be used or disclosed for certain purposes prohibited by new 45 CFR 164.502(a)(5)(iii). As such, the qualitative benefits of providing individuals with information about how their PHI may be used and disclosed under the Privacy Rule outweigh the quantitative burdens for covered entities to revise their NPPs. Accordingly, we are finalizing the modifications proposed to the NPP as part of the 2023 Privacy Rule NPRM.

Comment: A majority of the commenters on the 2023 Privacy Rule NPRM who expressed support for revising the NPP also recommended that the Department require that the NPP include an explanation that the prohibition or Privacy Rule generally would no longer apply to PHI that has been disclosed for a permitted purpose to a person that is not a regulated entity. A few commenters opposed the addition as unnecessary or expressed concern about the potential length of the NPP. A ***33048** few of the commenters opposed adding such a statement because they believed it could deter individuals from seeking reproductive health care, increase individuals' mistrust of health care providers, or not add to individuals' understanding of their rights and protections under the Privacy Rule.

Response: In response to comments and in support of transparency for individuals, the Department is finalizing a new requirement to include in the NPP a statement adequate to put the individual on notice of the potential for information disclosed pursuant to the Privacy Rule to be subject to redisclosure by the recipient and no longer protected by the Privacy Rule. This change will provide additional clarity to individuals directly and assist covered entities in explaining the limitations of the Privacy Rule to individuals. We believe that any concerns about the negative effects of these modifications on length are outweighed by their benefits to the individual.

Comment: Several commenters to the 2023 Privacy Rule NPRM requested the Department provide additional time for compliance with the new NPP requirements and exercise enforcement discretion for a period of time after the compliance date.

Response: As noted above, we are finalizing certain modifications to the NPP provisions that were proposed in the 2022 Part 2 NPRM rule and other modifications to the same provisions that were proposed in the 2023 Privacy Rule NPRM. To ease the burden on covered entities and in compliance with 45 CFR 160.104, the Department is finalizing a compliance date of February 16, 2026, for the NPP provisions. The rationale for this compliance date is discussed in greater detail in the discussion of Effective and Compliance Dates.

F. Section 164.535—Severability

In the NPRM, the Department included a discussion of severability that explained how we believed the proposed rule should be interpreted if any provision was held to be invalid or facially unenforceable. We are finalizing a new 45 CFR 164.535 to codify this interpretation. The Department intends that, if a specific regulatory provision in this rule is found to be invalid or unenforceable, the remaining provisions of the rule will remain in effect because they would still function sensibly.

For example, the changes this final rule makes to the NPP requirements in 45 CFR 164.520 (including the changes finalizing proposals from the 2022 Part 2 NPRM) shall remain in full force and effect to the extent that they are not directly related to a provision in this rulemaking that is held to be invalid or unenforceable such that notice of that provision is no longer necessary. Conversely, if the NPP requirements are held to be invalid or unenforceable, the other modifications shall remain in full force and effect to the extent that they are not directly related to the NPP requirements.

As another example, we also intend that the revision in 45 CFR 160.103 to the definition of "person" shall remain in full force and effect if any other provision is held to be invalid or unenforceable because the new modified definition is not solely related to supporting reproductive health care privacy and is consistent with the Department's longstanding interpretation of the term and with regulated entities' current understanding and practices.

Similarly, we are finalizing technical corrections to the heading at 45 CFR 164.512(c) and a clarifying revision at 45 CFR 164.512(f) regarding the permission for disclosures based on administrative processes. Those changes are intended to remain in full force and effect even if other parts of this final rule are held to be invalid or unenforceable.

As another example, we also intend, if the addition in 45 CFR 160.103 of the definition of "public health," as used in the terms "public health surveillance," "public health investigation," and "public health intervention" is held to be invalid and unenforceable, the other modifications to the rules shall remain in full force and effect to the extent that they are not directly related to the definition of public health.

We further intend that if the rule is held to be invalid and unenforceable with respect to its application to some types of health care, it should be upheld with respect to other types (e.g., pregnancy or abortion-related care).

We also intend that any provisions of the Privacy Rule that are unchanged by this final rule shall remain in full force and effect if any provision of this final rule is held to be invalid or unenforceable.

These examples are illustrative and not exhaustive.

We received no comments on the language addressing severability in the 2023 Privacy Rule NPRM.

G. Comments on Other Provisions of the HIPAA Rules

Comment: A few commenters expressed concerns that the Department may grant exceptions to preemption and recommended that the Department clarify the standards for which exceptions to preemption would be made and consider strengthening these standards wherever possible or remove the potential for exceptions entirely.

One commenter expressed concern that the proposed rule could dissuade regulated entities from providing de-identified data for research, while another commenter recommended that the Department prohibit the sharing of de-identified reproductive health care data except in limited circumstances to prevent the re-identification of reproductive health data by third parties, such as law enforcement or data brokers

Response: The process for requesting exceptions to preemption and the standards for granting such requests are at 45 CFR 160.201 et seq. We did not propose any modifications to these provisions as part of the 2023 Privacy Rule NPRM, and as such, do not finalize modifications in this final rule.

The Department does not believe that this final rule will dissuade regulated entities from providing de-identified data for research or other purposes. Under the Privacy Rule, health information that meets the standard and implementation specifications for de-identification under 45 CFR 164.514 is considered not to be IIHI.[FN412] HIPAA confers on the Department the authority to set standards for the privacy of IIHI, including for de-identification. We did not propose to modify the de-identification standard as part of the 2023 Privacy Rule NPRM, and as such, do not finalize modifications in this final rule.

Comment: A commenter posited that the proposed rule's preemption of contrary state laws was not sufficiently clear and recommended that the Department reinforce the preemption provision in the final rule.

Response: The Department did not propose changes to the preemption provisions of the HIPAA Rules, which are based in statute, [FN413] and believes that the provisions, in combination with our discussion of preemption in the preamble, are sufficient.

VI. Regulatory Impact Analysis

A. Executive Order 12866 and Related Executive Orders on Regulatory Review

The Department of Health and Human Services (HHS or "Department") has examined the effects of this final rule under Executive Order (E.O.) 12866, Regulatory Planning and Review,[FN414] as ***33049** amended by E.O. 14094,[FN415] E.O. 13563, Improving Regulation and Regulatory Review,[FN416] the Regulatory Flexibility Act [FN417] (RFA), and the Unfunded Mandates Reform Act of 1995 [FN418] (UMRA). E.O.s 12866 and 13563 direct the Department to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive effects; and equity). This final rule is significant under section 3(f)(1) of E.O. 12866, as amended.

The RFA requires us to analyze regulatory options that would minimize any significant effect of a rule on small entities. As discussed in greater detail below, this analysis concludes, and the Secretary certifies, that the rule will not result in a significant economic effect on a substantial number of small entities.

The UMRA (section 202(a)) generally requires us to prepare a written statement, which includes an assessment of anticipated costs and benefits, before proposing "any rule that includes any Federal mandate that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of $100,000,000 or more (adjusted annually for inflation) in any 1 year." [FN419] The current threshold after adjustment for inflation is $177 million, using the most current (2023) Implicit Price Deflator for the Gross Domestic Product. UMRA does not address the total cost of a rule. Rather, it focuses on certain categories of cost, mainly Federal mandate costs resulting from imposing enforceable duties on state, local, or Tribal governments or the private sector; or increasing the stringency of conditions in, or decreasing the funding of, state, local, or Tribal governments under entitlement programs. This final rule imposes mandates that would result in the expenditure by state, local, and Tribal governments, in the aggregate, or by the private sector, of more than $177 million in any one year. The impact analysis in this final rule addresses such effects both qualitatively and quantitatively. In general, each regulated entity, including government entities that meet the definition of covered entity (e.g., state Medicaid agencies), is required to adopt new policies and procedures for responding to requests for the use or disclosure of protected health information (PHI) for which an attestation is required and to train its workforce members on the new requirements. Additionally, although the Department has not quantified the costs, state, local, and Tribal law enforcement agencies must analyze requests that they initiate for the use or disclosure of PHI and provide regulated entities with an attestation that the request is not for a prohibited purpose in instances where the request is made for health oversight activities, judicial and administrative proceedings, law enforcement purposes, or about decedents to coroners and medical examiners, and is for PHI potentially related to reproductive health care. One-time costs for all regulated entities to change their policies will increase costs above the UMRA threshold in one year. The Department initially estimated that ongoing expenses for the new attestation condition would not increase significantly, but we sought additional data to inform our estimates. Although Medicaid makes Federal matching funds available for states for certain administrative costs, these are limited to costs specific to operating the Medicaid program. There are no Federal funds directed at Health Insurance Portability and Accountability Act of 1996 (HIPAA) compliance activities.

Pursuant to Subtitle E of the Small Business Regulatory Enforcement Fairness Act of 1996,[FN420] the Office of Management and Budget's (OMB's) Office of Information and Regulatory Affairs has determined that this final rule meets the criteria set forth in 5 U.S.C. 804(2) because it is projected to have an annualized effect on the economy of more than $100,000,000. Because of the large number of covered entities that are subject to this final rule and the large number of individuals with health plan coverage, any rule modifying the HIPAA Privacy Rule that requires updating policies and procedures and the Notice of Privacy Practices (NPP) and distributing the NPP to a percentage of individuals is likely to meet the threshold in 5 U.S.C. 804(2).

The Justification for this Rulemaking and Summary of Final Rule Provisions section at the beginning of this preamble contain a summary of this rule and describe the reasons it is needed. The Department presents a detailed analysis below.

1. Summary of Costs and Benefits

The Department identified six general categories of quantifiable costs arising from these proposals: (1) responding to requests for the use or disclosure of PHI for which an attestation is required; (2) revising business associate agreements; (3) updating the NPP and posting it online; (4) developing new or modified policies and procedures; (5) revising training programs for workforce members; and (6) requesting an exception from HIPAA's general preemption authority. The first five categories apply primarily to covered entities, while the sixth category applies to states and other interested persons.

The Department estimates that the first-year costs attributable to this final rule total approximately $595.0 million. These costs are associated with covered entities responding to requests for the use or disclosure of PHI that are conditioned upon an attestation; revising business associate agreements; revising policies and procedures; updating, posting, and mailing the NPP; and revising training programs for workforce members, and with states or other persons requesting exceptions from preemption. These costs also include increased estimates for wages, postage, and the number of NPPs distributed by health plans as compared to the baseline of existing annual cost and burden estimates for these activities in the approved HIPAA information collection. For years two through five, estimated annual costs of approximately $20.9 million are attributable to ongoing costs related to the attestation requirement. Table 1 reports the present value and annualized estimates of the costs of this final rule covering a 5-year time horizon. Using a 7% discount rate, the Department estimates this final rule will result in annualized costs of $151.8 million; and using a 3% discount rate, these annualized costs are $142.6 million.

Table 1—Accounting Table, Costs of the Rule

[$ Millions]

Costs	Primary estimate	Year dollars	Discount rate (%)	Period covered
Present Value	$678.6	2022	Undiscounted	2024-2028
Present Value	622.3	2022	7	2024-2028
Present Value	653.1	2022	3	2024-2028

Annualized	151.8	2022	7	2024-2028
Annualized	142.6	2022	3	2024-2028

***33050** The changes to the Privacy Rule will likely result in important benefits and some costs that the Department is unable to fully quantify at this time. As explained further below, unquantified benefits include improved trust and confidence between individuals and health care providers; enhanced privacy and improved access to reproductive health care and information, which may prevent increases in maternal mortality and morbidity; increased accuracy and completeness in patient medical records, which may prevent poor health outcomes; enhanced support for survivors of rape, incest, and sex trafficking; and maintenance of family economic stability by allowing families to determine the timing and spacing of whether or when to be pregnant. Additionally, allowing regulated entities to accept an attestation for requests for the use or disclosure of PHI potentially related to reproductive health care, and to presume that reproductive health care provided by another person was lawful under the circumstances it was provided, will reduce potential liability for regulated entities by providing some assurance with respect to whether the requested disclosure is prohibited.

Table 2—Potential Non-Quantified Benefits for Covered Entities and Individuals

Benefits
Improve access to complete information about lawful reproductive health care options, including for individuals who are pregnant or considering a pregnancy (i.e., improve health literacy), by reducing concerns about disclosure of PHI.
Maintain or reduce levels of maternal mortality and morbidity by ensuring that individuals and their clinicians can freely communicate and have access to complete information needed for quality lawful health care, including coordination of care.
Decrease barriers to accessing prenatal health care by maintaining privacy for individuals who seek a complete range of lawful reproductive health care options.
Enhance mental health and emotional well-being of pregnant individuals by reducing fear of potential disclosures of their PHI to investigate or impose liability on a person for the mere act of seeking, obtaining, providing, or facilitating lawful health care.
Improve or maintain trust between individuals and health care providers by reducing the potential for health care providers to report PHI in a manner that could harm the individuals' interests.
Prevent or reduce re-victimization of pregnant individuals who have survived rape or incest by protecting their PHI from undue scrutiny.
Improve or maintain families' economic well-being by not exposing individuals or their family members to costly investigations or activities to impose liability for seeking, obtaining or facilitating lawful reproductive health care.
Maintain the economic well-being of regulated entities by not exposing regulated entities or workforce members to costly investigations or activities to impose liability on them for engaging in lawful activities.
Ensure individuals' ability to obtain full and complete information and make lawful decisions concerning fertility- or infertility-related health care that may include selection or disposal of embryos without risk of PHI disclosure for criminal, civil, or administrative investigations or activities to impose liability for engaging in lawful activities.

The Department also recognizes that there may be some costs that are not readily quantifiable, notably, the potential burden on persons requesting PHI to investigate or impose liability on persons for seeking, obtaining, providing, or facilitating reproductive health care that is not lawful under the circumstances in which such health care is provided. As discussed elsewhere in this final rule, we acknowledge that, in certain limited circumstances, the final rule may, prevent persons from obtaining an individual's PHI, such as where the request is directed to the health care provider that provided the reproductive health care and that

health care provider reasonably determines that such health care was provided lawfully. However, the existing permission for disclosures for law enforcement does not create a mandate for disclosure to law enforcement agencies. Rather, it establishes the conditions under which a regulated entity may disclose PHI if it so chooses. Accordingly, consistent with how the Privacy Rule has operated since its inception, persons whose requests for PHI are declined by regulated entities may incur additional costs if they choose to pursue their investigations through other methods and obtain evidence from non-covered entities. We have not previously quantified the costs to such persons for obtaining an individual's PHI, such as where a law enforcement official is required to prepare a formal administrative request or obtain a qualified protective order and we do not do so here. We do not view the attestation requirement as changing this calculus and have designed the attestation to impose a minimal burden on requests for PHI related to lawful conduct by health care providers by offering a model attestation form. Despite the minimal formality of providing a signed attestation, some state law enforcement agencies may experience the requirement as a burden, and we acknowledge that potential as a non-quantifiable cost.

2. Baseline Conditions

The Privacy Rule, in conjunction with the Security and Breach Notification Rules, protects the privacy and security of individuals' PHI, that is, individually identifiable health information (IIHI) transmitted by or maintained in electronic media or any other form or ***33051** medium, with certain exceptions. It limits the circumstances under which regulated entities are permitted or required to use or disclose PHI and requires covered entities to have safeguards in place to protect the privacy of PHI. The Privacy Rule also establishes certain rights for individuals with respect to their PHI and sets limits and conditions on the uses and disclosures that may be made of such information without an individual's authorization.

As explained in the preamble, the Department has the authority under HIPAA to modify the Privacy Rule to prohibit the use or disclosure of PHI for activities to conduct a criminal, civil, or administrative investigation into or impose criminal, civil, or administrative liability on any person for the mere act of seeking, obtaining, providing, or facilitating reproductive health care that is lawful under the circumstances in which it was provided, as well as to identify any person for the purpose of initiating such activities. The Privacy Rule has been modified several times since it was first issued in 2000 to address statutory requirements, changed circumstances, and concerns and issues raised by stakeholders regarding the effects of the Privacy Rule on regulated entities, individuals, and others. Recently, as the preamble discusses, changed circumstances resulting from new inconsistencies in the regulation of reproductive health care nationwide and the negative effects on individuals' expectations for privacy and their relationships with their health care providers, as well as the additional burdens imposed on regulated entities, require the modifications made by this final rule.

For purposes of this Regulatory Impact Analysis (RIA), this final rule adopts the list of covered entities and cost assumptions identified in the Department's 2023 Information Collection Request (ICR).[FN421] The Department also relies on certain estimates and assumptions from the 1999 Privacy Rule NPRM [FN422] that remain relevant, and the 2013 Omnibus Rule, [FN423] as referenced in the analysis that follows.

The Department quantitatively analyzes and monetizes the effect that this final rule may have on regulated entities' actions to: revise business associate agreements between covered entities and their business associates, including release-of-information contractors; create new forms; respond to certain types of requests for PHI; update their NPPs; adopt policies and procedures to implement the requirements of this final rule; and train their employees on the updated policies and procedures. The Department analyzes the remaining benefits and burdens qualitatively because of the uncertainty inherent in predicting other concrete actions that such a diverse scope of regulated entities might take in response to this rule.

Analytic Assumptions

The Department bases its assumptions for calculating estimated costs and benefits on several publicly available datasets, including data from the U.S. Census, the U.S. Department of Labor, Bureau of Labor Statistics, Centers for Medicare & Medicaid Services, and the Agency for Healthcare Research and Quality. For the purposes of this analysis, the Department assumes that benefits plus indirect costs equal approximately 100 percent of pre-tax wages and adjusts the hourly wage rates by multiplying

by two, for a fully loaded hourly wage rate. The Department adopts this as the estimate of the hourly value of time for changes in time use for on-the-job activities.

Implementing the regulatory changes likely will require covered entities to engage workforce members or consultants for certain activities. The Department assumes that a lawyer will draft or review the new attestation form, revisions to business associate agreements, revisions to the NPP, and required changes to HIPAA policies and procedures. The Department expects that a training specialist will revise the necessary HIPAA training and that a web designer will post the updated NPP. The Department further anticipates that a workforce member at the pay level of medical records specialist will confirm receipt of required attestations. To the extent that these assumptions affect the Department's estimate of costs, the Department solicited comment on its assumptions, particularly assumptions in which the Department identifies the level of workforce member (e.g., clerical staff, professional) that will be engaged in activities and the amount of time that particular types of workforce members spend conducting activities related to this RIA as further described below. Table 3 also lists pay rates for occupations referenced in the explanation of estimated information collection burdens in Section F of this RIA and related tables.

The Department received several comments about the occupations engaged in certain activities and the time burden associated with them. We reviewed these submissions and used the provided information to revise the estimate for the cost of processing requests for the use or disclosure of PHI that require an attestation. For more details, please see the sections discussing the costs of the rule below.

The Department received no comment on the hourly value of time; therefore, we retain all relevant assumptions laid out in the 2023 Privacy Rule NPRM, as described above (see Table 3 for a list of occupations and corresponding wages).[FN424]

Table 3—Occupational Pay Rates

Occupation code and title	Mean hourly wage	Fully loaded hourly wage
00-0000 All Occupations	$29.76	$59.52
43-3021 Billing and Posting Clerks	21.54	43.08
29-0000 Healthcare Practitioners and Technical Occupations	46.52	93.04
29-9021 Health Information Technologists and Medical Registrars	31.38	62.76
29-9099 Healthcare Practitioners and Technical Workers, All Other	32.78	65.56
15-1212 Information Security Analysts	57.63	115.26
23-1011 Lawyers	78.74	157.48
13-1111 Management Analysts	50.32	100.64
11-9111 Medical and Health Services Manager	61.53	123.06
29-2072 Medical Records Specialist	24.56	49.12
43-0000 Office and Administrative Support Occupations	21.90	43.80

11-2030 Public Relations and Fundraising Managers	68.56	137.12
13-1151 Training and Development Specialist	33.59	67.18
43-4171 Receptionists and Information Clerks	16.64	33.28
15-1255 Web and Digital Interface Designers	48.91	97.82

***33052** The Department assumes that most covered entities will be able to incorporate changes to their workforce training into existing HIPAA training programs rather than conduct a separate training because the total time frame for compliance from date of finalization would be 240 days.[FN425]

Covered Entities Affected

The Department received no substantive comments on the number or type of HIPAA covered entities affected by this rule; therefore, we retain the methodology and entity estimates as described in the 2023 Privacy Rule NPRM and the baseline conditions section above.

To the extent that covered entities engage business associates to perform activities under the rule, the Department assumes that any additional costs will be borne by the covered entities through their contractual agreements with business associates. The Department's estimate that each revised business associate agreement will require no more than 1 hour of a lawyer's labor assumes that the hourly burden could be split between the covered entity and the business associate. Thus, the Department calculated estimated costs based on the potential number of business associate agreements that will be revised rather than the number of covered entities or business associates with revised business associate agreements.

The Department requested data on the number of business associates (which may include health care clearinghouses acting in their role as business associates of other covered entities) that would be affected by the rule and the extent to which they may experience costs or other burdens not already accounted for in the estimates of burdens for revising business associate agreements. The Department also requested comment on the number of business associate agreements that would need to be revised, if any. We did not receive any actionable comments on the number of affected business associates, the number of business associate agreements, or any specific costs that business associates might bear. For more details, see the section on business associate agreements below.

The Department requested public comment on these estimates, including estimates for third party administrators and pharmacies where the Department has provided additional explanation. The Department additionally requested detailed comment on any situations, other than those identified here, in which covered entities would be affected by this rulemaking. We did not receive any substantive comments related to these issues.

