UNITED STATES DISTRICT COURT

DISTRICT OF OREGON

EUGENE DIVISION

STATE OF WASHINGTON, et al., Plaintiff(s), v. UNITED STATES DEPARTMENT OF HEALTH AND HUMAN SERVICES, et al., Defendant(s).	Case No.: 6:25-cv-01748-AA NOTICE OF AMENDED ADMINISTRATIVE RECORD DOCUMENTS

NOTICE OF AMENDED ADMINISTRATIVE RECORD DOCUMENTS

Please take notice that Defendants hereby file amended Administrative Record documents reflecting 16 documents that were previously only able to be provided in native form. The documents have since been Bates stamped and Plaintiffs' counsel requested the documents be filed on the record. The native versions of these documents were previously transmitted to the Court

and to Plaintiffs' counsel on thumb drives containing the entirety of the Administrative Record. These documents were also designated on the record by slip sheets filed on January 16, 2026. The index below depicts all amended documents filed in conjunction with this notice and provides citation to the originally filed, corresponding slip sheets.

Introduction

Making Proud Choices! An Evidence-Based, Safer-Sex Approach to Teen Pregnancy and HIV/STI Prevention is designed to give adolescents the tools they need to reduce their risk of unintended pregnancy, HIV and other STIs. The goal is to increase knowledge and perception of personal vulnerability, develop positive attitudes toward safer sex, and build the skills and confidence needed to abstain successfully or to use safer sex practices willingly and effectively if they choose to be sexually active.

It isn't easy to motivate people to modify their sexual behavior, even when that behavior puts them at risk. Hence, the model of human behavior used to understand sexual risk behavior in ***Making Proud Choices!*** draws upon social learning theories, and the interventions proposed for changing that behavior reflect a cognitive-behavioral approach. This curriculum has also been informed by data gathered through numerous focus groups as well as the developers' extensive experience working with young people.

In order to encourage young people to adopt less risky behaviors they must be provided with the following crucial tools:

- The information they need to understand the issues.
- The cognitive skills that will allow them to examine their beliefs about personal risks and consequences and to analyze the behaviors or situations that increase their risk of pregnancy, HIV and other STIs.
- The intrapersonal (within self) skills to understand and manage their feelings and thoughts.
- The interpersonal (between self and others) skills to define and exercise behaviors that reduce personal risk.
- A sense of self-efficacy or the confidence required to allow them to make safer decisions about their sexual choices.
- The motivation to apply these skills to their everyday lives.

The ***Making Proud Choices!*** curriculum that follows consists of three sections. The first is a Facilitator's Guide that includes information about facilitating the curriculum, the theory behind it and evaluation of the curriculum with behavioral findings. It also covers curriculum teaching strategies and format of the intervention modules, including information about group agreements and training strategies such as brainstorming, roleplaying, and interactive activities and games. The second is the ***Making Proud Choices!***

curriculum itself. The final section, the appendixes, includes optional activities that can be included in the curriculum's implementation, additional information about common STIs, contraceptive methods and drugs, guidelines for managing problem behavior, answers to commonly asked questions and a glossary.

This curriculum is intended to reduce the incidence of unprotected sexual behavior among adolescents and help them make a difference in their lives by making proud and safer choices about their sexual behavior. The facilitator's ability to deliver the information and conduct the exercises contained in this manual will determine the success of the curriculum, so please take the time to carefully read and understand the basic principles, key elements and content of each session. Our collective efforts can help prevent pregnancy, STIs and HIV in adolescents and have a meaningful impact on the lives of our nation's young people.

Overview of the Curriculum

Making Proud Choices! An Evidence-Based, Safer-Sex Approach to Teen Pregnancy and HIV/STI Prevention is an eight-module curriculum designed to empower adolescents to change their behavior in ways that will reduce their risk of becoming infected with HIV and other STIs, and significantly decrease their chances of being involved in unintended pregnancies. The curriculum acknowledges that abstinence is the most effective way to eliminate these risks. However, realizing that abstinence is not the path that many young people will choose, the curriculum spends a great deal of time encouraging the practice of safer sex and condom use. The curriculum also addresses the underlying attitudes and beliefs that many young people have about birth control and condoms, provides information and exercises that teach adolescents how to use condoms correctly and gives them the confidence they need to choose and negotiate safer-sex practices.

Note: Throughout this curriculum the importance of effective and consistent use of protection and contraception are mentioned as an important strategy for reducing the risk of HIV and other STIs, as well as pregnancy. Any reference to protection is meant to include the external (male) condom, internal (female) condom and dental dam. The use of the term protection *is meant to be inclusive of all people, regardless of their gender, sexual orientation or type of usage. The terms* birth control *or* contraception *may be used interchangeably, referring to methods used to prevent pregnancy.*

The ***Making Proud Choices!*** curriculum was designed to be used with smaller groups ranging from six to twelve participants, but it can be implemented with larger numbers as well if more time is built into each session. It is appropriate for various community settings, including schools and youth agencies. The curriculum has 8 hours of content divided into eight 1-hour modules. It can be implemented in the 2-day format (four modules each day), 4-day format (two modules each day) or 8-day format (one module each day).

Curriculum Objectives

At the completion of the ***Making Proud Choices!*** curriculum youth will have:

- Increased knowledge about prevention of HIV, other STIs and pregnancy.
- More positive attitudes/beliefs about birth control and condom use.
- Increased confidence in their ability to negotiate safer sex and to use condoms correctly.
- Increased negotiation skills.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

- Improved condom use skills.
- Stronger intentions to use birth control and condoms if they have sex.
- A lower incidence of HIV/STI risk–associated sexual behavior.
- A stronger sense of pride and responsibility in making a difference in their lives.

Content Outline

The ***Making Proud Choices!*** curriculum has four major components. The first component focuses on goals and dreams and their relationship to adolescent sexual behavior. The second component emphasizes knowledge, including the causes, transmission and prevention of HIV, other STIs and pregnancy. The third component focuses on beliefs and attitudes about condoms, birth control methods, pregnancy, STIs and HIV. The fourth stresses skills and self-efficacy including negotiation-refusal and condom use skills. It also provides time for practice, reinforcement and support.

The Modules

- Module 1: Getting to Know You and Steps to Making Your Dreams Come True
- Module 2: A Possible Outcome of Unprotected Sex: HIV Infection
- Module 3: Attitudes and Beliefs about HIV/AIDS and Condom Use
- Module 4: Strategies for Preventing HIV Infection: Stop, Think and Act
- Module 5: Possible Outcomes of Unprotected Sex: STIs
- Module 6: A Possible Outcome of Unprotected Sex: Pregnancy
- Module 7: Developing Condom Use and Negotiation Skills
- Module 8: Enhancing Refusal and Negotiation Skills

Types of Activities

The ***Making Proud Choices!*** curriculum includes a series of fun and interactive learning experiences designed to increase participation and help adolescents understand the risk behaviors that can lead to pregnancy and STIs, including HIV. Activities are designed to help youth feel comfortable practicing condom use, address their concerns about the negative effects of practicing safer sex and build their condom-use skills as well as their ability to comfortably negotiate safer sex practices.

Facilitators may wish to add time to some of the modules, if possible, to allow for further discussion or to extend and reinforce the skills practice.

The activities involve viewing video clips, playing games, brainstorming, roleplaying, engaging in skill-building exercises and small-group discussions designed to build group cohesion and enhance the learning experience. Each activity is brief, and many require the participants to get up out of their chairs and interact with one another. This maintains their interest and attention in a way that lectures or lengthy group discussions do not. Below is a description of the types of activities used as well as their underlying philosophies and goals.

- The goals and dreams activity encourages the adolescents to consider their goals for the future and to think about how participating in unsafe sex might affect the attainment of these goals.
- Videos are used to depict adolescents in various situations. These videos evoke feelings, thoughts, attitudes, beliefs and stereotypes about pregnancy, HIV and other STIs, sexual involvement and HIV/STI prevention skills that are then discussed in a group setting. In addition to the videos provided with the curriculum, ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.
- The roleplay scenarios are designed to provide participants with the confidence and skills necessary to negotiate condom use. They also recommend a variety of ways in which the prevention skills learned in this program can be implemented in the participants' lives.
- The entire curriculum incorporates the ***Making Proud Choices! Be Proud! Be Responsible!*** theme designed to encourage the participants to be proud of themselves, their families and their community, and to behave responsibly for everyone's sake.

Training

It is highly recommended that educators who plan to teach ***Making Proud Choices!*** receive research-based professional development to prepare them to effectively implement the curriculum with fidelity for the intended target group. ETR provides research-based Training of Educators (TOE) that employs the key components required for quality implementation, including learner engagement, modeling, skills practice and follow-up support. Onsite and regional TOE on ***Making Proud Choices!*** is available through ETR's Professional Learning Services. For more information, please visit www.etr.org/ebi/training-ta/types-of-services.

Adapting This Program for Your Population

Program facilitators are encouraged to make minor adaptations (also referred to as "green light" adaptations) to optimize the program for the young people receiving it. Such adaptations are intended to help tailor the curriculum to the needs of participating youth. Examples of minor adaptations include updating statistics and changing the names or editing the language or scenarios in roleplays to better reflect your youth population.

It's recommended that facilitators work with a small group of youth to review the roleplays and other activities and suggest minor changes to increase relevance before implementation. Other allowable enhancements include teaching reproductive health lessons before starting the program, and adding lessons before or after the curriculum lessons to address additional sexual health issues, such as dating violence or electronic dating aggression.

It is also acceptable to add time to the modules when needed to ensure that all the relevant content can be covered. Lengthening sessions can allow more time for review of previous lessons, discussion, questions, roleplay practice, personalization, video viewing and other activities. This adaptation may increase effectiveness.

Adaptations such as re-ordering the curriculum lessons or inserting additional content into the middle of the program are considered "yellow light" adaptations because they can have an impact on program flow and effectiveness. It's best to discuss these kinds of changes with the program developers first.

Major changes (also referred to as "red light" adaptations) are discouraged and may significantly affect and alter program effectiveness. Examples of major changes include dropping entire activities or lessons, or altering the key messages of the program.

Adaptation guidelines for evidence-based curricula can be found at www.etr.org/ebi and include additional examples of green-, yellow- and red-light adaptations.

Researchers and organizations interested in making significant adaptations to this curriculum for use in an evaluation are asked to contact ETR for support and permission first. Such adaptations might include combining the curriculum with another evidence-based program or adding a new element or component.

CURRICULUM COMPONENTS AND FORMAT

Each module included in the ***Making Proud Choices!*** curriculum contains different activities. Reduced images of worksheets, facilitator materials and posters are included at the end of each module. The first pages of each module explain the following information.

Goals

A set of statements that give the facilitator a reference point for what participants will learn from the module.

Learning Objectives

A set of measurable objectives designed to help the facilitator "spot-evaluate" the extent to which a given activity has been successfully completed by the participants.

Strategies/Methods

A list of methods included in the module to achieve the objectives and goals. For example, these may include videos, mini-lectures, brainstorming and roleplaying.

Materials Needed

A list of equipment and materials needed for the module and for each specific activity.

Implementation Time / Time Needed

The amount of time allotted to each activity in the module (e.g., Lecture—10 minutes; Small-Group Exercise—15 minutes). Facilitators should conduct each activity in the time allotted. Facilitators may wish to add time to some of the modules, if possible, to allow for further discussion of videos and other activities, or to extend and reinforce the skills practice.

Rationale for Each Activity

The rationale for each activity is listed on the first page of the activity. It explains how and why the activity is helpful to participants' learning. All materials and exercises contained in the module are designed to help the participants to achieve these stated purposes.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Activities

Instructions for implementing each activity are fully described. For example, in the case of a roleplay exercise, each character receives a description of his or her circumstances and concerns. These exercises are designed to build prevention skills and are an essential part of the program.

Procedures

The procedures for each activity are numbered and include all the steps necessary to implement the activity. Whenever the facilitator is to say a specific instruction or mini-lecture aloud, the material appears in a box.

For example, the procedure would look like this:

1. **Introduce the activity by saying,**

> **We are going to do a brainstorming activity now. What I'd like you to do is . . .**

Although it is not necessary to say verbatim what appears in the box, facilitators should be sure that the content and tone are conveyed. Some facilitators find that memorizing the materials works best for them. The group will probably be more attentive if they do not think the facilitator is reading to them.

Facilitator Notes

Facilitator notes give tips to facilitators about implementing the activity. These notes appear at different points in the curriculum where background information or special teaching suggestions are provided. They are contained within a shaded box, as in the following example.

FACILITATOR'S NOTE

Be sure to post the group agreements on the wall at all times. The group agreements should be posted throughout all the sessions of the program.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Mini-Lecture Notes

Where mini-lectures appear in the curriculum, the lecture notes provide the key ideas to be presented; however, it is assumed that the facilitator will possess a working knowledge of the concepts being taught.

Summary Statements

Each activity and module ends with a brief statement from the facilitator about the key take-away messages for participants.

Student Workbooks

Student workbooks for participants include worksheets for individual and small-group work and roleplay materials. The workbook contains all the needed worksheets for the curriculum activities.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

THEORETICAL FRAMEWORK

Research shows that curricula are most effective if they are based on a sound theoretical framework. ***Making Proud Choices!*** draws upon three theories: the social cognitive theory, the theory of reasoned action, and its extension, the theory of planned behavior. These theories have been shown to be of great value in understanding a wide range of health-related behaviors.

Two major concepts are included in these theories: (1) self-efficacy or perceived behavioral control beliefs, which are defined as people's confidence in their ability to take part in the behavior, e.g., use a condom; and (2) outcome expectancies or behavioral beliefs, which are beliefs about the consequences of the behavior. Experience shows that all of the beliefs below are critically important to change behavior. The ***Making Proud Choices!*** curriculum addresses each of the principles, usually in more than one activity.

Below is a description of the two types of self-efficacy or perceived behavioral control beliefs emphasized in ***Making Proud Choices!***

Practicing safer sex is easy: "I can do it"

Many young people find it difficult to practice safer sex because of peer pressure, partner pressure and their perception of how others think of them. Therefore, they are less likely to negotiate condom use with their partners. In Module 3, youth examine their attitudes and beliefs about condom use, and in Modules 7 and 8, youth learn how to negotiate condom use with their partners.

Getting your partner to cooperate in practicing condom use is easy: "I can do it"

Practicing safer sex within a relationship is not something participants can do by themselves. They need the cooperation of a partner. Unfortunately, many participants' partners may not be willing. For example, attempts to negotiate condom use may be interpreted as mistrust, belief that the other person is not "clean" or some other misperception. Be sensitive to participants' desires to maintain their partners' interest and avoid conflict.

At the same time, participants need opportunities to practice responding to their partners' objections tactfully and effectively. In Modules 7 and 8, the youth are taught negotiation skills that they can practice through roleplays and other interactive exercises.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Below is a description of the four types of outcome expectancies or behavioral beliefs emphasized in the ***Making Proud Choices!*** curriculum:

Goals and Dreams Beliefs

The belief that unsafe sex, unprotected sex and having sex at a young age could have an impact on one's goals and dreams for the future, including education and a career. In Module 1, the participants engage in a Goals and Dreams Activity and discuss obstacles to their goals and dreams including the potential outcomes of unprotected sex. This belief is incorporated throughout the curriculum.

Prevention Beliefs

The belief that condoms can reduce the risk of pregnancy, HIV and other STIs. This belief is incorporated throughout the curriculum.

Partner-Reaction Beliefs

The belief that one's partner would not approve of condom use and react negatively to it. This might prevent a person from practicing safer sex. In Modules 7 and 8, participants learn negotiation and refusal skills necessary to communicate with their partners about condom use.

Personal Vulnerability to HIV/STI and Pregnancy Beliefs

Before young people change their behavior, they must have a reason, or source of motivation to do so. Unless adolescents see how they can personally benefit from doing something differently (for example, practicing safer sex), no amount of skill will be enough to produce change. Many young people do not believe that pregnancy, HIV or other STIs could really happen to them. One goal of ***Making Proud Choices!***, then, is to increase participants' sense of personal risk. Personal risk refers to a person's belief that "pregnancy or HIV/STI infection could happen to me." This is addressed throughout the curriculum, and specifically in Modules 2, 5 and 6.

UNIQUE FEATURES OF THE *MAKING PROUD CHOICES!* CURRICULUM

Making Proud Choices! has a unique approach that is successful with adolescents. Three major themes serve as the foundation for this curriculum and its implementation.

The Community and Family Approach

A key component of the approach is the strong emphasis on family and community. The importance of protecting one's family and community is used as a motive to change individual behavior. This strategy differs from the traditional approach of HIV prevention, which focused solely on protecting oneself as the motive to change risky behavior. The ***Making Proud Choices!*** theme encourages adolescents to be proud of themselves and to abstain from sex or practice safer sex in order to prevent sexually transmitted infections and pregnancy, not only for their own sake, but for the sake of their families and community as well.

The Role of Sexual Responsibility and Accountability

Learning to be sexually responsible and accountable is something that adolescents need to be taught. ***Making Proud Choices!*** teaches participants to make responsible decisions regarding their sexual behavior, urges them to respect themselves and others, and stresses the importance of developing a positive self-image. They learn that being responsible and practicing safer sex, if they choose to have sex, can contribute to reaching their goals and dreams.

The Role of Pride and Making Proud Choices with Safer Sex as Their Choice

Adolescence can be a difficult period of development. Adolescents are often faced with confusion, mixed emotions and uncertainty. They are bombarded with sexual messages from various sources, including the media, popular music and their peer group. They are often pressured to be sexually active. They struggle with issues of self-esteem, self-respect and self-pride. Because of this, it is extremely important that they learn to feel good about themselves and their decision to practice safer sex. ***Making Proud Choices!*** illustrates that making proud choices about safer sex and condom use can actually lead teens to develop a sense of pride, self-confidence and self-respect. The roleplay exercises and other skill-building activities reinforce the many positive benefits, both psychological and physical, of practicing safer sex.

EVALUATION OF THE CURRICULUM

Evaluation is a critical component of the ***Making Proud Choices!*** program. Many health promotion programs have been implemented in schools, churches, clinics, community-based organizations and other venues, but unfortunately, very few of them include formal evaluation components. Through rigorous research methods, the developers have explored whether or not the interventions designed in this curriculum actually result in the desired outcomes. For example, they set out to determine whether adolescents who participated in ***Making Proud Choices!*** did indeed develop more positive outcome expectancies regarding safer sex, and whether such effects were evident up to 12 months after the intervention. Below is a description of the study and its results.

In the research study, the 8-hour curriculum, ***Making Proud Choices!***, was implemented in a small group setting with African-American male and female adolescents between the ages of 11 and 13 on two consecutive Saturdays in three different middle schools. In this random control trial, 659 6th and 7th grade African-American male and female adolescents, mean age 11.8, were stratified by gender and age and randomly assigned to receive one of three 8-hour curricula: an abstinence curriculum, a safer sex curriculum or a health promotion curriculum (which served as the control group). The adolescents received the curriculum in small groups of six to eight students led by either an African-American adult facilitator (mean age 40) or two peer African-American co-facilitators (mean age 16).

The participants completed questionnaires before, immediately after, and 3, 6 and 12 months after the intervention. Of the original 659 participants, 97% returned to complete the 3-month follow-up questionnaire, 94% completed the 6-month, and 93% completed the 12-month follow-up. The primary measures were HIV risk–associated sexual behaviors. The secondary measures were variables from the theory of planned behavior and the social cognitive theory, including knowledge, beliefs, norms, intentions and self-efficacy regarding abstinence and condom use.

Since the original evaluation study, newer editions of the curriculum have been published. Updates to factual information are made to ensure medical accuracy and changes to language help keep the program activities relevant to a new generation and broader range of youth.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

BEHAVIORAL FINDINGS

The participants who received the ***Making Proud Choices!*** safer sex curriculum reported:

- More consistent condom use and less unprotected sex in the 3 months after the intervention than did those in the control group.
- A higher frequency of condom use at the 3-, 6-, and 12-month follow-up sessions than did those in the control group.
- ***Making Proud Choices!*** was especially effective with sexually experienced adolescents. For instance, among participants who were sexually experienced at baseline, those in the safer sex groups reported less sexual intercourse in the previous 3 months at the 6- and 12-month follow-up than the control group. In addition, they reported less unprotected sex at all three follow-up sessions than the control group.

Other Significant Findings

- The adult and peer facilitators were equally effective. There were no differences in intervention effects on behavior with adult facilitators as compared with peer co-facilitators.
- The adolescents who received the ***Making Proud Choices!*** curriculum scored higher in condom use knowledge; believed more strongly that condoms can prevent pregnancy, HIV and other STIs; believed more strongly that using condoms will not interfere with sexual enjoyment; expressed greater confidence that they could have condoms available when they needed them; and reported greater confidence that they could exercise sufficient impulse control to use condoms and greater self-efficacy for using condoms than did those in the control group.

Facilitator Information

CURRICULUM TEACHING STRATEGIES

Making Proud Choices! uses several strategies to facilitate behavioral change. Each strategy is defined below and its use in the curriculum is described.

STRATEGY 1: Setting the Environment: The Group Agreements

Module 1 is designed to create a safe, nurturing, non-threatening environment for participants, stimulate their interest in the group, and provide them with more detailed information about the program. The group agreements that will govern participation in the group should be developed during Module 1. This presentation should permit and encourage discussion designed to give members a sense of participation in the group's decision making. That is, members should be encouraged to accept and live by the standards they agree upon and seek to alter those they wish to change. This is also a good time to provide reassurance to group members about concerns they may have about confidentiality, embarrassment and fear of active participation.

Steps to Creating Group Agreements

- Brainstorm possible agreements.

  For example:

  - Respect each other's opinions.
  - One person speaks at a time.
  - No name-calling.
  - Confidentiality.
  - Begin and end on time.

- Clarify and discuss.
- Eliminate any agreements not acceptable to all.
- Come to a group consensus on all agreements.
- Invite participants to bring up additions/deletions as the need arises.
- Let participants know that everyone is responsible for following and determining the group agreements.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

General Tips for Improving Group Cohesion and Performance

The following tips can help build group cohesion:

- Frequently reward positive behavior (e.g., during demonstrations or exercises).
- Be supportive.
- Give compliments.
- Be non-judgmental.
- Respect participants' feelings and boundaries.
- Model appropriate assertive behavior.
- Be firm when necessary.
- Demonstrate concepts and give examples when possible.
- Keep the language simple.
- Encourage group members to share their experiences at their own pace.
- Build on strengths.
- Listen.
- Let the group members react, think and analyze.
- Be flexible.
- Be patient with the process and try different approaches until you find one that works.
- Clearly convey your expectations for how group members treat each other and how they participate.
- Encourage participation through reinforcement, teaching communication skills, modeling sensitive material, and being supportive, respectful and inclusive regardless of the group members' opinions and beliefs.
- Demonstrate acceptance and respect for all participants, regardless of personal characteristics, including race, cultural background, religion, social class, sexual orientation and gender identity.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

STRATEGY 2: Brainstorming

Brainstorming is a technique used to rapidly generate as many ideas as possible, within a given (usually brief) period of time, about a particular question, topic or problem.

For example: Important Concerns of Youth

Participants are encouraged to spontaneously express their thoughts and reactions (and the facilitator usually records each idea). No evaluation or criticism of ideas is allowed during this part of brainstorming. Participants simply say whatever comes to mind.

For example:

- Family
- Friends
- Money
- Having sex, or not
- Clothes
- School
- Relationships
- Peer pressure
- Pregnancy
- Violence
- Drug use
- Getting a job
- Popularity
- Music
- HIV and other STIs

The facilitator may ask probing questions to elicit certain types of ideas or information.

Once a list has been generated, the group then discusses, evaluates and/or processes each idea (giving neither credit nor blame to the person who suggested it).

For example: Ask the group "why" each item is an important concern to youth, or how each item impacts their lives.

If the task requires it, the group may then choose to prioritize, categorize or select the best idea(s).

For example:

- On which of these things can you have a positive impact? How?
- Which of these things would be healthier to avoid or prevent? How?
- Which five items do you think represent the most important concerns of youth? Why?

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

For our purposes, brainstorming will be used primarily as a method for:

- Assessing the knowledge of the group members—How much do they already know?
- Introducing new information at a level appropriate to the group—Bridging.
- Stimulating discussion—Asking probing questions.
- Processing information—Clarifying and reinforcing the main points or objectives.

Positive Characteristics About Brainstorming:

- Permits the facilitator to assess group dynamics: Who are the active members? How does the group respond?
- Builds group cohesion.
- Permits everyone to learn from the information that is generated.
- Permits the opportunity to assess knowledge and skills of the group.

Principles of Brainstorming:

- Try to get out as many ideas as possible.
- Participants can say anything that comes to mind.
- DON'T EVALUATE IDEAS; a later time can be set aside for evaluation.
- DON'T DISCUSS SUGGESTIONS; a later time can be set aside for discussion.
- Allow repetition.
- Encourage everyone's participation.
- Encourage building on other ideas.
- Allow periods of silence.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

STRATEGY 3: Interactive Activities and Competitive Games

Interactive activities and competitive games give the participants the opportunity to practice what they learned. One of the best strategies for teaching young people is to use fun, interactive and competitive activities, and many such activities are included in this curriculum.

Games and activities are a good strategy for teaching content. Games often promote rich discussion as participants work hard to prove their points. Because games can promote competition, remind participants of the group agreements prior to the game.

Facilitators—remember to read the instructions and game rules prior to teaching the game, and make adaptations as necessary.

STRATEGY 4: Processing a Video or Game

The practice of processing after an activity allows participants to reflect upon what they learned/experienced. Processing also allows the facilitator to draw out the key points of the activity. The most common way to process is to ask a series of questions or make a series of statements.

For example:

- Ask open-ended questions designed to elicit discussion.

  General Reactions

  » What did you think of the video?

  » What is your response to the activity?

  » How do you think Pat felt when…?

- Encourage all participants to contribute. In some groups, there are a few participants who may be less willing to volunteer during the discussion. The following techniques may be used to encourage all participants to contribute.

  Personal Reactions

  » How did you feel about…?

  » Describe what you saw.

  » What will you do as a result of…?

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Sentence Stems

» Ask each participant to complete a phrase such as, "The most important thing I learned was…." Move quickly around the room. Give participants the right to pass.

"I" Statements

» I learned that…

» I felt that…

» I was pleased that…

» I was disappointed that…

STRATEGY 5: Working in Small Groups

Discussion Guidelines

- Set up simple guidelines that encourage each person to participate.
- Be clear about the purpose of the small-group work.
- Use cooperative groups whenever possible to help participants develop positive interpersonal skills while working toward a common goal.
- Set definite time limits.
- Plan ahead for how you will assign participants to groups and how you will assign roles within groups.
- The room and seating should facilitate discussion within the group as much as possible, without disturbing other groups.
- You need not remove yourself from the discussion; however, you should encourage group members to rely on each other for problem solving and decision making.
- Remind participants when time is about to run out. Use a chime, train whistle, music, or some other clear sound to bring people back to the large group.
- Set clear norms, emphasizing that everyone's opinion is valuable, and that the group is working toward an atmosphere of trust.
- Determine the goal of the discussion, and periodically remind the group of that goal.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

- Encourage participants to become good listeners.
- Allow plenty of time for responses.
- Redirect conversation if one participant tries to dominate.
- Try to engage the more quiet participants by making longer eye contact or asking for their contribution.

STRATEGY 6: Roleplaying/Practice

This method of acting out imaginary situations allows participants to practice using a new skill. It provides an opportunity for participants to take risks with new ways of behaving in a safe situation without fear of failure, and to see how their peers will react to their behavior.

Steps

- Select roleplayers or ask for volunteers.
- Set the scene. Describe the situation carefully, but briefly.
- Give brief, clear instructions.
- Start the action.
- End the situation if it becomes stalemated or repetitive.
- Leave time to discuss:
  - What happened.
  - Why it turned out the way it did.
  - Whether it turned out as desired.
  - Who would have had to do what to make it turn out differently.

Tips for Making Roleplays Successful

- Set and follow norms or ground rules for group behavior.
- See yourself as the director of a movie.
- Make every effort to allow participants to volunteer. Urge everyone to participate.
- Set the scene.
- Rehearse.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

- Record to ensure transfer.
- Start with low-risk situations and move to high-risk situations. It may be beneficial to begin with scripted roleplays and then move to unscripted roleplays.
- Give continuous positive reinforcement.

Practice

Practice combines elements of roleplay and small-group work. Practice of specific skill steps is crucial for learning to occur. It should be a structured process.

Roleplay practice and learning may be enhanced if facilitators:

- Give participants a choice on whether or not to participate.
- Encourage participants to improvise during roleplays to make them more their own.
- Reinforce participants for using the specific skill.
- Give participants a specific role:
  - » Roleplayer
  - » Observer
- Develop structured methods for observing and providing feedback.
- Teach participants how to give feedback that focuses on the behavior, not the individual.
- Provide feedback on the skill-user's posture, tone, speech, eye contact and ability to follow the steps of the skill.

Whenever participants take on a role, particularly if it is "negative" in some way, it is important to "de-role" them, so elements of the role do not remain in the group's perception of the person. For example, at the end of the roleplay take the roleplay cards away and say, "You are no longer in this role."

STRATEGY 7: Student Workbooks

Student workbooks for participants include quiz questions, worksheets for small-group work and roleplay materials. The workbook contains all the needed worksheets for the curriculum activities.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.

GENERAL TIPS FOR PREPARING TO IMPLEMENT THE CURRICULUM

- Review the curriculum manual ahead of time.
- Review the format of the manual, which consists of goals, objectives, preparation, materials and a detailed outline of what the facilitator should say and do for each activity.
- Become familiar with all activities, videos and curriculum materials.
- Make sure you have all the necessary equipment and materials.
- Review the supplemental background information provided in Appendix B about HIV, other STIs, contraceptive methods and effects of alcohol and other drugs.
- Learn about local resources such as health departments and family planning clinics.
- Know the policies of school districts and community agencies in regard to implementing new programs, discussing issues of sexuality and gaining parental support and permission.

Tools for Online Implementation

A set of PowerPoint slides has been created to facilitate implementation of the curriculum, particularly in virtual settings. These slides are available under the Adaptation Guidelines & Tools tab on the *Making Proud Choices* page of ETR's Program Success Center at www.etr.org/ebi/programs/making-proud-choices. The slides summarize key content and instructions for group activities and can help facilitators present the information and guide activities.

ETR provides additional support and guidance for virtual implementation of evidence-based programs and other curricula, including tip sheets on a variety of considerations for online learning. These can be found at ETR's Design4Learning page at www.etr.org/design-4-learning.

Materials

Making Proud Choices! uses the following materials at various points in the curriculum. Use this checklist to prepare for teaching. Some of the items will need to be prepared prior to beginning the sessions; others can be developed as part of the process.

Materials Needed (Not Included in Implementation Kit)

Pencils (enough for each participant)
Markers
Masking tape
Garbage bag
Monitor and device for showing videos, or internet access if using alternative videos
Condoms (one per participant or pair plus demonstration condoms)
Water-based lubricant
Condom demonstrator(s)
Small paper bag
Roll of paper towels
Chart paper
Index cards (1 labeled with a star, 1 labeled with a triangle, 1 labeled with a rectangle, 3–5 labeled with a circle for a group of 6–8)

Pre-Labeled Chart Paper

Group Agreements
Why Some Teens Have Sex
Possible Outcomes of Unprotected Sex
Proud and Responsible Prevention Strategies
Goals (written on left side of chart paper)
Making Proud Choices! Be Proud! Be Responsible!
The Hard Way Characters: Kenrick, Miguel, Renee, Mom, Dad and *Koko*
How STI Are Transmitted
Reasons to Avoid STIs
Contraceptives
Ways to Make Condom Use Easy and More Fun (for high school youth)
Ways to Make Condom Use Easy (for middle school youth)
Pros
Cons
Excuses Sexual Partners Give

MODULE 1

GETTING TO KNOW YOU AND STEPS TO MAKING YOUR DREAMS COME TRUE

GOALS

The goals of this module are to:

- Provide participants with an overview of the program.
- Increase participants' personal investment and comfort in participating in the program.
- Increase participants' ability to identify realistic goals for their future.
- Increase participants' confidence about making proud and responsible choices to protect themselves and their community from unintended pregnancy, HIV and other STIs.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- Identify several agreements for group participation that will facilitate discussion and learning.
- Identify what it means to be proud and responsible.
- Describe the benefits of proud and responsible behavior.
- Identify at least two reasons why teens have sex, the possible outcomes of sex, and strategies for reducing possible negative outcomes.
- Describe at least one goal they wish to achieve in the future.
- Identify barriers to achieving their personal goals and strategies for overcoming them.

MODULE PREVIEW

The first module: (1) informs participants about the program; (2) creates a safe space for talking about sexuality; (3) generates enthusiasm about ***Making Proud Choices!***; (4) promotes the goal of protecting themselves and their community; and (5) gives them ideas about how they can examine their own goals, and obstacles that might stand in the way of reaching them.

STRATEGIES/METHODS

- Mini-Lecture
- Brainstorming
- Welcome Activity
- Goals and Dreams Timeline Exercise
- Group Discussion

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- *Goals and Dreams Timeline* poster
- *Goals and Dreams Timeline* worksheet in the student workbook

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Markers
- Pencils
- Masking tape
- Pre-labeled chart paper:
  - » *Group Agreements*
  - » *Why Some Teens Have Sex*
  - » *Possible Outcomes of Unprotected Sex*
  - » *Proud and Responsible Prevention Strategies*
  - » *Goals*
  - » *Making Proud Choices! Be Proud! Be Responsible!*

PREPARATION NEEDED

1. Before the program begins, label all of the charts as listed under Materials.
2. Hang the pre-labeled charts in the order they will be used. Fold and tape the charts so the titles remain covered by the bottom half of the sheet until you use them.

INSTRUCTIONAL TIME: 60 minutes

ACTIVITY	MINUTES NEEDED
A. Welcome and Program Overview	5
B. Welcome Activity	10
C. Creating Group Agreements	5
D. Making Proud Choices! Be Proud! Be Responsible! Brainstorm	5
E. Brainstorming About Teens and Sex	10
F. Goals and Dreams Timeline	15

ACTIVITY A

WELCOME AND PROGRAM OVERVIEW

PREPARING FOR THE ACTIVITY

RATIONALE

Providing participants with a general overview of the program will foster excitement and enthusiasm about participating.

MATERIALS

None

TIME

5 minutes

PROCEDURE

1. Welcome the participants and introduce yourself.

2. Present the purpose and format of the program by saying,

> This program is called *Making Proud Choices*. It will give you the tools to protect yourself and others from unintended pregnancy and sexually transmitted infections—STIs, sometimes called STDs—including HIV, the virus that causes AIDS.
>
> This program focuses on knowledge, attitudes and prevention skills related to pregnancy, HIV and other STIs. It also focuses on relationship issues, sexual behavior, decision making and negotiating in difficult situations. It's designed to teach specific information about ways to reduce your risk of getting pregnant or becoming infected with STIs, including HIV.
>
> Although STIs can be prevented, many young people don't take precautions because they don't believe they are at risk of getting an STI. Anyone can get an STI, including HIV, from having unprotected sexual intercourse with a partner who is infected.
>
> Unintended pregnancies can be prevented too. Many teen parents have been able to create successful lives for themselves and their children, especially when they have the support of some caring adults. However, they have to work a lot harder to do so. It's easier to reach your goals if you postpone having a child, or, if you're already a parent, postpone having another child.
>
> *(continued)*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

If you're going to have sexual intercourse, it's critical to use birth control to prevent unintended pregnancy and protection such as condoms or dental dams. Let's clarify the terms we will be using. When we speak of ***protection***, we will be referring to *condoms* and *dental dams*. When we say ***condoms***, we will be referring to *external condoms* and *internal condoms*. External condoms are also known as male condoms. Internal condoms are also called female condoms.

Do you think teens should be worried about unintended pregnancy, HIV and other STIs?

3. Pause to allow participants to answer.

4. Then say the following,

The people who designed this program care about the lives of young people. They want you to have the knowledge and skills to protect yourselves and others against pregnancy, HIV and other STIs.

To make the program interesting and fun, it includes videos, exercises and games that I hope you will enjoy. Although the information is serious and important, I hope we can learn together and have a good time.

Other young people who've participated in this program have said they had a good time, learned a lot and would recommend it to their friends. I hope you will like it too.

Who has questions?

5. Answer any questions the participants have about the purpose or format of the program.

6. Summarize by saying,

Now that you have some idea of what to expect, let's get started.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY B

WELCOME ACTIVITY

PREPARING FOR THE ACTIVITY

RATIONALE

The Welcome Activity encourages participants to feel like important contributors to the group and gives them an opportunity to express their thoughts and feelings.

MATERIALS

None

TIME

10 minutes

PROCEDURE

1. Have the participants sit in a circle.

FACILITATOR'S NOTE

If you know your participants and they already know each other this is an optional activity. An icebreaker that encourages group cohesion can be used in its place.

Sitting in a circle facing each other can build group cohesion. Have the participants sit on the floor, have them move their chairs close to each other, or set aside a special area of the room to accomplish this. Adapt this activity to accommodate group dynamics and environment. If creating a circle is not feasible, have the speaker toss a soft toy to the next speaker to encourage engagement.

2. Explain the Welcome Activity by saying,

> Let's introduce ourselves and get to know a little about each other.
>
> Each person will have a chance to speak. When you are finished speaking, the person sitting on your left will speak next.
>
> If you're not ready when we come to you, you may pass and we will come back to you later. I will speak first and when it is your turn please share your name, your age, the school you attend, your pronouns if you want to share, and something else you'd like us to know about you. For instance you might tell us about a hobby or favorite activity.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

3. **Model the Welcome Activity by beginning with yourself,**

> My name is _____ and I am _____.
> *(age)*
>
> I attend(ed) _____.
> *(high school, college or university)*
>
> When referring to me, please use the pronouns _____ or _____.
>
> I like to…(share something you enjoy doing).

4. **Ask the person on your left to speak next. Encourage each group member to speak. When the Welcome Activity is complete, thank each person for sharing.**

5. **Summarize this activity by saying,**

> Thanks to all of you for sharing a little about yourselves. During the program, we will get to know more about each other and what is important to each of us.

FACILITATOR'S NOTE

Asking participants to tell you their pronouns is a way of creating a safe space for transgender or gender nonconforming youth. Reinforce that sharing pronouns is optional; some youth may not feel comfortable sharing their pronouns and thus "outing" themselves. Model what you want participants to say by giving your own pronouns. Some transgender youth might have typical pronouns (he/she/his/her/their) or they might request more creative pronouns such as hir or zir. Pronouns don't always line up with what observers might expect based on a person's perceived biological sex. The simple act of requesting pronouns sends the message that transgender and gender nonconforming youth are welcome and respected in the group.

You can also use alternative sentence stems in the introductions. Here are some ideas:

- One of my favorite TV shows or movies is _____.
- The best movie/book I've ever seen/read is _____.
- An item on my bucket list is _____.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY C

CREATING GROUP AGREEMENTS

PREPARING FOR THE ACTIVITY

RATIONALE

Group agreements help participants feel more secure in a group setting and help facilitators provide structure when discussions become difficult or awkward. Developing guidelines as a group builds group cohesion and increases the likelihood that the agreements will be followed.

MATERIALS

- Pre-labeled chart paper:
  - *Group Agreements*
- Markers
- Masking tape

TIME

5 minutes

PROCEDURE

1. Begin this activity by unfolding the pre-labeled chart paper titled *Group Agreements* and saying,

> We're going to be talking about sexuality, pregnancy and STIs—topics that sometimes can cause people to feel nervous or uncomfortable. What guidelines or agreements could we put in place to help make sure that everyone in the group feels safe, comfortable and able to participate?

2. Have participants brainstorm a list of agreements or guidelines for the group to follow. As the participants offer guidelines, write them on the chart paper titled *Group Agreements*.

3. Make sure the list includes the following suggestions. Be sure to cover confidentiality, right to pass and respecting diversity.

> **GROUP AGREEMENTS AND GUIDELINE SUGGESTIONS**
>
> **Confidentiality:** When people share private information in this group, it should be kept private. If, for example, someone shares about crying because of hurt feelings, it would be a violation of the group agreements to discuss or joke about this outside the group. We will not talk about any personal information we hear in this group outside of this group.
>
> *(continued)*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

There is one exception. If any of you tell me something that might cause you or someone else harm, I will have to tell someone for safety reasons—for example, if you told me you were going to hurt yourself or someone else, or if someone talks about being abused in any way. Please know that it is important to tell and to get help if you or someone else is being harmed. I encourage you to talk to me before or after the session, or to talk with another trusted adult outside of this group.

No put-downs: Show respect for others, even if you disagree with them. If someone says something that you disagree with, it would be a violation of the group agreements to say, "That's stupid" or "You're wrong." Instead, say that you have a different idea and share it. All questions are important. There is no such thing as a "silly question."

Be supportive of each other: We will be discussing important and sometimes personal information about making choices and risky behaviors. At times you may talk about yourself, your peers and your partners. Everyone in this room is different and has had different experiences. It is important that we respect these differences by not laughing at anyone or making put-down statements.

Use "I statements": When we talk about personal subjects, we sometimes make assumptions about how others feel. In this group, it is important to talk about how YOU feel, think or act and not about how you think "all teens" or "all your friends" feel, think or act.

Right to pass: Sometimes when talking about subjects such as sexuality, someone might not want to talk or might have an uncomfortable feeling or memory. If you ever feel like being quiet or not sharing, it's OK to just listen. If I call on you or someone asks you a question, you can say, "I pass." Always take care of yourself. All group members have the right not to respond to any question they do not wish to address.

Move up, move back: If you tend to talk a lot in groups, talk less (move back) sometimes so others can talk. If you tend to be very quiet, share more (move up) and participate a little more so the group can benefit from your ideas.

Dealing with discomfort: Sometimes certain conversations or topics can bring up uncomfortable feelings for people. If anything makes you feel uncomfortable during our sessions, let me know. If you need to step outside for a few minutes, we can arrange that. Also it's OK to distract yourself by

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

doodling or using another strategy that helps you feel comfortable. Please come to me with any issues or concerns you have. If I can't help, I can connect you with people or resources that can help.

Respect diversity: Let's keep in mind that there's diversity in society and in this group. Individuals come from different family backgrounds, different racial and cultural groups and different living situations. Some young people have already had romantic relationships; others aren't even thinking about it. Some have had sexual intercourse. Some have had sex because they chose to; others may have had sex against their will. Some may identify as gay, lesbian, bisexual or straight. Some may identify as male, female or transgender.

Young people may express themselves in ways that don't conform with their biological sex. There are many ways that youth can express their gender identity.

Being open to diversity can help reduce stereotyping, which can be very harmful to a young person. Stereotyping individuals imposes restrictions on their opportunities for individual expression and limits personal growth.

Besides, all of these differences make us unique. Regardless of how you see yourself, your background, previous relationships or experience, each of you has a place in this group. This will be a safe space for everyone.

Other agreements you should include if participants do not mention them:

- Listen to others.
- Don't interrupt.
- Allow everyone to participate.

4. **Define terms related to diversity as needed.**

I want to be sure everyone understands some of the terms we use when talking about diversity.

Gender refers to the ideas in a culture or society about the appropriate ways for men and women to dress, behave, think and feel. Ideas about what gender behavior is appropriate change in different cultures and at different times in history. Sometimes one gender is given more power or status than another.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

Gender identity is peoples' inner understanding of what gender they identify with. It may be man, woman, something in between, or something that doesn't fit these labels. It may be the same as ***(cisgender)*** or different from ***(transgender)*** the sex they were assigned at birth. Gender identity is unique for each person.

Gender expression is how a person represents or expresses gender identity to others, often through behavior, clothing, hairstyles, voice or body characteristics.

Sexual orientation refers to the romantic and sexual attraction people feel for others. People can be attracted to others of the same gender, a different gender or more than one gender.

5. Ask participants if they have any other suggestions they would like to add.

6. Once the list is complete, re-read each agreement and ask all group members to nod and say "yes" that they agree to follow that guideline.

7. Summarize this activity by saying,

> You did a great job creating the list! I will post our group agreements each time we meet so we can all see it and remember those guidelines.
>
> I am excited and feel that we can work well together and respect each other by following our group agreements. I look forward to working with all of you.

FACILITATOR'S NOTE

Be sure to post the group agreements throughout all the sessions of the program.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY D

MAKING PROUD CHOICES! BE PROUD! BE RESPONSIBLE! BRAINSTORM

PREPARING FOR THE ACTIVITY

RATIONALE

This activity introduces the theme of the program, ***"Making Proud Choices! Be Proud! Be Responsible!"*** The emphasis on being proud and responsible provides a motivation for engaging in health-protective behavior and for encouraging others to do the same.

MATERIALS

- Pre-labeled chart paper:
  - *Making Proud Choices! Be Proud! Be Responsible!*

TIME

5 minutes

PROCEDURE

1. Tape the *Making Proud Choices! Be Proud! Be Responsible!* chart paper on the wall.

2. Open the discussion by saying,

> The title of this program is *Making Proud Choices!*

3. Then say,

> In this activity we are going to do some brainstorming. In brainstorming, you just say whatever comes to mind about a particular issue or question. I want you to brainstorm the answer to three questions.
>
> What does it mean to make proud choices? What does it mean to be "proud"? What does it mean to be "responsible"?

4. Have participants brainstorm answers to these questions. Record their answers on the chart paper or a dry erase board.

Make sure their responses include:

» ***Making Proud Choices*** means doing things that you feel good about, that your family and community will respect and that will help you achieve your goals and dreams.

» To ***Be Proud*** is to feel happy and pleased about something you've done or accomplished, to feel that you have lived up to your expectations or behaved according to your own or community values.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2026 agreement.

© ETR. All rights reserved.

» To ***Be Responsible*** is to be dependable, dedicated, reliable, committed, truthful and trustworthy.

5. **Explain that,**

Being proud and responsible means that you value yourself and you believe you are worthy! Each one of you has value. Each one of you is worthy. You have to behave in ways that show you understand your worth. Proud and responsible behavior also extends into the area of sex. It means talking with friends, partners and family members about behaviors that put them at risk of STIs and unintended pregnancy and encouraging them to protect themselves. If you are going to have vaginal, anal or oral sex, it means using protection such as an external or internal condom or dental dam.

We know that some young people have been sexually abused, and they didn't get to make a choice. Youth who have survived something like that can use that inner strength in the future to choose when they do and don't want to have sex and to always protect themselves and their partners from STIs and unintended pregnancies. If you are currently in a situation where you don't get to make your own choices about sexual activity, I encourage you to reach out to me or another trusted adult to get help.

6. **Then ask,**

What are the benefits of making proud choices and engaging in proud and responsible behaviors? What do we gain by being proud and responsible?

Make sure answers include:

» Feel better about yourself

» Have healthier relationships

» Stay out of trouble

» Accomplish your goals

» Make people feel proud of you

» Reduce your risk of pregnancy, HIV and other STIs

» Have a healthier body

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

» Stay in school

» Feel like you are helping your loved ones and your community

Always use protection AND effective birth control. By acting responsibly you can feel proud because you're protecting yourself, your sexual partners and the families and communities you've formed. You can play a big role in preventing unintended pregnancy and STIs in your community.

FACILITATOR'S NOTE

Post the chart with participants' list of words to describe what it means to be proud and responsible. You can refer back to their list throughout the program when encouraging the participants to make proud choices.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY E

BRAINSTORMING ABOUT TEENS AND SEX

PREPARING FOR THE ACTIVITY

RATIONALE

By exploring issues about teens and sex, participants become more aware of the pressures they face and the choices they may have to make. It gives the facilitator more information about the thoughts and feelings of the participants and helps the participants learn about the focus of the program.

MATERIALS

- Pre-labeled chart paper:
  - *Why Some Teens Have Sex*
  - *Possible Outcomes of Unprotected Sex*
  - *Proud and Responsible Prevention Strategies*
- Markers
- Masking tape

TIME

10 minutes

PROCEDURE

FACILITATOR'S NOTE

As you facilitate this activity and the entire program, keep in mind that for some youth pregnancy and parenting are intentional. The reasons are complex. There may be family, cultural and community influences—in some families, cultures and communities, young parenthood is prized and has been modeled. Some youth place high value on parenthood because they see it as a realistic life option when they don't see options such as post-secondary education and/or a career as viable. Others see a baby as someone who will always love them. While it is impossible to fully address these complex motivations for pregnancy and parenting in this model, the program approaches pregnancy prevention by offering concrete information, positive attitudes and beliefs, and many opportunities for skill practice.

1. For this activity, use the pre-labeled chart paper (folded so that the titles are covered by the bottom half of the chart paper). Unfold the chart paper sheets one at a time, as needed.

2. Introduce the activity by saying,

> We are going to do some more ***Brainstorming***. Remember in brainstorming, you just say whatever comes to mind about a particular issue or question.

3. Unfold the sheet of chart paper titled *Why Some Teens Have Sex*, and then say,

> Why do you think some teens your age are having sex?

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

The responses should include the following:

- For pleasure or sexual release
- To keep a partner/because partner expects it
- To have fun
- To satisfy curiosity
- To express feelings of love or affection to a partner
- To get attention or affection
- To feel more grown up
- To be popular
- To get back at parents
- To have a baby
- To fit in with peer group
- Loneliness
- To feel loved or needed
- Problems at home/living situation
- See it on TV, online or in the movies
- Forced
- To increase status in peer group
- Low self-esteem
- To prove masculinity/femininity

4. **Write all of the participants' comments on the chart paper.**

5. **Compliment their good ideas.**

6. **Summarize as follows,**

As we can see, there are many reasons teens have sex. Regardless of the reasons, if they don't use protection to prevent unintended pregnancy or STIs, they can face outcomes that could make it harder to accomplish their hopes and dreams for the future. Let's look at some of the possible outcomes of unprotected sex.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

7. **Unfold the next chart paper, *Possible Outcomes of Unprotected Sex*.**

8. **Then ask,**

> **What are some of the possible outcomes of unprotected sex?**

9. **Have participants brainstorm the possible outcomes of unprotected sex, and write all of their comments on the chart paper. (Be sure to include pregnancy, HIV and other STIs.)**

10. **Compliment the group on how much they know.**

11. **Next, unfold the chart paper titled, *Proud and Responsible Prevention Strategies* and ask,**

> **What are some ways to prevent these possible negative outcomes?**

12. **Have participants brainstorm ways to prevent possible negative outcomes of unprotected sex.**

13. **Write all of the participants' comments on the chart paper. (Emphasize that protection—such as latex (or polyurethane/polyisoprene) condoms—can help prevent pregnancy and sexually transmitted infections, including HIV.)**

14. **Compliment the group on how much they know.**

15. **Point to their lists and summarize by saying,**

> **As we can see by your lists, there are many reasons teens may have sex. We can also see there are many possible negative outcomes to having sex. Yet, there are some proud and responsible strategies for preventing those negative outcomes. You did a great job generating your lists. Throughout our lessons together we will be looking at many of these issues more closely. First, let's examine our goals and dreams and see how having unprotected sex can have an impact on them.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY F

GOALS AND DREAMS TIMELINE

PREPARING FOR THE ACTIVITY

RATIONALE

To achieve their goals, participants need to think about their future and to understand that their present behavior will have an impact on what they will be doing 5 and 10 years from now.

MATERIALS

- Pencils
- *Goals and Dreams Timeline* worksheet
- *Goals and Dreams Timeline* poster
- Pre-labeled chart paper:
  - *Goals* (Write Goals on the left side of chart paper)

TIME

15 minutes

PROCEDURE

1. Display the *Goals and Dreams Timeline* poster.

2. Introduce the exercise by saying,

> Everything and everyone has a past, present, and future. This next activity will help you take a closer look at your past, present, and future.

FACILITATOR'S NOTE

Record some things from your own life that you are proud of doing on the *Goals and Dreams Timeline* poster. Provide examples for each section. Be mindful that this activity may be challenging for some young people who may struggle to identify with the idea of setting future goals or even with reflecting on their own accomplishments, particularly in a group setting where the range will vary and young people may feel as if what they've done or want to do isn't "good enough." Listen for these insights and help youth recognize that their timelines will all differ based on things such as their experiences, interests and/or what brings them joy. When you model the activity include a range of accomplishments, taking care to highlight achievements beyond acquiring goods such as a car or house. This will help participants understand what you want them to do and encourage them to recognize their own varied accomplishments.

3. Have participants turn to the *Goals and Dreams Timeline* worksheet in their workbooks. Give the following instructions:

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

This is a timeline that will help you think about what you have already accomplished in the past year and what you want to accomplish in the future. There are three sections. In the first section, write your age and any things you've already accomplished or things you are proud of. This can be anything that's meaningful for you. For example, volunteering your time, playing for a sports team, getting certain grades, getting a job, learning something new, joining a club, winning a student election, getting a learner's permit, an artistic or musical performance, advocating for others, etc.

4. Give participants 1–2 minutes to complete the first task.

5. Then give the following instructions:

Move on to the second section on your timeline. Imagine yourself 5 years from now. That will be 20__. Write down the age you will be in 5 years. Think of at least one thing you hope to have achieved 5 years from now.

Write down at least one thing you hope or want to make happen in this section. In 5 years, what do you hope to be proud of doing? You can write more than one thing if you like.

6. Give participants 1–2 minutes to complete the second task.

7. Then give the following instructions:

Move on to the third section of your timeline. Imagine yourself 10 years from now. That will be 20__. Write down the age you will be in 10 years. Write down at least one thing you hope or want to make happen in the next 10 years. In 10 years, when you look back, what do you hope to be proud of doing?

You can write more than one thing if you like.

8. Allow 1–2 minutes for participants to complete their timelines.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

9. Then encourage each participant to share with the group one item from each section by going around the room and asking,

> Looking ahead 5 years, what goal do you want to achieve or thing do you hope to do? How about in 10 years?

10. Next say,

> I want you to now choose one of your goals or hopes and write it on the back of your timeline. Next to that item, write two things you must do to achieve it or make it happen.

11. While they are working on this, unfold the *Goals* chart paper. Circulate and provide support to anyone who seems to be struggling. Some youth need a little extra coaxing or encouragement to identify and voice their goals or aspirations. Be prepared to provide a few examples, such as graduating from high school, going to college, getting trained in a skill, buying a car or getting a good job. Have participants share the goals they've chosen and the actions they must take to achieve them.

12. Write these goals on the left side of the *Goals* chart paper, leaving space on the right half for items in the next activity.

13. Compliment participants on their answers.

14. Summarize the activity by saying,

> You can achieve your goals with a little planning and organizing, and by making proud and responsible decisions. Reaching your goals will make you and the people you care about proud. Remember that you are capable of doing whatever you put your mind to.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

FACILITATOR'S NOTE

Some youth may be struggling to meet basic needs such as food, shelter or safety. Others may have experienced a traumatic event. Validate all of their accomplishments and their hopes. Be careful not to minimize or praise any accomplishments or hopes in such a way that creates a hierarchy, as no goal is better or more important than another.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY G

BRAINSTORMING OBSTACLES OR DETOURS ALONG YOUR TIMELINE

PREPARING FOR THE ACTIVITY

RATIONALE

Directing participants' attention to the potential obstacles they may face when pursuing their goals and dreams encourages them to develop strategies to avoid, surmount or reduce those obstacles.

MATERIALS

- Pre-labeled chart paper:
  - *Goals* (from the previous activity)
- Markers
- Masking tape

TIME

10 minutes

PROCEDURE

1. Refer to the *Goals* chart paper from the previous activity.

2. Write "Obstacles" on the right side of the chart paper.

3. Ask the participants to brainstorm things that might prevent them from achieving the goals and dreams they listed by saying,

> We have just listed our goals and dreams. Now let's talk about some of the things that may get in the way of us reaching our goals and dreams. These are called obstacles. They are like roadblocks or detours along the way. What obstacles can you think of that may get in the way of your goals?

Answers should include:

» Unintended pregnancy or an uncurable STI such as HIV

4. Write their responses under "Obstacles or Detours" on the right side of the *Goals* chart paper with a different color marker.

5. Say,

> If you've already encountered any of these obstacles or detours, you understand how your life can change. Things can work out just fine but it may be harder.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

6. **Ask the following questions,**

> • **How can we avoid some of these obstacles or detours?**
>
> • **What can you do to make sure you don't get pregnant, get someone pregnant or get a chronic disease such as HIV?**

7. **Pick a few of the key obstacles and discuss ways to avoid, overcome or reduce them. If there are any teen parents in the group, ask them if they would like to discuss ways they have been able to manage the additional responsibility of raising a child and still accomplish their goals.**

8. **Summarize by saying,**

> **I'm impressed with your goals. For the rest of the program, we'll be looking at ways to overcome obstacles and navigate detours so you can reach your goals. If you decide to have sex, you can avoid negative outcomes such as unintended pregnancy and STIs by choosing not to do anything risky, or reducing your risk by using protection and effective birth control or engaging is less-risky behaviors.**
>
> **You're worthy of all the good things you imagine for your future. Each time we meet you'll gain knowledge, beliefs and skills to empower you to make proud choices! I look forward to working with you.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

GOALS AND DREAMS TIMELINE

Instructions:

Complete this timeline with goals you want to accomplish in the future. Examples include: getting a driver's license, high school graduation, having a committed and stable relationship, learning a new skill or hobby, community college, college, getting your own place, buying a car, travel, employment or career, marriage, buying a home, children, starting a business, etc.

Birthday: _____

THIS YEAR I AM AGE ___. HERE ARE SOME THINGS I'VE ALREADY DONE THAT I AM PROUD OF:
1.
2.
IN FIVE YEARS I WILL BE AGE ____. HERE IS AT LEAST ONE GOAL OR THING I HOPE TO BE PROUD OF DOING BY THIS AGE:
1.
2.
IN TEN YEARS I WILL BE AGE ____. HERE IS AT LEAST ONE GOAL OR THING I HOPE TO BE PROUD OF DOING BY THIS AGE:

Making Proud Choices! © ETR. All rights reserved. R308-20, 20-0602

Poster

GOALS AND DREAMS TIMELINE

Instructions: Complete this timeline with goals you want to accomplish in the future. Examples include: getting a driver's license, high school graduation, having a committed and stable relationship, learning a new skill or hobby, community college, college, getting your own place, buying a car, travel, employment or career, marriage, buying a home, children, starting a business, etc.

THIS YEAR I AM AGE ____. HERE ARE SOME THINGS I'VE ALREADY DONE THAT I AM PROUD OF:
1.
2.
IN FIVE YEARS I WILL BE AGE ____. HERE IS AT LEAST ONE GOAL OR THING I HOPE TO BE PROUD OF DOING BY THIS AGE:
1.
2.
IN TEN YEARS I WILL BE AGE ____. HERE IS AT LEAST ONE GOAL OR THING I HOPE TO BE PROUD OF DOING BY THIS AGE:
1.
2.

MODULE 2

A POSSIBLE OUTCOME OF UNPROTECTED SEX: HIV INFECTION

GOALS

The goal of this module is to:

- Increase participants' knowledge about HIV/AIDS and HIV risk–associated behavior.
- Help participants identify behaviors that place people at risk for contracting sexually transmitted infections, including HIV infection.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- Identify the basic facts about HIV and AIDS.
- Distinguish facts from falsehoods about HIV and AIDS.
- Identify a person's risk of HIV infection as a result of engaging in various sexual and non-sexual behaviors.
- Identify which behaviors are low risk and no risk for contracting HIV infection.
- Identify how HIV infection can be prevented.

MODULE PREVIEW

The second module: (1) clarifies myths about the causes, transmission and prevention of HIV while providing correct factual information; (2) provides opportunities for participants to develop skills in giving correct information on HIV/AIDS to friends; and (3) helps participants identify various behaviors that place them at risk for HIV infection.

STRATEGIES/METHODS

- Question-and-Answer Session
- Video Viewing
- Exercise
- Game

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- *HIV/AIDS Frame* poster
- *Key Words* poster
- Video: The Subject Is HIV (or alternative videos*)
- *True or False: HIV Statements* (included in module)
- *Risk Continuum* signs
- *Risk Behavior* cards

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Monitor and video player, or internet access if using alternative videos
- Chart paper
- Markers
- Masking tape

PREPARATION NEEDED

1. Set up the video(s) to be ready to play.
2. Review the *True or False: HIV Statements* and get comfortable with the content.
3. Review the information about HIV in Appendix B.

INSTRUCTIONAL TIME: 60 minutes

(*Note:* Facilitators may wish to extend the time to allow more thorough discussion of the video.)

ACTIVITY	MINUTES NEEDED
A. Discussing HIV and AIDS	**10**
B. *The Subject Is HIV* Video and Discussion*	**25**
C. True or False: HIV	**10**
D. HIV Risk Continuum	**15**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.

ACTIVITY A

DISCUSSING HIV AND AIDS

PREPARING FOR THE ACTIVITY

RATIONALE

Learning basic information about HIV and AIDS will provide participants with a foundation from which to work on attitudes and behaviors later in the program.

MATERIALS

- Posters:
  - *HIV/AIDS Frame*
  - *Key Words*

PREPARATION

- Review the information about HIV in Appendix B.

TIME

10 minutes

PROCEDURE

1. Hang the *Key Words* poster and *HIV/AIDS Frame* poster.

2. Direct participants' attention to the *HIV/AIDS Frame* poster and ask the following questions.

FACILITATOR'S NOTE

This activity is a discussion using a series of questions. Most youth already have some information about HIV. Invite participants to answer the questions and correct any misinformation. Keep this activity brief as all of the information will be reviewed again in the video *The Subject Is HIV*.

HIV/AIDS FRAME POSTER — QUESTIONS & ANSWERS*

How do people get HIV?

- **Through sex.** Anyone who has unprotected vaginal or anal sex with someone who has HIV can get HIV. There is also some risk of transmission through oral sex, but it is very low.
- **By sharing needles** for injecting drugs, vitamins, steroids or hormones, or for tattooing, piercing or any other reason.
- **From mother to child** either before or during birth. In a few cases HIV has been passed from mother to child through breastfeeding. A pregnant woman with HIV can take medicines to greatly lower the risk of her baby being born with HIV.

(continued)

What common body fluids can transmit HIV?

HIV is found in the blood, semen, vaginal fluids and rectal fluids (the mucus that lines the rectum to help with elimination of waste) of someone with HIV. It is passed from person to person through these body fluids.

How is HIV *not* transmitted?

HIV is not transmitted by casual, day-to-day contact between people. It is not transmitted through the air. It must get inside the body to infect a person.

People can't get HIV from:

- touching, coughing or sneezing
- toilet seats, eating utensils, swimming pools, water fountains, door knobs or phones
- casual contact such as hugging, kissing or sharing food
- donating blood
- tears, saliva, sweat or urine
- mosquitoes or other insects

Who is at risk?

It is what people do, not who they are, that puts them at risk for HIV.

People are at risk for HIV if:

- They have sex with someone who's had other partners.
- They have sex without using a latex condom or other protection.
- They share needles or syringes to inject drugs, or had sex with someone who has.
- They share needles or other sharp objects for tattooing, piercing or any other reason.

How can you prevent HIV?

- Don't have vaginal or anal sex.
- Never inject drugs or share needles for any reason.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

How can you reduce your risk of HIV?

- **Use a latex condom each and every time for vaginal or anal sex.** Barrier use during oral sex can further reduce the very low risk of getting HIV through oral intercourse. People who are allergic to latex can use polyurethane or polyisoprene condoms. Protection includes external or internal condoms and dental dams.
- **Avoid having multiple or overlapping partners.** The more sex partners a person has, the greater the chances of contracting HIV or another STI.
- **Discuss HIV with a partner.** Ask about past or present risk behaviors. Be sure any sex partner has been tested before having sex. Discuss ways that you can reduce your risks together such as using condoms, taking PrEP, or regular testing.
- **Get tested for HIV.** The only way to know your HIV status is to get tested. The only way for your partner to know their HIV status is for them to get tested.
- **Take medication, if needed.** If you are having sex or sharing needles with someone who is living with HIV, talk to a medical provider about taking pre-exposure prophylaxis (PrEP). If you think you were exposed to HIV, ask about taking post-exposure prophylaxis (PEP).
- **Don't use alcohol, marijuana or other drugs** that impair judgment. Being high can lead to unsafe sex or other drug use.

3. Direct participants' attention to the *Key Words* poster. As you review the questions, point to the key word on the poster.

4. Review the following questions using the *Key Words* poster. Encourage all the participants to try to answer them. Supplement their answers with the information below each question.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

KEY WORDS POSTER — QUESTIONS & ANSWERS

What is HIV?

HIV stands for human immunodeficiency virus. It is the virus that causes AIDS (acquired immunodeficiency syndrome). People who have HIV in their bodies are said to be living with HIV or to be HIV positive.

HIV damages the body's immune system, which normally protects the body from disease. The immune system becomes weaker until it can no longer fight off different types of infections.

There is no cure for HIV, but treatments can be started while the person still feels healthy. With these medicines, people with HIV can lead longer and healthier lives than ever before.

What is AIDS?

AIDS stands for acquired immunodeficiency syndrome. AIDS is the stage of HIV when the immune system has become very weak and damaged. When this happens, other diseases and infections can enter the body, including types of pneumonia, yeast infections, cancers and brain infections. These are called "opportunistic infections" because they take advantage of the weakened immune system.

How is AIDS different from HIV?

HIV is the virus that enters the body and damages the immune system. People can live with HIV for years without getting sick. They may look and feel healthy and may not even know they have the virus. People who are taking medicine to treat HIV may be in this stage for several decades, although they can still transmit HIV to others.

AIDS is the condition that develops as a result of the damage done to the immune system. As the amount of virus in the body starts to go up and the CD4 cell count begins to go down, the person may begin to have symptoms. A person with HIV is diagnosed as having AIDS when the CD4 count drops below a certain level, or when certain opportunistic infections develop.

What is the immune system?

The immune system is the body's defense against infections and diseases. When the immune system works as it should, white blood cells patrol the body and attack germs, viruses and other organisms that shouldn't be there.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2026 agreement.

© ETR. All rights reserved.

(continued)

HIV attacks specialized white blood cells called CD4 or T-cells. As the number of properly working CD4 cells decreases, the immune system becomes weaker until it can no longer fight off different types of infections. The most common treatments for HIV limit the ability of the virus to reproduce. They help protect the immune system and improve the chances of staying healthy.

Common Tests for HIV Available at a Clinic:

If you get a test in a health care setting or lab, a health care provider or lab technician will take your sample (blood or oral fluid). If it's a rapid test, you may get test results in 30 minutes or less, but if it is a laboratory test, it can take several days for your results to be available. Your health care provider or counselor may talk with you about your risk factors, and answer any questions you might have. They will discuss next steps with you if your result is positive.

Rapid tests are usually done with blood from a finger prick or with oral fluid, and the results are ready in 30 minutes or less.

Laboratory tests require a blood sample.

- If the test comes back negative, and you haven't had a possible exposure during the previous 3 months before the test you took, you can be confident you don't have HIV.
- If your test result is positive, the lab will conduct follow-up testing, usually on the same blood sample as the first test.

Common Tests for HIV Available Over the Counter:

Home Access requires a finger prick to collect a blood sample. The person sends the sample to a licensed laboratory and gets the results by phone as early as the next business day. This is an anonymous test. Anyone who tests positive is immediately offered a follow-up test, counseling and referral to treatment.

The OraQuick In-Home HIV Test provides results in 20 minutes and involves swabbing inside the mouth to get an oral fluid sample and testing this sample with a test kit. A positive test needs a follow-up test at the testing site, counseling and other referrals. HIV infection may show up later after exposure in an oral fluid test than a blood test, because the level of antibody in oral fluid is naturally lower.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

What is the window period?

The "window period" is the length of time between when a person first gets HIV and when a test can accurately detect it. This varies from person to person, and depends on the type of test done. During the window period, even before knowing about being infected, a person can transmit HIV to others. People getting tested at a clinic should ask their health care provider about the window period for the type of test they are taking. People testing at home should review the materials that come with the home test kit. If a test is taken within 3 months after possible exposure and the result is negative, the person should get tested again in another 3 months to be sure.

Why is early treatment so important?

There is no cure for HIV, but anti-retroviral treatments (ART) can be started while the person still feels healthy. If people with HIV remain in medical care and continue to take the medicines to keep low viral loads, they can live long, healthy lives.

Why is it important to use condoms?

A condom is a form of protective barrier that prevents the exchange of body fluids such as semen, vaginal fluids or rectal fluids. Latex is a type of material used for external (male) condoms and is effective in preventing HIV transmission. People who are allergic to latex can use condoms made of polyurethane or polyisoprene. Condoms made of lambskin do not protect against HIV because they have pores that are large enough for the virus to pass through. Another form of protection is the internal (female) condom, which is made of nitrile and is safe for people with latex allergies. The other form of protective barrier is the dental dam, which is also made of latex. Any type of condom cut into a flat sheet can serve as a dental dam.

What is PrEP? What is PEP?

Pre-exposure prophylaxis (PrEP) is a medicine taken daily to reduce the risk of HIV infection. If someone is at very high risk for HIV, PrEP might be right for them. PrEP should be considered if someone is HIV-negative and in an ongoing sexual relationship with an HIV-positive partner. PrEP also should be considered for people who are not in a mutually monogamous relationship

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

with a partner who recently tested HIV-negative, and if they are

- **A person with a penis who has had anal sex without a condom with another person with a penis, or who has been diagnosed with an STI in the past 6 months**
- **A person who does not regularly use condoms during sex with partners of unknown HIV status who are at very high risk of HIV infection (for example, people who use injection drugs or women who have bisexual male partners)**

Post-exposure prophylaxis (PEP) is an HIV medicine that can be taken after being potentially exposed to HIV to prevent becoming infected. If someone is HIV negative or doesn't know their HIV status and thinks they have recently been exposed to HIV during sex (for example, if a condom breaks), they should talk to their health care provider or an emergency room doctor about PEP right away (within 3 days). The sooner someone starts PEP, the better; every hour counts. If prescribed PEP, it is necessary to take it once or twice daily for 28 days.

What does U=U mean?

U=U means Undetectable = Untransmittable. If a person living with HIV has fewer than 200 copies of HIV per milliliter of blood, they are considered virally suppressed and the infection is undetectable on tests. Medications are used to suppress the virus so it becomes undetectable. People with undetectable viral loads cannot transmit the virus sexually to their partners.

Will everyone with HIV get sick eventually?

While complications from HIV infection are possible, current treatments and medications are giving people with HIV a positive prognosis and near-normal lifespan. HIV is now considered a chronic disease. If people with HIV remain in medical care and are able to continue to take the medications to keep low viral loads, they can live long, healthy lives. Patients living with HIV would then be vulnerable to the same health conditions that affect all people as they age.

5. **Summarize by saying,**

Now you know the basics about HIV infection. These are the facts that can help you make proud choices so you can reach your goals and dreams.

ACTIVITY B

THE SUBJECT IS HIV VIDEO AND DISCUSSION*

PREPARING FOR THE ACTIVITY

RATIONALE

Reinforcing information via a motivating video increases the possibility of reaching more teens who learn quickly through music videos and other television programs.

MATERIALS

- Monitor and video player, or internet access if using alternative videos
- Video: *The Subject Is HIV*, or alternative videos

PREPARATION

- Review the information about HIV in Appendix B.

TIME

25 minutes

(*Note:* Allow more time for discussion of the video, if possible, to help participants personalize the information and to answer any questions they may have.)

PROCEDURE

FACILITATOR'S NOTE

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. A list of alternative videos and discussion questions can be found at www.etr.org/ebi/alternative-videos.

1. Introduce the video by saying,

> This video you are going to see will discuss HIV/AIDS, what it is, how you can get it, and how to prevent infection. Afterward, we will talk about the video. Pay close attention to messages about how people can and cannot become infected with HIV, about injection drug use and about condom use.

2. Show the video, which is 18 minutes long.

3. At the end of the video, ask the participants to brainstorm answers to the following questions:

> What did they mean when they said "you can't get HIV from things you share?"

Answer:

» You can't get HIV from casual contact (e.g., combs, toilet seats, telephones, eating after someone).

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE In any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

What was the message about condoms in the video?

Answer:

» Use condoms every time you have anal, oral or vaginal sex.

What was the message about needle sharing?

Answer:

» Do not share needles or works.

What were the messages discussed between the young people in the library?

Answers:

» Don't have sex before you are ready.

» Don't let anyone pressure you to have sex.

» If you have sex, you must use a latex (or polyurethane/polyisoprene) condom.

What were the messages discussed between the students in biology class?

Answer:

» It's important to talk with your partner about using protection.

» If a person respects themselves and their partner, they will use a condom.

» Not having sex is a good way to avoid pregnancy, HIV and other STIs.

4. **Summarize this activity by saying,**

You did a great job answering those questions and remembering the important messages in the video(s).

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

HIV infection can happen to anyone who engages in risky behaviors. The choice is yours. I want you to make proud and responsible choices, so if you choose to have sex, choose to use protection.

FACILITATOR'S NOTE

Some statistics have changed since the video was produced. In 2018, youth ages 13 to 24 accounted for an estimated 21% of new HIV infections in the United States. The most recent data on young people and HIV can be found at: www.cdc.gov/hiv/group/age/youth/index.html

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY C

TRUE OR FALSE: HIV

PREPARING FOR THE ACTIVITY

RATIONALE

Distinguishing facts from falsehoods about HIV provides an opportunity for learning the correct information about HIV/AIDS.

MATERIALS

- Markers
- Chart paper (for keeping score)
- Masking tape
- *True or False: HIV Statements* (included in module)
- *HIV/AIDS Frame* poster

TIME

10 minutes

PROCEDURE

1. This activity reviews facts about HIV/AIDS. Refer to the *HIV/AIDS Frame* poster throughout the activity to help participants understand the answers.

2. Introduce the *True or False* activity by saying,

> The activity we are about to do will show just how much you know about HIV and how to protect yourself.

3. Put the words "True" and "False" on the board or a sheet of chart paper.

4. Explain the activity,

> I am going to divide you into two teams. I will then read each team a statement and ask you whether it is true or false and why. If your team answers correctly, you will get two points. If your team can correctly explain why it's true or false, then you get two more points. If your team answers incorrectly, then the other team has a chance to steal the question and get two points for correctly explaining why it's true or false.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

5. **Divide the group into two teams.**

6. **Go around to each team one at a time and read a statement from the *True or False: HIV Statements*.**

7. **Ask the first team to identify it as true or false and to state *WHY*.**

8. **Ask the second team if they agree. (If there is a disagreement, teach the right answer and explain why.)**

9. **If the second team agrees, but the answer is wrong, teach the right answer and explain why.**

10. **If the second team agrees and the answer is right, give the team the correct number of points.**

11. **Read the next statement to the second team.**

12. **The game is over when the statements are completed or time is up, whichever comes first.**

13. **Summarize by saying,**

> **When you believe in things that just aren't true, especially about HIV, it can cause you to make unhealthy choices. Knowing the facts can make all the difference.**
>
> **Understanding that HIV can affect anyone helps people understand that they need to always protect themselves.**
>
> **You can share this knowledge with your friends, family and partners. Your knowledge will help you protect yourself and reduce your risk of HIV.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

TRUE OR FALSE: HIV STATEMENTS

[Do *NOT* change the order of the statements]

1. **Having sex with someone who uses injection drugs is a way a person can get HIV.**
   TRUE
2. **Having unprotected anal sex increases your chances of getting HIV.**
   TRUE
3. **You can tell by looking at people whether they have HIV.**
   FALSE
4. **HIV can be transmitted in blood, semen, vaginal fluids, and rectal fluids.**
   TRUE
5. **Having unprotected sex with someone who is living with HIV is one way of getting HIV.**
   TRUE
6. **If a person who is pregnant has HIV, there is a chance the baby can get it.**
   TRUE
7. **You have a bigger chance of getting HIV if you have sex with many people.**
   TRUE
8. **You can get HIV from using someone else's comb or hairbrush.**
   FALSE (NO CONTACT WITH BODY FLUIDS)
9. **Using protection during sex reduces the chance of getting a sexually transmitted infection, including HIV.**
   TRUE
10. **You can get HIV by sharing a needle with a drug user.**
    TRUE
11. **If you hug someone with HIV you can get it.**
    FALSE (NO CONTACT WITH BODY FLUIDS)
12. **Having an untreated STI can increase your chances of getting HIV.**
    TRUE
13. **AIDS is the stage of HIV in which your body cannot fight off diseases.**
    TRUE
14. **Having AIDS makes you more likely to get other diseases.**
    TRUE
15. **AIDS can be cured.**
    FALSE
16. **AIDS is caused by a virus.**
    TRUE (CALLED HIV)
17. **Anyone can get HIV.**
    TRUE (IF YOU PARTICIPATE IN RISKY SEXUAL BEHAVIOR OR SHARE NEEDLES)
18. **You can avoid getting HIV by exercising regularly.**
    FALSE
19. **You can take certain medications to reduce your risk of HIV.**
    TRUE
20. **Early treatment can help people with HIV stay healthy.**
    TRUE

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY D

HIV RISK CONTINUUM

PREPARING FOR THE ACTIVITY

RATIONALE

Actively identifying the HIV risk posed by different sexual and non-sexual behaviors helps participants internalize the information and facilitates learning.

MATERIALS

- *Risk Continuum* signs
- *Risk Behavior* cards
- Masking tape

TIME

15 minutes

PROCEDURE

1. Tape the *Risk Continuum* signs on the wall or blackboard like the diagram below.

No Risk	Some Risk	High Risk
Green Light	Yellow Light	Red Light
(Safe)	(Proceed with caution)	(Unsafe)

2. Divide the group into pairs.

3. Explain the following information.

In this activity, you will be given cards containing behaviors. You will have to place each card under the heading that you feel identifies the level of risk for HIV infection the behavior represents.

High Risk/Red-Light Behaviors involve contact with blood, semen, vaginal fluids or rectal fluids and can transmit HIV.

Some Risk/Yellow-Light Behaviors involve a barrier such as a condom or dental dam (latex sheath or cover), but they are activities during which exchange of blood, semen, vaginal fluids or rectal fluids might create some risk of transmitting HIV.

No Risk/Green-Light Behaviors involve no exchange of blood, semen, vaginal fluids or rectal fluids and thus pose no risk of transmitting HIV.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

4. **Shuffle the *Risk Behavior* cards and distribute them as evenly as possible among the pairs.**

5. **Explain that "sex" in these questions means oral, anal and/or vaginal intercourse.**

6. **Ask each pair of participants to read one of their *Risk Behavior* cards and decide under which risk level category it should be placed.**

7. **After each answer, have participants explain why they think the behavior belongs under that particular category. Ask if other group members agree. Use this opportunity to clarify misinformation.**

8. **Once there is agreement about where the *Risk Behavior* card should be placed, ask participants to go tape the card under the correct category.**

FACILITATOR'S NOTE

***Risk Behavior* cards may be placed between categories because High, Some and No Risk represent a continuum and some behaviors do not fall solely within any one category.**

9. **Summarize as follows:**

> **Look at all the behaviors in the green light category. Notice all the things you can do to enjoy intimacy with your partner without putting yourself at risk for HIV. To protect yourself from HIV infection, it is important to know which behaviors are safe and which are risky. You can use the information you have been learning in this program to make proud choices that reduce your risk for HIV infection and help you reach your goals and dreams. Remember, it's not who you are but what you do that puts you at risk for HIV and other STIs. So be proud and responsible and always use latex (or polyurethane/polyisoprene) condoms and/or dental dams if you have any kind of sexual intercourse—oral, anal or vaginal.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

RISK BEHAVIORS[1]

(*Note:* This guide reflects risk levels for HIV transmission only. There are some STIs [herpes, syphilis, HPV] that can be passed through skin-to-skin contact or genital touching.)

Vaginal sex without a condom ---------- Red Light

Kissing ---------- Green Light

Having protected sex with a person who is having sex with other people ---------- Yellow Light

Romantic conversation ---------- Green Light

Oral stimulation of the penis without a condom ---------- Yellow Light

Sharing eating utensils with someone who is living with HIV ---------- Green Light

Sharing needles and syringes ---------- Red Light

Anal sex with a condom and water-based lubricant[2] ---------- Yellow Light

Self-masturbation ---------- Green Light

Mutual masturbation ---------- Green Light

Practicing abstinence ---------- Green Light

Vaginal sex with a condom ---------- Yellow Light

Massage ---------- Green Light

Having sex with multiple partners without using a condom ---------- Red Light

Oral stimulation of the vulva (female genitals) with a dental dam (latex barrier) ---------- Green/Yellow Light

Anal sex without a condom[2] ---------- Red Light

Having protected sex with multiple partners ---------- Yellow Light

Having sex without using a condom with a person who injects drugs ---- Red Light

Sexual fantasy ---------- Green Light

Touching someone who is living with HIV ---------- Green Light

Flirting ---------- Green Light

Body rubbing/grinding (with clothes on/no exchange of body fluids) ------- Green Light

Hugging ---------- Green Light

Having sex with only one partner (monogamous) -------- Green/Yellow/Red Light

(Green if both have never had sex before. If one or both have had other partners, Yellow if they use condoms; Red if they don't use condoms.)

Note: Anal sex is a higher risk activity for HIV specifically due to the possibility of rectal tearing and bleeding. When used correctly and consistently, condoms are highly effective in preventing HIV. If people are going to engage in anal sex, using a condom and water- or silicone-based lubrication can reduce their risk.[2]

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

FACILITATOR'S NOTE

Other HIV prevention strategies include PrEP 2-1-1 and TasP.

- PrEP 2-1-1 dosing strategy has been shown to be 86% effective at preventing HIV transmission during anal sex (though less effective during vaginal sex). The PrEP 2-1-1 strategy involves taking 2 pills between 2 and 24 hours before sex and another pill within 24 hours after the first and the final pill 24 hours after that.[3]
- TasP or "Treatment as Prevention" means that people living with HIV who get treatment are less likely to transmit the infection. Reducing the amount of the virus in the body through treatment helps prevent transmission to others. An undetectable viral load means the virus is untransmittable (or U=U).[4]

MODULE 3

ATTITUDES ABOUT SEX, HIV AND CONDOM USE

GOALS

The goals of this module are to:

- Increase participants' perceived vulnerability to HIV.
- Confront stereotypes about who becomes infected with HIV and learn more about how people can and cannot become infected.
- Reinforce knowledge about HIV and AIDS.
- Weaken negative beliefs and attitudes that foster risky sexual behaviors.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- Identify their attitudes toward risky sexual behavior.
- Problem solve for risky sexual behavior situations.
- Recall correct information about HIV/AIDS.
- Advocate and give advice regarding safer sex strategies.

MODULE PREVIEW

The third module: (1) informs participants about the transmission and prevention of HIV; and (2) helps participants advocate and give advice regarding HIV/AIDS and safer sex strategies.

STRATEGIES/METHODS

- Video Viewing
- Group Discussion
- Problem-Solving Exercises

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- *The Hard Way* character cards
- *Calling Koko Caller* worksheets in the student workbooks
- Video: *The Hard Way* (or alternative videos*)

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Chart paper
- Pre-labeled chart paper:
  - » *Kenrick, Miguel, Renee, Mom, Dad* and *Koko*
- Markers
- Masking tape
- Pencils
- Monitor and video player, or internet access if using alternative videos

PREPARATION NEEDED

1. Label all of the charts as listed under Materials.
2. Hang the pre-labeled charts in the order they will be used. Fold and tape the charts so the titles remain covered by the bottom half of the sheet until you use them.
3. Set up the video(s) to be ready to play.
4. Review the caller scripts in Activity B and choose three that will be most relevant for your group.

INSTRUCTIONAL TIME: 60 minutes

(*Note:* Facilitators may wish to extend the time to allow more thorough discussion of the video.)

ACTIVITY	MINUTES NEEDED
A. *The Hard Way* Video and Discussion*	**40**
B. Calling Koko	**20**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.

ACTIVITY A

THE HARD WAY VIDEO AND DISCUSSION*

PREPARING FOR THE ACTIVITY

RATIONALE

Reinforcing information about HIV, AIDS, risk levels and condom use through video presentations can promote further group discussion and enhance learning.

MATERIALS

- Monitor and video player, or internet access if using alternative videos
- Video: *The Hard Way*, or alternative videos
- Pre-labeled chart paper:
  - *Kenrick, Miguel, Renee, Mom, Dad* and *Koko*
- Masking tape
- Markers
- *The Hard Way* character cards (one card per participant)

TIME

40 minutes

(*Note:* Allow more time for discussion of the video, if possible.)

PROCEDURE

1. Introduce the film.

> Sexually active young people are at risk for HIV infection. The video you are going to see is about young people. This video discusses what AIDS is, the ways people get HIV and the ways to prevent infection.

2. If you haven't done so already, write the names of the characters on chart paper (Kenrick, Miguel, Renee, Mom, Dad and Koko).

3. Divide the group into 6 teams. Hand out a character card to each team. Explain the activity.

> The cards you have just received have the name of one of the main characters in the video. While you watch the video, pay close attention to the person on your card. Watch what this person says and how this person thinks and acts. Also, notice anything that changes the person's thinking during the course of the video.

4. Start the video, which is 18 minutes long.

5. When the video has ended, plan to spend 10–12 minutes discussing the various characters. Pace yourself. Plan to spend about 2 minutes on each character.

* A list of alternative videos and discussion questions can be found at www.etr.org/ebi/alternative-videos.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

6. **Begin the discussion by saying,**

> Let's talk about the characters in this video. I would like the group with Kenrick's card to go first.
>
> How would you describe Kenrick?
>
> What behaviors placed Kenrick at risk for HIV? *(Be sure the issue of number of partners gets addressed.)*
>
> Now let's talk about Miguel.
>
> Those of you with Miguel's card, what behaviors placed him at risk? *(Be sure number of partners gets addressed.)*
>
> Why didn't Miguel use condoms?
>
> Now let's talk about Miguel's partner, Renee. Notice the video refers to the use of birth control pills as "protection." While pills may protect against a pregnancy, they provide no protections against HIV and other STIs.
>
> What form of protection does Renee choose to use?
>
> Those of you with Renee's card, why do you think Renee chose to use birth control pills instead of condoms as her form of protection?
>
> What could Renee and Miguel say to each other about their sexual health and desires to protect themselves from unintended pregnancy or STIs?
>
> Does this make sense? Do you think that using the pill is OK if you are having sex with only one person? Why or why not?
>
> Those of you with the Dad card, what do you think about the way the dad talked to Kenrick?
>
> Those of you with the Mom card, what do you think about the conversation between Kenrick and his mom?
>
> How is Kenrick's conversation with his dad different from the one with his mom?
>
> What adults have ever talked to you about condoms or safer sex? How do your parents, guardians or other caring adults deal with the issue?
>
> Where would you turn for support and advice about relationships, sex and using protection?

7. **Spend the next 10 minutes discussing Koko's message, HIV testing and relationships. Begin the discussion by saying,**

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

Now let's talk about Koko. What was her message in the video?

What do you think it would be like to get tested?

What would someone gain by getting tested? (What would be the benefits of getting tested?)

Now let's discuss the types of relationships in this film. Kenrick had multiple partners whereas Miguel had a steady girlfriend. How do you negotiate condom use when

- You have more than one partner?
- You have a steady partner?
- You have a new partner?

Which one—with more than one partner, a steady partner or a new partner—is easier or harder, and why?

Now let's talk about friendships and conversations people have with their friends about being safer and using condoms. Do you think that Kenrick and Miguel had talked about using condoms enough? What else could they have said to each other? What would you say to your friends? What would you want your friends to say to you?

8. Summarize the activity by saying,

The characters in this video had to make decisions about whether to have sexual intercourse and whether to use condoms to protect themselves. What is the most important message you're taking away from the video and our discussion? (Listen for these messages and reinforce if they are not shared: getting tested, talking about sexual health and protection, and using protection if having sex can help reduce the risk of HIV transmission.)

As you make these decisions in your life, remember that abstinence is the 100 percent surest way to avoid an unintended pregnancy and sexual transmission of HIV and other STIs. If you choose to have sex, it's important to use condoms correctly and consistently every time. If you've had unprotected sexual intercourse in the past, you can get tested and then use protection correctly in the future. It's the proud and responsible thing to do!

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY B

CALLING KOKO

PREPARING FOR THE ACTIVITY

RATIONALE

Practicing solving HIV-related problems builds self-efficacy and the ability to safely resolve risky situations and behaviors.

MATERIALS

- *Calling Koko Caller* 1–6 worksheets
- Pencils

TIME

20 minutes

PROCEDURE

FACILITATOR'S NOTE

You may want to choose the caller scripts to use with your group. You have only 20 minutes, so you want to make sure you have enough time to read and discuss each call that you assign to participants.

If your participants resist getting into pairs, do the activity in the large group. Read the first caller script and ask group members to give ideas for the kind of advice Koko should give the caller. Then choose someone to play the role of Koko giving the caller advice. You play the role of the caller. Sit with your chairs back to back for the roleplay. Continue with the other caller scripts you've chosen.

1. Introduce this activity by saying,

> Based on what you have learned so far, you will give advice to someone who has questions or concerns about HIV, AIDS or condoms. In this activity, you will take the role of Koko, the expert on HIV, AIDS and condoms, who has an HIV Information Hotline for teenagers called *Calling Koko*. You will provide the solution to the concerns of one of these callers.

2. Divide the participants into pairs or small groups.

3. Have participants turn to the *Calling Koko* worksheets in their workbooks. Assign a different *Calling Koko Caller* to each pair or group. (Multiple groups will be working on the same caller script.)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

4. **Explain the following:**

> You will discuss, decide on and then write down the advice you would give to the caller. At the end of this activity, you will share the advice with the rest of us. Your final decision should be one that your team can agree on. Remind your callers that they can make proud and responsible choices.

5. **Give the pairs 5 minutes to discuss and write their advice.**

6. **Have one pair for each caller give their report. One person should read the part of the caller, and the other person should give Koko's advice using the Main Points to Cover.**

7. **Using the following sample responses, discuss any points that participants do not come up with themselves.**

FACILITATOR'S NOTE

Sample responses are provided. Participants' answers do not have to match the sample responses word for word to be considered correct. However, in the large-group discussion, it is important to make sure that the points in each box get discussed. You may want to read the sample responses as a review before going on to the next caller.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MAIN POINTS TO COVER

The surest protection is abstinence.

If you choose to have sex, you must use a latex condom.

PrEP and PEP can reduce the risk of HIV transmission.

Don't share needles or works.

CALLER 1

Koko,

I've heard that young people are at risk for HIV and the number of HIV cases among young people is growing. I don't want to take any chances of getting HIV. What's the surest way I can protect myself?

– Charlie

Sample Response to Caller 1

Every time you engage in a behavior that involves an exchange of body fluids you take a chance of getting HIV. The surest way *NOT* to get HIV (the virus that causes AIDS) is to practice abstinence—choosing not to have sex. If you do decide to have vaginal or anal sex, the best way to reduce your risk of HIV is to use condoms. That includes external or male condoms made of latex, polyurethane or polyisoprene; or female or internal condoms. PrEP and PEP are medications that you can take to reduce your risk of HIV infection. PrEP is a pill you take every day to prevent HIV. PrEP may be a great option for someone who is in a relationship with someone living with HIV or for someone who is at high risk for HIV. PEP is a pill you can take for 28 days after having sex if you think you may have been exposed to HIV. And don't share needles of any kind with anyone for any reason (whether it's for drug use, tattoos or ear piercing). That's the proud and responsible thing to do.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MAIN POINTS TO COVER

Commitment in a relationship is not always an effective form of protection.

Safer sex will reduce your risks of pregnancy, HIV and other STIs.

Talk to your partner about condoms.

Use latex condoms every time you have sex.

CALLER 2

Dear Koko,

My girlfriend and I have been going out for a year. We really love each other, and both want to have sex. I trust her, but I'm concerned about HIV. My girlfriend and I are 14 years old, and neither one of us has tattoos, and we don't use drugs. We've been thinking about having sex, but only with each other. Do we have to worry about HIV?

– Raymond

Sample Response to Caller 2

If you and your girlfriend have never had vaginal or anal sex with anyone else, and never used injection drugs or shared needles of any kind, the chances are that neither of you has HIV.

However, if you and your girlfriend start having sex, you should always use protection even if you are only having sex with each other. Deciding to have sex with someone is a big decision and it involves thinking and talking to your partner about using condoms. Using condoms reduces your risk of unintended pregnancy or getting an STI, including HIV.

Talk it over with your partner. You should both get tested for HIV and other STIs and agree to use protection every time you have sex. By protection, I mean external or male condoms made of latex, polyurethane or polyisoprene; internal or female condoms; or dental dams for oral sex.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MAIN POINTS TO COVER

Get tested for HIV now, and again in 6 months.

If the test is positive, seek medical help immediately.

Avoid future risk of infection by using protection every time you have vaginal, oral or anal sex.

CALLER 3

Hi Koko,

Five months ago, I had sex with someone for the first time. We didn't use condoms. I didn't really enjoy it, and he never even called me again. Now I have a new boyfriend and he wants me to have sex, too. Is it possible that I might have been exposed to HIV when I did it before? Now, I'm anxious that I might be infected with HIV. What do I tell my boyfriend? What should I do?

– Alex

Sample Response to Caller 3

Yes, it is possible that you have been exposed to HIV. There is no way of knowing for sure without being tested. Test kits are available over the counter at most drug stores. You can also go to a local HIV testing site such as a public health clinic, community health center or your doctor. It may take 2 to 6 weeks after exposure before HIV can be detected in a person's body. Make an appointment to get tested and use condoms until you get the test results.

It sounds like your first time didn't go the way you had hoped it would. It's OK if you want to choose not to have sex right now. Abstinence is the surest way to protect yourself from HIV and other STI. If you do decide to have sex, be proud and responsible and talk to your boyfriend about protection. Tell him it is important that you use condoms if you have sex. Let him know that you're concerned about getting HIV, and what would happen if either of you got infected. If he cares about the relationship, he will understand that being abstinent or using condoms is the right thing to do.

I also want to make sure you feel supported. Please reach out to the wellness center or find a school club or group that supports and affirms you.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MAIN POINTS TO COVER

Oral sex can transmit STIs, including HIV.

Practicing safer sex can protect you against pregnancy, HIV and other STIs.

Other things can lead to intimacy and orgasm without risking getting pregnant, or infected with HIV or another STI.

CALLER 4

It's like this Koko,

I am fifteen years old, and my girlfriend and I have never had vaginal sex. We do other things, though, including oral sex. Before, we just wanted to make sure that she didn't get pregnant. We had never really thought about infections like HIV. But, now I hear that teens my age are getting sexually transmitted infections. Is oral sex safe? How do we protect ourselves from STDs?

– Carmello

Sample Response to Caller 4

Oral sex poses little to no risk of transmitting HIV. However, most STIs can be transmitted during oral sex. Untreated STIs can increase the risk of HIV transmission. This is why it is important to use protection for oral sex. For oral sex that involves putting the mouth to a vagina or an anus, use a dental dam. If you don't have a dental dam, you can cut a condom into a flat sheet. A penis should also be covered with a condom during oral sex.

From what you've told me, you already know there are other things that people can do for physical intimacy, or even sexual orgasm, that will not lead to pregnancy or transmission of infection. Using protection every time you have oral sex is the responsible thing to do. If you decide to have sexual intercourse, use an external (male) or internal (female) condom every time you have sex. And make sure you only use condoms that are made of latex, polyurethane, polyisoprene or nitrile.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MAIN POINTS TO COVER

You can't tell if a person has HIV by looking.

Look for a relationship, *not* a sexual partner.

If you decide to have sex, use a latex condom every time.

CALLER 5

What's up, Koko,

I recently found out that a friend of mine is HIV positive and that she's had the virus for years. She's smart, fun to be around, and has only had sex with two guys her whole life. Now I'm afraid to be with anyone because if someone like her can get HIV, how can I know who's safe and who isn't? If she has HIV, then anyone could! I'm scared to date! What should I do?

– Dana

Sample Response to Caller 5

I can understand your concerns about having sex. You can't look at people and tell whether or not they have an STI, such as HIV. Take time to get to know a person as a friend before you decide to have sex.

You can always decide to wait to have sex. If you decided to have sex, your best combination strategy is safer sex and time. Take the time to really get to know your potential partner. Talk to them about your concerns and how you plan to protect yourself. When you decide to have sex, be sure to use protection every time. By protection, I mean external or male condoms made of latex, polyurethane, or polyisoprene; internal or female condoms; or dental dams.

I am assuming your friend is getting treatment for HIV. Antiretroviral therapy, or ART, can help your friend live a long, healthy life. If she has a steady sexual partner who is HIV negative, ART could help reduce the chances of her transmitting HIV to her partner. Her partner can get on pre-exposure prophylaxis or PrEP treatment, which will reduce the risk of getting the virus.

People who think they may have been exposed to HIV should get treatment immediately. Post-exposure prophylaxis or PEP is available at emergency or urgent care centers, doctor's offices and HIV clinics. PEP must be taken within 72 hours from the time of exposure for it to be effective in preventing HIV infection.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MAIN POINTS TO COVER

People cannot give consent when they are drunk or high.

Get tested for pregnancy, STIs and HIV.

Resist peer pressure to drink alcohol or do drugs. Alcohol and drugs affect your decision making.

Use protection if you decide to have sex.

CALLER 6

Koko,

I'm a senior this year and plan to go to college, but something happened the other night that I want to ask about. I went to a party. I had a couple of beers and then somebody handed me a joint. Everyone else was smoking too. It was powerful stuff! I had never used drugs before. The next thing I knew I was in the bedroom with this basketball player I kind of had a thing for. We ended up having sex, and I don't even know if we used protection, because I was so high that I forgot to ask. I heard he does this type of thing a lot. Now he barely even speaks to me. I'm afraid that I could have gotten pregnant or gotten infected with an STI like HIV. What should I do?

– Rihanna

Sample Response to Caller 6

This sounds like a tough situation. When people are drunk or high, they are more likely to have sex without using condoms, which increases their risk for STIs. Everybody has the right to say when they want or don't want to engage in sexual behaviors and to insist on using protection. When people are drunk or high they can't fully give consent to sexual activity. Please remember that someone doing something sexual to you while you are drunk or high means that technically you were not able to give consent, and so this may be a situation of sexual assault. Do not blame yourself. There are people in this world who seek out those who are too high or drunk to consent. If this person is known for having sex with people who are too drunk or high to consent, he likely isn't someone who has your best interests in mind. If you ever find yourself in a position where you were pushed or forced to do something you didn't really want to do, it's important to talk to a parent, counselor or other trusted adult.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

CALLER 6

Sample Response to Caller 6 *(continued)*

Go right away to your local reproductive health clinic and get emergency contraception (EC) to prevent a possible pregnancy. They can also test you for STIs. Make sure you go to the clinic right away. You have up to 5 days after unprotected sex to use EC, but the sooner, the better. EC is also available over the counter at most drug stores.

If you may have been exposed to HIV, immediately contact a doctor about post-exposure prophylaxis (PEP). These medications may be able to prevent the virus from infecting the body if taken immediately after exposure (within 72 hours).

Don't blame yourself. You deserve to have sexual partners who you feel comfortable communicating with, who respect what you want and don't want, and who will share the responsibility for using protection.

MODULE 4

STRATEGIES FOR PREVENTING HIV INFECTION: STOP, THINK AND ACT

GOALS

The goals of this module are to:

- Introduce participants to a problem-solving method to help think through and cope with sexual choices.
- Review and reinforce the information learned thus far in the program.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- State and explain the three steps of the problem-solving model.
- State how using problem-solving steps can help avoid risky situations.
- Explain how making their own decisions makes it more likely that they will achieve their goals and dreams.
- Provide correct answers to review questions on HIV and AIDS.

MODULE PREVIEW

The fourth module: (1) encourages participants to think about their choices; (2) helps them understand the importance of protecting themselves against HIV; (3) reinforces information about risky behavior; and (4) provides them with a problem-solving strategy as a way to reduce their risk of HIV.

STRATEGIES/METHODS

- Problem-Solving Strategies
- Case Study Worksheet
- Video Viewing
- Game

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- *STOP, THINK and ACT* poster
- *Sean and Morgan Case Study* worksheet in the student workbook
- HIV/AIDS Game Questions (included in module)
- Video: *Nicole's Choice* (or alternative videos*)

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Chart paper
- Masking tape
- Pencils
- Markers
- Monitor and video player, or internet access if using alternative videos

PREPARATION NEEDED

1. Set up the video(s) to be ready to play.
2. Review the information about sexually transmitted infections in Appendix B.

INSTRUCTIONAL TIME: 60 minutes

(*Note:* Facilitators may wish to extend the time to allow more discussion of STOP, THINK and ACT and the video.)

ACTIVITY	MINUTES NEEDED
A. STOP, THINK and ACT: Introduction to Problem Solving	**5**
B. Sean and Morgan Case Study: Problem Solving using STOP, THINK and ACT	**15**
C. *Nicole's Choice* Video and Discussion*	**25**
D. The HIV/AIDS Game	**15**

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.

ACTIVITY A

STOP, THINK AND ACT: INTRODUCTION TO PROBLEM SOLVING

PREPARING FOR THE ACTIVITY

RATIONALE

By learning a problem-solving model, participants will have a strategy they can rely on when faced with sexual decisions, rather than relying on emotions.

MATERIALS

- *STOP, THINK and ACT* poster
- Masking tape

TIME

5 minutes

PROCEDURE

FACILITATOR'S NOTE

This activity is intended as a brief overview of the STOP, THINK and ACT problem-solving approach. Keep it simple and quick.

1. Hang the *STOP, THINK and ACT* poster.

2. Introduce the activity by saying,

> We've been talking about making proud choices but it can be hard to do when you might be experiencing pressure and conflict.
>
> We are going to learn a problem-solving model that will help you think about making decisions under pressure.

3. Read the steps out loud to the group, pointing to the poster so the participants can read along. Begin with STOP.

> The first step is ***STOP***. Why might you need to ***STOP*** if you were being pressured sexually?

4. Let the participants provide a few answers.

Answers may include:

You may feel afraid, confused, angry or upset.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

5. Then say,

> ***STOPPING*** is important because it gives you a chance to take a deep breath, calm down and collect yourself.

6. Then move on to THINK.

> The second step is ***THINK***. What might you need to think about?

7. Allow participants to respond.

8. Then say,

> ***THINKING*** keeps you, not your emotions, in control of the situation. You don't want to overreact or underreact. Some of the things you want to think about include:
>
> - What is the problem?
> - What am I being pressured to do?
> - What am I feeling? What is the other person feeling?
> - What are my choices?
> - What do I want?
> - How can I stick to the decisions I've made for my health and well-being?
> - What alternatives can I suggest?
> - What are the possible consequences?
>
> The important thing here is to calm down and think things through a bit before acting.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

9. **Then move on to ACT.**

Once you are calm and you have thought things through a bit, the next step is to ***ACT*** on your decision. Evaluate the possible consequences and make the best choice. Try it out and see how well it works. If your solution does not work well enough, you can try another alternative, or ask for help.

Sometimes after taking an action, you realize it wasn't the best choice for you and you would do it differently the next time. That's fine. It's just important to reflect on what happened so you can learn from your experiences.

10. **Summarize by saying,**

Next we will practice the STOP, THINK and ACT problem-solving steps.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY B

SEAN AND MORGAN CASE STUDY: PROBLEM SOLVING USING STOP, THINK AND ACT

PREPARING FOR THE ACTIVITY

RATIONALE

Applying the problem-solving steps to a situation will enhance the participants' ability to use them.

MATERIALS

- *STOP, THINK and ACT* poster
- *Sean and Morgan Case Study* handout
- Pencils

TIME

15 minutes

PROCEDURE

FACILITATOR'S NOTE

The case study has been written to be gender neutral. Sean and Morgan might be a boy and a girl, a girl and a boy, two boys, two girls, or transgender youth.

1. Begin this activity by saying,

> No one should pressure someone else for sex. This is especially true of those who are less able to speak for themselves or assert themselves because of a disability. When we are being pressured sexually, we often feel confused or upset and may not think clearly about how to deal with the situation. STOP, THINK and ACT may be a way to help you practice safer sex. So we are going to practice using STOP, THINK and ACT. You may notice that we are using gender neutral names in the case study. The skills we are learning here can be applied by anyone of any gender or sexual orientation. Sean and Morgan may be transgender youth. No matter the gender, gender expression, gender identity or sexual orientation of people in a sexual relationship, there has to be consent and that consent has to be reaffirmed throughout the sexual intimacy and intercourse.

2. Divide the participants into pairs.

3. Have participants turn to the *Sean and Morgan Case Study* worksheet their workbooks.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

4. **Ask for a volunteer to read the case study and instructions to the group. Encourage the group to read along. If there is no good reader, you should read.**

SEAN AND MORGAN CASE STUDY

Sean is 3 years younger than Morgan. They've been going out for a while. Sean really likes being with someone who is older. Morgan is a lot of fun and Sean feels more mature and popular when they're together.

Sean is very smart and plans to become a psychologist. Sean has had a tough childhood and very much wants to be independent and successful as an adult. Sean works hard and has a plan for the future.

Morgan really likes Sean. Lately, Morgan's friends have been talking a lot about sex and keep asking if Morgan and Sean have "done it" yet. Morgan figures it's time and begins to pressure Sean about having sex.

When Morgan asks Sean about having sex, Sean feels unsure about what to say. Sean has actually thought a lot about this and doesn't feel ready for sex yet. Yes, Morgan is sexy and Sean feels turned on. But Sean wants to wait until after high school and maybe even college to have sex. Sean does not want to do anything that might interfere with future goals. Sean wants to be able to help young people deal with issues and problems. Sean is concerned about STIs and doesn't want to take any risks.

However, Sean really wants to keep the relationship with Morgan. Sean would be very hurt if Morgan turned to someone else for sex.

Today Sean and Morgan are hanging out at Morgan's house. Morgan's grandparents are out for a few hours. They're sitting on the couch, kissing and messing around. They're both breathing hard and things are getting hot and heavy. What can Sean do to avoid having sexual intercourse?

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

5. **Then say,**

I want you to work in pairs, and use the STOP, THINK and ACT steps to find a solution to the situation on your worksheet.

© ETR. All rights reserved.

6. Give the pairs about 7 minutes to complete the worksheets. Encourage both members of the pair to help answer the questions. One person can record the answers on the sheet. Circulate while pairs are working to provide support as needed.

7. After 8 minutes, even if most of the pairs have not finished, ask them to stop and begin discussing the case study. Ask one of the pairs to give their responses to the first section of the worksheet—the STOP section. They are reporting on what Sean and Morgan can do to stop and stay calm.

   When this pair has reported their answers, ask the other groups if they have any responses that are different or if they have anything to add.

   Ask a different pair to report on the second section of the worksheet—the THINK section. They will define the problem, explain what Sean wants and alternatives that Sean can suggest.

   When this pair has given their responses, ask the other groups to comment and offer any different ideas for this section.

   Finally, ask a different pair to report on the third section of the worksheet—the ACT section. They will discuss what Sean should do and how Sean should act to carry out that choice.

   When this pair has given their responses, ask the other groups to comment and offer any different ideas for this section.

8. Ask the group to consider this question:

   How does the age difference between Morgan and Sean affect their relationship? Do they have trust, respect, equality and open communication?

   Make the point that pressuring someone to have sex is not showing respect, and that the relationship is probably not equal. Morgan is 3 years older and is likely to be a lot more mature and experienced than Sean. Morgan probably has more power and influence in the relationship, which could put a lot of pressure on Sean. In healthy relationships, both partners are equal. One does not have more power than the other.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

9. **Summarize as follows,**

That's how STOP, THINK and ACT can be used to think through a problem.

You know that unprotected sexual intercourse can lead to pregnancy, HIV and other STIs, which can all make it harder to reach your goals. Using STOP, THINK and ACT can help you stay calm and think clearly so you can make the wise decision to always use protection if you have sexual intercourse.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY C

NICOLE'S CHOICE VIDEO AND DISCUSSION*

PREPARING FOR THE ACTIVITY

RATIONALE

By using a realistic scenario, this video helps participants understand the importance of protecting themselves against STI infection each time they engage in sexual intercourse.

MATERIALS

- Monitor and video player, or internet access if using alternative videos
- Video: *Nicole's Choice*, or alternative videos
- *STOP, THINK and ACT* poster

PREPARATION

- Review the information about STIs in Appendix B.

TIME

25 minutes

(*Note:* Allow more time for discussion of the video, if possible.)

PROCEDURE

1. Introduce the video by saying,

> Now we will watch a video called *Nicole's Choice*. Pay attention. I want you to look at it and think about its messages. I also want you to think about what you would do in Nicole's situation. Check to see if Nicole uses the STOP, THINK and ACT problem-solving steps.

2. Show the video *Nicole's Choice*, which is 15 minutes long.

3. At the end, ask the following:

> What were some of the messages in the video?

4. Allow participants to answer.

5. Refer to the poster *STOP, THINK and ACT*. Then ask,

> Did Nicole **STOP** and **THINK** when she was with Miguel? How would you have used STOP, THINK and ACT if you were Nicole?

* A list of alternative videos and discussion questions can be found at www.etr.org/ebi/alternative-videos.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

6. **After getting some answers from the group, ask,**

What messages about sexual partners did you receive from each person in the video?

- **Randy?**
- **Lynette?**
- **Nicole?**

Answers:

» You expose yourself not only to your partner, but also to all of your partner's partners.

» It is important for both individuals to get tested.

» It is important to use condoms every time you have sex.

7. **Then ask the following,**

How would you feel if you had to go to a clinic to be tested for an STI?

Can you get HIV the same way you get other STIs?

8. **Summarize as follows,**

Getting an STI may bring up a lot of emotions. Though young people ages 15-24 are diagnosed with half of all new STIs,* many STIs can be prevented by using protection or choosing not to have sex. Only you can decide to protect your future and your health. Use protection every time you have sex. And use the right kind of protection: external or male condoms made of latex, polyurethane or polyisoprene; internal or female condoms; or dental dams.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY D

THE HIV/AIDS GAME

PREPARING FOR THE ACTIVITY

RATIONALE

This activity is a way to review and reinforce the information about HIV transmission covered in this program. It also allows you to end the module with a fun, high-energy activity.

MATERIALS

- Chart paper
- Markers

TIME

15 minutes

PROCEDURE

1. Introduce the next activity by saying,

> We are going to play a game* that will review the information we've talked about regarding HIV and AIDS.

2. Divide the group into two teams.

3. Start by giving the rules:

- Each team will get the chance to answer a question.
- The team member responsible for answering the question will rotate so that each team member gets a turn.
- The other team members can help, but the answer must be given within 10 seconds.
- Only correct answers earn points. Correct answers are worth two or three points.
- The team members answering the question can choose whether they want a two- or three-point question.
- If the answer is incorrect or not given in time, I will give the correct answer, and the other team will get a bonus question (a one-point question).
- If someone answers out of turn, the interrupter's team receives a bonus question. The other team then gets a chance to answer a bonus question.

* Adapted from "AIDS Basketball" from *AIDS: What Young Adults Should Know*, 2nd ed., by William L. Yarber. Adapted with permission from the Association for the Advancement of Health Education.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

4. **Keep score (or ask a participant to keep score) on the board or on chart paper.**

5. **Try to get through all the questions, but remember you have only 15 minutes. The game goes quickly and is stimulating.**

FACILITATOR'S NOTE

If no one is given a bonus question, use the bonus questions in the game for one point each. You may be able to create other situations that result in bonus question being awarded.

6. **Use the questions that follow for the game. Correct answers are provided. Correct answers for True and False questions are in parentheses.**

7. **At the end of the game, total the team scores and declare a winning team.**

8. **Summarize by saying,**

> **Wow! What a game! You all remembered a lot of information. Remember to use all of the things you know and the STOP, THINK and ACT strategy to make proud and responsible choices.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

HIV/AIDS QUESTIONS AND ANSWERS*

TWO-POINT QUESTIONS

1. **What does AIDS stand for?**
   - Acquired immunodeficiency syndrome

2. **What causes AIDS?**
   - HIV, the human immunodeficiency virus

3. **Which body system does HIV damage?**
   - Immune system

4. **What happens to a person with AIDS that usually does not happen to people with a healthy immune system?**
   - They get certain diseases called opportunistic infections.

5. **Name three of the body fluids through which HIV is transmitted?**
   - Semen, vaginal fluids, rectal fluids, blood and breast milk (any 3)

6. **What are the most common ways HIV is transmitted?**
   - Unprotected sexual contact and exchange of blood

7. **What drug-related behavior allows the exchange of blood?**
   - Sharing needles or works

8. **How do most children get infected with HIV?**
   - From their infected mothers during pregnancy, at birth, or through breastfeeding

9. **True or (False). HIV is easily passed through oral sex.**

10. **(True) or False. Anal sex without a condom increases your chances of getting HIV.**

11. **True or (False). There is now a cure for AIDS.**

12. **(True) or False. If you think you were exposed to HIV, you can get Post-Exposure Prophylaxis (PEP) within 72 hours to avoid getting the virus.**

* See Appendix B for additional information on HIV and sources.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

13. True or (False). You can catch HIV like you catch a cold, because HIV can be carried in the air.

THREE-POINT QUESTIONS

14. What are two ways of reducing your risk of HIV?

- Abstinence
- Practicing safer sex by using condoms or taking PrEP which reduces risk of HIV transmission but not other STIs
- Engaging in low-risk activities such as kissing
- Not sharing needles or works
- Getting tested regularly
- Talking with your partners about HIV and making sure they get tested too

15. What does U=U mean?

- U=U stands for Undetectable equals Untransmittable. That means that people with HIV who achieve and maintain an undetectable viral load—the amount of HIV in the blood—by taking antiretroviral therapy (ART) daily as prescribed cannot sexually transmit the virus to others. If there is an undetectable amount of HIV in their blood, the virus cannot be transmitted to others.

16. Name three ways HIV is passed.

- During unprotected vaginal or anal sex (sex without a condom)
- By sharing needles and syringes
- From an infected mother to the fetus or newborn child

17. Name two types of sexual practices in which HIV can be passed.

- Anal sex
- Vaginal sex

18. Name two high-risk behaviors.

- Unprotected anal, oral or vaginal sex
- Sharing of needles or works

19. (True) or False. Using water-based lube and condoms when you have vaginal or anal sex lowers the chance of getting HIV.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

20. (True) or False. People without any symptoms can have HIV and pass it to a sexual partner.

21. Name three sexual behaviors that do not involve any exposure to body fluids that can carry HIV. (Any 3)

- Hugging
- Massage
- Touching
- Masturbation
- Sexual fantasy
- Grinding
- Romantic talking
- Cuddling

BONUS QUESTIONS (ONE POINT)

22. Yes or No. Which of these can transmit HIV?

Tears	no
Sharing needles with someone who is HIV positive	yes
Touching someone who is living with HIV	no
Using the same fork as someone who is HIV positive	no
Using someone's comb	no
Being around someone with HIV	no

23. (True) or False. People can have HIV and give it to others even if they do not look or feel sick.

24. (True) or False. Limiting the number of sexual partners a person has is one way of reducing the risk of HIV.

25. True or (False). People infected with HIV through injecting drugs are not likely to pass the virus to sex partners unless the partner also injects drugs.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

STOP, THINK and ACT
PROBLEM-SOLVING STEPS

STOP

- Stay calm, take a deep breath.
- Get control of myself.

THINK

- What is the problem?
- What am I being pressured to do?
- What am I feeling? What is the other person feeling?
- What are my choices?
- What do I want?
- How can I stick to the decisions I've made for my health and well-being?
- What alternatives can I suggest?
- What are the possible consequences?

ACT

- Evaluate the possible consequences.
- Make the best choice.
- How well did it work?
- Get help, if necessary.
- Make a new choice.

MODULE 5

POSSIBLE OUTCOMES OF UNPROTECTED SEX: STIs

GOALS

The goals of this module are to:

- Increase participants' knowledge of sexually transmitted infections.
- Help participants identify strategies for preventing STIs.
- Increase participants' perceived vulnerability to STIs.
- Clarify participants' attitudes and beliefs about STIs and condom use.
- Teach participants the steps for correct use of a condom.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- Identify the signs and symptoms of the most common STIs.
- Identify how STIs, including HIV, are transmitted, and how they can be prevented.
- Acknowledge their perceived risk for sexually transmitted infections.
- Demonstrate steps for correct use of a condom.
- Identify how condoms can prevent STIs, including HIV, and pregnancy.

MODULE PREVIEW:

The fifth module: (1) helps participants examine the signs and symptoms of the most common STIs; (2) illustrates how STIs can impact the lives of young people; and (3) informs participants about correct use of condoms, as a way to prevent STIs.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

STRATEGIES/METHODS

- Brainstorming
- Video Viewing
- Group Discussions
- Exercises
- Agree/Disagree
- Condom Demonstration

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- *STI* poster
- *Agree* and *Disagree* signs (1 set)
- *Steps for Using a Condom* poster
- Video: *The Subject Is STDs* (or alternative videos*)

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Pencils
- Markers
- Masking tape
- Condoms
- Water-based lubricant
- Condom Demonstrator(s)
- Paper towels
- Small paper bag
- Monitor and video player, or internet access if using alternative videos
- Pre-labeled chart paper:
  - » *How STIs Are Transmitted*
  - » *Reasons to Protect Against STIs*
  - » *Group Agreements* (from earlier session)
- Chart paper
- Index cards for the Transmission Game—pre-labeled with four distinct shapes, e.g., star, rectangle, circle, and triangle**

PREPARATION NEEDED

1. Label all of the charts as listed under Materials.
2. Hang the pre-labeled charts in the order they will be used. Fold and tape the charts so the titles remain covered by the bottom half of the sheet until you use them.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.

** You may change the index card codes to other things such as cities, plant names or animals. Avoid using codes that may imply judgment, such as a rating system. If you teach multiple class periods, change the code between classes so that youth in later periods do not have the same key.

3. Obtain penis models/condom demonstrators to use in the Condom Use Skills activity. If possible, get a model for each participant. You may be able to buy or borrow them from your local reproductive health clinic. Also check out the following sources: www.totalaccessgroup.com/wood_condom_demonstrator.html or www.etr.org/store/format/condom-kit.
4. Have the condom demonstrators, condoms, water-based lubricant and paper towels or wet wipes organized and ready to distribute.
5. Set up the video(s) to be ready to play.
6. Read the instructions for the Transmission Game and make sure you're clear about the process.
7. Label the index cards for the game. For a group of 6–8, one person will have a "star" card, one person will have a "triangle" card, one person will have a "rectangle" card and the rest will have "circle" cards. Increase the number of "triangle," "rectangle" and "circle" cards in this approximate ratio for larger groups.

INSTRUCTIONAL TIME: 60 minutes

(*Note:* Facilitators may wish to extend the time to include both the discussion and the video about STIs, and to provide more condom skills practice.)

ACTIVITY	MINUTES NEEDED
A. STI Facts	20
[A. (Alternate) *The Subject Is STDs* Video	20]
B. The Transmission Game	15
C. What I Think About HIV/STI and Safer Sex	10
D. Condom Use Skills	15

FACILITATOR'S NOTE

STD or STI? Some health educators prefer the term "STI" (sexually transmitted infection) over "STD" (sexually transmitted disease), whereas others use the two interchangeably. This intervention uses STI. It is important for everyone to understand that STIs (STDs) can present with or without symptoms.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY A

STI FACTS

PREPARING FOR THE ACTIVITY

RATIONALE

Providing information about STI transmission and symptoms gives participants the information they need to prevent the spread of STIs. It also provides a common ground for discussing attitudes and concerns about STIs and increases perceived vulnerability to infection as well as motivation to protect against infection. Seeing how STIs and HIV can impact the life of an individual helps motivate prevention planning.

MATERIALS

- *STI* poster
- Pre-labeled chart paper:
  - *How STIs Are Transmitted*
  - *Reasons to Protect Against STIs*
- Markers
- Masking tape

PREPARATION

- Review the information about STIs in Appendix B.

TIME

20 minutes

PROCEDURE

1. Begin this activity by displaying the *STI* poster. Use chart paper to cover the poster so only the letters "S T I" are revealed.

2. Then say,

> Today we are going to talk about STIs. First, I want you to tell me what the letters S, T and I stand for.

Answer:

» Sexually transmitted infection

Explain that they may have also heard the term *sexually transmitted disease* or STD.

3. Ask the group to brainstorm all of the STIs they know.

4. Then uncover the poster and read any STIs they did not mention.

- Chlamydia
- Gonorrhea
- Syphilis
- HPV (human papillomavirus)
- Herpes
- HIV
- Trichomoniasis
- Hepatitis B
- Hepatitis C

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE In any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

5. Then say,

> **STIs fall into three categories:**
>
> - **Bacterial (caused by bacteria)—**These STIs are curable. You can take medicine that kills the bacteria. They include chlamydia, gonorrhea and syphilis.
> - **Viral (caused by a virus)—**Most of these STIs are not curable. The symptoms can be treated, but the virus stays in the body. They include herpes, HIV, hepatitis B and HPV (human papillomavirus).
> - **Parasitical (caused by parasites)—**These STIs are curable. They include trichomoniasis and pubic lice.

6. Unfold the pre-labeled chart paper titled *How STIs Are Transmitted* and say to the group,

> **As you can see there are a lot of different STIs. How do you think people get STIs?**

7. List the answers on the chart paper as the group responds.

Be sure their answers include:

- » Vaginal intercourse (penis in vagina)
- » Oral sex (a person's mouth on another person's genitals)
- » Anal sex (penis in anus)
- » Mother to child (during pregnancy, at birth, or through breastfeeding)
- » Sharing needles
- » Skin-to-skin genital contact (herpes, syphilis, HPV)
- » *(Optional) For high school youth:* Sharing sex toys or other devices with partners without using a new condom each time the device is used by a different person

8. Next ask,

> **Who can get an STI?**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Answer:

» Anyone who has unprotected sexual intercourse (meaning without using condoms or dental dams).

9. **After participants have answered, say,**

That's right. Anyone who engages in unprotected sexual intercourse can get an STI. But teens and young adults are affected by STIs more than any other age group. The Centers for Disease Control and Prevention estimates that there are nearly 20 million new cases of STI each year, and that about half of these occur in young people ages 15 to 24.*

10. **Ask the group,**

What are some symptoms of STIs?

The list should include:

» Burning when urinating

» Sores, blisters, bumps, warts or pimples near the genitals or mouth

» Unusual discharge from penis or vagina

» Rash or itching in the genital area

» Frequent urination

» Abdominal pain

» **Often there are NO symptoms**

11. **Ask,**

How can you tell if someone has an STI?

Answers should include:

» **Often you cannot tell.**

» You may see sores, blisters, warts, bumps, a rash or pimples near the genital area.

* Centers for Disease Control and Prevention. 2017. Sexually transmitted diseases among adolescents and young adults. https://www.cdc.gov/std/life-stages-populations/adolescents-youngadults.htm. Accessed 06/2/2020.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

12. **Then say,**

> **In many cases, a person can have an STI and have no symptoms! This means that people may not even know they have an STI. It also means that even if you don't notice any sores, blisters, warts or other signs, a potential partner still may have an STI.**
>
> **Activities that do not include an exchange of body fluids have little or no chance of transmitting an STI. These include masturbating alone, petting, kissing, foreplay or dry humping. An exception is where skin-to-skin contact is involved with someone who has HPV, syphilis or herpes. In contrast, sexual activities that do include an exchange of body fluids increase the risk for STI transmission. These include vaginal, anal or oral sex.**

13. **Then ask,**

> **How can you protect yourself from getting an STI?**

Answers should include:

- Abstain from vaginal, oral and anal sex.
- Use a latex or polyurethane/polyisoprene condom every time you have vaginal, oral or anal sex.
- Do not use or share needles or works (including syringes, caps, cleaning water) for injecting drugs.
- There is a vaccine that can prevent hepatitis B.
- There is also a vaccine that protects people against most types of HPV that cause genital warts or lead to cervical cancer.
- Get tested regularly.
- Talk to your partners about STIs and encourage them to get tested too.

14. **Then say,**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

We know how STIs are transmitted. We know signs and symptoms that can indicate an STI infection. We know some STIs don't have symptoms. We know how to avoid getting an STI. But why would a person want to avoid getting an STI and what are the reasons they should get treatment right away if they do get an STI?

Let's brainstorm *Reasons to Protect Against STIs* by thinking of some of the long-term physical and emotional consequences of getting an STI.

15. **List the group's responses on the chart paper. Encourage all participants to respond.**

Answers should include:

- Increased risk of getting HIV
- Blindness (syphilis)
- Paralysis (syphilis, AIDS)
- Cervical cancer (HPV)
- Genital warts (HPV)
- Pelvic inflammatory disease (gonorrhea, chlamydia)
- Infertility (gonorrhea, chlamydia)
- Ectopic pregnancy (gonorrhea, chlamydia)
- Chronic pelvic pain (from PID)
- Liver disease (hepatitis B, hepatitis C)
- Child born with an STI
- Embarrassment
- Odor and discharge
- Impact on relationship
- Stigma

16. **Explain that many of these reasons to protect against STIs can be prevented by abstaining from vaginal, anal or oral sex, or by using protection such as condoms. STIs are common and many people will get one at some point in their lives. Getting tested regularly and treated, if required, can limit or prevent negative health outcomes. That is why it is important to get tested and treated as soon as possible. Explain that no one chooses to get an STI. Some people have gotten STIs from sex that was against their will. Getting tested and treated, if necessary, is the responsible thing to do. Summarize this activity by saying,**

There are 4 important facts about STIs I want to emphasize:

1. **Anyone can get an STI. Young people ages 15 to 24 make up half of all new STI cases.[1] You or a partner can have an STI and not know it. Many people with STIs have no symptoms.**

(continued)

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

(continued)

2. **Some untreated STIs increase the chance of HIV infection. They sometimes cause blisters or sores on or around the genitals which can become a point of entry for HIV during sex.[2]**
3. **Untreated STIs can have emotional and physical impacts. The impacts for people with vaginas are especially serious, and include things such as pelvic inflammatory disease, ectopic pregnancy, cervical cancer, infertility, chronic pelvic pain, and possible transmission of the STI to a fetus or baby.[3]**
4. **Some STIs can be cured. This means that, with testing and treatment, the person will no longer have the STI. Some STIs cannot be cured. This includes HIV. Incurable STIs can be managed with medications but the STI will remain in the body. It is important to get tested for STIs since often they have no symptoms. Then you can get the medications you need to prevent further complications like those listed on the *Reasons to Avoid STIs* sheet.[4]**

If you choose to have sexual intercourse, the proud and responsible thing to do is always use protection such as external condoms, internal condoms or dental dams every time you have vaginal, anal or oral sex. Make sure to use only protective barriers made of latex, polyurethane, polyisoprene or nitrile. Not having sex is the surest way to prevent an STI.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ALTERNATE ACTIVITY A

THE SUBJECT IS STD (VIDEO OPTION)*

PREPARING FOR THE ACTIVITY

RATIONALE

Providing information about STIs through a video gives participants the information they need to prevent the spread of STIs. It also provides a common ground for discussing attitudes and concerns about STIs and increases perceived vulnerability to infection as well as motivation to protect against infection. Seeing how STIs and HIV can impact the life of an individual helps motivate prevention planning.

MATERIALS

- Monitor and video player, or internet access if using alternative videos
- Video: *The Subject Is STDs,* or alternative videos

PREPARATION

- Review the information about STIs in Appendix B.

TIME

20 minutes

(*Note:* Allow more time for discussion of the video, if possible.)

PROCEDURE

1. Say,

> Today we are going to talk about STIs. First, I want you to tell me what the letters S, T and I stand for.

Answer:

» Sexually transmitted infection

Explain that they may have also heard the term *sexually transmitted disease* or STD.

2. Introduce the video by saying,

> We are going to learn more about STIs. In this video, you will see sexually active teenagers finding out the facts and dealing with issues of STIs.

3. Show the video, which is 17 minutes long.

4. When the video is finished, ask the following questions,

> How did you feel about the coach's advice to Jamal to be direct and honest with Diana?
>
> How did the teens react when they learned they might have been exposed to an STI from their partners?

(continued)

* A list of alternative videos and discussion questions can be found at www.etr.org/ebi/alternative-videos.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

(continued)

What could you do if you found out you or a partner had an STI?

Why is it important to tell your partner if you have an STI?

FACILITATOR'S NOTE

Be sure participants understand that when the video refers to "using a condom" this means a latex or polyurethane/polyisoprene condom.

5. **Explain that no one chooses to get an STI. Some people have gotten STIs from sex that was against their will. Summarize this activity by saying,**

There are 4 important facts about STIs I want to emphasize:

1. **Anyone can get an STI. Young people ages 15 to 24 make up half of all new STI cases.[1] You or a partner can have an STI and not know it. Many people with STIs have no symptoms.**
2. **Some untreated STIs increase the chance of HIV infection. They sometimes cause blisters or sores on or around the genitals which can become a point of entry for HIV during sex.[2]**
3. **Untreated STIs can have emotional and physical impacts. The impacts for people with vaginas are especially serious, and include things such as pelvic inflammatory disease, ectopic pregnancy, cervical cancer, infertility, chronic pelvic pain, and possible transmission of the STI to a fetus or baby.[3]**
4. **Some STIs can be cured. This means that, with testing and treatment, the person will no longer have the STI. Some STIs cannot be cured. This includes HIV. Incurable STIs can be managed with medications but the STI will remain in the body. It is important to get tested for STIs since often they have no symptoms. Then you can get the medications you need to prevent further complications like those listed on the *Reasons to Protect Against STIs* sheet.[4]**

If you choose to have sexual intercourse, the proud and responsible thing to do is always use protection such as external condoms, internal condoms or dental dams every time you have vaginal, anal or oral sex. Make sure to use only protective barriers made of latex, polyurethane, polyisoprene or nitrile. Not having sex is the surest way to prevent an STI.

ACTIVITY B

THE TRANSMISSION GAME

PREPARING FOR THE ACTIVITY

RATIONALE

Participation in an exercise that highlights how easy it is to get STIs breaks down participants' feelings of invulnerability, and increases their motivation to practice safer sex.

MATERIALS

- Labeled index cards (Star, Circle, Rectangle, Triangle)
- Pencils

TIME

15 minutes

PROCEDURE

1. Ask the rhetorical question,

> Who gets STIs? Don't answer. Just think about it. We are going to participate in an activity that will help us answer this question.

FACILITATOR'S NOTE

This activity illustrates how easy it is to transmit an STI if people have intercourse without using protection. This is a fun, engaging activity but it can also be sensitive. Some participants may have already had an STI; some might be living with HIV; and others may have family members or friends who are affected by HIV. Make sure no one is stigmatized by the activity.

2. Distribute the labeled cards and pencils so that only one person has a "star," one or two people have a "triangle" and "rectangle" and the rest get a "circle." DO NOT tell participants what the symbols mean at this time.

Rectangle = Abstinence

Triangle = Condoms/Dental Dams

Circle = Unprotected Sex (oral, anal or vaginal sex without protection)

Star = Infection (STI/HIV)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

FACILITATOR'S NOTE

You may change the index card codes to other things such as cities, plant names or animals. Avoid using codes that may imply judgment, such as a rating system. If you teach multiple class periods, change the code between classes so that youth in later periods do not have the same key.

3. Give the following instructions:

- Listen carefully and be ready to share what you hear.
- Write your name on the side of the index card that has the symbol on it.
- Stand and mingle (walk around) with others in the group until I say "stop."
- Pair off with the person standing closest to you.
- I will read you an incomplete sentence.
- You and your partner will each complete the sentence and discuss why you feel that way.
- When I call time (after 30 seconds to 1 minute), you will sign each other's card on the side without the symbol on it. Return the card to the original owner.
- Then you'll move around the room again until I say "stop" and you will pair up with a new partner.
- We will keep doing this until you've had six brief discussions.

4. Read each of the following unfinished sentences, following the procedure you just described.

UNFINISHED SENTENCES

- If I had a condom in my pocket or purse, my partner would think…
- I could convince my partner to use a condom if I...
- You can make using condoms fun by…
- If I asked whether my partner was having sex with other people, the response might be…
- If I asked my partner to use a condom, the response would be...
- People do not like to use condoms because…

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

5. When the six unfinished sentences have been discussed, ask all participants to have a seat.

6. Use the process below to discuss the activity. Say,

> - We are going to pretend that each conversation you had represented an act of "sexual intercourse."
> - Look at your cards. The shapes or symbols on the cards represent something in this exercise.
> - Will the person with the "star" card, please stand. For the purposes of this activity only, the star card represents an STI and anyone whose name is on your card could have the STI too.
> - (To the person with the "star"): Read the names on the back of your card. Everyone whose name is read, please stand.

7. After the people whose names were called are standing, say,

> - If you have a "triangle" on your card, that means you correctly used a protective barrier such as an external or internal condom, or a dental dam, every time to reduce your risk, and so you can sit back down.
> - If you have a "rectangle" on your card, that means you insisted on abstinence and refused to engage in sexual intercourse or any type of skin-to-skin genital contact, so you can sit back down. Abstinence is the 100 percent sure way to protect yourself.
> - If you have a "circle" on your card, you must remain standing because you took a chance and engaged in unprotected sexual intercourse and now you are possibly infected with an STI.

8. Ask each of the people still standing, one at a time, to read the names on their cards. Use the same process to find out the total number of people who got "infected" during this activity.

9. Count the number of people standing and ask the group to consider what would happen if they each continued to have unprotected sex with new partners.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

10. Thank the participants for participating in the game. Remind them that it is just a game to illustrate how quickly STIs can be transmitted when people who are having sex do not use condoms or get tested.

11. Ask the participants to take their cards and rip them to pieces.

12. Ask the participants to sit down.

13. Ask the following questions:

> How did it feel to participate in this activity?
>
> Imagine you had the star or circle card. How did or does it feel to potentially have been exposed to an STI?
>
> How might it feel to potentially expose others to an STI?
>
> Imagine you had the triangle card. How did or does it feel to have protected yourself from STIs? How does it feel to have protected others?
>
> Imagine you had the rectangle card. How did or does it feel to have chosen abstinence?

14. Explain that for those having sex, talking to sexual partners about STIs and getting tested are two strategies that can reduce the risk of STIs, including HIV.

15. Ask the following questions:

> If getting tested had been an option in this game, how do you think that could have changed how many people were standing at the end?
>
> How would talking to your partner(s) about STIs before engaging in a sexual behavior change the number of people potentially exposed to an STI (i.e., the number of people standing at the end of this activity)?
>
> What did you learn by participating in this game that will help you make decisions about your sexual health in the future?

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Try to elicit the following answers:

- One person can infect many by passing the infection to someone who passes it on to the next person.
- STIs can be spread through unprotected vaginal, anal and oral sex.
- People should consider the risks their partners have taken in the past.
- Practicing abstinence and using protection such as condoms can prevent STI transmission.
- You can't tell just by looking at someone who is infected and who isn't.
- It may not be easy to talk about using condoms or dental dams but it gets easier with practice.
- Anyone can get an STI regardless of whether the sex was consensual or forced.
- Getting tested is the only way to know for sure if you have an STI.

16. **Continue the activity by saying,**

This was just a game. However, it does highlight how fast and easily an STI can spread. A good way to reduce your risk for infection is to use a latex (or polyurethane/polyisoprene) condom or dental dam every time you engage in oral, anal or vaginal sex. Also, be sure to get tested regularly if having sex. Many STIs can be treated.

17. **Summarize as follows,**

As we reflect back to my first question, "Who gets STIs?," we have learned that it is possible for anyone to get an STI. STIs are common and many people will get an STI at some point in their lives. Remember, the proud and responsible things to do are to use a latex or polyurethane/polyisoprene condom and/or dental dam every time you have sex, to get tested, to talk to your partners about STIs, and to get treated if you get an STI.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY C

WHAT I THINK ABOUT HIV/STI AND SAFER SEX

PREPARING FOR THE ACTIVITY

RATIONALE

Examining attitudes and beliefs about HIV risk behaviors focuses participants on factors that can keep them from practicing safer behaviors.

MATERIALS

- *Agree/Disagree* signs
- Masking tape

TIME

10 minutes

PROCEDURE

1. Tape the *Agree* and *Disagree* signs on opposite sides of the room.

2. Begin this activity by saying,

> Let's look at what you think about HIV/STIs and safer sex.

3. Read the following directions:

> I will read some statements and ask, "Agree or disagree"?
>
> After I read each statement, stand under the Agree sign if you agree with the statement or stand under the Disagree sign if you do not agree with it.

4. Ask participants to stand.

5. Read the Agree/Disagree statements one at a time (included at the end of the activity).

6. After each statement, ask the participants to decide if they agree or disagree with the statement and to stand under the appropriate sign.

7. After each statement, ask participants on each side to say why they agreed or disagreed with the statement.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

FACILITATOR'S NOTE

During the activity, bolster the attitudes supportive of condom use, and respond to those unsupportive of condom use by using the information provided after each statement.

8. Give the participants a chance to switch after discussion of each statement.

9. Thank the participants for sharing their opinions. Have them return to their seats.

10. Summarize as follows,

> This activity showed us that different people can have different opinions and beliefs. You may have a different opinion about sex, HIV, STIs and protection than your partner or friends. But the facts about HIV/STI remain the same. Here are some facts we can agree on: HIV is transmitted sexually through blood, semen, vaginal fluids and rectal fluids. Other STIs are also passed through having sex. Whenever you have sex, you must use latex or polyurethane/polyisoprene condoms or dental dams every time you have vaginal, anal or oral sex to reduce the chance of HIV and other STI transmission. PrEP can also reduce your risk of HIV transmission, and PrEP plus condoms can reduce your risk of HIV and other STIs.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

AGREE OR DISAGREE STATEMENTS

- **It is hard to convince a sexual partner to use a condom.** (Even though it might be hard, it is important to do it.)
- **Condoms are effective at preventing HIV infection.** (If you choose to have sexual intercourse, using condoms correctly and consistently is an effective way to prevent HIV infection.)
- **Sex can feel good if you use condoms.** (Sex can feel very good with condoms. You can buy a brand that feels natural and use extra lubricant. You'll learn more about this later.)
- **Most people know how to use condoms correctly.** (Many people feel as if they know how, but anyone can improve their skills by learning the specific steps that you will be learning in a few minutes.)
- **If you know your sexual partner very well, you shouldn't have to use a condom.** (Knowing your sexual partner very well does not mean you are safe. Have honest conversations about your sexual health and your plans to protect yourself from unintended pregnancy or STIs. Both of you should get tested so you know your status.)
- **If someone looks healthy, you shouldn't have to use a condom.** (Looking at a person never lets you know whether the person has HIV or another STI, so you should always use a latex or polyurethane/polyisoprene condom or dental dam every time you have vaginal, anal or oral sex. Often people with STIs don't have symptoms, and a person living with HIV may not have symptoms for many years.)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY D

CONDOM USE SKILLS

PREPARING FOR THE ACTIVITY

RATIONALE

By becoming more comfortable touching condoms and by practicing correct condom use strategies, participants will be more likely to use them consistently and correctly in their personal lives and feel proud and responsible in doing so.

MATERIALS

- *Steps for Using a Condom* poster
- External condoms, lubricated (two per participant or pair of participants, plus demonstration condoms)
- Dental dam
- Lubricant
- Condom demonstrator(s)
- Paper towels
- Markers
- Masking tape
- Small paper bag (to dispose of condoms)

TIME

15 minutes

PROCEDURE

FACILITATOR'S NOTE

Some religions and individuals do not believe in condom use. Acknowledge that and make sure that participants are aware that condom use skills are the focus of this activity.

1. Clarify the purpose of the activity by saying,

> This activity is designed to show you how to use external or male condoms correctly and to have you practice condom use skills. I want to make sure we are clear that when teaching you these skills I'm not assuming that any of you are having sexual intercourse and I'm not encouraging you to do so. Having this knowledge and these skills will prepare you to make proud and responsible decisions if and when the need arises.
>
> For some people, using condoms may go against their religious beliefs. For others this may not be a consideration. I'm giving you this information because we want you to be able to make informed decisions about protecting yourselves.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

2. Explain what a condom is by saying,

> As we have learned, a condom is a form of protective barrier that prevents the exchange of body fluids such as semen, vaginal fluids, or rectal fluids.
>
> The external (male) condom slips over an erect penis to keep semen from entering the vagina, mouth or anus. It also keeps the penis from being exposed to vaginal fluids or rectal fluids. It is used to keep sperm from entering the vagina to prevent a pregnancy. When it is used to avoid the exchange of body fluids, the external condom can reduce the risk for transmission of HIV and other STIs. Only latex, polyurethane or polyisoprene condoms are effective in preventing HIV and other STIs.
>
> ***Optional for high school youth:***
> The external condom may also be used on a sex toy or other insertive sexual device that is being shared. A new condom must be used each time the sex toy or device is used by a different person.

3. Ask the group to brainstorm slang terms for condoms. They might mention rubber, raincoat, glove or sock. Keep this very brief. Then ask them to name some of the brands they've heard of.

4. Explain the following,

> We're going to be learning a lot about condoms. There are many different brands and types of condoms. Some are colored, ribbed, lubricated or flavored. People can choose the types they like as long as they are made of latex, polyurethane or polyisoprene.
>
> Regardless of what you call them or the types you prefer, it's important to use condoms correctly and to have them available when you need them.
>
> In the next activity, you're going to actually practice the steps for using an external condom correctly. Many of you may have never seen or touched a condom. We're going to practice using external condoms so that you will know what they feel like and how to use them if and when you are ready to use them.
>
> Just as a person might need to adjust to wearing a new pair of shoes or glasses, using a condom requires getting used to new sensations.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

5. **Post the *Steps for Using a Condom* poster. Using a condom demonstrator, follow the steps listed on the chart to model what the youth will be doing. Read the instructions and add additional details as you demonstrate the procedure.**

FACILITATOR'S NOTE

The ideal way to demonstrate proper condom use is to use a plastic or wooden model of a penis. If a model is not available, demonstrate by using your fingers. Also, be sensitive to the comfort level of your participants during this activity.

STEPS FOR USING A CONDOM

1. Get consent. Make sure you and your partner both agree to have sex. If either one of you expresses that you do not want to continue, you both must stop.
2. Check the expiration date and make sure the condom is latex, polyurethane or polyisoprene.
3. Open the package carefully to avoid tearing.
4. Make sure condom is on the proper side to roll down correctly.
5. Pinch the tip of the condom to create space (½ inch) for semen.
6. Squeeze a few drops of water-based lubricant inside the tip.
7. Make sure the penis is erect and both partners are ready to engage in sexual activity before putting on the condom.
8. Continuing to squeeze the tip, place the condom on the head of the penis. Unroll the condom down to the base of the penis. Apply water-based lubricant to the outside of the condom, if desired.
9. Check during sex to make sure the condom isn't slipping.
10. Immediately after ejaculation, hold the condom firmly at the base of the penis and pull the penis out before it gets soft.
11. Roll off the condom away from your partner. Wrap in tissue and throw it away. Do not re-use.

6. **Distribute the materials to participants so they can practice. Circulate and observe all participants, at least briefly, to make sure they're following the steps correctly.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

FACILITATOR'S NOTE

There may be lots of giggling. Most participants will have fun with this. However, a few may feel particularly nervous or uncomfortable. If any participants don't want to practice, allow them to pass. For some youth, especially those who have been sexually abused, it could be overwhelming to have to handle a penis model. Never push a young person to participate. Show empathy and check back in with them later to see how they're feeling. Not very many youth ask to pass. Most that do change their minds and decide to practice using a condom before the activity ends.

7. Collect the condoms and packaging in the paper bag.

8. Give participants paper towels or wet wipes to wipe their hands.

9. Reinforce condom information by asking the following questions (answers are provided),

Can condoms fit any size penis? Yes. Though condom sizes vary slightly from brand to brand, most can fit any size penis comfortably. Try several brands and type to find the best fit.

What should you never use with a condom? Condoms may break if you use Vaseline, lotion or grease, etc., as lubrication. Use only non-oil-based lubrication such as water-based or silicone-based lubricants (e.g., Good Clean Love or Aloe Cadabra).

Is it OK to keep a condom in your pocket? Yes, but *ONLY* for short periods of time. Prolonged exposure to any heat source (including body heat) can damage condoms.

Can you use condoms after their expiration date? No. Throw away unused condoms once the expiration date passes.

FACILITATOR'S NOTE

In addition to latex condoms, polyurethane or polyisoprene external condoms may also be used. People who are allergic to latex can use these types of condoms instead of latex. However, the important point to emphasize is that lambskin condoms should never be used because they do not protect against HIV.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

10. **Ask participants if they've ever heard of or seen a dental dam. Hold up a dental dam and say,**

> **A dental dam is a square of latex that can serve as a barrier between the mouth and a partner's vulva or anal area to prevent the transmission of STIs.**
>
> **It can be difficult to find dental dams, so you can cut a non-lubricated condom into a square and use it as a barrier.**

11. **Explain how a dental dam can be used when having oral contact with the vulva or anal area. Also demonstrate how to cut a condom into a square in case a dental dam is not available. (*Note:* Using scissors or your teeth, cut off the rim, then cut up one side, and use your fingers to spread the condom into a flat sheet.**

12. **Summarize as follows,**

> **To protect yourself and your partner from sexually transmitted infections, including HIV, remember to:**
>
> - **Use a latex (or polyurethane/polyisoprene) condom every time you have sex.**
> - **Use a dental dam when having oral contact with the vulva or anal area.**
> - **Keep a supply of unexpired condoms on hand.**
> - **Get used to condoms so they become easy to use each time.**
> - **Talk to your partner about using condoms.**
> - **Refrain from using alcohol or other drugs because they affect your judgment.**
>
> **Condoms make sense. Condoms help to protect both partners from pregnancy and STIs, including HIV. However, you must use them correctly every time you have vaginal, oral or anal sex.**

MODULE 6

A POSSIBLE OUTCOME OF UNPROTECTED SEX: PREGNANCY

GOALS

The goals of this module are to:

- Increase participants' understanding of pregnancy as a possible outcome of unprotected sex.
- Increase participants' perception that they are vulnerable to getting pregnant or getting someone pregnant.
- Increase participants' understanding of the consequences of teen pregnancy.
- Increase participants' knowledge of various types of contraceptive methods.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- Distinguish facts from falsehoods about pregnancy.
- Identify specific birth control methods that may be used to prevent pregnancy.

MODULE PREVIEW

The sixth module: (1) helps participants examine myths about pregnancy; (2) illustrates how pregnancy can impact the lives of young people; and (3) informs participants about the various forms of birth control.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

STRATEGIES/METHODS

- True or False Game
- Video Viewing
- Group Discussion
- Contraceptive Methods Demonstration
- Agree/Disagree

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- *True or False: Pregnancy Statements* (included in module)
- *Birth Control Choices* poster
- *Optional:* Video: *Tanisha & Shay* (or alternative videos*)
- *Agree/Disagree* signs (1 set)

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Pre-labeled chart paper: *Contraceptives*
- *Optional:* Monitor and video player, or internet access if using alternative videos
- Markers
- Masking tape

PREPARATION NEEDED

1. Label all of the charts as listed under Materials.
2. Hang the pre-labeled charts in the order they will be used. Fold and tape the charts so the titles remain covered by the bottom half of the sheet until you use them.
3. Review the *True or False: Pregnancy Statements* and get comfortable with the content.
4. *Optional:* Set up the video(s) to be ready to play.
5. Review the information about contraceptive methods in Appendix B.
6. Review and be familiar with current federal and state laws around pregnancy options, including adoption, abortion and safe surrender, so you can provide accurate information during the discussion of the *Tanisha & Shay* Shay video or alternative videos, if you decide to extend the session and include the videos.

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

7. Gather materials to help teach the birth control information effectively: contraceptive charts, charts of the female reproductive organs, female pelvic models and a birth control kit. Many local health departments and Planned Parenthood affiliates will loan or sell demonstration kits. A local health care provider may also be able to provide samples of prescribed methods, such as oral contraceptives. Free or low-cost condoms may be available from your local department of public health or a clinic.
8. Review how to use an internal condom. There are several YouTube videos that clearly explain the steps, such as this one from the Female Health Company that manufactures a female condom: www.youtube.com/watch?v=LRZH5ASO-eM. Watch the video prior to the session so you feel comfortable with how the female condom is used. If you have any problems with this link, do an online search for "female condom how to use animated video." If you have Internet access, set up a laptop computer so you can show participants the YouTube video.

INSTRUCTIONAL TIME: 60 minutes

(*Note:* The use of the optional video(s) will increase the length of the module by up to 25 minutes. A video is an excellent way to help participants personalize and conceptualize the information, but should not replace or take time away from the discussion and demonstration of the contraceptive methods. Facilitators may wish to deliver this module across two 60-minute sessions.)

ACTIVITY	MINUTES NEEDED
A. True or False: Pregnancy Statements	10
[B. *(Optional) Tanisha & Shay* Video	+25]
C. Birth Control Methods Demonstration	40
D. Agree/Disagree - Attitudes About Contraception	10

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY A

TRUE OR FALSE: PREGNANCY STATEMENTS

PREPARING FOR THE ACTIVITY

RATIONALE

Distinguishing facts from falsehoods about pregnancy provides an opportunity for learning the correct information about pregnancy.

MATERIALS

- *True or False: Pregnancy Statements* (included in module)

TIME

10 minutes

PROCEDURE

1. Introduce the following activity by saying,

> Let's take a closer look at what can happen when teenagers decide to have sex without using any protection. We'll play a game to help you separate what is true and what is false when it comes to the consequences of unprotected sex.

2. Explain the directions,

> - I will go around the room and read a statement to each of you.
> - I want you to tell me if the statement I read is true or false.
> - I also want you to explain why it is true or false.
> - If you don't know, I will ask for volunteers who think they know the answer.

3. Read the *True or False: Pregnancy Statements* on page 140.

4. Supplement the participants' explanations with those provided after each statement or have other participants give the information.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2026 agreement.

© ETR. All rights reserved.

5. **Once all the statements have been completed say,**

> **Wow! You did a great job and seem to know a lot of the correct information.**

6. **Summarize by saying,**

> **The more you know about the possible outcomes of sex, such as pregnancy and sexually transmitted infections, the better you will be at protecting yourself from experiencing an unintended pregnancy and/or STIs. Next, we are going to see a video (or videos) that describes how pregnancy can impact a young person's goals and dreams for the future.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

TRUE OR FALSE: PREGNANCY STATEMENTS

1. **Every time you have unprotected vaginal sex, there is the possibility of getting pregnant, even the first time you have vaginal sex.**
   TRUE
   Pregnancy is a possibility every time someone has unprotected vaginal sex, regardless if it's the first time or the hundredth time.

2. **Pulling the penis out of the vagina before ejaculation reduces the risk of pregnancy.**
   TRUE
   Pulling out, or withdrawal, does work in theory. However, it takes a lot of practice and concentration. It can be challenging, especially for teens and young adults, to actually pull the penis out before they ejaculate (or cum). Pulling out AND using another method of protection greatly increases the effectiveness.

3. **You can't get pregnant if you have sex standing up.**
   FALSE
   Sperm don't care what position you're in. Any time semen (which contains sperm) is able to travel up through the vagina and fallopian tubes to where sperm can fertilize an egg, you can get pregnant. There are no exceptions to that rule.

4. **If you have unprotected vaginal sex, there is a pill you can take afterward to reduce the risk of pregnancy.**
   TRUE
   If you had unprotected vaginal sex (or your birth control method failed) and you do not want to become pregnant, take an Emergency Contraceptive pill as soon as possible but no later than within 5 days. The EC pill (or a copper IUD) prevents a pregnancy from occurring.

5. **Douching (cleaning the vagina) after sex can prevent pregnancy.**
   FALSE
   Douching will not prevent pregnancy. In fact, it can even help carry sperm up into the uterus and increase the chances. The vagina keeps itself clean naturally, so douching isn't necessary and isn't recommended. Douching throws off the vagina's natural balance and can even lead to infection.

6. **You can't get pregnant unless you have an orgasm (cum).**
   FALSE
   It doesn't matter if you have an orgasm or not. You can get pregnant if you engage in vaginal sex without using protection.

(continued)

DO NOT COPY OR DISTRIBUTE
in any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2026 agreement.

© ETR. All rights reserved.

7. **If a girl misses her period, she is definitely pregnant.**

   FALSE

   When young people first start having periods they often have irregular cycles and may even skip a month from time to time. But if someone has had vaginal sex and misses a period, pregnancy is a possibility. The person should get tested right away, and see a doctor if the pregnancy test is positive.

8. **Gay and lesbian teens don't need to know how to avoid pregnancy.**

   FALSE

   If gay and lesbian teens engage only in same-sex behaviors, they don't have to worry about pregnancy. For many different reasons, gay and lesbian teens sometimes engage in penis-in-vagina sex and they have to worry about pregnancy if they do.

9. **There's no safe time of the month to have sex and avoid pregnancy.**

   TRUE

   True. There is no absolutely safe time of the month when you can't get pregnant or get someone pregnant.

10. **You can't get pregnant if you swallow semen.**

    TRUE

    The only way you can get pregnant is if sperm cells enter the vagina, usually during sexual intercourse, and fertilize an egg cell in the fallopian tube.

11. **A person cannot get pregnant from anal sex.**

    TRUE

    Yes, it's true a person can't get pregnant from having anal sex, but people still have to think about STIs. The lining of the anus is thin and lubricates less than the vagina, so it's easy for STIs to enter the body that way.

OPTIONAL ACTIVITY B

TANISHA & SHAY VIDEO*

PREPARING FOR THE ACTIVITY

RATIONALE

Presenting and reinforcing information about pregnancy can promote further discussion. Seeing how pregnancy can impact the lives of individuals helps increase prevention planning.

MATERIALS

- Monitor and video player, or internet access if using alternative videos
- Video: *Tanisha & Shay*, or alternative videos

TIME

25 additional minutes

PROCEDURE

1. **Introduce the video by saying,**

> **We are going to continue our focus on pregnancy prevention by watching a video called *Tanisha & Shay*. In this video you will see sexually active teenagers dealing with issues of pregnancy.**

2. **Show the video in three segments as described below.**

> **I will be showing you this video in 3 segments. After each part, I'll ask you some questions about what you've seen.**

3. **Show Part 1: Tanisha Finds Out. At the end of the segment, process by asking these questions:**
   - » What did the provider tell Tanisha?
   - » What is your reaction? What do you think happens?
   - » Why do you think Tanisha and Shay did not use protection/ birth control?

> **Let's watch the next segment and find out what happens next.**

4. **Show Part 2: Sharing the News. At the end of the segment, process by asking these questions:**

* A list of alternative videos and discussion questions can be found at www.etr.org/ebi/alternative-videos.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

- How does the pregnancy affect everyone in Tanisha's life?
- What does Tanisha risk losing because of the pregnancy?
- What does Shay risk losing?
- What could Tanisha say to Shay when she shares the news of the pregnancy?
- What might it look like for Shay to be a part of Tanisha's decision-making process?
- What might this conversation and decision-making look like in a healthy relationship like Tanisha and Shay's?

Let's watch the last segment.

5. **Show Part 3: Now What? At the end of the segment, process by asking these questions:**
   - What did this video teach you about teen pregnancy?
   - What could Tanisha and Shay have done after they had unprotected sex to prevent a pregnancy?
   - Are these teens ready to become parents? Why or why not?
   - How would your life change if you became pregnant or got somebody pregnant now?
   - What about if you became a parent or became a parent again?

6. **Summarize this activity by saying,**

As you can see, becoming pregnant or getting someone pregnant can dramatically change your life. Therefore, it is important to avoid unintended pregnancy by practicing abstinence or safer sex. Be prepared. If you're going to engage in sexual activity, make sure you use effective birth control and a latex (or polyurethane/polyisoprene) condom every time!

ACTIVITY C

BIRTH CONTROL METHODS DEMONSTRATION

PREPARING FOR THE ACTIVITY

RATIONALE

Reviewing and discussing the various forms of birth control methods will enhance participants' knowledge and empower them to make informed choices about the most suitable method to use.

MATERIALS

- Pre-labeled chart paper:
  - *Contraceptives*
- *Birth Control Choices* poster
- Markers

TIME

40 minutes

(*Note:* It is important to allow time to cover all of the different methods.)

PROCEDURE

1. Introduce this activity by saying,

> We're about to review the various methods of birth control. Let me clarify a couple of things. The purpose of this activity is to present factual information about birth control. I don't assume that you're having sex. There may be many different experiences in this group. Some of you may never have engaged in sexual intercourse and won't any time soon. Others may have had sex, not always by choice. Some might be parents already. Regardless of your background and experience, it's important for all teens to receive factual information about birth control. Being informed about birth control puts you in the driver's seat so you can be in control of when you have children in the future and how close together you have them.
>
> I also understand that personal values about birth control vary. For some people, using condoms may go against their religious beliefs. For others this may not be a consideration. The bottom line is that most people who have sex need a way to prevent pregnancy and STIs, including HIV. I want you to be able to make informed decisions about protecting yourselves, so we're going to learn about all of the options.

2. Unfold the pre-labeled chart paper titled *Contraceptives* and ask the participants to brainstorm all the methods of birth control or contraception that they can think of. Write the list on the chart paper.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Answers should include:

- » Abstinence
- » IUD
- » Implant
- » Depo-Provera (the shot)
- » Birth control pills, patch and ring
- » Male condom (external condom)
- » Female condom (internal condom)
- » Sponge
- » Spermicides
- » Diaphragm
- » Cervical cap
- » Withdrawal

3. **Post and point to the *Birth Control Choices* poster and say,**

> **This poster shows some common birth control, or contraceptive, methods. We will discuss them briefly. We won't have time to examine them in detail, but I want you to know what is available when you are ready to use them.**

4. **Begin your presentation by explaining,**

> **Contraceptive methods fall into three different categories:* behavioral methods, over-the-counter methods that can be purchased by anyone at any stores, clinics, supermarkets, convenience stores or online, and prescribed methods, which you have to see a health provider to get. I'll be talking about the methods in order of effectiveness, or how well they work to prevent pregnancy.**

5. **Using the following information, teach and demonstrate the various contraceptive methods. If you have a birth control kit, show the various methods as you discuss them. Don't pass the methods around while you're educating as it gets the group distracted. Allow participants to handle the methods at the end when you've finished the demonstration.**

* Shoupe, D., and D. R. Mishell, eds. 2016. *The Handbook of contraception: A guide for practical management*. New York: Humana Press, Springer International Publishing.

FACILITATOR'S NOTE

Don't try to communicate every fact about the various birth control methods in this presentation. This is an overview. Let participants know they will get a more thorough education whenever they go to a health center to obtain contraception. See the section on Contraceptives in Appendix B for additional information.

BEHAVIORAL METHODS

Abstinence

- Abstinence is the safest and most effective pregnancy and STI prevention method.
- There are a lot of different definitions of abstinence. We define it as not engaging in sexual intercourse of any type (oral, anal or vaginal).
- It requires that you avoid any behaviors that might result in exchange of bodily fluids that can result in pregnancy or can transmit STIs, including HIV. It also means not engaging in any skin-to-skin genital touching that could transmit certain STIs.
- Abstinence requires skills—you have to know why you want to say no to risky sex and be able to communicate that assertively to a partner.
- It's important to have a backup method in case you decide to stop using abstinence in order to be able to protect yourself from pregnancy and STIs, including HIV.

Withdrawal

- Withdrawal, or pulling out, is done by removing the penis fully from the vagina/anus before ejaculating and only ejaculating outside of the vagina/anus.
- Withdrawal is free and a method available to everyone.
- To be effective at preventing pregnancy, withdrawal must be used correctly and completely. This requires knowing and understanding a person's own body, which can be challenging for young people and people with little sexual experience.
- Withdrawal is most effective when used with another contraceptive method. Using withdrawal in addition to condoms or another form of birth control further reduces the risk of unintended pregnancy.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

FACILITATOR'S NOTE

Withdrawal is a commonly used form of contraception among youth. Avoid shaming messages about this method, and offer it as one of many options. Withdrawal is a behavioral skill that can be developed and can be combined with other methods for increased effectiveness.

A. 2018. Contraceptive technology. New York: Ayer Company Publishers.

PRESCRIBED METHODS

To obtain some methods of birth control, you need a prescription from your doctor. Some of these methods work by regulating hormones involved in the reproductive process. These hormonal methods include some IUDs, the implant, Depo-Provera shots and birth control pills, the patch and the ring. Although these methods are very effective at preventing pregnancy, they do not prevent sexually transmitted infections. Therefore, if you use one of these hormonal methods for pregnancy prevention, your partner must also use a latex condom so that you will be protected against STIs. Let's discuss the specific methods. These methods are highly effective if used correctly. And with some of them, there's nothing you have to do once they are inserted!

IUD

- An IUD, or intrauterine device, is a small T-shaped piece of plastic, or plastic and metal, that is inserted into the uterus by a trained medical provider.
- There are 2 kinds of IUDs in the U.S.:
  - » **Non-hormonal:** The copper-T IUD (ParaGard) is a non-hormonal IUD that creates an environment in the uterus that makes it very hard for sperm to survive and for fertilized eggs to attach to the wall of the uterus, which is necessary for a pregnancy to occur. Once you get this type of IUD inserted, you are protected from pregnancy for up to 10 years.
  - » **Hormonal:** A hormonal IUD does the same thing, but it also releases hormones that stop your body from releasing eggs. There are 4 kinds of hormonal IUDs available in the U.S.: Mirena, Skyla, Kyleena and Liletta. They are effective from 3 to 5 years, depending on which one you get.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

- When your body is first adjusting to the IUD, your period might be heavier or more painful. IUDs do not protect you from STIs, so you should also use a condom.

Implant

- The implant is a thin stick about the size of a matchstick that is placed under the skin of your upper arm by a trained medical provider and releases hormones to prevent your body from releasing eggs.
- It can be used for up to 3 years.
- It can cause periods to be irregular or stop.
- The implant does not protect you from STIs, so you should also use a condom.

The Shot

- People who use the shot receive hormonal shots every 3 months.
- Depo-Provera is the most common brand and is a highly effective birth control method.
- It can cause periods to be irregular or stop.
- The shot does not protect you from STIs, so you should also use a condom.

Birth control pills

- Birth control pills prevent the ovaries from releasing eggs during the monthly cycle.
- One pill must be taken each day at about the same time of day.
- When you start "the pill," you must use a back-up method for the first 7 days to prevent pregnancy.
- If you miss a day, you must take two pills the next day.
- If you miss more than one day, you must use a back-up method for 7 days to prevent pregnancy. You should also talk to your doctor about finishing the rest of your pack of pills.
- ***NEVER*** use another person's birth control pills (even your mother's or sister's). A doctor must prescribe the birth control pills that are safe for you.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

- The pill does not protect you from STIs, so you should also use a condom.

Birth control patch

- The patch works the same way as the pill, except that instead of swallowing the hormones, you absorb them through the skin.
- The patch is a small, band-aid like sticker that you wear on either your back, hip, butt or upper outer arm and change once a week for 3 weeks, and then the fourth week you don't wear it and get your period.
- The patch does not protect you from STIs, so you should also use a condom.

Vaginal ring

- The ring is a hormonal method just like the pill and the patch. With the ring, the hormones are absorbed through the vaginal wall.
- It is a small flexible ring that you insert into your vagina. It sits just below your cervix. Once you insert it, you leave it in for 3 weeks, and then take it out for a week to have your period.
- The ring does not protect you from STIs, so you should also use a condom.

Diaphragm and cervical cap

- The diaphragm and cervical cap are vaginal barriers that cover the cervix to keep sperm from reaching and fertilizing an egg.
- The diaphragm is a reusable, dome-shaped cup made of latex or silicone. It is used with spermicidal gel and inserted into the vagina, where it is positioned to cover the cervix. It can be placed up to 6 hours before sex and must be left in place for at least 6 hours (but no more than 24 hours) after sex. Caya is a new one-size-fits-all diaphragm. Unlike earlier diaphragms, it does not require fitting and is easier to insert and remove. It is available with a prescription.
- The cervical cap is a reusable silicone cap that fits over the cervix. It provides protection for 48 hours and requires spermicidal gel. Like the diaphragm, it is inserted in the vagina before sex, and must be left in place for at least 6 hours afterward. FemCap is the only brand available. It has to be fitted by a provider and requires a prescription.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

(continued)

Prescribed methods summary

So you see you have choices with prescribed methods. Many of the newer methods are easier to use and effective for long periods of time. Let's review:

- With the pill, you have to take a pill once a day at the same time.
- With the patch, you have to replace the patch once a week for 3 weeks and then leave it off for 1 week (the 4th week).
- With the ring, you insert a new one once a month. You leave it in for 3 weeks and then take it out for 1 week (the 4th week) to have a period.
- With the shot, you have to go back to the health provider every 3 months for another shot.
- With the implant, you get one inserted and it's effective for 3 years.
- With the IUD, once it's inserted, it's effective for up to 10 years depending on the type of IUD.

Research shows that when teens use long-acting methods like the implant and the IUD, the rate of teen pregnancy goes down dramatically.*

OVER-THE-COUNTER METHODS

These methods of birth control can be purchased by anyone of any age, at drugstores, clinics, supermarkets, convenience stores and online without a prescription.

External (male) condom

- The external condom is a latex sheath that covers the penis and keeps semen from entering a partner's body.
- It should be put on the penis as soon as the penis is erect, and removed after ejaculation, away from the partner.
- Latex condoms are the most common. People who are allergic to latex can use polyurethane or polyisoprene condoms. Lambskin condoms do not protect against HIV, so don't use those.

Internal (female) condom

- The internal condom is a soft, loose-fitting polyurethane (plastic) or nitrile sheath that lines the vagina. Polyurethane is strong and unlikely to rip or tear during use. It is also unlikely to cause allergic reactions.

(continued)

* Birgisson, N. E., Zhao, Q., Secura, G. M., Madden, T., Peipert, J. F. (2015). Preventing unintended pregnancy: The contraceptive CHOICE project in review. *Journal of Women's Health* 24 (5): 349–353.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

- The internal condom can be inserted right before sex, or up to 8 hours ahead of time.
- The internal condom can also be used for STI protection during anal sex. People of any gender can use these condoms for anal sex.
- These are the steps for using the internal condom:
  - » Check the expiration date.
  - » Rub the outside of the package to spread the lubricant onto the condom.
  - » Open carefully by tearing at the notch on the top right of the package.
  - » Note that there are two rings. The thinner outer ring covers the area around the opening of the vagina or anus (for additional STI protection). The thicker inner ring is used for insertion and to help hold the sheath in place during intercourse.
  - » There are different positions you can use to insert the condom—squat, raise one leg, sit or lie down. Choose a position that feels comfortable.
  - » While holding the condom at the closed end, grasp the flexible inner ring and squeeze it with the thumb and second or middle finger so it becomes long and narrow.
  - » Insert the inner ring into the vagina or anus and use your index finger to push it up into your vagina as far as it will go. If used vaginally, it will fit into place right under your cervix. Be sure the sheath is not twisted. Leave the outer ring on the outside of the vagina or anus—about a half inch of the sheath should remain on the outside of your body.
  - » You are now ready to guide your partner's penis into the condom's opening with your hand to make sure that it enters properly. Be sure that the penis is not entering on the side, between the sheath and the vaginal or anal wall.
  - » To remove the condom, place your finger under the outer ring. Twist it and pull it out. Wrap it in tissue and throw away.

