F. As of the date of this contract and throughout its term, the MA Organization

1. Agrees that any physician incentive plan it operates meets the requirements of 42 CFR 5422.208, and

2. Has assured that all physicians and physician groups that the MA Organization's physician incentive plan places at substantial financial risk have adequate stop-loss protection in accordance with 42 CFR 5422.208(f). **[422.208]**

Article VI Records Requirements

A. MAINTENANCE OF RECORDS

1. The MA Organization agrees to maintain for 10 years books, records, documents, and other evidence of accounting procedures and practices that—

(1.a) Are sufficient to do the following:

(1.a.i) Accommodate periodic auditing of the financial records (including data related to Medicare utilization, costs, and computation of the benefit and price bid) of the MA Organization.

(1.a.ii) Enable CMS to inspect or otherwise evaluate the quality, appropriateness and timeliness of services performed under the contract, and the facilities of the MA Organization.

(1.a.iii) Enable CMS to audit and inspect any books and records of the MA Organization that pertain to the ability of the organization to bear the risk of potential financial losses, or to services performed or determinations of amounts payable under the contract.

(1.a.iv) Properly reflect all direct and indirect costs claimed to have been incurred and used in the preparation of the benefit and price bid proposal.

(1.a.v) Establish component rates of the benefit and price bid for determining additional and supplementary benefits.

(1.a.vi) Determine the rates utilized in setting premiums for State insurance agency purposes and for other government and private purchasers; and

(1.b) Include at least records of the following:

(1.b.i) Ownership and operation of the MA Organization's financial, medical, and other record keeping systems.

(1.b.ii) Financial statements for the current contract period and ten prior periods.

(1.b.iii) Federal income tax or informational returns for the current contract period and ten prior periods.

(1.b.iv) Asset acquisition, lease, sale, or other action.

(1.b.v) Agreements, contracts (including, but not limited to, with related or unrelated prescription drug benefit managers) and subcontracts.

(1.b.vi) Franchise, marketing, and management agreements.

(1.b.vii) Schedules of charges for the MA Organization's fee-for-service patients.

(1.b.viii) Matters pertaining to costs of operations.

(1.b.ix) Amounts of income received, by source and payment.

(1.b.x) Cash flow statements.

(1.b.xi) Any financial reports filed with other Federal programs or State authorities. **[422.504(d)]**

2. Access to facilities and records. The MA Organization agrees to the following:

(2.a) The Department of Health and Human Services (HHS), the Comptroller General, or their designee may evaluate, through inspection or other means—

(2.a.i) The quality, appropriateness, and timeliness of services furnished to Medicare enrollees under the contract;

(2.a.ii) Compliance with CMS requirements for maintaining the privacy and security of protected health information and other personally identifiable information of Medicare enrollees;

(2.a.iii) The facilities of the MA Organization; and

(2.a.iv) The enrollment and disenrollment records for the current contract period and ten prior periods.

(b) HHS, the Comptroller General, or their designees may audit, evaluate, or inspect any books, contracts, medical records, documents, papers, patient care documentation, and other records of the MA Organization, related entity, contractor, subcontractor, or its transferee that pertain to any aspect of services performed, reconciliation of benefit liabilities, and determination of amounts payable under the contract, or as the Secretary may deem necessary to enforce the contract.

(c) The MA Organization agrees to make available, for the purposes specified in paragraph A of this Article, its premises, physical facilities and equipment, records relating to its Medicare enrollees, and any additional relevant information that CMS may require, in a manner that meets CMS record maintenance requirements.

(2.d) HHS, the Comptroller General, or their designee's right to inspect, evaluate, and audit extends through 10 years from the final date of the contract period or completion of audit, whichever is later unless—

(2.d.i) CMS determines there is a special need to retain a particular record or group of records for a longer period and notifies the MA Organization at least 30 days before the normal disposition date;

(2.d.ii) There has been a termination, dispute, or fraud or similar fault by the MA Organization, in which case the retention may be extended to 10 years from the date of any resulting final resolution of the termination, dispute, or fraud or similar fault; or

(2.d.iii) HHS, the Comptroller General, or their designee determines that there is a reasonable possibility of fraud, in which case they may inspect, evaluate, and audit the MA Organization at any time. **[422.504(e)]**

B. REPORTING REQUIREMENTS

1. The MA Organization shall have an effective procedure to develop, compile, evaluate, and report to CMS, to its enrollees, and to the general public, at the times and in the manner that CMS requires, and while safeguarding the confidentiality of the doctor-patient relationship, statistics and other information as described in the remainder of this paragraph. **[422.516(a)]**

2. The MA Organization agrees to submit to CMS certified financial information that must include the following:

(2.a) Such information as CMS may require demonstrating that the organization has a fiscally sound operation, including:

(2.a.i) The cost of its operations;

(2.a.ii) A description, submitted to CMS annually and within 120 days of the end of the fiscal year, of significant business transactions (as defined in 42 CFR §422.500) between the MA Organization and a party in interest showing that the costs of the transactions listed in subparagraph (2)(a)(v) of this paragraph do not exceed the costs that would be incurred if these transactions were with someone who is not a party in interest; or

(2.a.iii) If they do exceed, a justification that the higher costs are consistent with prudent management and fiscal soundness requirements.

(2.a.iv) A combined financial statement for the MA Organization and a party in interest if either of the following conditions is met:

(2.a.iv.aa) Thirty five percent or more of the costs of operation of the MA Organization go to a party in interest.

(2.a.iv.bb) Thirty five percent or more of the revenue of a party in interest is from the MA Organization. **[422.516(b)]**

(2.a.v) Requirements for combined financial statements.

(2.a.v.aa) The combined financial statements required by this subparagraph must display in separate columns the financial information for the MA Organization and each of the parties in interest.

(2.a.v.bb) Inter-entity transactions must be eliminated in the consolidated column.

(2.a.v.cc) The statements must have been examined by an independent auditor in accordance with generally accepted accounting principles and must include appropriate opinions and notes.

(2.a.v.dd) Upon written request from the MA Organization showing good cause, CMS may waive the requirement that the organization's combined financial statement include the financial information required in this subparagraph with respect to a particular entity. **[422.516(c)]**

(2.a.vi) A description of any loans or other special financial arrangements the MA Organization makes with contractors, subcontractors, and related entities. **[422.516(e)]**

(2.b) Such information as CMS may require pertaining to the disclosure of ownership and control of the MA Organization. **[422.504(f)]**

(2.c) Patterns of utilization of the MA Organization's services. **[422.516(a)(2)]**

3. The MA Organization agrees to participate in surveys required by CMS and to submit to CMS all information that is necessary for CMS to administer and evaluate the program and to simultaneously establish and facilitate a process for current and prospective beneficiaries to exercise choice in obtaining Medicare services. This information includes, but is not limited to:

(3.a) The benefits covered under the MA plan;

(3.b) The MA monthly basic beneficiary premium and MA monthly supplemental beneficiary premium, if any, for the plan.

(3.c) The service area and continuation area, if any, of each plan and the enrollment capacity of each plan;

(3.d) Plan quality and performance indicators for the benefits under the plan including —

(3.d.i) Disenrollment rates for Medicare enrollees electing to receive benefits through the plan for the previous 2 years;

(3.d.ii) Information on Medicare enrollee satisfaction;

(3.d.iii) The patterns of utilization of plan services;

(3.d.iv) The availability, accessibility, and acceptability of the plan's services;

(3.d.v) Information on health outcomes and other performance measures required by CMS;

- (3.d.vi) The recent record regarding compliance of the plan with requirements of this part, as determined by CMS; and
- (3.d.vii) Other information determined by CMS to be necessary to assist beneficiaries in making an informed choice among MA plans and traditional Medicare;
- (3.d.viii) Information about beneficiary appeals and their disposition;
- (3.d.ix) Information regarding all formal actions, reviews, findings, or other similar actions by States, other regulatory bodies, or any other certifying or accrediting organization;
- (3.d.x) Any other information deemed necessary by CMS for the administration or evaluation of the Medicare program. **[422.504(f)(2)]**
4. The MA Organization agrees to provide to its enrollees and upon request, to any individual eligible to elect an MA plan, all informational requirements under 42 CFR §422.64 and, upon an enrollee's request, the financial disclosure information required under 42 CFR §422.516. **[422.504(f)(3)]**
5. Reporting and disclosure under ERISA –
- (5.a) For any employees' health benefits plan that includes an MA Organization in its offerings, the MA Organization must furnish, upon request, the information the plan needs to fulfill its reporting and disclosure obligations (with respect to the MA Organization) under the Employee Retirement Income Security Act of 1974 (ERISA).
- (5.b) The MA Organization must furnish the information to the employer or the employer's designee, or to the plan administrator, as the term "administrator" is defined in ERISA. **[422.516(d)]**
6. Electronic communication. The MA Organization must have the capacity to communicate with CMS electronically. **[422.504(b)]**
7. Risk Adjustment data. The MA Organization agrees to comply with the requirements in 42 CFR §422.310 for submitting risk adjustment data to CMS. **[422.504(a)(8)]**
8. The MA Organization acknowledges that CMS releases to the public summary reconciled Part D Payment data after the reconciliation of Part C and Part D Payments for the contract year as provided in 42 CFR §422.504(n) and, for Part D plan sponsors, 42 CFR §423.505(e).
9. The MA Organization agrees that it must subject information collected pursuant to 42 CFR §422.516(a) to a yearly independent audit to determine their reliability, validity, completeness, and comparability in accordance with specifications developed by CMS. **[422.516(g)]**

Article VII Renewal of the MA Contract

A. RENEWAL OF CONTRACT

In accordance with 42 CFR §422.505, following the initial contract period, this contract is renewable annually only if –

1. The MA Organization has not provided CMS with a notice of intention not to renew; **[422.506(a)]**
2. CMS and the MA Organization reach agreement on the bid under 42 CFR Part 422, Subpart F; and **[422.505(d)]**
3. CMS informs the MA Organization that it authorizes a renewal.

B. NONRENEWAL OF CONTRACT

1. Nonrenewal by the Organization.

(1.a) In accordance with 42 CFR §422.506, the MA Organization may elect not to renew its contract with CMS as of the end of the term of the contract for any reason, provided it meets the time frames for doing so set forth in this subparagraph.

(1.b) If the MA Organization does not intend to renew its contract, it must notify –

(1.b.i) CMS, in writing, by the first Monday in June of the year in which the contract would end, pursuant to 42 CFR §422.506

(1.b.ii) Each Medicare enrollee by mail, at least 90 calendar days before the date on which the nonrenewal is effective. This notice must include a written description of all alternatives available for obtaining Medicare services within the service area including alternative MA plans, MA-PD plans, Medigap options, and original Medicare and prescription drug plans and must receive CMS approval prior to issuance.

(1.c) CMS may accept a nonrenewal notice submitted after the applicable annual non-renewal notice deadline if –

- (1.c.i) The MA Organization notifies its Medicare enrollees and the public in accordance with subparagraph (1)(b)(ii) of this paragraph; and
- (1.c.ii) Acceptance is not inconsistent with the effective and efficient administration of the Medicare program.

(1.d) If the MA Organization does not renew a contract under this subparagraph, CMS may deny an application for a new contract or a service area expansion from the Organization or with any organization whose covered persons, as defined at 42 CFR §422.506(a)(5), also served as covered persons for the non-renewing MA Organization for 2 years unless there are special circumstances that warrant special consideration, as determined by CMS. This prohibition may apply regardless of the product type, contract type, or service area of the previous contract. **[422.506(a)]**

2. CMS decision not to renew.

(2.a) CMS may elect not to authorize renewal of a contract for any of the following reasons:

(2.a.i) For any of the reasons listed in 42 CFR §422.510(a) which would also permit CMS to terminate the contract.

(2.a.ii) The MA Organization has committed any of the acts in 42 CFR §422.752(a) that would support the imposition of intermediate sanctions or civil money penalties under 42 CFR Part 422 Subpart D.

(2.a.iii) The MA Organization did not submit a benefit and price bid or the benefit and price bid was not acceptable **[422.505(d)]**

(2.b) Notice. CMS shall provide notice of its decision whether to authorize renewal of the contract as follows:

(2.b.i) To the MA Organization by August 1 of the contract year, except in the event described in subparagraph (2)(a)(iii) of this paragraph, for which notice will be sent by September 1.

(2.b.ii) To the MA Organization's Medicare enrollees by mail at least 90 days before the end of the current calendar year.

(2.c) Notice of appeal rights. CMS shall give the MA Organization written notice of its right to reconsideration of the decision not to renew in accordance with 42 CFR §422.644. **[422.506(b)]**

Article VIII Modification or Termination of the Contract

A. MODIFICATION OR TERMINATION OF CONTRACT BY MUTUAL CONSENT

1. This contract may be modified or terminated at any time by written mutual consent.

(1.a) If the contract is modified by written mutual consent, the MA Organization must notify its Medicare enrollees of any changes that CMS determines are appropriate for notification within time frames specified by CMS. [422.508(a)(2)]

(1.b) If the contract is terminated by written mutual consent, except as provided in subparagraph 2 of this paragraph, the MA Organization must provide notice to its Medicare enrollees and the general public as provided in paragraph B, subparagraph 2(b) of this Article. [422.508(a)(1)]

2. If this contract is terminated by written mutual consent and replaced the day following such termination by a new MA contract, the MA Organization is not required to provide the notice specified in paragraph B of this Article. [422.508(b)]

3. As a condition of the consent to a mutual termination, CMS will require as a provision of the termination agreement language prohibiting the MA organization from applying for new contracts or service area expansions for a period of 2 years, absent circumstances warranting special consideration. This prohibition may apply regardless of the product type, contract type, or service area of the previous contract. [422.508(c)]

B. TERMINATION OF THE CONTRACT BY CMS OR THE MA ORGANIZATION

1. Termination by CMS.

(1.a) CMS may at any time terminate a contract if CMS determines that the MA Organization meets any of the following:

(1.a.i) has failed substantially to carry out the terms of its contract with CMS,

(1.a.ii) is carrying out its contract in a manner that is inconsistent with the efficient and effective implementation of 42 CFR Part 422,

(1.a.iii) no longer substantially meets the applicable conditions of 42CFR Part 422.

(1.b) CMS may make a determination under paragraph B(1)(a)(i), (ii), or (iii) of this Article if the MA Organization has had one or more of the following occur:

(1.b.i) based on credible evidence, has committed or participated in false, fraudulent or abusive activities affecting the Medicare, Medicaid or other State or Federal health care program, including submission of false or fraudulent data,

(1.b.ii) experiences financial difficulties so severe that its ability to make necessary health services available is impaired to the point of posing an imminent and serious risk to the health of its enrollees, or otherwise fails to make services available to the extent that such a risk to health exists,

(1.b.iii) substantially failed to comply with the requirements in 42 CFR Part 422 Subpart M relating to grievances and appeals,

(1.b.iv) failed to provide CMS with valid data as required under 42 CFR §§422.310,

(1.b.v) failed to implement an acceptable quality assessment and performance improvement program as required under 42 CFR Part 422 Subpart D,

(1.b.vi) substantially failed to comply with the prompt payment requirements in 42 CFR §422.520,

(1.b.vii) substantially failed to comply with the service access requirements in 42 CFR §422.112,

(1.b.viii) failed to comply with the requirements of 42 CFR §422.208 regarding physician incentive plans,

(1.b.ix) substantially failed to comply with the marketing requirements in 42 CFR Part 422 Subpart V,

(1.b.x) Failed to comply with regulatory requirements contained in 42 CFR Parts 422 or 423 or both,

(1.b.xi) Failed to meet CMS performance requirements in carrying out the regulatory requirements contained in 42 CFR Parts 422 or 423 or both,

(1.b.xii) Achieves a Part C summary plan rating of less than 3 stars for 3 consecutive contract years,

(1.b.xiii) Has failed to report RLR data in a timely and accurate manner in accordance with 42 CFR §422.2460,

(1.c) Notice. If CMS decides to terminate a contract, it will give notice of the termination as follows:

(1.c.i) CMS will notify the MA Organization in writing at least 45 calendar days before the intended date of the termination,

(1.c.ii) The MA Organization will notify its Medicare enrollees of the termination by mail at least 30 calendar days before the effective date of the termination,

(1.c.iii) The MA Organization will notify the general public of the termination at least 30 calendar days before the effective date of the termination by releasing a press statement to news media serving the affected community or county and posting the press statement prominently on the organization's Web site,

(1.d) Expedited termination of contract by CMS.

(1.d.i) For terminations based on violations prescribed in subparagraph 1(b)(i) or (b)(ii) of this paragraph or if CMS determines that a delay in termination would pose an imminent and serious threat to the health of the individuals enrolled with the MA Organization, CMS will notify the MA Organization in writing that its contract has been terminated on a date specified by CMS. If a termination is effective in the middle of a month, CMS has the right to recover the prorated share of the capitation payments made to the MA Organization covering the period of the month following the contract termination.

(1.d.ii) CMS will notify the MA Organization's Medicare enrollees in writing of CMS' decision to terminate the MA Organization's contract. This notice will occur no later than 30 days after CMS notifies the plan of its decision to terminate this contract. CMS will simultaneously inform the Medicare enrollees of alternative options for obtaining Medicare services, including alternative MA Organizations in a similar geographic area and original Medicare.

(1.d.iii) CMS will notify the general public of the termination no later than 30 days after notifying the MA Organization of CMS' decision to terminate this contract. This notice will be published in one or more newspapers of general circulation in each community or county located in the MA Organization's service area.

(1.e) Corrective action plan

(1.e.i) General. Before providing a notice of intent to terminate a contract for reasons other than the grounds specified in subparagraph 1(a)(iv) or (v) of this paragraph, CMS will provide the MA Organization with notice specifying the MA Organization's deficiencies and a reasonable opportunity of at least 30 calendar days to develop and implement an approved corrective action plan to correct the deficiencies that are the basis of the proposed termination.

(1.e.ii) Exceptions. If a contract is terminated under subparagraph 1(a)(iv) or (v) of this paragraph, the MA Organization will not be provided with the opportunity to develop and implement a corrective action plan.

(1.f) Appeal rights. If CMS decides to terminate this contract, it will send written notice to the MA Organization informing it of its termination appeal rights in accordance with 42 CFR Part 422 Subpart N. [422.510(d)]

2. Termination by the MA Organization

(2.a) Cause for termination. The MA Organization may terminate this contract if CMS fails to substantially carry out the terms of the contract.

(2.b) Notice. The MA Organization must give advance notice as follows:

(2.b.i) To CMS, at least 90 days before the intended date of termination. This notice must specify the reasons why the MA Organization is requesting

contract termination.

(2.b.ii) To its Medicare enrollees, at least 60 days before the termination effective date. This notice must include a written description of alternatives available for obtaining Medicare services within the service area, including alternative MA and MA-PD plans, PDP plans, Medigap options, and original Medicare and must receive CMS approval.

(2.b.iii) To the general public at least 60 days before the termination effective date by publishing a CMS-approved notice in one or more newspapers of general circulation in each community or county located in the MA Organization's geographic area.

(2.c) Effective date of termination. The effective date of the termination will be determined by CMS and will be at least 90 days after the date CMS receives the MA Organization's notice of intent to terminate.

(2.d) CMS' liability. CMS' liability for payment to the MA Organization ends as of the first day of the month after the last month for which the contract is in effect, but CMS shall make payments for amounts owed prior to termination but not yet paid.

(2.e) Effect of termination by the organization. CMS (2.e) may deny an application for a new contract or service area expansion from the MA Organization or with an organization whose covered persons, as defined in 42 CFR §422.512(e)(2), also served as covered persons for the terminating MA Organization for a period of two years from the date the Organization has terminated this contract, unless there are circumstances that warrant special consideration, as determined by CMS. This prohibition may apply regardless of the product type, contract type, or service area of the previous contract. **[422.512]**

Article IX Requirements of Other Laws and Regulations

A. The MA Organization agrees to comply with—

1. Federal laws and regulations designed to prevent or ameliorate fraud, waste, and abuse, including, but not limited to, applicable provisions of Federal criminal law, the False Claims Act (31 USC §3729 et seq.), and the anti-kickback statute (§ 1128B(b) of the Act); and

2. HIPAA administrative simplification rules at 45 CFR Parts 160, 162, and 164. **[422.504(h)]**

B. Pursuant to § 13112 of the American Recovery and Reinvestment Act of 2009 (ARRA), the MA Organization agrees that as it implements, acquires, or upgrades its health information technology systems, it shall utilize, where available, health information technology systems and products that meet standards and implementation specifications adopted under § 3004 of the Public Health Service Act, as amended by § 13101 of the ARRA.

C. The MA Organization maintains ultimate responsibility for adhering to and otherwise fully complying with all terms and conditions of its contract with CMS, notwithstanding any relationship(s) that the MA Organization may have with related entities, contractors, or subcontractors. **[422.504(i)]**

D. In the event that any provision of this contract conflicts with the provisions of any statute or regulation applicable to an MA Organization, the provisions of the statute or regulation shall have full force and effect.

E. The MA Organization agrees to comply with the requirements relating to Nondiscrimination in Health Programs and Activities in 45 CFR Part 92, including submitting assurances that the MA Organization's health programs and activities will be operated in compliance with the nondiscrimination requirements, as required in 45 CFR §92.5.

Article X Severability

The MA Organization agrees that, upon CMS' request, this contract will be amended to exclude any MA plan or State-licensed entity specified by CMS, and a separate contract for any such excluded plan or entity will be deemed to be in place when such a request is made. **[422.504(k)]**

Article XI Miscellaneous

A. DEFINITIONS

Terms not otherwise defined in this contract shall have the meaning given to such terms in 42 CFR Part 422.

B. ALTERATION TO ORIGINAL CONTRACT TERMS

The MA Organization agrees that it has not altered in any way the terms of this contract presented for signature by CMS. The MA Organization agrees that any alterations to the original text the MA Organization may make to this contract shall not be binding on the parties.

C. APPROVAL TO BEGIN MARKETING AND ENROLLMENT

The MA Organization agrees that it must complete CMS operational requirements prior to receiving CMS approval to begin Part C marketing and enrollment activities. Such activities include, but are not limited to, establishing and successfully testing connectivity with CMS systems to process enrollment applications (or contracting with an entity qualified to perform such functions on the MA Organization's Sponsor's behalf) and successfully demonstrating capability to submit accurate and timely price comparison data. To establish and successfully test connectivity, the MA Organization must, 1) establish and test physical connectivity to the CMS data center, 2) acquire user identifications and passwords, 3) receive, store, and maintain data necessary to perform enrollments and send and receive transactions to and from CMS, and 4) check and receive transaction status information.

D. MA Organization agrees to maintain a fiscally sound operation by at least maintaining a positive net worth (total assets exceed total liabilities) as required in 42 CFR § 422.504(a)(14).

E. MA Organization agrees to maintain administrative and management capabilities sufficient for the organization to organize, implement, and control the financial, marketing, benefit administration, and quality improvement activities related to the delivery of Part C services as required by 42 CFR §422.504(a)(17).

F. MA Organization agrees to maintain a Part C summary plan rating score of at least 3 stars as required by 42 CFR §422.504(a)(18).

G. CMS may determine that an MA organization is out of compliance with a Part C requirement when the organization fails to meet performance standards articulated in the Part C statutes, regulations, or guidance. If CMS has not already articulated a measure for determining noncompliance, CMS may determine that an MA organization is out of compliance when its performance in fulfilling Part C requirements represents an outlier relative to the performance of other MA organizations. **[422.504(m)]**

H. **Business Continuity:** The MA organization agrees to develop, maintain, and implement a business continuity plan as required by 42 CFR §422.504(o).

ATTACHMENT A

ATTESTATION OF ENROLLMENT INFORMATION RELATING TO CMS PAYMENT TO A MEDICARE ADVANTAGE ORGANIZATION

Pursuant to the contract(s) between the Centers for Medicare & Medicaid Services (CMS) and (INSERT NAME OF MA ORGANIZATION), hereafter referred to as the MA Organization, governing the operation of the following Medicare Advantage plans (INSERT PLAN IDENTIFICATION NUMBERS HERE), the MA Organization hereby requests payment under the contract, and in doing so, makes the following attestation concerning CMS payments to the MA Organization. The MA Organization

acknowledges that the information described below directly affects the calculation of CMS payments to the MA Organization and that misrepresentations to CMS about the accuracy of such information may result in Federal civil action and/or criminal prosecution. This attestation shall not be considered a waiver of the MA Organization's right to seek payment adjustments from CMS based on information or data which does not become available until after the date the MA Organization submits this attestation.

1. The MA Organization has reported to CMS for the month of (INDICATE MONTH AND YEAR) all new enrollments, disenrollments, and appropriate changes in enrollees' status with respect to the above-stated MA plans. Based on best knowledge, information, and belief as of the date indicated below, all information submitted to CMS in this report is accurate, complete, and truthful.

2. The MA Organization has reviewed the CMS monthly membership report and reply listing for the month of (INDICATE MONTH AND YEAR) for the above-stated MA plans and has reported to CMS any discrepancies between the report and the MA Organization's records. For those portions of the monthly membership report and the reply listing to which the MA Organization raises no objection, the MA Organization, through the certifying CEO/CFO, will be deemed to have attested, based on best knowledge, information, and belief as of the date indicated below, to its accuracy, completeness, and truthfulness.

ATTACHMENT B

**ATTESTATION OF RISK ADJUSTMENT DATA INFORMATION RELATING TO
CMS PAYMENT TO A MEDICARE ADVANTAGE ORGANIZATION**

Pursuant to the contract(s) between the Centers for Medicare & Medicaid Services (CMS) and (INSERT NAME OF MA ORGANIZATION), hereafter referred to as the MA Organization, governing the operation of the following Medicare Advantage plans (INSERT PLAN IDENTIFICATION NUMBERS HERE), the MA Organization hereby requests payment under the contract, and in doing so, makes the following attestation concerning CMS payments to the MA Organization. The MA Organization acknowledges that the information described below directly affects the calculation of CMS payments to the MA Organization or additional benefit obligations of the MA Organization and that misrepresentations to CMS about the accuracy of such information may result in Federal civil action and/or criminal prosecution.

The MA Organization has reported to CMS during the period of (INDICATE DATES) all (INDICATE TYPE - DIAGNOSIS/ENCOUNTER) risk adjustment data available to the MA Organization with respect to the above-stated MA plans. Based on best knowledge, information, and belief as of the date indicated below, all information submitted to CMS in this report is accurate, complete, and truthful.

ATTACHMENT C - Medicare Advantage Plan Attestation of Benefit Plan and Price

In witness whereof, the parties hereby execute this contract.

EXHIBIT P-1B

[The following text is extremely faint and largely illegible due to the quality of the scan. It appears to be a series of paragraphs or a list of items, but the specific content cannot be accurately transcribed.]

The first part of the paper discusses the importance of the
 Journal of Management Education in the field of management
 education. It highlights the journal's role in providing
 a platform for the dissemination of research findings and
 the advancement of the discipline. The second part of the
 paper focuses on the journal's commitment to diversity and
 inclusion, emphasizing the need for a more equitable and
 inclusive research agenda. The third part of the paper
 discusses the journal's efforts to promote the use of
 research in management education, highlighting the
 importance of evidence-based practice. The fourth part of
 the paper discusses the journal's commitment to
 transparency and accountability, emphasizing the need for
 open access and the sharing of research data. The fifth
 part of the paper discusses the journal's commitment to
 the future of management education, highlighting the
 need for innovation and the development of new
 research paradigms. The final part of the paper
 discusses the journal's commitment to the management
 education community, emphasizing the need for
 collaboration and the sharing of resources.

Medicare+Choice Organization

Electronic Data Interchange Enrollment Form

MANAGED CARE ELECTRONIC DATA INTERCHANGE (EDI) ENROLLMENT FORM

ONLY for the Collection of Risk Adjustment Data and/or

With Medicare+Choice Eligible Organizations

The eligible organization agrees to the following provisions for submitting Medicare risk adjustment data electronically to The Centers for Medicare & Medicaid Services (CMS) or to CMS's contractors.

A. The Eligible Organization Agrees:

1. That it will be responsible for all Medicare risk adjustment data submitted to CMS by itself, its employees, or its agents.
2. That it will not disclose any information concerning a Medicare beneficiary to any other person or organization, except CMS and/or its contractors, without the express written permission of the Medicare beneficiary or his/her parent or legal guardian, or where required for the care and treatment of a beneficiary who is unable to provide written consent, or to bill insurance primary or supplementary to Medicare, or as required by State or Federal law.
3. That it will ensure that every electronic entry can be readily associated and identified with an original source document. Each source document must reflect the following information:
 - Beneficiary's name,
 - Beneficiary's health insurance claim number,
 - Date(s) of service,
 - Diagnosis/nature of illness
4. That the Secretary of Health and Human Services or his/her designee and/or the contractor has the right to audit and confirm information submitted by the eligible organization and shall have access to all original source documents and medical records related to the eligible organization's submissions, including the beneficiary's authorization and signature.
5. Based on best knowledge, information, and belief, that it will submit risk adjustment data that are accurate, complete, and truthful.
6. That it will retain all original source documentation and medical records pertaining to any such particular Medicare risk adjustment data for a period of at least 6 years, 3 months after the risk adjustment data is received and processed.
7. That it will affix the CMS-assigned unique identifier number of the eligible organization on each risk adjustment data electronically transmitted to the contractor.
8. That the CMS-assigned unique identifier number constitutes the eligible organization's legal electronic signature.
9. That it will use sufficient security procedures to ensure that all transmissions of documents are authorized and protect all beneficiary-specific data from improper access.
10. That it will establish and maintain procedures and controls so that information concerning Medicare beneficiaries, or any information obtained from CMS or its contractor, shall not be used by agents, officers, or employees of the billing service except as provided by the contractor (in accordance with §1106(a) of the Act).
11. That it will research and correct risk adjustment data discrepancies.
12. That it will notify the contractor or CMS within 2 business days if any transmitted data are received in an unintelligible or garbled form.

B. The Centers for Medicare & Medicaid Services Agrees To:

1. Transmit to the eligible organization an acknowledgment of risk adjustment data receipt.
2. Affix the intermediary/carrier number, as its electronic signature, on each response/report sent to the eligible organization.
3. Ensure that no contractor may require the eligible organization to purchase any or all electronic services from the contractor or from any subsidiary of the contractor or from any company for which the contractor has an interest.
4. The contractor will make alternative means available to any electronic biller to obtain such services.
5. Ensure that all Medicare electronic transmitters have equal access to any services that CMS requires Medicare contractors to make available to eligible organizations or their billing services, regardless of the electronic billing technique or service they choose. Equal access will be granted to any services the contractor sells directly, indirectly, or by arrangement.
6. Notify the provider within 2 business days if any transmitted data are received in an unintelligible or garbled form.

NOTICE:

Federal law shall govern both the interpretation of this document and the appropriate jurisdiction and venue for appealing any final decision made by CMS under this document.

This document shall become effective when signed by the eligible organization. The responsibilities and obligations contained in this document will remain in effect as long as Medicare risk adjustment data are submitted to CMS or the contractor. Either party may terminate this arrangement by giving the other party (30) days written notice of its intent to terminate. In the event that the notice is mailed, the written notice of termination shall be deemed to have been given upon the date of mailing, as established by the postmark or other appropriate evidence of transmittal.

C. Signature:

I am authorized to sign this document on behalf of the indicated party and I have read and agree to the foregoing provisions and acknowledge same by signing below.

Subject: RE: 2013 CMS RAF Attestation

Steve,

With this email, we are acknowledging receipt of your email dated 6/26/15. However, neither the receipt of your email nor any acknowledgment of such receipt should be interpreted as acquiescence by the Government to any purported modification to the Attestations of Risk Adjustment Data submitted by United or to any of the arrangements described in or statements made in your email, or as a release of any of United's present or future liability to the Government. As you know, both regulation and the MA organizations' contracts with CMS prescribe the specific language of this Attestation, and the MA organizations' execution and submission of the Attestation as specified is a condition of payment by the Medicare Program.

With respect to your fifth point, as we noted last year in response to a similar email from you, there are laws and contractual provisions that impose standards, requirements and responsibilities on MA organizations in connection with federal payments, including risk adjustment payments, they receive from the Medicare Program. We cannot provide legal advice to United about whether its current or proposed courses of action are compliant with such laws and obligations, but we do wish to remind you that MA organizations are required to implement effective compliance programs that prevent, detect and correct non-compliance with CMS program requirements, to exercise reasonable diligence in identifying overpayments, and to report and return such overpayments to the Medicare Program within 60 days. MA organizations cannot delegate these legal obligations to others.

Cheri Rice
Director, Medicare Plan Payment Group
Centers for Medicare and Medicaid Services

Subject: 2013 CMS RAF Attestation

Cheri,

Similar to last year, we are reaching out to you, to reiterate our approach to the electronic annual risk adjustment certifications. As you know, annual risk adjustment data certifications before 2014 were submitted on paper, enabling companies to add notes explaining their understanding of these certifications (including any remediation efforts). As we discussed with you last year, because the certifications are now electronic, companies are unable to include explanatory notes. As such, we informed you in writing our understanding of these certifications.

EXHIBIT

648

~~4008~~

Because the certifications remain electronic with no ability to add explanatory notes, we feel it would again be helpful, and appropriate, to capture our discussion and understanding regarding the certifications.

- As with our past certifications, the 2013 certifications are based on facts reasonably available or made available to us as of the date of the certifications. As we receive additional information, we may be required to modify the data to which the certifications relate.
- The certifications use the phrase "best knowledge, information, and belief," which is based on our ordinary business practices.
- The certifications only cover risk adjustment data for 2013 dates of service that were submitted to CMS and not subsequently deleted prior to the date of the certifications.
- As we have mentioned to you previously, we are engaged in an ongoing review of our risk adjustment processes and submission system. This review has identified areas for improvement and, as a result, we will be deleting all risk adjustment data for 2013 dates of service that we ultimately determine should be deleted consistent with this email.
- CMS issued a proposed rule last year that would have required MA plans to design any medical record reviews to determine the accuracy of risk adjustment diagnoses associated with those records. In May 2014, CMS withdrew the proposed rule. During our conversations last year before the proposed rule was withdrawn, CMS confirmed to us that the proposed requirements would not apply until the effective date of the rule, and that MA plans were thus not required to design their medical record reviews to determine the accuracy of risk adjustment diagnoses. As we discussed last year, we previously had a process through which we reviewed certain medical records to determine the accuracy of risk adjustment diagnoses and submitted appropriate deletes. Based on our conversations with CMS last year, CMS's withdrawal of the proposed rule, and CMS's ongoing consideration of a FFS Adjuster to address diagnoses not supported by a medical record in the context of RADV, we ended this process and informed you of that decision. That decision remains operative for 2013 dates of service. In particular, we did not use our previous process to determine whether diagnosis codes submitted through claims are unsupported in the medical record. We do have a quality assurance process that deletes codes initially identified during chart review and that are later determined to be unsupported.

The certifications we submit this year are made subject to these clarifications. Please let me know if you have any questions. As always, we appreciate your time and attention on this matter.

May 28, 2020

Brian Thompson
Chief Executive Officer
United Healthcare
Medicare & Retirement
9800 Health Care Lane
MN006-E010
Minnetonka, MN 55343

Dear Mr. Thompson:

Thank you for your communications regarding Medicare Advantage risk adjustment. We appreciate your taking time to share your views. This letter is in response to all correspondence related to Medicare Advantage risk adjustment data certifications and the Electronic Data Interchange (EDI) enrollment forms that the Medicare Plan Payment Group has received from your organization to date.

In CMS' view any caveats that United sends are non-binding and do not alter any existing agreements or any other statutory, regulatory, and contractual obligations. To the extent that your communication seeks "advice" regarding United's legal obligations, it is not CMS' practice to modify the established legal and contractual obligations of MA organizations through informal "advice."

We remind you that there are existing laws and contractual provisions that impose standards, requirements, and responsibilities on MA organizations in connection with federal payments, including risk adjustment payments, they receive from the Medicare Program. As you know, the decision in 2014 by CMS not to finalize the proposed amendment to 42 CFR § 422.310(e) did "not change CMS' existing contractual requirement that MA organizations must certify (based on best knowledge, information, and belief) the accuracy, completeness, and truthfulness of the risk adjustment data they submit to CMS." 79 Fed. Reg. 29,844, 29,926 (May 23, 2014). Nor did it change the requirement that all diagnosis codes submitted for risk adjustment payments must be documented in the beneficiaries' medical records pursuant to the ICD-9 and -10 Guidelines for Coding and Reporting with which HHS and Medicare regulations require compliance. CMS has not stated otherwise to United.

Furthermore, the agency's positions on the issues raised in your communications also are public and can be found in, among other places, the government's briefs in the *UnitedHealth Group* cases pending in the District of Columbia and in California. CMS reserves all its rights and remedies associated with United's submission of invalid risk adjustment data. The agency's

receipt of United's communications and the acknowledgement of such receipt should not be interpreted as a release of any administrative, civil, or criminal liability arising from United's failure to comply with its legal and regulatory obligations relating to the submission of risk adjustment data to and receipt of risk adjustment payments from the Medicare Program (including, without limitation, any potential liability arising from the matters currently under DOJ investigation).

Sincerely,

A handwritten signature in dark ink, reading "Jennifer R. Shapiro". The signature is written in a cursive, flowing style.

ATTACHMENT B

ATTESTATION OF RISK ADJUSTMENT DATA INFORMATION RELATING TO CMS PAYMENT TO A MEDICARE ADVANTAGE ORGANIZATION, MEDICARE MEDICAID PLAN OR PACE ORGANIZATION

Pursuant to the contract(s) between the Centers for Medicare & Medicaid Services (CMS) and UNITEDHEALTHCARE INSURANCE COMPANY (H2226), hereafter referred to as the MA Organization, governing the operation of the following Medicare Advantage and Medicare Advantage-Prescription Drug plans 001, the MA Organization hereby requests payment under the contract, and in doing so, makes the following attestation concerning CMS payments to the MA Organization. The MA Organization acknowledges that the information described below directly affects the calculation of CMS payments to the MA Organization or additional benefit obligations of the MA Organization and that misrepresentation to CMS about the accuracy of such information may result in Federal civil action and/or criminal prosecution.

The MA Organization has reported to CMS for the period of January 1, 2016, to December 31, 2016, all risk adjustment data (*inpatient hospital, outpatient hospital, and physician*) available to the MA Organization, Medicare Medicaid Plan or PACE Organization as of the applicable deadline(s), with respect to the above-stated MA, MMP, and MA-PD plans. Based on best knowledge, information, and belief as of the date indicated below, all information submitted to CMS in this report is accurate, complete, and truthful.

Job No. 983690

Page 30	Page 32
1 to answer. 2 MS. GLOVER: You're going to instruct 3 him not to answer based on -- his company has been 4 paid a certain amount for him to appear here today, 5 and he's still being paid by his company. It is 6 relevant in calculating the number of hours and how 7 much, approximately, his time is worth to be here 8 today. 9 MS. DO: He's already testified twice 10 now that he's paid a salary that is not impacted by 11 the hourly rate. It has no relevance. It's 12 outside the scope. 13 MS. GLOVER: It goes to his credibility 14 and bias. 15 MS. DO: It's outside the scope. 16 MS. GLOVER: Relevance is not an 17 appropriate basis for instructing him not to 18 answer. 19 MS. DO: You have an hourly rate. Move 20 on. 21 BY MS. GLOVER: 22 Q. Are you going to answer my question? 23 A. Counsel has instructed me not to answer 24 that question. 25 MS. GLOVER: And I will say for the	1 BY MS. GLOVER: 2 Q. Sure. 3 Is it your understanding that 4 UnitedHealthcare retains Optum to manage and 5 process the data that providers submit to 6 UnitedHealthcare, UnitedHealthcare's plans? 7 MS. DO: Outside the scope, and also 8 vague. 9 THE WITNESS: UnitedHealthcare -- Optum 10 supports UnitedHealthcare through the submissions 11 of a portion of their Medicare Advantage 12 beneficiaries. 13 BY MS. GLOVER: 14 Q. Does Optum process data submitted by 15 providers to UnitedHealthcare, Inc.? 16 A. What do you mean by process? 17 Q. Receive the data and assimilate it into 18 a system. 19 MS. DO: Outside the scope. Object to 20 form. 21 THE WITNESS: United providers do not 22 submit directly to Optum, no. 23 BY MS. GLOVER: 24 Q. Do they submit to systems, systems that 25 you've been asked to prepare on today, that
Page 31	Page 33
1 record that it is an inappropriate instruction not 2 to answer because it is not on the basis of 3 privilege. 4 BY MS. GLOVER: 5 Q. Okay. So let's -- we will move on for 6 now. All right. So just so that I understand, you 7 are here to testify on behalf of those three 8 entities that we've discussed, OptumInsight, UHC of 9 California, and UnitedHealthcare, Inc.; correct? 10 A. Yes. 11 Q. And at a high level, Optum submits risk 12 adjustment data on behalf of UnitedHealthcare, 13 Inc.'s Medicare Advantage plans; is that correct? 14 A. It's a portion of their business, yes. 15 Q. Okay. And UHC of California, Inc., is 16 one of those plans on whose behalf Optum submits 17 risk adjustment data to CMS. Is that correct? 18 A. Yes. 19 Q. All right. And is it your understanding 20 that UnitedHealthcare retains Optum to manage and 21 process data submitted by providers to 22 UnitedHealthcare -- to UnitedHealthcare's plans? 23 MS. DO: Object to form. Vague. 24 THE WITNESS: Can you repeat the 25 question?	1 ultimately load data into OptumInsight systems? 2 MS. DO: Outside the scope. And object 3 to form. 4 THE WITNESS: Yes, some data received by 5 providers of Medicare Advantage -- to Medicare 6 Advantage beneficiaries can end up in Optum 7 systems. 8 BY MS. GLOVER: 9 Q. And some of those Medicare beneficiaries 10 are enrolled in UnitedHealthcare, Inc.'s plans; 11 correct? 12 A. Medicare Advantage beneficiaries. 13 Q. Yes. 14 A. Yes. 15 Q. And Medicare Part D beneficiaries as 16 well; right? 17 MS. DO: Outside the scope. And object 18 to form. 19 THE WITNESS: I believe Optum may 20 receive part -- a portion of Part D data related to 21 Medicare Advantage beneficiaries. 22 BY MS. GLOVER: 23 Q. And a portion of data which includes 24 ICD-9 or 10 codes, diagnosis codes; right? 25 MS. DO: Object to form. Also outside

Page 310	Page 312
1 chart review data that may have been extracted from 2 ChartSync during that time. 3 BY MS. GLOVER: 4 Q. And what was the purpose of the compare? 5 MS. DO: Objection; outside the scope. 6 And objection to the form. 7 THE WITNESS: I'm not sure I can speak 8 to why they ran the analysis they did. Just a 9 comparison was done between the two datasets. 10 MS. DO: We've gone well over an hour. 11 I believe we're also hitting the seven-hour mark. 12 Would you like a break? 13 THE WITNESS: Ideally. I don't know if 14 we're close to seven hours. 15 MS. RISK ADJUSTMENT METHODOLOGY

disabled and smaller perhaps than some people expect because the final measure is plan liability rather than spending.

Figure 1C illustrates the calculation of the Part D Direct Subsidy.

Figure 1C – Calculation of Part D Direct Subsidy

1.4 Parts C and D Final Submission of Risk Adjustment Data (Reconciliation)

Reconciliation is used to complete the implementation of payments, with CMS calculating final risk adjustment factors and beneficiary status based on complete data. CMS continues to allow a period (approximately 13 months after the data collection year) for submitting final RAPS data for the appropriate data collection period. Data not received or submitted by the initial submission deadline for a data collection period can be submitted by the final submission deadline (reconciliation). In addition to incorporating new RAPS and fee-for-service diagnoses, reconciliation takes into account necessary adjustments to institutional status and demographic data for enrollees.

Note: CMS reconciles risk-adjusted payments for a calendar year only one time. When submitting risk adjustment data for reconciliation, plans may submit as well as correct data that was previously submitted.

1.4.1 Parts C and D Risk Adjustment Schedule & Elimination of the Payment Lag

Risk adjusted payments were originally implemented with a 6-month payment lag from the end of the collection period to the start of revised payments, based on the data collected.

2008 Risk Adjustment Data Technical Assistance For Medicare Advantage Organizations Participant Guide

RISK ADJUSTMENT SUBMISSION PROCESS OVERVIEW

MODULE 2 – RISK ADJUSTMENT SUBMISSION PROCESS OVERVIEW

Purpose

The success of Medicare Advantage (MA) risk adjustment is dependent upon organizations understanding the process of collecting and submitting accurate risk adjustment data. The purpose of this module is to provide participants with important terms, key resources, and schedule information that will provide the foundation for this training.

Learning Objectives

At the completion of this module, participants will be able to:

- Define common risk adjustment terminology.
- Demonstrate knowledge in interpreting key components of the risk adjustment process.
- Interpret the risk adjustment schedule.
- Identify the Centers for Medicare & Medicaid Services (CMS) outreach efforts available to organizations.

ICON KEY	
Example	
Reminder	
Resource	

2.1 Common Risk Adjustment Terms (Slide 7)

Table 2A provides descriptions of common risk adjustment terminology.

TABLE 2A – RISK ADJUSTMENT COMMON TERMS

TERM	DESCRIPTION
FERAS	Risk adjustment submitters send data to Palmetto through the Front-End Risk Adjustment System .
RAPS	Risk adjustment data are processed by the Risk Adjustment Processing System .
RAS	The Risk Adjustment System calculates the risk score.
MARx	The Medicare Advantage Prescription Drug System calculates the risk payment.
Common UI	The Common UI maintains Medicare beneficiary eligibility data.
HPMS	The Health Plan Management System is a CMS MA information system that contains health plan-level data.
Required Diagnosis	ICD-9-CM diagnosis codes required to be submitted for the CMS Hierarchical Condition Category (HCC) model and for future model development.

**2008 Risk Adjustment Data Technical Assistance
For Medicare Advantage Organizations
Participant Guide**

RISK ADJUSTMENT SUBMISSION PROCESS OVERVIEW

2.2 Risk Adjustment Process Overview

Hospital inpatient, hospital outpatient, and physician risk adjustment data must be submitted at least quarterly. Risk adjustment data are processed through RAPS.

2.2.1 Risk Adjustment Data Requirements (Slide 8)

- The data required under the risk adjustment process include:
 - Health Insurance Claim (HIC) number.
 - Diagnosis code.
 - Service from date.
 - Service through date.
 - Provider type (hospital inpatient, hospital outpatient, physician).
- MA organizations must submit data at least quarterly to CMS.
- Each quarterly submission should represent approximately one-fourth of the data that the MA organization will submit during a data collection year. MA organizations will be monitored to ensure compliance.
- All beneficiary ICD-9-CM diagnosis codes required for the CMS-HCC risk adjustment model must be reported at least once per enrollee in the data collection period.

2.2.2 Risk Adjustment Data Collection (Slide 9)

- MA organizations may choose to collect data from providers in a variety of formats:
 - Standard fee-for-service claim or encounter formats
 - Uniform Billing Form (UB-94)
 - HCFA 1500
 - National Standard Format (NSF) v3.01
 - American National Standards Institute (ANSI) X12 837 v30.5; or v40.10. Health Insurance Portability and Accountability Act (HIPAA) mandated transactions must use v40.10.
 - Superbill
 - RAPS format
 - HIC number
 - Provider type
 - Diagnosis code
 - Service from date
 - Service through date

2008 Risk Adjustment Data Technical Assistance
For Medicare Advantage Organizations
Participant Guide

CONFIDENTIAL AND PROPRIETARY

RISK ADJUSTMENT SUBMISSION PROCESS OVERVIEW

2.2.4 Risk Adjustment Dataflow (Slide 11)

- Hospital/physician submits data to MA organization via:
 - Full or abbreviated UB-04, ICD-9 (SDD), NCHS v3 PL, ANSI x837 v30.51 or v10.10, Superbel or RAPS format.
- The MA organization submits these data at least quarterly to Palmetto G&A.
- The MA organization submits the data via Direct Data Entry or in the RAPS format.
- The data are sent to FERAS for processing where the file level data, batch level data, and first and last detail records are checked.
- If any data are rejected, then data are reported on the FERAS Response Report.
- After passing the FERAS checks, the file is submitted to RAPS where detail editing is performed.
- The RAPS Return File is returned daily and shows all records approved and where errors occurred.
- The RAPS Transaction Error Report displays records on which errors occurred.
- The RAPS Transaction Summary Report is sent to the MA organization daily and identifies data that have been finalized in RAPS database.
- The Duplicate Diagnosis Cluster Report identifies diagnosis clusters submitted with information that duplicates a stored cluster.
- The RAPS Monthly Plan Activity Report and Cumulative Plan Activity Report provides a summary of all diagnoses stored for a given time period.
- Distributed monthly and quarterly, the Error Frequency Report provides an overview of all errors associated with files submitted in test and production.
- RAPS database stores all finalized diagnosis clusters.
- RAS calculates the Risk Adjuster Factors by executing the CMS-HCC model.
- MARx is used in the calculation of payments and determination of plan payments. MARx replaced Medicare Managed Care System (MMCS) on November 15, 2005.

Figure 2A – Risk Adjustment Dataflow

2008 Risk Adjustment Data Technical Assistance For Medicare Advantage Organizations Participant Guide

DATA COLLECTION

3.2.4 Alternative Data Sources

Alternative data sources (ADS) include diagnostic data from sources other than hospital inpatient, hospital outpatient, and physician services. MA organizations may use ADS as a **check** to ensure that all required diagnoses have been submitted to CMS for risk adjustment purposes, such as pharmacy records and information provided to national or state cancer registries. The MA organization may not, however, use ADS as substitutes for documenting diagnoses from a hospital/physician. As in all diagnoses submitted, there must be medical record documentation to support the diagnosis as having been documented as a result of a hospital inpatient stay, a hospital outpatient visit, or a physician face-to-face visit during the data collection period.

For example, a prescription for an ACE inhibitor, alone, is not considered sufficient for the sole data source of "clinical evidence" of congestive heart failure (CHF); instead, the medical record needs to document an appropriate clinician's diagnosis of CHF during the data collection period (e.g., where an "appropriate clinician" is a physician/nurse practitioner/physician assistant). A laboratory test showing one reading of high blood sugar is not considered sufficient "clinical evidence" of diabetes—the medical record needs to document a clinician's diagnosis of diabetes during the data collection period.

3.2.5 Excluded Providers

Medicare will not pay for items or services rendered to beneficiaries and recipients by an excluded provider or by entities owned or managed by an excluded provider. Providers are excluded for the following reasons: a program related crime, patient abuse or neglect, health care fraud in any health care program, and convictions relating to controlled substances.

1. The HHS monthly exclusion notification can be found at <http://oig.hhs.gov/fraud/exclusions.html>.

3.3 Data Collection Formats and Considerations

There are several formats that MA organizations can accept when collecting data from medical providers. Table 3I lists the formats by provider type.

3.3.1 Data Collection Formats (Slide 16)

For facility services, the standard billing format is UB-04 (Uniform Billing Form—2004 version). The HCFA 1500 form is the standard format for physician services.

TABLE 3I — DATA COLLECTION FORMATS

HOSPITAL INPATIENT/HOSPITAL OUTPATIENT	• UB-04 • ANSI X12 837 4010 • RAPS Format
PHYSICIAN	• HCFA 1500 • NSF 3.01 • ANSI X12 837 4010 • RAPS Format • Superbill

For Medicare Advantage Organizations
Participant Guide**

DATA SUBMISSION

4.13 Deleting Diagnosis Clusters (Slide 16)

Each diagnosis cluster ("Diagnosis Code," "From Date," "Through Date," and "Provider Type") is stored separately as a unique cluster associated with a beneficiary's HIC number. If a diagnosis was submitted in error and needs to be corrected, the original diagnosis cluster must be resubmitted with a delete indicator in the appropriate field. **Delete transactions may only be submitted using the RAPS format or the DDE function.** When a delete record is received, CMS maintains the original diagnosis cluster on file and adds a delete indicator to it and the date of the deletion.

4.14 Reasons to Delete a Diagnosis Cluster (Slide 17)

There are three reasons MA organizations may delete a diagnosis cluster:

- Diagnosis cluster submitted erroneously (e.g., data from an interim bill was submitted for hospital inpatient).
- Incorrect HIC number used for submission of a beneficiary's diagnostic information.
- An error in a diagnosis cluster field (i.e., "Provider Type," "Dates of Service," "Diagnosis Code").

MA organizations submit deletions within a file, batch, or record containing previously submitted risk adjustment data.

4.15 Steps for Deleting a Diagnosis Cluster (Slides 18-20)

Before deleting an error, verify that the diagnosis cluster appears on the RAPS Return File. Only diagnosis clusters accepted by RAPS and stored in the RAPS database may be deleted.

There are two methods for deleting diagnosis clusters:

Method 1 for Deleting Clusters

1. Submit RAPS format using normal submission process with appropriate HIC number included.
2. Enter information in the diagnosis cluster fields (9.0, 9.1, 9.2, 9.4, 9.5) exactly as it appeared in the original submission.
3. In field 9.3 enter a "D" for delete.
4. Enter the appropriate information in all other records to ensure the submission file is complete.
5. Transmit the file to FERAS. (See www.cmsoperations.com for details.)

Method 2 for Deleting Clusters

1. Create a file using the DDE screens available through FERAS at Palmetto (detailed information about the DDE process is located in Section 4.20).
2. Enter information exactly as it appeared in the original submission.
3. In the DDE "CCC" record screen, hit the down arrow key and select "D."
4. Proceed with entering all appropriate information.
5. Upload the file created in DDE to FERAS at Palmetto.

**2008 Risk Adjustment Data Technical Assistance
For Medicare Advantage Organizations
Participant Guide**

DATA SUBMISSION

4.16 MA Organization Responsibilities Regarding Deletions (Slide 21)

- MA organizations must submit delete records when an erroneous diagnosis cluster has been accepted by RAPS and stored in the RAPS database.
- If a diagnosis cluster is deleted for the purpose of correcting data, the MA organization is responsible for submitting the correct diagnosis cluster. Conversely, if the MA organization submits corrected data, the MA organization must submit the appropriate deletion record. That is, if the correct diagnosis cluster is submitted, the erroneous diagnosis cluster cannot be ignored.
- If a correction applies to the same beneficiary as the deletion, the correction may be included in the same "CCC" record as the deletion. (Do not exceed 10 diagnosis clusters per "CCC" record.)
- If only one of several clusters within the CCC record requires modification, do not resubmit all other associated clusters. If clusters are resubmitted exactly the same without the delete indicator, the plans will generate a duplicate cluster error.
- If the corrected diagnosis cluster belongs to a different beneficiary than the deleted diagnosis cluster, the correct diagnosis cluster may be submitted in the same file as the deletion.

MA organizations should not delete a diagnosis code or record repeatedly on the same day and on the same record. MA organizations should implement a process to ensure that only one instance of a specific diagnosis cluster (either add or delete) is submitted on a given day.

4.17 Direct Data Entry (Slide 22)

MA organizations have the option of manually entering diagnostic information via the DDE application offered by Palmetto. DDE instructions are illustrated in the screen shots below. DDE is available in FERAS at Palmetto via the Medicare Data Communications Network (MDCN).

- DDE entries allow for deletion of records for corrections even if another submission format was used.
- The DDE screens, as shown in Figures 4B through 4G, automatically prevent the placement of incorrect data characters (e.g., alpha characters will not be accepted in the "From" or "Through Date" fields).
- After the user has entered all relevant data, the user will click on the "Create File" button in FERAS. This will create a file on the user's local PC.
- After the file is created on the local PC, the user must upload the file to FERAS in order to complete the process.
- Files created in DDE and uploaded to FERAS will receive a FERAS Response Report, which may be downloaded from the MA organization's electronic mailbox.

2008 Risk Adjustment Data Technical Assistance For Medicare Advantage Organizations Participant Guide

DIAGNOSIS CODES & RISK ADJUSTMENT

The source medical record documentation that supports each coded diagnosis must be obtainable and demonstrate adherence to official coding guidelines.

Required diagnoses are defined as those diagnoses collected from one of the three provider types that are used in the Risk Adjustment models (i.e., CMS-HCC, ESRD, and RxHCC models), and those diagnoses required for payment simulation.

This module emphasizes physician documentation and reporting of diagnosis codes. Historically, physician reimbursement in fee-for-service is primarily based on procedures or services rather than diagnoses, and physicians are very familiar with documentation guidelines for procedures and services. Physicians generally are not as familiar with diagnosis codes and their associated documentation guidelines as they are with procedure coding rules. The Risk Adjustment models depend upon accurate diagnosis coding, which means that physicians must fully understand and comply with documentation and coding guidelines for reporting diagnoses.

6.1.1 Benefit to the MA Organization and Physician

Benefits to the MA organization and physician are illustrated in Table 6A.

TABLE 6A – BENEFITS TO MA ORGANIZATIONS AND PHYSICIANS

A basic understanding of ICD-9-CM process and guidelines assists MA organizations in:
• Interpreting and designing management reports. • Determining possible causes of ICD-9-CM errors. • Communicating diagnosis-related collection issues to the provider staff. • Developing and maintaining information systems that meet the clinical data collection needs of the organization. • Understanding clinical issues important to beneficiaries. • Planning for future MA organization services.
Medical record documentation and coding impact several issues important to the physician and MA organization including:
• Accurate reimbursement. ICD-9-CM codes are the basis of the Risk Adjustment models. Accurate diagnosis codes are a result of clear, consistent, and complete documentation. CMS may verify the accuracy of the diagnoses submitted relative to the medical record documentation. • Communication among all members of the health care team. • Evaluation of the care provided. • Research and education. • Practice patterns.

6.2 Structure and Terminology of ICD-9-CM

ICD-9-CM diagnosis codes are 3- to 5-digit codes used to describe the clinical reason for a patient's treatment. They do not describe the service performed, just the patient's medical condition. For any

CENTERS FOR MEDICARE & MEDICAID SERVICES

2008 Risk Adjustment Data Technical Assistance For Medicare Advantage Organizations Participant Guide

DIAGNOSIS CODES & RISK ADJUSTMENT

classification system to be reliable, the application of the codes must be consistent across users. Therefore, CMS, the American Hospital Association (AHA), the American Health Information Management Association (AHIMA), and the National Center for Health Statistics (NCHS) together have developed official coding guidelines. These guidelines are available on: <http://www.cdc.gov/nchs/data/wh/ftpserver/ftp/cd9/icdguide07.pdf>. The diagnosis portion of ICD-9-CM consists of two volumes: the Disease Tabular and the Disease Index.

- **The Disease Tabular (Numeric)** is also known as Volume I of ICD-9-CM. It is a numeric listing of codes organized primarily by body system. The Disease Tabular provides much more detail than the Alphabetic Index on conditions included and excluded in the code selected. Another code in the same category may represent the diagnostic description better than the one indicated in the Disease Index.
- **The Disease Index (Alphabetic)** is also known as Volume II of ICD-9-CM. It is an index of all diseases and injuries categorized in ICD-9-CM. When a code is listed after the description, it means the reader should look up that code in the Disease Tabular section to determine if that is the most specific code to describe the diagnosis. The index is organized by main terms and subterms that further describes or specifies the main term. In general, the main term is the condition, disease, symptom, or eponym (i.e., disease named after a person), not the organ or body system involved.

6.2.1 Special Notes and Abbreviations

Throughout the ICD-9-CM publication, there are notes and cross references to assist the coder in arriving at the most accurate code according to official coding guidelines. Examples include:

Excludes notes: Informs the coder which diagnosis codes are not included in the code selected

Use Additional Code notes: Informs the coder that more than one code is needed to fully describe the condition and gives examples of common associated conditions.

Not otherwise specified (NOS): Basically means "unspecified." The documentation does not provide additional information to assign a more specific code in the particular category. In many (but not all) code categories, the fourth digit "9" signifies an unspecified code.

Not elsewhere classified (NEC): Also is present in ICD-9-CM. It is used when the medical record documents a condition to a level of specificity not identified by a specific ICD-9-CM code. In some cases the fifth digit "8" represents an NEC code.

6.2.2 Supplemental Classifications and Tables

Included in Volumes I and II are supplemental classifications and special tables that provide additional guidance in determining the most accurate code.

- **V codes** are a section of ICD-9-CM diagnosis codes that represent factors that influence health status or describe contact with health services. They are used to describe those circumstances or reasons for encounter other than for disease or injury. Selected V codes are included in the Risk Adjustment models and are described later in this module.

DIAGNOSIS CODES & RISK ADJUSTMENT

6.5 Supporting Documentation Summary

Accurate coding begins with complete documentation. Characteristics of effective documentation include quality documentation as a team effort that may require some intervention by the MA organization. Table 6C lists documentation considerations.

TABLE 6C – DOCUMENTATION CONSIDERATIONS

Documentation Guidelines
- Reported diagnoses must be supported with medical record documentation. - Medical records and codes are subject to CMS validation. - Characteristics of acceptable documentation include: - Clear - Concise. - Consistent. - Complete. - Legible.
Physician Documentation and Communication Tips
- Document and report co-existing diagnoses. - Communicate issues regarding inadequate documentation. - Adhere to proper methods for appending (late entries) or correcting inaccurate data entries. - Lab/Radiology results. - Strike through, initial, and date. Do not obliterate. - Use only standard abbreviations. - Identify patient and date on each page of the record.
SOAP Notes
- SOAP note format assists both the physician and record reviewer/coder in identifying key documentation elements. SOAP stands for: Subjective: How the patients describe their problem or illness. Objective: Data obtained from examinations, lab results, vital signs, etc. Assessment: Listing of the patient's current condition and status of all chronic conditions. How the objective data relate to the patient's acute problem. Plan: Next steps in diagnosing problem further, prescriptions, consultation referrals, patient education, and recommended time to return for followup.

6.6 Provider and Staff Training

Remaining current on medical record documentation and coding guidelines is important to ensure accurate risk adjustment payment. Table 6D provides examples of resources available for medical record documentation and coding guidelines.

RISK ADJUSTMENT DATA VALIDATION

**MODULE 7 – RISK ADJUSTMENT DATA VALIDATION
(MEDICAL RECORD REVIEW)**

Presentation Purpose (Slide 2)

To provide participants with an understanding of:

- The risk adjustment data validation (RADV) process AND
- CMS' approaches for:
 - Identifying risk adjustment discrepancies,
 - Estimating payment error, and
 - Conducting contract-level payment adjustments

Presentation Objectives (Slide 3)

Define

- Purpose and objectives of risk adjustment data validation (RADV)
- New RADV policies and parameters
- RADV stages and requirements
- Documentation Dispute
- Payment adjustment implementation approach
- Appeals

ICON KEY	
Example	
Reminder	
Resource	...

7.1 Risk Adjustment Data Validation (RADV)

7.1.1 RADV – Purpose, Method, and Objectives (Slide 4)

Risk adjustment data validation (RADV) occurs after the final risk adjustment data submission deadline for the MA contract payment year. The purpose of RADV is to ensure risk adjusted payment integrity and accuracy. CMS reviews medical records from hospital (inpatient and outpatient) and physician providers to validate enrollee CMS-HCCs that were assigned based on risk adjustment diagnoses submitted by MA organizations for payment. As a basic risk adjustment rule, all risk adjustment diagnosis codes submitted by MA organizations must be supported by medical record documentation.

The primary objectives of RADV are to:

- Verify enrollee CMS-HCCs used for payment
- Identify risk adjustment discrepancies
- Calculate enrollee-level payment error
- Estimate national and contract-level payment errors
- Implement contract-level payment adjustments

VERIFYING RISK SCORES

MODULE 8– VERIFYING RISK SCORES

Purpose (Slide 2)

The risk score calculation is based on data captured from a variety of systems. To ensure that accurate payments are made, Medicare Advantage (MA) organizations may verify the components of the risk score calculation throughout the year. This module is designed to explain the systems involved in the risk score calculations and introduce MA organizations to a variety of verification tools available to them.

Learning Objectives (Slide 3)

At the completion of this module, participants will:

- Understand the systems and processes used to calculate the risk scores.
- Determine how the organizations can use risk adjustment processing and management reports to ensure the accuracy of payment.
- Identify the components and uses of the Non-Drug and Drug Monthly Membership Reports (MMRs).
- Explain the Part C Risk Adjustment and New RXHCC Model Output Report (MOR).

ICON KEY

8.1 Calculating Risk Scores (Slides 5-7)

The risk score used in calculating payments under the Centers for Medicare & Medicaid Services (CMS)-HCC model includes demographics as part of the risk model as well as different disease groups or HCCs. The risk score calculation gathers the critical data from a variety of systems, including risk adjustment data from the Risk Adjustment Processing System (RAPS) database, Fee-For-Service (FFS) information from the National Medicare Utilization Database (NMUD), and demographic data captured from the Common Tables.

The risk score calculation considers the following:

- Demographics
- Disease groups
- Disease interactions
- Disease hierarchies
- Disabled indicators
- Residence in a long-term care institution
- End-Stage Renal Disease (ESRD) Status

VERIFYING RISK SCORES

Table 8A describes the eight steps in the risk score calculation.

TABLE 8A - RISK SCORE CALCULATION STEPS

STEP	DESCRIPTION
1 Define Cohort	Each year CMS defines a cohort of beneficiaries for whom risk scores will be calculated and used for making payments beginning the following January. Typically, CMS calculates scores for all Medicare beneficiaries.
2 Obtain Beneficiary Specific Information	For this cohort, CMS obtains beneficiary-specific information from Medicare's enrollment databases. Beneficiary information includes the months of enrollment in Part A and Part B, age, sex, original reason for Medicare entitlement, etc. for each beneficiary in the cohort. Medicaid information is obtained from the third-party payor file. In addition, plan-submitted Medicaid status information is included and beneficiaries with an ESRD flag are identified. CMS ensures that all Health Insurance Claim (HIC) numbers associated with each individual in the file have been identified. CMS uses all of this information to create a beneficiary demographic input file.
3 Extract Long-term Institutional Information from MDS	Next, for this cohort, CMS extracts assessments from the Minimum Data Set (MDS). CMS identifies the beneficiaries who have resided in a long-term institution for 90 days or more and classifies these individuals as long-term institutional beneficiaries. CMS passes beneficiary long-term institutional file to the RAS system.
4 Obtain Diagnosis Information	Next, CMS obtains all diagnostic information from Medicare data files for the cohort. These data include all diagnoses for the data collection period from the three types of data sources: physician services, hospital outpatient, and hospital inpatient. These diagnoses come from the RAPS database as well as Medicare fee-for-service files. From these data, CMS creates a beneficiary diagnosis input file.
5 Run the Model	The beneficiary demographic and beneficiary diagnosis input files are used to run the CMS-HCC and ESRD models and the Prescription Drug HCC (RxHCC) model. The ESRD model is run only on those beneficiaries with ESRD flags from the Common Tables. Each model determines a new enrollee factor for individuals who had fewer than 12 months of Part B enrollment during the data collection period. The model filters out diagnoses that do not correlate, such as ovarian cancer in a male patient. For individuals with 12 months of Part B enrollment, the software produces two risk scores: one based on the community model and one on the institutional model. In addition, for individuals with ESRD, the ESRD model will create additional risk scores appropriate to that model. The software also shows which HCC group (as well as which demographics, interactions, etc.) is associated with the risk scores. Only the most severe disease classification within a hierarchy is shown in the output. Based on this information, an output file is created and sent to the payment system.

CONFIDENTIAL AND PROPRIETARY

2008 Risk Adjustment Data Technical Assistance For Medicare Advantage Organizations Participant Guide

VERIFYING RISK SCORES

TABLE 8A – RISK SCORE CALCULATION STEPS (CONTINUED)

STEP	DESCRIPTION
6 Send Model Output to MARx	The output from the CMS-HCC model is provided to MARx for use in making payments to plans. In addition, the model output serves as the basis for the MMR reports provided to plans and the risk adjustment MOR.
7 Apply Additional Payment Factors	Plan-level instructions are provided to MARx to determine which factors should be used in actually making payments.
8 Calculate Payment	MARx identifies individuals enrolled in an organization for a particular month. Then it accesses the risk factor file to retrieve the appropriate risk factor for each individual. MARx uses the individual's state and county code to determine the correct county capitation rate and then multiplies the risk factor by that rate. After calculating the correct demographic payment for the same individual, MARx then calculates the correct payment by blending the appropriate proportion of risk and demographic payments. Then the demographic and risk adjusted amounts are totaled.

Note: For each risk adjustment model run, the process is repeated, updating the data used for the model to include new diagnoses received for the data collection period, as well as changes in any of the demographic factors. During final reconciliation, long term institutional status is determined for each month during the payment year, and ESRD status is reconciled to obtain the most precise month-by-month status.

8.2 Risk Score Verification Tools (Slide 8)

CMS offers a variety of tools that MA organizations can use at various stages in the risk adjustment process to ensure that the risk score reported by CMS is in close alignment with the score that the organization expects to receive. This section of the training module describes each of the tools, identifies the method of access and timeframe, and provides information on how an organization can use the tool to increase the accuracy of payment projections.

The verification tools include:

- RAPS Return File/RAPS Transaction Error Report
- RAPS Monthly and Cumulative Plan Activity Reports
- SAS CMS-HCC Model Program
- MMR
- Part C MOR (Non-Drug) and the new RAS RxHCC MOR

Information on the tools are illustrated in Table 8B

VIDEOCONFERENCE VIDEOTAPED DEPOSITION OF
TAMMY DICKEY
(Taken virtually)
9:02 a.m. Eastern
Tuesday, May 24, 2022

REPORTED BY: Christine A. Taylor, RPR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 recall exactly. Somewhere in there, 2010, '11 to
2 I think the end of 2012 --

3 Q. Okay.

4 A. -- early 2013.

5 Q. Okay. And when did you -- sorry, I
6 think I missed this.

7 When did you first starting working at
8 AIM?

9 A. 2008.

10 Q. Okay. And prior to working as a coder
11 for a contractor for AIM, did you have experience
12 as a medical record coder?

13 A. I did.

14 Q. Okay. And how long had you worked as
15 a medical record coder prior to becoming a
16 contractor for AIM?

17 A. Probably 2001 or '02 until 2007. I
18 worked in a physician's office.

19 Q. Okay. And you mentioned the word "QA"
20 when you were describing some of your roles and
21 responsibilities. Does that stand for quality
22 assurance?

23 A. Yes.

24 Q. Okay. And what is QA for -- what's
25 the QA process for coding at Optum?

1 also referring to Ingenix which was sort of the
2 forerunner for Optum?

3 A. Yes.

4 Q. Okay. And if you need to clarify at
5 any point that something applies to Ingenix but
6 does not apply to Optum, please let me know. I
7 want to make sure the record is clear on that.

8 A. Okay.

9 Q. Okay. Ms. Dickey, are you -- are you
10 familiar with the program called Medicare
11 Advantage?

12 A. I am.

13 Q. It's sometimes called Part C; right?

14 A. Yes.

15 Q. Are you familiar with Part D of
16 Medicare?

17 A. Yes.

18 Q. And Part D includes drug benefits for
19 beneficiaries enrolled in the Part D program; is
20 that correct?

21 A. To my knowledge, yes.

22 Q. So as a certified coder, you are
23 certified to assess whether an ICD-9 or ICD-10
24 diagnosis code is documented in a medical record;
25 right?

1 MS. MADDUX: Objection. Form.

2 THE WITNESS: No, that's not correct.

3 BY MS. GLOVER:

4 Q. Oh, can you tell me what is correct
5 about what your certification means?

6 A. Well, the ICD-9 or 10, it is not
7 documented in the medical record. The diagnosis
8 is documented in the medical record.

9 Q. That's a valid point. So is it -- is
10 it helpful instead of saying ICD-9 or ICD-10,
11 which I understand to be the code, is it better --
12 would it be more understandable to you to say that
13 the diagnosis code is documented in the medical
14 record?

15 A. It's not -- that's not correct, the
16 diagnosis is documented in the medical record. A
17 coder then translates that diagnosis into the
18 ICD-9 or ICD-10 code.

19 Q. Understood. So is it fair to say then
20 that as a certified coder you're certified to
21 assess whether a diagnosis is documented in a
22 medical record and translate that diagnosis to an
23 ICD-9 or ICD-10 code as applicable?

24 A. That's correct.

25 MS. GLOVER: Okay. And, actually,

1 supported by medical record documentation. And we
2 talked about some guidance, whether it was from
3 CMS or the coding clinic or the ICD guidelines.
4 Is this -- this statement here that reported
5 diagnoses must be supported with medical record
6 documentation some of the guidance that you were
7 thinking about earlier?

8 MS. MADDUX: Objection. Form.

9 THE WITNESS: Not specifically this,
10 but more just the -- I would say like
11 golden rule of coding, that if it's not
12 documented, then you don't code it.

13 BY MS. GLOVER:

14 Q. Have you ever heard the phrase used at
15 Optum if it's not in the medical record, it didn't
16 happen?

17 MS. MADDUX: Objection. Form.

18 THE WITNESS: I don't know if I -- I've
19 heard that before, but not specifically at
20 Optum. I know I've heard it at my other
21 roles and just in the coding world.

22 BY MS. GLOVER:

23 Q. Understood. But you agree that
24 reported diagnoses must be supported with medical
25 record documentation?

1 been -- since that was implemented that there's
2 always been something in place.

3 Q. Okay. And do you know why Optum
4 requires new coders to do practice chart audits
5 before they can move into production?

6 MS. MADDUX: Objection. Form. Calls
7 for speculation.

8 THE WITNESS: So generally coders, when
9 coming onboard, they may not have had risk
10 adjustment coding experience and may have
11 only coded in a provider's office or
12 radiology or things like that and may not
13 be used to reading a full medical record
14 and coding from that medical record. A lot
15 of coders may be coding like an operative
16 note, why did the patient come in for an
17 operation. They don't necessarily read
18 that full note to make the code assignment.
19 And that's just an example.

20 BY MS. GLOVER:

21 Q. And at Optum in the chart review
22 program, you instruct the coders to read the full
23 record when conducting a chart review; is that
24 right?

25 MS. MADDUX: Objection. Form. Vague.

CERTIFICATE OF REPORTER

I, Christine A. Taylor, Certified
Court Reporter within and for the State of
Georgia, do hereby certify:

That the foregoing deposition was
taken before me on the date and at the time and
location stated on Page 1 of this transcript; that
the deponent was duly sworn to testify to the
truth, the whole truth and nothing but the truth;
that the testimony of the deponent and all
objections made at the time of the examination
were recorded stenographically by me and were
thereafter transcribed; that the foregoing
deposition as typed is a true, accurate and
complete record of the testimony of the deponent
and of all objections made at the time of the
examination to the best of my ability.

I further certify that I am neither
related to nor counsel for any party to the cause
pending or interested in the events thereof.
Witness my hand, this 26th day of May, 2022.

Christine A. Taylor

CONFIDENTIAL - SUBJECT TO PROTECTIVE ORDER
(With Redactions)

DEPOSITION OF MELISSA SEDOR
As 30(b)(6) Designee 1 of
OptumInsight, Inc.
UnitedHealthcare, Inc.
Washington, DC
June 29, 2023

Reported by: John L. Harmonson, RPR
Job No. 988356

1 THE WITNESS: The actual payment is
2 based on the actual risk score of each member and
3 that 1.0 bid that we submitted in the bid filing.

4 BY MS. GLOVER:

5 Q. Okay. And so if -- are you familiar
6 with the term "benchmark"?

7 A. I've heard the term. I probably
8 couldn't define it for you.

9 Q. Okay. I know earlier you mentioned the
10 county rates.

11 A. Uh-huh.

12 Q. And how do county rates factor in to
13 payment in Medicare Advantage?

14 A. This is probably a little more detailed
15 than I'm prepared to speak to, but my understanding
16 is on the Part C side the county rates are not as
17 impactful or included in our bids but they are
18 included on the D side as well as the ESRD bids.

19 Q. Okay. Now, you spoke a little bit about
20 timing earlier, and I said we would do it in a few
21 minutes. You submit diagnosis codes to CMS at
22 various intervals in order to receive payment under
23 the risk adjustment payment process; right?

24 A. That's correct.

25 Q. Okay. And there's an initial

1 calculation of a beneficiary's risk score, a
2 midyear calculation, and then a final calculation;
3 correct?

4 A. That's correct.

5 Q. Okay. And for the initial calculation,
6 you are actually submitting six months of
7 diagnostic data from a prior date of service year
8 as well as six months of diagnostic information
9 from the current date of service year to calculate
10 that initial payment; correct?

11 A. I would say it is six months and six
12 months. I maybe am unsure how you're using prior
13 and current because they're actually both prior to
14 the year the payment is being based on.

15 Q. That's very fair. Let's clarify. Maybe
16 an example will help.

17 So let's say that for 2011 payment year,
18 to calculate the initial risk score you would use
19 six months of diagnostic data from 2009 and six
20 months of diagnostic data from 2010; is that
21 correct?

22 A. That's correct. You use the last six
23 months of 2009 and the first six months of 2010 for
24 the initial payment.

25 Q. Okay. And then for the midyear

1 calculation, you use actually in this example the
2 full 2010 date of service year data; correct?

3 A. Yes, correct.

4 Q. Okay. And then for the final -- the
5 final calculation of the risk score, you also use
6 the full date of service year, in this example 2010
7 worth of data, to calculate that score; correct?

8 A. Yes.

9 Q. Okay. And the final -- the final
10 calculation is sometimes called the final
11 reconciliation; right?

12 A. Yes.

13 Q. Okay. And in advance of the final
14 reconciliation, there is a couple of things that
15 have to happen including, one, the submission of
16 data; correct?

17 A. Yes.

18 Q. And two, there is a final submission
19 deadline that happens in advance of that. Are you
20 familiar with that term?

21 A. Yes, I am.

22 Q. Okay. And in advance of the final
23 submission deadline, you had to submit all of the
24 diagnostic data for a given beneficiary by that
25 date; is that right?

1 A. That is correct.

2 Q. And generally that date is set for 13
3 months after the conclusion of a given date of
4 service year. So in this example, it may be
5 January 31 or beyond of 2012 when the final
6 submission deadline occurs; is that right?

7 A. Correct.

8 Q. Okay. And sometimes CMS has moved -- in
9 the past, has moved the final submission deadline
10 forward and given plans additional time to submit
11 data; is that correct?

12 A. That's correct.

13 Q. And after the final submission deadline,
14 plans are no longer able to submit additional
15 codes, diagnosis codes, that might increase a
16 beneficiary's risk score; right?

17 A. That's correct.

18 Q. Okay. But they are able to delete
19 diagnosis codes that were previously submitted that
20 the plan has determined were submitted in error;
21 right?

22 MR. JONES: Objection; form.

23 THE WITNESS: Correct. CMS's process
24 allows for what they would call as a closed period
25 delete which occurs after that sweep window has

1 closed, or reconciliation window has closed.

2 BY MS. GLOVER:

3 Q. And that's actually helpful.

4 Today as we talk about things, are you
5 comfortable if I use the term "open period" to
6 define the period prior to the final submission
7 deadline, and the "closed period" to apply to
8 information or things happening after the final
9 submission deadline?

10 A. Yes, I'm fine with that.

11 Q. Okay. And before -- after the final
12 submission deadline but before the final
13 reconciliation that CMS does, plans also submit
14 something called an annual attestation; correct?

15 A. Yes.

16 Q. And that attestation is something that's
17 required by the contract that they had entered into
18 with CMS the prior September; right?

19 MR. JONES: Objection; outside the
20 scope.

21 THE WITNESS: Yes, it's an attestation
22 required by the contract.

23 BY MS. GLOVER:

24 Q. Okay. And the attestation is a request
25 for payment under the Medicare Advantage payment

1 knowledge our risk adjustment submissions were
2 accurate, complete and truthful.

3 BY MS. GLOVER:

4 Q. Okay. And you also understood that you
5 as the Medicare Advantage organization had the
6 ultimate responsibility for the accuracy of the
7 data that you submitted to CMS; right?

8 MR. JONES: Objection; outside the scope
9 as to her responsibilities.

10 THE WITNESS: Yes.

11 BY MS. GLOVER:

12 Q. And that's true specifically for
13 diagnosis codes that you submitted for payment to
14 CMS; right?

15 A. That it was our responsibility to --

16 Q. To ensure the accuracy of the data, the
17 diagnosis codes that you submitted to CMS.

18 MR. JONES: Objection; outside the scope
19 of the notice.

20 THE WITNESS: Yes. With regard to
21 diagnosis codes submitted, it was our
22 responsibility to ensure that they were accurate
23 and complete to the best of our knowledge.

24 BY MS. GLOVER:

25 Q. Okay. And are you familiar with

1 something called a hierarchical condition category,
2 sometimes called an HCC?

3 A. I am.

4 Q. Okay. And what, at a high level, is an
5 HCC?

6 A. An HCC is, I would say, the mechanism
7 CMS uses to group like diagnosis codes using either
8 ICD-9 or ICD-10. There are, I think, tens of
9 thousands of diagnosis codes, and rather than
10 giving us a risk score component for tens of
11 thousands of ICD codes, they group them into HCCs,
12 and then that HCC is what dictates the component or
13 the numerical value that goes into your risk score.

14 Q. Okay. And earlier you mentioned a
15 couple of things that make up a risk score. One of
16 those things is demographics; is that correct?

17 A. Yes, that's correct.

18 Q. Okay. And demographics includes things
19 like age, sex, disability status, Medicaid status,
20 et cetera; right?

21 A. Correct.

22 Q. Okay. And then there is also a health
23 status portion of the risk score; right?

24 A. Correct.

25 Q. And do HCCs make up the health status

1 portion of the risk score?

2 A. Yes, they do.

3 Q. Okay. And so you understood that in
4 calculating the payments that you received from CMS
5 for the beneficiaries enrolled in your Medicare
6 Advantage and Medicare Advantage Part D plans that
7 CMS would use the HCCs to calculate the payments
8 that you received; right?

9 A. Yes, they use the HCC to calculate the
10 risk score, which is a component of the payment we
11 receive.

12 Q. Okay. And we talked a little bit about
13 the diagnosis codes that make up those HCCs. The
14 CMS HCC risk adjustment model as well as the Part D
15 model applies something called a hierarchy; right?

16 A. Yes.

17 Q. What does that mean?

18 A. A hierarchy describes -- it dictates
19 which condition you'll get paid for if there are
20 instances where two conditions are similar. An
21 example would be I believe one HCC would be for
22 diabetes while another HCC is diabetes with
23 complications. The hierarchy table explains which
24 one of them trumps the other one. You're not going
25 to get paid for both diabetes and diabetes with

1 complications. The hierarchy table explains to
2 you, if the member has two or three, which one is
3 the highest one that they're going to get paid on
4 instead of getting paid on all of them.

5 Q. Okay. And so for example, if you submit
6 a diagnosis code that maps to, let's say, HCC 19,
7 which is sort of garden-variety diabetes, as well
8 as HCC 15, which is diabetes with some severe
9 complications, in that scenario you would only be
10 paid for the diagnosis code that you submitted for
11 HCC 15 because it is the more severe form of
12 diabetes; is that right?

13 A. Correct.

14 Q. Okay. And so sometimes when you submit
15 a diagnosis code, it doesn't actually impact the
16 risk score in that it doesn't raise it higher
17 because a diagnosis code mapping to an HCC higher
18 in the hierarchy has also been submitted; is that
19 right?

20 A. That's correct.

21 Q. Okay. So as we're talking, if I say --
22 if I ask you questions with the premise that it's
23 something that impacts the risk score, you'll
24 understand what I mean?

25 A. Yes.

1 Q. Okay. Now, the CMS HCC risk adjustment
2 model as well as the Part D model account for
3 interactions between conditions as well; right?

4 A. Yes, that's correct.

5 Q. And you receive additional payments if
6 there are certain interactions of conditions;
7 right?

8 A. Correct. Certain interactions give you
9 an additional lift in your risk score.

10 Q. Okay. And so that piece of it is an
11 additional component to the risk score; is that
12 right?

13 A. Yes.

14 Q. It falls within health status, but let's
15 say that your risk score is 2.0. It may be that
16 disease interactions accounts for .2, but it's a
17 portion of it?

18 A. Correct, yes.

19 Q. Does that make sense?

20 A. Yes.

21 Q. All right. And you understood that the
22 CMS HCC risk adjustment model as well as the Part D
23 model are prospective models; right?

24 MR. JONES: Objection; form.

25 BY MS. GLOVER:

1 Q. And if you don't understand what I mean
2 by prospective, I can explain.

3 A. Yeah, can you explain?

4 Q. Certainly.

5 What I mean is that they use diagnoses
6 submitted from a prior date of service year to
7 anticipate the cost of caring for the beneficiary
8 in the next year.

9 A. Yes, I would agree with that.

10 Q. Okay. And so we've sort of talked about
11 this a little bit. But the way that the model
12 worked is that you would use information from one
13 year to calculate the payments that you received in
14 the next year?

15 A. That is correct.

16 Q. Okay. And earlier with Mr. Voldman you
17 referred to per member per month payments; right?

18 A. Yes.

19 Q. And what are per member per month
20 payments?

21 A. It would be the average -- if you're
22 looking at each individual member, it is the
23 premium that you are getting paid for that member
24 for one month of coverage.

25 Q. Okay. And when we spoke about the

1 timing of the initial risk score calculation, the
2 midyear calculation and the final reconciliation,
3 what happens in each of those calculations is
4 essentially your -- CMS is calculating how much you
5 will be paid for a given beneficiary on a per
6 member per month basis; right?

7 A. That's correct.

8 Q. And in the midyear run, for example,
9 based on the information that has been submitted
10 for the entire date of service year at issue, CMS
11 retroactively adjusts the per member per month
12 payments that were received by the plan based on
13 the initial calculation; right?

14 A. Correct. They go back and adjust your
15 payments for, generally speaking, January through
16 June is usually the timing.

17 Q. And then for the final reconciliation,
18 what CMS is doing is it's a similar process but
19 essentially what CMS does is they retroactively
20 adjust the payments that were received for the
21 entire payment year based on what was submitted for
22 the full date of service year; right?

23 A. That's correct.

24 Q. Okay. Are you familiar with something
25 called a rerun?

1 A. Yes, I am.

2 Q. What is a rerun?

3 A. In my experience, CMS has used rerun to
4 refer to when they're truing up the risk scores for
5 a payment year after that final reconciliation has
6 been received, which usually means that they're
7 processing closed period deletes and then rerunning
8 that payment year.

9 Q. Okay. And when you say their processing
10 closed period deletes, that is because you can't
11 submit additional codes after the final submission
12 deadline, but I think as you testified earlier you
13 can submit deletes; right?

14 A. Correct.

15 Q. Okay. And functionally, what the rerun
16 does is it's a rerun of that final reconciliation;
17 is that right?

18 A. Yes.

19 Q. Okay. So functionally, it's
20 retroactively adjusting the per member per month
21 payments that the plan received for a given
22 beneficiary in a given payment year; right?

23 A. Yes, that's correct.

24 Q. Okay. Now, sometimes those reruns don't
25 happen immediately; right?

1 A. They usually do not happen immediately,
2 yes.

3 Q. They can take a couple of years or a few
4 years; right?

5 A. Yes.

6 MR. JONES: Objection; form.

7 THE WITNESS: Yes. In my experience,
8 they usually take a number of years before the
9 reruns occur.

10 BY MS. GLOVER:

11 Q. Okay. And CMS announces a rerun in
12 advance of performing that rerun; correct?

13 MR. JONES: Objection; form. Outside
14 the scope.

15 THE WITNESS: That has been their
16 process of probably the past three to five years.
17 I don't know that in the time frame in question
18 that they were always announcing when they were
19 making reruns.

20 MS. GLOVER: I'm going to mark another
21 exhibit here. This is going to be marked
22 Exhibit 733, and the attachment will be 733-1.

23 (Exhibit 733 and 733-1 marked for
24 identification and attached hereto.)

25 BY MS. GLOVER:

1 Q. Feel free to take a look at that. I
2 don't know if you've seen this document, but let me
3 know if you have.

4 A. Okay.

5 Q. And the cover email, for the record, is
6 MAPL000172139, and the attachment is MAPL000172140.

7 Do you see that this is an announcement
8 of a rerun?

9 A. Yes, I do.

10 Q. And it's from September 18, 2013?

11 A. Yes.

12 Q. Does that refresh your memory that rerun
13 announcements were made during the relevant time
14 period?

15 MR. JONES: Objection; form.

16 THE WITNESS: I guess I would look at
17 this and say they're telling us on September 18th
18 that they're taking a rerun on September 30th and
19 not necessarily view that as advance notice. I
20 mean, that was less than two weeks, give or take,
21 of notice. Whereas their new process, they publish
22 it probably a year in advance. They say this is
23 what we're going to do.

24 BY MS. GLOVER:

25 Q. Oh, I see what you're saying. So they

1 may have always given notice but it may not have
2 had as much of a lead time as it does now?

3 A. Correct.

4 Q. All right. And so in -- I guess I want
5 to understand a little bit more about what happens
6 in the rerun.

7 So if you submit deletes -- closed
8 period deletes I think you referred to them as --
9 after the final reconciliation but before the
10 rerun, the new per member per month payment after
11 the rerun accounts for the new universe of HCCs
12 that apply to that beneficiary; is that right?

13 MR. JONES: Objection; form.

14 THE WITNESS: The rerun would create a
15 new risk score for each beneficiary based on the
16 most up-to-date information, which would include
17 the closed period deletes that we submitted.

18 BY MS. GLOVER:

19 Q. Okay. And if the closed period deletes
20 that you made impact the risk score, then that will
21 reduce the per member per month payments; correct?

22 A. That is correct.

23 Q. Okay. Similarly, in the open period, if
24 you submit diagnosis codes that increase the risk
25 score, that will increase the per member per month

1 payments that you receive from CMS; right?

2 A. If they are new and unique diagnosis
3 codes to that member and not a repeat of something
4 they're already getting paid on, then yes, that
5 would increase the risk score.

6 Q. Okay. And let's talk about that a
7 little bit. You do have to submit a diagnosis code
8 that maps to an HCC that impacts the risk score
9 once every year, right, at least?

10 A. Correct, at least once a year you have
11 to submit the diagnosis code.

12 Q. Okay. So you can't use diagnosis codes
13 that were submitted in prior years to determine the
14 payment that's going to be -- that's going to be
15 received for a date of service year that follows
16 it? Does that make sense?

17 A. Yes, that makes sense. And that is
18 correct. You have to recapture that diagnosis code
19 and submit it to CMS every year to get payment for
20 it.

21 Q. Okay. And so for example, if you submit
22 a diagnosis code that maps up to HCC 19, which we
23 established was diabetes, and you submit that based
24 on an encounter in date of service year 2010, you
25 have to resubmit it for 2011 as well; right?

1 A. That is correct.

2 Q. When you resubmit it for 2011, can it
3 still be based on the encounter that took place in
4 2010?

5 A. No.

6 MR. JONES: Objection; form.

7 THE WITNESS: No, it has to be based on
8 an encounter that happened in 2011.

9 BY MS. GLOVER:

10 Q. Okay. So there has to be separate
11 documentation in a medical record each year if
12 you're going to submit a diagnosis code to CMS?

13 MR. JONES: Objection; form.

14 THE WITNESS: There has to be a separate
15 submission from the physician or provider each year
16 on, say, a claim in order for us to resubmit it to
17 CMS.

18 BY MS. GLOVER:

19 Q. Okay. And in submitting diagnosis codes
20 for payment to CMS, sometimes you submitted
21 diagnosis codes based on a claim or an encounter
22 that you received from a physician or a hospital;
23 right?

24 A. Correct.

25 Q. And sometimes you submitted diagnosis

1 codes that were based on a review of medical
2 records; correct?

3 A. Correct.

4 Q. Okay. And either one of those sources
5 could be a source for a diagnosis code that you
6 submitted for payment; right?

7 A. That's correct.

8 Q. Okay. Now, were there certain diagnosis
9 codes that you couldn't submit based on the source
10 of that diagnosis code?

11 MR. JONES: Objection to form. Vague.

12 THE WITNESS: Yeah, I'm not sure I fully
13 know the answer to that, and it's very broad. I
14 would say with RAPS, with the RAPS submissions
15 versus EDS that we've started to shift to, there
16 were requirements by CMS such as the visit had to
17 be face-to-face with a provider. So if the visit
18 was not face-to-face, we would not or could not
19 submit it. I'm not sure if that's what you were
20 asking.

21 BY MS. GLOVER:

22 Q. That's exactly what I was asking. You
23 read my mind.

24 So for example, you couldn't submit a
25 diagnosis code that was based on a lab or a

1 radiology visit. It had to be a face-to-face visit
2 with a provider; right?

3 A. Correct.

4 Q. Okay. And every diagnosis code that you
5 submitted for payment to CMS, in order for CMS to
6 pay for it it had to be supported by documentation
7 in the medical record; correct?

8 MR. JONES: Objection; form. Vague.

9 THE WITNESS: The expectation is that
10 every diagnosis code is supported in the medical
11 record, yes.

12 BY MS. GLOVER:

13 Q. Okay. And so similarly, just the
14 converse of that, the expectation was that you were
15 not going to be paid for diagnosis codes that were
16 not supported by the medical record; right?

17 MR. JONES: Objection; form. Outside
18 the scope.

19 THE WITNESS: The expectation is that
20 every diagnosis code we submit is supported by a
21 medical record, so we would expect to only get paid
22 on a diagnosis supported by a medical record.

23 BY MS. GLOVER:

24 Q. Okay. And you can't just make up a
25 diagnosis code and submit it to CMS for payment;

1 right?

2 A. Correct.

3 Q. Did you also understand that diagnosis
4 codes that you submitted for payment, the medical
5 record that supported them had to be signed or have
6 the credential for the physician included on the
7 face of the medical record?

8 MR. JONES: Objection; form.

9 THE WITNESS: Yes, it's my understanding
10 that a medical record has to be signed by a
11 physician to be adequate documentation.

12 BY MS. GLOVER:

13 Q. Okay. We've covered some of this, so I
14 just want to speed things along.

15 Earlier, you mentioned CMS's model
16 software.

17 A. Uh-huh.

18 Q. Did you utilize the model software?

19 A. Not personally, but as an organization
20 we used the model software, yes.

21 Q. And I should be clear, every time I say
22 "you," I'm actually referring to the organizations.
23 But thank you for the clarification.

24 A. Yes, we utilize their model software.
25 We download it and utilize it.

1 Q. And what does the model software allow
2 you to do?

3 A. The model software assists with
4 projecting a member's risk score based on the
5 diagnosis codes that are being submitted to CMS.

6 Q. So essentially the model software, if
7 you put in the components for a given beneficiary,
8 will spit out what the anticipated risk score will
9 be for that beneficiary?

10 A. That's correct.

11 Q. Okay. And did you utilize that to
12 determine what your expected payments would be from
13 CMS for the beneficiaries enrolled in your MA and
14 MAPD plans?

15 A. Yes. As standard accounting principles,
16 we needed to attempt to accrue for the midyear and
17 final reconciliation in the coverage period that
18 they were occurring. So we used that tool and
19 would use that as one of the components to look at
20 what was submitted that we hadn't been paid on yet
21 and estimate what our accrual needed to be for the
22 CMS risk adjustment true-ups.

23 Q. And you understood which diagnosis codes
24 were risk adjusting for a given date of service
25 year; correct?

1 A. Correct. That was published by CMS.

2 Q. Okay. And you utilized the information
3 published by CMS so that you were aware of which
4 diagnosis codes could be used for risk adjustment
5 purposes and for which you could receive payment?

6 A. Yes.

7 Q. And we've talked about diagnosis codes.
8 Diagnosis codes can map to an HCC but they can also
9 map to something called an RxHCC; right?

10 A. That's correct. That's the Part D
11 component of it, yes.

12 Q. And there are some diagnosis codes that
13 map to both an RxHCC and an HCC; correct?

14 A. Yes, there's overlap.

15 Q. And then there's some that only map to
16 an HCC or only map to an RxHCC; right?

17 A. That's correct.

18 Q. Okay. So if you submit a diagnosis code
19 that maps to an HCC and an RxHCC and it impacts the
20 risk score under both models, then you could
21 receive additional payment under both models;
22 correct?

23 A. Yes, that's correct.

24 Q. Okay. And similarly, if you delete a
25 diagnosis code that maps to both an HCC and an

1 service or traditional side of Medicare; right?

2 A. Yes.

3 Q. And that was always true during the
4 relevant time period; right?

5 A. Yes. CMS utilizes the fee for service
6 data to arrive at their coefficients.

7 Q. Okay. So in the advance notice and rate
8 announcement that we talked about, as well as other
9 information provided by CMS, it was clear that CMS
10 was using fee for service data to calculate the
11 factors that would be used in a given risk score;
12 right?

13 A. Yes.

14 Q. Okay. Now, the final submission
15 deadline, you are supposed to make efforts to
16 submit all of the data that you have for a given
17 beneficiary before that deadline; right?

18 A. Yes.

19 Q. But CMS allows for submission of
20 deletions after that deadline; right?

21 A. Correct.

22 Q. And you understood that if you
23 identified something that needed to be deleted, you
24 were supposed to delete that after the final
25 submission deadline even though that deadline had

1 passed; right?

2 MR. JONES: Objection; form. Outside
3 the scope.

4 THE WITNESS: Yes. If we identified
5 something that we had submitted erroneously, it was
6 the expectation that we would submit a delete.

7 BY MS. GLOVER:

8 Q. Okay. And when you say "erroneously,"
9 what do you mean?

10 MR. JONES: Objection; form.

11 THE WITNESS: If as an organization we
12 had knowledge that we submitted a risk -- I'm
13 sorry, a diagnosis code that was in error, if we
14 had knowledge that the diagnosis code was in error
15 and unsupported, we would submit a delete.

16 BY MS. GLOVER:

17 Q. What do you mean by unsupported?

18 A. In an instance where we looked for
19 documentation or support for that diagnosis code
20 and could not find it, that's what I mean by
21 unsupported.

22 Q. I see. So in instances where you looked
23 at, like, the medical record documentation and you
24 couldn't find documentation for that specific
25 diagnosis code, it was your understanding that you

1 BY MS. GLOVER:

2 Q. Okay. And you were responsible for the
3 accuracy of your data, and so you felt that you
4 needed to correct it based on that as well?

5 MR. JONES: Objection; form as to
6 obligations. Outside the scope. And calls for a
7 legal conclusion.

8 THE WITNESS: Yeah, I can't speak
9 legally to what obligations we had to do. I can
10 just say as our practice, as our good business
11 practice, we felt we had to correct something that
12 we found was in error.

13 BY MS. GLOVER:

14 Q. Okay. And we spoke briefly about RAPS.
15 RAPS includes five different fields; right?

16 A. Yes.

17 Q. What fields does RAPS contain?

18 A. I believe they contain a provider ID, a
19 from date, through date, the member identifier, and
20 the diagnosis code.

21 Q. Okay. And you had to submit all five
22 elements into RAPS in order to get paid for a
23 diagnosis code that impacted a beneficiary's risk
24 score; right?

25 A. Correct.

1 Q. Okay. And if one of those fields was
2 missing, the CMS system would reject that code;
3 right?

4 A. That's correct.

5 Q. And did you submit diagnosis codes to a
6 system called FERAS, F-E-R-A-S?

7 A. I'm honestly not sure about that.

8 Q. I think it stands for Front End Risk
9 Adjustment System and feeds into RAPS.

10 A. Yes, then we did submit to that.

11 Q. Okay. And if CMS was rejecting a given
12 diagnosis code as well as the other elements that
13 you mentioned, it sent you an error message saying
14 that it could not accept that code; right?

15 A. Correct.

16 Q. And similarly, if it accepted a given
17 diagnosis code and the other RAPS elements, it
18 would send a message saying that it had accepted
19 that code; right?

20 A. Correct.

21 Q. And for purposes of maybe ease, are you
22 familiar with the term "diagnosis cluster"?

23 A. I am.

24 Q. What is a diagnosis cluster?

25 A. My understanding is that the term

1 "diagnosis cluster" refers to the combination of
2 the five fields on the RAP submission.

3 Q. Okay. And so if it's okay with you,
4 I'll just refer to the RAP submission as a
5 diagnosis cluster.

6 A. Okay.

7 Q. So you submitted diagnosis clusters to
8 CMS into the FERAS system, which fed into the RAP
9 system. And then is it your understanding that
10 after being processed in the RAP system it would go
11 into a system to calculate the risk score based on
12 the diagnosis codes that had been -- the diagnosis
13 clusters that had been submitted for the given
14 beneficiary?

15 A. Yes, that's my understanding.

16 Q. Are you familiar with a system called
17 RAS, R-A-S?

18 A. I am not.

19 Q. Do you know the name of the system that
20 calculated the risk score for the given
21 beneficiary?

22 A. No. On the CMS side?

23 Q. Yes.

24 A. No, I do not.

25 Q. Are you familiar with a system called

1 MARX, M-A-R-X?

2 A. Yes.

3 Q. And what is that system used for?

4 A. The MARX system is a CMS system that
5 they utilize to generate the payments on a monthly
6 basis.

7 Q. Okay. And so after a risk score is
8 calculated for a given beneficiary, was it your
9 understanding that MARX would then take that risk
10 score and calculate the payment that should be paid
11 to the plan based on that risk score?

12 A. Yes, that was my understanding.

13 Q. Are you familiar with something called a
14 RAPS return file?

15 A. Yes.

16 Q. What is a RAPS return file?

17 A. The RAPS return files were the -- when
18 we would submit something to CMS, when we would
19 submit a RAPS submission to CMS, the RAPS return
20 file would come back telling us if that submission
21 was accepted or if it errored out.

22 Q. So you were able to tell or you were
23 able to know what diagnosis clusters CMS had
24 accepted and which it had rejected; correct?

25 A. Correct.

1 Q. Now, if you were going to delete a
2 diagnosis cluster, you had to submit a delete flag
3 with that cluster; is that right?

4 A. Correct.

5 Q. Okay. And that delete flag or -- I
6 don't know what term you used -- an indicator would
7 signify to CMS that that particular cluster had to
8 be deleted; right?

9 A. That's correct.

10 Q. Okay. Now, if you submitted a diagnosis
11 cluster and later learned that it was an error and
12 needed to submit a new diagnosis cluster, you
13 understood that you first had to delete the
14 original diagnosis cluster that was submitted in
15 error and then replace it with the new diagnosis
16 cluster; right?

17 MR. JONES: Objection; outside the
18 scope. Calls for a legal conclusion.

19 THE WITNESS: Yes, my understanding --
20 our understanding and practice would be to delete
21 the one that was in error before we submitted the
22 other one, assuming that we're in an open period.

23 BY MS. GLOVER:

24 Q. Okay. And that was because you couldn't
25 just leave the -- you couldn't leave the incorrect

1 diagnosis cluster in the system and simply replace
2 it without indicating a delete first; right?

3 A. Correct.

4 Q. Okay. And I want to talk briefly about
5 EDPS.

6 A. Okay.

7 Q. And when I say EDPS, I mean the
8 Encounter Data Processing System. Are you familiar
9 with that term?

10 A. Yes.

11 Q. And you're aware that in approximately
12 2014, CMS started using encounter data to calculate
13 payments that it was making to Medicare Advantage
14 organizations for the beneficiaries enrolled in
15 their MA or MAPD plans; right?

16 A. Yes.

17 Q. Okay. Now, as opposed to the five RAPS
18 fields, there are a lot of fields that are
19 submitted into EDPS; right?

20 A. Correct.

21 Q. But you still submit diagnosis codes
22 into EDPS; right?

23 A. Yes, that's correct.

24 Q. And similar to the RAP system, there was
25 a way that you could delete previously submitted

1 Q. Okay. And then the non-allowable data
2 sources, I think we talked about these. Earlier,
3 you confirmed that you couldn't identify diagnosis
4 codes based on labs; right?

5 A. That's correct. It has to be a
6 face-to-face visit.

7 Q. And do you know what it means by
8 diagnostic?

9 MR. JONES: Objection; form. Outside
10 the scope.

11 THE WITNESS: I'm not a hundred percent
12 certain. I believe in this instance, diagnostic
13 would mean like a radiology technician kind of
14 saying to you: Oh, I think everything looks good,
15 or I think you have a problem. You know, that's
16 kind of their diagnostic opinion, but they're not a
17 certified provider from a CMS standpoint to allow
18 you to submit that information.

19 BY MS. GLOVER:

20 Q. Understood.

21 And similarly, you couldn't submit
22 diagnosis codes for payment to CMS under the risk
23 adjustment payment process for Part D if it was
24 like a rule-out or probable condition but hadn't
25 been confirmed by the provider; right?

1 MR. JONES: Objection; form.

2 THE WITNESS: I'm not -- I'm not sure
3 how we would even know of a probable condition
4 until it was confirmed by the provider.

5 BY MS. GLOVER:

6 Q. I see. I see what you're saying.

7 So if in the medical record
8 documentation the condition hasn't yet been
9 confirmed, you couldn't code that or submit that
10 diagnosis code for the probable condition until it
11 was confirmed; right?

12 MR. JONES: Objection; outside the
13 scope.

14 THE WITNESS: That's correct.

15 BY MS. GLOVER:

16 Q. Okay. And similarly, if an individual
17 had a history of a condition and it wasn't
18 currently documented in their medical record as a
19 current condition, you couldn't submit a diagnosis
20 code based on that for payment to CMS in the risk
21 adjustment payment process; right?

22 A. In our process around chart review, if
23 the member had -- if it's listed in the medical
24 record as a prior condition that is a lifelong
25 condition or a chronic condition that you cannot

1 get rid of, our process is to use that medical
2 record to submit the diagnosis code.

3 Q. Okay. So if it's documented -- if it's
4 documented in a -- earlier we talked about you had
5 to have an encounter each date of service year --

6 A. Correct.

7 Q. -- on which a diagnosis was based;
8 right?

9 A. Correct.

10 Q. Okay. So you couldn't base -- if it
11 said they have this diagnosis in 2010 but they
12 don't say they have it in 2011 when you look at the
13 medical record, you can't just submit the code
14 because there was a history of that condition
15 documented in 2010; right?

16 MR. JONES: Objection; outside the
17 scope. Form.

18 THE WITNESS: That is correct. You
19 would need a medical record with a visit from 2011
20 to document that that person had a provider visit
21 and had that condition.

22 BY MS. GLOVER:

23 Q. Okay. Let's go to the last page that
24 we'll do today, which is page 36. And you can go
25 directly to the page if you use the numbers at the

1 Q. Okay. And in a self-conducted chart
2 review they sometimes identified deletes; is that
3 right?

4 A. They could identify deletes through a
5 self-conducted chart review, yes.

6 Q. Do you know how those self-conducted
7 reviews were conducted?

8 MR. JONES: Outside the scope.

9 THE WITNESS: I have a general sense,
10 although I imagine every provider group could be a
11 little different. But from a general sense,
12 they're conducted by our capitated providers. And
13 the reason for that is the capitated providers do
14 not submit claims to us. So we're not getting
15 diagnosis codes from the claims themselves because
16 they don't submit the claims to us. They're in a
17 separate payment arrangement.

18 We require them to submit encounter data
19 to us to provide the diagnosis codes. The
20 providers often towards the end of a sweep window
21 closing, so either the midyear or the final
22 deadline approaching, the providers will look at
23 their systems and their medical records to ensure
24 that they did in fact provide us all the diagnosis
25 codes from their patients as an encounter record.

1 providers were supported or otherwise validated by
2 documentation in the associated medical records?

3 MR. JONES: Objection; form. Outside
4 the scope.

5 THE WITNESS: I'm not aware of -- if we
6 did conduct them I'm not aware of them. So I'm not
7 prepared to talk about them.

8 BY MS. GLOVER:

9 Q. Okay. How about the RACCR program?
10 What is that?

11 A. RACCR is the Risk Adjustment Coding
12 Compliance Review, and that is a risk adjustment
13 program that we use to monitor both our capitated
14 providers as well as our providers that were in an
15 accountable care organization.

16 Q. Okay. Was it used to monitor diagnosis
17 codes submitted by fee for service providers?

18 A. The accountable care organization
19 component of it would be considered a fee for
20 service provider. The capitation side of it would
21 not be.

22 Q. What is an accountable care
23 organization?

24 A. It is a provider network that we have
25 entered into some sort of risk sharing or gain

1 sharing arrangement where if they're able to manage
2 the member's care to decrease kind of the overall
3 spend by doing a better job managing it, we will
4 share in the savings with them.

5 Q. Okay. And did RACCR -- did RACCR review
6 diagnosis codes submitted by just your everyday fee
7 for service provider who was not involved in an
8 accountable care organization?

9 A. No. The RACCR program was intended to
10 monitor provider groups that potentially had an
11 incentive to over-submit because they were paid
12 some component of the percentage of revenue.

13 Q. Okay. And if you identified diagnosis
14 codes that weren't supported by the medical record
15 in the RACCR program, you deleted those codes;
16 correct?

17 A. That is correct.

18 Q. Now, the other program listed here is
19 CV, which I think you've mentioned today. Claims
20 verification; right?

21 A. Correct.

22 Q. And was that a program that was -- that
23 falls under Topic 10 here as a program to determine
24 whether diagnosis codes that were submitted to you
25 by fee for service providers were supported or

1 A. Yes.

2 Q. So I specifically want to talk to you
3 about the first part of that definition just as it
4 relates to Topic 10. Was chart review another
5 program where you were assessing whether diagnosis
6 codes submitted by providers were supported by
7 medical record documentation?

8 A. No.

9 Q. So in the chart review program, there
10 were some diagnosis codes that were identified as
11 being supported by the medical record that had
12 already been submitted by the provider; right?

13 MR. JONES: Objection; form.

14 THE WITNESS: Yes, that is correct.

15 BY MS. GLOVER:

16 Q. Okay. So in that way, chart review was
17 confirming diagnosis codes that had been submitted
18 by providers were supported by the medical record
19 documentation; right?

20 A. No. They were two separate and distinct
21 processes, and the results of chart review were not
22 necessarily bumped up against the claim to confirm
23 whether or not they matched.

24 Q. Are you familiar with something called a
25 new and unique HCC?

1 A. I am.

2 Q. Okay. And do you understand that a new
3 and unique HCC was identified if a chart reviewer
4 identified a diagnosis code that mapped to a new
5 and unique HCC that had not been submitted by a
6 provider before?

7 A. Yes.

8 Q. Okay. And so in that process to
9 identify a new and unique HCC, isn't it correct
10 that you were comparing the diagnosis codes that
11 had been submitted by a provider with what had been
12 found in the chart review?

13 MR. JONES: Objection; form.

14 BY MS. GLOVER:

15 Q. And the delta there, if it hadn't been
16 submitted by a provider, was a new and unique HCC?

17 A. So I would say that the chart review
18 process identified all HCCs, and then a separate
19 process that was not part of the chart review
20 program itself but was part of the submission
21 process would identify which of those codes from a
22 chart review were new and unique for submission.

23 Q. Okay. So do you understand what is
24 meant here when it says that "chart review is
25 performed at least once every two years to validate

1 Q. Okay. And so if you delete a diagnosis
2 code -- and by delete I mean you submit it to CMS
3 as a deletion -- and that diagnosis code impacts
4 the risk score and moves it down, is it correct
5 that when CMS accounts for that, they are
6 essentially -- like the plan is essentially paying
7 money back to CMS to account for the change in risk
8 score?

9 A. Yes. When a deletion results in a lower
10 risk score and, for example, they process a rerun,
11 the plan is -- CMS is recouping money back from the
12 plan. The plan is paying that money to CMS.

13 Q. I see. Okay.

14 All right. I want to move on to
15 Topic 11 which, from the sounds of your background,
16 may be very much in your wheelhouse.

17 And I know that the parties have made an
18 agreement to narrow this topic, and so one of the
19 things that you're prepared to testify about is the
20 quarterly roll forward schedules showing the total
21 CV-related accruals recorded and the reserves
22 released for the four quarters of 2013 and the
23 first two quarters of 2014 and their supporting
24 schedules, as well as the specific CV accruals that
25 were released in or around April and May of 2014,

1 including information regarding the release of
2 those reserves, their amounts, their inclusion in
3 the general ledger and monthly close reports
4 related to the release of CV reserves for April,
5 May and June of 2014.

6 Is that a correct description of what
7 you're prepared on?

8 A. Yes, it is.

9 Q. Okay. And as we sort of discuss this, I
10 want to make sure that I understand terms that are
11 used in this description just so that we can talk
12 about things a bit more freely.

13 A. Okay.

14 Q. So first of all, what is an accrual?

15 A. An accrual is an amount you would post
16 into the general ledger where cash has not settled
17 yet. So you're awaiting -- it could be you're
18 awaiting revenue and you haven't received that cash
19 yet. It could be that you're waiting to pay a
20 legal bill and you're accruing for it but you have
21 not received the bill and paid the cash out yet.

22 An accrual is something you post in the
23 general ledger to try to follow your accounting
24 principles and post it when you've accrued it even
25 though the cash has not come in or gone out yet.

1 Q. So it's almost like a placeholder so
2 that you know if you have money coming in or money
3 that's going to go out based on an event that has
4 happened now?

5 A. Correct.

6 Q. Okay. And what is a reserve?

7 A. A reserve is the same thing but in the
8 opposite direction. So from a revenue standpoint,
9 an accrual would be if you're expecting revenue in.
10 A reserve would be if you're expecting to pay
11 revenue out. On your balance sheet, you would call
12 that a reserve instead of an accrual just because
13 it's going the opposite direction.

14 Q. Okay. So with claims verification, is
15 it actually more accurate to say that there were
16 reserves given that you were making deletions based
17 on claims verification?

18 A. Yes, we would have called them reserves
19 within our general ledger and all our
20 documentation.

21 Q. Okay. So I know that you are prepared
22 to testify about CV-related accruals recorded and
23 reserves released. Were there accruals recorded
24 for CV?

25 A. No. Technically, it should probably say

1 CV reserves record and released.

2 Q. Okay. And then you mentioned something
3 called a general ledger. What is a general ledger?

4 A. A general ledger is your -- anybody's
5 accounting system that tracks their monthly profit
6 and loss statements. So your revenue in, your
7 income and expenses -- sorry, your revenue in, your
8 expenses out. They are all part of a financial
9 statement, and the general ledger is just a system
10 that manages your financial statements.

11 Q. Okay. And did you use a general ledger
12 to manage your financial statements?

13 A. Yes.

14 Q. Okay. And in order to make a reserve,
15 you mentioned something about accounting
16 principles.

17 A. Uh-huh.

18 Q. What were you referencing there?

19 A. Well, overarching, it's called GAAP,
20 Generally Accepted Accounting Principles, and
21 there's hundreds of them I would say that dictate
22 your rules of what you are and are not supposed to
23 do to follow standard accounting within your
24 general ledger.

25 Q. And is one of the principles that in

1 order to -- and maybe I should correct this. Is it
2 book a reserve?

3 A. Sure, you could say that.

4 Q. In order to book a reserve, that the
5 amount you'll have to -- that you are anticipating
6 paying out is probable and estimable?

7 A. Estimatable, yes. Yes, that is correct.
8 Part of the rule if you're booking a reserve is
9 that it's probable and -- it might be estimable.

10 Q. Estimable?

11 A. Yes. I always struggle with that word.
12 Estimable, estimatable, I'm not sure which it is.
13 But you have to be able to estimate it.

14 Q. I love that. Okay.

15 And basically, like that means that it's
16 probable or estimable that more likely than not
17 you're going to have to pay that money out; is that
18 right?

19 A. Correct.

20 Q. Okay. And are you familiar with the
21 term "contra revenue"?

22 A. Yes.

23 Q. What is that?

24 A. It's an accounting term for sort of a
25 reduction to your revenue. You could refer to a

1 delete reserve as a contra revenue. We just
2 internally refer to it as a reserve versus
3 contra revenue. But really it's revenue that's
4 going out. It's the direction. It's reducing
5 revenue instead of increasing revenue.

6 Q. Okay. So a reserve and a contra revenue
7 are conceptually the same in that both mean that
8 money will be paid out?

9 A. Correct.

10 Q. Okay. And then I'm still in the
11 definition of what we're going to be talking about.

12 A. Okay.

13 Q. I'm not an accountant.

14 What is a quarterly roll forward
15 schedule?

16 A. A quarterly roll forward schedule is
17 usually prepared on a balance sheet account, which
18 is sort of your running total of items you owe out
19 or receivables that are owed in to you. Your
20 balance sheet is that running total from month to
21 month to month. It just increases or decreases.

22 And a roll forward is usually a summary
23 of the activity that occurred in that account. For
24 example, if you started -- ended a year
25 December 31st with balance of zero and then the end

1 of the first quarter your balance was a hundred,
2 the roll forward details the activity that got you
3 to a hundred. It could be that you accrued 200 but
4 paid 100. You know, that net activity gets you to
5 your ending balance, but the roll forward details
6 that activity as it occurs to explain what happened
7 in that account.

8 Q. Does the roll forward -- if you take a
9 reserve on something, does the roll forward show
10 that as having happened? Or is there some
11 indication that it's a placeholder but the money
12 has not been taken out or accounted for yet?

13 A. A roll forward is a more general term,
14 and you can -- internally, someone creating a roll
15 forward can kind of make it do whatever they want.
16 As long as in concept it's showing your beginning
17 balance and your ending balance and what has
18 occurred, you can set it up to show any kind of
19 activity that you want, whether you want to show
20 that you put up a reserve or that a reserve paid
21 out or anything like that. It's really at the
22 discretion of who's creating it.

23 Q. I see.

24 Now, you're here to talk about the
25 claims verification roll forward schedules for

1 certain quarters in 2013 and 2014. How did you use
2 the roll forward schedules?

3 A. The roll forward schedule was created on
4 our entire risk adjustment receivable account which
5 is at times, depending on the time of year, could
6 be a very large account. Within that risk
7 adjustment receivable account we're accruing for
8 the midyear reconciliation, the final
9 reconciliation. We have reserves against it for
10 possible deletes that we're paying out. So across
11 our entire Medicare Advantage business, that
12 balance can be pretty large.

13 So the roll forward is actually
14 detailing that entire RAF receivable account and
15 then breaking it down into subcategories of what is
16 in that account based on the supporting schedules
17 that add up to those balances.

18 Q. What do you mean by supporting
19 schedules?

20 A. The schedules that -- within any account
21 reconciliation you really should have support for a
22 balance. You can't just accrue a million dollars
23 without some sort of support. So within the RAF
24 receivable account, as I said, at any given time
25 you could have multiple types of accruals. Let's

1 say it's March and you have a midyear accrual, plus
2 a final accrual, plus the final accrual from the
3 year previous because that hasn't settled yet, plus
4 a delete reserve, each one of those is going to
5 have a different supporting schedule.

6 Q. I see.

7 So does claims verification have its own
8 supporting schedule?

9 A. It was part of supporting schedules
10 depending on the payment type.

11 Q. What does that mean?

12 A. If -- when we were in an open period, it
13 would have been part of our overall accrual for
14 the, say, 2013 final reconciliation payment. So
15 within that support for the 2013 final
16 reconciliation payment, there would be a column or
17 something in the spreadsheet specific to claims
18 verification.

19 Q. Okay. And if there is a column in
20 claims verification -- sorry, in the roll forward
21 schedule for claims verification, is that
22 indicating a reserve for deletes that you
23 anticipate needing -- or sorry. No.

24 Is that a reserve for money that you
25 anticipate CMS taking back based on deletes?

1 A. It is the estimated anticipated payment
2 back to CMS for deletes related to the claims
3 verification program. But at any given time not
4 all of those deletes have yet been submitted.
5 There could be a subset of them that have or have
6 not been submitted based on the time of year and
7 where we sit within a reconciliation.

8 Q. I see.

9 So because some deletes identified
10 pursuant to claims verification were in fact
11 submitted to CMS, some portion of the roll forward
12 schedule line devoted to CV is -- could be
13 attributable to deletes that have already been
14 submitted and you're waiting for CMS to take the
15 money back, and some portion could be attributable
16 to deletes that you anticipate needing to make the
17 probable and estimable but you haven't submitted
18 them to CMS yet. Is that right?

19 A. Generally, yes. I guess I would add
20 that even for the ones not submitted to CMS, I
21 would add a distinction that not only have they not
22 been submitted but there is some subset of a
23 balance where the work hasn't even occurred yet.
24 We're just estimating future work that will occur.

25 Q. I see. I see.

1 So for example, work in claims
2 verification on 2013 date of service had not yet
3 begun when the program was canceled by
4 UnitedHealth; right? UnitedHealthcare?

5 A. So 2013 dates of service, May 2014
6 payment year?

7 Q. Correct.

8 A. Yes, that's correct.

9 Q. And so did the roll forward schedules
10 for the time that you're testifying about have
11 reserves in place for 2013 date of service?

12 A. Up until the month where we would have
13 released the accruals, there was an inherent
14 balance for claims verification on our roll
15 forwards, yes.

16 Q. And specifically for claims verification
17 for 2013 date of service?

18 A. Yes. As of -- so as of the quarters in
19 question for 2013, there would be nothing for 2014
20 payment year because we haven't hit that year yet.
21 So each quarter of 2013 would not have had any
22 reserve for '14 payment year because we haven't hit
23 '14 yet. But then for Q1 and Q2 of 2014 there
24 would be a balance for claims verification.

25 Q. I see.

1 So when did you -- what had to happen
2 before you put a reserve in place for -- or what
3 had to happen in order for you to put a reserve in
4 place for 2013 date of service in 2014 payment
5 year?

6 MR. JONES: Objection; form.

7 THE WITNESS: In the beginning of the
8 year, the way it works for the first quarter of any
9 year, because at that point minimal data has been
10 submitted because of the timing of the different
11 sweep periods. The first quarter of any year is
12 using an estimated PMPM based on what had occurred
13 the year prior. So in your question, in the first
14 quarter of 2014 we would have been using PMPMs from
15 2013 which baked into them had a reserve for claims
16 verification.

17 So by using a number that had claims
18 verification inside of it, we were basically
19 accruing to a claims verification balance in Q1 of
20 2014 as well even though no work had started yet.

21 BY MS. GLOVER:

22 Q. I see.

23 How did you know how much to put in the
24 estimated reserve for 2013 date of service CV?

25 MR. JONES: Objection; form.

1 your question, you're asking me if we did claims
2 verification before we did claims verification. So
3 I'm not sure I understand the question.

4 BY MS. McMAHON:

5 Q. Well, I certainly did see the look of
6 confusion on your face, so I do want to clear it
7 up.

8 My question is prior to -- prior to
9 implementation of the claims verification, did you
10 do any other process that would have served the
11 same purpose as you just described it, that would
12 have served the same purpose that CV served?

13 MR. JONES: Objection; outside the scope
14 of Judge Segal's order.

15 THE WITNESS: We complied with all
16 audits such as RADV audits and they're now called
17 improper payment audits, IPM -- I'm blanking on the
18 name it was years ago. But we complied with all
19 CMS audits which would have asked us to produce
20 medical records to support diagnosis codes. So
21 that would have been what we would have done to
22 compare diagnosis to medical records.

23 BY MS. McMAHON:

24 Q. But you didn't do anything in particular
25 with respect to the charts that had gone through

1 chart review, right, to make sure that anything
2 that the coders did not find as supported to try to
3 validate any of those codes; correct?

4 MR. JONES: Objection; outside the
5 scope.

6 THE WITNESS: Correct.

7 BY MS. McMAHON:

8 Q. And I would say by definition, if you
9 didn't have that type of process, then you were not
10 submitting deletes that would have -- that would
11 have resulted; correct?

12 MR. JONES: Objection; outside the scope
13 of Judge Segal's order.

14 THE WITNESS: Correct. Without a
15 program to identify the deletes, we would not have
16 been submitting deletes.

17 BY MS. McMAHON:

18 Q. Right, of course.

19 So my question is what was your -- what
20 was your decision to not submit deletes for codes
21 that were not identified in chart review but that
22 were on the provider's claim on the charts that
23 went through claims verification -- I mean, I'm
24 sorry, that went through chart review, what was
25 your decision based on to not have a program that

3 DISTRICT OF COLUMBIA

4 I, JOHN L. HARMONSON, a Notary Public
5 within and for the District of Columbia, do hereby
6 certify that MELISSA SEDOR, the witness whose
7 deposition is hereinbefore set forth, was duly
8 sworn by me and that such deposition is a true
9 record of the testimony given by such witness.

10 That before completion of the
11 proceedings, review and signature of the transcript
12 was not requested.

13 I further certify that I am not related
14 to any of the parties to this action by blood or
15 marriage; and that I am in no way interested in the
16 outcome of this matter.

17 IN WITNESS WHEREOF, I have hereunto set
18 my hand this 3rd day of July, 2023.

BENJAMIN POEHLING,

Plaintiffs,

vs.

UNITEDHEALTH GROUP, INC., et al.,

No.

16-08697 FMO

Defendants.

VIDEOTAPED DEPOSITION OF TIMOTHY RENJILIAN

March 21, 2024, 9:07 a.m.

Alston & Bird

One Atlantic Center

1201 West Peachtree Street

Suite 3800

Atlanta, Georgia

Michelle R. Lowe, RPR, CCR-2748

1 can't just make up diagnosis codes and report them
2 because they want to.