Table 4—Estimated Number and Type of Covered Entities

Covered entities			
NAICS code	**Type of entity**	**Firms**	**Establishments**
524114	Health and Medical Insurance Carriers	880	5,379
524292	Third Party Administrators	456	783

622	Hospitals	3,293		7,012
44611	Pharmacies	19,540	[a] 67,753	
6211-6213	Office of Drs. & Other Professionals	433,267		505,863
6215	Medical Diagnostic & Imaging	7,863		17,265
6214	Outpatient Care	16,896		39,387
6219	Other Ambulatory Care	6,623		10,059
623	Skilled Nursing & Residential Facilities	38,455		86,653
6216	Home Health Agencies	21,829		30,980
532283	Home Health Equipment Rental	611		3,197
Total		549,713		774,331

***33053 Individuals Affected**

The Department believes that the population of individuals potentially affected by the rule is approximately 76 million overall, [FN426] representing nearly one-fourth of the U.S. population, including approximately 6 million pregnant individuals annually and an unknown number of individuals facing a potential pregnancy or pregnancy risk due to sexual activity, contraceptive avoidance or failure, rape (including statutory rape), and incest. According to Federal data, 78 percent of sexually active females received reproductive health care in 2015-2017.[FN427]

The Department received comments related to the number of individuals affected by the rule, some of which are summarized below. One commenter asserted that the Department had overestimated the number of affected individuals and urged reducing the estimate to 78 percent of sexually active females (52.72 million). The same commenter also argued that even this revised number might be an overestimate, and that the number of individuals directly affected by the rule would be closer to 50,400 a year. Another commenter suggested that the number of individuals potentially affected by the proposed rule is much larger than the estimate and that the estimate should include any individual who was ever capable of bearing children and their family members.

Another commenter asserted that the Department was underestimating the number of individuals that would be affected by the proposed rule but did not include an estimate of their own.

After reviewing the comments, the Department is finalizing the estimates of the number of individuals that will be affected by this final rule as described above, which includes updates for 2022 data. The Department considers a key category of individuals affected by this final rule those who have the potential to become pregnant because pregnancies may occur and result in a need for reproductive health care nationwide. Pregnancy, concern about potential pregnancy, and the need for reproductive health care do not recognize state boundaries or regulatory timelines.

Commenters recommended data points above and below the Department's proposed estimate of 74 million affected individuals. We believe that the number of affected individuals is far greater than the total who are survivors of sexual assault or sex trafficking (as recommended by a commenter), yet less than the number of all individuals who have ever been of childbearing age and their family members (as recommended by another commenter). We recognize that the age range for the proposed estimate of females, 10-44, imperfectly reflects the number of females of childbearing age; however, the number of females over age 44 who could become pregnant may be offset by the number of females aged 10-13 who are not yet capable of childbearing.

We use the number of females of potentially childbearing age as a proxy for the number of individuals affected by the final rule as shown in Table 5 below.

Table 5—Estimated Number of Individuals Affected

Females of potentially childbearing age [428]	Population estimate
10 to 14 years	10,327,799
15 to 19 years	10,618,136
20 to 24 years	10,957,463
25 to 29 years	10,762,368
30 to 34 years	11,440,546
35 to 39 years	11,013,337
40 to 44 years	10,771,942
Total	75,891,591

3. Costs of the Rule

Below, the Department provides the basis for its estimated quantifiable costs resulting from the changes to specific provisions of the Privacy Rule. Many of the estimates are based on assumptions formed through the Office for Civil Rights' (OCR's) experience with its compliance and enforcement program and accounts from stakeholders received at outreach events. The Department has quantified recurring burdens for this final rule for obtaining an attestation from a person requesting the use or disclosure of PHI potentially related to reproductive health care for health oversight activities, judicial and administrative proceedings, law enforcement purposes, and about decedents to coroners or medical examiners.

The Department requested information or data points from commenters to further refine its estimates and assumptions. We examine the most substantive comments received in the cost section below. Additionally, we received comments that are also discussed below on topics that are not directly addressed in the cost section.

A commenter asserted that the Department did not account for the additional costs associated with major depressive disorders that would arise from the increase in abortions due to the rule. The Department does not believe that is a valid benchmark for the effects of this final rule, in part because we reject the premise, which is not backed by medical evidence or data, that this final rule will result in an increase in pregnancy terminations or depression.[FN429] Further, researchers have raised numerous concerns about the methodology of the 2011 study cited in ***33054** the comment.[FN430] Accordingly, we are not including the costs associated with treatment of depression in the cost section.

a. Costs Associated With Requests for Exception From Preemption

The Department anticipates that states with laws that restrict access to reproductive health care are likely to seek an exception to the requirements of this final rule that preempt state law. Given the pace at which state laws governing access to reproductive health care are changing, the Department is finalizing its proposed estimate that a potential increase of 26 states [FN431] will incur costs to develop a request to except a provision of state law from HIPAA's general preemption authority to submit to the Secretary.[FN432] Based on existing burden estimates for this activity,[FN433] the Department is finalizing its estimate that each exception request will require approximately 16 hours of labor at the rate of a general health care practitioner and that

approximately 26 states will make such requests. Thus, the Department estimates that states will spend a total of 416 hours requesting exception from preemption and monetize this as a one-time cost of $38,705 [= 16 x 26 x $93.04].

b. Estimated Costs From Adding a Requirement for an Attestation for Disclosures for Certain Purposes

Multiple commenters asserted that the projected attestation cost in the proposed rule was incorrect and underestimated the true cost of implementing the proposed requirement. One commenter asserted that the proposed rule underestimated the time to review medical records for PHI about reproductive health care and recommended that it be increased significantly. The same commenter also suggested that the Department adopt a requirement to obtain an individual's authorization, instead of an attestation, because it would reduce costs. Other commenters asserted that the proposed cost estimates for the attestation requirement did not account for associated administrative burdens, urged the Department to require an attestation for every request for PHI to decrease overall costs by establishing a procedural norm, or requested that the Department provide grants and trainings to regulated entities to offset the costs of the attestation provision. Finally, another commenter requested that the Department release a model attestation form to decrease the cost burden for covered entities.

A few commenters asserted that the Department mis-identified the types of staff that would performing specific components of the attestation requirement. One posited that both a lawyer and a medical professional would need to review medical records for the use or disclosure of PHI in response to the proposed revisions to the Privacy Rule. Another asserted that the person reviewing PHI in response to a request for the use or disclosure of PHI would be a medical records clerk.

The Department has modified the attestation requirement in response to public comments. As discussed above, this final rule requires regulated entities to obtain an attestation that the request for the use or disclosure of PHI is not for a purpose prohibited by 45 CFR 164.502(a)(5)(iii) when the request is for certain purposes (health oversight activities, judicial and administrative proceedings, law enforcement purposes, and about decedents to coroners and medical examiners) and is for PHI potentially related to reproductive health care. Where the request is for a purpose that implicates 45 CFR 164.502(a)(5)(iii) and the reproductive health care was provided by someone other than the regulated entity that received the request, such health care is presumed lawful under the circumstances in which it was provided unless the conditions of 45 CFR 164.502(a)(5)(iii)(C) are met. We expect the presumption of lawfulness to lower the burden for regulated entities to process requests for the use or disclosure of PHI for which an attestation is required; however, we also acknowledge that the proposed estimate did not fully represent the number of likely requests for the use or disclosure of PHI. The Department declines to require a valid authorization for these requests, as opposed to an attestation, and no grants to offset costs will be needed because of the lower estimated burden per request. The revised cost estimates include review of each request for the use or disclosure of PHI for health oversight activities, judicial and administrative proceedings, law enforcement purposes, and about decedents to coroners and medical examiners, to determine if an attestation has been provided and administrative burdens associated with obtaining the attestation.

This final rule necessitates that regulated entities establish a process for responding to requests for the use or disclosure of PHI for which an attestation is required, such as reviewing and screening requests that are not accompanied by a valid authorization and are not a right of access request. We anticipate that across all regulated entities, this final rule will result in approximately 2,794,201 requests that regulated entities need to review in connection with the permissions under 45 CFR 164.512(d)-(g)(1). The Department estimates 5 minutes of average processing time per attestation based on the average wage of a mix of several occupations: medical and health services managers, medical records specialists, and health practitioners.[FN434] For example, a medical records specialist may forward certain requests for the use or disclosure of PHI (for health oversight activities, judicial and administrative proceedings, law enforcement purposes, and about decedents to coroners and medical examiners) to a manager to review whether the request pertains to the lawfulness of reproductive health care. A health practitioner may review a number of records subject to a request for whether they contain PHI potentially related to reproductive health care. We calculate the annual cost for initial processing of the estimated 2,794,201 requests requiring attestations to total $20,585,500 [2,794,201 x (5/60) x $88.41]. For almost all of these requests, we believe that a brief review will be sufficient for a regulated entity to make a final disclosure determination.

For a small number of these requests, approximately 1,300, we assume that the brief review will not be sufficient; we assume that these requests will require legal review. This figure is an estimate of the number of requests that are generated to investigate or impose liability on a person for the mere act of seeking or obtaining lawful reproductive health care, including from a health care ***33055** provider in a state other than the state where the regulated entity is located. The Department's estimate assumes that approximately 26 states may seek to restrict access to out-of-state reproductive health care, including reproductive health care that is lawful under the circumstances in which it provided, and will initiate an average of 50 such requests annually. The Department estimates on average 1 hour of review for such requests based on the wage of a lawyer.[FN435] We calculate the annual legal review cost for the estimated 1,300 requests totals $204,724 [1,300 x 1 x $157.48]. This additional review increases the cost of processing attestations to $20,790,224.

We anticipate that approximately one-quarter of requests that result in legal reviews, approximately 325, will require additional managerial review by the regulated entity before making a disclosure decision. The Department estimates on average 3 hours of additional review for each of these requests based on the wage of medical and health insurance managers.[FN436] We calculate a total cost for additional actions for these requests of $119,984 [325 x 3 x $123.06]. The total annual estimated cost of processing attestations, including all additional legal and managerial reviews, is $20,910,207.

Upon consideration of the estimated cost for regulated entities to create a new attestation form, the Department is planning to develop a model form to be available prior to the compliance date of this final rule. This will save an estimated total of $60,970,823 [= 774,331 x (30/60) x $157.48], based on 30 minutes of labor by a lawyer.

c. Costs Arising From Revised Business Associate Agreements

The Department anticipates that a certain percentage of business associate agreements will likely need to be updated to reflect a determination made by parties about their respective responsibilities when either party receives requests for disclosures of PHI under 45 CFR 164.512(d), (e), (f), or (g)(1). For example, each of the parties to the business associate agreement may need to notify the other party when they have knowledge that a request is for an unlawful purpose and allocate their respective responsibilities for handling these less frequent requests. The Department is finalizing its proposed estimate that each new or significantly modified contract between a business associate and its subcontractors will require, on average, one hour of labor by a lawyer at the wage reported in Table 3. We believe that approximately 35 percent of 1 million business associates, or 350,000 entities, will decide to create or significantly modify subcontracts, resulting in total costs of $55,118,000 [= 350,000 x $157.48].

A few commenters asserted that the Department's estimates for business associates' costs were incorrect and that it should consider additional costs. A commenter recommended that the Department adopt a non-enforcement period to allow business associates to achieve compliance and limit legal costs. Another commenter stated that the Department did not adequately identify the costs that would be associated with increased legal scrutiny of business associates as a result of the proposed rule. And another commenter urged the Department to consider the additional costs for renegotiated contracts as a result of the proposed rule. Lastly, a commenter requested that the Department apply the attestation requirement to business associates because it would reduce the costs of the rule.

The Department has reviewed the comments and is adopting the 2023 Privacy Rule NPRM cost analysis in this final rule. Business associate costs are adequately captured by the estimate for revising agreements. Applying costs directly to business associates (as opposed to covered entities) is distributional and will not alter the total impact of the rule. The Department declines to create an additional non-enforcement period for this provision of the final rule beyond the 180 days from the date of publication for the final rule to the compliance date.[FN437] The estimated cost for responding to requests for PHI for which an attestation is required accounts for increased scrutiny of a small number of requests for PHI, and the estimated costs for updating business associate agreements accounts for renegotiation of an average of one release of information vendor contract for nearly half of all covered entities.

d. Costs Arising From Changes to the Notice of Privacy Practices

The final rule modifies the NPP to notify individuals that covered entities cannot use or disclose PHI for certain purposes and that in certain circumstances, covered entities must obtain an attestation from a person requesting the PHI that affirms that the use or disclosure is not for a purpose prohibited under 45 CFR 164.502(a)(5)(iii). The final rule also modifies the NPP to align with changes proposed in the 2022 Part 2 NPRM. This includes requiring covered entities that create or maintain Part 2 records to provide a notice that: addresses such records; references Part 2 as "other applicable law" that is more stringent than the Privacy Rule; explains that covered entities may not use or disclose a Part 2 record in a civil, criminal, administrative, or legislative proceeding against the individual absent written consent from the individual or a court order; and clarifies the applicability of Part 2 for organized health care arrangements that hold Part 2 records. Additionally, the final rule further modifies language for fundraising by covered entities that use or disclose Part 2 records to require a clear and conspicuous opt-out opportunity for patients. Finally, the modifications require the NPP to explain that PHI disclosed to a person other than a regulated entity is no longer subject to the requirements of the Privacy Rule.

The Department believes the burden associated with revising the NPP consists of costs related to developing and drafting the revised NPP for covered entities. The Department estimates that the updating and revising the language in the NPP will require 50 minutes of professional legal services at the wage reported in Table 3. Across all covered entities, the Department estimates a cost of $101,618,038 [= 774,331 x (50/60) x $157.48]. The Department does not anticipate any new costs for health care providers associated with distribution of the revised notice other than posting it on the entity's website (if it has one) because health care providers have an ongoing obligation to provide the notice to first-time patients that is already accounted for in cost estimates for the HIPAA Rules. Health plans that post their NPP online will incur minimal costs by posting the updated notice and then including the updated NPP in the next annual mailing to subscribers.[FN438] Health plans that do not provide an annual mailing will potentially incur an additional $12,743,700 in capital expenses for mailing the revised NPP to an estimated 10 percent of the 150,000,000 health plan subscribers who receive a mailed, paper copy of the notice, as well as the labor expense for an administrative support staff member at the rate shown in Table 3 to complete the mailing, for approximately $2,737,500 [= 62,500 hours x $43.80]. The Department further estimates the cost of posting the revised NPP on the ***33056** covered entity's website will be 15 minutes of a web designer's time at the wage reported in Table 3. Across all covered entities, the Department estimates a cost of online posting as $18,936,265 [= 774,331 x (15/60) x $97.82].

A commenter expressed concern that the Department was underestimating the cost of mailing updates associated with changes to NPP policies.

The Department is already accounting for the cost of mailing updated NPPs within the estimated capital costs, which include printing copies of NPPs that are provided in person and those that are mailed, and postage for health plans that will need to conduct a mailing that is off-cycle from its regular schedule. We estimate that half of NPPs will need to be mailed and that health plans may include the updated NPP with their next regular mailing to individuals.

e. Estimated Costs for Developing New or Modified Policies and Procedures

The Department anticipates that covered entities will need to develop new or modified policies and procedures for the new requirements for attestations, the new category of prohibited uses and disclosures, modifications to certain uses and disclosures permitted under 45 CFR 164.512, and clarification of personal representative qualifications. The Department is finalizing its proposed estimate that the costs associated with developing such policies and procedures will be the labor of a lawyer for 2.5 hours and that this expense represents the largest area of cost for compliance with this final rule, for a total of $304,854,115 [= 774,331 x 2.5 x $157.48].

A few commenters stated that the estimate for covered entities to draft new policies was incorrect and provided additional information or alternatives to reduce costs. A commenter stated that the time burden for drafting new policies was insufficient and did not accurately represent the amount of time it would take a covered entity to draft a policy that complied with the proposed rule. Another commenter urged the Department to include the costs for organizations to update their privacy policies because of the proposed rule. A few commenters requested that the Department provide organizations with additional time to develop new policies that comply with the final rule.

The Department considered the concerns raised by commenters about the burdens of the requirements to revise the Privacy Rule and made several additional modifications in this final rule to reduce burdens on regulated entities. For example, regulated entities are not required to develop policies to routinely evaluate whether reproductive health care that was provided by someone else was lawful. Instead, regulated entities will need to develop policies to ensure that regulated entities identify requests for health oversight activities, judicial and administrative proceedings, law enforcement purposes, and about decedents to coroners or medical examiners and procedures for obtaining the required attestation if it is not provided with the request for the use or disclosure of PHI. Additional policies will be required to address requests for the above purposes that could result in a prohibited use or disclosure, such as requests from law enforcement for the use or disclosure of PHI that assert, without any other information, that reproductive health care was provided unlawfully. The updating of privacy policies is included in the overall cost of updating policies and the estimate for updating the NPP. Because of changes in the final rule that simplify compliance with the new requirements, the Department is not adjusting the time burden for revising or creating new policies and procedures.

f. Costs Associated With Training Workforce Members

The Department anticipates that covered entities will be able to incorporate new content into existing HIPAA training requirements and that the costs associated with doing so will be attributed to the labor of a training specialist for an estimated 90 minutes for a total of $78,029,335 [= 774,331 x (90/60) x $67.18].

A few commenters addressed training costs within the proposed rule, including one who asserted that such costs could be reduced by ensuring that the effective date for all of the provisions of the rule is the same. Another commenter stated that covered entities would incur both a one time and yearly training cost, with the yearly training cost accounting for most of the total training cost in year 1.

The Department is finalizing the cost estimate for training workforce members as proposed, which includes the cost of a training a specialist to update the covered entity's HIPAA training program with new content to include in training for workforce members within the first year. Any further recurring component is likely to be implemented into regularly scheduled employee training and will thus not be directly attributable to this rule.

g. Total Quantifiable Costs

The Department summarizes in Table 6 the estimated nonrecurring costs that covered entities and states will experience in the first year of implementing the regulatory changes. The Department anticipates that these costs will be for requesting exceptions from preemption of contrary state law, implementing the attestation requirement, revising business associate agreements, revising the NPP, mailing and posting it online, revising policies and procedures, and updating HIPAA training programs.

Table 6—New Nonrecurring Costs of Compliance With the Final Rule

Nonrecurring costs	Burden hours/ action x hourly wage	Respondents	Total costs (millions)
Exception Requests	16 x $93.04	26 States	$0.04
BA Agreements, Revising	1 x $157.48	350,000 BAAs	55
NPP, Updating	50/60 x $157.48	774,331 Covered entities	102

NPP, Mailing	0.25/60 x $43.80	15,000,000 Subscribers	3
NPP, Posting Online	15/60 x $97.82	774,331 Covered entities	19
Policies & Procedures	150/60 x $157.48	774,331 Covered entities	305
Training	90/60 x $67.18	774,331 Covered entities	78
Capital Expenses, Mailing NPPs—Health Plans	$.85/NPP	15,000,000 Subscribers	13
Total Nonrecurring Burden		..... [a]	574

***33057** Table 7 summarizes the recurring costs that the Department anticipates covered entities will incur annually as a result of the regulatory changes. These new costs are based on responding to requests for uses and disclosures of PHI that are conditioned upon an attestation.

Table 7—Recurring Annual Costs of Compliance With the Final Rule [a]

Recurring costs	Burden hours x wage	Respondents	Total annual cost (millions)
Disclosures for which an attestation is required	232,850 x $88.41	2,794,201	$20,585,500
Attestation investigation review	1,300 x $157.48	1,300	204,724
Attestation additional actions	975 x 123.06	325	119,984
Total Recurring Annual Burden		.....	20,910,207

Costs Borne by the Department

The covered entities that are operated by the Department will be affected by the changes in a similar manner to other covered entities, and such costs have been factored into the estimates above.

The Department expects that it will incur costs related to drafting and disseminating a model attestation form and information about the regulatory changes to covered entities, including health care providers and health plans. In addition, the Department anticipates that it may incur a 26-fold increase in the number of requests for exceptions from preemption of contrary state law in the first year after a final rule becomes effective, at an estimated total cost of approximately $146,319 to analyze and develop responses for an average cost of $7,410 per request. This increase is based on the number of states that have enacted or are likely to enact laws restricting access to reproductive health care [FN439] and may seek to obtain individuals' PHI to enforce those laws. This estimate assumes that the Department receives and reviews exception requests from the 26 states, that half require a more complex analysis, and that all requests result in a written response within one year of the final rule's publication.

Benefits of the Final Rule

The benefits of this final rule to individuals and families are likely substantial, and yet are not fully quantifiable because the area of health care this final rule addresses is among the most sensitive and life-altering if privacy is violated. Additionally, the value of privacy, which cannot be recovered once lost, and trust that privacy will be protected by others, is difficult to quantify fully. Health privacy has many significant benefits, such as promoting effective communication between individuals and health care

providers, preventing discrimination, enhancing autonomy, supporting medical research, and protecting the individual from unwanted exposure of sensitive health information.[FN440]

Notably, reproductive health care may include circumstances resulting in a pregnancy, considerations concerning maternal and fetal health, family genetic conditions, information concerning sexually transmitted infections, and the relationship between prospective parents (including victimization due to rape, incest, or sex trafficking). Involuntary or poorly-timed disclosures can irreparably harm relationships and reputations, and even result in job loss or other negative consequences in the workplace, [FN441] as well as investigation, civil litigation or proceedings, and prosecution for lawful activities.[FN442] Additionally, fear of potential penalties or liability that may result from disclosing information to a health care provider about accessing reproductive health care may cast a long shadow, decreasing trust between individuals and health care providers, discouraging and deterring access to other valuable and necessary health care, or compromising ongoing or subsequent care if an individual's medical records are not accurate or complete.[FN443] This final rule will prevent or reduce the harms discussed here, resulting in non-quantifiable benefits to individuals and their families, friends, and health care providers. In particular, the role of trust in the health care system and its importance to the provision of high-quality health care is discussed extensively in Section III of this preamble.

The Department anticipates that this final rule will increase health literacy by improving access to complete information about health care options for individuals.[FN444] For example, the prohibition on the use and disclosure of PHI for purposes of investigating or imposing liability on an individual, a person assisting them, or their health care provider for lawful health care will increase individuals' access to complete information about their health care options because they will have increased confidence to share information about their life, including their health, with health care providers. In turn, the receipt of more complete information from patients will enable ***33058** health care providers to provide more accurate and relevant medical information about lawful reproductive health care, and the new prohibition will enable them to do so without fear of serious and costly professional repercussions.