Note: Take care to present the internal condom in a nonjudgmental fashion. It is a great option for people who choose to have sexual intercourse and don't want to depend on a partner to use an external condom. Although the female condom may not look as familiar as the male condom, it's not too complicated to use. Reassure participants that it will simply take a few times to practice

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

and then it will be no problem. Note that the internal condom can be inserted well in advance of being with a partner, so that sexual intercourse can be spontaneous. Internal condoms may be an appealing option for those who find condoms to be uncomfortable due to being too tight. Also, because they are made of nitrile, they warm to body temperature and lack the smell of latex.

Sponge

- The sponge is actually a dual method—it works as a barrier and a spermicide. With clean hands, you wet the sponge with clean water, gently squeeze the sponge until it foams up, fold the sides of the sponge and insert it into the vagina just as you would insert a tampon.
- The sponge can be inserted up to 24 hours before intercourse and must be left in place at least 6 hours after intercourse. This allows for more flexibility and spontaneity with sex. The sponge should not stay in for more than 30 hours.
- The sponge does not protect you from STIs, so you should also use a condom.

Spermicides

- You can also purchase various forms of spermicides—foam, cream, film, gel and suppositories—that prevent pregnancy by killing sperm cells before they can reach the egg cell.
- The sperm-killing substance in most vaginal spermicides is called nonoxynol-9. But nonoxynol-9 can cause an allergic reaction or irritation for some people, and this can increase the risk of STI/HIV infection. Spermicides need to be reapplied for each act of intercourse.
- Spermicides are somewhat less effective than condoms and many of the prescribed methods. However, they are good protection if they're used correctly and consistently, and very good if used along with a condom (which also prevents STIs).

EMERGENCY CONTRACEPTION

- Emergency contraception (EC) reduces the risk of pregnancy after unprotected sex or when another birth control method fails.
- There are 2 types of EC available:

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

  - » **EC pill**, also known as the morning-after pill, can be taken up to 5 days after unprotected sex. Some EC pills (Plan B One Step, Take Action and Next Choice One Dose) may be bought over the counter without a prescription and without having to see a pharmacist. Ella, a non-hormonal EC pill, requires a prescription from a health care provider or a pharmacist.
  - » **Copper-T IUD** (ParaGard) can act as emergency contraception when inserted by a health care provider within 5 days of unprotected sex.
- The sooner EC is taken (within 5 days) after unprotected sex, the more effective it is at preventing unintended pregnancy. Ella, unlike other EC pills, does not decrease in effectiveness during those 5 days.
- EC works by keeping sperm from fertilizing an egg by preventing ovulation or making the environment hard for sperm to survive in. EC is not the same thing as the abortion pill, and will not harm an existing pregnancy.
- Emergency contraception does not protect against HIV or other STIs, so protection like PEP should also be used.

FACILITATOR'S NOTE

Side Effects and Hormonal Methods

Hormonal methods (the pill, patch and ring) are safe, very effective methods of birth control. Most young people who use them have minimal side effects. Smoking cigarettes while using these methods can increase the risk of certain side effects, which is why health professionals advise people who use these methods not to smoke.

The side effects some people have while using these hormonal methods may include:

- irregular menstrual bleeding
- nausea, headaches, dizziness and breast tenderness
- mood changes
- blood clots (these are rare in people under 35 who do not smoke, but there may be a slightly higher risk with the patch than with the pill)

There are a few additional side effects to consider with the birth control shot (also a hormonal method), for example, no menstrual periods at all, weight gain and depression. Studies have linked the use of the long-acting progesterone shot to a loss of bone density. So teens considering getting the shot as a method should talk to their doctors about it.

In any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

6. **Process this activity with the questions below:**

How does a teenager decide whether to use birth control and which method to use?

Make sure answers include:

» Talk to parents, a health care provider, doctor, counselor, caregiver, caseworker or partner.

» Ask questions.

» Do lots of thinking.

» Ask themselves questions such as:

- Am I ready for parenthood?
- Do I want to deal with a pregnancy?
- How can I show myself respect in my sexual health decision making?

What are some ways partners can participate in the process of using birth control?

Make sure answers include:

» Help pay for it

» Go to doctor/clinic with partner

» Wear a latex (or polyurethane/polyisoprene) condom

» Ask questions

» Remind partner to use the method correctly

» Help decide which method to use in addition to condoms

» Be supportive

7. **Summarize this activity by saying,**

> If you are going to have sex, you have to worry about unintended pregnancy and sexually transmitted infections, including HIV. To avoid these problems, you have to use effective methods to prevent pregnancy and infections.
>
> You must use a latex or polyurethane/polyisoprene condom in addition to any other form of contraceptive you choose to use. The condom is the only birth control method that also helps prevent sexually transmitted infections, including HIV.
>
> Remember, in order to reach your goals and dreams, the proud and responsible thing to do is to use effective methods of protection every time you have sex.

ACTIVITY D

ATTITUDES ABOUT CONTRACEPTION

PREPARING FOR THE ACTIVITY

RATIONALE

This activity focuses attention on individual responsibility for the prevention of pregnancy and makes participants aware of some of the reasons people may not use birth control.

MATERIALS

- *Agree/Disagree* signs
- Masking tape

TIME

10 minutes

PROCEDURE

FACILITATOR'S NOTE

The attitude statements reflect negative beliefs that limit a young person's ability to use safer sex strategies effectively. You will begin with the negative statement and, after some discussion, end on a positive note. The goal is to put a positive spin on each attitude and bolster beliefs that will enhance the participants' ability to always choose to be safer.

1. Tape the *Agree* and *Disagree* signs on opposite sides of the room.

2. Introduce the activity by saying,

> We have already learned that there are many methods of birth control or contraception.
>
> Attitudes and beliefs often get in the way of using birth control, especially condoms, even when people know a lot about it. This activity is designed to help you look more closely at your attitudes and beliefs about birth control.

FACILITATOR'S NOTE

Be careful to protect participants who seem to be in the minority on a certain issue. Refer to the group agreements to give the participants structure if they become unruly.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

3. **Follow the instructions below:**

   - Ask participants to stand.
   - Read a statement from the *Attitudes Statements* below.
   - Ask participants to stand under the sign—Agree or Disagree—that corresponds to how they feel about the statement.
   - Ask volunteers to give their reasons for agreeing or disagreeing with the statement. If all participants choose the same position, ask them to guess what reasons people in the opposing position might give.
   - After some discussion of the statement, read the information in parentheses after each attitude statement. Promote attitudes that are supportive of birth control use. Remind the group that certain attitudes and beliefs can get in the way of correct use of birth control and condoms.
   - Give participants an opportunity to switch sides if they honestly have changed their attitude or belief about the statement.
   - Continue with as many statements as time allows.

4. **Thank the participants for sharing their attitudes and opinions. Ask them to return to their seats.**

ATTITUDE STATEMENTS

1. **Birth control methods are harmful and will mess you up.** (Birth control methods are safe and effective. But an unintended pregnancy can often make life more complicated. Teens who learn about birth control can use it correctly and safely.)
2. **It's embarrassing to go into the drugstore and buy condoms.** (It might be embarrassing but if you've decided you're ready to have sexual intercourse, you need to be ready to purchase condoms.)
3. **Girls who carry condoms are easy.** (Not only is it not true, girls who carry condoms are actually smart, responsible, proud and safer. Girls can take control of condom use by using internal condoms, having condoms ready for when they need them, and feeling comfortable buying condoms or getting them from a clinic.)

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

4. **Hormonal methods such as the shot can make someone fat and not sexy.** (The term *sexy* means appealing and exciting. It really has nothing to do with a person's body shape. Being happy with oneself projects a better self-image that may contribute to "feeling sexy." There is little evidence that links hormonal methods to weight gain. Diet, exercise and genetics have a bigger influence on a person's weight. If one contraceptive method does not work for you, you can always talk to your clinician about switching to a different method.)
5. **Internal condoms are too much trouble.** (The internal condom might seem complicated, but it gets simpler once you understand how it works and know how to use it. It takes a couple of times of practice to feel confident, but once you know how to use it, you can be proud and responsible and have the condom already inserted if you know you're likely to engage in vaginal or anal intercourse.)
6. **It's hard to talk about protection with the person you're having sex with.** (It might be challenging to have difficult conversation like this. However, it's easier to discuss birth control and condom use with a partner when your mind is made up and you know why you want to be safer. It's also easier in a healthy relationship based on trust, respect, equality and open communication.)
7. **Gay, lesbian and bisexual youth don't need to learn about birth control and safer sex.** (All young people regardless of their sexual orientation [who they find themselves attracted to] need to be informed about sexuality, including information about birth control and condoms. If youth engage in sexual activity with a partner of the same sex, they should use condoms or dental dams to help prevent the spread of HIV and other STIs. Regardless of a person's sexual orientation or sexual identity, anyone who engages in penis-in-vagina sex must use birth control to prevent pregnancy and latex or polyurethane/polyisoprene condoms or other protection to reduce the risk of STIs.)
8. **Men don't need to know as much about birth control as women.** (People of all genders need to know about birth control because it takes a male sperm and a female egg to make a baby. When babies are born, men will have to share responsibility for raising their children. Therefore, men should play an active role in planning when they become fathers. Men who know about birth control and participate in getting and using methods are wise, proud, responsible and supportive partners.)

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

9. **If you're a teen parent already, it's too late to worry about using birth control.** (Teen parents usually understand the realities of parenthood more than other teens. It's never too late to take charge of when you have a baby in the future. Having more than one child as a teenager increases the challenges you have to overcome to reach your goals and dreams.)
10. ***Optional for high school youth:*** **Using condoms takes the pleasure out of sex.** (Using condoms can be fun and pleasurable if you have the skills to make them that way. We'll discuss those skills later in the program.)

5. Summarize as follows,

People have a lot of ideas and opinions about birth control. Sometimes these ideas and opinions are based on what they've heard from others. Sometimes they are based on myths and misinformation.

It's important to consider how your attitudes and beliefs might be affecting your desire and willingness to reduce your risk of unintended pregnancy and STIs, including HIV.

It's up to you to think in ways that protect you and increase your chances of accomplishing your goals and having the life you want in the future.

Take the proud and responsible path! Choose not to have sexual intercourse of any type (abstinence) and get the skills to practice the method effectively. Or, if you decide to have sexual intercourse, help protect yourself against unintended pregnancy and STIs by using an effective method of birth control *and* condoms every time you have sex.

MODULE 7

DEVELOPING CONDOM USE AND NEGOTIATION SKILLS

GOALS

The goals of this module are to:

- Increase participants' understanding of barriers to condom use and increase their strategies for reducing those barriers, including how to make condom use fun and pleasurable.
- Increase participants' communication and negotiation skills so that they can negotiate condom use with a sexual partner.
- Enhance participants' ability to resist situations that place them at risk for HIV/STI infection and pregnancy.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- List the correct steps to using a condom.
- Identify barriers to using condoms and practicing other safer sex behaviors.
- Identify strategies for implementing condom use.
- Identify ways to make condoms a more pleasurable part of the sexual experience.
- Demonstrate the ability to respond to excuses a partner may give with statements in support of condom use.
- Identify strategies for negotiating condom use with their partners.

MODULE PREVIEW

The seventh module: (1) enhances participants' ability to use condoms correctly; (2) explores positive aspects of condom use; and (3) allows participants to practice condom negotiation skills.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

STRATEGIES/METHODS

- Exercises
- Scripted Roleplays

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- Video: *Condom Use Animation* (or alternative videos*) [for high school youth]
- *Condom Line-Up* cards
- *Negotiation and Refusal Skills Charts 1A & 1B*
- *Observer Checklist* poster
- *SWAT* poster
- Worksheets in the student workbook:
  - » *While They're Out* (Ineffective and Effective Versions)
  - » *Your Valentine's Day Gift* (Ineffective and Effective Versions)
  - » *Observer Checklist*

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Pre-labeled chart paper:
  - » *Ways to Make Condom Use Easy and More Fun* (for high school youth)
  - » *Ways to Make Condom Use Easy* (for middle school youth)
  - » *Pros*
  - » *Cons*
  - » *Excuses Sexual Partners Give*
- Markers
- Masking tape
- Monitor and video player, or internet access if using alternative videos

PREPARATION NEEDED

1. Label all of the charts as listed under Materials.
2. Hang the pre-labeled charts in the order they will be used. Fold and tape the charts so the titles remain covered by the bottom half of the sheet until you use them.
3. *For high school youth:* Set up the video(s) to be ready to play.

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

INSTRUCTIONAL TIME: 60 minutes

(*Note:* Facilitators may wish to extend the time to allow for further practice of the SWAT technique and roleplays.)

ACTIVITY	MINUTES NEEDED
A. Condom Line-Up	**10**
B. How to Make Condoms Fun and Pleasurable *(for high school youth)*	**10**
C. Barriers to Condom Use/Condom Pros and Cons	**10**
D. "What to Say If My Partner Says...": Responding to Excuses	**15**
E. Introduction to SWAT and Scripted Roleplays	**15**

(*Note:* This module includes different activities for middle school and high school youth. When implementing the program with middle school youth, adapt Activity A by skipping the video on condom use and including the optional discussion on how to make condom use easy, and skip Activity B. For high school youth, conduct all activities in the module as written.)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY A

CONDOM LINE-UP

PREPARING FOR THE ACTIVITY

RATIONALE

Practicing putting the *Condom Line-Up* cards in the correct order reinforces knowledge, ability and confidence to use condoms correctly.

MATERIALS

- Monitor and video player, or internet access if using alternative videos
- Video: *Condom Use Animation*, or alternative videos
- *Condom Line-Up* cards
- Masking tape
- Pre-labeled chart paper (for middle school youth):
  - *Ways to Make Condom Use Easy*

TIME

10 minutes

PROCEDURE

1. Introduce the *Condom Use Animation* video by saying,

> We are about to see a brief video on how to correctly put on a condom. The information presented in it will be helpful throughout the rest of this activity, and as soon as we're done watching it, we'll have a chance to practice what we've learned together as a group.

2. Show the video, which is 2 minutes long.

3. When the video is over, introduce the *Condom Line-Up* activity by saying,

> We are going to demonstrate all the steps involved in putting on a condom by putting a set of condom-use cards in correct order.

4. Shuffle the *Condom Line-Up* cards.

5. Pass out the cards to the participants. (Give each participant more than one card if there are more cards than participants.)

6. Ask the group to stand.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

7. **Explain to the group,**

> **These cards represent steps in proper condom use. Your task is to put them in the correct order. You will have about 1 minute to study them.**
>
> **Before we start, can someone tell me what a couple should do before they have sex?**

Answer

- » Get consent
- » Get condoms, lubricant and/or dental dams
- » Discuss safer sex issues, including when they were last tested for STIs and ways that they protect themselves from STIs and (if applicable) pregnancy.

8. **Have the participants put the cards in the proper order on the wall. Encourage all the group members to participate.**

9. **Ask if there are any final adjustments, and allow them to be made.**

10. **When the group has decided how the cards should be placed, verify the correct order or ask questions to prompt the movement to the correct order.**

11. **When the order is correct, review the steps:**

> **ORDER OF *CONDOM LINE-UP* CARDS**
>
> 1. Consent
> 2. Get external condoms and check expiration date
> 3. Sexual arousal (hug, cuddle, kiss, massage)
> 4. Erection
> 5. Carefully remove condom from package
> 6. Dab water-based lubricant on penis or inside condom
> 7. Squeeze out any air from tip of condom and leave room for ejaculation
> 8. Roll condom on
> 9. Intercourse
>
> *(continued)*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

10. Orgasm *(optional)*
11. Hold onto the rim of condom and withdraw the penis
12. Remove and discard condom
13. Loss of erection
14. Relaxation

FACILITATOR'S NOTE

Steps 6 and 7 could be reversed and still be correct. Relaxation can occur at any point throughout the process, and should be a continuous part of the process. Loss of erection can also happen at any time throughout the process. Orgasms are optional and not everyone will experience an orgasm every time.

12. **Next, use the following discussion questions to stimulate positive attitudes toward condom use. Say,**

Which steps in this process can involve a partner?

Answers

» Consent, sexual arousal, rolling condom on, intercourse, orgasm, holding onto rim, removing condom, and relaxation. A partner (of any gender) can also get or buy condoms and have them ready.

If a person with a penis loses their erection after putting on a condom and before intercourse, what could the couple do?

Answer

» This will happen to most people with penises at some point in their lives. Have partner take off condom, continue playing and stimulating one another, relax, and enjoy the fun. After a while, put a new condom on as part of the play.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

13. **Summarize by saying,**

> **You did a great job lining up the condom cards and discussing the correct steps in external condom use. Remember and practice these steps so that you can make the proud choice and use condoms correctly every time if you've decided to have sex. Remember, too, that you may also use internal condoms instead of external condoms. It is also important to remember that using two or more condoms at the same time can cause the condoms to weaken and tear. Never use two condoms at the same time. Condoms can be used with other birth control methods such as the pill or withdrawal to increase contraceptive effectiveness.**

OPTIONAL ACTIVITY FOR MIDDLE SCHOOL YOUTH

15. **When using this curriculum with middle school age youth, engage them in a discussion on how condom use can be made easy by asking these questions:**

    - What do you think makes some people uncomfortable about using protection such as external condoms? internal condoms? dental dams?
    - Why do you think other people use these forms of protection?
    - How might someone become more comfortable with the idea of using protection?
    - What might make it easier for someone to get and use condoms? (Use the pre-labeled chart paper to record responses.)

Skip Activity B and move directly to Activity C after this discussion.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY B

HOW TO MAKE CONDOMS FUN AND PLEASURABLE (FOR HIGH SCHOOL YOUTH)

PREPARING FOR THE ACTIVITY

RATIONALE

Helping participants see how they can make condom use fun and pleasurable for themselves and their partners encourages consistent use and a sense of pride and responsibility.

MATERIALS

- Pre-labeled chart paper:
  - *Ways to Make Condom Use Easy and More Fun*
- Markers

TIME

10 minutes

PROCEDURE

1. Introduce this activity by saying,

> People often say that sex doesn't feel as good with a condom so we're going to talk about ways to make the experience more pleasurable.
>
> Remember, I'm not assuming that you're having sex and I'm not encouraging you to have sex. This is information some of you will use right away and others can tuck it away for future reference.

2. Give the following examples of ways to make using condoms more pleasurable:

> - Try different brands to find one that feels most comfortable and natural.
> - Use extra lubricant inside the tip of the condom and on the outside of the condom to increase wetness.

3. Unfold the pre-labeled chart paper titled *Ways to Make Condom Use Easy and More Fun.*

4. Ask participants to brainstorm some ways to make using condoms fun and pleasurable. Record their responses.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

5. **Add the following ideas if they don't get mentioned:**

- Make putting on the condom a part of foreplay.
- Think up a sexual fantasy using condoms.
- Act sexy/sensual while putting on the condom.
- Hide a condom on your body and ask your partner to find it.
- Use extra lubrication inside and outside the condom.
- Experiment with different colors, types and textures of condoms.
- Have a sense of humor and make jokes.
- Tell your partner that using a condom can make an erection last longer.

6. **Now ask participants to think of some ways to make using condoms easy—to keep them from interrupting sex. Give the following examples,**

- You can talk about using condoms/dental dams in advance.
- Always have condoms on you.
- Learn to put the condom on in advance so you can do it more smoothly.
- Make sure you have condoms (or dental dams) close by to eliminate fumbling.
- Have the condom open and ready to use before sex.
- If using an internal condom, have it inserted before sex.

FACILITATOR'S NOTE

Remind youth that the only protective barriers that protect against HIV and other STIs are those made of latex, polyurethane, polyisoprene or nitrile. Anyone who is allergic to latex can use condoms made of the other materials.

Remember that some of the young people may not be sexually active and that for them this discussion may not make much sense. If this is the case, ask the questions in a way that is less personal. You could ask, "What do you think some people do to make condom use easier and more fun?" or "Imagine an advertisement for condoms and dental dams, what might it say that would make people think using condoms is easier and more fun?"

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

Participants should be reminded that only condoms consisting of latex, polyurethane, polyisoprene or nitrile can help protect against STIs. Condoms made from other materials, such as lambskin or other animal membranes, are not effective in preventing the spread of STI.

There are glow in the dark condoms that are latex and safe for STI/HIV protection, as well as flavored, ribbed and other options.

Just as there are different styles of condoms, each brand and type of lubricant is different. People have different preferences and may find that some lubricants feel better than others. Partners can try different brands to find one that feels comfortable and natural.

7. **Ask the group the following questions,**

> Do you feel prepared to use a condom if you have sex?
>
> Do you feel prepared to respond to excuses for not using a condom?

8. **Summarize as follows,**

> Once you and your partner both agree to use condoms, do something positive and fun. Go to the clinic or store together. Get lots of different brands and colors. Plan a special day when you can experiment. Just talking about how you'll use all of those condoms can be a turn-on.
>
> Remember, the proud and responsible thing to do is to always use protection such as latex or polyurethane/polyisoprene condoms if you have sex.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY C

BARRIERS TO CONDOM USE/ CONDOM PROS AND CONS

PREPARING FOR THE ACTIVITY

RATIONALE

Pointing out the positive aspects of condoms—by changing negative statements about condom use into positive ones—may reinforce the need to use condoms correctly and consistently, as well as build self-efficacy. This activity also sets the foundation for roleplaying and proud and responsible decision-making skills.

MATERIALS

- Pre-labeled chart paper:
  - *Pros*
  - *Cons*
- Markers
- Masking tape

TIME

10 minutes

PROCEDURE

FACILITATOR'S NOTE

While doing this activity, you might also bring up the issue of dental dams and find out if the reasons for not using dental dams are similar to those for not using condoms.

1. Introduce this activity by saying,

> There are many reasons why people do or do not use condoms. The reasons people do use condoms are *pros* and the reasons people don't use condoms are *cons* or *barriers to condom use*.

2. Unfold the 2 sheets of chart paper, labeled *Pros* and *Cons*.

3. Ask participants to brainstorm all of the *Pros* (all of the reasons *for* using condoms), and list their answers on the chart paper.

Make sure their list includes:

» Condoms can help prevent pregnancy.

» Condoms can help prevent STIs, including HIV.

» Condoms make you feel good about yourself.

» You know you are safer when you use condoms.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

4. **Ask participants to brainstorm all the *Cons* (all of the reasons people *don't* use condoms).**

Make sure the answers include:

- » Condoms are not available
- » Think condoms ruin the mood and pleasure
- » Using another form of birth control
- » Think condoms don't feel natural
- » Condoms cost too much
- » Don't know where to get free condoms
- » Partner doesn't want to use condoms
- » Embarrassed to bring up the subject
- » Parents might find them
- » Embarrassed to go to the store to buy them
- » Want to show they trust a partner

5. **Explain the following,**

Since you are proud and responsible young people who respect yourselves and want to protect yourselves, let's now change these cons into pros.

6. **Demonstrate by reading one of their cons/barriers and turning it into a pro.**

Example

Con: Condoms don't feel natural.

Pro: Knowing that you are being responsible by using condoms will feel natural and good.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

7. **Then, give each member of the group a chance to change a con into a pro.**

8. **Cross each con off the list as it is changed into a pro.**

9. **Summarize as follows,**

> **Good job. As you can see, we've changed all the *Cons* to *Pros*. There are no cons to using condoms. You will be using this skill again in a later activity.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY D

"WHAT TO SAY IF MY PARTNER SAYS…": RESPONDING TO EXCUSES

PREPARING FOR THE ACTIVITY

RATIONALE

Participants need to examine the excuses sexual partners give for not wanting to use condoms to protect themselves from pregnancy, STIs and sexual transmission of HIV. Practicing what to say if a partner has excuses for not wanting to use a condom prepares the participants to negotiate with a partner.

MATERIALS

- Pre-labeled chart paper:
  - *Excuses Sexual Partners Give*
- Markers

TIME

15 minutes

PROCEDURE

1. Unfold the pre-labeled chart paper titled *Excuses Sexual Partners Give*.

2. Begin the activity by saying,

> This next game is similar to the one we just played. It is about excuses partners might give for not wanting to use a condom.
>
> Let's brainstorm excuses sexual partners give for not wanting to use condoms. What excuses might sexual partners give for not wanting to use a condom?

3. Write their responses on the chart paper.

4. Then say,

> Now let's see if we can change each excuse for not wanting to use a condom into a good reason to use a condom. In other words, what could you say to a potential sexual partner who said the following?

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

5. **Demonstrate by reading one excuse that is listed on the chart paper and by giving a positive response to that excuse.**

Example

Excuse: I don't like the way condoms feel.

Response: I can show you how to make them feel much better.

6. **Then, read each remaining excuse and call on volunteers to respond to them. Say,**

I am going to read more excuses. Your job is to convince me to use a condom.

FACILITATOR'S NOTE

As you read the list of excuses, read only those that were not discussed by the group already. After the participants respond, read the provided response as an alternative.

BREAKING THE MOOD STATEMENTS

Excuse: Condoms ruin the mood for sex.

Response: Only if you let them. With a little imagination, condoms can actually enhance sexual feeling.

OR

Let me show you that it doesn't have to ruin the mood.

SEXUAL ENJOYMENT STATEMENTS

Excuse: Condoms don't feel as good as the real thing…they aren't natural.

Response: Today's thin latex condoms feel quite natural. Let's try a few different types to find the one that feels best. Putting a drop of lubricant inside the tip of the condom can give extra feeling.

OR

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

Internal condoms are made of nitrile, which warms up with body heat. We can use extra lube too.

Excuse: Sex doesn't feel as good with a condom on.

Response: There is plenty of feeling left, and I would feel unsafe without it.

Excuse: Dental dams are messy and smell funny.

Response: Dental dams aren't any messier or smellier than sex. Let's try a polyisoprene dental dam instead of a latex one so it doesn't smell. We can try different lubes too and find one that isn't smelly.

Excuse: Condoms are unnatural and turn me off.

Response: Worrying about unintended pregnancy and STIs turns me off. Condoms will make me feel safer and sexier.

OR

I know how to turn you back on.

Excuse: When I stop to put it on, I'll lose my erection.

Response: Don't worry, I'll help you get it back.

Excuse: Let's do it just this once without a condom.

Response: Once is all it takes to cause a problem, like unintended pregnancy or STI.

OTHER CONTRACEPTIVE METHODS STATEMENTS

Excuse: We don't need to use condoms if we're using the pill!

Response: The pill doesn't help protect you from STIs, including HIV, but condoms do. Proper condom usage can protect our health.

RELATIONSHIP/TRUST STATEMENTS

Excuse: People who use condoms don't trust each other.

Response: It's not a matter of trust—it is a matter of caring for yourself and the person you are with. In fact, both partners share a responsibility for having and using condoms— whether they trust each other or not.

(continued)

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

(continued)

Excuse: I love you. How can you think I would give you an infection?

Response: You wouldn't do it intentionally. But most people don't know when they are infected with an STI.

Excuse: But we've been having sex without condoms.

Response: I know, but we could enjoy each other a lot more if I did not have to worry.

OR

That does not mean it's not a good idea to use them from now on.

DISEASES AND HEALTH STATEMENTS

Excuse: Condoms are for people with diseases. Do I look sick to you?

Response: Unfortunately you can't tell by looking at people if they have an STI. A person can look and feel healthy—and still be infected.

Excuse: I know I am disease free. I have not had sex with anyone in months.

Response: As far as I know, I'm free of disease too. But either of us could have an infection from a previous relationship and not know it. The only way to know if someone has an infection is to get tested.

Excuse: I'm allergic.

Response: I'm glad you told me. We can use a polyurethane or polyisoprene condom. They work for people who have latex allergies. Or we can use internal condoms. They're made of nitrile and they warm up with body heat!

NOT HAVING A CONDOM PRESENT STATEMENTS

Excuse: I do not have a condom with me.

Response: Let's satisfy each other without having intercourse then.

OR

Let's go out and get some condoms, then have sex.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

7. When the group has finished, continue by saying,

> **Are there any additional excuses you think should go on this list?**

8. Record responses and then give these instructions,

> **We're going to do some more practice responding to these kinds of excuses. Here are some things you can include in your responses:**
>
> - **Good reasons to use condoms**
> - **Ways to make using condoms more pleasurable**
> - **Your beliefs about staying healthy and reaching your goals**

9. Ask the participants to brainstorm responses to the following questions (no need to record answers),

> **What if your partner still says no to using condoms even after you've responded to excuses?**

Answer

» Then you should postpone having sex with that person until you both agree to use them.

> **Do you need to use condoms even if you are involved with only one person?**

Answer

» Yes, even if you believe that neither of you has ever had sex with anyone else, shared needles, or had any other possible exposure to HIV. If any of these things aren't true, either one of you could have an STI and not know it. Make a plan to get tested together to know for sure.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Why is it important to use a condom even if you're using another effective method of birth control?

Answer

» Because while other birth control methods can prevent pregnancy, they don't offer protection from STIs, including HIV. Condoms (both external and internal) are the only birth control method besides abstinence that also helps protect you from HIV and other STIs.

How do alcohol and other drugs affect your sexual decisions?

Answer

» Alcohol and other drugs make it more difficult for you to think about what you are doing. They cloud your judgment, and you may do things that you would not normally do. You might not STOP and THINK before acting. And you and/or your partner won't be capable of giving consent.

10. **Summarize this activity by saying,**

Those were great responses. We will be using this information later when we practice roleplaying. Remember, regardless of what excuse a partner gives, you need to be prepared to explain why you insist on using a condom every time you have sex. Knowing what you're going to say in advance makes it easier to give a response that helps you make the proud and responsible choice of using a latex (or polyurethane/polyisoprene/nitrile) condom and/or dental dam every time you have sex.

ACTIVITY E

INTRODUCTION TO SWAT AND SCRIPTED ROLEPLAYS

PREPARING FOR THE ACTIVITY

RATIONALE

This scripted roleplay activity helps participants identify and practice the skills necessary to slow a situation down and gives alternative ways to clearly say *"NO."* Using the *Observer Checklist* poster helps reinforce specific refusal skills by giving participants a visual reminder as they watch others negotiate a potentially risky situation.

MATERIALS

- Posters:
  - *SWAT*
  - *Observer Checklist*
  - *How to Say "NO" Effectively* (Negotiation and Refusal Skills – Chart 1A)
  - *Examples of a Strong "NO"* (Negotiation and Refusal Skills – Chart 1B)
- Masking tape
- Scripted roleplays:
  - *While They're Out* (Ineffective and Effective Versions)
  - *Your Valentine's Day Gift* (Ineffective and Effective Versions)

TIME

15 minutes

(*Note:* Allow more time, if possible, to practice the SWAT technique and roleplays.)

PROCEDURE

FACILITATOR'S NOTE

Refusal Skills and Consent

Refusal skills are a key component of many evidence-based programs designed to reduce pregnancy, HIV and other STIs among youth. Programs provide instruction and practice in delivering effective refusals, and programs including refusal skills have been shown to reduce sexual risk behaviors and increase their chances of avoiding unwanted sexual pressures.

Affirmative consent is a conscious, voluntary agreement to engage in sexual activity. This consent has to be given throughout the sexual encounter. It is not enough that someone initiates or agrees to have sex. Past sexual relations or a dating relationship should never be assumed to be an indicator of a person's consent to have sex. Policies and laws around affirmative consent protect both partners by making sure they are in agreement and there is mutual understanding of what is happening.

This affirmative consent approach encourages partners to communicate openly about their wishes and boundaries, both prior to and during sexual interactions. It emphasizes the risks to both parties when partners pressure each other and the responsibility of both parties to respect the other's limits.

When teaching refusal skills and evaluating the effectiveness of participants' demonstration of those skills, it is important to affirm the value that no person who experiences sexual pressure, harassment or assault is to blame for being the target of those behaviors. Clear, assertive refusals can be encouraged, while also making sure youth understand that no one "deserves" to be pressured if a NO is unclear.

Instruction on boundaries and respecting another person's NO—both verbal and nonverbal—regardless of perceived clarity

(continued)

can be included to help young people understand the two-way nature of consent, and the importance of honest and respectful communication between friends and potential partners. This would be considered a "green-light" adaptation and can help optimize the success of the skill-building around refusals.

1. Display the *SWAT* poster, the *Negotiation and Refusal Skills Charts 1A* and *1B*, and the *Observer Checklist* poster.

2. Begin this activity by saying,

> We've talked a lot about unintended pregnancy, HIV and other STIs and how to use condoms. But how do you say "NO" when someone is pressuring you to have sex without using a condom?
>
> How do you express your personal boundaries or communicate how far you are willing to go? People set personal boundaries based on what feels right or what is uncomfortable. In dating or intimate relationships, examples of boundaries may include being happy to go to the movies but not be alone in a bedroom, or wanting to kiss but not to have sex.
>
> Being clear on your personal boundaries will help you in situations where you need to make a decision and communicate that clearly. Just as important as setting and communicating your own boundaries is respecting the other person's boundaries and decisions. This is also a sign of a healthy relationship.
>
> Talking about safer sex can be difficult sometimes. However, it is very important that you talk with your sexual partner about your decision to use condoms when you have sex. Talking openly and honestly prevents misunderstandings.
>
> We are going to work on a strategy for talking to your sexual partner about using condoms without blaming, arguing or getting into a fight. The strategy is called the SWAT technique.

3. Explain the following,

> The SWAT technique has four steps. Let's review the steps of the SWAT technique.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

4. Review the entire *SWAT* poster with the participants by reading each letter from the poster and describing what it means.

SWAT

S = Say "NO"

Refuse the unsafe behavior.

W = Explain why

Offer a good explanation as to why you want to be safe. Explaining why helps your partner hear and understand your real concerns and prevents negative reactions.

A = Provide alternatives

Provide safe alternatives to show that you still want to be intimate and have a relationship with this person, as long as it can be safe.

T = Talk it out

Talk openly about each other's feelings to help the relationship grow and ease any tension that may have developed.

5. Next, read each characteristic on the *How to Say "NO" Effectively* chart (Chart 1A).

NEGOTIATION AND REFUSAL SKILLS – CHART 1A

How to say "NO" effectively

Characteristics

- Use and repeat the word "no" often.
- Send a strong nonverbal "no" with your body language, e.g., use hand and body gestures to emphasize the point.
- Project a strong, serious tone of voice.
- Look directly at the person's face and eyes.
- Stand straight and tall.
- Use a serious facial expression.
- Don't send mixed signals.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

6. **Demonstrate how to use those characteristics by modeling the first example from the *Examples of a Strong "NO"* chart (Chart 1B). Model by showing the participants how to read the example with an assertive voice and body language.**

7. **Say to the participants,**

> **Now, each of you will get a chance to read one of the *Examples of a Strong "NO."* When you read your example, say it like you mean it. Be sure to also send a strong nonverbal "no" with your body language, tone of voice and facial expression.**

8. **Go around the group and have each participant read an example aloud.**

> **NEGOTIATION AND REFUSAL SKILLS – CHART 1B**
>
> **Examples of a strong "NO"**
>
> **Examples**
>
> - **No! I'm not ready to have sex yet!**
> - **No! I won't have sex without a condom!**
> - **No! I don't want to touch you there!**
> - **No! Stop touching me like that!**
> - **No! Stop trying to unbutton my pants.**
> - **No! I'm not going to have sex with you!**
> - **No! I really mean 'NO'!**
> - **No! I want to protect myself. We have to use a condom.**
> - **I have not said yes, which means this isn't happening.**

9. **Then say,**

> **You did a great job with that activity. We are now going to do roleplays using the SWAT technique and the *Observer Checklist*.**
>
> **Let's review the *Observer Checklist* poster. The Y/N stands for yes or no.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

10. **Review each item on the *Observer Checklist* poster to ensure participants understand it.**

11. **Then say,**

> **Now we are going to do some roleplays. As you watch the roleplays, pay attention to each skill to see whether it has (yes), or has not (no), been used by the actors.**

12. **Identify participants to act out the first roleplay. Have them turn to the scripted roleplay *While They're Out* (Ineffective Version) in their workbooks. Whisper to the actor playing Person 2 to avoid eye contact and use a soft tone of voice.**

13. **Begin by reading the Setting the Stage section of the roleplay before having the assigned participants read their parts. Remind the group who is playing Person 1 and who is playing Person 2. Ask the audience to pay attention to Person 2 and make note of the skills that actor uses.**

> **WHILE THEY'RE OUT – INEFFECTIVE VERSION**
>
> **Setting the Stage:**
>
> Your parents are out late. Your partner comes over, hoping to have sex with you. You want to have sex but you want to use condoms. Your partner refuses to use condoms. You decide to share how to make condoms feel much better.
>
> **Person 1:** Why are you stopping now?
>
> **Person 2:** Wait. Do you have a condom?
>
> **Person 1:** No I told you, I don't like the way those things feel.
>
> **Person 2:** Yeah, I know.
>
> **Person 1:** I don't have a condom. I want to be able to feel you, and it doesn't feel as good. Let's just do it without a condom this time.
>
> **Person 2:** I think there are ways using one can feel good. I don't want to get infected with an STI like HIV.
>
> *(continued)*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

Person 1: You won't. And I don't need you to show me anything. I know how condoms are used.

Person 2: I know you know how to use them. And you would never give me an STI. Sorry, I freaked out for a minute.

Person 1: Yeah, I mean I love you. Nothing bad is going to happen.

Person 2: You're right.

They keep kissing.

14. Use the *Observer Checklist* poster to process this roleplay. Point to each skill on the *Observer Checklist* poster and ask the group if they saw it demonstrated in the roleplay:

Did Person 2 say no? *(The person never said no.)*

Did the person refuse to engage in unsafe behavior? *(No)*

Did the person repeat the refusal? *(The person didn't repeat the objection.)*

Did the person's body language say no? *(The person didn't make eye contact and used a soft tone of voice.)*

Did the person explain why? *(The person did not give clear reasons. In addition, the person expressed doubt in their decision.)*

Did the person suggest alternatives? *(The person failed to offer any alternative actions.)*

Did the person talk it out and use language that protected the relationship? *(The person did not talk it over and express their feelings.)*

Did the person seem prepared to leave a potentially unsafe situation? *(No. The person finally gave up.)*

Was there consent in this situation? *(No)*

Even though Person 1 didn't say no, did it seem like they were consenting to sex? *(No)*

Even though Person 1 didn't say no, how might Person 2 know that Person 1 did not consent? *(Unsure or soft tone of voice, no eye contact, only backed down because of pressure)*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

FACILITATOR'S NOTE

Clear, assertive refusals can be encouraged, while also making sure youth understand that no one "deserves" to be pressured for giving an unclear NO. Be sure to affirm the value that no person who experiences sexual pressure, harassment or assault is to blame for being the target of those behaviors.

15. Then have the same two participants read *While They're Out* (Effective Version), keeping the same roles. Whisper to Person 2 to be firm and use strong body language. Again, set up the roleplay by reading the Setting the Stage section. Remind the roleplay group to use the *Observer Checklist* to observe Person 2.

WHILE THEY'RE OUT – EFFECTIVE VERSION

Setting the Stage:

Your parents are out late. Your partner comes over, hoping to have sex with you. You want to have sex but you want to use condoms. Your partner refuses to use condoms. You decide to share how to make condoms feel much better.

Person 1: Why are you stopping now?

Person 2: Wait. Do you have a condom?

Person 1: No I told you, I don't like the way those things feel.

Person 2: Yeah, I know. But I want to use a condom.

Person 1: I don't have a condom. I want to be able to feel you, and it doesn't feel as good. Let's just do it without a condom this time.

Person 2: No. I want to use a condom. I can show you how using one can feel good. I don't want to get infected with an STI like HIV.

Person 1: You won't. And I don't need you to show me anything. I know how condoms are used.

Person 2: I know, but it's better if we do it together. It's a responsible part of having sex. I'm not going to have sex without a condom. So let's get condoms.

Person 1: OK. You're right.

They stop talking and get condoms.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

16. **After the roleplay, thank the roleplaying participants and ask them to return to their seats. Then say,**

> Let's use the *Observer Checklist* to review whether Person 2 used the skills that are listed.
>
> Did Person 2 say no? *(Yes)*
>
> Did Person 2 refuse to engage in unsafe behavior? *(Yes, absolutely)*
>
> Did the person repeat the refusal? *(Yes)*
>
> Did the person's body language say no? *(Yes)*
>
> Did the person explain why? *(Yes)*
>
> Did the person suggest alternatives? *(Yes, the person suggested going to get condoms.)*
>
> Did the person talk it out and use language that protected the relationship? *(Yes, "It's better if we do it together.")*
>
> Did the person seem prepared to leave the situation? *(Probably, but it wasn't necessary.)*
>
> Did Person 1 respect Person 2's personal boundaries? *(Yes.)*
>
> Was there consent in this situation? *(Yes. There was mutual agreement on what to do next.)*
>
> How should this story end? *(If they have sex, each should continue to check how the other person is feeling and whether that person still wants to continue having sex. At any point, if either one says stop, they must stop. Consent can be revoked at any time.)*

17. **After participants respond, ask the following questions:**

> Why was Person 2 more successful in the second version?
>
> Which version showed that they loved and respected themselves and each other enough to practice proud and responsible behavior?

18. **Now ask for two new participants to read *Your Valentine's Day Gift* (Ineffective Version). Remind participants to continue to use the *Observer Checklist*.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

19. **Begin by reading the Setting the Stage section before having the assigned participants act out their parts.**

YOUR VALENTINE'S DAY GIFT – INEFFECTIVE VERSION

Setting the Stage:

It is Valentine's Day. You and your partner are going out to a movie and dinner. You know that at some point having sex will be discussed. You partner is willing to use condoms, but you're just not ready for any of it. You decide to tell your partner that you want to wait to have sex.

Person 1: Happy Valentine's Day! Here is a little something I bought, though I was hoping our gifts to each other would be more than something from a store.

Person 2: Do you mean you were hoping we would have sex?

Person 1: Yes. You don't have to worry. I have condoms.

Person 2: Oh! You are moving so fast.

Person 1: We have been dating for a while. I love you and I'm ready.

Person 2: Well. I love you but I'm just not sure.

Person 1: Don't worry. We're using protection. After all, it's Valentine's Day and what better gift than to share our love?

Person 2: I just have some doubts…I'm scared.

Person 1: You are always going to be scared, but the important thing is that we love each other.

Person 2: *(Reluctantly)* I guess.

They stop talking and begin to have sex.

20. **Use the *Observer Checklist* to process this roleplay. Point to each skill on the *Observer Checklist* and ask the group if they saw it demonstrated in the roleplay:**

From your observations, what was ineffective about this roleplay?

Did the person say no? *(The person never said no.)*

Did the person repeat the refusal? *(No)*

Did the person explain why? *(The person failed to clearly express reasons for waiting, and expressed doubt in the original decision.*

(continued)

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

(continued)

Did the person suggest alternatives? *(The person failed to offer alternative actions.)*

Did the person talk it out? *(The person gave in to his or her partner rather than stating her or his own view.)*

Did Person 1 respect Person 2's personal boundaries? *(No.)*

Was there affirmative consent in this situation? *(No. "I guess" is not affirmative consent.)*

How should this story end? *(They should stop because there is no affirmative consent to have sex.)*

FACILITATOR'S NOTE

Again, encourage clear, assertive refusals, but stress that no one "deserves" to be pressured if the NO is unclear.

21. Now have the same two participants read *Your Valentine's Day Gift* (Effective Version) keeping the same roles. Begin by reading the Setting the Stage section.

YOUR VALENTINE'S DAY GIFT – EFFECTIVE VERSION

Setting the Stage:

It is Valentine's Day. You and your partner are going out to a movie and dinner. You know that at some point having sex will be discussed. Your partner is willing to use condoms, but you're just not ready for any of it. You decide to tell your partner that you want to wait to have sex.

Person 1: Happy Valentine's Day! Here is a little something I bought, though I was hoping our gifts to each other would be more than something from a store.

Person 2: Do you mean you were hoping we would have sex?

Person 1: Yes. You don't have to worry. I have condoms.

Person 2: No. You are moving so fast.

Person 1: No, I'm not. We've been dating for a while. I love you and I'm ready.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

Person 2: Well, I'm not. I love you, but I'm not ready to have with sex you. I know you are the person that I want to be with, but I also know that I need you to be understanding and patient. I want to have sex only when I'm absolutely sure—when I'm not scared or in doubt. So the answer is no.

Person 1: Well, I don't want to feel like I'm pressuring you to do something you don't want to do. It's important that you're sure. So, I guess I'll wait until you're ready.

Person 2: Thanks, for understanding. I love you so much and I'm really glad that you are willing to wait.

They kiss and go to the movies.

22. After the roleplay, thank the roleplaying participants and ask them to return to their seats.

23. Then ask the group to use the *Observer Checklist* to answer the following questions,

What do you think made this roleplay version successful?

How was it different from the first version?

24. Allow participants to respond.

25. Summarize as follows,

You had some really great observations. We just had a chance to practice saying no to unsafe behavior. We also had the opportunity to practice listening for consent.

Remember these SWAT techniques and refusal skills so that you can be proud and responsible and use them whenever you need to discuss abstinence, condom use and safer sex.

MODULE 8

ENHANCING REFUSAL AND NEGOTIATION SKILLS

GOALS

The goals of this module are to:

- Increase participants' communication and negotiation skills regarding condom use.
- Enhance participants' ability to resist situations that increase their risk for unintended pregnancy, HIV and other STIs.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- Demonstrate body language and strategies for effectively saying no to unprotected sex.
- Identify strategies for negotiating safer sex with a sexual partner.
- Demonstrate the ability to negotiate condom use with a partner.
- Express pride about sticking to decisions that can help them to achieve their goals.

MODULE PREVIEW

The eighth module: (1) provides an opportunity for participants to practice condom negotiation skills; and (2) provides an opportunity for participants to practice communication and negotiation skills with a partner.

STRATEGIES/METHODS

- Roleplays
- Group Discussion
- Mini-Lecture
- Skills Practice
- Video Viewing
- Closing Circle

ACTIVITY A

SAFER SEX NEGOTIATION SKILLS AND *WRAP IT UP* VIDEO*

PREPARING FOR THE ACTIVITY

RATIONALE

Practicing strategies for negotiating condom use with their sexual partner provides participants with additional skills necessary to help reduce their risk for unintended pregnancy, and STIs or HIV infection.

MATERIALS

- Posters
  - *Negotiation and Refusal Skills Charts 1A, 1B, 2, 3 & 4*
  - *Observer Checklist*
  - *SWAT*
- Video: *Wrap It Up*, or alternative videos
- Monitor and video player, or internet access if using alternative videos

TIME

15 minutes

(*Note:* Allow more time, if possible, to practice the SWAT technique and to view the video.)

PROCEDURE

FACILITATOR'S NOTE

This is a quick but important activity. Please maintain a lively pace as you review the negotiation skills and have group members practice the skills of offering explanations, providing alternatives to unsafe sex and talking it out. Plan to spend no more than 7 minutes on this review and practice. The video is 6 minutes so you'll need the final 8 minutes to show the video and have group members critique the actor's skills.

1. Hang the *Observer Checklist* poster, *SWAT* poster, and the *Negotiation and Refusal Skills* charts.

2. Introduce this activity by saying,

> Talking about condom use can be difficult. However, it is very important that you talk with your partner about protection and safer sex. This should include what types of protection to use, such as external or internal condoms and dental dams. Having an open, honest discussion can help avoid misunderstandings.
>
> We are going to work on a strategy for getting your partner to agree to use condoms, without blaming, arguing or getting into a fight.
>
> Earlier we reviewed the SWAT technique for negotiating safer sex and the "S" part of the SWAT technique: Say "NO."
>
> Now let's review the other steps of SWAT: "W," which is Explain Why, "A," which is Provide Alternatives, and "T," which is Talk It Out.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

3. Show *Negotiation and Refusal Skills Chart 2—Explain Why*. Say,

> Let's start with *Explain Why—Give Clear Reasons to Support Your Choice*, which is the "W" part of the SWAT technique. The chart shows examples of explanations you might offer for why you are saying no to unsafe sex.
>
> We will go around the group and I would like each of you to read aloud an example of an explanation that you can offer to a partner. When you say the statement, say it like you really mean it.

4. Go around the group and ask each participant to read aloud an example from the chart until all the examples have been read. Encourage participants to make up their own examples as well.

> **NEGOTIATION AND REFUSAL SKILLS – CHART 2**
>
> **Explain why**
>
> Give clear reasons to support your choice.
>
> **Examples**
>
> - I want to protect myself with a condom every time I have sex.
> - No, I won't risk my future goals by having unprotected sex.
> - Condoms help prevent unintended pregnancy, HIV and other STIs.
> - I am not ready to have a child (again).

5. Now, follow the same procedure with *Negotiation and Refusal Skills Chart 3—Provide Alternatives*. Say,

> Let's move on to *Provide Alternatives—Suggest Something Else*, which is the "A" part of the SWAT technique. The chart gives examples of alternative actions you might provide instead of having sex. Once again, we will go around the group, and I would like each of you to read aloud an example of an alternative action statement. When you say the statement, say it like you really mean it.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

6. Go around the group and ask each participant to read aloud an example from the chart until all the examples have been read. Encourage the participants to make up their own examples as well.

NEGOTIATION AND REFUSAL SKILLS – CHART 3

Provide alternatives

Suggest another action.

Examples

- Let's go buy some condoms right now.
- Let's get out of the bedroom. It makes me feel uncomfortable.
- If you're willing to use a condom, then we can have sex.
- Let's do something else that will feel good for both of us, since we don't have a condom.
- Let's go get something to eat.
- Let's go see a movie.

7. Now follow the same procedure with *Negotiation and Refusal Skills Chart 4—Talk It Out*. Say,

> Now let's work on the last part of SWAT: Talk It Out—Discuss Your Feelings, which is the "T." These are examples of how you might discuss your feelings about practicing safer sex. We will go around the group and I would like each of you to read aloud an example of a talk it out statement. When you say the statement, say it like you really mean it.

8. Go around the group and ask each participant to read aloud an example from the chart until all the examples have been read. Encourage the participants to make up their own examples as well.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

NEGOTIATION AND REFUSAL SKILLS – CHART 4

Talk it out

Discuss your feelings.

Examples

- I feel like you don't really care about me when you pressure me like this.
- I'm not ready to have a baby. I would feel better if we use a condom.
- I'm glad you agreed to use condoms. I feel like you really care about me.
- You really turn me on when you touch me, but I won't have sexual intercourse without a condom.
- If you can't respect my feelings, then I'm prepared to end this relationship.
- Our future goals and dreams are more important than a moment of unsafe pleasure, so I'm glad we decided to use condoms.

9. Introduce the *Wrap It Up* video or alternative video(s) by saying,

> We are going to see a short video about a couple who are in a negotiation about using condoms. In this roleplay, one partner wants to use condoms and the other does not. Watch what happens, and take note of how they handle the situation, the things they say and how they say them, and be alert to the strategies used to convince a partner to use condoms.

10. Show the video, which is 6 minutes long.

11. Review the video using the *Observer Checklist*.

12. Process this activity by discussing the following questions,

- Did the person who wanted to use condoms use the SWAT Refusal and Negotiation Skills we talked about before? How?
- Did they say no?
- Did they offer an explanation?
- Did they provide alternatives?

(continued)

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

(continued)

- **Did the two people talk it out?**
- **Did you think that they had any difficulty? If so, what?**
- **What were the partner's concerns about using a condom?**
- **What did the person who wanted to use condoms say to respond to their partner's statements and concerns?**
- **Was the person who wanted to use condoms ready to walk away from the relationship, if necessary?**
- **Were their personal boundaries and choice respected?**
- **Was there consent?**

13. **Continue processing with the following questions,**

» What could have happened if one partner decided to continue pressuring the other for sex while refusing to honor that person's decision to use protection?

» What were some other points in the story when their relationship could have turned into harassment, abuse or violence?

» The video was about a heterosexual relationship (boyfriend/ girlfriend). Could this happen in other types of adolescent relationships?

» If you suspect a friend may be in an abusive relationship or is being used by someone in a sexual way, what would you do?

14. **Summarize as follows,**

You have demonstrated a really good understanding of healthy and unhealthy relationships. As we have seen here, the foundation of a healthy relationship is respect, and it is guided by open and honest communication. You also learned refusal and negotiation skills that could help you in your relationships. It sounds like you are ready for the roleplays we will be doing shortly.

FACILITATOR'S NOTE

You should determine the roles for the next roleplays before the activity begins. Having spent approximately 7 hours with this group, you will be able to assign the roles that best facilitate learning. All group members should participate.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY B

PRACTICING AND ENHANCING NEGOTIATION SKILLS: UNSCRIPTED ROLEPLAYS

PREPARING FOR THE ACTIVITY

RATIONALE

This activity allows participants guided practice for negotiating condom use with a partner in a controlled and safe environment. This practice increases their skills and feelings of confidence about condom negotiation and the likelihood that they will use these negotiation skills in real-life situations. Those not participating directly in the roleplay have the opportunity to identify helpful strategies and coach the actors.

MATERIALS

- Posters:
  - *Roleplay Guidelines*
  - *Observer Checklist*
  - *SWAT*
  - *Negotiation and Refusal Skills Charts 1A, 1B, 2, 3 & 4*
- Student workbook:
  - *Observer Checklist*
  - *Roleplays (A–E)*
- *Optional:* Additional roleplays found in Appendix A

TIME

35 minutes

PROCEDURE

FACILITATOR'S NOTE

During the roleplay practice, participants may roleplay sexual pressure situations with someone of a different or the same gender. This may be awkward for straight teens who are sensitive to the suggestion of same-sex romance, for teens who identify as gay or lesbian, or for teens who are transgender or gender nonconforming. It's important to address this situation directly and proactively.

Here are some tips:

- Explain the situation in a matter-of-fact way. Let participants know that they may be doing the roleplays with someone of a different or the same gender.
- Emphasize that they are playing roles. Doing the roleplay to practice the skill doesn't say anything about the sexual orientation of the people doing the roleplay or mean that anyone is expressing a real-life attraction toward the other person in the roleplay.
- Explain that they need to take their roles seriously because teens of all sexual orientations and gender identities need to learn how to resist sexual pressure and negotiate condom use to protect themselves. This will help ensure that they all get the most out of the roleplay activities.

1. Post the *Roleplay Guidelines* poster before starting this activity.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

2. **Begin this roleplay activity by saying,**

> In a little while, we are going to roleplay some situations to practice using these techniques in pressure situations.
>
> Try to incorporate everything you have learned so far. Be creative in your approach.

3. **Ask participants to define roleplaying.**

4. **After their responses, say,**

> Right! Roleplaying is a technique that can help you learn what it feels like to be someone else or to practice how to handle a situation that is new, difficult or in some way stressful.
>
> You should do your best to feel, sound and behave like the person you are roleplaying. You are trying to behave in a way that will help you and everyone else learn.
>
> It is important to follow some guidelines when you do roleplays. Let's review them now.

5. **Review each item on the *Roleplay Guidelines* poster. Remind the group to also use the *Negotiation and Refusal Skills Charts*.**

> **ROLEPLAY GUIDELINES**
>
> - Read your role carefully and think about how that person would really behave.
> - Do your best to stay in character through the whole roleplay.
> - Don't let comments and laughter distract you.
> - Really try to feel and act like the person you are playing.
> - Try things that you might not do ordinarily, just to see how it feels.
>
> *(continued)*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

- **Use SWAT:**
  - » **Say no; repeat it; use strong body language.**
  - » **Explain why you don't want to engage in unsafe behavior.**
  - » **Provide alternatives.**
  - » **Talk it out.**

6. **Have participants turn to the *Observer Checklist* worksheet in their workbooks and explain the following,**

> **This checklist will be used to critique the following roleplays just like we have been using the *Observer Checklist* poster. Put a "Y" in the box for each skill you see demonstrated in each roleplay and an "N" in the box for each skill that is NOT demonstrated.**

7. **If you don't have a co-facilitator, choose a group member to model Roleplay A with you (preferably someone who was identified in advance). You should play the role of Jamie, the person being pressured. The participant should play the role of Taylor. Have the participant turn to Roleplay A in the workbook and give them a minute to think about the role.**

8. **Put two chairs in the middle of the group, angled toward each other and facing the *Negotiation and Refusal Skills Charts*.**

9. **Remind observers to use their *Observer Checklists* to critique Jamie.**

10. **Start by saying,**

> **The rest of you can coach us if we get stuck in the roleplay. Remember that no one says *ALL* the right things in every conversation. But we can always go back to our partners and say more about thoughts and feelings another time.**

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

11. Read aloud the scenarios for both characters, then perform the roleplay.

ROLEPLAY A

Theme: Loss of trust and sexual pleasure through condom use

Observe: Jamie Using SWAT

(JAMIE and TAYLOR talking)

Jamie

You and your sexual partner (Taylor) are in your partner's living room with the lights down low and things are starting to get physical. You are trying to tell Taylor that you want to use protection, and Taylor is beginning to get angry. Taylor doesn't think sex will feel as good and does not want to use protection. But you want to use protection because you respect yourself. Your health is important to you and you want to protect yourself because you are worth it!

Your task is to convince Taylor that sex can be just as pleasurable with condoms/dental dams.

Taylor

You and your partner (Jamie) are at your place and things are getting very intimate. Jamie is starting to talk about using protection and you are getting angry. Does Jamie think you have been sleeping around? You don't think using protection feels good and truly believe it will ruin the mood.

Your task is to convince Jamie to have sex without protection.

12. Review participants' responses on the *Observer Checklist* by going over each item on the checklist. Encourage everyone, including the actors, to give input. Ask,

- Did Jamie use the SWAT technique?
- Did Jamie say no?
- Did Jamie explain why?
- Did Jamie provide alternatives?
- Did they talk it out?
- What could Jamie have done differently?

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

13. Continue to process the roleplay using the following questions,

> • What methods/strategies did Jamie use to get the message across?
> • Actors, what pressures were your characters feeling?
> • Were there any misunderstandings or breakdowns in communication?
> • Did these characters seem realistic to you?
> • How would you have handled the situation differently?

14. Summarize Roleplay A by saying,

> Condoms don't have to ruin sex. There are different techniques that can make condom use pleasurable and fun. It is important to talk about condom use ahead of time, before any touching or kissing begins. People have expectations in certain situations. If something happens that you don't like, tell your partner.

15. Have the first pair of participants turn to Roleplay B in their workbooks. Encourage the participants to be themselves, but to also pretend as if this were a real situation for them.

16. Explain to the roleplay participants,

> You are using these roleplays to practice talking to a partner. I'll give you about a minute to read and decide how you will perform the roleplay.

17. Explain the following to everyone,

> If, at any time, the players need help or the observers wish to move into a player's spot, raise your hands to signal me.

18. Tell observers which character to observe. (The character they should observe in each roleplay is underlined and described first.) In Roleplay B, the person is Justice. The goal of this roleplay is for Justice to be proud and responsible and resist pressure to have unsafe sex.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

19. **Remind observers to fill out the *Observer Checklist* as they watch the roleplay.**

FACILITATOR'S NOTE

After a few roleplays, participants may no longer need the *Observer Checklist*, but you should continue to go over each skill.

20. **Read aloud the scenarios for both characters in Roleplay B. Then have the players present the roleplay.**

FACILITATOR'S NOTE

Your job is to be sure that important issues are addressed and that participants feel that they can effectively use their skills. Give suggestions and help as they need it. Do not allow disagreement to continue too long or for anti-condom roles to win.

You may wish to have participants replay the roleplay again, having the audience help out, or play one of the roles yourself in order to show alternatives. What is important is that participants practice communicating even when the situation is difficult. In real life, one of the hardest things to do is to fully explain yourself and be understood.

Participants can also be divided into coaching groups to help each other out. This develops a cooperative atmosphere and is very energizing for the participants.

ROLEPLAY B

Theme: Condom use versus partner trust

Observe: Justice using SWAT

(JUSTICE and ANGEL talking)

Justice

You have been going out with Angel for a while now and you want to talk about using condoms. You know Angel has had sex with other people, and you are concerned about pregnancy and STIs, especially HIV, and want to use a condom. But you also don't want to lose Angel. You think you're falling in love.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

Angel may be offended because you're already using the pill for birth control, but you mention condoms anyway. You want to be with Angel, but only if you can be safer.

Your task is to resist the temptation to have unsafe sex but still keep the relationship.

Angel

Your partner (Justice) just suggested that you start using condoms. You feel that Justice does not trust you if Justice is afraid to have sex with you without using a condom.

Your older sibling told you that you don't have to use condoms when you really love someone. You want to prove Justice trusts and cares about you by not using condoms.

Your task is to try to convince Justice not to use condoms.

21. Review the participants' responses on the *Observer Checklist* by asking the following questions,

- Did Justice use the SWAT technique?
- Did Justice say no?
- Did Justice explain why?
- Did Justice provide alternatives?
- Did they talk it out?
- What could Justice have done differently?

22. Continue to process the roleplay using the following questions,

- Actors, what pressures were your characters feeling?
- Were there any misunderstandings or breakdowns in communication?
- Which decisions would you make in a situation like this?
- Do you know anyone who doesn't want a partner to use condoms?
- Would you risk losing your partner in order to protect yourself?

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

23. **Summarize Roleplay B by saying,**

> Relationships can be very complicated sometimes. Talking about condoms isn't always easy. Just remember, using condoms does not mean that you distrust your partner, it means that you care enough about yourself and your partner to make sure that you are *BOTH* protected.

24. **Have the next pair of participants turn to Roleplay C in their workbooks.**

25. **Tell observers which character to observe. In Roleplay C, the person is Kayla. The goal of this roleplay is for Kayla to be proud and responsible and resist pressure to have unsafe sex.**

26. **Remind observers to fill out the *Observer Checklist* as they watch the roleplay.**

27. **Read aloud the scenarios for both characters in Roleplay C, and then have the players present the roleplay.**

> **ROLEPLAY C**
>
> **Theme:** Two friends talk about protection
>
> **Observe:** Kayla using SWAT
>
> *(KAYLA and MIA talking)*
>
> **Kayla**
>
> Your friend, Mia, is upset because a partner wants to use protection. You have never used protection either, but you just finished this program at school about pregnancy, HIV and safer sex, and now you feel a lot differently about it.
>
> Your partner dated other people before you and had sex with them. Your partner wasn't your first either. Now you understand how important it is to reduce the risk for yourself and your partner by always using protection.
>
> While Mia is telling you all the reasons for not using condoms or other protection, you are trying to convince Mia that protection is a good idea. Maybe you can get Mia to go to the clinic with you to get protection.
>
> *(continued)*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

Your task is to resist Mia's pressure to have unsafe sex and still keep your friend's respect.

Mia

Your girlfriend told you that if you want to have sex you have to use dental dams. You've heard others talk about this at basketball practice. They say that rubber is nasty and you should feel the "real thing."

You're not trying to be difficult, but nobody is going to force you to use protection! Besides, you only go out with other girls so neither of you is going to get pregnant. And you're not worried about diseases because your new girlfriend is young.

Your friend, Kayla, wants to start using protection because of her class about STIs. You can't even respect Kayla anymore if she can't be real.

Your task is to convince Kayla that protection is a bad idea.

28. Review the participants' responses on the *Observer Checklists* asking the following questions,

- Did Kayla use the SWAT technique?
- Did Kayla say no?
- Did Kayla explain why?
- Did Kayla provide alternatives?
- Did they talk it out?
- What could Kayla have done differently?

29. Process the roleplay using the following questions,

- What kept Mia from using protection?
- What are some of the consequences Mia could be facing for having intercourse without using protection?
- What do you think convinced Kayla to start practicing safer sex?

(continued)

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

(continued)

- Was Kayla able to convince Mia? If so, how? If not, are they still friends?
- Were there any misunderstandings or breakdowns in communication?
- Why is it important to use condoms or dental dams every time you have sexual intercourse or oral sex?

30. Summarize Roleplay C by saying,

> Once you make the decision to protect yourself, convince a friend to do the same. That way, you can both be protected and have some answers for the next friend who needs to know how to stay safer.

31. Have the next pair of participants turn to Roleplay D in their workbooks.

32. Tell observers which character to observe. In Roleplay D, the person is Devon. The goal of this roleplay is for Devon to be proud and responsible and resist pressure to have unsafe sex.

33. Remind observers to fill out the *Observer Checklist* as they watch the roleplay.

34. Read aloud the scenarios for both characters, and then have participants present the roleplay.

ROLEPLAY D

Theme: Initiating use of protection in an existing relationship

Observe: Devon using SWAT

(DEVON and JADON talking)

Devon

You and your partner, Jadon, have been sexually active for a while. However, you have just completed a program called *Making Proud Choices!* You are thinking about the things you didn't know and the things that concern you. You think about your own behaviors. You think about Jadon's past sexual life

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement

© ETR. All rights reserved.

(continued)

and your own past sexual life. And now you begin to worry because you and your partner have been sexually active without using protection. Now you want to use protection. You know Jadon is stubborn and gets jealous very easily. You are afraid to say that you are concerned about HIV because Jadon might believe you are cheating, or even go and find a new partner.

You decide to tell Jadon about the program and all the important information you learned and that you want to use protection if you have sex again. When Jadon arrives, you are looking at the information about STI protection that was given to you at the program.

Your task is to convince Jadon that you want to be proud and responsible and use protection.

Jadon

You have never used a condom or dental dam and don't want to. You have been having sex with Devon for a while now and have never used protection before. You believe that if Devon suddenly wants to use protection, then Devon must be cheating on you. You also believe that condoms/dental dams are not natural and sex won't feel as good if you use them.

Your task is to convince Devon not to use condoms.

35. Review the groups' responses on the *Observer Checklist* by going over each item on the checklist. Include input from the actors as well. Ask the following questions:

- Did Devon use the SWAT technique?
- Did Devon say no?
- Did Devon explain why?
- Did Devon provide alternatives?
- Did they talk it out?
- What could Devon have done differently?

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

36. Continue to process the roleplay using the following questions,

- What methods/strategies did Devon use to get the message across?
- Actors, what pressures were your characters feeling?
- Were there any misunderstandings or breakdowns in communication?
- How would you have practiced safer sex differently in that situation?

37. Summarize Roleplay D by saying,

Condoms don't make a person weak. They don't have to ruin sex. There are different techniques that can make condom use pleasurable and fun. The bottom line is you should take responsibility and be comfortable and confident in your choice to be safer.

38. Have the next pair of participants turn to Roleplay E in their workbooks.

39. Tell observers which character to observe. In Roleplay E, the person is Alex. The goal of this roleplay is for Alex to be proud and responsible and resist pressure to have unprotected sex.

40. Remind observers to fill out the *Observer Checklist* as they watch the roleplay.

41. Read aloud the scenarios for both characters, and then have participants present the roleplay.

ROLEPLAY E

Theme: Possible loss of partner through condom use

Observe: Alex using SWAT

(ALEX and CASEY talking)

Alex

You have been dating Dominique for a few months. You really like Dominique and think this might be serious. You have decided to have sex, but you really want to use condoms.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

Your best friend (Casey), who is dating Dominique's best friend (Chase), doesn't think you should mention condoms to Dominique because you might create trouble in the relationship.

You know Dominique has never used condoms before but you won't have sex without a condom. Besides, you learned how to make condoms feel better.

Your task is to resist Casey's pressure, but not lose the friendship. You think Casey should be using condoms too.

Casey

You and your close friend (Alex) are going out with Chase and Dominique, who are also friends and a few years older than you.

You and Chase have had sex a couple of times and never used a condom. You think you might lose Chase if you ask to use a condom.

Your friend, Alex, is getting very close to having intercourse with Dominique. They're using birth control, but also want to use condoms.

You tell Alex that sex feels much better without condoms (even though you've never tried them).

You're afraid that if Alex insists on using a condom, Alex might lose Dominique.

Your task is to try to convince Alex to have sex without using a condom.

42. Review the group's responses on their *Observer Checklists* by asking,

- Did Alex use the SWAT technique?
- Did Alex say no?
- Did Alex explain why?
- Did Alex provide alternatives?
- Did they talk it out?
- What could Alex have done differently?

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

43. **Process the roleplay using the following questions,**

- What strategy did Alex use to continue to be safer?
- Actors, what pressures were your characters feeling?
- Would anyone have handled this situation differently?
- Did the roleplay seem realistic to you?

44. **Summarize Roleplay E by saying,**

If you value and care about your best friend, you should help your friend make safer decisions. You can even teach your friend how to make condoms pleasurable.

45. **Repeat two of the more successful roleplays, if time allows, using different participants to show how similar situations can be handled in different ways.**

46. **Remind observers to continue to use the *Observer Checklist*.**

47. **Summarize by saying,**

Wow! You have really learned a lot in this program. Your roleplays show that you have picked up quite a few skills also. I hope that you remember and use your knowledge and skills whenever the need arises.

All couples have to communicate and negotiate. And all couples who have decided to have sex must take steps to avoid negative consequences, regardless of their sexual orientation. In a healthy relationship and when you really care about your partner, it's usually easier to talk about safer sex. It's important to choose relationships where both parties care about each other's goals, health and values.

Remember to be proud, be responsible and make proud choices because the choices that you make now can help you reach your goals for the future.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY C

TALKING TO YOUR PARTNER ABOUT SAFER SEX—INFORMATION REVIEW

PREPARING FOR THE ACTIVITY

RATIONALE

This activity provides tips and encouragement for applying the communication and negotiation skills that have been learned thus far, with the hope of ensuring that the knowledge, positive attitudes and skills will translate into behavior.

MATERIALS

None

TIME

5 minutes

PROCEDURE

1. Remind participants that using condoms (and/or dental dams) is an expression of responsibility for yourself and of pride in your own decisions. Say,

> There is no doubt that using condoms and other protection is a good idea because they make sex safer. It is important to choose latex or polyurethane/polyisoprene condoms and use them correctly.
>
> You may have to overcome your partners' reluctance. But, if you choose to have vaginal, anal or oral sex, using a condom (or dental dam) is the first and most important step.

2. Ask participants to brainstorm some suggestions that would make talking to a partner about using condoms easier. (No need to record their responses). Supplement their answers with the following:

> - Think about what you want to say ahead of time. Sort out your own feelings about using condoms and other protection before you talk with your partner.
> - Choose a time to talk before anything sexual happens. Getting things clear before you have sex means you will both be prepared and relaxed.
> - Decide how you want to start the conversation. You might say, "I need to talk with you about something

(continued)

(continued)

that is important to both of us," or "I've been hearing a lot lately about safer sex. Have you ever tried condoms?" or "I feel kind of embarrassed, but I care too much about you not to talk about this."

- The best time to discuss protection is certainly before any touching below the waist.
- Once you both agree to use condoms, do something positive and fun. Go to the store together. Buy lots of different brands and colors. Plan a special day when you can experiment. Just talking about how you'll use all of those condoms can be a turn-on.

3. Ask participants to brainstorm ways to avoid becoming pregnant or infected with HIV or another STI. (No need to record their responses.) Supplement their answers with the following:

- Practice safer sex (use latex or polyurethane/polyisoprene condoms/ dental dams).
- Talk to your sexual partner about pregnancy, HIV and other STIs.
- Insist on using a condom/protection whenever you have sex.
- If you can get pregnant, use an effective method of birth control (IUD, implant, shot, pill, patch or ring).
- Educate yourself about unintended pregnancy, HIV and other STIs.
- Ask about your partner's sexual and drug use history.
- Get tested for and treated for HIV and other STIs.
- Encourage partners with HIV to get ART and stay on treatment.
- Encourage partners with other STIs to get and stay on treatment.
- If you think you might be at risk for HIV because of an infected partner, talk to your doctor about getting on PrEP.

4. **Reinforce tips for consistent condom use by saying,**

> **Protect yourself and your partner by:**
>
> - **Using a latex or polyurethane/polyisoprene condom (or dental dam) every time you have vaginal, oral or anal intercourse.**
> - **Keeping a supply of condoms on hand.**
> - **Getting used to condoms, so they seem natural and fun.**

5. **Summarize what they learned from the program's activities as follows,**

> **We've covered a lot of information in this program. However, I want you to remember 5 very important things:**
>
> 1. **Unintended pregnancy, HIV and other STIs are potential outcomes of unprotected sex that can sometimes make it harder to reach your future goals and can also harm your health.**
> 2. **Whatever you've had to overcome in life, you can use that strength to make proud and responsible choices to avoid these unintended outcomes.**
> 3. **Even if you've had sex in the past, you can choose to abstain from sexual intercourse at this point in your life.**
> 4. **If you're going to have sex, that choice comes with the responsibility to use protection—condoms and/or dental dams to prevent HIV and other STIs, and effective birth control to prevent pregnancy.**
> 5. **Strive to have healthy relationships. Choose to be with someone who cares about your goals and your health. Talk about using protection at a calm time and don't wait until just before or during sex.**

6. **Remind participants of resources,**

> **There are a number of resources we covered throughout the program. I want to make sure you have a list to refer to if or when you need resources or help.**

ACTIVITY D

CLOSING ACTIVITY

PREPARING FOR THE ACTIVITY

RATIONALE

This activity provides participants a sense of closure to the program.

MATERIALS

None

TIME

5 minutes

PROCEDURE

1. Ask the participants to form a tight circle with their chairs.
2. Ask each participant to share how something learned in the group will help in achieving goals and dreams for the future.
3. Thank the participants for their attendance and let them know how much you enjoyed working with them.
4. Summarize the activity by saying,

> Those were good responses. I am very proud of each and every one of you. Thank you for being part of this program. Now you can teach your friends and family what you've learned here.
>
> I have every confidence that you're going to make the proud and responsible choice to always practice safer sex whenever you decide to have intercourse with someone.
>
> Remember, practicing safer sex is the proud and responsible choice to make and will help you achieve your dreams.

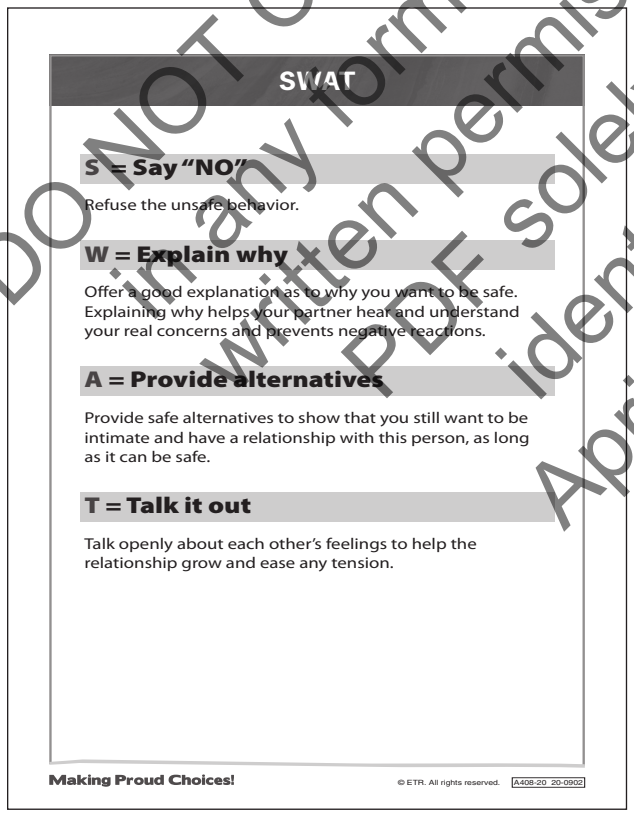
Making Proud Choices! STUDENT WORKBOOK • MODULE 8 25

Worksheet



SWAT

S = Say "NO"

Refuse the unsafe behavior.

W = Explain why

Offer a good explanation as to why you want to be safe. Explaining why helps your partner hear and understand your real concerns and prevents negative reactions.

A = Provide alternatives

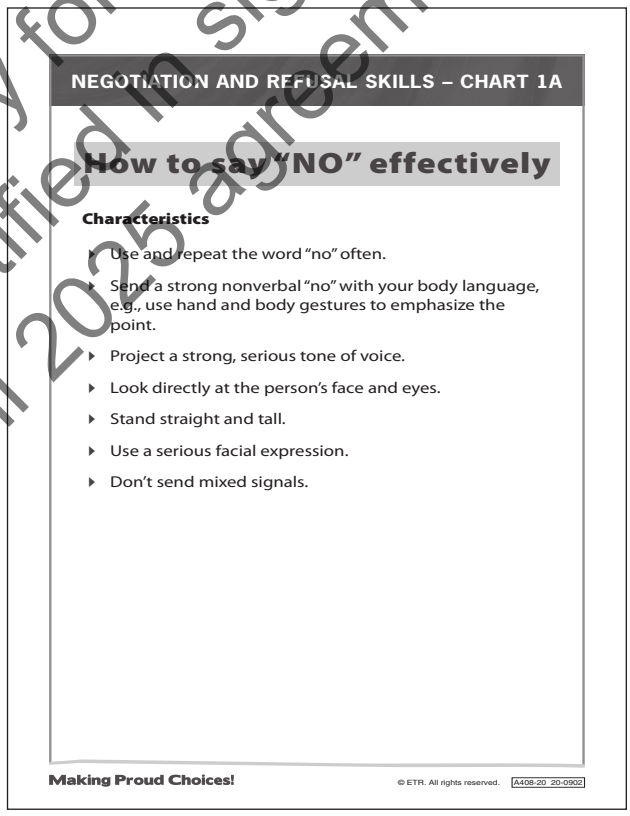
Provide safe alternatives to show that you still want to be intimate and have a relationship with this person, as long as it can be safe.

T = Talk it out

Talk openly about each other's feelings to help the relationship grow and ease any tension.

Making Proud Choices! © ETR. All rights reserved. A408-20 20-0902

Poster



NEGOTIATION AND REFUSAL SKILLS – CHART 1A

How to say "NO" effectively

Characteristics

- Use and repeat the word "no" often.
- Send a strong nonverbal "no" with your body language, e.g., use hand and body gestures to emphasize the point.
- Project a strong, serious tone of voice.
- Look directly at the person's face and eyes.
- Stand straight and tall.
- Use a serious facial expression.
- Don't send mixed signals.

Making Proud Choices! © ETR. All rights reserved. A408-20 20-0902

NEGOTIATION AND REFUSAL SKILLS – CHART 1B

Examples of a strong "NO"

Examples

- No! I'm not ready to have sex yet!
- No! I won't have sex without a condom!
- No! I don't want to touch you there!
- No! Stop touching me like that!
- No! Stop trying to unbutton my pants!
- No! I'm not going to have sex with you!
- No! I really mean 'NO'!
- No! I want to protect myself. We have to use a condom.
- I have not said yes, which means this isn't happening.

Making Proud Choices! © ETR. All rights reserved. A408-20_20-0902

Poster

NEGOTIATION AND REFUSAL SKILLS – CHART 2

Explain why

Give clear reasons to support your choice.

Examples

- I want to protect myself with a condom every time I have sex.
- No, I won't risk my future goals by having unprotected sex.
- Condoms help prevent unintended pregnancy, HIV and other STIs.
- I am not ready to have a child (again).

Making Proud Choices! © ETR. All rights reserved. A408-20_20-0902

Poster

NEGOTIATION AND REFUSAL SKILLS – CHART 3

Provide alternatives

Suggest another action.

Examples

- Let's go buy some condoms right now.
- Let's get out of the bedroom. It makes me feel uncomfortable.
- If you're willing to use a condom, then we can have sex.
- Let's do something else that will feel good for both of us, since we don't have a condom.
- Let's go get something to eat.
- Let's go see a movie.

Making Proud Choices! © ETR. All rights reserved. A408-20_20-0902

Poster

NEGOTIATION AND REFUSAL SKILLS – CHART 4

Talk it out

Discuss your feelings.

Examples

- I feel like you don't really care about me when you pressure me like this.
- I'm not ready to have a baby. I would feel better if we use a condom.
- I'm glad you agreed to use condoms. I feel like you really care about me.
- You really turn me on when you touch me, but I won't have sexual intercourse without a condom.
- If you can't respect my feelings, then I'm prepared to end this relationship.
- Our future goals and dreams are more important than a moment of unsafe pleasure, so I'm glad we decided to use condoms.

ROLEPLAY GUIDELINES

- Read your role carefully and think about how that person would really behave.
- Do your best to stay in character through the whole roleplay.
- Don't let comments and laughter distract you.
- Really try to feel and act like the person you are playing.
- Try things that you might not do ordinarily, just to see how it feels.
- Use SWAT:
  - » **Say NO.** Repeat it. Use strong body language.
  - » Explain **why** you don't want to engage in unsafe behavior.
  - » Provide **alternatives.**
  - » **Talk it out.**

ROLEPLAY A: JAMIE AND TAYLOR

THEME: Loss of trust and sexual pleasure through condom use

OBSERVE: Jamie using SWAT

(JAMIE and TAYLOR talking)

JAMIE

You and your sexual partner (Taylor) are in your partner's living room with the lights down low and things are starting to get physical. You are trying to tell Taylor that you want to use protection, and Taylor is beginning to get angry. Taylor doesn't think sex will feel as good and does not want to use protection. But you want to use protection because you respect yourself. Your health is important to you and you want to protect yourself because you are worth it!

Your task is to convince Taylor that sex can be just as pleasurable with condoms/dental dams.

TAYLOR

You and your partner (Jamie) are at your place and things are getting very intimate. Jamie is starting to talk about using protection and you are getting angry. Does Jamie think you have been sleeping around? You don't think using protection feels good and truly believe it will ruin the mood.

Your task is to convince Jamie to have sex without protection.

CALLING KOKO CALLER 1

Based on what you've learned so far, what advice would you give someone who has questions or concerns about HIV, AIDS and condoms?

In this activity, you will take the role of Koko, who has an HIV Information Hotline for teenagers called, "Calling Koko." Discuss, decide on and write down the advice you would give to the caller. Encourage the caller to make a proud and responsible choice.

Koko,

I've heard that young people are at risk for HIV and the number of HIV cases among young people is growing. I don't want to take any chances of getting HIV. What's the surest way I can protect myself?

- Charlie

CALLING KOKO CALLER 2

Based on what you've learned so far, what advice would you give someone who has questions or concerns about HIV, AIDS and condoms?

In this activity, you will take the role of Koko, who has an HIV Information Hotline for teenagers called, "Calling Koko." Discuss, decide on and write down the advice you would give to the caller. Encourage the caller to make a proud and responsible choice.

Dear Koko,

My girlfriend and I have been going out for a year. We really love each other, and both want to have sex. I trust her, but I'm concerned about HIV. My girlfriend and I are 14 years old, and neither one of us has tattoos, and we don't use drugs. We've been thinking about having sex, but only with each other. Do we have to worry about HIV?

– Raymond

CALLING KOKO CALLER 3

Based on what you've learned so far, what advice would you give someone who has questions or concerns about HIV, AIDS and condoms?

In this activity, you will take the role of Koko, who has an HIV Information Hotline for teenagers called, "Calling Koko." Discuss, decide on and write down the advice you would give to the caller. Encourage the caller to make a proud and responsible choice.

Hi Koko,

Five months ago, I had sex with someone for the first time. We didn't use condoms. I didn't really enjoy it, and he never even called me again. Now I have a new boyfriend and he wants me to have sex, too. Is it possible that I might have been exposed to HIV when I did it before? Now, I'm anxious that I might be infected with HIV. What do I tell my boyfriend? What should I do?

CALLING KOKO CALLER 4

Based on what you've learned so far, what advice would you give someone who has questions or concerns about HIV, AIDS and condom?

In this activity, you will take the role of Koko, who has an HIV Information Hotline for teenagers called, "Calling Koko." Discuss, decide on and write down the advice you would give to the caller. Encourage the caller to make a proud and responsible choice.

It's like this Koko,

I am fifteen years old, and my girlfriend and I have never had vaginal sex. We do other things, though, including oral sex. Before, we just wanted to make sure that she didn't get pregnant. We had never really thought about infections like HIV. But, now I hear that teens my age are getting sexually transmitted infections. Is oral sex safe? How do we protect ourselves from STIs?

– Carmello

CALLING KOKO CALLER 5

Based on what you've learned so far, what advice would you give someone who has questions or concerns about HIV, AIDS and condoms?

In this activity, you will take the role of Koko, who has an HIV Information Hotline for teenagers called, "Calling Koko." Discuss, decide on and write down the advice you would give to the caller. Encourage the caller to make a proud and responsible choice.

What's up, Koko,

I recently found out that a friend of mine is HIV positive and that she's had the virus for years. She's smart, fun to be around, and has only had sex with two guys her whole life. Now I'm afraid to be with anyone because if someone like her can get HIV, how can I know who's safe and who isn't? If she has HIV, then anyone could! I'm scared to date! What should I do?

– Dana

CALLING KOKO CALLER 6

Based on what you've learned so far, what advice would you give someone who has questions or concerns about HIV, AIDS and condoms?

In this activity, you will take the role of Koko, who has an HIV Information Hotline for teenagers called, "Calling Koko." Discuss, decide on and write down the advice you would give to the caller. Encourage the caller to make a proud and responsible choice.

Koko,

I'm a senior this year and plan to go to college, but something happened the other night that I want to ask about. I went to a party. I had a couple of beers and then somebody handed me a joint. Everyone else was smoking too. It was powerful stuff! I had never used drugs before. The next thing I knew I was in the bedroom with this basketball player I kind of had a thing for. We ended up having sex, and I don't even know if we used protection, because I was so high that I forgot to ask. I heard he does this type of thing a lot. Now he barely even speaks to me. I'm afraid that I could have gotten pregnant or gotten infected with an STI like HIV. What should I do?

– Rihanna

SEAN AND MORGAN CASE STUDY

Sean is 3 years younger than Morgan. They've been going out for a while. Sean really likes being with someone who is older. Morgan is a lot of fun and Sean feels more mature and popular when they're together.

Sean is very smart and plans to become a psychologist. Sean has had a tough childhood and very much wants to be independent and successful as an adult. Sean works hard and has a plan for the future.

Morgan really likes Sean. Lately, Morgan's friends have been talking a lot about sex and keep asking if Morgan and Sean have "done it" yet. Morgan figures it's time and begins to pressure Sean about having sex.

When Morgan asks Sean about having sex, Sean feels unsure about what to say. Sean has actually thought a lot about this and doesn't feel ready for sex yet. Yes, Morgan is sexy and Sean feels turned on. But Sean wants to wait until after high school and maybe even college to have sex. Sean does not want to do anything that might interfere with future goals. Sean wants to be able to help young people deal with issues and problems. Sean is concerned about STIs and doesn't want to take any risks.

However, Sean really wants to keep the relationship with Morgan. Sean is concerned about STIs and doesn't want to take any risks.

Today Sean and Morgan are hanging out at Morgan's house. Morgan's grandparents are out for a few hours. They're sitting on the couch, kissing and messing around. They're both breathing hard and things are getting hot and heavy. What can Sean do to avoid having sexual intercourse?

© ETR

SEAN AND MORGAN CASE STUDY (CONTINUED)

Using STOP, THINK and ACT and the questions below, decide what Sean should do to keep from having sex before being ready.

STOP:

What can Sean do to stop?

What can Sean do to stay calm?

THINK:

What is the problem? What is Sean being pressured to do?

What do you think Sean is feeling?

What does Sean think Morgan is feeling?

What are Sean's choices?

What does Sean really want to do?

What alternatives can Sean suggest to Morgan?

What are the possible consequences?

ACT:

What do you think is Sean's best choice?

How should Sean act on that choice?

WHILE THEY'RE OUT (INEFFECTIVE VERSION)

SCRIPTED ROLEPLAY

Setting the Stage:

Your parents are out late. Your partner comes over, hoping to have sex with you. You want to have sex but you want to use condoms. Your partner refuses to use condoms. You decide to share how to make condoms feel much better.

Person 1: Why are you stopping now?

Person 2: Wait. Do you have a condom?

Person 1: No, I told you, I don't like the way those things feel.

Person 2: Yeah, I know.

Person 1: I don't have a condom. I want to be able to feel you, and it doesn't feel as good. Let's just do it without a condom this time.

Person 2: I think there are ways using one can feel good. I don't want to get infected with an STI like HIV.

Person 1: You won't. And I don't need you to show me anything. I know how condoms are used.

Person 2: I know you know how to use them. And you would never give me an STI. Sorry, I freaked out for a minute.

Person 1: Yeah, I mean I love you. Nothing bad is going to happen.

Person 2: You're right.

They keep kissing.

YOUR VALENTINE'S DAY GIFT (INEFFECTIVE VERSION)

SCRIPTED ROLEPLAY

Setting the Stage:

It is Valentine's Day. You and your partner are going out to a movie and dinner. You know that at some point having sex will be discussed. You partner is willing to use condoms, but you're just not ready for any of it. You decide to tell your partner that you want to wait to have sex.

Person 1: Happy Valentine's Day! Here is a little something I bought, though I was hoping our gifts to each other would be more than something from a store.

Person 2: Do you mean you were hoping we would have sex?

Person 1: Yes. You don't have to worry. I have condoms.

Person 2: Oh! You are moving so fast.

Person 1: We have been dating for a while. I love you and I'm ready.

Person 2: Well. I love you but I'm just not sure.

Person 1: Don't worry we're using protection. After all, it's Valentine's Day and what better gift than to share our love?

Person 2: I just have some doubts…I'm scared.

Person 1: You are always going to be scared, but the important thing is that we love each other.

Person 2: *(Reluctantly)* I guess.

They stop talking and begin to have sex.

Person 2: Do you mean you were hoping we would have sex?

Person 1: Yes. You don't have to worry. I have condoms.

Person 2: No. You are moving so fast.

Person 1: No, I'm not. We've been dating for a while. I love you and I'm ready.

Person 2: Well, I'm not. I love you, but I'm not ready to have with sex you. I know you are the person that I want to be with, but I also know that I need you to be understanding and patient. I only want to have sex when I'm absolutely sure—when I'm not scared or in doubt. So the answer is no.

Person 1: Well, I don't want to feel like I'm pressuring you to do something you don't want to do. It's important that you're sure. So, I guess I'll wait until you're ready.

Person 2: Thanks, for understanding. I love you so much and I'm really glad that you are willing to wait.

They kiss and go to the movies.

ROLEPLAY A: JAMIE AND TAYLOR

THEME: Loss of trust and sexual pleasure through condom use

OBSERVE: Jamie using SWAT

(JAMIE and TAYLOR talking)

JAMIE

You and your sexual partner (Taylor) are in your partner's living room with the lights down low and things are starting to get physical. You are trying to tell Taylor that you want to use protection, and Taylor is beginning to get angry. Taylor doesn't think sex will feel as good and does not want to use protection. But you want to use protection because you respect yourself. Your health is important to you and you want to protect yourself because you are worth it!

Your task is to convince Taylor that sex can be just as pleasurable with condoms/dental dams.

TAYLOR

You and your partner (Jamie) are at your place and things are getting very intimate. Jamie is starting to talk about using protection and you are getting angry. Does Jamie think you have been sleeping around? You don't think using protection feels good and truly believe it will ruin the mood.

Your task is to convince Jamie to have sex without protection.

© ETR

ROLEPLAY B: JUSTICE AND ANGEL

THEME: Condom use versus partner trust

OBSERVE: Justice using SWAT

(JUSTICE and ANGEL talking)

JUSTICE

You have been going out with Angel for a while now and you want to talk about using condoms. You know Angel has had sex with other people, and you are concerned about pregnancy and STIs, especially HIV, and want to use a condom. But you also don't want to lose Angel. You think you're falling in love.

Angel may be offended because you're already using the pill for birth control, but you mention condoms anyway. You want to be with Angel, but only if you can be safer.

Your task is to resist the temptation to have unsafe sex but still keep the relationship.

ANGEL

Your partner (Justice) just suggested that you start using condoms. You feel that Justice does not trust you if Justice is afraid to have sex with you without using a condom.

Your older sibling told you that you don't have to use condoms when you really love someone. You want to prove Justice trusts and cares about you by not using condoms.

Your task is to try to convince Justice not to use condoms.

© ETR

ROLEPLAY C: KAYLA AND MIA

THEME: Two friends talk about protection

OBSERVE: Kayla using SWAT

(KAYLA and MIA talking)

KAYLA

Your friend, Mia, is upset because a partner wants to use protection. You have never used protection either, but you just finished this program at school about pregnancy, HIV and safer sex, and now you feel a lot differently about it.

Your partner dated other people before you and had sex with them. Your partner wasn't your first either. Now you understand how important it is to reduce the risk for yourself and your partner by always using protection.

While Mia is telling you all the reasons for not using condoms or other protection, you are trying to convince Mia that protection is a good idea. Maybe you can get Mia to go to the clinic with you to get protection.

Your task is to resist Mia's pressure to have unsafe sex and still keep your friend's respect.

MIA

Your girlfriend told you that if you want to have sex you have to use dental dams. You've heard others talk about this at basketball practice. They say that rubber is nasty and you should feel the "real thing."

You're not trying to be difficult, but nobody is going to force you to use protection! Besides, you only go out with other girls so neither of you is going to get pregnant. And you're not worried about diseases because your new girlfriend is young.

Your friend, Kalya, wants to start using protection because of her class about STIs. You can't even respect Kayla anymore if she can't be real.

Your task is to convince Kayla that protection is a bad idea.

ROLEPLAY D: DEVON AND JADON

THEME: Initiating use of protection in an existing relationship

OBSERVE: Devon using SWAT

(DEVON and JADON talking)

DEVON

You and your partner, Jadon, have been sexually active for a while. However, you have just completed a program called ***Making Proud Choices!*** You are thinking about the things you didn't know and the things that concern you. You think about your own behaviors. You think about Jadon's past sexual life and your own past sexual life. And now you begin to worry because you and your partner have been sexually active without using protection. Now you want to use protection. You know Jadon is stubborn and gets jealous very easily. You are afraid to say that you are concerned about HIV because Jadon might believe you are cheating, or even go and find a new partner.

You decide to tell Jadon about the program and all the important information you learned and that you want to use protection if you have sex again. When Jadon arrives, you are looking at the information about STI protection that was given to you at the program.

Your task is to convince Jadon that you want to be proud and responsible and use protection.

JADON

You have never used a condom or dental dam and don't want to. You have been having sex with Devon for a while now and have never used protection before. You believe that if Devon suddenly wants to use protection, then Devon must be cheating on you. You also believe that condoms/dental dams are not natural and sex won't feel as good if you use them.

Your task is to convince Devon not to use condoms.

ROLEPLAY E: ALEX AND CASEY

THEME: Possible loss of partner through condom use

OBSERVE: Alex using SWAT

(ALEX and CASEY talking)

ALEX

You have been dating Dominique for a few months. You really like Dominique and think this might be serious. You have decided to have sex, but you really want to use condoms.

Your best friend (Casey), who is dating Dominique's best friend (Chase), doesn't think you should mention condoms to Dominique because you might create trouble in the relationship.

You know Dominique has never used condoms before but you won't have sex without a condom. Besides, you learned how to make condoms feel better.

Your task is to resist Casey's pressure, but not lose the friendship. You think Casey should be using condoms too.

CASEY

You and your close friend (Alex) are going out with Chase and Dominique, who are also friends and a few years older than you.

You and Chase have had sex a couple of times and never used a condom. You think you might lose Chase if you ask to use a condom.

Your friend, Alex, is getting very close to having intercourse with Dominique. They're using birth control, but also want to use condoms.

You tell Alex that sex feels much better without condoms (even though you've never tried them).

You're afraid that if Alex insists on using a condom, Alex might lose Dominique.

Your task is to try to convince Alex to have sex without using a condom.

Introduction

Making Proud Choices! An Evidence-Based, Safer-Sex Approach to Teen Pregnancy and HIV/STI Prevention is designed to give adolescents the tools they need to reduce their risk of unintended pregnancy, HIV and other STIs. The goal is to increase knowledge and perception of personal vulnerability, develop positive attitudes toward safer sex, and build the skills and confidence needed to abstain successfully or to use safer sex practices willingly and effectively if they choose to be sexually active.

It isn't easy to motivate people to modify their sexual behavior, even when that behavior puts them at risk. Hence, the model of human behavior used to understand sexual risk behavior in ***Making Proud Choices!*** draws upon social learning theories, and the interventions proposed for changing that behavior reflect a cognitive-behavioral approach. This curriculum has also been informed by data gathered through numerous focus groups as well as the developers' extensive experience working with young people.

In order to encourage young people to adopt less risky behaviors they must be provided with the following crucial tools:

- The information they need to understand the issues.
- The cognitive skills that will allow them to examine their beliefs about personal risks and consequences and to analyze the behaviors or situations that increase their risk of pregnancy, HIV and other STIs.
- The intrapersonal (within self) skills to understand and manage their feelings and thoughts.
- The interpersonal (between self and others) skills to define and exercise behaviors that reduce personal risk.
- A sense of self-efficacy or the confidence required to allow them to make safer decisions about their sexual choices.
- The motivation to apply these skills to their everyday lives.

The ***Making Proud Choices!*** curriculum that follows consists of three sections. The first is a Facilitator's Guide that includes information about facilitating the curriculum, the theory behind it and evaluation of the curriculum with behavioral findings. It also covers curriculum teaching strategies and format of the intervention modules, including information about group agreements and training strategies such as brainstorming, roleplaying, and interactive activities and games. The second is the ***Making Proud Choices!***

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

curriculum itself. The final section, the appendixes, includes optional activities that can be included in the curriculum's implementation, additional information about common STIs, contraceptive methods and drugs, guidelines for managing problem behavior, answers to commonly asked questions and a glossary.

This curriculum is intended to reduce the incidence of unprotected sexual behavior among adolescents and help them make a difference in their lives by making proud and safer choices about their sexual behavior. The facilitator's ability to deliver the information and conduct the exercises contained in this manual will determine the success of the curriculum, so please take the time to carefully read and understand the basic principles, key elements and content of each session. Our collective efforts can help prevent pregnancy, STIs and HIV in adolescents and have a meaningful impact on the lives of our nation's young people.

Overview of the Curriculum

Making Proud Choices! An Evidence-Based, Safer-Sex Approach to Teen Pregnancy and HIV/STI Prevention is an eight-module curriculum designed to empower adolescents to change their behavior in ways that will reduce their risk of becoming infected with HIV and other STIs, and significantly decrease their chances of being involved in unintended pregnancies. The curriculum acknowledges that abstinence is the most effective way to eliminate these risks. However, realizing that abstinence is not the path that many young people will choose, the curriculum spends a great deal of time encouraging the practice of safer sex and condom use. The curriculum also addresses the underlying attitudes and beliefs that many young people have about birth control and condoms, provides information and exercises that teach adolescents how to use condoms correctly and gives them the confidence they need to choose and negotiate safer-sex practices.

Note: Throughout this curriculum the importance of effective and consistent use of protection and contraception are mentioned as an important strategy for reducing the risk of HIV and other STIs, as well as pregnancy. Any reference to protection is meant to include the external (male) condom, internal (female) condom and dental dam. The use of the term protection *is meant to be inclusive of all people, regardless of their gender, sexual orientation or type of usage. The terms* birth control *or* contraception *may be used interchangeably, referring to methods used to prevent pregnancy.*

The ***Making Proud Choices!*** curriculum was designed to be used with smaller groups ranging from six to twelve participants, but it can be implemented with larger numbers as well if more time is built into each session. It is appropriate for various community settings, including schools and youth agencies. The curriculum has 8 hours of content divided into eight 1-hour modules. It can be implemented in the 2-day format (four modules each day), 4-day format (two modules each day) or 8-day format (one module each day).

Curriculum Objectives

At the completion of the ***Making Proud Choices!*** curriculum youth will have:

- Increased knowledge about prevention of HIV, other STIs and pregnancy.
- More positive attitudes/beliefs about birth control and condom use.
- Increased confidence in their ability to negotiate safer sex and to use condoms correctly.
- Increased negotiation skills.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

- Improved condom use skills.
- Stronger intentions to use birth control and condoms if they have sex.
- A lower incidence of HIV/STI risk–associated sexual behavior.
- A stronger sense of pride and responsibility in making a difference in their lives.

Content Outline

The ***Making Proud Choices!*** curriculum has four major components. The first component focuses on goals and dreams and their relationship to adolescent sexual behavior. The second component emphasizes knowledge, including the causes, transmission and prevention of HIV, other STIs and pregnancy. The third component focuses on beliefs and attitudes about condoms, birth control methods, pregnancy, STIs and HIV. The fourth stresses skills and self-efficacy including negotiation-refusal and condom use skills. It also provides time for practice, reinforcement and support.

The Modules

- Module 1: Getting to Know You and Steps to Making Your Dreams Come True
- Module 2: A Possible Outcome of Unprotected Sex: HIV Infection
- Module 3: Attitudes and Beliefs about HIV/AIDS and Condom Use
- Module 4: Strategies for Preventing HIV Infection: Stop, Think and Act
- Module 5: Possible Outcomes of Unprotected Sex: STIs
- Module 6: A Possible Outcome of Unprotected Sex: Pregnancy
- Module 7: Developing Condom Use and Negotiation Skills
- Module 8: Enhancing Refusal and Negotiation Skills

Types of Activities

The ***Making Proud Choices!*** curriculum includes a series of fun and interactive learning experiences designed to increase participation and help adolescents understand the risk behaviors that can lead to pregnancy and STIs, including HIV. Activities are designed to help youth feel comfortable practicing condom use, address their concerns about the negative effects of practicing safer sex and build their condom-use skills as well as their ability to comfortably negotiate safer sex practices.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Facilitators may wish to add time to some of the modules, if possible, to allow for further discussion or to extend and reinforce the skills practice.

The activities involve viewing video clips, playing games, brainstorming, roleplaying, engaging in skill-building exercises and small-group discussions designed to build group cohesion and enhance the learning experience. Each activity is brief, and many require the participants to get up out of their chairs and interact with one another. This maintains their interest and attention in a way that lectures or lengthy group discussions do not. Below is a description of the types of activities used as well as their underlying philosophies and goals.

- The goals and dreams activity encourages the adolescents to consider their goals for the future and to think about how participating in unsafe sex might affect the attainment of these goals.
- Videos are used to depict adolescents in various situations. These videos evoke feelings, thoughts, attitudes, beliefs and stereotypes about pregnancy, HIV and other STIs, sexual involvement and HIV/STI prevention skills that are then discussed in a group setting. In addition to the videos provided with the curriculum, ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.
- The roleplay scenarios are designed to provide participants with the confidence and skills necessary to negotiate condom use. They also recommend a variety of ways in which the prevention skills learned in this program can be implemented in the participants' lives.
- The entire curriculum incorporates the ***Making Proud Choices! Be Proud! Be Responsible!*** theme designed to encourage the participants to be proud of themselves, their families and their community, and to behave responsibly for everyone's sake.

Training

It is highly recommended that educators who plan to teach ***Making Proud Choices!*** receive research-based professional development to prepare them to effectively implement the curriculum with fidelity for the intended target group. ETR provides research-based Training of Educators (TOE) that employs the key components required for quality implementation, including learner engagement, modeling, skills practice and follow-up support. Onsite and regional TOE on ***Making Proud Choices!*** is available through ETR's Professional Learning Services. For more information, please visit www.etr.org/ebi/training-ta/types-of-services.

Adapting This Program for Your Population

Program facilitators are encouraged to make minor adaptations (also referred to as "green light" adaptations) to optimize the program for the young people receiving it. Such adaptations are intended to help tailor the curriculum to the needs of participating youth. Examples of minor adaptations include updating statistics and changing the names or editing the language or scenarios in roleplays to better reflect your youth population.

It's recommended that facilitators work with a small group of youth to review the roleplays and other activities and suggest minor changes to increase relevance before implementation. Other allowable enhancements include teaching reproductive health lessons before starting the program, and adding lessons before or after the curriculum lessons to address additional sexual health issues, such as dating violence or electronic dating aggression.

It is also acceptable to add time to the modules when needed to ensure that all the relevant content can be covered. Lengthening sessions can allow more time for review of previous lessons, discussion, questions, roleplay practice, personalization, video viewing and other activities. This adaptation may increase effectiveness.

Adaptations such as re-ordering the curriculum lessons or inserting additional content into the middle of the program are considered "yellow light" adaptations because they can have an impact on program flow and effectiveness. It's best to discuss these kinds of changes with the program developers first.

Major changes (also referred to as "red light" adaptations) are discouraged and may significantly affect and alter program effectiveness. Examples of major changes include dropping entire activities or lessons, or altering the key messages of the program.

Adaptation guidelines for evidence-based curricula can be found at www.etr.org/ebi and include additional examples of green-, yellow- and red-light adaptations.

Researchers and organizations interested in making significant adaptations to this curriculum for use in an evaluation are asked to contact ETR for support and permission first. Such adaptations might include combining the curriculum with another evidence-based program or adding a new element or component.

CURRICULUM COMPONENTS AND FORMAT

Each module included in the ***Making Proud Choices!*** curriculum contains different activities. Reduced images of worksheets, facilitator materials and posters are included at the end of each module. The first pages of each module explain the following information.

Goals

A set of statements that give the facilitator a reference point for what participants will learn from the module.

Learning Objectives

A set of measurable objectives designed to help the facilitator "spot-evaluate" the extent to which a given activity has been successfully completed by the participants.

Strategies/Methods

A list of methods included in the module to achieve the objectives and goals. For example, these may include videos, mini-lectures, brainstorming and roleplaying.

Materials Needed

A list of equipment and materials needed for the module and for each specific activity.

Implementation Time / Time Needed

The amount of time allotted to each activity in the module (e.g., Lecture—10 minutes; Small-Group Exercise—15 minutes). Facilitators should conduct each activity in the time allotted. Facilitators may wish to add time to some of the modules, if possible, to allow for further discussion of videos and other activities, or to extend and reinforce the skills practice.

Rationale for Each Activity

The rationale for each activity is listed on the first page of the activity. It explains how and why the activity is helpful to participants' learning. All materials and exercises contained in the module are designed to help the participants to achieve these stated purposes.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Activities

Instructions for implementing each activity are fully described. For example, in the case of a roleplay exercise, each character receives a description of his or her circumstances and concerns. These exercises are designed to build prevention skills and are an essential part of the program.

Procedures

The procedures for each activity are numbered and include all the steps necessary to implement the activity. Whenever the facilitator is to say a specific instruction or mini-lecture aloud, the material appears in a box.

For example, the procedure would look like this:

1. **Introduce the activity by saying,**

> **We are going to do a brainstorming activity now. What I'd like you to do is . . .**

Although it is not necessary to say verbatim what appears in the box, facilitators should be sure that the content and tone are conveyed. Some facilitators find that memorizing the materials works best for them. The group will probably be more attentive if they do not think the facilitator is reading to them.

Facilitator Notes

Facilitator notes give tips to facilitators about implementing the activity. These notes appear at different points in the curriculum where background information or special teaching suggestions are provided. They are contained within a shaded box, as in the following example.

FACILITATOR'S NOTE

Be sure to post the group agreements on the wall at all times. The group agreements should be posted throughout all the sessions of the program.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Mini-Lecture Notes

Where mini-lectures appear in the curriculum, the lecture notes provide the key ideas to be presented; however, it is assumed that the facilitator will possess a working knowledge of the concepts being taught.

Summary Statements

Each activity and module ends with a brief statement from the facilitator about the key take-away messages for participants.

Student Workbooks

Student workbooks for participants include worksheets for individual and small-group work and roleplay materials. The workbook contains all the needed worksheets for the curriculum activities.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

THEORETICAL FRAMEWORK

Research shows that curricula are most effective if they are based on a sound theoretical framework. ***Making Proud Choices!*** draws upon three theories: the social cognitive theory, the theory of reasoned action, and its extension, the theory of planned behavior. These theories have been shown to be of great value in understanding a wide range of health-related behaviors.

Two major concepts are included in these theories: (1) self-efficacy or perceived behavioral control beliefs, which are defined as people's confidence in their ability to take part in the behavior, e.g., use a condom; and (2) outcome expectancies or behavioral beliefs, which are beliefs about the consequences of the behavior. Experience shows that all of the beliefs below are critically important to change behavior. The ***Making Proud Choices!*** curriculum addresses each of the principles, usually in more than one activity.

Below is a description of the two types of self-efficacy or perceived behavioral control beliefs emphasized in ***Making Proud Choices!***

Practicing safer sex is easy: "I can do it"

Many young people find it difficult to practice safer sex because of peer pressure, partner pressure and their perception of how others think of them. Therefore, they are less likely to negotiate condom use with their partners. In Module 3, youth examine their attitudes and beliefs about condom use, and in Modules 7 and 8, youth learn how to negotiate condom use with their partners.

Getting your partner to cooperate in practicing condom use is easy: "I can do it"

Practicing safer sex within a relationship is not something participants can do by themselves. They need the cooperation of a partner. Unfortunately, many participants' partners may not be willing. For example, attempts to negotiate condom use may be interpreted as mistrust, belief that the other person is not "clean" or some other misperception. Be sensitive to participants' desires to maintain their partners' interest and avoid conflict.

At the same time, participants need opportunities to practice responding to their partners' objections tactfully and effectively. In Modules 7 and 8, the youth are taught negotiation skills that they can practice through roleplays and other interactive exercises.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Below is a description of the four types of outcome expectancies or behavioral beliefs emphasized in the ***Making Proud Choices!*** curriculum:

Goals and Dreams Beliefs

The belief that unsafe sex, unprotected sex and having sex at a young age could have an impact on one's goals and dreams for the future, including education and a career. In Module 1, the participants engage in a Goals and Dreams Activity and discuss obstacles to their goals and dreams including the potential outcomes of unprotected sex. This belief is incorporated throughout the curriculum.

Prevention Beliefs

The belief that condoms can reduce the risk of pregnancy, HIV and other STIs. This belief is incorporated throughout the curriculum.

Partner-Reaction Beliefs

The belief that one's partner would not approve of condom use and react negatively to it. This might prevent a person from practicing safer sex. In Modules 7 and 8, participants learn negotiation and refusal skills necessary to communicate with their partners about condom use.

Personal Vulnerability to HIV/STI and Pregnancy Beliefs

Before young people change their behavior, they must have a reason, or source of motivation to do so. Unless adolescents see how they can personally benefit from doing something differently (for example, practicing safer sex), no amount of skill will be enough to produce change. Many young people do not believe that pregnancy, HIV or other STIs could really happen to them. One goal of ***Making Proud Choices!***, then, is to increase participants' sense of personal risk. Personal risk refers to a person's belief that "pregnancy or HIV/STI infection could happen to me." This is addressed throughout the curriculum, and specifically in Modules 2, 5 and 6.

UNIQUE FEATURES OF THE *MAKING PROUD CHOICES!* CURRICULUM

Making Proud Choices! has a unique approach that is successful with adolescents. Three major themes serve as the foundation for this curriculum and its implementation.

The Community and Family Approach

A key component of the approach is the strong emphasis on family and community. The importance of protecting one's family and community is used as a motive to change individual behavior. This strategy differs from the traditional approach of HIV prevention, which focused solely on protecting oneself as the motive to change risky behavior. The ***Making Proud Choices!*** theme encourages adolescents to be proud of themselves and to abstain from sex or practice safer sex in order to prevent sexually transmitted infections and pregnancy, not only for their own sake, but for the sake of their families and community as well.

The Role of Sexual Responsibility and Accountability

Learning to be sexually responsible and accountable is something that adolescents need to be taught. ***Making Proud Choices!*** teaches participants to make responsible decisions regarding their sexual behavior, urges them to respect themselves and others, and stresses the importance of developing a positive self-image. They learn that being responsible and practicing safer sex, if they choose to have sex, can contribute to reaching their goals and dreams.

The Role of Pride and Making Proud Choices with Safer Sex as Their Choice

Adolescence can be a difficult period of development. Adolescents are often faced with confusion, mixed emotions and uncertainty. They are bombarded with sexual messages from various sources, including the media, popular music and their peer group. They are often pressured to be sexually active. They struggle with issues of self-esteem, self-respect and self-pride. Because of this, it is extremely important that they learn to feel good about themselves and their decision to practice safer sex. ***Making Proud Choices!*** illustrates that making proud choices about safer sex and condom use can actually lead teens to develop a sense of pride, self-confidence and self-respect. The roleplay exercises and other skill-building activities reinforce the many positive benefits, both psychological and physical, of practicing safer sex.

EVALUATION OF THE CURRICULUM

Evaluation is a critical component of the ***Making Proud Choices!*** program. Many health promotion programs have been implemented in schools, churches, clinics, community-based organizations and other venues, but unfortunately, very few of them include formal evaluation components. Through rigorous research methods, the developers have explored whether or not the interventions designed in this curriculum actually result in the desired outcomes. For example, they set out to determine whether adolescents who participated in ***Making Proud Choices!*** did indeed develop more positive outcome expectancies regarding safer sex, and whether such effects were evident up to 12 months after the intervention. Below is a description of the study and its results.

In the research study, the 8-hour curriculum, ***Making Proud Choices!***, was implemented in a small group setting with African-American male and female adolescents between the ages of 11 and 13 on two consecutive Saturdays in three different middle schools. In this random control trial, 659 6th and 7th grade African-American male and female adolescents, mean age 11.8, were stratified by gender and age and randomly assigned to receive one of three 8-hour curricula: an abstinence curriculum, a safer sex curriculum or a health promotion curriculum (which served as the control group). The adolescents received the curriculum in small groups of six to eight students led by either an African-American adult facilitator (mean age 40) or two peer African-American co-facilitators (mean age 16).

The participants completed questionnaires before, immediately after, and 3, 6 and 12 months after the intervention. Of the original 659 participants, 97% returned to complete the 3-month follow-up questionnaire, 94% completed the 6-month, and 93% completed the 12-month follow-up. The primary measures were HIV risk–associated sexual behaviors. The secondary measures were variables from the theory of planned behavior and the social cognitive theory, including knowledge, beliefs, norms, intentions and self-efficacy regarding abstinence and condom use.

Since the original evaluation study, newer editions of the curriculum have been published. Updates to factual information are made to ensure medical accuracy and changes to language help keep the program activities relevant to a new generation and broader range of youth.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

BEHAVIORAL FINDINGS

The participants who received the ***Making Proud Choices!*** safer sex curriculum reported:

- More consistent condom use and less unprotected sex in the 3 months after the intervention than did those in the control group.
- A higher frequency of condom use at the 3-, 6-, and 12-month follow-up sessions than did those in the control group.
- ***Making Proud Choices!*** was especially effective with sexually experienced adolescents. For instance, among participants who were sexually experienced at baseline, those in the safer sex groups reported less sexual intercourse in the previous 3 months at the 6- and 12-month follow-up than the control group. In addition, they reported less unprotected sex at all three follow-up sessions than the control group.

Other Significant Findings

- The adult and peer facilitators were equally effective. There were no differences in intervention effects on behavior with adult facilitators as compared with peer co-facilitators.
- The adolescents who received the ***Making Proud Choices!*** curriculum scored higher in condom use knowledge; believed more strongly that condoms can prevent pregnancy, HIV and other STIs; believed more strongly that using condoms will not interfere with sexual enjoyment; expressed greater confidence that they could have condoms available when they needed them; and reported greater confidence that they could exercise sufficient impulse control to use condoms and greater self-efficacy for using condoms than did those in the control group.

Facilitator Information

CURRICULUM TEACHING STRATEGIES

Making Proud Choices! uses several strategies to facilitate behavioral change. Each strategy is defined below and its use in the curriculum is described.

STRATEGY 1: Setting the Environment: The Group Agreements

Module 1 is designed to create a safe, nurturing, non-threatening environment for participants, stimulate their interest in the group, and provide them with more detailed information about the program. The group agreements that will govern participation in the group should be developed during Module 1. This presentation should permit and encourage discussion designed to give members a sense of participation in the group's decision making. That is, members should be encouraged to accept and live by the standards they agree upon and seek to alter those they wish to change. This is also a good time to provide reassurance to group members about concerns they may have about confidentiality, embarrassment and fear of active participation.

Steps to Creating Group Agreements

- Brainstorm possible agreements.

  For example:

  - Respect each other's opinions.
  - One person speaks at a time.
  - No name-calling.
  - Confidentiality.
  - Begin and end on time.

- Clarify and discuss.
- Eliminate any agreements not acceptable to all.
- Come to a group consensus on all agreements.
- Invite participants to bring up additions/deletions as the need arises.
- Let participants know that everyone is responsible for following and determining the group agreements.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

General Tips for Improving Group Cohesion and Performance

The following tips can help build group cohesion:

- Frequently reward positive behavior (e.g., during demonstrations or exercises).
- Be supportive.
- Give compliments.
- Be non-judgmental.
- Respect participants' feelings and boundaries.
- Model appropriate assertive behavior.
- Be firm when necessary.
- Demonstrate concepts and give examples when possible.
- Keep the language simple.
- Encourage group members to share their experiences at their own pace.
- Build on strengths.
- Listen.
- Let the group members react, think and analyze.
- Be flexible.
- Be patient with the process and try different approaches until you find one that works.
- Clearly convey your expectations for how group members treat each other and how they participate.
- Encourage participation through reinforcement, teaching communication skills, modeling sensitive material, and being supportive, respectful and inclusive regardless of the group members' opinions and beliefs.
- Demonstrate acceptance and respect for all participants, regardless of personal characteristics, including race, cultural background, religion, social class, sexual orientation and gender identity.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

STRATEGY 2: Brainstorming

Brainstorming is a technique used to rapidly generate as many ideas as possible, within a given (usually brief) period of time, about a particular question, topic or problem.

For example: Important Concerns of Youth

Participants are encouraged to spontaneously express their thoughts and reactions (and the facilitator usually records each idea). No evaluation or criticism of ideas is allowed during this part of brainstorming. Participants simply say whatever comes to mind.

For example:

- Family
- Friends
- Money
- Having sex, or not
- Clothes
- School
- Relationships
- Peer pressure
- Pregnancy
- Violence
- Drug use
- Getting a job
- Popularity
- Music
- HIV and other STIs

The facilitator may ask probing questions to elicit certain types of ideas or information.

Once a list has been generated, the group then discusses, evaluates and/or processes each idea (giving neither credit nor blame to the person who suggested it).

For example: Ask the group "why" each item is an important concern to youth, or how each item impacts their lives.

If the task requires it, the group may then choose to prioritize, categorize or select the best idea(s).

For example:

- On which of these things can you have a positive impact? How?
- Which of these things would be healthier to avoid or prevent? How?
- Which five items do you think represent the most important concerns of youth? Why?

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

For our purposes, brainstorming will be used primarily as a method for:

- Assessing the knowledge of the group members—How much do they already know?
- Introducing new information at a level appropriate to the group—Bridging.
- Stimulating discussion—Asking probing questions.
- Processing information—Clarifying and reinforcing the main points or objectives.

Positive Characteristics About Brainstorming:

- Permits the facilitator to assess group dynamics: Who are the active members? How does the group respond?
- Builds group cohesion.
- Permits everyone to learn from the information that is generated.
- Permits the opportunity to assess knowledge and skills of the group.

Principles of Brainstorming:

- Try to get out as many ideas as possible.
- Participants can say anything that comes to mind.
- DON'T EVALUATE IDEAS; a later time can be set aside for evaluation.
- DON'T DISCUSS SUGGESTIONS; a later time can be set aside for discussion.
- Allow repetition.
- Encourage everyone's participation.
- Encourage building on other ideas.
- Allow periods of silence.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

STRATEGY 3: Interactive Activities and Competitive Games

Interactive activities and competitive games give the participants the opportunity to practice what they learned. One of the best strategies for teaching young people is to use fun, interactive and competitive activities, and many such activities are included in this curriculum.

Games and activities are a good strategy for teaching content. Games often promote rich discussion as participants work hard to prove their points. Because games can promote competition, remind participants of the group agreements prior to the game.

Facilitators—remember to read the instructions and game rules prior to teaching the game, and make adaptations as necessary.

STRATEGY 4: Processing a Video or Game

The practice of processing after an activity allows participants to reflect upon what they learned/experienced. Processing also allows the facilitator to draw out the key points of the activity. The most common way to process is to ask a series of questions or make a series of statements.

For example:

- Ask open-ended questions designed to elicit discussion.

  General Reactions

  » What did you think of the video?

  » What is your response to the activity?

  » How do you think Pat felt when…?

- Encourage all participants to contribute. In some groups, there are a few participants who may be less willing to volunteer during the discussion. The following techniques may be used to encourage all participants to contribute.

  Personal Reactions

  » How did you feel about…?

  » Describe what you saw.

  » What will you do as a result of…?

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Sentence Stems

» Ask each participant to complete a phrase such as, "The most important thing I learned was…." Move quickly around the room. Give participants the right to pass.

"I" Statements

» I learned that…

» I felt that…

» I was pleased that…

» I was disappointed that…

STRATEGY 5: Working in Small Groups

Discussion Guidelines

- Set up simple guidelines that encourage each person to participate.
- Be clear about the purpose of the small-group work.
- Use cooperative groups whenever possible to help participants develop positive interpersonal skills while working toward a common goal.
- Set definite time limits.
- Plan ahead for how you will assign participants to groups and how you will assign roles within groups.
- The room and seating should facilitate discussion within the group as much as possible, without disturbing other groups.
- You need not remove yourself from the discussion; however, you should encourage group members to rely on each other for problem solving and decision making.
- Remind participants when time is about to run out. Use a chime, train whistle, music, or some other clear sound to bring people back to the large group.
- Set clear norms, emphasizing that everyone's opinion is valuable, and that the group is working toward an atmosphere of trust.
- Determine the goal of the discussion, and periodically remind the group of that goal.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

- Encourage participants to become good listeners.
- Allow plenty of time for responses.
- Redirect conversation if one participant tries to dominate.
- Try to engage the more quiet participants by making longer eye contact or asking for their contribution.

STRATEGY 6: Roleplaying/Practice

This method of acting out imaginary situations allows participants to practice using a new skill. It provides an opportunity for participants to take risks with new ways of behaving in a safe situation without fear of failure, and to see how their peers will react to their behavior.

Steps

- Select roleplayers or ask for volunteers.
- Set the scene. Describe the situation carefully, but briefly.
- Give brief, clear instructions.
- Start the action.
- End the situation if it becomes stalemated or repetitive.
- Leave time to discuss:
  - What happened.
  - Why it turned out the way it did.
  - Whether it turned out as desired.
  - Who would have had to do what to make it turn out differently.

Tips for Making Roleplays Successful

- Set and follow norms or ground rules for group behavior.
- See yourself as the director of a movie.
- Make every effort to allow participants to volunteer. Urge everyone to participate.
- Set the scene.
- Rehearse.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

- Record to ensure transfer.
- Start with low-risk situations and move to high-risk situations. It may be beneficial to begin with scripted roleplays and then move to unscripted roleplays.
- Give continuous positive reinforcement.

Practice

Practice combines elements of roleplay and small-group work. Practice of specific skill steps is crucial for learning to occur. It should be a structured process.

Roleplay practice and learning may be enhanced if facilitators:

- Give participants a choice on whether or not to participate.
- Encourage participants to improvise during roleplays to make them more their own.
- Reinforce participants for using the specific skill.
- Give participants a specific role:
  - » Roleplayer
  - » Observer
- Develop structured methods for observing and providing feedback.
- Teach participants how to give feedback that focuses on the behavior, not the individual.
- Provide feedback on the skill-user's posture, tone, speech, eye contact and ability to follow the steps of the skill.

Whenever participants take on a role, particularly if it is "negative" in some way, it is important to "de-role" them, so elements of the role do not remain in the group's perception of the person. For example, at the end of the roleplay take the roleplay cards away and say, "You are no longer in this role."

STRATEGY 7: Student Workbooks

Student workbooks for participants include quiz questions, worksheets for small-group work and roleplay materials. The workbook contains all the needed worksheets for the curriculum activities.

DO NOT COPY OR DISTRIBUTE

GENERAL TIPS FOR PREPARING TO IMPLEMENT THE CURRICULUM

- Review the curriculum manual ahead of time.
- Review the format of the manual, which consists of goals, objectives, preparation, materials and a detailed outline of what the facilitator should say and do for each activity.
- Become familiar with all activities, videos and curriculum materials.
- Make sure you have all the necessary equipment and materials.
- Review the supplemental background information provided in Appendix B about HIV, other STIs, contraceptive methods and effects of alcohol and other drugs.
- Learn about local resources such as health departments and family planning clinics.
- Know the policies of school districts and community agencies in regard to implementing new programs, discussing issues of sexuality and gaining parental support and permission.

Tools for Online Implementation

A set of PowerPoint slides has been created to facilitate implementation of the curriculum, particularly in virtual settings. These slides are available under the Adaptation Guidelines & Tools tab on the *Making Proud Choices* page of ETR's Program Success Center at www.etr.org/ebi/programs/making-proud-choices. The slides summarize key content and instructions for group activities and can help facilitators present the information and guide activities.

ETR provides additional support and guidance for virtual implementation of evidence-based programs and other curricula, including tip sheets on a variety of considerations for online learning. These can be found at ETR's Design4Learning page at www.etr.org/design-4-learning.

Materials

Making Proud Choices! uses the following materials at various points in the curriculum. Use this checklist to prepare for teaching. Some of the items will need to be prepared prior to beginning the sessions; others can be developed as part of the process.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Materials Needed (Not Included in Implementation Kit)

Pencils (enough for each participant)
Markers
Masking tape
Garbage bag
Monitor and device for showing videos, or internet access if using alternative videos
Condoms (one per participant or pair plus demonstration condoms)
Water-based lubricant
Condom demonstrator(s)
Small paper bag
Roll of paper towels
Chart paper
Index cards (1 labeled with a star, 1 labeled with a triangle, 1 labeled with a rectangle, 3–5 labeled with a circle for a group of 6–8)

Pre-Labeled Chart Paper

Group Agreements
Why Some Teens Have Sex
Possible Outcomes of Unprotected Sex
Proud and Responsible Prevention Strategies
Goals (written on left side of chart paper)
Making Proud Choices! Be Proud! Be Responsible!
The Hard Way Characters: Kenrick, Miguel, Renee, Mom, Dad and *Koko*
How STI Are Transmitted
Reasons to Avoid STIs
Contraceptives
Ways to Make Condom Use Easy and More Fun (for high school youth)
Ways to Make Condom Use Easy (for middle school youth)
Pros
Cons
Excuses Sexual Partners Give

Materials Included in Implementation Kit

Cards

Risk Behavior cards
The Hard Way character cards (*Kenrick, Miguel, Renee, Mom, Dad* and *Koko)*
Condom Line-Up cards

Posters

Goals and Dreams Timeline
HIV/AIDS Frame
Key Words
Risk Continuum signs
STOP, THINK and ACT
STI
Steps for Using a Condom
Agree/Disagree signs
Birth Control Choices
SWAT
Negotiation and Refusal Skills (Charts 1A, 1B, 2, 3, 4)
Observer Checklist
Roleplay Guidelines
Physical Changes of Puberty (optional)
TREO (optional)

Student Workbook Pages

Goals and Dreams Timeline
Calling Koko Callers (1–6)
Sean and Morgan Case Study
While They're Out Scripted Roleplay (Ineffective and Effective Versions)
Your Valentine's Day Gift Scripted Roleplay (Ineffective and Effective Versions)
Roleplay A: Jamie and Taylor
Roleplay B: Justice and Angel
Roleplay C: Kayla and Mia
Roleplay D: Devon and Jadon
Roleplay E: Alex and Casey
Observer Checklist

MODULE 1

GETTING TO KNOW YOU AND STEPS TO MAKING YOUR DREAMS COME TRUE

GOALS

The goals of this module are to:

- Provide participants with an overview of the program.
- Increase participants' personal investment and comfort in participating in the program.
- Increase participants' ability to identify realistic goals for their future.
- Increase participants' confidence about making proud and responsible choices to protect themselves and their community from unintended pregnancy, HIV and other STIs.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- Identify several agreements for group participation that will facilitate discussion and learning.
- Identify what it means to be proud and responsible.
- Describe the benefits of proud and responsible behavior.
- Identify at least two reasons why teens have sex, the possible outcomes of sex, and strategies for reducing possible negative outcomes.
- Describe at least one goal they wish to achieve in the future.
- Identify barriers to achieving their personal goals and strategies for overcoming them.

MODULE PREVIEW

The first module: (1) informs participants about the program; (2) creates a safe space for talking about sexuality; (3) generates enthusiasm about ***Making Proud Choices!***; (4) promotes the goal of protecting themselves and their community; and (5) gives them ideas about how they can examine their own goals, and obstacles that might stand in the way of reaching them.

STRATEGIES/METHODS

- Mini-Lecture
- Brainstorming
- Welcome Activity
- Goals and Dreams Timeline Exercise
- Group Discussion

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- *Goals and Dreams Timeline* poster
- *Goals and Dreams Timeline* worksheet in the student workbook

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Markers
- Pencils
- Masking tape
- Pre-labeled chart paper:
  - » *Group Agreements*
  - » *Why Some Teens Have Sex*
  - » *Possible Outcomes of Unprotected Sex*
  - » *Proud and Responsible Prevention Strategies*
  - » *Goals*
  - » *Making Proud Choices! Be Proud! Be Responsible!*

PREPARATION NEEDED

1. Before the program begins, label all of the charts as listed under Materials.
2. Hang the pre-labeled charts in the order they will be used. Fold and tape the charts so the titles remain covered by the bottom half of the sheet until you use them.

INSTRUCTIONAL TIME: 60 minutes

ACTIVITY	MINUTES NEEDED
A. Welcome and Program Overview	5
B. Welcome Activity	10
C. Creating Group Agreements	5
D. Making Proud Choices! Be Proud! Be Responsible! Brainstorm	5
E. Brainstorming About Teens and Sex	10
F. Goals and Dreams Timeline	15
G. Brainstorming Obstacles or Detours Along Your Timeline	10

ACTIVITY A

WELCOME AND PROGRAM OVERVIEW

PREPARING FOR THE ACTIVITY

RATIONALE

Providing participants with a general overview of the program will foster excitement and enthusiasm about participating.

MATERIALS

None

TIME

5 minutes

PROCEDURE

1. Welcome the participants and introduce yourself.

2. Present the purpose and format of the program by saying,

> This program is called *Making Proud Choices*. It will give you the tools to protect yourself and others from unintended pregnancy and sexually transmitted infections—STIs, sometimes called STDs—including HIV, the virus that causes AIDS.
>
> This program focuses on knowledge, attitudes and prevention skills related to pregnancy, HIV and other STIs. It also focuses on relationship issues, sexual behavior, decision making and negotiating in difficult situations. It's designed to teach specific information about ways to reduce your risk of getting pregnant or becoming infected with STIs, including HIV.
>
> Although STIs can be prevented, many young people don't take precautions because they don't believe they are at risk of getting an STI. Anyone can get an STI, including HIV, from having unprotected sexual intercourse with a partner who is infected.
>
> Unintended pregnancies can be prevented too. Many teen parents have been able to create successful lives for themselves and their children, especially when they have the support of some caring adults. However, they have to work a lot harder to do so. It's easier to reach your goals if you postpone having a child, or, if you're already a parent, postpone having another child.
>
> *(continued)*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

If you're going to have sexual intercourse, it's critical to use birth control to prevent unintended pregnancy and protection such as condoms or dental dams. Let's clarify the terms we will be using. When we speak of ***protection***, we will be referring to *condoms* and *dental dams*. When we say ***condoms***, we will be referring to *external condoms* and *internal condoms*. External condoms are also known as male condoms. Internal condoms are also called female condoms.

Do you think teens should be worried about unintended pregnancy, HIV and other STIs?

3. Pause to allow participants to answer.

4. Then say the following,

The people who designed this program care about the lives of young people. They want you to have the knowledge and skills to protect yourselves and others against pregnancy, HIV and other STIs.

To make the program interesting and fun, it includes videos, exercises and games that I hope you will enjoy. Although the information is serious and important, I hope we can learn together and have a good time.

Other young people who've participated in this program have said they had a good time, learned a lot and would recommend it to their friends. I hope you will like it too.

Who has questions?

5. Answer any questions the participants have about the purpose or format of the program.

6. Summarize by saying,

Now that you have some idea of what to expect, let's get started.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY B

WELCOME ACTIVITY

PREPARING FOR THE ACTIVITY

RATIONALE

The Welcome Activity encourages participants to feel like important contributors to the group and gives them an opportunity to express their thoughts and feelings.

MATERIALS

None

TIME

10 minutes

PROCEDURE

1. Have the participants sit in a circle.

FACILITATOR'S NOTE

If you know your participants and they already know each other this is an optional activity. An icebreaker that encourages group cohesion can be used in its place.

Sitting in a circle facing each other can build group cohesion. Have the participants sit on the floor, have them move their chairs close to each other, or set aside a special area of the room to accomplish this. Adapt this activity to accommodate group dynamics and environment. If creating a circle is not feasible, have the speaker toss a soft toy to the next speaker to encourage engagement.

2. Explain the Welcome Activity by saying,

> Let's introduce ourselves and get to know a little about each other.
>
> Each person will have a chance to speak. When you are finished speaking, the person sitting on your left will speak next.
>
> If you're not ready when we come to you, you may pass and we will come back to you later. I will speak first and when it is your turn please share your name, your age, the school you attend, your pronouns if you want to share, and something else you'd like us to know about you. For instance you might tell us about a hobby or favorite activity.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

3. **Model the Welcome Activity by beginning with yourself,**

> My name is _____ and I am _____.
> *(age)*
>
> I attend(ed) _____.
> *(high school, college or university)*
>
> When referring to me, please use the pronouns _____ or _____.
>
> I like to…(share something you enjoy doing).

4. **Ask the person on your left to speak next. Encourage each group member to speak. When the Welcome Activity is complete, thank each person for sharing.**

5. **Summarize this activity by saying,**

> Thanks to all of you for sharing a little about yourselves. During the program, we will get to know more about each other and what is important to each of us.

FACILITATOR'S NOTE

Asking participants to tell you their pronouns is a way of creating a safe space for transgender or gender nonconforming youth. Reinforce that sharing pronouns is optional; some youth may not feel comfortable sharing their pronouns and thus "outing" themselves. Model what you want participants to say by giving your own pronouns. Some transgender youth might have typical pronouns (he/she/his/her/their) or they might request more creative pronouns such as hir or zir. Pronouns don't always line up with what observers might expect based on a person's perceived biological sex. The simple act of requesting pronouns sends the message that transgender and gender nonconforming youth are welcome and respected in the group.

You can also use alternative sentence stems in the introductions. Here are some ideas:

- One of my favorite TV shows or movies is _____.
- The best movie/book I've ever seen/read is _____.
- An item on my bucket list is _____.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY C

CREATING GROUP AGREEMENTS

PREPARING FOR THE ACTIVITY

RATIONALE

Group agreements help participants feel more secure in a group setting and help facilitators provide structure when discussions become difficult or awkward. Developing guidelines as a group builds group cohesion and increases the likelihood that the agreements will be followed.

MATERIALS

- Pre-labeled chart paper:
  - *Group Agreements*
- Markers
- Masking tape

TIME

5 minutes

PROCEDURE

1. Begin this activity by unfolding the pre-labeled chart paper titled *Group Agreements* and saying,

> We're going to be talking about sexuality, pregnancy and STIs—topics that sometimes can cause people to feel nervous or uncomfortable. What guidelines or agreements could we put in place to help make sure that everyone in the group feels safe, comfortable and able to participate?

2. Have participants brainstorm a list of agreements or guidelines for the group to follow. As the participants offer guidelines, write them on the chart paper titled *Group Agreements*.

3. Make sure the list includes the following suggestions. Be sure to cover confidentiality, right to pass and respecting diversity.

> **GROUP AGREEMENTS AND GUIDELINE SUGGESTIONS**
>
> **Confidentiality:** When people share private information in this group, it should be kept private. If, for example, someone shares about crying because of hurt feelings, it would be a violation of the group agreements to discuss or joke about this outside the group. We will not talk about any personal information we hear in this group outside of this group.
>
> *(continued)*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

There is one exception. If any of you tell me something that might cause you or someone else harm, I will have to tell someone for safety reasons—for example, if you told me you were going to hurt yourself or someone else, or if someone talks about being abused in any way. Please know that it is important to tell and to get help if you or someone else is being harmed. I encourage you to talk to me before or after the session, or to talk with another trusted adult outside of this group.

No put-downs: Show respect for others, even if you disagree with them. If someone says something that you disagree with, it would be a violation of the group agreements to say, "That's stupid" or "You're wrong." Instead, say that you have a different idea and share it. All questions are important. There is no such thing as a "silly question."

Be supportive of each other: We will be discussing important and sometimes personal information about making choices and risky behaviors. At times you may talk about yourself, your peers and your partners. Everyone in this room is different and has had different experiences. It is important that we respect these differences by not laughing at anyone or making put-down statements.

Use "I statements": When we talk about personal subjects, we sometimes make assumptions about how others feel. In this group, it is important to talk about how YOU feel, think or act and not about how you think "all teens" or "all your friends" feel, think or act.

Right to pass: Sometimes when talking about subjects such as sexuality, someone might not want to talk or might have an uncomfortable feeling or memory. If you ever feel like being quiet or not sharing, it's OK to just listen. If I call on you or someone asks you a question, you can say, "I pass." Always take care of yourself. All group members have the right not to respond to any question they do not wish to address.

Move up, move back: If you tend to talk a lot in groups, talk less (move back) sometimes so others can talk. If you tend to be very quiet, share more (move up) and participate a little more so the group can benefit from your ideas.

Dealing with discomfort: Sometimes certain conversations or topics can bring up uncomfortable feelings for people. If anything makes you feel uncomfortable during our sessions, let me know. If you need to step outside for a few minutes, we can arrange that. Also it's OK to distract yourself by

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

doodling or using another strategy that helps you feel comfortable. Please come to me with any issues or concerns you have. If I can't help, I can connect you with people or resources that can help.

Respect diversity: Let's keep in mind that there's diversity in society and in this group. Individuals come from different family backgrounds, different racial and cultural groups and different living situations. Some young people have already had romantic relationships; others aren't even thinking about it. Some have had sexual intercourse. Some have had sex because they chose to; others may have had sex against their will. Some may identify as gay, lesbian, bisexual or straight. Some may identify as male, female or transgender.

Young people may express themselves in ways that don't conform with their biological sex. There are many ways that youth can express their gender identity.

Being open to diversity can help reduce stereotyping, which can be very harmful to a young person. Stereotyping individuals imposes restrictions on their opportunities for individual expression and limits personal growth.

Besides, all of these differences make us unique. Regardless of how you see yourself, your background, previous relationships or experience, each of you has a place in this group. This will be a safe space for everyone.

Other agreements you should include if participants do not mention them:

- Listen to others.
- Don't interrupt.
- Allow everyone to participate.

4. **Define terms related to diversity as needed.**

I want to be sure everyone understands some of the terms we use when talking about diversity.

Gender refers to the ideas in a culture or society about the appropriate ways for men and women to dress, behave, think and feel. Ideas about what gender behavior is appropriate change in different cultures and at different times in history. Sometimes one gender is given more power or status than another.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

Gender identity is peoples' inner understanding of what gender they identify with. It may be man, woman, something in between, or something that doesn't fit these labels. It may be the same as ***(cisgender)*** or different from ***(transgender)*** the sex they were assigned at birth. Gender identity is unique for each person.

Gender expression is how a person represents or expresses gender identity to others, often through behavior, clothing, hairstyles, voice or body characteristics.

Sexual orientation refers to the romantic and sexual attraction people feel for others. People can be attracted to others of the same gender, a different gender or more than one gender.

5. Ask participants if they have any other suggestions they would like to add.

6. Once the list is complete, re-read each agreement and ask all group members to nod and say "yes" that they agree to follow that guideline.

7. Summarize this activity by saying,

> You did a great job creating the list! I will post our group agreements each time we meet so we can all see it and remember those guidelines.
>
> I am excited and feel that we can work well together and respect each other by following our group agreements. I look forward to working with all of you.

FACILITATOR'S NOTE

Be sure to post the group agreements throughout all the sessions of the program.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY D

MAKING PROUD CHOICES! BE PROUD! BE RESPONSIBLE! BRAINSTORM

PREPARING FOR THE ACTIVITY

RATIONALE

This activity introduces the theme of the program, ***"Making Proud Choices! Be Proud! Be Responsible!"*** The emphasis on being proud and responsible provides a motivation for engaging in health-protective behavior and for encouraging others to do the same.

MATERIALS

- Pre-labeled chart paper:
  - *Making Proud Choices! Be Proud! Be Responsible!*

TIME

5 minutes

PROCEDURE

1. Tape the *Making Proud Choices! Be Proud! Be Responsible!* chart paper on the wall.

2. Open the discussion by saying,

> The title of this program is *Making Proud Choices!*

3. Then say,

> In this activity we are going to do some brainstorming. In brainstorming, you just say whatever comes to mind about a particular issue or question. I want you to brainstorm the answer to three questions.
>
> What does it mean to make proud choices? What does it mean to be "proud"? What does it mean to be "responsible"?

4. Have participants brainstorm answers to these questions. Record their answers on the chart paper or a dry erase board.

Make sure their responses include:

» ***Making Proud Choices*** means doing things that you feel good about, that your family and community will respect and that will help you achieve your goals and dreams.

» To ***Be Proud*** is to feel happy and pleased about something you've done or accomplished, to feel that you have lived up to your expectations or behaved according to your own or community values.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2026 agreement.

© ETR. All rights reserved.

» To ***Be Responsible*** is to be dependable, dedicated, reliable, committed, truthful and trustworthy.

5. **Explain that,**

Being proud and responsible means that you value yourself and you believe you are worthy! Each one of you has value. Each one of you is worthy. You have to behave in ways that show you understand your worth. Proud and responsible behavior also extends into the area of sex. It means talking with friends, partners and family members about behaviors that put them at risk of STIs and unintended pregnancy and encouraging them to protect themselves. If you are going to have vaginal, anal or oral sex, it means using protection such as an external or internal condom or dental dam.

We know that some young people have been sexually abused, and they didn't get to make a choice. Youth who have survived something like that can use that inner strength in the future to choose when they do and don't want to have sex and to always protect themselves and their partners from STIs and unintended pregnancies. If you are currently in a situation where you don't get to make your own choices about sexual activity, I encourage you to reach out to me or another trusted adult to get help.

6. **Then ask,**

What are the benefits of making proud choices and engaging in proud and responsible behaviors? What do we gain by being proud and responsible?

Make sure answers include:

» Feel better about yourself

» Have healthier relationships

» Stay out of trouble

» Accomplish your goals

» Make people feel proud of you

» Reduce your risk of pregnancy, HIV and other STIs

» Have a healthier body

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

» Stay in school

» Feel like you are helping your loved ones and your community

Always use protection AND effective birth control. By acting responsibly you can feel proud because you're protecting yourself, your sexual partners and the families and communities you've formed. You can play a big role in preventing unintended pregnancy and STIs in your community.

FACILITATOR'S NOTE

Post the chart with participants' list of words to describe what it means to be proud and responsible. You can refer back to their list throughout the program when encouraging the participants to make proud choices.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY E

BRAINSTORMING ABOUT TEENS AND SEX

PREPARING FOR THE ACTIVITY

RATIONALE

By exploring issues about teens and sex, participants become more aware of the pressures they face and the choices they may have to make. It gives the facilitator more information about the thoughts and feelings of the participants and helps the participants learn about the focus of the program.

MATERIALS

- Pre-labeled chart paper:
  - *Why Some Teens Have Sex*
  - *Possible Outcomes of Unprotected Sex*
  - *Proud and Responsible Prevention Strategies*
- Markers
- Masking tape

TIME

10 minutes

PROCEDURE

FACILITATOR'S NOTE

As you facilitate this activity and the entire program, keep in mind that for some youth pregnancy and parenting are intentional. The reasons are complex. There may be family, cultural and community influences—in some families, cultures and communities, young parenthood is prized and has been modeled. Some youth place high value on parenthood because they see it as a realistic life option when they don't see options such as post-secondary education and/or a career as viable. Others see a baby as someone who will always love them. While it is impossible to fully address these complex motivations for pregnancy and parenting in this model, the program approaches pregnancy prevention by offering concrete information, positive attitudes and beliefs, and many opportunities for skill practice.

1. For this activity, use the pre-labeled chart paper (folded so that the titles are covered by the bottom half of the chart paper). Unfold the chart paper sheets one at a time, as needed.

2. Introduce the activity by saying,

> We are going to do some more ***Brainstorming***. Remember in brainstorming, you just say whatever comes to mind about a particular issue or question.

3. Unfold the sheet of chart paper titled *Why Some Teens Have Sex*, and then say,

> Why do you think some teens your age are having sex?

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

The responses should include the following:

- For pleasure or sexual release
- To keep a partner/because partner expects it
- To have fun
- To satisfy curiosity
- To express feelings of love or affection to a partner
- To get attention or affection
- To feel more grown up
- To be popular
- To get back at parents
- To have a baby
- To fit in with peer group
- Loneliness
- To feel loved or needed
- Problems at home/living situation
- See it on TV, online or in the movies
- Forced
- To increase status in peer group
- Low self-esteem
- To prove masculinity/femininity

4. **Write all of the participants' comments on the chart paper.**

5. **Compliment their good ideas.**

6. **Summarize as follows,**

As we can see, there are many reasons teens have sex. Regardless of the reasons, if they don't use protection to prevent unintended pregnancy or STIs, they can face outcomes that could make it harder to accomplish their hopes and dreams for the future. Let's look at some of the possible outcomes of unprotected sex.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

7. **Unfold the next chart paper, *Possible Outcomes of Unprotected Sex*.**

8. **Then ask,**

> **What are some of the possible outcomes of unprotected sex?**

9. **Have participants brainstorm the possible outcomes of unprotected sex, and write all of their comments on the chart paper. (Be sure to include pregnancy, HIV and other STIs.)**

10. **Compliment the group on how much they know.**

11. **Next, unfold the chart paper titled, *Proud and Responsible Prevention Strategies* and ask,**

> **What are some ways to prevent these possible negative outcomes?**

12. **Have participants brainstorm ways to prevent possible negative outcomes of unprotected sex.**

13. **Write all of the participants' comments on the chart paper. (Emphasize that protection—such as latex (or polyurethane/polyisoprene) condoms—can help prevent pregnancy and sexually transmitted infections, including HIV.)**

14. **Compliment the group on how much they know.**

15. **Point to their lists and summarize by saying,**

> **As we can see by your lists, there are many reasons teens may have sex. We can also see there are many possible negative outcomes to having sex. Yet, there are some proud and responsible strategies for preventing those negative outcomes. You did a great job generating your lists. Throughout our lessons together we will be looking at many of these issues more closely. First, let's examine our goals and dreams and see how having unprotected sex can have an impact on them.**

ACTIVITY F

GOALS AND DREAMS TIMELINE

PREPARING FOR THE ACTIVITY

RATIONALE

To achieve their goals, participants need to think about their future and to understand that their present behavior will have an impact on what they will be doing 5 and 10 years from now.

MATERIALS

- Pencils
- *Goals and Dreams Timeline* worksheet
- *Goals and Dreams Timeline* poster
- Pre-labeled chart paper:
  - *Goals* (Write Goals on the left side of chart paper)

TIME

15 minutes

PROCEDURE

1. Display the *Goals and Dreams Timeline* poster.

2. Introduce the exercise by saying,

> Everything and everyone has a past, present, and future. This next activity will help you take a closer look at your past, present, and future.

FACILITATOR'S NOTE

Record some things from your own life that you are proud of doing on the *Goals and Dreams Timeline* poster. Provide examples for each section. Be mindful that this activity may be challenging for some young people who may struggle to identify with the idea of setting future goals or even with reflecting on their own accomplishments, particularly in a group setting where the range will vary and young people may feel as if what they've done or want to do isn't "good enough." Listen for these insights and help youth recognize that their timelines will all differ based on things such as their experiences, interests and/or what brings them joy. When you model the activity include a range of accomplishments, taking care to highlight achievements beyond acquiring goods such as a car or house. This will help participants understand what you want them to do and encourage them to recognize their own varied accomplishments.

3. Have participants turn to the *Goals and Dreams Timeline* worksheet in their workbooks. Give the following instructions:

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

This is a timeline that will help you think about what you have already accomplished in the past year and what you want to accomplish in the future. There are three sections. In the first section, write your age and any things you've already accomplished or things you are proud of. This can be anything that's meaningful for you. For example, volunteering your time, playing for a sports team, getting certain grades, getting a job, learning something new, joining a club, winning a student election, getting a learner's permit, an artistic or musical performance, advocating for others, etc.

4. Give participants 1–2 minutes to complete the first task.

5. Then give the following instructions:

Move on to the second section on your timeline. Imagine yourself 5 years from now. That will be 20__. Write down the age you will be in 5 years. Think of at least one thing you hope to have achieved 5 years from now.

Write down at least one thing you hope or want to make happen in this section. In 5 years, what do you hope to be proud of doing? You can write more than one thing if you like.

6. Give participants 1–2 minutes to complete the second task.

7. Then give the following instructions:

Move on to the third section of your timeline. Imagine yourself 10 years from now. That will be 20__. Write down the age you will be in 10 years. Write down at least one thing you hope or want to make happen in the next 10 years. In 10 years, when you look back, what do you hope to be proud of doing?

You can write more than one thing if you like.

8. Allow 1–2 minutes for participants to complete their timelines.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

9. **Then encourage each participant to share with the group one item from each section by going around the room and asking,**

> Looking ahead 5 years, what goal do you want to achieve or thing do you hope to do? How about in 10 years?

10. **Next say,**

> I want you to now choose one of your goals or hopes and write it on the back of your timeline. Next to that item, write two things you must do to achieve it or make it happen.

11. **While they are working on this, unfold the *Goals* chart paper. Circulate and provide support to anyone who seems to be struggling. Some youth need a little extra coaxing or encouragement to identify and voice their goals or aspirations. Be prepared to provide a few examples, such as graduating from high school, going to college, getting trained in a skill, buying a car or getting a good job. Have participants share the goals they've chosen and the actions they must take to achieve them.**

12. **Write these goals on the left side of the *Goals* chart paper, leaving space on the right half for items in the next activity.**

13. **Compliment participants on their answers.**

14. **Summarize the activity by saying,**

> You can achieve your goals with a little planning and organizing, and by making proud and responsible decisions. Reaching your goals will make you and the people you care about proud. Remember that you are capable of doing whatever you put your mind to.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

FACILITATOR'S NOTE

Some youth may be struggling to meet basic needs such as food, shelter or safety. Others may have experienced a traumatic event. Validate all of their accomplishments and their hopes. Be careful not to minimize or praise any accomplishments or hopes in such a way that creates a hierarchy, as no goal is better or more important than another.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY G

BRAINSTORMING OBSTACLES OR DETOURS ALONG YOUR TIMELINE

PREPARING FOR THE ACTIVITY

RATIONALE

Directing participants' attention to the potential obstacles they may face when pursuing their goals and dreams encourages them to develop strategies to avoid, surmount or reduce those obstacles.

MATERIALS

- Pre-labeled chart paper:
  - *Goals* (from the previous activity)
- Markers
- Masking tape

TIME

10 minutes

PROCEDURE

1. Refer to the *Goals* chart paper from the previous activity.

2. Write "Obstacles" on the right side of the chart paper.

3. Ask the participants to brainstorm things that might prevent them from achieving the goals and dreams they listed by saying,

> We have just listed our goals and dreams. Now let's talk about some of the things that may get in the way of us reaching our goals and dreams. These are called obstacles. They are like roadblocks or detours along the way. What obstacles can you think of that may get in the way of your goals?

Answers should include:

» Unintended pregnancy or an uncurable STI such as HIV

4. Write their responses under "Obstacles or Detours" on the right side of the *Goals* chart paper with a different color marker.

5. Say,

> If you've already encountered any of these obstacles or detours, you understand how your life can change. Things can work out just fine but it may be harder.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

6. **Ask the following questions,**

> • **How can we avoid some of these obstacles or detours?**
>
> • **What can you do to make sure you don't get pregnant, get someone pregnant or get a chronic disease such as HIV?**

7. **Pick a few of the key obstacles and discuss ways to avoid, overcome or reduce them. If there are any teen parents in the group, ask them if they would like to discuss ways they have been able to manage the additional responsibility of raising a child and still accomplish their goals.**

8. **Summarize by saying,**

> **I'm impressed with your goals. For the rest of the program, we'll be looking at ways to overcome obstacles and navigate detours so you can reach your goals. If you decide to have sex, you can avoid negative outcomes such as unintended pregnancy and STIs by choosing not to do anything risky, or reducing your risk by using protection and effective birth control or engaging is less-risky behaviors.**
>
> **You're worthy of all the good things you imagine for your future. Each time we meet you'll gain knowledge, beliefs and skills to empower you to make proud choices! I look forward to working with you.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

MODULE 2

A POSSIBLE OUTCOME OF UNPROTECTED SEX: HIV INFECTION

GOALS

The goal of this module is to:

- Increase participants' knowledge about HIV/AIDS and HIV risk–associated behavior.
- Help participants identify behaviors that place people at risk for contracting sexually transmitted infections, including HIV infection.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- Identify the basic facts about HIV and AIDS.
- Distinguish facts from falsehoods about HIV and AIDS.
- Identify a person's risk of HIV infection as a result of engaging in various sexual and non-sexual behaviors.
- Identify which behaviors are low risk and no risk for contracting HIV infection.
- Identify how HIV infection can be prevented.

MODULE PREVIEW

The second module: (1) clarifies myths about the causes, transmission and prevention of HIV while providing correct factual information; (2) provides opportunities for participants to develop skills in giving correct information on HIV/AIDS to friends; and (3) helps participants identify various behaviors that place them at risk for HIV infection.

STRATEGIES/METHODS

- Question-and-Answer Session
- Video Viewing
- Exercise
- Game

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- *HIV/AIDS Frame* poster
- *Key Words* poster
- Video: The Subject Is HIV (or alternative videos*)
- *True or False: HIV Statements* (included in module)
- *Risk Continuum* signs
- *Risk Behavior* cards

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Monitor and video player, or internet access if using alternative videos
- Chart paper
- Markers
- Masking tape

PREPARATION NEEDED

1. Set up the video(s) to be ready to play.
2. Review the *True or False: HIV Statements* and get comfortable with the content.
3. Review the information about HIV in Appendix B.

INSTRUCTIONAL TIME: 60 minutes

(*Note:* Facilitators may wish to extend the time to allow more thorough discussion of the video.)

ACTIVITY	MINUTES NEEDED
A. Discussing HIV and AIDS	**10**
B. *The Subject Is HIV* Video and Discussion*	**25**
C. True or False: HIV	**10**
D. HIV Risk Continuum	**15**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.

ACTIVITY A

DISCUSSING HIV AND AIDS

PREPARING FOR THE ACTIVITY

RATIONALE

Learning basic information about HIV and AIDS will provide participants with a foundation from which to work on attitudes and behaviors later in the program.

MATERIALS

- Posters:
  - *HIV/AIDS Frame*
  - *Key Words*

PREPARATION

- Review the information about HIV in Appendix B.

TIME

10 minutes

PROCEDURE

1. Hang the *Key Words* poster and *HIV/AIDS Frame* poster.

2. Direct participants' attention to the *HIV/AIDS Frame* poster and ask the following questions.

FACILITATOR'S NOTE

This activity is a discussion using a series of questions. Most youth already have some information about HIV. Invite participants to answer the questions and correct any misinformation. Keep this activity brief as all of the information will be reviewed again in the video *The Subject Is HIV*.

HIV/AIDS FRAME POSTER — QUESTIONS & ANSWERS*

How do people get HIV?

- **Through sex.** Anyone who has unprotected vaginal or anal sex with someone who has HIV can get HIV. There is also some risk of transmission through oral sex, but it is very low.
- **By sharing needles** for injecting drugs, vitamins, steroids or hormones, or for tattooing, piercing or any other reason.
- **From mother to child** either before or during birth. In a few cases HIV has been passed from mother to child through breastfeeding. A pregnant woman with HIV can take medicines to greatly lower the risk of her baby being born with HIV.

(continued)

* Centers for Disease Control and Prevention. 2019. HIV basics. https://www.cdc.gov/hiv/basics/index.html. Accessed 6/9/2020.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

What common body fluids can transmit HIV?

HIV is found in the blood, semen, vaginal fluids and rectal fluids (the mucus that lines the rectum to help with elimination of waste) of someone with HIV. It is passed from person to person through these body fluids.

How is HIV *not* transmitted?

HIV is not transmitted by casual, day-to-day contact between people. It is not transmitted through the air. It must get inside the body to infect a person.

People can't get HIV from:

- touching, coughing or sneezing
- toilet seats, eating utensils, swimming pools, water fountains, door knobs or phones
- casual contact such as hugging, kissing or sharing food
- donating blood
- tears, saliva, sweat or urine
- mosquitoes or other insects

Who is at risk?

It is what people do, not who they are, that puts them at risk for HIV.

People are at risk for HIV if:

- They have sex with someone who's had other partners.
- They have sex without using a latex condom or other protection.
- They share needles or syringes to inject drugs, or had sex with someone who has.
- They share needles or other sharp objects for tattooing, piercing or any other reason.

How can you prevent HIV?

- Don't have vaginal or anal sex.
- Never inject drugs or share needles for any reason.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

How can you reduce your risk of HIV?

- **Use a latex condom each and every time for vaginal or anal sex.** Barrier use during oral sex can further reduce the very low risk of getting HIV through oral intercourse. People who are allergic to latex can use polyurethane or polyisoprene condoms. Protection includes external or internal condoms and dental dams.
- **Avoid having multiple or overlapping partners.** The more sex partners a person has, the greater the chances of contracting HIV or another STI.
- **Discuss HIV with a partner.** Ask about past or present risk behaviors. Be sure any sex partner has been tested before having sex. Discuss ways that you can reduce your risks together such as using condoms, taking PrEP, or regular testing.
- **Get tested for HIV.** The only way to know your HIV status is to get tested. The only way for your partner to know their HIV status is for them to get tested.
- **Take medication, if needed.** If you are having sex or sharing needles with someone who is living with HIV, talk to a medical provider about taking pre-exposure prophylaxis (PrEP). If you think you were exposed to HIV, ask about taking post-exposure prophylaxis (PEP).
- **Don't use alcohol, marijuana or other drugs** that impair judgment. Being high can lead to unsafe sex or other drug use.

3. Direct participants' attention to the *Key Words* poster. As you review the questions, point to the key word on the poster.

4. Review the following questions using the *Key Words* poster. Encourage all the participants to try to answer them. Supplement their answers with the information below each question.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

KEY WORDS POSTER — QUESTIONS & ANSWERS

What is HIV?

HIV stands for human immunodeficiency virus. It is the virus that causes AIDS (acquired immunodeficiency syndrome). People who have HIV in their bodies are said to be living with HIV or to be HIV positive.

HIV damages the body's immune system, which normally protects the body from disease. The immune system becomes weaker until it can no longer fight off different types of infections.

There is no cure for HIV, but treatments can be started while the person still feels healthy. With these medicines, people with HIV can lead longer and healthier lives than ever before.

What is AIDS?

AIDS stands for acquired immunodeficiency syndrome. AIDS is the stage of HIV when the immune system has become very weak and damaged. When this happens, other diseases and infections can enter the body, including types of pneumonia, yeast infections, cancers and brain infections. These are called "opportunistic infections" because they take advantage of the weakened immune system.

How is AIDS different from HIV?

HIV is the virus that enters the body and damages the immune system. People can live with HIV for years without getting sick. They may look and feel healthy and may not even know they have the virus. People who are taking medicine to treat HIV may be in this stage for several decades, although they can still transmit HIV to others.

AIDS is the condition that develops as a result of the damage done to the immune system. As the amount of virus in the body starts to go up and the CD4 cell count begins to go down, the person may begin to have symptoms. A person with HIV is diagnosed as having AIDS when the CD4 count drops below a certain level, or when certain opportunistic infections develop.

What is the immune system?

The immune system is the body's defense against infections and diseases. When the immune system works as it should, white blood cells patrol the body and attack germs, viruses and other organisms that shouldn't be there.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2026 agreement.

© ETR. All rights reserved.

(continued)

HIV attacks specialized white blood cells called CD4 or T-cells. As the number of properly working CD4 cells decreases, the immune system becomes weaker until it can no longer fight off different types of infections. The most common treatments for HIV limit the ability of the virus to reproduce. They help protect the immune system and improve the chances of staying healthy.

Common Tests for HIV Available at a Clinic:

If you get a test in a health care setting or lab, a health care provider or lab technician will take your sample (blood or oral fluid). If it's a rapid test, you may get test results in 30 minutes or less, but if it is a laboratory test, it can take several days for your results to be available. Your health care provider or counselor may talk with you about your risk factors, and answer any questions you might have. They will discuss next steps with you if your result is positive.

Rapid tests are usually done with blood from a finger prick or with oral fluid, and the results are ready in 30 minutes or less.

Laboratory tests require a blood sample.

- If the test comes back negative, and you haven't had a possible exposure during the previous 3 months before the test you took, you can be confident you don't have HIV.
- If your test result is positive, the lab will conduct follow-up testing, usually on the same blood sample as the first test.

Common Tests for HIV Available Over the Counter:

Home Access requires a finger prick to collect a blood sample. The person sends the sample to a licensed laboratory and gets the results by phone as early as the next business day. This is an anonymous test. Anyone who tests positive is immediately offered a follow-up test, counseling and referral to treatment.

The OraQuick In-Home HIV Test provides results in 20 minutes and involves swabbing inside the mouth to get an oral fluid sample and testing this sample with a test kit. A positive test needs a follow-up test at the testing site, counseling and other referrals. HIV infection may show up later after exposure in an oral fluid test than a blood test, because the level of antibody in oral fluid is naturally lower.

(continued)

What is the window period?

The "window period" is the length of time between when a person first gets HIV and when a test can accurately detect it. This varies from person to person, and depends on the type of test done. During the window period, even before knowing about being infected, a person can transmit HIV to others. People getting tested at a clinic should ask their health care provider about the window period for the type of test they are taking. People testing at home should review the materials that come with the home test kit. If a test is taken within 3 months after possible exposure and the result is negative, the person should get tested again in another 3 months to be sure.

Why is early treatment so important?

There is no cure for HIV, but anti-retroviral treatments (ART) can be started while the person still feels healthy. If people with HIV remain in medical care and continue to take the medicines to keep low viral loads, they can live long, healthy lives.

Why is it important to use condoms?

A condom is a form of protective barrier that prevents the exchange of body fluids such as semen, vaginal fluids or rectal fluids. Latex is a type of material used for external (male) condoms and is effective in preventing HIV transmission. People who are allergic to latex can use condoms made of polyurethane or polyisoprene. Condoms made of lambskin do not protect against HIV because they have pores that are large enough for the virus to pass through. Another form of protection is the internal (female) condom, which is made of nitrile and is safe for people with latex allergies. The other form of protective barrier is the dental dam, which is also made of latex. Any type of condom cut into a flat sheet can serve as a dental dam.

What is PrEP? What is PEP?

Pre-exposure prophylaxis (PrEP) is a medicine taken daily to reduce the risk of HIV infection. If someone is at very high risk for HIV, PrEP might be right for them. PrEP should be considered if someone is HIV-negative and in an ongoing sexual relationship with an HIV-positive partner. PrEP also should be considered for people who are not in a mutually monogamous relationship

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

(continued)

with a partner who recently tested HIV-negative, and if they are

- A person with a penis who has had anal sex without a condom with another person with a penis, or who has been diagnosed with an STI in the past 6 months
- A person who does not regularly use condoms during sex with partners of unknown HIV status who are at very high risk of HIV infection (for example, people who use injection drugs or women who have bisexual male partners)

Post-exposure prophylaxis (PEP) is an HIV medicine that can be taken after being potentially exposed to HIV to prevent becoming infected. If someone is HIV negative or doesn't know their HIV status and thinks they have recently been exposed to HIV during sex (for example, if a condom breaks), they should talk to their health care provider or an emergency room doctor about PEP right away (within 3 days). The sooner someone starts PEP, the better; every hour counts. If prescribed PEP, it is necessary to take it once or twice daily for 28 days.

What does U=U mean?

U=U means Undetectable = Untransmittable. If a person living with HIV has fewer than 200 copies of HIV per milliliter of blood, they are considered virally suppressed and the infection is undetectable on tests. Medications are used to suppress the virus so it becomes undetectable. People with undetectable viral loads cannot transmit the virus sexually to their partners.

Will everyone with HIV get sick eventually?

While complications from HIV infection are possible, current treatments and medications are giving people with HIV a positive prognosis and near-normal lifespan. HIV is now considered a chronic disease. If people with HIV remain in medical care and are able to continue to take the medications to keep low viral loads, they can live long, healthy lives. Patients living with HIV would then be vulnerable to the same health conditions that affect all people as they age.

5. Summarize by saying,

Now you know the basics about HIV infection. These are the facts that can help you make proud choices so you can reach your goals and dreams.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY B

THE SUBJECT IS HIV VIDEO AND DISCUSSION*

PREPARING FOR THE ACTIVITY

RATIONALE

Reinforcing information via a motivating video increases the possibility of reaching more teens who learn quickly through music videos and other television programs.

MATERIALS

- Monitor and video player, or internet access if using alternative videos
- Video: *The Subject Is HIV*, or alternative videos

PREPARATION

- Review the information about HIV in Appendix B.

TIME

25 minutes

(*Note:* Allow more time for discussion of the video, if possible, to help participants personalize the information and to answer any questions they may have.)

PROCEDURE

FACILITATOR'S NOTE

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. A list of alternative videos and discussion questions can be found at www.etr.org/ebi/alternative-videos.

1. Introduce the video by saying,

> This video you are going to see will discuss HIV/AIDS, what it is, how you can get it, and how to prevent infection. Afterward, we will talk about the video. Pay close attention to messages about how people can and cannot become infected with HIV, about injection drug use and about condom use.

2. Show the video, which is 18 minutes long.

3. At the end of the video, ask the participants to brainstorm answers to the following questions:

> What did they mean when they said "you can't get HIV from things you share?"

Answer:

» You can't get HIV from casual contact (e.g., combs, toilet seats, telephones, eating after someone).

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

What was the message about condoms in the video?

Answer:

» Use condoms every time you have anal, oral or vaginal sex.

What was the message about needle sharing?

Answer:

» Do not share needles or works.

What were the messages discussed between the young people in the library?

Answers:

» Don't have sex before you are ready.

» Don't let anyone pressure you to have sex.

» If you have sex, you must use a latex (or polyurethane/polyisoprene) condom.

What were the messages discussed between the students in biology class?

Answer:

» It's important to talk with your partner about using protection.

» If a person respects themselves and their partner, they will use a condom.

» Not having sex is a good way to avoid pregnancy, HIV and other STIs.

4. **Summarize this activity by saying,**

You did a great job answering those questions and remembering the important messages in the video(s).

(continued)

© ETR. All rights reserved.

(continued)

HIV infection can happen to anyone who engages in risky behaviors. The choice is yours. I want you to make proud and responsible choices, so if you choose to have sex, choose to use protection.

FACILITATOR'S NOTE

Some statistics have changed since the video was produced. In 2018, youth ages 13 to 24 accounted for an estimated 21% of new HIV infections in the United States. The most recent data on young people and HIV can be found at: www.cdc.gov/hiv/group/age/youth/index.html

ACTIVITY C

TRUE OR FALSE: HIV

PREPARING FOR THE ACTIVITY

RATIONALE

Distinguishing facts from falsehoods about HIV provides an opportunity for learning the correct information about HIV/AIDS.

MATERIALS

- Markers
- Chart paper (for keeping score)
- Masking tape
- *True or False: HIV Statements* (included in module)
- *HIV/AIDS Frame* poster

TIME

10 minutes

PROCEDURE

1. This activity reviews facts about HIV/AIDS. Refer to the *HIV/AIDS Frame* poster throughout the activity to help participants understand the answers.

2. Introduce the *True or False* activity by saying,

> The activity we are about to do will show just how much you know about HIV and how to protect yourself.

