In the case of two BBRA provisions, we have reflected our interpretation of the provisions in the regulations text. This interpretation is already in effect, and has been applied, as the provisions in question are already in effect. These provisions are section 501(c) of the BBRA, which permits an M+C organization that has reduced a plan service area to offer continued enrollment to current enrollees in all or a portion of the reduced areas, and section 512 that introduces "bonus payments" to encourage organizations to offer M+C plans in areas without such plans. Both of these provisions are discussed in detail in section I.C of this preamble, and both required a limited amount of interpretation of the statute in order to implement the provisions on a timely basis. For example, with regard to the continuation of enrollment option (which was effective upon enactment of the BBRA), we have clarified that an M+C organization may offer enrollment in any plan it offers in the affected area, rather than solely the plan in which an individual was previously enrolled. This clarification results in greater flexibility for M+C enrollees and is consistent with our interpretation of a similar statutory provision affecting individuals with ESRD. Similarly, with regard to the bonus payment provisions (which took effect as of January 1, 2000), we have indicated that if an M+C organization or organizations offers two or more new plans simultaneously in a given area, the organization could receive the bonus payments for each new plan. We believe this interpretation of the statute clearly is consistent with legislative intent to promote the availability of more M+C alternatives for Medicare beneficiaries.

Policy clarifications of this limited nature were essential to implement these BBRA provisions in a clear and timely manner. Again, it would have been impractical and contrary to the public interest to proceed with proposed rulemaking before implementing the interpretive policies linked with these provisions, nor is such rulemaking required under section 1871(b) of the Act. Thus, we believe that

the "good cause" exemption to notice and comment rulemaking is equally applicable for these BBRA provisions as for the others discussed above, and the same 60-day period for public comment applies.

C. Responses to Comments

As discussed above, a limited number of the provisions set forth in this final rule are subject to a 60-day comment period. Because of the large number of items of correspondence we normally receive on a rule, we are not able to acknowledge or respond to them individually. We will, however, consider all comments that we receive by the date specified in the **DATES** section of this preamble and, if we proceed with subsequent rulemaking, we will respond to the comments in that document.

List of Subjects

42 CFR Part 417

Administrative practice and procedure, Grant programs—health, Health care, health facilities, Health insurance, Health maintenance organizations (HMO), Loan programs—health, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 422

Administrative practice and procedure, Health facilities, Health maintenance organizations (HMO), Medicare+Choice, Penalties, Privacy, Provider-sponsored organizations (PSO), Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, HCFA amends 42 CFR chapter IV as set forth below:

PART 417—HEALTH MAINTENANCE ORGANIZATIONS, COMPETITIVE MEDICAL PLANS, AND HEALTH CARE PREPAYMENT PLANS

1. The authority citation for part 417 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh), secs. 1301, 1306, and 1310 of the Public Health Service Act (2 U.S.C. 300e, 300e–5, 300e–9), and 31 U.S.C. 9701.

2. Revise § 417.402(b) to read as follows:

§ 417.402 Effective date of initial regulations.

(b) The changes made to section 1876 of the Act by section 4002 of the Balanced Budget Act (BBA) of 1997 are incorporated in section 422 except for 1876 cost contracts. Upon enactment of the BBA (August 5, 1997) no new cost

contracts or service area expansions are accepted by HCFA except for current Health Care Prepayment Plans that may convert to 1876 cost contracts. Also, 1876 cost contracts may not be extended or renewed beyond December 31, 2004.

PART 422—MEDICARE+CHOICE PROGRAM

1. The authority citation for part 422 continues to read as follows:

Authority: Secs. 1102, 1851 through 1857, 1859, and 1871 of the Social Security Act (42 U.S.C. 1302, 1395w–21 through 1395w–27, and 1395hh).

2. Section 422.2 is amended by:

A. Revising the definitions of "Basic benefits," "Benefits," "M+C plan," "Mandatory supplemental benefits," "Optional supplemental benefits," "Religious and fraternal (RFB) society," "RFB plan," and "Service area."

B. Adding the definition of "National coverage determination."

C. Removing the definitions of "Emergency medical condition," "Emergency services," and "Urgently needed services."

§ 422.2 Definitions.

* * * * *

Basic benefits means all Medicare-covered benefits (except hospice services) and additional benefits.

Benefits are health care services that are intended to maintain or improve the health status of enrollees, for which the M+C organization incurs a cost or liability under an M+C plan (not solely an administrative processing cost). Benefits are submitted and approved through the ACR process.

* * * * *

M+C plan means health benefits coverage offered under a policy or contract by an M+C organization that includes a specific set of health benefits offered at a uniform premium and uniform level of cost-sharing to all Medicare beneficiaries residing in the service area of the M+C plan (or in individual segments of a service area, under § 422.304(b)(2)).

* * * * *

Mandatory supplemental benefits are health services not covered by Medicare that an M+C enrollee must purchase as part of an M+C plan that are paid for in full, directly by (or on behalf of) Medicare enrollees, in the form of premiums or cost-sharing.

* * * * *

National coverage determination (NCD) means a national policy determination regarding the coverage status of a particular service that HCFA makes under section 1862(a)(1) of the

Act, and publishes as a **Federal Register** notice or HCFA ruling. (The term does not include coverage changes mandated by statute.)

* * * * *

Optional supplemental benefits are health services not covered by Medicare that are purchased at the option of the M+C enrollee and paid for in full, directly by (or on behalf of) the Medicare enrollee, in the form of premiums or cost-sharing. These services may be grouped or offered individually.

* * * * *

Religious and fraternal benefit (RFB) society means an organization that—

(1) Is described in section 501(c)(8) of the Internal Revenue Code of 1986 and is exempt from taxation under section 501(a) of that Act; and

(2) Is affiliated with, carries out the tenets of, and shares a religious bond with, a church or convention or association of churches or an affiliated group of churches.

RFB plan means an M+C plan that is offered by an RFB society.

Service area means a geographic area approved by HCFA within which an M+C-eligible individual may enroll in a particular M+C plan offered by an M+C organization. Each M+C plan must be available to all M+C-eligible individuals within the plan's service area. In deciding whether to approve an M+C plan's proposed service area, HCFA considers the following criteria:

(1) Whether the area meets the "county integrity rule" that a service area generally consists of a full county or counties. However, HCFA may approve a service area that includes a portion of a county if it determines that the "partial county" area is necessary, nondiscriminatory, and in the best interests of the beneficiaries.

(2) The extent to which the proposed services area mirrors service areas of existing commercial health care plans or M+C plans offered by the organization.

(3) For M+C coordinated care plans and network M+C MSA plans, whether the contracting provider network meets the access and availability standards set forth in § 422.112. Although not all contracting providers must be located within the plan's service area, HCFA must determine that all services covered under the plan are accessible from the service area.

(4) For non-network M+C MSA plans, HCFA may approve single county non-network M+C MSA plans even if the M+C organization's commercial plans have multiple county service areas.

3. In § 422.4, revise paragraph (a)(1)(iii) and add a new paragraph (a)(1)(iv), to read as follows:

§ 422.4 Types of M+C plans.

(a) * * *

(1) * * *

(iii) Coordinated care plans include plans offered by health maintenance organizations (HMOs), provider-sponsored organizations (PSOs), preferred provider organizations (PPOs) as specified in paragraph (a)(1)(iv) of this section, RFBs, and other network plans (except network MSA plans).

(iv) A PPO plan is a plan that has a network of providers that have agreed to a contractually specified reimbursement for covered benefits with the organization offering the plan; provides for reimbursement for all covered benefits regardless of whether the benefits are provided within the network of providers; and is offered by an organization that is not licensed or organized under State law as an HMO.

* * * * *

4. Revise § 422.8 to read as follows:

§ 422.8 Evaluation and determination procedures.

(a) *Basis for evaluation and determination.* (1) HCFA evaluates an application for an M+C contract on the basis of information contained in the application itself and any additional information that HCFA obtains through on-site visits, public hearings, and any other appropriate procedures.

(2) If the application is incomplete, HCFA notifies the contract applicant and allows 60 days from the date of the notice for the contract applicant to furnish the missing information.

(3) After evaluating all relevant information, HCFA determines whether the contract applicant's application meets the applicable requirements of § 422.6.

(b) *Use of information from a prior contracting period.* If an M+C organization, HMO, competitive medical plan, or health care prepayment plan has failed to comply with the terms of a previous year's contract with HCFA under title XVIII of the Act, or has failed to complete a corrective action plan during the term of the contract, HCFA may deny an application from a contract applicant based on the contract applicant's failure to comply with that prior contract with HCFA even if the contract applicant meets all of the current requirements.

(c) *Notice of determination.* HCFA notifies each applicant that applies for an M+C contract under this part of its determination and the basis for the determination. The determination may be approval, intent to deny, or denial.

(d) *Approval of application.* If HCFA approves the application, it gives

written notice to the contract applicant, indicating that it meets the requirements for an M+C contract.

(e) *Intent to deny.* (1) If HCFA finds that the contract applicant does not appear to meet the requirements for an M+C organization and appears to be able to meet those requirements within 60 days, HCFA gives the contract applicant notice of intent to deny the application for an M+C contract and a summary of the basis for this preliminary finding.

(2) Within 60 days from the date of the notice, the contract applicant may respond in writing to the issues or other matters that were the basis for HCFA's preliminary finding and may revise its application to remedy any defects HCFA identified.

(f) *Denial of application.* If HCFA denies the application, it gives written notice to the contract applicant indicating—

(1) That the contract applicant does not meet the contract requirements under part C of title XVIII of the Act;

(2) The reasons why the contract applicant does not meet the contract requirements; and

(3) The contract applicant's right to request reconsideration in accordance with the procedures specified in subpart N of this part.

(g) *Oversight of continuing compliance.* (1) HCFA oversees an M+C organization's continued compliance with the requirements for an M+C organization.

(2) If an M+C organization no longer meets those requirements, HCFA terminates the contract in accordance with § 422.510.

5. Revise § 422.10 to read as follows:

§ 422.10 Cost-sharing in enrollment-related costs (M+C user fee).

(a) *Basis and scope.* This section implements that portion of section 1857 of the Act that pertains to cost-sharing in enrollment-related costs. It sets forth the procedures that HCFA follows to determine the aggregate annual "user fee" to be contributed by M+C organizations and to assess the required user fees for M+C plans offered by M+C organizations.

(b) *Purpose of assessment.* Section 1857(e)(2) of the Act authorizes HCFA to charge and collect from each M+C plan offered by an M+C organization its pro rate share of fees for administering section 1851 of the Act, relating to dissemination of enrollment information; and section 4360 of the Omnibus Budget Reconciliation Act of 1990, relating to the health insurance counseling and assistance program.

(c) *Applicability.* The fee assessment also applies to those demonstrations for which enrollment is effected or coordinated under section 1851 of the Act.

(d) *Collection of fees.* (1) *Timing of collection.* HCFA collects the fees over 9 consecutive months beginning with January of each fiscal year.

(2) *Amount to be collected.* The aggregate amount of fees for a fiscal year is the lesser of—

(i) The estimated costs to be incurred by HCFA in that fiscal year to carry out the activities described in paragraph (b) of this section; or

(ii) For fiscal year 2000, \$100 million and for fiscal year 2001 and each succeeding year, the M+C portion (as defined in paragraph (e) of this section) of \$100 million.

(e) *M+C portion.* In this section, the term “M+C portion” means, for a fiscal year, the ratio, as estimated by the Secretary of the average number of individuals enrolled in M+C plans during the fiscal year to the average number of individuals entitled to benefits under part A, and enrolled under part B, during the fiscal year.

(f) *Assessment methodology.* (1) The amount of the M+C portion of the user fee each M+C organization must pay is assessed as a percentage of the total Medicare payments to each organization. HCFA determines this percentage rate using the following formula:

A times B divided by C where—

A is the total estimated January payments to all organizations subject to the assessment;

B is the 9-month (January through September) assessment period; and

C is the total fiscal year M+C user fee assessment amount determined in accordance with paragraph (d)(2) of this section.

(2) HCFA determines each organization's pro rata share of the annual fee on the basis of the organization's calculated monthly payment amount during the 9 consecutive months beginning with January. HCFA calculates each organization's monthly pro rata share by multiplying the established percentage rate by the total monthly calculated Medicare payment amount to the organization as recorded in HCFA's payment system on the first day of the month.

(3) HCFA deducts the organization's fee from the amount of Federal funds otherwise payable to the organization for that month under the M+C program.

(4) If assessments reach the amount authorized for the year before the end of September, HCFA discontinues assessment.

(5) If there are delays in determining the amount of the annual aggregate fees specified in paragraph (d)(2) of this section, or the fee percentage rate specified in paragraph (f)(2), HCFA may adjust the assessment time period and the fee percentage amount.

6. Revise § 422.50(a) to read as follows:

§ 422.50 Eligibility to elect an M+C plan.

(a) An individual is eligible to elect an M+C plan if he or she—

(1) Is entitled to Medicare under Part A and enrolled in Part B (except that an individual entitled only to Part B and who was enrolled in an HMO or CMP with a risk contract under part 417 of this chapter on December 31, 1998 may continue to be enrolled in the M+C organization as an M+C plan enrollee);

(2) Has not been medically determined to have end-stage renal disease, except that an individual who develops end-stage renal disease while enrolled in an M+C plan or in a health plan offered by the M+C organization is eligible to elect an M+C plan offered by that organization;

(3) Meets either of the following residency requirements:

(i) Resides in the service area of the M+C plan.

(ii) Resides outside of the service area of the M+C plan and is enrolled in a health plan offered by the M+C organization during the month immediately preceding the month in which the individual is entitled to both Medicare Part A and Part B, provided that an M+C organization chooses to offer this option and that HCFA determines that all applicable M+C access requirements of § 422.112 are met for that individual through the M+C plan's established provider network.

The M+C organization must furnish the same benefits to these enrollees as to enrollees who reside in the service area;

(4) Has been a member of an Employer Group Health Plan (EGHP) that includes the elected M+C plan, even if the individual lives outside of the M+C plan service area, provided that an M+C organization chooses to offer this option and that HCFA determines that all applicable M+C access requirements at § 422.12 are met for that individual through the M+C plan's established provider network. The M+C organization must furnish the same benefits to all enrollees, regardless of whether they reside in the service area;

(5) Completes and signs an election form and gives information required for enrollment; and

(6) Agrees to abide by the rules of the M+C organization after they are

disclosed to him or her in connection with the election process.

* * * * *

7. In § 422.54, the heading of paragraph (b) and paragraphs (c)(2), (d)(1), and (d)(3) are revised to read as follows:

§ 422.54 Continuation of enrollment.

* * * * *

(b) *Basic rule.* * * *

(c) * * *

(2) An enrollee who moves out of the service area into the geographic area designated as the continuation area has the choice of continuing enrollment or disenrolling from the plan. The enrollee must make the choice of continuing enrollment in a manner specified by HCFA. If no choice is made, the enrollee must be disenrolled from the plan.

* * * * *

(d) * * *

(1) *Continuation of enrollment benefits.* The M+C organization must, at a minimum, provide or arrange for the Medicare-covered benefits as described in § 422.101(a).

* * * * *

(3) *Reasonable cost-sharing.* For services furnished in the continuation area, an enrollee's cost-sharing liability is limited to the cost-sharing amounts required in the M+C plan's service area (in which the enrollee no longer resides).

* * * * *

8. Section § 422.60 is amended by:

A. Revising paragraph (b)(1).

B. Adding paragraph (b)(3).

C. Revising paragraphs (e)(6), (f)(1), and (f)(3).

§ 422.60 Election process.

* * * * *

(b) *Capacity to accept new enrollees.*

(1) M+C organizations may submit information on enrollment capacity of plans they offer by July 1 of each year as provided by § 422.306(a)(1).

* * * * *

(3) HCFA considers enrollment limit requests for an M+C plan service area, other than those submitted with the adjusted community rate proposal, or for a portion of the plan service area, only if the health and safety of beneficiaries is at risk, such as if the provider network is not available to serve the enrollees in all or a portion of the service area.

* * * * *

(e) * * *

(6) Upon receipt of the election form or from the date a vacancy occurs for an individual who was accepted for future enrollment, the M+C organization transmits, within the timeframes

specified by HCFA, the information necessary for HCFA to add the beneficiary to its records as an enrollee of the M+C organization.

(f) * * *

(1) In cases in which an M+C organization has both a Medicare contract and a contract with an employer group health plan, and in which the M+C organization arranges for the employer to process election forms for Medicare-entitled group members, who wish to enroll under the Medicare contract, the effective date of the election may be retroactive. Consistent with § 422.250(b), payment adjustments based on a retroactive effective date may be made for up to a 90-day period.

* * * * *

(3) Upon receipt of the election form from the employer, the M+C organization must submit the enrollment within timeframes specified by HCFA.

9. Section 422.62 is amended by:

A. Removing, in paragraph (a)(3), the phrase “as provide under” and adding in its place the phrase “as provided under”.

B. Revising paragraphs (a)(4)(i) and (a)(5)(i).

C. Adding new paragraph (a)(6).

D. Revising paragraph (b)(1).

§ 422.62 Election of coverage under an M+C plan.

(a) * * *

(4) * * *

(i) Except as provided in paragraphs (a)(4)(ii), (a)(4)(iii), and (a)(6) of this section, an individual who is eligible to elect an M+C plan in 2002 may elect an M+C plan or change his or her election from an M+C plan to original Medicare or to a different M+C plan, or from original Medicare to an M+C plan, but only once during the first 6 months of the year.

* * * * *

(5) * * *

(i) For 2003 and subsequent years, except as provided in paragraphs (a)(5)(ii), (a)(5)(iii), and (a)(6) of this section, an individual who is eligible to elect an M+C plan may elect an M+C plan, change his or her election from an M+C plan to original Medicare or to a different M+C plan, or from original Medicare to an M+C plan, but only once during the first 3 months of the year.

* * * * *

(6) *Open enrollment period for institutionalized individuals.* After 2001, an individual who is eligible to elect an M+C plan and who is institutionalized, as defined by HCFA, is not limited (except as provided for in

paragraph (d) of this section for M+C MSA plans) in the number of elections or changes he or she may make. Subject to the M+C plan being open to enrollees as provided under § 422.60(a)(2), an M+C eligible institutionalized individual may at any time elect an M+C plan or change his or her election from an M+C plan to original Medicare, to a different M+C plan, or from original Medicare to an M+C plan.

(b) * * *

(1) HCFA or the organization has terminated the organization's contract for the plan, discontinued the plan in the area in which the individual resides, or the organization has notified the individual of the impending termination of the plan, or the impending discontinuation of the plan in the area in which the individual resides.

* * * * *

10. Section 422.64 is revised to read as follows:

§ 422.64 Information about the M+C program.

Each M+C organization must provide, on an annual basis, and in a format and using standard terminology that may be specified by HCFA, the information necessary to enable HCFA to provide to current and potential beneficiaries the information they need to make informed decisions with respect to the available choices for Medicare coverage.

11. Section § 422.66 is amended by:

A. Republishing the heading of paragraph (b) and the introductory text for paragraph (b)(3).

B. Revising paragraphs (b)(3)(i), (d)(1), (d)(3), the introductory text for paragraph (e), and paragraphs (e)(2), and (f).

§ 422.66 Coordination of enrollment and disenrollment through M+C organizations.

* * * * *

(b) *Disenrollment*—

* * * * *

(3) *Responsibilities of the M+C organization.* The M+C organization must—

(i) Submit a disenrollment notice to HCFA within timeframes specified by HCFA;

* * * * *

(d) * * *

(1) *Basic rule.* An M+C plan offered by an M+C organization must accept any individual (regardless of whether the individual has end-stage renal disease) who is enrolled in a health plan offered by the M+C organization during the month immediately preceding the month in which he or she is entitled to both Part A and Part B, and who meets the eligibility requirements at § 422.50.

* * * * *

(3) *Effective date of conversion.* If an individual chooses to remain enrolled with the M+C organization as an M+C enrollee, the individual's conversion to an M+C enrollee is effective the month in which he or she is entitled to both Part A and Part B in accordance with the requirements in paragraph (d)(5) of this section.

* * * * *

(e) *Maintenance of enrollment.* An individual who has made an election under this section is considered to have continued to have made that election until either of the following, which ever occurs first:

* * * * *

(2) The elected M+C plan is discontinued or no longer serves the area in which the individual resides, the organization does not offer, or the individual does not elect, the option of continuing enrollment, as provided under either § 422.54 or § 422.74(b)(3)(ii).

(f) *Exception for employer group health plans.* (1) In cases when an M+C organization has both a Medicare contract and a contract with an employer group health plan, and in which the M+C organization arranges for the employer to process election forms for Medicare-entitled group members who wish to disenroll from the Medicare contract, the effective date of the election may be retroactive. Consistent with § 422.250(b), payment adjustments based on a retroactive effective date may be made for up to a 90-day period.

(2) Upon receipt of the election form from the employer, the M+C organization must submit a disenrollment notice to HCFA within timeframes specified by HCFA.

12. Revise § 422.68(c) to read as follows:

§ 422.68 Effective dates of coverage and change of coverage.

* * * * *

(c) *Open enrollment periods.* For an election, or change in election, made during an open enrollment period as described in § 422.62(a)(3) through (a)(6), coverage is effective as of the first day of the first calendar month following the month in which the election is made, except that, if the election or change in election is made after the 10th day of any calendar month, then the election shall not take effect until the first day of the second calendar month following the date on which the election is made.

* * * * *

13. Section 422.74 is amended by revising paragraphs (b)(2)(i), (b)(3), (c),

(d)(1), the heading of paragraph (d)(3), (d)(4), and (d)(7) to read as follows:

§ 422.74 Disenrollment by the M+C organization.

* * * * *

(b) * * *
(2) * * *

(i) The individual no longer resides in the M+C plan's service area as specified under paragraph (d)(4) of this section, is no longer eligible under § 422.50(a)(3)(ii), and optional continued enrollment has not been offered or elected under § 422.54.

* * * * *

(3) *Plan termination or reduction of area where plan is available.* (i) *General rule.* An M+C organization that has its contract for an M+C plan terminated, that terminates an M+C plan, or that discontinues offering the plan in any portion of the area where the plan had previously been available, must disenroll affected enrollees in accordance with the procedures for disenrollment set forth at paragraph (d)(7) of this section, unless the exception in paragraph (b)(3)(ii) of this section applies.

(ii) *Exception.* When an M+C organization discontinues offering an M+C plan in a portion of its service area, the M+C organization may elect to offer enrollees residing in all or portions of the affected area the option to continue enrollment in an M+C plan offered by the organization, provided that there is no other M+C plan offered in the affected area at the time of the organization's election. The organization may require an enrollee who chooses to continue enrollment to agree to receive the full range of basic benefits (excluding emergency and urgently needed care) exclusively through facilities designated by the organization within the plan service area.

(c) *Notice requirement.* If the disenrollment is for any of the reasons specified in paragraphs (b)(1), (b)(2)(i), or (b)(3) of this section (that is, other than death or loss of entitlement to Part A or Part B) the M+C organization must give the individual a written notice of the disenrollment with an explanation of why the M+C organization is planning to disenroll the individual. Notices for reasons specified in paragraphs (b)(1) through (b)(2)(i) must—

(1) Be mailed to the individual before submission of the disenrollment notice to HCFA; and

(2) Include an explanation of the individual's right to a hearing under the M+C organization's grievance procedures.

(d) * * *

(1) *Monthly basic and supplementary premiums are not paid timely.* An M+C organization may disenroll an individual from the M+C plan for failure to pay any basic and supplementary premiums under the following circumstances:

(i) The M+C organization makes a reasonable effort to collect unpaid premium amounts by sending a written notice of nonpayment to the enrollee within 20 days after the date the delinquent charges were due—

(A) Alerting the individual that the premiums are delinquent;

(B) Providing the individual with an explanation of the disenrollment procedures and any lock-in requirements of the M+C plan; and

(C) Advising that failure to pay the premiums within the 90-day grace period will result in termination of M+C coverage;

(ii) The M+C organization only disenrolls a Medicare enrollee when the organization has not received payment within 90 days after the date it has sent the notice of nonpayment to the enrollee.

(iii) The M+C organization gives the individual a written notice of disenrollment that meets the requirement set forth in paragraph (c) of this section.

(iv) If the enrollee fails to pay the premium for optional supplemental benefits (that is, a package of benefits that an enrollee is not required to accept), but pays the basic premium and any mandatory supplemental premium, the M+C organization has the option to discontinue the optional supplemental benefits and retain the individual as an M+C enrollee.

* * * * *

(3) *Individual commits fraud or permits abuse of enrollment card.* * * *

* * * * *

(4) *Individual no longer resides in the M+C plan's service area.* (i) *Basis for disenrollment.* Unless continuation of enrollment is elected under § 422.54, the M+C organization must disenroll an individual if the M+C organization establishes, on the basis of a written statement from the individual or other evidence acceptable to HCFA, that the individual has permanently moved out of a plan's service area. If the individual has not moved from the M+C plan's service area, but has left the plan's service area for more than 6 months, the M+C organization must disenroll the individual.

(ii) *Special rule.* The M+C organization must disenroll an individual who is enrolled in the M+C

plan, under the eligibility requirements at § 422.50(a)(3)(ii) or (a)(4), if the organization establishes, on the basis of a written statement from the individual or other evidence acceptable to HCFA, that the individual has permanently moved from the residence in which she or he resided at the time of enrollment in the M+C plan, to an area outside the M+C plan service area (unless continuation of enrollment is elected under § 422.54). If the individual has not permanently moved from the residence in which she or he resided at the time of enrollment in the M+C plan, but has left the residence for over 6 months, the M+C organization must disenroll the individual.

(iii) *Notice of disenrollment.* The M+C organization must give the individual a written notice of the disenrollment that meets the requirements set forth in paragraph (c) of this section.

* * * * *

(7) *Plan termination or area reduction.* (i) When an M+C organization has its contract for an M+C plan terminated, terminates an M+C plan, or discontinues offering the plan in any portion of the area where the plan had previously been available, the M+C organization must give each affected M+C plan enrollee a written notice of the effective date of the plan termination or area reduction and a description of alternatives for obtaining benefits under the M+C program.

(ii) The notice must be sent before the effective date of the plan termination or area reduction, and in the timeframes specified in § 422.506(a)(2).

* * * * *

14. Section 422.80 is amended by:
A. Republishing the introductory text in paragraph (b)(5).

B. Revising paragraph (b)(5)(v).

C. Republishing the introductory text in paragraph (c).

D. Revising paragraph (c)(4).

E. Adding new paragraphs (e)(1)(vi), (e)(1)(vii), and (e)(1)(viii).

F. Revising paragraph (f).

§ 422.80 Approval of marketing materials and election forms.

* * * * *

(b) * * *

(5) Examples of marketing materials include, but are not limited to:

* * * * *

(v) Membership communication materials such as membership rules, subscriber agreements (evidence of coverage), member handbooks and wallet card instructions to enrollees.

* * * * *

(c) *Guidelines for HCFA review.* In reviewing marketing material or election

forms under paragraph (a) of this section, HCFA determines that the marketing materials:

* * * * *

(4) Are not materially inaccurate or misleading or otherwise make material misrepresentations.

* * * * *

(e) * * *

(1) * * *

(vi) Use providers or provider groups to distribute printed information comparing the benefits of different health plans unless the materials have the concurrence of all M+C organizations involved and have received prior approval by HCFA. Physicians or providers may distribute health plan brochures (exclusive of application forms) at a health fair or in their offices. Physicians may discuss, in response to an individual patient's inquiry, the various benefits in different health plans.

(vii) Accept plan applications in provider offices or other places where health care is delivered.

(viii) Employ M+C plan names that suggest that a plan is not available to all Medicare beneficiaries. This prohibition shall not apply to M+C plan names in effect on July 31, 2000.

* * * * *

(f) *Employer group retiree marketing.* M+C organizations may develop marketing materials designed for members of an employer group who are eligible for employer-sponsored benefits through the M+C organization, and furnish these materials only to the group members. While the materials must be submitted for approval under paragraph (a) of this section, HCFA will not review portions of these materials that relate to employer group benefits.

15. Revise § 422.100 to read as follows:

§ 422.100 General requirements.

(a) *Basic rule.* Subject to the conditions and limitations set forth in this subpart, an M+C organization offering an M+C plan must provide enrollees in that plan with coverage of the basic benefits described in paragraph (c) of this section (and, to the extent applicable, the benefits described in § 422.102) by furnishing the benefits directly or through arrangements, or by paying for the benefits. HCFA reviews these benefits subject to the requirements of § 422.100(g) and the requirements in subpart G of this part.

(b) *Services of noncontracting providers and suppliers.* (1) An M+C organization must make timely and reasonable payment to or on behalf of the plan enrollee for the following

services obtained from a provider or supplier that does not contract with the M+C organization to provide services covered by the M+C plan:

(i) Ambulance services dispatched through 911 or its local equivalent as provided in § 422.113.

(ii) Emergency and urgently needed services as provided in § 422.113.

(iii) Maintenance and post-stabilization care services as provided in § 422.113.

(iv) Renal dialysis services provided while the enrollee was temporarily outside the plan's service area.

(v) Services for which coverage has been denied by the M+C organization and found (upon appeal under subpart M of this part) to be services the enrollee was entitled to have furnished, or paid for, by the M+C organization.

(2) An M+C plan (other than an M+C MSA plan) offered by an M+C organization satisfies paragraph (a) of this section with respect to benefits for services furnished by a noncontracting provider if that M+C plan provides payment in an amount the provider would have received under original Medicare (including balance billing permitted under Medicare Part A and Part B).

(c) *Types of benefits.* An M+C plan includes at a minimum basic benefits, and also may include mandatory and optional supplemental benefits.

(1) Basic benefits are all Medicare-covered services, except hospice services, and additional benefits as defined in § 422.2 and meeting all requirements in § 422.312.

(2) Supplemental benefits, which consist of—

(i) Mandatory supplemental benefits are services not covered by Medicare that an M+C enrollee must purchase as part of an M+C plan that are paid for in full, directly by (or on behalf of) Medicare enrollees, in the form of premiums or cost-sharing.

(ii) Optional supplemental benefits are health services not covered by Medicare that are purchased at the option of the M+C enrollee and paid for in full, directly by (or on behalf of) the Medicare enrollee, in the form of premiums or cost-sharing. These services may be grouped or offered individually.

(d) *Availability and structure of plans.* An M+C organization offering an M+C plan must offer it—

(1) To all Medicare beneficiaries residing in the service area of the M+C plan;

(2) At a uniform premium, with uniform benefits and cost-sharing throughout the plan's service area, or

segment of service area as provided in § 422.304(b)(2).

(e) *Terms of M+C plans.* Terms of M+C plans described in instructions to beneficiaries, as required by § 422.111, will include basic and supplemental benefits and terms of coverage for those benefits.

(f) *Multiple plans in one service area.* An M+C organization may offer more than one M+C plan in the same service area subject to the conditions and limitations set forth in this subpart for each M+C plan.

(g) *HCFA review and approval of M+C benefits.* HCFA reviews and approves M+C benefits using written policy guidelines and requirements in this part, operational policy letters, and other HCFA instructions to ensure that—

(1) Medicare-covered services meet HCFA fee-for-service guidelines;

(2) M+C organizations are not designing benefits to discriminate against beneficiaries; and

(3) Benefit design meets other M+C program requirements.

(h) *Benefits affecting screening mammography, influenza vaccine, and pneumococcal vaccine.* (1) Enrollees of M+C organizations may directly access (through self-referral) screening mammography and influenza vaccine.

(2) M+C organizations may not impose cost-sharing for influenza vaccine and pneumococcal vaccine on their M+C plan enrollees.

(i) *Requirements relating to Medicare conditions of participation.* Basic benefits must be furnished through providers meeting the requirements in § 422.204(b)(3).

(j) *Provider networks.* The M+C plans offered by an M+C organization may share a provider network as long as each M+C plan independently meets the access and availability standards described at § 422.112, as determined by HCFA.