This final rule will also contribute to increased access to prenatal health care at the critical early stages of pregnancy by affording individuals the assurance that they may obtain lawful reproductive health care without fearing that records related to that care would be subject to disclosure. For example, if a sexually active individual fears they or their health care providers could be subject to prosecution as a result of disclosure of their PHI, the individual may avoid informing health care providers about symptoms or asking questions of medical experts and may consequently fail to receive necessary support and health care for a pregnancy diagnosis.[FN445] Similarly, this final rule will likely contribute to a decreased rate of maternal mortality and morbidity by improving access to information about health services.[FN446]

Additionally, this final rule will enhance the mental health and emotional well-being of individuals seeking or obtaining lawful reproductive health care by reducing fear that their PHI will be disclosed to investigate or impose liability on the individual, their health care provider, or any persons facilitating the individual's access to lawful reproductive health care. This is especially important for individuals who need access to reproductive health care because they are survivors of rape, incest, or sex trafficking. For at least some such individuals, certain types of reproductive health care, including abortion, often remain legal even if pregnancy termination is not available to the broader population under state law. The Department expects that this final rule will help to prevent or reduce re-victimization of pregnant individuals who have been subject to rape, incest, or sex trafficking by protecting their PHI from disclosure.

Activities conducted to investigate and impose liability that rely on that information may be costly to defend against and thus are financially draining for the target of those activities and for persons who are not the target of the activity but whose information may be used as evidence against others. Witnesses or targets of such activities may lose time from work and incur steep legal bills that create unmanageable debt or otherwise harm the economic stability of the individual, their family, and their health care provider. In the absence of this final rule, much of the costs may be for defending against the unwanted use or disclosure of PHI. Thus, the Department expects that this final rule will contribute to families' economic well-being by reducing the risk of exposure to costly activities to investigate or impose liability on persons for lawful activities as a result of disclosures of PHI.

This final rule will also contribute to improved continuity of care and ongoing and subsequent health care for individuals, thereby improving health outcomes. If a health care provider believes that PHI is likely to be disclosed without the individual's or the health care provider's knowledge or consent, possibly to initiate or be used in criminal or civil proceedings against the individual, their health care provider, or others, the health care provider is more likely to omit information about an individual's medical history or condition, leave gaps, or include inaccuracies when preparing the individual's medical records. And if an individual's medical records lack complete information about the individual's health history, a subsequent health care provider may not be able to conduct an appropriate health assessment to reach a sound diagnosis and recommend the best course of action for the individual. Alternatively, health care providers may withhold from the individual full and complete information about their treatment options because of liability concerns stemming from fears about the privacy of an individual's PHI.[FN447] Heightened confidentiality and privacy protections enable a health care provider to feel confident maintaining full and complete patient records. Without complete patient records, an individual is less likely to receive appropriate ongoing or future health care, including correct diagnoses, and will be impeded in making informed treatment decisions.

Comparison of Benefits and Costs

A few commenters stated that the 2023 Privacy Rule NPRM reflected the staffing costs of covered entities in full. One posited that covered entities will receive more requests for PHI because of changes in the legal environment after Dobbs, which will require some regulated entities that may not typically get such requests to adjust according to the changes in the law and how it is enforced. Another commenter stated that the proposed rule did not account for higher staffing costs from more highly qualified employees. The commenters did not provide any relevant data or discussion of methodology for how these costs should be quantified. Therefore, the Department did not include any additional labor costs in the economic analysis based on this comment.

A few additional commenters expressed general concerns related to electronic health record (EHR) systems and data storage. One urged the Department to include costs associated with updating EHR systems to ensure compliance and to allow for data segmentation. Another asserted that the current classifications for different types of PHI are not clear enough for effective data segmentation, contributing to increased costs. As a result, they recommended that the Department provide clearer guidelines on the different types of PHI. The Department did not attempt to estimate additional data maintenance or EHR-related costs because any adjustments will be part of the regular cost of business for regulated entities.

A commenter stated that the Department did not quantify the costs associated with violations of the rule by regulated entities, such as incurring a monetary penalty after impermissibly responding to a court order. The Department does not quantify the costs of noncompliance as part of its analysis. Whether a violation will result in a monetary penalty is dependent on numerous factors and the aim of the Department's enforcement is to bring regulated entities into compliance.

A few commenters asserted that the proposed rule would make it more difficult for law enforcement to investigate criminals for crimes related to sex and recommended that the Department quantify this cost. The Department acknowledges that the final rule may result in some changes to procedures for handling law enforcement requests for PHI; however, the burden on regulated entities is calculated in its cost estimates. The Department is unable to quantify the burdens to law enforcement resulting from this final rule. However, to address concerns about victims' ability to disclose their PHI related to reproductive health care, the final rule ***33059** permits individuals to authorize disclosures for any purpose, including law enforcement investigations. Therefore, the Department is not including costs to law enforcement in the quantified costs and benefits analysis. The Department expects the totality of the benefits of this final rule to outweigh the costs, particularly in light of the privacy benefits for individuals who could become pregnant (nearly one-fourth of the U.S. population in any given year) and seek access to lawful health care without the risk of their PHI being used or disclosed in furtherance of activities to conduct criminal, civil, or administrative investigations or impose liability without their authorization. The Department expects covered entities and individuals to benefit from covered entities' increased confidence to be able to provide lawful health care according to professional standards.

The Department's qualitative benefit-cost analysis asserts that the regulatory changes in this final rule will support an individual's privacy with respect to lawful health care, enhance the relationship between health care providers and individuals, strengthen maternal well-being and family stability, and support victims of rape, incest, and sex trafficking. The regulatory changes will also aid health care providers in developing and maintaining a high level of trust with individuals and maintaining complete and accurate medical records to aid ongoing and subsequent health care. Greater levels of trust will further enable individuals to develop and maintain relationships with health care providers, which would enhance continuity of health care for all individuals receiving care from the health care provider, not only individuals in need of reproductive health care.

The financial costs of this final rule will accrue primarily to covered entities, particularly health care providers and health plans in the first year after implementation of a final rule, with recurring costs accruing annually at a lower rate.

B. Regulatory Alternatives to the Final Rule

In addition to regulatory proposals in the 2023 Privacy Rule NPRM that are not adopted here, the Department considered several alternatives to the policies finalized in this rule.

Define Public Health in the Context of Public Health Surveillance, Intervention, or Investigation

The Department considered alternatives to the proposed definition of "public health" in the context of public health surveillance, investigation, and intervention, particularly the reference to population-level activities. Specifically, the Department considered whether to add "individual-level" to further distinguish public health surveillance, investigation, and intervention from other activities but did not adopt this approach because it would add a new undefined term that would generate more complexity without adding clarity. The Department also considered removing "population-level" from the definition in this final rule, but we are not adopting that approach because it might lead people to believe that the focus of public health is not on activities benefiting the population as a whole. Additionally, the Department considered defining "public health" surveillance, investigation, or intervention only in the negative—that is, by listing activities that are excluded—but decided not to adopt this approach to ensure that stakeholders understand what public health surveillance, investigation, or intervention means.

Modify Prohibition To Presume That Reproductive Health Care Is Lawful Absent Actual Knowledge

The Department considered adding a provision that would allow regulated entities to presume that certain requests for PHI are about reproductive health care that was lawful under the circumstances in which such health care was provided where it was provided by someone other than the regulated entity receiving the PHI request, unless the regulated entity had actual knowledge that such health care was not lawful under the circumstances in which it was provided. However, in consultation with Federal partners, the Department decided to finalize a second exception to the presumption to permit uses or disclosures of PHI where privacy interests are reduced, as compared to the societal interest in the PHI for certain non-health care purposes. This exception is available where factual information supplied by the person requesting the use or disclosure of PHI demonstrates to the regulated entity a substantial factual basis that the reproductive health care was not lawful under the specific circumstances in which such health care was provided.

Administrative Requests by Law Enforcement

The Department received reports that not all regulated entities are interpreting the administrative request provision correctly and proposed a clarification to 45 CFR 164.512(f)(1)(ii)(C). To address concerns that disclosures currently made under Federal agencies' interpretations of the Privacy Act of 1974 [FN448] would not be permitted under the NPRM proposal, the Department considered adding qualifying language to paragraph 45 CFR 164.512(f)(1)(ii)(C) to state that PHI may be disclosed by a Federal agency in response to an administrative request from law enforcement where the Federal agency is authorized, but not required, to disclose under applicable law (see, e.g., the Privacy Act and OMB 1975 Guidelines [FN449]). However, the Department determined that the contemplated change was not necessary because the intent of the Privacy Rule was adequately captured in the clarification proposed in the NPRM and finalized in this rule at 45 CFR 164.512(f)(1)(ii)(C). As finalized, this provision

permits disclosures to law enforcement in response to "an administrative request for which response is required by law, including an administrative subpoena or summons, a civil or an authorized investigative demand, or similar process authorized under law."

Scope of Prohibited Conduct

In response to public comments on the 2023 Privacy Rule NPRM, the Department considered several approaches to outlining prohibited conduct. One approach was creating a category of "highly sensitive PHI" and prohibiting its use and disclosure in certain proceedings based on the mere act of, for example, obtaining, providing, or aiding that category of health care. The Department did not adopt this category based on many concerns expressed in public comments. For example, distinguishing between the sensitivity of different types of PHI would require complicated subjective determinations, and prohibiting or limiting uses or disclosures of highly sensitive PHI for certain purposes could negatively affect efforts to eliminate data segmentation and further stigmatize the types of health care included in the "highly sensitive" category.

Another approach the Department considered was to require an attestation for all requested uses and discloses of PHI under 45 CFR 164.512(d)-(g)(1), rather than limiting the requirement to only requested uses and disclosures of PHI potentially related to reproductive health care under such provisions. This would have reduced the burden on ***33060** regulated entities to screen requested PHI for whether it contained information potentially related to reproductive health care and increased the burden on persons requesting PHI to evaluate and attest to all requests for use and disclosure of PHI under 45 CFR 164.512(d)-(g)(1). However, in recognition of the importance of oversight and law enforcement entities' ability to obtain PHI for legitimate inquiries, the Department decided not to require an attestation for all requests under these provisions.

Requiring an Attestation Under Penalty of Perjury

The Department requested comments about the possibility of adding a required penalty of perjury statement to strengthen the attestation requirement but did not propose this statement in the 2023 Privacy Rule NPRM. After reviewing public comments on this topic, the Department considered adding a requirement that the attestation be signed by the person requesting the use or disclosure of PHI under penalty of perjury but did not adopt such a requirement in the final rule. As discussed in greater detail above, a person who knowingly and in violation of the Administrative Simplification provisions of HIPAA obtains or discloses IIHI relating to another individual or discloses IIHI to another person is subject to criminal liability.[FN450] Thus, a person who knowingly and in violation of HIPAA [FN451] falsifies an attestation (e.g., makes material misrepresentations about the intended uses of the PHI requested) to obtain (or cause to be disclosed) an individual's IIHI could be subject to criminal penalties as outlined in the statute. The Department believes such penalties are sufficient to hold persons who knowingly submit false attestations accountable for their actions and deter such submissions entirely.

Right To Request Restrictions

In the 2023 Privacy Rule NPRM, the Department requested comments regarding the right of individuals to request restrictions of uses and disclosures of their PHI. We did not propose any changes to this provision in the 2023 Privacy Rule NPRM, nor are we proposing or finalizing any modifications to it at this time. We appreciate the comments we received regarding expanding the rights to request disclosures and will take them under advisement when we consider future modifications to the Privacy Rule.

C. Regulatory Flexibility Act—Small Entity Analysis

The Department has examined the economic implications of this final rule as required by the RFA. If a rule has a significant economic impact on a substantial number of small entities, the RFA requires agencies to analyze regulatory options that would reduce the economic effect of the rule on small entities.

For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. The Act defines "small entities" as (1) a proprietary firm meeting the size standards of the Small Business Administration (SBA), (2) a nonprofit organization that is not dominant in its field, and (3) a small government jurisdiction of less than 50,000

population. A few commenters raised concerns about the effects of the proposed rule on small or rural providers and requested additional analysis, guidance, or technical assistance from the Department to aid these entities. The Department did not receive any public comments on the small business analysis assumptions used in the NPRM. Accordingly, we are not changing the baseline assumptions for this final rule. We have updated our analysis of small entities for consistency with revisions to the RIA for the costs and savings for covered entities. The Department has determined that roughly 90 percent or more of all health care providers meet the SBA size standard for a small business or are a nonprofit organization. Therefore, the Department estimates that there are 696,898 small entities affected by the final rule.[FN452] The SBA size standard for health care providers ranges between a maximum of $16 million and $47 million in annual receipts, depending upon the type of entity.[FN453]

With respect to health insurers, the SBA size standard is a maximum of $47 million in annual receipts, and for third party administrators it is $45.5 million.[FN454] While some insurers are classified as nonprofit, it is possible they are dominant in their market. For example, a number of Blue Cross/Blue Shield insurers are organized as nonprofit entities; yet they dominate the health insurance market in the states where they are licensed.[FN455]

For the reasons stated below, we do not expect that the cost of compliance will be significant for small entities. Nor do we expect that the cost of compliance will fall disproportionately on small entities. Although many of the covered entities affected by this final rule are small entities, they will not bear a disproportionate cost burden compared to the other entities subject to the rule. The projected total costs are discussed in detail in the RIA. The Department does not view this as a substantial burden because the result of the changes will be annualized costs per covered entity of approximately $184 [= $142.6 million [FN456]/774,331 covered entities]. In the context of the RFA, HHS generally considers an economic impact exceeding 3 percent of annual revenue to be significant, and 5 percent or more of the affected small entities within an identified industry to represent a substantial number. The quantified impact of $184 per covered entity would only apply to covered entities whose annual revenue is $6,133 or less. We believe almost all, if not all covered entities have annual revenues that exceed this amount. Accordingly, the Department has determined that this final rule is unlikely to affect a substantial number of small entities that meet the RFA threshold. Thus, this analysis concludes, and the Secretary certifies, that the rule will not result in a significant economic effect on a substantial number of small entities.

D. Executive Order 13132—Federalism

As required by E.O. 13132 on Federalism, the Department has examined the provisions in both the proposed and final regulation for their effects on the relationship between the Federal Government and the states. In the Department's view, the final regulation may have federalism implications because it may have direct effects on the states, the relationship between the Federal Government and states, and on the distribution of power and responsibilities among various ***33061** levels of government relating to the disclosure of PHI.

The changes from this final rule flow from and are consistent with the underlying statute, which authorizes the Secretary to issue regulations that govern the privacy of PHI. The statute provides that, with limited exceptions, such regulations supersede contrary provisions of state law unless the provision of state law imposes more stringent privacy protections than the Federal law.[FN457]

Section 3(b) of E.O. 13132 recognizes that national action limiting the policymaking discretion of states will be imposed only where there is constitutional and statutory authority for the action and the national activity is appropriate when considering a problem of national significance. The privacy of PHI is of national concern by virtue of the scope of interstate health commerce. As described in the preamble to the proposed rule and this final rule, recent state actions affecting reproductive health care have undermined the longstanding expectation among individuals in all states that their highly sensitive reproductive health information will remain private and not be used against them for seeking or obtaining legal health care. These state actions thus directly threaten the trust that is essential to ensuring access to, and quality of, lawful health care. HIPAA's provisions reflect this position by authorizing the Secretary to promulgate regulations to implement the Privacy Rule.

Section 4(a) of E.O. 13132 expressly contemplates preemption when there is a conflict between exercising state and Federal authority under a Federal statute. Section 4(b) of the E.O. authorizes preemption of state law in the Federal rulemaking context when "the exercise of State authority directly conflicts with the exercise of Federal authority under the Federal statute." The approach in this regulation is consistent with the standards in the E.O. because it supersedes state authority only when such authority is inconsistent with standards established pursuant to the grant of Federal authority under the statute.

State and local laws that impinge on the privacy protections for PHI of individuals who obtain lawful reproductive health care undermine Congress' directive to develop a health information system for the purpose of improving the effectiveness of the health care system, which requires that all individuals who receive health care legally are assured a minimum level of privacy for their PHI. Congress established specific, narrow exceptions to preemption that did not include the use or disclosure of an individual's medical records for law enforcement purposes generally. Nor did Congress include a specific exception to preemption that would permit states to use PHI against that individual, health care providers, or third parties merely for seeking, obtaining, providing, or facilitating lawful health care.[FN458] Both the personal and public interest is served by protecting PHI so as not to undermine an individual's access to and quality of lawful health care services and their trust in the health care system.

The Department anticipates that the most significant direct costs on state and local governments would be the cost for state and local government-operated covered entities to revise business associate agreements, revise policies and procedures, update the NPP, update training programs, and process requests for disclosures for which an attestation is required. These costs would be similar in kind to those borne by non-government operated covered entities. In addition, the Department anticipates that approximately half of the states may choose to file a request for an exception to preemption. The longstanding regulatory provisions that govern preemption exception requests under the HIPAA Rules would remain undisturbed by this rule.[FN459] However, based on the legal developments in some states that are described elsewhere in this preamble, the Department anticipates that in the first year of implementation of a final rule, more states will submit requests for exceptions from preemption than have done so in the past. The RIA above addresses these costs in detail.

Pursuant to the requirements set forth in section 8(a) of E.O. 13132, and by the signature affixed to the final rule, the Department certifies that it has complied with the requirements of E.O. 13132, including review and consideration of comments from state and local government officials and the public about the interaction of this rule with state activity, for the final rule in a meaningful and timely manner.

E. Assessment of Federal Regulation and Policies on Families

Section 654 of the Treasury and General Government Appropriations Act of 1999 [FN460] requires Federal departments and agencies to determine whether a proposed policy or regulation could affect family well-being. If the determination is affirmative, then the Department or agency must prepare an impact assessment to address criteria specified in the law. This final rule is expected to strengthen the stability of the family and marital commitment because it protects individual privacy in the context of sensitive decisions about family planning. The rule may be carried out only by the Federal Government because it would modify Federal health privacy law, ensuring that American families have confidence in the privacy of their information about lawful reproductive health care, regardless of the state where they are located when health care is provided. Such health care privacy is vital for individuals who may become pregnant or who are capable of becoming pregnant.

F. Paperwork Reduction Act of 1995

Under the Paperwork Reduction Act of 1995 [FN461] (PRA), agencies are required to submit to OMB for review and approval any reporting or record-keeping requirements inherent in a proposed or final rule and are required to publish such proposed requirements for public comment. To fairly evaluate whether an information collection should be approved by the OMB, section 3506(c)(2)(A) of the PRA requires that the Department solicit comment on the following issues:

1. Whether the information collection is necessary and useful to carry out the proper functions of the agency;

2. The accuracy of the agency's estimate of the information collection burden;

3. The quality, utility, and clarity of the information to be collected; and

4. Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

The PRA requires consideration of the time, effort, and financial resources necessary to meet the information collection requirements referenced in this section. The Department considered public comments on its assumptions and burden estimates in the 2023 Privacy Rule NPRM and addresses those comments above in the discussion of benefits and costs of this final rule.

In this RIA, the Department is revising certain information collection requirements associated with this final rule and, as such, is revising the information collection last prepared in ***33062** 2023 and approved under OMB control #0945-0003. The revised information collection describes all new and adjusted information collection requirements for covered entities pursuant to the implementing regulation for HIPAA at 45 CFR parts 160 and 164, the HIPAA Privacy, Security, Breach Notification, and Enforcement Rules ("HIPAA Rules").

The estimated annual labor burden presented by the regulatory modifications in the first year of implementation, including nonrecurring and recurring burdens, is 4,584,224 burden hours at a cost of $582,242,165 [FN462] and $20,910,207 of estimated annual labor costs in years two through five. The overall total burden for respondents to comply with the information collection requirements of all of the HIPAA Privacy, Security, and Breach Notification Rules, including nonrecurring and recurring burdens presented by program changes, is 953,982,236 burden hours at a cost of $107,336,705,941, plus $197,364,010 in capital costs for a total estimated annual burden of $107,534,069,951 in the first year following the effective date of the final rule. Details describing the burden analysis for the proposals associated with this RIA are presented below and explained further in the ICR associated with this final rule.

Explanation of Estimated Annualized Burden Hours

Below is a summary of the significant program changes and adjustments made since the approved 2023 ICR; because the ICR addresses regulatory burdens associated with the full suite of HIPAA Rules, the changes and adjustments include updated data and estimates for some provisions of the HIPAA Rules that are not affected by this final rule. These program changes and adjustments form the bases for the burden estimates presented in the ICR associated with this RIA.

Adjusted Estimated Annual Burdens of Compliance

(1) Increasing the number of covered entities from 700,000 to 774,331 based on program change.

(2) Increasing the number of respondents requesting exceptions to state law preemption from 1 to 27 based on an expected reaction by states that have enacted restrictions on reproductive health care access.

(3) Increasing the burden hours by a factor of two for responding to individuals' requests for restrictions on disclosures of their PHI under 45 CFR 164.522 to represent a doubling of the expected requests.

(4) Updating the number of breaches for which notification is required to reflect data in OCR's 2022 Report to Congress [FN463] and related burdens.

(5) Increasing the number of estimated uses and disclosures for research purposes.

(6) Increasing the total number of NPPs distributed by health plans by 50% to total 300,000,000 due to the increase in number of Americans with health coverage.

New Burdens Resulting from Program Changes

In addition to these changes, the Department added new annual burdens as a result of program changes in the final rule:

(1) A nonrecurring burden of 1 hour for each of 350,000 business associate agreements that is likely to be revised as a result of the changes to handling requests for PHI under 45 CFR 164.512(d), (e), (f), and (g)(1), to allocate responsibilities between covered entities and their release-of-information contractors.

(2) A recurring burden of 5 minutes per request for staff to determine whether an attestation is required for disclosure under 45 CFR 164.509.