3. Put the words "True" and "False" on the board or a sheet of chart paper.

4. Explain the activity,

> I am going to divide you into two teams. I will then read each team a statement and ask you whether it is true or false and why. If your team answers correctly, you will get two points. If your team can correctly explain why it's true or false, then you get two more points. If your team answers incorrectly, then the other team has a chance to steal the question and get two points for correctly explaining why it's true or false.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

5. **Divide the group into two teams.**

6. **Go around to each team one at a time and read a statement from the *True or False: HIV Statements*.**

7. **Ask the first team to identify it as true or false and to state *WHY*.**

8. **Ask the second team if they agree. (If there is a disagreement, teach the right answer and explain why.)**

9. **If the second team agrees, but the answer is wrong, teach the right answer and explain why.**

10. **If the second team agrees and the answer is right, give the team the correct number of points.**

11. **Read the next statement to the second team.**

12. **The game is over when the statements are completed or time is up, whichever comes first.**

13. **Summarize by saying,**

> **When you believe in things that just aren't true, especially about HIV, it can cause you to make unhealthy choices. Knowing the facts can make all the difference.**
>
> **Understanding that HIV can affect anyone helps people understand that they need to always protect themselves.**
>
> **You can share this knowledge with your friends, family and partners. Your knowledge will help you protect yourself and reduce your risk of HIV.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

TRUE OR FALSE: HIV STATEMENTS

[Do *NOT* change the order of the statements]

1. **Having sex with someone who uses injection drugs is a way a person can get HIV.**
   TRUE
2. **Having unprotected anal sex increases your chances of getting HIV.**
   TRUE
3. **You can tell by looking at people whether they have HIV.**
   FALSE
4. **HIV can be transmitted in blood, semen, vaginal fluids, and rectal fluids.**
   TRUE
5. **Having unprotected sex with someone who is living with HIV is one way of getting HIV.**
   TRUE
6. **If a person who is pregnant has HIV, there is a chance the baby can get it.**
   TRUE
7. **You have a bigger chance of getting HIV if you have sex with many people.**
   TRUE
8. **You can get HIV from using someone else's comb or hairbrush.**
   FALSE (NO CONTACT WITH BODY FLUIDS)
9. **Using protection during sex reduces the chance of getting a sexually transmitted infection, including HIV.**
   TRUE
10. **You can get HIV by sharing a needle with a drug user.**
    TRUE
11. **If you hug someone with HIV you can get it.**
    FALSE (NO CONTACT WITH BODY FLUIDS)
12. **Having an untreated STI can increase your chances of getting HIV.**
    TRUE
13. **AIDS is the stage of HIV in which your body cannot fight off diseases.**
    TRUE
14. **Having AIDS makes you more likely to get other diseases.**
    TRUE
15. **AIDS can be cured.**
    FALSE
16. **AIDS is caused by a virus.**
    TRUE (CALLED HIV)
17. **Anyone can get HIV.**
    TRUE (IF YOU PARTICIPATE IN RISKY SEXUAL BEHAVIOR OR SHARE NEEDLES)
18. **You can avoid getting HIV by exercising regularly.**
    FALSE
19. **You can take certain medications to reduce your risk of HIV.**
    TRUE
20. **Early treatment can help people with HIV stay healthy.**
    TRUE

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY D

HIV RISK CONTINUUM

PREPARING FOR THE ACTIVITY

RATIONALE

Actively identifying the HIV risk posed by different sexual and non-sexual behaviors helps participants internalize the information and facilitates learning.

MATERIALS

- *Risk Continuum* signs
- *Risk Behavior* cards
- Masking tape

TIME

15 minutes

PROCEDURE

1. Tape the *Risk Continuum* signs on the wall or blackboard like the diagram below.

No Risk	Some Risk	High Risk
Green Light	Yellow Light	Red Light
(Safe)	(Proceed with caution)	(Unsafe)

2. Divide the group into pairs.

3. Explain the following information.

In this activity, you will be given cards containing behaviors. You will have to place each card under the heading that you feel identifies the level of risk for HIV infection the behavior represents.

High Risk/Red-Light Behaviors involve contact with blood, semen, vaginal fluids or rectal fluids and can transmit HIV.

Some Risk/Yellow-Light Behaviors involve a barrier such as a condom or dental dam (latex sheath or cover), but they are activities during which exchange of blood, semen, vaginal fluids or rectal fluids might create some risk of transmitting HIV.

No Risk/Green-Light Behaviors involve no exchange of blood, semen, vaginal fluids or rectal fluids and thus pose no risk of transmitting HIV.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

4. **Shuffle the *Risk Behavior* cards and distribute them as evenly as possible among the pairs.**

5. **Explain that "sex" in these questions means oral, anal and/or vaginal intercourse.**

6. **Ask each pair of participants to read one of their *Risk Behavior* cards and decide under which risk level category it should be placed.**

7. **After each answer, have participants explain why they think the behavior belongs under that particular category. Ask if other group members agree. Use this opportunity to clarify misinformation.**

8. **Once there is agreement about where the *Risk Behavior* card should be placed, ask participants to go tape the card under the correct category.**

FACILITATOR'S NOTE

***Risk Behavior* cards may be placed between categories because High, Some and No Risk represent a continuum and some behaviors do not fall solely within any one category.**

9. **Summarize as follows:**

> **Look at all the behaviors in the green light category. Notice all the things you can do to enjoy intimacy with your partner without putting yourself at risk for HIV. To protect yourself from HIV infection, it is important to know which behaviors are safe and which are risky. You can use the information you have been learning in this program to make proud choices that reduce your risk for HIV infection and help you reach your goals and dreams. Remember, it's not who you are but what you do that puts you at risk for HIV and other STIs. So be proud and responsible and always use latex (or polyurethane/polyisoprene) condoms and/or dental dams if you have any kind of sexual intercourse—oral, anal or vaginal.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

RISK BEHAVIORS[1]

(*Note:* This guide reflects risk levels for HIV transmission only. There are some STIs [herpes, syphilis, HPV] that can be passed through skin-to-skin contact or genital touching.)

Vaginal sex without a condom ---------- Red Light

Kissing ---------- Green Light

Having protected sex with a person who is having sex with other people ---------- Yellow Light

Romantic conversation ---------- Green Light

Oral stimulation of the penis without a condom ---------- Yellow Light

Sharing eating utensils with someone who is living with HIV ---------- Green Light

Sharing needles and syringes ---------- Red Light

Anal sex with a condom and water-based lubricant[2] ---------- Yellow Light

Self-masturbation ---------- Green Light

Mutual masturbation ---------- Green Light

Practicing abstinence ---------- Green Light

Vaginal sex with a condom ---------- Yellow Light

Massage ---------- Green Light

Having sex with multiple partners without using a condom ---------- Red Light

Oral stimulation of the vulva (female genitals) with a dental dam (latex barrier) ---------- Green/Yellow Light

Anal sex without a condom[2] ---------- Red Light

Having protected sex with multiple partners ---------- Yellow Light

Having sex without using a condom with a person who injects drugs ---- Red Light

Sexual fantasy ---------- Green Light

Touching someone who is living with HIV ---------- Green Light

Flirting ---------- Green Light

Body rubbing/grinding (with clothes on/no exchange of body fluids) ------- Green Light

Hugging ---------- Green Light

Having sex with only one partner (monogamous) -------- Green/Yellow/Red Light

(Green if both have never had sex before. If one or both have had other partners, Yellow if they use condoms; Red if they don't use condoms.)

Note: Anal sex is a higher risk activity for HIV specifically due to the possibility of rectal tearing and bleeding. When used correctly and consistently, condoms are highly effective in preventing HIV. If people are going to engage in anal sex, using a condom and water- or silicone-based lubrication can reduce their risk.[2]

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

FACILITATOR'S NOTE

Other HIV prevention strategies include PrEP 2-1-1 and TasP.

- PrEP 2-1-1 dosing strategy has been shown to be 86% effective at preventing HIV transmission during anal sex (though less effective during vaginal sex). The PrEP 2-1-1 strategy involves taking 2 pills between 2 and 24 hours before sex and another pill within 24 hours after the first and the final pill 24 hours after that.[3]
- TasP or "Treatment as Prevention" means that people living with HIV who get treatment are less likely to transmit the infection. Reducing the amount of the virus in the body through treatment helps prevent transmission to others. An undetectable viral load means the virus is untransmittable (or U=U).[4]

MODULE 3

ATTITUDES ABOUT SEX, HIV AND CONDOM USE

GOALS

The goals of this module are to:

- Increase participants' perceived vulnerability to HIV.
- Confront stereotypes about who becomes infected with HIV and learn more about how people can and cannot become infected.
- Reinforce knowledge about HIV and AIDS.
- Weaken negative beliefs and attitudes that foster risky sexual behaviors.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- Identify their attitudes toward risky sexual behavior.
- Problem solve for risky sexual behavior situations.
- Recall correct information about HIV/AIDS.
- Advocate and give advice regarding safer sex strategies.

MODULE PREVIEW

The third module: (1) informs participants about the transmission and prevention of HIV; and (2) helps participants advocate and give advice regarding HIV/AIDS and safer sex strategies.

STRATEGIES/METHODS

- Video Viewing
- Group Discussion
- Problem-Solving Exercises

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- *The Hard Way* character cards
- *Calling Koko Caller* worksheets in the student workbooks
- Video: *The Hard Way* (or alternative videos*)

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Chart paper
- Pre-labeled chart paper:
  - » *Kenrick, Miguel, Renee, Mom, Dad* and *Koko*
- Markers
- Masking tape
- Pencils
- Monitor and video player, or internet access if using alternative videos

PREPARATION NEEDED

1. Label all of the charts as listed under Materials.
2. Hang the pre-labeled charts in the order they will be used. Fold and tape the charts so the titles remain covered by the bottom half of the sheet until you use them.
3. Set up the video(s) to be ready to play.
4. Review the caller scripts in Activity B and choose three that will be most relevant for your group.

INSTRUCTIONAL TIME: 60 minutes

(*Note:* Facilitators may wish to extend the time to allow more thorough discussion of the video.)

ACTIVITY	MINUTES NEEDED
A. *The Hard Way* Video and Discussion*	**40**
B. Calling Koko	**20**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.

ACTIVITY A

THE HARD WAY VIDEO AND DISCUSSION*

PREPARING FOR THE ACTIVITY

RATIONALE

Reinforcing information about HIV, AIDS, risk levels and condom use through video presentations can promote further group discussion and enhance learning.

MATERIALS

- Monitor and video player, or internet access if using alternative videos
- Video: *The Hard Way*, or alternative videos
- Pre-labeled chart paper:
  - *Kenrick, Miguel, Renee, Mom, Dad* and *Koko*
- Masking tape
- Markers
- *The Hard Way* character cards (one card per participant)

TIME

40 minutes

(*Note:* Allow more time for discussion of the video, if possible.)

PROCEDURE

1. Introduce the film.

> Sexually active young people are at risk for HIV infection. The video you are going to see is about young people. This video discusses what AIDS is, the ways people get HIV and the ways to prevent infection.

2. If you haven't done so already, write the names of the characters on chart paper (Kenrick, Miguel, Renee, Mom, Dad and Koko).

3. Divide the group into 6 teams. Hand out a character card to each team. Explain the activity.

> The cards you have just received have the name of one of the main characters in the video. While you watch the video, pay close attention to the person on your card. Watch what this person says and how this person thinks and acts. Also, notice anything that changes the person's thinking during the course of the video.

4. Start the video, which is 18 minutes long.

5. When the video has ended, plan to spend 10–12 minutes discussing the various characters. Pace yourself. Plan to spend about 2 minutes on each character.

* A list of alternative videos and discussion questions can be found at www.etr.org/ebi/alternative-videos.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

6. **Begin the discussion by saying,**

> Let's talk about the characters in this video. I would like the group with Kenrick's card to go first.
>
> How would you describe Kenrick?
>
> What behaviors placed Kenrick at risk for HIV? *(Be sure the issue of number of partners gets addressed.)*
>
> Now let's talk about Miguel.
>
> Those of you with Miguel's card, what behaviors placed him at risk? *(Be sure number of partners gets addressed.)*
>
> Why didn't Miguel use condoms?
>
> Now let's talk about Miguel's partner, Renee. Notice the video refers to the use of birth control pills as "protection." While pills may protect against a pregnancy, they provide no protections against HIV and other STIs.
>
> What form of protection does Renee choose to use?
>
> Those of you with Renee's card, why do you think Renee chose to use birth control pills instead of condoms as her form of protection?
>
> What could Renee and Miguel say to each other about their sexual health and desires to protect themselves from unintended pregnancy or STIs?
>
> Does this make sense? Do you think that using the pill is OK if you are having sex with only one person? Why or why not?
>
> Those of you with the Dad card, what do you think about the way the dad talked to Kenrick?
>
> Those of you with the Mom card, what do you think about the conversation between Kenrick and his mom?
>
> How is Kenrick's conversation with his dad different from the one with his mom?
>
> What adults have ever talked to you about condoms or safer sex? How do your parents, guardians or other caring adults deal with the issue?
>
> Where would you turn for support and advice about relationships, sex and using protection?

7. **Spend the next 10 minutes discussing Koko's message, HIV testing and relationships. Begin the discussion by saying,**

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

Now let's talk about Koko. What was her message in the video?

What do you think it would be like to get tested?

What would someone gain by getting tested? (What would be the benefits of getting tested?)

Now let's discuss the types of relationships in this film. Kenrick had multiple partners whereas Miguel had a steady girlfriend. How do you negotiate condom use when

- You have more than one partner?
- You have a steady partner?
- You have a new partner?

Which one—with more than one partner, a steady partner or a new partner—is easier or harder, and why?

Now let's talk about friendships and conversations people have with their friends about being safer and using condoms. Do you think that Kenrick and Miguel had talked about using condoms enough? What else could they have said to each other? What would you say to your friends? What would you want your friends to say to you?

8. Summarize the activity by saying,

The characters in this video had to make decisions about whether to have sexual intercourse and whether to use condoms to protect themselves. What is the most important message you're taking away from the video and our discussion? (Listen for these messages and reinforce if they are not shared: getting tested, talking about sexual health and protection, and using protection if having sex can help reduce the risk of HIV transmission.)

As you make these decisions in your life, remember that abstinence is the 100 percent surest way to avoid an unintended pregnancy and sexual transmission of HIV and other STIs. If you choose to have sex, it's important to use condoms correctly and consistently every time. If you've had unprotected sexual intercourse in the past, you can get tested and then use protection correctly in the future. It's the proud and responsible thing to do!

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY B

CALLING KOKO

PREPARING FOR THE ACTIVITY

RATIONALE

Practicing solving HIV-related problems builds self-efficacy and the ability to safely resolve risky situations and behaviors.

MATERIALS

- *Calling Koko Caller* 1–6 worksheets
- Pencils

TIME

20 minutes

PROCEDURE

FACILITATOR'S NOTE

You may want to choose the caller scripts to use with your group. You have only 20 minutes, so you want to make sure you have enough time to read and discuss each call that you assign to participants.

If your participants resist getting into pairs, do the activity in the large group. Read the first caller script and ask group members to give ideas for the kind of advice Koko should give the caller. Then choose someone to play the role of Koko giving the caller advice. You play the role of the caller. Sit with your chairs back to back for the roleplay. Continue with the other caller scripts you've chosen.

1. Introduce this activity by saying,

> Based on what you have learned so far, you will give advice to someone who has questions or concerns about HIV, AIDS or condoms. In this activity, you will take the role of Koko, the expert on HIV, AIDS and condoms, who has an HIV Information Hotline for teenagers called *Calling Koko*. You will provide the solution to the concerns of one of these callers.

2. Divide the participants into pairs or small groups.

3. Have participants turn to the *Calling Koko* worksheets in their workbooks. Assign a different *Calling Koko Caller* to each pair or group. (Multiple groups will be working on the same caller script.)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

4. **Explain the following:**

> You will discuss, decide on and then write down the advice you would give to the caller. At the end of this activity, you will share the advice with the rest of us. Your final decision should be one that your team can agree on. Remind your callers that they can make proud and responsible choices.

5. **Give the pairs 5 minutes to discuss and write their advice.**

6. **Have one pair for each caller give their report. One person should read the part of the caller, and the other person should give Koko's advice using the Main Points to Cover.**

7. **Using the following sample responses, discuss any points that participants do not come up with themselves.**

FACILITATOR'S NOTE

Sample responses are provided. Participants' answers do not have to match the sample responses word for word to be considered correct. However, in the large-group discussion, it is important to make sure that the points in each box get discussed. You may want to read the sample responses as a review before going on to the next caller.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

MAIN POINTS TO COVER

The surest protection is abstinence.

If you choose to have sex, you must use a latex condom.

PrEP and PEP can reduce the risk of HIV transmission.

Don't share needles or works.

CALLER 1

Koko,

I've heard that young people are at risk for HIV and the number of HIV cases among young people is growing. I don't want to take any chances of getting HIV. What's the surest way I can protect myself?

– Charlie

Sample Response to Caller 1

Every time you engage in a behavior that involves an exchange of body fluids you take a chance of getting HIV. The surest way *NOT* to get HIV (the virus that causes AIDS) is to practice abstinence—choosing not to have sex. If you do decide to have vaginal or anal sex, the best way to reduce your risk of HIV is to use condoms. That includes external or male condoms made of latex, polyurethane or polyisoprene; or female or internal condoms. PrEP and PEP are medications that you can take to reduce your risk of HIV infection. PrEP is a pill you take every day to prevent HIV. PrEP may be a great option for someone who is in a relationship with someone living with HIV or for someone who is at high risk for HIV. PEP is a pill you can take for 28 days after having sex if you think you may have been exposed to HIV. And don't share needles of any kind with anyone for any reason (whether it's for drug use, tattoos or ear piercing). That's the proud and responsible thing to do.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MAIN POINTS TO COVER

Commitment in a relationship is not always an effective form of protection.

Safer sex will reduce your risks of pregnancy, HIV and other STIs.

Talk to your partner about condoms.

Use latex condoms every time you have sex.

CALLER 2

Dear Koko,

My girlfriend and I have been going out for a year. We really love each other, and both want to have sex. I trust her, but I'm concerned about HIV. My girlfriend and I are 14 years old, and neither one of us has tattoos, and we don't use drugs. We've been thinking about having sex, but only with each other. Do we have to worry about HIV?

– Raymond

Sample Response to Caller 2

If you and your girlfriend have never had vaginal or anal sex with anyone else, and never used injection drugs or shared needles of any kind, the chances are that neither of you has HIV.

However, if you and your girlfriend start having sex, you should always use protection even if you are only having sex with each other. Deciding to have sex with someone is a big decision and it involves thinking and talking to your partner about using condoms. Using condoms reduces your risk of unintended pregnancy or getting an STI, including HIV.

Talk it over with your partner. You should both get tested for HIV and other STIs and agree to use protection every time you have sex. By protection, I mean external or male condoms made of latex, polyurethane or polyisoprene; internal or female condoms; or dental dams for oral sex.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MAIN POINTS TO COVER

Get tested for HIV now, and again in 6 months.

If the test is positive, seek medical help immediately.

Avoid future risk of infection by using protection every time you have vaginal, oral or anal sex.

CALLER 3

Hi Koko,

Five months ago, I had sex with someone for the first time. We didn't use condoms. I didn't really enjoy it, and he never even called me again. Now I have a new boyfriend and he wants me to have sex, too. Is it possible that I might have been exposed to HIV when I did it before? Now, I'm anxious that I might be infected with HIV. What do I tell my boyfriend? What should I do?

– Alex

Sample Response to Caller 3

Yes, it is possible that you have been exposed to HIV. There is no way of knowing for sure without being tested. Test kits are available over the counter at most drug stores. You can also go to a local HIV testing site such as a public health clinic, community health center or your doctor. It may take 2 to 6 weeks after exposure before HIV can be detected in a person's body. Make an appointment to get tested and use condoms until you get the test results.

It sounds like your first time didn't go the way you had hoped it would. It's OK if you want to choose not to have sex right now. Abstinence is the surest way to protect yourself from HIV and other STI. If you do decide to have sex, be proud and responsible and talk to your boyfriend about protection. Tell him it is important that you use condoms if you have sex. Let him know that you're concerned about getting HIV, and what would happen if either of you got infected. If he cares about the relationship, he will understand that being abstinent or using condoms is the right thing to do.

I also want to make sure you feel supported. Please reach out to the wellness center or find a school club or group that supports and affirms you.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MAIN POINTS TO COVER

Oral sex can transmit STIs, including HIV.

Practicing safer sex can protect you against pregnancy, HIV and other STIs.

Other things can lead to intimacy and orgasm without risking getting pregnant, or infected with HIV or another STI.

CALLER 4

It's like this Koko,

I am fifteen years old, and my girlfriend and I have never had vaginal sex. We do other things, though, including oral sex. Before, we just wanted to make sure that she didn't get pregnant. We had never really thought about infections like HIV. But, now I hear that teens my age are getting sexually transmitted infections. Is oral sex safe? How do we protect ourselves from STDs?

– Carmello

Sample Response to Caller 4

Oral sex poses little to no risk of transmitting HIV. However, most STIs can be transmitted during oral sex. Untreated STIs can increase the risk of HIV transmission. This is why it is important to use protection for oral sex. For oral sex that involves putting the mouth to a vagina or an anus, use a dental dam. If you don't have a dental dam, you can cut a condom into a flat sheet. A penis should also be covered with a condom during oral sex.

From what you've told me, you already know there are other things that people can do for physical intimacy, or even sexual orgasm, that will not lead to pregnancy or transmission of infection. Using protection every time you have oral sex is the responsible thing to do. If you decide to have sexual intercourse, use an external (male) or internal (female) condom every time you have sex. And make sure you only use condoms that are made of latex, polyurethane, polyisoprene or nitrile.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MAIN POINTS TO COVER

You can't tell if a person has HIV by looking.

Look for a relationship, *not* a sexual partner.

If you decide to have sex, use a latex condom every time.

CALLER 5

What's up, Koko,

I recently found out that a friend of mine is HIV positive and that she's had the virus for years. She's smart, fun to be around, and has only had sex with two guys her whole life. Now I'm afraid to be with anyone because if someone like her can get HIV, how can I know who's safe and who isn't? If she has HIV, then anyone could! I'm scared to date! What should I do?

– Dana

Sample Response to Caller 5

I can understand your concerns about having sex. You can't look at people and tell whether or not they have an STI, such as HIV. Take time to get to know a person as a friend before you decide to have sex.

You can always decide to wait to have sex. If you decided to have sex, your best combination strategy is safer sex and time. Take the time to really get to know your potential partner. Talk to them about your concerns and how you plan to protect yourself. When you decide to have sex, be sure to use protection every time. By protection, I mean external or male condoms made of latex, polyurethane, or polyisoprene; internal or female condoms; or dental dams.

I am assuming your friend is getting treatment for HIV. Antiretroviral therapy, or ART, can help your friend live a long, healthy life. If she has a steady sexual partner who is HIV negative, ART could help reduce the chances of her transmitting HIV to her partner. Her partner can get on pre-exposure prophylaxis or PrEP treatment, which will reduce the risk of getting the virus.

People who think they may have been exposed to HIV should get treatment immediately. Post-exposure prophylaxis or PEP is available at emergency or urgent care centers, doctor's offices and HIV clinics. PEP must be taken within 72 hours from the time of exposure for it to be effective in preventing HIV infection.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MAIN POINTS TO COVER

People cannot give consent when they are drunk or high.

Get tested for pregnancy, STIs and HIV.

Resist peer pressure to drink alcohol or do drugs. Alcohol and drugs affect your decision making.

Use protection if you decide to have sex.

CALLER 6

Koko,

I'm a senior this year and plan to go to college, but something happened the other night that I want to ask about. I went to a party. I had a couple of beers and then somebody handed me a joint. Everyone else was smoking too. It was powerful stuff! I had never used drugs before. The next thing I knew I was in the bedroom with this basketball player I kind of had a thing for. We ended up having sex, and I don't even know if we used protection, because I was so high that I forgot to ask. I heard he does this type of thing a lot. Now he barely even speaks to me. I'm afraid that I could have gotten pregnant or gotten infected with an STI like HIV. What should I do?

– Rihanna

Sample Response to Caller 6

This sounds like a tough situation. When people are drunk or high, they are more likely to have sex without using condoms, which increases their risk for STIs. Everybody has the right to say when they want or don't want to engage in sexual behaviors and to insist on using protection. When people are drunk or high they can't fully give consent to sexual activity. Please remember that someone doing something sexual to you while you are drunk or high means that technically you were not able to give consent, and so this may be a situation of sexual assault. Do not blame yourself. There are people in this world who seek out those who are too high or drunk to consent. If this person is known for having sex with people who are too drunk or high to consent, he likely isn't someone who has your best interests in mind. If you ever find yourself in a position where you were pushed or forced to do something you didn't really want to do, it's important to talk to a parent, counselor or other trusted adult.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

CALLER 6

Sample Response to Caller 6 *(continued)*

Go right away to your local reproductive health clinic and get emergency contraception (EC) to prevent a possible pregnancy. They can also test you for STIs. Make sure you go to the clinic right away. You have up to 5 days after unprotected sex to use EC, but the sooner, the better. EC is also available over the counter at most drug stores.

If you may have been exposed to HIV, immediately contact a doctor about post-exposure prophylaxis (PEP). These medications may be able to prevent the virus from infecting the body if taken immediately after exposure (within 72 hours).

Don't blame yourself. You deserve to have sexual partners who you feel comfortable communicating with, who respect what you want and don't want, and who will share the responsibility for using protection.

MODULE 4

STRATEGIES FOR PREVENTING HIV INFECTION: STOP, THINK AND ACT

GOALS

The goals of this module are to:

- Introduce participants to a problem-solving method to help think through and cope with sexual choices.
- Review and reinforce the information learned thus far in the program.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- State and explain the three steps of the problem-solving model.
- State how using problem-solving steps can help avoid risky situations.
- Explain how making their own decisions makes it more likely that they will achieve their goals and dreams.
- Provide correct answers to review questions on HIV and AIDS.

MODULE PREVIEW

The fourth module: (1) encourages participants to think about their choices; (2) helps them understand the importance of protecting themselves against HIV; (3) reinforces information about risky behavior; and (4) provides them with a problem-solving strategy as a way to reduce their risk of HIV.

STRATEGIES/METHODS

- Problem-Solving Strategies
- Case Study Worksheet
- Video Viewing
- Game

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- *STOP, THINK and ACT* poster
- *Sean and Morgan Case Study* worksheet in the student workbook
- HIV/AIDS Game Questions (included in module)
- Video: *Nicole's Choice* (or alternative videos*)

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Chart paper
- Masking tape
- Pencils
- Markers
- Monitor and video player, or internet access if using alternative videos

PREPARATION NEEDED

1. Set up the video(s) to be ready to play.
2. Review the information about sexually transmitted infections in Appendix B.

INSTRUCTIONAL TIME: 60 minutes

(*Note:* Facilitators may wish to extend the time to allow more discussion of STOP, THINK and ACT and the video.)

ACTIVITY	MINUTES NEEDED
A. STOP, THINK and ACT: Introduction to Problem Solving	**5**
B. Sean and Morgan Case Study: Problem Solving using STOP, THINK and ACT	**15**
C. *Nicole's Choice* Video and Discussion*	**25**
D. The HIV/AIDS Game	**15**

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.

ACTIVITY A

STOP, THINK AND ACT: INTRODUCTION TO PROBLEM SOLVING

PREPARING FOR THE ACTIVITY

RATIONALE

By learning a problem-solving model, participants will have a strategy they can rely on when faced with sexual decisions, rather than relying on emotions.

MATERIALS

- *STOP, THINK and ACT* poster
- Masking tape

TIME

5 minutes

PROCEDURE

FACILITATOR'S NOTE

This activity is intended as a brief overview of the STOP, THINK and ACT problem-solving approach. Keep it simple and quick.

1. Hang the *STOP, THINK and ACT* poster.

2. Introduce the activity by saying,

> We've been talking about making proud choices but it can be hard to do when you might be experiencing pressure and conflict.
>
> We are going to learn a problem-solving model that will help you think about making decisions under pressure.

3. Read the steps out loud to the group, pointing to the poster so the participants can read along. Begin with STOP.

> The first step is ***STOP***. Why might you need to ***STOP*** if you were being pressured sexually?

4. Let the participants provide a few answers.

Answers may include:

You may feel afraid, confused, angry or upset.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

5. Then say,

> ***STOPPING*** is important because it gives you a chance to take a deep breath, calm down and collect yourself.

6. Then move on to THINK.

> The second step is ***THINK***. What might you need to think about?

7. Allow participants to respond.

8. Then say,

> ***THINKING*** keeps you, not your emotions, in control of the situation. You don't want to overreact or underreact. Some of the things you want to think about include:
>
> - What is the problem?
> - What am I being pressured to do?
> - What am I feeling? What is the other person feeling?
> - What are my choices?
> - What do I want?
> - How can I stick to the decisions I've made for my health and well-being?
> - What alternatives can I suggest?
> - What are the possible consequences?
>
> The important thing here is to calm down and think things through a bit before acting.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

9. **Then move on to ACT.**

Once you are calm and you have thought things through a bit, the next step is to ***ACT*** on your decision. Evaluate the possible consequences and make the best choice. Try it out and see how well it works. If your solution does not work well enough, you can try another alternative, or ask for help.

Sometimes after taking an action, you realize it wasn't the best choice for you and you would do it differently the next time. That's fine. It's just important to reflect on what happened so you can learn from your experiences.

10. **Summarize by saying,**

Next we will practice the STOP, THINK and ACT problem-solving steps.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY B

SEAN AND MORGAN CASE STUDY: PROBLEM SOLVING USING STOP, THINK AND ACT

PREPARING FOR THE ACTIVITY

RATIONALE

Applying the problem-solving steps to a situation will enhance the participants' ability to use them.

MATERIALS

- *STOP, THINK and ACT* poster
- *Sean and Morgan Case Study* handout
- Pencils

TIME

15 minutes

PROCEDURE

FACILITATOR'S NOTE

The case study has been written to be gender neutral. Sean and Morgan might be a boy and a girl, a girl and a boy, two boys, two girls, or transgender youth.

1. Begin this activity by saying,

> No one should pressure someone else for sex. This is especially true of those who are less able to speak for themselves or assert themselves because of a disability. When we are being pressured sexually, we often feel confused or upset and may not think clearly about how to deal with the situation. STOP, THINK and ACT may be a way to help you practice safer sex. So we are going to practice using STOP, THINK and ACT. You may notice that we are using gender neutral names in the case study. The skills we are learning here can be applied by anyone of any gender or sexual orientation. Sean and Morgan may be transgender youth. No matter the gender, gender expression, gender identity or sexual orientation of people in a sexual relationship, there has to be consent and that consent has to be reaffirmed throughout the sexual intimacy and intercourse.

2. Divide the participants into pairs.

3. Have participants turn to the *Sean and Morgan Case Study* worksheet their workbooks.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

4. **Ask for a volunteer to read the case study and instructions to the group. Encourage the group to read along. If there is no good reader, you should read.**

SEAN AND MORGAN CASE STUDY

Sean is 3 years younger than Morgan. They've been going out for a while. Sean really likes being with someone who is older. Morgan is a lot of fun and Sean feels more mature and popular when they're together.

Sean is very smart and plans to become a psychologist. Sean has had a tough childhood and very much wants to be independent and successful as an adult. Sean works hard and has a plan for the future.

Morgan really likes Sean. Lately, Morgan's friends have been talking a lot about sex and keep asking if Morgan and Sean have "done it" yet. Morgan figures it's time and begins to pressure Sean about having sex.

When Morgan asks Sean about having sex, Sean feels unsure about what to say. Sean has actually thought a lot about this and doesn't feel ready for sex yet. Yes, Morgan is sexy and Sean feels turned on. But Sean wants to wait until after high school and maybe even college to have sex. Sean does not want to do anything that might interfere with future goals. Sean wants to be able to help young people deal with issues and problems. Sean is concerned about STIs and doesn't want to take any risks.

However, Sean really wants to keep the relationship with Morgan. Sean would be very hurt if Morgan turned to someone else for sex.

Today Sean and Morgan are hanging out at Morgan's house. Morgan's grandparents are out for a few hours. They're sitting on the couch, kissing and messing around. They're both breathing hard and things are getting hot and heavy. What can Sean do to avoid having sexual intercourse?

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

5. **Then say,**

I want you to work in pairs, and use the STOP, THINK and ACT steps to find a solution to the situation on your worksheet.

© ETR. All rights reserved.

6. Give the pairs about 7 minutes to complete the worksheets. Encourage both members of the pair to help answer the questions. One person can record the answers on the sheet. Circulate while pairs are working to provide support as needed.

7. After 8 minutes, even if most of the pairs have not finished, ask them to stop and begin discussing the case study. Ask one of the pairs to give their responses to the first section of the worksheet—the STOP section. They are reporting on what Sean and Morgan can do to stop and stay calm.

   When this pair has reported their answers, ask the other groups if they have any responses that are different or if they have anything to add.

   Ask a different pair to report on the second section of the worksheet—the THINK section. They will define the problem, explain what Sean wants and alternatives that Sean can suggest.

   When this pair has given their responses, ask the other groups to comment and offer any different ideas for this section.

   Finally, ask a different pair to report on the third section of the worksheet—the ACT section. They will discuss what Sean should do and how Sean should act to carry out that choice.

   When this pair has given their responses, ask the other groups to comment and offer any different ideas for this section.

8. Ask the group to consider this question:

   How does the age difference between Morgan and Sean affect their relationship? Do they have trust, respect, equality and open communication?

   Make the point that pressuring someone to have sex is not showing respect, and that the relationship is probably not equal. Morgan is 3 years older and is likely to be a lot more mature and experienced than Sean. Morgan probably has more power and influence in the relationship, which could put a lot of pressure on Sean. In healthy relationships, both partners are equal. One does not have more power than the other.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

9. **Summarize as follows,**

That's how STOP, THINK and ACT can be used to think through a problem.

You know that unprotected sexual intercourse can lead to pregnancy, HIV and other STIs, which can all make it harder to reach your goals. Using STOP, THINK and ACT can help you stay calm and think clearly so you can make the wise decision to always use protection if you have sexual intercourse.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY C

NICOLE'S CHOICE VIDEO AND DISCUSSION*

PREPARING FOR THE ACTIVITY

RATIONALE

By using a realistic scenario, this video helps participants understand the importance of protecting themselves against STI infection each time they engage in sexual intercourse.

MATERIALS

- Monitor and video player, or internet access if using alternative videos
- Video: *Nicole's Choice*, or alternative videos
- *STOP, THINK and ACT* poster

PREPARATION

- Review the information about STIs in Appendix B.

TIME

25 minutes

(*Note:* Allow more time for discussion of the video, if possible.)

PROCEDURE

1. Introduce the video by saying,

> Now we will watch a video called *Nicole's Choice*. Pay attention. I want you to look at it and think about its messages. I also want you to think about what you would do in Nicole's situation. Check to see if Nicole uses the STOP, THINK and ACT problem-solving steps.

2. Show the video *Nicole's Choice*, which is 15 minutes long.

3. At the end, ask the following:

> What were some of the messages in the video?

4. Allow participants to answer.

5. Refer to the poster *STOP, THINK and ACT*. Then ask,

> Did Nicole **STOP** and **THINK** when she was with Miguel? How would you have used STOP, THINK and ACT if you were Nicole?

* A list of alternative videos and discussion questions can be found at www.etr.org/ebi/alternative-videos.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

6. **After getting some answers from the group, ask,**

What messages about sexual partners did you receive from each person in the video?

- **Randy?**
- **Lynette?**
- **Nicole?**

Answers:

» You expose yourself not only to your partner, but also to all of your partner's partners.

» It is important for both individuals to get tested.

» It is important to use condoms every time you have sex.

7. **Then ask the following,**

How would you feel if you had to go to a clinic to be tested for an STI?

Can you get HIV the same way you get other STIs?

8. **Summarize as follows,**

Getting an STI may bring up a lot of emotions. Though young people ages 15-24 are diagnosed with half of all new STIs,* many STIs can be prevented by using protection or choosing not to have sex. Only you can decide to protect your future and your health. Use protection every time you have sex. And use the right kind of protection: external or male condoms made of latex, polyurethane or polyisoprene; internal or female condoms; or dental dams.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

* Centers for Disease Control and Prevention. 2019. STDs in adolescents and young adults - 2018 Sexually Transmitted Diseases Surveillance. https://www.cdc.gov/std/stats18/adolescents.htm. Accessed 6/22/2020.

© ETR. All rights reserved.

ACTIVITY D

THE HIV/AIDS GAME

PREPARING FOR THE ACTIVITY

RATIONALE

This activity is a way to review and reinforce the information about HIV transmission covered in this program. It also allows you to end the module with a fun, high-energy activity.

MATERIALS

- Chart paper
- Markers

TIME

15 minutes

PROCEDURE

1. Introduce the next activity by saying,

> We are going to play a game* that will review the information we've talked about regarding HIV and AIDS.

2. Divide the group into two teams.

3. Start by giving the rules:

- Each team will get the chance to answer a question.
- The team member responsible for answering the question will rotate so that each team member gets a turn.
- The other team members can help, but the answer must be given within 10 seconds.
- Only correct answers earn points. Correct answers are worth two or three points.
- The team members answering the question can choose whether they want a two- or three-point question.
- If the answer is incorrect or not given in time, I will give the correct answer, and the other team will get a bonus question (a one-point question).
- If someone answers out of turn, the interrupter's team receives a bonus question. The other team then gets a chance to answer a bonus question.

* Adapted from "AIDS Basketball" from *AIDS: What Young Adults Should Know*, 2nd ed., by William L. Yarber. Adapted with permission from the Association for the Advancement of Health Education.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

4. **Keep score (or ask a participant to keep score) on the board or on chart paper.**

5. **Try to get through all the questions, but remember you have only 15 minutes. The game goes quickly and is stimulating.**

FACILITATOR'S NOTE

If no one is given a bonus question, use the bonus questions in the game for one point each. You may be able to create other situations that result in bonus question being awarded.

6. **Use the questions that follow for the game. Correct answers are provided. Correct answers for True and False questions are in parentheses.**

7. **At the end of the game, total the team scores and declare a winning team.**

8. **Summarize by saying,**

> **Wow! What a game! You all remembered a lot of information. Remember to use all of the things you know and the STOP, THINK and ACT strategy to make proud and responsible choices.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

HIV/AIDS QUESTIONS AND ANSWERS*

TWO-POINT QUESTIONS

1. **What does AIDS stand for?**
   - Acquired immunodeficiency syndrome

2. **What causes AIDS?**
   - HIV, the human immunodeficiency virus

3. **Which body system does HIV damage?**
   - Immune system

4. **What happens to a person with AIDS that usually does not happen to people with a healthy immune system?**
   - They get certain diseases called opportunistic infections.

5. **Name three of the body fluids through which HIV is transmitted?**
   - Semen, vaginal fluids, rectal fluids, blood and breast milk (any 3)

6. **What are the most common ways HIV is transmitted?**
   - Unprotected sexual contact and exchange of blood

7. **What drug-related behavior allows the exchange of blood?**
   - Sharing needles or works

8. **How do most children get infected with HIV?**
   - From their infected mothers during pregnancy, at birth, or through breastfeeding

9. **True or (False). HIV is easily passed through oral sex.**

10. **(True) or False. Anal sex without a condom increases your chances of getting HIV.**

11. **True or (False). There is now a cure for AIDS.**

12. **(True) or False. If you think you were exposed to HIV, you can get Post-Exposure Prophylaxis (PEP) within 72 hours to avoid getting the virus.**

* See Appendix B for additional information on HIV and sources.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

13. True or (False). You can catch HIV like you catch a cold, because HIV can be carried in the air.

THREE-POINT QUESTIONS

14. What are two ways of reducing your risk of HIV?

- Abstinence
- Practicing safer sex by using condoms or taking PrEP which reduces risk of HIV transmission but not other STIs
- Engaging in low-risk activities such as kissing
- Not sharing needles or works
- Getting tested regularly
- Talking with your partners about HIV and making sure they get tested too

15. What does U=U mean?

- U=U stands for Undetectable equals Untransmittable. That means that people with HIV who achieve and maintain an undetectable viral load—the amount of HIV in the blood—by taking antiretroviral therapy (ART) daily as prescribed cannot sexually transmit the virus to others. If there is an undetectable amount of HIV in their blood, the virus cannot be transmitted to others.

16. Name three ways HIV is passed.

- During unprotected vaginal or anal sex (sex without a condom)
- By sharing needles and syringes
- From an infected mother to the fetus or newborn child

17. Name two types of sexual practices in which HIV can be passed.

- Anal sex
- Vaginal sex

18. Name two high-risk behaviors.

- Unprotected anal, oral or vaginal sex
- Sharing of needles or works

19. (True) or False. Using water-based lube and condoms when you have vaginal or anal sex lowers the chance of getting HIV.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

20. (True) or False. People without any symptoms can have HIV and pass it to a sexual partner.

21. Name three sexual behaviors that do not involve any exposure to body fluids that can carry HIV. (Any 3)

- Hugging
- Massage
- Touching
- Masturbation
- Sexual fantasy
- Grinding
- Romantic talking
- Cuddling

BONUS QUESTIONS (ONE POINT)

22. Yes or No. Which of these can transmit HIV?

Tears	no
Sharing needles with someone who is HIV positive	yes
Touching someone who is living with HIV	no
Using the same fork as someone who is HIV positive	no
Using someone's comb	no
Being around someone with HIV	no

23. (True) or False. People can have HIV and give it to others even if they do not look or feel sick.

24. (True) or False. Limiting the number of sexual partners a person has is one way of reducing the risk of HIV.

25. True or (False). People infected with HIV through injecting drugs are not likely to pass the virus to sex partners unless the partner also injects drugs.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

STOP, THINK and ACT
PROBLEM-SOLVING STEPS

STOP

- Stay calm, take a deep breath.
- Get control of myself.

THINK

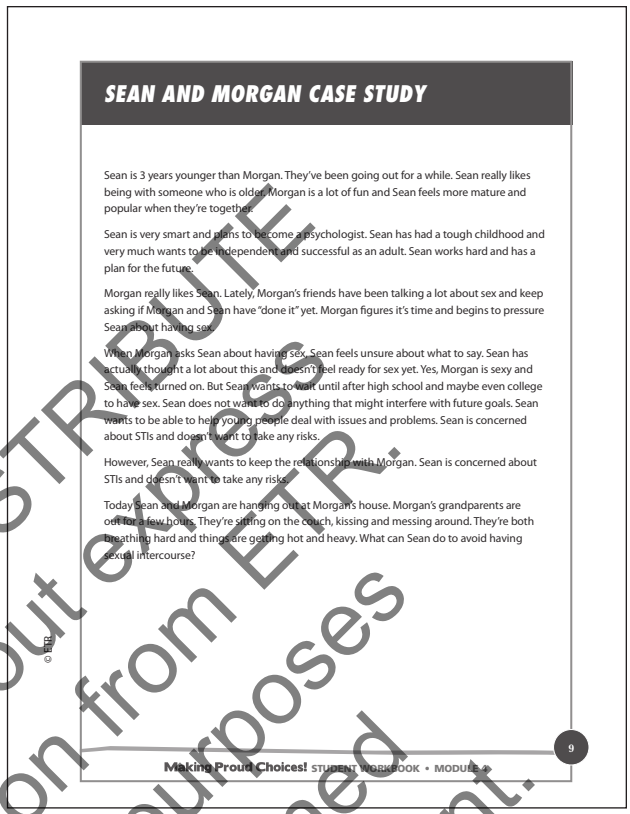
- What is the problem?
- What am I being pressured to do?
- What am I feeling? What is the other person feeling?
- What are my choices?
- What do I want?
- How can I stick to the decisions I've made for my health and well-being?
- What alternatives can I suggest?
- What are the possible consequences?

ACT

- Evaluate the possible consequences.
- Make the best choice.
- How well did it work?
- Get help, if necessary.
- Make a new choice.

Making Proud Choices! © ETR. All rights reserved. [illegible]

Poster



SEAN AND MORGAN CASE STUDY

Sean is 3 years younger than Morgan. They've been going out for a while. Sean really likes being with someone who is older. Morgan is a lot of fun and Sean feels more mature and popular when they're together.

Sean is very smart and plans to become a psychologist. Sean has had a tough childhood and very much wants to be independent and successful as an adult. Sean works hard and has a plan for the future.

Morgan really likes Sean. Lately, Morgan's friends have been talking a lot about sex and keep asking if Morgan and Sean have "done it" yet. Morgan figures it's time and begins to pressure Sean about having sex.

When Morgan asks Sean about having sex, Sean feels unsure about what to say. Sean has actually thought a lot about this and doesn't feel ready for sex yet. Yes, Morgan is sexy and Sean feels turned on. But Sean wants to wait until after high school and maybe even college to have sex. Sean does not want to do anything that might interfere with future goals. Sean wants to be able to help young people deal with issues and problems. Sean is concerned about STIs and doesn't want to take any risks.

However, Sean really wants to keep the relationship with Morgan. Sean is concerned about STIs and doesn't want to take any risks.

Today Sean and Morgan are hanging out at Morgan's house. Morgan's grandparents are out for a few hours. They're sitting on the couch, kissing and messing around. They're both breathing hard and things are getting hot and heavy. What can Sean do to avoid having sexual intercourse?

MODULE 5

POSSIBLE OUTCOMES OF UNPROTECTED SEX: STIs

GOALS

The goals of this module are to:

- Increase participants' knowledge of sexually transmitted infections.
- Help participants identify strategies for preventing STIs.
- Increase participants' perceived vulnerability to STIs.
- Clarify participants' attitudes and beliefs about STIs and condom use.
- Teach participants the steps for correct use of a condom.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- Identify the signs and symptoms of the most common STIs.
- Identify how STIs, including HIV, are transmitted, and how they can be prevented.
- Acknowledge their perceived risk for sexually transmitted infections.
- Demonstrate steps for correct use of a condom.
- Identify how condoms can prevent STIs, including HIV, and pregnancy.

MODULE PREVIEW:

The fifth module: (1) helps participants examine the signs and symptoms of the most common STIs; (2) illustrates how STIs can impact the lives of young people; and (3) informs participants about correct use of condoms, as a way to prevent STIs.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

STRATEGIES/METHODS

- Brainstorming
- Video Viewing
- Group Discussions
- Exercises
- Agree/Disagree
- Condom Demonstration

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- *STI* poster
- *Agree* and *Disagree* signs (1 set)
- *Steps for Using a Condom* poster
- Video: *The Subject Is STDs* (or alternative videos*)

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Pencils
- Markers
- Masking tape
- Condoms
- Water-based lubricant
- Condom Demonstrator(s)
- Paper towels
- Small paper bag
- Monitor and video player, or internet access if using alternative videos
- Pre-labeled chart paper:
  - » *How STIs Are Transmitted*
  - » *Reasons to Protect Against STIs*
  - » *Group Agreements* (from earlier session)
- Chart paper
- Index cards for the Transmission Game—pre-labeled with four distinct shapes, e.g., star, rectangle, circle, and triangle**

PREPARATION NEEDED

1. Label all of the charts as listed under Materials.
2. Hang the pre-labeled charts in the order they will be used. Fold and tape the charts so the titles remain covered by the bottom half of the sheet until you use them.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.

** You may change the index card codes to other things such as cities, plant names or animals. Avoid using codes that may imply judgment, such as a rating system. If you teach multiple class periods, change the code between classes so that youth in later periods do not have the same key.

3. Obtain penis models/condom demonstrators to use in the Condom Use Skills activity. If possible, get a model for each participant. You may be able to buy or borrow them from your local reproductive health clinic. Also check out the following sources: www.totalaccessgroup.com/wood_condom_demonstrator.html or www.etr.org/store/format/condom-kit.
4. Have the condom demonstrators, condoms, water-based lubricant and paper towels or wet wipes organized and ready to distribute.
5. Set up the video(s) to be ready to play.
6. Read the instructions for the Transmission Game and make sure you're clear about the process.
7. Label the index cards for the game. For a group of 6–8, one person will have a "star" card, one person will have a "triangle" card, one person will have a "rectangle" card and the rest will have "circle" cards. Increase the number of "triangle," "rectangle" and "circle" cards in this approximate ratio for larger groups.

INSTRUCTIONAL TIME: 60 minutes

(*Note:* Facilitators may wish to extend the time to include both the discussion and the video about STIs, and to provide more condom skills practice.)

ACTIVITY	MINUTES NEEDED
A. STI Facts	20
[A. (Alternate) *The Subject Is STDs* Video	20]
B. The Transmission Game	15
C. What I Think About HIV/STI and Safer Sex	10
D. Condom Use Skills	15

FACILITATOR'S NOTE

STD or STI? Some health educators prefer the term "STI" (sexually transmitted infection) over "STD" (sexually transmitted disease), whereas others use the two interchangeably. This intervention uses STI. It is important for everyone to understand that STIs (STDs) can present with or without symptoms.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.

ACTIVITY A

STI FACTS

PREPARING FOR THE ACTIVITY

RATIONALE

Providing information about STI transmission and symptoms gives participants the information they need to prevent the spread of STIs. It also provides a common ground for discussing attitudes and concerns about STIs and increases perceived vulnerability to infection as well as motivation to protect against infection. Seeing how STIs and HIV can impact the life of an individual helps motivate prevention planning.

MATERIALS

- *STI* poster
- Pre-labeled chart paper:
  - *How STIs Are Transmitted*
  - *Reasons to Protect Against STIs*
- Markers
- Masking tape

PREPARATION

- Review the information about STIs in Appendix B.

TIME

20 minutes

PROCEDURE

1. Begin this activity by displaying the *STI* poster. Use chart paper to cover the poster so only the letters "S T I" are revealed.

2. Then say,

> Today we are going to talk about STIs. First, I want you to tell me what the letters S, T and I stand for.

Answer:

» Sexually transmitted infection

Explain that they may have also heard the term *sexually transmitted disease* or STD.

3. Ask the group to brainstorm all of the STIs they know.

4. Then uncover the poster and read any STIs they did not mention.

- Chlamydia
- Gonorrhea
- Syphilis
- HPV (human papillomavirus)
- Herpes
- HIV
- Trichomoniasis
- Hepatitis B
- Hepatitis C

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE In any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

5. **Then say,**

> **STIs fall into three categories:**
>
> - **Bacterial (caused by bacteria)—**These STIs are curable. You can take medicine that kills the bacteria. They include chlamydia, gonorrhea and syphilis.
> - **Viral (caused by a virus)—**Most of these STIs are not curable. The symptoms can be treated, but the virus stays in the body. They include herpes, HIV, hepatitis B and HPV (human papillomavirus).
> - **Parasitical (caused by parasites)—**These STIs are curable. They include trichomoniasis and pubic lice.

6. **Unfold the pre-labeled chart paper titled *How STIs Are Transmitted* and say to the group,**

> **As you can see there are a lot of different STIs. How do you think people get STIs?**

7. **List the answers on the chart paper as the group responds.**

   Be sure their answers include:

   - » Vaginal intercourse (penis in vagina)
   - » Oral sex (a person's mouth on another person's genitals)
   - » Anal sex (penis in anus)
   - » Mother to child (during pregnancy, at birth, or through breastfeeding)
   - » Sharing needles
   - » Skin-to-skin genital contact (herpes, syphilis, HPV)
   - » *(Optional) For high school youth:* Sharing sex toys or other devices with partners without using a new condom each time the device is used by a different person

8. **Next ask,**

> **Who can get an STI?**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Answer:

» Anyone who has unprotected sexual intercourse (meaning without using condoms or dental dams).

9. **After participants have answered, say,**

That's right. Anyone who engages in unprotected sexual intercourse can get an STI. But teens and young adults are affected by STIs more than any other age group. The Centers for Disease Control and Prevention estimates that there are nearly 20 million new cases of STI each year, and that about half of these occur in young people ages 15 to 24.*

10. **Ask the group,**

What are some symptoms of STIs?

The list should include:

» Burning when urinating

» Sores, blisters, bumps, warts or pimples near the genitals or mouth

» Unusual discharge from penis or vagina

» Rash or itching in the genital area

» Frequent urination

» Abdominal pain

» **Often there are NO symptoms**

11. **Ask,**

How can you tell if someone has an STI?

Answers should include:

» **Often you cannot tell.**

» You may see sores, blisters, warts, bumps, a rash or pimples near the genital area.

* Centers for Disease Control and Prevention. 2017. Sexually transmitted diseases among adolescents and young adults. https://www.cdc.gov/std/life-stages-populations/adolescents-youngadults.htm. Accessed 06/2/2020.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

12. **Then say,**

> **In many cases, a person can have an STI and have no symptoms! This means that people may not even know they have an STI. It also means that even if you don't notice any sores, blisters, warts or other signs, a potential partner still may have an STI.**
>
> **Activities that do not include an exchange of body fluids have little or no chance of transmitting an STI. These include masturbating alone, petting, kissing, foreplay or dry humping. An exception is where skin-to-skin contact is involved with someone who has HPV, syphilis or herpes. In contrast, sexual activities that do include an exchange of body fluids increase the risk for STI transmission. These include vaginal, anal or oral sex.**

13. **Then ask,**

> **How can you protect yourself from getting an STI?**

Answers should include:

- Abstain from vaginal, oral and anal sex.
- Use a latex or polyurethane/polyisoprene condom every time you have vaginal, oral or anal sex.
- Do not use or share needles or works (including syringes, caps, cleaning water) for injecting drugs.
- There is a vaccine that can prevent hepatitis B.
- There is also a vaccine that protects people against most types of HPV that cause genital warts or lead to cervical cancer.
- Get tested regularly.
- Talk to your partners about STIs and encourage them to get tested too.

14. **Then say,**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

We know how STIs are transmitted. We know signs and symptoms that can indicate an STI infection. We know some STIs don't have symptoms. We know how to avoid getting an STI. But why would a person want to avoid getting an STI and what are the reasons they should get treatment right away if they do get an STI?

Let's brainstorm *Reasons to Protect Against STIs* by thinking of some of the long-term physical and emotional consequences of getting an STI.

15. **List the group's responses on the chart paper. Encourage all participants to respond.**

Answers should include:

- Increased risk of getting HIV
- Blindness (syphilis)
- Paralysis (syphilis, AIDS)
- Cervical cancer (HPV)
- Genital warts (HPV)
- Pelvic inflammatory disease (gonorrhea, chlamydia)
- Infertility (gonorrhea, chlamydia)
- Ectopic pregnancy (gonorrhea, chlamydia)
- Chronic pelvic pain (from PID)
- Liver disease (hepatitis B, hepatitis C)
- Child born with an STI
- Embarrassment
- Odor and discharge
- Impact on relationship
- Stigma

16. **Explain that many of these reasons to protect against STIs can be prevented by abstaining from vaginal, anal or oral sex, or by using protection such as condoms. STIs are common and many people will get one at some point in their lives. Getting tested regularly and treated, if required, can limit or prevent negative health outcomes. That is why it is important to get tested and treated as soon as possible. Explain that no one chooses to get an STI. Some people have gotten STIs from sex that was against their will. Getting tested and treated, if necessary, is the responsible thing to do. Summarize this activity by saying,**

There are 4 important facts about STIs I want to emphasize:

1. **Anyone can get an STI. Young people ages 15 to 24 make up half of all new STI cases.[1] You or a partner can have an STI and not know it. Many people with STIs have no symptoms.**

(continued)

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

(continued)

2. **Some untreated STIs increase the chance of HIV infection. They sometimes cause blisters or sores on or around the genitals which can become a point of entry for HIV during sex.[2]**
3. **Untreated STIs can have emotional and physical impacts. The impacts for people with vaginas are especially serious, and include things such as pelvic inflammatory disease, ectopic pregnancy, cervical cancer, infertility, chronic pelvic pain, and possible transmission of the STI to a fetus or baby.[3]**
4. **Some STIs can be cured. This means that, with testing and treatment, the person will no longer have the STI. Some STIs cannot be cured. This includes HIV. Incurable STIs can be managed with medications but the STI will remain in the body. It is important to get tested for STIs since often they have no symptoms. Then you can get the medications you need to prevent further complications like those listed on the *Reasons to Avoid STIs* sheet.[4]**

If you choose to have sexual intercourse, the proud and responsible thing to do is always use protection such as external condoms, internal condoms or dental dams every time you have vaginal, anal or oral sex. Make sure to use only protective barriers made of latex, polyurethane, polyisoprene or nitrile. Not having sex is the surest way to prevent an STI.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ALTERNATE ACTIVITY A

THE SUBJECT IS STD (VIDEO OPTION)*

PREPARING FOR THE ACTIVITY

RATIONALE

Providing information about STIs through a video gives participants the information they need to prevent the spread of STIs. It also provides a common ground for discussing attitudes and concerns about STIs and increases perceived vulnerability to infection as well as motivation to protect against infection. Seeing how STIs and HIV can impact the life of an individual helps motivate prevention planning.

MATERIALS

- Monitor and video player, or internet access if using alternative videos
- Video: *The Subject Is STDs,* or alternative videos

PREPARATION

- Review the information about STIs in Appendix B.

TIME

20 minutes

(*Note:* Allow more time for discussion of the video, if possible.)

PROCEDURE

1. Say,

> Today we are going to talk about STIs. First, I want you to tell me what the letters S, T and I stand for.

Answer:

» Sexually transmitted infection

Explain that they may have also heard the term *sexually transmitted disease* or STD.

2. Introduce the video by saying,

> We are going to learn more about STIs. In this video, you will see sexually active teenagers finding out the facts and dealing with issues of STIs.

3. Show the video, which is 17 minutes long.

4. When the video is finished, ask the following questions,

> How did you feel about the coach's advice to Jamal to be direct and honest with Diana?
>
> How did the teens react when they learned they might have been exposed to an STI from their partners?

(continued)

* A list of alternative videos and discussion questions can be found at www.etr.org/ebi/alternative-videos.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

(continued)

What could you do if you found out you or a partner had an STI?

Why is it important to tell your partner if you have an STI?

FACILITATOR'S NOTE

Be sure participants understand that when the video refers to "using a condom" this means a latex or polyurethane/polyisoprene condom.

5. **Explain that no one chooses to get an STI. Some people have gotten STIs from sex that was against their will. Summarize this activity by saying,**

There are 4 important facts about STIs I want to emphasize:

1. **Anyone can get an STI. Young people ages 15 to 24 make up half of all new STI cases.[1] You or a partner can have an STI and not know it. Many people with STIs have no symptoms.**
2. **Some untreated STIs increase the chance of HIV infection. They sometimes cause blisters or sores on or around the genitals which can become a point of entry for HIV during sex.[2]**
3. **Untreated STIs can have emotional and physical impacts. The impacts for people with vaginas are especially serious, and include things such as pelvic inflammatory disease, ectopic pregnancy, cervical cancer, infertility, chronic pelvic pain, and possible transmission of the STI to a fetus or baby.[3]**
4. **Some STIs can be cured. This means that, with testing and treatment, the person will no longer have the STI. Some STIs cannot be cured. This includes HIV. Incurable STIs can be managed with medications but the STI will remain in the body. It is important to get tested for STIs since often they have no symptoms. Then you can get the medications you need to prevent further complications like those listed on the *Reasons to Protect Against STIs* sheet.[4]**

If you choose to have sexual intercourse, the proud and responsible thing to do is always use protection such as external condoms, internal condoms or dental dams every time you have vaginal, anal or oral sex. Make sure to use only protective barriers made of latex, polyurethane, polyisoprene or nitrile. Not having sex is the surest way to prevent an STI.

ACTIVITY B

THE TRANSMISSION GAME

PREPARING FOR THE ACTIVITY

RATIONALE

Participation in an exercise that highlights how easy it is to get STIs breaks down participants' feelings of invulnerability, and increases their motivation to practice safer sex.

MATERIALS

- Labeled index cards (Star, Circle, Rectangle, Triangle)
- Pencils

TIME

15 minutes

PROCEDURE

1. Ask the rhetorical question.

> Who gets STIs? Don't answer. Just think about it. We are going to participate in an activity that will help us answer this question.

FACILITATOR'S NOTE

This activity illustrates how easy it is to transmit an STI if people have intercourse without using protection. This is a fun, engaging activity but it can also be sensitive. Some participants may have already had an STI; some might be living with HIV; and others may have family members or friends who are affected by HIV. Make sure no one is stigmatized by the activity.

2. Distribute the labeled cards and pencils so that only one person has a "star," one or two people have a "triangle" and "rectangle" and the rest get a "circle." DO NOT tell participants what the symbols mean at this time.

Rectangle = Abstinence

Triangle = Condoms/Dental Dams

Circle = Unprotected Sex (oral, anal or vaginal sex without protection)

Star = Infection (STI/HIV)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

FACILITATOR'S NOTE

You may change the index card codes to other things such as cities, plant names or animals. Avoid using codes that may imply judgment, such as a rating system. If you teach multiple class periods, change the code between classes so that youth in later periods do not have the same key.

3. Give the following instructions:

- Listen carefully and be ready to share what you hear.
- Write your name on the side of the index card that has the symbol on it.
- Stand and mingle (walk around) with others in the group until I say "stop."
- Pair off with the person standing closest to you.
- I will read you an incomplete sentence.
- You and your partner will each complete the sentence and discuss why you feel that way.
- When I call time (after 30 seconds to 1 minute), you will sign each other's card on the side without the symbol on it. Return the card to the original owner.
- Then you'll move around the room again until I say "stop" and you will pair up with a new partner.
- We will keep doing this until you've had six brief discussions.

4. Read each of the following unfinished sentences, following the procedure you just described.

UNFINISHED SENTENCES

- If I had a condom in my pocket or purse, my partner would think…
- I could convince my partner to use a condom if I...
- You can make using condoms fun by…
- If I asked whether my partner was having sex with other people, the response might be…
- If I asked my partner to use a condom, the response would be...
- People do not like to use condoms because…

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

5. When the six unfinished sentences have been discussed, ask all participants to have a seat.

6. Use the process below to discuss the activity. Say,

> - We are going to pretend that each conversation you had represented an act of "sexual intercourse."
> - Look at your cards. The shapes or symbols on the cards represent something in this exercise.
> - Will the person with the "star" card, please stand. For the purposes of this activity only, the star card represents an STI and anyone whose name is on your card could have the STI too.
> - (To the person with the "star"): Read the names on the back of your card. Everyone whose name is read, please stand.

7. After the people whose names were called are standing, say,

> - If you have a "triangle" on your card, that means you correctly used a protective barrier such as an external or internal condom, or a dental dam, every time to reduce your risk, and so you can sit back down.
> - If you have a "rectangle" on your card, that means you insisted on abstinence and refused to engage in sexual intercourse or any type of skin-to-skin genital contact, so you can sit back down. Abstinence is the 100 percent sure way to protect yourself.
> - If you have a "circle" on your card, you must remain standing because you took a chance and engaged in unprotected sexual intercourse and now you are possibly infected with an STI.

8. Ask each of the people still standing, one at a time, to read the names on their cards. Use the same process to find out the total number of people who got "infected" during this activity.

9. Count the number of people standing and ask the group to consider what would happen if they each continued to have unprotected sex with new partners.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

10. Thank the participants for participating in the game. Remind them that it is just a game to illustrate how quickly STIs can be transmitted when people who are having sex do not use condoms or get tested.

11. Ask the participants to take their cards and rip them to pieces.

12. Ask the participants to sit down.

13. Ask the following questions:

> How did it feel to participate in this activity?
>
> Imagine you had the star or circle card. How did or does it feel to potentially have been exposed to an STI?
>
> How might it feel to potentially expose others to an STI?
>
> Imagine you had the triangle card. How did or does it feel to have protected yourself from STIs? How does it feel to have protected others?
>
> Imagine you had the rectangle card. How did or does it feel to have chosen abstinence?

14. Explain that for those having sex, talking to sexual partners about STIs and getting tested are two strategies that can reduce the risk of STIs, including HIV.

15. Ask the following questions:

> If getting tested had been an option in this game, how do you think that could have changed how many people were standing at the end?
>
> How would talking to your partner(s) about STIs before engaging in a sexual behavior change the number of people potentially exposed to an STI (i.e., the number of people standing at the end of this activity)?
>
> What did you learn by participating in this game that will help you make decisions about your sexual health in the future?

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Try to elicit the following answers:

- One person can infect many by passing the infection to someone who passes it on to the next person.
- STIs can be spread through unprotected vaginal, anal and oral sex.
- People should consider the risks their partners have taken in the past.
- Practicing abstinence and using protection such as condoms can prevent STI transmission.
- You can't tell just by looking at someone who is infected and who isn't.
- It may not be easy to talk about using condoms or dental dams but it gets easier with practice.
- Anyone can get an STI regardless of whether the sex was consensual or forced.
- Getting tested is the only way to know for sure if you have an STI.

16. **Continue the activity by saying,**

This was just a game. However, it does highlight how fast and easily an STI can spread. A good way to reduce your risk for infection is to use a latex (or polyurethane/polyisoprene) condom or dental dam every time you engage in oral, anal or vaginal sex. Also, be sure to get tested regularly if having sex. Many STIs can be treated.

17. **Summarize as follows,**

As we reflect back to my first question, "Who gets STIs?," we have learned that it is possible for anyone to get an STI. STIs are common and many people will get an STI at some point in their lives. Remember, the proud and responsible things to do are to use a latex or polyurethane/polyisoprene condom and/or dental dam every time you have sex, to get tested, to talk to your partners about STIs, and to get treated if you get an STI.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY C

WHAT I THINK ABOUT HIV/STI AND SAFER SEX

PREPARING FOR THE ACTIVITY

RATIONALE

Examining attitudes and beliefs about HIV risk behaviors focuses participants on factors that can keep them from practicing safer behaviors.

MATERIALS

- *Agree/Disagree* signs
- Masking tape

TIME

10 minutes

PROCEDURE

1. Tape the *Agree* and *Disagree* signs on opposite sides of the room.

2. Begin this activity by saying,

> Let's look at what you think about HIV/STIs and safer sex.

3. Read the following directions:

> I will read some statements and ask, "Agree or disagree"?
>
> After I read each statement, stand under the Agree sign if you agree with the statement or stand under the Disagree sign if you do not agree with it.

4. Ask participants to stand.

5. Read the Agree/Disagree statements one at a time (included at the end of the activity).

6. After each statement, ask the participants to decide if they agree or disagree with the statement and to stand under the appropriate sign.

7. After each statement, ask participants on each side to say why they agreed or disagreed with the statement.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

FACILITATOR'S NOTE

During the activity, bolster the attitudes supportive of condom use, and respond to those unsupportive of condom use by using the information provided after each statement.

8. Give the participants a chance to switch after discussion of each statement.

9. Thank the participants for sharing their opinions. Have them return to their seats.

10. Summarize as follows,

> This activity showed us that different people can have different opinions and beliefs. You may have a different opinion about sex, HIV, STIs and protection than your partner or friends. But the facts about HIV/STI remain the same. Here are some facts we can agree on: HIV is transmitted sexually through blood, semen, vaginal fluids and rectal fluids. Other STIs are also passed through having sex. Whenever you have sex, you must use latex or polyurethane/polyisoprene condoms or dental dams every time you have vaginal, anal or oral sex to reduce the chance of HIV and other STI transmission. PrEP can also reduce your risk of HIV transmission, and PrEP plus condoms can reduce your risk of HIV and other STIs.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

AGREE OR DISAGREE STATEMENTS

- **It is hard to convince a sexual partner to use a condom.** (Even though it might be hard, it is important to do it.)
- **Condoms are effective at preventing HIV infection.** (If you choose to have sexual intercourse, using condoms correctly and consistently is an effective way to prevent HIV infection.)
- **Sex can feel good if you use condoms.** (Sex can feel very good with condoms. You can buy a brand that feels natural and use extra lubricant. You'll learn more about this later.)
- **Most people know how to use condoms correctly.** (Many people feel as if they know how, but anyone can improve their skills by learning the specific steps that you will be learning in a few minutes.)
- **If you know your sexual partner very well, you shouldn't have to use a condom.** (Knowing your sexual partner very well does not mean you are safe. Have honest conversations about your sexual health and your plans to protect yourself from unintended pregnancy or STIs. Both of you should get tested so you know your status.)
- **If someone looks healthy, you shouldn't have to use a condom.** (Looking at a person never lets you know whether the person has HIV or another STI, so you should always use a latex or polyurethane/polyisoprene condom or dental dam every time you have vaginal, anal or oral sex. Often people with STIs don't have symptoms, and a person living with HIV may not have symptoms for many years.)

ACTIVITY D

CONDOM USE SKILLS

PREPARING FOR THE ACTIVITY

RATIONALE

By becoming more comfortable touching condoms and by practicing correct condom use strategies, participants will be more likely to use them consistently and correctly in their personal lives and feel proud and responsible in doing so.

MATERIALS

- *Steps for Using a Condom* poster
- External condoms, lubricated (two per participant or pair of participants, plus demonstration condoms)
- Dental dam
- Lubricant
- Condom demonstrator(s)
- Paper towels
- Markers
- Masking tape
- Small paper bag (to dispose of condoms)

TIME

15 minutes

PROCEDURE

FACILITATOR'S NOTE

Some religions and individuals do not believe in condom use. Acknowledge that and make sure that participants are aware that condom use skills are the focus of this activity.

1. Clarify the purpose of the activity by saying,

> This activity is designed to show you how to use external or male condoms correctly and to have you practice condom use skills. I want to make sure we are clear that when teaching you these skills I'm not assuming that any of you are having sexual intercourse and I'm not encouraging you to do so. Having this knowledge and these skills will prepare you to make proud and responsible decisions if and when the need arises.
>
> For some people, using condoms may go against their religious beliefs. For others this may not be a consideration. I'm giving you this information because we want you to be able to make informed decisions about protecting yourselves.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

2. Explain what a condom is by saying,

> As we have learned, a condom is a form of protective barrier that prevents the exchange of body fluids such as semen, vaginal fluids, or rectal fluids.
>
> The external (male) condom slips over an erect penis to keep semen from entering the vagina, mouth or anus. It also keeps the penis from being exposed to vaginal fluids or rectal fluids. It is used to keep sperm from entering the vagina to prevent a pregnancy. When it is used to avoid the exchange of body fluids, the external condom can reduce the risk for transmission of HIV and other STIs. Only latex, polyurethane or polyisoprene condoms are effective in preventing HIV and other STIs.
>
> ***Optional for high school youth:***
> The external condom may also be used on a sex toy or other insertive sexual device that is being shared. A new condom must be used each time the sex toy or device is used by a different person.

3. Ask the group to brainstorm slang terms for condoms. They might mention rubber, raincoat, glove or sock. Keep this very brief. Then ask them to name some of the brands they've heard of.

4. Explain the following,

> We're going to be learning a lot about condoms. There are many different brands and types of condoms. Some are colored, ribbed, lubricated or flavored. People can choose the types they like as long as they are made of latex, polyurethane or polyisoprene.
>
> Regardless of what you call them or the types you prefer, it's important to use condoms correctly and to have them available when you need them.
>
> In the next activity, you're going to actually practice the steps for using an external condom correctly. Many of you may have never seen or touched a condom. We're going to practice using external condoms so that you will know what they feel like and how to use them if and when you are ready to use them.
>
> Just as a person might need to adjust to wearing a new pair of shoes or glasses, using a condom requires getting used to new sensations.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

5. **Post the *Steps for Using a Condom* poster. Using a condom demonstrator, follow the steps listed on the chart to model what the youth will be doing. Read the instructions and add additional details as you demonstrate the procedure.**

FACILITATOR'S NOTE

The ideal way to demonstrate proper condom use is to use a plastic or wooden model of a penis. If a model is not available, demonstrate by using your fingers. Also, be sensitive to the comfort level of your participants during this activity.

STEPS FOR USING A CONDOM

1. Get consent. Make sure you and your partner both agree to have sex. If either one of you expresses that you do not want to continue, you both must stop.
2. Check the expiration date and make sure the condom is latex, polyurethane or polyisoprene.
3. Open the package carefully to avoid tearing.
4. Make sure condom is on the proper side to roll down correctly.
5. Pinch the tip of the condom to create space (½ inch) for semen.
6. Squeeze a few drops of water-based lubricant inside the tip.
7. Make sure the penis is erect and both partners are ready to engage in sexual activity before putting on the condom.
8. Continuing to squeeze the tip, place the condom on the head of the penis. Unroll the condom down to the base of the penis. Apply water-based lubricant to the outside of the condom, if desired.
9. Check during sex to make sure the condom isn't slipping.
10. Immediately after ejaculation, hold the condom firmly at the base of the penis and pull the penis out before it gets soft.
11. Roll off the condom away from your partner. Wrap in tissue and throw it away. Do not re-use.

6. **Distribute the materials to participants so they can practice. Circulate and observe all participants, at least briefly, to make sure they're following the steps correctly.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

FACILITATOR'S NOTE

There may be lots of giggling. Most participants will have fun with this. However, a few may feel particularly nervous or uncomfortable. If any participants don't want to practice, allow them to pass. For some youth, especially those who have been sexually abused, it could be overwhelming to have to handle a penis model. Never push a young person to participate. Show empathy and check back in with them later to see how they're feeling. Not very many youth ask to pass. Most that do change their minds and decide to practice using a condom before the activity ends.

7. Collect the condoms and packaging in the paper bag.

8. Give participants paper towels or wet wipes to wipe their hands.

9. Reinforce condom information by asking the following questions (answers are provided),

Can condoms fit any size penis? Yes. Though condom sizes vary slightly from brand to brand, most can fit any size penis comfortably. Try several brands and type to find the best fit.

What should you never use with a condom? Condoms may break if you use Vaseline, lotion or grease, etc., as lubrication. Use only non-oil-based lubrication such as water-based or silicone-based lubricants (e.g., Good Clean Love or Aloe Cadabra).

Is it OK to keep a condom in your pocket? Yes, but *ONLY* for short periods of time. Prolonged exposure to any heat source (including body heat) can damage condoms.

Can you use condoms after their expiration date? No. Throw away unused condoms once the expiration date passes.

FACILITATOR'S NOTE

In addition to latex condoms, polyurethane or polyisoprene external condoms may also be used. People who are allergic to latex can use these types of condoms instead of latex. However, the important point to emphasize is that lambskin condoms should never be used because they do not protect against HIV.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

10. **Ask participants if they've ever heard of or seen a dental dam. Hold up a dental dam and say,**

> **A dental dam is a square of latex that can serve as a barrier between the mouth and a partner's vulva or anal area to prevent the transmission of STIs.**
>
> **It can be difficult to find dental dams, so you can cut a non-lubricated condom into a square and use it as a barrier.**

11. **Explain how a dental dam can be used when having oral contact with the vulva or anal area. Also demonstrate how to cut a condom into a square in case a dental dam is not available. (*Note:* Using scissors or your teeth, cut off the rim, then cut up one side, and use your fingers to spread the condom into a flat sheet.**

12. **Summarize as follows,**

> **To protect yourself and your partner from sexually transmitted infections, including HIV, remember to:**
>
> - **Use a latex (or polyurethane/polyisoprene) condom every time you have sex.**
> - **Use a dental dam when having oral contact with the vulva or anal area.**
> - **Keep a supply of unexpired condoms on hand.**
> - **Get used to condoms so they become easy to use each time.**
> - **Talk to your partner about using condoms.**
> - **Refrain from using alcohol or other drugs because they affect your judgment.**
>
> **Condoms make sense. Condoms help to protect both partners from pregnancy and STIs, including HIV. However, you must use them correctly every time you have vaginal, oral or anal sex.**

MODULE 6

A POSSIBLE OUTCOME OF UNPROTECTED SEX: PREGNANCY

GOALS

The goals of this module are to:

- Increase participants' understanding of pregnancy as a possible outcome of unprotected sex.
- Increase participants' perception that they are vulnerable to getting pregnant or getting someone pregnant.
- Increase participants' understanding of the consequences of teen pregnancy.
- Increase participants' knowledge of various types of contraceptive methods.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- Distinguish facts from falsehoods about pregnancy.
- Identify specific birth control methods that may be used to prevent pregnancy.

MODULE PREVIEW

The sixth module: (1) helps participants examine myths about pregnancy; (2) illustrates how pregnancy can impact the lives of young people; and (3) informs participants about the various forms of birth control.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

STRATEGIES/METHODS

- True or False Game
- Video Viewing
- Group Discussion
- Contraceptive Methods Demonstration
- Agree/Disagree

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- *True or False: Pregnancy Statements* (included in module)
- *Birth Control Choices* poster
- *Optional:* Video: *Tanisha & Shay* (or alternative videos*)
- *Agree/Disagree* signs (1 set)

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Pre-labeled chart paper: *Contraceptives*
- *Optional:* Monitor and video player, or internet access if using alternative videos
- Markers
- Masking tape

PREPARATION NEEDED

1. Label all of the charts as listed under Materials.
2. Hang the pre-labeled charts in the order they will be used. Fold and tape the charts so the titles remain covered by the bottom half of the sheet until you use them.
3. Review the *True or False: Pregnancy Statements* and get comfortable with the content.
4. *Optional:* Set up the video(s) to be ready to play.
5. Review the information about contraceptive methods in Appendix B.
6. Review and be familiar with current federal and state laws around pregnancy options, including adoption, abortion and safe surrender, so you can provide accurate information during the discussion of the *Tanisha & Shay* Shay video or alternative videos, if you decide to extend the session and include the videos.

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

7. Gather materials to help teach the birth control information effectively: contraceptive charts, charts of the female reproductive organs, female pelvic models and a birth control kit. Many local health departments and Planned Parenthood affiliates will loan or sell demonstration kits. A local health care provider may also be able to provide samples of prescribed methods, such as oral contraceptives. Free or low-cost condoms may be available from your local department of public health or a clinic.
8. Review how to use an internal condom. There are several YouTube videos that clearly explain the steps, such as this one from the Female Health Company that manufactures a female condom: www.youtube.com/watch?v=LRZH5ASO-eM. Watch the video prior to the session so you feel comfortable with how the female condom is used. If you have any problems with this link, do an online search for "female condom how to use animated video." If you have Internet access, set up a laptop computer so you can show participants the YouTube video.

INSTRUCTIONAL TIME: 60 minutes

(*Note:* The use of the optional video(s) will increase the length of the module by up to 25 minutes. A video is an excellent way to help participants personalize and conceptualize the information, but should not replace or take time away from the discussion and demonstration of the contraceptive methods. Facilitators may wish to deliver this module across two 60-minute sessions.)

ACTIVITY	MINUTES NEEDED
A. True or False: Pregnancy Statements	10
[B. *(Optional) Tanisha & Shay* Video	+25]
C. Birth Control Methods Demonstration	40
D. Agree/Disagree - Attitudes About Contraception	10

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY A

TRUE OR FALSE: PREGNANCY STATEMENTS

PREPARING FOR THE ACTIVITY

RATIONALE

Distinguishing facts from falsehoods about pregnancy provides an opportunity for learning the correct information about pregnancy.

MATERIALS

- *True or False: Pregnancy Statements* (included in module)

TIME

10 minutes

PROCEDURE

1. Introduce the following activity by saying,

> Let's take a closer look at what can happen when teenagers decide to have sex without using any protection. We'll play a game to help you separate what is true and what is false when it comes to the consequences of unprotected sex.

2. Explain the directions,

> - I will go around the room and read a statement to each of you.
> - I want you to tell me if the statement I read is true or false.
> - I also want you to explain why it is true or false.
> - If you don't know, I will ask for volunteers who think they know the answer.

3. Read the *True or False: Pregnancy Statements* on page 140.

4. Supplement the participants' explanations with those provided after each statement or have other participants give the information.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2026 agreement.

© ETR. All rights reserved.

5. **Once all the statements have been completed say,**

> **Wow! You did a great job and seem to know a lot of the correct information.**

6. **Summarize by saying,**

> **The more you know about the possible outcomes of sex, such as pregnancy and sexually transmitted infections, the better you will be at protecting yourself from experiencing an unintended pregnancy and/or STIs. Next, we are going to see a video (or videos) that describes how pregnancy can impact a young person's goals and dreams for the future.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

TRUE OR FALSE: PREGNANCY STATEMENTS

1. **Every time you have unprotected vaginal sex, there is the possibility of getting pregnant, even the first time you have vaginal sex.**
   TRUE
   Pregnancy is a possibility every time someone has unprotected vaginal sex, regardless if it's the first time or the hundredth time.

2. **Pulling the penis out of the vagina before ejaculation reduces the risk of pregnancy.**
   TRUE
   Pulling out, or withdrawal, does work in theory. However, it takes a lot of practice and concentration. It can be challenging, especially for teens and young adults, to actually pull the penis out before they ejaculate (or cum). Pulling out AND using another method of protection greatly increases the effectiveness.

3. **You can't get pregnant if you have sex standing up.**
   FALSE
   Sperm don't care what position you're in. Any time semen (which contains sperm) is able to travel up through the vagina and fallopian tubes to where sperm can fertilize an egg, you can get pregnant. There are no exceptions to that rule.

4. **If you have unprotected vaginal sex, there is a pill you can take afterward to reduce the risk of pregnancy.**
   TRUE
   If you had unprotected vaginal sex (or your birth control method failed) and you do not want to become pregnant, take an Emergency Contraceptive pill as soon as possible but no later than within 5 days. The EC pill (or a copper IUD) prevents a pregnancy from occurring.

5. **Douching (cleaning the vagina) after sex can prevent pregnancy.**
   FALSE
   Douching will not prevent pregnancy. In fact, it can even help carry sperm up into the uterus and increase the chances. The vagina keeps itself clean naturally, so douching isn't necessary and isn't recommended. Douching throws off the vagina's natural balance and can even lead to infection.

6. **You can't get pregnant unless you have an orgasm (cum).**
   FALSE
   It doesn't matter if you have an orgasm or not. You can get pregnant if you engage in vaginal sex without using protection.

(continued)

DO NOT COPY OR DISTRIBUTE
in any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2026 agreement.

© ETR. All rights reserved.

7. **If a girl misses her period, she is definitely pregnant.**

   FALSE

   When young people first start having periods they often have irregular cycles and may even skip a month from time to time. But if someone has had vaginal sex and misses a period, pregnancy is a possibility. The person should get tested right away, and see a doctor if the pregnancy test is positive.

8. **Gay and lesbian teens don't need to know how to avoid pregnancy.**

   FALSE

   If gay and lesbian teens engage only in same-sex behaviors, they don't have to worry about pregnancy. For many different reasons, gay and lesbian teens sometimes engage in penis-in-vagina sex and they have to worry about pregnancy if they do.

9. **There's no safe time of the month to have sex and avoid pregnancy.**

   TRUE

   True. There is no absolutely safe time of the month when you can't get pregnant or get someone pregnant.

10. **You can't get pregnant if you swallow semen.**

    TRUE

    The only way you can get pregnant is if sperm cells enter the vagina, usually during sexual intercourse, and fertilize an egg cell in the fallopian tube.

11. **A person cannot get pregnant from anal sex.**

    TRUE

    Yes, it's true a person can't get pregnant from having anal sex, but people still have to think about STIs. The lining of the anus is thin and lubricates less than the vagina, so it's easy for STIs to enter the body that way.

OPTIONAL ACTIVITY B

TANISHA & SHAY VIDEO*

PREPARING FOR THE ACTIVITY

RATIONALE

Presenting and reinforcing information about pregnancy can promote further discussion. Seeing how pregnancy can impact the lives of individuals helps increase prevention planning.

MATERIALS

- Monitor and video player, or internet access if using alternative videos
- Video: *Tanisha & Shay,* or alternative videos

TIME

25 additional minutes

PROCEDURE

1. Introduce the video by saying,

> We are going to continue our focus on pregnancy prevention by watching a video called *Tanisha & Shay*. In this video you will see sexually active teenagers dealing with issues of pregnancy.

2. Show the video in three segments as described below.

> I will be showing you this video in 3 segments. After each part, I'll ask you some questions about what you've seen.

3. Show Part 1: Tanisha Finds Out. At the end of the segment, process by asking these questions:
   - » What did the provider tell Tanisha?
   - » What is your reaction? What do you think happens?
   - » Why do you think Tanisha and Shay did not use protection/ birth control?

> Let's watch the next segment and find out what happens next.

4. Show Part 2: Sharing the News. At the end of the segment, process by asking these questions:

* A list of alternative videos and discussion questions can be found at www.etr.org/ebi/alternative-videos.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

- How does the pregnancy affect everyone in Tanisha's life?
- What does Tanisha risk losing because of the pregnancy?
- What does Shay risk losing?
- What could Tanisha say to Shay when she shares the news of the pregnancy?
- What might it look like for Shay to be a part of Tanisha's decision-making process?
- What might this conversation and decision-making look like in a healthy relationship like Tanisha and Shay's?

Let's watch the last segment.

5. **Show Part 3: Now What? At the end of the segment, process by asking these questions:**
   - What did this video teach you about teen pregnancy?
   - What could Tanisha and Shay have done after they had unprotected sex to prevent a pregnancy?
   - Are these teens ready to become parents? Why or why not?
   - How would your life change if you became pregnant or got somebody pregnant now?
   - What about if you became a parent or became a parent again?

6. **Summarize this activity by saying,**

As you can see, becoming pregnant or getting someone pregnant can dramatically change your life. Therefore, it is important to avoid unintended pregnancy by practicing abstinence or safer sex. Be prepared. If you're going to engage in sexual activity, make sure you use effective birth control and a latex (or polyurethane/polyisoprene) condom every time!

ACTIVITY C

BIRTH CONTROL METHODS DEMONSTRATION

PREPARING FOR THE ACTIVITY

RATIONALE

Reviewing and discussing the various forms of birth control methods will enhance participants' knowledge and empower them to make informed choices about the most suitable method to use.

MATERIALS

- Pre-labeled chart paper:
  - *Contraceptives*
- *Birth Control Choices* poster
- Markers

TIME

40 minutes

(*Note:* It is important to allow time to cover all of the different methods.)

PROCEDURE

1. Introduce this activity by saying,

> We're about to review the various methods of birth control. Let me clarify a couple of things. The purpose of this activity is to present factual information about birth control. I don't assume that you're having sex. There may be many different experiences in this group. Some of you may never have engaged in sexual intercourse and won't any time soon. Others may have had sex, not always by choice. Some might be parents already. Regardless of your background and experience, it's important for all teens to receive factual information about birth control. Being informed about birth control puts you in the driver's seat so you can be in control of when you have children in the future and how close together you have them.
>
> I also understand that personal values about birth control vary. For some people, using condoms may go against their religious beliefs. For others this may not be a consideration. The bottom line is that most people who have sex need a way to prevent pregnancy and STIs, including HIV. I want you to be able to make informed decisions about protecting yourselves, so we're going to learn about all of the options.

2. Unfold the pre-labeled chart paper titled *Contraceptives* and ask the participants to brainstorm all the methods of birth control or contraception that they can think of. Write the list on the chart paper.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Answers should include:

- » Abstinence
- » IUD
- » Implant
- » Depo-Provera (the shot)
- » Birth control pills, patch and ring
- » Male condom (external condom)
- » Female condom (internal condom)
- » Sponge
- » Spermicides
- » Diaphragm
- » Cervical cap
- » Withdrawal

3. **Post and point to the *Birth Control Choices* poster and say,**

> **This poster shows some common birth control, or contraceptive, methods. We will discuss them briefly. We won't have time to examine them in detail, but I want you to know what is available when you are ready to use them.**

4. **Begin your presentation by explaining,**

> **Contraceptive methods fall into three different categories:* behavioral methods, over-the-counter methods that can be purchased by anyone at any stores, clinics, supermarkets, convenience stores or online, and prescribed methods, which you have to see a health provider to get. I'll be talking about the methods in order of effectiveness, or how well they work to prevent pregnancy.**

5. **Using the following information, teach and demonstrate the various contraceptive methods. If you have a birth control kit, show the various methods as you discuss them. Don't pass the methods around while you're educating as it gets the group distracted. Allow participants to handle the methods at the end when you've finished the demonstration.**

* Shoupe, D., and D. R. Mishell, eds. 2016. *The Handbook of contraception: A guide for practical management*. New York: Humana Press, Springer International Publishing.

FACILITATOR'S NOTE

Don't try to communicate every fact about the various birth control methods in this presentation. This is an overview. Let participants know they will get a more thorough education whenever they go to a health center to obtain contraception. See the section on Contraceptives in Appendix B for additional information.

BEHAVIORAL METHODS

Abstinence

- Abstinence is the safest and most effective pregnancy and STI prevention method.
- There are a lot of different definitions of abstinence. We define it as not engaging in sexual intercourse of any type (oral, anal or vaginal).
- It requires that you avoid any behaviors that might result in exchange of bodily fluids that can result in pregnancy or can transmit STIs, including HIV. It also means not engaging in any skin-to-skin genital touching that could transmit certain STIs.
- Abstinence requires skills—you have to know why you want to say no to risky sex and be able to communicate that assertively to a partner.
- It's important to have a backup method in case you decide to stop using abstinence in order to be able to protect yourself from pregnancy and STIs, including HIV.

Withdrawal

- Withdrawal, or pulling out, is done by removing the penis fully from the vagina/anus before ejaculating and only ejaculating outside of the vagina/anus.
- Withdrawal is free and a method available to everyone.
- To be effective at preventing pregnancy, withdrawal must be used correctly and completely. This requires knowing and understanding a person's own body, which can be challenging for young people and people with little sexual experience.
- Withdrawal is most effective when used with another contraceptive method. Using withdrawal in addition to condoms or another form of birth control further reduces the risk of unintended pregnancy.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

FACILITATOR'S NOTE

Withdrawal is a commonly used form of contraception among youth. Avoid shaming messages about this method, and offer it as one of many options. Withdrawal is a behavioral skill that can be developed and can be combined with other methods for increased effectiveness.

Uncovering withdrawal use among sexually active U.S. adolescents: High prevalence rates suggest the need for a sexual health harm reduction approach. *Sex Education* DOI: 10.1080/14681811.2020.1768324; Hatcher, R. A. 2018. Contraceptive technology. New York: Ayer Company Publishers.

PRESCRIBED METHODS

To obtain some methods of birth control, you need a prescription from your doctor. Some of these methods work by regulating hormones involved in the reproductive process. These hormonal methods include some IUDs, the implant, Depo-Provera shots and birth control pills, the patch and the ring. Although these methods are very effective at preventing pregnancy, they do not prevent sexually transmitted infections. Therefore, if you use one of these hormonal methods for pregnancy prevention, your partner must also use a latex condom so that you will be protected against STIs. Let's discuss the specific methods. These methods are highly effective if used correctly. And with some of them, there's nothing you have to do once they are inserted!

IUD

- An IUD, or intrauterine device, is a small T-shaped piece of plastic, or plastic and metal, that is inserted into the uterus by a trained medical provider.
- There are 2 kinds of IUDs in the U.S.:
  - » **Non-hormonal:** The copper-T IUD (ParaGard) is a non-hormonal IUD that creates an environment in the uterus that makes it very hard for sperm to survive and for fertilized eggs to attach to the wall of the uterus, which is necessary for a pregnancy to occur. Once you get this type of IUD inserted, you are protected from pregnancy for up to 10 years.
  - » **Hormonal:** A hormonal IUD does the same thing, but it also releases hormones that stop your body from releasing eggs. There are 4 kinds of hormonal IUDs available in the U.S.: Mirena, Skyla, Kyleena and Liletta. They are effective from 3 to 5 years, depending on which one you get.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

- When your body is first adjusting to the IUD, your period might be heavier or more painful. IUDs do not protect you from STIs, so you should also use a condom.

Implant

- The implant is a thin stick about the size of a matchstick that is placed under the skin of your upper arm by a trained medical provider and releases hormones to prevent your body from releasing eggs.
- It can be used for up to 3 years.
- It can cause periods to be irregular or stop.
- The implant does not protect you from STIs, so you should also use a condom.

The Shot

- People who use the shot receive hormonal shots every 3 months.
- Depo-Provera is the most common brand and is a highly effective birth control method.
- It can cause periods to be irregular or stop.
- The shot does not protect you from STIs, so you should also use a condom.

Birth control pills

- Birth control pills prevent the ovaries from releasing eggs during the monthly cycle.
- One pill must be taken each day at about the same time of day.
- When you start "the pill," you must use a back-up method for the first 7 days to prevent pregnancy.
- If you miss a day, you must take two pills the next day.
- If you miss more than one day, you must use a back-up method for 7 days to prevent pregnancy. You should also talk to your doctor about finishing the rest of your pack of pills.
- ***NEVER*** use another person's birth control pills (even your mother's or sister's). A doctor must prescribe the birth control pills that are safe for you.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

- The pill does not protect you from STIs, so you should also use a condom.

Birth control patch

- The patch works the same way as the pill, except that instead of swallowing the hormones, you absorb them through the skin.
- The patch is a small, band-aid like sticker that you wear on either your back, hip, butt or upper outer arm and change once a week for 3 weeks, and then the fourth week you don't wear it and get your period.
- The patch does not protect you from STIs, so you should also use a condom.

Vaginal ring

- The ring is a hormonal method just like the pill and the patch. With the ring, the hormones are absorbed through the vaginal wall.
- It is a small flexible ring that you insert into your vagina. It sits just below your cervix. Once you insert it, you leave it in for 3 weeks, and then take it out for a week to have your period.
- The ring does not protect you from STIs, so you should also use a condom.

Diaphragm and cervical cap

- The diaphragm and cervical cap are vaginal barriers that cover the cervix to keep sperm from reaching and fertilizing an egg.
- The diaphragm is a reusable, dome-shaped cup made of latex or silicone. It is used with spermicidal gel and inserted into the vagina, where it is positioned to cover the cervix. It can be placed up to 6 hours before sex and must be left in place for at least 6 hours (but no more than 24 hours) after sex. Caya is a new one-size-fits-all diaphragm. Unlike earlier diaphragms, it does not require fitting and is easier to insert and remove. It is available with a prescription.
- The cervical cap is a reusable silicone cap that fits over the cervix. It provides protection for 48 hours and requires spermicidal gel. Like the diaphragm, it is inserted in the vagina before sex, and must be left in place for at least 6 hours afterward. FemCap is the only brand available. It has to be fitted by a provider and requires a prescription.

(continued)

Prescribed methods summary

So you see you have choices with prescribed methods. Many of the newer methods are easier to use and effective for long periods of time. Let's review:

- With the pill, you have to take a pill once a day at the same time.
- With the patch, you have to replace the patch once a week for 3 weeks and then leave it off for 1 week (the 4th week).
- With the ring, you insert a new one once a month. You leave it in for 3 weeks and then take it out for 1 week (the 4th week) to have a period.
- With the shot, you have to go back to the health provider every 3 months for another shot.
- With the implant, you get one inserted and it's effective for 3 years.
- With the IUD, once it's inserted, it's effective for up to 10 years depending on the type of IUD.

Research shows that when teens use long-acting methods like the implant and the IUD, the rate of teen pregnancy goes down dramatically.*

OVER-THE-COUNTER METHODS

These methods of birth control can be purchased by anyone of any age, at drugstores, clinics, supermarkets, convenience stores and online without a prescription.

External (male) condom

- The external condom is a latex sheath that covers the penis and keeps semen from entering a partner's body.
- It should be put on the penis as soon as the penis is erect, and removed after ejaculation, away from the partner.
- Latex condoms are the most common. People who are allergic to latex can use polyurethane or polyisoprene condoms. Lambskin condoms do not protect against HIV, so don't use those.

Internal (female) condom

- The internal condom is a soft, loose-fitting polyurethane (plastic) or nitrile sheath that lines the vagina. Polyurethane is strong and unlikely to rip or tear during use. It is also unlikely to cause allergic reactions.

(continued)

* Birgisson, N. E., Zhao, Q., Secura, G. M., Madden, T., Peipert, J. F. (2015). Preventing unintended pregnancy: The contraceptive CHOICE project in review. *Journal of Women's Health* 24 (5): 349–353.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

- The internal condom can be inserted right before sex, or up to 8 hours ahead of time.
- The internal condom can also be used for STI protection during anal sex. People of any gender can use these condoms for anal sex.
- These are the steps for using the internal condom:
  - » Check the expiration date.
  - » Rub the outside of the package to spread the lubricant onto the condom.
  - » Open carefully by tearing at the notch on the top right of the package.
  - » Note that there are two rings. The thinner outer ring covers the area around the opening of the vagina or anus (for additional STI protection). The thicker inner ring is used for insertion and to help hold the sheath in place during intercourse.
  - » There are different positions you can use to insert the condom—squat, raise one leg, sit or lie down. Choose a position that feels comfortable.
  - » While holding the condom at the closed end, grasp the flexible inner ring and squeeze it with the thumb and second or middle finger so it becomes long and narrow.
  - » Insert the inner ring into the vagina or anus and use your index finger to push it up into your vagina as far as it will go. If used vaginally, it will fit into place right under your cervix. Be sure the sheath is not twisted. Leave the outer ring on the outside of the vagina or anus—about a half inch of the sheath should remain on the outside of your body.
  - » You are now ready to guide your partner's penis into the condom's opening with your hand to make sure that it enters properly. Be sure that the penis is not entering on the side, between the sheath and the vaginal or anal wall.
  - » To remove the condom, place your finger under the outer ring. Twist it and pull it out. Wrap it in tissue and throw away.

Note: Take care to present the internal condom in a nonjudgmental fashion. It is a great option for people who choose to have sexual intercourse and don't want to depend on a partner to use an external condom. Although the female condom may not look as familiar as the male condom, it's not too complicated to use. Reassure participants that it will simply take a few times to practice

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

and then it will be no problem. Note that the internal condom can be inserted well in advance of being with a partner, so that sexual intercourse can be spontaneous. Internal condoms may be an appealing option for those who find condoms to be uncomfortable due to being too tight. Also, because they are made of nitrile, they warm to body temperature and lack the smell of latex.

Sponge

- The sponge is actually a dual method—it works as a barrier and a spermicide. With clean hands, you wet the sponge with clean water, gently squeeze the sponge until it foams up, fold the sides of the sponge and insert it into the vagina just as you would insert a tampon.
- The sponge can be inserted up to 24 hours before intercourse and must be left in place at least 6 hours after intercourse. This allows for more flexibility and spontaneity with sex. The sponge should not stay in for more than 30 hours.
- The sponge does not protect you from STIs, so you should also use a condom.

Spermicides

- You can also purchase various forms of spermicides—foam, cream, film, gel and suppositories—that prevent pregnancy by killing sperm cells before they can reach the egg cell.
- The sperm-killing substance in most vaginal spermicides is called nonoxynol-9. But nonoxynol-9 can cause an allergic reaction or irritation for some people, and this can increase the risk of STI/HIV infection. Spermicides need to be reapplied for each act of intercourse.
- Spermicides are somewhat less effective than condoms and many of the prescribed methods. However, they are good protection if they're used correctly and consistently, and very good if used along with a condom (which also prevents STIs).

EMERGENCY CONTRACEPTION

- Emergency contraception (EC) reduces the risk of pregnancy after unprotected sex or when another birth control method fails.
- There are 2 types of EC available:

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

  - » **EC pill**, also known as the morning-after pill, can be taken up to 5 days after unprotected sex. Some EC pills (Plan B One Step, Take Action and Next Choice One Dose) may be bought over the counter without a prescription and without having to see a pharmacist. Ella, a non-hormonal EC pill, requires a prescription from a health care provider or a pharmacist.
  - » **Copper-T IUD** (ParaGard) can act as emergency contraception when inserted by a health care provider within 5 days of unprotected sex.
- The sooner EC is taken (within 5 days) after unprotected sex, the more effective it is at preventing unintended pregnancy. Ella, unlike other EC pills, does not decrease in effectiveness during those 5 days.
- EC works by keeping sperm from fertilizing an egg by preventing ovulation or making the environment hard for sperm to survive in. EC is not the same thing as the abortion pill, and will not harm an existing pregnancy.
- Emergency contraception does not protect against HIV or other STIs, so protection like PEP should also be used.

FACILITATOR'S NOTE

Side Effects and Hormonal Methods

Hormonal methods (the pill, patch and ring) are safe, very effective methods of birth control. Most young people who use them have minimal side effects. Smoking cigarettes while using these methods can increase the risk of certain side effects, which is why health professionals advise people who use these methods not to smoke.

The side effects some people have while using these hormonal methods may include:

- irregular menstrual bleeding
- nausea, headaches, dizziness and breast tenderness
- mood changes
- blood clots (these are rare in people under 35 who do not smoke, but there may be a slightly higher risk with the patch than with the pill)

There are a few additional side effects to consider with the birth control shot (also a hormonal method), for example, no menstrual periods at all, weight gain and depression. Studies have linked the use of the long-acting progesterone shot to a loss of bone density. So teens considering getting the shot as a method should talk to their doctors about it.

In any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

6. **Process this activity with the questions below:**

How does a teenager decide whether to use birth control and which method to use?

Make sure answers include:

» Talk to parents, a health care provider, doctor, counselor, caregiver, caseworker or partner.

» Ask questions.

» Do lots of thinking.

» Ask themselves questions such as:

- Am I ready for parenthood?
- Do I want to deal with a pregnancy?
- How can I show myself respect in my sexual health decision making?

What are some ways partners can participate in the process of using birth control?

Make sure answers include:

» Help pay for it

» Go to doctor/clinic with partner

» Wear a latex (or polyurethane/polyisoprene) condom

» Ask questions

» Remind partner to use the method correctly

» Help decide which method to use in addition to condoms

» Be supportive

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

7. **Summarize this activity by saying,**

> If you are going to have sex, you have to worry about unintended pregnancy and sexually transmitted infections, including HIV. To avoid these problems, you have to use effective methods to prevent pregnancy and infections.
>
> You must use a latex or polyurethane/polyisoprene condom in addition to any other form of contraceptive you choose to use. The condom is the only birth control method that also helps prevent sexually transmitted infections, including HIV.
>
> Remember, in order to reach your goals and dreams, the proud and responsible thing to do is to use effective methods of protection every time you have sex.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY D

ATTITUDES ABOUT CONTRACEPTION

PREPARING FOR THE ACTIVITY

RATIONALE

This activity focuses attention on individual responsibility for the prevention of pregnancy and makes participants aware of some of the reasons people may not use birth control.

MATERIALS

- *Agree/Disagree* signs
- Masking tape

TIME

10 minutes

PROCEDURE

FACILITATOR'S NOTE

The attitude statements reflect negative beliefs that limit a young person's ability to use safer sex strategies effectively. You will begin with the negative statement and, after some discussion, end on a positive note. The goal is to put a positive spin on each attitude and bolster beliefs that will enhance the participants' ability to always choose to be safer.

1. Tape the *Agree* and *Disagree* signs on opposite sides of the room.

2. Introduce the activity by saying,

> We have already learned that there are many methods of birth control or contraception.
>
> Attitudes and beliefs often get in the way of using birth control, especially condoms, even when people know a lot about it. This activity is designed to help you look more closely at your attitudes and beliefs about birth control.

FACILITATOR'S NOTE

Be careful to protect participants who seem to be in the minority on a certain issue. Refer to the group agreements to give the participants structure if they become unruly.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

3. **Follow the instructions below:**

   - Ask participants to stand.
   - Read a statement from the *Attitudes Statements* below.
   - Ask participants to stand under the sign—Agree or Disagree—that corresponds to how they feel about the statement.
   - Ask volunteers to give their reasons for agreeing or disagreeing with the statement. If all participants choose the same position, ask them to guess what reasons people in the opposing position might give.
   - After some discussion of the statement, read the information in parentheses after each attitude statement. Promote attitudes that are supportive of birth control use. Remind the group that certain attitudes and beliefs can get in the way of correct use of birth control and condoms.
   - Give participants an opportunity to switch sides if they honestly have changed their attitude or belief about the statement.
   - Continue with as many statements as time allows.

4. **Thank the participants for sharing their attitudes and opinions. Ask them to return to their seats.**

ATTITUDE STATEMENTS

1. **Birth control methods are harmful and will mess you up.** (Birth control methods are safe and effective. But an unintended pregnancy can often make life more complicated. Teens who learn about birth control can use it correctly and safely.)
2. **It's embarrassing to go into the drugstore and buy condoms.** (It might be embarrassing but if you've decided you're ready to have sexual intercourse, you need to be ready to purchase condoms.)
3. **Girls who carry condoms are easy.** (Not only is it not true, girls who carry condoms are actually smart, responsible, proud and safer. Girls can take control of condom use by using internal condoms, having condoms ready for when they need them, and feeling comfortable buying condoms or getting them from a clinic.)

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

4. **Hormonal methods such as the shot can make someone fat and not sexy.** (The term *sexy* means appealing and exciting. It really has nothing to do with a person's body shape. Being happy with oneself projects a better self-image that may contribute to "feeling sexy." There is little evidence that links hormonal methods to weight gain. Diet, exercise and genetics have a bigger influence on a person's weight. If one contraceptive method does not work for you, you can always talk to your clinician about switching to a different method.)
5. **Internal condoms are too much trouble.** (The internal condom might seem complicated, but it gets simpler once you understand how it works and know how to use it. It takes a couple of times of practice to feel confident, but once you know how to use it, you can be proud and responsible and have the condom already inserted if you know you're likely to engage in vaginal or anal intercourse.)
6. **It's hard to talk about protection with the person you're having sex with.** (It might be challenging to have difficult conversation like this. However, it's easier to discuss birth control and condom use with a partner when your mind is made up and you know why you want to be safer. It's also easier in a healthy relationship based on trust, respect, equality and open communication.)
7. **Gay, lesbian and bisexual youth don't need to learn about birth control and safer sex.** (All young people regardless of their sexual orientation [who they find themselves attracted to] need to be informed about sexuality, including information about birth control and condoms. If youth engage in sexual activity with a partner of the same sex, they should use condoms or dental dams to help prevent the spread of HIV and other STIs. Regardless of a person's sexual orientation or sexual identity, anyone who engages in penis-in-vagina sex must use birth control to prevent pregnancy and latex or polyurethane/polyisoprene condoms or other protection to reduce the risk of STIs.)
8. **Men don't need to know as much about birth control as women.** (People of all genders need to know about birth control because it takes a male sperm and a female egg to make a baby. When babies are born, men will have to share responsibility for raising their children. Therefore, men should play an active role in planning when they become fathers. Men who know about birth control and participate in getting and using methods are wise, proud, responsible and supportive partners.)

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

9. **If you're a teen parent already, it's too late to worry about using birth control.** (Teen parents usually understand the realities of parenthood more than other teens. It's never too late to take charge of when you have a baby in the future. Having more than one child as a teenager increases the challenges you have to overcome to reach your goals and dreams.)
10. ***Optional for high school youth:*** **Using condoms takes the pleasure out of sex.** (Using condoms can be fun and pleasurable if you have the skills to make them that way. We'll discuss those skills later in the program.)

5. Summarize as follows,

People have a lot of ideas and opinions about birth control. Sometimes these ideas and opinions are based on what they've heard from others. Sometimes they are based on myths and misinformation.

It's important to consider how your attitudes and beliefs might be affecting your desire and willingness to reduce your risk of unintended pregnancy and STIs, including HIV.

It's up to you to think in ways that protect you and increase your chances of accomplishing your goals and having the life you want in the future.

Take the proud and responsible path! Choose not to have sexual intercourse of any type (abstinence) and get the skills to practice the method effectively. Or, if you decide to have sexual intercourse, help protect yourself against unintended pregnancy and STIs by using an effective method of birth control *and* condoms every time you have sex.

MODULE 7

DEVELOPING CONDOM USE AND NEGOTIATION SKILLS

GOALS

The goals of this module are to:

- Increase participants' understanding of barriers to condom use and increase their strategies for reducing those barriers, including how to make condom use fun and pleasurable.
- Increase participants' communication and negotiation skills so that they can negotiate condom use with a sexual partner.
- Enhance participants' ability to resist situations that place them at risk for HIV/STI infection and pregnancy.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- List the correct steps to using a condom.
- Identify barriers to using condoms and practicing other safer sex behaviors.
- Identify strategies for implementing condom use.
- Identify ways to make condoms a more pleasurable part of the sexual experience.
- Demonstrate the ability to respond to excuses a partner may give with statements in support of condom use.
- Identify strategies for negotiating condom use with their partners.

MODULE PREVIEW

The seventh module: (1) enhances participants' ability to use condoms correctly; (2) explores positive aspects of condom use; and (3) allows participants to practice condom negotiation skills.

STRATEGIES/METHODS

- Exercises
- Scripted Roleplays

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- Video: *Condom Use Animation* (or alternative videos*) [for high school youth]
- *Condom Line-Up* cards
- *Negotiation and Refusal Skills Charts 1A & 1B*
- *Observer Checklist* poster
- *SWAT* poster
- Worksheets in the student workbook:
  - » *While They're Out* (Ineffective and Effective Versions)
  - » *Your Valentine's Day Gift* (Ineffective and Effective Versions)
  - » *Observer Checklist*

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Pre-labeled chart paper:
  - » *Ways to Make Condom Use Easy and More Fun* (for high school youth)
  - » *Ways to Make Condom Use Easy* (for middle school youth)
  - » *Pros*
  - » *Cons*
  - » *Excuses Sexual Partners Give*
- Markers
- Masking tape
- Monitor and video player, or internet access if using alternative videos

PREPARATION NEEDED

1. Label all of the charts as listed under Materials.
2. Hang the pre-labeled charts in the order they will be used. Fold and tape the charts so the titles remain covered by the bottom half of the sheet until you use them.
3. *For high school youth:* Set up the video(s) to be ready to play.

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

INSTRUCTIONAL TIME: 60 minutes

(*Note:* Facilitators may wish to extend the time to allow for further practice of the SWAT technique and roleplays.)

ACTIVITY	MINUTES NEEDED
A. Condom Line-Up	**10**
B. How to Make Condoms Fun and Pleasurable *(for high school youth)*	**10**
C. Barriers to Condom Use/Condom Pros and Cons	**10**
D. "What to Say If My Partner Says...": Responding to Excuses	**15**
E. Introduction to SWAT and Scripted Roleplays	**15**

(*Note:* This module includes different activities for middle school and high school youth. When implementing the program with middle school youth, adapt Activity A by skipping the video on condom use and including the optional discussion on how to make condom use easy, and skip Activity B. For high school youth, conduct all activities in the module as written.)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY A

CONDOM LINE-UP

PREPARING FOR THE ACTIVITY

RATIONALE

Practicing putting the *Condom Line-Up* cards in the correct order reinforces knowledge, ability and confidence to use condoms correctly.

MATERIALS

- Monitor and video player, or internet access if using alternative videos
- Video: *Condom Use Animation*, or alternative videos
- *Condom Line-Up* cards
- Masking tape
- Pre-labeled chart paper (for middle school youth):
  - *Ways to Make Condom Use Easy*

TIME

10 minutes

PROCEDURE

1. Introduce the *Condom Use Animation* video by saying,

> We are about to see a brief video on how to correctly put on a condom. The information presented in it will be helpful throughout the rest of this activity, and as soon as we're done watching it, we'll have a chance to practice what we've learned together as a group.

2. Show the video, which is 2 minutes long.

3. When the video is over, introduce the *Condom Line-Up* activity by saying,

> We are going to demonstrate all the steps involved in putting on a condom by putting a set of condom-use cards in correct order.

4. Shuffle the *Condom Line-Up* cards.

5. Pass out the cards to the participants. (Give each participant more than one card if there are more cards than participants.)

6. Ask the group to stand.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

7. **Explain to the group,**

> **These cards represent steps in proper condom use. Your task is to put them in the correct order. You will have about 1 minute to study them.**
>
> **Before we start, can someone tell me what a couple should do before they have sex?**

Answer

- » Get consent
- » Get condoms, lubricant and/or dental dams
- » Discuss safer sex issues, including when they were last tested for STIs and ways that they protect themselves from STIs and (if applicable) pregnancy.

8. **Have the participants put the cards in the proper order on the wall. Encourage all the group members to participate.**

9. **Ask if there are any final adjustments, and allow them to be made.**

10. **When the group has decided how the cards should be placed, verify the correct order or ask questions to prompt the movement to the correct order.**

11. **When the order is correct, review the steps:**

> **ORDER OF *CONDOM LINE-UP* CARDS**
>
> 1. Consent
> 2. Get external condoms and check expiration date
> 3. Sexual arousal (hug, cuddle, kiss, massage)
> 4. Erection
> 5. Carefully remove condom from package
> 6. Dab water-based lubricant on penis or inside condom
> 7. Squeeze out any air from tip of condom and leave room for ejaculation
> 8. Roll condom on
> 9. Intercourse
>
> *(continued)*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

10. Orgasm *(optional)*

11. Hold onto the rim of condom and withdraw the penis

12. Remove and discard condom

13. Loss of erection

14. Relaxation

FACILITATOR'S NOTE

Steps 6 and 7 could be reversed and still be correct. Relaxation can occur at any point throughout the process, and should be a continuous part of the process. Loss of erection can also happen at any time throughout the process. Orgasms are optional and not everyone will experience an orgasm every time.

12. Next, use the following discussion questions to stimulate positive attitudes toward condom use. Say,

"Which steps in this process can involve a partner?"

Answers

» Consent, sexual arousal, rolling condom on, intercourse, orgasm, holding onto rim, removing condom, and relaxation. A partner (of any gender) can also get or buy condoms and have them ready.

"If a person with a penis loses their erection after putting on a condom and before intercourse, what could the couple do?"

Answer

» This will happen to most people with penises at some point in their lives. Have partner take off condom, continue playing and stimulating one another, relax, and enjoy the fun. After a while, put a new condom on as part of the play.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

13. **Summarize by saying,**

> **You did a great job lining up the condom cards and discussing the correct steps in external condom use. Remember and practice these steps so that you can make the proud choice and use condoms correctly every time if you've decided to have sex. Remember, too, that you may also use internal condoms instead of external condoms. It is also important to remember that using two or more condoms at the same time can cause the condoms to weaken and tear. Never use two condoms at the same time. Condoms can be used with other birth control methods such as the pill or withdrawal to increase contraceptive effectiveness.**

OPTIONAL ACTIVITY FOR MIDDLE SCHOOL YOUTH

15. **When using this curriculum with middle school age youth, engage them in a discussion on how condom use can be made easy by asking these questions:**

    - What do you think makes some people uncomfortable about using protection such as external condoms? internal condoms? dental dams?
    - Why do you think other people use these forms of protection?
    - How might someone become more comfortable with the idea of using protection?
    - What might make it easier for someone to get and use condoms? (Use the pre-labeled chart paper to record responses.)

Skip Activity B and move directly to Activity C after this discussion.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY B

HOW TO MAKE CONDOMS FUN AND PLEASURABLE (FOR HIGH SCHOOL YOUTH)

PREPARING FOR THE ACTIVITY

RATIONALE

Helping participants see how they can make condom use fun and pleasurable for themselves and their partners encourages consistent use and a sense of pride and responsibility.

MATERIALS

- Pre-labeled chart paper:
  - *Ways to Make Condom Use Easy and More Fun*
- Markers

TIME

10 minutes

PROCEDURE

1. Introduce this activity by saying,

> People often say that sex doesn't feel as good with a condom so we're going to talk about ways to make the experience more pleasurable.
>
> Remember, I'm not assuming that you're having sex and I'm not encouraging you to have sex. This is information some of you will use right away and others can tuck it away for future reference.

2. Give the following examples of ways to make using condoms more pleasurable:

> - Try different brands to find one that feels most comfortable and natural.
> - Use extra lubricant inside the tip of the condom and on the outside of the condom to increase wetness.

3. Unfold the pre-labeled chart paper titled *Ways to Make Condom Use Easy and More Fun.*

4. Ask participants to brainstorm some ways to make using condoms fun and pleasurable. Record their responses.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

5. **Add the following ideas if they don't get mentioned:**

- Make putting on the condom a part of foreplay.
- Think up a sexual fantasy using condoms.
- Act sexy/sensual while putting on the condom.
- Hide a condom on your body and ask your partner to find it.
- Use extra lubrication inside and outside the condom.
- Experiment with different colors, types and textures of condoms.
- Have a sense of humor and make jokes.
- Tell your partner that using a condom can make an erection last longer.

6. **Now ask participants to think of some ways to make using condoms easy—to keep them from interrupting sex. Give the following examples,**

- You can talk about using condoms/dental dams in advance.
- Always have condoms on you.
- Learn to put the condom on in advance so you can do it more smoothly.
- Make sure you have condoms (or dental dams) close by to eliminate fumbling.
- Have the condom open and ready to use before sex.
- If using an internal condom, have it inserted before sex.

FACILITATOR'S NOTE

Remind youth that the only protective barriers that protect against HIV and other STIs are those made of latex, polyurethane, polyisoprene or nitrile. Anyone who is allergic to latex can use condoms made of the other materials.

Remember that some of the young people may not be sexually active and that for them this discussion may not make much sense. If this is the case, ask the questions in a way that is less personal. You could ask, "What do you think some people do to make condom use easier and more fun?" or "Imagine an advertisement for condoms and dental dams, what might it say that would make people think using condoms is easier and more fun?"

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

Participants should be reminded that only condoms consisting of latex, polyurethane, polyisoprene or nitrile can help protect against STIs. Condoms made from other materials, such as lambskin or other animal membranes, are not effective in preventing the spread of STI.

There are glow in the dark condoms that are latex and safe for STI/HIV protection, as well as flavored, ribbed and other options.

Just as there are different styles of condoms, each brand and type of lubricant is different. People have different preferences and may find that some lubricants feel better than others. Partners can try different brands to find one that feels comfortable and natural.

7. **Ask the group the following questions,**

> Do you feel prepared to use a condom if you have sex?
>
> Do you feel prepared to respond to excuses for not using a condom?

8. **Summarize as follows,**

> Once you and your partner both agree to use condoms, do something positive and fun. Go to the clinic or store together. Get lots of different brands and colors. Plan a special day when you can experiment. Just talking about how you'll use all of those condoms can be a turn-on.
>
> Remember, the proud and responsible thing to do is to always use protection such as latex or polyurethane/polyisoprene condoms if you have sex.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY C

BARRIERS TO CONDOM USE/ CONDOM PROS AND CONS

PREPARING FOR THE ACTIVITY

RATIONALE

Pointing out the positive aspects of condoms—by changing negative statements about condom use into positive ones—may reinforce the need to use condoms correctly and consistently, as well as build self-efficacy. This activity also sets the foundation for roleplaying and proud and responsible decision-making skills.

MATERIALS

- Pre-labeled chart paper:
  - *Pros*
  - *Cons*
- Markers
- Masking tape

TIME

10 minutes

PROCEDURE

FACILITATOR'S NOTE

While doing this activity, you might also bring up the issue of dental dams and find out if the reasons for not using dental dams are similar to those for not using condoms.

1. Introduce this activity by saying,

> There are many reasons why people do or do not use condoms. The reasons people do use condoms are *pros* and the reasons people don't use condoms are *cons* or *barriers to condom use*.

2. Unfold the 2 sheets of chart paper, labeled *Pros* and *Cons*.

3. Ask participants to brainstorm all of the *Pros* (all of the reasons *for* using condoms), and list their answers on the chart paper.

Make sure their list includes:

» Condoms can help prevent pregnancy.

» Condoms can help prevent STIs, including HIV.

» Condoms make you feel good about yourself.

» You know you are safer when you use condoms.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

4. **Ask participants to brainstorm all the *Cons* (all of the reasons people *don't* use condoms).**

Make sure the answers include:

- » Condoms are not available
- » Think condoms ruin the mood and pleasure
- » Using another form of birth control
- » Think condoms don't feel natural
- » Condoms cost too much
- » Don't know where to get free condoms
- » Partner doesn't want to use condoms
- » Embarrassed to bring up the subject
- » Parents might find them
- » Embarrassed to go to the store to buy them
- » Want to show they trust a partner

5. **Explain the following,**

Since you are proud and responsible young people who respect yourselves and want to protect yourselves, let's now change these cons into pros.

6. **Demonstrate by reading one of their cons/barriers and turning it into a pro.**

Example

Con: Condoms don't feel natural.

Pro: Knowing that you are being responsible by using condoms will feel natural and good.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

7. **Then, give each member of the group a chance to change a con into a pro.**

8. **Cross each con off the list as it is changed into a pro.**

9. **Summarize as follows,**

> **Good job. As you can see, we've changed all the *Cons* to *Pros*. There are no cons to using condoms. You will be using this skill again in a later activity.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY D

"WHAT TO SAY IF MY PARTNER SAYS…": RESPONDING TO EXCUSES

PREPARING FOR THE ACTIVITY

RATIONALE

Participants need to examine the excuses sexual partners give for not wanting to use condoms to protect themselves from pregnancy, STIs and sexual transmission of HIV. Practicing what to say if a partner has excuses for not wanting to use a condom prepares the participants to negotiate with a partner.

MATERIALS

- Pre-labeled chart paper:
  - *Excuses Sexual Partners Give*
- Markers

TIME

15 minutes

PROCEDURE

1. Unfold the pre-labeled chart paper titled *Excuses Sexual Partners Give*.

2. Begin the activity by saying,

> This next game is similar to the one we just played. It is about excuses partners might give for not wanting to use a condom.
>
> Let's brainstorm excuses sexual partners give for not wanting to use condoms. What excuses might sexual partners give for not wanting to use a condom?

3. Write their responses on the chart paper.

4. Then say,

> Now let's see if we can change each excuse for not wanting to use a condom into a good reason to use a condom. In other words, what could you say to a potential sexual partner who said the following?

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

5. **Demonstrate by reading one excuse that is listed on the chart paper and by giving a positive response to that excuse.**

Example

Excuse: I don't like the way condoms feel.

Response: I can show you how to make them feel much better.

6. **Then, read each remaining excuse and call on volunteers to respond to them. Say,**

I am going to read more excuses. Your job is to convince me to use a condom.

FACILITATOR'S NOTE

As you read the list of excuses, read only those that were not discussed by the group already. After the participants respond, read the provided response as an alternative.

BREAKING THE MOOD STATEMENTS

Excuse: Condoms ruin the mood for sex.

Response: Only if you let them. With a little imagination, condoms can actually enhance sexual feeling.

OR

Let me show you that it doesn't have to ruin the mood.

SEXUAL ENJOYMENT STATEMENTS

Excuse: Condoms don't feel as good as the real thing…they aren't natural.

Response: Today's thin latex condoms feel quite natural. Let's try a few different types to find the one that feels best. Putting a drop of lubricant inside the tip of the condom can give extra feeling.

OR

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

Internal condoms are made of nitrile, which warms up with body heat. We can use extra lube too.

Excuse: Sex doesn't feel as good with a condom on.

Response: There is plenty of feeling left, and I would feel unsafe without it.

Excuse: Dental dams are messy and smell funny.

Response: Dental dams aren't any messier or smellier than sex. Let's try a polyisoprene dental dam instead of a latex one so it doesn't smell. We can try different lubes too and find one that isn't smelly.

Excuse: Condoms are unnatural and turn me off.

Response: Worrying about unintended pregnancy and STIs turns me off. Condoms will make me feel safer and sexier.

OR

I know how to turn you back on.

Excuse: When I stop to put it on, I'll lose my erection.

Response: Don't worry, I'll help you get it back.

Excuse: Let's do it just this once without a condom.

Response: Once is all it takes to cause a problem, like unintended pregnancy or STI.

OTHER CONTRACEPTIVE METHODS STATEMENTS

Excuse: We don't need to use condoms if we're using the pill!

Response: The pill doesn't help protect you from STIs, including HIV, but condoms do. Proper condom usage can protect our health.

RELATIONSHIP/TRUST STATEMENTS

Excuse: People who use condoms don't trust each other.

Response: It's not a matter of trust—it is a matter of caring for yourself and the person you are with. In fact, both partners share a responsibility for having and using condoms— whether they trust each other or not.

(continued)

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

(continued)

Excuse: I love you. How can you think I would give you an infection?

Response: You wouldn't do it intentionally. But most people don't know when they are infected with an STI.

Excuse: But we've been having sex without condoms.

Response: I know, but we could enjoy each other a lot more if I did not have to worry.

OR

That does not mean it's not a good idea to use them from now on.

DISEASES AND HEALTH STATEMENTS

Excuse: Condoms are for people with diseases. Do I look sick to you?

Response: Unfortunately you can't tell by looking at people if they have an STI. A person can look and feel healthy—and still be infected.

Excuse: I know I am disease free. I have not had sex with anyone in months.

Response: As far as I know, I'm free of disease too. But either of us could have an infection from a previous relationship and not know it. The only way to know if someone has an infection is to get tested.

Excuse: I'm allergic.

Response: I'm glad you told me. We can use a polyurethane or polyisoprene condom. They work for people who have latex allergies. Or we can use internal condoms. They're made of nitrile and they warm up with body heat!

NOT HAVING A CONDOM PRESENT STATEMENTS

Excuse: I do not have a condom with me.

Response: Let's satisfy each other without having intercourse then.

OR

Let's go out and get some condoms, then have sex.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

7. When the group has finished, continue by saying,

> **Are there any additional excuses you think should go on this list?**

8. Record responses and then give these instructions,

> **We're going to do some more practice responding to these kinds of excuses. Here are some things you can include in your responses:**
>
> - **Good reasons to use condoms**
> - **Ways to make using condoms more pleasurable**
> - **Your beliefs about staying healthy and reaching your goals**

9. Ask the participants to brainstorm responses to the following questions (no need to record answers),

> **What if your partner still says no to using condoms even after you've responded to excuses?**

Answer

» Then you should postpone having sex with that person until you both agree to use them.

> **Do you need to use condoms even if you are involved with only one person?**

Answer

» Yes, even if you believe that neither of you has ever had sex with anyone else, shared needles, or had any other possible exposure to HIV. If any of these things aren't true, either one of you could have an STI and not know it. Make a plan to get tested together to know for sure.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Why is it important to use a condom even if you're using another effective method of birth control?

Answer

» Because while other birth control methods can prevent pregnancy, they don't offer protection from STIs, including HIV. Condoms (both external and internal) are the only birth control method besides abstinence that also helps protect you from HIV and other STIs.

How do alcohol and other drugs affect your sexual decisions?

Answer

» Alcohol and other drugs make it more difficult for you to think about what you are doing. They cloud your judgment, and you may do things that you would not normally do. You might not STOP and THINK before acting. And you and/or your partner won't be capable of giving consent.

10. Summarize this activity by saying,

Those were great responses. We will be using this information later when we practice roleplaying. Remember, regardless of what excuse a partner gives, you need to be prepared to explain why you insist on using a condom every time you have sex. Knowing what you're going to say in advance makes it easier to give a response that helps you make the proud and responsible choice of using a latex (or polyurethane/polyisoprene/nitrile) condom and/or dental dam every time you have sex.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY E

INTRODUCTION TO SWAT AND SCRIPTED ROLEPLAYS

PREPARING FOR THE ACTIVITY

RATIONALE

This scripted roleplay activity helps participants identify and practice the skills necessary to slow a situation down and gives alternative ways to clearly say *"NO."* Using the *Observer Checklist* poster helps reinforce specific refusal skills by giving participants a visual reminder as they watch others negotiate a potentially risky situation.

MATERIALS

- Posters:
  - *SWAT*
  - *Observer Checklist*
  - *How to Say "NO" Effectively* (Negotiation and Refusal Skills – Chart 1A)
  - *Examples of a Strong "NO"* (Negotiation and Refusal Skills – Chart 1B)
- Masking tape
- Scripted roleplays:
  - *While They're Out* (Ineffective and Effective Versions)
  - *Your Valentine's Day Gift* (Ineffective and Effective Versions)

TIME

15 minutes

(*Note:* Allow more time, if possible, to practice the SWAT technique and roleplays.)

PROCEDURE

FACILITATOR'S NOTE

Refusal Skills and Consent

Refusal skills are a key component of many evidence-based programs designed to reduce pregnancy, HIV and other STIs among youth. Programs provide instruction and practice in delivering effective refusals, and programs including refusal skills have been shown to reduce sexual risk behaviors and increase their chances of avoiding unwanted sexual pressures.

Affirmative consent is a conscious, voluntary agreement to engage in sexual activity. This consent has to be given throughout the sexual encounter. It is not enough that someone initiates or agrees to have sex. Past sexual relations or a dating relationship should never be assumed to be an indicator of a person's consent to have sex. Policies and laws around affirmative consent protect both partners by making sure they are in agreement and there is mutual understanding of what is happening.

This affirmative consent approach encourages partners to communicate openly about their wishes and boundaries, both prior to and during sexual interactions. It emphasizes the risks to both parties when partners pressure each other and the responsibility of both parties to respect the other's limits.

When teaching refusal skills and evaluating the effectiveness of participants' demonstration of those skills, it is important to affirm the value that no person who experiences sexual pressure, harassment or assault is to blame for being the target of those behaviors. Clear, assertive refusals can be encouraged, while also making sure youth understand that no one "deserves" to be pressured if a NO is unclear.

Instruction on boundaries and respecting another person's NO—both verbal and nonverbal—regardless of perceived clarity

(continued)

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement

(continued)

can be included to help young people understand the two-way nature of consent, and the importance of honest and respectful communication between friends and potential partners. This would be considered a "green-light" adaptation and can help optimize the success of the skill-building around refusals.

1. Display the *SWAT* poster, the *Negotiation and Refusal Skills Charts 1A* and *1B*, and the *Observer Checklist* poster.

2. Begin this activity by saying,

> We've talked a lot about unintended pregnancy, HIV and other STIs and how to use condoms. But how do you say "NO" when someone is pressuring you to have sex without using a condom?
>
> How do you express your personal boundaries or communicate how far you are willing to go? People set personal boundaries based on what feels right or what is uncomfortable. In dating or intimate relationships, examples of boundaries may include being happy to go to the movies but not be alone in a bedroom, or wanting to kiss but not to have sex.
>
> Being clear on your personal boundaries will help you in situations where you need to make a decision and communicate that clearly. Just as important as setting and communicating your own boundaries is respecting the other person's boundaries and decisions. This is also a sign of a healthy relationship.
>
> Talking about safer sex can be difficult sometimes. However, it is very important that you talk with your sexual partner about your decision to use condoms when you have sex. Talking openly and honestly prevents misunderstandings.
>
> We are going to work on a strategy for talking to your sexual partner about using condoms without blaming, arguing or getting into a fight. The strategy is called the SWAT technique.

3. Explain the following,

> The SWAT technique has four steps. Let's review the steps of the SWAT technique.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

4. Review the entire *SWAT* poster with the participants by reading each letter from the poster and describing what it means.

SWAT

S = Say "NO"

Refuse the unsafe behavior.

W = Explain why

Offer a good explanation as to why you want to be safe. Explaining why helps your partner hear and understand your real concerns and prevents negative reactions.

A = Provide alternatives

Provide safe alternatives to show that you still want to be intimate and have a relationship with this person, as long as it can be safe.

T = Talk it out

Talk openly about each other's feelings to help the relationship grow and ease any tension that may have developed.

5. Next, read each characteristic on the *How to Say "NO" Effectively* chart (Chart 1A).

NEGOTIATION AND REFUSAL SKILLS – CHART 1A

How to say "NO" effectively

Characteristics

- Use and repeat the word "no" often.
- Send a strong nonverbal "no" with your body language, e.g., use hand and body gestures to emphasize the point.
- Project a strong, serious tone of voice.
- Look directly at the person's face and eyes.
- Stand straight and tall.
- Use a serious facial expression.
- Don't send mixed signals.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

6. **Demonstrate how to use those characteristics by modeling the first example from the *Examples of a Strong "NO"* chart (Chart 1B). Model by showing the participants how to read the example with an assertive voice and body language.**

7. **Say to the participants,**

> **Now, each of you will get a chance to read one of the *Examples of a Strong "NO."* When you read your example, say it like you mean it. Be sure to also send a strong nonverbal "no" with your body language, tone of voice and facial expression.**

8. **Go around the group and have each participant read an example aloud.**

> **NEGOTIATION AND REFUSAL SKILLS – CHART 1B**
>
> **Examples of a strong "NO"**
>
> **Examples**
>
> - **No! I'm not ready to have sex yet!**
> - **No! I won't have sex without a condom!**
> - **No! I don't want to touch you there!**
> - **No! Stop touching me like that!**
> - **No! Stop trying to unbutton my pants.**
> - **No! I'm not going to have sex with you!**
> - **No! I really mean 'NO'!**
> - **No! I want to protect myself. We have to use a condom.**
> - **I have not said yes, which means this isn't happening.**

9. **Then say,**

> **You did a great job with that activity. We are now going to do roleplays using the SWAT technique and the *Observer Checklist*.**
>
> **Let's review the *Observer Checklist* poster. The Y/N stands for yes or no.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

10. **Review each item on the *Observer Checklist* poster to ensure participants understand it.**

11. **Then say,**

> Now we are going to do some roleplays. As you watch the roleplays, pay attention to each skill to see whether it has (yes), or has not (no), been used by the actors.

12. **Identify participants to act out the first roleplay. Have them turn to the scripted roleplay *While They're Out* (Ineffective Version) in their workbooks. Whisper to the actor playing Person 2 to avoid eye contact and use a soft tone of voice.**

13. **Begin by reading the Setting the Stage section of the roleplay before having the assigned participants read their parts. Remind the group who is playing Person 1 and who is playing Person 2. Ask the audience to pay attention to Person 2 and make note of the skills that actor uses.**

> **WHILE THEY'RE OUT – INEFFECTIVE VERSION**
>
> **Setting the Stage:**
>
> Your parents are out late. Your partner comes over, hoping to have sex with you. You want to have sex but you want to use condoms. Your partner refuses to use condoms. You decide to share how to make condoms feel much better.
>
> **Person 1:** Why are you stopping now?
>
> **Person 2:** Wait. Do you have a condom?
>
> **Person 1:** No I told you, I don't like the way those things feel.
>
> **Person 2:** Yeah, I know.
>
> **Person 1:** I don't have a condom. I want to be able to feel you, and it doesn't feel as good. Let's just do it without a condom this time.
>
> **Person 2:** I think there are ways using one can feel good. I don't want to get infected with an STI like HIV.
>
> *(continued)*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

(continued)

Person 1: You won't. And I don't need you to show me anything. I know how condoms are used.

Person 2: I know you know how to use them. And you would never give me an STI. Sorry, I freaked out for a minute.

Person 1: Yeah, I mean I love you. Nothing bad is going to happen.

Person 2: You're right.

They keep kissing.

14. Use the *Observer Checklist* poster to process this roleplay. Point to each skill on the *Observer Checklist* poster and ask the group if they saw it demonstrated in the roleplay:

Did Person 2 say no? *(The person never said no.)*

Did the person refuse to engage in unsafe behavior? *(No)*

Did the person repeat the refusal? *(The person didn't repeat the objection.)*

Did the person's body language say no? *(The person didn't make eye contact and used a soft tone of voice.)*

Did the person explain why? *(The person did not give clear reasons. In addition, the person expressed doubt in their decision.)*

Did the person suggest alternatives? *(The person failed to offer any alternative actions.)*

Did the person talk it out and use language that protected the relationship? *(The person did not talk it over and express their feelings.)*

Did the person seem prepared to leave a potentially unsafe situation? *(No. The person finally gave up.)*

Was there consent in this situation? *(No)*

Even though Person 1 didn't say no, did it seem like they were consenting to sex? *(No)*

Even though Person 1 didn't say no, how might Person 2 know that Person 1 did not consent? *(Unsure or soft tone of voice, no eye contact, only backed down because of pressure)*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

FACILITATOR'S NOTE

Clear, assertive refusals can be encouraged, while also making sure youth understand that no one "deserves" to be pressured for giving an unclear NO. Be sure to affirm the value that no person who experiences sexual pressure, harassment or assault is to blame for being the target of those behaviors.

15. Then have the same two participants read *While They're Out* (Effective Version), keeping the same roles. Whisper to Person 2 to be firm and use strong body language. Again, set up the roleplay by reading the Setting the Stage section. Remind the roleplay group to use the *Observer Checklist* to observe Person 2.

WHILE THEY'RE OUT – EFFECTIVE VERSION

Setting the Stage:

Your parents are out late. Your partner comes over, hoping to have sex with you. You want to have sex but you want to use condoms. Your partner refuses to use condoms. You decide to share how to make condoms feel much better.

Person 1: Why are you stopping now?

Person 2: Wait. Do you have a condom?

Person 1: No I told you, I don't like the way those things feel.

Person 2: Yeah, I know. But I want to use a condom.

Person 1: I don't have a condom. I want to be able to feel you, and it doesn't feel as good. Let's just do it without a condom this time.

Person 2: No. I want to use a condom. I can show you how using one can feel good. I don't want to get infected with an STI like HIV.

Person 1: You won't. And I don't need you to show me anything. I know how condoms are used.

Person 2: I know, but it's better if we do it together. It's a responsible part of having sex. I'm not going to have sex without a condom. So let's get condoms.

Person 1: OK. You're right.

They stop talking and get condoms.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

16. **After the roleplay, thank the roleplaying participants and ask them to return to their seats. Then say,**

> Let's use the *Observer Checklist* to review whether Person 2 used the skills that are listed.
>
> Did Person 2 say no? *(Yes)*
>
> Did Person 2 refuse to engage in unsafe behavior? *(Yes, absolutely)*
>
> Did the person repeat the refusal? *(Yes)*
>
> Did the person's body language say no? *(Yes)*
>
> Did the person explain why? *(Yes)*
>
> Did the person suggest alternatives? *(Yes, the person suggested going to get condoms.)*
>
> Did the person talk it out and use language that protected the relationship? *(Yes, "It's better if we do it together.")*
>
> Did the person seem prepared to leave the situation? *(Probably, but it wasn't necessary.)*
>
> Did Person 1 respect Person 2's personal boundaries? *(Yes.)*
>
> Was there consent in this situation? *(Yes. There was mutual agreement on what to do next.)*
>
> How should this story end? *(If they have sex, each should continue to check how the other person is feeling and whether that person still wants to continue having sex. At any point, if either one says stop, they must stop. Consent can be revoked at any time.)*

17. **After participants respond, ask the following questions:**

> Why was Person 2 more successful in the second version?
>
> Which version showed that they loved and respected themselves and each other enough to practice proud and responsible behavior?

18. **Now ask for two new participants to read *Your Valentine's Day Gift* (Ineffective Version). Remind participants to continue to use the *Observer Checklist*.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

19. **Begin by reading the Setting the Stage section before having the assigned participants act out their parts.**

YOUR VALENTINE'S DAY GIFT – INEFFECTIVE VERSION

Setting the Stage:

It is Valentine's Day. You and your partner are going out to a movie and dinner. You know that at some point having sex will be discussed. You partner is willing to use condoms, but you're just not ready for any of it. You decide to tell your partner that you want to wait to have sex.

Person 1: Happy Valentine's Day! Here is a little something I bought, though I was hoping our gifts to each other would be more than something from a store.

Person 2: Do you mean you were hoping we would have sex?

Person 1: Yes. You don't have to worry. I have condoms.

Person 2: Oh! You are moving so fast.

Person 1: We have been dating for a while. I love you and I'm ready.

Person 2: Well. I love you but I'm just not sure.

Person 1: Don't worry. We're using protection. After all, it's Valentine's Day and what better gift than to share our love?

Person 2: I just have some doubts…I'm scared.

Person 1: You are always going to be scared, but the important thing is that we love each other.

Person 2: *(Reluctantly)* I guess.

They stop talking and begin to have sex.

20. **Use the *Observer Checklist* to process this roleplay. Point to each skill on the *Observer Checklist* and ask the group if they saw it demonstrated in the roleplay:**

From your observations, what was ineffective about this roleplay?

Did the person say no? *(The person never said no.)*

Did the person repeat the refusal? *(No)*

Did the person explain why? *(The person failed to clearly express reasons for waiting, and expressed doubt in the original decision.*

(continued)

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

(continued)

Did the person suggest alternatives? *(The person failed to offer alternative actions.)*

Did the person talk it out? *(The person gave in to his or her partner rather than stating her or his own view.)*

Did Person 1 respect Person 2's personal boundaries? *(No.)*

Was there affirmative consent in this situation? *(No. "I guess" is not affirmative consent.)*

How should this story end? *(They should stop because there is no affirmative consent to have sex.)*

FACILITATOR'S NOTE

Again, encourage clear, assertive refusals, but stress that no one "deserves" to be pressured if the NO is unclear.

21. Now have the same two participants read *Your Valentine's Day Gift* (Effective Version) keeping the same roles. Begin by reading the Setting the Stage section.

YOUR VALENTINE'S DAY GIFT – EFFECTIVE VERSION

Setting the Stage:

It is Valentine's Day. You and your partner are going out to a movie and dinner. You know that at some point having sex will be discussed. Your partner is willing to use condoms, but you're just not ready for any of it. You decide to tell your partner that you want to wait to have sex.

Person 1: Happy Valentine's Day! Here is a little something I bought, though I was hoping our gifts to each other would be more than something from a store.

Person 2: Do you mean you were hoping we would have sex?

Person 1: Yes. You don't have to worry. I have condoms.

Person 2: No. You are moving so fast.

Person 1: No, I'm not. We've been dating for a while. I love you and I'm ready.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

Person 2: Well, I'm not. I love you, but I'm not ready to have with sex you. I know you are the person that I want to be with, but I also know that I need you to be understanding and patient. I want to have sex only when I'm absolutely sure—when I'm not scared or in doubt. So the answer is no.

Person 1: Well, I don't want to feel like I'm pressuring you to do something you don't want to do. It's important that you're sure. So, I guess I'll wait until you're ready.

Person 2: Thanks, for understanding. I love you so much and I'm really glad that you are willing to wait.

They kiss and go to the movies.

22. After the roleplay, thank the roleplaying participants and ask them to return to their seats.

23. Then ask the group to use the *Observer Checklist* to answer the following questions,

What do you think made this roleplay version successful?

How was it different from the first version?

24. Allow participants to respond.

25. Summarize as follows,

You had some really great observations. We just had a chance to practice saying no to unsafe behavior. We also had the opportunity to practice listening for consent.

Remember these SWAT techniques and refusal skills so that you can be proud and responsible and use them whenever you need to discuss abstinence, condom use and safer sex.

NEGOTIATION AND REFUSAL SKILLS – CHART 1A

How to say "NO" effectively

Characteristics

- Use and repeat the word "no" often.
- Send a strong nonverbal "no" with your body language, e.g., use hand and body gestures to emphasize the point.
- Project a strong, serious tone of voice.
- Look directly at the person's face and eyes.
- Stand straight and tall.
- Use a serious facial expression.
- Don't send mixed signals.

Poster

NEGOTIATION AND REFUSAL SKILLS – CHART 1B

Examples of a strong "NO"

Examples

- No! I'm not ready to have sex yet!
- No! I won't have sex without a condom!
- No! I don't want to touch you there!
- No! Stop touching me like that!
- No! Stop trying to unbutton my pants!
- No! I'm not going to have sex with you!
- No! I really mean 'NO'!
- No! I want to protect myself. We have to use a condom.
- I have not said yes, which means this isn't happening.

SWAT

S = Say "NO"

Refuse the unsafe behavior.

W = Explain why

Offer a good explanation as to why you want to be safe. Explaining why helps your partner hear and understand your real concerns and prevents negative reactions.

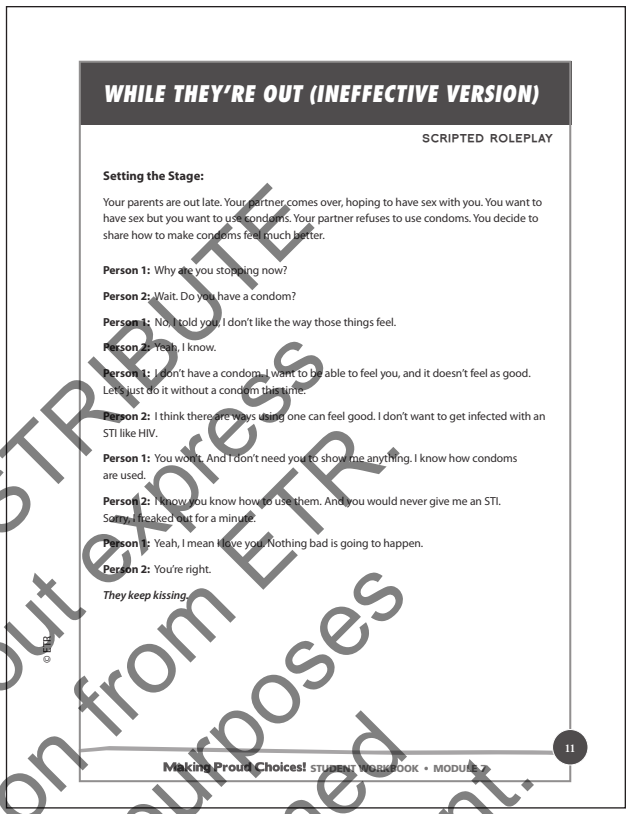
A = Provide alternatives

Provide safe alternatives to show that you still want to be intimate and have a relationship with this person, as long as it can be safe.

T = Talk it out

Talk openly about each other's feelings to help the relationship grow and ease any tension.

Making Proud Choices! © ETR. All rights reserved. Poster



WHILE THEY'RE OUT (INEFFECTIVE VERSION)

SCRIPTED ROLEPLAY

Setting the Stage:

Your parents are out late. Your partner comes over, hoping to have sex with you. You want to have sex but you want to use condoms. Your partner refuses to use condoms. You decide to share how to make condoms feel much better.

Person 1: Why are you stopping now?

Person 2: Wait. Do you have a condom?

Person 1: No, I told you, I don't like the way those things feel.

Person 2: Yeah, I know.

Person 1: I don't have a condom. I want to be able to feel you, and it doesn't feel as good. Let's just do it without a condom this time.

Person 2: I think there are ways using one can feel good. I don't want to get infected with an STI like HIV.

Person 1: You won't. And I don't need you to show me anything. I know how condoms are used.

Person 2: I know you know how to use them. And you would never give me an STI. Sorry, I freaked out for a minute.

MODULE 8

ENHANCING REFUSAL AND NEGOTIATION SKILLS

GOALS

The goals of this module are to:

- Increase participants' communication and negotiation skills regarding condom use.
- Enhance participants' ability to resist situations that increase their risk for unintended pregnancy, HIV and other STIs.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- Demonstrate body language and strategies for effectively saying no to unprotected sex.
- Identify strategies for negotiating safer sex with a sexual partner.
- Demonstrate the ability to negotiate condom use with a partner.
- Express pride about sticking to decisions that can help them to achieve their goals.

MODULE PREVIEW

The eighth module: (1) provides an opportunity for participants to practice condom negotiation skills; and (2) provides an opportunity for participants to practice communication and negotiation skills with a partner.

STRATEGIES/METHODS

- Roleplays
- Group Discussion
- Mini-Lecture
- Skills Practice
- Video Viewing
- Closing Circle

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- *Negotiation and Refusal Skills Charts 1A, 1B, 2, 3 & 4*
- *Observer Checklist* poster
- *SWAT* poster
- *Roleplay Guidelines* poster
- Video: *Wrap It Up* (or alternative videos*)
- Roleplays and worksheet in the student workbook:
  - » *Roleplay A: Jamie and Taylor*
  - » *Roleplay B: Justice and Angel*
  - » *Roleplay C: Kayla and Mia*
  - » *Roleplay D: Devon and Jadon*
  - » *Roleplay E: Casey and Alex*
  - » *Observer Checklist*
- *Optional:* Additional roleplay scenarios found in Appendix A

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Monitor and video player, or internet access if using alternative videos
- Pencils
- Masking tape

INSTRUCTIONAL TIME: 60 minutes

(*Note:* Facilitators may wish to extend the time to allow for further practice of the SWAT technique and roleplays.)

ACTIVITY	MINUTES NEEDED
A. Safer Sex Negotiation Skills and *Wrap It Up* Video*	**15**
B. Practicing and Enhancing Negotiation Skills: Unscripted Roleplays	**35**
C. Talking to Your Partner about Condom Use - Information Review	**5**
D. Closing Activity	**5**

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.

ACTIVITY A

SAFER SEX NEGOTIATION SKILLS AND *WRAP IT UP* VIDEO*

PREPARING FOR THE ACTIVITY

RATIONALE

Practicing strategies for negotiating condom use with their sexual partner provides participants with additional skills necessary to help reduce their risk for unintended pregnancy, and STIs or HIV infection.

MATERIALS

- Posters
  - *Negotiation and Refusal Skills Charts 1A, 1B, 2, 3 & 4*
  - *Observer Checklist*
  - *SWAT*
- Video: *Wrap It Up*, or alternative videos
- Monitor and video player, or internet access if using alternative videos

TIME

15 minutes

(*Note:* Allow more time, if possible, to practice the SWAT technique and to view the video.)

PROCEDURE

FACILITATOR'S NOTE

This is a quick but important activity. Please maintain a lively pace as you review the negotiation skills and have group members practice the skills of offering explanations, providing alternatives to unsafe sex and talking it out. Plan to spend no more than 7 minutes on this review and practice. The video is 6 minutes so you'll need the final 8 minutes to show the video and have group members critique the actor's skills.

1. Hang the *Observer Checklist* poster, *SWAT* poster, and the *Negotiation and Refusal Skills* charts.

2. Introduce this activity by saying,

> Talking about condom use can be difficult. However, it is very important that you talk with your partner about protection and safer sex. This should include what types of protection to use, such as external or internal condoms and dental dams. Having an open, honest discussion can help avoid misunderstandings.
>
> We are going to work on a strategy for getting your partner to agree to use condoms, without blaming, arguing or getting into a fight.
>
> Earlier we reviewed the SWAT technique for negotiating safer sex and the "S" part of the SWAT technique: Say "NO."
>
> Now let's review the other steps of SWAT: "W," which is Explain Why, "A," which is Provide Alternatives, and "T," which is Talk It Out.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

3. Show *Negotiation and Refusal Skills Chart 2—Explain Why*. Say,

> Let's start with *Explain Why—Give Clear Reasons to Support Your Choice*, which is the "W" part of the SWAT technique. The chart shows examples of explanations you might offer for why you are saying no to unsafe sex.
>
> We will go around the group and I would like each of you to read aloud an example of an explanation that you can offer to a partner. When you say the statement, say it like you really mean it.

4. Go around the group and ask each participant to read aloud an example from the chart until all the examples have been read. Encourage participants to make up their own examples as well.

> **NEGOTIATION AND REFUSAL SKILLS – CHART 2**
>
> **Explain why**
>
> Give clear reasons to support your choice.
>
> **Examples**
>
> - I want to protect myself with a condom every time I have sex.
> - No, I won't risk my future goals by having unprotected sex.
> - Condoms help prevent unintended pregnancy, HIV and other STIs.
> - I am not ready to have a child (again).

5. Now, follow the same procedure with *Negotiation and Refusal Skills Chart 3—Provide Alternatives*. Say,

> Let's move on to *Provide Alternatives—Suggest Something Else*, which is the "A" part of the SWAT technique. The chart gives examples of alternative actions you might provide instead of having sex. Once again, we will go around the group, and I would like each of you to read aloud an example of an alternative action statement. When you say the statement, say it like you really mean it.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

6. Go around the group and ask each participant to read aloud an example from the chart until all the examples have been read. Encourage the participants to make up their own examples as well.

NEGOTIATION AND REFUSAL SKILLS – CHART 3

Provide alternatives

Suggest another action.

Examples

- Let's go buy some condoms right now.
- Let's get out of the bedroom. It makes me feel uncomfortable.
- If you're willing to use a condom, then we can have sex.
- Let's do something else that will feel good for both of us, since we don't have a condom.
- Let's go get something to eat.
- Let's go see a movie.

7. Now follow the same procedure with *Negotiation and Refusal Skills Chart 4—Talk It Out*. Say,

> Now let's work on the last part of SWAT: Talk It Out—Discuss Your Feelings, which is the "T." These are examples of how you might discuss your feelings about practicing safer sex. We will go around the group and I would like each of you to read aloud an example of a talk it out statement. When you say the statement, say it like you really mean it.

8. Go around the group and ask each participant to read aloud an example from the chart until all the examples have been read. Encourage the participants to make up their own examples as well.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

NEGOTIATION AND REFUSAL SKILLS – CHART 4

Talk it out

Discuss your feelings.

Examples

- I feel like you don't really care about me when you pressure me like this.
- I'm not ready to have a baby. I would feel better if we use a condom.
- I'm glad you agreed to use condoms. I feel like you really care about me.
- You really turn me on when you touch me, but I won't have sexual intercourse without a condom.
- If you can't respect my feelings, then I'm prepared to end this relationship.
- Our future goals and dreams are more important than a moment of unsafe pleasure, so I'm glad we decided to use condoms.

9. Introduce the *Wrap It Up* video or alternative video(s) by saying,

> We are going to see a short video about a couple who are in a negotiation about using condoms. In this roleplay, one partner wants to use condoms and the other does not. Watch what happens, and take note of how they handle the situation, the things they say and how they say them, and be alert to the strategies used to convince a partner to use condoms.

10. Show the video, which is 6 minutes long.

11. Review the video using the *Observer Checklist*.

12. Process this activity by discussing the following questions,

- Did the person who wanted to use condoms use the SWAT Refusal and Negotiation Skills we talked about before? How?
- Did they say no?
- Did they offer an explanation?
- Did they provide alternatives?

(continued)

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

(continued)

- **Did the two people talk it out?**
- **Did you think that they had any difficulty? If so, what?**
- **What were the partner's concerns about using a condom?**
- **What did the person who wanted to use condoms say to respond to their partner's statements and concerns?**
- **Was the person who wanted to use condoms ready to walk away from the relationship, if necessary?**
- **Were their personal boundaries and choice respected?**
- **Was there consent?**

13. **Continue processing with the following questions,**

» What could have happened if one partner decided to continue pressuring the other for sex while refusing to honor that person's decision to use protection?

» What were some other points in the story when their relationship could have turned into harassment, abuse or violence?

» The video was about a heterosexual relationship (boyfriend/ girlfriend). Could this happen in other types of adolescent relationships?

» If you suspect a friend may be in an abusive relationship or is being used by someone in a sexual way, what would you do?

14. **Summarize as follows,**

You have demonstrated a really good understanding of healthy and unhealthy relationships. As we have seen here, the foundation of a healthy relationship is respect, and it is guided by open and honest communication. You also learned refusal and negotiation skills that could help you in your relationships. It sounds like you are ready for the roleplays we will be doing shortly.

FACILITATOR'S NOTE

You should determine the roles for the next roleplays before the activity begins. Having spent approximately 7 hours with this group, you will be able to assign the roles that best facilitate learning. All group members should participate.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY B

PRACTICING AND ENHANCING NEGOTIATION SKILLS: UNSCRIPTED ROLEPLAYS

PREPARING FOR THE ACTIVITY

RATIONALE

This activity allows participants guided practice for negotiating condom use with a partner in a controlled and safe environment. This practice increases their skills and feelings of confidence about condom negotiation and the likelihood that they will use these negotiation skills in real-life situations. Those not participating directly in the roleplay have the opportunity to identify helpful strategies and coach the actors.

MATERIALS

- Posters:
  - *Roleplay Guidelines*
  - *Observer Checklist*
  - *SWAT*
  - *Negotiation and Refusal Skills Charts 1A, 1B, 2, 3 & 4*
- Student workbook:
  - *Observer Checklist*
  - *Roleplays (A–E)*
- *Optional:* Additional roleplays found in Appendix A

TIME

35 minutes

PROCEDURE

FACILITATOR'S NOTE

During the roleplay practice, participants may roleplay sexual pressure situations with someone of a different or the same gender. This may be awkward for straight teens who are sensitive to the suggestion of same-sex romance, for teens who identify as gay or lesbian, or for teens who are transgender or gender nonconforming. It's important to address this situation directly and proactively.

Here are some tips:

- Explain the situation in a matter-of-fact way. Let participants know that they may be doing the roleplays with someone of a different or the same gender.
- Emphasize that they are playing roles. Doing the roleplay to practice the skill doesn't say anything about the sexual orientation of the people doing the roleplay or mean that anyone is expressing a real-life attraction toward the other person in the roleplay.
- Explain that they need to take their roles seriously because teens of all sexual orientations and gender identities need to learn how to resist sexual pressure and negotiate condom use to protect themselves. This will help ensure that they all get the most out of the roleplay activities.

1. Post the *Roleplay Guidelines* poster before starting this activity.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

2. **Begin this roleplay activity by saying,**

> In a little while, we are going to roleplay some situations to practice using these techniques in pressure situations.
>
> Try to incorporate everything you have learned so far. Be creative in your approach.

3. **Ask participants to define roleplaying.**

4. **After their responses, say,**

> Right! Roleplaying is a technique that can help you learn what it feels like to be someone else or to practice how to handle a situation that is new, difficult or in some way stressful.
>
> You should do your best to feel, sound and behave like the person you are roleplaying. You are trying to behave in a way that will help you and everyone else learn.
>
> It is important to follow some guidelines when you do roleplays. Let's review them now.

5. **Review each item on the *Roleplay Guidelines* poster. Remind the group to also use the *Negotiation and Refusal Skills Charts*.**

> **ROLEPLAY GUIDELINES**
>
> - Read your role carefully and think about how that person would really behave.
> - Do your best to stay in character through the whole roleplay.
> - Don't let comments and laughter distract you.
> - Really try to feel and act like the person you are playing.
> - Try things that you might not do ordinarily, just to see how it feels.
>
> *(continued)*

© ETR. All rights reserved.

(continued)

- **Use SWAT:**
  - » **Say no; repeat it; use strong body language.**
  - » **Explain why you don't want to engage in unsafe behavior.**
  - » **Provide alternatives.**
  - » **Talk it out.**

6. **Have participants turn to the *Observer Checklist* worksheet in their workbooks and explain the following,**

> **This checklist will be used to critique the following roleplays just like we have been using the *Observer Checklist* poster. Put a "Y" in the box for each skill you see demonstrated in each roleplay and an "N" in the box for each skill that is NOT demonstrated.**

7. **If you don't have a co-facilitator, choose a group member to model Roleplay A with you (preferably someone who was identified in advance). You should play the role of Jamie, the person being pressured. The participant should play the role of Taylor. Have the participant turn to Roleplay A in the workbook and give them a minute to think about the role.**

8. **Put two chairs in the middle of the group, angled toward each other and facing the *Negotiation and Refusal Skills Charts*.**

9. **Remind observers to use their *Observer Checklists* to critique Jamie.**

10. **Start by saying,**

> **The rest of you can coach us if we get stuck in the roleplay. Remember that no one says *ALL* the right things in every conversation. But we can always go back to our partners and say more about thoughts and feelings another time.**

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

11. Read aloud the scenarios for both characters, then perform the roleplay.

ROLEPLAY A

Theme: Loss of trust and sexual pleasure through condom use

Observe: Jamie Using SWAT

(JAMIE and TAYLOR talking)

Jamie

You and your sexual partner (Taylor) are in your partner's living room with the lights down low and things are starting to get physical. You are trying to tell Taylor that you want to use protection, and Taylor is beginning to get angry. Taylor doesn't think sex will feel as good and does not want to use protection. But you want to use protection because you respect yourself. Your health is important to you and you want to protect yourself because you are worth it!

Your task is to convince Taylor that sex can be just as pleasurable with condoms/dental dams.

Taylor

You and your partner (Jamie) are at your place and things are getting very intimate. Jamie is starting to talk about using protection and you are getting angry. Does Jamie think you have been sleeping around? You don't think using protection feels good and truly believe it will ruin the mood.

Your task is to convince Jamie to have sex without protection.

12. Review participants' responses on the *Observer Checklist* by going over each item on the checklist. Encourage everyone, including the actors, to give input. Ask,

- Did Jamie use the SWAT technique?
- Did Jamie say no?
- Did Jamie explain why?
- Did Jamie provide alternatives?
- Did they talk it out?
- What could Jamie have done differently?

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

13. Continue to process the roleplay using the following questions,

> • What methods/strategies did Jamie use to get the message across?
> • Actors, what pressures were your characters feeling?
> • Were there any misunderstandings or breakdowns in communication?
> • Did these characters seem realistic to you?
> • How would you have handled the situation differently?

14. Summarize Roleplay A by saying,

> Condoms don't have to ruin sex. There are different techniques that can make condom use pleasurable and fun. It is important to talk about condom use ahead of time, before any touching or kissing begins. People have expectations in certain situations. If something happens that you don't like, tell your partner.

15. Have the first pair of participants turn to Roleplay B in their workbooks. Encourage the participants to be themselves, but to also pretend as if this were a real situation for them.

16. Explain to the roleplay participants,

> You are using these roleplays to practice talking to a partner. I'll give you about a minute to read and decide how you will perform the roleplay.

17. Explain the following to everyone,

> If, at any time, the players need help or the observers wish to move into a player's spot, raise your hands to signal me.

18. Tell observers which character to observe. (The character they should observe in each roleplay is underlined and described first.) In Roleplay B, the person is Justice. The goal of this roleplay is for Justice to be proud and responsible and resist pressure to have unsafe sex.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

19. **Remind observers to fill out the *Observer Checklist* as they watch the roleplay.**

FACILITATOR'S NOTE

After a few roleplays, participants may no longer need the *Observer Checklist*, but you should continue to go over each skill.

20. **Read aloud the scenarios for both characters in Roleplay B. Then have the players present the roleplay.**

FACILITATOR'S NOTE

Your job is to be sure that important issues are addressed and that participants feel that they can effectively use their skills. Give suggestions and help as they need it. Do not allow disagreement to continue too long or for anti-condom roles to win.

You may wish to have participants replay the roleplay again, having the audience help out, or play one of the roles yourself in order to show alternatives. What is important is that participants practice communicating even when the situation is difficult. In real life, one of the hardest things to do is to fully explain yourself and be understood.

Participants can also be divided into coaching groups to help each other out. This develops a cooperative atmosphere and is very energizing for the participants.

ROLEPLAY B

Theme: Condom use versus partner trust

Observe: Justice using SWAT

(JUSTICE and ANGEL talking)

Justice

You have been going out with Angel for a while now and you want to talk about using condoms. You know Angel has had sex with other people, and you are concerned about pregnancy and STIs, especially HIV, and want to use a condom. But you also don't want to lose Angel. You think you're falling in love.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

Angel may be offended because you're already using the pill for birth control, but you mention condoms anyway. You want to be with Angel, but only if you can be safer.

Your task is to resist the temptation to have unsafe sex but still keep the relationship.

Angel

Your partner (Justice) just suggested that you start using condoms. You feel that Justice does not trust you if Justice is afraid to have sex with you without using a condom.

Your older sibling told you that you don't have to use condoms when you really love someone. You want to prove Justice trusts and cares about you by not using condoms.

Your task is to try to convince Justice not to use condoms.

21. Review the participants' responses on the *Observer Checklist* by asking the following questions,

- Did Justice use the SWAT technique?
- Did Justice say no?
- Did Justice explain why?
- Did Justice provide alternatives?
- Did they talk it out?
- What could Justice have done differently?

22. Continue to process the roleplay using the following questions,

- Actors, what pressures were your characters feeling?
- Were there any misunderstandings or breakdowns in communication?
- Which decisions would you make in a situation like this?
- Do you know anyone who doesn't want a partner to use condoms?
- Would you risk losing your partner in order to protect yourself?

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

23. **Summarize Roleplay B by saying,**

> Relationships can be very complicated sometimes. Talking about condoms isn't always easy. Just remember, using condoms does not mean that you distrust your partner, it means that you care enough about yourself and your partner to make sure that you are *BOTH* protected.

24. **Have the next pair of participants turn to Roleplay C in their workbooks.**

25. **Tell observers which character to observe. In Roleplay C, the person is Kayla. The goal of this roleplay is for Kayla to be proud and responsible and resist pressure to have unsafe sex.**

26. **Remind observers to fill out the *Observer Checklist* as they watch the roleplay.**

27. **Read aloud the scenarios for both characters in Roleplay C, and then have the players present the roleplay.**

> **ROLEPLAY C**
>
> **Theme:** Two friends talk about protection
>
> **Observe:** Kayla using SWAT
>
> *(KAYLA and MIA talking)*
>
> **Kayla**
>
> Your friend, Mia, is upset because a partner wants to use protection. You have never used protection either, but you just finished this program at school about pregnancy, HIV and safer sex, and now you feel a lot differently about it.
>
> Your partner dated other people before you and had sex with them. Your partner wasn't your first either. Now you understand how important it is to reduce the risk for yourself and your partner by always using protection.
>
> While Mia is telling you all the reasons for not using condoms or other protection, you are trying to convince Mia that protection is a good idea. Maybe you can get Mia to go to the clinic with you to get protection.
>
> *(continued)*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

Your task is to resist Mia's pressure to have unsafe sex and still keep your friend's respect.

Mia

Your girlfriend told you that if you want to have sex you have to use dental dams. You've heard others talk about this at basketball practice. They say that rubber is nasty and you should feel the "real thing."

You're not trying to be difficult, but nobody is going to force you to use protection! Besides, you only go out with other girls so neither of you is going to get pregnant. And you're not worried about diseases because your new girlfriend is young.

Your friend, Kayla, wants to start using protection because of her class about STIs. You can't even respect Kayla anymore if she can't be real.

Your task is to convince Kayla that protection is a bad idea.

28. Review the participants' responses on the *Observer Checklists* asking the following questions,

- Did Kayla use the SWAT technique?
- Did Kayla say no?
- Did Kayla explain why?
- Did Kayla provide alternatives?
- Did they talk it out?
- What could Kayla have done differently?

29. Process the roleplay using the following questions,

- What kept Mia from using protection?
- What are some of the consequences Mia could be facing for having intercourse without using protection?
- What do you think convinced Kayla to start practicing safer sex?

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

- Was Kayla able to convince Mia? If so, how? If not, are they still friends?
- Were there any misunderstandings or breakdowns in communication?
- Why is it important to use condoms or dental dams every time you have sexual intercourse or oral sex?

30. Summarize Roleplay C by saying,

> Once you make the decision to protect yourself, convince a friend to do the same. That way, you can both be protected and have some answers for the next friend who needs to know how to stay safer.

31. Have the next pair of participants turn to Roleplay D in their workbooks.

32. Tell observers which character to observe. In Roleplay D, the person is Devon. The goal of this roleplay is for Devon to be proud and responsible and resist pressure to have unsafe sex.

33. Remind observers to fill out the *Observer Checklist* as they watch the roleplay.

34. Read aloud the scenarios for both characters, and then have participants present the roleplay.

> **ROLEPLAY D**
>
> **Theme:** Initiating use of protection in an existing relationship
>
> **Observe:** Devon using SWAT
>
> *(DEVON and JADON talking)*
>
> **Devon**
>
> You and your partner, Jadon, have been sexually active for a while. However, you have just completed a program called *Making Proud Choices!* You are thinking about the things you didn't know and the things that concern you. You think about your own behaviors. You think about Jadon's past sexual life
>
> *(continued)*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement

© ETR. All rights reserved.

(continued)

and your own past sexual life. And now you begin to worry because you and your partner have been sexually active without using protection. Now you want to use protection. You know Jadon is stubborn and gets jealous very easily. You are afraid to say that you are concerned about HIV because Jadon might believe you are cheating, or even go and find a new partner.

You decide to tell Jadon about the program and all the important information you learned and that you want to use protection if you have sex again. When Jadon arrives, you are looking at the information about STI protection that was given to you at the program.

Your task is to convince Jadon that you want to be proud and responsible and use protection.

Jadon

You have never used a condom or dental dam and don't want to. You have been having sex with Devon for a while now and have never used protection before. You believe that if Devon suddenly wants to use protection, then Devon must be cheating on you. You also believe that condoms/dental dams are not natural and sex won't feel as good if you use them.

Your task is to convince Devon not to use condoms.