16. Revise § 422.101 to read as follows:

§ 422.101 Requirements relating to basic benefits.

Except as specified in § 422.264 (for entitlement that begins or ends during a hospital stay) and § 422.266 (with respect to hospice care), each M+C organization must meet the following requirements:

(a) Provide coverage of, by furnishing, arranging for, or making payment for, all services that are covered by Part A and Part B of Medicare (if the enrollee is entitled to benefits under both parts) or by Medicare Part B (if entitled only under Part B) and that are available to beneficiaries residing in the plan's

service area. Services may be provided outside of the service area of the plan if the services are accessible and available to enrollees.

(b) Comply with—

(1) HCFA's national coverage determinations;

(2) General coverage guidelines included in original Medicare manuals and instructions unless superseded by operational policy letters or regulations in this part; and

(3) Written coverage decisions of local carriers and intermediaries with jurisdiction for claims in the geographic area in which services are covered under the M+C plan.

17. Revise § 422.102 to read as follows:

§ 422.102 Supplemental benefits.

(a) *Mandatory supplemental benefits.*

(1) Subject to HCFA's approval, an M+C organization may require Medicare enrollees of an M+C plan other than an MSA plan to accept and pay for services in addition to Medicare-covered services described in § 422.101 and additional benefits described in § 422.312.

(2) If the M+C organization imposes mandatory supplemental benefits, it must impose them on all Medicare beneficiaries enrolled in the M+C plan.

(3) HCFA approves mandatory supplemental benefits if the benefits are designed in accordance with HCFA's guidelines and requirements as stated in this part and instructions and operational policy letters.

(b) *Optional supplemental benefits.* Except as provided in § 422.104 in the case of MSA plans, each M+C organization may offer (for election by the enrollee and without regard to health status) services that are not included in the basic benefits as described in § 422.100(c) and any mandatory supplemental benefits described in paragraph (a) of this section. Optional supplemental benefits are purchased at the discretion of the enrollee and must be offered to all Medicare beneficiaries enrolled in the M+C plan.

(c) *Payment for supplemental services.* All supplemental benefits are paid for in full, directly by (or on behalf of) the enrollee of the M+C plan.

(d) *Marketing of supplemental benefits.* M+C organizations may offer enrollees a group of services as one optional supplemental benefit, offer services individually, or offer a combination of groups and individual services.

18. Section 422.105 is amended by:

A. Revising the introductory text for paragraph (a).

B. Revising paragraph (f).

§ 422.105 Special rules for point of service option.

(a) *General rule.* A POS benefit is an option that an M+C organization may offer in an M+C coordinated care plan or network M+C MSA plan to provide enrollees with additional choice in obtaining specified health care services. The organization may offer a POS option—

* * * * *

(f) *POS-related data.* An M+C organization that offers a POS benefit through an M+C plan must report enrollee utilization data at the plan level by both plan contracting providers (in-network) and by non-contracting providers (out-of-network) including enrollee use of the POS benefit, in the form and manner prescribed by HCFA.

19. Revise § 422.106 to read as follows:

§ 422.106 Coordination of benefits with employer group health plans and Medicaid.

(a) *General rule.* If an M+C organization contracts with an employer group health plan (EGHP) that covers enrollees in an M+C plan, or contracts with a State Medicaid agency to provide Medicaid benefits to individuals who are eligible for both Medicare and Medicaid, and who are enrolled in an M+C plan, the enrollees must be provided the same benefits as all other enrollees in the M+C plan, with the EGHP or Medicaid benefits supplementing the M+C plan benefits. Jurisdiction regulating benefits under these circumstances is as follows:

(1) All requirements of this part that apply to the M+C program apply to the M+C plan coverage provided to enrollees eligible for benefits under an EGHP or Medicaid contract.

(2) Employer benefits that complement an M+C plan, and the marketing materials associated with the benefits, are not subject to review or approval by HCFA. M+C plan benefits provided to members of the EGHP, and the associated marketing materials, are subject to HCFA review and approval.

(3) Medicaid benefits are not reviewed under this part, but are subject to appropriate HCFA review under the Medicaid program. M+C plan benefits provided to individuals entitled to Medicaid benefits provided by the M+C organization under a contract with the State Medicaid agency are subject to M+C rules and requirements.

(b) *Examples.* Employer/Medicaid benefits, permissible EGHP or Medicaid plan benefits include the following:

(1) Payment of a portion or all of the M+C basic and supplemental premiums.

(2) Payment of a portion or all of other cost-sharing amounts approved for the M+C plan.

(3) Other employer-sponsored benefits that may require additional premium and cost-sharing, or other benefits provided by the organization under a contract with the State Medicaid agency.

20. Section 422.108 is amended by:

A. Republishing the introductory text for paragraph (b).

B. Revising paragraphs (b)(2), (c), the introductory text in paragraph (d), and paragraph (e).

C. Adding a new paragraph (f).

§ 422.108 Medicare secondary payer (MSP) procedures.

* * * * *

(b) Responsibilities of the M+C organization. The M+C organization must, for each M+C plan—

* * * * *

(2) Identify the amounts payable by those payers; and * * * * *

* * * * *

(c) *Collecting from other entities.* The M+C organization may bill, or authorize a provider to bill, other individuals or entities for covered Medicare services for which Medicare is not the primary payer, as specified in paragraphs (d) and (e) of this section.

(d) *Collecting from other insurers or the enrollee.* If a Medicare enrollee receives from an M+C organization covered services that are also covered under State or Federal workers' compensation, any no-fault insurance, or any liability insurance policy or plan, including a self-insured plan, the M+C organization may bill, or authorize a provider to bill any of the following—

* * * * *

(e) *Collecting from group health plans (GHPs) and large group health plans (LGHPs).* An M+C organization may bill a GHP or LGHP for services it furnishes to a Medicare enrollee who is also covered under the GHP or LGHP and may bill the Medicare enrollee to the extent that he or she has been paid by the GHP or LGHP.

(f) *MSP rules and State laws.* Consistent with § 422.402 concerning the Federal preemption of State law, the rules established under this section supersede any State laws, regulations, contract requirements, or other standards that would otherwise apply to M+C plans only to the extent that those State laws are inconsistent with the standards established under this part. A State cannot take away an M+C organization's right under Federal law and the MSP regulations to bill, or to authorize providers and suppliers to

bill, for services for which Medicare is not the primary payer. Section 1852(a)(4) of the Social Security Act does not prohibit a State from limiting the amount of the recovery; thus, State law could modify, but not negate, an M+C organization's rights in this regard.

21. In 422.109, the introductory text for paragraph (b) and paragraph (b)(5) are revised to read as follows:

§ 422.109 Effect of national coverage determinations (NCDs).

* * * * *

(b) The M+C organization must furnish, arrange or pay for an NCD "significant cost" service before the adjustment of the annual M+C capitation rate. The following rules apply to these services:

* * * * *

(5) Beneficiaries are liable for any applicable coinsurance amounts, but are not responsible for the Part A deductible.

* * * * *

22. Revise § 422.110(c) to read as follows:

§ 422.110 Discrimination against beneficiaries prohibited.

* * * * *

(c) *Additional requirements.* An M+C organization is required to observe the provisions of the Civil Rights Act, Age Discrimination Act, Rehabilitation Act of 1973, and Americans with Disabilities Act (see § 422.502(h)).

23. Section 422.111 is amended by:

A. Revising the introductory text in paragraph (a).

B. Revising paragraphs (b)(2)(i), (b)(4), and (b)(5)(i).

C. Republishing the introductory text in paragraph (c) and revising paragraph (c)(1).

D. Revising paragraph (e).

E. Adding new paragraph (f).

§ 422.111 Disclosure requirements.

(a) *Detailed description.* An M+C organization must disclose the information specified in paragraph (b) of this section—

* * * * *

(b) * * *

(2) * * *

(i) The benefits offered under original Medicare, including the content specified in paragraph (f)(1) of this section;

* * * * *

(4) Out-of-area coverage provided under the plan, including coverage provided to individuals eligible to enroll in the plan under § 422.50(a)(3)(ii).

(5) * * *

(i) Explanation of what constitutes an emergency, referencing the definitions of emergency services and emergency medical condition at § 422.113;

* * * * *

(c) *Disclosure upon request.* Upon request of an individual eligible to elect an M+C plan, an M+C organization must provide to the individual the following information:

(1) The information required paragraph (f) of this section.

* * * * *

(e) *Changes to provider network.* The M+C organization must make a good faith effort to provide written notice of a termination of a contracted provider at least 30 calendar days before the termination effective date to all enrollees who are patients seen on a regular basis by the provider whose contracted is terminating, irrespective of whether the termination was for cause or without cause. When a contract termination involves a primary care professional, all enrollees who are patients of that primary care professional must be notified.

(f) *Disclosable information*—(1) *Benefits under original Medicare.* (i) Covered services.

(ii) Beneficiary cost-sharing, such as deductibles, coinsurance, and copayment amounts.

(iii) Any beneficiary liability for balance billing.

(2) *Enrollment procedures.* Information and instructions on how to exercise election options under this subpart.

(3) *Rights.* A general description of procedural rights (including grievance and appeals procedures) under original Medicare and the M+C program and the right to be protected against discrimination based on factors related to health status in accordance with § 422.110.

(4) *Medigap and Medicare Select.* A general description of the benefits, enrollment rights, and requirements applicable to Medicare supplemental policies under section 1882 of the Act, and provisions relating to Medicare Select policies under section 1882(t) of the Act.

(5) *Potential for contract termination.* The fact that an M+C organization may terminate or refuse to renew its contract, or reduce the service area included in its contract, and the effect that any of those actions may have on individuals enrolled in that organization's M+C plan.

(6) *Comparative information.* A list of M+C plans that are or will be available to residents of the service area in the following calendar year, and, for each

available plan, information on the aspects described in paragraphs (c)(7) through (c)(11) of this section, presented in a manner that facilitates comparison among the plans.

(7) *Benefits.* (i) Covered services beyond those provided under original Medicare.

(ii) Any beneficiary cost-sharing.

(iii) Any maximum limitations on out-of-pocket expenses.

(iv) In the case of an M+C MSA plan, the amount of the annual MSA deposit and the differences in cost-sharing, enrollee premiums, and balance billing, as compared to M+C plans.

(v) In the case of an M+C private fee-for-service plan, differences in cost-sharing, enrollee premiums, and balance billing, as compared to M+C plans.

(vi) The extent to which an enrollee may obtain benefits through out-of-network health care providers.

(vii) The types of providers that participate in the plan's network and the extent to which an enrollee may select among those providers.

(viii) The coverage of emergency and urgently needed services.

(8) *Premiums.* (i) The M+C monthly basic beneficiary premiums.

(ii) The M+C monthly supplemental beneficiary premium.

(9) *The plan's service area.*

(10) *Quality and performance indicators* for benefits under a plan to the extent they are available as follows (and how they compare with indicators under original Medicare):

(i) Disenrollment rates for Medicare enrollees for the 2 previous years, excluding disenrollment due to death or moving outside the plan's service area, calculated according to HCFA guidelines.

(ii) Medicare enrollee satisfaction.

(iii) Health outcomes.

(iv) Plan-level appeal data.

(v) The recent record of plan compliance with the requirements of this part, as determined by the Secretary.

(vi) Other performance indicators.

(11) *Supplemental benefits.* Whether the plan offers mandatory supplemental benefits or offers optional supplemental benefits and the premiums and other terms and conditions for those benefits.

24. Section 422.112 is amended by:

A. Republishing the introductory text to paragraph (a).

B. Revising paragraphs (a)(2), (a)(3) and (a)(9).

C. Adding new paragraph (a)(10).

D. Removing paragraph (c).

§ 422.112 Access to services.

(a) *Rules for coordinated care plans and network M+C MSA plans.* An M+C

organization that offers an M+C coordinated care plan or network M+C MSA plan may specify the networks of providers from whom enrollees may obtain services if the M+C organization ensures that all covered services, including additional or supplemental services contracted for by (or on behalf of) the Medicare enrollee, are available and accessible under the plan. To accomplish this, the M+C organization must meet the following requirements:

* * * * *

(2) *PCP panel.* Establish a panel of PCPs from which the enrollee may select a PCP. If an M+C organization requires its enrollees to obtain a referral in most situations before receiving services from a specialist, the M+C organization must either assign a PCP for purposes of making the needed referral or make other arrangements to ensure access to medically necessary specialty care.

(3) *Specialty care.* Provide or arrange for necessary specialty care, and in particular give women enrollees the option of direct access to a women's health specialist within the network for women's routine and preventive health care services provided as basic benefits (as defined in § 422.2). The M+C organization arranges for specialty care outside of the plan provider network when network providers are unavailable or inadequate to meet an enrollee's medical needs.

* * * * *

(9) *Cultural considerations.* Ensure that services are provided in a culturally competent manner to all enrollees, including those with limited English proficiency or reading skills, and diverse cultural and ethnic backgrounds.

(10) *Ambulance services, emergency and urgently needed services, and post-stabilization care services coverage.* Provide coverage for ambulance services, emergency and urgently needed services, and post-stabilization care services in accordance with § 422.113.

* * * * *

25. Add new § 422.113 to read as follows:

§ 422.113 Special rules for ambulance services, emergency and urgently needed services, and maintenance and post-stabilization care services.

(a) *Ambulance services.* The M+C organization is financially responsible for ambulance services, including ambulance services dispatched through 911 or its local equivalent, where other means of transportation would endanger the beneficiary's health.

(b) *Emergency and urgently needed services.* (1) *Definitions.*

(i) *Emergency medical condition* means a medical condition manifesting itself by acute symptoms of sufficient severity (including severe pain) such that a prudent layperson, with an average knowledge of health and medicine, could reasonably expect the absence of immediate medical attention to result in—

(A) Serious jeopardy to the health of the individual or, in the case of a pregnant woman, the health of the woman or her unborn child;

(B) Serious impairment to bodily functions; or

(C) Serious dysfunction of any bodily organ or part.

(ii) *Emergency services* means covered inpatient and outpatient services that are—

(A) Furnished by a provider qualified to furnish emergency services; and

(B) Needed to evaluate or stabilize an emergency medical condition.

(iii) *Urgently needed services* means covered services that are not emergency services as defined this section, provided when an enrollee is temporarily absent from the M+C plan's service (or, if applicable, continuation) area (or, under unusual and extraordinary circumstances, provided when the enrollee is in the service or continuation area but the organization's provider network is temporarily unavailable or inaccessible) when the services are medically necessary and immediately required—

(A) As a result of an unforeseen illness, injury, or condition; and

(B) It was not reasonable given the circumstances to obtain the services through the organization offering the M+C plan.

(2) *M+C organization financial responsibility.* The M+C organization is financially responsible for emergency and urgently needed services—

(i) Regardless of whether the services are obtained within or outside the M+C organization;

(ii) Regardless of whether there is prior authorization for the services.

(A) Instructions to seek prior authorization for emergency or urgently needed services may not be included in any materials furnished to enrollees (including wallet card instructions), and enrollees must be informed of their right to call 911.

(B) Instruction to seek prior authorization before the enrollee has been stabilized may not be included in any materials furnished to providers (including contracts with providers);

(iii) In accordance with the prudent layperson definition of *emergency*

medical condition regardless of final diagnosis;

(iv) For which a plan provider or other M+C organization representative instructs an enrollee to seek emergency services within or outside the plan; and

(v) With a limit on charges to enrollees for emergency services of \$50 or what it would charge the enrollee if he or she obtained the services through the M+C organization, whichever is less.

(3) *Stabilized condition.* The physician treating the enrollee must decide when the enrollee may be considered stabilized for transfer or discharge, and that decision is binding on the M+C organization.

(c) *Maintenance care and post-stabilization care services* (hereafter together referred to as "post-stabilization care services").

(1) *Definition.* *Post-stabilization care services* means covered services, related to an emergency medical condition, that are provided after an enrollee is stabilized in order to maintain the stabilized condition, or, under the circumstances described in paragraph (c)(2)(iii) of this section, to improve or resolve the enrollee's condition.

(2) *M+C organization financial responsibility.* The M+C organization—

(i) Is financially responsible (consistent with § 422.214) for post-stabilization care services obtained within or outside the M+C organization that are pre-approved by a plan provider or other M+C organization representative;

(ii) Is financially responsible for post-stabilization care services obtained within or outside the M+C organization that are not pre-approved by a plan provider or other M+C organization representative, but administered to maintain the enrollee's stabilized condition within 1 hour of a request to the M+C organization for pre-approval of further post-stabilization care services;

(iii) Is financially responsible for post-stabilization care services obtained within or outside the M+C organization that are not pre-approved by a plan provider or other M+C organization representative, but administered to maintain, improve, or resolve the enrollee's stabilized condition if—

(A) The M+C organization does not respond to a request for pre-approval within 1 hour;

(B) The M+C organization cannot be contacted; or

(C) The M+C organization representative and the treating physician cannot reach an agreement concerning the enrollee's care and a plan physician is not available for consultation. In this situation, the M+C

organization must give the treating physician the opportunity to consult with a plan physician and the treating physician may continue with care of the patient until a plan physician is reached or one of the criteria in § 422.113(c)(3) is met; and

(iv) Must limit charges to enrollees for post-stabilization care services to an amount no greater than what the organization would charge the enrollee if he or she had obtained the services through the M+C organization.

(3) *End of M+C organization's financial responsibility.* The M+C organization's financial responsibility for post-stabilization care services it has not pre-approved ends when—

(i) A plan physician with privileges at the treating hospital assumes responsibility for the enrollee's care;

(ii) A plan physician assumes responsibility for the enrollee's care through transfer;

(iii) An M+C organization representative and the treating physician reach an agreement concerning the enrollee's care; or

(iv) The enrollee is discharged.

26. Revise § 422.118 to read as follows:

§ 422.118 Confidentiality and accuracy of enrollee records.

For any medical records or other health and enrollment information it maintains with respect to enrollees, an M+C organization must establish procedures to do the following:

(a) Abide by all Federal and State laws regarding confidentiality and disclosure of medical records, or other health and enrollment information. The M+C organization must safeguard the privacy of any information that identifies a particular enrollee and have procedures that specify—

(1) For what purposes the information will be used within the organization; and

(2) To whom and for what purposes it will disclose the information outside the organization.

(b) Ensure that medical information is released only in accordance with applicable Federal or State law, or pursuant to court orders or subpoenas.

(c) Maintain the records and information in an accurate and timely manner.

(d) Ensure timely access by enrollees to the records and information that pertain to them.

27. Section 422.152 is amended by:

A. Revising the heading and introductory text for paragraph (b).

B. Revising the heading and introductory text for paragraph (e).

C. Revising paragraph (e)(1).

D. Republishing the heading of paragraph (f).

E. Adding new paragraph (f)(3).

§ 422.152 Quality assessment and performance improvement program.

* * * * *

(b) *Requirements for network M+C MSA plans and M+C coordinated care plans other than PPO plans.* An organization offering a network M+C MSA plan or M+C coordinated care plan other than a PPO plan must do the following:

* * * * *

(e) *Requirements for M+C PPO plans, non-network MSA plans, and M+C private fee-for-service plans.* An organization offering an M+C plan, non-network MSA plan, or private fee-for-service plan must do the following:

(1) Measure performance under the plan using standard measures required by HCFA and report its performance to HCFA. The standard measures may be specified in uniform data collection and reporting instruments required by HCFA and will relate to—

(i) Clinical areas including effectiveness of care, enrollee perception of care, and use of services; and

(ii) Nonclinical areas including access to and availability of services, appeals and grievances, and organizational characteristics.

* * * * *

(f) *Requirements for all types of plans—*

* * * * *

(3) *Remedial action.* For each plan, the organization must correct all problems that come to its attention through internal surveillance, complaints, or other mechanisms.

28. In § 422.154, the introductory text for paragraph (b) is republished, and paragraph (b)(2) is revised to read as follows:

§ 422.154 External review.

* * * * *

(b) *Terms of the agreement.* The agreement must be consistent with HCFA guidelines and include the following provisions:

* * * * *

(2) Except in the case of complaints about quality, exclude review activities that HCFA determines would duplicate review activities conducted as part of an approved accreditation process or as part of HCFA monitoring.

* * * * *

29. Revise paragraphs (a) and (b) in § 422.156 to read as follows:

§ 422.156 Compliance deemed on the basis of accreditation.

(a) *General rule.* An M+C organization is deemed to meet all of the requirements of any of the areas described in paragraph (b) of this section if—

(1) The M+C organization is fully accredited (and periodically reaccredited) for the standards related to the applicable area under paragraph (b) of this section by a private, national accreditation organization approved by HCFA; and

(2) The accreditation organization used the standards approved by HCFA for the purposes of assessing the M+C organization's compliance with Medicare requirements.

(b) *Deemable requirements.* The requirements relating to the following areas are deemable:

(1) Quality assurance.

(2) Antidiscrimination.

(3) Access to services.

(4) Confidentiality and accuracy of enrollee records.

(5) Information on advance directives.

(6) Provider participation rules.

* * * * *

30. Section 422.157 is amended by republishing the introductory text for paragraph (a) and revising paragraphs (a)(3) and (b)(1) to read as follows:

§ 422.157 Accreditation organizations.

(a) *Conditions for approval.* HCFA may approve an accreditation organization with respect to a given standard under this part if it meets the following conditions:

* * * * *

(3) It ensures that:

(i) Any individual associated with it, who is also associated with an entity it accredits, does not influence the accreditation decision concerning that entity.

(ii) The majority of the membership of its governing body is not comprised of managed care organizations or their representatives.

(iii) Its governing body has a broad and balanced representation of interests and acts without bias.

* * * * *

(b) *Notice and comment—(1)*

Proposed notice. HCFA publishes a notice in the **Federal Register** whenever it is considering granting an accreditation organization's application for approval. The notice—

(i) Announces HCFA's receipt of the accreditation organization's application for approval;

(ii) Describes the criteria HCFA will use in evaluating the application; and

(iii) Provides at least a 30-day comment period.

* * * * *

31. Revise the introductory text of § 422.158(e) to read as follows:

§ 422.158 Procedures for approval of accreditation as basis for deeming compliance.

* * * * *

(e) *Notice of determination.* HCFA gives the accreditation organization, within 210 days of receipt of its completed application, a formal notice that—

* * * * *

32. Section 422.202 is amended by:

A. Revising the introductory text of paragraph (b).

B. Adding a heading to paragraph (c).

C. Adding a new paragraph (d)

§ 422.202 Participation procedures.

* * * * *

(b) *Consultation.* The M+C organization must establish a formal mechanism to consult with the physicians who have agreed to provide services under the M+C plan offered by the organization, regarding the organization's medical policy, quality assurance programs and medical management procedures and ensure that the following standards are met:

* * * * *

(c) *Subcontracted groups.* * * *

* * * * *

(d) *Suspension or termination of contract.* An M+C organization that operates a coordinated care plan or network MSA plan providing benefits through contracting providers must meet the following requirements:

(1) *Notice to physician.* An M+C organization that suspends or terminates an agreement under which the physician provides services to M+C plan enrollees must give the affected individual written notice of the following:

(i) The reasons for the action, including, if relevant, the standards and profiling data used to evaluate the physician and the numbers and mix of physicians needed by the M+C organization.

(ii) The affected physician's right to appeal the action and the process and timing for requesting a hearing.

(2) *Composition of hearing panel.* The M+C organization must ensure that the majority of the hearing panel members are peers of the affected physician.

(3) *Notice to licensing or disciplinary bodies.* An M+C organization that suspends or terminates a contract with a physician because of deficiencies in the quality of care must give written

notice of that action to licensing or disciplinary bodies or to other appropriate authorities.

(4) *Timeframes.* An M+C organization and a contracting provider must provide at least 60 days written notice to each other before terminating the contract without cause.

33. Revise § 422.204 to read as follows:

§ 422.204 Provider selection and credentialing.

(a) *General rule.* An M+C organization must have written policies and procedures for the selection and evaluation of providers. These policies must conform with the credential and recredentialing requirements set forth in paragraph (b) of this section and with the antidiscrimination provisions set forth in § 422.205.

(b) *Basic requirements.* An M+C organization must follow a documented process with respect to providers and suppliers who have signed contracts or participation agreements that—

(1) For providers (other than physicians and other health care professionals) requires determination, and redetermination at specified intervals, that each provider is—

(i) Licensed to operate in the State, and in compliance with any other applicable State or Federal requirements; and

(ii) Reviewed and approved by an accrediting body, or meets the standards established by the organization itself;

(2) For physicians and other health care professionals, including members of physician groups, covers—

(i) Initial credentialing that includes written application, verification of licensure or certification from primary sources, disciplinary status, eligibility for payment under Medicare, and site visits as appropriate. The application must be signed and dated and include an attestation by the applicant of the correctness and completeness of the application and other information submitted in support of the application;

(ii) Recredentialing at least every 2 years that updates information obtained during initial credentialing and considers performance indicators such as those collected through quality assurance programs, utilization management systems, handling of grievances and appeals, enrollee satisfaction surveys, and other plan activities, and that includes an attestation of the correctness and completeness of the new information; and

(iii) A process for consulting with contracting health care professionals

with respect to criteria for credentialing and recredentialing.

(3) Specifies that basic benefits must be provided through, or payments must be made to, providers and suppliers that meet applicable requirements of title XVIII and part A of title XI of the Act. In the case of providers meeting the definition of "provider of services" in section 1861(u) of the Act, basic benefits may only be provided through these providers if they have a provider agreement with HCFA permitting them to provide services under original Medicare.

(4) Ensures compliance with the requirements at § 422.752(a)(8) that prohibit employment or contracts with individuals (or with an entity that employs or contracts with such an individual) excluded from participation under Medicare and with the requirements at § 422.220 regarding physicians and practitioners who opt out of Medicare.

34. Add § 422.205 to read as follows:

§ 422.205 Provider antidiscrimination rules.

(a) *General rule.* Consistent with the requirements of this section, the policies and procedures concerning provider selection and credentialing established under § 422.204, and with the requirement under § 422.100(c) that all Medicare-covered services be available to M+C plan enrollees, an M+C organization may select the practitioners that participate in its plan provider networks. In selecting these practitioners, an M+C organization may not discriminate, in terms of participation, reimbursement, or indemnification, against any health care professional who is acting within the scope of his or her license or certification under State law, solely on the basis of the license or certification. If an M+C organization declines to include a given provider or group of providers in its network, it must furnish written notice to the effected provider(s) of the reason for the decision.

(b) *Construction.* The prohibition in paragraph (a)(1) of this section does not preclude any of the following by the M+C organization:

(1) Refusal to grant participation to health care professionals in excess of the number necessary to meet the needs of the plan's enrollees (except for M+C private-fee-for-service plans, which may not refuse to contract on this basis).

(2) Use of different reimbursement amounts for different specialties or for different practitioners in the same specialty.

(3) Implementation of measures designed to maintain quality and

control costs consistent with its responsibilities.

35. In § 422.206, the heading for paragraph (b) is republished and paragraph (b)(2) is revised to read as follows:

§ 422.206 Interference with health care professionals' advice to enrollees prohibited.

* * * * *

(b) *Conscience protection.* * * *

(2) Through appropriate written means, makes available information on these policies as follows:

(i) To HCFA, with its application for a Medicare contract, within 10 days of submitting its ACR proposal or, for policy changes, in accordance with § 422.80 (concerning approval of marketing materials and election forms) and with § 422.111.

(ii) To prospective enrollees, before or during enrollment.

(iii) With respect to current enrollees, the organization is eligible for the exception provided in paragraph (b)(1) of this section if it provides notice of such change within 90 days after adopting the policy at issue; however, under § 422.111(d), notice of such a change must be given in advance.

* * * * *

36. Section 422.208 is amended by:

A. Republishing the introductory text for paragraph (c).

B. Revising paragraph (c)(2).

C. Adding a heading to paragraph (e).

§ 422.208 Physician incentive plans: requirements and limitations.

* * * * *

(c) *Basic requirements.* Any physician incentive plan operated by an M+C organization must meet the following requirements:

* * * * *

(2) If the physician incentive plan places a physician or physician group at substantial financial risk (as determined under paragraph (d) of this section) for services that the physician or physician group does not furnish itself, the M+C organization must assure that all physicians and physician groups at substantial financial risk have either aggregate or per-patient stop-loss protection in accordance with paragraph (f) of this section, and conduct periodic surveys in accordance with paragraph (h) of this section.

* * * * *

(e) *Prohibition for private M+C fee-for-service plans.* * * *

* * * * *

37. In § 422.214, the heading for paragraph (a) is republished and paragraphs (a)(1) and (b) are revised to read as follows:

§ 422.214 Special rules for services furnished by noncontract providers.

(a) *Services furnished by non-section 1861(u) providers.* (1) Any provider (other than a provider of services as defined in section 1861(u) of the Act) that does not have in effect a contract establishing payment amounts for services furnished to a beneficiary enrolled in an M+C coordinated care plan or M+C private fee-for-service plan must accept, as payment in full, the amounts that the provider could collect if the beneficiary were enrolled in original Medicare.

* * * * *

(b) *Services furnished by section 1861(u) providers of service.* Any provider of services as defined in section 1861(u) of the Act that does not have in effect a contract establishing payment amounts for services furnished to a beneficiary enrolled in an M+C coordinated care plan or M+C private fee-for-service plan must accept as payment in full the amounts (less any payments under §§ 412.105(g) and 413.86(d)) of this chapter that it could collect if the beneficiary were enrolled in original Medicare. (Section 412.105(g) concerns indirect medical education payment to hospitals for managed care enrollees. Section 413.86(d) concerns calculating payment for direct graduate medical education costs.)

38. In § 422.216, paragraphs (a)(4), (b)(2), (c)(2), and the introductory text for paragraph (f) are revised to read as follows:

§ 422.216 Special rules for M+C private fee-for-service plans.

(a) * * *

(4) *Service furnished by providers of service.* Any provider of services as defined in section 1861(u) of the Act that does not have in effect a contract establishing payment amounts for services furnished to a beneficiary enrolled in an M+C private fee-for-service plan must accept as payment in full the amounts (less any payments under §§ 412.105(g) and 413.86(d) of this chapter) that it could collect if the beneficiary were enrolled in original Medicare.

(b) * * *

(2) Noncontract providers. A noncontract provider may not collect from an enrollee more than the cost-sharing established by the M+C private fee-for-service plan as specified in § 422.308(b), unless the provider has opted out of Medicare as described in part 405, subpart D of this chapter.

(c) * * *

(2) *Noncontract providers.* An M+C organization that offers an M+C private

fee-for-service plan must monitor the amount collected by noncontract providers to ensure that those amounts do not exceed the amounts permitted to be collected under paragraph (b)(2) of this section, unless the provider has opted out of Medicare as described in part 405, subpart D of this chapter. The M+C organization must develop and document violations specified in instructions and must forward documented cases to HCFA.

* * * * *

(f) *Rules describing deemed contract providers.* Any provider furnishing health services, except for emergency services furnished in a hospital pursuant to § 489.24 of this chapter, to an enrollee in an M+C private fee-for-service plan, and who has not previously entered into a contract or agreement to furnish services under the plan, is treated as having a contract in effect and is subject to the limitations of this section that apply to contract providers if the following conditions are met:

* * * * *

39. Section 422.250 is amended by:

A. In paragraph (a)(1), removing the phrase "in paragraph (a)(2)" and adding in its place the phrase "in paragraphs (a)(2) or (f)".

B. Revising paragraph (a)(2)(i)(B).

C. Adding new paragraph (g).

§ 422.250 General provisions.

(a) * * *

(2) * * *

(i) * * *

(B) HCFA reduces the payment rate for each renal dialysis treatment by the same amount that the Secretary is authorized to reduce the amount of each composite rate payment for each treatment as set forth in section 1881(b)(7) of the Act. These funds are to be used to help pay for the ESRD network program in the same manner as similar reductions are used in original Medicare.