(3) A recurring burden of 1 hour per request for legal review of whether certain requests identified by staff as potentially requiring an attestation pertain to the lawfulness of reproductive health care.

(4) A recurring burden of 3 hours per request for a percentage of requests requiring legal review that might require additional manager review to determine whether the requirements at 45 CFR 164.509 are met.

(5) A nonrecurring burden of 50 minutes per covered entity to update the required content of its NPP.

(6) A nonrecurring burden of 15 minutes per covered entity for posting an updated NPP online.

(7) A nonrecurring burden of 2.5 hours for each covered entity to update its policies and procedures.

(8) A nonrecurring burden of 90 minutes for each covered entity to update the content of its HIPAA training program.

List of Subjects

45 CFR Part 160

Health care, Health records, Preemption, Privacy, Public health, Reproductive health care.

45 CFR Part 164

Health care, Health records, Privacy, Public health, Reporting and recordkeeping requirements, Reproductive health care.

For the reasons stated in the preamble, the Department of Health and Human Services amends 45 CFR subtitle A, subchapter C, parts 160 and 164 as set forth below:

PART 160—GENERAL ADMINISTRATIVE REQUIREMENTS

1. The authority citation for part 160 continues to read as follows:

Authority: 42 U.S.C. 1302(a); 42 U.S.C. 1320d-1320d-9; sec. 264, Pub. L. 104-191, 110 Stat. 2033-2034 (42 U.S.C. 1320d-2 (note)); 5 U.S.C. 552; secs. 13400-13424, Pub. L. 111-5, 123 Stat. 258-279; and sec. 1104 of Pub. L. 111-148, 124 Stat. 146-154.

45 CFR § 160.103

2. Amend § 160.103 by:

a. Revising the definition of “Person”; and

b. Adding in alphabetical order the definitions of “Public health” and “Reproductive health care”.

The revision and additions read as follows:
45 CFR § 160.103

§ 160.103 Definitions.
* * * * *
Person means a natural person (meaning a human being who is born alive), trust or estate, partnership, corporation, professional association or corporation, or other entity, public or private.
* * * * *
Public health, as used in the terms "public health surveillance," "public health investigation," and "public health intervention," means population-level activities to prevent disease in and promote the health of populations. Such activities include identifying, monitoring, preventing, or mitigating ongoing or prospective threats to the health or safety of a population, which may involve the collection of protected health information. But such activities do not include those with any of the following purposes:

(1) To conduct a criminal, civil, or administrative investigation into any person for the mere act of seeking, obtaining, providing, or facilitating health care.

(2) To impose criminal, civil, or administrative liability on any person for the mere act of seeking, obtaining, providing, or facilitating health care.

***33063** (3) To identify any person for any of the activities described at paragraphs (1) or (2) of this definition.

Reproductive health care means health care, as defined in this section, that affects the health of an individual in all matters relating to the reproductive system and to its functions and processes. This definition shall not be construed to set forth a standard of care for or regulate what constitutes clinically appropriate reproductive health care.
* * * * *

PART 164—SECURITY AND PRIVACY
3. The authority citation for part 164 continues to read as follows:

Authority: 42 U.S.C. 1302(a); 42 U.S.C. 1320d-1320d-9; sec. 264, Pub. L. 104-191, 110 Stat. 2033-2034 (42 U.S.C. 1320d-2(note)); and secs. 13400-13424, Pub. L. 111-5, 123 Stat. 258-279.
45 CFR § 164.502
4. Amend § 164.502 by

a. Revising paragraph (a)(1)(vi);

b. Adding paragraph (a)(5)(iii); and

c. Revising paragraph (g)(5).

The addition and revisions read as follows:
45 CFR § 164.502

§ 164.502 Uses and disclosures of protected health information: General rules.
(a) * * *

(1) * * *

(vi) As permitted by and in compliance with any of the following:

(A) This section.

(B) Section 164.512 and, where applicable, § 164.509.

(C) Section 164.514(e), (f), or (g).

* * * * *

(5) * * *

(iii) Reproductive health care—(A) Prohibition. Subject to paragraphs (a)(5)(iii)(B) and (C) of this section, a covered entity or business associate may not use or disclose protected health information for any of the following activities:

(1) To conduct a criminal, civil, or administrative investigation into any person for the mere act of seeking, obtaining, providing, or facilitating reproductive health care.

(2) To impose criminal, civil, or administrative liability on any person for the mere act of seeking, obtaining, providing, or facilitating reproductive health care.

(3) To identify any person for any purpose described in paragraphs (a)(5)(iii)(A)(1) or (2) of this section.

(B) Rule of applicability. The prohibition at paragraph (a)(5)(iii)(A) of this section applies only where the relevant activity is in connection with any person seeking, obtaining, providing, or facilitating reproductive health care, and the covered entity or business associate that received the request for protected health information has reasonably determined that one or more of the following conditions exists:

(1) The reproductive health care is lawful under the law of the state in which such health care is provided under the circumstances in which it is provided.

(2) The reproductive health care is protected, required, or authorized by Federal law, including the United States Constitution, under the circumstances in which such health care is provided, regardless of the state in which it is provided.

(3) The presumption at paragraph (a)(5)(iii)(C) of this section applies.

(C) Presumption. The reproductive health care provided by another person is presumed lawful under paragraph (a)(5)(iii)(B)(1) or (2) of this section unless the covered entity or business associate has any of the following:

(1) Actual knowledge that the reproductive health care was not lawful under the circumstances in which it was provided.

(2) Factual information supplied by the person requesting the use or disclosure of protected health information that demonstrates a substantial factual basis that the reproductive health care was not lawful under the specific circumstances in which it was provided.

(D) Scope. For the purposes of this subpart, seeking, obtaining, providing, or facilitating reproductive health care includes, but is not limited to, any of the following: expressing interest in, using, performing, furnishing, paying for, disseminating information about, arranging, insuring, administering, authorizing, providing coverage for, approving, counseling about, assisting, or otherwise taking action to engage in reproductive health care; or attempting any of the same.

* * * * *

(g) * * *

(5) Implementation specification: Abuse, neglect, endangerment situations. Notwithstanding a State law or any requirement of this paragraph to the contrary, a covered entity may elect not to treat a person as the personal representative, provided that the conditions at paragraphs (g)(5)(i) and (ii) of this section are met:

(i) Paragraphs (g)(5)(i)(A) and (B) of this section both apply.

(A) The covered entity has a reasonable belief that any of the following is true:

(1) The individual has been or may be subjected to domestic violence, abuse, or neglect by such person.

(2) Treating such person as the personal representative could endanger the individual.

(B) The covered entity, in the exercise of professional judgment, decides that it is not in the best interest of the individual to treat the person as the individual's personal representative.

(ii) The covered entity does not have a reasonable belief under paragraph (g)(5)(i)(A) of this section if the basis for their belief is the provision or facilitation of reproductive health care by such person for and at the request of the individual.

* * * * *45 CFR § 164.509

5. Add § 164.509 to read as follows:

45 CFR § 164.509

§ 164.509 Uses and disclosures for which an attestation is required.

(a) Standard: Attestations for certain uses and disclosures of protected health information to persons other than covered entities or business associates. (1) A covered entity or business associate may not use or disclose protected health information potentially related to reproductive health care for purposes specified in § 164.512(d), (e), (f), or (g)(1), without obtaining an attestation that is valid under paragraph (b)(1) of this section from the person requesting the use or disclosure and complying with all applicable conditions of this part.

(2) A covered entity or business associate that uses or discloses protected health information potentially related to reproductive health care for purposes specified in § 164.512(d), (e), (f), or (g)(1), in reliance on an attestation that is defective under paragraph (b)(2) of this section, is not in compliance with this section.

(b) Implementation specifications: General requirements—(1) Valid attestations. (i) A valid attestation is a document that meets the requirements of paragraph (c)(1) of this section.

(ii) A valid attestation verifies that the use or disclosure is not otherwise prohibited by § 164.502(a)(5)(iii).

(iii) A valid attestation may be electronic, provided that it meets the requirements in paragraph (c)(1) of this section, as applicable.

(2) Defective attestations. An attestation is not valid if the document submitted has any of the following defects:

(i) The attestation lacks an element or statement required by paragraph (c) of this section.

(ii) The attestation contains an element or statement not required by paragraph (c) of this section

(iii) The attestation violates paragraph (b)(3) of this section.

***33064** (iv) The covered entity or business associate has actual knowledge that material information in the attestation is false.

(v) A reasonable covered entity or business associate in the same position would not believe that the attestation is true with respect to the requirement at paragraph (c)(1)(iv) of this section.

(3) Compound attestation. An attestation may not be combined with any other document except where such other document is needed to satisfy the requirements at paragraph (c)(iv) of this section or at § 164.502(a)(5)(iii)(C), as applicable.

(c) Implementation specifications: Content requirements and other obligations—(1) Required elements. A valid attestation under this section must contain the following elements:

(i) A description of the information requested that identifies the information in a specific fashion, including one of the following:

(A) The name of any individual(s) whose protected health information is sought, if practicable.

(B) If including the name(s) of any individual(s) whose protected health information is sought is not practicable, a description of the class of individuals whose protected health information is sought.

(ii) The name or other specific identification of the person(s), or class of persons, who are requested to make the use or disclosure.

(iii) The name or other specific identification of the person(s), or class of persons, to whom the covered entity is to make the requested use or disclosure.

(iv) A clear statement that the use or disclosure is not for a purpose prohibited under § 164.502(a)(5)(iii).

(v) A statement that a person may be subject to criminal penalties pursuant to 42 U.S.C. 1320d-6 if that person knowingly and in violation of HIPAA obtains individually identifiable health information relating to an individual or discloses individually identifiable health information to another person.

(vi) Signature of the person requesting the protected health information, which may be an electronic signature, and date. If the attestation is signed by a representative of the person requesting the information, a description of such representative's authority to act for the person must also be provided.

(2) Plain language requirement. The attestation must be written in plain language.

(d) Material misrepresentations. If, during the course of using or disclosing protected health information in reasonable reliance on a facially valid attestation, a covered entity or business associate discovers information reasonably showing that any representation made in the attestation was materially false, leading to a use or disclosure for a purpose prohibited under § 164.502(a)(5)(iii), the covered entity or business associate must cease such use or disclosure.

* * * * *45 CFR § 164.512

6. Amend § 164.512 by:

a. Revising the introductory text and the paragraph (c) paragraph heading;

b. Adding paragraph (c)(3); and

c. Revising paragraph (f)(1)(ii)(C) introductory text.

The revisions and addition read as follows:

45 CFR § 164.512

§ 164.512 Uses and disclosures for which an authorization or opportunity to agree or object is not required.

Except as provided by § 164.502(a)(5)(iii), a covered entity may use or disclose protected health information without the written authorization of the individual, as described in § 164.508, or the opportunity for the individual to agree or object as described in § 164.510, in the situations covered by this section, subject to the applicable requirements of this section and § 164.509. When the covered entity is required by this section to inform the individual of, or when the individual may agree to, a use or disclosure permitted by this section, the covered entity's information and the individual's agreement may be given verbally.

* * * * *

(c) Standard: Disclosures about victims of abuse, neglect, or domestic violence—* * *

(3) Rule of construction. Nothing in this section shall be construed to permit disclosures prohibited by § 164.502(a)(5)(iii) when the sole basis of the report of abuse, neglect, or domestic violence is the provision or facilitation of reproductive health care.

* * * * *

(f) * * *

(1) * * *

(ii) * * *

(C) An administrative request for which response is required by law, including an administrative subpoena or summons, a civil or an authorized investigative demand, or similar process authorized under law, provided that:

* * * * *45 CFR § 164.520

7. Amend § 164.520 by:

a. Revising and republish paragraphs (a) and (b); and

b. Adding paragraph (d)(4).

The revisions and additions read as follows:

45 CFR § 164.520

§ 164.520 Notice of privacy practices for protected health information.

* * * * *

(a) Standard: Notice of privacy practices—(1) Right to notice. Except as provided by paragraph (a)(3) or (4) of this section, an individual has a right to adequate notice of the uses and disclosures of protected health information that may be made by the covered entity, and of the individual's rights and the covered entity's legal duties with respect to protected health information.

(2) Notice requirements for covered entities creating or maintaining records subject to 42 U.S.C. 290dd-2. As provided in 42 CFR 2.22, an individual who is the subject of records protected under 42 CFR part 2 has a right to adequate notice of the uses and disclosures of such records, and of the individual's rights and the covered entity's legal duties with respect to such records.

(3) Exception for group health plans. (i) An individual enrolled in a group health plan has a right to notice:

(A) From the group health plan, if, and to the extent that, such an individual does not receive health benefits under the group health plan through an insurance contract with a health insurance issuer or HMO; or

(B) From the health insurance issuer or HMO with respect to the group health plan through which such individuals receive their health benefits under the group health plan.

(ii) A group health plan that provides health benefits solely through an insurance contract with a health insurance issuer or HMO, and that creates or receives protected health information in addition to summary health information as defined in § 164.504(a)

or information on whether the individual is participating in the group health plan, or is enrolled in or has disenrolled from a health insurance issuer or HMO offered by the plan, must:

(A) Maintain a notice under this section; and

(B) Provide such notice upon request to any person. The provisions of paragraph (c)(1) of this section do not apply to such group health plan.

(iii) A group health plan that provides health benefits solely through an insurance contract with a health insurance issuer or HMO, and does not create or receive protected health information other than summary health information as defined in § 164.504(a) or information on whether an individual is participating in the group health plan, or is enrolled in or has disenrolled from a health insurance issuer or HMO ***33065** offered by the plan, is not required to maintain or provide a notice under this section.

(4) Exception for inmates. An inmate does not have a right to notice under this section, and the requirements of this section do not apply to a correctional institution that is a covered entity.

(b) Implementation specifications: Content of notice—(1) Required elements. The covered entity, including any covered entity receiving or maintaining records subject to 42 U.S.C. 290dd-2, must provide a notice that is written in plain language and that contains the elements required by this paragraph.

(i) Header. The notice must contain the following statement as a header or otherwise prominently displayed:

"THIS NOTICE DESCRIBES HOW MEDICAL INFORMATION ABOUT YOU MAY BE USED AND DISCLOSED AND HOW YOU CAN GET ACCESS TO THIS INFORMATION. PLEASE REVIEW IT CAREFULLY."

(ii) Uses and disclosures. The notice must contain:

(A) A description, including at least one example, of the types of uses and disclosures that the covered entity is permitted by this subpart to make for each of the following purposes: treatment, payment, and health care operations.

(B) A description of each of the other purposes for which the covered entity is permitted or required by this subpart to use or disclose protected health information without the individual's written authorization.

(C) If a use or disclosure for any purpose described in paragraphs (b)(1)(ii)(A) or (B) of this section is prohibited or materially limited by other applicable law, such as 42 CFR part 2, the description of such use or disclosure must reflect the more stringent law as defined in § 160.202 of this subchapter.

(D) For each purpose described in paragraph (b)(1)(ii)(A) or (B) of this section, the description must include sufficient detail to place the individual on notice of the uses and disclosures that are permitted or required by this subpart and other applicable law, such as 42 CFR part 2.

(E) A description of the types of uses and disclosures that require an authorization under § 164.508(a)(2)-(a)(4), a statement that other uses and disclosures not described in the notice will be made only with the individual's written authorization, and a statement that the individual may revoke an authorization as provided by § 164.508(b)(5).

(F) A description, including at least one example, of the types of uses and disclosures prohibited under § 164.502(a)(5)(iii) in sufficient detail for an individual to understand the prohibition.

(G) A description, including at least one example, of the types of uses and disclosures for which an attestation is required under § 164.509.

(H) A statement adequate to put the individual on notice of the potential for information disclosed pursuant to this subpart to be subject to redisclosure by the recipient and no longer protected by this subpart

(iii) Separate statements for certain uses or disclosures. If the covered entity intends to engage in any of the following activities, the description required by paragraph (b)(1)(ii)(A) or (B) of this section must include a separate statement informing the individual of such activities, as applicable:

(A) In accordance with § 164.514(f)(1), the covered entity may contact the individual to raise funds for the covered entity and the individual has a right to opt out of receiving such communications;

(B) In accordance with § 164.504(f), the group health plan, or a health insurance issuer or HMO with respect to a group health plan, may disclose protected health information to the sponsor of the plan;

(C) If a covered entity that is a health plan, excluding an issuer of a long-term care policy falling within paragraph (1)(viii) of the definition of health plan, intends to use or disclose protected health information for underwriting purposes, a statement that the covered entity is prohibited from using or disclosing protected health information that is genetic information of an individual for such purposes;

(D) Substance use disorder treatment records received from programs subject to 42 CFR part 2, or testimony relaying the content of such records, shall not be used or disclosed in civil, criminal, administrative, or legislative proceedings against the individual unless based on written consent, or a court order after notice and an opportunity to be heard is provided to the individual or the holder of the record, as provided in 42 CFR part 2. A court order authorizing use or disclosure must be accompanied by a subpoena or other legal requirement compelling disclosure before the requested record is used or disclosed; or

(E) If a covered entity that creates or maintains records subject to 42 CFR part 2 intends to use or disclose such records for fundraising for the benefit of the covered entity, the individual must first be provided with a clear and conspicuous opportunity to elect not to receive any fundraising communications.

(iv) Individual rights. The notice must contain a statement of the individual's rights with respect to protected health information and a brief description of how the individual may exercise these rights, as follows:

(A) The right to request restrictions on certain uses and disclosures of protected health information as provided by § 164.522(a), including a statement that the covered entity is not required to agree to a requested restriction, except in case of a disclosure restricted under § 164.522(a)(1)(vi);

(B) The right to receive confidential communications of protected health information as provided by § 164.522(b), as applicable;

(C) The right to inspect and copy protected health information as provided by § 164.524;

(D) The right to amend protected health information as provided by § 164.526;

(E) The right to receive an accounting of disclosures of protected health information as provided by § 164.528; and

(F) The right of an individual, including an individual who has agreed to receive the notice electronically in accordance with paragraph (c)(3) of this section, to obtain a paper copy of the notice from the covered entity upon request.

(v) Covered entity's duties. The notice must contain:

(A) A statement that the covered entity is required by law to maintain the privacy of protected health information, to provide individuals with notice of its legal duties and privacy practices, and to notify affected individuals following a breach of unsecured protected health information;

(B) A statement that the covered entity is required to abide by the terms of the notice currently in effect; and

(C) For the covered entity to apply a change in a privacy practice that is described in the notice to protected health information that the covered entity created or received prior to issuing a revised notice, in accordance with § 164.530(i)(2)(ii), a statement that it reserves the right to change the terms of its notice and to make the new notice provisions effective for all protected health information that it maintains. The statement must also describe how it will provide individuals with a revised notice.

(vi) Complaints. The notice must contain a statement that individuals may complain to the covered entity and ***33066** to the Secretary if they believe their privacy rights have been violated, a brief description of how the individual may file a complaint with the covered entity, and a statement that the individual will not be retaliated against for filing a complaint.

(vii) Contact. The notice must contain the name, or title, and telephone number of a person or office to contact for further information as required by § 164.530(a)(1)(ii).

(viii) Effective date. The notice must contain the date on which the notice is first in effect, which may not be earlier than the date on which the notice is printed or otherwise published.

(2) Optional elements. (i) In addition to the information required by paragraph (b)(1) of this section, if a covered entity elects to limit the uses or disclosures that it is permitted to make under this subpart, the covered entity may describe its more limited uses or disclosures in its notice, provided that the covered entity may not include in its notice a limitation affecting its right to make a use or disclosure that is required by law or permitted by § 164.512(j)(1)(i).

(ii) For the covered entity to apply a change in its more limited uses and disclosures to protected health information created or received prior to issuing a revised notice, in accordance with § 164.530(i)(2)(ii), the notice must include the statements required by paragraph (b)(1)(v)(C) of this section.

(3) Revisions to the notice. The covered entity must promptly revise and distribute its notice whenever there is a material change to the uses or disclosures, the individual's rights, the covered entity's legal duties, or other privacy practices stated in the notice. Except when required by law, a material change to any term of the notice may not be implemented prior to the effective date of the notice in which such material change is reflected.

(d) * * *

* * * * *

(4) The permission in paragraph (d) of this section for covered entities that participate in an organized health care arrangement to issue a joint notice may not be construed to remove any obligations or duties of entities creating or maintaining records subject to 42 U.S.C. 290dd-2, or to remove any rights of patients who are the subjects of such records.

* * * * *45 CFR § 164.535

8. Add § 164.535 to read as follows:

45 CFR § 164.535

§ 164.535 Severability.

If any provision of the HIPAA Privacy Rule to Support Reproductive Health Care Privacy is held to be invalid or unenforceable facially, or as applied to any person, plaintiff, or circumstance, it shall be construed to give maximum effect to the provision permitted by law, unless such holding shall be one of utter invalidity or unenforceability, in which case the provision shall

be severable from this part and shall not affect the remainder thereof or the application of the provision to other persons not similarly situated or to other dissimilar circumstances.

Xavier Becerra,

Secretary, Department of Health and Human Services.

[FR Doc. 2024-08503 Filed 4-22-24; 4:15 pm]

BILLING CODE 4153-01-P

Footnotes

1 Subtitle F of title II of HIPAA (Pub. L. 104-191, 110 Stat. 1936 (Aug. 21, 1996)) added a new part C to title XI of the Social Security Act of 1935 (SSA), Public Law 74-271, 49 Stat. 620 (Aug. 14, 1935), (see sections 1171-1179 of the SSA (codified at 42 U.S.C. 1320d-1320d-8)), as well as promulgating section 264 of HIPAA (codified at 42 U.S.C. 1320d-2 note), which authorizes the Secretary to promulgate regulations with respect to the privacy of individually identifiable health information. The Privacy Rule has subsequently been amended pursuant to the Genetic Information Nondiscrimination Act of 2008 (GINA), title I, section 105, Public Law 110-233, 122 Stat. 881 (May 21, 2008) (codified at 42 U.S.C. 2000ff), and the Health Information Technology for Economic and Clinical Health (HITECH) Act of 2009, Public Law 111-5, 123 Stat. 226 (Feb. 17, 2009) (codified at 42 U.S.C. 1390w-4(O)(2)).