3 BY MR. MASON:

4 Q They can only submit what you call
5 appropriate diagnosis codes?

6 A Yeah. Again, not speaking as a lawyer,
7 but, yes, that's consistent with my understanding.

8 Q Okay. And diagnosis codes submitted for
9 risk adjustment must be adequately documented in a
10 medical record from a face-to-face encounter with a
11 medical provider; right?

12 A I'm sorry. Are you reading from my
13 report, or was that --

14 Q I'm just asking you a question.

15 A Oh.

16 Q Diagnosis codes submitted for risk
17 adjustment must be adequately documented in a
18 medical record from a face-to-face encounter with a
19 medical provider; right?

20 MR. JONES: Objection. Form.

21 A Well, again, I'm not speaking as a lawyer.

22 So I understand that ultimately if a code
23 is reviewed, it should have appropriate medical
24 record support. The MAO doesn't gather underlying
25 medical record data or retain it for all codes and

1 so it wouldn't necessarily have that kind of data,
2 you know, at its immediate disposal. But
3 ultimately, to the extent that codes are being
4 reviewed, they should have adequate support.

5 BY MR. MASON:

6 Q In a medical record from a face-to-face
7 encounter?

8 A Correct.

9 Q Okay. And you said that -- Paragraph 35,
10 when you use appropriate clinical diagnosis codes,
11 you're referring to the statements that you made in
12 the preceding paragraphs; right?

13 A I believe so. Let me just make sure we're
14 clear. Let me take a second and just take a look to
15 make sure.

16 Yes. I -- I think that I'm using that
17 term there as -- as a bit of a catchall for the
18 various criteria that are expressed in the preceding
19 several paragraphs, at least back up through
20 Paragraph 31. So appropriate is referring to
21 those -- those preceding paragraphs.

22 Q Okay. And let's look at Paragraph 31. In
23 Paragraph 31, you say: Diagnosis codes -- sorry.

24 You say: According to the CMS 2012 Risk
25 Adjustment Regional Technical Assistance Participant

1 Guide.

2 I might refer to that just as the
3 participant guide. Is that okay with you?

4 A Yeah, that -- that's fine. I think, just
5 as a caution, there may be a couple of different
6 participant guides that are that referred to across
7 the different reports.

8 Q Fair point. So I will refer to that as
9 the 2012 participant guide.

10 A Okay. Thank you.

11 Q So what you say in Paragraph 31 is:
12 According to the 2012 participant guide, diagnosis
13 codes included in risk adjustment data must be based
14 on clinical medical record documentation from a
15 face-to-face encounter, coded according to the
16 applicable coding guidelines, paren, ICD-9-CM or
17 ICD-10, closed paren, assigned based on dates of
18 service within the data collection period, and
19 submitted to the MAO from an acceptable source and
20 acceptable provider type.

21 Did I read that correctly?

22 A Yes. You read that very well.

23 Q Okay. And that requirement is part of
24 what makes a diagnosis code appropriate, as you use
25 it in your report; right?

1 MR. JONES: Objection. Form.

2 A That's what the participant guide says. I
3 understand there could be different views of
4 requirements. And I'm not opining as a lawyer, but,
5 yes, what -- what we read is consistent with my
6 understanding of the 2012 participant guide.

7 BY MR. MASON:

8 Q And it's part of what you meant when you
9 said appropriate diagnosis codes in Paragraph 35?

10 A As a general proposition, yes. I mean,
11 I -- we're probably focusing more attention on the
12 specific word appropriate than I did at the time
13 that I selected that.

14 But, yeah, what I'm intending to do in
15 this section is to provide a general overview just
16 for background-setting purposes. It's not meant to
17 be an exhaustive recitation of legal or other
18 requirements associated with the submission of
19 codes. It's really intended just to be sort of a
20 foundation-setting discussion.

21 Q Right. This section -- well, what is the
22 purpose of this section?

23 A As I said, just to provide some
24 foundational background for understanding my report.

25 Q And -- and this section accurately sets

1 forth what your understanding of how the program
2 works; right?

3 MR. JONES: Objection. Form.

4 A Well, again, as I said, it's meant to
5 be -- not meant to be an exhaustive recitation of
6 all of the requirements or nuances inside of those.
7 It's a -- meant to be a simplified background
8 explanation of my understanding.

9 BY MR. MASON:

10 Q And you reference here the 2012
11 participant guide. Can you explain what that is.

12 A Yes. That -- that was a guide that was
13 put out by CMS that just, you know, provided
14 additional training and guidance around the use of
15 risk assessment and the submission of codes and that
16 sort of thing.

17 Q You said risk assessment. Do you mean
18 risk adjustment?

19 A I'm sorry. Risk adjustment, yeah. Thank
20 you. Sorry.

21 Q I'm just trying to make sure the
22 transcript is clear.

23 A I appreciate that. Sorry. I do a lot of
24 risk assessment work as well so that just flowed a
25 little too naturally.

1 supported or not appropriate for submission, you
2 know, my recommendation from a compliance standpoint
3 would typically be to delete that code.

4 BY MR. MASON:

5 Q Go on. Sorry.

6 A No. I'm sorry. Go ahead.

7 Q Why would that be a recommendation?

8 A I think that's the -- you know, probably
9 the safest course of action. It's not necessarily
10 the legal requirement, which I know that's the next
11 part of your question -- and I'll tell you now, I
12 don't know strictly from a legal standpoint what the
13 actual technical requirement would be.

14 But if you have definitive knowledge that
15 a code is not correct and, you know, impacts
16 payment, et cetera, et cetera, then I would say, you
17 know, the safest course from a compliance standpoint
18 is to delete it.

19 Q You would only recommend that MAOs delete
20 codes if they've learned that it impacted the
21 payment?

22 A No, not necessarily, because, frankly,
23 determining whether a code impacted payment, you
24 know, may be unknowable for quite some period of
25 time.

1 So, yeah, again, I mean, I think it's
2 probably a facts and circumstances determination
3 rather than an abstract discussion. But, generally
4 speaking, if -- if, you know, I had a client who
5 said they had identified codes as being not
6 supported, I would suggest that they delete those
7 codes.

8 Q And you said -- when I asked you why, you
9 said because that would be the safest course of
10 action. What do you mean by that?

11 A Well, I think it would be hard for anybody
12 to object to the deletion of codes, whereas not
13 deleting them at least opens you up to, you know,
14 additional questioning in those circumstances.

15 Q What type of additional questioning are
16 you referring to?

17 MR. JONES: Objection. Form.

18 A Could be any kind of form, you know,
19 coming out of an OIG audit, a CMS audit, an internal
20 audit, et cetera. I mean, there are all sorts of
21 people who are scrutinizing what happens in the
22 healthcare industry.

23 BY MR. MASON:

24 Q And you said you don't know what the
25 participant guide says as to this question?

1 Q And what CMS does is they calculate the
2 risk score for the beneficiary, excluding whatever
3 diagnosis code submission was deleted?

4 MR. JONES: Objection.

5 A That's right.

6 MR. JONES: Form.

7 BY MR. MASON:

8 Q Sorry. I didn't catch the answer.

9 A I'm sorry. Yeah. Again, some -- I have
10 not reviewed in detail the internal mechanics of
11 CMS's process, but that would be my general
12 understanding.

13 Q Okay. So, in other words, the next time
14 CMS calculates a risk score -- wherever we are in
15 the year, the next time CMS calculates a risk score
16 that specific submission that was deleted won't be
17 included in that calculation?

18 A Presumably.

19 Q And that would generally result in a
20 downward adjustment in the payment that the MAO
21 receives; right?

22 A No.

23 Q And are you saying no because it depends
24 on whether the diagnosis code that's deleted maps to
25 a risk adjusting HCC is duplicated by another

1 diagnosis code that was submitted or is duplicated
2 at the HCC level by another diagnosis code that was
3 submitted?

4 A Yes, all of those reasons, at least within
5 the initial processing of -- you know, by CMS.

6 It's also possible, of course, that, you
7 know, if a code is deleted there was another
8 unsubmitted code that was appropriate that -- that
9 could have been submitted that might take the place
10 of that or that other records are found if the -- a
11 code is, you know, audited and reviewed.

12 But in the strict sort of mechanical
13 processing, you know, if a code is taken out of
14 CMS's RAS system at that level, you know, the HCC
15 impact would flow from there in whatever way is
16 appropriate, but there may not be an HCC impact.

17 Q And you mentioned unsubmitted codes.
18 Those unsubmitted codes can never be part of the
19 risk score that's calculated by CMS; right?

20 MR. JONES: Objection. Form. Foundation.
21 Incomplete hypothetical.

22 A If they weren't submitted, they would not
23 be considered as part of the -- the basic RAPS and
24 RAS processing, you know, flow that we just
25 discussed. But they may ultimately come into play

1 at some point, for example, through an audit process
2 or if a -- you know, a code is deleted and it's
3 found that another unsubmitted code that could
4 properly be submitted can be submitted in its place.

5 BY MR. MASON:

6 Q We're going to talk about RADV and audits
7 later.

8 Right now I'm just talking about what
9 happens in the ordinary payment model --

10 A Okay.

11 Q -- the CMS-HCC model when MAOs submit adds
12 or submit deletes. Okay?

13 A Okay.

14 Q So in the ordinary CMS-HCC model
15 unsubmitted codes are never part of the calculation
16 of a risk score; right?

17 MR. JONES: Objection. Form. Foundation.
18 Asked and answered.

19 A If a code hasn't been submitted, CMS won't
20 know about it.

21 BY MR. MASON:

22 Q And therefore it can't be part of the
23 calculation of a risk score; right?

24 A If it's not been submitted, it wouldn't be
25 factored into that initial risk score calculation.

1 Q Or the final risk score calculation?

2 MR. JONES: Objection. Form. Incomplete
3 hypothetical.

4 A Yeah. Again, at the risk score
5 calculation level if a code is not submitted, an
6 unsubmitted code would not be considered in that
7 calculation process.

8 BY MR. MASON:

9 Q And you mentioned that if the diagnosis
10 code is duplicated either at the HCC level or at the
11 diagnosis code level by another submitted code, then
12 the deletion would not have a financial impact in
13 the calculation of risk scores in the ordinary
14 CMS-HCC model; right?

15 MR. JONES: Objection. Form. Incomplete
16 hypothetical.

17 A That's one example of why a deleted code
18 might not have a payment impact at the beneficiary
19 level.

20 BY MR. MASON:

21 Q And does CMS undertake any extra steps to
22 account for or search for or identify whether codes
23 are duplicated at the diagnosis code or HCC level?

24 MR. JONES: Objection. Form. Incomplete
25 hypothetical. Foundation.

1 A Okay.

2 Q Do you understand?

3 A Okay. Yes.

4 Q So you haven't offered an expert opinion
5 that the methodology that Dr. Garthwaite used to
6 identify which encounters had charts go through
7 Chart Review was flawed, have you?

8 A I have not offered such an expert opinion.

9 Q And you haven't offered an expert opinion
10 that the conclusions that Dr. Garthwaite reached
11 regarding which provider encounters had charts go
12 through Chart Review was incorrect -- or were
13 incorrect?

14 MR. JONES: Objection. Form.

15 A That's not a question that I felt I needed
16 to evaluate in detail for purposes of my opinion.
17 So it's not that I don't have thoughts on that, but
18 I have not expressed an expert opinion on that.

19 BY MR. MASON:

20 Q Okay. And you -- you haven't identified
21 any specific encounters that Dr. Garthwaite says
22 their charts went through Chart Review that you say
23 he got it wrong; right?

24 A Not something that I sought to do as part
25 of my expert reports.

1 Q You have an understanding of the
2 methodology that Dr. Garthwaite used to identify
3 which diagnosis codes were submitted by United to
4 CMS for risk adjustment by analyzing United's IRADS
5 and EDPS data?

6 A We're talking just about his analysis of
7 what codes were submitted irrespective of whether
8 they link to Chart Review?

9 Q Yeah.

10 A Generally I understand that he was looking
11 at the same sorts of data that I was.

12 Q And you're not offering an expert opinion
13 that Dr. Garthwaite did that part incorrectly, are
14 you?

15 MR. JONES: Objection. Form.

16 A Again, I don't think that my opinions go
17 down to that level of detailed mechanics. So I
18 didn't seek to identify where he may have gotten
19 that wrong.

20 I do point out, I think as I described his
21 methodology, some of the assumptions inherent in
22 that process, but I haven't expressed specific
23 expert opinions as to the degree to which he may
24 have gotten it wrong.

25 BY MR. MASON:

1 Q And you're familiar with the methodology
2 that Dr. Garthwaite used to identify which diagnosis
3 codes were recorded by Chart Review coders in the
4 Chart Review databases?

5 MR. JONES: Objection. Form.

6 A Yes, generally I'm -- I'm familiar with
7 how he did that.

8 BY MR. MASON:

9 Q And have you analyzed whether the
10 diagnosis codes that Dr. Garthwaite identifies as
11 found in Chart Review were, in fact, recorded in the
12 Chart Review databases?

13 MR. JONES: Objection. Form.

14 A Again, not a question that I sought to
15 answer for purposes of my expert report; so I don't
16 have an opinion on that.

17 BY MR. MASON:

18 Q Okay. So you're -- you don't have an
19 expert opinion that Dr. Garthwaite misidentifies or
20 makes an error in identifying the diagnosis codes
21 that the Chart Review coders found?

22 A I haven't expressed an opinion on that.

23 You know, again, I'd say that, you know, I
24 think he had to employ a number of significant
25 assumptions in that process, but I haven't sought

1 exhaustively to rebut those assumptions or formed
2 a -- or expressed a particular expert opinion about
3 the extent to which those assumptions may drive his
4 calculations.

5 Q And you're not offering an expert opinion
6 that -- that any of the diagnosis codes that he
7 identifies as found in Chart Review -- that -- that
8 he made any errors in identifying codes that were
9 found in Chart Review?

10 A I haven't expressed opinions, one way or
11 the other. So it shouldn't be meant to -- to
12 suggest that I agree --

13 Q That's --

14 A -- with him. It's -- but I have not
15 expressed direct opinions saying that I disagree
16 with those -- those analyses.

17 Q Sorry for interrupting.

18 Fair point. I'm not trying to put words
19 in your mouth. I'm just trying to close off, like,
20 what you did and did not analyze. So I'm not
21 trying to suggest that you have agreed with
22 Dr. Garthwaite on any of these things. I'm just
23 trying to understand and make sure that I understand
24 what you have and haven't opined on.

25 So when I say you don't have an expert

1 opinion on something, I'm not -- I'm not suggesting
2 that you have an expert opinion that it's correct.
3 Okay?

4 A Okay. No. That's fair and I appreciate
5 that. I also just want to make sure --

6 Q Yeah.

7 A -- the record is clear after the fact --

8 Q Sure.

9 A -- so --

10 Q You have a familiarity with the
11 methodology that Dr. Garthwaite used to compare the
12 diagnosis codes that United submitted associated
13 with the provider claim to the diagnosis codes that
14 United chart reviewers found in a Chart Review of
15 the corresponding chart; right?

16 A Again, he employs a bunch of assumptions
17 in there; so I don't want to say that -- that
18 there's a definitive way of knowing which chart --
19 which diagnoses were actually reviewed in Chart
20 Review, but I have not expressed opinions about the
21 mechanics of his specific analyses in that regard.

22 Q You don't have an expert opinion that
23 Dr. Garthwaite performed that comparison
24 incorrectly?

25 MR. JONES: Objection. Form.

1 A Well, I have not expressed opinions on
2 that, one way or the other.

3 BY MR. MASON:

4 Q Are you familiar with how -- are you
5 familiar with the fact that FTI supported United in
6 execute -- or implementing the claims verification
7 program?

8 MR. JONES: Objection. Form. Foundation.

9 A Actually, I don't think I was aware of
10 that, no.

11 BY MR. MASON:

12 Q Do you know what the claims verification
13 program is?

14 A I do.

15 Q Can you just describe it at a high level.

16 A Sure. At a high level, it was a program
17 that was in effect from 2011 to 2012, I believe, in
18 which the intent was to try to identify what I think
19 United referred to as exclusive codes that had gone
20 through Chart Review and not been independently
21 identified in the course of that chart review. That
22 was the subjective intent.

23 I think the -- I further understand that
24 the implementation of that was -- was difficult and
25 not always precise, but that's, at a high level, my

1 that leads you to believe that.

2 MR. JONES: Objection. Form.

3 A So I'm looking at -- as one example, I'm
4 looking at Paragraph 6 of my initial report from
5 December 3rd: The first interrogatory requested
6 that the government identify certain information
7 related to each and every diagnosis code the
8 government alleges United knowingly and improperly
9 failed to delete or otherwise return to Medicare --
10 to the Medicare program as an overpayment.

11 And then the government produced data
12 tables comprising of approximately 28 million
13 records of data.

14 That's one example.

15 BY MR. MASON:

16 Q And that doesn't say anything about the
17 methodology that the government used to compile the
18 diagnosis codes on the first interrogatory response,
19 does it?

20 MR. JONES: Objection. Form. Misstates
21 the testimony.

22 A So I'm not -- I don't know what other way
23 the government could have done that, but to try to
24 come up with some way of matching datasets to figure
25 out which charts may have been subjected to Chart

1 Review and which codes from those charts may have
2 been identified or not identified by chart reviewers
3 and which chart -- and which codes had or had not
4 been deleted.

5 I mean, there is some sort of matching
6 mechanism that I believe has to be inherent to that
7 process and that would be consistent with my
8 understanding of all the data requests and the data
9 that was produced.

10 If you're telling me that there was some
11 other way the government did that, okay. But I --
12 you know, the government hasn't disclosed its
13 methodology for compiling the first interrogatory
14 response, but from everything I've seen I believe
15 that's how it had to have been done in some form or
16 fashion.

17 BY MR. MASON:

18 Q So just to make sure that we're clear on
19 the record, you don't have any knowledge of the
20 methodology that the government used; right?

21 A The government --

22 MR. JONES: Objection.

23 A -- has not disclosed its methodology.

24 BY MR. MASON:

25 Q So therefore you don't have any knowledge

1 of how the -- how the codes on Interrogatory Number
2 1 were compiled; right?

3 MR. JONES: Objection. Form. Misstates
4 the testimony.

5 A You know, I -- I have my insights based on
6 my understanding of the data and the objective of
7 the exercise and the way the government has
8 characterized it. I have not seen anything from the
9 government that says, this is exactly how we did it.

10 BY MR. MASON:

11 Q And those insights are that the only way
12 to answer this question being asked in Interrogatory
13 Number 1 would be to evaluate through matching data
14 elements what charts went through Chart Review and
15 identify what codes were submitted based on provider
16 claims that weren't subsequently found in Chart
17 Review?

18 MR. JONES: Objection. Form. Misstates
19 the testimony.

20 A I'm saying it's the only way that I can
21 discern the government could have come up with the
22 FIR, based on the information that's been produced.

23 BY MR. MASON:

24 Q Just going back to how you've written it
25 here in the Opinion 1 section on Page 8 of your

1 rebuttal report. Do you see the sentence that
2 begins with specifically?

3 A I do.

4 Q Specifically, the data available from
5 CMS's RADV audits in payment years 2011 to 2015
6 shows that 91 percent of the diagnosis codes in the
7 government's first interrogatory response -- which
8 are diagnosis codes the government alleges should
9 have deleted -- United should have deleted as
10 overpayments because they were not found in Chart
11 Review -- mapped to health conditions that were
12 confirmed to be supported by the government in the
13 RADV audits.

14 Did I read that correctly?

15 A You read that correctly.

16 Q And the way that you've written this,
17 you've said that the RADV data shows that 91 percent
18 of the diagnosis codes on the government's first
19 interrogatory response map to health conditions that
20 were confirmed to be supported by the government in
21 RADV audits; right?

22 A Yes, that is what it says there. I think
23 I make the basis for that 91 percent clearer in the
24 subsequent paragraphs of the report itself, which
25 makes clear that what I'm referring to is the codes

1 from the FIR that overlap with RADV audits.

2 Q Right. What you've referred to as the
3 RADV overlap?

4 A Correct.

5 Q So this 91 -- as it's written, this isn't
6 quite correct; right?

7 MR. JONES: Objection. Form.

8 BY MR. MASON:

9 Q When I say this, I mean the -- the last
10 sentence in your Opinion 1.

11 MR. JONES: Objection. Form. Misstates
12 the testimony.

13 A I think the basis of the opinion becomes
14 clearer, but I -- I agree that it would be clearer
15 in this bolded section of Opinion 1 if it said 91
16 percent of the diagnosis codes in the government's
17 first interrogatory response which overlapped with
18 the RADV audits, and then continued on from there.

19 BY MR. MASON:

20 Q And -- and we'll talk about this later,
21 but I -- I think we're going to -- you're using
22 shorthand, and I've used it to, what you referred to
23 as the RADV overlap. Can you explain what you mean
24 by a RADV overlap.

25 A Sure. Those would be diagnosis codes that

1 are included in whatever relevant body of diagnosis
2 codes we're talking about, whether it's the FIR or
3 the Garthwaite deletes, that map to HCCs that were
4 reviewed by auditors as part of the RADV audit
5 program, which was in effect across -- or for which
6 we have relevant data across five years from the
7 audit years 2011 through 2015.

8 Q So the diagnosis codes on the first
9 interrogatory response and the Garthwaite's delete
10 list are diagnosis code instances; right?

11 A Yes. The --

12 MR. JONES: Objection. Form.

13 THE WITNESS: I apologize.

14 A Yes. The individual line items in the FIR
15 or in the Garthwaite deletes are expressed as
16 diagnosis codes, that's right.

17 BY MR. MASON:

18 Q But they're not just the diagnosis codes.
19 They're the instances of the diagnosis codes.

20 In other words, the corresponding date of
21 service, provider information, et cetera.

22 A So --

23 MR. JONES: Objection. Form.

24 A Yes. So they are expressed as instances
25 of a given diagnosis code. There's multiple fields

1 there: Member, provider, year, and I think HCC as
2 well.

3 BY MR. MASON:

4 Q And so it's not that -- it's not that that
5 whole -- that that specific diagnosis code instance
6 was reviewed in RADV. It's just that the specific
7 diagnosis code itself maps to an HCC that CMS RADV
8 audits analyzed?

9 A The -- the basis of the RADV audits was
10 the HCC. And so -- yes, so when we're looking at
11 what the RADV auditors reviewed, they reviewed at
12 the HCC level. And I have linked the diagnoses from
13 the different lists to those HCCs to identify which
14 diagnoses mapped to the HCCs that were reviewed by
15 the RADV auditors.

16 Q I think I'm asking this question in a way
17 that's not clear; so I -- I'm going to try again.
18 I'm sorry.

19 What's set forth on both the first
20 interrogatory response and the Dr. Garthwaite delete
21 list are not just diagnosis codes; right? They're
22 rows that include a diagnosis code, a date, a
23 provider, a member, a specific instance of a
24 diagnosis code that United submitted to CMS; right?

25 A Generally speaking, yeah, that's a fair

1 characterization.

2 Q And when you say that there's a RADV
3 overlap, just to be clear, you're not saying that --
4 that that entire -- or that exact diagnosis code
5 instance -- the date of service, the provider, that
6 encounter that's associated with all of that -- was
7 reviewed in RADV; right?

8 MR. JONES: Objection. Form.

9 A Yeah, what I'm saying is that those
10 diagnoses mapped to an HCC that was reviewed by the
11 RADV auditors.

12 And -- yeah, so that's right.

13 BY MR. MASON:

14 Q Okay. You're not offering an opinion that
15 that 91 percent rate that you've calculated at which
16 you -- you've concluded that the RADV overlap
17 resulted in finding a validation of the HCC --
18 you're not offering an expert opinion that that rate
19 should apply to the entire population of the first
20 interrogatory response, are you?

21 A Well, certainly not as a statistical
22 matter. I'm not saying that that 91 percent rate
23 can be extrapolated out to any full population of
24 claims or of diagnoses.

25 The way I'm using the RADV information,

1 you know, in particular here is as rebutting the
2 presumption that diagnosis codes not independently
3 identified by a chart reviewer were necessarily
4 unsupported.

5 Q Okay. And, likewise, you're not offering
6 an expert opinion that the 55 percent that you
7 calculated for the Garthwaite RADV overlap should be
8 applied to the entire population of the Garthwaite
9 delete list; right?

10 A Again, I'm using that principally to rebut
11 Dr. Garthwaite's presumption that the codes on his
12 delete list were necessarily unsupported.

13 Q So you agree then that you're not offering
14 an expert opinion that the 55 percent rate that you
15 calculated for the Garthwaite delete list should be
16 applied across the entire Garthwaite delete
17 population?

18 A Well, when you say should be applied, I
19 mean, I think it's -- as I've, I think, termed it in
20 my report -- it's an instructive basis on which to
21 think about that grouping, but it's not a
22 statistically valid extrapolable [sic] rate that
23 you could say with any sort of mathematical
24 confidence reflects, you know, anything about the
25 larger population of Garthwaite deletes.

1 Q If one were to opine that the validation
2 rate of 55 percent from the Garthwaite RADV overlap
3 that you calculated should be applied to the entire
4 Garthwaite delete list, then that would also mean
5 that 45 percent of the diagnosis codes on
6 Garthwaite's list map to member-HCC combinations
7 that would not be validated in RADV; right?

8 MR. JONES: Objection. Form.

9 A Well, as I've said, I don't think the RADV
10 overlap can statistically or mathematically be
11 extrapolated to any population, which means just as
12 I wouldn't assert that that means that some certain
13 percentage of the codes are supported, it would be
14 inappropriate to conclude that that definitively
15 means that some certain percentage of the codes were
16 not supported. And that's -- I think that's
17 important.

18 Nonetheless, my view, just based on what
19 we have in the RADV overlap, that some of the HCCs
20 to which the questioned diagnoses map were found to
21 be validated definitively rebuts Dr. Garthwaite's
22 presumption that the codes on his list are
23 necessarily unsupported, but you can't do the
24 converse and say, and here's the percentage that is
25 or is not supported.

1 I think the other thing I would just throw
2 in there is that the RADV results, you know, are
3 also subject to appeal. So we don't know whether or
4 to what extent the RADV audit findings might be
5 changed by appeals that United might pursue, and I
6 haven't seen that data.

7 BY MR. MASON:

8 Q In your experience, is 45 percent of a
9 RADV audit not validating considered high?

10 MR. JONES: Objection. Form. Foundation.
11 Misstates the testimony.

12 A I don't -- I don't think there's enough
13 information here to make a judgment about that, one
14 way or the other.

15 I mean, at some level, right, if you did
16 enough work, you could find a population that had an
17 error rate of 100 percent, right, if you went all
18 the way through and did everything you needed to do.
19 That, to me, probably isn't the relevant way to
20 think about an error rate and there's not an
21 absolute standard as to what sort of error is too
22 high or not high enough. There's judgment inherent
23 in those determinations.

24 So I don't have a clear answer for you on
25 that.

1 BY MR. MASON:

2 Q You said a minute ago if you did
3 everything you needed to do you could find a
4 population with 100 percent. Can you explain what
5 you meant by that.

6 MR. JONES: Objection. Form. Misstates
7 the testimony. Incomplete hypothetical.

8 A Sure. So conceptually if you took a group
9 of -- well, let's just say, you know, emergency
10 department admissions and you did a 100 percent
11 thorough audit of every admission and you -- or on
12 every encounter and you ended up finding 20 that
13 were coded incorrectly. The error rate associated
14 with those 20 is 100 percent. Those 20 may be a
15 small percentage of the body that you looked at.

16 So as a framing device, there's 100
17 percent error rate associated with 20, but if that's
18 out of 100,000 emergency department encounters, say,
19 that's a -- I would probably -- you know, again in
20 my hypothetical -- characterize that as a low error
21 rate.

22 But as you tighten the lens, you can
23 artificially construct smaller and smaller
24 subpopulations that would logically have higher and
25 higher error rate percentages.

1 So the framing, I think, is important.

2 MR. MASON: Okay. You know what? This is
3 a decent breaking spot. Why don't we go off the
4 record?

5 THE VIDEOGRAPHER: We are going off the
6 record. The time is 12:06 p.m.

7 (Recess taken from 12:06 p.m. to 1:19
8 p.m.)

9 THE VIDEOGRAPHER: We are now back on the
10 record. The time is 1:19 p.m.

11 BY MR. MASON:

12 Q Good afternoon, Mr. Renjilian.

13 When we left off before lunch, we were
14 discussing your Opinion 1 in your rebuttal report;
15 right?

16 A Right.

17 Q And I'd like to pick up there,
18 specifically discussing your opinions regarding the
19 diagnosis codes in the RADV overlap that, as you put
20 it, were validated in RADV. Okay?

21 A Okay.

22 Q And when you say that a diagnosis code
23 is -- was validated in RADV, what you mean is that
24 the RADV of the member-HCC combination that maps to
25 the same as the diagnosis code in the RADV

1 overlap -- that that RADV found some diagnosis that
2 maps to the same HCC. Did I get that right?

3 A I think so, yeah. So what -- what I mean,
4 just to rephrase, is that the HCC to which a
5 diagnosis mapped was a HCC that was validated by the
6 RADV auditor. So in that circumstance, in my
7 tallies on a diagnosis basis, I -- I think I sort of
8 shorthand described that as a validated diagnosis.

9 Q And so a diagnosis code can be validated
10 under those terms in RADV by any diagnosis code that
11 maps to the same HCC; right?

12 A Yes. It's really saying that the HCC is
13 validated, because we don't know specifically what
14 diagnosis the RADV auditor looked at. And they
15 wouldn't necessarily look at all of the diagnoses.
16 They would stop when they got to one that supported
17 the HCC.

18 Q Okay. And so RADV does not actually
19 assess whether the specific diagnosis codes
20 submitted by an MAO are supported by medical
21 records?

22 MR. JONES: Objection. Form.

23 A Yeah. I don't think we know, one way or
24 the other, which specific diagnosis was found by the
25 RADV auditors to be supported, but it's just that

1 the HCC was supported. And therefore then in my
2 analysis any of those diagnoses that I sort of
3 describe as validated had no payment impact and, you
4 know, couldn't have affected the -- the -- the risk
5 scoring of the -- of the member affected.

6 BY MR. MASON:

7 Q And there are multiple diagnosis codes
8 that map to each of the HCCs in the CMS-HCC model;
9 right?

10 A Certainly at least for most. I don't
11 remember if every one of them has multiple, but
12 probably so.

13 Q Sometimes hundreds of diagnosis codes that
14 map to the same HCC?

15 A There can certainly be many.

16 Q And so RADV does not assess whether the
17 specific diagnosis code that the MAO submitted was
18 supported?

19 MR. JONES: Objection. Form. Misstates
20 the testimony.

21 A Again, the RADV audit is focused on the
22 condition level -- on the HCC and the condition code
23 and -- and they are looking at the diagnoses
24 underneath that, but we don't know from the data
25 which specific diagnosis the RADV auditors may have

1 What I'm looking at is the impact of the
2 codes that were submitted and that are alleged here
3 to have been problematic.

4 BY MR. MASON:

5 Q Okay. But I'm just trying to see if you
6 agree that it's possible for a code that is
7 validated at the RADV -- in a RADV audit or
8 validated at the HCC level, as you're putting it,
9 to -- nevertheless, that specific diagnosis code is
10 not adequately documented in the medical record from
11 the face-to-face encounter that it's associated
12 with?

13 MR. JONES: Objection. Form. Asked and
14 answered. Calls for a legal conclusion.

15 A It is certainly possible, for example, if
16 multiple codes were submitted that all mapped to the
17 same HCC, that some of those weren't supported.

18 That's certainly possible. It's not
19 something I've evaluated. Well, it's certainly
20 possible and I don't know that it's relevant to my
21 conclusions, but it's certainly possible.

22 BY MR. MASON:

23 Q Okay. And so it would be incorrect to
24 state that the RADV results confirmed that the
25 specific diagnosis codes that the MAO submitted were

1 documented in any medical record; right?

2 MR. JONES: Objection. Form. Asked and
3 answered.

4 A We can't know or don't know which specific
5 diagnoses the RADV auditors reviewed to get to their
6 conclusion that a given HCC was supported; so we
7 don't know, one way or the other.

8 What we can say is that diagnoses that map
9 to an HCC that was found to be validated by the RADV
10 auditors is either supported or had no impact.

11 BY MR. MASON:

12 Q Can you say that again.

13 A Sure.

14 Q What we can say is?

15 A We can say that for all of the diagnoses
16 that map to an HCC that was validated by the RADV
17 auditors -- those codes were either supported or
18 they had no impact.

19 Q When -- when you say they had no impact,
20 that's -- that's not true in terms of the impact to
21 the CMS payment process; right?

22 MR. JONES: Objection. Form. Asked and
23 answered.

24 A It is completely true.

25 You only need one code -- one diagnosis

1 that maps to a given HCC in order for that HCC to be
2 calculated within CMS's system.

3 BY MR. MASON:

4 Q Right.

5 A If you submitted five codes that map to
6 the same HCC and four of them turned out to have
7 been a problem for some reason, if the fifth one is
8 okay, the other four didn't have an impact --

9 Q What if you only --

10 A -- on that calculation.

11 Q But what if you only submitted one
12 diagnosis code?

13 MR. JONES: Objection. Form. Asked and
14 answered.

15 A And I think that's a different
16 hypothetical. We were talking about a hypothetical
17 where the HCC has been validated, but we don't know
18 which diagnosis code.

19 If -- is your question what happens if a
20 diagnosis code that uniquely supports an HCC was
21 determined definitively to be incorrect, would that
22 affect the payment model of CMS? Is that your
23 question?

24 BY MR. MASON:

25 Q Well, go ahead and answer that one.

1 MR. JONES: Objection. Form. Incomplete
2 hypothetical.

3 A So within the confines of the -- the RAPS
4 and RAS model and without considering things like
5 the impact of unsubmitted but supported codes and
6 all of that and what actually constitutes an
7 overpayment, which are a couple of other levels of
8 consideration here -- strictly within the mechanics
9 of the model, if a single diagnosis code uniquely
10 supported an HCC and that diagnosis code was
11 definitively determined not to be supported or to be
12 inappropriate, then re -- the removal of that
13 diagnosis code would presumably affect the risk
14 calculation score that comes out of CMS's system.

15 BY MR. MASON:

16 Q And that answer could hold true even if a
17 RADV found the HCC that that diagnosis code maps to
18 as supported by some other chart?

19 MR. JONES: Objection. Form. Asked and
20 answered.

21 A No. Because in that scenario that code
22 wouldn't have mattered. That diagnosis wouldn't
23 have mattered, because if that diagnosis maps to the
24 HCC and there's another supported diagnosis that
25 maps to that HCC, the HCC is supported and therefore

1 the problematic code couldn't have had an impact.

2 BY MR. MASON:

3 Q But in the CMS payment model there's no
4 opportunity to add additional diagnosis codes that
5 were unsubmitted after the final submission
6 deadline?

7 A I don't think that's --

8 MR. JONES: Objection.

9 A -- what we're talking about. I think
10 we're talking --

11 THE COURT REPORTER: Was that an
12 objection?

13 THE WITNESS: I'm sorry.

14 MR. JONES: Objection. Form.

15 A I think we were talking about a scenario
16 where multiple codes support an HCC or multiple
17 codes were submitted and -- I'm sorry.

18 Please clarify your question, because I
19 think we got something lost there.

20 BY MR. MASON:

21 Q Why don't we come back to that?

22 A diagnosis code can be validated in RADV
23 by any medical record that's presented by the MAO
24 for RADV; right?

25 A You mean an HCC can be validated?

1 Q Fair enough.

2 A Yes. So an HCC can be validated by any of
3 the -- I think up to five different records that a
4 MAO may provide to the RADV auditors.

5 Q You -- you object to the phrase a
6 diagnosis code being validated in RADV?

7 MR. JONES: Objection. Form.

8 A Well, what I'm saying is that submissions
9 aren't made to support individual diagnoses
10 necessarily. Support -- submissions are made to
11 support the HCC, because the level at which the RADV
12 audit is being performed.

13 BY MR. MASON:

14 Q But you consider a diagnosis code to be
15 validated in RADV if RADV auditors find any other
16 diagnosis code that maps to the same HCC; right?

17 MR. JONES: Objection. Form. Asked and
18 answered.

19 A Yeah. I tried to be clear on what my
20 calculations are saying. They're saying that when
21 I'm calculating what we've called a validation rate
22 at the diagnosis code level, if the HCC to which the
23 diagnosis maps is validated, then I count that in
24 that rubric as a validated diagnosis.

25 I'm not saying that that specific -- any

1 specific diagnosis code from a specific provider on
2 a specific date was validated.

3 What I'm saying is that either all of
4 those diagnoses were supported or had no impact on
5 payment.

6 BY MR. MASON:

7 Q Okay. So CMS allows MAOs to go and
8 investigate all of the members' medical records for
9 the whole year and submit up to five medical records
10 that the MAO believes supports the HCC; right?

11 MR. JONES: Objection. Form.

12 A That's generally consistent with my
13 understanding. Again, not something I studied in
14 detail, but that sounds right.

15 BY MR. MASON:

16 Q Even if none of those medical records are
17 associated with any RAPS submission that the MAO
18 made?

19 MR. JONES: Objection. Form. Asked and
20 answered.

21 A Yes. My understanding is that the MAO can
22 support -- can submit any medical records in support
23 of the HCC and they don't necessarily need to relate
24 to a specific diagnosis that was submitted. So
25 there could be another record that supports an

1 unsubmitted diagnosis code that gets submitted by
2 the MAO and therefore yields a validated HCC from
3 the RADV auditors.

4 BY MR. MASON:

5 Q So it's possible to be validated in RADV
6 even if no diagnosis codes that map to that HCC were
7 adequately documented in the specific medical record
8 that was associated with the RAPS submission?

9 MR. JONES: Objection. Form. Asked and
10 answered.

11 A It is possible that -- that a RADV auditor
12 considers a record that is not associated with a
13 submitted diagnosis code and finds that record to
14 support the HCC.

15 BY MR. MASON:

16 Q And did you do anything to analyze whether
17 the RADV audits that you reference in your opinion
18 made any finding about the specific medical record
19 from the face-to-face encounter associated with
20 United's submission to CMS?

21 A As I think we've discussed, we can't know
22 which specific diagnosis codes the RADV auditors
23 looked at. What I know is that the RADV auditors
24 validated the HCC.

25 Q Sorry. No. I'm not asking about which

1 specific --

2 A Oh.

3 Q -- diagnosis code here.

4 I'm asking about --

5 A Sorry.

6 Q -- which specific medical record.

7 So my question is: Did you do anything to
8 analyze whether the RADV audits that you reference
9 in your opinion made any finding about the specific
10 medical record from the face-to-face encounter that
11 was associated with United's submission to CMS?

12 A I have not looked at the medical records
13 that the HCC -- I'm sorry -- that the RADV reviewers
14 reviewed at all. I mean, that's really not relevant
15 to my analysis.

16 Q Okay. So you haven't looked at the
17 medical records; right?

18 A That's correct, yeah, nor has
19 Dr. Garthwaite.

20 Q But have you done anything to analyze
21 whether the RADV audits that you reference in your
22 opinion made any finding about the specific medical
23 record from the face-to-face encounter associated
24 with United's submission to CMS?

25 A I haven't looked on a specific basis. I

1 have to conclude that the RADV auditors saw a
2 medical record that they agreed supported the HCC.
3 I don't know which one they saw.

4 Q You don't know which one they saw and so
5 you don't know whether it was the same -- whether it
6 was the same one that was associated with United's
7 submission?

8 MR. JONES: Objection. Form.

9 A There could be dozens that were associated
10 with United's submission. So I don't know which one
11 you're talking about when you say one.

12 BY MR. MASON:

13 Q But you don't even know if it was any of
14 those dozens?

15 A That's correct. I -- as I've said, I
16 don't know which medical record the RADV auditors
17 relied on to conclude that the HCC was supported.

18 And, again, that wasn't relevant to my
19 analysis which is really about whether or not these
20 diagnoses had any payment impact.

21 Q And so you're not making an opinion
22 that -- you're not offering an expert opinion that
23 the RADV results show that United's chart reviewers
24 missed codes that were actually supported by the
25 charts that they were looking at; right?

1 MR. JONES: Objection. Misstates the
2 testimony. Form.

3 A Yeah. I don't think I know on that front.
4 I know that the RADV auditors found codes that were
5 supported but not submitted. I don't know the
6 extent to which those may have been ones that were
7 on charts that were reviewed as part of chart
8 review.

9 BY MR. MASON:

10 Q So it could be that the chart reviewers
11 didn't miss anything on the chart that they
12 reviewed, but that RADV reviewers found it on some
13 other chart?

14 A I think that's one possibility.

15 Q Okay. And you don't know -- it's one
16 possibility and you don't know, one way or the
17 other, whether it's correct?

18 MR. JONES: Objection. Form.

19 A Yeah. I don't think anybody knows which
20 charts the RADV -- I'm sorry -- yeah -- the RADV
21 auditors reviewed and -- and concluded on.

22 BY MR. MASON:

23 Q And you've also mentioned, I think a
24 couple of times, that RADV accounts for or credits
25 MAOs for additional supported and unsubmitted HCCs

1 that they identify in the charts that they look at
2 in RADV; right?

3 A Yes, that's right.

4 Q You agree that that's not part of the CMS
5 payment process; right?

6 MR. JONES: Objection. Form. Asked and
7 answered.

8 A When you say CMS payment process, can you
9 just be more specific what you mean there?

10 BY MR. MASON:

11 Q I'm referring to the process by which
12 we -- that we discussed earlier today by which CMS
13 pays monthly payments to MAOs based on the diagnosis
14 data and demographic information that MAOs submit to
15 CMS for risk adjustment.

16 A To my knowledge, the -- the mechanics of
17 that system do not consider diagnoses that haven't
18 been submitted. But I do think that the RADV
19 findings with respect to supported but unsubmitted
20 diagnoses and their related impact is relevant to an
21 evaluation of whether an MAO has been paid too much.

22 Q And so the question you were assessing was
23 not how would -- the payments had been computed
24 differently had the diagnosis codes that were
25 unsupported been deleted, understanding you have

1 about to make sure that we get to the right
2 determinations on those.

3 BY MR. MASON:

4 Q So walk me through how that -- how that
5 works.

6 A I think I just did. Sorry. That's the --

7 Q Oh, can you add any more specificity to
8 how -- to how -- how that process ultimately arrives
9 at a conclusion whether the provider -- the codes
10 recorded by the provider are documented or
11 supported?

12 A Sure. And, again, I -- I thought I
13 covered this.

14 But so -- you know, as one example, if I
15 have the parallel review process: One coder looks
16 at it; another coder looks at it. It may be the
17 case that one coder says, I don't think this code
18 was supported. And the other one thinks that was
19 supported.

20 In that circumstance then I would convene
21 the coders and say, let's -- you know, let's go
22 through the medical record as a group and let's
23 figure out, you know, why one of you found it and
24 one of you didn't, to make sure that we've actually
25 got it right.

1 And then through that process -- with me
2 essentially as facilitator, but not as coder -- we
3 would reach the conclusion as to whether or not the
4 code that we were reviewing was actually supported.

5 MR. MASON: Okay. Good time for a break.
6 Why don't we go off the record here?

7 THE VIDEOGRAPHER: We are going off the
8 record. The time is 3:19 p.m.

9 (Recess taken from 3:19 p.m. to 3:44 p.m.)

10 THE VIDEOGRAPHER: We are now back on the
11 record. The time is 3:44 p.m.

12 BY MR. MASON:

13 Q Mr. Renjilian, before the break we were
14 talking about your experience supervising teams and
15 conducting inter-rater reliability.

16 A Yes.

17 Q Is that -- am I saying that right?

18 A You are, yes.

19 Q When you -- in your experience in IRR --
20 can I call it that?

21 A Sure.

22 Q Are -- are the reviews being done blind?

23 MR. JONES: Objection. Form. Foundation.

24 A So there -- there are going to be sort of
25 different approaches, but one of the approaches I

1 discussed was -- I think what I would characterize
2 as a blind approach to the extent that I would have
3 two different reviewers independently reviewing the
4 same record and then comparing the results that they
5 each independently came up with. And that's one of
6 those quality control techniques that I utilized.

7 BY MR. MASON:

8 Q Okay. And you mentioned that if those
9 reviewers disagree, then you have a process for
10 convening them together and working out the
11 disagreement; right?

12 A Correct.

13 Q And if both of them agree that a code is
14 supported, what happens?

15 A Then we would conclude that it was
16 supported.

17 Q And if neither of them record a code is
18 supported, what happens?

19 A Then we would conclude that -- that
20 whatever the code is and whatever kind of claim
21 is -- is not supported or --

22 Q Without any other steps?

23 MR. JONES: Objection. Form.

24 A Again, I'm speaking in general terms.

25 There -- there can be other steps, you

1 know, in theory.

2 So, for example, if we presented the
3 interim results of our work to the client and the
4 client said, well, hold on a second, you know, that
5 can't be right, or, look, we found in this cabinet
6 another medical record.

7 That kind of thing could get considered in
8 the process as well.

9 But, yeah, generally speaking, part of the
10 point of that kind of parallel process is that if
11 they both agree on a finding, you can be pretty
12 comfortable that that's the appropriate finding and
13 if they disagree, you need to figure that out.

14 BY MR. MASON:

15 Q We're still in your rebuttal report. I'd
16 like to go to Paragraph 37. You say: The notion
17 that valid diagnosis codes can nonetheless be missed
18 by Chart Review coders is further supported by
19 the --

20 And then you refer to the RADV
21 underpayments; right?

22 A Yes, yeah. That's a summary of the -- of
23 that first couple of lines of Paragraph 37.

24 Q And can you identify any result from the
25 RADV overlap that shows that a Chart Review coder

1 A This was the publicly disseminated result
2 of their audits.

3 Q Your understanding is that these results
4 were publicly disseminated?

5 A Well, I know that they were reflected
6 within a RADV audit summary that -- that I have
7 referenced in my report. I don't actually recall
8 whether that was generally publicly available,
9 available only through a FOYA request. I don't
10 recall exactly how it was obtained.

11 Q Why -- why did you refer to it as publicly
12 disseminated?

13 A Well, I apologize if that's a
14 misstatement. My understanding was that that
15 information is available and it's been incorporated
16 into my work.

17 Q Okay. So your understanding is that this
18 was a finding by CMS?

19 A Yes, that the results of their RADV audits
20 showed that 13 of those 15 contracts had negative
21 net recovery amounts or negative recovery amounts.

22 Q And do you have an understanding whether
23 that result was finalized by CMS?

24 MR. JONES: Objection. Form.

25 A I don't know what the current status is or

1 whether any appeals that United may have pursued
2 with respect to the findings of that -- of those
3 audits, you know, may also impact those results. So
4 I don't know.

5 BY MR. MASON:

6 Q You don't know that CMS considers those
7 preliminary results?

8 MR. JONES: Objection. Form.

9 A I do under -- I guess I do understand that
10 they are not final-final. My corresponding
11 understanding would be that they're not likely to
12 get worse from the MAO's perspective, but, rather,
13 that they are open to an appeal process that can be
14 initiated by the MAOs which may reverse some of the
15 adverse findings from those audits.

16 BY MR. MASON:

17 Q So let me just back up.

18 Do -- do you have an under --
19 understanding whether these results were finalized
20 by CMS?

21 MR. JONES: Objection. Form. Asked and
22 answered.

23 A I don't believe that they were
24 final-final.

25 BY MR. MASON:

1 whether the financial impact of deletes should be
2 offset by recalculating MLR remittances?

3 MR. JONES: Objection. Form.

4 A Not necessarily, because I think what
5 we're looking at here is, in some respects, a
6 but-for world.

7 So, in other words, modeling -- I think in
8 Dr. Garthwaite's work he's modeled what he believes
9 reimbursement might have looked like had these
10 things been deleted. And in that process, among
11 other things, as we discussed earlier, has taken
12 into account unsubmitted codes that were never
13 submitted, by definition, but that he's factored
14 those into his analysis because they could have been
15 taken into account at the time, had things
16 progressed the way he believes they should have
17 progressed.

18 So the basis for my MLR calculation here
19 is similar to say, you know, had all of that
20 happened, then also there would have been this
21 impact on the MLR calculation.

22 It's similar, I think, in many respects to
23 the work that he did around the risk corridors in
24 Part D, taking that into account in his work. So
25 this is predicated on the notion of if at the time

1 DISCLOSURE OF COURT REPORTER

2
3 Pursuant to Article 10.B of the Rules and
4 Regulations of the Board Of Court Reporting of the
5 Judicial Council of Georgia, I make the following
6 disclosures:

7 That I am not disqualified for a
8 relationship of interest under the provisions of
9 OCGA Section 9-11-28(c); that I am a Georgia
10 Certified Court Reporter; that I am a representative
11 of MLowe Reporting, LLC; that MLowe Reporting, LLC,
12 was contacted by Regency-Brentano, Inc. to provide
13 court reporting services for this deposition; that
14 all financial arrangements beyond the usual and
15 customary rates have been disclosed and offered to
16 all parties; and that I will not be taking this
17 deposition under any contract prohibited by Georgia
18 law.

19
20 This the 22st day of March 2024.

VOLUME I
VIDEOTAPED RULE 30(b)(6) DEPOSITION OF
OPTUMINSIGHT, INC. AND UNITEDHEALTHCARE, INC.,
BY THEIR DESIGNEE, KATHLEEN O. BAKER

Washington, D.C.
May 30, 2023

Reported by:
Misty Klapper, RMR, CRR
Job No.: 982005

1 are you referring to?

2 A. UnitedHealthcare's risk adjustment
3 health plan members, Medicare Advantage health
4 plan members.

5 Q. And you're here today to testify
6 about certain aspects of Optum's chart review
7 program; is that right?

8 A. The retrospective chart review
9 program, yes.

10 Q. Okay. So broadly speaking, what is
11 Optum's retrospective chart review program?

12 A. Optum's retrospective chart review
13 program is a program where we submit a more
14 complete health status from medical records
15 collected on a member for appropriate payment
16 from CMS.

17 Q. Okay. So what is the purpose of
18 Optum's chart review program?

19 A. To submit more complete health
20 statuses to CMS on risk adjustment members.

21 Q. Okay. And what do you -- what do you
22 mean when you say more complete risk adjustment

1 MS. MADDUX: Objection,
2 mischaracterizes testimony.

3 THE WITNESS: As part of the
4 retrospective chart review program we have
5 quality assurance's programs that look at
6 what our coders code and ensure -- to
7 ensure or to work towards a 95 percent
8 industry standard, which is what we all
9 do.

10 BY MS. ZUPAC:

11 Q. A 95 industry -- a 95 percent
12 industry standard in terms of accuracy?

13 A. Correct.

14 Q. Okay.

15 A. For what our coders code.

16 Q. Okay. I just want to make sure that
17 we're operating under the same definition of
18 accurate.

19 What is -- what is Optum's
20 understanding of the term accurate?

21 A. For -- for -- well, it -- it would
22 vary. And if I could go to my --

1 And then once we get validation from
2 there, typically we either fax or we would secure
3 E-mail the complete list of the members. And
4 then, based upon the number, we'd work with them
5 to schedule either on site or they could
6 themselves decide to send us the charts them --
7 back because they don't want people -- or they
8 wouldn't want somebody on site or various
9 permutations of that.

10 Q. Okay. And prior to this retrieval
11 process that you just described, there is a chart
12 targeting process, correct?

13 A. Correct.

14 Q. Okay. So Optum began by targeting
15 certain charts to pull, correct?

16 A. Began chart review?

17 Q. Yes.

18 A. We would -- actually, as part of the
19 targeting -- targeting was one of the first
20 steps, yes, not the -- not the first, first step,
21 because there's suspecting that you have to do
22 and then out of suspecting you go into targeting.

1 But, yes, it was part of that.

2 Q. Okay. So we can actually go
3 backwards in time.

4 You mentioned that the first step
5 that Optum did was suspecting.

6 A. Um-hmm.

7 Q. And what is suspecting?

8 A. You know, part of suspecting was just
9 taking a look at the whole universe of -- of
10 members. And so you think about that, it's like
11 the whole universe and then targeting as you're
12 picking specific ones, right?

13 And so, like, from a suspecting
14 perspective, we'd take a look at information that
15 we have from CMS on -- on -- like, for instance
16 from the MOR, the Model Output Report, or other
17 CMS documentation that would tell us what health
18 statuses a member has, had either in the prior
19 year or the current year.

20 We would look at lab information.
21 We'd look at medications. We'd look at encounter
22 information or claims information if we had it,

1 knowing that, again, this information, especially
2 if it comes from an MOR, could have come from
3 other health plans, right, because the member
4 could have not been in our health plan the prior
5 year.

6 You know, we take a look at
7 information such as, like, disease management
8 programs that our members belong to. So, like,
9 you know, if someone was in diabetes, they would
10 probably be in a diabetes program; cancer, an
11 oncology program. You know we take a look at
12 certain information like that.

13 And then, you know, as we look at
14 information regarding the different types of --
15 of health statuses that member either previously
16 had or currently has or how they interact with
17 one another, we would then compare that to the
18 claims information that we would have.

19 Or, in some cases, if we didn't have
20 claims information -- because, again -- I mean,
21 again, we -- we may not -- get a capitated
22 provider, a provider that -- or somehow we don't

1 have information on that member, we may have just
2 made a request to a -- an assigned provider
3 panel, if that makes sense, patient panel to a
4 provider.

5 And then once we get to the universe
6 of what member-provider combinations there could
7 be, then we would go through a -- a -- you know,
8 a targeting process of saying okay, let's look
9 for these member-provider combinations based upon
10 health statuses, based upon their -- their health
11 risk status.

12 Q. Okay.

13 MS. ZUPAC: I'm going to pull up a
14 new exhibit, Tab 4. So this exhibit will
15 be marked 608.

16 (Exhibit 608 was marked for
17 identification.)

18 THE WITNESS: Thank you.

19 BY MS. ZUPAC:

20 Q. So this exhibit was produced in
21 native, so the individual slides don't have Bates
22 numbers. But the Bates number of the document is

1 of go, so that the question is not compound, and
2 talk about each one.

3 Generally speaking, I -- I'm trying
4 to ask whether or not Optum targeted charts for
5 outpatient provider visits, inpatient charts from
6 hospital admissions, nursing homes or any other
7 type of chart. So that's generally what I'm
8 getting at.

9 A. We would look at the CMS level
10 face-to-face encounter types, which are -- which
11 do include some of the examples that you just
12 gave or the examples that you just gave.

13 Q. Okay. So what's -- what -- what
14 types of visits specifically did the face-to-face
15 encounters include?

16 A. Physician encounters, in-office
17 encounters or provider encounters, let's say,
18 like if it's a nurse practitioner, and then,
19 like, hospital reviews like you were just
20 describing. Those are some of the examples.

21 Q. Are there any other examples that you
22 can think of?

1 from CMS.

2 Q. And we've been discussing Optum's
3 suspecting and targeting processes, correct?

4 A. Yes.

5 Q. Okay. Did -- did UnitedHealthcare,
6 Inc. -- was UnitedHealthcare, Inc. aware that
7 Optum was using suspecting logic to target
8 particular charts for retrieval?

9 A. We would have conversations with
10 UnitedHealthcare on the logic we would use and
11 targeting to make sure we were generally aligned.

12 Q. Okay. And did UnitedHealthcare, Inc.
13 sign off on or approve the suspect logic that
14 Optum used?

15 A. We would have conversations with them
16 and we would generally receive their approval on
17 the -- on the logic that we would deploy.

18 Q. Okay. And did Optum decide which
19 charts to target for retrieval based on their
20 chart score group?

21 A. Chart score group was a consideration
22 on doing retrievals, but it was not the only

1 consideration.

2 So, for instance, timing was a
3 consideration, like meaning -- the way the risk
4 adjustment program works, you have only until
5 January of the following year after the year that
6 the data collection period ended to submit that.
7 So you have about 13 months, you know, to submit
8 it.

9 And so with claims, if we're using it
10 for targeting and claims lag and -- and run out,
11 sometimes targeting wouldn't start until May of a
12 year and retrievals wouldn't start until summer.
13 So you had less time to do retrievals. Right?
14 So just the timing of things would have had a
15 consideration. Other things would have been
16 operational capacity.

17 So, you know, you could retrieve all
18 the charts you want, but if you can't code the
19 charts, then there's no -- you can't -- you can't
20 code them. And so we would also have to take a
21 look at seeing if we only had the ability to code
22 1,000 charts, you know, you know, which 1,000

1 does it make sense for us to look after.

2 And there could have been other
3 constraints, such as onshore/offshore
4 restrictions. So not all charts could be sent
5 offshore for coding. And so there is kind of
6 business rules that we had to take a look at, if
7 that makes sense.

8 So there's other things that we took
9 a look at as well.

10 Q. Um-hmm. The one thing you mentioned
11 is that Optum may have limited resources or
12 certain resources to code charts, correct?

13 A. We have -- we had operational
14 considerations when you're looking at it,
15 production plans and operational capacity plans,
16 yes.

17 Q. Okay. So did Optum use the chart
18 score group information as part of its
19 consideration for which charts to retrieve?

20 A. We -- chart score group was one of
21 the considerations, but not the only
22 consideration.

1 going to be 100 percent complete in what
2 they pick up.

3 BY MS. ZUPAC:

4 Q. And then with all the caveats that
5 you've mentioned on multiple answers, was it also
6 UnitedHealthcare, Inc.'s expectation that coders
7 working on its retrospective chart review
8 programs would code as accurately as possible?

9 MS. MADDUX: Objection, form,
10 asked and answered.

11 THE WITNESS: Can you maybe
12 restate?

13 MS. ZUPAC: Can you read back my
14 question.

15 (The record was read as requested.)

16 THE WITNESS: I'd say UHC's
17 expectations were aligned with Optum's
18 with the fact that, you know, we both knew
19 that, you know, theory versus practice,
20 100 percent is never going to be the case.
21 But for what we -- for what our individual
22 risk adjustment coders were doing in the

1 context of retrospective chart review,
2 that our program was designed to have what
3 they were coding to be at 95 percent or
4 above accuracy.

5 BY MS. ZUPAC:

6 Q. Okay. And both Optum and HCC,
7 under -- or sorry.

8 Both Optum and UHC understood that
9 the HCCs for members submitted to CMS were used
10 to determine risk adjustment payments to the
11 Medicare Advantage organization, correct?

12 MS. MADDUX: Objection, out of
13 scope.

14 THE WITNESS: The risk adjustment
15 model underlying it is health statuses
16 tied to HCCs for appropriate payment. But
17 not all HCCs submitted to CMS are there to
18 establish appropriate payment. I mean,
19 like when -- let me clarify that.

20 It's like you could send the same
21 HCC 15 times and not -- it -- it's only
22 one of those occurrence that matters. So

1 only worked in a paper and had not
2 navigated EM&R -- sorry -- EMR, so just
3 kind of, you know, various as a good
4 practice in terms of those types of sets
5 that we'd show to them.

6 BY MS. ZUPAC:

7 Q. And in order for coders going through
8 training to move into production, they had to
9 achieve certain chart audit or quality audit
10 standards, correct?

11 A. We would -- again, in terms of
12 retrospect chart review, release a coder into
13 production after they had demonstrated their
14 ability to meet or exceed that 95 percent
15 accuracy based upon what they coded.

16 Q. And that was true of all date of
17 service years from 2008 to 2016?

18 A. The 95 percent industry standard has
19 been in effect that time frame.

20 Q. But I'm specifically asking was it
21 always Optum's policy that coders had to meet a
22 certain quality standard before they could be

1 THE WITNESS: We required that our
2 coders be certified coders. And then from
3 there, we provided them training on risk
4 adjustment coding.

5 But every coder came with varying
6 degrees of -- of experience coding and
7 then experience coding diagnosis coding.
8 Right?

9 And so when a coder started with
10 us, they may have only done
11 fee-for-service coding and done CPT and
12 REV code coding, where they only have to
13 provide, like, the primary diagnosis code
14 or something like that in order for the
15 provider to get reimbursement. Or they
16 could have been a -- again, a coder like
17 I -- I described earlier, that was more
18 familiar with cardiology. Or they could
19 have been a coder that did radiology
20 billing, which has a very finite set.

21 And so our goal of our program for
22 training was to give them a baseline so

1 that everybody was hearing the same thing,
2 to have the same training, you know, to be
3 able to get them to get them prepared to
4 be able to do their job.

5 But in regards to what your
6 question is, you know, all coders met our
7 job requirements, but they also come with
8 different levels of experience and skill
9 sets.

10 MS. ZUPAC: All right. Why don't
11 we break for lunch now. Go off the
12 record.

13 VIDEO OPERATOR: Off the record.
14 The time is 12:49.

15 (Thereupon, at 12:49 p.m. EDT, a
16 lunch recess was taken.)

17
18
19
20
21
22

1 A. I see that.

2 Q. And as you've testified, ChartSync
3 was the program used to conduct retrospective
4 chart review for dates of service 2010, 2011,
5 2012 and some of 2013, correct?

6 A. Yes.

7 Q. All right. So down at the bottom
8 there's a heading 2.5, Standard Operating
9 Procedure, and 2.5.1, Review ChartSync specific
10 coding guidelines.

11 Do you see that?

12 A. I do.

13 Q. All right. All right. So there are
14 certain instructions or notes here in bullet
15 points. So that first bullet point states one
16 date of service, DOS, is considered an encounter,
17 correct?

18 A. I see that.

19 Q. Okay. So charts could, and often
20 did, include multiple encounters or dates of
21 service, correct?

22 MS. MADDUX: Objection, form.

1 THE WITNESS: A chart could contain
2 multiple dates of services.

3 BY MS. ZUPAC:

4 Q. Okay. So I just want to go over the
5 setup in ChartSync for coding a chart, including
6 the -- multiple dates of service. So that's what
7 we're going to be going over in the next few --

8 A. Okay.

9 Q. -- set of questions.

10 This SOP also notes that an encounter
11 can have multiple diagnoses, right?

12 A. That's what it states.

13 Q. Okay. And it can also have multiple
14 error and admission codes, correct?

15 A. That's what it states.

16 Q. Okay. So this third bullet point
17 notes that coders will only code ICD-9 codes that
18 map to HCC or RxHCC codes, correct?

19 A. That's what it states.

20 Q. Because, as you've testified, there
21 were something like 15,000 ICD-9 diagnosis codes
22 and not all of them mapped to an HCC, correct?

1 A. I mean, the member name and that --
2 that -- correct. I mean, it's industry standard
3 to start with blind coding.

4 Q. But I just want to make sure I
5 understand what exactly blind coding entails.

6 A. Um-hmm.

7 Q. So -- so in blind coding a coder
8 would not be informed, for example, about
9 diagnoses that the member is suspected to have,
10 correct?

11 MS. MADDUX: Objection, form.

12 THE WITNESS: The -- in blind
13 coding a coder's given no additional
14 information, other than the image of the
15 chart to -- to code to the best of their
16 ability.

17 BY MS. ZUPAC:

18 Q. And in blind coding a coder would not
19 be informed about diagnosis codes previously
20 submitted by a provider for that member, correct?

21 A. The -- the -- in blind coding a
22 coder's is given no information.

1 do it.

2 BY MS. ZUPAC:

3 Q. Okay. And so we've been talking
4 about the recode project, but at a high level,
5 what was the recode project?

6 A. The recode project was a project
7 where we had to take another look at our charts
8 due to a new coding policy application.

9 Q. And which charts specifically were
10 subject to the recode project?

11 A. The 2012 project year charts. So
12 they are the 2011 dates of services due that
13 January 2013.

14 Q. Okay. And so the recode project
15 entailed taking charts that were coded in the
16 2012 project year and coding them again with a
17 changed coding policy?

18 MS. MADDUX: Objection, form.

19 THE WITNESS: With a new coding
20 policy application.

21 BY MS. ZUPAC:

22 Q. Okay. And those -- those charts from

1 that you're mentioning that you tried to do
2 informed coding on in the 2013 date of service
3 year were not ultimately coded using informed
4 coding, correct?

5 A. Correct.

6 Q. Okay. So then -- so then I -- I
7 guess I can modify my question to ask, are there
8 any other instances of charts successfully coded
9 using informed coding in the retrospective chart
10 review program that have not been marked with the
11 recode flag?

12 MS. MADDUX: Objection, form.

13 THE WITNESS: Not that I'm aware of
14 in regards to the retrospective chart
15 review program.

16 BY MS. ZUPAC:

17 Q. Okay. Okay. So aside from the
18 charts marked with the recode flag discussed
19 here, Optum coded charts for UnitedHealthcare's
20 chart review program using blind coding for the
21 2008 to 2016 dates of service, correct?

22 A. Yes.

1 Q. Okay. And why is that? Why were
2 the -- why were charts other than those subject
3 to the recode program coded using blind coding?

4 A. It's just how it organically evolved.
5 I mean, from the very beginning, there weren't --
6 there wasn't tools or processes or even claims
7 information available to be able to provide that
8 information from a blind -- or sorry -- from a --
9 from a -- a -- from a non-blind perspective.

10 And then as chart review --
11 retrospective chart review became industry
12 standard, it also just became industry standard
13 to do blind coding as part of its natural method
14 for doing it.

15 Q. I believe you testified about --
16 at -- at the beginning there wasn't -- there
17 weren't other data sources to -- used to use
18 informed coding, correct?

19 MS. MADDUX: Objection, form.

20 THE WITNESS: There weren't --
21 there wasn't an ability to tie, you know,
22 a -- like a -- a claim to a -- a chart,

1 second-level review, quality assurance and
2 overread, correct?

3 A. Yes.

4 Q. Okay. So what is your understanding
5 of second-level review?

6 A. Because we, you know, established
7 that every -- that not every coder -- that coders
8 won't get to 100 percent completeness and that,
9 based upon the coder's own individual skill sets
10 and experience and the complexity of the chart,
11 we would have that chart coded by a second coder
12 for a second level of review.

13 Q. Okay. And when did -- when did you
14 start performing second-level review?

15 A. In recode we started coding 2LR or
16 second-level review.

17 Q. Okay. Let me make sure I understand
18 that.

19 During the recode project that
20 you've --

21 A. During the recode project, yes.

22 Q. Okay. And then subsequent to the

1 recode project, did Optum start sending some
2 charts to second-level review automatically?

3 A. We would send charts to second-level
4 review based upon the information that we saw,
5 where again, depending upon the coder's
6 experience -- the complexity of the chart, the
7 type of chart, if it was EMR or if it was
8 handwritten -- that we would send it to
9 second-level review.

10 Q. Okay. And so the basic process for
11 second-level review is a chart was reviewed and
12 coded once by a production coder, correct?

13 Step one, sorry. Let's -- let's put
14 it that way.

15 A. Okay.

16 Q. All right. So step one of the
17 second-level review process was that a chart was
18 reviewed and coded by a production coder once,
19 correct?

20 A. First-time coding.

21 Q. Okay. It was referred to as
22 first-time coding?

1 A. First-time coding --

2 Q. Okay. All right.

3 A. -- FTC, yes --

4 Q. Okay.

5 A. -- or 1LR.

6 Q. 1LR, okay.

7 So the first step was to conduct --
8 for the -- for a coder to conduct first-time
9 coding or basically just review the code the
10 first time and using the normal blind coding
11 process, correct?

12 MS. MADDUX: Objection, form.

13 THE WITNESS: We would code the
14 chart using our standard process, which
15 was the -- a -- a blind code.

16 BY MS. ZUPAC:

17 Q. Okay. And then a chart that was
18 subject to second-level review would be assigned
19 to a different coder; is that right?

20 A. It would be assigned to a different
21 coder.

22 Q. And that -- that second-level

1 reviewer, that second-level coder, would then
2 conduct a second blind review of that chart?

3 A. A second blind review of that chart.

4 Q. Okay. And so did -- did Optum
5 perform second-level review on charts at a time
6 when ChartSync was operational?

7 A. I mean, while technically ChartSync
8 was operational during recode, we just didn't use
9 ChartSync.

10 Q. Okay. So I -- I -- I guess let me
11 ask my question a different way.

12 Was second-level review performed
13 using ChartSync at all?

14 A. Not that I recall.

15 Q. Okay. So what was the general
16 process for conducting second-level review? Was
17 it conducted on paper with results later uploaded
18 to a database or some other method?

19 A. In the 2013 project year it was based
20 upon the -- the paper and spreadsheet process,
21 yes.

22 Q. Um-hmm.

1 So then let's move on to the next
2 quality score, which is the completeness quality
3 score.

4 What does that refer to?

5 A. So the completeness quality score is
6 in -- if, in their review of the encounter
7 information, that the QA auditor identified
8 another diagnosis code that could have been coded
9 by the production coder because it would have
10 been picked up -- or sorry -- because the
11 documentation supported it, they would have noted
12 that diagnosis code and that would have been
13 noted on their -- the coder's QA feedback.

14 Q. Okay. So again, just trying to
15 figure out mechanically how this would work and
16 be calculated.

17 So start -- again, back to Mary, the
18 production coder identified diagnosis code or
19 codes that mapped to HCC 15 for diabetes.

20 A. Um-hmm.

21 Q. Okay?

22 And then the QA coder is reviewing

1 CERTIFICATE OF NOTARY

2 I, MISTY KLAPPER, the officer before whom
3 the foregoing deposition was taken, do hereby
4 certify that the witness whose testimony appears in
5 the foregoing deposition was duly sworn by me; that
6 the testimony of said witness was taken by me in
7 shorthand and thereafter reduced to typewriting by
8 me; that said deposition is a true record of the
9 testimony given by said witness; that I am neither

130 - Glossary of Terms

10 - Introduction

(Rev. 114, Issued; 06-07-13, Effective: 06- 07-13, Implementation: 06-07-13)

This manual chapter addresses the policies and operations related to the data collection for, calculation of, and use of risk scores in Part C and Part D payments through 2011. For detailed information on payment policies and formulas, refer to Chapter 8 for Part C payment (a chapter for Part D payment is forthcoming). CMS risk adjusts Part C payments made to Medicare Advantage (MA) plans and Program of All Inclusive Care for The Elderly (PACE) organizations, and Part D payments made to Part D sponsors, including Medicare Advantage-Prescription Drug plans (MA-PDs) and standalone Prescription Drug Plans (PDPs).

20 - Purpose of Risk Adjustment

(Rev. 114, Issued; 06-07-13, Effective: 06- 07-13, Implementation: 06-07-13)

Risk adjustment allows CMS to pay plans for the risk of the beneficiaries they enroll, instead of an average amount for Medicare beneficiaries. By risk adjusting plan payments, CMS is able to make appropriate and accurate payments for enrollees with differences in expected costs. Risk adjustment is used to adjust bidding and payment based on the health status and demographic characteristics of an enrollee. Risk scores measure individual beneficiaries' relative risk and risk scores are used to adjust payments for each beneficiary's expected expenditures. By risk adjusting plan bids, CMS is able to use standardized bids as base payments to plans.

30 - Statutory and Regulatory Authority for Risk Adjustment

(Rev. 114, Issued; 06-07-13, Effective: 06- 07-13, Implementation: 06-07-13)

The Medicare Advantage (MA) program provides Parts A and B services under Part C of Title XVIII of the Social Security Act ("the Act"). CMS administers risk adjusted payments to MA organizations in accordance with Subpart G of 42 CFR §422.304. This regulatory provision is based on sections 1853, 1854, and 1858 of the Act. CMS risk adjusts Part C payments made to MA plans under Section 1853(a) (3) of the Act; these rules are codified at 42 CFR 422.310. CMS risk adjusts payments to PACE organizations under 1894(d) (2).

MA plans include MA-only plans, MA-PD plans, regional plans, employer group health plans, and Special Needs Plans (SNPs). CMS risk adjusts certain demonstration plan payments, such as the Part C payments made to the dual demonstration plans (Wisconsin Partnership Program, MassHealth Senior Care Options, and Minnesota Senior Health Options and Minnesota Disability Health Options), and Social Health Maintenance Organizations (SHMOs).

CMS risk adjusts Part D payments to Medicare Advantage Prescription Drugs plans (MA-PDs), standalone Prescription Drug Plans (PDPs), and PACE organizations under 1860(d); these rules are codified at 42 CFR 423.

40 - Role and Responsibilities of Plan Sponsors

(Rev. 118; Effective: ICD-10: Upon Implementation of ICD-10, ASC X12: January 1, 2012 (for ASC X12 5010); Implementation: ICD-10: Upon Implementation of ICD-10, ASC X12: January 1, 2012 (for ASC X12 5010))

MA organizations, PACE organizations, 1876 Cost HMOs/Competitive Medical Plans (CMPs), and starting in 2012, Health Care Prepayment Plans (HCPPs) like the United Mine Workers of America Health and Retirement Funds, must submit risk adjustment data, as required by CMS.

This section provides a high-level checklist of plan requirements. Detailed information about risk adjustment data collection, submission, reporting, and validation are outlined in later sections within this chapter.

Risk Adjustment Data Submission Requirements – Plan Sponsors (Medicare Advantage Organizations (MAOs), PACE organizations, and 1876 Cost HMO/CMPs) must:

- Ensure the accuracy and integrity of risk adjustment data submitted to CMS. All diagnosis codes submitted must be documented in the medical record and must be documented as a result of a face-to-face visit. The diagnosis must be coded according to *International Classification of Diseases, (ICD) Clinical Modification Guidelines for Coding and Reporting*.
- Implement procedures to ensure that diagnoses are from acceptable data sources. The only acceptable data sources are hospital inpatient facilities, hospital outpatient facilities, and physicians. Plan sponsors are responsible for determining provider type based on the source of the data.
- Submit the required data elements from acceptable data sources according to the coding guidelines.
- Submit all required diagnosis codes for each beneficiary and submit unique diagnoses at least once during the risk adjustment data-reporting period. Submitters must filter diagnosis data to eliminate the submission of duplicate diagnosis clusters.
 - For Part B-only beneficiaries enrolled in a plan, the plan sponsor must submit diagnosis codes under the same rules as for a beneficiary with both Parts A and B. The plan should also submit *diagnosis* codes for Part A services provided under a non-Medicare contract.

If upon conducting an internal review of submitted diagnosis codes, the plan sponsor determines that any diagnosis codes that have been submitted do not meet risk adjustment submission requirements, the plan sponsor is responsible for deleting the submitted diagnosis codes as soon as possible.

- Receive and reconcile CMS Risk Adjustment Reports in a timely manner. Plan sponsors must track their submission and deletion of diagnosis codes on an ongoing basis.
- Once CMS calculates the final risk scores for a payment year, plan sponsors may request a recalculation of payment upon discovering the submission of inaccurate diagnosis codes that CMS used to calculate a final risk score for a previous payment year and that

had an impact on the final payment. Plan sponsors must inform CMS immediately upon such a finding.

50 - History of Risk Adjustment

(Rev. 114, Issued; 06-07-13, Effective: 06- 07-13, Implementation: 06-07-13)

The Balanced Budget Act of 1997 (BBA) mandated that a risk adjustment payment methodology, incorporating information on beneficiaries' health status, be implemented in the Medicare+Choice (M+C) program (now the Medicare Advantage program) no later than January 2000. Under the BBA, risk adjustment of M+C payments was initially to be based only on data from enrollees' inpatient hospital stays, with later implementation of risk adjustment based on data from additional sites of care. CMS selected the Principal Inpatient Diagnostic Cost Group (PIP-DCG) model as the risk adjustment method to be implemented in 2000. This model recognizes diagnoses for which inpatient care is most frequently appropriate and which are predictive of higher future costs.

To assist managed care organizations, CMS provided for a gradual phase-in of risk adjusted payment, initially adjusting only a portion of the total payment based on the PIP-DCG methodology - and later the CMS Hierarchical Condition Category (HCC) methodology - with the remainder still adjusted under the pre-BBA method based only on demographic information. This phase in was intended to provide more stable payments to M+C organizations.

The phase in schedule was as follows:

Payment year	MA plans	Evercare*	SHMO*	PACE and dual demonstrations*
2000-2003	10% risk/90% demographic	100% demographic	100% demographic	100% demographic
2004	30% risk/70% demographic			10% risk/90% demographic
2005	50% risk/50% demographic		30% risk/70% demographic	
2006	75% risk/25% demographic		50% risk/50% demographic	
2007	100% risk/0% demographic		75% risk/25% demographic	
2008 and later			100% risk/0% demographic	

*Note: For MA plans (formerly M+C plans), the demographic-only portion of the payment was adjusted for age, gender, Medicaid eligibility, institutional status, and working aged status. For certain demonstrations, the non-risk portion of the payment may have involved a demonstration-specific payment methodology.

ESRD risk adjustment was implemented at 100% in 2005. Part D risk adjustment was implemented at 100% in 2006.

120.2 - Submission and Flow of Risk Adjustment Data (Rev. 114, Issued; 06-07-13, Effective: 06- 07-13, Implementation: 06-07-13)

The following outlines the flow of risk adjustment data:

- Hospital/Physician submits data to MA organization using standard claims formats, or through review of medical records.
- The MA organization submits required data at least quarterly to FERAS via Direct Data Entry (DDE) or RAPS format.
- FERAS checks the file-level data, batch-level data, and first and last detail records on each Batch Record within the file.
- If any data are rejected, the rejections are reported on the FERAS Response Report.
- After passing the FERAS checks, the file is submitted to RAPS where detail editing is performed and applicable reports are generated.
- The RAPS Return File contains the entire submitted transaction and identifies errors.
- The RAPS Transaction Error Report communicates errors found in CCC records during processing.
- The RAPS Transaction Summary Report summarizes the disposition of the diagnosis clusters.
- The Duplicate Diagnosis Cluster Report identifies diagnosis clusters with the 502-error message. Duplicate clusters are accepted but not stored.
- The RAPS Monthly Plan Activity Report and Cumulative Plan Activity Report provides a summary of the status of submissions by submitter ID and plan number.
- Distributed monthly and quarterly, the Error Frequency Report provides an overview of all errors associated with files submitted in test and productions.
- RAPS database stores all finalized diagnosis clusters.
- RAS calculates the Risk Adjuster Factors by executing the CMS-HCC model.
- MARx is used in the calculation of payments and determination of plan payments.

120.2.1 - Data Exchange Requirements (Rev. 114, Issued; 06-07-13, Effective: 06- 07-13, Implementation: 06-07-13)

Prior to submitting risk adjustment data to CMS, CMS requires MAOs to:

- Complete and submit an Electronic Data Interchange (EDI) Agreement to the Customer Service and Support Center (CSSC) within 1 month of their contract's HPMS effective date.
 - o The EDI Agreement is a contract between the MAO and CMS attesting to the accuracy of the data submitted.
 - o An officer (e.g., CEO) that represents the MAO must sign the EDI Agreement
- Submit test data within three months of the HPMS effective date.
- Submit production files within four months of the HPMS effective date and continue to submit at least one time per quarter.

If the MAO uses a third party submitter:

- A Letter of Authorization on company letterhead from the plan is required indicating that the third party vendor is going to submit on their behalf.
- The MAO must complete the EDI Agreement.
- The third party submitter must complete the Submitter ID Application Form.

If the MAO establishes a new contract number, the MAO must submit a new EDI agreement. If the submitter's system successfully submitted test data previously, CMS does not require additional testing.

Note: CMS holds the MA organization accountable for the content of submissions regardless of who submits the data.

120.2.2 - Format

(Rev. 118; Effective: ICD-10: Upon Implementation of ICD-10, ASC X12: January 1, 2012 (for ASC X12 5010); Implementation: ICD-10: Upon Implementation of ICD-10, ASC X12: January 1, 2012 (for ASC X12 5010))

In accordance with CMS' 2008 Call Letter, MA organizations must submit risk adjustment data electronically using one of two formats to enable CMS to more efficiently process the data at CSSC and ensure appropriate payment under the risk adjustment payment models. MA organizations must submit data electronically using either the RAPS format or the Direct Data Entry (DDE) option. Both of these formats are used for all provider types.

Table 20 describes each field of the current RAPS file layout.

EXHIBIT P-9

CMS Manual System

Pub. 100-16 Medicare Managed Care

Transmittal: 57

**Department of Health &
Human Services (DHHS)
Centers for Medicare &
Medicaid Services (CMS)**

Date: AUGUST 13, 2004

I. SUMMARY OF CHANGES:

NEW/REVISED MATERIAL - EFFECTIVE DATE: August 13, 2004

Table of Contents - Added new line for new Exhibit 30.

Section 55 - Coverage of Clinical Trials:

In first paragraph, updated years "2002 through 2003" to read "2002 through 2005."

In second paragraph, updated reference to the Medicare National Coverage Determinations manual and the web address.

Deleted previously fourth and fifth paragraphs regarding payment of clinical trial items and services on a fee-for-service basis.

Added fifth paragraph referring reader to Exhibit 2, the Medicare National Coverage Determinations Manual, and Program Memorandum AB-01-142 for information on billing for clinical trial services.

Deleted the previously last two paragraphs which together provided reference to Program Memorandum and instructions on submitting claims for clinical trial services.

Miscellaneous changes throughout section.

Section 111.1 - Hospital Inpatient Data - Updated citation in last sentence to read "Exhibit 30" for new exhibit instead of "the section of these instructions titled Coexisting Conditions."

Exhibit 30 - Diagnostic Coding and Guidelines for Data Collection from Provider Networks - Added new exhibit.

Disclaimer for manual changes only: The revision date and transmittal number apply only to red italicized material. Any other material was previously published and remains unchanged. However, if this revision contains a table of contents, you will only receive the new/revised information and not the entire table of contents.

To aid in determining whether or not a provider is a Medicare-certified hospital inpatient facility, the M+C organization may refer to the Medicare provider number. The Medicare provider number has a two-digit state code followed by four digits that identify the type of provider and the specific provider number. Exhibit 25 outlines the number ranges for all facility types that CMS considers to be Medicare hospital inpatient facilities. If the facility's Medicare provider number is unknown, the M+C organization may verify the provider number with the facility's billing department.

Some hospitals also operate Skilled Nursing Facilities (SNFs) as separate components within the hospital or have components with "swing beds" that can be used for either hospital inpatient or SNF stays. The M+C organizations shall not submit any diagnoses for stays in the SNF component of a hospital or from swing bed stays when the swing beds were utilized as SNF beds. Stays in both of these circumstances qualify as SNF stays and do not qualify as hospital inpatient stays. If the Medicare provider number is on the incoming transaction from the facility, the M+C organization may distinguish the SNF or SNF swing-bed stays by the presence of a U, W, Y, or Z in the third position of the Medicare provider number (e.g., 11U001).

Principal Hospital Inpatient and Other Hospital Inpatient Diagnoses

The M+C organizations must differentiate between the principal hospital inpatient diagnosis and all other hospital inpatient diagnoses when coding the provider type on the risk adjustment transaction. According to the Official ICD-9 CM Guidelines for Coding and Reporting, the principal diagnosis is defined in the Uniform Hospital Discharge Data Set (UHDDS) as "that condition established after study to be chiefly responsible for occasioning the admission of the patient to the hospital for care." The principal diagnosis as reported by the hospital shall be coded as Provider Type 01, Principal Hospital Inpatient. The CMS strongly recommends that M+C organizations continue to collect electronic encounter data or claims from hospital inpatient stays to ensure the proper identification of the principal diagnosis.

The remaining diagnoses from a hospital inpatient stay shall be coded as Provider Type 02, Other Hospital Inpatient. The guidance for coding other conditions appears in Official ICD-9 CM Guidelines for Coding and Reporting, as well as in Exhibit 30.

Exhibit 30 - Diagnostic Coding and Guidelines for Data Collection from Provider Networks

(Rev. 57, 08-13-04)

Medicare utilizes ICD-9-CM as the official diagnosis code set for all lines of business. The "Official ICD-9 CM Guidelines for Coding and Reporting" provides guidance on diagnosis coding. This document provides guidelines for hospital inpatient, hospital outpatient and physician services. In accordance with this policy, CMS will utilize ICD-9

diagnosis codes in the determination of risk adjustment factors, M+C organizations must submit for each beneficiary all relevant ICD-9 codes that are utilized in the risk adjustment model. M+C organizations must submit each relevant diagnosis at least once during a risk adjustment data reporting period, with the first period being July 1, 2002 – June 30, 2003. See <http://www.cms.hhs.gov/paymentsystems/icd9/default.asp> for information regarding ICD-9-CM codes.

At a minimum, the submitted ICD-9 codes must be sufficiently specific to allow appropriate grouping of the diagnoses in the risk adjustment model. For the complete list of diagnoses used in the risk adjustment model, as well as the list of minimal ICD-9 codes required to group diagnoses for risk adjustment, see <http://www.cms.hhs.gov/healthplans/riskadj/>. In all cases, coding to the highest degree of specificity provides the most accurate coding and ensures appropriate grouping in the risk adjustment model.

M+C organizations must apply the following guidelines when collecting data from their provider networks. If the M+C organization utilizes an abbreviated method of collecting diagnoses, such as a superbill, the diagnoses may be coded to the highest level of specificity or to the level of specificity necessary to group the diagnosis appropriately for risk adjusted payments. If the M+C organization collects data using an encounter or claim format, the codes should already be at the highest level of specificity. CMS encourages M+C organizations to utilize the full level of specificity in submitting risk adjustment data. Regardless of the level of specificity of submitted diagnoses, a medical record must substantiate all diagnostic information provided to CMS.

Coexisting Conditions

Physicians and providers should use the “Official ICD-9-CM Guidelines for Coding and Reporting” (found at <http://www.cms.hhs.gov/paymentsystems/icd9/default.asp>) and Medicare fee-for-service rules when submitting risk adjustment data to M+C organizations. The official guidelines that govern those coexisting conditions that may be coded and reported by hospital inpatient, hospital outpatient and physician providers are summarized below. The guidelines for inpatient hospital stays are as follows:

“...all conditions that coexist at the time of admission, that develop subsequently, or that affect the treatment received and/or length of stay. Diagnoses that relate to an earlier episode which have no bearing on the current hospital stay are to be excluded.”

The guidelines for coexisting conditions that should be coded for hospital outpatient and physician services are as follows:

“Code all documented conditions that coexist at time of the encounter/visit, and require or affect patient care treatment or management. Do not code conditions that were previously treated and no longer exist. However, history codes (V10-V19) may be used as secondary

codes if the historical condition or family history has an impact on current care or influences treatment."

Physicians and hospital outpatient departments shall not code diagnoses documented as "probable," "suspected," "questionable," "rule out," or "working" diagnosis. Rather, physicians and hospital outpatient departments shall code the condition(s) to the highest degree of certainty for that encounter/visit, such as symptoms, signs, abnormal test results, or other reason for the visit.

9:01 a.m. Eastern

Reported by: Karen K. Kidwell, RMR, CRR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 reading this e-mail, saying that we could define
2 specific steps that a plan must take to meet
3 that requirement; for example, we could
4 self-audit -- require them to self-audit their
5 own RADV audits, or we could revive the NPRM
6 proposal we had, that if a plan is checking a
7 medical record for underpayments, they must also
8 look for overpayments.

9 BY MR. GALLAGHER:

10 Q. All right. So you -- you don't have
11 anywhere in this e-mail any reference to
12 subregulatory guidance that defines this requirement,
13 do you?

14 MS. McMAHON: Objection.

15 THE WITNESS: No, I don't reference the
16 reasonable diligence standard, because that
17 was -- that was in regulation.

18 BY MR. GALLAGHER:

19 Q. Right. And -- and you also don't say,
20 "Well, we don't need to" -- sorry, my light keeps
21 turning off.

22 You also don't say in here, "Well, we
23 don't need regulation on this to define what we mean
24 by 'reasonable diligence,' or define what the
25 requirements are, because we have manuals and -- and

1 technical guidance and other subregulatory guidance
2 out there." Right?

3 MS. McMAHON: Objection. The document
4 speaks for itself.

5 MR. GALLAGHER: I actually need the
6 witness to speak, because I can't hear the
7 document.

8 MS. McMAHON: That's interesting. Love
9 your colleagues can when they make that
10 objection.

11 THE WITNESS: So there are general
12 requirements for plans in terms of -- or
13 expectations around submitting accurate data,
14 right? So we have -- we have to have a
15 compliance program. We have attestations. We
16 have language in the managed care manual.

17 So setting aside this reasonable diligence
18 standard, there still is overall framework about
19 specifying that -- the various requirements for
20 diagnosis to be valid and, you know, what our
21 expectations are generally about plans'
22 obligations to -- to use a good faith effort to
23 submit accurate data.

24 I think what I'm talking about here is
25 specifying specific steps that we would

1 prescribe for plans to meet that obligation, and
2 whether that's requiring them to do their sort
3 of own RADV audits or reviving the medical
4 record review regulation that we -- that we had
5 not finalized.

6 BY MR. GALLAGHER:

7 Q. Right. And these were all -- so the
8 things you mention here -- and I'll go through
9 them -- are all things that you -- that would require
10 a regulation change if you wanted to set those as
11 specific requirements for plans, right?

12 MR. BULAND: Objection.

13 MS. McMAHON: Objection.

14 THE WITNESS: No, I don't think we would
15 need to do it through regulation. I suggested
16 doing it through regulation, but we had
17 specified other requirements outside of
18 regulation that were expectations for plans.

19 So it's -- we can enforce manual chapters,
20 subregulatory guidance; so it -- it doesn't just
21 have to be through regulation.

22 BY MR. GALLAGHER:

23 Q. So let's -- let's take a look at one of
24 these. You say you could, through regulation, define
25 specific steps a plan must take, at a minimum, to

1 the part of plans.

2 A. Uh-huh.

3 Q. So with that framework, is the -- was the
4 fact that -- that audits demonstrated some error rate
5 in the -- in Medicare Advantage diagnosis codings and
6 the support for codes and the support for them, was
7 that enough, in your mind, to trigger an obligation
8 to conduct medical record review, or to confirm the
9 support for diagnosis codes, above and beyond the
10 general requirement that you think exists?

11 MS. McMAHON: Objection. Vague.

12 THE WITNESS: No, I don't think so. I
13 think -- I mean, there's an understanding that
14 some subset of Medicare Advantage codes are --
15 are not going to be valid in a medical record,
16 most likely. And so the -- the fact that a plan
17 was RADV'd in one year wouldn't really change
18 that.

19 But again, it doesn't -- it's not
20 necessarily holding those plans to a higher
21 standard in subsequent years, but it doesn't --
22 it also doesn't change the underlying
23 expectation that when we're not RADV, that their
24 plan has to do -- has some proactive
25 responsibilities to take a good faith effort to

1 make sure that -- that the data that they're
2 submitting are correct.

3 BY MR. GALLAGHER:

4 Q. So earlier, you were -- you were
5 mentioning some -- I think you called it obligation
6 to -- to investigate whether codes were supported,
7 based on some knowledge a plan might have. So I want
8 to go back to that question and the process you were
9 talking about.

10 So -- so I understand it, you believe
11 that -- that in some -- in some way, if a plan has
12 reason to believe, I'll call it, that -- that codes
13 might not be supported, they have an obligation, a
14 more specific obligation to do something about that.
15 Is that right? Is that your belief?

16 A. Yes.

17 Q. And what triggers that obligation? What
18 sort of knowledge triggers this obligation, in your
19 mind? What do they have to know in order to have
20 this obligation to do more?

21 A. So we do not specify the details of what
22 "knowledge" means in our -- at least in our Medicare
23 Advantage regulations. But if -- if a plan is, for
24 example, looking at a medical record, and they don't
25 see a diagnosis that they had previously supported

1 for that medical record, that, to me, would indicate
2 there could be a problem here, and would warrant
3 additional follow-up by the plan to determine whether
4 that -- that code was actually valid or not.

5 Q. At what point in that process, if they're
6 following up, at what point does a plan have to
7 delete the code?

8 MS. McMAHON: Objection. Vague.

9 BY MR. GALLAGHER:

10 Q. Let me ask it this way: Under -- under
11 your rules, as you understand them --

12 A. Uh-huh?

13 Q. -- at what point in that process does a
14 plan have to delete the code?

15 A. So again, we have not been specific about
16 that. But if the plan has information that suggests
17 that perhaps this code is not documented, that they
18 need to take steps to double-check on whether that is
19 accurate or not. And if -- if there is still an
20 issue with it not being valid, then they need to
21 correct it.

22 So we don't -- we aren't prescriptive
23 about the five steps that the plan needs to take,
24 because you -- you can't regulate all the different
25 scenarios, the universe's scenarios. So we don't --

1 we don't get into being prescriptive there.

2 Q. Earlier I asked you about the example of
3 sort of RADV audits and whether the knowledge of --
4 of the results of those might create some obligation
5 in subsequent years. If a -- if a plan, for whatever
6 reason, has done its own internal audit for one year,
7 and -- and appreciated from that that there was a
8 certain rate at which their providers had, you know,
9 coded things that were not supported by the medical
10 records, does that, in your view, create an
11 obligation in subsequent years to do something?

12 MR. BULAND: Objection.

13 MS. McMAHON: Objection.

14 THE WITNESS: I think there -- again,
15 the -- there is -- regardless of whether they --
16 what they found in the particular year, there's
17 a general requirement and expectation that
18 they're going to take a good faith effort to
19 validate the validity of the -- of the diagnoses
20 that they submit.

21 BY MR. GALLAGHER:

22 Q. I'm -- I'm sort of setting aside what
23 you've described as a general expectation that --
24 that you believe exists for plans, and I -- I want to
25 ask more specifically: Do you at CMS -- let me put

1 have to delete it because it's not supported by the
2 radiology record, but it would still be available for
3 risk adjustment purposes?

4 A. Yes.

5 Q. And -- and therefore deleting it wouldn't
6 affect payment?

7 A. Correct.

8 Q. Do you agree that there's a difference
9 between knowing that a code is not supported by a
10 particular set of medical records and knowing that
11 that has resulted in an overpayment?

12 MS. McMAHON: Objection.

13 THE WITNESS: Yes. But our -- our
14 requirements are plans need to correct their
15 diagnosis data regardless of whether there's a
16 payment impact or not. So it's not up to them
17 to decide, "I'm not going to -- I'm not going to
18 correct this one because there's no payment
19 impact."

20 The data need to be corrected, and then it
21 will flow through our payments, and it may or
22 may not change, you know, the payment to the
23 plan. But the -- the plan needs to submit the
24 accurate diagnosis data, and then it flows
25 through our -- you know, our payment

1 methodology.

2 BY MR. GALLAGHER:

3 Q. Right. What I'm getting at is the
4 question that's kind of at issue in this lawsuit,
5 which is whether there's an overpayment. And that's
6 a different issue than whether you need to correct
7 the data, right?

8 MS. McMAHON: Objection.

9 BY MR. GALLAGHER:

10 Q. You can answer.

11 A. So -- I'm sorry, can you state your
12 question again?

13 Q. Yeah. What I'm trying to get at is that
14 there's a difference between whether there's an
15 overpayment, which is the -- which is what is alleged
16 to have happened in this lawsuit, and whether there
17 is simply a data correction that needs to be made for
18 a particular code or -- or set of data.

19 MS. McMAHON: Objection.

20 BY MR. GALLAGHER:

21 Q. Do you understand that, that distinction?

22 A. Yes. So there will be -- there could be
23 some set -- set of codes that get corrected and don't
24 have a payment impact.

25 Q. Yeah. Put another way, you can have data

1 A. Yes.

2 Q. So if you go to the next page, the bottom
3 section, "Model Calibration Factor," this is the
4 section where you're discussing that issue, the
5 extrapolation methodology and whether to apply a
6 fee-for-service adjuster, right?

7 A. Correct.

8 Q. And a fee-for-service adjuster, if you
9 could, just explain to us what that is.

10 A. So the -- the concept of the
11 fee-for-service adjuster is that in -- when we audit
12 a plan for RADV, we were taking a sample, reviewing
13 that sample of beneficiaries, reviewing the medical
14 records for all the diagnoses for those
15 beneficiaries, computing an error rate, and
16 extrapolating those results to the entire payment for
17 the plan.

18 So we were, in that context, basically
19 enforcing a -- what I call a perfection standard, of
20 100 percent enforcement of the -- all the risk
21 adjustment rules that -- that we have.

22 Plans had raised concerns, when we
23 announced that we were launching the RADV audits and
24 began them, that the data that we used to calibrate
25 the risk adjustment model is based on fee-for-service

1 spending and diagnostic information from the
2 fee-for-service program.

3 Plans raised the concern that we were not
4 subjecting the fee-for-service data that we were
5 using in the model calibration to a RADV-like audit.
6 So the model would include diagnoses that --
7 presumably some subset, that if we were to RADV-audit
8 those data, we would determine, don't -- you know,
9 requirements aren't -- aren't valid for risk
10 adjustment purposes.

11 And so the plans made -- raised that
12 concern, and made the argument that that -- because
13 there was this disconnect in the documentation
14 standard that we were applying and enforcing,
15 effectively through this extrapolation in RADV, and
16 the documentation and lack of auditing of that
17 documentation for the model calibration, that there
18 was a difference there; and that there was a -- there
19 would be a payment impact if you were to recalibrate
20 the model based on a RADV-like audit instead of
21 fee-for-service data.

22 So within the context of RADV, we
23 concluded that -- that conceptual argument made
24 sense, and that we should include a fee-for-service
25 adjuster. That was our recommendation, to include a

1 fee-for-service adjuster to take into account that
2 different enforcement of the documentation standard
3 between the two data sets in the extrapolation
4 methodology as part of the RADV program.

5 Q. All right. So to unpack that just a
6 little bit -- and I won't try to get the technical
7 details right. But for reasons having to do with the
8 fact that you were not conducting a RADV-type audit
9 of the fee-for-service data, the objection was raised
10 that if you were to extrapolate from the RADV audit
11 to change the payment to Medicare Advantage programs,
12 you would be disadvantaging them because of that
13 difference in documentation standard, right?

14 MS. McMAHON: Objection.

15 THE WITNESS: I'm not sure I would say
16 "disadvantaging." I think it's -- it's that we
17 should take into account, if we're applying this
18 standard uniformly throughout the whole payment
19 to the plan, that the recovery amount will be
20 different if we --

21 BY MR. GALLAGHER:

22 Q. Right.

23 A. -- were to audit the data.

24 And so this is an adjustment to take that
25 into account.

1 validates the accuracy of codes already submitted.

2 We did not finalize that regulation. So
3 we do not have a specific recipe for how plans are
4 supposed to meet their obligation of -- under the
5 False Claims Act, and our various requirements about
6 making sure their data are accurate. But we don't
7 have a specification that says you have to do
8 chart -- specifically, you have to do chart review,
9 and you have to do a specific kind of claims
10 verification program.

11 Q. Right. You've never specified in any
12 guidance, rule, regulation, subregulatory document,
13 that plans are required to look both ways?

14 MR. BULAND: Objection.

15 MS. McMAHON: Objection.

16 THE WITNESS: I would say -- well, that's
17 very broad. I would say there's a requirement
18 that plans have a good -- good faith compliance
19 program to validate the accuracy of diagnoses.
20 Doesn't have to be 100 percent; we're not saying
21 they have to do like a RADV of everything. But
22 they have to have some kind of protocols,
23 procedures in place to assess the accuracy of
24 the data that they're submitting.

25

1 BY MR. GALLAGHER:

2 Q. Doesn't even have to be a chart review,
3 though, I think you said earlier, right? You don't
4 require chart review?

5 A. Not specifically, no.

6 Q. And so a plan of deciding how to meet the
7 obligation that you say exists, you know, generally,
8 doesn't have any guidance from CMS that says
9 specifically, you have to look both ways, or design a
10 chart review program to validate the diagnoses
11 reported by --

12 MS. McMAHON: Objection.

13 BY MR. GALLAGHER:

14 Q. Right?

15 A. We don't say specifically, "Here are the
16 steps that you need to take." But we -- but we do
17 say, "If you have information that suggests that a
18 diagnosis isn't valid, that you've already submitted,
19 you need to take steps to correct it; to find out if
20 it's right or wrong, and to correct it if it's not.

21 Q. What sort of -- what sort of information
22 have you told plans triggers that obligation?

23 A. So we have not been specific, because
24 there are all sorts of circumstances and scenarios,
25 and didn't -- we didn't want to be prescriptive. And

1 so we have not done that. So there's general
2 obligation. We have not specified, "Here's the, you
3 know, the specific steps in all various scenarios
4 that you have to follow to meet your obligations
5 under the False Claims Act, or the other requirements
6 that we have, and specific to the MA program."

7 Q. Right. So you've not -- CMS has not
8 specified what type of information a plan might have
9 that would trigger an obligation to do some
10 additional assessment, right? You have not --

11 MS. McMAHON: Objection.

12 BY MR. GALLAGHER:

13 Q. You have not been specific in saying,
14 "Here's the type of thing that would trigger this
15 obligation to do something more"? Right?

16 MR. BULAND: Objection.

17 MS. McMAHON: Objection.

18 THE WITNESS: That's correct. We have not
19 been that specific.

20 BY MR. GALLAGHER:

21 Q. Have you -- have you generally informed
22 plans that there is such an obligation? And if so,
23 where?

24 A. Yes. So first we have in our regs that
25 the plans have to have a compliance program to do

1 internal monitoring.

2 We also have the managed care manual,
3 where we say they have to implement procedures to
4 make sure that the data that they submit for -- the
5 encounter data, which includes the diagnosis data --
6 have to be accurate.

7 We also have plans attest, every time they
8 submit data, that the data are accurate to their best
9 knowledge, information, and belief.

10 So there's -- and then we have participant
11 guides for encounter data submission, where we also
12 flag that if you're looking -- if you're looking at
13 records, and you're seeing additional codes, and
14 you're not -- you need to make sure that you're
15 correcting anything that isn't documented.

16 So we've said in multiple places, the
17 standard for an accurate diagnosis data is -- it has
18 to be documented in the medical record. And we've
19 said in multiple places, and I think including in the
20 contract for the plan, there is -- you can't just do
21 nothing. You have to do something. We have not been
22 specific about -- "Here's the precise formula"; but
23 you must take steps, good faith steps, to ensure that
24 the data that you're submitting is accurate.

25 Q. So just a few follow-up questions on that.

1 have identified that a code is not supported when
2 they know that there's no support for it in the
3 medical records, right?

4 MS. McMAHON: Objection.

5 BY MR. GALLAGHER:

6 Q. Let me see if it helps if I direct your
7 attention to the last full sentence on the -- in the
8 left-hand column: "Under this provision, the day
9 after the date on which the organization has
10 confirmed and identified overpayment -- because the
11 organization knows that the diagnosis is not
12 supported by documentation -- is the first day of the
13 60-day period for reporting." Right?

14 A. Right. So I -- I would say there that our
15 intention there was not to say you don't have to
16 correct diagnosis data because there's another
17 similar diag for that condition elsewhere.

18 Our point with this was, if you have a
19 payment -- a payment diagnosis -- or a diagnosis that
20 feeds into a payment HCC, you don't have to put a
21 dollar amount on it; that's -- that needs to be
22 corrected.

23 And not trying to make this nuanced
24 interpretation of -- "Well, yeah, it's a payment HCC,
25 but there's another diagnosis, so I don't have to

1 correct it."

2 Like that's -- that wasn't our intent in
3 this preamble language.

4 Q. Just focusing on the -- the obligation to
5 delete or correct the diagnosis code, without regard
6 to that.

7 A. Uh-huh.

8 Q. What you're telling -- the guidance you're
9 giving to plans here is that that obligation to
10 delete the code arises when they've confirmed and
11 know that there is no support for the code in the
12 medical records. Right?

13 MS. McMAHON: Objection.

14 THE WITNESS: Yes.

15 BY MR. GALLAGHER:

16 Q. Not when they suspect it might be,
17 but when they --

18 A. Well, no, I'm sorry. When -- we weren't
19 getting into what it means to know here. It was the
20 circumstances where there's a risk adjustment
21 diagnosis that's problematic, our point with this was
22 we're not going to have -- you don't need to do the
23 math of how it might affect payment. That -- that is
24 enough to say that needs to be corrected, and that's
25 when the clock starts. That was our intent with this

1 those comments in the preamble.

2 Q. And -- and to the extent that there is any
3 decision made about whether to finalize the rule or
4 withdraw it, do you have to then go through the same
5 chain of command of policymakers that you went
6 through to propose the rule in the first place?

7 A. So, yes. The final rule then goes through
8 the clearance process, where policy officials are
9 briefed on the comments, and any recommendations for
10 finalizing or modifying or -- however, you know,
11 whatever the scope of options for the final rule are.

12 Q. And you have the opportunity in that
13 process to make a recommendation about whether the
14 rule should be finalized, whether it should be
15 modified, or whether it should be withdrawn?

16 A. Uh-huh.

17 MS. McMAHON: Objection.

18 THE WITNESS: Yes.

19 BY MR. GALLAGHER:

20 Q. In the case of the medical record review
21 rule, what was your recommendation after the comment
22 period?

23 A. So we did not make a recommendation,
24 because a -- a decision was made that -- as I
25 mentioned, this -- this was a provision in a much

1 larger rule that had some provisions that were -- got
2 a lot of stakeholder concern and pushback. And so
3 the direction that we received was that the rule --
4 the final rule needed to include only those
5 provisions that had wide -- you know, widespread
6 stakeholder support.

7 So we did not move forward then with the
8 medical record review provision, not because we
9 didn't think it was the right thing to do or the
10 right policy, but because it had mixed reactions from
11 stakeholders. It didn't meet those criteria, and so
12 we didn't include it in the final rule.

13 Q. So you didn't withdraw -- you didn't make
14 the determination that the rule wasn't necessary?

15 MS. McMAHON: Objection.

16 BY MR. GALLAGHER:

17 Q. You made the determination that -- or
18 somebody made the determination, as a policy matter,
19 that they weren't going to go forward with it because
20 it had faced opposition?

21 MR. BULAND: Objection.

22 MS. McMAHON: Objection.

23 THE WITNESS: So we didn't make a
24 recommendation one way or the other, because of
25 the decision about what the scope of the final

1 BY MR. GALLAGHER:

2 Q. Now, there's a reference in -- still on
3 Exhibit 1061, on that first page, there's a reference
4 in that same Bullet Number 4, under "Meeting
5 Summary," to UHG representatives indicating that "in
6 light of the proposed rule and other discussions with
7 CMS, UHC had suspended its claims verification
8 process pending a decision by the company of whether
9 it was appropriate to submit additional deletes to
10 CMS that have been identified through the company's
11 claims verification process."

12 You see that?

13 A. Yes.

14 Q. Do you recall being informed by
15 UnitedHealth that they had in fact suspended this
16 program?

17 A. Not in the meeting, no.

18 Q. Do you recall being informed that later?

19 A. So there was an e-mail the next day, that
20 Steve Nelson sent me, where I believe he said that in
21 the e-mail.

22 Q. Right. So if we could have Exhibit 1063,
23 which is Tab 12. I think that's the e-mail you're
24 referring to.

25 (Exhibit 1063 was marked for identification.)

1 BY MR. GALLAGHER:

2 Q. So Exhibit 1063 is an e-mail exchange that
3 starts at the bottom of the first page with an e-mail
4 from Steve Nelson to you, on Wednesday, April 30th,
5 at 9:55 in the morning.

6 Is this the e-mail you're referring to?

7 A. Yes.

8 Q. And if you go to the next page, in the --
9 in the paragraph that starts, "Fifth," is -- is it in
10 this paragraph that you were informed -- or that
11 UnitedHealth had in fact suspended or stopped this
12 program, the claims verification or chart review
13 program looking for deletes?

14 A. Yes. Just rereading it again here.

15 Yes, so we suspended the process, yes,
16 right.

17 Q. So you were aware of that in -- in April
18 of 2014, that whatever process UnitedHealth had, that
19 it was asking for guidance on in this meeting, it had
20 decided to suspend that process?

21 A. Yes.

22 Q. What do you recall learning about what,
23 you know -- actually, let me ask this differently.

24 Do you recall ever learning what
25 UnitedHealth's decision was with respect to claims

1 obligations were with respect to conducting medical
2 record review or confirming the support for diagnosis
3 codes?

4 A. I don't remember the conversation. All I
5 can tell you is I remember feeling very uncomfortable
6 in the meeting, and -- and then when I saw
7 Mr. Nelson's e-mail the following day, I was very
8 concerned about how things were characterized.

9 And -- but again, I don't remember
10 specifically what was said in the -- in the meeting.

11 Q. So, for example, you don't recall anybody
12 from CMS informing UnitedHealth at this meeting that
13 they haven't any obligation, outside of whatever
14 might be imposed by the proposed medical record
15 review, to conduct medical record review looking for
16 deletes, or to design their compliance program to
17 conduct medical record review looking for deletes?

18 MR. BULAND: Objection.

19 THE WITNESS: The only thing I --

20 MS. McMAHON: Objection.

21 THE WITNESS: The only thing I -- I
22 remember feeling very uncomfortable, and I
23 believe I said something along the --
24 referencing the False Claims Act.

25 And -- and, you know, the -- that that is

1 still -- you know, is still in play, even
2 regardless of the medical record review rule,
3 but -- other than that, no.

4 BY MR. GALLAGHER:

5 Q. So tell me everything you recall saying
6 about the False Claims Act and how it came to bear
7 here, during this meeting in April of 2014.

8 A. I -- I honestly don't recall,
9 specifically. I just remember feeling very
10 uncomfortable with the conversation, and reminding
11 United about the False Claims Act. But the details,
12 I don't recall.

13 Q. With reference to the e-mail exchange you
14 had with Cynthia Tudor and Mr. Cavanaugh before the
15 meeting, which is Exhibit 1060 --

16 A. Uh-huh.

17 Q. -- do you recall that there was -- as part
18 of that exchange, discussion of -- of deleting or
19 correcting data that you know is wrong?

20 A. Yes.

21 Q. Was your reference to the False Claims
22 Act, if you remember, a reference to that obligation
23 or some obligation with respect to the -- the data
24 that was in review already?

25 MR. BULAND: Objection.

1 THE WITNESS: What was particularly
2 concerning to me was the data that had been
3 reviewed and not found, at that point in the
4 process, to be documented in medical records.
5 And that was very concerning to me, that they
6 appeared to be saying, "We're not going to do
7 anything more with that," and that was
8 concerning.

9 BY MR. GALLAGHER:

10 Q. So -- I'm sorry. I didn't mean to
11 interrupt you. Were you --

12 A. No, that's okay. Go ahead.

13 Q. The -- so do you think that when you were
14 -- that whatever it is you recall about saying about
15 the False Claims Act, it was in reference to that
16 data that was in review and some potential for the
17 need to delete had been identified for it?

18 A. Again, I don't -- I don't recall.

19 Q. Do you recall whether you had any --
20 whether you had any thought, even, that the False
21 Claims Act had any bearing on the decision whether to
22 stop the program and not continue it in further -- in
23 future years?

24 MR. BULAND: Objection.

25 THE WITNESS: Yeah, I don't recall.

1 inference that somehow CMS was blessing this --
2 these next steps that United was suggesting.
3 And so -- I was frankly alarmed by the e-mail,
4 and wanted to make -- respond in writing that we
5 were not blessing what they were suggesting they
6 were doing in Bullet 5, and that there were
7 other laws and requirements beyond the medical
8 record review rule that they needed to be in
9 compliance with.

10 And so I, again, was very, very concerned
11 with this e-mail.

12 BY MR. GALLAGHER:

13 Q. My question was, you don't dispute, in
14 your responsive e-mail, Mr. Nelson's characterization
15 of what was said by CMS and confirmed by CMS at the
16 meeting on the 29th?

17 MR. BULAND: Objection.

18 MS. McMAHON: Objection. Asked and
19 answered.

20 THE WITNESS: I think it is making clear
21 that they should not take away from that meeting
22 that we had said that it was okay to stop the
23 claims verification program, or that it was okay
24 not to continue to review and determine whether
25 those questionable diagnoses were accurate or

1 not.

2 BY MR. GALLAGHER:

3 Q. In April of 2014, had you issued any --
4 had CMS issued any guidance, rules, requirements,
5 subregulatory or otherwise, that required plans to
6 conduct any medical record review?

7 MS. McMAHON: Objection. Asked and
8 answered.

9 THE WITNESS: Again, not specifically. We
10 had general requirements about compliance
11 programs, language in our managed care manual,
12 et cetera. But in terms of a specific procedure
13 that plans were to follow to -- to meet their
14 obligations to submit correct data, no, we did
15 not have specific procedures that we were
16 telling plans to follow.

17 BY MR. GALLAGHER:

18 Q. And in your response to Mr. Nelson, do you
19 identify any rule, regulation, subregulatory
20 guidance, you know, communication from CMS that
21 imposes an obligation to conduct medical record
22 review specifically to look for deletes?

23 A. No.

24 Q. Do you know -- do you identify any
25 requirements with specificity in your response?

1 and communicate to them your expectations?

2 MR. BULAND: Objection.

3 MS. McMAHON: Objection.

4 THE WITNESS: Again, I think that not
5 knowing all the details, for example, of
6 United's claim verification program, for us to
7 be able to say, "Yes, it's fine," or "No, it's
8 not," or "What are all the steps that you went
9 through," we would have to have a lot more
10 information to be able to -- to weigh in, even
11 if that were appropriate, to be able to say
12 "Yes, it's okay," or "No, it's not."

13 And my purpose in sending that e-mail was
14 to make clear we're not -- we're not giving you
15 a blessing one way or the other; you need to
16 make that determination based on the laws and
17 requirements.

18 BY MR. GALLAGHER:

19 Q. All right. So -- I'm sorry. Go ahead.

20 A. I'm sorry. While we try to be as specific
21 and as helpful as we can, we can't always give a
22 specific yes or no. In this case, it would have
23 taken a lot more information to know exactly what the
24 scope is of what United was doing, what information
25 they had, how much due diligence they had done, and

1 wanted to make clear to them that they had an
2 obligation -- they might have an obligation under --
3 you know, setting aside the medical record review
4 rule, to follow up on those -- certainly on those --
5 on those diagnoses that, at least through the process
6 to date, didn't look like they were going to be
7 valid. So . . .

8 Q. So looking at your response to Mr. Nelson
9 in Exhibit 1063, the e-mail of May 2nd, 2014 --

10 A. Uh-huh.

11 Q. -- as we discussed earlier, you -- you
12 mentioned -- you say there are other laws that do
13 impose standards, requirements, and responsibilities,
14 but you don't identify what those laws are. Right?

15 A. That's correct.

16 Q. In Interrogatory Number 24, when
17 identifying the ways in which CMS would communicate
18 requirements that you believe are imposed by the --
19 by the regulation concerning a compliance program, or
20 due diligence generally, you indicate that you would
21 provide guidance -- provide that guidance in e-mails
22 and in-person communications. Right?

23 MS. McMAHON: Objection. Misstates the
24 witness's testimony, and the document.

25

1 specific set of circumstances, and that we were not
2 giving them an answer of up or down, but that they
3 needed to think carefully about whether their
4 proposed course of action was consistent with those
5 other laws and regs.

6 BY MR. GALLAGHER:

7 Q. Without identifying what those laws and
8 regs were with any specificity?

9 MR. BULAND: Objection.

10 THE WITNESS: (Nodding head up and down.)

11 BY MR. GALLAGHER:

12 Q. If you -- if, in May of 2014, you thought
13 there was some specific guidance, rule, regulation,
14 or requirement that United's proposed course of
15 action that they discussed with you would run afoul
16 of, why didn't you tell them what that rule was?

17 MR. BULAND: Objection.

18 MS. McMAHON: Objection.

19 THE WITNESS: And so we didn't know all
20 the details of their program, and all the
21 details of the work that they had done in terms
22 of the review of the diagnoses that they had --
23 at least initially -- identified as not being
24 supported in the medical record, so we didn't
25 have enough information to say, at that point,

1 it definitively is or is not in compliance with
2 these other laws and regulations.

3 BY MR. GALLAGHER:

4 Q. They -- they did tell you, United did, at
5 the meeting in April of 2014, or in Mr. Nelson's
6 e-mail following, that they were stopping the program
7 entirely, right?

8 MS. McMAHON: Objection.

9 BY MR. GALLAGHER:

10 Q. That they weren't going to continue with a
11 claims verification process that involved looking for
12 deletes?

13 A. Yes.

14 Q. And if you thought that violated some
15 requirement that you -- that CMS had imposed on
16 plans, by rule or regulation or otherwise, why didn't
17 you tell United that?

18 MR. BULAND: Objection.

19 MS. McMAHON: Objection. Asked and
20 answered. Argumentative.

21 THE WITNESS: Again, they're very well
22 aware we have these requirements, specifically
23 with reference laws and regs in their contract
24 they have to comply with. And so while we
25 didn't put a laundry list in there, we did say

1 A. Yes.

2 Q. And then it says, "During our
3 conversations last year before the proposed rule was
4 withdrawn, CMS confirmed to us that the proposed
5 requirements would not apply until the effective date
6 of the rule, and that MA plans were thus not required
7 to design their medical record reviews to determine
8 the accuracy of risk adjustment diagnoses."

9 Do you recognize that as basically the
10 same language that was in the 2014 e-mail that you
11 responded to on May 2nd, 2014?

12 A. Yes.

13 Q. And am I right that you never responded to
14 this e-mail from Mr. Nelson disputing that
15 characterization of the advice provided by CMS?

16 A. I don't recall if I responded or not. I
17 don't believe I did, but I don't recall.

18 Q. Right. But you don't recall ever
19 disputing it one way or the other?

20 A. Right. Yeah, that's correct.

21 Q. And then there's a sentence that begins
22 later, "Based on." It says, "Based on our
23 conversations with CMS last year, CMS's withdrawal of
24 the proposed rule, and CMS's ongoing consideration of
25 a fee-for-service adjuster to address diagnoses not

1 A. Yes.

2 Q. And then following that, it says,
3 "However, we emphasize that our decision to not
4 finalize this regulatory proposal does not change
5 CMS' existing contractual requirement that MA
6 organizations must certify (based on best knowledge,
7 information, and belief) the accuracy, completeness,
8 and truthfulness of the risk adjustment data they
9 submit to CMS. Further, this decision does not
10 change the longstanding risk adjustment data
11 requirement that a diagnosis submitted to CMS by an
12 MA organization for payment purposes must be
13 supported by medical record documentation."

14 Did I read that correctly?

15 A. Yes.

16 Q. And is -- is that a true statement?

17 A. Yes.

18 Q. And that is -- your understanding is that
19 despite not finalizing the medical record review
20 rule, you -- you are in agreement that -- that it
21 does not change CMS's longstanding existing
22 contractual requirements that MA organizations have,
23 correct?

24 MR. GALLAGHER: Objection. Leading.

25 THE WITNESS: Correct. Yes.

1 CERTIFICATE

2

3 I, KAREN K. KIDWELL, Registered Merit Reporter,
4 and Certified Realtime Reporter, do hereby certify
5 that prior to the commencement of the examination,
6 the deponent was remotely sworn to testify to the
7 truth, the whole truth under penalty of perjury.

8 I DO FURTHER CERTIFY that the foregoing is a
9 verbatim transcript of the testimony as taken
10 stenographically by me at the time, place and on the
11 date hereinbefore set forth, to the best of my
12 ability.

13 I DO FURTHER CERTIFY that I am neither a
14 relative nor employee nor attorney nor counsel of any
15 of the parties to this action, and that I am neither
16 a relative nor employee of such attorney or counsel,
17 and that I am not financially interested in this
18 action.

v.

UNITEDHEALTH GROUP, INC. *et*
al.,

Defendants.

CASE NO. CV 16-08697 (SSx)

**UNITEDHEALTH'S FIRST
SUPPLEMENTAL RESPONSES AND
OBJECTIONS TO PLAINTIFF
UNITED STATES' SIXTH SET OF
INTERROGATORIES**

EXHIBIT

00381

1 information from multiple providers and multiple dates of services across different
2 data collection years and different provider encounters.

3 Subject to and without waiving the foregoing Specific and General
4 Objections, UnitedHealth states that it has previously produced information
5 responsive to this Interrogatory. Pursuant to Fed. R. Civ. P. 33(d), UnitedHealth
6 directs the government to UnitedHealth's prior productions of chart review data in
7 response to document request 4C. The relevant data is bates labeled:
8 MARA2160495, MARA2157337, and MARA2152918. There is a "Recode_Flag"
9 column in each document that denotes whether a chart was coded in UnitedHealth's
10 Chart Review program using "informed coding," as UnitedHealth interprets this
11 term. UnitedHealth is not aware of additional data responsive to this Interrogatory
12 that has not already been produced to the United States. The burden of determining
13 or ascertaining the answer is substantially the same for the United States as it is for
14 the United States.

15 **INTERROGATORY NO. 18:**

16 For each year, Identify the total amount of revenue Your MA Organizations
17 received from CMS as a result of Diagnoses submitted to CMS as a result of the
18 Chart Review Program.

19 **RESPONSE TO INTERROGATORY NO. 18:**

20 UnitedHealth incorporates by reference each of its General Objections and
21 Specific Objections to Definitions set forth above. UnitedHealth objects to this
22 Interrogatory on the grounds that it calls for UnitedHealth to provide information
23 already provided to the United States in connection with the *Poehling* Investigation
24 and to the extent it seeks information already in the possession of the United States.
25 UnitedHealth also objects to this Interrogatory as duplicative of discovery requests
26 issued during the *Poehling* Investigation, including but not limited to Interrogatory
27 1K.

1 UnitedHealth additionally objects to this Interrogatory to the extent it calls for
2 UnitedHealth to prepare documents and/or perform data analysis that does not
3 already exist.

4 UnitedHealth also objects to this Interrogatory as overly broad to the extent
5 “each year” is undefined and seeks information related to UnitedHealth’s Chart
6 Review program—and the chart review data UnitedHealth has produced—beyond
7 the date of service years at issue in the litigation. For the purpose of responding to
8 this Interrogatory, UnitedHealth interprets the request to seek information related to
9 UnitedHealth’s Chart Review program for date of service years 2008–2016.

10 UnitedHealth further objects to this Interrogatory to the extent the term
11 “Diagnoses,” as defined is unclear, mis-leading, confusing, vague, and ambiguous.
12 For the purposes of responding to this Interrogatory, UnitedHealth interprets the
13 term “Diagnoses” to refer to multiple diagnosis codes.

14 Subject to and without waiving the foregoing Special and General Objections,
15 UnitedHealth states that, as the government is well aware, during the Poehling
16 Investigation, it issued Interrogatory 1(K), which sought the “total monetary amount
17 of the RA payments made by CMS to UHG’s MA Plans based on the diagnosis codes
18 that were submitted to CMS based on CRs.” UnitedHealth responded to
19 Interrogatory 1(K) in 2015 and 2016 and provided the requested information for date
20 of service years 2009 through a portion of 2014. As UnitedHealth confirmed in a
21 December 21, 2015 cover letter, UnitedHealth “does not have sufficient data
22 available to provide a similar estimate for years prior to 2009 DOS.” UnitedHealth’s
23 response remains the same, and therefore UnitedHealth cannot perform the analysis
24 or provide the relevant data in response to this Interrogatory.

25 Subject to and without waiving the foregoing Specific and General
26 Objections, UnitedHealth further states that it has previously produced information
27 responsive to this Interrogatory related to UnitedHealth’s Chart Review program for
28 date of service years 2009 through part of 2014, including in a May 2, 2016 cover

letter and supplemental response to the government’s Interrogatory 1(K) issued during the *Poehling* Investigation. Nonetheless, UnitedHealth has included below a table that provides revised estimates of the total amount of revenue attributable to UnitedHealth’s Chart Review program for date of services years 2009 through 2013, which reflect the impact of closed period deletes. Given that UnitedHealth previously provided partial information for date of service year 2014 because the period was still open at the time of UnitedHealth’s May 2, 2016 response, UnitedHealth has also included below a revised estimate of the total amount of revenue attributable to UnitedHealth’s Chart Review program for date of service year 2014. Finally, UnitedHealth has provided in the table below the estimates of the total amount of revenue attributable to UnitedHealth’s Chart Review program for date of services years 2015 and 2016.

Date of Service Year	Total
2009 DOS	\$152,546,622
2010 DOS	\$421,010,415
2011 DOS	\$581,369,966
2012 DOS	\$713,432,228
2013 DOS	\$757,396,026
2014 DOS	\$1,466,271,322
2015 DOS	\$1,581,139,269
2016 DOS	\$1,864,349,540

INTERROGATORY NO. 19:

For each year, Identify all Diagnoses Deleted as part of or as a result of Claims Verification You performed for Your MA Organizations.

RESPONSE TO INTERROGATORY NO. 19:

UnitedHealth incorporates by reference each of its General Objections and Specific Objections to Definitions set forth above. UnitedHealth objects to this Interrogatory on the grounds that it calls for UnitedHealth to provide information already provided to the United States in connection with the *Poehling* Investigation and to the extent it seeks information already in the possession of the United States. UnitedHealth also objects to this Interrogatory as duplicative of discovery requests issued during the *Poehling* Investigation, including but not limited to document request 4C.vii.m.

UnitedHealth additionally objects to this Interrogatory to the extent it calls for UnitedHealth to prepare documents and/or perform data analysis that does not already exist.

UnitedHealth also objects to this Interrogatory as overly broad to the extent “each year” is undefined and seeks information for the entire time period of January 1, 2004 to May 16, 2017 when the Claims Verification program did not exist during the entirety of the time period. For the purposes of responding to this Interrogatory, UnitedHealth interprets the term “each year” to refer to the years during which UnitedHealth had a Claims Verification program.