35. Review the groups' responses on the *Observer Checklist* by going over each item on the checklist. Include input from the actors as well. Ask the following questions:

- Did Devon use the SWAT technique?
- Did Devon say no?
- Did Devon explain why?
- Did Devon provide alternatives?
- Did they talk it out?
- What could Devon have done differently?

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

36. Continue to process the roleplay using the following questions,

- What methods/strategies did Devon use to get the message across?
- Actors, what pressures were your characters feeling?
- Were there any misunderstandings or breakdowns in communication?
- How would you have practiced safer sex differently in that situation?

37. Summarize Roleplay D by saying,

Condoms don't make a person weak. They don't have to ruin sex. There are different techniques that can make condom use pleasurable and fun. The bottom line is you should take responsibility and be comfortable and confident in your choice to be safer.

38. Have the next pair of participants turn to Roleplay E in their workbooks.

39. Tell observers which character to observe. In Roleplay E, the person is Alex. The goal of this roleplay is for Alex to be proud and responsible and resist pressure to have unprotected sex.

40. Remind observers to fill out the *Observer Checklist* as they watch the roleplay.

41. Read aloud the scenarios for both characters, and then have participants present the roleplay.

ROLEPLAY E

Theme: Possible loss of partner through condom use

Observe: Alex using SWAT

(ALEX and CASEY talking)

Alex

You have been dating Dominique for a few months. You really like Dominique and think this might be serious. You have decided to have sex, but you really want to use condoms.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

Your best friend (Casey), who is dating Dominique's best friend (Chase), doesn't think you should mention condoms to Dominique because you might create trouble in the relationship.

You know Dominique has never used condoms before but you won't have sex without a condom. Besides, you learned how to make condoms feel better.

Your task is to resist Casey's pressure, but not lose the friendship. You think Casey should be using condoms too.

Casey

You and your close friend (Alex) are going out with Chase and Dominique, who are also friends and a few years older than you.

You and Chase have had sex a couple of times and never used a condom. You think you might lose Chase if you ask to use a condom.

Your friend, Alex, is getting very close to having intercourse with Dominique. They're using birth control, but also want to use condoms.

You tell Alex that sex feels much better without condoms (even though you've never tried them).

You're afraid that if Alex insists on using a condom, Alex might lose Dominique.

Your task is to try to convince Alex to have sex without using a condom.

42. Review the group's responses on their *Observer Checklists* by asking,

- Did Alex use the SWAT technique?
- Did Alex say no?
- Did Alex explain why?
- Did Alex provide alternatives?
- Did they talk it out?
- What could Alex have done differently?

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

43. **Process the roleplay using the following questions,**

- What strategy did Alex use to continue to be safer?
- Actors, what pressures were your characters feeling?
- Would anyone have handled this situation differently?
- Did the roleplay seem realistic to you?

44. **Summarize Roleplay E by saying,**

If you value and care about your best friend, you should help your friend make safer decisions. You can even teach your friend how to make condoms pleasurable.

45. **Repeat two of the more successful roleplays, if time allows, using different participants to show how similar situations can be handled in different ways.**

46. **Remind observers to continue to use the *Observer Checklist*.**

47. **Summarize by saying,**

Wow! You have really learned a lot in this program. Your roleplays show that you have picked up quite a few skills also. I hope that you remember and use your knowledge and skills whenever the need arises.

All couples have to communicate and negotiate. And all couples who have decided to have sex must take steps to avoid negative consequences, regardless of their sexual orientation. In a healthy relationship and when you really care about your partner, it's usually easier to talk about safer sex. It's important to choose relationships where both parties care about each other's goals, health and values.

Remember to be proud, be responsible and make proud choices because the choices that you make now can help you reach your goals for the future.

ACTIVITY C

TALKING TO YOUR PARTNER ABOUT SAFER SEX—INFORMATION REVIEW

PREPARING FOR THE ACTIVITY

RATIONALE

This activity provides tips and encouragement for applying the communication and negotiation skills that have been learned thus far, with the hope of ensuring that the knowledge, positive attitudes and skills will translate into behavior.

MATERIALS

None

TIME

5 minutes

PROCEDURE

1. Remind participants that using condoms (and/or dental dams) is an expression of responsibility for yourself and of pride in your own decisions. Say,

> There is no doubt that using condoms and other protection is a good idea because they make sex safer. It is important to choose latex or polyurethane/polyisoprene condoms and use them correctly.
>
> You may have to overcome your partners' reluctance. But, if you choose to have vaginal, anal or oral sex, using a condom (or dental dam) is the first and most important step.

2. Ask participants to brainstorm some suggestions that would make talking to a partner about using condoms easier. (No need to record their responses). Supplement their answers with the following:

> - Think about what you want to say ahead of time. Sort out your own feelings about using condoms and other protection before you talk with your partner.
> - Choose a time to talk before anything sexual happens. Getting things clear before you have sex means you will both be prepared and relaxed.
> - Decide how you want to start the conversation. You might say, "I need to talk with you about something

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

that is important to both of us," or "I've been hearing a lot lately about safer sex. Have you ever tried condoms?" or "I feel kind of embarrassed, but I care too much about you not to talk about this."

- The best time to discuss protection is certainly before any touching below the waist.
- Once you both agree to use condoms, do something positive and fun. Go to the store together. Buy lots of different brands and colors. Plan a special day when you can experiment. Just talking about how you'll use all of those condoms can be a turn-on.

3. Ask participants to brainstorm ways to avoid becoming pregnant or infected with HIV or another STI. (No need to record their responses.) Supplement their answers with the following:

- Practice safer sex (use latex or polyurethane/polyisoprene condoms/ dental dams).
- Talk to your sexual partner about pregnancy, HIV and other STIs.
- Insist on using a condom/protection whenever you have sex.
- If you can get pregnant, use an effective method of birth control (IUD, implant, shot, pill, patch or ring).
- Educate yourself about unintended pregnancy, HIV and other STIs.
- Ask about your partner's sexual and drug use history.
- Get tested for and treated for HIV and other STIs.
- Encourage partners with HIV to get ART and stay on treatment.
- Encourage partners with other STIs to get and stay on treatment.
- If you think you might be at risk for HIV because of an infected partner, talk to your doctor about getting on PrEP.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

4. **Reinforce tips for consistent condom use by saying,**

> **Protect yourself and your partner by:**
>
> - **Using a latex or polyurethane/polyisoprene condom (or dental dam) every time you have vaginal, oral or anal intercourse.**
> - **Keeping a supply of condoms on hand.**
> - **Getting used to condoms, so they seem natural and fun.**

5. **Summarize what they learned from the program's activities as follows,**

> **We've covered a lot of information in this program. However, I want you to remember 5 very important things:**
>
> 1. **Unintended pregnancy, HIV and other STIs are potential outcomes of unprotected sex that can sometimes make it harder to reach your future goals and can also harm your health.**
> 2. **Whatever you've had to overcome in life, you can use that strength to make proud and responsible choices to avoid these unintended outcomes.**
> 3. **Even if you've had sex in the past, you can choose to abstain from sexual intercourse at this point in your life.**
> 4. **If you're going to have sex, that choice comes with the responsibility to use protection—condoms and/or dental dams to prevent HIV and other STIs, and effective birth control to prevent pregnancy.**
> 5. **Strive to have healthy relationships. Choose to be with someone who cares about your goals and your health. Talk about using protection at a calm time and don't wait until just before or during sex.**

6. **Remind participants of resources,**

> **There are a number of resources we covered throughout the program. I want to make sure you have a list to refer to if or when you need resources or help.**

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

FACILITATOR'S NOTE

Make sure you have referral resources for the youth completing your program. It should include reproductive health care clinics; LGBTQ centers and organizations such as PFLAG or GSA; and STI and HIV Hotlines. Also include:

- LYRIC Youth Talk Line (800) 246-PRIDE
- Youth Legal Information Line (NCLR) 800-528-NCLR (6257)
- National Runaway Hotline 800-231-6946.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY D

CLOSING ACTIVITY

PREPARING FOR THE ACTIVITY

RATIONALE

This activity provides participants a sense of closure to the program.

MATERIALS

None

TIME

5 minutes

PROCEDURE

1. Ask the participants to form a tight circle with their chairs.
2. Ask each participant to share how something learned in the group will help in achieving goals and dreams for the future.
3. Thank the participants for their attendance and let them know how much you enjoyed working with them.
4. Summarize the activity by saying,

> Those were good responses. I am very proud of each and every one of you. Thank you for being part of this program. Now you can teach your friends and family what you've learned here.
>
> I have every confidence that you're going to make the proud and responsible choice to always practice safer sex whenever you decide to have intercourse with someone.
>
> Remember, practicing safer sex is the proud and responsible choice to make and will help you achieve your dreams.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

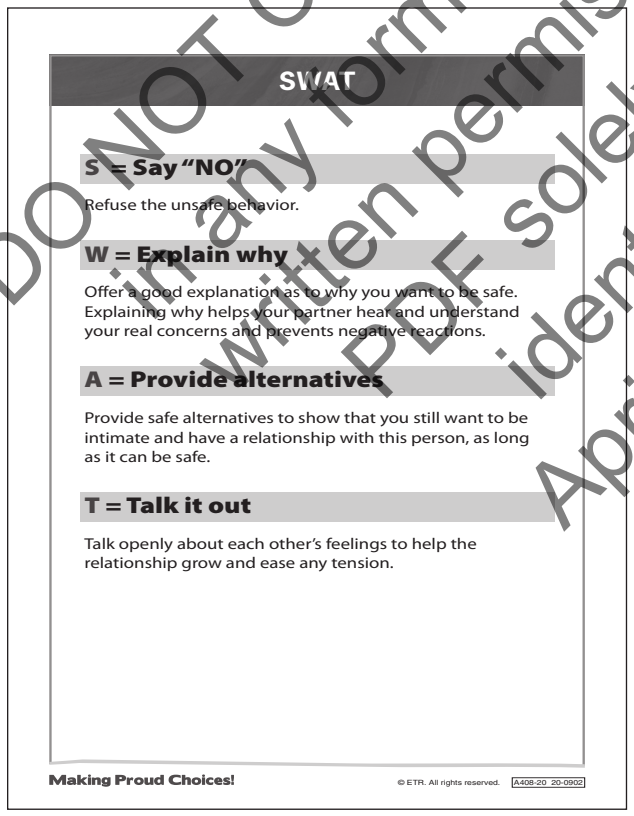
Making Proud Choices! STUDENT WORKBOOK • MODULE 8 25

Worksheet



SWAT

S = Say "NO"

Refuse the unsafe behavior.

W = Explain why

Offer a good explanation as to why you want to be safe. Explaining why helps your partner hear and understand your real concerns and prevents negative reactions.

A = Provide alternatives

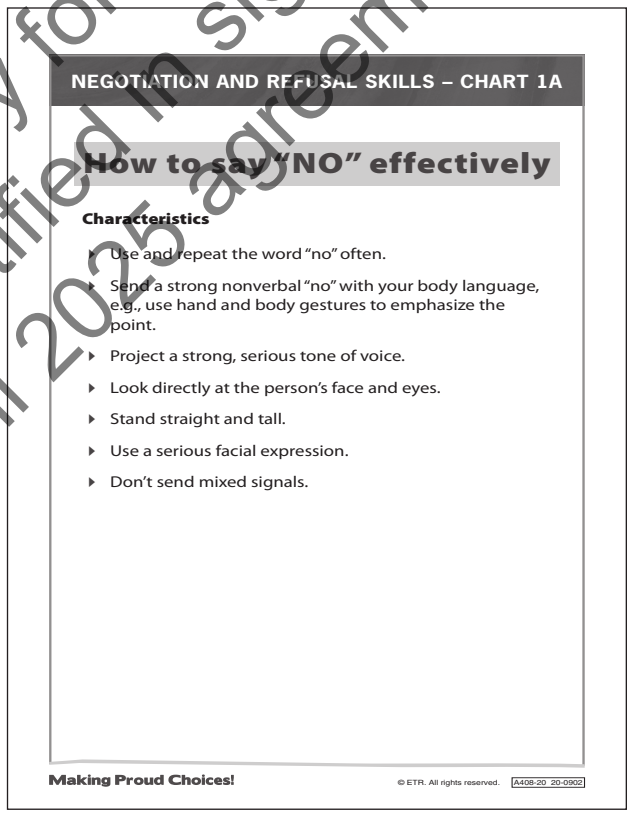
Provide safe alternatives to show that you still want to be intimate and have a relationship with this person, as long as it can be safe.

T = Talk it out

Talk openly about each other's feelings to help the relationship grow and ease any tension.

Making Proud Choices! © ETR. All rights reserved. A408-20 20-0902

Poster



NEGOTIATION AND REFUSAL SKILLS – CHART 1A

How to say "NO" effectively

Characteristics

- Use and repeat the word "no" often.
- Send a strong nonverbal "no" with your body language, e.g., use hand and body gestures to emphasize the point.
- Project a strong, serious tone of voice.
- Look directly at the person's face and eyes.
- Stand straight and tall.
- Use a serious facial expression.
- Don't send mixed signals.

Making Proud Choices! © ETR. All rights reserved. A408-20 20-0902

Poster

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

NEGOTIATION AND REFUSAL SKILLS – CHART 1B

Examples of a strong "NO"

Examples

- No! I'm not ready to have sex yet!
- No! I won't have sex without a condom!
- No! I don't want to touch you there!
- No! Stop touching me like that!
- No! Stop trying to unbutton my pants!
- No! I'm not going to have sex with you!
- No! I really mean 'NO'!
- No! I want to protect myself. We have to use a condom.
- I have not said yes, which means this isn't happening.

Making Proud Choices! © ETR. All rights reserved. A408-20_20-0902

Poster

NEGOTIATION AND REFUSAL SKILLS – CHART 2

Explain why

Give clear reasons to support your choice.

Examples

- I want to protect myself with a condom every time I have sex.
- No, I won't risk my future goals by having unprotected sex.
- Condoms help prevent unintended pregnancy, HIV and other STIs.
- I am not ready to have a child (again).

Making Proud Choices! © ETR. All rights reserved. A408-20_20-0902

Poster

NEGOTIATION AND REFUSAL SKILLS – CHART 3

Provide alternatives

Suggest another action.

Examples

- Let's go buy some condoms right now.
- Let's get out of the bedroom. It makes me feel uncomfortable.
- If you're willing to use a condom, then we can have sex.
- Let's do something else that will feel good for both of us, since we don't have a condom.
- Let's go get something to eat.
- Let's go see a movie.

NEGOTIATION AND REFUSAL SKILLS – CHART 4

Talk it out

Discuss your feelings.

Examples

- I feel like you don't really care about me when you pressure me like this.
- I'm not ready to have a baby. I would feel better if we use a condom.
- I'm glad you agreed to use condoms. I feel like you really care about me.
- You really turn me on when you touch me, but I won't have sexual intercourse without a condom.
- If you can't respect my feelings, then I'm prepared to end this relationship.
- Our future goals and dreams are more important than a moment of unsafe pleasure, so I'm glad we decided to use condoms.

ROLEPLAY GUIDELINES

- Read your role carefully and think about how that person would really behave.
- Do your best to stay in character through the whole roleplay.
- Don't let comments and laughter distract you.
- Really try to feel and act like the person you are playing.
- Try things that you might not do ordinarily, just to see how it feels.
- Use SWAT:
  - » **Say NO.** Repeat it. Use strong body language.
  - » Explain **why** you don't want to engage in unsafe behavior.
  - » Provide **alternatives.**
  - » **Talk it out.**

ROLEPLAY A: JAMIE AND TAYLOR

THEME: Loss of trust and sexual pleasure through condom use

OBSERVE: Jamie using SWAT

(JAMIE and TAYLOR talking)

JAMIE

You and your sexual partner (Taylor) are in your partner's living room with the lights down low and things are starting to get physical. You are trying to tell Taylor that you want to use protection, and Taylor is beginning to get angry. Taylor doesn't think sex will feel as good and does not want to use protection. But you want to use protection because you respect yourself. Your health is important to you and you want to protect yourself because you are worth it!

Your task is to convince Taylor that sex can be just as pleasurable with condoms/dental dams.

TAYLOR

You and your partner (Jamie) are at your place and things are getting very intimate. Jamie is starting to talk about using protection and you are getting angry. Does Jamie think you have been sleeping around? You don't think using protection feels good and truly believe it will ruin the mood.

Your task is to convince Jamie to have sex without protection.

CALLING KOKO CALLER 1

Based on what you've learned so far, what advice would you give someone who has questions or concerns about HIV, AIDS and condoms?

In this activity, you will take the role of Koko, who has an HIV Information Hotline for teenagers called, "Calling Koko." Discuss, decide on and write down the advice you would give to the caller. Encourage the caller to make a proud and responsible choice.

Koko,

I've heard that young people are at risk for HIV and the number of HIV cases among young people is growing. I don't want to take any chances of getting HIV. What's the surest way I can protect myself?

- Charlie

CALLING KOKO CALLER 2

Based on what you've learned so far, what advice would you give someone who has questions or concerns about HIV, AIDS and condoms?

In this activity, you will take the role of Koko, who has an HIV Information Hotline for teenagers called, "Calling Koko." Discuss, decide on and write down the advice you would give to the caller. Encourage the caller to make a proud and responsible choice.

Dear Koko,

My girlfriend and I have been going out for a year. We really love each other, and both want to have sex. I trust her, but I'm concerned about HIV. My girlfriend and I are 14 years old, and neither one of us has tattoos, and we don't use drugs. We've been thinking about having sex, but only with each other. Do we have to worry about HIV?

– Raymond

CALLING KOKO CALLER 3

Based on what you've learned so far, what advice would you give someone who has questions or concerns about HIV, AIDS and condoms?

In this activity, you will take the role of Koko, who has an HIV Information Hotline for teenagers called, "Calling Koko." Discuss, decide on and write down the advice you would give to the caller. Encourage the caller to make a proud and responsible choice.

Hi Koko,

Five months ago, I had sex with someone for the first time. We didn't use condoms. I didn't really enjoy it, and he never even called me again. Now I have a new boyfriend and he wants me to have sex, too. Is it possible that I might have been exposed to HIV when I did it before? Now, I'm anxious that I might be infected with HIV. What do I tell my boyfriend? What should I do?

– Alex

CALLING KOKO CALLER 4

Based on what you've learned so far, what advice would you give someone who has questions or concerns about HIV, AIDS and condom?

In this activity, you will take the role of Koko, who has an HIV Information Hotline for teenagers called, "Calling Koko." Discuss, decide on and write down the advice you would give to the caller. Encourage the caller to make a proud and responsible choice.

It's like this Koko,

I am fifteen years old, and my girlfriend and I have never had vaginal sex. We do other things, though, including oral sex. Before, we just wanted to make sure that she didn't get pregnant. We had never really thought about infections like HIV. But, now I hear that teens my age are getting sexually transmitted infections. Is oral sex safe? How do we protect ourselves from STIs?

– Carmello

CALLING KOKO CALLER 5

Based on what you've learned so far, what advice would you give someone who has questions or concerns about HIV, AIDS and condoms?

In this activity, you will take the role of Koko, who has an HIV Information Hotline for teenagers called, "Calling Koko." Discuss, decide on and write down the advice you would give to the caller. Encourage the caller to make a proud and responsible choice.

What's up, Koko,

I recently found out that a friend of mine is HIV positive and that she's had the virus for years. She's smart, fun to be around, and has only had sex with two guys her whole life. Now I'm afraid to be with anyone because if someone like her can get HIV, how can I know who's safe and who isn't? If she has HIV, then anyone could! I'm scared to date! What should I do?

CALLING KOKO CALLER 6

Based on what you've learned so far, what advice would you give someone who has questions or concerns about HIV, AIDS and condoms?

In this activity, you will take the role of Koko, who has an HIV Information Hotline for teenagers called, "Calling Koko." Discuss, decide on and write down the advice you would give to the caller. Encourage the caller to make a proud and responsible choice.

Koko,

I'm a senior this year and plan to go to college, but something happened the other night that I want to ask about. I went to a party. I had a couple of beers and then somebody handed me a joint. Everyone else was smoking too. It was powerful stuff! I had never used drugs before. The next thing I knew I was in the bedroom with this basketball player I kind of had a thing for. We ended up having sex, and I don't even know if we used protection, because I was so high that I forgot to ask. I heard he does this type of thing a lot. Now he barely even speaks to me. I'm afraid that I could have gotten pregnant or gotten infected with an STI like HIV. What should I do?

SEAN AND MORGAN CASE STUDY

Sean is 3 years younger than Morgan. They've been going out for a while. Sean really likes being with someone who is older. Morgan is a lot of fun and Sean feels more mature and popular when they're together.

Sean is very smart and plans to become a psychologist. Sean has had a tough childhood and very much wants to be independent and successful as an adult. Sean works hard and has a plan for the future.

Morgan really likes Sean. Lately, Morgan's friends have been talking a lot about sex and keep asking if Morgan and Sean have "done it" yet. Morgan figures it's time and begins to pressure Sean about having sex.

When Morgan asks Sean about having sex, Sean feels unsure about what to say. Sean has actually thought a lot about this and doesn't feel ready for sex yet. Yes, Morgan is sexy and Sean feels turned on. But Sean wants to wait until after high school and maybe even college to have sex. Sean does not want to do anything that might interfere with future goals. Sean wants to be able to help young people deal with issues and problems. Sean is concerned about STIs and doesn't want to take any risks.

However, Sean really wants to keep the relationship with Morgan. Sean is concerned about STIs and doesn't want to take any risks.

Today Sean and Morgan are hanging out at Morgan's house. Morgan's grandparents are out for a few hours. They're sitting on the couch, kissing and messing around. They're both breathing hard and things are getting hot and heavy. What can Sean do to avoid having sexual intercourse?

SEAN AND MORGAN CASE STUDY (CONTINUED)

Using STOP, THINK and ACT and the questions below, decide what Sean should do to keep from having sex before being ready.

STOP:

What can Sean do to stop?

What can Sean do to stay calm?

THINK:

What is the problem? What is Sean being pressured to do?

What do you think Sean is feeling?

What does Sean think Morgan is feeling?

What are Sean's choices?

What does Sean really want to do?

What alternatives can Sean suggest to Morgan?

What are the possible consequences?

ACT:

What do you think is Sean's best choice?

How should Sean act on that choice?

WHILE THEY'RE OUT (INEFFECTIVE VERSION)

SCRIPTED ROLEPLAY

Setting the Stage:

Your parents are out late. Your partner comes over, hoping to have sex with you. You want to have sex but you want to use condoms. Your partner refuses to use condoms. You decide to share how to make condoms feel much better.

Person 1: Why are you stopping now?

Person 2: Wait. Do you have a condom?

Person 1: No, I told you, I don't like the way those things feel.

Person 2: Yeah, I know.

Person 1: I don't have a condom. I want to be able to feel you, and it doesn't feel as good. Let's just do it without a condom this time.

Person 2: I think there are ways using one can feel good. I don't want to get infected with an STI like HIV.

Person 1: You won't. And I don't need you to show me anything. I know how condoms are used.

Person 2: I know you know how to use them. And you would never give me an STI. Sorry, I freaked out for a minute.

Person 1: Yeah, I mean I love you. Nothing bad is going to happen.

Person 2: You're right.

They keep kissing.

YOUR VALENTINE'S DAY GIFT (INEFFECTIVE VERSION)

SCRIPTED ROLEPLAY

Setting the Stage:

It is Valentine's Day. You and your partner are going out to a movie and dinner. You know that at some point having sex will be discussed. You partner is willing to use condoms, but you're just not ready for any of it. You decide to tell your partner that you want to wait to have sex.

Person 1: Happy Valentine's Day! Here is a little something I bought, though I was hoping our gifts to each other would be more than something from a store.

Person 2: Do you mean you were hoping we would have sex?

Person 1: Yes. You don't have to worry. I have condoms.

Person 2: Oh! You are moving so fast.

Person 1: We have been dating for a while. I love you and I'm ready.

Person 2: Well. I love you but I'm just not sure.

Person 1: Don't worry we're using protection. After all, it's Valentine's Day and what better gift than to share our love?

Person 2: I just have some doubts…I'm scared.

Person 1: You are always going to be scared, but the important thing is that we love each other.

Person 2: *(Reluctantly)* I guess.

They stop talking and begin to have sex.

Person 2: Do you mean you were hoping we would have sex?

Person 1: Yes. You don't have to worry. I have condoms.

Person 2: No. You are moving so fast.

Person 1: No, I'm not. We've been dating for a while. I love you and I'm ready.

Person 2: Well, I'm not. I love you, but I'm not ready to have with sex you. I know you are the person that I want to be with, but I also know that I need you to be understanding and patient. I only want to have sex when I'm absolutely sure—when I'm not scared or in doubt. So the answer is no.

Person 1: Well, I don't want to feel like I'm pressuring you to do something you don't want to do. It's important that you're sure. So, I guess I'll wait until you're ready.

Person 2: Thanks, for understanding. I love you so much and I'm really glad that you are willing to wait.

They kiss and go to the movies.

ROLEPLAY A: JAMIE AND TAYLOR

THEME: Loss of trust and sexual pleasure through condom use

OBSERVE: Jamie using SWAT

(JAMIE and TAYLOR talking)

JAMIE

You and your sexual partner (Taylor) are in your partner's living room with the lights down low and things are starting to get physical. You are trying to tell Taylor that you want to use protection, and Taylor is beginning to get angry. Taylor doesn't think sex will feel as good and does not want to use protection. But you want to use protection because you respect yourself. Your health is important to you and you want to protect yourself because you are worth it!

Your task is to convince Taylor that sex can be just as pleasurable with condoms/dental dams.

TAYLOR

You and your partner (Jamie) are at your place and things are getting very intimate. Jamie is starting to talk about using protection and you are getting angry. Does Jamie think you have been sleeping around? You don't think using protection feels good and truly believe it will ruin the mood.

Your task is to convince Jamie to have sex without protection.

ROLEPLAY B: JUSTICE AND ANGEL

THEME: Condom use versus partner trust

OBSERVE: Justice using SWAT

(JUSTICE and ANGEL talking)

JUSTICE

You have been going out with Angel for a while now and you want to talk about using condoms. You know Angel has had sex with other people, and you are concerned about pregnancy and STIs, especially HIV, and want to use a condom. But you also don't want to lose Angel. You think you're falling in love.

Angel may be offended because you're already using the pill for birth control, but you mention condoms anyway. You want to be with Angel, but only if you can be safer.

Your task is to resist the temptation to have unsafe sex but still keep the relationship.

ANGEL

Your partner (Justice) just suggested that you start using condoms. You feel that Justice does not trust you if Justice is afraid to have sex with you without using a condom.

Your older sibling told you that you don't have to use condoms when you really love someone. You want to prove Justice trusts and cares about you by not using condoms.

Your task is to try to convince Justice not to use condoms.

© ETR

ROLEPLAY C: KAYLA AND MIA

THEME: Two friends talk about protection

OBSERVE: Kayla using SWAT

(KAYLA and MIA talking)

KAYLA

Your friend, Mia, is upset because a partner wants to use protection. You have never used protection either, but you just finished this program at school about pregnancy, HIV and safer sex, and now you feel a lot differently about it.

Your partner dated other people before you and had sex with them. Your partner wasn't your first either. Now you understand how important it is to reduce the risk for yourself and your partner by always using protection.

While Mia is telling you all the reasons for not using condoms or other protection, you are trying to convince Mia that protection is a good idea. Maybe you can get Mia to go to the clinic with you to get protection.

Your task is to resist Mia's pressure to have unsafe sex and still keep your friend's respect.

MIA

Your girlfriend told you that if you want to have sex you have to use dental dams. You've heard others talk about this at basketball practice. They say that rubber is nasty and you should feel the "real thing."

You're not trying to be difficult, but nobody is going to force you to use protection! Besides, you only go out with other girls so neither of you is going to get pregnant. And you're not worried about diseases because your new girlfriend is young.

Your friend, Kalya, wants to start using protection because of her class about STIs. You can't even respect Kayla anymore if she can't be real.

Your task is to convince Kayla that protection is a bad idea.

ROLEPLAY D: DEVON AND JADON

THEME: Initiating use of protection in an existing relationship

OBSERVE: Devon using SWAT

(DEVON and JADON talking)

DEVON

You and your partner, Jadon, have been sexually active for a while. However, you have just completed a program called ***Making Proud Choices!*** You are thinking about the things you didn't know and the things that concern you. You think about your own behaviors. You think about Jadon's past sexual life and your own past sexual life. And now you begin to worry because you and your partner have been sexually active without using protection. Now you want to use protection. You know Jadon is stubborn and gets jealous very easily. You are afraid to say that you are concerned about HIV because Jadon might believe you are cheating, or even go and find a new partner.

You decide to tell Jadon about the program and all the important information you learned and that you want to use protection if you have sex again. When Jadon arrives, you are looking at the information about STI protection that was given to you at the program.

Your task is to convince Jadon that you want to be proud and responsible and use protection.

JADON

You have never used a condom or dental dam and don't want to. You have been having sex with Devon for a while now and have never used protection before. You believe that if Devon suddenly wants to use protection, then Devon must be cheating on you. You also believe that condoms/dental dams are not natural and sex won't feel as good if you use them.

Your task is to convince Devon not to use condoms.

ROLEPLAY E: ALEX AND CASEY

THEME: Possible loss of partner through condom use

OBSERVE: Alex using SWAT

(ALEX and CASEY talking)

ALEX

You have been dating Dominique for a few months. You really like Dominique and think this might be serious. You have decided to have sex, but you really want to use condoms.

Your best friend (Casey), who is dating Dominique's best friend (Chase), doesn't think you should mention condoms to Dominique because you might create trouble in the relationship.

You know Dominique has never used condoms before but you won't have sex without a condom. Besides, you learned how to make condoms feel better.

Your task is to resist Casey's pressure, but not lose the friendship. You think Casey should be using condoms too.

CASEY

You and your close friend (Alex) are going out with Chase and Dominique, who are also friends and a few years older than you.

You and Chase have had sex a couple of times and never used a condom. You think you might lose Chase if you ask to use a condom.

Your friend, Alex, is getting very close to having intercourse with Dominique. They're using birth control, but also want to use condoms.

You tell Alex that sex feels much better without condoms (even though you've never tried them).

You're afraid that if Alex insists on using a condom, Alex might lose Dominique.

Your task is to try to convince Alex to have sex without using a condom.

Introduction

Making Proud Choices! An Evidence-Based, Safer-Sex Approach to Teen Pregnancy and HIV/STI Prevention is designed to give adolescents the tools they need to reduce their risk of unintended pregnancy, HIV and other STIs. The goal is to increase knowledge and perception of personal vulnerability, develop positive attitudes toward safer sex, and build the skills and confidence needed to abstain successfully or to use safer sex practices willingly and effectively if they choose to be sexually active.

It isn't easy to motivate people to modify their sexual behavior, even when that behavior puts them at risk. Hence, the model of human behavior used to understand sexual risk behavior in ***Making Proud Choices!*** draws upon social learning theories, and the interventions proposed for changing that behavior reflect a cognitive-behavioral approach. This curriculum has also been informed by data gathered through numerous focus groups as well as the developers' extensive experience working with young people.

In order to encourage young people to adopt less risky behaviors they must be provided with the following crucial tools:

- The information they need to understand the issues.
- The cognitive skills that will allow them to examine their beliefs about personal risks and consequences and to analyze the behaviors or situations that increase their risk of pregnancy, HIV and other STIs.
- The intrapersonal (within self) skills to understand and manage their feelings and thoughts.
- The interpersonal (between self and others) skills to define and exercise behaviors that reduce personal risk.
- A sense of self-efficacy or the confidence required to allow them to make safer decisions about their sexual choices.
- The motivation to apply these skills to their everyday lives.

The ***Making Proud Choices!*** curriculum that follows consists of three sections. The first is a Facilitator's Guide that includes information about facilitating the curriculum, the theory behind it and evaluation of the curriculum with behavioral findings. It also covers curriculum teaching strategies and format of the intervention modules, including information about group agreements and training strategies such as brainstorming, roleplaying, and interactive activities and games. The second is the ***Making Proud Choices!***

curriculum itself. The final section, the appendixes, includes optional activities that can be included in the curriculum's implementation, additional information about common STIs, contraceptive methods and drugs, guidelines for managing problem behavior, answers to commonly asked questions and a glossary.

This curriculum is intended to reduce the incidence of unprotected sexual behavior among adolescents and help them make a difference in their lives by making proud and safer choices about their sexual behavior. The facilitator's ability to deliver the information and conduct the exercises contained in this manual will determine the success of the curriculum, so please take the time to carefully read and understand the basic principles, key elements and content of each session. Our collective efforts can help prevent pregnancy, STIs and HIV in adolescents and have a meaningful impact on the lives of our nation's young people.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Overview of the Curriculum

Making Proud Choices! An Evidence-Based, Safer-Sex Approach to Teen Pregnancy and HIV/STI Prevention is an eight-module curriculum designed to empower adolescents to change their behavior in ways that will reduce their risk of becoming infected with HIV and other STIs, and significantly decrease their chances of being involved in unintended pregnancies. The curriculum acknowledges that abstinence is the most effective way to eliminate these risks. However, realizing that abstinence is not the path that many young people will choose, the curriculum spends a great deal of time encouraging the practice of safer sex and condom use. The curriculum also addresses the underlying attitudes and beliefs that many young people have about birth control and condoms, provides information and exercises that teach adolescents how to use condoms correctly and gives them the confidence they need to choose and negotiate safer-sex practices.

Note: Throughout this curriculum the importance of effective and consistent use of protection and contraception are mentioned as an important strategy for reducing the risk of HIV and other STIs, as well as pregnancy. Any reference to protection is meant to include the external (male) condom, internal (female) condom and dental dam. The use of the term protection *is meant to be inclusive of all people, regardless of their gender, sexual orientation or type of usage. The terms* birth control *or* contraception *may be used interchangeably, referring to methods used to prevent pregnancy.*

The ***Making Proud Choices!*** curriculum was designed to be used with smaller groups ranging from six to twelve participants, but it can be implemented with larger numbers as well if more time is built into each session. It is appropriate for various community settings, including schools and youth agencies. The curriculum has 8 hours of content divided into eight 1-hour modules. It can be implemented in the 2-day format (four modules each day), 4-day format (two modules each day) or 8-day format (one module each day).

Curriculum Objectives

At the completion of the ***Making Proud Choices!*** curriculum youth will have:

- Increased knowledge about prevention of HIV, other STIs and pregnancy.
- More positive attitudes/beliefs about birth control and condom use.
- Increased confidence in their ability to negotiate safer sex and to use condoms correctly.
- Increased negotiation skills.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

- Improved condom use skills.
- Stronger intentions to use birth control and condoms if they have sex.
- A lower incidence of HIV/STI risk–associated sexual behavior.
- A stronger sense of pride and responsibility in making a difference in their lives.

Content Outline

The ***Making Proud Choices!*** curriculum has four major components. The first component focuses on goals and dreams and their relationship to adolescent sexual behavior. The second component emphasizes knowledge, including the causes, transmission and prevention of HIV, other STIs and pregnancy. The third component focuses on beliefs and attitudes about condoms, birth control methods, pregnancy, STIs and HIV. The fourth stresses skills and self-efficacy including negotiation-refusal and condom use skills. It also provides time for practice, reinforcement and support.

The Modules

- Module 1: Getting to Know You and Steps to Making Your Dreams Come True
- Module 2: A Possible Outcome of Unprotected Sex: HIV Infection
- Module 3: Attitudes and Beliefs about HIV/AIDS and Condom Use
- Module 4: Strategies for Preventing HIV Infection: Stop, Think and Act
- Module 5: Possible Outcomes of Unprotected Sex: STIs
- Module 6: A Possible Outcome of Unprotected Sex: Pregnancy
- Module 7: Developing Condom Use and Negotiation Skills
- Module 8: Enhancing Refusal and Negotiation Skills

Types of Activities

The ***Making Proud Choices!*** curriculum includes a series of fun and interactive learning experiences designed to increase participation and help adolescents understand the risk behaviors that can lead to pregnancy and STIs, including HIV. Activities are designed to help youth feel comfortable practicing condom use, address their concerns about the negative effects of practicing safer sex and build their condom-use skills as well as their ability to comfortably negotiate safer sex practices.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Facilitators may wish to add time to some of the modules, if possible, to allow for further discussion or to extend and reinforce the skills practice.

The activities involve viewing video clips, playing games, brainstorming, roleplaying, engaging in skill-building exercises and small-group discussions designed to build group cohesion and enhance the learning experience. Each activity is brief, and many require the participants to get up out of their chairs and interact with one another. This maintains their interest and attention in a way that lectures or lengthy group discussions do not. Below is a description of the types of activities used as well as their underlying philosophies and goals.

- The goals and dreams activity encourages the adolescents to consider their goals for the future and to think about how participating in unsafe sex might affect the attainment of these goals.
- Videos are used to depict adolescents in various situations. These videos evoke feelings, thoughts, attitudes, beliefs and stereotypes about pregnancy, HIV and other STIs, sexual involvement and HIV/STI prevention skills that are then discussed in a group setting. In addition to the videos provided with the curriculum, ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.
- The roleplay scenarios are designed to provide participants with the confidence and skills necessary to negotiate condom use. They also recommend a variety of ways in which the prevention skills learned in this program can be implemented in the participants' lives.
- The entire curriculum incorporates the ***Making Proud Choices! Be Proud! Be Responsible!*** theme designed to encourage the participants to be proud of themselves, their families and their community, and to behave responsibly for everyone's sake.

Training

It is highly recommended that educators who plan to teach ***Making Proud Choices!*** receive research-based professional development to prepare them to effectively implement the curriculum with fidelity for the intended target group. ETR provides research-based Training of Educators (TOE) that employs the key components required for quality implementation, including learner engagement, modeling, skills practice and follow-up support. Onsite and regional TOE on ***Making Proud Choices!*** is available through ETR's Professional Learning Services. For more information, please visit www.etr.org/ebi/training-ta/types-of-services.

Adapting This Program for Your Population

Program facilitators are encouraged to make minor adaptations (also referred to as "green light" adaptations) to optimize the program for the young people receiving it. Such adaptations are intended to help tailor the curriculum to the needs of participating youth. Examples of minor adaptations include updating statistics and changing the names or editing the language or scenarios in roleplays to better reflect your youth population.

It's recommended that facilitators work with a small group of youth to review the roleplays and other activities and suggest minor changes to increase relevance before implementation. Other allowable enhancements include teaching reproductive health lessons before starting the program, and adding lessons before or after the curriculum lessons to address additional sexual health issues, such as dating violence or electronic dating aggression.

It is also acceptable to add time to the modules when needed to ensure that all the relevant content can be covered. Lengthening sessions can allow more time for review of previous lessons, discussion, questions, roleplay practice, personalization, video viewing and other activities. This adaptation may increase effectiveness.

Adaptations such as re-ordering the curriculum lessons or inserting additional content into the middle of the program are considered "yellow light" adaptations because they can have an impact on program flow and effectiveness. It's best to discuss these kinds of changes with the program developers first.

Major changes (also referred to as "red light" adaptations) are discouraged and may significantly affect and alter program effectiveness. Examples of major changes include dropping entire activities or lessons, or altering the key messages of the program.

Adaptation guidelines for evidence-based curricula can be found at www.etr.org/ebi and include additional examples of green-, yellow- and red-light adaptations.

Researchers and organizations interested in making significant adaptations to this curriculum for use in an evaluation are asked to contact ETR for support and permission first. Such adaptations might include combining the curriculum with another evidence-based program or adding a new element or component.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

CURRICULUM COMPONENTS AND FORMAT

Each module included in the ***Making Proud Choices!*** curriculum contains different activities. Reduced images of worksheets, facilitator materials and posters are included at the end of each module. The first pages of each module explain the following information.

Goals

A set of statements that give the facilitator a reference point for what participants will learn from the module.

Learning Objectives

A set of measurable objectives designed to help the facilitator "spot-evaluate" the extent to which a given activity has been successfully completed by the participants.

Strategies/Methods

A list of methods included in the module to achieve the objectives and goals. For example, these may include videos, mini-lectures, brainstorming and roleplaying.

Materials Needed

A list of equipment and materials needed for the module and for each specific activity.

Implementation Time / Time Needed

The amount of time allotted to each activity in the module (e.g., Lecture—10 minutes; Small-Group Exercise—15 minutes). Facilitators should conduct each activity in the time allotted. Facilitators may wish to add time to some of the modules, if possible, to allow for further discussion of videos and other activities, or to extend and reinforce the skills practice.

Rationale for Each Activity

The rationale for each activity is listed on the first page of the activity. It explains how and why the activity is helpful to participants' learning. All materials and exercises contained in the module are designed to help the participants to achieve these stated purposes.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Activities

Instructions for implementing each activity are fully described. For example, in the case of a roleplay exercise, each character receives a description of his or her circumstances and concerns. These exercises are designed to build prevention skills and are an essential part of the program.

Procedures

The procedures for each activity are numbered and include all the steps necessary to implement the activity. Whenever the facilitator is to say a specific instruction or mini-lecture aloud, the material appears in a box.

For example, the procedure would look like this:

1. **Introduce the activity by saying,**

> **We are going to do a brainstorming activity now. What I'd like you to do is . . .**

Although it is not necessary to say verbatim what appears in the box, facilitators should be sure that the content and tone are conveyed. Some facilitators find that memorizing the materials works best for them. The group will probably be more attentive if they do not think the facilitator is reading to them.

Facilitator Notes

Facilitator notes give tips to facilitators about implementing the activity. These notes appear at different points in the curriculum where background information or special teaching suggestions are provided. They are contained within a shaded box, as in the following example.

FACILITATOR'S NOTE

Be sure to post the group agreements on the wall at all times. The group agreements should be posted throughout all the sessions of the program.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Mini-Lecture Notes

Where mini-lectures appear in the curriculum, the lecture notes provide the key ideas to be presented; however, it is assumed that the facilitator will possess a working knowledge of the concepts being taught.

Summary Statements

Each activity and module ends with a brief statement from the facilitator about the key take-away messages for participants.

Student Workbooks

Student workbooks for participants include worksheets for individual and small-group work and roleplay materials. The workbook contains all the needed worksheets for the curriculum activities.

THEORETICAL FRAMEWORK

Research shows that curricula are most effective if they are based on a sound theoretical framework. ***Making Proud Choices!*** draws upon three theories: the social cognitive theory, the theory of reasoned action, and its extension, the theory of planned behavior. These theories have been shown to be of great value in understanding a wide range of health-related behaviors.

Two major concepts are included in these theories: (1) self-efficacy or perceived behavioral control beliefs, which are defined as people's confidence in their ability to take part in the behavior, e.g., use a condom; and (2) outcome expectancies or behavioral beliefs, which are beliefs about the consequences of the behavior. Experience shows that all of the beliefs below are critically important to change behavior. The ***Making Proud Choices!*** curriculum addresses each of the principles, usually in more than one activity.

Below is a description of the two types of self-efficacy or perceived behavioral control beliefs emphasized in ***Making Proud Choices!***

Practicing safer sex is easy: "I can do it"

Many young people find it difficult to practice safer sex because of peer pressure, partner pressure and their perception of how others think of them. Therefore, they are less likely to negotiate condom use with their partners. In Module 3, youth examine their attitudes and beliefs about condom use, and in Modules 7 and 8, youth learn how to negotiate condom use with their partners.

Getting your partner to cooperate in practicing condom use is easy: "I can do it"

Practicing safer sex within a relationship is not something participants can do by themselves. They need the cooperation of a partner. Unfortunately, many participants' partners may not be willing. For example, attempts to negotiate condom use may be interpreted as mistrust, belief that the other person is not "clean" or some other misperception. Be sensitive to participants' desires to maintain their partners' interest and avoid conflict.

At the same time, participants need opportunities to practice responding to their partners' objections tactfully and effectively. In Modules 7 and 8, the youth are taught negotiation skills that they can practice through roleplays and other interactive exercises.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Below is a description of the four types of outcome expectancies or behavioral beliefs emphasized in the ***Making Proud Choices!*** curriculum:

Goals and Dreams Beliefs

The belief that unsafe sex, unprotected sex and having sex at a young age could have an impact on one's goals and dreams for the future, including education and a career. In Module 1, the participants engage in a Goals and Dreams Activity and discuss obstacles to their goals and dreams including the potential outcomes of unprotected sex. This belief is incorporated throughout the curriculum.

Prevention Beliefs

The belief that condoms can reduce the risk of pregnancy, HIV and other STIs. This belief is incorporated throughout the curriculum.

Partner-Reaction Beliefs

The belief that one's partner would not approve of condom use and react negatively to it. This might prevent a person from practicing safer sex. In Modules 7 and 8, participants learn negotiation and refusal skills necessary to communicate with their partners about condom use.

Personal Vulnerability to HIV/STI and Pregnancy Beliefs

Before young people change their behavior, they must have a reason, or source of motivation to do so. Unless adolescents see how they can personally benefit from doing something differently (for example, practicing safer sex), no amount of skill will be enough to produce change. Many young people do not believe that pregnancy, HIV or other STIs could really happen to them. One goal of ***Making Proud Choices!***, then, is to increase participants' sense of personal risk. Personal risk refers to a person's belief that "pregnancy or HIV/STI infection could happen to me." This is addressed throughout the curriculum, and specifically in Modules 2, 5 and 6.

UNIQUE FEATURES OF THE *MAKING PROUD CHOICES!* CURRICULUM

Making Proud Choices! has a unique approach that is successful with adolescents. Three major themes serve as the foundation for this curriculum and its implementation.

The Community and Family Approach

A key component of the approach is the strong emphasis on family and community. The importance of protecting one's family and community is used as a motive to change individual behavior. This strategy differs from the traditional approach of HIV prevention, which focused solely on protecting oneself as the motive to change risky behavior. The ***Making Proud Choices!*** theme encourages adolescents to be proud of themselves and to abstain from sex or practice safer sex in order to prevent sexually transmitted infections and pregnancy, not only for their own sake, but for the sake of their families and community as well.

The Role of Sexual Responsibility and Accountability

Learning to be sexually responsible and accountable is something that adolescents need to be taught. ***Making Proud Choices!*** teaches participants to make responsible decisions regarding their sexual behavior, urges them to respect themselves and others, and stresses the importance of developing a positive self-image. They learn that being responsible and practicing safer sex, if they choose to have sex, can contribute to reaching their goals and dreams.

The Role of Pride and Making Proud Choices with Safer Sex as Their Choice

Adolescence can be a difficult period of development. Adolescents are often faced with confusion, mixed emotions and uncertainty. They are bombarded with sexual messages from various sources, including the media, popular music and their peer group. They are often pressured to be sexually active. They struggle with issues of self-esteem, self-respect and self-pride. Because of this, it is extremely important that they learn to feel good about themselves and their decision to practice safer sex. ***Making Proud Choices!*** illustrates that making proud choices about safer sex and condom use can actually lead teens to develop a sense of pride, self-confidence and self-respect. The roleplay exercises and other skill-building activities reinforce the many positive benefits, both psychological and physical, of practicing safer sex.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

EVALUATION OF THE CURRICULUM

Evaluation is a critical component of the ***Making Proud Choices!*** program. Many health promotion programs have been implemented in schools, churches, clinics, community-based organizations and other venues, but unfortunately, very few of them include formal evaluation components. Through rigorous research methods, the developers have explored whether or not the interventions designed in this curriculum actually result in the desired outcomes. For example, they set out to determine whether adolescents who participated in ***Making Proud Choices!*** did indeed develop more positive outcome expectancies regarding safer sex, and whether such effects were evident up to 12 months after the intervention. Below is a description of the study and its results.

In the research study, the 8-hour curriculum, ***Making Proud Choices!***, was implemented in a small group setting with African-American male and female adolescents between the ages of 11 and 13 on two consecutive Saturdays in three different middle schools. In this random control trial, 659 6th and 7th grade African-American male and female adolescents, mean age 11.8, were stratified by gender and age and randomly assigned to receive one of three 8-hour curricula: an abstinence curriculum, a safer sex curriculum or a health promotion curriculum (which served as the control group). The adolescents received the curriculum in small groups of six to eight students led by either an African-American adult facilitator (mean age 40) or two peer African-American co-facilitators (mean age 16).

The participants completed questionnaires before, immediately after, and 3, 6 and 12 months after the intervention. Of the original 659 participants, 97% returned to complete the 3-month follow-up questionnaire, 94% completed the 6-month, and 93% completed the 12-month follow-up. The primary measures were HIV risk–associated sexual behaviors. The secondary measures were variables from the theory of planned behavior and the social cognitive theory, including knowledge, beliefs, norms, intentions and self-efficacy regarding abstinence and condom use.

Since the original evaluation study, newer editions of the curriculum have been published. Updates to factual information are made to ensure medical accuracy and changes to language help keep the program activities relevant to a new generation and broader range of youth.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

BEHAVIORAL FINDINGS

The participants who received the ***Making Proud Choices!*** safer sex curriculum reported:

- More consistent condom use and less unprotected sex in the 3 months after the intervention than did those in the control group.
- A higher frequency of condom use at the 3-, 6-, and 12-month follow-up sessions than did those in the control group.
- ***Making Proud Choices!*** was especially effective with sexually experienced adolescents. For instance, among participants who were sexually experienced at baseline, those in the safer sex groups reported less sexual intercourse in the previous 3 months at the 6- and 12-month follow-up than the control group. In addition, they reported less unprotected sex at all three follow-up sessions than the control group.

Other Significant Findings

- The adult and peer facilitators were equally effective. There were no differences in intervention effects on behavior with adult facilitators as compared with peer co-facilitators.
- The adolescents who received the ***Making Proud Choices!*** curriculum scored higher in condom use knowledge; believed more strongly that condoms can prevent pregnancy, HIV and other STIs; believed more strongly that using condoms will not interfere with sexual enjoyment; expressed greater confidence that they could have condoms available when they needed them; and reported greater confidence that they could exercise sufficient impulse control to use condoms and greater self-efficacy for using condoms than did those in the control group.

Facilitator Information

CURRICULUM TEACHING STRATEGIES

Making Proud Choices! uses several strategies to facilitate behavioral change. Each strategy is defined below and its use in the curriculum is described.

STRATEGY 1: Setting the Environment: The Group Agreements

Module 1 is designed to create a safe, nurturing, non-threatening environment for participants, stimulate their interest in the group, and provide them with more detailed information about the program. The group agreements that will govern participation in the group should be developed during Module 1. This presentation should permit and encourage discussion designed to give members a sense of participation in the group's decision making. That is, members should be encouraged to accept and live by the standards they agree upon and seek to alter those they wish to change. This is also a good time to provide reassurance to group members about concerns they may have about confidentiality, embarrassment and fear of active participation.

Steps to Creating Group Agreements

- Brainstorm possible agreements.

  For example:

  - Respect each other's opinions.
  - One person speaks at a time.
  - No name-calling.
  - Confidentiality.
  - Begin and end on time.

- Clarify and discuss.
- Eliminate any agreements not acceptable to all.
- Come to a group consensus on all agreements.
- Invite participants to bring up additions/deletions as the need arises.
- Let participants know that everyone is responsible for following and determining the group agreements.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

General Tips for Improving Group Cohesion and Performance

The following tips can help build group cohesion:

- Frequently reward positive behavior (e.g., during demonstrations or exercises).
- Be supportive.
- Give compliments.
- Be non-judgmental.
- Respect participants' feelings and boundaries.
- Model appropriate assertive behavior.
- Be firm when necessary.
- Demonstrate concepts and give examples when possible.
- Keep the language simple.
- Encourage group members to share their experiences at their own pace.
- Build on strengths.
- Listen.
- Let the group members react, think and analyze.
- Be flexible.
- Be patient with the process and try different approaches until you find one that works.
- Clearly convey your expectations for how group members treat each other and how they participate.
- Encourage participation through reinforcement, teaching communication skills, modeling sensitive material, and being supportive, respectful and inclusive regardless of the group members' opinions and beliefs.
- Demonstrate acceptance and respect for all participants, regardless of personal characteristics, including race, cultural background, religion, social class, sexual orientation and gender identity.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

STRATEGY 2: Brainstorming

Brainstorming is a technique used to rapidly generate as many ideas as possible, within a given (usually brief) period of time, about a particular question, topic or problem.

For example: Important Concerns of Youth

Participants are encouraged to spontaneously express their thoughts and reactions (and the facilitator usually records each idea). No evaluation or criticism of ideas is allowed during this part of brainstorming. Participants simply say whatever comes to mind.

For example:

- Family
- Friends
- Money
- Having sex, or not
- Clothes
- School
- Relationships
- Peer pressure
- Pregnancy
- Violence
- Drug use
- Getting a job
- Popularity
- Music
- HIV and other STIs

The facilitator may ask probing questions to elicit certain types of ideas or information.

Once a list has been generated, the group then discusses, evaluates and/or processes each idea (giving neither credit nor blame to the person who suggested it).

For example: Ask the group "why" each item is an important concern to youth, or how each item impacts their lives.

If the task requires it, the group may then choose to prioritize, categorize or select the best idea(s).

For example:

- On which of these things can you have a positive impact? How?
- Which of these things would be healthier to avoid or prevent? How?
- Which five items do you think represent the most important concerns of youth? Why?

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

For our purposes, brainstorming will be used primarily as a method for:

- Assessing the knowledge of the group members—How much do they already know?
- Introducing new information at a level appropriate to the group—Bridging.
- Stimulating discussion—Asking probing questions.
- Processing information—Clarifying and reinforcing the main points or objectives.

Positive Characteristics About Brainstorming:

- Permits the facilitator to assess group dynamics: Who are the active members? How does the group respond?
- Builds group cohesion.
- Permits everyone to learn from the information that is generated.
- Permits the opportunity to assess knowledge and skills of the group.

Principles of Brainstorming:

- Try to get out as many ideas as possible.
- Participants can say anything that comes to mind.
- DON'T EVALUATE IDEAS; a later time can be set aside for evaluation.
- DON'T DISCUSS SUGGESTIONS; a later time can be set aside for discussion.
- Allow repetition.
- Encourage everyone's participation.
- Encourage building on other ideas.
- Allow periods of silence.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

STRATEGY 3: Interactive Activities and Competitive Games

Interactive activities and competitive games give the participants the opportunity to practice what they learned. One of the best strategies for teaching young people is to use fun, interactive and competitive activities, and many such activities are included in this curriculum.

Games and activities are a good strategy for teaching content. Games often promote rich discussion as participants work hard to prove their points. Because games can promote competition, remind participants of the group agreements prior to the game.

Facilitators—remember to read the instructions and game rules prior to teaching the game, and make adaptations as necessary.

STRATEGY 4: Processing a Video or Game

The practice of processing after an activity allows participants to reflect upon what they learned/experienced. Processing also allows the facilitator to draw out the key points of the activity. The most common way to process is to ask a series of questions or make a series of statements.

For example:

- Ask open-ended questions designed to elicit discussion.

  General Reactions

  » What did you think of the video?

  » What is your response to the activity?

  » How do you think Pat felt when…?

- Encourage all participants to contribute. In some groups, there are a few participants who may be less willing to volunteer during the discussion. The following techniques may be used to encourage all participants to contribute.

  Personal Reactions

  » How did you feel about…?

  » Describe what you saw.

  » What will you do as a result of…?

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Sentence Stems

» Ask each participant to complete a phrase such as, "The most important thing I learned was…." Move quickly around the room. Give participants the right to pass.

"I" Statements

» I learned that…

» I felt that…

» I was pleased that…

» I was disappointed that…

STRATEGY 5: Working in Small Groups

Discussion Guidelines

- Set up simple guidelines that encourage each person to participate.
- Be clear about the purpose of the small-group work.
- Use cooperative groups whenever possible to help participants develop positive interpersonal skills while working toward a common goal.
- Set definite time limits.
- Plan ahead for how you will assign participants to groups and how you will assign roles within groups.
- The room and seating should facilitate discussion within the group as much as possible, without disturbing other groups.
- You need not remove yourself from the discussion; however, you should encourage group members to rely on each other for problem solving and decision making.
- Remind participants when time is about to run out. Use a chime, train whistle, music, or some other clear sound to bring people back to the large group.
- Set clear norms, emphasizing that everyone's opinion is valuable, and that the group is working toward an atmosphere of trust.
- Determine the goal of the discussion, and periodically remind the group of that goal.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

- Encourage participants to become good listeners.
- Allow plenty of time for responses.
- Redirect conversation if one participant tries to dominate.
- Try to engage the more quiet participants by making longer eye contact or asking for their contribution.

STRATEGY 6: Roleplaying/Practice

This method of acting out imaginary situations allows participants to practice using a new skill. It provides an opportunity for participants to take risks with new ways of behaving in a safe situation without fear of failure, and to see how their peers will react to their behavior.

Steps

- Select roleplayers or ask for volunteers.
- Set the scene. Describe the situation carefully, but briefly.
- Give brief, clear instructions.
- Start the action.
- End the situation if it becomes stalemated or repetitive.
- Leave time to discuss:
  - What happened.
  - Why it turned out the way it did.
  - Whether it turned out as desired.
  - Who would have had to do what to make it turn out differently.

Tips for Making Roleplays Successful

- Set and follow norms or ground rules for group behavior.
- See yourself as the director of a movie.
- Make every effort to allow participants to volunteer. Urge everyone to participate.
- Set the scene.
- Rehearse.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

- Record to ensure transfer.
- Start with low-risk situations and move to high-risk situations. It may be beneficial to begin with scripted roleplays and then move to unscripted roleplays.
- Give continuous positive reinforcement.

Practice

Practice combines elements of roleplay and small-group work. Practice of specific skill steps is crucial for learning to occur. It should be a structured process.

Roleplay practice and learning may be enhanced if facilitators:

- Give participants a choice on whether or not to participate.
- Encourage participants to improvise during roleplays to make them more their own.
- Reinforce participants for using the specific skill.
- Give participants a specific role:
  - » Roleplayer
  - » Observer
- Develop structured methods for observing and providing feedback.
- Teach participants how to give feedback that focuses on the behavior, not the individual.
- Provide feedback on the skill-user's posture, tone, speech, eye contact and ability to follow the steps of the skill.

Whenever participants take on a role, particularly if it is "negative" in some way, it is important to "de-role" them, so elements of the role do not remain in the group's perception of the person. For example, at the end of the roleplay take the roleplay cards away and say, "You are no longer in this role."

STRATEGY 7: Student Workbooks

Student workbooks for participants include quiz questions, worksheets for small-group work and roleplay materials. The workbook contains all the needed worksheets for the curriculum activities.

GENERAL TIPS FOR PREPARING TO IMPLEMENT THE CURRICULUM

- Review the curriculum manual ahead of time.
- Review the format of the manual, which consists of goals, objectives, preparation, materials and a detailed outline of what the facilitator should say and do for each activity.
- Become familiar with all activities, videos and curriculum materials.
- Make sure you have all the necessary equipment and materials.
- Review the supplemental background information provided in Appendix B about HIV, other STIs, contraceptive methods and effects of alcohol and other drugs.
- Learn about local resources such as health departments and family planning clinics.
- Know the policies of school districts and community agencies in regard to implementing new programs, discussing issues of sexuality and gaining parental support and permission.

Tools for Online Implementation

A set of PowerPoint slides has been created to facilitate implementation of the curriculum, particularly in virtual settings. These slides are available under the Adaptation Guidelines & Tools tab on the *Making Proud Choices* page of ETR's Program Success Center at www.etr.org/ebi/programs/making-proud-choices. The slides summarize key content and instructions for group activities and can help facilitators present the information and guide activities.

ETR provides additional support and guidance for virtual implementation of evidence-based programs and other curricula, including tip sheets on a variety of considerations for online learning. These can be found at ETR's Design4Learning page at www.etr.org/design-4-learning.

Materials

Making Proud Choices! uses the following materials at various points in the curriculum. Use this checklist to prepare for teaching. Some of the items will need to be prepared prior to beginning the sessions; others can be developed as part of the process.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Materials Needed (Not Included in Implementation Kit)

Pencils (enough for each participant)
Markers
Masking tape
Garbage bag
Monitor and device for showing videos, or internet access if using alternative videos
Condoms (one per participant or pair plus demonstration condoms)
Water-based lubricant
Condom demonstrator(s)
Small paper bag
Roll of paper towels
Chart paper
Index cards (1 labeled with a star, 1 labeled with a triangle, 1 labeled with a rectangle, 3–5 labeled with a circle for a group of 6–8)

Pre-Labeled Chart Paper

Group Agreements
Why Some Teens Have Sex
Possible Outcomes of Unprotected Sex
Proud and Responsible Prevention Strategies
Goals (written on left side of chart paper)
Making Proud Choices! Be Proud! Be Responsible!
The Hard Way Characters: Kenrick, Miguel, Renee, Mom, Dad and *Koko*
How STI Are Transmitted
Reasons to Avoid STIs
Contraceptives
Ways to Make Condom Use Easy and More Fun (for high school youth)
Ways to Make Condom Use Easy (for middle school youth)
Pros
Cons
Excuses Sexual Partners Give

MODULE 1

GETTING TO KNOW YOU AND STEPS TO MAKING YOUR DREAMS COME TRUE

GOALS

The goals of this module are to:

- Provide participants with an overview of the program.
- Increase participants' personal investment and comfort in participating in the program.
- Increase participants' ability to identify realistic goals for their future.
- Increase participants' confidence about making proud and responsible choices to protect themselves and their community from unintended pregnancy, HIV and other STIs.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- Identify several agreements for group participation that will facilitate discussion and learning.
- Identify what it means to be proud and responsible.
- Describe the benefits of proud and responsible behavior.
- Identify at least two reasons why teens have sex, the possible outcomes of sex, and strategies for reducing possible negative outcomes.
- Describe at least one goal they wish to achieve in the future.
- Identify barriers to achieving their personal goals and strategies for overcoming them.

MODULE PREVIEW

The first module: (1) informs participants about the program; (2) creates a safe space for talking about sexuality; (3) generates enthusiasm about ***Making Proud Choices!***; (4) promotes the goal of protecting themselves and their community; and (5) gives them ideas about how they can examine their own goals, and obstacles that might stand in the way of reaching them.

STRATEGIES/METHODS

- Mini-Lecture
- Brainstorming
- Welcome Activity
- Goals and Dreams Timeline Exercise
- Group Discussion

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- *Goals and Dreams Timeline* poster
- *Goals and Dreams Timeline* worksheet in the student workbook

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Markers
- Pencils
- Masking tape
- Pre-labeled chart paper:
  - » *Group Agreements*
  - » *Why Some Teens Have Sex*
  - » *Possible Outcomes of Unprotected Sex*
  - » *Proud and Responsible Prevention Strategies*
  - » *Goals*
  - » *Making Proud Choices! Be Proud! Be Responsible!*

PREPARATION NEEDED

1. Before the program begins, label all of the charts as listed under Materials.
2. Hang the pre-labeled charts in the order they will be used. Fold and tape the charts so the titles remain covered by the bottom half of the sheet until you use them.

INSTRUCTIONAL TIME: 60 minutes

ACTIVITY	MINUTES NEEDED
A. Welcome and Program Overview	5
B. Welcome Activity	10
C. Creating Group Agreements	5
D. Making Proud Choices! Be Proud! Be Responsible! Brainstorm	5
E. Brainstorming About Teens and Sex	10
F. Goals and Dreams Timeline	15
G. Brainstorming Obstacles or Detours Along Your Timeline	10

ACTIVITY A

WELCOME AND PROGRAM OVERVIEW

PREPARING FOR THE ACTIVITY

RATIONALE

Providing participants with a general overview of the program will foster excitement and enthusiasm about participating.

MATERIALS

None

TIME

5 minutes

PROCEDURE

1. Welcome the participants and introduce yourself.

2. Present the purpose and format of the program by saying,

> This program is called *Making Proud Choices*. It will give you the tools to protect yourself and others from unintended pregnancy and sexually transmitted infections—STIs, sometimes called STDs—including HIV, the virus that causes AIDS.
>
> This program focuses on knowledge, attitudes and prevention skills related to pregnancy, HIV and other STIs. It also focuses on relationship issues, sexual behavior, decision making and negotiating in difficult situations. It's designed to teach specific information about ways to reduce your risk of getting pregnant or becoming infected with STIs, including HIV.
>
> Although STIs can be prevented, many young people don't take precautions because they don't believe they are at risk of getting an STI. Anyone can get an STI, including HIV, from having unprotected sexual intercourse with a partner who is infected.
>
> Unintended pregnancies can be prevented too. Many teen parents have been able to create successful lives for themselves and their children, especially when they have the support of some caring adults. However, they have to work a lot harder to do so. It's easier to reach your goals if you postpone having a child, or, if you're already a parent, postpone having another child.
>
> *(continued)*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

If you're going to have sexual intercourse, it's critical to use birth control to prevent unintended pregnancy and protection such as condoms or dental dams. Let's clarify the terms we will be using. When we speak of ***protection***, we will be referring to *condoms* and *dental dams*. When we say ***condoms***, we will be referring to *external condoms* and *internal condoms*. External condoms are also known as male condoms. Internal condoms are also called female condoms.

Do you think teens should be worried about unintended pregnancy, HIV and other STIs?

3. Pause to allow participants to answer.

4. Then say the following,

The people who designed this program care about the lives of young people. They want you to have the knowledge and skills to protect yourselves and others against pregnancy, HIV and other STIs.

To make the program interesting and fun, it includes videos, exercises and games that I hope you will enjoy. Although the information is serious and important, I hope we can learn together and have a good time.

Other young people who've participated in this program have said they had a good time, learned a lot and would recommend it to their friends. I hope you will like it too.

Who has questions?

5. Answer any questions the participants have about the purpose or format of the program.

6. Summarize by saying,

Now that you have some idea of what to expect, let's get started.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY B

WELCOME ACTIVITY

PREPARING FOR THE ACTIVITY

RATIONALE

The Welcome Activity encourages participants to feel like important contributors to the group and gives them an opportunity to express their thoughts and feelings.

MATERIALS

None

TIME

10 minutes

PROCEDURE

1. Have the participants sit in a circle.

FACILITATOR'S NOTE

If you know your participants and they already know each other this is an optional activity. An icebreaker that encourages group cohesion can be used in its place.

Sitting in a circle facing each other can build group cohesion. Have the participants sit on the floor, have them move their chairs close to each other, or set aside a special area of the room to accomplish this. Adapt this activity to accommodate group dynamics and environment. If creating a circle is not feasible, have the speaker toss a soft toy to the next speaker to encourage engagement.

2. Explain the Welcome Activity by saying,

> Let's introduce ourselves and get to know a little about each other.
>
> Each person will have a chance to speak. When you are finished speaking, the person sitting on your left will speak next.
>
> If you're not ready when we come to you, you may pass and we will come back to you later. I will speak first and when it is your turn please share your name, your age, the school you attend, your pronouns if you want to share, and something else you'd like us to know about you. For instance you might tell us about a hobby or favorite activity.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

3. **Model the Welcome Activity by beginning with yourself,**

> My name is _____ and I am _____.
> *(age)*
>
> I attend(ed) _____.
> *(high school, college or university)*
>
> When referring to me, please use the pronouns _____ or _____.
>
> I like to…(share something you enjoy doing).

4. **Ask the person on your left to speak next. Encourage each group member to speak. When the Welcome Activity is complete, thank each person for sharing.**

5. **Summarize this activity by saying,**

> Thanks to all of you for sharing a little about yourselves. During the program, we will get to know more about each other and what is important to each of us.

FACILITATOR'S NOTE

Asking participants to tell you their pronouns is a way of creating a safe space for transgender or gender nonconforming youth. Reinforce that sharing pronouns is optional; some youth may not feel comfortable sharing their pronouns and thus "outing" themselves. Model what you want participants to say by giving your own pronouns. Some transgender youth might have typical pronouns (he/she/his/her/their) or they might request more creative pronouns such as hir or zir. Pronouns don't always line up with what observers might expect based on a person's perceived biological sex. The simple act of requesting pronouns sends the message that transgender and gender nonconforming youth are welcome and respected in the group.

You can also use alternative sentence stems in the introductions. Here are some ideas:

- One of my favorite TV shows or movies is _____.
- The best movie/book I've ever seen/read is _____.
- An item on my bucket list is _____.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY C

CREATING GROUP AGREEMENTS

PREPARING FOR THE ACTIVITY

RATIONALE

Group agreements help participants feel more secure in a group setting and help facilitators provide structure when discussions become difficult or awkward. Developing guidelines as a group builds group cohesion and increases the likelihood that the agreements will be followed.

MATERIALS

- Pre-labeled chart paper:
  - *Group Agreements*
- Markers
- Masking tape

TIME

5 minutes

PROCEDURE

1. Begin this activity by unfolding the pre-labeled chart paper titled *Group Agreements* and saying,

> We're going to be talking about sexuality, pregnancy and STIs—topics that sometimes can cause people to feel nervous or uncomfortable. What guidelines or agreements could we put in place to help make sure that everyone in the group feels safe, comfortable and able to participate?

2. Have participants brainstorm a list of agreements or guidelines for the group to follow. As the participants offer guidelines, write them on the chart paper titled *Group Agreements*.

3. Make sure the list includes the following suggestions. Be sure to cover confidentiality, right to pass and respecting diversity.

> **GROUP AGREEMENTS AND GUIDELINE SUGGESTIONS**
>
> **Confidentiality:** When people share private information in this group, it should be kept private. If, for example, someone shares about crying because of hurt feelings, it would be a violation of the group agreements to discuss or joke about this outside the group. We will not talk about any personal information we hear in this group outside of this group.
>
> *(continued)*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

There is one exception. If any of you tell me something that might cause you or someone else harm, I will have to tell someone for safety reasons—for example, if you told me you were going to hurt yourself or someone else, or if someone talks about being abused in any way. Please know that it is important to tell and to get help if you or someone else is being harmed. I encourage you to talk to me before or after the session, or to talk with another trusted adult outside of this group.

No put-downs: Show respect for others, even if you disagree with them. If someone says something that you disagree with, it would be a violation of the group agreements to say, "That's stupid" or "You're wrong." Instead, say that you have a different idea and share it. All questions are important. There is no such thing as a "silly question."

Be supportive of each other: We will be discussing important and sometimes personal information about making choices and risky behaviors. At times you may talk about yourself, your peers and your partners. Everyone in this room is different and has had different experiences. It is important that we respect these differences by not laughing at anyone or making put-down statements.

Use "I statements": When we talk about personal subjects, we sometimes make assumptions about how others feel. In this group, it is important to talk about how YOU feel, think or act and not about how you think "all teens" or "all your friends" feel, think or act.

Right to pass: Sometimes when talking about subjects such as sexuality, someone might not want to talk or might have an uncomfortable feeling or memory. If you ever feel like being quiet or not sharing, it's OK to just listen. If I call on you or someone asks you a question, you can say, "I pass." Always take care of yourself. All group members have the right not to respond to any question they do not wish to address.

Move up, move back: If you tend to talk a lot in groups, talk less (move back) sometimes so others can talk. If you tend to be very quiet, share more (move up) and participate a little more so the group can benefit from your ideas.

Dealing with discomfort: Sometimes certain conversations or topics can bring up uncomfortable feelings for people. If anything makes you feel uncomfortable during our sessions, let me know. If you need to step outside for a few minutes, we can arrange that. Also it's OK to distract yourself by

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

doodling or using another strategy that helps you feel comfortable. Please come to me with any issues or concerns you have. If I can't help, I can connect you with people or resources that can help.

Respect diversity: Let's keep in mind that there's diversity in society and in this group. Individuals come from different family backgrounds, different racial and cultural groups and different living situations. Some young people have already had romantic relationships; others aren't even thinking about it. Some have had sexual intercourse. Some have had sex because they chose to; others may have had sex against their will. Some may identify as gay, lesbian, bisexual or straight. Some may identify as male, female or transgender.

Young people may express themselves in ways that don't conform with their biological sex. There are many ways that youth can express their gender identity.

Being open to diversity can help reduce stereotyping, which can be very harmful to a young person. Stereotyping individuals imposes restrictions on their opportunities for individual expression and limits personal growth.

Besides, all of these differences make us unique. Regardless of how you see yourself, your background, previous relationships or experience, each of you has a place in this group. This will be a safe space for everyone.

Other agreements you should include if participants do not mention them:

- Listen to others.
- Don't interrupt.
- Allow everyone to participate.

4. **Define terms related to diversity as needed.**

I want to be sure everyone understands some of the terms we use when talking about diversity.

Gender refers to the ideas in a culture or society about the appropriate ways for men and women to dress, behave, think and feel. Ideas about what gender behavior is appropriate change in different cultures and at different times in history. Sometimes one gender is given more power or status than another.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

Gender identity is peoples' inner understanding of what gender they identify with. It may be man, woman, something in between, or something that doesn't fit these labels. It may be the same as ***(cisgender)*** or different from ***(transgender)*** the sex they were assigned at birth. Gender identity is unique for each person.

Gender expression is how a person represents or expresses gender identity to others, often through behavior, clothing, hairstyles, voice or body characteristics.

Sexual orientation refers to the romantic and sexual attraction people feel for others. People can be attracted to others of the same gender, a different gender or more than one gender.

5. Ask participants if they have any other suggestions they would like to add.

6. Once the list is complete, re-read each agreement and ask all group members to nod and say "yes" that they agree to follow that guideline.

7. Summarize this activity by saying,

> You did a great job creating the list! I will post our group agreements each time we meet so we can all see it and remember those guidelines.
>
> I am excited and feel that we can work well together and respect each other by following our group agreements. I look forward to working with all of you.

FACILITATOR'S NOTE

Be sure to post the group agreements throughout all the sessions of the program.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY D

MAKING PROUD CHOICES! BE PROUD! BE RESPONSIBLE! BRAINSTORM

PREPARING FOR THE ACTIVITY

RATIONALE

This activity introduces the theme of the program, ***"Making Proud Choices! Be Proud! Be Responsible!"*** The emphasis on being proud and responsible provides a motivation for engaging in health-protective behavior and for encouraging others to do the same.

MATERIALS

- Pre-labeled chart paper:
  - *Making Proud Choices! Be Proud! Be Responsible!*

TIME

5 minutes

PROCEDURE

1. Tape the *Making Proud Choices! Be Proud! Be Responsible!* chart paper on the wall.

2. Open the discussion by saying,

> The title of this program is *Making Proud Choices!*

3. Then say,

> In this activity we are going to do some brainstorming. In brainstorming, you just say whatever comes to mind about a particular issue or question. I want you to brainstorm the answer to three questions.
>
> What does it mean to make proud choices? What does it mean to be "proud"? What does it mean to be "responsible"?

4. Have participants brainstorm answers to these questions. Record their answers on the chart paper or a dry erase board.

Make sure their responses include:

» ***Making Proud Choices*** means doing things that you feel good about, that your family and community will respect and that will help you achieve your goals and dreams.

» To ***Be Proud*** is to feel happy and pleased about something you've done or accomplished, to feel that you have lived up to your expectations or behaved according to your own or community values.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2026 agreement.

© ETR. All rights reserved.

» To ***Be Responsible*** is to be dependable, dedicated, reliable, committed, truthful and trustworthy.

5. **Explain that,**

Being proud and responsible means that you value yourself and you believe you are worthy! Each one of you has value. Each one of you is worthy. You have to behave in ways that show you understand your worth. Proud and responsible behavior also extends into the area of sex. It means talking with friends, partners and family members about behaviors that put them at risk of STIs and unintended pregnancy and encouraging them to protect themselves. If you are going to have vaginal, anal or oral sex, it means using protection such as an external or internal condom or dental dam.

We know that some young people have been sexually abused, and they didn't get to make a choice. Youth who have survived something like that can use that inner strength in the future to choose when they do and don't want to have sex and to always protect themselves and their partners from STIs and unintended pregnancies. If you are currently in a situation where you don't get to make your own choices about sexual activity, I encourage you to reach out to me or another trusted adult to get help.

6. **Then ask,**

What are the benefits of making proud choices and engaging in proud and responsible behaviors? What do we gain by being proud and responsible?

Make sure answers include:

» Feel better about yourself

» Have healthier relationships

» Stay out of trouble

» Accomplish your goals

» Make people feel proud of you

» Reduce your risk of pregnancy, HIV and other STIs

» Have a healthier body

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

» Stay in school

» Feel like you are helping your loved ones and your community

Always use protection AND effective birth control. By acting responsibly you can feel proud because you're protecting yourself, your sexual partners and the families and communities you've formed. You can play a big role in preventing unintended pregnancy and STIs in your community.

FACILITATOR'S NOTE

Post the chart with participants' list of words to describe what it means to be proud and responsible. You can refer back to their list throughout the program when encouraging the participants to make proud choices.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY E

BRAINSTORMING ABOUT TEENS AND SEX

PREPARING FOR THE ACTIVITY

RATIONALE

By exploring issues about teens and sex, participants become more aware of the pressures they face and the choices they may have to make. It gives the facilitator more information about the thoughts and feelings of the participants and helps the participants learn about the focus of the program.

MATERIALS

- Pre-labeled chart paper:
  - *Why Some Teens Have Sex*
  - *Possible Outcomes of Unprotected Sex*
  - *Proud and Responsible Prevention Strategies*
- Markers
- Masking tape

TIME

10 minutes

PROCEDURE

FACILITATOR'S NOTE

As you facilitate this activity and the entire program, keep in mind that for some youth pregnancy and parenting are intentional. The reasons are complex. There may be family, cultural and community influences—in some families, cultures and communities, young parenthood is prized and has been modeled. Some youth place high value on parenthood because they see it as a realistic life option when they don't see options such as post-secondary education and/or a career as viable. Others see a baby as someone who will always love them. While it is impossible to fully address these complex motivations for pregnancy and parenting in this model, the program approaches pregnancy prevention by offering concrete information, positive attitudes and beliefs, and many opportunities for skill practice.

1. For this activity, use the pre-labeled chart paper (folded so that the titles are covered by the bottom half of the chart paper). Unfold the chart paper sheets one at a time, as needed.

2. Introduce the activity by saying,

> We are going to do some more ***Brainstorming***. Remember in brainstorming, you just say whatever comes to mind about a particular issue or question.

3. Unfold the sheet of chart paper titled *Why Some Teens Have Sex*, and then say,

> Why do you think some teens your age are having sex?

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

The responses should include the following:

- For pleasure or sexual release
- To keep a partner/because partner expects it
- To have fun
- To satisfy curiosity
- To express feelings of love or affection to a partner
- To get attention or affection
- To feel more grown up
- To be popular
- To get back at parents
- To have a baby
- To fit in with peer group
- Loneliness
- To feel loved or needed
- Problems at home/living situation
- See it on TV, online or in the movies
- Forced
- To increase status in peer group
- Low self-esteem
- To prove masculinity/femininity

4. **Write all of the participants' comments on the chart paper.**

5. **Compliment their good ideas.**

6. **Summarize as follows,**

As we can see, there are many reasons teens have sex. Regardless of the reasons, if they don't use protection to prevent unintended pregnancy or STIs, they can face outcomes that could make it harder to accomplish their hopes and dreams for the future. Let's look at some of the possible outcomes of unprotected sex.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

7. **Unfold the next chart paper, *Possible Outcomes of Unprotected Sex*.**

8. **Then ask,**

> **What are some of the possible outcomes of unprotected sex?**

9. **Have participants brainstorm the possible outcomes of unprotected sex, and write all of their comments on the chart paper. (Be sure to include pregnancy, HIV and other STIs.)**

10. **Compliment the group on how much they know.**

11. **Next, unfold the chart paper titled, *Proud and Responsible Prevention Strategies* and ask,**

> **What are some ways to prevent these possible negative outcomes?**

12. **Have participants brainstorm ways to prevent possible negative outcomes of unprotected sex.**

13. **Write all of the participants' comments on the chart paper. (Emphasize that protection—such as latex (or polyurethane/polyisoprene) condoms—can help prevent pregnancy and sexually transmitted infections, including HIV.)**

14. **Compliment the group on how much they know.**

15. **Point to their lists and summarize by saying,**

> **As we can see by your lists, there are many reasons teens may have sex. We can also see there are many possible negative outcomes to having sex. Yet, there are some proud and responsible strategies for preventing those negative outcomes. You did a great job generating your lists. Throughout our lessons together we will be looking at many of these issues more closely. First, let's examine our goals and dreams and see how having unprotected sex can have an impact on them.**

ACTIVITY F

GOALS AND DREAMS TIMELINE

PREPARING FOR THE ACTIVITY

RATIONALE

To achieve their goals, participants need to think about their future and to understand that their present behavior will have an impact on what they will be doing 5 and 10 years from now.

MATERIALS

- Pencils
- *Goals and Dreams Timeline* worksheet
- *Goals and Dreams Timeline* poster
- Pre-labeled chart paper:
  - *Goals* (Write Goals on the left side of chart paper)

TIME

15 minutes

PROCEDURE

1. Display the *Goals and Dreams Timeline* poster.

2. Introduce the exercise by saying,

> Everything and everyone has a past, present, and future. This next activity will help you take a closer look at your past, present, and future.

FACILITATOR'S NOTE

Record some things from your own life that you are proud of doing on the *Goals and Dreams Timeline* poster. Provide examples for each section. Be mindful that this activity may be challenging for some young people who may struggle to identify with the idea of setting future goals or even with reflecting on their own accomplishments, particularly in a group setting where the range will vary and young people may feel as if what they've done or want to do isn't "good enough." Listen for these insights and help youth recognize that their timelines will all differ based on things such as their experiences, interests and/or what brings them joy. When you model the activity include a range of accomplishments, taking care to highlight achievements beyond acquiring goods such as a car or house. This will help participants understand what you want them to do and encourage them to recognize their own varied accomplishments.

3. Have participants turn to the *Goals and Dreams Timeline* worksheet in their workbooks. Give the following instructions:

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

This is a timeline that will help you think about what you have already accomplished in the past year and what you want to accomplish in the future. There are three sections. In the first section, write your age and any things you've already accomplished or things you are proud of. This can be anything that's meaningful for you. For example, volunteering your time, playing for a sports team, getting certain grades, getting a job, learning something new, joining a club, winning a student election, getting a learner's permit, an artistic or musical performance, advocating for others, etc.

4. Give participants 1–2 minutes to complete the first task.

5. Then give the following instructions:

Move on to the second section on your timeline. Imagine yourself 5 years from now. That will be 20__. Write down the age you will be in 5 years. Think of at least one thing you hope to have achieved 5 years from now.

Write down at least one thing you hope or want to make happen in this section. In 5 years, what do you hope to be proud of doing? You can write more than one thing if you like.

6. Give participants 1–2 minutes to complete the second task.

7. Then give the following instructions:

Move on to the third section of your timeline. Imagine yourself 10 years from now. That will be 20__. Write down the age you will be in 10 years. Write down at least one thing you hope or want to make happen in the next 10 years. In 10 years, when you look back, what do you hope to be proud of doing?

You can write more than one thing if you like.

8. Allow 1–2 minutes for participants to complete their timelines.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

9. **Then encourage each participant to share with the group one item from each section by going around the room and asking,**

> **Looking ahead 5 years, what goal do you want to achieve or thing do you hope to do? How about in 10 years?**

10. **Next say,**

> **I want you to now choose one of your goals or hopes and write it on the back of your timeline. Next to that item, write two things you must do to achieve it or make it happen.**

11. **While they are working on this, unfold the *Goals* chart paper. Circulate and provide support to anyone who seems to be struggling. Some youth need a little extra coaxing or encouragement to identify and voice their goals or aspirations. Be prepared to provide a few examples, such as graduating from high school, going to college, getting trained in a skill, buying a car or getting a good job. Have participants share the goals they've chosen and the actions they must take to achieve them.**

12. **Write these goals on the left side of the *Goals* chart paper, leaving space on the right half for items in the next activity.**

13. **Compliment participants on their answers.**

14. **Summarize the activity by saying,**

> **You can achieve your goals with a little planning and organizing, and by making proud and responsible decisions. Reaching your goals will make you and the people you care about proud. Remember that you are capable of doing whatever you put your mind to.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

FACILITATOR'S NOTE

Some youth may be struggling to meet basic needs such as food, shelter or safety. Others may have experienced a traumatic event. Validate all of their accomplishments and their hopes. Be careful not to minimize or praise any accomplishments or hopes in such a way that creates a hierarchy, as no goal is better or more important than another.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY G

BRAINSTORMING OBSTACLES OR DETOURS ALONG YOUR TIMELINE

PREPARING FOR THE ACTIVITY

RATIONALE

Directing participants' attention to the potential obstacles they may face when pursuing their goals and dreams encourages them to develop strategies to avoid, surmount or reduce those obstacles.

MATERIALS

- Pre-labeled chart paper:
  - *Goals* (from the previous activity)
- Markers
- Masking tape

TIME

10 minutes

PROCEDURE

1. Refer to the *Goals* chart paper from the previous activity.

2. Write "Obstacles" on the right side of the chart paper.

3. Ask the participants to brainstorm things that might prevent them from achieving the goals and dreams they listed by saying,

> We have just listed our goals and dreams. Now let's talk about some of the things that may get in the way of us reaching our goals and dreams. These are called obstacles. They are like roadblocks or detours along the way. What obstacles can you think of that may get in the way of your goals?

Answers should include:

» Unintended pregnancy or an uncurable STI such as HIV

4. Write their responses under "Obstacles or Detours" on the right side of the *Goals* chart paper with a different color marker.

5. Say,

> If you've already encountered any of these obstacles or detours, you understand how your life can change. Things can work out just fine but it may be harder.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

6. **Ask the following questions,**

> • **How can we avoid some of these obstacles or detours?**
>
> • **What can you do to make sure you don't get pregnant, get someone pregnant or get a chronic disease such as HIV?**

7. **Pick a few of the key obstacles and discuss ways to avoid, overcome or reduce them. If there are any teen parents in the group, ask them if they would like to discuss ways they have been able to manage the additional responsibility of raising a child and still accomplish their goals.**

8. **Summarize by saying,**

> **I'm impressed with your goals. For the rest of the program, we'll be looking at ways to overcome obstacles and navigate detours so you can reach your goals. If you decide to have sex, you can avoid negative outcomes such as unintended pregnancy and STIs by choosing not to do anything risky, or reducing your risk by using protection and effective birth control or engaging is less-risky behaviors.**
>
> **You're worthy of all the good things you imagine for your future. Each time we meet you'll gain knowledge, beliefs and skills to empower you to make proud choices! I look forward to working with you.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

GOALS AND DREAMS TIMELINE

Instructions:

Complete this timeline with goals you want to accomplish in the future. Examples include: getting a driver's license, high school graduation, having a committed and stable relationship, learning a new skill or hobby, community college, college, getting your own place, buying a car, travel, employment or career, marriage, buying a home, children, starting a business, etc.

Birthday: _____

MODULE 2

A POSSIBLE OUTCOME OF UNPROTECTED SEX: HIV INFECTION

GOALS

The goal of this module is to:

- Increase participants' knowledge about HIV/AIDS and HIV risk–associated behavior.
- Help participants identify behaviors that place people at risk for contracting sexually transmitted infections, including HIV infection.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- Identify the basic facts about HIV and AIDS.
- Distinguish facts from falsehoods about HIV and AIDS.
- Identify a person's risk of HIV infection as a result of engaging in various sexual and non-sexual behaviors.
- Identify which behaviors are low risk and no risk for contracting HIV infection.
- Identify how HIV infection can be prevented.

MODULE PREVIEW

The second module: (1) clarifies myths about the causes, transmission and prevention of HIV while providing correct factual information; (2) provides opportunities for participants to develop skills in giving correct information on HIV/AIDS to friends; and (3) helps participants identify various behaviors that place them at risk for HIV infection.

STRATEGIES/METHODS

- Question-and-Answer Session
- Video Viewing
- Exercise
- Game

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- *HIV/AIDS Frame* poster
- *Key Words* poster
- Video: The Subject Is HIV (or alternative videos*)
- *True or False: HIV Statements* (included in module)
- *Risk Continuum* signs
- *Risk Behavior* cards

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Monitor and video player, or internet access if using alternative videos
- Chart paper
- Markers
- Masking tape

PREPARATION NEEDED

1. Set up the video(s) to be ready to play.
2. Review the *True or False: HIV Statements* and get comfortable with the content.
3. Review the information about HIV in Appendix B.

INSTRUCTIONAL TIME: 60 minutes

(*Note:* Facilitators may wish to extend the time to allow more thorough discussion of the video.)

ACTIVITY	MINUTES NEEDED
A. Discussing HIV and AIDS	**10**
B. *The Subject Is HIV* Video and Discussion*	**25**
C. True or False: HIV	**10**
D. HIV Risk Continuum	**15**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.

ACTIVITY A

DISCUSSING HIV AND AIDS

PREPARING FOR THE ACTIVITY

RATIONALE

Learning basic information about HIV and AIDS will provide participants with a foundation from which to work on attitudes and behaviors later in the program.

MATERIALS

- Posters:
  - *HIV/AIDS Frame*
  - *Key Words*

PREPARATION

- Review the information about HIV in Appendix B.

TIME

10 minutes

PROCEDURE

1. Hang the *Key Words* poster and *HIV/AIDS Frame* poster.

2. Direct participants' attention to the *HIV/AIDS Frame* poster and ask the following questions.

FACILITATOR'S NOTE

This activity is a discussion using a series of questions. Most youth already have some information about HIV. Invite participants to answer the questions and correct any misinformation. Keep this activity brief as all of the information will be reviewed again in the video *The Subject Is HIV*.

HIV/AIDS FRAME POSTER — QUESTIONS & ANSWERS*

How do people get HIV?

- **Through sex.** Anyone who has unprotected vaginal or anal sex with someone who has HIV can get HIV. There is also some risk of transmission through oral sex, but it is very low.
- **By sharing needles** for injecting drugs, vitamins, steroids or hormones, or for tattooing, piercing or any other reason.
- **From mother to child** either before or during birth. In a few cases HIV has been passed from mother to child through breastfeeding. A pregnant woman with HIV can take medicines to greatly lower the risk of her baby being born with HIV.

(continued)

What common body fluids can transmit HIV?

HIV is found in the blood, semen, vaginal fluids and rectal fluids (the mucus that lines the rectum to help with elimination of waste) of someone with HIV. It is passed from person to person through these body fluids.

How is HIV *not* transmitted?

HIV is not transmitted by casual, day-to-day contact between people. It is not transmitted through the air. It must get inside the body to infect a person.

People can't get HIV from:

- touching, coughing or sneezing
- toilet seats, eating utensils, swimming pools, water fountains, door knobs or phones
- casual contact such as hugging, kissing or sharing food
- donating blood
- tears, saliva, sweat or urine
- mosquitoes or other insects

Who is at risk?

It is what people do, not who they are, that puts them at risk for HIV.

People are at risk for HIV if:

- They have sex with someone who's had other partners.
- They have sex without using a latex condom or other protection.
- They share needles or syringes to inject drugs, or had sex with someone who has.
- They share needles or other sharp objects for tattooing, piercing or any other reason.

How can you prevent HIV?

- Don't have vaginal or anal sex.
- Never inject drugs or share needles for any reason.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

How can you reduce your risk of HIV?

- **Use a latex condom each and every time for vaginal or anal sex.** Barrier use during oral sex can further reduce the very low risk of getting HIV through oral intercourse. People who are allergic to latex can use polyurethane or polyisoprene condoms. Protection includes external or internal condoms and dental dams.
- **Avoid having multiple or overlapping partners.** The more sex partners a person has, the greater the chances of contracting HIV or another STI.
- **Discuss HIV with a partner.** Ask about past or present risk behaviors. Be sure any sex partner has been tested before having sex. Discuss ways that you can reduce your risks together such as using condoms, taking PrEP, or regular testing.
- **Get tested for HIV.** The only way to know your HIV status is to get tested. The only way for your partner to know their HIV status is for them to get tested.
- **Take medication, if needed.** If you are having sex or sharing needles with someone who is living with HIV, talk to a medical provider about taking pre-exposure prophylaxis (PrEP). If you think you were exposed to HIV, ask about taking post-exposure prophylaxis (PEP).
- **Don't use alcohol, marijuana or other drugs** that impair judgment. Being high can lead to unsafe sex or other drug use.

3. Direct participants' attention to the *Key Words* poster. As you review the questions, point to the key word on the poster.

4. Review the following questions using the *Key Words* poster. Encourage all the participants to try to answer them. Supplement their answers with the information below each question.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

KEY WORDS POSTER — QUESTIONS & ANSWERS

What is HIV?

HIV stands for human immunodeficiency virus. It is the virus that causes AIDS (acquired immunodeficiency syndrome). People who have HIV in their bodies are said to be living with HIV or to be HIV positive.

HIV damages the body's immune system, which normally protects the body from disease. The immune system becomes weaker until it can no longer fight off different types of infections.

There is no cure for HIV, but treatments can be started while the person still feels healthy. With these medicines, people with HIV can lead longer and healthier lives than ever before.

What is AIDS?

AIDS stands for acquired immunodeficiency syndrome. AIDS is the stage of HIV when the immune system has become very weak and damaged. When this happens, other diseases and infections can enter the body, including types of pneumonia, yeast infections, cancers and brain infections. These are called "opportunistic infections" because they take advantage of the weakened immune system.

How is AIDS different from HIV?

HIV is the virus that enters the body and damages the immune system. People can live with HIV for years without getting sick. They may look and feel healthy and may not even know they have the virus. People who are taking medicine to treat HIV may be in this stage for several decades, although they can still transmit HIV to others.

AIDS is the condition that develops as a result of the damage done to the immune system. As the amount of virus in the body starts to go up and the CD4 cell count begins to go down, the person may begin to have symptoms. A person with HIV is diagnosed as having AIDS when the CD4 count drops below a certain level, or when certain opportunistic infections develop.

What is the immune system?

The immune system is the body's defense against infections and diseases. When the immune system works as it should, white blood cells patrol the body and attack germs, viruses and other organisms that shouldn't be there.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2026 agreement.

© ETR. All rights reserved.

(continued)

HIV attacks specialized white blood cells called CD4 or T-cells. As the number of properly working CD4 cells decreases, the immune system becomes weaker until it can no longer fight off different types of infections. The most common treatments for HIV limit the ability of the virus to reproduce. They help protect the immune system and improve the chances of staying healthy.

Common Tests for HIV Available at a Clinic:

If you get a test in a health care setting or lab, a health care provider or lab technician will take your sample (blood or oral fluid). If it's a rapid test, you may get test results in 30 minutes or less, but if it is a laboratory test, it can take several days for your results to be available. Your health care provider or counselor may talk with you about your risk factors, and answer any questions you might have. They will discuss next steps with you if your result is positive.

Rapid tests are usually done with blood from a finger prick or with oral fluid, and the results are ready in 30 minutes or less.

Laboratory tests require a blood sample.

- If the test comes back negative, and you haven't had a possible exposure during the previous 3 months before the test you took, you can be confident you don't have HIV.
- If your test result is positive, the lab will conduct follow-up testing, usually on the same blood sample as the first test.

Common Tests for HIV Available Over the Counter:

Home Access requires a finger prick to collect a blood sample. The person sends the sample to a licensed laboratory and gets the results by phone as early as the next business day. This is an anonymous test. Anyone who tests positive is immediately offered a follow-up test, counseling and referral to treatment.

The OraQuick In-Home HIV Test provides results in 20 minutes and involves swabbing inside the mouth to get an oral fluid sample and testing this sample with a test kit. A positive test needs a follow-up test at the testing site, counseling and other referrals. HIV infection may show up later after exposure in an oral fluid test than a blood test, because the level of antibody in oral fluid is naturally lower.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

What is the window period?

The "window period" is the length of time between when a person first gets HIV and when a test can accurately detect it. This varies from person to person, and depends on the type of test done. During the window period, even before knowing about being infected, a person can transmit HIV to others. People getting tested at a clinic should ask their health care provider about the window period for the type of test they are taking. People testing at home should review the materials that come with the home test kit. If a test is taken within 3 months after possible exposure and the result is negative, the person should get tested again in another 3 months to be sure.

Why is early treatment so important?

There is no cure for HIV, but anti-retroviral treatments (ART) can be started while the person still feels healthy. If people with HIV remain in medical care and continue to take the medicines to keep low viral loads, they can live long, healthy lives.

Why is it important to use condoms?

A condom is a form of protective barrier that prevents the exchange of body fluids such as semen, vaginal fluids or rectal fluids. Latex is a type of material used for external (male) condoms and is effective in preventing HIV transmission. People who are allergic to latex can use condoms made of polyurethane or polyisoprene. Condoms made of lambskin do not protect against HIV because they have pores that are large enough for the virus to pass through. Another form of protection is the internal (female) condom, which is made of nitrile and is safe for people with latex allergies. The other form of protective barrier is the dental dam, which is also made of latex. Any type of condom cut into a flat sheet can serve as a dental dam.

What is PrEP? What is PEP?

Pre-exposure prophylaxis (PrEP) is a medicine taken daily to reduce the risk of HIV infection. If someone is at very high risk for HIV, PrEP might be right for them. PrEP should be considered if someone is HIV-negative and in an ongoing sexual relationship with an HIV-positive partner. PrEP also should be considered for people who are not in a mutually monogamous relationship

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

with a partner who recently tested HIV-negative, and if they are

- **A person with a penis who has had anal sex without a condom with another person with a penis, or who has been diagnosed with an STI in the past 6 months**
- **A person who does not regularly use condoms during sex with partners of unknown HIV status who are at very high risk of HIV infection (for example, people who use injection drugs or women who have bisexual male partners)**

Post-exposure prophylaxis (PEP) is an HIV medicine that can be taken after being potentially exposed to HIV to prevent becoming infected. If someone is HIV negative or doesn't know their HIV status and thinks they have recently been exposed to HIV during sex (for example, if a condom breaks), they should talk to their health care provider or an emergency room doctor about PEP right away (within 3 days). The sooner someone starts PEP, the better; every hour counts. If prescribed PEP, it is necessary to take it once or twice daily for 28 days.

What does U=U mean?

U=U means Undetectable = Untransmittable. If a person living with HIV has fewer than 200 copies of HIV per milliliter of blood, they are considered virally suppressed and the infection is undetectable on tests. Medications are used to suppress the virus so it becomes undetectable. People with undetectable viral loads cannot transmit the virus sexually to their partners.

Will everyone with HIV get sick eventually?

While complications from HIV infection are possible, current treatments and medications are giving people with HIV a positive prognosis and near-normal lifespan. HIV is now considered a chronic disease. If people with HIV remain in medical care and are able to continue to take the medications to keep low viral loads, they can live long, healthy lives. Patients living with HIV would then be vulnerable to the same health conditions that affect all people as they age.

5. **Summarize by saying,**

Now you know the basics about HIV infection. These are the facts that can help you make proud choices so you can reach your goals and dreams.

ACTIVITY B

THE SUBJECT IS HIV VIDEO AND DISCUSSION*

PREPARING FOR THE ACTIVITY

RATIONALE

Reinforcing information via a motivating video increases the possibility of reaching more teens who learn quickly through music videos and other television programs.

MATERIALS

- Monitor and video player, or internet access if using alternative videos
- Video: *The Subject Is HIV*, or alternative videos

PREPARATION

- Review the information about HIV in Appendix B.

TIME

25 minutes

(*Note:* Allow more time for discussion of the video, if possible, to help participants personalize the information and to answer any questions they may have.)

PROCEDURE

FACILITATOR'S NOTE

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. A list of alternative videos and discussion questions can be found at www.etr.org/ebi/alternative-videos.

1. Introduce the video by saying,

> This video you are going to see will discuss HIV/AIDS, what it is, how you can get it, and how to prevent infection. Afterward, we will talk about the video. Pay close attention to messages about how people can and cannot become infected with HIV, about injection drug use and about condom use.

2. Show the video, which is 18 minutes long.

3. At the end of the video, ask the participants to brainstorm answers to the following questions:

> What did they mean when they said "you can't get HIV from things you share?"

Answer:

» You can't get HIV from casual contact (e.g., combs, toilet seats, telephones, eating after someone).

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE In any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

What was the message about condoms in the video?

Answer:

» Use condoms every time you have anal, oral or vaginal sex.

What was the message about needle sharing?

Answer:

» Do not share needles or works.

What were the messages discussed between the young people in the library?

Answers:

» Don't have sex before you are ready.

» Don't let anyone pressure you to have sex.

» If you have sex, you must use a latex (or polyurethane/polyisoprene) condom.

What were the messages discussed between the students in biology class?

Answer:

» It's important to talk with your partner about using protection.

» If a person respects themselves and their partner, they will use a condom.

» Not having sex is a good way to avoid pregnancy, HIV and other STIs.

4. **Summarize this activity by saying,**

You did a great job answering those questions and remembering the important messages in the video(s).

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

HIV infection can happen to anyone who engages in risky behaviors. The choice is yours. I want you to make proud and responsible choices, so if you choose to have sex, choose to use protection.

FACILITATOR'S NOTE

Some statistics have changed since the video was produced. In 2018, youth ages 13 to 24 accounted for an estimated 21% of new HIV infections in the United States. The most recent data on young people and HIV can be found at: www.cdc.gov/hiv/group/age/youth/index.html

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY C

TRUE OR FALSE: HIV

PREPARING FOR THE ACTIVITY

RATIONALE

Distinguishing facts from falsehoods about HIV provides an opportunity for learning the correct information about HIV/AIDS.

MATERIALS

- Markers
- Chart paper (for keeping score)
- Masking tape
- *True or False: HIV Statements* (included in module)
- *HIV/AIDS Frame* poster

TIME

10 minutes

PROCEDURE

1. This activity reviews facts about HIV/AIDS. Refer to the *HIV/AIDS Frame* poster throughout the activity to help participants understand the answers.

2. Introduce the *True or False* activity by saying,

> The activity we are about to do will show just how much you know about HIV and how to protect yourself.

3. Put the words "True" and "False" on the board or a sheet of chart paper.

4. Explain the activity,

> I am going to divide you into two teams. I will then read each team a statement and ask you whether it is true or false and why. If your team answers correctly, you will get two points. If your team can correctly explain why it's true or false, then you get two more points. If your team answers incorrectly, then the other team has a chance to steal the question and get two points for correctly explaining why it's true or false.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

5. **Divide the group into two teams.**

6. **Go around to each team one at a time and read a statement from the *True or False: HIV Statements*.**

7. **Ask the first team to identify it as true or false and to state *WHY*.**

8. **Ask the second team if they agree. (If there is a disagreement, teach the right answer and explain why.)**

9. **If the second team agrees, but the answer is wrong, teach the right answer and explain why.**

10. **If the second team agrees and the answer is right, give the team the correct number of points.**

11. **Read the next statement to the second team.**

12. **The game is over when the statements are completed or time is up, whichever comes first.**

13. **Summarize by saying,**

> **When you believe in things that just aren't true, especially about HIV, it can cause you to make unhealthy choices. Knowing the facts can make all the difference.**
>
> **Understanding that HIV can affect anyone helps people understand that they need to always protect themselves.**
>
> **You can share this knowledge with your friends, family and partners. Your knowledge will help you protect yourself and reduce your risk of HIV.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

TRUE OR FALSE: HIV STATEMENTS

[Do *NOT* change the order of the statements]

1. **Having sex with someone who uses injection drugs is a way a person can get HIV.**
   TRUE
2. **Having unprotected anal sex increases your chances of getting HIV.**
   TRUE
3. **You can tell by looking at people whether they have HIV.**
   FALSE
4. **HIV can be transmitted in blood, semen, vaginal fluids, and rectal fluids.**
   TRUE
5. **Having unprotected sex with someone who is living with HIV is one way of getting HIV.**
   TRUE
6. **If a person who is pregnant has HIV, there is a chance the baby can get it.**
   TRUE
7. **You have a bigger chance of getting HIV if you have sex with many people.**
   TRUE
8. **You can get HIV from using someone else's comb or hairbrush.**
   FALSE (NO CONTACT WITH BODY FLUIDS)
9. **Using protection during sex reduces the chance of getting a sexually transmitted infection, including HIV.**
   TRUE
10. **You can get HIV by sharing a needle with a drug user.**
    TRUE
11. **If you hug someone with HIV you can get it.**
    FALSE (NO CONTACT WITH BODY FLUIDS)
12. **Having an untreated STI can increase your chances of getting HIV.**
    TRUE
13. **AIDS is the stage of HIV in which your body cannot fight off diseases.**
    TRUE
14. **Having AIDS makes you more likely to get other diseases.**
    TRUE
15. **AIDS can be cured.**
    FALSE
16. **AIDS is caused by a virus.**
    TRUE (CALLED HIV)
17. **Anyone can get HIV.**
    TRUE (IF YOU PARTICIPATE IN RISKY SEXUAL BEHAVIOR OR SHARE NEEDLES)
18. **You can avoid getting HIV by exercising regularly.**
    FALSE
19. **You can take certain medications to reduce your risk of HIV.**
    TRUE
20. **Early treatment can help people with HIV stay healthy.**
    TRUE

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY D

HIV RISK CONTINUUM

PREPARING FOR THE ACTIVITY

RATIONALE

Actively identifying the HIV risk posed by different sexual and non-sexual behaviors helps participants internalize the information and facilitates learning.

MATERIALS

- *Risk Continuum* signs
- *Risk Behavior* cards
- Masking tape

TIME

15 minutes

PROCEDURE

1. Tape the *Risk Continuum* signs on the wall or blackboard like the diagram below.

No Risk	Some Risk	High Risk
Green Light	Yellow Light	Red Light
(Safe)	(Proceed with caution)	(Unsafe)

2. Divide the group into pairs.

3. Explain the following information.

In this activity, you will be given cards containing behaviors. You will have to place each card under the heading that you feel identifies the level of risk for HIV infection the behavior represents.

High Risk/Red-Light Behaviors involve contact with blood, semen, vaginal fluids or rectal fluids and can transmit HIV.

Some Risk/Yellow-Light Behaviors involve a barrier such as a condom or dental dam (latex sheath or cover), but they are activities during which exchange of blood, semen, vaginal fluids or rectal fluids might create some risk of transmitting HIV.

No Risk/Green-Light Behaviors involve no exchange of blood, semen, vaginal fluids or rectal fluids and thus pose no risk of transmitting HIV.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

4. **Shuffle the *Risk Behavior* cards and distribute them as evenly as possible among the pairs.**

5. **Explain that "sex" in these questions means oral, anal and/or vaginal intercourse.**

6. **Ask each pair of participants to read one of their *Risk Behavior* cards and decide under which risk level category it should be placed.**

7. **After each answer, have participants explain why they think the behavior belongs under that particular category. Ask if other group members agree. Use this opportunity to clarify misinformation.**

8. **Once there is agreement about where the *Risk Behavior* card should be placed, ask participants to go tape the card under the correct category.**

FACILITATOR'S NOTE

***Risk Behavior* cards may be placed between categories because High, Some and No Risk represent a continuum and some behaviors do not fall solely within any one category.**

9. **Summarize as follows:**

> **Look at all the behaviors in the green light category. Notice all the things you can do to enjoy intimacy with your partner without putting yourself at risk for HIV. To protect yourself from HIV infection, it is important to know which behaviors are safe and which are risky. You can use the information you have been learning in this program to make proud choices that reduce your risk for HIV infection and help you reach your goals and dreams. Remember, it's not who you are but what you do that puts you at risk for HIV and other STIs. So be proud and responsible and always use latex (or polyurethane/polyisoprene) condoms and/or dental dams if you have any kind of sexual intercourse—oral, anal or vaginal.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

RISK BEHAVIORS[1]

(*Note:* This guide reflects risk levels for HIV transmission only. There are some STIs [herpes, syphilis, HPV] that can be passed through skin-to-skin contact or genital touching.)

Vaginal sex without a condom ---------- Red Light

Kissing ---------- Green Light

Having protected sex with a person who is having sex with other people ---------- Yellow Light

Romantic conversation ---------- Green Light

Oral stimulation of the penis without a condom ---------- Yellow Light

Sharing eating utensils with someone who is living with HIV ---------- Green Light

Sharing needles and syringes ---------- Red Light

Anal sex with a condom and water-based lubricant[2] ---------- Yellow Light

Self-masturbation ---------- Green Light

Mutual masturbation ---------- Green Light

Practicing abstinence ---------- Green Light

Vaginal sex with a condom ---------- Yellow Light

Massage ---------- Green Light

Having sex with multiple partners without using a condom ---------- Red Light

Oral stimulation of the vulva (female genitals) with a dental dam (latex barrier) ---------- Green/Yellow Light

Anal sex without a condom[2] ---------- Red Light

Having protected sex with multiple partners ---------- Yellow Light

Having sex without using a condom with a person who injects drugs ---- Red Light

Sexual fantasy ---------- Green Light

Touching someone who is living with HIV ---------- Green Light

Flirting ---------- Green Light

Body rubbing/grinding (with clothes on/no exchange of body fluids) ------- Green Light

Hugging ---------- Green Light

Having sex with only one partner (monogamous) -------- Green/Yellow/Red Light

(Green if both have never had sex before. If one or both have had other partners, Yellow if they use condoms; Red if they don't use condoms.)

Note: Anal sex is a higher risk activity for HIV specifically due to the possibility of rectal tearing and bleeding. When used correctly and consistently, condoms are highly effective in preventing HIV. If people are going to engage in anal sex, using a condom and water- or silicone-based lubrication can reduce their risk.[2]

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

FACILITATOR'S NOTE

Other HIV prevention strategies include PrEP 2-1-1 and TasP.

- PrEP 2-1-1 dosing strategy has been shown to be 86% effective at preventing HIV transmission during anal sex (though less effective during vaginal sex). The PrEP 2-1-1 strategy involves taking 2 pills between 2 and 24 hours before sex and another pill within 24 hours after the first and the final pill 24 hours after that.[3]
- TasP or "Treatment as Prevention" means that people living with HIV who get treatment are less likely to transmit the infection. Reducing the amount of the virus in the body through treatment helps prevent transmission to others. An undetectable viral load means the virus is untransmittable (or U=U).[4]

MODULE 3

ATTITUDES ABOUT SEX, HIV AND CONDOM USE

GOALS

The goals of this module are to:

- Increase participants' perceived vulnerability to HIV.
- Confront stereotypes about who becomes infected with HIV and learn more about how people can and cannot become infected.
- Reinforce knowledge about HIV and AIDS.
- Weaken negative beliefs and attitudes that foster risky sexual behaviors.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- Identify their attitudes toward risky sexual behavior.
- Problem solve for risky sexual behavior situations.
- Recall correct information about HIV/AIDS.
- Advocate and give advice regarding safer sex strategies.

MODULE PREVIEW

The third module: (1) informs participants about the transmission and prevention of HIV; and (2) helps participants advocate and give advice regarding HIV/AIDS and safer sex strategies.

STRATEGIES/METHODS

- Video Viewing
- Group Discussion
- Problem-Solving Exercises

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- *The Hard Way* character cards
- *Calling Koko Caller* worksheets in the student workbooks
- Video: *The Hard Way* (or alternative videos*)

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Chart paper
- Pre-labeled chart paper:
  - » *Kenrick, Miguel, Renee, Mom, Dad* and *Koko*
- Markers
- Masking tape
- Pencils
- Monitor and video player, or internet access if using alternative videos

PREPARATION NEEDED

1. Label all of the charts as listed under Materials.
2. Hang the pre-labeled charts in the order they will be used. Fold and tape the charts so the titles remain covered by the bottom half of the sheet until you use them.
3. Set up the video(s) to be ready to play.
4. Review the caller scripts in Activity B and choose three that will be most relevant for your group.

INSTRUCTIONAL TIME: 60 minutes

(*Note:* Facilitators may wish to extend the time to allow more thorough discussion of the video.)

ACTIVITY	MINUTES NEEDED
A. *The Hard Way* Video and Discussion*	**40**
B. Calling Koko	**20**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.

ACTIVITY A

THE HARD WAY VIDEO AND DISCUSSION*

PREPARING FOR THE ACTIVITY

RATIONALE

Reinforcing information about HIV, AIDS, risk levels and condom use through video presentations can promote further group discussion and enhance learning.

MATERIALS

- Monitor and video player, or internet access if using alternative videos
- Video: *The Hard Way*, or alternative videos
- Pre-labeled chart paper:
  - *Kenrick, Miguel, Renee, Mom, Dad* and *Koko*
- Masking tape
- Markers
- *The Hard Way* character cards (one card per participant)

TIME

40 minutes

(*Note:* Allow more time for discussion of the video, if possible.)

PROCEDURE

1. Introduce the film.

> Sexually active young people are at risk for HIV infection. The video you are going to see is about young people. This video discusses what AIDS is, the ways people get HIV and the ways to prevent infection.

2. If you haven't done so already, write the names of the characters on chart paper (Kenrick, Miguel, Renee, Mom, Dad and Koko).

3. Divide the group into 6 teams. Hand out a character card to each team. Explain the activity.

> The cards you have just received have the name of one of the main characters in the video. While you watch the video, pay close attention to the person on your card. Watch what this person says and how this person thinks and acts. Also, notice anything that changes the person's thinking during the course of the video.

4. Start the video, which is 18 minutes long.

5. When the video has ended, plan to spend 10–12 minutes discussing the various characters. Pace yourself. Plan to spend about 2 minutes on each character.

* A list of alternative videos and discussion questions can be found at www.etr.org/ebi/alternative-videos.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

6. **Begin the discussion by saying,**

> Let's talk about the characters in this video. I would like the group with Kenrick's card to go first.
>
> How would you describe Kenrick?
>
> What behaviors placed Kenrick at risk for HIV? *(Be sure the issue of number of partners gets addressed.)*
>
> Now let's talk about Miguel.
>
> Those of you with Miguel's card, what behaviors placed him at risk? *(Be sure number of partners gets addressed.)*
>
> Why didn't Miguel use condoms?
>
> Now let's talk about Miguel's partner, Renee. Notice the video refers to the use of birth control pills as "protection." While pills may protect against a pregnancy, they provide no protections against HIV and other STIs.
>
> What form of protection does Renee choose to use?
>
> Those of you with Renee's card, why do you think Renee chose to use birth control pills instead of condoms as her form of protection?
>
> What could Renee and Miguel say to each other about their sexual health and desires to protect themselves from unintended pregnancy or STIs?
>
> Does this make sense? Do you think that using the pill is OK if you are having sex with only one person? Why or why not?
>
> Those of you with the Dad card, what do you think about the way the dad talked to Kenrick?
>
> Those of you with the Mom card, what do you think about the conversation between Kenrick and his mom?
>
> How is Kenrick's conversation with his dad different from the one with his mom?
>
> What adults have ever talked to you about condoms or safer sex? How do your parents, guardians or other caring adults deal with the issue?
>
> Where would you turn for support and advice about relationships, sex and using protection?

7. **Spend the next 10 minutes discussing Koko's message, HIV testing and relationships. Begin the discussion by saying,**

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

Now let's talk about Koko. What was her message in the video?

What do you think it would be like to get tested?

What would someone gain by getting tested? (What would be the benefits of getting tested?)

Now let's discuss the types of relationships in this film. Kenrick had multiple partners whereas Miguel had a steady girlfriend. How do you negotiate condom use when

- You have more than one partner?
- You have a steady partner?
- You have a new partner?

Which one—with more than one partner, a steady partner or a new partner—is easier or harder, and why?

Now let's talk about friendships and conversations people have with their friends about being safer and using condoms. Do you think that Kenrick and Miguel had talked about using condoms enough? What else could they have said to each other? What would you say to your friends? What would you want your friends to say to you?

8. Summarize the activity by saying,

The characters in this video had to make decisions about whether to have sexual intercourse and whether to use condoms to protect themselves. What is the most important message you're taking away from the video and our discussion? (Listen for these messages and reinforce if they are not shared: getting tested, talking about sexual health and protection, and using protection if having sex can help reduce the risk of HIV transmission.)

As you make these decisions in your life, remember that abstinence is the 100 percent surest way to avoid an unintended pregnancy and sexual transmission of HIV and other STIs. If you choose to have sex, it's important to use condoms correctly and consistently every time. If you've had unprotected sexual intercourse in the past, you can get tested and then use protection correctly in the future. It's the proud and responsible thing to do!

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY B

CALLING KOKO

PREPARING FOR THE ACTIVITY

RATIONALE

Practicing solving HIV-related problems builds self-efficacy and the ability to safely resolve risky situations and behaviors.

MATERIALS

- *Calling Koko Caller* 1–6 worksheets
- Pencils

TIME

20 minutes

PROCEDURE

FACILITATOR'S NOTE

You may want to choose the caller scripts to use with your group. You have only 20 minutes, so you want to make sure you have enough time to read and discuss each call that you assign to participants.

If your participants resist getting into pairs, do the activity in the large group. Read the first caller script and ask group members to give ideas for the kind of advice Koko should give the caller. Then choose someone to play the role of Koko giving the caller advice. You play the role of the caller. Sit with your chairs back to back for the roleplay. Continue with the other caller scripts you've chosen.

1. Introduce this activity by saying,

> Based on what you have learned so far, you will give advice to someone who has questions or concerns about HIV, AIDS or condoms. In this activity, you will take the role of Koko, the expert on HIV, AIDS and condoms, who has an HIV Information Hotline for teenagers called *Calling Koko*. You will provide the solution to the concerns of one of these callers.

2. Divide the participants into pairs or small groups.

3. Have participants turn to the *Calling Koko* worksheets in their workbooks. Assign a different *Calling Koko Caller* to each pair or group. (Multiple groups will be working on the same caller script.)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

4. **Explain the following:**

> You will discuss, decide on and then write down the advice you would give to the caller. At the end of this activity, you will share the advice with the rest of us. Your final decision should be one that your team can agree on. Remind your callers that they can make proud and responsible choices.

5. **Give the pairs 5 minutes to discuss and write their advice.**

6. **Have one pair for each caller give their report. One person should read the part of the caller, and the other person should give Koko's advice using the Main Points to Cover.**

7. **Using the following sample responses, discuss any points that participants do not come up with themselves.**

FACILITATOR'S NOTE

Sample responses are provided. Participants' answers do not have to match the sample responses word for word to be considered correct. However, in the large-group discussion, it is important to make sure that the points in each box get discussed. You may want to read the sample responses as a review before going on to the next caller.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MAIN POINTS TO COVER

The surest protection is abstinence.

If you choose to have sex, you must use a latex condom.

PrEP and PEP can reduce the risk of HIV transmission.

Don't share needles or works.

CALLER 1

Koko,

I've heard that young people are at risk for HIV and the number of HIV cases among young people is growing. I don't want to take any chances of getting HIV. What's the surest way I can protect myself?

– Charlie

Sample Response to Caller 1

Every time you engage in a behavior that involves an exchange of body fluids you take a chance of getting HIV. The surest way *NOT* to get HIV (the virus that causes AIDS) is to practice abstinence—choosing not to have sex. If you do decide to have vaginal or anal sex, the best way to reduce your risk of HIV is to use condoms. That includes external or male condoms made of latex, polyurethane or polyisoprene; or female or internal condoms. PrEP and PEP are medications that you can take to reduce your risk of HIV infection. PrEP is a pill you take every day to prevent HIV. PrEP may be a great option for someone who is in a relationship with someone living with HIV or for someone who is at high risk for HIV. PEP is a pill you can take for 28 days after having sex if you think you may have been exposed to HIV. And don't share needles of any kind with anyone for any reason (whether it's for drug use, tattoos or ear piercing). That's the proud and responsible thing to do.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MAIN POINTS TO COVER

Commitment in a relationship is not always an effective form of protection.

Safer sex will reduce your risks of pregnancy, HIV and other STIs.

Talk to your partner about condoms.

Use latex condoms every time you have sex.

CALLER 2

Dear Koko,

My girlfriend and I have been going out for a year. We really love each other, and both want to have sex. I trust her, but I'm concerned about HIV. My girlfriend and I are 14 years old, and neither one of us has tattoos, and we don't use drugs. We've been thinking about having sex, but only with each other. Do we have to worry about HIV?

– Raymond

Sample Response to Caller 2

If you and your girlfriend have never had vaginal or anal sex with anyone else, and never used injection drugs or shared needles of any kind, the chances are that neither of you has HIV.

However, if you and your girlfriend start having sex, you should always use protection even if you are only having sex with each other. Deciding to have sex with someone is a big decision and it involves thinking and talking to your partner about using condoms. Using condoms reduces your risk of unintended pregnancy or getting an STI, including HIV.

Talk it over with your partner. You should both get tested for HIV and other STIs and agree to use protection every time you have sex. By protection, I mean external or male condoms made of latex, polyurethane or polyisoprene; internal or female condoms; or dental dams for oral sex.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MAIN POINTS TO COVER

Get tested for HIV now, and again in 6 months.

If the test is positive, seek medical help immediately.

Avoid future risk of infection by using protection every time you have vaginal, oral or anal sex.

CALLER 3

Hi Koko,

Five months ago, I had sex with someone for the first time. We didn't use condoms. I didn't really enjoy it, and he never even called me again. Now I have a new boyfriend and he wants me to have sex, too. Is it possible that I might have been exposed to HIV when I did it before? Now, I'm anxious that I might be infected with HIV. What do I tell my boyfriend? What should I do?

– Alex

Sample Response to Caller 3

Yes, it is possible that you have been exposed to HIV. There is no way of knowing for sure without being tested. Test kits are available over the counter at most drug stores. You can also go to a local HIV testing site such as a public health clinic, community health center or your doctor. It may take 2 to 6 weeks after exposure before HIV can be detected in a person's body. Make an appointment to get tested and use condoms until you get the test results.

It sounds like your first time didn't go the way you had hoped it would. It's OK if you want to choose not to have sex right now. Abstinence is the surest way to protect yourself from HIV and other STI. If you do decide to have sex, be proud and responsible and talk to your boyfriend about protection. Tell him it is important that you use condoms if you have sex. Let him know that you're concerned about getting HIV, and what would happen if either of you got infected. If he cares about the relationship, he will understand that being abstinent or using condoms is the right thing to do.

I also want to make sure you feel supported. Please reach out to the wellness center or find a school club or group that supports and affirms you.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MAIN POINTS TO COVER

Oral sex can transmit STIs, including HIV.

Practicing safer sex can protect you against pregnancy, HIV and other STIs.

Other things can lead to intimacy and orgasm without risking getting pregnant, or infected with HIV or another STI.

CALLER 4

It's like this Koko,

I am fifteen years old, and my girlfriend and I have never had vaginal sex. We do other things, though, including oral sex. Before, we just wanted to make sure that she didn't get pregnant. We had never really thought about infections like HIV. But, now I hear that teens my age are getting sexually transmitted infections. Is oral sex safe? How do we protect ourselves from STDs?

– Carmello

Sample Response to Caller 4

Oral sex poses little to no risk of transmitting HIV. However, most STIs can be transmitted during oral sex. Untreated STIs can increase the risk of HIV transmission. This is why it is important to use protection for oral sex. For oral sex that involves putting the mouth to a vagina or an anus, use a dental dam. If you don't have a dental dam, you can cut a condom into a flat sheet. A penis should also be covered with a condom during oral sex.

From what you've told me, you already know there are other things that people can do for physical intimacy, or even sexual orgasm, that will not lead to pregnancy or transmission of infection. Using protection every time you have oral sex is the responsible thing to do. If you decide to have sexual intercourse, use an external (male) or internal (female) condom every time you have sex. And make sure you only use condoms that are made of latex, polyurethane, polyisoprene or nitrile.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MAIN POINTS TO COVER

You can't tell if a person has HIV by looking.

Look for a relationship, *not* a sexual partner.

If you decide to have sex, use a latex condom every time.

CALLER 5

What's up, Koko,

I recently found out that a friend of mine is HIV positive and that she's had the virus for years. She's smart, fun to be around, and has only had sex with two guys her whole life. Now I'm afraid to be with anyone because if someone like her can get HIV, how can I know who's safe and who isn't? If she has HIV, then anyone could! I'm scared to date! What should I do?

– Dana

Sample Response to Caller 5

I can understand your concerns about having sex. You can't look at people and tell whether or not they have an STI, such as HIV. Take time to get to know a person as a friend before you decide to have sex.

You can always decide to wait to have sex. If you decided to have sex, your best combination strategy is safer sex and time. Take the time to really get to know your potential partner. Talk to them about your concerns and how you plan to protect yourself. When you decide to have sex, be sure to use protection every time. By protection, I mean external or male condoms made of latex, polyurethane, or polyisoprene; internal or female condoms; or dental dams.

I am assuming your friend is getting treatment for HIV. Antiretroviral therapy, or ART, can help your friend live a long, healthy life. If she has a steady sexual partner who is HIV negative, ART could help reduce the chances of her transmitting HIV to her partner. Her partner can get on pre-exposure prophylaxis or PrEP treatment, which will reduce the risk of getting the virus.

People who think they may have been exposed to HIV should get treatment immediately. Post-exposure prophylaxis or PEP is available at emergency or urgent care centers, doctor's offices and HIV clinics. PEP must be taken within 72 hours from the time of exposure for it to be effective in preventing HIV infection.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MAIN POINTS TO COVER

People cannot give consent when they are drunk or high.

Get tested for pregnancy, STIs and HIV.

Resist peer pressure to drink alcohol or do drugs. Alcohol and drugs affect your decision making.

Use protection if you decide to have sex.

CALLER 6

Koko,

I'm a senior this year and plan to go to college, but something happened the other night that I want to ask about. I went to a party. I had a couple of beers and then somebody handed me a joint. Everyone else was smoking too. It was powerful stuff! I had never used drugs before. The next thing I knew I was in the bedroom with this basketball player I kind of had a thing for. We ended up having sex, and I don't even know if we used protection, because I was so high that I forgot to ask. I heard he does this type of thing a lot. Now he barely even speaks to me. I'm afraid that I could have gotten pregnant or gotten infected with an STI like HIV. What should I do?

– Rihanna

Sample Response to Caller 6

This sounds like a tough situation. When people are drunk or high, they are more likely to have sex without using condoms, which increases their risk for STIs. Everybody has the right to say when they want or don't want to engage in sexual behaviors and to insist on using protection. When people are drunk or high they can't fully give consent to sexual activity. Please remember that someone doing something sexual to you while you are drunk or high means that technically you were not able to give consent, and so this may be a situation of sexual assault. Do not blame yourself. There are people in this world who seek out those who are too high or drunk to consent. If this person is known for having sex with people who are too drunk or high to consent, he likely isn't someone who has your best interests in mind. If you ever find yourself in a position where you were pushed or forced to do something you didn't really want to do, it's important to talk to a parent, counselor or other trusted adult.

CALLER 6

Sample Response to Caller 6 *(continued)*

Go right away to your local reproductive health clinic and get emergency contraception (EC) to prevent a possible pregnancy. They can also test you for STIs. Make sure you go to the clinic right away. You have up to 5 days after unprotected sex to use EC, but the sooner, the better. EC is also available over the counter at most drug stores.

If you may have been exposed to HIV, immediately contact a doctor about post-exposure prophylaxis (PEP). These medications may be able to prevent the virus from infecting the body if taken immediately after exposure (within 72 hours).

Don't blame yourself. You deserve to have sexual partners who you feel comfortable communicating with, who respect what you want and don't want, and who will share the responsibility for using protection.

MODULE 4

STRATEGIES FOR PREVENTING HIV INFECTION: STOP, THINK AND ACT

GOALS

The goals of this module are to:

- Introduce participants to a problem-solving method to help think through and cope with sexual choices.
- Review and reinforce the information learned thus far in the program.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- State and explain the three steps of the problem-solving model.
- State how using problem-solving steps can help avoid risky situations.
- Explain how making their own decisions makes it more likely that they will achieve their goals and dreams.
- Provide correct answers to review questions on HIV and AIDS.

MODULE PREVIEW

The fourth module: (1) encourages participants to think about their choices; (2) helps them understand the importance of protecting themselves against HIV; (3) reinforces information about risky behavior; and (4) provides them with a problem-solving strategy as a way to reduce their risk of HIV.

STRATEGIES/METHODS

- Problem-Solving Strategies
- Case Study Worksheet
- Video Viewing
- Game

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- *STOP, THINK and ACT* poster
- *Sean and Morgan Case Study* worksheet in the student workbook
- HIV/AIDS Game Questions (included in module)
- Video: *Nicole's Choice* (or alternative videos*)

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Chart paper
- Masking tape
- Pencils
- Markers
- Monitor and video player, or internet access if using alternative videos

PREPARATION NEEDED

1. Set up the video(s) to be ready to play.
2. Review the information about sexually transmitted infections in Appendix B.

INSTRUCTIONAL TIME: 60 minutes

(*Note:* Facilitators may wish to extend the time to allow more discussion of STOP, THINK and ACT and the video.)

ACTIVITY	MINUTES NEEDED
A. STOP, THINK and ACT: Introduction to Problem Solving	**5**
B. Sean and Morgan Case Study: Problem Solving using STOP, THINK and ACT	**15**
C. *Nicole's Choice* Video and Discussion*	**25**
D. The HIV/AIDS Game	**15**

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.

ACTIVITY A

STOP, THINK AND ACT: INTRODUCTION TO PROBLEM SOLVING

PREPARING FOR THE ACTIVITY

RATIONALE

By learning a problem-solving model, participants will have a strategy they can rely on when faced with sexual decisions, rather than relying on emotions.

MATERIALS

- *STOP, THINK and ACT* poster
- Masking tape

TIME

5 minutes

PROCEDURE

FACILITATOR'S NOTE

This activity is intended as a brief overview of the STOP, THINK and ACT problem-solving approach. Keep it simple and quick.

1. Hang the *STOP, THINK and ACT* poster.

2. Introduce the activity by saying,

> We've been talking about making proud choices but it can be hard to do when you might be experiencing pressure and conflict.
>
> We are going to learn a problem-solving model that will help you think about making decisions under pressure.

3. Read the steps out loud to the group, pointing to the poster so the participants can read along. Begin with STOP.

> The first step is ***STOP***. Why might you need to ***STOP*** if you were being pressured sexually?

4. Let the participants provide a few answers.

Answers may include:

You may feel afraid, confused, angry or upset.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

5. Then say,

> ***STOPPING*** is important because it gives you a chance to take a deep breath, calm down and collect yourself.

6. Then move on to THINK.

> The second step is ***THINK***. What might you need to think about?

7. Allow participants to respond.

8. Then say,

> ***THINKING*** keeps you, not your emotions, in control of the situation. You don't want to overreact or underreact. Some of the things you want to think about include:
>
> - What is the problem?
> - What am I being pressured to do?
> - What am I feeling? What is the other person feeling?
> - What are my choices?
> - What do I want?
> - How can I stick to the decisions I've made for my health and well-being?
> - What alternatives can I suggest?
> - What are the possible consequences?
>
> The important thing here is to calm down and think things through a bit before acting.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

9. **Then move on to ACT.**

Once you are calm and you have thought things through a bit, the next step is to ***ACT*** on your decision. Evaluate the possible consequences and make the best choice. Try it out and see how well it works. If your solution does not work well enough, you can try another alternative, or ask for help.

Sometimes after taking an action, you realize it wasn't the best choice for you and you would do it differently the next time. That's fine. It's just important to reflect on what happened so you can learn from your experiences.

10. **Summarize by saying,**

Next we will practice the STOP, THINK and ACT problem-solving steps.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY B

SEAN AND MORGAN CASE STUDY: PROBLEM SOLVING USING STOP, THINK AND ACT

PREPARING FOR THE ACTIVITY

RATIONALE

Applying the problem-solving steps to a situation will enhance the participants' ability to use them.

MATERIALS

- *STOP, THINK and ACT* poster
- *Sean and Morgan Case Study* handout
- Pencils

TIME

15 minutes

PROCEDURE

FACILITATOR'S NOTE

The case study has been written to be gender neutral. Sean and Morgan might be a boy and a girl, a girl and a boy, two boys, two girls, or transgender youth.

1. Begin this activity by saying,

> No one should pressure someone else for sex. This is especially true of those who are less able to speak for themselves or assert themselves because of a disability. When we are being pressured sexually, we often feel confused or upset and may not think clearly about how to deal with the situation. STOP, THINK and ACT may be a way to help you practice safer sex. So we are going to practice using STOP, THINK and ACT. You may notice that we are using gender neutral names in the case study. The skills we are learning here can be applied by anyone of any gender or sexual orientation. Sean and Morgan may be transgender youth. No matter the gender, gender expression, gender identity or sexual orientation of people in a sexual relationship, there has to be consent and that consent has to be reaffirmed throughout the sexual intimacy and intercourse.

2. Divide the participants into pairs.

3. Have participants turn to the *Sean and Morgan Case Study* worksheet their workbooks.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

4. **Ask for a volunteer to read the case study and instructions to the group. Encourage the group to read along. If there is no good reader, you should read.**

SEAN AND MORGAN CASE STUDY

Sean is 3 years younger than Morgan. They've been going out for a while. Sean really likes being with someone who is older. Morgan is a lot of fun and Sean feels more mature and popular when they're together.

Sean is very smart and plans to become a psychologist. Sean has had a tough childhood and very much wants to be independent and successful as an adult. Sean works hard and has a plan for the future.

Morgan really likes Sean. Lately, Morgan's friends have been talking a lot about sex and keep asking if Morgan and Sean have "done it" yet. Morgan figures it's time and begins to pressure Sean about having sex.

When Morgan asks Sean about having sex, Sean feels unsure about what to say. Sean has actually thought a lot about this and doesn't feel ready for sex yet. Yes, Morgan is sexy and Sean feels turned on. But Sean wants to wait until after high school and maybe even college to have sex. Sean does not want to do anything that might interfere with future goals. Sean wants to be able to help young people deal with issues and problems. Sean is concerned about STIs and doesn't want to take any risks.

However, Sean really wants to keep the relationship with Morgan. Sean would be very hurt if Morgan turned to someone else for sex.

Today Sean and Morgan are hanging out at Morgan's house. Morgan's grandparents are out for a few hours. They're sitting on the couch, kissing and messing around. They're both breathing hard and things are getting hot and heavy. What can Sean do to avoid having sexual intercourse?

5. **Then say,**

I want you to work in pairs, and use the STOP, THINK and ACT steps to find a solution to the situation on your worksheet.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

6. Give the pairs about 7 minutes to complete the worksheets. Encourage both members of the pair to help answer the questions. One person can record the answers on the sheet. Circulate while pairs are working to provide support as needed.

7. After 8 minutes, even if most of the pairs have not finished, ask them to stop and begin discussing the case study. Ask one of the pairs to give their responses to the first section of the worksheet—the STOP section. They are reporting on what Sean and Morgan can do to stop and stay calm.

   When this pair has reported their answers, ask the other groups if they have any responses that are different or if they have anything to add.

   Ask a different pair to report on the second section of the worksheet—the THINK section. They will define the problem, explain what Sean wants and alternatives that Sean can suggest.

   When this pair has given their responses, ask the other groups to comment and offer any different ideas for this section.

   Finally, ask a different pair to report on the third section of the worksheet—the ACT section. They will discuss what Sean should do and how Sean should act to carry out that choice.

   When this pair has given their responses, ask the other groups to comment and offer any different ideas for this section.

8. Ask the group to consider this question:

   How does the age difference between Morgan and Sean affect their relationship? Do they have trust, respect, equality and open communication?

   Make the point that pressuring someone to have sex is not showing respect, and that the relationship is probably not equal. Morgan is 3 years older and is likely to be a lot more mature and experienced than Sean. Morgan probably has more power and influence in the relationship, which could put a lot of pressure on Sean. In healthy relationships, both partners are equal. One does not have more power than the other.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

9. **Summarize as follows,**

That's how STOP, THINK and ACT can be used to think through a problem.

You know that unprotected sexual intercourse can lead to pregnancy, HIV and other STIs, which can all make it harder to reach your goals. Using STOP, THINK and ACT can help you stay calm and think clearly so you can make the wise decision to always use protection if you have sexual intercourse.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY C

NICOLE'S CHOICE VIDEO AND DISCUSSION*

PREPARING FOR THE ACTIVITY

RATIONALE

By using a realistic scenario, this video helps participants understand the importance of protecting themselves against STI infection each time they engage in sexual intercourse.

MATERIALS

- Monitor and video player, or internet access if using alternative videos
- Video: *Nicole's Choice*, or alternative videos
- *STOP, THINK and ACT* poster

PREPARATION

- Review the information about STIs in Appendix B.

TIME

25 minutes

(*Note:* Allow more time for discussion of the video, if possible.)

PROCEDURE

1. Introduce the video by saying,

> Now we will watch a video called *Nicole's Choice*. Pay attention. I want you to look at it and think about its messages. I also want you to think about what you would do in Nicole's situation. Check to see if Nicole uses the STOP, THINK and ACT problem-solving steps.

2. Show the video *Nicole's Choice*, which is 15 minutes long.

3. At the end, ask the following:

> What were some of the messages in the video?

4. Allow participants to answer.

5. Refer to the poster *STOP, THINK and ACT*. Then ask,

> Did Nicole **STOP** and **THINK** when she was with Miguel? How would you have used STOP, THINK and ACT if you were Nicole?

* A list of alternative videos and discussion questions can be found at www.etr.org/ebi/alternative-videos.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

6. **After getting some answers from the group, ask,**

What messages about sexual partners did you receive from each person in the video?

- **Randy?**
- **Lynette?**
- **Nicole?**

Answers:

» You expose yourself not only to your partner, but also to all of your partner's partners.

» It is important for both individuals to get tested.

» It is important to use condoms every time you have sex.

7. **Then ask the following,**

How would you feel if you had to go to a clinic to be tested for an STI?

Can you get HIV the same way you get other STIs?

8. **Summarize as follows,**

Getting an STI may bring up a lot of emotions. Though young people ages 15-24 are diagnosed with half of all new STIs,* many STIs can be prevented by using protection or choosing not to have sex. Only you can decide to protect your future and your health. Use protection every time you have sex. And use the right kind of protection: external or male condoms made of latex, polyurethane or polyisoprene; internal or female condoms; or dental dams.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY D

THE HIV/AIDS GAME

PREPARING FOR THE ACTIVITY

RATIONALE

This activity is a way to review and reinforce the information about HIV transmission covered in this program. It also allows you to end the module with a fun, high-energy activity.

MATERIALS

- Chart paper
- Markers

TIME

15 minutes

PROCEDURE

1. Introduce the next activity by saying,

> We are going to play a game* that will review the information we've talked about regarding HIV and AIDS.

2. Divide the group into two teams.

3. Start by giving the rules:

> - Each team will get the chance to answer a question.
> - The team member responsible for answering the question will rotate so that each team member gets a turn.
> - The other team members can help, but the answer must be given within 10 seconds.
> - Only correct answers earn points. Correct answers are worth two or three points.
> - The team members answering the question can choose whether they want a two- or three-point question.
> - If the answer is incorrect or not given in time, I will give the correct answer, and the other team will get a bonus question (a one-point question).
> - If someone answers out of turn, the interrupter's team receives a bonus question. The other team then gets a chance to answer a bonus question.

* Adapted from "AIDS Basketball" from *AIDS: What Young Adults Should Know*, 2nd ed., by William L. Yarber. Adapted with permission from the Association for the Advancement of Health Education.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

4. **Keep score (or ask a participant to keep score) on the board or on chart paper.**

5. **Try to get through all the questions, but remember you have only 15 minutes. The game goes quickly and is stimulating.**

FACILITATOR'S NOTE

If no one is given a bonus question, use the bonus questions in the game for one point each. You may be able to create other situations that result in bonus question being awarded.

6. **Use the questions that follow for the game. Correct answers are provided. Correct answers for True and False questions are in parentheses.**

7. **At the end of the game, total the team scores and declare a winning team.**

8. **Summarize by saying,**

> **Wow! What a game! You all remembered a lot of information. Remember to use all of the things you know and the STOP, THINK and ACT strategy to make proud and responsible choices.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

HIV/AIDS QUESTIONS AND ANSWERS*

TWO-POINT QUESTIONS

1. **What does AIDS stand for?**
   - Acquired immunodeficiency syndrome

2. **What causes AIDS?**
   - HIV, the human immunodeficiency virus

3. **Which body system does HIV damage?**
   - Immune system

4. **What happens to a person with AIDS that usually does not happen to people with a healthy immune system?**
   - They get certain diseases called opportunistic infections.

5. **Name three of the body fluids through which HIV is transmitted?**
   - Semen, vaginal fluids, rectal fluids, blood and breast milk (any 3)

6. **What are the most common ways HIV is transmitted?**
   - Unprotected sexual contact and exchange of blood

7. **What drug-related behavior allows the exchange of blood?**
   - Sharing needles or works

8. **How do most children get infected with HIV?**
   - From their infected mothers during pregnancy, at birth, or through breastfeeding

9. **True or (False). HIV is easily passed through oral sex.**

10. **(True) or False. Anal sex without a condom increases your chances of getting HIV.**

11. **True or (False). There is now a cure for AIDS.**

12. **(True) or False. If you think you were exposed to HIV, you can get Post-Exposure Prophylaxis (PEP) within 72 hours to avoid getting the virus.**

* See Appendix B for additional information on HIV and sources.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

13. True or (False). You can catch HIV like you catch a cold, because HIV can be carried in the air.

THREE-POINT QUESTIONS

14. What are two ways of reducing your risk of HIV?

- Abstinence
- Practicing safer sex by using condoms or taking PrEP which reduces risk of HIV transmission but not other STIs
- Engaging in low-risk activities such as kissing
- Not sharing needles or works
- Getting tested regularly
- Talking with your partners about HIV and making sure they get tested too

15. What does U=U mean?

- U=U stands for Undetectable equals Untransmittable. That means that people with HIV who achieve and maintain an undetectable viral load—the amount of HIV in the blood—by taking antiretroviral therapy (ART) daily as prescribed cannot sexually transmit the virus to others. If there is an undetectable amount of HIV in their blood, the virus cannot be transmitted to others.

16. Name three ways HIV is passed.

- During unprotected vaginal or anal sex (sex without a condom)
- By sharing needles and syringes
- From an infected mother to the fetus or newborn child

17. Name two types of sexual practices in which HIV can be passed.

- Anal sex
- Vaginal sex

18. Name two high-risk behaviors.

- Unprotected anal, oral or vaginal sex
- Sharing of needles or works

19. (True) or False. Using water-based lube and condoms when you have vaginal or anal sex lowers the chance of getting HIV.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

20. (True) or False. People without any symptoms can have HIV and pass it to a sexual partner.

21. Name three sexual behaviors that do not involve any exposure to body fluids that can carry HIV. (Any 3)

- Hugging
- Massage
- Touching
- Masturbation
- Sexual fantasy
- Grinding
- Romantic talking
- Cuddling

BONUS QUESTIONS (ONE POINT)

22. Yes or No. Which of these can transmit HIV?

Tears	no
Sharing needles with someone who is HIV positive	yes
Touching someone who is living with HIV	no
Using the same fork as someone who is HIV positive	no
Using someone's comb	no
Being around someone with HIV	no

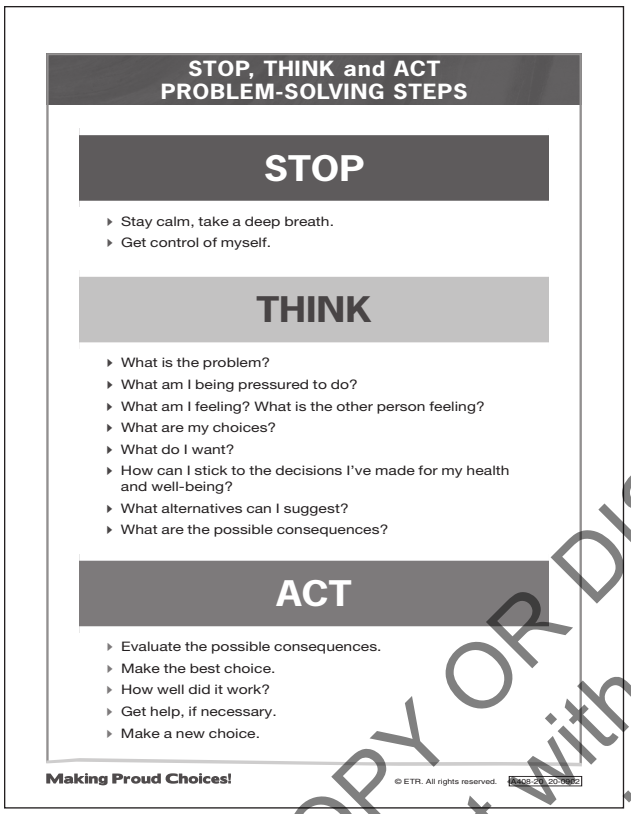
23. (True) or False. People can have HIV and give it to others even if they do not look or feel sick.

24. (True) or False. Limiting the number of sexual partners a person has is one way of reducing the risk of HIV.

25. True or (False). People infected with HIV through injecting drugs are not likely to pass the virus to sex partners unless the partner also injects drugs.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.



STOP, THINK and ACT
PROBLEM-SOLVING STEPS

STOP

- Stay calm, take a deep breath.
- Get control of myself.

THINK

- What is the problem?
- What am I being pressured to do?
- What am I feeling? What is the other person feeling?
- What are my choices?
- What do I want?
- How can I stick to the decisions I've made for my health and well-being?
- What alternatives can I suggest?
- What are the possible consequences?

ACT

- Evaluate the possible consequences.
- Make the best choice.
- How well did it work?
- Get help, if necessary.
- Make a new choice.

MODULE 5

POSSIBLE OUTCOMES OF UNPROTECTED SEX: STIs

GOALS

The goals of this module are to:

- Increase participants' knowledge of sexually transmitted infections.
- Help participants identify strategies for preventing STIs.
- Increase participants' perceived vulnerability to STIs.
- Clarify participants' attitudes and beliefs about STIs and condom use.
- Teach participants the steps for correct use of a condom.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- Identify the signs and symptoms of the most common STIs.
- Identify how STIs, including HIV, are transmitted, and how they can be prevented.
- Acknowledge their perceived risk for sexually transmitted infections.
- Demonstrate steps for correct use of a condom.
- Identify how condoms can prevent STIs, including HIV, and pregnancy.

MODULE PREVIEW:

The fifth module: (1) helps participants examine the signs and symptoms of the most common STIs; (2) illustrates how STIs can impact the lives of young people; and (3) informs participants about correct use of condoms, as a way to prevent STIs.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

STRATEGIES/METHODS

- Brainstorming
- Video Viewing
- Group Discussions
- Exercises
- Agree/Disagree
- Condom Demonstration

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- *STI* poster
- *Agree* and *Disagree* signs (1 set)
- *Steps for Using a Condom* poster
- Video: *The Subject Is STDs* (or alternative videos*)

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Pencils
- Markers
- Masking tape
- Condoms
- Water-based lubricant
- Condom Demonstrator(s)
- Paper towels
- Small paper bag
- Monitor and video player, or internet access if using alternative videos
- Pre-labeled chart paper:
  - » *How STIs Are Transmitted*
  - » *Reasons to Protect Against STIs*
  - » *Group Agreements* (from earlier session)
- Chart paper
- Index cards for the Transmission Game—pre-labeled with four distinct shapes, e.g., star, rectangle, circle, and triangle**

PREPARATION NEEDED

1. Label all of the charts as listed under Materials.
2. Hang the pre-labeled charts in the order they will be used. Fold and tape the charts so the titles remain covered by the bottom half of the sheet until you use them.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.

** You may change the index card codes to other things such as cities, plant names or animals. Avoid using codes that may imply judgment, such as a rating system. If you teach multiple class periods, change the code between classes so that youth in later periods do not have the same key.

3. Obtain penis models/condom demonstrators to use in the Condom Use Skills activity. If possible, get a model for each participant. You may be able to buy or borrow them from your local reproductive health clinic. Also check out the following sources: www.totalaccessgroup.com/wood_condom_demonstrator.html or www.etr.org/store/format/condom-kit.
4. Have the condom demonstrators, condoms, water-based lubricant and paper towels or wet wipes organized and ready to distribute.
5. Set up the video(s) to be ready to play.
6. Read the instructions for the Transmission Game and make sure you're clear about the process.
7. Label the index cards for the game. For a group of 6–8, one person will have a "star" card, one person will have a "triangle" card, one person will have a "rectangle" card and the rest will have "circle" cards. Increase the number of "triangle," "rectangle" and "circle" cards in this approximate ratio for larger groups.

INSTRUCTIONAL TIME: 60 minutes

(*Note:* Facilitators may wish to extend the time to include both the discussion and the video about STIs, and to provide more condom skills practice.)

ACTIVITY	MINUTES NEEDED
A. STI Facts	20
[A. (Alternate) *The Subject Is STDs* Video	20]
B. The Transmission Game	15
C. What I Think About HIV/STI and Safer Sex	10
D. Condom Use Skills	15

FACILITATOR'S NOTE

STD or STI? Some health educators prefer the term "STI" (sexually transmitted infection) over "STD" (sexually transmitted disease), whereas others use the two interchangeably. This intervention uses STI. It is important for everyone to understand that STIs (STDs) can present with or without symptoms.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY A

STI FACTS

PREPARING FOR THE ACTIVITY

RATIONALE

Providing information about STI transmission and symptoms gives participants the information they need to prevent the spread of STIs. It also provides a common ground for discussing attitudes and concerns about STIs and increases perceived vulnerability to infection as well as motivation to protect against infection. Seeing how STIs and HIV can impact the life of an individual helps motivate prevention planning.

MATERIALS

- *STI* poster
- Pre-labeled chart paper:
  - *How STIs Are Transmitted*
  - *Reasons to Protect Against STIs*
- Markers
- Masking tape

PREPARATION

- Review the information about STIs in Appendix B.

TIME

20 minutes

PROCEDURE

1. Begin this activity by displaying the *STI* poster. Use chart paper to cover the poster so only the letters "S T I" are revealed.

2. Then say,

> Today we are going to talk about STIs. First, I want you to tell me what the letters S, T and I stand for.

Answer:

» Sexually transmitted infection

Explain that they may have also heard the term *sexually transmitted disease* or STD.

3. Ask the group to brainstorm all of the STIs they know.

4. Then uncover the poster and read any STIs they did not mention.

- Chlamydia
- Gonorrhea
- Syphilis
- HPV (human papillomavirus)
- Herpes
- HIV
- Trichomoniasis
- Hepatitis B
- Hepatitis C

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE In any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

5. Then say,

> **STIs fall into three categories:**
>
> - **Bacterial (caused by bacteria)—**These STIs are curable. You can take medicine that kills the bacteria. They include chlamydia, gonorrhea and syphilis.
> - **Viral (caused by a virus)—**Most of these STIs are not curable. The symptoms can be treated, but the virus stays in the body. They include herpes, HIV, hepatitis B and HPV (human papillomavirus).
> - **Parasitical (caused by parasites)—**These STIs are curable. They include trichomoniasis and pubic lice.

6. Unfold the pre-labeled chart paper titled *How STIs Are Transmitted* and say to the group,

> **As you can see there are a lot of different STIs. How do you think people get STIs?**

7. List the answers on the chart paper as the group responds.

Be sure their answers include:

- » Vaginal intercourse (penis in vagina)
- » Oral sex (a person's mouth on another person's genitals)
- » Anal sex (penis in anus)
- » Mother to child (during pregnancy, at birth, or through breastfeeding)
- » Sharing needles
- » Skin-to-skin genital contact (herpes, syphilis, HPV)
- » *(Optional) For high school youth:* Sharing sex toys or other devices with partners without using a new condom each time the device is used by a different person

8. Next ask,

> **Who can get an STI?**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Answer:

» Anyone who has unprotected sexual intercourse (meaning without using condoms or dental dams).

9. **After participants have answered, say,**

That's right. Anyone who engages in unprotected sexual intercourse can get an STI. But teens and young adults are affected by STIs more than any other age group. The Centers for Disease Control and Prevention estimates that there are nearly 20 million new cases of STI each year, and that about half of these occur in young people ages 15 to 24.*

10. **Ask the group,**

What are some symptoms of STIs?

The list should include:

» Burning when urinating

» Sores, blisters, bumps, warts or pimples near the genitals or mouth

» Unusual discharge from penis or vagina

» Rash or itching in the genital area

» Frequent urination

» Abdominal pain

» **Often there are NO symptoms**

11. **Ask,**

How can you tell if someone has an STI?

Answers should include:

» **Often you cannot tell.**

» You may see sores, blisters, warts, bumps, a rash or pimples near the genital area.

* Centers for Disease Control and Prevention. 2017. Sexually transmitted diseases among adolescents and young adults. https://www.cdc.gov/std/life-stages-populations/adolescents-youngadults.htm. Accessed 06/2/2020.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

12. **Then say,**

> **In many cases, a person can have an STI and have no symptoms! This means that people may not even know they have an STI. It also means that even if you don't notice any sores, blisters, warts or other signs, a potential partner still may have an STI.**
>
> **Activities that do not include an exchange of body fluids have little or no chance of transmitting an STI. These include masturbating alone, petting, kissing, foreplay or dry humping. An exception is where skin-to-skin contact is involved with someone who has HPV, syphilis or herpes. In contrast, sexual activities that do include an exchange of body fluids increase the risk for STI transmission. These include vaginal, anal or oral sex.**

13. **Then ask,**

> **How can you protect yourself from getting an STI?**

Answers should include:

- Abstain from vaginal, oral and anal sex.
- Use a latex or polyurethane/polyisoprene condom every time you have vaginal, oral or anal sex.
- Do not use or share needles or works (including syringes, caps, cleaning water) for injecting drugs.
- There is a vaccine that can prevent hepatitis B.
- There is also a vaccine that protects people against most types of HPV that cause genital warts or lead to cervical cancer.
- Get tested regularly.
- Talk to your partners about STIs and encourage them to get tested too.

14. **Then say,**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

We know how STIs are transmitted. We know signs and symptoms that can indicate an STI infection. We know some STIs don't have symptoms. We know how to avoid getting an STI. But why would a person want to avoid getting an STI and what are the reasons they should get treatment right away if they do get an STI?

Let's brainstorm *Reasons to Protect Against STIs* by thinking of some of the long-term physical and emotional consequences of getting an STI.

15. **List the group's responses on the chart paper. Encourage all participants to respond.**

Answers should include:

- Increased risk of getting HIV
- Blindness (syphilis)
- Paralysis (syphilis, AIDS)
- Cervical cancer (HPV)
- Genital warts (HPV)
- Pelvic inflammatory disease (gonorrhea, chlamydia)
- Infertility (gonorrhea, chlamydia)
- Ectopic pregnancy (gonorrhea, chlamydia)
- Chronic pelvic pain (from PID)
- Liver disease (hepatitis B, hepatitis C)
- Child born with an STI
- Embarrassment
- Odor and discharge
- Impact on relationship
- Stigma

16. **Explain that many of these reasons to protect against STIs can be prevented by abstaining from vaginal, anal or oral sex, or by using protection such as condoms. STIs are common and many people will get one at some point in their lives. Getting tested regularly and treated, if required, can limit or prevent negative health outcomes. That is why it is important to get tested and treated as soon as possible. Explain that no one chooses to get an STI. Some people have gotten STIs from sex that was against their will. Getting tested and treated, if necessary, is the responsible thing to do. Summarize this activity by saying,**

There are 4 important facts about STIs I want to emphasize:

1. **Anyone can get an STI. Young people ages 15 to 24 make up half of all new STI cases.[1] You or a partner can have an STI and not know it. Many people with STIs have no symptoms.**

(continued)

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

(continued)

2. **Some untreated STIs increase the chance of HIV infection. They sometimes cause blisters or sores on or around the genitals which can become a point of entry for HIV during sex.[2]**
3. **Untreated STIs can have emotional and physical impacts. The impacts for people with vaginas are especially serious, and include things such as pelvic inflammatory disease, ectopic pregnancy, cervical cancer, infertility, chronic pelvic pain, and possible transmission of the STI to a fetus or baby.[3]**
4. **Some STIs can be cured. This means that, with testing and treatment, the person will no longer have the STI. Some STIs cannot be cured. This includes HIV. Incurable STIs can be managed with medications but the STI will remain in the body. It is important to get tested for STIs since often they have no symptoms. Then you can get the medications you need to prevent further complications like those listed on the *Reasons to Avoid STIs* sheet.[4]**

If you choose to have sexual intercourse, the proud and responsible thing to do is always use protection such as external condoms, internal condoms or dental dams every time you have vaginal, anal or oral sex. Make sure to use only protective barriers made of latex, polyurethane, polyisoprene or nitrile. Not having sex is the surest way to prevent an STI.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ALTERNATE ACTIVITY A

THE SUBJECT IS STD (VIDEO OPTION)*

PREPARING FOR THE ACTIVITY

RATIONALE

Providing information about STIs through a video gives participants the information they need to prevent the spread of STIs. It also provides a common ground for discussing attitudes and concerns about STIs and increases perceived vulnerability to infection as well as motivation to protect against infection. Seeing how STIs and HIV can impact the life of an individual helps motivate prevention planning.

MATERIALS

- Monitor and video player, or internet access if using alternative videos
- Video: *The Subject Is STDs,* or alternative videos

PREPARATION

- Review the information about STIs in Appendix B.

TIME

20 minutes

(*Note:* Allow more time for discussion of the video, if possible.)

PROCEDURE

1. Say,

> Today we are going to talk about STIs. First, I want you to tell me what the letters S, T and I stand for.

Answer:

» Sexually transmitted infection

Explain that they may have also heard the term *sexually transmitted disease* or STD.

2. Introduce the video by saying,

> We are going to learn more about STIs. In this video, you will see sexually active teenagers finding out the facts and dealing with issues of STIs.

3. Show the video, which is 17 minutes long.

4. When the video is finished, ask the following questions,

> How did you feel about the coach's advice to Jamal to be direct and honest with Diana?
>
> How did the teens react when they learned they might have been exposed to an STI from their partners?

(continued)

* A list of alternative videos and discussion questions can be found at www.etr.org/ebi/alternative-videos.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

(continued)

What could you do if you found out you or a partner had an STI?

Why is it important to tell your partner if you have an STI?

FACILITATOR'S NOTE

Be sure participants understand that when the video refers to "using a condom" this means a latex or polyurethane/polyisoprene condom.

5. **Explain that no one chooses to get an STI. Some people have gotten STIs from sex that was against their will. Summarize this activity by saying,**

There are 4 important facts about STIs I want to emphasize:

1. **Anyone can get an STI. Young people ages 15 to 24 make up half of all new STI cases.[1] You or a partner can have an STI and not know it. Many people with STIs have no symptoms.**
2. **Some untreated STIs increase the chance of HIV infection. They sometimes cause blisters or sores on or around the genitals which can become a point of entry for HIV during sex.[2]**
3. **Untreated STIs can have emotional and physical impacts. The impacts for people with vaginas are especially serious, and include things such as pelvic inflammatory disease, ectopic pregnancy, cervical cancer, infertility, chronic pelvic pain, and possible transmission of the STI to a fetus or baby.[3]**
4. **Some STIs can be cured. This means that, with testing and treatment, the person will no longer have the STI. Some STIs cannot be cured. This includes HIV. Incurable STIs can be managed with medications but the STI will remain in the body. It is important to get tested for STIs since often they have no symptoms. Then you can get the medications you need to prevent further complications like those listed on the *Reasons to Protect Against STIs* sheet.[4]**

If you choose to have sexual intercourse, the proud and responsible thing to do is always use protection such as external condoms, internal condoms or dental dams every time you have vaginal, anal or oral sex. Make sure to use only protective barriers made of latex, polyurethane, polyisoprene or nitrile. Not having sex is the surest way to prevent an STI.

ACTIVITY B

THE TRANSMISSION GAME

PREPARING FOR THE ACTIVITY

RATIONALE

Participation in an exercise that highlights how easy it is to get STIs breaks down participants' feelings of invulnerability, and increases their motivation to practice safer sex.

MATERIALS

- Labeled index cards (Star, Circle, Rectangle, Triangle)
- Pencils

TIME

15 minutes

PROCEDURE

1. Ask the rhetorical question,

> Who gets STIs? Don't answer. Just think about it. We are going to participate in an activity that will help us answer this question.

FACILITATOR'S NOTE

This activity illustrates how easy it is to transmit an STI if people have intercourse without using protection. This is a fun, engaging activity but it can also be sensitive. Some participants may have already had an STI; some might be living with HIV; and others may have family members or friends who are affected by HIV. Make sure no one is stigmatized by the activity.

2. Distribute the labeled cards and pencils so that only one person has a "star," one or two people have a "triangle" and "rectangle" and the rest get a "circle." DO NOT tell participants what the symbols mean at this time.

Rectangle = Abstinence

Triangle = Condoms/Dental Dams

Circle = Unprotected Sex (oral, anal or vaginal sex without protection)

Star = Infection (STI/HIV)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

FACILITATOR'S NOTE

You may change the index card codes to other things such as cities, plant names or animals. Avoid using codes that may imply judgment, such as a rating system. If you teach multiple class periods, change the code between classes so that youth in later periods do not have the same key.

3. Give the following instructions:

- Listen carefully and be ready to share what you hear.
- Write your name on the side of the index card that has the symbol on it.
- Stand and mingle (walk around) with others in the group until I say "stop."
- Pair off with the person standing closest to you.
- I will read you an incomplete sentence.
- You and your partner will each complete the sentence and discuss why you feel that way.
- When I call time (after 30 seconds to 1 minute), you will sign each other's card on the side without the symbol on it. Return the card to the original owner.
- Then you'll move around the room again until I say "stop" and you will pair up with a new partner.
- We will keep doing this until you've had six brief discussions.

4. Read each of the following unfinished sentences, following the procedure you just described.

UNFINISHED SENTENCES

- If I had a condom in my pocket or purse, my partner would think…
- I could convince my partner to use a condom if I...
- You can make using condoms fun by…
- If I asked whether my partner was having sex with other people, the response might be…
- If I asked my partner to use a condom, the response would be...
- People do not like to use condoms because…

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

5. When the six unfinished sentences have been discussed, ask all participants to have a seat.

6. Use the process below to discuss the activity. Say,

> - We are going to pretend that each conversation you had represented an act of "sexual intercourse."
> - Look at your cards. The shapes or symbols on the cards represent something in this exercise.
> - Will the person with the "star" card, please stand. For the purposes of this activity only, the star card represents an STI and anyone whose name is on your card could have the STI too.
> - (To the person with the "star"): Read the names on the back of your card. Everyone whose name is read, please stand.

7. After the people whose names were called are standing, say,

> - If you have a "triangle" on your card, that means you correctly used a protective barrier such as an external or internal condom, or a dental dam, every time to reduce your risk, and so you can sit back down.
> - If you have a "rectangle" on your card, that means you insisted on abstinence and refused to engage in sexual intercourse or any type of skin-to-skin genital contact, so you can sit back down. Abstinence is the 100 percent sure way to protect yourself.
> - If you have a "circle" on your card, you must remain standing because you took a chance and engaged in unprotected sexual intercourse and now you are possibly infected with an STI.

8. Ask each of the people still standing, one at a time, to read the names on their cards. Use the same process to find out the total number of people who got "infected" during this activity.

9. Count the number of people standing and ask the group to consider what would happen if they each continued to have unprotected sex with new partners.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

10. Thank the participants for participating in the game. Remind them that it is just a game to illustrate how quickly STIs can be transmitted when people who are having sex do not use condoms or get tested.

11. Ask the participants to take their cards and rip them to pieces.

12. Ask the participants to sit down.

13. Ask the following questions:

> How did it feel to participate in this activity?
>
> Imagine you had the star or circle card. How did or does it feel to potentially have been exposed to an STI?
>
> How might it feel to potentially expose others to an STI?
>
> Imagine you had the triangle card. How did or does it feel to have protected yourself from STIs? How does it feel to have protected others?
>
> Imagine you had the rectangle card. How did or does it feel to have chosen abstinence?

14. Explain that for those having sex, talking to sexual partners about STIs and getting tested are two strategies that can reduce the risk of STIs, including HIV.

15. Ask the following questions:

> If getting tested had been an option in this game, how do you think that could have changed how many people were standing at the end?
>
> How would talking to your partner(s) about STIs before engaging in a sexual behavior change the number of people potentially exposed to an STI (i.e., the number of people standing at the end of this activity)?
>
> What did you learn by participating in this game that will help you make decisions about your sexual health in the future?

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Try to elicit the following answers:

- One person can infect many by passing the infection to someone who passes it on to the next person.
- STIs can be spread through unprotected vaginal, anal and oral sex.
- People should consider the risks their partners have taken in the past.
- Practicing abstinence and using protection such as condoms can prevent STI transmission.
- You can't tell just by looking at someone who is infected and who isn't.
- It may not be easy to talk about using condoms or dental dams but it gets easier with practice.
- Anyone can get an STI regardless of whether the sex was consensual or forced.
- Getting tested is the only way to know for sure if you have an STI.

16. **Continue the activity by saying,**

This was just a game. However, it does highlight how fast and easily an STI can spread. A good way to reduce your risk for infection is to use a latex (or polyurethane/polyisoprene) condom or dental dam every time you engage in oral, anal or vaginal sex. Also, be sure to get tested regularly if having sex. Many STIs can be treated.

17. **Summarize as follows,**

As we reflect back to my first question, "Who gets STIs?," we have learned that it is possible for anyone to get an STI. STIs are common and many people will get an STI at some point in their lives. Remember, the proud and responsible things to do are to use a latex or polyurethane/polyisoprene condom and/or dental dam every time you have sex, to get tested, to talk to your partners about STIs, and to get treated if you get an STI.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY C

WHAT I THINK ABOUT HIV/STI AND SAFER SEX

PREPARING FOR THE ACTIVITY

RATIONALE

Examining attitudes and beliefs about HIV risk behaviors focuses participants on factors that can keep them from practicing safer behaviors.

MATERIALS

- *Agree/Disagree* signs
- Masking tape

TIME

10 minutes

PROCEDURE

1. Tape the *Agree* and *Disagree* signs on opposite sides of the room.

2. Begin this activity by saying,

> Let's look at what you think about HIV/STIs and safer sex.

3. Read the following directions:

> I will read some statements and ask, "Agree or disagree"?
>
> After I read each statement, stand under the Agree sign if you agree with the statement or stand under the Disagree sign if you do not agree with it.

4. Ask participants to stand.

5. Read the Agree/Disagree statements one at a time (included at the end of the activity).

6. After each statement, ask the participants to decide if they agree or disagree with the statement and to stand under the appropriate sign.

7. After each statement, ask participants on each side to say why they agreed or disagreed with the statement.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

FACILITATOR'S NOTE

During the activity, bolster the attitudes supportive of condom use, and respond to those unsupportive of condom use by using the information provided after each statement.

8. Give the participants a chance to switch after discussion of each statement.

9. Thank the participants for sharing their opinions. Have them return to their seats.

10. Summarize as follows,

> This activity showed us that different people can have different opinions and beliefs. You may have a different opinion about sex, HIV, STIs and protection than your partner or friends. But the facts about HIV/STI remain the same. Here are some facts we can agree on: HIV is transmitted sexually through blood, semen, vaginal fluids and rectal fluids. Other STIs are also passed through having sex. Whenever you have sex, you must use latex or polyurethane/polyisoprene condoms or dental dams every time you have vaginal, anal or oral sex to reduce the chance of HIV and other STI transmission. PrEP can also reduce your risk of HIV transmission, and PrEP plus condoms can reduce your risk of HIV and other STIs.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

AGREE OR DISAGREE STATEMENTS

- **It is hard to convince a sexual partner to use a condom.** (Even though it might be hard, it is important to do it.)
- **Condoms are effective at preventing HIV infection.** (If you choose to have sexual intercourse, using condoms correctly and consistently is an effective way to prevent HIV infection.)
- **Sex can feel good if you use condoms.** (Sex can feel very good with condoms. You can buy a brand that feels natural and use extra lubricant. You'll learn more about this later.)
- **Most people know how to use condoms correctly.** (Many people feel as if they know how, but anyone can improve their skills by learning the specific steps that you will be learning in a few minutes.)
- **If you know your sexual partner very well, you shouldn't have to use a condom.** (Knowing your sexual partner very well does not mean you are safe. Have honest conversations about your sexual health and your plans to protect yourself from unintended pregnancy or STIs. Both of you should get tested so you know your status.)
- **If someone looks healthy, you shouldn't have to use a condom.** (Looking at a person never lets you know whether the person has HIV or another STI, so you should always use a latex or polyurethane/polyisoprene condom or dental dam every time you have vaginal, anal or oral sex. Often people with STIs don't have symptoms, and a person living with HIV may not have symptoms for many years.)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY D

CONDOM USE SKILLS

PREPARING FOR THE ACTIVITY

RATIONALE

By becoming more comfortable touching condoms and by practicing correct condom use strategies, participants will be more likely to use them consistently and correctly in their personal lives and feel proud and responsible in doing so.