* * * * *

(g) *Bonus payments.* (1) HCFA provides bonus payments to the M+C organization(s) that first offers a plan in a previously unserved county on or after January 1, 2000 and no later than December 31, 2001. The bonus payment amounts equal—

(i) For the first 12 months after a plan is offered in a previously unserved county, 5 percent of the monthly capitation rate otherwise payable under this section; and

(ii) For the subsequent 12 months, 3 percent of the monthly capitation rate otherwise payable under this section.

(2) A previously unserved county is defined as—

(i) A county in which no M+C plan has been offered; or

(ii) A county in which an M+C plan or plans has been offered, but where any M+C organization offering an M+C plan notified HCFA by October 13, 1999, that it will no longer offer plans in the county as of January 1, 2000.

(3) A plan is considered to be offered when—

(i) The M+C organization sponsoring the plan has a contract in effect to serve beneficiaries in the previously unserved area; and

(ii) The M+C plan is open for enrollment.

40. Revise § 422.254(b)(2) to read as follows:

§ 422.254 Calculation and adjustment factors.

* * * * *

(b) * * *

(2) The percentage points that HCFA uses to reduce its estimates are as follows:

(i) For 1998, 0.8 percentage points.

(ii) For years 1999 through 2001, 0.5 percentage points.

(iii) For 2002, 0.3 percentage points.

(iv) For years after 2002, 0 percentage points.

* * * * *

41. In § 422.257, revise paragraph (d) and add paragraph (g) to read as follows:

§ 422.257 Encounter data.

* * * * *

(d) *Other data requirements.* (1) M+C organizations must submit data that conform to the requirements for equivalent data for Medicare fee-for-service when appropriate, and to all relevant national standards.

(2) The data must be submitted electronically to the appropriate HCFA contractor.

(3) M+C organizations must obtain the encounter data required by HCFA from the provider, supplier, physician, or other practitioner that rendered the services.

(4) M+C organizations may include in their contracts with providers, suppliers, physicians, and other practitioners, provisions that require submission of complete and accurate encounter data as required by HCFA. These provisions may include financial penalties for failure to submit complete data, or for failure to submit data that conform to the requirements for equivalent data for Medicare fee-for-service.

* * * * *

(g) *Deadlines for submission of encounter data.* Risk adjustment factors for each payment year are based on

encounter data submitted for services furnished during the 12 month period ending 6 months before to the payment year (for example, risk adjustment factors for CY 2000 are based on data for services furnished during the period July 1, 1998 through June 30, 1999).

(1) The annual deadline for encounter data submission is September 10 for encounter data reflecting services furnished during the 12 month period ending the prior June 30 (for example, the deadline for submission of data for the period July 1, 1998 through June 30, 1999 is September 10, 1999).

(2) HCFA allows a reconciliation process to account for late data submissions. HCFA continues to accept encounter data submitted after the September 10 deadline until June 30 of the payment year (for example, until June 30, 2000 for data from the period July 1, 1998 through June 30, 1999). After the payment year is completed, HCFA recalculates the risk factors for affected individuals to determine if adjustments to payments are necessary.

42. Revise § 422.300(b)(2) to read as follows:

§ 422.300 Basis and scope.

* * * * *

(b) * * *

(2) For contracts beginning on a date other than January 1 (according to § 422.504(d)), M+C organizations may submit ACRs on a date other than July 1 approved by HCFA.

43. Revise § 422.304(b) to read as follows:

§ 422.304 Rules governing premiums and cost-sharing.

* * * * *

(b) *Uniformity.* (1) *General rule.* The M+C monthly basic beneficiary premium, the M+C monthly supplemental beneficiary premiums, and the M+C monthly MSA premium of an M+C organization may not vary among individuals enrolled in an M+C plan (or segment of the plan as provided under paragraph (b)(2) of this section). In addition, the M+C organization may not vary the level of cost-sharing charged for basic benefits or supplemental benefits (if any), among individuals enrolled in an M+C plan (or segment of the plan as provided under paragraph (b)(2) of this section).

(2) *Segmented service area option.* An M+C organization may apply the uniformity requirements in paragraph (b)(1) of this section to segments of an M+C plan service area (rather than to the entire service area) as long as any such segment is composed of one or more M+C payment areas, and the information specified under § 422.306 is

submitted separately, as provided in that section, for each such segment.

* * * * *

44. Revise the introductory text in § 422.306(a)(1) to read as follows:

§ 422.306 Submission of proposed premiums and related information.

(a) *General rule.* (1) Not later than July 1 of each year, each M+C organization and any organization intending to contract as an M+C organization in the subsequent year must submit to HCFA, in the manner and form prescribed by HCFA, for each M+C plan (or service area segment, under § 422.304(b)(2)) it intends to offer in the following year—

* * * * *

45. Section 422.310 is amended by:

A. In the introductory text for paragraph (d), removing the phrase “paragraphs (a)(1) and (a)(2) of this section” and adding in its place the phrase “paragraphs (d)(1) and (d)(2) of this section”.

B. Revising paragraph (c)(3).

§ 422.310 Adjusted community rate (ACR) approval process.

* * * * *

(c) * * *

(3) *Additional revenues.* The relative cost ratio for total revenues for an M+C plan is determined by comparing the total revenues charged on an accrual basis during the most recently ended calendar year prior to submission of the ACR for Medicare enrollees (including payments from HCFA without any needed offsets or reductions, such as, those required by § 422.250(a)(2)(i)(B) for ESRD enrollees) that elected the M+C plan to the total revenues charged for non-Medicare enrollees over the same period. The non-Medicare enrollees included in this computation must be consistent with the non-Medicare enrollees included in the initial rate computation. When the relative cost ratio for total revenues is applied to the total initial rate, the value of additional revenues is the remaining value after removing the value of direct medical costs (as adjusted by paragraph (c)(1) of this section) and the value of Administration (as adjusted by paragraph (c)(2) of this section).

46. In § 422.312, the introductory text for paragraph (b) is republished and paragraph (b)(1) is revised to read as follows:

§ 422.312 Requirement for additional benefits.

* * * * *

(b) *Requirement for additional benefits.* If there is an adjusted excess amount for the plan it offers, the M+C organization must—

(1) Provide additional benefits with an actuarial value (less the actuarial value of any cost-sharing associated with the benefit) which HCFA determines is at least equal to the adjusted excess amount; and

* * * * *

47–50. In § 422.352, the introductory text for paragraph (a) is republished and paragraph (a)(1) is revised to read as follows:

§ 422.352 Basic requirements.

(a) *General rule.* An organization is considered a PSO for purposes of an M+C contract if the organization—

(1) Has obtained a waiver of State licensure as provided for under § 422.370;

* * * * *

51. Section 422.500 is amended by:

A. Revising the definition of “clean claim.”

B. Adding definitions for “downstream entity” and “first tier entity.”

§ 422.500 Definitions.

* * * * *

Clean claim means—

(1) A claim that has no defect, impropriety, lack of any required substantiating documentation (consistent with § 422.257(d)) or particular circumstance requiring special treatment that prevents timely payment; and

(2) A claim that otherwise conforms to the clean claim requirements for equivalent claims under original Medicare.

Downstream entity means any party that enters into an acceptable written arrangement below the level of the arrangement between an M+C organization (or contract applicant) and a first tier entity. These written arrangements continue down to the level of the ultimate provider of both health and administrative services.

First tier entity means any party that enters into an acceptable written arrangement with an M+C organization or contract applicant to provide administrative services or health care services for a Medicare eligible individual.

* * * * *

52. Section 422.501 is amended by:

A. Republishing the introductory text in paragraphs (b), (b)(3), and (b)(3)(vi).

B. Revising paragraphs (b)(3)(vi)(G) and (b)(5).

C. Removing paragraph (b)(3)(vi)(H).

D. Republishing the introductory text in (d)(2) and (d)(2)(iii).

E. Revising paragraph (d)(2)(iii)(A).

§ 422.501 General provisions.

* * * * *

(b) *Conditions necessary to contract as an M+C organization.* Any entity seeking to contract as an M+C organization must:

* * * * *

(3) Have administrative and management arrangements satisfactory to HCFA, as demonstrated by at least the following:

* * * * *

(vi) A compliance plan that consists of the following:

* * * * *

(G) Procedures for ensuring prompt response to detected offenses and development of corrective action initiatives relating to the organization's M+C contract.

* * * * *

(5) The M+C organization's contract must not have been terminated by HCFA under § 422.510 within the past 2 years unless—

(i) During the 6-month period beginning on the date the organization notified HCFA of the intention to terminate the most recent previous contract, there was a change in the statute or regulations that had the effect of increasing M+C payments in the payment area or areas at issue; or

(ii) HCFA has otherwise determined that circumstances warrant special consideration.

* * * * *

(d) * * *

(2) Each contract under this section must provide that HCFA, or any person or organization designated by HCFA has the right to:

* * * * *

(iii) Audit and inspect any books, contracts, and records of the M+C organization that pertain to—

(A) The ability of the organization or its first tier or downstream providers to bear the risk of potential financial losses; or

* * * * *

53. Section 422.502 is amended by:

A. In paragraph (a)(12), removing the phrase “To comply will all requirements” and adding in its place the phrase “To comply with all requirements”.

B. Republishing the introductory text for paragraph (g).

C. Revising the introductory text for paragraph (g)(1) and the introductory text for paragraph (g)(3).

D. Revising paragraph (i)(3).

E. Revising paragraph (l).

§ 422.502 Contract provisions.

* * * * *

(g) *Beneficiary financial protections.* The M+C organization agrees to comply with the following requirements:

(1) Each M+C organization must adopt and maintain arrangements satisfactory to HCFA to protect its enrollees from incurring liability (for example, as a result of an organization's insolvency or other financial difficulties) for payment of any fees that are the legal obligation of the M+C organization. To meet this requirement, the M+C organization must—

* * * * *

(3) In meeting the requirements of this paragraph, other than the provider contract requirements specified in paragraph (g)(1)(i) of this section, the M+C organization may use—

* * * * *

(i) * * *

(3) All contracts or written arrangements between M+C organizations and providers, related entities, contractors, subcontractors, first tier and downstream entities must contain the following:

(i) Enrollee protection provisions that provide, consistent with paragraph (g)(1) of this section, arrangements that prohibit providers from holding an enrollee liable for payment of any fees that are the obligation of the M+C organization.

(ii) Accountability provisions that indicate that—

(A) The M+C organization oversees and is accountable to HCFA for any functions or responsibilities that are described in these standards; and

(B) The M+C organization may only delegate activities or functions to a provider, related entity, contractor, or subcontractor in a manner consistent with requirements set forth at paragraph (i)(4) of this section.

(iii) A provision requiring that any services or other activity performed by a related entity, contractor, subcontractor, or first-tier or downstream entity in accordance with a contract or written agreement are consistent and comply with the M+C organization's contractual obligations.

* * * * *

(1) *Certification of data that determine payment.* As a condition for receiving a monthly payment under subpart F of this part, the M+C organization agrees that its chief executive officer (CEO), chief financial officer (CFO), or an individual delegated the authority to sign on behalf of one of these officers, and who reports directly to such officer, must request payment under the contract on a document that certifies (based on best knowledge, information, and belief) the accuracy,

completeness, and truthfulness of relevant data that HCFA requests. Such data include specified enrollment information, encounter data, and other information that HCFA may specify.

(1) The CEO, CFO, or an individual delegated the authority to sign on behalf of one of these officers, and who reports directly to such officer, must certify that each enrollee for whom the organization is requesting payment is validly enrolled in an M+C plan offered by the organization and the information relied upon by HCFA in determining payment (based on best knowledge, information, and belief) is accurate, complete, and truthful.

(2) The CEO, CFO, or an individual delegated with the authority to sign on behalf of one of these officers, and who reports directly to such officer, must certify (based on best knowledge, information, and belief) that the encounter data it submits under § 422.257 are accurate, complete, and truthful.

(3) If such encounter data are generated by a related entity, contractor, or subcontractor of an M+C organization, such entity, contractor, or subcontractor must similarly certify (based on best knowledge, information, and belief) the accuracy, completeness, and truthfulness of the data.

(4) The CEO, CFO, or an individual delegated the authority to sign on behalf of one of these officers, and who reports directly to such officer, must certify (based on best knowledge, information, and belief) that the information in its ACR submission is accurate, complete, and truthful and fully conforms to the requirements in § 422.310.

54. In § 422.504, revise paragraph (b) and remove paragraph (d) to read as follows:

§ 422.504 Effective date and term of contract.

* * * * *

(b) *Term of contract.* Each contract is for a period of at least 12 months.

* * * * *

55. Section 422.506 is amended by:

- A. Republishing the introductory text of paragraph (a)(2).
- B. Revising paragraph (a)(2)(i) and the introductory text of paragraph (a)(3).
- C. Removing paragraph (b)(1)(ii).
- D. Redesignating paragraphs (b)(1)(iii) and (b)(1)(iv) as (b)(1)(ii) and (b)(1)(iii), respectively.

§ 422.506 Nonrenewal of contract.

(a) * * *

(2) If an M+C organization does not intend to renew its contract, it must notify—

(i) HCFA in writing, by July 1 of the year in which the contract would end;

* * * * *

(3) HCFA may accept a nonrenewal notice submitted after July 1 if—

* * * * *

56. Section 422.510 is amended by adding paragraph (a)(12) and revising paragraph (c)(1) to read as follows:

§ 422.510 Termination of contract by HCFA.

(a) * * *

(12) The M+C organization substantially fails to comply with the marketing requirements in § 422.80.

* * * * *

(c) * * *

(1) *General.* Before terminating a contract for reasons other than the grounds specified in paragraph (a)(5) of this section, HCFA provides the M+C organization with reasonable opportunity to develop and receive HCFA approval of a corrective action plan to correct the deficiencies that are the basis of the proposed termination.

57. Revise § 422.514(b)(1) to read as follows:

§ 422.514 Minimum enrollment requirements.

* * * * *

(b) * * *

(1) For a contract applicant or M+C organization that does not meet the applicable requirement of paragraph (a) of this section at application for an M+C contract or during the first 3 years of the contract, HCFA may waive the minimum enrollment requirement as provided for below. To receive a waiver, a contract applicant or M+C organization must demonstrate to HCFA's satisfaction that it is capable of administering and managing an M+C contract and is able to manage the level of risk required under the contract. Factors that HCFA takes into consideration in making this evaluation include the extent to which—

(i) The contract applicant or M+C organization's management and providers have previous experience in managing and providing health care services under a risk-based payment arrangement to at least as many individuals as the applicable minimum enrollment for the entity as described in paragraph (a) of this section, or

(ii) The contract applicant or M+C organization has the financial ability to bear financial risk under an M+C contract. In determining whether an organization is capable of bearing risk, HCFA considers factors such as the organization's management experience as described in paragraph (b)(1)(i) of this

section and stop-loss insurance that is adequate and acceptable to HCFA; and

(iii) The contract applicant or M+C organization is able to establish a marketing and enrollment process that allows it to meet the applicable enrollment requirement specified in paragraph (a) of this section before completion of the third contract year.

* * * * *

58. Revise § 422.520(a)(3) to read as follows:

§ 422.520 Prompt payment by M+C organization.

* * * * *

(a) * * *

(3) All other claims must be paid or denied within 60 calendar days from the date of the request.

* * * * *

§ 422.550 [Amended]

59. In § 422.550(a)(2), the heading "Unincorporated sole proprietor" is removed and the heading "Asset Sale" is added in its place.

60. In § 422.561, the introductory text is republished and the definitions of "Appeal" and "Authorized representative" are revised to read as follows:

§ 422.561 Definitions.

As used in this subpart, unless the context indicates otherwise—

Appeal means any of the procedures that deal with the review of adverse organization determinations on the health care services the enrollee believes he or she is entitled to receive, including delay in providing, arranging for, or approving the health care services (such that a delay would adversely affect the health of the enrollee), or on any amounts the enrollee must pay for a service, as defined under § 422.566(b). These procedures include reconsiderations by the M+C organization, and if necessary, an independent review entity, hearings before ALJs, review by the Departmental Appeals Board (DAB), and judicial review.

Authorized representative means an individual authorized by an enrollee, or under State law, to act on his or her behalf in obtaining an organization determination or in dealing with any of the levels of the appeal process, subject to the rules described in 20 CFR part 404, subpart R, unless otherwise stated in this subpart.

* * * * *

61. Section 422.562 is amended by republishing the introductory text for paragraphs (a) and (a)(1) and revising paragraph (a)(1)(ii).

§ 422.562 General provisions.

(a) *Responsibilities of the M+C organization.* (1) An M+C organization, with respect to each M+C plan that it offers, must establish and maintain—

* * * * *

(ii) A procedure for making timely organization determinations;

* * * * *

62. Revise § 422.566(b) to read as follows:

§ 422.566 Organization determinations.

* * * * *

(b) *Actions that are organization determinations.* An organization determination is any determination made by an M+C organization with respect to any of the following:

(1) Payment for temporarily out of the area renal dialysis services, emergency services, post-stabilization care, or urgently needed services.

(2) Payment for any other health services furnished by a provider other than the M+C organization that the enrollee believes—

(i) Are covered under Medicare; or

(ii) If not covered under Medicare, should have been furnished, arranged for, or reimbursed by the M+C organization.

(3) The M+C organization's refusal to provide or pay for services, in whole or in part, including the type or level of services, that the enrollee believes should be furnished or arranged for by the M+C organization.

(4) Discontinuation of a service if the enrollee believes that continuation of the services is medically necessary.

(5) Failure of the M+C organization to approve, furnish, arrange for, or provide payment for health care services in a timely manner, or to provide the enrollee with timely notice of an adverse determination, such that a delay would adversely affect the health of the enrollee.

* * * * *

63. Section 422.568 is revised to read as follows:

§ 422.568 Standard timeframes and notice requirements for organization determinations.

(a) *Timeframe for requests for service.* When a party has made a request for a service, the M+C organization must notify the enrollee of its determination as expeditiously as the enrollee's health condition requires, but no later than 14 calendar days after the date the organization receives the request for a standard organization determination. The M+C organization may extend the timeframe by up to 14 calendar days if the enrollee requests the extension or if

the organization justifies a need for additional information and how the delay is in the interest of the enrollee (for example, the receipt of additional medical evidence from noncontract providers may change an M+C organization's decision to deny). When the M+C organization extends the timeframe, it must notify the enrollee in writing of the reasons for the delay, and inform the enrollee of the right to file a grievance if he or she disagrees with the M+C organization's decision to grant an extension. The M+C organization must notify the enrollee of its determination as expeditiously as the enrollee's health condition requires, but no later than upon expiration of the extension.

(b) *Timeframe for requests for payment.* The M+C organization must process requests for payment according to the "prompt payment" provisions set forth in § 422.520.

(c) *Written notification by practitioners.* At each patient encounter with an M+C enrollee, a practitioner must notify the enrollee of his or her right to receive, upon request, a detailed written notice from the M+C organization regarding the enrollee's services, consistent with paragraph (d) of this section. The practitioner's notification must—

(1) Provide the enrollee with the information necessary to contact the M+C organization; and

(2) Comply with any other requirements specified by HCFA.

(d) *Written notice for M+C organization denials.* If an enrollee requests an M+C organization to provide a detailed notice of a practitioner's decision to deny a service in whole or in part, or if an M+C organization decides to deny service or payment in whole or in part, it must give the enrollee written notice of the determination.

(e) *Form and content of the M+C organization notice.* The notice of any denial under paragraph (d) of this section must—

(1) Use approved notice language in a readable and understandable form;

(2) State the specific reasons for the denial;

(3) Inform the enrollee of his or her right to a reconsideration;

(4)(i) For service denials, describe both the standard and expedited reconsideration processes, including the enrollee's right to, and conditions for, obtaining an expedited reconsideration and the rest of the appeal process; and

(ii) For payment denials, describe the standard reconsideration process and the rest of the appeal process; and

(5) Comply with any other notice requirements specified by HCFA.

(f) *Effect of failure to provide timely notice.* If the M+C organization fails to provide the enrollee with timely notice of an organization determination as specified in this section, this failure itself constitutes an adverse organization determination and may be appealed.

64. Section 422.570 is amended by:

A. Revising paragraph (a).

B. Republishing the introductory text for paragraph (d).

C. Revising the introductory text to paragraph (d)(2) and revising paragraph (d)(2)(iii).

D. Adding a new paragraph (d)(2)(iv).

§ 422.570 Expediting certain organization determinations.

(a) *Request for expedited*

determination. An enrollee or a physician (regardless of whether the physician is affiliated with the M+C organization) may request that an M+C organization expedite an organization determination involving the issues described in § 422.566(b)(3) and (b)(4). (This does not include requests for payment of services already furnished.)

* * * * *

(d) *Actions following denial.* If an M+C organization denies a request for expedited determination, it must take the following actions:

* * * * *

(2) Give the enrollee prompt oral notice of the denial and subsequently deliver, within 3 calendar days, a written letter that—

* * * * *

(iii) Informs the enrollee of the right to resubmit a request for an expedited determination with any physician's support; and

(iv) Provides instructions about the grievance process and its timeframes.

* * * * *

65. In § 422.572, revise paragraphs (b), (c), and (d) to read as follows:

§ 422.572 Timeframes and notice requirements for expedited organization determinations.

* * * * *

(b) *Extensions.* The M+C organization may extend the 72-hour deadline by up to 14 calendar days if the enrollee requests the extension or if the organization justifies a need for additional information and how the delay is in the interest of the enrollee (for example, the receipt of additional medical evidence from noncontract providers may change an M+C organization's decision to deny). When the M+C organization extends the deadline, it must notify the enrollee in writing of the reasons for the delay and

inform the enrollee of the right to file a grievance if he or she disagrees with the M+C organization's decision to grant an extension. The M+C organization must notify the enrollee of its determination as expeditiously as the enrollee's health condition requires, but no later than upon expiration of the extension.

(c) *Confirmation of oral notice.* If the M+C organization first notifies an enrollee of its expedited determination orally, it must mail written confirmation to the enrollee within 3 calendar days of the oral notification.

(d) *How the M+C organization must request information from noncontract providers.* If the M+C organization must receive medical information from noncontract providers, the M+C organization must request the necessary information from the noncontract provider within 24 hours of the initial request for an expedited organization determination. Noncontract providers must make reasonable and diligent efforts to expeditiously gather and forward all necessary information to assist the M+C organization in meeting the required timeframe. Regardless of whether the M+C organization must request information from noncontract providers, the M+C organization is responsible for meeting the timeframe and notice requirements of this section.

* * * * *

66. Section 422.584 is amended by:

A. Revising paragraph (a).

B. Republishing the introductory text to paragraph (d).

C. Revising paragraph (d)(2).

§ 422.584 Expediting certain reconsiderations.

(a) *Who may request an expedited reconsideration.* An enrollee or a physician (regardless of whether he or she is affiliated with the M+C organization) may request that an M+C organization expedite a reconsideration of a determination that involves the issues described in § 422.566(b)(3) and (b)(4). (This does not include requests for payment of services already furnished.)

* * * * *

(d) *Actions following denial.* If an M+C organization denies a request for expedited reconsideration, it must take the following actions:

* * * * *

(2) Give the enrollee prompt oral notice, and subsequently deliver, within 3 calendar days, a written letter that—

(i) Explains that the M+C organization will process the enrollee's request using the 30-day timeframe for standard reconsiderations;

(ii) Informs the enrollee of the right to file a grievance if he or she disagrees

with the organization's decision not to expedite;

(iii) Informs the enrollee of the right to resubmit a request for an expedited reconsideration with any physician's support; and

(iv) Provides instructions about the grievance process and its timeframes.

* * * * *

67. Section 422.590 is amended by:

A. Republishing the heading for paragraph (a) and revising paragraph (a)(1).

B. Republishing the heading for paragraph (d) and revising paragraphs (d)(2), (d)(3), and (d)(4).

C. Republishing the heading for paragraph (g) and revising paragraph (g)(2).

§ 422.590 Timeframes and responsibility for reconsiderations.

(a) *Standard reconsideration: Request for services.* (1) If the M+C organization makes a reconsidered determination that is completely favorable to the enrollee, the M+C organization must issue the determination (and effectuate it in accordance with § 422.618(a)) as expeditiously as the enrollee's health condition requires, but no later than 30 calendar days from the date it receives the request for a standard reconsideration. The M+C organization may extend the timeframe by up to 14 calendar days if the enrollee requests the extension or if the organization justifies a need for additional information and how the delay is in the interest of the enrollee (for example, the receipt of additional medical evidence from noncontract providers may change an M+C organization's decision to deny). When the M+C organization extends the timeframe, it must notify the enrollee in writing of the reasons for the delay, and inform the enrollee of the right to file a grievance if he or she disagrees with the M+C organization's decision to grant an extension. For extensions, the M+C organization must issue and effectuate its determination as expeditiously as the enrollee's health condition requires, but no later than upon expiration of the extension.

* * * * *

(d) *Expedited reconsideration—** * *

(2) *Extensions.* The M+C organization may extend the 72-hour deadline by up to 14 calendar days if the enrollee requests the extension or if the organization justifies a need for additional information and how the delay is in the interest of the enrollee (for example, the receipt of additional medical evidence from noncontract providers may change an M+C organization's decision to deny). When

the M+C organization extends the timeframe, it must notify the enrollee in writing of the reasons for the delay, and inform the enrollee of the right to file a grievance if he or she disagrees with the M+C organization's decision to grant an extension. The M+C organization must notify the enrollee of its determination as expeditiously as the enrollee's health condition requires but no later than upon expiration of the extension.

(3) *Confirmation of oral notice.* If the M+C organization first notifies an enrollee of a completely favorable expedited reconsideration, it must mail written confirmation to the enrollee within 3 calendar days.

(4) *How the M+C organization must request information from noncontract providers.* If the M+C organization must receive medical information from noncontract providers, the M+C organization must request the necessary information from the noncontract provider within 24 hours of the initial request for an expedited reconsideration. Noncontract providers must make reasonable and diligent efforts to expeditiously gather and forward all necessary information to assist the M+C organization in meeting the required timeframe. Regardless of whether the M+C organization must request information from noncontract providers, the M+C organization is responsible for meeting the timeframe and notice requirements.

* * * * *

(g) *Who must reconsider an adverse organization determination.* * * *

(2) When the issue is the M+C organization's denial of coverage based on a lack of medical necessity (or any substantively equivalent term used to describe the concept of medical necessity), the reconsidered determination must be made by a physician with expertise in the field of medicine that is appropriate for the services at issue. The physician making the reconsidered determination need not, in all cases, be of the same specialty or subspecialty as the treating physician.

68. In § 422.594, the introductory text for paragraph (b) is republished, and paragraph (b)(1) is revised to read as follows:

§ 422.594 Notice of reconsidered determination by the independent entity.

* * * * *

(b) *Content of the notice.* The notice must—

(1) State the specific reasons for the entity's decisions in understandable language;

* * * * *

69. Revise § 422.596 to read as follows:

§ 422.596 Effect of a reconsidered determination.

A reconsidered determination is final and binding on all parties unless a party other than the M+C organization files a request for a hearing under the provisions of § 422.602, or unless the reconsidered determination is revised under § 422.616.

70. Revise § 422.612(b) to read as follows:

§ 422.612 Judicial review.

* * * * *

(b) *Review of Board decision.* Any party, including the M+C organization, may request judicial review (upon notifying the other parties) of the Board decision if it is the final decision of HCFA and the amount in controversy is \$ 1,000 or more.

* * * * *

71. Section 422.618 is amended by:

- A. Revising the section heading.
- B. Redesignating paragraph (b) as paragraph (c).
- C. Adding a new paragraph (b).
- D. Revising newly designated paragraph (c).

§ 422.618 How an M+C organization must effectuate standard reconsidered determinations or decisions.

* * * * *

(b) *Reversals by the independent outside entity.* (1) *Requests for service.* If, on reconsideration of a request for service, the M+C organization's determination is reversed in whole or in part by the independent outside entity, the M+C organization must authorize the service under dispute within 72 hours from the date it receives notice reversing the determination, or provide the service under dispute as expeditiously as the enrollee's health condition requires, but no later than 14 calendar days from that date. The M+C organization must inform the independent outside entity that the organization has effectuated the decision.

(2) *Requests for payment.* If, on reconsideration of a request for payment, the M+C organization's determination is reversed in whole or in part by the independent outside entity, the M+C organization must pay for the service no later than 30 calendar days from the date it receives notice reversing the organization determination. The M+C organization must inform the independent outside entity that the organization has effectuated the decision.

(c) *Reversals other than by the M+C organization or the independent outside entity.* If the independent outside entity's determination is reversed in whole or in part by the ALJ, or at a higher level of appeal, the M+C organization must pay for, authorize, or provide the service under dispute as expeditiously as the enrollee's health condition requires, but no later than 60 calendar days from the date it receives notice reversing the determination. The M+C organization must inform the independent outside entity that the organization has effectuated the decision.

72. Add new § 422.619 to read as follows:

§ 422.619 How an M+C organization must effectuate expedited reconsidered determinations.

(a) *Reversals by the M+C organization.* If on reconsideration of an expedited request for service, the M+C organization completely reverses its organization determination, the M+C organization must authorize or provide the service under dispute as expeditiously as the enrollee's health condition requires, but no later than 72 hours after the date the M+C organization receives the request for reconsideration (or no later than upon expiration of an extension described in § 422.590(d)(2)).

(b) *Reversals by the independent outside entity.* If the M+C organization's determination is reversed in whole or in part by the independent outside entity, the M+C organization must authorize or provide the service under dispute as expeditiously as the enrollee's health condition requires but no later than 72 hours from the date it receives notice reversing the determination. The M+C organization must inform the independent outside entity that the organization has effectuated the decision.

(c) *Reversals other than by the M+C organization or the independent outside entity.* If the independent review entity's expedited determination is reversed in whole or in part by the ALJ, or at a higher level of appeal, the M+C organization must authorize or provide the service under dispute as expeditiously as the enrollee's health condition requires, but no later than 60 days from the date it receives notice reversing the determination. The M+C organization must inform the independent outside entity that the organization has effectuated the decision.

73. Section 422.620 is revised to read as follows:

§ 422.620 How enrollees of M+C organizations must be notified of noncoverage of inpatient hospital care.

(a) *Enrollee's entitlement.* Where an M+C organization has authorized coverage of the inpatient admission of an enrollee, either directly or by delegation (or the admission constitutes emergency or urgently needed care, as described in §§ 422.2 and 422.113), written notice of noncoverage under paragraph (c) of this section must be provided to each enrollee. An enrollee is entitled to coverage until at least noon the day after such notice is provided. If PRO review is requested under § 422.622, coverage is extended as provided in that section.

(b) *Physician concurrence required.* Before notice of noncoverage is provided as described in paragraph (c) of this section, the entity that makes the noncoverage/discharge determination (that is, the hospital by delegation or the M+C organization) must obtain the concurrence of the physician who is responsible for the enrollee's hospital care.

(c) *Notice to the enrollee.* In all cases in which a determination is made that inpatient hospital care is no longer necessary, no later than the day before hospital coverage ends, written notice must be provided to the enrollee that includes the following elements:

- (1) The reason why inpatient hospital care is no longer needed.
- (2) The effective date and time of the enrollee's liability for continued inpatient care.
- (3) The enrollee's appeal rights.
- (4) Additional information specified by HCFA.

74. Revise § 422.648(b) to read as follows:

§ 422.648 Reconsideration: Applicability.

* * * * *

(b) HCFA reconsiders the specified determinations if the contract applicant or the M+C organization files a written request in accordance with § 422.650.

75. In § 422.650, paragraphs (c) and (d) are revised to read as follows:

§ 422.650 Request for reconsideration.

* * * * *

(c) *Proper party to file a request.* Only an authorized official of the contract applicant or M+C organization that was the subject of a contract determination may file the request for reconsideration.

(d) *Withdrawal of a request.* The M+C organization or contract applicant who filed the request for a reconsideration may withdraw it at any time before the notice of the reconsidered determination is mailed. The request for

withdrawal must be in writing and filed with HCFA.