UnitedHealth further objects to this Interrogatory to the extent the term “Diagnoses,” as defined is unclear, mis-leading, confusing, vague, and ambiguous. For the purposes of responding to this Interrogatory, UnitedHealth interprets the term “Diagnoses” to refer to multiple diagnosis codes.

Subject to and without waiving the foregoing Specific and General Objections, UnitedHealth states that it has previously produced information responsive to this Interrogatory. Pursuant to Fed. R. Civ. P. 33(d), UnitedHealth directs the government to UnitedHealth’s prior productions of chart review data in response to document request 4C. The relevant data is bates labeled: MARA2160498, MARA2157342, and MARA2152923. MARA2160498 is a

standalone file with the diagnosis codes that were deleted through UnitedHealth's Claims Verification program for date of service year 2010. There is a "Delete_Flag" column in MARA2157342 and MARA2152923 that denotes the diagnosis codes that were deleted through UnitedHealth's Claims Verification program for date of service years 2011 and 2012, respectively. UnitedHealth is not aware of additional data responsive to this Interrogatory that has not already been produced to the United States. The burden of determining or ascertaining the answer is substantially the same for the United States as it is for the United States.

INTERROGATORY NO. 20:

For each year, Identify what You understood to be the total monetary value of Diagnoses Deleted as part of or as a result of Claims Verification You performed for Your MA Organizations.

RESPONSE TO INTERROGATORY NO. 20:

UnitedHealth incorporates by reference each of its General Objections and Specific Objections to Definitions set forth above. UnitedHealth objects to this Interrogatory on the grounds that it calls for UnitedHealth to provide information already provided to the United States in connection with the *Poehling* Investigation and to the extent it seeks information already in the possession of the United States. UnitedHealth also objects to this Interrogatory as duplicative of discovery requests issued during the *Poehling* Investigation, including but not limited to document request 4C.

UnitedHealth additionally objects to this Interrogatory to the extent it calls for UnitedHealth to prepare documents and/or perform data analysis that does not already exist.

UnitedHealth also objects to this Interrogatory as overly broad to the extent "each year" is undefined and seeks information for the entire time period of January 1, 2004 to May 16, 2017 when the Claims Verification program did not exist during the entirety of the time period. For the purposes of responding to this Interrogatory,

UnitedHealth interprets the term “each year” to refer to the years during which UnitedHealth had a Claims Verification program.

UnitedHealth further objects to this Interrogatory to the extent the term “Diagnoses,” as defined is unclear, mis-leading, confusing, vague, and ambiguous. For the purposes of responding to this Interrogatory, UnitedHealth interprets the term “Diagnoses” to refer to multiple diagnosis codes.

UnitedHealth also objects to this Interrogatory to the extent the term “You understood” is vague and ambiguous as to the time period. Specifically, the term “You understood” is vague and ambiguous because it uses the past tense but is unclear as to what specific time period is at issue. For example, it is unclear if the government is requesting information related to UnitedHealth’s understanding in a particular year, at the time diagnoses were submitted for deletion, or at a different time period. For the purposes of responding to this Interrogatory, UnitedHealth is providing information currently available to it.

Subject to and without waiving the foregoing Specific and General Objections, UnitedHealth has provided below a table with the total monetary value of diagnosis codes it submitted for deletion as part of or as a result of its Claims Verification program for date of service years 2010, 2011, and 2012.

Date of Service Year	Total
2010 DOS	\$1,264,751
2011 DOS	\$183,375,164
2012 DOS	\$42,800,053

INTERROGATORY NO. 21:

Excluding Deletes made as part of the Claims Verification You performed for Your MA Organizations or the Chart Review Quality Assurance process, for each year, Identify all Diagnoses Deleted because the Diagnosis Codes were not supported by Chart documentation.

1 Given the breadth of the information sought by this Interrogatory,
2 UnitedHealth in good faith requested a meet and confer with the government to
3 discuss its current response to Interrogatory 25 and whether the government would
4 agree to narrow the scope of the interrogatory. On the parties' July 5, 2022 meet and
5 confer, UnitedHealth explained that it has already identified the relevant individuals
6 who may have provided risk adjustment services to the UnitedHealth MAOs,
7 including in its Initial Disclosures and on its custodian list, but that further
8 identification of all such employees for every year is overly burdensome because it
9 calls for every individual who may have provided broad categories of risk
10 adjustment services to UnitedHealth's MAOs over a 13-year time period. In light of
11 the parties' July 5, 2022 meet and confer, UnitedHealth understands that the
12 government plans to provide UnitedHealth with a proposal for narrowing the scope
13 of Interrogatory 25. UnitedHealth agrees to consider the government's proposal in
14 good faith and will, if appropriate, supplement its response to Interrogatory 25.
15 UnitedHealth is in receipt of and assessing the government's proposal in its July 15,
16 2022 email.

Name	Title	Date
Tim Trujillo	VP Risk Adjustment	6/9/2015

PURPOSE

Optum Medicare Advantage Risk Adjustment Operations provides Chart Review services to Medicare Advantage Organizations (MAO) Clients that support risk adjustment submissions in accordance with CMS risk adjustment regulations, the Medicare Managed Care Manual and the CMS Risk Adjustment Participant Guide. This policy addresses standards for the review of medical record documentation that supports the diagnoses submitted to CMS for Medicare program risk adjustment.

SCOPE

This policy addresses Optum Medicare Advantage Risk Adjustment Operations Chart Review services.

DEFINITIONS

TERM	DESCRIPTION
Hierarchical Condition Category (HCC)	HCC is a disease group broadly organized into body systems. The HCC assigned to a disease group is determined by the ICD-CM diagnosis code.
MAO Client	Medicare Advantage Organization that holds a Medicare Advantage contract.
PCP	Primary Care Physician

POLICY

Where Optum Medicare Advantage Risk Adjustment Operations performs Chart Review services on behalf of its MAO Clients, it will do so in accordance with CMS standards. Optum Medicare Advantage Risk Adjustment Operations will abide by instructions in the applicable Medicare regulations, CMS Risk Adjustment Participant Guides and Medicare Managed Care Manual, CH. 7 addressing medical record documentation sources and content, coding review, coding standards and quality activities.

CHART REVIEW SERVICES

Chart Review services, which will be conducted if and as specified in the contract with the Client, include a number of programs that are designed to collect, assess and evaluate documentation that supports health plan risk adjustment submissions. Chart Review services are designed to review individual medical records to identify and capture risk adjusted member diagnoses and chronic conditions based on review of the member's medical record. Chart Review services include:

A. Standard Chart Review :

The standard chart review includes retrieval, review, coding and confirming signature and credential requirements of the medical record to capture the risk adjusted diagnosis information from the member's medical record documentation for a specific date of service or timeframe.

B. Attestations:

An optional Medicare risk adjustment chart review service a client may select to retrieve attestations from providers. Attestations capture a providers signature or credentials when absent from the chart documentation. The provider states in writing that the pre-existing medical record accurately reflects the care of a member in a given encounter.

Optum Medicare Advantage Risk Adjustment Chart Review Operations Team will follow Optum coding guidelines for Risk Adjustment submissions when reviewing medical record documentation as outlined in the Retrospective Services Standards section of this policy.

1. Standards for Reviewing Medical Records for Chart Review Services:

Optum Medicare Advantage Risk Adjustment Operations has developed standards for reviewing medical records based on CMS risk adjustment instructions. These standards include:

- A.** The diagnosis must be coded in accordance with the ICD-CM Coding Guidelines as mandated by CMS and Optum coding guidelines;

B. The medical record documentation meets the CMS medical records guidelines and includes the following risk adjustment information:

- The service was provided by an acceptable risk adjustment provider and physician type.
- Dates of service are within the data collection period.
- Diagnoses are supported by medical record documentation.
- A provider signature and credentials are documented for each note.
 - Client may exercise discretion, consistent with CMS guidance on attestation, as to how to address records that have not yet been fully authenticated by the treating practitioner at the time of chart review.
- Coding level specificity – 3-5 digit codes

2. Coding Review Requirements:

To meet this standard, Optum Medicare Advantage Risk Adjustment Operations has developed requirements for coding reviews based on the Medicare Advantage regulations, the Medicare Managed Care Manual and CMS Risk Adjustment Participant Guide. These requirements include:

- A. Optum Medicare Advantage Risk Adjustment Operations will utilize certified medical coders.
- B. The certified coders will use ICD-CM Diagnosis Codes Guidelines as mandated by CMS, Optum coding guidelines, and Coding Clinics published by American Hospital Association (AHA), and comply with Optum Medicare Advantage Diagnostic Coding Standards and any other applicable Optum Coding Compliance Policies when evaluating assigned medical charts.
- C. Certified coders will review medical records to identify risk adjusting conditions supported in the medical record documentation. When performing chart reviews, the certified coders will apply CMS standards for Medicare Risk Adjustment submissions as detailed above.
- D. Optum Medicare Advantage Risk Adjustment Operations will document and implement a procedure for receipt, research and response to coding questions from internal coders or its vendors.
- E. Optum Medicare Advantage Risk Adjustment Operations will provide training to its internal coding staff that specifically addresses the above standards. This training will be conducted for all new coding staff before they begin coding charts and on-going thereafter for all coding staff.
- F. Optum Medicare Advantage Risk Adjustment Operations will conduct coding accuracy reviews of its internal coding staff to validate that data is coded correctly and meets CMS standards

3. Chart Review Vendor Engagement and Oversight

Optum Medicare Advantage Risk Adjustment Operations will conduct reasonable due diligence on potential vendors that conduct chart reviews and may engage vendors to conduct chart reviews pursuant to a written agreement that meets business, legal and regulatory requirements. Optum Medicare Advantage Risk Adjustment Operations will follow appropriate procurement processes when engaging chart review vendors. When Optum Medicare Advantage Risk Adjustment Operations engages a vendor to conduct chart reviews, Optum Medicare Advantage Risk Adjustment Operations will follow the following standards:

A. Contract Standards:

The terms of a vendor agreement with Optum Medicare Advantage Risk Adjustment Operations will include: the specific retrospective program activities, measurement or performance standards, if applicable, auditing and monitoring rights and payment terms. The vendor agreement will also include a Business Associate Agreement (BAA) or other appropriate terms that describe the permitted and required uses of protected health information.

B. Coding Standards:

See coding standards guidelines from Section 1 Standards for Reviewing Medical Records.

4. Vendor Oversight:

Optum Medicare Advantage Risk Adjustment Operations will design and execute appropriate coding reviews for its external vendors as part of its overall quality review program. Optum Medicare Advantage Risk Adjustment Operations will establish performance measurements, corrective action and disciplinary action guidelines for vendors that do not meet the quality review standards.

5. Provider Communications Standards

Optum Medicare Advantage Risk Adjustment Operations will obtain prior review as required by Optum Legal and Compliance and prior approval from the Client for all provider correspondence related to the chart review process.

6. Privacy Standards

Optum Medicare Advantage Risk Adjustment Operations will only receive, use and disclose Protected Health Information pursuant to the Optum privacy and security standards, including the use of secure transmission methods.

7. Standards Management

The Director of Chart Review Programs is responsible for collaborating with Optum Compliance to identify changes to the standards for all risk adjustment data collection and submission and ensuring implementation of any new requirements.

- The policy will be reviewed for updates periodically or when changes are indicated by CMS.
- All policy changes will be approved by the policy owner, Compliance and Legal.

Version control will apply to all policies.

OPTUM Right

Quality Audit Standard

Optum Right is committed to providing high quality care to our patients. We are committed to continuous improvement and to ensuring that our patients receive the best possible care. The following are the standards for quality care that we expect all of our providers to follow:

1. Patient Safety

Optum Right is committed to ensuring the safety of our patients. We expect all of our providers to follow the following standards:

Each Patient Audit Results	How to Improve QA Score	Assigned to Provider Score	QA Score for the Score	Assigned to Provider QA Score

Quality Audit

Audit Process

The audit process is a continuous process that involves the following steps:

1. Identify the audit area.
2. Develop the audit plan.
3. Conduct the audit.
4. Analyze the results.
5. Implement the findings.
6. Monitor the results.

The audit process is a continuous process that involves the following steps:

1. Identify the audit area.
2. Develop the audit plan.
3. Conduct the audit.
4. Analyze the results.
5. Implement the findings.
6. Monitor the results.

Question 10: What is the difference between a "data source" and a "data stream"?

Answer: A data source is a location where data is stored, while a data stream is a continuous flow of data. Data sources are typically used for batch processing, while data streams are used for real-time processing.

Reference: <https://www.optuminsight.com/docs/data-sources-and-streams>

Further Clarification:

A data source is a location where data is stored, while a data stream is a continuous flow of data. Data sources are typically used for batch processing, while data streams are used for real-time processing.

Question 11: What is the difference between a "data source" and a "data stream"?

Answer: A data source is a location where data is stored, while a data stream is a continuous flow of data. Data sources are typically used for batch processing, while data streams are used for real-time processing.

Reference: <https://www.optuminsight.com/docs/data-sources-and-streams>

Further Clarification:

A data source is a location where data is stored, while a data stream is a continuous flow of data. Data sources are typically used for batch processing, while data streams are used for real-time processing.

Question 12: What is the difference between a "data source" and a "data stream"?

Answer: A data source is a location where data is stored, while a data stream is a continuous flow of data. Data sources are typically used for batch processing, while data streams are used for real-time processing.

VOLUME II
CONTINUATION OF VIDEOTAPED
RULE 30(b)(6)DEPOSITION OF
OPTUMINSIGHT, INC. AND UNITEDHEALTHCARE, INC.,
BY THEIR DESIGNEE, KATHLEEN O. BAKER

Washington, D.C.

May 31, 2023

Reported by:
Misty Klapper, RMR, CRR
Job No.: 982006

1 when in that project year you reverted back to
2 instructing coders to record all RxHCCs?

3 MS. MADDUX: Objection, form.

4 THE WITNESS: Going into then --
5 after our first attempt at the CAT form,
6 we reverted back to the standard process
7 of coding all.

8 BY MS. ZUPAC:

9 Q. Okay. Was that approximately in July
10 of 2013?

11 A. Approximately.

12 Q. Okay. And then going forward for
13 subsequent date of service years, so date of --
14 dates of service 2013, 2014, 2015 and 2016, were
15 coders consistently instructed to record all
16 RxHCCs?

17 MS. MADDUX: Objection, form.

18 THE WITNESS: They were asked to
19 code all HCCs and RxHCCs that they could
20 identify in the chart according to their
21 ability, according to the chart difficulty
22 levels.

1 CERTIFICATE OF NOTARY

2 I, MISTY KLAPPER, the officer before whom
3 the foregoing deposition was taken, do hereby
4 certify that the witness whose testimony appears in
5 the foregoing deposition was duly sworn by me; that
6 the testimony of said witness was taken by me in
7 shorthand and thereafter reduced to typewriting by
8 me; that said deposition is a true record of the
9 testimony given by said witness; that I am neither
10 counsel for, related to, nor employed by any of the
11 parties to the action in which this deposition was
12 taken; and, further, that I am not a relative or
13 employee of any attorney or counsel employed by the
14 parties hereto, nor financially or otherwise
15 interested in the outcome of this action.

CONFIDENTIAL - SUBJECT TO PROTECTIVE ORDER

Volume 1
DEPOSITION OF JON H. BIRD
As 30(b)(6) Designee 2 of
OptumInsight, Inc.
UnitedHealthcare, Inc.
Washington, DC
June 22, 2023

Reported by: John L. Harmonson, RPR
Job No. 988356

1 programs continues.

2 Q. Okay.

3 MR. MASON: Why don't we go off the
4 record and take a break.

5 THE VIDEOGRAPHER: Going off the record
6 at 11:53.

7 (Recess taken.)

8 THE VIDEOGRAPHER: We are back on the
9 record at 12:11.

10 BY MR. MASON:

11 Q. Mr. Bird, another risk adjustment
12 program that Optum performed for UnitedHealthcare
13 was called claims verification; right?

14 A. Correct.

15 Q. Can you explain what the claims
16 verification program is?

17 A. It was a program that we operated during
18 a certain time frame that identified and reviewed
19 exclusive HCCs that were submitted by providers
20 that were part of the chart review program.

21 Q. And Optum performed that program for
22 UnitedHealthcare?

23 A. That's correct.

24 Q. When?

25 A. The program was in phases. The first

1 phase of the program was 2010 calendar year for
2 2009 dates of service that was limited to Ovations,
3 which was UnitedHealthcare population, and also
4 limited to one member one provider.

5 The second phase was a similar one
6 member one provider. It was moved from a manual
7 process into one that was within a system, and that
8 was in 2011 for 2010 dates of service.

9 And then Phase 3 of CV was for 2011 and
10 '12 dates of service. And that was looking at
11 multiple provider as opposed to one member one
12 provider criteria.

13 Q. And when was Phase 3 conducted?

14 A. Phase 3 -- and I may need to refer to
15 kind of a timeline on that. But typically it would
16 be done on a retrospective basis. So if we're
17 looking at 2011 dates of service, we would have
18 commenced that in 2012. And then it was ongoing
19 for 2011 and in 2012 until the program was
20 suspended and ultimately discontinued, which was
21 the spring of 2014.

22 Q. When specifically was it suspended?

23 A. There was -- so there was operational
24 suspensions from time to time based upon -- but in
25 terms of suspension leading to discontinuation of

1 the program, my understanding is it was around the
2 middle of April that there was -- I think I've seen
3 within the documentation I reviewed some
4 notification for the delete process to be put on
5 hold around April of -- on or around April 18th of
6 2014.

7 Q. And when you say suspended, you just
8 said that you suspended the delete process. Did
9 you suspend all of CV, or just the delete process?

10 A. The notification that I saw was in
11 relation to deletes. But my understanding is the
12 entire CV process was suspended at or around that
13 time.

14 Q. And it was terminated when?

15 A. The decision for termination, which is
16 based on the memorandum that came from Steve Nelson
17 to Scott Theisen, I think that was dated on
18 June 11th, and he references in there the decision
19 for termination of the program was made on
20 May 27th.

21 Q. And so is that your testimony as the
22 designee for UnitedHealthcare and Optum, that the
23 suspension of CV went into place on April 18, 2014,
24 and the termination of CV went into place on
25 May 27, 2014?

1 A. Yeah, my testimony is on or around
2 April 18th is when I saw notification of delete
3 processing, and I believe the program was also
4 suspended on or around that date.

5 And yeah, based upon the -- we have the
6 exhibit in here which is Steve Nelson's email or
7 memorandum to Scott Theisen. He indicates in there
8 that the decision was made to terminate on
9 May 27th, and then that memorandum was dated with
10 notification to Scott and others that was on
11 June 11th.

12 Q. And the dates that you were just
13 speaking of are in regards to the CV program that
14 Optum performed for UnitedHealthcare; right?

15 A. That's correct.

16 Q. Optum also performed CV for other MAO
17 clients; right?

18 A. That is correct.

19 Q. During what time period?

20 A. I don't actually -- within the materials
21 that I kind of reviewed, I didn't look at the
22 specific timelines related to commercial customers
23 or non-UHC customers. There were claims
24 verification processes in place for some MAO
25 clients as well as some HHS, you know, ACA risk

1 Q. What's the purpose of the claims
2 verification program?

3 A. The purpose is to identify exclusive
4 HCCs and review those that were submitted by
5 providers that were part of the chart review
6 program.

7 Q. What do you mean, and review them?

8 A. They would be subject to medical coder
9 review. So the CVA people that we spoke about
10 earlier, CV analysts.

11 Q. And when you say the purpose was to
12 identify exclusive -- did you say exclusive HCCs or
13 exclusive codes?

14 A. Exclusive HCCs.

15 Q. And what do you mean by that?

16 A. It would be an HCC or diagnoses that
17 mapped to an HCC and that HCC is submitted by one
18 and only one provider.

19 Q. So why?

20 MR. QURESHI: Objection to form.

21 BY MR. MASON:

22 Q. I was asking the purpose; right? And
23 you're telling me what CV did. CV looked at
24 exclusive codes and then had a CV analyst review
25 the chart associated with it to determine if it was

1 supported; right?

2 MR. QURESHI: Objection to form.

3 Mischaracterizes testimony.

4 THE WITNESS: It's the operational
5 purpose that the program was to identify and review
6 codes.

7 BY MR. MASON:

8 Q. Okay. Why was that the operational
9 purpose?

10 MR. QURESHI: Objection to form.
11 Outside the scope. He's answered the question
12 about purpose.

13 You can answer in your personal capacity
14 if you know the answer, Mr. Bird.

15 MR. MASON: That's an inappropriate
16 assertion. Please refrain from instructing the
17 witness how to answer. I'm allowed to ask
18 questions, and the witness can answer those to the
19 best of his ability. You can assert all the
20 objections you want out of scope, but it's
21 inappropriate to tell the witness how he should
22 answer.

23 MR. QURESHI: Once again I'm going to
24 object to your question as being outside the
25 scope --

1 supported in the corresponding medical chart
2 documentation. All diagnosis codes determined to
3 be adequately documented within the chart will" --
4 sorry, "not adequately documented within the chart
5 will be deleted."

6 Q. Is this statement a correct description
7 of the claims verification program?

8 MR. QURESHI: Objection to form.

9 THE WITNESS: They were the words of
10 whoever authored this document chose to describe it
11 at that particular time. As I kind of break it
12 down based upon my understanding of the program, I
13 see the programs between chart review and claims
14 verification as being separate programs as opposed
15 to part of the chart review program. It could have
16 been described or positioned in that way. But it
17 wasn't something that was part of a single program.

18 This does not mention exclusive HCCs.
19 But I think, yeah, my description, the purpose was
20 to identify exclusive HCCs. This doesn't mention
21 exclusive HCCs, but it does mention review of
22 diagnosis. I did mention review. And it would be
23 reviewed by a coder.

24 And to the extent that we've been
25 through every step of the claims verification

1 process as defined at any point in time, and we can
2 determine that the -- we have all of the
3 appropriate medical records and we have sufficient
4 evidence to overturn the diagnosis that was
5 submitted by the provider that takes care of the
6 patient, then they would be deleted.

7 It doesn't provide all of that detail
8 but a summarized version that they provide outside
9 of claims verification seems to cover most of the
10 main aspects of the program.

11 BY MR. MASON:

12 Q. So I'm just trying to make sure I
13 understand your answer. My question was: Is this
14 a correct description of the claims verification
15 program? You've mentioned some things, but I'm not
16 sure that you've answered my question.

17 MR. QURESHI: Objection to form.
18 Argumentative. And asked and answered.

19 THE WITNESS: What I'm trying to say is
20 there's a lot of different descriptions and
21 different documents written by different people.

22 BY MR. MASON:

23 Q. I'm asking about this one, though.

24 MR. QURESHI: Let him finish his answer.
25 If you're going to ask him questions, give him the

1 words than just "reviews chart."

2 BY MR. MASON:

3 Q. Okay. And I'm just trying to make sure
4 that I understand all of your knowledge.

5 So other than the disposition codes, is
6 there anything else that you know about as a step
7 in the coding review process?

8 MR. QURESHI: Objection to form.
9 Outside the scope.

10 THE WITNESS: I'm just going to refer to
11 some documents.

12 BY MR. MASON:

13 Q. Sure. Just let me know which ones,
14 please.

15 A. Yeah. Let me see if I can find -- so
16 this is process documentation titled "Claims
17 Verification, Business Requirements." It's Tab 4.
18 And I don't think the pages --

19 Q. So this is your Tab 4. So for the
20 record, we're looking at Exhibit 712-4.

21 MR. QURESHI: I think he was still
22 responding. I know you're trying to clarify the
23 record, but I think he's in the middle of
24 something.

25 THE WITNESS: Yeah. I was just about to

1 say these pages don't seem to be numbered. So the
2 section I was looking at goes to Section 10, "Chart
3 Review Discrepancies." So there is a Step 2.0,
4 which I think is one thing I mentioned, validate
5 member and providers listed in the chart.

6 BY MR. MASON:

7 Q. Sorry. Can you point me to where?

8 A. So under Section 10.0, review -- "Chart
9 Review Discrepancies," the second box, process box
10 in that diagram, "Validate member and provider
11 listed in chart match CV inventory list." So
12 that's one step to look at.

13 There were steps related to HCCs on the
14 chart, and hierarchy, which are kind of covered
15 further down in the process documentation.

16 There was steps related to E&O codes,
17 which is also in the process documentation.

18 There's querying ChartSync for
19 additional charts.

20 So I think what I was trying to depict
21 is on the chart view provided, it said review
22 medical record, which is very high level, and
23 within this document there's two and a half pages'
24 worth of process flows that describe some of the
25 steps that would have been taken at that point in

1 time.

2 So the point I was trying to make is
3 review is a step in the process, but that process
4 is actually quite detailed.

5 Q. Quite detailed. And the detail can be
6 found here on page 13 -- sorry, 12, 13 and 14 of --
7 sorry. Let me try that again. Can be found on
8 page 12, 13, 14 and 15 of Exhibit 712-4?

9 MR. QURESHI: Objection to form.
10 Mischaracterizes testimony. And outside the scope.

11 THE WITNESS: This was the process as
12 documented at the time that this business
13 requirements document was put together. As I
14 indicated earlier, things evolved and changed over
15 time.

16 BY MR. MASON:

17 Q. But this was accurate as of the time it
18 was written?

19 MR. QURESHI: Same objection to form and
20 scope.

21 THE WITNESS: I have no reason to
22 believe not.

23 BY MR. MASON:

24 Q. Okay. And you said this would describe
25 some of the steps. Are you aware of any other

1 A. "After a chart review is complete and it
2 has been determined that the member associated with
3 the chart is a candidate for claims verification,
4 the system will pull the member's claims data from
5 IRADS. The system will then determine if there are
6 discrepancies between the claims information in
7 IRADS and the data from chart review."

8 Q. And is that an accurate description of
9 the claims verification process as of 2010?

10 A. It's a high-level description of the
11 matching process, not the entire claims
12 verification process.

13 Q. I'm not asking if it covers everything
14 about the claims verification process. I'm just
15 asking whether it's accurate as to how the claims
16 verification process worked at this time.

17 MR. QURESHI: Objection to form.
18 Mischaracterizes testimony.

19 THE WITNESS: But I don't think this
20 describes the claims verification process. It's a
21 component of the claims verification process it's
22 describing. So if your question is is this --

23 BY MR. MASON:

24 Q. My question wasn't does this describe
25 the claims verification process. It was: Is this

1 Q. Okay. Why don't you go to page 3. Do
2 you see at the top under "Claims Verification -
3 Purpose"?

4 A. I see that.

5 Q. Can you read what's below that out loud,
6 please.

7 A. "The purpose of the claims verification
8 is twofold: (1) Enable the submission of 'delete
9 transactions' to CMS if HCCs that were supposed to
10 be evidenced in a chart were either not evidenced
11 in the chart, or not appropriately evidenced in the
12 chart, and

13 "(2) Enable the submission of 'add
14 transactions' to CMS if HCCs are evidenced in the
15 chart but are not evidenced in IRADS."

16 Q. So putting aside numeral 2, because I
17 think we have already spoken about the fact that
18 the add component was changed early on in the
19 implementation of CV. So putting aside part 2, do
20 you agree with the statement of the purpose of
21 claims verification in part 1?

22 MR. QURESHI: Objection to form.

23 THE WITNESS: I think it's consistent
24 with the explanation that I previously provided
25 outside of the detail related to exclusive HCCs.

1 MR. QURESHI: Objection to form.

2 THE WITNESS: It depends on which --
3 where the discrepancy exists, because this doesn't
4 make it clear in here whether this is post-CVA
5 review or pre-CVA review. So I think the words
6 "potential delete" were used interchangeably with
7 CV inventory. So where there was no match, as we
8 discussed earlier there would be a review and
9 coding process. Then once the delete had been
10 identified through this multistep process, such a
11 process, that would probably be called a delete.

12 So this doesn't make it clear in this
13 document of what point in the process it's
14 referring to.

15 BY MR. MASON:

16 Q. Right. So you don't know in this
17 definition whether you're talking about just after
18 the matching logic or after the CVA analysis?

19 A. Yeah, correct.

20 Q. And so if it's just after the matching
21 logic but before the CV analysis, you would call
22 that a potential delete?

23 A. That's what many people referred to it
24 as at the time.

25 Q. And after the CV analysis, you would

1 call it a delete?

2 A. I mean, it could be a -- it could be --
3 yeah, an identified delete and an actual process
4 delete. So typically there's some kind of
5 qualification to what stage in the process it's in.

6 Q. Okay. And if the stage of the process
7 it's in is after the CVA analysis, then you would
8 call it a delete?

9 A. If it's been through the steps of the
10 process, yeah.

11 Q. Okay. And so with that clarification in
12 mind, this definition is otherwise consistent with
13 how Optum and UHC used the term "delete" at the
14 time?

15 MR. QURESHI: Objection to form. Asked
16 and answered.

17 THE WITNESS: Well, I think the things
18 that I added in there kind of change it
19 fundamentally. So I wouldn't call this consistent
20 with our understanding of what a delete is. I
21 think it lacks detail to describe which part of the
22 process it's in.

23 BY MR. MASON:

24 Q. Okay. You have a different
25 understanding of what delete means than what's

1 So I wasn't going back to determine whether the
2 data elements that were available for CV 3 were
3 also available during the earlier dates of service
4 years.

5 Q. You don't know one way or the other?

6 MR. QURESHI: Objection; asked and
7 answered. And argumentative.

8 THE WITNESS: Yeah, I don't know what
9 data elements would have been available in earlier
10 years.

11 BY MR. MASON:

12 Q. Okay. And let's go down to Number 12,
13 "Matching Logic." This bullet refers to the fact
14 that the matching logic was done at the HCC level;
15 right?

16 A. That's correct.

17 Q. And we've talked about this, but
18 matching logic is looking for a match in diagnoses
19 between the claim and the chart review?

20 A. HCC, not diagnosis.

21 Q. Thank you. Matching logic is looking
22 for a match in the HCC between the claim and the
23 chart review?

24 A. Correct.

25 Q. Okay. And what you mean by at the HCC

1 THE WITNESS: It looks higher than my
2 recollection, actually.

3 BY MR. MASON:

4 Q. Your recollection is that the percentage
5 that made the exclusive HCC rule is lower than
6 that?

7 A. Yes, it is.

8 Q. Okay. And then the inner circle,
9 approximately 360,000 charts contains HCCs
10 requiring CV coding review. Do you see that?

11 A. I do.

12 Q. What would that refer to?

13 MR. QURESHI: Objection to form.

14 THE WITNESS: To be honest, I'm not
15 familiar with this particular slide or the way that
16 the data was put together. So it's -- I'm
17 struggling to interpret it.

18 BY MR. MASON:

19 Q. Okay. Why don't we zoom out just a
20 little bit. Just at a high level, you agree that
21 the number of charts that were eligible for the CV
22 program under Optum's rules was a small subset of
23 the overall number of charts that went through the
24 chart review program?

25 MR. QURESHI: Objection to form.

1 THE WITNESS: In terms of what
2 qualifies -- so the universe of charts and which
3 ones went through the eligibility and matching and
4 resulted in a review?

5 BY MR. MASON:

6 Q. Just that made it to the matching step.

7 A. To or through the matching step?

8 Q. Let's do to the matching step first and
9 then through the matching step.

10 A. The way I understand the process works
11 is all of the charts would be considered for CV
12 eligibility. Then it would be eligibility applied
13 in terms of which of those charts had an exclusive
14 HCC associated with them where there is a match and
15 whether you're able to see I've got a provider ID
16 match between the chart data and the claim data and
17 that the member is eligible and there is an
18 exclusive HCC.

19 So all of the charts are considered in
20 that step to try and get to what is going to be
21 eligible. And then from eligibility, all of the
22 ones that are eligible are considered for matching.
23 And then after the matching, anything that didn't
24 match would move on into the CV review process.

25 Q. Okay. And the number of charts that

1 were eligible was a small subset of the overall
2 number of charts that went through the chart review
3 program; right?

4 MR. QURESHI: Objection to form. Asked
5 and answered.

6 THE WITNESS: I don't know what the
7 percentage is exactly at the eligible level. But,
8 you know, it's a portion of the overall charts. I
9 don't know exactly what the percentage is, but it's
10 not all of the charts that make it through
11 eligibility.

12 BY MR. MASON:

13 Q. Less than 25 percent?

14 MR. QURESHI: Objection to form.

15 THE WITNESS: That's my recollection.

16 BY MR. MASON:

17 Q. Less than 10 percent?

18 MR. QURESHI: Same objection.

19 THE WITNESS: You know, I can say less
20 than 25 percent. I don't know whether it's less
21 than 10 percent.

22 BY MR. MASON:

23 Q. Okay. Let's go to slide 8.

24 A. Just to be clear on that, they're all in
25 process for analysis of eligibility. So it's the

PRODUCT SCORECARD

Clinical Performance & Compliance

Growth Lever: Business Services
Product Type: Service
Markets Served: Payer and Provider

Solution Description

Integrates existing systems of the client organization with a cloud-based platform to manage and enhance the delivery of member and clinical outcomes. The solution is designed to improve the quality of care and reduce costs.

Key Priorities

1. Population Health – Integrated Member/Provider Engagement
 - Integrated Assessments (in Office/Home)
 - Integrated Member Engagement (Assessments, Drug Adherence, CM-EM, etc.)
 - Big 4 Opportunities (Aetna/Coverity, Humana, Cigna and Health Net/Oscar)
2. Global Chart Management
 - Outcomes and Efficiency Improvements (MA Risk)
 - Workflow (Medicaid, PAH, Assessments, RADV/IDV, HEDIS, Hospital, Other Clinical)
 - Client Enablement and Transparency
 - Innovation: Clinical and embedded reviews linked to prospective
3. Submission and Compliance
 - MA Submissions (RAPs, EDRS)
 - Risk Adjustment Compliance (IDV, RADV, EM, etc.)
 - Other Compliance (Part C & D data validation, other consulting)
4. Quality/STARS
 - HEDIS Measurement and Chart Abstraction
 - STARS Enterprise Reporting and Other Quality Consulting
5. Integrated Platforms
 - Clinical Analytics (Risk, Quality, Utilization and Cost)
 - Campaign Management (Tracking Interventions)
 - Provider Data Sharing (One source of truth)

Videotaped Deposition of
United States' 30(b)(6) Designee 1
CONTAINS ATTORNEYS' EYES ONLY PORTIONS
At the Law Offices of Latham & Watkins
Thursday, May 25, 2023
10:24 a.m. Eastern

1 I'll put on that list is the June -- the response to
2 the comment in June of 2000, which is in Exhibit 164
3 at, you know, Page 40286.

4 Are there any other documents that should go
5 on this list that --

6 MS. LIKOFF: Object to --

7 BY MR. GALLAGHER:

8 Q -- you say support the rule you say exists?

9 MS. LIKOFF: Object to form. Objection.

10 Outside the scope of Topic 21. Topic 21 did not ask
11 the witness to prepare to identify all instances of
12 any communications.

13 THE DEPONENT: I would say that CMS has been
14 very clear, including in Ms. Rice's deposition, that
15 CMS does not provide recipes about how MAOs should
16 conduct their chart review programs. So CMS is not
17 going to provide a threshold for what information is
18 or a threshold for what best knowledge is. That is
19 the responsibility of the MAO when designing an
20 effective compliance program that ensures that it --
21 that the -- the organization is fulfilling all program
22 requirements including the payment ones and that

1 ensures that it is -- identified the key risks and is
2 monitoring them and auditing. So that -- it's the
3 MAO's responsibility.

4 So you're asking for something that M- --
5 that CMS has been clear they, on purpose, are not
6 doing. They are not providing a detailed series of
7 steps or a recipe for how to conduct and organize and
8 design a chart review program. CMS requires that
9 diagnoses be accurate, complete, and truthful. It's
10 the MAO's responsibility to figure out how to make
11 that truth which allows them to certify every year.

12 MR. GALLAGHER: I'm going to move to strike
13 that as not responsive.

14 BY MR. GALLAGHER:

15 Q My question is just, can you give me a list
16 of the documents you rely upon for the assertion that
17 there exists a duty for MAOs to investigate if they
18 have any information that a set of codes is not
19 supported?

20 MS. LIKOFF: Object to form. Asked and
21 answered.

22 Counsel, the fact that you don't like her

1 Because -- because CMS doesn't specify how to validate
2 risk adjustment data. I mean, you're using the word
3 "audit," so I guess you mean auditing risk adjustment
4 data. CMS doesn't tell MAOs how to audit risk
5 adjustment data. So the specificity -- you're looking
6 for a very specific link that doesn't make sense
7 because under the risk adjustment program, there is no
8 specific requirement for an audit. Under 422.503,
9 audit could mean something very general, even for risk
10 adjustment data. It doesn't have to be on diagnosis
11 codes.

12 BY MR. GALLAGHER:

13 Q My question is not whether you communicated
14 how you think they should conduct an audit.

15 My question is, can you point to anywhere
16 that CMS communicated to MAOs that there's an
17 obligation under 422.503(b)(4)(vi) to audit risk
18 adjustment data at all?

19 MS. LIKOFF: Objection to form.

20 THE DEPONENT: There's an obligation to have
21 accurate data, which is also under 422.504. So when
22 you go look at that one step in the compliance

1 programs, there are series of obligations described,
2 you know, monitoring audit, et cetera. So you're
3 looking for one very specific link when it -- that's
4 just not how CMS operates with this.

5 BY MR. GALLAGHER:

6 Q Earlier you testified that it's CMS's view
7 that 422.503(b)(4)(vi) creates an obligation for plans
8 to audit risk adjustment data to confirm the support
9 for codes.

10 And my question is just, can you point me
11 anywhere where CMS has communicated that view to
12 plans?

13 MS. LIKOFF: Objection to form.

14 THE DEPONENT: And I did -- I did not say
15 just audit. I was talking about the entire paragraph,
16 which is there should procedures for monitoring and
17 audit and -- oh, goodness, where is it? I want to
18 read --

19 BY MR. GALLAGHER:

20 Q I -- I don't need you to read it.

21 A -- that section.

22 Anyway, I didn't say just audit. I said the

1 whole kit and caboodle. There's a requirement to do a
2 risk assessment and then develop procedures to deal
3 with the problems at hand or areas that are always at
4 risk of error such as payment. And that you need to
5 develop monitoring protocols, select some audits in or
6 out, if that's useful, and just make sure that the
7 program is in full compliance with all of the program
8 guidelines, which is a statement at the beginning of
9 Paragraph -- Subparagraph 6.

10 Q Can -- can you point to me anywhere where
11 CMS has told plans that it's your view that
12 422.503(b)(4)(vi) imposes on them an obligation to
13 audit risk adjustment data?

14 A You know --

15 MS. LIKOFF: Objection to form.

16 THE DEPONENT: Yeah. You said my view, and
17 I'm -- I'm just not going to say anything else beside
18 what I said. I answered the question by saying the
19 implementation of that Subparagraph 6 depends on the
20 risk assessment results and on what the MAO decides
21 under 422.310 to do to validate its data, its risk
22 adjustment data.

1 BY MR. GALLAGHER:

2 Q Right.

3 And so the requirement is to do a risk
4 assessment; right?

5 A That's part of it.

6 Q And -- and what plans do, based on that risk
7 assessment, and -- and frankly whether they've done an
8 appropriate risk assessment, is something that the
9 government audits through MOEG; yes?

10 MS. LIKOFF: Objection to form. Objection.
11 Outside the scope to the extent you included the --
12 the term "government."

13 THE DEPONENT: What MOEG audits for CPE,
14 compliance program effectiveness, is, is there a
15 process in place? And then they find certain problems
16 that came up, and they track them through the process.
17 They don't comment on the nature of the process that
18 the MAOs put in place.

19 BY MR. GALLAGHER:

20 Q Right.

21 They -- they -- they -- but they will
22 comment if they find problems; right?

1 Here you're referring to your own personal
2 view, not something that you ascertained with advice
3 of counsel or with somebody higher up in the -- in
4 the -- in the chain of command at CMS; right?

5 A You mean the sentence I just said?

6 Q Yeah. The -- the --

7 A That -- the sentence I just said is CMS's
8 position on -- on using -- on the limits of using
9 group level -- level memos that are internal to a
10 group that never see the light of day anywhere outside
11 the group. And that CMS would say they're very --
12 there are limits to using that to mean anything.

13 Q Right. Right.

14 My -- my point is just that when -- when I
15 asked the best authority for the medical record review
16 rule that you referenced here, when you write this in
17 this email, you're referring to what you, Anne
18 Hornsby, think, not something that you have vetted
19 through the process at CMS or gotten advice of counsel
20 on; right?

21 A Of course not. This is just my memo done
22 with Jennifer that just reflects two people of the

1 many people within MPPG to present some approaches to
2 Cheri, the di- -- the group director. So this memo is
3 really not particularly meaningful from CMS's point of
4 view. It's -- you know, it's just a little staff
5 memo.

6 Q You say in the next sentence, "And I gather
7 we don't want to use that," referring to the
8 contracting requirement to have a routine process for
9 monitoring compliance risk; right? That's what you
10 say in the next sentence?

11 A That's what's written there.

12 Q Yeah.

13 Why -- why didn't you -- and -- and the "we"
14 there is a reference to MPPG not wanting to use that
15 contracting requirement as the authority for the
16 medical record review rule?

17 MS. LIKOFF: Objection to form.

18 THE DEPONENT: Speaking as Anne Hornsby, I
19 do not remember that. I -- I just don't.

20 BY MR. GALLAGHER:

21 Q So then you say, "So I've tried to write the
22 authority for requiring this using the contractual

1 BY MR. GALLAGHER:

2 Q Have you ever specified for plans the
3 circumstances in which you believe at CMS they are
4 obligated to investigate whether codes are or are not
5 supported by the medical records? Have you ever given
6 that specific guidance to plans whether it's in a rule
7 or regulation or any -- some regulatory guidance?

8 MS. LIKOFF: Objection to form.

9 THE DEPONENT: If CMS says, and for many
10 forms of this guidance you've listed, is that the data
11 has to be accurate and complete and truthful. So when
12 an MAO is doing chart reviews or medical record
13 reviews, they have a protocol, presumably. CMS knows
14 nothing about the MAO chart review protocols, but they
15 have a protocol presumably which gives them results.
16 And this is not rocket science. If there's something
17 that quacks like a duck, it probably is a duck, an
18 unsupported diagnosis. And the MAO knows that that
19 violates the regulation to submit accurate data.

20 Q Have you ever given MAOs specific guidance
21 on when it is you think they have to conduct a medical
22 record review or do further investigation to determine

CONTAINS PORTIONS OF ATTORNEYS' EYES ONLY

Videotaped Deposition of
SEAN CAVANAUGH
Given Remotely
Thursday, February 17, 2022
9:02 a.m.

Reported by: Karen K. Kidwell, RMR, CRR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 fee-for-service, traditional claims data, and the
2 Medicare Advantage plans data, right?

3 A. Well, I think it was much more common, if
4 it was unsupported, to be on the side where it drove
5 financial advantage and Medicare Advantage. And if
6 it was omitted, it was much more likely to happen on
7 the fee-for-service side, where it didn't cause any
8 financial harm.

9 Q. Setting aside your belief about the extent
10 to which it occurred, you agree that both fee for
11 service and Medicare Advantage, you know, submitted
12 data included codes that were not supported by the
13 medical records, and omitted diagnostic codes that
14 would be supported by the medical records? Right?

15 MS. KRIEG: Object to form.

16 THE WITNESS: Yes, it was my understanding
17 that that was true.

18 BY MR. GALLAGHER:

19 Q. And you could refer to that as overcoding
20 and undercoding, right? Overcoding being assigning
21 codes that are not supported by the medical record,
22 and undercoding being omitting codes that would be
23 supported by the medical records. Fair?

24 A. Yes. They frequently -- they are
25 frequently referred to that way.

1 Q. And it was your understanding, as the
2 director for the Center for Medicare in 2014, 2017,
3 in that time frame, that overcoding and undercoding
4 was to some degree an issue with both traditional,
5 fee-for-service data and the data submitted by
6 Medicare Advantage plans. Right?

7 MS. KRIEG: Object to form.

8 THE WITNESS: Yes.

9 BY MR. GALLAGHER:

10 Q. Bear with me one second. I have an
11 outline, and I've covered some of it already. I
12 don't want to waste time, so -- just bear with me one
13 second.

14 So I want to direct your attention to the
15 article that we've marked as Exhibit 1002, and in
16 particular to page 5, at the top.

17 Are you on page 5?

18 A. I am.

19 Q. So do you see at the top, where
20 Mr. Kronick and Mr. Welch write in their article that
21 "However, fee-for-service coding is known to be both
22 incomplete and variable." Do you see that?

23 A. Yes.

24 Q. And this article was written in two
25 thousand -- or published in 2014. Do you agree with

1 was inaccurate, you had to do something, what did you
2 mean by "came across that knowledge"?

3 A. If by any mechanism, whether it's medical
4 record review or other -- I don't want to run through
5 hypothetical scenarios. I don't know everything that
6 goes into how they run their plans and their audits
7 and so forth. But they had an affirmative obligation
8 to make it correct.

9 Q. So are you saying that an affirmative
10 obligation, if they knew, from whatever mechanism,
11 that a code was not supported, to withdraw it?

12 A. Absolutely if they knew. I'm
13 less conversant in law and regulation on if they had
14 an affirmative obligation to take reasonable steps to
15 find out.

16 Q. Sitting here today, you can't identify any
17 rule or regulation that created an affirmative
18 obligation to audit the claims data submitted by
19 providers, or to proactively review medical records,
20 to ensure that the codes selected by providers were
21 supported?

22 A. I cannot. But I'm not an expert in the
23 area and don't work in that area.

24 Q. This rule that we're looking at in
25 Exhibit 1006, the medical records review rule that

1 BY MR. GALLAGHER:

2 Q. Right. And the provision of the medical
3 record review rule that would have required Medicare
4 Advantage organizations to design their medical
5 record reviews to determine the accuracy of
6 diagnoses -- in other words, to look for deletes --
7 that was one of -- that was the part that was
8 withdrawn and never finalized, right?

9 MS. KRIEG: Object to form.

10 THE WITNESS: This provision you referred
11 me to, 422.3.0 was not finalized.

12 BY MR. GALLAGHER:

13 Q. And you're not aware of any other rule or
14 regulation that imposes this requirement, are you?

15 A. Again, my understanding of the attestation
16 would cover similar ground. And in fact, you know, I
17 was always careful to tell United that, you know,
18 there are multiple rules and statutes that may apply,
19 and you should be careful to comply with all of them,
20 and you shouldn't focus solely on this proposed rule.

21 Q. There was no other -- there is no other
22 rule or regulation that specifically instructs
23 Medicare Advantage plans that they must conduct
24 medical record reviews to look for deletes, right?

25 A. I'm -- I'm not the right person to ask

1 Do you agree that you and Ms. Rice were
2 the appropriate people to be talking about this issue
3 with United?

4 A. Yes, among others.

5 Q. All right. So then -- let's go back to
6 the first page of Exhibit 1060, now that we have the
7 background for the meeting. And -- and do you see --
8 well, actually, first, I'm sorry, go back to page 2.
9 There's something I forgot to ask about.

10 A. Uh-huh.

11 Q. So Mr. Renfro indicates that "other
12 Medicare Advantage plans do not look for possible
13 deletions when reviewing medical records."

14 Did you know that in 2014? That
15 medical -- Medicare Advantage plans were conducting
16 medical record reviews, and for the most part, not
17 looking for deletes?

18 A. I did not know that.

19 Q. Did that surprise you --

20 MS. KRIEG: Object to form.

21 BY MR. GALLAGHER:

22 Q. -- when you learned?

23 MS. KRIEG: Object to form.

24 THE WITNESS: I don't recall how I reacted
25 to it.

1 What do you recall about who said what, if anything?

2 MS. KRIEG: Object to form.

3 BY MR. GALLAGHER:

4 Q. Actually, let me -- let me ask it
5 differently.

6 Do you have a specific recollection of who
7 said what at the meeting?

8 A. My recollections are much stronger on what
9 CMS said, because it was something we practiced and
10 something we agreed upon prior to going into the
11 meeting.

12 I am much weaker on my recollections of
13 specifically what United said and asked. But as I
14 told you previously, we had agreed that we would
15 consistently say that -- that, you know, they should
16 stay tuned to find out whether the proposed
17 regulation was finalized or not. However, that was
18 not the only applicable requirement on them to make
19 sure they submitted complete and accurate data in --
20 for risk adjustment, and that to the degree they were
21 posing questions to us that sought legal advice on
22 their obligations under the statute and regulations,
23 they should instead rely on their own counsel, and
24 not this meeting.

25 Q. Was that a mantra that you practiced in

1 advance? I mean, did you have a script for that?

2 A. I -- I probably would have had notes of
3 some sort, but it -- it was something -- it was
4 certainly something we talked amongst ourselves and
5 agreed to. I think -- you know, I think, as you read
6 from the e-mails, there was a concern that they might
7 be trying to get us to say something other than that.

8 Q. Can you give me the answer again, like
9 what -- what you recall about the meeting?

10 MS. KRIEG: Object to form.

11 THE WITNESS: About what I recall about
12 the meeting? Or --

13 BY MR. GALLAGHER:

14 Q. No, what you recall CMS said, because you
15 practiced it.

16 A. Yeah. I was better at this eight years
17 ago than I am now, but my recollection is it was
18 along the lines of, yes, there's a proposed
19 regulation. It may or may not be finalized. We
20 can't tell you one way or the other. However, if
21 you're solely focused on that, you should be aware
22 there are other statutes, regulations, requirements
23 that apply to your obligation to submit complete and
24 accurate data. You should make sure you're aware of
25 them, and if you're asking us questions about how to

1 specifically comply with the law, that's more
2 appropriately posed to your own counsel.

3 Q. Do you recall that there was -- there were
4 actually a couple of issues raised by United about
5 their -- about what the rule -- what the rules were;
6 that it wasn't just whether the medical record review
7 rule would be finalized, but also what to do with
8 their as-yet-not-completed medical record review that
9 they had been conducting for the 2012 year?

10 A. I -- in the vaguest sense, I do recall
11 something like that, yes.

12 Q. So you recall that there was discussion
13 about how United had been -- unlike other plans, had
14 been conducting medical record reviews and looking
15 for deletes, that they had a whole process around
16 that, and that they had not yet really completed it?

17 MR. LANGHAM: Objection. Form.

18 BY MR. GALLAGHER:

19 Q. Do you recall that?

20 A. I have a recollection that they did
21 describe their medical record review process in
22 some -- I forget how much detail, but they were
23 describing it.

24 Q. If you would look at Exhibit 1060, which
25 is the exchange you had with Cynthia Tudor and

1 Q. And you deny that Cheri Rice said that?

2 A. I -- yes. I deny that she said that. It
3 seems -- it's totally inconsistent with the approach
4 we took into that meeting, and what we agreed to say.

5 Q. So you claim that rather than saying that,
6 you stuck to the script that you gave us earlier, and
7 just repeated that mantra?

8 A. When it came to articulating any
9 obligation and duty, or duty they had, that was the
10 response we gave.

11 Q. Did you give that response more than once
12 in the meeting? Like multiple times?

13 A. Oh, yes. Yes.

14 Q. So it was a mantra that you repeated, you
15 claim, multiple times in response to questions from
16 United?

17 A. Yes.

18 Q. And you deny saying anything else besides
19 the mantra on the subject of what United's
20 obligations were before finalization of the medical
21 record review rule?

22 MR. LANGHAM: Objection. Form.

23 THE WITNESS: I deny saying anything else
24 about what their obligations were under either
25 the probes reg or existing requirements.

1 firsthand.

2 Q. So you actually don't recall one way or
3 the other whether Ms. Rice said this about what you
4 have to do if you have knowledge?

5 A. I don't have a specific recollection, as I
6 said, but it did seem more consistent with how we
7 prepared for the meeting.

8 Q. Okay. Let's go to page 2, and in -- and
9 in particular, the second bullet point.

10 A. The second bullet point?

11 Q. Yeah, that begins, "Cheri Rice then asked
12 some follow-up questions." Do you see that?

13 A. Yes, I see that.

14 Q. And do you see the sentence that reads,
15 near the end of that paragraph, "Sean Cavanaugh
16 stated that, under current rules, if UHG doesn't know
17 codes are inaccurate the company would not have to
18 delete them. He went on to state that if UHC does
19 not know until the end of its claims verification
20 process that a code is incorrect then there is no
21 requirement to delete the code until the effective
22 date of CMS's final rule." Do you see that?

23 A. I see that.

24 Q. You -- you deny saying that?

25 A. I deny it, absolutely.

1 BY MR. GALLAGHER:

2 Q. In the next sentence of his e-mail,
3 Mr. Nelson writes, "During our conversation yesterday
4 and other recent conversations, CMS confirmed to us
5 that these requirements do not apply until the
6 effective date of the rule." Do you see that?

7 A. I see that.

8 Q. And do you agree that the requirements of
9 the medical record review rule did not apply, or
10 would not apply, until the effective date of the
11 rule?

12 A. I agreed that -- well, actually, I think
13 I -- yes, I think I agree.

14 Q. And do you agree that that's something
15 that -- that somebody from CMS told United during
16 your meeting on April 29th, 2014?

17 A. I think if we'd been asked about the reg,
18 we would have said, again, what you see Cheri says,
19 what I called my mantra. But you also see in Cheri's
20 response, which is, you know, there are other
21 applicable laws that impose standards requirements
22 and responsibilities. I don't know that we would
23 have specifically given that response to him.

24 And the --

25 Q. So you deny that -- you deny -- sorry. Go

1 ahead.

2 A. No, go ahead, please.

3 Q. You deny confirming that the requirements
4 of the medical -- the proposed medical record review
5 rule do not apply until the effective date of the
6 rule, because you believe that instead of answering
7 that, you would have simply repeated the mantra that
8 you agreed to deliver at the meeting?

9 A. Correct. And as I told you previously, my
10 only specific recollection around this sort of topic
11 was in the abstract, about a regulation that is not
12 finalized.

13 Q. All right. Mr. Nelson writes that "CMS
14 confirmed to us that these requirements do not apply
15 until the effective date of the rule, and that
16 Medicare Advantage plans are thus not currently
17 required to design their medical record reviews to
18 determine the accuracy of risk adjustment diagnoses."

19 Do you see that?

20 A. I see that.

21 Q. And you deny saying that anybody from CMS
22 said that at the meeting, right?

23 A. Absolutely.

24 Q. All right. So let's -- let's look at --
25 because you had agreed to deliver the mantra, and

1 that's all you did, as you recall it?

2 A. But also, as phrased here, the reason why
3 my memory is so crystal clear, none of us would say,
4 if you're doing a medical record review, you
5 shouldn't -- you wouldn't be held to a standard of
6 trying to be accurate. Like that -- that's just not
7 a posture CMS would take.

8 Q. All right. So on page 1 -- well, sorry.
9 So there's two reasons you say you deny that you said
10 that.

11 One is because, as you said a few times,
12 you agreed to deliver the same mantra in response to
13 questions like that. And the second is, you believe
14 you would never have said such a thing because it's
15 not consistent with what, you know, your
16 understanding was?

17 A. Correct.

18 Q. Okay. All right. So on the first page of
19 Exhibit 1063, you have Mrs. Rice responding to
20 Mr. Nelson's e-mail, on May 2nd, 2014. Right?

21 A. Yes.

22 Q. Anywhere in this e-mail does she deny that
23 CMS confirmed, as Mr. Nelson set forth, that the
24 requirements of the medical record review rule do not
25 apply until the effective date of the rule, and that

CONFIDENTIAL - SUBJECT TO PROTECTIVE ORDER

Volume 3
DEPOSITION OF ANNE HORNSBY
As 30(b)(6) Designee 1 of
The United States

Washington, DC
November 21, 2023

Reported by: John L. Harmonson, RPR

1 Mr. Gardner during the Zoom session -- one of the
2 Zoom sessions that you had with him; correct?

3 MS. LIKOFF: Object to form. Asked and
4 answered.

5 THE WITNESS: Yes, that was an adequate
6 preparation because of what the answer was. The
7 fact that the answer was no results have been
8 released, the answer is there is nothing else to do
9 to prepare. I focused on preparing for CON14 and
10 CON15.

11 BY MR. MARTINEZ:

12 Q. Are you aware that CMS has released I
13 believe what it referred to as preliminary results
14 of the payment year 2011 through 2013 RADV audits
15 to MA plans?

16 MS. LIKOFF: Objection. Outside the
17 scope in terms of the time frame the witness has
18 been designated for.

19 THE WITNESS: I'm not prepared to
20 testify on behalf of CMS on this topic. It is out
21 of my scope.

22 BY MR. MARTINEZ:

23 Q. So my question is are you aware -- and
24 let me step back, because what you're telling me
25 now is that Mr. Gardner told you that the results,

1 the audit results for years prior to CON14 had not
2 been released as of the time you spoke to him. Is
3 that right?

4 MS. LIKOFF: Objection; asked and
5 answered.

6 THE WITNESS: That is a correct summary
7 of what Mr. Gardner said to me.

8 BY MR. MARTINEZ:

9 Q. Okay. And so then my follow-up question
10 is: Are you aware whether any results, whether
11 preliminary or final, have been released to MA
12 plans concerning the payment year 2011 through 2013
13 audits?

14 MS. LIKOFF: Objection; outside the
15 scope. Again, this witness was prepared on this
16 limited topic with respect to only the time period
17 post July 2021.

18 THE WITNESS: I'm not prepared to
19 testify on behalf of CMS for these previous audit
20 years with which I was not tasked.

21 BY MR. MARTINEZ:

22 Q. All right. You reviewed the deposition
23 testimonies you've indicated of the government's
24 Designee Witness 6 in preparation for today;
25 correct?

1 That's the system that the medical reviewers, the
2 reviewers look at.

3 So I asked -- so, you know, there is a
4 process within CDAT that gives MAOs continuous
5 report feedback. They can log in any time and see
6 where their medical record reviews are in the
7 process in CDAT. So that's all part of medical
8 record review.

9 That's separate from the analytical
10 piece of the RADV audit where you take all those
11 results, build all these massive datasets, crunch
12 them, and then eventually have a result for each
13 contract.

14 Q. So that second piece of analyzing all of
15 the results from the medical record reviews for
16 payment years 2014 and 2015, that piece has not
17 happened yet; correct?

18 A. That is correct. I asked Dave, and he
19 said there are no preliminary results for '14 or
20 '15 at this point.

21 Q. Who is the lead analytic contractor for
22 the payment year 2014 and 2015 RADVs?

23 A. Deloitte.

24 Q. All right. We've talked about some of
25 the documents that you reviewed in preparation for

1 from the provider or was instead added by the MAO
2 through chart review?

3 A. CMS does not know what kind of data
4 exists in MAOs, in the parent organizations. It
5 does not know; does not have that information. So
6 that means -- also, it means that with the RAPS
7 system, the abbreviated dataset, CMS cannot
8 distinguish between a provider-submitted diagnosis
9 and an additional diagnosis added by the MAO from
10 its own chart review. CMS cannot distinguish that.

11 With encounter data, you could partly
12 distinguish but not completely. So it's still not
13 something that could be relied on if that were of
14 interest.

15 Q. Is RADV, the RADV process that CMS is
16 performing, is it designed to separate inaccurate
17 codes that originate with providers as opposed to
18 inaccurate codes that were potentially added by the
19 plans themselves?

20 A. That is not CMS's intention. And as
21 I've explained, CMS cannot make that distinction in
22 any systematic way.

23 Q. If I was to look at the results of any
24 given RADV audit performed by CMS, then, it would
25 not tell me what percentage of the

1 provider-submitted codes were accurate?

2 MS. LIKOFF: Objection to form. Vague.

3 THE WITNESS: CMS is interested in
4 determining whether or not the HCC on which the MA
5 contract was paid is supported in the medical
6 record. That's what accurate is. Accurate means
7 supported, the diagnosis is supported in the
8 medical record.

9 BY MR. BAAK:

10 Q. To my question, though, if I look at the
11 results of any given RADV audit performed on a
12 contract by CMS, the purpose of that is not trying
13 to identify what percentage of the
14 provider-submitted codes were inaccurate on that
15 plan; right?

16 A. The purpose of the RADV audit is to
17 determine what enrollee HCCs are not validated by
18 coder review. That's -- that's it. That's what
19 CMS is looking for.

20 Q. And CMS is making no distinction in that
21 process between codes that originated with the
22 providers themselves versus codes that were added
23 downstream by the plans through chart review;
24 correct?

25 A. CMS doesn't have that information so it

1 would not be possible to incorporate it in the
2 sampling frame.

3 Q. You mentioned as your second category
4 the IPIA and IPERIA requirements. What is IPIA?

5 A. The Improper Payment Improvements Act,
6 which was the initial one in 2002. There are
7 amendments, I believe, to Department of Treasury
8 U.S. Code. And then Congress subsequently made two
9 more versions of it in the time frame of this
10 litigation. So the most recent, 2013, is IPERIA.
11 And I don't even remember what all the extra
12 letters stand for.

13 But the point was federal
14 government-wide to have programs that expend over a
15 certain dollar limit conduct a risk adjustment and
16 then every year conduct an analysis to come up with
17 an improper payment error rate for that program.

18 So CMS, being a very large organization,
19 has to do an improper payment error analysis for a
20 number of its programs: Medicare Advantage,
21 fee-for-service, Part D, Medicaid, SCHIP, so on.
22 That's where the term "improper payment" came into
23 common discourse in CMS. It's from those laws.

24 Q. Has CMS calculated an improper payment
25 amount on Medicare Advantage for every year from

1 to their medical record reviews in January of 2014?

2 A. That is correct.

3 Q. And then ultimately CMS opted not to
4 finalize this new proposed requirement on MA plans
5 related to how they conduct their medical record
6 reviews; right?

7 A. CMS opted not to finalize over 40
8 provisions in the proposed rule.

9 Q. And one of them --

10 A. And one of them was medical record
11 review proposal, yeah.

12 Q. So coming back to the attachment to your
13 email, the bottom part of the email says Issue 6.B,
14 and then it says: "Amend Section 422.310 to
15 require MA organizations conducting medical record
16 reviews to focus" -- "to not focus only on
17 identifying underpayments."

18 Do you see that?

19 A. I do see that sentence.

20 Q. So this is the section that's on what
21 ultimately became the proposed medical record
22 review rule; right?

23 A. Yes. This is an early draft.

24 Q. And you say -- this next statement under
25 6.B is that "Under existing regulation, there is no

1 have been a new obligation in the sense
2 that a continuous adequate compliance
3 review process conducted during the routine
4 course of business of an MAO should include
5 looking for diagnoses that are not
6 supported by the medical record and looking
7 for diagnoses that could be submitted for
8 payment that had been missed. So that
9 should have been seen as part of a rigorous
10 compliance process. And, in fact, you
11 know, CMS has a contract termination
12 requirement that if you don't submit valid
13 risk adjustment data, we can stop your --
14 terminate your contract. But, you know, a
15 lot of times people find that specifying
16 guidance more precisely, you know, is
17 helpful. So it's -- did that answer your
18 question?

19 BY MR. LEE:

20 Q. Yes. Even though the medical record
21 rule as proposed ultimately was not passed, was it
22 your understanding that MAOs had obligations to
23 CMS?

24 A. Yes.

25 MS. SCHEFFLER DO: Objection. Vague.

1 THE WITNESS: Do I --

2 BY MR. LEE:

3 Q. And were part of the obligations to
4 submit accurate, truthful, and complete data to
5 CMS?

6 A. Yeah, absolutely.

7 MS. SCHEFFLER DO: Objection. Lacks
8 foundation.

9 THE WITNESS: So I don't answer?

10 BY MR. LEE:

11 Q. You can answer.

12 MS. SCHEFFLER DO: You can -- yeah, let
13 me get my objection out, please, and then
14 you can go ahead and answer.

15 BY MR. LEE:

16 Q. And was it your understanding as part
17 of the obligations that MAOs had, that they were
18 required to delete submitted codes that they knew
19 were inaccurate?

20 MS. SCHEFFLER DO: Objection. Form.

21 THE WITNESS: Absolutely. Absolutely.

REMOTE VIDEOCONFERENCE DEPOSITION OF
JONATHAN BLUM
March 4, 2022

Reported by:

Anne E. Vosburgh, CSR-6804, RPR, CRR

Job No. 789903

1 J. BLUM

2 seeing code growth was the behavior the
3 plans -- plans' different behaviors and
4 different tactics.

5 BY MR. SUMMERS:

6 Q. Right. And one of those behaviors
7 was one-way chart review, correct?

8 MS. LIKOFF: Objection to form.

9 Asked and answered. Vague.

10 A. I cannot speak to the operations
11 that a plan had. I can speak to the policy
12 that CMS set.

13 BY MR. SUMMERS:

14 Q. Okay. I know you can't speak with
15 firsthand knowledge to what MA plans were
16 doing. But at the risk of extreme repetition,
17 I'm asking you, did you have a general

19 driving the increased coding was one-sided
20 chart review by MA plans?

21 MS. LIKOFF: Objection to form.

24 forms. There's not one common terminology
25 that I'm aware of.

1 J. BLUM

2 Typically CMS would finalize
3 regulations, then produce materials to
4 describe those final regulations. But, again,
5 I was not involved with the final
6 determination of that regulation.

7 BY MR. SUMMERS:

8 Q. And there were no regulations
9 explicitly requiring medical record reviews to
10 be two ways, right?

11 MS. LIKOFF: Object to form.

12 BY MR. SUMMERS:

13 Q. That's not controversial, is it?

14 MS. LIKOFF: Object to form. Vague.

15 Asked and answered.

16 A. My understanding of the regulations
17 that were in place, the plans had an
18 obligation to submit accurate diagnosis codes
19 to the Agency.

20 BY MR. SUMMERS:

21 Q. I'll take that as a no, there were no
22 such requirements explicitly, unless you'd like
23 to amend your remarks.

Subject: 2012 Attestation and follow-up from yesterday's meeting

Cheri,

Thanks for your email, and please let us know if you need any additional information.

Steve

-----Original Message-----

From: Rice, Cheri M. (CMS:CM) [Cheri.Rice@cms.hhs.gov]
Sent: Friday, May 02, 2014 05:14 PM Central Standard Time
To: Nelson, Steve H.
Cc: Johnson, Thad C.; Schumacher, Daniel J.; Erickson, Karen L.; Harlow, Jennifer A. (CMS:CM)
Subject: RE: 2012 Attestation and follow-up from yesterday's meeting

Steve,

Thank you for your email and for our discussion earlier this week. With respect to your fifth point, I would note that regardless of the effective date of the proposed requirement related to medical record reviews, there are other laws that do impose standards, requirements and responsibilities on MA plans in connection with the federal payments they receive from CMS. We cannot provide advice to United about the scope of those other laws. Nor can we provide advice on whether United's plan course of action and/or purported limits on the scope of its attestation are compliant with such other laws. Your statement concerning the data submissions that have already been made and United's plans for future action will be included in our records and we will proceed with our evaluation and use of the risk adjustment data consistent with 42 CFR 422.308, 422.310, and other applicable law.

Thanks again.

Cheri

Subject: 2012 Attestation and follow-up from yesterday's meeting

Dear Cheri,

I wanted to thank you and your colleagues for taking the time to meet with us yesterday. We appreciate the time and attention that you and others in CMS leadership have provided on the issue of our 2012 risk adjustment data.

EXHIBIT
00324

submissions and our annual risk adjustment data certifications. As we mentioned, prior annual certifications have been on paper, and we have thus had the ability to add notes explaining our understanding of the certifications and our ongoing data remediation efforts. This year, however, the certifications are electronic, and there does not appear to be an opportunity to reflect our understanding. The purpose of our meeting yesterday and this email is to explain our understanding of the certifications.

First, as with our past certifications, the 2012 certifications are based on facts reasonably available or made available to us as of the date of the certifications. As we receive additional information, we may be required to modify the data to which the certifications relate.

Second, the certifications use the phrase "best knowledge, information, and belief," which is based on our ordinary business practices.

Third, the certifications only cover risk adjustment data for 2012 dates of service that were submitted to CMS and not subsequently deleted prior to the date of the certifications.

Fourth, as we have mentioned to you previously, we are engaged in an ongoing review of our risk adjustment processes and submission system. This review has identified areas for improvement and, as a result, we will be deleting all risk adjustment data for 2012 dates of service that we ultimately determine should be deleted consistent with this email.

Fifth, as we discussed yesterday, CMS recently issued a proposed rule that would, if finalized, require MA plans to design any medical record reviews to determine the accuracy of risk adjustment diagnoses associated with those records. During our conversation yesterday and other recent conversations, CMS confirmed to us that these requirements do not apply until the effective date of the rule, and that MA plans are thus not currently required to design their medical record reviews to determine the accuracy of risk adjustment diagnoses. We currently have a process through which we review certain medical records to determine the accuracy of risk adjustment diagnoses and submit appropriate deletes. This process already has resulted in the identification of and, in some instances, the submission of deletes for 2012 dates of service. But based on the proposed rule, including the preamble, and recent conversations with CMS, we suspended that process for 2012 dates of service while we consider whether to make changes. Pursuant to our discussion, however, we will soon submit for deletion those diagnosis codes that have undergone a complete review and that we have therefore identified as appropriate deletes. In the near future, we will determine whether to continue our review process for the diagnosis codes which were still under review at the time we suspended our process. In the meantime, we will not delete these codes.

The certifications that we submit today are made subject to these clarifications. Please let us know if you have any questions. Again, thank you for your time and attention on this matter.

1 and we said, "Okay."

2 I mean, that's how I remember it.

3 Q. Okay. And we -- we are going to talk now
4 about sort of the substance of what took place at
5 that meeting, best we can.

6 A. Okay.

7 Q. So why don't we start out -- can you tell
8 me right now, sitting here today, what you remember
9 about what transpired at that meeting on
10 April 14th -- I'm sorry, April 29th, 2014, with CMS?

11 MR. SUMMERS: I'm just going to object to
12 form, since it's such an open-ended question.

13 But you can go ahead and do your best to
14 answer.

15 THE WITNESS: Okay.

16 Yeah, so I -- I remember opening up the
17 meeting, talking about what we wanted to
18 accomplish and what the objectives were of the
19 meeting, to get clarification on the proposed
20 rule, the timing of it, and -- and that we were
21 evaluating and trying to make a decision on our
22 claims verification program, and was that
23 required.

24 BY MS. McMAHON:

25 Q. Okay.

1 Q. Okay.

2 A. Yeah.

3 Q. And did you understand that she was making
4 clear that she was not providing you advice on that
5 course of action?

6 MR. SUMMERS: Objection. Form.
7 Mischaracterizes.

8 THE WITNESS: Yeah, I -- not -- I mean,
9 other than what I just said, I just think she
10 was trying to limit, you know, where -- where
11 she would weigh in on. But I -- it's hard to
12 completely -- you know, like interpret what --
13 what she meant by the "advice" word, if that's
14 what -- if that's the word you're specifically
15 focused on.

16 BY MS. McMAHON:

17 Q. Did you have an understanding, after the
18 meeting you had with CMS and after this
19 correspondence that you had with Ms. Rice, that CMS
20 was confirming or concurring with your potential
21 decision to not submit diagnosis codes that -- that
22 had been identified during your chart review program?

23 MR. SUMMERS: Objection. Form.

24 THE WITNESS: Yeah, the -- just to remind
25 you, the question we were there to discuss was

1 the status of the proposed rule and potential
2 timing, if they could give us any insight about
3 that. And then our question about the
4 requirement or not to have a claims verification
5 program.

6 And the -- the conclusion we reached after
7 the conversation was that we had no obligation
8 to proactively delete codes, or have a program
9 like the claims verification program.

10 So that was the -- that was the answer we
11 got. That's what we heard. We gave -- we were
12 super clear in our follow-up: This is what we
13 heard. This is what we intend to do. There's
14 no -- no -- no vagueness in -- in our letter
15 back.

16 And then -- and what we got this letter
17 was -- said, you know, "Thanks for your e-mail."
18 And -- and then, "I'd just like to remind you
19 that this" -- I'm paraphrasing her: "I'd like
20 to remind you that regardless of the
21 conversation we had, there's other laws you
22 should pay attention to, and you should be
23 thinking about that too."

24 And I take that as -- you know, whether
25 she meant it as advice or not, good advice; and

1 that's written right here, is an agreement that --
2 that CMS or she agreed with the information you put
3 in your fifth point, that she was somehow giving you
4 the -- her understanding that you could go ahead, and
5 CMS was okay with the -- the course of action that
6 you describe in your Point 5?

7 A. I think -- again, it -- sorry, but it's --
8 your -- your characterization is I think simplistic,
9 but how I -- I'll just try this again.

10 We went there seeking very specific
11 information and to very specific questions about
12 claims verification program, the -- and the entirety
13 of that conversation, that we've talked about several
14 times here. And in addition, the time -- timeliness
15 and -- and their thoughts about the proposed rule,
16 and the finalization or possibility of finalization
17 of that rule.

18 We had a discussion during the meeting
19 that -- that we concluded that they agreed with us
20 that it did not -- that MA plans did not need to
21 do -- have a program -- again, people probably called
22 it different things -- but our claims verification
23 program.

24 We then put that in a memo. We were very
25 specific about our plans. And we got this response

1 hitting a budget. I mean, that's -- that's just how
2 we have to run our business. There's no way around
3 that.

4 And then you have to find -- you know,
5 continue to run the business in a proper way. But
6 the compliance and consistent with CMS regulations,
7 there's no negotiation on that.

8 Q. After your meeting with CMS on April 29 of
9 2014, after that point in time, did CMS ever come to
10 you and say that you needed to reinstate claim
11 verification or risk being sued?

12 A. Not to my knowledge.

13 MR. SUMMERS: I have no further questions.
14 Thank you for your time.

15 MS. McMAHON: All right. I just -- give
16 me five minutes to see if I have any follow-up.
17 I think we have ten minutes left on record.

18 MR. SUMMERS: I think you only had like
19 two minutes left, according to our count. And
20 the count -- the witness has a -- a flight to
21 catch, so be as fast as you can, please.

22 MS. McMAHON: Well, I will go as fast as I
23 can, but I believe I have ten minutes, and I
24 believe that was made clear at the end of
25 Mr. Havian's --

CONFIDENTIAL
CONTAINS ATTORNEYS' EYES ONLY PORTIONS
Videotaped Deposition of
ANNE HORNSBY
VOLUME I

Friday, May 19, 2023

Reported by: Traci M. Mertens, RDR, CRR, CSR

MAGNA LEGAL SERVICES
866-624-6221
www.MagnaLS.com

1 more, to find more diagnosis codes and hopefully to
2 find sicker beneficiaries to enroll.

3 What I said is there wasn't a general
4 awareness in -- among CM leadership -- and Cynthia
5 Tutor also said this in her deposition. There
6 wasn't a general awareness that plans were -- were
7 going to medical records and only looking for
8 additional.

9 CMS supported the idea of chart review.
10 That -- that means confirming the accuracy of the
11 diagnoses you submit for payment and -- and
12 confirming that they are supported in the medical
13 record, and it can mean also, but not only, that you
14 find diagnoses that were -- had not been submitted
15 for payment.

16 Q. If you look at the middle of this page E4,
17 there's a paragraph that starts: "If we find that
18 MA plans code with high intensity, that does not
19 provide information about whether MA plans are
20 overcoding or whether fee-for-service providers are
21 undercoding. Similarly, one cannot infer whether MA
22 coding is any more or less accurate than
23 fee-for-service."

24 Do you see that?

25 A. I do.

1 compliance actions for marketing issues because
2 that's the -- the policy area for which they're
3 responsible.

4 And MDBG, M-D-B-G, will take some
5 compliance actions for issues related to the Part C
6 and D reporting because that's what they're
7 responsible for.

8 So that -- and then MOAG has its own set
9 of responsibilities for, for example, audits, audits
10 of plans to see if they're complying with CMS'
11 requirements. So I learned that from them, and I
12 learned about CMS' policy about termination from
13 them.

14 Q. What did you learn about CMS' policy for
15 termination from John Scott and Jerry Mulcahey?

16 A. I learned that CMS will terminate for
17 reasons of beneficiary harm. That is CMS' focus.
18 That is the goal. They want beneficiaries to have
19 continuity of coverage and to be protected and to
20 make sure that plans are handling the appeals and
21 grievances and determinations correctly, and that is
22 CMS' focus regarding termination.

23 (Exhibit 1446 was marked for
24 identification and attached hereto.)

25 Q. (By Mr. Jones) Ms. Hornsby, we're handing

1 Swoben case about United's risk adjustment practices
2 and the chart review practices, correct?

3 A. Some people in CMS, yes. Not everyone.

4 Q. Okay. And after finding out about those
5 issues, CMS continued to contract with United and
6 these United Health plans for the purposes of
7 providing services as Medicare -- as Medicare
8 Advantage organizations, right?

9 A. Yes. CMS' position is that beneficiary
10 harm is the overarching reason for termination and
11 that CMS has two other remedies for MAOs that are
12 not ensuring that they submit accurate data to CMS,
13 and those two remedies are RADV audits and -- and
14 the False Claims Act.

15 Q. Does CMS consider conducting one-way chart
16 reviews looking for codes that are supported by
17 medical records to add to risk adjustment payments,
18 does it consider that to be fraud?

19 MS. KRIEG: Object to form.

20 A. So the question is whether one-way review
21 is fraud?

22 Q. Sure. Does CMS consider United looking
23 for codes to add by looking at medical records as
24 part of chart review but not looking for deletes,
25 does it consider that to be fraud?

1 A. I'm just going to repeat myself. I mean,
2 CMS believes this is being handled by the Department
3 of Justice.

4 Q. So --

5 A. That is the appropriate way to handle
6 this.

7 Q. So instead of invoking the power to
8 terminate or the choice not to contract with United
9 plans, CMS has chosen to support the Department of
10 Justice's lawsuit instead of ending the
11 relationship?

12 A. Yes. United is the largest single MAO in
13 the program. You terminate all those beneficiaries
14 which fall outside of their provider networks, it's
15 not likely they could find new providers easily.
16 CMS is interested in protecting continuity of care
17 for beneficiaries.

18 Q. And so under CMS' view, CMS decided to
19 continue contracting with United plans
20 notwithstanding the allegations that CMS' risk
21 adjustment practices have cost the government
22 billions of dollars?

23 A. CMS' position is that this is being
24 handled by the Department of Justice.

25 Q. And you can't tell me one way or another

1 Q. The next sentence says: "In particular,
2 we did not use our previous process to determine
3 whether diagnosis codes submitted through claims are
4 unsupported in the medical record."

5 Do you see that?

6 A. Yeah, but that doesn't say anything.

7 Q. You don't think that -- well, CMS knew
8 that United was not using the previous process
9 discussed with Ms. Rice to review medical records to
10 determine whether diagnosis codes submitted through
11 claims are unsupported.

12 A. My understanding is that CMS' entire
13 discussion with United, with Steve Nelson in
14 particular, started with that April 2014 meeting and
15 is still continuing here, and CMS still doesn't know
16 exactly what United was doing. You know, were they
17 targeting a population? Were they doing blind
18 coding or not, you know? Who knows what that claims
19 verification program was? Who knows if there are
20 other parts of United, other MAOs that are still
21 doing some kind of review?

22 So CMS doesn't give specific
23 recommendations to MAOs in meetings like that. CMS
24 will restate CMS' position, and -- and that's it.

25 Q. Did CMS ask for any clarity on what

1 with Medicare Advantage plans about rules of the
2 road on chart review?

3 A. Could you tell me what transparent means?

4 Q. We just got a -- seen the email where
5 United is telling CMS what it's doing. Do you have
6 any view one way or another about whether CMS should
7 be transparent with MA plans and give guidance about
8 the rules of the road with respect to chart review
9 programs?

10 MS. KRIEG: Object to form and scope.

11 A. Well, first, I would say the fifth bullet
12 really has no information in it about United's
13 claims verification program. It's very vague. So
14 there's really -- it's -- even if CMS were to
15 respond in a meeting like that, there would be
16 nothing to respond to.

17 Secondly, CMS would not tell one company
18 special guidance that none of the others had access
19 to and give them that kind of leg up and advance.

20 Q. Here in this Exhibit 330, we already
21 established that United was asking for guidance from
22 CMS, that it was telling CMS what it was doing, and
23 CMS didn't ask for any clarification, right?

24 A. Exactly, because that's not what CMS would
25 do.

CERTIFICATE

I, TRACI M. MERTENS, Registered Diplomate Reporter and Certified Realtime Reporter, do hereby certify that prior to the commencement of the examination, the deponent was placed under oath to testify to the truth and nothing but the truth under penalty of perjury.

I DO FURTHER CERTIFY that the foregoing is a verbatim transcript of the testimony as taken stenographically by me at the time, place, and on the date hereinbefore set forth, to the best of my ability.

I DO FURTHER CERTIFY that I am neither a relative nor employee nor counsel for any of the parties to this action in which this proceeding was taken, and further that I am not financially or otherwise interested in the outcome of this action.

Certified to by me on this 24th day of May, 2023.

Videotaped Deposition of
CYNTHIA G. TUDOR, Ph.D.
Given Remotely
Tuesday, August 23, 2022
9:59 a.m. Eastern Time

Reported by: Cindy A. Hayden, RMR, CRR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 you don't recall the specifics. Do you recall in
2 general the April 2014 meeting you had with Steve
3 Nelson?

4 A. Well, only because people had asked for
5 what was in my Day-Timer at the time. And I looked
6 at my Day-Timer, and it told me that there had been
7 a meeting.

8 Q. You're referring to your Day-Timer.
9 Dr. Tudor, did you take notes at the meeting you
10 had with Steve Nelson and others from United in
11 April of 2014?

12 MS. CHEN: Object to form.

13 THE WITNESS: I don't know about the
14 date, but I know that there was a piece of paper
15 that had something on it.

16 BY MR. BAAK:

17 Q. Was it your practice to take notes of
18 meetings with -- your meetings with Steve Nelson?

19 A. No. Not necessarily. It'd depend upon
20 what the subject of the meeting was. It'd depend
21 upon who else was there, what role I was serving.
22 It's all sort of situational.

23 Q. Did reviewing the notes you took of the
24 April 2014 meeting in your Day-Timer, the meeting
25 with Steve Nelson and others from United, did it

1 refresh your recollection at all about what the
2 subject matter of that meeting was?

3 A. Well, my -- the way I remember that
4 piece of paper, it was pretty vague. And it -- you
5 know, there were other people there who knew more
6 than I did about these subjects. So I -- as my
7 general practice was, those people should take the
8 lead.

9 Q. And the subjects you just referenced,
10 what were the subjects of that April 2014 meeting,
11 as you recall?

12 A. I don't -- I don't --

13 MS. CHEN: Object to form.

14 THE WITNESS: I don't really remember
15 this April '14 meeting, so I don't think I can
16 answer that.

17 BY MR. BAAK:

18 Q. Do you recall how it was determined
19 that you would attend the April 2014 meeting with
20 Mr. Nelson and others from United?

21 A. Well, I was the deputy director, so I
22 was there. Because I'm sure that whoever was the
23 director -- I think it was Sean Cavanaugh at that
24 point -- told me to come, so I came.

25 Q. Do you recall what you said, if

1 MS. MCMAHON: Objection. Vague.

2 THE WITNESS: So my stance as deputy
3 director was my experts were the leads, and I was
4 there to elevate them and to sort of understand
5 whether CMS needed to do something. That's
6 generally where I stood.

7 BY MR. BAAK:

8 Q. My question is a little different,
9 Dr. Tudor. Just -- just in general, was it your
10 practice when you took notes at meetings,
11 recognizing you didn't take notes at all meetings,
12 to try to take accurate notes, to the best of your
13 ability?

14 MS. CHEN: Object to form.

15 THE WITNESS: Well, for example, I -- I
16 don't really -- the trouble with my notes -- and it
17 isn't just here -- is it's not clear sometimes who
18 said what and the sort of context of what they
19 said.

20 So I can't -- where -- I can't really
21 say whether or not they were accurate and whether
22 or not you can read anything into them.

23 Generally, my note-taking -- the only
24 thing that was really important to me for my
25 note-taking was whether CMS committed to do

1 something for a plan, and if so, it was a next
2 step.

3 And so, generally, the next steps, if I
4 put them in there, which I didn't here, would be
5 reliable. I wouldn't say that I would judge
6 anything else to be necessarily the verdict.

7 I tried to -- for example, on the
8 right-hand side of this, I tried to get their
9 numbers down. But they were going very fast, and
10 I'm not sure that they are even close to being
11 right.

12 BY MR. BAAK:

13 Q. In general, you tried to take accurate
14 notes, though, Dr. Tudor, at meetings when you
15 elected to take notes, right?

16 MS. MCMAHON: Objection.

17 MS. CHEN: Object to form.

18 THE WITNESS: I don't know what else I
19 can say on this. It -- it -- you know, I'm
20 admitting that my mind wasn't necessarily on
21 everything these people were saying --

22 BY MR. BAAK:

23 Q. Dr. Tudor, we'll talk about these
24 particular notes in just a second.

25 I'm asking, in general, it was your

1 During your time as the deputy director
2 of the Center for Medicare, did you understand that
3 Medicare Advantage plans were conducting chart
4 review to add diagnosis codes for the submission of
5 risk adjustment data?

6 MS. CHEN: Object to form.

7 THE WITNESS: I understood they were
8 doing chart reviews. To the extent to which they
9 were only adding and not -- not validating, if you
10 will, to what they had already submitted, I was not
11 aware. Chart review means both ways to me, but --
12 when it comes to encounter data, it means both
13 ways.

14 BY MR. BAAK:

15 Q. Let me just unpack that a little. Did
16 you understand, during the time you were the deputy
17 director of the Center for Medicare, that Medicare
18 Advantage plans were reviewing charts to add
19 diagnosis codes?

20 MS. MCMAHON: Objection. Asked and
21 answered.

22 BY MR. BAAK:

23 Q. You can answer it.

24 A. I think it's the same that I said
25 before. I -- I don't see how plans can attest the

1 hundreds of insurers at the time.

2 BY MR. BAAK:

3 Q. If a plan comes to CMS, its regulator,
4 and says, "Is what we're about to do permissible
5 under CMS rules and regulations?" do you agree that
6 it's reasonable of the plan to expect a clear
7 answer from CMS?

8 A. That --

9 MS. MCMAHON: Objection.

10 THE WITNESS: -- that's -- that's not
11 the way CMS operated.

12 BY MR. BAAK:

13 Q. So it would have been -- during your
14 time at CMS, if a plan came and had a question
15 about whether its course of action was permissible,
16 CMS, in your experience, did not feel like it owed
17 a clear answer to the plan, right?

18 A. That's not what I would --

19 MS. MCMAHON: Objection. Misstates.

20 THE WITNESS: That's not what I said.
21 And what -- CMS's practice was that they would
22 state the requirements. Here are the requirements.
23 It's up to you to make sure that those requirements
24 are consistent with CMS's requirements.

25 BY MR. BAAK:

UNITED STATES DISTRICT COURT
FOR THE CENTAL DISTRICT OF CALIFORNIA
WESTERN DIVISION

United States of America, ex rel.
Benjamin Poehling,

Plaintiffs,

vs.

No. 16-08697 FMO

UnitedHealth Group, Inc., et al.,

Defendants.

DEPOSITION

of Thad Johnson, taken pursuant to
notice to take oral deposition, at
Dorsey & Whitney LLP, 50 South Sixth
Street, Minneapolis, Minnesota 55402 on
the 17th day of November, 2022, before
Nathan D. Engen, a notary public in and
for the State of Minnesota.

(Confidential information,
subject to protective order)

1 A No.

2 Q When Ms. Rice talked about knowledge,
3 did you understand what she was saying?

4 MR. BAAK: Objection. I
5 instruct the witness not to answer his
6 mental impressions of Ms. Rice's
7 statements in the meeting. It calls
8 for privilege information.

9

10 By Mr. Buland:

11 Q But you certainly didn't ask her at the
12 meeting, 'What do you mean by
13 knowledge?'

14 MR. BAAK: Objection; asked
15 and answered.

16 THE WITNESS: I did not ask
17 her.

18 MR. BULAND: Okay.

19

20 By Mr. Buland:

21 Q Now, the next thing in Mr. Schumacher's
22 notes is, "Statutory obligation to
23 report and repay." Do you see that?

24 A Yes, I do.

25 Q Okay. And it says, "False Claims Act

1 implications." Do you see that?

2 A Yes, I do.

3 Q Okay. And did Ms. Rice say at the
4 meeting about -- in response to your
5 question about claims verification, and
6 by 'you,' I mean UnitedHealthcare, if
7 there were false claims identifications
8 to be issued?

9 MR. BAAK: Objection; form.

10 THE WITNESS: She said this
11 in response to the second part of the
12 conversation I was talking about where
13 we had the -- some deletes we
14 submitted, some were through the
15 process, some were in the middle of the
16 process.

17

18 By Mr. Buland:

19 Q So you're telling me that the false
20 claims identifications Ms. Rice talked
21 about were only in reference to the
22 buckets of codes already in the claims
23 verification process?

24 A That's how I understood the
25 conversation, yes.

1 STATE OF MINNESOTA)

1 logical that any contracted entity should be aware of
2 what's expected of them.

3 BY MR. BAAK:

4 Q. We covered earlier some of your experience
5 in the consulting work you do in compliance. But
6 you're not offering any opinions in this case on the
7 compliance obligations of Medicare Advantage
8 organizations, right?

9 A. Correct.

10 Q. You are not offering any opinions in this
11 case about whether or not the Department of Justice's
12 allegations against United are, in fact, true, right?

13 A. Correct.

14 Q. And to get a little more specific, you're
15 not offering any opinions related to the design or
16 operation of United Health Group's chart review
17 program?

18 A. Correct.

19 Q. You're not offering any opinions about
20 whether United Health Group have been overpaid in any
21 way in connection with the Medicare Advantage
22 program?

1 A. Correct.

2 Q. You have not reviewed the details of
3 United Health Group's chart review programs, correct?

4 A. Correct.

5 Q. You're not familiar with the details of
6 those -- of United Health's chart review programs,
7 correct?

8 A. Correct.

9 Q. In connection with the expert testimony
10 you're offering in this case, you have not reviewed
11 any of the medical records underlying the diagnosis
12 codes that are in dispute between the Department of
13 Justice and United Health Group, right?

14 A. Correct.

15 MS. KRIEG: Object to form.

16 BY MR. BAAK:

17 Q. And, in fact, you have not reviewed any
18 specific medical records in connection with the
19 expert testimony you're offering in this case,
20 correct?

21 MS. KRIEG: Object to form. Foundation.

22 A. Correct.

1 ultimate outcome, correct?

2 MS. KRIEG: Object to form.

3 A. To improve the accuracy -- oh, of the
4 coder, yes. Um-hum.

5 BY MR. BAAK:

6 Q. When you have chart audits at Acevedo
7 Consulting that are designed with multiple layers of
8 coder review, do you set up a procedure for resolving
9 when the two coders disagree?

10 MS. KRIEG: Object to form. Foundation.

11 A. So I don't think the procedure would vary
12 based on a project versus how we work in general,
13 which is to reach out to someone.

14 And if, indeed, there were two assigned
15 coders to a project because of the checks and
16 balances that you just asked me about, having a
17 second coder review, invalidate or not the first
18 coder's work, they would still follow the same
19 guidelines that we would use at any particular time,
20 check the guidelines, what -- depending on what the
21 -- what was the cause of the disagreement.

22 Maybe query the provider, seek further

1 advice, use another resource. So all of those
2 options are always available.

3 BY MR. BAAK:

4 Q. Let me unpack that a little bit more.

5 A. Sure.

6 Q. So if you have two providers -- let me try
7 again.

8 If you have two coders who are reviewing a
9 chart as part of a chart audit, do you -- you don't
10 always assume that the second reviewer is the one who
11 got the correct answer?

12 A. No, not if that reviewer has at all -- so
13 if, indeed, that reviewer is darn certain, no, no,
14 this is it and I'll show you why, he or she has to be
15 able to say I'll show you why so that the first coder
16 sees the why and has his or her, what I call, aha
17 moment -- aha, forgot about that; aha, missed that;
18 misinterpreted that -- then of course not. That's
19 the whole idea of the second check.

20 Q. I'm going to try to simplify this, but I
21 want to get it right. It sounds like that when the
22 two coders in one of your chart audits disagree about

1 whether a code should be assigned, how that
2 disagreement is resolved depends on the
3 circumstances.

4 Is that accurate?

5 A. Yes.

6 Q. It is also, in fact, the case that when
7 you have more than one coder reviewing a medical
8 record you do have disagreements about whether a
9 diagnosis code is appropriately assigned, right?

10 MS. KRIEG: Object to form.

11 A. Yes. That can happen and does.

12 BY MR. BAAK:

13 Q. The first step at Acevedo Consulting when
14 you have such a disagreement, is that a dialogue
15 between the two coders about why they disagree about
16 whether a diagnosis code should be assigned?

17 A. Yes.

18 Q. If that process doesn't produce agreement,
19 what are the next steps at Acevedo Consulting for you
20 to resolve a disagreement between two of your coders
21 as to whether a diagnosis code should be assigned?

22 A. So one would be to make sure that they

1 have reviewed all of the available resources.
2 Depending on what's their root cause of any
3 disagreement such as if it happens to be
4 documentation in the clinical record that is unclear
5 to one or both of them or could be interpreted in
6 more than one way, then they should be eliciting a
7 physician query to get the clarification from the
8 provider.

9 They can always go to a more senior person
10 such as myself, use other resources that they hadn't
11 used before.

12 There was one -- one instance in my 25
13 years where none of that resolved and it was a mental
14 health code. And I actually brought in a
15 psychiatrist that would be able to explain to the
16 person who was resistant what that mental health
17 condition actually meant so that she could actually
18 have what I call her aha moment and say aha, got it,
19 I just didn't understand that.

20 Q. How frequently -- well, let me ask just to
21 follow up there.

22 In discussing how you resolve a

1 disagreement between two of your coders about whether
2 or not a code should be assigned, sometimes you're
3 brought in to break the tie between the two coders;
4 is that correct?

5 A. Yes.

6 Q. How frequently does that happen?

7 A. Not very frequently at all. I mean, these
8 things just don't happen very often in my
9 organization.

10 Q. Do you track how often when you have two
11 levels of coder review on a given medical record
12 there is disagreement?

13 A. It would only be tracked per project.

14 Q. Would you keep statistics on a given
15 project, the rate of disagreement between two coders?

16 A. Yes, I would keep -- yes.

17 Q. You mentioned potentially using other
18 resources that the coder didn't have before to
19 resolve a disagreement. And then I also see in
20 paragraph 54 a reference to providing coders with
21 resources to address coding questions.

22 What kind of resources do you have in mind

1 there?

2 A. So, again, the Coding Clinic, you know,
3 would be an example.

4 Q. The Coding Clinic is one example of a
5 resource that a coder might consult when there's
6 disagreement. Is there anything -- other guidance or
7 resource, rather, that you can identify that the
8 coder -- the coders might consult to resolve a
9 disagreement?

10 A. So, obviously, it would depend on what the
11 project actually was. But if we are speaking risk
12 adjustment, then they would also be encouraged if
13 they didn't do it on their own to use the participant
14 guide or the managed care manual.

15 Q. I want to come back to blind coding we
16 talked about a little bit earlier. But before we get
17 into blind coding, are you familiar with the term
18 "informed coding" or an "informed coding review"?

19 A. I've not used that term, so I wouldn't
20 want to guess at a definition.

21 Q. Well, I'm going to try my best to give us
22 a definition to use just so we can speak the same

1 front of them, that would not allow them to draw a
2 conclusion about the totality of the appropriate
3 diagnosis codes for that given patient, correct?

4 A. Correct. They could only assign diagnosis
5 codes for the medical records they had at hand.

6 Q. Do you have any experience with what -- or
7 do you track what percentage of time in the chart
8 retrieval process you're able to obtain a complete
9 set of the patient's medical records?

10 A. I don't track it, but I will tell you that
11 it's the overwhelming majority of the time with
12 electronic medical records.

13 Q. When did most practices switch to
14 electronic medical records?

15 A. Beginning in 2011, probably the majority
16 of -- because that's when the meaningful use program
17 and some government funding for implementing
18 electronic medical records started. And the adoption
19 -- I'm trying to think when seeing paper charts at
20 all for medical records was suddenly so very uncommon
21 for us. I can't picture when.

22 Q. Can you estimate just approximately when

1 there's an interface between the practice, if they
2 don't do in-house lab and the outside laboratory,
3 that the lab results just come into the practice
4 through an integration process.

5 So there's a lot of those issues, the most
6 important one being that one doesn't know where the
7 chart is, is eliminated in the electronic medical
8 records because it's always in the electronic medical
9 record.

10 Q. Even with the improvements in electronic
11 medical records over paper medical records, assuming
12 you agree that's an improvement, are there still
13 circumstances where you're unable to retrieve and a
14 complete set of a patient's electronic medical
15 records for various reasons?

16 MS. KRIEG: Object to form.

17 A. I would say that's extremely uncommon,
18 extremely uncommon.

19 BY MR. BAAK:

20 Q. Is it the case that providers always
21 respond to every request for medical records that you
22 make?

1 MS. KRIEG: Object to form.

2 A. The overwhelming majority of the time,
3 yes. Most definitely, yes.

4 BY MR. BAAK:

5 Q. But not always? Not all providers respond
6 to all requests for medical records, right?

7 A. No, but it's probably about 99 percent. I
8 mean, it's really rare that we don't have a provider
9 that provides to us what we need, even if what we
10 need, they say let me get you access to the EMR and
11 we find it ourselves. So yeah.

12 Q. Turn to paragraph 41 of your opening
13 report -- sorry -- paragraph 51.

14 A. 51?

15 Q. Yes. In paragraph 51 you discuss some of
16 the difficult coding scenarios that a coder might
17 encounter in assigning the appropriate diagnosis
18 code, correct?

19 A. Correct.

20 Q. And you list a couple things that we've
21 already covered. The first is skill level and
22 experience among the coders, right?

1 documentation in that, yes, that would be proper.

2 I don't know what you meant by --

3 Q. Maybe my question is a little confusing.

4 I'll try again. So I'll use your phrase. I think
5 you said available?

6 A. No. I don't think --

7 Q. Well, let me ask a more simple version.

8 Is it possible to determine whether a given diagnosis
9 code is supported without looking at any medical
10 records in your experience?

11 A. So I hope you don't mind, I'm going to
12 reverse it to hopefully say -- what I'm comfortable
13 saying is that the only way a diagnosis code can be
14 reported is if you have clinical documentation to
15 support it.

16 Q. And so the converse, though -- I want to
17 press on this because it's important.

18 A. All right.

19 Q. The converse is also true. You can't make
20 a determination in your experience of whether a
21 diagnosis code is unsupported without access to the
22 clinical documentation, right?

1 MS. KRIEG: Object to form.

2 A. So that statement infers that the
3 documentation exists and I just haven't been provided
4 with it. And until I'm provided with it, I can't
5 support the code.

6 BY MR. BAAK:

7 Q. And you can't determine that a code is
8 unsupported either, right?

9 A. Well, it's not supported until you provide
10 me with the documentation.

11 Q. Well, what if a code has been submitted by
12 a provider already? So I'm asking, can you
13 invalidate that code in your experience without
14 looking at the underlying clinical documentation?

15 A. If you cannot provide me with that
16 documentation, correct.

17 Q. Or you elect not to look at the
18 documentation. That would be another circumstance
19 where you would be unable to invalidate a provider's
20 submitted diagnosis code, right?

21 A. I want to go back for a second, because
22 the way I worded it, I want to make sure that what I

1 physician queries as a way to resolve uncertainty as
2 to whether or not to assign a diagnosis code?

3 A. Correct.

4 Q. Just explain briefly what a physician
5 query is.

6 A. A physician query is a -- just that, a
7 query, a question submitted to the provider of the
8 service asking for clarification.

9 It is not asking for any additional
10 documentation, et cetera. It's for the actual
11 provider who made the documentation in the clinical
12 record to clarify something that might, indeed, in
13 the record not be clear.

14 Q. Are physician queries something you use in
15 your consulting practice at Acevedo Consulting?

16 A. Yes.

17 Q. In your view, is it appropriate for a
18 Medicare Advantage plan when it's doing a coding
19 review itself to submit a physician query to try to
20 seek clarity?

21 MS. KRIEG: Object to form.

22 A. Assuming that that's something that

C E R T I F I C A T E

I do hereby certify that I am a Notary Public in good standing, that the aforesaid testimony was taken before me, pursuant to notice, at the time and place indicated; that said deponent was by me duly sworn to tell the truth, the whole truth, and nothing but the truth; that the testimony of said deponent was correctly recorded in machine shorthand by me and thereafter transcribed under my supervision with computer-aided transcription; that the deposition is a true and correct record of the testimony given by the witness; and that I am neither of counsel nor kin to any party in said action, nor interested in the outcome thereof.

DEPOSITION OF BARBARA BLAIR
WEDNESDAY, APRIL 3, 2024
9:48 a.m. - 7:37 p.m.

TWO SOUTH BISCAYNE BOULEVARD, SUITE 1850
MIAMI, FLORIDA

- - -

Reported By:
Katiana Louis
Notary Public, State of Florida
Miami Office #1100998
Magna Legal Services
866-624-6221
Www.MagnaLS.com

1 A. Yes, that is what I would have been
2 doing.

3 Q. And had you done any work for
4 UnitedHealth prior to your employment with FTI?

5 A. Not that I'm aware of.

6 Q. And since the 2012 time frame you
7 provided, have you done any work for UnitedHealth
8 other than your work in this particular matter?

9 A. No, not that I'm aware of.

10 Q. Are you aware that UnitedHealth conducts
11 a chart review program by which it reviews the
12 medical records of its beneficiary he's to
13 identify additional codes that were not
14 previously submitted by providers?

15 MS. SOBEL: Objection to form.

16 THE WITNESS: I'm not aware of
17 United's program, no.

18 BY MS. LIKOFF:

19 Q. So, you have no familiarity with
20 UnitedHealth's chart review program; is that
21 correct?

22 A. That's correct.

23 Q. Do you have any familiarity with a
24 UnitedHealth program called Claims Verification?

25 A. I do.

1 Q. And would you advise your client on
2 whether those unsupported codes should be
3 deleted?

4 A. Again, my results go to my FTI team, and
5 the client and whoever else. I don't advise on
6 what gets added or what gets deleted.

7 Q. Do you know whether there's anyone on
8 the FTI team that provides that type of advice to
9 FTI's clients?

10 MS. SOBEL: Objection to form.
11 Lacks foundation. Calls for
12 speculation.

13 THE WITNESS: I would be
14 speculating. I honestly don't know what
15 our final is with the client.

16 BY MS. LIKOFF:

17 Q. I'm looking back to your CV, I think the
18 second page of your CV -- strike that.

19 During your time at FTI, have you done
20 any work for the United States government?

21 A. For the government, not that I'm aware
22 of.

23 Q. Now turning back to your second page of
24 your CV, I think you've mentioned this a couple
25 of times but I just want to unpack it a little

1 MS. SOBEL: Objection to form.

2 Asked and answered.

3 MS. LIKOFF: You can go ahead and
4 answer.

5 THE WITNESS: As I said before, to
6 assign a diagnosis code, it must be in
7 the medical record that you've received.

8 BY MS. LIKOFF:

9 Q. All right. And this was a principle
10 that you learned during your 25 years of
11 experience as a coder; correct?

12 A. Yes.

13 Q. And would you agree that this is a
14 principle that coders receive training on?

15 MS. SOBEL: Objection to form.

16 THE WITNESS: Again, I can't opine
17 to what training they received, but if I
18 were going to offer my experience, then
19 I would say that if they've received
20 formal training, they may have received
21 that.

22 BY MS. LIKOFF:

23 Q. And would you agree that ICD guidelines
24 require that all diagnosis codes that are
25 reported be based on documentation that shows

1 A. More often than not, yes.

2 Q. Can you think of any specific examples
3 in which you were not able to assign a code?

4 A. If I didn't have access to all of the
5 documentation, I would have to -- I wouldn't be
6 able to assign that code at that time.

7 Q. But in that case that you've just
8 described, the dispute would be resolved and it
9 would be resolved in determining that there was
10 no code that could be supported; correct?

11 A. No, I wouldn't be able to -- I guess,
12 one of the ways -- I couldn't -- I couldn't be
13 the determination on the two coders if I didn't
14 have access to the documentation to make that
15 determination.

16 Q. So what would happen in those cases?

17 A. Then, again, I would attempt to get the
18 documentation. So, that would be like the
19 initial immediate -- based on my e-mail, I'd have
20 to ask for more information. But ultimately
21 based on what I have, I would make a decision as
22 to which one -- which diagnosis code was
23 supported.

24 Q. So, based on your experience can you
25 think of any instance in which a coder

1 disagreement was not able to be resolved?

2 A. Not at this time.

3 Q. Turn back to paragraph 22 of your
4 report, you then opine that there are a variety
5 of reasons why coders may reach different
6 conclusions and you list six specific reasons in
7 your report; correct?

8 A. Correct.

9 Q. And we'll go through a number of these,
10 but first I just want to make sure that your
11 report provides a complete list of the reasons
12 you believe coders may reach different
13 conclusions. So in paragraph 22, I believe, you
14 list six of them.

15 So my question is: Whether there are
16 any other reasons you believe that coders may
17 disagree?

18 A. Well, there may be, but these are what
19 my opinion is upon. I can't opine to all of
20 them. I said, "including, but not limited to."
21 These are the ones I'm making the opinion on.

22 Q. I'm just trying to understand exactly
23 what you honed in on in the "including but not
24 limited to." So, I'm just trying to understand
25 if there are any other reasons that you are

1 A. Yes.

2 Q. And what is the basis for your opinion?

3 A. Again, my years of experience and myself
4 assigning a code in error.

5 Q. Can you point to any data regarding the
6 prevalence of human error in diagnosis coding?

7 A. I cannot.

8 Q. So you cannot point to any data
9 regarding the prevalence of human error in
10 diagnosis coding?

11 A. No.

12 Q. Can you point to any studies regarding
13 the prevalence of human error in diagnosis
14 coding?

15 A. I'm not aware of any.

16 Q. And can you point to any published
17 article regarding the prevalence of human error
18 in diagnosis coding?

19 A. I'm not aware of any.

20 Q. You then provided a number of factors
21 that you believe make human error more likely,
22 including long days, voluminous records, and
23 fatigue among coders; is that correct?

24 A. Correct.

25 Q. And you opine that all of these factors

1 can result in mistakes, including missed
2 diagnosis codes; is that correct?

3 A. Actually, I opine here that they may
4 miss records, mistakes including missed diagnosis
5 codes. So, mistakes meaning transposed,
6 assigning the wrong diagnosis code, and including
7 missed diagnoses, as I said.

8 Q. So, you would agree that human error in
9 coding could also lead a coder to assign codes
10 that are not in fact supported by the medical
11 record; correct?

12 A. I do speak to them assigning the wrong
13 code in that sentence. I do speak to that in my
14 report. I believe it's in paragraph 43 where I
15 say it's a simple transposition of a number, and
16 the code gets reported in error.

17 Q. Well, I understand in paragraph 43
18 you -- you're referring to mistyped codes;
19 correct?

20 A. Correct.

21 Q. So, separate from typographical errors,
22 I'm trying to understand whether you believe the
23 factors we mentioned before, long days,
24 voluminous records, fatigue among coders, could
25 also lead coders to assign codes that are not

1 supported by medical record documentation?

2 A. As I said, it states right there, "which
3 can result in mistakes."

4 Q. And you believe that these mistakes,
5 include missed diagnosis codes as well as
6 diagnosis codes that are not supported by the
7 medical record; is that correct?

8 A. Yes. Diagnosis codes that may not be
9 supported in the medical record, again because
10 they typed something wrong, they didn't read
11 through the entire 100 pages. It can happen,
12 yes.

13 Q. So, other than mistakes that involve
14 mistyping a diagnosis code, you are agreeing that
15 human error can lead to coders reporting codes
16 that are unsupported; correct?

17 A. Like I said, that can result in
18 mistakes. The code that would be reported would
19 more than likely be in error. It does not
20 necessarily mean that the documentation was not
21 there. They may have, again, misread something,
22 not read something further, but it could be that
23 they put something in error. Yes, there can be
24 mistakes.

25 Q. Again, I'm just trying to understand the

WESTERN DIVISION

UNITED STATES OF AMERICA *ex*
rel. BENJAMIN POEHLING,

Plaintiffs,

v.

UNITEDHEALTH GROUP, INC., *et al.*,

Defendants.

No. CV 16-08697 FMO-PVCx

DECLARATION OF Steven Ferraina

1 I, Steven Ferraina, declare and state as follows:

2
3 1. I am the Deputy Director for CMS' Center for Program Integrity (CPI), Audits
4 and Vulnerabilities Group. I have been in this position since September 2020. My
5 responsibilities include overseeing and implementing the Medicare Advantage Risk
6 Adjustment Data Validation (RADV) program in CPI. I submit this Declaration in
7 support of the United States' Opposition to UnitedHealth's Motion for Summary
8 Judgment. I have personal knowledge of the matters set forth herein and, if called to
9 testify, could and would testify competently thereto.

10 2. In connection with RADV Audits for Contract Year (CY) 2011 through CY 2013,
11 the Centers for Medicare & Medicaid Services (CMS) issued Plan Feedback Reports
12 (PFRs) to the plans being audited. The PFRs communicated initial feedback of the
13 agency's medical record reviews and provided an initial estimate of the portion of the
14 audited Hierarchical Condition Categories (HCCs) that were not found to be supported
15 by medical records submitted by the given plan.

16 3. CMS provided UnitedHealth initial access to PFRs for the UnitedHealth plans
17 included in CYs 2011, 2012, and 2013 RADV Audits beginning in April 2019.

18 4. CMS did not provide UnitedHealth with PFRs for plans included in the CYs 2014
19 and 2015 RADV Audits.

20 5. When conducting RADV Audits for CY 2014 and CY 2015, CMS gave the plans
21 being audited access to a portal to view the initial feedback of the agency's medical
22 record reviews, which CMS added to the portal as they became available.

23 6. CMS provided UnitedHealth with access to the portal for CY 2014 in April 2019.

24 7. CMS provided UnitedHealth with access to the portal for CY 2015 in January
25 2020.

26 8. The RADV Audits for CY 2011 through CY 2015 are not final. The initial results
27 of medical record reviews and estimates of the portion of the audited HCCs that were
28

found to be supported by medical records, provided to plans in the PFRs and through the portal, are not yet final and are subject to change. The portion of audited HCCs that were initially found to be supported by medical records submitted by a given plan may increase or decrease before the RADV Audits are finalized.

I declare under penalty of perjury that the foregoing is true and correct.

Executed on July 12, 2024, Washington, D.C.

CONFIDENTIAL

Videotaped Rule 30(b)(6) Deposition of
UnitedHealthcare, Inc. and OptumInsight, Inc.,
Designee 4, by SCOTT THEISEN
Given Remotely
Tuesday, June 6, 2023
10:08 a.m. Eastern

Reported by: Karen K. Kidwell, RMR, CRR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 Q. Yes. Exactly. So there, CMS indicates
2 that it addressed that concern in developing the
3 Medicare Advantage contract requirement by mandating
4 that the MA organizations certify the accuracy,
5 completeness, and truthfulness of its data based on
6 its best knowledge, information, and belief. Do you
7 see? Do you see that?

8 A. I do.

9 Q. Okay. And so this is -- do you understand
10 that this is where, and in response to what the best
11 knowledge, information, and belief standard was --
12 was adopted by CMS?

13 MR. BAAK: Objection. Calls for a legal
14 conclusion. Foundation.

15 THE WITNESS: Can you restate the
16 question, Linda?

17 BY MS. McMAHON:

18 Q. So do you understand that this is where
19 CMS was announcing this standard that it was creating
20 of best knowledge, information, and belief that was
21 applying to -- that applied to MA organizations'
22 obligation to certify the accuracy, completeness, and
23 truthfulness of their risk adjustment data?

24 MR. BAAK: Objection. Form. Calls for a
25 legal conclusion.

1 THE WITNESS: I do. I think it's
2 important to read the sentence following, for
3 context, which also says: "This language was
4 included in the 1999 contract forms in
5 recognition of the fact that the Medicare Plus
6 Choice organizations cannot reasonably be
7 expected to know that every piece of data is
8 correct, nor is the standard that HCFA, the OIG,
9 and DOJ believe is reasonable to enforce."

10 BY MS. McMAHON:

11 Q. Perfect. Yes. I -- thank you for
12 pointing that out.

13 So you did understand, as a result of
14 these requirements that are being developed right
15 here, you understood that you, indeed, were not being
16 asked to certify to the accuracy of every single
17 diagnosis code you submitted, correct?

18 A. Yes, that I would interpret this to mean
19 that there's a best efforts, good-faith,
20 reasonableness standard with regard to a plan's need
21 or ability to submit complete, accurate, and truthful
22 information, that there would be some limitations in
23 the plan's ability to -- to support that in a way
24 that's -- would not be requiring 100 percent
25 accuracy, but reasonable -- you know, not absolute,

1 but assurance of 100 percent of the data. But, yes,
2 I understand the concept.

3 Q. Okay. And what CMS is saying right here
4 is that in order to address that, in order to make --
5 to address the plan's concerns that you just
6 articulated, that it would be too difficult or maybe
7 impossible to certify every single piece of data;
8 that instead what they were asking you to do is to
9 certify based on your best knowledge, information,
10 and belief, correct?

11 A. That is correct.

12 Q. Okay. And then -- see. And CMS defines
13 for you here, correct, that the best knowledge,
14 information, and belief standard encompasses the
15 concept that you don't actually know or deliberately
16 ignore or recklessly disregard the fact that your
17 risk adjustment data submitted to CMS for payment was
18 not accurate, complete, and truthful, correct?

19 MR. BAAK: Objection. Mischaracterizes
20 the document. Calls for a legal conclusion.

21 THE WITNESS: I would just acknowledge how
22 it's written here. Generally, the federal
23 government can bring an action only when one of
24 three states of mind exist: actual knowledge of
25 falsity of a claim or information, reckless

1 disregard, or deliberate ignorance of
2 information supporting the truth or falsity of a
3 claim or other information. However, no
4 specific intent to defraud is required. The
5 best knowledge, information, and belief standard
6 of the Medicare Plus Choice contract
7 certification forms is consistent with these
8 standards.

9 BY MS. McMAHON:

10 Q. Okay. Thank you.

11 And that is something you, as an
12 organization, understood throughout your time
13 participating in the program, correct?

14 MR. BAAK: Object to the form.

15 THE WITNESS: Yeah, I would say the
16 company understands the terms and conditions of
17 the CMS regulations.

18 BY MS. McMAHON:

19 Q. Okay. And of course you did understand
20 that you had an obligation to take some steps to
21 ensure that the risk adjustment data you were
22 submitting was accurate, complete, and truthful,
23 correct?

24 MR. BAAK: Objection. Calls for a legal
25 conclusion.

1 We have an entire witness designated on the
2 RACCR program.

3 BY MS. McMAHON

4 Q. Sorry. Did you -- did you answer the
5 question? I couldn't hear.

6 A. Yeah, I read this -- I read this. And at
7 the time, can't speak specifically to the RACCR
8 program, but we certainly had a RACCR program in
9 place at the time of this letter.

10 Q. Right. And what I'm specifically asking
11 you now is, do you agree, sitting here today, that by
12 seeking to identify and delete diagnosis codes that
13 are not supported in the medical record, that you are
14 improving the accuracy of the data you submit to CMS?

15 MR. BAAK: Objection. Beyond the scope.

16 THE WITNESS: Yes, I would agree with
17 that. I would add that the RACCR program was
18 really -- was designed and -- to audit and have
19 quality assurance around capitated provider
20 groups, so those provider groups would be
21 different than a fee-for-service provider group,
22 just to be clear.

23 And the reason it was important to analyze
24 and do some analytical reviews and some auditing
25 of those records is that the value-based care

1 reimbursement to these providers was based upon
2 the revenue and medical costs of the members
3 they managed. So implicit in that could be --
4 is some level of potential incentive to code
5 completely and accurately.

6 And the purpose of the RACCR program was
7 to look at diagnoses, understand where a
8 particular provider might be an outlier to their
9 peers, and then there were subsequent audits
10 back to medical records on a select basis.

11 So I just wanted to be clear that as we're
12 talking about this letter, it's really the --
13 this subgroup of physicians we're talking about
14 are those that -- and this procedure and this
15 audit procedure was designed and specifically
16 targeted at those that were paid on a capitated
17 percentage of revenue basis for the members they
18 served.

19 BY MS. McMAHON:

20 Q. Okay. And I want to ask you, separate and
21 apart from the RACCR program, I am asking you if,
22 sitting here today, as a general proposition, that
23 seeking to identify and delete diagnosis codes that
24 are not supported in the medical record, that you are
25 improving the accuracy of the data that you submit to

CERTIFICATE

I, KAREN K. KIDWELL, Registered Merit Reporter, and Certified Realtime Reporter, do hereby certify that prior to the commencement of the examination, the deponent was remotely sworn to testify to the truth, the whole truth under penalty of perjury.

VIDEOTAPED VIDEOCONFERENCE ZOOM DEPOSITION OF
KAREN ERICKSON

August 2, 2022

9:32 a.m. Eastern Standard Time

Magna Legal Services
(866) 624-6221
www.MagnaLS.com

Prepared by:
Marcella Daughtry, RPR, RMR
CA CSR 14315
GA No. 6595-1471-3597-5424

1 MS. KRIEG: I had it in here as 320. If -- if
2 we have 319 prepared, we can pull it up.

3 MS. SOBEL: We can take a look. My notes could
4 be wrong, too.

5 MS. KRIEG: Let's see, we have 319 in here.
6 Okay. Here we go. So here is 319.

7 Q BY MS. KRIEG: 319 is from Thad Johnson to
8 Steve Nelson, Daniel Schumacher, Karen Erickson. I think
9 that's it. "Subject: Meeting Minutes. Attachment: CMS
10 meeting notes 4/29/14.

11 "Privileged and Confidential.

12 "Please let me know of any
13 corrections/clarifications or changes you may have to my
14 notes from the meeting today. Thanks."

15 Did I read that correctly?

16 A Yes.

17 Q And I think you have testified that you
18 received this e-mail?

19 A Yes.

20 Q Okay. Let's go to 320. And these are the
21 notes that you reviewed in anticipation of your
22 deposition today?

23 A Yes.

24 Q Okay. And again, you have no independent
25 recollection of the meeting, correct?

1 A I don't remember the specifics. I remember the
2 meeting itself and some of the -- some of the big topics,
3 but I don't remember the specifics.

4 Q And the big topics are?

5 A The rule that was proposed in January of 2014
6 and whether or not the Claims Verification program of
7 United was -- what their guidance would be in terms of
8 whether that was required or not.

9 Q Okay. And I want to direct you to the fourth
10 bullet from the top. And it says: "Cheri Rice added
11 that there is a False Claims Act requirement that plans
12 not knowingly keep overpayments so if you do not know
13 that there is an overpayment, you do not need to delete a
14 code."

15 Did I read that correctly?

16 A Which -- I'm sorry, which bullet are you on?

17 Q The fourth from the bottom on page 2.

18 MS. SOBEL: Oh, on page 2.

19 THE WITNESS: Oh, on page 2.

20 Q BY MS. KRIEG: I'm sorry, on page 2.

21 A Okay. Yes.

22 Q And do you agree that the inverse of this is
23 true, right? If you know there is an overpayment, you do
24 need to delete the code, right?

25 MS. SOBEL: Objection. Calls for a legal

Videotaped Deposition of
DANIEL J. SCHUMACHER
Given Remotely
Tuesday, September 20, 2022
9:04 a.m. Eastern Time

Reported by: Cindy A. Hayden, RMR, CRR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 then articulated, as I mentioned, at the outset,
2 what the intent of it was, and then the fundamental
3 question we were there to ask, which was, "Boy, it
4 sure sounds like you're proposing that people might
5 need to start doing something. And that would
6 imply that we are doing more than we need to be
7 doing here." And that's what we were there to ask.

8 Q. So nobody at United suggested or gave
9 the impression that the chart review program and
10 the claims verification program were related in any
11 way?

12 A. I think we were clear to -- we were --
13 you know, my recollection was that we were clear to
14 say, "We have a chart review program. There's a
15 quality assurance around that." Because there was
16 a conversation about a meeting prior. So after we
17 did the general description, then we went into more
18 specific description.

19 Then Cheri Rice was in a meeting with
20 some folks from our organization. And I think she
21 was asking for a distinction between this meeting
22 and that meeting. And we were clear to say that,
23 you know, "Chart program is one thing. It has its
24 own QA process. We're not asking about that right
25 now. We're asking you about our claims

1 verification process."

2 Q. So, in other words, the chart review
3 program and the quality assurance related to the
4 chart review program, that's not -- that's not the
5 reason for the meeting today?

6 MR. SUMMERS: Objection. Form.

7 THE WITNESS: We were -- we were there
8 to ask the three things that I articulated before,
9 the first of which was: Do we have a proactive
10 obligation to do a two-way look when we're
11 reviewing a medical chart given that there was a
12 proposed rule that would -- if -- if and when
13 finalized, would then require it? And we were
14 already doing it, so we had suspended it. So we
15 wanted to know the answer to that question.

16 We also wanted to know: Okay. Then
17 what should we be doing with things that had
18 initiated the claims verification process and had
19 not gone through all the steps?

20 And then, lastly, we were quickly going
21 to be submitting bids for the 2015 bid year, and we
22 wanted to understand how we should be treating --
23 how we should be thinking about that in light of
24 this, you know, proposed regulation that says we
25 might have to start doing something that we were

1 Q. Do you have a memory of Sean Cavanaugh
2 saying what is attributed to him here? Aside from
3 what's written in the notes, do you remember him
4 saying it?

5 A. I have a recollection of Sean saying
6 something very closely to this effect. Whether or
7 not it's word for word, I -- I cannot recall.

8 Q. What does that mean, very -- something
9 very close to this?

10 A. I'm saying that the spirit of what is
11 reflected here is what was conveyed to us. Whether
12 he used every single word exactly as it's expressed
13 in this note, I cannot tell you.

14 Q. Okay. And so what's written here in
15 Thad Johnson's notes comports with your memory is
16 what you're saying?

17 A. Yes, it does.

18 Q. And it comports with your memory that
19 Cheri Rice raised the False Claims Act shortly
20 after the comment from Sean Cavanaugh?

21 MR. SUMMERS: Objection. Form.

22 THE WITNESS: That is a piece that
23 is -- in terms of timing, I -- I don't -- I don't
24 have a chronology in my notes, because it's -- my
25 notes are just not a comprehensive record. So

1 that's a question I have in my mind about whether
2 or not she said that after this or it was said
3 earlier.

4 BY MR. MASON:

5 Q. Well, okay. You agree that the way
6 Thad Johnson's notes set it forth, she -- she
7 said -- it -- it says: Cheri Rice added that there
8 is a False Claims Act requirement.

9 So you agree that Thad Johnson's notes
10 indicate that Cheri Rice made the False Claims Act
11 comment, adding onto Sean Cavanaugh's statement,
12 right?

13 A. Thad's notes reflect that.

14 Q. But you don't remember if that is
15 accurate or not?

16 A. I read this shortly after the meeting,
17 and I gave verbal and then written feedback that
18 it -- it comported with my recollection of the
19 meeting.

20 Q. Okay. Do you -- and -- and is that
21 still the case? As you read Thad Johnson's notes
22 today, do you find anything in there that is
23 inaccurate or incorrect?

24 A. I think that Thad's notes are a very
25 good reflection, a faithful reflection of -- of how

I disagree that we stated the last part of this sentence beginning "...and that MA plans..."

"During our conversations last year before the proposed rule was withdrawn, CMS confirmed to us that the proposed requirements would not apply until the effective date of the rule, and that MA plans were thus not required to design their medical record reviews to determine the accuracy of risk adjustment diagnoses."

Cheri,

Similar to last year, we are reaching out to you, to reiterate our approach to the electronic annual risk adjustment certifications. As you know, annual risk adjustment data certifications before 2014 were submitted on paper, enabling companies to add notes explaining their understanding of these certifications (including any remediation efforts). As we discussed with you last year, because the certifications are now electronic, companies are unable to include explanatory notes. As such, we informed you in writing our understanding of these certifications.

Because the certifications remain electronic with no ability to add explanatory notes, we feel it would again be helpful, and appropriate, to capture our discussion and understanding regarding the certifications.

- As with our past certifications, the 2013 certifications are based on facts reasonably available or made available to us as of the date of the certifications. As we receive additional information, we may be required to modify the data to which the certifications relate
- The certifications use the phrase "best knowledge, information, and belief," which is based on our ordinary business practices.