2 45 CFR parts 160 and 164, subparts A and E. For a history of the Privacy Rule, see infra Section II.B., "Regulatory History."

3 See also the HIPAA Security Rule, 45 CFR parts 160 and 164, subparts A and C; the HIPAA Breach Notification Rule, 45 CFR part 164, subpart D; and the HIPAA Enforcement Rule, 45 CFR part 160, subparts C, D, and E.

4 45 CFR 160.103 (definition of "Protected health information").

5 42 U.S.C. 1320d. See also 45 CFR 160.103 (definition of "Individually identifiable health information").

6 At times throughout this final rule, the Department uses the terms "health information" or "individuals' health information" to refer generically to health information pertaining to an individual or individuals. In contrast, the Department's use of the term "IIHI" refers to a category of health information defined in HIPAA, and "PHI" is used to refer specifically to a category of IIHI that is defined by and subject to the privacy and security standards promulgated in the HIPAA Rules.

76 See id. at 82472.

77 See id.

78 65 FR 82462 (Dec. 28, 2000).

79 45 CFR 164.506 was originally titled "Consent for uses or disclosures to carry out treatment, payment, or health care operations."

80 45 CFR 164.508.

81 45 CFR 164.510.

82 45 CFR 164.512.

83 See 64 FR 59918, 59955 (Nov. 3, 1999).

84 See 45 CFR 164.520, 164.522, 164.524, 164.526, and 164.528.

85 See 65 FR 82462, 82800 (Dec. 28, 2000).

86 See 67 FR 53182 (Aug. 14, 2002).

87 78 FR 5566 (Jan. 25, 2013).

88 81 FR 382 (Jan. 6, 2016).

89 66 FR 12738 (Feb. 28, 2001).

90 67 FR 53182, 53183 (Aug. 14, 2002).

91 67 FR 14775 (Mar. 27, 2002).

92 67 FR 53182 (Aug. 14, 2002). See the final rule for changes in the entirety. The 2002 Privacy Rule was issued before the compliance date for the 2000 Privacy Rule. Thus, covered entities never implemented the 2000 Privacy Rule. Instead, they implemented the 2000 Privacy Rule as modified by the 2002 Privacy Rule.

93 See 67 FR 53182 (Aug. 14, 2002).

94 75 FR 40868 (July 14, 2010).

95 78 FR 5566 (Jan. 25, 2013). In addition to finalizing requirements of the HITECH Act that were proposed in the 2010 NPRM, the Department adopted modifications to the Enforcement Rule not previously adopted in an earlier interim final rule, 74 FR 56123 (Oct. 30, 2009), and to the Breach Notification Rule not previously adopted in an interim final rule, 74 FR 42739 (Aug. 24, 2009). The Department also finalized previously proposed Privacy Rule modifications as required by GINA, 74 FR 51698 (Oct. 7, 2009).

96 See 78 FR 5566 (Jan. 25, 2013) (explaining that the Department was using its general authority under HIPAA to make a number of changes to the Privacy Rule that were intended to increase workability and flexibility, decrease burden, and better harmonize the requirements with those under other Departmental regulations). The Department's general authority to modify the Privacy Rule is codified in HIPAA section 264(c), and OCR conducts rulemaking under HIPAA based on authority granted by the Secretary.

97 See 75 FR 40868, 40871 (July 14, 2010).

98 75 FR 40868, 40871 (July 14, 2010).

99 See 78 FR 5566, 5611 (Jan. 25, 2013).

100 See id. at 5612.

101 Id. at 5616-17. See also 45 CFR 164.512(b)(1).

102 78 FR 5566, 5614 (Jan. 25, 2013). See also 45 CFR 164.502(f) and the definition of "Protected health information" at 45 CFR 160.103, excluding IIHI regarding a person who has been deceased for more than 50 years.

103 In addition to the rulemakings discussed here, the Department has modified the Privacy Rule for workability purposes and in response to changes in circumstances on two other occasions, and it issued another notice of proposed rulemaking in 2021 for the same reasons. See 79 FR 7289 (Feb. 6, 2014), 81 FR 382 (Jan. 6, 2016), and 86 FR 6446 (Jan. 21, 2021).

104 See Letter from NCVHS Chair Simon P. Cohn to HHS Sec'y Michael O. Leavitt (June 22, 2006), https://ncvhs.hhs.gov/rrp/june-22-2006-letter-to-the-secretary-recommendations-regarding-privacy-and-confidentiality-in-the-nationwide-health-information-network/; Letter from NCVHS Chair Simon P. Cohn to HHS Sec'y Michael O. Leavitt (Feb. 20, 2008) (listing categories of health information that are commonly considered to contain sensitive information), https://ncvhs.hhs.gov/wp-content/uploads/2014/05/080220*l*t.pdf; Letter from NCVHS Chair Justine M. Carr to HHS Sec'y Kathleen Sebelius (Nov. 10, 2010) (forwarding NCVHS recommendations), https://ncvhs.hhs.gov/wp-content/uploads/2014/05/101110lt.pdf.

130 This PHI includes limited demographic and certain other information needed for the purposes of reporting to NICS. 45 CFR 164.512(k)(7)(iii)(A). In preamble, the Department explained that generally the information described at 45 CFR 164.512(k)(7)(iii)(A) would be limited to the data elements required to create a NICS record and certain other elements to the extent that they are necessary to exclude false matches: Social Security number, State of residence, height, weight, place of birth, eye color, hair color, and race. 81 FR 382, 390 (Jan. 6, 2016).

131 81 FR 382, 386-388 (Jan. 6, 2016).

132 Id. The Department addressed concerns about the possible chilling effect on individuals seeking health care by explaining that (1) the permission is limited to only those covered entities that order the involuntary commitments or make the other adjudications that cause individuals to be subject to the Federal mental health prohibitor, or that serve as repositories of

such information for NICS reporting purposes; (2) the specified regulated entities are permitted to disclose NICS data only to designated repositories or the NICS; (3) the information that may be disclosed is limited to certain demographic or other information that is necessary for NICS reporting; and (4) the rulemaking did not expand the permission to encompass State law prohibitor information.

168 See Daniel M. Walker et al., "Interoperability in a Post-Roe Era Sustaining Progress While Protecting Reproductive Health Information," JAMA (Nov. 1, 2022) (discussing that segregation of records for reproductive health care is more difficult than for SUD treatment records because "reproductive health services are often provided in the same settings as other primary and acute care and thus could be inferred or directly reflected in many parts of the record."), https://jamanetwork-com.ezproxyhhs.nihlibrary.nih.gov/journals/jama/fullarticle/2797865; See, e.g., 87 FR 74216, 74221 (Dec. 2, 2022) (noting that 42 CFR part 2 previously resulted in the separation of SUD treatment records previous from other health records, which led to the creation of data "silos" that hampered the integration of SUD treatment records into covered entities' electronic record systems and billing processes. When considering amendments to the relevant statute, some lawmakers argued that the silos perpetuated negative stereotypes about persons with SUD and inhibited coordination of care during the opioid epidemic.). See also Health Info. Tech. Advisory Comm., "Health Information Technology Advisory Committee (HITAC) Annual Report for Fiscal Year 2019," 2019 ONC Ann. Rep., at 37 (Feb. 19, 2020), https://www.healthit.gov/sites/default/files/page/2020-03/HITACAnnualReportforFY19_508.pdf

("The new certification criteria that support the sharing of data via third-party apps will help advance the use of data segmentation, but adoption of this capability by the industry is not yet widespread.").

169 See 88 FR 23746, 23898 (Apr. 18, 2023) (explaining that while there are standards for security labels for document-based exchange that the Office of the National Coordinator for Health Information Technology (ONC) adopted in full in 2020 for the criteria in 45 CFR 170.315(b)(7) and (b)(8) to support the application of security labels at a granular level for sending in and receiving, standards to define the technical requirements for the actions described by the security label vocabularies do not yet exist. In the 21st Century Cures Act: Interoperability, Information Blocking, and the ONC Health IT Certification Program Final Rule, published in 2020, ONC estimated a cost of the certification criteria and standards adopted for security labels in 45 CFR 170.315(b)(7) and (b)(8). The Department estimated the total cost to developers could range from $2,910,400 to $6,933,600 and that it would be a onetime cost. (85 FR 25926) The criteria do not include the ability for health IT to take the actions described by the security labels. Additionally, ONC did not require that health IT be certified to the criteria described above, making it essentially voluntary. Accordingly, the estimates for health IT developer and health care provider costs were likely significantly lower than they would have been if health IT were required to be certified to the criteria for participation. Thus, the total cost of implementing full segmentation capabilities is likely substantially higher than the per-product cost estimates provided by the Department in that rule). See also 88 FR 23746, 23875 (Apr. 18, 2023) (discussing examples of challenges or technical limitations to electronic health information segmentation that have been described to ONC).

288 42 U.S.C. 1320d-7(a)(1) (providing the general rule that, with limited exceptions, a provision or requirement under HIPAA supersedes any contrary provision of state law); see also section 264(c)(2) of Public Law 104-191 (codified at 42 U.S.C. 1320d-2 note) and 45 CFR 160.203.

289 See final 45 CFR 164.509, and discussion below.

290 See 42 U.S.C. 1320d-6.

291 88 FR 23506, 23532-33 (Apr. 17, 2023).

292 See 45 CFR 164.512(d)(1)(i) through (iv) for health oversight activities for which the Privacy Rule permits uses and disclosures of PHI. See also the National Association of Medicaid Fraud Control Units, described at https://www.naag.org/about-naag/namfcu/. All 53 federally certified Medicaid Fraud Control Units voluntarily subscribe to this organization. This final rule does not interfere with any State's ability to meet their statutory obligations to combat health care fraud related to Medicaid.

293 31 U.S.C. 3729-3733.

294 18 U.S.C. 248(e)(5) (definition of "Reproductive health services").

295 45 CFR 160.103 (definition of "Person").

296 Note that in Section V.A.1, the Department is clarifying the definition of "person," although that clarification does not affect the analysis in this paragraph.

297 See 45 CFR 164.514(d)(3)(iii)(A) and 65 FR 82462, 82545, and 82547 (Dec. 28, 2000).

298 45 CFR 164.514(h)(2) and 65 FR 82462, 82546-47 (Dec. 28, 2000).

299 See 45 CFR 164.514(h) and 65 FR 82462, 82546-47 (Dec. 28, 2000).

300 See 65 FR 82462, 82545 (Dec. 28, 2000) ("[. . .] covered entities making disclosures to public officials that are permitted under § 164.512 may rely on the representations of a public official that the information requested is the minimum necessary."); see also id. at 82547 (further discussing verification of identity and authority of persons requesting PHI

in 45 CFR 164.514(h) and the requirements in 45 CFR 164.512 for the circumstances under which covered entities must make reasonable determinations about the sufficiency of proof of identify and authority based on documentary evidence, contrasted with a reasonable reliance on verbal representations when necessary to avert a pending emergency or imminent threat to the health or safety of a person or the public pursuant to 45 CFR 164.512(j)(1)(i)).

301 See 88 FR 23506, 23530 (Apr. 17, 2023).

302 See 42 CFR part 2 and the 2024 Part 2 Rule for more information about Part 2 and the protections afforded to Part 2 records.

303 See the finalized definition of "Reproductive health care" at 45 CFR 160.103.

304 See Off. for Civil Rights, "Protecting the Privacy and Security of Your Health Information When Using Your Personal Cell Phone or Tablet," U.S. Dep't of Health and Human Servs. (June 29, 2022), https://www.hhs.gov/hipaa/for-professionals/privacy/guidance/cell-phone-hipaa/index.html.

305 See 45 CFR 164.502(b). Uses and disclosures of PHI pursuant to 45 CFR 164.512(a) are limited to the relevant requirements of such law. 45 CFR 164.512(a)(1).

306 45 CFR 164.514(b).

307 See 45 CFR 164.506.

308 See 45 CFR 160.103 (definitions of "health plan" and "group health plan").

309 In the 2023 Privacy Rule NPRM, we proposed the Scope of prohibition in 45 CFR 164.502(a)(5)(iii)(B).

310 88 FR 23506, 23509 (Apr. 17, 2023) (citing 65 FR 82464 (Dec. 28, 2000)).

311 Id.

312 See 42 U.S.C. 1320d-5 and 6.

313 See 45 CFR 164.512(a).

314 See 45 CFR 164.512(a).

315 Public Law 100-578, 102 Stat. 2903 (Oct. 31, 1988) (codified at 42 U.S.C. 201 note).

316 See 45 CFR 164.512(a)(1).

317 See 45 CFR 164.103 (definition of "Required by law"). The definition provides additional explanation about what constitutes a mandate contained in law.

318 See 45 CFR 164.512(a)(1).

319 See 45 CFR 164.103 (definition of "Required by law").

320 The Privacy Rule permits but does not require covered entities to disclose PHI in response to an order of a court or administrative tribunal. The Privacy Rule also permits but does not require covered entities to disclose PHI in response to a subpoena, discovery request, or other lawful process, but only when certain conditions are met. See 45 CFR 164.512(e)(1). These provisions cannot be used to make disclosures to law enforcement officials that are restricted by 45 CFR 164.512(f). See 45 CFR 164.512(e)(2).

321 45 CFR 164.512(f)(1).

322 Whether the regulated entity is limited by the minimum necessary standard or the relevant requirements of the law that requires the reporting depends upon whether the regulated entity is making the disclosure pursuant to 45 CFR 164.512(a) or some other permission under 45 CFR 164.512. See 45 CFR 164.502(b)(v).

323 See 45 CFR 164.502(g).

324 See 45 CFR 164.502(g)(3)(i). See also Off. for Civil Rights, "Personal Representatives," U.S. Dep't of Health and Human Servs., https://www.hhs.gov/hipaa/for-individuals/personal-representatives/index.html.

325 See, e.g., 45 CFR 164.510(b)(3) and 164.512(j)(1)(i)(A).

326 See 65 FR 82462, 82471 (Dec. 28, 2000).

327 88 FR 23506, 23533-34 (Apr. 17, 2023).

328 See 45 CFR 164.502(g).

329 See 45 CFR 164.502(g)(3)(i).

330 88 FR 23506, 23534 (Apr. 17, 2023).

331 45 CFR 164.506.

332 45 CFR 164.508.

333 45 CFR 164.510.

334 45 CFR 164.512.

335 45 CFR 164.508(b).

336 88 FR 23506, 23534-37 (Apr. 17, 2023).

337 Pursuant to 45 CFR 164.530(j), regulated entities would be required to maintain a written or electronic copy of the attestation.

338 The Federal plain language guidelines under the Plain Writing Act of 2010 only applies to Federal agencies, but it serves as a helpful resource. See 5 U.S.C. 105 and "Federal plain language guidelines," U.S. Gen. Servs. Admin., https://www.plainlanguage.gov/guidelines/.

339 Proposed 45 CFR 164.509(b)(1)(iv) and (c)(1)(iv).

340 While not explicitly stated in the Privacy Rule, the Department previously issued guidance clarifying that authorizations are permitted to be submitted and signed electronically. See Off. for Civil Rights, "Is a copy, facsimile, or electronically transmitted version of a signed authorization valid under the Privacy Rule?," U.S. Dep't of Health and Human Servs., HIPAA FAQ #475 (Jan. 9, 2023), https://www.hhs.gov/hipaa/for-professionals/faq/475/is-a-copy-of-a-signed-authorization-valid/index.html and Off. for Civil Rights, "How do HIPAA authorizations apply to an electronic health information exchange environment?," U.S. Dep't of Health and Human Servs., HIPAA FAQ #554 (July 26, 2013), https://www.hhs.gov/hipaa/for-professionals/faq/554/how-do-hipaa-authorizations-apply-to-electronic-health-information/index.html.

341 This approach is consistent with 45 CFR 164.514(h), which requires a regulated entity to verify the identity and legal authority of a public official or a person acting on behalf of a public official, and describes the type of documentation

upon which a regulated entity may rely, if such reliance is reasonable under the circumstances, to do so. See also 45 CFR 164.514(d)(3)(iii)(A), which permits a covered entity to rely, if such reliance is reasonable under the circumstances, on a requested disclosure as the minimum necessary for the stated purpose when making disclosures to public officials that are permitted under 45 CFR 164.512, if the public official represents that the information requested is the minimum necessary for the stated purpose(s).

342 Proposed 45 CFR 164.509(d).

343 Business associates became directly liable for compliance with certain requirements of the HIPAA Rules under the HITECH Act. Consistent with the HITECH Act, the 2013 Omnibus Rule identified the portions of the HIPAA Rules that apply directly to business associates and for which business associates are directly liable. Prior to the HITECH Act and the Omnibus Rule, these requirements applied to business associates and their subcontractors indirectly through the requirements under 45 CFR 164.504(e) and 164.314(a), which require that covered entities by contract require business associates to limit uses and disclosures and implement HIPAA Security Rule-like safeguards. See 78 FR 5566 (Jan. 25, 2013). See also Off. for Civil Rights, "Direct Liability of Business Associates Fact Sheet," U.S. Dep't of Health and Human Servs. (July 16, 2021), https://www.hhs.gov/hipaa/for-professionals/privacy/guidance/business-associates/factsheet/index.html.

344 45 CFR 164.504(e) and 164.314(a).

345 45 CFR 164.504(e)(2)(i)(E).

346 65 FR 82462, 82471, and 82875 (Dec. 28, 2000).

347 See 42 U.S.C. 1320d-6(a).

348 45 CFR 164.509(b)(1)(iii) and (c)(1)(vi).

349 45 CFR 164.502(b). The minimum necessary standard of the Privacy Rule applies to all uses and disclosures where a request does not meet one of the specified exceptions in paragraph (b)(2).

350 45 CFR 164.502(b)(1).

351 This approach is consistent with 45 CFR 164.514(h), which requires a covered entity to verify the identity and legal authority of a public official or a person acting on behalf of the public official and describes the type of documentation upon which regulated entities can rely, if such reliance is reasonable under the circumstances, to do so. See also 45 CFR 164.514(d)(3)(iii)(A), which permits a covered entity to rely, if such reliance is reasonable under the circumstances, on a requested disclosure as the minimum necessary for the stated purpose when making disclosures to public officials that are permitted under 45 CFR 164.512, if the public official represents that the information requested is the minimum necessary for the stated purpose(s).

352 E.g., Restatement (Second) Torts § 283, comment b (Am. L. Inst. 1965).

353 45 CFR 164.509(d).

354 See 42 U.S.C. 1320d-6(a).

355 A person (including an employee or other individual) shall be considered to have obtained or disclosed individually identifiable health information in violation of this part if the information is maintained by a covered entity (as defined in the HIPAA privacy regulation described in section 1320d-9(b)(3) of this title) and the individual obtained or disclosed such information without authorization. Id.

356 See 42 U.S.C. 1320d-6(b).

357 45 CFR 164.400 et seq. The HIPAA Breach Notification Rule, 45 CFR 164.400-414, requires HIPAA covered entities and their business associates to provide notification following a breach of unsecured PHI.

358 See 42 U.S.C. 1320d-6(a).

359 See 45 CFR 164.512.

360 See 42 U.S.C. 300jj-52(a)(1) (excluding from the definition of "information blocking" practices that are likely to interfere with, prevent, or materially discourage access, exchange, or use of electronic health information if they are "required by law"; 85 FR 25642, 25794 (May 1, 2020) (explaining that "required by law" specifically refers to interferences that are explicitly required by state or Federal law). See also 89 FR 1192, 1351 (Jan. 9, 2024) (affirming that where applicable law prohibits access, exchange, or use of information, practices in compliance with such law are not considered to be information blocking and citing to compliance with the Privacy Rule as an example of an applicable law).

361 This approach is consistent with 45 CFR 164.514(h), which requires a regulated entity to verify the identity and legal authority of a public official or a person acting on behalf of the public official and describes the type of documentation upon which the regulated entity can rely, if such reliance is reasonable under the circumstances, to do so. See also 45 CFR 164.514(d)(3)(iii)(A), which permits a covered entity to rely, if such reliance is reasonable under the circumstances, on a requested disclosure as the minimum necessary for the stated purpose when making disclosures to public officials that are permitted under 45 CFR 164.512, if the public official represents that the information requested is the minimum necessary for the stated purpose(s).

362 45 CFR 164.514(h)(1) requires a regulated entity to verify both the identity of the person requesting PHI and the authority of any such person to have access to PHI, if the identity or authority of such person is not known to the regulated entity. 45 CFR 164.514(h)(2)(ii) describes the information upon which a regulated entity may rely, if such reliance is reasonable under the circumstances, to verify the identity of a public official requesting PHI or a person acting on behalf of a public official, while 45 CFR 164.514(h)(2)(iii) describes the information upon which a regulated entity may rely, if such reliance is reasonable under the circumstances, to verify the authority of the public official requesting PHI or a person acting on behalf of a public official.

363 45 CFR 164.512(e)(1)(ii)(A).

364 45 CFR 164.512(e)(1)(ii)(B).

365 45 CFR 164.512(e)(1)(iii) and (iv).

Currentness

The legislative authority of any city or village may by a two-thirds vote of its members, and upon petition of ten per centum of the electors shall forthwith, provide by ordinance for the submission to the electors, of the question, "Shall a commission be chosen to frame a charter." The ordinance providing for the submission of such question shall require that it be submitted to the electors at the next regular municipal election if one shall occur not less than sixty nor more than one hundred and twenty days after its passage; otherwise it shall provide for the submission of the question at a special election to be called and held within the time aforesaid. The ballot containing such question shall bear no party designation, and provision shall be made thereon for the election from the municipality at large of fifteen electors who shall constitute a commission to frame a charter; provided that a majority of the electors voting on such question shall have voted in the affirmative. Any charter so framed shall be submitted to the electors of the municipality at an election to be held at a time fixed by the charter commission and within one year from the date of its election, provision for which shall be made by the legislative authority of the municipality in so far as not prescribed by general law. Not less than thirty days prior to such election the clerk of the municipality shall mail a copy of the proposed charter to each elector whose name appears upon the poll or registration books of the last regular or general election held therein. If such proposed charter is approved by a majority of the electors voting thereon it shall become the charter of such municipality at the time fixed therein.