76. Revise § 422.652 to read as follows:

§ 422.652 Opportunity to submit evidence.

HCFA provides the M+C organization or contract applicant and the HCFA official or officials who made the contract determination reasonable opportunity, not to exceed the timeframe in which an M+C organization could choose to request a hearing as described at § 422.662, to present as evidence any documents or written statements that are relevant and material to the matters at issue.

77. Revise § 422.656 to read as follows:

§ 422.656 Notice of reconsidered determination.

(a) HCFA gives the M+C organization or contract applicant written notice of the reconsidered determination.

(b) The notice—

(1) Contains findings with respect to the contract applicant's qualifications to

enter into, or the M+C organization's qualifications to remain under, a contract with HCFA under Part C of title XVIII of the Act;

(2) States the specific reasons for the reconsidered determination; and

(3) Informs the M+C organization or contract applicant of its right to a hearing if it is dissatisfied with the determination.

78. In § 422.660, the introductory text is republished and paragraph (a) is revised to read as follows:

§ 422.660 Right to a hearing.

The following parties are entitled to a hearing:

(a) A contract applicant that has been determined in a reconsidered determination to be unqualified to enter into a contract with HCFA under Part C of title XVIII of the Act.

* * * * *

79. In § 422.662, paragraphs (a) and (b) are revised to read as follows:

§ 422.662 Request for hearing.

(a) *Method and place for filing a request.* A request for a hearing must be made in writing and filed by an authorized official of the contract applicant or M+C organization that was the party to the determination under appeal. The request for a hearing must be filed with any HCFA office.

(b) *Time for filing a request.* A request for a hearing must be filed within 15 days after the date of the reconsidered determination.

EXHIBIT D-67

What is medical coding?

 aapc.com/resources/what-is-medical-coding

Medical coding is the transformation of healthcare diagnosis, procedures, medical services, and equipment into universal medical alphanumeric codes. The diagnoses and procedure codes are taken from medical record documentation, such as transcription of physician's notes, laboratory and radiologic results, etc. Medical coding professionals help ensure the codes are applied correctly during the medical billing process, which includes abstracting the information from documentation, assigning the appropriate codes, and creating a claim to be paid by insurance carriers.

Medical coding happens every time you see a healthcare provider. The healthcare provider reviews your complaint and medical history, makes an expert assessment of what's wrong and how to treat you, and documents your visit. That documentation is not only the patient's ongoing record, it's how the healthcare provider gets paid.

Medical coders translate documentation into standardized codes that tell payers the following:

- Patient's diagnosis
- Medical necessity for treatments, services, or supplies the patient received
- Treatments, services, and supplies provided to the patient
- Any unusual circumstances or medical condition that affected those treatments and services

EXHIBIT

1582

~~2105~~

Like a musician who interprets the written music and uses their instrument to produce what's intended, medical coding requires the ability to understand anatomy, physiology, and details of the services, and the rules and regulations of the payers to succeed. Check out our webinar to learn more — [Guidelines: The Foundation of Coding](#).

Medical coding derives from public bills of mortality posted in London in the 18th century. It was through correlating these that doctors determined the cause of a cholera epidemic. It is even more vital now as the data gathered through medical coding is used to improve healthcare overall. The results are submitted to payers for reimbursement, but the data derived from the codes also are used to determine utilization, manage risk, identify resource use, build actuarial tables, and support public health and actions.

Medical coding requires a particular discipline. Medical coders are considered part of the medical team, often working very closely with providers, management, and payers. A scholar, detective, educator, and problem solver, medical coders possess particular skills.

The medical coder and biller process a variety of services and claims on a daily basis. Medical codes must tell the whole story of the patient's encounter with the physician and must be as specific as possible in capturing reimbursement for rendered services. To better understand what a coding transaction looks like, read the article: [What does a medical coder do?](#)

The main task of a medical coder is to review clinical statements and assign standard codes using CPT®, ICD-10-CM, and HCPCS Level II classification systems. Medical billers, on the other hand, process and follow up on claims sent to health insurance companies for reimbursement of services rendered by a healthcare provider.

The medical coder and medical biller may be the same person or may work with each other to ensure invoices are paid properly. To help promote a smooth coding and billing process, the coder checks the patient's medical record (i.e., the transcription of the doctor's notes, ordered laboratory tests, requested imaging studies, and other sources) to verify the work that was done. Both work together to avoid insurance payment denials.

Why is medical coding needed?

The healthcare revenue stream is based on the documentation of what was learned, decided, and performed.

A patient's diagnosis, test results, and treatment must be documented, not only for reimbursement but to guarantee high quality care in future visits. A patient's personal health information follows them through subsequent complaints and treatments, and they must be easily understood. This is especially important considering the hundreds of millions of visits, procedures, and hospitalizations annually in the United States.

The challenge, however, is that there are thousands of conditions, diseases, injuries, and causes of death. There are also thousands of services performed by providers and an equal number of injectable drugs and supplies to be tracked. Medical coding classifies these for easier reporting and tracking. And in healthcare, there are multiple descriptions, acronyms, names, and eponyms for each disease, procedure, and tool. Medical coding standardizes the language and presentation of all these elements so they can be more easily understood, tracked, and modified.

This common language, mandated by the Health Information Portability and Accountability Act (HIPAA), allows hospitals, providers, and payers to communicate easily and consistently. Nearly all private health information is kept digitally and rests on the codes being assigned.

Types of codes used

Medical coding is performed all over the world, with most countries using the International Classification of Diseases (ICD). ICD is maintained by the World Health Organization and modified by each member country to serve its needs. In the United States, there are six official HIPAA-mandated code sets serving different needs.

ICD-10-CM (International Classification of Diseases, 10th Edition, Clinically Modified)

ICD-10-CM includes codes for anything that can make you sick, hurt you, or kill you. The 69,000-code set is made up of codes for conditions and disease, poisons, neoplasms, injuries, causes of injuries, and activities being performed when the injuries were incurred. Codes are “smart codes” of up to seven alphanumeric characters that specifically describe the patient’s complaint.

ICD-10-CM is used to establish medical necessity for services and for tracking. It also makes up the foundation of the MS-DRG system below.

CPT® (Current Procedure Terminology)

This code set, owned and maintained by the American Medical Association, includes more than 8,000 five-character alphanumeric codes describing services provided to patients by physicians, paraprofessionals, therapists, and others. Most outpatient services are reported using the CPT® system. Physicians also use it to report services they perform in inpatient facilities. Here's a little behind the scene on the making of CPT® codes.

ICD-10-PCS (International Classification of Diseases, 10th Edition, Procedural Coding System)

ICD-10-PCS is a 130,000 alphanumeric code set used by hospitals to describe surgical procedures performed in operating, emergency department, and other settings. Don't let the procedural coding intimidate you by taking the right approach to ICD-10-PCS coding.

HCPCS Level II (Health Care Procedural Coding System, Level II)

Developed originally for use by Medicare, Medicaid, Blue Cross/Blue Shield, and other providers to report procedures and bill for supplies, HCPCS Level II's 7,000-plus alphanumeric codes are used for many more purposes, such as quality measure tracking, outpatient surgery billing, and academic studies.

CDT[®] (Code on Dental Procedures and Nomenclature)

CDT[®] codes are owned and maintained by the American Dental Association (ADA). The five-character codes start with the letter D and used to be the dental section of HCPCS Level II. Most dental and oral procedures are billed using CDT[®] codes.

NDC (National Drug Codes)

The Federal Drug Administration's (FDA) code set is used to track and report all packages of drugs. The 10-13 alphanumeric character smart codes allow providers, suppliers, and federal agencies to identify drugs prescribed, sold, and used.

Modifiers

CPT[®] and HCPCS Level II codes use hundreds of alphanumeric two-character modifier codes to add clarity. They may indicate the status of the patient, the part of the body on which a service is being performed, a payment instruction, an occurrence that changed the service the code describes, or a quality element.

MS-DRG and APC

Two federal code sets used to facilitate payment deriving from those above systems are MS-DRG and APCs. They rely on existing codes sets but indicate the resources consumed by the facility to perform the service.

MS-DRG (Medical Severity Diagnosis Related Groups)

MS-DRGs are reported by a hospital to be reimbursed for a patient's stay. The MS-DRG is based on the ICD-10-CM and ICD-10-PCS codes reported. They are defined by a particular set of patient attributes which include principal diagnosis, specific secondary diagnoses, procedures, sex, and discharge status. The Centers for Medicare & Medicaid Services (CMS) work with 3M HIS to maintain this data set.

APC (Ambulatory Payment Categories)

APCs are maintained by the Centers for Medicare & Medicaid Services (CMS) to support the Hospital Outpatient Prospective Payment System (OPPS). Some outpatient services in a hospital, such as minor surgery and other treatments, are reimbursed through this system.

How is medical coding done?

Medical coding is best performed by trained and certified medical coders. The following example outlines what a typical day in the life of a Medical Coder may look like.

After settling into the office and grabbing a cup of coffee, a medical coder usually begins the workday by reviewing the previous day's batch of patient notes for evaluation and coding. The type of records and notes depends on the clinical setting (outpatient or facility) and may require a certain degree of specialization (Healthcare systems may have individuals who focus on medical specialties while coders who work in smaller, or more general offices, may have a broad range of patients and medical conditions.).

Selecting the top patient note or billing sheet on the stack, the coder begins reviewing the documentation to understand the patient's diagnoses assigned and procedures performed during their visit. Coders also abstract other key information from the documentation, including physician names, dates of procedures, and other information.

Coders rely on ICD-10 and CPT® code books to begin translating the physician's notes into useful medical codes. An example of basic procedure documentation and subsequently assigned codes can be seen below.

Many cases are simple to code. Individual medical coders develop a detailed understanding of the procedures and commonality of their specific clinic or facility. Coders occasionally encounter a difficult note requiring in-depth research, taking more time to code correctly. Even among the more commonly used codes are significant gray areas open for examination among coders. With very complex or unusual cases, coding guidelines may be confusing to interpret. Experienced coders will rely on their network of peers and professionals to discuss nuances in online forums, networking with specialists they have met at national conferences, or consulting with co-workers to help understand the issue and determine the proper codes. Ongoing training and current coding-related periodicals such as AAPC the Magazine also provide important opportunities to advance understanding and professionalism.

Finally, the coder completes the chart and begins the next patient record. This cycle of reading, note taking, assigning codes, and computer entry repeats with each chart. Most coders will spend the majority of their day sitting at the computer reading notes and using their computer to enter data into a billing system or search for information to clarify the documentation in the notes.

Here's an example of a case:

This is a 40-year-old male with rectal pain, rectal bleeding, and some left-sided lower abdominal pain. The colonoscopy procedure and the risks, not limited to bleeding, perforation, infection, side effects from medication, need for surgery, etc., and were fully explained to the patient. An informed consent was taken.

Instrument Used: CF-Q160.

Sedation: Versed 5 mg IV in incremental doses and Demerol 100 mg IV in incremental doses performed by the anesthesia team.

Extent of Exam: Up to cecum as identified by ileocecal valve and appendiceal orifice.

Length of Scope Insertion: 110 cm.

Postop Diagnoses/Impression:

1. Moderate-sized, internal hemorrhoids.
2. Mild diverticulosis.

Description of Procedure: With the patient being in the left lateral position, first digital examination of the rectum was done, which was unremarkable. Then, the CF-Q160 was passed through the rectum under direct visualization and advanced all the way to cecum. The cecum was identified by ileocecal valve and appendiceal orifice. There were a couple of tics/diverticula seen on the left side of the colon. A careful look was taken while withdrawing the scope. Retroflex view in the rectum showed moderate-sized internal hemorrhoids.

Plan:

1. Anusol-HC suppositories for hemorrhoids.
2. High-fiber diet.
3. If there is no family history, a follow-up colonoscopy in 10 years.

CPT® Code: 45378

ICD-10-CM Codes: K64.8, K57.30

How do you become a medical coder?

Successful medical coders know anatomy, physiology, medical procedures, and payer rules and policies. To become a medical coder, you must attend training via a coding-specific training program or college. Afterward, finding a job in the field is easier if you have a professional credential, such as AAPC's.

There are several medical coding certifications available, depending on the area of the revenue cycle you wish to pursue. The baseline for most is the Certified Professional Coder (CPC) , which certifies the coder's ability to work in outpatient settings. Facility coders should pursue the Certified Inpatient Coder (CIC) for inpatient coding and Certified Outpatient Coder (COC) for hospital patients receiving in-and-out services. Here's an

infographic to help you chose the right hospital credential. There are several programs available both for online training on medical coding and physical medical coding training classes.

Today more than 200,000 medical professionals are members of AAPC. AAPC elevates the standards of medical coding by developing training, professional certification, opportunities to network with other related medical professionals and providing a variety of job search and career building opportunities.

Professional coders largely work independently. However, interaction with coding staff, medical billers, physicians, and ancillary office staff is essential. Medical coders are usually placed on tight production schedules and expected to complete a determined number of notes each day or to keep their lag days at a specified timeframe. Lag days are the number of days it takes for the notes to be documented to the actual claims submission date. The prime date is usually between two to five days.

Depending on the clinical setting, internal or external auditors periodically perform audits of the coding and documentation for accuracy and completeness. The results of these coding audits are maintained by the compliance department or the department supervisor and are a significant part of job evaluations.

How much does a medical coder make in a year?

AAPC-certified medical coders make \$60,917 per year on average — 29% more than uncertified health information technicians who earn approximately \$47,200 annually. Where you live, what role you play in the revenue cycle, and how much education and credentials you have can influence your pay. Coders who pursue career advancement, earning their Certified Professional Medical Auditor (CPMA), Certified Physician Practice Manager (CPPM), or Certified Documentation Expert Outpatient (CDEO) make average salaries of \$71,646 annually, according to AAPC's 2023 Medical Coding Salary Survey.

Charting your career requires curiosity, continuing education, and imagination. Achieving the credential is the beginning of a lifetime of new experiences and knowledge.

Subject: RE: 2012 Attestation and follow-up from yesterday's meeting

Steve,

Thank you for your email and for our discussion earlier this week. With respect to your fifth point, I would note that regardless of the effective date of the proposed requirement related to medical record reviews, there are other laws that do impose standards, requirements and responsibilities on MA plans in connection with the federal payments they receive from CMS. We cannot provide advice to United about the scope of those other laws. Nor can we provide advice on whether United's plan course of action and/or purported limits on the scope of its attestation are compliant with such other laws. Your statement concerning the data submissions that have already been made and United's plans for future action will be included in our records and we will proceed with our evaluation and use of the risk adjustment data consistent with 42 CFR 422.308, 422.310, and other applicable law.

Thanks again,

Cheri

Subject: 2012 Attestation and follow-up from yesterday's meeting

Dear Cheri,

I wanted to thank you and your colleagues for taking the time to meet with us yesterday. We appreciate the time and attention that you and others in CMS leadership have provided on the issue of our 2012 risk adjustment data

EXHIBIT
00324

submissions and our annual risk adjustment data certifications. As we mentioned, prior annual certifications have been on paper, and we have thus had the ability to add notes explaining our understanding of the certifications and our ongoing data remediation efforts. This year, however, the certifications are electronic, and there does not appear to be an opportunity to reflect our understanding. The purpose of our meeting yesterday and this email is to explain our understanding of the certifications.

First, as with our past certifications, the 2012 certifications are based on facts reasonably available or made available to us as of the date of the certifications. As we receive additional information, we may be required to modify the data to which the certifications relate.

Second, the certifications use the phrase "best knowledge, information, and belief," which is based on our ordinary business practices.

Third, the certifications only cover risk adjustment data for 2012 dates of service that were submitted to CMS and not subsequently deleted prior to the date of the certifications.

Fourth, as we have mentioned to you previously, we are engaged in an ongoing review of our risk adjustment processes and submission system. This review has identified areas for improvement and, as a result, we will be deleting all risk adjustment data for 2012 dates of service that we ultimately determine should be deleted consistent with this email.

Fifth, as we discussed yesterday, CMS recently issued a proposed rule that would, if finalized, require MA plans to design any medical record reviews to determine the accuracy of risk adjustment diagnoses associated with those records. During our conversation yesterday and other recent conversations, CMS confirmed to us that these requirements do not apply until the effective date of the rule, and that MA plans are thus not currently required to design their medical record reviews to determine the accuracy of risk adjustment diagnoses. We currently have a process through which we review certain medical records to determine the accuracy of risk adjustment diagnoses and submit appropriate deletes. This process already has resulted in the identification of and, in some instances, the submission of deletes for 2012 dates of service. But based on the proposed rule, including the preamble, and recent conversations with CMS, we suspended that process for 2012 dates of service while we consider whether to make changes. Pursuant to our discussion, however, we will soon submit for deletion those diagnosis codes that have undergone a complete review and that we have therefore identified as appropriate deletes. In the near future, we will determine whether to continue our review process for the diagnosis codes which were still under review at the time we suspended our process. In the meantime, we will not delete these codes.

The certifications that we submit today are made subject to these clarifications. Please let us know if you have any questions. Again, thank you for your time and attention on this matter.

Optum: The Health Services Partner

~~Optum is the leading partner for stakeholders across the complex and dynamic health system.~~

One of the largest **health information, technology and consulting** companies in the world

The leader in **population health management** serving the physical, mental and financial needs of both individuals and organizations

The **pharmacy management** leader in service, affordability and clinical quality

Market leaders within a dynamic health services market

Optum Services focused on the Payer Value Chain

The payer value chain serves as a strategic framework to organize ideas and actions in three key areas critical to successfully meeting stakeholder requirements.

Payer Value Chain

Payers are seeing challenges across all aspects

Optum Population Health Management Portfolio

Optum's **population health management solution** addresses quality, risk adjustment and utilization in an integrated manner using a framework that leverages our advanced analytic capabilities to provide a holistic view of a population to provide the right intervention at the right time to drive change in member and provider behavior across lines of business.

Risk Adjustment Solution

Assists in the improvement of accuracy and timeliness of risk adjusted revenue reimbursement.

- Data capture, reconciliation and submission services
- Coordinated chart retrieval and abstraction
- Professionals who engage providers in their offices to improve assessment, documentation and gap closure for members
- Individual assessment services with a unique clinical orientation to improve care management

Medicare/HCC Program

RAPS & Encounter Submission Services

Medicaid/CDPS Program

Exchange HHS/HCC Program

Market/Provider Consultation Representatives

Chart Retrieval Abstraction & Management

Quality Solution

Solution helps to improve quality ratings through a combination of expert consulting, services and technology that support:

- Quality gap identification
- Improvement in Medication Adherence
- Member profiles and registries
- Provider profiles and registries
- Facilitate member and provider outreach & engagement activities
- Capture quality data and submits it with certified software

Stars/HEDIS Gaps in Care

NCQA Certified HEDIS Software

Stars Management and Modeling Software

Evidence Based Medicine Gap ID Software

CAHPS & HOS Surveys and Improvement

Medical Record Abstraction & Management

Integrated Member Support Solution

improves health outcomes, increases member satisfaction, reduces costs and improve retention by:

- Supporting healthy behaviors
- Improving access and setting appointments
- Providing comprehensive HRAs that cover physical, behavioral and environmental assessments
- Providing or partnering in direct care and assessments
- Managing chronic & acute medical, social and behavioral needs
- Medicare, Medicaid, MME, Employer, and Exchange oriented programs

End-to-End Chart Review Solution

Optum delivers end-to-end services to identify accurate reimbursements & performance.

Chart Scoring Example

Mary is an 85 year old, high-risk diabetic. She has had a number of visits with her PCP (Dr. Smith), and one visit with her rheumatologist (Dr. Jones).

Illustration of 2013 Project/2012 Dates of Service Outcomes

Approach:

- Member profile created for each unique member
- Clinical analysis of each member profile is grouped into 7 stratified priority groups based on level of risk
- Each priority group includes multiple probability factors in addition to the member's clinical risk factors

Suspecting Results:

- Detailed front end analysis **driven by data intelligence** that aligns to Health Plan goals & initiatives
- Enhanced focused on clinical & administrative data ensures **greater accuracy & conversion** of suspected charts to actual diagnosis

% of Charts	Average Value Per Chart 1 Year DOS	Priority Grouping
3%	\$714	1
5%	\$463	2
9%	\$400	3
15%	\$330	4
21%	\$242	5
27%	\$190	6
20%	\$57	7

Chart Score Value

2014 Chart Opportunity Logic

Charts to pursue

- Logic applied to remove 'duplicate' charts reviewed in the prior period
- Remaining charts are stratified and prioritized

2013 Filtering & Targeting Waterfall

Total membership active as of 1/1/2013	2,596,515
Cap members	(530,634)
MWOV, or visit at a non-targeted speciality or invalid POS	(436,969)
Net members eligible for Optum coordinated chart review	1,628,912
Available charts	3,122,650
Prioritization of available charts	
(1)	42,730
(2)	192,056
(3)	299,724
(4)	459,142
(5)	418,849
(6)	377,661
(7)	1,332,488
Exclusions	
Charts with no new DOS	(499,563)
Non targeted due to market exclusions	(31,227)
Provider group clean up charts	(48,542)
Low value specialities	(202,704)
Low value charts	(471,847)
Total Exclusions	(1,253,883)
Targeted Charts to Pursue	1,868,768

Medical Record Retrieval Process

✓ Provider pull list is generated by the Health Plan or by Optum using our NCQA certified HEDIS engine.

✓ The pull list is reviewed & approved by the Health Plan in advance of contacting physician offices.

✓ Health Plan is informed of historical accounts of Providers Not Participating (PNPs) & works with Healthcare Advocates to determine retrieval strategies.

✓ Providers approved for inclusion in chart review receive letters by mail or direct delivery.

✓ Provider is contacted by phone to schedule an appointment & discuss preferred method & workflow for retrieving medical record data.

Real-time tracking of record request status via Chart Review Portal. Weekly project tracking, meeting, reporting, and issue resolution reporting provided to Health Plan.

On-site Scanning

Fax & Mail

Secure Email

EMR Retrieval

Direct to Optum

(Provider Submits Electronic Records)

Handling Provider Resistance

Approach:

- Sophisticated management process of identifying Providers Not Participating (PNPs)
- Leverage Healthcare Advocates to engage with providers to resolve issues
- Escalation path defined by Optum & UHC
- Year over year analysis of PNPs & engagement strategies for each Chart Review project period

Results:

- Weekly PNP reporting by reason code including days pending to resolution
- Joint Optum|UHC escalation process to resolve provider PNP's

Provider Not Participating Summary

Chart Review Service Level Agreement (SLA)

- The **SLA** is the contracted number of charts Optum is obligated to complete for UHC (M&R | C&S) as part of the service pmpm fee
- Measure period is January sweeps to January sweeps
- Charts completed above and beyond the SLA is incremental (buy-up) and charged @ \$30/chart
- M&R and C&S SLA's are derived by taking the September restated membership of the current CY year and running it through a series of specific calculations

Chart Review Project

Chart Review Timing & Targeting:

Drivers of May release

- Necessary runway needed to retrieve and code by sweeps deadline
- Creation and delivery of end of project chart review provider reports
- Early chart entry into claim verification & attestation process
- Coordinate provider chart reviews to minimize provider disruption (attempt chart retrieval for risk adjustment one time per year)

Claims Verification

Patty Brennan

Claims Verification Overview

Reporting	Submission	Coding QA	CVA	System	Chart	Chart
	File		Coding	Matching	Eligibility	Review

- Process of reviewing claims data with corresponding chart review coding results
- Verifies that the indicated medical record properly documents the condition in accordance with CMS guidelines
- Focused on risk mitigation for single source, single instance HCCs which drive payment

Definition & Methodology of Exclusive HCC

- Defined as an HCC reported by a single provider for a unique member during the collection period.
- Targeting charts that contain only exclusive HCCs allows for:
 - Review of HCC conditions that drive payment
 - Risk Mitigation in case of RADV

Reporting Provider	HCC Reported	Exclusive HCC?
A	HCC 19 HCC 80	NO YES
B	HCC 21	YES
C	HCC 19	NO

Claims Verification – System Matching Overview

RADV

Patty Brennan

CMS RADV – What we know?

- 30 MA contracts selected
 - M&R four contracts selected.
 - 201 members sampled within each contract selected
- Extrapolation methodology will be applied for next round of RADV - 2011 Payment Year (2010 dates of service)
 - Fee for service adjuster will be applied
- Multiple medical records can be submitted in support of each member/HCC combination (up to five medical records)
- Attestations will be accepted to address signature/credential issues
- Expanded submission deadline to 16 weeks (previously 12 weeks)
- Medical Record Dispute process

CMS Targeted RADV Overview

RADV
End to
End
Support

- Dedicated Project Manager
- Extensive Experience with CMS Targeted RADV, OIG “RADV Like” Reviews, CMS National Sample Reviews
- Expedited retrieval process
- Focused on identifying the best medical records for submission to CMS
- Frequent reporting and status

RADV Workflow

RACCR

Patty Brennan

RACCR Goals

Goals of RACCR Audits

- Identify and test aberrant coding patterns
- Remove errant codes from claims
- Improve accuracy of data submitted by providers via claims and encounters through education

Targeted Provider Groups

- Tier 1 (capitated/gainshare providers)
- Groups with over 500 members
- Groups/HCC combinations that are 2 SD from the mean

Basis for Provider Selection

- Reimbursed on diagnosis code basis
- Large enough for reporting to identify statistically valid patterns
- Greatest likelihood for engagement in improvement efforts

Risk Adjustment Coding and Compliance Reviews

RACCR Process

Analyze prevalence
and compare Tier 1
groups to other tier 1

OPTUMinsight™

Healthcare Quality Patient Assessment Form

The Healthcare Quality Patient Assessment Form (HQPAF) questions, please contact 1-877-751-4207.

Instructions

1. Schedule a comprehensive exam for this patient or return only the sections of this form marked with an asterisk.
2. Document in the progress note, including clear progress notes, the results of this form.
3. Submit pages of this form containing the "yes" and "no" factors, documented to the highest level of specificity. Secure Fax Server: 577-660-5747

Administrative reimbursement of \$1K will be paid for each completed form.

Patient & Provider Information

Patient: LAST_NAME1, FIRST_NAME1 Member ID: XXXXXXXX1 DOB: 01/01/1950 Phone: (999)999-9999

Complete this section only if you are not able to complete a full assessment. A reduced reimbursement of \$1K will be paid after submission. Patient does not respond to contact efforts. Invalid / incomplete contact information. This member is deceased, as of MM/DD/YYYY.

Complete this section only if you are not interested in completing a full assessment. No reimbursement will be made. I am not interested in completing this patient.

Early Detection of Chronic Illness

Please consider screening for these chronic illnesses based on conditions and document any confirmed conditions that result in out-of-pocket expense for the patient, depending on the insurance plan.

Chronic Illnesses to Consider	Risk Factors or Co-morbid Conditions
Chronic Kidney Disease	Family History Kidney Disease (V18.01)
Chronic Obstructive Pulmonary Disease	History of Smoking (V15.82)
Diabetes Mellitus	Lower Extremity Ulcer (707.1)
Diabetic Neuropathy	Chronic Bronchitis (491)
Major Depression	Depressive Disorder, not elsewhere classified (311)
Peripheral Arterial Disease	Chronic Pancreatitis (577.1)
Protein Calorie Malnutrition	Cystic Fibrosis (277.0)

Note: Additional information and reference links on risk factors are available in the progress note.

> Care for Older Adults Complete suggested action(s). Detail in progress note and return with form. According to HEDIS specifications, the following should be completed for members of Special Needs Plans.

Measure	Suggested Action	Outcome Document in progress notes	
Advanced Care Planning	Discussion with patient	☐ Completed	☐ Previously executed
Medication Review	Annual review of medications	☐ Completed	☐ Referred
Functional Status Assessment	Assess Activities of Daily Living	☐ Completed	☐ Referred
	Instrumental Activities Daily Living	☐ Completed	☐ Referred
	Other Standardized assessment	☐ Completed	☐ Referred
Comprehensive Pain Screening	Comprehensive Pain Assessment	☐ Completed	☐ Referred
	And/or Pain Management Plan	☐ Completed	☐ Referred

Note for Advanced Care Planning: Progress notes documenting the discussion with patient (including date) is sufficient to demonstrate the required interaction with the member; progress notes must be returned with HQPAF.

> Additional Instructions

- Schedule** a comprehensive exam for this patient or review HQPAF during the patient's next office visit and complete pages one and two.
- Document** in the progress note, including clear provider signature & credential(s), patient name, and date of service. *This form expires – eligible dates of service for submission limited to MM/DD/YYYY through MM/DD/YYYY.*
- Submit** pages one and two of this form and applicable progress note(s) to support all chronic conditions and co-morbid factors, documented to the highest level of specificity. Submission options:
 - Secure Fax Server: 1-877-889-5747
 - Traceable Carrier: Optum PAF Processing - 1021 Windcross Ct., Franklin, TN 37067

Administrative reimbursement of \$X will be paid for completed forms with progress note(s) that meet CMS documentation requirements.

> Keys to Success

- ✓ Be sure to include the following when submitting an HQPAF:
 - Completed page one
 - All pages of completed progress note for a visit between mm/dd/yy and mm/dd/yy
 - Additional documentation (potentially outside of date range above) supporting past screenings
- ✓ Progress notes must meet Optum coding standards and CMS Documentation requirements, including:
 - Provider name, credentials and signature must appear at the end of each documented patient visit in the progress note
 - Provider signature log should be on file
 - If printing from EMR, appropriate authentication language, such as "Signed by" or "Authenticated by", must be present
 - Member name and date of birth (on all pages)
 - Date of service

> Patient Status Exceptions

Complete this section and return this page only if you are not able to complete the assessment. A reduced reimbursement of \$x will be paid after submission & processing.

☐ Patient does not respond to contact efforts.

☐ Invalid / incomplete contact information.

☐ This patient is deceased, as of MM/DD/YYYY

Complete this section and return this page only if you are not interested in completing the assessment. No reimbursement will be made.

☐ I am not interested in contacting this patient.

HeadPrint	Page 2 of 2	Run Date: 11/3/2012
00001, Group Name	Print ID	Print ID, Review Type
This information is a summary of previously reported diagnoses, from multiple sources and is not intended to be used in place of medical diagnosis or treatment. Any HEDIS diagnosis and substance abuse conditions, whether present or not, are not part of this Patient Assessment Form.		

2014 HQPAF Form Enhancements

Depression Screening	Added to Early Detection of Chronic Illness section	Promotes screening for depression in the primary care setting using readily available formal screening tools	Prompt providers to perform depression screening on all patients
Cognitive Function Screening	Added to Early Detection of Chronic Illness section	Promotes screening for cognitive impairment, in the primary care setting, using readily available formal screening tools	Prompt providers to perform cognitive function screening on all patients
Morbid Obesity	Added to Early Detection of Chronic Illness section	In the CMS V22 HCC model, morbid obesity is a risk-adjusting condition.	Asks provider to consider coding morbid obesity when BMI is >40.
Annual Exam	Added to Office Visits section	Informs provider of the date of the patient's most recent annual exam	Allows providers to easily identify patients who are overdue for an annual exam.
Diabetes Treatment	New section added within the Medication History	Alignment with STAR measure	Alerts providers if patients who are diabetic, and also have high blood pressure, have not been prescribed, or are not taking, an appropriate medication for either condition.
2014 HEDIS and CMS STAR measures	Updating patient identification logic, as appropriate, based on changes to HEDIS and STAR measures

OptumPAF – Data Flow

HQPAF – HCA Process

Analytics & Reporting

Deployment – Market Consultation Volume YoY

- 2014 Deployment Strategy
 - Early deployment prioritizing based on engagement and volume
 - 2014 initial volumes reduced by blank HQPAF suppression
 - Additional deployments expected in 2014Q3 and Q4

Returns – Market Consultation Return Percentage

- 2013 MC return percentage currently 40%, on track to exceed previous years

Returns – Market Consultation Volume

- 323K total returned thru 12/31, currently 35% favorable to 2012 project year
 - Significant additional returns expected

Returns – Market Consultation Return Trend

- Early deployments tend to return more consistent volumes each month.
- Returns tend to spike in December regardless of month generated.