EXHIBIT

00331
4436

USBP000619443

- The certifications only cover risk adjustment data for 2013 dates of service that were submitted to CMS and not subsequently deleted prior to the date of the certifications.
- As we have mentioned to you previously, we are engaged in an ongoing review of our risk adjustment processes and submission system. This review has identified areas for improvement and, as a result, we will be deleting all risk adjustment data for 2013 dates of service that we ultimately determine should be deleted consistent with this email.
- CMS issued a proposed rule last year that would have required MA plans to design any medical record reviews to determine the accuracy of risk adjustment diagnoses associated with those records. In May 2014, CMS withdrew the proposed rule. During our conversations last year before the proposed rule was withdrawn, CMS confirmed to us that the proposed requirements would not apply until the effective date of the rule, and that MA plans were thus not required to design their medical record reviews to determine the accuracy of risk adjustment diagnoses. As we discussed last year, we previously had a process through which we reviewed certain medical records to determine the accuracy of risk adjustment diagnoses and submitted appropriate deletes. Based on our conversations with CMS last year, CMS's withdrawal of the proposed rule, and CMS's ongoing consideration of a FFS Adjuster to address diagnoses not supported by a medical record in the context of RADV, we ended this process and informed you of that decision. That decision remains operative for 2013 dates of service. In particular, we did not use our previous process to determine whether diagnosis codes submitted through claims are unsupported in the medical record. We do have a quality assurance process that deletes codes initially identified during chart review and that are later determined to be unsupported.

The certifications we submit this year are made subject to these clarifications. Please let me know if you have any questions. As always, we appreciate your time and attention on this matter.

Steve Nelson

v.

UNITEDHEALTH GROUP, INC., et al,

Defendants.

Case No. 16-cv-08697 FMO

**EXPERT DISCLOSURE OF PAUL SPITALNIC
JANUARY 29, 2024**

Expert Disclosure by Paul Spitalnic

I have been the Chief Actuary for the Centers for Medicare & Medicaid Services since 2013 where I am responsible for overseeing all actuarial work in the Agency including for the Medicare Advantage (MA) program. Prior to this role, I was the Director of the Parts C & D Actuarial Group where I was specifically responsible for overseeing all work related to the Medicare Advantage program, including the rate development and bidding processes. I have a Bachelor of Arts degree in Mathematics from Binghamton University and am an Associate of the Society of Actuaries and a member of the American Academy of Actuaries. I have not been retained or specially employed to provide expert testimony in this case, nor do my routine duties as an employee of CMS involve giving expert testimony. I am not being compensated in any way for this report, or any testimony I may give in this case, other than the salary I earn from my current position with CMS. I have prepared this expert opinion in response to statements in Julia Lambert's expert opinion. Attached as Appendix 1 is a list of the documents I relied on in forming these expert opinions.

Ms. Lambert claims that "Removing MAO payments related to unsupported codes fundamentally changes the application of the risk model. Whether or not an MAO was overpaid cannot be determined solely by the presence of unsupported medical conditions in its data. Rather, an MAO is overpaid only if its level of unsupported diagnosis codes exceeds or is not reasonably consistent with the level of unsupported diagnosis codes in the TM data used to develop the risk model."¹ She adds that "A decision that retrospectively removes a significant amount of UHG revenue related to unsupported diagnosis codes would materially change the payment rules and nullify the actuarial certification UHG submitted with the filing of MA plan benefits and premiums."²

Based on my roles and years of experience as an actuary working on the MA program and my knowledge of the Actuarial Standards of Practice (ASOPs) and the statute and regulations governing the MA program, it is my opinion that these statements are inaccurate. Specifically, (i) there is no actuarial soundness issue with the requirement that bids are to be prepared and certified in a manner consistent with the various published payment policies, (ii) MAOs would be overpaid if they are reimbursed for unsupported diagnoses and, (iii) the actuarial certification submitted by the actuary requires that they have complied with the

¹ Expert Report of Julia Lambert, dated September 29, 2023 ("Lambert Report") at P. 2.

² *Id.* at 3.

applicable laws, rules, bid instructions and CMS guidance and necessitates that they only include diagnoses that are expected to be included in payment. The following describes how I've reached these conclusions.

1. The risk adjustment model used in MA payment is proposed through the Advance Notice of Methodological Changes for Medicare Advantage (MA) Capitation Rates and Part C and Part D Payment Policies; is subject to comment³; and is finalized in the Announcement of Medicare Advantage (MA) Capitation Rates and Part C and Part D Payment Policies, prior to the bid submission deadline⁴.
2. MA bids must be prepared with projected risk scores that represent what the actuary reasonably expects to be used for payment. Since diagnoses submitted to CMS by an MA organization for payment purposes must be supported by medical record documentation, the actuary must exclude from the bid development any knowingly unsupported codes that will not be included for payment. While the actuary does not have an obligation to audit the data used in the risk score projection development, they are obligated to review this data to ensure that the data is reasonable and consistent for purposes of the assignment⁵
3. The risk adjustment model development and the MA bidding and payment process does follow the data consistency standard described in ASOP #45 – The Use of Health Status Based Risk Adjustment Methodologies⁶. The ASOP considers two areas of consistent treatment consideration.
 - a. The first is that “The actuary should consider if the population and program to which the model is being applied are reasonably consistent with those used to develop the model.” Since both the development and application of the model are applicable to Medicare beneficiaries, this standard has been satisfied⁷.

³ For example, USBP067351461 is the Advance Notice of Methodological Changes for the Calendar Year (CY) 2015 for Medicare Advantage (MA) Capitation Rates and Part C and Part D Payment Policies.

⁴ USBP067351609 is the Announcement Medicare Advantage (MA) Capitation Rates of Calendar Year (CY) 2015 and Part C and Part D Payment Policies

⁵ American Academy of Actuaries, Actuarial Standard of Practice (“ASOP”) No. 23, https://www.actuarialstandardsboard.org/wp-content/uploads/2017/01/asop023_185.pdf.

⁶ American Academy of Actuaries, Actuarial Standard of Practice (“ASOP”) No. 45, https://www.actuarialstandardsboard.org/wp-content/uploads/2014/02/asop045_164.pdf.

⁷ *Id.* at § 3.1.4.

- b. The second is that “The type of input data that is used in the application of risk adjustment should be reasonably consistent with the type of data used to develop the model. Also, the type of input data should be reasonably consistent across organizations, populations, and time periods.” The risk model development and the application of the risk model in the bid and payment processes both rely on health care diagnoses which are wholly consistent. The reliance on unaudited Traditional Medicare (using the same terminology as used by Ms. Lambert -an inter-changeable term is Medicare Fee-for-Service) data for determining the relative and predictive values of the various condition categories used in the risk model doesn’t invalidate the reasonability of those values. The risk model development process is subject to public comment and there have been no substantive comments rejecting the model development because of the unaudited nature of the underlying data nor have there been reasonable suggestions of alternative data sources that would provide for better predictability. Relying on unaudited data for the risk model development and requiring support for diagnoses submitted for payment does not result in an unreasonable or inconsistent application of risk adjustment⁸.
4. As stated above, it is my opinion that the data consistency standard described in ASOP #45 is followed in the application of the risk adjustment model to Medicare Advantage payments. Even if an actuary believed that there was an inconsistency between the data used as the basis of the risk model development and the data used for plan payment, the Actuarial Standards allow for the actuary to depart from the guidance set forth in the prescribed standard in order to comply with applicable law (statutes, regulations, and other legally binding authority) and to disclose if any material assumption or method was prescribed by applicable law (statutes, regulations, and other legally binding authority)⁹. Thus, the Actuarial Standards of Practice allow the actuary to perform their work in a manner prescribed by the law, regulations and other guidance related to the Medicare Advantage program, including the requirement that payment will only be made for diagnoses that are supported by a medical record.
5. Once again, it is my opinion that the data consistency standard described in ASOP #45 is followed in the application of the risk adjustment model to

⁸ *Id.* at § 3.2.

⁹ *Id.* at §§ 4.1-4.2.

Medicare Advantage payments. However, even if there were data inconsistencies resulting from the reliance on unaudited diagnosis data used in the development of the risk adjustment model, this potential inconsistency would not result in an underpayment to Medicare Advantage plans.

Specifically:

- An audit of the medical records for the Traditional Medicare diagnoses used in the risk model development would result in unsupported diagnoses being eliminated and unrecorded diagnoses being added.
- If the risk model was recalibrated based on the audited Traditional Medicare data, it is uncertain if this would lead to a net increase or decrease in cumulative diagnoses codes as the audit would result in some codes being added and others being deleted.
- If this change resulted in a change in average Traditional Medicare risk scores, the calibration of the model coefficients will change, and the calculated normalization factor would also need to change to return the average Traditional Medicare risk score to 1.0 in the payment year since normalization always gets back to a projected 1.0 score for the average Traditional Medicare beneficiary.
- Similarly, such a recalibration of the risk adjustment model would result in a change to the measure of coding intensity, or roughly the difference between average MA and Traditional Medicare risk scores. Even if just unsupported claims were removed, as in Ms. Lambert's illustration, the measured coding intensity adjustment would increase commensurately.
- As described in the preceding bullets, any change in a theorized risk adjustment model based on audited Traditional Medicare data would directly affect the risk model coefficient values, normalization, and coding intensity factors, all of which affect MA plan payments. A more complete consideration of any potential effects of including unsupported diagnoses in the calibration of the risk adjustment model would negate most, if not all, of any potential payment difference identified in Ms. Lambert's illustration.
- All these considerations are theoretical as the program is dependent on the finalization of the published risk adjustment model that serves as the foundation for the bidding and payments of the Medicare Advantage program.

- Once the bid is finalized, even if there are known changes that would materially affect the assumptions underlying the bid development, no changes to the bid are permitted.
6. Actuaries preparing bids are required to be familiar with the laws, regulations, and instructions of the program. They are required to include in their certification¹⁰ that “the actuary is familiar with the requirements for preparing Medicare Advantage and Prescription Drug bid submissions and meets the Academy’s qualification standards for doing so¹¹” and that they attest “that the bid was prepared in compliance with the current standards of practice, as promulgated by the Actuarial Standards Board of the American Academy of Actuaries, and that the bid complies with the appropriate ASOPs”.¹²

Based on the considerations summarized in points 1-6 above, it is my opinion that there is no actuarial soundness issue with the requirement that bids are to be prepared and certified in a manner consistent with the various published payment policies. Specifically, (i) there is no actuarial soundness issue with the requirement that bids are to be prepared and certified in a manner consistent with the various published payment policies, (ii) MAOs would be overpaid if they are reimbursed for unsupported diagnoses and, (iii) the actuarial certification submitted by the actuary requires that they have complied with the applicable laws, rules, bid instructions and CMS guidance and necessitates that they only include diagnoses that are expected to be included in payment.

Now, I’ll respond to a few other statements in Ms. Lambert’s report.

7. Ms. Lambert’s report states that “retrospectively removing unsupported diagnosis codes and the associated revenue would materially change the assumed payment methodology relied on in the bid submission process, nullify the actuarial certification, and underpay MAOs for the benefits offered.”¹³ Ms. Lambert’s opinion that “retrospectively removing unsupported diagnosis codes and the associated revenue would ... nullify the actuarial certification” is incorrect. The actuarial certification is not affected by events that occur after the

¹⁰ The CMS Bid pricing tool instructions for the Calendar Year (CY) 2015 was produced in this litigation as USBP057538571.

¹¹ USBP057538571 at p. 100.

¹² USBP057538571 at p. 101.

¹³ Lambert Report at P. 30.

certification. Actual results may vary from the assumptions and projections. The actuarial certification remains in effect based on what was known at that time. As noted above, the certifying actuary is required to prepare the bid in accordance with compliance with the applicable laws, rules, bid instructions, and guidance. This requirement should preclude an actuary from certifying a bid when they are aware of unsupported diagnoses included in the projected risk scores.

8. Ms. Lambert's report also states that "UHG projected risk scores without validating them in the medical record, and CMS accepted those bids under these assumptions."¹⁴ Given this statement, I believe it is relevant to note that acceptance of the bid submission by CMS is not a justification or guarantee that the bid submission is entirely correct or without issues. The certifying actuary is responsible for the assumptions, methodologies, and inputs for each bid pricing submission. To emphasize this position, the bid pricing instructions state that: "The objective of obtaining an actuarial certification is to place greater responsibility on the actuary's professional judgment and to hold him/her accountable for the reasonableness of the assumptions and projections."¹⁵ The following assertions cited by Ms. Lambert do not diminish the certifying actuary's and MA organization's responsibility because CMS may (i) not have reviewed this specific information or (ii) only reviewed this information to check compliance with disclosure requirements in the ASOPs:

- In every year during the Review Period: "As part of the preparation of the bids, we did not attempt to validate any actual or projected risk scores through a review of applicable medical records or of the systems used to submit RAF data to CMS."
- And starting with the BPT submissions in 2015: "We also adjusted projected risk scores to account for changes in our medical record review processes. Specifically, based on multiple conversations with CMS and CMS's treatment of medical record review in its recent rulemaking process, the health plan has decided to cease one of its prior processes that identified and deleted certain diagnoses codes through the medical record review process."¹⁶

¹⁴ *Id.* at P. 39.

¹⁵ USBP067812968 at P. 99.

¹⁶ Lambert Report at P. 32.

An actuary cannot disclaim that they are knowingly violating the rules of the program. The actuarial certification requires that they are familiar with the laws, regulations, and instructions of the program.

9. Finally, Ms. Lambert’s report includes the following statement, “In addition, approximately one third of the bids go through a rigorous audit procedure where an actuary hired by CMS reviews the calculations and checks the bid information, including the supporting data and assumptions for compliance with CMS’s instructions, guidance, and regulations (called “Bid Audits”).¹⁷” This statement is incorrect. The CMS audit of “one third of the bids” is a process that is independent of and separate from the “Bid Audits.” The Bid Audits are significantly smaller in scope than one third of the bids. Regardless of the number of bid audits performed, the actuarial certification requirement that a bid is to be prepared in accordance with the applicable law, regulations and guidance, including the requirement that diagnoses provided by the plan for payment purposes to be supported by a medical record, is unchanged.

CONTAINS ATTORNEYS' EYES ONLY PORTIONS

The Videotaped, In-Person, Remote deposition of KIRK LIMMER was held on Wednesday, June 21, 2023, commencing at 10:40 a.m., at the Law Offices of DLA Piper, 650 South Exeter Street, Suite 1100, Baltimore, Maryland 21202 before Susan Wootton, Notary Public.

REPORTED BY: Susan Wootton, RPR, CLR

1 risk scores to account for changes in our medical
2 record review processes, specifically based on
3 multiple conversations with CMS and CMS's
4 treatment of medical record review in its
5 reasonable making process.

6 The health plan has decided to cease
7 one of its prior processes that identified and
8 deleted certain diagnosis codes through the
9 medical record review process. Do you see that?

10 A Yes.

11 Q So what this paragraph is saying is
12 that the plan has adjusted its projected risk
13 score to account for cessation of a prior process
14 that identified and deleted certain diagnosis
15 codes, correct?

16 MS. ZUPAC: Object to form.

17 A It says they've decided to cease one
18 of its prior processes that identified and deleted
19 certain diagnoses codes. Yes. It does say that.

20 Q And it also says that it adjusted its
21 projected risk scores to account for that.

22 A It says: We also adjusted projected
23 risk scores to account for changes in our medical
24 review process.

25 Q And then it says: Specifically,

1 we've -- the plan has decided to cease one of its
2 prior processes and delete codes. Correct?

3 MS. ZUPAC: Object to form.

4 A Yes. It does say that.

5 Q And CMS understands, right, that an
6 adjustment to a projected risk score -- to account
7 for cessation of a process to identify and delete
8 diagnosis codes -- would be an upward adjustment
9 in the risk score, correct?

10 MS. ZUPAC: Object to form.

11 Q All else being equal?

12 A So given the -- the brief context of
13 what is provided here, I don't know if I would
14 know the -- the scope of the entire -- the entire
15 change or the magnitude.

16 I think that the -- and there --
17 there's -- there's very little information in here
18 in terms -- to make an assessment on what -- you
19 know, the -- the entirety of what's happening
20 here.

21 This doesn't really state any
22 quantitative assessment. But that's not required.
23 I mean, the Standards of Practice don't
24 necessarily require that the actuary quantify some
25 of these coding things.

1 there may be a number of different changes going
2 on simultaneously during the course of the year
3 which are projected for the next year.

4 A Yes.

5 Q And those changes might cumulatively
6 point in various different directions.

7 A Okay.

8 Q Is that right?

9 A Yes.

10 Q That's what you're saying? But what
11 I'm asking is -- holding all the others constant,
12 whatever those others are -- the incremental
13 impact -- CMS would understand, right, that the
14 incremental impact of ceasing a process of
15 identifying and deleting diagnosis codes -- in
16 terms of the risk score -- would have to be in an
17 upward direction, correct?

18 MS. ZUPAC: Object to form.

19 A So you're asking for this -- under
20 this bid submission under this here, whether CMS
21 would have known about that question you just
22 asked?

23 So -- so I did inquire -- so I have
24 maybe some background. I did inquire with Tova
25 Labell, the one, the one from -- from Korn Ferry.

1 I checked with her, and I checked with
2 other -- the points of contact in 2015 and 2012,
3 if they recalled a review of this, and I was not
4 able to confirm that anyone ever recalled or heard
5 or saw it.

6 I also checked under -- so under this
7 one, 2015, I did check the documentation that was
8 uploaded to HPMS as part of the Korn Ferry's
9 review and their documentation, and I was unable
10 to find any reference to this.

11 So in -- in doing that, I -- I
12 searched on, like, key words, like the word --
13 words that would stand out in here, like the word
14 "cease" and the word "process," I believe, RAD --
15 the RADV, and the word "adjustor."

16 So I did try to find if this was
17 reviewed. I was not able to find any of that in
18 the -- in the -- the contractor's documentation
19 that they necessarily looked at this.

20 Q So just to understand, so your
21 testimony is that CMS is not sure whether or not,
22 one way or another, this particular language was
23 reviewed by a bid reviewer as part of the review
24 of United's bids; is that your testimony?

25 A Correct. I was not able to confirm

1 it, whether or not it was actually -- it wasn't
2 documented, and no one -- no one had a
3 recollection.

4 It's kind of -- it was kind of hard
5 too, because the people at Korn Ferry, that staff
6 is gone.

7 So they -- they weren't able to
8 really -- talking to them, to them directly, I
9 wasn't able to provide any information there.

10 Q So they may have reviewed it and found
11 it was okay, but you just don't know one way or
12 the other?

13 A Correct.

14 Q Okay. And then -- my question,
15 though, was a little different, which is -- my
16 original question, which was: Do you agree -- do
17 you understand that, that an up -- an adjustment
18 to a risk score projection -- everything else held
19 constant -- an adjustment to a risk score
20 projection to account for the cessation of a
21 program to identify and delete diagnosis codes
22 would be an upward adjustment?

23 MS. ZUPAC: Object to form.

24 A I believe that depends on which codes
25 are being deleted in that, that hierarchal

Re: UnitedHealth Group Updates

Dear Ms. Wallack:

I write to update you on several issues concerning UnitedHealth Group ("UHG").

First, we received your June 16, 2014 email with suggested revisions to the search term proposal outlined in our May 16, 2014 letter. We are reviewing the proposed revisions and analyzing how the changes may impact the amount of potentially responsive documents subject to review. We appreciate the fact that you offered to prioritize certain searches and custodians, and we are focusing our collection and production efforts accordingly. We plan to produce additional documents to you shortly, and on a rolling basis, for all custodians for whom we have active data. This includes all the additional custodians identified by the government except the following individuals: Ken Burdick, Ken Fasola, Ronnie Grower, Pamela Leal, and Kathleen Linder. Each of these individuals ended their respective employment with UHG before the government issued its first request for documents. Nonetheless, UHG intends to produce any responsive communications that any of these individuals had with other custodians for whom active data exists.

Second, on June 13, 2014, UHG provided the government with a catalogue of documents and audio recordings subject to the attorney-client privilege and/or attorney work product protection. We are confident that the government will remain mindful of its ethical obligations and associated policies regarding the treatment of privileged materials and will report on any developments regarding this issue so UHG may take appropriate steps. We appreciate your candor with respect to this issue thus far.

Third, I wanted to provide you with an update on the Claims Verification program OptumInsight developed to analyze certain diagnosis codes submitted in provider claims data. This program was described during our September 14, 2012 meeting with your colleagues Dick Nicholson, Gretchen Wylegala, Peggy Glynn, Teresa Tetlow, Peggy McFarland, and Jessica Rogers. As Claims Verification has continued to evolve, and based on a number of factors, UnitedHealthcare recently decided to discontinue its utilization of the program. We would be pleased to discuss this development with you or your colleagues if you have any questions or concerns, including as part of a broader discussion of this matter.

* * * *

Thank for your continued courtesies. Please do not hesitate to contact me if you have any questions or concerns.

Very truly yours,

(d) Hospice care; election; waiver of rights; revocation; change of election

(1) Payment under this part may be made for hospice care provided with respect to an individual only during two periods of 90 days each and an unlimited number of subsequent periods of 60 days each during the individual's lifetime and only, with respect to each such period, if the individual makes an election under this paragraph to receive hospice care under this part provided by, or under arrangements made by, a particular hospice program instead of certain other benefits under this subchapter.

(2)(A) Except as provided in subparagraphs (B) and (C) and except in such exceptional and unusual circumstances as the Secretary may provide, if an individual makes such an election for a period with respect to a particular hospice program, the individual shall be deemed to have waived all rights to have payment made under this subchapter with respect to-

(i) hospice care provided by another hospice program (other than under arrangements made by the particular hospice program) during the period, and

(ii) services furnished during the period that are determined (in accordance with guidelines of the Secretary) to be-

(I) related to the treatment of the individual's condition with respect to which a diagnosis of terminal illness has been made or

(II) equivalent to (or duplicative of) hospice care;

except that clause (ii) shall not apply to physicians' services furnished by the individual's attending physician (if not an employee of the hospice program) or to services provided by (or under arrangements made by) the hospice program.

(B) After an individual makes such an election with respect to a 90-day period or a subsequent 60-day period, the individual may revoke the election during the period, in which case-

(i) the revocation shall act as a waiver of the right to have payment made under this part for any hospice care benefits for the remaining time in such period and (for purposes of subsection (a)(4) of this section and subparagraph (A)) the individual shall be deemed to have been provided such benefits during such entire period, and

(ii) the individual may at any time after the revocation execute a new election for a subsequent period, if the individual otherwise is entitled to hospice care benefits with respect to such a period.

(C) An individual may, once in each such period, change the hospice program with respect to which the election is made and such change shall not be considered a revocation of an election under subparagraph (B).

(D) For purposes of this subchapter, an individual's election with respect to a hospice program shall no longer be considered to be in effect with respect to that hospice program after the date the individual's revocation or change of election with respect to that election takes effect.

§1395x. Definitions

For purposes of this subchapter-

(a) Spell of illness

The term "spell of illness" with respect to any individual means a period of consecutive days-

(1) beginning with the first day (not included in a previous spell of illness) (A) on which such individual is furnished inpatient hospital services, inpatient critical access hospital services or extended care services, and (B) which occurs in a month for which he is entitled to benefits under part A, and

(2) ending with the close of the first period of 60 consecutive days thereafter on each of which he is neither an inpatient of a hospital or critical access hospital nor an inpatient of a facility described in section 1395i-3(a)(1) of this title or subsection (y)(1).

(b) Inpatient hospital services

The term "inpatient hospital services" means the following items and services furnished to an inpatient of a hospital and (except as provided in paragraph (3)) by the hospital-

(1) bed and board;

(2) such nursing services and other related services, such use of hospital facilities, and such medical social services as are ordinarily furnished by the hospital for the care and treatment of inpatients, and such drugs, biologicals, supplies, appliances, and equipment, for use in the hospital, as are ordinarily furnished by such hospital for the care and treatment of inpatients; and

(3) such other diagnostic or therapeutic items or services, furnished by the hospital or by others under arrangements with them made by the hospital, as are ordinarily furnished to inpatients either by such hospital or by others under such arrangements;

excluding, however-

(4) medical or surgical services provided by a physician, resident, or intern, services described by subsection (s) (2)(K), certified nurse-midwife services, qualified psychologist services, and services of a certified registered nurse anesthetist; and

(5) the services of a private-duty nurse or other private-duty attendant.

Paragraph (4) shall not apply to services provided in a hospital by-

(6) an intern or a resident-in-training under a teaching program approved by the Council on Medical Education of the American Medical Association or, in the case of an osteopathic hospital, approved by the Committee on Hospitals of the Bureau of Professional Education of the American Osteopathic Association, or, in the case of services in a hospital or osteopathic hospital by an intern or resident-in-training in the field of dentistry, approved by the Council on Dental Education of the American Dental Association, or in the case of services in a hospital or osteopathic hospital by an intern or resident-in-training in the field of podiatry, approved by the Council on Podiatric Medical Education of the American Podiatric Medical Association; or

(7) a physician where the hospital has a teaching program approved as specified in paragraph (6), if (A) the hospital elects to receive any payment due under this subchapter for reasonable costs of such services, and (B) all physicians in such hospital agree not to bill charges for professional services rendered in such hospital to individuals covered under the insurance program established by this subchapter.

(c) Inpatient psychiatric hospital services

individual who is an outpatient of a comprehensive outpatient rehabilitation facility under a plan (for furnishing such items and services to such individual) established and periodically reviewed by a physician-

- (A) physicians' services;
- (B) physical therapy, occupational therapy, speech-language pathology services, and respiratory therapy;
- (C) prosthetic and orthotic devices, including testing, fitting, or training in the use of prosthetic and orthotic devices;
- (D) social and psychological services;
- (E) nursing care provided by or under the supervision of a registered professional nurse;
- (F) drugs and biologicals which cannot, as determined in accordance with regulations, be self-administered;
- (G) supplies and durable medical equipment; and
- (H) such other items and services as are medically necessary for the rehabilitation of the patient and are ordinarily furnished by comprehensive outpatient rehabilitation facilities,

excluding, however, any item or service if it would not be included under subsection (b) if furnished to an inpatient of a hospital. In the case of physical therapy, occupational therapy, and speech pathology services, there shall be no requirement that the item or service be furnished at any single fixed location if the item or service is furnished pursuant to such plan and payments are not otherwise made for the item or service under this subchapter.

(2) The term "comprehensive outpatient rehabilitation facility" means a facility which-

- (A) is primarily engaged in providing (by or under the supervision of physicians) diagnostic, therapeutic, and restorative services to outpatients for the rehabilitation of injured, disabled, or sick persons;
- (B) provides at least the following comprehensive outpatient rehabilitation services: (i) physicians' services (rendered by physicians, as defined in subsection (r)(1), who are available at the facility on a full- or part-time basis); (ii) physical therapy; and (iii) social or psychological services;
- (C) maintains clinical records on all patients;
- (D) has policies established by a group of professional personnel (associated with the facility), including one or more physicians defined in subsection (r)(1) to govern the comprehensive outpatient rehabilitation services it furnishes, and provides for the carrying out of such policies by a full- or part-time physician referred to in subparagraph (B)(i);
- (E) has a requirement that every patient must be under the care of a physician;
- (F) in the case of a facility in any State in which State or applicable local law provides for the licensing of facilities of this nature (i) is licensed pursuant to such law, or (ii) is approved by the agency of such State or locality, responsible for licensing facilities of this nature, as meeting the standards established for such licensing;
- (G) has in effect a utilization review plan in accordance with regulations prescribed by the Secretary;
- (H) has in effect an overall plan and budget that meets the requirements of subsection (z);
- (I) provides the Secretary on a continuing basis with a surety bond in a form specified by the Secretary and in an amount that is not less than \$50,000; and
- (J) meets such other conditions of participation as the Secretary may find necessary in the interest of the health and safety of individuals who are furnished services by such facility, including conditions concerning qualifications of personnel in these facilities.

The Secretary may waive the requirement of a surety bond under subparagraph (I) in the case of a facility that provides a comparable surety bond under State law.

(dd) Hospice care; hospice program; definitions; certification; waiver by Secretary

(1) The term "hospice care" means the following items and services provided to a terminally ill individual by, or by others under arrangements made by, a hospice program under a written plan (for providing such care to such individual) established and periodically reviewed by the individual's attending physician and by the medical director (and by the interdisciplinary group described in paragraph (2)(B)) of the program-

- (A) nursing care provided by or under the supervision of a registered professional nurse,
- (B) physical or occupational therapy, or speech-language pathology services,
- (C) medical social services under the direction of a physician,
- (D)(i) services of a home health aide who has successfully completed a training program approved by the Secretary and (ii) homemaker services,
- (E) medical supplies (including drugs and biologicals) and the use of medical appliances, while under such a plan,
- (F) physicians' services,
- (G) short-term inpatient care (including both respite care and procedures necessary for pain control and acute and chronic symptom management) in an inpatient facility meeting such conditions as the Secretary determines to be appropriate to provide such care, but such respite care may be provided only on an intermittent, nonroutine, and occasional basis and may not be provided consecutively over longer than five days,
- (H) counseling (including dietary counseling) with respect to care of the terminally ill individual and adjustment to his death, and
- (I) any other item or service which is specified in the plan and for which payment may otherwise be made under this subchapter.

The care and services described in subparagraphs (A) and (D) may be provided on a 24-hour, continuous basis only during periods of crisis (meeting criteria established by the Secretary) and only as necessary to maintain the terminally

ill individual at home.

(2) The term "hospice program" means a public agency or private organization (or a subdivision thereof) which-

(A)(i) is primarily engaged in providing the care and services described in paragraph (1) and makes such services available (as needed) on a 24-hour basis and which also provides bereavement counseling for the immediate family of terminally ill individuals and services described in section 1395d(a)(5) of this title,

(ii) provides for such care and services in individuals' homes, on an outpatient basis, and on a short-term inpatient basis, directly or under arrangements made by the agency or organization, except that-

(I) the agency or organization must routinely provide directly substantially all of each of the services described in subparagraphs (A), (C), and (H) of paragraph (1), except as otherwise provided in paragraph (5), and

(II) in the case of other services described in paragraph (1) which are not provided directly by the agency or organization, the agency or organization must maintain professional management responsibility for all such services furnished to an individual, regardless of the location or facility in which such services are furnished; and

(iii) provides assurances satisfactory to the Secretary that the aggregate number of days of inpatient care described in paragraph (1)(G) provided in any 12-month period to individuals who have an election in effect under section 1395d(d) of this title with respect to that agency or organization does not exceed 20 percent of the aggregate number of days during that period on which such elections for such individuals are in effect;

(B) has an interdisciplinary group of personnel which-

(i) includes at least-

(I) one physician (as defined in subsection (r)(1)),

(II) one registered professional nurse, and

(III) one social worker, marriage and family therapist, or mental health counselor,

employed by or, in the case of a physician described in subclause (I), under contract with the agency or organization, and also includes at least one pastoral or other counselor,

(ii) provides (or supervises the provision of) the care and services described in paragraph (1), and

(iii) establishes the policies governing the provision of such care and services;

(C) maintains central clinical records on all patients;

(D) does not discontinue the hospice care it provides with respect to a patient because of the inability of the patient to pay for such care;

(E)(i) utilizes volunteers in its provision of care and services in accordance with standards set by the Secretary, which standards shall ensure a continuing level of effort to utilize such volunteers, and (ii) maintains records on the use of these volunteers and the cost savings and expansion of care and services achieved through the use of these volunteers;

(F) in the case of an agency or organization in any State in which State or applicable local law provides for the licensing of agencies or organizations of this nature, is licensed pursuant to such law; and

(G) meets such other requirements as the Secretary may find necessary in the interest of the health and safety of the individuals who are provided care and services by such agency or organization.

(3)(A) An individual is considered to be "terminally ill" if the individual has a medical prognosis that the individual's life expectancy is 6 months or less.

(B) The term "attending physician" means, with respect to an individual, the physician (as defined in subsection (r)(1)), the nurse practitioner (as defined in subsection (aa)(5)), or the physician assistant (as defined in such subsection), who may be employed by a hospice program, whom the individual identifies as having the most significant role in the determination and delivery of medical care to the individual at the time the individual makes an election to receive hospice care.

(4)(A) An entity which is certified as a provider of services other than a hospice program shall be considered, for purposes of certification as a hospice program, to have met any requirements under paragraph (2) which are also the same requirements for certification as such other type of provider. The Secretary shall coordinate surveys for determining certification under this subchapter so as to provide, to the extent feasible, for simultaneous surveys of an entity which seeks to be certified as a hospice program and as a provider of services of another type.

(B) Any entity which is certified as a hospice program and as a provider of another type shall have separate provider agreements under section 1395cc of this title and shall file separate cost reports with respect to costs incurred in providing hospice care and in providing other services and items under this subchapter.

(5)(A) The Secretary may waive the requirements of paragraph (2)(A)(ii)(I) for an agency or organization with respect to all or part of the nursing care described in paragraph (1)(A) if such agency or organization-

(i) is located in an area which is not an urbanized area (as defined by the Bureau of the Census);

(ii) was in operation on or before January 1, 1983; and

(iii) has demonstrated a good faith effort (as determined by the Secretary) to hire a sufficient number of nurses to provide such nursing care directly.

(B) Any waiver, which is in such form and containing such information as the Secretary may require and which is requested by an agency or organization under subparagraph (A) or (C), shall be deemed to be granted unless such

request is denied by the Secretary within 60 days after the date such request is received by the Secretary. The granting of a waiver under subparagraph (A) or (C) shall not preclude the granting of any subsequent waiver request should such a waiver again become necessary.

(C) The Secretary may waive the requirements of paragraph (2)(A)(i) and (2)(A)(ii) for an agency or organization with respect to the services described in paragraph (1)(B) and, with respect to dietary counseling, paragraph (1)(H), if such agency or organization-

- (i) is located in an area which is not an urbanized area (as defined by the Bureau of Census), and
- (ii) demonstrates to the satisfaction of the Secretary that the agency or organization has been unable, despite diligent efforts, to recruit appropriate personnel.

(D) In extraordinary, exigent, or other non-routine circumstances, such as unanticipated periods of high patient loads, staffing shortages due to illness or other events, or temporary travel of a patient outside a hospice program's service area, a hospice program may enter into arrangements with another hospice program for the provision by that other program of services described in paragraph (2)(A)(ii)(I). The provisions of paragraph (2)(A)(ii)(II) shall apply with respect to the services provided under such arrangements.

(E) A hospice program may provide services described in paragraph (1)(A) other than directly by the program if the services are highly specialized services of a registered professional nurse and are provided non-routinely and so infrequently so that the provision of such services directly would be impracticable and prohibitively expensive.

(ee) Discharge planning process

(1) A discharge planning process of a hospital shall be considered sufficient if it is applicable to services furnished by the hospital to individuals entitled to benefits under this subchapter and if it meets the guidelines and standards established by the Secretary under paragraph (2).

(2) The Secretary shall develop guidelines and standards for the discharge planning process in order to ensure a timely and smooth transition to the most appropriate type of and setting for post-hospital or rehabilitative care. The guidelines and standards shall include the following:

(A) The hospital must identify, at an early stage of hospitalization, those patients who are likely to suffer adverse health consequences upon discharge in the absence of adequate discharge planning.

(B) Hospitals must provide a discharge planning evaluation for patients identified under subparagraph (A) and for other patients upon the request of the patient, patient's representative, or patient's physician.

(C) Any discharge planning evaluation must be made on a timely basis to ensure that appropriate arrangements for post-hospital care will be made before discharge and to avoid unnecessary delays in discharge.

(D) A discharge planning evaluation must include an evaluation of a patient's likely need for appropriate post-hospital services, including hospice care and post-hospital extended care services, and the availability of those services, including the availability of home health services through individuals and entities that participate in the program under this subchapter and that serve the area in which the patient resides and that request to be listed by the hospital as available and, in the case of individuals who are likely to need post-hospital extended care services, the availability of such services through facilities that participate in the program under this subchapter and that serve the area in which the patient resides.

(E) The discharge planning evaluation must be included in the patient's medical record for use in establishing an appropriate discharge plan and the results of the evaluation must be discussed with the patient (or the patient's representative).

(F) Upon the request of a patient's physician, the hospital must arrange for the development and initial implementation of a discharge plan for the patient.

(G) Any discharge planning evaluation or discharge plan required under this paragraph must be developed by, or under the supervision of, a registered professional nurse, social worker, or other appropriately qualified personnel.

(H) Consistent with section 1395a of this title, the discharge plan shall-

(i) not specify or otherwise limit the qualified provider which may provide post-hospital home health services, and

(ii) identify (in a form and manner specified by the Secretary) any entity to whom the individual is referred in which the hospital has a disclosable financial interest (as specified by the Secretary consistent with section 1395cc(a)(1)(S) of this title) or which has such an interest in the hospital.

(3) With respect to a discharge plan for an individual who is enrolled with a Medicare+Choice organization under a Medicare+Choice plan and is furnished inpatient hospital services by a hospital under a contract with the organization-

(A) the discharge planning evaluation under paragraph (2)(D) is not required to include information on the availability of home health services through individuals and entities which do not have a contract with the organization; and

(B) notwithstanding subparagraph (H)(i) ⁹, the plan may specify or limit the provider (or providers) of post-hospital home health services or other post-hospital services under the plan.

(ff) Partial hospitalization services; intensive outpatient services

(1) The term "partial hospitalization services" means the items and services described in paragraph (2) prescribed by a physician for an individual determined (not less frequently than monthly) by a physician to have a need for such services for a minimum of 20 hours per week and provided under a program described in paragraph (3) under the

1 identified for that given year?

2 MS. GLOVER: Objection. Form.

3 Scope.

4 THE WITNESS: So a claim comes in
5 to Medicare fee for service. The claim
6 processes through the system that I talked
7 about, the claim is paid. Somewhere down
8 the road a Medicare review contractor
9 decides to review the claim and maybe they
10 review it on its face. That doesn't matter
11 one way or the other.

12 And they review the claim, and
13 the -- they adjust the claim in some form.
14 Maybe they downcode. They change the
15 diagnosis code. We will stick to the
16 diagnosis codes. Maybe they changed the
17 diagnosis code.

18 If that was a post-claim claim,
19 what happens is that claim is adjusted and
20 the provider gets a demand letter to send
21 back whatever the difference between the

1 actual payment was and what the new payment
2 amount would be. And that claim is
3 adjusted. And when that claim is adjusted,
4 that claim, that final adjustment goes into
5 the claim, claims history, into the claims
6 data. If it was a prepaid claim, then that
7 adjustment happens, and then when the claim
8 goes into the national claims history,
9 that's the final claim action.

10 So whenever they pull that data,
11 June 30 is the date that they pulled the
12 data, all they're pulling is the current
13 status of that claim. So when I use the
14 term "adjustment," I mean that the claim has
15 actually been adjusted, the medical record
16 has been reviewed, or somebody has adjusted
17 it, but somebody has reviewed the claim and
18 wanted to make a change to the previous
19 final action and they reopen the claim. The
20 claim was adjusted, and now it's a new final
21 form.

1 CERTIFICATE OF COURT REPORTER

2 I, BARBARA MOORE, do hereby
3 certify that the proceedings were recorded
4 by me stenographically and electronically at
5 the time and place mentioned on the cover
6 sheet thereof, and, thereafter, transcribed;
7 that said hearing is a true record of the
8 statements made; that I am neither counsel
9 for, related to, nor employed by any of the
10 parties to this proceeding;

11 And further, that I am not
12 financially or otherwise interested in the
13 outcome of this matter.

14 As Witnessed by my hand and
15 signature as indicated below.

VIDEOTAPED DEPOSITION OF JANICE REDMOND
Costa Mesa, California
Friday, July 29, 2022

Job No.: 835270

Reported by:

Shirley R. Lynn, C.S.R. NO. 13784

1 A I've heard of it.

2 Q Did you ever attend any ICE events?

3 A No.

4 Q Do you know who at Optum did attend ICE
5 events?

6 MS. ZUCKERMAN: Objection. Calls for
7 speculation.

8 THE WITNESS: Pam Leal that reported to me
9 was active in that organization.

10 BY MS. GLOVER:

11 Q Okay. I'm going to mark another exhibit
12 here.

13 This is 358. You can let me know when it's on
14 your screen. This is a two-page e-mail, although I
15 think all the text is on the first page. So if you want
16 to give a read to the e-mail chain, and we'll talk about
17 it in a minute.

18 (Exhibit 358 was marked for
19 identification.)

20 THE WITNESS: Okay.

21 BY MS. GLOVER:

22 Q Okay. Ms. Redmond, are you familiar with
23 the term "capitated provider"?

24 A Yes.

25 Q How about "gainsharing provider"?

1 A Yes.

2 Q What is a capitated provider?

3 A A provider that gets paid per member per

4 month.

5 Q To care for certain beneficiaries?

6 A Yes.

7 Q Okay. And what is a gainsharing provider?

8 (Court reporter clarification.)

9 MS. GLOVER: Gain, like g-a-i-n, yeah.

10 Yeah.

11 THE WITNESS: I'm familiar with the term.

12 I don't recall the specifics of the gainshare.

13 BY MS. GLOVER:

14 Q Are you familiar with the term

15 "fee-for-service" --

16 A Yes.

17 Q -- "provider"?

18 A Yes.

19 Q What's a fee-for-service provider?

20 A A provider that gets paid transactionally

21 as a member comes through the door, so based on

22 every encounter separately.

23 Q And in market consultation, did -- did you

24 work with capitated and gainsharing providers?

25 A Yes.

CERTIFICATE
OF
SHORTHAND REPORTER

* * * *

I, Shirley Lynn, CSR No. 13784, a Certified
Shorthand Reporter in and for the State of California,
do hereby certify:

That prior to being examined, the witness
named in the foregoing proceedings declared under
penalty of perjury to testify to the truth, the whole
truth, and nothing but the truth;

That said proceedings were taken by me in
shorthand at the time and place herein named and were
thereafter transcribed into typewriting under my
direction, said transcript being a true and correct
transcription of my shorthand notes;

Pursuant to Federal Rule 30(e), transcript
review was requested;

I further certify that I have no interest in
the outcome of this action.

MAGNA LEGAL SERVICES

WWW.MAGNALS.COM

1 take into account that -- I'm sorry. Are you saying
2 providers? I'm sorry. I need to understand the
3 question. Can you repeat it? I'm missing a word.

4 Q. Right. So do you know what percentage of
5 Medicare Advantage providers are paid by -- or have
6 increased payments based upon their diagnosis coding?

7 A. I do not have a study that gives me that
8 percentage.

9 Q. And you don't have any empirical analysis
10 or any basis to say what portion of Medicare
11 Advantage payments or Medicare Advantage providers
12 are based on diagnosis codes as opposed to
13 procedures?

14 A. I cannot quantify it.

15 Q. Are any providers in the fee-for-service
16 side of Medicare compensated at all based upon
17 diagnoses that are coded?

18 MS. MCMAHON: Objection. Calls for
19 speculation.

20 A. If we're talking in fee-for-service, the
21 hospital fee-for-service claims are paid partly on
22 procedures and partly on which diagnosis they put

1 first on a claim.

2 So hospitals have an incentive to choose
3 among the diagnoses they have for the patient which
4 one they put first because that is a basic part of
5 the DRG payment system, diagnostic-related group
6 payment system for hospitals.

7 BY MR. JONES:

8 Q. And as part of the DRG payment system for
9 hospitals, the diagnosis being put first matters
10 because more cost-intensive diagnoses lead to higher
11 reimbursement rates for those hospitals, right?

12 A. In the fee-for-service side they -- how
13 they order them would determine the amount that
14 they're paid, yes. But I want to just add that in
15 risk adjustment we don't care what order they're in.
16 But for what you said, it is true.

17 Q. Sure. And so those hospitals have
18 incentives to code first the most cost intensive
19 diagnosis that a patient they are seeing in the
20 fee-for-service Medicare has, right?

21 A. You could, indeed, say that they have an
22 incentive and also that the work is being done by

1 certified coders who have rules for themselves. So,
2 yes, there is an incentive but also the people doing
3 the coding are libel in some sense for fudging.

4 Q. Okay. And -- but you don't know, one way
5 or another, whether there is more compensation on the
6 MA side of the house for diagnosis coding compared to
7 the fee-for-service payments that are tied to DRGs
8 and diagnoses in hospital stays, do you?

9 A. Yes.

10 MS. MCMAHON: Objection. Form.

11 A. The hospitals are a relatively small
12 contributor to the diagnosis coding. And, as I said,
13 that would increase their payments so that the
14 fee-for-service costs might go up. When we do the
15 model and add up all the dollars, the fee-for-service
16 costs might go up.

17 However, as far as the risk adjustment is
18 concerned, it takes them in any order. On the side
19 of Medicare Advantage it is a lot of the time the
20 physicians who are in the position and not just
21 hospitals who do it for an entirely different reason.

22 And I can tell you that my experience in

1 talking with physicians who are in large systems,
2 they -- when they do their coding, the ones that do
3 have electronic systems are reminded of codes
4 particularly because of the HCC model that they
5 should be coding.

6 They literally when they sit down to code
7 a patient -- and I have (sic) this from personal
8 conversation that we've had over the years with
9 consulting physicians -- they are prodded to and
10 let's say reminded that this person also has
11 something.

12 But the guidelines, of course, for normal
13 fee-for-service is not just to code anything that the
14 person has. The guidelines are a bit different
15 there. It's supposed to be relevant.

16 So yeah, there's something going on with
17 physicians just the way the electronic systems work
18 today, specifically oriented towards HCCs to remind
19 people to code thoroughly. Let's put it that way.

20 BY MR. JONES:

21 Q. Sir, my question, respectfully, didn't
22 have anything to do with reminders.

1 What I'm interested in -- you mentioned
2 incentives for coding.

3 A. You mean paid --

4 Q. For payment.

5 A. Yeah.

6 Q. In terms of the differences in -- or the
7 -- let me -- let me start over.

8 You don't have any basis to quantify the
9 difference between payments in providers for Medicare
10 Advantage that are tied to diagnoses compared to
11 payments for providers in the fee-for-service side
12 that are tied to diagnoses?

13 A. I cannot quantify that.

14 Q. And you can't say whether the payments on
15 the MA side are materially higher than the payments
16 for diagnoses as part of the DRG payments for
17 Medicare fee-for-service are (sic), right?

18 MS. MCMAHON: Objection. Form.

19 A. When I use the term "payments," I want to
20 be very specific because the payments that are put on
21 encounter records, which are the source of the
22 diagnoses used, they're like claims that are

1 submitted by managed care plans. Those payments are
2 not the payments I'm talking about.

3 And the payments I'm talking about do not
4 appear anywhere that would make it possible to
5 quantify it. If a payment is made by somebody
6 writing a check to somebody, there's no record of
7 that. So the payments on claims are not affected.
8 So that, yes, I can't quantify that at all.

9 BY MR. JONES:

10 Q. Okay. And just to have the -- make sure I
11 got the question and answer right, you can't say
12 whether payments to providers who see MA patients
13 that are tied to diagnoses are any different or
14 materially higher than the payments to
15 fee-for-service hospitals that are tied to DRGs or
16 diagnoses, right?

17 MS. MCMAHON: Objection. Form.

18 A. The payments that I can talk about in a
19 quantitative way are payments on the encounter
20 records similar to claims. I can't say anything
21 about comparing payments that are made not through
22 the standard payment system for providers.

1 BY MR. JONES:

2 Q. So is the answer to my question no, that
3 you can't say whether payments from MA plans to
4 providers that are tied to diagnoses like the example
5 you provided are materially higher than the payments
6 to fee-for-service hospitals from the government that
7 are tied to DRGs or diagnoses?

8 A. I would like to answer the question, but I
9 have to keep saying that the word "payments" is a
10 little bit -- has a double meaning because there are
11 -- you're saying payments tied to diagnoses. And
12 payments tied to diagnoses means payments made
13 without a record of them.

14 I cannot talk about that. Payments made
15 in fee-for-service based on diagnoses are almost
16 entirely related to the actual payment system and are
17 on the records, the claims. The payments I'm talking
18 about based on diagnoses are not on the claims at
19 all. So I just want to be careful about the word
20 "payments." That's all.

21 Q. Sure. Is there another term that would --
22 that I should -- that would be better for me to use

1 to compare? I just want to make sure I know what
2 your testimony is in terms of that -- the example
3 that you gave of the provider who suggested that he
4 was compensated or that his group was compensated
5 because of more complete coding, what is the kind of
6 payment term that you'd prefer me to use so that I
7 can get the -- your -- your testimony?

8 A. It would be payments not related to the
9 claims, per se, because payments are made to
10 providers based on whatever system -- usually a
11 fee-for-service type system for most managed care
12 plans with the risk capitation.

13 But those payments of record are not the
14 ones we're speaking of, and it's only the payments
15 made to providers based on diagnoses that are beyond
16 those that are external to what is paid on claims.
17 So those are the payments that I would be talking
18 about that I cannot quantify at all.

19 Q. Okay. So let me try this again: You
20 don't have any way of saying whether the payments for
21 diagnosis coding that are not based on claims are any
22 -- materially higher in the Medicare Advantage world

1 than payments to hospitals on the fee-for-service
2 side that are based on diagnoses for DRGs, for
3 example?

4 A. I'm sorry. We're -- on one side or the
5 other we have hospitals and then we have a more vague
6 term on the Medicare Advantage side.

7 The hospital claims on both sides may or
8 may not be paid similarly based on diagnoses. I
9 don't know what a particular plan does. We do know
10 what Medicare fee-for-service does. The diagnosis
11 matters and so do the procedures. Okay?

12 On the managed care side, they may or may
13 not pay on DRGs. So the diagnosis may or may not
14 matter on the claim itself because there are many
15 ways to pay hospitals.

16 So, you know, not knowing the specifics of
17 any case, I couldn't say. But then there is the
18 other payment which can be made outside of the
19 hospital world all together and having some sort of a
20 -- on the one hand physicians who are not paid --
21 physicians provide the diagnosis codes for most
22 beneficiaries because hospitalizations are relatively

1 rare.

2 So most people get only physician-based
3 codes with some hospitals also. So if we're talking
4 about the other half of the world, which is not a
5 hospital, for physicians -- physicians there in
6 fee-for-service, the diagnoses are not a basis of
7 payment.

8 On the managed care side what they pay
9 physicians on a claim may or may not have anything to
10 do with the diagnoses they put on. But if there is a
11 -- an additional on top of that for increasing the
12 diagnoses, I cannot quantify that. I just know that
13 it exists. I can't quantify that.

14 Bonus payment -- let's go with the bonus
15 payment to make it clearer.

16 Q. Okay. But in terms of the comparison of
17 any payment that depends on a diagnosis as opposed to
18 a procedure, can you say, one way or another, whether
19 the payments on the Medicare Advantage side as a
20 general matter are materially higher that depend on a
21 diagnosis rather than a procedure than the payments
22 on the Medicare fee-for-service side that depend on a

1 diagnosis rather than a procedure?

2 A. If we're looking on the claim itself I
3 can't say that the hospitals -- and that's exactly
4 what we're talking about at this point -- that the
5 hospitals are coding differently for their own
6 benefit depending on how they're being paid by the
7 plan.

8 But if they were getting paid by DRGs,
9 they would have the same incentives. And if there
10 was a bonus payment, I can't see that at all in
11 there. So I'm not saying that in hospitals there's a
12 big difference because if the plan does pay with DRGs
13 based on diagnoses -- if they don't pay -- I know
14 from history that there are hospitals that have been
15 paid per diems, and it's an entirely different
16 situation from DRGs.

17 So, no, I can't speak too specifically
18 what's on the claim. I don't think there's a big
19 difference there.

20 But if there's any bonus for coding more
21 comorbidities or something like that outside of the
22 claim, which doesn't affect the payment on the claim,

1 I cannot say firmly how much that is.

2 Q. Sir, I'm just trying to understand whether
3 you have any data or quantification that would
4 suggest, one way or another, whether payments to
5 providers based on diagnoses for MA plans are any
6 materially different than payments to providers based
7 on diagnoses, not procedures, in the fee-for-service
8 side of Medicare.

9 MS. MCMAHON: Objection. Asked and
10 answered.

11 A. For hospitals -- that is the group you're
12 referring to -- I cannot quantify that there is a
13 difference, correct.

14 BY MR. JONES:

15 Q. And can you quantify that there is any
16 difference overall including hospitals or all
17 providers with respect to payments tied to diagnoses
18 for MA plans as opposed to payments tied to diagnoses
19 in the fee-for-service Medicare?

20 A. I cannot quantify that, no.

21 MR. JONES: We've been going about an
22 hour. Do you want to take a break now or do you want

C E R T I F I C A T E

I do hereby certify that I am a Notary Public in good standing, that the aforesaid testimony was taken before me, pursuant to notice, at the time and place indicated; that said deponent was by me duly sworn to tell the truth, the whole truth, and nothing but the truth; that the testimony of said deponent was correctly recorded in machine shorthand by me and thereafter transcribed under my supervision with computer-aided transcription; that the deposition is a true and correct record of the testimony given by the witness; and that I am neither of counsel nor kin to any party in said action, nor interested in the outcome thereof.

Defendants.

1 This is a civil fraud action brought by the United States of America (“United
2 States” or “Government”) to recover treble damages and civil penalties under the False
3 Claims Act (“FCA”), 31 U.S.C. §§ 3729-3733, as well as for restitution and common
4 law damages, for monies unlawfully obtained and retained by Defendant UnitedHealth
5 Group Inc. and various of its direct and indirect subsidiaries (“Defendants”) involved in
6 Parts C and D of the Medicare Program. Defendants knowingly submitted false claims
7 and made false statements to the Medicare Program. Moreover, Defendants have
8 knowingly and improperly avoided their obligations to repay significant sums of money
9 to the Medicare Program.

10 Having filed a notice of intervention pursuant to 31 U.S.C. § 3730(b)(4), the
11 United States alleges for its amended complaint-in-partial-intervention (the “Amended
12 Complaint”) as follows:

13 **INTRODUCTION**

14 1. Millions of elderly and disabled individuals throughout the United States receive
15 their Medicare benefits through Parts C and D of the Medicare Program, hereinafter
16 referred to as the Medicare Advantage (MA) Program, which is administered by the
17 Government agency called the Centers for Medicare and Medicaid Services (“CMS”). A
18 central, distinguishing feature of the MA Program is the provision of Medicare benefits
19 by private healthcare insurance organizations, which are called Medicare Advantage
20 Organizations (“MA Organizations”). Medicare beneficiaries enroll in managed
21 healthcare insurance plans called Medicare Advantage Plans (“MA Plans”) and
22 prescription drug plans (“PD Plans”) that are offered by these MA Organizations. The
23 MA Plans are packages of healthcare insurance benefits and the PD Plans are packages
24 of prescription drug benefits. Hereinafter MA Plans and PD Plans are collectively
25 referred to as “Plans.”

26 2. The Government pays each MA Organization a fixed monthly payment for each
27 Medicare beneficiary enrolled in its Plans. The Government adjusts these payments for
28 various risk factors that affect expected healthcare expenditures, including the age,

gender, and health status of each beneficiary. The adjustments are intended to ensure that MA Organizations are paid more for beneficiaries whose healthcare expenses are *expected* to be more and less for beneficiaries whose health care expenses are *expected* to be less. However, these adjustments to the fixed monthly payments are made regardless of the actual services provided to the beneficiaries and, thus, regardless of whether those beneficiaries expected to need more or more costly services actually obtain more or more costly services, and whether those beneficiaries expected to need less or less costly services actually obtain less or less costly services.

3. To obtain payments based on adjustments for health status, MA Organizations submit diagnosis codes to the Government for the beneficiaries in their Plans. These diagnosis codes are from the beneficiaries' medical encounters with healthcare providers (*e.g.*, physician office visits and hospital stays) during the year prior to the actual payment year (often referred to as the "data collection" year or the "date of service" year). Payments are based on diagnoses from the prior year because they are used to predict the *expected* needs of a beneficiary for more or less costly healthcare services during the payment year. Using these diagnosis codes submitted by or on behalf of MA Organizations, the Government calculates a risk score for each beneficiary. The beneficiary's risk score is then used to calculate monthly payments to the MA Organization for that beneficiary for the payment year. In general, the more numerous and severe the conditions identified by the diagnosis codes, the higher the risk score for a beneficiary and, thus, the greater the risk adjustment payments made to the MA Organization for that beneficiary for the payment year.

4. This payment model creates powerful incentives for MA Organizations and their owners and operators to exaggerate the expected healthcare costs for the beneficiaries in their Plans by submitting invalid diagnosis codes and failing to comply with their obligation to retract invalid diagnoses. In order to combat these incentives and protect the Government from overpaying MA Organizations, the Government requires that submitted diagnoses be unambiguously supported and, thus, validated by the

1 beneficiaries' medical records for medical encounters during the data collection year.
2 Medical records are the "source of truth" for the purpose of receiving and retaining risk
3 adjustment payments.

4 5. The medical records that must support the diagnosis codes are not provided to the
5 Government as part of the payment process. Instead, the Government requires that each
6 MA Organization expressly certify that the diagnosis codes it has submitted for risk
7 adjustment payments are accurate and truthful based on best knowledge, information,
8 and belief. 42 C.F.R. § 422.504(l)(2). Each MA Organization must exercise due
9 diligence in order to make this express certification. Each MA Organization must also
10 "[a]dopt and implement an effective compliance program, which must include measures
11 that prevent, detect, and correct non-compliance with [the Government's] program
12 requirements as well as measures that prevent, detect, and correct fraud, waste, and
13 abuse." 42 C.F.R. § 422.503(b)(4)(vi).

14 6. As explained by the United States Court of Appeals for the Ninth Circuit, CMS, in
15 2000, made clear that

16 Medicare Advantage organizations have always had "an obligation to take
17 steps to ensure the accuracy, completeness, and truthfulness of the
18 [medical] encounter data" [i.e., diagnoses] and "an obligation to undertake
19 'due diligence' to ensure the accuracy, completeness, and truthfulness of
20 encounter data submitted to [CMS]." . . . CMS made perfectly clear that
21 Medicare Advantage organizations would be "held responsible for making
22 good faith efforts to certify the accuracy, completeness, and truthfulness of
23 encounter data submitted."

24 *United States ex rel. Swoben v. UnitedHealthcare Ins. Co.*, 848 F.3d 1161, 1174 (9th Cir.
25 2016) (quoting 65 Fed. Reg. 40,170, 40,268 (June 29, 2000)). The Ninth Circuit further
26 explained that the requirement that MA Organizations take affirmative steps to address
27 errors in their data is further demonstrated by "§ 422.503, which since 2005 has required
28 Medicare Advantage organizations to have effective compliance programs in place,

1 including ‘[p]rocedures for internal monitoring and auditing’ and ‘for ensuring prompt
2 response to detected offenses’.” *Id.* (quoting 42 C.F.R. § 422.503(b)(4)(vi), (vi)(F),
3 (vi)(G) (2005)).

4 7. For many years, Defendant UnitedHealth Group Inc. (“UHG”) has been the
5 nation’s largest owner of MA Organizations. These organizations offer MA and PD
6 Plans throughout the country. Millions of elderly and disabled Medicare beneficiaries
7 throughout the United States are enrolled in MA and PD Plans that are offered by UHG
8 and the MA Organizations owned by it. In March 2017, approximately 229,000
9 Medicare beneficiaries in the Central District of California were enrolled in MA Plans
10 offered by Defendants UnitedHealthcare of California, Inc. (previously known as
11 PacifiCare of California, Inc.) and Sierra Health and Life Insurance Company, Inc.

12 8. UHG manages and operates the Defendant MA Organizations itself and through
13 its business divisions which, depending on the time period, were or are part of
14 Defendants UnitedHealthcare, Inc.; United HealthCare Services, Inc.; Ovations, Inc.;
15 Optum, Inc.; and OptumInsight, Inc. Hereinafter, UHG, UnitedHealthcare, Inc.; United
16 HealthCare Services, Inc.; Ovations, Inc.; Optum, Inc.; and OptumInsight, Inc. are
17 sometimes collectively referred to as the “UHG Managing Defendants,” based on their
18 roles in managing and operating the Defendant MA Organizations, as described more
19 fully herein. When the term “UHG Managing Defendants” is used in this Amended
20 Complaint in reference to specific facts (*e.g.*, meetings and communications), it refers to
21 those Defendants that managed and operated the Defendant MA Organizations at the
22 time relating to the facts alleged.

23 9. The Government pays billions of taxpayer dollars each year to the Defendant MA
24 Organizations for the Medicare beneficiaries enrolled in the Defendant MA
25 Organizations’ Plans. Risk adjustment payments account for a substantial percentage of
26 these dollars. The diagnoses submitted to the Government by the UHG Managing
27 Defendants on behalf of the Defendant MA Organizations drive a large percentage of the
28 payments that the Defendant MA Organizations receive from the Government.

1 Accordingly, it is not surprising that the UHG Managing Defendants and the Defendant
2 MA Organizations are not passive conduits of diagnoses from healthcare providers to the
3 Government. Rather, for many years, the UHG Managing Defendants have conducted
4 programs and engaged in other activities to increase the amount of risk adjustment
5 payments from the Government to the Defendant MA Organizations. This includes
6 programs and other efforts to directly influence both the number of diagnoses and the
7 severity of the medical conditions reported by providers (such as educating physicians
8 about diagnoses associated with greater risk adjustment payments). This also includes
9 programs and efforts that do not involve providers but nonetheless materially increase
10 the number of diagnoses submitted to the Government and, thus, the amount of risk
11 adjustment payments to the Defendant MA Organizations. Since 2005, the UHG
12 Managing Defendants and/or their predecessors have worked jointly to conduct these
13 programs and perform these activities.

14 10. In particular, since 2005, the UHG Managing Defendants have conducted a very
15 large national Chart Review Program to significantly increase the risk adjustment
16 payments that the Defendant MA Organizations receive from the Government. For
17 many years, this was their biggest effort aimed at increasing risk adjustment payments.
18 During the last ten years, they significantly increased the amount of risk adjustment
19 payments that the Defendant MA Organizations received from the Government by
20 collecting millions of medical records (also known as “charts”) from providers and then
21 employing diagnosis coders (also known as “chart reviewers”) to review the medical
22 records in order to mine them for diagnoses that the providers themselves did not report
23 to the Defendant MA Organizations for the beneficiaries in their Plans. The UHG
24 Managing Defendants then submitted these additional diagnosis codes (“ADDS”) to the
25 Government for billions of dollars of additional risk adjustment payments.

26 11. The UHG Managing Defendants’ national Chart Review Program was strictly a
27 one-sided revenue-generating program. The UHG Managing Defendants did not review
28 the beneficiaries’ medical records in good faith in order to obtain a true and accurate

1 picture of the health status of the beneficiaries in the Defendant MA Organizations’
2 Plans or to submit truthful and accurate risk adjustment data to the Government. They
3 used the results of the chart reviews to only increase payments, *i.e.*, to submit additional
4 diagnoses not reported by the providers. At the same time, they systematically ignored
5 the results of chart reviews that would have led to decreased payments, *i.e.*, results
6 showing that diagnoses reported by providers to them and then submitted by them to the
7 Government were not supported by the beneficiaries’ medical records.

8 12. Moreover, since at least 2005, the UHG Managing Defendants and/or their
9 predecessors have known that a significant percentage of diagnoses reported by
10 providers to them (hereinafter “provider-reported diagnoses”) are invalid because the
11 beneficiaries’ medical records do not substantiate that the beneficiaries had the medical
12 conditions identified by the diagnosis codes reported by the providers. They knew this
13 from audits conducted by the Government and from their own internal medical record
14 reviews. Despite this knowledge, they knowingly avoided “looking both ways” as part
15 of their national Chart Review Program, except for a very limited time period when they
16 “looked both ways” at some of the chart review results as part of their Claims
17 Verification (“CV”) Program. That is, they knowingly and improperly avoided
18 comparing the diagnoses reported by the providers and submitted by them to the
19 Government with the results of the coders’ chart reviews to identify those provider-
20 reported diagnoses that were not supported by the beneficiaries’ medical records. They
21 could and should have done this comparison and withdrawn their prior submission of
22 these unsupported diagnoses, that is, made “DELETES.” If they had done so, the
23 Government would not have made risk adjustment payments based on these unsupported
24 diagnoses or, if it had already made the payments, it would have recovered them from
25 the Defendant MA Organizations or the other Defendants.

26 13. By failing to “look both ways,” the UHG Managing Defendants generated and
27 reported skewed data artificially inflating beneficiaries’ risk scores, avoided negative
28 payment adjustments, and caused the Defendant MA Organizations to retain payments to

1 which they were not entitled. They did this “knowingly,” as that term is defined in the
2 FCA. The Government has conservatively estimated that, if the UHG Managing
3 Defendants had “looked both ways,” they would not have submitted on behalf of the
4 Defendant MA Organizations or, if submitted, they would have withdrawn hundreds of
5 thousands of invalid diagnoses on behalf of the Defendant MA Organizations, and the
6 Government would not have erroneously paid or would have recovered substantial sums
7 of money (*e.g.*, potentially over a billion dollars in risk adjustment payments for four
8 payment years) to which the Defendant MA Organizations were not entitled.

9 14. By failing to “look both ways,” the UHG Managing Defendants and the Defendant
10 MA Organizations knowingly submitted false certifications about the accuracy and
11 truthfulness of their data and knowingly and improperly avoided or decreased
12 obligations to repay (*i.e.*, return) monies owed to the Government in violation of the
13 FCA.

14 15. In addition, Defendants engaged in other conduct (unrelated to their Chart Review
15 Program) that violated the FCA. Defendants deliberately ignored or recklessly
16 disregarded information from their Risk Adjustment Coding Compliance Review
17 (“RACCR”) Program about invalid diagnoses. This information showed that significant
18 percentages of the diagnoses reported to the UHG Managing Defendants and the
19 Defendant MA Organizations by certain “financially incentivized” providers, including
20 certain capitated and gainsharing providers, were unsubstantiated by their patients’
21 medical records.

22 16. The UHG Managing Defendants and the Defendant MA Organizations paid
23 providers who cared for the beneficiaries in the Defendant MA Organizations’ MA Plans
24 through a variety of arrangements. They paid some healthcare providers on a fee-for-
25 service basis for each service (*e.g.*, office visit) they provided to a beneficiary. However,
26 they negotiated payment arrangements with large provider groups that were intended to
27 more closely align their financial interests. For example, the UHG Managing
28 Defendants and the Defendant MA Organizations paid many large provider groups a

1 “fixed” fee for each beneficiary cared for by these providers. These “capitated” fees
2 generally were not dependent on the amount of services rendered by these providers.
3 Instead, the “capitated” fees were often based on a percentage share of the payments that
4 the Defendant MA Organizations received from the Government for the beneficiaries
5 cared for by the providers. The UHG Managing Defendants and the Defendant MA
6 Organizations also entered into “gainsharing” agreements whereby they made incentive
7 payments to some of their fee-for-service providers. These incentive payments were
8 based in whole or part on total revenues that the Defendant MA Organizations received
9 from the Government for the beneficiaries cared for by these gainsharing providers.

10 17. The UHG Managing Defendants’ and the Defendant MA Organizations’
11 agreements with capitated and gainsharing providers incentivized these providers to
12 increase the number of diagnoses that they reported to the UHG Managing Defendants
13 and the Defendant MA Organizations and to report diagnoses for more severe medical
14 conditions. The more risk adjustment payments obtained by the Defendant MA
15 Organizations for the beneficiaries cared for by these providers, the more money the
16 UHG Managing Defendants and the Defendant MA Organizations paid to these
17 providers pursuant to the capitation and gainsharing agreements.

18 18. The UHG Managing Defendants knew that these capitated and gainsharing
19 providers had a financial incentive to report invalid diagnoses in order to increase their
20 own revenues. In fact, based on the results of their own data analyses and medical
21 record reviews conducted as part of their RACCR Program, they knew which
22 incentivized providers were actually or likely engaged in over-reporting diagnoses,
23 including a significant number of providers located in this District. But the UHG
24 Managing Defendants knowingly continued to submit diagnoses from these incentivized
25 providers to the Government and knowingly and improperly avoided repaying the
26 Government for risk adjustment payments based on invalid diagnoses from these
27 providers, all in violation of the FCA.

JURISDICTION AND VENUE

19. This Court has subject matter jurisdiction over this action pursuant to 28 U.S.C. § 1345 because the United States is the Plaintiff. In addition, the Court has subject matter jurisdiction over the FCA claims for relief under 28 U.S.C. §§ 1331 and 1345 and 31 U.S.C. § 3732(a)-(b) and supplemental jurisdiction to entertain the common law and equitable claims for relief under 28 U.S.C. § 1367(a).

20. This Court has personal jurisdiction over Defendants pursuant to 31 U.S.C. § 3732(a) because at least one of the Defendants can be found in, resides in, transacts business in, or has committed the alleged acts in the Central District of California.

21. Venue also lies in this District pursuant to 28 U.S.C. § 1391(b)-(c) and 31 U.S.C. § 3732(a) because at least one of the Defendants can be found in, resides in, and transacts business in this District, a substantial part of the events or omissions giving rise to the claims occurred in this District, and/or all of the Defendants are subject to the Court's personal jurisdiction under the FCA.

PARTIES

I. Plaintiffs

22. Plaintiff is the United States of America, suing on behalf of the United States Department of Health and Human Services ("HHS"), which includes its operating division, the Centers for Medicare and Medicaid Services ("CMS"). At all times relevant to this Complaint, CMS administered and supervised the MA Program and made risk adjustment payments to MA Organizations, including the Defendant MA Organizations in this action, under Parts C and D of the Program. The United States filed its notice of partial intervention in this action on February 14, 2017.

23. The *qui tam* plaintiff ("Relator") is Benjamin Poehling, a former employee of United HealthCare Services, Inc. who was the Director of Finance for Oventions, the group that managed the Defendant MA Organizations until approximately 2010 and, after that, the Director of Finance for UnitedHealthcare Medicare & Retirement, which was the group at UnitedHealthcare, Inc. that succeeded Oventions in managing the

1 Defendant MA Organizations. From mid-2007 until he left at the end of 2012, Poehling
2 ran the risk adjustment team at Ovations and then at UnitedHealthcare Medicare &
3 Retirement, where he was one of the management employees responsible for the
4 submission of claims (*i.e.*, diagnoses) by the UHG Managing Defendants to the
5 Government for risk adjustment payments to the Defendant MA Organizations. He was
6 also one of the management employees responsible for risk adjustment revenue-
7 generating activities, including, but not limited to, the UHG Managing Defendants’
8 national Chart Review Program. Poehling expressed concerns to fellow executives
9 about the failure of the UHG Managing Defendants’ Chart Review Program to “look
10 both ways.” In March 2011, Poehling initiated this action by filing a complaint pursuant
11 to the *qui tam* provisions of the FCA. 31 U.S.C. § 3730(b)(1).

12 **II. Defendants**

13 24. Defendant UnitedHealth Group, Inc. (“UHG”) is a publicly traded Delaware
14 corporation. It is the parent company for all other Defendants in this action. UHG, the
15 other Defendants, and their affiliates have offices in various locations throughout the
16 United States, including in the Central District of California. UHG offers a broad
17 spectrum of products and services through two distinct primary direct corporate
18 subsidiaries (each of which has numerous direct and indirect subsidiaries of its own):
19 (1) UnitedHealthcare, Inc., a health benefits (*i.e.*, insurance) company, and (2) Optum,
20 Inc., a health services company. Accordingly, UHG’s healthcare insurance products,
21 including those under Parts C and D of the Medicare Program, are offered by, and
22 UHG’s MA and PD Plans are managed by, various entities that are UHG’s direct or
23 indirect subsidiaries, including, but not limited to, the other Defendants identified below.
24 UHG controls all of these entities.

25 25. UHG and its direct and indirect subsidiaries and affiliates operate MA
26 Organizations in all fifty states and the District of Columbia. Each of these MA
27 Organizations offers one or more MA Plans, that is, one or more packages of healthcare
28 insurance benefits under Part C of the Medicare Program. Many, if not all, of these MA

1 Organizations also offer PD Plans, that is, drug benefit packages under Part D of the
2 Medicare Program. As of December 31, 2008, UHG had approximately 1.5 million
3 Medicare beneficiaries enrolled in its MA Plans under Part C of the Medicare Program
4 and millions of additional beneficiaries enrolled in its PD Plans. As of December 31,
5 2009, UHG had approximately 1.8 million Medicare beneficiaries enrolled in its MA and
6 millions of additional beneficiaries enrolled in its PD Plans. As of December 31, 2010,
7 UHG had approximately 2.1 million beneficiaries in its MA Plans and millions of
8 additional beneficiaries in its PD Plans. As of December 31, 2011, UHG had 2.2 million
9 beneficiaries in its MA Plans and millions of additional beneficiaries in its PD Plans. As
10 of December 31, 2012, UHG had approximately 2.6 million beneficiaries in its MA
11 Plans and millions of additional beneficiaries in its PD Plans. In 2013, 2014, and 2015
12 United had approximately 3 million beneficiaries in its MA Plans and approximately 8
13 million in its PD Plans. In 2016, UHG had approximately 3.6 million beneficiaries in its
14 MA Plans, and approximately 8.6 million beneficiaries in its PD Plans. Annually,
15 UHG's revenues from the MA Program have been in the tens of billions of dollars.

16 26. All Defendant MA Organizations entered into one or more agreements with the
17 Government during the relevant time period to offer MA Plans and/or PD Plans to
18 Medicare beneficiaries under Parts C and D of the Medicare Program, presented or had
19 the UHG Managing Defendants present on their behalf claims to the Government for risk
20 adjustment payments under Parts C and D of the Medicare Program, submitted or had
21 the UHG Managing Defendants submit on their behalf one or more Risk Adjustment
22 Attestations to the Government for risk adjustment payments from the Medicare
23 Program, and received risk adjustment payments from the Government. These
24 Defendant MA Organizations include all MA Organizations acquired, owned, and
25 controlled directly or indirectly by UHG after 2005, including:

26 a. AmeriChoice of New Jersey, Inc., a New Jersey corporation, doing
27 business as AmeriChoice Personal Care Plus and UnitedHealthcare Community
28 Plan.

1 b. Arizona Physicians IPA, Inc., an Arizona corporation, doing business
2 as APIPA Personal Care Plus and UnitedHealthcare Community Plan.

3 c. Care Improvement Plus of Maryland, Inc., which is or was a
4 Maryland corporation, doing business as Care Improvement Plus.

5 d. Care Improvement Plus of Texas Insurance Company, which is a
6 Texas insurance company, doing business as Care Improvement Plus.

7 e. Care Improvement Plus South Central Insurance Co., which is an
8 Arkansas insurance company, doing business as Care Improvement Plus and
9 UnitedHealthcare.

10 f. Care Improvement Plus Wisconsin Insurance Company, which is a
11 Wisconsin insurance company, doing business as Care Improvement Plus and
12 UnitedHealthcare.

13 g. Optum Insurance Co., which is an Ohio corporation.

14 h. Citrus Health Care, Inc., which is or was a Florida corporation.

15 i. Health Plan of Nevada, Inc., which is a Nevada corporation.

16 j. Medica HealthCare Plans, Inc., which is a Florida corporation.

17 k. Oxford Health Plans (CT), Inc., which is a Connecticut corporation,
18 doing business as AARP MedicareComplete from SecureHorizons; Oxford
19 Medicare Advantage; SecureHorizons; SecureHorizons by UnitedHealthCare; and
20 UnitedHealthcare.

21 l. Oxford Health Plans (NJ), Inc., which is a New Jersey corporation,
22 also known as Oxford Health Plans of New Jersey, Inc., doing business as AARP
23 MedicareComplete from SecureHorizons; AARP MedicareComplete provided by
24 SecureHorizons; Evercare; Evercare by UnitedHealthcare; Evercare Health Plans;
25 Evercare Plan H; SecureHorizons; SecureHorizons by UnitedHealthCare; and
26 UnitedHealthcare.

1 m. Oxford Health Plans (NY), Inc. which is a New York corporation,
2 doing business as Oxford Medicare Advantage; SecureHorizons; SecureHorizons
3 by UnitedHealthcare; and UnitedHealthcare.

4 n. PacifiCare Life and Health Insurance Company, which is an Indiana
5 insurance company, doing business as SecureHorizons Direct and SecureHorizons
6 MedicareDirect.

7 o. PacifiCare of Arizona, Inc., which is an Arizona corporation doing
8 business as SecureHorizons Medicare Advantage Plan; SecureHorizons by
9 UnitedHealthcare; and UnitedHealthcare.

10 p. PacifiCare of Colorado, Inc., which is a Colorado corporation doing
11 business as AARP MedicareComplete from Secure Horizons; AARP
12 MedicareComplete provided by SecureHorizons; Secure Horizons Medicare
13 Advantage Plan; SecureHorizons by UnitedHealthcare; and UnitedHealthcare.

14 q. PacifiCare of Nevada, Inc., which is a Nevada corporation, also
15 known as PacifiCare/UHC of Nevada, doing business as AARP
16 MedicareComplete provided by SecureHorizons; PacifiCare/UHC of Nevada;
17 Secure Horizons Medicare Advantage Plan; SecureHorizons by UnitedHealthcare;
18 and UnitedHealthcare.

19 r. Physicians Health Choice of Texas, LLC, which is a Texas limited
20 liability company doing business as Physicians Health Choice.

21 s. Preferred Care Partners, Inc., which is a Florida corporation doing
22 business as UnitedHealthcare.

23 t. Rocky Mountain Health Maintenance Organization, Inc., which is a
24 Colorado company.

25 u. Sierra Health and Life Insurance Company, Inc., which is a Nevada
26 corporation doing business as Erickson Advantage and UnitedHealthcare.

27 v. Symphonix Health Insurance, Inc., which is an Illinois insurance
28 company doing business as Symphonix Health.

1 w. UnitedHealthcare of California, Inc., which is a California
2 corporation, also known as UHC of California, Inc. and formerly known as
3 PacifiCare of California, Inc. and PacifiCare of California/Secure Horizons, doing
4 business as SecureHorizons by UnitedHealthcare, Secure Horizons Medicare
5 Advantage Plan, and UnitedHealthcare.

6 x. Unison Health Plan of Tennessee, Inc., which is a Tennessee
7 corporation doing business as Unison Advantage and UnitedHealthcare
8 Community Plan.

9 y. United Health Care Ins. Co. and United New York, which is a New
10 York insurance company doing business as UnitedHealthcare.

11 z. UnitedHealthcare Benefits of Texas, Inc., which is a Texas
12 corporation, formerly known as PacifiCare of Texas, Inc., doing business as
13 SecureHorizons Medicare Advantage Plan; SecureHorizons by UnitedHealthcare;
14 and UnitedHealthcare.

15 aa. UnitedHealthcare Community Plan of Ohio, Inc., which is an Ohio
16 corporation, formerly known as Unison Health Plan of Ohio, Inc., doing business
17 as Unison Advantage and UnitedHealthcare Community Plan.

18 bb. UnitedHealthcare Community Plan of Texas, L.L.C., which is a
19 Texas limited liability company, formerly known as Evercare of Texas, LLC,
20 doing business as Evercare by UnitedHealthcare and Evercare Health Plans; and
21 UnitedHealthcare.

22 cc. UnitedHealthcare Community Plan, Inc., which is a Michigan
23 corporation, also known as Great Lakes Health Plan, Inc. and UnitedHealthcare of
24 the Great Lakes Health Plan, Inc., doing business as Great Lakes Personal Care
25 Plus and UnitedHealthcare Community Plan.

26 dd. UnitedHealthcare Insurance Company, which is a Connecticut
27 insurance company, also known as United Healthcare Insurance Company, doing
28 business as AARP MedicareComplete from SecureHorizons; Erickson Advantage;

1 Evercare by UnitedHealthcare; Evercare Health Plans; Evercare Senior Care
2 Options; SecureHorizons; SecureHorizons by UnitedHealthcare; SecureHorizons
3 MedicareDirect; United Health Group; UnitedHealthcare; and UnitedHealthcare
4 Community Plan.

5 ee. UnitedHealthcare Insurance Company of New York, which is a New
6 York insurance company, also known as United Healthcare Insurance Company of
7 New York, doing business as SecureHorizons; SecureHorizons MedicareDirect;
8 SecureHorizons by UnitedHealthcare; and UnitedHealthcare.

9 ff. UnitedHealthcare of Alabama, Inc., which is an Alabama
10 corporation, also known as United HealthCare of Alabama, Inc., doing business as
11 SecureHorizons; SecureHorizons by UnitedHealthcare; and UnitedHealthcare.

12 gg. UnitedHealthcare of Arizona, Inc., which is an Arizona corporation,
13 also known as United HealthCare of Arizona, Inc., doing business as
14 SecureHorizons; SecureHorizons by UnitedHealthcare; and UnitedHealthcare.

15 hh. UnitedHealthcare of Arkansas, Inc., which is an Arkansas
16 corporation, also known as United Healthcare of Arkansas, Inc., doing business as
17 SecureHorizons; SecureHorizons by UnitedHealthcare; and UnitedHealthcare.

18 ii. UnitedHealthcare of Florida, Inc., which is a Florida corporation, also
19 known as United Healthcare of Florida, Inc. doing business as AmeriChoice;
20 Evercare at Home; SecureHorizons; SecureHorizons by UnitedHealthcare; and
21 UnitedHealthcare.

22 jj. UnitedHealthcare of Georgia, Inc., which is a Georgia corporation,
23 also known as United Healthcare of Georgia, Inc., doing business as
24 SecureHorizons; SecureHorizons by UnitedHealthcare; and UnitedHealthcare.

25 kk. UnitedHealthcare of New England, Inc., which is a Rhode Island
26 corporation, also known as United HealthCare of New England, Inc. and United
27 Health Plans of New England, Inc., doing business as AARP MedicareComplete
28

1 provided by SecureHorizons; AARP MedicareComplete from SecureHorizons;
2 SecureHorizons by UnitedHealthcare; and UnitedHealthcare.

3 ll. UnitedHealthcare of New York, Inc., which is a New York
4 corporation, also known as AmeriChoice of New York, Inc. and United
5 Healthcare of New York, Inc. doing business as AmeriChoice Personal Care Plus;
6 SecureHorizons; SecureHorizons by UnitedHealthcare; UnitedHealthcare; and
7 UnitedHealthcare Community Plan.

8 mm. UnitedHealthcare of North Carolina, Inc., which is a North Carolina
9 corporation, also known as United Healthcare of North Carolina, Inc., doing
10 business as SecureHorizons; SecureHorizons by UnitedHealthcare, and
11 UnitedHealthcare.

12 nn. UnitedHealthcare of Ohio, Inc., which is an Ohio corporation, also
13 known as United Healthcare of Ohio, Inc., doing business as SecureHorizons,
14 SecureHorizons by UnitedHealthcare, and UnitedHealthcare.

15 oo. UnitedHealthcare of Oklahoma, Inc., which is an Oklahoma
16 corporation, formerly known as PacifiCare of Oklahoma, Inc., doing business as
17 Secure Horizons Medicare Advantage Plan; SecureHorizons by UnitedHealthcare,
18 and UnitedHealthcare.

19 pp. UnitedHealthcare of Oregon, Inc., which is an Oregon corporation,
20 formerly known as PacifiCare of Oregon, Inc., doing business as AARP
21 MedicareComplete from SecureHorizons; AARP MedicareComplete provided by
22 SecureHorizons; SecureHorizons Medicare Advantage Plan; SecureHorizons by
23 UnitedHealthCare; and UnitedHealthcare.

24 qq. UnitedHealthcare of Pennsylvania, Inc., which is a Pennsylvania
25 corporation, formerly known as Unison Health Plan of Pennsylvania, Inc., doing
26 business as Unison Advantage; UnitedHealthcare Community Plan; and
27 UnitedHealthcare.
28

1 rr. UnitedHealthcare of Tennessee, Inc., which is a Tennessee
2 corporation, also known as United Healthcare of Tennessee, Inc., doing business
3 as AARP MedicareComplete from SecureHorizons; AARP MedicareComplete
4 provided by SecureHorizons; SecureHorizons; and SecureHorizons by
5 UnitedHealthcare.

6 ss. UnitedHealthcare of the Midlands, Inc., which is a Nebraska
7 corporation, also known as United Healthcare of the Midlands, Inc., doing
8 business as SecureHorizons by UnitedHealthcare and UnitedHealthcare.

9 tt. UnitedHealthcare of the Midwest, Inc., which is a Missouri
10 corporation, also known as United Healthcare of the Midwest, Inc., doing business
11 as SecureHorizons; SecureHorizons by UnitedHealthcare; and UnitedHealthcare.

12 uu. UnitedHealthcare of Utah, Inc., which is a Utah corporation, also
13 known as United Healthcare of Utah, Inc., doing business as SecureHorizons;
14 SecureHorizons by UnitedHealthcare; and UnitedHealthcare.

15 vv. UnitedHealthcare of Washington, Inc., which is a Washington
16 corporation, formerly known as PacifiCare of Washington, Inc., doing business as
17 AARP MedicareComplete from SecureHorizons; Secure Horizons Medicare
18 Advantage Plan; SecureHorizons by UnitedHealthcare; and UnitedHealthcare.

19 ww. UnitedHealthcare of Wisconsin, Inc., which is a Wisconsin
20 corporation, also known as United Healthcare of Wisconsin, Inc. doing business as
21 SecureHorizons; SecureHorizons by UnitedHealthcare; UnitedHealthcare
22 Community Plan; UnitedHealthcare Personal Care Plus; and UnitedHealthcare.

23 xx. UnitedHealthcare Plan of the River Valley, Inc., which is an Illinois
24 corporation, also known as United Healthcare Plan of the River Valley, Inc.,
25 UnitedHealth Care Plan of the River Valley, Inc., and United HealthCare of the
26 River Valley, Inc., doing business as AmeriChoice Secure Plus Complete;
27 SecureHorizons by UnitedHealthcare; UnitedHealthcare; and UnitedHealthcare
28 Community Plan.

yy. Any other MA Organizations acquired, owned, or controlled by UHG since 2005.

27. Defendant United HealthCare Services, Inc. (“United HealthCare Services”) is a Minnesota corporation. It is a direct subsidiary of Defendant UHG. United HealthCare Services is the successor to PacifiCare Health Systems and PacifiCare Health Plan Administrators, Inc., which managed some of the Defendant MA Organizations. See *infra* paragraph 37. As previously stated, United HealthCare Services also employed Relator Poehling and, on information and belief, employed other individuals who held titles and positions within the other UHG Managing Defendants and who performed work on behalf of the Defendant MA Organizations.

28. Defendant Ovations, Inc. (“Ovations”) is a Delaware corporation. It is a direct subsidiary of Defendant United HealthCare Services and an indirect subsidiary of Defendant UHG. Until approximately 2010, one or more of the groups that managed some of the Defendant MA Organizations were located within Defendant Ovations.

29. Defendant UnitedHealthcare, Inc. (“UnitedHealthcare”) is a Delaware corporation, and a direct subsidiary of Defendant UHG. UnitedHealthcare is the UHG business entity which owns, operates, and offers health insurance plans to governmental customers. Various UnitedHealthcare subsidiaries operate health benefit plans and provide healthcare benefits to millions of Medicare beneficiaries under the MA Program. UnitedHealthcare also is the UHG subsidiary which contracts (through its subsidiaries) with the Government to provide insurance benefits to MA beneficiaries, submits the annual Risk Adjustment Attestations to the Government, submits claims for payment to the Government, and receives payment from the Government.

30. Defendants Optum, Inc. and OptumInsight, Inc. are health services companies. They are Delaware corporations. They are direct or indirect subsidiaries of Defendant UHG. In 2011, OptumInsight became the successor to Ingenix, Inc. (“Ingenix”). Thereafter, OptumInsight operated as part of Optum. For the purposes of this Amended Complaint, Optum, Inc. and OptumInsight, Inc. will be referred to as “Optum.”

1 Furthermore, to the extent that the United States is uncertain whether an act or statement
2 is attributable to Ingenix or its successor, Optum, the United States will refer to the entity
3 as “Ingenix/Optum.” Since 2007, the group within Ingenix and then Optum that
4 performed risk adjustment-related work had various names. For purposes of this
5 Amended Complaint, it is referred to as the “Risk Adjustment Group.”

6 31. Defendants United HealthCare Services, Ovations, UnitedHealthcare, and Optum
7 (and Optum’s predecessor, Ingenix) are or were “Related Entities” under the federal
8 regulations that govern the MA Program. As explained more fully below, each of them
9 has or had its own legal obligations to the MA Program relating to, among other things,
10 the submission of valid risk adjustment data and the deletion or withdrawal of invalid
11 data.

12 32. The Defendant MA Organizations were not autonomous and do not appear to have
13 had any management or any other employees who ran them or had any decision-making
14 authority (if they had any of their own management or employees at all). Instead, UHG
15 had various groups that managed and had oversight responsibilities and decision-making
16 authority for the Defendant MA Organizations. At various times relevant to this
17 Amended Complaint, these groups were located within Defendants United HealthCare
18 Services (and/or its predecessors), Ovations, and UnitedHealthcare. Depending on the
19 time period, the groups were known by the names Secure Horizons, Evercare, the Public
20 & Senior Markets Group (“PSMG”), the Public Sector Market Group (also “PSMG”),
21 Ovations, Ovations Part D, and AmeriChoice. Prior to approximately 2010, these groups
22 were located in Defendants United HealthCare Services (and/or its predecessors) and
23 Ovations. Since approximately 2010, these groups have been located within Defendant
24 UnitedHealthcare and are referred to as UnitedHealthcare Medicare & Retirement and
25 UnitedHealthcare Community & State. Among other things, these groups oversaw risk
26 adjustment-related activities such as the submission of risk adjustment data (including
27 diagnoses) to the Government on behalf of the Defendant MA Organizations, the
28 retraction of invalid data that they had submitted to the Government on behalf of the

1 Defendant MA Organizations, and the Chart Review, Claims Verification, and RACCR
2 Programs that they had conducted on behalf of the Defendant MA Organizations. As
3 explained more fully below, Defendants United HealthCare Services (and/or its
4 predecessors), Ovations, UnitedHealthcare, and any other UHG entities in which these
5 groups may have been located are “Related Entities” with their own legal obligations
6 relating to, among other things, the submission of valid risk adjustment data to the
7 Government and the deletion or withdrawal of invalid data.

8 33. Starting in 2007, the actual risk adjustment data submission work was performed
9 by the Risk Adjustment Group within Ingenix and then within Ingenix’s successor,
10 Optum. First Ingenix and then Optum operated a computer system called the Internal
11 Risk Adjustment Data System (“IRADS”) that electronically submitted risk adjustment
12 data (that is, diagnoses) to CMS’ Risk Adjustment Processing System (“RAPS”) in order
13 for the Defendant MA Organizations to claim and receive risk adjustment payments. In
14 addition, Ingenix and then Optum helped to manage the Chart Review, Claims
15 Verification, and RACCR Programs and performed the day-to-day activities necessary to
16 conduct these programs. Ingenix and then Optum performed activities relating to the
17 submission of risk adjustment data and operated the various risk adjustment-related
18 programs from offices in this District and elsewhere.

19 34. Similar to the other UHG Managing Defendants, Ingenix was and Optum is a
20 “Related Entity” because Ingenix was and Optum is related to the Defendant MA
21 Organizations by common ownership or control through Defendant UHG and performed
22 some or all of the management functions for the Defendant MA Organizations. As
23 previously explained, Optum is one of the “UHG Managing Defendants” because of the
24 role that it (and its predecessor, Ingenix) played in managing the Defendant MA
25 Organizations during the relevant time period. Any reference in this Amended
26 Complaint to the predecessors of the UHG Managing Defendants includes Ingenix.

27 35. Ingenix and then Optum also performed risk adjustment-related services for third-
28 parties which owned and operated their own MA Organizations and offered their own

1 Plans. The UHG Managing Defendants referred to these third-parties as Ingenix's and
2 then Optum's commercial clients. Ingenix and then Optum submitted risk adjustment
3 data to the Government on behalf of these commercial clients and conducted Chart
4 Review and other programs for them. Ingenix and then Optum performed this risk
5 adjustment-related work for commercial clients from offices in this District and
6 elsewhere.

7 36. UHG became the largest owner of MA Organizations in large part by acquiring
8 them. For example, in 2005, UHG (directly or through a subsidiary) acquired PacifiCare
9 Health Systems ("PacifiCare") and PacifiCare's and its affiliates' MA Organizations and
10 MA Plans, including the following MA Organization Defendants: PacifiCare of
11 Arizona, Inc., incorporated in Arizona; PacifiCare of California, incorporated in
12 California; PacifiCare of Colorado, Inc., incorporated in Colorado; PacifiCare of
13 Nevada, Inc., incorporated in Nevada; PacifiCare of Oklahoma, Inc., incorporated in
14 Oklahoma; PacifiCare of Oregon, Inc., incorporated in Oregon; PacifiCare of Texas, Inc.
15 incorporated in Texas; and PacifiCare of Washington, incorporated in Washington. Both
16 before and after the acquisition, PacifiCare of California and possibly other PacifiCare
17 MA Organizations and MA Plans referred to themselves or to their brand of MA Plans as
18 Secure Horizons. Since 2005, these PacifiCare MA Organizations have been indirect
19 subsidiaries of and controlled by UHG. Several years after the acquisition, these
20 PacifiCare plans were renamed or rebranded as UnitedHealthcare MA Organizations or
21 merged into other UHG MA Organizations. For instance, in 2011, PacifiCare of
22 California became Defendant UnitedHealthcare of California.

23 37. Defendant United HealthCare Services is the successor of PacifiCare Health
24 Systems and PacifiCare Health Plan Administrators, Inc., which were the direct or
25 indirect parents of the PacifiCare MA Organizations acquired by UHG in 2005. United
26 HealthCare Services became their successor sometime after the acquisition. For a short
27 period of time after the acquisition, PacifiCare Health Systems (and possibly also
28 PacifiCare Health Plan Administrators) was involved in the management of the

1 PacifiCare MA Organizations and perhaps other Defendant MA Organizations, including
2 the management of risk adjustment-related activities. All PacifiCare MA Organizations
3 and other entities and their successors were direct or indirect subsidiaries of Defendant
4 UHG. Any reference in this Amended Complaint to United HealthCare Services or the
5 UHG Managing Defendants includes PacifiCare Health Systems and PacifiCare Health
6 Plan Administrators.

7 38. Before UHG's acquisition of PacifiCare, the PacifiCare employees with
8 responsibilities relating to the submission of risk adjustment data to the Government and
9 responsibilities relating to other risk adjustment-related activities worked at a PacifiCare
10 office in Cypress, California, within this District. Sometime after the acquisition, this
11 office moved to Santa Ana, California, within this District, and continued to submit
12 claims and perform other risk adjustment-related activities. In 2007, the employees in
13 this Risk Adjustment Group in this District became employees of Ingenix and then they
14 became employees of Optum in 2011. A substantial part of the events or omissions
15 relevant to this litigation occurred at these and other locations within this District.

16 39. As an example of UHG's other acquisitions, UHG (directly or through a
17 subsidiary) acquired WellMed Medical Management, Inc. ("WMMI") in 2011. UHG's
18 acquisition of WMMI included its subsidiaries and affiliates, including, but not limited
19 to, WMMI's MA Organizations and MA Plans, Physician's Health Choice of Texas,
20 LLC and Citrus Health Care, Inc., which operated in Texas, Florida, New Mexico and
21 Arkansas. Citrus Health Care, Inc. was a Florida corporation and a subsidiary of PHC
22 Holdings of Florida, Inc. Sometime after the acquisition, UHG renamed or rebranded
23 these MA Organizations and MA Plans as UHG MA Organizations or MA Plans or
24 merged them with or into UHG's other MA Organizations or MA Plans in these states.

25 40. Over the last decade, UHG and its subsidiaries have also sought to vertically
26 integrate in the health care market by acquiring and/or operating large groups or
27 networks of direct providers of healthcare services and other entities that manage the
28 provision of such services to beneficiaries enrolled in the Defendant MA Organizations'

1 MA Plans. For example, UHG vertically integrated in several States when it acquired
2 WMMI in 2011. For many years, WMMI had subsidiaries and other affiliates that
3 directly managed the provision of or directly provided healthcare services. These
4 affiliates included WellMed Networks, Inc., WellMed Networks Inc. of Florida,
5 WellMed Medical Management of Florida Inc., and WellMed Medical Group, PA. After
6 the acquisition, WellMed became part of the group called OptumCare. After the
7 acquisition, WellMed also significantly expanded by acquiring more than 50 medical
8 practices in Texas and Florida. WellMed included more than 10,000 physicians that
9 provided healthcare to hundreds of thousands of Medicare beneficiaries in Texas and
10 Florida, including beneficiaries enrolled in Plans owned or operated by one or more
11 Defendant MA Organizations.

12 41. All references to “Defendants” in this Complaint include all of the Defendants
13 identified above.

14 **DEFENDANTS’ EXECUTIVES AND OTHER EMPLOYEES**

15 42. When the job titles of Defendants’ executives and other employees are provided in
16 this Amended Complaint, the United States, based on its best knowledge and belief, has
17 provided their titles at the time relating to the facts alleged. As a reference, the United
18 States also provides, based on its best knowledge and belief, the following list of the job
19 titles of Defendants’ executives and other employees who are referenced in this
20 Amended Complaint and the names of the specific business divisions or entities for
21 which they worked during the time period that they were involved in matters relevant to
22 this action (in alphabetical order by last name):

- 23 • Kyle Anderson – From 2009 to 2015, Anderson was the Director of Financial
24 Planning and Analysis at UnitedHealthcare.
- 25 • Jason Bainbridge – Bainbridge worked for UnitedHealthcare Community & State
26 in 2012.
- 27 • Paul Balthazor – From 2011 through 2015, Balthazor was the Chief Financial
28 Officer of UnitedHealthcare Community & State.

- 1 • Marc Beckmann – Beckmann worked for UnitedHealthcare Medicare &
2 Retirement in the Finance-Risk Adjustment Analysis Section.
- 3 • Paul Bihm – At PacifiCare, Bihm was a Vice President and Chief of Staff. After
4 the acquisition, he worked for Ingenix as Chief Financial Officer and Chief
5 Operating Officer from 2007 to 2010 and then for Optum’s Risk Adjustment
6 Group as a Senior Vice President of Client Management.
- 7 • Jon Bird – In 2008, Bird was hired to work for Ingenix’s Risk Adjustment Group.
8 In 2010, he became the Director of Revenue Projections for this group. In or
9 about 2011, when the Risk Adjustment Group was moved to Optum, Bird became
10 an employee of Optum. In or about 2013, Bird assumed significant responsibility
11 for the Chart Review and Claims Verification Programs. He was also a “decision
12 maker” for the Claims Verification and RACCR Programs and a member of
13 United’s Risk Adjustment Advisory Board/Council, which was chaired by
14 Defendant UHG’s Chief Executive Officer Steve Hemsley. By at least March
15 2014, Bird was the Senior Vice President of Risk and Quality Analytics at Optum.
- 16 • Gail Boudreaux – In 2008, Boudreaux became the Executive Vice President of
17 UnitedHealthcare. From 2011 to 2014, she was the Chief Executive Officer of
18 UnitedHealthcare. During Boudreaux’s time as Chief Executive Officer of
19 UnitedHealthcare, Steve Nelson, John Larsen, and Daniel Schumacher reported to
20 her. She reported to Steve Hemsley. According to a 2011 document, Boudreaux
21 was “significantly involved in the oversight and management of”
22 UnitedHealthcare’s “Medicare business.”
- 23 • Tracey Bradberry – From 2008 through 2012, Bradberry was an Operations
24 Manager at Ingenix. Since 2012, she has been an Associate Director of
25 Operations at Optum. In that role, she leads diagnosis coding teams for the Chart
26 Review Program.
- 27 • Patty Brennan – In 2008, Brennan was hired to work for Ingenix’s Risk
28 Adjustment Group. She was hired as Ingenix’s Compliance Manager for Risk

1 Adjustment Programs. In 2009, Brennan became the Ingenix Director of
2 Retrospective Services relating to risk adjustment. In or about 2011, when the
3 Risk Adjustment Group was moved to Optum, Brennan became an employee of
4 Optum. From 2009 to 2013, Brennan oversaw the Chart Review Program. In
5 2013, she became the Vice President of Retrospective Services. Brennan, along
6 with other individuals, was responsible for the development and execution of the
7 Internal Data Validation Program, the RACCR Program, and the Claims
8 Verification Program. She was also the Program Manager for the Claims
9 Verification Program for several years and had strategic oversight over the
10 RACCR Program from 2009 to 2013.

- 11 • Jonathon Bunker – In 2009, Bunker was the President of Sierra Health and Life
12 Insurance Company, Inc. and the President of Health Plan of Nevada, Inc. Upon
13 the close of the merger between UHG and Sierra Health Services, Bunker was the
14 Chief Executive Officer of the southwest region of UnitedHealthcare.
- 15 • Barbara Carlson – In 2011, Carlson was a Senior Regulatory Affairs Analyst at the
16 Regulatory Affairs Department at UnitedHealthcare Medicare & Retirement.
- 17 • Shelly Cranley – Cranley served as the Director of Regulatory Affairs for
18 UnitedHealthcare.
- 19 • Keith Dobbins – Since 2006, Dobbins has been UnitedHealthcare's Deputy
20 General Counsel.
- 21 • Juliet Domb – From 2012 to 2015, Domb was a Strategic Relationship Analyst at
22 Optum. She has also served as an administrative assistant to Larry Renfro.
- 23 • Jeffrey Dumcum – At PacifiCare, Dumcum was the Chief Financial Officer. After
24 the acquisition, he became a Vice President of Finance for Ovations. In 2007,
25 Dumcum became a Senior Vice President at Ingenix and oversaw the Risk
26 Adjustment Group at Ingenix and then Optum until approximately 2014.
- 27 • Karen Erickson – Since 2011, Erickson has been an Executive Vice President and
28 the Chief Quality Officer at Optum. In this role, Erickson has reported to the

1 Chief Executive Officer of Optum, Larry Renfro. Also in 2011, Erickson was the
2 Chief Administrative Officer of Optum, and prior to that she worked for Optum
3 for 12 years in various financial and administrative roles.

- 4 • Ronnie Grower – From 2008 to 2010 Grower was a Vice President of Market
5 Consultation and a Vice President of Account Management at Ingenix.
- 6 • Joseph Haferman – Haferman was the Chief Financial Officer of Ovations in 2005
7 and the Chief Financial Officer of Secure Horizons in 2007 and possibly for some
8 time thereafter. Relator Poehling reported to Haferman from early 2007 to late
9 2008.
- 10 • Kimberly Halva – In 2009, Halva was an attorney for UnitedHealthcare Medicare
11 & Retirement. From 2010 to 2013, Halva was the UnitedHealthcare Medicare &
12 Retirement’s Finance Compliance Officer. She also had the title Director of
13 Compliance. From 2010 to 2103, she reported to Jennifer O’Brien.
- 14 • Mary Hammond – From 2010 to 2013, Hammond was an Associate Director of
15 Strategy and Support who worked for the risk adjustment team at
16 UnitedHealthcare Medicare & Retirement. She reported to Relator Poehling until
17 he left at the end of 2012.
- 18 • Charles Hanson – From 2008 to 2013, Hanson was a Vice President of
19 Underwriting and Finance at UnitedHealthcare Medicare & Retirement.
- 20 • Steve Hemsley – Hemsley is currently the Executive Chairman of UHG’s Board
21 of Directors. He was the Chief Executive Officer of UHG from 2006 to 2017.
22 According to a 2011 document, Hemsley was “significantly involved in the
23 oversight and management of” UHG’s “Medicare business.”
- 24 • James Higgins – Higgins was the Finance Director at PacifiCare. After the
25 acquisition, Higgins became a Director for Revenue Analytics.
- 26 • William Hnath – Hnath was the financial controller for UnitedHealthcare
27 Medicare & Retirement.

- 1 • Pam Holt – Holt was a Project Manager for Network Management Operations at
2 PacifiCare. After the acquisition, she became a Manager of Provider Outreach for
3 the Risk Adjustment Program.
- 4 • Scott Hughes – Starting in mid-2012, Hughes was a Senior Project Manager at
5 Optum.
- 6 • Michael Jacobson – Jacobson was a Program Business Analyst/Project Manager at
7 Optum.
- 8 • Donald James – James was a Director of Program Strategy at Optum from 2012 to
9 2015.
- 10 • Thad Johnson – Johnson is an attorney for UnitedHealthcare and is the current
11 Chief Legal Officer for the company.
- 12 • Joseph Keen – Keen was a Vice President and Chief Compliance Audit Officer for
13 UnitedHealthcare Medicare & Retirement in 2011.
- 14 • Gerald (Jerry) Knutson – Knutson was the Chief Financial Officer of Ovations
15 from 2003 to 2009 and the Chief Financial Officer of OptumInsight from 2009 to
16 2012.
- 17 • John Larsen – Larsen was the Chief Financial Officer of UnitedHealthcare
18 Medicare & Retirement (previously called Ovations-PSMG) until 2010, when
19 Scott Theisen succeeded him in that position. Larsen reported to Larry Renfro
20 when Renfro was the Chief Executive Officer of Ovations-PSMG. Relator
21 Poehling reported to Larsen in 2010. In August 2012, Larsen became the Chief
22 Executive Officer of UnitedHealthcare Medicare & Retirement. In early 2014,
23 Steve Nelson took over that position.
- 24 • Pam Leal – Leal was the Executive Director of Provider Training and
25 Development at PacifiCare. After the acquisition, she became a Regional Vice
26 President for Market Consultation at Ingenix.
- 27 • Rebecca Martin – In 2010, Martin became the Director of Encounter Operations at
28 Ingenix. From 2011 to 2015, Martin was the Director of Data Remediation at

1 Optum. In 2015, she became the Director of Data Management Strategies at
2 Optum.

- 3 • Jay Matushak – From 2013 to 2015, Matushak was a Vice President of Financial
4 Planning and Analysis for UnitedHealthcare Medicare & Retirement. He reported
5 to Brian Thompson.
- 6 • Michael McCarthy – Starting in November 2011, McCarthy was the Executive
7 Director of UnitedHealthcare Medicare & Retirement. In 2013, he also served as
8 a Regional Vice President for Southern California for UnitedHealthcare Medicare
9 Solutions.
- 10 • Marybeth Meyer – Since 2013, Meyer has been a Vice President of Operations at
11 UnitedHealthcare Medicare & Retirement where she oversees risk adjustment
12 programs and activities. Meyer reported to Theisen and then to Brian Thompson.
- 13 • Bill Miller – Miller was the Chief Executive Officer of OptumInsight from 2012
14 to 2017.
- 15 • Eric Murphy – Murphy was the President of Payer Solutions at Optum.
- 16 • Randall Myers – Myers worked for PacifiCare and, after the acquisition, for
17 Ingenix and then Optum as a Director of Encounter Operations.
- 18 • Timothy Noel – Noel was the Vice President of Finance for Ovations and then
19 UnitedHealthcare Medicare & Retirement from 2007 to 2013 and reported to the
20 Chief Financial Officers of those groups. Poehling reported to Noel from the fall
21 of 2010 until his departure in December 2012.
- 22 • Steve Nelson – Since 2017, Nelson has been the Chief Executive Officer of
23 UnitedHealthcare. From 2014 to 2017, he was the Chief Executive Officer of
24 UnitedHealthcare Medicare & Retirement.
- 25 • Jennifer O’Brien – O’Brien was the Chief Medicare Compliance Officer of
26 Ovations and then UnitedHealthcare Medicare & Retirement. She reported to
27 David Orbuch. She was part of the UnitedHealthcare Medicare & Retirement
28 “Executive Leadership Team.”

- 1 • Karin O'Hara – O'Hara worked at UnitedHealthcare Community & State.
- 2 • David Orbuch – Orbuch was the Chief Compliance Office for PSMG and
- 3 UnitedHealthcare Medicare & Retirement.
- 4 • Thomas Paul – In the 2009 to mid-2010 time period, Paul was the Chief Executive
- 5 Officer and Chief Operating Office of Ovations and, in the mid-2010 to August
- 6 2012 time period, Paul was the Chief Executive Officer of UnitedHealthcare
- 7 Medicare & Retirement. He reported to Renfro and then to Gail Boudreaux. He
- 8 was part of the UnitedHealthcare Medicare & Retirement "Executive Leadership
- 9 Team."
- 10 • Karen Petroff – Petroff was the Senior Vice President of Business Development at
- 11 Optum.
- 12 • Cindy Polich – Polich was the President of Ovations and then UnitedHealthcare
- 13 Medicare & Retirement. She reported to Larry Renfro and Thomas Paul. She was
- 14 part of the UnitedHealthcare Medicare & Retirement "Executive Leadership
- 15 Team."
- 16 • Patricia Rasmussen – Rasmussen was Manager of Encounter Submissions at
- 17 Ingenix.
- 18 • Janice Redmond – Prior to 2012, Redmond was Senior Vice President of Provider
- 19 Outreach at Optum. Since 2012, Redmond has been a Vice President of Market
- 20 Consultation for Optum's Western Region.
- 21 • Anne Reis – In 2013, Reis was an Associate Director of Revenue for
- 22 UnitedHealthcare Medicare & Retirement.
- 23 • Larry Renfro – During the 2009 to 2011 time period, Renfro served in various
- 24 roles, including the Executive Vice President of Defendant UHG, the Chief
- 25 Executive Officer of Defendant Ovations, and the Chief Executive Officer of the
- 26 Public & Senior Markets Group. Since July 2011, Renfro has been the current
- 27 Chief Executive Officer of Defendant Optum. Since November 2014, he has also
- 28 been Vice Chairman of Defendant UHG.

- 1 • Sandy Rick – Rick was a Senior Regulatory Affairs Analyst at UnitedHealthcare
2 Medicare & Retirement.
- 3 • Kara Rios – Rios was the Chief Financial Officer of AmeriChoice, one of the
4 groups that managed some of the Defendant MA Organizations.
- 5 • Justin Roth – Roth was the Chief Financial Officer of Evercare, one of the groups
6 that managed some of the Defendant MA Organizations.
- 7 • Daniel Schumacher – Since 2017, Schumacher has been the President and Chief
8 Operating Officer of UnitedHealthcare. Prior to that, he was the Chief Financial
9 Officer of UnitedHealthcare.
- 10 • Melissa Sedor – Sedor worked in UnitedHealthcare’s controller’s office, in the
11 area of revenue accounting. Sedor was an accounting manager and reported to
12 Bill Hnath, the controller for UnitedHealthcare Medicare & Retirement.
- 13 • Matt Shors – Shors is UHG’s Senior Deputy General Counsel.
- 14 • Marianne Short – Short is UHG’s Executive Vice President and Chief Legal
15 Officer.
- 16 • Andy Slavitt – Slavitt was the Chief Executive Officer for OptumInsight and an
17 Executive Vice President for Optum.
- 18 • Scott Theisen – From 2010 to 2013, Theisen was the Chief Financial Officer of
19 UnitedHealthcare Medicare & Retirement. In 2011, he was part of the
20 UnitedHealthcare Medicare & Retirement “Executive Leadership Team” reporting
21 to Tom Paul. In 2014, Theisen moved to Optum, but, during that year, his
22 responsibilities continued to include the risk adjustment-related work that Optum
23 performed for UnitedHealthcare Medicare & Retirement.
- 24 • Brian Thompson – Since 2017, Brian Thompson has been the Chief Executive
25 Officer of UnitedHealthcare Medicare & Retirement. From 2013 to 2017, he was
26 the Chief Financial Officer of UnitedHealthcare Medicare & Retirement. He was
27 also previously the Chief Financial Officer of UnitedHealthcare Community &
28 State.

- 1 • Carol Thompson – Until 2009, Carol Thompson was a National Manager for Risk
2 Adjustment Programs at Ingenix. From 2009 to 2011, she was a Manager of the
3 ChartSync operations (part of the Chart Review Program) at Ingenix. From 2011
4 to 2014, she was a Manager and Analyst of Encounter Operations at Optum.
- 5 • Pam Thomsen – Thomsen worked for Optum in Data Validation Operations and
6 Clinical Performance & Compliance.
- 7 • Lee Valenta – At various times, Valenta was the Chief Financial Officer, the Chief
8 Operating Officer, the President of Life Sciences, and an Executive Vice President
9 at Ingenix and then OptumInsight.
- 10 • Emily Vue – From 2009 to 2014, Vue was a Senior Regulatory Analyst and later a
11 Manager of Regulatory Affairs at Ovations-PSMG and then UnitedHealthcare.
- 12 • Karen Wagor – Wagor was the Manager of the National Medical Coder Team and
13 the National Coding Trainer at Ingenix and then Optum. She previously worked
14 at PacifiCare.
- 15 • David Walsh – In 2011, Walsh was the Director for Regulatory Affairs for and, in
16 2012, became the Senior Director of Regulatory Affairs for UnitedHealthcare
17 Medicare & Retirement.
- 18 • John Way – Way was Chief Financial Officer of Secure Horizons. Relator
19 Poehling reported to Way from late 2008 to early 2010.
- 20 • Christopher Webb – Webb worked with Payer Operations at Optum in 2014.
- 21 • Timothy Wicks – Wicks served in a senior management position at Optum.
- 22 • Stephanie Will – Will had been a Principal Analyst at PacifiCare. After the
23 acquisition, she joined Ovations as the Program Manager for the national Chart
24 Review Program. In 2007, she became the Vice President of Risk Adjustment
25 Programs at Ingenix.

THE MEDICARE PROGRAM

I. The Medicare Statute

43. Medicare is a federally-operated health insurance program administered by CMS. Medicare benefits individuals age 65 and older and the disabled. 42 U.S.C. § 1395c *et seq.* Parts A and B of the Medicare Program are known as “traditional” Medicare.

Medicare Part A covers inpatient and institutional care. Medicare Part B covers physician, hospital outpatient, and ancillary services and durable medical equipment.

44. Under Medicare Parts A and B, CMS reimburses healthcare providers (*e.g.*, hospitals and physicians) using what is known as a “fee-for-service” (“FFS”) payment system. Under an FFS payment system, healthcare providers submit claims to CMS for reimbursement for each service actually rendered, such as a physician office visit or a hospital stay. CMS then pays the providers directly for each service based on payment rates pre-determined by the Government.

45. Under Medicare Part C, Medicare beneficiaries can opt out of the traditional Medicare Program (Parts A and B) and instead enroll in MA Plans and receive health care services managed by those MA Plans. MA Plans must provide Medicare beneficiaries all the services that they are entitled to receive from the traditional Medicare Program.

46. Under Medicare Part D, Medicare beneficiaries can elect to enroll in either a Prescription Drug plan (known as a PD Plan) or an MA Plan that provides prescription drug coverage in addition to the physician office visit and hospital outpatient and inpatient coverage provided under Part C (known as an MAPD Plan). For simplicity, in this Amended Complaint, the Government refers to Parts C and D collectively as the MA Program and refers collectively to MA, PD, and MAPD Plans as Plans.

47. MA Organizations are “risk-bearing” entities that must be licensed by the State in which they are located. 42 C.F.R. §§ 422.2 & 422.503(b)(2). Each MA Organization agrees to bear the risk that the amount that it pays providers for the health services for a

1 particular beneficiary in one of its Plans may exceed the amount that it was paid to
2 insure the beneficiary.

3 48. Medicare beneficiaries who enroll in an MA, PD or MAPD Plan are considered
4 members of and enrollees in that Plan. In this Amended Complaint, the terms
5 beneficiaries, members, enrollees, and patients are used interchangeably, but mean the
6 same thing, that is, individuals enrolled in Plans.

7 49. MA Organizations' obligations to the MA Program and the requirements for them
8 to participate in the Program are set forth in federal regulations and, each year, the MA
9 Organizations must agree in writing to comply with those regulations and to other terms
10 and conditions in order to participate in the MA Program. 42 C.F.R. §§ 422.504 &
11 422.505 (Part C); 42 C.F.R. §§ 423.504 & 423.505 (Part D). In addition, MA
12 Organizations must comply with requirements set forth in statutes, such as the FCA, and
13 guidance documents, such as the Medicare Managed Care Manual, the Medicare
14 Prescription Drug Benefit Manual, the Risk Adjustment Participant Guides, and
15 Medicare Advantage operating instructions.

16 50. Related Entities include those entities that are related to an MA Organization by
17 common ownership or control and perform at least some of the MA Organization's
18 management functions. 42 C.F.R. §§ 422.2 & 422.500. As previously explained, the
19 UHG Managing Defendants are or were Related Entities.

20 51. First Tier Entities include those providers or provider groups that enter into a
21 written arrangement with an MA Organization to provide healthcare services to the
22 beneficiaries in the organization's Plan(s). 42 C.F.R. §§ 422.2 & 422.500. The capitated
23 providers in the RACCR Program were First Tier Entities.

24 52. The obligations of Related Entities and First Tier Entities to the MA Program are
25 also set forth in the MA Program regulations. Related Entities and First Tier Entities
26 must, among other things, (i) perform their services in a manner that complies with the
27 MA Organization's contractual obligations to the Government, *id.* at 422.504(i)(3)(iii);
28 agree to "comply with all applicable Medicare laws, regulations, and CMS instructions,"

1 *id.* at 422.504(i)(4)(v); and receive effective compliance training and education relating
2 to preventing fraud, waste, and abuse. *Id.* at § 422.503(b)(4)(vi)(C)(1). Furthermore, if
3 a Related Entity or First Tier Entity generates data relating to an MA Organization’s
4 claims for payments from the MA Program, it (as well as the MA Organization) must
5 certify the accuracy and truthfulness of the data. *Id.* at § 422.504(l)(3).

6 53. An MA Organization, however, cannot evade its legal and contractual obligations
7 to the Government by using Related Entities to manage it or by contracting with First
8 Tier Entities to provide services to its beneficiaries. An MA Organization “maintains
9 ultimate responsibility for adhering to and otherwise fully complying with all terms and
10 conditions of its contract with CMS.” 42 C.F.R. § 422.504(i)(1). Thus, an MA
11 Organization cannot delegate away its ultimate responsibility for its obligations to the
12 Government.

13 **II. Medicare Parts C and D Risk Adjustment Payments**

14 54. Under Part C, the Government pays each MA Organization a predetermined base
15 monthly amount for each Medicare beneficiary in its MA Plans. This monthly payment
16 is known as a “per-member, per-month” payment. This predetermined base payment
17 varies for each MA Plan depending on various factors, including amounts set forth in the
18 MA Plan’s bid submitted to the Government, the scope of medical services covered by
19 the Plan’s benefit package (all packages must cover at least those services offered by
20 Parts A and B of the Medicare Program), and the amount of premiums, deductibles, and
21 co-pays for which an enrollee in the Plan is responsible (Plans have different premiums,
22 deductibles and co-pays such that Plans with higher deductibles and co-pays may have
23 lower premiums).

24 55. Since 2000, Congress has also required that the payments be risk adjusted for each
25 beneficiary based on “such risk factors as age, disability status, gender, institutional
26 status, and *such other factors as [the Secretary of the United States Department of*
27 *Health and Human Services] determines to be appropriate, including adjustment for*
28 *health status . . . to ensure actuarial equivalence.”* 42 U.S.C. § 1395w-23(a)(1)(C)

1 (emphasis added). By risk adjusting for health status, the Government pays MA
2 Organizations more for beneficiaries with certain serious chronic medical conditions
3 and, thus, higher risk scores than for beneficiaries who do not have those conditions and,
4 thus, have lower risk scores.

5 56. Pursuant to 42 U.S.C. § 1395w-23(a)(1)(C), the Secretary has the authority to
6 determine how to adjust for health status. For example, the Secretary has the authority to
7 decide to risk adjust only for serious chronic medical conditions and to risk adjust by
8 requiring the submission of diagnoses from medical encounters that occurred the year
9 preceding each payment year and projecting the possibility of additional costs for each
10 payment year. The Secretary also has authority to decide what historical cost and/or
11 utilization data it should consider in projecting how much more it may cost an MA
12 Organization to provide services to a beneficiary who has been assigned a diagnosis
13 relating to a serious chronic medical condition.

14 57. From 2000 to 2004, the Secretary employed a Principal Inpatient Diagnostic Cost
15 Group (“PIP-DCG”) model that took into account diagnoses from inpatient hospital
16 stays to determine the risk scores of beneficiaries in MA Plans. The PIP-DCG model
17 was prospective. Diagnoses for one year were used to determine each beneficiary’s risk
18 score for the following payment year. During the 2000 to 2004 time period, MA
19 Organizations (which were then called Medicare + Choice Organizations) had many of
20 the same obligations that they have had since 2004. For instance, they had the obligation
21 to design and implement effective systems to monitor and review the accuracy and
22 truthfulness of the diagnoses they submitted for risk adjustment payments in order to
23 certify the accuracy and truthfulness of that data. *See* Medicare Managed Care Manual,
24 Chapter 7, Section 110.2 (entitled “Certification of Data Accuracy, Completeness, and
25 Truthfulness”) (Rev. 2, 10-01-01).

26 58. Since 2004, the Secretary has employed the Hierarchical Conditions Category
27 (“HCC”) model, which takes into account both demographic factors (such as age and
28 gender) and health status to determine the risk scores for beneficiaries in MA Plans.

1 With respect to health status, the model takes into account diagnoses from physician
2 office visits and hospital outpatient encounters as well as hospital inpatient stays. Like
3 the PIP-DCG model, the HCC model is prospective, meaning that it relies on diagnoses
4 assigned to a beneficiary in one year (referred to by CMS as the “data collection” year
5 but also generally known as the “date of service” or “DOS” year) to determine the risk
6 score for the beneficiary for the following year (often referred to as the “payment year”
7 or “PY”). The medical conditions included in the model are grouped into HCCs, which
8 are categories of clinically-related medical diagnoses. *See* 42 C.F.R. § 422.2. The
9 diagnoses grouped into HCCs include major, severe, and/or chronic illnesses. Related
10 groups of diagnoses are ranked on the basis of disease severity and the cost associated
11 with their treatment. Between 2004 and 2013, the CMS-HCC model included 70 HCCs.
12 Starting in 2014, the CMS-HCC model included 79 HCCs.

13 59. Under Medicare Part D, payments to PD or MAPD Plans for prescription drug
14 benefits are also risk-adjusted based on health status. As with Part C, Part D employs a
15 health-based risk adjustment model known as the Rx Hierarchical Condition Categories
16 (“RxHCC”) model. Like HCCs, RxHCCs are also groups of clinically-related medical
17 diagnoses that are ranked by disease severity and the cost associated with the
18 pharmaceutical drugs used to treat them.

19 60. The Government assigns a relative numerical value (also known as a relative
20 factor, multiplier, or coefficient) to each HCC and RxHCC group that correlates to the
21 predicted incremental costs of care associated with treating the medical conditions in
22 each category. It currently determines the relative values based on an analysis of the
23 additional amounts that it paid on average for the treatment of these major, severe, and
24 chronic medical conditions under Parts A and B of the Medicare Program. Higher
25 relative values are assigned to HCCs and RxHCCs that include diagnoses with greater
26 disease severity and greater costs associated with their treatment.

27 61. As previously stated, the HCC and RxHCC risk adjustment models are
28 prospective and a beneficiary’s risk score for a particular payment year is determined by

his or her medical conditions during the previous year (*i.e.*, the date of service year). For risk adjustment payment purposes, these medical conditions must be documented by a qualified healthcare provider (*e.g.*, a doctor) in the beneficiary's medical record during the previous year. Accordingly, for risk adjustment payment purposes, the diagnosis codes that the healthcare provider, his or her administrative or billing support staff, or anyone else (such as the MA Organization or a Related Entity) assigns to a beneficiary must be supported by the beneficiary's medical record.

62. Each beneficiary's risk score is calculated anew for each payment year. For example, a beneficiary's risk score for payment year 2012 is determined by the diagnoses that his or her qualified healthcare providers documented in his or her medical records during medical encounters during date of service year 2011.

63. MA Organizations obtain diagnosis data from the healthcare providers that treat the beneficiaries in their plans (as well as through other means and sources such as the MA Organizations' own medical record reviews). Healthcare providers can transmit diagnosis codes to MA Organizations with claims for payment for services rendered, in encounter records reporting the services rendered, or by alternative means. In this Amended Complaint, the United States refers to diagnosis codes reported by providers through any means as "provider-reported diagnoses."

64. MA Organizations submit risk adjustment data, including diagnoses, to CMS using CMS' Risk Adjustment Processing System ("RAPS"). Each RAPS submission must include the following information: the Medicare beneficiary's identification number (called a "HIC number" or "HICN"); the date(s) of the medical encounter (the physician office visit, hospital outpatient visit, or hospital inpatient stay); the type of provider (physician or hospital); and the diagnosis code(s) reported by the provider for the encounter. Each RAPS submission is a claim for payment. If the data submitted is invalid, the claim is false.

65. RAPS also has a field that is called a "Delete Indicator" and allows MA Organizations and Related Entities to comply with their obligation to delete invalid

1 diagnoses that they previously submitted in order to withdraw or retract the invalid
2 diagnoses. That is, the RAPS system enables MA Organizations and Related Entities to
3 withdraw or retract their false claims for risk adjustment payments.

4 **DEFENDANTS' AGREEMENTS**

5 **I. The Annual Parts C and D Agreements**

6 66. As previously explained, in order to participate in the MA Program, the Defendant
7 MA Organizations were required to agree in writing to comply with the Part C and D
8 regulations and any other terms and conditions CMS deemed appropriate. 42 C.F.R.
9 §§ 422.504 & 422.505 (Part C); 42 C.F.R. §§ 423.504 & 423.505 (Part D). Each year
10 during the relevant time period, one or more executives of one or more of the UHG
11 Managing Defendants or their predecessors executed these written agreements or
12 renewals of these written agreements between the Defendant MA Organizations and
13 CMS.