MATERIALS

- *Steps for Using a Condom* poster
- External condoms, lubricated (two per participant or pair of participants, plus demonstration condoms)
- Dental dam
- Lubricant
- Condom demonstrator(s)
- Paper towels
- Markers
- Masking tape
- Small paper bag (to dispose of condoms)

TIME

15 minutes

PROCEDURE

FACILITATOR'S NOTE

Some religions and individuals do not believe in condom use. Acknowledge that and make sure that participants are aware that condom use skills are the focus of this activity.

1. Clarify the purpose of the activity by saying,

> This activity is designed to show you how to use external or male condoms correctly and to have you practice condom use skills. I want to make sure we are clear that when teaching you these skills I'm not assuming that any of you are having sexual intercourse and I'm not encouraging you to do so. Having this knowledge and these skills will prepare you to make proud and responsible decisions if and when the need arises.
>
> For some people, using condoms may go against their religious beliefs. For others this may not be a consideration. I'm giving you this information because we want you to be able to make informed decisions about protecting yourselves.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

2. Explain what a condom is by saying,

> As we have learned, a condom is a form of protective barrier that prevents the exchange of body fluids such as semen, vaginal fluids, or rectal fluids.
>
> The external (male) condom slips over an erect penis to keep semen from entering the vagina, mouth or anus. It also keeps the penis from being exposed to vaginal fluids or rectal fluids. It is used to keep sperm from entering the vagina to prevent a pregnancy. When it is used to avoid the exchange of body fluids, the external condom can reduce the risk for transmission of HIV and other STIs. Only latex, polyurethane or polyisoprene condoms are effective in preventing HIV and other STIs.
>
> ***Optional for high school youth:***
> The external condom may also be used on a sex toy or other insertive sexual device that is being shared. A new condom must be used each time the sex toy or device is used by a different person.

3. Ask the group to brainstorm slang terms for condoms. They might mention rubber, raincoat, glove or sock. Keep this very brief. Then ask them to name some of the brands they've heard of.

4. Explain the following,

> We're going to be learning a lot about condoms. There are many different brands and types of condoms. Some are colored, ribbed, lubricated or flavored. People can choose the types they like as long as they are made of latex, polyurethane or polyisoprene.
>
> Regardless of what you call them or the types you prefer, it's important to use condoms correctly and to have them available when you need them.
>
> In the next activity, you're going to actually practice the steps for using an external condom correctly. Many of you may have never seen or touched a condom. We're going to practice using external condoms so that you will know what they feel like and how to use them if and when you are ready to use them.
>
> Just as a person might need to adjust to wearing a new pair of shoes or glasses, using a condom requires getting used to new sensations.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

5. **Post the *Steps for Using a Condom* poster. Using a condom demonstrator, follow the steps listed on the chart to model what the youth will be doing. Read the instructions and add additional details as you demonstrate the procedure.**

FACILITATOR'S NOTE

The ideal way to demonstrate proper condom use is to use a plastic or wooden model of a penis. If a model is not available, demonstrate by using your fingers. Also, be sensitive to the comfort level of your participants during this activity.

STEPS FOR USING A CONDOM

1. Get consent. Make sure you and your partner both agree to have sex. If either one of you expresses that you do not want to continue, you both must stop.
2. Check the expiration date and make sure the condom is latex, polyurethane or polyisoprene.
3. Open the package carefully to avoid tearing.
4. Make sure condom is on the proper side to roll down correctly.
5. Pinch the tip of the condom to create space (½ inch) for semen.
6. Squeeze a few drops of water-based lubricant inside the tip.
7. Make sure the penis is erect and both partners are ready to engage in sexual activity before putting on the condom.
8. Continuing to squeeze the tip, place the condom on the head of the penis. Unroll the condom down to the base of the penis. Apply water-based lubricant to the outside of the condom, if desired.
9. Check during sex to make sure the condom isn't slipping.
10. Immediately after ejaculation, hold the condom firmly at the base of the penis and pull the penis out before it gets soft.
11. Roll off the condom away from your partner. Wrap in tissue and throw it away. Do not re-use.

6. **Distribute the materials to participants so they can practice. Circulate and observe all participants, at least briefly, to make sure they're following the steps correctly.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

FACILITATOR'S NOTE

There may be lots of giggling. Most participants will have fun with this. However, a few may feel particularly nervous or uncomfortable. If any participants don't want to practice, allow them to pass. For some youth, especially those who have been sexually abused, it could be overwhelming to have to handle a penis model. Never push a young person to participate. Show empathy and check back in with them later to see how they're feeling. Not very many youth ask to pass. Most that do change their minds and decide to practice using a condom before the activity ends.

7. Collect the condoms and packaging in the paper bag.

8. Give participants paper towels or wet wipes to wipe their hands.

9. Reinforce condom information by asking the following questions (answers are provided),

Can condoms fit any size penis? Yes. Though condom sizes vary slightly from brand to brand, most can fit any size penis comfortably. Try several brands and type to find the best fit.

What should you never use with a condom? Condoms may break if you use Vaseline, lotion or grease, etc., as lubrication. Use only non-oil-based lubrication such as water-based or silicone-based lubricants (e.g., Good Clean Love or Aloe Cadabra).

Is it OK to keep a condom in your pocket? Yes, but *ONLY* for short periods of time. Prolonged exposure to any heat source (including body heat) can damage condoms.

Can you use condoms after their expiration date? No. Throw away unused condoms once the expiration date passes.

FACILITATOR'S NOTE

In addition to latex condoms, polyurethane or polyisoprene external condoms may also be used. People who are allergic to latex can use these types of condoms instead of latex. However, the important point to emphasize is that lambskin condoms should never be used because they do not protect against HIV.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

10. **Ask participants if they've ever heard of or seen a dental dam. Hold up a dental dam and say,**

> **A dental dam is a square of latex that can serve as a barrier between the mouth and a partner's vulva or anal area to prevent the transmission of STIs.**
>
> **It can be difficult to find dental dams, so you can cut a non-lubricated condom into a square and use it as a barrier.**

11. **Explain how a dental dam can be used when having oral contact with the vulva or anal area. Also demonstrate how to cut a condom into a square in case a dental dam is not available. (*Note:* Using scissors or your teeth, cut off the rim, then cut up one side, and use your fingers to spread the condom into a flat sheet.**

12. **Summarize as follows,**

> **To protect yourself and your partner from sexually transmitted infections, including HIV, remember to:**
>
> - **Use a latex (or polyurethane/polyisoprene) condom every time you have sex.**
> - **Use a dental dam when having oral contact with the vulva or anal area.**
> - **Keep a supply of unexpired condoms on hand.**
> - **Get used to condoms so they become easy to use each time.**
> - **Talk to your partner about using condoms.**
> - **Refrain from using alcohol or other drugs because they affect your judgment.**
>
> **Condoms make sense. Condoms help to protect both partners from pregnancy and STIs, including HIV. However, you must use them correctly every time you have vaginal, oral or anal sex.**

MODULE 6

A POSSIBLE OUTCOME OF UNPROTECTED SEX: PREGNANCY

GOALS

The goals of this module are to:

- Increase participants' understanding of pregnancy as a possible outcome of unprotected sex.
- Increase participants' perception that they are vulnerable to getting pregnant or getting someone pregnant.
- Increase participants' understanding of the consequences of teen pregnancy.
- Increase participants' knowledge of various types of contraceptive methods.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- Distinguish facts from falsehoods about pregnancy.
- Identify specific birth control methods that may be used to prevent pregnancy.

MODULE PREVIEW

The sixth module: (1) helps participants examine myths about pregnancy; (2) illustrates how pregnancy can impact the lives of young people; and (3) informs participants about the various forms of birth control.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

STRATEGIES/METHODS

- True or False Game
- Video Viewing
- Group Discussion
- Contraceptive Methods Demonstration
- Agree/Disagree

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- *True or False: Pregnancy Statements* (included in module)
- *Birth Control Choices* poster
- *Optional:* Video: *Tanisha & Shay* (or alternative videos*)
- *Agree/Disagree* signs (1 set)

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Pre-labeled chart paper: *Contraceptives*
- *Optional:* Monitor and video player, or internet access if using alternative videos
- Markers
- Masking tape

PREPARATION NEEDED

1. Label all of the charts as listed under Materials.
2. Hang the pre-labeled charts in the order they will be used. Fold and tape the charts so the titles remain covered by the bottom half of the sheet until you use them.
3. Review the *True or False: Pregnancy Statements* and get comfortable with the content.
4. *Optional:* Set up the video(s) to be ready to play.
5. Review the information about contraceptive methods in Appendix B.
6. Review and be familiar with current federal and state laws around pregnancy options, including adoption, abortion and safe surrender, so you can provide accurate information during the discussion of the *Tanisha & Shay* Shay video or alternative videos, if you decide to extend the session and include the videos.

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

7. Gather materials to help teach the birth control information effectively: contraceptive charts, charts of the female reproductive organs, female pelvic models and a birth control kit. Many local health departments and Planned Parenthood affiliates will loan or sell demonstration kits. A local health care provider may also be able to provide samples of prescribed methods, such as oral contraceptives. Free or low-cost condoms may be available from your local department of public health or a clinic.
8. Review how to use an internal condom. There are several YouTube videos that clearly explain the steps, such as this one from the Female Health Company that manufactures a female condom: www.youtube.com/watch?v=LRZH5ASO-eM. Watch the video prior to the session so you feel comfortable with how the female condom is used. If you have any problems with this link, do an online search for "female condom how to use animated video." If you have Internet access, set up a laptop computer so you can show participants the YouTube video.

INSTRUCTIONAL TIME: 60 minutes

(*Note:* The use of the optional video(s) will increase the length of the module by up to 25 minutes. A video is an excellent way to help participants personalize and conceptualize the information, but should not replace or take time away from the discussion and demonstration of the contraceptive methods. Facilitators may wish to deliver this module across two 60-minute sessions.)

ACTIVITY	MINUTES NEEDED
A. True or False: Pregnancy Statements	10
[B. *(Optional) Tanisha & Shay* Video	+25]
C. Birth Control Methods Demonstration	40
D. Agree/Disagree - Attitudes About Contraception	10

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY A

TRUE OR FALSE: PREGNANCY STATEMENTS

PREPARING FOR THE ACTIVITY

RATIONALE

Distinguishing facts from falsehoods about pregnancy provides an opportunity for learning the correct information about pregnancy.

MATERIALS

- *True or False: Pregnancy Statements* (included in module)

TIME

10 minutes

PROCEDURE

1. Introduce the following activity by saying,

> Let's take a closer look at what can happen when teenagers decide to have sex without using any protection. We'll play a game to help you separate what is true and what is false when it comes to the consequences of unprotected sex.

2. Explain the directions,

> - I will go around the room and read a statement to each of you.
> - I want you to tell me if the statement I read is true or false.
> - I also want you to explain why it is true or false.
> - If you don't know, I will ask for volunteers who think they know the answer.

3. Read the *True or False: Pregnancy Statements* on page 140.

4. Supplement the participants' explanations with those provided after each statement or have other participants give the information.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2026 agreement.

© ETR. All rights reserved.

5. **Once all the statements have been completed say,**

> **Wow! You did a great job and seem to know a lot of the correct information.**

6. **Summarize by saying,**

> **The more you know about the possible outcomes of sex, such as pregnancy and sexually transmitted infections, the better you will be at protecting yourself from experiencing an unintended pregnancy and/or STIs. Next, we are going to see a video (or videos) that describes how pregnancy can impact a young person's goals and dreams for the future.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

TRUE OR FALSE: PREGNANCY STATEMENTS

1. **Every time you have unprotected vaginal sex, there is the possibility of getting pregnant, even the first time you have vaginal sex.**
   TRUE
   Pregnancy is a possibility every time someone has unprotected vaginal sex, regardless if it's the first time or the hundredth time.

2. **Pulling the penis out of the vagina before ejaculation reduces the risk of pregnancy.**
   TRUE
   Pulling out, or withdrawal, does work in theory. However, it takes a lot of practice and concentration. It can be challenging, especially for teens and young adults, to actually pull the penis out before they ejaculate (or cum). Pulling out AND using another method of protection greatly increases the effectiveness.

3. **You can't get pregnant if you have sex standing up.**
   FALSE
   Sperm don't care what position you're in. Any time semen (which contains sperm) is able to travel up through the vagina and fallopian tubes to where sperm can fertilize an egg, you can get pregnant. There are no exceptions to that rule.

4. **If you have unprotected vaginal sex, there is a pill you can take afterward to reduce the risk of pregnancy.**
   TRUE
   If you had unprotected vaginal sex (or your birth control method failed) and you do not want to become pregnant, take an Emergency Contraceptive pill as soon as possible but no later than within 5 days. The EC pill (or a copper IUD) prevents a pregnancy from occurring.

5. **Douching (cleaning the vagina) after sex can prevent pregnancy.**
   FALSE
   Douching will not prevent pregnancy. In fact, it can even help carry sperm up into the uterus and increase the chances. The vagina keeps itself clean naturally, so douching isn't necessary and isn't recommended. Douching throws off the vagina's natural balance and can even lead to infection.

6. **You can't get pregnant unless you have an orgasm (cum).**
   FALSE
   It doesn't matter if you have an orgasm or not. You can get pregnant if you engage in vaginal sex without using protection.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2026 agreement.

© ETR. All rights reserved.

7. **If a girl misses her period, she is definitely pregnant.**

   FALSE

   When young people first start having periods they often have irregular cycles and may even skip a month from time to time. But if someone has had vaginal sex and misses a period, pregnancy is a possibility. The person should get tested right away, and see a doctor if the pregnancy test is positive.

8. **Gay and lesbian teens don't need to know how to avoid pregnancy.**

   FALSE

   If gay and lesbian teens engage only in same-sex behaviors, they don't have to worry about pregnancy. For many different reasons, gay and lesbian teens sometimes engage in penis-in-vagina sex and they have to worry about pregnancy if they do.

9. **There's no safe time of the month to have sex and avoid pregnancy.**

   TRUE

   True. There is no absolutely safe time of the month when you can't get pregnant or get someone pregnant.

10. **You can't get pregnant if you swallow semen.**

    TRUE

    The only way you can get pregnant is if sperm cells enter the vagina, usually during sexual intercourse, and fertilize an egg cell in the fallopian tube.

11. **A person cannot get pregnant from anal sex.**

    TRUE

    Yes, it's true a person can't get pregnant from having anal sex, but people still have to think about STIs. The lining of the anus is thin and lubricates less than the vagina, so it's easy for STIs to enter the body that way.

OPTIONAL ACTIVITY B

TANISHA & SHAY VIDEO*

PREPARING FOR THE ACTIVITY

RATIONALE

Presenting and reinforcing information about pregnancy can promote further discussion. Seeing how pregnancy can impact the lives of individuals helps increase prevention planning.

MATERIALS

- Monitor and video player, or internet access if using alternative videos
- Video: *Tanisha & Shay,* or alternative videos

TIME

25 additional minutes

PROCEDURE

1. **Introduce the video by saying,**

> **We are going to continue our focus on pregnancy prevention by watching a video called *Tanisha & Shay*. In this video you will see sexually active teenagers dealing with issues of pregnancy.**

2. **Show the video in three segments as described below.**

> **I will be showing you this video in 3 segments. After each part, I'll ask you some questions about what you've seen.**

3. **Show Part 1: Tanisha Finds Out. At the end of the segment, process by asking these questions:**
   - » What did the provider tell Tanisha?
   - » What is your reaction? What do you think happens?
   - » Why do you think Tanisha and Shay did not use protection/ birth control?

> **Let's watch the next segment and find out what happens next.**

4. **Show Part 2: Sharing the News. At the end of the segment, process by asking these questions:**

* A list of alternative videos and discussion questions can be found at www.etr.org/ebi/alternative-videos.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

- How does the pregnancy affect everyone in Tanisha's life?
- What does Tanisha risk losing because of the pregnancy?
- What does Shay risk losing?
- What could Tanisha say to Shay when she shares the news of the pregnancy?
- What might it look like for Shay to be a part of Tanisha's decision-making process?
- What might this conversation and decision-making look like in a healthy relationship like Tanisha and Shay's?

Let's watch the last segment.

5. **Show Part 3: Now What? At the end of the segment, process by asking these questions:**
   - What did this video teach you about teen pregnancy?
   - What could Tanisha and Shay have done after they had unprotected sex to prevent a pregnancy?
   - Are these teens ready to become parents? Why or why not?
   - How would your life change if you became pregnant or got somebody pregnant now?
   - What about if you became a parent or became a parent again?

6. **Summarize this activity by saying,**

As you can see, becoming pregnant or getting someone pregnant can dramatically change your life. Therefore, it is important to avoid unintended pregnancy by practicing abstinence or safer sex. Be prepared. If you're going to engage in sexual activity, make sure you use effective birth control and a latex (or polyurethane/polyisoprene) condom every time!

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY C

BIRTH CONTROL METHODS DEMONSTRATION

PREPARING FOR THE ACTIVITY

RATIONALE

Reviewing and discussing the various forms of birth control methods will enhance participants' knowledge and empower them to make informed choices about the most suitable method to use.

MATERIALS

- Pre-labeled chart paper:
  - *Contraceptives*
- *Birth Control Choices* poster
- Markers

TIME

40 minutes

(*Note:* It is important to allow time to cover all of the different methods.)

PROCEDURE

1. Introduce this activity by saying,

> We're about to review the various methods of birth control. Let me clarify a couple of things. The purpose of this activity is to present factual information about birth control. I don't assume that you're having sex. There may be many different experiences in this group. Some of you may never have engaged in sexual intercourse and won't any time soon. Others may have had sex, not always by choice. Some might be parents already. Regardless of your background and experience, it's important for all teens to receive factual information about birth control. Being informed about birth control puts you in the driver's seat so you can be in control of when you have children in the future and how close together you have them.
>
> I also understand that personal values about birth control vary. For some people, using condoms may go against their religious beliefs. For others this may not be a consideration. The bottom line is that most people who have sex need a way to prevent pregnancy and STIs, including HIV. I want you to be able to make informed decisions about protecting yourselves, so we're going to learn about all of the options.

2. Unfold the pre-labeled chart paper titled *Contraceptives* and ask the participants to brainstorm all the methods of birth control or contraception that they can think of. Write the list on the chart paper.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Answers should include:

- » Abstinence
- » IUD
- » Implant
- » Depo-Provera (the shot)
- » Birth control pills, patch and ring
- » Male condom (external condom)
- » Female condom (internal condom)
- » Sponge
- » Spermicides
- » Diaphragm
- » Cervical cap
- » Withdrawal

3. **Post and point to the *Birth Control Choices* poster and say,**

> **This poster shows some common birth control, or contraceptive, methods. We will discuss them briefly. We won't have time to examine them in detail, but I want you to know what is available when you are ready to use them.**

4. **Begin your presentation by explaining,**

> **Contraceptive methods fall into three different categories:* behavioral methods, over-the-counter methods that can be purchased by anyone at any stores, clinics, supermarkets, convenience stores or online, and prescribed methods, which you have to see a health provider to get. I'll be talking about the methods in order of effectiveness, or how well they work to prevent pregnancy.**

5. **Using the following information, teach and demonstrate the various contraceptive methods. If you have a birth control kit, show the various methods as you discuss them. Don't pass the methods around while you're educating as it gets the group distracted. Allow participants to handle the methods at the end when you've finished the demonstration.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

* Shoupe, D., and D. R. Mishell, eds. 2016. *The Handbook of contraception: A guide for practical management*. New York: Humana Press, Springer International Publishing.

FACILITATOR'S NOTE

Don't try to communicate every fact about the various birth control methods in this presentation. This is an overview. Let participants know they will get a more thorough education whenever they go to a health center to obtain contraception. See the section on Contraceptives in Appendix B for additional information.

BEHAVIORAL METHODS

Abstinence

- Abstinence is the safest and most effective pregnancy and STI prevention method.
- There are a lot of different definitions of abstinence. We define it as not engaging in sexual intercourse of any type (oral, anal or vaginal).
- It requires that you avoid any behaviors that might result in exchange of bodily fluids that can result in pregnancy or can transmit STIs, including HIV. It also means not engaging in any skin-to-skin genital touching that could transmit certain STIs.
- Abstinence requires skills—you have to know why you want to say no to risky sex and be able to communicate that assertively to a partner.
- It's important to have a backup method in case you decide to stop using abstinence in order to be able to protect yourself from pregnancy and STIs, including HIV.

Withdrawal

- Withdrawal, or pulling out, is done by removing the penis fully from the vagina/anus before ejaculating and only ejaculating outside of the vagina/anus.
- Withdrawal is free and a method available to everyone.
- To be effective at preventing pregnancy, withdrawal must be used correctly and completely. This requires knowing and understanding a person's own body, which can be challenging for young people and people with little sexual experience.
- Withdrawal is most effective when used with another contraceptive method. Using withdrawal in addition to condoms or another form of birth control further reduces the risk of unintended pregnancy.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

FACILITATOR'S NOTE

Withdrawal is a commonly used form of contraception among youth. Avoid shaming messages about this method, and offer it as one of many options. Withdrawal is a behavioral skill that can be developed and can be combined with other methods for increased effectiveness.

Sources: Laris, BA, et al. 2020. Uncovering withdrawal use among sexually active U.S. adolescents: High prevalence rates suggest the need for a sexual health harm reduction approach. *Sex Education* DOI: 10.1080/14681811.2020.1768324; Hatcher, R. A. 2018. Contraceptive technology. New York: Ayer Company Publishers.

PRESCRIBED METHODS

To obtain some methods of birth control, you need a prescription from your doctor. Some of these methods work by regulating hormones involved in the reproductive process. These hormonal methods include some IUDs, the implant, Depo-Provera shots and birth control pills, the patch and the ring. Although these methods are very effective at preventing pregnancy, they do not prevent sexually transmitted infections. Therefore, if you use one of these hormonal methods for pregnancy prevention, your partner must also use a latex condom so that you will be protected against STIs. Let's discuss the specific methods. These methods are highly effective if used correctly. And with some of them, there's nothing you have to do once they are inserted!

IUD

- An IUD, or intrauterine device, is a small T-shaped piece of plastic, or plastic and metal, that is inserted into the uterus by a trained medical provider.
- There are 2 kinds of IUDs in the U.S.:
  - » **Non-hormonal:** The copper-T IUD (ParaGard) is a non-hormonal IUD that creates an environment in the uterus that makes it very hard for sperm to survive and for fertilized eggs to attach to the wall of the uterus, which is necessary for a pregnancy to occur. Once you get this type of IUD inserted, you are protected from pregnancy for up to 10 years.
  - » **Hormonal:** A hormonal IUD does the same thing, but it also releases hormones that stop your body from releasing eggs. There are 4 kinds of hormonal IUDs available in the U.S.: Mirena, Skyla, Kyleena and Liletta. They are effective from 3 to 5 years, depending on which one you get.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

- When your body is first adjusting to the IUD, your period might be heavier or more painful. IUDs do not protect you from STIs, so you should also use a condom.

Implant

- The implant is a thin stick about the size of a matchstick that is placed under the skin of your upper arm by a trained medical provider and releases hormones to prevent your body from releasing eggs.
- It can be used for up to 3 years.
- It can cause periods to be irregular or stop.
- The implant does not protect you from STIs, so you should also use a condom.

The Shot

- People who use the shot receive hormonal shots every 3 months.
- Depo-Provera is the most common brand and is a highly effective birth control method.
- It can cause periods to be irregular or stop.
- The shot does not protect you from STIs, so you should also use a condom.

Birth control pills

- Birth control pills prevent the ovaries from releasing eggs during the monthly cycle.
- One pill must be taken each day at about the same time of day.
- When you start "the pill," you must use a back-up method for the first 7 days to prevent pregnancy.
- If you miss a day, you must take two pills the next day.
- If you miss more than one day, you must use a back-up method for 7 days to prevent pregnancy. You should also talk to your doctor about finishing the rest of your pack of pills.
- ***NEVER*** use another person's birth control pills (even your mother's or sister's). A doctor must prescribe the birth control pills that are safe for you.

(continued)

(continued)

- The pill does not protect you from STIs, so you should also use a condom.

Birth control patch

- The patch works the same way as the pill, except that instead of swallowing the hormones, you absorb them through the skin.
- The patch is a small, band-aid like sticker that you wear on either your back, hip, butt or upper outer arm and change once a week for 3 weeks, and then the fourth week you don't wear it and get your period.
- The patch does not protect you from STIs, so you should also use a condom.

Vaginal ring

- The ring is a hormonal method just like the pill and the patch. With the ring, the hormones are absorbed through the vaginal wall.
- It is a small flexible ring that you insert into your vagina. It sits just below your cervix. Once you insert it, you leave it in for 3 weeks, and then take it out for a week to have your period.
- The ring does not protect you from STIs, so you should also use a condom.

Diaphragm and cervical cap

- The diaphragm and cervical cap are vaginal barriers that cover the cervix to keep sperm from reaching and fertilizing an egg.
- The diaphragm is a reusable, dome-shaped cup made of latex or silicone. It is used with spermicidal gel and inserted into the vagina, where it is positioned to cover the cervix. It can be placed up to 6 hours before sex and must be left in place for at least 6 hours (but no more than 24 hours) after sex. Caya is a new one-size-fits-all diaphragm. Unlike earlier diaphragms, it does not require fitting and is easier to insert and remove. It is available with a prescription.
- The cervical cap is a reusable silicone cap that fits over the cervix. It provides protection for 48 hours and requires spermicidal gel. Like the diaphragm, it is inserted in the vagina before sex, and must be left in place for at least 6 hours afterward. FemCap is the only brand available. It has to be fitted by a provider and requires a prescription.

(continued)

Prescribed methods summary

So you see you have choices with prescribed methods. Many of the newer methods are easier to use and effective for long periods of time. Let's review:

- With the pill, you have to take a pill once a day at the same time.
- With the patch, you have to replace the patch once a week for 3 weeks and then leave it off for 1 week (the 4th week).
- With the ring, you insert a new one once a month. You leave it in for 3 weeks and then take it out for 1 week (the 4th week) to have a period.
- With the shot, you have to go back to the health provider every 3 months for another shot.
- With the implant, you get one inserted and it's effective for 3 years.
- With the IUD, once it's inserted, it's effective for up to 10 years depending on the type of IUD.

Research shows that when teens use long-acting methods like the implant and the IUD, the rate of teen pregnancy goes down dramatically.*

OVER-THE-COUNTER METHODS

These methods of birth control can be purchased by anyone of any age, at drugstores, clinics, supermarkets, convenience stores and online without a prescription.

External (male) condom

- The external condom is a latex sheath that covers the penis and keeps semen from entering a partner's body.
- It should be put on the penis as soon as the penis is erect, and removed after ejaculation, away from the partner.
- Latex condoms are the most common. People who are allergic to latex can use polyurethane or polyisoprene condoms. Lambskin condoms do not protect against HIV, so don't use those.

Internal (female) condom

- The internal condom is a soft, loose-fitting polyurethane (plastic) or nitrile sheath that lines the vagina. Polyurethane is strong and unlikely to rip or tear during use. It is also unlikely to cause allergic reactions.

(continued)

* Birgisson, N. E., Zhao, Q., Secura, G. M., Madden, T., Peipert, J. F. (2015). Preventing unintended pregnancy: The contraceptive CHOICE project in review. *Journal of Women's Health* 24 (5): 349–353.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

- The internal condom can be inserted right before sex, or up to 8 hours ahead of time.
- The internal condom can also be used for STI protection during anal sex. People of any gender can use these condoms for anal sex.
- These are the steps for using the internal condom:
  - » Check the expiration date.
  - » Rub the outside of the package to spread the lubricant onto the condom.
  - » Open carefully by tearing at the notch on the top right of the package.
  - » Note that there are two rings. The thinner outer ring covers the area around the opening of the vagina or anus (for additional STI protection). The thicker inner ring is used for insertion and to help hold the sheath in place during intercourse.
  - » There are different positions you can use to insert the condom—squat, raise one leg, sit or lie down. Choose a position that feels comfortable.
  - » While holding the condom at the closed end, grasp the flexible inner ring and squeeze it with the thumb and second or middle finger so it becomes long and narrow.
  - » Insert the inner ring into the vagina or anus and use your index finger to push it up into your vagina as far as it will go. If used vaginally, it will fit into place right under your cervix. Be sure the sheath is not twisted. Leave the outer ring on the outside of the vagina or anus—about a half inch of the sheath should remain on the outside of your body.
  - » You are now ready to guide your partner's penis into the condom's opening with your hand to make sure that it enters properly. Be sure that the penis is not entering on the side, between the sheath and the vaginal or anal wall.
  - » To remove the condom, place your finger under the outer ring. Twist it and pull it out. Wrap it in tissue and throw away.

Note: Take care to present the internal condom in a nonjudgmental fashion. It is a great option for people who choose to have sexual intercourse and don't want to depend on a partner to use an external condom. Although the female condom may not look as familiar as the male condom, it's not too complicated to use. Reassure participants that it will simply take a few times to practice

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

and then it will be no problem. Note that the internal condom can be inserted well in advance of being with a partner, so that sexual intercourse can be spontaneous. Internal condoms may be an appealing option for those who find condoms to be uncomfortable due to being too tight. Also, because they are made of nitrile, they warm to body temperature and lack the smell of latex.

Sponge

- The sponge is actually a dual method—it works as a barrier and a spermicide. With clean hands, you wet the sponge with clean water, gently squeeze the sponge until it foams up, fold the sides of the sponge and insert it into the vagina just as you would insert a tampon.
- The sponge can be inserted up to 24 hours before intercourse and must be left in place at least 6 hours after intercourse. This allows for more flexibility and spontaneity with sex. The sponge should not stay in for more than 30 hours.
- The sponge does not protect you from STIs, so you should also use a condom.

Spermicides

- You can also purchase various forms of spermicides—foam, cream, film, gel and suppositories—that prevent pregnancy by killing sperm cells before they can reach the egg cell.
- The sperm-killing substance in most vaginal spermicides is called nonoxynol-9. But nonoxynol-9 can cause an allergic reaction or irritation for some people, and this can increase the risk of STI/HIV infection. Spermicides need to be reapplied for each act of intercourse.
- Spermicides are somewhat less effective than condoms and many of the prescribed methods. However, they are good protection if they're used correctly and consistently, and very good if used along with a condom (which also prevents STIs).

EMERGENCY CONTRACEPTION

- Emergency contraception (EC) reduces the risk of pregnancy after unprotected sex or when another birth control method fails.
- There are 2 types of EC available:

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

  - » **EC pill**, also known as the morning-after pill, can be taken up to 5 days after unprotected sex. Some EC pills (Plan B One Step, Take Action and Next Choice One Dose) may be bought over the counter without a prescription and without having to see a pharmacist. Ella, a non-hormonal EC pill, requires a prescription from a health care provider or a pharmacist.
  - » **Copper-T IUD** (ParaGard) can act as emergency contraception when inserted by a health care provider within 5 days of unprotected sex.
- The sooner EC is taken (within 5 days) after unprotected sex, the more effective it is at preventing unintended pregnancy. Ella, unlike other EC pills, does not decrease in effectiveness during those 5 days.
- EC works by keeping sperm from fertilizing an egg by preventing ovulation or making the environment hard for sperm to survive in. EC is not the same thing as the abortion pill, and will not harm an existing pregnancy.
- Emergency contraception does not protect against HIV or other STIs, so protection like PEP should also be used.

FACILITATOR'S NOTE

Side Effects and Hormonal Methods

Hormonal methods (the pill, patch and ring) are safe, very effective methods of birth control. Most young people who use them have minimal side effects. Smoking cigarettes while using these methods can increase the risk of certain side effects, which is why health professionals advise people who use these methods not to smoke.

The side effects some people have while using these hormonal methods may include:

- irregular menstrual bleeding
- nausea, headaches, dizziness and breast tenderness
- mood changes
- blood clots (these are rare in people under 35 who do not smoke, but there may be a slightly higher risk with the patch than with the pill)

There are a few additional side effects to consider with the birth control shot (also a hormonal method), for example, no menstrual periods at all, weight gain and depression. Studies have linked the use of the long-acting progesterone shot to a loss of bone density. So teens considering getting the shot as a method should talk to their doctors about it.

6. **Process this activity with the questions below:**

How does a teenager decide whether to use birth control and which method to use?

Make sure answers include:

» Talk to parents, a health care provider, doctor, counselor, caregiver, caseworker or partner.

» Ask questions.

» Do lots of thinking.

» Ask themselves questions such as:

- Am I ready for parenthood?
- Do I want to deal with a pregnancy?
- How can I show myself respect in my sexual health decision making?

What are some ways partners can participate in the process of using birth control?

Make sure answers include:

» Help pay for it

» Go to doctor/clinic with partner

» Wear a latex (or polyurethane/polyisoprene) condom

» Ask questions

» Remind partner to use the method correctly

» Help decide which method to use in addition to condoms

» Be supportive

7. **Summarize this activity by saying,**

> **If you are going to have sex, you have to worry about unintended pregnancy and sexually transmitted infections, including HIV. To avoid these problems, you have to use effective methods to prevent pregnancy and infections.**
>
> **You must use a latex or polyurethane/polyisoprene condom in addition to any other form of contraceptive you choose to use. The condom is the only birth control method that also helps prevent sexually transmitted infections, including HIV.**
>
> **Remember, in order to reach your goals and dreams, the proud and responsible thing to do is to use effective methods of protection every time you have sex.**

ACTIVITY D

ATTITUDES ABOUT CONTRACEPTION

PREPARING FOR THE ACTIVITY

RATIONALE

This activity focuses attention on individual responsibility for the prevention of pregnancy and makes participants aware of some of the reasons people may not use birth control.

MATERIALS

- *Agree/Disagree* signs
- Masking tape

TIME

10 minutes

PROCEDURE

FACILITATOR'S NOTE

The attitude statements reflect negative beliefs that limit a young person's ability to use safer sex strategies effectively. You will begin with the negative statement and, after some discussion, end on a positive note. The goal is to put a positive spin on each attitude and bolster beliefs that will enhance the participants' ability to always choose to be safer.

1. Tape the *Agree* and *Disagree* signs on opposite sides of the room.

2. Introduce the activity by saying,

> We have already learned that there are many methods of birth control or contraception.
>
> Attitudes and beliefs often get in the way of using birth control, especially condoms, even when people know a lot about it. This activity is designed to help you look more closely at your attitudes and beliefs about birth control.

FACILITATOR'S NOTE

Be careful to protect participants who seem to be in the minority on a certain issue. Refer to the group agreements to give the participants structure if they become unruly.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

3. **Follow the instructions below:**

   - Ask participants to stand.
   - Read a statement from the *Attitudes Statements* below.
   - Ask participants to stand under the sign—Agree or Disagree—that corresponds to how they feel about the statement.
   - Ask volunteers to give their reasons for agreeing or disagreeing with the statement. If all participants choose the same position, ask them to guess what reasons people in the opposing position might give.
   - After some discussion of the statement, read the information in parentheses after each attitude statement. Promote attitudes that are supportive of birth control use. Remind the group that certain attitudes and beliefs can get in the way of correct use of birth control and condoms.
   - Give participants an opportunity to switch sides if they honestly have changed their attitude or belief about the statement.
   - Continue with as many statements as time allows.

4. **Thank the participants for sharing their attitudes and opinions. Ask them to return to their seats.**

ATTITUDE STATEMENTS

1. **Birth control methods are harmful and will mess you up.** (Birth control methods are safe and effective. But an unintended pregnancy can often make life more complicated. Teens who learn about birth control can use it correctly and safely.)
2. **It's embarrassing to go into the drugstore and buy condoms.** (It might be embarrassing but if you've decided you're ready to have sexual intercourse, you need to be ready to purchase condoms.)
3. **Girls who carry condoms are easy.** (Not only is it not true, girls who carry condoms are actually smart, responsible, proud and safer. Girls can take control of condom use by using internal condoms, having condoms ready for when they need them, and feeling comfortable buying condoms or getting them from a clinic.)

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

4. **Hormonal methods such as the shot can make someone fat and not sexy.** (The term *sexy* means appealing and exciting. It really has nothing to do with a person's body shape. Being happy with oneself projects a better self-image that may contribute to "feeling sexy." There is little evidence that links hormonal methods to weight gain. Diet, exercise and genetics have a bigger influence on a person's weight. If one contraceptive method does not work for you, you can always talk to your clinician about switching to a different method.)
5. **Internal condoms are too much trouble.** (The internal condom might seem complicated, but it gets simpler once you understand how it works and know how to use it. It takes a couple of times of practice to feel confident, but once you know how to use it, you can be proud and responsible and have the condom already inserted if you know you're likely to engage in vaginal or anal intercourse.)
6. **It's hard to talk about protection with the person you're having sex with.** (It might be challenging to have difficult conversation like this. However, it's easier to discuss birth control and condom use with a partner when your mind is made up and you know why you want to be safer. It's also easier in a healthy relationship based on trust, respect, equality and open communication.)
7. **Gay, lesbian and bisexual youth don't need to learn about birth control and safer sex.** (All young people regardless of their sexual orientation [who they find themselves attracted to] need to be informed about sexuality, including information about birth control and condoms. If youth engage in sexual activity with a partner of the same sex, they should use condoms or dental dams to help prevent the spread of HIV and other STIs. Regardless of a person's sexual orientation or sexual identity, anyone who engages in penis-in-vagina sex must use birth control to prevent pregnancy and latex or polyurethane/polyisoprene condoms or other protection to reduce the risk of STIs.)
8. **Men don't need to know as much about birth control as women.** (People of all genders need to know about birth control because it takes a male sperm and a female egg to make a baby. When babies are born, men will have to share responsibility for raising their children. Therefore, men should play an active role in planning when they become fathers. Men who know about birth control and participate in getting and using methods are wise, proud, responsible and supportive partners.)

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

9. **If you're a teen parent already, it's too late to worry about using birth control.** (Teen parents usually understand the realities of parenthood more than other teens. It's never too late to take charge of when you have a baby in the future. Having more than one child as a teenager increases the challenges you have to overcome to reach your goals and dreams.)
10. ***Optional for high school youth:*** **Using condoms takes the pleasure out of sex.** (Using condoms can be fun and pleasurable if you have the skills to make them that way. We'll discuss those skills later in the program.)

5. Summarize as follows,

People have a lot of ideas and opinions about birth control. Sometimes these ideas and opinions are based on what they've heard from others. Sometimes they are based on myths and misinformation.

It's important to consider how your attitudes and beliefs might be affecting your desire and willingness to reduce your risk of unintended pregnancy and STIs, including HIV.

It's up to you to think in ways that protect you and increase your chances of accomplishing your goals and having the life you want in the future.

Take the proud and responsible path! Choose not to have sexual intercourse of any type (abstinence) and get the skills to practice the method effectively. Or, if you decide to have sexual intercourse, help protect yourself against unintended pregnancy and STIs by using an effective method of birth control *and* condoms every time you have sex.

MODULE 7

DEVELOPING CONDOM USE AND NEGOTIATION SKILLS

GOALS

The goals of this module are to:

- Increase participants' understanding of barriers to condom use and increase their strategies for reducing those barriers, including how to make condom use fun and pleasurable.
- Increase participants' communication and negotiation skills so that they can negotiate condom use with a sexual partner.
- Enhance participants' ability to resist situations that place them at risk for HIV/STI infection and pregnancy.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- List the correct steps to using a condom.
- Identify barriers to using condoms and practicing other safer sex behaviors.
- Identify strategies for implementing condom use.
- Identify ways to make condoms a more pleasurable part of the sexual experience.
- Demonstrate the ability to respond to excuses a partner may give with statements in support of condom use.
- Identify strategies for negotiating condom use with their partners.

MODULE PREVIEW

The seventh module: (1) enhances participants' ability to use condoms correctly; (2) explores positive aspects of condom use; and (3) allows participants to practice condom negotiation skills.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

STRATEGIES/METHODS

- Exercises
- Scripted Roleplays

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- Video: *Condom Use Animation* (or alternative videos*) [for high school youth]
- *Condom Line-Up* cards
- *Negotiation and Refusal Skills Charts 1A & 1B*
- *Observer Checklist* poster
- *SWAT* poster
- Worksheets in the student workbook:
  - » *While They're Out* (Ineffective and Effective Versions)
  - » *Your Valentine's Day Gift* (Ineffective and Effective Versions)
  - » *Observer Checklist*

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Pre-labeled chart paper:
  - » *Ways to Make Condom Use Easy and More Fun* (for high school youth)
  - » *Ways to Make Condom Use Easy* (for middle school youth)
  - » *Pros*
  - » *Cons*
  - » *Excuses Sexual Partners Give*
- Markers
- Masking tape
- Monitor and video player, or internet access if using alternative videos

PREPARATION NEEDED

1. Label all of the charts as listed under Materials.
2. Hang the pre-labeled charts in the order they will be used. Fold and tape the charts so the titles remain covered by the bottom half of the sheet until you use them.
3. *For high school youth:* Set up the video(s) to be ready to play.

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

INSTRUCTIONAL TIME: 60 minutes

(*Note:* Facilitators may wish to extend the time to allow for further practice of the SWAT technique and roleplays.)

ACTIVITY	MINUTES NEEDED
A. Condom Line-Up	**10**
B. How to Make Condoms Fun and Pleasurable *(for high school youth)*	**10**
C. Barriers to Condom Use/Condom Pros and Cons	**10**
D. "What to Say If My Partner Says...": Responding to Excuses	**15**
E. Introduction to SWAT and Scripted Roleplays	**15**

(*Note:* This module includes different activities for middle school and high school youth. When implementing the program with middle school youth, adapt Activity A by skipping the video on condom use and including the optional discussion on how to make condom use easy, and skip Activity B. For high school youth, conduct all activities in the module as written.)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY A

CONDOM LINE-UP

PREPARING FOR THE ACTIVITY

RATIONALE

Practicing putting the *Condom Line-Up* cards in the correct order reinforces knowledge, ability and confidence to use condoms correctly.

MATERIALS

- Monitor and video player, or internet access if using alternative videos
- Video: *Condom Use Animation*, or alternative videos
- *Condom Line-Up* cards
- Masking tape
- Pre-labeled chart paper (for middle school youth):
  - *Ways to Make Condom Use Easy*

TIME

10 minutes

PROCEDURE

1. Introduce the *Condom Use Animation* video by saying,

> We are about to see a brief video on how to correctly put on a condom. The information presented in it will be helpful throughout the rest of this activity, and as soon as we're done watching it, we'll have a chance to practice what we've learned together as a group.

2. Show the video, which is 2 minutes long.

3. When the video is over, introduce the *Condom Line-Up* activity by saying,

> We are going to demonstrate all the steps involved in putting on a condom by putting a set of condom-use cards in correct order.

4. Shuffle the *Condom Line-Up* cards.

5. Pass out the cards to the participants. (Give each participant more than one card if there are more cards than participants.)

6. Ask the group to stand.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

7. **Explain to the group,**

> **These cards represent steps in proper condom use. Your task is to put them in the correct order. You will have about 1 minute to study them.**
>
> **Before we start, can someone tell me what a couple should do before they have sex?**

Answer

- » Get consent
- » Get condoms, lubricant and/or dental dams
- » Discuss safer sex issues, including when they were last tested for STIs and ways that they protect themselves from STIs and (if applicable) pregnancy.

8. **Have the participants put the cards in the proper order on the wall. Encourage all the group members to participate.**

9. **Ask if there are any final adjustments, and allow them to be made.**

10. **When the group has decided how the cards should be placed, verify the correct order or ask questions to prompt the movement to the correct order.**

11. **When the order is correct, review the steps:**

> **ORDER OF *CONDOM LINE-UP* CARDS**
>
> 1. Consent
> 2. Get external condoms and check expiration date
> 3. Sexual arousal (hug, cuddle, kiss, massage)
> 4. Erection
> 5. Carefully remove condom from package
> 6. Dab water-based lubricant on penis or inside condom
> 7. Squeeze out any air from tip of condom and leave room for ejaculation
> 8. Roll condom on
> 9. Intercourse
>
> *(continued)*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

10. Orgasm *(optional)*

11. Hold onto the rim of condom and withdraw the penis

12. Remove and discard condom

13. Loss of erection

14. Relaxation

FACILITATOR'S NOTE

Steps 6 and 7 could be reversed and still be correct. Relaxation can occur at any point throughout the process, and should be a continuous part of the process. Loss of erection can also happen at any time throughout the process. Orgasms are optional and not everyone will experience an orgasm every time.

12. Next, use the following discussion questions to stimulate positive attitudes toward condom use. Say,

"Which steps in this process can involve a partner?"

Answers

» Consent, sexual arousal, rolling condom on, intercourse, orgasm, holding onto rim, removing condom, and relaxation. A partner (of any gender) can also get or buy condoms and have them ready.

"If a person with a penis loses their erection after putting on a condom and before intercourse, what could the couple do?"

Answer

» This will happen to most people with penises at some point in their lives. Have partner take off condom, continue playing and stimulating one another, relax, and enjoy the fun. After a while, put a new condom on as part of the play.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

13. **Summarize by saying,**

> **You did a great job lining up the condom cards and discussing the correct steps in external condom use. Remember and practice these steps so that you can make the proud choice and use condoms correctly every time if you've decided to have sex. Remember, too, that you may also use internal condoms instead of external condoms. It is also important to remember that using two or more condoms at the same time can cause the condoms to weaken and tear. Never use two condoms at the same time. Condoms can be used with other birth control methods such as the pill or withdrawal to increase contraceptive effectiveness.**

OPTIONAL ACTIVITY FOR MIDDLE SCHOOL YOUTH

15. **When using this curriculum with middle school age youth, engage them in a discussion on how condom use can be made easy by asking these questions:**

    - What do you think makes some people uncomfortable about using protection such as external condoms? internal condoms? dental dams?
    - Why do you think other people use these forms of protection?
    - How might someone become more comfortable with the idea of using protection?
    - What might make it easier for someone to get and use condoms? (Use the pre-labeled chart paper to record responses.)

Skip Activity B and move directly to Activity C after this discussion.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY B

HOW TO MAKE CONDOMS FUN AND PLEASURABLE (FOR HIGH SCHOOL YOUTH)

PREPARING FOR THE ACTIVITY

RATIONALE

Helping participants see how they can make condom use fun and pleasurable for themselves and their partners encourages consistent use and a sense of pride and responsibility.

MATERIALS

- Pre-labeled chart paper:
  - *Ways to Make Condom Use Easy and More Fun*
- Markers

TIME

10 minutes

PROCEDURE

1. Introduce this activity by saying,

> People often say that sex doesn't feel as good with a condom so we're going to talk about ways to make the experience more pleasurable.
>
> Remember, I'm not assuming that you're having sex and I'm not encouraging you to have sex. This is information some of you will use right away and others can tuck it away for future reference.

2. Give the following examples of ways to make using condoms more pleasurable:

> - Try different brands to find one that feels most comfortable and natural.
> - Use extra lubricant inside the tip of the condom and on the outside of the condom to increase wetness.

3. Unfold the pre-labeled chart paper titled *Ways to Make Condom Use Easy and More Fun.*

4. Ask participants to brainstorm some ways to make using condoms fun and pleasurable. Record their responses.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

5. **Add the following ideas if they don't get mentioned:**

- Make putting on the condom a part of foreplay.
- Think up a sexual fantasy using condoms.
- Act sexy/sensual while putting on the condom.
- Hide a condom on your body and ask your partner to find it.
- Use extra lubrication inside and outside the condom.
- Experiment with different colors, types and textures of condoms.
- Have a sense of humor and make jokes.
- Tell your partner that using a condom can make an erection last longer.

6. **Now ask participants to think of some ways to make using condoms easy—to keep them from interrupting sex. Give the following examples,**

- You can talk about using condoms/dental dams in advance.
- Always have condoms on you.
- Learn to put the condom on in advance so you can do it more smoothly.
- Make sure you have condoms (or dental dams) close by to eliminate fumbling.
- Have the condom open and ready to use before sex.
- If using an internal condom, have it inserted before sex.

FACILITATOR'S NOTE

Remind youth that the only protective barriers that protect against HIV and other STIs are those made of latex, polyurethane, polyisoprene or nitrile. Anyone who is allergic to latex can use condoms made of the other materials.

Remember that some of the young people may not be sexually active and that for them this discussion may not make much sense. If this is the case, ask the questions in a way that is less personal. You could ask, "What do you think some people do to make condom use easier and more fun?" or "Imagine an advertisement for condoms and dental dams, what might it say that would make people think using condoms is easier and more fun?"

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

Participants should be reminded that only condoms consisting of latex, polyurethane, polyisoprene or nitrile can help protect against STIs. Condoms made from other materials, such as lambskin or other animal membranes, are not effective in preventing the spread of STI.

There are glow in the dark condoms that are latex and safe for STI/HIV protection, as well as flavored, ribbed and other options.

Just as there are different styles of condoms, each brand and type of lubricant is different. People have different preferences and may find that some lubricants feel better than others. Partners can try different brands to find one that feels comfortable and natural.

7. **Ask the group the following questions,**

> Do you feel prepared to use a condom if you have sex?
>
> Do you feel prepared to respond to excuses for not using a condom?

8. **Summarize as follows,**

> Once you and your partner both agree to use condoms, do something positive and fun. Go to the clinic or store together. Get lots of different brands and colors. Plan a special day when you can experiment. Just talking about how you'll use all of those condoms can be a turn-on.
>
> Remember, the proud and responsible thing to do is to always use protection such as latex or polyurethane/polyisoprene condoms if you have sex.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY C

BARRIERS TO CONDOM USE/ CONDOM PROS AND CONS

PREPARING FOR THE ACTIVITY

RATIONALE

Pointing out the positive aspects of condoms—by changing negative statements about condom use into positive ones—may reinforce the need to use condoms correctly and consistently, as well as build self-efficacy. This activity also sets the foundation for roleplaying and proud and responsible decision-making skills.

MATERIALS

- Pre-labeled chart paper:
  - *Pros*
  - *Cons*
- Markers
- Masking tape

TIME

10 minutes

PROCEDURE

FACILITATOR'S NOTE

While doing this activity, you might also bring up the issue of dental dams and find out if the reasons for not using dental dams are similar to those for not using condoms.

1. Introduce this activity by saying,

> There are many reasons why people do or do not use condoms. The reasons people do use condoms are *pros* and the reasons people don't use condoms are *cons* or *barriers to condom use*.

2. Unfold the 2 sheets of chart paper, labeled *Pros* and *Cons*.

3. Ask participants to brainstorm all of the *Pros* (all of the reasons *for* using condoms), and list their answers on the chart paper.

Make sure their list includes:

» Condoms can help prevent pregnancy.

» Condoms can help prevent STIs, including HIV.

» Condoms make you feel good about yourself.

» You know you are safer when you use condoms.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

4. **Ask participants to brainstorm all the *Cons* (all of the reasons people *don't* use condoms).**

Make sure the answers include:

- » Condoms are not available
- » Think condoms ruin the mood and pleasure
- » Using another form of birth control
- » Think condoms don't feel natural
- » Condoms cost too much
- » Don't know where to get free condoms
- » Partner doesn't want to use condoms
- » Embarrassed to bring up the subject
- » Parents might find them
- » Embarrassed to go to the store to buy them
- » Want to show they trust a partner

5. **Explain the following,**

Since you are proud and responsible young people who respect yourselves and want to protect yourselves, let's now change these cons into pros.

6. **Demonstrate by reading one of their cons/barriers and turning it into a pro.**

Example

Con: Condoms don't feel natural.

Pro: Knowing that you are being responsible by using condoms will feel natural and good.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

7. **Then, give each member of the group a chance to change a con into a pro.**

8. **Cross each con off the list as it is changed into a pro.**

9. **Summarize as follows,**

> **Good job. As you can see, we've changed all the *Cons* to *Pros*. There are no cons to using condoms. You will be using this skill again in a later activity.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY D

"WHAT TO SAY IF MY PARTNER SAYS...": RESPONDING TO EXCUSES

PREPARING FOR THE ACTIVITY

RATIONALE

Participants need to examine the excuses sexual partners give for not wanting to use condoms to protect themselves from pregnancy, STIs and sexual transmission of HIV. Practicing what to say if a partner has excuses for not wanting to use a condom prepares the participants to negotiate with a partner.

MATERIALS

- Pre-labeled chart paper:
  - *Excuses Sexual Partners Give*
- Markers

TIME

15 minutes

PROCEDURE

1. Unfold the pre-labeled chart paper titled *Excuses Sexual Partners Give*.

2. Begin the activity by saying,

> This next game is similar to the one we just played. It is about excuses partners might give for not wanting to use a condom.
>
> Let's brainstorm excuses sexual partners give for not wanting to use condoms. What excuses might sexual partners give for not wanting to use a condom?

3. Write their responses on the chart paper.

4. Then say,

> Now let's see if we can change each excuse for not wanting to use a condom into a good reason to use a condom. In other words, what could you say to a potential sexual partner who said the following?

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

5. **Demonstrate by reading one excuse that is listed on the chart paper and by giving a positive response to that excuse.**

Example

Excuse: I don't like the way condoms feel.

Response: I can show you how to make them feel much better.

6. **Then, read each remaining excuse and call on volunteers to respond to them. Say,**

I am going to read more excuses. Your job is to convince me to use a condom.

FACILITATOR'S NOTE

As you read the list of excuses, read only those that were not discussed by the group already. After the participants respond, read the provided response as an alternative.

BREAKING THE MOOD STATEMENTS

Excuse: Condoms ruin the mood for sex.

Response: Only if you let them. With a little imagination, condoms can actually enhance sexual feeling.

OR

Let me show you that it doesn't have to ruin the mood.

SEXUAL ENJOYMENT STATEMENTS

Excuse: Condoms don't feel as good as the real thing…they aren't natural.

Response: Today's thin latex condoms feel quite natural. Let's try a few different types to find the one that feels best. Putting a drop of lubricant inside the tip of the condom can give extra feeling.

OR

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

Internal condoms are made of nitrile, which warms up with body heat. We can use extra lube too.

Excuse: Sex doesn't feel as good with a condom on.

Response: There is plenty of feeling left, and I would feel unsafe without it.

Excuse: Dental dams are messy and smell funny.

Response: Dental dams aren't any messier or smellier than sex. Let's try a polyisoprene dental dam instead of a latex one so it doesn't smell. We can try different lubes too and find one that isn't smelly.

Excuse: Condoms are unnatural and turn me off.

Response: Worrying about unintended pregnancy and STIs turns me off. Condoms will make me feel safer and sexier.

OR

I know how to turn you back on.

Excuse: When I stop to put it on, I'll lose my erection.

Response: Don't worry, I'll help you get it back.

Excuse: Let's do it just this once without a condom.

Response: Once is all it takes to cause a problem, like unintended pregnancy or STI.

OTHER CONTRACEPTIVE METHODS STATEMENTS

Excuse: We don't need to use condoms if we're using the pill!

Response: The pill doesn't help protect you from STIs, including HIV, but condoms do. Proper condom usage can protect our health.

RELATIONSHIP/TRUST STATEMENTS

Excuse: People who use condoms don't trust each other.

Response: It's not a matter of trust—it is a matter of caring for yourself and the person you are with. In fact, both partners share a responsibility for having and using condoms— whether they trust each other or not.

(continued)

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

(continued)

Excuse: I love you. How can you think I would give you an infection?

Response: You wouldn't do it intentionally. But most people don't know when they are infected with an STI.

Excuse: But we've been having sex without condoms.

Response: I know, but we could enjoy each other a lot more if I did not have to worry.

OR

That does not mean it's not a good idea to use them from now on.

DISEASES AND HEALTH STATEMENTS

Excuse: Condoms are for people with diseases. Do I look sick to you?

Response: Unfortunately you can't tell by looking at people if they have an STI. A person can look and feel healthy—and still be infected.

Excuse: I know I am disease free. I have not had sex with anyone in months.

Response: As far as I know, I'm free of disease too. But either of us could have an infection from a previous relationship and not know it. The only way to know if someone has an infection is to get tested.

Excuse: I'm allergic.

Response: I'm glad you told me. We can use a polyurethane or polyisoprene condom. They work for people who have latex allergies. Or we can use internal condoms. They're made of nitrile and they warm up with body heat!

NOT HAVING A CONDOM PRESENT STATEMENTS

Excuse: I do not have a condom with me.

Response: Let's satisfy each other without having intercourse then.

OR

Let's go out and get some condoms, then have sex.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

7. When the group has finished, continue by saying,

> **Are there any additional excuses you think should go on this list?**

8. Record responses and then give these instructions,

> **We're going to do some more practice responding to these kinds of excuses. Here are some things you can include in your responses:**
>
> - **Good reasons to use condoms**
> - **Ways to make using condoms more pleasurable**
> - **Your beliefs about staying healthy and reaching your goals**

9. Ask the participants to brainstorm responses to the following questions (no need to record answers),

> **What if your partner still says no to using condoms even after you've responded to excuses?**

Answer

» Then you should postpone having sex with that person until you both agree to use them.

> **Do you need to use condoms even if you are involved with only one person?**

Answer

» Yes, even if you believe that neither of you has ever had sex with anyone else, shared needles, or had any other possible exposure to HIV. If any of these things aren't true, either one of you could have an STI and not know it. Make a plan to get tested together to know for sure.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Why is it important to use a condom even if you're using another effective method of birth control?

Answer

» Because while other birth control methods can prevent pregnancy, they don't offer protection from STIs, including HIV. Condoms (both external and internal) are the only birth control method besides abstinence that also helps protect you from HIV and other STIs.

How do alcohol and other drugs affect your sexual decisions?

Answer

» Alcohol and other drugs make it more difficult for you to think about what you are doing. They cloud your judgment, and you may do things that you would not normally do. You might not STOP and THINK before acting. And you and/or your partner won't be capable of giving consent.

10. Summarize this activity by saying,

Those were great responses. We will be using this information later when we practice roleplaying. Remember, regardless of what excuse a partner gives, you need to be prepared to explain why you insist on using a condom every time you have sex. Knowing what you're going to say in advance makes it easier to give a response that helps you make the proud and responsible choice of using a latex (or polyurethane/polyisoprene/nitrile) condom and/or dental dam every time you have sex.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY E

INTRODUCTION TO SWAT AND SCRIPTED ROLEPLAYS

PREPARING FOR THE ACTIVITY

RATIONALE

This scripted roleplay activity helps participants identify and practice the skills necessary to slow a situation down and gives alternative ways to clearly say *"NO."* Using the *Observer Checklist* poster helps reinforce specific refusal skills by giving participants a visual reminder as they watch others negotiate a potentially risky situation.

MATERIALS

- Posters:
  - *SWAT*
  - *Observer Checklist*
  - *How to Say "NO" Effectively* (Negotiation and Refusal Skills – Chart 1A)
  - *Examples of a Strong "NO"* (Negotiation and Refusal Skills – Chart 1B)
- Masking tape
- Scripted roleplays:
  - *While They're Out* (Ineffective and Effective Versions)
  - *Your Valentine's Day Gift* (Ineffective and Effective Versions)

TIME

15 minutes

(*Note:* Allow more time, if possible, to practice the SWAT technique and roleplays.)

PROCEDURE

FACILITATOR'S NOTE

Refusal Skills and Consent

Refusal skills are a key component of many evidence-based programs designed to reduce pregnancy, HIV and other STIs among youth. Programs provide instruction and practice in delivering effective refusals, and programs including refusal skills have been shown to reduce sexual risk behaviors and increase their chances of avoiding unwanted sexual pressures.

Affirmative consent is a conscious, voluntary agreement to engage in sexual activity. This consent has to be given throughout the sexual encounter. It is not enough that someone initiates or agrees to have sex. Past sexual relations or a dating relationship should never be assumed to be an indicator of a person's consent to have sex. Policies and laws around affirmative consent protect both partners by making sure they are in agreement and there is mutual understanding of what is happening.

This affirmative consent approach encourages partners to communicate openly about their wishes and boundaries, both prior to and during sexual interactions. It emphasizes the risks to both parties when partners pressure each other and the responsibility of both parties to respect the other's limits.

When teaching refusal skills and evaluating the effectiveness of participants' demonstration of those skills, it is important to affirm the value that no person who experiences sexual pressure, harassment or assault is to blame for being the target of those behaviors. Clear, assertive refusals can be encouraged, while also making sure youth understand that no one "deserves" to be pressured if a NO is unclear.

Instruction on boundaries and respecting another person's NO—both verbal and nonverbal—regardless of perceived clarity

(continued)

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement

© ETR. All rights reserved.

(continued)

can be included to help young people understand the two-way nature of consent, and the importance of honest and respectful communication between friends and potential partners. This would be considered a "green-light" adaptation and can help optimize the success of the skill-building around refusals.

1. Display the *SWAT* poster, the *Negotiation and Refusal Skills Charts 1A* and *1B*, and the *Observer Checklist* poster.

2. Begin this activity by saying,

> We've talked a lot about unintended pregnancy, HIV and other STIs and how to use condoms. But how do you say "NO" when someone is pressuring you to have sex without using a condom?
>
> How do you express your personal boundaries or communicate how far you are willing to go? People set personal boundaries based on what feels right or what is uncomfortable. In dating or intimate relationships, examples of boundaries may include being happy to go to the movies but not be alone in a bedroom, or wanting to kiss but not to have sex.
>
> Being clear on your personal boundaries will help you in situations where you need to make a decision and communicate that clearly. Just as important as setting and communicating your own boundaries is respecting the other person's boundaries and decisions. This is also a sign of a healthy relationship.
>
> Talking about safer sex can be difficult sometimes. However, it is very important that you talk with your sexual partner about your decision to use condoms when you have sex. Talking openly and honestly prevents misunderstandings.
>
> We are going to work on a strategy for talking to your sexual partner about using condoms without blaming, arguing or getting into a fight. The strategy is called the SWAT technique.

3. Explain the following,

> The SWAT technique has four steps. Let's review the steps of the SWAT technique.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

4. Review the entire *SWAT* poster with the participants by reading each letter from the poster and describing what it means.

SWAT

S = Say "NO"

Refuse the unsafe behavior.

W = Explain why

Offer a good explanation as to why you want to be safe. Explaining why helps your partner hear and understand your real concerns and prevents negative reactions.

A = Provide alternatives

Provide safe alternatives to show that you still want to be intimate and have a relationship with this person, as long as it can be safe.

T = Talk it out

Talk openly about each other's feelings to help the relationship grow and ease any tension that may have developed.

5. Next, read each characteristic on the *How to Say "NO" Effectively* chart (Chart 1A).

NEGOTIATION AND REFUSAL SKILLS – CHART 1A

How to say "NO" effectively

Characteristics

- Use and repeat the word "no" often.
- Send a strong nonverbal "no" with your body language, e.g., use hand and body gestures to emphasize the point.
- Project a strong, serious tone of voice.
- Look directly at the person's face and eyes.
- Stand straight and tall.
- Use a serious facial expression.
- Don't send mixed signals.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

6. **Demonstrate how to use those characteristics by modeling the first example from the *Examples of a Strong "NO"* chart (Chart 1B). Model by showing the participants how to read the example with an assertive voice and body language.**

7. **Say to the participants,**

> **Now, each of you will get a chance to read one of the *Examples of a Strong "NO."* When you read your example, say it like you mean it. Be sure to also send a strong nonverbal "no" with your body language, tone of voice and facial expression.**

8. **Go around the group and have each participant read an example aloud.**

> **NEGOTIATION AND REFUSAL SKILLS – CHART 1B**
>
> **Examples of a strong "NO"**
>
> **Examples**
>
> - **No! I'm not ready to have sex yet!**
> - **No! I won't have sex without a condom!**
> - **No! I don't want to touch you there!**
> - **No! Stop touching me like that!**
> - **No! Stop trying to unbutton my pants.**
> - **No! I'm not going to have sex with you!**
> - **No! I really mean 'NO'!**
> - **No! I want to protect myself. We have to use a condom.**
> - **I have not said yes, which means this isn't happening.**

9. **Then say,**

> **You did a great job with that activity. We are now going to do roleplays using the SWAT technique and the *Observer Checklist*.**
>
> **Let's review the *Observer Checklist* poster. The Y/N stands for yes or no.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

10. **Review each item on the *Observer Checklist* poster to ensure participants understand it.**

11. **Then say,**

> Now we are going to do some roleplays. As you watch the roleplays, pay attention to each skill to see whether it has (yes), or has not (no), been used by the actors.

12. **Identify participants to act out the first roleplay. Have them turn to the scripted roleplay *While They're Out* (Ineffective Version) in their workbooks. Whisper to the actor playing Person 2 to avoid eye contact and use a soft tone of voice.**

13. **Begin by reading the Setting the Stage section of the roleplay before having the assigned participants read their parts. Remind the group who is playing Person 1 and who is playing Person 2. Ask the audience to pay attention to Person 2 and make note of the skills that actor uses.**

> **WHILE THEY'RE OUT – INEFFECTIVE VERSION**
>
> **Setting the Stage:**
>
> Your parents are out late. Your partner comes over, hoping to have sex with you. You want to have sex but you want to use condoms. Your partner refuses to use condoms. You decide to share how to make condoms feel much better.
>
> **Person 1:** Why are you stopping now?
>
> **Person 2:** Wait. Do you have a condom?
>
> **Person 1:** No I told you, I don't like the way those things feel.
>
> **Person 2:** Yeah, I know.
>
> **Person 1:** I don't have a condom. I want to be able to feel you, and it doesn't feel as good. Let's just do it without a condom this time.
>
> **Person 2:** I think there are ways using one can feel good. I don't want to get infected with an STI like HIV.
>
> *(continued)*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

Person 1: You won't. And I don't need you to show me anything. I know how condoms are used.

Person 2: I know you know how to use them. And you would never give me an STI. Sorry, I freaked out for a minute.

Person 1: Yeah, I mean I love you. Nothing bad is going to happen.

Person 2: You're right.

They keep kissing.

14. Use the *Observer Checklist* poster to process this roleplay. Point to each skill on the *Observer Checklist* poster and ask the group if they saw it demonstrated in the roleplay:

Did Person 2 say no? *(The person never said no.)*

Did the person refuse to engage in unsafe behavior? *(No)*

Did the person repeat the refusal? *(The person didn't repeat the objection.)*

Did the person's body language say no? *(The person didn't make eye contact and used a soft tone of voice.)*

Did the person explain why? *(The person did not give clear reasons. In addition, the person expressed doubt in their decision.)*

Did the person suggest alternatives? *(The person failed to offer any alternative actions.)*

Did the person talk it out and use language that protected the relationship? *(The person did not talk it over and express their feelings.)*

Did the person seem prepared to leave a potentially unsafe situation? *(No. The person finally gave up.)*

Was there consent in this situation? *(No)*

Even though Person 1 didn't say no, did it seem like they were consenting to sex? *(No)*

Even though Person 1 didn't say no, how might Person 2 know that Person 1 did not consent? *(Unsure or soft tone of voice, no eye contact, only backed down because of pressure)*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

FACILITATOR'S NOTE

Clear, assertive refusals can be encouraged, while also making sure youth understand that no one "deserves" to be pressured for giving an unclear NO. Be sure to affirm the value that no person who experiences sexual pressure, harassment or assault is to blame for being the target of those behaviors.

15. Then have the same two participants read *While They're Out* (Effective Version), keeping the same roles. Whisper to Person 2 to be firm and use strong body language. Again, set up the roleplay by reading the Setting the Stage section. Remind the roleplay group to use the *Observer Checklist* to observe Person 2.

WHILE THEY'RE OUT – EFFECTIVE VERSION

Setting the Stage:

Your parents are out late. Your partner comes over, hoping to have sex with you. You want to have sex but you want to use condoms. Your partner refuses to use condoms. You decide to share how to make condoms feel much better.

Person 1: Why are you stopping now?

Person 2: Wait. Do you have a condom?

Person 1: No I told you, I don't like the way those things feel.

Person 2: Yeah, I know. But I want to use a condom.

Person 1: I don't have a condom. I want to be able to feel you, and it doesn't feel as good. Let's just do it without a condom this time.

Person 2: No. I want to use a condom. I can show you how using one can feel good. I don't want to get infected with an STI like HIV.

Person 1: You won't. And I don't need you to show me anything. I know how condoms are used.

Person 2: I know, but it's better if we do it together. It's a responsible part of having sex. I'm not going to have sex without a condom. So let's get condoms.

Person 1: OK. You're right.

They stop talking and get condoms.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

16. **After the roleplay, thank the roleplaying participants and ask them to return to their seats. Then say,**

> Let's use the *Observer Checklist* to review whether Person 2 used the skills that are listed.
>
> Did Person 2 say no? *(Yes)*
>
> Did Person 2 refuse to engage in unsafe behavior? *(Yes, absolutely)*
>
> Did the person repeat the refusal? *(Yes)*
>
> Did the person's body language say no? *(Yes)*
>
> Did the person explain why? *(Yes)*
>
> Did the person suggest alternatives? *(Yes, the person suggested going to get condoms.)*
>
> Did the person talk it out and use language that protected the relationship? *(Yes, "It's better if we do it together.")*
>
> Did the person seem prepared to leave the situation? *(Probably, but it wasn't necessary.)*
>
> Did Person 1 respect Person 2's personal boundaries? *(Yes.)*
>
> Was there consent in this situation? *(Yes. There was mutual agreement on what to do next.)*
>
> How should this story end? *(If they have sex, each should continue to check how the other person is feeling and whether that person still wants to continue having sex. At any point, if either one says stop, they must stop. Consent can be revoked at any time.)*

17. **After participants respond, ask the following questions:**

> Why was Person 2 more successful in the second version?
>
> Which version showed that they loved and respected themselves and each other enough to practice proud and responsible behavior?

18. **Now ask for two new participants to read *Your Valentine's Day Gift* (Ineffective Version). Remind participants to continue to use the *Observer Checklist*.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

19. **Begin by reading the Setting the Stage section before having the assigned participants act out their parts.**

YOUR VALENTINE'S DAY GIFT – INEFFECTIVE VERSION

Setting the Stage:

It is Valentine's Day. You and your partner are going out to a movie and dinner. You know that at some point having sex will be discussed. You partner is willing to use condoms, but you're just not ready for any of it. You decide to tell your partner that you want to wait to have sex.

Person 1: Happy Valentine's Day! Here is a little something I bought, though I was hoping our gifts to each other would be more than something from a store.

Person 2: Do you mean you were hoping we would have sex?

Person 1: Yes. You don't have to worry. I have condoms.

Person 2: Oh! You are moving so fast.

Person 1: We have been dating for a while. I love you and I'm ready.

Person 2: Well. I love you but I'm just not sure.

Person 1: Don't worry. We're using protection. After all, it's Valentine's Day and what better gift than to share our love?

Person 2: I just have some doubts…I'm scared.

Person 1: You are always going to be scared, but the important thing is that we love each other.

Person 2: *(Reluctantly)* I guess.

They stop talking and begin to have sex.

20. **Use the *Observer Checklist* to process this roleplay. Point to each skill on the *Observer Checklist* and ask the group if they saw it demonstrated in the roleplay:**

From your observations, what was ineffective about this roleplay?

Did the person say no? *(The person never said no.)*

Did the person repeat the refusal? *(No)*

Did the person explain why? *(The person failed to clearly express reasons for waiting, and expressed doubt in the original decision.*

(continued)

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

(continued)

Did the person suggest alternatives? *(The person failed to offer alternative actions.)*

Did the person talk it out? *(The person gave in to his or her partner rather than stating her or his own view.)*

Did Person 1 respect Person 2's personal boundaries? *(No.)*

Was there affirmative consent in this situation? *(No. "I guess" is not affirmative consent.)*

How should this story end? *(They should stop because there is no affirmative consent to have sex.)*

FACILITATOR'S NOTE

Again, encourage clear, assertive refusals, but stress that no one "deserves" to be pressured if the NO is unclear.

21. Now have the same two participants read *Your Valentine's Day Gift* (Effective Version) keeping the same roles. Begin by reading the Setting the Stage section.

YOUR VALENTINE'S DAY GIFT – EFFECTIVE VERSION

Setting the Stage:

It is Valentine's Day. You and your partner are going out to a movie and dinner. You know that at some point having sex will be discussed. Your partner is willing to use condoms, but you're just not ready for any of it. You decide to tell your partner that you want to wait to have sex.

Person 1: Happy Valentine's Day! Here is a little something I bought, though I was hoping our gifts to each other would be more than something from a store.

Person 2: Do you mean you were hoping we would have sex?

Person 1: Yes. You don't have to worry. I have condoms.

Person 2: No. You are moving so fast.

Person 1: No, I'm not. We've been dating for a while. I love you and I'm ready.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

Person 2: Well, I'm not. I love you, but I'm not ready to have with sex you. I know you are the person that I want to be with, but I also know that I need you to be understanding and patient. I want to have sex only when I'm absolutely sure—when I'm not scared or in doubt. So the answer is no.

Person 1: Well, I don't want to feel like I'm pressuring you to do something you don't want to do. It's important that you're sure. So, I guess I'll wait until you're ready.

Person 2: Thanks, for understanding. I love you so much and I'm really glad that you are willing to wait.

They kiss and go to the movies.

22. After the roleplay, thank the roleplaying participants and ask them to return to their seats.

23. Then ask the group to use the *Observer Checklist* to answer the following questions,

What do you think made this roleplay version successful?

How was it different from the first version?

24. Allow participants to respond.

25. Summarize as follows,

You had some really great observations. We just had a chance to practice saying no to unsafe behavior. We also had the opportunity to practice listening for consent.

Remember these SWAT techniques and refusal skills so that you can be proud and responsible and use them whenever you need to discuss abstinence, condom use and safer sex.

NEGOTIATION AND REFUSAL SKILLS – CHART 1A

How to say "NO" effectively

Characteristics

- Use and repeat the word "no" often.
- Send a strong nonverbal "no" with your body language, e.g., use hand and body gestures to emphasize the point.
- Project a strong, serious tone of voice.
- Look directly at the person's face and eyes.
- Stand straight and tall.
- Use a serious facial expression.
- Don't send mixed signals.

Making Proud Choices! © ETR. All rights reserved. A408-20 20-0902

Poster

NEGOTIATION AND REFUSAL SKILLS – CHART 1B

Examples of a strong "NO"

Examples

- No! I'm not ready to have sex yet!
- No! I won't have sex without a condom!
- No! I don't want to touch you there!
- No! Stop touching me like that!
- No! Stop trying to unbutton my pants!
- No! I'm not going to have sex with you!
- No! I really mean 'NO'!
- No! I want to protect myself. We have to use a condom.
- I have not said yes, which means this isn't happening.

SWAT

S = Say "NO"

Refuse the unsafe behavior.

W = Explain why

Offer a good explanation as to why you want to be safe. Explaining why helps your partner hear and understand your real concerns and prevents negative reactions.

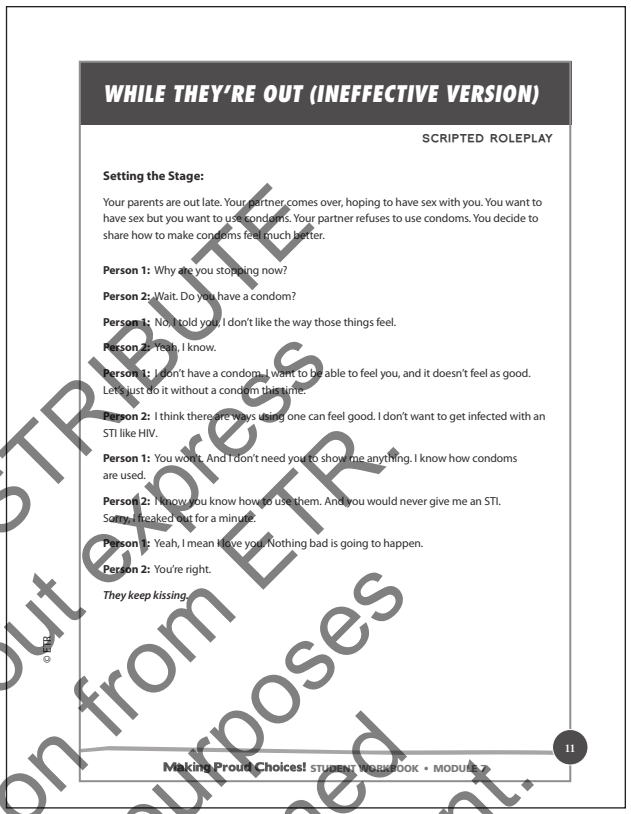
A = Provide alternatives

Provide safe alternatives to show that you still want to be intimate and have a relationship with this person, as long as it can be safe.

T = Talk it out

Talk openly about each other's feelings to help the relationship grow and ease any tension.

Making Proud Choices! © ETR. All rights reserved. Poster



WHILE THEY'RE OUT (INEFFECTIVE VERSION)

SCRIPTED ROLEPLAY

Setting the Stage:

Your parents are out late. Your partner comes over, hoping to have sex with you. You want to have sex but you want to use condoms. Your partner refuses to use condoms. You decide to share how to make condoms feel much better.

Person 1: Why are you stopping now?

Person 2: Wait. Do you have a condom?

Person 1: No, I told you, I don't like the way those things feel.

Person 2: Yeah, I know.

Person 1: I don't have a condom. I want to be able to feel you, and it doesn't feel as good. Let's just do it without a condom this time.

Person 2: I think there are ways using one can feel good. I don't want to get infected with an STI like HIV.

Person 1: You won't. And I don't need you to show me anything. I know how condoms are used.

Person 2: I know you know how to use them. And you would never give me an STI. Sorry, I freaked out for a minute.

Person 1: Yeah, I mean I love you. Nothing bad is going to happen.

Person 2: You're right.

They keep kissing.

YOUR VALENTINE'S DAY GIFT (INEFFECTIVE VERSION)

SCRIPTED ROLEPLAY

Setting the Stage:

It is Valentine's Day. You and your partner are going out to a movie and dinner. You know that at some point having sex will be discussed. You partner is willing to use condoms, but you're just not ready for any of it. You decide to tell your partner that you want to wait to have sex.

Person 1: Happy Valentine's Day! Here is a little something I bought, though I was hoping our gifts to each other would be more than something from a store.

Person 2: Do you mean you were hoping we would have sex?

Person 1: Yes. You don't have to worry. I have condoms.

Person 2: Oh! You are moving so fast.

Person 1: We have been dating for a while. I love you and I'm ready.

Person 2: Well. I love you but I'm just not sure.

Person 1: Don't worry we're using protection. After all, it's Valentine's Day and what better gift than to share our love?

Person 2: I just have some doubts…I'm scared.

Person 1: You are always going to be scared, but the important thing is that we love each other.

Person 2: *(Reluctantly)* I guess.

They stop talking and begin to have sex.

MODULE 8

ENHANCING REFUSAL AND NEGOTIATION SKILLS

GOALS

The goals of this module are to:

- Increase participants' communication and negotiation skills regarding condom use.
- Enhance participants' ability to resist situations that increase their risk for unintended pregnancy, HIV and other STIs.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- Demonstrate body language and strategies for effectively saying no to unprotected sex.
- Identify strategies for negotiating safer sex with a sexual partner.
- Demonstrate the ability to negotiate condom use with a partner.
- Express pride about sticking to decisions that can help them to achieve their goals.

MODULE PREVIEW

The eighth module: (1) provides an opportunity for participants to practice condom negotiation skills; and (2) provides an opportunity for participants to practice communication and negotiation skills with a partner.

STRATEGIES/METHODS

- Roleplays
- Group Discussion
- Mini-Lecture
- Skills Practice
- Video Viewing
- Closing Circle

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- *Negotiation and Refusal Skills Charts 1A, 1B, 2, 3 & 4*
- *Observer Checklist* poster
- *SWAT* poster
- *Roleplay Guidelines* poster
- Video: *Wrap It Up* (or alternative videos*)
- Roleplays and worksheet in the student workbook:
  - » *Roleplay A: Jamie and Taylor*
  - » *Roleplay B: Justice and Angel*
  - » *Roleplay C: Kayla and Mia*
  - » *Roleplay D: Devon and Jadon*
  - » *Roleplay E: Casey and Alex*
  - » *Observer Checklist*
- *Optional:* Additional roleplay scenarios found in Appendix A

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Monitor and video player, or internet access if using alternative videos
- Pencils
- Masking tape

INSTRUCTIONAL TIME: 60 minutes

(*Note:* Facilitators may wish to extend the time to allow for further practice of the SWAT technique and roleplays.)

ACTIVITY	MINUTES NEEDED
A. Safer Sex Negotiation Skills and *Wrap It Up* Video*	**15**
B. Practicing and Enhancing Negotiation Skills: Unscripted Roleplays	**35**
C. Talking to Your Partner about Condom Use - Information Review	**5**
D. Closing Activity	**5**

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.

ACTIVITY A

SAFER SEX NEGOTIATION SKILLS AND *WRAP IT UP* VIDEO*

PREPARING FOR THE ACTIVITY

RATIONALE

Practicing strategies for negotiating condom use with their sexual partner provides participants with additional skills necessary to help reduce their risk for unintended pregnancy, and STIs or HIV infection.

MATERIALS

- Posters
  - *Negotiation and Refusal Skills Charts 1A, 1B, 2, 3 & 4*
  - *Observer Checklist*
  - *SWAT*
- Video: *Wrap It Up*, or alternative videos
- Monitor and video player, or internet access if using alternative videos

TIME

15 minutes

(*Note:* Allow more time, if possible, to practice the SWAT technique and to view the video.)

PROCEDURE

FACILITATOR'S NOTE

This is a quick but important activity. Please maintain a lively pace as you review the negotiation skills and have group members practice the skills of offering explanations, providing alternatives to unsafe sex and talking it out. Plan to spend no more than 7 minutes on this review and practice. The video is 6 minutes so you'll need the final 8 minutes to show the video and have group members critique the actor's skills.

1. Hang the *Observer Checklist* poster, *SWAT* poster, and the *Negotiation and Refusal Skills* charts.

2. Introduce this activity by saying,

> Talking about condom use can be difficult. However, it is very important that you talk with your partner about protection and safer sex. This should include what types of protection to use, such as external or internal condoms and dental dams. Having an open, honest discussion can help avoid misunderstandings.
>
> We are going to work on a strategy for getting your partner to agree to use condoms, without blaming, arguing or getting into a fight.
>
> Earlier we reviewed the SWAT technique for negotiating safer sex and the "S" part of the SWAT technique: Say "NO."
>
> Now let's review the other steps of SWAT: "W," which is Explain Why, "A," which is Provide Alternatives, and "T," which is Talk It Out.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

3. Show *Negotiation and Refusal Skills Chart 2—Explain Why*. Say,

> Let's start with *Explain Why—Give Clear Reasons to Support Your Choice*, which is the "W" part of the SWAT technique. The chart shows examples of explanations you might offer for why you are saying no to unsafe sex.
>
> We will go around the group and I would like each of you to read aloud an example of an explanation that you can offer to a partner. When you say the statement, say it like you really mean it.

4. Go around the group and ask each participant to read aloud an example from the chart until all the examples have been read. Encourage participants to make up their own examples as well.

> **NEGOTIATION AND REFUSAL SKILLS – CHART 2**
>
> **Explain why**
>
> Give clear reasons to support your choice.
>
> **Examples**
>
> - I want to protect myself with a condom every time I have sex.
> - No, I won't risk my future goals by having unprotected sex.
> - Condoms help prevent unintended pregnancy, HIV and other STIs.
> - I am not ready to have a child (again).

5. Now, follow the same procedure with *Negotiation and Refusal Skills Chart 3—Provide Alternatives*. Say,

> Let's move on to *Provide Alternatives—Suggest Something Else*, which is the "A" part of the SWAT technique. The chart gives examples of alternative actions you might provide instead of having sex. Once again, we will go around the group, and I would like each of you to read aloud an example of an alternative action statement. When you say the statement, say it like you really mean it.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

6. Go around the group and ask each participant to read aloud an example from the chart until all the examples have been read. Encourage the participants to make up their own examples as well.

NEGOTIATION AND REFUSAL SKILLS – CHART 3

Provide alternatives

Suggest another action.

Examples

- Let's go buy some condoms right now.
- Let's get out of the bedroom. It makes me feel uncomfortable.
- If you're willing to use a condom, then we can have sex.
- Let's do something else that will feel good for both of us, since we don't have a condom.
- Let's go get something to eat.
- Let's go see a movie.

7. Now follow the same procedure with *Negotiation and Refusal Skills Chart 4—Talk It Out*. Say,

> Now let's work on the last part of SWAT: Talk It Out—Discuss Your Feelings, which is the "T." These are examples of how you might discuss your feelings about practicing safer sex. We will go around the group and I would like each of you to read aloud an example of a talk it out statement. When you say the statement, say it like you really mean it.

8. Go around the group and ask each participant to read aloud an example from the chart until all the examples have been read. Encourage the participants to make up their own examples as well.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

NEGOTIATION AND REFUSAL SKILLS – CHART 4

Talk it out

Discuss your feelings.

Examples

- I feel like you don't really care about me when you pressure me like this.
- I'm not ready to have a baby. I would feel better if we use a condom.
- I'm glad you agreed to use condoms. I feel like you really care about me.
- You really turn me on when you touch me, but I won't have sexual intercourse without a condom.
- If you can't respect my feelings, then I'm prepared to end this relationship.
- Our future goals and dreams are more important than a moment of unsafe pleasure, so I'm glad we decided to use condoms.

9. Introduce the *Wrap It Up* video or alternative video(s) by saying,

> We are going to see a short video about a couple who are in a negotiation about using condoms. In this roleplay, one partner wants to use condoms and the other does not. Watch what happens, and take note of how they handle the situation, the things they say and how they say them, and be alert to the strategies used to convince a partner to use condoms.

10. Show the video, which is 6 minutes long.

11. Review the video using the *Observer Checklist*.

12. Process this activity by discussing the following questions,

- Did the person who wanted to use condoms use the SWAT Refusal and Negotiation Skills we talked about before? How?
- Did they say no?
- Did they offer an explanation?
- Did they provide alternatives?

(continued)

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

(continued)

- **Did the two people talk it out?**
- **Did you think that they had any difficulty? If so, what?**
- **What were the partner's concerns about using a condom?**
- **What did the person who wanted to use condoms say to respond to their partner's statements and concerns?**
- **Was the person who wanted to use condoms ready to walk away from the relationship, if necessary?**
- **Were their personal boundaries and choice respected?**
- **Was there consent?**

13. **Continue processing with the following questions,**

» What could have happened if one partner decided to continue pressuring the other for sex while refusing to honor that person's decision to use protection?

» What were some other points in the story when their relationship could have turned into harassment, abuse or violence?

» The video was about a heterosexual relationship (boyfriend/ girlfriend). Could this happen in other types of adolescent relationships?

» If you suspect a friend may be in an abusive relationship or is being used by someone in a sexual way, what would you do?

14. **Summarize as follows,**

You have demonstrated a really good understanding of healthy and unhealthy relationships. As we have seen here, the foundation of a healthy relationship is respect, and it is guided by open and honest communication. You also learned refusal and negotiation skills that could help you in your relationships. It sounds like you are ready for the roleplays we will be doing shortly.

FACILITATOR'S NOTE

You should determine the roles for the next roleplays before the activity begins. Having spent approximately 7 hours with this group, you will be able to assign the roles that best facilitate learning. All group members should participate.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY B

PRACTICING AND ENHANCING NEGOTIATION SKILLS: UNSCRIPTED ROLEPLAYS

PREPARING FOR THE ACTIVITY

RATIONALE

This activity allows participants guided practice for negotiating condom use with a partner in a controlled and safe environment. This practice increases their skills and feelings of confidence about condom negotiation and the likelihood that they will use these negotiation skills in real-life situations. Those not participating directly in the roleplay have the opportunity to identify helpful strategies and coach the actors.

MATERIALS

- Posters:
  - *Roleplay Guidelines*
  - *Observer Checklist*
  - *SWAT*
  - *Negotiation and Refusal Skills Charts 1A, 1B, 2, 3 & 4*
- Student workbook:
  - *Observer Checklist*
  - *Roleplays (A–E)*
- *Optional:* Additional roleplays found in Appendix A

TIME

35 minutes

PROCEDURE

FACILITATOR'S NOTE

During the roleplay practice, participants may roleplay sexual pressure situations with someone of a different or the same gender. This may be awkward for straight teens who are sensitive to the suggestion of same-sex romance, for teens who identify as gay or lesbian, or for teens who are transgender or gender nonconforming. It's important to address this situation directly and proactively.

Here are some tips:

- Explain the situation in a matter-of-fact way. Let participants know that they may be doing the roleplays with someone of a different or the same gender.
- Emphasize that they are playing roles. Doing the roleplay to practice the skill doesn't say anything about the sexual orientation of the people doing the roleplay or mean that anyone is expressing a real-life attraction toward the other person in the roleplay.
- Explain that they need to take their roles seriously because teens of all sexual orientations and gender identities need to learn how to resist sexual pressure and negotiate condom use to protect themselves. This will help ensure that they all get the most out of the roleplay activities.

1. Post the *Roleplay Guidelines* poster before starting this activity.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified on signed April 2025 agreement.

© ETR. All rights reserved.

2. **Begin this roleplay activity by saying,**

> In a little while, we are going to roleplay some situations to practice using these techniques in pressure situations.
>
> Try to incorporate everything you have learned so far. Be creative in your approach.

3. **Ask participants to define roleplaying.**

4. **After their responses, say,**

> Right! Roleplaying is a technique that can help you learn what it feels like to be someone else or to practice how to handle a situation that is new, difficult or in some way stressful.
>
> You should do your best to feel, sound and behave like the person you are roleplaying. You are trying to behave in a way that will help you and everyone else learn.
>
> It is important to follow some guidelines when you do roleplays. Let's review them now.

5. **Review each item on the *Roleplay Guidelines* poster. Remind the group to also use the *Negotiation and Refusal Skills Charts*.**

> **ROLEPLAY GUIDELINES**
>
> - Read your role carefully and think about how that person would really behave.
> - Do your best to stay in character through the whole roleplay.
> - Don't let comments and laughter distract you.
> - Really try to feel and act like the person you are playing.
> - Try things that you might not do ordinarily, just to see how it feels.
>
> *(continued)*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

- **Use SWAT:**
  - » **Say no; repeat it; use strong body language.**
  - » **Explain why you don't want to engage in unsafe behavior.**
  - » **Provide alternatives.**
  - » **Talk it out.**

6. **Have participants turn to the *Observer Checklist* worksheet in their workbooks and explain the following,**

> **This checklist will be used to critique the following roleplays just like we have been using the *Observer Checklist* poster. Put a "Y" in the box for each skill you see demonstrated in each roleplay and an "N" in the box for each skill that is NOT demonstrated.**

7. **If you don't have a co-facilitator, choose a group member to model Roleplay A with you (preferably someone who was identified in advance). You should play the role of Jamie, the person being pressured. The participant should play the role of Taylor. Have the participant turn to Roleplay A in the workbook and give them a minute to think about the role.**

8. **Put two chairs in the middle of the group, angled toward each other and facing the *Negotiation and Refusal Skills Charts*.**

9. **Remind observers to use their *Observer Checklists* to critique Jamie.**

10. **Start by saying,**

> **The rest of you can coach us if we get stuck in the roleplay. Remember that no one says *ALL* the right things in every conversation. But we can always go back to our partners and say more about thoughts and feelings another time.**

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

11. Read aloud the scenarios for both characters, then perform the roleplay.

ROLEPLAY A

Theme: Loss of trust and sexual pleasure through condom use

Observe: Jamie Using SWAT

(JAMIE and TAYLOR talking)

Jamie

You and your sexual partner (Taylor) are in your partner's living room with the lights down low and things are starting to get physical. You are trying to tell Taylor that you want to use protection, and Taylor is beginning to get angry. Taylor doesn't think sex will feel as good and does not want to use protection. But you want to use protection because you respect yourself. Your health is important to you and you want to protect yourself because you are worth it!

Your task is to convince Taylor that sex can be just as pleasurable with condoms/dental dams.

Taylor

You and your partner (Jamie) are at your place and things are getting very intimate. Jamie is starting to talk about using protection and you are getting angry. Does Jamie think you have been sleeping around? You don't think using protection feels good and truly believe it will ruin the mood.

Your task is to convince Jamie to have sex without protection.

12. Review participants' responses on the *Observer Checklist* by going over each item on the checklist. Encourage everyone, including the actors, to give input. Ask,

- Did Jamie use the SWAT technique?
- Did Jamie say no?
- Did Jamie explain why?
- Did Jamie provide alternatives?
- Did they talk it out?
- What could Jamie have done differently?

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

13. Continue to process the roleplay using the following questions,

> • What methods/strategies did Jamie use to get the message across?
> • Actors, what pressures were your characters feeling?
> • Were there any misunderstandings or breakdowns in communication?
> • Did these characters seem realistic to you?
> • How would you have handled the situation differently?

14. Summarize Roleplay A by saying,

> Condoms don't have to ruin sex. There are different techniques that can make condom use pleasurable and fun. It is important to talk about condom use ahead of time, before any touching or kissing begins. People have expectations in certain situations. If something happens that you don't like, tell your partner.

15. Have the first pair of participants turn to Roleplay B in their workbooks. Encourage the participants to be themselves, but to also pretend as if this were a real situation for them.

16. Explain to the roleplay participants,

> You are using these roleplays to practice talking to a partner. I'll give you about a minute to read and decide how you will perform the roleplay.

17. Explain the following to everyone,

> If, at any time, the players need help or the observers wish to move into a player's spot, raise your hands to signal me.

18. Tell observers which character to observe. (The character they should observe in each roleplay is underlined and described first.) In Roleplay B, the person is Justice. The goal of this roleplay is for Justice to be proud and responsible and resist pressure to have unsafe sex.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

19. **Remind observers to fill out the *Observer Checklist* as they watch the roleplay.**

FACILITATOR'S NOTE

After a few roleplays, participants may no longer need the *Observer Checklist*, but you should continue to go over each skill.

20. **Read aloud the scenarios for both characters in Roleplay B. Then have the players present the roleplay.**

FACILITATOR'S NOTE

Your job is to be sure that important issues are addressed and that participants feel that they can effectively use their skills. Give suggestions and help as they need it. Do not allow disagreement to continue too long or for anti-condom roles to win.

You may wish to have participants replay the roleplay again, having the audience help out, or play one of the roles yourself in order to show alternatives. What is important is that participants practice communicating even when the situation is difficult. In real life, one of the hardest things to do is to fully explain yourself and be understood.

Participants can also be divided into coaching groups to help each other out. This develops a cooperative atmosphere and is very energizing for the participants.

ROLEPLAY B

Theme: Condom use versus partner trust

Observe: Justice using SWAT

(JUSTICE and ANGEL talking)

Justice

You have been going out with Angel for a while now and you want to talk about using condoms. You know Angel has had sex with other people, and you are concerned about pregnancy and STIs, especially HIV, and want to use a condom. But you also don't want to lose Angel. You think you're falling in love.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

Angel may be offended because you're already using the pill for birth control, but you mention condoms anyway. You want to be with Angel, but only if you can be safer.

Your task is to resist the temptation to have unsafe sex but still keep the relationship.

Angel

Your partner (Justice) just suggested that you start using condoms. You feel that Justice does not trust you if Justice is afraid to have sex with you without using a condom.

Your older sibling told you that you don't have to use condoms when you really love someone. You want to prove Justice trusts and cares about you by not using condoms.

Your task is to try to convince Justice not to use condoms.

21. Review the participants' responses on the *Observer Checklist* by asking the following questions,

- Did Justice use the SWAT technique?
- Did Justice say no?
- Did Justice explain why?
- Did Justice provide alternatives?
- Did they talk it out?
- What could Justice have done differently?

22. Continue to process the roleplay using the following questions,

- Actors, what pressures were your characters feeling?
- Were there any misunderstandings or breakdowns in communication?
- Which decisions would you make in a situation like this?
- Do you know anyone who doesn't want a partner to use condoms?
- Would you risk losing your partner in order to protect yourself?

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

23. **Summarize Roleplay B by saying,**

> Relationships can be very complicated sometimes. Talking about condoms isn't always easy. Just remember, using condoms does not mean that you distrust your partner, it means that you care enough about yourself and your partner to make sure that you are *BOTH* protected.

24. **Have the next pair of participants turn to Roleplay C in their workbooks.**

25. **Tell observers which character to observe. In Roleplay C, the person is Kayla. The goal of this roleplay is for Kayla to be proud and responsible and resist pressure to have unsafe sex.**

26. **Remind observers to fill out the *Observer Checklist* as they watch the roleplay.**

27. **Read aloud the scenarios for both characters in Roleplay C, and then have the players present the roleplay.**

> **ROLEPLAY C**
>
> **Theme:** Two friends talk about protection
>
> **Observe:** Kayla using SWAT
>
> *(KAYLA and MIA talking)*
>
> **Kayla**
>
> Your friend, Mia, is upset because a partner wants to use protection. You have never used protection either, but you just finished this program at school about pregnancy, HIV and safer sex, and now you feel a lot differently about it.
>
> Your partner dated other people before you and had sex with them. Your partner wasn't your first either. Now you understand how important it is to reduce the risk for yourself and your partner by always using protection.
>
> While Mia is telling you all the reasons for not using condoms or other protection, you are trying to convince Mia that protection is a good idea. Maybe you can get Mia to go to the clinic with you to get protection.
>

(continued)

Your task is to resist Mia's pressure to have unsafe sex and still keep your friend's respect.

Mia

Your girlfriend told you that if you want to have sex you have to use dental dams. You've heard others talk about this at basketball practice. They say that rubber is nasty and you should feel the "real thing."

You're not trying to be difficult, but nobody is going to force you to use protection! Besides, you only go out with other girls so neither of you is going to get pregnant. And you're not worried about diseases because your new girlfriend is young.

Your friend, Kayla, wants to start using protection because of her class about STIs. You can't even respect Kayla anymore if she can't be real.

Your task is to convince Kayla that protection is a bad idea.

28. Review the participants' responses on the *Observer Checklists* asking the following questions,

- Did Kayla use the SWAT technique?
- Did Kayla say no?
- Did Kayla explain why?
- Did Kayla provide alternatives?
- Did they talk it out?
- What could Kayla have done differently?

29. Process the roleplay using the following questions,

- What kept Mia from using protection?
- What are some of the consequences Mia could be facing for having intercourse without using protection?
- What do you think convinced Kayla to start practicing safer sex?

(continued)

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

(continued)

- Was Kayla able to convince Mia? If so, how? If not, are they still friends?
- Were there any misunderstandings or breakdowns in communication?
- Why is it important to use condoms or dental dams every time you have sexual intercourse or oral sex?

30. Summarize Roleplay C by saying,

> Once you make the decision to protect yourself, convince a friend to do the same. That way, you can both be protected and have some answers for the next friend who needs to know how to stay safer.

31. Have the next pair of participants turn to Roleplay D in their workbooks.

32. Tell observers which character to observe. In Roleplay D, the person is Devon. The goal of this roleplay is for Devon to be proud and responsible and resist pressure to have unsafe sex.

33. Remind observers to fill out the *Observer Checklist* as they watch the roleplay.

34. Read aloud the scenarios for both characters, and then have participants present the roleplay.

> **ROLEPLAY D**
>
> **Theme:** Initiating use of protection in an existing relationship
>
> **Observe:** Devon using SWAT
>
> *(DEVON and JADON talking)*
>
> **Devon**
>
> You and your partner, Jadon, have been sexually active for a while. However, you have just completed a program called *Making Proud Choices!* You are thinking about the things you didn't know and the things that concern you. You think about your own behaviors. You think about Jadon's past sexual life
>
> *(continued)*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement

© ETR. All rights reserved.

(continued)

and your own past sexual life. And now you begin to worry because you and your partner have been sexually active without using protection. Now you want to use protection. You know Jadon is stubborn and gets jealous very easily. You are afraid to say that you are concerned about HIV because Jadon might believe you are cheating, or even go and find a new partner.

You decide to tell Jadon about the program and all the important information you learned and that you want to use protection if you have sex again. When Jadon arrives, you are looking at the information about STI protection that was given to you at the program.

Your task is to convince Jadon that you want to be proud and responsible and use protection.

Jadon

You have never used a condom or dental dam and don't want to. You have been having sex with Devon for a while now and have never used protection before. You believe that if Devon suddenly wants to use protection, then Devon must be cheating on you. You also believe that condoms/dental dams are not natural and sex won't feel as good if you use them.

Your task is to convince Devon not to use condoms.

35. Review the groups' responses on the *Observer Checklist* by going over each item on the checklist. Include input from the actors as well. Ask the following questions:

- Did Devon use the SWAT technique?
- Did Devon say no?
- Did Devon explain why?
- Did Devon provide alternatives?
- Did they talk it out?
- What could Devon have done differently?

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

36. Continue to process the roleplay using the following questions,

- What methods/strategies did Devon use to get the message across?
- Actors, what pressures were your characters feeling?
- Were there any misunderstandings or breakdowns in communication?
- How would you have practiced safer sex differently in that situation?

37. Summarize Roleplay D by saying,

Condoms don't make a person weak. They don't have to ruin sex. There are different techniques that can make condom use pleasurable and fun. The bottom line is you should take responsibility and be comfortable and confident in your choice to be safer.

38. Have the next pair of participants turn to Roleplay E in their workbooks.

39. Tell observers which character to observe. In Roleplay E, the person is Alex. The goal of this roleplay is for Alex to be proud and responsible and resist pressure to have unprotected sex.

40. Remind observers to fill out the *Observer Checklist* as they watch the roleplay.

41. Read aloud the scenarios for both characters, and then have participants present the roleplay.

ROLEPLAY E

Theme: Possible loss of partner through condom use

Observe: Alex using SWAT

(ALEX and CASEY talking)

Alex

You have been dating Dominique for a few months. You really like Dominique and think this might be serious. You have decided to have sex, but you really want to use condoms.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

Your best friend (Casey), who is dating Dominique's best friend (Chase), doesn't think you should mention condoms to Dominique because you might create trouble in the relationship.

You know Dominique has never used condoms before but you won't have sex without a condom. Besides, you learned how to make condoms feel better.

Your task is to resist Casey's pressure, but not lose the friendship. You think Casey should be using condoms too.

Casey

You and your close friend (Alex) are going out with Chase and Dominique, who are also friends and a few years older than you.

You and Chase have had sex a couple of times and never used a condom. You think you might lose Chase if you ask to use a condom.

Your friend, Alex, is getting very close to having intercourse with Dominique. They're using birth control, but also want to use condoms.

You tell Alex that sex feels much better without condoms (even though you've never tried them).

You're afraid that if Alex insists on using a condom, Alex might lose Dominique.

Your task is to try to convince Alex to have sex without using a condom.

42. Review the group's responses on their *Observer Checklists* by asking,

- Did Alex use the SWAT technique?
- Did Alex say no?
- Did Alex explain why?
- Did Alex provide alternatives?
- Did they talk it out?
- What could Alex have done differently?

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

43. **Process the roleplay using the following questions,**

- What strategy did Alex use to continue to be safer?
- Actors, what pressures were your characters feeling?
- Would anyone have handled this situation differently?
- Did the roleplay seem realistic to you?

44. **Summarize Roleplay E by saying,**

If you value and care about your best friend, you should help your friend make safer decisions. You can even teach your friend how to make condoms pleasurable.

45. **Repeat two of the more successful roleplays, if time allows, using different participants to show how similar situations can be handled in different ways.**

46. **Remind observers to continue to use the *Observer Checklist*.**

47. **Summarize by saying,**

Wow! You have really learned a lot in this program. Your roleplays show that you have picked up quite a few skills also. I hope that you remember and use your knowledge and skills whenever the need arises.

All couples have to communicate and negotiate. And all couples who have decided to have sex must take steps to avoid negative consequences, regardless of their sexual orientation. In a healthy relationship and when you really care about your partner, it's usually easier to talk about safer sex. It's important to choose relationships where both parties care about each other's goals, health and values.

Remember to be proud, be responsible and make proud choices because the choices that you make now can help you reach your goals for the future.

ACTIVITY C

TALKING TO YOUR PARTNER ABOUT SAFER SEX—INFORMATION REVIEW

PREPARING FOR THE ACTIVITY

RATIONALE

This activity provides tips and encouragement for applying the communication and negotiation skills that have been learned thus far, with the hope of ensuring that the knowledge, positive attitudes and skills will translate into behavior.

MATERIALS

None

TIME

5 minutes

PROCEDURE

1. Remind participants that using condoms (and/or dental dams) is an expression of responsibility for yourself and of pride in your own decisions. Say,

> There is no doubt that using condoms and other protection is a good idea because they make sex safer. It is important to choose latex or polyurethane/polyisoprene condoms and use them correctly.
>
> You may have to overcome your partners' reluctance. But, if you choose to have vaginal, anal or oral sex, using a condom (or dental dam) is the first and most important step.

2. Ask participants to brainstorm some suggestions that would make talking to a partner about using condoms easier. (No need to record their responses). Supplement their answers with the following:

> - Think about what you want to say ahead of time. Sort out your own feelings about using condoms and other protection before you talk with your partner.
> - Choose a time to talk before anything sexual happens. Getting things clear before you have sex means you will both be prepared and relaxed.
> - Decide how you want to start the conversation. You might say, "I need to talk with you about something

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

that is important to both of us," or "I've been hearing a lot lately about safer sex. Have you ever tried condoms?" or "I feel kind of embarrassed, but I care too much about you not to talk about this."

- The best time to discuss protection is certainly before any touching below the waist.
- Once you both agree to use condoms, do something positive and fun. Go to the store together. Buy lots of different brands and colors. Plan a special day when you can experiment. Just talking about how you'll use all of those condoms can be a turn-on.

3. Ask participants to brainstorm ways to avoid becoming pregnant or infected with HIV or another STI. (No need to record their responses.) Supplement their answers with the following:

- Practice safer sex (use latex or polyurethane/polyisoprene condoms/ dental dams).
- Talk to your sexual partner about pregnancy, HIV and other STIs.
- Insist on using a condom/protection whenever you have sex.
- If you can get pregnant, use an effective method of birth control (IUD, implant, shot, pill, patch or ring).
- Educate yourself about unintended pregnancy, HIV and other STIs.
- Ask about your partner's sexual and drug use history.
- Get tested for and treated for HIV and other STIs.
- Encourage partners with HIV to get ART and stay on treatment.
- Encourage partners with other STIs to get and stay on treatment.
- If you think you might be at risk for HIV because of an infected partner, talk to your doctor about getting on PrEP.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

4. **Reinforce tips for consistent condom use by saying,**

> **Protect yourself and your partner by:**
>
> - **Using a latex or polyurethane/polyisoprene condom (or dental dam) every time you have vaginal, oral or anal intercourse.**
> - **Keeping a supply of condoms on hand.**
> - **Getting used to condoms, so they seem natural and fun.**

5. **Summarize what they learned from the program's activities as follows,**

> **We've covered a lot of information in this program. However, I want you to remember 5 very important things:**
>
> 1. **Unintended pregnancy, HIV and other STIs are potential outcomes of unprotected sex that can sometimes make it harder to reach your future goals and can also harm your health.**
> 2. **Whatever you've had to overcome in life, you can use that strength to make proud and responsible choices to avoid these unintended outcomes.**
> 3. **Even if you've had sex in the past, you can choose to abstain from sexual intercourse at this point in your life.**
> 4. **If you're going to have sex, that choice comes with the responsibility to use protection—condoms and/or dental dams to prevent HIV and other STIs, and effective birth control to prevent pregnancy.**
> 5. **Strive to have healthy relationships. Choose to be with someone who cares about your goals and your health. Talk about using protection at a calm time and don't wait until just before or during sex.**

6. **Remind participants of resources,**

> **There are a number of resources we covered throughout the program. I want to make sure you have a list to refer to if or when you need resources or help.**

FACILITATOR'S NOTE

Make sure you have referral resources for the youth completing your program. It should include reproductive health care clinics; LGBTQ centers and organizations such as PFLAG or GSA; and STI and HIV Hotlines. Also include:

- LYRIC Youth Talk Line (800) 246-PRIDE
- Youth Legal Information Line (NCLR) 800-528-NCLR (6257)
- National Runaway Hotline 800-231-6946.

ACTIVITY D

CLOSING ACTIVITY

PREPARING FOR THE ACTIVITY

RATIONALE

This activity provides participants a sense of closure to the program.

MATERIALS

None

TIME

5 minutes

PROCEDURE

1. Ask the participants to form a tight circle with their chairs.
2. Ask each participant to share how something learned in the group will help in achieving goals and dreams for the future.
3. Thank the participants for their attendance and let them know how much you enjoyed working with them.
4. Summarize the activity by saying,

> Those were good responses. I am very proud of each and every one of you. Thank you for being part of this program. Now you can teach your friends and family what you've learned here.
>
> I have every confidence that you're going to make the proud and responsible choice to always practice safer sex whenever you decide to have intercourse with someone.
>
> Remember, practicing safer sex is the proud and responsible choice to make and will help you achieve your dreams.

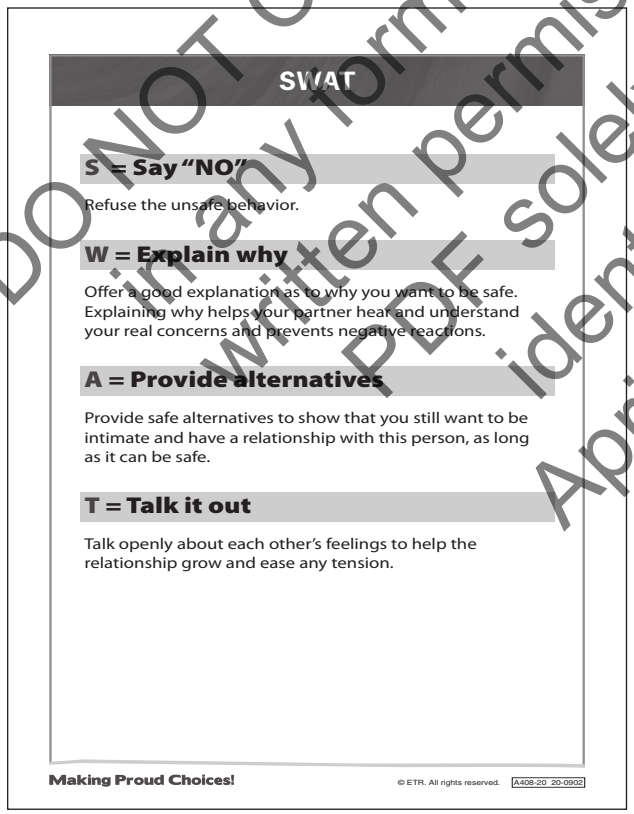
Making Proud Choices! STUDENT WORKBOOK • MODULE 8 25

Worksheet



SWAT

S = Say "NO"

Refuse the unsafe behavior.

W = Explain why

Offer a good explanation as to why you want to be safe. Explaining why helps your partner hear and understand your real concerns and prevents negative reactions.

A = Provide alternatives

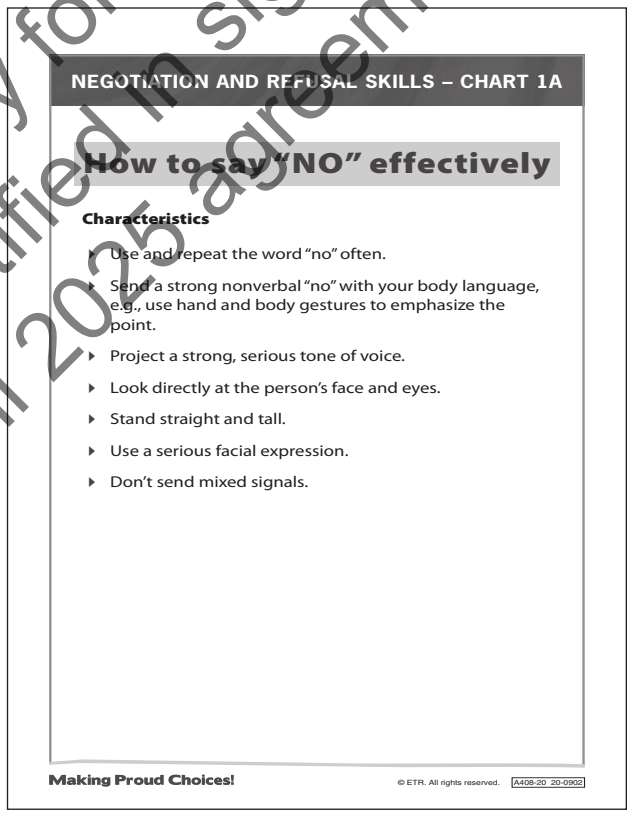
Provide safe alternatives to show that you still want to be intimate and have a relationship with this person, as long as it can be safe.

T = Talk it out

Talk openly about each other's feelings to help the relationship grow and ease any tension.

Making Proud Choices! © ETR. All rights reserved. A408-20 20-0902

Poster



NEGOTIATION AND REFUSAL SKILLS – CHART 1A

How to say "NO" effectively

Characteristics

- Use and repeat the word "no" often.
- Send a strong nonverbal "no" with your body language, e.g., use hand and body gestures to emphasize the point.
- Project a strong, serious tone of voice.
- Look directly at the person's face and eyes.
- Stand straight and tall.
- Use a serious facial expression.
- Don't send mixed signals.

Making Proud Choices! © ETR. All rights reserved. A408-20 20-0902

Poster

NEGOTIATION AND REFUSAL SKILLS – CHART 1B

Examples of a strong "NO"

Examples

- No! I'm not ready to have sex yet!
- No! I won't have sex without a condom!
- No! I don't want to touch you there!
- No! Stop touching me like that!
- No! Stop trying to unbutton my pants!
- No! I'm not going to have sex with you!
- No! I really mean 'NO'!
- No! I want to protect myself. We have to use a condom.
- I have not said yes, which means this isn't happening.

Making Proud Choices! © ETR. All rights reserved. A408-20_20-0902

Poster

NEGOTIATION AND REFUSAL SKILLS – CHART 2

Explain why

Give clear reasons to support your choice.

Examples

- I want to protect myself with a condom every time I have sex.
- No, I won't risk my future goals by having unprotected sex.
- Condoms help prevent unintended pregnancy, HIV and other STIs.
- I am not ready to have a child (again).

Making Proud Choices! © ETR. All rights reserved. A408-20_20-0902

Poster

NEGOTIATION AND REFUSAL SKILLS – CHART 3

Provide alternatives

Suggest another action.

Examples

- Let's go buy some condoms right now.
- Let's get out of the bedroom. It makes me feel uncomfortable.
- If you're willing to use a condom, then we can have sex.
- Let's do something else that will feel good for both of us, since we don't have a condom.
- Let's go get something to eat.
- Let's go see a movie.

Making Proud Choices! © ETR. All rights reserved. A408-20_20-0902

Poster

NEGOTIATION AND REFUSAL SKILLS – CHART 4

Talk it out

Discuss your feelings.

Examples

- I feel like you don't really care about me when you pressure me like this.
- I'm not ready to have a baby. I would feel better if we use a condom.
- I'm glad you agreed to use condoms. I feel like you really care about me.
- You really turn me on when you touch me, but I won't have sexual intercourse without a condom.
- If you can't respect my feelings, then I'm prepared to end this relationship.
- Our future goals and dreams are more important than a moment of unsafe pleasure, so I'm glad we decided to use condoms.

Making Proud Choices! © ETR. All rights reserved. A408-20_20-0902

ROLEPLAY GUIDELINES

- Read your role carefully and think about how that person would really behave.
- Do your best to stay in character through the whole roleplay.
- Don't let comments and laughter distract you.
- Really try to feel and act like the person you are playing.
- Try things that you might not do ordinarily, just to see how it feels.
- Use SWAT:
  - **Say NO.** Repeat it. Use strong body language.
  - Explain **why** you don't want to engage in unsafe behavior.
  - Provide **alternatives.**
  - **Talk it out.**

ROLEPLAY A: JAMIE AND TAYLOR

THEME: Loss of trust and sexual pleasure through condom use

OBSERVE: Jamie using SWAT

(JAMIE and TAYLOR talking)

JAMIE

You and your sexual partner (Taylor) are in your partner's living room with the lights down low and things are starting to get physical. You are trying to tell Taylor that you want to use protection, and Taylor is beginning to get angry. Taylor doesn't think sex will feel as good and does not want to use protection. But you want to use protection because you respect yourself. Your health is important to you and you want to protect yourself because you are worth it!

Your task is to convince Taylor that sex can be just as pleasurable with condoms/dental dams.

TAYLOR

You and your partner (Jamie) are at your place and things are getting very intimate. Jamie is starting to talk about using protection and you are getting angry. Does Jamie think you have been sleeping around? You don't think using protection feels good and truly believe it will ruin the mood.

Your task is to convince Jamie to have sex without protection.

CALLING KOKO CALLER 1

Based on what you've learned so far, what advice would you give someone who has questions or concerns about HIV, AIDS and condoms?

In this activity, you will take the role of Koko, who has an HIV Information Hotline for teenagers called, "Calling Koko." Discuss, decide on and write down the advice you would give to the caller. Encourage the caller to make a proud and responsible choice.

Koko,

I've heard that young people are at risk for HIV and the number of HIV cases among young people is growing. I don't want to take any chances of getting HIV. What's the surest way I can protect myself?

- Charlie

CALLING KOKO CALLER 2

Based on what you've learned so far, what advice would you give someone who has questions or concerns about HIV, AIDS and condoms?

In this activity, you will take the role of Koko, who has an HIV Information Hotline for teenagers called, "Calling Koko." Discuss, decide on and write down the advice you would give to the caller. Encourage the caller to make a proud and responsible choice.

Dear Koko,

My girlfriend and I have been going out for a year. We really love each other, and both want to have sex. I trust her, but I'm concerned about HIV. My girlfriend and I are 14 years old, and neither one of us has tattoos, and we don't use drugs. We've been thinking about having sex, but only with each other. Do we have to worry about HIV?

– Raymond

CALLING KOKO CALLER 3

Based on what you've learned so far, what advice would you give someone who has questions or concerns about HIV, AIDS and condoms?

In this activity, you will take the role of Koko, who has an HIV Information Hotline for teenagers called, "Calling Koko." Discuss, decide on and write down the advice you would give to the caller. Encourage the caller to make a proud and responsible choice.

Hi Koko,

Five months ago, I had sex with someone for the first time. We didn't use condoms. I didn't really enjoy it, and he never even called me again. Now I have a new boyfriend and he wants me to have sex, too. Is it possible that I might have been exposed to HIV when I did it before? Now, I'm anxious that I might be infected with HIV. What do I tell my boyfriend? What should I do?

– Alex

CALLING KOKO CALLER 4

Based on what you've learned so far, what advice would you give someone who has questions or concerns about HIV, AIDS and condom?

In this activity, you will take the role of Koko, who has an HIV Information Hotline for teenagers called, "Calling Koko." Discuss, decide on and write down the advice you would give to the caller. Encourage the caller to make a proud and responsible choice.

It's like this Koko,

I am fifteen years old, and my girlfriend and I have never had vaginal sex. We do other things, though, including oral sex. Before, we just wanted to make sure that she didn't get pregnant. We had never really thought about infections like HIV. But, now I hear that teens my age are getting sexually transmitted infections. Is oral sex safe? How do we protect ourselves from STIs?

– Carmello

CALLING KOKO CALLER 5

Based on what you've learned so far, what advice would you give someone who has questions or concerns about HIV, AIDS and condoms?

In this activity, you will take the role of Koko, who has an HIV Information Hotline for teenagers called, "Calling Koko." Discuss, decide on and write down the advice you would give to the caller. Encourage the caller to make a proud and responsible choice.

What's up, Koko,

I recently found out that a friend of mine is HIV positive and that she's had the virus for years. She's smart, fun to be around, and has only had sex with two guys her whole life. Now I'm afraid to be with anyone because if someone like her can get HIV, how can I know who's safe and who isn't? If she has HIV, then anyone could! I'm scared to date! What should I do?

– Dana

CALLING KOKO CALLER 6

Based on what you've learned so far, what advice would you give someone who has questions or concerns about HIV, AIDS and condoms?

In this activity, you will take the role of Koko, who has an HIV Information Hotline for teenagers called, "Calling Koko." Discuss, decide on and write down the advice you would give to the caller. Encourage the caller to make a proud and responsible choice.

Koko,

I'm a senior this year and plan to go to college, but something happened the other night that I want to ask about. I went to a party. I had a couple of beers and then somebody handed me a joint. Everyone else was smoking too. It was powerful stuff! I had never used drugs before. The next thing I knew I was in the bedroom with this basketball player I kind of had a thing for. We ended up having sex, and I don't even know if we used protection, because I was so high that I forgot to ask. I heard he does this type of thing a lot. Now he barely even speaks to me. I'm afraid that I could have gotten pregnant or gotten infected with an STI like HIV. What should I do?

SEAN AND MORGAN CASE STUDY

Sean is 3 years younger than Morgan. They've been going out for a while. Sean really likes being with someone who is older. Morgan is a lot of fun and Sean feels more mature and popular when they're together.

Sean is very smart and plans to become a psychologist. Sean has had a tough childhood and very much wants to be independent and successful as an adult. Sean works hard and has a plan for the future.

Morgan really likes Sean. Lately, Morgan's friends have been talking a lot about sex and keep asking if Morgan and Sean have "done it" yet. Morgan figures it's time and begins to pressure Sean about having sex.

When Morgan asks Sean about having sex, Sean feels unsure about what to say. Sean has actually thought a lot about this and doesn't feel ready for sex yet. Yes, Morgan is sexy and Sean feels turned on. But Sean wants to wait until after high school and maybe even college to have sex. Sean does not want to do anything that might interfere with future goals. Sean wants to be able to help young people deal with issues and problems. Sean is concerned about STIs and doesn't want to take any risks.

However, Sean really wants to keep the relationship with Morgan. Sean is concerned about STIs and doesn't want to take any risks.

Today Sean and Morgan are hanging out at Morgan's house. Morgan's grandparents are out for a few hours. They're sitting on the couch, kissing and messing around. They're both breathing hard and things are getting hot and heavy. What can Sean do to avoid having sexual intercourse?

SEAN AND MORGAN CASE STUDY (CONTINUED)

Using STOP, THINK and ACT and the questions below, decide what Sean should do to keep from having sex before being ready.

STOP:

What can Sean do to stop?

What can Sean do to stay calm?

THINK:

What is the problem? What is Sean being pressured to do?

What do you think Sean is feeling?

What does Sean think Morgan is feeling?

What are Sean's choices?

What does Sean really want to do?

What alternatives can Sean suggest to Morgan?

What are the possible consequences?

ACT:

What do you think is Sean's best choice?

How should Sean act on that choice?

WHILE THEY'RE OUT (INEFFECTIVE VERSION)

SCRIPTED ROLEPLAY

Setting the Stage:

Your parents are out late. Your partner comes over, hoping to have sex with you. You want to have sex but you want to use condoms. Your partner refuses to use condoms. You decide to share how to make condoms feel much better.

Person 1: Why are you stopping now?

Person 2: Wait. Do you have a condom?

Person 1: No, I told you, I don't like the way those things feel.

Person 2: Yeah, I know.

Person 1: I don't have a condom. I want to be able to feel you, and it doesn't feel as good. Let's just do it without a condom this time.

Person 2: I think there are ways using one can feel good. I don't want to get infected with an STI like HIV.

Person 1: You won't. And I don't need you to show me anything. I know how condoms are used.

Person 2: I know you know how to use them. And you would never give me an STI. Sorry, I freaked out for a minute.

Person 1: Yeah, I mean I love you. Nothing bad is going to happen.

Person 2: You're right.

They keep kissing.

YOUR VALENTINE'S DAY GIFT (INEFFECTIVE VERSION)

SCRIPTED ROLEPLAY

Setting the Stage:

It is Valentine's Day. You and your partner are going out to a movie and dinner. You know that at some point having sex will be discussed. You partner is willing to use condoms, but you're just not ready for any of it. You decide to tell your partner that you want to wait to have sex.

Person 1: Happy Valentine's Day! Here is a little something I bought, though I was hoping our gifts to each other would be more than something from a store.

Person 2: Do you mean you were hoping we would have sex?

Person 1: Yes. You don't have to worry. I have condoms.

Person 2: Oh! You are moving so fast.

Person 1: We have been dating for a while. I love you and I'm ready.

Person 2: Well. I love you but I'm just not sure.

Person 1: Don't worry we're using protection. After all, it's Valentine's Day and what better gift than to share our love?

Person 2: I just have some doubts…I'm scared.

Person 1: You are always going to be scared, but the important thing is that we love each other.

Person 2: *(Reluctantly)* I guess.

They stop talking and begin to have sex.

ROLEPLAY A: JAMIE AND TAYLOR

THEME: Loss of trust and sexual pleasure through condom use

OBSERVE: Jamie using SWAT

(JAMIE and TAYLOR talking)

JAMIE

You and your sexual partner (Taylor) are in your partner's living room with the lights down low and things are starting to get physical. You are trying to tell Taylor that you want to use protection, and Taylor is beginning to get angry. Taylor doesn't think sex will feel as good and does not want to use protection. But you want to use protection because you respect yourself. Your health is important to you and you want to protect yourself because you are worth it!

Your task is to convince Taylor that sex can be just as pleasurable with condoms/dental dams.

TAYLOR

You and your partner (Jamie) are at your place and things are getting very intimate. Jamie is starting to talk about using protection and you are getting angry. Does Jamie think you have been sleeping around? You don't think using protection feels good and truly believe it will ruin the mood.

Your task is to convince Jamie to have sex without protection.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR

ROLEPLAY B: JUSTICE AND ANGEL

THEME: Condom use versus partner trust

OBSERVE: Justice using SWAT

(JUSTICE and ANGEL talking)

JUSTICE

You have been going out with Angel for a while now and you want to talk about using condoms. You know Angel has had sex with other people, and you are concerned about pregnancy and STIs, especially HIV, and want to use a condom. But you also don't want to lose Angel. You think you're falling in love.

Angel may be offended because you're already using the pill for birth control, but you mention condoms anyway. You want to be with Angel, but only if you can be safer.

Your task is to resist the temptation to have unsafe sex but still keep the relationship.

ANGEL

Your partner (Justice) just suggested that you start using condoms. You feel that Justice does not trust you if Justice is afraid to have sex with you without using a condom.

Your older sibling told you that you don't have to use condoms when you really love someone. You want to prove Justice trusts and cares about you by not using condoms.

Your task is to try to convince Justice not to use condoms.

© ETR

ROLEPLAY C: KAYLA AND MIA

THEME: Two friends talk about protection

OBSERVE: Kayla using SWAT

(KAYLA and MIA talking)

KAYLA

Your friend, Mia, is upset because a partner wants to use protection. You have never used protection either, but you just finished this program at school about pregnancy, HIV and safer sex, and now you feel a lot differently about it.

Your partner dated other people before you and had sex with them. Your partner wasn't your first either. Now you understand how important it is to reduce the risk for yourself and your partner by always using protection.

While Mia is telling you all the reasons for not using condoms or other protection, you are trying to convince Mia that protection is a good idea. Maybe you can get Mia to go to the clinic with you to get protection.

Your task is to resist Mia's pressure to have unsafe sex and still keep your friend's respect.

MIA

Your girlfriend told you that if you want to have sex you have to use dental dams. You've heard others talk about this at basketball practice. They say that rubber is nasty and you should feel the "real thing."

You're not trying to be difficult, but nobody is going to force you to use protection! Besides, you only go out with other girls so neither of you is going to get pregnant. And you're not worried about diseases because your new girlfriend is young.

Your friend, Kalya, wants to start using protection because of her class about STIs. You can't even respect Kayla anymore if she can't be real.

Your task is to convince Kayla that protection is a bad idea.

ROLEPLAY D: DEVON AND JADON

THEME: Initiating use of protection in an existing relationship

OBSERVE: Devon using SWAT

(DEVON and JADON talking)

DEVON

You and your partner, Jadon, have been sexually active for a while. However, you have just completed a program called ***Making Proud Choices!*** You are thinking about the things you didn't know and the things that concern you. You think about your own behaviors. You think about Jadon's past sexual life and your own past sexual life. And now you begin to worry because you and your partner have been sexually active without using protection. Now you want to use protection. You know Jadon is stubborn and gets jealous very easily. You are afraid to say that you are concerned about HIV because Jadon might believe you are cheating, or even go and find a new partner.

You decide to tell Jadon about the program and all the important information you learned and that you want to use protection if you have sex again. When Jadon arrives, you are looking at the information about STI protection that was given to you at the program.

Your task is to convince Jadon that you want to be proud and responsible and use protection.

JADON

You have never used a condom or dental dam and don't want to. You have been having sex with Devon for a while now and have never used protection before. You believe that if Devon suddenly wants to use protection, then Devon must be cheating on you. You also believe that condoms/dental dams are not natural and sex won't feel as good if you use them.

Your task is to convince Devon not to use condoms.

ROLEPLAY E: ALEX AND CASEY

THEME: Possible loss of partner through condom use

OBSERVE: Alex using SWAT

(ALEX and CASEY talking)

ALEX

You have been dating Dominique for a few months. You really like Dominique and think this might be serious. You have decided to have sex, but you really want to use condoms.

Your best friend (Casey), who is dating Dominique's best friend (Chase), doesn't think you should mention condoms to Dominique because you might create trouble in the relationship.

You know Dominique has never used condoms before but you won't have sex without a condom. Besides, you learned how to make condoms feel better.

Your task is to resist Casey's pressure, but not lose the friendship. You think Casey should be using condoms too.

CASEY

You and your close friend (Alex) are going out with Chase and Dominique, who are also friends and a few years older than you.

You and Chase have had sex a couple of times and never used a condom. You think you might lose Chase if you ask to use a condom.

Your friend, Alex, is getting very close to having intercourse with Dominique. They're using birth control, but also want to use condoms.

You tell Alex that sex feels much better without condoms (even though you've never tried them).

You're afraid that if Alex insists on using a condom, Alex might lose Dominique.

Your task is to try to convince Alex to have sex without using a condom.

Introduction

Program

All4You2! is a 15-lesson group-based program for young people in alternative school settings. Each lesson is 50 minutes (12.5 hours total).

Goals

The primary goal of *All4You2!* is to reduce the risk of pregnancy and/or STD, including HIV by reducing the number of students who have unprotected sexual intercourse (either by increasing use of effective birth control and/or condom use or reducing the frequency of sexual intercourse). The program also aims to change key determinants related to sexual risk taking, such as attitudes, beliefs, and perceived norms.

Theory

All4You2! ! is based on Social Cognitive Theory (Bandura, 1986) and the Theory of Planned Behavior (Ajzen, 1991), both of which are common theoretical frameworks of other evidence-based prevention programs. These theories suggest that behavior is influenced by a variety of factors including:

- Personal factors (e.g., knowledge, personal values, attitudes and beliefs, perceived self-efficacy, intentions)
- Environmental factors (e.g., influential role models, social or normative support)
- Behavioral influences (e.g., existing behavioral patterns)

These theories also address how individuals learn, emphasizing that people can learn from a variety of experiences, including directly through education and experience, and indirectly through observation of others' behaviors.

Research Results

The initial *All4You2!* study was implemented during 2006–2009, with data collection follow-up extending 18 months after the last enrollment in the study. The evaluation featured a randomized trial involving 47 classrooms (765 young people) in alternative school settings (specifically continuation schools) located in urban areas with diverse populations in northern California. Classrooms were randomly assigned to one of four conditions: (1) HIV/STI/pregnancy prevention curriculum only, (2) service learning only, (3) HIV/STI/pregnancy prevention curriculum plus service learning, or (4) an attention-control curriculum.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Participants included both males and females (53% male) who were an average age of 16.2 years. The majority of young people in the study reported being Hispanic/Latino (37.9%) or African American (22.3%).

To assess the effectiveness of the intervention, paper-pencil self-report surveys were collected from students three times during the study period: baseline, plus two follow up surveys at 6 and 18 months after baseline.

In general, youth receiving *All4You2!* HIV/STI and pregnancy prevention curriculum were less likely to have vaginal intercourse without a condom [odds ratio (OR) = 0.58, p=.04]; these effects diminished by final follow up. The program also significantly reduced students' exposure to risky situations and had other effects that were marginally significant (Coyle et al., 2013).

Six months after the baseline survey:

- Students taking part in *All4You2!* were less likely to have intercourse without a condom in the previous 3 months than were students in the control group; these effects diminished by the 18-month follow up.
- Students receiving *All4You2!* also reported having sexual intercourse fewer times than youth in the control condition, though the difference did not reach statistical significance (p = .09).
- Students receiving *All4You2!* reported higher levels of refusal self efficacy than youth in the control group, but these differences were only marginally significant (p = .06).

Eighteen months after the baseline survey:

- Students receiving *All4You2!* were less likely to place themselves in risky situations (p = .03) than were youth in the control condition.
- Students receiving *All4You2!* reported having sexual intercourse fewer times than youth in the control condition, though the difference did not reach statistical significance (p = .07).

Core Components

Overview

Core components are important parts of a program that should be implemented in order for that program to be effective. They may involve the implementation of the program, including the audience and setting, the implementation schedule, the program leaders and preparation. Core components also include the content of the program activities and the teaching methods (pedagogy) used to cover that content.

Implementation

Audience and Setting

- *All4You2!* can be implemented in school-based alternative education settings. It may also be appropriate for non-school based alternative education settings if young people can be retained for most lessons in non-school settings. It can also be used in mainstream settings if the content is deemed appropriate, but it was not evaluated in this setting.
- The curriculum is designed for high-school age participants (i.e., ages 14–18, or grades 9–12).

Implementation Schedule

- *All4You2!* includes 15 50-minute lessons (12.5 hours total).
- Ideally the program should be implemented 1–3 times per week for a period of 5 to 15 weeks.
- All classes should be taught in sequence.
- The ideal class size is between 10 and 20 students, but it can be used with classes of up to 30–35 students.
- All 15 sessions of the program should be implemented.
- The classes should be taught using a schedule that allows most youth to attend most classes.

Program Leaders

- Facilitators/teachers for the *All4You2!* curriculum should have good rapport with alternative school youth and be trained. They should be familiar with the *All4You2!* content, comfortable discussing the material, and experienced in teaching skills-based programs.
- In-class Peer Leaders facilitate specified activities in the curriculum.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Preparation

- Obtain approval and support from the school administrators and others (e.g., teachers if you are an outside facilitator) for program implementation.
- Obtain parental consent for program participation as required by schools/districts in which the program is implemented.
- Select and train facilitators/teachers to teach the content, implement the interactive activities, lead roleplays and discuss the sexual topics comfortably.
- Have youth nominate Peer Leaders for the program using the steps in the curriculum.
- Orient Peer Leaders to facilitate three types of activities: (1) recording and reporting small-group activities, (2) modeling and demonstrating various skills, and (3) assisting with the visit or call a clinic activity. Selected Peer Leaders also will help with selected general tasks, such as playing a set role in a simulation.

Content

The core content areas are based on the behavioral determinants and underlying behavior change theories. The content is woven throughout the lessons, making it difficult to eliminate specific lessons without altering potential effectiveness.

- Functional knowledge (i.e., information that is directly tied to behavior such as steps for proper condom use, what behaviors increase risk of STI and HIV transmission).
- Attitudes and beliefs (i.e., activities that address perceived barriers to condom use or perceived risk of STI or pregnancy).
- Norms (i.e., activities that re-align norms or facilitate the development of positive norms, such as seeing Peer Leaders model skills).
- Skills, including refusal/negotiation and condom use skills.
- Individual commitment activity to solidify intentions toward positive behavioral choices, and reinforce norms favoring such choices.

Pedagogy

All the activities are implemented as designed, using the teaching strategies specified. In terms of pedagogy, this means that facilitators:

- Create a safe and effective learning environment by establishing group agreements, including mechanisms for asking sensitive questions and actively involving participants.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

- Implement all activities using the interactive strategies included in the lessons, which were designed to influence the theory-based risk and protective factors related to sexual risk behaviors.
  - Use the varied pedagogical techniques (i.e., mini-lectures, brainstorming, games, small group work, roleplays) and maintain the interactive nature of the activities to engage youth and facilitate learning.
  - Review learning from prior classes to enhance mastery of material.
  - Use music as noted to create a positive environment for youth participation.
  - Use the embedded skill development approach that explains and models the skills, provides large-group and individual practice, and offers corrective feedback.
  - Use the question box technique to invite anonymous questions.
  - Use videos as specified in selected lessons. Replacement videos can be used if they are selected to meet the objectives of the lessons.
  - Use pamphlets as specified in selected lessons to provide succinct content summaries for reference outside the classroom.
  - Use small gifts with program name (e.g., pencils, pens) to provide visual cues to reinforce program messages if possible.
  - Teach all activities in sequence within each lesson.

All4You2! Lesson Outline

The primary goal of *All4You2!* is to reduce the risk of pregnancy and/or STD, including HIV by reducing the number of students who have unprotected sexual intercourse (either by increasing use of effective birth control and/or condom use or reducing the frequency of sexual intercourse). The program also aims to change key determinants related to sexual risk taking, such as attitudes, beliefs, and perceived norms. The program includes 15 50-minute lessons (12.5 hours total).

Pre-Lesson
25 minutes

Preparing for *All4You2!*

Students meet the *All4You2!* educator and receive a brief overview of the program. Students establish group agreements and nominate Peer Leaders.

Lesson 1
50 minutes

STDs

Sexually transmitted diseases are serious, and spreading rapidly among young people. In this lesson, students watch and discuss a video about common STDs.

Lesson 2
50 minutes

HIV and Teens

Students view and discuss personal stories of teens who are HIV positive. Students also take part in an activity to personalize their vulnerability to STDs.

Lesson 3
50 minutes

Reasons for Not Having Sex

This lesson provides a story to help students think about and compare the consequences of having versus not having sex.

Lesson 4
50 minutes

What's the Risk

Students participate in an activity to identify behaviors that put them at risk for HIV and other STDs, identify ways to reduce their risk, and then complete a small-group activity to examine ways to make respectful and responsible decisions in a relationship.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Lesson 5 **Examining the Risk**

50 minutes

Students participate in an activity that illustrates the increased risk of having multiple sexual partners. They discuss how STD spread increases with increasing numbers of partners. Then they work in small groups to rate and discuss the relative risk of different partner scenarios.

Lesson 6 **Negotiation and Refusal Skills**

50 minutes

Negotiation and refusal skills are introduced and demonstrated through roleplays. Students then practice the skills and receive feedback using half-scripted roleplays.

Lesson 7 **More Skills**

50 minutes

Alternative actions and delay tactics are introduced as two more ways to stick with personal limits. Students then practice and receive feedback using these skills through roleplays.

Lesson 8 **Handling Risky Situations**

50 minutes

In this lesson, students listen to a story and identify risky situations that could lead to unplanned sex, such as being at a party with no parents there. They also identify ways to handle these risky situations.

Lesson 9 **Teens and Relationships**

50 minutes

In this lesson, students will identify healthy and unhealthy elements of a relationship, and identify these elements in their own relationships.

Lesson 10 **Ending Relationships in Healthy Ways**

50 minutes

Although unhealthy elements can be warning signs in a relationship, they do not necessarily mean a relationship should end. In this lesson, students learn to identify warning signs that indicate it might be best to end a relationship, and explore how to end a relationship when necessary. They also learn healthy ways to recover when a relationship ends.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Lesson 11 Reduce Your Risk

50 minutes

Students discuss different methods of protection and categorize them based on their effectiveness for preventing HIV, other STDs and/or pregnancy. Students work in small groups to analyze methods of protection based on personal lifestyle and relationship characteristics. Students then analyze their own lifestyle and relationship and think about what method of protection would be best for them.

Lesson 12 It's All About Condoms

50 minutes

The educator tells a story to demonstrate the proper use of condoms. Students identify the dos and don'ts of condom use, and practice how to use a condom. Students then brainstorm ways to make condom use more likely.

Lesson 13 Talking About Condoms

50 minutes

Students identify ways to bring up the subject of using condoms with a partner. They also brainstorm possible excuses for not wanting to use condoms and responses to those solutions.

Lesson 14 Testing and Resources

50 minutes

Students work in small groups to examine issues around HIV, other STD and pregnancy testing, including basic information regarding the test itself, confidentiality and when to get tested. Students discuss resources to locate selected health services. Peer Leaders and other students share their experience visiting or calling a clinic, reviewing available services, and whether they would recommend the clinic to others.

Lesson 15 Staying Safe

50 minutes

Students participate in a textline activity, providing advice to other teens on how to stay safe from HIV, other STDs, and unplanned pregnancy. Students personalize the information by working in pairs to talk through important issues about relationships and/or avoiding unprotected intercourse. As a closing activity, students identify what changes they can make in their lives right now that will help protect them from unplanned pregnancy and/or HIV, and other sexually transmitted diseases.

Getting Ready

Preparing for Implementation

Securing approvals and support for the program

It is essential to meet with school administrators and teachers (if using an outside educator) to secure their approval and support for program implementation. Prepare for the meetings with highlights of the need for the program, the benefits of participation, and the requirements for participation. Remain flexible when possible, but go into the meetings knowing what can and cannot be changed (e.g., teaching one time a week is an option; cutting lessons to shorten program length is not).

Parent support is also essential. Provide opportunities for parents to preview materials and ask questions (e.g., have a preview night or copy of curriculum in school office). Follow District guidelines regarding parental notification and approval for sexual health education programming.

Identifying who will teach the program

This curriculum can be used by either classroom teachers or community-based educators.

Individuals implementing *All4You2!* should:

- Have knowledge of the content areas covered in the curriculum.
- Be comfortable discussing the material and answering sensitive questions about sexual risk taking.
- Have experience using interactive teaching strategies such as roleplaying.
- Have good rapport with youth.

Ideally, all educators implementing the program should be trained on its contents and teaching strategies. ETR offers training for *All4You2!* See www.etr.org/ebi/training-ta/ for more information on training options.

Peer Leaders are also used to facilitate some of the activities. Educators should orient the Peer Leaders to their tasks before they start implementing the program (see Appendix A for more details).

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

Use by classroom teachers

During the evaluation study, this curriculum was taught by trained health educators from outside the school; however, classroom teachers can implement it themselves. Classroom teachers have the advantage of being familiar with their students and able to maintain discipline.

In some cases, however, seeing the teacher as an authority figure may make it more difficult for students to freely express their questions or views about sex. Students also will often say things to challenge teachers or make them uncomfortable, just to see their reaction. It's important for classroom teachers implementing the curriculum to plan how they will react to difficult situations and to be aware of district policies about what can and cannot be said about sex in the classroom.

Use by outside educators

If the program is being implemented by outside educators, it is ideal to schedule a pre-implementation meeting with the classroom teacher(s) to discuss logistics and support. If possible, outside educators may also want to observe the classroom prior to teaching the curriculum to get to know the students and how they interact in the classroom.

Pre-implementation meeting

At the pre-implementation meeting, the educator and classroom teacher should:

- Review curriculum content.
- Review selection and training for in-class Peer Leaders.
- Discuss and confirm implementation dates.
- Discuss parental notification requirements.
- Discuss how the teacher can assist during implementation. For example:
  - Maintaining discipline in the classroom as needed
  - Offering credit for participation and homework activities
  - Reinforcing the messages of the curriculum between sessions and after the program is complete

Scheduling classes

Classes should be scheduled with sufficient frequency to avoid excessive re-teaching. Ideally the program would be provided 1 to 3 times per week.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Identifying videos

During the evaluation study, a few of the lessons were augmented with videos.

- Lesson 1 used a video about STDs.
- Lesson 2 used a video about young people living with HIV.

Comparable videos are included with the curriculum basic and enhanced sets. Educators can also use current, school-approved videos to emphasize key points in Lessons 1 and 2 when using this program.

Using Poems or Songs

The *All4You2!* curriculum makes use of poetry written by teens to provide an introduction to content and themes in some of the lessons. Educators can use the poems provided in the Teacher Guide and Student Workbook, or can select other youth-developed poems or contemporary songs that address the issues students will learn about in *All4You2!* If alternate poetry and/or songs are used, make copies of the poem or song lyrics to distribute to students (including copyright information as applicable), or have a way to project a copy of the words large enough for the class to read. Be sure to check if there are any language or topic restrictions for music or poetry that is shared in class.

Preparing to use in-class Peer Leaders

One of the unique features of the *All4You2!* curriculum is the use of in-class Peer Leaders to facilitate three types of activities: (1) recording and reporting small group activities; (2) modeling and demonstrating various skills; and (3) assisting with the visit or call a clinic activity. There are also other key roles for simulation activities. Use of Peer Leaders capitalizes on modeling and use of credible leaders to influence behavior change. Peer Leaders are prepared by educators through a brief orientation/ training (see Appendix A for guidelines).

Parent notification

It's essential to inform parents and guardians regarding the nature and scheduling of the *All4You2!* program. Requirements for parent notification vary by local school district and state. Review school district policies, and work with them to follow established procedures.

A sample permission form that can be modified and used by a school is provided in Appendix B. The letter should be printed on school letterhead and include the principal's signature. Because legal requirements are different from state to state and community to community, schools should check the sample for thoroughness, accuracy and appropriateness, and make any necessary changes.

Parents should be given the opportunity to preview the curriculum and associated materials and meet the educators if they wish (e.g., as part of a parent preview night or at back-to-school night).

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Refusal skills and consent

Refusal skills are a key component of many evidence-based programs designed to reduce pregnancy, HIV and other STD among youth. Programs provide instruction and practice in delivering effective refusals, and programs including refusal skills have been shown to reduce sexual risk behaviors and increase their chances of avoiding unwanted sexual pressures.

At the same time, ideas and concepts around consent are evolving. Some institutions have adopted policies that emphasize affirmative consent, or "yes means yes," and are moving away from a "no means no" perspective. This affirmative consent approach encourages partners to communicate openly about their wishes and boundaries, both prior to and during sexual interactions. It emphasizes the risks to both parties when partners pressure each other and the responsibility of both parties to respect the other's limits.

When teaching refusal skills and evaluating the effectiveness of students' demonstration of those skills, it is important to affirm the value that no person who experiences sexual pressure, harassment or assault is to blame for being the target of those behaviors. Clear, assertive refusals can be encouraged, while also making sure youth understand that no one "deserves" to be pressured if his or her NO is unclear.

Instruction on boundaries and respecting another person's NO—both verbal and nonverbal—regardless of perceived clarity can be included to help young people understand the two-way nature of consent, and the importance of honest and respectful communication between friends and potential partners. This would be considered a "green-light" adaptation and can help optimize the success of the skill-building around refusals.

Adapting this program for your population

Program facilitators are encouraged to make minor adaptations (also referred to as "green light" adaptations) to optimize the program for the young people receiving it. Such adaptations are intended to help tailor the curriculum to the needs of participating youth. Examples of minor adaptations include updating statistics and changing the names or editing the language or scenarios in roleplays to better reflect your youth population.

It's recommended that facilitators work with a small group of youth to review the roleplays and other activities and suggest minor changes to increase relevance before implementation. Other allowable enhancements include teaching reproductive health lessons before starting the program, and adding lessons before or after the curriculum lessons to address additional sexual health issues, such as dating violence or electronic dating aggression.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Adaptations such as re-ordering the curriculum lessons or inserting additional content into the middle of the program are considered "yellow light" adaptations because they can have an impact on program flow and effectiveness. It's best to discuss these kinds of changes with the program developers first.

Major changes (also referred to as "red light" adaptations) are discouraged and may significantly affect and alter program effectiveness. Examples of major changes include dropping entire activities or lessons, or altering the key messages of the program.

Adaptation guidelines for this curriculum can be found at www.etr.org/ebi and include additional examples of green-, yellow- and red-light adaptations.

Researchers and organizations interested in making significant adaptations to this curriculum for use in an evaluation are asked to contact ETR for support and permission first. Such adaptations might include combining the curriculum with another evidence-based program or adding a new element or component.

Pre-Lesson

Preparing for *All4You2!*

Synopsis	Students meet the *All4You2!* educator and receive a brief overview of the program. Students establish group agreements and nominate Peer Leaders.
Purpose Statement for Students	Today we are going to prepare for a new program that we will be starting next week.
Objectives	Students will be able to: • Identify up to six people in their class whom they respect and admire. • Describe key parts of the *All4You2!* program. • State the class agreements.
Activities & Time	Pre1: Name Tents & Ice Breaker — 10 minutes Pre2: People I Respect — 5 minutes Pre3: Introduction — 10 minutes

Materials

Have

- ☐ Chart paper, markers and tape.
- ☐ Student name tents (white card stock, pre-folded, 1 per student)
- ☐ Two hula hoops *(if you choose the "Hula Hoops" ice breaker)*
- ☐ Question Box or envelope
- ☐ 3 x 5 index cards, 1 per student
- ☐ Pencils

Review

- ☐ **Scavenger Hunt** (Activity Sheet Pre1) *(if you choose the "Scavenger Hunt" ice breaker)*
- ☐ **The Voice Inside** (Activity Sheet Pre3)

Prepare

- ☐ Chart of key points to introduce the program
- ☐ Chart paper showing steps for activity *(if you choose the "I See People Who" icebreaker)*
- ☐ Question Box (can be made by cutting a slit-style opening in a shoe box)

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Educator Preparation	☐ Review the entire lesson and prepare the Chart of Key Points to introduce the program (see Activity Pre3). ☐ Read and familiarize yourself with the poem entitled **The Voice Inside** (see Activity Sheet Pre3).
Peer Leader Activities	None (Peer Leaders are nominated as part of Activity Pre2.)
Determinants Addressed	None

Educator Note: You can feel free to select another inspirational youth-developed poem or introductory song that students can relate to that addresses issues they will learn about in *All4You2!* Topics might include standing up for yourself, being proud of the choices you make, facing pressures to have sex, moving into the future, believing in yourself. Make copies of the poem or song lyrics to distribute to students. Be sure to check to see if there are language or topic restrictions for music or poetry that is shared in class.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity Pre1 Name Tents & Ice Breaker

Suggested Time 10 minutes

Materials
For *I See People Who:* Prepared chart paper with activity steps
For *Scavenger Hunt:* Activity Sheet Pre1, pencils
For *Hula Hoops:* 2 hula hoops

Purpose To have students and the educator get to know each other better

Educator Note: You can choose one of the following three ice breakers. Each requires different materials.

Steps for Activity

1 Students create name tents.

As students enter the classroom, give them (or ask them to pick up) a blank name tent and a marker.

Introduce yourself covering the following points:

- *Tell students that you will be teaching a class with them for the next X weeks (insert # weeks based on the implementation schedule).*
- *Tell them that they will learn more about what to expect from the class soon, but that you'd like to begin the day by creating name tents and then doing a brief activity that will get everybody up and moving.*

Introduce the name tents as follows:

- Please write your first name or nickname on the name tent with the marker.
- Write your name on both sides.
- On the inside of the name tent, please write the name of one of your favorite songs or music artists/groups.

Explain that having the name tents will help you get to know them better.

Explain that you will play music at different times throughout the program and you will try to play some of their favorite songs and/or artists. Explain you will pick music that is appropriate for playing at school, and that you will get "clean" versions of some songs if the lyrics have a lot of explicit language.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

2 Conduct an ice breaker.

Select one of the three following ice breakers and follow the appropriate steps, or use another one similar in purpose and time requirements.

Ice Breaker 1: I See People Who

1 Explain the activity.

Have students put their chairs in a circle. Explain the following steps (post prepared chart paper with steps as well):

- Everyone starts by sitting in their seats.
- During each round, someone will call out a description about people and everyone with that description has to stand up, cross the circle and try to find a new seat. For example, I might say "I see people who are wearing jeans." Everyone with jeans would have to get up and try to find a seat on the other side of the circle.
- You can't sit back down in the same seat or even on the same side of the circle.
- The person who is left without a seat gets to call out the next description.
- We will play five rounds.

2 Practice.

Have students practice once before starting. Use a description that matches several of the students. Examples:

"I see people who have brown hair."

"I see people wearing sneakers."

3 Clarify.

Clarify any misunderstandings and then begin the activity.

4 Play the game.

Continue for five rounds.

5 Conclude.

Have students put the chairs back in place and return to their seats.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Ice Breaker 2: Scavenger Hunt

1 Explain the activity.

Have students turn to **Scavenger Hunt** *(Activity Sheet Pre1) in their workbooks. Explain that the activity sheet has several statements on it. Read one of the statements. Tell students:*

Once you start the activity, you will have 5 minutes to walk around the room and talk to others in the room, looking for people who match the statements on the activity sheet.

Once you find someone who matches the statements, write that person's name next to the appropriate statement on the activity sheet. You can only use a name once. It's also OK to use your own names once.

2 Clarify.

Check for understanding by asking students what they will do once the game begins. Clarify as needed.

3 Play the game.

Be sure students have their activity sheets and pencils. Allow students to circulate for about 5 minutes on the scavenger hunt.

4 Conclude.

Debrief quickly by asking a few questions. Examples:

- Who has all the statements signed?
- Who met someone who likes pineapple on pizza?

Ice Breaker 3: Hula Hoops

1 Explain the activity.

Divide the class in half. Have students form two circles. Explain:

I am going to put a hula hoop on the arm of one student in each group. Then everyone in the group will join hands. The goal of the activity is to see which group can get the hula hoop all the way around their circle first without breaking hands.

2 Play the game.

Allow students to try it for a moment before starting. Re-focus the groups and have them get ready to start. Get them started by calling out:

Ready, set, go!

Monitor groups to see who finishes first. Give that group a round of applause. Thank students for their participation.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

Activity Pre2 Nominating Peer Leaders

Suggested Time 5 minutes

Materials 3 x 5 index cards

Purpose To have students identify people in class whom they respect and admire

Educator Note: One of the unique features of *All4You2!* is the Peer Leader component. The use of same-age peers as classroom facilitators along with the classroom teacher has been found to be an effective means of educating teens about important health issues. The incorporation of Peer Leaders as facilitators of selected curriculum activities is an important feature of this curriculum.

The Peer Leaders will be involved in facilitating 3 different types of activities: (1) recording and reporting small-group activities, (2) modeling and demonstrating various skills, and (3) assisting with the small-group roleplays (e.g., ensuring that everyone has a chance to practice and observe during each roleplay). There are also several general tasks, such as creating posters or copying information from the board, that you can ask Peer Leaders to complete.

Once Peer Leaders have been elected and have agreed to participate, you should meet with them outside of class (e.g., during lunch) to review their tasks and gain their support for the program.

Steps for Activity

1 Students nominate Peer Leaders.

Distribute one 3 x 5 index card to each student and explain the nomination process.

Educator Note: You will need about 20% of the class to serve as Peer Leaders. Thus, for a class of 20, have students nominate 4 peers. For a class of 30, have students nominate 6 peers.

I'd like you to write down the names of up to 6 students in the class. Half should be guys, half should be girls. Choose people you respect and admire. You can include your own name on this list if you wish. If you do that, be sure to write your actual name, not just the word "me."

Make your own choices, without input from others.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Educator Note: Do *not* tell students that the nomination is related to an HIV/STD and pregnancy prevention curriculum, as this may alter their responses.

After the Pre-lesson and before Lesson 1

1 Select Peer Leaders.

Tally the nominations from the cards. The students who received the most votes will be the Peer Leaders.

Check with the classroom teacher about the students nominated. If the teacher feels strongly that one or more of the elected students won't be able to carry out the tasks of a Peer Leader, select replacements from the students receiving the next highest tally of votes.

Select at least two alternates in each class in case a Peer Leader is absent during a lesson.

2 Inform elected Peer Leaders.

Talk (or have the teacher talk) with the elected Peer Leaders to ensure they are willing to serve in this role.

Tell them they will be participating in a brief meeting/training where they will learn more about All4You2!, *and will have a chance to practice the activities they will be doing as Peer Leaders.*

Arrange a time a day or two after Lesson 1 to train the Peer Leaders.

You will introduce the Peer Leaders during Lesson 1.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity Pre3 Introduction

Suggested Time 10 minutes

Materials Activity Sheet Pre3 (or other introductory poem or song), Chart of Key Points, Question Box, 3 x 5 index cards

Purpose To have students and the educator get to know each other better

Steps for Activity

Introduce the program

1 Introduce *All4You2!*

Briefly introduce the All4You2! *program, making the following points:*

- I'm happy to be here.
- *All4You2!* is a special program designed just for you—we'll be talking about relationships; sex; ways to prevent HIV, other STDs, and pregnancy; ways to talk with partners about sex and protection; and resources for STD, HIV and pregnancy tests.
- I'd like to start by reading a poem that will help me introduce the program.

2 Share the introductory poem.

Have students turn to **The Voice Inside** *(Activity Sheet Pre3) in the workbooks (or distribute a copy of an alternate poem or song lyrics to each student). Explain where the poem or lyrics come from. Explain that this poem was written by a 15 year old named Lakeisha. Read the poem aloud or play the song and ask students to follow along. Then ask students to write down what they think the poem is about somewhere on the activity sheet (e.g., in the margins or open space). Allow students to work for 1 minute.*

3 Discuss.

Ask for volunteers to share what the poem means to them. Possible themes include:

- *Be proud of yourself*
- *Stand up for yourself*
- *You can take charge of your life*
- *Be yourself no matter what others say (don't try to be someone else to please others)*
- *Do your best*
- *Trust you inner voice*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Ask students how these themes might connect to preventing HIV, other sexually transmitted diseases and pregnancy. Emphasize that All4You2! *is about being real, looking at sexual risks, and finding ways to respect yourself and protect yourself from disease and pregnancy.*

4 Describe the program.

Explain how often you will be coming to the class (e.g., 4 days a week for the next 8 weeks).

Using the Chart of Key Points, explain that the All4You2! *program will include:*

- *Music*
- *Skits*
- *Games*
- *Advice columns*
- *Videos*
- *Stories*
- *Discussions*
- *Anonymous questions*

Emphasize that the program will be fun. It will give them an opportunity to think about their relationships and about how they will protect themselves and others from HIV, other STD, and unplanned pregnancy.

Establish class agreements

1 Review existing agreements.

If you are an outside educator, explain to students that while you are visiting their classroom you want to be respectful of their class agreements. Ask students to name or point to the class agreements.

Explain that during All4You2! *you want to have a class environment where it's comfortable for all to participate and say what's on their minds. Ask which class agreements are most important for making it comfortable to talk about relationships, sex, and HIV, other STD and pregnancy.*

2 Add new agreements.

Add any agreements not already represented. The final list of All4You2! *class agreements should include the following concepts:*

- *Respect*
- *No hating (includes no name calling)*
- *Listen*
- *One at a time*
- *Ask any question*
- *OK to pass*
- *Confidentiality*
- *Use appropriate language*
- *Use inclusive language*
- *No sunglasses*
- *No headphones*
- *No cell phones on during lessons*

3 Get student buy-in.

Explain that there will be many open discussions and activities during the lessons. Stress the importance of respecting each other (e.g., no harassing, no hating, etc.).

Explain that you will make a poster of the agreements that will be displayed during each class, and will ask students to sign the poster when they come to class next time to confirm their support of the agreements.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

4 Discuss mandated reporting as part of confidentiality.

You can say:

There are some things I'm required to report by law, even if you tell me in confidence. For example, if one of you reports that someone is hurting you physically, or sexually abusing you, I'm required by law to report this to the proper officials. This helps protect everyone's safety.

Educator Note: Write up an Agreements poster for students to sign at the next meeting and to bring to every class.

Question Box

1 Introduce activity.

Explain that over the next several weeks you and the class will be talking about a lot of different issues on relationships, prevention, sex, services available in the community, and other similar topics. Tell students that you will provide a Question Box as one way for students to ask questions.

2 Introduce the Question Box.

Emphasize the following points:

- The Question Box is a way for you to ask questions privately.
- I will leave the Question Box and blank cards in the classroom. You can write a question and put it in the box at any time. During some lessons I also will pass out blank cards and give you a chance to write questions.

Show students where you will put the box and cards.

- I will take time to answer the questions in the box during selected lessons.
- Today is the first opportunity for writing your anonymous questions. I'm going to pass out a card to each of you. Remember NOT to put your names on the cards.

Pass out the 3 x 5 index cards.

Try to come up with one question about HIV, other STD or pregnancy. If you can't think of any questions, you can write "I don't have a question" on the card. I will pick up one card from each of you in a few minutes, even if you did not write a question.

3 Have students write questions.

Allow them to work for up to 3 minutes. Ask students to fold their cards. Collect one card from each student, even if the student did not fill the card out.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

4 Answer questions if there is time.

Relate answers to lesson objectives, whenever possible. If there are unanswered questions, let students know that you will address them in later lessons.

5 Conclude.

Thank students for their help today. Let them know that you are looking forward to working with them on this project. Tell them when you will start the program.

Collect student's name tents.

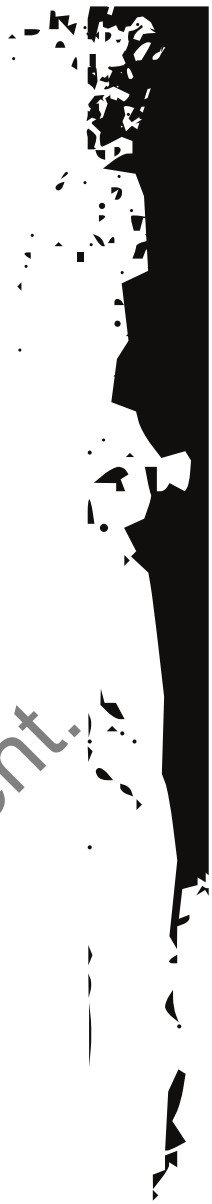
THE VOICE INSIDE

by Lakeisha W.



Don't listen to the negative voices.
Don't let them decide all your choices.
Be the person who turns the other cheek
Don't cry and let them know you're weak.

Getting the best of you is their game.
They look at you as if you aren't the same.
Listen to that little voice inside you.
Let that voice inside guide you towards the dreams you need.
Let that voice inside be the blood you bleed.
Carry yourself like you're the only one there,
As the words they say pass through your ears.

Don't let people bring you down, prevail and win.
You're the only one standing the firm ground.
It's your mission, so you tell when it begins.
That little voice inside is your guide through your life.

And, as that dream expands, you do too.
That little voice inside takes an important role in carrying you.
As a favor, let's dream and make reality leave those negative people in their own jealous fantasy.

Lesson 1 STDs

Synopsis	Sexually transmitted diseases are serious, and spreading rapidly among young people. In this lesson, students watch and discuss a video about common STDs.
Purpose Statement for Students	Today we will learn the "411" on STDs.
Objectives	Students will be able to: • Describe common signs and symptoms of STDs. • Identify condom use as one way to reduce the risk of some STD infections. • Identify abstinence as the best way to prevent STD infection. • Describe when and how to get help for STD infection.
Activities & Time	1.1: Check-In — 6 minutes 1.2: Plan for the Day — 2 minutes 1.3: STDs: In the Know — 5 minutes 1.4: Video on STDs — 34 minutes 1.5: Closure
Materials	**Have** ☐ Chart paper, markers and tape ☐ Student name tents ☐ Agreements poster (see Activity Pre3). ☐ *STD Facts for Teens* pamphlets, 1 per student ☐ Video on STD ☐ TV and DVD player, or other way to show the video ☐ Music and music player (choose a student favorite for the music if possible) ☐ Pencils

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Materials

Review

- ☐ ***All4You2!* Messages** (Activity Sheet 1.1)
- ☐ **STDs: In the Know** (Activity Sheet 1.3)

Prepare

- ☐ Plan for the Day
- ☐ Poster with *All4You2!* Messages (see Activity 1.1)
- ☐ Resource poster (see Activity 1.4)

Educator Preparation

- ☐ Review the entire lesson and prepare needed materials.
- ☐ Make poster of the class agreements created during the Pre-Lesson, and display it in the room. Be sure to sign it and have the teacher sign it too.
- ☐ Create list of Peer Leaders to announce to the class.
- ☐ Prepare or purchase (e.g., from iTunes) ***appropriate*** music based on students' favorite songs as reported during the Pre-lesson.
- ☐ Preview the video.
- ☐ Make a poster with CDC hotline and website resources (see Activity 1.4 for instructions)

Peer Leader Activities

None

Determinants Addressed

- Greater knowledge about STDs, including HIV
- Increased perceived risk and costs of getting HIV and other STDs if sexually active
- Greater perceived importance of avoiding disease
- More conservative attitudes toward having multiple partners

Educator Note:

STI vs. STD: Some health educators prefer the term "STI" (sexually transmitted infection) over "STD" (sexually transmitted disease), whereas others use the two interchangeably. The Centers for Disease Control and Prevention, along with many other leaders in health education, use STD because this is the term understood by the greatest number of people. We use STD in *All4You2!* because we find it is a term teens understand easily. It is important for everyone to understand that STDs (STDs) can present with or without symptoms.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 1.1 Check-In

Suggested Time 6 minutes

Materials Activity Sheet 1.1, *All4You2!* Messages poster

Purpose Students will come to class each day with a range of emotions and experiences affecting their readiness and willingness to participate. Using a daily check-in is a way to acknowledge this reality.

Educator Note: Remind students to sign the Agreements poster to show their support of the class agreements. Doing this as students enter or leave the classroom will minimize the time needed.

Steps for Activity

Lead a brief check-in

1 Explain the reasons for the check-in.

Explain to students that it is very helpful for you to know how they are feeling each day before you start the day's lesson.

2 Have students check in.

Ask a few students to volunteer to share how they are feeling or what's going on for them today.

Acknowledge responses using your best judgment. Use simple, short acknowledgements, particularly positive ones (e.g., head nods, thank you, one-word sentiments such as "great," "glad to hear it," etc.). Avoid long responses or analyzing students' comments in this group setting.

Here are some examples of potential responses:

- Thank you for letting me know. I understand it could be hard to focus when you are dealing with that.
- I'll try to remember that you're having a hard day. I'm confident you can get through it.
- I appreciate you making an effort to be in this class even though it's a hard day.
- Thanks for sharing that with us.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Discourage students from commenting on others' responses by just moving the activity along.

If students share something inappropriate or say something with extreme bravado, ask them to re-state their response in a more appropriate manner. If students share something serious and/or reportable (e.g., parent hit me last night) work with the teacher to provide support to the student right after class or before you even begin the lesson if necessary.

Educator Note: Discuss potential sensitive and/or reportable issues with the classroom teacher or school administrator in advance so you are in agreement on how to handle these situations.