HQPAF – Variable Reimbursement

General

- All requests approved by RVPs using standard form
- Approvals expire at year end and must be reviewed & reapproved

State Level

- Permits client to set variable rate for a particular market based on the provider state
- Rate change should be set before deployment begins
- Compatible with all deployment channels
- 2012 Performance – No Variable State level rates for UHC M&R

Group Level

- Permits variable rate for a specific group
- Rate change must be set before deployment
- Currently compatible with PAFs ordered by PVF only
- 2012 Performance
 - 35.8K PAFs generated, 96 orders, June – November
 - 28% returned outperforms 40% model on average (*see graph for variability*)
 - 7% CNA rate (vs 15% average)

Performance vs Lag Model

HQPAF – Managing Rejected Forms

Provider reports available for top rejects:

- D02: Provider signature not included in documentation
- D04: Document is partially or totally ineligible
- D05: Date of service not included in documentation
- D06: No patient name on progress note
- D09: Provider credentials missing from documentation
- D14: Chronic Condition Not Documented
- D27: EMR signature verbiage is invalid for authentication

HQPAF – Managing Rejected Forms

UHC Reject Reasons

Administrative Issues

- Member name and DOS visible on all pages of progress note
- DOS exceeds 60 day run date threshold
- Fax viewing error
- Need all pages of progress note
- EMR authentication issues

Signature Issues

- Need signature log
- No provider signature
- EMR signature noncompliant

HQPAF – Monthly Reporting

1. Operational Report

- Provides summary of PAF volumes by channel, including point-in-time generated, returned, and returned disposition (CNA, In Process, Coding Complete)
- Includes catalog of all groups with PAFs generated and early warning engagement indicators

2. Trend Report

- Monthly trend of PAFs generated and returned by channel
- Includes point-in-time breakdown of returned PAF disposition & reject reasons

3. Invoice Support File

- One record per PAF received, including current disposition, provider, group, processing dates, max date of service, and provider reimbursement

4. HQSMR

- Summary and member level detail for early detection and HEDIS/Quality screenings using all claims sources (lab & rx where available) and data coded from medical records returned with HQPAFs
- Includes prospective view of screenings needed
- Member-level data published to Health Plan
- Provider version available

5. Gap Analysis

- Details gap closures resulting from returned HQPAFs based on coding of attached medical records, including gaps triggered, percentage completed
- Shows by measure gaps triggered as well as percentages completed, referred and closed including validly documented numerator-compliant screenings.
- Recent Enhancements
 - Includes additional non-closure reasons (e.g, invalid documentation, numerator specification not met)
 - Provider group version of the report is being developed

MA-PCPi: Overview

- What is MA-PCPi?
 - Medicare Advantage Primary Care Physician Incentive Program
 - Pay for Performance incentive supporting CMS HEDIS & Star Quality Rating programs
 - Requires a contract amendment; automatically renews
 - Utilizes HQPAF
 - Member specific clinical data
 - Captures Risk Adjustment and Stars data
 - Established submission pathways
 - Rapid reimbursement
 - Permits provider control of member population
 - Unprecedented national collaboration between Optum & UHN to engage providers
 - Scalable – deployed to over 1,100 groups in 2013

10	\$80
9	\$70
8	\$60
7	\$50
6	\$40

2014

# of MA-PCPi Measures Met	Bonus Amount per Assessed MA-PCPi Customer		
	Met Requirements for <u>both</u> C17 and C18	Met Requirements for <u>either</u> C17 or C18	Did Not Meet Requirements for either C17 or C18
17	\$300	n/a	n/a
16	\$230	\$215	n/a
15	\$215	\$200	\$185
14	\$200	\$185	\$175
13	\$185	\$175	\$130
12	\$175	\$130	\$120
11	\$130	\$120	\$110
10	\$120	\$110	\$100
9	\$110	\$100	\$90
8	\$100	\$90	\$80
7	\$90	\$80	\$70
6	\$80	\$70	\$60

In addition to the inclusion of the pharmacy measures, we will double the payment for achieving 4 Star on the outcomes measures (C17 and C18) and include an additional \$10 per assessed customer for each measure where the provider hits the 5 Star stretch goal.

Example, if they hit 12 measures including C17 and C18, they would earn \$175 per Assessed Customer. If they hit the stretch goal on 3 measures, we would add an additional \$30 for a total of $(\$175 + (\$10 * 3)) = \$205$ per assessed customer.

2013 Early Indicators – Incentive Estimates

Accrual Summary

PAF activity thru: 01/08/2014

HQSMR updated thru: 12/13/2013

Incentive Accrual (\$) - Point-In-Time Model

Total	
#	%

\$ 1,978,270

Incentive Accrual (\$) - End-of-Year Model

\$ 2,804,876

Projects forms completed at end of measurement period based on current completion rates, holding all other variables constant.

Incremental Potential #1 (\$) - End-of-Year Model

\$ 2,129,614

Estimates incremental incentive potential if On-Track HS's close gaps at a higher rate (+2 measures).

Incremental Potential #2 (\$) - End-of-Year Model

\$ 1,352,844

Estimates incremental incentive potential if slightly Off-Track HS's shift to On-Track & close gaps at a higher rate (+2 measures).

MA-PCPi Incentive Accrual Tracking (M&R + C&S)

2013 Early Indicators – HQPAF performance & MA-PCPi

- Data thru 12/18/13

MA-PCPi 2014 – Changes

1. Earlier Deployment

- Targeting by Tier based on 2013 engagement

2. New Measures

- Remove Access to Care
- Add BMI
- Add Rx Measures

3. New Incentive Model

- Higher potential payout
- More complex tiers to drive provider behavior

4. Reporting thru PCOR

- Client requests integration with PCOR as report delivery engine

HQPAF & MA-PCPi 2014 – Opportunities & Challenges

OPPORTUNITIES

1. Growth in Engagement, Volumes, Outcomes

- Enhanced Provider Targeting
- YoY engagement growth at the provider level
- Incentives for quality submission
- Blank PAF suppression
- Earlier SOPAF deployment (17% of M&R mbrs associate with small groups)

2. Continued RA & Stars Impact

3. Supplemental Submission

- Provider ability to close gaps with submission subsequent to HQPAF

4. Full Year MA-PCPi Campaign

CHALLENGES

1. Compressed Production/Deployment Calendar

2. Enticing Providers to Portals

- Insite
- OptumPAF

3. PCOR Alignment/Integration

4. Provider Data Alignment w/ UHN

- Alignment between Contracted Entities (Health Systems) & Point-of-Care Providers

HEDIS Programs

Ramesh Jayasuriya

Clinical Quality – Financial Impact

Financial performance of payers are increasingly dependent on the ability to accurately **measure** and **improve** quality of care

Healthcare reform has attached a significant dollar value to quality of care

- ❖ Increased use of sanctions with stringent corrective action plans
- ❖ The industry as a whole has transitioned from routine retrospective measurements to real-time data driven issue identification and follow-through to operations
- ❖ Focus on the member experience when interacting with the health plan, its delegates and its network

Quality-based bonus payments are increasingly important to operating margins

- ❖ STARS
- ❖ State bonuses
- ❖ ACO
- ❖ PCMH

Quality Spending has Grown Dramatically

Payers have demonstrated a financial commitment to quality, increasing their investment in this area at nearly double the rate of the next closest administrative spend category

Growth Rate of Admin Spend

Blue Cross Blue Shield Admin Spend Benchmark
CAGR of Admin Spend Category from 2005 to 2008

PMPM Growth in Admin Spend

Blue Cross Blue Shield Admin Spend Benchmark
Increase in PMPM Spend from 2005 to 2008

Notes: Based on Median PMPM expense level of surveyed BCBS plans from 2005 to 2008.

Our Solution At-A-Glance

HEDIS Medical Record Review

Key highlights:

- ✓ Year 1 of a 2-3 year plan to in-source HEDIS medical record review
- ✓ In 2014 we will handle about 30% of total volume – about 150k charts between all 3 lines of business
- ✓ Goal is to offer a high quality internal solution & minimize the reliance on external vendors

Key Components to Optum's HEDIS solutions

- Efficient Record Retrieval
- High Quality Abstraction
- Dynamic Reporting and Monitoring
- NCQA Certified Engine and Reporting Front End
- Best in class team that has ample industry and direct UHC experience

Key Business Benefits

- Internal solution that has a proven track record of supporting large projects & maintaining high quality standards
- Minimize the reliance on external vendors
- Working with a trusted and experienced team that is directly impacted by, and committed to, the success of UHC

UHC/Optum HEDIS MRR Partnership

- ✓ Opportunity to insource medical record review for HEDIS within UHG
- ✓ Rely on trusted HEDIS professionals to carry the burden of HEDIS medical record review
- ✓ Align QMP & Optum quality goals

Award Winning Certified HEDIS Reporting

Stars Management Reporting – Intent of Design

To empower the client/user with a “**prospective**” solution that allows them to make informed decisions regarding “**where**” their organization can affect the care, services and satisfaction being received “**today**” by their members/provider in order to achieve their “**goal(s)**” - Evaluate the response to their intervention on those services that will be measured and reimbursed in the future thru the CMS 5 Star Rating program

- Business goals:
 - Evaluate progression to the plan’s goal “are we on track”
 - Where are we strong, where do we have opportunities to improve
 - Project the impact if the plan’s goal were achieved
 - Drill into identify and priorities area of focus – who to engage
 - Measure response to intervention
 - Promote a easy, intuitive and mature reporting solution the analyzes across all Stars domains and measures

Medicare Revenue Reconciliation Programs

Lori Meyer

What we do

The key objective of the MRR Team is to ensure CMS has the most accurate and complete information for special status categories for each member that impact payment.

MRR Reconciliation Processes

- **Current Medicaid Status**
 - To ensure plan and CMS records are as accurate as possible, the MRR Team identifies Medicaid suspects; verifies the member's eligibility with state data; reconciles the Medicaid and Medicaid Add-On statuses with CMS; submits status adjustments if needed; and tracks until resolved.
- **MAO (Medicaid Add On)**
 - All members with at least one month of Medicaid status in the prior year are identified on an annual basis. This list is compared to the MMR payment dates for the following year. Any member without the expected MAO flag or payment adjustment is sent to CMS for correction and tracked until resolved.
- **ESRD (End Stage Renal Disease)**
 - To ensure plan and CMS records are as accurate as possible, the MRR Team identifies ESRD enrollees; verifies the enrollees' status with Dialysis Facilities or with the Renal Networks; reconciles the ESRD status with the CMS Monthly Membership Report (MMR); submits status adjustment requests; and tracks until resolved.
- **ESRD MSP (End Stage Renal Disease, Medicare as Secondary Payer)**
 - The MRR team identifies ESRD Members with other health insurance that is primary to Medicare and works directly with the Coordination of Benefits Contractor (COBC) to ensure CMS records are accurate.

MRR Reconciliation Processes

- MSP (Medicare as Secondary Payer)

- To ensure plan and CMS records are as accurate as possible, the MRR Team identifies MSP members; verifies the members' status with member, employer and/or other insurer; reconciles the MSP status with the CMS Monthly Membership Report (MMR); submits status adjustment requests; and tracks until resolved.

- Hospice

- To ensure plan and CMS records are as accurate as possible, the MRR Team identifies hospice members; verifies status with hospice agencies; reconciles the hospice flag with the Daily Transaction Reply Report (DTRR), Monthly Membership Report (MMR), and internal systems; works with agencies to ensure they submit status adjustment requests to CMS timely; and tracks until resolved.

Appendix

Hospital Data Capture

Submissions

Hospital Data Capture Solution Overview

Hospital Data Capture

CPC retrospective service designed to capture additional member diagnoses codes from hospitals not submitted through the normal claim/encounter process. Due to both payer and hospital system limitations, some hospital diagnoses may be omitted via the normal claim stream.

Hospital Data Capture Logic

2012 Preliminary results

- 2,466 facilities identified w/an admit to pursue
- 1,746 facilities w / a submission to Optum

Outreach Timing

Q1	Q2	Q3	Q4
• Create hospital admission reports • Review program collateral • Analyze prior year results • Enhance operational reporting • Assess 2013 and 2014 strategy	• UHC review of plan • Segment facilities • Provide list of outreach facilities • Initiate facility outreach	• Process hospital submissions • Track returns vs. plan • Follow up on non-engaged facilities	

2013 Strategy

Market Opportunity

Health Plan Business Challenge

- Hospitals capture and submit to Health Plans between 18 - 24 Dx Codes during an inpatient encounter when in fact a patient may have as many as 80 Dx Codes during the encounter.
- This presents a gap in the number of Dx Codes being documented in the Hospital's Health Information System and the number of codes that are being transmitted to the Health Plan.
- Health Plans need to ensure complete and accurate coding is represented in the risk adjustment data submissions to CMS.

Business Opportunity & Client Value

- Currently, Optum offers a **Hospital Data Capture** service as part of the retrospective risk adjustment service offering. According to Optum's interpretation of the CMS EPDS guidelines, CMS will not accept hospital based diagnoses codes submitted as part of Optum's 'current' Hospital Data Capture (HDC)
- Only 'chart review type' data will be accepted by CMS as part of the EDPS submission.
- In order to maintain customer expectations, we are evaluating the HDC service under EDPS

CMS definition of ‘chart review type’

August 2012 CMS Participation Guide:

3.5.7 Chart Reviews

Historically, chart reviews have been performed by MAOs and other entities for the purpose of obtaining diagnosis codes that were either not originally submitted by the provider or were submitted by the provider in error. Based on this information, CMS collects chart review data as a part of the encounter data process. All chart review encounter data must be from an appropriate provider “specialty,” from an allowed provider type (inpatient, outpatient, physician), and within 25 months of the data collection period. Further, all diagnoses codes submitted through chart review must be based on a face-to-face visit and supported by a medical record.

Because not all chart reviews are able to be linked back to a previously adjudicated claim in the MAOs adjudication system, CMS allows for MAOs and other entities to submit chart review encounters that are linked to a previously submitted and accepted encounter (linked ICN) and chart review encounters that are not linked to a previously submitted and accepted encounter (unlinked ICN). All chart reviews, whether linked to an ICN or unlinked, must be able to be validated through the medical record.

The term “chart review” refers to all medical reviews

2013 Strategy

- Continue with HDC 'business as usual' as follows:
 - Target 2012 DOS and submit via RAPS to drive CY 2013 payment
 - Evaluate the Optum HDC service in the context of EPDS submission guidelines
- Consider how **Optum's** HDC program will co-exist with **XL Health's** hospital abstract program (Hospital Chart Review)
 - Coordinated approach
 - Identify overlapping facilities & members
 - Information sharing between XL hospital abstract program and Optum HDC program

Subject: RE: 2012 Attestation and follow-up from yesterday's meeting

Steve,

Thank you for your email and for our discussion earlier this week. With respect to your fifth point, I would note that regardless of the effective date of the proposed requirement related to medical record reviews, there are other laws that do impose standards, requirements and responsibilities on MA plans in connection with the federal payments they receive from CMS. We cannot provide advice to United about the scope of those other laws. Nor can we provide advice on whether United's plan course of action and/or purported limits on the scope of its attestation are compliant with such other laws. Your statement concerning the data submissions that have already been made and United's plans for future action will be included in our records and we will proceed with our evaluation and use of the risk adjustment data consistent with 42 CFR § 422.308, § 422.310, and other applicable law.

Thanks again,

Cheri

Subject: 2012 Attestation and follow-up from yesterday's meeting

Dear Cheri,

I wanted to thank you and your colleagues for taking the time to meet with us yesterday. We appreciate the time and attention that you and others in CMS leadership have provided on the issue of our 2012 risk adjustment data submissions and our annual risk adjustment data certifications. As we mentioned, prior annual certifications have been on paper, and we have thus had the ability to add notes explaining our understanding of the certifications and our ongoing data remediation efforts. This year, however, the certifications are electronic, and there does not appear to be an opportunity to reflect our understanding. The purpose of our meeting yesterday and this email is to explain our understanding of the certifications.

First, as with our past certifications, the 2012 certifications are based on facts reasonably available or made available to us as of the date of the certifications. As we receive additional information, we may be required to modify the data to which the certifications relate.

Second, the certifications use the phrase "best knowledge, information, and belief," which is based on our practices.

Third, the certifications only cover risk adjustment data for 2012 dates of service that were submitted to CMS and subsequently deleted prior to the date of the certifications.

EXHIBIT
1063
2207
USBP000197069

Fourth, as we have mentioned to you previously, we are engaged in an ongoing review of our risk adjustment processes and submission system. This review has identified areas for improvement and, as a result, we will be deleting all risk adjustment data for 2012 dates of service that we ultimately determine should be deleted consistent with this email.

Fifth, as we discussed yesterday, CMS recently issued a proposed rule that would, if finalized, require MA plans to design any medical record reviews to determine the accuracy of risk adjustment diagnoses associated with those records. During our conversation yesterday and other recent conversations, CMS confirmed to us that these requirements do not apply until the effective date of the rule, and that MA plans are thus not currently required to design their medical record reviews to determine the accuracy of risk adjustment diagnoses. We currently have a process through which we review certain medical records to determine the accuracy of risk adjustment diagnoses and submit appropriate deletes. This process already has resulted in the identification of and, in some instances, the submission of deletes for 2012 dates of service. But based on the proposed rule, including the preamble, and recent conversations with CMS, we suspended that process for 2012 dates of service while we consider whether to make changes. Pursuant to our discussion, however, we will soon submit for deletion those diagnosis codes that have undergone a complete review and that we have therefore identified as appropriate deletes. In the near future, we will determine whether to continue our review process for the diagnosis codes which were still under review at the time we suspended our process. In the meantime, we will not delete these codes.

The certifications that we submit today are made subject to these clarifications. Please let us know if you have any questions. Again, thank you for your time and attention on this matter.

Subject: RE: RADV

Another thought is getting more help supporting DOJ whistleblower activity. The volume of these cases is increasing and they often need significant technical assistance from MPPG to evaluate whether to intervene and to support cases they choose to prosecute. We think the whistleblower activity could be as effective – or even more effective – than CMS audits in getting plans to do more to prevent and identify risk adjustment overpayments.

Subject: RE: RADV

Our regs say that plans must use reasonable diligence to identify overpayments. We have not yet defined what that means.

We could, through regulation, define specific steps a plan must take, at a minimum, to meet that requirement. For example, we could require them to self-audit (i.e., their own RADV audits). We could also revive the NPRM proposal we had that if a plan is checking a medical record for underpayments, they must also look for overpayments.

On the attestation language, we are working now to tighten it up. But without a reg change (as described above), we are limited in how high we set the bar.

We're developing contract-specific coding adjustor options, but those don't address diagnosis error.

Subject: RADV

What would a list of proposals to strengthen RADV include?

1. Stronger attestation language.
2. Limitations around home visits.
3. Anything else?

EXECUTIVE SUMMARY
[Please see body of report.]

BACKGROUND

The Unfunded Budget Act of 1997, P.L. No. 105-33, established Medicare Part C to allow beneficiaries managed care options through the Medicare Choice program. Section 227 of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003, P.L. No. 108-173, revised Medicare Part C and renamed the program the Medicare Advantage (MA) program. Organizations that participate in the MA program (MA organizations) include health maintenance organizations, preferred provider organizations, provider-sponsored organizations, and private fee-for-service plans.

Section 1833(a)(4) of the Social Security Act requires that the Secretary of Health and Human Services adjust payments to MA organizations based on the health status of beneficiaries. As a result, the Centers for Medicare and Medicaid Services (CMS) pays MA organizations less for beneficiaries who are expected to incur lower health care costs and more for beneficiaries who are expected to incur higher health care costs.

Pursuant to 42 CFR § 422.30(d), “Each MA organization must submit to CMS for reconciliation with CMS instructions of the data necessary to characterize the context and purposes of each service provided to a Medicare enrollee by a provider, supplier, physician, or other practitioner. CMS may also collect data necessary to characterize the functional capabilities of enrollees of each MA organization.” The 2007 *MA Reimbursement Data: Overview* (hereinafter *Reimbursement Data*) states that “MA organizations are responsible for the accuracy of the data submitted to CMS.” These data are commonly known as risk adjustment data. Among other information, risk adjustment data include beneficiaries’ diagnoses.

CMS calculates risk-adjusted payments to MA organizations using the CMS Hierarchical Condition Category model (the model). Under the model, MA organizations collect beneficiary diagnoses from hospital inpatient facilities, hospital outpatient facilities, and physicians during a data collection period. MA organizations review the data, identify diagnoses relevant to the model, and submit the relevant diagnoses to CMS. CMS categorizes these diagnoses into groups of clinically related diseases called Hierarchical Condition Categories (HCCs). CMS uses these HCCs and demographic characteristics to calculate a risk score for each MA organization beneficiary. Benchmark risk scores are used to adjust the monthly capitated payments that CMS makes to MA organizations.

Pacificare of Texas (Pacificare), an indirect, wholly owned subsidiary of UnitedHealth Group located in Cypress, California, is an MA organization. For calendar year (CY) 2007, Pacificare had multiple contracts with CMS, including contract number H4590, which we refer to in this report as “the contract.” Under the contract, CMS paid Pacificare approximately \$1.2 billion to administer health care plans for approximately 118,000 beneficiaries.

DRAFT

OBJECTIVE

Our objective was to determine whether the risk adjustment data that PacificCare submitted to CMS complied with requirements set forth in the Participant Guide.

SUMMARY OF FINDINGS

The risk adjustment data that PacificCare submitted to CMS did not always comply with requirements set forth in the Participant Guide. As a result, PacificCare did not always receive accurate payments from CMS. Risk scores calculated using the diagnosis codes for 56 of the 100 beneficiaries in our sample were valid. The risk scores for the remaining beneficiaries were invalid because each of the 44 beneficiaries had at least 1 HC Code that was not supported by documentation. Based on our sample results, we estimated that PacificCare was overpaid at least \$69,549,120.

PacificCare did not have written policies and procedures in place for obtaining, processing, and submitting risk adjustment data to CMS. Furthermore, PacificCare's quality assurance practices focused primarily on ensuring that all relevant risk adjustment data were submitted to CMS, rather than ensuring that the data it submitted were accurate. Contrary to CMS requirements, UnitedHealth Group officials stated that providers are responsible for the accuracy of risk adjustment data that PacificCare submitted to CMS.

RECOMMENDATIONS

We recommend that PacificCare:

- return to the Medicare program \$69,549,120 in overpayments;
- implement formal policies and procedures for obtaining, processing, and submitting risk adjustment data; and
- create a more robust claim validation process by periodically selecting a random sample of all providers and using this data to ensure that PacificCare is in compliance with the requirements set forth in the Participant Guide.

INTRODUCTION

BACKGROUND

Welsh: A Language Programme

The Unfunded Budget Act of 1997, P.L. No. 105-33, established Medicare Part C to offer beneficiaries managed care options through the Medicare+Choice program. Section 201 of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003, P.L. No. 108-173, revised Medicare Part C and renamed the program the Medicare Advantage (MA) program. Organizations that participate in the MA program (MA-sponsors) include health maintenance organizations, preferred provider organizations, private-sponsored organizations, and private fee-for-service plans. The Centers for Medicare & Medicaid Services (CMS), which administers the Medicare program, makes monthly capitated payments to MA organizations for services provided to Medicare beneficiaries enrolled in their plans.

Section 13(1) of the Social Security Act requires that the Secretary of the Department of Human Resources Development Canada, in his or her discretion, may award an award of compassionate allowances to persons who are unable to work because of a long-term illness or disability. The regulations also contain provisions for awards of compassionate allowances to persons who are unable to work because of a long-term illness or disability. The regulations also contain provisions for awards of compassionate allowances to persons who are unable to work because of a long-term illness or disability.

Pharmacologic [2, 3] and clinical [4, 5] data have shown that smoking status plays a significant role in the development of AIDS and that the data necessary to characterize the complex role of patients of certain ethnic groups due to a variety of factors for the development of AIDS are still incomplete. The CDC has also collected data necessary to characterize the functional interactions and mechanisms of ethnicity, migration, and other factors [6]. The 1987 *First National Survey of Drug-Using Populations: Characteristics, Health Status, and Health Care Needs* [7] presents information that will be used to select, evaluate, and develop interventions and programs for drug-using populations and to develop strategies for the prevention of AIDS. The survey was nationally known as the risk reduction study. Among other information, the risk reduction study includes information on the following:

The Risk-Adjusted Process Risk-Adjusted Payoffs

As stated in section 1832 of the Social Security Act, CMS is required to "first attempt to pay" organizational claims for the health care of eligible individuals. In January 1994, CMS implemented the following risk-adjusted payments to MA organizations offering the CMS financial risk-adjustment eligibility model (the model for a state to use as a model payment):

Under the model, MA organizations collect skill and/or data including beneficiary diagnoses, length of stay, employment activities, hospital or patient activities, and physicians during a

Φ is a positive real function, $\Phi(\lambda) = 0$ if and only if $\lambda = 0$, $\Phi(\lambda) \rightarrow \infty$ as $|\lambda| \rightarrow \infty$, and $\Phi(\lambda)$ is bounded on the unit circle.

[३५८]

DRAFT

data collection period.¹ MA organizations review the data, identify diagnoses relevant to the model, and submit the relevant diagnoses to CMS. CMS categorizes these diagnoses into groups of clinically related diseases called Hierarchical Condition Categories (HCCs). CMS uses HCCs and demographic characteristics to calculate a risk score for each MA organization beneficiary. CMS then uses the risk score to adjust the monthly capitation payment to the MA organization for the next payment period.²

Risk Adjustment Data Requirements

CPHQ's 2007 *Final Guidance on Data Submission to Medicare Coverage Eligibility Contractors* (hereby the Part 499 guidance) and the Medicare Claims & MS established guidelines regarding the valid risk adjustment data. Diagnoses included in risk adjustment data must be "based on clinical medical record documentation from a face-to-face encounter coded according to the ICD-9-CM coding manual." *Consistency in Reporting, Subsequent, Complete Identification, Good Care, the Coding and Reporting*. A stipulated based on dates of service within the data collection period, and submitted to the RFA region, not from an appropriate risk adjustment provider type and an appropriate risk adjustment physician data source." The Part 499 guidance addresses the following points: (1) face hospital inpatient documentation and hospital outpatient and physician documentation; (2) source of data as a claim starts for a claim; (3) signatures and credentials and the approval of a certified medical agencies; (4) the Part 499 guidance also specifies unacceptable sources of medical records (such as medical records from skilled nursing facilities and long-term care facilities); (5) patients' records and unacceptable medical records; (6) records that are not used for purposes beyond the intended use of the data; and (7) the Part 499 guidance also specifies that the data must be submitted to the RFA region in a timely manner.

CMS engages providers in a risk adjustment data validation process in which it verifies that the diagnosis codes that inform a by MSA organization's submission to CMS are supported by beneficiaries' medical record documentation. The purpose of risk adjustment data validation is to ensure payment integrity and accuracy.

PacificCare of Texas

Pacific Air of Texas (Pacific Air) is an NVO company that is not subject to the proposed rules. The UnitedHealth Group is not an express contracting or an NVO company. For FY 2013 Pacific Air had multiple contracts with UHS, including contract number H-1590, which we refer to in this report as "the contract." Under the contract, UHS paid Pacific Air approximately \$1.3 billion to administer health care plans for approximately 1.3 million beneficiaries.

and service team and business units.

for example, a MS used diagnoses that KX is given, was submitted for the calendar year X . On data collection, prices for determining payments for the FY 2007 payment prices.

and then a further refinement will likely produce the optimal set $\hat{M}_k$ and interest in high-order discontinuous reconstructions is increasing. In fact, previous work would allow us to conjecture that $\hat{M}_k$ may converge to a set $\hat{M}_\infty$ which is independent of k .

[244]

DRAFT

OBJECTIVE, SCOPE, AND METHODOLOGY

Objective

Our objective was to determine whether the risk adjustment data that PacificCare submitted to CMS for FY 2010 risk adjustment complied with the requirements set forth in the Participant Guide.

Scope

Our review covered \$827 million of CY 2010 MA payments that CMS made to PacificCare on behalf of 57,373 beneficiaries. These payments were based on risk adjustment data that PacificCare submitted to CMS for FY 2010 dates of service for beneficiaries who were aged 18 to 64, with a primary diagnosis of mental illness, 20% of the ages 65 to 64, with a primary diagnosis of mental illness, and 10% of the ages 65 to 64, with a primary diagnosis of mental illness. We limited our objective and no-assignment survey review of PacificCare's overall internal control structure to gathering evidence on the collection process for the risk adjustment data.

We reviewed CMS's risk adjustment validation process, which did not request all medical records associated with a beneficiary. Instead, we limited our request to the portion of the sampled beneficiary's medical record associated with an encounter that, in PacificCare's judgment, best supported the risk adjustment diagnosis that was submitted to CMS. To verify that risk adjustment diagnosis information was accurate, we selected the data on two representative sample beneficiaries to review documentation for the purpose of this report; we refer to this medical record assessment throughout the report as "review" and as "documentation."

We did not calculate the entropy of the assignment of the risk scores.

We performed our fieldwork at 11 medical clinics in Minnesota, Minnesota, and at CMS in Baltimore, Maryland, from October 2018 through December 2019.

Methodology

To accomplish our objective, we did the following:

- We reviewed applicable Federal laws, regulations, and guidance regarding payments to MA organizations.
- We interviewed CMS officials to obtain an understanding of the model.
- We obtained the services of a medical review contractor to determine whether the documentation that PacificCare submitted supported the HCCs in our sample.

¹ We limited our sampling frame to continuously enrolled beneficiaries to ensure that PacificCare was responsible for obtaining the risk adjustment data for the risk scores subject to our review.

[P a g e]

DRAFT

- We retrieved UnitedHealth Group's efforts to guarantee standardizing of EHR data via its internal controls for obtaining risk adjustment data from providers, processing the data, and submitting the data to CMS.
- We obtained enrollment data (i.e. 2017 beneficiary risk score data) and 2018 risk adjustment data from CMS.
- We first identified 62,987 beneficiaries associated with the Saxton Insurance network. These beneficiaries were continuously enrolled under the contract during all of CY 2016 and January of CY 2017, and (2) had a risk score that is below the top 25% of first-line HC.
- We selected a simple random sample of 100 beneficiaries with 25 HC's (see Appendix B.4 for more information about our sample design and methodology). For each sample beneficiary, we:

We revised our sampling frame to exclusively include hotel chains in cities that they are responsible for admitting the risk assessment data that resulted in the risk scores subject to our review.

DRAFT

highly specific (e.g., S. 2.2.2.1.2, paragraph 1). For the sampled jurisdictions that we determined to have implemented one or more effective risk controls, we identified a set of jurisdictions whose practices were based on the model of existing guidance to the pertinent controls or regulation. These jurisdictions are "Y" jurisdictions, as they published risk scores, and "E" or "overpayments in delay" jurisdictions, which are based on the difference between the old and new risk scores. (Although the language we suggested is more detailed, we believe it is not inquisitive. As indicated, we recommend revision to the more general language included in the prior version. If you disagree, let's discuss.)

- We estimated the total seasonal wage of overpayments based on our sample results. (See Appendix E) to our survey results and to Figure 1.

We conducted this performance audit in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objectives. We believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives.

FINDINGS AND RECOMMENDATIONS

The risk-adjustment standard requires that Panel 56, as submitted, not include a case (JO) whose risk score (level 1 or 2) did not always comply with the requirements set forth in the Participant Guide. (12) As a result, Panel 56 did not always reserve adequate payment (in \$ MS). Risk scores calculated using the diagnosis codes for the Participant's data for 56 of the 100 beneficiaries in our sample were valid. The risk scores for the remaining 44 beneficiaries were invalid because, for diagnosis 1, the Patient's submission was not appropriate because each of the 44 beneficiaries had at least one risk 1 that was not supported by documentation. (13) The 44 beneficiaries were placed in the risk category of level 2 because they had at least one risk 2 that was not supported. Because in our sample results, we determined that Panel 56 was supported at rate 86% (46/53).