14 67. The regulations specifying the terms and conditions of the contractual relationship
15 between MA Organizations and CMS have remained the same for many years.
16 Accordingly, from year to year, the terms and conditions of these written agreements
17 between the Defendant MA Organizations and CMS remained very similar, if not
18 identical.

19 68. The terms and conditions of the Part C agreements are exemplified by the attached
20 contract that Defendant UnitedHealthcare Plan of River Valley, Inc. entered into with
21 CMS relating to its participation in Medicare Part C in 2010. *See* Exhibit 1, attached
22 hereto. The terms and conditions of these Part C contracts include, among many other
23 things, that each of the MA Organizations agrees to (i) operate its Plans “in compliance
24 with the requirements of [the] contract and applicable Federal statutes, regulations, and
25 policies (e.g., policies as described in the Call Letter, Medicare Managed Care Manual,
26 etc.)” (Article II, Section A); (ii) “implement a compliance plan in accordance with the
27 requirements of § 422.503(b)(4)(vi)” (Article III, Section F); (iii) “[a]s a condition of
28 receiving a monthly payment under” the contract, “request payment under the contract

1 on the forms attached” to the contract, including “Attachment B (risk adjustment data)
2 which attest[s] to *(based on best knowledge, information and belief, as of the date*
3 *specified on the attestation form)* the accuracy, completeness, and truthfulness of the
4 data identified on” Attachment B (Article IV, Section C) (emphasis in the original); (iv)
5 ensure that related entities, contractors, and subcontractors that generated risk adjustment
6 data also attest to the accuracy and truthfulness of the data (Article IV, Section C.2); (v)
7 ensure that all agreements with related entities, contractors, and subcontractors specify
8 that the related entities, contractors, and subcontractors “must comply with all applicable
9 Medicare laws, regulations, and CMS instructions” (Article V, Section D(5)); and (vi)
10 comply with “Federal laws and regulations designed to prevent or ameliorate fraud,
11 waste, and abuse, including, but not limited to, applicable provisions of the Federal
12 criminal law [and] the False Claims Act (31 USC 3729 et seq.)” (Article IX, Section
13 A.1). In accordance with 42 C.F.R. § 422.510, the agreements also provided that CMS
14 may terminate the MA Organization’s participation in the MA Program if it determines
15 that the organization has submitted false data to it or “fail[ed] to provide CMS with valid
16 risk adjustment data.” Article VIII, Section B.1(a)(iv) & (vii).

17 69. The agreements for other years were very similar, if not identical. For example, in
18 September 2010, Tom Paul, the Chief Executive Office of UnitedHealthcare Medicare &
19 Retirement, executed a new agreement between Defendant UnitedHealthcare of
20 California (the successor to PacifiCare of California) and CMS relating to this MA
21 Organization’s participation in Medicare Part C in 2011. *See* Exhibit 2, attached hereto.
22 By executing this contract, UnitedHealthcare of California agreed to, among many other
23 things, (i) operate its Plans “in compliance with the requirements of [the] contract and
24 applicable Federal statutes, regulations, and policies (e.g., policies as described in the
25 Call Letter, Medicare Managed Care Manual, etc.)” (Article II, Section A); (ii)
26 “implement a compliance plan in accordance with the requirements of §
27 422.503(b)(4)(vi)” (Article III, Section F); (iii) “[a]s a condition of receiving a monthly
28 payment under” the contract, “request payment under the contract on the forms attached”

1 to the contract, including “Attachment B (risk adjustment data) which attest[s] to *(based*
2 *on best knowledge, information and belief, as of the date specified on the attestation*
3 *form)* the accuracy, completeness, and truthfulness of the data identified on” Attachment
4 B (Article IV, Section D); (iv) ensure that related entities, contractors, and
5 subcontractors that generated risk adjustment data also attest to the accuracy and
6 truthfulness of the data (Article IV, Section D.2); (v) ensure that all agreements with
7 related entities, contractors, and subcontractors specify that the related entities,
8 contractors, and subcontractors “must comply with all applicable Medicare laws,
9 regulations, and CMS instructions” (Article V, Section D.5); and (vi) comply with
10 “Federal laws and regulations designed to prevent or ameliorate fraud, waste, and abuse,
11 including, but not limited to, applicable provisions of the Federal criminal law [and] the
12 False Claims Act (31 USC 3729 et seq.)” (Article IX, Section A.1). The agreement also
13 provided that CMS had the right to terminate the agreement with the MA Organization if
14 it determined that the organization had submitted false data to it or “fail[ed] to provide
15 CMS with valid risk adjustment data.” Article VIII, Section B.1(a)(iv) & (vii). In
16 September 2010, Paul also executed an agreement with CMS relating to
17 UnitedHealthcare of California’s offering of prescription drug benefits under Medicare
18 Part D. This Part D agreement was, in all respects relevant to this Amended Complaint,
19 very similar to the one described above for the offering of healthcare insurance benefit
20 packages under Part C. Furthermore, in September 2010, Tom Paul executed the same
21 Part C and D agreements on behalf of other of the Defendant MA Organizations. All
22 these agreements were very similar, if not identical, to the ones he executed for
23 UnitedHealthcare of California.

24 70. In September 2011, August 2012, and August 2013, Scott Theisen, the Chief
25 Financial Officer of UnitedHealthcare Medicare & Retirement, executed agreements for
26 many of the Defendant MA Organizations relating to their participation in Medicare
27 Parts C and D for 2012, 2013, and 2014, respectively. *See, e.g.*, Exhibits 3, 4, & 5,
28 attached hereto (Defendant UnitedHealthcare of California’s Parts C agreements for

1 these years). In August 2014 and 2015, Brian Thompson, the Chief Financial Officer of
2 UnitedHealthcare Medicare & Retirement, executed agreements for many of the
3 Defendant MA Organizations relating to their participation in Medicare Parts C and D
4 for 2015 and 2016. See, e.g., Exhibits 6 & 7, attached hereto (Defendant
5 UnitedHealthcare of California's Part C agreements for these years). These agreements
6 were, in all respects relevant to this Amended Complaint, very similar, if not identical, to
7 the agreements described in the preceding paragraphs relating to the agreements for 2010
8 and 2011 and imposed the same contractual obligations on the Defendant MA
9 Organizations as the earlier agreements.

10 71. The annual Attestations executed in order to renew existing contracts were also
11 very similar as shown by the following: In the fall of 2006, Jerry Knutson, the Chief
12 Financial Officer of Ovations and Jeff Putnam, the Chief Financial Officer of Secure
13 Horizons, executed Attestations renewing (for calendar year 2007) the existing contract
14 between PacifiCare of California (the predecessor of Defendant UnitedHealthcare of
15 California) and CMS. Knutson and Putnam attested that PacifiCare of California would
16 "comply with all applicable program guidance that CMS has issued to date and will issue
17 during the remainder of 2006 and 2007 pursuant to Medicare program authorizing
18 statutes and regulations, including but not limited to, . . . the CMS memoranda issued
19 through the Health Plan Management System (HPMS)." (HPMS is one of the web-
20 based systems used by CMS to provide program information to MA Organizations and is
21 used to communicate program requirements.) In September 2007, Joseph Haferman, the
22 Chief Financial Officer of Secure Horizons, executed another Attestation renewing the
23 existing contract for PacifiCare of California (this time for calendar year 2008).
24 Haferman thereby attested that PacifiCare of California would comply "with all
25 applicable program authorizing statutes and regulations and program guidance that CMS
26 has issued to date and will issue during the remainder of 2007 and 2008, including but
27 not limited to, . . . the Medicare Managed Care Manual, and CMS memoranda issued
28 through the Health Plan Management System (HPMS)." In September 2008, Kenneth

1 Burdick, the Chief Executive Officer of Secure Horizons at the time, executed another
2 Attestation renewing the existing contract for PacifiCare of California (this time for
3 calendar year 2009). Burdick thereby attested that PacifiCare of California would
4 comply “with all applicable Medicare program authorizing statutes and regulations and
5 program guidance that CMS has issued to date and will issue during the remainder of
6 2008 and 2009, including but not limited to, . . . the Medicare Managed Care Manual,
7 and the CMS memoranda issued through the Health Plan Management System
8 (HPMS).” In September 2009, both Tom Paul, the Chief Executive Officer of Ovations,
9 and John Way, the Chief Financial Officer of Secure Horizons, executed an Attestation
10 renewing the existing contract for PacifiCare of California (this time for calendar year
11 2010). They thereby attested that PacifiCare of California would comply “with all
12 applicable Medicare program authorizing statutes and regulations and program guidance
13 that CMS has issued to date or will issue during the remainder of 2009 and 2010,
14 including but not limited to, . . . the Medicare Managed Care Manual, and the CMS
15 memoranda issued through the Health Plan Management System (HPMS).”

16 72. The United States hereby incorporates by reference as if they were recited herein
17 and attached hereto all of the agreements that all of the Defendant MA Organizations
18 entered into with CMS relating to their participation in Medicare Parts C and D for 2007
19 to present date. All of these agreements were, in all respects relevant to this Amended
20 Complaint, very similar, if not identical, to the agreements described in the preceding
21 paragraphs.

22 **II. The Electronic Data Interchange Agreements**

23 73. In addition, since at least 2003, MA Organizations and entities that submit risk
24 adjustment data on their behalf have been required to execute Electronic Data
25 Interchange (“EDI”) agreements prior to submitting risk adjustment data. These EDI
26 agreements are considered contracts by which the MA Organizations attest to the
27 accuracy of the data submitted. Even if another entity submits the data, the MA
28 Organizations are still responsible for the content of the submissions. See 2003 Regional

1 Risk Adjustment Training for Medicare+Choice Organizations Participant Guide, §
2 6.1; 2004 Regional Risk Adjustment Training for Medicare+Choice Organizations
3 Participant Guide, § 4.1; 2005 Risk Adjustment Data Basic Training for Medicare
4 Advantage Organizations Participant Guide § 4.1; 2006 Risk Adjustment Data Basic
5 Training for Medicare Advantage Organizations Participant Guide § 4.1; 2007 Risk
6 Adjustment Data Training for Medicare Advantage Organizations Participant Guide §
7 4.1; 2008 Risk Adjustment Technical Assistance for Medicare Advantage Organizations
8 Participant Guide § 4.1; Risk Adjustment 101 Participant Guide § 2.1 (2013). See also
9 Medicare Managed Care Manual, Chapter 7, § 111.6.1 (Rev. 57, 08-13-04); *id.* § 120.2.1
10 (Rev. 114, 06-07-13). By executing these EDI forms, the MA Organizations agree that
11 (i) they will be responsible for all risk adjustment data submitted to CMS by themselves,
12 their employees, and their agents; (ii) they will submit risk adjustment data that is
13 accurate, complete, and truthful based on best knowledge, information, and belief; (iii)
14 *they will research and correct risk adjustment data discrepancies*; and (iv) CMS has the
15 right to audit and confirm the risk adjustment data, including diagnoses, submitted by the
16 MA Organization and the right of access to the beneficiaries' medical records to conduct
17 such audits.

18 74. Each of the Defendant MA Organizations and Defendants Optum (and its
19 predecessor, Ingenix) and Ovations executed these EDI agreements and submitted them
20 to the MA Program in order to submit risk adjustment data to and receive risk adjustment
21 payments from the MA Program. Pursuant to the express terms of these EDI
22 agreements, these Defendants promised to submit valid risk adjustment data to the MA
23 Program and *to research and correct any data discrepancies*.

24 75. For instance, in 2005, Joseph Haferman, the Chief Financial Officer of Defendant
25 Ovations, executed and submitted to CMS an EDI agreement in order to obtain a
26 "submitter ID" permitting Ovations to submit risk adjustment data on behalf of various
27 of the Defendant MA Organizations. See Exhibit 8, attached hereto. By executing this
28 agreement and submitting it to CMS on behalf of the "eligible organization," which was

1 identified as “United Health Group – Ovations” on the form, Defendants UHG and
2 Ovations and the Defendant MA Organizations each agreed that they would (i) be
3 responsible for all risk adjustment data submitted to CMS by themselves, their
4 employees, or their agents; (ii) submit accurate and truthful risk adjustment data; and
5 (iii) *research and correct discrepancies with its risk adjustment data*. In addition, each
6 of them agreed that CMS could audit the data and have access to medical records to
7 conduct such audits.

8 76. Additional examples include the EDI agreements that James Higgins, the Finance
9 Director of PacifiCare Health Systems, executed on behalf of the following Defendant
10 MA Organizations or their predecessors: On September 14, 2006, Higgins signed EDI
11 agreements for UnitedHealthcare Insurance Company of New York (contract numbers
12 H5515 and R5342); UnitedHealthcare Insurance Company (the name for a number of
13 different MA Organizations with contract numbers R3175, R5287, H1717, H2803,
14 H2001, H2003, H2111, H2408, H0624, H0620, H1303, H1509, H3921, H0319, H5500,
15 H2406, H4106, H3812, H3209, H5918, H5697, H5754, H0315, H2228, H1108, H4522,
16 H5532, H5516, H5507, H5440, H5417, H5424, H5008, H5527, H2226 and H5518);
17 PacifiCare of Nevada, Inc. (contract number H2949); PacifiCare of Arizona, Inc.
18 (contract number H0303); UnitedHealthcare of Alabama, Inc. (contract number H0151);
19 UnitedHealthcare of the Midwest, Inc. (contract number H2654); Oxford Health Plans
20 (CT), Inc. (contract number H0752); Oxford Health Plans (NJ), Inc. (contract numbers
21 H3113 and H3107); UnitedHealthcare of Ohio, Inc. (contract numbers H3659 and
22 H5678); UHC of California, then known as PacifiCare of California (contract number
23 H0543); UnitedHealthcare of Florida, Inc. (contract number H1080 and H9011);
24 UnitedHealthcare Benefits of Texas, Inc. (contract number H4590); UnitedHealthcare of
25 Utah, Inc. (contract number H4604); UnitedHealthcare of Arizona, Inc. (contract number
26 H0316); UnitedHealthcare of Arkansas, Inc. (contract number H0401); UnitedHealthcare
27 of Georgia, Inc. (contract number H1111); UnitedHealthcare of Tennessee, Inc. (contract
28 number H4406); UnitedHealthcare of New England, Inc. (contract number H4102);

1 UnitedHealthcare of Oregon, Inc. (contract number H3805); UnitedHealthcare of
2 Oklahoma, Inc. (contract number H3749); UnitedHealthcare of New York, Inc. (contract
3 number H3379); Oxford Health Plans (NY), Inc. (contract number H3307);
4 UnitedHealthcare of the Midlands, Inc. (contract number H2802); UnitedHealthcare of
5 North Carolina, Inc. (contract number H3456); PacifiCare of Colorado, Inc. (contract
6 number H0609); Sierra Health and Life Insurance Company, Inc. (contract number
7 H5652); UnitedHealthcare of Washington, Inc. (contract number H5005);
8 UnitedHealthcare of Wisconsin, Inc. (contract number H5253); and UnitedHealthcare
9 Community Plan of Texas, L.L.C. (contract number H4514). On November 2, 2006,
10 Higgins signed EDI agreements for UnitedHealthcare of the Midwest, Inc. (contract
11 number H3887), UnitedHealthcare Insurance Company of New York (contract number
12 H4720), and UnitedHealthcare Insurance Company (contract numbers H9418, H8000,
13 and H4779). On December 13, 2006, Higgins signed EDI agreements for
14 UnitedHealthcare Insurance Company (the name for a number of MA Organizations
15 with contract numbers H0408, H1286, H3435, H7274, H7254, H0410, and H6717) and
16 UnitedHealthcare of Wisconsin, Inc. (contract number H7187). On January 1, 2007,
17 Higgins signed an EDI agreement for UnitedHealthcare Insurance Company (contract
18 number H5435). On January 14, 2008, Higgins signed an EDI agreement for
19 UnitedHealthcare Insurance Company (contract numbers H3912 and H0710). *See, e.g.,*
20 Exhibit 9, attached hereto (September 14, 2006 EDI for PacifiCare of California).
21 Pursuant to these EDI agreements, each of these MA Organizations agreed that it would
22 (i) be responsible for all risk adjustment data submitted to CMS by itself, its employees,
23 or its agents; (ii) submit accurate and truthful risk adjustment data; and (iii) *research and*
24 *correct discrepancies with its risk adjustment data*. In addition, each of them agreed that
25 CMS could audit the data and have access to medical records to conduct such audits.
26 77. In addition, on January 14, 2008, Patricia Rasmussen, who worked as a manager
27 for Ingenix, signed EDI agreements for UnitedHealthcare Insurance Company (contract
28 numbers H4971, H0710, H3912, H7698, H4971, H0710, H6793, H5749, and H6228),

1 UnitedHealthcare of New England, Inc. (contract number H1944), and UnitedHealthcare
2 Insurance Company of New York (contract number H4720). On June 18, 2008,
3 Rasmussen signed an EDI agreement for PacifiCare of Nevada, Inc. (contract number
4 H7949). In January 2009, Rasmussen signed additional EDI agreements for
5 UnitedHealthcare Insurance Company (contract numbers H7444, H8748, H2182, and
6 H1949). Pursuant to these EDI agreements, each of these MA Organizations agreed that
7 it would (i) be responsible for all risk adjustment data submitted to CMS by itself, its
8 employees, or its agents; (ii) submit accurate and truthful risk adjustment data; and (iii)
9 *research and correct discrepancies with its risk adjustment data*. In addition, each of
10 them agreed that CMS could audit the data and have access to medical records to
11 conduct such audits.

12 78. On December 15, 2010, Timothy Noel, who was Vice President of Finance for
13 UnitedHealthcare Medicare & Retirement, signed an EDI agreement for Oxford Health
14 Plans (CT), Inc. (contract number H0755). On September 22, 2011, Noel signed an EDI
15 agreement for UnitedHealthcare Insurance Company of New York (contract number
16 H1537). Pursuant to these EDI agreements, each of these MA Organizations agreed that
17 it would (i) be responsible for all risk adjustment data submitted to CMS by itself, its
18 employees, or its agents; (ii) submit accurate and truthful risk adjustment data; and (iii)
19 *research and correct discrepancies with its risk adjustment data*. In addition, each of
20 them agreed that CMS could audit the data and have access to medical records to
21 conduct such audits.

22 79. On April 27, 2011, Scott Theisen, the Chief Financial Officer of UnitedHealthcare
23 Medicare & Retirement, submitted an EDI agreement for PacifiCare of California, which
24 included all the same promises. On October 21, 2013, Theisen also signed EDI
25 agreements for Care Improvement Plus Wisconsin Insurance Company (contract number
26 H3794) and Care Improvement Plus South Central Insurance Co. (contract number
27 H5322). Accordingly, each of these Defendant MA Organizations also agreed that it
28 would (i) be responsible for all risk adjustment data (which includes encounter data)

1 submitted to CMS by itself, its employees, or its agents; (ii) submit accurate and truthful
2 risk adjustment data; and (iii) *research and correct discrepancies with its risk adjustment*
3 *data*. In addition, each of them agreed that CMS could audit the data and have access to
4 medical records to conduct such audits.

5 80. Patricia Rasmussen also executed and submitted an EDI agreement so that Ingenix
6 could submit risk adjustment data on behalf of the Defendant MA Organizations. *See*
7 Exhibit 10, attached hereto. By doing this, Ingenix also agreed that it would (i) be
8 responsible for all risk adjustment data submitted to CMS by itself, its employees, or its
9 agents; (ii) submit accurate and truthful risk adjustment data; and (iii) *research and*
10 *correct discrepancies with its risk adjustment data*. In addition, it agreed that CMS
11 could audit the data and have access to medical records to conduct such audits. When
12 Ingenix became OptumInsight, Rasmussen also notified CMS (that is, CMS' contractor
13 Palmetto, which helped operate RAPS) that its records should be updated to reflect that
14 OptumInsight was making the risk adjustment submissions for the Defendant MA
15 Organizations. Rasmussen identified OptumInsight as "part of Optum." *See* Exhibit 11,
16 attached hereto.

17 81. Jeffrey Dumcum, a Senior Vice President at Optum, also executed an EDI
18 agreement in May 2011 in order to submit risk adjustment data (also known as encounter
19 data) to the MA Program on behalf of many of the Defendant MA Organizations,
20 including those MA Organizations listed in a letter sent by Theisen to CMS' contractor
21 in April 2011. By doing this, Dumcum agreed that Optum would be responsible for the
22 data it submitted, submit valid data, and *research and correct data discrepancies*. *See*
23 Exhibit 12, attached hereto.

24 82. All EDI agreements executed by the UHG Managing Defendants on their own
25 behalf and on behalf of the Defendant MA Organizations are incorporated by reference
26 in this Amended Complaint as if they were recited in full and attached hereto.

III. The Ingenix/Optum Service Agreements

83. Depending on the time period, Ingenix or Optum entered into internal agreements with Ovation or UnitedHealthcare regarding the risk adjustment-related services that Ingenix or Optum would provide to the Defendant MA Organizations. These services included, among other things, the submission of risk adjustment data to CMS and the management of the Chart Review, Claims Verification, and RACCR Programs. These internal agreements further confirm the parties' joint and several obligations to the MA Program to submit accurate and truthful risk adjustment data and to investigate and correct any data discrepancies. These agreements also exemplify the UHG Managing Defendants' understanding of their joint and several obligations to the MA Program. All of these agreements are incorporated herein by reference.

84. By way of example, the Memorandum of Understanding ("MOU") entered into between Optum and UnitedHealthcare for risk adjustment-related services rendered by Optum in 2011 exemplifies the obligations undertaken by Optum not only to UnitedHealthcare but to the MA Program. That MOU was executed by Jerry Knutson, Chief Financial Officer of Optum, and Scott Theisen, Chief Financial Officer of UnitedHealthcare Medicare & Retirement. Paul Bihm at Optum, Relator Poehling at UnitedHealthcare Medicare & Retirement, and Jason Bainbridge at UnitedHealthcare Community & State were copied on the MOU. (The MOU referred to UnitedHealthcare Medicare & Retirement and UnitedHealthcare Community & State collectively as "UnitedHealth Group's Public and Senior Markets Group ("PSMG")." This is but one of many examples of the confusion that Defendants have created by the way they used names of groups and entities interchangeably.) Pursuant to the MOU, Optum was compensated for its services through an "intercompany allocation of fees paid pursuant to [a separate] Management Agreement."

85. Pursuant to this 2011 MOU, Optum provided many risk adjustment-related services to the Defendant MA Organizations, including, but not limited to the submission of risk adjustment data to CMS "pursuant to CMS risk adjustment rules and

requirements” and conducting the Chart Review, Claims Verification, and RACCR Programs. Importantly, Optum also agreed to (i) conduct “[p]rovider engagement and education regarding accurate and complete diagnostic coding and documentation”; (ii) “[c]ontribute (along with PSMG) to the level of accuracy and completeness of diagnostic coding for a respective population by identifying opportunities to improve documentation and coding for accuracy, facilitating improvement in accuracy by working directly with providers to improve documentation and coding practices, and executing the timely and accurate submission of claim coding information to CMS, thereby ensuring appropriate revenues are being paid by CMS for the underlying risk inherent within the member population;” (iii) “[m]onitor[] the appropriateness and accuracy of provider coding;” and (iv) conduct “[i]nternal validation testing of outlier providers, internal validation testing of other sample populations and support CMS validation requirements.”

86. The 2011 MOU also included a “Medicare Advantage Regulatory Requirements Appendix.” This Appendix included Optum’s agreement to (i) “comply with all applicable federal and Medicare laws, regulations, and CMS instructions, including but not limited to . . . federal laws and regulations designed to prevent or ameliorate fraud, waste, and abuse, including but not limited to, applicable provisions of federal criminal law [and] the False Claims Act (31 U.S.C. § 3729 et seq.);” (ii) “perform services and provide the products set forth in the MOU in a manner consistent with and in compliance with [the Defendant MA Organizations’] obligations under the CMS Contact[s]; “ and (iii) certify in writing that the risk adjustment data it submitted to CMS was “accurate, complete, and truthful, based on [its] best knowledge, information and belief.” The Appendix further specified that UnitedHealthcare and the Defendant MA Organizations were accountable to CMS for fulfilling their regulatory and contractual obligations under the MA Program, including those that they had delegated to Optum under the MOU and, thus, that they were responsible for overseeing and monitoring Optum’s performance under the MOU.

DEFENDANTS' DATA INTEGRITY OBLIGATIONS

I. Obligation to Submit Valid Diagnoses

87. MA Organizations are entitled to risk adjustment payments based on the diagnosis codes that they submit to CMS *only* if the codes are from face-to-face medical encounters between the Medicare beneficiary and provider, the encounter occurred during the relevant date of service year, the provider was of a type and specialty acceptable for risk adjustment purposes, and at the time of the encounter, the provider documented the medical conditions identified by the diagnosis codes in the medical record based on acceptable documentation. In addition, codes should be based on documented conditions that require or affect patient care treatment or management. *See* Medicare Managed Care Manual, Chapter 7, Exhibit 30 (August 13, 2004) (stating that diagnosis codes submitted for risk adjustment payments should be for documented conditions that “require or affect patient care treatment or management”). *See also* 2008 Risk Adjustment Data Technical Assistance for Medicare Advantage Organizations Participant Guide (“2008 RA Participation Guide”) at § 6.4.1.

88. Risk adjustment claims are valid, and the resulting risk adjustment payments are therefore proper and justified, only to the extent that the diagnosis codes submitted by the MA Organizations are valid. The diagnoses must be coded according to the *International Classification of Diseases (ICD) Clinical Modification Guidelines for Coding and Reporting* (“ICD-9-CM” & “ICD-10-CM”) and documented with sufficient clinical specificity. *See* Medicare Managed Care Manual, Chapter 7, Exhibit 30 (August 13, 2004). In addition, codes cannot be submitted for diagnoses that are only probable or suspected, for diagnoses that are questionable, or for a condition that the provider is trying to rule out. *Id.*

89. Moreover, all diagnosis codes submitted by MA Organizations must be supported by medical record documentation. The 2004 Medicare Managed Care Manual stated that “M+C organizations [now known as MA Organizations] must submit risk adjustment data that are substantiated by the physician or provider’s full medical record.” Medicare

1 Managed Care Manual, Chapter 7, § 111.8 (August 13, 2004). A later version of the
2 Manual similarly states that MA Organizations “must . . . [e]nsure the accuracy and
3 integrity of risk adjustment data to CMS. All diagnosis codes submitted must be
4 documented in the medical record” Medicare Managed Care Manual, Chapter 7, §
5 40 (June 2013). Also similarly, the 2003 Participant Guide stated that MA
6 Organizations “must submit risk adjustment data that are substantiated by the patient’s
7 medical record.” 2003 Regional Risk Adjustment Training for Medicare+Choice
8 Organizations Participant Guide, § 4.1. This requirement was reiterated in the following
9 CMS training guides and materials since 2003: 2003 Regional Risk Adjustment
10 Training for Medicare+Choice Organizations Participant Guide, §§ 12.3, 12.6; 2004
11 Regional Risk Adjustment Training for Medicare+Choice Organizations Participant
12 Guide, §§ 5.1, 5.5, 6.1.3; 2005 Risk Adjustment Data Basic Training for Medicare
13 Advantage Organizations Participant Guide §§ 4.1, 5, 5.1, 5.5, 8.7.3, 9.1, 9.2; 2006 Risk
14 Adjustment Data Basic Training for Medicare Advantage Organizations Participant
15 Guide §§ 5.1, 5.4, 5.5, 7.7.3, 8.1, 8.2; 2007 Risk Adjustment Data Training for Medicare
16 Advantage Organizations Participant Guide §§ 6.1, 6.4, 7.1, 7.2, 8.7.3; 2008 Risk
17 Adjustment Technical Assistance for Medicare Advantage Organizations Participant
18 Guide §§ 5.6, 6, 6.1, 6.4, 6.5, 7.1, 7.2; 2012 Regional Technical Assistance Participant
19 Guide § 2.2; Risk Adjustment 101 Participant Guide §§ 3.2.4; 4.3 (2013); Risk
20 Adjustment Webinar at p. 48 (July 1, 2014). Furthermore, in a 2003 Regional Risk
21 Adjustment Training for Medicare+Choice Organizations presentation, organizations
22 were advised to “[t]ake steps to ensure that medical documentation supports submitted
23 diagnoses.” *Id.* at §8-19.

24 90. In connection with the requirement that the patient’s medical record support the
25 diagnosis(es) reported for him or her, the 2004 Medicare Managed Care Manual also
26 provided that “M+C organizations must maintain sufficient information to trace the
27 submitted diagnosis back to the hospital or physician that originally reported the
28 diagnosis. Since M+C organizations may submit summary level transactions without a

1 link to a specific encounter or claim, establishing an appropriate audit trail to the original
2 source of the data requires diligent information management on the part of the M+C.”
3 Medicare Managed Care Manual, Chapter 7, § 111.8 (August 13, 2004). Again, in the
4 2005 Risk Adjustment Data Basic Training for Medicare Advantage Organizations
5 Participant Guide § 8.7.3, CMS advised that “MA organizations should take steps to
6 ensure that they have, or have access to, the proper medical documentation to support
7 diagnoses being submitted for risk adjustment. MA organizations are responsible for the
8 accuracy of the data they submit to CMS. Where necessary, they should obtain the
9 proper documentation to support diagnoses and maintain an efficient system for tracking
10 diagnoses back to medical records.” This requirement was also reiterated in the
11 following CMS training guides: 2003 Regional Risk Adjustment Training for
12 Medicare+Choice Organizations Participant Guide, § 12.2; 2004 Regional Risk
13 Adjustment Training for Medicare+Choice Organizations Participant Guide, § 6.1.3;
14 2004 Regional Risk Adjustment Training for Medicare+Choice Organizations Resource
15 Guide at p. 20; 2005 Risk Adjustment Data Basic Training for Medicare Advantage
16 Organizations Participant Guide §§ 5.1, 9.1.3; 2006 Risk Adjustment Data Basic
17 Training for Medicare Advantage Organizations Participant Guide §§ 5.1, 7.7.3, 8.7.3;
18 2007 Risk Adjustment Data Training for Medicare Advantage Organizations Participant
19 Guide §§ 6.1, 7.1.4, 8.7.3; 2008 Risk Adjustment Technical Assistance for Medicare
20 Advantage Organizations Participant Guide §§ 5.6.3, 6.1; 2012 Regional Technical
21 Assistance Participant Guide § 2.2.

22 91. Furthermore, the medical record relied on by an MA Organization to support
23 payment cannot be ambiguous. See 2008 RA Participation Guide at § 7.2.4.1 (stating
24 that risk adjustment claims and payments cannot be based on questionable diagnoses).

25 92. CMS recognizes that risk adjusting based on health status creates a strong
26 incentive for MA Organizations to report invalid diagnoses. Thus, CMS engages in a
27 variety of program integrity activities, including training MA Organizations about their
28 obligations to submit valid data and withdraw invalid data. For example, in a 2003

1 Regional Risk Adjustment Training for Medicare+Choice Organization Questions &
2 Answers document, CMS stated all information that is submitted must be correct. “If a
3 plan identifies incorrect or invalid information that has been submitted, it must delete
4 that information.” Likewise, in an August 9, 2005 Regional Training presentation made
5 jointly by CMS and its contractor, Aspen Systems Corporation, called “Risk Adjustment
6 Data Basic Training,” MA Organizations were told that they “must . . . Delete a
7 diagnosis cluster [that is, a RAPS submission] when any data in that cluster are in error.”

8 93. In addition, for many years, CMS has conducted audits of diagnoses submitted by
9 MA Organizations, known as Risk Adjustment Data Validation (“RADV”) audits. In
10 2001, when the old PIP-DCG model was in place, CMS alerted M+C organizations that
11 they were “required to submit medical records for validating encounter data” and that
12 “[m]edical record reviews of a sample of hospital encounters may be audited to ensure
13 the accuracy of diagnostic information.” Medicare Managed Care Manual, Chapter 7, §
14 110.3 (October 2001). In 2004, CMS revised the Manual to provide that “[a] sample of
15 risk adjustment data used for making payments may be validated against hospital
16 inpatient, hospital outpatient, and physician medical records to ensure the accuracy of
17 medical information. Risk adjustment data will be validated to the extent that the
18 diagnostic information justifies appropriate payment under the risk adjustment model.”
19 Medicare Managed Care Manual, Chapter 7, § 111.8 (August 13, 2004). The Manual
20 further explained that the MA Organizations must be prepared to locate and produce the
21 medical records to support the diagnoses codes that they submitted. *Id.* Federal
22 regulations also require MA Organizations and their providers to provide medical
23 records to CMS to validate the diagnoses they submitted for risk adjustment payments.
24 *See* 42 C.F.R. § 422.310(e).

25 94. When making risk adjustment payments, CMS relies on MA Organizations to
26 exercise due diligence to ensure that provider-reported diagnoses are supported by
27 beneficiaries’ medical records and are otherwise accurate and truthful. This is why
28 insurance companies that want to participate in the MA Program must agree, through

1 their Part C and D agreements and their EDI agreements, to provide valid diagnostic data
2 and investigate and delete invalid data. Moreover, this is why insurance companies that
3 want to participate in the MA Program must (i) establish and implement effective
4 compliance programs to ensure the integrity of their payment data, 42 CFR
5 § 422.503(b)(4)(vi) (Part C compliance program regulation); 42 C.F.R.
6 § 423.504(b)(4)(vi) (Part D compliance program regulation); (ii) annually attest to the
7 accuracy and truthfulness of the diagnosis data that they submit for risk adjustment
8 payments, 42 C.F.R. § 422.504(l) (Part C regulation); 42 C.F.R. § 423.505(k) (Part D
9 regulation); and (iii) “comply with . . . Federal laws and regulations designed to prevent
10 or ameliorate fraud, waste, and abuse, including, but not limited to, applicable provisions
11 of Federal criminal law [and] the False Claims Act (31 USC §§ 3729 et seq.).” 42
12 C.F.R. § 422 (Part C regulation); 42 C.F.R. § 423 (Part D regulation).

13 **II. Obligation to Implement an Effective Compliance Program**

14 95. The implementation of an effective compliance program is a prerequisite to an
15 MA Organization’s obtaining and retaining payments under both Parts C and D of the
16 Medicare Program. *Id.* §§ 422.503(a) (Part C) & 423.504(b)(4)(vi) (Part D). One
17 purpose of requiring a compliance program is to ensure that MA Organizations submit
18 accurate and truthful information to CMS. 65 Fed. Reg. 40170-01 at 40264 (June 29,
19 2000).

20 96. Specifically, each MA Organization must “[a]dopt and implement an effective
21 compliance program, which must include measures that prevent, detect, and correct non-
22 compliance with CMS’ program requirements as well as measures that prevent, detect,
23 and correct fraud, waste, and abuse.” 42 C.F.R. § 422.503(b)(4)(vi) (Part C); 42 C.F.R.
24 § 423.504(b)(4)(vi) (Part D). The compliance program “must, at a minimum, include
25 [certain] core requirements,” including (but not limited to):

26 (F) Establishment and implementation of an effective system for routine
27 monitoring and identification of compliance risks. The system
28 should include internal monitoring and audits and, as appropriate,

external audits, to evaluate the MA organization[’s], including first tier entities’, compliance with CMS requirements and the overall effectiveness of the compliance program.

(G) Establishment and implementation of procedures and a system for promptly responding to compliance issues as they are raised, investigating potential compliance problems as identified in the course of self-evaluations and audits, correcting such problems promptly and thoroughly to reduce the potential for recurrence, and ensuring ongoing compliance with CMS requirements.

(1) If the MA organization discovers evidence of misconduct related to payment or delivery of items or services under the contract, it must conduct a timely, reasonable inquiry into that conduct.

(2) The MA organization must conduct appropriate corrective actions (for example, repayment of overpayments, disciplinary actions against responsible employees) in response to the potential violation referenced in paragraph (b)(4)(G)(1) of this section.

(3) The MA organization should have procedures to voluntarily self-report potential fraud or misconduct related to the MA program to CMS or its designee.

97. A compliance program is not effective unless the MA Organization devotes adequate resources to the program.

III. Obligation to Attest to Validity of Risk Adjustment Data

98. After the final deadline for their submission of risk adjustment data but before their receipt of their final reconciliation payments for a given payment year, MA Organizations must attest to the validity of their risk adjustment data, including diagnoses, in a Risk Adjustment Attestation submitted to CMS. Specifically, the chief

1 executive officer, chief financial officer, or another individual with delegated authority
2 to sign on behalf of one of these officers, and who reports directly to such an officer,
3 must certify that the risk adjustment data that the MA Organization submitted to CMS
4 was accurate, complete, and truthful.

5 99. An MA Organization must request payment on a document that contains this
6 Attestation and the submission of this Attestation to CMS is a condition of receiving
7 Risk Adjustment payments.

8 100. The Part D regulations include a similar attestation for risk adjustment data,
9 including diagnoses, submitted for risk adjustment payments under the prescription drug
10 program. Under the applicable Part D regulation, these attestations are referred to as
11 certifications. 42 C.F.R. § 423.505(k).

12 101. Every year, each MA Organization agrees in writing that:

13 [a]s a condition for receiving a monthly payment under paragraph B of this
14 article, and 42 CFR Part 422 Subpart G, the MA Organization agrees that its
15 chief executive officer (CEO), chief financial officer (CFO), or an
16 individual delegated with the authority to sign on behalf of one of these
17 officers, and who reports directly to such officer, must request payment
18 under the contract on the form[] attached hereto as . . . Attachment B (risk
19 adjustment data) which attest to (based on best knowledge, information and
20 belief, as of the date specified on the attestation form) the accuracy,
21 completeness and truthfulness of the data identified on these attachments.

22 . . .

23 2. Attachment B requires the CEO, CFO, or an individual delegated with
24 the authority to sign on behalf of one of these officers, and who reports
25 directly to such officer, must attest to (based on best knowledge,
26 information and belief, as of the date specified on the attestation form) that
27 the risk adjustment data it submits to CMS under 42 CFR § 422.310 are
28 accurate, complete, and truthful. The MA Organization shall make annual

1 attestations to this effect for risk adjustment data on Attachment B and
2 according to a schedule to be published by CMS. If such risk adjustment
3 data are generated by a related entity, contractor, or subcontractor, then such
4 related entity, contractor, or subcontractor must also attest to (based on best
5 knowledge, information, and belief, as of the date specified on the
6 attestation form) the accuracy, completeness, and truthfulness of the data.
7 [422.504(l).]

8 102. MA Organizations have an obligation to acquire knowledge, information, and
9 belief about their risk adjustment data, including diagnoses, in order to both submit such
10 data and attest to the accuracy and truthfulness of the data. Nearly 17 years ago, CMS
11 put MA Organizations on notice that they were “responsible for making *good faith*
12 *efforts* to certify the accuracy, completeness, and truthfulness of the encounter [*i.e.*, risk
13 adjustment] data submitted” for payments from the Medicare Program. 65 Fed. Reg.
14 40,170, 40,268 (June 29, 2000) (emphasis added); *see also* Medicare Managed Care
15 Manual, Chapter 7, § 110.2 (October 2001) (stating, under section titled “Certification of
16 Data Accuracy, Completeness, and Truthfulness,” that “CMS expects M+C
17 organizations [now known as MA Organizations] to design and implement effective
18 systems to monitor the accuracy, completeness, and truthfulness of encounter data [that
19 is, diagnoses from hospital inpatient stays under the old PIP-DCG risk adjustment
20 model] and to exercise due diligence in reviewing the information provided to CMS”);
21 Medicare Managed Care Manual, Chapter 7, § 111.7 (August 2004) (stating, under
22 section titled “Certification of Data Accuracy, Completeness, and Truthfulness,” that
23 “CMS expects M+C organizations [now known as MA Organizations] to design and
24 implement effective systems to monitor the accuracy, completeness, and truthfulness of
25 risk adjustment data and to exercise due diligence in reviewing the information provided
26 to CMS”). When MA Organizations fail to act in good faith and deliberately ignore or
27 recklessly disregard information about their submission of inaccurate or untruthful data,
28 their Risk Adjustment Attestations are false.

IV. Obligation to Delete Invalid Diagnoses

103. MA Organizations are obligated to delete invalid diagnoses previously submitted by them to RAPS or to use other available means to return risk adjustment payments based on invalid diagnoses. Their deletion of invalid diagnoses is the principal mechanism by which CMS is able to recalculate beneficiaries' risk scores and ensure that the Government does not make improper risk adjustment payments to MA Organizations or that it recovers improper payments that were already made. In particular, the submission of diagnoses that are not supported by the beneficiaries' medical records and, thus, are invalid directly and necessarily causes CMS to make risk-adjustment payments that it would not have made but for the submission of that false data. Conversely, the "deletion" of previously-submitted diagnoses that are invalid because they are not supported by the beneficiaries' medical records directly and necessarily causes CMS either to avoid paying for previously-submitted false diagnoses or to recover payments it made for those false diagnoses. As a result, an MA Organization's failure to "DELETE" invalid diagnoses results in that MA Organization's retention of payments to which it was not entitled. Thus, both the submission of false diagnostic data and the failure to correct false diagnosis data influence CMS' payment, including the amount of the risk-adjustment payment, if any, that it makes for any given beneficiary based on his or her health status.

104. The obligation to delete invalid diagnoses previously submitted to RAPS or to otherwise return risk adjustment payments based on invalid diagnoses arises from the contractual relationship between MA Organizations and the Government, from regulation, and from the retention of an overpayment and, thus, constitutes an "obligation to pay . . . the Government" under the reverse false claims act provision of the FCA. 31 U.S.C. §§ 3729(a)(1)(G) & (b)(3). The obligation is imposed on MA Organizations by the following, among other things:

- The MA Organizations' execution of EDI agreements pursuant to which they agree to "research and correct risk adjustment data discrepancies." *See supra*

1 paragraphs 73-82 (describing these agreements). *See also* Exhibits 8-11, attached
2 hereto (examples of EDI agreements that the Defendant MA Organizations
3 executed).

- 4 • Regulations requiring MA Organizations to implement effective compliance
5 programs and to “detect and correct non-compliance with CMS’ program
6 requirements as well as . . . [to] prevent, detect, and correct fraud, waste, and
7 abuse.” *See supra* paragraphs 95-97 (describing these regulations). Plus, the MA
8 Organizations’ execution of agreements with CMS under Parts C and D pursuant
9 to which they agree to implement effective compliance programs. *See* 42 C.F.R.
10 § 422.504(a) (stating that the agreement between an MA Organization and CMS
11 must include a provision by which the MA Organizations agree to comply with
12 the Part C regulatory requirements and general instructions issued by CMS). *See*
13 *also supra* paragraphs 66-72 (describing the Part C and D agreements); Exhibits 1-
14 7, attached hereto (examples of Part C agreements between the Defendant MA
15 Organizations and CMS by which the Defendant MA Organizations agreed to
16 implement effective compliance programs).
- 17 • The regulations requiring the submission of the Risk Adjustment Attestations. *See*
18 *supra* paragraphs 98-102 (describing those regulations). Plus, the requirements set
19 forth in the Medicare Managed Care Manual and elsewhere that MA
20 Organizations exercise both good faith and due diligence in order to submit
21 truthful Risk Adjustment Attestations to the Government certifying that their risk
22 adjustment data is accurate and truthful. *See supra* paragraph 102. In addition,
23 the separate contractual requirement to submit Risk Adjustment Attestations and
24 to comply with the Medicare Managed Care Manual. *See, e.g.*, Exhibits 1-7,
25 attached hereto (examples of the Defendant MA Organizations’ Parts C
26 agreements with CMS by which they agree to submit such Attestations and to
27 comply with the Medicare Managed Care Manual).

- 1 • The requirement in the CMS' Participant Guides that MA Organizations delete
2 erroneous diagnosis data submitted to CMS. See 2003 Regional Risk Adjustment
3 Training for Medicare+Choice Organizations Participant Guide, § 6.1;
4 2004 Regional Risk Adjustment Training for Medicare+Choice Organizations
5 Participant Guide, §§ 4.12 to 4.16; 2005 Risk Adjustment Data Basic Training for
6 Medicare Advantage Organizations Participant Guide §§ 4.12 to 4.16; 2006 Risk
7 Adjustment Data Basic Training for Medicare Advantage Organizations
8 Participant Guide §§ 4.12 to 4.16; 2007 Risk Adjustment Data Training for
9 Medicare Advantage Organizations Participant Guide §§ 4.12 to 4.16; 2008 Risk
10 Adjustment Technical Assistance for Medicare Advantage Organizations
11 Participant Guide §§ 4.12 to 4.16. This requirement is also included in 2014 and
12 2016 CMS training presentations. See *infra* paragraph 108. Plus, the regulatory
13 and contractual requirement that MA Organizations' comply with CMS'
14 instructions and policies. See 42 C.F.R. § 422.504(a) (stating that the agreement
15 between an MA Organization and CMS must include a provision by which the
16 MA Organizations agree to comply with the Part C regulatory requirements and
17 general instructions issued by CMS) (emphasis added). See also, e.g., Exhibits 1-
18 7 hereto (examples of the Defendant MA Organization's agreements to comply
19 with the CMS instructions and policies).
- 20 • The requirement in the Medicare Managed Care Manual that "[i]f upon
21 conducting an internal review of submitted diagnosis codes, the [MA
22 Organization] determines that any ICD-9-CM diagnosis codes that have been
23 submitted do not meet risk adjustment submission requirements [which includes
24 medical record support for all diagnoses], the [MA Organization] is responsible
25 for deleting the submitted ICD-9-CM diagnosis codes as soon as possible."
26 Medicare Managed Care Manual, Chapter 7, § 40 (June 2013). Plus, the
27 regulatory requirement that MA Organizations' comply with the Manual and MA
28 Organizations' contractual agreements to comply with the Manual. See 42 C.F.R.

§ 422.504(a) (stating that the agreement between an MA Organization and CMS must include a provision by which the MA Organizations agree to comply with the Part C regulatory requirements and general instructions issued by CMS). See also, e.g., Exhibits 1-7 hereto (examples of the Defendant MA Organization's agreements to comply with the Medicare Managed Care Manual).

105. Related Entities are also obligated to delete invalid diagnoses previously submitted by them to RAPS or to use other available means to return risk adjustment payments based on invalid diagnoses. Like the MA Organizations to which they are related, they are required to comply with the Part C and D regulations, the Medicare Managed Care Manual, the Participant Guides, and the other general instructions issued by CMS. In addition, when they submit risk adjustment data to the MA Program on behalf of their related MA Organizations, they are obligated to execute separate EDI agreements and Risk Adjustment Attestations, both of which impose an obligation to delete invalid diagnoses.

106. As previously explained, RAPS provides a means for MA Organizations and others submitting data on their behalf (such as Ingenix and then Optum) to withdraw or retract invalid diagnoses that they previously submitted to RAPS for risk adjustment payments. The process of withdrawing or retracting invalid diagnosis codes is often referred to as making "DELETES" because the field in RAPS that enables this to be accomplished is called a "Delete Indicator." The withdrawal or retraction of a diagnosis codes is also often referred to as a "DELETE."

107. CMS began instructing MA Organizations on the use of RAPS in the early 2000s in order to facilitate the phase in, during the 2004 to 2007 time period, of the use of diagnoses from physician office visits and hospital outpatient encounters to risk adjust for health status using the HCC model. It issued Risk Adjustment Training Participant Guides in order to provide instructions relating to, among other things, the use of RAPS to submit and delete data. The 2003 Risk Adjustment Training Participant Guide stated: "Now that the RAPS system is operational, effective October 1, 2002, the new system

1 allows for correction of risk adjustment data via the deletion process.” 2003 Regional
2 Risk Adjustment Training for Medicare+Choice Organizations Participant Guide, § 6.11
3 (titled “Modifying Risk Adjustment Data”). The 2003 Guide listed various reasons why
4 risk adjustment data may need to be deleted, including in order to withdraw an erroneous
5 diagnoses code. *Id.* at § 6.12.1. Finally, it stated that M+C organizations “must submit
6 delete records” to correct erroneous diagnosis data. *Id.* at § 6.12.3. The Guide made
7 very clear that deleting erroneous diagnoses was mandatory. Subsequent versions of the
8 Guide have included the same mandatory deletion requirement and instructions. *See*
9 2004 Regional Risk Adjustment Training for Medicare+Choice Organizations
10 Participant Guide, §§ 4.12 to 4.16; 2005 Risk Adjustment Data Basic Training for
11 Medicare Advantage Organizations Participant Guide §§ 4.12 to 4.16; 2006 Risk
12 Adjustment Data Basic Training for Medicare Advantage Organizations Participant
13 Guide §§ 4.12 to 4.16; 2007 Risk Adjustment Data Training for Medicare Advantage
14 Organizations Participant Guide §§ 4.12 to 4.16; 2008 Risk Adjustment Technical
15 Assistance for Medicare Advantage Organizations Participant Guide §§ 4.12 to 4.16.
16 108. The same mandatory requirement and instructions about deletions of invalid
17 diagnoses were also set forth in other CMS instructional materials used to train MA
18 Organizations. For instance, a 2003 presentation titled “Regional Risk Adjustment
19 Training for Medicare+Choice Organization Questions & Answers” instructed that “all
20 information that is submitted must be correct. If a plan identifies incorrect or invalid
21 information that has been submitted, it must delete that information.” These instructions
22 were also provided in CMS’ presentation slides for a July 1, 2014 Risk Adjustment
23 Webinar used to provide training to MA Organizations and others about how risk
24 adjustment operates. A training presentation that CMS made to MA Organizations and
25 others on June 23, 2016, also stated that it was the responsibility of each MA
26 Organization to “delete each instance of unsupported diagnoses from” RAPS. All of the
27 above-mentioned Participant Guides and other instructional materials also describe an
28 alternative method for deleting erroneous data using a Direct Data Entry system.

1 109. All of the above-mentioned Participant Guides and other instructional materials
2 have been and continue to be available to all MA Organizations and others on a website
3 hosted by a CMS contractor. *See* www.csscooperations.com. The 2003 to 2011 material
4 is in the Training subsection under Risk Adjustment Processing System in the Archives
5 and the 2012 to 2016 material is in the Training subsection under Risk Adjustment
6 Processing System on the Home page.

7 110. MA Organizations can delete invalid diagnoses both before and after the final
8 deadline for RAPS data submissions, which is sometime during the year following the
9 payment year at issue. The final deadline is only a submission deadline; it does not
10 pertain to deleting invalid diagnoses in order to withdraw them. *See* 42 C.F.R.
11 § 422.310(g)(2)(ii) (codifying pre-existing process permitting, after the final deadline,
12 only corrections to delete diagnoses from previously-submitted risk adjustment data).
13 Diagnoses deleted before the deadline for RAPS data submissions for a payment year are
14 known as “open-period deletes” and diagnoses deleted after the deadline for RAPS data
15 submissions for a payment year are known as “closed-period deletes.”

16 111. Because the final submission deadline is after the completion of the payment year,
17 monthly payments made during the payment year are interim payments. After the final
18 submission deadline, CMS determines if any adjustments to these interim monthly
19 payments are necessary based on all diagnoses submitted (and not deleted) for each
20 beneficiary up until the final submission deadline and re-calculates each beneficiary’s
21 risk score for the payment year to determine if it has changed and whether a plus or
22 minus adjustment to the payment for the beneficiary is necessary. If the beneficiary’s
23 risk score is higher because of the submission of additional diagnoses for that
24 beneficiary, CMS makes a final reconciliation payment of any additional payment owed
25 to the Plan for that beneficiary for that payment year. Conversely, if the beneficiary’s
26 risk score is lower because of the deletion of diagnoses for that beneficiary prior to the
27 final submission deadline, CMS recovers the payments associated with the deleted
28 diagnoses as part of this final reconciliation payment process.

1 112. Accordingly, if, prior to the final submission deadline, an MA Organization is in
2 possession of or has access to information about invalid diagnoses, it should delete
3 invalid diagnoses prior to that deadline to ensure that the final reconciliation payment
4 that it is claiming is correct. If, however, an MA Organization comes into possession or
5 otherwise gains access to information about invalid diagnoses after the final submission
6 deadline, it must still delete the invalid diagnoses, and CMS will still recover the risk
7 adjustment payments associated with the deleted diagnoses as part of additional risk
8 score rerun and reconciliation processes it has in place to recover overpayments.

9 113. The UHG Managing Defendants knew how to make deletes in RAPS. They also
10 knew the difference in making “open-period” and “closed-period” deletes. The
11 individuals who knew about the delete process and the difference between “open-period”
12 and “closed-period” deletes included, but were not limited to: Rebecca Martin, the
13 Director of Encounter Operations for Ingenix and then the Director of Data Remediation
14 for Optum; Jon Bird at Optum; and Scott Theisen and Brian Thompson at
15 UnitedHealthcare Medicare & Retirement.

16 114. However, Defendants violated the FCA by knowingly and improperly failing to
17 delete many invalid diagnoses and, thus, failing to repay risk adjustment payments to
18 which they were not entitled.

19 **THE FALSE CLAIMS ACT**

20 115. The FCA reflects Congress’s objective to “enhance the Government’s ability to
21 recover losses as a result of fraud against the Government.” S. Rep. No. 99-345, at 1
22 (1986), available at 1986 U.S.C.C.A.N. 5266. First, a defendant violates the FCA when
23 it “knowingly presents, or causes to be presented, a false or fraudulent claim for payment
24 or approval.” 31 U.S.C. § 3729(a)(1)(A). Under the FCA, a claim includes a request for
25 money. *Id.*, § 3729(b)(2). Further, a claim is “false or fraudulent” under the FCA if the
26 entity or person submitting the claim was not entitled to payment.

27 116. Second, after the 2009 amendments to the FCA by the Fraud Enforcement and
28 Recovery Act of 2009 (“FERA”), Pub.L. 111-21 (May 20, 2009), a defendant violates

1 the FCA when it “knowingly makes, uses, or causes to be made or used, a false record or
2 statement material to a false or fraudulent claim.” 31 U.S.C. § 3729(a)(1)(B). Prior to
3 FERA, a defendant violated this provision of the FCA when it “knowingly [made],
4 use[d], or cause[d] to be made or used, a false record or statement to get a false or
5 fraudulent claim paid or approved by the Government.”

6 117. Third, in May 2009, Congress amended the “reverse false claims act” provision of
7 the FCA to provide that a defendant violates the FCA when it “knowingly conceals *or*
8 knowingly and improperly avoids *or* decreases an obligation to pay or transmit money or
9 property to the Government.” 31 U.S.C. § 3729(a)(1)(G) (emphasis added). Prior to
10 FERA, this provision of the FCA provided that a defendant violates the FCA when it
11 “knowingly makes, uses, or causes to be made or used, a false record or statement to
12 conceal, avoid, or decrease an obligation to pay or transmit money or property to the
13 Government.” After FERA, a defendant violates this provision of the FCA when it
14 “knowingly makes, uses, or causes to be made or used, a false record or statement
15 material to an obligation to pay or transmit money or property to the Government, *or*
16 knowingly conceals *or* knowingly and improperly avoids *or* decreases an obligation to
17 pay or transmit money or property to the Government.” 31 U.S.C. § 3729(a)(1)(G)
18 (emphasis added).

19 118. Under the FCA, the terms “knowing” and “knowingly” mean that the defendant
20 had actual knowledge of or acted in deliberate ignorance or reckless disregard of
21 information relating to the truth or falsity of its claims for payment or its false records or
22 statements. *Id.* § 3729(b)(1)(A). Proof that the defendant had specific intent to defraud
23 the Government is not required. *Id.* § 3729(b)(1)(B). Congress included “deliberate
24 ignorance” in its definition of the terms “knowing” and “knowingly” to hold a defendant
25 accountable for failing to make the inquiry that a reasonable and prudent person or entity
26 would have made under the circumstances to be reasonably certain that he, she, or it was
27 entitled to the money that he, she, or it sought from the Government. S. Rep. No. 99-
28 345, at 21 (1986), as reprinted in 1986 U.S.C.A.N. 5266, 5286. The terms “knowing”

1 and “knowingly” used in this Amended Complaint have the meaning ascribed to them by
2 the FCA. Similarly, the terms “knowledge,” “knows” and “knew” are used in this
3 Amended Complaint to have the same meaning.

4 119. In 2009, Congress also amended the FCA to provide a definition of the term
5 “obligation” for the purpose of the new “reverse false claims act” provision of the
6 statute, section 3729(a)(1)(G). See FERA, Pub. L. 111-21, 123 Stat. 1617, 1621-25
7 (2009). It defined the term to mean “an established duty, *whether or not fixed*, arising
8 from an express or implied contractual ... relationship, from a fee-based or similar
9 relationship, from statute or regulation, or from the retention of any overpayment.” 31
10 U.S.C. § 3729(b)(3) (emphasis added). Congress promulgated this definition to reflect
11 its long-held view that an “obligation” under the FCA’s reverse FCA provision, 31
12 U.S.C. § 3729(a)(1)(G), encompasses non-fixed and contingent duties to pay or repay
13 monies to the Government. S. Rep. 111-10, 14, 2009 U.S.C.C.A.N. 430, 441.

14 120. Under the FCA, “material” means “having a natural tendency to influence, or
15 capable of influencing, the payment or receipt of money or property.” *Id.* § 3729(b)(4).

16 121. Under the FCA, the Government is entitled to recover three times the amount of
17 damages which it sustained because of a defendant’s violation of the statute and, for each
18 act by the defendant violating the statute, a civil penalty. For violations that occurred
19 before November 2, 2015, the FCA imposes a penalty for each violation of not less than
20 \$5,500 and not more than \$11,000. For violations occurring after November 2, 2015, all
21 civil statutory penalties, including the FCA, are subject to an annual adjustment for
22 inflation pursuant to Section 701 of the Bipartisan Budget Act of 2015, Public Law 114-
23 74 (No. 2, 2015) (“BBA”). At this time, by operation of the BBA, for violations that
24 occurred after November 2, 2015, the FCA imposes a penalty of not less than \$10,957
25 and not more than \$21,916 per violation, and these amounts are subject to annual
26 adjustment for inflation in future years. See 28 C.R.F. § 85.5 (identifying applicable
27 inflation adjustments on an annual basis).

THE FACTS

122. Since at least 2005, Defendants knew that diagnoses submitted to Medicare for risk adjustment payments had to satisfy various criteria and be supported and validated by the medical records of the beneficiaries in their MA Plans. Defendants also knew that many provider-reported diagnoses were not supported and validated by the beneficiaries' medical records and that they were obliged to undertake good faith efforts to identify and delete those unsupported and invalid diagnoses. Moreover, Defendants knew that they were obligated to "look both ways" at the results of their chart reviews and delete unsupported provider-reported diagnoses. Nonetheless, Defendants conducted millions of medical record reviews as part of their revenue-generating national Chart Review Program, turned a blind eye to the negative results of those reviews showing hundreds of thousands of unsupported diagnoses that the UHG Managing Defendants had previously submitted to Medicare on behalf of the Defendant MA Organizations, and knowingly and improperly avoided repaying Medicare for at least over a billion dollars in risk adjustment payments to which they were not entitled. Similarly, Defendants disregarded information from their RACCR Program about invalid coding practices by their incentivized capitated and gain-sharing providers and failed to repay Medicare for additional erroneous payments based on their invalid diagnoses.

I. Defendants Knew That Many Provider-Reported Diagnoses Were Invalid And That They Were Obligated To Undertake Good Faith Efforts To Identify And Delete Them

123. As part of its 2005 acquisition of PacifiCare, UHG retained the PacifiCare employees with knowledge about the requirements for the submission of valid diagnoses, the obligation to delete invalid diagnoses, and the various problems relating to the invalidity of provider-reported diagnoses. UHG retained these PacifiCare employees to continue performing work relating to risk adjustment.

124. For example, Jeffrey Dumcum, Stephanie Will, Pam Holt, and Pam Leal were all former PacifiCare employees knowledgeable about risk adjustment and were retained by

1 UHG to run its risk adjustment programs. Dumcum had been PacifiCare's Chief
2 Financial Officer and, after the acquisition, became Vice President of Finance for
3 Oventions. Will had been a Principal Analyst at PacifiCare who designed risk adjustment
4 programs and, after the acquisition, joined Oventions as the Program Manager for the
5 national Chart Review Program. Holt had been a Project Manager for Network
6 Management Operations at PacifiCare and, after the acquisition, became the Manager of
7 Provider Outreach for the Risk Adjustment Program. Leal had been an Executive
8 Director of Provider Training and Development for PacifiCare and, after the acquisition,
9 became a Regional Vice President for Market Consultation.

10 125. From 2005 to 2007, Dumcum, Will, Holt, and Leal worked at the PacifiCare
11 office in the Central District of California. Thereafter, Holt and Leal continued to work
12 for Ingenix at its office in the Central District of California.

13 126. The PacifiCare employees obtained their knowledge about risk adjustment from
14 various sources, including CMS. Will attended CMS training programs focused on the
15 Risk Adjustment Participant Guide and was also familiar with the content of this
16 document based on her reading of it. Prior to the acquisition, PacifiCare also conducted
17 various risk adjustment programs, including a chart review program, and provided
18 training to healthcare professionals concerning medical record documentation and
19 diagnosis coding.

20 127. In addition, PacifiCare had been a member of an industry association called the
21 Industry Collaboration Effort ("ICE") and ICE's Risk Adjustment Data Acquisition &
22 Reporting ("RADAR") team. ICE was an association of MA Organizations and provider
23 groups in California that served beneficiaries in MA Plans. ICE focused on risk
24 adjustment issues and other matters of particular importance to the managed care
25 industry. After PacifiCare became part of UHG, the PacifiCare employees continued to
26 participate in ICE and its RADAR team. During the 2006 and 2007 time period (perhaps
27 longer), Leal was the President and a member of the Board of Directors of ICE. Leal
28 continued in a leadership role at ICE until 2013. During that time period, she worked for

1 Ingenix and then Optum. At the ICE Annual Conferences in 2006 and 2007, Leal made
2 presentations about “[p]rovider coding [being] highly inaccurate and incomplete,” CMS
3 reviews showing that 30 percent of the provider-reported diagnoses were not supported
4 by medical records, and the use of chart reviews to generate larger risk adjustment
5 payments. Furthermore, throughout the time period relevant to this Amended
6 Complaint, one or more of the Defendants were members of ICE and, at various times,
7 employees of Ingenix, Optum, UnitedHealthcare of California, and UnitedHealthcare
8 participated in the activities of the RADAR team. As reflected in the meeting minutes of
9 the RADAR team, these Defendants included Ingenix (*e.g.*, August 2011),
10 UnitedHealthcare of California (*e.g.*, March 2014), Optum (*e.g.*, November 2014, June
11 2015, and March 2016), and UnitedHealthcare (*e.g.*, June 2015 and March 2016).

12 128. The former PacifiCare employees knew that a beneficiary’s medical record was
13 the “source of truth” for purposes of submitting valid diagnostic data to the MA Program
14 for risk adjustment payments. For example, in a March 2006 email, Will acknowledged
15 that diagnosis data had to be “fully supported by medical record documentation.” As
16 another example, in 2008, Ingenix sent notices to capitated provider groups in California
17 instructing them that they should only report to Ingenix “diagnosis codes that can be
18 supported by the documentation in the medical record.” Furthermore, according to
19 Randall Myers at Ingenix, these providers, when they submitted diagnoses through a
20 web portal referred to as the Alternate Submission Method, were required to attest that
21 their diagnostic data complied with CMS requirements for the submission of valid data.
22 Other employees of the UHG Managing Defendants also understood these requirements,
23 including Patty Brennan who, when she was Director of Retrospective Services
24 (including chart review services) at Ingenix and then Optum, acknowledged that CMS’
25 Risk Adjustment Participant Guide established that the medical record was the “one
26 source of truth” for MA Organizations to ensure that they were submitting accurate data
27 to CMS for risk adjustment payments. In addition, Kimberly Halva, the Compliance
28

Officer for UnitedHealthcare Medicare & Retirement from 2010 to 2013, was aware that “[a] medical record must substantiate all diagnostic information provided to CMS.”

129. In addition, those Defendants and their employees involved in ICE and its RADAR team knew or should have known that enrollees’ medical records are the “source of truth” based on guidance documents issued by the RADAR team about this fundamental payment requirement. In 2010, ICE’s RADAR team issued a guidance document highlighting that CMS requires complete and accurate documentation of medical conditions for the submission of diagnoses, that only diagnoses depicting documented medical conditions which required or affected patient care are valid, and that diagnosis codes cannot be submitted “until [the provider] is sure the patient has the condition.” The ICE RADAR Physician Education Work Group also issued a similar document called “Best Practices for Risk Adjustment,” which advised that “ICD-9-CM coding requires documentation of the diagnosis in the medical record as well as evaluation and management. Documentation should indicate how this diagnosis impacted this episode of care.” In 2012, ICE also issued a Medical Record Documentation Tips sheet, which once again warned MA Organizations and providers not to code diagnoses that are probable, suspected, questionable, or “working diagnoses,” and also not to code diagnoses when medical records use “other similar terms indicating uncertainty.” More recently, in 2013, ICE issued a “Documentation Newsletter” that repeated earlier advice and also cautioned that “[c]oding guidelines **prohibit coders from making assumptions**” regarding whether a diagnosis is or is not substantiated by a patient’s medical record. (Emphasis in the original.) That is, the medical record must “clearly reflect” the medical condition.

130. The former PacifiCare employees also were aware that provider-reported diagnoses often did not comply with CMS requirements and were often inconsistent with the information in their patients’ medical records. According to Dumcum, when he was the Chief Financial Officer of PacifiCare, he and others there knew “in Medicare Advantage that the claims did not always match the medical record documentation. So

1 ... we were concerned that it should be a place that we try to improve, that we try to
2 educate and try to identify things to make that better.” In addition, Will, Holt and other
3 former PacifiCare employees were aware of common diagnosis coding errors made by
4 providers. They learned of these problems from PacifiCare employees working in the
5 field with physicians, reports of physician-coding trends, and reports from PacifiCare-
6 employed certified coders. For example, a June 2003 PacifiCare PowerPoint
7 Presentation by Will, Holt, and other PacifiCare employees identified diabetes as a
8 medical condition that was often miscoded.

9 131. In 2005, the PacifiCare employees, including Dumcum, Will, Leal, and Holt, were
10 also aware of a data validation review conducted by the Government of diagnosis codes
11 previously submitted for medical encounters that occurred in 2003 (*i.e.*, encounters with
12 2003 dates of service). The PacifiCare employees were aware that the results of CMS’
13 medical record reviews showed that approximately 30 percent of the provider-reported
14 diagnoses were invalid and, after UHG acquired PacifiCare, Dumcum, Will, and Leal
15 shared this information with other individuals who worked for various UHG Managing
16 Defendants such as Jerry Knutson, Lee Valenta, Cynthia Polich, Relator Poehling, Paul
17 Bihm, Janice Redmond, and Carol Thompson. Furthermore, the results from this CMS
18 review also put the former PacifiCare employees on notice that providers were reporting
19 codes that were just plain wrong, were coded from laboratory reports, and did not reflect
20 current medical conditions – all of which was in breach of the fundamental rules that the
21 diagnosis codes submitted to Medicare must be accurate and truthful, based on face-to-
22 face visits (*e.g.*, not lab reports), reflect current conditions, and otherwise be valid.

23 132. Moreover, the former PacifiCare employees were aware that MA Organizations
24 are not entitled to risk adjustment payments based on diagnoses that are unsupported by
25 the beneficiaries’ medical records, and that CMS expected health plans to delete
26 incorrect diagnoses submitted for risk adjustment payments. They also knew, based on
27 their experiences at PacifiCare, that CMS could audit the diagnoses MA Organizations
28 submitted for risk adjustment payments.

1 133. In fact, in April 2005, Holt participated in a “CMS data validation call” in which
2 CMS explained that it expected MA Organizations to correct invalid diagnoses
3 submitted to Medicare for risk adjustment payments. Holt reported this to Will and
4 suggested creating a spreadsheet to give to providers for providers to use to inform
5 PacifiCare of invalid diagnoses and allow PacifiCare to delete them. As part of this
6 discussion, Leal explained to Will that, if provider groups “during their chart audits find
7 that physicians have documented rule-out or history-of but coded as if the member had
8 [the medical condition,] they want to be able to fix it so when we get audited again by
9 CMS it is fixed.” Leal further stated that “[o]bviously, as issues are identified there will
10 need to be education to physician[s] on changing their practice of coding incorrectly (as
11 you remember Dr. Norman mentioned habits doctors have, that we will need to break).”
12 Holt agreed that provider groups

- 13 • need something ‘standardized and formalized’ so they know what fields to report
14 if and when they find any obvious discrepancies. They are the type of thing that
15 Pam [Leal] stated in her email below, the code of the actual disease when the
16 documentation clearly only supports ‘history of’ or ‘suspected’ (and then it was
17 not confirmed), or an obvious miscode; the things that Melissa [Ferron] is finding
18 in the data validation. Provider groups will find this during their own chart audits.
- 19 • and CMS “was very firm that we need to be doing this, so I would expect [CMS]
20 will look for our process when they get around to more formally auditing our
21 oversight of this process.”

22 134. In addition, in August 2006, a year after the April 2005 CMS validation call, Will
23 and Holt knew that CMS had confirmed, in responses to questions about its RADV
24 audits, that it would invalidate diagnoses submitted to Medicare that were not supported
25 by the beneficiaries’ medical records.

26 135. After PacifiCare became part of UHG, the former PacifiCare employees began
27 educating others at the UHG Managing Defendants about risk adjustment. In particular,
28 Dumcum made a series of presentations to various employees, including senior

1 management employees of the UHG Managing Defendants such as Ovations' Jerry
2 Knutson, where he explained that "[p]rovider coding is highly inaccurate and
3 incomplete" and that "more than 30% of coded conditions are not supported by CMS
4 validation findings." Other senior executives or managers of the UHG Managing
5 Defendants that were recipients of the slide presentation with this information included
6 Cynthia Polich at Ovations (who was emailed a copy of the presentation in March 2007),
7 Lee Valenta at Ingenix (to whom Knutson emailed a copy of the presentation in May
8 2007), and Relator Poehling.

9 136. Furthermore, Defendants' own data revealed and confirmed problems with
10 provider-reported diagnoses. In September 2006, Will, Holt, Leal, and others generated
11 a list of providers that were outliers, which, at that time, they defined as providers with
12 significantly above average patient risk scores. This information made them "question
13 the validity" of these providers' codes. These provider groups included Healthcare
14 Partners Medical Group, Edinger Medical Group, WellMed, and other incentivized
15 provider groups which, based on subsequent reviews conducted as part of the RACCR
16 Program, submitted significant numbers of invalid diagnoses. After 2006, Ingenix and
17 then Optum continued to track risk scores of beneficiaries cared for by various provider
18 groups and saw risk scores they considered to be outliers. They also generated
19 prevalence reports that identified the provider groups with abnormally high average risk
20 scores. These prevalence reports also identified specific medical conditions (or
21 categories of medical conditions, that is, HCCs) that were reported by various provider
22 groups at rates significantly above average.

23 137. In 2007, Dumcum and other former PacifiCare employees were given the
24 responsibility for creating and then managing a risk adjustment service group within
25 Ingenix, the predecessor to Optum. This enabled UHG to move the risk adjustment
26 operations to Ingenix. Ovations and later UnitedHealthcare became Ingenix's internal
27 "client." This move also enabled Ingenix to offer its risk adjustment services to other
28 MA Organizations which it referred to as its "commercial clients." Dumcum became

1 Senior Vice President and Will became Vice President of Risk Adjustment Programs for
2 this new risk adjustment service group within Ingenix. After 2007, Ingenix hired
3 additional employees and increased the size of the Ingenix risk adjustment group,
4 including the size of the group in this District. The Ingenix risk adjustment group in this
5 District was responsible for, among other things, risk adjustment data/diagnosis codes
6 submissions, risk adjustment data remediation and the deletion of invalid diagnoses, risk
7 adjustment data analytics and finance (*e.g.*, tracking the results and financial impact of
8 the Chart Review and Claims Verification Programs), provider outreach and programs
9 relating to risk adjustment, and the Chart Review Program operations.

10 138. In January 2007, Dumcum made a presentation in which he stated that the
11 validation of provider-reported diagnosis codes had to improve. Dumcum knew that
12 providers were reporting unsupported diagnoses and that both fee-for-service and
13 capitated providers needed to improve their validation rates.

14 139. Prior to this, in 2006, Dumcum, Will, Holt and others had already participated in
15 discussions about conducting an Internal Data Validation (“IDV”) Program focused on
16 the validity of provider-reported diagnoses. The purpose of the IDV Program was to
17 determine whether the physicians’ medical records supported the diagnoses they
18 reported to the UHG Managing Defendants, who in turn submitted the diagnoses to
19 Medicare for risk adjustment payments.

20 140. In February 2007, Will, Holt, and Patricia Rasmussen, Manager of Encounter
21 Submissions at Ingenix, were informed of specific provider-reported codes that were
22 reported based on “faulty coding.” For example, Sharp Community Medical Group in
23 California submitted a diagnosis tracking to HCC 155 (Major Head Injury) but there was
24 “no documentation to support intracranial injury.” Likewise, Monarch/South Coast,
25 located in this District, submitted a diagnosis tracking to HCC 17 but there was “[n]o
26 documentation of diabetes or diabetic complication[.]” Will, Holt, and Rasmussen were
27 requested to remove, or delete, these codes before the final submission deadline but
28 Rasmussen replied that they did not have resources and could not do this.

1 141. In addition, UHG Managing Defendants knew that a significant percentage of
2 provider-reported diagnoses were invalid based on audits performed by CMS and similar
3 internal audits or reviews that they performed. For example, one such audit was
4 performed on diagnoses submitted for 2004 date of service medical encounters (*e.g.*
5 physician office visits) that mapped to 1,231 HCCs. The results were reported in a
6 September 2007 Risk Adjustment Programs presentation sent by Dumcum to Relator
7 Poehling. The presentation showed that no support was found in the beneficiaries'
8 medical records for 32 percent of the HCCs at issue. That is, the records did not confirm
9 the diagnoses mapping to 32 percent of the HCCs under review. The same presentation
10 showed the results of another audit of diagnoses submitted for 2005 date of service
11 medical encounters that mapped to 1,160 HCCs. It showed that, as of the date of the
12 presentation, 18 percent of the HCCs were "NOT supported" and another 8 percent were
13 most likely not supported.

14 142. In October 2007, Ingenix also emphasized the fact that more than 30 percent of
15 provider-reported diagnoses were unsupported by the beneficiaries' medical records as a
16 selling point for the risk adjustment services, including data validation services, that it
17 marketed to another MA Organization.

18 143. During the 2007 and 2008 time period, Ingenix implemented the IDV Program.
19 The program focused on physicians in California, Missouri, Texas, and Washington who
20 reported more than three times the number of diagnoses than the average. The program
21 was very small in scope, but the results confirmed that providers reported many invalid
22 diagnoses. In January 2008, the results for medical encounters in 2006 showed a 30
23 percent invalidation rate. That is, approximately 30 percent of provider-reported
24 diagnoses were invalid, which was consistent with what the PacifiCare employees had
25 known since at least 2005. In January 2008, these results were sent to Will, Holt, and
26 Rasmussen.

27 144. Accordingly, by at least 2005, the former PacifiCare employees Dumcum, Will,
28 Holt, and Leal knew that at least 30 percent of provider-reported diagnoses were not

1 supported by the beneficiaries' medical records; by at least 2007, Dumcum had imparted
2 this knowledge to others at the UHG Managing Defendants; and, by at least 2008, the
3 UHG Managing Defendants' own medical record reviews had confirmed that fact.

4 145. Additional evidence demonstrates that, by at least the 2007 and 2008 time period,
5 the invalidity of provider-reported diagnoses was an ongoing concern. For example, in
6 September 2008, one of United's own actuarial consulting subsidiaries, Reden &
7 Anders, made a presentation that identified unsupported diagnosis codes as a "Potential
8 Compliance Risk Area" and warned that "[t]here is no such thing as minimally
9 compliant." Ovation's President Cynthia Polich possessed a copy of this presentation.

10 146. In addition, by at least 2008, the former PacifiCare employees, then at Ingenix,
11 had also imparted their knowledge that the UHG Managing Defendants were obligated
12 to identify and delete invalid provider-reported diagnoses. For example, a January 2008
13 training guide entitled "CMS-HCC Risk Adjustment Training Module," created by
14 Ingenix personnel for provider outreach, recognized that it is the accuracy of medical
15 record documentation and coding that supports entitlement to risk adjusted payments
16 from the Medicare Program. The presentation recognized that accurate medical record
17 documentation is key to accurate risk adjustment payments and necessary to validate
18 payments. In addition, in June 2008 emails, Patty Brennan, the Compliance Manager for
19 Ingenix, and Karen Wagor, a Senior Coder and National Trainer for Ingenix, both of
20 whom worked at Ingenix's Santa Ana office, recognized that Defendant MA
21 Organizations were not entitled to payment based on diagnoses that were not validated
22 by beneficiaries' medical records and that those entities risked losing revenue based on
23 invalid diagnoses: "We could be at risk of losing \$\$ if there isn't another piece in the
24 documentation before or after this date of service for the HCC if it can't be verified with
25 the most accurate validation. **The medical record must support all diagnoses coded
26 for the date of service and must be able to stand alone for an audit on those reported
27 diagnosis codes.**" (Emphasis in the original.)
28

1 147. Moreover, the UHG Managing Defendants knew they were required to effectively
2 address compliance issues. For example, a presentation from November 2009 entitled
3 “UnitedHealth Group – Audit Management Overview,” made at a Medicare Compliance
4 Oversight Committee meeting, expressly acknowledged the legal obligation to
5 implement an effective compliance program and stated that “[i]n order to have an
6 effective Compliance Program, an organization must have a robust internal monitoring
7 and auditing process in place.” In 2009, Jenny O’Brien, the Chief Medicare Compliance
8 Officer, was a Co-Chair of the Medicare Compliance Oversight Committee, a position
9 she held until approximately 2015. During this time period, O’Brien worked for
10 Ovations and then UnitedHealthcare Medicare & Retirement. Her Co-Chair was the
11 Chief Executive Officer or another officer of Ovations and then UnitedHealthcare
12 Medicare & Retirement. In the 2010-2011 time frame, the Co-Chair was Tom Paul.
13 And, as another example, in approximately May 2010, Larry Renfro, who was then the
14 Chief Executive Officer of both the Public & Senior Market Group (PSMG) and
15 Defendant Ovations, and David Orbuch, who was then the Executive Vice President and
16 Chief Compliance Officer of PSMG, met with CMS regarding their Medicare
17 compliance program and represented to CMS that they would “meet and exceed” CMS’
18 expectations.

19 148. Kimberly Halva, UnitedHealth Medicare & Retirement’s Finance Compliance
20 Officer from 2010 to 2013, also was keenly aware that the validity of provider-reported
21 diagnoses needed to be addressed. Halva understood that MA Organizations had an
22 obligation to identify and delete diagnoses that were not supported by its beneficiaries’
23 medical records. (Halva was also familiar with the Risk Adjustment Participants Guide.)
24 In November 2010, she sent a memorandum to Relator Poehling with recommendations
25 for compliance problems focused on identifying and deleting invalid provider-reported
26 diagnoses. In January 2011, she sent Relator Poehling “a few suggestions for risk
27 mitigation type programs UnitedHealthcare Medicare and Retirement could take to more
28 equally distribute resources between programs dedicated to improper coding or billing

1 and those focused on identifying additional reimbursement opportunities through
2 improved coding/documentation.” One of Halva’s suggestions was for
3 UnitedHealthcare to perform “General Coding Accuracy Audits,” which were essentially
4 “look both ways” medical record reviews that would identify both incomplete coding
5 (which she referred to as “under-coding”) and inaccurate coding (which she referred to
6 as “over-coding”). Another of her suggestions was for UnitedHealthcare Medicare &
7 Retirement to “Specifically Identify Traditionally Over-Coded or Incorrectly Coded
8 Conditions,” “such as stroke or COPD,” and conduct medical record reviews to
9 determine if those traditionally over-coded or incorrectly coded conditions could be
10 validated. Halva and Scott Theisen, the Chief Financial Officer for UnitedHealthcare
11 Medicare & Retirement from 2010 to 2013, were Co-Chairs of the UnitedHealthcare
12 Medicare & Retirement Finance Compliance Oversight Committee, which was
13 responsible for risk adjustment compliance issues. Halva also reported to Theisen as
14 well as Jennifer O’Brien.

15 149. In or around early 2009, Deloitte & Touche, which served as the public
16 accounting firm for UHG (which filed a consolidated financial statement for all of its
17 businesses), sent a memo to Ovations regarding an audit it performed to investigate the
18 appropriateness of an accounting treatment used by Ovations. In the audit, Deloitte &
19 Touche “looked both ways” when reviewing MA Program beneficiaries’ medical records
20 because, according to Auditor Bill Nepple, that was the only way to achieve a full and
21 complete picture of a beneficiary’s health status. The results of this “look both ways”
22 audit were communicated to Relator Poehling in February 2009 and he was aware that
23 both ADDS and DELETES resulted from the audit.

24 150. In addition, as part of their compliance efforts, the UHG Managing Defendants
25 had, since at least 2008, required financially-incentivized capitated provider groups to
26 submit attestations to them that certified that the diagnoses that they reported to the UHG
27 Managing Defendants were valid and met CMS’s requirements. For example, in or
28 around 2008, Ingenix sent notices to these providers describing these “**CMS DATA**

1 **ACCEPTANCE GUIDELINES,”** and stating that “[a]ll diagnoses must be
2 **documented at the time of the patient encounter or after receipt and confirmation**
3 **of the diagnosis (i.e. Lab or Radiology report) and must be documented in the**
4 **medical record,”** and “[o]nly report diagnosis codes that can be supported by the
5 **documentation in the medical record,”** and “[a]ll diagnosis codes should be valid . . .
6 .” (Emphasis in the original.)

7 151. In 2010, Holt and Leal were a part of an email chain discussing California
8 provider groups and risk adjustment data validation. Based on Holt’s involvement with
9 ICE’s RADAR team (and possibly other sources), Holt noted that California provider
10 groups are “acutely aware of the importance of data validation” and that risk adjustment
11 data validation was “a subject discussed frequently at the ICE meetings.” In the same
12 email chain, Holt also assured Relator Poehling that provider groups in California would
13 understand the importance of CMS’s RADV audits.

14 152. In November 2009, the results of an IDV audit for one of Ingenix’s commercial
15 clients, another company that owned and operated MA Plans, further confirmed what the
16 UHG Managing Defendants already knew, that is, that providers were reporting invalid
17 diagnoses at an alarming rate. The results of the audit showed a 45 percent invalidation
18 rate. Providers in that commercial client’s plans were providers for beneficiaries in one
19 or more of the Defendant MA Organizations’ Plans.

20 153. In mid-2010, the results of IDV reviews once again confirmed an ongoing
21 problem with the validity of provider-reported diagnoses. The results showed an
22 invalidation rate of approximately 40 percent for California provider groups which cared
23 for beneficiaries enrolled in one of more UHG MA Plans. Higher than the 30 percent
24 invalidation rate reported in 2005, these results confirmed that a significant percentage of
25 provider-reported diagnoses were invalid. In mid-2010, these results were shared with
26 Relator Poehling, Keith Dobbins (an attorney for one of the UHG Managing
27 Defendants), Stephanie Will, Patty Brennan, Ronnie Grower, among other individuals
28 working for the UHG Managing Defendants.

1 154. Also, in June 2010, an Ingenix Health Reform Implementation (HRI) Report
2 prepared for UHG's then Chief Executive Officer, Steve Hemsley, and other members of
3 the "UHG executive team" identified compliance as an important issue of immediate
4 concern to UHG, particularly compliance with the FCA. This report was sent to
5 Dumcum, Knutson, Valenta, Andy Slavitt, Timothy Wicks, and other individuals
6 working for the UHG Managing Defendants at the time.

7 155. Furthermore, in 2010, additional Government audits confirmed the problem with
8 invalid provider-reported diagnoses. In March 2010, the HHS Office of Inspector
9 General ("OIG") sent Jack Larsen, the Chief Financial Officer of Ovations, a draft report
10 of an audit of the risk adjustment data that one of UHG's Texas MA Organizations, then
11 called PacifiCare of Texas, submitted for payment year 2007. In July 2010, OIG sent
12 Thomas Paul, the Chief Executive Officer of Ovations, a draft report of an audit of the
13 risk adjustment data that UHG's California MA Organization, then called PacifiCare of
14 California, submitted for payment year 2007. In the draft reports, the OIG concluded
15 that the diagnoses for half the beneficiaries in the California audit and 44 percent of the
16 beneficiaries in the Texas audit were invalid, and that both plans' practices were not
17 effective for ensuring that the diagnoses they submitted to CMS complied with CMS
18 requirements. These draft OIG reports were described as a "top issue" in the third
19 quarter 2010 Public & Senior Markets Group Medicare Compliance Program Overview
20 for which Jennifer O'Brien was the Compliance Program Lead and Tom Paul was the
21 Business Lead. In May 2010, Paul sent OIG a response about its draft report relating to
22 PacifiCare of Texas and, in October 2010, Paul (whose job title had then been changed
23 to Chief Executive Officer of UnitedHealthcare Medicare & Retirement) sent OIG a
24 response about its draft report relating to PacifiCare of California. After consideration of
25 Paul's responses to the draft audit reports, the OIG issued final reports concluding that
26 the health risk scores for 45 percent of the beneficiaries in the California audit and 43
27 percent of the beneficiaries in the Texas audit were invalid because the diagnoses were
28 not supported by the beneficiaries' medical records or were uncertain or unconfirmed

1 diagnoses. In both the draft and final reports, the OIG provided examples of
2 unsupported diagnoses. The OIG also concluded that the MA Organizations should
3 refund the overpayments due to these invalid diagnoses. In addition to Larsen and Paul,
4 other individuals who were aware of the OIG audit reports during the 2010 and 2011
5 time period included Scott Theisen, Jenny O'Brien, Kimberly Halva, Joseph Keen, and
6 Jeffrey Dumcum.

7 156. The results of RADV audits were also of concern to UnitedHealthcare. The third
8 quarter 2010 Public & Senior Markets Group Medicare Compliance Program Overview
9 (for which Jennifer O'Brien was the Compliance Program Lead and Tom Paul was the
10 Business Lead) also stated that CMS was conducting RADV audits of three of the
11 Defendant MA Organizations. Then, when CMS announced in February 2011 that it
12 planned to extrapolate the sample audit results, Charles Hanson, the then Vice President
13 of Finance and Underwriting at UnitedHealthcare Medicare & Retirement, left a
14 voicemail message for Relator Poehling stating: "I haven't been close to this for . . .
15 three or four years now probably, but back that far I know the results of our RADV
16 audits were concerning, to say the least. That we had significant . . . errors or
17 undocumented RAFs [*i.e.*, undocumented diagnoses] in our claim submissions." He
18 asked Poehling: "I'm sure we're careful about how we communicate these findings, but
19 can you give me a sense of kind of more recent RADV audits, what impact could this
20 have? So just generally, are we still sort of, I'll say as bad as we were a few years ago? .
21 . . So, what's the potential impact on revenue of extrapolating these RADV audit
22 findings . . . ?"

23 157. Because of the problem with provider-reported diagnoses, in 2010, the UHG
24 Managing Defendants started the RACCR Program, as described more fully at
25 paragraphs 239-292 below, and Claims Verification Program, as described more fully at
26 paragraphs 196-234 below. Mary Hammond, one of the UnitedHealthcare Medicare &
27 Retirement employees who oversaw the RACCR Program, described it as "an important
28 part of Medicare & Retirement's efforts to meet CMS requirements to submit accurate

1 risk adjustment data.” The Claims Verification Program was also supposed to satisfy
2 this basic payment rule.

3 158. However, the major effect of the Claims Verification and RACCR Programs was
4 that they highlighted that a significant amount of the risk adjustment payments claimed
5 by the UHG Managing Defendants on behalf of the Defendant MA Organizations and
6 paid to the Defendant MA Organizations by the Medicare Program were unsupported
7 and invalidated by beneficiaries’ medical records. For instance, as explained in more
8 detail in paragraph 206 below, in December 2010, the results of the first pilot phase
9 (Phase I) of the CV Program showed that provider-reported diagnoses were unsupported
10 for over 50 percent of the medical records reviewed. Over a year later, as explained in
11 more detail in paragraph 208 below, Optum had completed the second pilot phase (Phase
12 II) of the CV Program on 17,398 charts and the results were even more striking. Phase II
13 identified 4,786 invalid diagnoses to be deleted, which was greater than the number of
14 additional diagnoses (ADDS) identified based reviews of the same medical records. In
15 February 2012, Dumcum, who was responsible for the Claims Verification Program, met
16 with Relator Poehling and Theisen, who was the Chief Financial Officer of
17 UnitedHealthcare Medicare & Retirement at that time, and reported: “I’m deleting as
18 much as I’m adding at the end of the day. And I don’t know if—you know, what I want
19 to do.” He also stated: “we’re getting more and more red here,” and that Claims
20 Verification “eats in very substantially” to the revenue from ADDS from chart reviews.

21 159. In addition, as explained in more detail below, by February 2012, there were
22 “5,519 bad codes” that were “identified and deleted” as the result of RACCR reviews of
23 the medical records for only 13,451 beneficiaries. On a beneficiary basis, the results
24 showed more than a 40 percent invalidation rate.

25 160. Over time, the UHG Managing Defendants also obtained more information about
26 incorrect diagnosis coding by providers, some of which information confirmed what had
27 been known for years. For example, by at least 2013, Tracey Bradberry, an Ingenix and
28 then Optum employee who was a certified coder, was aware of various reasons for

1 invalid provider-reported diagnoses, including, for example, the “[c]linical findings
2 and/or treatment does not support the diagnosis” and “[n]ot a current condition.” In
3 addition, in March of 2014, Melissa Ferron, a coding consultant, sent Optum employee
4 Christopher Webb a list identifying various HCC codes and diagnosis codes that were
5 unlikely to validate based on medical record reviews because providers frequently used
6 the codes incorrectly. These included HCCs 17 (diabetes with acute complications), 96
7 (specified heart arrhythmias), 104 (monoplegia, other paralytic syndromes), and 111
8 (chronic obstructive pulmonary disease).

9 161. More recently, other employees of the UHG Managing Defendants also have
10 recognized the obligation to ensure the validity of diagnoses submitted for risk
11 adjustment payments. They also understood that the obligation to correct invalid data
12 provided to Medicare for risk adjustment payments. For example, in an April 2013
13 email, Marybeth Meyer, the Vice President of Operations for UnitedHealthcare
14 Medicare & Retirement who succeeded Relator Poehling in managing the risk
15 adjustment team for that group, stated that “as a Medicare Advantage Plan, if we become
16 aware of a coding issue that impacted the revenue received from CMS for risk
17 adjustment, we are obligated to investigate and correct the submissions to CMS.” In
18 response to Meyer’s email, Halva, then Compliance Officer for UnitedHealthcare
19 Medicare & Retirement, agreed. She also stated that “[w]e have an obligation to go back
20 to CMS and correct submissions that impact the revenue received for risk adjustment
21 purposes.” Halva did not think that anything was wrong with the requirement that
22 UnitedHealthcare Medicare & Retirement delete unsupported diagnoses. Moreover, she
23 believed that “arguably” this obligation existed for ten years because of the ten-year
24 statute of limitation for the Government to pursue FCA claims against entities that
25 knowingly fail to delete unsupported diagnoses.

26 162. As another example, in February 2014, Melissa Sedor who worked in
27 UnitedHealthcare Medicare & Retirement’s controller’s office, sent an email stating that
28 “it is our responsibility to submit accurate records to CMS. Even if the provider submits

1 bad data to us, the responsibility is on us to be submitting the correct data.” Sedor
2 further explained that this was the reason United implemented compliance programs like
3 RACCR and Claims Verification. Sedor’s email was sent to others at UnitedHealthcare,
4 including Marybeth Meyer and William Hnath.

5 163. Finally, other employees in addition to Halva were aware of the potential FCA
6 liability for submitting invalid diagnoses to CMS for risk adjustment payments or for
7 failing to delete them. For example, in 2010, Carol Thompson, then National Manager
8 for Ingenix’s Risk Adjustment Programs who worked at the Ingenix office in this
9 District, provided the following reason as justification for funding for a coding vendor
10 who was assisting the UHG Managing Defendants with a CMS RADV audit: “Politics
11 and Congressional scrutiny put an exclamation point on our need to demonstrate that the
12 data submitted to CMS for risk adjustment payment is valid. Data that drives payment
13 from the government can be reviewed to determine if the claims are ‘valid.’ Improper
14 claims submission can fall under the False Claims Act.” Also, as alleged more fully
15 below, Dumcum informed Relator Poehling that the FCA was a consideration in
16 deciding whether the UHG Managing Defendants should implement the Claims
17 Verification Program and “look both ways” at the results of their Chart Review Program.

18 **II. Chart Reviews and Claims Verification**

19 **A. United’s “Look One Way” Chart Review Program**

20 164. Over the last decade, Defendants have obtained billions of dollars of risk
21 adjustment payments from Medicare from its national Chart Review Program because
22 they only looked one way at the results of their coders’ chart reviews. As part of this
23 program, the coders were instructed to perform “blind” reviews of the beneficiaries’
24 medical records. That is, the coders did not know which, if any, diagnoses had been
25 reported by the providers who treated the beneficiaries and created the medical records.
26 Thus, rather than confirming diagnoses already reported by the providers or identifying
27 only additional diagnoses supported by the records, the coders were instructed to look
28 for all medical conditions purportedly documented in the records, record all diagnosis

1 codes identifying those conditions, and give all of those codes to the UHG Managing
2 Defendants. But, the UHG Managing Defendants selectively utilized results of these
3 chart reviews – that is, the coders’ list of diagnosis codes – for the sole purpose of
4 identifying diagnosis codes that the providers had not reported and submitting ADDS for
5 additional risk adjustment payments. They did not utilize the coders’ lists of diagnosis
6 codes to determine if the providers had reported codes that were not supported by their
7 own medical records. If the UHG Managing Defendants had looked both ways and
8 deleted these unsupported and, thus, invalid provider-reported codes, their national Chart
9 Review Program would have been far less lucrative.

10 165. The UHG Managing Defendants’ national Chart Review Program was their largest
11 risk adjustment revenue-generating program. This program was started in 2005 as an
12 outgrowth of the chart review program that PacifiCare was already conducting.
13 Dumcum, Will, and other former PacifiCare employees became key participants in
14 designing, implementing, and managing the United Managing Defendants’ revenue-
15 generating national Chart Review Program. Will was the Program Manager for the
16 program.

17 166. During the first few years of the program, hundreds of thousands of charts were
18 reviewed each year in order to mine them for additional diagnosis codes. In 2008, The
19 Coding Source (“TCS”), a chart review/diagnosis coding vendor retained by Ingenix,
20 reported to Carol Thompson at Ingenix that “[s]ince 2005, TCS has partnered with
21 PacifiCare-United and Ingenix to support your HHC initiatives. TCS has successfully
22 completed 460,000 chart reviews for multiple United regions.”

23 167. In 2009, the UHG Managing Defendants significantly expanded the size of the
24 national Chart Review Program by providing Ingenix with the funds to acquire a coding
25 vendor called AIM Healthcare Services, Inc. and integrating Ingenix’s operations in
26 Santa Ana, California, and the AIM coding operations in Tennessee, and by providing
27 Ingenix with the funds to develop an in-house chart review computer database system
28 called ChartSync so that Ingenix’s in-house coders and third-party coding vendors could

1 electronically review medical records and electronically record the coding results of their
2 reviews. At or about the same time, the UHG Managing Defendants also expanded the
3 size of the Chart Review Program by providing Ingenix with the funds to open offices in
4 foreign countries (the Philippines and India) where it could hire foreign workers to
5 review beneficiaries' medical records in order to try to find additional diagnosis codes.

6 168. Due to the increased resources devoted to the Chart Review Program, the number
7 of medical records reviewed in the hunt for additional codes significantly increased over
8 time. For the first few years of the Chart Review Program, between 500,000 and
9 600,000 charts were reviewed each year. According to a presentation by Dumcum,
10 600,000 charts were reviewed in 2006 and, as of September 21, 2007, 400,000 charts had
11 been reviewed so far that year with 200,000 charts remaining for review during the
12 fourth quarter of 2007.

13 169. By 2010, the number of chart reviews had increased substantially to
14 approximately 850,000 charts for that year. For 2011 to 2014, approximately 1.5 million
15 charts were reviewed each year. The Government believes that, after 2014, the national
16 Chart Review Program was most likely similar in size.

17 170. As part of this national Chart Review Program, the UHG Managing Defendants
18 focused primarily on the review of charts from providers paid on a fee-for-service basis.
19 Ingenix and then Optum or their vendors obtained medical records from thousands of
20 these providers throughout the United States. They or their vendors sent these medical
21 records to coders that they employed in Tennessee, India, and the Philippines. They also
22 hired coding vendors to review these medical records. Those vendors were located in
23 various locations within and outside of the United States.

24 171. Physician groups owned by one or more of the UHG Managing Defendants also
25 had chart review programs. WellMed had a group called DataRaps that conducted
26 reviews of its physicians' medical records for patients in one or more Defendant MA
27 Organizations' MA plans. Southwest Medical Associates conducted some of its own
28

1 reviews though it also relied on Ingenix's/Optum's coding operations in Tennessee and
2 coding vendors for its chart reviews.

3 172. In 2006, the Defendant MA Organizations obtained approximately \$270 million in
4 additional risk adjustment payments from the ADDS that were submitted on their behalf
5 by the UHG Managing Defendants based on the national Chart Review Program. The
6 return on investment was substantial (approximately \$250 million) as it cost only
7 approximately \$18 million to review the charts in 2006.

8 173. Not unexpectedly, as the number of medical records reviewed significantly
9 increased over the years, so did risk adjustment payments from ADDS based on the
10 national Chart Review Program. Defendant MA Organizations received approximately
11 \$426 million in additional risk adjustment payments from ADDs the UHG Managing
12 Defendants submitted to Medicare based on the medical record reviews conducted as
13 part of the Chart Review Program for the 2011 payment year, approximately \$455
14 million for the 2012 payment year, approximately \$758 million for the 2013 payment
15 year, and approximately \$882 million for the 2014 payment year.

16 174. For payment years 2010 to 2015 combined, Defendant MA Organizations
17 obtained over \$3 billion in additional risk adjustment payments from Medicare due to the
18 ADDs the UHG Managing Defendants submitted on their behalf based on medical
19 record reviews conducted as part of the national Chart Review Program.

20 175. United's Chart Review Program was conducted according to an annual cycle. For
21 example, in the spring of 2012, Optum started its collection and review of medical
22 records relating to medical encounters in 2011 (*i.e.*, with 2011 dates of service). These
23 efforts then intensified through the remainder of the year until the final deadline for
24 submitting diagnosis codes to Medicare for payment year 2012, which was February 15,
25 2013.

26 176. Prior to the start of each annual cycle, the UHG Managing Defendants' senior
27 executives set a revenue target for the program. After chart reviews started, these senior
28 executives then closely monitored the progress of the program and, if the forecast did not

1 look like the program would achieve the revenue target, they made changes to the
2 diagnostic coding being performed by the coders. For instance, when UnitedHealthcare
3 Medicare & Retirement and Optum were not achieving the return on investment
4 expected from chart reviews for the 2012 payment year, they “liberalized” coding
5 policies and engaged in a “Recode Project” consisting of re-reviewing 900,000 charts
6 that had already been mined once for additional diagnoses. They liberalized the coding
7 policies to enable the coders to identify more diagnosis codes purportedly supported by
8 the beneficiaries’ medical records. In this second-round review, the coders did identify
9 more codes purportedly supported by the records based on the liberalized coding
10 policies, and UnitedHealthcare Medicare & Retirement and Optum submitted those
11 codes to Medicare for additional risk adjustment payments. Scott Theisen at
12 UnitedHealthcare Medicare & Retirement and Karen Erickson and Jon Bird at Optum
13 were involved in this “Recode Project.”

14 177. Despite their aggressive coding to submit as many ADDS as possible to meet their
15 annual revenue targets for their Chart Review Program, officers of UnitedHealthcare
16 Medicare & Retirement attested to the validity of *all* of these ADDS in the annual Risk
17 Adjustment Attestations submitted to Medicare and various senior management
18 employees of both UnitedHealthcare Medicare & Retirement and Optum attested to the
19 validity of *all* of these ADDS in approving the annual Risk Adjustment Attestations
20 submitted to Medicare. *See infra* at paragraphs 296-308 (describing this internal
21 approval process). If the results of these chart reviews were so reliable that they could
22 attest to the validity of all of the ADDS, then the results were of equal reliability for
23 them to have deleted all previously-submitted diagnoses invalidated by the reviews. To
24 the extent that Defendants call into question the results of their own chart reviews in *not*
25 finding support for and *not* validating hundreds of thousands of diagnoses, they also call
26 into question the overall reliability of the chart reviews and validity of the ADDS.
27 Under those circumstances, Defendants acted with reckless disregard for the truth by
28 submitting the ADDS and attesting to their validity, knowing they were not entitled to

1 payments by Medicare based on such unreliable data and the United States is entitled to
2 recover those payments in this action.

3 **B. United Knew It Was Obligated To Look Both Ways At The**
4 **Results Of Its Chart Reviews And Make DELETES As**
5 **Well As ADDS**

6 178. By 2008, Relator Poehling and others began to question the practice of ignoring
7 the negative results of blind chart reviews invalidating many provider-reported
8 diagnoses. In May 2008, Relator Poehling participated in a meeting in which he
9 discussed this issue with Will. She explained to Relator Poehling that, as part of the
10 Chart Review Program, Ovations and Ingenix did not look at whether provider-reported
11 diagnoses were not substantiated by the results of the coders' blind chart reviews.
12 Poehling and Will discussed the idea of changing this process, comparing the results of
13 the blind chart reviews to the provider-reported diagnoses that Ovations and Ingenix had
14 submitted to CMS, and deleting the unsupported diagnoses.

15 179. Thereafter, the need to address problems with the diagnoses reported by providers
16 continued to be an issue. In March 2009, the question of how to address problems with
17 diagnoses reported by fee-for-service providers arose during a discussion among Ingenix
18 employees about the Internal Data Validation Program that Ingenix conducted for
19 Ovations and the Defendant MA Organizations. During that discussion, Ronnie Grower,
20 Vice President of Market Consultation for Ingenix, noted that the Internal Data
21 Validation Program excluded fee-for-service providers and questioned whether the UHG
22 Managing Defendants would have another program to address diagnoses reported by fee-
23 for-service providers given that "there are common coding errors that get reported across
24 all providers." In fact, other than its short-lived Claims Verification Program, the UHG
25 Managing Defendants never had a medical record review program like the IDV or
26 RACCR Programs to address the validity (or lack thereof) of diagnoses reported to it by
27 its fee-for-service providers.
28

180. In 2009, these internal discussions continued. In early April 2009, Relator Poehling, Dumcum, Will, Kimberly Halva, Janice Redmond (the Senior Vice President of Market Outreach for Ingenix's Risk Adjustment Group, who worked in Santa Ana, California) and others participated in a discussion about compliance risks, including provider over-coding (*i.e.*, invalid coding). One of the items on the agenda that they discussed included "[a]uditing under & over coded conditions" as part of the chart review process, that is, "looking both ways." A few weeks later, Relator Poehling again met with Will and others to discuss what to do when provider-reported diagnosis codes were inconsistent with the results of the coders' blind chart reviews of the providers' medical records. At this second meeting in April 2009, the participants began to design a methodology for "looking both ways." This led to subsequent discussions about creating a Claims Verification Program in order to look both ways at the coders' blind chart review results and make DELETES as well as ADDS.

181. A few months later, in August 2009, in an internal presentation, Redmond noted that chart reviews only looked for additional revenue and suggested that the process should also include a certain amount of charts that are reviewed to determine the validity of providers' codes. Redmond was concerned that providers paid on a fee-for-service basis were not being audited to validate their diagnoses. Her presentation stated: "Known problematic codes are not audited across plans/providers raising the risk of error."

182. In early 2010, Will sent Dumcum a presentation proposing the Claims Verification Program. The stated goal of the program was to improve the accuracy of the diagnosis data that the UHG Managing Defendants submitted to CMS. Will believed that Claims Verification would achieve this goal.

183. In May 2010, Relator Poehling discussed the potential creation of the Claims Verification Program with Dumcum. Dumcum referenced the Department of Justice's enforcement of the FCA as a consideration.

1 184. According to Halva, while she was the UnitedHealthcare Medicare & Retirement
2 Compliance Officer from 2010 to 2013, the “general consensus from the
3 [UnitedHealthcare Medicare & Retirement] point of view was . . . that any time we
4 opened a chart we should be looking both ways.”

5 185. In the fall of 2010, after two years of discussions, senior executives such as
6 Thomas Paul, Cynthia Polich, and Lee Valenta acknowledged that the UHG Managing
7 Defendants should “look both ways” at the results of their blind chart reviews. By at
8 least that time, however, these Defendants should and could have compared the results of
9 *all* chart reviews to the provider-reported diagnoses and deleted all of the invalid
10 provider-reported diagnoses that they previously had submitted to the Medicare
11 Program. They also should and could have done this contemporaneously with
12 submitting ADDS based on the same chart reviews. Instead, they embarked on a very
13 slow, phased development of their Claims Verification Program. The senior executives
14 authorized only a pilot test program to look at the negative results (*i.e.*, the results
15 showing that provider-reported diagnoses were invalid) from only a very small sample of
16 chart reviews. Moreover, the Claims Verification process was designed to “save” – that
17 is, avoid deleting – the provider-reported diagnoses invalidated by the blind chart
18 reviews conducted as a part of the Chart Review Program. The UHG Managing
19 Defendants attempted to and sometimes did save some of these invalid codes by re-
20 reviewing the beneficiaries’ medical records, sometimes multiple times, to try to glean
21 any support, even doubtful or ambiguous support, for the provider-reported diagnoses at
22 issue.

23 186. In August 2011, Relator Poehling made clear to Scott Theisen, then Chief
24 Financial Officer of UnitedHealthcare Medicare & Retirement, that Poehling did not
25 believe it was appropriate to conduct chart reviews unless and until Claims Verification
26 was fully implemented and they were “looking both ways.” Theisen was one of the
27 senior managers charged with making decisions regarding the implementation and
28 design of the Claims Verification Program. At that time, in an email to Paul Bihm at

1 Optum, Poehling wrote: “You (and Scott [Theisen]) know where I stand on chart
2 reviews without full CV in place ... I wouldn’t do them. Scott, though, is the decision
3 maker” At that time, Bihm was an Optum Senior Vice President of Client
4 Management and had responsibilities relating to the Chart Review Program.

5 187. In September 2011, Mary Hammond, Associate Director of Strategy and Support
6 for UnitedHealthcare Medicare & Retirement’s risk adjustment team, attended an
7 industry conference in Washington, D.C. on risk adjustment. She reported that it was
8 “great to get a perspective on what the activity in DC may mean for risk adjustment.
9 More audit protection (*looking both ways compliance programs*), . . . and less reliance
10 on chart review are the recommendations.” (Emphasis added.)

11 188. In approximately November 2011, a “factual and unbiased” presentation was
12 created for UHG’s Chief Executive Officer Steve Hemsley, to provide him information
13 about Optum’s and its competitors’ risk adjustment programs and other risk adjustment
14 services. The presentation described “Compliance” as “the True Value of Claims
15 Verification.” The presentation further noted that the medical record is the “source of
16 truth” and that looking at this “source of truth” had a negative revenue impact because
17 comparing provider-reported diagnoses with the information in the providers’ medical
18 records resulted in having to delete some of their diagnoses. In December 2011, a copy
19 of this presentation was sent by Karen Petroff, the Senior Vice President of Business
20 Development at Optum, to Dumcum and Eric Murphy at Optum. Murphy was the
21 President of Payer Solutions at Optum at the time.

22 189. In December 2012, Mike Jacobson, Program Business Analyst/Project
23 Management at Optum, sent Patty Brennan an updated version of Optum’s Business
24 Vision Document for the marketing of the Claims Verification Program to commercial
25 clients (*i.e.*, third-party MA Organizations). Under the section titled “Business Segment
26 Strategies and Tactics,” the document stated that “Optum has an industry compliance
27 duty and responsibility to ensure that each HCC code is accurate and can be
28 substantiated within the medical charts.” Under the section titled “Competitive Analysis

1 – Market Research,” the document stated: “The marketplace will soon recognize the
2 need and importance of performing due diligence on HCCs added during the chart
3 review process but also verifying HCCs submitted to CMS can be substantiated within
4 the medical chart according to CMS guidelines. For HCCs that cannot be substantiated
5 within the medical chart, clients will need to perform the appropriate deletes in order to
6 remain compliant with CMS guidelines.” At this time, Optum had already begun
7 marketing Claims Verification or “looking both ways” chart reviews to commercial
8 clients.

9 190. In September 2012, the Chief Executive Officer of OptumInsight, William Miller,
10 informed the Government that the UHG Managing Defendants were developing a
11 Claims Verification Program to ensure the accuracy of the diagnosis data they submitted
12 to CMS and look both ways at the results of the chart reviews conducted as part of the
13 Chart Review Program. Miller further stated that unsupported diagnoses would be
14 deleted. The UHG Managing Defendants knew that this information was important to
15 the Government. They led the Government to believe that they were not deliberately
16 ignoring or recklessly disregarding the negative results of their Chart Review Program
17 showing that numerous provider-reported diagnoses that they had submitted for payment
18 were invalid.

19 191. Until 2012, UnitedHealthcare Medicare and Retirement and Optum allowed
20 coders to review medical records at providers’ offices if the providers did not want to
21 provide copies of their records. However, in 2012, in accordance with their
22 acknowledgement of their obligation to “look both ways,” these Defendants changed this
23 policy and restricted on-site reviews because they needed copies of the charts in order to
24 conduct Claims Verification. Mary Hammond, in an April 2012 email, explained this
25 decision: “M&R has made a decision on the chart reviews where providers are requiring
26 onsite coding. We will ask the [United] Provider Advocates to talk to the groups to try
27 to talk them out of it. If they won’t budge, then we will allow onsite coding if
28 OptumInsight has a solution for doing claims verification on those charts.”

1 192. Similarly, at around the same time, a decision was also made that Optum's
2 commercial clients were required to retain Optum to perform Claims Verification (*i.e.*, to
3 "look both ways") if Optum performed chart reviews for them and submitted risk
4 adjustment data, including diagnoses, to CMS on their behalf. According to Dumcum,
5 Optum decided "that if we did chart review and submissions, that we then must do the
6 two-way look. It became our policy of how we executed business at the time. So if they
7 bought both, then we required that piece [*i.e.*, Claims Verification] be implemented."

8 193. UnitedHealthcare has also consistently demanded that CMS and HHS OIG, when
9 performing their audits, credit the Defendant MA Organizations for any additional
10 medical conditions that UnitedHealthcare believed were supported by the medical
11 records but that had not been reported by the providers. UnitedHealthcare took the firm
12 position with the Government that, in order to accurately reflect a patients' true health
13 status, it was necessary to review patients' medical records for both the under-reporting
14 (not reporting diagnoses supported by the beneficiaries' medical records) and over-
15 reporting (the reporting of codes unsubstantiated by the beneficiaries' medical records)
16 of medical conditions by providers. In fact, CMS RADV audits have historically
17 credited MA Organizations, including UnitedHealthcare, for additional diagnoses found
18 during such audits.

19 194. For example, in a February 2011 letter from Thomas Paul, the then Chief
20 Executive Officer of UnitedHealthcare Medicare & Retirement, to CMS concerning the
21 parties' dispute about the preliminary results of CMS' pilot RADV audit of one of the
22 Defendant MA Organizations, UnitedHealthcare argued that the dispute process
23 "incorrectly exclude[d] consideration of additional CMS-HCCs" supported by the
24 beneficiaries' medical records. The letter stated that UnitedHealthcare identified
25 additional HCCs (*i.e.*, additional diagnoses mapping to additional HCCs) in the medical
26 records and, if CMS refused to give it credit for them, it would challenge CMS legally.
27 In September 2012, in a letter from Theisen, the then Chief Financial Officer of
28 UnitedHealthcare Medicare & Retirement, to CMS about the same RADV audit,

1 UnitedHealthcare continued to complain that the audit incorrectly excluded
2 consideration of additional HCCs and argued that the Defendant MA Organization
3 should receive credit for the additional HCCs. The letter stated: “If [the MA
4 Organization] is not credited for these incremental HCCs, then any adjustments made by
5 CMS do not accurately reflect an enrollee’s comprehensive medical conditions. The
6 goal of RADV audits should be to determine the full extent of enrollees’ medical
7 conditions, and **make overpayment and underpayment adjustments so that [MA
8 Organizations] are paid commensurate with enrollees’ health status.**” (Emphasis
9 added.) Similarly, in a September 2012 letter from Thomas Paul to HHS OIG,
10 UnitedHealthcare stated that “the OIG should correct the invalid HCCs and credit [the
11 MA Organization] with the incidental HCCs documented in the submitted medical
12 records.”

13 195. ICE, the industry group to which several of the Defendants belonged and which
14 they financially supported, also opined that “looking both ways” was a “Best Practice.”
15 It issued a Best Practices document encouraging the industry to conduct chart reviews
16 that “looked both ways.” It described the advantages of such chart reviews as
17 “[p]romoting validation functions for diagnostic codes previously submitted by
18 providers” and “[p]roviding the ability to submit code corrections forward (additions and
19 deletions) to health plans upon the completion of review.”

20 **C. United’s Short-lived “Look Both Ways” Claims**
21 **Verification Program**

22 196. In September 2010, Lee Valenta, then Ingenix’s Chief Operating Officer, sent
23 Thomas Paul, then Chief Executive Officer of Ovations, a memorandum “summariz[ing]
24 Ingenix’s plans for implementing a claims verification program for charts reviewed by
25 Ingenix on behalf of Ovations Medicare Advantage Plans.” Valenta explained that the
26 “overarching aim” of the Claims Verification Program was “improving the quality of
27 member-level diagnosis information submitted to CMS.” He also explained that the
28 program’s purpose was to identify the provider-reported diagnoses that were not

1 validated by the blind medical record reviews conducted as part of the Chart Review
2 Program and for another coder to conduct a second non-blind review to determine if the
3 provider-reported diagnoses had been missed by the first blind coder.

4 197. Valenta's memorandum also set forth a three-phased approach for the
5 development of the Claims Verification Program. The first phase, Phase I, was supposed
6 to focus on a random sample of 850 beneficiaries in Ovations MA Plans whose medical
7 records for encounters (*i.e.*, provider office visits) in 2009 were included in the Chart
8 Review Program in 2010 and had already been subject to a blind review as part of that
9 Program. Phase I was supposed to start in October 2010 and be completed by January
10 31, 2011. The second phase, Phase II, was supposed to focus on a larger sample of
11 beneficiaries and, thus, a larger number of medical records for encounters in 2010. This
12 group was supposed to include all beneficiaries who had medical encounters with only
13 one provider during 2010. Phase II was supposed to start by May 2011. The final phase,
14 Phase III, was supposed to focus on all beneficiaries in Ovations' MA Plans whose
15 medical records for medical encounters in 2011 were included in the national Chart
16 Review Program in 2012 and had already been subject to a blind review as part of that
17 Program. Phase III was supposed to be implemented in 2012.

18 198. In October 2010, Cindy Polich, then President of Ovations, which was in the
19 Public and Senior Markets Group ("PSMG") that managed the Defendant MA
20 Organizations at the time, responded to Valenta's memorandum. Polich agreed to his
21 proposal. Polich also acknowledged the need to improve PSMG's risk adjustment
22 programs. She stated that "[w]hile Ingenix is implementing Phase II [of Claims
23 Verification], PSMG will conduct a comprehensive review of its current risk adjustment
24 strategies, including our chart review strategy. The purpose of this review is to
25 determine the future programs and approaches to be used to improve the accuracy of our
26 risk scores."

27 199. A Claims Verification project management document, prepared by Optum,
28 Ingenix's successor, described Claims Verification as "[a] risk adjustment chart audit

1 service designed to ensure that qualified patient diagnoses and conditions are identified
2 and supported in the physician medical record documentation. This audit service
3 identifies any discrepant coding patterns contained within the medical record
4 documentation and the associated claims and encounters. This service includes the
5 submission and delete process to CMS, financial reporting, and training/education for
6 providers. Claims Verification will further supplement our efforts to assess coding
7 accuracy and our ability to drive prospective improvements by engaging and educating
8 providers.”

9 200. At a meeting in September 2012, Theisen explained to Jason Bainbridge and
10 Karin O’Hara, both of whom worked for UnitedHealthcare Community & State, that
11 UHG decided to “look both ways” and implement Claims Verification in order to defend
12 the Chart Review Program in light of increased scrutiny on risk adjustment. According
13 to Relator Poehling’s notes, the meeting focused on the financial impact of Claims
14 Verification, and Theisen “said historically when we audited we only added codes.
15 UHG has decided from a defensibility standpt, & the increased scrutiny on risk
16 adjustment, that we would begin deleting unsupported codes as well. Scott [Theisen]
17 explained that [Optum] did a CV pilot on ~ 5k charts. Scott said we anticipated ~
18 \$100M in give backs related to CV, but the pilot is showing ~ \$225M/yr (extrapolating
19 results).” Other attendees at this meeting included, but were not limited to, Relator
20 Poehling, Jon Bird, William Hnath, and Melissa Sedor.

21 201. At some point in 2012, UnitedHealthcare Medicare & Retirement also started to
22 impose a “look both ways” requirement on providers with which it was sharing the cost
23 of chart reviews. Many, if not all, of these providers were incentivized capitated
24 providers. UnitedHealthcare Medicare & Retirement sent letters to these providers about
25 this requirement. Some of the letters expressly stated that UnitedHealthcare Medicare &
26 Retirement was agreeing to share in the cost of the chart reviews based on its
27 understanding that the provider would use the information gathered from the chart
28 reviews to verify the diagnosis data that it previously reported to UnitedHealthcare

1 Medicare & Retirement. In other of the letters, UnitedHealthcare Medicare &
2 Retirement requested that the provider ensure that it uses the information gathered
3 during the chart reviews to verify the diagnoses that it previously reported to
4 UnitedHealthcare Medicare & Retirement. All of the letters further instructed the
5 providers on how to submit to UnitedHealthcare Medicare & Retirement (via Optum) a
6 data file of diagnosis codes that should be deleted (as well as those that should be added)
7 as a result of the chart reviews. In addition, UnitedHealthcare Medicare & Retirement
8 required all of the providers to complete and return a certification. Pursuant to the
9 certification, the provider had to attest that it had compared diagnoses previously
10 reported to UnitedHealthcare Medicare & Retirement with the charts that it reviewed,
11 and that it had submitted to UnitedHealthcare Medicare & Retirement and Optum a data
12 file of diagnoses that it had determined should be added or deleted. Pursuant to the
13 certification, the provider also had to certify that the information in the data file was
14 accurate and truthful. There was an attachment to the letters that specified the fields for
15 the data file that the providers were required to use. One of the fields was for the
16 providers to identify diagnoses that needed to be deleted because they were not validated
17 by the chart reviews.

18 202. UnitedHealthcare Medicare & Retirement and Optum, however, took over three
19 years to develop the Claims Verification Program. Furthermore, the manner in which
20 they developed and then implemented the Program shows that they were never
21 committed to honoring their obligation to undertake good faith efforts to ensure the
22 validity of the risk adjustment data that they submitted to the Medicare Program. They
23 did not automatically delete the provider-reported diagnoses that were not supported by
24 the medical record reviews conducted as part of the Chart Review Program. Rather, they
25 considered these invalid diagnoses as mere “potential deletes” and instructed the coders
26 to re-review the medical records to try to avoid deleting them. Optum also trained the
27 Claims Verification coders that the goal of Claims Verification, above all else, was to
28 “validate” or “save” the potential deletes through finding any support for the diagnosis in

1 the beneficiary's chart. Additionally, Optum instructed its coders to "save" these invalid
2 diagnoses even if the information in the medical records was ambiguous.

3 203. When performing Claims Verification, Optum also did not consult providers even
4 when medical records were ambiguous concerning whether the beneficiaries actually had
5 the medical conditions corresponding to the diagnosis codes.

6 204. Optum also saved "potential deletes" by simply accepting the diagnoses reported
7 by providers even when the medical conditions were not unambiguously documented in
8 the beneficiaries' medical records. Optum characterized this practice as deferring to the
9 judgment of the provider or the provider's administrative staff who assigned the
10 diagnosis codes. For example, if a chart was unclear, illegible, or missing, and even
11 though Optum could not identify any medical records documenting the medical
12 conditions identified by the provider-reported codes, it just accepted the codes and did
13 not delete them. Optum did this with either deliberate ignorance or reckless disregard
14 for the truth in light of the mountain of knowledge it possessed about the significant
15 percentage of invalid provider-reported diagnoses.

16 205. However, despite all its flaws, the Claims Verification Program confirmed what
17 UnitedHealthcare Medicare & Retirement and Optum already knew about the significant
18 error rate associated with provider-reported diagnoses that they submitted to the
19 Medicare Program for risk adjustment payments.

20 206. At the end of 2010, Ingenix, Optum's predecessor, had conducted the first pilot
21 phase, Phase I, of its development of the Claims Verification Program. As specified in
22 Valenta's memorandum, Phase I included a very small sample of medical records that
23 Ingenix had reviewed as part of the Chart Review Program for encounters (*e.g.*, office
24 visits) that beneficiaries had with providers in 2009. A "CV Dashboard" summary from
25 December 2010 shows that out of the many hundreds of thousands of medical records
26 included in the Chart Review Program for 2009 encounters, only 843 records were
27 included in Phase I of the Claims Verification Program. By December 2010, the review
28 for 728 of those medical records had been completed. The results showed that 224 of the

728 medical records re-reviewed as part of Claims Verification (*i.e.*, reviewed once as part of the Chart Review Program and then again as part of Phase I of the Claims Verification Program) had both at least one ADD (a diagnosis code that the provider had not reported) and at least one DELETE (a diagnosis code that was reported by the provider but not validated by the medical record) and 167 of the 728 medical records re-reviewed as part of Claims Verification had at least one DELETE but no ADDS. Furthermore, of the HCCs and the RxHCCs for which Ingenix looked for validation in these 728 records that it had re-reviewed, 19 percent of the HCCs and 15 percent of the RxHCCs did not validate. At the time that the summary was prepared, Ingenix was conducting “follow-up” on 39 medical records. Of the HCCs and the RxHCCs for which Ingenix looked for validation in these 39 medical records that it had re-reviewed, 47 percent of the HCCs and approximately 45 percent of the RxHCCs did not validate.

207. As part of Phase I, but only as part of Phase I, Ingenix sometimes contacted the providers who gave it the medical records. It did this when the second non-blind review of the records in Claims Verification failed to validate the diagnoses that the first blinded review had failed to validate as part of the Chart Review Program. For some beneficiaries, the providers responded that they should not have submitted their claims (*i.e.*, the claims which included the diagnoses). Consequently, the diagnoses should not have been submitted to CMS. For some other beneficiaries, the providers did not have additional records or their additional records did not support the diagnoses in question.

208. In mid-2011, Ingenix/Optum began conducting the second pilot phase, Phase II, of the Claims Verification Program. Phase II began in the summer of 2011 and was completed in early 2012. Out of the many hundreds of thousands of medical records included in the Chart Review Program for 2010 medical encounters, only approximately 17,000 charts were included in Phase II. Coders tried to save as many “potential deletes” as possible when reviewing these medical records as part of Phase II. Nonetheless, the results of their Claims Verification reviews confirmed more invalid diagnoses

(DELETES) than the number of additional codes (ADDS) gleaned from the same records.

209. In mid-2012, Optum began conducting a preliminary test or pilot for Phase III of the Claims Verification Program. This pilot included approximately 5,000 medical records relating to encounters (*e.g.*, office visits) that beneficiaries had with providers during calendar year 2011. In September 2012, Theisen explained to others including Relator Poehling, that UnitedHealthcare Medicare & Retirement, relying on the results of this sample review, had increased its estimate of the financial impact of Claims Verification deletes. In October 2012, Theisen sent Daniel Schumacher, the then Chief Financial Officer of Defendant UnitedHealthcare, and others a “CV III analysis – based on 2011-2012 Chart review activity for 2011 DOS.” The document showed validation rates based on the review of HCCs because the coders were instructed to find support for any diagnosis that mapped to the HCC under review even if it was not the same diagnosis reported by the provider that originally mapped to that HCC. The document showed that the validation rate “[b]ased on results of CV3 pilot (5,000 chart sample)” was 66.4 percent. In other words, only 66.4 percent of the HCCs reviewed were supported by the beneficiaries’ medical records. That meant that 33.6 percent of the HCCs were unsupported by the beneficiaries’ medical records even after UnitedHealthcare Medicare & Retirement and Optum had them reviewed twice, once as part of the Chart Review Program and again as part of the pilot Claims Verification Phase III process. Based on these results, UnitedHealthcare Medicare & Retirement estimated that the negative financial impact of Claims Verification in 2012 would be \$231 million based on the number of estimated “potential deletes” that it could not save and would have to be made. It estimated that diagnoses mapping to 120,147 HCCs would have to be deleted and that, on average, each delete would result in a \$1,924 negative financial impact.