Subchapter I. General Powers; Administration

W.S.A. 66.0101

66.0101. Home rule; manner of exercise

Currentness

(1) Under article XI, section 3, of the constitution, the method of determination of the local affairs and government of cities and villages shall be as prescribed in this section.

(1m) In this section, "charter ordinance" means an ordinance that enacts, amends or repeals the charter, or any part of the charter, of a city or village or that makes the election under sub. (4).

(2)(a) A city or village may enact a charter ordinance. A charter ordinance shall be designated as a charter ordinance, requires a two-thirds vote of the members-elect of the legislative body of the city or village, and is subject to referendum as provided in this section.

(b) A charter ordinance that amends or repeals a city or village charter shall designate specifically the portion of the charter that is amended or repealed. A charter ordinance that makes the election under sub. (4) shall designate specifically each enactment of the legislature or portion of the enactment that is made inapplicable to the city or village by the election.

(3) A charter ordinance shall be published as a class 1 notice, under ch. 985, and shall be recorded by the clerk in a permanent book kept for that purpose, with a statement of the manner of its adoption. A certified copy of the charter ordinance shall be filed by the clerk with the secretary of state. The secretary of state shall keep a separate index of all charter ordinances, arranged alphabetically by city and village and summarizing each ordinance, and annually shall issue the index of charter ordinances filed during the 12 months prior to July 1.

(4) A city or village may elect under this section that any law relating to the local affairs and government of the city or village other than those enactments of the legislature of statewide concern as shall with uniformity affect every city or every village shall not apply to the city or village, and when the election takes effect, the law ceases to be in effect in the city or village.

(5) A charter ordinance does not take effect until 60 days after its passage and publication. If within the 60--day period a petition conforming to the requirements of s. 8.40 and signed by a number of electors of the city or village equal to not less than 7 percent of the votes cast in the city or village for governor at the last general election is filed in the office of the clerk of the city or village demanding that the ordinance be submitted to a vote of the electors, it may not take effect until it is submitted to a referendum and approved by a majority of the electors voting in the referendum. The petition and the proceedings for its submission are governed by s. 9.20(2) to (6).

(6) A charter ordinance may be initiated under s. 9.20(1) to (6), but alternative adoption of the charter ordinance by the legislative body is subject to referendum under sub. (5).

(7) A charter ordinance may be submitted to a referendum by the legislative body, under s. 9.20(4) to (6), without initiative petition, and becomes effective when approved by a majority of the electors voting in the referendum.

(8) A charter ordinance enacted or approved by a vote of the electors controls over any prior or subsequent act of the legislative body of the city or village. If the electors of any city or village by a majority vote have adopted or determined to continue to operate under either ch. 62 or 64, or have determined the method of selection of members of the governing board, the question shall not again be submitted to the electors, nor action taken on the question, within a period of 2 years. Any election to change or amend the charter of any city or village, other than a special election as provided in s. 9.20(4), shall be held at the time provided by statute for holding the spring election.

(9)(a) The legislative body of a city or village, by resolution adopted by a two-thirds vote of its members-elect may, and upon petition complying with s. 9.20 shall, submit to the electors under s. 9.20(4) to (6) the question of holding a charter convention under one or more plans proposed in the resolution or petition.

(b) The ballot shall be in substantially the following form:

Shall a charter convention be held?

YES ☐ NO ☐

If a charter convention is held what plan do you favor?

PLAN 1 ☐ PLAN 2 ☐

[Repeat for each plan proposed.]

Mark an [X] in the square to the RIGHT of the plan that you select.

(c) If a majority of the electors voting vote for a charter convention, the convention shall be held pursuant to the plan favored by a majority of the total votes cast for all plans. If no plan receives a majority, the 2 plans receiving the highest number of votes shall be again submitted to the electors and a convention shall be held pursuant to the plan favored by a majority of the votes cast.

(d) A charter convention may adopt a charter or amendments to the existing charter. The charter or charter amendments adopted by the convention shall be certified, as soon as practicable, by the presiding officer and secretary of the convention to the city or village clerk and shall be submitted to the electors as provided under s. 9.20(4) to (6), without the alternative provided in s. 9.20(4) to (6), and take effect when approved by a majority of the electors voting.

(10) Nothing in this section shall be construed to impair the right of cities or villages under existing or future authority to enact ordinances or resolutions other than charter ordinances.

(11) Sections 62.13 and 62.50 and chapter 589, laws of 1921, and chapter 423, laws of 1923, shall be construed as enactments of statewide concern for the purpose of providing uniform regulation of police, fire, and combined protective services departments.

(12) Every charter ordinance enacted under s. 66.01, 1943 stats., which was adopted by the governing body prior to December 31, 1944, and which also was published prior to that date in the official newspaper of the city or village, or, if there was none, in a newspaper having general circulation in the city or village, shall be valid as of the date of the original publication notwithstanding the failure to publish the ordinance under s. 10.43(5) and (6), 1943 stats.

66.0103. Code of ordinances

Currentness

(1) The governing body of a city, village, town or county may authorize the preparation of a code of some or all of its general ordinances. The code may be enacted by an ordinance that incorporates the code by reference. A copy of the code shall be available for public inspection not less than 2 weeks before it is enacted. After the code is enacted, a copy shall be maintained and available for public inspection in the office of the city, village, town or county clerk.

(2) Publication of a code enacted under sub. (1), in book or pamphlet form, meets the publication requirements of ss. 59.14, 60.80, 61.50(1) and 62.11(4)(a).

66.0104. Prohibiting ordinances that place certain limits or requirements on a landlord

Currentness

(1) In this section:

(ah) “Habitability violation” means any of the following conditions if the condition constitutes an ordinance violation:

1. The rental property or rental unit lacks hot or cold running water.

2. Heating facilities serving the rental property or rental unit are not in safe operating condition or are not capable of maintaining a temperature, in all living areas of the property or unit, of at least 67 degrees Fahrenheit during all seasons of the year in which the property or unit may be occupied. Temperatures in living areas shall be measured at the approximate center of the room, midway between floor and ceiling.

3. The rental property or rental unit is not served by electricity, or the electrical wiring, outlets, fixtures, or other components of the electrical system are not in safe operating condition.

4. Any structural or other conditions in the rental property or rental unit that constitute a substantial hazard to the health or safety of the tenant, or create an unreasonable risk of personal injury as a result of any reasonably foreseeable use of the property or unit other than negligent use or abuse of the property or unit by the tenant.

5. The rental property or rental unit is not served by plumbing facilities in good operating condition.

6. The rental property or rental unit is not served by sewage disposal facilities in good operating condition.

7. The rental property or rental unit lacks working smoke detectors or carbon monoxide detectors.

8. The rental property or rental unit is infested with rodents or insects.

9. The rental property or rental unit contains excessive mold.

(ax) “Premises” has the meaning given in s. 704.01(3).

(b) “Rental agreement” has the meaning given in s. 704.01(3m).

(c) “Tenancy” has the meaning given in s. 704.01(4).

(2)(a) No city, village, town, or county may enact an ordinance that places any of the following limitations on a residential landlord:

1. Prohibits a landlord from, or places limitations on a landlord with respect to, obtaining and using or attempting to obtain and use any of the following information with respect to a tenant or prospective tenant:

a. Monthly household income.

b. Occupation.

c. Rental history.

d. Credit information.

e. Court records, including arrest and conviction records, to which there is public access.

f. Social security number or other proof of identity.

2. Limits how far back in time a prospective tenant's credit information, conviction record, or previous housing may be taken into account by a landlord.

3. Prohibits a landlord from, or places limitations on a landlord with respect to, entering into a rental agreement for a premises with a prospective tenant during the tenancy of the current tenant of the premises.

4. Prohibits a landlord from, or places limitations on a landlord with respect to, showing a premises to a prospective tenant during the tenancy of the current tenant of the premises.

(b) No city, village, town, or county may enact an ordinance that places requirements on a residential landlord with respect to security deposits or earnest money or pretenancy or posttenancy inspections that are additional to the requirements under administrative rules related to residential rental practices.

(c) No city, village, town, or county may enact an ordinance that limits a residential tenant's responsibility, or a residential landlord's right to recover, for any damage or waste to, or neglect of, the premises that occurs during the tenant's occupancy of the premises, or for any other costs, expenses, fees, payments, or damages for which the tenant is responsible under the rental agreement or applicable law.

(d)1.a. No city, village, town, or county may enact an ordinance that requires a landlord to communicate to tenants any information that is not required to be communicated to tenants under federal or state law.

b. Subdivision 1.a. does not apply to an ordinance that has a reasonable and clearly defined objective of regulating the manufacture of illegal narcotics.

2. No city, village, town, or county may enact an ordinance that requires a landlord to communicate to the city, village, town, or county any information concerning the landlord or a tenant, unless any of the following applies:

a. The information is required under federal or state law.

b. The information is required of all residential real property owners.

(e) No city, village, town, or county may enact an ordinance that does any of the following:

1. Requires that a rental property or rental unit be inspected except upon a complaint by any person, as part of a program of inspections under subd. 1m., under s. 66.0119, or as required under state or federal law.

1m. A city, village, town, or county may establish a rental property inspection program under this subdivision. Under the program, the governing body of the city, village, town, or county may designate districts in which there is evidence of blight, high rates of building code complaints or violations, deteriorating property values, or increases in single-family home conversions to rental units. A city, village, town, or county may require that a rental property or rental unit located in a district designated under this subdivision be initially inspected and periodically inspected. If no habitability violation is discovered during a program inspection or if a habitability violation is discovered during a program inspection and the violation is corrected within a period of not less than 30 days established by the city, village, town, or county, the city, village, town, or county may not perform a program inspection of the property for at least 5 years. If a habitability violation is discovered during a program inspection and the violation is not corrected within the period established by the city, village, town, or county, the city, village, town, or county may require the rental property or unit to be inspected annually under the program. If a habitability violation is discovered during an inspection conducted upon a complaint and the violation is not corrected within a period of not less than 30 days established by the city, village, town, or county, the city, village, town, or county may require the rental property or unit to be inspected annually under the program. If, at a rental property or unit subject to annual program inspections, no habitability violation is discovered during 2 consecutive annual program inspections, the city, village, town, or county, except as provided in this subdivision, may not perform a program inspection of the property for at least 5 years. No rental property or unit that is less than 8 years old may be inspected under this subdivision. A city, village, town, or county may provide a period of less than 30 days for the correction of a habitability violation under this subdivision if the violation exposes a tenant to imminent danger. A city, village, town, or county shall provide an extension to the period for correction of a habitability violation upon a showing of good cause. A city, village, town, or county shall provide in a notice of a habitability violation an explanation

of the violation including a specification of the violation and the exact location of the violation. No inspection of a rental unit may be conducted under this subdivision if the occupant of the unit does not consent to allow access unless the inspection is under a special inspection warrant under s. 66.0119.

2. Charges a fee for conducting an inspection of a residential rental property unless all of the following are satisfied:

a. The amount of the fee does not exceed $75 for an inspection of a vacant unit under subd. 1m. or an inspection of the exterior and common areas of a property under subd. 1m., $90 for any other initial program inspection under subd. 1m., or $150 for any other 2nd or subsequent program inspection under subd. 1m. No fee may be charged for a program inspection under subd. 1m. if no habitability violation is discovered during the inspection or, if a violation is discovered during the inspection, the violation is corrected within the period established by the city, village, town, or county under subd. 1m. No fee may be charged for an inspection of the exterior and common areas if the property owner voluntarily allows access for the inspection and no habitability violation is discovered during the inspection or, if a violation is discovered during the inspection, the violation is corrected within the period established by the city, village, town, or county under subd. 1m. No fee may be charged for a reinspection that occurs after a habitability violation has been corrected. No fee may be charged to a property owner if a program inspection does not occur because an occupant of the property does not allow access to the property. Annually, a city, village, town, or county may increase the fee amounts under this subd. 2. a. by not more than the percentage change in the U.S. consumer price index for all urban consumers, U.S. city average, as determined by the federal department of labor, for the previous year or 2 percent, whichever is greater.

am. The amount of the fee does not exceed $150 for an inspection under s. 66.0119, except that if a habitability violation is discovered during the inspection and the violation is not corrected within a period of not less than 30 days established by the city, village, town, or county, the fee may not exceed $300. No fee may be charged for an inspection under s. 66.0119 if no habitability violation is discovered. Annually, a city, village, town, or county may increase the fee amounts under this subd. 2. am. by not more than the percentage change in the U.S. consumer price index for all urban consumers, U.S. city average, as determined by the federal department of labor, for the previous year or 2 percent, whichever is greater.

b. The fee is charged at the time that the inspection is actually performed.

3. Charges a fee for a subsequent reinspection of a residential rental property that is more than twice the fee charged for an initial reinspection.

4. Except as provided in this subdivision, requires that a rental property or rental unit be certified, registered, or licensed or requires that a residential rental property owner register or obtain a certification or license related to owning or managing the residential rental property. A city, village, town, or county may require that a rental unit or residential rental property owner be registered if the registration requires only one name of an owner or authorized contact person and an address, telephone number, and, if available, an electronic mail address or other information necessary to receive communications by other electronic means at which the person may be contacted. No city, village, town, or county, except a 1st class city, may charge a fee for registration under this subdivision except a one-time registration fee that reflects the actual costs of operating a registration program, but that does not exceed $10 per building, and a one-time fee for the registration of a change of ownership or management of a building or change of contact information for a building that reflects the actual and direct costs of registration, but that does not exceed $10 per building.

(f) No city, village, town, or county may impose an occupancy or transfer of tenancy fee on a rental unit.

(2m) If a city, village, town, or county has in effect an ordinance that authorizes the inspection of a rental property or rental unit upon a complaint from an inspector or other employee or elected official of the city, village, town, or county, the city, village, town, or county shall maintain for each inspection performed upon a complaint from an employee or official a record of the name of the person making the complaint, the nature of the complaint, and any inspection conducted upon the complaint.

(3)(a) If a city, village, town, or county has in effect on December 21, 2011, an ordinance that is inconsistent with sub. (2)(a) or (b), the ordinance does not apply and may not be enforced.

(b) If a city, village, town, or county has in effect on March 1, 2014, an ordinance that is inconsistent with sub. (2)(c) or (d), the ordinance does not apply and may not be enforced.

(c) If a city, village, town, or county has in effect on March 2, 2016, an ordinance that is inconsistent with sub. (2)(e) or (f), the ordinance does not apply and may not be enforced.

W.S.A. 66.0105

66.0105. Jurisdiction of overlapping extraterritorial powers

Currentness

The extraterritorial powers granted to cities and villages by statute, including ss. 30.745, 62.23(2) and (7a), 66.0415, 236.10 and 254.57, may not be exercised within the corporate limits of another city or village. Wherever these statutory extraterritorial powers overlap, the jurisdiction over the overlapping area shall be divided on a line all points of which are equidistant from the boundaries of each municipality concerned so that not more than one municipality shall exercise power over any area.

66.0107. Power of municipalities to prohibit criminal conduct

Currentness

(1) The board or council of any town, village or city may:

(a) Prohibit all forms of gambling and fraudulent devices and practices.

(b) Seize anything devised solely for gambling or found in actual use for gambling and destroy the device after a judicial determination that it was used solely for gambling or found in actual use for gambling.

(bm) Enact and enforce an ordinance to prohibit the possession of marijuana, as defined in s. 961.01(14), subject to the exceptions in s. 961.41(3g)(intro.), and provide a forfeiture for a violation of the ordinance; except that if a complaint is issued regarding an allegation of possession of more than 25 grams of marijuana, or possession of any amount of marijuana following a conviction in this state for possession of marijuana, the subject of the complaint may not be prosecuted under this paragraph for the same action that is the subject of the complaint unless the charges are dismissed or the district attorney declines to prosecute the case.

(bn) Enact and enforce an ordinance to prohibit the possession of a controlled substance specified in s. 961.14(4)(tb) and provide a forfeiture for a violation of the ordinance, except that if a complaint is issued regarding an allegation of possession of a controlled substance specified in s. 961.14(4)(tb) following a conviction in this state for possession of a controlled substance, the subject of the complaint may not be prosecuted under this paragraph for the same action that is the subject of the complaint unless the charges are dismissed or the district attorney declines to prosecute the case.

(bp) Enact and enforce an ordinance to prohibit conduct that is the same as that prohibited by s. 961.573(1) or (2), 961.574(1) or (2), or 961.575(1) or (2) and provide a forfeiture for violation of the ordinance.

(2) Except as provided in sub. (3), nothing in this section may be construed to preclude cities, villages and towns from prohibiting conduct which is the same as or similar to that prohibited by chs. 941 to 948.

(3) The board or council of a city, village or town may not, by ordinance, prohibit conduct which is the same as or similar to conduct prohibited by s. 944.21.

66.0111. Bond or cash deposit under municipal ordinances

Currentness

(1) If a person is arrested for the violation of a city, village or town ordinance and the action is to be in circuit court, the chief of police or police officer designated by the chief, marshal or clerk of court may accept from the person a bond, in an amount not to exceed the maximum penalty for the violation, with sufficient sureties, or a cash deposit, for appearance in the court having jurisdiction of the offense. A receipt shall be issued for the bond or cash deposit.

(2)(a) If the person released fails to appear, personally or by an authorized attorney or agent, before the court at the time fixed for hearing the case, the bond and money deposited, or an amount that the court determines to be an adequate penalty, plus costs, including any applicable fees prescribed in ch. 814, may be declared forfeited by the court or may be ordered applied to the payment of any penalty which is imposed after an ex parte hearing, together with the costs. In either event, any surplus shall be refunded to the person who made the deposit.

(b) This subsection does not apply to violations of parking ordinances. Bond or cash deposit given for appearance to answer a charge under any parking ordinance may be forfeited in the manner determined by the governing body.

(3) This section shall not be construed as a limitation upon the general power of cities, villages and towns in all cases of alleged violations of city, village or town ordinances to authorize the acceptance of bonds or cash deposits or upon the general power to accept stipulations for forfeiture of bonds or deposits or pleas where arrest was had without warrant or where action has not been started in court.

(4) This section does not apply to ordinances enacted under ch. 349.

66.0113. Citations for certain ordinance violations

Currentness

(1) Adoption; content. (a) Except as provided in sub. (5), the governing body of a county, town, city, village, town sanitary district or public inland lake protection and rehabilitation district may by ordinance adopt and authorize the use of a citation under this section to be issued for violations of ordinances, including ordinances for which a statutory counterpart exists.

(b) An ordinance adopted under par. (a) shall prescribe the form of the citation which shall provide for the following:

1. The name and address of the alleged violator.

2. The factual allegations describing the alleged violation.

3. The time and place of the offense.

4. The section of the ordinance violated.

5. A designation of the offense in a manner that can be readily understood by a person making a reasonable effort to do so.

6. The time at which the alleged violator may appear in court and a statement describing whether the appearance is mandatory.

7. A statement which in essence informs the alleged violator:

a. That the alleged violator may make a cash deposit of a specified amount to be mailed to a specified official within a specified time.

b. That if the alleged violator makes such a deposit, he or she need not appear in court unless appearance is mandated by the court or he or she is subsequently summoned.

c. That, if the alleged violator makes a cash deposit and does not appear in court, he or she either will be deemed to have tendered a plea of no contest and submitted to a forfeiture, plus costs, fees, and surcharges imposed under ch. 814, not to exceed the amount of the deposit or will be summoned into court to answer the complaint if the court does not accept the plea of no contest.

d. That, if the alleged violator does not make a cash deposit and does not appear in court at the time specified, the court may issue a summons or a warrant for the defendant's arrest or consider the nonappearance to be a plea of no contest and enter judgment under sub. (3)(d), or the municipality may commence an action against the alleged violator to collect the forfeiture, plus costs, fees, and surcharges imposed under ch. 814.

e. That if the court finds that the violation involves an ordinance that prohibits conduct that is the same as or similar to conduct prohibited by state statute punishable by fine or imprisonment or both, and that the violation resulted in damage to the property of or physical injury to a person other than the alleged violator, the court may summon the alleged violator into court to determine if restitution shall be ordered under s. 800.093.

8. A direction that if the alleged violator elects to make a cash deposit, the alleged violator shall sign an appropriate statement which accompanies the citation to indicate that he or she read the statement required under subd. 7. and shall send the signed statement with the cash deposit.

9. Such other information as may be deemed necessary.

(c) An ordinance adopted under par. (a) shall contain a schedule of cash deposits that are to be required for the various ordinance violations, plus costs, fees, and surcharges imposed under ch. 814, for which a citation may be issued. The ordinance shall also specify the court, clerk of court, or other official to whom cash deposits are to be made and shall require that receipts be given for cash deposits.

(2) Issuance; filing. (a) Citations authorized under this section may be issued by law enforcement officers of the county, town, city, village, town sanitary district or public inland lake protection and rehabilitation district. In addition, the governing body of a county, town, city, village, town sanitary district or public inland lake protection and rehabilitation district may designate by ordinance or resolution other county, town, city, village, town sanitary district or public inland lake protection and rehabilitation district officials who may issue citations with respect to ordinances which are directly related to the official responsibilities of the officials. Officials granted the authority to issue citations may delegate, with the approval of the governing body, the authority to employees. Authority delegated to an official or employee shall be revoked in the same manner by which it is conferred.