Each of the 62 unsupplied EUs identified in my review was determined to be unsupplied for one or more of the following reasons:⁴

- The documentation did not support the associated diagnosis; also, were there dependent on HCC?
- The documentation did not include an appropriate: Was our issue whether the signature and credentials were appropriate, or was it that they were missing? If the latter, we suggest changing "an" to "a" and deleting inappropriate "[provider [physician]] signature and credentials."
- The diagnosis submitted for this was unacceptable for use and ten proposed corrections.

* The null hypothesis is: the proportion of the sample that says "yes" is less than or equal to the proportion in the population. The alternative hypothesis is: the proportion of the sample that says "yes" is greater than the proportion in the population.

DRAFT

•

• [Formatted: Bulleted List - Disc]

- The *Diagnostic Coding Manual* (“DCM”) is a 1992 document that is not an update to a

“book of codes” and is not a “text” that is “used” to “code” or “translate” physical conditions.¹⁴

As a result of these unapproved diagnoses, Pacificare received \$ 790.12 million overpayment from CMS per Appendix C.1. In 2003, in response to this, we learned that Pacificare was overpaid at least \$55,546,130. See Appendix D for an analysis of the unapproved ICD-9-CM coding and response to each error.

[Formatted: Text Box]

Pacificare did not have written policies and procedures in place for coding, processing, and submitting new diagnosis-based claims to CMS. Furthermore, Pacificare’s quality assurance practices were not effective in ensuring that the diagnoses it submitted to CMS compared with the most recent *ICD-9-CM Coding Manual*. As a result, on occasions that all new risk adjustment data were submitted to CMS either the information that the data contained were accurate. UnitedHealth Group officials stated that providers were responsible for the accuracy of the diagnosis-based charges, those that Pacificare submitted to CMS, which is contrary to CMS’ position.

RISK ADJUSTMENT DATA VALIDATION REQUIREMENTS

On September 17, 2008, *ICD-9-CM Coding Manual* (“ICD-9-CM”) was updated to ICD-9-CM, version 9. The *ICD-9-CM* is a book that contains the codes and descriptions of the diseases, injuries, and conditions that are used to code medical services provided to a patient and is used by a provider, supplier, physician, or other professional. CMS may adjust the data necessary and appropriate for determining the accuracy of each ICD-9-CM diagnosis. The *ICD-9-CM* is a book that contains the codes and descriptions of the diseases, injuries, and conditions that are used to code medical services provided to a patient and is used by a provider, supplier, physician, or other professional. CMS may adjust the data necessary and appropriate for determining the accuracy of each ICD-9-CM diagnosis.

Diagnosis Coding

Pursuant to section 7.1.4 of the *Participated Guide*, a diagnosis submitted to CMS for risk adjustment purposes must be coded according to the *International Classification of Diseases, 9th Revision, Clinical Modification Guidelines for Coding and Reporting* (the “Coding Guidelines”). According to Section 2.1 of the *Coding Guidelines*, states that for each hospital inpatient stay, the hospital’s medical record reviewer should code the principal diagnosis and “... all conditions that coexist at the time of admission, that develop subsequently, or that affect the treatment received and/or length of stay. Diagnoses that relate to an earlier episode which have no bearing on the current hospital stay are to be excluded.”

In *UnitedHealth Group v. UnitedHealthcare*, Section IV of the *Coding Guidelines* states that “[e]ach hospital’s medical record reviewer should “[e]xclude all documented conditions that

¹⁴ A typical example is that a provider does not apply and the two patients mean to be treated typically provided by a physician, usually a nurse practitioner or physician assistant.

[256]

DRAFT

coexist at the time of the encounter visit, and require or affect patient care/treatment or management.” The Coding Guidelines also state that conditions should not be coded “if they” were previously treated and no longer exist. However, “history codes” may be used as secondary codes if the historical condition or family history has an impact on current care or influences treatment.” Additionally, diagnoses that are “probable,” “suspected,” “questionable,” “working,” or “trial and,” should not be coded.

Medical Record Documentation

The Participant Guide requires that documentation support the MRA assessment as described in the various Part IV components and direct the use of CMS’s manual coding criteria.

Specifically, the Participant Guide requires (emphasis supplied) the following with respect to documentation for MRA component’s related to CMS’s valuation: “benefiting risk scores—regardless of:”

- The documentation must be based on a face-to-face visit with one of the three provider types associated with the adjustment. Benefiting risk scores are applied without a compliance check.
- The documentation must include an acceptable physician signature and specialty credentials. Examples of acceptable physician signatures include handwritten signatures or initials, signature stamps that comply with State regulations, and electronic signatures with authentication by the respective providers. Typed names or printouts of nonphysicians or nonphysician extenders (e.g., medical students), and signatures without credentials are unacceptable for risk adjustment purposes (section 7.2.4.2.1).
- Documentation must be in a form of acceptable type. Acceptable types of documentation include physician or registered nurse notes of patient encounters, diagnosis reports, discharge notes, consult notes, and any documentation or data collected via services outside the claim collection period (section 7.2.4.2.2).

[Formatted: Initial Release: 08/25]

[Formatted: Document Number: 01]

[Formatted: Initial Release: 08/25]

[Formatted: Document Number: 01]

Additionally, the Participant Guide (section 7.2.4.4) specifies several sources of documentation that are not acceptable for risk adjustment data collection:

- skilled nursing facilities;
- direct support organizations or group homes;
- ambulatory care centers or pharmacies;
- other physician extenders (e.g., nurse practitioners);

[Formatted: Document Number: 01]

[Formatted: Document Number: 01]

[Formatted: Document Number: 01]

[Formatted: Document Number: 01]

DRAFT

- For one beneficiary, PacificCare submitted a diagnosis code indicating for "malignant neoplasm of the brain, cerebrum, except for lobes and ventricles." As a result, CMS associated with the HCUP system and the diagnosis associated HCUP code to the beneficiary's risk score. However, the documentation that PacificCare provided regarding the diagnosis of benign prostatic hypertrophy. The documentation did not mention the beneficiary's brain cancer or indicate that brain cancer had affected the care, treatment, or management provided during the encounter.

[Formatted: Bulleted List - Lower Case]

Missing Signatures and Credentials

Fourteen HCUs were unsupported because the documentation that PacificCare provided did not include the physician's signatures and credentials.

For example, for one beneficiary PacificCare submitted a diagnosis code for congestive heart failure, unspecified. As a result, CMS associated with the HCUP system and the diagnosis associated HCUP code to the beneficiary's risk score. However, the documentation that PacificCare submitted was not signed by the physician. The documentation stated, "This report has been dictated but not proofread and is subject to correction of transcription variances & edit."

Unconfirmed Diagnoses

Three HCUs were unsupported because the diagnoses submitted to CMS were unconfirmed.

For example, for one beneficiary PacificCare submitted a diagnosis code for cardiovascular disease, obstructive pulmonary disease, not elsewhere specified. As a result, CMS associated with the HCUP system and the diagnosis associated HCUP code to the beneficiary's risk score. The physician's impression was documented that the patient had a long history of smoking with possible mild chronic obstructive pulmonary disease. (For this example, please confirm and indicate that this was a physician or outpatient/hospital encounter. (The criteria do not apply to inpatient encounters.) Diagnoses that are "probable," "suspected," "questionable," or "working" or "crossed out" should not have been assigned.

No Face-to-Face Visits: Unreliable Documentation

Two HCUs were unsupported because the documentation provided in support of the diagnosis (heart failure) was not signed by a physician. No other documentation was provided in support of these two HCUs. Another unsupported diagnosis was a patient diagnosis that type of documentation required support from a physician or other healthcare provider who is not a physician.

For example, for one beneficiary PacificCare submitted a diagnosis code for one beneficiary out-patient, inflammation and toxic neuropathy, unspecified. As a result, CMS associated with the HCUP system and the diagnosis associated HCUP code to the beneficiary's risk score. The physician's impression was documented that the patient had a long history of smoking. However, the

[Pilot]

DRAFT

documentation about the file are provided regardless of native connection protocol and file location (local or remote) and the location path is resolved by global type for the specific host (e.g., `http://www.example.com`).

CAUSES OF OVERPAYMENTS

As a result of the above, the following theorem holds.

During our audit period, Pacificare did not have written policies and procedures for obtaining, processing, and submitting risk adjustment data. Pacificare informed us that it had since developed formal policies and procedures, but had not implemented them as of December 2, 2019.

Insuffizienz-Praktikum

Although 2-year-life expectancy was used as a proxy for survival, it is likely that this measure is not a perfect proxy for quality of life. Furthermore, quality of life may be affected by the timing of the diagnosis, the extent of the disease, and the effectiveness of the treatment. Although the accuracy of the diagnosis, the extent of the disease, and the effectiveness of the treatment were not directly measured, they were indirectly measured by the use of the following variables: (1) the extent of the disease was measured by the use of the extent of the disease at the time of diagnosis; (2) the effectiveness of the treatment was measured by the use of the extent of the disease at the time of diagnosis; and (3) the extent of the disease was measured by the use of the extent of the disease at the time of diagnosis. The use of these variables as proxies for survival is likely to be biased, but the bias is likely to be in the same direction for all groups, and thus the relative ranking of the groups is likely to be preserved.

[illegible]

Participants were informed by the research provider that the diagnosis was possible if their codes corresponded to valid ICD-9 diagnosis codes.¹¹ Any error that one did not respond to valid diagnosis codes was the responsibility of the participants because the purpose was to test their ability to work specific without medical diagnosis. *Example:* These errors were first reviewed by a board of ethics and clinical analysts who determined whether the errors could be corrected by reviewing the original clinical notes entry, if not the provider corrected. A board of ethics and clinical analysts determined whether the errors could be corrected. The research group was not informed of this. Overall, one-fifth of the misclassified in 2008 and 2009, 19.4 percent of diagnosis errors were rejected as invalid and manually corrected. The article also said that they thought the 2007 internet report was incorrect. The study's error control checklist was also incorrect identifying and correcting invalid diagnosis codes. However, as pointed out by the low percentage of invalid diagnosis codes, Pacific Eye identified invalid codes were a minor source of risk (as mentioned in 2008).

* The 1996 prevalence of childhood overweight and obesity is based on information from the publication period standard classification of diseases as health records. Current circumstances are determined by extrapolation of 2% annual decrease in prevalence from 1996 to childhood year 2000.

DRAFT

(4) $\text{H}^1(\mathbb{R}^n, \mathbb{R}) \cong \mathbb{R}$.

existing self-reported survey data and were linked as much as possible to data on the subject countries' income per capita. The results may, however, be properly tested against a parallel, substantial clearing of other self-reported data, including beneficiaries' drug use. The pursuit of the research was consistent with the objectives that were established in the identification and field-based evaluation of DHS. The research design reviewed and ensured the accuracy of the data.

$$\dot{z} = \dot{z}_p + \dot{z}^* = \dot{z}_p + \frac{1}{\tau} (z^* - z)$$

During chart abstraction, the diagnosis codes submitted by providers were reviewed to determine whether they were supported and valid. Part 10 was used when it fit into the chart abstraction to represent ICD-9 codes in terms of codes and Outpatient use for internal audit purposes. Part 10 and its chart utilization was not formally used for quality assurance purposes. When chart abstractions were used for quality assurance purposes, the chart abstractions included only those diagnoses that received a financial payment. Of the practice, we selected a series of 100 patients as a point of entry to the significant data to be analyzed, namely, Part 10 only, provided we could find the patients, date of diagnosis, and date of ICD-9 coded with the diagnosis of the dominant trade. For *accuracy*, it is only stated that Part 10 is not a source of a complete picture of the patient's care, they have a limited Part 10 only.

ESTIMATE OF UNRECOVERABLE PAYMENTS

Based on our sample results, we estimated that Pacifica are was compensated at least \$89,546,120 for a ton of the fish it sees the Pacific states discarded but MSW is not a good fit.

RECOMMENDATIONS

We assumed that β is 0.05.

- return to the Federal Government \$88,546,120 in overpayments;
 - implement formal policies and procedures for obtaining, processing, and submitting payed risk adjusting data; and
 - create a review and more robust cost-containment review process by periodically selecting and displaying a random sample of all providers' applied records to compare if the numerical difference between cost-bills are acceptable and why any cost data overruns that do occur are in compliance with the requirements set forth in the Partic-part rule.
- Let's discuss whether we can support this recommendation.

¹ For details see e.g. [15] for a review of the various theoretical approaches to the problem.

APPENDIX B.1: SAMPLE DESIGN AND METHODOLOGY

POPULATION

The population included beneficiaries who were continuously enrolled under H4590 during all of calendar year (CY) 2006 (the data collection period) and January of CY 2007 (CY 2007 was the payment period) and (2) had at least one diagnosis relevant to the CY 2007 Centers for Medicare & Medicaid Services Therapeutic Condition Category payment model (the model).

SAMPLING FRAME

The sampling frame included 52,987 beneficiaries on whose behalf CMS paid Part D out of Texas approximately \$877 million for CY 2007.

SAMPLE UNIT

The sample unit is a continuously enrolled beneficiary who had one or more diagnoses relevant to the model.

SAMPLE DESIGN

We used a simple random sample.

SAMPLE SIZE

We selected a sample of 890 beneficiaries.

SOURCE OF THE RANDOM NUMBERS

We generated the random numbers using the Office of Inspector General, Office of Audit Services, RAT-STATS statistical sampling software.

METHOD OF SELECTING SAMPLE ITEMS

We consecutively numbered the sample units in the frame from 1 to 12,987. After generating 100 random numbers, we selected the corresponding frame items.

ESTIMATION METHODOLOGY

We used RAT-STATS to estimate the amount of incorrect payments.

DRAFT

APPENDIX C: SAMPLE RESULTS AND ESTIMATES

Sample Results

Risk Adjustment Data Validation (RADV) Contract-Level Audits

Center for Medicare
January 13, 2012

EXHIBIT
1143-1

INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

Agenda

- Background on RADV audits
- Current status of audits
- Policy issues
 1. Timing of audits
 2. Model Calibration Factor
 3. Number of annual audits and selection criteria [[reversed #3 and #4]]
 4. Audit documentation standards – One Best Medical Record policy

Background

- Of approximately \$112.2 billion in Medicare Advantage payments in CY 2009, approximately 11.0%, or \$12.4 billion are estimated to be improper payments (gross dollars in error, as reported in FY 2011 AFR for CY 2009 payment year).
- Most of the CY 2009 improper payments are due to MA organizations' submitting diagnoses to CMS for enhanced payment and not being able to document these diagnoses in a medical record.
- CMS developed its Risk Adjustment Data Validation (RADV) audits as its primary corrective action to recoup these improper payments.

Basic RADV Audit Methodology

- Sample beneficiaries enrolled in MA plans
- Request medical records for their Hierarchical Condition Codes (HCCs)
- Review medical records for supporting diagnosis information
- Correct HCCs and risk score
- Recalculate correct payment
- Estimate contract-level error using extrapolation

Current Status

- On December 21, 2010, CMS released a proposed RADV contract-level audit methodology for public comment.
- CMS solicited comments on two issues in particular:
 - RADV sampling methodology
 - RADV payment error calculation methodology
- CMS received over 500 comments from health plans, trade associations, law firms, and the public.
- Health plan industry is eagerly awaiting CMS's final methodology, and has raised significant concerns with CMS's proposed methodology.
- CMS plans to publish the final RADV methodology at the time the MA/Part D Advance Notice is released (February 2012).

Policy Issue #1: Timing of First RADV Audits Using Payment Recovery Based on Extrapolation

- Issue: Medicare Advantage plans most recently have argued that RADV payment recovery based on extrapolation should begin with plan year 2011 rather than 2007 as CMS originally proposed.

Plans argue they did not have sufficient information on RADV audits to 1) understand the implications of RADV and build their plan operations accordingly; or 2) bid appropriately.

- CMS Recommendation:
 - RADV audits start with payment year 2011 and will be conducted every calendar year thereafter. Recovery would start in Jan. 2014.

Note that the RADV proposal in the President's Plan for Economic Growth and Deficit Reduction begins with payment year 2008.

Policy Issue #2: Model Calibration Factor (MCF)

- Issue: Medicare Advantage plans argue that they are being held to a standard of coding perfection that is greater than observed for the traditional fee-for-service program.
- CMS Recommendation: CMS will apply an MCF adjustment to payment error estimates to account for the underlying error in the traditional fee-for-service program.

Applying the MCF adjustment accounts for the fact that the documentation standard used in RADV audits to determine a plan's payment error (medical records) is different from the documentation standard used to develop the Part C risk-adjustment model (FFS claims).

Policy Issue #3: Number of Plans to Audit and Selection Criteria

Issue: How many plans should be subject to RADV audits each year, and what criteria should be used to select plans for audit?

CMS Recommendation:

- CMS should audit 30 plans per year. [deleted other text]
- Select plans for audit based on their coding intensity scores, targeting more plans with higher levels of coding intensity.

Policy Issue #4: Audit Documentation Standards

- Issue: Medicare Advantage plans object to CMS's current documentation standards for plans to select the "one best medical record" to validate their risk adjustment scores.
 - Plans want to submit more than one medical record, documentation other than medical records, and documentation from outside of the collection period to validate HCCs.
- CMS Recommendation:
 - Allow unlimited submission of medical records. Recognize underpayment from the first medical record that validates the diagnosis being audited.
 - (Alternative) Maintain current policy, recently modified in response to industry comments (with a proposed increase for submission time, medical record selection support, and interactive submission process) while still requiring plans to document a patient's risk score with at least one medical record from the collection period.
 - (Alternative) Increase the number of medical records the plan can submit, e.g., to two records, and recognize underpayment on all medical records submitted.

CMS Responses to Industry Concerns about RADV Policies

CMS' previous responses to industry concerns:

- Permit attestations to allow for physicians signatures and credentials in instances where medical records lacked either for outpatient and physician records
- Provide specific guidance in the form of Best Practices to Medicare Advantage plans to help MA contracts identify valid medical records for submission and address problems regarding diagnosis documentation
- Provide additional time to gather and submit medical records, representing a change in policy from 12 to 16 weeks
- Provide an interactive electronic CMS-HCC coversheet to prompt MA contract to confirm that medical record meets RADV guidelines and to guide the MA contracts through the submission process
- Credit additional identified during medical record review
- Medical Record Dispute process permits plan to request subsequent review of medical record and may reduce payment error

CMS continues to demonstrate its willingness to assist the industry in conducting RADV audit activity:

- Begin with CY2011 audit year allows plan/provider more timely access to medical records
- Allow multiple records to assist MA contract with selection of OBMR
- Apply Model Calibration Factor (FFS Adjustor) to account for appropriate level of coding accuracy

CON11 RADV Results

MPPG

May 26, 2016

EXHIBIT

1187-1

2247

Introduction

- Today we present preliminary results of the CON11 RADV audit.
- We audited 201 enrollees in each of 30 MA contracts for PY 2011 (2010 dates of service). Contracts were selected based on coding intensity: 20 from the “High” group, 5 from “Medium,” and 5 from “Low.”
- MAOs were allowed 20 weeks to submit medical records, and we received over 42,000 submissions for over 6,000 beneficiaries.
- Certified medical record coders review and code the medical records, with independent verification of the results by other coders.
- Payment error amounts are reduced by:
 - “Additional,” which are HCCs found during medical record review that are not among the audited HCC(s) for the enrollee.
 - RADV finding a more severe manifestation of an audited HCC than what the MAO submitted for payment.
- The total preliminary CON11 recovery amount is \$98,178,040 (lower bound of a 99% confidence interval [CI]) without a Fee-for-Service Adjuster (FFSA).
 - “Preliminary” means before a FFSA and before appeals.

Audit Methodology

- Our audit methodology for CON11 is detailed in a publicly available white paper.
- We select 201 enrollees from the RADV-eligible population in each contract: 67 from each of three strata based on risk scores for the payment year.
- After medical record review, we determine preliminary recovery amounts by calculating a point estimate of the payment error for each contract and then computing a 99% confidence interval (CI) around the point estimate. The lower bound of the confidence interval for each contract is the recovery amount unless the lower bound is negative, in which case the recovery amount is constrained to \$0.
 - Preliminary recovery amounts are subject to change based on the FFSA and appeals, which are triggered by regulation upon release of the audit reports.
 - Using the lower bound of a 95% confidence interval would increase recoveries by about 40%, from \$98,178,040 to \$138,238,562. This would constitute a methodological change.
 - Using the lower bound of a 90% confidence interval would increase recoveries by about 66%, from \$98,178,040 to \$163,363,801. This would also constitute a methodological change.

Preliminary Recovery Amounts

Contract ID	Parent Org	Total PY 2011 Contract Payment	Weighted Net Payment Error (Point Estimate)	Recovery Amount (99% CI)	Recovery Amount (95% CI)	Recovery Amount (90% CI)
-------------	------------	--------------------------------	---	--------------------------	--------------------------	--------------------------

Preliminary Recovery Amounts (cont.)

Contract ID	Parent Org	Total PY 2011 Contract Payment	Weighted Net Payment Error (Point Estimate)	Recovery Amount (99% CI)	Recovery Amount (95% CI)	Recovery Amount (90% CI)
H0543	UnitedHealth Group, Inc.	\$3,606,115,507	\$32,363,041	-	-	-
H2226	UnitedHealth Group, Inc.	\$94,201,539	\$524,117	-	-	-
H4522	UnitedHealth Group, Inc.	\$132,156,899	(\$1,142,040)	-	-	-
H4590	UnitedHealth Group, Inc.	\$2,002,635,960	(\$3,943,825)	-	-	-

Contracts with Net Underpayments

At 99% CI	At 95% CI	At 90% CI
16	13	11

- Per our published methodology, a contract has a net underpayment if the lower bound of the confidence interval around the payment error point estimate is a negative amount.
- Based on point estimates of payment error alone, six CON11 contracts had net underpayments.
 - Compare this with TAR07, which had two contracts with net underpayments based on point estimates and four contracts with net underpayments based on the lower bound of the 99% CI.

Contracts with Net Underpayments at 99% CI

Contract ID	Parent Org	Total PY 2011 Contract Payment	Lower Bound of 99% CI	Underpayment as % of Total Payment	HCC Discrepancy Rate ³
				-6.15%	17.60%
				-5.60%	17.50%
				-4.79%	16.00%
H4522	UnitedHealth Group, Inc.	\$132,156,899	(\$4,622,640)	-3.50%	19.00%
H0543	UnitedHealth Group, Inc.	\$3,606,115,507	(\$91,884,129)	-2.55%	16.20%
H4590	UnitedHealth Group, Inc.	\$2,002,635,960	(\$51,017,738)	-2.55%	11.90%
				-2.53%	12.90%
				-2.20%	16.80%
				-1.65%	17.70%
				-1.58%	14.10%
				-1.52%	20.70%
				-1.49%	22.50%
				-1.15%	19.70%
				-0.73%	21.90%
				-0.59%	16.90%
				-0.44%	13.80%

¹ Contract does not have a net underpayment at the 95% CI

² Contract does not have a net underpayment at the 90% CI

³ Discrepancy rate is calculated as (discrepant HCCs for sampled enrollees / total audited HCCs for sampled enrollees)

Notes on Underpayments

- All four (4) UnitedHealth Group contracts have net underpayments at the 99%, 95%, and 90% CI.
- Total PY 2011 payments to the 16 contracts on the previous slide were \$10,347,596,161, which is 67.8% of total PY 2011 payments to all 30 selected contracts.

-

-

Outliers
include H2226 (UnitedHealth Group) with 99 additional,

Average Number of Valid MRs per HCC*

* Valid MRs are those not invalidated due to missing DOS, missing signature/credential, or other issues. RADV policy generally allows up to five medical records per HCC.

HCC Discrepancy Rates for Major Parent Orgs

Parent Org	CON11 Discrepancy Rate	TAR07 Discrepancy Rate
	25.8%	45.3%
	23.5%	32.0%
	20.5%	30.7%
	15.0%	—
UnitedHealth Group	12.3%	38.7%

Note: Discrepancy rate is calculated as (discrepant HCCs for sampled enrollees / total audited HCCs for sampled enrollees)

HCC Discrepancies by Final Error Type

Final Error Type	Frequency	Percent	Cumulative Frequency	Cumulative Percent
Coding/Incomplete	2,424	79.11%	2,424	79.11%
Invalid (non-Signature/non-Credential)	136	4.44%	2,560	83.55%
Missing	248	8.09%	2,808	91.64%
Invalid (Signature/Credential)	256	8.36%	3,064	100%

Coding/Incomplete: The medical record(s) reviewed for the audited CMS-HCC did not provide sufficient documentation of a diagnosis, in accordance with ICD-9 coding guidelines, to support the CMS-HCC being audited.

Invalid (non-Signature/non-Credential): The medical record(s) submitted for the audited CMS-HCC were invalid for reasons other than signature/credential issues.

Missing: No medical record was submitted for the audited CMS-HCC, and no other record submitted for the enrollee could confirm the CMS-HCC.

Invalid (Signature/Credential): The medical record submitted was ruled invalid because it did not contain a valid signature and/or credential.

Top 10 HCCs by Discrepancy Rate*

OIG 2007 Audit Results vs. CON11 Results

Contract ID	Parent Org	OIG 2007 Payment Error Point Estimate *	OIG 2007 Lower Bound of 99% CI	CON11 Payment Error Point Estimate *	CON11 Lower Bound of 99% CI
H0543	UnitedHealth Group, Inc.	\$423,709,068	\$288,232,331	\$32,363,041	(\$91,884,129)
H4590	UnitedHealth Group, Inc.	\$115,422,084	\$82,129,887	(\$3,943,825)	(\$51,017,738)

* Point estimate is calculated as (payment error for sampled enrollees / sampling weight)

- In 2007, HHS OIG audited six contracts to estimate the payment error. All six of these contracts were also selected for CON11.
- All but one of the six contracts had a net underpayment for CON11 at the 99% CI. This may have been due to internal plan measures taken to delete inaccurate diagnoses in response to the OIG 2007 audit.

TAR07 Recovery Amounts

Contract ID	Parent Org	Recovery Amount
[REDACTED]		
H0609	UnitedHealth Group, Inc.	\$406,738
[REDACTED]		
H0151	UnitedHealth Group, Inc.	\$362,527
[REDACTED]		

Contract ID	Parent Org	Recovery Amount
[REDACTED]		

Key Differences Between CON11 and TAR07

- CMS' February 24, 2012, press release estimated the CON11 recovery amount at \$370M, based on extrapolating TAR07 results with a Fee-for-Service Adjuster applied.
- Unlike in TAR07, MAOs used routine CMS processes to self-report and return overpayments for PY 2011 data, which may have impacted overpayments identified by RADV. Total deletes submitted for PY 2011 for all contracts are (\$227,246,080.99).
- Five medical records per HCC were allowed for CON11, providing more opportunity for validating the audited HCC and finding additional HCCs; only one medical record per HCC was allowed for TAR07 (actual CON11 average was 2.5 records/HCC)
- Submissions for TAR07 occurred outside CDAT (MAOs filled out hardcopy Coversheets)
- Greater use of EMRs during time of CON11

Next Steps

- Issue proposed FFSA methodology for comment
- Issue CON11 audit reports to MAOs
 - Triggers the first set of administrative appeals, known as Reconsideration, which is comprised of re-reviewing medical records for disputed HCCs and the payment error calculation appeal
 - Using the extrapolated estimates at the lower bound of the 99% CI, about 10% of HCCs are eligible for the reconsideration phase of appeals (1,644 of ~16,000)
 - Next phase of appeals is with the Office of Hearings, and the third and final phase of appeals is with the Administrator

Objectives

- Presentation will provide information about the risk adjustment data validation (RADV) contract-level audits for payment year 2011
- Information geared toward the contract-level sample, not the national sample conducted annually for error rate reporting
- At the conclusion of the presentation, CMS will respond to questions that have been submitted in advance

Agenda

- What is RADV?
- Final Payment Error Calculation Methodology
- RADV Process: Selection for Audit through Appeals
- What Happens After My Contract is Selected for an Audit?
- Answers to Submitted Questions

CY 2011 CMS Risk Adjustment Data Validation Overview

What Is RADV?

Terminology

- AROF – Audit Report of Findings
- CDAT - Central Data Abstraction Tool
- CMS - HCC – Center for Medicare and Medicaid Services Hierarchical Condition Category
- INV - Invalid
- MRD - Medical Record Dispute
- MRR - Medical Record Review
- RADV - Risk Adjustment Data Validation
- RAPS – Risk Adjustment Processing System

Risk Adjustment Data Validation (RADV)

Overview

- RADV validates diagnoses submitted for payment.
- RADV is a corrective action to help reduce the Part C error rate.
 - Each year CMS reports a National Payment Error Estimate to comply with the Improper Payments Elimination and Recovery Act (IPERA) of 2010
- CMS expects that RADV will have a sentinel effect on quality of risk adjustment data submitted for payment going forward.

Risk Adjustment and Data Accuracy

- MA organizations are responsible for submitting accurate data to CMS for payment
- RADV is a method of evaluating the accuracy of the diagnoses submitted for payment

RADV Verifies Diagnoses Submitted for Payment

- MAO-submitted risk adjustment diagnoses must be:
 - Based on clinical medical record documentation from a face-to-face encounter (patient and provider)
 - Coded in accordance with the *ICD-9-CM Guidelines for Coding and Reporting*
 - Assigned based on dates of service within the data collection period
 - Submitted to the MA contracts by acceptable:
 - RA provider type
 - RA provider data source

Case 2:16-cv-08697-FMO-PVC Document 616-9 Filed 08/06/24 Page 179 of 267 Page ID #:21142

CY 2011 CMS Risk Adjustment Data Validation Overview

Final Payment Error Calculation Methodology

Final Payment Error Calculation Methodology

- On Feb 24, 2012 CMS released the

Notice of Final Payment Error Calculation Methodology for Part C Medicare Advantage Risk Adjustment Data Validation Contract-Level Audits.

- Notice available at: www.cms.gov/Medicare/Medicare-Advantage/Plan-Payment/PaymentValidation.html/

- Revised from the December 20, 2010 document CMS released for comment entitled

Medicare Advantage Risk Adjustment Data Validation Notice of Payment Error Calculation Methodology for Part C Organizations Selected for Contract-Level RADV Audits- Request for Comment

- CMS reviewed all comments received and considered them when finalizing the methodology

Final Payment Error Calculation Methodology

- Methodology will be applied to next round of contract level audits conducted on payment year 2011
- Extrapolation will begin with payment year 2011
- Approximately 30 contracts will be selected for audit
- Contracts will be able to submit multiple medical records per CMS-HCC
- Fee-for-Service Adjuster will be applied to payment recovery amounts

Case 2:16-cv-08697-FMO-PVC Document 616-9 Filed 08/06/24 Page 182 of 267 Page ID #:23145

CY 2011 CMS Risk Adjustment Data Validation Overview

RADV Process:
Selection for Audit through
Appeals

RADV Process -Sampling

- Step 1: Select MA Contracts eligible for RADV audits
 - Active contracts that received risk adjusted payments
- Step 2: Select enrollees eligible for sampling
 - Selection based on enrollment data for January of the payment year
 - Eligible enrollees:
 - 12 months of Part B during data collection year (i.e., Full Risk)
 - Continuously enrolled in the same contract from January of the data collection year through January of the payment year
 - Non-ESRD in status from January of the data collection year through January of the payment year;
 - No hospice-only status from January of the data collection year through January of the payment year;
 - At least one CMS-HCC assigned
 - All CMS-HCCs for selected enrollees will be reviewed

RADV Process – Sampling Size and Strata

- 201 enrollees will be selected from the contract's RADV eligible population
- Stratified, random sample
 - o 67 in each stratum
- Sampling weights
 - o Enrollee sample weight computed as the total number divided by the number of enrollees sampled from that stratum (N/n).
 - For RADV contract level samples $n = 67$

RADV Process – Medical Record Review

- Every valid submitted record is evaluated by coders according to the *ICD-9-CM Guidelines for Coding and Reporting*
- Contracts should adhere to the RADV rules and provide documentation as prescribed in the audit instructions
 - Failure to do so may render the contract's subsequent appeals invalid and impact the payment recovery amount.
- CMS uses the Central Data Abstraction Tool (CDAT) to facilitate the RADV process

RADV Process – Medical Record Review

- Effective with the CY 2011 RADV audits, CMS will allow audited MA contracts to submit up to five medical records for each audited CMS-HCC per enrollee.
- A CDAT management function will allow MA contracts to add, re-order, and delete medical records for each enrollee up until the submission deadline.
- CMS will consider individual hardship requests if an MA contract identifies the need to submit more than five medical records per sampled CMS - HCC.