210. In or about October 2012, UnitedHealthcare Medicare & Retirement recorded in its financial records a \$208 million accrual for potential revenue reductions due to

1 deletes that would need to be made as part of the Claims Verification Program
2 (hereinafter referred to as a “CV liability accrual”) for payment year 2012. Relator
3 Poehling and Kyle Anderson were aware of this CV liability accrual. In late 2012, other
4 individuals at UnitedHealthcare Medicare & Retirement and Optum, including Timothy
5 Noel, Scott Theisen, and Jon Bird, were also aware of the CV liability accrual and/or the
6 estimated negative financial impact of the Claims Verification Program.

7 211. UnitedHealthcare Medicare & Retirement and Optum did not complete their pilot
8 tests and start to implement their Claims Verification Program for charts relating to 2011
9 medical encounters (*i.e.*, with 2011 dates of service) until late 2012. Even after that,
10 they never fully implemented the program. They also continually changed the program
11 in order to limit its scope and created arbitrary rules to avoid looking at the negative
12 results of many of the blind chart reviews conducted as part of the Chart Review
13 Program. In addition, when they learned that their second review of the medical records
14 in Claims Verification was not saving a significant number of diagnoses from deletion,
15 they created another level of review. That is, it created a re-re-review or third review of
16 the beneficiaries’ medical records in order to keep trying to save the diagnoses from
17 deletion. They also limited the scope of Claims Verification by excluding certain
18 providers, including providers that they or their affiliates owned and operated. In 2014,
19 Defendants UHG and UnitedHealthcare then terminated CV without completing the
20 program for charts relating to 2012 medical encounters (with 2012 dates of service).

21 212. UnitedHealthcare Medicare & Retirement and Optum imposed several arbitrary
22 exclusionary rules to improperly disqualify many medical records reviewed as part of
23 their Chart Review Program from their Claims Verification Program. For medical
24 records for encounters in 2011 and 2012, they arbitrarily and improperly excluded
25 numerous medical records from Claims Verification. For example, they excluded
26 numerous charts from Claims Verification because the image of the chart was
27 purportedly “unavailable.” Yet, when making ADDS in the Chart Review Program, the
28 image of the chart or chart itself must have been available. But, instead of locating the

1 images or obtaining the charts for Claims Verification, they decided not to re-review the
2 charts to save those diagnoses invalidated by the results of their Chart Review Program.
3 They also did not delete those invalid diagnoses.

4 213. The re-reviews conducted as part of the Claims Verification Program did not save
5 as many deletes as UnitedHealthcare Medicare & Retirement would have liked and, in
6 2013, Theisen and others at UnitedHealthcare Medicare & Retirement became
7 increasingly concerned about the financial impact of the deletes. UnitedHealthcare
8 Medicare & Retirement decided that its coders were not saving enough “potential
9 deletes.” Accordingly, sometime in 2013, UnitedHealthcare Medicare & Retirement
10 decided that a third review or a re-re-review of the medical records had to be conducted
11 to try to save more deletes.

12 214. Thus, if Optum’s internal coders were unable, despite their best efforts, to “save” a
13 diagnosis code, Optum sent that code to a coding consultant for re-re-review. Optum
14 knew, however, that the consultant engaged in a pattern of “saving” diagnoses without
15 supporting medical records in several circumstances, including when the chart was
16 scanned illegibly, when pages were missing from a chart and the diagnosis could not be
17 validated, and when the reported date of service did not appear in the chart. By
18 accepting validation of these diagnoses without supporting medical records, Optum
19 knowingly and improperly avoided its and UnitedHealthcare Medicare and Retirement’s
20 obligation to return monies wrongfully obtained from the Medicare Program.

21 215. In November 2013, Donald James, then Director of Program Strategy for Optum
22 in Santa Ana, California, reported to senior management that the Claims Verification
23 Program had not yet started for charts reviewed as part of the 2013 Chart Review
24 Program. In December 2013, Patty Brennan, then also in the Optum Santa Ana office,
25 reported to Dumcum that “[h]alf of the CV volume for 2012 DOS has been completed
26 but deletes are on hold.” She also informed him that UnitedHealthcare Medicare &
27 Retirement “[r]equested all CV deletes be held until further noticed so Ops is not going
28 to complete the second half of the volume at this time.”

1 216. When Steve Nelson became the Chief Executive Officer of UnitedHealthcare
2 Medicare & Retirement in early 2014, he spoke with Steve Hemsley, then Chief
3 Executive Officer of UHG, about whether UnitedHealthcare Medicare & Retirement
4 should continue the Claims Verification Program. Hemsley encouraged Nelson to look
5 into whether or not it should do so, formulate an opinion, and report back to him.

6 217. In February 2014, Marc Beckmann, then in the Finance – Risk Adjustment
7 Analysis Group at UnitedHealthcare Medicare & Retirement, sent information about CV
8 liability accruals to Daniel Schumacher, the Chief Financial Officer of Defendant
9 UnitedHealthcare, and Brian Thompson, the Chief Financial Officer for
10 UnitedHealthcare Medicare & Retirement. He estimated that the effect of Claims
11 Verification on UnitedHealthcare Medicare & Retirement’s revenue would be \$208
12 million for payment year 2012, \$125 million for payment year 2013, and either \$125
13 million or \$175 million (depending on the number of charts reviewed) for payment year
14 2014. This information was also provided to other individuals at UnitedHealthcare
15 Medicare & Retirement including, but not limited to, Jay Matushak, Marybeth Meyer,
16 and Kyle Anderson.

17 218. On March 3, 2014, Jon Bird, the Optum Senior Vice President of Risk and Quality
18 Analytics, participated in a meeting with Brian Thompson about the CV liability accrual
19 for 2013. Thompson wanted to “move toward the more conservative range of the
20 confidence interval (from 50% to 80%) resulting in [a] \$29M higher CV estimate” for
21 the liability accrual. By March 3, 2014, UnitedHealthcare Medicare & Retirement’s
22 estimate of its CV liability accrual for 2013 already had been increased by over \$50
23 million dollars from \$125 million to \$180 million.

24 219. Also, in February or March 2014, the financial managers at UnitedHealthcare
25 Medicare & Retirement, including Brian Thompson, performed a comparison of their
26 then-expected revenues for 2014 with the revenue estimated in UnitedHealthcare
27 Medicare & Retirement’s annual budget for 2014. They determined that there was going
28

1 to be a shortfall in their financial performance relative to that budget and they started to
2 think about ways to eliminate the shortfall.

3 220. In March 2014, Thompson sent Nelson “a current brain dump of ‘shut off/stop
4 doing’ that is not yet valued/included in the road back to plan.” Part of the “brain dump”
5 was to “shut off” or reduce compliance efforts. Thompson asked others at
6 UnitedHealthcare Medicare & Retirement for other “shut offs.”

7 221. Subsequently in March 2014, Marybeth Meyer, who ran the risk adjustment team
8 at UnitedHealthcare Medicare & Retirement, reported to Thompson that the “CV
9 estimate of \$125M may be light (estimate for 2012 DOS/2013 payment year of
10 \$167M).”

11 222. In late March or early April 2014, Nelson met with other Chief Executive Officers
12 at Defendant UnitedHealthcare to discuss UnitedHealthcare Medicare & Retirement’s
13 financial performance. A very detailed slide deck was created for that meeting. The
14 slide deck was sent by Schumacher to senior executives at UnitedHealthcare, including
15 Gail Boudreaux (who reported to Hemsley), Nelson, Brian Thompson, and Paul
16 Balthazor. The slide deck highlighted that UnitedHealthcare Medicare & Retirement
17 was projecting that its actual revenues for 2014 were going to miss the target set forth in
18 the annual budget by half of a billion dollars. It stated: “Best estimate of \$500 million
19 budget miss.” It also stated that, because of that projected miss, UnitedHealthcare
20 Medicare & Retirement’s management was making a commitment to the senior
21 executives to “find \$250 million to cut miss in half.” UnitedHealthcare Medicare &
22 Retirement referred to this “Management Commitment” as a \$250M “good guy.”

23 223. Nelson and others, including Boudreaux (who reported to Hemsley), knew that, if
24 UnitedHealthcare Medicare & Retirement terminated the Claims Verification Program, it
25 could reduce the \$500 million budget miss by not deleting the provider-reported
26 diagnoses invalidated by its chart reviews and reversing the CV liability accruals. This
27 was their “good guy.” But, it appears that UHG, UnitedHealthcare, and Optum were
28 concerned about the consequences of terminating the program and reverting to ignoring

1 the negative results of their chart reviews. They decided to ask CMS about the
2 retroactivity of a proposed regulation requiring MA Organizations to design all medical
3 record reviews to validate diagnoses submitted to CMS.

4 224. Under Hemsley's direction, Larry Renfro, the Chief Executive Officer of Optum,
5 contacted senior government employees at CMS, including the Administrator of CMS,
6 to ask whether the Defendants had a legal obligation to perform Claims Verification
7 before the effective date of the proposed rule. These employees were not government
8 attorneys and could not render the requested legal advice. Renfro, moreover, knew
9 nothing about the UHG Managing Defendants' Chart Review and Claims Verification
10 Programs and could not impart any meaningful information about these programs to the
11 government employees. Accordingly, Renfro could not and did not provide the senior
12 government employees with any description of the Claims Verification Program or its
13 purpose. Hemsley and his attorneys, however, continued to push Renfro to make further
14 contacts with these government employees when UHG, UnitedHealthcare, and Optum
15 did not obtain from these government employees the legal opinion they wanted.

16 225. On or before April 8, 2014, Renfro asked Karen Erickson, an Optum executive
17 who worked directly for him, for speaking points for a call with the Administrator of
18 CMS. On April 8, 2014, Erickson sent Renfro's assistant, Juliet Domb, "aspirational"
19 talking points, that is, things that they wanted Renfro to get the CMS employees to say,
20 including "CV is not currently required" and that Defendants were "allowed to stop any
21 CV activities (including delete submission) currently underway." (Emphasis in the
22 original.) In her email, Erickson told Domb: "I sent this to Marianne [Short] and Matt
23 Shors for editing – they will send final directly, and they know it has to be today." The
24 same day, Renfro spoke to Hemsley and Short to obtain direction about what he should
25 say to the Administrator of CMS on the call that he had scheduled with the
26 Administrator. Renfro then purportedly spoke with the CMS Administrator and
27 purportedly dictated notes of the call to Domb, who wrote the notes by hand on Renfro's
28

1 notepad and sent them to Short. According to Renfro, he dictated these notes from
2 memory and he does not usually take notes, but was asked to do so by Short.
3 226. On April 26, 2014, Short asked Renfro to again contact the Administrator of CMS.
4 According to Brian Thompson (the Chief Financial Officer of UnitedHealthcare
5 Medicare & Retirement in 2014), Renfro had not obtained the “clarity” they wanted
6 from the Administrator about whether they were obligated to perform Claims
7 Verification. Accordingly, on April 27, 2014, Renfro sent an email to the Administrator
8 asking the same questions he had purportedly asked her on April 8 and to which she
9 purportedly had responded on April 8. He also asked for a meeting with other
10 employees at CMS who were responsible for operating the MA Program. On April 27,
11 2017, Renfro reported to Hemsley and Short that CMS was arranging for the UHG
12 Managing Defendants to meet with these employees. On April 29, 2014, Hemsley sent
13 UnitedHealthcare’s attorney, Thad Johnson, to Washington, D.C. to speak with those
14 CMS employees responsible for the MA Program, including Cheri Rice, the Director of
15 the Medicare Plan Payment Group at CMS. Nelson, Schumacher, and an Optum
16 executive, Karen Erickson, also attended the meeting. At the meeting, when the UHG
17 Managing Defendants informed CMS about the possibility of terminating their Claims
18 Verification Program, CMS told them that they had a statutory obligation to report and
19 repay the Medicare Program for erroneous risk adjustment payments and that there were
20 FCA implications if they failed to do so. CMS also told the UHG Managing Defendants
21 that they could not ignore information in their possession showing that diagnoses may be
22 invalid and that they were obligated to delete invalid diagnoses. According to Erickson,
23 CMS told the UHG Managing Defendants that “if there was reason to have knowledge
24 that something had been begun and we were [*i.e.*, Defendants were] far enough along
25 that there was knowledge that something might not be supported that we needed to
26 continue the investigation into those numbers, or those codes.” Erickson further recalled
27 CMS stating that, if they had “knowledge of things that might not be supported we [*i.e.*,
28 the Defendants] needed to continue the investigation.” According to Schumacher, CMS

1 also told them that CMS did not have sufficient information about the Claims
2 Verification Program to provide further guidance.

3 227. On April 30, 2014, Nelson sent an email to Cheri Rice at CMS about the meeting
4 between the UHG Managing Defendants and CMS on April 29, 2014. He stated: “[A]s
5 we discussed yesterday, CMS recently issued a proposed rule that would, if finalized,
6 require MA plans to design any medical record reviews to determine the accuracy of risk
7 adjustment diagnoses associated with those records. During our conversation yesterday
8 and other recent conversations, CMS confirmed to us that these requirements do not
9 apply until the effective date of the rule, and that MA plans are thus not currently
10 required to design their medical record reviews to determine the accuracy of risk
11 adjustment diagnoses. We currently have a process through which we review certain
12 medical records to determine the accuracy of risk adjustment diagnoses and submit
13 appropriate deletes. This process already has resulted in the identification of and, in
14 some instances, the submission of deletes for 2012 dates of service. But based on the
15 proposed rule, including the preamble, and recent conversations with CMS, we
16 suspended that process for 2012 dates of service while we consider whether to make
17 changes. Pursuant to our discussion, however, we will soon submit for deletion those
18 diagnosis codes that have undergone a complete review and that we have therefore
19 identified as appropriate deletes. In the near future, we will determine whether to
20 continue our review process for the diagnosis codes which were still under review at the
21 time we suspended our process. In the meantime we will not delete these codes.”

22 228. On May 2, 2014, Cheri Rice replied to Nelson’s email: “[R]egardless of the
23 effective date of the proposed requirement related to medical record reviews, there are
24 other laws that do impose standards, requirements and responsibilities on MA plans in
25 connection with the federal payments they receive from CMS. We cannot provide
26 advice to United about the scope of those other laws. Nor can we provide advice on
27 whether United’s plan[ned] course of action and/or purported limits on the scope of its
28 [Risk Adjustment Attestation, submitted April 30, 2014] are compliant with such other

1 laws. Your statement concerning the data submissions that have already been made and
2 United's plans for future action will be included in our records and we will proceed with
3 our evaluation and use of the risk adjustment data consistent with 42 CFR § 422.308, §
4 422.310, and other applicable law."

5 229. According to Schumacher and Nelson, Rice's May 2, 2014 email did not say
6 anything that was inconsistent with what CMS said in the meeting on April 29, 2014.
7 After Rice sent her May 2 email, the Department of Justice sent a letter to Defendants'
8 counsel emphasizing that the FCA is one of the "other laws" that imposes standards,
9 requirements, and responsibilities on MA Organizations and Related Entities in
10 connection with the federal payments received from the Medicare Program.

11 230. On May 5, 2014, Jay Matushak informed Jeffrey Putman, UHG's Controller who
12 reported to Hemsley, and others (including Schumacher and Brian Thompson) that
13 "M&R CV delete, good guy, is ~\$250M for the year (note this is just the M&R piece and
14 there is an incremental component at C&S)." On the same date, Brian Thompson also
15 informed Putnam and others (including Matushak and Schumacher) that
16 UnitedHealthcare Medicare & Retirement had "not made a final determination to our CV
17 policy," "[o]ur RAF counsel will make that determination," and that "determination will
18 not occur until later in May most likely." According to Schumacher, the \$250 million
19 was the estimated amount of the deletes from Claims Verification for 2014 and prior
20 years and, thus, the CV liability accruals that had been recorded for 2014 and prior years.
21 The "good guy" was the hoped-for release or reversal of those accruals.

22 UnitedHealthcare Medicare & Retirement knew the accruals were likely underestimated
23 and the financial impact likely greater if it did not terminate the Claims Verification
24 Program.

25 231. Despite CMS' warnings in the April 29 meeting and Cheri Rice's May 2 email,
26 Nelson, Schumacher, and Brian Thompson decided to go forward with the idea of
27 terminating the Claims Verification Program. This decision was reported to Hemsley
28

1 and, according to Nelson, Hemsley could have reversed this decision but instead he
2 supported it.

3 232. Despite the warnings, UnitedHealthcare Medicare & Retirement also decided not
4 to delete or otherwise report to CMS at least 100,000 invalid diagnoses about which it
5 had *actual* knowledge based on more than one review of the patients' medical records
6 for encounters in 2011 and 2012 (*i.e.*, encounters with 2011 and 2012 dates of service).
7 The single damages to the Medicare Program arising from its submission of and failure
8 to delete just these invalid diagnoses is approximately \$190 million under Part C alone.

9 233. After they terminated the Claims Verification Program, UnitedHealthcare
10 (including UnitedHealthcare Medicare & Retirement and UnitedHealthcare Community
11 & State) and Optum reverted to "looking one way" at the results of their chart reviews,
12 making only ADDS, and knowingly and improperly failing to delete invalid provider-
13 reported diagnoses and repay the Medicare Program for them.

14 234. At the time they decided to terminate the Claims Verification Program, Steve
15 Nelson, Dan Schumacher, and Brian Thompson knew that their decision would enable
16 UnitedHealthcare Medicare & Retirement to reverse its CV liability accruals by more
17 than \$250 million dollars. Hemsley also was aware that terminating Claims Verification
18 would enable UnitedHealthcare Medicare & Retirement to achieve this financial benefit.
19 This was important to all of them because they wanted to represent to investors that
20 UnitedHealthcare Medicare & Retirement's actual revenues were on target. An internal
21 document relating to their second quarter 2014 "earnings release" issued in July 2014
22 states: "Q2 was on track and we are building momentum that will take us through the
23 year and into 2015. Internal: Important to note that 2014 benefits from the one-time
24 claims verification policy change which investors are unaware of." (Emphasis in the
25 original.) On July 11, 2014, this internal document was sent to Nelson and Thompson,
26 among others.

**D. United Failed to Delete Diagnoses Invalidated By Its Own
Chart Review Program**

235. The results of the UHG Managing Defendants' national Chart Review Program provided them information about a significant number of invalid provider-reported diagnoses that should not have been, but were, submitted by them on behalf of the Defendant MA Organizations to the Medicare Program for risk adjustment payments. For example, for the 2011 payment year (involving payments based on diagnoses with 2010 dates of service), UnitedHealthcare Medicare & Retirement and Optum submitted at least 197,000 diagnoses that were invalidated by the medical record reviews conducted as part of their Chart Review Program. But, for that year, they deleted only a very few (only about 1,800) of these invalid diagnoses based on the results of Phase II of the Claims Verification Program. For the 2012 payment year (involving payments based on diagnoses with 2011 dates of service), UnitedHealthcare Medicare & Retirement and Optum submitted at least 222,329 diagnoses that were invalidated by the medical record reviews conducted as part of their national Chart Review Program. Based on the results of the Claims Verification Program for charts with 2011 dates of service, they deleted approximately 120,000 of these invalid diagnoses despite their arbitrary exclusionary rules and attempts to save these deletes. For the 2013 payment year (involving payments based on diagnoses with 2012 dates of service), UnitedHealthcare Medicare & Retirement and Optum submitted at least 285,122 diagnoses that were invalidated by the medical record reviews conducted as part of their national Chart Review Program. Based on the results of the Claims Verification Program for charts with 2012 dates of service, they deleted approximately 27,000 of these invalid diagnoses despite their arbitrary exclusionary rules, multiple attempts to save these deletes, and failure to complete the program. For the 2014 payment year (involving payments based on diagnoses with 2013 dates of service), UnitedHealthcare Medicare & Retirement and Optum submitted at least 199,039 diagnoses that were invalidated by the medical record reviews conducted as part of their Chart Review Program. Because UHG,

1 UnitedHealthcare, and Optum terminated the Claims Verification Program, they did not
2 delete any of these invalid diagnoses. These numbers apply to invalid diagnoses relating
3 to risk adjustment payments under Part C only and not also Part D.

4 236. Accordingly, the UHG Managing Defendants knowingly and improperly failed to
5 delete or otherwise repay Medicare for most of the diagnoses invalidated by their
6 national Chart Review Program over the last decade.

7 237. For example: for the 2011 payment year, they failed to repay the Medicare
8 Program at least \$377,734,792 by failing to look both ways and delete diagnoses
9 invalidated by the Chart Review Program; for the 2012 payment year, they failed to
10 repay the Medicare Program at least \$213,978,134 by failing to look both ways and
11 delete diagnoses invalidated by the Chart Review Program; for the 2013 payment year,
12 they failed to repay the Medicare Program at least \$317,329,602 by failing to look both
13 ways and delete diagnoses invalidated by the Chart Review Program; and for the 2014
14 payment year, they failed to repay the Medicare Program at least \$234,159,775 by
15 failing to look both ways and delete diagnoses invalidated by the Chart Review Program.
16 These numbers apply to the failure to make repayments relating to risk adjustment
17 payments under Part C only and not also Part D.

18 238. Examples of beneficiaries with invalid diagnoses about which Defendants knew
19 but failed to delete based on its Chart Review Programs for payment years 2011 through
20 2014 are set forth in Exhibit 13 to this Complaint.

21 **III. The RACCR Program**

22 239. The UHG Managing Defendants (which, in this section, refers to Ingenix or
23 Optum, depending on the time period, and Ovations or UnitedHealthcare Medicare &
24 Retirement, depending on the time period) negotiated agreements with some of the
25 largest healthcare provider groups that tied the provider groups' compensation to their
26 beneficiaries' risk scores. The UHG Managing Defendants knew that this compensation
27 structure created a financial incentive for the provider groups to increase the number and
28 severity of diagnoses they reported and to report invalid diagnoses. Nonetheless, while

1 the UHG Managing Defendants were scouring millions of medical records through the
2 Chart Review Program to identify additional diagnoses and increase their revenue, their
3 effort to identify the invalid codes submitted by these incentivized providers was limited
4 to the RACCR Program. Moreover, the UHG Managing Defendants designed and
5 implemented the RACCR Program to limit its scope and to minimize the number of
6 invalid diagnoses for which the UHG Managing Defendants would have to return
7 overpayments to CMS. They failed to delete invalid diagnosis codes identified through
8 the RACCR Program, and eventually restructured the RACCR program to become just
9 another program to identify additional diagnoses and to increase revenue, rather than a
10 program to remedy the known problem of invalid coding by incentivized providers.

11 **A. Defendants Knew That Their Financially-Incentivized**
12 **Providers Were Reporting Invalid Codes**

13 240. As discussed above, the UHG Managing Defendants entered into financial
14 arrangements with capitated and gainsharing providers that were tied to the risk
15 adjustment payments that the Defendant MA Organizations received from the Medicare
16 Program. As a result, these providers benefited financially from any increase in risk
17 adjustment payments resulting from the diagnoses they reported to the UHG Managing
18 Defendants for beneficiaries enrolled in the Defendant MA Organizations' Plans.

19 241. The UHG Managing Defendants knew that these compensation arrangements
20 created a strong financial incentive for these providers to increase the number and
21 severity of diagnoses they reported for each beneficiary, and in some cases to report
22 invalid diagnosis codes.

23 242. Early on, Ingenix implemented the Internal Data Validation ("IDV") reviews
24 discussed earlier in this Amended Complaint. In or about 2010, Ovations (or its
25 successor, UnitedHealthcare Medicare & Retirement) and Ingenix expanded and
26 changed the name of that program to RACCR. Ingenix was responsible for conducting
27 the RACCR Program until Optum succeeded it in 2011, after which Optum was
28 responsible for conducting the program. Likewise, Ovations was responsible for

1 managing the RACCR Program until UnitedHealthcare Medicare & Retirement
2 succeeded it and assumed responsibility for the program in 2010.

3 243. Although the IDV and RACCR Programs were extremely limited in scope and
4 utility, they confirmed what the UHG Managing Defendants already knew: that there
5 were serious problems with the diagnoses being reported by a number of the financially-
6 incentivized providers, including WellMed (which UHG acquired in 2011).

7 **B. UnitedHealthcare Structured The RACCR Program To**
8 **Limit The Number Of Invalid Diagnosis Codes It Identified**

9 244. The UHG Managing Defendants knew they had an obligation to review diagnoses
10 reported by incentivized providers to determine their validity. In an April 23, 2012
11 email to many United Healthcare executives and managers (including Scott Theisen,
12 Keith Dobbins, Michael McCarthy, and Kimberly Halva), Mary Hammond, one of the
13 UnitedHealthcare employees who oversaw the RACCR program, described RACCR as
14 “an important part of Medicare & Retirement’s efforts to meet CMS requirements to
15 submit accurate risk adjustment data.” Later, in a June 22, 2012 agenda for a meeting
16 attended by Keith Dobbins, Kim Halva, Benjamin Poehling, and others, Mary Hammond
17 stated that the answer to “Why RACCRs?” was that “We have an obligation to submit
18 accurate Dx data to CMS.”

19 245. Despite the UHG Managing Defendants’ understanding that the RACCR Program
20 was part of UHG’s effort to comply with CMS’s accuracy requirements, they structured
21 the RACCR Program to limit its utility in identifying invalid diagnosis codes. There
22 were various fundamental limitations on the RACCR Program.

23 246. First, the UHG Managing Defendants excluded from their RACCR Program any
24 incentivized providers who cared for fewer than 500 beneficiaries in a Plan. This
25 resulted in the exclusion of approximately 40 percent of the financially-incentivized
26 providers from the RACCR Program for medical encounters in 2008, 2009, and 2010
27 (*i.e.*, with dates of service in those years).

247. Second, for the incentivized provider groups with 500 beneficiaries or more, the UHG Managing Defendants did not review the medical documentation for any diagnoses unless the provider group was an extreme outlier in reporting diagnoses that mapped to one or more HCCs. For medical encounters in 2008, 2009, and 2010 (*i.e.*, with dates of service in those years), the UHG Managing Defendants defined an outlier as a provider that reported diagnoses mapping to a particular HCC more than three times as often as the average national prevalence rate for that HCC for all beneficiaries in the Defendant MA Organizations' MA Plans. For example, if 15 percent of the beneficiaries in these MA Plans nationwide were reported by providers to have a diagnosis that mapped to HCC 52 (Drug/Alcohol Dependence), the UHG Managing Defendants did not consider the incentivized provider an outlier unless it reported diagnoses mapping to HCC 52 for more than 45 percent of its patients enrolled in a Defendant MA Organization's Plan. Combined with the exclusion of providers with less than 500 beneficiaries, this resulted in a total exclusion of over 80 percent of the financially-incentivized providers for medical encounters in 2008, 2009, and 2010.

248. For medical encounters in 2011 and 2012, the UHG Managing Defendants further limited which providers would qualify as outliers in order to reduce the number of providers and HCCs subject to review. Instead of using a national average prevalence rate for each HCC based on diagnoses reported by *all* of the providers in the Defendant MA Organizations' MA Plans, the UHG Managing Defendants used the average rate at which only financially-incentivized providers reported diagnoses mapping to each HCC. Thus, an incentivized provider was considered an outlier only if it reported diagnoses mapping to an HCC greater than two standard deviations above the rate that the HCC was coded by other incentivized providers, that is, providers who *also* had a financial incentive to invalidly code.

249. A large percentage of the outliers were located in the Central District of California. They are listed in Exhibit 14 to this Complaint.

250. Third, after limiting the program to only extreme outliers, the UHG Managing Defendants conducted an initial review of just a small sample of beneficiaries for whom the provider had reported diagnoses mapping to the outlier HCC or HCCs (as used herein, an “outlier HCC” is one that meets the criteria identified in Paragraphs 246 and 247 above for a particular provider and a particular encounter year). For medical encounters in 2008, 2009, and 2010, the initial sample size for even the largest provider groups was never more than 30 beneficiaries per outlier HCC, and was often as few as 10 beneficiaries per outlier HCC. The UHG Managing Defendants purposefully kept the sample size small to ensure the samples were not statistically significant, in the hope of preserving the ability to argue later that they were unable to extrapolate the results of their sample reviews to all of the diagnoses reported by the provider that mapped to the outlier HCC. For 2011 and 2012 medical encounters, the UHG Managing Defendants increased the initial sample size to 50 beneficiaries per provider for each outlier HCC.

251. Fourth, after reviewing the medical records for the beneficiaries in the sample to determine if the diagnoses were valid, the UHG Managing Defendants gave a provider a “passing” grade if anything less than 20 percent of the diagnoses were determined to be invalid. Accordingly, even if 19 percent of the diagnoses in the sample were invalid, the provider passed and no further review was conducted.

252. Fifth, if a provider failed the initial review for a particular outlier HCC, the UHG Managing Defendants often added only a few additional beneficiaries to the sample (*i.e.*, additional beneficiaries for whom the provider had reported diagnoses mapping to the outlier HCC). The UHG Managing Defendants called this slightly larger sample an “incremental sample.” If they were successful in decreasing the invalidation rate to below 20 percent based on increasing the sample size, the UHG Managing Defendants considered the provider group to have a passing grade for that HCC. Accordingly, if 19 percent of the diagnoses in the “incremental sample” were invalid, the provider passed and no further review was conducted.

253. Sixth, when the UHG Managing Defendants determined that a provider failed the incremental sample review for an outlier HCC, their RACCR policy specified that, with limited exceptions, *all* diagnoses reported by that provider mapping to the outlier HCC should be reviewed. In other words, once it was established that a provider reported diagnoses mapping to a particular HCC three times or more than the national average *and* that 20 percent or more of the diagnoses in a sample review were not supported by the beneficiaries' medical records *and* that increasing the sample size did not reduce the percentage of unsupported codes, even the UHG Managing Defendants recognized that, with limited exceptions, a complete review of the medical records for all beneficiaries for whom the provider had reported diagnoses mapping to the outlier HCC was essential. But in most cases, the UHG Managing Defendants did not conduct these 100 percent reviews themselves. Instead, as part of the RACCR Program, the UHG Managing Defendants purported to require the financially incentivized providers – the very providers who had over-reported the diagnoses at issue – to conduct these 100 percent reviews.

**C. Despite Its Limited Scope, The RACCR Program
Confirmed That Financially Incentivized Providers Were
Submitting Invalid Diagnosis Codes**

254. Despite the many flaws of the RACCR Program, the UHG Managing Defendants knew from the results of their small sample reviews and the 100 percent reviews that were actually conducted that significant problems existed with diagnoses reported by financially-incentivized providers.

255. By the end of March 2011, the UHG Managing Defendants were analyzing final results of RACCR sample analyses for encounters in 2008 and 2009, and had determined that a majority of the outlier HCCs analyzed in those years had validation rates below 80 percent, according to a March 29, 2011 email and spreadsheet that Benjamin Poehling sent to Paul Bihm.

1 256. By mid-February 2012, the UHG Managing Defendants reviewed samples for
2 encounters in 2010 and, again, found a substantial number of outlier HCCs that had
3 validation rates below 80 percent, according to a February 13, 2012 email and supporting
4 materials that Mary Hammond sent to Benjamin Poehling.

5 257. Overall, for the sample reviews for 2008, 2009, and 2010 encounters, nearly half
6 (49.61 percent) of the outlier HCCs reviewed failed the 80 percent validation test. Over
7 a third (37.01 percent) of all sampled diagnoses were not supported by the beneficiaries'
8 medical records. On April 23, 2012, Mary Hammond reported to numerous of the
9 employees of the UHG Managing Defendants (including Scott Theisen, Michael
10 McCarthy, Kimberly Halva, Keith Dobbins, and others) that Optum had calculated the
11 final results for samples from encounters in 2008, 2009, and 2010, and had identified the
12 providers who had failed the 80% validation test.

13 258. For the sample reviews for 2011 encounters, more than half (57.34 percent) of the
14 outlier HCCs reviewed failed the 80 percent validation test, and over 30 percent of all
15 sampled diagnoses reviewed for that year were not supported by the beneficiaries'
16 medical records, according to an August 8, 2013 email and supporting documentation
17 from Optum's Tracey Bradberry to Scott Hughes at Optum and Melissa Ferron, the
18 President of iCodify, a diagnosis coding consultant.

19 259. For the sample reviews for 2012 encounters, more than half of the outlier HCCs
20 failed the 80 percent validation test, and more than a third (38 percent) of all sampled
21 diagnoses were invalid, according to a July 2, 2014 presentation by Marybeth Meyer.

22 260. The problems with incentivized providers' invalid diagnoses were not isolated
23 incidents, but in many circumstances reflected a clear pattern of miscoding by provider
24 groups. Although the UHG Managing Defendants purposefully reviewed only a small
25 sample of medical records each year, they knew that certain provider groups were
26 consistently identified as extreme outliers on certain HCCs and failed the 80 percent
27 sample validation test year after year. For example:

1 • Every year from 2008 through 2011, Edinger Medical Group was an
2 extreme outlier for Spinal Cord Disorders/Injuries (HCC 69). Over those four years,
3 Optum (or its predecessor, Ingenix) reviewed medical records for a total of 126
4 beneficiaries that Edinger diagnosed with Spinal Cord Disorders/Injuries and determined
5 that the medical records of only *two* of those beneficiaries actually supported those
6 diagnoses. (Under the RACCR Program, Edinger or the UHG Managing Defendants
7 should have conducted 100 percent reviews of its diagnoses that mapped to this HCC for
8 the years 2008 through 2011, but they did not do so.)

9 • Every year from 2008 through 2012, HealthCarePartners was an extreme
10 outlier for Drug/Alcohol Psychosis (HCC 51). During those five years,
11 HealthCarePartners's highest sample validation rate for this HCC was 57.14 percent.
12 HealthCarePartners conducted 100 percent reviews for 2008, 2009, and 2011, and even
13 HealthCarePartners recognized that over a third of the diagnoses it reported were not
14 supported by its medical records. (Under the RACCR Program, HealthCarePartners or
15 the UHG Managing Defendants should have conducted 100 percent reviews for 2010
16 and 2012, but they did not do so.)

17 • Every year from 2008 through 2012, a provider named CAIPA was an
18 extreme outlier for Chronic Hepatitis (HCC 27). During those five years, CAIPA's
19 highest sample validation rate for this HCC was 76.92 percent. CAIPA conducted 100
20 percent reviews for 2008 and 2009 encounters, and its highest self-audit validation rate
21 was 56.73 percent. (Under the RACCR Program, CAIPA or the UHG Managing
22 Defendants should have conducted a 100 percent reviews for 2010 through 2012, but
23 they did not do so.)

24 • Every year from 2008 through 2012, Hemet Community Medical Group
25 was an extreme outlier for Spinal Cord Disorders/Injuries (HCC 69). During those five
26 years, Hemet's highest sample validation rate for this HCC was 50 percent. Hemet
27 conducted 100 percent reviews for 2008 through 2011, and its highest self-audit
28 validation rate also was 50 percent. (Under the RACCR Program, Hemet or the UHG

1 Managing Defendants should have conducted a 100 percent review for 2012, but they
2 did not do so.)

3 • Every year from 2008 through 2012, WellMed was an extreme outlier for
4 Disorders of Immunity (HCC 45). During those five years, WellMed's highest sample
5 validation rate for this HCC was 56.00 percent. WellMed conducted 100 percent
6 reviews for 2008, 2009 and 2011, and its highest self-audit validation rate was 63.64
7 percent. (Under the RACCR Program, WellMed or the UHG Managing Defendants
8 should have conducted a 100 percent review for 2010 and 2012 encounters, but they did
9 not do so.)

10 261. In those cases in which providers performed 100 percent reviews, the results
11 confirmed that the providers had initially submitted numerous invalid codes. Marybeth
12 Meyer and Scott Hughes's RACCR tracking spreadsheet indicated that more than 65
13 percent of the HCCs that providers reviewed in conducting 100 percent reviews had
14 validation rates below 80 percent. The RACCR "master tracking" documents that
15 Hughes updated regularly for Marybeth Meyer from 2013 through 2015 showed that
16 validation rates for problematic HCCs did not improve over time.

17 262. The UHG Managing Defendants' executives were routinely informed of RACCR
18 results. Beginning in 2011 and until at least 2014, the UHG Managing Defendants held
19 frequent meetings – usually weekly – concerning the status of the RACCR Program and
20 its results, with regular attendance by those responsible for the RACCR Program
21 (including, at various times, Kim Halva, Keith Dobbins, Marybeth Meyer, Benjamin
22 Poehling, Patty Brennan, Mary Hammond, Scott Hughes, and Pam Thomsen). During
23 these meetings, participants discussed the status and results of RACCR reviews, coding
24 results for individual practice groups, provider meetings to discuss results and 100
25 percent reviews, how 100 percent reviews would be handled in cases of provider
26 resistance, the financial impact of RACCR reviews, and changes to the RACCR
27 Program.

263. At least as early as February 14, 2012, Scott Theisen, Mary Hammond, and Benjamin Poehling met to discuss the deletion of codes resulting from the IDV and RACCR Programs for encounters in 2008, 2009, and 2010, and whether those deletions had been submitted. In March 2012, Theisen asked Hammond, Dumcum, Poehling, and Paul Bihm to pull together summary data concerning RACCR sample results for discussions with the incentivized providers. Theisen continued to be actively involved with some of the large incentivized providers that month, reviewing HealthCarePartners' results with Hammond and asking Hammond to identify the volume of codes that might be reviewed if WellMed were asked to do a 100 percent review so that he could provide a "worst case" scenario to John Way. In April 2012, Poehling updated Way regarding the status of WellMed's RACCR review, and Kimberly Fadden wrote to a number of employees of the UHG Managing Defendants, including Jeff Dumcum, Stephanie Will, and Jon Bird, noting that, among other things, there were then 40 to 42 provider groups in the 100 percent review process. The UHG Managing Defendants continued to provide periodic overviews or status updates concerning the RACCR Program to their executives and responsible employees. For example, in October 2013, Hammond sent Karen Erickson, Jon Bird, Scott Theisen, Jeff Dumcum, Patty Brennan, Marybeth Meyer, and others a "two-page detailed document that outlines the status, by provider group and year, of the 2008-2012 RACCR program."

264. The UHG Managing Defendants also kept their financial teams apprised of the status of the RACCR Program so that they could monitor, report, and account for its financial impact. For example, at some time before April 4, 2012, Jon Bird and Scott Theisen began discussing a rough estimate of the financial impact of the deletion of diagnosis codes as a result of RACCR. Theisen, Jon Bird, Bill Hnath, Melissa Sedor, and others also attended a December 3, 2012 meeting discussing, among other things, the financial effect of the IDV (*i.e.*, RACCR) Program, including the deletion of thousands of diagnosis codes as a result of that program. As set forth in more detail below, the UHG Managing Defendants' financial teams, including, at various times,

1 Theisen, Brian Thompson, Sedor and Hnath, also calculated liability accruals that
2 UnitedHealthcare Medicare & Retirement took in 2012 and 2013 to account for the
3 financial effect of the diagnosis codes that would have to be deleted as a result of the
4 RACCR Program.

5 **D. UnitedHealthcare Knew It Was Obligated To Delete**
6 **Invalid Diagnosis Codes Identified Through The RACCR**
7 **Reviews**

8 265. The Managing Defendants knew that they were required to submit accurate
9 diagnosis data to the Medicare Program. First, as described above, many of those
10 executives understood that RACCR was an important part of UnitedHealthcare Medicare
11 & Retirement's efforts to meet CMS's requirements regarding the submission of
12 accurate risk adjustment data, which necessarily implied the correction of inaccurate data
13 identified through the program.

14 266. Second, the UHG Managing Defendants' conduct demonstrated their knowledge
15 that they were required to delete invalid diagnosis codes identified through the RACCR
16 Program. From 2012 through 2015, the Managing Defendants deleted – albeit belatedly
17 – many invalid diagnosis codes submitted to CMS for encounters from 2008 through
18 2013, after determining, through the RACCR Program, that those codes were invalid.

19 267. Third, UnitedHealthcare Medicare & Retirement's practice of booking contra-
20 revenue accruals for the value of the deletions it had to submit as a result of the RACCR
21 Program demonstrated that the UHG Managing Defendants knew of their obligation to
22 return overpayments discovered through that program to the Government. Pursuant to
23 Statement of Financial Accounting Standards No. 5, *Accounting for Contingencies*, an
24 estimated loss from a loss contingency shall be accrued by a charge to income if both:
25 (a) a liability or impairment of an asset is "probable"; and (b) the amount of the loss can
26 be reasonably estimated. Thus, the accrual of loss contingencies relating to RACCR
27 reflected an acknowledgement that the return of an overpayment to the Government was
28

1 “probable,” and that UnitedHealthcare could reasonably estimate the amount of the
2 overpayment to be returned.

3 268. Beginning in 2012, UnitedHealthcare began taking liability accruals to account for
4 changes in its revenue that it expected to incur as a result of deletion of invalid codes
5 identified through the RACCR Program. By end of year 2012, it calculated that it would
6 have to reduce its revenue by \$79 million to account for its deletion of invalid codes
7 resulting from RACCR reviews (including expected 100 percent reviews) of medical
8 encounters in 2008, 2009, and 2010. That \$79 million was less than the total amount of
9 overpayment that it estimated it owed the United States, since it included both a
10 reduction in revenue resulting from the expected return of the overpayment and an offset
11 for the amount of money that it expected to recover from the incentivized providers,
12 which would have to share a portion of the burden of overpayment.

13 269. Accordingly, UnitedHealthcare took a liability accrual of \$79 million. It shared
14 this calculation with Deloitte and Touche in connection with that firm’s audit of UHG’s
15 financial statements, as part of UnitedHealthcare’s quarterly RAF Accounting Treatment
16 for Q4 2012 and Risk Adjustment Factor Revenue and Receivable Accounting for 2012.
17 Bill Hnath and Melissa Sedor told UHG’s Deloitte auditors that the \$79 million liability
18 accrual was “related to overpayments by CMS” that were identified through the RACCR
19 Program.

20 270. Scott Theisen was aware of the existence of a RACCR liability, and the
21 expectation that UnitedHealthcare would take an accrual for it, at least as early as
22 October 9, 2012, when Melissa Sedor sent him and Bill Hnath an August 2012 RAF
23 Financial Summary showing a \$97.5 million exposure (*i.e.*, amount of overpayment to
24 be returned) relating to the RACCR Program for encounters in 2008, 2009, and 2010.

25 271. In December 2013, Anne Reis, UnitedHealthcare Medicare & Retirement’s
26 Associate Director of Revenue, shared risk adjustment accruals with UnitedHealthcare
27 executives, including Scott Theisen, Brian Thompson, Bill Hnath, and Marybeth Meyer.
28 Those accruals included an additional liability accrual of \$34.5 million for RACCR

1 overpayments for the 2012 date of service year (2013 payment year), increasing the total
2 liability accrual for the RACCR Program to \$90.7 million for the 2008-2012 date of
3 service years (2009-2013 payment years). In taking a liability accrual for the 2012 date
4 of service year, UnitedHealthcare determined that it was probable that RACCR reviews
5 for the 2012 date of service year would result in the identification of deletes of diagnoses
6 reported by incentivized providers for medical encounters in 2012, as these reviews had
7 done in previous years.

8 272. The accuracy of the risk adjustment data that UnitedHealthcare and others
9 submitted to CMS on behalf of the Defendant MA Organizations was material to the
10 government's decision to pay and to the amount of risk adjustment payments. The
11 submission of inaccurate diagnosis data from incentivized providers directly resulted in
12 increases in risk adjustment payments that the Government made to the Defendant MA
13 Organizations.

14 273. Similarly, when the UHG Management Defendants deleted inaccurate diagnoses –
15 as they did when inaccurate diagnoses were identified in sample RACCR reviews or 100
16 percent reviews under the RACCR Program – the Government was able to offset its
17 subsequent payments to the Defendant MA Organizations by the value of those
18 deletions. UnitedHealthcare Medicare & Retirement's and Optum's failure to delete
19 unsupported codes because of their failure to conduct or complete 100 percent reviews
20 when their sample reviews identified Provider/HCC combinations with unacceptably
21 high error rates was material because if they had conducted the 100 percent reviews and
22 submitted deletes for the inaccurate diagnosis codes found in those reviews, those
23 deletions would have resulted in further offsets and, thus, reductions of payments to the
24 Defendant MA Organizations.

25 **E. Defendants Failed To Follow Their Own RACCR Protocol**
26 **Requiring 100 Percent Reviews**

27 274. As set forth above, the RACCR Program provided that if the sample review of an
28 outlier HCC showed that less than 80 percent of the diagnoses were supported by the

1 medical record, the provider would be required to perform a 100 percent review of all
2 instances of that outlier HCC coded by that provider for the date-of-service year at issue.
3 This requirement reflects a recognition by the UHG Managing Defendants that if a
4 provider codes a diagnosis three times as often as the national average rate *and* a sample
5 review shows that more than 1 in 5 diagnoses are not supported by the medical record,
6 then the provider's other uses of the same diagnosis code are highly likely to include
7 invalid diagnoses and must be reviewed for accuracy. Nonetheless, despite this
8 requirement of the RACCR Program, the UHG Managing Defendants frequently did not
9 require providers to perform 100 percent reviews of problematic HCCs for which sample
10 results showed unacceptably high error rates.

11 275. Not surprisingly, many providers were very resistant to performing 100 percent
12 reviews. Sometimes, the providers reviewed the records for only some, but not all,
13 additional beneficiaries for whom they had reported diagnoses mapping to the outlier
14 HCC. Sometimes, they did nothing.

15 276. For medical encounters in 2008 to 2010, at least 58 provider groups should have
16 performed 100 percent reviews because they failed the sample validation test for at least
17 one outlier HCC. Combined, these providers should have conducted 100 percent
18 reviews relating to 192 problematic HCCs. However, the providers only conducted
19 reviews of 143 of the 192 HCCs. Thus, a quarter of all outlier HCCs that failed the
20 sample validation test were not further reviewed by either the provider groups or
21 UnitedHealthcare. Similarly, for 2011 encounters, 100 percent reviews were conducted
22 for only 69 of 82 HCCs that failed Optum's sample validation test. Because the UHG
23 Managing Defendants did not require provider to perform 100 percent reviews of these
24 high-frequency but low-validating codes, they were able to avoid deleting the invalid
25 codes among them.

26 277. For example, for 2010 encounters, Edinger Medical Group coded Drug/Alcohol
27 Dependence (HCC 52) at a rate greater than three times the national rate. Optum (or its
28 predecessor, Ingenix) determined that only 70 percent of the diagnoses in its sample

1 were supported by medical record documentation. Because 30 percent of the sampled
2 diagnoses were invalid, the UHG Managing Defendants should have required Edinger to
3 review the additional 66 Edinger beneficiaries with a diagnosis mapping to HCC 52 that
4 were not included in the sample (or the UHG Managing Defendants should have
5 performed that review themselves). Nonetheless, the UHG Managing Defendants did
6 not require Edinger to do this review and they did nothing further to examine Edinger's
7 additional diagnoses mapping to HCC 52 that were not included in the sample.

8 278. Additional examples of provider groups that failed to conduct 100 percent reviews
9 for particular HCCs are shown in the chart attached as Exhibit 15 to this Complaint. The
10 UHG Managing Defendants also did not conduct the 100 percent reviews of these
11 problematic HCCs.

12 279. Moreover, even when a financially incentivized provider group conducted a 100
13 percent review, the UHG Managing Defendants knew they could not rely on the
14 accuracy of that review. For example, in a draft "WellMed RACCR Audit Status
15 Summary as of 2-9-12" that Mary Hammond circulated to Benjamin Poehling for
16 discussion with John Way in February 2012, Hammond reported that WellMed did a
17 self-audit for eight HCCs, but that the UHG Managing Defendants determined that "70%
18 of the codes [WellMed] indicated were properly documented actually were not supported
19 in the medical record." Hammond's summary also stated that, based on sample reviews
20 for medical encounters in 2008, 2009, and 2010, "WellMed failed to achieve an
21 acceptable validation rate for multiple HCCs ..., as defined by the RACCR audit
22 program policy and procedure."

23 **F. Even After Identifying Miscoding By Providers,**
24 **Defendants Failed To Delete Invalid Codes**

25 280. Even when the UHG Managing Defendants determined that diagnoses in a sample
26 review or 100 percent review were not supported by the medical records,
27 UnitedHealthcare Medicare & Retirement did not always delete them. For example:
28

1 • For 2008 medical encounters, the UHG Managing Defendants conducted a
2 sample review for Edinger Medical Group of diagnoses mapping to Drug/Alcohol
3 Dependence (HCC 52) and Major Complications of Medical Care & Trauma
4 (HCC 164). Optum's (or Ingenix's) coders determined that "[t]here was no
5 clinical documentation to support the diagnoses" mapping to HCC 52 for six
6 beneficiaries and that the diagnosis mapping to HCC 164 was the "wrong code"
7 for one beneficiary. (For all examples, further information to identify or aid in
8 identifying the beneficiaries will be separately provided to the Defendants.) On
9 January 23, 2013, Mary Hammond recommended to Keith Dobbins and Marybeth
10 Meyer that these results be put "on hold." The UHG Managing Defendants never
11 deleted these codes.

12 • For 2008 medical encounters, Optum (or its predecessor, Ingenix)
13 conducted a sample review for Family Practice Medical Group's diagnoses
14 mapping to Drug/Alcohol Dependence (HCC 52). For two beneficiaries, Optum's
15 (or Ingenix's) coder concluded there was "no clinical documentation to support
16 the diagnoses." In the Corrective Action Plan for the sample review, the reviewer
17 gave the provider "the benefit of the doubt" for the two diagnoses, despite noting
18 that "if these were submitted for a CMS or OIG audit, they may have been
19 rejected."

20 • In a sample review for Sharp-Rees Sealy for Vascular Disease (HCC 105)
21 for 2011, the UHG Managing Defendants failed to delete a diagnosis for
22 Beneficiary AA even though Optum's (or Ingenix's) coder, iCodify, determined it
23 was the "wrong code."

24 • In a sample review for HealthCarePartners for Protein-Calorie Malnutrition
25 (HCC 21) for 2011, the UHG Managing Defendants failed to delete a diagnosis for
26 Beneficiary BB even though Optum's (or Ingenix's) coder, iCodify, determined it
27 was the "wrong code."
28

1 • In a sample review for Mercy Physicians Medical Group for Protein-Calorie
2 Malnutrition (HCC 21) for 2011, the UHG Managing Defendants failed to delete a
3 diagnosis for Beneficiary CC even though Optum's (or Ingenix's) coders, under
4 the supervision of Tracey Bradberry, an Optum Operations Manager, determined
5 that it was the "wrong code."

6 • In a sample review for WellMed for Major Complications of Medical Care
7 and Trauma (HCC 164) for 2011, the UHG Managing Defendants did not delete a
8 diagnosis for Beneficiary DD even though Optum's (or Ingenix's) coder noted the
9 "dx [was] not documented" in the record.

10 • In a sample review for HealthCarePartners for Pneumococcal Pneumonia,
11 Emphysema, Lung Abscess (HCC 112) for 2012, the UHG Managing Defendants
12 did not delete a diagnosis code for Beneficiary EE even though Optum's (or
13 Ingenix's) coder determined the "dx [was] not documented."

14 • In a sample review for WellMed for Disorders of Immunity (HCC 45) for
15 2011, the UHG Managing Defendants did not delete a diagnosis code for
16 Beneficiary FF even though Optum's (or Ingenix's) coder determined the
17 diagnosis in the record was "not a current condition."

18 281. For some providers, the UHG Managing Defendants simply agreed not to delete
19 invalid codes. In January 2013, Keith Dobbins was informed that the UHG Managing
20 Defendants had not yet submitted deletes reflecting invalid codes found in RACCR
21 sample reviews of Edinger and WellMed diagnoses for encounters in 2008, 2009, and
22 2010. Optum kept those deletes "on hold," meaning that the UHG Managing Defendants
23 did not submit them, despite knowledge that the underlying codes had led to improper
24 payments from CMS.

**G. UnitedHealthcare Medicare & Retirement Discontinued
100 Percent Reviews And Converted The RACCR
Program Into A Revenue Generating Program**

282. By early 2014, UnitedHealthcare Medicare & Retirement knew, based on its observation of the results of the RACCR Program (as set forth above), that many of its large incentivized providers had reported unacceptably high rates of invalid diagnoses for numerous conditions. However, rather than redoubling its efforts to address invalid coding by incentivized providers, UnitedHealthcare Medicare & Retirement had Optum restructure the RACCR Program to turn it into just another chart review program focused on making ADDS. By July 2014, Optum made changes to the RACCR Program that effectively terminated the program as a tool for remedying the known problem of invalid coding by incentivized providers and refunding Medicare for risk adjustment payments based on those providers' invalid diagnoses.

283. First, UnitedHealthcare Medicare & Retirement stopped requiring any 100 percent reviews when the sample reviews failed the 80 percent sample validation test. At the time it made this decision, it was conducting RACCR sample reviews for 2012 DOS medical encounters. Accordingly, no 100 percent reviews were conducted for any outlier HCCs associated with 2012 medical encounters.

284. For 2012 DOS, there were 21 provider groups that had failed the 80 percent sample validation test for at least one outlier HCC. Optum had determined that the average invalidation rate was 34.73 percent for these 21 providers based on the sample reviews of their outlier HCCs. The UHG Managing Defendants knew from prior years that 100 percent reviews would result in the identification of more deletes. Nonetheless, they failed to require 100 percent reviews of the outlier HCCs or perform reviews themselves.

285. Second, for dates of service years after 2012, the UHG Managing Defendants stopped selecting sample beneficiaries for reviews based on whether the providers had submitted diagnoses for them mapping to outlier HCCs. Instead, they began selecting

1 beneficiaries and medical records based on what they believed would yield additional
2 codes and result in increased risk adjustment payments.

3 286. Third, starting with 2013 DOS medical encounters, UnitedHealthcare Medicare &
4 Retirement and Optum reviewed even fewer medical records than in previous years (less
5 than 100 total) for each incentivized provider group. Thus, they reviewed only several
6 thousand medical records as part of this new program.

7 287. By making these changes, the UHG Managing Defendants and Optum effectively
8 terminated the RACCR Program as an effort to correct the submission of invalid
9 diagnosis codes. Instead, they deliberately avoided identifying (and, thus, deleting)
10 invalid diagnoses reported by their financially-incentivized providers and repaying
11 Medicare for risk adjustment payments based on them.

12 288. Executives at Optum and UnitedHealthcare, including Scott Theisen, Jeff
13 Dumcum, Karen Erickson, Brian Thompson, and Keith Dobbins, were aware that the
14 changes to the RACCR Program for 2013 DOS and future years created a program that
15 no longer targeted outlier HCCs by provider, but instead selected beneficiaries and
16 medical records based on methods that Optum believed would yield additional codes and
17 result in increased risk adjustment payments. They knew that there was no replacement
18 program put into place to target the outlier HCCs and providers that had previously been
19 identified by the RACCR program. They knew that by stopping its program to look for
20 inaccurate codes, outlier providers who had failed the 80 percent validation tests would
21 continue to submit inaccurate codes to UnitedHealthcare, causing the submission of
22 inaccurate codes to CMS.

23 **H. RACCR-Related Falsehoods In UnitedHealthcare's And**
24 **Optum's Attestations**

25 289. As discussed in more detail below, Defendant UnitedHealthcare, on behalf of the
26 Defendant MA Organizations, submitted a Risk Adjustment Attestation to the Medicare
27 Program each year after the final risk adjustment submission deadline. *See infra*
28

1 paragraphs 309 to 327. Defendant Optum approved these Attestations in order for
2 UnitedHealthcare to submit them. *Id.*

3 290. In March 2012, Scott Theisen signed an Attestation on behalf of United's
4 Medicare & Retirement health plans certifying to the accuracy of UnitedHealthcare's
5 data for the 2010 date of service year (2011 payment year). By that date, the members of
6 UHG Management Defendants' RACCR team (including Michael McCarthy, Keith
7 Dobbins, Kim Halva, Benjamin Poehling, and Mary Hammond) knew that the RACCR
8 Program had identified thousands of invalid codes mapping to outlier HCCs from
9 encounters in 2010, that those codes had not yet been deleted, and that efforts were
10 underway to identify the providers that would be required to conduct 100 percent
11 reviews for encounters in 2010 because some of their diagnosis codes did not pass the 80
12 percent sample validation test.

13 291. In April 2013, Scott Theisen signed an Attestation on behalf of
14 UnitedHealthcare's Medicare & Retirement health plans certifying to the accuracy of
15 UnitedHealthcare's data for the 2011 date of service year (2012 payment year). By that
16 date, Theisen, along with the members of UHG Management Defendants' RACCR team
17 (including Marybeth Meyer, Keith Dobbins, Kim Halva, Patty Brennan, Benjamin
18 Poehling, and Scott Hughes) knew that the RACCR Program had identified thousands of
19 invalid codes mapping to HCCs from encounters in 2011, that those codes had not yet
20 been deleted, and that efforts were underway to identify the providers that would be
21 required to conduct 100 percent reviews for encounters in 2011 because some of their
22 diagnosis codes did not pass the 80 percent sample validation test.

23 292. In April 2014, Brian Thompson signed an Attestation on behalf of
24 UnitedHealthcare's Medicare & Retirement health plans certifying to the accuracy of
25 UnitedHealthcare's data for the 2012 date of service year (2013 payment year). By that
26 date, the members of UHG Management Defendants' RACCR team (including Marybeth
27 Meyer, Keith Dobbins, Kim Halva, Scott Theisen, Scott Hughes, and Tracey Bradberry)
28 knew that the RACCR Program had identified thousands of invalid codes mapping to

HCCs from encounters in 2012 through sample reviews, and that those codes had not yet been deleted. Additionally, Thompson was aware that there was a contra-revenue accrual in the amount of \$34.5 million for anticipated RACCR deletes for the 2012 date of service year alone.

IV. Defendants' False Risk Adjustment Attestations

293. The UHG Managing Defendants submitted or caused the submission, on behalf of the Defendant MA Organizations, of the annual Risk Adjustment Attestations to the Medicare Program after the final submission deadline but before the final reconciliation payment each year. Officers of Defendants Ovations and UnitedHealthcare reviewed and signed these Attestations. Defendant Optum and its predecessor Ingenix reviewed and approved these Attestations. These Defendants knew that the Defendant MA Organizations were required to submit truthful Risk Adjustment Attestations to the Medicare Program. Their officers and employees (*e.g.*, Jeffrey Dumcum, Stephanie Will, Jon Bird, Patty Brennan, Rebecca Martin, Scott Theisen, Relator Poehling, Mary Hammond) were aware of the obligations for deleting invalid diagnoses from RAPs or otherwise reporting and repaying risk adjustment overpayments by other means. Their officers and employees (*e.g.*, Jeffrey Dumcum, Stephanie Will, Jon Bird, Patty Brennan, Rebecca Martin, Scott Theisen, Relator Poehling, Mary Hammond) also knew that, if they deleted or withdrew invalid diagnoses from RAPS prior to the submission of an Attestation, Medicare would not pay for them or would recover any erroneous payments associated with them. However, Defendants failed to do this and knowingly submitted or caused the submission of false Attestations. They did this with actual knowledge that the Attestations were false or acted in deliberate ignorance or reckless disregard of the falsity of the Attestations.

294. Starting with the Attestation for payment year 2008 (if not for earlier Attestations) and continuing forward, attorneys for one or more of the UHG Managing Defendants added a footnote to the Attestations which stated that the Attestations were "based on facts reasonably available or made available to" the Defendant MA Organizations as of

1 the date of the Attestations. Optum and its predecessor Ingenix knew about this footnote
2 because its senior management, including Karen Erickson, Jeff Dumcum and Scott
3 Theisen, reviewed the Attestations and approved them prior to their submission to the
4 Medicare Program. The officers of Ovations and UnitedHealthcare who signed the
5 Attestations also knew about this footnote. Even without this footnote, the Attestations
6 themselves state that they must be made based on information available to the MA
7 Organizations: “Based on best knowledge, *information*, and belief as of the date
8 indicated below, all information submitted to CMS in such report [*i.e.*, the risk
9 adjustment data reported for the payment year at issue] and not subsequently deleted
10 prior to the date hereof is accurate, complete, and truthful.” (Emphasis added).

11 295. Information and facts reasonably available or made available to the Defendant
12 MA Organizations and the groups and entities that managed them at the time the
13 Attestations were submitted included the results of the medical record reviews conducted
14 as part of the Chart Review, Claims Verification, and RACCR Programs. In particular,
15 the results of the Chart Review Program were available before the final submission
16 deadline each year as the Chart Review Program ended when additional diagnoses could
17 no longer be submitted. Thus, the results of the Chart Review Program were
18 “information” and “facts reasonably available” before Ingenix and Optum approved the
19 Attestations and before Ovations and UnitedHealthcare executed and submitted the
20 Attestations to CMS on behalf of the Defendant MA Organizations. However, these
21 Defendants knowingly failed to delete numerous diagnoses that they had previously-
22 submitted that were unsupported and invalidated by their own chart reviews.

23 **A. Defendants’ Internal Attestation Approval Process**

24 296. Generally, the Chief Financial Officers of the groups with responsibility for
25 managing the Defendant MA Organizations owned by UHG were the officers designated
26 to sign and execute the annual Risk Adjustment Attestations on behalf of the Defendant
27 MA Organizations. Over the relevant time period, these groups included, but were not
28 limited to, Secure Horizons, the Public & Seniors Markets Group, Ovations,

1 UnitedHealthcare Medicare & Retirement, and UnitedHealthcare Community & States.
2 They were “responsible for establishing and maintaining adequate internal controls over
3 completion of attestations” submitted to the Medicare Program. They used a form to
4 “confirm that the appropriate legal, regulatory, and business owners” reviewed and
5 approved the attestations. *Id.* These legal, regulatory, and business owners were
6 required to sign Internal Approval Forms in order for the designated officials to sign the
7 Risk Adjustment Attestations.

8 297. Part C regulation, 42 C.F.R. § 422.504(1), and the agreements between the MA
9 Organizations and CMS required that this internal approval process include any related
10 entity, contractor or subcontractor of the Defendant MA Organizations that generated or
11 submitted risk adjustment data on their behalf. Furthermore, if a related entity generated
12 data relating to an MA Organization’s claims for payments from the Medicare Program,
13 the related entity (as well as the MA Organization) must certify the accuracy and
14 truthfulness of the data. *Id.* at § 422.504(l)(3). The contracts stated: “If such risk
15 adjustment data are generated by a related entity, contractor, or subcontractor of an MA
16 Organization, such entity, contractor, or subcontractor must also attest to (*based on best*
17 *knowledge, information, and belief, as of the date specified on the attestation form*) the
18 accuracy, completeness, and truthfulness of the data.” See Exhibits 1-7, attached hereto
19 (Article IV, Section D.2). Optum (and its predecessor, Ingenix), Ovation, and
20 UnitedHealthcare Medicare & Retirement understood this requirement as shown by the
21 previously-described MOU that obligated Optum to attest to the validity of the risk
22 adjustment data that it submitted to the Medicare Program on behalf of the Defendant
23 MA Organizations. See *supra* paragraphs 83-86.

24 298. During the time period relevant to this Complaint, the “business owners” that
25 signed off on the Internal Approval Forms were executives of Optum and Ingenix. One
26 of these business owners was Jeffrey Dumcum, who ran the Risk Adjustment Group at
27 Ingenix and then Optum. Dumcum’s internal attestations stated that he had reviewed the
28 content of the Risk Adjustment Attestations to be submitted by the managing entity (e.g.,

1 Oventions or UnitedHealthcare) to the Medicare Program and confirmed that the
2 Attestations were factually accurate. For example, on March 26, 2010, Dumcum sent an
3 email to Emily Vue, a Senior Regulatory Affairs Analyst for “Oventions – PSMG,
4 UnitedHealth Group, Inc.,” stating that he approved the Risk Adjustment Attestation for
5 John Larsen, the Chief Financial Officer of the Ovation Public & Senior Markets Group,
6 to submit to Medicare for payment year 2009. On March 24, 2011, Dumcum sent an
7 email to Barbara Carlson, a Senior Regulatory Affairs Analyst for UnitedHealthcare
8 Medicare & Retirement, stating that he approved the Risk Adjustment Attestation for
9 Scott Theisen, the Chief Financial Officer of UnitedHealthcare Medicare & Retirement,
10 to submit to Medicare for payment year 2010. On March 8, 2012, Dumcum sent an
11 email to Sandy Rick, a Senior Regulatory Affairs Analyst for UnitedHealthcare
12 Medicare & Retirement, stating that he approved the Risk Adjustment Attestation for
13 Mr. Theisen to submit to Medicare for payment year 2011.

14 299. Mr. Dumcum approved the Larsen and Theisen Risk Adjustment Attestations after
15 reviewing them and the footnotes added by the attorneys to them, including the footnote
16 stating that the Attestations were based on information available to the Defendant MA
17 Organizations about the accuracy and truthfulness of the diagnosis data that was
18 submitted on their behalf to the Medicare Program for risk adjustment payments.
19 However, Dumcum deliberately ignored or recklessly disregarded information available
20 to the Defendant MA Organizations and the entities that managed them (including
21 Oventions, UnitedHealthcare, Ingenix, and Optum, depending on the time period) about
22 invalid diagnoses, that is, he deliberately ignored and recklessly disregarded the negative
23 results of the medical record reviews conducted as part of the Chart Review, Claims
24 Verification, and RACCR Programs. Accordingly, Dumcum, as a senior executive of
25 Defendant Optum (and its predecessor, Ingenix), caused false Risk Adjustment
26 Attestations to be submitted to the Medicare Program.

27 300. For example, in March 2010, when Dumcum approved the Larsen Attestation for
28 payment year 2009, his Risk Adjustment Group at Ingenix possessed information about

1 the negative results of the Chart Review Program focused on the review of medical
2 records for medical encounters in date of service year 2008. Also, in March 2010,
3 Dumcum knew (or deliberately ignored or recklessly disregarded) that the managing
4 entities were not deleting or withdrawing the diagnoses unsubstantiated and invalidated
5 by those chart reviews. At that time, Dumcum also knew (or deliberately ignored or
6 recklessly disregarded) that these managing entities and the MA Organizations had an
7 obligation to delete or withdraw those invalid diagnoses. In fact, in 2009 prior to
8 Dumcum's approval of the Larsen Attestation, Dumcum knew that his Risk Adjustment
9 Group had already started discussing "looking both ways" at the results of chart reviews
10 and the methodology to do so in order to make DELETES as well as ADDS. *See supra*
11 paragraphs 180-182. Nonetheless, Dumcum signed the Internal Approval Form and
12 caused Larsen to submit a false Attestation to the Medicare Program.

13 301. As another example, in March 2011, when Dumcum approved the Theisen
14 Attestation for payment year 2010, his Risk Adjustment Group at Optum possessed
15 information about the negative results of the Chart Review Program focused on the
16 review of medical records for medical encounters in date of service year 2009. Also, in
17 March 2011, Dumcum knew (or deliberately ignored or recklessly disregarded) that
18 neither Optum nor UnitedHealthcare were deleting or withdrawing the diagnoses
19 invalidated by those chart reviews because they were not supported by the beneficiaries'
20 medical records. At that time, Dumcum also knew (or deliberately ignored or recklessly
21 disregarded) that both UnitedHealthcare and Optum had an obligation to delete or
22 withdraw those invalid diagnoses. In fact, in the fall of 2010 prior to Dumcum's
23 approval of the Theisen Attestation, Dumcum knew that senior executives of Ingenix and
24 Ovations had already acknowledged that they should be "looking both ways" at the
25 results of the chart reviews to make DELETES as well as ADDS. *See supra* paragraphs
26 185 and 196-198. In December 2010, the results of the first pilot phase (Phase I) of the
27 Claims Verification Program, which showed that provider-reported diagnoses were
28 unsupported for over 50 percent of the medical records reviewed, were also known by or

1 available to Dumcum. *See supra* paragraph 206. Nonetheless, Dumcum signed the
2 Internal Approval Form and caused Theisen to submit a false Attestation to the Medicare
3 Program.

4 302. In addition, in March 2012, when Dumcum approved the Theisen Attestation for
5 payment year 2011, his risk adjustment group at Optum possessed information about the
6 negative results of the Chart Review Program focused on the review of medical records
7 for medical encounters in date of service year 2010. Also, in March 2012, Dumcum
8 knew (or deliberately ignored or recklessly disregarded) that neither Optum nor
9 UnitedHealthcare were deleting or withdrawing the diagnoses invalidated by those chart
10 reviews, *i.e.*, those diagnoses not supported by the beneficiaries' medical records. At
11 that time, Dumcum also knew (or deliberately ignored or recklessly disregarded) that
12 both UnitedHealthcare and Optum had an obligation to delete or withdraw those invalid
13 diagnoses but were not doing so. In fact, by the time that Dumcum approved Theisen's
14 Attestation in March 2012, Optum had completed the second pilot phase (Phase II) of the
15 Claims Verification Program on 17,398 charts and the results were striking. Optum
16 identified 4,786 invalid diagnoses to be deleted, which was greater than the number of
17 additional diagnoses (ADDS) identified by the coders based on their review of the same
18 medical records. And, as previously stated, in February 2012, Dumcum, who was
19 responsible for the Claims Verification Program, met with Relator Poehling and Theisen
20 and reported: "I'm deleting as much as I'm adding at the end of the day. And I don't
21 know if—you know, what I want to do." He also stated: "we're getting more and more
22 red here," and that Claims Verification "eats in very substantially" to the revenue from
23 ADDS from chart reviews. Nonetheless, Dumcum signed the Internal Approval Form
24 and caused Theisen to submit a false Attestation.

25 303. Another "business owner" who executed the Internal Approval Form was Karen
26 Erickson, an Executive Vice President of Optum. On April 3, 2013, Erickson approved
27 Risk Adjustment Attestations for Scott Theisen, the Chief Financial Officer of
28 UnitedHealthcare Medicare & Retirement, and Paul Balthazor, the Chief Financial

1 Officer of UnitedHealthcare Community & State, to submit to Medicare for payment
2 year 2012. Erickson's internal attestation stated that she had reviewed the content of the
3 Theisen and Balthazor Risk Adjustment Attestations and confirmed that the Attestations
4 were factually accurate. Because she reviewed these Risk Adjustment Attestations she
5 knew about the footnotes that UnitedHealthcare included in the Attestations, stating that
6 the Attestations were based on information available to the Defendant MA
7 Organizations. In April 2013, Erickson knew (or deliberately ignored or recklessly
8 disregarded) that this information included the negative results of the Chart Reviews
9 focused on the review of medical records for medical encounters in date of service year
10 2011. Also, in April 2013, Erickson knew (or deliberately ignored or recklessly
11 disregarded) that neither Optum nor UnitedHealthcare were deleting or withdrawing all
12 of the diagnoses invalidated by those chart reviews because they were not supported by
13 the beneficiaries' medical records. At that time, Erickson also knew (or deliberately
14 ignored or recklessly disregarded) that both UnitedHealthcare and Optum had an
15 obligation to delete or withdraw all invalid diagnoses. In addition, prior to approving the
16 Attestations in 2013, Erickson, who was part of the team that developed the operational
17 plan for Claims Verification, knew and was concerned about the error rates based on
18 chart reviews conducted as part of the Claims Verification Program. Nonetheless,
19 Erickson signed the Internal Approval Forms and caused Theisen and Balthazor to
20 submit false Attestations.

21 304. In addition, on April 17 and 21, 2014, Erickson approved Risk Adjustment
22 Attestations for Brian Thompson, the Chief Financial Officer of UnitedHealthcare
23 Medicare & Retirement, and for Paul Balthazor, the Chief Financial Officer of
24 UnitedHealthcare Community & State, to submit to Medicare for payment year 2013.
25 Erickson's internal attestation stated that she reviewed the content of the Thompson and
26 Balthazor Risk Adjustment Attestations and confirmed that the Attestations were
27 factually accurate. Because she reviewed these Risk Adjustment Attestations she knew
28 about the footnotes that UnitedHealthcare included in the Attestations, stating that the

1 Attestations were based on information available to the Defendant MA Organizations.
2 In April 2014, Erickson knew (or deliberately ignored or recklessly disregarded) that this
3 information included the negative results of the Chart Reviews focused on the review of
4 medical records for medical encounters in date of service year 2012. Also, in April
5 2014, Erickson knew (or deliberately ignored or recklessly disregarded) that neither
6 Optum nor UnitedHealthcare were deleting or withdrawing all of the diagnoses
7 invalidated by those chart reviews because they were not supported by the beneficiaries'
8 medical records. At that time, Erickson also knew (or deliberately ignored or recklessly
9 disregarded) that both UnitedHealthcare and Optum had an obligation to delete or
10 withdraw all invalid diagnoses. Nonetheless, Erickson signed the Internal Approval
11 Forms and caused Thompson and Balthazor to submit false Attestations.

12 305. During the time period relevant to this Complaint, one of the "regulatory owners"
13 that executed the Internal Approval Form was David Walsh, the Senior Director of
14 Regulatory Affairs for UnitedHealthcare. He attested that he had reviewed the content
15 of the Risk Adjustment Attestation "to confirm that it complies with applicable
16 *regulatory* requirements and determined that it is appropriate for the designated
17 executive to proceed with signature." However, Walsh deliberately ignored or recklessly
18 disregarded the negative results of the Chart Review Program. He also ignored and
19 disregarded that Defendants had failed to comply with the requirements that diagnoses
20 must be supported by patients' medical records and those diagnoses that are not
21 supported by the patients' medical records must be deleted from RAPS or otherwise
22 reported to CMS and corrected to repay or avoid any overpayment.

23 306. During the time period relevant to this Complaint, one of the "legal owners" that
24 executed the Internal Approval Form was UnitedHealthcare's Senior General Counsel
25 Keith Dobbins. For example, on March 26, 2010, Dobbins approved the Risk
26 Adjustment Attestation for John Larsen to submit to the Medicare Program for payment
27 year 2009. Dobbins attested that he had reviewed the content of the Risk Adjustment
28 Attestation to confirm that it complied with "applicable *legal* requirements" and was

1 “appropriate” for Larsen to sign. (emphasis in the original). As another example, on
2 March 25, 2011, Dobbins approved the Risk Adjustment Attestation for Scott Theisen,
3 the Chief Financial Officer of UnitedHealthcare Medicare & Retirement, to submit to the
4 Medicare Program for payment year 2010. Again, Dobbins attested that he reviewed the
5 content of the Attestation to confirm that it complied with “applicable legal
6 requirements” and was “appropriate” for Theisen to submit to the Medicare Program for
7 payment year 2011. In addition, on March 9, 2012, Dobbins approved the Risk
8 Adjustment Attestation for Scott Theisen, the Chief Financial Officer of
9 UnitedHealthcare Medicare & Retirement, to submit to the Medicare Program for
10 payment year 2011. Again, Dobbins attested that he reviewed the content of the
11 Attestation to confirm that it complied with “applicable legal requirements” and was
12 “appropriate” for Theisen to submit to the Medicare Program for payment year 2011.
13 On April 30, 2014, Dobbins also approved the Risk Adjustment Attestation for Brian
14 Thompson, the Chief Financial Officer of UnitedHealthcare Medicare & Retirement, to
15 submit to Medicare for payment year 2013. Again, Dobbins attested that he reviewed
16 the content of the Attestation to confirm that it complied with “applicable legal
17 requirements” and was “appropriate” for Theisen to submit to the Medicare Program for
18 payment year 2011. On information and belief, Dobbins approved other Risk
19 Adjustment Attestations for other payment years and attested to their accuracy.
20 307. Each time Dobbins approved the Attestations, he knew (or deliberately ignored or
21 recklessly disregarded) that information available to the Defendant MA Organizations
22 included the negative results of the chart reviews for the date of service years at issue.
23 Also, he knew (or deliberately ignored or recklessly disregarded) that neither
24 Ingenix/Optum nor Ovations/UnitedHealthcare (depending on the time period) were
25 deleting or withdrawing all of the diagnoses invalidated by those chart reviews because
26 they were not supported by the beneficiaries’ medical records. At that time, he also
27 knew (or deliberately ignored or recklessly disregarded) that both Ingenix/Optum and
28 Ovations/UnitedHealthcare had an obligation to delete or withdraw all invalid diagnoses.

308. During the years relevant to his approvals, Dobbins was a member of UnitedHealthcare's Risk Adjustment Compliance Oversight Committee and Optum's Clinical Programs and Compliance Oversight Committee. During those years, Dobbins also attended various meetings involving the work that Ingenix and then Optum performed for Ovations and then UnitedHealthcare. As a member of these committees and a participant in these meetings, Dobbins was included in numerous discussions about the validity of the risk adjustment data submitted to the Medicare Program, the Chart Review Program, the development and results of the Claims Verification Program, and the RACCR Program. Dobbins was also one of the individuals who was responsible for reviewing quarterly compliance scorecards that included detailed information about the Chart Review, Claims Verification, and RACCR Programs. Despite these compliance responsibilities and this knowledge, Dobbins ignored and disregarded that Ovations, UnitedHealthcare, Optum, and Ingenix had failed to comply with the requirements that diagnoses must be supported by patients' medical records and that diagnoses unsupported by patients' medical records must be deleted from RAPS or otherwise reported to CMS and corrected to repay or avoid any overpayments.

B. The False Attestations Submitted To The Government

309. On March 19, 2009, John Way executed and submitted or caused to be submitted to the Medicare Program an "Attestation of Risk Adjustment Data Information Relating to CMS Payment to a Medicare Advantage Organization." He submitted this Attestation "[o]n behalf of the UnitedHealth Group entities listed in Attachment 1." This Attestation related to risk adjustment data, that is, diagnoses, which Ovations and/or UnitedHealthcare and Ingenix submitted on behalf of many of the Defendant MA Organizations for risk adjustment payments for payment year 2008. See Exhibit 16, attached hereto. The Risk Adjustment data, that is, the diagnoses, were related to medical encounters that occurred in date of service year 2007. Way signed the Attestation as "Chief Financial Officer, SecureHorizons." At this time, March 2009, SecureHorizons was an internal group within Ovations or UnitedHealthcare. Way added

1 a footnote to the Attestation which stated that the Attestation was “based on facts
2 reasonably available or made available to the MA Organization as of the date of” the
3 Attestation. The Attestation itself said it was made based on information available to the
4 MA Organizations. In March 2009, information and facts reasonably available to the
5 Defendant MA Organizations, Ovations and/or UnitedHealthcare, and Ingenix included
6 the negative results of the Chart Review Program for 2007 date of service medical
7 encounters.

8 310. In March 2009, when Way signed the Attestation, he deliberately ignored or
9 recklessly disregarded the negative results of the Chart Review Program relating to
10 medical encounters with 2007 dates of service. Way also ignored and disregarded that
11 Defendants had failed to comply with the requirements that diagnoses must be supported
12 by patients’ medical records and those diagnoses that are not supported by patients’
13 medical records are invalid and must be deleted from RAPS or otherwise reported to
14 CMS and corrected to repay or avoid any overpayment. In addition, at this time, Relator
15 Poehling was a direct report to Way, Relator Poehling and Way had numerous
16 conversations about risk adjustment programs, and Relator Poehling voiced his concerns
17 to Way about Ovations failure to “look both ways” at the results of medical record
18 reviews conducted as part of the Chart Review Program.

19 311. On March 18, 2009, Kara Rios executed and submitted or caused to be submitted
20 to the Medicare Program an “Attestation of Risk Adjustment Data Information Relating
21 to CMS Payment to a Medicare Advantage Organization.” She submitted this
22 Attestation “[o]n behalf of the UnitedHealth Group entities listed in Attachment 1.” This
23 Attestation related to Risk Adjustment data, that is, diagnoses, that Ovations (or the
24 group known as AmeriChoice, which, on information and belief, was located within
25 Ovations at this time) and Ingenix submitted on behalf of certain Defendant MA
26 Organizations for Risk Adjustment payments for payment year 2008. The Risk
27 Adjustment data, that is, the diagnoses, were related to medical encounters that occurred
28 in date of service year 2007. Rios signed the Attestation as “Chief Financial Officer,

1 AmeriChoice.” Rios added a footnote to the Attestation which stated that the Attestation
2 was “based on facts reasonably available or made available to the MA Organization as of
3 the date of” the Attestation. The Attestation itself said it was made based on information
4 available to the MA Organizations. In March 2009, information and facts reasonably
5 available to all Defendants included the negative results of the Chart Review Program.

6 312. On March 2, 2009, Jonathan Bunker executed and submitted or caused to be
7 submitted to the Medicare Program an “Attestation of Risk Adjustment Data Information
8 Relating to CMS Payment to a Medicare Advantage Organization.” He submitted this
9 Attestation “[o]n behalf of Sierra Health and Life Insurance Company, Inc.,” a
10 Defendant MA Organization. This Attestation was for payment year 2008. The Risk
11 Adjustment data, that is, the diagnoses, were related to medical encounters that occurred
12 in date of service year 2007. Bunker signed the Attestation as President of Sierra Health
13 and Life Insurance Company, Inc. At this time, March 2009, Sierra Health and Life
14 Insurance Company, Inc. was an MA Organization owned by UHG and managed by
15 UnitedHealthcare. The Attestation was submitted to the Medicare Program by Shelly
16 Cranley, the Director of Regulatory Affairs for UnitedHealthcare.

17 313. On March 2, 2009, Jonathan Bunker executed and submitted or caused to be
18 submitted to the Medicare Program another “Attestation of Risk Adjustment Data
19 Information Relating to CMS Payment to a Medicare Advantage Organization.” He
20 submitted this Attestation “[o]n behalf of Health Plan of Nevada, Inc.,” a Defendant MA
21 Organization, and its MA Plans. This Attestation was for payment year 2008. The Risk
22 Adjustment data, that is, the diagnoses, were related to medical encounters that occurred
23 in date of service year 2007. Bunker signed the Attestation as President of Health Plan
24 of Nevada, Inc. At this time, March 2009, Health Plan of Nevada, Inc. was an MA
25 Organization owned by UHG and managed by UnitedHealthcare. The Attestation was
26 submitted to the Medicare Program by Shelly Cranley, the Director of Regulatory
27 Affairs for UnitedHealthcare.

314. On March 19, 2009, Justin Roth executed and submitted or caused to be submitted to the Medicare Program another “Attestation of Risk Adjustment Data Information Relating to CMS Payment to a Medicare Advantage Organization.” This Attestation was for payment year 2008. The Risk Adjustment data, that is, the diagnoses, were related to medical encounters that occurred in date of service year 2007. Roth signed the Attestation as “Chief Financial Officer of Evercare” and stated that the Attestation was signed “[o]n behalf of the UnitedHealth Group entities listed in Attachment 1,” which included various Defendant MA Organizations, including many United Healthcare Insurance Company MA Organizations, Oxford Health Plans of New Jersey, Inc., and Evercare of Texas. At this time, March 2009, these MA Organizations were owned by UHG and managed by UnitedHealthcare. The Attestation stated that it was based on information and facts reasonably available or made available to the MA Organizations listed in Attachment 1 at the time the Attestation was submitted.

315. On March 26, 2010, John Larsen executed and submitted or caused to be submitted to CMS an “Attestation of Risk Adjustment Data Information Relating to CMS Payment to a Medicare Advantage Organization.” He submitted this Attestation “[o]n behalf of the UnitedHealth Group entities listed in Attachment 1.” These entities included numerous Defendant MA Organizations. This Attestation related to Risk Adjustment data, that is, diagnoses, that Optum (or its predecessors Ingenix) and Ovations and/or UnitedHealthcare submitted on behalf of these MA Organizations to Medicare for Risk Adjustment payments for payment year 2009. See Exhibit 17, attached hereto. The Risk Adjustment data, that is, the diagnoses, were related to medical encounters that occurred in date of service year 2008. Larsen signed the Attestation as “Chief Financial Officer, Public & Senior Markets Group.” At this time, the Public & Senior Markets Group included Ovations. Larsen added a footnote to his Risk Adjustment Attestation which stated that the Attestation was “based on facts reasonably available or made available to the MA Organization as of the date of” the Attestation. The Attestation itself stated that it was based on information available to the

1 MA Organizations. In March 2010, information and facts reasonably available to the
2 Defendant MA Organizations included the negative results of the Chart Review Program
3 relating to medical encounters that occurred in 2008.

4 316. When Larsen signed the Attestation, he deliberately ignored or recklessly
5 disregarded the negative results of the Chart Review Program. Larsen also ignored or
6 disregarded that Defendants had failed to comply with the requirements that diagnoses
7 must be supported by patients' medical records and that diagnoses that are not supported
8 by patients' medical records are invalid and must be deleted from RAPS or otherwise
9 reported to CMS and corrected to repay or avoid any overpayment. During the relevant
10 time period, Larsen was involved in meetings concerning the Chart Review Program and
11 knew that the Public & Senior Markets Group could have "looked both ways" at the
12 results of the chart reviews but was not doing so and, thus, that the Public & Senior
13 Markets Group was not reporting to CMS those provider-reported codes that were not
14 supported by the beneficiaries' medical records.

15 317. On March 25, 2011, Scott Theisen executed and submitted or caused to be
16 submitted to CMS an "Attestation of Risk Adjustment Data Information Relating to
17 CMS Payment to a Medicare Advantage Organization." He submitted this Attestation
18 "[o]n behalf of the UnitedHealth Group entities listed in Attachment 1." This Attestation
19 related to Risk Adjustment data, that is, diagnoses, that UnitedHealthcare and Optum (or
20 its predecessor Ingenix) submitted on behalf of numerous Defendant MA Organizations
21 to Medicare for risk adjustment payments for payment year 2010. See Exhibit 18,
22 attached hereto. The risk adjustment data, that is, the diagnoses, were related to medical
23 encounters that occurred in date of service year 2009. Theisen signed the Attestation as
24 "Chief Financial Officer, UnitedHealthcare Medicare & Retirement." Theisen added a
25 footnote to his Risk Adjustment Attestation which stated that the Attestation was "based
26 on facts reasonably available or made available to the MA Organization as of the date
27 of" the Attestation. The Attestation itself stated that it was made based on information
28 available to the Defendant MA Organizations. In March 2011, information and facts

1 reasonably available to the Defendant MA Organizations, UnitedHealthcare, and Optum
2 (or its predecessor, Ingenix) included the negative results of the Chart Review Program
3 relating to medical encounters in 2009.

4 318. On March 9, 2012, Scott Theisen executed and submitted or caused to be
5 submitted to CMS an “Attestation of Risk Adjustment Data Information Relating to
6 CMS Payment to a Medicare Advantage Organization.” He submitted this Attestation
7 “[o]n behalf of the UnitedHealth Group entities listed in Attachment 1.” This Attestation
8 related to Risk Adjustment data, that is, diagnoses, that UnitedHealth and Optum
9 submitted to on behalf of numerous MA Organizations to Medicare for risk adjustment
10 payments for payment year 2011. See Exhibit 19, attached hereto. The risk adjustment
11 data, that is, the diagnoses, were related to medical encounters that occurred in date of
12 service year 2010. Theisen signed the Attestation as “Chief Financial Officer,
13 UnitedHealthcare Medicare & Retirement. The Attestation stated that it was based on
14 information available to the MA Organizations. It also included a footnote that stated
15 the Attestation was “based on facts reasonably available or made available to the MA
16 Organization as of the date” of the Attestation. In March 2012, information and facts
17 reasonably available to all Defendants included the negative results of the medical record
18 reviews conducted as part of the Chart Review Program for payment year 2011 (date of
19 service year 2010).

20 319. On April 9, 2013, Scott Theisen executed and submitted or caused to be submitted
21 to CMS an “Attestation of Risk Adjustment Data Information Relating to CMS Payment
22 to a Medicare Advantage Organization.” He submitted this Attestation “[o]n behalf of
23 the UnitedHealth Group entities listed in Attachment A.” This Attestation related to
24 Risk Adjustment data, that is, diagnoses, that UnitedHealthcare and Optum submitted on
25 behalf of numerous MA Organizations to Medicare for risk adjustment payments for
26 payment year 2012. See Exhibit 20, attached hereto. The risk adjustment data, that is,
27 the diagnoses, were related to medical encounters that occurred in date of service year
28 2011. Theisen signed the Attestation as “Chief Financial Officer, UnitedHealthcare

1 Medicare & Retirement.” The Attestation stated that it was based on information
2 available to the MA Organizations and also included a footnote stating that the
3 Attestation was “based on facts reasonably available or made available to the MA
4 Organization as of the date of” the Attestation. In March 2013, information and facts
5 reasonably available to the MA Organizations, UnitedHealthcare, and Optum included
6 the negative results of the medical record reviews conducted as part of the Chart Review
7 Program for payment year 2012 (date of service year 2011).

8 320. Each time Theisen signed the Attestations, he deliberately ignored or recklessly
9 disregarded the negative results of the Chart Review Program for the 2010, 2011, and
10 2012 payment years and 2009, 2010, and 2011 date of service years at issue. Theisen
11 also ignored or disregarded that the Defendant MA Organizations, UnitedHealthcare,
12 and Optum (or its predecessor, Ingenix) had failed to comply with the requirements that
13 diagnoses must be supported by patients’ medical records and that those diagnoses that
14 are not supported by patients’ medical records are invalid and must be deleted from
15 RAPS or otherwise reported to CMS and corrected to repay or avoid any overpayments.

16 321. During the years in which he was Chief Financial Officer of UnitedHealthcare
17 Medicare & Retirement and approved the Attestations, Theisen was co-chair and
18 business lead of UnitedHealthcare Medicare & Retirement’s Financial Compliance
19 Oversight Committee. He also attended quarterly meetings with UnitedHealthcare
20 Medicare & Retirement’s Compliance Committee, comprised of UnitedHealthcare
21 Medicare & Retirement’s executive leadership team; Executive Steering Committee
22 meetings; and meetings to identify and evaluate corporate risks. As a member of these
23 committees, a participant in these meetings, and in fulfilling his duties as
24 UnitedHealthcare Medicare & Retirement’s Chief Financial Officer, Theisen was
25 involved in discussions about the Chart Review Program, the implementation and results
26 of the Claims Verification Program, and the RACCR Program. During this time period,
27 Theisen had authority to make decisions on behalf of UnitedHealthcare, including how
28 much to spend on the Chart Review Program, how many charts to include in the Chart

1 Review Program, and whether to submit DELETES based on information available to
2 UnitedHealthcare. He also had authority to make similar decisions about the RACCR
3 Program.

4 322. In addition, Theisen was aware of the significant number of invalid provider-
5 reported diagnoses based on the results of the Chart Review and Claims Verification
6 Programs. For example, when Theisen executed the Risk Adjustment Attestation in
7 March 2011, the results of the first pilot phase (Phase I) of the Claims Verification
8 Program were available. As previously explained, those results showed that provider-
9 reported diagnoses were unsupported for over 50 percent of the medical records
10 reviewed. *See supra* paragraph 206. As another example, in February 2012 prior to his
11 signing the March 2012 Attestation, Theisen (as well as Dumcum and Relator Poehling)
12 had actual knowledge of the strikingly negative results of the Claims Verification Phase
13 II pilot program showing that there were more DELETES than ADDS. *See supra*
14 paragraph 158. In addition, on April 3, 2013, when Theisen executed and submitted the
15 Risk Adjustment Attestations for payment year 2012, the information available to the
16 Defendants MA Organizations, UnitedHealthcare Medicare & Retirement (including
17 Theisen), and Optum included the results of the chart reviews for 2011 dates of service,
18 which showed that they had submitted at least 100,000 diagnoses that were invalid, but
19 had not been deleted (and never were deleted). *See supra* paragraph 235. Yet, Theisen
20 attested that these invalid diagnoses were accurate and truthful.

21 323. On March 25, 2011, Brian Thompson, the Chief Financial Officer of
22 UnitedHealthcare Community & State, executed and submitted or caused to be
23 submitted an “Attestation of Risk Adjustment Data Information Relating to CMS
24 Payment to a Medicare Advantage Organization.” He submitted this Attestation on
25 behalf of “the UnitedHealth Group entities listed in Attachment 1.” This Attestation
26 related to risk adjustment data, that is, diagnoses, that UnitedHealthcare and Optum (or
27 its predecessor, Ingenix) submitted on behalf of certain of the Defendant MA
28 Organizations to Medicare for payment year 2010. The data related to the 2009 date of

1 service year. The Attestation as based on information and facts reasonably available to
2 the MA Organizations, including the negative results of the Chart Review Program based
3 on medical record reviews for date of service year 2009. Information and facts available
4 to the MA Organizations, UnitedHealthcare, and Optum (or its predecessor, Ingenix)
5 included the results of the medical record reviews conducted as part of the Chart Review
6 Program for medical encounters during the 2009 date of service year. However,
7 Thompson and these Defendants deliberately ignored or recklessly disregarded the
8 negative results of these chart reviews. They also ignored or disregarded that the
9 Defendant MA Organizations, UnitedHealthcare, and Optum (or its predecessor,
10 Ingenix) had failed to comply with the requirements that diagnoses must be supported by
11 patients' medical records and that those diagnoses that are not supported by patients'
12 medical records are invalid and must be deleted from RAPS or otherwise reported to
13 CMS and corrected to repay or avoid any overpayments.

14 324. On March 29, 2012, Paul Balthazor, the Chief Financial Officer of
15 UnitedHealthcare Community & State, executed and submitted or caused to be
16 submitted an "Attestation of Risk Adjustment Data Information Relating to CMS
17 Payment to a Medicare Advantage Organization." He submitted this Attestation on
18 behalf of "the UnitedHealth Group entities listed in Attachment 1." This Attestation
19 related to risk adjustment data, that is, diagnoses, that UnitedHealthcare and Optum (or
20 its predecessor, Ingenix) submitted on behalf of certain of the Defendant MA
21 Organizations to Medicare for payment year 2011. The data related to 2010 date of
22 service year. The Attestation was based on information and facts reasonably available to
23 the MA Organizations, UnitedHealthcare, and Optum including the negative results of
24 the medical record reviews conducted as part of the Chart Review Program for the 2010
25 date of service year. However, Balthazor and these Defendants deliberately ignored or
26 recklessly disregarded the negative results of these chart reviews. They also ignored or
27 disregarded that the Defendant MA Organizations, UnitedHealthcare, and Optum had
28 failed to comply with the requirements that diagnoses must be supported by patients'

1 medical records and that those diagnoses that are not supported by patients' medical
2 records are invalid and must be deleted from RAPS or otherwise reported to CMS and
3 corrected to repay or avoid any overpayments. In April 2013, Balthazor also executed
4 the Risk Adjustment Attestation for the MA Organizations managed by
5 UnitedHealthcare Community & State for payment year 2012 (date of service year
6 2011). For this year too, Balthazor and the Defendant MA Organizations,
7 UnitedHealthcare, and Optum ignored the results of the chart reviews and their
8 obligations to delete invalid diagnoses.

9 325. On April 30, 2014, Brian Thompson executed and submitted or caused to be
10 submitted Risk Adjustment Attestations on behalf of all of the Defendant MA
11 Organizations managed by UnitedHealthcare Medicare & Retirement at that time. (On
12 the same date, Paul Balthazor executed and submitted or caused to be submitted Risk
13 Adjustment Attestations on behalf of all Defendant MA Organizations managed by
14 UnitedHealthcare Community & State at the time.) An example of one of Thompson's
15 Attestations includes the Attestation he submitted "[o]n behalf of the UnitedHealth of
16 California." See Exhibit 21, attached hereto. This Attestation related to risk adjustment
17 data, that is, diagnoses, which UnitedHealthcare and Optum submitted on behalf of
18 UnitedHealthcare of California to the Government for risk adjustment payments for
19 payment year 2013. The risk adjustment data, that is, the diagnoses, were related to
20 medical encounters that occurred in date of service year 2012. At the time Thompson
21 signed this Attestation he was the Chief Financial Officer of UnitedHealthcare Medicare
22 & Retirement. The Attestation was based on information available to the MA
23 Organizations. UnitedHealthcare could not add a footnote to the Attestation because it
24 was submitted electronically. However, Steve Nelson, the Chief Executive Officer of
25 UnitedHealthcare Medicare & Retirement, sent CMS an email on April 30, 2014, stating
26 that the Attestation was "based on facts reasonably available or made available to *us* as
27 of the date of" the Attestation. (Emphasis added). In April 2014, facts reasonably
28 available to all the Defendant MA Organizations, UnitedHealthcare, and Optum included

1 the negative results of the Chart Review and Claims Verification Programs relating to
2 medical encounters in 2012. Other information and facts that were available included,
3 for instance, millions of dollars of invalid diagnoses about which United had *actual*
4 knowledge but never deleted. *See supra* paragraph 232.

5 326. In April 2014, when Thompson signed the Attestation, he deliberately ignored or
6 recklessly disregarded the negative results of the Chart Review Program. Thompson
7 also ignored that Defendants had failed to comply with the requirements that diagnoses
8 must be supported by patients' medical records and that those diagnoses that are not
9 supported by patients' medical records must be deleted from RAPS or otherwise
10 reported to CMS and corrected to repay or avoid any overpayment. At the time that
11 Thompson submitted the Attestation on April 30, 2014, he knew about the actual or
12 estimated adverse financial impact of DELTES from the Chart Review and Claims
13 Verification Programs for payment year 2013 (date of service year 2012) and he knew
14 about CV liability accruals. *See supra* paragraphs 217-221. Furthermore, on April 30,
15 2014, the date the Attestations were submitted for the 2013 payment year, the
16 information available to the Defendant MA Organizations, UnitedHealthcare Medicare
17 & Retirement (including Thompson), and Optum included the results of the chart
18 reviews for the date of service year 2012, which showed that at least 250,000 diagnoses
19 were invalid. *See supra* paragraph 235. Yet, Thompson certified that this invalid data
20 was accurate and truthful even though the invalid diagnoses had not been deleted (and
21 never have been).

22 327. On June 26, 2015 and June 7, 2016, Thompson executed and submitted or caused
23 to be submitted Risk Adjustment Attestations on behalf of all of the Defendant MA
24 Organizations managed by UnitedHealthcare Medicare & Retirement on those dates.
25 (On the same dates, UnitedHealthcare Community & State also submitted Risk
26 Adjustment Attestations for the Defendant MA Organizations that it managed.) These
27 Attestations related to risk adjustment data, that is, diagnoses, which UnitedHealthcare
28 and Optum submitted on behalf of these MA Organizations to the Government for risk

1 adjustment payments for payment years 2014 and 2015. The risk adjustment data, that
2 is, the diagnoses, were related to medical encounters that occurred in date of service
3 years 2013 and 2014. At the time Thompson signed these Attestations he was the Chief
4 Financial Officer of UnitedHealthcare Medicare & Retirement. The Attestations were
5 the same as those for prior years (except that they did not have footnotes.) The
6 Attestations were based on information available to the MA Organizations, including
7 information about diagnoses unsupported and, thus, invalidated by the chart reviews for
8 the dates of service years at issue. On June 26, 2015, the date the Attestations were
9 submitted for the 2014 payment year, the information available to the Defendant MA
10 Organizations, UnitedHealthcare Medicare & Retirement (including Thompson), and
11 Optum were the results of the chart reviews for date of service year 2013, which showed
12 that at least 199, 039 diagnoses were invalid. *See supra* paragraph 235. Yet, Thompson
13 certified that this invalid data was accurate and truthful even though the invalid codes
14 had not been deleted (and never have been).

15 **V. Diagnoses Solely Determine Risk Adjustment Payments Based**
16 **On Health Status**

17 328. The diagnostic data submitted by an MA Organizations are not merely ancillary to
18 its claims for risk adjustment payments. Rather, the diagnoses are the sole determinant
19 in the calculation of any risk adjustment payment based on a beneficiary's health status.
20 The submissions of diagnoses are themselves claims for risk adjustment payments and
21 are inexorably material to any payment based on the beneficiary's health status. The
22 diagnoses are the *raison d'être* of RAPS submissions, *i.e.*, risk adjustment claims.

23 329. As emphasized throughout this Amended Complaint, the Government has never
24 agreed to make risk adjustment payments based on invalid diagnoses, and MA
25 Organizations are required by their contracts with CMS, federal regulations, and CMS
26 instructions (*e.g.*, the Managed Care Manual and Participant Guide) to delete invalid
27 diagnoses. Moreover, no statute or regulation entitles an MA Organization to risk
28 adjustment payments based on invalid diagnoses, including payments based on

1 diagnoses that are unsubstantiated by the beneficiaries' medical records. *See Swoben*,
2 848 F.3d at 1179 (rejecting arguments that MA Organizations are allowed to ignore
3 information about invalid diagnoses based on their own chart reviews and that they are
4 not obligated to delete such invalid diagnoses submitted by them for risk adjustment
5 payments).

6 330. When MA Organizations provide CMS with information identifying specific
7 invalid diagnoses that were submitted for payment (such as by deleting the invalid
8 diagnoses in the RAPS system) and, thus, CMS has *actual knowledge* about the specific
9 invalid diagnoses that were submitted for payment (such as because they were deleted in
10 the RAPS system), Medicare recovers the associated overpayments. *See United States*
11 *ex rel. Campie v. Gilead Sciences, Inc.*, 862 F.3d 890, 906 (9th Cir. 2017) (holding that,
12 in assessing materiality, the court must examine what the agency does when it has *actual*
13 *knowledge* of the regulatory violation). There is no way that CMS can obtain this actual
14 knowledge about invalid diagnoses by looking at an Attestation. The falsity of the
15 Attestation is not apparent on the face of the document. Someone must inform CMS that
16 the MA Organization has information showing that its diagnoses are invalid and that it
17 failed to delete those invalid diagnoses.

18 331. The UHG Managing Defendants and the Defendant MA Organizations knew that
19 they were required to delete invalid diagnoses that they had submitted for payment and,
20 in fact, they did this by making deletes in the RAPS system. For example, as previously
21 explained, based on their short-lived Claims Verification Program, UnitedHealthcare
22 Medicare & Retirement and Optum deleted diagnoses from the RAPS system. They also
23 deleted some invalid diagnoses from the RAPS system based on their RACCR reviews.

24 332. In addition, in the past, when UnitedHealthcare has informed CMS that it is in
25 possession of information about invalid diagnoses that it had submitted and requested
26 some direction with respect to deleting the invalid diagnoses, CMS has worked with it to
27 recover the overpayments. In 2010 and 2011, CMS did this when Joseph Keen, the
28 Chief Compliance Audit Officer at UnitedHealthcare, informed it about risk adjustment

1 data that UnitedHealthcare had submitted that included invalid diagnoses. Importantly,
2 CMS also asked Keen a series of questions to obtain information about the invalid
3 diagnoses, an explanation why the deletes were being made after the final submission
4 deadline for the payment year (because, if made prior to the deadline, CMS would have
5 been able to offset the overpayment as a part of the final reconciliation payment
6 process), and for an explanation of the steps that UnitedHealthcare was taking to ensure
7 that deletes were made in a timely manner. Keen responded that UnitedHealthcare was
8 “continuing to conduct targeted chart validation reviews to determine if the member-
9 diagnoses reviewed are supported by a medical record. These reviews continue and we
10 may need to delete certain risk adjustment data in the future. We will promptly notify
11 CMS of any risk adjustment data determined through these reviews to have been
12 incorrectly submitted.”

13 333. If Defendants had complied with their obligation to delete invalid diagnoses from
14 RAPS, Medicare’s Risk Adjustment System (“RAS”) would have processed the
15 corrected data and recalculated the risk score for the beneficiaries for whom an invalid
16 diagnosis had been deleted. The degree of the change in the payment amount for that
17 beneficiary would have depended on the HCC to which the invalid diagnosis was
18 grouped. The risk adjustment reconciliation payment system would have made these
19 adjustments automatically if the DELETES were made in RAPS. The system would
20 have done this as part of the final reconciliation payment process or future
21 reconciliations conducted by CMS for the payment year at issue.

22 334. If an MA Organization does not comply with its express obligation to delete the
23 invalid diagnoses from RAPS prior to the final submission deadline, Medicare pays for
24 the invalid diagnoses as part of its final reconciliation payment to the MA Organization
25 or, if it already paid for the invalid diagnosis, does not recover the overpayment as part
26 of the final reconciliation payment process. If the MA Organization never deletes the
27 invalid diagnoses from RAPS, Medicare does not recover the overpayment when future
28 payment reconciliations are done for the payment year at issue. Accordingly, the

1 diagnostic information submitted by an MA Organization is not merely ancillary to its
2 claim for risk adjustment payments, it is the sole determinant in the calculation of the
3 amount (if any) of the risk adjustment payments made by Medicare based on the health
4 status of a beneficiary and, therefore, inexorably material to the amount (if any) paid.

5 335. A false Risk Adjustment Attestation, by its very nature, is also material as it
6 relates directly to the data element – diagnoses – that is the sole determinant of risk
7 adjustment payments based on health status. Submission of invalid diagnoses and
8 failing to delete them are not minor or insubstantial infractions of the MA Organization’s
9 obligations to Medicare with which they pledge to comply. Keen, the UnitedHealthcare
10 Chief Compliance Audit Officer, and others at UnitedHealthcare and Optum were aware
11 of these obligations.

12 336. The purpose of the Risk Adjustment Attestation is, first, to remind MA
13 Organizations that they may not ignore or disregard information about invalid diagnoses,
14 such as (but not limited to) the negative results of chart reviews showing that diagnoses
15 previously submitted for payment are unsupported by the charts; and, second, to enforce
16 the fundamental program requirement that MA Organizations delete invalid diagnoses.
17 *See* 65 Fed. Reg. 40,170, 40,268 (June 29, 2000) (noting that “certifications would help
18 ensure accurate data submissions”). When MA Organizations do not comply with these
19 payment data integrity requirements of the MA Program (which are reiterated and
20 enforced by the Attestations), the result is the submission of and/or failure to delete false
21 diagnostic data and, thus, the submission of false Attestations that the data is accurate
22 and truthful. When MA Organizations do this by deliberately ignoring or recklessly
23 disregarding information about invalid diagnoses and, thus fail to delete invalid
24 diagnoses, as Defendants here have done, they are unable to represent that their data is
25 accurate, complete, and truthful, as the Attestations require. Moreover, in that situation,
26 their Attestations are “knowingly” false, as the term knowingly is defined in the FCA.

27 337. The Risk Adjustment Attestation itself includes language warning about the
28 serious legal implications of making false representations about diagnoses. It states that

1 “[t]he MA Organization acknowledges . . . that misrepresentations to CMS about the
2 accuracy of such [risk adjustment] information may result in Federal civil action and/or
3 criminal prosecution.” See Exhibits 15-21. Risk adjustment Attestations thus are
4 intended to serve as a powerful deterrent against an MA Organization’s “knowingly”
5 submitting false claims for payment. *United States ex rel. Swoben v. UnitedHealthcare*
6 *Insurance Co. et al.*, 848 F.3d 1161, 1168 (9th Cir. 2016) (characterizing certifications
7 “[a]s a further bulwark against fraud”).

8 338. Defendants’ knowledge of the importance of the Attestations is demonstrated by
9 the footnotes that UnitedHealthcare and other UHG Managing Defendants added to the
10 Attestations they submitted on behalf of the Defendant MA Organizations, such as the
11 footnotes that stated the Attestations should not be construed as representations that the
12 data may not require subsequent modification should additional information become
13 available. See Exhibits 15-20. According to Dumcum, UnitedHealthcare’s counsel
14 added these footnotes.

15 339. Defendants’ knowledge of the importance of the Attestations is also demonstrated
16 by the meeting they requested with CMS in April 2014. As previously explained, on
17 April 29, 2014, Steve Hemsley, Defendant UHG’s Chief Executive Officer, sent
18 UnitedHealthcare’s attorney Thad Johnson, UnitedHealthcare Medicare & Retirement’s
19 Chief Executive Officer Steve Nelson, UnitedHealthcare’s Chief Financial Officer
20 Daniel Schumacher, and Optum executive Karen Erickson, to meet with CMS
21 employees responsible for the MA Program, including Cheri Rice, the Director of the
22 Medicare Plan Payment Group at CMS. Defendant UHG and its subsidiaries,
23 UnitedHealthcare and Optum, asked for this meeting on very short (just a few days)
24 notice because the Chief Financial Officer of UnitedHealthcare Medicare & Retirement,
25 Brian Thompson, had to execute and submit the Risk Adjustment Attestations for the
26 Defendant MA Organizations on April 30, 2014. Defendants UHG, UnitedHealthcare
27 and Optum wanted to disclose to CMS, before the Attestations were submitted, that they
28 were in possession of information **from chart reviews** (the nature and mechanics of

1 which they did not describe in any detail) about invalid diagnoses (which were not
2 specifically identified to CMS) that they had submitted to the Government but had not
3 deleted. They apparently believed that this sort of very vague disclosure would
4 somehow render the Attestations truthful even if they did not delete the invalid diagnoses
5 from RAPS.

6 340. In addition, for many years, Jeffrey Dumcum, the senior executive overseeing all
7 risk adjustment programs and activities at Ingenix and then Optum, was also aware of
8 the FCA implications of ignoring information about invalid diagnoses. He told Poehling
9 that the Department of Justice's enforcement of the FCA was a consideration in deciding
10 to delete diagnoses when the results of blind chart reviews showed that they were
11 unsupported by the patients' medical records. In fact, Optum even decided that all of its
12 clients (its commercial clients as well as its internal client, UnitedHealthcare) had to look
13 both ways at the results of blind chart reviews and delete diagnosis codes invalidated by
14 the chart reviews if Optum was responsible for submitting risk adjustment data to CMS
15 on their behalf. This requirement was most likely imposed by Optum (at least for some
16 period of time) because Optum had to execute the internal attestations certifying the
17 accuracy and truthfulness of the diagnoses it submitted to Medicare on behalf of its
18 clients and, perhaps, it was also concerned about violating the FCA by causing its MA
19 Organization clients to submit false Attestations. Accordingly, like UHG and
20 UnitedHealthcare, Optum was aware that the Attestations required it to make deletes
21 based on information available to it about the negative results of chart reviews.

22 **FIRST CLAIM FOR RELIEF**

23 **False Claims Act: Reverse False Claims**

24 **31 U.S.C. § 3729(a)(1)(G) (formerly 31 U.S.C. § 3729(a)(7))**

25 341. The United States repeats and re-alleges the allegations contained in Paragraphs 1
26 to 340 above as though they are fully set forth herein.

27 342. Defendants violated the second part of 31 U.S.C. § 3729(a)(1)(G) as follows:
28 Defendants knowingly (as "knowingly" is defined by 31 U.S.C. § 3729(b)(1)) concealed

1 or knowingly and improperly avoided or decreased an obligation to pay or transmit
2 money or property to the Government. Specifically, Defendants knowingly concealed or
3 knowingly and improperly avoided or decreased an obligation to repay risk adjustment
4 payments to which they were not entitled from the Medicare Program. In particular,
5 Defendants knowingly and improperly failed to delete in the RAPS system the invalid
6 diagnoses that had been submitted to the Medicare Program for risk adjustment
7 payments which were made by the Medicare Program to them or knowingly and
8 improperly failed to otherwise return to the Medicare Program the overpayments based
9 on the invalid diagnoses.

10 343. By virtue of the said acts of concealment and/or improper avoidance, the United
11 States incurred damages and therefore is entitled to multiple damages under the False
12 Claims Act, plus a civil penalty for each violation of the Act.

13 **SECOND CLAIM FOR RELIEF**

14 **False Claims Act: Presentation of False or Fraudulent Claims**

15 **31 U.S.C. § 3729(a)(1)(A) (formerly 31 U.S.C. § 3729(a)(1))**

16 344. The United States repeats and re-alleges the allegations contained in Paragraphs 1
17 to 340 above as though they are fully set forth herein.

18 345. Defendants violated 31 U.S.C. § 3729(a)(1)(A) as follows: Defendants knowingly
19 (as “knowingly” is defined by 31 U.S.C. § 3729(b)(1)) presented or caused to be
20 presented a false or fraudulent claim for payment or approval. Specifically, Defendants
21 knowingly presented or caused to be presented to the Medicare Program a false or
22 fraudulent Risk Adjustment Attestation claiming risk adjustment payments from the
23 Medicare Program.

24 346. Defendants violated former 31 U.S.C. § 3729(a)(1) as follows: Defendants
25 knowingly presented, or caused to be presented, to the Government a false or fraudulent
26 claim for payment or approval. Specifically, Defendants knowingly presented or caused
27 to be presented to the Medicare Program a false or fraudulent Risk Adjustment
28 Attestation claiming risk adjustment payments from the Medicare Program.

347. By virtue of the said false or fraudulent claim, the United States incurred damages and therefore is entitled to multiple damages under the False Claims Act, plus a civil penalty for each violation of the Act.

THIRD CLAIM FOR RELIEF

False Claims Act: Making or Using False Records or Statements

31 U.S.C. § 3729(a)(1)(B) (formerly 31 U.S.C. § 3729(a)(2))

348. The United States repeats and re-alleges the allegations contained in Paragraphs 1 to 340 above as though they are fully set forth herein.

349. Defendants violated 31 U.S.C. § 3729(a)(1)(B) as follows: Defendants knowingly (as “knowingly” is defined by 31 U.S.C. § 3729(b)(1)) made, used, or caused to be made or used, a false record or statement material to a false or fraudulent claim. Specifically, Defendants knowingly made, used, or caused to be made or used a false Risk Adjustment Attestation material to a false or fraudulent claim for risk adjustment payments from the Medicare Program.

350. Defendants violated former 31 U.S.C. § 3729(a)(2) as follows: Defendants knowingly made, used, or caused to be made or used, a false record or statement to get a false or fraudulent claim paid or approved by the Government. Specifically, Defendants knowingly made, used, or caused to be made or used a false Risk Adjustment Attestation to get a false or fraudulent claim for risk adjustment payments paid or approved by the Medicare Program.

351. By virtue of the said false record or statement, the United States incurred damages and therefore is entitled to multiple damages under the False Claims Act, plus a civil penalty for each violation of the Act.

FOURTH CLAIM FOR RELIEF

False Claims Act: Reverse False Claims

31 U.S.C. § 3729(a)(1)(G) (formerly 31 U.S.C. § 3729(a)(7))

352. The United States repeats and re-alleges the allegations contained in Paragraphs 1 to 340 above as though they are fully set forth herein.

353. Defendants violated the first part of 31 U.S.C. § 3729(a)(1)(G) as follows: Defendants knowingly (as “knowingly” is defined by 31 U.S.C. § 3729(b)(1)) made, used, or caused to be made or used, a false record or statement material to an obligation to pay or transmit money or property to the Government. Specifically, Defendants knowingly made, used, or caused to be made or used a false Risk Adjustment Attestation material to an obligation to repay risk adjustment payments to which they were not entitled from the Medicare Program.

354. Defendants also violated former 31 U.S.C. § 3729(a)(7) as follows: Defendants knowingly (as “knowingly” is defined by 31 U.S.C. § 3729(b)(1)) made, used, or caused to be made or used, a false record or statement to conceal, avoid or decrease an obligation to pay or transmit money or property to the Government. Specifically, Defendants knowingly made, used, or caused to be made or used, a false Risk Adjustment Attestation to conceal, avoid or decrease an obligation to repay risk adjustment payments to which they were not entitled from the Medicare Program.

355. By virtue of the said false record, statement, and other acts of concealment and improper avoidance, the United States incurred damages and therefore is entitled to multiple damages under the False Claims Act, plus a civil penalty for each violation of the Act.

FIFTH CLAIM FOR RELIEF

Unjust Enrichment

356. The United States repeats and re-alleges the allegations contained in Paragraphs 1 to 340 above as though they are fully set forth herein.

357. Defendants have received money from the United States to which Defendants were not entitled, which unjustly enriched Defendants, and for which Defendants must make restitution. Defendants received such money by claiming and retaining Medicare risk adjustment payments based on invalid risk adjustment data. In equity and good conscience, such money belongs to the United States and to the Medicare Program.

358. The United States is entitled to recover such money from Defendants in an amount to be determined at trial.

SIXTH CLAIM FOR RELIEF

Payment by Mistake

359. The United States repeats and re-alleges the allegations contained in Paragraphs 1 to 340 above as though they are fully set forth herein.

360. The United States paid money to Defendants as a result of a mistaken understanding. Specifically, the United States paid Defendants claims for risk adjustment payments under the mistaken understanding that such claims were based on valid risk adjustment data. Had the United States known the truth, it would not have paid such claims. Payment was therefore by mistake.

361. As a result of such mistaken payments, the United States has sustained damages for which Defendants are liable in the amount to be determined at trial.

PRAYER

WHEREFORE, the United States requests that judgment be entered in its favor and against Defendants as follows:

362. On Claims I, II, III, and IV (False Claims Act), against all Defendants jointly and severally, for the amount of the United States' damages, trebled as required by law, together with the maximum civil penalties allowed by law, costs, post-judgment interest, and such other and further relief as the Court may deem appropriate;

363. On Claim V (Unjust Enrichment), against all Defendants jointly and severally, for an amount equal to the monies that Defendants obtained from the United States without right and by which Defendants have been unjustly enriched, plus costs, pre- and post-judgment interest, and such other and further relief as the Court may deem appropriate; and

364. On Claim VI (Payment By Mistake), against Defendants for an amount equal to the United States' damages, plus costs, pre- and post-judgment interest, and such other and further relief as the Court may deem appropriate.

DEMAND FOR JURY TRIAL

The United States of America hereby demands a trial by jury.

Dated: November 17, 2017

ICD-10-CM Official Guidelines for Coding and Reporting

FY 2022 -- UPDATED April 1, 2022

(October 1, 2021 - September 30, 2022)

Narrative changes appear in bold text

Items underlined have been moved within the guidelines since the FY 2021 version
***Italics* are used to indicate revisions to heading changes**

The Centers for Medicare and Medicaid Services (CMS) and the National Center for Health Statistics (NCHS), two departments within the U.S. Federal Government's Department of Health and Human Services (DHHS) provide the following guidelines for coding and reporting using the International Classification of Diseases, 10th Revision, Clinical Modification (ICD-10-CM). These guidelines should be used as a companion document to the official version of the ICD-10-CM as published on the NCHS website. The ICD-10-CM is a morbidity classification published by the United States for classifying diagnoses and reason for visits in all health care settings. The ICD-10-CM is based on the ICD-10, the statistical classification of disease published by the World Health Organization (WHO).

These guidelines have been approved by the four organizations that make up the Cooperating Parties for the ICD-10-CM: the American Hospital Association (AHA), the American Health Information Management Association (AHIMA), CMS, and NCHS.

These guidelines are a set of rules that have been developed to accompany and complement the official conventions and instructions provided within the ICD-10-CM itself. The instructions and conventions of the classification take precedence over guidelines. These guidelines are based on the coding and sequencing instructions in the Tabular List and Alphabetic Index of ICD-10-CM, but provide additional instruction. Adherence to these guidelines when assigning ICD-10-CM diagnosis codes is required under the Health Insurance Portability and Accountability Act (HIPAA). The diagnosis codes (Tabular List and Alphabetic Index) have been adopted under HIPAA for all healthcare settings. A joint effort between the healthcare provider and the coder is essential to achieve complete and accurate documentation, code assignment, and reporting of diagnoses and procedures. These guidelines have been developed to assist both the healthcare provider and the coder in identifying those diagnoses that are to be reported. The importance of consistent, complete documentation in the medical record cannot be overemphasized. Without such documentation accurate coding cannot be achieved. The entire record should be reviewed to determine the specific reason for the encounter and the conditions treated.

The term encounter is used for all settings, including hospital admissions. In the context of these guidelines, the term provider is used throughout the guidelines to mean physician or any qualified health care practitioner who is legally accountable for establishing the patient's diagnosis. Only this set of guidelines, approved by the Cooperating Parties, is official.

The guidelines are organized into sections. Section I includes the structure and conventions of the classification and general guidelines that apply to the entire classification, and chapter-specific guidelines that correspond to the chapters as they are arranged in the classification. Section II includes guidelines for selection of principal diagnosis for non-outpatient settings. Section III includes guidelines for reporting additional diagnoses in non-outpatient settings. Section IV is for outpatient coding and reporting. It is necessary to review all sections of the guidelines to fully understand all of the rules and instructions needed to code properly.

Medical Record Entries: What Is Timely and Reasonable?

 [Print Post](#)

Coding Compass

Because so many factors weigh into the answer, it depends.

By Robert A. Pelaia, Esq., CPC, CPCO

Every year at AAPC's national conference, several members of AAPC's Legal Advisory Board present an open forum session to respond to a wide variety of questions from attendees. For the past few years, without fail, audience members have asked for guidance on medical record entry timeliness and reasonable record keeping. This is not an easy topic and there is no one answer that will apply to the many scenarios coders encounter.

In 2006, however, useful and practical guidance regarding medical record documentation was released by the medical director of First Coast Service Options, Inc. (FCSO). The current Medicare administrative contractor for Puerto Rico, the U.S. Virgin Islands, and Florida also has recently issued helpful information regarding this. In addition to several other issues, FCSO's medical director touched upon the overall timeliness of documentation, medical record addenda, legibility, and "cloning." Here are selected excerpts in regards to timeliness from the FCSO memo (http://medicare.fcso.com/Publications_B/2006/141067.pdf) (see pages 3-6), followed by practical compliance tips that apply to each issue raised.

Medicare Comment No. 1

"Medicare expects the documentation to be generated at the time of service or shortly thereafter. Delayed entries within a reasonable time frame (24 to 48 hours) are acceptable for purposes of clarification, error correction, the addition of information not initially available, and if certain unusual circumstances prevented the generation of the note at the time of service."

Compliance Tips: Medicare has clearly stated that “reasonable” means 24 to 48 hours. Understand that anything beyond 48 hours could be considered unreasonable. Providers should comply with this requirement and complete documentation in a timely manner. Those responsible for coding and/or entering charges need to be cognizant of the timeliness of medical record completion. It’s unreasonable to expect a provider to recall the specifics of a service two weeks after the service was rendered. Nor should an entry be made in advance.

Medicare Comment No. 2

"The medical record cannot be altered. Errors must be legibly corrected so that the reviewer can draw an inference as to their origin. These corrections or additions must be dated, preferably timed, and legibly signed or initialed."

Compliance Tips: To properly execute a medical record addendum, the provider must, at a minimum, write the following details in the medical record:

(<https://www.aapc.com/medical-coding-education/webinars/selection-of-principal-diagnosis-for->

inpatient-admission)

EXHIBIT
815
4723

- The date the record is being amended

(<https://cta-redirect.hubspot.com/cta/redirect/2072848/24bd00b5-f062-4000-b010-280000000000>)

The details of the amended information

- A statement that the entry is an addendum to the medical record (An addendum should not be added to the medical record without identifying it as such.)

(<https://www.aapc.com>)

- The signature of the provider writing the addendum

/seal

The medical record should be amended within a reasonable time that would allow the service provider to recall the specific details of the patient encounter. Medical record addenda should be an exception, rather than a routine or recurring part of medical record documentation. Medical record addenda must be properly identified and reference must be made to the original note being amended. Failure to properly amend the medical record may give the appearance of "falsifying documentation," which is considered fraudulent.

Medicare Comment No. 3

"Every note must stand alone, i.e., the performed services must be documented at the outset. Delayed written explanations will be considered. They serve for clarification only and cannot be used to add and authenticate services billed and not documented at the time of service or to retrospectively substantiate medical necessity. For that, the medical record must stand on its own with the original entry corroborating that the service was rendered and was medically necessary."

Compliance Tips: Again, addenda to the medical record should not be a normal practice—these should be the exception and not the rule. Coders responsible for reviewing documentation should be cognizant of providers who demonstrate patterns of insufficient documentation that necessitate addenda. It's also important to remember that medical record addenda need to be made to the original medical record, not just to the billing copy.

Medicare Comment No. 4

"All entries must be legible to another reader to a degree that a meaningful review may be conducted. All notes should be dated, preferably timed, and signed by the author."

Compliance Tips: Legibility of medical record documentation is not just a billing issue; it's a patient care issue. Illegible documentation may result in medication errors and incorrect diagnoses being assigned to the patient. The medical record must be legible to an individual who is not familiar with the provider's handwriting. Notes should be timed and dated appropriately, as well. The timing of a medical record note is especially important in inpatient charts, emergency department settings, trauma settings, and critical care units. It's especially critical for the service provider's identity to be legible. Signatures also should include the provider's credentials.

Medicare Comment No. 5

"Documentation is considered cloned when each entry in the medical record for a patient is worded exactly alike or similar to the previous entries. Cloning also occurs when medical documentation is exactly the same from patient to patient. It would not be expected that every patient had the exact same problem, symptoms, and required the exact same treatment."

"Cloned documentation does not meet medical necessity requirements for coverage of services rendered due to the lack of specific, individual information. All documentation in the medical record must be specific to the patient and her/his situation at the time of the encounter. Cloning of documentation is considered a misrepresentation of the medical necessity requirement for coverage of services. Identification of this type of documentation will lead to denial of services for lack of medical necessity and recoupment of all overpayments made."

Compliance Tips: Templates certainly are useful tools, but providers must use caution when applying “templated” language. Specifically, (although it may seem obvious) providers must ensure that what is being represented in the medical record actually took place and isn’t something the provider normally does, but may not have done for that particular patient.

Robert A. Pelaia, Esq., CPC, CPCO, is senior university counsel for health affairs at the University of Florida College of Medicine in Jacksonville, Fla. He is certified as a Health Care Law Specialist by the Florida Bar Board of Legal Specialization and Education, serves on AAPC's Legal Advisory Board, and was a 2011-2013 AAPC National Advisory Board member. Pelaia is a member of the Jacksonville River City, Fla., local chapter.