3 Conclude.

- *Close by thanking students for their honest responses.*
- *If there are a majority of students feeling a certain way, note that pattern.*
- *Remind them that at the beginning of each class you'll be checking in with them like you did today.*
- *Share that knowing "where they are at" each day helps you as a teacher and that you would like them to try their best to make the most of what the class is doing together today. Emphasize that you have confidence in their ability to focus despite all that is confronting them.*

Review *All4You2!* themes

1 Re-introduce the program.

Follow these steps:

- *Tell students that today is the first official day of the* All4You2! *program.*
- *Have students turn to the* **All4You2!** ***Messages*** *(Activity Sheet 1.1) in their workbooks, and post the* **All4You2!** ***Messages*** *poster.*
- *Tell students that this part of the program is all about respecting and protecting themselves and their partners and friends from HIV, other STDs and unplanned pregnancy. Explain that you will be coming back to these themes or messages at different times throughout the program.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Announce the Peer Leaders

1 Introduce Peer Leaders.

Remind students that they wrote down names of people they admired and respected on a card during the pre-lesson. Explain that those individuals were invited to be All4You2! *Peer Leaders.*

These people are going to help with *All4You2!* as the Peer Leaders for the class. The Peer Leaders' names are *(announce the names of the main Peer Leaders plus an alternate)*.

2 Have Peer Leaders stand.

The Peer Leaders will help with activities, lead some group activities and help model the roleplays we do.

I hope you'll all support your peers in this role.

Have students give their Peer Leaders a round of applause.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 1.2 Plan for the Day

Suggested Time 2 minutes

Materials Plan for the Day, student name tents

Purpose To review the plan for the day and orient students to the day's activities

Steps for Activity

1 **Have students help pass back name tents.**

2 **Post and review the Plan for the Day.**

Today we will learn the "411" on STDs.

3 **Ask for a volunteer to read the plan.**

Lesson 1
Plan for the Day
- STDs
- Video
- Summary

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 1.3 STDs: In the Know

Suggested Time 5 minutes

Materials Activity Sheet 1.3, chart paper, markers and tape

Purpose To allow students to assess how much they know about STDs

Educator Note: Resist doing a mini-lecture on STDs here. The purpose of this activity is to serve as an anticipatory set and transition for the video.

Steps for Activity

1 Discuss STD.

Write in big letters on the board or chart paper: STD.

Ask students:

What do the letters STD mean?

Give hints if necessary and write the answer underneath:

Sexually Transmitted Disease

Tell students that some people also call these illnesses Sexually Transmitted Infections (STIs).

Ask students for examples of STDs/STIs. Write their ideas on the board. Post chart paper with common STDs, including: herpes, chlamydia, HIV/AIDS, gonorrhea, syphilis, HPV. Point out that there are many different STDs and these are some of the more common ones.

Ask students:

How do people get a sexually transmitted infection?

Look for the answer "by sexual contact." Clarify that this includes sexual intercourse (vaginal, oral, anal), as well as close physical contact, such as body rubbing.

2 Introduce the quiz.

Explain the activity using these steps:

- *Tell students they are going to complete a brief quiz about STDs.*
- *Explain that after they finish they will watch a video about sexually transmitted disease.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

- *Tell students the answers to the quiz questions are in the video or will be given during class, and they should feel free to change their answers at any time.*

Have students turn to **STDs: In the Know** *(Activity Sheet 1.3) in their workbooks. Allow a few minutes for students to complete the quiz.*

1. Do people always know if they have an STD?
2. What are some common symptoms of STDs?
3. What should people who have an STD do?
4. Can all STDs be cured?
5. What can happen if someone with an STD never gets it treated?
6. Can a person get an STD from having oral sex?
7. What can someone do to prevent STD?

Assure students that even though they might feel unsure of their answers now, they will learn the right answers to these questions before the end of the class.

Educator Note: Avoid the temptation to debrief the quiz here. The debrief is part of the video summary.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 1.4 Video on STD

Suggested Time 34 minutes

Materials Video, TV and DVD player (or some other means of showing the video), Resources poster

Purpose To provide basic information on STD

Steps for Activity

1 Prepare students to watch the video.

Remind them that as they watch the video they should listen for the answers to the questions on the **STDs: In the Know** *quiz. Ask them to notice:*

- *What types of STD are covered*
- *What symptoms are described*
- *How people in the video feel about getting tested for or finding out they have an STD*

Educator Note: Your instructions for watching the video may change depending on the content of the video you will show. For example, you may need to change the pre-viewing questions to align with the selected video. Including pre-viewing questions helps increase students' attention to the video as they watch.

2 Play the video.

Stop the video briefly in key places as needed to maintain interest and generate thoughts about the situations and information shown. Do not show any video segment that includes instruction or information about condoms, as this will be covered in a later session.

3 Debrief.

At the end of the video, ask students questions to build and enhance understanding. Depending on the content of the video, you might ask questions such as:

- What caught your attention in the video?
- What is one difference between curable and incurable STDs?

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

- How do you think the teens in the video felt about having an STD? How do you think they felt about telling their partners?
- What is one thing you would tell a friend about STDs?

4 Review the quiz answers to summarize main points.

- **Do people always know if they have an STD?** *Answer:* No. Besides HPV, there are other STDs, including HIV and chlamydia, that a person can have without knowing it.
- **What are some common symptoms of STDs?** *Answer:* Bumps, unexplained rash or lesions, jaundice, painful blisters, discharge or drip, painful urination. Some people with STDs do not have any symptoms.
- **What should people who have an STD do?** *Answer:* Go to a clinic or doctor to be tested. Tell their partner(s). Not have sex until treatment is complete and the STD is cured. Find out how to protect themselves and their partner(s) if the STD is incurable. They can also get more information about the STD from the Internet, pamphlets or a book, or a hotline.
- **Can all STDs be cured?** *Answer:* Some can, but some can't, including herpes, hepatitis B, HIV and certain strains of HPV.
- **What can happen if someone with an STD never gets it treated?** *Answer:* The person can pass it along to other people. Some STDs have very serious long-term consequences such as damage to the reproductive system (e.g., gonorrhea and chlamydia); brain damage and blindness (e.g., syphilis); skin disease (e.g., gonorrhea); and cancer (certain strains of HPV). Pregnant women who have an STD also can infect their babies (e.g., with syphilis during pregnancy or gonorrhea and chlamydia when giving birth).
- **Can a person get an STD from oral sex?** *Answer:* Yes. Many STDs are transmitted through sexual fluids. Those fluids could enter the body through open sores or small cuts in the mouth during oral sex. Some STDs, such as herpes, can be passed by skin-to-skin contact during oral sex.
- **What can someone do to prevent STD?** *Answer:* The best way to prevent an STD is to choose not to have sex (vaginal, oral or anal) and to avoid genital skin-to-skin contact. If you do have sex, it's important to limit the number of sexual partners you have; the more partners, the greater the possibility of coming into contact with someone who has an STD. Latex or polyurethane/polyisoprene condoms and dental dams (for oral sex) can reduce the risk of some STDs if they're used every time people have sex.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Educator Note: Throughout this curriculum, the importance of effective and consistent use of latex condoms is mentioned as an important strategy for reducing the risk of STD transmission. Because some individuals may have a latex allergy or develop awareness of a latex allergy in the future, it is appropriate to consistently remind students that polyurethane and polyisoprene condoms are an effective alternative to latex condoms if allergies are present. All are significantly more effective than animal skin condoms, such as lambskin, which are not considered to be an effective barrier for most STDs.

5 Post the CDC website and hotline number.

- The CDC's STD information page, with links to additional information and test site locators, is at http://www.cdc.gov/STD.
- The CDC also has a 24-hour hotline number: 800-CDC-INFO or 800-232-4636. (TTY: 888-232-6348)

Here are some resources you can use to get more information about HIV and other STD, either by phone or online. The CDC site has an STD test-site locator, so you can find somewhere to get tested no matter where you are.

These are toll-free numbers, so there's no long distance charge for these calls. People who call do not need to give their names or reveal anything about themselves that they don't want to.

Educator Note: Create a simple poster with hotline and website resource information. You can hand write this information on a standard sheet of typing paper if you wish. There may be local resources you can suggest, or trustworthy websites you want students to know about.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 1.5 Closure

Suggested Time 8 minutes

Materials *All4You2!* Messages poster, *STD Facts for Teens* pamphlets

Purpose To summarize experiences and key points of the lesson

Steps for Activity

Lesson Summary

1 Discuss.

Ask students to summarize the main points of this lesson. Emphasize that the purpose of today's lesson was to look at how sexually transmitted disease can affect people's decisions about sex, including their thoughts about having sex, their feelings and worries, and their concerns about how STDs will affect their bodies.

2 Emphasize the behavioral messages.

Use the All4You2! *Messages poster to review the main messages of the program:*

- **Respect:** Respect yourself, your body and your partner by having sexual limits.
- **Protect:** The best way to avoid STDs and protect yourself and your partner is to choose not to have sex.
- **Protect:** Another way to protect yourself is to limit the number of sexual partners. Using latex condoms every time you have sex can also reduce your risk of STDs, including HIV. People who are allergic to latex can use polyurethane (plastic) or polyisoprene (non-latex rubber) condoms.

3 Distribute pamphlets.

Give an STD Facts for Teens *pamphlet to each student.*

Please open the *STD Facts for Teens* pamphlet and look it over for a moment. This gives some basic information on common STDs. You can save this information as a resource or share it with a friend.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Transition and Closure

1 Prepare students for next lesson.

Tell students that in the next lesson they will watch another video about HIV and how it affects young people.

2 Collect the student name tents.

Close by recognizing students for their participation.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

DO NOT COPY OR DISTRIBUTE
in any format without express
written permission from ETR.
PDF solely for purposes

Activity Sheet 1.3

STDs: In the Know

Directions: Answer each question as best as you can.

1. Do people always know if they have an STD? (Check one answer.)
   ☐ Yes ☐ No ☐ Don't know
2. What are some common symptoms of STD?
3. What should people who have an STD do?
4. Can all STDs be cured? (Check one answer.)
   ☐ Yes ☐ No ☐ Don't know
5. What can happen if someone with an STD never gets it treated?
6. Can a person get an STD from having oral sex? (Check one answer.)
   ☐ Yes ☐ No ☐ Don't know
7. What can someone do to prevent STD?

Activity Sheet 1.3

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Lesson 2

HIV and Teens

Synopsis	Students view and discuss personal stories of teens who are HIV positive. Students also take part in an activity to personalize their vulnerability to STDs.
Purpose Statement for Students	Today we will focus on how HIV affects people who have it.
Objectives	Students will be able to: • Describe the impact of living with HIV. • Explain how STDs can spread.
Activities & Time	2.1: Check-In 2 minutes 2.2: Review & Plan for the Day 3 minutes 2.3: Blood Lines 30 minutes 2.4: Don't Pass It Along 10 minutes 2.5: Question Box and Closure 5 minutes
Materials	**Have** ☐ Chart paper, markers and tape ☐ Student name tents ☐ Blood Lines video ☐ TV and DVD player, or other way to show the video ☐ Music and music player ☐ *All4You2!* Messages poster ☐ Question Box ☐ 3 x 5 index cards, 1 per student ☐ Pencils

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Materials

Review

☐ **Blood Lines: Facts** (Activity Sheet 2.3)

Prepare

☐ Plan for the Day

☐ 3 x 5 index cards of the same color (35 total)
Label with small letters as follows:

- ☐ 1 D card
- ☐ 10 U cards
- ☐ 8 O cards
- ☐ 8 C cards
- ☐ 8 A cards

Educator Preparation

☐ Review entire lesson and prepare needed materials.

☐ Preview the video.

☐ Meet with Peer Leader who will get the D card for Activity 2.4 and explain what he/she needs to do.

☐ Review Appendix A: More Information About HIV/AIDS.

☐ Prepare answers to students' questions in the Question Box.

Peer Leader Activities

☐ Peer Leaders read movie facts from Activity Sheet 2.3 following the Blood Lines video.

☐ One of Peer Leaders receives the D card for Activity 2.4.

Determinants Addressed

- Greater knowledge about HIV/AIDS
- Increased perceived risk and costs of getting HIV and other STDs if sexually active
- Greater perceived importance of avoiding disease
- More conservative attitudes toward having multiple partners

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 2.1 Check-In

Suggested Time 2 minutes

Materials None

Purpose Students will come to class each day with a range of emotions and experiences affecting their readiness and willingness to participate. Using a daily check-in is a way to acknowledge this reality.

Steps for Activity

1 Have students check in.

Ask a few students to volunteer how they are feeling or what's going on for them today.

Acknowledge responses based on your judgment. Use simple, short acknowledgements, particularly the positive ones (e.g., head nods, thank you, one-word sentiments such as "great," "glad to hear it," etc.). Avoid long responses or analyzing students' comments in this group setting.

Here are some examples of potential responses:

- Thank you for letting me know. I understand it could be hard to focus when you are dealing with that.
- Thanks for sharing that with us.

Discourage students from commenting on others' responses by just moving the activity along.

If students share something inappropriate or say something with extreme bravado, ask them to re-state their response in a more appropriate manner. If students share something serious and/or reportable (e.g., parent hit me last night) work with the teacher to provide support to the student right after class or before you even begin the lesson if necessary.

Educator Note: Discuss potential sensitive and/or reportable issues with the classroom teacher or school administrator in advance so you are in agreement on how to handle these situations.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in Signed April 2025 agreement.

2 Conclude.

- *Close by thanking students for their honest responses.*
- *If there are a majority of students feeling a certain way, note that pattern.*
- *Share that knowing "where they are at" each day helps you as a teacher and that you would like them to try their best to make the most of what the class is doing together today. Emphasize that you have confidence in their ability to focus despite all that is confronting them.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 2.2 Review & Plan for the Day

Suggested Time 3 minutes

Materials Plan for the Day, student name tents

Purpose To review the plan for the day and orient students to the day's activities

Steps for Activity

1 Have students help pass back name tents.

2 Review Lesson 1.

Have students count off by twos (1, 2, 1, 2, etc.). Have all the 2's stand. Tell students that half of all new STD infections each year occur among young people ages 15 to 24 (CDC, 2014).

Explain that the students who are standing represent 50% or half of the students in the classroom. If the classroom represented all new STD infections, the students who are standing would represent the infections that occur among young people ages 15 to 24. Have students sit down.

Ask students the following questions:

- It's said that when you have sex with someone you are really having sex with that person and with everyone that person has ever had sex with. What does this mean?
- What can people do to prevent getting STDs? (Choose not to have sex (vaginal, oral, or anal); limit partners; use condoms and other barriers).

3 Post and review the Plan for the Day.

Today we will focus on how HIV affects people who have it and discuss how we can protect ourselves.

4 Ask for a volunteer to read the plan.

Lesson 2
Plan for the Day

- Blood Lines
- Passing Cards
- Summary

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 2.3 Blood Lines

Suggested Time 30 minutes

Materials *Blood Lines* video, TV and DVD player (or some other means of showing the video, Activity Sheet 2.3, chart paper

Purpose To personalize the motivation for choosing not to have sex or using protection to reduce the risk for disease

Educator Note: Before starting the video, recruit Peer Leaders or other student volunteers to read the movie facts on Activity Sheet 2.3 after the video. Let the volunteers know that you will cue them when to read.

Steps for Activity

1 Prepare students to watch the video.

Explain that you will be showing another video today. Explain that afterward students will have a chance to discuss it in pairs and then as a whole class.

Ask students how many of them know or have known someone who is HIV positive or who has AIDS. Acknowledge that young people ages 13 to 24 are affected by HIV. In 2010, young people accounted for 26% of all new HIV infections because of their sexual behaviors. Young men who have sex with men are particularly at risk (CDC, 2015).

Ask students to watch and listen carefully for the answers to these 2 questions:

- In what ways were the young people in the video affected by being HIV positive?
- What is one thing you will walk away with from seeing this video?

Post the questions on chart paper.

2 Play the video.

3 Debrief.

After the video, refer to the questions you posted. Ask students to reflect on their answers (you can have them write on scratch paper or just think quietly for a minute). Ask for a few volunteers to share their responses.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

4 Review information about HIV.

Review some basic functional knowledge regarding HIV by asking students the following questions. Clarify their responses as needed.

- What are the body fluids that can pass HIV? *(blood, semen [also called cum], pre-seminal fluid [also called pre-cum], rectal fluids, vaginal fluids and breast milk)*
- What are the most common ways people get HIV in the U.S.? *(Unprotected sex with someone who has HIV. Anal sex is riskiest; vaginal sex is second riskiest in terms of sexual behavior. Oral sex has a lower risk, but not zero risk. People also get HIV through sharing needles and other injection equipment that has been contaminated with infected blood.)*
- What population groups are heavily affected by HIV/AIDS? *(African Americans and Hispanics)*
- How can teens protect themselves from HIV? *(Don't have sex. Use latex barriers during sex (e.g., a condom for vaginal or anal sex, and a dental dam for oral sex). Have sex with only one uninfected partner who is faithful—neither person can have HIV or have sex with anyone else. Don't use drugs or share injection equipment.)*

5 Conclude.

Close by following these steps:

- *Have students turn to* **Blood Lines: Facts** *(Activity Sheet 2.3) in their workbooks.*
- *Remind students that all individuals are at risk for HIV depending on their behaviors.*
- *Review 2 or 3 facts by asking the Peer Leaders or other student volunteers to read selected facts, one at a time.*
- *Read the "What does it all mean?" box, and remind students of the importance of respecting and protecting themselves and their partners, and of getting tested for HIV if they are having sex.*

6 Transition to the next activity.

Stress to students that our actions affect others, and can put others at risk for HIV, other STD and/or unplanned pregnancy. Explain that they will see how this could play out in the next activity.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

Activity 2.4 Don't Pass It Along

Suggested Time 8 minutes

Materials Lettered 3 x 5 index cards, music and music player

Purpose To illustrate the transmission of HIV and other STDs

Steps for Activity

1 Introduce and explain the activity.

Let's take a closer look at STDs.

- Each of you will receive a card.
- Once you get your cards I will ask everyone to stand and start walking around the classroom, talking with friends.
- Talk with *at least five people,* and have those people sign your cards.
- You will have about 3 minutes to walk around and talk with each other.

Educator Note: The following activity helps participants understand the potential ease of transmission of HIV if responsible behavior isn't practiced. Be aware, however, that it can be a very sensitive activity. Some participants might be HIV positive or have family members who are; others might worry about being wrongly identified as HIV positive. Remind students that the activity is not intended to identify anyone personally and that it is strictly an exercise. It should not be taken lightly or used against anyone in the group.

2 Clarify.

Check for understanding by asking students what they will do once they get their cards. Clarify as needed.

3 Set up activity.

Give each participant an index card with a letter on it. Do not tell the students what the letters mean prior to the activity.

- *Distribute the cards so that a Peer Leader has the only D card, four or five students have U cards, and the other cards are distributed evenly.*
- *If there are fewer than five participants, eliminate the O card.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

- *If the group is large, give 5 to 10 people U cards.*
- *Have participant their names at the top of their cards.*

4 Students circulate and sign cards.

Ask everyone to stand. Have students walk around, talk to each other and sign each other's cards.

Allow students to circulate and talk for about 3 minutes. ***Play music*** *while students circulate.*

5 Reveal risk behaviors.

After 3 minutes, ask everyone to have a seat. Give the following instructions:

You've just completed an exercise to show what can happen when people engage in risky behavior. Let's see what happened.

- *Ask the person who has a D on the card to stand.*

  For the purpose of this activity, this person has a sexually transmitted disease. This means that all of you who have that person's name on your card have been in contact with someone who has a disease.

- *Ask everyone who has that person's name on the card to stand.*

  All of these people have been exposed to the STD.

- *Have students check the small letters on their cards.*

  If you have a C on your card, you may sit down. The C means you correctly used a latex condom to reduce your risk.

  Have students with C cards sit.

  If you have an O on your card, you may sit down. The O means you had outercourse only. Outercourse refers to sexually pleasurable things, such as massage or rubbing bodies, that don't involve sexual intercourse, exposure to another person's body fluids or skin-to-skin genital touching.

  Have students with O cards sit.

  If you have an A on your card you may sit down. The A means you abstained and did not have sex. Abstinence is the 100 percent sure way to protect yourself.

  Have students with A cards sit.

  If you have a U on your card, remain standing. The U means you had unprotected sex. Because you did not use a condom, you are at high risk of being infected with whatever STD the first person had.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

Educator Note: If the group is large (over 15), you can continue the activity by asking the students who are sitting if any of the people who are still standing signed their cards. Have the students with these signatures stand. Then repeat the steps of checking the cards (i.e., those with C, O or A cards can sit down; those with U remain standing). Repeat the process as often as needed to emphasize individual vulnerability. This step is not necessary if the group is small (under 15).

6 Debrief.

Have all the students who were left standing sit down.

Ask the Peer Leader who had the D card:

- How did it feel to be the person who had the STD?

Ask the other participants:

- How did you feel when you found this person had an STD?
- How did you feel when you had to stand because one of the people who had signed your card had an STD?
- How did you feel when you got to sit down because you had protected yourself by abstaining (not having sex)? How did you feel when you got to sit down because you had reduced your risk by using a condom or having outercourse only?
- How did you feel if you had to stay standing because you had had unprotected sex and had been exposed to the STD?

7 Summarize the activity.

Even though this was just a game, it was meant to model how an STD can spread. I want to emphasize that HIV and other STDs are not spread through casual contact, such as talking to someone, shaking hands or having someone sign a card like we did in this exercise. You get an STD from having sexual intercourse with someone who has one.

8 Review HIV/STD prevention.

Ask students to describe the best ways to prevent HIV and other STDs. Be sure the following behaviors are covered.

- **Choose not to have sex and never share needles or works (for HIV prevention).** This is the safest approach for preventing disease, as well as pregnancy.
- **Use condoms if having sex (and other protection for pregnancy if having vaginal sex.** Using condoms and a hormonal method of birth control together will provide the best protection for both disease and pregnancy, if having vaginal sex.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

- **Reduce the number of sexual partners if having sex, particularly the number of sexual partners at any one time.** This is an important strategy for protection too, because condoms and birth control are not always 100% effective, and people sometimes fail to use methods of protection. The more people a person has sex with, the greater the chances of coming into contact with someone who has HIV or another STD.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 2.5 Question Box and Closure

Suggested Time 5 minutes

Materials Question Box, 3 x 5 index cards, *All4You2!* Messages poster

Purpose To provide an ice breaker for the group

Steps for Activity

Question Box

1 Remind students about the Question Box.

Make the following points again if needed:

- The Question Box is a way for you to ask questions privately, if you don't feel comfortable asking the questions directly in class.
- I will leave the Question Box and blank cards in the classroom. You can write a question and put it in the box at any time. During some lessons I also will pass out blank cards and give you a chance to write questions.
- I will take time to answer the questions in the box during selected lessons.

Show students where you will put the box and cards.

Explain that today is the first opportunity for writing anonymous questions. Pass out an index card to each student. Remind students NOT to put their names on the cards.

Ask students to try to come up with a question about HIV, other STDs and/or pregnancy. Tell students that if they can't think of any questions they can write "I don't have a question" on the card. Explain that you will pick up one card from each person in a few minutes even if they did not write a question.

2 Students write questions.

Allow students to work for up to 3 minutes. Ask students to fold their cards. Collect one card from each student even if the card is blank.

3 Answer questions.

Respond to student questions, if there is time and if you are comfortable doing so without previewing the questions first. Relate answers to future lesson objectives whenever possible.

If there are unanswered questions, let students know that you will address them in later lessons.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Lesson Summary

1 Discuss.

Ask students what today's lesson was about. Elaborate as needed.

2 Emphasize the behavioral messages.

Use the All4You2! *Messages poster and tie these to the main messages of the curriculum:*

- **Respect:** Think about what you will and won't do sexually.
- **Protect:** The best way to avoid HIV and other STDs is to choose not to have sex at this time.
- **Protect:** Limiting the number of sexual partners and using latex condoms/barriers can reduce your risk of HIV and other STDs. The more partners you have, the more you expose yourself to the risk of STD infection.

Add the following message to the poster: **Check it out**

- **Check it out:** If you are having sex, get tested at least once each year and/or before every new sexual partner.

Transition and Closure

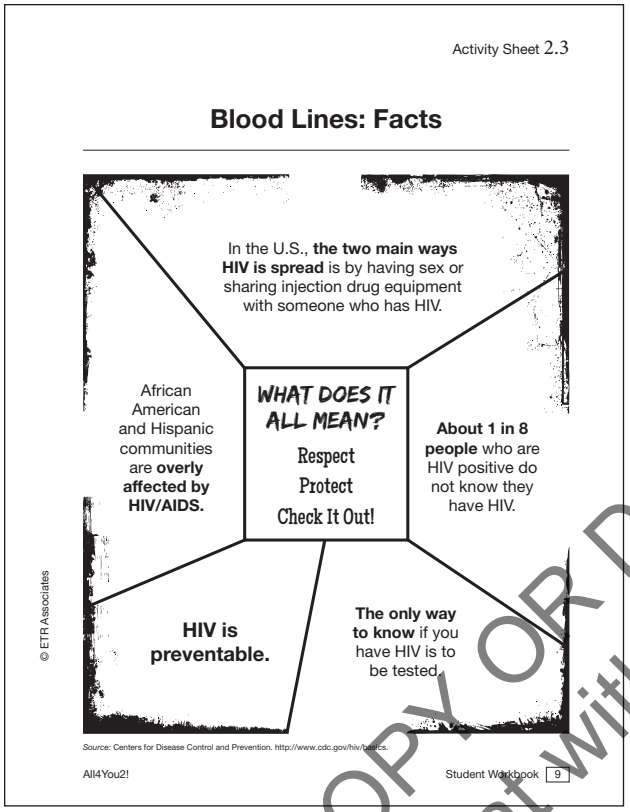
1 Assign homework.

Tell students that they have homework for tonight. Ask them to share one thing from today's lesson with a friend.

2 Collect the student name tents.

Close by recognizing students for their participation.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.



Activity Sheet 2.3

Blood Lines: Facts

In the U.S., **the two main ways HIV is spread** is by having sex or sharing injection drug equipment with someone who has HIV.

African American and Hispanic communities are **overly affected by HIV/AIDS.**

WHAT DOES IT ALL MEAN?
Respect
Protect
Check It Out!

About 1 in 8 people who are HIV positive do not know they have HIV.

HIV is preventable.

The only way to know if you have HIV is to be tested.

Activity Sheet 2.3

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Lesson 3

Reasons for Not Having Sex

Synopsis	This lesson provides a story to help students think about and compare the consequences of having versus not having sex.
Purpose Statement for Students	Today we will take a closer look at the consequences of sexual pressure.
Objectives	Students will be able to: • Compare the emotional consequences of having versus not having sex. • Analyze relationships and what could happen if the couples did or did not have sex. • Identify ways to show love and affection without having sex.
Activities & Time	3.1: Check-In 2 minutes 3.2: Review & Plan for the Day 8 minutes 3.3: Remy and Phoenix 15 minutes 3.4: Should They, or Shouldn't They? 10 minutes 3.5: Ways to Show Love & Affection 10 minutes 3.6: Closure 5 minutes

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Materials

Have

- ☐ Chart paper, markers and tape
- ☐ Student name tents
- ☐ *101 Ways to Make Love Without Doin' It* pamphlets, 1 per student
- ☐ Music and music player
- ☐ *All4You2!* Messages poster
- ☐ Question Box
- ☐ 3 x 5 index cards, 1 per student
- ☐ Pencils

Review

- ☐ **How Do I Wait?** (Activity Sheet 3.2)
- ☐ **Remy and Phoenix** (Activity Sheet 3.3)
- ☐ **Should They, or Shouldn't They?** (Activity Sheet 3.4)
- ☐ **Love & Affection** (Activity Sheet 3.5)

Prepare

- ☐ Plan for the Day
- ☐ **The Story of Remy and Phoenix** (Educator Activity Sheet 3.3), 1 copy

Educator Preparation

- ☐ Review the entire lesson and prepare needed materials.
- ☐ Practice reading the "How Do I Wait?" poem (Activity Sheet 3.2) out loud before class.
- ☐ Practice reading The Story of Remy and Phoenix (Educator Activity Sheet 3.3) out loud before class.
- ☐ Prepare answers to students' questions in the Question Box.

Peer Leader Activities

- ☐ A Peer Leader can read the poem for Activity 3.2.

Determinants Addressed

- Increased attitudes favoring choosing not to have sex (being abstinent)
- Increased perceived risk and costs of getting HIV, other STD or getting pregnant if sexually active
- Greater perceived importance of avoiding disease and pregnancy

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

Activity 3.1 Check-In

Suggested Time 2 minutes

Materials None

Purpose Students will come to class each day with a range of emotions and experiences affecting their readiness and willingness to participate. We will use a daily check-in as a way to acknowledge this reality.

Steps for Activity

1 Have students check in.

Ask a few students to volunteer how they are feeling or what's going on for them today.

Acknowledge responses based on your judgment. Use simple, short acknowledgements, particularly the positive ones (e.g., head nods, thank you, one-word sentiments such as "great," "glad to hear it," etc.). Avoid long responses or analyzing students' comments in this group setting.

Here are some examples of potential responses:

- Thank you for letting me know. I understand it could be hard to focus when you are dealing with that.
- I'll try to remember that you're having a hard day. I'm confident that you can get through it.

Discourage students from commenting on others' responses by just moving the activity along.

If students share something inappropriate or say something with extreme bravado, ask them to re-state their response in a more appropriate manner. If students share something serious and/or reportable (e.g., parent hit me last night) work with the teacher to provide support to the student right after class or before you even begin the lesson if necessary.

Educator Note: Discuss potential sensitive and/or reportable issues with the classroom teacher or school administrator in advance so you are in agreement on how to handle these situations.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in Signed April 2025 agreement.

2 Conclude.

- *Close by thanking students for their honest responses.*
- *If there are a majority of students feeling a certain way, note that pattern.*
- *Share that knowing "where they are at" each day helps you as a teacher and that you would like them to try their best to make the most of what the class is doing together today. Emphasize that you have confidence in their ability to focus despite all that is confronting them.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 3.2 Review & Plan for the Day

Suggested Time 8 minutes

Materials Plan for the Day, student name tents, Activity Sheet 3.2

Purpose To review the plan for the day and orient students to the day's activities

Steps for Activity

1 Have students help pass back name tents.

2 Review Lesson 2.

Ask students the following questions:

- Who gets HIV?
- How can having HIV/AIDS impact people?

3 Debrief homework.

Ask students how many of them shared something about the last lesson with a friend. Ask for 1 or 2 examples of what they shared.

Clarify any misinformation or key points as needed.

4 Prepare students for today's lesson.

Explain that you want to read a brief poem written by a teen named Jolita. Follow these steps:

- *Have students turn to* **How Do I Wait?** *(Activity Sheet 3.2). Read or have a Peer Leader read the poem.*
- *Ask students to turn to someone next to them to share 1 thought about the poem.*
- *Ask for volunteers to share their thoughts.*

Lesson 3
Plan for the Day

- Remy and Phoenix
- Should They, or Shouldn't They?
- Summary

5 Post and review the Plan for the Day.

Today we will look at the emotional consequences of having or not having sex. We also will hear about some different people and analyze their choices around sexual activity.

6 Ask for a volunteer to read the plan.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

Activity 3.3 Remy and Phoenix

Suggested Time 15 minutes

Materials Educator Activity Sheet 3.3, Activity Sheet 3.3, chart paper and markers, music and music player

Purpose To allow students to identify, discuss and personalize the immediate and short-term consequences of having or not having sex

Steps for Activity

1 Read the story.

Tell students that you will read them a story about two teens. Explain that after you read the story they will get a chance to think about and write what happens next in the story.

Read or have a Peer Leader read **The Story of Remy and Phoenix** *aloud.*

2 Introduce the activity.

Explain that you would like students to think about what happens next in the Remy and Phoenix story. Cover these points:

- Turn to **Remy and Phoenix** (Activity Sheet 3.3) in your workbook.
- Read each scene and fill in the "thinking and talking" bubbles for the characters based on what you think might happen next.
- Try to use the words that Remy and Phoenix might really be thinking or saying.
- After you've filled in the bubbles, answer the question at the bottom of the second page.

3 Clarify.

Check for understanding by asking students what they will be doing with the Remy and Phoenix activity sheet. Clarify as needed.

4 Students complete activity sheet.

Allow students to work for about 5–8 minutes. ***Play music*** *while students work. Circulate to ensure students are on task and to assist as needed.*

While students are working, label the left side of a piece of chart paper with "HAD SEX" and the right side with "DIDN'T HAVE SEX." Draw a line to divide the 2 columns.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

5 Debrief.

Once students finish, ask for volunteers to share their responses, moving scene by scene following these steps:

- *Note key words in students' responses in the chart paper column labeled HAD SEX (e.g., sad, embarrassed, worried, afraid, regret about getting an STD).*
- *Ask students about the final question on the activity sheet. Have them hold up 1, 2, or 3 fingers to show which scene would be most difficult for them to handle.*

Then ask students to think about how things might be different if Remy and Phoenix decided NOT to have sex that night. Follow these steps.

- *Discuss each scene (next morning and 2 days later) and ask how things might be different.*
- *Note key words in the chart paper column labeled DIDN'T HAVE SEX.*
- *Ask how scene 3 (STD infection) would change. Note key words on chart paper.*

Ask students:

- What are some differences in feelings and thoughts between the two situations?
- Are the feelings and thoughts the same or different for Remy and Phoenix? Why?
- If Remy and Phoenix were a girl and a guy, what other risk did they avoid by not having sex? (unplanned pregnancy)
- What if Remy and Phoenix were a same-sex couple? Would anything about the situation change? (No, same-sex couples have to protect themselves from STD just like male/female couples if they choose to have sex.)

Educator Note: Discussing how things might have been different if Remy and Phoenix had decided NOT to have sex is crucial step for this activity.

6 Conclude.

Close by pointing out that even though some people treat sex very casually, there are mental, emotional and physical consequences of having sex, even for people who have already had sex before. Point out some of these consequences from the Remy and Phoenix story (e.g., worry, fear, embarrassment, risk of STD/HIV).

Ask students if they can recall some of the other consequences discussed in Lessons 1 and 2 (e.g., pregnancy for male-female couples engaging in vaginal sex).

Emphasize that making a decision about sex is a very important decision, and one that deserves careful thought because of all the potential consequences or after effects.

7 Prepare students for next activity.

Explain that in the next activity students will continue to examine and discuss the consequences of having or not having sex.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 3.4 Should They, or Shouldn't They?

Suggested Time 10 minutes

Materials Chart paper and markers, Activity Sheet 3.4

Purpose To have students to think about what it means to have sex and what conditions should to be in place before having sex (e.g., in love and in a healthy relationship, know partner well, prepared to take care of a child if there's a pregnancy)

Steps for Activity

1 Discuss.

Ask students why they think people have sex (e.g., to be close to someone, to show your love, because it feels good). Have students brainstorm when it's OK to have sex in a relationship. Record key words on chart paper.

2 Explain activity.

Tell students that they are going to work in pairs on the next activity. Review the following points:

- You will be reading about some teen couples and their situations.
- Read the situations and talk about whether you think the people in each situation are ready for sex or not.
- Talk about what they need to be thinking about in deciding whether or not to have sex.
- Make notes so you can share what you and your partner talked about.

3 Clarify.

Check for understanding by asking students to describe what they are going to do once they are in pairs. Clarify as needed.

4 Students complete activity sheet.

Put students in pairs and have them turn to **Should They, or Shouldn't They?** *(Activity Sheet 3.4) in their workbooks. Circulate to monitor and assist students as needed. Allow students to work for about 5 minutes.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

5 Debrief.

When students are finished, call the class back to attention and ask students to share their thoughts about each situation.

- *Ask students what they think the couples should do and what they need to think about in making their decision.*
- *Ask what would happen if these teens decided to wait before having sex.*

6 Share information about teens and relationships.

Emphasize the following information about a recent study on teens and relationships:

A recent study found that teens ages 14 to 17 who said they decided to wait before having sexual intercourse in their relationships actually reported greater satisfaction and commitment in their relationships than those who had sex early in a relationship.*

Why do you think this might be true? *(get to know person better, feel connection with person that is more than just sexual)*

Kissing and desire for the partner were strong predictors of relationship satisfaction in the study. This shows the importance of non-sexual ways of showing love and affection.

There are lots of ways to show love and affection without having sex. You'll get to explore more about that topic next!

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

*Welsh, D. P., P. T. Haugen, L. Widman, N. Darling and C. M. Grello. 2005. Kissing is good: A developmental investigation of sexuality in adolescent romantic couples. *Sexuality Research & Social Policy* 2 (4): 32–41.

Activity 3.5 Showing Love and Affection

Suggested Time 10 minutes

Materials Activity Sheet 3.5, *101 Ways to Make Love Without Doin' It* pamphlets, chart paper or poster board and markers

Purpose To have students identify ways of showing love and affection without have sexual intercourse

Steps for Activity

1 Discuss basic needs.

Acknowledge that some of our basic needs as humans include the need for intimate contact, closeness, and love. Explain that there are a lot of ways to get our need for intimacy and closeness met without having sex. Ask students to share a few ideas. Repeat or rephrase them as needed.

2 Explain activity.

Tell students that they will now get a chance to make a poster or a "top ten" list of ways to show love and affection without having sexual intercourse (vaginal, oral or anal). Follow these steps:

- *Explain that students will work in groups of four.*
- *Ask them to include at least 10 ideas on their posters/lists.*
- *Remind students to keep it "clean" if you feel that reminder is necessary.*

3 Clarify.

Check for understanding by asking students what they will do once they get in groups. Clarify as needed.

4 Groups make posters.

Put students into groups of four. Follow these steps:

- *Pass out markers and chart paper of poster board to each group.*
- *Allow students to work for about 5–8 minutes.*
- *Circulate and prompt students or clarify the task as needed.*
- *As you circulate, recruit 2 or 3 groups to share their work once they are finished.*

DO NOT COPY OR DISTRIBUTE
in any format without express
written permission from ETR.
PDF solely for purposes
identified in signed
April 2025 agreement.

5 Share.

Have two or three groups share their work in front of class. Thank students for their efforts and creativity.

6 Summarize.

Close by noting that closeness is important in a relationship, but there are many ways to be close without having sex.

Have students turn to **Love & Affection** *(Activity Sheet 3.5) in their workbooks. To personalize the activity, ask them to think about all the ideas that were shared, select two ways that they would like to remember and use, and write these ideas down on the activity sheet.*

7 Distribute pamphlets.

Distribute a 101 Ways to Make Love Without Doin' It *pamphlet to each student. Allow students to look through it briefly. Encourage them to share it with a friend or partner.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 3.6 Closure & Question Box

Suggested Time 5 minutes

Materials Question Box, 3 x 5 index cards

Purpose To summarize key points of the lesson and prepare for the next lesson

Steps for Activity

Lesson Summary

1 Discuss.

Ask students to summarize the main points of this lesson.

2 Emphasize the behavioral messages.

Use the All4You2! *Messages poster and tie these to the main messages of the curriculum.*

- **Respect and Protect:** Choosing not to have sex can lead to better relationships, and can keep you safe from unplanned pregnancy and/or HIV and other STDs.
- **Respect and Protect:** There are many ways to show people you care about them without taking a risk of sexually transmitted diseases or pregnancy.

Question Box

1 Answer questions.

Answer the student questions from the Question Box.

2 Gather new questions.

If there is time, hand out 3 x 5 index cards and give students a minute to write any new questions they might have. Tell students that if they don't have a question they should write "I don't have a question" on the card. Remind students NOT to put their names on the cards.

Have them fold the cards when they are finished writing. Have a Peer Leader collect the cards. Tell students that you will address these questions in a later lesson.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Closure

1 Conclude.

Collect the student name tents.

Close by recognizing students for their interest, their creative thinking and all the work they accomplished today.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

DO NOT COPY OR DISTRIBUTE

HOW DO I WAIT?

by Jolita Phillips

Going from class to class knowing that more than half has already been taken

All of the pressure makes me question why I am still waiting

Should I give in to the boy that I've been dating?

When the topic comes up between my friends I'm the one who's not relating

Some say I should just wait until I'm in love

Yet I wonder is that really enough?

I hear the stories of others getting hurt and just used

I'm young still untaken and confused

Television portrays that having sex is so good

I really like this boy and he thinks I should

How am I sure if he's the right one?

How would it be once we're done?

This could end with me feeling either very regretful or great

So hard, how do I wait?

The Story of Remy and Phoenix

Educator Note: Emphasize that the Remy and Phoenix in the story could be any teens with any names.

Remy is in high school. It's Saturday and Remy's Nana thinks Remy is doing homework at a friend's house that night, but Remy and the friend went to a party instead. When they got there, the house was a little dark and there were no parents. Music was playing and some people were dancing. There was a bar set up near the kitchen and others were sipping alcohol. Some kids were hooking up in the rooms.

Remy's friend went off to talk to some other people. Remy was feeling uncomfortable without the friend, and decided to have a few drinks. Just when Remy was wishing someone would come over and talk, Phoenix, someone Remy had seen at school, came over.

Phoenix and a few friends had been drinking. Phoenix's friends were talking about getting down tonight. Phoenix joined in the talk, but didn't mean it. Sex had really messed up a relationship in the past, so Phoenix had made a private decision not to have sex again, at least for a few years. Phoenix didn't know many people at the party, so was happy to see Remy. Phoenix got a drink and offered another one to Remy. Remy wasn't sure about drinking more, but took the drink anyway.

Phoenix asked Remy to dance and they started feeling good. Phoenix saw some friends watching and wanted to impress them. So Phoenix started to rub on Remy in ways that felt kind of good, but also were a little uncomfortable.

The touching felt good to Remy too, but, like Phoenix, Remy felt a little uncomfortable and wasn't sure touching in that way was OK. But Remy decided that Phoenix was cool and let the touching keep going. Both Phoenix and Remy were feeling odd because everybody was watching. They were also feeling the alcohol and it was hard to think clearly.

Soon their friends were signaling for them to go to a room, so Phoenix suggested the idea to Remy. Remy wasn't sure whether it was a good idea, but liked Phoenix and didn't want to deal with their friends' responses, so they went.

Remy took Phoenix's hand and started to go down the hallway. They turned the knob on one of the doors. Someone yelled "Hey!" "Ooops—Sorry!" they said, laughing nervously. "Wrong door!" They tried the next one a little more carefully. It was empty. Remy and Phoenix went into the bedroom. Soon they were lying on the bed, kissing and messing around. They didn't really talk about having sex. It just happened. After they did it, Remy and Phoenix found their friends and went home.

Should They or Shouldn't They?

Jordon and Jaden

have been together for a month. They see each other about once a week. They still go out with other people too. Tonight they are at home alone and things are heating up. Should they have sex? What do they need to think about? What could happen if they do? What would happen if they decide to wait?

Katrina and Avery

are in tenth grade. They've been together almost a year. They both decided they didn't want to have sex until they were older, but some of Katrina's friends are having sex and she is re-thinking her decision. Should Katrina and Avery have sex? What do they need to think about? What could happen if they do? What would happen if they decide to wait?

Alicia and Donnel

just hooked up at a party. They really like each other. They are leaving the party in Alicia's car to find somewhere quieter. Should they have sex? What do they need to think about? What could happen if they do? What would happen if they decide to wait?

Lesson 4 What's the Risk?

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Synopsis

Students participate in an activity to identify behaviors that put them at risk for HIV and other STDs, identify ways to reduce their risk, and then complete a small-group activity to examine ways to make respectful and responsible decisions in a relationship.

Purpose Statement for Students

Today we will focus on things that put us at risk of getting HIV and other STDs, and ways to reduce that risk.

Objectives

Students will be able to:

- Distinguish between behaviors that range from no to high risk for HIV transmission.
- Describe how to prevent HIV and other STDs.
- Personalize their risk for HIV infection and identify personal plans for avoiding infection.
- Describe how to show respect and responsibility in relationships.
- Explain the benefits of making respectful and responsible decisions.

Activities & Time

4.1: Check-In	2 minutes
4.2: Review & Plan for the Day	3 minutes
4.3: Risk Continuum	25 minutes
4.4: What's Your Risk?	5 minutes
4.5: Respect & Responsibility	12 minutes
4.6: Closure	3 minutes

Materials

Have

- ☐ Chart paper, markers, and tape
- ☐ Student name tents
- ☐ Blank index cards the same size and color as the Risk Behavior Cards (see Educator Background Sheet 4.3)
- ☐ Large envelope (see Activity 4.4)
- ☐ Prizes (see Activity 4.5)
- ☐ Music and music player
- ☐ *All4You2!* Messages poster
- ☐ Pencils

(continued)

Materials

Review

☐ **Risk Continuum Activity** (Educator Background Sheet 4.3)

Prepare

☐ Plan for the Day

☐ Three traffic lights drawn on 8-½ x 11 paper, with the following labels:

- Green—Lowest Risk
- Yellow—Proceed with Caution
- Red—High Risk

☐ Tape or Velcro strips to hang cards between the stop lights

☐ **Risk Behavior Cards** (see Educator Background Sheet 4.3)

☐ Chart paper (see Activity 4.3 for instructions)—divide the paper into two columns by putting a line down the middle. On the left side write "Respectful and Responsible Decisions." On the right side write "What's in It for Me." Make 4 or 5, depending on class size,

☐ **What's Your Risk? Cards** (Master 4.4), 1 per student

Educator Preparation

☐ Review the entire lesson and prepare needed materials.

☐ Make chart paper sheets for group work in Activity 4.3.

☐ Check with Peer Leaders to be sure they are prepared.

Peer Leader Activities

☐ Peer Leaders serve as recorders and reporters for Activity 4.5.

Determinants Addressed

- Greater knowledge about HIV/AIDS
- Greater perceived risk of HIV/STDs
- More positive attitudes about using condoms
- Increased attitudes favoring choosing not to have sex
- More conservative attitudes toward having multiple partners
- Decreased alcohol use and use of other substances before having sex

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 4.1 Check-In

Suggested Time 2 minutes

Materials None

Purpose Students will come to class each day with a range of emotions and experiences affecting their readiness and willingness to participate. We will use a daily check-in as a way to acknowledge this reality.

Steps for Activity

1 Have students check in.

Ask a few students to volunteer how they are feeling or what's going on for them today.

Acknowledge responses based on your judgment. Use simple, short acknowledgements, particularly the positive ones (e.g., head nods, thank you, one-word sentiments such as "great," "glad to hear it," etc.). Avoid long responses or analyzing students' comments in this group setting.

Here are some examples of potential responses:

- Thank you for letting me know. I understand it could be hard to focus when you are dealing with that.
- I'll try to remember that you're having a hard day. I'm confident that you can get through it.

Discourage students from commenting on others' responses by just moving the activity along.

If students share something inappropriate or say something with extreme bravado, ask them to re-state their response in a more appropriate manner. If students share something serious and/or reportable (e.g., parent hit me last night) work with the teacher to provide support to the student right after class or before you even begin the lesson if necessary.

Educator Note: Discuss potential sensitive and/or reportable issues with the classroom teacher or school administrator in advance so you are in agreement on how to handle these situations.

2 Conclude.

- *Close by thanking students for their honest responses.*
- *If there are a majority of students feeling a certain way, note that pattern.*
- *Share that knowing "where they are at" each day helps you as a teacher and that you would like them to try their best to make the most of what the class is doing together today. Emphasize that you have confidence in their ability to focus despite all that is confronting them.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 4.2 Review & Plan for the Day

Suggested Time 3 minutes

Materials Plan for the Day, student name tents

Purpose To review the plan for the day and orient students to the day's activities

Steps for Activity

1 Have students help pass back name tents.

2 Review Lesson 3.

Ask students the following questions:

- What are some of the emotional and physical consequences of having sex?
- What are some of the issues young people need to think about before having sex in a relationship?

Clarify any misinformation or key points as needed.

4 Post and review the Plan for the Day.

Today we will focus on things that put us at risk of getting HIV and other STDs, and ways to reduce that risk.

6 Ask for a volunteer to read the plan.

Lesson 4
Plan for the Day

- What's the Risk?
- Proud & Responsible
- Summary

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 4.3 Risk Continuum

Suggested Time 25 minutes

Materials Traffic lights, Risk Behavior Cards, Educator Background Sheet 4.3, blank index cards, tape, markers

Purpose To help students identify the risk level for a variety of sexual and nonsexual behaviors

Steps for Activity

1 Introduce activity.

- *Ask students for a few examples of behaviors that put teens at risk for HIV and other STDs (e.g., having sex without using condoms).*
- *Ask students to describe a behavior that is safer (e.g., choosing not to have sex, kissing, using condoms if having sex).*
- *Note that it may feel like everything sexual is risky, but it's not.*
- *Explain that in this next activity students are going to look at different behaviors and how risky they might be.*

Post the three labeled traffic lights in a continuum on the chalkboard or on the wall. Explain the activity, reviewing the following steps:

- *You will work in small groups of three or four.*
- *Each group will get several cards with different behaviors written on them (show cards).*
- *Discuss each behavior as a group and decide the level of risk of the behaviors.*
- *Once your group has decided, someone from the group should tape each card along the continuum based on the level of risk for STD and/or HIV infection the behavior represents. It's OK to put a card in between two of the traffic lights—for example, if your group decides it fits somewhere between the green light and the yellow light.*

2 Model the activity.

Ask students to indicate the level of risk associated with "Talk on phone." Write this on a card and post it in the no risk category, under the Green Light.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

3 Students place cards.

Divide students into groups of three or four. Assign a Peer Leader to each group. Pass out Risk Behavior Cards and tape to each group. Allow students to work for 5 minutes to place their cards in the correct categories. Prompt them if necessary when they have about a minute left.

4 Debrief.

Have students stay in their groups after they finish. Review the three risk categories:

- High Risk/Red Light behaviors involve an exchange of blood, semen (cum), pre-cum, vaginal or rectal fluids. These behaviors pose a definite risk of transmitting HIV and other STDs.
- Proceed with Caution/Yellow Light behaviors are behaviors that involve a barrier such as a condom or dental dam. They are activities during which an exchange of body fluids is possible and so there can be some danger of transmitting HIV and other STDs.
- Lowest Risk/Green Light behaviors involve no exchange of blood, semen (cum), pre-cum, vaginal, or rectal fluids, and thus pose no risk of transmitting HIV. Most also pose no risk of transmitting other STDs, although some could.

Ask students if there are any behaviors that they think should be moved on the continuum. Have students explain why they think the behavior should be moved. If students do not agree on the level of risk of selected behaviors, encourage discussion and seek input from other students.

Make sure all behaviors are in the proper categories before moving to the next step. Use Educator Background Sheet 4.3 as a guide for final placement of behaviors.

Educator Note: Be sure not to leave a card incorrectly placed along the continuum. Heated discussion may emerge about the proper place of a behavior along the risk continuum, which is a great opportunity for nuanced discussion. Stress that any behavior in the yellow or red categories are more risky than those in the green category. End any discussion that becomes nonproductive.

When students are evaluating a behavior they may ask you whether the sex partner is infected with HIV or another STD. Say that you do not know.

5 Identify additional behaviors.

Continue the activity by allowing groups to identify other behaviors not already on the wall using the following steps:

- *Assign each group to work on Green Light, Yellow Light or Red Light behaviors. Assign one category of behaviors to each group.*
- *Explain that you would like each group to come up with two behaviors that are not already on the wall for their assigned category (Green, Yellow or Red Light behaviors), and to write those behaviors on the cards you will give them.* ***Remind students to use appropriate behaviors and language.***

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

- *Give each group two blank index cards and a marker, and have them get started. Circulate to ensure students are on task. Check the behaviors they identify for appropriateness and specificity.*
- *Once groups have come up with their behaviors, have them discuss and agree upon where within their category they would place the cards (e.g., closer to the green light or toward the yellow light for the Green Light group). Have representatives from each group tape their cards on the wall based on the group's decision.*
- *Review the new behaviors quickly as a class and ask if the class agrees on the placement. Discuss and move the cards as needed.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 4.4 What's Your Risk?

Suggested Time 5 minutes

Materials What's Your Risk? Cards, pencils, large envelope

Purpose To have students think about their personal risk behaviors and identify how many of them are in the Yellow or Red Light risk categories

Steps for Activity

1 Introduce activity.

Ask students to think about their own sexual behaviors over the past 7 days. (Stress that they should just to think about the behaviors, not share them out loud).

Remind them that if they are practicing Yellow or Red Light behaviors they are placing themselves and their partners at risk for HIV and other STDs, and they should change their behaviors to lower their risk.

Tell students that you will be passing out a card and a pencil. Explain that when they get the card they should mark whether or not they have done any Yellow or Red Light behaviors in the past week. Tell students NOT to put their names on the card.

2 Students assess personal risks.

Conduct the activity using the following steps:

- *Pass out a* **What's Your Risk? Card** *and a pencil to each student.*
- *Have students check the appropriate boxes and fold the card in half when they are done.*
- *Walk around the room with a large envelope and have students put their completed cards in the envelope. Do NOT have students pass the cards forward, as it could jeopardize their privacy.*
- *Do a quick tally of how many students marked "yes" to Yellow or Red Light behaviors and how many marked "no" to each (e.g., 10 students marked no for Yellow, 5 marked yes; 13 students marked no for Red; 2 marked yes).*

3 Debrief.

Share the tallies with students.

If it is true, point out that some (or many) students are avoiding Yellow and Red Light behaviors and are reducing their risk for HIV and other STDs.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

If some students are reporting Yellow or Red Light behaviors, randomly pick a few behaviors in each category from those listed on the wall (ideally based on what you hear is common practice among these students) and ask students how people might change the behavior so that they are closer to the Green Light end of the continuum.

Suppose someone is having sex with multiple partners, but always uses a condom. This is a Yellow Light behavior. Having sex with multiple people increases the chances that one of those people might have a disease. So what could that person do to further reduce the risk of HIV and other STDs and move more toward the Green Light end of the continuum?

(Reducing the number of partners will lower the person's risk.)

Educator Note: This activity has the potential to backfire if all students are practicing risky behaviors. If this is the case for your class, do NOT debrief this activity by sharing group results. Rather, debrief by picking one or two common Yellow and Red Light behaviors and asking students how to change each behavior to make it safer.

4 Conclude.

Close by asking students to think about their behaviors and all the behaviors they discussed today. Have them think about what they can do or change in the next week to stay or get to "Green."

Emphasize that it is in their power to protect themselves and their friends/partners. Encourage students to share this information about Green, Yellow and Red Light behaviors with friends and/or their partners, emphasizing which behaviors are safer.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 4.5 Respect & Responsibility

Suggested Time 12 minutes

Materials Chart paper, markers, prizes

Purpose To introduce the concepts of respect and responsibility in protecting themselves and others against HIV, other STDs and unintended pregnancy

Educator Note: To prepare the chart paper for the small-group activity, divide each piece into two columns by putting a line down the middle. On the left side, write "Respectful and Responsible Decisions." On the right side write "What's in It for Me." Make 4 or 5 per class, depending on class size. Remember to make one to use for the discussion segment.

Steps for Activity

1 Define key terms.

- *Write the words Respect and Responsible on chart paper.*
- *Have students brainstorm what it means to respect your body. Record key words on the chart paper.*
- *Then have students brainstorm what it means to be responsible. Record key words on the chart paper.*

Be sure students' answers include the following:

To respect your body means having self-worth, integrity, and dignity; valuing yourself; taking care of yourself.

Being responsible means being dependable, dedicated, reliable, committed and trustworthy.

2 Describe small-group activity.

Tell students that now you would like them to work in small groups to think more about what it means to show respect and responsibility in terms of relationships, and to think about the benefits of showing respect and responsibility.

Explain the activity:

- You will work in groups of three or four. Your Peer Leader will be your recorder.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

- Each group will receive a piece of chart paper and a marker. The paper has two columns. On the left side it says "Respectful and Responsible Decisions." On the right side it says "What's in It for Me." (Show example.)
- Your task is to list at least 3 respectful and responsible decisions people can make in a relationship. Then, you should list at least 3 benefits of making those decisions. The group with the most items on their lists (that meet the objective of the activity) will get a prize.
- You'll have 5 minutes to create your lists.

3 Clarify.

Check for understanding by asking students what they will do with the chart paper. Clarify as needed.

Put students in groups and pass out chart paper and markers to the Peer Leader in each group. Have the groups get started on the activity. Circulate to clarify the task and answer student questions.

4 Debrief.

After about 5 minutes, call students back to attention. Have the Peer Leaders in each group share one way to show respect and responsibility in a relationship. Write these answers on a piece of chart paper labeled "Respectful and Responsible Decisions." After the groups have reported, ask if there are other ideas that weren't mentioned.

Students' lists should include concepts such as:

- Wait until older or in a serious, committed relationship to have sex.
- Use a latex or polyurethane/polyisoprene condom during sex (and, if having vaginal sex, ideally a condom and hormonal birth control).
- Abstain from sexual behavior when no condom is available.
- Avoid using alcohol and drugs.
- Talk with partners and friends about risk behaviors and protection.
- Be faithful to each other (don't cheat).
- Choose to have one partner.
- Don't push partner into doing something he/she isn't ready to or doesn't want to do.

Now ask the Peer Leaders of each group to share one of the benefits of showing respect and responsibility. Record key words on chart paper labeled "What's in It for Me." After the groups have reported, ask if there are other ideas that weren't mentioned.

Students' lists should include benefits such as:

- Feel better about yourself
- Have healthier relationships
- Reduce your risk of HIV, other STDs and/or unintended pregnancy
- Stay in school

DO NOT COPY OR DISTRIBUTE
In any format without express
written permission from ETR.
PDF solely for purposes
identified in signed
April 2025 agreement.

- Accomplish your goals
- Build more trust with your partner
- Make people feel proud of you
- Feel like you are helping your loved ones and your community

Leave this chart paper posted in class. Distribute prizes to groups with most ideas on their lists.

5 Summarize.

Be sure to make the following points:

- Everyone is vulnerable to HIV and other STD infection.
- Have limits and honor your partner's limits. Waiting until you're older to have sex is the safest choice for avoiding HIV and other STDs right now.
- If people have sex, the respectful and responsible things are to (1) use condoms/barriers (and another effective form of birth control every time if having vaginal sex); (2) limit the number of sexual partners; and (3) get tested for STDs and HIV before having sex.
- People who engage in responsible behavior feel proud of helping to protect themselves and their partners, which ultimately helps reduce HIV and other STD in their communities.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 4.6 Closure

Suggested Time 3 minutes

Materials *All4You2!* Messages poster

Purpose To summarize key points of the lesson and prepare for the next lesson

Steps for Activity

Lesson Summary

1 Discuss.

Ask students to summarize the main points of this lesson.

2 Summarize.

Emphasize that the purpose of today's lesson was to look at different sexual behaviors and what risk they pose for transmitting STDs, including HIV. Point out that taking responsibility in a relationship is one way of showing your partner you care, and it can help reduce the chances that either person will get a disease.

3 Emphasize the behavioral messages.

Use the All4You2! *Messages poster and tie these in to the main messages of the curriculum:*

- **Respect:** Think about what you are doing and make sure your behaviors are low risk.
- **Protect:** The best way to avoid HIV and other STDs is to choose not to have sex.
- **Protect:** Limiting the number of sexual partners and using latex condoms/barriers every time you do have sex can reduce your risk of HIV and other STDs.

Closure

1 Conclude.

Collect the student name tents. Close by recognizing students for their interest, their creative thinking and all the work they accomplished today.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Risk Continuum Activity

Traffic Lights

Take 3 sheets of standard 8-½ x 11 paper. Draw a tall rectangle with 3 circles on each, so you have a diagram of a traffic light.

- Color the top circle red on one page, and write, "Red Light/High Risk" on it.
- Color the middle circle yellow on one page, and write, "Yellow Light/Proceed with Caution" on it.
- Color the bottom circle green on one page, and write, "Green Light/Lower Risk" on it.

Post the Traffic Lights along a wall or board so they create a continuum, like this:

Be sure there is space between each traffic light for posting Risk Behavior Cards.

Risk Behavior Cards

Make Risk Behavior Cards by putting the risk behaviors from the key below on 5 x 8 index cards (or similar material). Type or write only one behavior per card. Do not put the correct placement category on the card, just the behavior. Use a marker and write large enough so the card can be seen easily in the classroom. All cards should be the same color. Only use behaviors that you feel are appropriate for your class.

Behavior	Correct Placement
1. Vaginal sex without a condom	**Red Light**
2. Vaginal sex with a condom	**Yellow Light**
3. Oral sex without a condom or barrier	**Red/Yellow Light** Risk of transmission of HIV is much lower for oral sex than for vaginal or anal sex. However, many other STDs can be transmitted this way. Condoms (for males) or flat latex barriers (for females) are recommended.
4. Oral sex with a condom or barrier	**Yellow Light**

(continued)

© ETR Associates

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Risk Continuum Activity *(continued)*

Behavior	Correct Placement
5. Anal sex without a condom	**Red Light**
6. Anal sex with a condom	**Red/Yellow Light** Condoms are more likely to break during anal sex.
7. Kissing	**Green Light** Unless person has sores on or in mouth.
8. Getting or giving a massage	**Green Light**
9. Showering together	**Green Light**
10. Having a romantic conversation	**Green Light**
11. Sharing needles for drugs/ tattooing	**Red Light** High risk for HIV and hepatitis.
12. Having vaginal sex with multiple partners and not using condoms	**Red Light**
13. Having vaginal sex with multiple partners and using a condom every single time	**Yellow Light**
14. Having sex without a condom with a person who injects drugs	**Red Light**
15. Having sex without a condom with someone who has had multiple partners	**Red Light**
16. Having unprotected sex with a woman who is having sex with other women	**Yellow Light** Any type of unprotected sex with someone with HIV puts a person at risk for HIV. This includes sexual activities that involve sharing vaginal secretions or blood.
17. Having unprotected sex with a man who is having sex with other men	**Red Light**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR Associates

Risk Continuum Activity *(continued)*

Behavior	Correct Placement
18. Not having sex	**Green Light**
19. Having dry sex (clothes on)	**Green Light**
20. Flirting	**Green Light**
21. Body rubbing (no clothes)	**Yellow Light**
22. Hugging	**Green Light**
23. Having vaginal sex without a condom with only one person	**Green/Yellow/Red Light** Depends on whether both are uninfected or virgins and have never shared needles for any reason.
24. Having vaginal sex without a condom with someone who is using the pill or the shot for birth control	**Red Light** Hormonal birth control methods, such as birth control pills and the shot protect against pregnancy, but not HIV/STD.
25. Group sex	**Red Light**
26. Having anal sex with a casual friend	**Red Light**
27. Injecting meth	**Red Light**
28. Having sex while drunk or high	**Red Light** Greater chance of making risky choices.
29. Being alone with someone while drunk or high	**Yellow Light**
30. Having vaginal sex and then having anal sex right after, using the same condom	**Yellow/Red Light**

Lesson 5

Examining the Risk

Synopsis	Students participate in an activity that illustrates the increased risk of having multiple sexual partners. They discuss how STD spread increases with increasing numbers of partners. Then they work in small groups to rate and discuss the relative risk of different partner scenarios.
Purpose Statement for Students	Today we will look at how having multiple and overlapping partners affects the transmission of HIV and other STDs.
Objectives	Students will be able to: • Analyze the risk of having multiple and overlapping partners. • Rate the relative risk of different partner scenarios.
Activities & Time	5.1: Check-In — 2 minutes 5.2: Review & Plan for the Day — 3 minutes 5.3: How Number of Partners Affects STD Risk — 22 minutes 5.4: Rate the STD Risk — 20 minutes 5.5: Closure — 3 minutes

Materials

Have

- ☐ Chart paper, markers and tape
- ☐ Plan for the day (Educator makes own).
- ☐ Student name tents
- ☐ Risk Behavior Cards from Lesson 4
- ☐ Music and music player
- ☐ *All4You2!* Messages poster
- ☐ Pencils

Review

- ☐ **Signature Sheet** (Activity Sheet 5.3)
- ☐ **Partner Risk Stories** (Activity Sheet 5.4)

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Materials

Prepare

- ☐ Plan for the Day
- ☐ **How STD Spreads** slides
  - **Not Having Sex or Having Only 1 Partner** (Master 5.4a)
  - **Having 1 or 2 Partners** (Master 5.4b)
  - **Having 2 or 3 Partners** (Master 5.4c)

Educator Preparation

- ☐ Review the entire lesson and prepare needed materials.
- ☐ Make slides or transparencies from Masters 5.4a–c, or copy the diagrams to chart paper.
- ☐ Check with Peer Leaders to be sure they are prepared.
- ☐ Prepare **Signature Sheets** for Peer Leaders. Mark a small 1 in the upper right corner of the first Peer Leader's activity sheet, a 2 in the upper right corner of the second Peer Leader's activity sheet, and a 3 in the upper right corner of the third Peer Leader's activity sheet.
- ☐ Select at least 4 of the Risk Behavior Cards from Lesson 4 that involve multiple partners (e.g., cards 12, 13, 15, 16, 17, or 25) to post on the wall in Activity 5.3.

Peer Leader Activities

- ☐ Three Peer Leaders help with the Signature Sheet activity (see Activity 5.3).

Determinants Addressed

- Greater knowledge about HIV/AIDS
- Increased perceived risk of HIV/STDs
- More conservative attitudes toward having multiple partners
- Greater intentions to limit the number of sexual partners

Educator Note: Lesson content and materials specific to the volunteer site are modeled on a volunteer project at a skilled nursing facility serving elders. You will need to adapt the content (e.g., discussion questions) and materials (Conversation Starter Tips) to your class site.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 5.1 Check-In

Suggested Time 3 minutes

Materials None

Purpose Students will come to class each day with a range of emotions and experiences affecting their readiness and willingness to participate. We will use a daily check-in as a way to acknowledge this reality.

Steps for Activity

1 Have students check in.

Ask a few students to volunteer how they are feeling or what's going on for them today.

Acknowledge responses based on your judgment. Use simple, short acknowledgements, particularly the positive ones (e.g., head nods, thank you, one-word sentiments such as "great," "glad to hear it," etc.). Avoid long responses or analyzing students' comments in this group setting.

Here are some examples of potential responses:

- Thank you for letting me know. I understand it could be hard to focus when you are dealing with that.
- I'll try to remember that you're having a hard day. I'm confident that you can get through it.

Discourage students from commenting on others' responses by just moving the activity along.

If students share something inappropriate or say something with extreme bravado, ask them to re-state their response in a more appropriate manner. If students share something serious and/or reportable (e.g., parent hit me last night) work with the teacher to provide support to the student right after class or before you even begin the lesson if necessary.

Educator Note: Discuss potential sensitive and/or reportable issues with the classroom teacher or school administrator in advance so you are in agreement on how to handle these situations.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in Signed April 2025 agreement.

2 Conclude.

- *Close by thanking students for their honest responses.*
- *If there are a majority of students feeling a certain way, note that pattern.*
- *Share that knowing "where they are at" each day helps you as a teacher and that you would like them to try their best to make the most of what the class is doing together today. Emphasize that you have confidence in their ability to focus despite all that is confronting them.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 5.2 Review & Plan for the Day

Suggested Time 3 minutes

Materials Plan for the Day, student name tents

Purpose To review the plan for the day and orient students to the day's activities

Steps for Activity

1 Have students help pass back name tents.

2 Review Lesson 4.

Ask students the following questions:

- Why are the behaviors in the Yellow Light and Red Light categories more risky for HIV and other STD transmission than the Green Light behaviors?
- What are two ways to show respect and responsibility in a relationship?

Clarify any mis-information or key points as needed.

3 Post and review the Plan for the Day.

Today we will look at the risk of having multiple and overlapping sexual partners.

4 Ask for a volunteer to read the plan.

Lesson 5
Plan for the Day

- Partners
- Rate the Risk
- Summary

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 5.3 How Number of Partners Affects STD Risk

Suggested Time 22 minutes

Materials Activity Sheet 5.3

Purpose This activity demonstrates how STD risk increases with number of partners and with concurrent partners

Educator Note: Before class begins, briefly explain the activity privately to the three Peer Leaders whose activity sheets you have numbered with a 1, 2 and 3. Tell them that for the purposes of this activity, they will represent someone who has an STD to help show how STD can spread within a group.

Students may comment that this is the same as the activity they did in Lesson 2 (Don't Pass It Along). Tell them that the two activities share some similarities, but the focus of this lesson in on the number and timing of sexual partners, while the focus of Lesson 2 was on how STDs spread and how certain actions (having sex or not) could affect that spread.

Steps for Activity

1 Introduce the activity.

Be sure to make the following points.

- *Remind students that in the last lesson they reviewed different behaviors that could put people at risk of HIV and other STDs.*
- *Post at least 4 of the multiple-partner-related cards from Lesson 4 on chart paper or a wall (e.g., cards 12, 13, 15, 16, 17, or 25). Ask students what the cards share in common (having sex with multiple partners or infected partners).*
- *Tell students that during today's lesson they will explore how the number of sexual partners and the timing of being with different sexual partners can put them at risk for STDs, including HIV.*

2 Explain the activity.

Tell students that they will be exchanging signatures using an activity sheet. Have students turn to the **Signature Sheet** *(Activity Sheet 5.3) in their workbooks. Explain that the activity sheet has 3 parts, and review how they will complete it:*

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

- *Students will move around the room with their activity sheets to trade signatures with others. There will be three rounds to get signatures.*
- *They will use one part of the activity sheet for each round. They should stop after they complete each part and wait for instructions.*
- *They will trade signatures with one other person for Part 1, with two different people for Part 2, and with three additional people for Part 3.*
- *They should mingle outside their usual groups and trade signatures with classmates they don't know as well during the activity.*

Educator Note: Be sure students understand that they need to TRADE signatures—as they sign someone else's activity sheet, that person should be signing theirs.

Check for understanding by asking students what they will do once they receive their activity sheets. Address questions as needed. To clarify, you can have two of the Peer Leaders model signing each other's sheets for Part 1. (Then these two students will not circulate during the Part 1 round of the activity.)

3 Students trade signatures.

Have students stand and form a group in the center of the classroom with their activity sheets. Then conduct the activity, using the following steps:

- *Have students complete Part 1 of the activity sheet by circulating and trading signatures with **one** other person. Tell them to wait before moving on to Part 2.*
- *Once everyone has a signature for Part 1, have students complete Part 2 by circulating and trading signatures with **two** different people. Tell them to wait before moving on to Part 3.*
- *After everyone has two signatures for Part 2, have students complete Part 3 by circulating and trading signatures with **three** additional people.*
- *When all students have three signatures for Part 3, have them return to their seats.*

Announce that, for the purpose of this activity, signing someone's activity sheet represented having sex with that person. The number of signatures in each part represents the number of sexual partners a person had.

4 Demonstrate having only one partner.

Explain that in Part 1 each person traded signatures with only one other person. Explain that this one signature represents having only one sexual partner. Tell students that this is like having a mutually committed relationship with only one person for a long period of time. Some people call this "mutual monogamy" or "being monogamous." Others might call it "being faithful."

Ask the Peer Leader who had the number 1 on the activity sheet to stand up. Explain that, for the purposes of the activity, this person has an STD. Have the Peer Leader read the name from Part 1 on his or her activity sheet and have this student also stand. Explain that, in the context of this activity, this person got the STD from the Peer Leader.

DO NOT COPY OR DISTRIBUTE
in any format without express
written permission from ETR.
PDF solely for purposes
identified in signed
April 2025 agreement.

Note that these are the only two people infected with the STD. All the other students in the class avoided getting the STD because they limited their number of partners to one. Explain that, if two people only have sex with each other, and neither of them has an STD, they can remain uninfected. Having sex with only one other person, who does not have an STD and who only has sex within the relationship, is a SAFER choice. Have the two standing students sit down.

Educator Note: For the next two demonstrations (Part 2 and Part 3 of the activity sheet), it's important to have students read only the names that come *after* the Peer Leader's, or any other "infected" students, in order to show the effect of having sequential or serial partners—two or three distinct partners over time.

In the last demonstration, students will read all of the names in Part 3 of their activity sheets. This will show the effect of having overlapping partners—continuing to have sex with all three partners over the same period of time. In this last case, an even greater number of students will be standing by the end of the demonstration, illustrating how STD spread increases dramatically when people have multiple partners and continue to have sex with all of them.

5 Demonstrate STD spread with two partners.

Tell students that the risk of STD, including HIV, increases when people have more than one partner. Explain that, in Part 2, trading two signatures represents having two partners over time. For example, having one partner, ending that relationship, and then, after some time has passed, having another partner.

Ask the Peer Leader who has the number 2 on the activity sheet to stand up. Explain that, for the purposes of the activity, this person has an STD. Have the Peer Leader read the two names from Part 2 and have these two students also stand. Explain that these people have gotten the STD from the Peer Leader.

Ask the first person whose name was read to read the name from Part 2 that comes after the Peer Leader's name on his or her activity sheet, and have this student stand as well. Explain that this person also got the STD because he or she had sex with someone who had already been infected.

Ask the second person whose name was read to read any name from Part 2 that comes before the Peer Leader's name on his or her activity sheet. Ask students:

Was this person exposed to the STD?

Explain that this student does not have to stand and does not have the STD because he or she had sex with the second person before he or she got the STD from the Peer Leader.

Count the number of students standing and write it on the board. (There should be three students standing in addition to the Peer Leader). Then have the students who are standing sit down.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

6 Demonstrate STD spread with three partners.

Tell students that the risk of STD, including HIV, increases even more with each additional partner a person has. Explain that Part 3 represents a situation in which each person had three different partners over time.

Ask the Peer Leader who has the number 3 on the activity sheet to stand up. Again, explain that, for the purposes of the activity, this person has an STD. Have the Peer Leader read the three names from Part 3 and have these three students also stand. Explain that these people have gotten the STD from the Peer Leader.

Ask the three people whose names were read to each read any names from Part 3 that come after the Peer Leader's name on their activity sheets, and have these students stand as well. Explain that these people also got the STD because they had sex with someone who had already been infected.

Have the newly standing students read any additional names from Part 3 that come after the names of any of the previously standing students, and have these students stand too. Count the number of standing students and write it on the board.

Explain that everyone who had traded signatures (had sex) with a person after that person got the STD was at risk of being infected. Point out how the number of people who had the STD grew very rapidly as the number of sexual partners increased. Have the students who are standing sit down.

7 Demonstrate STD spread with overlapping partners.

Tell students that, so far, this activity has represented having sex with different partners one after the other over time. Only the people who had sex with someone after that person was exposed to the STD were at risk.

Explain that some people may have sex with more than one partner during the same period of time. That is, they may have sex with one person, then a second person, then with the first person again. This is called having "overlapping" sexual partners.

Have the Peer Leader who has the number 3 on the activity sheet stand and read the three names from Part 3 again. Have these three students stand again.

Then have these three students read all of the names from Part 3 on their activity sheets, not just the names that come after the Peer Leader's name. Explain that, in this case, the three students infected all of their sexual partners, because they continued to have sex with all of them over time.

When this next group of students is standing, have them in turn read all of the names from Part 3 on their activity sheets. They also infected all their partners because they continued to have sex with all of them over time. Continue until there are no more names to read. Count the number of students standing and write it on the board. In most cases everyone who participated will be infected.

Explain that this last demonstration represents what happens if people continue to have sex with all their partners over the same period of time. In this case, every person who had sex with one of the people who was exposed to the STD would be at risk no matter in what order the activity sheet was signed. When people continue to have sex with more than one partner, everyone's STD risk goes up.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

8 Compare results.

Discuss the difference in the number of students standing at the end of each demonstration. Ask students how the number of sexual partners a person has affects STD risk.

Help students draw the conclusion that the risk of getting an STD greatly increases with the number of partners a person has, and that having overlapping partners (i.e., continuing to have sex with more than one person over the same period of time) greatly increases the spread of STD within a population.

Remind students that choosing not to have sex is always an option and is always the safest choice.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 5.4 Rate the STD Risk

Suggested Time 20 minutes

Materials Transparencies 5.4 a, b and c, Activity Sheet 5.4

Purpose To demonstrate and examine how STDs spread

Steps for Activity

1 Illustrate how STDs spread.

Remind students about the partner risk demonstration from Activity 1. Explain that research has shown that as the number of partners increases, so does the spread of STDs (Morris, 2009). Illustrate the influence of having multiple sexual partners using the How STD Spreads transparencies.

Show **How STD Spreads—Not Having Sex or Having Only 1 Partner** *(Master 5.4a). Tell students that this picture represents a group or community of people. It shows what happens when people in that community choose not to have sex (single dots) or have sex with only one uninfected partner who only has sex with them (dots joined only to each other). Point out the shaded dot in the corner and tell students this represents someone who has an STD. Emphasize that, as long as people choose not to have sex or only have sex with one uninfected partner who only has sex with them, the STD won't spread.*

Show **How STD Spreads—1 or 2 Partners** *(Master 5.4b).Tell students that this picture shows what happens when some people in a community have two partners. (Indicate the dots that are connected to two other dots.) Explain that, if any one of those people has sex with someone who has an STD (indicate the thicker line with the arrow), the STD will spread among those people in the community who have sex with each other. Note that people will not be exposed to the STD if they are not connected sexually to the group of people who have it. Also point out that some of the people are choosing not to have sex (single dots) or are having sex with only one other person who only has sex with them (dots joined only to each other) and that this helps them avoid STDs.*

Show **How STD Spreads—2 or 3 Partners** *(Master 5.4c). Tell students that this picture shows what happens when some people in a community have up to three partners. (Indicate the dots that are connected to three other dots.) Explain that the chances of the STD spreading to more people are now much greater. If just one person with an STD has sex with someone who is sexually connected to a different group of people (indicate the thicker lines with the arrows), the STD will spread among that group of people as well.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Again stress that people can choose not to have sex (single dots), or to have sex with only one uninfected partner who only has sex with them (dots joined only to each other) to reduce their risk of STD. Point out that someone who has not had sex before now can get the STD too if he or she starts having sex with someone who's had other partners, and that someone who's been faithful to just one partner can get the STD if his or her partner starts having sex with other people. (Indicate the thicker lines without arrows.)

2 Form groups.

Divide the class into groups of four and have students turn to **Partner Risk Stories** *(Activity Sheet 5.4) in their workbooks.*

Have students read the scenarios in their small groups and discuss the risks each couple is taking. Ask them to rate the risk, from 0 = no risk to 3 = high risk, for each story, then discuss the scenarios using the questions on the back of the activity sheet. Explain to students that some stories may have the same risk rating.

Educator Note: If necessary, have each group pick two scenarios to rate. It's best to have students read and rate all scenarios, but this may not be feasible with some classes.

3 Analyze risks.

Lead a discussion around the small group conclusions. Be sure to make the following points about each story:

- **Anita and Jordon—**This couple has made the safest choice. It's possible to have a close relationship with a partner and not have sex. Choosing not to have sex gives people a chance to get to know each other without the pressures sex can put on a relationship. (STD Risk = 0)
- **Calvin and Natalie—**Calvin is having sex with more than one person over the same period of time. This increases his risk of getting an STD and also increases the risk that he will pass the STD to his partners. Note that people may not know that their partners are having sex outside the relationship. This is why it's important to be honest with a partner about past and present sexual behavior. Calvin could help protect both himself and Natalie if he didn't have sex with anyone else, or if he used condoms correctly and consistently when he had sex with other people. (STD Risk = 3)
- **Jayden and Quinn—**Because Jayden and Quinn only have sex with each other they are much safer from STD. There is a slight risk that Quinn might have gotten an STD from a prior partner, but Quinn waited 6 months between the breakup with the prior partner and having sex with Jayden. Taking time and being abstinent between relationships reduces the risk of STD. It gives you time to be clear about your choices so you won't be pressured into a sexual relationship with a new partner before you're ready. It also gives you time to be tested for STD before you have sex with a new partner. (STD risk = 1)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

- **Sam and Riley—**Sam has had overlapping partners. This means Sam started having sex with a new partner before ending the relationship with a previous partner. This puts all Sam's partners at increased risk for STD. If Sam always used condoms with all of the partners, this would help reduce the risk of STD. Waiting between sexual relationships gives you time to get tested for STD before having sex with a new partner. (STD risk = 3)

Educator Note: Students may have different opinions about the level of risk in the stories. Focus the discussion on the general level of risk—higher or lower—rather than assigning an exact number to each story. Acknowledge that STD risk depends on many factors, including past and present sexual behaviors and a partner's past and present sexual behaviors, and note that people can't always know this information.

Emphasize that choosing not to have sex is the safest behavior, and point out the ways the people in the stories could have practiced safer behaviors, such as using latex condoms and limiting the number of sexual partners. Be sure students understand that even if a male/female couple is only having sex with each other, they still need to protect themselves from pregnancy.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 5.5 Closure

Suggested Time 3 minutes

Materials *All4You2!* Messages poster

Purpose To summarize key points of the lesson

Steps for Activity

Lesson Summary

1 Discuss.

Ask students to summarize the main points of this lesson by using the following prompts:

- How does the number of sexual partners affect STD risk?
- How does a partner's sexual history and number of partners affect STD risk?
- How does having overlapping partners change the risk of STD?

2 Summarize.

Point out that a small increase in the number of partners (e.g., going from two to three) can have a huge impact on the spread of STDs. Emphasize the importance of choosing not to have sex or asking a potential partner about his or her sexual past. Remind students that people may not always be honest about their sexual past.

3 Emphasize the behavioral messages.

Use the All4You2! *Messages poster and tie these in to the main messages:*

- **Respect:** Think about how you are partnering and make sure your behaviors are low risk.
- **Protect:** The best way to avoid HIV and other STDs is to choose not to have sex.
- **Protect:** Limiting the number of sexual partners, not having overlapping partners, and using latex condoms/barriers every time if having sex can reduce your risk of HIV and other STDs.
- **Check it out:** To be safest, you and your partner should be tested for STDs before you start having sex.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Closure

1 Conclude.

Collect the student name tents. Close by recognizing students for their interest, their creative thinking and all the work they accomplished today.

Activity Sheet 5.4

Partner Risk Stories

Directions: Read the stories with your group. For each story, rate the risk of STD on a scale from 0 (no risk) to 3 (very high risk). Then discuss the questions on the back of this page in your group.

Anita and Jordon

Anita and Jordon have been together since ninth grade. They've both decided that not having sex is the best choice for them. They feel that their relationship is growing stronger because of their choice.

STD Risk: 0 1 2 3

Calvin and Natalie

Calvin and Natalie hang together and have a sexual relationship. Last week, Natalie was away on a school trip. Calvin hooked up with Mimi at a party and they had sex. Later in the week, he went out with his old girlfriend Bianca and had sex with her too. Calvin's glad Natalie will be home soon, because he likes her best.

STD Risk: 0 1 2 3

Jayden and Quinn

Jayden and Quinn have been together for two years. They have sex, but only with each other. Jacob has never had sex with anyone else. Quinn had sex with a prior partner, but broke up 6 months before getting together with Jayden.

STD Risk: 0 1 2 3

Sam and Riley

Sam used to be in a sexual relationship with Luke. They broke up after Sam got involved with Carlos and they started having sex. Then Sam met Riley. Sam liked Riley a lot, but wasn't sure about leaving Carlos. After a few weeks of seeing both Carlos and Riley, and having sex with each of them, Sam broke up with Carlos. Sam's only been having sex with Riley since then.

STD Risk: 0 1 2 3

Lesson 6

Negotiation and Refusal Skills

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Synopsis

Negotiation and refusal skills are introduced and demonstrated through roleplays. Students then practice the skills and receive feedback using half-scripted roleplays.

Purpose Statement for Students

Today we will review and practice ways to respect and protect ourselves in sexual situations.

Objectives

Students will be able to:

- Describe and give examples of interpersonal skills to maintain their personal limits in sexual situations.
- Demonstrate interpersonal skills to maintain their personal limits in sexual situations.

Activities & Time

6.1: Check-In	2 minutes
6.2: Review & Plan for the Day	5 minutes
6.3: Effective Refusals	15 minutes
6.4: Peer Leader Skill Demonstration	5 minutes
6.5: Student Skill Practice	15 minutes
6.6: Closure & Question Box	8 minutes

Materials

Have

- ☐ Chart paper, markers, and tape
- ☐ Student name tents
- ☐ Music and music player
- ☐ *All4You2!* Messages Poster
- ☐ Question Box
- ☐ 3 x 5 index cards, 2 per student
- ☐ Pencils

Review

- ☐ **You Say You Love Me** (Activity Sheet 6.2)
- ☐ **"Pst" Chart** (Activity Sheet 6.3)
- ☐ **Should I Say Anything?** (Roleplay 6.5a)
- ☐ **The Party** (Roleplay 6.5b)
- ☐ **PST** (Activity Sheet 6.5)

(continued)

Materials

Copy

- ☐ **Try It!** (Demonstration Roleplay 6.3), 2 copies
- ☐ **Messing Around—Ineffective Version** (Peer Leader Roleplay 6.4a) and **Messing Around—Effective Version** (Peer Leader Roleplay 6.4b), 2 copies of each

Prepare

- ☐ Plan for the Day
- ☐ **Peer Leader "Pst" Step Cards** (Master 6.3), 1 set
- ☐ Copy **"Pst" Chart** to chart paper

Educator Preparation

- ☐ Review the entire lesson and prepare needed materials.
- ☐ Practice reading the poem "The Choice" out loud (see Activity Sheet 6.2).
- ☐ Review **Effective Communication** (Educator Background Sheet 6.3).
- ☐ Check with Peer Leaders to be sure they are prepared.
- ☐ Prepare answers to students' questions in the Question Box.

Peer Leader Activities

- ☐ If Peer Leaders are comfortable reading a poem aloud in class, one could be invited to read the poem for Activity 6.2.
- ☐ Four Peer Leaders assist in demonstrating the steps for the "Pst" technique.
- ☐ One Peer Leader assists in demonstrating the "Pst" technique by reading Roleplay 6.3 with educator.
- ☐ Two Peer Leaders demonstrate ineffective and effective communication by reading Roleplays 6.4a and 6.4b.
- ☐ Peer Leaders serve as small-group recorders and reporters for Activity 6.5.

Determinants Addressed

- Increased self-efficacy to abstain or refuse sex or unprotected sex
- Higher self-concept
- Increased perception that peers would support the decision to not have sex or unprotected sex

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 6.1 Check-In

Suggested Time 2 minutes

Materials None

Purpose Students will come to class each day with a range of emotions and experiences affecting their readiness and willingness to participate. We will use a daily check-in as a way to acknowledge this reality.

Steps for Activity

1 Have students check in.

Ask a few students to volunteer how they are feeling or what's going on for them today.

Acknowledge responses based on your judgment. Use simple, short acknowledgements, particularly the positive ones (e.g., head nods, thank you, one-word sentiments such as "great," "glad to hear it," etc.). Avoid long responses or analyzing students' comments in this group setting.

Here are some examples of potential responses:

- Thank you for letting me know. I understand it could be hard to focus when you are dealing with that.
- I'll try to remember that you're having a hard day. I'm confident that you can get through it.

Discourage students from commenting on others' responses by just moving the activity along.

If students share something inappropriate or say something with extreme bravado, ask them to re-state their response in a more appropriate manner. If students share something serious and/or reportable (e.g., parent hit me last night) work with the teacher to provide support to the student right after class or before you even begin the lesson if necessary.

Educator Note: Discuss potential sensitive and/or reportable issues with the classroom teacher or school administrator in advance so you are in agreement on how to handle these situations.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in Signed April 2025 agreement.

2 Conclude.

- *Close by thanking students for their honest responses.*
- *If there are a majority of students feeling a certain way, note that pattern.*
- *Share that knowing "where they are at" each day helps you as a teacher and that you would like them to try their best to make the most of what the class is doing together today. Emphasize that you have confidence in their ability to focus despite all that is confronting them.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 6.2 Review & Plan for the Day

Suggested Time 5 minutes

Materials Plan for the Day, student name tents, Activity Sheet 6.2

Purpose To review the plan for the day and orient students to the day's activities

Steps for Activity

1 Have students help pass back name tents.

2 Review Lesson 5.

Ask students the following questions:

- How does the number of sexual partners you have affect your STD risk?
- What does it mean to have overlapping partners? How does that affect STD risk?

Clarify any misinformation or key points as needed.

Lesson 6
Plan for the Day
- "Pst"
- Let's Watch
- Roleplay
- Summary

3 Read and discuss poem.

Explain that you want to read a poem written by a teen named Robert. Follow these steps:

- Let students know the poem is in their workbooks—**You Say You Love Me** (Activity Sheet 6.2)—if they want to follow along.
- Read "You Say You Love Me" or have a Peer Leader who is comfortable reading out loud read it.
- Afterwards, have students share their thoughts on the message the author is trying to pass along in his writing.
- Tie in the poem by stating that today's lesson will focus on ways to communicate with a partner or friend about sexual limits.

4 Post and review the Plan for the Day.

Today we will review and practice ways to respect and protect ourselves in sexual situations.

5 Ask for a volunteer to read the plan.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 6.3 Effective Refusals

Suggested Time 15 minutes

Materials Educator Background Sheet 6.3, "Pst: Chart, Peer Leader "Pst" Step Cards, Demonstration Roleplay 6.3

Purpose To review and demonstrate characteristics for effectively communicating about sexual decisions

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Educator Note:

Identifying Characteristics of Effective Communication: When identifying characteristics of effective communication, some students may identify negative or disrespectful characteristics (e.g., yell at someone, use bad language, call people names, etc.). Watch for this and provide corrective feedback immediately. Remind students that it may seem easy to refuse someone they don't like, but the purpose of this lesson is to learn and practice ways to communicate with someone who they like as a friend or romantic partner. In these situations they'll want to communicate in a way that shows respect for the other person.

In some instances, a partner may not respect students' direct communication. Thus, it is also important to have a back-up plan and be prepared to walk away from a situation if needed (e.g., if a person feels unsafe or uncomfortable).

Peer Leader Preparation: Before beginning this activity, be sure the Peer Leaders have their **"Pst" Step Cards** for the demonstration. Tell the Peer Leaders that they can use examples other than those on the cards, but they must check out the changes with you first. (The goal is for Peer Leaders to model the steps.)

Steps for Activity

1 Introduce the topic of communication.

Ask students to think about their relationships with their friends or their romantic partners. Ask students what they think are the most important things in a successful relationship (e.g., trust, honesty, communication).

Acknowledge students' input. Point out that communication is one of the most important elements of a good relationship. This means being honest and saying what you want or need. Explain that we shouldn't expect others to know how we feel if we don't share our feelings directly.

Explain to students that for the rest of the class they will be talking about and practicing ways to talk with their partners to let them know they don't want to have sex or unprotected sex.

2 Analyze examples of effective communication.

Ask students to think about a time when they needed to share information with someone and really wanted to be sure the other person was getting it. They can also think about a time someone was sharing information with them. Ask them to identify what they or the other person did or said—including how they said it—to get their point across (e.g., direct, spelling out details, body language, said it over and over again, explained why they felt a certain way).

Record students' responses on chart paper. Probe for clarity and provide explanations as needed.

Explain that the ability to communicate clearly gives a person a lot of power in life. Tell students that using some of the things they just identified can help them build strong, honest communication in their relationships.

3 Introduce skills.

Explain that the "Pst" technique is a way to communicate what they will and won't do sexually with a partner, or with someone who is pressuring them for sex or unprotected sex.

Use the "Pst" Chart and Teacher Background Sheet 6.3 to review the three skill steps and explain the importance of each. Have students follow along using the **"Pst" Chart** *(Activity Sheet 6.3) in their workbooks.*

After reviewing each step, call on the Peer Leader who was assigned that step to demonstrate it. Where appropriate, give students an example of the ineffective use of the step after the Peer Leader's positive example. This will highlight the difference between ineffective and effective use.

P= Pick your limit.

Decide what you are going to do to stay safe from HIV, other STDs and unintended pregnancy. For example, you might wait until later to have sex or always use condoms if having sex. If you don't think about staying safe ahead of time, you may get caught up in the moment and expose yourself to disease or unplanned pregnancy.

S= Say it strong

Let the other person know what you will and won't do, in a strong and positive way. Say "no," "I don't, " "I won't," or "I'm not" to let them know where you stand. Your partner can't read your mind, so it's important to talk about it.

Also, pay attention to the way you say it. The way you say something often gives a stronger message than the words you use. Use your voice and other body movements to support your message. For example, use hand or arm movements to emphasize your NO, such as crossing your arms; use serious facial expressions to show you mean what you say.

- *Effective use:* With firm voice and arms crossed say, "I'm not ready to have sex right now" or "I won't have sex without a condom."

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

- *Ineffective use:* With some uncertainty in words, tone, and body language, say, "I don't know. I guess we really should use a condom."

T=Tell why

Tell the other person why you want to be safe. Explaining why helps your partner hear and understand your real concerns and helps prevent a negative reaction. Ask yourself: "Why do I want to be safe?" Then base your answer on that. Talking openly about each other's feelings helps the relationship grow and eases any tensions that may have developed.

- *Effective use:* "I really like being with you, but I'm not ready to have sex," "I feel intimate with you already, we don't have to get physical" or "I would feel a lot safer if we had the right protection."
- *Ineffective use:* "I don't know. Just because." Or, not saying how you feel or not talking about it, and expecting the other person to just know how you feel.

After Peer Leaders have demonstrated the steps, have students brainstorm other ideas for each step (e.g., ideas for sexual limits, ideas for how to say it strong, ideas for what to say when "telling why").

Acknowledge that there may be some situations where the "Pst" technique may not work. Explain that students need to have a back-up plan and may need to leave the situation. Tell students that you will talk more about back-up plans in a few minutes.

5 Demonstrate.

Explain that you and one of the Peer Leaders will demonstrate the use of the "Pst" technique by reading a roleplay. Follow these steps:

- Give a copy of **Try It!** (Demonstration Roleplay 6.3) to the Peer Leader and keep a copy for yourself.
- Instruct students to watch and listen, and be prepared to describe what was said and done to communicate clearly.
- Read the Setting the Stage section first. Then read the roleplay with the Peer Leader. Play the part of the person saying "no."

6 Debrief.

After the roleplay, check for understanding by asking students the following questions:

- What was my limit? *(No needles.)*
- What did I say and do to communicate clearly? *(Said "I won't," used a firm voice, used body language to reinforce the words, talked about why.)*

DO NOT COPY OR DISTRIBUTE

April 2025 agreement.

Activity 6.4 Peer Leader Skill Demonstration

Suggested Time 5 minutes

Materials Peer Leader Roleplays 6.4a and 6.4b, "Pst" Chart

Purpose To demonstrate the potential impact of ineffective communication

Steps for Activity

1 Introduce the activity.

Explain that two Peer Leaders will demonstrate some of the ways that not communicating clearly can work against getting what you really want.

Point to the Pst chart. Tell students to be prepared to identify which steps are used in the roleplay.

2 Set up the roleplay.

Give each Peer Leader a copy of **Messing Around—Ineffective Version** *(Peer Leader Roleplay 6.4a). Instruct the rest of the class to watch and listen to the roleplay.*

3 Roleplay ineffective version.

Have a Peer Leader read the "Setting the Stage" section of Roleplay 6.4a, then have the Peer Leaders read the lines.

4 Discuss the roleplay with students.

After the roleplay, ask students if the person being pressured used the "Pst" technique. Ask them to identify what was missing from the responses (e.g., never said "I don't or I won't," did not have strong body language, did not tell why).

5 Roleplay effective version.

Give the Peer Leaders a copy of **Messing Around—Effective Version** *(Peer Leader Roleplay 6.4b). Again, have the class listen and watch for the "Pst" steps and refer to the "Pst" Chart). Set the stage by reminding students of the roleplay situation. Have the Peer Leaders read their roles.*

6 Discuss differences.

After the roleplay, ask students to identify the difference between the two versions. (In the second roleplay, the person being pressured used more "Pst" steps.) Use the Pst chart during the debrief to review which steps were used.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

7 **Explore the "Pst" steps in more depth.**

Ask students which steps worked well, and why. Ask if any responses could have been strengthened, and how.

List students' suggestions on the board or chart paper. Ask Peer Leaders how they felt playing their roles during the two versions and how they might change their responses.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 6.5 Student Skill Practice

Suggested Time 15 minutes

Materials Roleplays 6.5a and 6.5b, "Pst" Chart, Activity Sheet 6.5, pencils, music and music player

Purpose To help students practice using the "Pst" technique

Educator Note: The lines in the roleplays were developed by students participating in previous sessions of *All4You!* Of course, language and slang are different from one group of students to another. To make the roleplays as effective as possible, feel free to encourage your students to adapt the language so it better fits their own group's style of speech.

Steps for Activity

1 Introduce the activity.

Tell students that they will now have a chance to practice using the "Pst" technique by working in pairs on roleplays. Review the following instructions:

- You will work on a roleplay that has the pressure lines written. There are two different roleplays.
- You should work on your own to write down your responses to the pressure lines in that roleplay.
- Be sure to use all three "Pst" steps.
- After everyone finishes, each of you will pair up with someone with the same roleplay and then take turns reading your lines.

2 Clarify.

Check for understanding and clarify as needed.

3 Students write refusals.

Have students turn to **Should I Say Anything** *(Roleplay 6.5a) and* **The Party** *(Roleplay 6.5b) in their workbooks. Assign or allow students to choose a roleplay to work on, making sure half the class works on each roleplay. Allow students to work for 3 to 5 minutes.*

4 Introduce roleplay practice.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Once students have finished, explain that they will now work in pairs and take turns reading their response lines.

Explain that after both people have read their lines, they should help each other think of one thing that was very strong in their responses (e.g., you used a firm tone of voice, you explained why), and one way to make their responses stronger.

Remind students that the purpose of giving each other feedback is to help each other, not to make each other feel bad.

5 Students roleplay.

Have students pair up with someone with the same roleplay and begin reading their roleplays. Allow students to work for 3 to 5 minutes. ***Play music*** *as they work.*

Educator Note: Over the course of the roleplay activities, students will be in a position where they must roleplay sexual pressure situations with classmates of both a different and the same gender. This may be awkward for teens who are sensitive to the suggestion of same-sex romance, for teens who identify as gay or lesbian, or for teens who are transgender or gender nonconforming. It's important to address this situation directly and proactively.

Here are some tips:

- Explain the situation in a matter-of-fact way. Let students know that every student in the class will, at some point, be doing a roleplay with a classmate of a different gender and with a classmate of the same gender. Most likely, they will do this several times.
- Emphasize that they are playing roles. Doing the roleplay to practice the skill doesn't say anything about the sexual orientation of the people doing the roleplay or mean that anyone is expressing a real-life attraction toward the other person in the roleplay.
- Explain that they need to take their roles seriously because teens of all sexual orientations and gender identities need to learn how to resist sexual pressure and protect themselves. This will help ensure that they and their classmates get the most out of the roleplay activities.

6 Monitor.

Circulate to ensure students are on task and to assist as needed. While circulating, recruit one or two volunteers who would be willing to read their roleplays in front of class.

Educator Note: It is possible that students will not want to volunteer to read in front of the class. Accept this and do not force students to present their roleplays for the class.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

7 Have volunteers roleplay for the class.

If students are willing, have several volunteers read their roleplays in front of the class. Have other students identify what steps they used from the "Pst" technique.

Educator Note: In this activity, students often list reasons they can't do something instead of saying directly that they won't do it (e.g., "I can't because...." versus "I don't" or "I won't.") Address this issue as part of the roleplay debrief. Point out that offering excuses may seem to work at first, but it leaves the door open for the other person to continue to pressure. Emphasize the power of being direct and clear about your needs and limits.

8 Summarize.

Ask students what strategies seem most effective for them. Explain that some strategies may be more comfortable to use than others, and students should think about which ones are best for them.

9 Review back-up plans.

Remind students that there may be times when they use the "Pst" technique but the other person still doesn't back-off. Explain that because of this possibility, it is important for them to have back-up plans just in case they need to get out of a situation.

Have students brainstorm a list of situations where they might need to walk away (e.g., because they feel unsafe or uncomfortable), and then possible back-up plans that they could use (e.g., go with a friend, send a text to a friend, have money to get a ride home , etc.).

10 Students apply skills.

Tell students that you would like to close by having them think about using the "Pst" technique in their own lives.

Have students turn to **PST** *(Activity Sheet 6.5) in their workbooks. Have them take a few minutes to fill out how they could use each "Pst" step to stick with one of their limits.*

Ask why it is important to think about and practice these things ahead of time (so they can be prepared). Encourage students to try some of these ideas in the next few days.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 6.6 Closure & Question Box

Suggested Time 8 minutes

Materials *All4You2!* Messages poster, Question Box, 3 x 5 index cards

Purpose To summarize key points of the lesson and prepare for the next lesson

Steps for Activity

Lesson Summary

1 Discuss.

Ask students to summarize the main points of this lesson.

2 Summarize.

Emphasize that the purpose of today's lesson was to look at and practice ways to talk with a partner about limits. Acknowledge that communicating with a partner about sex and protection can be difficult, but that they have lots of strategies that can help them.

3 Emphasize the behavioral messages.

Use the All4You2! *Messages poster and tie these to the main messages of the curriculum:*

- **Respect:** It's important to know your sexual limits and to share those with your partner.
- **Respect:** Respect your body and your partner by picking limits that will protect you and your partner from pregnancy and/or disease.

Ask students how the "Pst" technique can help them avoid pregnancy and disease.

Question Box

1 Answer questions.

Answer the student questions from the Question Box.

2 Gather new questions.

Hand out index cards and give students a minute to write any new questions they have. Tell students that if they don't have a question they should write "I don't have a question" on the card. Remind students NOT to put their names on the cards.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

Have them fold the cards when they are finished writing. Have a Peer Leader collect the cards. Tell students that you will address these questions in a later lesson.

Closure

1 Conclude.

Collect the student name tents.

Thank students for their participation, creative thinking and all the work they accomplished today.

YOU SAY YOU LOVE ME

by Robert Green

You say you love me but won't use a condom
Because the only thing you're thinking about is having some fun
But you won't get anything from me not even a smile
See playing this game isn't worth the while
You say 'come on baby enjoy the ride'
But I see nine months later a baby at my side
You say you love me but won't get tested
I'm just trying to make sure you're not infected
Just to see if you have syphilis or gonorrhea
Because before you give it to me I'll say 'see ya'
It could be worse you might have AIDS
Then it's your life that starts to fade
You say you love me boy are you persistent
But despite your reasons I'm going to stay resistant
See I'm going to go to college and make something of myself
Instead of trying to see how three minutes of pleasure felt
Instead of doing what you want I'm going to use common sense
Sorry baby boy but I'm using ABSTINENCE!!!

Effective Communication: Characteristics of the "Pst" Technique

There are 3 steps to the "Pst" technique that are important for effective communication. Each step has particular qualities that contribute to its effectiveness. When students are practicing these steps, be sure to watch and listen to how they are using them. Provide corrective feedback as needed to ensure student success. These are the 3 steps:

P = Pick your limit. Decide what you are going to do to stay safe from HIV, other STDs, and unintended pregnancy (e.g., wait until later to have sex, use condoms if having sex, use long-acting contraceptives to prevent pregnancy and condoms to prevent disease).

Students may or may not have thought about how far they will go, and this may differ in different situations. Encourage students to refer back to Lesson 3 when the class categorized all the behaviors as green, yellow, and red. Remind them if they are in the red zone they need to pick a safer limit. If they are in the yellow zone, they need to recognize the risk, and make sure they are taking all possible steps to minimize that risk. They also can think about ways to move toward the green zone.

S = Say it strong. Whenever possible, it is helpful to be direct and tell the other person what it is you won't do (that is, your limit). This might sound like:

- "I don't"
- "I'm not"
- "No. I don't"
- "I won't"
- "That's where I draw the line"

The word NO is very direct and clear, but it does not have to be used every time.

Students are likely to use excuses rather than directly stating their limits. For example, students might say "I feel sick today," "I've got to go now," etc. Although excuses may work in the short term, they do not convey a direct message of what students won't do. Excuses leave the door open for further pressure.

The way something is said often gives a stronger message than the words used. A convincing voice and other body movements can support a no-message (e.g., use hand or arm movements for emphasis, cross arms for emphasis, use serious facial expressions, etc.). A convincing voice is firm and sure in tone, but not necessarily loud. Students may equate convincing voice with yelling.

Conversely, students who are quiet may not feel they can master this strategy. Students do not need to yell to be successful at using this characteristic; the effectiveness rests on the tone rather than the volume.

There are many body movements and gestures that can support a message, including:

© ETR Associates

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Effective Communication: Characteristics of the "Pst" Technique *(continued)*

- Using a serious expression
- Looking at the person directly (eye contact)
- Crossing arms
- Moving hands in a "get away" gesture
- Putting hands on hips

Some examples of body language that might indicate a person is not serious or sure include:

- Laughing or giggling
- Looking at the ground
- Wiggling

Always emphasize to students that they should respect a partners' wishes even if their statements come across less strong. A weaker statement is not an invitation to keep pushing a partner until that person gives in.

T = Tell why. Provide an explanation as to why you want to be safe. Explaining why helps your partner hear and understand your real concerns and helps prevent your partner from reacting in a negative way. Ask yourself: "Why do I want to be safe?" Then base your answer on that.

Talking openly about each other's feelings helps the relationship grow and eases tensions that may have developed. Students should be encouraged to talk about their feelings and be direct and honest.

Steps to take if a partner does not respect direct communication

There may be some situations in which students should walk away rather than continue to try to negotiate or resist pressure (e.g., if they feel unsafe or uncomfortable). This will vary across students. Students need to judge for themselves how they are feeling in each situation.

If they feel uncomfortable and/or unsafe, and they don't think the person who is pressuring them is going to back down, it is probably best to walk away and leave the situation. It is also important for students to have back-up plans just in case they find themselves in a situation where they need to walk away. Plans may include calling or texting a friend, carrying extra money for a ride home, setting up code words to signal the need for support, etc.

Try It

Setting the Stage

One of your friends, Richard, has started shooting up drugs. All of you have experimented with some drugs, and no one has been hurt so far. Richard says he has some good stuff and wants you to try it. He says it feels better when you inject it. You're not sure about this. You heard you can get HIV from shooting up.

Richard (Peer Leader): Say cuzo, you gotta try this new dope. I ain't never felt anything like this before. You have to shoot it up.

You (Educator): Nah, partna. I'm cool on needles.

Richard (Peer Leader): You don't know what you're missing. This is some good dope.

You (Educator): I heard you could get HIV from sharing needles.

Richard (Peer Leader): Fool, I ain't got nothin'. Don't even worry about it.

You (Educator): No man, I said I'm cool on needles. Hey, I just got paid. Let's go get a burger.

Messing Around
(Ineffective Version)

Setting the Stage

Misha and Javon just started seeing each other. They've been messing around but haven't had sex. Misha really doesn't feel ready for sex yet, but doesn't want to lose Javon. They are going to Javon's house to be alone. No one else is going to be home. They start talking about having sex. Misha still doesn't want to have sex and wants to tell Javon that.

Javon: Misha, lets go to my room to get more comfortable.

Misha: What do you want to go to your room for?

Javon: What do you think? I'll take care of everything.

Misha: OK. But I don't know if we should be doing this yet.

Javon: Baby, we love each other. I thought you wanted to be my main.

Misha: I do love you. It's just that I'm nervous.

Misha: What do you want to go to your room for?

Javon: What do you think? I'll take care of everything.

Misha: Let's stay in the living room.

Javon: Baby, we love each other. I thought you wanted to be my main.

Misha: I thought we loved each other too. But love doesn't mean that I'm ready to give it up. I'm waiting till I'm older.

Javon: OK, I respect that, but I'm over-heated. I gotta get back to my regular temperature.

Misha: Let's go for a walk outside. That will cool you off.

Peer Leader "Pst" Step Cards

Directions: Copy and cut apart the cards, or print the "Pst" steps on 3 x 5 index cards—one step per card—with the example of the step below the title. Give a card to each Peer Leader who is helping with the demonstration.

P = Pick your limit.

Example of limits: "I'm going to wait until later to have sex," "I'm going to use condoms if having any type of sex," "I'm going to limit the number of sexual partners I have to reduce my chances of STDs."

S = Say it strong.

Example of saying it strong: With firm voice say, "I'm not ready to for sex right now" or "I won't have sex without a condom."

T = Tell why.

Example of telling why: "I feel intimate with you already. We don't have to get physical." Or, "I would feel a lot safer if we had the right protection."

Roleplay 6.5a

Should I Say Anything?

Directions: Fill in the "You" lines using the "Pst" steps.

Setting the Stage

You go back to your partner's house after a party. No one is home. You begin kissing, touching and undressing each other. The last time you had sex, you and your partner talked about getting protection for STDs. Your partner promised to get condoms. You want to use condoms because you are worried about STDs.

Your partner continues kissing and touching, but doesn't say anything about protection. In the past you went along and had sex without protection, but you've decided that from now on you aren't willing to take a chance.

You: Did you remember to get some condoms?

Your Partner: No, I forgot them. But nothing is going to happen. Besides, I've only been with you.

You: _____

_____

Your Partner: Look, don't start trippin' now. We've had sex before without one.

You: _____

_____

Your Partner: Why should we be feeling rubber when we could be feeling each other? It's not natural.

You: _____

_____

"PST" ☐ Pick your limit ☐ Say it strong ☐ Tell why

© ETR Associates

Roleplay 6.5a

Roleplay 6.5b

The Party

Directions: Fill in the "You" lines using the "Pst" steps.

Setting the Stage

You and your partner have been together for 4 months. Every time you're together you have a great time. You are at a small party. Most of the other couples have gone to other rooms—probably to get down. Your partner says "I love you," and leads you to a bedroom. You start kissing, holding and touching each other. Things are moving fast. You aren't ready to take it that far right now.

You: Hold up. I'm not ready to have sex.

Your Partner: You know how I feel. This will be the perfect ending to a great night.

You: _____

_____

_____

Your Partner: I've taken care of everything. Just trust me, and I'll make this a night you won't forget.

You: _____

_____

_____

Your Partner: Baby, just for a moment, let's become one.

You: _____

_____

_____

Lesson 7

More Skills

Synopsis

Alternative actions and delay tactics are introduced as two more ways to stick with personal limits. Students then practice and receive feedback using these skills through roleplays.

Purpose Statement for Students

Today we will review and practice two other ways to stick with your personal limits.

Objectives

Students will be able to:

- Recall and give examples of the steps in the "Pst" technique.
- Describe and give examples of alternative actions and delay tactics to maintain their personal limits in sexual situations.
- Respond to pressure to have sex by using "Pst," alternative actions and delay tactics.

Activities & Time

7.1: Check-In	2 minutes
7.2: Review & Plan for the Day	5 minutes
7.3: Alternative Actions & Delay Tactics	15 minutes
7.4: Student Skill Practice	20 minutes
7.5: Closure & Question Box	8 minutes

Materials

Have

- ☐ Chart paper, markers and tape
- ☐ Student name tents
- ☐ "Pst" Chart from Lesson 6
- ☐ Music and music player
- ☐ *All4You2!* Messages poster
- ☐ Question Box
- ☐ 3 x 5 index cards, 1 per student
- ☐ Pencils

Review

- ☐ **In the Dark** (Roleplay 7.4a)
- ☐ **Are You Feeling It?** (Roleplay 7.4b)
- ☐ **Using My Skills** (Activity Sheet 7.4)

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Materials

Copy

☐ **The Answer Is No** (Peer Leader Roleplay 7.3), 2 copies

Prepare

☐ Plan for the Day

☐ **Peer Leader Demonstration Cards** (Master 7.3), 1 set

☐ **Alternative Actions** (Poster 7.3a)

☐ **Delay Tactics** (Poster 7.3b)

Educator Preparation

☐ Review the entire lesson and prepare needed materials.

☐ Review **Examples of Alternative Actions and Delay Tactics** (Educator Background Sheet 7.3) and identify any additional strategies that may be relevant for your students.

☐ Make posters or transparencies of Posters 7.3a and b.

☐ Check with Peer Leaders to be sure they are prepared.

☐ Prepare answers to students' questions in the Question Box.

Peer Leader Activities

☐ Two Peer Leaders assist in demonstrating the steps for alternative actions and delay tactics.

☐ Two Peer Leaders assist in demonstrating the "Pst" technique, alternative actions and delay tactics by reading Roleplay 7.3 and by demonstrating alternative actions and delay tactics in Activity 7.3.

☐ Peer Leaders serve as small-group recorders and reporters for Activity 7.4.

Determinants Addressed

- Increased self-efficacy to abstain or refuse unprotected sex
- Higher self-concept
- Increased perception that peers would support the decision to not have sex or unprotected sex
- Increased attitudes favoring choosing not to have sex

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in Signed April 2025 agreement.

Activity 7.1 Check-In

Suggested Time 2 minutes

Materials None

Purpose Students will come to class each day with a range of emotions and experiences affecting their readiness and willingness to participate. We will use a daily check-in as a way to acknowledge this reality.

Steps for Activity

1 Have students check in.

Ask a few students to volunteer how they are feeling or what's going on for them today.

Acknowledge responses based on your judgment. Use simple, short acknowledgements, particularly the positive ones (e.g., head nods, thank you, one-word sentiments such as "great," "glad to hear it," etc.). Avoid long responses or analyzing students' comments in this group setting.

Here are some examples of potential responses:

- Thank you for letting me know. I understand it could be hard to focus when you are dealing with that.
- I'll try to remember that you're having a hard day. I'm confident that you can get through it.

Discourage students from commenting on others' responses by just moving the activity along.

If students share something inappropriate or say something with extreme bravado, ask them to re-state their response in a more appropriate manner. If students share something serious and/or reportable (e.g., parent hit me last night) work with the teacher to provide support to the student right after class or before you even begin the lesson if necessary.

Educator Note: Discuss potential sensitive and/or reportable issues with the classroom teacher or school administrator in advance so you are in agreement on how to handle these situations.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in Signed April 2025 agreement.

2 Conclude.

- *Close by thanking students for their honest responses.*
- *If there are a majority of students feeling a certain way, note that pattern.*
- *Share that knowing "where they are at" each day helps you as a teacher and that you would like them to try their best to make the most of what the class is doing together today. Emphasize that you have confidence in their ability to focus despite all that is confronting them.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 7.2 Review & Plan for the Day

Suggested Time 5 minutes

Materials Plan for the Day, student name tents

Purpose To review the plan for the day and orient students to the day's activities

Steps for Activity

1 Have students help pass back name tents.

2 Review Lesson 6.

Ask students if they can recall what "Pst" stands for. Ask them to give an example of each step.

Clarify any misinformation or key points as needed.

3 Post and review the Plan for the Day.

Today we will review and practice ways to respect and protect ourselves in sexual situations.

4 Ask for a volunteer to read the plan.

Lesson 7
Plan for the Day

- Alternative Actions & Delay Tactics
- Roleplay
- Summary

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 7.3

Alternative Actions & Delay Tactics

Suggested Time 15 minutes

Materials Peer Leader Roleplay 7.3, Educator Background Sheet 7.3, Alternative Actions and Delay Tactics posters, Peer Leader Demonstration Cards

Purpose To review and demonstrate alternative actions and delay tactics

Educator Note: When identifying characteristics of effective communication, some students may identify negative or disrespectful characteristics (e.g., yell at someone, use bad language, call people names, etc.). Watch for this and provide corrective feedback immediately. Remind students that it may seem easy to refuse someone they don't like, but the purpose of this lesson is to learn and practice ways to communicate with someone who they like as a friend or romantic partner. In these situations, they'll want to communicate in a way that shows respect for the other person.

In some instances, a partner may not respect students' direct communication. Thus, it is also important to have a back-up plan and be prepared to walk away from a situation if needed (e.g., if a person feels unsafe or uncomfortable).

Steps for Activity

1 Identify concerns and introduce activity.

Have students imagine themselves one of these situations:

- *They are in a relationship with someone they really care about. They don't really want to have sex yet, but they have to make a decision about engaging in sexual behaviors.*
- *They are in a situation where they're about to have sex, but they don't have any protection.*

Ask students to think about their greatest concerns about telling a partner they're not ready for sex or that they don't want to have sex without using birth control and/or a condom (e.g., having the partner get angry, fear of ending relationship, fear of hurting partner's feelings).

Acknowledge that these are realistic concerns, particularly if they really care about the other person. Explain that today they will be learning and practicing two more ways to help them stick with their personal limits (the P in "Pst").

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

2 Discuss alternative actions.

Write the words Alternative Actions on chart paper or the board. Ask students what this might mean.

Explain that an alternative action is another way of dealing with pressure to do something you're not ready to do. When you use an alternative action, you suggest something else to do rather than go along with something you would prefer not to do.

Using the **Alternative Actions** *poster or transparency, review the two characteristics of effective alternative actions and explain the importance of each.*

3 Demonstrate alternative actions.

Have a Peer Leader demonstrate alternative actions, using the Peer Leader Demonstration Card. Be sure the examples of effective and ineffective use are given for comparison.

- **Suggest something that gets you out of the situation.**
  - *Effective use:* Let's go for a walk.
  - *Ineffective use:* Let's go to my room. (Doesn't get person out of the situation.)
- **Suggest something that is positive, fun, and realistic.**
  - *Effective use:* Let's go to the mall.
  - *Ineffective use:* Let's go get wasted. (Suggests a negative behavior.)

Have students suggest other alternative actions (see Educator Background Sheet 7.3 for more examples if needed). Record them on chart paper. Tell students that following "Pst" with an alternative action is a way to give your limit, but still keep the relationship going. Suggesting something else to do also gives couples more time to think and talk about their choices.

Educator Note: You can use other examples of alternative actions and delay tactics that better match your students.

4 Discuss delay tactics.

Write the words Delay Tactics on chart paper or the board. Ask students to define the word delay.

Explain that delay tactics can be used to cool down a situation or break the mood. Delay tactics also provide more time to think about positive and negative consequences of a choice, or to think of a response if the situation comes up again.

Using the **Delay Tactics** *poster or transparency, review the two characteristics of effective delay tactics and explain the importance of each.*

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

5 Demonstrate delay tactics.

Have a Peer Leader demonstrate delay tactics, using the Peer Leader Demonstration Card. Be sure the examples of effective and ineffective use are given for comparison.

- **Say or do something that cools down the situation or breaks the mood.**
  - *Effective use:* I have to go to the bathroom.
  - Ineffective use: Let's move to the couch so we can get more comfortable. (May heat up the situation).
- **Say or do something that gives you time to think.**
  - *Effective use:* I'm just not ready; it's just not the right time.
  - *Ineffective use:* I don't know if I'm ready for this. What should we do? (Not as strongly stated; leaves room for partner to keep trying different ways to pressure you).

Have students suggest other delay tactics (see Educator Background Sheet 7.3 for more examples if needed). Record them on chart paper.

Emphasize that even though delay tactics can buy them more time, relying on delay tactics alone without using "Pst" can leave the door open for the other person to continue the pressure or ask again later. Stress the importance and power of being direct and telling the person your limit or desires clearly.

6 Demonstrate.

Explain that two Peer Leaders will demonstrate ways to use these skills in a pressure situation.

Give each Peer Leader a copy of **The Answer is No** *(Peer Leader Roleplay 7.3). Instruct students to watch and listen and be prepared to identify the alternative actions and delay tactics used.*

Read the Setting the Stage section. Then have the Peer Leaders read the roleplay.

7 Discuss the roleplay with students.

Ask students to identify examples of "Pst," alternative actions and delay tactics that they observed in the roleplay.

- **P:** "I don't want to do this; I'm not ready for this."
- **S:** Said it in a firm voice.
- **T:** "I'm waiting until I'm out of high school before having sex."
- **Alternative actions:** "Come on, let's go get something to eat."
- **Delay tactics:** "I'm not ready for this. It's just not the right time," and "That doesn't mean I'm ready to have sex."

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

Activity 7.4 Student Skill Practice

Suggested Time 20 minutes

Materials Roleplay 7.4a, Roleplay 7.4b, "Pst" Chart, pencils, music and music player, Activity Sheet 7.4

Purpose To help students practice using the "Pst" technique, alternative actions and delay tactics

Educator Note: Language and slang are different from one group of students to another. To make the roleplays as effective as possible, feel free to encourage your students to adapt the language so it better fits their own group's style of speech.

Steps for Activity

1 Introduce the activity.

Tell students that they will now have a chance to practice using "Pst," alternative actions and delay tactics by working in pairs on roleplays. Review the following instructions:

- You will get a roleplay that has 1 refusal line ("you" lines) and 1 pressure line ("your partner" lines) written on it. There are two different roleplays.
- You should work on your own to write the rest of the lines for you and your partner.
- When writing the "you" lines, be sure to use all 3 strategies—"Pst," alternative actions and delay tactics—to help you deal with the situation. Point out the "Pst" Chart to remind students of the steps.
- After everyone finishes, each of you will pair up with someone with the same roleplay and then take turns reading your "you" lines.

2 Clarify.

Check for understanding and clarify as needed.

3 Students write roleplays.

Have students turn to **In the Dark** *(Roleplay 7.4a) and* **Are You Feeling It?** *(Roleplay 7.4b) in their workbooks. Assign or allow students to choose a roleplay to work on, making sure half the class works on each roleplay. Allow them to work for about 5 minutes.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

4 Introduce roleplay practice.

Once students have finished, explain that they will now work in pairs and take turns reading their response lines. While one person reads the "you" lines the other person should read the "partner" lines.

Explain that after both people have read their lines, they should help each other think of one thing that was very strong in the responses (e.g., you used a firm tone of voice, you explained why), and one way to make the responses stronger.

Remind students that the purpose of giving each other feedback is to help each other, not to make each other feel bad.

5 Students roleplay.

Have students pair up with someone with the same roleplay and begin reading their lines. Allow students to work for about 5 minutes. ***Play music*** *as they work.*

6 Monitor.

Circulate to ensure students are on task and to assist as needed. While circulating, recruit one or two volunteers who would be willing to read their roleplays in front of class.

Educator Note: It is possible that students will not want to volunteer to read in front of the class. Accept this and do not force students to present their roleplays for the class. You can also volunteer to read the lines from students' roleplays, asking others in the class to identify the steps that were used.

7 Have volunteers roleplay for the class.

If students are willing, have several volunteers read their roleplays in front of the class. Have other students identify "Pst" steps, alternative actions and delay tactics used.

8 Review back-up plans.

Remind students that there may be times when they use these strategies but the other person still doesn't back-off. Review that because of this possibility, it is important for them to have back-up plans just in case they need to get out of a situation. Ask students to share examples of how they could recognize these situations (e.g., they feel unsafe or uncomfortable)and possible back-up plans (e.g., go with a friend, text a friend, have money to get a ride home, etc.).

9 Summarize.

Encourage students to try out some of these ideas in the next few days.

Ask students what strategies seem most effective for them. Explain that some strategies may be more comfortable to use than others, and students should think about which ones are best for them.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

10 Students apply skills.

Have students turn to **Using My Skills** *(Activity Sheet 7.4) in their workbooks. Allow time for them to write two alternative actions and two delay tactics they would be comfortable using if they needed to.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 7.5 Closure & Question Box

Suggested Time 10 minutes

Materials *All4You2!* Messages poster, Question Box, 3 x 5 index cards

Purpose To summarize key points of the lesson

Steps for Activity

Lesson Summary

1 Discuss.

Ask students to summarize the main points of this lesson.

2 Summarize.

Alternative actions and delay tactics are two additional techniques you can use to stick with your personal limits.

3 Emphasize the behavioral messages.

Use the All4You2! *Messages poster and tie these to the main messages of the curriculum:*

- **Respect:** Show respect for your body by knowing your sexual limits and telling your partner your limits.
- **Respect:** Stay true to yourself by using "Pst," alternative actions and/or delay tactics to stay safe from unintended pregnancy and/or HIV and other STD.

Question Box

1 Answer questions.

Answer the student questions from the Question Box.

2 Gather new questions.

Hand out index cards and give students a minute to write any new questions they have. Tell students that if they don't have a question they should write "I don't have a question" on the card. Remind students NOT to put their names on the cards.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Have them fold the cards when they are finished writing. Have a Peer Leader collect the cards. Tell students that you will address these questions in a later lesson.

Closure

1 Conclude.

Collect the student name tents.

Close by recognizing students for their interest, their creative thinking and all the work they accomplished today.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

DO NOT COPY OR DISTRIBUTE
in any format without express
written permission from ETR.
PDF solely for purposes
identified in signed
April 2025 agreement.

ALTERNATIVE ACTIONS

Suggest an action that gets you out of the situation.

Suggest an action that is positive, fun, and realistic.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR Associates

DO NOT COPY OR DISTRIBUTE
in any format without express
written permission from ETR.
PDF solely for purposes
identified in signed
April 2025 agreement.

DELAY TACTICS

Say or do something that cools down the situation or breaks the mood.

Say or do something that gives you more time to think.

DO NOT COPY OR DISTRIBUTE
in any format without express
written permission from ETR.
PDF solely for purposes
identified in signed
April 2025 agreement.

© ETR Associates

identified in signed
April 2025 agreement.

Peer Leader Demonstration Cards

Directions: Make two cards, with alternative action steps and examples on one card and delay tactic steps and examples on the other. Give a card to each Peer Leader who is helping with the demonstration.

Steps for Alternative Actions

- **Suggest something that gets you out of the situation.**
  Effective use: Let's go for a walk.
  Ineffective use: Let's go to my room.
  The ineffective response isn't the best because it doesn't get person out of the situation.
- **Suggest something that is positive, fun and realistic.**
  Effective use: Let's go to the mall.
  Ineffective use: Let's go get wasted.
  The ineffective response isn't the best because it's a negative behavior.

Steps for Delay Tactics

- **Say or do something that cools down the situation or breaks the mood.**
  Effective use: I have to go to the bathroom.
  Ineffective use: Let's move to the couch so we can get more comfortable.
  The ineffective response isn't the best because it may heat up the situation.
- **Say or do something that gives you time to think.**
  Effective use: I'm just not ready; it's just not the right time.
  Ineffective use: I don't know if I'm ready for this. What should we do?
  The ineffective response isn't the best because it is not stated very strongly. It also leaves room open for partner to try to keep pressuring.

Examples of Alternative Actions and Delay Tactics

Alternative Actions

Let's go to the mall.	Why don't we go play video games?
Let's go get something to eat.	Let's go for a walk.
Let's just dance instead.	Why don't we go to a movie?

Delay Tactics

Things you could say	Things you could do
I'm not ready.	Go to the bathroom.
Not now.	Eat something.
Sorry, I have to go home.	Drop something.
I'm not in the mood.	Start talking with someone else.
Not tonight—I'm not feeling well.	Pretend you lost something.
Let's just chill and play some music or video games. (This combines both delay tactic and alternative action.)	Go home.
I'm going home because you are pressuring me.	Say you have to call someone and then do it
	Have a friend text you and say you need to go home

The Answer Is No

Setting the Stage

You and your partner have been together for 6 months. You're on the couch kissing. Your partner wants to have sex, but you don't. You made a promise to yourself that you would wait until you were older before having sex. You stop kissing.

Person 1: (In a firm voice) NO, wait. I don't want to do this.

Person 2: Why? I thought we loved each other?

Person 1: *(Moving away)* We talked about this before. I'm waiting until I'm out of high school before having sex. I'm not ready for this.

Person 2: *(Moving closer)* Being ready just means we love each other. You do still love me, don't you?

Person 1: *(Moving away again)* Yes, but that doesn't mean I'm ready to have sex.

Person 2: Nothing's going to happen. This will bring us closer.

Person 1: I love being close to you, but I'm not ready for sex. Let's go take a walk to the park.

Lesson 8

Handling Risky Situations

Synopsis	In this lesson, students listen to a story and identify risky situations that could lead to unplanned sex, such as being at a party with no parents there. They also identify ways to handle these risky situations.
Purpose Statement for Students	Today we will learn how to recognize warning signs that a situation could lead to unplanned sex, and make plans to get out of this kind of situation.
Objectives	Students will be able to: • Use intrapersonal skills to identify risky situations that can lead to unplanned sex. • Use interpersonal skills to get out of these risky situations.
Activities & Time	8.1: Check-In 3 minutes 8.2: Review & Plan for the Day 7 minutes 8.3: Clues 15 minutes 8.4: Handling Risky Situations 15 minutes 8.5: Closure & Question Box 10 minutes
Materials	**Have** ☐ Chart paper, markers and tape ☐ Student name tents ☐ Highlighters—yellow, pink, green and/or blue, 1 per pair of students ☐ **The Story of Remy and Phoenix** (Educator Activity Sheet 3.3), from Lesson 3 ☐ Music and music player ☐ *All4You2!* Messages poster ☐ Question Box ☐ 3 x 5 index cards, 1 per student ☐ Pencils

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Materials

Review

☐ **Remy and Phoenix: Warning Signs** (Activity Sheet 8.3)

Prepare

☐ Plan for the Day

☐ Large traffic light drawn on chart paper, with the center circle colored yellow

☐ **Warning Sign Cards** (Master 8.4), 2 per small group

Educator Preparation

☐ Review the entire lesson and prepare needed materials.

☐ Create traffic light poster for Activity 8.3.

☐ Practice reading the Remy and Phoenix story out loud before class.

☐ Prepare answers to students' questions in the Question Box.

Peer Leader Activities

None

Determinants Addressed

- Increased self-efficacy to avoid situations that may lead to sex or unprotected sex
- Increased self-efficacy to abstain
- Increased self-efficacy to refuse sex or unprotected sex
- Higher self-concept

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 8.1 Check-In

Suggested Time 2 minutes

Materials None

Purpose Students will come to class each day with a range of emotions and experiences affecting their readiness and willingness to participate. We will use a daily check-in as a way to acknowledge this reality.

Steps for Activity

1 Have students check in.

Ask a few students to volunteer how they are feeling or what's going on for them today.

Acknowledge responses based on your judgment. Use simple, short acknowledgements, particularly the positive ones (e.g., head nods, thank you, one-word sentiments such as "great," "glad to hear it," etc.). Avoid long responses or analyzing students' comments in this group setting.

Here are some examples of potential responses:

- Thank you for letting me know. I understand it could be hard to focus when you are dealing with that.
- I'll try to remember that you're having a hard day. I'm confident that you can get through it.

Discourage students from commenting on others' responses by just moving the activity along.

If students share something inappropriate or say something with extreme bravado, ask them to re-state their response in a more appropriate manner. If students share something serious and/or reportable (e.g., parent hit me last night) work with the teacher to provide support to the student right after class or before you even begin the lesson if necessary.

Educator Note: Discuss potential sensitive and/or reportable issues with the classroom teacher or school administrator in advance so you are in agreement on how to handle these situations.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in Signed April 2025 agreement.

2 Conclude.

- *Close by thanking students for their honest responses.*
- *If there are a majority of students feeling a certain way, note that pattern.*
- *Share that knowing "where they are at" each day helps you as a teacher and that you would like them to try their best to make the most of what the class is doing together today. Emphasize that you have confidence in their ability to focus despite all that is confronting them.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 8.2 Review & Plan for the Day

Suggested Time 7 minutes

Materials Plan for the Day, student name tents

Purpose To review the plan for the day and orient students to the day's activities

Steps for Activity

1 Have students help pass back name tents.

2 Review Lesson 7.

Ask students if they can remember what an alternative action is and what it does. Ask for examples as well. Repeat for delay tactics.

Clarify any misinformation or key points as needed.

3 Introduce word scramble.

Complete the following activity to orient students to the lesson.

- *Explain that you are going to post a scrambled word on the board and you want students to try to figure out what the word is.*
- *Post a chart with the word CLUES written in scrambled form—LUSEC, EUCSL, etc.*
- *Ask students if they can figure out the word. Tell them they can use a blank page in their workbooks as scratch paper if they need to write out the letters.*
- *Allow students to guess for a minute. Rewrite the word in proper order—CLUES.*
- *Clarify the meaning of the word as needed (e.g., a clue is evidence or information that leads a person toward the solution of a problem).*

4 Post and review the Plan for the Day.

Today we will look at clues that a situation could lead to unplanned sex or unprotected sex, and make plans to deal with those situations.

5 Ask for a volunteer to read the plan.

Lesson 8
Plan for the Day

- Clues
- Handling Risky Situations
- Summary

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 8.3 Clues

Suggested Time 15 minutes

Materials Educator Activity Sheet 3.3, Activity Sheet 8.3, chart paper with yellow traffic light, highlighters, music and music player

Purpose To allow students to identify clues that a situation could lead to sex or unprotected sex

Steps for Activity

1 Show the traffic light.

Post the chart paper with the traffic light drawn on it. Ask students the following questions:

- What does the yellow light mean on a traffic light? (Slow down, caution)
- What might happen if a person ignores the yellow light and goes through it? (Might crash, might make it, might get a ticket)

Acknowledge that sometimes people may make it through a yellow light, but sometimes they run into trouble.

2 Explain warning signs.

Tell students that there are often similar warning signs when people may be about to cross their personal sexual limits. Explain that some of these signs might be internal (feelings or emotions) and others might be things happening around them (such as the yellow traffic light) or things they are doing.

Ask students if they remember the Remy and Phoenix story. Explain that today they will get a chance to identify the clues or warning signs in that story.

3 Read the story.

Read or have a Peer Leader read **The Story of Remy and Phoenix** *aloud. Ask students to listen for warning signs as you read the story.*

4 Introduce activity.

After reading the story, ask students for one or two examples of a warning sign they heard in the story.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Educator Note: Stop at one or two examples in this first step, otherwise the rest of the activity will be redundant.

Explain that students now will have a chance to look at the story more closely to identify other clues or warning signs for Remy and Phoenix. Provide the following instructions:

- Now you and a partner will identify other warning signs in the story.
- Each pair will get highlighter.
- You will work together to review the story and highlight all the clues or warning signs in the story.
- You will have 5 minutes to finish this task.

Check for understanding by asking students what they will do. Clarify as needed.

5 Students identify warning signs.

Put students in pairs and have them turn to **Remy and Phoenix: Warning Signs** *(Activity Sheet 8.3) in their workbooks. Distribute a highlighter to each pair and have them begin identifying the warning signs in the story.* ***Play music*** *while students work.*

Allow students to work for up to 5 minutes. Circulate to ensure pairs are on task and to assist as needed.

6 Debrief.

Call students back to attention. Ask for volunteers to share the warning signs they found in the story that could have signaled to Remy and Phoenix to get out of the situation and not cross their lines. List key points on chart paper.

7 Analyze warning signs.

Review the list of key points and circle any warning signs that involved internal signals (e.g., felt uncomfortable, not sure it was a good idea).

Ask students how the signs you circled differ from the other ones. Prompt if needed by explaining that often a person can sense a feeling inside that something doesn't feel or seem right, just like in the poem we read at the beginning of class.

Point out that internal signs and feelings are very helpful when people are in situations that might lead to unplanned or unprotected sex. Emphasize the importance of trusting a feeling like this and using it as a signal that they need to get out of the situation.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

Activity 8.4 Handling Risky Situations

Suggested Time 15 minutes

Materials Warning Sign Cards, pencils

Purpose To identify ways to handle risky situations that might lead to sex or unprotected sex

Steps for Activity

1 Introduce activity.

Tell students that being able to recognize clues or warning signs is a first step toward sticking with their limits. Explain that it is also important to think about what to do if they are in a risky situation, and in this next activity they will be able to do just that.

Provide the following instructions:

- You will work in groups of four.
- Each group will be given two cards. Each card has a warning sign on it.
- Your group will work together to identify two or three ways that Remy and/or Phoenix could deal with the warning sign on the card. This could be things they could do or things they could say.
- You can write their ideas on the back of the cards.
- You'll share some of your ideas with the whole class.

Check for understanding by asking students what they will do with the cards. Clarify as needed.

2 Groups identify ways to deal with warning signs.

Pass out two **Warning Sign Cards** *and a pencil to each group. Allow groups to work for about 5 minutes.*

Circulate to ensure groups are on task and to prompt them to write 2 or 3 ideas on their cards.

3 Debrief.

Tell students that Remy and Phoenix need their advice. Ask for volunteers to share one of the warning signs on their cards and one or two ideas on how to handle that warning sign.

After the volunteer has shared, ask the class to add any other ideas they might have.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Repeat for several warning signs. Then quickly review the list of ideas.

Choose a few of the ideas and ask students how the story might have ended differently if Remy and/or Phoenix had used these ideas.

4 Identify additional warning signs.

Ask students if they can think of other clues or warning signs (not used in the Remy and Phoenix story) that might put people at risk of crossing their limits regarding sex. Write key words on chart paper.

Have the class brainstorm possible ways to deal with those warning signs.

5 Review.

Remind students that they have several strategies that they can use to deal with difficult situations.

You now have several strategies that can help you deal with warning signs and risky situations. You can:

- Use "Pst" to pick a limit and tell someone your limits.
- Suggest something else to do to get out of a situation (alternative actions).
- Use delay tactics to break the mood and buy more time to deal with a situation.
- Think ahead and avoid situations that might be challenging to deal with.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 8.5 Closure & Question Box

Suggested Time 10 minutes

Materials *All4You2!* Messages poster, Question Box, 3 x 5 index cards

Purpose To summarize key points of the lesson and prepare for the next lesson

Steps for Activity

Lesson Summary

1 Discuss.

Ask students to summarize the main points of this lesson.

2 Emphasize the behavioral messages.

Use the All4You2! *Messages poster and tie these to the main messages of the curriculum.*

- **Respect:** Know your limits and tell your limits to your partner.
- **Respect and Protect:** Respect and protect yourself by avoiding situations that might lead to unplanned or unprotected sex.

Encourage students to look for clues and to slow down or use caution when they see the warning signs.

Question Box

1 Answer questions.

Answer the student questions from the Question Box.

2 Gather new questions.

If there is time, hand out 3 x 5 index cards and give students a minute to write any new questions they might have. Tell students that if they don't have a question they should write "I don't have a question" on the card. Remind students NOT to put their names on the cards.

Have them fold the cards when they are finished writing. Have a Peer Leader collect the cards. Tell students that you will address these questions in a later lesson.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Closure

1 Conclude.

Collect the student name tents.

Close by recognizing students for their interest, their creative thinking and all the work they accomplished today.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

DO NOT COPY OR DISTRIBUTE

Warning Signs Cards *(continued)*

Phoenix joining in talk with friends about "getting down" tonight without really meaning it

What could Remy or Phoenix do or say if they saw this warning sign?
Write 2 or 3 ideas on the back of this card.

Remy and Phoenix feeling a bit uncomfortable about touching each other sexually

What could Remy or Phoenix do or say if they saw this warning sign?
Write 2 or 3 ideas on the back of this card.

Remy not sure it was a good idea to go to a bedroom, but going anyway

What could Remy or Phoenix do or say if they saw this warning sign?
Write 2 or 3 ideas on the back of this card.

Phoenix and Remy going into a bedroom

What could Remy or Phoenix do or say if they saw this warning sign?
Write 2 or 3 ideas on the back of this card.

Phoenix and Remy lying on the bed, kissing and messing around

What could Remy or Phoenix do or say if they saw this warning sign?
Write 2 or 3 ideas on the back of this card.

Activity Sheet 8.3

Remy and Phoenix: Warning Signs

Directions: Review the story with your partner. Highlight the clues or warning signs in the story for Remy and Phoenix.

Remy is in high school. It's Saturday and Remy's Nana thinks Remy is doing homework at a friend's house that night, but Remy and the friend went to a party instead. When they got there, the house was a little dark and there were no parents. Music was playing and some people were dancing. There was a bar set up near the kitchen and others were sipping alcohol. Some kids were hooking up in the rooms.

Remy's friend went off to talk to some other people. Remy was feeling uncomfortable without the friend, and decided to have a few drinks. Just when Remy was wishing someone would come over and talk, Phoenix, someone Remy had seen at school, came over.

Phoenix and a few friends had been drinking. Phoenix's friends were talking about getting down tonight. Phoenix joined in the talk, but didn't mean it. Sex had really messed up a relationship in the past, so Phoenix had made a private decision not to have sex again, at least for a few years. Phoenix didn't know many people at the party, so was happy to see Remy. Phoenix got a drink and offered another one to Remy. Remy wasn't sure about drinking more, but took the drink anyway.

Phoenix asked Remy to dance and they started feeling good. Phoenix saw some friends watching and wanted to impress them. So Phoenix started to rub on Remy in ways that felt kind of good, but also were a little uncomfortable.

The touching felt good to Remy too, but, like Phoenix, Remy felt a little uncomfortable and wasn't sure touching in that way was OK. But Remy decided that Phoenix was cool and let the touching keep going. Both Phoenix and Remy were feeling odd because everybody was watching. They were also feeling the alcohol and it was hard to think clearly.

Soon their friends were signaling for them to go to a room, so Phoenix suggested the idea to Remy. Remy wasn't sure whether it was a good idea, but liked Phoenix and didn't want to deal with their friends' responses, so they went.

Remy took Phoenix's hand and started to go down the hallway. They turned the knob on one of the doors. Someone yelled "Hey!" "Ooops—Sorry!" they said, laughing nervously. "Wrong door!" They tried the next one a little more carefully. It was empty. Remy and Phoenix went into the bedroom. Soon they were lying on the bed, kissing and messing around. They didn't really talk about having sex. It just happened. After they did it, Remy and Phoenix found their friends and went home.

Lesson 9

Teens and Relationships

Synopsis	In this lesson, students will identify healthy and unhealthy elements of a relationship, and identify these elements in their own relationships.
Purpose Statement for Students	Today we will learn how to recognize the elements of a healthy personal relationship, and practice using skills for building relationships in a positive way.
Objectives	Students will be able to: • Build a personal value for healthy relationships. • Shape peer norms that value healthy relationships. • Use communication skills to demonstrate elements of a healthy relationship.

Activities & Time

9.1: Check-In	2 minutes
9.2: Review & Plan for the Day	3 minutes
9.3: What's in a Relationship?	10 minutes
9.4: Creating a Roleplay	20 minutes
9.5: Call or Visit a Clinic Homework	8 minutes
9.6: Closure & Question Box	7 minutes

Materials

Have

- ☐ Chart paper, markers and tape
- ☐ Student name tents
- ☐ Highlighters
- ☐ Blank paper
- ☐ Music and music player
- ☐ *All4You2!* Messages poster
- ☐ Question Box
- ☐ 3 x 5 index cards, 1 per student
- ☐ Pencils

Review

- ☐ **What's in a Relationship?** (Activity Sheet 9.3a)
- ☐ **How's My Relationship?** (Activity Sheet 9.3b)
- ☐ **A New Look at My Relationship** (Activity Sheet 9.4)
- ☐ **Call or Visit a Clinic** (Extra Credit Homework 9.5)

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Materials

Prepare

- ☐ Plan for the Day
- ☐ **How's My Relationship Score?** (Poster 9.3)
- ☐ **Relationship Elements Roleplay Cards** (Master 9.4), 2 sets per class

Educator Preparation

- ☐ Review the entire lesson and prepare needed materials.
- ☐ Review **Relationship Scenarios** (Educator Activity Sheet 9.3) and practice reading the scenarios out loud before class.
- ☐ For Activity 9.3, prepare a chart or poster showing a local teen hotline that can help support young people dealing with physical and sexual abuse.
- ☐ For Activity 9.5, prepare a list of local health clinics with phone numbers. You can use an existing resource list if there is one available for the areas surrounding the school.
- ☐ Meet with the Peer Leaders briefly before or at the end of class to request their assistance in completing the **Call or Visit a Clinic** extra credit homework. Explain that they will report on their experience in Lesson 14.
- ☐ Prepare answers to students' questions in the Question Box.

Peer Leader Activities

- ☐ Peer Leaders are asked to call or visit a clinic in preparation for Lesson 14.

Determinants Addressed

- Higher self-concept
- Increased self-efficacy to abstain or refuse unprotected sex

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 9.1 Check-In

Suggested Time 2 minutes

Materials None

Purpose Students will come to class each day with a range of emotions and experiences affecting their readiness and willingness to participate. We will use a daily check-in as a way to acknowledge this reality.

Steps for Activity

1 Have students check in.

Ask a few students to volunteer how they are feeling or what's going on for them today.

Acknowledge responses based on your judgment. Use simple, short acknowledgements, particularly the positive ones (e.g., head nods, thank you, one-word sentiments such as "great," "glad to hear it," etc.). Avoid long responses or analyzing students' comments in this group setting.

Here are some examples of potential responses:

- Thank you for letting me know. I understand it could be hard to focus when you are dealing with that.
- I'll try to remember that you're having a hard day. I'm confident that you can get through it.

Discourage students from commenting on others' responses by just moving the activity along.

If students share something inappropriate or say something with extreme bravado, ask them to re-state their response in a more appropriate manner. If students share something serious and/or reportable (e.g., parent hit me last night) work with the teacher to provide support to the student right after class or before you even begin the lesson if necessary.

Educator Note: Discuss potential sensitive and/or reportable issues with the classroom teacher or school administrator in advance so you are in agreement on how to handle these situations.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in Signed April 2025 agreement.

2 Conclude.

- *Close by thanking students for their honest responses.*
- *If there are a majority of students feeling a certain way, note that pattern.*
- *Share that knowing "where they are at" each day helps you as a teacher and that you would like them to try their best to make the most of what the class is doing together today. Emphasize that you have confidence in their ability to focus despite all that is confronting them.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 9.2 Review & Plan for the Day

Suggested Time 5 minutes

Materials Plan for the day, student name tents and folders

Purpose To review the plan for the day and orient students to the day's activities

Steps for Activity

1 Have students help pass back name tents.

2 Review Lesson 8.

Ask students the following questions:

- What was one warning sign for Remy and Phoenix?
- How could they have dealt with that warning sign?

Clarify any misinformation or key points as needed.

3 Post and review the Plan for the Day.

Today we will learn how to recognize the elements of a healthy personal relationship, and practice using skills for building relationships in a positive way.

4 Ask for a volunteer to read the plan.

Lesson 9
Plan for the Day

- What's in a Relationship?
- Creating a Roleplay
- Call or Visit a Clinic
- Summary

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 9.3 What's in a Relationship?

Suggested Time 10 minutes

Materials Activity Sheet 9.3a, Activity Sheet 9.b, Educator Activity Sheet 9.3, Poster 9.3, highlighters, teen hotline number

Purpose To help students determine when an unhealthy relationship should end and practice communication skills for ending those relationships in a positive way

Steps for Activity

1 Brainstorm.

Write the word "Relationships" across the top of a piece of chart paper or the board. Draw a line down the center and write "Healthy" on one side and "Unhealthy" on the other side.

Have students brainstorm healthy and unhealthy elements of relationships. Write key words in the appropriate column.

2 Examine elements of relationships.

Have students turn to **What's in a Relationship?** *(Activity Sheet 9.3a) in their workbooks. Ask for a volunteer to read the information at the top of the sheet aloud.*

Have students review both the positive and damaging elements listed in on the activity sheet and compare these to the ones they just brainstormed that are listed on chart paper or the board. Ask students to point out any that didn't come up in the brainstorming. Review what the different elements mean as needed.

3 Share information about abuse.

Address physical and sexual abuse by noting that it is never appropriate to abuse someone else. Make these points:

- Based on the 2013 Youth Risk Behavior Survey:*
  - About 1 out of 10 students (10.3%) who dated or went out with someone in the year before the survey had been hit, slammed into something, or injured with an object or weapon on purpose by the person they were dating.

* Kann, L, Kinchen, S, Shanklin, S., et al. (2014). Youth risk behavior surveillance—United States, 2013. *MMWR, 63* (SS04): 1–168. Accessed at www.cdc.gov/mmwr/pdf/ss/ss6304.pdf.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

  - Similarly, approximately 1 out of 10 (10.4%) experienced sexual violence (defined as being kissed, touched or forced physically to have sex when they did not want to in the 12 months before the survey.

- Physical or sexual abuse can involve both actual harm and/or the threat of harm.
- People in abusive relationships may need to leave the relationship to get away from the abuse.
- People in abusive relationships should seek help and support.

Ask students why it might be difficult to end an abusive relationship (e.g., fear, sense of loss, depression, conflicted feelings—feel person really loves you).

Ask students where teens in abusive relationships could go for help (e.g., family members, counselors, or community agencies that deal with this issue).

Post the number for a teen hotline or other resources in your area that can help people who are in abusive relationships.

4 Analyze scenarios.

Tell students you'd like to review the concepts of healthy and unhealthy relationships and then give them a chance to rate their own relationships. Follow these steps:

- *Explain that you are going to read a few scenarios.*
- *Tell students that you'd like them to tell you if the relationship in each scenario is healthy or unhealthy, and why.*
- *Read the three* **Relationship Scenarios***, one at a time.*
- *After each one, ask students to identify if the relationship described is healthy or unhealthy.*
- *Ask what, if any, of the relationship elements (healthy or unhealthy) were present in each of the relationships described.*

5 Students assess relationships.

Explain that students will now have a chance to rate their own relationships. Have them turn to **How's My Relationship** *(Activity Sheet 9.3b) in their workbooks and distribute a highlighter to each student.*

- Think of a relationship you have with a friend or a partner. It does not have to be a romantic relationship.
- Then read each sentence and rate how true it is for you. You can use the highlighter to can mark which answer is most true for you.

Allow time for students to complete the activity sheet.

Once students have finished, help them score their relationships as follows:

- Give yourself 3 points for each "Almost Always" response,
- Give yourself 2 points for each "Sometimes" response,

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETP. PDF solely for purposes identified in signed April 2025 agreement.

- Give yourself 1 point for each "Almost Never" response and
- Give yourself 0 points for each "Never" response.

Show and review the **How's My Relationship Score?** *poster and have students reflect on how their relationships scored.*

Educator Note: You can read Activity Sheet 9.3b out loud if you think your students would benefit from hearing it rather than reading it.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 9.4 Creating a Roleplay

Suggested Time 20 minutes

Materials Relationship Elements Roleplay Cards, Activity Sheet 9.4, blank paper

Purpose To help students recognize healthy and unhealthy relationship elements and re-examine qualities in one of their personal relationships

Steps for Activity

1 Introduce roleplay activity.

Explain that students will now have a chance to do some roleplaying:

- You will work in pairs.
- Each pair will get a different relationship element and a blank piece of paper.
- Keep your element a secret from everyone else.
- Work with your partner to create a roleplay so the rest of us can try to guess which relationship element you are showing with the roleplay.

Write down these key steps on chart paper or the board and review them:

- Talk to your partner about ideas for the roleplay.
- Write the script and practice.
- Don't use your own name or friends' names.

2 Clarify.

Check for understanding by asking students what they will do once they get into pairs. Clarify as needed.

3 Students create roleplays.

Put students into pairs. Give each pair a blank piece of paper and one of the **Relationship Elements Roleplay Cards** *without letting others in the class know which element each pair received.*

Educator Note: Physical and sexual abuse are not included on the cards. Do not assign these elements to any pair.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Allow students time to create their roleplays. ***Play music*** *while students work. Circulate to ensure students are on task.*

4 Perform roleplays.

Once students have finished their scripts, have pairs perform their roleplays for the class, while the other students try to guess the element they are depicting.

Emphasize key points after each roleplay based on students' scripts (e.g., open communication is a great way to build trust in a relationship; controlling someone else can be very damaging to a relationship, etc.). Use Activity Sheet 9.3 as needed to guide these comments.

5 Students reassess relationships.

Direct students to turn to **A New Look at My Relationship** *(Activity Sheet 9.4) in their workbooks. Explain you'd like them to re-examine the relationship they rated earlier in class.*

Allow students time to fill out the activity sheet. When they have finished, encourage volunteers to share their answers to the last question on the activity sheet—one thing they learned—with the class.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 9.5 Call or Visit a Clinic Homework

Suggested Time 8 minutes

Materials Extra Credit Homework 9.5

Purpose To provide students with an opportunity to learn more about local clinic services and how to access them

Steps for Activity

1 Introduce homework activity.

Explain to students that one of the upcoming lessons will cover HIV, other STDs, and pregnancy testing, and where to go for testing.

Ask students why people might not go to a doctor or health clinic even if they thought they might have an STD or be pregnant (e.g., unsure of what might happen there, fear that someone might find out, not sure of where to go, fear of finding out they actually do have a disease or are pregnant).

Point out that one of the most common reasons that keeps people from going to a clinic is feeling unsure of where to go or what to expect.

Explain that you are looking for students who are willing to volunteer for an extra-credit homework activity to help gather information about what services are available at clinics in their communities. Explain that they will share the information during Lesson 14.

2 Clarify.

Have students turn to **Call or Visit a Clinic** *(Extra Credit Homework 9.5) in their workbooks, and hand out a list of nearby clinics (you can also post these on chart paper). Review the steps for completing the homework assignment:*

- You can pick one clinic and call or visit it to get the information asked for on the activity sheet. You may work in pairs, if you want.
- You will share the information and what you thought of the clinic during a later lesson (Lesson 14).
- This activity will help everyone learn more about what services are available at clinics in the community, and will help everyone feel more confident of what to expect at a clinic.

Explain to students that clinic staff members are very busy and sometimes may come across as unfriendly. Stress that you would like students to be respectful and mindful of clinic staff's time when calling, and remind them to record what they thought of the clinic on the homework sheet.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

3 Recruit volunteers.

Ask for volunteers to complete the homework assignment. Make a note of the names of students who are willing to complete the activity. Thank them for their help. Let them know you will be checking in with them periodically over the next few lessons to see how this activity is working for them.

Educator Note: Ask and encourage all Peer Leaders to assist with this activity. If some Peer Leaders are uncomfortable with the activity, thank them for considering it, but do not force them to complete it.

Be sure to check with the volunteers who are doing this activity each day between Lessons 10 and 14 to be sure they complete the task. Emphasize the importance of their participation. If you feel they won't be ready, be sure to call or visit a clinic yourself and be prepared to step in during Lesson 14 as needed.

All volunteers should receive extra credit or some small incentive for assisting.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 9.6 Closure & Question Box

Suggested Time 7 minutes

Materials Question Box, 3 x 5 index cards, pencils, *All4You2!* Messages poster

Purpose To summarize key points of the lesson

Steps for Activity

Lesson Summary

1 Discuss.

Ask students to summarize the main points of this lesson.

2 Summarize.

Emphasize that the purpose of today's lesson was to become familiar with the elements of healthy and unhealthy relationships and to assess their own relationships based on these elements.

3 Emphasize the behavioral messages.

Use the All4You2! *Messages poster and tie these to the main messages of the curriculum:*

- **Respect:** Be true to yourself. Have sexual limits and be sure to tell your partner these limits.
- **Protect:** Healthy relationships make it easier to share your limits with your partner and for you to keep those limits.

Question Box

1 Answer questions.

Answer the student questions from the Question Box.

2 Gather new questions.

Hand out index cards and give students a minute to write any new questions they have. Tell students that if they don't have a question they should write "I don't have a question" on the card. Remind students NOT to put their names on the cards.

Have them fold the cards when they are finished writing. Have a Peer Leader collect the cards. Tell students that you will address these questions in a later lesson.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Closure

1 Conclude.

Collect the student name tents and any remaining materials. Close by recognizing students for their participation today.

2 Assign homework.

Tell students that they have homework for tonight. Ask students to share one thing from today's lesson with a friend.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Relationship Scenarios

As part of Step 4 in Activity 9.3, read these three scenarios one at a time. Ask students if they think the relationship is healthy or unhealthy and why.

Scenario 1

Samantha and Oliver have been together for 6 months. Samantha really loves Oliver and wants to spend every minute with him. She won't let Oliver go out with his friends. She also tells him how to dress. Sometimes she slaps him when she's mad at him. Based on this information, would you say their relationship is mostly healthy or unhealthy? Why? *(Answer: Unhealthy)*

Scenario 2

JD and his partner have been together for a year. They spend a lot of time together and they call each other every day. They both hang out with their friends too. Sometimes JD feels like he needs more time with friends. He tells his partner that, and his partner is cool with it. Based on this information, would you say their relationship is mostly healthy or unhealthy? Why? *(Answer: Healthy)*

Scenario 3

LT and Lee have been friends since middle school. They hang out after school on some days and party together on the weekends. LT believes that Lee would be there any time LT needed help. Lee feels the same way about LT. Sometimes LT makes fun of Lee because Lee doesn't have a romantic relationship. Lee just ignores LT, but the teasing is starting to hurt. Lee decides to say something to LT about it. Based on this information, would you say their friendship is mostly healthy or unhealthy? Why? *(Answer: Healthy, but there may be some discussion around LT's teasing)*

How's My Relationship Score?

Scoring

- Almost Always = 3 points each
- Sometimes = 2 points each
- Almost Never = 1 point each
- Never = 0 points

What your score means:

38–45: You have what it takes to continue a satisfying, successful relationship.

30–37: You have the basis for a good relationship. Focus on the positive elements and work to improve the damaging elements.

15–29: Indicates problems that might be solved through improving honesty and communication.

0–15: Indicates few positive elements. You might want to look at your motives for continuing the relationship and perhaps work toward improving it.

Relationship Elements Roleplay Cards

Directions: Copy and cut apart the cards, or print each relationship element on a 3 x 5 index card. Prepare two sets for each class.

Self-esteem	**Responsibility for self**
Flexibility	**Trust**
Honesty	**Communication**
Jealousy	**Overdependence**
Selfishness	**Control**
Emotional abuse

Activity Sheet 9.3a

What's in a Relationship?

All relationships go through cycles. People who feel love and affection for each other can also experience irritation or even dislike. Every relationship has both positive and damaging elements.

So what makes a relationship healthy or unhealthy?

- In a healthy relationship, positive elements are always there in some way—even when people disagree or are angry with each other.
- In an unhealthy relationship, damaging elements take over, making both people unhappy.

Positive Elements	Damaging Elements
Self-esteem—each person has a feeling of self-worth.	Jealousy—one person is fearful of losing the other person's affection.
Responsibility for self—each person is responsible for thoughts, feelings, and actions.	Over dependency—one person relies on the other person to fulfill all needs.
Flexibility—each person allows for and accepts changes within relationship.	Selfishness—one person has little or no concern for the other person in relationship.
Trust—each person has confidence in the other person's honesty and reliability.	Control—one person tries to have power over the other person's behavior or makes all of the decisions.
Honesty—each person reveals who he/she is, both strengths and weaknesses. They don't hide or pretend.	Emotional, physical, or sexual abuse—one person harms or threatens to harm the other person. Attack on a person's feelings, personality, character, ability, or dignity is also abusive.
Communication—each person exchanges information, thoughts, & feelings. Communication is needed for intimacy.

Activity Sheet 9.3a

Activity Sheet 9.3b

How's My Relationship?

Directions: Think about a friend or a romantic partner. Read each statement and highlight the response that best describes your feelings or behaviors.

1. I feel my friend/partner understands me.	Almost Always	Sometimes	Almost Never	Almost Never
2. I can speak freely with my friend/partner about things I like and things that bother me.	Almost Always	Sometimes	Almost Never	Almost Never
3. I care about my friend's/partner's needs and concerns and my friend/partner cares about mine.	Almost Always	Sometimes	Almost Never	Almost Never
4. I maintain my own interests.	Almost Always	Sometimes	Almost Never	Almost Never
5. I have other important friendships in my life.	Almost Always	Sometimes	Almost Never	Almost Never
6. I believe I am a worthwhile person outside this relationship.	Almost Always	Sometimes	Almost Never	Almost Never
7. Our relationship is physically safe. We don't physically hurt or threaten each other.	Almost Always	Sometimes	Almost Never	Almost Never
8. Our relationship is emotionally healthy.	Almost Always	Sometimes	Almost Never	Almost Never
9. Our relationship is supported by others.	Almost Always	Sometimes	Almost Never	Almost Never
10. We support each other's friendships.	Almost Always	Sometimes	Almost Never	Almost Never
11. I can be myself around my friend/partner.	Almost Always	Sometimes	Almost Never	Almost Never
12. I feel comfortable sharing my feelings in my relationship.	Almost Always	Sometimes	Almost Never	Almost Never
13. My friend/partner does what is best for me and the relationship.	Almost Always	Sometimes	Almost Never	Almost Never
14. I feel good about myself and the relationship.	Almost Always	Sometimes	Almost Never	Almost Never
15. Most of the decisions in our relationship are made together.	Almost Always	Sometimes	Almost Never	Almost Never

Activity Sheet 9.4

A New Look At My Relationship

Directions: Think again about your relationship with your friend or partner. Using what you've learned in class and from the How's My Relationship? sheet, complete the following statements.

1. The **healthy** elements of my relationship:

2. The **unhealthy** elements of my relationship:

3. We can **improve** our relationship by:

4. One thing I **learned** from this activity:

© ETR Associates

Activity Sheet 9.4

Extra Credit Homework 9.5

Call or Visit a Clinic

Directions: Pick a local clinic from the list you got in class. Call to find out what services the clinic offers, how much it costs, and what type of confidentiality policy they have. You can visit the clinic instead of calling if you want to. Once you call, please fill in the information below and bring it back to class. You can share what you learned during Lesson 14.

Name of clinic: _____

Clinic address: _____

Clinic phone and hours: _____

Check the services available at this clinic:

☐ STD testing ☐ HIV testing ☐ Pregnancy testing ☐ Contraceptive services

☐ STD treatment ☐ Other services: _____

How much does a routine exam or consultation cost? _____

What is the clinic policy about confidentiality? _____

How comfortable did you feel calling or visiting this clinic?

☐ Uncomfortable ☐ Somewhat comfortable ☐ Very comfortable

What made it uncomfortable or comfortable? _____

Would you tell other young people your age to visit this clinic if they needed information or services? ☐ Yes ☐ No. Why or why not?

Thank You!

Lesson 10 Ending Relationships in Healthy Ways

Synopsis	Although unhealthy elements can be warning signs in a relationship, they do not necessarily mean a relationship should end. In this lesson, students learn to identify warning signs that indicate it might be best to end a relationship, and explore how to end a relationship when necessary. They also learn healthy ways to recover when a relationship ends.
Purpose Statement for Students	Today we will learn how to recognize the warning signs of unhealthy relationships and practice skills for ending those relationships in a positive way.
Objectives	Students will be able to: • Recognize the warning signs of an unhealthy relationship. • Build a value system for ending relationships in a positive way. • Shape peer norms that value ending relationships in healthy ways. • Use communication skills to end relationships in a positive way.
Activities & Time	10.1: Check-In 2 minutes 10.2: Review & Plan for the Day 3 minutes 10.3: Ending Relationships 30 minutes 10.4: What Do You Think? 5 minutes 10.5: Closure & Question Box 5 minutes
Materials	**Have** ☐ Chart paper, markers and tape ☐ Student name tents ☐ Music and music player ☐ *All4You2!* Messages poster ☐ Question Box ☐ 3 x 5 index cards, 1 per student ☐ Pencils

(continued)

Activity 10.1 Check-In

Suggested Time 2 minutes

Materials None

Purpose Students will come to class each day with a range of emotions and experiences affecting their readiness and willingness to participate. We will use a daily check-in as a way to acknowledge this reality.

Steps for Activity

1 Have students check in.

Ask a few students to volunteer how they are feeling or what's going on for them today.

Acknowledge responses based on your judgment. Use simple, short acknowledgements, particularly the positive ones (e.g., head nods, thank you, one-word sentiments such as "great," "glad to hear it," etc.). Avoid long responses or analyzing students' comments in this group setting.

Here are some examples of potential responses:

- Thank you for letting me know. I understand it could be hard to focus when you are dealing with that.
- I'll try to remember that you're having a hard day. I'm confident that you can get through it.

Discourage students from commenting on others' responses by just moving the activity along.

If students share something inappropriate or say something with extreme bravado, ask them to re-state their response in a more appropriate manner. If students share something serious and/or reportable (e.g., parent hit me last night) work with the teacher to provide support to the student right after class or before you even begin the lesson if necessary.

Educator Note: Discuss potential sensitive and/or reportable issues with the classroom teacher or school administrator in advance so you are in agreement on how to handle these situations.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in Signed April 2025 agreement.

2 Conclude.

- *Close by thanking students for their honest responses.*
- *If there are a majority of students feeling a certain way, note that pattern.*
- *Share that knowing "where they are at" each day helps you as a teacher and that you would like them to try their best to make the most of what the class is doing together today. Emphasize that you have confidence in their ability to focus despite all that is confronting them.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 10.2 Review & Plan for the Day

Suggested Time 3 minutes

Materials Plan for the day, student name tents and folders

Purpose To review the plan for the day and orient students to the day's activities

Steps for Activity

1 Have students help pass back name tents.

2 Review Lesson 9.

Ask students the following questions:

- Can you name three or four positive elements in a relationship?
- How can being in a good relationship help teens reduce the risk of unplanned pregnancy and/or STD, including HIV? (e.g., can communicate more easily and talk about sexual boundaries; partner respects you more and honors sexual boundaries)

Clarify any misinformation or key points as needed.

3 Post and review the Plan for the Day.

Today we will learn to recognize when an unhealthy relationship should end, and practice the skills for ending relationships in positive ways.

4 Ask for a volunteer to read the plan.

Lesson 10
Plan for the Day

- Ending Relationships
- What Do You Think?
- Summary

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

Activity 10.3 Ending Relationships

Suggested Time 30 minutes

Materials Activity Sheet 10.3a; Activity Sheets 10.3b, c and d; Activity Sheet 10.3e

Purpose To help students determine when an unhealthy relationship should end and practice communication skills for ending those relationships in a positive way

Steps for Activity

1 Introduce the activity.

Ask students how being in an unhealthy relationship impacts a person's ability to stick with their personal sexual limits (may feel like they can't refuse sex or unprotected sex; no power to speak up, etc.).

Explain that in this next activity they will look at characteristics of unhealthy relationships and talk about ways to end them.

2 Review warning signs in relationships.

Have students turn to **Ending Relationships** *(Activity Sheet 10.3a) in their workbooks. Ask for volunteers to read the information on the first page aloud, one section at a time.*

As each section is read, discuss key points by asking students to share their thoughts—what they agree or disagree with; how it compares to experiences with which they are familiar (e.g., friends' experiences).

After discussing the signs of emotional or physical abuse, ask students to brainstorm a list of people they could go to for help in ending an abusive relationship.

3 Review steps for ending relationships.

Have students turn to the second page of **Ending Relationships** *(Activity Sheet 10.3a). Ask for volunteers to read the information aloud, one section at a time.*

Ask students if they see any similarities in some of the steps for ending relationships (make a decision, be prepared to feel uncomfortable, find a place, mean it, explain) and "Pst." Point out the similarities as needed ("make decision" same as P—pick a limit; "mean it" similar to S—say it strong; "explain your reasons" similar to T—tell why).

Ask students to list some emotions teens might feel when a friendship or romantic relationship ends. Discuss how the ideas for coping with a break-up might help them deal with these emotions.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

4 Analyze relationship scenarios.

Explain that students will now have a chance to look at some relationships and decide if they should end or not. Have them turn to **Should It End?** *(Activity Sheets 10.3b, c and d) in their workbooks. Explain that students will work in small groups and each group will be assigned one of the 3 case studies to analyze.*

Divide students into groups of three, and assign one case study to each group. Allow students about 5–8 minutes to complete the activity sheet in their groups.

Once groups have finished, ask for volunteers to share their responses with the class. Be sure each case study is discussed.

Educator Note: In discussing Case Study 3, be sure students understand that Cory is in an abusive and potentially dangerous situation. She should be very clear about not wanting any contact with Max, and, if he doesn't respect her wishes, she should get help immediately or even anticipate that he may not and have help lined up beforehand.

5 Students roleplay.

Acknowledge that ending relationships can be difficult. Ask students what could make it difficult to end a relationship (e.g., fear of safety, don't want to be alone, hard to meet people, don't want to hurt person's feelings, etc.).

Explain that now students will have a chance to create a roleplay around ending a relationship. Have them turn to **How Does It End?** *(Activity Sheet 10.3e) in their workbooks. Explain that they will stay in their groups of 3 write a roleplay script that ends the relationship between DJ and Kim in a healthy way.*

Allow 5–8 minutes for groups to create and practice their roleplay scripts.