(b) The issuance of a citation by a person authorized to do so under par. (a) shall be deemed adequate process to give the appropriate court jurisdiction over the subject matter of the offense for the purpose of receiving cash deposits, if directed to do so, and for the purposes of sub. (3)(b) and (c). Issuance and filing of a citation does not constitute commencement of an action. Issuance of a citation does not violate s. 946.68.

(3) Violator's options; procedure on default. (a) The person named as the alleged violator in a citation may appear in court at the time specified in the citation or may mail or deliver personally a cash deposit in the amount, within the time, and to the court, clerk of court, or other official specified in the citation. If a person makes a cash deposit, the person may nevertheless appear in court at the time specified in the citation, but the cash deposit may be retained for application against any forfeiture or restitution, plus costs, fees, and surcharges imposed under ch. 814 that may be imposed.

(b) If a person appears in court in response to a citation, the citation may be used as the initial pleading, unless the court directs that a formal complaint be made, and the appearance confers personal jurisdiction over the person. The person may plead guilty, no contest, or not guilty. If the person pleads guilty or no contest, the court shall accept the plea, enter a judgment of guilty, and impose a forfeiture, plus costs, fees, and surcharges imposed under ch. 814. If the court finds that the violation meets the conditions in s. 800.093(1), the court may order restitution under s. 800.093. A plea of not guilty shall put all matters in the case at issue, and the matter shall be set for trial.

(c) If the alleged violator makes a cash deposit and fails to appear in court, the citation may serve as the initial pleading and the violator shall be considered to have tendered a plea of no contest and submitted to a forfeiture, plus costs, fees, and surcharges imposed under ch. 814, not exceeding the amount of the deposit. The court may either accept the plea of no contest and enter judgment accordingly or reject the plea. If the court finds that the violation meets the conditions in s. 800.093(1), the court may summon the alleged violator into court to determine if restitution shall be ordered under s. 800.093. If the court accepts the plea of no contest, the defendant may move within 10 days after the date set for the appearance to withdraw the plea of no contest, open the judgment, and enter a plea of not guilty if the defendant shows to the satisfaction of the court that the failure to appear was due to mistake, inadvertence, surprise, or excusable neglect. If the plea of no contest is accepted and not subsequently changed to a plea of not guilty, no additional costs, fees, or surcharges may be imposed against the violator under s. 814.78. If the court rejects the plea of no contest, an action for collection of the forfeiture, plus costs, fees, and surcharges imposed under ch. 814, may be commenced. A city, village, town sanitary district, or public inland lake protection and rehabilitation district may commence action under s. 66.0114(1) and a county or town may commence action under s. 778.10. The citation may be used as the complaint in the action for the collection of the forfeiture, plus costs, fees, and surcharges imposed under ch. 814.

(d) If the alleged violator does not make a cash deposit and fails to appear in court at the time specified in the citation, the court may issue a summons or warrant for the defendant's arrest or consider the nonappearance to be a plea of no contest and enter judgment accordingly if service was completed as provided under par. (e) or the county, town, city, village, town sanitary district, or public inland lake protection and rehabilitation district may commence an action for collection of the forfeiture, plus costs, fees, and surcharges imposed under ch. 814. A city, village, town sanitary district, or public inland lake protection and rehabilitation district may commence action under s. 66.0114(1) and a county or town may commence action under s. 778.10. The citation may be used as the complaint in the action for the collection of the forfeiture, plus costs, fees, and surcharges imposed under ch. 814. If the court considers the nonappearance to be a plea of no contest and enters judgment accordingly, the court shall promptly mail a copy or notice of the judgment to the defendant. The judgment shall allow the defendant not less than 20 days from the date of the judgment to pay any forfeiture, plus costs, fees, and surcharges imposed under ch. 814. If the defendant moves to open the judgment within 6 months after the court appearance date fixed in the citation, and shows to the satisfaction of the court that the failure to appear was due to mistake, inadvertence, surprise, or excusable neglect, the court shall reopen the judgment, accept a not guilty plea and set a trial date.

(e) A judgment may be entered under par. (d) if the summons or citation was served as provided under s. 968.04(3)(b)2. or by personal service by a county, town, city, village, town sanitary district or public inland lake protection and rehabilitation district employee.

(4) Relationship to other laws. The adoption and authorization for use of a citation under this section does not preclude the governing body from adopting any other ordinance or providing for the enforcement of any other law or ordinance relating to the same or any other matter. The issuance of a citation under this section does not preclude proceeding under any other ordinance or law relating to the same or any other matter. Proceeding under any other ordinance or law relating to the same or any other matter does not preclude the issuance of a citation under this section.

(5) Municipal court. If the action is to be in municipal court, the citation under s. 800.02(2) shall be used.

Notes of Decisions (4)

W. S. A. 66.0113, WI ST 66.0113
Current through 2023 Act 272, published April 10, 2024.

End of Document

West's Wisconsin Statutes Annotated
Municipalities (Ch. 59 to 68)
Chapter 66. General Municipality Law (Refs & Annos)
Subchapter I. General Powers; Administration

W.S.A. 66.0114

66.0114. Actions for violation of ordinances

Currentness

(1) Collection of forfeitures and penalties. (a) An action for violation of an ordinance or bylaw enacted by a city, village, town sanitary district or public inland lake protection and rehabilitation district is a civil action. All forfeitures and penalties imposed by an ordinance or bylaw of the city, village, town sanitary district or public inland lake protection and rehabilitation district, except as provided in ss. 345.20 to 345.53, may be collected in an action in the name of the city or village before the municipal court or in an action in the name of the city, village, town sanitary district or public inland lake protection and rehabilitation district before a court of record. If the action is in municipal court, the procedures under ch. 800 apply and the procedures under this section do not apply. If the action is in a court of record, it shall be commenced by warrant or summons under s. 968.04 or, if applicable, by citation under s. 778.25 or 778.26. A law enforcement officer may arrest the offender in all cases without warrant under s. 968.07. If the action is commenced by warrant the affidavit may be the complaint. The affidavit or complaint is sufficient if it alleges that the defendant has violated an ordinance or bylaw, specifying the ordinance or bylaw by section, chapter, title or otherwise with sufficient plainness to identify the ordinance or bylaw. The judge may release a defendant without a cash deposit or may permit him or her to execute an unsecured appearance bond upon arrest. In arrests without a warrant or summons a statement on the records of the court of the offense charged is the complaint unless the court directs that a formal complaint be issued. In all actions under this paragraph the defendant's plea shall be guilty, not guilty or no contest and shall be entered as not guilty on failure to plead. A plea of not guilty on failure to plead puts all matters in the case at issue, any other provision of law notwithstanding. The defendant may enter a not guilty plea by certified mail.

(b) Local ordinances, except as provided in this paragraph or ss. 345.20 to 345.53, may contain a provision for stipulation of guilt or no contest of any or all violations under those ordinances, may designate the manner in which the stipulation is to be made, and may fix the penalty to be paid. When a person charged with a violation for which stipulation of guilt or no contest is authorized makes a timely stipulation and pays the required penalty, plus costs, fees, and surcharges imposed under ch. 814, to the designated official, the person need not appear in court and no witness fees or other additional costs, fees, or surcharges may be imposed under ch. 814 unless the local ordinance so provides. A court appearance is required for a violation of a local ordinance in conformity with s. 346.63(1).

(bm) The official receiving the penalties shall remit all moneys collected to the treasurer of the city, village, town sanitary district, or public inland lake protection and rehabilitation district in whose behalf the sum was paid, except that all jail surcharges imposed under ch. 814 shall be remitted to the county treasurer, within 20 days after their receipt by the official. If timely remittance is not made, the treasurer may collect the payment of the officer by action, in the name of the office, and upon the official bond of the officer, with interest at the rate of 12 percent per year from the date on which it was due. In the case of any other costs, fees, and surcharges imposed under ch. 814, the treasurer of the city, village, town sanitary district, or public inland lake protection and rehabilitation district shall remit to the secretary of administration the amount required by law to be paid on the actions entered during the preceding month on or before the first day of the next succeeding month. The governing body of the city, village, town sanitary district, or public inland lake protection and rehabilitation district shall by ordinance designate the official to receive the penalties and the terms under which the official qualifies.

(c) If the circuit court finds a defendant guilty in a forfeiture action based on a violation of an ordinance, the court shall render judgment as provided under ss. 800.09 and 800.095. If the court finds the violation meets the conditions in s. 800.093(1)(a) and (b), the court may hold a hearing to determine if restitution shall be ordered under s. 800.093.

(2) Appeals. Appeals in actions in courts of record to recover forfeitures and penalties imposed by any ordinance or bylaw of a city, village, town sanitary district or public inland lake protection and rehabilitation district may be taken either by the defendant or by the city, village, town sanitary district or public inland lake protection and rehabilitation district. Appeals from circuit court in actions to recover forfeitures for ordinances enacted under ch. 349 shall be to the court of appeals. An appeal by the defendant shall include a bond to the city, village, town sanitary district or public inland lake protection and rehabilitation district with surety, to be approved by the judge, conditioned that if judgment is affirmed in whole or in part the defendant will pay the judgment and all costs and damages awarded against the defendant on the appeal. If the judgment is affirmed in whole or in part, execution may issue against both the defendant and the surety.

(3) Costs and fees; forfeitures to go to treasury. (a) Fees in forfeiture actions in circuit court for violations of ordinances are prescribed in s. 814.63(1) and (2).

(b) All forfeitures and penalties recovered for the violation of an ordinance or bylaw of a city, village, town, town sanitary district, or public inland lake protection and rehabilitation district shall be paid into the city, village, town, town sanitary district, or public inland lake protection and rehabilitation district treasury for the use of the city, village, town, town sanitary district, or public inland lake protection and rehabilitation district, except as provided in par. (c) and sub. (1)(bm). The judge shall report and pay into the treasury, quarterly, or at more frequent intervals if required, all moneys collected belonging to the city, village, town, town sanitary district, or public inland lake protection and rehabilitation district. The report shall be certified and filed in the office of the treasurer. The judge is entitled to duplicate receipts, one of which he or she shall file with the city, village, or town clerk, or with the town sanitary district or the public inland lake protection and rehabilitation district.

(c) The entire amount in excess of $150 of any forfeiture imposed for the violation of any traffic regulation in conformity with ch. 348 shall be transmitted to the county treasurer if the violation occurred on an interstate highway, a state trunk highway, or a highway over which the local highway authority does not have primary maintenance responsibility. The county treasurer shall then make payment to the secretary of administration as provided in s. 59.25(3)(L).

W.S.A. 66.0115

66.0115. Outstanding unpaid forfeitures

Currentness

(1) In this section, "municipality" means a county, city, village or town. Except as provided under sub. (2), any municipality may refuse to issue any license or permit to a person who has not paid an overdue forfeiture resulting from a violation of an ordinance of the municipality. Any municipality, by written agreement between itself and any other city, village or town within the county in which the municipality is located, may refuse to issue any license or permit to a person who has not paid an overdue forfeiture resulting from a violation of an ordinance of any municipality which is a party to the agreement. No municipality may refuse to issue a license or permit to a person who is appealing the imposition of a forfeiture.

(2) A municipality may not refuse to issue any of the following licenses under sub. (1):

(a) A marriage license issued under s. 765.12.

(b) A hunting or fishing license issued under ch. 29.

(c) A dog license issued under s. 174.07.

66.0117. Judgment against local governmental units

Currentness

(1) In this section:

(a) "Local governmental unit" means a city, village, town, county, school district, technical college district, town sanitary district or public inland lake protection and rehabilitation district.

(b) "Statement" means all of the following:

1. A certified transcript of a judgment.

2. A judgment creditor's affidavit of the amount due on a judgment, of payments made on the judgment and that the judgment has not been appealed.

(2)(a) If a final judgment for the payment of money is recovered against a local governmental unit, or an officer of the local governmental unit, when the judgment is to be paid by the local governmental unit, the judgment creditor may file a statement with the clerk of circuit court. The clerk of circuit court shall send a copy of the statement to the appropriate municipal clerk.

(b) If a statement is filed under par. (a), the amount due, with costs and interest to the time when the money will be available for payment, shall be added to the next tax levy, and shall, when received, be paid to satisfy the judgment. If the judgment is appealed after filing the transcript with the clerk of circuit court, and before the tax is collected, the money shall not be collected on that levy. If the municipal clerk fails to include the proper amount in the first tax levy, he or she shall include it or the portion required to complete it in the next levy.

(3) In the case of school districts, town sanitary districts or public inland lake protection and rehabilitation districts a statement shall be filed with the clerk of the town, village or city in which the district or any part of it lies, and levy shall be made against the taxable property of the district.

(4) No process for the collection of a judgment shall issue until after the time when the money, if collected upon the first tax levy under sub. (2)(b), is available for payment, and then only by leave of court upon motion.

(5) If by reason of dissolution or other cause, pending action, or after judgment, a statement cannot be filed with the clerk described in sub. (2)(a) or (3), it shall be filed with the clerk or clerks whose duty it is to make up the tax roll for the property liable.

Editors' Notes

COMMENTS--1999 ACT 150, § 29

Note: Creates a definition for s. 66.0117, relating to judgments against local governmental units. The definition differs from the current language of s. 66.09 by removing a community center from the list of local governmental bodies to which the law applies. It appears that a community center is not treated as a local governmental unit anywhere else in the statutes. The term community center first appeared in this section when separate statutes were consolidated and revised in chapter 396, laws of 1921.

W.S.A. 66.0119

66.0119. Special inspection warrants

Currentness

(1)(a) "Inspection purposes" includes such purposes as building, housing, electrical, plumbing, heating, gas, fire, health, safety, environmental pollution, water quality, waterways, use of water, food, zoning, property assessment, meter and obtaining data required to be submitted in an initial site report or feasibility report under subch. III of ch. 289 or s. 291.23, 291.25, 291.29 or 291.31 or an environmental impact statement related to one of those reports. "Inspection purposes" also includes purposes for obtaining information specified in s. 196.02(5m) by or on behalf of the public service commission.

(b) "Peace officer" means a state, county, city, village, town, town sanitary district or public inland lake protection and rehabilitation district officer, agent or employee charged under statute or municipal ordinance with powers or duties involving inspection of real or personal property, including buildings, building premises and building contents, and means a local health officer, as defined in s. 250.01(5), or his or her designee.

(c) "Public building" has the meaning given in s. 101.01(12).

(2) A peace officer may apply for, obtain and execute a special inspection warrant issued under this section. Except in cases of emergency where no special inspection warrant is required, special inspection warrants shall be issued for inspection of personal or real properties which are not public buildings or for inspection of portions of public buildings which are not open to the public only upon showing that consent to entry for inspection purposes has been refused.

(3) The following forms for use under this section are illustrative and not mandatory:

AFFIDAVIT

STATE OF WISCONSIN

... County

In the ... court of the ... of ...

A. F., being duly sworn, says that on the ... day of ..., ... (year), in said county, in and upon certain premises in the (city, town or village) of ... and more particularly described as follows: (describe the premises) there now exists a necessity to determine if said premises comply with (section ... of the Wisconsin statutes) or (section ... of ordinances of said municipality) or both. The facts tending to establish the grounds for issuing a special inspection warrant are as follows: (set forth brief statement of

reasons for inspection, frequency and approximate date of last inspection, if any, which shall be deemed probable cause for issuance of warrant).

Wherefore, the said A. F. prays that a special inspection warrant be issued to search such premises for said purpose.

...(Signed) A. F.

Subscribed and sworn to before me this ... day of ..., ... (year)

... Judge of the ... Court.

SPECIAL INSPECTION WARRANT

STATE OF WISCONSIN

... County

In the ... court of the ... of ...

THE STATE OF WISCONSIN, To the sheriff or any constable or any peace officer of said county:

Whereas, A. B. has this day complained (in writing) to the said court upon oath that on the ... day of ..., ... (year), in said county, in and upon certain premises in the (city, town or village) of ... and more particularly described as follows: (describe the premises) there now exists a necessity to determine if said premises comply with (section ... of the Wisconsin statutes) or (section ... of ordinances of said municipality) or both and prayed that a special inspection warrant be issued to search said premises.

Now, therefore, in the name of the state of Wisconsin you are commanded forthwith to search the said premises for said purposes.

Dated this ... day of ..., ... (year),

... Judge of the ... Court.

ENDORSEMENT ON WARRANT

Received by me ..., ... (year), at ... o'clock ... M.

... Sheriff (or peace officer).

RETURN OF OFFICER

STATE OF WISCONSIN

... Court

... County.

I hereby certify that by virtue of the within warrant I searched the named premises and found the following things (describe findings).

Dated this ... day of ..., ... (year)

... Sheriff (or peace officer).

66.0123. Recreation authority

Currentness

(1) In this section, "governmental unit" means a town board or school board.

(2) A governmental unit may, after compliance with s. 65.90, provide funds for the establishment, operation and maintenance of a department of public recreation.

(3)(a) A governmental unit may delegate the power to establish, maintain and operate a department of public recreation to a recreation board, which shall consist of 3 members and shall be appointed by the chairperson or other presiding officer of the governmental unit. The first appointments shall be made so that one member serves one year, one serves 2 years and one serves 3 years. After the first appointments, terms are 3 years.

(b) When 2 or more of the governmental units desire to conduct, jointly, a department of public recreation, the joint recreation board shall consist of not less than 3 members selected by the presiding officers of the governmental units acting jointly. Appointments shall be made for terms as provided in par. (a).

(c) The members of a recreation board shall serve gratuitously.

(d) A recreation board may conduct the activities of the department of public recreation, expend funds, employ a supervisor of recreation, employ assistants, purchase equipment and supplies and generally supervise the administration, maintenance and operation of the department of public recreation and recreational activities authorized by the recreation board.

(4)(a) A recreation board may conduct public recreation activities on property purchased or leased by a governmental unit for recreational purposes and under its own custody, on other public property under the custody of any other public authority, body or board with the consent of the public authority, body or board, or on private property with the consent of its owner. The recreation board, with the approval of the appointing authority, may accept gifts and bequests of land, money or other personal property, and use the gifts and bequests in whole or in part, the income from the gifts and bequests or the proceeds from the sale of any such property in the establishment, maintenance and operation of recreational activities.

(b) A recreation board shall annually submit to the governmental unit a report of the board's activities, including receipts and expenditures. The report shall be submitted not less than 15 days before the annual meeting of the governmental unit.

(c) An audit shall be made of the accounts of the recreation board in the same manner as provided for audits for towns or school districts as the case may be.

(d) The persons selected by the recreation board shall furnish a surety bond in an amount fixed by the governmental unit.

Subchapter I. General Powers; Administration

W.S.A. 66.0125

66.0125. Community relations--social development commissions

Currentness

(1) Definitions. In this section:

(a) "Status as a victim of domestic abuse, sexual assault, or stalking," for purposes of discrimination in housing, has the meaning given in s. 106.50(1m)(u).

(b) "Local governmental unit" means a city, village, town, school district, or county.

(2) Creation. Each local governmental unit is authorized and urged to either establish by ordinance a community relations-social development commission or to participate in a commission established on an intergovernmental basis within the county under enabling ordinances adopted by the participating local governmental units. A school district may establish or participate in a commission by resolution. An intergovernmental commission may be established in cooperation with a nonprofit corporation located in the county and composed primarily of public and private welfare agencies devoted to any of the purposes set forth in this section. An ordinance or resolution establishing a commission shall substantially embody the language of sub. (3). Each local governmental unit may appropriate money to defray the expenses of the commission. If the commission is established on an intergovernmental basis within the county, the provisions of s. 66.0301, relating to local cooperation, apply as optional authority and may be utilized by participating local governmental units to effectuate the purposes of this section, but a contract between local governmental units is not necessary for the joint exercise of any power authorized for the joint performance of any duty required in this section.

(3) Purpose and functions of commission. (a) The purpose of the commission is to study, analyze, and recommend solutions for the major social, economic, and cultural problems that affect people residing or working within the local governmental unit, including problems of the family, youth, education, the aging, juvenile delinquency, health and zoning standards, discrimination in employment and public accommodations and facilities on the basis of sex, class, race, religion, sexual orientation, or ethnic or minority status and discrimination in housing on the basis of sex, class, race, religion, sexual orientation, ethnic or minority status, or status as a victim of domestic abuse, sexual assault, or stalking.

(b) The commission may:

1. Include within its studies problems related to pornography, industrial strife and the inciting or fomenting of class, race or religious hatred and prejudice.

2. Encourage and foster participation in the fine arts.

(c) The commission shall:

1. Recommend to the local governmental unit's governing body and chief executive or administrative officer the enactment of such ordinances or other action as they deem necessary:

a. To establish and keep in force proper health standards for the community and beneficial zoning for the community area in order to facilitate the elimination of, and prevent the start and spread of, blighted areas.

b. To ensure to all residents of a local governmental unit, regardless of sex, race, sexual orientation, or color, the right to enjoy equal employment opportunities and to ensure to those residents, regardless of sex, race, sexual orientation, color, or status as a victim of domestic abuse, sexual assault, or stalking, the right to possess equal housing opportunities.

2. Cooperate with state and federal agencies and nongovernmental organizations having similar or related functions.

3. Examine the need for, initiate, participate in and promote publicly and privately sponsored studies and programs in any field of human relationship that will aid in accomplishing the purposes and duties of the commission.

4. Have authority to conduct public hearings within the local governmental unit and to administer oaths to persons testifying before it.

5. Employ such staff as is necessary to implement the duties assigned to it.

(4) Composition of commission. The commission shall be nonpartisan and composed of citizens residing in the local governmental unit, including representatives of the clergy and minority groups. The composition of the commission and the method of appointing and removing commission members shall be determined by the governing body of the local governmental unit creating or participating in the commission. Notwithstanding s. 59.10(4) or 66.0501(2), a member of the local governmental unit's governing body may serve on the commission, except that a county board member in a county having a population over 750,000 may not accept compensation for serving on the commission. Of the persons first appointed, one-third shall hold office for one year, one-third for 2 years, and one-third for 3 years from the first day of February next following their appointment, and until their respective successors are appointed and qualified. All succeeding terms shall be for 3 years. Any vacancy shall be filled for the unexpired term in the same manner as original appointments. Every person appointed as a member of the commission shall take and file the official oath.