No Responses to “Medical Record Entries: What Is Timely and Reasonable?”

Angie says:
January 7, 2015 at 11:12 pm (https://www.aapc.com/blog/25667-medical-record-entries-what-is-timely-and-reasonable/#comment-4981)

Thank you thank you THANK YOU for the straightforward and direct answer to this question that so many medical professionals are asking. There are many articles out there that touch on this, but this article is the first that is thorough and understandable, using direct Medicare standards and regulations. I appreciate the use of excerpts to verify and support each point. Thank you again!

UNITED STATES DISTRICT COURT
CENTRAL DISTRICT OF CALIFORNIA
WESTERN DIVISION

UNITED STATES OF AMERICA ex rel.

BENJAMIN POEHLING,

Plaintiffs,

v.

UNITEDHEALTH GROUP, INC., et al.,

Defendants

EXPERT REPORT OF JEAN ACEVEDO

SEPTEMBER 29, 2023

Amended April 5, 2024

I. QUALIFICATIONS

1. I am a Certified Professional Coder (“CPC”) and Certified ENT Coder (“CENTC,” i.e., coding focused on ear, nose, and throat conditions), and have been so designated since 1999 and 2008, respectively, through the American Academy of Professional Coders (“AAPC”).¹ I achieved AAPC Fellow status in January 2017, which indicates that I have been recognized for my professional achievements in coding and continuous adherence to the ethical and professional standards of the AAPC.² I have also held the Certified in Healthcare Compliance (“CHC”) certification from the Health Care Compliance Association (“HCCA”) since 2002.³ Additionally, I have been a health care risk manager since 1989 (currently inactive).

2. I have experience in all areas of medical coding and reimbursement, particularly with Current Procedural Terminology (“CPT”), Healthcare Common Procedure Coding System (“HCPCS”), the International Classification of Diseases, Ninth and Tenth Revisions, Clinical Modification (ICD-9-CM and ICD-10-CM)⁴ diagnosis coding,⁵ and third-party payer billing and payment rules, including the Centers for Medicare and Medicaid Services (“CMS”) Medicare Advantage risk adjustment program.

3. From 2007 through 2022, I developed and taught the regulatory and compliance modules of the Certificate in Medical Business Management program at Florida Atlantic University’s School of Business.

4. For the past twenty-three years, I have maintained an active healthcare consulting practice as the founder and senior consultant of Acevedo Consulting Incorporated (“ACI”). ACI assists clients in the healthcare industry in all areas concerning reimbursement, including coding

¹ *Coding Certifications*, AAPC, <https://www.aapc.com/certifications?tag=coding> (last visited Sept. 29, 2023).

² *AAPC Fellow Application Process*, AAPC, <https://www.aapc.com/recognition/aapc-fellow.aspx> (last visited Sept. 29, 2023) (“Fellows are highly experienced in their position within the business of healthcare. This status indicates your professional achievement and continuous adherence to the ethical and professional standards of AAPC. Fellowship is earned through hard work, written demonstration of your professional expertise, and regular commitment to dedicated leadership in the healthcare community.”).

³ *Certified in Healthcare Compliance (CHC)*, HCCA, <https://www.hcca-info.org/certification/become-certified/chc> (last visited Sept. 29, 2023).

⁴ For purposes of this report, I use the term “ICD-9” to refer to “ICD-9-CM” and “ICD-10” to refer to “ICD-10-CM,” respectively. Furthermore, I use the term “ICD” to refer both to ICD-9 and ICD-10.

⁵ See *ICD-10, ICD-10-CM, & ICD-10-PCS*, University of Kansas Medical Center, <https://guides.library.kumc.edu/icd10> (last visited Sept. 29, 2023).

and medical records review. The firm's clients span the gamut of the United States' healthcare system, from large Medicare Advantage Organizations ("MAOs") to small private health insurers, small physician practices to large healthcare systems, and the federal government.

5. I have provided education on ICD coding rules to large and small physician organizations, Accountable Care Organizations ("ACOs"), and a national MAO. I have also advised physician practice groups on accuracy and compliance with the coding and Medicare Advantage risk adjustment rules on a proactive basis as well as assisting them through risk adjustment audits by any one of the Medicare contractors. I have had a longstanding contract with a large Program of All-Inclusive Care for the Elderly ("PACE") to provide documentation and education on ICD-10 coding, and to provide monthly quality reviews and feedback on the accuracy and completeness of the providers' documentation.

6. A copy of my Curriculum Vitae, including a list of all publications I have authored, is attached as **Appendix A**. A list of my prior testimony is attached as **Appendix B**.

II. COMPENSATION

7. My contract with the United States Department of Justice is on an hourly basis. For my work on this case, I am being compensated at my standard billing rate of \$325.00 per hour for guidance and development of my report. My rate for testifying at a deposition or appearing at any proceeding is \$468.75 per hour. My compensation is not contingent on the content of my opinions or the outcome of this matter.

III. SCOPE OF ASSIGNMENT

8. I have been engaged by the Plaintiffs to provide expert testimony in this matter. Specifically, I have been asked to provide background on medical record coding, including ICD-9 and ICD-10 diagnosis coding, and its relationship to the Hierarchical Condition Categories ("HCCs") used in the Medicare Advantage risk adjustment program. I have also been asked to provide expert testimony on the following topics: (1) the documentation standards required in risk adjustment coding; (2) the standards and guidelines governing medical record coding; and (3) industry best practices for achieving accurate and complete coding in the Medicare Advantage context. The relevant time period for my report covers dates of service in 2008 through 2016.

9. I reserve the right to supplement or revise my opinions should additional information become available.

IV. BASIS FOR OPINIONS

10. I have reviewed publicly-available materials for the relevant time period, including the ICD-9 official Coding Guidelines applicable during the 2008–2014 dates-of-service years and the ICD-10 official Coding Guidelines applicable during the 2015–2016 dates-of-service years; the CMS 2008 Risk Adjustment Data Technical Assistance for Medicare Advantage Organizations Participant Guide (“2008 Participant Guide”); the CMS Medicare Managed Care Manual, Chapter 7 – Risk Adjustment; and various publications regarding coding. I have also reviewed deposition transcripts from this case. A complete list of the materials that I have relied upon as a basis for my opinions rendered in this report is attached as **Appendix C**.

V. BACKGROUND

A. Introduction to Medical Record Coding

11. When an individual goes to a doctor’s office, an urgent care center, hospital, or other health care facility, the physician or other provider documents one or more of the following in the patient’s medical record: the patient’s complaint and related history, a physical examination, and the assessment/impression and plan. In determining whether to pay for a healthcare service, the patient’s insurance company or other payer generally requires information on what was done to the patient (i.e., the medical service provided), and why. There are industry-standard medical “codes” used to report “what was done” and “why” on claims made to insurance companies. These codes ensure that all healthcare providers are speaking the same language when submitting a claim for payment.

12. While the American Medical Association has created Current Procedural Terminology (“CPT”) codes to describe “what was done” (e.g., an office visit, an ultrasound, a blood draw, etc.), ICD diagnosis codes tell the insurer “why”—i.e., what health condition the medical service addresses. ICD diagnosis codes designate diseases, symptoms, abnormal findings, and other elements of the patient’s diagnosis. For example, when a physician sees a patient for a new patient office visit, the CPT code may be 99204, which represents the service provided. If the medical record appropriately documents that the patient exhibits symptoms of

diabetes and that blood tests confirm that the patient has diabetes mellitus, the proper ICD-10-CM code is E11.9, which represents the diagnosis.

13. When insurance payment is on a “fee-for-service” basis, the physician is paid based on the specific CPT code submitted for the office visit, and the payment amount is the same regardless of how sick the patient is. Continuing the example from paragraph 12, the physician would be paid based on CPT code 99204 (new patient office visit), regardless of the patient’s confirmed diabetes mellitus diagnosis (E11.9). The ICD code does not impact the payment.

14. By contrast, in the Medicare Advantage program discussed further below, the reported ICD codes are relevant because payment is on a “risk adjusted” basis. This means that CMS pays MAOs a monthly amount per beneficiary based on the risk profile of that beneficiary. Generally, the sicker a beneficiary is, the higher the payment. The risk adjustment system sets the monthly payment amount by estimating the healthcare expenditures a patient is likely to require in a given year, based in part on the health status of the patient, which in turn is based on the Hierarchical Condition Categories (“HCCs”) reported for that patient. As explained below, ICD codes underlie HCCs, and therefore, may impact payment in this system.

B. ICD-9 and ICD-10 Coding

15. The International Classification of Diseases is a medical classification system maintained by the World Health Organization (“WHO”) and used worldwide for health management and clinical purposes. WHO issues new revisions of the ICD periodically.

16. At the beginning of the relevant time period, ICD-9 was the operative classification system. There were approximately 14,000 ICD-9 diagnosis codes. When the United States Department of Health and Human Services switched to ICD-10 in 2015, that number rose to almost 70,000, because ICD-10 allows for greater specificity and more granularity in describing a patient’s condition, variants of that condition, or complications present with certain conditions.⁶

⁶ *International Classification of Diseases, (ICD-10-CM/PCS) Transition - Background*, Centers for Disease Control and Prevention, https://www.cdc.gov/nchs/icd/icd10cm_pcs_background.htm (last visited Sept. 29, 2023).

17. Depending on the date-of-service year in the relevant time period, the authoritative source for diagnosis coding is the ICD-9 or ICD-10 Coding Guidelines published by the Centers for Disease Control and Prevention (CDC).⁷ There are a number of additional sources that explain coding rules and guidelines that must be followed for proper reporting of diagnoses. These additional sources include coding guidelines, manuals, and training published by CMS.⁸ Organizations such as hospitals and MAOs also subscribe to the American Hospital Association's "Coding Clinic," another recognized source for ICD-9 and ICD-10 guidance.

18. There are two recognized organizations that certify professional coders, the AAPC and American Health Information Management Association ("AHIMA"). The main credential provided by the AAPC is the CPC (Certified Professional Coder) and the main credential provided by AHIMA is the CCS (Clinical Coding Specialist).⁹

19. Coding certification from either the AAPC or AHIMA requires following the AAPC and AHIMA's guidelines for ethical coding.¹⁰

C. ICD Coding and Reporting Process

20. In the Medicare Advantage context, both ICD and CMS have set out rules on the provider documentation (and content of that documentation) needed to assign and report particular ICD codes on insurance claims. Historically, before this process became electronic, physicians handwrote notes in patient charts, the billing staff looked up the applicable diagnosis code(s) supported by notes in patient charts in an ICD code book, and then the staff would report the assigned ICD codes on a claim submitted for payment.

21. With the adoption of electronic medical records (EMRs) beginning in 2011, it has become increasingly common for physicians to select the ICD-9 or ICD-10 code(s) as they

⁷ *International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM)*, Centers for Disease Control and Prevention, <https://www.cdc.gov/nchs/icd/icd-10-cm.htm> (last visited Sept. 29, 2023); *ICD-9-CM Addenda, Conversion Table, and Guidelines*, Centers for Disease Control and Prevention, https://www.cdc.gov/nchs/icd/icd9cm_addenda_guidelines.htm (last visited Sept. 29, 2023).

⁸ See, e.g., *ICD-10 Resources*, Centers for Medicare & Medicaid Services, <https://www.cms.gov/medicare/coding-billing/icd-10-codes/icd-10-resources> (last visited Sept. 29, 2023).

⁹ See *Certified Professional Coder (CPC) Certification*, AAPC, <https://www.aapc.com/certifications/cpc> (last visited Sept. 29, 2023); *Certified Coding Specialist (CCS)*, AHIMA, <https://www.ahima.org/certification-careers/certification-exams/ccs/> (last visited Sept. 29, 2023).

¹⁰ See *Code of Ethics*, AAPC, <https://www.aapc.com/about-us/code-of-ethics> (last visited Sept. 29, 2023); *Ethics*, AHIMA, <https://www.ahima.org/who-we-are/governance/ethics/> (last visited Sept. 29, 2023).

complete their notes in the EMR system. This is especially true in an outpatient office or clinic setting. As a physician starts to type “diabetes” in the section of the note where diagnoses are listed, the EMR presents a list of possible ICD codes. For example, if the patient has Type 2 diabetes mellitus without complications, the physician should select E11.9 as the corresponding ICD-10 code. Billing staff may verify that the physician selected the correct code(s) and then include them on an insurance claim. In hospital settings, which tend to have more resources than the typical outpatient provider’s office, dedicated coders may look at the appropriate sections of medical charts and, following the applicable payer rules for the type of medical facility, report diagnosis codes on the insurance claim.

D. Medicare Advantage Program

22. The federal government’s Medicare program provides health insurance for people ages 65 or older as well as younger individuals with certain disabilities.¹¹ Medicare beneficiaries have the option to enroll in “Traditional Medicare” or “Medicare Advantage.” Medicare Advantage beneficiaries enroll in plans administered by private insurance companies known as “Medicare Advantage Organizations,” or “MAOs.”¹²

23. CMS enters into annual contracts with MAOs that participate in the Medicare Advantage program and imposes numerous requirements on the MAOs pursuant to statutes, regulations, guidance materials, and through the contracts.¹³

Risk Scores Under the CMS-HCC Risk Adjustment Model

24. In the Medicare Advantage program, CMS pays MAOs a monthly premium for each beneficiary enrolled in the MAOs’ plans.¹⁴ The amount of payment depends in part on the beneficiary’s “risk score,” which is calculated using the CMS Hierarchical Condition Category (“HCC”) Risk Adjustment Model.¹⁵

25. Each beneficiary’s risk score is newly calculated each payment year based on health conditions documented in the beneficiary’s medical records during the prior year (referred

¹¹ 42 U.S.C. § 426 *et seq.*; 42 C.F.R. § 406.5; 42 C.F.R. §§ 406.10–406.13.

¹² 42 U.S.C. § 1395w *et seq.*; 42 C.F.R. § 422 *et seq.*

¹³ 42 U.S.C. § 1395w *et seq.*; 42 C.F.R. § 422 *et seq.*

¹⁴ 42 U.S.C. § 1395w-23(a)(1)(A); 42 C.F.R. § 422 *et seq.*

¹⁵ 42 U.S.C. § 1395w-23(a)(1)(C); 42 C.F.R. §§ 422.300–422.308.

to as the “service year” or “date-of-service” (“DOS”) year). For example, a beneficiary’s risk score for payment year 2016 is based on conditions documented in that beneficiary’s medical records during encounters that took place in 2015, but that risk score would not reflect conditions documented in that beneficiary’s medical records during encounters in 2014 or in 2016.

26. The purpose of these individualized risk scores is to capture anticipated differences in the costs of coverage for beneficiaries given differences in their health status and demographic background.¹⁶ Thus, the risk score is calculated based on both the health status of the beneficiary and demographic factors (e.g., a patient’s gender and age, disability status, institutional status).¹⁷

Hierarchical Condition Categories (HCCs)

27. The health status component of the risk score is based on the HCCs or Hierarchical Condition Categories reported for the beneficiary. CMS groups ICD-9/ICD-10 diagnosis codes with other clinically similar diagnosis codes.¹⁸ These diagnosis code groupings are in turn grouped into “condition categories.”¹⁹ Similar “condition categories” are organized hierarchically based on severity of the condition and cost implications, such that the most severe and costly condition category is at the “top” of the hierarchy.²⁰ Once hierarchically organized, these condition categories become HCCs.

28. This hierarchical organization ensures a beneficiary’s risk score will incorporate only the HCC that represents the most severe and costly manifestation of a disease documented in a given year. For example, if claims data shows a patient has both diabetes without complications (ICD-10 code E11.9, HCC 19), and diabetes with acute complications (ICD-10 code E11.8, HCC 18), only HCC 18 is used in computing the patient’s risk score, as it is the more severe form of diabetes.

¹⁶ See Medicare Managed Care Manual, Ch. 7, § 20 (June 7, 2013) (“Risk adjustment allows CMS to pay plans for the risk of the beneficiaries they enroll, instead of an average amount for Medicare beneficiaries. By risk adjusting plan payments, CMS is able to make appropriate and accurate payments for enrollees with differences in expected costs Risk scores measure individual beneficiaries’ relative risk and risk scores are used to adjust payments for each beneficiary’s expected expenditures.”).

¹⁷ See *id.* § 70 (“Risk scores are used to adjust payments and bids based on the health status (diagnostic data) and demographic characteristics (such as age and gender) of an enrollee.”).

¹⁸ *Id.* § 70.1.

¹⁹ *Id.*

²⁰ *Id.*

29. Each year, CMS determines the groupings of diagnosis codes that “map” to a given HCC.²¹ If a beneficiary has a condition corresponding to a diagnosis code that maps to an HCC, that HCC will be incorporated into the calculation of the beneficiary’s risk score. For example, under the current CMS-HCC Risk Adjustment Model, of the approximately 70,000 total ICD-10 codes, over 9,700 of those codes map to one or more of the 86 HCCs in the model.²²

30. Multiple ICD codes can map to the same HCC. ICD-10 codes each contain up to 7 characters. Although slight variations in the last characters in the code string leads to distinct ICD-10 codes, these distinct ICD-10 codes may still map to the same HCC. For example:

- a. E11.10 (Type 2 diabetes mellitus with ketoacidosis without coma) and E11.11 (Type 2 diabetes mellitus with ketoacidosis with coma) both map to HCC 17 (diabetes with acute complications).
- b. M35.00 (Sjögren syndrome, unspecified) and M35.3 (Polymyalgia rheumatica) both map to HCC 40 (Rheumatoid arthritis and inflammatory connective tissue disease).

31. However, certain diagnosis codes indicating historical conditions or potential risk for future conditions may be documented in the patient’s medical record and assigned an ICD code, but they would not map to an HCC. For example:

- a. If an individual is diagnosed with thyroid cancer, it is appropriate to assign the ICD-10 code C73 (malignant neoplasm of the thyroid gland). After the thyroid is removed, if the patient is asymptomatic and no further treatment is being provided, then Z85.850 (personal history of malignant neoplasm of thyroid) is the proper ICD-10 code to report.
- b. If a patient’s blood sugar has been elevated on lab tests, but there is not enough information to diagnose the patient with diabetes mellitus, the proper code to report in this situation is a code for abnormal glucose (R73.09), rather than E11.9 (diabetes mellitus without complications).

²¹ Not all ICD-9/ICD-10 diagnosis codes map to an HCC included in the CMS-HCC Risk Adjustment Model, and therefore not all ICD-9/ICD-10 diagnosis codes affect risk adjustment payments.

²² Amerigroup, *CMS-HCC Risk Adjustment Model (V24), ICD-10-CM to CMS-HCC Crosswalk*, https://provider.amerigroup.com/dam/publicdocuments/ALL_CARE_CMSHCCRAModel_mrdcoding_tip_s.pdf (last visited Sept. 29, 2023).

32. Where a patient has several diseases corresponding to several HCCs, the risk adjustment model allows those multiple HCCs to be assigned and accounted for in the risk score. The number of HCCs reported and the severity of the HCCs tend to increase the risk score. Thus, a 72-year-old male with COPD, diabetes mellitus, and coronary artery disease would have a higher risk score than a 72-year-old male with diabetes mellitus only.

Medical Record Documentation to Support HCCs Under CMS Rules

33. During the relevant time period, CMS had specific rules governing the submission of diagnosis codes for inclusion in the HCC risk adjustment model. HCC coding requires clinical support in medical record documentation.

34. As explained in the 2008 Participant Guide, CMS requires that diagnosis codes submitted for risk adjustment result from a face-to-face encounter between a beneficiary and a provider of a qualifying physician specialty.²³ In addition, the medical record for a particular encounter used as the basis for submission of a diagnosis code must be signed and include the provider's credentials.²⁴

35. In addition, both the ICD guidelines and CMS specify that all conditions reported should be based on documentation showing that conditions exist at the time of the encounter/visit and "require or affect patient care, treatment or management."²⁵

36. Importantly, regulations and official CMS publications require all diagnosis codes submitted by MAOs to be documented in the medical record, and ICD Coding Guidelines must be followed for coding and reporting.²⁶ For example, the Medicare Managed Care Manual, Chapter 7 states that MAOs must:

²³ 2008 Participant Guide, § 7.2.4.2; *see also id.* Table 3H (setting forth acceptable physician specialties, which include physicians and other qualified healthcare providers, such as nurse practitioners and physician assistants).

²⁴ *Id.* § 7.2.4.2 ("For purposes of risk adjustment data submission and validation, the MA organizations must ensure that the provider of service for face-to-face encounters is appropriately identified on medical records via their signature and physician specialty credentials.").

²⁵ ICD-9, § IV.K (effective Oct. 1, 2011), https://www.cdc.gov/nchs/data/icd/icd9cm_guidelines_2011.pdf; ICD-10, § IV.J (updated Apr. 1, 2022), <https://www.cms.gov/files/document/fy-2022-icd-10-cm-coding-guidelines-updated-02012022.pdf>; *see also* 2008 Participant Guide, § 6.4.1.

²⁶ *See, e.g.*, 45 C.F.R. § 162.1002(a)(1)(i), (b)(1), (c)(2)(i) (establishing the ICD, including the ICD Guidelines, as the national standard for diagnosis coding); 42 C.F.R. § 422.310(d)(1) ("MA organizations

Ensure the accuracy and integrity of risk adjustment data submitted to CMS. ***All diagnosis codes submitted must be documented in the medical record*** and must be documented as a result of a face-to-face visit. The diagnosis must be coded according to International Classification of Diseases, (ICD) Clinical Modification Guidelines for Coding and Reporting.²⁷

In addition, the 2008 Participant Guide states:

Standard ICD-9-CM coding practices support the CMS-HCC model. ***In all cases, the documentation must support the code selected and substantiate that the proper coding guidelines were followed.***²⁸

OPINIONS

a. Diagnosis Codes Submitted for Risk Adjustment Must Be Supported By Documentation in the Medical Record Meeting CMS Requirements.

37. The principal requirement for assigning and reporting diagnosis codes in the Medicare Advantage risk adjustment model is that the codes are supported by appropriate medical record documentation.²⁹

38. As referenced above, the medical record cannot merely contain a list of the patient's conditions without supporting documentation showing that the conditions "require or affect patient care, treatment or management."³⁰ In the absence of such documentation, the coder cannot assign codes for listed conditions. In my experience, such documentation may include physician notes on disease progression or stabilization, patient response to the treatment, and whether test results were reviewed by the physician.

39. In sum, the diagnosis codes that MAOs submit to CMS for risk adjustment purposes must be (1) based on a face-to-face encounter; (2) by a qualified provider (either a physician or other qualified healthcare provider); (3) documented in the medical record; and (4) coded in compliance with the ICD Guidelines.³¹

must submit data that conform to CMS' requirements for data equivalent to Medicare fee-for-service data, when appropriate, and to all relevant national standards.").

³¹ 2008 Participant Guide, § 7.2.4.2.

b. Coding is Governed by Objective Standards and Guidelines.

40. It is my opinion that, if a coder is knowledgeable of the official ICD and CMS coding rules discussed above, he or she should be able to identify an objectively correct ICD code or set of ICD codes that can be reported based on a particular medical record and thus there should be little variance in code assignment among coders.

41. The coding rules are by design clear, consistent, and specific. They offer detailed instructions on what codes should be assigned based on features of a patient's condition and what is documented in the medical record. If qualified coders properly follow these rules, they are able to identify appropriate ICD codes and rule out inappropriate codes.

Coding is a Methodical Step-By-Step Process.

42. To begin, coders must follow a methodical step-by-step process in arriving at a code assignment under the ICD guidelines. The "Alphabetical Index" and "Tabular List" in both the ICD-9 and ICD-10 set out these directions.

43. The Alphabetical Index lists conditions and subvariants of conditions in alphabetical order. At the first step of coding, a coder looks up in the Alphabetical Index a condition he or she identifies that meets the medical record documentation requirements.

44. This Index supplies the initial ICD code string for that condition. For example, for Parkinson's disease with dementia a coder would look up "Parkinsonism," under which there are sub-listings of around twenty variations of "Parkinsonism," including with "dementia."³²

³²ICD-10-CM Index to Diseases and Injuries, *available at* https://ftp.cdc.gov/pub/Health_Statistics/NCHS/Publications/ICD10CM/2022/ (Table and Index zip.zip) (last visited April 5, 2024).

Parkinsonism (idiopathic) (primary) G20
 - with neurogenic orthostatic hypotension (symptomatic) G90.3
 - arteriosclerotic G21.4
 - dementia G31.83 [F02.80]
 - - with behavioral disturbance G31.83 [F02.81]
 - due to
 - - drugs NEC G21.19
 - - - neuroleptic G21.11
 - medication-induced NEC G21.19
 - neuroleptic induced G21.11
 - postencephalitic G21.3
 - secondary G21.9
 - - due to
 - - - arteriosclerosis G21.4
 - - - drugs NEC G21.19
 - - - - neuroleptic G21.11
 - - - encephalitis G21.3
 - - - external agents NEC G21.2
 - - - syphilis A52.19
 - - specified NEC G21.8
 - syphilitic A52.19
 - treatment-induced NEC G21.19
 - vascular G21.4

The index directs the coder that “Parkinson’s with Dementia without behavioral disturbance” may be coded with the ICD code strings “G20” (Parkinsonism) and “F02.80.”

Next, the coder must consult the “Tabular List” for further step-by-step instructions on the requirements to assign a code.³³ In this case, the Tabular List entry for “G20” (Parkinson’s disease) instructs the coder to: Use additional code to identify: dementia with behavioral disturbance (F02.81) dementia without behavioral disturbance (F02.80). Therefore, the proper codes for Parkinson’s with dementia without behavioral disturbance are G20 and F02.80.

³³ ICD-10-CM Tabular List of Diseases and Injuries, *available at* https://ftp.cdc.gov/pub/Health_Statistics/NCHS/Publications/ICD10CM/2022/ (Table and Index zip.zip) (last visited April 5, 2024).

G20 Parkinson's disease

Hemiparkinsonism
Idiopathic Parkinsonism or Parkinson's disease
Paralysis agitans
Parkinsonism or Parkinson's disease NOS
Primary Parkinsonism or Parkinson's disease

Use additional code to identify:

dementia with behavioral disturbance (F02.81)
dementia without behavioral disturbance (F02.80)

Excludes1: dementia with Parkinsonism (G31.83)

45. As shown above, the coding rules provide clear instructions on (1) the specific items the medical record documentation must contain to support a condition, *supra* ¶¶ 37–39, (2) how to look up a particular condition or variants of a condition in the Alphabetical Index to identify the ICD code and further requirements for assigning the code, and (3) the step-by-step process of applying those requirements to arrive at code assignment.

46. In addition, there are rules about how a coder should use these resources. For example, it is well established a coder must use the Alphabetical Index and Tabular List sequentially and follow the instructional notations in both.³⁴ Coders may never select a final code based just on what the Alphabetical Index provides. As long as the coder follows this order of operations, the instructions in the Alphabetical Index and Tabular List are consistent and will lead the coder to the proper code assignment.

Coding Rules Are Highly Specific and Particularized to Features of Patients' Conditions.

47. The ICD guidelines provide specific rules for assigning ICD codes regarding how particular features of a patient's condition should be coded. This specificity makes clear to coders under what circumstances a particular ICD code should be assigned.

48. For example, ICD-10 specifies the codes to assign when a condition occurs on the left or right side of the body, and in some cases provides a code indicating that a condition occurs on both sides of the body (bilaterally). If the medical record does not specify which side the condition occurs, the rules generally require the coder to assign the code denoting the side is

³⁴ ICD-9, § I.B.1–2 (effective Oct. 1, 2015), https://www.cdc.gov/nchs/data/icd/icd9cm_guidelines_2011.pdf; ICD-10, § I.A.1, § I.B.1 (updated Apr. 1, 2022), <https://www.cms.gov/files/document/fy-2022-icd-10-cm-coding-guidelines-updated-02012022.pdf>.

unspecified.³⁵ If, however, the condition occurs bilaterally, but there is no specific ICD code designating that the condition occurs bilaterally, the guidelines require the coder to report the ICD codes for both the right and left sides of the body separately.³⁶

49. For example, ICD-10 provides codes based on where the condition staphylococcal arthritis manifests: M00.011 (Staphylococcal arthritis, right shoulder), M00.012 (Staphylococcal arthritis, left shoulder), and M00.019 (Staphylococcal arthritis, unspecified shoulder). There is no code designating this condition as bilateral. If the medical record indicates that the patient has staphylococcal arthritis in both shoulders, the coder should report *both* M00.011 (right shoulder) and M00.012 (left shoulder) as there is no specific ICD code designating this condition as bilateral.

Difficult Coding Scenarios Do Not Indicate that Coding is a Subjective or Ambiguous Process.

50. The existence of difficult coding scenarios does not mean coding itself is a subjective process with no right answers as to whether a code is properly assigned or not. Nor do these difficult scenarios show that the coding guidelines themselves are ambiguous or fail to provide objective rules for a coder to follow.

51. Rather, difficult scenarios generally are caused by and reflect (1) the varying degrees of skill level and experience among coders; (2) errors in how those coders apply the guidelines and rules; and (3) problems extrinsic to the guidelines and the required coding process, such as problems with the medical record documentation itself. All of these issues, however, are far less likely to be present in sophisticated coding programs that use certified, well-trained coders and implement sufficient quality assurance processes to check coders' work.

52. Below, I address some potentially difficult coding scenarios, and explain why they do not demonstrate the coding process and guidelines are fundamentally subjective or ambiguous:

- a. **Updated coding guidelines:** One potential source of error during the relevant time period was coders' relative levels of experience with and training on operative coding

³⁵ ICD-10, § I.B.13 (updated Apr. 1, 2022), <https://www.cms.gov/files/document/fy-2022-icd-10-cm-coding-guidelines-updated-02012022.pdf>.

³⁶ *Id.*

guidelines. The CDC transitioned from ICD-9 to ICD-10 in 2015. While some less-experienced coders may have erred in applying the new ICD-10 guidelines, this does not indicate that the guidelines themselves were unclear or ambiguous.

For example, as the table below shows, under ICD-10, coders are required to assign a single combination code (E11.331) where a patient has both diabetes mellitus with diabetic retinopathy. ICD-9, however, provided a different rule where these conditions were required to be coded separately (250.52, 362.05). Under the new rule, the objectively correct code is the single combination code. In my experience, coders who were unfamiliar with the operative ICD-10 rules might attempt to search for two separate codes or simply miss the combination code and apply a different diabetes code. This example does not illustrate that ICD-10 is itself ambiguous or allows for varying or inconsistent results (i.e., different diabetes code assignments) among coders. Rather, it indicates that lack of experience with the operative rules may lead to error.

ICD-9 Coding	ICD-10 Coding
250.52 – Diabetes with ophthalmic manifestations, type II or unspecified type, controlled	E11.331 – Type II diabetes mellitus with moderate non-proliferative diabetic retinopathy with macular edema
362.05 – Moderate non-proliferative diabetic retinopathy	

Notably, the coding industry attempts to provide training and other resources to address varying levels of experience on the part of coders. For example, during the transition to ICD-10, there were numerous continuing education classes that focused on educating coders on the new rules. The AAPC also required its certified members to pass a proficiency assessment on ICD-10 “format and structure, groupings and

categories of codes, ICD-10-CM official guidelines, and coding concepts.”³⁷ A major focus on my work during this time was providing trainings on ICD-10 rules, including trainings customized for specific practice groups.

- b. **Problems extrinsic to coding rules, guidelines, and resources:** Some difficult coding scenarios are due to problems extrinsic to the coding rules, for example, issues in the medical record documentation itself or its legibility. These issues do not indicate that the coding rules or process themselves are subjective, and experienced coders are trained to handle these circumstances properly.

For example, a provider might use the abbreviation “PE” in a medical record, which typically stands for “pulmonary embolism,” but may also mean “pulmonary edema” or “physical exam.” Under this circumstance, unless the coder is able to verify the meaning of the ambiguous or illegible term (e.g., via a physician query), the coder should not assume the meaning of the term and base a coding assignment on it.³⁸ Rather, a code assignment is only appropriate if based on clear and consistent medical record documentation.³⁹

53. I also reviewed the deposition transcripts of some United witnesses that discuss difficult coding scenarios. For example, United coding supervisor, Tammy Dickey, testified: “if

³⁷ See *ICD-10 Proficiency Assessment*, AAPC (Mar. 26, 2013), <https://www.aapc.com/blog/24145-icd-10-proficiency-assessment/#:~:text=The%20assessment%20will%20measure%20your,for%20other%20exams%20or%20Oassessments>.

³⁸ ICD-10 at 1 (updated Apr. 1, 2022), <https://www.cms.gov/files/document/fy-2022-icd-10-cm-coding-guidelines-updated-02012022.pdf> (stating that “The importance of consistent, complete documentation in the medical record cannot be overemphasized. Without such documentation accurate coding cannot be achieved.”). The AHIMA Standards of Ethical Coding also provide that coders should “[a]ssign and report . . . only the codes and data that are clearly and consistently supported by health record documentation in accordance with applicable code set and abstraction conventions” and should “[q]uery and/or consult as needed with the provider for clarification and additional documentation prior to final code assignment in accordance with acceptable healthcare industry practices.” *American Health Information Management Association Standards of Ethical Coding (2016 Version)*, AHIMA (revised and approved Dec. 12, 2016), https://bok.ahima.org/doc?oid=302237#.X0-0BRNKg_U.

³⁹ *Id.*

you gave the same record to ten coders, you would probably be get [sic] five sets of answers.”⁴⁰ To the extent this example illustrates that coding is subjective and the rules lack clarity, I disagree. In my opinion, what Ms. Dickey describes does not reflect a phenomenon in ICD coding. ICD coding is highly specific and governed by a set of particularized rules. In my opinion and experience, there is not substantial variance in ICD coding among qualified coders, nor have I experienced this level of variance in my own practice.

c. There Are Well-Established Industry Best Practices For Achieving Complete and Accurate Coding.

54. In the Medicare Advantage context, there are industry best practices for achieving accurate and complete coding. In my opinion, these best practices include: (1) requiring coders to be certified; (2) providing extensive and ongoing training to the coders, including training in Medicare Advantage risk adjustment; (3) requiring coders to meet high quality standards in order to graduate from training; (4) requiring coders to maintain high quality standards after training; (5) providing coders with resources to address coding questions; (6) providing remedial training to coders who fall below the organization’s standards; (7) terminating coders who fail to perform up to the organization’s standards despite remedial training; and finally, (8) maintaining robust quality assurance processes to check the coders’ work on an ongoing basis. Issues with coding accuracy and completeness are more likely to be avoided when an organization’s policies and procedures encompass these elements.

55. Although coders approach their work with varying types of experience, the impact of these variances is limited when they are certified and provided with training that augments their prior work experience. For example, coders who have only worked on electronic medical records should be trained on coding from handwritten records and vice versa. In addition, coders should be exposed to different medical specialties during training if they had previously only worked in one specialty.

56. As discussed throughout this report, using certified coders is key in ensuring accurate and complete coding. Coders certified by the AAPC or AHIMA have had their knowledge tested by an independent body and must obtain a number of Continuing Education Credits (“CEUs”) to retain their certification. In addition, organizations participating in the

⁴⁰ Dickey Dep. 195:8–12, 220:17–23, May 24, 2022.

Medicare Advantage risk adjustment program should ensure that their coders are trained in risk adjustment coding.

Signed on April 5, 2024.

VIDEOCONFERENCE VIDEOTAPED DEPOSITION OF
JANET FRY

(Taken virtually)

9:02 a.m. Eastern

Thursday, June 2, 2022

REPORTED BY: Christine A. Taylor, RPR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 discipline that is based on multiple --
2 multiple documentation by multiple people in
3 the medical record. So one coder may have
4 seen something in a particular note that he
5 or she felt was important to pick up whereas
6 another coder might either just decided that
7 wasn't appropriate to code at that point or
8 maybe was a historical condition that the
9 person doesn't have anymore.

10 So there's these types of decisions
11 that are made every time you open up a
12 medical record to determine whether to
13 include the condition or not.

14 BY MS. MADDUX:

15 Q. So this situation is describing a
16 scenario where the senior coder may disagree about
17 whether a medical record documentation supported a
18 diagnosis code or HCC?

19 A. Yes.

20 Q. And in addition to the reasons you just
21 gave, are there any other reasons two certified
22 coders may disagree about whether a medical record
23 documentation supports a diagnosis or HCC?

24 MS. ZUPAC: Object to form.

25 THE WITNESS: Just in general. I don't

1 have any specific examples to give you, but
2 that's just a known fact. That's why we do
3 audits, because people disagree with the
4 information that's in the medical record.

5 BY MS. MADDUX:

6 Q. In your experience working with trained
7 coders, do you think it was not uncommon for two
8 certified coders to disagree on whether or not a
9 particular diagnosis code is supported in the
10 medical record?

11 MS. ZUPAC: Object to form.

12 THE WITNESS: I can't really put a
13 percentage whether to say it's common or not
14 common. I believe I mentioned before that
15 we only saw a -- we didn't see the whole --
16 100 percent of the records did not come
17 through as discrepant. So, therefore, some
18 did, but I don't have numbers as far as
19 which ones -- what the numbers were to give
20 you.

21 BY MS. MADDUX:

22 Q. While you were the ICC, do you recall
23 senior coders raising situations with you where the
24 senior coder disagreed with a primary coder or
25 senior coder?

1 A. Yes.

2 Q. Do you know how often this occurred?

3 MS. ZUPAC: Object to form.

4 THE WITNESS: Same response. I don't
5 have a percentage or a number for you.

6 BY MS. MADDUX:

7 Q. How would you resolve the disagreement?

8 A. The case would be discussed with the
9 es- -- the -- how do I say it?

10 The -- I would review the medical
11 record and look at what both -- the notes that both
12 coders gave to say what the problem was, where were
13 they having issues, you know, why did they
14 disagree, that sort of thing. And then, again,
15 since I was kind of the -- at the top as far as the
16 buck stops here, I would -- we would make a
17 decision on the guidance that we have. I'd either
18 agree with the primary or agree with the senior.
19 We may have to bring in a physician if we wanted to
20 look at it a little further, if it was a clinical
21 issue that they were disagreeing on. But primarily
22 between discussion of the -- myself plus other
23 professional coders that were on the QA panel, we
24 could typically come up with a good decision as far
25 as what the medical record documented.

1 A. Again, if it's potentially they -- and
2 I don't even know if there were productivity
3 standards at the MRRCs. But, again, if the coder
4 felt stressed to work faster, they might forget or
5 miss a particular diagnosis, which is why we have
6 the various levels so that the next person could
7 pick it up.

8 Q. And looking at this list today, are
9 there any other factors that you can think of that
10 may contribute to coder disagreement?

11 A. No. I think it's pretty -- you know,
12 can pretty much generalize because of documentation
13 and signatures and guidance. That's pretty much
14 what the -- subjectively, what we think causes
15 differences in coding.

16 MS. MADDUX: So I think if we can go
17 off the record.

18 THE VIDEOGRAPHER: We are going off the
19 record. The time is 12:09 p.m.

20 (Recess taken from 12:09 p.m. until 12:40 p.m.)

21 THE VIDEOGRAPHER: We are back on the
22 record. The time is 12:40 p.m.

23 (Exhibit 1215 marked for
24 identification.)

25 BY MS. MADDUX:

CERTIFICATE OF REPORTER

I, Christine A. Taylor, Certified Court Reporter within and for the State of Georgia, do hereby certify:

That the foregoing deposition was taken before me on the date and at the time and location stated on Page 1 of this transcript; that the deponent was duly sworn to testify to the truth, the whole truth and nothing but the truth; that the testimony of the deponent and all objections made at the time of the examination were recorded stenographically by me and were thereafter transcribed; that the foregoing deposition as typed is a true, accurate and complete record of the testimony of the deponent and of all objections made at the time of the examination to the best of my ability.

I further certify that I am neither related to nor counsel for any party to the cause pending or interested in the events thereof. Witness my hand, this 6th day of June, 2022.

CONFIDENTIAL - SUBJECT TO PROTECTIVE ORDER

Volume 2
DEPOSITION OF CHRISTOPHER BRESETTE
As 30(b)(6) Designee 5 of
The United States

(Via Zoom Videoconference)
August 9, 2023

Reported by: John L. Harmonson, RPR
Job No. 1001591

1 was not validated but OIG ultimately determined
2 that it in fact was validated?

3 A. I'm not going to say that it did or did
4 not happen. It very well may have happened. I did
5 not study the results of the first senior coder and
6 the second senior coder.

7 Q. We can go back to that and look at some
8 specific examples to refresh your recollection.

9 A. Absolutely.

10 Q. So if the second senior coder determines
11 that the HCC that the first senior coder -- let me
12 restart that.

13 If the second senior coder determines
14 that a particular HCC is validated despite the
15 first senior coder determining that it was not
16 supported, then it escalated to a physician to
17 independently review the medical record and make a
18 final determination. Is that right?

19 A. It's mostly correct. There were
20 oftentimes where the senior coders -- I shouldn't
21 say often. There was the opportunity and there
22 were times that existed that either the first

1 senior coder or the second senior coder asked for
2 assistance with that physician reviewer to make the
3 determination.

4 There were, as you say, instances in
5 which the physician reviewer would review that. I
6 believe independently, but I don't want to say that
7 it was exclusively independently. A lot of times I
8 believe it was in consultation with the senior
9 coder to make that determination.

10 Q. So are you saying that the example that
11 I gave, that's not the only time a physician would
12 weigh in?

13 A. Correct.

14 Q. But you're not -- you're agreeing that
15 if the second senior coder found support in that
16 example, then a physician would independently
17 review the medical record to make the final
18 determination?

19 A. I would agree with that.

20 Q. Was the physician review blind as well?

21 A. No, it was not. And independently is
22 correct. So my apologies. I see "independently"

VIDEOTAPED VIDEOCONFERENCE ZOOM DEPOSITION OF

THOMAS KORNFIELD

March 10, 2022
10:14 a.m.
Rockville, Maryland

Magna Legal Services
(866) 624-6221
www.MagnaLS.com

Prepared by:
Marcella Daughtry, RPR, RMR
CA CSR 14315
GA No. 6595-1471-3597-5424

1 of sort of the overall level, and I don't know that I
2 fully understand all of the ways in which it would -- it
3 would work, to be honest with you. I mean, I know --
4 well, I know the way it's being discussed, which is that
5 it's, you know, an overall adjustment to the -- based on
6 the extrapolation amount.

7 But I'm sorry. I lost -- I think I'm -- I'm
8 not really answering your question. Or can you repeat
9 the question? Because I think I have --

10 Q BY MS. SCHEFFLER DO: Yeah.

11 A I have lost track of it.

12 Q Sure. No problem.

13 So my question was: Outside of RADV, do you
14 believe there is a need for an adjuster if MA Plans are
15 coding in a way that systematically differs from how
16 fee-for-service providers are coding under traditional
17 Medicare?

18 A No. I think it's only needed in a -- in a RADV
19 or overpayment context.

20 Q Okay. Can you explain --

21 A When you are extrapolating.

22 Q Can you explain to me why you think that it's
23 only necessary in the context of RADV when you are
24 extrapolating?

25 A I guess it's just a policy piece of it. I

1 mean, I think I have just had a hard time with the
2 argument that if a diagnosis code is not valid and, you
3 know, there is -- there is -- it's known that it's not
4 valid, that there shouldn't just be something taken --
5 you know, money taken back with that. And maybe some of
6 it is level of effort involved in, you know, getting to
7 a -- getting to an adjustment and applying a
8 fee-for-service adjuster outside of a -- outside of a
9 case where, you know, if you -- if you've audited -- I
10 guess, if you've audited 200 records or something --
11 something to that effect and you are taking back money
12 with those 200 records, I -- I guess I just don't know
13 that it's worth the government's time to -- and I don't
14 know that it really means a whole lot from a payment
15 perspective just in terms of dollars to -- to adjust each
16 one of those coefficients and to get to the right -- you
17 know, what the right level of payment should be with a
18 fee-for-service adjuster if we are not doing
19 extrapolation, but I don't know.

20 But with extrapolation it just feels like a
21 different argument to me, and it -- it just seemed much
22 larger in scale. From that perspective, it seems like
23 something that shouldn't be ignored. But when it's
24 not -- when it's not done in an extrapolation, it's
25 just -- and maybe this is just my own personal feeling

1 about it, about sort of thinking about, okay, and -- in
2 fairness and -- you know, and I guess impact.

3 Q So I believe you were sort of referring to
4 whether specific codes found in RADV, whether you have to
5 apply some sort of adjuster before deleting those as
6 opposed to, you know, when RADV, they -- they determined
7 that they were going to extrapolate that error rate.
8 What I was curious about is sort of just outside of RADV
9 altogether. Why would this principle of the
10 fee-for-service adjuster only be limited to the context
11 of RADV?

12 A Because I think when you're estimating a model,
13 paying on that model and not doing any adjustment, and
14 you are sort of assuming, making the same -- I don't
15 know. It's just sort of how people have talked about it,
16 I guess, that -- that when you are estimating the model,
17 it's built into the model that there are errors. There
18 may be some errors that are, you know, in the MA data in
19 some way, and you haven't corrected for that in a
20 systematic way, that you don't have to then adjust the
21 payments.

22 But if you -- the way -- the way -- the way I
23 have heard it explained is, you know, if you have a, you
24 know, audited -- a model that's on audited data and you
25 pay on audited data, that's completely on audited data,

1 but that's not exactly what's happening right now.

2 Q So I think you said a little bit ago that in an
3 ideal world you would have data -- fee-for-service data
4 that was validated, and you would base the coefficients
5 based out of that.

6 A Yeah, I mean, I should say --

7 MS. KRIEG: Object to form. Misstates prior
8 testimony.

9 THE WITNESS: Yeah, I mean, I would say if you
10 were doing an -- an adjustment, that's -- that's how it
11 would be done on the fee-for-service data.

12 Q BY MS. SCHEFFLER D0: That's not how it -- so
13 that's the ideal world, but that's not how it's being
14 done, because CMS does not audit that fee-for-service
15 data before setting the risk --

16 A Well --

17 MS. KRIEG: Object to form, compound.

18 THE WITNESS: No, I mean, I think I was just
19 thinking about how the fee-for-service adjuster should be
20 calculated, or I would think it should be calculated,
21 which is to reestimate the data, reestimate the model and
22 all the coefficients associated with the model on audited
23 data.

24 Q BY MS. SCHEFFLER D0: So going back to the clip
25 that we just watched, what did you mean by diagnosis

Remote Videotaped Deposition of
PAT RASMUSSEN
July 22, 2022
9:10 a.m. Eastern

Reported by Rita A. DeRouen, RPR, CRR

MAGNA LEGAL SERVICES
(866) 624-6221
www.MagnaLS.com

1 A. I think the way I could answer that is
2 that we would ensure what was submitted to us was
3 sent on to CMS. I couldn't ensure that whoever
4 put that code on the form we were looking at did a
5 correct job.

6 BY MS. GLOVER:

7 Q. Understood.

8 So you submitted data received by Optum
9 from providers and submitted that data to CMS,
10 correct?

11 A. Correct.

12 Q. And earlier we spoke about error
13 corrections.

14 Do you recall that?

15 A. Yes.

16 Q. And if you saw errors in the data that you
17 received from providers, you -- you researched and
18 corrected those errors; is that correct?

19 MS. RAMAKRISHNAN:

20 Objection; misstates prior testimony.

21 A. I -- I'm really struggling to even
22 remember what IRAD looked like. But there were
23 instances where a code might have been truncated
24 or there was a line, a box, that a number was in
25 the middle of and the system couldn't read it.

1 When I say we corrected errors, it's like
2 we might stop at something like that that was
3 thrown out by the system to reach out to the
4 provider's office to have them pull the records or
5 whatever and give us the correct code to enter.

6 BY MS. GLOVER:

7 Q. Understood.

8 And so when you would research -- when you
9 would research data errors, you would reach out to
10 the provider and ask them for the correct code; is
11 that -- am I understanding you correctly?

12 MS. RAMAKRISHNAN:

13 Objection.

14 A. That is correct.

15 THE COURT REPORTER:

16 I'm sorry, didn't heard the objection.

17 MS. RAMAKRISHNAN:

18 Objection; misstates prior testimony.

19 BY MS. GLOVER:

20 Q. And, Ms. Rasmussen, I realize you've said
21 that your role was to submit data received by
22 providers to CMS.

23 Did you also have an understanding that
24 CMS required that all diagnosis codes must be
25 documented in a medical record?

1 REPORTER'S CERTIFICATE

2 This certification is valid only for a
3 transcript accompanied by my original signature
4 and original required seal on this page.

5 I, Rita DeRouen, Certified Court Reporter in and
6 for the State of Louisiana, (CCR #2014018),
7 Registered Professional Reporter (RPR #006908), as
8 the officer before this testimony was taken
9 remotely via videoconferencing, do hereby certify
10 that PAT RASMUSSEN, having been duly sworn by me
11 upon authority of R.S. 37:2554, did testify on
12 July 22, 2022, as hereinbefore set forth in the
13 foregoing 207 pages; that this testimony was
14 reported by me in stenographic shorthand, prepared
15 and transcribed by me or under my personal
16 direction and supervision, and is a true and
17 correct transcript to the best of my ability and
18 understanding; that the transcript has been
19 prepared in compliance with transcript format
20 guidelines required by statute and rules of the
21 Board; that I am informed about the complete
22 arrangement, financial or otherwise, with the
23 person or entity making arrangements for
24 deposition services; that I have acted in
25 compliance with the prohibition on contractual

1 relationships, as defined by Louisiana Code of
2 Civil Procedure Article 1434 and in Rules and
3 Advisory Opinions of the Board; that I have no
4 actual knowledge of any prohibited employment or
5 contractual relationship, direct or indirect,
6 between a court reporting firm and any party
7 litigant in this matter, nor is there any such
8 relationship between myself and a party litigant
9 in this matter; that I am not related to counsel
10 or to any of the parties hereto, I am in no manner
11 associated with counsel for any of the interested
12 parties to this litigation, and I am in no way
13 concerned with the outcome thereof.

CONFIDENTIAL - SUBJECT TO PROTECTIVE ORDER

DEPOSITION OF CAROLYN KAPUSTIJ
As 30(b)(6) Designee 6 of
The United States

Baltimore, Maryland
August 25, 2023

Reported by: John L. Harmonson, RPR
Job No. 1011736

1 Q. And why did CMS develop a methodology
2 for selecting Medicare Advantage plans for its RADV
3 audits based on an increase in -- a plan's increase
4 in coding from year to year?

5 A. I believe there was a hypothesis that an
6 increase in coding might be indicative of larger
7 probability for an error.

8 Q. So in selecting Medicare Advantage plans
9 for the 2011 to 2013 RADV audits, was it CMS's goal
10 to identify plans that were more likely to have
11 payment errors?

12 MS. OBEREMBT: Objection; vague.

13 THE WITNESS: I'm not sure, and none of
14 the documentation confirmed that.

15 BY MR. MARTINEZ:

16 Q. Do you have an understanding as to what
17 CMS's purpose was in designing the MA selection
18 process for the RADV audits 2011 to 2013?

19 MS. OBEREMBT: Objection; vague.

20 THE WITNESS: The objective was to get a
21 selection of contracts to audit.

22 BY MR. MARTINEZ:

23 Q. Okay. Well, you testified earlier to a
24 hypothesis that an increase in coding might be
25 indicative of a larger probability for a payment

1 error; correct?

2 A. Correct.

3 Q. So is it your understanding that CMS --
4 the reason why they were selecting plans using this
5 methodology was to try and identify plans that were
6 more likely to have higher rates of payment errors?

7 A. That was the hypothesis and that was the
8 research question. But plans were selected from
9 all three groups, high, medium and low.

10 Q. And of the 30 plans selected for each --
11 let's start with payment year 2011. How many were
12 from the high increase group?

13 A. I am going to have to look at that. I
14 do not recall offhand. I'm trying to...

15 Q. Are you searching for Tab 18 by chance?

16 A. 18 and perhaps 19. I'll start with 19.
17 And so for 2011, it was 20 from the high group,
18 five from medium, and five from low.

19 Q. So two-thirds of the plans selected for
20 payment year 2011 came from the high coding
21 increase group; is that right?

22 A. Correct.

23 Q. What about for payment year 2012? And I
24 think to help you answer that question, I've marked
25 what's in your binder as Tab 18 as Exhibit 1498.

1 prior rule had been that MA plans could submit only
2 one supporting record per HCC per enrollee. Is
3 that correct?

4 MS. OBEREMBT: Objection; outside the
5 scope.

6 THE WITNESS: To the best of my
7 recollection.

8 BY MR. MARTINEZ:

9 Q. Okay. And then CMS changed that policy
10 and, for example, payment year 2011 allowed plans
11 to submit up to five medical records to support a
12 particular HCC for a particular sampled enrollee.
13 Is that right?

14 A. Yes.

15 Q. And CMS made that change because it
16 understood that even if a particular HCC is not
17 supported by one medical record, it might be
18 supported by another; correct?

19 A. Correct.

20 Q. I want to talk now about the medical
21 record review process in some more detail.

22 So we had kind of a brief exchange
23 earlier about initial validation contractors and
24 secondary validation contractors, and I think you
25 said at one point that that wasn't really the

1 particular sampled beneficiary; correct?

2 A. No. The way it worked was they -- there
3 was a system, and the coder would receive one
4 medical record and code that record. They would
5 not receive -- I do not believe they received all
6 of an enrollee's records.

7 Q. Okay. But in the focused review
8 process, was the -- was the mandate to -- for the
9 coders involved in that process to review all of
10 the medical records that an MA plan had submitted
11 in support of HCCs for sampled enrollees?

12 A. Yeah, the focused review process
13 resulted in a review of all the medical records
14 submitted.

15 Q. And the focused review was a blind
16 review; right?

17 MS. OBEREMBT: Objection; vague.

18 THE WITNESS: Define what you mean by
19 blind.

20 BY MR. MARTINEZ:

21 Q. Well, have you seen the term "blind
22 review" in preparing for your testimony today?

23 A. I have.

24 Q. What do you understand that term to
25 mean?

1 A. It's used different ways. The way I've
2 seen it used in preparing was that the medical
3 record review contractors were blind to one
4 another's findings.

5 Q. And isn't it also true that the
6 individuals doing the focused review were blind as
7 to which HCCs the MA plan had submitted for payment
8 for a given sampled enrollee?

9 A. Based on my conversations, it was my
10 understanding that the coders did have knowledge to
11 see what is called the cover sheet which indicated
12 what HCCs were submitted for payment.

13 Q. And is it your understanding that all of
14 the coders who were doing this first-level review
15 knew which HCCs were being audited?

16 A. I believe that that was the procedure
17 that was eventually adopted.

18 Q. And in preparing to testify today, you
19 didn't review any documents that referred to the
20 blind review method as meaning the coders don't
21 know which HCCs or diagnoses are being audited?

22 A. I am not sure.

23 Q. You're not sure whether you reviewed any
24 materials that defined blind review in the way that
25 I did?

1 plan in support of the sampled enrollee?

2 A. So that record will then go forward to
3 the second coder no matter what, and the second
4 coder will have a set of findings also. So at the
5 end of the review process you have a set of
6 findings from one coder and a set of findings from
7 another coder.

8 Q. And CMS understands that sometimes one
9 of those coders might miss the HCC in the medical
10 records and yet the second coder would find it to
11 be supported; correct?

12 MS. OBEREMBT: Objection; vague.

13 THE WITNESS: I would not necessarily
14 say that the coder misses it. Working with coders,
15 there are some gray areas and some things are open
16 to interpretation. But there are circumstances
17 where one coder would find evidence for it and the
18 other coder would feel no, that that was not
19 sufficient.

20 BY MR. MARTINEZ:

21 Q. Right. Medical record review coding
22 involves gray areas; right?

23 A. Yes.

24 Q. And lots of things in medical record
25 reviews are subject to interpretation; right?

1 MS. OBEREMBT: Objection; vague.

2 THE WITNESS: Yes.

3 BY MR. MARTINEZ:

4 Q. So I want to drill down on this a little
5 bit. Did CMS understand, then, that sometimes an
6 initial coder, as part of the RADV process, would
7 not abstract an HCC that a different coder perhaps
8 later in the process would abstract?

9 MS. OBEREMBT: Objection; vague.

10 THE WITNESS: That's why there were
11 two -- always two reviews.

12 BY MR. MARTINEZ:

13 Q. Right. And it was important to CMS to
14 have those multiple layers of review; right?

15 A. Correct.

16 Q. To make sure that they were getting the
17 most accurate results that they could in terms of
18 reviewing the medical records for supportable HCCs;
19 right?

20 A. Yes.

21 Q. Because obviously CMS would not want to
22 come out with even a preliminary finding that an
23 HCC is not supported by a medical record if it
24 hadn't done its best to make sure that that's
25 actually the case; right?

1 A. Correct.

2 Q. And so kind of in the same vein, CMS
3 understood when it was conducting its audits, RADV
4 audits for payment years 2011 through 2015, that
5 sometimes the coders that CMS oversaw would
6 disagree about whether or not an HCC was supported
7 by medical records; right?

8 A. Yes.

9 Q. And in fact, CMS I believe instructed
10 the medical record review contractors to develop
11 protocols for handling those very situations in
12 which one coder might disagree with the judgment of
13 another coder. Is that right?

14 A. I'm not sure what you're referring to.

15 Q. Have you heard of the concept of quality
16 assurance protocols in the context of the RADV
17 audits that CMS oversaw?

18 A. Medical record review contractors, it
19 was contingent on them to monitor the quality of
20 their coders.

21 Q. And that was a requirement that CMS
22 imposed on the medical record review contractors;
23 right?

24 A. Yes.

25 Q. And as one of those quality control

1 mechanisms that the medical record review
2 contractors had to have in place was a process for
3 resolving disagreements between coders about
4 whether an HCC was in fact supported by the medical
5 records?

6 A. I believe something like that did exist.
7 When I talked to Michelle Atkins to kind of
8 understand how they implemented this, when you have
9 focused review and discrepant confirmation, when
10 you have one MRRC coding it and then it goes to
11 another coder rather than a primary and senior at
12 each organization looking at it, she said that her
13 process was to -- for those HCCs that were not in
14 agreement, they would internally have someone look
15 at it and see if the coder needed additional
16 training.

17 Q. So in that instance that Michelle Atkins
18 was talking to you about, there would be a third
19 layer of review to kind of assess --

20 A. No.

21 Q. -- or remediate the disagreement?
22 No?

23 A. No, it was an internal practice by the
24 medical record review contractors. There were two
25 layers of review, and the HCC was considered

1 validated if either of the coders abstracted it.

2 Q. And was that the process for payment
3 year 2012 and 2013 as well?

4 A. I believe so, yes.

5 Q. And is that the process CMS intends to
6 employ for payment years 2014 and 2015?

7 A. I believe so.

8 Q. And what's your source for your
9 understanding with respect to payment years '14 and
10 '15?

11 A. That was discussions with Michelle
12 Atkins.

13 Q. Okay. Has that process, the medical
14 record review process for payment year 2014, has
15 that started yet?

16 A. I believe it has just based on when --
17 the date of the sampling evaluation report, and
18 then I also have some CON14 training in Tab 9. So
19 it appears those samples have started.

20 Q. Do you know whether they started before
21 or after July 2021?

22 A. I don't know. I believe CON14 did, but
23 I can't say with 100 percent certainty. What
24 started, the coding or --

25 Q. The coding. Sorry.

1 collection, CMS went with a very conservative
2 approach and offset those overpayments by what it's
3 calling underpayments for additional diagnoses.

4 BY MR. MARTINEZ:

5 Q. And that's CMS's own terminology; right?

6 A. I believe so, yes.

7 Q. And I think you said that whenever a
8 diagnosis code cannot be validated by the medical
9 records, that is an overpayment. But isn't it true
10 that not all diagnosis codes or HCCs actually
11 impact payment?

12 A. I believe all HCCs by definition impact
13 payment. All diagnosis codes do not. You can have
14 two HCCs.

15 Q. And you understand that multiple
16 diagnosis codes could support the same HCC; right?

17 A. Yes.

18 Q. And so I guess what I'm wondering is,
19 then, just because the CMS medical record review
20 contractors find that there is a certain percentage
21 of unsupported HCCs in an MA plan's submitted data
22 for a particular payment year, that does not mean
23 that the MA plan has been net overpaid as CMS
24 defines it for that payment year; correct?

25 MS. OBEREMBT: Objection; vague.

1 THE WITNESS: It's not in the terms of
2 the RADV payment recovery context.

3 BY MR. MARTINEZ:

4 Q. Is there a different context that you're
5 thinking your answer might be different?

6 A. Yes. In the payment context, plans have
7 a firm deadline for the date by which they must
8 submit diagnoses for payment.

9 Q. And so how does that deadline inform
10 your answer to my question?

11 A. Plans would not be allowed -- diagnoses
12 would not be considered that were not submitted
13 within the data submission period.

14 Q. So it's possible that a plan might just
15 submit a code or an HCC too late to be paid in a
16 certain payment year; right?

17 A. It's possible, yes.

18 Q. Is that what you're referring to?

19 A. Yeah, that's one example.

20 Q. Okay. Are there other examples?

21 A. No. Just RADV is not kind of considered
22 a forum to introduce new diagnoses into the
23 payment.

24 Q. Okay. And I want to understand that a
25 little bit. Just because in performing the medical

1 record reviews as part of the RADV program, as we
2 established, the medical record review contractors
3 also report additional HCCs that were not submitted
4 by the plans for payment; correct?

5 A. That is correct.

6 Q. And because of those additional HCCs
7 that are found by CMS's own coders, that's why you
8 get sometimes net underpayments to MA plans for a
9 particular year?

10 MS. OBEREMBT: Objection; misstates
11 prior testimony.

12 THE WITNESS: You get an enrollee net
13 underpayment.

14 BY MR. MARTINEZ:

15 Q. And then when you extrapolate to the
16 entire contract as a whole taking account of any
17 additional HCCs, that also leads to net
18 underpayments for the plan as a whole in the RADV
19 context; right?

20 A. Well, in the RADV methodology, the
21 payment recovery amount is constrained to zero. So
22 it's not a forum for plans to receive additional
23 payment.

24 Q. Right. And so what that means, it's
25 constrained to zero -- well, it means a couple of

1 things, but one thing it means is that if a
2 particular plan has a net underpayment that CMS has
3 calculated for a given payment year, there is no
4 payment recovery for CMS for that particular plan;
5 correct?

6 A. Correct. That was the methodology.

7 Q. Using the extrapolated methodology;
8 right?

9 A. Correct.

10 MS. OBEREMBT: Counsel, we've been going
11 an hour now. Can we take a break, please? We
12 started at 1:15.

13 MR. MARTINEZ: Would you like a break?

14 THE WITNESS: Uh-huh.

15 MR. MARTINEZ: Sure. We can go off the
16 record.

17 THE VIDEOGRAPHER: We are off the record
18 at 14:23.

19 (Recess taken.)

20 THE VIDEOGRAPHER: We are back on the
21 record at 14:35.

22 BY MR. MARTINEZ:

23 Q. Ms. Kapustij, I would like to dig a
24 little deeper now into the extrapolation
25 methodology that CMS published in February of 2012.

1 So I think as we talked about
2 previously, Step 1 is CMS will calculate an
3 enrollee-level payment error for each sampled
4 enrollee. Is that right?

5 A. Correct.

6 Q. And then CMS will, through a specific
7 methodology, apply sampling weights to those
8 enrollees; right?

9 A. Correct.

10 Q. And then CMS adds together the weighted
11 enrollee payment errors of all the enrollees in the
12 sample for that MA plan; correct?

13 A. Correct.

14 Q. And that's how they generate what CMS
15 calls a point estimate. Is that right?

16 A. Correct.

17 Q. And then CMS calculates a 99 percent
18 confidence interval around that point estimate. Is
19 that right?

20 A. That is correct.

21 Q. And then from that confidence interval
22 is how CMS determines what the extrapolated payment
23 recovery amount is; correct?

24 A. Correct.

25 Q. And if the lower bound of that

1 99 percent confidence interval is negative or
2 crosses zero, then there is no payment recovery for
3 CMS; correct?

4 A. Correct.

5 Q. And the reason why it could be negative
6 is because of the additional HCCs that CMS's coders
7 are reporting in the medical record review process;
8 right?

9 A. Correct. I also believe the confidence
10 interval calculation may play into that.

11 Q. Is it your understanding that either the
12 confidence interval calculation or the presence of
13 additional HCCs, one of those two variables is more
14 responsible for negative results?

15 A. I couldn't opine on that.

16 Q. And conversely, if the confidence -- if
17 the lower bound of the 99 percent confidence
18 interval is positive, then there is a payment
19 recovery; correct?

20 A. Correct.

21 Q. And it's calculated at that -- whatever
22 that lower bound for the 99 percent confidence
23 interval is. Is that right?

24 A. Correct.

25 Q. Okay. And that was the final

1 methodology that CMS published in February of 2012;
2 right?

3 A. Correct.

4 Q. And I should say that was the final
5 extrapolation methodology that CMS published in
6 February of 2012; correct?

7 A. Yes. It was called the "Notice of Final
8 Payment Error Calculation Methodology for Part C
9 Medicare Advantage Risk Adjustment Data Validation
10 and Contract-Level Audits."

11 Q. And you're reading the title of Tab 10
12 in your binder?

13 A. Yes.

14 Q. And then on page 4 of that document, CMS
15 then said it will apply a fee-for-service adjuster
16 as an offset to the extrapolated recovery amount to
17 determine what CMS referred to as a final recovery
18 amount. Is that right?

19 A. That is what the paper states.

20 Q. Were you involved in writing that paper?

21 MS. OBEREMBT: Objection; vague.

22 MR. MARTINEZ: I'll rephrase it.

23 BY MR. MARTINEZ:

24 Q. Were you involved in preparing the
25 February 2012 final notice of RADV methodology?

1 A. It's through July -- I can speak to
2 July 2021. I don't think it's happened to date.

3 Q. So as I understand, the way it's
4 supposed to work is an MA plan will submit medical
5 records to support HCCs for a sampled enrollee;
6 right? Just starting at the beginning.

7 A. Correct.

8 Q. And then there's two layers of review by
9 well-trained, well-qualified RADV coders that
10 happens next. Right?

11 MS. OBEREMBT: Objection; vague.

12 THE WITNESS: There are two levels of
13 review by RADV coders.

14 BY MR. MARTINEZ:

15 Q. Okay. And then sometimes the RADV
16 coders, both of them agree that an HCC that was
17 submitted by an MA plan is not supported by the
18 medical records that have been submitted; right?

19 A. Correct.

20 Q. And then CMS presumably alerts the MA
21 plan through that preliminary audit report of that
22 finding; right?

23 A. The plan would be alerted through that
24 preliminary audit report. However, that has not
25 been issued.

1 Q. That report has not been issued for
2 payment year 2011 even?

3 A. Correct.

4 Q. So let's assume it has -- let's assume
5 that CMS alerts a plan about the HCCs that CMS
6 claims are unsupported by the medical records. Now
7 we move to the reconsideration process. And in
8 that process, an MA plan can say: No, wait a
9 minute. Take a look at this one record and that's
10 where we think it is in fact supported. Is that
11 right?

12 MS. OBEREMBT: Objection; calls for
13 speculation.

14 THE WITNESS: It would have to be a
15 record that was already submitted.

16 BY MR. MARTINEZ:

17 Q. So it's a record that's already
18 submitted; right?

19 A. Correct.

20 Q. And the plan can only point to one
21 record in the reconsideration context, not the
22 five, or up to five; right?

23 A. I believe it's one per each HCC.

24 Q. And so once the plan identifies that one
25 medical record for that one HCC, then there is a

1 third layer of review by a third coder who then
2 makes an assessment as to whether or not that
3 record supports the HCC that has been submitted for
4 payment; correct?

5 A. That was the process as designed.
6 Again, these results have not been issued, so I'm
7 being kind of speculative.

8 Q. Well, you're not being speculative, but
9 you're just explaining how the process is supposed
10 to work; right?

11 A. Based on my knowledge, yes.

12 Q. And based on your having been designated
13 as the government's representative to testify on
14 Topic 5.

15 And so if CMS's findings were in fact
16 overturned with respect to a particular HCC, that
17 would mean that this third coder would have found
18 support in the medical record submitted for that
19 HCC that two previous well-trained, well-qualified
20 coders did not report; correct?

21 MS. OBEREMBT: Objection; vague. And
22 calls for speculation.

23 THE WITNESS: That is one option.
24 Another reason a lot of records were found not to
25 support the HCC was not because of a disagreement

1 not designed to determine fraud. CMS can't make
2 that determination whether or not it has committed
3 fraud.

4 BY MR. MARTINEZ:

5 Q. But you understand that CMS has said in
6 the RADV context that neither payment errors nor
7 coding differences are fraud; right?

8 A. Correct. In and of themselves, no.

9 Q. Right. So in and of themselves, the
10 plans on here, not the UHG plans but the other
11 plans that have contract-level overpayments, that
12 fact alone does not mean that CMS believes they
13 have all committed fraud; right?

14 MS. OBEREMBT: Objection; calls for
15 speculation. Asked and answered.

16 THE WITNESS: Correct. But CMS is not
17 conducting this exercise to determine if there is
18 fraud.

19 BY MR. MARTINEZ:

20 Q. So staying on page 5 of Exhibit 1187-1,
21 all three -- excuse me, all four of the UHG plans
22 that were audited, CMS determined that they had no
23 recovery amounts at any of the three confidence
24 intervals listed in this chart. Is that right?

25 A. That is correct.

3 STATE OF MARYLAND

4 I, JOHN L. HARMONSON, a Notary Public
5 within and for the State of Maryland, do hereby
6 certify that CAROLYN KAPUSTIJ, the witness whose
7 deposition is hereinbefore set forth, was duly
8 sworn by me and that such deposition is a true
9 record of the testimony given by such witness.

10 That before completion of the
11 proceedings, review and signature of the transcript
12 was reserved.

13 I further certify that I am not related
14 to any of the parties to this action by blood or
15 marriage; and that I am in no way interested in the
16 outcome of this matter.

17 IN WITNESS WHEREOF, I have hereunto set
18 my hand this 28th day of August, 2023.

TUESDAY, MARCH 12, 2024

VIDEOTAPED DEPOSITION OF PHILIP STARK, PH.D.

CONFIDENTIAL TRANSCRIPT

---o0o---

REPORTER: BALINDA DUNLAP, CSR 10710, RPR, CRR, RMR

1 Q. Okay. I am going to try to use the same
2 term today, "member-HCC-year," so that we're
3 consistent.

4 A. Thank you.

5 Q. All right. Now, in your -- I am going to 10:28:41
6 call this Opinion II on Page 7 because it's got the
7 Roman II. Your Opinion II found support in RADV
8 for diagnosis instances with no payment impact was
9 higher than those with payment impact, correct?

10 A. I'm sorry. I didn't hear the last part of 10:29:07
11 the question.

12 Q. That you -- in your Opinion II, you found
13 that the RADV validation rate of diagnosis
14 instances with no payment impact was higher than
15 those with payment impact, correct? 10:29:24

16 A. No, sir. I didn't independently examine
17 whether any diagnosis instance had financial
18 impact. I'm relying on Mr. Renjilian's Opinions 2
19 and 3 for that determination. I'm doing
20 calculations based on his labeling of diagnosis 10:29:40
21 instances as potentially having financial impact or
22 not.

23 Q. Fair enough. Let's go into what you did
24 here. Let's look at your Paragraph 24.

25 In Paragraph 24 you write "To evaluate the 10:29:59

1 rates at which RADV audits found support for
2 member-HCC-years that Mr. Renjilian identified as
3 having financial impact if deleted, I replicated
4 and extended portions of Mr. Renjilian's analysis,"
5 right?

10:30:17

6 A. Yes, sir.

7 Q. So you did not verify Mr. Renjilian's work
8 on whether a diagnosis instance had payment impact
9 or not; you just accepted his Opinions 2 and 3,
10 correct?

10:30:32

11 A. I used his determination. I -- "accepted"
12 is a little stronger. I used his determination.

13 Q. Fair enough. You used his determination.
14 And you did the work identified in your Paragraphs
15 25 through 29, correct?

10:30:47

16 A. Yes, sir.

17 Q. All right. After doing that work -- well,
18 I should say in Paragraph 24 you say "I replicated
19 and extended portions of Mr. Renjilian's analysis."
20 And you did that by doing the work in Paragraphs 25
21 through 29, correct?

10:31:28

22 A. Yes, sir.

23 Q. And in Paragraph 30 --

24 A. Some of the extension is not just

25 described there. That's -- Paragraphs 25 through

10:31:41

1 29 are for preparing the database for -- creating a
2 database that I used then for subsequent
3 calculations that are described later in the
4 report.

5 Q. Okay. 10:31:55

6 A. That's not the full extent of the work.

7 Q. Fair enough. You feel confident in the
8 methods you used, correct?

9 A. Yes, yes.

10 Q. And you feel confident in the results you 10:32:07
11 achieved, right?

12 A. Yes.

13 Q. All right. In Paragraph 30 you state the
14 following: "My results match the 2011-2013 counts
15 in the left panel of Figure 15 of the Renjilian 10:32:20
16 report." Do you see that?

17 A. Yes, sir.

18 Q. Is that accurate?

19 A. That's to the best of my recollection,
20 yes. 10:32:32

21 Q. So the independent analysis that you
22 performed matched the same results as Mr. Renjilian
23 on Figure 15 of his report, right?

24 A. The left panel?

25 Q. Yes. 10:32:45

1 A. For 2013 -- from 2011 through 2013, yes,
2 sir.

3 Q. And let's go ahead and look at that left
4 panel in Mr. Renjilian's report. And that's on
5 Page 87 of his report. 10:33:01

6 You're referring, Dr. Stark, to the panel
7 that says at the top "Member-HCCs, 2011-2013"?

8 A. I think it says CON13 -- "CON11-13."

9 Q. Yeah, I think you have a different
10 pagination than I do. So go to Page 86. 10:33:38
11 Member-HCC-years -- member-HCCs 2011-2015. Do you
12 see that?

13 A. I see something that says "CON11-13." Is
14 that --

15 Q. CON11-13? 10:33:57

16 A. Not 2011 through '15. Yes, sir.

17 Q. Great. Okay. And Dr. Stark, you
18 replicated and reached the same result as in that
19 upper left panel, right?

20 A. Our arithmetic agrees, yes. 10:34:12

21 Q. Your arithmetic agrees.

22 A. Yes.

23 Q. All right. So you found, Dr. Stark, that

24 -- I want to go through these numbers in some more

25 detail. You found that for 2011 through 2013, your 10:34:24

1 arithmetic found that there was 1,119

2 member-HCC-years with a diagnosis instance that was

3 on the first interrogatory response, right?

4 A. As I sit here, I can't remember whether

5 this is counting diagnosis instances or HCCs rolled 10:35:05

6 up to the member-year level.

7 Q. Well, you stated in your report you

8 replicated and found the same results, correct?

9 A. Yes.

10 Q. And Mr. Renjilian writes "Member-HCCs" at 10:35:25

11 the top of that chart, correct?

12 A. Yes, sir.

13 Q. So that would suggest these are

14 member-HCC-years, correct?

15 A. It would, although Mr. Renjilian's 10:35:36

16 terminology isn't -- I think he sometimes uses the

17 same phrase to talk about diagnosis instances and

18 sometimes to talk about HCC-years.

19 Q. Okay. Well, assuming this is

20 member-HCC-years for now, and if you discover later 10:35:54

21 it was diagnosis instance, you'll let us know.

22 A. Yes.

23 Q. Okay. So to state it plainly, there were

24 1,119 instances where a provider submitted a code

25 after an encounter, a United chart review coder 10:36:09

1 reviewed the chart and did not identify that
2 submitted code, and then the member-HCC-year was
3 reviewed in RADV, correct?

4 A. That's my understanding, yes.

5 Q. And out of those 1,119 instances, the RADV 10:36:31
6 auditors found 980 of them to be supported, right?

7 A. Not of the diagnosis instances, but of the
8 resulting HCC for that beneficiary for that year.

9 Q. Thank you for correcting that.

10 So in -- let me restate. So in 980 of 10:36:50
11 those instances, the RADV auditors validated the
12 member-HCC-year associated with that diagnosis
13 instance, right?

14 A. That's my understanding. My understanding
15 is that RADV does not look at the diagnosis 10:37:06
16 instances to see whether the diagnosis instances
17 are supported. RADV looks at members and the HCCs
18 that those members were assigned for the year and
19 asks United or whoever the MAO is to provide
20 documentation to support that HCC for that 10:37:29
21 beneficiary for that year.

22 Q. All right. Let me just establish some
23 foundation about RADV. What do you understand RADV
24 to be?

25 A. I understand it to be a review that's done 10:37:40

1 by CMS of some contracts and some years, that it
2 involves sampling beneficiaries and then looking
3 for -- or asking the MAO for support for the HCCs
4 that were assigned to that beneficiary that year,
5 that the MAO is allowed to provide up to five
6 pieces of information -- I think their chart
7 specifically, but five pieces of information to
8 support each HCC, and that support might or might
9 not be from the diagnosis instance that was
10 originally submitted.

10:38:06

10:38:26

11 Q. And you understand that the CMS auditors
12 will then review the charts to determine if the
13 member-HCC-year is supported, correct?

14 A. That's my understanding, yes, sir.

15 Q. All right.

10:38:45

16 A. I have a little bit more detail in the
17 understanding of RADV. I understand that at least
18 in some years the sample -- first of all, I
19 understand that the samples are drawn from contract
20 years.

10:38:59

21 Second, I understand that at least in some
22 years, the sample was a stratified random sample,
23 that it was stratified by a tercile of payment for
24 the beneficiary in question.

25 I have also seen language somewhere that

10:39:14

1 said it was somehow risk -- risk aware, that
2 somehow it was attempting to focus on things that
3 were perceived to have more risk, but I don't
4 understand the detail of that.

5 Q. Okay. Thank you for clarifying that. 10:39:29

6 We are going to assume today, Dr. Stark,
7 that the RADV auditors always get it right.

8 A. I don't know whether the RADV auditors
9 always get it right.

10 Q. Do you have any doubts whether they always 10:39:41
11 get it right?

12 A. I mean, any process involving humans
13 reading printed materials, some error rate. I just
14 don't know -- I haven't seen attempts to quantify
15 it. I don't have an independent basis for knowing 10:39:59
16 what the accuracy would be.

17 Q. Fair enough. Well, let's assume for the
18 purposes of today, I'll give you an assumption,
19 that the RADV auditors are always correct.

20 A. Okay. 10:40:16

21 Q. And I'll -- I'll restate that assumption
22 when I ask you various questions.

23 A. Okay.

24 Q. But if you have any doubts, you can say,
25 "Are you assuming RADV is correct?" 10:40:25

1 A. I'll do my best here.

2 Q. Okay. Great. All right. Going back to

3 Mr. Renjilian's chart that you verified the

4 arithmetic, you agree that there were 980 instances

5 where a provider submitted a code after an 10:40:42

6 encounter, United chart review coders reviewed the

7 chart and failed to find the diagnosis code

8 submitted by the provider, and RADV auditors

9 reviewed the member-HCC-year associated with that

10 diagnosis instance and found it to be supported, 10:41:06

11 right?

12 A. My understanding is that one of -- at

13 least one of the up to five pieces of information

14 provided by United, possibly from different

15 diagnosis instances or even diagnosis instances 10:41:20

16 that were not submitted, provided support for that

17 HCC, or possibly something in the -- higher in the

18 hierarchy for that beneficiary for that year.

19 Q. Okay. Thank you for those caveats. But

20 in summary, in those 980 instances, ultimately the 10:41:41

21 RADV auditors found the member-HCC-year to be

22 supported, correct?

23 A. They found the member-HCC-year to be

24 supported, yes, sir.

25 Q. All right. And then the next line in 10:41:54

1 So somewhere in some chart that was
2 presented by United to RADV, there was support for
3 that HCC for that member for that year.

4 Q. I understand that caveat, and you've
5 mentioned it a few times. In understanding that 11:22:24
6 caveat, which I am going to cover in a minute, I
7 just want to restate the hypothesis and make sure I
8 understand your opinion.

9 The hypothesis is every time a United
10 chart review coder fails to find a diagnosis code 11:22:37
11 submitted by a provider, the member-HCC-year
12 associated with that diagnosis code is not
13 supported, that hypothesis is false, correct?

14 A. I agree.

15 Q. Okay. And you agree that that's false to 11:22:56
16 a certainty, right?

17 A. Yes, sir. Well, yes, my -- if by
18 "supported," we mean RADV found support, yes.

19 Q. Fair enough. We talked about that
20 assumption earlier, but you had said that human 11:23:12
21 beings are fallible and so RADV auditors may be
22 fallible, right?

23 A. Yes, I am just worried about the
24 definition of "supported," but yes, I -- yes, RADV
25 finds support for some nonzero fraction of 11:23:27

1 member-HCC-years for which corresponding to some of
2 the diagnoses that were originally submitted but
3 not found in chart review.

4 Q. All right. Fair enough.

5 I want to cover this caveat that you've 11:23:48
6 raised a number of times about a member-HCC-year
7 potentially being supported from another chart.

8 And so if I understand what you're saying,
9 Dr. Stark, is that a diagnosis instance in the
10 first interrogatory response would have involved a 11:24:14
11 provider meeting with a patient in an encounter,
12 having an encounter with a patient, submitting a
13 diagnosis and that mapping to a member-HCC-year;
14 but then another provider, meaning -- or having an
15 encounter with a patient and also submitting a 11:24:35
16 diagnosis.

17 And you're saying that the member-HCC-year
18 in RADV could have been supported by that second
19 encounter, not the first encounter on the first
20 interrogatory response; is that correct? 11:24:50

21 A. That's my understanding, or it could have
22 been a different encounter with the same provider,
23 or it could have been an encounter with the same
24 provider or a different provider with a different
25 diagnosis that mapped to either the same HCC or an 11:25:02

1 HCC higher in the hierarchy.

2 Q. That's correct. So just to put it in

3 plain terms, a provider may meet with a patient and

4 diagnosis a patient as having diabetes and that may

5 not be found in chart review, the diabetes

11:25:19

6 diagnosis; but then a different provider may meet

7 with the same patient, diagnosis diabetes, and then

8 that would be the chart that the RADV auditors

9 would find as supporting the member-HCC-year,

10 right?

11:25:37

11 A. I think it's a little more complicated

12 than that, in that my understanding is that RADV

13 doesn't do its own selection of materials to

14 review, that it's the MAO that provides RADV with

15 materials that they purport support the HCC for

11:25:53

16 that member for that year.

17 So my understanding is that the materials

18 presented to RADV in support of a particular

19 HCC-member-year could be one of the diagnosis codes

20 that chart review -- diagnosis instances that chart

11:26:15

21 review did not find.

22 It could be based on an encounter with the

23 same or a different provider, a different

24 encounter, and it could be support for, for

25 example, a more severe form of diabetes than the

11:26:35

1 particular HCC corresponding to the diagnosis event
2 that was originally submitted but not found in
3 chart review.

4 Q. Fair enough. Okay. Dr. Stark, I want to
5 change the hypothesis a little bit and focus just 11:26:53
6 on payment impact codes.

7 So the -- I want to present to you this
8 hypothesis. Every time a United chart review coder
9 fails to find a diagnosis code with payment impact
10 that had been submitted by a provider, the 11:27:13
11 member-HCC-year associated with that diagnosis
12 instance was unsupported.

13 You agree, based on the work you
14 performed, that that hypothesis is false, right?

15 A. Not quite. I have made no independent 11:27:31
16 determination of whether a diagnosis instance has
17 financial impact. My analysis relies either on --
18 in some cases on Mr. Renjilian's determination of
19 whether it has financial impact, and in some case
20 on Mr. Garthwaite -- Dr. Garthwaite's determination 11:27:51
21 on whether that diagnosis instance has financial
22 impact.

23 But I agree with what I think the gist is
24 of your assertion, which is that there are examples
25 of HCCs that were identified by one or the other or 11:28:04

1 both of Mr. Renjilian and Dr. Garthwaite as having
2 financial impact where RADV found support for that
3 HCC for that member for that year.

4 That determination might or might not have
5 been based on a review of the chart corresponding 11:28:25
6 to that, to the diagnosis event that was explicitly
7 stated.

8 Q. Okay. Dr. Stark, thank you for that
9 clarification. I will make my hypothesis even more
10 precise. 11:28:42

11 A. Okay.

12 Q. Because I am not trying to play gotcha,
13 and I'm glad you're being careful about the
14 wording.

15 So let me present you this hypothesis: 11:28:49
16 Every time a United chart review coder fails to
17 find a diagnosis code that either Mr. Renjilian or
18 Dr. Garthwaite identified as having payment impact
19 that have been submitted by a provider, the
20 member-HCC-year associated with that diagnosis 11:29:10
21 instance was unsupported?

22 A. Again, the word "supported" bothers me.
23 RADV found support for some of them.

24 Q. That RADV found support?

25 A. Yeah. So if you change that to "RADV 11:29:22

1 determined that it was unsupported," then -- then I
2 would agree.

3 Q. Okay. And the reason you have trouble
4 with "found support" is it requires an assumption
5 that the RADV auditors were correct, right?

11:29:41

6 A. Well, I -- RADV reviews -- my
7 understanding is that RADV reviews up to five
8 pieces of information provided by United. There
9 might be other charts that were not presented to
10 RADV -- even though I understand those to be
11 United's best attempt to demonstrate support for
12 that member-HCC-year combination. It's possible
13 that there would be support somewhere else. It's
14 possible that -- it's possible that RADV made a
15 mistake. There's a lot of things that are
16 possible.

11:30:11

11:30:28

17 And I just want to be clear that we are
18 talking about whether RADV found support rather
19 than some more abstract notion --

20 (Clarification by the reporter.)

11:30:46

21 THE WITNESS: Abstract notion of
22 supported. And I want to be also clear about the
23 distinction between whether a particular diagnosis
24 instance is supported by the chart corresponding to
25 that diagnosis instance or the HCC that that

11:31:03

1 diagnosis instance maps to has support somewhere in
2 some chart for that subscriber for that year.

3 Q. BY MR. ABASCAL: Thank you.

4 A. Or something higher in the hierarchy.

5 Q. But assuming the RADV auditors were 11:31:22
6 correct, you would agree that that hypothesis is
7 false, right?

8 A. I have now -- I am no longer holding your
9 statement in memory. Let me try to say it myself.
10 I agree that the hypothesis that when RADV reviewed 11:31:42
11 a member-HCC-year instance that -- for which a
12 diagnosis code had been submitted but not found by
13 the chart reviewers, and that -- and that diagnosis
14 instance had been identified by either
15 Mr. Renjilian and/or Mr. Garthwaite as having 11:32:29
16 financial impact, some fraction of the time that
17 they never found -- with a hypothesis that they
18 never -- that RADV never found support for that
19 HCC. And I agree that that hypothesis is false.

20 Q. All right. Let me try to state this in a 11:32:53
21 little plain terms, which is pretty dangerous.

22 So just because a United chart review
23 coder did not find a provider-submitted code, that
24 does not mean that the associated member-HCC-year
25 is unsupported, assuming RADV is correct? You 11:33:27

1 agree with that, right?

2 A. Yes, the -- just because chart review did
3 not find support for a diagnosis code submitted for
4 a particular diagnosis instance, there might be
5 somewhere -- there still might be somewhere support
6 for the HCC that that diagnosis code maps to or an
7 HCC higher in the hierarchy, possibly in the chart
8 that was reviewed by the United chart reviewers and
9 possibly in some other chart for that member for
10 that year.

11:33:56

11:34:17

11 Q. And you verified that through your own
12 analysis as reflected in Table 2?

13 A. I couldn't hear the last part of your
14 sentence. My analysis of?

15 Q. As reflected in your Table 2?

11:34:32

16 A. Yes, sir.

17 Q. All right. Dr. Stark, you understand that
18 payment to United is based on a member-HCC-year,
19 correct?

20 A. That's my understanding, yes, sir.

11:34:46

21 Q. All right.

22 A. And other characteristics of the members,
23 including demographic information.

24 Q. Fair enough. And you understand that if
25 the RADV auditors find support for the

11:34:58

1 member-HCC-year, then the payment is appropriate,
2 right, that portion of the --

3 MS. GLOVER: Objection; calls for legal
4 conclusion.

5 THE WITNESS: Yeah, I don't know what 11:35:14
6 "appropriate" means in this context. I don't know
7 the terms of the contract between the MAOs and CMS.

8 I understand that as a matter of practice
9 that RADV does not ask to be reimbursed when they
10 find -- if support is found for that HCC, but I 11:35:33
11 don't know the connection between the common
12 practice and RADV and the legal terms of the
13 contract between the MAO and the government.

14 Q. BY MR. ABASCAL: That's fair, Dr. Stark.

15 Do you understand that if a 11:35:54
16 member-HCC-year is unsupported, that would be
17 considered an overpayment?

18 MS. GLOVER: Objection; calls for a legal
19 conclusion.

20 THE WITNESS: I don't know -- I don't know 11:36:08
21 how that word is used in this context. I mean, in
22 lay terms, my understanding is that the practice of
23 RADV is to count that payment against -- against
24 the MAO, but I don't know -- again, I don't know
25 how the term is used. I don't know whether it is a 11:36:30

1 legal term of art. I don't know whether it is a
2 term that appears in the contract.

3 Q. BY MR. ABASCAL: That's fair. I am not
4 trying to play gotcha or suggest a term or trick
5 you with a term of art. So let me rephrase it. 11:36:42

6 Do you understand that if a
7 member-HCC-year is unsupported, then the payment
8 would be inappropriate?

9 A. Again, I don't really know what
10 "inappropriate" means here. And "unsupported," I 11:37:10
11 think you mean if RADV determines that none of the
12 pieces of information provided by the MAO support
13 that HCC for that member for that year. I
14 understand that that's considered some kind of
15 error and that there's some kind of accounting. 11:37:27
16 But I don't know -- I don't know details.

17 I understand informally that RADV allows
18 offsets as well, but, again, this is -- I don't
19 know the rules under which RADV operates. And I
20 don't understand in detail how a RADV audit results 11:37:48
21 in any kind of reconciliation of money between the
22 MAO and the government.

23 Q. I understand you're not an expert in RADV,
24 and I am not trying to suggest that anything you
25 say would bind the government on its interpretation 11:38:04

1 of RADV.

2 I am trying to find the word that would
3 make you more comfortable. And you said the word
4 "improper," so let me try that.

5 A. I'm sorry. I need to answer verbally 11:38:20
6 here. I don't -- I mean, I understand that there's
7 some kind of accounting for HCCs that RADV
8 determines were unsupported, HCC-member-year
9 combinations that RADV determines were unsupported,
10 but I don't know the details of that. 11:38:40

11 Q. Fair enough. Do you understand that
12 payment would be improper to United if the
13 member-HCC-year were unsupported?

14 A. Again, I'm a little hung up on the word
15 "improper." I think that I -- I think that -- 11:38:55
16 yeah, I don't know what to say.

17 Q. That's fair enough. If you're
18 uncomfortable, I don't want to make you
19 uncomfortable.

20 You do not know whether payment would be 11:39:07
21 proper or improper if a United member-HCC were
22 unsupported, correct?

23 A. Again, I don't know the sense of the word
24 "improper." I understand that -- I understand
25 informally that the MAOs don't submit HCCs. They 11:39:35

1 submit diagnosis instances to a government system.

2 And I understand that payments are based on the
3 member demographics and the HCCs that the diagnoses
4 for that member map to for the year that only a
5 single instance of each HCC matters. Multiple

11:40:05

6 instances don't change anything. And that there
7 are hierarchies for some HCCs and only, in some
8 sense, the riskiest of HCC in that hierarchy
9 matters if more than one has been assigned to a

10 given subscriber for the year.

11:40:25

11 I understand that there is some obligation
12 to submit only genuine diagnosis instances and some
13 obligation to correct errors that the MAO is aware
14 of or should be aware of. But beyond that, I don't
15 really know.

11:40:50

16 Q. All right. Fair enough. Well, Dr. Stark,
17 let's move on to a different part of your report.
18 I am going to focus on Section III of your report,
19 and this is where you analyze the member-HCC-year
20 combinations associated with the Garthwaite final
21 delete list, right?

11:41:16

22 I am going to draw your attention to
23 Paragraph 39, Dr. Stark. In Paragraph 39 you state
24 "For the V12 model, overall, RADV found support for
25 41,681 of 49,978 audited member-HCC-year

11:41:45

1 A. There's a very long list of reasons. One
2 of them is that in sampling and extrapolation, we
3 draw -- meaning statistics draws a distinction
4 between the sampling frame and the population.

5 The sampling frame is the collection of 02:56:27
6 units from which the sample is drawn, and that
7 might or might not be identical to the population
8 to which one would like to extrapolate.

9 My understanding is that the sampling
10 frame for RADV was a particular collection of 02:56:43
11 contract years that did not comprise every contract
12 year that's relevant to the present matter.

13 So there's a mismatch between the sampling
14 frame and the population that already makes
15 extrapolation impossible without bias of unknown 02:57:09
16 magnitude.

17 Second issue is within each contract year
18 that RADV did examine, the way the sample was drawn
19 was not a simple random sample of HCCs, which is
20 what would be required for -- in order to 02:57:39

21 extrapolate from a sample of HCCs to the contract
22 year from which those HCCs were selected, those
23 member-HCC-years were selected, for the raw rate to
24 be an unbiased estimate, that sample needs to have
25 been drawn in such a way that every HCC-member-year 02:58:06

1 in that contract was equally likely to be selected.

2 That is not how the sample was drawn. The

3 sample was drawn -- I understand the way that RADV

4 works in general -- although I understand there's

5 been some variation from year to year. But I 02:58:25

6 understand in general the way RADV works is by

7 sampling members, not sampling HCCs. Because it is

8 sampling members and then looking at all of the

9 HCCs that go with a given member. Instead of being

10 an equal probability sample, it is a cluster 02:58:40

11 sample. It doesn't sample all the subsets with

12 equal probability.

13 And secondly, even the members are not

14 drawn with equal probabilities -- sorry. The

15 design of the sample, even at the member level -- 02:58:56

16 at the level of members is a stratified sample, I

17 understand that it involves first dividing payments

18 -- dividing members into three groups based on the

19 amount that was paid for that member in that year.

20 So terciles of payment. 02:59:20

21 So all of those differences need to be

22 taken into account in extrapolating the sample rate

23 for the RADV sample from a single contract year to

24 that entire contract year. But then the number of

25 the sampling rates, meaning the fraction of the 02:59:52

1 population that each sample represents, I
2 understand may vary from contract to contract that
3 RADV audits. So weights need to be used to adjust
4 for those differences in sampling rates.

5 And beyond that, there's no statistical 03:00:13
6 justification for extrapolating beyond the
7 particular contract years that RADV looked at.

8 So there are a large list of reasons that
9 the raw rate of support has unknown bias in
10 addition to statistical variability if it's being 03:00:38
11 used as an estimate of the overall rate of support
12 for HCCs corresponding to diagnosis instances
13 identified on the Garthwaite final deletes list.

14 Q. Have you completed your answer, Doctor?

15 A. Yes, I think so. 03:01:02

16 Q. All right. Great. I may have to ask you
17 to repeat it again because I am going to change --
18 I am going to change -- it's torture, isn't it --
19 the question slightly.

20 You said in Paragraph 54 "the raw RADV 03:01:17
21 support rate should not be extrapolated to the
22 Garthwaite Final Deletes List."

23 Now I want to be a little bit more
24 specific. In Paragraph 39 you concluded, or you
25 found -- you counted, you counted that RADV found 03:01:33

1 one to estimate what fraction of the diagnosis --
2 sorry. What fraction of the diagnosis events in
3 the final deletes list map to an HCC-member-year
4 that RADV would have found support for had it
5 examined every member-HCC-year that intersects
6 Garthwaite's final deletes list.

03:55:05

7 Q. I am going to try to restate that.

8 A. You want me to say it again?

9 Q. No, I am going to try to restate it.

10 A. Okay.

03:55:46

11 Q. Based on the data that you have available
12 and that you have reviewed in your work on this
13 case, there is not a way to reliably estimate the
14 fraction of diagnosis instances in the final
15 deletes -- the Garthwaite final deletes list that
16 map to an HCC-member-year that would be supported
17 by RADV auditors, right?

03:56:03

18 A. I agree with that.

19 Q. And similarly, there's not a way to
20 estimate the fraction that would not be supported,
21 correct?

03:56:32

22 A. I agree with that, too.

23 Q. All right.

24 A. If there were, there would be a way to do
25 it the first time.

03:56:44

1 DEPOSITION OFFICER'S CERTIFICATE

2 (Civ. Proc. § 2025.520(e))

3 STATE OF CALIFORNIA)

4) Ss

5 COUNTY OF SAN FRANCISCO)

6 I, BALINDA DUNLAP, CSR #10710, hereby
7 certify:

8 I am a duly qualified Certified Shorthand
9 Reporter, in the State of California, holder of
10 Certificate Number CSR 10710 issued by the Court
11 Reporters Board of California and which is in full
12 force and effect. (Bus. & Prof. § 8016)

13 I am not financially interested in this
14 action and am not a relative or employee of any
15 attorney of the parties, or of any of the parties.
16 (Civ. Proc. § 2025.320(a))

17 I am authorized to administer oaths or
18 affirmations pursuant to California Code of Civil
19 Procedure, Section 2093(b) and prior to being
20 examined, the deponent was first placed under oath
21 or affirmation by me. (Civ. Proc. §§ 2025.320,
22 2025.540(a))

23 I am the deposition officer that
24 stenographically recorded the testimony in the
25 foregoing deposition and the foregoing transcript

1 is a true record of the testimony given. (Civ.
2 Proc. § 2025.540(a))

3 I have not, and shall not, offer or
4 provide any services or products to any party's
5 attorney or third party who is financing all or
6 part of the action without first offering same to
7 all parties or their attorneys attending the
8 deposition and making same available at the same
9 time to all parties or their attorneys. (Civ.
10 Proc. § 2025.320(b))

11 I shall not provide any service or product
12 consisting of the deposition officer's notations or
13 comments regarding the demeanor of any witness,
14 attorney, or party present at the deposition to any
15 party or any party's attorney or third party who is
16 financing all or part of the action, nor shall I
17 collect any personal identifying information about
18 the witness as a service or product to be provided
19 to any party or third party who is financing all or
20 part of the action. (Civ. Proc. § 2025.320(c))

GA No. 6595-1471-3597-5424

1 PDF, question 4 at the very bottom of page 5 --

2 A Okay.

3 Q -- Bates number ending 4716. Okay. So there
4 is a question about obtaining copies of the P&P that were
5 in effect during calendar year 2006. Do you see that?

6 A I do.

7 Q And is that a request for policies and
8 procedures?

9 A It is.

10 Q Okay. Is that part of your standard auditing
11 practice, to ask the companies -- or MA Plans for
12 policies and procedures?

13 A Yes, it is.

14 Q So if you sort of scroll down and look at the
15 response there, I want to direct your attention to the
16 first full paragraph on page 6 in particular. And there
17 is a description there of chart validations and chart
18 reviews. Do you see that paragraph --

19 A I do.

20 Q -- that I am referring to?

21 And it states, "A chart validation involved the
22 review of a provider's patient charts to determine
23 whether they supported certain codes that the provider
24 had reported."

25 Do you see that?

1 A I do.

2 Q "We selected a provider for chart validation
3 based principally on whether the provider's coding was
4 unusually high compared to a national benchmark
5 established by our risk adjustment system."

6 Do you see that?

7 A I do.

8 Q "The chart validation tested the provider's
9 deviation from that benchmark. Codes found to be
10 inaccurate or incomplete through chart validations were
11 deleted."

12 Do you see all of that?

13 A I do.

14 Q Do you recall representatives from the
15 PacifiCare of Texas explaining what their chart
16 validation process was --

17 MS. GLOVER: Objection.

18 Q BY MS. SCHEFFLER D0: -- as part of this?

19 MS. GLOVER: Form.

20 Sorry. Objection. Form.

21 THE WITNESS: I do not recall.

22 Q BY MS. SCHEFFLER D0: Is that just because it
23 was a long time ago; you are not sure whether --

24 A Yes.

25 Q -- you did or not?

1 STATE OF GEORGIA)
)
2 COUNTY OF DEKALB) ss:
3

4 I HEREBY CERTIFY that the foregoing deposition
5 was taken before me; that I was then and there a
6 Registered Professional Reporter and Registered Merit
7 Reporter, License No. 6595-1471-3597-5424 for the State
8 of Georgia, and License No. 14315 in the State of
9 California; that the witness before testifying was duly
10 sworn by me to testify to the whole truth; that the
11 questions propounded by counsel and the answers of the
12 witness thereto were taken down by me in shorthand and
13 thereafter transcribed under my direction; and that the
14 foregoing pages contain a full, true, and accurate
15 transcript of all deposition testimony and proceedings
16 had, all done to the best of my skill and ability.

17 Signature requested.

18 I FURTHER CERTIFY that I am in no way related
19 to, nor employed by any of the parties hereto, nor am I
20 in any way interested in the outcome.

21 DATED at Dunwoody, Georgia, this 30th day of
22 March, 2022.

in the attached document, section 2.4.3 references chart review - this is the MA guidance.

2.4.3 Chart Reviews Chart reviews may be performed by MAOs and other entities for the purpose of diagnosis code validation. Because diagnoses drive risk adjustment, all chart review encounters must be supported by the medical record. MAOs and other entities may submit chart reviews that are linked to an original encounter stored in FDS (linked ICD chart reviews) or chart reviews that are not linked to an original encounter stored in FDS (unlinked ICD chart reviews). All chart review encounters should be flagged by MAOs and other entities.

- Module 3 (Professional Submission) and Module 4 (Institutional Submission) provide detailed guidance on proxy data submission requirements.
- If MAOs and other entities have any questions about submission of proxy claim information, with regard to any situation outlined in the Participant Guide, contact CMS at eds@ardx.net.

2.4.3 Chart Reviews

Chart reviews may be performed by MAOs and other entities for the purpose of diagnosis code validation. Because diagnoses drive risk adjustment, all chart review encounters must be supported by the medical record. MAOs and other entities may submit chart reviews that are linked to an original encounter stored in EDS (linked ICD chart reviews) or chart reviews that are not linked to an original encounter stored in Encounter Operational Data Store (EODS) (unlinked ICD chart reviews). All chart review encounters should be flagged by MAOs and other entities.

- Module 3 (Professional Submission) and Module 4 (Institutional Submission) provide detailed guidance on chart review submission.

2.4.4 Bundled Claims

Bundled claims refer to the bundling of claim lines meeting the definition of the National Correct Coding Initiative (NCCI) or the bundling of claim lines in adjudication to match the benefit structure of the MAO or other entity. The NCCI was developed to promote correct coding methodologies and to control improper coding. The purpose of the NCCI edit is to prevent improper payment when incorrect code combinations are reported. Only claims bundled using the NCCI will be accepted for encounter data submission. The Coding Policy Manual found on the CMS website can be utilized by MAOs and other entities as a general reference tool.

2.4.5 Minimum Data Elements

Minimum data elements are required to properly process and price encounters. MAOs and other entities must include at least the minimum data elements when submitting encounter data, including paper, DU10, and foreign provider generated encounters, as well as typical provider submissions. The EDS Minimum Data Elements and EDS Completion Guides provide details on the required elements.

 www.cms.gov/edsturn

2.4.6 Home Health Submission

EDS is not currently accepting Home Health encounter submissions from MAOs and other entities. CMS will provide further guidance on the submission of this data in the near future.

the minimum frequency standards established by the tiered scale, but are encouraged to submit encounter data more often. More frequent submission will keep the EDS maintain its systematic capabilities to process encounter data. Table 2G provides the minimum frequency standards for encounter data submission based on the number of Medicare beneficiaries enrolled per contract.

TABLE 2G — TIERED DATA SUBMISSION FREQUENCY

Number of Medicare Enrollees	Minimum Submission Frequency
Greater than 100,000	Weekly
50,000 – 100,000	Bi-weekly
Less than 50,000	Monthly

Table 2G identifies minimum frequency standards for submission. MAOs and other entities may submit data as often as daily and should not delay the submission of data for any reason.

2.5.2 Quantity of Submission

EDS specifications require that the volume of encounters submitted to the system align with the number of enrollees per contract ID. Specific metrics include, but are not limited to, submission rates, proportions of claims in particular service categories, and overall volume of submission. It is MAOs and other entities' responsibility to ensure the volume of encounters submitted is appropriate in relation to the frequency standards established. CMS will confirm the anticipated volume annually and will run submission quantity analyses on a quarterly basis. CMS will also perform analyses on the quantity of encounters submitted to EDS against the volume of RAPS submissions for each Contract ID.

- MAOs and other entities are strongly encouraged to evenly distribute the volume of encounters submitted according to the required frequency requirements.

2.5.3 Quality of Submission

Quality standards allow CMS to analyze encounter data submission to ensure that EDS collects accurate and complete data. Adherence to quality standards requires that MAOs and other entities collect and submit all encounter data in the appropriate ANSI X12 V5010 format. The quality of encounter data submitted is partially evidenced by the number of errors returned to the submitter and the number of duplicates submitted per Contract ID. CMS will develop error frequency benchmarks and will monitor resubmission and duplicate rates on a quarterly basis.

2.5.4 Accuracy of Submission

MAOs and other entities are responsible for the accuracy of all encounter data submitted and must ensure that every submission can be supported by an original source document (i.e., a medical record). MAOs and other entities must also attest that the data submitted is based on best knowledge, information, and belief and be accurate and truthful.

Chapter IV — Centers for Medicare & Medicaid Services, Department of Health and Human Services

Subchapter B — Medicare Program

Part 422 — Medicare Advantage Program

Subpart G — Payments to Medicare Advantage Organizations

Source: 70 FR 4729, Jan. 28, 2005, unless otherwise noted.

Authority: 42 U.S.C. 1302, 1306, 1395w-21 through 1395w-28, and 1395hh.

Source: 63 FR 18134, Apr. 14, 1998, unless otherwise noted.

Editorial Note: Nomenclature changes to part 422 appear at 70 FR 4741, Jan. 28, 2005.

§ 422.310 Risk adjustment data.

- (a) **Definition of risk adjustment data.** Risk adjustment data are all data that are used in the development and application of a risk adjustment payment model.
- (b) **Data collection: Basic rule.** Each MA organization must submit to CMS (in accordance with CMS instructions) the data necessary to characterize the context and purposes of each item and service provided to a Medicare enrollee by a provider, supplier, physician, or other practitioner. CMS may also collect data necessary to characterize the functional limitations of enrollees of each MA organization.
- (c) **Sources and extent of data.**
 - (1) To the extent required by CMS, risk adjustment data must account for the following:
 - (i) Items and services covered under the original Medicare program.
 - (ii) Medicare covered items and services for which Medicare is not the primary payer.
 - (iii) Other additional or supplemental benefits that the MA organization may provide.
 - (2) The data must account separately for each provider, supplier, physician, or other practitioner that would be permitted to bill separately under the original Medicare program, even if they participate jointly in the same service.
- (d) **Other data requirements.**
 - (1) MA organizations must submit data that conform to CMS' requirements for data equivalent to Medicare fee-for-service data, when appropriate, and to all relevant national standards. CMS may specify abbreviated formats for data submission required of MA organizations.
 - (2) The data must be submitted electronically to the appropriate CMS contractor.
 - (3) MA organizations must obtain the risk adjustment data required by CMS from the provider, supplier, physician, or other practitioner that furnished the item or service.

- (4) MA organizations may include in their contracts with providers, suppliers, physicians, and other practitioners, provisions that require submission of complete and accurate risk adjustment data as required by CMS. These provisions may include financial penalties for failure to submit complete data.
- (5) For data described in paragraph (d)(1) of this section as data equivalent to Medicare fee-for-service data, which is also known as MA encounter data, MA organizations must submit a NPI in a billing provider field on each MA encounter data record, per CMS guidance.
- (e) **Validation of risk adjustment data.** MA organizations and their providers and practitioners are required to submit a sample of medical records for the validation of risk adjustment data, as required by CMS. There may be penalties for submission of false data. MA organizations must remit improper payments based on RADV audits, in a manner specified by CMS. For RADV audits, CMS may extrapolate RADV Contract-Level audit findings for payment year 2018 and subsequent payment years.
- (f) **Use and release of data –**
 - (1) **CMS use of data.** CMS may use the data described in paragraphs (a) through (d) of this section for the following purposes:
 - (i) To determine the risk adjustment factors used to adjust payments, as required under §§ 422.304(a) and (c);
 - (ii) To update risk adjustment models;
 - (iii) To calculate Medicare DSH percentages;
 - (iv) To conduct quality review and improvement activities;
 - (v) For Medicare coverage purposes;
 - (vi) To conduct evaluations and other analysis to support the Medicare and Medicaid programs (including demonstrations) and to support public health initiatives and other health care-related research;
 - (vii) For activities to support the administration of the Medicare and Medicaid programs;
 - (viii) For activities conducted to support program integrity; and
 - (ix) For purposes authorized by other applicable laws.
 - (2) **CMS release of data.** Regarding data described in paragraphs (a) through (d) of this section, CMS may release the minimum data it determines is necessary for one or more of the purposes listed in paragraph (f)(1) of this section to other HHS agencies, other Federal executive branch agencies, States, and external entities in accordance with the following:
 - (i) Applicable Federal laws;
 - (ii) CMS data sharing procedures;
 - (iii) Subject to the protection of beneficiary identifier elements and beneficiary confidentiality, including—
 - (A) A prohibition against public disclosure of beneficiary identifying information;
 - (B) Release of beneficiary identifying information to other HHS agencies, other Federal executive branch agencies, and States only when such information is needed; and

- (C) Release of beneficiary identifying information to external entities only to the extent needed to link datasets.
- (iv) Subject to the aggregation of dollar amounts reported for the associated encounter to protect commercially sensitive data.
- (v) Risk adjustment data other than data described in paragraphs (f)(2)(iii) and (f)(2)(iv) of this section will be released without the redaction or aggregation described in paragraphs (f)(2)(iii) and (f)(2)(iv) of this section, respectively.
- (3) Risk adjustment data will not become available for release under this paragraph (f) unless—
 - (i) The risk adjustment reconciliation for the applicable payment year has been completed;
 - (ii) CMS determines that data release is necessary under paragraph (f)(1)(vi) of this section for emergency preparedness purposes before reconciliation; or
 - (iii) CMS determines that extraordinary circumstances exist to release the data before reconciliation.
 - (iv) CMS determines that releasing aggregated data before reconciliation is necessary and appropriate to support activities or authorized uses under paragraph (f)(1)(vii) of this section.
 - (v) CMS determines that releasing data to State Medicaid agencies before reconciliation for the purpose of coordinating care for dually eligible individuals is necessary and appropriate to support activities or authorized uses under paragraph (f)(1)(vii) of this section.
- (g) **Deadlines for submission of risk adjustment data.** Risk adjustment factors for each payment year are based on risk adjustment data submitted for items and services furnished during the 12-month period before the payment year that is specified by CMS. As determined by CMS, this 12-month period may include a 6-month data lag that may be changed or eliminated as appropriate. CMS may adjust these deadlines, as appropriate.
 - (1) The annual deadline for risk adjustment data submission is the first Friday in September for risk adjustment data reflecting items and services furnished during the 12-month period ending the prior June 30, and the first Friday in March for data reflecting services furnished during the 12-month period ending the prior December 31.
 - (2) After the payment year is completed, CMS recalculates the risk factors for affected individuals to determine if adjustments to payments are necessary.
 - (i) Prior to calculation of final risk factors for a payment year, CMS allows a reconciliation process to account for risk adjustment data submitted after the March deadline until the final risk adjustment data submission deadline in the year following the payment year.
 - (ii) After the final risk adjustment data submission deadline, which is a date announced by CMS that is no earlier than January 31 of the year following the payment year, an MA organization can submit data to correct overpayments but cannot submit diagnoses for additional payment.
 - (3) Submission of corrected risk adjustment data in accordance with overpayments after the final risk adjustment data submission deadline, as described in paragraph (g)(2) of this section, must be made as provided in § 422.326.

Videotaped Deposition of
JEFFERY S. DUMCUM
Given Remotely
Wednesday, July 28, 2021
9:12 a.m. Eastern Time

Reported by: Cindy A. Hayden, RMR, CRR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 Q. And the second bullet there says:
2 Goal to launch claims verification process; do you
3 see that?

4 A. I see it. I -- I see that.

5 Q. Is -- is the timing of this consistent
6 with your -- this is a 2010 presentation. Does
7 that line up with when you were -- you had a goal
8 to launch the claims verification process?

9 MR. ABASCAL: Object to the
10 characterization as "you."

11 THE WITNESS: It aligns to the
12 approximate time that there was a goal to
13 launch claims verification.

14 BY MR. MASON:

15 Q. Okay. And the second bullet there
16 says: Compare to codes from claim.

17 And, again, this is in a presentation
18 about chart review. And it says: Compare to
19 codes from claim.

20 I'm interested in what that means. Do
21 you have any understanding of what that means,
22 compare to codes from claim?

23 A. I don't recall this specific
24 presentation. I do recall in the claims
25 verification process, that was eventually

1 incorporated.

2 Q. Does -- does that mean -- when it says
3 "Compare to codes from claims," does that mean
4 comparing the codes submitted by a provider --
5 that's what claims is -- to the codes identified
6 by a chart review of -- of that encounter?

7 MR. ABASCAL: Asked and answered.

8 THE WITNESS: Yes.

9 BY MR. MASON:

10 Q. You understood that that was a
11 comparison that -- that UnitedHealth could run?

12 A. Yes.

13 Q. That UnitedHealth could identify if
14 there were codes that a provider recorded that a
15 chart review of that same provider encounter did
16 not identify?

17 A. United could compare data from claims
18 with data from chart review. So they could
19 identify for a member what codes were submitted in
20 claims and what codes were captured from chart
21 review. They could not -- it took work to
22 identify if all the information was captured in
23 chart review. The data comparison was able to be
24 compared. The completeness of the chart review
25 information had limitations.

1 Q. Okay. It -- it took work, but that
2 was something that could be done?

3 A. There was research that could be done.
4 The delta between what was in claims and what was
5 in charts would lack certainty. So there was
6 research that could be done. But because of lack
7 of -- their interpretation in the coding process,
8 as one coder viewed something as legible versus
9 another does not, if people code in a medical
10 group setting and you get a chart for one doctor,
11 do you know if you have it for all the doctors,
12 even though it may be from a similar date of
13 service, that they see multiple providers.

14 So the data comparison was easy
15 enough, and we could do research. But there were
16 always still areas of uncertainty in the
17 completeness of the chart data.

18 Q. Okay. And when there was a code that
19 was submitted by a provider that a chart review
20 did not identify, was that sometimes referred to
21 as a discrepant code?

22 A. I -- I don't recall.

23 Q. That's not a term you're familiar
24 with, discrepant code?

25 A. I've heard it. I'm unsure of the

CSR No. 3024
Job No. 835287

1 Q. Okay. Why was CV limited to members with
2 exclusive HCCs?

3 A. I don't know.

4 Q. Okay.

5 A. I didn't -- I didn't build that rule.

6 Q. Do you know who did build that rule?

7 A. I don't know. It was a rule that was
8 already there.

9 Q. Okay. Did you ever question that rule?

10 A. Not to my recollection.

11 Q. Okay. Why not?

12 A. It wasn't my role.

13 Q. Okay. Whose role would it have been?

14 MR. RYDBERG: Objection. Calls for
15 speculation.

16 THE WITNESS: Yeah. I would assume my
17 manager's.

18 BY MR. VOLDMAN:

19 Q. Okay. The third step is called "system
20 matching."

21 What does that mean?

22 A. So the system matching is now at the point
23 in claims verification, where a chart is deemed to be
24 eligible because it contains a date of service for
25 the year we're evaluating. It has one or more

1 exclusive HCCs in the claims.

2 And the system matching is the process of
3 taking HCCs from claim and comparing them to the HCCs
4 that were found during the first step -- the chart
5 review process.

6 Q. Okay. What were the points of comparison?

7 A. To the best of my recollection, the points
8 of comparison were -- we did everything at the HCC
9 level. And the date of service was important. So
10 we -- we tried to ensure that we wouldn't identify
11 HCCs that could not be validated in the chart.

12 So dates of service were a driver of what
13 was deemed to be CV eligible or continue within the
14 process of CV eligibility.

15 Q. Okay. So the date of service had to match
16 between whatever came out of chart review and
17 whatever is in the claims or encounter system?

18 A. Yes.

19 Q. Okay. What would happen if it didn't match,
20 but a member had an exclusive HCC?

21 A. At a high level, that -- that chart would
22 either not be eligible, or if there were other dates,
23 the HCC would be dispositioned appropriately,
24 depending on what -- where it was found -- or when it
25 was found or when it was incurred.

1 Q. Okay. Do you know who made the rules for
2 what counts as a match and what doesn't?

3 MR. RYDBERG: Objection. Calls for
4 speculation.

5 THE WITNESS: I don't recall.

6 BY MR. VOLDMAN:

7 Q. Okay. Do you know who did the actual coding
8 to match these things together?

9 A. A technical team. Developers.

10 Q. Do you remember any of them by name?

11 A. No.

12 Q. Okay.

13 A. No.

14 Q. Fair enough.

15 A. Sorry.

16 Q. What's the fourth step, CVA coding?

17 A. Fourth step is now at the point in the
18 evaluation of the -- of that chart. And where we
19 find -- or we have deemed that a HCC is found in the
20 claim stream. And, of course, all eligibility rules
21 are -- are -- are applicable.

22 But where we find an HCC that is found in
23 claims, but we did not find that HCC in the coding
24 results, that -- that is part of step 1.

25 Q. Okay. And -- and is that determination made

1 at the system matching step?

2 A. I consider it separate. System matching is
3 simply comparing an HCC from one data stream to the
4 other.

5 CVA coding was now queuing the H- -- that
6 bar code to a coder for review.

7 Q. Okay. So only -- only instances without a
8 perfect match, went to CVA coding; is that correct?

9 MR. RYDBERG: Objection. Vague.

10 THE WITNESS: There are other reasons why
11 HCCs would go to coding.

12 But at a high level, if it matched, it would
13 not go to coding.

14 BY MR. VOLDMAN:

15 Q. Okay. What were the other reasons you just
16 referenced?

17 A. Well, HCCs have a hierarchy. So if the
18 hierarchy -- and I'm going to try to go really slow
19 here, 'cause this is very confusing.

20 But if the hierarchy was higher in claim,
21 but it was lower in chart, we would still route it
22 for a coder to review.

23 Q. Okay. Why is that?

24 A. We wanted to be accurate in ensuring that
25 the member truly had the condition, according to the

1 BY MR. VOLDMAN:

2 Q. Okay. Is HCC 96 something that was not
3 found by a CV analyst but submitted by a provider,
4 based on your understanding of how CV worked?

5 MR. RYDBERG: Object to form.
6 Mischaracterizes the document.

7 THE WITNESS: So in this slide, this is
8 referring to the system matching process.

9 BY MR. VOLDMAN:

10 Q. Okay.

11 A. And so it depends on where you are in the
12 process.

13 But this slide HCC 96 would be marked --
14 marked as a discrepancy.

15 Q. Okay. And is "potential delete" just
16 another word for discrepancy?

17 MR. RYDBERG: Objection. Calls for
18 speculation.

19 THE WITNESS: I believe so.

20 BY MR. VOLDMAN:

21 Q. Okay. And do you know what converts
22 potential deletes into deletes?

23 MR. RYDBERG: Objection. Vague.

24 THE WITNESS: Yeah, I think I do.

25 ///

1 BY MR. VOLDMAN:

2 Q. What is it?

3 A. The following processes of claims
4 verification. They're sent -- they're sent to a
5 coder for review.

6 Q. Okay. Got it.

7 And if the coder doesn't find support, and
8 then the next coder doesn't find support, it gets
9 sent to the delete team; is that right?

10 A. It's dispositioned as a delete.

11 Q. Okay. Thanks.

12 Did you use the phrase "risk mitigation"
13 when working in CV?

14 A. I don't recall.

15 Q. Got it.

16 Did you ever talk about risks of not doing
17 CV?

18 MR. RYDBERG: Object to form.

19 THE WITNESS: Not to my recollection.

20 BY MR. VOLDMAN:

21 Q. Okay. Did CV generally cost clients that
22 were using it, money?

23 MR. RYDBERG: Object to form. Lacks
24 foundation.

25 THE WITNESS: We offered it as a service

REPORTER'S CERTIFICATION

I, Marceline F. Noble, a Certified Shorthand Reporter in and for the State of California, do hereby certify:

That the foregoing witness was by me duly sworn; that the deposition was then taken before me at the time and place herein set forth; that the testimony and proceedings were reported stenographically by me and later transcribed into typewriting under my direction; that the foregoing is a true record of the testimony and proceedings taken at that time.

IN WITNESS WHEREOF, I have subscribed my name this 5th day of September, 2022.

Name	Title	Date
Tim Trujillo	VP Risk Adjustment	6/9/2015

PURPOSE

Optum Medicare Advantage Risk Adjustment Operations provides Chart Review services to Medicare Advantage Organizations (MAO) Clients that support risk adjustment submissions in accordance with CMS risk adjustment regulations, the Medicare Managed Care Manual and the CMS Risk Adjustment Participant Guide. This policy addresses standards for the review of medical record documentation that supports the diagnoses submitted to CMS for Medicare program risk adjustment.

SCOPE

This policy addresses Optum Medicare Advantage Risk Adjustment Operations Chart Review services.

DEFINITIONS

TERM	DESCRIPTION
Hierarchical Condition Category (HCC)	HCC is a disease group broadly organized into body systems. The HCC assigned to a disease group is determined by the ICD-CM diagnosis code.
MAO Client	Medicare Advantage Organization that holds a Medicare Advantage contract.
PCP	Primary Care Physician

POLICY

Where Optum Medicare Advantage Risk Adjustment Operations performs Chart Review services on behalf of its MAO Clients, it will do so in accordance with CMS standards. Optum Medicare Advantage Risk Adjustment Operations will abide by instructions in the applicable Medicare regulations, CMS Risk Adjustment Participant Guides and Medicare Managed Care Manual, CH. 7 addressing medical record documentation sources and content, coding review, coding standards and quality activities.

CHART REVIEW SERVICES

Chart Review services, which will be conducted if and as specified in the contract with the Client, include a number of programs that are designed to collect, assess and evaluate documentation that supports health plan risk adjustment submissions. Chart Review services are designed to review individual medical records to identify and capture risk adjusted member diagnoses and chronic conditions based on review of the member's medical record. Chart Review services include:

A. Standard Chart Review :

The standard chart review includes retrieval, review, coding and confirming signature and credential requirements of the medical record to capture the risk adjusted diagnosis information from the member's medical record documentation for a specific date of service or timeframe.

B. Attestations:

An optional Medicare risk adjustment chart review service a client may select to retrieve attestations from providers. Attestations capture a providers signature or credentials when absent from the chart documentation. The provider states in writing that the pre-existing medical record accurately reflects the care of a member in a given encounter.

Optum Medicare Advantage Risk Adjustment Chart Review Operations Team will follow Optum coding guidelines for Risk Adjustment submissions when reviewing medical record documentation as outlined in the Retrospective Services Standards section of this policy.

1. Standards for Reviewing Medical Records for Chart Review Services:

Optum Medicare Advantage Risk Adjustment Operations has developed standards for reviewing medical records based on CMS risk adjustment instructions. These standards include:

- A.** The diagnosis must be coded in accordance with the ICD-CM Coding Guidelines as mandated by CMS and Optum coding guidelines;

B. The medical record documentation meets the CMS medical records guidelines and includes the following risk adjustment information:

- The service was provided by an acceptable risk adjustment provider and physician type.
- Dates of service are within the data collection period.
- Diagnoses are supported by medical record documentation.
- A provider signature and credentials are documented for each note.
 - Client may exercise discretion, consistent with CMS guidance on attestation, as to how to address records that have not yet been fully authenticated by the treating practitioner at the time of chart review.
- Coding level specificity – 3-5 digit codes

2. Coding Review Requirements:

To meet this standard, Optum Medicare Advantage Risk Adjustment Operations has developed requirements for coding reviews based on the Medicare Advantage regulations, the Medicare Managed Care Manual and CMS Risk Adjustment Participant Guide. These requirements include:

- A. Optum Medicare Advantage Risk Adjustment Operations will utilize certified medical coders.
- B. The certified coders will use ICD-CM Diagnosis Codes Guidelines as mandated by CMS, Optum coding guidelines, and Coding Clinics published by American Hospital Association (AHA), and comply with Optum Medicare Advantage Diagnostic Coding Standards and any other applicable Optum Coding Compliance Policies when evaluating assigned medical charts.
- C. Certified coders will review medical records to identify risk adjusting conditions supported in the medical record documentation. When performing chart reviews, the certified coders will apply CMS standards for Medicare Risk Adjustment submissions as detailed above.
- D. Optum Medicare Advantage Risk Adjustment Operations will document and implement a procedure for receipt, research and response to coding questions from internal coders or its vendors.
- E. Optum Medicare Advantage Risk Adjustment Operations will provide training to its internal coding staff that specifically addresses the above standards. This training will be conducted for all new coding staff before they begin coding charts and on-going thereafter for all coding staff.
- F. Optum Medicare Advantage Risk Adjustment Operations will conduct coding accuracy reviews of its internal coding staff to validate that data is coded correctly and meets CMS standards

3. Chart Review Vendor Engagement and Oversight

Optum Medicare Advantage Risk Adjustment Operations will conduct reasonable due diligence on potential vendors that conduct chart reviews and may engage vendors to conduct chart reviews pursuant to a written agreement that meets business, legal and regulatory requirements. Optum Medicare Advantage Risk Adjustment Operations will follow appropriate procurement processes when engaging chart review vendors. When Optum Medicare Advantage Risk Adjustment Operations engages a vendor to conduct chart reviews, Optum Medicare Advantage Risk Adjustment Operations will follow the following standards:

A. Contract Standards:

The terms of a vendor agreement with Optum Medicare Advantage Risk Adjustment Operations will include: the specific retrospective program activities, measurement or performance standards, if applicable, auditing and monitoring rights and payment terms. The vendor agreement will also include a Business Associate Agreement (BAA) or other appropriate terms that describe the permitted and required uses of protected health information.