RADV Process – Medical Record Review

- CMS will consider hardship requests in the extraordinary circumstance that a contract will need to submit more than five medical records to support a CMS-HCC for an enrollee
- Guidance pertaining to the hardship request will be included in the instructions packet issued to audited contracts

RADV Process – Medical Record Review

- Records submitted for RADV first undergo an intake evaluation
- For outpatient and physician records, a CMS-Generated Attestation may be submitted with a record that is missing a provider's signature and/or credential
- Only valid records go forward for coding

RADV Process – Medical Record Review

- CMS created the *Risk Adjustment Data Validation (RADV) Medical Record Checklist and Guidance* to assist contracts in selecting appropriate medical records
 - o The guidance is based on issues CMS observed with medical records submitted for previous RADV audits
 - o The guidance addresses issues observed during intake (incorrect date of service, unacceptable provider type, etc) and coding (diagnosis cannot be verified using ICD-9 guidelines).
- List available at <http://www.cms.gov/Medicare/Medicare-Advantage/Plan-Payment/Downloads/radvchecklist.pdf>

RADV Process – Medical Record Review

- All diagnoses will be abstracted from the priority medical record that supports the CMS-HCC under review.
- Priority is based on the order in which medical records are arranged by the MA contract.

RADV Process - Payment Error Estimate and Payment Recovery Amount

- The medical record review (MRR) results feed the payment error estimate
- Enrollee Level Error = Original Payment – Post RADV Payment
- Apply the sampling weights to the enrollee level payment error to determine contract level error

RADV Process: Payment Error Estimate and Payment Recovery Amount

- Total all enrollee payment errors
- Calculate 99% confidence interval
- Payment Error Estimate is lower bound of 99% confidence interval
- Application of FFS Adjuster
- Payment Recovery Amount
 - Payment recovery will occur after all steps of medical record review have been completed, including medical record dispute
 - Recovery amounts will be deducted from a contract's monthly payment

RADV Process - Payment Error Estimate and Payment Recovery Amount

- Step One: calculate difference in payment based on MRR results for each sampled enrollee.

Actual payment – Post MRR payment = Enrollee level payment error

- Step two: apply sampling weights.

Un-weighted payment error X strata specific sampling weight (N/n) =
Extrapolated payment error for MA contract (point estimate)

RADV Process - Payment Error Estimate and Payment Recovery Amount

- Step three: calculate 99% confidence interval (CI) around payment error estimate
- Step four: determine payment recovery amount
 - If the CI for the point estimate includes zero or is below zero, payment recovery amount is constrained to zero
 - If CI is above zero, preliminary payment recovery amount is set at lower bound of 99% CI
 - Final payment recovery amount determined by applying a fee-for-service (FFS) adjuster to lower bound
 - If FFS adjuster amount is greater than preliminary payment recovery amount, final recovery is constrained to zero
 - Details on the FFS Adjuster will be shared in the future
 - Calculated by CMS based on a RADV-like review of records submitted to support FFS claims data.

RADV Process - Findings

- At the conclusion of the initial medical record review process, results will be issued to audited contracts
- Contracts will receive their Preliminary Audit Report of Findings (AROF)
 - For each audited CMS- HCC the Preliminary AROF will detail the validation outcome, error type (if applicable), and eligibility for medical record dispute
 - For each enrollee, the preliminary AROF will detail calculation of the corrected risk score and payment, based on initial medical record review results
- Contracts will receive information and instructions on medical record dispute (MRD) with the preliminary AROF

RADV Process - Medical Record Dispute

- MRD occurs after the initial medical record review results have been released to contracts
- Allows MA contracts an opportunity to dispute certain types of RADV-related errors
- Errors may be overturned through the MRD process
- For MRD, MA contracts will be allowed to select the “one best medical record” from the medical records it previously submitted for each audited CMS-HCC

RADV Process – MRD Findings

- At the conclusion of MRD, audited contracts will receive their finding through the Audit Report Post Medical Record Review
- Similar to the Preliminary AROF, the Audit Report Post Medical Record Review will detail CMS - HCC validation outcomes, error types, eligibility for appeal, as well as payment error recovery amounts
- Contracts will also receive instructions on filing appeals

Appeals

- Per 42 CFR § 422.311, MA contracts are afforded two types of appeals:
 - Medical Record Review Determination Appeal
 - Payment Error Calculation Appeal
- Full appeal rights are detailed in the regulation

Case 2:16-cv-08697-FMG-RVC Document 616-9 Filed 08/06/24 Page 199 of 267 Page ID

CY 2011 CMS Risk Adjustment Data Validation Overview

What Happens After My
Contract Is Selected for an
Audit?

What happens after my contract is selected for audit?

- The CEO and MCO for your MA contract will:
 - o Receive a CMS notification message via email containing:
 - Information about training and instructions availability
 - Directions on establishing three users for the Central Data Abstraction Tool (CDAT)
- Training will include
 - o CDAT Access Training Teleconference
 - o CMS Audit-Specific Teleconference, including CDAT submission training

What happens after my contract is selected for audit?

- CDAT is the secure system through which data related to RADV audits is transferred.
 - o MA contracts download enrollee data and audit instructions
 - o MA contracts upload medical records to CDAT
 - o Medical record review is conducted within the CDAT

What happens after my contract is selected for audit?

- Two types of training will be held prior to the start of the audit
 - o CDAT access training
 - Will instruct users on how to access and login to the system
 - o Audit specific training
 - Will instruct users on how to upload records to CDAT
 - Will also provide information and instructions for the audit

What happens after my contract is selected for audit?

- Enrollee data is available on CDAT following the CMS Audit-Specific Teleconference
- Medical record submission deadline will be 16 weeks after the data identifying sampled enrollees is released to contracts
- CMS will provide technical assistance regarding the submission process

Case 2:16-cv-08097-FMO-RVC Document 616-9 Filed 08/06/24 Page 204 of 267 Page ID #:21367

DRAFT
Affordable Care Act Section 6402(a):
Reporting and Returning Overpayments
by Medicare Advantage Organizations and Part D Sponsors

PURPOSE:

The goal of the proposed regulatory changes described in this paper is to codify the Affordable Care Act requirement that Medicare Advantage organizations and Part D sponsors identify and return Medicare overpayments. This paper addresses six key issues related to this report and repay requirement.

BACKGROUND:

The Affordable Care Act (the Act) makes a number of changes to the Medicare program that enhance CMS' efforts to recover overpayments and combat fraud, waste and abuse. Section 6402(a) of the Act established 1128J(d) of the Social Security Act entitled "Reporting and Returning of Overpayments." Section 1128J(d)(1) of the Social Security Act requires a person who has received an overpayment under Titles XVIII and XIX to report and return the overpayment to the Secretary, the State, an intermediary, a carrier, or a contractor and to provide written documentation explaining the reason for the overpayment.

Section 1128J(d)(2) of the Social Security Act further requires that an overpayment must be reported and returned by the later of -- (1) the date which is 60 days after the date on which the overpayment was identified; or (2) the date any corresponding cost report is due, if applicable.

The Center for Program Integrity (CPI) issued a proposed rule in February 2012 that proposed several provisions regarding reporting and returning overpayments under section 6402 by providers in FFS Medicare. We propose to use the upcoming proposed Part C and D regulation for plan year 2015, which will be published this fall, as the vehicle for codifying the report and return requirement for MA organizations and Part D sponsors.

DISCUSSION:

This paper discusses six issues that will be addressed in the upcoming regulation and where decisions are needed for Medicare Parts C and D:

- **Issue 1.** Defining *Overpayment* for Medicare Parts C and D;
- **Issue 2.** Defining *Identified* for Medicare Parts C and D;
- **Issue 3.** Determining what the term *Applicable Reconciliation* means for Medicare Parts C and D;
- **Issue 4:** Determining the process for reporting and returning overpayments;
- **Issue 5:** Establish a look-back period for reporting Medicare Parts C and D overpayments; and
- **Issue 6:** Amending current payment regulations for Parts C and D to align with the new overpayment provisions.

It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

June 4, 2013

A number of the overpayment decisions apply equally to Part C and Part D payments; however, in several places a separate approach is needed for each program.

Due to the fact that this proposed overpayment rule will be released before CPI's final rule on overpayments, we must be cognizant not to refer in preamble to any element of our proposed policies as a CPI or Parts A and B final policy. Throughout this paper, differences and similarities in the two sets of proposals are noted.

ISSUE 1: Defining Overpayment for Medicare Part C and Medicare Part D

Section 1128J(d)(4)(B) of the Act defines the term "*overpayment*" as "any funds that a person receives or retains under title XVIII or XIX to which the person, after applicable reconciliation, is not entitled under such title." (In this paper we use the term entity instead of person.) In the regulation text, should CMS adhere to the more general statutory definition of an *overpayment* in implementing this provision for Parts C and D or should CMS tailor the definition to Medicare Parts C and D?

OPTIONS:

Option 1: Propose the statutory definition. Under this approach, CMS would propose the statutory definition of *overpayment*, which provides CMS with maximum flexibility, and then provide in preamble some examples of overpayments specific to Medicare Parts C and D. CMS would further specify in sub-regulatory documents what constitutes Medicare Parts C and D overpayments. However, the downside to adopting this approach is that MA organizations and Part D sponsors may argue that the broad statutory definition of *overpayment* is not specific enough to be actionable. Of note, CPI proposed adopting the statutory definition of overpayment in their proposed rule, and received very few comments objecting to this definition.

Option 2: Further specify the statutory definition by incorporating parameters unique to Medicare Parts C and D. Under this approach, CMS would identify the universe of examples that would constitute an overpayment. The advantage in adopting this approach is that it clarifies in more detail what is and is not an overpayment in Medicare Parts C and D. The disadvantage with taking a more specific approach in defining overpayment in the regulations text is that CMS could unintentionally fail to cover all possibilities, thus creating exceptions that the industry could exploit, and the need for ongoing updates to regulation.

RECOMMENDATION:

Adopt the more general statutory definition of an *overpayment*. This would avoid the situation where we unintentionally omit from regulation an area of Medicare Part C or D payment for which MA organizations and Part D sponsors would have responsibility, thus creating loopholes. Also, in the event new laws change Medicare Parts C or D payment provisions in a way that impacts the regulation, we would not have to amend the definition of *overpayment*. We understand that CPI intends to utilize the statutory definition of *overpayment* in the Medicare Parts A and B final rule.

INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW: This information has not been publicly disclosed and may be pre-legal and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

June 4, 2013

We would, however, recommend that we discuss in the preamble the general principle that the obligation to report and repay overpayments under Section 6402 applies in those circumstances in which the overpayment is the result of the use of data submitted to CMS by the plans. Plan-submitted payment data generally fall into three categories: enrollment transactions, risk adjustment data, and Prescription Drug Event/ Direct and Indirect Remuneration data. Plans have complete control over submitting and then correcting data that fall into these three categories.

There are other payment data that could lead to an overpayment that MA organizations and Part D sponsors do not control because these elements are submitted to CMS by the SSA, States, and other sources such as ESRD dialysis networks. The accuracy of these other data are ultimately the responsibility of the entity that controls the relevant system of record. We would clarify in preamble that plans have an obligation to report what they believe might be errors in these data, but the final determination of the accuracy of the data is responsibility of the entity that controls the system of record. As a result, we would clarify that, in these situations, a determination by the plan of whether an overpayment occurred is not possible and, therefore, would not be governed by Section 6402.

ISSUE 2. Defining *Identified* for Medicare Parts C and D

Section 1128J of the Act does not include a definition of the term "*identified*." Our understanding from CPI is that the definition of "*identified*" proposed in their proposed rule will likely be amended for the final rule, in response to public comments¹. The Center for Program Integrity's final definition of "identification" of overpayments may be refined to indicate that the person/entity has identified an overpayment if there was (or should have been) an exercise of "reasonable diligence" to determine whether they did receive an overpayment and if so, to quantify the amount with a reasonable degree of certainty. Further, we understand that CPI's approach to defining "reasonable diligence" is to indicate it includes both proactive activities to monitor payments and reactive activities to investigate a possible overpayment based on credible information the person/entity received about an overpayment.

RECOMMENDATION:

Redacted

¹ In CPI's NPRM, identified means that "a person has actual knowledge of the existence of the overpayment or acts in reckless disregard or deliberate ignorance of the existence of the overpayment." CPI mentioned that commenters indicated confusion about this definition (e.g., how persons are to identify potential overpayments and whether persons must take proactive steps).

Redacted

ISSUE 3. Determining what the term “*applicable reconciliation*” means for Medicare Part C and D

Applicable Reconciliation. Section 1128J(d)(4)(B) of the Act defines the term *overpayment* as “any funds that a person receives or retains under title XVIII or XIX to which the person, after *applicable reconciliation*, is not entitled under such title.” Since Medicare Parts C and D payments go through elaborate reconciliation processes, CMS must determine what the term means within the context of the definition of *overpayment*, for MA organizations and Part D sponsors.

Risk Adjustment Reconciliation. Medicare makes “estimated” interim capitated payments to MA organizations and Part D sponsors for each enrollee each month with the knowledge that a reconciliation of those payments will be done when the actual costs or correct payment information, such as risk adjustment data, becomes available, usually at a later date. The initial “estimated” payments are based on the approved bids and preliminary risk adjustment data submitted by MA organizations and Part D sponsors. CMS makes prepayments at the beginning of the month based on the most current information available. Over time, as additional payment information becomes available, interim payments that were made throughout the payment year are reconciled. Final risk adjustment data are due by January 31st following the payment year. Overpayments are currently recognized and accepted after this point, but MA organizations cannot submit additional diagnoses for additional payment after the January 31st deadline. Therefore, January 31st provides a logical *applicable reconciliation*.

Annual Part D Reconciliation. In addition to the direct subsidy, Medicare Part D makes prospective payments to plans that cover the low-income cost-sharing subsidy (LICS) and the reinsurance subsidy. During the annual Part D payment reconciliation, CMS compares the finalized prospective payments and the corresponding actual costs reported on prescription drug events (PDEs) and makes payment adjustment according to the rules for LICS and reinsurance. In addition, after year-end (and after reconciliation of the direct subsidy payment), CMS compares actual covered drug costs to direct subsidy payments, and if they differ by legislatively specified percentages, CMS calculates a risk sharing payment adjustment. Plans have an additional reporting requirement to submit DIR data for the year-end reconciliation. Prior to performing the reinsurance reconciliation and risk sharing, the Net Part D Covered DIR amount is determined. The cost-based reconciliations for the LICS and the reinsurance subsidy (described at 42 CFR 423.343 (c) and (d), respectively) are the last reconciliation processes for the annual Part D payment reconciliation, and therefore provide a logical *applicable reconciliation* for Medicare Part D.

RECOMMENDATION:

We recommend adopting separate definitions of *applicable reconciliation* for risk adjustment data and for Part D payment data.

[PAGE 19 MERGEFORMAT]

INFORMATION NOT RELIABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW: This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

June 4, 2013

Risk Adjustment: For risk adjustment data, *applicable reconciliation*, for the purposes of this rule, means

- *after the deadline for submitting diagnoses that will be used to calculate the risk scores that will be used in the final reconciliation of risk adjusted payments to MA organizations within the timeframes established within applicable MA regulations or other sub-regulatory guidance. See 42 CFR 310 (g) (2) for the annual deadline for risk adjustment data submission.*

Part D: For Medicare Part D, *applicable reconciliation*, for the purposes of this rule, means

- *The annual Part D payment reconciliation referred to in 42 CFR 423.343 (c) and (d).*

ISSUE 4. Determining the process for reporting and returning overpayments.

Section 1128J(d)(1) of the Social Security Act requires a person who has received an overpayment to report and return the overpayment. Section 1128J of the Act also provides that an overpayment must be reported and returned by the later of (i) the date which is 60 days after the date on which the overpayment was identified; or (ii) the date any corresponding cost report is due, if applicable. The statute does not define what *return* means in terms of the Secretary's responsibility. We believe the statute provides flexibility in the length of time, within reason, for CMS to process the overpayment returned by the MA organization or Part D sponsor. We do not believe the statute requires CMS to process the overpayment in the system within the 60 days after the date on which the overpayment was identified. This would be impossible to accomplish due to operational resource constraints. We would discuss this in the preamble.

RECOMMENDATION:

We recommend generally that MA organizations and Part D sponsors submit corrected data related to overpayments to CMS and that CMS then recoup overpayments through the routine payment adjustment processes. Therefore, a plan's obligation to "return" the overpayment would be met by reporting corrected data related to the overpayment and the timing of the actual overpayment recoupment would depend on the timing of when CMS performs the relevant payment update or reconciliation.

ISSUE 5. Look-back Period for Reporting Medicare Parts C and D Overpayments

After the applicable reconciliation, the look-back period is the timeframe within which MA organizations and Part D sponsors will be held accountable for both identifying and reporting overpayments. The question is how long should the look-back period be.

Current Policy for Finalizing Medicare Part C Payments. The applicable reconciliation and deadline for finalizing Medicare Part C payments is final risk adjustment reconciliation. However, payment adjustments are routinely conducted after this reconciliation in order to incorporate changes to plan and beneficiary information which impact the payment calculation. These changes to plan and beneficiary information can be discovered well after the final payment reconciliation and some necessitate special system runs to accommodate payment recalculations. Changes to beneficiaries risk score information generally trigger the larger payment adjustments.

[PAGE *MERGEFORMAT]

INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW: This information has not been fully disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

June 4, 2013

Recently, with RADV, plans have been paying more attention to submitting 'deletes' which essentially remove diagnoses from risk scores and result in payments being recouped from plans. Once risk adjusted payment are finalized, CMS only updates risk scores to address overpayments (e.g., "adds" are not taken and there are no "underpayments"). The timeframe for conducting a final risk adjustment reconciliation is established at 42 CFR 422.310(g) (2) as January 31st after the payment year. Payment adjustments based on final risk scores are typically made in August after the payment year has ended.

Current Policy for Finalizing Medicare Part D Payments. The timing for when the direct subsidy part of the Medicare Part D payment is final follows that for the Medicare Part C risk score final reconciliation, and the discussion above generally applies to the Medicare Part D direct subsidy payments. Medicare Part D regulations and Medicare Part D guidance do not define a time at which the cost-based reconciliations for a given contract year is considered final. To the contrary, 42 CFR 423.346(a) (2) contemplates a reopening 4 years after the date of the notice of the initial or reconsidered determination and 42 CFR 423.346(a) (3) contemplate a reopening at *any time* for fraud or similar fault of the Part D sponsor.

Multiple factors can cause overpayment related to the cost-based reconciliations, such as:

- An overstatement in the LICR, covered plan-paid amounts (CPP), Gross Covered Drug Cost Above the OOP Threshold (GDCA);
- An overstatement in of the TrOOP eligible fields (e.g., patient pay, LICR, reported gap discount, other TrOOP amount), which can lead to an overstatement in GDCA;
- Beneficiary is retroactively disenrolled, and the plan fails to delete the PDEs;
- Plan submitted a claim as if Medicare was primary when they were secondary;
- Underlying claim issue where the plan should have never submitted a PDE in the first place;
- Plan submits a duplicate PDE;
- Plan under-reports DIR, which could result in inflated reinsurance and risk-sharing payments; and
- Inaccuracies in bid data resulting in a plan being miscategorized for reconciliation

As stated in Issue 3 above, the proposed "*applicable reconciliation*" for Medicare Part D is to be the annual Part D payment reconciliations referred to in 42 CFR 423.343 (e) and (d). Part D sponsors will continue to submit PDEs and DIR data after the applicable reconciliation due to audit and other post reconciliation oversight activity. As a result, CMS will perform global reopenings of the reconciled contract years to reconcile payments with the new data received. To date, contract years 2006, 2007, and 2008 have been reopened, and CMS has released guidance stating that we intend to eventually perform a global reopening of 2011 once there is stability in the data for that year. This experience indicates to us that we will likely have to perform a reopening for every contract year. However, in light of the statutory overpayment provision that we plan to codify in this regulation, we do not believe that it is necessary do a reopening for a contract year anymore than once. We, therefore, propose that CMS may do one reopening 5 years from the initial cost-based reconciliations. This is approximately 6 years from the close of a contract year.

[PAGE * MERGEFORMAT]

INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW: This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. If a release and disclosure may result, a prosecution to the full extent of the law.

June 4, 2013

CPI Proposed Rule for FFS. In CMS-6037-P, CPI proposed a 10 year look-back period. However, it is expected that the final regulation will move to a 6 year look-back period. This is because a 6 year period will not pose enforcement obstacles for the Department of Justice, and is consistent with the statute of limitations related to the False Claims Act and Civil Monetary Penalty provisions.

OPTIONS:

The following options address the look-back period for which MA organizations and Part D sponsors will need to ensure accurate payments.

Option 1: 10 year lookback period- MA organizations and Part D sponsors would be required to ensure accurate payments for 10 years after applicable reconciliation. This timeframe is consistent with the outer limit of the False Claims Act statute of limitations. This is also consistent with the record keeping requirements for the MA and Part D contracts and allows MA organizations and Part D sponsors to close their books and not have ongoing liability associated with an overpayment.

Option 2: 6 year lookback period- MA organizations and Part D sponsors would be required to ensure accurate payments for 6 years after applicable reconciliation. This option would be consistent with what we understand will be the final FFS policy. In CMS-6037-P, CPI proposed a 10 year look-back period. However, it is expected that the final regulation will move to a 6 year look-back period. This is because a 6 year period will not pose enforcement obstacles for the Department of Justice, and is consistent with the statute of limitations related to the False Claims Act and Civil Monetary Penalty provisions.

RECOMMENDATIONS:

We recommend Option 2. The 6 year look-back period allows MA organizations and Part D sponsors to ensure accurate payments within a reasonable amount of time. It takes into consideration the resource burden on MA organizations, Part D sponsors and CMS. For Part D sponsors, a 6 year look-back period also makes sense in light of the proposed changes to the reopening provision.

This approach is consistent with the maintenance of records requirements in MA and Part D contracts. There would be exceptions pertaining to fraud-related overpayments.

ISSUE 6. Amending current payment regulations for Parts C and D to align with the new overpayment provisions.

Issue 6.A. Currently the Part C regulation at 422.310(g)(2) states that CMS will not accept risk adjustment data after the annual January 31 late data submission deadline:

CMS allows a reconciliation process to account for late data submissions. CMS continues to accept risk adjustment data.... until January 31 of the year following the payment year. After the payment year is completed, CMS recalculates the risk factors for affected individuals to determine if adjustments to payments are necessary. Risk adjustment data

[PAGE * MERGEFORMAT]

INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW: This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

June 4, 2013

that are received after the annual January 31 late data submission deadline will not be accepted for the purposes of reconciliation.

This paragraph also applies to Part D, by reference at 423.343(b), which states that adjustments to payments to account for updated risk adjustment data are made as provided in the Part C regulation at 422.310(g)(2).

CMS has not enforced this late deadline, especially given numerous requests in recent years from MA organizations that CMS allow them to submit updated risk adjustment records that delete diagnoses previously submitted for payment. Adjustments for overpayments after the deadline have been allowed, but not for underpayments (except in a very limited number of circumstances).

The proposed overpayment regulation will require organizations that identify overpayments under a look-back period of six years to submit corrected data to allow CMS to correct payment amounts.

RECOMMENDATION: We would propose to replace the final sentence in paragraph 422.310(g)(2) with the following sentence that references 422.326, the proposed new section with the Part C overpayment provisions.

CMS will determine the timeline and conditions under which risk adjustment data can be corrected for purposes of 422.326. However, additional diagnoses for the payment year cannot be submitted after the annual late data submission deadline.

Issue 6.B. Amend §422.310 to require MA organizations conducting medical record reviews to focus not only on identifying underpayments.

Under existing regulation, there is no requirement to for plans to audit medical records for overpayments. If a plan is conducting medical record reviews to identify underpayments, we recommend that they be required to audit as well for overpayments. We believe that CMS should codify this requirement, and now would be an effective time to make this change, as part of implementing the overpayment provisions of Section 6402(a) of the Act.

Redacted

(1) *Certification of data that determine payment.* As a condition for receiving a monthly payment under subpart G of this part, the MA organization agrees that its chief executive

It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

June 4, 2013

officer (CEO), chief financial officer (CFO), or an individual delegated the authority to sign on behalf of one of these officers, and who reports directly to such officer, must request payment under the contract on a document that certifies (based on best knowledge, information, and belief) the accuracy, completeness, and truthfulness of relevant data that CMS requests. Such data include specified enrollment information, encounter data, and other information that CMS may specify.....

(2) The CEO, CFO, or an individual delegated with the authority to sign on behalf of one of these officers, and who reports directly to such officer, must certify (based on best knowledge, information, and belief) that the data it submits under §422.310 are accurate, complete, and truthful.

The requirement would apply to those MA organizations that conduct medical record reviews for the purpose of evaluating their payments (i.e., evaluating the diagnosis data that they submit to CMS for payment). "Accurate and complete" risk adjustment data for a beneficiary should obligate an MA organization to identify and delete diagnoses it submitted to CMS systems but later found to not be supported by the medical record, as a part of any medical record review it undertakes.

RECOMMENDATION:

We recommend adding a new paragraph §422.310(c)(1)², stating:

"For any MA organization that conducts reviews of enrollee medical records (including reviews conducted by a related entity, contractor, or subcontractor), if any aspect of such reviews informs the MA organization's decisions on what risk adjustment data to submit or resubmit to CMS (including encounter data) for purposes of amending CMS' payments to the MA organization under §422.304, the methodology and implementation of such reviews cannot focus only on identification of underpayments. Such reviews must focus on the identification of any payment that was made by CMS in an incorrect amount, including both underpayments and overpayments."

² We would propose to renumber current 422.310(c)(1), which addresses RADV audits, as (c)(2), and then add this paragraph as (c)(1).

**Notice of Final Payment Error Calculation Methodology for
Part C Medicare Advantage Risk Adjustment Data Validation Contract-Level Audits**

Introduction

On December 21, 2010 the Centers for Medicare and Medicaid Services (CMS) posted on its website the "Medicare Advantage Risk Adjustment Data Validation (RADV) Notice of Payment Error Calculation Methodology for Part C Organizations Selected for RADV Audit – Request for Comment". CMS invited public comment on the proposed methodology, with such comments to be submitted in writing by Friday, January 21, 2011.

CMS carefully reviewed the more than 500 comments received on the draft methodology. This Notice responds to the analytic concerns raised relating to extrapolation and payment recovery and presents the final methodology for the RADV payment error calculation.

Following the background section, this Notice provides a general walkthrough of the RADV payment error calculation methodology in two sections: (A) sampling; and (B) payment error calculation.

This methodology will be applied to the next round of RADV contract-level audits, which will be conducted on payment year 2011. Payment year 2011 is the first year for which payment recovery based on extrapolated estimates will be conducted for Medicare Advantage (MA). Note that sampling for RADV audits will occur after the close of final reconciliation for the payment year being audited.

CMS' RADV audit initiative is the Agency's primary strategy to address the national payment error rate for the MA program, which is currently estimated to be 11 percent for FY 2011. In addition to recovery of overpayments through RADV audits, CMS also expects that these contract-level audits will have a sentinel effect on the quality of risk adjustment data submitted for payment by MA organizations.

Background

Section 1853(a)(3) of the Social Security Act requires that CMS risk adjust payments to Medicare Advantage (MA) organizations. In general, the current risk adjustment methodology relies on enrollee diagnoses, as specified by the International Classification of Disease, Ninth Revision Clinical Modification guidelines (ICD-9-CM), to prospectively adjust capitation payments for a given enrollee based on the health status of the enrollee. Diagnosis codes submitted by MA organizations are used to determine beneficiary risk scores, which in turn determine the risk-adjusted reimbursement.

RADV audits determine whether the diagnosis codes submitted by MA organizations can be validated by supporting medical record documentation. This medical record documentation must meet certain criteria and standards specified in RADV materials that CMS provides to audited contracts. Diagnoses that cannot be validated contribute to a payment error rate. This document describes the sampling methodology that CMS will use for RADV audits and the methodology for calculating the payment error for each audited Medicare Advantage contract.

EXHIBIT

1497-10
2318

A. Sampling

To conduct these audits, CMS selects a set of MA contracts for each RADV audit cycle. Enrollees are sampled from each selected MA contract for the purpose of estimating payment error related to risk adjustment.

Sampling Frame

First, CMS identifies all beneficiaries under each MA contract who are “RADV-eligible” because they meet the following criteria:

1. Enrolled in an MA contract (H-number, E-number, or R-number) in January of the payment year— based on CMS’ monthly member enrollment files;
2. Continuously enrolled in the same MA contract (as identified in step (1) above) from January of the data collection year through January of the payment year;
3. Non-End Stage Renal Disease (non-ESRD) status from January of the data collection year through January of the payment year;
4. Non-hospice status from January of the data collection year through January of the payment year;
5. Enrolled in Medicare Part B coverage for all 12 months during the data collection year (i.e., defined as full risk enrollees for risk adjusted payment); and
6. Had at least one risk adjustment diagnosis (ICD-9-CM code) submitted during the data collection year that led to at least one CMS-Hierarchical Condition Category (HCC) assignment for the payment year.

Sample Size and Strata

Next, CMS selects a sample of beneficiaries from each contract’s cohort of RADV-eligible enrollees. Enrollee-based stratification will be used in the process of sampling enrollees. In order to derive the strata, the RADV-eligible enrollees in each contract will be ranked from lowest to highest based on their community risk score. The enrollees will then be divided into three equal groups based on the total number of eligible enrollees, where the first group will include the third of enrollees with the highest risk scores and the third group will include the third of enrollees with the lowest risk scores. The remaining enrollees will be in the middle stratum.

CMS will select up to 201 enrollees for medical record review from each contract selected for a contract-level audit. For smaller contracts, i.e., those with fewer than 1,000 RADV-eligible enrollees, CMS will individually adjust their sample sizes by using the finite population correction factor. The sample sizes for these smaller contracts will be 201 or fewer enrollees.

To achieve a sample size of 201 enrollees per contract, sixty-seven (67) enrollees will be randomly sampled from each group or stratum. The corresponding stratum-based enrollee weights will be computed as the number of RADV-eligible enrollees in the population grouping (or stratum) divided by the number of enrollees selected from that grouping for the sample, i.e., N_h/n_h , where h represents the corresponding stratum.

For example, if a contract has 3,000 RADV-eligible enrollees, the enrollees would be ranked by risk score, then divided into three equal groups of 1,000 enrollees each (to represent high, medium, and low strata). An equal number of enrollees will be randomly selected from each group. The weight for each sampled enrollee will equal 14.925 (i.e., 1,000/67).

For small contracts with fewer than 1,000 RADV-eligible enrollees, the same enrollee-based stratification process will be applied; however, a proportionally smaller number of enrollees will be randomly sampled from each group or stratum.

The enrollee sampling weights will be used as multipliers to scale-up (or extrapolate) the sample payment error findings to the population it represents.