(5) Organization. The commission shall meet in January, April, July and October of each year, and may meet at such additional times as the members determine or the chairperson directs. Annually, it shall elect from its membership a chairperson, vice chairperson and secretary. A majority of the commission shall constitute a quorum. Members of the commission shall receive no

compensation, but each member shall be entitled to actual and necessary expenses incurred in the performance of commission duties. The commission may appoint consulting committees consisting of either members or nonmembers or both, the appointees of which shall be reimbursed their actual and necessary expenses. All expense accounts shall be paid by the commission on certification by the chairperson or acting chairperson.

(6) Open meetings. All meetings of the commission and its consulting committees shall be publicly held and open to all citizens at all times as required by subch. V of ch. 19.

(7) Designation of commissions as cooperating agencies under federal law. (a) The commission may be the official agency of the local governmental unit to accept assistance under title II of the federal economic opportunity act of 1964. [1] No assistance shall be accepted with respect to any matter to which objection is made by the legislative body creating the commission, but if the commission is established on an intergovernmental basis and objection is made by any participating legislative body, assistance may be accepted with the approval of a majority of the legislative bodies participating in the commission.

(b) The commission may be the official agency of the local governmental unit to accept assistance from the community relations service of the U.S. department of justice under title X of the federal civil rights act of 1964 [2] to provide assistance to communities in resolving disputes, disagreements or difficulties relating to discriminatory practices based on sex, race, color or national origin which may impair the rights of persons in the local governmental unit under the constitution or laws of the United States or which affect or may affect interstate commerce.

(8) Other powers of the county board of supervisors. County boards may appropriate county funds for the operation of community relations-social development commissions established or reconstituted under this section, including those participated in on an equal basis by nonprofit corporations located in the county and comprised primarily of public and private welfare agencies devoted to any of the purposes set forth in this section. The legislature finds that the expenditure of county funds for the establishment or support of such commissions is for a public purpose.

(9) Intent. It is the intent of this section to promote fair and friendly relations among all the people in this state, and to that end race, creed, sexual orientation, or color ought not to be made tests in the matter of the right of any person to earn a livelihood or to enjoy the equal use of public accommodations and facilities and race, creed, sexual orientation, color, or status as a victim of domestic abuse, sexual assault, or stalking ought not to be made tests in the matter of the right of any person to sell, lease, occupy, or use real estate.

(10) Short title. This section shall be known and may be cited as “The Wisconsin Bill of Human Rights”.

66.0127. Municipal hospital board

Currentness

(1) In a city, village or town in which a municipal hospital is located, the board of trustees or other governing board of the municipal hospital may, except as otherwise provided by ordinance, do any of the following:

(a) Prescribe rules of order for the regulation of its own meetings and deliberations.

(b) Promulgate rules relating to the government, operation and maintenance of the hospital and relating to the employees of the hospital.

(c) Contract for and purchase all fuel, food and other supplies reasonably necessary for the operation and maintenance of the hospital.

(d) Promulgate rules for the admission to and government of patients at the hospital.

(e) Contract for the construction, installation or making of additions or improvements to or alterations of the hospital if the additions, improvements or alterations have been ordered and funds have been provided by the city council or village or town board.

(f) Employ all necessary employees at the hospital.

(g) Audit all accounts and claims against the hospital or against the board of trustees and, if approved, the city, village or town clerk and treasurer shall pay the accounts and claims in the manner provided by s. 66.0607.

(2) All expenditures made under this section shall be within the limits authorized by the governing body of the municipality.

Editors' Notes

COMMENTS--1999 ACT 150, § 486

Note: Section 66.50(1)(f) provides that the board of trustees or other governing board of a municipal hospital may engage all necessary employees for a period not to exceed one year under any one contract and at a salary not exceeding the sum of $25 per week, excluding board and laundry, unless a larger salary is expressly authorized by the city council or village or town board. Renumbered s. 66.0127(1)(f) removes these limits on the terms of employee contracts and on employee salaries.

W.S.A. 66.0129

66.0129. Hospital facilities lease from nonprofit corporation

Currentness

(1) Powers and duties of governing body. For the purpose of providing adequate hospital facilities in the state of Wisconsin to serve cities, villages and towns and the hospital service area; providing all lands, buildings, improvements, facilities or equipment or other capital items necessary or desirable in connection with the hospital; ultimately acquiring the hospital by the city, village or town; acquiring lands for future hospital development; and refinancing indebtedness created by a nonprofit corporation for acquiring lands or providing hospital buildings or additions or improvements to the hospital buildings, the governing body of a city, village or town may:

(a) Without limitation by any other statute, sell and convey title to a nonprofit corporation any land and any existing buildings on the land owned by the city, village or town for that consideration and upon the terms and conditions that the governing body of the city, village or town determines are in the public interest.

(b) Lease to a nonprofit corporation for terms not exceeding 40 years each any land and existing buildings on the land that are owned by the city, village or town upon the terms, conditions and rentals that the governing body of the city, village or town determines are in the public interest.

(c) Lease or sublease from the nonprofit corporation, for terms not exceeding 40 years, and make available for public use, any lands or any land and existing buildings conveyed or leased to the corporation under pars. (a) and (b), and any new buildings erected upon the land or upon any other land owned by the corporation, upon the terms, conditions and rentals, subject to available appropriations, and ultimate acquisition, that the governing body of the city, village or town determines are in the public interest. With respect to any property conveyed to the nonprofit corporation under par. (a), the lease from the nonprofit corporation may be subject or subordinated to one or more mortgages of the property granted by the corporation.

(d) Apply all net revenues derived from the operation of any lands or buildings to the payment of rentals due and to become due under any lease or sublease made under par. (c).

(e) Pledge and assign all or part of the revenues derived from the operation of any lands or new buildings as security for the payment of rentals due and to become due under any lease or sublease of the new buildings made under par. (c).

(f) Covenant and agree in any lease or sublease made under par. (c) to impose fees, rentals or other charges for the use and occupancy or other operation of the new buildings in an amount which together with other moneys of the city, village or town available for that purpose will produce net revenue sufficient to pay the rentals due and to become due under the lease or sublease.

(g) Apply all or any part of the revenues derived from the operation of any lands or existing buildings to the payment of rentals due and to become due under a lease or sublease made under par. (c).

(h) Pledge and assign all or any part of the revenues derived from the operation of any lands or existing buildings to the payment of rentals due and to become due under a lease or sublease made under par. (c).

(i) Covenant and agree in a lease or sublease made under par. (c) to impose fees, rentals or other charges for the use and occupancy or other operation of any lands or existing buildings in an amount calculated to produce net revenues sufficient to pay the rentals due and to become due under the lease or sublease.

(j) Operate the hospital, until it is ultimately acquired, in a manner that provides revenues sufficient to pay the costs of operation and maintenance of the hospital and the payments due the nonprofit corporation.

(2) Municipal liability. The city, village or town shall be liable for accrued rentals and for any other default under any lease or sublease made under sub. (1)(c) and may be sued therefor on contract.

(3) No debt inclusion. Nothing under this section shall be considered to incur any municipal debt. No obligation under this section shall be included in arriving at constitutional debt limitations.

(4) Powers and duties of nonprofit corporation. In addition to all other powers granted to nonprofit corporations, the nonprofit corporation has the following additional powers and duties when leasing hospital facilities to a city, village or town:

(a) To acquire by purchase, gift or lease real property and buildings on the property from a city, village or town or other person, to construct hospital facilities on the property and to lease the real property and buildings to a city, village or town for terms not exceeding 40 years, and to transfer the land and buildings to the city, village or town upon termination of the lease.

(b) To borrow money and pledge income and rentals as security.

(5) Bids for construction. The nonprofit corporation shall let all contracts exceeding $1,000 for the construction, maintenance or repair of hospital facilities to the lowest responsible bidder after advertising for bids by the publication of a class 2 notice under ch. 985. Section 66.0901 applies to bids and contracts under this subsection.

(6) Definitions. Unless the context otherwise requires, in this section:

(a) “Buildings”, “new buildings” and “existing buildings” include all buildings, structures, improvements, facilities, equipment or other capital items which the governing body of the city, village or town determines are necessary or desirable for the purpose of providing hospital facilities.

(b) “Nonprofit corporation” means a nonstock corporation organized under ch. 181 that is a nonprofit corporation, as defined in s. 181.0103(17).

W.S.A. 66.0131

66.0131. Local governmental purchasing

Currentness

(1) Definitions. In this section:

(a) "Local governmental unit" means a political subdivision of this state, a special purpose district in this state, an agency or corporation of a political subdivision or special purpose district, or a combination or subunit of any of the foregoing.

(b) "Recycled or recovered content" has the meaning given in s. 16.70(13).

(2) Intergovernmental purchases without bids. Notwithstanding any statute requiring bids for public purchases, any local governmental unit may make purchases from another unit of government, including the state or federal government, without the intervention of bids.

(3) Purchase of recycled materials. (a)1. A local governmental unit shall, to the extent practicable, make purchasing selections using specifications developed by state agencies under s. 16.72(2)(e) to maximize the purchase of products utilizing recycled or recovered materials.

2. Each local governmental unit shall ensure that the average recycled or recovered content of all paper purchased by the local governmental unit measured as a proportion, by weight, of the fiber content of all paper products purchased in a year, is not less than the following:

a. By 1991, 10 percent of all purchased paper.

b. By 1993, 25 percent of all purchased paper.

c. By 1995, 40 percent of all purchased paper.

(4) Purchase of recyclable materials. A local governmental unit shall, to the extent practicable, make purchasing selections using specifications prepared by state agencies under s. 16.72(2)(f).

(5) Life cycle cost estimate. A local governmental unit shall award each order or contract for materials, supplies or equipment on the basis of life cycle cost estimates whenever that action is appropriate. The terms, conditions and evaluation criteria to be applied shall be incorporated into the solicitation of bids or proposals. The life cycle cost formula may include, but is not limited to, the applicable costs of energy efficiency, acquisition and conversion, money, transportation, warehousing and distribution, training, operation and maintenance, and disposition or resale.

Current through 2023 Act 272, published April 10, 2024.

End of Document

W.S.A. 66.0133

66.0133. Energy savings performance contracting

Currentness

(1) Definitions. In this section:

(a) "Energy conservation measure" means a facility alteration or training, service, or operations program designed to reduce energy consumption or operating costs, conserve water resources, improve metering accuracy, or ensure state or local building code compliance.

(b) "Local governmental unit" has the meaning given in s. 19.42(7u).

(bg) "Operational savings" means savings from costs eliminated or avoided as a result of installing equipment or providing services.

(c) "Performance contract" means a contract for the evaluation and recommendation of energy conservation and facility improvement measures, and for the implementation of these measures.

(d) "Qualified provider" means a person, other than a local governmental unit, who is experienced in the design, implementation and installation of energy conservation and facility improvement measures and who has the ability to provide labor and material payment and performance bonds equal to the maximum amount of any payments due under a performance contract entered into by the person.

(2) Authorization; report. (a)1. Except as provided under subd. 2., any local governmental unit may, in accordance with this section, enter into a performance contract with a qualified provider to reduce energy or operating costs, realize operational savings, conserve water resources, ensure state or local building code compliance, or enhance the protection of property of the local governmental unit.

2. A performance contract with a qualified provider under this section may not allow a local governmental unit to increase the square footage of a facility unless the increase is necessary to make mechanical, electrical, or plumbing improvements in order to achieve reductions in energy consumption or to conserve water resources.

(b) Prior to entering into a performance contract for the implementation of any energy conservation or facility improvement measure, a local governmental unit shall obtain a report from a qualified provider containing recommendations concerning the

amount the local governmental unit should spend on energy conservation and facility improvement measures. The report shall contain estimates of all costs of installation, modifications, or remodeling, including costs of design, engineering, maintenance, repairs and financing. In addition, the report shall contain a guarantee specifying a minimum amount by which energy or operating costs of the local governmental unit will be reduced or energy or water metering accuracy will be improved, if the installation, modification or remodeling is performed by that qualified provider.

(c) If, after review of the report under par. (b), the local governmental unit finds that the amount it would spend on the energy conservation and facility improvement measures recommended in the report is not likely to exceed the amount to be saved in energy and operation costs, or the benefits to be obtained by improved metering accuracy, over the remaining useful life of the facility to which the measures apply, the local governmental unit may enter into the contract.

(3) Notice. Notwithstanding ss. 27.065(5)(a), 30.32, 38.18, 43.17(9)(a), 59.52(29)(a), 59.70(11), 60.47(2) to (4), 60.77(6)(a), 61.54, 61.57, 62.15(1), 62.155, 66.0131(2), 66.0923(10), 66.0925(10), 66.0927(11), 66.1333(5)(a)2., 200.11(5)(d) and 200.47(2), before entering into a performance contract under this section, a local governmental unit shall solicit bids or competitive sealed proposals from qualified providers. A local governmental unit may only enter into a performance contract with a qualified provider if the contract is awarded by the governing body of the local governmental unit and if the qualified provider agrees to sign the performance contract and all contracts with subcontractors, including subcontractors who provide billing services under the performance contract. The governing body shall give at least 10 days' notice of the meeting at which the body intends to award a performance contract. The notice shall include a statement of the intent of the governing body to award the performance contract, the names of all potential parties to the proposed performance contract, and a description of the energy conservation and facility improvement measures included in the performance contract and an explanation of how these measures will generate operational savings sufficient to pay for the cost of the measures. At the meeting, the governing body shall review and evaluate the bids or proposals submitted by all qualified providers and may award the performance contract to the qualified provider that best meets the needs of the local governmental unit, which need not be the lowest cost provider.

(4) Installment payment and lease-purchase agreements. A local governmental unit may enter into an installment payment contract or lease-purchase agreement for the purchase and installation of energy conservation or facility improvement measures.

(5) Payment schedule; savings. Each performance contract shall provide that all payments to a qualified provider, except obligations on termination of the contract before its expiration, shall be made no later than the date on which the contract expires. Energy savings shall be guaranteed by the qualified provider for the entire term of the performance contract and may not be guaranteed by a third party. Unless otherwise agreed by the parties, every performance contract shall assume an annual increase of 3 percent in the cost of relevant utility services incurred by the local governmental unit.

(6) Terms of contracts. A performance contract may extend beyond the fiscal year in which it becomes effective, subject to appropriation of moneys, if required by law, for costs incurred in future fiscal years.

(7) Allocation of obligations. Subject to appropriations as provided in sub. (6), each local governmental unit shall allocate sufficient moneys for each fiscal year to make payment of any amounts payable by the local governmental unit under performance contracts during that fiscal year.

(8) Bonds. Each qualified provider under a performance contract shall provide labor and material payment and performance bonds in an amount equivalent to the maximum amount of any payments due under the contract, including payments for work performed by other persons that is necessary to achieve the required guaranteed energy or operational savings.

(9) Use of moneys. Unless otherwise provided by law or ordinance, if a local governmental unit has funding designated for operating and capital expenditures, the local governmental unit may use moneys designated for operating or capital expenditures to make payments under any performance contract, including installment payments or payments under lease-purchase agreements.

(10) Monitoring; reports. During the entire term of each performance contract, the qualified provider entering into the contract shall monitor the reductions in energy consumption and cost savings attributable to the energy conservation and facility improvement measures installed under the contract, and shall periodically prepare and provide a report to the local governmental unit entering into the contract documenting the reductions in energy consumption and cost savings to the local governmental unit.

(11) Energy conservation measures. Energy conservation measures under this section may include the following:

(a) Insulation of a building structure or systems within a building.

(b) Storm windows or doors, caulking or weather stripping, multiglazed windows or doors, heat-absorbing or heat-reflective glazed and coated window or door systems, additional glazing, reductions in glass area, or other window and door system modifications that reduce energy consumption.

(c) Automated or computerized energy control and facility management systems or computerized maintenance management systems.

(d) Heating, ventilating or air conditioning system modifications or replacements.

(e) Replacement or modification of lighting fixtures to increase the energy efficiency of the lighting system without increasing the overall illumination of a facility, unless an increase in illumination is necessary to conform to the applicable state or local building code for the lighting system after the proposed modifications are made.

(f) Energy recovery systems.

(g) Utility management systems and services.

(h) Cogeneration systems that produce steam or forms of energy such as heat, as well as electricity, for use primarily within a building or complex of buildings.

(i) Life safety improvements or systems required to comply with the federal Americans with Disabilities Act.

(ig) Replacement or improvement of energy or water metering systems.

(im) Measures to improve indoor or outdoor water conservation, including measures related to water recycling and reuse, and systems or equipment that implement those measures.

(ir) Measures to improve indoor air quality to meet applicable state and local building code requirements.

(j) Any other facility improvement measure that is designed to provide long-term energy or operating cost reductions or compliance with state or local building codes.

Proposed Legislation

W.S.A. 66.0134

66.0134. Labor peace agreements prohibited

Currentness

(1) Definitions. In this section:

(a) "Federal labor laws" means the federal Labor Management Relations Act, 29 USC 141 to 144, and the federal National Labor Relations Act, 29 USC 151 to 169.

(b) "Local governmental unit" means a city, village, town, county, school district, including a 1st class city school district, technical college district, sewerage district, drainage district, or any other special purpose district in this state, or any other public or quasi-public corporation, officer, board, or other public body, an agency or corporation of a political subdivision or special purpose district, or a combination or subunit of any of the foregoing.

(2) Agreements prohibited. Neither the state nor a local governmental unit may enact a statute or ordinance; adopt a policy or regulation; or impose a contract, zoning, permitting, or licensing requirement, or any other condition including a condition of any regulatory approval; that would require any person to accept any provision that is a mandatory or nonmandatory subject of collective bargaining under state or federal labor laws.

(3) Waiver prohibited. Neither the state nor a local governmental unit, nor any of its employees, may require any person to waive the person's rights under state or federal labor laws, or compel or attempt to compel a person to agree to waive the person's rights under state or federal labor laws as a condition of any regulatory approval or other approval by the local governmental unit.

(4) Agreements void. Any agreement entered into, renewed, modified, or extended on or after April 18, 2018, between any person and any labor organization in violation of this section is void.

W.S.A. 66.0135

66.0135. Interest on late payments

Currentness

(1) Definitions. In this section:

(a) "Agency" means any office, department, board, commission or other body under the control of the governing body of a local governmental unit which expends moneys or incurs obligations on behalf of the local governmental unit.

(b) "Good faith dispute" means any of the following:

1. A contention by an agency, principal contractor or subcontractor that goods delivered or services rendered were of a lesser quantity or quality than ordered or specified by contract, were faulty or were installed improperly.

2. Any other reason giving cause for the withholding of payment by an agency, principal contractor or subcontractor until the dispute is settled.

(c) "Local governmental unit" means a political subdivision of this state, a special purpose district in this state, an agency or corporation of a political subdivision or special purpose district, or a combination or subunit of any of the foregoing.

(d) "Subcontractor" has the meaning given in s. 66.0901(1)(d).

(2) Interest payable to principal contractors. (a) Except as provided in sub. (4) or as otherwise specifically provided, an agency that does not pay timely the amount due on an order or contract shall pay interest on the balance due from the 31st day after receipt of a properly completed invoice or receipt and acceptance of the property or service under the order or contract, whichever is later, or, if the agency does not comply with sub. (7), from the 31st day after receipt of an improperly completed invoice or receipt and acceptance of the property or service under the order or contract, whichever is later, at the rate specified in s. 71.82(1)(a) compounded monthly.

(b) For the purposes of par. (a), a payment is timely if the payment is mailed, delivered or transferred by the later of the following:

1. The date specified on a properly completed invoice for the amount specified in the order or contract.

2. Within 30 days after receipt of a properly completed invoice or receipt and acceptance of the property or service under the order or contract, or, if the agency does not comply with sub. (7), within 30 days after receipt of an improperly completed invoice or receipt and acceptance of the property or service under the order or contract, whichever is later.

(3) Interest payable to subcontractors. (a) Except as provided in sub. (4)(e) or as otherwise specifically provided, principal contractors that engage subcontractors to perform part of the work on an order or contract from an agency shall pay subcontractors for satisfactory work in a timely fashion. A payment is timely if it is mailed, delivered or transferred to the subcontractor no later than 7 days after the principal contractor's receipt of any payment from the agency.

(b) If a subcontractor is not paid in a timely fashion, the principal contractor shall pay interest on the balance due from the 8th day after the principal contractor's receipt of any payment from the agency, at the rate specified in s. 71.82(1)(a) compounded monthly.

(c) Subcontractors receiving payment under this subsection shall pay lower-tier subcontractors, and be liable for interest on late payments, in the same manner as principal contractors are required to pay subcontractors in pars. (a) and (b).

(4) Exceptions. Subsection (2) does not apply to any of the following:

(a) Any portion of an order or contract for which the payment, from federal moneys, has not been received.

(b) An order or contract that is subject to late payment interest or another late payment charge required by another law or rule specifically authorized by law.

(c) An order or contract between 2 or more agencies of the same local governmental unit.

(d) An order or contract which provides for the time of payment and the consequences of nontimely payment, if any deviation from the deadlines established in sub. (2) appears in the original bid or proposal.

(e) An order or contract under which the amount due is subject to a good faith dispute if, before the date on which payment is not timely, notice of the dispute is sent by 1st class mail, personally delivered or sent in accordance with the procedure specified in the order or contract.

(5) Appropriation from which paid. An agency that pays interest under this section shall pay the interest only from the appropriation for administration of the program under which the order or contract was made or entered into, unless otherwise directed by the governing body of the local governmental unit.

(6) Attorney fees. Notwithstanding s. 814.04(1), in an action to recover interest due under this section, the court shall award the prevailing party reasonable attorney fees.

(7) Improper invoices. If an agency receives an improperly completed invoice, the agency shall notify the sender of the invoice within 10 working days after it receives the invoice of the reason that it is improperly completed.