6 Debrief.

Ask for volunteers (two groups) to present their roleplays to the class or to allow you to read their script to the class. Seek input from other groups on additional ways to end the relationship in a healthy way.

7 Conclude.

Close the activity as follows:

- *Acknowledge how difficult it can be to recognize warning signs and end relationships (with friends or romantic partners).*
- *Emphasize the importance of thinking about how their relationships influence the risks they take.*
- *Encourage students to show respect for themselves by getting out of relationships that may increase their risk for unplanned pregnancy and/or STD, including HIV.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 10.4 What Do You Think?

Suggested Time 5 minutes

Materials Homework 10.4

Purpose To encourage communication about sexual values with a trusted adult

Educator Note: Some students may be unable to talk with their parents or guardians. Have students identify other adults with whom they can complete this assignment (e.g., another teacher, counselor, nurse, aunt, uncle, older brother or sister, clergy). For extra credit, encourage students to interview a friend or their partners as well as a trusted adult.

Steps for Activity

1 Introduce the homework.

Remind students that open communication between young people and their parents or other important adults in their lives is very important, but not always easy. Tell students you would like them to complete a homework activity with their parents/guardians or another trusted adult.

2 Review assignment.

Have students turn to **What Do You Think?** *(Homework 10.4) in their workbooks and review the 3 homework questions about sexuality:*

- What are some things people can do to keep their friendships and other relationships healthy?
- What are some ways teens can show they care about someone without having sex?
- What are some of the things people should think about before deciding whether or not to have sexual intercourse?

Explain that students will answer the questions for themselves first. Then they will interview their parents/guardians (or another adult) using the same three questions. Offer students extra credit for interviewing a friend or partner in addition to the adult.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

3 Clarify.

Emphasize that the benefit of this assignment comes from discussing the questions with their parents or other adults, so students shouldn't just give the homework sheet to their parents to complete.

Stress that both students' and parents' answers will be confidential. Students will turn in only the signed portion to verify that the homework was completed. They do not need to write the adult's answers on the homework sheet.

Tell students the homework sign-off sheet will be due at the beginning of class 14.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 10.5 Closure & Question Box

Suggested Time 5 minutes

Materials *All4You2!* Messages poster, Question Box, 3 x 5 index cards

Purpose To summarize key points of the lesson

Steps for Activity

Lesson Summary

1 Discuss.

Ask students to summarize the main points of this lesson.

2 Summarize.

Emphasize that the purpose of today's lesson was to learn how to recognize the warning signs of destructive relationships and practice skills for ending those relationships in a positive way.

3 Emphasize the behavioral messages.

Use the All4You2! *Messages poster and tie these to the main messages of the curriculum:*

- **Respect:** Be true to yourself. End unhealthy relationships.
- **Protect:** Unhealthy relationships make it harder to protect yourself from unplanned pregnancy and/or disease.

Question Box

1 Answer questions.

Answer the student questions from the Question Box.

2 Gather new questions.

Hand out index cards and give students a minute to write any new questions they have. Tell students that if they don't have a question they should write "I don't have a question" on the card. Remind students NOT to put their names on the cards.

Have them fold the cards when they are finished writing. Have a Peer Leader collect the cards. Tell students that you will address these questions in a later lesson.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Closure

1 Conclude.

Collect the student name tents.

Close by recognizing students for their participation today.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Student Workbook Pages for Educator Reference

Ending Relationships

Relationships of all kinds can come to an end for many different reasons. Sometimes, both people agree that a close friendship or relationship isn't right for them anymore. More often, only one of the people decides the relationship is no longer a good choice.

Signs of Trouble

Warning signs that a relationship may be in trouble include:

- **Change in communication.** One person doesn't listen or pay attention. This can make the other person feel unappreciated or undesirable.
- **Increase in unresolved conflicts.** When misunderstandings aren't resolved, resentment can build. Eventually, one or both people become angry or frustrated.
- **Change in the amount and quality of time spent together.** Sometimes this is normal—for example, when one person is particularly busy. A sign of trouble would be if one or both people seek the company of others to avoid the relationship.

Signs of Emotional or Physical Abuse

Abuse of any kind is serious and should not be tolerated.

It's a warning sign of abuse if your partner or friend:

- **Always has to "win"** an argument and doesn't respect your views when you disagree.
- **Is threatened** by your accomplishments.
- **Discourages you from having other friendships** and tries to isolate you from others.
- **Threatens violence** toward you or toward himself or herself to make you stay.
- **Hits,** pushes, slams you into things, throws things at you, or has violent outbursts toward you.
- **Becomes verbally or physically abusive** after drinking alcohol or using other drugs.
- **Forces or manipulates you into sexual activities** (kissing, touching, or any type of intercourse) against your wishes.

Activity Sheet 10.3a

Should It End? Case Study 1

Directions: Read the case study and answer the questions.

Jerome and JJ

Jerome and JJ have been together for a year. Jerome hopes to get a scholarship to an out-of-state university. JJ really enjoys sports and having a good time with friends. JJ studies enough to pass, but school isn't a big priority. JJ wants to get a job in town after graduation, to be near family and friends.

Lately, Jerome and JJ have been fighting. JJ thinks they should spend more time together and partying with friends and less time studying. Jerome can't understand why JJ doesn't apply to college too. JJ thinks they'll work things out, but some days Jerome doesn't call or answer the phone to avoid arguing.

One night, after another argument about school versus partying with friends, Jerome decides it's time to end the relationship.

Case Study 1: Questions

1. What signs show the relationship is in trouble?
2. What are Jerome's reasons for ending the relationship?
3. How should Jerome end the relationship? What should Jerome say? Where should Jerome end it?
4. What are healthy ways JJ can deal with the emotions of losing a partner? What should Jerome do if JJ keeps trying to get back together?

Activity Sheet 10.3b

Should It End? Case Study 2

Directions: Read the case study and answer the questions.

Martina and David

Martina and David have been seeing each other for 2 years. Martina is still in high school. David is out of high school. They see each other mostly on weekends. Martina met David, a friend of her older brother, at a family event.

At first Martina had a great time with David. Lately, though, she's been feeling uncomfortable. He tells her that he's tired of hearing about high school and her friends, and sometimes he hints about getting married.

Martina has begun spending more time with a guy in her class. She thinks they have much more in common. Martina knows David cares about her, but she wants to spend time being a teenager while she still can. She also knows her parents would be happier if they were not seeing each other.

Martina doesn't want to hurt David's feelings, but she doesn't want to continue the relationship either.

Case Study 2: Questions

1. What signs show the relationship is in trouble?
2. What are Martina's reasons for ending the relationship?
3. How should Martina end the relationship? What should Martina say? Where should Martina end it?
4. What are healthy ways David can deal with the emotions of losing a partner? What advice would you give Martina if she sees David at future family events?

Activity Sheet 10.3c

Should It End? Case Study 3

Directions: Read the case study and answer the questions.

Cory and Max

When Cory and Max first started going together, Max said he wanted Cory all to himself. So Cory spent more and more time with him. After a while Cory's other friends stopped calling.

One day, Cory met someone else Cory knew from middle school and had a fun conversation. Max became very jealous. For weeks he accused Cory of secretly meeting someone else. Cory even caught him reading messages on her phone. One day Max screamed at Cory and punched the wall.

This scared Cory and she told Max they shouldn't see each other for a while. He became very upset and told her he couldn't live without her. He followed her everywhere and called her all the time. Finally, Cory agreed to get back together. But a few months later, there were more jealous accusations. Every time Cory tried to break up, Max would convince her they should stay together.

Finally, Cory has made up her mind to end the relationship for good. Max has become even more jealous and possessive. He watches her every move and is constantly accusing her. She knows this isn't healthy for either of them.

Case Study 3: Questions

1. What signs show the relationship is in trouble?
2. What are Cory's reasons for ending the relationship?
3. How should Cory end the relationship? What should Cory say? Where should Cory end it?
4. What are healthy ways Cory can deal with the emotions of ending a relationship? What advice would you give Max to help him in future relationships?

Activity Sheet 10.3e

How Does It End?

Directions: Read the situation and then create a roleplay that indicates how the relationship might end. Be as realistic and believable as possible.

Situation

DJ and Kim have been dating for 3 months. They go out on weekends and several nights during the week.

A few times, Kim has made plans to spend time with other friends and hasn't included DJ. DJ felt hurt and shared these feelings with Kim.

Kim recently made plans to attend a concert with a few other people, without inviting DJ. Friends said they saw Kim messing around with someone else at the concert.

At this point, DJ has decided to end the relationship. Here is their conversation:

DJ: _____

Kim: _____

DJ: _____

Kim: _____

DJ: _____

Kim: _____

DJ: _____

Kim: _____

DJ: _____

Kim: _____

Lesson 11 Reduce Your Risk

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

Synopsis

Students discuss different methods of protection and categorize them based on their effectiveness for preventing HIV, other STDs and/or pregnancy. Students work in small groups to analyze methods of protection based on personal lifestyle and relationship characteristics. Students then analyze their own lifestyle and relationship and think about what method of protection would be best for them.

Purpose Statement for Students

Today we will take a close look at the most common methods of protection from HIV, other STDs and pregnancy, including their effectiveness and how they are used.

Objectives

Students will be able to:

- Describe the most common methods of protection from HIV, other STDs, and/or pregnancy, including how these work and how they should be used.
- Select methods of protection based on lifestyle and relationship characteristics.
- Recognize that choosing not to have sex is the best way to prevent HIV, other STDs, and pregnancy.

Activities & Time

11.1: Check-In	2 minutes
11.2: Review & Plan for the Day	5 minutes
11.3: Protection	20 minutes
11.4: What's the Right Method?	20 minutes
11.5: Closure	3 minutes

Materials

Have

- ☐ Chart paper, markers and tape
- ☐ Student name tents
- ☐ *Birth Control Facts for Teens* pamphlets, 1 per student
- ☐ Music and music player

(continued)

Materials

Have

- ☐ *All4You2!* Messages poster
- ☐ 3 x 5 index cards, 1 per student
- ☐ Pencils

Review

- ☐ **Consequences of Teen Pregnancy** (Activity Sheet 11.2)

Prepare

- ☐ Plan for the Day
- ☐ **Protection Display Chart** (Master 11.3) with samples of methods attached (See Activity 11.3 for instructions.)
- ☐ **Methods of Protection Cards** (Master 11.4), 1 set for each small group
- ☐ **Profiles 1–4** (Group Activity Sheets 11.4a–d), 1 per small group.

Educator Preparation

- ☐ Review the entire lesson and prepare needed materials. Be sure to read:
  - ☐ **Educator Discussion Questions** (Educator Background Sheets 11.4a–d)
  - ☐ Appendix C: Effective and Ineffective Methods of Protection
- ☐ Check with Peer Leaders to be sure they are prepared.
- ☐ Review Appendix F on Methods of Protection

Peer Leader Activities

- ☐ Peer Leaders serve as small-group recorders and reporters for Activity 11.4.

Determinants Addressed

- Greater knowledge about contraception
- More positive attitudes about using condoms
- More positive attitudes about using birth control and condoms
- Greater perceived risk or susceptibility to pregnancy and disease
- Greater perceived self-efficacy in using contraception

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

Activity 11.1 Check-In

Suggested Time 2 minutes

Materials None

Purpose Students will come to class each day with a range of emotions and experiences affecting their readiness and willingness to participate. We will use a daily check-in as a way to acknowledge this reality.

Steps for Activity

1 Have students check in.

Ask a few students to volunteer how they are feeling or what's going on for them today.

Acknowledge responses based on your judgment. Use simple, short acknowledgements, particularly the positive ones (e.g., head nods, thank you, one-word sentiments such as "great," "glad to hear it," etc.). Avoid long responses or analyzing students' comments in this group setting.

Here are some examples of potential responses:

- Thank you for letting me know. I understand it could be hard to focus when you are dealing with that.
- I'll try to remember that you're having a hard day. I'm confident that you can get through it.

Discourage students from commenting on others' responses by just moving the activity along.

If students share something inappropriate or say something with extreme bravado, ask them to re-state their response in a more appropriate manner. If students share something serious and/or reportable (e.g., parent hit me last night) work with the teacher to provide support to the student right after class or before you even begin the lesson if necessary.

Educator Note: Discuss potential sensitive and/or reportable issues with the classroom teacher or school administrator in advance so you are in agreement on how to handle these situations.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in Signed April 2025 agreement.

2 Conclude.

- *Close by thanking students for their honest responses.*
- *If there are a majority of students feeling a certain way, note that pattern.*
- *Share that knowing "where they are at" each day helps you as a teacher and that you would like them to try their best to make the most of what the class is doing together today. Emphasize that you have confidence in their ability to focus despite all that is confronting them.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 11.2 Review & Plan for the Day

Suggested Time 5 minutes

Materials Plan for the day, student name tents and folders

Purpose To review the plan for the day and orient students to the day's activities

Steps for Activity

1 Have students help pass back name tents.

2 Review Lesson 10.

Ask students:

How might being in an unhealthy relationship increase someone's risk for unplanned pregnancy and/or HIV and other STD?

Clarify any misinformation or key points as needed.

3 Read poem.

Explain that you want to read a brief poem written by teen named Omar. Have students turn to **Consequences of Teen Pregnancy** *(Activity Sheet 11.2) in their workbooks.*

Read the poem or ask a Peer Leader who is comfortable reading aloud to read it. Tell students they can follow along in their workbooks.

After reading the poem, ask students to students identify one of the many challenges of being a teen parent.

Acknowledge that being a parent has many positives, but that it is a life-changing event that requires enormous devotion and sacrifice. Explain that today's lesson is all about ways to prevent pregnancy if having vaginal sex until both people in the relationship are ready to be parents.

Educator Note: Be sensitive to the fact that some students in class may be parents. Invite them to talk about the positives and challenges if they are comfortable.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

4 **Post and review the Plan for the Day.**

Today we will focus on ways people can protect themselves from unplanned pregnancy and/or HIV and other STDs.

5 **Ask for a volunteer to read the plan.**

Lesson 11
Plan for the Day

- Protection
- What's the Right Method?
- Summary

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 11.3 Protection

Suggested Time 20 minutes

Materials Protection Display Chart, Appendix C, *Birth Control Facts for Teens* pamphlet

Purpose To review the most common methods of protection from unplanned pregnancy and/or HIV and other STDs, including how these methods work, how they are properly used, and what factors might influence their use

Educator Note: Before making decisions about explaining and demonstrating the use of methods of protection, be sure to check and adhere to the school district guidelines and policies. In addition, use your best judgment about whether the following activities are appropriate for your class(es). Parents and guardians should be informed of any demonstrations that will be taking place during class. Throughout the discussion, remind students that this information can be used when they decide they are ready to have sex, which may not be for a long time.

Create a large-size Protection Display Chart and attach actual samples of the different methods to it. You can use the picture of the couple hugging from Birth Control Facts for Teens to represent abstinence.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Steps for Activity

1 Introduce activity.

Explain to students that even though they may not be having sex right now, it is important for them to understand the extent to which different methods of protection work to prevent HIV, other STDs and pregnancy. Tell students that as part of today's lesson they will look at different methods of protection, including factors that might influence which ones they use.

2 Brainstorm birth control methods.

Have students brainstorm a list of methods that teens use to prevent HIV, other STDs and/or pregnancy. Write students' responses on chart paper. Be sure students' responses include the following methods:

- Abstinence (choosing not to have sex)
- IUD
- Implant
- The shot (Depo-Provera®)
- Birth control pill, birth control patch, vaginal ring
- Latex condom, female (internal) condom
- Vaginal barriers (diaphragm, cervical cap, sponge)
- Spermicides (foams, creams, gels)
- Fertility awareness methods (rhythm, Natural Family Planning)
- Withdrawal

Educator Note: The goal of the following mini-lecture on protection methods is to provide a general sense of the category, the names of the methods in each category, how the methods in that category work, and the general effectiveness. You will not have time to provide a detailed discussion of each method unless this lesson is extended over two sessions, which is an allowable adaptation. Let students know that you will be focusing more on condoms in the next lesson.

3 Discuss birth control methods.

Explain that some methods protect against pregnancy only (IUD, implant, the shot, birth control pills, the patch, vaginal ring, spermicides). Some protect against HIV, most other STDs, and pregnancy (choosing not to have sex, latex condoms). And some offer limited reliable protection against pregnancy and no protection against disease (e.g., withdrawal).

Using the information from Appendix C, discuss each category of birth control with students, starting with the most effective methods as listed in the appendix. Categories to cover include choosing not to have sex, long acting reversible contraceptives, hormonal methods, barrier methods, vaginal barriers, spermicides, fertility awareness and withdrawal. Explain that typical effectiveness rates can be lower than "perfect" use effectiveness rates because people do not always use a method correctly and consistently. Also briefly discuss emergency contraception as an option for preventing pregnancy after unprotected intercourse.

Show students each method on the display chart as you discuss it, focusing on the following points:

- How the method works (in general)
- Effectiveness and key advantages
- Risks and disadvantages
- How and where to get it

As you discuss each category on the list, summarize by asking students if the methods in that category protect against:

- Pregnancy
- Most STDs, including HIV
- Both pregnancy and STDs
- Nothing

Using a marker or a sticky note, label each method on the chart with the letters P, STD, BOTH or NOTHING.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

Activity 11.4 What's the Right Method?

Suggested Time 20 minutes

Materials Methods of Protection Cards, Group Activity Sheets 11.4a–d, 3 x 5 index cards, Educator Background Sheet 11.4

Purpose To review what factors might influence what type of protection people use

Steps for Activity

1 Discuss factors that influence choices about protection.

Ask students how people's lifestyle (the way someone is living) and/or relationships may influence what type of protection they use.

Explain that there are many factors that might influence a person's decision on what method to use (e.g., relationships, behavior, religious or moral feelings, cost, ability to use method, desire to be protected from HIV, other STDs, and pregnancy, or disease only, etc.).

2 Introduce activity.

Explain that in the next activity they will have a chance to help some teens figure out what type of protection they should be using given their current situations.

Review the following directions for the activity:

- You will work in small groups of three or four.
- Each group will get a Profile of an individual or a couple along with a set of Methods of Protection Cards with information about each method of protection. There are four different profiles—two couples and two individuals—so different groups may have different profiles.
- After reading the profile and looking at the different methods, your group will answer some questions. You'll want to:
  - Choose the best method of protection for that individual or couple.
  - Indicate why you are making that choice.
  - Discuss the benefits and difficulties (pros and cons) of your choice.
- You will have 10 minutes to finish this. Once all the groups finish we'll talk about each profile.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

3 Group work.

Form groups and monitor the activity using the following steps:

- *Divide students into small groups. Assign a Peer Leader to each group.*
- *Distribute a Profile and a set of* **Methods of Protection Cards** *to each group.*
- *Have groups get started on the activity. Remind Peer Leaders to record their groups' answers.*
- *Circulate to ensure students are on task and to provide feedback as needed.*
- *Allow students to work for up to 10 minutes.* ***Play music*** *as students work. Post the Protection Display Chart while students are working.*

4 Debrief the activity.

- *Ask the groups with* **Profile 1—Tanya and Rory** *to raise their hands. Ask for a volunteer from one of these groups to read or summarize the profile.*
- *Then ask those groups what type of protection they choose for the individual(s) in the profile and why. (See Educator Background Sheet 11.4 for suggested methods.) Elaborate as needed and show the method on the Protection Display Chart.*
- *Ask the groups if there are any disadvantages to the method(s) they selected. Elaborate as needed.*
- *Ask the other groups if they would make different choices for these individuals, and why. Probe by using the discussion questions on Educator Background Sheet 11.4.*
- *Bring the group to consensus on which method(s) would be best for the individual(s) based on their lifestyle and relationship characteristics.*
- *Repeat for Profile 2, Profile 3 and Profile 4.*

5 Discuss differences among methods.

Draw from the students that some methods may be better than others based on lifestyle and relationship characteristics.

Emphasize that for people who are having vaginal sex, condoms are one of the most effective methods for preventing HIV, other STDs, and pregnancy, but that it is most protective to use condoms and a hormonal method of birth control.

Remind students that choosing not to have sex is by far the most effective method, and it's free and always available.

Tell students that you will spend more time talking about condoms in the next class.

6 Help students personalize the learning.

Explain that you will pass out a 3 x 5 index card to each student, and that you would like them to think about their own lifestyle and relationships, and then write down what they will do or use to protect themselves from unplanned pregnancy and/or STD, including HIV.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Tell students NOT to put their names on the cards. Tell them that you will not ask them to discuss what they write down, but that you will collect a card from each person.

Remind students that picking protection is one part of picking their limits for staying safe (the "P" in "Pst").

Educator Note: Students' limits may be broader than just protection. For example, their limits may include limits regarding partners, needle use, etc.

Pass out the 3 x 5 index cards. Give students 1 minute to complete the task. Have students fold their cards in half before collecting them. Collect one card from each student.

7 Distribute *Birth Control Facts for Teens* pamphlets.

Tell students that you have a pamphlet on birth control for each of them.

Show the pamphlet. Explain that it includes descriptions of each method of protection and information on level of protection from HIV, other STDs, and pregnancy.

Distribute the pamphlet and allow students a few minutes to review it.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 11.5 Closure

Suggested Time 3 minutes

Materials *All4You2!* Messages poster

Purpose To summarize the importance of choosing not to have sex or using protection consistently and correctly every time when having sex

Steps for Activity

Lesson Summary

1 Discuss.

Ask students how teens can prevent pregnancy and/or HIV and other STDs.

2 Summarize.

- The best way to avoid pregnancy and/or STDs is to choose not to have sex.
- People who are having sex can use latex condoms consistently and correctly every time to protect against HIV and most other STDs. Condoms can also protect against pregnancy.
- For people who are having vaginal sex, it is safest to use condoms along with a long-acting or hormonal method of birth control (such as the IUD, implant, shot or pill).

3 Emphasize the behavioral messages.

Use the All4You2! *Messages poster and tie these to the main messages of the curriculum:*

- **Respect:** Respect yourself by having sexual limits.
- **Protect:** Avoid pregnancy and/or STDs by choosing not to have sex.
- **Protect:** Use latex condoms consistently and correctly every time to protect against HIV and most other STDs. Condoms can also protect against pregnancy.
- **Protect:** For couples who are at risk of pregnancy, it is safest to use condoms along with an effective method of birth control.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2026 agreement.

Transition and Closure

1 Prepare students for next class session.

Let students know that they will get to practice using condoms during the next lesson. They also will talk about how to talk with a partner about using condoms.

2 Conclude.

Collect the student name tents.

Close by recognizing students for their interest, their creative thinking and all the work they accomplished today.

3 Homework reminder.

Remind students that their **What Do You Think?** *homework is due in class 14 (give day).*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

CONSEQUENCES OF TEEN PREGNANCY

by Omar Simmons

Rather you're a young man or a young lady
There's consequences to having a baby
Some are good, others are bad
It's more stressful than any struggles you've had
Especially if you're not ready or prepared
The pressure can be heavy so be aware
It's your choice to bring a baby boy
Or a baby girl into this crazy world
But my advice is to wait until you have a spouse
And both of you are sure and have no doubts
So be wise, analyze where you are in life
Before you decide if having one is right
Having one too soon can prove too much
It can feel like you're crowed and about bust
Having to work late, plus make a hot plate
While juggling jobs to pay for your own place
Not just for the females, but also the guys
You must be there not just supervise
Then disappear, acting like you don't care
But you do it's just your heart is full of fear
You're pulling in a couple checks
Still you're deep in debt
Payments are piling up, your child is crying
You weren't ready, now on the inside you're dying
So females mature before you say yes
And will the guys please do what's for the best
Then when you have a baby, prince or princess
You'll reach nothing less than pure success.

Methods of Protection Cards

Directions: Make enough sets for each small group to have a set during the small-group activity.

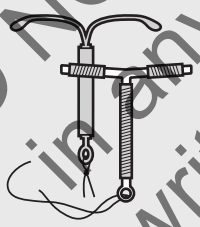
Choosing Not to Have Sex (Abstinence)

What is it?
Choosing not to have sex means refraining from any sexual activity that can result in pregnancy and STDs, including vaginal, oral and anal sex, as well as skin-to-skin genital contact that can transmit certain STDs.

Chances of not getting pregnant?
It works all the time when people consistently avoid any behaviors that can potentially result in pregnancy or STD.

Protects against? Pregnancy, HIV and other STDs.

IUD (Intrauterine Device)



What is it?
A form of long-acting reversible contraception. A small, plastic device shaped like a "T" that is inserted into the uterus by a doctor. Some types release hormones that prevent pregnancy.

Chances of not getting pregnant?
Highly effective (more than 99%) at preventing pregnancy for 3 to 10 years, depending on the type.

Protects against? Pregnancy only.

Implant

What is it?
A form of long-acting reversible contraception. One or more tiny rods or tubes of artificial hormones (progestin) that are placed under the skin of the upper arm by a health care provider.

Chances of not getting pregnant?
Highly effective (more than 99%) at preventing pregnancy for 3 years.

Protects against? Pregnancy only.

(continued)

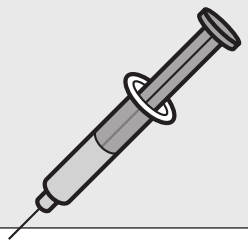
Methods of Protection Cards *(continued)*

Depo-Provera (the shot)

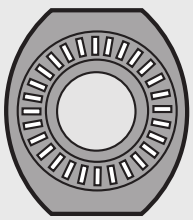


What is it?
An injectable form of birth control that uses a synthetic hormone (progestin) to prevent pregnancy. Requires a visit to a health care provider every 12 weeks to get the shot.

Chances of not getting pregnant?
Highly effective (more than 99%) at preventing pregnancy as long as the shots are given on schedule. (Effectiveness is 94% with typical use.)

Protects against? Pregnancy only.

Birth Control Pill



What is it?
A prescription drug that contains different amounts of the hormones estrogen and progesterone.

Chances of not getting pregnant?
Highly effective (more than 99%) at preventing pregnancy if the person takes it every day, uses some other method of protection during the first month and doesn't use another person's pills. (Effectiveness is 91% with typical use.)

Protects against? Pregnancy only.

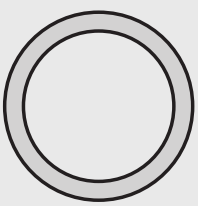
Birth Control Patch

What is it?
A thin plastic square worn on the skin of the buttocks, stomach, upper outer arm or upper torso (but not on the breasts) that slowly releases artificial hormones into the body. A new patch is applied each week.

Chances of not getting pregnant?
Highly effective (more than 99%) at preventing pregnancy if the person remembers to wear the patch and change it each week. (Effectiveness is 91% with typical use.)

Protects against? Pregnancy only.

Vaginal Ring



What is it?
A soft, flexible ring inserted into the vagina that slowly releases artificial hormones into the body. The ring is changed once a month.

Chances of not getting pregnant?
Highly effective (more than 99%) at preventing pregnancy if the person remembers to insert the ring and change it each month. (Effectiveness is 91% with typical use.)

Protects against? Pregnancy only.

Methods of Protection Cards *(continued)*

Latex Condom

What is it?
A sheath made of thin latex rubber that fits over an erect penis. People allergic or sensitive to latex can use condoms made of polyurethane (a type of plastic) and polyisoprene (a non-latex rubber).

Chances of not getting pregnant?
Up to 98% effective in preventing pregnancy, but only if they are used correctly and consistently—every time a person has sex. (Effectiveness is 82% with typical use.) Latex condoms are also highly effective against HIV and many other STDs when used consistently and correctly.

Protects against? Pregnancy, HIV and most other STDs.

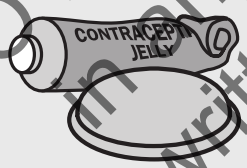
Female (Internal) Condom

What is it?
A soft, loose-fitting polyurethane (plastic) sheath that is inserted into the vagina. It can be inserted up to 8 hours before sex.

Chances of not getting pregnant?
Up to 95% effective in preventing pregnancy if used correctly and consistently. (Effectiveness is 79% with typical use.) Female (internal) condoms can also be used for STD protection during anal sex.

Protects against? Pregnancy, HIV and most other STDs.

Vaginal Barriers



What is it?
Devices that are inserted in the vagina and positioned to cover the cervix (opening to the uterus) to keep sperm from reaching and fertilizing an egg.

- The diaphragm is a reusable flexible, dome-shaped cup made of latex that can be inserted up to 6 hours before sex, and must be left in place at least 6 but no more than 24 hours after.
- The cervical cap is a reusable silicon cap that fits over the cervix and provides protection for 48 hours. Like the diaphragm it is inserted in the vagina before sex, and must be left in place for 6 hours after.
- The sponge is made of soft polyurethane that contains spermicide. It provides protection for 24 hours, and must be left in place for at least 6 hours after sex. It should not be left in the vagina for any more than 30 hours total. It is not reusable.

Chances of not getting pregnant?
If used correctly with spermicide every time a couple has sexual intercourse, the diaphragm is up to 94% effective; the cervical cap up to 86% effective; and the sponge up to 91% effective. (Effectiveness is 71–88% with typical use.)

Protects against? Pregnancy only.

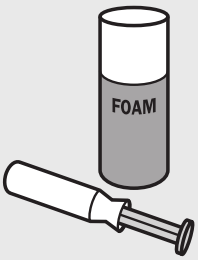
Methods of Protection Cards *(continued)*

Spermicides



What is it?
Chemicals that kill sperm. Inserted into the vagina before sexual intercourse. Come in the form of foam, gel, cream, film, suppositories or tablets. Must be reapplied every time a couple has sex.

Chances of not getting pregnant?
If used correctly every time a couple has sexual intercourse, spermicides are up to 82% effective. (Effectiveness is 72% with typical use.)

Protects against? Pregnancy only.

Fertility Awareness Methods

What is it?
Methods that depend on a couple identifying the days in each menstrual cycle when a pregnancy is most likely to occur, and then abstaining from intercourse or using a barrier method during the fertile days.

Chances of not getting pregnant?
Can range from 75% to 97% effective depending on how accurate the method is in identifying fertile days and how well the couple follows the instructions for using the method.

Protects against? Pregnancy only.

Withdrawal

What is it?
When a couple has sex, the man pulls his penis out of his partner's body before he ejaculates to try to keep semen and sperm from entering his partner's body.

Chances of not getting pregnant?
It is 78% effective with typical use. It requires a great deal of self-control and many people find it difficult to interrupt sexual intercourse to practice this method.

Protects against? Pregnancy only.

Profile 1: **Tanya & Rory**

- Tanya and Rory have been together for almost a year.
- Tanya lives with her grandparents. Rory lives with his mother.
- Tanya is 16 years old. Rory is 18 years old.
- Rory is popular and gets lots of attention from other girls. He does well in school, and he will be starting community college next year.
- Rory is the first and only person Tanya has had sex with.
- Tanya worries that Rory is messing around, but she doesn't bring it up because she doesn't want to lose him.
- Tanya does not want her grandparents to find out she's having sex, and she definitely does not want to get pregnant.
- Tanya used the pill for a few months but had some negative side effects.
- Tanya also tried foam in the past, but it was messy. Also, she had an allergic reaction to it.

Tanya and Rory: Decisions, Decisions

1. What are the best methods of protection for Tanya and Rory? Why?

2. What are some of the ***benefits*** of using the methods you selected? What are some of the ***difficulties***?

Benefits	Difficulties

Profile 2: **Sharen & Percy**

- Sharen is 15 years old. She has had several boyfriends.
- Sharen lives with her aunt.
- She sells sex for money when she has to.
- Her boyfriend, Percy, is 17 years old. He loves to party.
- Percy has been sexually active since he was 11 years old, and he has a 3-year-old child.
- Sharen and Percy have been together for 3 months.
- They just started having sex, but they have never talked about each other's sexual history.
- Percy has had herpes for 2 years.
- Sharen is afraid of getting HIV.

Sharen & Percy: Decisions, Decisions

1. What are the best methods of protection for Sharen and Percy? Why?

2. What are some of the ***benefits*** of using the methods you selected? What are some of the ***difficulties***?

Benefits	Difficulties

Educator Discussion Questions
Profile 1: **Tanya & Rory**

- Tanya and Rory have been together for almost a year.
- Tanya lives with her grandparents. Rory lives with his mother.
- Tanya is 16 years old. Rory is 18 years old.
- Rory is popular and gets lots of attention from other girls. He does well in school, and he will be starting community college next year.
- Rory is the first and only person Tanya has had sex with.
- Tanya worries that Rory is messing around, but she doesn't bring it up because she doesn't want to lose him.
- Tanya does not want her grandparents to find out she's having sex, and she definitely does not want to get pregnant.
- Tanya used the pill for a few months but had some negative side effects.
- Tanya also tried foam in the past, but it was messy. Also, she had an allergic reaction to it.

Discussion Questions

- **How does the possibility that Rory is messing around affect their choice of which method of protection to use?**

  Having multiple sex partners increases Rory's risk for getting and transmitting HIV and other STD. Because Tanya has not discussed this with Rory, she is putting herself at risk, too. Tanya and Rory need to be sure to use latex condoms (or polyurethane/polyisoprene condoms if either is allergic to latex) with any other method of birth control, but ideally one that is highly effective (IUD, implant) given Tanya's desire to prevent pregnancy. It would be best for them to discuss this before they have sex again.

- **If Tanya had an allergic reaction to foam, does that mean she should never use it again?**

  Some people cannot use foam because they always have an allergic reaction to it; however, it is possible that Tanya might not react to a different brand or another type of spermicide (e.g., film).

- **Are all spermicides messy?**

  No. Some, like film or suppositories, are not messy.

Suggested Methods

- Condoms plus IUD, implant or Depo Provera (the shot)
- Condoms and spermicide (but this combination is not as effective as condoms and a more effective birth control method)

© ETR Associates

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Educator Discussion Questions
Profile 2: **Sharen & Percy**

- Sharen is 15 years old. She has had several boyfriends.
- Sharen lives with her aunt.
- She sells sex for money when she has to.
- Her boyfriend, Percy, is 17 years old. He loves to party.
- Percy has been sexually active since he was 11 years old, and he has a 3-year-old child.
- Sharen and Percy have been together for 3 months.
- They just started having sex, but they have never talked about each other's sexual history.
- Percy has had herpes for 2 years.
- Sharen is afraid of getting HIV.

Discussion Questions

- **If Sharen decides to use the IUD, implant, Depo Provera or the pill, does she still need to use condoms?**

  Yes. She needs condoms to protect against STD, including HIV.

Suggested Methods

- Condoms plus IUD or implant
- Condoms plus Depo-Provera
- Condoms plus the birth control pill, birth control patch or vaginal ring.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR Associates

Educator Discussion Questions
Profile 3: **Joseph**

- Joseph is 16 years old.
- He goes to school and works part-time.
- He wants everyone to think he's a player, and does what he can to give that impression.
- He uses multiple drugs, and sometimes uses injection drugs.
- He's sexually active.
- He's bisexual.
- He's afraid he has HIV.

Discussion Questions

- **How does Joseph's drug use affect his risk for HIV and other STD?**

  Joseph is at risk of getting HIV if he shares needles or works with someone who has HIV. His drug use also may affect his judgment. He may engage in risky behaviors because he's high on drugs.

Suggested Methods

- Latex condoms (or polyurethane/polyisoprene condoms if Joseph is allergic to latex)
- Latex condoms and spermicide
- Choosing not to have sex.

Note: Joseph should also stop using drugs, especially injection drugs. This would lower his risk for HIV.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR Associates

Educator Discussion Questions
Profile 4: **Irene**

- Irene is 17 years old.
- She's very religious.
- She's an honor student and plans to go to college.
- She's been with her boyfriend for 2 years, and she hopes they will get married someday.
- Her boyfriend pressures her for sex.
- She's never had sex and is not ready to. But she's thinking about it because she doesn't want to lose her boyfriend.

Discussion Questions

- **Should Irene have sex to keep her boyfriend?**

  Irene should stick with her limit. She shouldn't have sex just to keep a boyfriend. If he really loves her, he will wait until she is ready. If she has sex before she's ready, she may regret it later. It would be best for Irene to talk with her boyfriend about how she feels and about her limit.

Suggested Methods

- Choosing not to have sex (abstinence)

Lesson 12

It's All About Condoms

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Synopsis

The educator tells a story to demonstrate the proper use of condoms. Students identify the dos and don'ts of condom use, and practice how to use a condom. Students then brainstorm ways to make condom use more likely.

Purpose Statement for Students

Today we will review and practice using condoms.

Objectives

Students will be able to:

- Describe the "dos and don'ts" of proper condom use.
- Demonstrate the steps for proper condom use.
- Identify ways to make condom use more likely.

Activities & Time

12.1: Check-In	2 minutes
12.2: Review & Plan for the Day	3 minutes
12.3: Educator Condom Demonstration	15 minutes
12.4: Condom Practice	10 minutes
12.5: Using Condoms	15 minutes
12.6: Closure & Question Box	5 minutes

Materials

Have

- ☐ Chart paper, markers and tape
- ☐ Student name tents
- ☐ 10–15 bulk latex condoms for demonstration
- ☐ 1 dental dam (to show students what it is)
- ☐ 2 boxes of retail condoms in package (get different sized condoms)
- ☐ Container of Vaseline.
- ☐ Containers of Astroglide or Aqua Lube lubricant, 2 per class
- ☐ Container of lubricant with spermicide
- ☐ Pair of scissors

(continued)

Materials

Have

- ☐ Moist wipes and large plastic sandwich bags (to wipe off Vaseline/ lubricants and collect used condoms)
- ☐ 30 bulk latex condoms for student practice
- ☐ Music and music player
- ☐ *All4You2!* Messages poster
- ☐ Question Box
- ☐ 3 x 5 index cards, 4 per student
- ☐ Pencils

Review

- ☐ **How to Use a Condom** (Activity Sheet 12.3)
- ☐ **Condom Practice** (Activity Sheet 12.4)

Prepare

- ☐ Plan for the Day

Educator Preparation

- ☐ Review the entire lesson and prepare needed materials.
- ☐ Practice reading and demonstrating **Alex and Kiva** (Educator Activity Sheet 12.3) before class.
- ☐ Check with Peer Leaders to be sure they are prepared.
- ☐ Prepare answers to students' questions in the Question Box.

Peer Leader Activities

None

Determinants Addressed

- Greater knowledge about condoms and how to use them
- More positive attitudes about using condoms
- Fewer perceived barriers to condom use
- Greater belief that peers support the use of condoms, if having sex
- Greater partner support for condom use
- Increased self-efficacy to get and use condoms

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 12.1 Check-In

Suggested Time 2 minutes

Materials None

Purpose Students will come to class each day with a range of emotions and experiences affecting their readiness and willingness to participate. We will use a daily check-in as a way to acknowledge this reality.

Steps for Activity

1 Have students check in.

Ask a few students to volunteer how they are feeling or what's going on for them today.

Acknowledge responses based on your judgment. Use simple, short acknowledgements, particularly the positive ones (e.g., head nods, thank you, one-word sentiments such as "great," "glad to hear it," etc.). Avoid long responses or analyzing students' comments in this group setting.

Here are some examples of potential responses:

- Thank you for letting me know. I understand it could be hard to focus when you are dealing with that.
- I'll try to remember that you're having a hard day. I'm confident that you can get through it.

Discourage students from commenting on others' responses by just moving the activity along.

If students share something inappropriate or say something with extreme bravado, ask them to re-state their response in a more appropriate manner. If students share something serious and/or reportable (e.g., parent hit me last night) work with the teacher to provide support to the student right after class or before you even begin the lesson if necessary.

Educator Note: Discuss potential sensitive and/or reportable issues with the classroom teacher or school administrator in advance so you are in agreement on how to handle these situations.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in Signed April 2025 agreement.

2 Conclude.

- *Close by thanking students for their honest responses.*
- *If there are a majority of students feeling a certain way, note that pattern.*
- *Share that knowing "where they are at" each day helps you as a teacher and that you would like them to try their best to make the most of what the class is doing together today. Emphasize that you have confidence in their ability to focus despite all that is confronting them.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 12.2 Review & Plan for the Day

Suggested Time 3 minutes

Materials Plan for the Day, student name tents

Purpose To review the plan for the day and orient students to the day's activities

Steps for Activity

1 Have students help pass back name tents.

2 Review Lesson 11.

Ask the following questions:

- What is the most effective way of preventing unplanned pregnancy and/or HIV and other STDs? *(choosing not to have sex)*
- What are two methods of protection that do NOT protect against HIV and other STDs? *(e.g., birth control pills, the patch, the shot, withdrawal, spermicides) What would a person need to do to protect against disease if using these methods? (use condoms along with the birth control method)*
- If people are having vaginal sex, what is the only method of protection that reduces risk of HIV, most other STDs and pregnancy? *(latex condoms or, ideally, latex condoms plus birth control)*

Review answers and clarify as needed.

3 Post and review the Plan for the Day.

Today we will review and practice using condoms.

4 Ask for a volunteer to read the plan.

Lesson 12
Plan for the Day

- Alex and Kiva
- Your Turn
- Using Condoms
- Summary

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 12.3 Educator Condom Demonstration

Suggested Time 15 minutes

Materials Latex condoms, Vaseline, water-based lubricants, moist wipes, plastic bag, scissors, Educator Activity Sheet 12.3, Activity Sheet 12.3, dental dam, chart paper, markers, tape, pencils

Purpose To demonstrate the proper use of condoms

Educator Note: Before making decisions about explaining and demonstrating the use of methods of protection, be sure to check and adhere to the school district guidelines and policies. In addition, use your best judgment about whether the following activities are appropriate for your class(es). Parents and guardians should be informed of any demonstrations that will be taking place during class. Throughout the discussion, remind students that this information about protection can be used when they decide they are ready to have sex, which may be when they are older.

Steps for Activity

1 Introduce activity.

Explain that you are going to start with a story about someone who wanted to use condoms, but didn't really know how.

Tell students that at the end of the story they will work in groups to figure out how to help this couple use condoms properly.

2 Tell the story of Alex and Kiva.

Using Educator Activity Sheet 12.3 as a guide, tell and demonstrate the **Alex and Kiva** *story up to the part that says: "STOP here."*

Explain that sometimes condoms break (2 or 3 times out of 100) during sexual intercourse, usually because people don't know how to use them correctly.* ***Emphasize that using condoms properly can increase their effectiveness at preventing HIV, other STD and unintended pregnancy.***

*Hatcher, R. A., et al. 2011. *Contraceptive Technology.* 20th rev. ed. New York: Ardent Media.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement

3 Explain the pair activity.

Tell students that now they will work in pairs to create a list of DOs and DON'Ts that they could give to Alex and Kiva so they'll know how to use the last condom. Explain that their lists will be like instructions that could go in a box of condoms.

Review the following directions for the activity:

- Turn to **How to Use a Condom** (Activity Sheet 12.3) in your workbooks. You will work in pairs to complete it.
- Your task is to list all the things Alex and Kiva should DO to use condoms properly under the DO column. List all the things they shouldn't do under the DON'T column.
- You'll have 5 minutes to create your lists.

4 Clarify.

Check for understanding by asking students what they will do. Clarify as needed.

5 Pairs create list of condom DOs and DON'Ts.

Have students begin working. Circulate to clarify the task and answer student questions.

While students finish their lists, create a classroom chart by writing Condom DOs and DON'Ts on chart paper.

6 Discuss.

Debrief the activity as follows:

- *Point out the classroom chart.*
- *Ask students what advice they have for Alex and Kiva.*
- *Record key words on the chart paper.*

7 Demonstrate correct condom use.

Return to the story of Alex and Kiva to complete a quick demonstration of condom use to reinforce the condoms "DOs." Use the following steps:

- *Pull out one more condom.*
- *Tell students this is Alex and Kiva's last condom.*
- *Go through the proper steps for condom use by finishing the story using Educator Activity Sheet 12.3.*

Emphasize these points:

- *Remind students that by discussing condom use for disease prevention, you are not endorsing sexual activity among young people.*
- *Tell students that the purpose of the activity it to present factual information about condoms and ways to protect students' health if having sex.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

- *Explain that they may not need the information now, but may need it in the future.*
- *Remind students that thinking about protection in advance will help them make respectful and responsible decisions when the need arises.*
- *Note that values vary. Explain that some religions and some individuals do not believe in using condoms, whereas others do not object. Remind students that their beliefs will become an important part of their decision making.*
- *Briefly review how to protect during oral sex using a condom or dental dam. Show students the example of a dental dam, if you have one.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 12.4 Condom Practice

Suggested Time 10 minutes

Materials Bulk latex condoms (1 per student), box of retail condoms, water-based lubricants (6 per class), Activity Sheet 12.4, moist wipes, plastic bags

Purpose To enable students to practice using condoms

Educator Note: It is important that all students have a chance to practice proper use of condoms; however, do not force students to practice using condoms if they are uncomfortable with the idea. These students can read the steps for a partner or watch a partner go through the steps.

If the condoms to be used for practice were purchased in bulk, they may not have any general label information on the outside of the package. If this is the case, be sure to circulate sample condoms packaged as they would appear if purchased at a store.

Some students may be allergic to latex or unaware that there are effective alternatives to latex. Be sure to mention that plastic (polyurethane) or synthetic rubber (polyisoprene) condoms are recommended for those allergic to latex. Have examples of these alternative condoms on hand, ensuring that any student with a latex allergy practices using them. If no polyurethane or polyisoprene condoms are available, students with latex allergies should not complete the condom practice activity.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Steps for Activity

1 Introduce condom practice activity.

Transition by saying: Now it's your turn to practice.

Give each student an unopened condom package. Ask them to open the package, carefully remove the condom, and unroll it.

Educator Note: While they open the packages and begin exploring the condoms, model your own comfort with condoms. Open a package, take the condom out. Put it over your hand and pull it up your arm, showing students how strong it is and how it can accommodate any sized penis. If it tears on your nails or jewelry, use the opportunity to emphasize the importance of being careful about sharp objects. Use humor and allow them to be nervous and silly. Handle the condoms with confidence and comfort. Do not appear worried about mess or stickiness.

2 Get feedback on the experience.

Encourage participants to discuss how the condoms feel and what makes them effective. Remind students that condoms are a barrier—they block sperm and virus particles from going from one person's body to the other person's body.

3 Review important information about condoms.

Reiterate the following essential information before having students practice steps for proper condom use:

- Condoms can stretch and fit different-sized penises. *(Stretch a condom up your arm.)*
- They also come in different sizes. Condoms should feel comfortable and fit snugly at the base. The condom should unroll all the way to the base of the penis and stay there. Fit is important because it can help reduce condoms from slipping.
- Condoms may break if you use oil-based products such as Vaseline, lotion, grease or oils as lubricants. Use only water-based solutions, such as K-Y Jelly, Astroglide or Aqua Lube. *(Show examples and list any other current water-based brands that students may use or have heard of.)*
- Don't expose condoms to heat. For example, don't store them in a glove compartment of a car. Heat weakens the latex.
- Throw away unused condoms once the expiration date passes, because the latex may be weakened, and they could break more easily.
- Throw away any condoms that are visibly damaged.

4 Explain pair practice.

- You will work in pairs to practice proper condom use.
- Each pair will get two condoms.
- You will use **Condom Practice** (Activity Sheet 12.4) in your workbooks.
- One person in the pair will read the steps for proper condom use while the other person practices with the condom.
- After the first person has practiced, you will switch roles so the second person practices with the condom and the first person reads the steps.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

5 Clarify.

Check for understanding by having one student repeat the practice instructions.

Can someone please tell me where I would find the condom use steps to practice?

6 Students practice with condoms

Have students pair-up. Have them turn to **Condom Practice** *(Activity Sheet 12.4) in their workbooks. Distribute two condoms to each pair.*

Show students where the sample lubricants are located (e.g., in front of room) and encourage them to check out the lubricants too.

Have students get started. Circulate as students practice and ask them to give you a demonstration, giving them new condoms as necessary. Provide corrective feedback as needed.

Educator Note: There may be lots of laughing and nervous behavior, but teens have lots of fun and ask many questions. Monitor and assist each student because teens sometimes have trouble putting condoms on properly. They may unroll them backwards, not add lubricant correctly, and/or not unroll them the entire length of the imaginary penis.

7 Close activity.

After all pairs are finished, collect the condoms (make sure you get them all back). Then lead a discussion using the following questions:

- Was using the condom more or less difficult than you thought it would be? What made it more or less difficult?
- How did you feel when you were unrolling the condom? *(Answers might include: nervous, uncomfortable, awkward, not sure if doing it right.)*
- Why is it important to practice using condoms? *(Answers might include: to learn how to put them on correctly before actually needing to use them; to make it less awkward; to make it more likely students will use them.)*
- Why is fit important? *(Answers might include: it can help reduce condom slippage; it is more comfortable to have a good fit; good fit may make it more likely that people will use them.)*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 12.5 Using Condoms

Suggested Time 15 minutes

Materials Chart paper, markers, tape, 3 x 5 index cards

Purpose To help students see how they can make condom use fun and more likely

Educator Note: This is an important activity, as many teens view condom use as something that is a hassle and "ruins the mood."

Steps for Activity

1 Transition.

As you can see, the steps for using condoms are pretty easy, but some people still don't use them.

Ask students when a person might have sex without a condom. Have students describe the situations. Record key words on chart paper.

Acknowledge the difficulties and then say:

Let's figure out some ways to use condoms in these situations.

2 Explain activity.

- I'd like you to work in pairs to come up with two ideas on how to make condoms more fun and acceptable. You'll write your ideas down on cards.
- Do not put your names on the cards.
- Once you are done writing, you'll take your cards and tape them to the wall. *(Show them where on wall.)*

Check for understanding by asking students what they will write on the card. Clarify as needed.

3 Pairs generate ideas.

Pair students, distribute 3 x 5 index cards, and have them begin.

As pairs finish, give them tape and remind them to post their cards on the wall.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Educator Note: If students seem to have trouble getting started, have the class brainstorm a few ideas to get their thoughts going.

4 Debrief.

Review the responses on the wall, emphasizing positive feelings about condoms. Ask students if they can think of any other ideas. Write these on cards and add them to the wall.

Add the following ideas to the ideas on the wall if they weren't mentioned by students. As you mention each idea, have students talk about how realistic it is and ask for insights on what brands/types teens like most (e.g., what colors/brands are most liked by teens).

- Use different colors and types/textures (some have ribs on them).
- Use extra lubrication.
- Tell your partner how using a condom can make a man last longer.
- Have the partner put on the condom.
- Have a sense of humor—be silly—make jokes.
- Hide the condom on your body and ask your partner to find it.
- Wrap some condoms as a present and give them to your partner.
- Put lubricant on tip of penis to increase sensitivity for men or use pre-lubricated condoms.

5 Summarize.

Cover the following points:

- Once you and a partner agree to use condoms, do something positive and fun.
- Go get them together.
- Get different brands and colors, and look at the sizes too.
- Check them out before you use them.
- Just talking about how you'll use all of those condoms can help you use them when you need to.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 12.6 Closure & Question Box

Suggested Time 5 minutes

Materials *All4You2!* Messages poster, Question Box, 3 x 5 index cards

Purpose To summarize key points of the lesson and prepare for the next lesson

Steps for Activity

Lesson Summary

1 Discuss.

Ask students to summarize the main points of this lesson.

2 Summarize.

Choosing not to have sex is the best protection from pregnancy and STDs, including HIV. But when people do choose to have sex, using condoms can help protect them. Having a chance to practice with condoms will help you use them correctly and consistently when and if you need to.

3 Emphasize the behavioral messages.

Use the All4You2! *Messages poster and tie these to the main messages of the curriculum:*

- **Respect:** If you are having sex, tell your partner you want to be safe from disease and pregnancy.
- **Respect and Protect:** If you are having sex, respect yourself and your partner by using a latex condom correctly every time. If you are having vaginal sex, use a condom and a highly effective method of birth control.
- **Protect:** Find a way to make using condoms fun for you and your partner.

Question Box

1 Answer questions.

Answer the student questions from the Question Box.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

2 Gather new questions.

Hand out index cards and give students a minute to write any new questions they have. Tell students that if they don't have a question they should write "I don't have a question" on the card. Remind students NOT to put their names on the cards.

Have them fold the cards when they are finished writing. Have a Peer Leader collect the cards. Tell students that you will address these questions in a later lesson.

Transition and Closure

1 Conclude.

Collect the student name tents.

Close by recognizing students for their interest, their creative thinking and all the work they accomplished today.

2 Homework reminder.

Remind students that their **What Do You Think?** *homework is due at the beginning of class 14 (give day).*

Alex and Kiva

Version for Educator

Directions: Read through the story. Use the numbered actions in the gray boxes to make the storytelling livelier and more effective. You will need a box of condoms, scissors, some Vaseline, moist wipes or paper towels, and examples of water-based lubricants.

Note: If appropriate at your school, tell students that this story happens to involve a heterosexual couple, but the issues could be the same for gay, lesbian or bisexual people who have vaginal or anal sex.

Alex is kind of shy and nervous around girls, so it took him a while to have a real girlfriend, but it finally happened. He and Kiva have been going together for a long time and think they might stay together forever. Eventually, they decided to have sex and wanted to use a condom.

Alex went to buy condoms, and took his older brother along to help him. When he got to the store, he saw there were lots of different kinds: colored ones, tight ones, even extra large ones. He looked for the most expensive ones because he wanted to have the best. When he showed his brother the package, his brother said, "No. Those are lambskin condoms, and they don't protect against HIV."

His brother recommended some lubricated latex condoms. Alex got two boxes, each box had a different size of condoms. His brother told him to practice first with the condom, but Alex was too excited and headed straight for Kiva's house.

Kiva was happy to see him. They talked for a while and started to kiss and touch. Alex was a little nervous when he got out the condom.

1 Start with the smaller-sized condoms. Take a condom out of box, fumbling.

He tried to open the condom package with scissors.

2 Hold up a pair of scissors.

Oh no, he cut the condom!

3 Make cutting noise as you cut the package. Look horrified, then throw the condom away.

Let's try again. Alex opened the next package with his fingers.

4 Open another package with fingers instead of scissors.

Just thinking about sex was making him excited. He put the condom on the tip of his penis and tried to roll it down. What's wrong? It wouldn't roll!

© ETR Associates

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement

Alex and Kiva Version for Educator *(continued)*

5 Put condom on your fingers facing the wrong direction. Make motion, trying to roll it down your fingers. Show that it won't roll.

Alex took the condom off and looked at it. Oh. The condom was supposed to roll down the other way.

6 Look at condom.

But now there was a little drop of semen on the condom. To be safe, Alex threw it away and got another one.

7 Toss condom away and get another.

He looked carefully to see which was the outside, and started to roll it down. The condom felt uncomfortable. Kiva suggested he use the bigger condoms.

8 Get box of larger condoms and take one out of its package.

Alex checked which way the condom went, then unrolled it halfway down his penis and thought, "Great! I'm ready."

9 Look at condom, then roll partway down fingers.

As Alex and Kiva started to have sex, they felt the condom slipping off!

10 Slip condom off fingers.

Alex threw that condom away, got another one that was not so big, opened it with his fingers, checked which was the outside, and put it on all the way to the base of his penis.

11 Go back to the smaller-sized condoms, take one out and go through all the motions. Put condom on to base of fingers. Look pleased.

But, by this time, Kiva wasn't very excited anymore. Alex suggested using some Vaseline or baby oil.

He put Vaseline on the condom, and they started having sex.

12 Put Vaseline on condom. *(Note: Have moist wipes or paper towels to wipe the Vaseline off your fingers after this demonstration.)*

Oh, no! The condom broke! Alex didn't know that oil and Vaseline can cause condoms to break. If you are going to use a lubricant, it has to be something water-based, like Astroglide or Aqua Lube.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR Associates

Alex and Kiva Version for Educator *(continued)*

13 Show examples of appropriate, water-based lubricants.

By now Alex was getting frustrated and wishing he and Kiva had paid more attention in their class about condoms and HIV. He looked in the box for another condom and found one more condom and...the condom instructions!

14 Look very happy, take instructions out of box.

Kiva laughed and said maybe they should read the instructions together before using the last condom.

>> STOP here <<

Have students complete the **How to Use a Condom** activity sheet.

Story continued. Finish with a demonstration of proper use.

Alex took the last condom out of the package carefully. He checked to make sure it was right side out.

15 Take condom out of package carefully and check to make sure it is right side out.

He put the condom on his erect penis, pinched the tip to leave a little space, and rolled it down to the base of his penis.

16 Put condom on two fingers and roll it down to the "base" of your hand.

He put water-based lubricant on the condom.

17 Put lubricant on the condom.

Now he was ready. After having sex, he held the condom at the base of his penis, so that the semen wouldn't spill as he pulled out.

18 Remove condom from fingers carefully.

Alex took the condom off, wrapped the condom in a tissue and threw it away in the garbage.

19 Wrap condom in a tissue and throw it away.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity Sheet 12.3

How to Use a Condom

Do	Don't

© ETR Associates

Activity Sheet 12.3

Activity Sheet 12.4

Condom Practice

- ☐ Check the condom package for expiration date and FDA approval for STD prevention.
- ☐ Open the condom package. Be careful not to tear the condom.
- ☐ Make sure the condom is right side out. Check by unrolling the condom a little over two fingers to see if the tip of the condom naturally sticks out.
- ☐ Pinch the tip of the condom between your thumb and forefinger to get rid of any air pockets and to create a space for the semen during ejaculation.
- ☐ Then unroll the condom over the index and middle finger of your other hand. Unroll the condom all the way down to the bottom of your fingers.

When Actually Using a Condom...

- ☐ *After ejaculation*, hold the condom around the base. Gently pull the penis out of the partner's body while it is still erect.
- ☐ Take the condom off carefully so the semen doesn't spill. Roll it off *starting at the base* of the penis.
- ☐ Dispose of the condom in the trash. *Never reuse* a condom.

Lesson 13 Talking About Condoms

Synopsis	Students identify ways to bring up the subject of using condoms with a partner. They also brainstorm possible excuses for not wanting to use condoms and responses to those solutions.
Purpose Statement for Students	Today we will review and practice ways to talk about condoms with a partner.
Objectives	Students will be able to: • Identify how and when to bring up the subject of using condoms with a partner. • Identify strategies to counter excuses for not wanting to use condoms.

Activities & Time

13.1: Check-In	2 minutes
13.2: Review & Plan for the Day	3 minutes
13.3: Talking about Condoms	20 minutes
13.4: Excuses, Excuses	20 minutes
13.5: Closure & Question Box	5 minutes

Materials

Have

- ☐ Chart paper, markers and tape
- ☐ Student name tents
- ☐ 1 condom in a package for Activity 13.2
- ☐ Music and music player
- ☐ *All4You2*! Messages poster
- ☐ Question Box
- ☐ 3 x 5 index cards, 2 per student
- ☐ Pencils

Review

- ☐ **Clayton & Robin, Carlos & Yvonne, Lee & Reggie** (Group Activity Sheets 13.3a–c), 3 copies of each
- ☐ **Excuses, Excuses** (Activity Sheet 13.4)

Prepare

- ☐ Plan for the Day

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

Educator Preparation	☐ Review the entire lesson and prepare needed materials. ☐ Review **Sample Excuses and Responses** (Educator Background Sheet 13.4). ☐ Check with Peer Leaders to be sure they are prepared. ☐ Prepare answers to students' questions in the Question Box.
Peer Leader Activities	☐ Peer Leaders serve as small group recorders and reporters for Activity 13.3.
Determinants Addressed	• More positive attitudes about using condoms • Fewer perceived barriers to condom use • Greater belief that peers support the use of condoms, if having sex • Greater partner support for condom use • Increased self-efficacy to use condoms

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 13.1 Check-in

Suggested Time 2 minutes

Materials None

Purpose Students will come to class each day with a range of emotions and experiences affecting their readiness and willingness to participate. We will use a daily check-in as a way to acknowledge this reality.

Steps for Activity

1 Have students check in.

Ask a few students to volunteer how they are feeling or what's going on for them today.

Acknowledge responses based on your judgment. Use simple, short acknowledgements, particularly the positive ones (e.g., head nods, thank you, one-word sentiments such as "great," "glad to hear it," etc.). Avoid long responses or analyzing students' comments in this group setting.

Here are some examples of potential responses:

- Thank you for letting me know. I understand it could be hard to focus when you are dealing with that.
- I'll try to remember that you're having a hard day. I'm confident that you can get through it.

Discourage students from commenting on others' responses by just moving the activity along.

If students share something inappropriate or say something with extreme bravado, ask them to re-state their response in a more appropriate manner. If students share something serious and/or reportable (e.g., parent hit me last night) work with the teacher to provide support to the student right after class or before you even begin the lesson if necessary.

Educator Note: Discuss potential sensitive and/or reportable issues with the classroom teacher or school administrator in advance so you are in agreement on how to handle these situations.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in Signed April 2025 agreement.

2 Conclude.

- *Close by thanking students for their honest responses.*
- *If there are a majority of students feeling a certain way, note that pattern.*
- *Share that knowing "where they are at" each day helps you as a teacher and that you would like them to try their best to make the most of what the class is doing together today. Emphasize that you have confidence in their ability to focus despite all that is confronting them.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 13.2 Review & Plan for the Day

Suggested Time 3 minutes

Materials Plan for the day, student name tents and folders, 1 condom

Purpose To review the plan for the day and orient students to the day's activities

Steps for Activity

1 Have students help pass back name tents.

2 Review Lesson 12.

Ask students if they can recall what was discussed last class (using condoms). Ask the following questions:

- What are the steps for using a condom correctly? *(Demonstrate this with a condom as students list steps.)*
- What are 2 ways to make using condoms more likely or more fun?
- How do condoms work to protect against HIV, other STDs, and pregnancy? *(They put a barrier between your fluids and your partner's fluids.)*

Review answers and clarify as needed. Transition by noting that today the class will focus more on talking about condoms with a partner.

3 Post and review the Plan for the Day.

Today we will focus on talking about condoms with a partner.

4 Ask for a volunteer to read the plan.

Lesson 13
Plan for the Day

- When? When? Win!
- Excuses, Excuses
- Summary

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 13.3 When? When? Win! Talking About Condoms

Suggested Time 20 minutes

Materials Chart paper, markers, tape, Group Activity Sheets 13.3a–c; 3 x 5 index cards

Purpose To enable students to identify ways to bring up the subject of using condoms with a partner

Steps for Activity

1 Transition and introduce activity.

Another important part of using condoms is being able to ask your partner to use one.

2 Facilitate brainstorm.

Have students imagine that they have decided that when they have sex (which may not be for a long time), they are going to use condoms to protect themselves from pregnancy and/or disease. Emphasize that their limit is ***no unprotected sex (vaginal, anal or oral),*** *no matter what.*

Have students brainstorm how and when they might tell a partner that limit. Record students' answers on chart paper.

Educator Note: Encourage students to give you specifics on exactly what they might say and when (you need specifics for the next step).

3 Roleplay examples.

Ask for two volunteers to roleplay two or three of the specific ideas in front of the class (or from their seats if they are uncomfortable in front of class). Acknowledge their willingness to roleplay by having the class give them a round of applause.

4 Discuss.

Emphasize that it is best to discuss protection before they are in a situation where they are close to having sex.

Ask students why this is true. (Answers might include: less likely to cross your line because you aren't thinking clearly/in the heat of the moment.)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Remind students that by thinking about "when" and picking a good time to talk about condoms, they are more likely to "win" their way.

5 Describe group activity.

Explain to students that each situation will be different and present different challenges. Tell them the next activity will help them think about how and when to talk about condoms in some different situations. Review the following steps for the activity:

- You will work in groups of four. Your Peer Leader will be your recorder.
- Each group will get one situation in which someone in the relationship wants to use condoms and needs to bring it up with the other person.
- Your group needs to come up with three ways this person might use to bring up the subject of using condoms. Be sure to write down the words that this person should use when talking with his/her partner. You also need to give advice on when to talk about it.
- You'll have 5 minutes to come up with your advice.
- Each group will be asked to share one or two of their ideas.

6 Check for understanding.

Ask students what they will do once they get in their small groups. Clarify as needed.

7 Group work.

Pass out one **Situation** *(Group Activity Sheet 13.3a, 13.3b or 13.3c) to each Peer Leader. Have the groups get started.*

Circulate to clarify task and answer student questions. Allow students to work for 5 minutes. ***Play music*** *as students work.*

8 Debrief.

Explain that there are three different situations: A (Clayton and Robin), B (Carlos and Yvonne), and C (Lee and Reggie).

Have the groups check which situation they have. Call out each situation and have the groups raise their hands if they have that situation, making a mental note of who has each one.

Ask for a volunteer to read Situation A (Clayton and Robin) to the entire class (if no one volunteers, read it aloud yourself).

Ask each of the groups with situation "A" to share one way that Clayton can talk with Robin about using condoms. Encourage students to be specific on what words to use.

Ask the groups when Clayton should talk with Robin.

Ask the rest of the class if they have any other ideas.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

Repeat for Situation B (Carlos and Yvonne) and situation C (Lee and Reggie). Note that in situation B Carlos and Yvonne waited to talk about condoms until they were in the heat of the moment. Ask students how this might affect their communication.

Congratulate students on their creativity. Emphasize that there are lots of ways to bring up the subject of using condoms and that each of them will find a way that works best for them.

9 Help students personalize the learning.

Pass out a 3 x 5 index card or scratch paper to each student. Tell students that you are going to give them a chance to think about how they might bring up condoms with a partner if they were in a relationship. Explain that this is a private activity and they will not have to share it with the class.

Remind students that this is part of the "Pst" technique (refer to the "s" and the "t" in "Pst").

Have students write down what they would say and when they would say it on the index card. Tell students NOT to put their names on the cards. Allow them to work for 1 to 2 minutes.

Have students fold their cards. Collect one card from each student. If students prefer to keep their cards they can.

10 Review and emphasize key points.

- Using latex condoms makes sex safer. People who are allergic to latex can use polyurethane or polyisoprene condoms.
- Latex condoms help to protect both partners from STDs, including HIV. They can also protect against pregnancy for those having vaginal sex. To obtain these benefits, however, you must choose good quality condoms that fit properly and use them correctly every time you have intercourse.
- In some cases, you may have to overcome a partner's reluctance.
- However, if you choose to have sex (vaginal, anal or oral), using a condom is an important step to staying safe.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

Activity 13.4 Excuses, Excuses

Suggested Time 20 minutes

Materials Activity Sheet 13.4 , Educator Background Sheet 13.4

Purpose To help teens identify potential responses to condom use excuses

Steps for Activity

1 Transition to next activity.

Tell students that sometimes we encourage other people to do something and they give us excuses for not wanting to. Remind students that they may hear excuses for not using condoms from partners or even friends who are having sex. Tell students this activity focuses on excuses and ideas for responding to them.

2 Facilitate brainstorm.

Have students call out possible excuses for not using condoms. Record them on chart paper. Some examples might include:

- Condoms kill the mood for sex.
- Condoms don't feel as good; we are using the pill.
- We don't need condoms.
- Using condoms means you don't trust me.
- I don't have a condom with me.

3 Discuss.

Review the list of excuses, and have students vote (by show of hands) on the five most challenging excuses to deal with. Put stars next to the top five.

Tell students that you are going to have them work in pairs to come up with responses to these top 5 excuses.

Before breaking students into pairs, practice generating responses to one of the excuses on the list that didn't make the top five.

4 Students respond to excuses.

Put students in pairs, and have them turn to **Excuses, Excuses** *(Activity Sheet 13.4.) in their workbooks.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Ask pairs to work together to come up with at least one response to each of the top five excuses. Tell students they can write more responses if they can think of them. Explain that once they finish, you will ask for volunteers to roleplay their responses.

Allow students to work for about 8 minutes.

5 Debrief.

When students have finished, call the class back to attention.

Focus on 1 excuse at a time, and ask for volunteers to read their responses for that excuse. They can stay at their seats, but need to stand up and speak loudly so others can hear. Read the excuse, then allow one person from each pair to read the response. Repeat this at least three times for each excuse.

Encourage students to write down responses that they might like to use on their activity sheets.

6 Summarize.

Thank students for their creative thinking, and ask if there are any other responses they want to share. Add any other response ideas from Educator Background Sheet 13.4, if needed.

Remind students that it is up to both people in a relationship to take responsibility for preventing HIV, other STDs, and unplanned pregnancy.

Remind them that if they are having sex, they always need to be ready with protection against HIV, other STDs and unplanned pregnancy, just in case their partner isn't.

.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 13.5 Closure & Question Box

Suggested Time 5 minutes

Materials *All4You2!* Messages poster, Question Box, 3 x 5 index cards

Purpose To summarize key points of the lesson and prepare for the next lesson

Steps for Activity

Lesson Summary

1 Discuss.

Ask students to summarize the main points of this lesson.

2 Summarize.

Remind students that it is up to both people in a relationship to take responsibility for preventing HIV, other STDs, and unplanned pregnancy. If a partner makes excuses to not use condoms, they need to be prepared to respond and protect themselves.

3 Emphasize the behavioral messages.

Use the All4You2! *Messages poster and tie these to the main messages of the curriculum:*

- **Respect:** It is really important to have personal limits and tell your partner your limits, including limits about unprotected sex.
- **Protect:** If you are having sex, use a latex condom correctly every time. Use condoms plus pregnancy protection for vaginal sex. If you expect you might hear excuses, think about your responses ahead of time.

Question Box

1 Answer questions.

Answer the student questions from the Question Box.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

2 Gather new questions.

Hand out index cards and give students a minute to write any new questions they have. Tell students that if they don't have a question they should write "I don't have a question" on the card. Remind students NOT to put their names on the cards.

Have them fold the cards when they are finished writing. Have a Peer Leader collect the cards. Tell students that you will address these questions in a later lesson.

Transition and Closure

1 Conclude.

Collect the student name tents.

Close by recognizing students for their interest, their creative thinking and all the work they accomplished today.

2 Homework reminder.

Remind students that their **What Do You Think?** *homework is due in the next class.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Situation A: **Clayton & Robin**

Clayton is going out with Robin. He wants to talk about using condoms because he is worried about STDs, HIV infection and pregnancy. Clayton knows Robin has had other partners in the past and doesn't always use condoms. Robin already uses the pill for birth control and tells Clayton she's only with him. Clayton knows that he needs to use condoms with Robin because of her past sexual patterns and he decides to tell her.

"Pst": Clayton Needs Your Advice!!!

1. List 3 different ways that Clayton can tell Robin he wants to use condoms. Write the words that Clayton should use.

2. When should Clayton talk with Robin about using condoms?

"PST" ☐ Pick your limit ☐ Say it strong ☐ Tell why

Situation B: **Carlos & Yvonne**

Yvonne and Carlos are in his living room with the lights down low, and they are starting to get physical. Yvonne pulls out a pack of lubricated condoms and suggests they use them. Carlos begins to get angry because they've never used condoms before. He also thinks sex does not feel as good with a condom. Carlos tells Yvonne she doesn't trust him. Yvonne needs to convince Carlos that sex can be just as pleasurable with condoms.

"Pst": Yvonne Needs Your Advice!!!

1. List 3 different ways that Yvonne can convince Carlos that sex can feel just as good with condoms. Write the words that Yvonne should use.

2. Yvonne waited until she and Carlos were getting physical before she pulled out the box of condoms. Is this the best time, or would another time have been better? When should Yvonne have talked with Carlos about using condoms?

"PST" ☐ Pick your limit ☐ Say it strong ☐ Tell why

Situation B: **Lee & Reggie**

Lee and Reggie have been sexually active for a while. They have had sex without using any protection. Lee just found out that a good friend has genital warts. This makes Lee think about Lee's own sexual relationship with Reggie. Lee has caught Reggie in lies about relationships with other people. Lee isn't sure if Reggie is having sex with anyone else. Lee's really worried about having sex without protection anymore and decides to convince Reggie they should use condoms.

"Pst": Lee Needs Your Advice!!!

1. List 3 different ways that Lee can tell Reggie that they need to use condoms. Write the words that Lee should use.

2. When should Lee talk with Reggie about using condoms?

"PST" ☐ Pick your limit ☐ Say it strong ☐ Tell why

Sample Excuses and Responses

No matter what the specific excuse for resisting condoms might be, you can respond to it. Asking someone to use a condom is a sign of respect—for yourself first of all, but also for your partner. That's the bottom line!

"How It Feels" Excuses and Responses

E: *I don't enjoy sex as much with a condom—it doesn't feel as good.*

R: Let's try some different kinds of condoms—maybe some will make you feel even better. And no matter how good it feels to you, I need to feel safe to relax and enjoy myself.

E: *It's a turn-off. If we stop to put on a condom, I'll lose my erection.*

R: I'll help you put the condom on; that will take care of it. I'm confident I can get you right back to where we were. Besides, isn't sex with a condom better than no sex at all?

E: *They're not natural. It's an artificial barrier between us.*

R: It's not natural to get a disease, either.

E: *They're uncomfortable.*

R: Let's have fun experimenting until we find some we both like. (And they can't possibly be as uncomfortable as an STD!)

"Relationship" Excuses and Responses

E: *If you really loved me, you wouldn't ask me to wear a condom.*

R: I'm asking you because I love you—because I want us both to be protected.

E: *You don't trust me?*

R: I trust you, but either one of us could have an infection and not know it. It's better to be safe than sorry. This is for both of us. If I didn't trust you, I wouldn't be having sex with you in the first place—but I want us both to stay healthy.

(continued)

© ETR Associates

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Sample Excuses and Responses *(continued)*

E: *It's my decision whether to wear one or not.*

R: No, it's about both of us—my health and yours, my body and yours. Let's take care of each other and protect ourselves.

E: *We didn't use one last time (or in the past). What's different, all of a sudden?*

R: I've been thinking about last time/the past, and I think it was a mistake—I worry about it. Let's protect ourselves from now on.

E: *Do you really think you'll catch something from me? Look at me, I don't have any diseases!*

R: You can't really tell just by looking. Let's just be safe and not have to worry about it.

"Contraception" Excuses and Responses

E: *But you're on the pill!*

R: I am, but it just prevents pregnancy—not STD.

E: *I don't think condoms really work, anyway.*

R: If you use them the right way, they almost always do. Let me show you how.

E: *I don't know how to use one.*

R: Good news: I do! Here, let me show you. Anyone who is having sex should know how.

E: *I don't have a condom with me right now. We can use one next time.*

R: Then let's make each other feel good without sex this time. Or let's take a break and go get some at the store. Or let's go do something else tonight.

E: *Buying condoms is so embarrassing!*

R: It can be, but isn't it more embarrassing to have to tell someone you have an STD? If you're embarrassed, I'll buy some for us. Or we can buy them together.

Lesson 14

Testing and Resources

Synopsis

Students work in small groups to examine issues around HIV, other STD and pregnancy testing, including basic information regarding the test itself, confidentiality and when to get tested. Students discuss resources to locate selected health services. Peer Leaders and other students share their experience visiting or calling a clinic, reviewing available services, and whether they would recommend the clinic to others.

Purpose Statement for Students

Today we will learn how to identify issues around HIV, other STD and pregnancy testing, and learn how to access resources for information and health services.

Objectives

Students will be able to:

- Describe the steps involved in getting tested for HIV, other STD and pregnancy, including parental consent and notification issues.
- Describe when a person should go for testing.
- Describe how to find clinics using existing resources.
- Identify places where people can get tested and treated for STD, including HIV, and/or obtain sexual health services.

Activities & Time

14.1: Check-In	2 minutes
14.2: Review & Plan for the Day	5 minutes
14.3: Testing	20 minutes
14.4: Accessing Resources	8 minutes
14.5: Visit or Call a Clinic	10 minutes
14.5: Closure & Question Box	5 minutes

Materials

Have

- ☐ Chart paper, markers and tape
- ☐ Student name tents
- ☐ Internet access and/or local health resource app, if available
- ☐ "Positive" by Spearhead (from the "Home" CD)
- ☐ Music and music player
- ☐ Question Box
- ☐ 3 x 5 index cards, 2 per student
- ☐ *All4You2!* Messages poster
- ☐ Pencils

(continued)

DO NOT COPY OR DISTRIBUTE
In any format without eXpress written permission from ETP.
PDF solely for purposes identified in signed April 2025 agreement.

Materials

Review

- ☐ **HIV Testing** (Fact Sheet 14.3a)
- ☐ **STD Testing** (Fact Sheet 14.3b)
- ☐ **Pregnancy Testing** (Fact Sheet 14.3c)
- ☐ **Information about Testing** (Activity Sheet 14.3)

Prepare

- ☐ Plan for the Day
- ☐ **"Positive" Lyrics** (Master 14.2), as a slide, transparency or handout
- ☐ Poster with contact information for local clinics

Educator Preparation

- ☐ Review the entire lesson and prepare needed materials.
- ☐ Listen to the song "Positive" by Spearhead and review the lyrics.
- ☐ Review Appendix D: Testing and Treatment Issues.
- ☐ Locate a local sexual health resource directory or app (see Activity 14.4).
- ☐ Research contact information for local clinics that provide services for teens and make a poster with this information.
- ☐ Check with Peer Leaders to be sure they are prepared to share information about the clinics.
- ☐ Prepare answers to students' questions in the Question Box.

Peer Leader Activities

- ☐ Peer Leaders report experiences calling or visiting clinics in Activity 14.5.

Determinants Addressed

- Greater knowledge of what to expect when seeking STD or pregnancy tests
- Greater knowledge of where and how to access clinical services for testing
- Greater perceived self-efficacy in locating and using testing services

DO NOT COPY OR DISTRIBUTE
in any format without express
written permission from ETR.
PDF solely for purposes
identified in signed
April 2025 agreement.

Activity 14.1 Check-in

Suggested Time 2 minutes

Materials None

Purpose Students will come to class each day with a range of emotions and experiences affecting their readiness and willingness to participate. We will use a daily check-in as a way to acknowledge this reality.

Steps for Activity

1 Have students check in.

Ask a few students to volunteer how they are feeling or what's going on for them today.

Acknowledge responses based on your judgment. Use simple, short acknowledgements, particularly the positive ones (e.g., head nods, thank you, one-word sentiments such as "great," "glad to hear it," etc.). Avoid long responses or analyzing students' comments in this group setting.

Here are some examples of potential responses:

- Thank you for letting me know. I understand it could be hard to focus when you are dealing with that.
- I'll try to remember that you're having a hard day. I'm confident that you can get through it.

Discourage students from commenting on others' responses by just moving the activity along.

If students share something inappropriate or say something with extreme bravado, ask them to re-state their response in a more appropriate manner. If students share something serious and/or reportable (e.g., parent hit me last night) work with the teacher to provide support to the student right after class or before you even begin the lesson if necessary.

Educator Note: Discuss potential sensitive and/or reportable issues with the classroom teacher or school administrator in advance so you are in agreement on how to handle these situations.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in Signed April 2025 agreement.

2 Conclude.

- *Close by thanking students for their honest responses.*
- *If there are a majority of students feeling a certain way, note that pattern.*
- *Share that knowing "where they are at" each day helps you as a teacher and that you would like them to try their best to make the most of what the class is doing together today. Emphasize that you have confidence in their ability to focus despite all that is confronting them.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 14.2 Review & Plan for the Day

Suggested Time 5 minutes

Materials Plan for the day, student name tents, music—"Positive" by Spearhead, music player

Purpose To review the plan for the day and orient students to the day's activities

Steps for Activity

1 Have students help pass back name tents.

2 Review Lesson 13.

Ask students if they can recall what you discussed last class (talking about condoms). Ask the following question:

- If someone wants to talk with a partner about using condoms, what could the person say to start that conversation?

Clarify or expand on their responses as needed.

3 Debrief homework.

Review the **What Do You Think?** *homework that was assigned in Lesson 10. Ask the following questions:*

- How many of you were able to complete the homework activity?
- Was completing the homework easier or harder than you expected?
- What makes open communication between teens and trusted adults in their lives important?
- Thank students who completed the homework. Prompt other students to complete it by the last class, if possible.

4 Play song.

Explain that you want to play a song by a band called Spearhead. Follow these steps:

- If possible, project a copy of the lyrics or hand out copies to allow students to follow along.
- Play "Positive" by Spearhead.
- Afterward, have students share their thoughts on the message in the song.
- Tie in the song by stating that today's lesson will focus on HIV, other STD and pregnancy testing.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Educator Note: This is the song that was played during the original study. You may use a different song that conveys a message about STI testing for this activity, if desired.

5 **Post and review the Plan for the Day.**

Today we will focus on talking about testing and resources for getting tested.

6 **Ask for a volunteer to read the plan.**

Lesson 14
Plan for the Day

- HIV, STD and Pregnancy Testing
- Accessing Resources
- Visit or Call a Clinic
- Summary

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 14.3 HIV, STD and Pregnancy Testing

Suggested Time 20 minutes

Materials Fact Sheets 14.3a–c, Activity Sheet 14.3, Appendix D

Purpose To identify issues around HIV, STD and pregnancy testing

Steps for Activity

1 Introduce the activity.

Tell students that even though many of them are not having sex at this time, it is important they understand what to do if they need sexual health services, such as birth control. If they think they may be pregnant or have gotten someone pregnant; or if they think they may have been exposed to HIV or another STD, it's important for them to get tested.

Inform students that today they will learn about HIV, STD and pregnancy testing, and how to identify and access resources for information and health services.

Explain the activity:

- You will work in groups of three.
- Each person in your group will read about a different test (HIV, STD, pregnancy).
- You will fill out a brief activity sheet on what you learned about your test.
- Then you will share the information with each other in your group.

2 Clarify.

Check for understanding by asking students to explain what they will do once they are in their groups. Clarify as needed.

3 Students read about testing.

Divide the class into groups of three and have them turn to the **Testing** *fact sheets (14.3a, b and c) in their workbooks. Have the students decide in their groups who will review each test. Each person in the group should review a different test.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Educator Note: If there are uneven numbers, create as many groups of three as possible, and then assign the remaining students to form groups of four. In groups with four students, have the fourth person pick a test to read and report about. The fourth person also could pair up with someone in the group to work together on one of the types of testing.

Instruct students to fill out the activity sheet after they read about their test, and remind them they will share the information with each other after all group members have completed their activity sheets.

Have students begin reading. Allow them to read for about 5 minutes and then encourage them to work on the activity sheets.

Move from group to group to ensure students stay on task, and to answer any questions they may have.

4 Students share information.

Once students have finished their activity sheets, have them take turns in their group sharing what they learned about the test they researched. Explain that, once they are done sharing information, they should complete the last question on the activity sheet.

Allow students to talk in their groups for about 5 minutes. Circulate to prompt students and answer questions as needed.

5 Discuss.

After students have finished sharing within their small groups, lead a discussion using the following questions:

- How do they test to see if a person has HIV? How do they test to see if a person has another STD? How do they test for pregnancy?
- How long does it take to get the results of an HIV test? An STD test? A pregnancy test?
- What is the difference between confidential and anonymous HIV testing?
- What one thing do you most remember about the information on testing you discussed in your small groups?
- What do you think about the fact that teens can be tested for HIV, other STD and/or pregnancy without their parents' consent?
- Whom would you talk with if you thought you needed to be tested?
- What are some of the pros and cons about getting tested for HIV?
- What are some of the reasons that people may not go for testing even though they have practiced risky behaviors, such as having sex without using latex condoms or having sex with multiple partners?

Be sure to clarify any misinformation. Refer to Appendix D, Testing and Treatment Issues for more information regarding the tests.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR
PDF solely for purposes identified in signed April 2025 agreement.

6 Summarize.

Close by making the following points:

- For people who are having sex, it is important to get tested for STDs, including HIV, at least once a year and before any new sexual partner.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 14.4 Accessing Resources

Suggested Time 8 minutes

Materials Internet access and/or app for locating resources

Purpose To identify resources for locating reproductive health services

Steps for Activity

1 Brainstorm resources.

Tell students that many people don't go for testing because they don't know where to go or how to find a clinic that provides the services they need.

Explain that there are a lot of resources available for individuals who want more information or health services related to HIV infection, other STD and/or pregnancy.

Have students brainstorm a list of people and places that might be resources for them.

List students' responses on the board. (Examples: phone app, Internet, a school nurse or counselor, a family friend who is in the medical field, a health department clinic, a community clinic, Planned Parenthood, a local hospital clinic, a school-based clinic.)

Educator Note: List all answers provided at this point. As part of the next step, students will be asked to reassess the list based on credibility of the resources.

2 Assess resources.

Ask students how they would judge whether a resource is a good resource (accurate, up-to-date information, trustworthy source, etc.). Write students' responses on the board.

Continue by asking students:

- Why are these criteria important? (Inaccurate information could be harmful; if source isn't trustworthy you won't know if information is true; out-of-date information could be harmful or lead someone to a wrong decision.)
- How can you know if information you receive is accurate? (It comes from a credible source; it checks against another resource.)

Ask students to review the list of resources on the board while thinking of the criteria they just described and indicate any resources listed that may not meet the criteria.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Discuss why these resources might not be the best source of information or services. For example, friends may not have accurate information. Cross out or erase resources that do not meet the criteria.

3 Discuss how to locate resources.

Have students imagine they want to go to a clinic (for themselves or a friend). Ask them how they could find the number and location of the clinic. Have students be as specific as possible and provide several different alternatives for finding phone numbers and locations.

Clarify any misinformation students may have about accessing resources.

If possible, demonstrate using the Internet or an app to find local resources (e.g., CDC's STD testing website has a feature where you can enter a zipcode and get local clinics).

Educator Note: Remind students that if they are not sure what services a clinic provides they may need to call the clinic first to find out if the services they need are available there.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 14.5 Visit or Call a Clinic

Suggested Time 10 minutes

Materials Poster with local clinic phone numbers and websites

Purpose To identify resources for getting tested

Educator Note: The success of this activity rests on the Peer Leaders and any other students who decided to complete the activity. If no other students completed this activity, ask each of the Peer Leaders to share information. If nobody completed the assignment, be prepared to provide some basic information about one or two local clinics for teens.

Steps for Activity

1 Transition.

Ask how many students called or visited local clinics to see what services they offered and what the clinics were like. Praise those students who completed the activity.

2 Share information.

Ask for a few volunteers among those who completed the activity (and at least one of the Peer Leaders) to share what they learned about the clinics they called or visited. Starting with a Peer Leader, have them share their information one at a time, using the following prompts:

- Start by giving the name and location of the clinic you called or visited.
- Describe the services provided. Ask clarifying questions, as needed, regarding the various services available.
- What is the cost of a routine examination or consultation at the clinic(s)? Do any of the clinics have a "sliding scale" or offer free services? Have a volunteer explain the concept of "sliding scale." If students are not familiar with the concept, explain that, at some clinics, the amount clients pay depends on their income.
- What is the confidentiality policy of the clinic(s)? Discuss why these policies are in place.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

- How old must a person be to obtain services at the clinics without parental consent? Clarify that teens can obtain many services without parent/guardian permission, such as HIV, other STD and pregnancy testing, or access to condoms and other birth control. Remind students that although teens can receive these services without parental permission, if at all possible they should discuss these issues beforehand with a parent or another adult whom they trust.
- Share how it felt to visit or call the clinic(s). Describe something positive about the visit or call. Describe anything that made you feel uncomfortable.
- What does the clinic looks like inside and how does it operate? What does a person do to make an appointment? Do staff take people who don't have appointments? What does a person do first?
- What are the staff people like? (friendly, not friendly, willing to answer questions, welcoming to young people of all gender identities or sexual orientations).
- Would you recommend the clinic you called or visited to someone who needed services? Why or why not?

3 Summarize.

Conclude by making the following points:

- Many people don't go to clinics because they are unsure of what to expect or of what to say or do.
- Although each clinic may operate a little differently, you now know what to expect, and what kinds of questions to ask if you need to obtain services from a clinic.

Post the phone numbers and websites of one or two reputable local health clinics for teens.

Thank the Peer Leaders and other students (if applicable) for their efforts. Emphasize how helpful the information is for everyone.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 14.6 Closure & Question Box

Suggested Time 5 minutes

Materials *All4You2!* Messages poster, Question Box, 3 x 5 index cards

Purpose To summarize key points of the lesson and prepare for the next lesson

Steps for Activity

Lesson Summary

1 Discuss.

Ask students to summarize the main points of this lesson.

2 Summarize.

- Today you learned how to identify issues around HIV, other STD and pregnancy testing.
- You also learned how to access resources for information and health services.

3 Emphasize the behavioral messages.

Use the All4You2! *Messages poster and tie these to the main messages of the curriculum:*

- **Check it Out:** if you are having sex, get tested for STDs and HIV at least once a year and/or before having sex with every new partner.

Question Box

1 Answer questions.

Answer the student questions from the Question Box.

2 Gather new questions.

Hand out index cards and give students a minute to write any new questions they have. Tell students that if they don't have a question they should write "I don't have a question" on the card. Remind students NOT to put their names on the cards.

Have them fold the cards when they are finished writing. Have a Peer Leader collect the cards. Tell students that you will address these questions in a later lesson.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Closure

1 Conclude.

Collect the student name tents.

Close by recognizing students for their interest, their creative thinking and all the work they accomplished today.

April 2025 agreement.

"POSITIVE" LYRICS

Michael Franti and Spearhead

Make me, make me sweat
Til I'm wet, til I'm dry
But then wipe this tear from my eye
Haven't felt this warm in a long time
Even out in the bright sunshine
In lifetime of springtimes

I fall into your arms
With my heart pumpin' on
Like a bubblin' dub track
Like a garlicy hot tonque and lip smack

I did some contemplation
Before we got down to this consecration
Maybe baby something in you kiss said
It was an impetous
For me to rethink this

If I love you
Then I better get tested
Make sure we're protected

I walk through the park
Dressed like a question mark
Hark!
I hear my memory bark
In the back of my brain,
Makn' me insane...
...like cocaine

(chorus)

But how'm I gonna live my life if I'm positive?
Is it gonna be a negative?
How'm I gonna live my life if I'm positive?
Is it gonna be a negative?
But how'm I gonna live my life if I'm positive?

It dawned on me, it seemed to me
This is unusual scenery
This red light greenery
Make me feel kinda dreamery
Thinkin' how I used to be

Arrive at the clinic
Walk through the front door
Take a nervous number
Then I think about it more
About all the time
That I neglected
Makin sure that
I was protected

They took my blood
With an anonymous number
Two weeks waitin' wonderin'

I shoulda done this a long time ago
Alot of excuses why I couldn't go
I know these things and these things I must know
'cause it's better to know than to not know!

(chorus)

I go home to kick it
In my apartment
I try to give myself
A risk assessment
The wait is what can really annoy ya
Everyday is more paranoya

I'm readin' about how it's transmitted
Some behavior I must admit it
Who I slept with, and who they slept with,
Who they, who they, who they slept with

I think about life and immortality
What's the first thing I do if I'm H.I.V.
Have a cry and tell my mother
Get on the phone and call my past lovers
I never thought about infectin' anotha
All the times that I said hmmm? don't bother.

Was it really all that magic?
The times I didn't use a prophalactic

Would my whole life have to change?
Or would my whole life remain the same?
Sometimes it makes me wanna shout!
All these things too hard to think about
A day to laugh, a day to cry
A day to live and a day to die
'til I find out, I may wonder
But I'm not gonna live my life six feet under

(chorus)

Fact Sheet 14.3a

HIV Testing

An HIV test tells if a person has HIV.

How Is the Test Done?

Before the test, a counselor or health worker may explain the test and answer any questions. Counselors may also talk about HIV risks and help people plan to deal with either a positive or negative result.

During the test, a health worker takes a little blood from the person's arm or takes some cells from inside the cheek or gums with a cotton swab. The sample is sent to a lab for testing. Some clinics can test the sample on site.

The most common test is the HIV antibody test. It checks to see if the person's body has antibodies to HIV. Antibodies are proteins the body's immune system makes in response to an infection. If a person has HIV antibodies, it means the person has HIV.

A second type of HIV test looks for antigens. Antigens are the proteins that produce antibodies. They can be detected very soon after infection (1–3 weeks) by testing the blood. HIV antigen tests are more expensive and are not typically used for routine HIV testing. If a person has antigens for HIV, it means the person has HIV.

A PCR (polymerase chain reaction) test is used to test blood for the genetic material of HIV. Blood supplies in most developed countries are screened for HIV using PCR tests. PCR tests are also used to measure viral loads for people who are HIV positive.

Getting the Results

It can take about 2 weeks to get the test results back. The person is asked to return to the test site to get the results. Many clinics offer a quick test. Results are available in 30 minutes. Positive results on the quick test must be tested again. Results of the second test take 2 weeks.

(continued)

© ETR Associates

Fact Sheet 14.3a

Fact Sheet 14.3b

STD Testing

There are many different tests for sexually transmitted disease (STD). The type of test used depends on the STD.

How Is the Test Done?

The most common ways to test for STD include:

- taking a sample of blood from the finger or arm
- taking a urine sample
- taking a sample of fluid from the penis, vagina, throat or anus and examining it under the microscope or growing it in a culture in the laboratory

Some STD can be diagnosed during an exam by a doctor or health worker. For example, if a person had herpes, a doctor might be able to tell just by looking at the sores. But the doctor still might do a test to be sure.

Getting the Results

It takes anywhere from a day to 2 weeks to get test results. It depends on the type of STD being tested for, and where the tests were done.

Some clinics call only if the test results are positive. People are told that if they don't hear from the clinic in a certain period of time, they can assume their results are negative. But it's a good idea for the person to follow up and call the clinic to be sure. Any person going for testing should ask how the clinic tells people about the results.

Who Knows the Test Results?

Clinics usually arrange to get test results to a person confidentially, so no one else can learn the results. Sometimes the person will be asked to come back to the clinic.

Teens can be tested without getting parents' permission, and clinics will not give the results to parents or other adults. Teens should call the clinic beforehand to find out what the policies are.

(continued)

© ETR Associates

Fact Sheet 14.3b

Fact Sheet 14.3c

Pregnancy Testing

Women who think they're pregnant can either go to a family doctor or clinic to be tested, or use a home pregnancy test.

How Is the Test Done?

Pregnancy tests check for the pregnancy hormone, called HCG (human chorionic gonadotropin) to see if a woman is pregnant. The tests used by health workers are either urine or blood tests. Home pregnancy tests are urine tests.

Getting the Results

With a urine test at a clinic or doctor's office, results are provided a few minutes after the test. If a blood test is used, it may take several days to get the results. Some clinics may ask the woman to return to the clinic. Other clinics may call with results, or have the woman call the clinic to get the results. Women going for testing should ask how the clinic tells people about the results.

Home pregnancy tests can be bought at drugstores or online. There are many different brands. A person can buy a test without a prescription. Home pregnancy tests are easy to use, but it's very important to read and follow the directions exactly. If home tests are not used properly, the results may not be correct. Results from most home pregnancy tests are ready within a few minutes after the test.

Who Knows the Test Results?

If the results are not given immediately, clinics usually arrange for a way to get the results to the woman confidentially, so no one else will know the results.

In most states, teens can be tested without getting parents' permission, and clinics will not give the results to parents or other adults. Teens should call the clinic beforehand to find out what the policies are.

Lesson 15 Staying Safe

Synopsis

Students participate in a textline activity, providing advice to other teens on how to stay safe from HIV, other STDs, and unplanned pregnancy. Students personalize the information by working in pairs to talk through important issues about relationships and/or avoiding unprotected intercourse. As a closing activity, students identify what changes they can make in their lives right now that will help protect them from unplanned pregnancy and/or HIV, and other sexually transmitted diseases.

Purpose Statement for Students

Today we will talk about handling different sexual risk situations.

Objectives

Students will be able to:

- Give advice to other teens on how to handle different sexual risk situations.
- Talk through how they would handle personal issues regarding relationships and/or avoiding unprotected intercourse.
- Identify changes they can make in their lives to protect themselves from HIV, other STDs, and unplanned pregnancy.

Activities & Time

15.1: Check-In	2 minutes
15.2: Review & Plan for the Day	3 minutes
15.3: Textline	30 minutes
15.4: What Can You Use?	10 minutes
15.5: Closure	5 minutes

Materials

Have

- ☐ Chart paper, markers and tape
- ☐ Student name tents
- ☐ Paper bag
- ☐ Colored dots (30 each of green, blue, yellow and red)
- ☐ Music and music player
- ☐ *All4You2!* Messages poster
- ☐ Question Box
- ☐ Pencils

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Materials

Review

☐ **What Can You Use?** (Activity Sheet 15.4)

Copy

☐ **Your Choices Summary Sheet** (Class Activity Sheet 15.4), 1 copy

Prepare

☐ Plan for the Day

☐ **Textline Question Cards** (Master 15.3), 2 sets per class

☐ **Your Choice Cards** (Master 15.4), 1 per student

Educator Preparation

☐ Review the entire lesson and prepare needed materials.

☐ Review **Textline Sample Responses** (Educator Background Sheet 15.3).

☐ Prepare answers to students' questions in the Question Box.

Peer Leader Activities

☐ Peer Leaders assist with sorting and counting cards for Activity 15.4 and adhering the dots to Class Activity Sheet 15.4 to show the results.

Determinants Addressed

- Increased self-efficacy to abstain or refuse unprotected sex
- Higher self-concept
- Increased perception that peers would support the decision to not have sex or unprotected sex
- Increased attitudes favoring choosing not to have sex
- Increased perceived risk and costs of getting HIV and other STD if sexually active
- Greater perceived importance of avoiding disease
- More conservative attitudes toward having multiple partners

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 15.1 Check-in

Suggested Time 2 minutes

Materials None

Purpose Students will come to class each day with a range of emotions and experiences affecting their readiness and willingness to participate. We will use a daily check-in as a way to acknowledge this reality.

Steps for Activity

1 Have students check in.

Ask a few students to volunteer how they are feeling or what's going on for them today.

Acknowledge responses based on your judgment. Use simple, short acknowledgements, particularly the positive ones (e.g., head nods, thank you, one-word sentiments such as "great," "glad to hear it," etc.). Avoid long responses or analyzing students' comments in this group setting.

Here are some examples of potential responses:

- Thank you for letting me know. I understand it could be hard to focus when you are dealing with that.
- I'll try to remember that you're having a hard day. I'm confident that you can get through it.

Discourage students from commenting on others' responses by just moving the activity along.

If students share something inappropriate or say something with extreme bravado, ask them to re-state their response in a more appropriate manner. If students share something serious and/or reportable (e.g., parent hit me last night) work with the teacher to provide support to the student right after class or before you even begin the lesson if necessary.

Educator Note: Discuss potential sensitive and/or reportable issues with the classroom teacher or school administrator in advance so you are in agreement on how to handle these situations.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in Signed April 2025 agreement.

2 Conclude.

- *Close by thanking students for their honest responses.*
- *If there are a majority of students feeling a certain way, note that pattern.*
- *Share that knowing "where they are at" each day helps you as a teacher and that you would like them to try their best to make the most of what the class is doing together today. Emphasize that you have confidence in their ability to focus despite all that is confronting them.*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 15.2 Review & Plan for the Day

Suggested Time 3 minutes

Materials Plan for the day, student name tents and folders

Purpose To review the plan for the day and orient students to the day's activities

Steps for Activity

1 Have students help pass back name tents.

2 Review Lesson 14.

Ask students:

- How old do you need to be to get health services like STD and pregnancy testing?
- Will the clinic/testing location tell parents if teens get tested?

5 Post and review the Plan for the Day.

Today we will focus on talking about handling different sexual risk situations.

6 Ask for a volunteer to read the plan.

Lesson 15

- What Can You Use?
- Summary

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 15.3 Textline: Handling Sexual Risk Challenge Situations

Suggested Time 30 minutes

Materials Textline Question Cards, 3 x 5 index cards, scratch paper, music and music player, Educator Background Sheet 15.3

Purpose To give students practice solving sexual risk taking problems, thereby enhancing their self-efficacy in resolving risky situations and practicing safer behaviors

Steps for Activity

1 Introduce activity.

Today, you're all going to be a part of *All4You2!* Textline—an advice line that works by responding to text messages. You're going to give teens just like you advice on how to handle sexual risk situations.

This Textline center receives texted questions about sex 24/7, and needs your help answering the questions. You'll work in teams to help answer some of the center's questions.

(Glance at Textline Question Cards) Hey, look! We've already got several questions about HIV, AIDS and safer sex waiting right now.

Educator Note: Be sure students understand this is an in-class activity, and they are not providing answers for a real textline program.

2 Review the steps for the activity.

- You will work in pairs.
- Each pair will get one texted question from a concerned teen. You and your partner will prepare an answer to the question.
- I will ask for volunteers to share their questions and responses with the class.

3 Demonstrate.

Model using one of the situations so students understand they are responding to someone who is texting them seeking advice.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

4 Pairs answer Textline questions.

Divide the participants into pairs. Provide a Textline question and some scratch paper to each group.

Explain the process.

Discuss, decide on, and then write down the advice you would give to the person who texted a question. Your final decision should be one that both of you can agree on.

And even though this is a texting activity, you don't need to worry about having your answers fit in 160 characters or less. I want you to focus on the *content*, not the length, of your answer.

*Give pairs 5 minutes to come up with their advice. **Play music** while they are working. While students are working, recruit four pairs, each representing different situations, to roleplay their advice in front of the class. Also recruit one person to help you model what you'd like the roleplayers to do.*

5 Have volunteers roleplay for the class.

After students have finished, call the class to attention to watch the roleplays. Model what you want the roleplayers to do using one of the situations.

After the model, have the volunteers roleplay one pair at a time, giving their advice. Start each roleplay by summarizing the texter's issue rather than having students read it.

6 Review key points.

From the **Textline Sample Responses** *(Educator Background Sheet 12.3), discuss any points that students do not come up with themselves.*

Educator Note: Students' answers do not need to match the suggested responses word-for-word to be considered correct. However, in the large-group discussion, it is important that you make sure that the points in the sample responses are discussed.

Thank students for their creative responses.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 15.4 What Can You Use?

Suggested Time 10 minutes

Materials Activity Sheet 15.4, music and music player, pencils, Your Choice Cards, paper bag, Class Activity Sheet 15.4, colored dots

Purpose To allow students to personalize the advice on how to handle sexual risk situations and to commit to safer behaviors

Steps for Activity

1 Introduce activity.

Explain that now it's time for students to think about all the advice they've heard today and throughout All4You2*! and see if any of it may be helpful for them.*

Review the steps of the activity:

- You will work by yourself to complete a brief activity sheet.
- The activity sheet asks you to think about what changes you can make in your life right now that will help you stay safe from HIV, other STDs and unplanned pregnancy.
- You will have 5 to 8 minutes to think about it and fill out the activity sheet. I will play music while you work.
- You should not put your names on your sheet. I will not ask you to share your answers with the class.

2 Clarify.

Check for understanding by asking participants what they will do. Clarify as needed.

3 Students complete activity sheet.

Have students turn to **What Can You Use?** *(Activity Sheet 15.4) in their workbooks.*

Allow students to work for up to 8 minutes. ***Play music*** *as they work. Circulate to assist as needed and keep students on task.*

4 Debrief.

Call students back to the large group. Ask students, by a show of hands, how many of them were able to identify one or two changes to try based on the advice they heard.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

5 Ask students to make a choice.

Remind students that it's important for people to think about how they will protect themselves from HIV, other STD and unintended pregnancy ahead of time. Explain that now they will have a chance to think about what choices they are going to make now to protect themselves from HIV, other STD and unintended pregnancy.

Distribute a **Your Choice Card** *to each student. Tell them to look at the four options and decide which one they will choose. Remind them that this is an important decision and encourage them to think about it carefully and seriously. Tell students NOT to put their names on the card.*

Explain that the Peer Leaders will create a graph based on their responses so the class can see, overall, where they stand in respecting and protecting themselves from disease and pregnancy.

Give students 1 or 2 minutes to complete the card. When students have finished, collect the cards in a bag.

6 Tally results.

Once you've collected all the cards, ask one of the Peer Leaders to create a graph of the responses. Follow these steps:

- *Give the Peer Leader a copy of Class Summary Sheet 15.4 and the colored dots.*
- *Have the Peer Leader sort and count the cards by the choice made, and stick one colored dot for each answer choice in the proper columns on the Class Summary Sheet to show students' choices visually, using the following key.*
  1. *Not having sex = green dot*
  2. *Using latex condoms or condoms+birth control if having sex = blue dot*
  3. *Having sex without any protection = red dot*
  4. *Not sure = yellow dot*
- *Have the Peer Leader write the total number of dots for each choice at the bottom of the activity sheet.*
- *While the Peer Leaders work on the chart, answer any unanswered questions from the Question Box.*

7 Review the class results.

If it is true for your class, point out that most students are committing to choosing not to have sex or using protection if having sex to reduce the risk of unplanned pregnancy and/or STDs.

If many students selected unprotected sex or selected unsure, refer to the Educator's Note below for discussion ideas.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

Educator Note: If a lot of students are unsure of their choice or are choosing to have sex without protection, encourage students to spend time thinking about these choices. Ask whether they might make a different choice if their current situations were different. Ask students to think about how the choices they are making today may affect their lives. Remind students that if they are having vaginal sex that it is important for them to use protection against both pregnancy and disease.

Some students may mention that they are in long-term relationships and don't need to use condoms. Remind students that having a sexual relationship with only one person (who is not infected with HIV or another STD and not having sex with anyone else) is a way of reducing the risk for STDs, including HIV, but this choice is not necessarily safe unless both people have been tested and are not having sex with other people. One problem with this choice is that some people may not know they are infected, and some people may lie about whether or not they have HIV or another STD. Therefore, it is safer to always use a latex or polyurethane/polyisoprene condom with any partner.

8 Close.

- *Explain that over the next several years, students may find themselves in situations where they need to use the information and skills presented in* All4You2!
- *Remind them that, in most situations, every person has a choice about whether or not to have sex or whether or not to have unprotected sex, even if he/she has had sex or unprotected sex in the past.*
- *Emphasize that sticking with their limits may not always be easy, but that they have what it takes to do it.*
- *Remind students that it is up to them to respect themselves and their partners by taking the necessary steps to protect themselves from HIV, other STDs, and/or unintended pregnancy.*

Educator Note: Be sensitive to situations in which there is little, if any, choice involved, such as nonconsensual sex.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Activity 15.5 Closure

Suggested Time 5 minutes

Materials *All4You2!* Messages poster, Question Box

Purpose To summarize key points of the lesson and conclude the *All4You2!* program

Steps for Activity

Lesson Summary

1 Discuss.

Ask students to summarize the main points of this lesson.

2 Emphasize the behavioral messages.

Use the All4You2! *Messages poster and tie these to the main messages of the curriculum:*

- **Respect your body and your partner**—have limits; honor limits.
- **Protect yourself and your partner**—choose not to have sex. If you do have sex, use latex condoms/barriers for vaginal, oral and anal sex; use birth control if having vaginal sex; and limit the number of partners you have.
- **Check It Out**—if you are having sex, get tested for HIV and other STDs at least once a year and/or before having sex with every new partner.

Question Box

1 Answer questions.

Answer any remaining questions from the Question Box. Make connections to prior lessons as appropriate.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Closure

1 Conclude the program.

Collect the student name tents.

Close by recognizing students for their interest, their creative thinking and all the work they accomplished today and over the past 14 classes on preventing HIV, other STD and pregnancy.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Textline Question Cards

Directions: Copy and cut apart the cards. Make enough sets for each pair to have one.

1	To: TEXTLINE From: JunkiePast Had sex few mos ago & just fnd out the guy did drugs in past. A LOT. Maybe w needles. Now I'm terrified I got infected w/something. What should I do?
2	To: TEXTLINE From: PillPower I'm on the pill so won't get pregnant. I don't have to worry about STD while I'm on the pill, right?
3	To: TEXTLINE From: CondomSense Bfriend and I fight about condoms. He says they're uncomfortable and cuz I insist, I don't trust him. How can I convince him to use them?
4	To: TEXTLINE From: Drank2Much Drank too much at a party last wkend & woke up nxt to a total stranger. He looked healthy. How can I find out for sure?
5	To: TEXTLINE From: Fool4Luv My grlfrnd and I haven't had sex, but we've fooled around a lot. Naked. If we don't have vaginal or anal sex, are we still safe?
6	To: TEXTLINE From: One&Onlies My bfriend and I are each other's 1st and only sex partner. Both clean and healthy and don't use drugs. We don't need to use condoms, right?
7	To: TEXTLINE From: DoubleTrouble I've heard 2 condoms are safer than 1. True?
8	To: TEXTLINE From: WhatzSafer? A friend says anal sex is safe and a girl can't get pregnant. Is anal sex safer than vaginal?
9	To: TEXTLINE From: Sometimes I identify as a lesbian, but once in a while I have sex with guys, too. Do I need to worry about pregnancy?

Textline Sample Responses

Texter	Question	Suggested Response
1	To: TEXTLINE From: JunkiePast Had sex few mos ago & just fnd out the girl did drugs in past. A LOT. Maybe w needles. Now I'm terrified I got infected w/ something. What should I do?	You're right to be worried. The best thing to do is to get yourself tested for HIV and other STD (at a free clinic, health department clinic, or your doctor's office) and to use a latex condom or other barrier every time you have sex—with her or anyone else—from now on. You can learn from this mistake and be safe in the future! And this is a reminder that you can't really know everything about your partner.
2	To: TEXTLINE From: PillPower I'm on the pill so won't get pregnant. I don't have to worry about STD while I'm on the pill, right?	Wrong! The pill does protect you from pregnancy, but it won't protect you from STD (including HIV). For that, you need to use a latex condom every time, in addition to the pill. You've already taken the step of protecting yourself from getting pregnant, which is great. It's time to go ahead and be even safer by using condoms from now on, so that you won't have to worry about STD, either.
3	To: TEXTLINE From: CondomSense Bfriend and I fight about condoms. He says they're uncomfortable and cuz I insist, I don't trust him. How can I convince him to use them?	Have you tried different kinds? Making condoms part of foreplay and turning each other on? Tell him it's not about trust. It's about both of you staying healthy. You may have infections you don't even know about. If you use condoms, you don't have to worry about it. If he tries to get more comfortable with condoms, it shows he respects you and the relationship. You're doing the right thing for both of you by wanting to use condoms. Stay true to yourself!

(continued)

Textline Sample Responses *(continued)*

Texter	Question	Suggested Response
4	To: TEXTLINE From: Drank2Much Drank too much at a party last wkend & woke up nxt to a total stranger. This person looked healthy. How can I find out for sure?	You can't find out for sure unless you both get tested (at a clinic, health department, or doctor's office) for HIV and STD. What you do know for sure is that drinking and drugs make it tough to stay safe in sexual situations. Go ahead and get yourself tested for your own peace of mind (or treatment, if needed). Then make sure you have condoms with you, and that you're willing and able to use them, no matter how much you've had to drink. If drinking too much is happening a lot, think about getting some help with that before it affects your health and well-being even more. Good luck!
5	To: TEXTLINE From: Fool4Luv My grlfrnd and I haven't had sex, but we've fooled around a lot. Naked. If we don't have vaginal or anal sex, are we still safe?	You're not as safe as you might think. Semen can still find its way into her body and cause infection or even pregnancy. And many STDs (like herpes) can be transmitted during skin-to-skin contact or oral sex. To be safe, use condoms during oral sex on a man. You can use a plastic barrier or dental dams during oral sex on a woman. If you and your girlfriend decide to have sex in the future, make sure you have latex condoms available and know how to use them.
6	To: TEXTLINE From: One&Onlies My bfriend and I are each other's 1st and only sex partner. Both clean and healthy and don't use drugs. We don't need to use condoms, right?	If you're having sex, no matter what your sexual histories are, you need to be thinking about protecting yourselves from STD and from pregnancy, if that is a risk for you. Even if you are each other's first and only sex partners, a day may come when that could change. Protecting yourself from pregnancy and/or STD is a strong statement that you care about yourself and about each other. It's a good, safe habit to get into early in your sexual life and will keep you healthier no matter what happens between the two of you.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR Associates

Textline Sample Responses *(continued)*

Texter	Question	Suggested Response
7	To: TEXTLINE From: DoubleTrouble I've heard 2 condoms are safer than 1. True?	Not true. In fact, using two condoms may make you less safe, because the friction between them can cause them both to break. It's great that you're thinking about how to be as safe as possible, but your best bet is to use one condom—and to use it correctly—every time you have sex. Spread the word!
8	To: TEXTLINE From: WhatzSafer? A friend says anal sex is safe and a girl can't get pregnant. Is anal sex safer than vaginal?	It's true that anal sex can't cause a pregnancy. But unprotected anal sex can put people at high risk of STD, including HIV. People who have anal sex can reduce their risk for STIs by using a latex condom every time. The safest way to avoid HIV/STI, though, is choosing not to have anal, vaginal or oral sex.
9	To: TEXTLINE From: Sometimes I identify as a lesbian, but once in a while I have sex with guys, too. Do I need to worry about pregnancy?	Yes. Anyone who has male/female vaginal sex needs to worry about preventing pregnancy. For people who want to prevent pregnancy, condoms can be very effective when used consistently and correctly. The most effective method of birth control is to use condoms along with another effective method, such as the IUD, implant, shot, or the birth control pill, patch or ring. The most important thing when choosing a method of birth control is to talk to a doctor or clinician you trust who can help you choose the method that will work the best for your life and your body.

Your Choice Cards

Directions: Copy and cut apart the cards. Make 1 for each student.

MY CHOICE... Look at the choices below. What will you commit to do to respect and protect yourself? Pick one choice based on what you will do given who you are.

1. I will not have sex right now.
2. I will use latex condoms or latex condoms and birth control every time if I have sex.
3. I will have sex without using condoms/barriers or any other protection.
4. I'm not sure of my choice at this time.

Activity Sheet 15.4

What Can You Use?

Directions: Think about the questions in the thought bubble, then answer the question below the bubble.

How do I tell my partner I'm not ready for sex?

What's my chance of getting HIV?

How do I tell my partner I want to use condoms?

What's the best way to avoid HIV?

How do alcohol and drugs affect my chances of getting HIV or another STD?

What are the risks of getting HIV through injecting drugs?

What are the pros and cons of choosing not to have sex right now?

How do I know if my partner has HIV or another STD?

Think about all the things we talked about today. What changes can you make in your life ***right now*** that will help you protect yourself from HIV, other sexually transmitted diseases, and unplanned pregnancy?

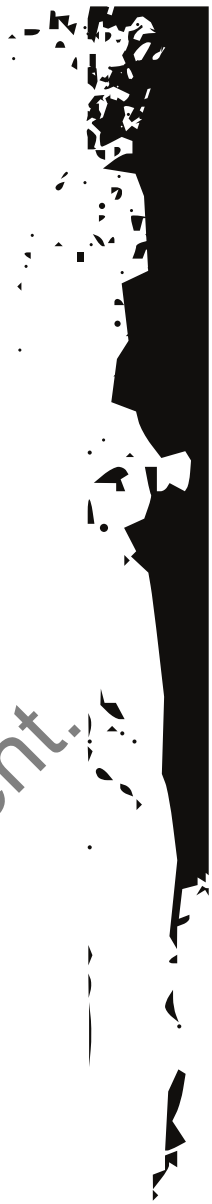
THE VOICE INSIDE

by Lakeisha W.



Don't listen to the negative voices.
Don't let them decide all your choices.
Be the person who turns the other cheek
Don't cry and let them know you're weak.

Getting the best of you is their game.
They look at you as if you aren't the same.
Listen to that little voice inside you.
Let that voice inside guide you towards the dreams you need.
Let that voice inside be the blood you bleed.
Carry yourself like you're the only one there,
As the words they say pass through your ears.

Don't let people bring you down, prevail and win.
You're the only one standing the firm ground.
It's your mission, so you tell when it begins.
That little voice inside is your guide through your life.

And, as that dream expands, you do too.
That little voice inside takes an important role in carrying you.
As a favor, let's dream and make reality leave those negative people in their own jealous fantasy.

All4You2! Messages

RESPECT. Respect yourself, your body and your partner by having sexual limits.

PROTECT. The best way to avoid STDs and protect yourself and your partner is to choose not to have sex.

PROTECT. Another way to protect yourself is to limit the number of sexual partners. Using latex condoms every time you have sex can also reduce your risk of STDs, including HIV.

HOW DO I WAIT?

by Jolita Phillips

Going from class to class knowing that more than half has already been taken

All of the pressure makes me question why I am still waiting

Should I give in to the boy that I've been dating?

When the topic comes up between my friends I'm the one who's not relating

Some say I should just wait until I'm in love

Yet I wonder is that really enough?

I hear the stories of others getting hurt and just used

I'm young still untaken and confused

Television portrays that having sex is so good

I really like this boy and he thinks I should

How am I sure if he's the right one?

How would it be once we're done?

This could end with me feeling either very regretful or great

So hard, how do I wait?

Should They or Shouldn't They?

Jordon and Jaden

have been together for a month. They see each other about once a week. They still go out with other people too. Tonight they are at home alone and things are heating up. Should they have sex? What do they need to think about? What could happen if they do? What would happen if they decide to wait?

Katrina and Avery

are in tenth grade. They've been together almost a year. They both decided they didn't want to have sex until they were older, but some of Katrina's friends are having sex and she is re-thinking her decision. Should Katrina and Avery have sex? What do they need to think about? What could happen if they do? What would happen if they decide to wait?

Alicia and Donnel

just hooked up at a party. They really like each other. They are leaving the party in Alicia's car to find somewhere quieter. Should they have sex? What do they need to think about? What could happen if they do? What would happen if they decide to wait?

Partner Risk Stories

Directions: Read the stories with your group. For each story, rate the risk of STD on a scale from 0 (no risk) to 3 (very high risk). Then discuss the questions on the back of this page in your group.

Anita and Jordon

Anita and Jordon have been together since ninth grade. They've both decided that not having sex is the best choice for them. They feel that their relationship is growing stronger because of their choice.

STD Risk: 0 1 2 3

Calvin and Natalie

Calvin and Natalie hang together and have a sexual relationship. Last week, Natalie was away on a school trip. Calvin hooked up with Mimi at a party and they had sex. Later in the week, he went out with his old girlfriend Bianca and had sex with her too. Calvin's glad Natalie will be home soon, because he likes her best.

STD Risk: 0 1 2 3

Jayden and Quinn

Jayden and Quinn have been together for two years. They have sex, but only with each other. Jacob has never had sex with anyone else. Quinn had sex with a prior partner, but broke up 6 months before getting together with Jayden.

STD Risk: 0 1 2 3

Sam and Riley

Sam used to be in a sexual relationship with Luke. They broke up after Sam got involved with Carlos and they started having sex. Then Sam met Riley. Sam liked Riley a lot, but wasn't sure about leaving Carlos. After a few weeks of seeing both Carlos and Riley, and having sex with each of them, Sam broke up with Carlos. Sam's only been having sex with Riley since then.

STD Risk: 0 1 2 3

YOU SAY YOU LOVE ME

by Robert Green

You say you love me but won't use a condom
Because the only thing you're thinking about is having some fun
But you won't get anything from me not even a smile
See playing this game isn't worth the while
You say 'come on baby enjoy the ride'
But I see nine months later a baby at my side
You say you love me but won't get tested
I'm just trying to make sure you're not infected
Just to see if you have syphilis or gonorrhea
Because before you give it to me I'll say 'see ya'
It could be worse you might have AIDS
Then it's your life that starts to fade
You say you love me boy are you persistent
But despite your reasons I'm going to stay resistant
See I'm going to go to college and make something of myself
Instead of trying to see how three minutes of pleasure felt
Instead of doing what you want I'm going to use common sense
Sorry baby boy but I'm using ABSTINENCE!!!

Should I Say Anything?

Directions: Fill in the "You" lines using the "Pst" steps.

Setting the Stage

You go back to your partner's house after a party. No one is home. You begin kissing, touching and undressing each other. The last time you had sex, you and your partner talked about getting protection for STDs. Your partner promised to get condoms. You want to use condoms because you are worried about STDs.

Your partner continues kissing and touching, but doesn't say anything about protection. In the past you went along and had sex without protection, but you've decided that from now on you aren't willing to take a chance.

You: Did you remember to get some condoms?

Your Partner: No, I forgot them. But nothing is going to happen. Besides, I've only been with you.

You: _____

_____

Your Partner: Look, don't start trippin' now. We've had sex before without one.

You: _____

_____

Your Partner: Why should we be feeling rubber when we could be feeling each other? It's not natural.

You: _____

_____

"PST" ☐ Pick your limit ☐ Say it strong ☐ Tell why

The Party

Directions: Fill in the "You" lines using the "Pst" steps.

Setting the Stage

You and your partner have been together for 4 months. Every time you're together you have a great time. You are at a small party. Most of the other couples have gone to other rooms—probably to get down. Your partner says "I love you," and leads you to a bedroom. You start kissing, holding and touching each other. Things are moving fast. You aren't ready to take it that far right now.

You: Hold up. I'm not ready to have sex.

Your Partner: You know how I feel. This will be the perfect ending to a great night.

You: _____

_____

_____

Your Partner: I've taken care of everything, just trust me, and I'll make this a night you won't forget.

You: _____

_____

_____

Your Partner: Baby, just for a moment, let's become one.

You: _____

_____

Remy and Phoenix: Warning Signs

Directions: Review the story with your partner. Highlight the clues or warning signs in the story for Remy and Phoenix.

Remy is in high school. It's Saturday and Remy's Nana thinks Remy is doing homework at a friend's house that night, but Remy and the friend went to a party instead. When they got there, the house was a little dark and there were no parents. Music was playing and some people were dancing. There was a bar set up near the kitchen and others were sipping alcohol. Some kids were hooking up in the rooms.

Remy's friend went off to talk to some other people. Remy was feeling uncomfortable without the friend, and decided to have a few drinks. Just when Remy was wishing someone would come over and talk, Phoenix, someone Remy had seen at school, came over.

Phoenix and a few friends had been drinking. Phoenix's friends were talking about getting down tonight. Phoenix joined in the talk, but didn't mean it. Sex had really messed up a relationship in the past, so Phoenix had made a private decision not to have sex again, at least for a few years. Phoenix didn't know many people at the party, so was happy to see Remy. Phoenix got a drink and offered another one to Remy. Remy wasn't sure about drinking more, but took the drink anyway.

Phoenix asked Remy to dance and they started feeling good. Phoenix saw some friends watching and wanted to impress them. So Phoenix started to rub on Remy in ways that felt kind of good, but also were a little uncomfortable.

The touching felt good to Remy too, but, like Phoenix, Remy felt a little uncomfortable and wasn't sure touching in that way was OK. But Remy decided that Phoenix was cool and let the touching keep going. Both Phoenix and Remy were feeling odd because everybody was watching. They were also feeling the alcohol and it was hard to think clearly.

Soon their friends were signaling for them to go to a room, so Phoenix suggested the idea to Remy. Remy wasn't sure whether it was a good idea, but liked Phoenix and didn't want to deal with their friends' responses, so they went.

Remy took Phoenix's hand and started to go down the hallway. They turned the knob on one of the doors. Someone yelled "Hey!" "Ooops—Sorry!" they said, laughing nervously. "Wrong door!" They tried the next one a little more carefully. It was empty. Remy and Phoenix went into the bedroom. Soon they were lying on the bed, kissing and messing around. They didn't really talk about having sex. It just happened. After they did it, Remy and Phoenix found their friends and went home.

What's in a Relationship?

All relationships go through cycles. People who feel love and affection for each other can also experience irritation or even dislike. Every relationship has both positive and damaging elements.

So what makes a relationship healthy or unhealthy?

- In a healthy relationship, positive elements are always there in some way—even when people disagree or are angry with each other.
- In an unhealthy relationship, damaging elements take over, making both people unhappy.

Positive Elements	Damaging Elements
Self-esteem—each person has a feeling of self-worth.	Jealousy—one person is fearful of losing the other person's affection.
Responsibility for self—each person is responsible for thoughts, feelings, and actions.	Over dependency—one person relies on the other person to fulfill all needs.
Flexibility—each person allows for and accepts changes within relationship.	Selfishness—one person has little or no concern for the other person in relationship.
Trust—each person has confidence in the other person's honesty and reliability.	Control—one person tries to have power over the other person's behavior or makes all of the decisions.
Honesty—each person reveals who he/she is, both strengths and weaknesses. They don't hide or pretend.	Emotional, physical, or sexual abuse—one person harms or threatens to harm the other person. Attack of a person's feelings, personality, character, ability, or dignity is also abusive.
Communication—each person exchanges information, thoughts, & feelings. Communication is needed for intimacy.

Call or Visit a Clinic

Directions: Pick a local clinic from the list you got in class. Call to find out what services the clinic offers, how much it costs, and what type of confidentiality policy they have. You can visit the clinic instead of calling if you want to. Once you call, please fill in the information below and bring it back to class. You can share what you learned during Lesson 14.

Name of clinic: _____

Clinic address: _____

Clinic phone and hours: _____

Check the services available at this clinic:

☐ STD testing ☐ HIV testing ☐ Pregnancy testing ☐ Contraceptive services

☐ STD treatment ☐ Other services: _____

How much does a routine exam or consultation cost? _____

What is the clinic policy about confidentiality? _____

How comfortable did you feel calling or visiting this clinic?

☐ Uncomfortable ☐ Somewhat comfortable ☐ Very comfortable

What made it uncomfortable or comfortable? _____

Would you tell other young people your age to visit this clinic if they needed information or services? ☐ Yes ☐ No. Why or why not?

Thank You!

Ending Relationships

Relationships of all kinds can come to an end for many different reasons. Sometimes, both people agree that a close friendship or relationship isn't right for them anymore. More often, only one of the people decides the relationship is no longer a good choice.

Signs of Trouble

Warning signs that a relationship may be in trouble include:

- **Change in communication.** One person doesn't listen or pay attention. This can make the other person feel unappreciated or undesirable.
- **Increase in unresolved conflicts.** When misunderstandings aren't resolved, resentment can build. Eventually, one or both people become angry or frustrated.
- **Change in the amount and quality of time spent together.** Sometimes this is normal—for example, when one person is particularly busy. A sign of trouble would be if one or both people seek the company of others to avoid the relationship.

Signs of Emotional or Physical Abuse

Abuse of any kind is serious and should not be tolerated.

It's a warning sign of abuse if your partner or friend:

- **Always has to "win"** an argument and doesn't respect your views when you disagree.
- **Is threatened** by your accomplishments.
- **Discourages you from having other friendships** and tries to isolate you from others.
- **Threatens violence** toward you or toward himself or herself to make you stay.
- **Hits,** pushes, slams you into things, throws things at you, or has violent outbursts toward you.
- **Becomes verbally or physically abusive** after drinking alcohol or using other drugs.
- **Forces or manipulates you into sexual activities** (kissing, touching, or any type of intercourse) against your wishes.

Ending Relationships *(continued)*

How to End It

Sometimes troubled relationships can be saved if both partners are committed to working on communication and change. At other times, a person realizes it's time to end a relationship.

If you decide you want to end a relationship, here are some guidelines:

- **Make the decision.** Be sure that ending the relationship is what you really want. You may want to talk out the decision with a friend or family member. Once you have decided, tell your friend or partner so he/she doesn't learn about it from someone else.
- **Be prepared to feel uncomfortable.** You may feel lonely and unhappy after a relationship ends, even if you're the one who wanted to end it. You may feel a sense of loss, grief or failure. You can work through this.
- **Choose a neutral place where you can talk in-person.** Tell your partner of your decision to end the relationship in a place where you can leave if you need to. Be prepared for feeling awkward and uncomfortable.
- **Explain your reasons using "I" statements.** Clearly state why you want to end the relationship. Use "I-statements" to avoid blaming your partner, like: "I don't feel supported in my school pathway now and I don't want to change that pathway" or "I found out you were seeing someone else. I can't be in a relationship with someone who is seeing someone else."
- **Mean it.** Be sure your body language and tone of voice match the message. Make the end final. Don't make future plans or promises as this may make it even harder on both of you. Remember that you'll probably experience the problems again, unless you and your partner are both committed to improving the destructive elements.

Coping with a Break-Up

- **Practice thought-stopping.** When a thought about the former partner or friend comes to mind, tell yourself, "Stop!" and think about something else. Practice whenever thoughts of the ex-partner or friend occur.
- **Think realistically.** See the relationship as it truly was, instead of idealizing your former partner or friend. Remember the problems in a realistic, honest way.
- **Build yourself up.** Focus on your positive traits and accomplishments. If you have negative thoughts about yourself, try thought stopping. Do things you enjoy and be around people who help you feel good about yourself.
- **Develop other relationships.** These can provide support. If the relationship with your former partner or friend made time with other friends scarce, reconnect with new and old friends now.
- **Look ahead.** Think about what you can learn from both the positive and negative elements of the relationship that has ended, and apply these lessons in your next relationship.

Should It End? Case Study 1

Directions: Read the case study and answer the questions.

Jerome and JJ

Jerome and JJ have been together for a year. Jerome hopes to get a scholarship to an out-of-state university. JJ really enjoys sports and having a good time with friends. JJ studies enough to pass, but school isn't a big priority. JJ wants to get a job in town after graduation, to be near family and friends.

Lately, Jerome and JJ have been fighting. JJ thinks they should spend more time together and partying with friends and less time studying. Jerome can't understand why JJ doesn't apply to college too. JJ thinks they'll work things out, but some days Jerome doesn't call or answer the phone to avoid arguing.

One night, after another argument about school versus partying with friends, Jerome decides it's time to end the relationship.

Case Study 1: Questions

1. What signs show the relationship is in trouble?

2. What are Jerome's reasons for ending the relationship?

3. How should Jerome end the relationship? What should Jerome say? Where should Jerome end it?

4. What are healthy ways JJ can deal with the emotions of losing a partner? What should Jerome do if JJ keeps trying to get back together?

Activity Sheet 10.3c

Should It End? Case Study 2

Directions: Read the case study and answer the questions.

Martina and David

Martina and David have been seeing each other for 2 years. Martina is still in high school. David is out of high school. They see each other mostly on weekends. Martina met David, a friend of her older brother, at a family event.

At first Martina had a great time with David. Lately, though, she's been feeling uncomfortable. He tells her that he's tired of hearing about high school and her friends, and sometimes he hints about getting married.

Martina has begun spending more time with a guy in her class. She thinks they have much more in common. Martina knows David cares about her, but she wants to spend time being a teenager while she still can. She also knows her parents would be happier if they were not seeing each other.

Martina doesn't want to hurt David's feelings, but she doesn't want to continue the relationship either.

Case Study 2: Questions

1. What signs show the relationship is in trouble?

2. What are Martina's reasons for ending the relationship?

3. How should Martina end the relationship? What should Martina say? Where should Martina end it?

4. What are healthy ways David can deal with the emotions of losing a partner? What advice would you give Martina if she sees David at future family events?

Should It End? Case Study 3

Directions: Read the case study and answer the questions.

Cory and Max

When Cory and Max first started going together, Max said he wanted Cory all to himself. So Cory spent more and more time with him. After a while Cory's other friends stopped calling.

One day, Cory met someone else Cory knew from middle school and had a fun conversation. Max became very jealous. For weeks he accused Cory of secretly meeting someone else. Cory even caught him reading messages on her phone. One day Max screamed at Cory and punched the wall.

This scared Cory and she told Max they shouldn't see each other for a while. He became very upset and told her he couldn't live without her. He followed her everywhere and called her all the time. Finally, Cory agreed to get back together. But a few months later, there were more jealous accusations. Every time Cory tried to break up, Max would convince her they should stay together.

Finally, Cory has made up her mind to end the relationship for good. Max has become even more jealous and possessive. He watches her every move and is constantly accusing her. She knows this isn't healthy for either of them.

Case Study 3: Questions

1. What signs show the relationship is in trouble?

2. What are Cory's reasons for ending the relationship?

3. How should Cory end the relationship? What should Cory say? Where should Cory end it?

4. What are healthy ways Cory can deal with the emotions of ending a relationship? What advice would you give Max to help him in future relationships?

Activity Sheet 10.3e

How Does It End?

Directions: Read the situation and then create a roleplay that indicates how the relationship might end. Be as realistic and believable as possible.

Situation

DJ and Kim have been dating for 3 months. They go out on weekends and several nights during the week.

A few times, Kim has made plans to spend time with other friends and hasn't included DJ. DJ felt hurt and shared these feelings with Kim.

Kim recently made plans to attend a concert with a few other people, without inviting DJ. Friends said they saw Kim messing around with someone else at the concert.

At this point, DJ has decided to end the relationship. Here is their conversation:

DJ: _____

Kim: _____

DJ: _____

Kim: _____

DJ: _____

Kim: _____

DJ: _____

Kim: _____

DJ: _____

Kim: _____

CONSEQUENCES OF TEEN PREGNANCY

by Omar Simmons

Rather you're a young man or a young lady
There's consequences to having a baby
Some are good, others are bad
It's more stressful than any struggles you've had
Especially if you're not ready or prepared
The pressure can be heavy so be aware
It's your choice to bring a baby boy
Or a baby girl into this crazy world
But my advice is to wait until you have a spouse
And both of you are sure and have no doubts
So be wise, analyze where you are in life
Before you decide if having one is right
Having one too soon can prove too much
It can feel like you're crowed and about bust
Having to work late, plus make a hot plate
While juggling jobs to pay for your own place
Not just for the females, but also the guys
You must be there not just supervise
Then disappear, acting like you don't care
But you do it's just your heart is full of fear
You're pulling in a couple checks
Still you're deep in debt
Payments are piling up, your child is crying
You weren't ready, now on the inside you're dying
So females mature before you say yes
And will the guys please do what's for the best
Then when you have a baby, prince or princess
You'll reach nothing less than pure success.

How to Use a Condom

Do	Don't

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR Associates

Condom Practice

- ☐ Check the condom package for expiration date and FDA approval for STD prevention.
- ☐ Open the condom package. Be careful not to tear the condom.
- ☐ Make sure the condom is right side out. Check by unrolling the condom a little over two fingers to see if the tip of the condom naturally sticks out.
- ☐ Pinch the tip of the condom between your thumb and forefinger to get rid of any air pockets and to create a space for the semen during ejaculation.
- ☐ Then unroll the condom over the index and middle finger of your other hand. Unroll the condom all the way down to the bottom of your fingers.

When Actually Using a Condom...

- ☐ *After ejaculation,* hold the condom around the base. Gently pull the penis out of the partner's body while it is still erect.
- ☐ Take the condom off carefully so the semen doesn't spill. Roll it off *starting at the base* of the penis.
- ☐ Dispose of the condom in the trash. *Never reuse* a condom.

HIV Testing

An HIV test tells if a person has HIV.

How Is the Test Done?

Before the test, a counselor or health worker may explain the test and answer any questions. Counselors may also talk about HIV risks and help people plan to deal with either a positive or negative result.

During the test, a health worker takes a little blood from the person's arm or takes some cells from inside the cheek or gums with a cotton swab. The sample is sent to a lab for testing. Some clinics can test the sample on site.

The most common test is the HIV antibody test. It checks to see if the person's body has antibodies to HIV. Antibodies are proteins the body's immune system makes in response to an infection. If a person has HIV antibodies, it means the person has HIV.

A second type of HIV test looks for antigens. Antigens are the proteins that produce antibodies. They can be detected very soon after infection (1–3 weeks) by testing the blood. HIV antigen tests are more expensive and are not typically used for routine HIV testing. If a person has antigens for HIV, it means the person has HIV.

A PCR (polymerase chain reaction) test is used to test blood for the genetic material of HIV. Blood supplies in most developed countries are screened for HIV using PCR tests. PCR tests are also used to measure viral loads for people who are HIV positive.

Getting the Results

It can take about 2 weeks to get the test results back. The person is asked to return to the test site to get the results. Many clinics offer a quick test. Results are available in 30 minutes. Positive results on the quick test must be tested again. Results of the second test take 2 weeks.

(continued)

© ETR Associates

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

HIV Testing *(continued)*

A counselor helps people understand what the results mean. If the results are negative, the counselor discusses ways to prevent HIV infection in the future. If the test is positive, the counselor helps people begin to deal with the medical and emotional issues associated with a positive test, and discusses how to keep from passing HIV to others.

Who Knows the Test Results?

Most test sites offer confidential testing. This means the test result will be told only to the person being tested. But the result also may be put in the person's medical file.

Some areas offer anonymous testing. This means the person gets a code name or number when taking the test. There is no way to link the person's name, address or social security number with the results. The person being tested is the only one who knows the results.

Teens can be tested without getting parents' permission, and test sites will not give the results to parents or other adults. Teens should call the test site beforehand to find out what the policies are.

Home Testing Kits

People can buy a home testing kit at a pharmacy or online. The person using the kit mails a small blood or saliva sample to a lab for testing, using a code name or number. Test results are given by telephone when the person calls and gives the code. Home testing kit results are anonymous.

Who Should Be Tested?

It's not who people are but what they do that puts them at risk. People are at risk for HIV and should be tested if:

- They've had vaginal, anal or oral sex with someone who has other partners.
- They've had sex without using a latex condom.
- They've shared needles or syringes to inject drugs or have had sex with someone who has.
- They've shared needles or other sharp objects for tattoos, piercing or for any other reason.

Testing is important because the sooner people find out they have HIV, the earlier they can begin getting care and treatment.

© ETR Associates

STD Testing

There are many different tests for sexually transmitted disease (STD). The type of test used depends on the STD.

How Is the Test Done?

The most common ways to test for STD include:

- taking a sample of blood from the finger or arm
- taking a urine sample
- taking a sample of fluid from the penis, vagina, throat or anus and examining it under the microscope or growing it in a culture in the laboratory

Some STD can be diagnosed during an exam by a doctor or health worker. For example, if a person had herpes, a doctor might be able to tell just by looking at the sores. But the doctor still might do a test to be sure.

Getting the Results

It takes anywhere from a day to 2 weeks to get test results. It depends on the type of STD being tested for, and where the tests were done.

Some clinics call only if the test results are positive. People are told that if they don't hear from the clinic in a certain period of time, they can assume their results are negative. But it's a good idea for the person to follow up and call the clinic to be sure. Any person going for testing should ask how the clinic tells people about the results.

Who Knows the Test Results?

Clinics usually arrange to get test results to a person confidentially, so no one else can learn the results. Sometimes the person will be asked to come back to the clinic.

Teens can be tested without getting parents' permission, and clinics will not give the results to parents or other adults. Teens should call the clinic beforehand to find out what the policies are.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR Associates

STD Testing *(continued)*

Who Should Be Tested?

Anyone who has signs or symptoms of an STD, or who has a partner who has signs or symptoms, should be tested. These are some of the most common symptoms:

- sores, bumps, blisters or rashes in the genital area
- pain or burning when urinating (using the bathroom)
- unusual discharge from the penis or vagina

Some STDs, such as gonorrhea or chlamydia, don't always cause symptoms, so people may be infected and not know it.

People should also get tested for STD if:

- They have more than one sex partner.
- Their partner has other sex partners.
- They've had sex without using condoms outside of a long-term, monogamous relationship.
- They're planning to have sex with a new partner.
- They think they might be at risk for any reason.

If a person tests positive for an STD, his or her partner(s) should be tested too, and treated, if needed.

It can be difficult to tell a partner about an STD diagnosis, but it's important. A partner who doesn't know he or she has been exposed can get sick or pass the STD to someone else.

People who don't want to tell their partners themselves can ask the doctor's office or clinic to notify their partners. Sometimes counselors who work at a city or county public health office will interview people who test positive for STD and get the names of their sexual contacts, so they can notify these people that they may have been exposed to an STD and refer them for testing and treatment. This helps control the spread of STD.

© ETR Associates

Pregnancy Testing

Women who think they're pregnant can either go to a family doctor or clinic to be tested, or use a home pregnancy test.

How Is the Test Done?

Pregnancy tests check for the pregnancy hormone, called HCG (human chorionic gonadotropin) to see if a woman is pregnant. The tests used by health workers are either urine or blood tests. Home pregnancy tests are urine tests.

Getting the Results

With a urine test at a clinic or doctor's office, results are provided a few minutes after the test. If a blood test is used, it may take several days to get the results. Some clinics may ask the woman to return to the clinic. Other clinics may call with results, or have the woman call the clinic to get the results. Women going for testing should ask how the clinic tells people about the results.

Home pregnancy tests can be bought at drugstores or online. There are many different brands. A person can buy a test without a prescription. Home pregnancy tests are easy to use, but it's very important to read and follow the directions exactly. If home tests are not used properly, the results may not be correct. Results from most home pregnancy tests are ready within a few minutes after the test.

Who Knows the Test Results?

If the results are not given immediately, clinics usually arrange for a way to get the results to the woman confidentially, so no one else will know the results.

In most states, teens can be tested without getting parents' permission, and clinics will not give the results to parents or other adults. Teens should call the clinic beforehand to find out what the policies are.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR Associates

Pregnancy Testing *(continued)*

Who Should Be Tested

A woman whose period is late or who misses a period should consider being tested for pregnancy. Some women may miss periods for other reasons (such as rapid weight loss or extreme stress). But it's better for a woman to know if she is pregnant as soon as possible, rather than waiting another month or assuming her period is late because of some other reason.

If a home test is used and shows a positive result, the woman should call her doctor or a clinic. Many doctors and clinics will want to do a blood test to be sure the home test results are correct. Women who are pregnant need to set up an appointment for their first prenatal visit. During the appointment the doctor will determine how far along the pregnancy is and discuss what to expect. The doctor or health worker will also look for possible risks for an abnormal pregnancy.

Introduction

Making Proud Choices! An Evidence-Based, Safer-Sex Approach to Teen Pregnancy and HIV/STI Prevention is designed to give adolescents the tools they need to reduce their risk of unintended pregnancy, HIV and other STIs. The goal is to increase knowledge and perception of personal vulnerability, develop positive attitudes toward safer sex, and build the skills and confidence needed to abstain successfully or to use safer sex practices willingly and effectively if they choose to be sexually active.

It isn't easy to motivate people to modify their sexual behavior, even when that behavior puts them at risk. Hence, the model of human behavior used to understand sexual risk behavior in ***Making Proud Choices!*** draws upon social learning theories, and the interventions proposed for changing that behavior reflect a cognitive-behavioral approach. This curriculum has also been informed by data gathered through numerous focus groups as well as the developers' extensive experience working with young people.

In order to encourage young people to adopt less risky behaviors they must be provided with the following crucial tools:

- The information they need to understand the issues.
- The cognitive skills that will allow them to examine their beliefs about personal risks and consequences and to analyze the behaviors or situations that increase their risk of pregnancy, HIV and other STIs.
- The intrapersonal (within self) skills to understand and manage their feelings and thoughts.
- The interpersonal (between self and others) skills to define and exercise behaviors that reduce personal risk.
- A sense of self-efficacy or the confidence required to allow them to make safer decisions about their sexual choices.
- The motivation to apply these skills to their everyday lives.

The ***Making Proud Choices!*** curriculum that follows consists of three sections. The first is a Facilitator's Guide that includes information about facilitating the curriculum, the theory behind it and evaluation of the curriculum with behavioral findings. It also covers curriculum teaching strategies and format of the intervention modules, including information about group agreements and training strategies such as brainstorming, roleplaying, and interactive activities and games. The second is the ***Making Proud Choices!***

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

curriculum itself. The final section, the appendixes, includes optional activities that can be included in the curriculum's implementation, additional information about common STIs, contraceptive methods and drugs, guidelines for managing problem behavior, answers to commonly asked questions and a glossary.

This curriculum is intended to reduce the incidence of unprotected sexual behavior among adolescents and help them make a difference in their lives by making proud and safer choices about their sexual behavior. The facilitator's ability to deliver the information and conduct the exercises contained in this manual will determine the success of the curriculum, so please take the time to carefully read and understand the basic principles, key elements and content of each session. Our collective efforts can help prevent pregnancy, STIs and HIV in adolescents and have a meaningful impact on the lives of our nation's young people.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Overview of the Curriculum

Making Proud Choices! An Evidence-Based, Safer-Sex Approach to Teen Pregnancy and HIV/STI Prevention is an eight-module curriculum designed to empower adolescents to change their behavior in ways that will reduce their risk of becoming infected with HIV and other STIs, and significantly decrease their chances of being involved in unintended pregnancies. The curriculum acknowledges that abstinence is the most effective way to eliminate these risks. However, realizing that abstinence is not the path that many young people will choose, the curriculum spends a great deal of time encouraging the practice of safer sex and condom use. The curriculum also addresses the underlying attitudes and beliefs that many young people have about birth control and condoms, provides information and exercises that teach adolescents how to use condoms correctly and gives them the confidence they need to choose and negotiate safer-sex practices.

Note: Throughout this curriculum the importance of effective and consistent use of protection and contraception are mentioned as an important strategy for reducing the risk of HIV and other STIs, as well as pregnancy. Any reference to protection is meant to include the external (male) condom, internal (female) condom and dental dam. The use of the term protection *is meant to be inclusive of all people, regardless of their gender, sexual orientation or type of usage. The terms* birth control *or* contraception *may be used interchangeably, referring to methods used to prevent pregnancy.*

The ***Making Proud Choices!*** curriculum was designed to be used with smaller groups ranging from six to twelve participants, but it can be implemented with larger numbers as well if more time is built into each session. It is appropriate for various community settings, including schools and youth agencies. The curriculum has 8 hours of content divided into eight 1-hour modules. It can be implemented in the 2-day format (four modules each day), 4-day format (two modules each day) or 8-day format (one module each day).

Curriculum Objectives

At the completion of the ***Making Proud Choices!*** curriculum youth will have:

- Increased knowledge about prevention of HIV, other STIs and pregnancy.
- More positive attitudes/beliefs about birth control and condom use.
- Increased confidence in their ability to negotiate safer sex and to use condoms correctly.
- Increased negotiation skills.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

- Improved condom use skills.
- Stronger intentions to use birth control and condoms if they have sex.
- A lower incidence of HIV/STI risk–associated sexual behavior.
- A stronger sense of pride and responsibility in making a difference in their lives.

Content Outline

The ***Making Proud Choices!*** curriculum has four major components. The first component focuses on goals and dreams and their relationship to adolescent sexual behavior. The second component emphasizes knowledge, including the causes, transmission and prevention of HIV, other STIs and pregnancy. The third component focuses on beliefs and attitudes about condoms, birth control methods, pregnancy, STIs and HIV. The fourth stresses skills and self-efficacy including negotiation-refusal and condom use skills. It also provides time for practice, reinforcement and support.

The Modules

- Module 1: Getting to Know You and Steps to Making Your Dreams Come True
- Module 2: A Possible Outcome of Unprotected Sex: HIV Infection
- Module 3: Attitudes and Beliefs about HIV/AIDS and Condom Use
- Module 4: Strategies for Preventing HIV Infection: Stop, Think and Act
- Module 5: Possible Outcomes of Unprotected Sex: STIs
- Module 6: A Possible Outcome of Unprotected Sex: Pregnancy
- Module 7: Developing Condom Use and Negotiation Skills
- Module 8: Enhancing Refusal and Negotiation Skills

Types of Activities

The ***Making Proud Choices!*** curriculum includes a series of fun and interactive learning experiences designed to increase participation and help adolescents understand the risk behaviors that can lead to pregnancy and STIs, including HIV. Activities are designed to help youth feel comfortable practicing condom use, address their concerns about the negative effects of practicing safer sex and build their condom-use skills as well as their ability to comfortably negotiate safer sex practices.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Facilitators may wish to add time to some of the modules, if possible, to allow for further discussion or to extend and reinforce the skills practice.

The activities involve viewing video clips, playing games, brainstorming, roleplaying, engaging in skill-building exercises and small-group discussions designed to build group cohesion and enhance the learning experience. Each activity is brief, and many require the participants to get up out of their chairs and interact with one another. This maintains their interest and attention in a way that lectures or lengthy group discussions do not. Below is a description of the types of activities used as well as their underlying philosophies and goals.

- The goals and dreams activity encourages the adolescents to consider their goals for the future and to think about how participating in unsafe sex might affect the attainment of these goals.
- Videos are used to depict adolescents in various situations. These videos evoke feelings, thoughts, attitudes, beliefs and stereotypes about pregnancy, HIV and other STIs, sexual involvement and HIV/STI prevention skills that are then discussed in a group setting. In addition to the videos provided with the curriculum, ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.
- The roleplay scenarios are designed to provide participants with the confidence and skills necessary to negotiate condom use. They also recommend a variety of ways in which the prevention skills learned in this program can be implemented in the participants' lives.
- The entire curriculum incorporates the ***Making Proud Choices! Be Proud! Be Responsible!*** theme designed to encourage the participants to be proud of themselves, their families and their community, and to behave responsibly for everyone's sake.

Training

It is highly recommended that educators who plan to teach ***Making Proud Choices!*** receive research-based professional development to prepare them to effectively implement the curriculum with fidelity for the intended target group. ETR provides research-based Training of Educators (TOE) that employs the key components required for quality implementation, including learner engagement, modeling, skills practice and follow-up support. Onsite and regional TOE on ***Making Proud Choices!*** is available through ETR's Professional Learning Services. For more information, please visit www.etr.org/ebi/training-ta/types-of-services.

Adapting This Program for Your Population

Program facilitators are encouraged to make minor adaptations (also referred to as "green light" adaptations) to optimize the program for the young people receiving it. Such adaptations are intended to help tailor the curriculum to the needs of participating youth. Examples of minor adaptations include updating statistics and changing the names or editing the language or scenarios in roleplays to better reflect your youth population.

It's recommended that facilitators work with a small group of youth to review the roleplays and other activities and suggest minor changes to increase relevance before implementation. Other allowable enhancements include teaching reproductive health lessons before starting the program, and adding lessons before or after the curriculum lessons to address additional sexual health issues, such as dating violence or electronic dating aggression.

It is also acceptable to add time to the modules when needed to ensure that all the relevant content can be covered. Lengthening sessions can allow more time for review of previous lessons, discussion, questions, roleplay practice, personalization, video viewing and other activities. This adaptation may increase effectiveness.

Adaptations such as re-ordering the curriculum lessons or inserting additional content into the middle of the program are considered "yellow light" adaptations because they can have an impact on program flow and effectiveness. It's best to discuss these kinds of changes with the program developers first.

Major changes (also referred to as "red light" adaptations) are discouraged and may significantly affect and alter program effectiveness. Examples of major changes include dropping entire activities or lessons, or altering the key messages of the program.

Adaptation guidelines for evidence-based curricula can be found at www.etr.org/ebi and include additional examples of green-, yellow- and red-light adaptations.

Researchers and organizations interested in making significant adaptations to this curriculum for use in an evaluation are asked to contact ETR for support and permission first. Such adaptations might include combining the curriculum with another evidence-based program or adding a new element or component.

CURRICULUM COMPONENTS AND FORMAT

Each module included in the ***Making Proud Choices!*** curriculum contains different activities. Reduced images of worksheets, facilitator materials and posters are included at the end of each module. The first pages of each module explain the following information.

Goals

A set of statements that give the facilitator a reference point for what participants will learn from the module.

Learning Objectives

A set of measurable objectives designed to help the facilitator "spot-evaluate" the extent to which a given activity has been successfully completed by the participants.

Strategies/Methods

A list of methods included in the module to achieve the objectives and goals. For example, these may include videos, mini-lectures, brainstorming and roleplaying.

Materials Needed

A list of equipment and materials needed for the module and for each specific activity.

Implementation Time / Time Needed

The amount of time allotted to each activity in the module (e.g., Lecture—10 minutes; Small-Group Exercise—15 minutes). Facilitators should conduct each activity in the time allotted. Facilitators may wish to add time to some of the modules, if possible, to allow for further discussion of videos and other activities, or to extend and reinforce the skills practice.

Rationale for Each Activity

The rationale for each activity is listed on the first page of the activity. It explains how and why the activity is helpful to participants' learning. All materials and exercises contained in the module are designed to help the participants to achieve these stated purposes.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Activities

Instructions for implementing each activity are fully described. For example, in the case of a roleplay exercise, each character receives a description of his or her circumstances and concerns. These exercises are designed to build prevention skills and are an essential part of the program.

Procedures

The procedures for each activity are numbered and include all the steps necessary to implement the activity. Whenever the facilitator is to say a specific instruction or mini-lecture aloud, the material appears in a box.

For example, the procedure would look like this:

1. **Introduce the activity by saying,**

> **We are going to do a brainstorming activity now. What I'd like you to do is . . .**

Although it is not necessary to say verbatim what appears in the box, facilitators should be sure that the content and tone are conveyed. Some facilitators find that memorizing the materials works best for them. The group will probably be more attentive if they do not think the facilitator is reading to them.

Facilitator Notes

Facilitator notes give tips to facilitators about implementing the activity. These notes appear at different points in the curriculum where background information or special teaching suggestions are provided. They are contained within a shaded box, as in the following example.

FACILITATOR'S NOTE

Be sure to post the group agreements on the wall at all times. The group agreements should be posted throughout all the sessions of the program.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Mini-Lecture Notes

Where mini-lectures appear in the curriculum, the lecture notes provide the key ideas to be presented; however, it is assumed that the facilitator will possess a working knowledge of the concepts being taught.

Summary Statements

Each activity and module ends with a brief statement from the facilitator about the key take-away messages for participants.

Student Workbooks

Student workbooks for participants include worksheets for individual and small-group work and roleplay materials. The workbook contains all the needed worksheets for the curriculum activities.

THEORETICAL FRAMEWORK

Research shows that curricula are most effective if they are based on a sound theoretical framework. ***Making Proud Choices!*** draws upon three theories: the social cognitive theory, the theory of reasoned action, and its extension, the theory of planned behavior. These theories have been shown to be of great value in understanding a wide range of health-related behaviors.

Two major concepts are included in these theories: (1) self-efficacy or perceived behavioral control beliefs, which are defined as people's confidence in their ability to take part in the behavior, e.g., use a condom; and (2) outcome expectancies or behavioral beliefs, which are beliefs about the consequences of the behavior. Experience shows that all of the beliefs below are critically important to change behavior. The ***Making Proud Choices!*** curriculum addresses each of the principles, usually in more than one activity.

Below is a description of the two types of self-efficacy or perceived behavioral control beliefs emphasized in ***Making Proud Choices!***

Practicing safer sex is easy: "I can do it"

Many young people find it difficult to practice safer sex because of peer pressure, partner pressure and their perception of how others think of them. Therefore, they are less likely to negotiate condom use with their partners. In Module 3, youth examine their attitudes and beliefs about condom use, and in Modules 7 and 8, youth learn how to negotiate condom use with their partners.

Getting your partner to cooperate in practicing condom use is easy: "I can do it"

Practicing safer sex within a relationship is not something participants can do by themselves. They need the cooperation of a partner. Unfortunately, many participants' partners may not be willing. For example, attempts to negotiate condom use may be interpreted as mistrust, belief that the other person is not "clean" or some other misperception. Be sensitive to participants' desires to maintain their partners' interest and avoid conflict.

At the same time, participants need opportunities to practice responding to their partners' objections tactfully and effectively. In Modules 7 and 8, the youth are taught negotiation skills that they can practice through roleplays and other interactive exercises.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Below is a description of the four types of outcome expectancies or behavioral beliefs emphasized in the ***Making Proud Choices!*** curriculum:

Goals and Dreams Beliefs

The belief that unsafe sex, unprotected sex and having sex at a young age could have an impact on one's goals and dreams for the future, including education and a career. In Module 1, the participants engage in a Goals and Dreams Activity and discuss obstacles to their goals and dreams including the potential outcomes of unprotected sex. This belief is incorporated throughout the curriculum.

Prevention Beliefs

The belief that condoms can reduce the risk of pregnancy, HIV and other STIs. This belief is incorporated throughout the curriculum.

Partner-Reaction Beliefs

The belief that one's partner would not approve of condom use and react negatively to it. This might prevent a person from practicing safer sex. In Modules 7 and 8, participants learn negotiation and refusal skills necessary to communicate with their partners about condom use.

Personal Vulnerability to HIV/STI and Pregnancy Beliefs

Before young people change their behavior, they must have a reason, or source of motivation to do so. Unless adolescents see how they can personally benefit from doing something differently (for example, practicing safer sex), no amount of skill will be enough to produce change. Many young people do not believe that pregnancy, HIV or other STIs could really happen to them. One goal of ***Making Proud Choices!***, then, is to increase participants' sense of personal risk. Personal risk refers to a person's belief that "pregnancy or HIV/STI infection could happen to me." This is addressed throughout the curriculum, and specifically in Modules 2, 5 and 6.

UNIQUE FEATURES OF THE *MAKING PROUD CHOICES!* CURRICULUM

Making Proud Choices! has a unique approach that is successful with adolescents. Three major themes serve as the foundation for this curriculum and its implementation.

The Community and Family Approach

A key component of the approach is the strong emphasis on family and community. The importance of protecting one's family and community is used as a motive to change individual behavior. This strategy differs from the traditional approach of HIV prevention, which focused solely on protecting oneself as the motive to change risky behavior. The ***Making Proud Choices!*** theme encourages adolescents to be proud of themselves and to abstain from sex or practice safer sex in order to prevent sexually transmitted infections and pregnancy, not only for their own sake, but for the sake of their families and community as well.

The Role of Sexual Responsibility and Accountability

Learning to be sexually responsible and accountable is something that adolescents need to be taught. ***Making Proud Choices!*** teaches participants to make responsible decisions regarding their sexual behavior, urges them to respect themselves and others, and stresses the importance of developing a positive self-image. They learn that being responsible and practicing safer sex, if they choose to have sex, can contribute to reaching their goals and dreams.

The Role of Pride and Making Proud Choices with Safer Sex as Their Choice

Adolescence can be a difficult period of development. Adolescents are often faced with confusion, mixed emotions and uncertainty. They are bombarded with sexual messages from various sources, including the media, popular music and their peer group. They are often pressured to be sexually active. They struggle with issues of self-esteem, self-respect and self-pride. Because of this, it is extremely important that they learn to feel good about themselves and their decision to practice safer sex. ***Making Proud Choices!*** illustrates that making proud choices about safer sex and condom use can actually lead teens to develop a sense of pride, self-confidence and self-respect. The roleplay exercises and other skill-building activities reinforce the many positive benefits, both psychological and physical, of practicing safer sex.

EVALUATION OF THE CURRICULUM

Evaluation is a critical component of the ***Making Proud Choices!*** program. Many health promotion programs have been implemented in schools, churches, clinics, community-based organizations and other venues, but unfortunately, very few of them include formal evaluation components. Through rigorous research methods, the developers have explored whether or not the interventions designed in this curriculum actually result in the desired outcomes. For example, they set out to determine whether adolescents who participated in ***Making Proud Choices!*** did indeed develop more positive outcome expectancies regarding safer sex, and whether such effects were evident up to 12 months after the intervention. Below is a description of the study and its results.

In the research study, the 8-hour curriculum, ***Making Proud Choices!***, was implemented in a small group setting with African-American male and female adolescents between the ages of 11 and 13 on two consecutive Saturdays in three different middle schools. In this random control trial, 659 6th and 7th grade African-American male and female adolescents, mean age 11.8, were stratified by gender and age and randomly assigned to receive one of three 8-hour curricula: an abstinence curriculum, a safer sex curriculum or a health promotion curriculum (which served as the control group). The adolescents received the curriculum in small groups of six to eight students led by either an African-American adult facilitator (mean age 40) or two peer African-American co-facilitators (mean age 16).

The participants completed questionnaires before, immediately after, and 3, 6 and 12 months after the intervention. Of the original 659 participants, 97% returned to complete the 3-month follow-up questionnaire, 94% completed the 6-month, and 93% completed the 12-month follow-up. The primary measures were HIV risk–associated sexual behaviors. The secondary measures were variables from the theory of planned behavior and the social cognitive theory, including knowledge, beliefs, norms, intentions and self-efficacy regarding abstinence and condom use.

Since the original evaluation study, newer editions of the curriculum have been published. Updates to factual information are made to ensure medical accuracy and changes to language help keep the program activities relevant to a new generation and broader range of youth.

BEHAVIORAL FINDINGS

The participants who received the ***Making Proud Choices!*** safer sex curriculum reported:

- More consistent condom use and less unprotected sex in the 3 months after the intervention than did those in the control group.
- A higher frequency of condom use at the 3-, 6-, and 12-month follow-up sessions than did those in the control group.
- ***Making Proud Choices!*** was especially effective with sexually experienced adolescents. For instance, among participants who were sexually experienced at baseline, those in the safer sex groups reported less sexual intercourse in the previous 3 months at the 6- and 12-month follow-up than the control group. In addition, they reported less unprotected sex at all three follow-up sessions than the control group.

Other Significant Findings

- The adult and peer facilitators were equally effective. There were no differences in intervention effects on behavior with adult facilitators as compared with peer co-facilitators.
- The adolescents who received the ***Making Proud Choices!*** curriculum scored higher in condom use knowledge; believed more strongly that condoms can prevent pregnancy, HIV and other STIs; believed more strongly that using condoms will not interfere with sexual enjoyment; expressed greater confidence that they could have condoms available when they needed them; and reported greater confidence that they could exercise sufficient impulse control to use condoms and greater self-efficacy for using condoms than did those in the control group.

Facilitator Information

CURRICULUM TEACHING STRATEGIES

Making Proud Choices! uses several strategies to facilitate behavioral change. Each strategy is defined below and its use in the curriculum is described.

STRATEGY 1: Setting the Environment: The Group Agreements

Module 1 is designed to create a safe, nurturing, non-threatening environment for participants, stimulate their interest in the group, and provide them with more detailed information about the program. The group agreements that will govern participation in the group should be developed during Module 1. This presentation should permit and encourage discussion designed to give members a sense of participation in the group's decision making. That is, members should be encouraged to accept and live by the standards they agree upon and seek to alter those they wish to change. This is also a good time to provide reassurance to group members about concerns they may have about confidentiality, embarrassment and fear of active participation.

Steps to Creating Group Agreements

- Brainstorm possible agreements.

  For example:

  - Respect each other's opinions.
  - One person speaks at a time.
  - No name-calling.
  - Confidentiality.
  - Begin and end on time.

- Clarify and discuss.
- Eliminate any agreements not acceptable to all.
- Come to a group consensus on all agreements.
- Invite participants to bring up additions/deletions as the need arises.
- Let participants know that everyone is responsible for following and determining the group agreements.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

General Tips for Improving Group Cohesion and Performance

The following tips can help build group cohesion:

- Frequently reward positive behavior (e.g., during demonstrations or exercises).
- Be supportive.
- Give compliments.
- Be non-judgmental.
- Respect participants' feelings and boundaries.
- Model appropriate assertive behavior.
- Be firm when necessary.
- Demonstrate concepts and give examples when possible.
- Keep the language simple.
- Encourage group members to share their experiences at their own pace.
- Build on strengths.
- Listen.
- Let the group members react, think and analyze.
- Be flexible.
- Be patient with the process and try different approaches until you find one that works.
- Clearly convey your expectations for how group members treat each other and how they participate.
- Encourage participation through reinforcement, teaching communication skills, modeling sensitive material, and being supportive, respectful and inclusive regardless of the group members' opinions and beliefs.
- Demonstrate acceptance and respect for all participants, regardless of personal characteristics, including race, cultural background, religion, social class, sexual orientation and gender identity.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

STRATEGY 2: Brainstorming

Brainstorming is a technique used to rapidly generate as many ideas as possible, within a given (usually brief) period of time, about a particular question, topic or problem.

For example: Important Concerns of Youth

Participants are encouraged to spontaneously express their thoughts and reactions (and the facilitator usually records each idea). No evaluation or criticism of ideas is allowed during this part of brainstorming. Participants simply say whatever comes to mind.

For example:

- Family
- Friends
- Money
- Having sex, or not
- Clothes
- School
- Relationships
- Peer pressure
- Pregnancy
- Violence
- Drug use
- Getting a job
- Popularity
- Music
- HIV and other STIs

The facilitator may ask probing questions to elicit certain types of ideas or information.

Once a list has been generated, the group then discusses, evaluates and/or processes each idea (giving neither credit nor blame to the person who suggested it).

For example: Ask the group "why" each item is an important concern to youth, or how each item impacts their lives.

If the task requires it, the group may then choose to prioritize, categorize or select the best idea(s).

For example:

- On which of these things can you have a positive impact? How?
- Which of these things would be healthier to avoid or prevent? How?
- Which five items do you think represent the most important concerns of youth? Why?

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

For our purposes, brainstorming will be used primarily as a method for:

- Assessing the knowledge of the group members—How much do they already know?
- Introducing new information at a level appropriate to the group—Bridging.
- Stimulating discussion—Asking probing questions.
- Processing information—Clarifying and reinforcing the main points or objectives.

Positive Characteristics About Brainstorming:

- Permits the facilitator to assess group dynamics: Who are the active members? How does the group respond?
- Builds group cohesion.
- Permits everyone to learn from the information that is generated.
- Permits the opportunity to assess knowledge and skills of the group.

Principles of Brainstorming:

- Try to get out as many ideas as possible.
- Participants can say anything that comes to mind.
- DON'T EVALUATE IDEAS; a later time can be set aside for evaluation.
- DON'T DISCUSS SUGGESTIONS; a later time can be set aside for discussion.
- Allow repetition.
- Encourage everyone's participation.
- Encourage building on other ideas.
- Allow periods of silence.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

STRATEGY 3: Interactive Activities and Competitive Games

Interactive activities and competitive games give the participants the opportunity to practice what they learned. One of the best strategies for teaching young people is to use fun, interactive and competitive activities, and many such activities are included in this curriculum.

Games and activities are a good strategy for teaching content. Games often promote rich discussion as participants work hard to prove their points. Because games can promote competition, remind participants of the group agreements prior to the game.

Facilitators—remember to read the instructions and game rules prior to teaching the game, and make adaptations as necessary.

STRATEGY 4: Processing a Video or Game

The practice of processing after an activity allows participants to reflect upon what they learned/experienced. Processing also allows the facilitator to draw out the key points of the activity. The most common way to process is to ask a series of questions or make a series of statements.

For example:

- Ask open-ended questions designed to elicit discussion.

  General Reactions

  » What did you think of the video?

  » What is your response to the activity?

  » How do you think Pat felt when…?

- Encourage all participants to contribute. In some groups, there are a few participants who may be less willing to volunteer during the discussion. The following techniques may be used to encourage all participants to contribute.

  Personal Reactions

  » How did you feel about…?

  » Describe what you saw.

  » What will you do as a result of…?

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Sentence Stems

» Ask each participant to complete a phrase such as, "The most important thing I learned was…." Move quickly around the room. Give participants the right to pass.

"I" Statements

» I learned that…

» I felt that…

» I was pleased that…

» I was disappointed that…

STRATEGY 5: Working in Small Groups

Discussion Guidelines

- Set up simple guidelines that encourage each person to participate.
- Be clear about the purpose of the small-group work.
- Use cooperative groups whenever possible to help participants develop positive interpersonal skills while working toward a common goal.
- Set definite time limits.
- Plan ahead for how you will assign participants to groups and how you will assign roles within groups.
- The room and seating should facilitate discussion within the group as much as possible, without disturbing other groups.
- You need not remove yourself from the discussion; however, you should encourage group members to rely on each other for problem solving and decision making.
- Remind participants when time is about to run out. Use a chime, train whistle, music, or some other clear sound to bring people back to the large group.
- Set clear norms, emphasizing that everyone's opinion is valuable, and that the group is working toward an atmosphere of trust.
- Determine the goal of the discussion, and periodically remind the group of that goal.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

- Encourage participants to become good listeners.
- Allow plenty of time for responses.
- Redirect conversation if one participant tries to dominate.
- Try to engage the more quiet participants by making longer eye contact or asking for their contribution.

STRATEGY 6: Roleplaying/Practice

This method of acting out imaginary situations allows participants to practice using a new skill. It provides an opportunity for participants to take risks with new ways of behaving in a safe situation without fear of failure, and to see how their peers will react to their behavior.