B. Coding Standards:

See coding standards guidelines from Section 1 Standards for Reviewing Medical Records.

4. Vendor Oversight:

Optum Medicare Advantage Risk Adjustment Operations will design and execute appropriate coding reviews for its external vendors as part of its overall quality review program. Optum Medicare Advantage Risk Adjustment Operations will establish performance measurements, corrective action and disciplinary action guidelines for vendors that do not meet the quality review standards.

5. Provider Communications Standards

Optum Medicare Advantage Risk Adjustment Operations will obtain prior review as required by Optum Legal and Compliance and prior approval from the Client for all provider correspondence related to the chart review process.

6. Privacy Standards

Optum Medicare Advantage Risk Adjustment Operations will only receive, use and disclose Protected Health Information pursuant to the Optum privacy and security standards, including the use of secure transmission methods.

7. Standards Management

The Director of Chart Review Programs is responsible for collaborating with Optum Compliance to identify changes to the standards for all risk adjustment data collection and submission and ensuring implementation of any new requirements.

- The policy will be reviewed for updates periodically or when changes are indicated by CMS.
- All policy changes will be approved by the policy owner, Compliance and Legal.

Version control will apply to all policies.

1 deletes being discussed earlier in the e-mail chain?

2 A. I don't recall, but I have no reason to
3 doubt that.

4 Q. Okay. Your full sentence reads: "I would
5 advise continuing with them because if we know data
6 was incorrectly submitted, we have an obligation to
7 notify CMS and they have the right to retro adjust
8 pay." Did you believe this when you wrote it?

9 A. I don't recall.

10 Q. Okay. Do you have any reason to doubt
11 that you believed this when you wrote it?

12 A. I -- I don't recall. I have -- I have no
13 reason to doubt what I wrote.

14 Q. Okay. Did you believe, during the period
15 that you worked at United, that if data was
16 incorrectly submitted, you had an obligation to
17 notify CMS?

18 A. My understanding was that if we were aware
19 that a -- a condition was not -- incorrectly
20 submitted, as in not supported by the medical record
21 documentation, then that we should proceed with
22 deleting it.

23 Q. What was this belief based on?

24 A. I don't recall specifically.

25 Q. Was this belief based on discussions you

REMOTE VIDEOCONFERENCE DEPOSITION OF

KIMBERLY HALVA

February 24, 2022

Reported by:

Anne E. Vosburgh, CSR-6804, RPR, CRR

Job No. 792083

1 K. Halva

2 A. I don't understand the "but" -- "but
3 did not find" --

4 I'm just not clear on what I'm
5 trying to answer. Could you rephrase it?

6 BY MS. LIKOFF:

7 Q. Sure. Give me just one minute.

8 All right. If M&R opened a given
9 medical record to look for all diagnosis codes
10 that were supported by documentation in that
11 record, but did not find documentation to
12 support a diagnosis that had been previously
13 submitted --

14 A. Okay.

15 Q. -- do you believe that M&R had an
16 obligation to delete that code?

17 MR. SCHINDLER: Same objection.

18 Vague and ambiguous as framed. Calls for
19 a legal conclusion as well.

20 A. My general thought is if the
21 circumstances were correct, yes. I mean, as
22 we discussed before, there's potentially some
23 one-offs that wouldn't require the deletion of
24 that code. But, in general, yes, I believe it
25 should be deleted.

1 K. Halva

From: Nelson, Steve H [mailto:steve_nelson@uhc.com]
Sent: Friday, June 26, 2015 12:41 PM
To: Rice, Cheri M. (CMS/CM)
Subject: 2013 CMS RAF Attestation

Cheri,

Similar to last year, we are reaching out to you, to reiterate our approach to the electronic annual risk adjustment certifications. As you know, annual risk adjustment data certifications before 2014 were submitted on paper, enabling companies to add notes explaining their understanding of these certifications (including any remediation efforts). As we discussed with you last year, because the certifications are now electronic, companies are unable to include explanatory notes. As such, we informed you in writing our understanding of these certifications.

Because the certifications remain electronic with no ability to add explanatory notes, we feel it would again be helpful, and appropriate, to capture our discussion and understanding regarding the certifications.

- As with our past certifications, the 2013 certifications are based on facts reasonably available or made available to us as of the date of the certifications. As we receive additional information, we may be required to modify the data to which the certifications relate
- The certifications use the phrase "best knowledge, information, and belief," which is based on our ordinary business practices.

- The certifications only cover risk adjustment data for 2013 dates of service that were submitted to CMS and not subsequently deleted prior to the date of the certifications.
- As we have mentioned to you previously, we are engaged in an ongoing review of our risk adjustment processes and submission system. This review has identified areas for improvement and, as a result, we will be deleting all risk adjustment data for 2013 dates of service that we ultimately determine should be deleted consistent with this email.
- CMS issued a proposed rule last year that would have required MA plans to design any medical record reviews to determine the accuracy of risk adjustment diagnoses associated with those records. In May 2014, CMS withdrew the proposed rule. During our conversations last year before the proposed rule was withdrawn, CMS confirmed to us that the proposed requirements would not apply until the effective date of the rule, and that MA plans were thus not required to design their medical record reviews to determine the accuracy of risk adjustment diagnoses. As we discussed last year, we previously had a process through which we reviewed certain medical records to determine the accuracy of risk adjustment diagnoses and submitted appropriate deletes. Based on our conversations with CMS last year, CMS's withdrawal of the proposed rule, and CMS's ongoing consideration of a FFS Adjuster to address diagnoses not supported by a medical record in the context of RADV, we ended this process and informed you of that decision. That decision remains operative for 2013 dates of service. In particular, we did not use our previous process to determine whether diagnosis codes submitted through claims are unsupported in the medical record. We do have a quality assurance process that deletes codes initially identified during chart review and that are later determined to be unsupported.

The certifications we submit this year are made subject to these clarifications. Please let me know if you have any questions. As always, we appreciate your time and attention on this matter.

1 other reason, the average of the relative values
2 go up.

3 I don't know what "definitionally"
4 means, but in general, that is the result when
5 you take out markers.

6 Q. Okay. Fair enough.

7 I think "definitionally," I
8 mean categorically, that it doesn't matter
9 whether the error rate is 1 percent or
10 99 percent, the average relative factor
11 increases if you take out markers from this
12 calibration?

13 A. Yes, that is what the proof shows.

14 Q. Okay. So then if you recalibrated
15 the model using both unsupported codes and
16 unsubmitted codes, doesn't that connection
17 between -- can I call it "directionality"?

18 It doesn't definitely go up
19 anymore; is that -- is that right?

20 A. That would be something different,
21 not addressed by my proof, for sure.

22 Q. Sure. But if you take out markers
23 and add in markers, it's no longer necessarily
24 true that the relative factors would increase;

1 is that --

2 A. That's correct.

3 Q. -- correct?

4 Yeah. Because they would net
5 out and there's a chance that more markers end
6 up, or different, higher value markers; is that
7 correct?

8 A. I didn't perform that study, but
9 adding markers has the opposite effect as
10 removing markers --

11 Q. And --

12 A. -- at that --

13 Q. Sorry.

14 Are you finished?

15 A. Yes.

16 Q. And recalibrating with both adding
17 and removing markers, it -- the average can go
18 up, the average can go down, or the average can
19 stay the same; is that correct?

20 A. As a matter of math, yes. It
21 depends on how many markers you add and how many
22 markers you take out.

23 Q. Yep. Totally agree with you there.

24 Okay. So that being said, is

1 I, Cindy L. Sebo, Nationally Certified Court
2 Reporter herein, do hereby certify that the

CONFERENCE GUIDE

September 7, 2017 • 9:30 am – 4:30 pm EDT
CMS Grand Auditorium

Speaker Bios, cont.

appeals operations for the FFS, MA, and Part D Qualified Independent Contractors, the appeals units of the Medicare administrative contractors, and CMS' Beneficiary Notice Initiative, which includes provider-issued notices such as the Important Message from Medicare, the Advance Beneficiary Notices of Noncoverage, and the Medicare Outpatient Observation Notice.

Mike previously worked on program integrity issues, including overseeing the implementation of several new program safeguard contractors. He began his federal career in budget formulation, where his main area of concentration was the Medicare managed care program. Mike has been at CMS for 20 years and holds a BS.

Judy Geisler

BA, BS, Deputy Director, Medicare Parts C and D Oversight and Enforcement Group, Center for Medicare, CMS

Judy is currently the Deputy Director of the Medicare Parts C and D Oversight and Enforcement Group (MOEG). Prior to joining MOEG she served briefly as the Acting Deputy Director of the Medicare Enrollment and Appeals Group and the Medicare Drug Benefit and C & D Data Group and spent 10 years as the Director

of the Division of Formulary and Benefit Operations in the Medicare Drug Benefit and C & D Data Group.

Staci Paige

MA, Social Science Research Analyst, Division of Appeals Policy, Medicare Enrollment and Appeals Group, Center for Medicare, CMS

Staci Paige is a Social Science Research Analyst in the Division of Appeals Policy (DAP), Medicare Enrollment and Appeals Group (MEAG). As a Medicare Advantage appeals and grievances subject matter expert, Staci works on regulations, beneficiary notices and manual guidance. She also works closely with the Medicare-Medicaid Coordination Office on appeals and grievance issues related to Medicare-Medicaid Plans (MMPs). Prior to working at CMS, Staci directed admissions at a skilled nursing facility and also has a background in community case management and care coordination.

Rebecca Paul

MPH, MA, Director, Division of Payment Policy, Medicare Plan Payment Group, Center for Medicare, CMS

Rebecca Paul currently serves as the Director of the Division of Payment Policy (DPP) in the Medicare Plan Payment Group (MPPG) in the Center for Medicare (CM). Since joining CMS in 2005, Rebecca has worked on a variety of Medicare payment issues and policies.

Christine Reinhard

BA, MBA, JD, Technical Advisor, Medicare Drug and Health Plan Contract Administration Group, Center for Medicare, CMS

Christine has been with CMS since 1995, working in managed care since 1998. Her previous work has focused on many aspects of the Part C and Part D programs including bid submissions, plan benefits, auditing, enforcement actions,

and financial analysis of contractors. She is currently a Technical Advisor for the Division of Surveillance, Compliance, and Marketing.

John Scott

JD, Senior Advisor, Medicare Drug Benefit and C and D Data Group, Center for Medicare, CMS

John Scott has been employed by CMS since 2003, and has worked extensively on the Medicare Part C and Part D Programs since coming to CMS. John has been on detail in the Medicare Drug Benefit and C and D Data Group since January 2017. John previously worked in the Medicare Parts C and D Oversight and Enforcement Group (MOEG) as the Director of the Division of Compliance Enforcement. Prior to joining MOEG in April 2016, John worked in the Medicare Plan Payment Group (MPPG) as the Director of the Division of Payment Systems, Director of the Division of Payment Operations, and Special Assistant to the Director of MPPG. John's first position at CMS was in the Medicare Enrollment and Appeals Group's Division of Appeals Policy. John holds a BA from Ripon College and a JD from North Carolina Central University.

Scott Sturiale

Deputy Director, Medicare Drug and Health Plan Contract Administration Group, Center for Medicare, CMS

Scott is the Deputy Director for the Medicare Drug and Health Plan Contract Administration Group (MCAG) in the Center for Medicare, providing leadership and he is director over the development of new policies to reflect changes in program objectives, the health care delivery system, beneficiary health care needs, and new plan types to support an appropriate range of choices for beneficiaries.

1 of what the word "accurate" means --

2 MS. DO: Object --

3 BY MS. GLOVER:

4 Q. -- in -- in that attestation?

5 MS. DO: Objection. Calls for a legal
6 conclusion.

7 THE WITNESS: My idea of "accurate," you
8 know -- it represents things that really happened.

9 BY MS. GLOVER:

10 Q. Understood.

11 So if a -- if -- if a provider is submitting
12 a diagnosis code, your understanding of accurate is
13 that that diagnose code is, in fact, supported by
14 medical record documentation that the provider has;
15 is that correct?

16 MS. DO: Objection. Hypothetical. And
17 mischaracterizes prior testimony.

18 THE WITNESS: Yeah. Our basic mantra was,
19 if it wasn't in the medical record, it didn't happen.

20 BY MS. GLOVER:

21 Q. Understood. Understood.

22 And -- and was that a mantra that was
23 repeated to providers in provider education sessions,
24 that you and Ms. -- Ms. Leal and Ms. Holt held with
25 certain providers?

1 MS. DO: Okay. Preferably, just keep
2 looking at the camera so Madam Court Reporter can
3 hear you.

4 THE WITNESS: Okay.

5 MS. DO: That's kind of awkward. Do you
6 mind if I switch with you?

7 MS. GLOVER: I -- I do not.

8 Why don't we go off the record.

9 THE VIDEOGRAPHER: We're now off record.
10 The time is 5:16 p.m.

11 (Off record.)

12 THE VIDEOGRAPHER: Stand by, please.

13 We are now on the record.

14 The time is 5:19 p.m.

15

16 EXAMINATION

17 BY MS. DO:

18 Q. All right, Mr. Higgins. I just have a few
19 questions, and then hopefully we'll get out of here.

20 Can you remind me, when did you leave
21 United?

22 A. The end of August 2007.

23 Q. And after your departure from United, did
24 you ever return --

25 A. No.

REPORTER'S CERTIFICATION

I, MARCELINE F. NOBLE, a Certified Shorthand Reporter in and for the State of California, do hereby certify:

That the foregoing witness was by me duly sworn; that the deposition was then taken before me at the time and place herein set forth; that the testimony and proceedings were reported stenographically by me and later transcribed into typewriting under my direction; that the foregoing is a true record of the testimony and proceedings taken at that time.

IN WITNESS WHEREOF, I have subscribed my name this 12th day of May, 2022.

Marceline F. Noble

Videotaped Deposition of
REBECCA PAUL
Given Remotely
Wednesday, April 13, 2022
9:02 a.m. Eastern Time

Reported by: Karen K. Kidwell, RMR, CRR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 this piece fit with that, with seeing this went
2 to RADV, so it also went to CPI.

3 BY MR. QURESHI:

4 Q. Ms. Paul, you -- you referenced
5 discussions with CPI about taking on the role of
6 conducting RADV audits. Who had those discussions?

7 MR. MASON: Objection to form.

8 THE WITNESS: I don't know. I don't know
9 if Cheri was involved in them or if it was
10 people above her.

11 BY MR. QURESHI:

12 Q. Who told you --

13 A. It was not me. I was not involved with
14 them.

15 Q. Who told you that CPI would be taking over
16 the project that you described as modeling changes in
17 the risk adjustment model?

18 MR. MASON: Objection. Misstates prior
19 testimony.

20 THE WITNESS: I don't remember. Probably
21 Cheri. I -- it wasn't -- I don't remember.

22 BY MR. QURESHI:

23 Q. And do you recall why CPI was taking it
24 over, according to Ms. Rice?

25 MR. MASON: Objection. Asked and

1 answered.

2 THE WITNESS: I'm assuming it's Cheri
3 because I don't know who else would have told
4 me, but I don't know. I mean, it came up in
5 conversation or -- you know, someone would have
6 told me -- not conversational. It would have
7 been updates.

8 I -- I don't know why. I mean, like I
9 said, the context was that this was part of
10 RADV, and CPI already had RADV, so that, you
11 know, would be seen as linking it. But I
12 don't -- I don't know that it was a big formal
13 announcement.

14 BY MR. QURESHI:

15 Q. Do you recall who at CPI would take over
16 responsibility for the task Ms. Rice previously asked
17 you to perform?

18 MR. MASON: Objection. Misstates
19 testimony.

20 THE WITNESS: I mean, I know who worked on
21 it. I don't think that was part of the -- I
22 don't remember how we discussed it. I -- I
23 can't recall the conversation or -- or how the
24 conversation went. But I only know who ended up
25 working on it. I don't know if that was part of

1 identified, and understand them.

2 BY MR. QURESHI:

3 Q. Ms. Paul, did you ever ask Ms. Cheri Rice
4 why CPI was given responsibility to calculate the
5 methodology for the fee-for-service adjuster?

6 MR. MASON: Objection to form. Confusing.
7 Misstates prior testimony.

8 THE WITNESS: I don't know if I asked her
9 or not. I mean, the impression I have today is
10 that it was a RADV side issue that went with it.

11 BY MR. QURESHI:

12 Q. What is that impression based on?

13 A. Well, it was a RADV-related effort, and
14 that RADV had gone to CPI. I don't recall discussing
15 with her.

16 Q. But while the division --

17 A. (Simultaneous speaking.)

18 Q. I'm sorry. Were you finished?

19 A. Yeah, I just meant, the negotiations and
20 discussions about what went over there, I -- I was
21 not involved with them.

22 Q. And while you were in the Division of
23 Payment Policy, you weren't working on RADV, were
24 you?

25 A. I did not work on RADV.

Videotaped Deposition of
JON HARVEY BIRD
Given Remotely
Wednesday, August 10, 2022

Reported by: Karen K. Kidwell, RMR, CRR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 A. Typically we would target certain medical
2 records for retrieval. You know, once those medical
3 records are retrieved, they would be reviewed by
4 certified coders. There would be QA processes in
5 place to ensure the -- the codes are appropriately
6 supported in the medical record. And then those
7 codes would be submitted.

8 Q. You talked about certified coders who
9 abstracted medical records. What was the entire
10 universe of information provided to the certified
11 coders who abstract the medical records?

12 A. Yeah, those reviews would have been --
13 yeah, so the information that would have been
14 provided to the -- the coders at the time would be an
15 image of the -- the medical record, so it is what we
16 would refer to as a blind interview, you know, where
17 we're not getting any additional information related
18 to codes that were previously submitted; just a blind
19 abstraction, looking at the documentation provided in
20 the record, and assigning the appropriate ICD
21 diagnosis codes to that documentation.

22 Q. In this chart review process that you've
23 described, what attempt was made to compare diagnoses
24 codes abstracted by certified coders with diagnoses
25 codes that might have been identified by a coder

1 working for a hospital or a provider?

2 A. That -- that comparison would not have
3 been completed at, you know, through the chart review
4 program, but, you know, as we, you know, as I
5 testified earlier, there was a claims verification
6 process, you know, where there was an attempt to
7 match the diagnosis submitted by providers; they're
8 also part of the chart review program.

9 You know, I call it an attempt because it
10 a very complex process; it has, you know, several
11 challenges, you know, in particular related to the
12 quality of data around the provider IDs across
13 various systems. And also, you know, the
14 completeness of the medical records that would have
15 been reviewed as part of the chart review process.

16 Q. You talked a little bit about the
17 complexity of the process. What additional
18 information would be required in order to undertake a
19 comparison between diagnoses codes identified by
20 United's certified coders with codes that might have
21 been identified by coders working for a hospital or a
22 provider?

23 MR. MASON: Objection to form.

24 Foundation.

25 THE WITNESS: So, you know, the first

DEPOSITION OF BIGGS T. CANNON, III

As 30(b)(6) Designee 6 of UHC of California, Inc.,
OptumInsight, Inc.
UnitedHealthcare, Inc.

Washington, DC
June 7, 2023

Reported by: John L. Harmonson, RPR

Job No. 983691

1 if it passes the other checks -- there is a check
2 in there, we may have referenced it yesterday,
3 called an X19. I think if that had been identified
4 in the same six-month window -- and I think we
5 talked about this. It's not a rolling six months.
6 It's January 1st to June 30th, July 1st to
7 December 31st.

8 I believe if that came in and a claim
9 had already been submitted for that same
10 member/diagnosis combination, I believe IRADS would
11 have assigned it an X19, kind of indicating it had
12 been submitted before. And I think we talked about
13 the definition yesterday. It will stop it from
14 submission at that time.

15 BY MS. GLOVER:

16 Q. Okay. So in this process, you were able
17 to assess whether a diagnosis code identified in
18 chart review had already been identified and
19 submitted by a provider previously; is that
20 correct?

21 MS. DO: Objection; misstates prior
22 testimony. Outside the scope. Lacks foundation.

23 THE WITNESS: I don't think the X19
24 process, as I recall, takes into consideration who
25 the provider was. In the RAPS system, I don't know

4913

Nevada Chart Review

Targeted 2500 members/2747 charts

2398 members/1991 charts reviewed

2003 and 2004 DOS

PCP charts only

\$117,000 or \$43 per chart

\$28.50 per chart base rate –mileage –copying

Membership Targeting

Membership divided into four tiers using
PHS reports:

Tier 1 - HIGH likelihood

at least 3 HCC qualifying dx in previous year with none in
current year

Tier 2 - MEDIUM to LOW likelihood

between 1-3 HCC qualifying dx in previous year

Tier 3 - HCC history

HCC in claims history but not appearing on PHS reports

Tier 4

No HCC's in member history

Findings

2004

350 members had positive RAF improvement

Average RAF increase of .44

2005 payment (50% blend) impact of \$656K

2003

251 members had positive RAF improvement

Average RAF increase of .43

2004 payment (30% blend) impact of \$260 K

Combined ROI (after costs) of \$800K

Most Commonly Found HCC's

HCC	Description	Count	RAF
168	COPD	127	.376
19	Diabetes	57	.2
105	Vascular Disease	36	.357
71	Rheumatoid Arthritis	23	.268
80	CHF	22	.417
83	Old MI, Angina	17	.235
92	Atrial fibrillation	12	.266
10	Cancer	10	.233

Potential Unconfirmed Diagnoses

- Compared chart review findings with reported qualifying diagnoses

- Isolated qualifying diagnosis codes not found in chart review

- Reviewed member history to identify if HCC was reported from other source or diagnosis

- Identified 131 members with average potential negative RAF impact .4

- Possible negative impact of \$223K for 2004

Most Common Unconfirmed HCC's

HCC	Description	Count	RAF
19	Diabetes	34	.2
105	Vascular Disease	18	.357
80	CHF	18	.417
108	COPD	17	.376
16	Diabetes (neuro)	13	.552
18	Diabetes (ophth)	7	.343
92	Atrial fibrillation	7	.266

Arizona Chart Review

- Same targeted approach using PHS reports

- Include Tucson PCP capitated group

- Group identified as having poor coding quality,
low RAF score and poor diagnosis submission

- 9746 members in Tiers 1-2

- 100% of AZ membership in these tiers

- 3758 members in Tier 3

- limited to Tucson PCP capped group

TUESDAY, APRIL 2, 2024

VIDEOTAPED DEPOSITION OF CRAIG GARTHWAITE, PH.D.

CONFIDENTIAL TRANSCRIPT

---000---

REPORTER: BALINDA DUNLAP, CSR 10710, RPR, CRR, RMR

1 Q. BY MR. GALLAGHER: At various points in
2 your report you refer to something called a list of
3 potential deletes. Are you familiar with that?

4 A. I am familiar with the writing of that.
5 There was no actual list of potential deletes, but 09:22:56
6 it's a way we describe it in the report
7 conceptually.

8 Q. Well, you have not seen a list of
9 potential deletes, but that doesn't mean that
10 Analysis Group could not have created one, right? 09:23:09

11 MR. MASON: Objection to form.

12 THE WITNESS: I should be very clear on
13 what I'm saying here, that there's no list of
14 potential deletes, that the process by which the
15 code operates does not create a list of potential 09:23:21
16 deletes as described in the report.

17 Q. BY MR. GALLAGHER: Correct. But the way
18 the databases work, if you wanted to create a
19 report that was an actual list of the potential
20 deletes that were -- that would have been created 09:23:35
21 under the logic described in your report, you and
22 the Analysis Group certainly have the technological
23 capability to do that, do you not?

24 A. There could have been an entirely
25 different structure of the code that did that in 09:23:48

1 the logic in the report, but that is not the way
2 that we approached the problem, nor is it the way
3 the code currently operates.

4 Q. Let me ask you, in your Appendix D at
5 Paragraph 49 --

09:24:04

6 A. Did you say paragraph or page? I
7 apologize.

8 Q. Paragraph 49.

9 A. Oh, thank you.

10 Q. So you have "Identification of Potential
11 Deletes" as the heading VI, and then you talk about
12 how you identified potential deletes?

09:24:26

13 A. Yes, I do see that.

14 Q. And you give examples here in Paragraph 50
15 of something that would not be on the list of
16 potential deletes. Do you see that?

09:24:45

17 A. If you give me a second to read 49 and 50
18 just to make sure we are on the same page. I see
19 the part you're talking about, yes.

20 Q. How do you know whether an example is on
21 the list of potential deletes or not on the list of
22 potential deletes?

09:25:35

23 A. I am going to, again, refer back to what I
24 said earlier. There is no actual list of potential
25 deletes. I understand that the report is written

09:25:51

1 that way to provide a way to, in English language,
2 describe a set of steps that are happening
3 concurrently.

4 So it is not a question of some list of
5 potential deletes and something that's on it. It's 09:26:05
6 something that's happening sort of in realtime in
7 the code.

8 Q. So how do you -- if you need to confirm
9 that something is on -- would be on the list of
10 potential deletes or not on the potential list of 09:26:16
11 deletes, how do you do that?

12 MR. MASON: Objection to form.

13 THE WITNESS: Again, there is no list of
14 potential deletes that I have to confirm that
15 something is on. 09:26:30

16 Q. BY MR. GALLAGHER: You said earlier that
17 the way the code is currently -- the way the code
18 currently operates, there's no, you know,
19 preparation of a potential deletes list. Was there
20 ever a draft of the code that created a potential 09:26:44
21 deletes list?

22 A. If I did say they word "currently
23 operates," I did not mean to say "currently
24 operates." There's not been under my direction a
25 time where a list of potential deletes was created 09:26:59

1 and that we changed the code. This is the way we
2 have always approached the problem in this report.

3 Q. There was, however, a time where the code
4 was operated by Analysis Group to create a list of
5 potential deletes, was there not? 09:27:13

6 A. I am unaware of that.

7 Q. If that was something that they were
8 directed to do by the DOJ lawyers, that's something
9 you're not familiar with, don't know about?

10 A. I was not involved in any process of 09:27:25
11 creating a list of codes outside of what's in my
12 report.

13 Q. Have you read the first interrogatory
14 response that you referenced earlier today?

15 A. I don't know if I referenced it. I think 09:27:36
16 you might have referenced it. I have since writing
17 the report become aware of the first interrogatory,
18 but it is not something I was involved in creating
19 or crafting or discussed with Analysis Group in any
20 way. 09:27:51

21 Q. That is something that you understand
22 Analysis Group created the list that is -- that was
23 submitted in the first interrogatory response?

24 MR. MASON: Objection to form; foundation.

25 THE WITNESS: It's come to my attention 09:28:05

1 that they were involved in it. Whether they solely
2 created it or there was other people that counsel
3 had involved with that, I don't know.

4 Q. BY MR. GALLAGHER: You would, in fact, be
5 able to write code or instruct Analysis Group to 09:28:25
6 write code that would produce the potential deletes
7 list that you referenced throughout your report,
8 right?

9 MR. MASON: Objection; asked and answered.

10 THE WITNESS: As a matter of sort of 09:28:38
11 technological capability, yes, but it would be an
12 entirely different approach to writing the code to
13 answer the question in the report.

14 Q. BY MR. GALLAGHER: How would it be
15 different? 09:28:49

16 A. At no point is the code intended to create
17 a list of potential deletes.

18 Q. Right. But if you intended it to create a
19 list of potential deletes, you could, right?

20 MR. MASON: Objection; asked and answered. 09:29:00

21 THE WITNESS: Again, that's why it would
22 be different. Because it would be a different
23 intention, so...

24 Q. BY MR. GALLAGHER: Right. So my question
25 is if you wanted to create a list of potential 09:29:08

1 deletes, you could, right?

2 MR. MASON: Objection; asked and answered.

3 THE WITNESS: As a matter of course, we
4 could do it, yes.

5 Q. BY MR. GALLAGHER: And what would it 09:29:23
6 entail if you wanted to do that? What would you
7 have to do?

8 A. Well, we would -- I can't find a complete
9 answer to that. We would sit down and think about
10 the goal being creating a list of potential deletes 09:29:36
11 as opposed to what was the goal as I state in the
12 report, which is developing an analysis of what are
13 the codes that lack support in United's data. And
14 more specifically, what we are trying to understand
15 is how would the flow of funds change between the 09:29:55
16 United States government and United Healthcare as a
17 result of the removal of the codes that lack
18 support in the data.

19 Q. So you were not asked to produce or to
20 identify a list of diagnosis codes that would meet 09:30:11
21 your definition of potential deletes? That wasn't
22 -- that was not your assignment?

23 A. That would meet the list of potential
24 deletes?

25 Q. Correct. 09:30:25

1 A. No. I was asked to come up with an
2 estimate of how the flow of funds would change
3 between the United States government and United as
4 a result of the removal of unsupported codes in the
5 chart review and risk adjustment data.

09:30:38

6 There was no specific interim step that I
7 was asked to create.

8 Q. So specifically your assignment was to
9 determine how the flow of funds would change if you
10 removed what you call unsupported codes in the
11 chart review, right?

09:30:57

12 MR. MASON: Objection; mis --

13 Q. BY MR. GALLAGHER: That was your
14 assignment?

15 MR. MASON: Objection; misstates
16 testimony.

09:31:10

17 THE WITNESS: I think if you kept reading
18 there's an "and" after "chart review."

19 Q. BY MR. GALLAGHER: I will do that. Your
20 assignment was to determine how the flow of funds
21 would change as a result of the removal of
22 unsupported codes in the chart review and risk
23 adjustment data, right?

09:31:18

24 A. That is a summary of what we're trying to
25 do here, yes.

09:31:34

1 Q. And when you say unsupported codes in the
2 chart review, you're referring to the list of
3 potential deletes, right?

4 MR. MASON: Objection; misstates
5 testimony.

09:31:44

6 THE WITNESS: No, I'm referring to the
7 codes that we have in our final deletes list that
8 were unsupported in the chart review and risk
9 adjustment data.

10 I am not sure why you keep stopping at
11 chart review. Because I am referring to the chart
12 review and risk adjustment data together.

09:31:54

13 Q. BY MR. GALLAGHER: So the concept of
14 whether a code is supported or not, to know that
15 you have to look at not just the chart review but
16 also risk adjustment data?

09:32:05

17 MR. MASON: Objection to form.

18 THE WITNESS: Yes.

19 Q. BY MR. GALLAGHER: Okay. And what risk
20 adjustment data do you have to look at to determine
21 whether a code is or is not supported?

09:32:15

22 A. So if you look in the report, what we are
23 -- there are a few places where we talk about sort
24 of things where we -- where we develop our final
25 deletes list.

09:32:31

1 the opinion you're offering about the flow of funds
2 is not an opinion about what would happen if you
3 took a list that corresponds to what you describe
4 as the potential deletes and were to delete that?

5 A. By definition, we remove things -- we 10:09:48
6 don't -- there are some things that initially lack
7 support from chart review that we are giving United
8 credit for. We are not saying that they have
9 support. We are saying there's enough evidence
10 there in United's data that could have been relied 10:10:01
11 upon for support that we don't feel comfortable
12 saying that those are unsupported codes in United's
13 chart review and risk adjustment data.

14 Q. I think my question is simpler. You are
15 not offering an opinion about what -- how the flow 10:10:12
16 of funds would change if you took a list of codes
17 that corresponds to what you call potential deletes
18 in your report and deleted them? That's not the
19 analysis you're offering?

20 MR. MASON: Objection; asked and answered. 10:10:26

21 Q. BY MR. GALLAGHER: Right?

22 A. It is -- it's -- everything on --
23 everything that we do delete is identified in that
24 unsupported data. So it would be sort of a related
25 but not identical exercise. 10:10:37

1 Q. It's not the exercise you undertook?

2 A. No. We gave credit to United for codes

3 that they had evidence for that they also, I would

4 note, could have identified in their data or could

5 have said the reason why we're not going to delete 10:10:52

6 that code is that there's other evidence.

7 So it is not a question of them changing

8 their behavior, but a question about sort of the

9 knowledge they had at the time.

10 Q. And you also are not offering an opinion 10:11:03

11 on what would traditionally be called but-for

12 damages, right?

13 MR. MASON: Objection to form.

14 THE WITNESS: Or answering the question as

15 of what would have happened as of 2019 -- I 10:11:14

16 shouldn't say 2019. The time period I am sort of

17 looking at this question, which is given the sort

18 of COVID and the length of this from '19 to '23,

19 pick a date in there, what would happen if the

20 codes were removed. 10:11:29

21 Q. BY MR. GALLAGHER: That's not a -- you are

22 not offer -- sorry. Let me clarify.

23 You are offering an opinion about what

24 would happen if after the fact, in like 2019 or

25 2020, you removed the codes, what the flow of funds 10:11:40

1 would look like in that -- that scenario?

2 A. If it is a question about as of 2019 what
3 would happen if we removed the codes then, yes.

4 Q. You are not offering an opinion about what
5 would happen if United had done something different 10:11:58
6 in 2008 or 2009 or 2010 or 2011 at the time?

7 A. Yeah, I'm not offering an opinion about
8 how contemporaneously they would have changed their
9 other behavior.

10 Q. And you are not offering an opinion about 10:12:15
11 what would happen in a but-for world where United
12 had done the analysis you did in 2008, 2009, 2010
13 and had changed its submission of codes accordingly
14 in those years at the time?

15 MR. MASON: Objection to form. 10:12:31

16 THE WITNESS: No, I think we are very
17 clear in the report that the question we are trying
18 to answer is how would the flow of funds have
19 changed if as of the time period we're asking the
20 question, the code that lacks support in United's 10:12:41
21 chart review and risk adjustment data were removed
22 from the system.

23 Q. BY MR. GALLAGHER: Effectively giving away
24 the payments on contract years, you're effectively
25 offering an opinion about what would happen if you 10:12:54

1 A. It would seem like it's possible that
2 given that there's no provider encounter data from
3 Connor for February 1st, that this would be an
4 encounter that we matched in No. 2 which was sort
5 of -- would not be a reviewed encounter.

02:37:45

6 I wouldn't say -- we spent a lot of time
7 in doing this and doing these kind of validation
8 checks to figure out if systematically this was
9 showing up.

10 There are millions of diagnosis codes, 1.9
11 million diagnosis codes on Attachment 1. It is
12 possible that there is a single one that you are
13 identifying here.

02:38:00

14 Q. Well, I'm just identifying -- I'm just
15 trying to first identify that this is an example of
16 something that you would have, and, in fact, in
17 this case did, identify as a reviewed encounter
18 under your match method No. 2, okay.

02:38:14

19 So assuming the data is as follows: There
20 is a February 1, 2011, encounter from which a
21 provider-reported code 1742 was submitted to CMS.
22 There is no record in the chart review database
23 identified as being from Allen on that date. There
24 is no other provider-reported code from February 1,
25 2011, and the only chart reviewed in chart review

Re: UnitedHealth Group Investigation

Dear Mr. Goldman,

We sincerely appreciate the two presentations that Mr. Meron and you provided to us on October 9th in Buffalo. The presentations were very informative and helpful. One of the purposes of this letter is to follow-up on our requests for additional information about the issues raised by your presentations. These requests are set forth in the attachment to this letter. Please let us know if you have any questions about these requests or would like to discuss them further before responding to them. We are available to discuss at your convenience.

In addition, we would like to follow-up on our request for a presentation about UnitedHealth Group's Chart Review program and for a demonstration of UnitedHealth Group's ChartSync system. We are also very interested in learning more about the Ingenix Risk Adjustment Data System (IRADS), including the systems which interface with it. We are available December 2 in Washington or December 9, 10, 11, 15 or 17 in Buffalo. Please let us know if you are agreeable to meeting with us on any of these dates.

Furthermore, we would like to schedule a telephone call with you very soon to discuss UnitedHealth Group's privilege assertion with respect to documents and information that the government is seeking from one of UnitedHealth Group's vendors, iCodify. Please let us know when you are available this week or next week for this telephone call.

Finally, in response to the arguments that you made as part of your presentation about UnitedHealth Group's termination of its Claims Verification Program and UnitedHealth Group's annual attestation about the truthfulness and accuracy of its risk adjustment submissions, we wish to remind you of Cheri Rice's May 2, 2014 response to Mr. Nelson's April 30, 2014 email quoted at page 20 of your presentation. In particular, we note that she stated that there are "laws that do impose standards, requirements and responsibilities on [Medicare Advantage] plans in connection with the federal payments they receive from [the Centers for Medicare & Medicaid Services]" Ms. Rice also stated that CMS could not provide advice about whether UnitedHealth

EXHIBIT

1942

- 2 -

Group's plan of action and purported limits on the scope of its attestation are compliant with these laws. Thus, CMS did not agree that UnitedHealth Group's planned actions and its purported limited attestation are compliant with the laws that apply to Medicare Advantage plans. As you know, such laws include the federal False Claims Act.

Please do not hesitate to call Gretchen Wylegala or me if you wish to discuss this matter. Again, we sincerely appreciate the two presentations that you made on October 9th and we look forward to UnitedHealth Group's and your continued cooperation in this matter.

Very truly yours,

Carol Lynn Wallack

Attachment

Requests relating to the "UnitedHealthcare of California, Inc. (plan #E10543) Closed-Period Deletes for 2010 and 2011 DOS" presentation:

- Page 6, sub-bullet point 2, refers to deletes that CMS refused to process for 2010 DOS. Please identify the risk adjustment (RA) submissions that UHC sought to delete. Similarly, page 9, states that CMS has not processed an additional approximate \$4.8 million in 2010 DOS deletes submitted by UHC after May 31, 2013. Please also identify the RA submissions associated with these deletes.
- Page 12 describes the Ingenix Risk Adjustment Data System (IRADS). Please describe the data system(s) that feed into IRADS with respect to the UHC of California plan and, if this has changed over time, please specify. Please describe the data system(s) that feed into IRADS with respect to UHC's other plans and how this changed over time. Also, if there is an integrated system, please identify and describe it. We are also interested in knowing what system UHC used prior to IRADS to make its RA submissions. (You may wish address these questions as part of a larger presentation about IRADS.)
- Page 13 refers to approximately \$11.9M in deletes due to IRADS improvements. Please breakdown the monetary amounts of the deletes for each type of improvement.
- Page 20 refers to Provider Specialty Code 70 deletes and page 21 refers to Unknown Physician Specialty ("99") deletes. We have additional inquiries about these deletes and will provide them to you soon.
- Page 25 of the presentation discusses the Risk Adjustment Data Reconciliation (RADR) team. When was this team created? What are the team's responsibilities, and what policies and procedures govern its decisions. Also, please identify the UHC employees who have been part of this team since its inception to present. Additionally, identify what role (and title) each individual had and whether the individual is a current or former employee. If a former employee, please provide their home address and contact information.
- Page 26 states that "the largest single provider" initiated proposed deletes totaling \$2.6 million for 2010 DOS. You identified this provider as Sharp. Is this Sharp Community Medical Group in San Diego or another entity? What deletes did it propose? What deletes were actually made (all of the proposed deletes)? Please provide a list of all of these deletes and the dates on which they were made and state the amount of the monetary impact, if any. Additionally, provide all correspondence (in any format) between UHC and Sharp, and identify the UHC and Sharp employees who were part of this process. Also, please explain whether UHC of California, Sharp or both have any monetary impact associated with those deletes?

- 4 -

- Please identify all provider groups with which UHC of California has contracted from 2006 to present and, for each year, the number of Medicare Part C plan members in each group.
- Page 27 refers to RA Coding Compliance Reviews. What were the parameters for selecting providers or provider groups for these reviews? Please explain what rules or guidelines UHG used in conducting these reviews and, if those rules and guidelines changed over time, please explain how so. Please identify (1) all provider groups for which UHG has performed RACCR reviews, (2) any provider groups with which UHG has discontinued its relationship based on any RACCR reviews, and (3) if any provider groups were required to return money to UHG. Also, identify what information UHG provided to the providers or provider groups about the results of those reviews. In addition, we would like to know whether UHG is continuing to perform RACCR reviews.
- Page 32 refers to RACCR Look-backs. What were the criteria used to determine that a significant number of sampled codes failed to validate? Was 80% validation required? If a significant number of sampled codes failed to validate, was the 100% look-back only for the DOS or payment year for which the sampled was pulled? Or did UHG look back to prior years and, if so, how far back?
- Please provide background information relating to UHG's RACCR 150 patient review of WellMed, including, but not limited to, a list identifying the patients' name and HIC numbers, when the review was conducted, how it was conducted and by whom, and the results of the review.

Requests relating to the "Claims Verification Program" presentation:

- Page 18 refers to a discussion between UHG and CMS on April 29, 2014, page 20 refers to a communication with Sean Cavanaugh at CMS on June 10, 2014, and page 24 and 25 refer to other conversations and communications with CMS. Please provide all documents relating to these communications, including, but not limited to, emails, letters, memos, notes and bid documents. For each communication, please identify the participants/attendees.
- The first section of the presentation refers to Chart Reviews conducted by UHG to find additional diagnoses that are not made by and/or reported to it by providers. Please provide a list of all chart reviewers and companies hired by UHG since it started conducting chart reviews. Please specify the time period(s) for which UHG used each reviewer and company. Please specify who currently performs chart reviews for UHG.
- Page 20 refers to 2012 DOS deletes. For 2012 DOS, please identify the RA submissions that UHG identified for Claims Verification (CV) review but for which

- 5 -

UHG did not perform the CV review or for which it performed the review but did not make the delete even if the diagnosis was not confirmed.

- Page 23 refers to the 2015 contract bid process. Please specify whether any monetary amount(s) were included in UHG's 2015 proposed bid that UHG believed may be associated with deletes for payment years 2015 if it continued the CV program and, if so, please specify those amount(s). Please provide this information for each of UHG's MA plans. Also, please provide this information for bids prior to 2015 if monetary amounts for projected deletes were included in those bids.
- Also, during the meeting, you stated that UHG has represented to CMS that the cost of completing CV reviews (which reviews UHG stopped conducting in or about May 2014) would not be taken as profit by UHG but would be used to provide additional benefits to Medicare beneficiaries in 2015. Please provide that part of UHG's 2014 bid proposal (or contract with CMS) that sets forth the monies that UHG stated that it would expend to perform CV work in 2014. In addition, please identify the monies that UHG received from CMS after May 2014, i.e. after it stopped CV reviews, to perform these reviews and how UHG used these funds. Furthermore, please identify the total costs of additional benefits that UHG intends to provide to Medicare beneficiaries in 2015 that are specifically attributed to not performing or completing CV work and identify the specific additional benefits. As an example, please provide the breakdown of these calculations from the bid proposals/contracts for UHG of California (013543). Also, please provide a copy of the contracts between UHG and CMS for this plan for 2014 and 2015.
- Did UHG conduct audits or reviews of any fee for service providers? If so, how were the providers chosen for the audits or reviews and how were the reviews conducted?
- What is the current status of the UHG of California RADV audit?

Videotaped Deposition of
REBECCA MARTIN
Given Remotely
Friday, August 5, 2022
9:03 a.m.

Reported by: Karen K. Kidwell, RMR, CRR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 diagnosis clusters that map to a specific HCC and
2 looking to see if there are other records that we may
3 have on file for that member that otherwise risk
4 adjust but had not been submitted to CMS due to some
5 of their submission limitations. And when we had
6 that condition of a record that otherwise risk
7 adjusts, that map to the same HCC, we would use that
8 record to basically save the HCC from being deleted.

9 Q. Understood. And are you familiar with
10 something called an "X19" as the term was used at
11 Optum within IRADS?

12 A. Yes.

13 Q. What's an X19?

14 A. It is a specific status that is assigned
15 to otherwise risk adjusting transactions that could
16 not be submitted to CMS due to submission
17 limitations.

18 Q. And what submission limitations are you
19 referring to?

20 A. For example, CMS would not allow the
21 submission of multiple records for the same member,
22 the same date of service, the same diagnosis code,
23 even if they were for different providers. You could
24 only submit one.

25 Q. Understood. And in the delete netting

Title 45 — Public Welfare

Subtitle A — Department of Health and Human Services

Subchapter C — Administrative Data Standards and Related Requirements

Part 162 — Administrative Requirements

Subpart J — Code Sets

Authority: 42 U.S.C. 1320d–1320d-9 and secs. 1104 and 10109 of Pub. L. 111-148, 124 Stat. 146-154 and 915-917.

Source: 65 FR 50367, Aug. 17, 2000, unless otherwise noted.

§ 162.1002 Medical data code sets.

The Secretary adopts the following maintaining organization's code sets as the standard medical data code sets:

- (a) For the period from October 16, 2002 through October 15, 2003:
 - (1) *International Classification of Diseases, 9th Edition, Clinical Modification, (ICD-9-CM), Volumes 1 and 2* (including The Official ICD-9-CM Guidelines for Coding and Reporting), as maintained and distributed by HHS, for the following conditions:
 - (i) Diseases.
 - (ii) Injuries.
 - (iii) Impairments.
 - (iv) Other health problems and their manifestations.
 - (v) Causes of injury, disease, impairment, or other health problems.
 - (2) *International Classification of Diseases, 9th Edition, Clinical Modification, Volume 3 Procedures* (including The Official ICD-9-CM Guidelines for Coding and Reporting), as maintained and distributed by HHS, for the following procedures or other actions taken for diseases, injuries, and impairments on hospital inpatients reported by hospitals:
 - (i) Prevention.
 - (ii) Diagnosis.
 - (iii) Treatment.
 - (iv) Management.
 - (3) *National Drug Codes* (NDC), as maintained and distributed by HHS, in collaboration with drug manufacturers, for the following:
 - (i) Drugs
 - (ii) Biologics.
 - (4) *Code on Dental Procedures and Nomenclature*, as maintained and distributed by the American Dental Association, for dental services.

(5) The combination of *Health Care Financing Administration Common Procedure Coding System (HCPCS)*, as maintained and distributed by HHS, and *Current Procedural Terminology, Fourth Edition (CPT-4)*, as maintained and distributed by the American Medical Association, for physician services and other health care services. These services include, but are not limited to, the following:

- (i) Physician services.
- (ii) Physical and occupational therapy services.
- (iii) Radiologic procedures.
- (iv) Clinical laboratory tests.
- (v) Other medical diagnostic procedures.
- (vi) Hearing and vision services.
- (vii) Transportation services including ambulance.

(6) The *Health Care Financing Administration Common Procedure Coding System (HCPCS)*, as maintained and distributed by HHS, for all other substances, equipment, supplies, or other items used in health care services. These items include, but are not limited to, the following:

- (i) Medical supplies.
- (ii) Orthotic and prosthetic devices.
- (iii) Durable medical equipment.

(b) For the period on and after October 16, 2003 through September 30, 2015:

(1) The code sets specified in paragraphs (a)(1), (a)(2), (a)(4), and (a)(5) of this section.

(2) **National Drug Codes (NDC)**, as maintained and distributed by HHS, for reporting the following by retail pharmacies:

- (i) Drugs.
- (ii) Biologics.

(3) **The Healthcare Common Procedure Coding System (HCPCS)**, as maintained and distributed by HHS, for all other substances, equipment, supplies, or other items used in health care services, with the exception of drugs and biologics. These items include, but are not limited to, the following:

- (i) Medical supplies.
- (ii) Orthotic and prosthetic devices.
- (iii) Durable medical equipment.

(c) For the period on and after October 1, 2015:

(1) The code sets specified in paragraphs (a)(4), (a)(5), (b)(2), and (b)(3) of this section.

(2) International Classification of Diseases, 10th Revision, Clinical Modification (ICD-10-CM) (including The Official ICD-10-CM Guidelines for Coding and Reporting), as maintained and distributed by HHS, for the following conditions:

- (i) Diseases.

- (ii) Injuries.
 - (iii) Impairments.
 - (iv) Other health problems and their manifestations.
 - (v) Causes of injury, disease, impairment, or other health problems.
- (3) International Classification of Diseases, 10th Revision, Procedure Coding System (ICD-10-PCS) (including The Official ICD-10-PCS Guidelines for Coding and Reporting), as maintained and distributed by HHS, for the following procedures or other actions taken for diseases, injuries, and impairments on hospital inpatients reported by hospitals:
- (i) Prevention.
 - (ii) Diagnosis.
 - (iii) Treatment.
 - (iv) Management.

WESTERN DIVISION

UNITED STATES DISTRICT COURT

CENTRAL DISTRICT OF CALIFORNIA

UNITED STATES OF AMERICA ex rel.
BENJAMIN POEHLING,

Plaintiffs,

vs.

UNITED HEALTH GROUP, INC., et. al.

Defendants.

Case No. CV 16-8697 FMO (SSx)

ORDER DENYING WITHOUT PREJUDICE
PLAINTIFF'S MOTION TO COMPEL RE
INTERROGATORY NO. 14 AND REQUEST
FOR PRODUCTION NO. 147

On April 16, 2021, Plaintiff United States (the "government") filed a motion to compel (the "Motion" or "MTC") seeking an order regarding Defendant United Health Group, Inc. and related entities ("UnitedHealth" or "UHG") to provide a supplemental response to Interrogatory No. 14 ("Interrogatory 14") and Request for Production No. 147 ("RFP 147" or "Request 147"). The parties submitted a Joint Stipulation in connection with the Motion. Each party also filed a Supplemental Memorandum. On May 20, 2021, the Special Master held a Zoom hearing on the

1 Motion. For the reasons discussed below, the Motion is DENIED without prejudice
2 to renewing the motion at a later stage in the litigation.
3

4 5 I. FACTUAL AND PROCEDURAL BACKGROUND 6

7
8 The government contends that UnitedHealth has refused to reasonably
9 respond to two discovery requests that address whether UnitedHealth improperly
10 failed to delete diagnosis codes from its Medicare Part C risk adjustment submission.
11 According to the government, UnitedHealth systematically ignored medical record
12 reviews when it indicated that diagnosis codes UnitedHealth previously submitted
13 to CMS were not supported by beneficiaries' medical records.
14
15

16 The government contends that it has identified every diagnosis code that
17 UnitedHealth submitted to CMS to increase its risk adjustment payments and then
18 improperly failed to delete when UnitedHealth's own review found no support for
19 the diagnosis code in the medical records. The government asserts that Interrogatory
20 14 and Request 147 are intended to discover UnitedHealth's contentions about the
21 very same diagnosis codes. The government seeks to discover whether
22 UnitedHealth contends that any of the diagnosis codes on the government's list were
23 supported by medical records, despite not being found during any of UnitedHealth's
24 reviews of the associated medical records.
25
26
27
28

1 Interrogatory 14 asked UnitedHealth to, with respect to every diagnosis code
2 on the government's list, (a) identify which code is supported by a medical record
3 and (b) identify every medical record review that UnitedHealth conducted. (MTC
4 at 5-7). Request 147 requests all medical records associated with the diagnosis codes
5 on the government's list. (Id. at 7).

6
7
8 In response to Interrogatory 14, UnitedHealth objected on the grounds that
9 "this Interrogatory is an improper contention interrogatory that impermissibly seeks
10 to shift the burden of proving an essential element of the government's False Claims
11 Act case on to UnitedHealth and seeks expert opinion." (Id. at 8). In response to
12 Request 147, UnitedHealth stated: "Based upon its General and Specific Objections,
13 UnitedHealth does not intend to produce documents responsive to this Request."
14

15
16 At the meet and confer on this issue, UnitedHealth indicated that it would
17 produce the responsive medical records in its possession. This production, however,
18 would require a production of approximately 21 million charts and take 8 months to
19 produce. This proposal did not resolve the discovery dispute.
20

21
22 The government asserts that, as it was required to provide a list of 28 million
23 diagnosis codes to comply with its obligation to identify the diagnosis codes it
24 contends UnitedHealth knew were invalid, UnitedHealth should now explain
25 whether medical records do or do not support these codes. (Id. at 9).
26
27
28

1 According to UnitedHealth, Interrogatory 14A requires it to identify the over
2 20 million medical records corresponding to each of the 28 million codes on the
3 government's list and then to hire experts to review those charts to determine
4 whether each code on the government's list is or is not supported by the medical
5 chart. Subpart 14B requests that UnitedHealth "[i]dentify each Medical record
6 Review(s) of the chart(s) corresponding to that Diagnosis, etc." According to UHG,
7 this request would also require it to engage in a massive and complex matching
8 analysis. RFP 147 seeks the documents that relate to the answer required in
9 Interrogatory 14.
10
11
12
13
14

15 II. INTERROGATORY 14 REQUIRES EXPERT ANALYSIS TO
16 RESPOND
17
18

19 Although the government argues that Interrogatory 14 is "only seeking facts,"
20 it would be impossible for anyone other than an expert to provide a reliable answer.
21 Only an expert -- or someone with specialized knowledge -- could do a fair
22 comparison of the medical records and the diagnosis codes to determine if the
23 medical record supported the code. It is also undeniable that the interrogatory would
24 impose a tremendous burden on the responding party to prepare an answer that does
25
26
27
28

1 not currently exist. For these reasons, Interrogatory 14 is an improper interrogatory
2 at this stage of the proceedings.

3
4 Contention interrogatories may be improper “[when] they ask the respondent
5 to provide an expert opinion.” Amgen Inc. v. Sandoz Inc., 2017 WL 1352052, at *2
6 (C.D. Cal. April 13, 2017); Montgomery v. Wal-Mart Stores, Inc., 2015 WL
7 11233384, at *6 (S.D. Cal. July 17, 2015). In addition, a court has discretion to
8 delay an answer to a contention interrogatory until designated discovery is complete
9 or at some other time. See Capacchione v. Charlotte-Mecklenburg Sch., 182 F.R.D.
10 486, 489 (W.D.N.C.1998) (stating that “[d]ue to the nature of contention
11 interrogatories, they are more appropriately used after a substantial amount of
12 discovery has been conducted - typically, at the end of the discovery period”). In
13 general, courts prefer to defer answers to contention interrogatories that are
14 propounded prematurely. See e.g., Everett v. USAir Group, Inc., 165 F.R.D. 1, 3
15 (D.D.C. 1995) (denying without prejudice motion to compel response to contention
16 interrogatory on grounds that interrogatory served too early in discovery process);
17 B. Braun Medical, Inc. v Abbott Lab., 155 F.R.D. 525, 527 (E.D. Pa. 1994) (“[T]here
18 is considerable support to defer answering contention interrogatories until the end of
19 the discovery period.”).

20
21 In the present action, the request seeks the application of expert knowledge to
22 facts, i.e., the medical records. This interrogatory cannot be answered until after
23
24
25
26
27
28

1 expert discovery is completed and only if UnitedHealth intends to assert a defense
2 based upon this information. Indeed, parties generally provide this type of
3 information through expert testimony. See United States ex rel. Desrosiers v. Thaller,
4 2016 WL 6441548, at *4-6 (S.D. Fla. Nov. 1, 2016) (whether medical codes
5 submitted for reimbursement were proper was subject of expert testimony); Counts
6 v. Pollock, 2020 WL 5534444, at *2 (M.D. Fla. August 21, 2020) (providing expert
7 testimony on whether plaintiff's medical bills were properly coded); United States
8 ex rel Armfield v. Gills, 2012 WL 12918274, at * 2 (M.D. Fla. 2012) (qualifying
9 expert for testimony regarding improperly coded claims). Accordingly, this
10 interrogatory is improper at this stage of the proceedings because it would require
11 expert analysis to respond.

12
13
14
15
16 It is also undeniable that preparation of the response to the request would be
17 extremely burdensome and costly. It would require UnitedHealth to pay for and
18 create an analysis for 20 million documents. Ordinarily, a respondent is not required
19 to undertake investigation and analysis to prepare a response to an interrogatory.
20
21 See Behrazfar v. Unisys Corp., 2009 WL 10673197, at *4 (C.D. Cal. June 3, 2009)
22 (party need not respond to an interrogatory that would require extensive analysis and
23 cost). While this analysis and cost may be necessary at some point in the litigation,
24 the Special Master concludes that it is premature to order UHG to undertake this
25 analysis now.
26
27
28

1 UnitedHealth has stated that if it discloses during the expert discovery phase
2 that it has retained an expert to testify at trial that the 28 million codes on the
3 government's list are supported by medical records, that information will be
4 produced in a manner that provides the government sufficient time to prepare a
5 rebuttal. (MTC at 42). Nothing more is required during this phase of the litigation.
6 Because Request 14 is a contention interrogatory and requires expert analysis,
7 UnitedHealth is not required to prepare a response at this time.
8
9
10
11

12 III. REQUEST 147 IS DEPENDENT UPON A RESPONSE TO
13 INTERROGATORY 14 AND THEREFORE IS
14 DENIED WITHOUT PREJUDICE
15
16
17

18 Request 147 seeks: "All Chart(s) corresponding to, associated with, or related
19 to each Beneficiary, from each DOS Year(s) in which that Beneficiary is listed in
20 the United States Response to Defendants' Interrogatory No. 1 (Including the United
21 States' First Supplemental Response served on August 17, 2020, the United States
22 Amended First Supplemental Response served on October 13, 2020, the United
23 States' Second Supplemental Response served on October 30, 2020, and any other
24 subsequent responses)." (Mason Decl., Ex. B). The government agreed to limit this
25
26
27
28

1 request to production of only those medical records UHG contends supports a
2 diagnosis code on the government's list. (MTC at 7-8).

3
4 During the meet and confer process, UnitedHealth offered to produce the
5 responsive medical records in its possession which would amount to an estimated
6 21 million charts and take 8 months to collect and produce. This would allow the
7 government to review the medical records that UnitedHealth reviewed as part of its
8 chart review program and the government could then determine which of the codes
9 on its list are or are not supported. (MTC at 17). At the hearing on the MTC,
10 counsel for the government argued that at a minimum the medical records should be
11 produced to allow the government to review the medical evidence underlying
12 UnitedHealth's codes. Production of these records would allow the government to
13 determine for itself which of the codes on its list are supported or are not supported.
14
15
16
17

18 However, in the Motion itself, the government asserted the following: "After
19 the United States identified its list of all diagnosis codes it contends are at issue, it
20 served Interrogatory 14 and Request 147 to discover UnitedHealth's contentions
21 about the very same diagnosis codes. In particular, the United States seeks to
22 discovery whether UnitedHealth contends that any of the diagnosis codes on the
23 United States' list were supported by medical records, despite not being found
24 during any of UnitedHealth's reviews of the associated medical records. The United
25 States further seeks to discover factual information related to UnitedHealth's
26
27
28

1 medical record reviews.” (MTC at 2, ll. 18-24). The United States also noted:
2
3 “Request 147, as written, relatedly requests all medical records associated with the
4 diagnosis codes on the United States’ list. (citation omitted). Importantly, as a result
5 of the meet and confer process . . . the United States agreed to limit its request for
6 medical records to only those records associated with the diagnosis codes that
7 UnitedHealth contends were supported (i.e., the medical records UnitedHealth
8 identifies in response to Part A of Interrogatory 14).” (MTC at 3, ll. 5-11) . . .
9
10 “Subsequently, UnitedHealth agreed to produce some (but not all) of the underlying
11 medical records, but that offer is hollow without identifying which codes
12 UnitedHealth contends are supported by medical records (i.e., responding to
13 Interrogatory 14). Simply producing millions of medical records alone does nothing
14 to illuminate UnitedHealth’s contentions.” (MTC at 3, ll. 17-21).

15
16
17
18 As UHG observed, “RFP 147 is . . . dependent entirely on whether United is
19 required to Interrogatory 14A; if the Court agrees that United is not required to hire
20 experts to engage in the coding reviews that responding to Interrogatory 14A would
21 require, then there would be no medical records responsive to RFP 147 as now
22 recrafted by the government.” (MTC at 16, ll. 2-6). UHG, as part of the meet and
23 confer efforts, offered to produce to the government every medical record in
24 United’s possession that United reviewed as part of its chart review program, to
25 allow the government to determine for itself which of the codes on its list are or are
26
27
28

1 not supported. (MTC at 16, ll. 25-28; 17, ll. 1-2). The government rejected this
2 offer. UHG contends that the government's position regarding Request 147 has
3 "vacillated dramatically over time." (MTC at 17, ll. 12-13). At the hearing on the
4 MTC, the government did take a position that contradicted the government's prior
5 arguments in the MTC, i.e., the government argued that a response to Request 147
6 would be meaningful even without a response to Interrogatory 14.

7
8
9 The Special Master finds that the inconsistency in the government's
10 arguments undermines their persuasiveness. The Special Master concludes that if
11 the two discovery requests are related and linked as the government originally
12 argued, then the Order should be consistent regarding both requests. Accordingly,
13 the MTC is DENIED without prejudice as it pertains to Request 147. The
14 government may renew Request 147 if the requested documents are relevant to
15 UHG's defenses asserted at a later phase of the action.
16
17
18
19
20

21 IT IS SO ORDERED.

Job No. 1097542

1 records if the plan has any information that is --
2 might not be supported, right?

3 A. I cannot provide such reference.

4 Q. Can you provide me a specific law,
5 regulation, piece of subregulatory guidance or
6 contractual provision that obligates MA plans to
7 design their chart reviews to identify and delete
8 diagnosis codes that are not supported by medical
9 records?

10 A. I cannot.

11 Q. Do -- by the way, do you know what
12 "chart reviews" are?

13 A. I'm familiar with the term.

14 Q. You understand that United had a
15 chart review program in place during the period
16 relevant to this case?

17 A. I understand United takes a number of
18 actions with respect to supporting or developing or
19 -- related to the diagnoses they submit for plan
20 payment.

21 Q. And would those actions include a

1 chart review program?

2 A. That is my understanding.

3 Q. When did you first become aware that
4 United had a chart review program?

5 A. I don't think I was ever aware that
6 there was a specific program. I know that United
7 and other MAOs, Medicare Advantage organizations,
8 do various -- have various initiatives in support
9 of their diagnosis submission.

10 Q. So you have no specific information
11 about how United may have conducted its chart
12 review program during the period relevant to this
13 case?

14 A. I do not have any specific
15 information.

16 Q. I want to go back to Page 3 of your
17 report, Mr. Spitalnic. We read the first half of
18 this sentence in Paragraph Number 2. I -- I want
19 to focus now on the second half of the sentence,
20 but I'll -- I'll read the whole sentence so we've
21 got the full context.

1 you agree with me that it's important for CMS to
2 review bid submissions by MA plans?

3 A. Yes.

4 Q. You're not suggesting here that CMS
5 should ignore portions of MA plan bid submissions,
6 right?

7 A. I'm suggesting that there may not
8 have been a reliance on certain statements that are
9 included in some aspects of the bid submission.

10 Q. Do you think it's reasonable for
11 MA plans like United to presume that CMS is
12 reviewing the bid submissions that the plans submit
13 to the Agency?

14 ATTORNEY ZUPAC: Object to form.

15 Go ahead.

16 THE WITNESS: I'm sorry. Could you
17 repeat the question?

18 BY ATTORNEY MARTINEZ:

19 Q. Do you think it's reasonable for
20 MA plans like United to presume that CMS is
21 reviewing the bid submissions that the plans submit

1 to the Agency?

2 A. I -- I certainly believe that it's
3 reasonable for a plan to expect that CMS is going
4 to do a thorough review of their bid submission.
5 And I think many of the actuaries that go through
6 the bid review procedure would agree that there is
7 a thorough review of the bid submission -- of their
8 bid submissions.

9 I would also expect that actuaries
10 would not be surprised that every word of their
11 submission is not reviewed or necessarily relied
12 upon in drawing ultimate conclusions and that, as I
13 included in this sentence before you started
14 reading, that there is a specific reliance on the
15 actuary to -- that that's -- that CMS places on the
16 actuary to ensure that there is compliance with the
17 laws, regulations and instructions and the various
18 Actuarial Standards of Practice.

19 Q. CMS does a thorough review of bid
20 submissions from MA plans, right?

21 A. Speaking on behalf of the -- on

1 behalf of the Office of the Actuary, we do as
2 thorough and comprehensive a job in reviewing those
3 bids that have been submitted as possible, given
4 the various time and other constraints placed upon
5 us.

6 Q. And you believe it's reasonable for
7 MA plans to presume that CMS is doing that thorough
8 review that you just spoke about, right?

9 A. Plans are familiar with our review
10 process.

11 Q. And how thorough it is, right?

12 A. Yes.

13 Q. Mr. Spitalnic, on the top of
14 Page 8 -- we're still in -- in Paragraph 8,
15 you -- you also wrote -- and this is in response to
16 a couple of bulleted statements -- quoting from
17 United's bid submissions. You wrote, An actuary
18 cannot disclaim that they are knowingly violating
19 the rules of the program.

20 Do you see that?

21 A. I do.

1 Q. Are you aware of any instance in
2 which CMS responded to the bulleted statements you
3 include in Paragraph 8 by saying that United's
4 decision to cease its prior process of identifying
5 and deleting certain diagnosis codes violated
6 United's obligations?

7 ATTORNEY ZUPAC: Object to form.

8 THE WITNESS: I am not aware of
9 discussions that were related to the subject
10 of those quotations.

11 BY ATTORNEY MARTINEZ:

12 Q. So let -- let's -- let's drill down
13 on one of them. Let's look at the second bullet --
14 sorry to keep flipping back.

15 We're on the bottom of Page 7 --
16 starting with the BPT submissions in 2015. And --
17 and what does "BPT" stand for?

18 A. "BPT" stands for bid pricing tool.

19 Q. All right.

20 -- starting with the bid pricing
21 tool submissions in 2015, quote, We also adjusted

1 projected risk scores to account for changes in our
2 medical record review processes. Specifically,
3 based on multiple conversations with CMS and CMS'
4 treatment of medical record review in its recent
5 rulemaking process, the health plan has decided to
6 cease one of its prior processes that identified
7 and deleted certain diagnoses codes through the
8 medical record review process.

9 Do you see that?

10 A. I do see that.

11 Q. Are you aware of any instance in
12 which CMS responded to that statement by saying
13 that United's decision to cease its prior process
14 of identifying and deleting certain diagnosis codes
15 violated United's obligations under the MA program?

16 A. I am not aware of any such
17 statements.

18 Q. Were you aware of these statements
19 from United in its BPT submissions at the time they
20 were made?

21 A. I do not believe I have -- I -- I do

1 not believe I was aware of these statements at that
2 time.

3 Q. Was anyone else in your office aware
4 of them?

5 A. I do not know of anyone in my office
6 being specifically aware of this specific
7 statement.

8 Q. And after writing your report or
9 during the process of writing your report, did you
10 ask anyone at the Office of the Actuary or at CMS
11 whether they were aware of these statements from
12 United?

13 A. I did not specifically ask anybody
14 about anything going back to 2015.

15 Q. So going -- going back to the top
16 of -- of Page 8, Mr. Spitalnic, where you wrote An
17 actuary cannot disclaim that they are knowingly
18 violating the rules of the program.

19 Are you aware of United ever
20 asserting in this case that it could knowingly
21 violate the rules of the MA program by issuing a

1 disclaimer in its bid submissions to CMS?

2 A. I took the potential qualification
3 that I referenced in those two preceding bullets
4 that there was some acknowledgment by United in
5 this case -- I took the suggestion that they were
6 trying to disclaim that they knew of unsupported
7 doc- -- documentation -- unsupported diagnoses
8 being used for payment and if the contention was --
9 and if the reason for the inclusion in the
10 actuarial support materials was to reference that
11 they were aware of additional codes that were
12 unsupported as being included in their basis for
13 payment -- if that was the intention, then that's
14 how I would potentially read those -- that
15 particular statement.

16 And so that was what got me to say --
17 and in complete fairness or disclosure, if I were
18 to have read this statement in 2015 without knowing
19 the history of exactly what all the -- you know,
20 some of the background that I'm now more familiar
21 with, you know, given some of the either facts of

1 this case or implications that I've made in reading
2 Ms. Lambert's report, without that additional
3 detail, I would not be exactly sure what this was
4 referencing or what this was getting into.

5 And so with that additional
6 background, if the intent of this -- these
7 paragraph -- or this paragraph or two was to say
8 that United was aware that they had unsupported
9 diagnoses and they're going to continue to include
10 them in their bid development, I would think that
11 to be inappropriate.

12 Q. That is your -- an assumption that
13 you're making, right?

14 A. Absolutely.

15 Q. Just so we're clear.

16 You have no information of United
17 in this case ever asserting, arguing, claiming that
18 it can knowingly violate the rules of the
19 MA program by issuing a disclaimer in its bid
20 submissions to CMS, right?

21 A. I would say United, nor anyone else,

1 I, Cindy L. Sebo, Nationally Certified Court
2 Reporter herein, do hereby certify that the foregoing
3 deposition of PAUL IRA SPITALNIC was taken before me
4 pursuant to notice at the time and place indicated;
5 that said witness duly swore to tell the truth, the
6 whole truth, and nothing but the truth under
7 penalties of perjury; that said testimony of witness
8 was correctly recorded to the best of my abilities in
9 machine shorthand, thereafter transcribed under my
10 supervision with computer-aided transcription; that
11 deposition is a true and accurate record of the
12 testimony given by the witness; that I am neither
13 counsel, nor kin to any party in said action, nor
14 interested in the outcome; and that a copy of this
15 transcript obtained from a source other than the
16 court reporting firm, including an adversary or
17 co-counsel in the matter, is uncertified and may not
18 be used at trial.

NOTE TO: All Medicare Advantage Organizations, Prescription Drug Plan Sponsors, and Other Interested Parties

SUBJECT: Announcement of Calendar Year (CY) 2013 Medicare Advantage Capitation Rates and Medicare Advantage and Part D Payment Policies and Final Call Letter

In accordance with section 1853(b)(1) of the Social Security Act (the Act), we are notifying you of the annual Medicare Advantage (MA) capitation rate for each MA payment area for CY 2013 and the risk and other factors to be used in adjusting such rates. The capitation rate tables for 2013 are posted on the Centers for Medicare & Medicaid Services (CMS) web site at <http://www.cms.gov/Medicare/Health-Plans/MedicareAdvtgSpecRateStats/index.html> under Ratebooks and Supporting Data. The statutory component of the regional benchmarks, transitional phase-in periods for the Affordable Care Act rates, qualifying counties, and each county's applicable percentage are also posted at this website.

Attachment I shows the final estimates of the increases in the National Per Capita MA Growth Percentages for 2013 and the national Medicare fee-for-service growth percentage. These growth rates will be used to update the 2013 rates. As discussed in Attachment I, the final estimate of the increase in the National Per Capita MA Growth Percentage for combined aged and disabled beneficiaries is 2.80 percent. Attachment II provides a set of tables that summarizes many of the key Medicare assumptions used in the calculation of the National Per Capita MA Growth Percentages.

Section 1853(b)(4) of the Act requires CMS to release county-specific per capita fee-for-service (FFS) expenditure information on an annual basis, beginning with March 1, 2001. In accordance with this requirement, FFS data for CY 2010 are being posted on the above website.

Information on deductibles for MSA plans is included below.

Attachment III presents responses to comments on the Advance Notice of Methodological Changes for CY 2013 MA Capitation Rates and Parts C and Part D Payment Policies (Advance Notice). Attachment VII presents the final Call Letter. We received 114 submissions in response to CMS' request for comments on the Advance Notice/Call Letter, published on February 17, 2012. Eight of the comments were from advocacy groups, 22 were from associations, 5 were from members of the public, 1 was from a State, 1 was from a Congressman, 1 was from a Congressional Advisory Committee, 68 were from health plans and 8 were from consultants.

Financial Summary

Key Takeaways

2014 Financial Summary

- Best estimate of (\$500M) miss, M&R management commitment to find \$250M
- Submitted 2014 2+10 forecast \$250M down from budget
- Excluding insurer's fee 22% earnings growth at the 2+10 forecast
- Recent development on CV (under review), and additional Optum contributions may result in an additional \$350M in IOI versus the 2+10 forecast

2015 Estimate

- CMS rate pressure driving unprecedented member premiums \$520M and benefit reductions \$255M
- The expiration of the demonstration period drives 280 bps of pressure (\$535M in IOI)
- Insurer's Fee increase of 44bps drives (\$163M) of IOI pressure
- Pulling all levers to minimize plan closures
- Aggressive 100K growth assumption

2016 – 2017 Long Term Outlook

- Assuming 38% of members in a 4.0+ in 2016 and 50% in 2017
- Volume capture is key
- Net core trend of 3% throughout
- Net operating cost takeout of \$120M in 2016 and \$100M in 2017
- Consistent IOI contribution from HouseCalls
- Incremental Insurer's Fee headwind in 2017 (\$203M) as tax increases nearly 35 bps and 2016 revenues rebound from 2015
- MAPD plan liability increasing as coverage gap fills; \$280M in 2016 and \$270M in 2017

	2014 Budget	2014 Outlook	2015 Estimate	2016 Estimate	2017 Estimate
Gross IOI	\$2,254	\$2,354	\$2,000	\$2,250	\$2,677
Growth:					
MA	(65)	(5)	100	200	200
Part D	300	300	300	100	0
Med Supp	235	270	229	208	191
Metrics:					
MA BCR %	84.3%	84.3%	84.6%	85.0%	84.5%
M&R OCR %	11.4%	11.3%	12.1%	11.5%	11.3%
M&R IOI %	5.1%	5.2%	4.1%	4.2%	4.6%
Benefits	\$455	\$435	\$255	\$90	\$90
Premiums	\$20	\$20	\$520	\$190	\$180

What Has Changed

2015 – 100K growth versus (300K)
2017 – 200K growth versus 100K

2015 – \$175M increase in benefit reductions/
member premiums; \$775M total
2016/2017 – incremental benefit cuts/member
premiums of \$280M and \$270M, respectively

2015 – \$220M incremental earnings from
HouseCalls versus \$0M

2015 – \$25M versus \$0M

2015 – \$60M net productivity versus \$0M

2015 – 37% in 4.0+ versus 24%
2016 – 38% in 4.0+ versus 35%
2017 – 50% in 4.0+ versus 45%

2015 – removal of (\$300M) IOI from one-
time prior year CV/QA deletes

What Hasn't Changed

2016 – 100K growth

2016/2017 – Trend neutral RAF programs

2015 - 2017 – ~3% net core trend

2015 - 2017 – Trend neutral impact

2016 – \$120M net productivity
2017 – \$100M net productivity

2014 Budget to 2014 Outlook Bridge

	2014 Budget	2014 Best Est.	2014 2+10	2014 Outlook
Growth	470	565	565	565
MA	(65)	(5)	(5)	(5)
Part D	300	300	300	300
MedSupp	235	270	270	270
Revenue	\$44,293	\$45,085	\$45,085	\$45,470
MA	31,249	31,930	31,930	32,315
Part D	5,016	4,978	4,978	4,978
MedSupp	8,028	8,177	8,177	8,177
KEY METRICS				
Reported BCR				
MA	84.3%	85.8%	85.2%	84.3%
Part D	74.9%	75.1%	75.1%	75.1%
MedSupp	85.7%	85.9%	85.9%	85.9%
Total M&R OCR	11.4%	11.5%	11.3%	11.3%
Total M&R OCR (excl. F)	10.2%	10.3%	10.1%	10.1%
IOI Margin %				
MA	5.5%	3.8%	4.6%	5.6%
Part D	6.4%	5.9%	5.9%	5.9%
MedSupp	2.8%	3.0%	3.0%	3.0%

- 2014 Outlook **revenue and earnings better than budget** by \$1,177 million and \$100 million respectively
- Best Estimate IOI gap of (\$500M) versus budget comprised of (\$200M) in network optimization, (\$100M) in lower coding intensity (net of HouseCalls upside), (\$100M) of Hep C, and (\$100M) of other medical baseline and prior period retro.
- Will cut gap in half with \$250M in M&R management commitment. Earnings recouped through network contracting and new ideation, additional clinical based affordability, further operating cost reductions, and contributions from Optum and other UHC partners.
- CV & QA deletes opportunity driving \$350M in IOI
- 2014 Outlook IOI MA margin of 5.6% is slight improvement versus budget margin of 5.5%

Videotaped Deposition of
MELISSA FERRON
Given Remotely
Wednesday, July 27, 2022
11:13 a.m. Eastern

Reported by: Karen K. Kidwell, RMR, CRR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 should be looking at?

2 Q. It is page 3 of Exhibit 348.

3 A. Oh, page 3. Okay.

4 Q. Yeah, I think I misspoke and told you
5 page 4 earlier.

6 A. Okay. Yes.

7 Q. All right. So Mr. Webb wrote to you,
8 "There was also a key takeaway that you were going to
9 work on:

10 "Identifying the HCC's (or hcc/dx code
11 combinations) that could be used to further filter
12 the CV populations due to the inability to validate."

13 Do you see that?

14 A. Yes.

15 Q. So what Mr. Webb is asking you to do is
16 identifying a set of HCCs that you have determined
17 often do not validate in your second-level review.
18 Is that right?

19 MS. SOBEL: Objection to form. Document
20 speaks for itself.

21 THE WITNESS: Yes.

22 BY MS. CHEN:

23 Q. And the purpose of identifying these HCCs
24 was to allow United to get a second-level review for
25 those HCCs. Is that right?

1 MS. SOBEL: Objection to form. Calls for
2 speculation.

3 THE WITNESS: Yes. That would -- my
4 understanding was that there are certain HCCs
5 and diagnosis that are likely to be miscoded
6 from a physician office. And if the first-level
7 reviewer deemed it as not valid, that the second
8 level wouldn't need to be done.

9 BY MS. CHEN:

10 Q. In other words, one level of review was
11 sufficient to determine that these codes should be
12 deleted?

13 MS. SOBEL: Objection. Form.

14 THE WITNESS: Yes, that's a good
15 interpretation.

16 I might -- can I just offer just an
17 observation, also, that in the first amended
18 complaint, there's some misquoting of what these
19 HCCs are. So my e-mail has a numerical label
20 for the HCCs; and in the first amended
21 complaint, the diagnosis narrative was put in,
22 which does not coincide with the HCC numbers.

23 BY MS. CHEN:

24 Q. Okay. So -- okay. So -- so, Ms. Ferron,
25 I think what you're saying is that there was a

1 documentation that's capable of being understood in
2 two or more possible ways?

3 A. Yes.

4 Q. Conflicting documentation includes
5 documentation that is opposing, or that does -- is
6 not internally consistent?

7 A. Yes.

8 Q. And incomplete documentation, similar to
9 what we've been discussing for a while now, is
10 documentation that's lacking certain information?

11 A. Yes.

12 Q. And you would agree that there are certain
13 circumstances where it would be appropriate to use
14 queries, correct?

15 A. Yes.

16 Q. One of those circumstances is when a
17 documented diagnosis lacks specificity for which
18 clarification will yield the assignment of the
19 accurate specific code?

20 MR. McNAMARA: Are you just going to read
21 the slide and run through the slide? We can all
22 see what's on the slide.

23 THE WITNESS: Yes.

24 BY MS. CHEN:

25 Q. Another circumstance when it would be

1 appropriate to use a physician query is when the
2 medical record indicates that the patient is
3 receiving treatment for a diagnosis that is not
4 clearly documented. Is that right?

5 A. Yes. Yes.

6 Q. Another circumstance where it would be
7 appropriate to use a physician query is when the
8 physician has used a symbol or abbreviation, and a
9 clarification is needed to assign the appropriate
10 code, correct?

11 A. Yes.

12 Q. A fourth circumstance where it would be
13 appropriate to use a physician query are when there
14 are multiple possible interpretations to what is
15 documented, and clarification is needed to assign the
16 appropriate code?

17 A. Yes.

18 Q. Another circumstance where a physician
19 query might be appropriate is when clarification is
20 needed as to whether a listed diagnosis still exists
21 or if it has resolved? Is that correct?

22 A. Yes.

23 Q. Another circumstance where it would be
24 appropriate to use a physician query is when
25 clarification of the cause or etiology of a diagnosis

1 or condition is needed to assign the appropriate
2 code? Is that correct?

3 MR. McNAMARA: Can you indicate which --
4 which slide you're reading from, Counsel?

5 MS. CHEN: I'm asking Ms. Ferron the
6 question.

7 MR. McNAMARA: Okay. But you appear to be
8 reading from something. Are you reading from
9 Slide 23?

10 MS. CHEN: I am reading from Slide 23, but
11 the question to Ms. Ferron concerns -- the
12 question to Ms. Ferron was simply another
13 circumstance where it would be appropriate to
14 use a physician query is when clarification for
15 the cause or etiology of a diagnosis or
16 condition is needed to assign the appropriate
17 code.

18 BY MS. CHEN:

19 Q. Correct?

20 A. Correct.

21 Q. And can you explain what etiology of a
22 diagnosis or condition is?

23 A. Yes.

24 Q. And what is it?

25 A. Okay. Sorry.

1 Q. Sorry.

2 A. It would be -- there's certain code
3 assignments that could differ, based on the etiology
4 of the condition. So the etiology is the underlying
5 cause.

6 So typically -- I'll give you an example.
7 So peripheral neuropathy can be caused by diabetes.
8 It can be caused by chemotherapy. It can be caused
9 by spinal disorders. So knowing the etiology of a
10 condition could change the code assignment.

11 Q. Thank you.

12 Another circumstance where physician query
13 would be appropriate would be to clarify the
14 cause-and-effect relationship between two conditions
15 needed to assign the appropriate code; is that right?

16 A. Yes.

17 Q. Another circumstance where it would be
18 appropriate to use a physician query is when clinical
19 indications are noted in the medical record that
20 raise the possibility that a condition may be
21 present, but is not stated as a diagnosis. Correct?

22 A. Yes, correct.

23 Q. And then there's one final circumstance
24 for using a physician query, which is present on
25 admission. But I'm going to have to ask you to

CERTIFICATE

I, KAREN K. KIDWELL, Registered Merit Reporter, and Certified Realtime Reporter, do hereby certify that prior to the commencement of the examination, the deponent was remotely sworn to testify to the truth, the whole truth under penalty of perjury.

I DO FURTHER CERTIFY that the foregoing is a verbatim transcript of the testimony as taken stenographically by me at the time, place and on the date hereinbefore set forth, to the best of my ability.

I DO FURTHER CERTIFY that I am neither a relative nor employee nor attorney nor counsel of any of the parties to this action, and that I am neither a relative nor employee of such attorney or counsel, and that I am not financially interested in this action.

Videoconference Videotaped Deposition OF
CAROLYN KAPUSTIJ
(Taken virtually)
9:03 a.m. Eastern
Thursday, August 25, 2022

REPORTED BY: Christine A. Taylor, RPR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 Inspector General, you were with CMS?

2 A. Correct.

3 Q. And you were with CMS for about
4 12 years from 2009 through 2021?

5 A. Yes. Yes. 12 years.

6 Q. Okay. And during the period when you
7 were at CMS, you worked on a research matter
8 looking into a potential fee-for-service adjuster
9 in the context of RADV?

10 A. I was involved in that during
11 different time periods at CMS.

12 Q. And can you tell us a little bit about
13 that? What is a fee-for-service adjuster?

14 MS. YEVTUKHOVA: Objection. Form.

15 THE WITNESS: So the fee-for-service
16 adjuster was a concept that was put forward
17 by the MA industry and taken up by CMS as a
18 means to offset recoveries for risk
19 adjustment data validation audits.

20 BY MR. QURESHI:

21 Q. And when you say it was taken up by
22 CMS, what do you mean by that?

23 A. I mean the industry contacted Tom
24 Hutchinson about it and then he kind of directed
25 his staff to calculate it.

CERTIFICATE OF REPORTER

I, Christine A. Taylor, Certified Court Reporter within and for the State of Georgia, do hereby certify:

That the foregoing deposition was taken before me on the date and at the time and location stated on Page 1 of this transcript; that the deponent was duly sworn to testify to the truth, the whole truth and nothing but the truth; that the testimony of the deponent and all objections made at the time of the examination were recorded stenographically by me and were thereafter transcribed; that the foregoing deposition as typed is a true, accurate and complete record of the testimony of the deponent and of all objections made at the time of the examination to the best of my ability.

I further certify that I am neither related to nor counsel for any party to the cause pending or interested in the events thereof. Witness my hand, this 29th day of August, 2022.

VIDEOTAPED DEPOSITION OF PATRICIA BRENNAN
(Taken Virtually by Plaintiff)
Tuesday, September 12th, 2023
11:34 a.m. EDT

Reported Stenographically by

1 Q. Do you recall any sort of ballpark
2 estimate or range?

3 A. No.

4 Q. Was there at any point in time a
5 discussion about -- a discussion not involving
6 lawyers about expanding CV to include members with
7 nonexclusive HCCs?

8 A. I don't recall that.

9 Q. Okay. And so what happened with the
10 charts once they went through the chart eligibility
11 step in this workflow?

12 A. So then they went through -- obviously,
13 if you look at the written part about we would
14 import the claims data that was related to those
15 charts, so we would pull in the member claim data,
16 and then match it against the coding results to
17 determine if the exclusive HCC that was in claim
18 matched to what was coded. If it did, the process
19 ended because there was a match. The coder coded
20 the condition that was in claim, so the medical
21 records supported it. If it did not match, it went
22 to coding, and a coder -- claims verification
23 analyst coder would perform a review to see if that
24 code was supported in the medical record.

25 Q. And the system-matching logic phase,

1 placed on hold at some point, yes.

2 Q. And do you have an understanding of why
3 the deletes were placed on hold?

4 A. No.

5 Q. Do you have an understanding of what
6 time period during which the deletes were placed on
7 hold?

8 A. No.

9 Q. Do you have an understanding of who at
10 M&R would have made the decision to place CV
11 deletes on hold?

12 A. No.

13 Q. Do you recall anything about the volume
14 of deletes that were placed on hold?

15 A. No.

16 Q. Did you ever become aware of the volume
17 of deletes that were placed on hold after the date
18 of this e-mail?

19 A. Not that I recall.

20 Q. Do you have any understanding of the
21 outcome of the assessment that's referenced here by
22 M&R of the CV program?

23 A. No.

24 Q. Do you have any understanding of what
25 happened with those CV deletes that were placed on

1 hold?

2 A. No.

3 Q. So you don't know whether deletes were
4 actually ever submitted to CMS for those -- for
5 those deletes that had been placed on hold; is that
6 correct?

7 A. Correct.

8 Q. Did you become aware at some point in
9 2014 that Optum had suspended the claims
10 verification program for M&R?

11 A. Yes.

12 Q. And when did you become aware of that?

13 A. I don't know the exact timing, but I
14 got an e-mail that informed me of that.

15 Q. And do you recall who that e-mail was
16 from?

17 A. I believe it was from Jeff Dumcum.

18 Q. Jeff Dumcum.

19 And do you recall what that e-mail
20 said?

21 A. Just that the CV program -- I don't
22 recall the specifics of the e-mail, but I know that
23 that's when we found out the CV program was going
24 to be stopped.

25 Q. Okay. And do you have any sense of --

1 do you recall receiving that e-mail sometime during
2 2014?

3 A. I don't remember the timing, like I
4 mentioned, but I do recall receiving it. I just
5 don't know the timing.

6 Q. Okay. And the e-mail that you're
7 thinking of, did that inform you that the CV
8 program was being terminated entirely?

9 A. Yes.

10 Q. Okay. Prior to that, did you become
11 aware at any point that M&R had suspended the CV
12 program for a period of time?

13 A. I really don't recall the suspension or
14 the holds. I mean, I recall hearing about it, but
15 I don't recall being involved in the specifics
16 around it.

17 Q. Do you recall whether during this time
18 frame, so I guess starting in 2013 with the e-mail
19 that we just looked at, going into 2014, do you
20 recall whether you were engaged in any operations
21 activities for the CV program?

22 A. I don't recall.

23 Q. And do you recall -- I think you said
24 that you remembered hearing something about CV
25 being suspended. Do you recall hearing anything

Re: Response to Follow Up Questions on March 18, 2016 Letter re: 2012 DOS Encounters Identified for CV Review

Dear Carol and Jessica:

I am writing in response to your April 4, 2016 follow up questions regarding UnitedHealth Group's ("UHG's") March 18, 2016 letter re: 2012 DOS Encounters Identified for CV Review (the "March 18 Letter").

As explained in the March 18 Letter, UHG was still in the process of confirming whether or not MARA1298042 (produced on May 12, 2015) included all 2012 DOS CV encounters with financial impact for which the multi-stage CV process was begun but not completed at the time M&R discontinued CV ("In Process CV Encounters") and anticipated supplementing its response upon completion of that review. That review is now complete. Rather than producing another supplemental spreadsheet, the enclosed spreadsheet, MARA2160501, includes a complete list of all identified 2012 DOS In Process CV Encounters or CV Cancelled Deletes with Part C financial impact to UHG, including, but not limited to, the relevant encounters identified in your April 4, 2016 email. Please note that the Plan Number(s) listed are Contracts in the corresponding Payment Year 2013.

In your April 4, 2016 email, you request an explanation for "why the deletes were never made." As you know, based on discussions and correspondence with CMS in March – June 2014, M&R undertook to delete only those diagnosis codes that had undergone a complete CV review and been identified as appropriate deletes at the time M&R discontinued CV. The encounters in the enclosed spreadsheet were not deleted because they had not completed the

LATHAM & WATKINS LLP

multi-stage CV process in place at the time M&R discontinued CV. In particular, none of the encounters in the enclosed spreadsheet completed the expert coding review stage of the CV process, and approximately 800 encounters were not reviewed by any coder as part of the CV process. UHG has flagged the 800 encounters that were not reviewed by any coder as part of the CV process with a "0" under Column J of the enclosed spreadsheet ("Initial_CV_Review").

In response to your request that we identify each encounter with "a project number or some other identifier," please note that the great majority of the encounters in the enclosed spreadsheet were not far enough along in the CV process to be assigned such an identifier at the encounter level. UHG has included the ProjectID number in the enclosed spreadsheet, where available.

Please also note that the enclosed spreadsheet and facts described above are based on the information we have been able to gather to date. UHG reserves the right to modify, supplement, correct, or otherwise amend these responses as it gathers additional information in the course of its review.

As with the prior productions and responses, these documents and responses contain highly proprietary and competitively sensitive commercial information, and UHG requests confidential treatment of these documents and responses and exemption from disclosure under the Freedom of Information Act. These documents and responses may also contain patient health information protected by the Health Insurance Portability and Accountability Act of 1996, as amended and implemented. Per our discussions, UHG is producing these documents and response pursuant to 45 C.F.R. § 164.512 and/or 45 C.F.R. § 164.502(a)(3), and pursuant to its understanding that the government has a standard business associate agreement in place with Relator's counsel.

* * * *

Please do not hesitate to contact me with any questions.

Very truly yours,

Abid R. Qureshi

	)	CV 16-08697 FMO
UNITEDHEALTH GROUP, INC. et	)	
al.,	)	
	)	
Defendants.	)	

VIDEOTAPED DEPOSITION of KATHLEEN BAKER
taken by Plaintiffs, held at Riley, Warnock &
Jacobson, 1906 West End Avenue, Nashville,
Tennessee, commencing at 8:19 A.M., on July 12,
2022, before Gary Schneider, RPR, CRR, RMR, TLCR
and Notary Public within and for the State of
Tennessee.

1 Q. What was your involvement in
2 making decisions about whether to submit deletes
3 from Optum's CV program?

4 A. I made no decisions regarding
5 that.

6 Q. What was your involvement in
7 decisions regarding whether a claims verification
8 program should be implemented?

9 A. I was not involved in those
10 conversations or decisions.

11 Q. Earlier today do you recall that
12 you testified that you used chart retrieval
13 vendors to retrieve charts for Optum's
14 retrospective chart review program?

15 A. Yes.

16 Q. In your experience, did these
17 chart retrieval vendors retrieve all charts for a
18 member for a given date of service year?

19 A. No, that's not possible.

20 Q. When you say it's not possible,
21 what do you mean?

22 A. Meaning there's just so many
23 charts for members. So, like, you know, if we go
24 back to, like, my -- well, actually, where we're
25 positioned right now, like, my cancer diagnosis is

1 that, you know, a member can have multiple charts
2 across different locations, across different
3 providers. So, like, here we sit in -- you know,
4 I had services done at Saint Thomas Ascension that
5 also has a private ambulatory surgery center that
6 also houses a medical -- a medical building that
7 housed my breast surgeon and my plastic surgeon,
8 and then also Vanderbilt where I had some
9 procedures done.

10 You know, even if I just go back
11 to the date where I had, you know, surgery done at
12 the ASC, I would have, you know, four different
13 visits from separate doctors regarding my date of
14 service that day, but they're all different charts
15 or, you know, Vanderbilt's in their charts. If I
16 would go to one location to grab a chart, it
17 doesn't mean I would have grabbed all charts for
18 that member because it would've only been what was
19 available that day. But even if I -- you know,
20 for instance, for Vanderbilt or maybe personal
21 experience, we've all been to doctors, where
22 Monday -- well, here, I mean, I'll say Vanderbilt,
23 like, Monday and Wednesdays they're here downtown
24 or Midtown here at Vanderbilt. But then on, you
25 know, Tuesdays and Thursdays, they're out in

1 Franklin office location. And so depending upon
2 how their medical charts are, those could be
3 different locations for charts for that member.
4 And so, you know, it's just charts -- a chart for
5 a member doesn't contain every single encounter
6 that that member has had, nor is it possible to
7 say whether or not it's always a complete chart
8 because it's based upon what was available at that
9 time or if the provider sent it and what the
10 provider sent to us.

11 Q. Did Optum review all of the
12 charts for a member in a particular date of
13 service year in its retrospective chart review
14 program?

15 A. Did we review all? No, it's
16 not -- I mean, we didn't have all of the data. We
17 didn't have all of the medical charts for them.

18 Q. Earlier today do you recall
19 testifying about blind -- blind chart reviews?

20 A. Yes.

21 Q. Do you know what a blind chart
22 review is?

23 A. Yes.

24 Q. What is it?

25 A. It's when the coders are not

1 STATE OF TENNESSEE)

Subject: Preliminary 2015 Payment Year ICD-10 to HCC Mappings

I formatted the preliminary ICD-10 to HCC mappings. CMS will continue to blend the V12 and V22 models for 2015 payment, but did not publish a V12 ICD-10 to HCC mapping yet. They provided mappings for the V22 part C model, the PACE/ESRD model for part C, and the new V04 Rx HCC model for Part D.

The attached file contains 5 tabs:

1. All_ICD10_Prelim
 - a. Contains all ICD-10 codes, with a column to indicate which HCC the code maps to in each model
 - b. Includes non-risk-adjusting codes
 - b. A blank indicates the code does not map in that model
 - c. Note that incomplete codes do not (and should not) map to HCCs
2. MAPart_C_Prelim - Contains the Part C mapping for the V22 model
3. Rx_Prelim - Contains the Part D mapping for the new V04 model
4. PACE_ESRD_Part_C_Prelim - Contains the Part C mapping for the PACE/ESRD model
5. MultHCCs_Prelim
 - a. Lists ICD-10s that map to more than 1 HCC in any model
 - b. 5 Diabetes codes map to 3 HCCs (these are the only codes that map to 3 HCCs)
 - c. The maximum number of HCCs per ICD-10 is 3
 - d. There are 366 codes that map to more than 1 HCC in at least 1 model (158 for the V22 Part C model)

The original files from CMS can be found here:

Videotaped Deposition of
MARYBETH MEYER
Given Remotely
Tuesday, June 7, 2022

Reported by: Karen K. Kidwell, RMR, CRR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 earlier that towards the end of 2013, Scott
2 Theisen, who was my boss, asked me to review the
3 proposed CV deletes.

4 BY MR. LEE:

5 Q. And in accordance with that instruction
6 from Scott Theisen, you would review deletes and
7 instruct Optum to submit them after you reviewed
8 them?

9 A. We reviewed the -- the CV deletes. Yes.

10 Q. And was that for the purpose of
11 instructing Optum to delete them when appropriate?

12 A. We were asked to review the CV deletes
13 because we were receiving complaints from providers
14 that transactions were being deleted inappropriately.
15 We received those complaints through the RACCR
16 program specifically.

17 So when Scott asked me to start reviewing
18 and approving CV deletes, we were finding the same --
19 we were finding similar logic errors in Optum's
20 proposed deletes. So I don't recall how many deletes
21 were approved for Optum to process.

22 MR. LEE: Okay. Let me ask my colleague
23 to put up Tab 14, which will be Exhibit 198.

24 (Exhibit 198 was marked for identification.)

25

CERTIFICATE

I, KAREN K. KIDWELL, Registered Merit Reporter, and Certified Realtime Reporter, do hereby certify that prior to the commencement of the examination, the deponent was remotely sworn to testify to the truth, the whole truth under penalty of perjury.

I DO FURTHER CERTIFY that the foregoing is a verbatim transcript of the testimony as taken stenographically by me at the time, place and on the date hereinbefore set forth, to the best of my ability.

I DO FURTHER CERTIFY that I am neither a relative nor employee nor attorney nor counsel of any of the parties to this action, and that I am neither a relative nor employee of such attorney or counsel, and that I am not financially interested in this action.

CONFIDENTIAL - SUBJECT TO PROTECTIVE ORDER

Volume 3
DEPOSITION OF ANNE HORNSBY
As 30(b)(6) Designee 1 of
The United States

Washington, DC
November 21, 2023

Reported by: John L. Harmonson, RPR

1 typical result of the audit process. For each
2 contract audited, there would be a payment error
3 amount.

4 And in addition, as I had been talking
5 about, CMS was aware that parent organizations were
6 deleting records that they had been paid on because
7 they found errors in the diagnosis codes.

8 BY MR. BAAK:

9 Q. You mentioned -- Dr. Hornsby, you
10 mentioned an error where a plan submits a diagnosis
11 code and then subsequently determines for some
12 reason that that code ought to be deleted. That
13 was an example you gave me a little bit earlier.

14 A. That was one example I gave, yes, that
15 CMS has seen.

16 Q. CMS is also aware that there are errors
17 where in fact a provider does document a diagnosis
18 code on a medical record but fails to submit it;
19 right? CMS knows that from the RADV process?

20 MS. LIKOFF: Objection to form. Vague.
21 Beyond the scope.

22 THE WITNESS: CMS did not have evidence
23 of that. You know, around the time of the 2014
24 rule, CMS had anecdotal evidence that MAOs were
25 conducting medical record reviews to find what

1 everybody calls additional to find diagnoses that
2 had not been submitted before that appear to be
3 supported by the medical record. CMS was not aware
4 of that as a fact, as clear knowledge. It was all
5 through professional networks and, you know, that
6 level of knowledge.

7 BY MR. BAAK:

8 Q. Just to make sure I understand,
9 Dr. Hornsby, you're testifying that over time CMS
10 became aware through professional discussions,
11 industry conferences and the like that Medicare
12 Advantage organizations were conducting medical
13 record reviews to add diagnosis codes that the
14 provider had failed to submit. Is that what you
15 just testified to?

16 A. Yes. Over time CMS became aware, around
17 2014 as a tipping point.

18 Q. It had knowledge that CMS obtained about
19 what plans were doing. That obviously predated the
20 proposed medical record review, right, since that
21 was targeted at Medicare Advantage organization's
22 chart review activities?

23 MS. LIKOFF: Object to form. Vague.
24 Misstates the witness's testimony.

25 THE WITNESS: CMS did not propose a

1 medical records provision because of plans seeking
2 additional. CMS had heard anecdotally that many
3 MAOs were failing to submit their deletes.
4 Therefore, CMS wanted to put in a reg an
5 application of the long-standing broader
6 requirement that diagnoses must be supported in the
7 medical record to be accurate. And that's what the
8 provision said.

9 MR. BAAK: I'm going to move to strike
10 that as nonresponsive.

11 BY MR. BAAK:

12 Q. My question, Dr. Hornsby, was about when
13 CMS obtained the knowledge that MA plans were
14 conducting medical record review to add diagnosis
15 codes but not to delete them. And my question is
16 simple.

17 Did CMS have that knowledge at the time
18 it proposed the medical record review rule in early
19 2014?

20 MS. LIKOFF: Objection to form.

21 THE WITNESS: CMS does not consider it
22 knowledge. CMS considers it informal network
23 information but nothing that would rise to the
24 level of knowledge because CMS cannot see what's
25 inside an MAO in terms of its data and its due

1 diligence activities.

2 BY MR. BAAK:

3 Q. I want to come back just to the basic
4 concept of an error in the diagnosis codes that go
5 provider to MA and from MA to CMS. Okay? So there
6 can be two types of errors, Dr. Hornsby; right?
7 You've mentioned one. I want to make sure we're
8 clear there are two types.

9 There can be an error when a provider
10 submits a diagnosis code to an MA plan that then
11 gets sent to CMS where that diagnosis code is not
12 reflected on a medical record. That's one example;
13 right?

14 MS. LIKOFF: Objection to form.

15 THE WITNESS: CMS does not agree with
16 that. Let's go to the contract. I can read you
17 Article 5. The MAO is responsible. CMS does not
18 have a concept of error that lands just on the
19 provider. It is the MAO's responsibility.

20 BY MR. BAAK:

21 Q. Dr. Hornsby, I don't think maybe you
22 understood my question. I'm just talking about the
23 true state of the universe. Did the provider
24 submit to the MA plan an accurate diagnosis code?
25 I want to figure out why that can go wrong. Are

Medicare Program; Contract Year 2015 Policy and Technical Changes to the Medicare Advantage and the Medicare Prescription Drug Benefit Programs

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Final rule.

SUMMARY: The final rule will revise the Medicare Advantage (MA) program (Part C) regulations and prescription drug

benefit program (Part D) regulations to implement statutory requirements; improve program efficiencies; and clarify program requirements. The final rule also includes several provisions designed to improve payment accuracy.

DATES: *Effective Dates:* These regulations are effective on July 22, 2014 except for the amendment in instruction 27 to § 423.100, the amendment in instruction 30 to § 423.501, and the amendment in instruction 34 to § 423.505, which are effective on January 1, 2016.

Applicability Dates: In the **SUPPLEMENTARY INFORMATION** section of this final rule, we provide a table (Table 1) which lists key changes in this final rule that have an applicability date other than the effective date of this final rule.

FOR FURTHER INFORMATION CONTACT:

Christopher McClintick, (410) 786-4682, Part C issues.

Marie Manteuffel, (410) 786-3447, Part D issues.

Kristy Nishimoto, (206) 615-2367, Part C and D enrollment and appeals issues.

Whitney Johnson, (410) 786-0490, Part C and D payment issues.

Joscelyn Lissone, (410) 786-5116, Part C and D compliance issues.

Frank Whelan, (410) 786 1302, Part D improper prescribing issues.

SUPPLEMENTARY INFORMATION: Table 1 lists key changes that have an applicability date other than 60 days after the date of publication of this final rule. The applicability dates are discussed in the preamble for each of these items.

TABLE 1—APPLICABILITY DATE OF KEY PROVISIONS OTHER THAN 60 DAYS AFTER THE DATE OF PUBLICATION OF THE FINAL RULE

Preamble section	Section title	Applicability date
III.A.4	Reducing the Burden of the Compliance Program Training Requirements (§§ 422.503(b)(4)(vi)(C) and § 423.504(b)(4)(vi)(C)).	01/01/2016
III.A.7	Agent/Broker Compensation Requirements (§§ 422.2274 and 423.2274)	01/01/2015
III.A.20	Enrollment Requirements for the Prescribers of Part D Covered Drugs (§ 423.120(c)(6))	06/01/2015
III.A.24	Eligibility of Enrollment for Incarcerated Individuals (§§ 417.1, 417.460(b)(2)(i), 417.460(f)(1)(i)(A) through (C), 422.74(d)(4)(i)(A), 422.74(d)(4)(v), 423.44(d)(5)(iii) and (iv)).	01/01/2015

b. Drug Enforcement Administration (DEA) Certification of Registration

c. Patterns or Practices of Prescribing

22. Broadening the Release of Part D Data (§ 423.505)

23. Establish Authority to Directly Request Information From First Tier, Downstream, and Related Entities (§§ 422.504(i)(2)(i) and 423.505(i)(2)(i))

detailed in forthcoming operational guidance.

We received the following comments on general rules for overpayments and our responses follow.

Comment: Several commenters requested that CMS clarify when the 60-day period begins. Specifically, does the period begin once the MA organization or Part D sponsor has identified that there is an overpayment or once the organization has determined the exact amount of the overpayment? A commenter expressed concern that the proposed rule does not appear to acknowledge that the amount of an overpayment must be quantified before it is “identified.” Another commenter requested that CMS address the situation where an MA organization or Part D sponsor becomes aware of an issue or error that may have resulted in one or more overpayments, but could not determine, with reasonable certainty, the amount of the overpayment(s) within a 60-day period.

Response: It is important to understand the distinctions among identifying, reporting, and returning an overpayment in this rulemaking for the purposes of the MA and Part D programs. Once an organization has identified that it has received an overpayment, the 60-day period for reporting and returning the overpayment begins. Because of the nature of the Part C and Part D programs, we did not propose that “identified” includes completion of the act of quantification of an overpayment amount. Rather, we proposed that identification of an overpayment means knowing that the MA organization or Part D sponsor has submitted erroneous data to CMS that caused CMS to overpay the organization.

An organization can identify or assess that there is a problem with data submitted to CMS, and determine that it is incorrect data, prior to actually calculating what the payment impact is of that erroneous data. For the MA and Part D programs, the relevant factor is identifying that the data is incorrect and will result in an overpayment. For example, a risk adjustment diagnosis that has been submitted for payment but is found to be invalid because it does not have supporting medical record documentation would result in an overpayment. Under this provision, the day after the date on which the organization has confirmed an identified overpayment—because the organization knows that the diagnosis is not supported by documentation—is the first day of the 60-day period for reporting and returning the overpayment. As another example, an

MA organization may find that data used to calculate Healthcare Effectiveness Data and Information Set (HEDIS) measures that the organization submitted to CMS are found to be invalid; when the organization has confirmed that it has identified invalid data leading to an overpayment, this is the first day of the 60-day period for reporting and returning the overpayment.

Then, during the 2-month period for reporting and returning the overpayment, the organization must determine what data should be submitted to CMS to correct the identified overpayment, and then must engage in the reporting and returning process that we will describe in forthcoming guidance. This reporting and returning process will involve: (1) Notifying CMS that an overpayment exists, including notification of the reason and estimated amount for that overpayment; and (2) submitting the corrected data to CMS.

In other words, we believe that the MA organization and Part D sponsor will discover through appropriate payment evaluation procedures when a 60-day period would begin under the requirements of this provision, because “day one” of the 60-day period is the day after the date on which organization has determined that it has identified the existence of an overpayment. Once the organization “starts the clock,” it has 60 days to submit to CMS the corrected data that is the basis of the overpayment. It is the act of submitting the corrected data to CMS, along with a reason and an amount of the overpayment (which may be an estimate), that constitutes fulfillment of the requirement to report and return the overpayment.

As we stated in the January 10, 2014 proposed rule preamble (79 FR 1997), “It also is important to note that the MA organization and Part D sponsor are deemed to have returned the overpayment when they have taken the actions that we will specify, in forthcoming operational guidance, to submit the corrected data that is the source of the overpayment”. We will recover the returned overpayment through routine CMS payment processes. That is, payments will continue to be recovered through the established payment adjustment processes and schedules. As a result the payment recovery may not occur within the 60-day window triggered by identifying an overpayment. Rerunning payment reconciliations and conducting payment recovery within CMS payment systems each time an entity identifies an

overpayment that triggers its 60-day clock is simply not feasible for CMS.

We will release operational guidance on the process an organization will use for informing CMS that it has identified a Part C and/or Part D overpayment. This guidance will also address how an organization will be required to provide a reason for and the amount of the overpayment (which may be estimated). We seek to reduce burden and implement an efficient process for administering the reporting and return of overpayments, so we are considering making use of existing procedures for organizations to communicate payment data issues to CMS. For example, MA organizations and Part D sponsors have used the Remedy system for a number of years to inform CMS of payment issues and provide relevant information on that issue.

In the forthcoming operational guidance, we will address the question of how to report the overpayment amount, including estimation of the overpayment amount and updates under certain scenarios.

Comment: A commenter contended that, applying the principles adopted by CMS in the RADV audit context, an overpayment cannot exist for a particular MA contract unless CMS’ payments as a whole to the MA organization pursuant to the contract are inaccurate in light of an appropriate FFS Adjuster applied to the entire contract. Potential overpayments can be determined, therefore, based only on processes such as CMS’ RADV audits, which are designed to measure whether contract-level payments to an MA organization are accurate when compared to an appropriate FFS Adjuster. The commenter further contended that to the extent an MA organization develops processes intended to measure payment accuracy at the contract-level, the MA organization would be required to report and repay inaccuracies calculated after applying CMS’s FFS Adjuster, and consistent with prior CMS guidance, this is the sole instance in which an “overpayment” can be determined for purposes of proposed § 422.326.

Response: We disagree with the commenter. Our RADV methodology does not change our existing contractual requirement that MA organizations must certify (based on best knowledge, information, and belief) the accuracy, completeness, and truthfulness of the risk adjustment data they submit to CMS. Further, this decision does not change the long-standing risk adjustment data requirement that a diagnosis submitted to CMS by an MA organization for payment purposes must

be supported by medical record documentation.

However, we are clarifying the link between the § 422.326 overpayment provisions and RADV audits under § 422.311 by adding a condition to the requirement at § 422.326(d), as follows: an MA organization must report and return any overpayment it received no later than 60 days after the date on which it identified it received an overpayment. We are adding to paragraph (d) the provision “unless otherwise directed by CMS for the purpose of § 422.311.” Thus, when an MA organization has a contract selected for a RADV audit, during the audit the MA organization will not be allowed to report and return an overpayment under § 422.326 that is due to errors in the data used to risk-adjust payments for the audited contract for the payment year that is the subject of the RADV audit. We will notify the MA organization about the timeline for reporting and returning any overpayments for a contract under a RADV audit. This new provision protects the integrity of the RADV audit process, including the sampling frame of beneficiaries in a selected MA plan, whose diagnoses will be audited.

Comment: A commenter stated that there will be many circumstances and situations where entities receiving an overpayment will not have the ability to repay funds within the 60-day period without undue hardship.

Response: MA organizations and Part D sponsors have an obligation to pay an overpayment owed under Section 1128J(d). As noted previously, our recovery of overpayments will occur through routine payment processing cycles and schedules. In most circumstances, MA organizations and Part D sponsors will be submitting corrected data, which will be re-run by CMS and then CMS will recover the overpayment.

Comment: A commenter noted that 60 days is not a sufficient timeframe, as identifying and quantifying overpayments can be a very involved process. Another commenter stated that most overpayments are identified through analyses and studies, such as internal RADV studies; the commenter requested that the 60-day time period begin at the conclusion of the internal study, so that overpayments can be referred to CMS after all issues have been identified and confirmed.

Response: We provide that the 60-day period is the time period for reporting and returning an identified overpayment, after the organization has conducted the activities needed to identify that it has received an

overpayment. As explained previously, for the purposes of the MA and Part D programs, the MA organization or Part D sponsor must report and return the identified overpayment, which is due to incorrect data it has submitted to CMS, no later than 60 days after the date on which the organization identified it received the overpayment. Subsequently and within the 60-day period the MA organization or Part D sponsor is required to report and return the overpayment. Reporting the overpayment involves notifying CMS of the reason for and the amount of the overpayment. Returning the overpayment is deemed to have occurred through the act of correcting the erroneous data submitted to CMS, for example, by deleting incorrect PDEs or risk adjustment data. Note that if an organization identifies one set of erroneous data that has caused an overpayment, the organization must begin the 60-day clock on that date, and if subsequent overpayments are identified, the organization must begin subsequent 60-day reporting and returning periods.

Comment: A commenter questioned whether CMS will be identifying criteria for organizations to use to determine an overpayment.

Response: We have specified in this final rule the specific types of “funds” that are subject to the provisions under this section through the definition of “funds”. Funds are payments an organization has received that are based on data that the organization submitted to CMS for payment purposes. We will not provide additional criteria or a checklist.

Comment: A commenter stated that logically, an MA organization or Part D sponsor cannot return an overpayment until it has calculated the exact amount that it must return. It might take a considerable amount of time for the MA organization or Part D sponsor to audit its records to determine the amount, whether there is an issue in previous years, and whether extrapolation, or case by case analysis, is appropriate. The commenter was concerned that while a plan sponsor might be able to report to CMS that it has identified an issue within 60 days, a plan sponsor may not have enough information after identification to be able to report the exact amount. Therefore, the commenter requested that CMS clarify that the 60 days begins once the organization has identified the exact amount of the overpayment. The commenter suggested, as an alternative, that if the MA organization or Part D sponsor has notified CMS that it believes there is an overpayment, but it will take more than

60 days to determine the exact amount, CMS consider allowing a “tolling” of the 60 days so that the organization may determine the amount it must return to CMS. Under this “tolling” process, the organization would be required to notify CMS within 60 days of identifying that an overpayment likely exists, but would be provided additional time by CMS to determine the exact amount.

Response: We have not used the phrase “exact amount” in this rule-making. For the MA and Part D programs, we define overpayment in the regulation as “funds” the organization has received to which it is not entitled, and then defines “funds” as any payment based on data submitted by an MA or Part D organization. Because of the nature of the Part C and Part D programs, the key focus in implementing these statutory provisions for the MA and Part D programs is thus correcting the incorrect data that the organization submitted to CMS that resulted in an overpayment. We will then run reconciliation on its routine operational schedule to recover overpayment amounts based on the corrected data. The purpose of the 60 days is to provide the MA or Part D organization with sufficient time to correct the incorrect data submitted to CMS using established data correction processes. MA organizations and Part D sponsors are deemed to have returned the overpayment when they have taken the actions to submit the corrected data that is the source of the identified overpayment. Within the 60 days the MA organization and Part D sponsor must also report the overpayment amount (or estimated amount). If an estimated overpayment amount is reported, it may be higher or lower than the actual overpayment amount recovered because additional payment data submitted into the CMS payment system from other sources may be incorporated into the payment calculations.

Comment: A commenter stated that it is unclear what may occur post-reconciliation if both parties have been overpaid. For example, if CMS owes the Part D sponsor \$10 million due to activity post-reconciliation and a \$2 million overpayment is discovered, the commenter questioned whether we will still require that the \$2 million be refunded within 60 days or whether the sponsor will be allowed to offset amounts owed by CMS. The commenter recommended that if an overpayment would be reduced or fully covered by a reopening, that CMS allow sponsors to request a reopening and offset the reopening amount due from the

submitted by every provider, while others thought this implied a restriction on the ability of plans to identify what medical records to review. Other commenters believed the proposed amendment limited plans' ability to review medical records for operational purposes other than risk-adjusted payment, such as focusing on only a portion of a medical record for a subset of beneficiaries in order to enhance HEDIS scores, conduct contract compliance reviews, and validate claims processing and billing.

Finally, a few commenters argued that CMS should offset the payment impact of diagnoses an MA organization submitted to CMS that were later found through medical record reviews to not be supported by medical record documentation by adjusting the amount of CMS' overpayment to the MA organization for the level of error in equivalent diagnoses in FFS claims data. Specifically, the commenters argued that CMS should give MA organizations a credit for erroneous diagnoses they submitted from their providers' claims up to the rate identified by CMS as the applicable FFS Adjustor in the RADV program. The commenters also argued that there is no reason to require that both MA and FFS diagnosis data be scrutinized for error rates when determining retroactive payment adjustments, while not engaging in a similar adjustment process when paying plans prospectively.

Response: We thank the commenters for their input. We are not finalizing the proposed amendment to § 410.322(e).

However, we emphasize that our decision to not finalize this regulatory proposal does not change CMS' existing contractual requirement that MA organizations must certify (based on best knowledge, information, and belief) the accuracy, completeness, and truthfulness of the risk adjustment data they submit to CMS. Further, this decision does not change the long-standing risk adjustment data requirement that a diagnosis submitted to CMS by an MA organization for payment purposes must be supported by medical record documentation.

Comment: A few commenters supported CMS' proposal to remove the current date of January 31 as the annual final risk adjustment data submission deadline and replace it with the provision that CMS will announce the deadline annually, with the proviso that CMS' timing of this annual deadline always allows sufficient opportunity for organizations to make final data submissions. Several other commenters stated their concern about this proposed change in deadline, including a concern

that CMS might announce a deadline earlier than January 31 in some years. These commenters requested that CMS clarify that the annual deadline would never be before January 31, and a few commenters suggested that the regulation state that the deadline is January 31 but may be extended. Finally, a few commenters requested that CMS not change the January 31 date to a floating date, in order to allow operational stability.

Response: We are not finalizing this proposal at this time.

Comment: Many commenters disagreed with CMS' proposal under § 410.322(g)(2) that, after the final risk adjustment data submission deadline, CMS would permit submission of data to correct overpayments but not permit late submission of diagnosis data that would result in additional payment, asserting that this asymmetrical approach does not promote CMS' stated goal of improving payment accuracy. The commenters maintained that an MA organization should be allowed to submit additional diagnoses after the final risk adjustment data submission deadline to correct not only an overpayment to the MA organization, but also an underpayment. A commenter recommended that, after the final deadline, MA organizations should be able to submit paired deletions-additions of diagnoses as long as the result is not an increased payment to the organization but a smaller reduction in payment than would otherwise occur if only the deletion were submitted; for example, an MA organization may want to delete the diagnosis code for diabetes with acute complications and replace it with the code for diabetes without complications so that it loses only some of the payment. Finally, a commenter requested that CMS allow exceptions to the general rule that no new diagnoses may be submitted after the final risk adjustment data submission deadline for special circumstances such as system failures, file formatting issues, and other technical problems.

Response: For a given payment year (which is a calendar year), CMS applies diagnoses from the previous year (the data collection year) to calculate beneficiary risk scores used to risk-adjust payments to MA organizations in the payment year. MA organizations must finalize any corrections and new submissions of diagnosis data for a data collection year by January 31 of the year after the payment year. That is, we allow 13 months after the end of the diagnosis year for MA organizations to identify errors in data they have submitted (that is, deleting diagnoses from CMS' systems) and to identify and

submit additional diagnoses that were not submitted during the diagnosis year. We believe that is a very reasonable period of time to finalize risk adjustment data for a diagnosis year.

These risk adjustment processes have been in place for many years, and we believe it is the responsibility of MA organizations to have internal audit processes in place allowing them to finalize their risk adjustment data for a payment year by the conclusion of this 13-month period. Therefore, we are finalizing, as proposed, the provision codified at § 422.310(g)(2)(ii) that, after the final deadline, an MA organization may submit risk adjustment data to correct overpayments but not to add payments.

Comment: A commenter supported CMS' proposal to limit post-deadline modifications to deletions of incorrect diagnoses but requested that CMS offer one additional opportunity to eliminate unsupported diagnosis codes in advance of a RADV audit.

Response: When we are preparing to initiate a RADV audit cycle, all MA organizations are notified that they should eliminate unsupported diagnoses from CMS' systems by a date specified in the notice. Subsequently, we inform the contracts that have been selected for RADV.

In summary, after consideration of the public comments received, we are not finalizing the proposed amendment to § 410.322(e). Also, we are not finalizing at this time our proposal at § 422.310(g)(2)(ii) to remove the current date of January 31 as the annual final risk adjustment data submission deadline and replace it with the provision that CMS will announce the deadline annually. We are finalizing as proposed the restructuring of §§ 422.310(g)(2) and the 422.310(g)(2)(ii) provision to prohibit submission of diagnoses for additional payment after the final risk adjustment data submission deadline. We did not receive any comments on subparagraph (g)(3) and are finalizing it as proposed.

3. RADV Appeals

a. Background

We published final Risk Adjustment Data Validation (RADV) appeals regulations in the April 15 2010 **Federal Register** (75 FR 19677). These rules were proposed and finalized under our authority to establish Medicare Advantage (MA) program standards at section 1856(b)(1) of the Act and are found at § 422.311 et seq. Since finalizing these rules in 2010, we conducted additional RADV audits and determined that some of the appeals

1 Q. You can answer, Dr. Tudor.

2 A. The answer is: Probably.

3 Q. Can you --

4 A. In general -- in general, I would say
5 that you have to design medical record review to
6 look for both adds and deletes.

7 Q. Dr. Tudor, sitting here today, can you
8 identify any Medicare Advantage plan that you
9 advised that they had to design their chart-review
10 programs to look to delete diagnosis codes in
11 addition to add?

12 A. I don't remember which specific
13 plans --

14 MS. CHEN: Object to form.

15 BY MR. BAAK:

16 Q. The answer to my question, Dr. Tudor,
17 is: Sitting here today, you can't identify any
18 Medicare Advantage plan that you recall telling
19 that they needed to design their chart review to
20 look to delete diagnosis codes in addition to add,
21 correct?

22 A. That's correct.

23 Q. I want to back up in time. When did
24 you first join CMS?

25 A. 1992.

CERTIFICATE OF REPORTER

I, Cindy A. Hayden, Registered Merit Reporter and Notary Public for the State of Maryland at Large, do hereby certify that the foregoing transcript is a true, accurate, and complete record.

I further certify that I am neither related to nor counsel for any party to the cause pending or interested in the events thereof.

Witness my hand, I have hereunto affixed my official seal this 26th day of August, 2022.

CONFIDENTIAL - SUBJECT TO PROTECTIVE ORDER

Volume 2
DEPOSITION OF CHRISTOPHER BRESETTE
As 30(b)(6) Designee 5 of
The United States

(Via Zoom Videoconference)
August 9, 2023

Reported by: John L. Harmonson, RPR
Job No. 1001591

1 coder to take another look to determine whether
2 they agreed with the first senior coder who
3 identified a new HCC that had not been submitted by
4 the MAO; correct?

5 A. Correct.

6 Q. Why was the second senior coder -- why
7 wasn't that reviewed blind as well?

8 A. This was a process that we believed was
9 reasonable to accomplish our audit objective.

10 Q. Would you agree that coders can
11 sometimes miss diagnosis codes on a blind review?

12 MS. OBEREMBT: Objection; calls for
13 speculation.

14 THE WITNESS: I would have to speculate
15 on that. We've asked the senior coders to
16 determine whether they believe something is -- if a
17 diagnosis is supported or not.

18 BY MS. SCHEFFLER DO:

19 Q. In your preparation for today and
20 reviewing all of these audits, you're not aware of
21 any instances where the first senior coder
22 conducting a blind review determined that an HCC

1 was not validated but OIG ultimately determined
2 that it in fact was validated?

3 A. I'm not going to say that it did or did
4 not happen. It very well may have happened. I did
5 not study the results of the first senior coder and
6 the second senior coder.

7 Q. We can go back to that and look at some
8 specific examples to refresh your recollection.

9 A. Absolutely.

10 Q. So if the second senior coder determines
11 that the HCC that the first senior coder -- let me
12 restart that.

13 If the second senior coder determines
14 that a particular HCC is validated despite the
15 first senior coder determining that it was not
16 supported, then it escalated to a physician to
17 independently review the medical record and make a
18 final determination. Is that right?

19 A. It's mostly correct. There were
20 oftentimes where the senior coders -- I shouldn't
21 say often. There was the opportunity and there
22 were times that existed that either the first

1 senior coder or the second senior coder asked for
2 assistance with that physician reviewer to make the
3 determination.

4 There were, as you say, instances in
5 which the physician reviewer would review that. I
6 believe independently, but I don't want to say that
7 it was exclusively independently. A lot of times I
8 believe it was in consultation with the senior
9 coder to make that determination.

10 Q. So are you saying that the example that
11 I gave, that's not the only time a physician would
12 weigh in?

13 A. Correct.

14 Q. But you're not -- you're agreeing that
15 if the second senior coder found support in that
16 example, then a physician would independently
17 review the medical record to make the final
18 determination?

19 A. I would agree with that.

20 Q. Was the physician review blind as well?

21 A. No, it was not. And independently is
22 correct. So my apologies. I see "independently"

1 C E R T I F I C A T E

3 DISTRICT OF COLUMBIA

4 I, JOHN L. HARMONSON, a Notary Public
5 within and for the District of Columbia, do hereby
6 certify that CHRISTOPHER BRESETTE, the witness
7 whose deposition is hereinbefore set forth, was
8 duly sworn by me and that such deposition is a true
9 record of the testimony given by such witness.

10 That before completion of the
11 proceedings, review and signature of the transcript
12 was reserved.

13 I further certify that I am not related
14 to any of the parties to this action by blood or
15 marriage; and that I am in no way interested in the
16 outcome of this matter.

17 IN WITNESS WHEREOF, I have hereunto set
18 my hand this 11th day of August, 2023.