Steps

- Select roleplayers or ask for volunteers.
- Set the scene. Describe the situation carefully, but briefly.
- Give brief, clear instructions.
- Start the action.
- End the situation if it becomes stalemated or repetitive.
- Leave time to discuss:
  - What happened.
  - Why it turned out the way it did.
  - Whether it turned out as desired.
  - Who would have had to do what to make it turn out differently.

Tips for Making Roleplays Successful

- Set and follow norms or ground rules for group behavior.
- See yourself as the director of a movie.
- Make every effort to allow participants to volunteer. Urge everyone to participate.
- Set the scene.
- Rehearse.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

- Record to ensure transfer.
- Start with low-risk situations and move to high-risk situations. It may be beneficial to begin with scripted roleplays and then move to unscripted roleplays.
- Give continuous positive reinforcement.

Practice

Practice combines elements of roleplay and small-group work. Practice of specific skill steps is crucial for learning to occur. It should be a structured process.

Roleplay practice and learning may be enhanced if facilitators:

- Give participants a choice on whether or not to participate.
- Encourage participants to improvise during roleplays to make them more their own.
- Reinforce participants for using the specific skill.
- Give participants a specific role:
  - » Roleplayer
  - » Observer
- Develop structured methods for observing and providing feedback.
- Teach participants how to give feedback that focuses on the behavior, not the individual.
- Provide feedback on the skill-user's posture, tone, speech, eye contact and ability to follow the steps of the skill.

Whenever participants take on a role, particularly if it is "negative" in some way, it is important to "de-role" them, so elements of the role do not remain in the group's perception of the person. For example, at the end of the roleplay take the roleplay cards away and say, "You are no longer in this role."

STRATEGY 7: Student Workbooks

Student workbooks for participants include quiz questions, worksheets for small-group work and roleplay materials. The workbook contains all the needed worksheets for the curriculum activities.

DO NOT COPY OR DISTRIBUTE

GENERAL TIPS FOR PREPARING TO IMPLEMENT THE CURRICULUM

- Review the curriculum manual ahead of time.
- Review the format of the manual, which consists of goals, objectives, preparation, materials and a detailed outline of what the facilitator should say and do for each activity.
- Become familiar with all activities, videos and curriculum materials.
- Make sure you have all the necessary equipment and materials.
- Review the supplemental background information provided in Appendix B about HIV, other STIs, contraceptive methods and effects of alcohol and other drugs.
- Learn about local resources such as health departments and family planning clinics.
- Know the policies of school districts and community agencies in regard to implementing new programs, discussing issues of sexuality and gaining parental support and permission.

Tools for Online Implementation

A set of PowerPoint slides has been created to facilitate implementation of the curriculum, particularly in virtual settings. These slides are available under the Adaptation Guidelines & Tools tab on the *Making Proud Choices* page of ETR's Program Success Center at www.etr.org/ebi/programs/making-proud-choices. The slides summarize key content and instructions for group activities and can help facilitators present the information and guide activities.

ETR provides additional support and guidance for virtual implementation of evidence-based programs and other curricula, including tip sheets on a variety of considerations for online learning. These can be found at ETR's Design4Learning page at www.etr.org/design-4-learning.

Materials

Making Proud Choices! uses the following materials at various points in the curriculum. Use this checklist to prepare for teaching. Some of the items will need to be prepared prior to beginning the sessions; others can be developed as part of the process.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

Materials Needed (Not Included in Implementation Kit)

Pencils (enough for each participant)
Markers
Masking tape
Garbage bag
Monitor and device for showing videos, or internet access if using alternative videos
Condoms (one per participant or pair plus demonstration condoms)
Water-based lubricant
Condom demonstrator(s)
Small paper bag
Roll of paper towels
Chart paper
Index cards (1 labeled with a star, 1 labeled with a triangle, 1 labeled with a rectangle, 3–5 labeled with a circle for a group of 6–8)

Pre-Labeled Chart Paper

Group Agreements
Why Some Teens Have Sex
Possible Outcomes of Unprotected Sex
Proud and Responsible Prevention Strategies
Goals (written on left side of chart paper)
Making Proud Choices! Be Proud! Be Responsible!
The Hard Way Characters: Kenrick, Miguel, Renee, Mom, Dad and *Koko*
How STI Are Transmitted
Reasons to Avoid STIs
Contraceptives
Ways to Make Condom Use Easy and More Fun (for high school youth)
Ways to Make Condom Use Easy (for middle school youth)
Pros
Cons
Excuses Sexual Partners Give

MODULE 1

GETTING TO KNOW YOU AND STEPS TO MAKING YOUR DREAMS COME TRUE

GOALS

The goals of this module are to:

- Provide participants with an overview of the program.
- Increase participants' personal investment and comfort in participating in the program.
- Increase participants' ability to identify realistic goals for their future.
- Increase participants' confidence about making proud and responsible choices to protect themselves and their community from unintended pregnancy, HIV and other STIs.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- Identify several agreements for group participation that will facilitate discussion and learning.
- Identify what it means to be proud and responsible.
- Describe the benefits of proud and responsible behavior.
- Identify at least two reasons why teens have sex, the possible outcomes of sex, and strategies for reducing possible negative outcomes.
- Describe at least one goal they wish to achieve in the future.
- Identify barriers to achieving their personal goals and strategies for overcoming them.

MODULE PREVIEW

The first module: (1) informs participants about the program; (2) creates a safe space for talking about sexuality; (3) generates enthusiasm about ***Making Proud Choices!***; (4) promotes the goal of protecting themselves and their community; and (5) gives them ideas about how they can examine their own goals, and obstacles that might stand in the way of reaching them.

STRATEGIES/METHODS

- Mini-Lecture
- Brainstorming
- Welcome Activity
- Goals and Dreams Timeline Exercise
- Group Discussion

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- *Goals and Dreams Timeline* poster
- *Goals and Dreams Timeline* worksheet in the student workbook

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Markers
- Pencils
- Masking tape
- Pre-labeled chart paper:
  - » *Group Agreements*
  - » *Why Some Teens Have Sex*
  - » *Possible Outcomes of Unprotected Sex*
  - » *Proud and Responsible Prevention Strategies*
  - » *Goals*
  - » *Making Proud Choices! Be Proud! Be Responsible!*

PREPARATION NEEDED

1. Before the program begins, label all of the charts as listed under Materials.
2. Hang the pre-labeled charts in the order they will be used. Fold and tape the charts so the titles remain covered by the bottom half of the sheet until you use them.

INSTRUCTIONAL TIME: 60 minutes

ACTIVITY	MINUTES NEEDED
A. Welcome and Program Overview	5
B. Welcome Activity	10
C. Creating Group Agreements	5
D. Making Proud Choices! Be Proud! Be Responsible! Brainstorm	5
E. Brainstorming About Teens and Sex	10
F. Goals and Dreams Timeline	15
G. Brainstorming Obstacles or Detours Along Your Timeline	10

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY A

WELCOME AND PROGRAM OVERVIEW

PREPARING FOR THE ACTIVITY

RATIONALE

Providing participants with a general overview of the program will foster excitement and enthusiasm about participating.

MATERIALS

None

TIME

5 minutes

PROCEDURE

1. Welcome the participants and introduce yourself.

2. Present the purpose and format of the program by saying,

> This program is called *Making Proud Choices*. It will give you the tools to protect yourself and others from unintended pregnancy and sexually transmitted infections—STIs, sometimes called STDs—including HIV, the virus that causes AIDS.
>
> This program focuses on knowledge, attitudes and prevention skills related to pregnancy, HIV and other STIs. It also focuses on relationship issues, sexual behavior, decision making and negotiating in difficult situations. It's designed to teach specific information about ways to reduce your risk of getting pregnant or becoming infected with STIs, including HIV.
>
> Although STIs can be prevented, many young people don't take precautions because they don't believe they are at risk of getting an STI. Anyone can get an STI, including HIV, from having unprotected sexual intercourse with a partner who is infected.
>
> Unintended pregnancies can be prevented too. Many teen parents have been able to create successful lives for themselves and their children, especially when they have the support of some caring adults. However, they have to work a lot harder to do so. It's easier to reach your goals if you postpone having a child, or, if you're already a parent, postpone having another child.
>
> *(continued)*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

If you're going to have sexual intercourse, it's critical to use birth control to prevent unintended pregnancy and protection such as condoms or dental dams. Let's clarify the terms we will be using. When we speak of ***protection***, we will be referring to *condoms* and *dental dams*. When we say ***condoms***, we will be referring to *external condoms* and *internal condoms*. External condoms are also known as male condoms. Internal condoms are also called female condoms.

Do you think teens should be worried about unintended pregnancy, HIV and other STIs?

3. Pause to allow participants to answer.

4. Then say the following,

The people who designed this program care about the lives of young people. They want you to have the knowledge and skills to protect yourselves and others against pregnancy, HIV and other STIs.

To make the program interesting and fun, it includes videos, exercises and games that I hope you will enjoy. Although the information is serious and important, I hope we can learn together and have a good time.

Other young people who've participated in this program have said they had a good time, learned a lot and would recommend it to their friends. I hope you will like it too.

Who has questions?

5. Answer any questions the participants have about the purpose or format of the program.

6. Summarize by saying,

Now that you have some idea of what to expect, let's get started.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY B

WELCOME ACTIVITY

PREPARING FOR THE ACTIVITY

RATIONALE

The Welcome Activity encourages participants to feel like important contributors to the group and gives them an opportunity to express their thoughts and feelings.

MATERIALS

None

TIME

10 minutes

PROCEDURE

1. Have the participants sit in a circle.

FACILITATOR'S NOTE

If you know your participants and they already know each other this is an optional activity. An icebreaker that encourages group cohesion can be used in its place.

Sitting in a circle facing each other can build group cohesion. Have the participants sit on the floor, have them move their chairs close to each other, or set aside a special area of the room to accomplish this. Adapt this activity to accommodate group dynamics and environment. If creating a circle is not feasible, have the speaker toss a soft toy to the next speaker to encourage engagement.

2. Explain the Welcome Activity by saying,

> "Let's introduce ourselves and get to know a little about each other.
>
> Each person will have a chance to speak. When you are finished speaking, the person sitting on your left will speak next.
>
> If you're not ready when we come to you, you may pass and we will come back to you later. I will speak first and when it is your turn please share your name, your age, the school you attend, your pronouns if you want to share, and something else you'd like us to know about you. For instance you might tell us about a hobby or favorite activity.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

3. **Model the Welcome Activity by beginning with yourself,**

> My name is _____ and I am _____.
> *(age)*
>
> I attend(ed) _____.
> *(high school, college or university)*
>
> When referring to me, please use the pronouns _____ or _____.
>
> I like to…(share something you enjoy doing).

4. **Ask the person on your left to speak next. Encourage each group member to speak. When the Welcome Activity is complete, thank each person for sharing.**

5. **Summarize this activity by saying,**

> Thanks to all of you for sharing a little about yourselves. During the program, we will get to know more about each other and what is important to each of us.

FACILITATOR'S NOTE

Asking participants to tell you their pronouns is a way of creating a safe space for transgender or gender nonconforming youth. Reinforce that sharing pronouns is optional; some youth may not feel comfortable sharing their pronouns and thus "outing" themselves. Model what you want participants to say by giving your own pronouns. Some transgender youth might have typical pronouns (he/she/his/her/their) or they might request more creative pronouns such as hir or zir. Pronouns don't always line up with what observers might expect based on a person's perceived biological sex. The simple act of requesting pronouns sends the message that transgender and gender nonconforming youth are welcome and respected in the group.

You can also use alternative sentence stems in the introductions. Here are some ideas:

- One of my favorite TV shows or movies is _____.
- The best movie/book I've ever seen/read is _____.
- An item on my bucket list is _____.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY C

CREATING GROUP AGREEMENTS

PREPARING FOR THE ACTIVITY

RATIONALE

Group agreements help participants feel more secure in a group setting and help facilitators provide structure when discussions become difficult or awkward. Developing guidelines as a group builds group cohesion and increases the likelihood that the agreements will be followed.

MATERIALS

- Pre-labeled chart paper:
  - *Group Agreements*
- Markers
- Masking tape

TIME

5 minutes

PROCEDURE

1. Begin this activity by unfolding the pre-labeled chart paper titled *Group Agreements* and saying,

> We're going to be talking about sexuality, pregnancy and STIs—topics that sometimes can cause people to feel nervous or uncomfortable. What guidelines or agreements could we put in place to help make sure that everyone in the group feels safe, comfortable and able to participate?

2. Have participants brainstorm a list of agreements or guidelines for the group to follow. As the participants offer guidelines, write them on the chart paper titled *Group Agreements*.

3. Make sure the list includes the following suggestions. Be sure to cover confidentiality, right to pass and respecting diversity.

> **GROUP AGREEMENTS AND GUIDELINE SUGGESTIONS**
>
> **Confidentiality:** When people share private information in this group, it should be kept private. If, for example, someone shares about crying because of hurt feelings, it would be a violation of the group agreements to discuss or joke about this outside the group. We will not talk about any personal information we hear in this group outside of this group.
>
> *(continued)*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

There is one exception. If any of you tell me something that might cause you or someone else harm, I will have to tell someone for safety reasons—for example, if you told me you were going to hurt yourself or someone else, or if someone talks about being abused in any way. Please know that it is important to tell and to get help if you or someone else is being harmed. I encourage you to talk to me before or after the session, or to talk with another trusted adult outside of this group.

No put-downs: Show respect for others, even if you disagree with them. If someone says something that you disagree with, it would be a violation of the group agreements to say, "That's stupid" or "You're wrong." Instead, say that you have a different idea and share it. All questions are important. There is no such thing as a "silly question."

Be supportive of each other: We will be discussing important and sometimes personal information about making choices and risky behaviors. At times you may talk about yourself, your peers and your partners. Everyone in this room is different and has had different experiences. It is important that we respect these differences by not laughing at anyone or making put-down statements.

Use "I statements": When we talk about personal subjects, we sometimes make assumptions about how others feel. In this group, it is important to talk about how YOU feel, think or act and not about how you think "all teens" or "all your friends" feel, think or act.

Right to pass: Sometimes when talking about subjects such as sexuality, someone might not want to talk or might have an uncomfortable feeling or memory. If you ever feel like being quiet or not sharing, it's OK to just listen. If I call on you or someone asks you a question, you can say, "I pass." Always take care of yourself. All group members have the right not to respond to any question they do not wish to address.

Move up, move back: If you tend to talk a lot in groups, talk less (move back) sometimes so others can talk. If you tend to be very quiet, share more (move up) and participate a little more so the group can benefit from your ideas.

Dealing with discomfort: Sometimes certain conversations or topics can bring up uncomfortable feelings for people. If anything makes you feel uncomfortable during our sessions, let me know. If you need to step outside for a few minutes, we can arrange that. Also it's OK to distract yourself by

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

doodling or using another strategy that helps you feel comfortable. Please come to me with any issues or concerns you have. If I can't help, I can connect you with people or resources that can help.

Respect diversity: Let's keep in mind that there's diversity in society and in this group. Individuals come from different family backgrounds, different racial and cultural groups and different living situations. Some young people have already had romantic relationships; others aren't even thinking about it. Some have had sexual intercourse. Some have had sex because they chose to; others may have had sex against their will. Some may identify as gay, lesbian, bisexual or straight. Some may identify as male, female or transgender.

Young people may express themselves in ways that don't conform with their biological sex. There are many ways that youth can express their gender identity.

Being open to diversity can help reduce stereotyping, which can be very harmful to a young person. Stereotyping individuals imposes restrictions on their opportunities for individual expression and limits personal growth.

Besides, all of these differences make us unique. Regardless of how you see yourself, your background, previous relationships or experience, each of you has a place in this group. This will be a safe space for everyone.

Other agreements you should include if participants do not mention them:

- Listen to others.
- Don't interrupt.
- Allow everyone to participate.

4. **Define terms related to diversity as needed.**

I want to be sure everyone understands some of the terms we use when talking about diversity.

Gender refers to the ideas in a culture or society about the appropriate ways for men and women to dress, behave, think and feel. Ideas about what gender behavior is appropriate change in different cultures and at different times in history. Sometimes one gender is given more power or status than another.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

Gender identity is peoples' inner understanding of what gender they identify with. It may be man, woman, something in between, or something that doesn't fit these labels. It may be the same as ***(cisgender)*** or different from ***(transgender)*** the sex they were assigned at birth. Gender identity is unique for each person.

Gender expression is how a person represents or expresses gender identity to others, often through behavior, clothing, hairstyles, voice or body characteristics.

Sexual orientation refers to the romantic and sexual attraction people feel for others. People can be attracted to others of the same gender, a different gender or more than one gender.

5. Ask participants if they have any other suggestions they would like to add.

6. Once the list is complete, re-read each agreement and ask all group members to nod and say "yes" that they agree to follow that guideline.

7. Summarize this activity by saying,

> You did a great job creating the list! I will post our group agreements each time we meet so we can all see it and remember those guidelines.
>
> I am excited and feel that we can work well together and respect each other by following our group agreements. I look forward to working with all of you.

FACILITATOR'S NOTE

Be sure to post the group agreements throughout all the sessions of the program.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY D

MAKING PROUD CHOICES! BE PROUD! BE RESPONSIBLE! BRAINSTORM

PREPARING FOR THE ACTIVITY

RATIONALE

This activity introduces the theme of the program, ***"Making Proud Choices! Be Proud! Be Responsible!"*** The emphasis on being proud and responsible provides a motivation for engaging in health-protective behavior and for encouraging others to do the same.

MATERIALS

- Pre-labeled chart paper:
  - *Making Proud Choices! Be Proud! Be Responsible!*

TIME

5 minutes

PROCEDURE

1. Tape the *Making Proud Choices! Be Proud! Be Responsible!* chart paper on the wall.

2. Open the discussion by saying,

> The title of this program is *Making Proud Choices!*

3. Then say,

> In this activity we are going to do some brainstorming. In brainstorming, you just say whatever comes to mind about a particular issue or question. I want you to brainstorm the answer to three questions.
>
> What does it mean to make proud choices? What does it mean to be "proud"? What does it mean to be "responsible"?

4. Have participants brainstorm answers to these questions. Record their answers on the chart paper or a dry erase board.

Make sure their responses include:

» ***Making Proud Choices*** means doing things that you feel good about, that your family and community will respect and that will help you achieve your goals and dreams.

» To ***Be Proud*** is to feel happy and pleased about something you've done or accomplished, to feel that you have lived up to your expectations or behaved according to your own or community values.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2026 agreement.

© ETR. All rights reserved.

» To ***Be Responsible*** is to be dependable, dedicated, reliable, committed, truthful and trustworthy.

5. **Explain that,**

Being proud and responsible means that you value yourself and you believe you are worthy! Each one of you has value. Each one of you is worthy. You have to behave in ways that show you understand your worth. Proud and responsible behavior also extends into the area of sex. It means talking with friends, partners and family members about behaviors that put them at risk of STIs and unintended pregnancy and encouraging them to protect themselves. If you are going to have vaginal, anal or oral sex, it means using protection such as an external or internal condom or dental dam.

We know that some young people have been sexually abused, and they didn't get to make a choice. Youth who have survived something like that can use that inner strength in the future to choose when they do and don't want to have sex and to always protect themselves and their partners from STIs and unintended pregnancies. If you are currently in a situation where you don't get to make your own choices about sexual activity, I encourage you to reach out to me or another trusted adult to get help.

6. **Then ask,**

What are the benefits of making proud choices and engaging in proud and responsible behaviors? What do we gain by being proud and responsible?

Make sure answers include:

» Feel better about yourself

» Have healthier relationships

» Stay out of trouble

» Accomplish your goals

» Make people feel proud of you

» Reduce your risk of pregnancy, HIV and other STIs

» Have a healthier body

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

» Stay in school

» Feel like you are helping your loved ones and your community

Always use protection AND effective birth control. By acting responsibly you can feel proud because you're protecting yourself, your sexual partners and the families and communities you've formed. You can play a big role in preventing unintended pregnancy and STIs in your community.

FACILITATOR'S NOTE

Post the chart with participants' list of words to describe what it means to be proud and responsible. You can refer back to their list throughout the program when encouraging the participants to make proud choices.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY E

BRAINSTORMING ABOUT TEENS AND SEX

PREPARING FOR THE ACTIVITY

RATIONALE

By exploring issues about teens and sex, participants become more aware of the pressures they face and the choices they may have to make. It gives the facilitator more information about the thoughts and feelings of the participants and helps the participants learn about the focus of the program.

MATERIALS

- Pre-labeled chart paper:
  - *Why Some Teens Have Sex*
  - *Possible Outcomes of Unprotected Sex*
  - *Proud and Responsible Prevention Strategies*
- Markers
- Masking tape

TIME

10 minutes

PROCEDURE

FACILITATOR'S NOTE

As you facilitate this activity and the entire program, keep in mind that for some youth pregnancy and parenting are intentional. The reasons are complex. There may be family, cultural and community influences—in some families, cultures and communities, young parenthood is prized and has been modeled. Some youth place high value on parenthood because they see it as a realistic life option when they don't see options such as post-secondary education and/or a career as viable. Others see a baby as someone who will always love them. While it is impossible to fully address these complex motivations for pregnancy and parenting in this model, the program approaches pregnancy prevention by offering concrete information, positive attitudes and beliefs, and many opportunities for skill practice.

1. For this activity, use the pre-labeled chart paper (folded so that the titles are covered by the bottom half of the chart paper). Unfold the chart paper sheets one at a time, as needed.

2. Introduce the activity by saying,

> We are going to do some more ***Brainstorming***. Remember in brainstorming, you just say whatever comes to mind about a particular issue or question.

3. Unfold the sheet of chart paper titled *Why Some Teens Have Sex*, and then say,

> Why do you think some teens your age are having sex?

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

The responses should include the following:

- For pleasure or sexual release
- To keep a partner/because partner expects it
- To have fun
- To satisfy curiosity
- To express feelings of love or affection to a partner
- To get attention or affection
- To feel more grown up
- To be popular
- To get back at parents
- To have a baby
- To fit in with peer group
- Loneliness
- To feel loved or needed
- Problems at home/living situation
- See it on TV, online or in the movies
- Forced
- To increase status in peer group
- Low self-esteem
- To prove masculinity/femininity

4. **Write all of the participants' comments on the chart paper.**

5. **Compliment their good ideas.**

6. **Summarize as follows,**

As we can see, there are many reasons teens have sex. Regardless of the reasons, if they don't use protection to prevent unintended pregnancy or STIs, they can face outcomes that could make it harder to accomplish their hopes and dreams for the future. Let's look at some of the possible outcomes of unprotected sex.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

7. **Unfold the next chart paper, *Possible Outcomes of Unprotected Sex*.**

8. **Then ask,**

> **What are some of the possible outcomes of unprotected sex?**

9. **Have participants brainstorm the possible outcomes of unprotected sex, and write all of their comments on the chart paper. (Be sure to include pregnancy, HIV and other STIs.)**

10. **Compliment the group on how much they know.**

11. **Next, unfold the chart paper titled, *Proud and Responsible Prevention Strategies* and ask,**

> **What are some ways to prevent these possible negative outcomes?**

12. **Have participants brainstorm ways to prevent possible negative outcomes of unprotected sex.**

13. **Write all of the participants' comments on the chart paper. (Emphasize that protection—such as latex (or polyurethane/polyisoprene) condoms—can help prevent pregnancy and sexually transmitted infections, including HIV.)**

14. **Compliment the group on how much they know.**

15. **Point to their lists and summarize by saying,**

> **As we can see by your lists, there are many reasons teens may have sex. We can also see there are many possible negative outcomes to having sex. Yet, there are some proud and responsible strategies for preventing those negative outcomes. You did a great job generating your lists. Throughout our lessons together we will be looking at many of these issues more closely. First, let's examine our goals and dreams and see how having unprotected sex can have an impact on them.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY F

GOALS AND DREAMS TIMELINE

PREPARING FOR THE ACTIVITY

RATIONALE

To achieve their goals, participants need to think about their future and to understand that their present behavior will have an impact on what they will be doing 5 and 10 years from now.

MATERIALS

- Pencils
- *Goals and Dreams Timeline* worksheet
- *Goals and Dreams Timeline* poster
- Pre-labeled chart paper:
  - *Goals* (Write Goals on the left side of chart paper)

TIME

15 minutes

PROCEDURE

1. Display the *Goals and Dreams Timeline* poster.

2. Introduce the exercise by saying,

> Everything and everyone has a past, present, and future. This next activity will help you take a closer look at your past, present, and future.

FACILITATOR'S NOTE

Record some things from your own life that you are proud of doing on the *Goals and Dreams Timeline* poster. Provide examples for each section. Be mindful that this activity may be challenging for some young people who may struggle to identify with the idea of setting future goals or even with reflecting on their own accomplishments, particularly in a group setting where the range will vary and young people may feel as if what they've done or want to do isn't "good enough." Listen for these insights and help youth recognize that their timelines will all differ based on things such as their experiences, interests and/or what brings them joy. When you model the activity include a range of accomplishments, taking care to highlight achievements beyond acquiring goods such as a car or house. This will help participants understand what you want them to do and encourage them to recognize their own varied accomplishments.

3. Have participants turn to the *Goals and Dreams Timeline* worksheet in their workbooks. Give the following instructions:

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

This is a timeline that will help you think about what you have already accomplished in the past year and what you want to accomplish in the future. There are three sections. In the first section, write your age and any things you've already accomplished or things you are proud of. This can be anything that's meaningful for you. For example, volunteering your time, playing for a sports team, getting certain grades, getting a job, learning something new, joining a club, winning a student election, getting a learner's permit, an artistic or musical performance, advocating for others, etc.

4. Give participants 1–2 minutes to complete the first task.

5. Then give the following instructions:

Move on to the second section on your timeline. Imagine yourself 5 years from now. That will be 20__. Write down the age you will be in 5 years. Think of at least one thing you hope to have achieved 5 years from now.

Write down at least one thing you hope or want to make happen in this section. In 5 years, what do you hope to be proud of doing? You can write more than one thing if you like.

6. Give participants 1–2 minutes to complete the second task.

7. Then give the following instructions:

Move on to the third section of your timeline. Imagine yourself 10 years from now. That will be 20__. Write down the age you will be in 10 years. Write down at least one thing you hope or want to make happen in the next 10 years. In 10 years, when you look back, what do you hope to be proud of doing?

You can write more than one thing if you like.

8. Allow 1–2 minutes for participants to complete their timelines.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

9. **Then encourage each participant to share with the group one item from each section by going around the room and asking,**

> **Looking ahead 5 years, what goal do you want to achieve or thing do you hope to do? How about in 10 years?**

10. **Next say,**

> **I want you to now choose one of your goals or hopes and write it on the back of your timeline. Next to that item, write two things you must do to achieve it or make it happen.**

11. **While they are working on this, unfold the *Goals* chart paper. Circulate and provide support to anyone who seems to be struggling. Some youth need a little extra coaxing or encouragement to identify and voice their goals or aspirations. Be prepared to provide a few examples, such as graduating from high school, going to college, getting trained in a skill, buying a car or getting a good job. Have participants share the goals they've chosen and the actions they must take to achieve them.**

12. **Write these goals on the left side of the *Goals* chart paper, leaving space on the right half for items in the next activity.**

13. **Compliment participants on their answers.**

14. **Summarize the activity by saying,**

> **You can achieve your goals with a little planning and organizing, and by making proud and responsible decisions. Reaching your goals will make you and the people you care about proud. Remember that you are capable of doing whatever you put your mind to.**

FACILITATOR'S NOTE

Some youth may be struggling to meet basic needs such as food, shelter or safety. Others may have experienced a traumatic event. Validate all of their accomplishments and their hopes. Be careful not to minimize or praise any accomplishments or hopes in such a way that creates a hierarchy, as no goal is better or more important than another.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY G

BRAINSTORMING OBSTACLES OR DETOURS ALONG YOUR TIMELINE

PREPARING FOR THE ACTIVITY

RATIONALE

Directing participants' attention to the potential obstacles they may face when pursuing their goals and dreams encourages them to develop strategies to avoid, surmount or reduce those obstacles.

MATERIALS

- Pre-labeled chart paper:
  - *Goals* (from the previous activity)
- Markers
- Masking tape

TIME

10 minutes

PROCEDURE

1. Refer to the *Goals* chart paper from the previous activity.

2. Write "Obstacles" on the right side of the chart paper.

3. Ask the participants to brainstorm things that might prevent them from achieving the goals and dreams they listed by saying,

> We have just listed our goals and dreams. Now let's talk about some of the things that may get in the way of us reaching our goals and dreams. These are called obstacles. They are like roadblocks or detours along the way. What obstacles can you think of that may get in the way of your goals?

Answers should include:

» Unintended pregnancy or an uncurable STI such as HIV

4. Write their responses under "Obstacles or Detours" on the right side of the *Goals* chart paper with a different color marker.

5. Say,

> If you've already encountered any of these obstacles or detours, you understand how your life can change. Things can work out just fine but it may be harder.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

6. **Ask the following questions,**

> • **How can we avoid some of these obstacles or detours?**
>
> • **What can you do to make sure you don't get pregnant, get someone pregnant or get a chronic disease such as HIV?**

7. **Pick a few of the key obstacles and discuss ways to avoid, overcome or reduce them. If there are any teen parents in the group, ask them if they would like to discuss ways they have been able to manage the additional responsibility of raising a child and still accomplish their goals.**

8. **Summarize by saying,**

> **I'm impressed with your goals. For the rest of the program, we'll be looking at ways to overcome obstacles and navigate detours so you can reach your goals. If you decide to have sex, you can avoid negative outcomes such as unintended pregnancy and STIs by choosing not to do anything risky, or reducing your risk by using protection and effective birth control or engaging is less-risky behaviors.**
>
> **You're worthy of all the good things you imagine for your future. Each time we meet you'll gain knowledge, beliefs and skills to empower you to make proud choices! I look forward to working with you.**

MODULE 2

A POSSIBLE OUTCOME OF UNPROTECTED SEX: HIV INFECTION

GOALS

The goal of this module is to:

- Increase participants' knowledge about HIV/AIDS and HIV risk–associated behavior.
- Help participants identify behaviors that place people at risk for contracting sexually transmitted infections, including HIV infection.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- Identify the basic facts about HIV and AIDS.
- Distinguish facts from falsehoods about HIV and AIDS.
- Identify a person's risk of HIV infection as a result of engaging in various sexual and non-sexual behaviors.
- Identify which behaviors are low risk and no risk for contracting HIV infection.
- Identify how HIV infection can be prevented.

MODULE PREVIEW

The second module: (1) clarifies myths about the causes, transmission and prevention of HIV while providing correct factual information; (2) provides opportunities for participants to develop skills in giving correct information on HIV/AIDS to friends; and (3) helps participants identify various behaviors that place them at risk for HIV infection.

STRATEGIES/METHODS

- Question-and-Answer Session
- Video Viewing
- Exercise
- Game

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- *HIV/AIDS Frame* poster
- *Key Words* poster
- Video: The Subject Is HIV (or alternative videos*)
- *True or False: HIV Statements* (included in module)
- *Risk Continuum* signs
- *Risk Behavior* cards

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Monitor and video player, or internet access if using alternative videos
- Chart paper
- Markers
- Masking tape

PREPARATION NEEDED

1. Set up the video(s) to be ready to play.
2. Review the *True or False: HIV Statements* and get comfortable with the content.
3. Review the information about HIV in Appendix B.

INSTRUCTIONAL TIME: 60 minutes

(*Note:* Facilitators may wish to extend the time to allow more thorough discussion of the video.)

ACTIVITY	MINUTES NEEDED
A. Discussing HIV and AIDS	**10**
B. *The Subject Is HIV* Video and Discussion*	**25**
C. True or False: HIV	**10**
D. HIV Risk Continuum	**15**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.

ACTIVITY A

DISCUSSING HIV AND AIDS

PREPARING FOR THE ACTIVITY

RATIONALE

Learning basic information about HIV and AIDS will provide participants with a foundation from which to work on attitudes and behaviors later in the program.

MATERIALS

- Posters:
  - *HIV/AIDS Frame*
  - *Key Words*

PREPARATION

- Review the information about HIV in Appendix B.

TIME

10 minutes

PROCEDURE

1. Hang the *Key Words* poster and *HIV/AIDS Frame* poster.

2. Direct participants' attention to the *HIV/AIDS Frame* poster and ask the following questions.

FACILITATOR'S NOTE

This activity is a discussion using a series of questions. Most youth already have some information about HIV. Invite participants to answer the questions and correct any misinformation. Keep this activity brief as all of the information will be reviewed again in the video *The Subject Is HIV*.

HIV/AIDS FRAME POSTER — QUESTIONS & ANSWERS*

How do people get HIV?

- **Through sex.** Anyone who has unprotected vaginal or anal sex with someone who has HIV can get HIV. There is also some risk of transmission through oral sex, but it is very low.
- **By sharing needles** for injecting drugs, vitamins, steroids or hormones, or for tattooing, piercing or any other reason.
- **From mother to child** either before or during birth. In a few cases HIV has been passed from mother to child through breastfeeding. A pregnant woman with HIV can take medicines to greatly lower the risk of her baby being born with HIV.

(continued)

What common body fluids can transmit HIV?

HIV is found in the blood, semen, vaginal fluids and rectal fluids (the mucus that lines the rectum to help with elimination of waste) of someone with HIV. It is passed from person to person through these body fluids.

How is HIV *not* transmitted?

HIV is not transmitted by casual, day-to-day contact between people. It is not transmitted through the air. It must get inside the body to infect a person.

People can't get HIV from:

- touching, coughing or sneezing
- toilet seats, eating utensils, swimming pools, water fountains, door knobs or phones
- casual contact such as hugging, kissing or sharing food
- donating blood
- tears, saliva, sweat or urine
- mosquitoes or other insects

Who is at risk?

It is what people do, not who they are, that puts them at risk for HIV.

People are at risk for HIV if:

- They have sex with someone who's had other partners.
- They have sex without using a latex condom or other protection.
- They share needles or syringes to inject drugs, or had sex with someone who has.
- They share needles or other sharp objects for tattooing, piercing or any other reason.

How can you prevent HIV?

- Don't have vaginal or anal sex.
- Never inject drugs or share needles for any reason.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

How can you reduce your risk of HIV?

- **Use a latex condom each and every time for vaginal or anal sex.** Barrier use during oral sex can further reduce the very low risk of getting HIV through oral intercourse. People who are allergic to latex can use polyurethane or polyisoprene condoms. Protection includes external or internal condoms and dental dams.
- **Avoid having multiple or overlapping partners.** The more sex partners a person has, the greater the chances of contracting HIV or another STI.
- **Discuss HIV with a partner.** Ask about past or present risk behaviors. Be sure any sex partner has been tested before having sex. Discuss ways that you can reduce your risks together such as using condoms, taking PrEP, or regular testing.
- **Get tested for HIV.** The only way to know your HIV status is to get tested. The only way for your partner to know their HIV status is for them to get tested.
- **Take medication, if needed.** If you are having sex or sharing needles with someone who is living with HIV, talk to a medical provider about taking pre-exposure prophylaxis (PrEP). If you think you were exposed to HIV, ask about taking post-exposure prophylaxis (PEP).
- **Don't use alcohol, marijuana or other drugs** that impair judgment. Being high can lead to unsafe sex or other drug use.

3. Direct participants' attention to the *Key Words* poster. As you review the questions, point to the key word on the poster.

4. Review the following questions using the *Key Words* poster. Encourage all the participants to try to answer them. Supplement their answers with the information below each question.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

KEY WORDS POSTER — QUESTIONS & ANSWERS

What is HIV?

HIV stands for human immunodeficiency virus. It is the virus that causes AIDS (acquired immunodeficiency syndrome). People who have HIV in their bodies are said to be living with HIV or to be HIV positive.

HIV damages the body's immune system, which normally protects the body from disease. The immune system becomes weaker until it can no longer fight off different types of infections.

There is no cure for HIV, but treatments can be started while the person still feels healthy. With these medicines, people with HIV can lead longer and healthier lives than ever before.

What is AIDS?

AIDS stands for acquired immunodeficiency syndrome. AIDS is the stage of HIV when the immune system has become very weak and damaged. When this happens, other diseases and infections can enter the body, including types of pneumonia, yeast infections, cancers and brain infections. These are called "opportunistic infections" because they take advantage of the weakened immune system.

How is AIDS different from HIV?

HIV is the virus that enters the body and damages the immune system. People can live with HIV for years without getting sick. They may look and feel healthy and may not even know they have the virus. People who are taking medicine to treat HIV may be in this stage for several decades, although they can still transmit HIV to others.

AIDS is the condition that develops as a result of the damage done to the immune system. As the amount of virus in the body starts to go up and the CD4 cell count begins to go down, the person may begin to have symptoms. A person with HIV is diagnosed as having AIDS when the CD4 count drops below a certain level, or when certain opportunistic infections develop.

What is the immune system?

The immune system is the body's defense against infections and diseases. When the immune system works as it should, white blood cells patrol the body and attack germs, viruses and other organisms that shouldn't be there.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2026 agreement.

© ETR. All rights reserved.

(continued)

HIV attacks specialized white blood cells called CD4 or T-cells. As the number of properly working CD4 cells decreases, the immune system becomes weaker until it can no longer fight off different types of infections. The most common treatments for HIV limit the ability of the virus to reproduce. They help protect the immune system and improve the chances of staying healthy.

Common Tests for HIV Available at a Clinic:

If you get a test in a health care setting or lab, a health care provider or lab technician will take your sample (blood or oral fluid). If it's a rapid test, you may get test results in 30 minutes or less, but if it is a laboratory test, it can take several days for your results to be available. Your health care provider or counselor may talk with you about your risk factors, and answer any questions you might have. They will discuss next steps with you if your result is positive.

Rapid tests are usually done with blood from a finger prick or with oral fluid, and the results are ready in 30 minutes or less.

Laboratory tests require a blood sample.

- If the test comes back negative, and you haven't had a possible exposure during the previous 3 months before the test you took, you can be confident you don't have HIV.
- If your test result is positive, the lab will conduct follow-up testing, usually on the same blood sample as the first test.

Common Tests for HIV Available Over the Counter:

Home Access requires a finger prick to collect a blood sample. The person sends the sample to a licensed laboratory and gets the results by phone as early as the next business day. This is an anonymous test. Anyone who tests positive is immediately offered a follow-up test, counseling and referral to treatment.

The OraQuick In-Home HIV Test provides results in 20 minutes and involves swabbing inside the mouth to get an oral fluid sample and testing this sample with a test kit. A positive test needs a follow-up test at the testing site, counseling and other referrals. HIV infection may show up later after exposure in an oral fluid test than a blood test, because the level of antibody in oral fluid is naturally lower.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

What is the window period?

The "window period" is the length of time between when a person first gets HIV and when a test can accurately detect it. This varies from person to person, and depends on the type of test done. During the window period, even before knowing about being infected, a person can transmit HIV to others. People getting tested at a clinic should ask their health care provider about the window period for the type of test they are taking. People testing at home should review the materials that come with the home test kit. If a test is taken within 3 months after possible exposure and the result is negative, the person should get tested again in another 3 months to be sure.

Why is early treatment so important?

There is no cure for HIV, but anti-retroviral treatments (ART) can be started while the person still feels healthy. If people with HIV remain in medical care and continue to take the medicines to keep low viral loads, they can live long, healthy lives.

Why is it important to use condoms?

A condom is a form of protective barrier that prevents the exchange of body fluids such as semen, vaginal fluids or rectal fluids. Latex is a type of material used for external (male) condoms and is effective in preventing HIV transmission. People who are allergic to latex can use condoms made of polyurethane or polyisoprene. Condoms made of lambskin do not protect against HIV because they have pores that are large enough for the virus to pass through. Another form of protection is the internal (female) condom, which is made of nitrile and is safe for people with latex allergies. The other form of protective barrier is the dental dam, which is also made of latex. Any type of condom cut into a flat sheet can serve as a dental dam.

What is PrEP? What is PEP?

Pre-exposure prophylaxis (PrEP) is a medicine taken daily to reduce the risk of HIV infection. If someone is at very high risk for HIV, PrEP might be right for them. PrEP should be considered if someone is HIV-negative and in an ongoing sexual relationship with an HIV-positive partner. PrEP also should be considered for people who are not in a mutually monogamous relationship

(continued)

DO NOT COPY OR DISTRIBUTE
in any format without express
written permission from ETR.
PDF solely for purposes
identified in signed
April 2025 agreement.

© ETR. All rights reserved.

(continued)

with a partner who recently tested HIV-negative, and if they are

- **A person with a penis who has had anal sex without a condom with another person with a penis, or who has been diagnosed with an STI in the past 6 months**
- **A person who does not regularly use condoms during sex with partners of unknown HIV status who are at very high risk of HIV infection (for example, people who use injection drugs or women who have bisexual male partners)**

Post-exposure prophylaxis (PEP) is an HIV medicine that can be taken after being potentially exposed to HIV to prevent becoming infected. If someone is HIV negative or doesn't know their HIV status and thinks they have recently been exposed to HIV during sex (for example, if a condom breaks), they should talk to their health care provider or an emergency room doctor about PEP right away (within 3 days). The sooner someone starts PEP, the better; every hour counts. If prescribed PEP, it is necessary to take it once or twice daily for 28 days.

What does U=U mean?

U=U means Undetectable = Untransmittable. If a person living with HIV has fewer than 200 copies of HIV per milliliter of blood, they are considered virally suppressed and the infection is undetectable on tests. Medications are used to suppress the virus so it becomes undetectable. People with undetectable viral loads cannot transmit the virus sexually to their partners.

Will everyone with HIV get sick eventually?

While complications from HIV infection are possible, current treatments and medications are giving people with HIV a positive prognosis and near-normal lifespan. HIV is now considered a chronic disease. If people with HIV remain in medical care and are able to continue to take the medications to keep low viral loads, they can live long, healthy lives. Patients living with HIV would then be vulnerable to the same health conditions that affect all people as they age.

5. **Summarize by saying,**

Now you know the basics about HIV infection. These are the facts that can help you make proud choices so you can reach your goals and dreams.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY B

THE SUBJECT IS HIV VIDEO AND DISCUSSION*

PREPARING FOR THE ACTIVITY

RATIONALE

Reinforcing information via a motivating video increases the possibility of reaching more teens who learn quickly through music videos and other television programs.

MATERIALS

- Monitor and video player, or internet access if using alternative videos
- Video: *The Subject Is HIV*, or alternative videos

PREPARATION

- Review the information about HIV in Appendix B.

TIME

25 minutes

(*Note:* Allow more time for discussion of the video, if possible, to help participants personalize the information and to answer any questions they may have.)

PROCEDURE

FACILITATOR'S NOTE

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. A list of alternative videos and discussion questions can be found at www.etr.org/ebi/alternative-videos.

1. Introduce the video by saying,

> This video you are going to see will discuss HIV/AIDS, what it is, how you can get it, and how to prevent infection. Afterward, we will talk about the video. Pay close attention to messages about how people can and cannot become infected with HIV, about injection drug use and about condom use.

2. Show the video, which is 18 minutes long.

3. At the end of the video, ask the participants to brainstorm answers to the following questions:

> What did they mean when they said "you can't get HIV from things you share?"

Answer:

» You can't get HIV from casual contact (e.g., combs, toilet seats, telephones, eating after someone).

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE In any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

What was the message about condoms in the video?

Answer:

» Use condoms every time you have anal, oral or vaginal sex.

What was the message about needle sharing?

Answer:

» Do not share needles or works.

What were the messages discussed between the young people in the library?

Answers:

» Don't have sex before you are ready.

» Don't let anyone pressure you to have sex.

» If you have sex, you must use a latex (or polyurethane/polyisoprene) condom.

What were the messages discussed between the students in biology class?

Answer:

» It's important to talk with your partner about using protection.

» If a person respects themselves and their partner, they will use a condom.

» Not having sex is a good way to avoid pregnancy, HIV and other STIs.

4. **Summarize this activity by saying,**

You did a great job answering those questions and remembering the important messages in the video(s).

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

HIV infection can happen to anyone who engages in risky behaviors. The choice is yours. I want you to make proud and responsible choices, so if you choose to have sex, choose to use protection.

FACILITATOR'S NOTE

Some statistics have changed since the video was produced. In 2018, youth ages 13 to 24 accounted for an estimated 21% of new HIV infections in the United States. The most recent data on young people and HIV can be found at: www.cdc.gov/hiv/group/age/youth/index.html

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY C

TRUE OR FALSE: HIV

PREPARING FOR THE ACTIVITY

RATIONALE

Distinguishing facts from falsehoods about HIV provides an opportunity for learning the correct information about HIV/AIDS.

MATERIALS

- Markers
- Chart paper (for keeping score)
- Masking tape
- *True or False: HIV Statements* (included in module)
- *HIV/AIDS Frame* poster

TIME

10 minutes

PROCEDURE

1. This activity reviews facts about HIV/AIDS. Refer to the *HIV/AIDS Frame* poster throughout the activity to help participants understand the answers.

2. Introduce the *True or False* activity by saying,

> The activity we are about to do will show just how much you know about HIV and how to protect yourself.

3. Put the words "True" and "False" on the board or a sheet of chart paper.

4. Explain the activity,

> I am going to divide you into two teams. I will then read each team a statement and ask you whether it is true or false and why. If your team answers correctly, you will get two points. If your team can correctly explain why it's true or false, then you get two more points. If your team answers incorrectly, then the other team has a chance to steal the question and get two points for correctly explaining why it's true or false.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

5. **Divide the group into two teams.**

6. **Go around to each team one at a time and read a statement from the *True or False: HIV Statements*.**

7. **Ask the first team to identify it as true or false and to state *WHY*.**

8. **Ask the second team if they agree. (If there is a disagreement, teach the right answer and explain why.)**

9. **If the second team agrees, but the answer is wrong, teach the right answer and explain why.**

10. **If the second team agrees and the answer is right, give the team the correct number of points.**

11. **Read the next statement to the second team.**

12. **The game is over when the statements are completed or time is up, whichever comes first.**

13. **Summarize by saying,**

> **When you believe in things that just aren't true, especially about HIV, it can cause you to make unhealthy choices. Knowing the facts can make all the difference.**
>
> **Understanding that HIV can affect anyone helps people understand that they need to always protect themselves.**
>
> **You can share this knowledge with your friends, family and partners. Your knowledge will help you protect yourself and reduce your risk of HIV.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

TRUE OR FALSE: HIV STATEMENTS

[Do *NOT* change the order of the statements]

1. **Having sex with someone who uses injection drugs is a way a person can get HIV.**
   TRUE
2. **Having unprotected anal sex increases your chances of getting HIV.**
   TRUE
3. **You can tell by looking at people whether they have HIV.**
   FALSE
4. **HIV can be transmitted in blood, semen, vaginal fluids, and rectal fluids.**
   TRUE
5. **Having unprotected sex with someone who is living with HIV is one way of getting HIV.**
   TRUE
6. **If a person who is pregnant has HIV, there is a chance the baby can get it.**
   TRUE
7. **You have a bigger chance of getting HIV if you have sex with many people.**
   TRUE
8. **You can get HIV from using someone else's comb or hairbrush.**
   FALSE (NO CONTACT WITH BODY FLUIDS)
9. **Using protection during sex reduces the chance of getting a sexually transmitted infection, including HIV.**
   TRUE
10. **You can get HIV by sharing a needle with a drug user.**
    TRUE
11. **If you hug someone with HIV you can get it.**
    FALSE (NO CONTACT WITH BODY FLUIDS)
12. **Having an untreated STI can increase your chances of getting HIV.**
    TRUE
13. **AIDS is the stage of HIV in which your body cannot fight off diseases.**
    TRUE
14. **Having AIDS makes you more likely to get other diseases.**
    TRUE
15. **AIDS can be cured.**
    FALSE
16. **AIDS is caused by a virus.**
    TRUE (CALLED HIV)
17. **Anyone can get HIV.**
    TRUE (IF YOU PARTICIPATE IN RISKY SEXUAL BEHAVIOR OR SHARE NEEDLES)
18. **You can avoid getting HIV by exercising regularly.**
    FALSE
19. **You can take certain medications to reduce your risk of HIV.**
    TRUE
20. **Early treatment can help people with HIV stay healthy.**
    TRUE

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY D

HIV RISK CONTINUUM

PREPARING FOR THE ACTIVITY

RATIONALE

Actively identifying the HIV risk posed by different sexual and non-sexual behaviors helps participants internalize the information and facilitates learning.

MATERIALS

- *Risk Continuum* signs
- *Risk Behavior* cards
- Masking tape

TIME

15 minutes

PROCEDURE

1. Tape the *Risk Continuum* signs on the wall or blackboard like the diagram below.

No Risk	Some Risk	High Risk
Green Light	Yellow Light	Red Light
(Safe)	(Proceed with caution)	(Unsafe)

2. Divide the group into pairs.

3. Explain the following information.

In this activity, you will be given cards containing behaviors. You will have to place each card under the heading that you feel identifies the level of risk for HIV infection the behavior represents.

High Risk/Red-Light Behaviors involve contact with blood, semen, vaginal fluids or rectal fluids and can transmit HIV.

Some Risk/Yellow-Light Behaviors involve a barrier such as a condom or dental dam (latex sheath or cover), but they are activities during which exchange of blood, semen, vaginal fluids or rectal fluids might create some risk of transmitting HIV.

No Risk/Green-Light Behaviors involve no exchange of blood, semen, vaginal fluids or rectal fluids and thus pose no risk of transmitting HIV.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

4. **Shuffle the *Risk Behavior* cards and distribute them as evenly as possible among the pairs.**

5. **Explain that "sex" in these questions means oral, anal and/or vaginal intercourse.**

6. **Ask each pair of participants to read one of their *Risk Behavior* cards and decide under which risk level category it should be placed.**

7. **After each answer, have participants explain why they think the behavior belongs under that particular category. Ask if other group members agree. Use this opportunity to clarify misinformation.**

8. **Once there is agreement about where the *Risk Behavior* card should be placed, ask participants to go tape the card under the correct category.**

FACILITATOR'S NOTE

***Risk Behavior* cards may be placed between categories because High, Some and No Risk represent a continuum and some behaviors do not fall solely within any one category.**

9. **Summarize as follows:**

> **Look at all the behaviors in the green light category. Notice all the things you can do to enjoy intimacy with your partner without putting yourself at risk for HIV. To protect yourself from HIV infection, it is important to know which behaviors are safe and which are risky. You can use the information you have been learning in this program to make proud choices that reduce your risk for HIV infection and help you reach your goals and dreams. Remember, it's not who you are but what you do that puts you at risk for HIV and other STIs. So be proud and responsible and always use latex (or polyurethane/polyisoprene) condoms and/or dental dams if you have any kind of sexual intercourse—oral, anal or vaginal.**

RISK BEHAVIORS[1]

(*Note:* This guide reflects risk levels for HIV transmission only. There are some STIs [herpes, syphilis, HPV] that can be passed through skin-to-skin contact or genital touching.)

Vaginal sex without a condom ---------- Red Light

Kissing ---------- Green Light

Having protected sex with a person who is having sex with other people ---------- Yellow Light

Romantic conversation ---------- Green Light

Oral stimulation of the penis without a condom ---------- Yellow Light

Sharing eating utensils with someone who is living with HIV ---------- Green Light

Sharing needles and syringes ---------- Red Light

Anal sex with a condom and water-based lubricant[2] ---------- Yellow Light

Self-masturbation ---------- Green Light

Mutual masturbation ---------- Green Light

Practicing abstinence ---------- Green Light

Vaginal sex with a condom ---------- Yellow Light

Massage ---------- Green Light

Having sex with multiple partners without using a condom ---------- Red Light

Oral stimulation of the vulva (female genitals) with a dental dam (latex barrier) ---------- Green/Yellow Light

Anal sex without a condom[2] ---------- Red Light

Having protected sex with multiple partners ---------- Yellow Light

Having sex without using a condom with a person who injects drugs ---- Red Light

Sexual fantasy ---------- Green Light

Touching someone who is living with HIV ---------- Green Light

Flirting ---------- Green Light

Body rubbing/grinding (with clothes on/no exchange of body fluids) ------- Green Light

Hugging ---------- Green Light

Having sex with only one partner (monogamous) -------- Green/Yellow/Red Light

(Green if both have never had sex before. If one or both have had other partners, Yellow if they use condoms; Red if they don't use condoms.)

Note: Anal sex is a higher risk activity for HIV specifically due to the possibility of rectal tearing and bleeding. When used correctly and consistently, condoms are highly effective in preventing HIV. If people are going to engage in anal sex, using a condom and water- or silicone-based lubrication can reduce their risk.[2]

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

FACILITATOR'S NOTE

Other HIV prevention strategies include PrEP 2-1-1 and TasP.

- PrEP 2-1-1 dosing strategy has been shown to be 86% effective at preventing HIV transmission during anal sex (though less effective during vaginal sex). The PrEP 2-1-1 strategy involves taking 2 pills between 2 and 24 hours before sex and another pill within 24 hours after the first and the final pill 24 hours after that.[3]
- TasP or "Treatment as Prevention" means that people living with HIV who get treatment are less likely to transmit the infection. Reducing the amount of the virus in the body through treatment helps prevent transmission to others. An undetectable viral load means the virus is untransmittable (or U=U).[4]

MODULE 3

ATTITUDES ABOUT SEX, HIV AND CONDOM USE

GOALS

The goals of this module are to:

- Increase participants' perceived vulnerability to HIV.
- Confront stereotypes about who becomes infected with HIV and learn more about how people can and cannot become infected.
- Reinforce knowledge about HIV and AIDS.
- Weaken negative beliefs and attitudes that foster risky sexual behaviors.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- Identify their attitudes toward risky sexual behavior.
- Problem solve for risky sexual behavior situations.
- Recall correct information about HIV/AIDS.
- Advocate and give advice regarding safer sex strategies.

MODULE PREVIEW

The third module: (1) informs participants about the transmission and prevention of HIV; and (2) helps participants advocate and give advice regarding HIV/AIDS and safer sex strategies.

STRATEGIES/METHODS

- Video Viewing
- Group Discussion
- Problem-Solving Exercises

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- *The Hard Way* character cards
- *Calling Koko Caller* worksheets in the student workbooks
- Video: *The Hard Way* (or alternative videos*)

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Chart paper
- Pre-labeled chart paper:
  - » *Kenrick, Miguel, Renee, Mom, Dad* and *Koko*
- Markers
- Masking tape
- Pencils
- Monitor and video player, or internet access if using alternative videos

PREPARATION NEEDED

1. Label all of the charts as listed under Materials.
2. Hang the pre-labeled charts in the order they will be used. Fold and tape the charts so the titles remain covered by the bottom half of the sheet until you use them.
3. Set up the video(s) to be ready to play.
4. Review the caller scripts in Activity B and choose three that will be most relevant for your group.

INSTRUCTIONAL TIME: 60 minutes

(*Note:* Facilitators may wish to extend the time to allow more thorough discussion of the video.)

ACTIVITY	MINUTES NEEDED
A. *The Hard Way* Video and Discussion*	**40**
B. Calling Koko	**20**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.

ACTIVITY A

THE HARD WAY VIDEO AND DISCUSSION*

PREPARING FOR THE ACTIVITY

RATIONALE

Reinforcing information about HIV, AIDS, risk levels and condom use through video presentations can promote further group discussion and enhance learning.

MATERIALS

- Monitor and video player, or internet access if using alternative videos
- Video: *The Hard Way*, or alternative videos
- Pre-labeled chart paper:
  - *Kenrick, Miguel, Renee, Mom, Dad* and *Koko*
- Masking tape
- Markers
- *The Hard Way* character cards (one card per participant)

TIME

40 minutes

(*Note:* Allow more time for discussion of the video, if possible.)

PROCEDURE

1. Introduce the film.

> Sexually active young people are at risk for HIV infection. The video you are going to see is about young people. This video discusses what AIDS is, the ways people get HIV and the ways to prevent infection.

2. If you haven't done so already, write the names of the characters on chart paper (Kenrick, Miguel, Renee, Mom, Dad and Koko).

3. Divide the group into 6 teams. Hand out a character card to each team. Explain the activity.

> The cards you have just received have the name of one of the main characters in the video. While you watch the video, pay close attention to the person on your card. Watch what this person says and how this person thinks and acts. Also, notice anything that changes the person's thinking during the course of the video.

4. Start the video, which is 18 minutes long.

5. When the video has ended, plan to spend 10–12 minutes discussing the various characters. Pace yourself. Plan to spend about 2 minutes on each character.

* A list of alternative videos and discussion questions can be found at www.etr.org/ebi/alternative-videos.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

6. **Begin the discussion by saying,**

> Let's talk about the characters in this video. I would like the group with Kenrick's card to go first.
>
> How would you describe Kenrick?
>
> What behaviors placed Kenrick at risk for HIV? *(Be sure the issue of number of partners gets addressed.)*
>
> Now let's talk about Miguel.
>
> Those of you with Miguel's card, what behaviors placed him at risk? *(Be sure number of partners gets addressed.)*
>
> Why didn't Miguel use condoms?
>
> Now let's talk about Miguel's partner, Renee. Notice the video refers to the use of birth control pills as "protection." While pills may protect against a pregnancy, they provide no protections against HIV and other STIs.
>
> What form of protection does Renee choose to use?
>
> Those of you with Renee's card, why do you think Renee chose to use birth control pills instead of condoms as her form of protection?
>
> What could Renee and Miguel say to each other about their sexual health and desires to protect themselves from unintended pregnancy or STIs?
>
> Does this make sense? Do you think that using the pill is OK if you are having sex with only one person? Why or why not?
>
> Those of you with the Dad card, what do you think about the way the dad talked to Kenrick?
>
> Those of you with the Mom card, what do you think about the conversation between Kenrick and his mom?
>
> How is Kenrick's conversation with his dad different from the one with his mom?
>
> What adults have ever talked to you about condoms or safer sex? How do your parents, guardians or other caring adults deal with the issue?
>
> Where would you turn for support and advice about relationships, sex and using protection?

7. **Spend the next 10 minutes discussing Koko's message, HIV testing and relationships. Begin the discussion by saying,**

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

Now let's talk about Koko. What was her message in the video?

What do you think it would be like to get tested?

What would someone gain by getting tested? (What would be the benefits of getting tested?)

Now let's discuss the types of relationships in this film. Kenrick had multiple partners whereas Miguel had a steady girlfriend. How do you negotiate condom use when

- You have more than one partner?
- You have a steady partner?
- You have a new partner?

Which one—with more than one partner, a steady partner or a new partner—is easier or harder, and why?

Now let's talk about friendships and conversations people have with their friends about being safer and using condoms. Do you think that Kenrick and Miguel had talked about using condoms enough? What else could they have said to each other? What would you say to your friends? What would you want your friends to say to you?

8. Summarize the activity by saying,

The characters in this video had to make decisions about whether to have sexual intercourse and whether to use condoms to protect themselves. What is the most important message you're taking away from the video and our discussion? (Listen for these messages and reinforce if they are not shared: getting tested, talking about sexual health and protection, and using protection if having sex can help reduce the risk of HIV transmission.)

As you make these decisions in your life, remember that abstinence is the 100 percent surest way to avoid an unintended pregnancy and sexual transmission of HIV and other STIs. If you choose to have sex, it's important to use condoms correctly and consistently every time. If you've had unprotected sexual intercourse in the past, you can get tested and then use protection correctly in the future. It's the proud and responsible thing to do!

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY B

CALLING KOKO

PREPARING FOR THE ACTIVITY

RATIONALE

Practicing solving HIV-related problems builds self-efficacy and the ability to safely resolve risky situations and behaviors.

MATERIALS

- *Calling Koko Caller* 1–6 worksheets
- Pencils

TIME

20 minutes

PROCEDURE

FACILITATOR'S NOTE

You may want to choose the caller scripts to use with your group. You have only 20 minutes, so you want to make sure you have enough time to read and discuss each call that you assign to participants.

If your participants resist getting into pairs, do the activity in the large group. Read the first caller script and ask group members to give ideas for the kind of advice Koko should give the caller. Then choose someone to play the role of Koko giving the caller advice. You play the role of the caller. Sit with your chairs back to back for the roleplay. Continue with the other caller scripts you've chosen.

1. Introduce this activity by saying,

> Based on what you have learned so far, you will give advice to someone who has questions or concerns about HIV, AIDS or condoms. In this activity, you will take the role of Koko, the expert on HIV, AIDS and condoms, who has an HIV Information Hotline for teenagers called *Calling Koko*. You will provide the solution to the concerns of one of these callers.

2. Divide the participants into pairs or small groups.

3. Have participants turn to the *Calling Koko* worksheets in their workbooks. Assign a different *Calling Koko Caller* to each pair or group. (Multiple groups will be working on the same caller script.)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

4. **Explain the following:**

> You will discuss, decide on and then write down the advice you would give to the caller. At the end of this activity, you will share the advice with the rest of us. Your final decision should be one that your team can agree on. Remind your callers that they can make proud and responsible choices.

5. **Give the pairs 5 minutes to discuss and write their advice.**

6. **Have one pair for each caller give their report. One person should read the part of the caller, and the other person should give Koko's advice using the Main Points to Cover.**

7. **Using the following sample responses, discuss any points that participants do not come up with themselves.**

FACILITATOR'S NOTE

Sample responses are provided. Participants' answers do not have to match the sample responses word for word to be considered correct. However, in the large-group discussion, it is important to make sure that the points in each box get discussed. You may want to read the sample responses as a review before going on to the next caller.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MAIN POINTS TO COVER

The surest protection is abstinence.

If you choose to have sex, you must use a latex condom.

PrEP and PEP can reduce the risk of HIV transmission.

Don't share needles or works.

CALLER 1

Koko,

I've heard that young people are at risk for HIV and the number of HIV cases among young people is growing. I don't want to take any chances of getting HIV. What's the surest way I can protect myself?

– Charlie

Sample Response to Caller 1

Every time you engage in a behavior that involves an exchange of body fluids you take a chance of getting HIV. The surest way *NOT* to get HIV (the virus that causes AIDS) is to practice abstinence—choosing not to have sex. If you do decide to have vaginal or anal sex, the best way to reduce your risk of HIV is to use condoms. That includes external or male condoms made of latex, polyurethane or polyisoprene; or female or internal condoms. PrEP and PEP are medications that you can take to reduce your risk of HIV infection. PrEP is a pill you take every day to prevent HIV. PrEP may be a great option for someone who is in a relationship with someone living with HIV or for someone who is at high risk for HIV. PEP is a pill you can take for 28 days after having sex if you think you may have been exposed to HIV. And don't share needles of any kind with anyone for any reason (whether it's for drug use, tattoos or ear piercing). That's the proud and responsible thing to do.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MAIN POINTS TO COVER

Commitment in a relationship is not always an effective form of protection.

Safer sex will reduce your risks of pregnancy, HIV and other STIs.

Talk to your partner about condoms.

Use latex condoms every time you have sex.

CALLER 2

Dear Koko,

My girlfriend and I have been going out for a year. We really love each other, and both want to have sex. I trust her, but I'm concerned about HIV. My girlfriend and I are 14 years old, and neither one of us has tattoos, and we don't use drugs. We've been thinking about having sex, but only with each other. Do we have to worry about HIV?

– Raymond

Sample Response to Caller 2

If you and your girlfriend have never had vaginal or anal sex with anyone else, and never used injection drugs or shared needles of any kind, the chances are that neither of you has HIV.

However, if you and your girlfriend start having sex, you should always use protection even if you are only having sex with each other. Deciding to have sex with someone is a big decision and it involves thinking and talking to your partner about using condoms. Using condoms reduces your risk of unintended pregnancy or getting an STI, including HIV.

Talk it over with your partner. You should both get tested for HIV and other STIs and agree to use protection every time you have sex. By protection, I mean external or male condoms made of latex, polyurethane or polyisoprene; internal or female condoms; or dental dams for oral sex.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MAIN POINTS TO COVER

Get tested for HIV now, and again in 6 months.

If the test is positive, seek medical help immediately.

Avoid future risk of infection by using protection every time you have vaginal, oral or anal sex.

CALLER 3

Hi Koko,

Five months ago, I had sex with someone for the first time. We didn't use condoms. I didn't really enjoy it, and he never even called me again. Now I have a new boyfriend and he wants me to have sex, too. Is it possible that I might have been exposed to HIV when I did it before? Now, I'm anxious that I might be infected with HIV. What do I tell my boyfriend? What should I do?

– Alex

Sample Response to Caller 3

Yes, it is possible that you have been exposed to HIV. There is no way of knowing for sure without being tested. Test kits are available over the counter at most drug stores. You can also go to a local HIV testing site such as a public health clinic, community health center or your doctor. It may take 2 to 6 weeks after exposure before HIV can be detected in a person's body. Make an appointment to get tested and use condoms until you get the test results.

It sounds like your first time didn't go the way you had hoped it would. It's OK if you want to choose not to have sex right now. Abstinence is the surest way to protect yourself from HIV and other STI. If you do decide to have sex, be proud and responsible and talk to your boyfriend about protection. Tell him it is important that you use condoms if you have sex. Let him know that you're concerned about getting HIV, and what would happen if either of you got infected. If he cares about the relationship, he will understand that being abstinent or using condoms is the right thing to do.

I also want to make sure you feel supported. Please reach out to the wellness center or find a school club or group that supports and affirms you.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MAIN POINTS TO COVER

Oral sex can transmit STIs, including HIV.

Practicing safer sex can protect you against pregnancy, HIV and other STIs.

Other things can lead to intimacy and orgasm without risking getting pregnant, or infected with HIV or another STI.

CALLER 4

It's like this Koko,

I am fifteen years old, and my girlfriend and I have never had vaginal sex. We do other things, though, including oral sex. Before, we just wanted to make sure that she didn't get pregnant. We had never really thought about infections like HIV. But, now I hear that teens my age are getting sexually transmitted infections. Is oral sex safe? How do we protect ourselves from STDs?

– Carmello

Sample Response to Caller 4

Oral sex poses little to no risk of transmitting HIV. However, most STIs can be transmitted during oral sex. Untreated STIs can increase the risk of HIV transmission. This is why it is important to use protection for oral sex. For oral sex that involves putting the mouth to a vagina or an anus, use a dental dam. If you don't have a dental dam, you can cut a condom into a flat sheet. A penis should also be covered with a condom during oral sex.

From what you've told me, you already know there are other things that people can do for physical intimacy, or even sexual orgasm, that will not lead to pregnancy or transmission of infection. Using protection every time you have oral sex is the responsible thing to do. If you decide to have sexual intercourse, use an external (male) or internal (female) condom every time you have sex. And make sure you only use condoms that are made of latex, polyurethane, polyisoprene or nitrile.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MAIN POINTS TO COVER

You can't tell if a person has HIV by looking.

Look for a relationship, *not* a sexual partner.

If you decide to have sex, use a latex condom every time.

CALLER 5

What's up, Koko,

I recently found out that a friend of mine is HIV positive and that she's had the virus for years. She's smart, fun to be around, and has only had sex with two guys her whole life. Now I'm afraid to be with anyone because if someone like her can get HIV, how can I know who's safe and who isn't? If she has HIV, then anyone could! I'm scared to date! What should I do?

– Dana

Sample Response to Caller 5

I can understand your concerns about having sex. You can't look at people and tell whether or not they have an STI, such as HIV. Take time to get to know a person as a friend before you decide to have sex.

You can always decide to wait to have sex. If you decided to have sex, your best combination strategy is safer sex and time. Take the time to really get to know your potential partner. Talk to them about your concerns and how you plan to protect yourself. When you decide to have sex, be sure to use protection every time. By protection, I mean external or male condoms made of latex, polyurethane, or polyisoprene; internal or female condoms; or dental dams.

I am assuming your friend is getting treatment for HIV. Antiretroviral therapy, or ART, can help your friend live a long, healthy life. If she has a steady sexual partner who is HIV negative, ART could help reduce the chances of her transmitting HIV to her partner. Her partner can get on pre-exposure prophylaxis or PrEP treatment, which will reduce the risk of getting the virus.

People who think they may have been exposed to HIV should get treatment immediately. Post-exposure prophylaxis or PEP is available at emergency or urgent care centers, doctor's offices and HIV clinics. PEP must be taken within 72 hours from the time of exposure for it to be effective in preventing HIV infection.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MAIN POINTS TO COVER

People cannot give consent when they are drunk or high.

Get tested for pregnancy, STIs and HIV.

Resist peer pressure to drink alcohol or do drugs. Alcohol and drugs affect your decision making.

Use protection if you decide to have sex.

CALLER 6

Koko,

I'm a senior this year and plan to go to college, but something happened the other night that I want to ask about. I went to a party. I had a couple of beers and then somebody handed me a joint. Everyone else was smoking too. It was powerful stuff! I had never used drugs before. The next thing I knew I was in the bedroom with this basketball player I kind of had a thing for. We ended up having sex, and I don't even know if we used protection, because I was so high that I forgot to ask. I heard he does this type of thing a lot. Now he barely even speaks to me. I'm afraid that I could have gotten pregnant or gotten infected with an STI like HIV. What should I do?

– Rihanna

Sample Response to Caller 6

This sounds like a tough situation. When people are drunk or high, they are more likely to have sex without using condoms, which increases their risk for STIs. Everybody has the right to say when they want or don't want to engage in sexual behaviors and to insist on using protection. When people are drunk or high they can't fully give consent to sexual activity. Please remember that someone doing something sexual to you while you are drunk or high means that technically you were not able to give consent, and so this may be a situation of sexual assault. Do not blame yourself. There are people in this world who seek out those who are too high or drunk to consent. If this person is known for having sex with people who are too drunk or high to consent, he likely isn't someone who has your best interests in mind. If you ever find yourself in a position where you were pushed or forced to do something you didn't really want to do, it's important to talk to a parent, counselor or other trusted adult.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

CALLER 6

Sample Response to Caller 6 *(continued)*

Go right away to your local reproductive health clinic and get emergency contraception (EC) to prevent a possible pregnancy. They can also test you for STIs. Make sure you go to the clinic right away. You have up to 5 days after unprotected sex to use EC, but the sooner, the better. EC is also available over the counter at most drug stores.

If you may have been exposed to HIV, immediately contact a doctor about post-exposure prophylaxis (PEP). These medications may be able to prevent the virus from infecting the body if taken immediately after exposure (within 72 hours).

Don't blame yourself. You deserve to have sexual partners who you feel comfortable communicating with, who respect what you want and don't want, and who will share the responsibility for using protection.

MODULE 4

STRATEGIES FOR PREVENTING HIV INFECTION: STOP, THINK AND ACT

GOALS

The goals of this module are to:

- Introduce participants to a problem-solving method to help think through and cope with sexual choices.
- Review and reinforce the information learned thus far in the program.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- State and explain the three steps of the problem-solving model.
- State how using problem-solving steps can help avoid risky situations.
- Explain how making their own decisions makes it more likely that they will achieve their goals and dreams.
- Provide correct answers to review questions on HIV and AIDS.

MODULE PREVIEW

The fourth module: (1) encourages participants to think about their choices; (2) helps them understand the importance of protecting themselves against HIV; (3) reinforces information about risky behavior; and (4) provides them with a problem-solving strategy as a way to reduce their risk of HIV.

STRATEGIES/METHODS

- Problem-Solving Strategies
- Case Study Worksheet
- Video Viewing
- Game

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- *STOP, THINK and ACT* poster
- *Sean and Morgan Case Study* worksheet in the student workbook
- HIV/AIDS Game Questions (included in module)
- Video: *Nicole's Choice* (or alternative videos*)

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Chart paper
- Masking tape
- Pencils
- Markers
- Monitor and video player, or internet access if using alternative videos

PREPARATION NEEDED

1. Set up the video(s) to be ready to play.
2. Review the information about sexually transmitted infections in Appendix B.

INSTRUCTIONAL TIME: 60 minutes

(*Note:* Facilitators may wish to extend the time to allow more discussion of STOP, THINK and ACT and the video.)

ACTIVITY	MINUTES NEEDED
A. STOP, THINK and ACT: Introduction to Problem Solving	**5**
B. Sean and Morgan Case Study: Problem Solving using STOP, THINK and ACT	**15**
C. *Nicole's Choice* Video and Discussion*	**25**
D. The HIV/AIDS Game	**15**

DO NOT COPY OR DISTRIBUTE

PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.

ACTIVITY A

STOP, THINK AND ACT: INTRODUCTION TO PROBLEM SOLVING

PREPARING FOR THE ACTIVITY

RATIONALE

By learning a problem-solving model, participants will have a strategy they can rely on when faced with sexual decisions, rather than relying on emotions.

MATERIALS

- *STOP, THINK and ACT* poster
- Masking tape

TIME

5 minutes

PROCEDURE

FACILITATOR'S NOTE

This activity is intended as a brief overview of the STOP, THINK and ACT problem-solving approach. Keep it simple and quick.

1. Hang the *STOP, THINK and ACT* poster.

2. Introduce the activity by saying,

> We've been talking about making proud choices but it can be hard to do when you might be experiencing pressure and conflict.
>
> We are going to learn a problem-solving model that will help you think about making decisions under pressure.

3. Read the steps out loud to the group, pointing to the poster so the participants can read along. Begin with STOP.

> The first step is ***STOP***. Why might you need to ***STOP*** if you were being pressured sexually?

4. Let the participants provide a few answers.

Answers may include:

You may feel afraid, confused, angry or upset.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

5. Then say,

> ***STOPPING*** is important because it gives you a chance to take a deep breath, calm down and collect yourself.

6. Then move on to THINK.

> The second step is ***THINK***. What might you need to think about?

7. Allow participants to respond.

8. Then say,

> ***THINKING*** keeps you, not your emotions, in control of the situation. You don't want to overreact or underreact. Some of the things you want to think about include:
>
> - What is the problem?
> - What am I being pressured to do?
> - What am I feeling? What is the other person feeling?
> - What are my choices?
> - What do I want?
> - How can I stick to the decisions I've made for my health and well-being?
> - What alternatives can I suggest?
> - What are the possible consequences?
>
> The important thing here is to calm down and think things through a bit before acting.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

9. **Then move on to ACT.**

Once you are calm and you have thought things through a bit, the next step is to ***ACT*** on your decision. Evaluate the possible consequences and make the best choice. Try it out and see how well it works. If your solution does not work well enough, you can try another alternative, or ask for help.

Sometimes after taking an action, you realize it wasn't the best choice for you and you would do it differently the next time. That's fine. It's just important to reflect on what happened so you can learn from your experiences.

10. **Summarize by saying,**

Next we will practice the STOP, THINK and ACT problem-solving steps.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY B

SEAN AND MORGAN CASE STUDY: PROBLEM SOLVING USING STOP, THINK AND ACT

PREPARING FOR THE ACTIVITY

RATIONALE

Applying the problem-solving steps to a situation will enhance the participants' ability to use them.

MATERIALS

- *STOP, THINK and ACT* poster
- *Sean and Morgan Case Study* handout
- Pencils

TIME

15 minutes

PROCEDURE

FACILITATOR'S NOTE

The case study has been written to be gender neutral. Sean and Morgan might be a boy and a girl, a girl and a boy, two boys, two girls, or transgender youth.

1. Begin this activity by saying,

> No one should pressure someone else for sex. This is especially true of those who are less able to speak for themselves or assert themselves because of a disability. When we are being pressured sexually, we often feel confused or upset and may not think clearly about how to deal with the situation. STOP, THINK and ACT may be a way to help you practice safer sex. So we are going to practice using STOP, THINK and ACT. You may notice that we are using gender neutral names in the case study. The skills we are learning here can be applied by anyone of any gender or sexual orientation. Sean and Morgan may be transgender youth. No matter the gender, gender expression, gender identity or sexual orientation of people in a sexual relationship, there has to be consent and that consent has to be reaffirmed throughout the sexual intimacy and intercourse.

2. Divide the participants into pairs.

3. Have participants turn to the *Sean and Morgan Case Study* worksheet their workbooks.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

4. **Ask for a volunteer to read the case study and instructions to the group. Encourage the group to read along. If there is no good reader, you should read.**

SEAN AND MORGAN CASE STUDY

Sean is 3 years younger than Morgan. They've been going out for a while. Sean really likes being with someone who is older. Morgan is a lot of fun and Sean feels more mature and popular when they're together.

Sean is very smart and plans to become a psychologist. Sean has had a tough childhood and very much wants to be independent and successful as an adult. Sean works hard and has a plan for the future.

Morgan really likes Sean. Lately, Morgan's friends have been talking a lot about sex and keep asking if Morgan and Sean have "done it" yet. Morgan figures it's time and begins to pressure Sean about having sex.

When Morgan asks Sean about having sex, Sean feels unsure about what to say. Sean has actually thought a lot about this and doesn't feel ready for sex yet. Yes, Morgan is sexy and Sean feels turned on. But Sean wants to wait until after high school and maybe even college to have sex. Sean does not want to do anything that might interfere with future goals. Sean wants to be able to help young people deal with issues and problems. Sean is concerned about STIs and doesn't want to take any risks.

However, Sean really wants to keep the relationship with Morgan. Sean would be very hurt if Morgan turned to someone else for sex.

Today Sean and Morgan are hanging out at Morgan's house. Morgan's grandparents are out for a few hours. They're sitting on the couch, kissing and messing around. They're both breathing hard and things are getting hot and heavy. What can Sean do to avoid having sexual intercourse?

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

5. **Then say,**

I want you to work in pairs, and use the STOP, THINK and ACT steps to find a solution to the situation on your worksheet.

© ETR. All rights reserved.

6. Give the pairs about 7 minutes to complete the worksheets. Encourage both members of the pair to help answer the questions. One person can record the answers on the sheet. Circulate while pairs are working to provide support as needed.

7. After 8 minutes, even if most of the pairs have not finished, ask them to stop and begin discussing the case study. Ask one of the pairs to give their responses to the first section of the worksheet—the STOP section. They are reporting on what Sean and Morgan can do to stop and stay calm.

   When this pair has reported their answers, ask the other groups if they have any responses that are different or if they have anything to add.

   Ask a different pair to report on the second section of the worksheet—the THINK section. They will define the problem, explain what Sean wants and alternatives that Sean can suggest.

   When this pair has given their responses, ask the other groups to comment and offer any different ideas for this section.

   Finally, ask a different pair to report on the third section of the worksheet—the ACT section. They will discuss what Sean should do and how Sean should act to carry out that choice.

   When this pair has given their responses, ask the other groups to comment and offer any different ideas for this section.

8. Ask the group to consider this question:

   How does the age difference between Morgan and Sean affect their relationship? Do they have trust, respect, equality and open communication?

   Make the point that pressuring someone to have sex is not showing respect, and that the relationship is probably not equal. Morgan is 3 years older and is likely to be a lot more mature and experienced than Sean. Morgan probably has more power and influence in the relationship, which could put a lot of pressure on Sean. In healthy relationships, both partners are equal. One does not have more power than the other.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

9. **Summarize as follows,**

That's how STOP, THINK and ACT can be used to think through a problem.

You know that unprotected sexual intercourse can lead to pregnancy, HIV and other STIs, which can all make it harder to reach your goals. Using STOP, THINK and ACT can help you stay calm and think clearly so you can make the wise decision to always use protection if you have sexual intercourse.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY C

NICOLE'S CHOICE VIDEO AND DISCUSSION*

PREPARING FOR THE ACTIVITY

RATIONALE

By using a realistic scenario, this video helps participants understand the importance of protecting themselves against STI infection each time they engage in sexual intercourse.

MATERIALS

- Monitor and video player, or internet access if using alternative videos
- Video: *Nicole's Choice*, or alternative videos
- *STOP, THINK and ACT* poster

PREPARATION

- Review the information about STIs in Appendix B.

TIME

25 minutes

(*Note:* Allow more time for discussion of the video, if possible.)

PROCEDURE

1. Introduce the video by saying,

> Now we will watch a video called *Nicole's Choice*. Pay attention. I want you to look at it and think about its messages. I also want you to think about what you would do in Nicole's situation. Check to see if Nicole uses the STOP, THINK and ACT problem-solving steps.

2. Show the video *Nicole's Choice*, which is 15 minutes long.

3. At the end, ask the following:

> What were some of the messages in the video?

4. Allow participants to answer.

5. Refer to the poster *STOP, THINK and ACT*. Then ask,

> Did Nicole **STOP** and **THINK** when she was with Miguel? How would you have used STOP, THINK and ACT if you were Nicole?

* A list of alternative videos and discussion questions can be found at www.etr.org/ebi/alternative-videos.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

6. **After getting some answers from the group, ask,**

What messages about sexual partners did you receive from each person in the video?

- **Randy?**
- **Lynette?**
- **Nicole?**

Answers:

» You expose yourself not only to your partner, but also to all of your partner's partners.

» It is important for both individuals to get tested.

» It is important to use condoms every time you have sex.

7. **Then ask the following,**

How would you feel if you had to go to a clinic to be tested for an STI?

Can you get HIV the same way you get other STIs?

8. **Summarize as follows,**

Getting an STI may bring up a lot of emotions. Though young people ages 15-24 are diagnosed with half of all new STIs,* many STIs can be prevented by using protection or choosing not to have sex. Only you can decide to protect your future and your health. Use protection every time you have sex. And use the right kind of protection: external or male condoms made of latex, polyurethane or polyisoprene; internal or female condoms; or dental dams.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY D

THE HIV/AIDS GAME

PREPARING FOR THE ACTIVITY

RATIONALE

This activity is a way to review and reinforce the information about HIV transmission covered in this program. It also allows you to end the module with a fun, high-energy activity.

MATERIALS

- Chart paper
- Markers

TIME

15 minutes

PROCEDURE

1. Introduce the next activity by saying,

> We are going to play a game* that will review the information we've talked about regarding HIV and AIDS.

2. Divide the group into two teams.

3. Start by giving the rules:

- Each team will get the chance to answer a question.
- The team member responsible for answering the question will rotate so that each team member gets a turn.
- The other team members can help, but the answer must be given within 10 seconds.
- Only correct answers earn points. Correct answers are worth two or three points.
- The team members answering the question can choose whether they want a two- or three-point question.
- If the answer is incorrect or not given in time, I will give the correct answer, and the other team will get a bonus question (a one-point question).
- If someone answers out of turn, the interrupter's team receives a bonus question. The other team then gets a chance to answer a bonus question.

* Adapted from "AIDS Basketball" from *AIDS: What Young Adults Should Know*, 2nd ed., by William L. Yarber. Adapted with permission from the Association for the Advancement of Health Education.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

4. **Keep score (or ask a participant to keep score) on the board or on chart paper.**

5. **Try to get through all the questions, but remember you have only 15 minutes. The game goes quickly and is stimulating.**

FACILITATOR'S NOTE

If no one is given a bonus question, use the bonus questions in the game for one point each. You may be able to create other situations that result in bonus question being awarded.

6. **Use the questions that follow for the game. Correct answers are provided. Correct answers for True and False questions are in parentheses.**

7. **At the end of the game, total the team scores and declare a winning team.**

8. **Summarize by saying,**

> **Wow! What a game! You all remembered a lot of information. Remember to use all of the things you know and the STOP, THINK and ACT strategy to make proud and responsible choices.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

HIV/AIDS QUESTIONS AND ANSWERS*

TWO-POINT QUESTIONS

1. **What does AIDS stand for?**
   - Acquired immunodeficiency syndrome

2. **What causes AIDS?**
   - HIV, the human immunodeficiency virus

3. **Which body system does HIV damage?**
   - Immune system

4. **What happens to a person with AIDS that usually does not happen to people with a healthy immune system?**
   - They get certain diseases called opportunistic infections.

5. **Name three of the body fluids through which HIV is transmitted?**
   - Semen, vaginal fluids, rectal fluids, blood and breast milk (any 3)

6. **What are the most common ways HIV is transmitted?**
   - Unprotected sexual contact and exchange of blood

7. **What drug-related behavior allows the exchange of blood?**
   - Sharing needles or works

8. **How do most children get infected with HIV?**
   - From their infected mothers during pregnancy, at birth, or through breastfeeding

9. **True or (False). HIV is easily passed through oral sex.**

10. **(True) or False. Anal sex without a condom increases your chances of getting HIV.**

11. **True or (False). There is now a cure for AIDS.**

12. **(True) or False. If you think you were exposed to HIV, you can get Post-Exposure Prophylaxis (PEP) within 72 hours to avoid getting the virus.**

* See Appendix B for additional information on HIV and sources.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

13. True or (False). You can catch HIV like you catch a cold, because HIV can be carried in the air.

THREE-POINT QUESTIONS

14. What are two ways of reducing your risk of HIV?

- Abstinence
- Practicing safer sex by using condoms or taking PrEP which reduces risk of HIV transmission but not other STIs
- Engaging in low-risk activities such as kissing
- Not sharing needles or works
- Getting tested regularly
- Talking with your partners about HIV and making sure they get tested too

15. What does U=U mean?

- U=U stands for Undetectable equals Untransmittable. That means that people with HIV who achieve and maintain an undetectable viral load—the amount of HIV in the blood—by taking antiretroviral therapy (ART) daily as prescribed cannot sexually transmit the virus to others. If there is an undetectable amount of HIV in their blood, the virus cannot be transmitted to others.

16. Name three ways HIV is passed.

- During unprotected vaginal or anal sex (sex without a condom)
- By sharing needles and syringes
- From an infected mother to the fetus or newborn child

17. Name two types of sexual practices in which HIV can be passed.

- Anal sex
- Vaginal sex

18. Name two high-risk behaviors.

- Unprotected anal, oral or vaginal sex
- Sharing of needles or works

19. (True) or False. Using water-based lube and condoms when you have vaginal or anal sex lowers the chance of getting HIV.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

20. (True) or False. People without any symptoms can have HIV and pass it to a sexual partner.

21. Name three sexual behaviors that do not involve any exposure to body fluids that can carry HIV. (Any 3)

- Hugging
- Massage
- Touching
- Masturbation
- Sexual fantasy
- Grinding
- Romantic talking
- Cuddling

BONUS QUESTIONS (ONE POINT)

22. Yes or No. Which of these can transmit HIV?

Tears	no
Sharing needles with someone who is HIV positive	yes
Touching someone who is living with HIV	no
Using the same fork as someone who is HIV positive	no
Using someone's comb	no
Being around someone with HIV	no

23. (True) or False. People can have HIV and give it to others even if they do not look or feel sick.

24. (True) or False. Limiting the number of sexual partners a person has is one way of reducing the risk of HIV.

25. True or (False). People infected with HIV through injecting drugs are not likely to pass the virus to sex partners unless the partner also injects drugs.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

STOP, THINK and ACT
PROBLEM-SOLVING STEPS

STOP

- Stay calm, take a deep breath.
- Get control of myself.

THINK

- What is the problem?
- What am I being pressured to do?
- What am I feeling? What is the other person feeling?
- What are my choices?
- What do I want?
- How can I stick to the decisions I've made for my health and well-being?
- What alternatives can I suggest?
- What are the possible consequences?

ACT

- Evaluate the possible consequences.
- Make the best choice.
- How well did it work?
- Get help, if necessary.
- Make a new choice.

MODULE 5

POSSIBLE OUTCOMES OF UNPROTECTED SEX: STIs

GOALS

The goals of this module are to:

- Increase participants' knowledge of sexually transmitted infections.
- Help participants identify strategies for preventing STIs.
- Increase participants' perceived vulnerability to STIs.
- Clarify participants' attitudes and beliefs about STIs and condom use.
- Teach participants the steps for correct use of a condom.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- Identify the signs and symptoms of the most common STIs.
- Identify how STIs, including HIV, are transmitted, and how they can be prevented.
- Acknowledge their perceived risk for sexually transmitted infections.
- Demonstrate steps for correct use of a condom.
- Identify how condoms can prevent STIs, including HIV, and pregnancy.

MODULE PREVIEW:

The fifth module: (1) helps participants examine the signs and symptoms of the most common STIs; (2) illustrates how STIs can impact the lives of young people; and (3) informs participants about correct use of condoms, as a way to prevent STIs.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

STRATEGIES/METHODS

- Brainstorming
- Video Viewing
- Group Discussions
- Exercises
- Agree/Disagree
- Condom Demonstration

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- *STI* poster
- *Agree* and *Disagree* signs (1 set)
- *Steps for Using a Condom* poster
- Video: *The Subject Is STDs* (or alternative videos*)

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Pencils
- Markers
- Masking tape
- Condoms
- Water-based lubricant
- Condom Demonstrator(s)
- Paper towels
- Small paper bag
- Monitor and video player, or internet access if using alternative videos
- Pre-labeled chart paper:
  - » *How STIs Are Transmitted*
  - » *Reasons to Protect Against STIs*
  - » *Group Agreements* (from earlier session)
- Chart paper
- Index cards for the Transmission Game—pre-labeled with four distinct shapes, e.g., star, rectangle, circle, and triangle**

PREPARATION NEEDED

1. Label all of the charts as listed under Materials.
2. Hang the pre-labeled charts in the order they will be used. Fold and tape the charts so the titles remain covered by the bottom half of the sheet until you use them.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.

** You may change the index card codes to other things such as cities, plant names or animals. Avoid using codes that may imply judgment, such as a rating system. If you teach multiple class periods, change the code between classes so that youth in later periods do not have the same key.

3. Obtain penis models/condom demonstrators to use in the Condom Use Skills activity. If possible, get a model for each participant. You may be able to buy or borrow them from your local reproductive health clinic. Also check out the following sources: www.totalaccessgroup.com/wood_condom_demonstrator.html or www.etr.org/store/format/condom-kit.
4. Have the condom demonstrators, condoms, water-based lubricant and paper towels or wet wipes organized and ready to distribute.
5. Set up the video(s) to be ready to play.
6. Read the instructions for the Transmission Game and make sure you're clear about the process.
7. Label the index cards for the game. For a group of 6–8, one person will have a "star" card, one person will have a "triangle" card, one person will have a "rectangle" card and the rest will have "circle" cards. Increase the number of "triangle," "rectangle" and "circle" cards in this approximate ratio for larger groups.

INSTRUCTIONAL TIME: 60 minutes

(*Note:* Facilitators may wish to extend the time to include both the discussion and the video about STIs, and to provide more condom skills practice.)

ACTIVITY	MINUTES NEEDED
A. STI Facts	20
[A. (Alternate) *The Subject Is STDs* Video	20]
B. The Transmission Game	15
C. What I Think About HIV/STI and Safer Sex	10
D. Condom Use Skills	15

FACILITATOR'S NOTE

STD or STI? Some health educators prefer the term "STI" (sexually transmitted infection) over "STD" (sexually transmitted disease), whereas others use the two interchangeably. This intervention uses STI. It is important for everyone to understand that STIs (STDs) can present with or without symptoms.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY A

STI FACTS

PREPARING FOR THE ACTIVITY

RATIONALE

Providing information about STI transmission and symptoms gives participants the information they need to prevent the spread of STIs. It also provides a common ground for discussing attitudes and concerns about STIs and increases perceived vulnerability to infection as well as motivation to protect against infection. Seeing how STIs and HIV can impact the life of an individual helps motivate prevention planning.

MATERIALS

- *STI* poster
- Pre-labeled chart paper:
  - *How STIs Are Transmitted*
  - *Reasons to Protect Against STIs*
- Markers
- Masking tape

PREPARATION

- Review the information about STIs in Appendix B.

TIME

20 minutes

PROCEDURE

1. Begin this activity by displaying the *STI* poster. Use chart paper to cover the poster so only the letters "S T I" are revealed.

2. Then say,

> Today we are going to talk about STIs. First, I want you to tell me what the letters S, T and I stand for.

Answer:

» Sexually transmitted infection

Explain that they may have also heard the term *sexually transmitted disease* or STD.

3. Ask the group to brainstorm all of the STIs they know.

4. Then uncover the poster and read any STIs they did not mention.

- Chlamydia
- Gonorrhea
- Syphilis
- HPV (human papillomavirus)
- Herpes
- HIV
- Trichomoniasis
- Hepatitis B
- Hepatitis C

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE In any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

5. **Then say,**

> **STIs fall into three categories:**
>
> - **Bacterial (caused by bacteria)—**These STIs are curable. You can take medicine that kills the bacteria. They include chlamydia, gonorrhea and syphilis.
> - **Viral (caused by a virus)—**Most of these STIs are not curable. The symptoms can be treated, but the virus stays in the body. They include herpes, HIV, hepatitis B and HPV (human papillomavirus).
> - **Parasitical (caused by parasites)—**These STIs are curable. They include trichomoniasis and pubic lice.

6. **Unfold the pre-labeled chart paper titled *How STIs Are Transmitted* and say to the group,**

> **As you can see there are a lot of different STIs. How do you think people get STIs?**

7. **List the answers on the chart paper as the group responds.**

   Be sure their answers include:

   - » Vaginal intercourse (penis in vagina)
   - » Oral sex (a person's mouth on another person's genitals)
   - » Anal sex (penis in anus)
   - » Mother to child (during pregnancy, at birth, or through breastfeeding)
   - » Sharing needles
   - » Skin-to-skin genital contact (herpes, syphilis, HPV)
   - » *(Optional) For high school youth:* Sharing sex toys or other devices with partners without using a new condom each time the device is used by a different person

8. **Next ask,**

> **Who can get an STI?**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Answer:

» Anyone who has unprotected sexual intercourse (meaning without using condoms or dental dams).

9. **After participants have answered, say,**

That's right. Anyone who engages in unprotected sexual intercourse can get an STI. But teens and young adults are affected by STIs more than any other age group. The Centers for Disease Control and Prevention estimates that there are nearly 20 million new cases of STI each year, and that about half of these occur in young people ages 15 to 24.*

10. **Ask the group,**

What are some symptoms of STIs?

The list should include:

» Burning when urinating

» Sores, blisters, bumps, warts or pimples near the genitals or mouth

» Unusual discharge from penis or vagina

» Rash or itching in the genital area

» Frequent urination

» Abdominal pain

» **Often there are NO symptoms**

11. **Ask,**

How can you tell if someone has an STI?

Answers should include:

» **Often you cannot tell.**

» You may see sores, blisters, warts, bumps, a rash or pimples near the genital area.

* Centers for Disease Control and Prevention. 2017. Sexually transmitted diseases among adolescents and young adults. https://www.cdc.gov/std/life-stages-populations/adolescents-youngadults.htm. Accessed 06/2/2020.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

12. **Then say,**

> **In many cases, a person can have an STI and have no symptoms! This means that people may not even know they have an STI. It also means that even if you don't notice any sores, blisters, warts or other signs, a potential partner still may have an STI.**
>
> **Activities that do not include an exchange of body fluids have little or no chance of transmitting an STI. These include masturbating alone, petting, kissing, foreplay or dry humping. An exception is where skin-to-skin contact is involved with someone who has HPV, syphilis or herpes. In contrast, sexual activities that do include an exchange of body fluids increase the risk for STI transmission. These include vaginal, anal or oral sex.**

13. **Then ask,**

> **How can you protect yourself from getting an STI?**

Answers should include:

- Abstain from vaginal, oral and anal sex.
- Use a latex or polyurethane/polyisoprene condom every time you have vaginal, oral or anal sex.
- Do not use or share needles or works (including syringes, caps, cleaning water) for injecting drugs.
- There is a vaccine that can prevent hepatitis B.
- There is also a vaccine that protects people against most types of HPV that cause genital warts or lead to cervical cancer.
- Get tested regularly.
- Talk to your partners about STIs and encourage them to get tested too.

14. **Then say,**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

We know how STIs are transmitted. We know signs and symptoms that can indicate an STI infection. We know some STIs don't have symptoms. We know how to avoid getting an STI. But why would a person want to avoid getting an STI and what are the reasons they should get treatment right away if they do get an STI?

Let's brainstorm *Reasons to Protect Against STIs* by thinking of some of the long-term physical and emotional consequences of getting an STI.

15. **List the group's responses on the chart paper. Encourage all participants to respond.**

Answers should include:

- Increased risk of getting HIV
- Blindness (syphilis)
- Paralysis (syphilis, AIDS)
- Cervical cancer (HPV)
- Genital warts (HPV)
- Pelvic inflammatory disease (gonorrhea, chlamydia)
- Infertility (gonorrhea, chlamydia)
- Ectopic pregnancy (gonorrhea, chlamydia)
- Chronic pelvic pain (from PID)
- Liver disease (hepatitis B, hepatitis C)
- Child born with an STI
- Embarrassment
- Odor and discharge
- Impact on relationship
- Stigma

16. **Explain that many of these reasons to protect against STIs can be prevented by abstaining from vaginal, anal or oral sex, or by using protection such as condoms. STIs are common and many people will get one at some point in their lives. Getting tested regularly and treated, if required, can limit or prevent negative health outcomes. That is why it is important to get tested and treated as soon as possible. Explain that no one chooses to get an STI. Some people have gotten STIs from sex that was against their will. Getting tested and treated, if necessary, is the responsible thing to do. Summarize this activity by saying,**

There are 4 important facts about STIs I want to emphasize:

1. **Anyone can get an STI. Young people ages 15 to 24 make up half of all new STI cases.[1] You or a partner can have an STI and not know it. Many people with STIs have no symptoms.**

(continued)

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

(continued)

2. **Some untreated STIs increase the chance of HIV infection. They sometimes cause blisters or sores on or around the genitals which can become a point of entry for HIV during sex.[2]**
3. **Untreated STIs can have emotional and physical impacts. The impacts for people with vaginas are especially serious, and include things such as pelvic inflammatory disease, ectopic pregnancy, cervical cancer, infertility, chronic pelvic pain, and possible transmission of the STI to a fetus or baby.[3]**
4. **Some STIs can be cured. This means that, with testing and treatment, the person will no longer have the STI. Some STIs cannot be cured. This includes HIV. Incurable STIs can be managed with medications but the STI will remain in the body. It is important to get tested for STIs since often they have no symptoms. Then you can get the medications you need to prevent further complications like those listed on the *Reasons to Avoid STIs* sheet.[4]**

If you choose to have sexual intercourse, the proud and responsible thing to do is always use protection such as external condoms, internal condoms or dental dams every time you have vaginal, anal or oral sex. Make sure to use only protective barriers made of latex, polyurethane, polyisoprene or nitrile. Not having sex is the surest way to prevent an STI.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ALTERNATE ACTIVITY A

THE SUBJECT IS STD (VIDEO OPTION)*

PREPARING FOR THE ACTIVITY

RATIONALE

Providing information about STIs through a video gives participants the information they need to prevent the spread of STIs. It also provides a common ground for discussing attitudes and concerns about STIs and increases perceived vulnerability to infection as well as motivation to protect against infection. Seeing how STIs and HIV can impact the life of an individual helps motivate prevention planning.

MATERIALS

- Monitor and video player, or internet access if using alternative videos
- Video: *The Subject Is STDs,* or alternative videos

PREPARATION

- Review the information about STIs in Appendix B.

TIME

20 minutes

(*Note:* Allow more time for discussion of the video, if possible.)

PROCEDURE

1. Say,

> Today we are going to talk about STIs. First, I want you to tell me what the letters S, T and I stand for.

Answer:

» Sexually transmitted infection

Explain that they may have also heard the term *sexually transmitted disease* or STD.

2. Introduce the video by saying,

> We are going to learn more about STIs. In this video, you will see sexually active teenagers finding out the facts and dealing with issues of STIs.

3. Show the video, which is 17 minutes long.

4. When the video is finished, ask the following questions,

> How did you feel about the coach's advice to Jamal to be direct and honest with Diana?
>
> How did the teens react when they learned they might have been exposed to an STI from their partners?

(continued)

* A list of alternative videos and discussion questions can be found at www.etr.org/ebi/alternative-videos.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

(continued)

What could you do if you found out you or a partner had an STI?

Why is it important to tell your partner if you have an STI?

FACILITATOR'S NOTE

Be sure participants understand that when the video refers to "using a condom" this means a latex or polyurethane/polyisoprene condom.

5. **Explain that no one chooses to get an STI. Some people have gotten STIs from sex that was against their will. Summarize this activity by saying,**

There are 4 important facts about STIs I want to emphasize:

1. **Anyone can get an STI. Young people ages 15 to 24 make up half of all new STI cases.[1] You or a partner can have an STI and not know it. Many people with STIs have no symptoms.**
2. **Some untreated STIs increase the chance of HIV infection. They sometimes cause blisters or sores on or around the genitals which can become a point of entry for HIV during sex.[2]**
3. **Untreated STIs can have emotional and physical impacts. The impacts for people with vaginas are especially serious, and include things such as pelvic inflammatory disease, ectopic pregnancy, cervical cancer, infertility, chronic pelvic pain, and possible transmission of the STI to a fetus or baby.[3]**
4. **Some STIs can be cured. This means that, with testing and treatment, the person will no longer have the STI. Some STIs cannot be cured. This includes HIV. Incurable STIs can be managed with medications but the STI will remain in the body. It is important to get tested for STIs since often they have no symptoms. Then you can get the medications you need to prevent further complications like those listed on the *Reasons to Protect Against STIs* sheet.[4]**

If you choose to have sexual intercourse, the proud and responsible thing to do is always use protection such as external condoms, internal condoms or dental dams every time you have vaginal, anal or oral sex. Make sure to use only protective barriers made of latex, polyurethane, polyisoprene or nitrile. Not having sex is the surest way to prevent an STI.

ACTIVITY B

THE TRANSMISSION GAME

PREPARING FOR THE ACTIVITY

RATIONALE

Participation in an exercise that highlights how easy it is to get STIs breaks down participants' feelings of invulnerability, and increases their motivation to practice safer sex.

MATERIALS

- Labeled index cards (Star, Circle, Rectangle, Triangle)
- Pencils

TIME

15 minutes

PROCEDURE

1. Ask the rhetorical question,

> Who gets STIs? Don't answer. Just think about it. We are going to participate in an activity that will help us answer this question.

FACILITATOR'S NOTE

This activity illustrates how easy it is to transmit an STI if people have intercourse without using protection. This is a fun, engaging activity but it can also be sensitive. Some participants may have already had an STI; some might be living with HIV; and others may have family members or friends who are affected by HIV. Make sure no one is stigmatized by the activity.

2. Distribute the labeled cards and pencils so that only one person has a "star," one or two people have a "triangle" and "rectangle" and the rest get a "circle." DO NOT tell participants what the symbols mean at this time.

Rectangle = Abstinence

Triangle = Condoms/Dental Dams

Circle = Unprotected Sex (oral, anal or vaginal sex without protection)

Star = Infection (STI/HIV)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

FACILITATOR'S NOTE

You may change the index card codes to other things such as cities, plant names or animals. Avoid using codes that may imply judgment, such as a rating system. If you teach multiple class periods, change the code between classes so that youth in later periods do not have the same key.

3. Give the following instructions:

- Listen carefully and be ready to share what you hear.
- Write your name on the side of the index card that has the symbol on it.
- Stand and mingle (walk around) with others in the group until I say "stop."
- Pair off with the person standing closest to you.
- I will read you an incomplete sentence.
- You and your partner will each complete the sentence and discuss why you feel that way.
- When I call time (after 30 seconds to 1 minute), you will sign each other's card on the side without the symbol on it. Return the card to the original owner.
- Then you'll move around the room again until I say "stop" and you will pair up with a new partner.
- We will keep doing this until you've had six brief discussions.

4. Read each of the following unfinished sentences, following the procedure you just described.

UNFINISHED SENTENCES

- If I had a condom in my pocket or purse, my partner would think…
- I could convince my partner to use a condom if I...
- You can make using condoms fun by…
- If I asked whether my partner was having sex with other people, the response might be…
- If I asked my partner to use a condom, the response would be...
- People do not like to use condoms because…

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

5. When the six unfinished sentences have been discussed, ask all participants to have a seat.

6. Use the process below to discuss the activity. Say,

> - We are going to pretend that each conversation you had represented an act of "sexual intercourse."
> - Look at your cards. The shapes or symbols on the cards represent something in this exercise.
> - Will the person with the "star" card, please stand. For the purposes of this activity only, the star card represents an STI and anyone whose name is on your card could have the STI too.
> - (To the person with the "star"): Read the names on the back of your card. Everyone whose name is read, please stand.

7. After the people whose names were called are standing, say,

> - If you have a "triangle" on your card, that means you correctly used a protective barrier such as an external or internal condom, or a dental dam, every time to reduce your risk, and so you can sit back down.
> - If you have a "rectangle" on your card, that means you insisted on abstinence and refused to engage in sexual intercourse or any type of skin-to-skin genital contact, so you can sit back down. Abstinence is the 100 percent sure way to protect yourself.
> - If you have a "circle" on your card, you must remain standing because you took a chance and engaged in unprotected sexual intercourse and now you are possibly infected with an STI.

8. Ask each of the people still standing, one at a time, to read the names on their cards. Use the same process to find out the total number of people who got "infected" during this activity.

9. Count the number of people standing and ask the group to consider what would happen if they each continued to have unprotected sex with new partners.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

10. **Thank the participants for participating in the game. Remind them that it is just a game to illustrate how quickly STIs can be transmitted when people who are having sex do not use condoms or get tested.**

11. **Ask the participants to take their cards and rip them to pieces.**

12. **Ask the participants to sit down.**

13. **Ask the following questions:**

> **How did it feel to participate in this activity?**
>
> **Imagine you had the star or circle card. How did or does it feel to potentially have been exposed to an STI?**
>
> **How might it feel to potentially expose others to an STI?**
>
> **Imagine you had the triangle card. How did or does it feel to have protected yourself from STIs? How does it feel to have protected others?**
>
> **Imagine you had the rectangle card. How did or does it feel to have chosen abstinence?**

14. **Explain that for those having sex, talking to sexual partners about STIs and getting tested are two strategies that can reduce the risk of STIs, including HIV.**

15. **Ask the following questions:**

> **If getting tested had been an option in this game, how do you think that could have changed how many people were standing at the end?**
>
> **How would talking to your partner(s) about STIs before engaging in a sexual behavior change the number of people potentially exposed to an STI (i.e., the number of people standing at the end of this activity)?**
>
> **What did you learn by participating in this game that will help you make decisions about your sexual health in the future?**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Try to elicit the following answers:

- One person can infect many by passing the infection to someone who passes it on to the next person.
- STIs can be spread through unprotected vaginal, anal and oral sex.
- People should consider the risks their partners have taken in the past.
- Practicing abstinence and using protection such as condoms can prevent STI transmission.
- You can't tell just by looking at someone who is infected and who isn't.
- It may not be easy to talk about using condoms or dental dams but it gets easier with practice.
- Anyone can get an STI regardless of whether the sex was consensual or forced.
- Getting tested is the only way to know for sure if you have an STI.

16. **Continue the activity by saying,**

This was just a game. However, it does highlight how fast and easily an STI can spread. A good way to reduce your risk for infection is to use a latex (or polyurethane/polyisoprene) condom or dental dam every time you engage in oral, anal or vaginal sex. Also, be sure to get tested regularly if having sex. Many STIs can be treated.

17. **Summarize as follows,**

As we reflect back to my first question, "Who gets STIs?," we have learned that it is possible for anyone to get an STI. STIs are common and many people will get an STI at some point in their lives. Remember, the proud and responsible things to do are to use a latex or polyurethane/polyisoprene condom and/or dental dam every time you have sex, to get tested, to talk to your partners about STIs, and to get treated if you get an STI.

ACTIVITY C

WHAT I THINK ABOUT HIV/STI AND SAFER SEX

PREPARING FOR THE ACTIVITY

RATIONALE

Examining attitudes and beliefs about HIV risk behaviors focuses participants on factors that can keep them from practicing safer behaviors.

MATERIALS

- *Agree/Disagree* signs
- Masking tape

TIME

10 minutes

PROCEDURE

1. Tape the *Agree* and *Disagree* signs on opposite sides of the room.

2. Begin this activity by saying,

> Let's look at what you think about HIV/STIs and safer sex.

3. Read the following directions:

> I will read some statements and ask, "Agree or disagree"?
>
> After I read each statement, stand under the Agree sign if you agree with the statement or stand under the Disagree sign if you do not agree with it.

4. Ask participants to stand.

5. Read the Agree/Disagree statements one at a time (included at the end of the activity).

6. After each statement, ask the participants to decide if they agree or disagree with the statement and to stand under the appropriate sign.

7. After each statement, ask participants on each side to say why they agreed or disagreed with the statement.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

FACILITATOR'S NOTE

During the activity, bolster the attitudes supportive of condom use, and respond to those unsupportive of condom use by using the information provided after each statement.

8. Give the participants a chance to switch after discussion of each statement.

9. Thank the participants for sharing their opinions. Have them return to their seats.

10. Summarize as follows,

> This activity showed us that different people can have different opinions and beliefs. You may have a different opinion about sex, HIV, STIs and protection than your partner or friends. But the facts about HIV/STI remain the same. Here are some facts we can agree on: HIV is transmitted sexually through blood, semen, vaginal fluids and rectal fluids. Other STIs are also passed through having sex. Whenever you have sex, you must use latex or polyurethane/polyisoprene condoms or dental dams every time you have vaginal, anal or oral sex to reduce the chance of HIV and other STI transmission. PrEP can also reduce your risk of HIV transmission, and PrEP plus condoms can reduce your risk of HIV and other STIs.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

AGREE OR DISAGREE STATEMENTS

- **It is hard to convince a sexual partner to use a condom.** (Even though it might be hard, it is important to do it.)
- **Condoms are effective at preventing HIV infection.** (If you choose to have sexual intercourse, using condoms correctly and consistently is an effective way to prevent HIV infection.)
- **Sex can feel good if you use condoms.** (Sex can feel very good with condoms. You can buy a brand that feels natural and use extra lubricant. You'll learn more about this later.)
- **Most people know how to use condoms correctly.** (Many people feel as if they know how, but anyone can improve their skills by learning the specific steps that you will be learning in a few minutes.)
- **If you know your sexual partner very well, you shouldn't have to use a condom.** (Knowing your sexual partner very well does not mean you are safe. Have honest conversations about your sexual health and your plans to protect yourself from unintended pregnancy or STIs. Both of you should get tested so you know your status.)
- **If someone looks healthy, you shouldn't have to use a condom.** (Looking at a person never lets you know whether the person has HIV or another STI, so you should always use a latex or polyurethane/polyisoprene condom or dental dam every time you have vaginal, anal or oral sex. Often people with STIs don't have symptoms, and a person living with HIV may not have symptoms for many years.)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY D

CONDOM USE SKILLS

PREPARING FOR THE ACTIVITY

RATIONALE

By becoming more comfortable touching condoms and by practicing correct condom use strategies, participants will be more likely to use them consistently and correctly in their personal lives and feel proud and responsible in doing so.

MATERIALS

- *Steps for Using a Condom* poster
- External condoms, lubricated (two per participant or pair of participants, plus demonstration condoms)
- Dental dam
- Lubricant
- Condom demonstrator(s)
- Paper towels
- Markers
- Masking tape
- Small paper bag (to dispose of condoms)

TIME

15 minutes

PROCEDURE

FACILITATOR'S NOTE

Some religions and individuals do not believe in condom use. Acknowledge that and make sure that participants are aware that condom use skills are the focus of this activity.

1. Clarify the purpose of the activity by saying,

> This activity is designed to show you how to use external or male condoms correctly and to have you practice condom use skills. I want to make sure we are clear that when teaching you these skills I'm not assuming that any of you are having sexual intercourse and I'm not encouraging you to do so. Having this knowledge and these skills will prepare you to make proud and responsible decisions if and when the need arises.
>
> For some people, using condoms may go against their religious beliefs. For others this may not be a consideration. I'm giving you this information because we want you to be able to make informed decisions about protecting yourselves.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

2. Explain what a condom is by saying,

> As we have learned, a condom is a form of protective barrier that prevents the exchange of body fluids such as semen, vaginal fluids, or rectal fluids.
>
> The external (male) condom slips over an erect penis to keep semen from entering the vagina, mouth or anus. It also keeps the penis from being exposed to vaginal fluids or rectal fluids. It is used to keep sperm from entering the vagina to prevent a pregnancy. When it is used to avoid the exchange of body fluids, the external condom can reduce the risk for transmission of HIV and other STIs. Only latex, polyurethane or polyisoprene condoms are effective in preventing HIV and other STIs.
>
> ***Optional for high school youth:***
> The external condom may also be used on a sex toy or other insertive sexual device that is being shared. A new condom must be used each time the sex toy or device is used by a different person.

3. Ask the group to brainstorm slang terms for condoms. They might mention rubber, raincoat, glove or sock. Keep this very brief. Then ask them to name some of the brands they've heard of.

4. Explain the following,

> We're going to be learning a lot about condoms. There are many different brands and types of condoms. Some are colored, ribbed, lubricated or flavored. People can choose the types they like as long as they are made of latex, polyurethane or polyisoprene.
>
> Regardless of what you call them or the types you prefer, it's important to use condoms correctly and to have them available when you need them.
>
> In the next activity, you're going to actually practice the steps for using an external condom correctly. Many of you may have never seen or touched a condom. We're going to practice using external condoms so that you will know what they feel like and how to use them if and when you are ready to use them.
>
> Just as a person might need to adjust to wearing a new pair of shoes or glasses, using a condom requires getting used to new sensations.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

5. **Post the *Steps for Using a Condom* poster. Using a condom demonstrator, follow the steps listed on the chart to model what the youth will be doing. Read the instructions and add additional details as you demonstrate the procedure.**

FACILITATOR'S NOTE

The ideal way to demonstrate proper condom use is to use a plastic or wooden model of a penis. If a model is not available, demonstrate by using your fingers. Also, be sensitive to the comfort level of your participants during this activity.

STEPS FOR USING A CONDOM

1. Get consent. Make sure you and your partner both agree to have sex. If either one of you expresses that you do not want to continue, you both must stop.
2. Check the expiration date and make sure the condom is latex, polyurethane or polyisoprene.
3. Open the package carefully to avoid tearing.
4. Make sure condom is on the proper side to roll down correctly.
5. Pinch the tip of the condom to create space (½ inch) for semen.
6. Squeeze a few drops of water-based lubricant inside the tip.
7. Make sure the penis is erect and both partners are ready to engage in sexual activity before putting on the condom.
8. Continuing to squeeze the tip, place the condom on the head of the penis. Unroll the condom down to the base of the penis. Apply water-based lubricant to the outside of the condom, if desired.
9. Check during sex to make sure the condom isn't slipping.
10. Immediately after ejaculation, hold the condom firmly at the base of the penis and pull the penis out before it gets soft.
11. Roll off the condom away from your partner. Wrap in tissue and throw it away. Do not re-use.

6. **Distribute the materials to participants so they can practice. Circulate and observe all participants, at least briefly, to make sure they're following the steps correctly.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

FACILITATOR'S NOTE

There may be lots of giggling. Most participants will have fun with this. However, a few may feel particularly nervous or uncomfortable. If any participants don't want to practice, allow them to pass. For some youth, especially those who have been sexually abused, it could be overwhelming to have to handle a penis model. Never push a young person to participate. Show empathy and check back in with them later to see how they're feeling. Not very many youth ask to pass. Most that do change their minds and decide to practice using a condom before the activity ends.

7. Collect the condoms and packaging in the paper bag.

8. Give participants paper towels or wet wipes to wipe their hands.

9. Reinforce condom information by asking the following questions (answers are provided),

Can condoms fit any size penis? Yes. Though condom sizes vary slightly from brand to brand, most can fit any size penis comfortably. Try several brands and type to find the best fit.

What should you never use with a condom? Condoms may break if you use Vaseline, lotion or grease, etc., as lubrication. Use only non-oil-based lubrication such as water-based or silicone-based lubricants (e.g., Good Clean Love or Aloe Cadabra).

Is it OK to keep a condom in your pocket? Yes, but *ONLY* for short periods of time. Prolonged exposure to any heat source (including body heat) can damage condoms.

Can you use condoms after their expiration date? No. Throw away unused condoms once the expiration date passes.

FACILITATOR'S NOTE

In addition to latex condoms, polyurethane or polyisoprene external condoms may also be used. People who are allergic to latex can use these types of condoms instead of latex. However, the important point to emphasize is that lambskin condoms should never be used because they do not protect against HIV.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

10. **Ask participants if they've ever heard of or seen a dental dam. Hold up a dental dam and say,**

> **A dental dam is a square of latex that can serve as a barrier between the mouth and a partner's vulva or anal area to prevent the transmission of STIs.**
>
> **It can be difficult to find dental dams, so you can cut a non-lubricated condom into a square and use it as a barrier.**

11. **Explain how a dental dam can be used when having oral contact with the vulva or anal area. Also demonstrate how to cut a condom into a square in case a dental dam is not available. (*Note:* Using scissors or your teeth, cut off the rim, then cut up one side, and use your fingers to spread the condom into a flat sheet.**

12. **Summarize as follows,**

> **To protect yourself and your partner from sexually transmitted infections, including HIV, remember to:**
>
> - **Use a latex (or polyurethane/polyisoprene) condom every time you have sex.**
> - **Use a dental dam when having oral contact with the vulva or anal area.**
> - **Keep a supply of unexpired condoms on hand.**
> - **Get used to condoms so they become easy to use each time.**
> - **Talk to your partner about using condoms.**
> - **Refrain from using alcohol or other drugs because they affect your judgment.**
>
> **Condoms make sense. Condoms help to protect both partners from pregnancy and STIs, including HIV. However, you must use them correctly every time you have vaginal, oral or anal sex.**

MODULE 6

A POSSIBLE OUTCOME OF UNPROTECTED SEX: PREGNANCY

GOALS

The goals of this module are to:

- Increase participants' understanding of pregnancy as a possible outcome of unprotected sex.
- Increase participants' perception that they are vulnerable to getting pregnant or getting someone pregnant.
- Increase participants' understanding of the consequences of teen pregnancy.
- Increase participants' knowledge of various types of contraceptive methods.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- Distinguish facts from falsehoods about pregnancy.
- Identify specific birth control methods that may be used to prevent pregnancy.

MODULE PREVIEW

The sixth module: (1) helps participants examine myths about pregnancy; (2) illustrates how pregnancy can impact the lives of young people; and (3) informs participants about the various forms of birth control.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

STRATEGIES/METHODS

- True or False Game
- Video Viewing
- Group Discussion
- Contraceptive Methods Demonstration
- Agree/Disagree

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- *True or False: Pregnancy Statements* (included in module)
- *Birth Control Choices* poster
- *Optional:* Video: *Tanisha & Shay* (or alternative videos*)
- *Agree/Disagree* signs (1 set)

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Pre-labeled chart paper: *Contraceptives*
- *Optional:* Monitor and video player, or internet access if using alternative videos
- Markers
- Masking tape

PREPARATION NEEDED

1. Label all of the charts as listed under Materials.
2. Hang the pre-labeled charts in the order they will be used. Fold and tape the charts so the titles remain covered by the bottom half of the sheet until you use them.
3. Review the *True or False: Pregnancy Statements* and get comfortable with the content.
4. *Optional:* Set up the video(s) to be ready to play.
5. Review the information about contraceptive methods in Appendix B.
6. Review and be familiar with current federal and state laws around pregnancy options, including adoption, abortion and safe surrender, so you can provide accurate information during the discussion of the *Tanisha & Shay* Shay video or alternative videos, if you decide to extend the session and include the videos.

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

7. Gather materials to help teach the birth control information effectively: contraceptive charts, charts of the female reproductive organs, female pelvic models and a birth control kit. Many local health departments and Planned Parenthood affiliates will loan or sell demonstration kits. A local health care provider may also be able to provide samples of prescribed methods, such as oral contraceptives. Free or low-cost condoms may be available from your local department of public health or a clinic.
8. Review how to use an internal condom. There are several YouTube videos that clearly explain the steps, such as this one from the Female Health Company that manufactures a female condom: www.youtube.com/watch?v=LRZH5ASO-eM. Watch the video prior to the session so you feel comfortable with how the female condom is used. If you have any problems with this link, do an online search for "female condom how to use animated video." If you have Internet access, set up a laptop computer so you can show participants the YouTube video.

INSTRUCTIONAL TIME: 60 minutes

(*Note:* The use of the optional video(s) will increase the length of the module by up to 25 minutes. A video is an excellent way to help participants personalize and conceptualize the information, but should not replace or take time away from the discussion and demonstration of the contraceptive methods. Facilitators may wish to deliver this module across two 60-minute sessions.)

ACTIVITY	MINUTES NEEDED
A. True or False: Pregnancy Statements	10
[B. *(Optional) Tanisha & Shay* Video	+25]
C. Birth Control Methods Demonstration	40
D. Agree/Disagree - Attitudes About Contraception	10

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY A

TRUE OR FALSE: PREGNANCY STATEMENTS

PREPARING FOR THE ACTIVITY

RATIONALE

Distinguishing facts from falsehoods about pregnancy provides an opportunity for learning the correct information about pregnancy.

MATERIALS

- *True or False: Pregnancy Statements* (included in module)

TIME

10 minutes

PROCEDURE

1. Introduce the following activity by saying,

> Let's take a closer look at what can happen when teenagers decide to have sex without using any protection. We'll play a game to help you separate what is true and what is false when it comes to the consequences of unprotected sex.

2. Explain the directions,

> - I will go around the room and read a statement to each of you.
> - I want you to tell me if the statement I read is true or false.
> - I also want you to explain why it is true or false.
> - If you don't know, I will ask for volunteers who think they know the answer.

3. Read the *True or False: Pregnancy Statements* on page 140.

4. Supplement the participants' explanations with those provided after each statement or have other participants give the information.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2026 agreement.

© ETR. All rights reserved.

5. **Once all the statements have been completed say,**

> **Wow! You did a great job and seem to know a lot of the correct information.**

6. **Summarize by saying,**

> **The more you know about the possible outcomes of sex, such as pregnancy and sexually transmitted infections, the better you will be at protecting yourself from experiencing an unintended pregnancy and/or STIs. Next, we are going to see a video (or videos) that describes how pregnancy can impact a young person's goals and dreams for the future.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

TRUE OR FALSE: PREGNANCY STATEMENTS

1. **Every time you have unprotected vaginal sex, there is the possibility of getting pregnant, even the first time you have vaginal sex.**
   TRUE
   Pregnancy is a possibility every time someone has unprotected vaginal sex, regardless if it's the first time or the hundredth time.

2. **Pulling the penis out of the vagina before ejaculation reduces the risk of pregnancy.**
   TRUE
   Pulling out, or withdrawal, does work in theory. However, it takes a lot of practice and concentration. It can be challenging, especially for teens and young adults, to actually pull the penis out before they ejaculate (or cum). Pulling out AND using another method of protection greatly increases the effectiveness.

3. **You can't get pregnant if you have sex standing up.**
   FALSE
   Sperm don't care what position you're in. Any time semen (which contains sperm) is able to travel up through the vagina and fallopian tubes to where sperm can fertilize an egg, you can get pregnant. There are no exceptions to that rule.

4. **If you have unprotected vaginal sex, there is a pill you can take afterward to reduce the risk of pregnancy.**
   TRUE
   If you had unprotected vaginal sex (or your birth control method failed) and you do not want to become pregnant, take an Emergency Contraceptive pill as soon as possible but no later than within 5 days. The EC pill (or a copper IUD) prevents a pregnancy from occurring.

5. **Douching (cleaning the vagina) after sex can prevent pregnancy.**
   FALSE
   Douching will not prevent pregnancy. In fact, it can even help carry sperm up into the uterus and increase the chances. The vagina keeps itself clean naturally, so douching isn't necessary and isn't recommended. Douching throws off the vagina's natural balance and can even lead to infection.

6. **You can't get pregnant unless you have an orgasm (cum).**
   FALSE
   It doesn't matter if you have an orgasm or not. You can get pregnant if you engage in vaginal sex without using protection.

(continued)

DO NOT COPY OR DISTRIBUTE
in any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2026 agreement.

© ETR. All rights reserved.

7. **If a girl misses her period, she is definitely pregnant.**

   FALSE

   When young people first start having periods they often have irregular cycles and may even skip a month from time to time. But if someone has had vaginal sex and misses a period, pregnancy is a possibility. The person should get tested right away, and see a doctor if the pregnancy test is positive.

8. **Gay and lesbian teens don't need to know how to avoid pregnancy.**

   FALSE

   If gay and lesbian teens engage only in same-sex behaviors, they don't have to worry about pregnancy. For many different reasons, gay and lesbian teens sometimes engage in penis-in-vagina sex and they have to worry about pregnancy if they do.

9. **There's no safe time of the month to have sex and avoid pregnancy.**

   TRUE

   True. There is no absolutely safe time of the month when you can't get pregnant or get someone pregnant.

10. **You can't get pregnant if you swallow semen.**

    TRUE

    The only way you can get pregnant is if sperm cells enter the vagina, usually during sexual intercourse, and fertilize an egg cell in the fallopian tube.

11. **A person cannot get pregnant from anal sex.**

    TRUE

    Yes, it's true a person can't get pregnant from having anal sex, but people still have to think about STIs. The lining of the anus is thin and lubricates less than the vagina, so it's easy for STIs to enter the body that way.

OPTIONAL ACTIVITY B

TANISHA & SHAY VIDEO*

PREPARING FOR THE ACTIVITY

RATIONALE

Presenting and reinforcing information about pregnancy can promote further discussion. Seeing how pregnancy can impact the lives of individuals helps increase prevention planning.

MATERIALS

- Monitor and video player, or internet access if using alternative videos
- Video: *Tanisha & Shay,* or alternative videos

TIME

25 additional minutes

PROCEDURE

1. Introduce the video by saying,

> We are going to continue our focus on pregnancy prevention by watching a video called *Tanisha & Shay*. In this video you will see sexually active teenagers dealing with issues of pregnancy.

2. Show the video in three segments as described below.

> I will be showing you this video in 3 segments. After each part, I'll ask you some questions about what you've seen.

3. Show Part 1: Tanisha Finds Out. At the end of the segment, process by asking these questions:
   - » What did the provider tell Tanisha?
   - » What is your reaction? What do you think happens?
   - » Why do you think Tanisha and Shay did not use protection/ birth control?

> Let's watch the next segment and find out what happens next.

4. Show Part 2: Sharing the News. At the end of the segment, process by asking these questions:

* A list of alternative videos and discussion questions can be found at www.etr.org/ebi/alternative-videos.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

- How does the pregnancy affect everyone in Tanisha's life?
- What does Tanisha risk losing because of the pregnancy?
- What does Shay risk losing?
- What could Tanisha say to Shay when she shares the news of the pregnancy?
- What might it look like for Shay to be a part of Tanisha's decision-making process?
- What might this conversation and decision-making look like in a healthy relationship like Tanisha and Shay's?

Let's watch the last segment.

5. **Show Part 3: Now What? At the end of the segment, process by asking these questions:**
   - What did this video teach you about teen pregnancy?
   - What could Tanisha and Shay have done after they had unprotected sex to prevent a pregnancy?
   - Are these teens ready to become parents? Why or why not?
   - How would your life change if you became pregnant or got somebody pregnant now?
   - What about if you became a parent or became a parent again?

6. **Summarize this activity by saying,**

As you can see, becoming pregnant or getting someone pregnant can dramatically change your life. Therefore, it is important to avoid unintended pregnancy by practicing abstinence or safer sex. Be prepared. If you're going to engage in sexual activity, make sure you use effective birth control and a latex (or polyurethane/polyisoprene) condom every time!

ACTIVITY C

BIRTH CONTROL METHODS DEMONSTRATION

PREPARING FOR THE ACTIVITY

RATIONALE

Reviewing and discussing the various forms of birth control methods will enhance participants' knowledge and empower them to make informed choices about the most suitable method to use.

MATERIALS

- Pre-labeled chart paper:
  - *Contraceptives*
- *Birth Control Choices* poster
- Markers

TIME

40 minutes

(*Note:* It is important to allow time to cover all of the different methods.)

PROCEDURE

1. Introduce this activity by saying,

> We're about to review the various methods of birth control. Let me clarify a couple of things. The purpose of this activity is to present factual information about birth control. I don't assume that you're having sex. There may be many different experiences in this group. Some of you may never have engaged in sexual intercourse and won't any time soon. Others may have had sex, not always by choice. Some might be parents already. Regardless of your background and experience, it's important for all teens to receive factual information about birth control. Being informed about birth control puts you in the driver's seat so you can be in control of when you have children in the future and how close together you have them.
>
> I also understand that personal values about birth control vary. For some people, using condoms may go against their religious beliefs. For others this may not be a consideration. The bottom line is that most people who have sex need a way to prevent pregnancy and STIs, including HIV. I want you to be able to make informed decisions about protecting yourselves, so we're going to learn about all of the options.

2. Unfold the pre-labeled chart paper titled *Contraceptives* and ask the participants to brainstorm all the methods of birth control or contraception that they can think of. Write the list on the chart paper.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

Answers should include:

- » Abstinence
- » IUD
- » Implant
- » Depo-Provera (the shot)
- » Birth control pills, patch and ring
- » Male condom (external condom)
- » Female condom (internal condom)
- » Sponge
- » Spermicides
- » Diaphragm
- » Cervical cap
- » Withdrawal

3. **Post and point to the *Birth Control Choices* poster and say,**

> **This poster shows some common birth control, or contraceptive, methods. We will discuss them briefly. We won't have time to examine them in detail, but I want you to know what is available when you are ready to use them.**

4. **Begin your presentation by explaining,**

> **Contraceptive methods fall into three different categories:* behavioral methods, over-the-counter methods that can be purchased by anyone at any stores, clinics, supermarkets, convenience stores or online, and prescribed methods, which you have to see a health provider to get. I'll be talking about the methods in order of effectiveness, or how well they work to prevent pregnancy.**

5. **Using the following information, teach and demonstrate the various contraceptive methods. If you have a birth control kit, show the various methods as you discuss them. Don't pass the methods around while you're educating as it gets the group distracted. Allow participants to handle the methods at the end when you've finished the demonstration.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

* Shoupe, D., and D. R. Mishell, eds. 2016. *The Handbook of contraception: A guide for practical management*. New York: Humana Press, Springer International Publishing.

FACILITATOR'S NOTE

Don't try to communicate every fact about the various birth control methods in this presentation. This is an overview. Let participants know they will get a more thorough education whenever they go to a health center to obtain contraception. See the section on Contraceptives in Appendix B for additional information.

BEHAVIORAL METHODS

Abstinence

- Abstinence is the safest and most effective pregnancy and STI prevention method.
- There are a lot of different definitions of abstinence. We define it as not engaging in sexual intercourse of any type (oral, anal or vaginal).
- It requires that you avoid any behaviors that might result in exchange of bodily fluids that can result in pregnancy or can transmit STIs, including HIV. It also means not engaging in any skin-to-skin genital touching that could transmit certain STIs.
- Abstinence requires skills—you have to know why you want to say no to risky sex and be able to communicate that assertively to a partner.
- It's important to have a backup method in case you decide to stop using abstinence in order to be able to protect yourself from pregnancy and STIs, including HIV.

Withdrawal

- Withdrawal, or pulling out, is done by removing the penis fully from the vagina/anus before ejaculating and only ejaculating outside of the vagina/anus.
- Withdrawal is free and a method available to everyone.
- To be effective at preventing pregnancy, withdrawal must be used correctly and completely. This requires knowing and understanding a person's own body, which can be challenging for young people and people with little sexual experience.
- Withdrawal is most effective when used with another contraceptive method. Using withdrawal in addition to condoms or another form of birth control further reduces the risk of unintended pregnancy.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

FACILITATOR'S NOTE

Withdrawal is a commonly used form of contraception among youth. Avoid shaming messages about this method, and offer it as one of many options. Withdrawal is a behavioral skill that can be developed and can be combined with other methods for increased effectiveness.

Sources: Laris, BA, et al. 2020. Uncovering withdrawal use among sexually active U.S. adolescents: High prevalence rates suggest the need for a sexual health harm reduction approach. *Sex Education* DOI: 10.1080/14681811.2020.1768324; Hatcher, R. A. 2018. Contraceptive technology. New York: Ayer Company Publishers.

PRESCRIBED METHODS

To obtain some methods of birth control, you need a prescription from your doctor. Some of these methods work by regulating hormones involved in the reproductive process. These hormonal methods include some IUDs, the implant, Depo-Provera shots and birth control pills, the patch and the ring. Although these methods are very effective at preventing pregnancy, they do not prevent sexually transmitted infections. Therefore, if you use one of these hormonal methods for pregnancy prevention, your partner must also use a latex condom so that you will be protected against STIs. Let's discuss the specific methods. These methods are highly effective if used correctly. And with some of them, there's nothing you have to do once they are inserted!

IUD

- An IUD, or intrauterine device, is a small T-shaped piece of plastic, or plastic and metal, that is inserted into the uterus by a trained medical provider.
- There are 2 kinds of IUDs in the U.S.:
  - » **Non-hormonal:** The copper-T IUD (ParaGard) is a non-hormonal IUD that creates an environment in the uterus that makes it very hard for sperm to survive and for fertilized eggs to attach to the wall of the uterus, which is necessary for a pregnancy to occur. Once you get this type of IUD inserted, you are protected from pregnancy for up to 10 years.
  - » **Hormonal:** A hormonal IUD does the same thing, but it also releases hormones that stop your body from releasing eggs. There are 4 kinds of hormonal IUDs available in the U.S.: Mirena, Skyla, Kyleena and Liletta. They are effective from 3 to 5 years, depending on which one you get.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

- When your body is first adjusting to the IUD, your period might be heavier or more painful. IUDs do not protect you from STIs, so you should also use a condom.

Implant

- The implant is a thin stick about the size of a matchstick that is placed under the skin of your upper arm by a trained medical provider and releases hormones to prevent your body from releasing eggs.
- It can be used for up to 3 years.
- It can cause periods to be irregular or stop.
- The implant does not protect you from STIs, so you should also use a condom.

The Shot

- People who use the shot receive hormonal shots every 3 months.
- Depo-Provera is the most common brand and is a highly effective birth control method.
- It can cause periods to be irregular or stop.
- The shot does not protect you from STIs, so you should also use a condom.

Birth control pills

- Birth control pills prevent the ovaries from releasing eggs during the monthly cycle.
- One pill must be taken each day at about the same time of day.
- When you start "the pill," you must use a back-up method for the first 7 days to prevent pregnancy.
- If you miss a day, you must take two pills the next day.
- If you miss more than one day, you must use a back-up method for 7 days to prevent pregnancy. You should also talk to your doctor about finishing the rest of your pack of pills.
- ***NEVER*** use another person's birth control pills (even your mother's or sister's). A doctor must prescribe the birth control pills that are safe for you.

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

- The pill does not protect you from STIs, so you should also use a condom.

Birth control patch

- The patch works the same way as the pill, except that instead of swallowing the hormones, you absorb them through the skin.
- The patch is a small, band-aid like sticker that you wear on either your back, hip, butt or upper outer arm and change once a week for 3 weeks, and then the fourth week you don't wear it and get your period.
- The patch does not protect you from STIs, so you should also use a condom.

Vaginal ring

- The ring is a hormonal method just like the pill and the patch. With the ring, the hormones are absorbed through the vaginal wall.
- It is a small flexible ring that you insert into your vagina. It sits just below your cervix. Once you insert it, you leave it in for 3 weeks, and then take it out for a week to have your period.
- The ring does not protect you from STIs, so you should also use a condom.

Diaphragm and cervical cap

- The diaphragm and cervical cap are vaginal barriers that cover the cervix to keep sperm from reaching and fertilizing an egg.
- The diaphragm is a reusable, dome-shaped cup made of latex or silicone. It is used with spermicidal gel and inserted into the vagina, where it is positioned to cover the cervix. It can be placed up to 6 hours before sex and must be left in place for at least 6 hours (but no more than 24 hours) after sex. Caya is a new one-size-fits-all diaphragm. Unlike earlier diaphragms, it does not require fitting and is easier to insert and remove. It is available with a prescription.
- The cervical cap is a reusable silicone cap that fits over the cervix. It provides protection for 48 hours and requires spermicidal gel. Like the diaphragm, it is inserted in the vagina before sex, and must be left in place for at least 6 hours afterward. FemCap is the only brand available. It has to be fitted by a provider and requires a prescription.

(continued)

Prescribed methods summary

So you see you have choices with prescribed methods. Many of the newer methods are easier to use and effective for long periods of time. Let's review:

- With the pill, you have to take a pill once a day at the same time.
- With the patch, you have to replace the patch once a week for 3 weeks and then leave it off for 1 week (the 4th week).
- With the ring, you insert a new one once a month. You leave it in for 3 weeks and then take it out for 1 week (the 4th week) to have a period.
- With the shot, you have to go back to the health provider every 3 months for another shot.
- With the implant, you get one inserted and it's effective for 3 years.
- With the IUD, once it's inserted, it's effective for up to 10 years depending on the type of IUD.

Research shows that when teens use long-acting methods like the implant and the IUD, the rate of teen pregnancy goes down dramatically.*

OVER-THE-COUNTER METHODS

These methods of birth control can be purchased by anyone of any age, at drugstores, clinics, supermarkets, convenience stores and online without a prescription.

External (male) condom

- The external condom is a latex sheath that covers the penis and keeps semen from entering a partner's body.
- It should be put on the penis as soon as the penis is erect, and removed after ejaculation, away from the partner.
- Latex condoms are the most common. People who are allergic to latex can use polyurethane or polyisoprene condoms. Lambskin condoms do not protect against HIV, so don't use those.

Internal (female) condom

- The internal condom is a soft, loose-fitting polyurethane (plastic) or nitrile sheath that lines the vagina. Polyurethane is strong and unlikely to rip or tear during use. It is also unlikely to cause allergic reactions.

(continued)

* Birgisson, N. E., Zhao, Q., Secura, G. M., Madden, T., Peipert, J. F. (2015). Preventing unintended pregnancy: The contraceptive CHOICE project in review. *Journal of Women's Health* 24 (5): 349–353.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

- The internal condom can be inserted right before sex, or up to 8 hours ahead of time.
- The internal condom can also be used for STI protection during anal sex. People of any gender can use these condoms for anal sex.
- These are the steps for using the internal condom:
  - » Check the expiration date.
  - » Rub the outside of the package to spread the lubricant onto the condom.
  - » Open carefully by tearing at the notch on the top right of the package.
  - » Note that there are two rings. The thinner outer ring covers the area around the opening of the vagina or anus (for additional STI protection). The thicker inner ring is used for insertion and to help hold the sheath in place during intercourse.
  - » There are different positions you can use to insert the condom—squat, raise one leg, sit or lie down. Choose a position that feels comfortable.
  - » While holding the condom at the closed end, grasp the flexible inner ring and squeeze it with the thumb and second or middle finger so it becomes long and narrow.
  - » Insert the inner ring into the vagina or anus and use your index finger to push it up into your vagina as far as it will go. If used vaginally, it will fit into place right under your cervix. Be sure the sheath is not twisted. Leave the outer ring on the outside of the vagina or anus—about a half inch of the sheath should remain on the outside of your body.
  - » You are now ready to guide your partner's penis into the condom's opening with your hand to make sure that it enters properly. Be sure that the penis is not entering on the side, between the sheath and the vaginal or anal wall.
  - » To remove the condom, place your finger under the outer ring. Twist it and pull it out. Wrap it in tissue and throw away.

Note: Take care to present the internal condom in a nonjudgmental fashion. It is a great option for people who choose to have sexual intercourse and don't want to depend on a partner to use an external condom. Although the female condom may not look as familiar as the male condom, it's not too complicated to use. Reassure participants that it will simply take a few times to practice

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

and then it will be no problem. Note that the internal condom can be inserted well in advance of being with a partner, so that sexual intercourse can be spontaneous. Internal condoms may be an appealing option for those who find condoms to be uncomfortable due to being too tight. Also, because they are made of nitrile, they warm to body temperature and lack the smell of latex.

Sponge

- The sponge is actually a dual method—it works as a barrier and a spermicide. With clean hands, you wet the sponge with clean water, gently squeeze the sponge until it foams up, fold the sides of the sponge and insert it into the vagina just as you would insert a tampon.
- The sponge can be inserted up to 24 hours before intercourse and must be left in place at least 6 hours after intercourse. This allows for more flexibility and spontaneity with sex. The sponge should not stay in for more than 30 hours.
- The sponge does not protect you from STIs, so you should also use a condom.

Spermicides

- You can also purchase various forms of spermicides—foam, cream, film, gel and suppositories—that prevent pregnancy by killing sperm cells before they can reach the egg cell.
- The sperm-killing substance in most vaginal spermicides is called nonoxynol-9. But nonoxynol-9 can cause an allergic reaction or irritation for some people, and this can increase the risk of STI/HIV infection. Spermicides need to be reapplied for each act of intercourse.
- Spermicides are somewhat less effective than condoms and many of the prescribed methods. However, they are good protection if they're used correctly and consistently, and very good if used along with a condom (which also prevents STIs).

EMERGENCY CONTRACEPTION

- Emergency contraception (EC) reduces the risk of pregnancy after unprotected sex or when another birth control method fails.
- There are 2 types of EC available:

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

  - » **EC pill**, also known as the morning-after pill, can be taken up to 5 days after unprotected sex. Some EC pills (Plan B One Step, Take Action and Next Choice One Dose) may be bought over the counter without a prescription and without having to see a pharmacist. Ella, a non-hormonal EC pill, requires a prescription from a health care provider or a pharmacist.
  - » **Copper-T IUD** (ParaGard) can act as emergency contraception when inserted by a health care provider within 5 days of unprotected sex.
- The sooner EC is taken (within 5 days) after unprotected sex, the more effective it is at preventing unintended pregnancy. Ella, unlike other EC pills, does not decrease in effectiveness during those 5 days.
- EC works by keeping sperm from fertilizing an egg by preventing ovulation or making the environment hard for sperm to survive in. EC is not the same thing as the abortion pill, and will not harm an existing pregnancy.
- Emergency contraception does not protect against HIV or other STIs, so protection like PEP should also be used.

FACILITATOR'S NOTE

Side Effects and Hormonal Methods

Hormonal methods (the pill, patch and ring) are safe, very effective methods of birth control. Most young people who use them have minimal side effects. Smoking cigarettes while using these methods can increase the risk of certain side effects, which is why health professionals advise people who use these methods not to smoke.

The side effects some people have while using these hormonal methods may include:

- irregular menstrual bleeding
- nausea, headaches, dizziness and breast tenderness
- mood changes
- blood clots (these are rare in people under 35 who do not smoke, but there may be a slightly higher risk with the patch than with the pill)

There are a few additional side effects to consider with the birth control shot (also a hormonal method), for example, no menstrual periods at all, weight gain and depression. Studies have linked the use of the long-acting progesterone shot to a loss of bone density. So teens considering getting the shot as a method should talk to their doctors about it.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

6. **Process this activity with the questions below:**

How does a teenager decide whether to use birth control and which method to use?

Make sure answers include:

» Talk to parents, a health care provider, doctor, counselor, caregiver, caseworker or partner.

» Ask questions.

» Do lots of thinking.

» Ask themselves questions such as:

- Am I ready for parenthood?
- Do I want to deal with a pregnancy?
- How can I show myself respect in my sexual health decision making?

What are some ways partners can participate in the process of using birth control?

Make sure answers include:

» Help pay for it

» Go to doctor/clinic with partner

» Wear a latex (or polyurethane/polyisoprene) condom

» Ask questions

» Remind partner to use the method correctly

» Help decide which method to use in addition to condoms

» Be supportive

7. **Summarize this activity by saying,**

> If you are going to have sex, you have to worry about unintended pregnancy and sexually transmitted infections, including HIV. To avoid these problems, you have to use effective methods to prevent pregnancy and infections.
>
> You must use a latex or polyurethane/polyisoprene condom in addition to any other form of contraceptive you choose to use. The condom is the only birth control method that also helps prevent sexually transmitted infections, including HIV.
>
> Remember, in order to reach your goals and dreams, the proud and responsible thing to do is to use effective methods of protection every time you have sex.

ACTIVITY D

ATTITUDES ABOUT CONTRACEPTION

PREPARING FOR THE ACTIVITY

RATIONALE

This activity focuses attention on individual responsibility for the prevention of pregnancy and makes participants aware of some of the reasons people may not use birth control.

MATERIALS

- *Agree/Disagree* signs
- Masking tape

TIME

10 minutes

PROCEDURE

FACILITATOR'S NOTE

The attitude statements reflect negative beliefs that limit a young person's ability to use safer sex strategies effectively. You will begin with the negative statement and, after some discussion, end on a positive note. The goal is to put a positive spin on each attitude and bolster beliefs that will enhance the participants' ability to always choose to be safer.

1. Tape the *Agree* and *Disagree* signs on opposite sides of the room.

2. Introduce the activity by saying,

> We have already learned that there are many methods of birth control or contraception.
>
> Attitudes and beliefs often get in the way of using birth control, especially condoms, even when people know a lot about it. This activity is designed to help you look more closely at your attitudes and beliefs about birth control.

FACILITATOR'S NOTE

Be careful to protect participants who seem to be in the minority on a certain issue. Refer to the group agreements to give the participants structure if they become unruly.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

3. **Follow the instructions below:**

   - Ask participants to stand.
   - Read a statement from the *Attitudes Statements* below.
   - Ask participants to stand under the sign—Agree or Disagree—that corresponds to how they feel about the statement.
   - Ask volunteers to give their reasons for agreeing or disagreeing with the statement. If all participants choose the same position, ask them to guess what reasons people in the opposing position might give.
   - After some discussion of the statement, read the information in parentheses after each attitude statement. Promote attitudes that are supportive of birth control use. Remind the group that certain attitudes and beliefs can get in the way of correct use of birth control and condoms.
   - Give participants an opportunity to switch sides if they honestly have changed their attitude or belief about the statement.
   - Continue with as many statements as time allows.

4. **Thank the participants for sharing their attitudes and opinions. Ask them to return to their seats.**

ATTITUDE STATEMENTS

1. **Birth control methods are harmful and will mess you up.** (Birth control methods are safe and effective. But an unintended pregnancy can often make life more complicated. Teens who learn about birth control can use it correctly and safely.)
2. **It's embarrassing to go into the drugstore and buy condoms.** (It might be embarrassing but if you've decided you're ready to have sexual intercourse, you need to be ready to purchase condoms.)
3. **Girls who carry condoms are easy.** (Not only is it not true, girls who carry condoms are actually smart, responsible, proud and safer. Girls can take control of condom use by using internal condoms, having condoms ready for when they need them, and feeling comfortable buying condoms or getting them from a clinic.)

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

4. **Hormonal methods such as the shot can make someone fat and not sexy.** (The term *sexy* means appealing and exciting. It really has nothing to do with a person's body shape. Being happy with oneself projects a better self-image that may contribute to "feeling sexy." There is little evidence that links hormonal methods to weight gain. Diet, exercise and genetics have a bigger influence on a person's weight. If one contraceptive method does not work for you, you can always talk to your clinician about switching to a different method.)
5. **Internal condoms are too much trouble.** (The internal condom might seem complicated, but it gets simpler once you understand how it works and know how to use it. It takes a couple of times of practice to feel confident, but once you know how to use it, you can be proud and responsible and have the condom already inserted if you know you're likely to engage in vaginal or anal intercourse.)
6. **It's hard to talk about protection with the person you're having sex with.** (It might be challenging to have difficult conversation like this. However, it's easier to discuss birth control and condom use with a partner when your mind is made up and you know why you want to be safer. It's also easier in a healthy relationship based on trust, respect, equality and open communication.)
7. **Gay, lesbian and bisexual youth don't need to learn about birth control and safer sex.** (All young people regardless of their sexual orientation [who they find themselves attracted to] need to be informed about sexuality, including information about birth control and condoms. If youth engage in sexual activity with a partner of the same sex, they should use condoms or dental dams to help prevent the spread of HIV and other STIs. Regardless of a person's sexual orientation or sexual identity, anyone who engages in penis-in-vagina sex must use birth control to prevent pregnancy and latex or polyurethane/polyisoprene condoms or other protection to reduce the risk of STIs.)
8. **Men don't need to know as much about birth control as women.** (People of all genders need to know about birth control because it takes a male sperm and a female egg to make a baby. When babies are born, men will have to share responsibility for raising their children. Therefore, men should play an active role in planning when they become fathers. Men who know about birth control and participate in getting and using methods are wise, proud, responsible and supportive partners.)

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

9. **If you're a teen parent already, it's too late to worry about using birth control.** (Teen parents usually understand the realities of parenthood more than other teens. It's never too late to take charge of when you have a baby in the future. Having more than one child as a teenager increases the challenges you have to overcome to reach your goals and dreams.)
10. ***Optional for high school youth:*** **Using condoms takes the pleasure out of sex.** (Using condoms can be fun and pleasurable if you have the skills to make them that way. We'll discuss those skills later in the program.)

5. Summarize as follows,

People have a lot of ideas and opinions about birth control. Sometimes these ideas and opinions are based on what they've heard from others. Sometimes they are based on myths and misinformation.

It's important to consider how your attitudes and beliefs might be affecting your desire and willingness to reduce your risk of unintended pregnancy and STIs, including HIV.

It's up to you to think in ways that protect you and increase your chances of accomplishing your goals and having the life you want in the future.

Take the proud and responsible path! Choose not to have sexual intercourse of any type (abstinence) and get the skills to practice the method effectively. Or, if you decide to have sexual intercourse, help protect yourself against unintended pregnancy and STIs by using an effective method of birth control *and* condoms every time you have sex.

MODULE 7

DEVELOPING CONDOM USE AND NEGOTIATION SKILLS

GOALS

The goals of this module are to:

- Increase participants' understanding of barriers to condom use and increase their strategies for reducing those barriers, including how to make condom use fun and pleasurable.
- Increase participants' communication and negotiation skills so that they can negotiate condom use with a sexual partner.
- Enhance participants' ability to resist situations that place them at risk for HIV/STI infection and pregnancy.

LEARNING OBJECTIVES

After completing this module, participants will be able to:

- List the correct steps to using a condom.
- Identify barriers to using condoms and practicing other safer sex behaviors.
- Identify strategies for implementing condom use.
- Identify ways to make condoms a more pleasurable part of the sexual experience.
- Demonstrate the ability to respond to excuses a partner may give with statements in support of condom use.
- Identify strategies for negotiating condom use with their partners.

MODULE PREVIEW

The seventh module: (1) enhances participants' ability to use condoms correctly; (2) explores positive aspects of condom use; and (3) allows participants to practice condom negotiation skills.

STRATEGIES/METHODS

- Exercises
- Scripted Roleplays

MATERIALS NEEDED — INCLUDED IN IMPLEMENTATION KIT

- Video: *Condom Use Animation* (or alternative videos*) [for high school youth]
- *Condom Line-Up* cards
- *Negotiation and Refusal Skills Charts 1A & 1B*
- *Observer Checklist* poster
- *SWAT* poster
- Worksheets in the student workbook:
  - » *While They're Out* (Ineffective and Effective Versions)
  - » *Your Valentine's Day Gift* (Ineffective and Effective Versions)
  - » *Observer Checklist*

MATERIALS NEEDED — NOT INCLUDED IN IMPLEMENTATION KIT

- Pre-labeled chart paper:
  - » *Ways to Make Condom Use Easy and More Fun* (for high school youth)
  - » *Ways to Make Condom Use Easy* (for middle school youth)
  - » *Pros*
  - » *Cons*
  - » *Excuses Sexual Partners Give*
- Markers
- Masking tape
- Monitor and video player, or internet access if using alternative videos

PREPARATION NEEDED

1. Label all of the charts as listed under Materials.
2. Hang the pre-labeled charts in the order they will be used. Fold and tape the charts so the titles remain covered by the bottom half of the sheet until you use them.
3. *For high school youth:* Set up the video(s) to be ready to play.

* ETR has identified other videos that can be used and developed discussion questions and key messages for each. Suggestions for alternative videos are available at www.etr.org/ebi/alternative-videos.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

INSTRUCTIONAL TIME: 60 minutes

(*Note:* Facilitators may wish to extend the time to allow for further practice of the SWAT technique and roleplays.)

ACTIVITY	MINUTES NEEDED
A. Condom Line-Up	**10**
B. How to Make Condoms Fun and Pleasurable *(for high school youth)*	**10**
C. Barriers to Condom Use/Condom Pros and Cons	**10**
D. "What to Say If My Partner Says...": Responding to Excuses	**15**
E. Introduction to SWAT and Scripted Roleplays	**15**

(*Note:* This module includes different activities for middle school and high school youth. When implementing the program with middle school youth, adapt Activity A by skipping the video on condom use and including the optional discussion on how to make condom use easy, and skip Activity B. For high school youth, conduct all activities in the module as written.)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

ACTIVITY A

CONDOM LINE-UP

PREPARING FOR THE ACTIVITY

RATIONALE

Practicing putting the *Condom Line-Up* cards in the correct order reinforces knowledge, ability and confidence to use condoms correctly.

MATERIALS

- Monitor and video player, or internet access if using alternative videos
- Video: *Condom Use Animation*, or alternative videos
- *Condom Line-Up* cards
- Masking tape
- Pre-labeled chart paper (for middle school youth):
  - *Ways to Make Condom Use Easy*

TIME

10 minutes

PROCEDURE

1. Introduce the *Condom Use Animation* video by saying,

> We are about to see a brief video on how to correctly put on a condom. The information presented in it will be helpful throughout the rest of this activity, and as soon as we're done watching it, we'll have a chance to practice what we've learned together as a group.

2. Show the video, which is 2 minutes long.

3. When the video is over, introduce the *Condom Line-Up* activity by saying,

> We are going to demonstrate all the steps involved in putting on a condom by putting a set of condom-use cards in correct order.

4. Shuffle the *Condom Line-Up* cards.

5. Pass out the cards to the participants. (Give each participant more than one card if there are more cards than participants.)

6. Ask the group to stand.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

7. **Explain to the group,**

> **These cards represent steps in proper condom use. Your task is to put them in the correct order. You will have about 1 minute to study them.**
>
> **Before we start, can someone tell me what a couple should do before they have sex?**

Answer

- » Get consent
- » Get condoms, lubricant and/or dental dams
- » Discuss safer sex issues, including when they were last tested for STIs and ways that they protect themselves from STIs and (if applicable) pregnancy.

8. **Have the participants put the cards in the proper order on the wall. Encourage all the group members to participate.**

9. **Ask if there are any final adjustments, and allow them to be made.**

10. **When the group has decided how the cards should be placed, verify the correct order or ask questions to prompt the movement to the correct order.**

11. **When the order is correct, review the steps:**

> **ORDER OF *CONDOM LINE-UP* CARDS**
>
> 1. Consent
> 2. Get external condoms and check expiration date
> 3. Sexual arousal (hug, cuddle, kiss, massage)
> 4. Erection
> 5. Carefully remove condom from package
> 6. Dab water-based lubricant on penis or inside condom
> 7. Squeeze out any air from tip of condom and leave room for ejaculation
> 8. Roll condom on
> 9. Intercourse
>
> *(continued)*

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

10. Orgasm *(optional)*

11. Hold onto the rim of condom and withdraw the penis

12. Remove and discard condom

13. Loss of erection

14. Relaxation

FACILITATOR'S NOTE

Steps 6 and 7 could be reversed and still be correct. Relaxation can occur at any point throughout the process, and should be a continuous part of the process. Loss of erection can also happen at any time throughout the process. Orgasms are optional and not everyone will experience an orgasm every time.

12. Next, use the following discussion questions to stimulate positive attitudes toward condom use. Say,

"Which steps in this process can involve a partner?"

Answers

» Consent, sexual arousal, rolling condom on, intercourse, orgasm, holding onto rim, removing condom, and relaxation. A partner (of any gender) can also get or buy condoms and have them ready.

"If a person with a penis loses their erection after putting on a condom and before intercourse, what could the couple do?"

Answer

» This will happen to most people with penises at some point in their lives. Have partner take off condom, continue playing and stimulating one another, relax, and enjoy the fun. After a while, put a new condom on as part of the play.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

13. **Summarize by saying,**

> **You did a great job lining up the condom cards and discussing the correct steps in external condom use. Remember and practice these steps so that you can make the proud choice and use condoms correctly every time if you've decided to have sex. Remember, too, that you may also use internal condoms instead of external condoms. It is also important to remember that using two or more condoms at the same time can cause the condoms to weaken and tear. Never use two condoms at the same time. Condoms can be used with other birth control methods such as the pill or withdrawal to increase contraceptive effectiveness.**

OPTIONAL ACTIVITY FOR MIDDLE SCHOOL YOUTH

15. **When using this curriculum with middle school age youth, engage them in a discussion on how condom use can be made easy by asking these questions:**

    - What do you think makes some people uncomfortable about using protection such as external condoms? internal condoms? dental dams?
    - Why do you think other people use these forms of protection?
    - How might someone become more comfortable with the idea of using protection?
    - What might make it easier for someone to get and use condoms? (Use the pre-labeled chart paper to record responses.)

Skip Activity B and move directly to Activity C after this discussion.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY B

HOW TO MAKE CONDOMS FUN AND PLEASURABLE (FOR HIGH SCHOOL YOUTH)

PREPARING FOR THE ACTIVITY

RATIONALE

Helping participants see how they can make condom use fun and pleasurable for themselves and their partners encourages consistent use and a sense of pride and responsibility.

MATERIALS

- Pre-labeled chart paper:
  - *Ways to Make Condom Use Easy and More Fun*
- Markers

TIME

10 minutes

PROCEDURE

1. Introduce this activity by saying,

> People often say that sex doesn't feel as good with a condom so we're going to talk about ways to make the experience more pleasurable.
>
> Remember, I'm not assuming that you're having sex and I'm not encouraging you to have sex. This is information some of you will use right away and others can tuck it away for future reference.

2. Give the following examples of ways to make using condoms more pleasurable:

> - Try different brands to find one that feels most comfortable and natural.
> - Use extra lubricant inside the tip of the condom and on the outside of the condom to increase wetness.

3. Unfold the pre-labeled chart paper titled *Ways to Make Condom Use Easy and More Fun.*

4. Ask participants to brainstorm some ways to make using condoms fun and pleasurable. Record their responses.

© ETR. All rights reserved.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

5. **Add the following ideas if they don't get mentioned:**

- Make putting on the condom a part of foreplay.
- Think up a sexual fantasy using condoms.
- Act sexy/sensual while putting on the condom.
- Hide a condom on your body and ask your partner to find it.
- Use extra lubrication inside and outside the condom.
- Experiment with different colors, types and textures of condoms.
- Have a sense of humor and make jokes.
- Tell your partner that using a condom can make an erection last longer.

6. **Now ask participants to think of some ways to make using condoms easy—to keep them from interrupting sex. Give the following examples,**

- You can talk about using condoms/dental dams in advance.
- Always have condoms on you.
- Learn to put the condom on in advance so you can do it more smoothly.
- Make sure you have condoms (or dental dams) close by to eliminate fumbling.
- Have the condom open and ready to use before sex.
- If using an internal condom, have it inserted before sex.

FACILITATOR'S NOTE

Remind youth that the only protective barriers that protect against HIV and other STIs are those made of latex, polyurethane, polyisoprene or nitrile. Anyone who is allergic to latex can use condoms made of the other materials.

Remember that some of the young people may not be sexually active and that for them this discussion may not make much sense. If this is the case, ask the questions in a way that is less personal. You could ask, "What do you think some people do to make condom use easier and more fun?" or "Imagine an advertisement for condoms and dental dams, what might it say that would make people think using condoms is easier and more fun?"

(continued)

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

(continued)

Participants should be reminded that only condoms consisting of latex, polyurethane, polyisoprene or nitrile can help protect against STIs. Condoms made from other materials, such as lambskin or other animal membranes, are not effective in preventing the spread of STI.

There are glow in the dark condoms that are latex and safe for STI/HIV protection, as well as flavored, ribbed and other options.

Just as there are different styles of condoms, each brand and type of lubricant is different. People have different preferences and may find that some lubricants feel better than others. Partners can try different brands to find one that feels comfortable and natural.

7. **Ask the group the following questions,**

> Do you feel prepared to use a condom if you have sex?
>
> Do you feel prepared to respond to excuses for not using a condom?

8. **Summarize as follows,**

> Once you and your partner both agree to use condoms, do something positive and fun. Go to the clinic or store together. Get lots of different brands and colors. Plan a special day when you can experiment. Just talking about how you'll use all of those condoms can be a turn-on.
>
> Remember, the proud and responsible thing to do is to always use protection such as latex or polyurethane/polyisoprene condoms if you have sex.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY C

BARRIERS TO CONDOM USE/ CONDOM PROS AND CONS

PREPARING FOR THE ACTIVITY

RATIONALE

Pointing out the positive aspects of condoms—by changing negative statements about condom use into positive ones—may reinforce the need to use condoms correctly and consistently, as well as build self-efficacy. This activity also sets the foundation for roleplaying and proud and responsible decision-making skills.

MATERIALS

- Pre-labeled chart paper:
  - *Pros*
  - *Cons*
- Markers
- Masking tape

TIME

10 minutes

PROCEDURE

FACILITATOR'S NOTE

While doing this activity, you might also bring up the issue of dental dams and find out if the reasons for not using dental dams are similar to those for not using condoms.

1. Introduce this activity by saying,

> There are many reasons why people do or do not use condoms. The reasons people do use condoms are *pros* and the reasons people don't use condoms are *cons* or *barriers to condom use*.

2. Unfold the 2 sheets of chart paper, labeled *Pros* and *Cons*.

3. Ask participants to brainstorm all of the *Pros* (all of the reasons *for* using condoms), and list their answers on the chart paper.

Make sure their list includes:

» Condoms can help prevent pregnancy.

» Condoms can help prevent STIs, including HIV.

» Condoms make you feel good about yourself.

» You know you are safer when you use condoms.

DO NOT COPY OR DISTRIBUTE
In any format without express written permission from ETR.
PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

4. **Ask participants to brainstorm all the *Cons* (all of the reasons people *don't* use condoms).**

Make sure the answers include:

- » Condoms are not available
- » Think condoms ruin the mood and pleasure
- » Using another form of birth control
- » Think condoms don't feel natural
- » Condoms cost too much
- » Don't know where to get free condoms
- » Partner doesn't want to use condoms
- » Embarrassed to bring up the subject
- » Parents might find them
- » Embarrassed to go to the store to buy them
- » Want to show they trust a partner

5. **Explain the following,**

Since you are proud and responsible young people who respect yourselves and want to protect yourselves, let's now change these cons into pros.

6. **Demonstrate by reading one of their cons/barriers and turning it into a pro.**

Example

Con: Condoms don't feel natural.

Pro: Knowing that you are being responsible by using condoms will feel natural and good.

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

7. **Then, give each member of the group a chance to change a con into a pro.**

8. **Cross each con off the list as it is changed into a pro.**

9. **Summarize as follows,**

> **Good job. As you can see, we've changed all the *Cons* to *Pros*. There are no cons to using condoms. You will be using this skill again in a later activity.**

DO NOT COPY OR DISTRIBUTE in any format without express written permission from ETR. PDF solely for purposes identified in signed April 2025 agreement.

© ETR. All rights reserved.

ACTIVITY D

"WHAT TO SAY IF MY PARTNER SAYS…": RESPONDING TO EXCUSES

PREPARING FOR THE ACTIVITY

RATIONALE

Participants need to examine the excuses sexual partners give for not wanting to use condoms to protect themselves from pregnancy, STIs and sexual transmission of HIV. Practicing what to say if a partner has excuses for not wanting to use a condom prepares the participants to negotiate with a partner.

MATERIALS

- Pre-labeled chart paper:
  - *Excuses Sexual Partners Give*
- Markers

TIME

15 minutes

PROCEDURE

1. Unfold the pre-labeled chart paper titled *Excuses Sexual Partners Give*.

2. Begin the activity by saying,

> This next game is similar to the one we just played. It is about excuses partners might give for not wanting to use a condom.
>
> Let's brainstorm excuses sexual partners give for not wanting to use condoms. What excuses might sexual partners give for not wanting to use a condom?

3. Write their responses on the chart paper.

4. Then say,

> Now let's see if we can change each excuse for not wanting to use a condom into a good reason to use a condom. In other words, what could you say to a potential sexual partner who said the following?

5. **Demonstrate by reading one excuse that is listed on the chart paper and by giving a positive response to that excuse.**

Example

Excuse: I don't like the way condoms feel.

Response: I can show you how to make them feel much better.

6. **Then, read each remaining excuse and call on volunteers to respond to them. Say,**

I am going to read more excuses. Your job is to convince me to use a condom.

FACILITATOR'S NOTE

As you read the list of excuses, read only those that were not discussed by the group already. After the participants respond, read the provided response as an alternative.

BREAKING THE MOOD STATEMENTS

Excuse: Condoms ruin the mood for sex.

Response: Only if you let them. With a little imagination, condoms can actually enhance sexual feeling.

OR

Let me show you that it doesn't have to ruin the mood.

SEXUAL ENJOYMENT STATEMENTS

Excuse: Condoms don't feel as good as the real thing…they aren't natural.

Response: Today's thin latex condoms feel quite natural. Let's try a few different types to find the one that feels best. Putting a drop of lubricant inside the tip of the condom can give extra feeling.

Internal condoms are made of nitrile, which warms up with body heat. We can use extra lube too.

Excuse: Sex doesn't feel as good with a condom on.

Response: There is plenty of feeling left, and I would feel unsafe without it.

Excuse: Dental dams are messy and smell funny.

Response: Dental dams aren't any messier or smellier than sex. Let's try a polyisoprene dental dam instead of a latex one so it doesn't smell. We can try different lubes too and find one that isn't smelly.

Excuse: Condoms are unnatural and turn me off.

Response: Worrying about unintended pregnancy and STIs turns me off. Condoms will make me feel safer and sexier.

OR

I know how to turn you back on.

Excuse: When I stop to put it on, I'll lose my erection.

Response: Don't worry, I'll help you get it back.

Excuse: Let's do it just this once without a condom.

Response: Once is all it takes to cause a problem, like unintended pregnancy or STI.

OTHER CONTRACEPTIVE METHODS STATEMENTS

Excuse: We don't need to use condoms if we're using the pill!

Response: The pill doesn't help protect you from STIs, including HIV, but condoms do. Proper condom usage can protect our health.

RELATIONSHIP/TRUST STATEMENTS

Excuse: People who use condoms don't trust each other.

Response: It's not a matter of trust—it is a matter of caring for yourself and the person you are with. In fact, both partners share a responsibility for having and using condoms— whether they trust each other or not.

(continued)

Excuse: I love you. How can you think I would give you an infection?

Response: You wouldn't do it intentionally. But most people don't know when they are infected with an STI.

Excuse: But we've been having sex without condoms.

Response: I know, but we could enjoy each other a lot more if I did not have to worry.

OR

That does not mean it's not a good idea to use them from now on.

DISEASES AND HEALTH STATEMENTS

Excuse: Condoms are for people with diseases. Do I look sick to you?

Response: Unfortunately you can't tell by looking at people if they have an STI. A person can look and feel healthy—and still be infected.

Excuse: I know I am disease free. I have not had sex with anyone in months.

Response: As far as I know, I'm free of disease too. But either of us could have an infection from a previous relationship and not know it. The only way to know if someone has an infection is to get tested.

Excuse: I'm allergic.

Response: I'm glad you told me. We can use a polyurethane or polyisoprene condom. They work for people who have latex allergies. Or we can use internal condoms. They're made of nitrile and they warm up with body heat!

NOT HAVING A CONDOM PRESENT STATEMENTS

Excuse: I do not have a condom with me.

Response: Let's satisfy each other without having intercourse then.

OR

Let's go out and get some condoms, then have sex.

7. When the group has finished, continue by saying,

> **Are there any additional excuses you think should go on this list?**

8. Record responses and then give these instructions,

> **We're going to do some more practice responding to these kinds of excuses. Here are some things you can include in your responses:**
>
> - **Good reasons to use condoms**
> - **Ways to make using condoms more pleasurable**
> - **Your beliefs about staying healthy and reaching your goals**