Once enrollees have been selected, the MA contract will be required to submit medical records to support all CMS-HCCs represented in the sampled beneficiaries' risk scores for the payment year.

Effective with the CY 2011 RADV audit, CMS will allow audited MA contracts to submit multiple medical records for each CMS-HCC being validated. All diagnoses will be abstracted from the first medical record that validates the CMS-HCC under review. The one best medical record policy will continue to apply to the RADV audit dispute and appeal processes outlined in 42 CFR §422.311. CMS will provide more detailed information in the RADV audit procedures that will be distributed to audited MA contracts.

B. Payment Error Calculation

Enrollee-level Payment Error Calculation

CMS will calculate each contract's payment error based on the validation results. For each sampled enrollee, the RADV-corrected risk score and corrected payment will be calculated based on the CMS-HCCs that are supported by RADV medical record review findings for the enrollee. Enrollee-level payment errors will be defined as the difference between the original payment and the RADV-corrected payment (per member per month). The payment error for each enrollee will be either positive (representing a net overpayment), or negative (representing a net underpayment). An annual payment error amount will be calculated for each sampled enrollee based on the number of months the person was enrolled in the selected MA contract (and was not in ESRD or hospice status) during the payment year.

Payment Error Extrapolation Calculation

To derive the payment error estimate for each MA contract, the annual payment error for each sampled enrollee will be multiplied by the enrollee's sampling weight (computed for each stratum [h] during the sampling phase as N_h/n_h , where N represents the number of enrollees in the RADV-eligible population and n is the number of enrollees sampled). The weighted enrollee annual payment error will be summed across all enrollees in the sample to determine an estimated payment error for the MA contract (the "point estimate"). A 99 percent confidence interval (CI) will then be calculated for the estimated payment error for each audited MA contract.

The following formulas illustrate computation of a 99 percent CI around the payment error estimate for one contract, assuming a sample size of 201, with 67 enrollees selected from each of three strata groupings.

The lower bound of the 99 percent CI is computed as the estimated payment error for the contract (PE) minus (2.575 multiplied by the standard error), or (PE – (2.575 * SE)). The standard error (SE) can be calculated as follows:

1. Derive the variance, v_h , (standard deviation squared) of the unweighted enrollee payment errors across the sample enrollees within each of the three strata (h).
2. Calculate the variance of the estimated total ($V_{\hat{\tau}}$) payment error, where N represents the number of enrollees in the RADV-eligible population of the h^{th} (1st, 2nd, 3rd) stratum:

$$V_{\hat{\tau}} = \sum_{h=1}^3 \frac{N_h^2}{67} v_h$$

3. The standard error is $SE_{\hat{\tau}} = \sqrt{V_{\hat{\tau}}}$

Payment Recovery Amount and the Fee-For-Service Adjuster

If the CI for the point estimate includes zero or is below zero, the contract will have the payment recovery amount constrained to zero.

If the CI for the point estimate is above zero, the payment recovery amount for the contract will be determined as follows. First, a preliminary payment recovery amount will be set at the lower bound of the 99 percent CI for the contract's point estimate. Second, to determine the final payment recovery amount, CMS will apply a Fee-for-Service Adjuster (FFS Adjuster) amount as an offset to the preliminary recovery amount. If the FFS Adjuster amount is greater than the preliminary recovery amount, the final recovery amount is equal to zero.

The FFS adjuster accounts for the fact that the documentation standard used in RADV audits to determine a contract's payment error (medical records) is different from the documentation standard used to develop the Part C risk-adjustment model (FFS claims). The actual amount of the adjuster will be calculated by CMS based on a RADV-like review of records submitted to support FFS claims data.

CMS RADV

– Comparison and Analysis of CON11, CON12 & CON13

December 8, 2017

Sampling Differences for Contract Samples

	CON11	CON12	CON13
RADV-eligible enrollee threshold	1,000	2,000	5,000
Number of Contracts selected:	30	30	30
High Coding Intensity Stratum	20*	20	25
Medium Coding Intensity Stratum	5**	5	5
Low Coding Intensity Stratum	5	5	0
Number of RADV-eligible enrollees in 30 Sampled Contracts	778,808	838,373	902,451
Parent Organization Analysis			
4 United HealthGroup plans account for 0.0% of total recovery amount			6 United Health Group plans account for 1.4% of total recovery amount
5 United HealthGroup plans account for 5.0% of total recovery amount			

* includes 5 OIG-selected plans

** includes 1 OIG-selected plan

Recovery Amount/Eligible Population

*Recovery amount is the extrapolated payment error amount based on the lower bound of the 99% confidence interval for the total.
*Only those MA contracts with greater than \$0 recovery amount are included; there were 14 such contracts in CON11, 17 contracts in CON12 and 12 contracts in CON13.

Recovery Amount and Eligible Population by Parent Organization

*Recovery amount is the extrapolated payment error incorporating the lower bound of the 99% confidence interval.

*All MA contracts in the sample are included in this analysis.

Medical Record Submission Summary

Medical Record (MR) Submission per CMS-HCC- Overall

MR validity	CON11					CON12					CON13				
	Total MRs	MEAN	STD	MIN	MAX	Total MRs	MEAN	STD	MIN	MAX	Total MRs	MEAN	STD	MIN	MAX
Invalid	1,805	1.38	0.79	1	6	1,842	1.47	1.01	1	5	1,426	1.46	0.98	1	5
Valid	35,499	2.91	2.13	1	26	37,979	2.75	1.76	1	13	41,203	2.78	1.85	1	15
Overall	37,304	2.99	2.21	1	26	39,821	2.81	1.8	1	13	42,629	2.83	1.88	1	15

- The number of MRs submitted increased year over year, with CON13 having the most submissions
- The average number of MR submission per CMS-HCC is similar between CON12 and CON13, and slightly higher in CON11
- There were ~400 fewer invalid records submitted in CON13 compared to CON11 and CON12

Summary of Valid MRs Used for MRR CMS-HCC by Contract

Sample	Total Valid MRs submitted	MRs used after applying MRR result selection logic*			
		MRs - additional allowed	MRs - additional Not allowed	Total	Percentage
CON11	35,499	8,679	212	8,891	25.05%
CON12	37,979	8,364	213	8,577	22.58%
CON13	41,203	8,849	168	9,017	21.88%

*MRR Result Selection Logic:

- For each non-hierarchical audited CMS-HCC: The highest ranked MR that confirmed the audited CMS-HCC is selected. Any additional found on the selected MR are used.

- For each hierarchical audited CMS-HCC: The highest ranked MR that had a higher manifestation of the audited CMS-HCC is selected. If the selected MR confirm/confirm higher then additional found on the MR, if any, are used. If the selected MR confirmed-lower then additional found on the MR, if any, are not used.

**Full details of MRR results selection criteria can be found in LAC-Oriented data creation document.

- The percentage of total valid MRs used for MRR decreased year over year with the lowest percentage of valid MR used in CON13

HCC Discrepancy Rate Summary

Discrepancy Rate by Sample - Overall

Sample	Audited HCCs	Confirmed* HCCs	Discrepant** HCCs	Additional HCCs					Discrepancy Rate
				Confirmed Higher	Confirmed Lower	New Hierarchy	Non Hierarchy	Total	
CON11	16,263	13,199	3,064	439	475	678	462	2,054	18.84%
CON12	16,842	13,241	3,601	329	473	696	414	1,912	21.38%
CON13	17,863	15,099	2,764	362	393	710	410	1,875	15.47%

* Discrepant confirmed higher CMS-HCCs were counted as confirmed.

** Discrepant confirmed lower CMS-HCCs were counted as discrepant.

- CON13 has lowest discrepancy rate
 - Highest number of audited HCCs
 - ~900 fewer discrepant HCCs compared to CON12
- CON13 has fewer additional HCCs

Discrepant CMS-HCC Summary by Error Type - Overall

Sample	Discrepant HCCs	Error Type							
		Coding Incomplete		Signature Credential Issues		Invalid		Missing	
		Count	Percent	Count	Percent	Count	Percent	Count	Percent
CON11	3,064	2,424	79.11%	256	8.36%	136	4.44%	248	8.09%
CON12	3,601	2,764	76.76%	303	8.41%	161	4.47%	373	10.35%
CON13	2,764	2,344	84.80%	162	5.86%	105	3.80%	153	5.54%

- Percentage of discrepant HCCs due to incomplete coding is higher in CON13
- Percentage of discrepant HCCs due to signature credential issues, invalid MR, and missing MR is lower in CON13

HCC Discrepancy Rate by Contract

*MA contracts are in the descending order (from left to right) by recovery amount (based on lower 99% Confidence Interval).

** Discrepant confirmed higher CMS-HCCs were counted as discrepant.

Sampled Enrollees Distribution by Gender/Age Group

➤ The number of sampled enrollees per group appears to be close among the three samples

*All MA contracts in the sample are included in this analysis.

Sampled Enrollees Payment Error by Gender/Age Group

Average Unweighted Payment Error by Gender/Age Group and Sample Year

- The average **unweighted** payment error is lower for CON13 in many of the groups
- The Male 0-34 yrs and Male ≥95 yrs groups show underpayments on average for CON11

Average Weighted Payment Error by Gender/Age Group and Sample Year

- CON11 has more groups with average **weighted** underpayments

Sampled Enrollees Average Unweighted Payment Error and Risk Score Change by Contract

Case 2:16-cv-08697-FMO-PVC Document 616-9 Filed 08/06/24 Page 233 of 267 Page ID

CMS RADV

– Comparison and Analysis of CON11, CON12 & CON13

December 8, 2017

Sampling Differences for Contract Samples

	CON11	CON12	CON13
RADV-eligible enrollee threshold	1,000	2,000	5,000
Number of Contracts selected:	30	30	30
High Coding Intensity Stratum	20*	20	25
Medium Coding Intensity Stratum	5**	5	5
Low Coding Intensity Stratum	5	5	0
Number of RADV-eligible enrollees in 30 Sampled Contracts	778,808	838,373	902,451
Parent Organization Analysis			
	4 United HealthGroup plans account for 0.0% of total recovery amount	5 United HealthGroup plans account for 5.0% of total recovery amount	6 United Health Group plans account for 1.4% of total recovery amount

* includes 5 OIG-selected plans

** includes 1 OIG-selected plan

Recovery Amount/Eligible Population

*Recovery amount is the extrapolated payment error amount based on the lower bound of the 99% confidence interval for the total.
*Only those MA contracts with greater than \$0 recovery amount are included; there were 14 such contracts in CON11, 17 contracts in CON12 and 12 contracts in CON13.

Recovery Amount and Eligible Population by Parent Organization

*Recovery amount is the extrapolated payment error incorporating the lower bound of the 99% confidence interval.
*All MA contracts in the sample are included in this analysis.

Medical Record Submission Summary

Medical Record (MR) Submission per CMS-HCC- Overall

MR validity	CON11					CON12					CON13				
	Total MRs	MEAN	STD	MIN	MAX	Total MRs	MEAN	STD	MIN	MAX	Total MRs	MEAN	STD	MIN	MAX
Invalid	1,805	1.38	0.79	1	6	1,842	1.47	1.01	1	5	1,426	1.46	0.98	1	5
Valid	35,499	2.91	2.13	1	26	37,979	2.75	1.76	1	13	41,203	2.78	1.85	1	15
Overall	37,304	2.99	2.21	1	26	39,821	2.81	1.8	1	13	42,629	2.83	1.88	1	15

- The number of MRs submitted increased year over year, with CON13 having the most submissions
- The average number of MR submission per CMS-HCC is similar between CON12 and CON13, and slightly higher in CON11
- There were ~400 fewer invalid records submitted in CON13 compared to CON11 and CON12

Summary of Valid MRs Used for MRR CMS-HCC by Contract

Sample	Total Valid MRs submitted	MRs used after applying MRR result selection logic*			
		MRs - additional allowed	MRs - additional Not allowed	Total	Percentage
CON11	35,499	8,679	212	8,891	25.05%
CON12	37,979	8,364	213	8,577	22.58%
CON13	41,203	8,849	168	9,017	21.88%

*MRR Result Selection Logic:

- For each non-hierarchical audited CMS-HCC: The highest ranked MR that confirmed the audited CMS-HCC is selected. Any additional found on the selected MR are used.

- For each hierarchical audited CMS-HCC: The highest ranked MR that had a higher manifestation of the audited CMS-HCC is selected. If the selected MR confirm/confirm higher then additional found on the MR, if any, are used. If the selected MR confirmed-lower then additional found on the MR, if any, are not used.

**Full details of MRR results selection criteria can be found in LAC-Oriented data creation document.

- The percentage of total valid MRs used for MRR decreased year over year with the lowest percentage of valid MR used in CON13

HCC Discrepancy Rate Summary

Discrepancy Rate by Sample - Overall

Sample	Audited HCCs	Confirmed* HCCs	Discrepant** HCCs	Additional HCCs					Discrepancy Rate
				Confirmed Higher	Confirmed Lower	New Hierarchy	Non Hierarchy	Total	
CON11	16,263	13,199	3,064	439	475	678	462	2,054	18.84%
CON12	16,842	13,241	3,601	329	473	696	414	1,912	21.38%
CON13	17,863	15,099	2,764	362	393	710	410	1,875	15.47%

* Discrepant confirmed higher CMS-HCCs were counted as confirmed.

** Discrepant confirmed lower CMS-HCCs were counted as discrepant.

- CON13 has lowest discrepancy rate
 - Highest number of audited HCCs
 - ~900 fewer discrepant HCCs compared to CON12
- CON13 has fewer additional HCCs

Discrepant CMS-HCC Summary by Error Type - Overall

Sample	Discrepant HCCs	Error Type							
		Coding Incomplete		Signature Credential Issues		Invalid		Missing	
		Count	Percent	Count	Percent	Count	Percent	Count	Percent
CON11	3,064	2,424	79.11%	256	8.36%	136	4.44%	248	8.09%
CON12	3,601	2,764	76.76%	303	8.41%	161	4.47%	373	10.35%
CON13	2,764	2,344	84.80%	162	5.86%	105	3.80%	153	5.54%

- Percentage of discrepant HCCs due to incomplete coding is higher in CON13
- Percentage of discrepant HCCs due to signature credential issues, invalid MR, and missing MR is lower in CON13

Sampled Enrollees Distribution by Gender/Age Group

➤ The number of sampled enrollees per group appears to be close among the three samples

Sampled Enrollees Payment Error by Gender/Age Group

Average Unweighted Payment Error by Gender/Age Group and Sample Year

- The average **unweighted** payment error is lower for CON13 in many of the groups
- The Male 0-34 yrs and Male ≥95 yrs groups show underpayments on average for CON11

Average Weighted Payment Error by Gender/Age Group and Sample Year

- CON11 has more groups with average **weighted** underpayments

Sampled Enrollees Average Unweighted Payment Error and Risk Score Change by Contract

Average Unweighted Payment Error by Contract

➤ Higher average risk score changes are aligned with the higher average unweighted payment errors

*Only MA contracts with greater than \$0 recovery amount are included.

**Average Risk Score Change is based on unadjusted/un-normalized risk scores.

Sampled Enrollees Average Weighted Payment Error and Risk Score Change by Contract

Average Weighted Payment Error by Contract

*Only MA contracts with greater than \$0 recovery amount are included.
 **MA contracts are in descending order (from left to right) by unweighted payment error.
 ***Average risk score change is based on unadjusted/un-normalized risk scores.

Sampled Enrollees Average Unweighted Payment Error by Contract

Average Unweighted Payment Error by Contract – by Stratum

- Average unweighted payment error is lower in Stratum 1 for most contracts
- Average unweighted payment error is higher in Stratum 3 for all contracts

➤ [Redacted]

Sampled Enrollees Average Weighted Payment Error by Contract

Average Weighted Payment Error by Contract – by Stratum

*Only MA contracts with greater than \$0 recovery amount are included.

**MA contracts are in descending order (from left to right) by unweighted payment error.

Sampled Enrollees Average Risk Score Change by Contract

Average Risk Score Change by Contract – by Stratum

➤ Stratum 3 has the highest average risk score change for most contracts in all samples

➤ [Redacted]

*Only MA contracts with greater than \$0 recovery amount are included.

**MA contracts are in descending order (from left to right) by unweighted payment error.

***Average risk score change is based on unadjusted/un-normalized risk scores.

Why Medicare Advantage Plans Are Being Overpaid By \$200 Billion And What To Do About It

[Richard Kronick](#)

JANUARY 29, 2020 10.1377/forefront.20200127.293799

In the Deficit Reduction Act of 2005, Congress gave the Centers for Medicare and Medicaid Services (CMS) the statutory authority and obligation to implement a “coding intensity adjustment” for Medicare Advantage (MA) plans, to adjust for differences in patterns of diagnosis coding between MA and traditional Medicare.

Under both the Obama and Trump administrations, the coding intensity adjustment implemented by CMS has consistently been substantially smaller than justified by the data. The fiscal problem created by inadequate adjustment for coding intensity is large. Under reasonable assumptions about the rate of growth of MA coding, [CMS will overpay MA plans by \\$200 billion](#) over the next decade if the coding intensity adjustment remains at 5.91 percent, its current level.

Why does this overpayment persist? The annual decision about the size of the coding intensity adjustment is made by political appointees at CMS, the Department of Health and Human Services, and the White House, and the political benefits from implementing a smaller than empirically justified coding intensity adjustment far outweigh the potential political gains from protecting the taxpayers and creating a stable and level playing field between MA and traditional Medicare. To fix this problem, Congress should remove discretion from CMS and specify in statute an even-handed method of computing coding intensity. A statutory formula for measuring coding intensity would bring MA payment more in line with payment for other providers, in which Congress, not CMS, decides how much providers will be paid.

Below, I offer suggestions regarding what a statutory coding intensity adjustment formula should look like. Of course, Congress, like CMS, is subject to political pressures that will make enacting such a formula difficult. But unlike CMS, Congress could use the \$200 billion in

avoided MA overpayments to fund other priorities, offering countervailing political incentives for legislators to save taxpayer money and level the playing field between MA and traditional Medicare by adopting a statutory measure of relative coding intensity.

The Problem

CMS pays MA plans based on the health status of the beneficiaries who enroll, paying more for older and sicker enrollees and less for younger and healthier enrollees. This "risk adjusted" payment mechanism is intended to encourage MA plans to develop systems of care that are attractive to beneficiaries most in need and to prevent MA plans from profiting by attracting only good risks.

The health status of MA enrollees is measured using diagnostic information submitted by the MA plans themselves. As a result, MA plans have strong incentives to identify and report as many diagnoses as can be supported by the medical record, incentives that are not present in traditional Medicare. Although some MA plans may have used fraudulent strategies to inflate enrollee risk scores, many legitimate strategies are available to MA to increase risk scores. The incompleteness of diagnostic coding in traditional Medicare provides ample opportunities for MA plans to increase the identification and reporting of diagnoses. For example, in traditional Medicare, approximately 40 percent of beneficiaries coded with quadriplegia in a 12-month period do not have a diagnosis of quadriplegia appear on any claim in the subsequent 12 months.

Discretion For CMS

Recognizing the likelihood that MA plans will report diagnostic information differently than is reported in traditional Medicare, in the Deficit Reduction Act of 2005, Congress gave CMS the authority to implement a "coding

intensity adjustment” to adjust for differences in coding patterns between MA and traditional Medicare. In 2010, CMS implemented a 3.41 percent coding intensity adjustment, reducing MA risk scores by that amount. The Affordable Care Act, and subsequently the American Taxpayers Relief Act of 2012, created a schedule of minimum adjustments, starting at 4.71 percent in 2014, increasing to 5.91 percent in 2018.

CMS retained the authority and obligation to implement adjustments larger than the statutory minimum if the data indicated that a larger adjustment was needed. However, it has not yet done so, despite strong evidence that a larger adjustment is needed to compensate for differences between MA and traditional Medicare in coding patterns. The measured risk of MA enrollees relative to traditional Medicare increased from 95.0 percent in 2007 to 106.2 percent in 2015 (exhibit 1).

Exhibit 1: Average risk score of Medicare Advantage enrollees as a percentage of average risk score of traditional Medicare beneficiaries, 2007-15

Source: [Richard Kronick and Pete Welch, 2014](#); [Paul Jacobs and Richard Kronick, 2018](#).

MA enrollment grew substantially from 2007 to 2015, and it is theoretically possible that the increase in relative risk reflects real changes in the relative health of MA enrollees. However, analyses of other data sources—including [mortality rates](#), [survey data from the Medicare Current Beneficiary Survey](#), [data on switchers from traditional Medicare to MA](#), and [prescription drug use data](#)—show conclusively that there was little, if any, change in real relative risk over this time period. The 11-percentage-point increase in measured relative risk from 2007 to 2015 appears largely to be the result of differences in coding patterns between MA and traditional Medicare.

Perverse Political Incentives

The main reason that CMS has not implemented a larger

coding intensity adjustment is that there is little political gain from doing so, and the decision about the coding intensity adjustment is, ultimately, made by political appointees. If CMS were to implement an adjustment that is larger than the statutory minimum, MA plans would make their displeasure known to members of Congress. Furthermore, an adjustment larger than the statutory minimum might result in higher MA premiums or fewer extra benefits for enrollees, raising the likelihood of constituent dissatisfaction.

In even numbered years, information on MA premiums and benefits is made public soon before the November elections. Members of Congress (and, every four years, the president) are concerned that voters, likely encouraged by information fed to them by MA plans, may blame incumbents for increased premiums or reduced benefits. This is not a merely theoretical argument. Federal legislators have repeatedly exerted strong bipartisan pressure on CMS in response to industry and constituent concerns about MA payment policy.

The political cost of more aggressive action by CMS on coding intensity is clear. The political benefits are much less clear: The deficit would be slightly smaller but not enough to change interest rates or anything else that voters would notice. Given this imbalance between political costs and benefits, it is not surprising that CMS has stuck with the statutory minimum, despite strong evidence that larger adjustments are warranted.

Proposed Solution: Specify The Coding Intensity Adjustment Formula By Statute

This problem could be solved by removing discretion from CMS when calculating the coding intensity adjustment, which Congress could do by writing a method for calculating the adjustment into statute. This approach would make payment for MA plans more like

payment for other providers—Congress typically tells CMS how to set payment rates, leaving relatively little discretion to CMS.

MedPAC's Method

There are several reasonable options for specification of a formula to calculate the coding intensity adjustment. For example, Congress could direct CMS to adopt the [approach used by the Medicare Payment Advisory Commission](#) (MedPAC) in the past few years to estimate the magnitude of differential MA coding. That method compares the rate of growth in risk scores for MA enrollees with the rate of growth in risk scores for similar beneficiaries in traditional Medicare. For 2015, MedPAC estimated coding intensity increased MA risk scores by 10 percent. The MedPAC estimates for 2016 and 2017 are slightly lower—8 percent and 7 percent respectively—largely because of changes in the model used to calculate beneficiary risk scores. However, further changes in that model in 2018 and subsequent years are likely to increase the estimated coding intensity effect.

The MedPAC method is reasonable but requires complex calculations, would be difficult to audit, and is somewhat difficult to explain. It would be extraordinarily difficult to write into statute in enough detail to remove discretion from CMS in implementation.

A Better, More Practical Approach

An alternative, and, in my view, preferable approach would be to require CMS to calculate the coding intensity adjustment using a method that CMS floated as a trial balloon in the [Advance Notice for 2016 MA rates](#). First, CMS would calculate the relative risk of MA using the diagnostic risk adjustment system, which, as noted above, was 106.2 percent in 2015.

Second, CMS would calculate the relative risk of MA

using information on the age, gender, Medicaid status, and institutional status of enrollees—that is, using the Adjusted Area Per Capita Cost (AAPCC) system that was used prior to the introduction of diagnosis-based risk adjustment. In 2015, MA relative risk using these four factors was 97 percent. That statistic is less than 100 percent primarily because MA enrollees were less likely than traditional Medicare beneficiaries to be institutionalized, and institutionalized enrollees have high risk scores.

Third, CMS would divide the second number by the first, and subtract the quotient from 1.0. The result, which would have been 8.7 percent in 2015, would be the coding intensity adjustment.

This is a simple approach to explain and write into statute. It assumes that MA enrollees are no healthier and no sicker than demographically similar traditional Medicare beneficiaries. This assumption of no favorable or adverse selection is likely still a bit generous to MA—although the extent of favorable selection for MA appears to have declined over the past decade, [there is no evidence](#) to suggest that MA enrollees are, on average, sicker than demographically similar traditional Medicare beneficiaries, and some evidence to suggest they are a bit healthier.

The method of calculating coding intensity suggested above would return to the “budget neutrality” method that CMS, under the leadership of Tom Scully, implemented when the CMS-HCC (hierarchical condition category) risk adjustment model began to be phased in in 2004. At that time, MA relative risk, using the CMS-HCC model, was well below 1.0, and MA revenues would have been reduced if the CMS-HCC model had been implemented without adjustment. To avoid this outcome, CMS implemented a “budget neutrality adjustment,” increasing CMS-HCC scores by the ratio suggested above. In the

Deficit Reduction Act of 2005, Congress directed CMS to phase out the budget neutrality adjustment by 2008. Ironically, in 2008, the measured relative risk of MA using the CMS-HCC model became greater than the measured relative risk using the AAPCC model, so if budget neutrality had been left in place, it would have resulted in decreases in payments to MA.

One potential substantive disadvantage to this approach is that at some point in the future it is theoretically possible that MA enrollees will, on average, be sicker than demographically similar traditional Medicare beneficiaries, and that the formula will unfairly penalize MA contracts. At the risk of giving CMS discretion that might be abused, CMS could be given the authority to use other data—such as data on mortality rates, prescription drug use, and the Medicare Current Beneficiary Survey—to analyze whether there is adverse selection against MA. Under this option, if CMS certifies that there is strong evidence of adverse selection against MA, then it would have the authority to adjust the statutory formula to reflect that adverse selection. Political influence on this decision could be lessened by requiring the CMS Office of the Actuary (OACT), not the agency's Center for Medicare, to make the certification. OACT has traditionally been less responsive than other parts of CMS to the preferences of political appointees.

A second potential concern about the proposed approach, as well as about the status quo adjustment of 5.91 percent, is that there is [substantial variation across MA plans in how aggressively they have increased risk scores](#). Any industrywide adjustment will pay too much to plans that have been most aggressive in coding, too little to plans that have been least aggressive, and leave in place the incentive to code as many diagnoses as legally permissible. Consideration could be given to contract-specific adjustments, but it is far more important to first get the coding intensity adjustment, on average, correct.

- After first fixing the \$200 billion problem, Congress and CMS could then consider whether and how to implement contract-specific adjustments.

Summing Up

Under reasonably conservative assumptions about the rate of growth of coding intensity, using the budget neutrality method to calculate coding intensity would likely result in approximately \$200 billion in savings to Medicare over the next decade compared to current policy in which the coding intensity adjustment remains at 5.91 percent. Just as CMS is reluctant to anger the MA industry and its enrollees, members of Congress will be reluctant as well. However, unlike CMS, which does not get to spend any of the savings generated by more appropriate actions on coding intensity, Congress can choose to use the \$200 billion in savings for additional spending or tax cuts, providing reason to hope that legislators will, at some point, do the right thing.

1 A. Correct.

2 Q. You have not reviewed the details of
3 United Health Group's chart review programs, correct?

4 A. Correct.

5 Q. You're not familiar with the details of
6 those -- of United Health's chart review programs,
7 correct?

8 A. Correct.

9 Q. In connection with the expert testimony
10 you're offering in this case, you have not reviewed
11 any of the medical records underlying the diagnosis
12 codes that are in dispute between the Department of
13 Justice and United Health Group, right?

14 A. Correct.

15 MS. KRIEG: Object to form.

16 BY MR. BAAK:

17 Q. And, in fact, you have not reviewed any
18 specific medical records in connection with the
19 expert testimony you're offering in this case,
20 correct?

21 MS. KRIEG: Object to form. Foundation.

22 A. Correct.

1 BY MR. BAAK:

2 Q. If you had been asked by the Department of
3 Justice to review the medical records underlying the
4 diagnosis codes that the two parties are disagreeing
5 about to see whether the codes were, in fact,
6 supported, would you have been qualified to do so?

7 A. Yes.

8 Q. The Department of Justice, though,
9 however, has not asked you to do so, correct?

10 A. Correct.

11 MS. KRIEG: Object to form. And, again, I
12 caution the witness not to reveal any attorney/client
13 privileged communications.

14 BY MR. BAAK:

15 Q. I mentioned earlier an expert for the
16 Department of Justice, Craig Garthwaite. And I think
17 you indicated you had not looked at his report; is
18 that correct?

19 A. That's correct.

20 Q. Have you heard of Mr. Garthwaite?

21 A. No.

22 Q. I don't want to march through his report.

1 So I'm just going to represent a couple things to
2 you, and I trust your counsel will object if I get
3 them wrong.

4 Mr. Garthwaite offers an opinion on a list
5 of diagnosis codes that he refers to as his potential
6 deletes. You have not reviewed any medical records
7 related to Professor Garthwaite's potential deletes
8 list, right?

9 A. Correct.

10 Q. Similarly, you have not reviewed any
11 medical records related to Professor Garthwaite's
12 final delete list, right?

13 A. Correct.

14 Q. And you're not offering any opinions, one
15 way or the other, on whether or not the diagnosis
16 codes on Dr. Garthwaite's final deletes list are, in
17 fact, supported, right?

18 A. Correct.

19 Q. Let's come back to paragraph 26 of your
20 report. You're discussing the purpose of the
21 Medicare Advantage risk adjustment payment model in
22 paragraph 26.

1 A. Correct.

2 Q. So, for example, in my blood draw
3 hypothetical they may say that I was having certain
4 routine blood testing done, for example, correct?

5 A. Yes.

6 Q. Or part of an annual exam?

7 A. Yes, and there would be an ICD code for
8 that.

9 Q. In your experience what are providers
10 typically paid for, the CPT codes, the procedures
11 they've done, or the diagnosis codes that are
12 submitted?

13 A. So in a non -- in an organization that is
14 not primarily Medicare Advantage risk basis, it's the
15 CPT and HCPCS codes.

16 Even in a risk environment they're
17 actually not paid on the diagnosis. The diagnosis
18 can have an impact on their payment, which does not
19 typically happen -- I have to say typically -- in a
20 fee-for-service environment where the physician is
21 billing -- being paid for the CPT or HCPCS codes.

22 Q. Outside of the circumstances where the

1 provider is sharing in risk adjustment payments, the
2 providers are typically being paid instead for the
3 procedures they perform; is that correct?

4 A. Correct.

5 Q. In your experience, is that the vast
6 majority of providers?

7 MS. KRIEG: Object to form.

8 A. It depends on where you are in the
9 country.

10 BY MR. BAAK:

11 Q. What about the providers you consult for?
12 Are they primarily compensated for the procedures
13 they perform?

14 A. Some yes; some no.

15 Q. If a provider is being compensated based
16 solely on the procedures they submit, they would not
17 have a financial incentive to submit a complete set
18 of diagnosis codes, right?

19 A. Right.

20 MS. KRIEG: Object to form.

21 BY MR. BAAK:

22 Q. That's one reason why providers sometimes

1 fail to submit a complete set of the diagnosis codes
2 that are, in fact, supported by the medical record,
3 right?

4 MS. KRIEG: Object to form.

5 A. Failed to submit or submit codes that
6 aren't supported, sure.

7 BY MR. BAAK:

8 Q. Well, that wasn't my question. We'll get
9 to that in a second. But since providers are often
10 not paid for the diagnosis codes, that's one reason
11 why -- and are instead paid for the procedures,
12 that's one reason that providers often fail to submit
13 a complete set of the diagnosis codes that are
14 supported by the medical records, right?

15 A. Correct.

16 MS. KRIEG: Object to form.

17 BY MR. BAAK:

18 Q. And I think you suggested that there are
19 also cases where the providers submit codes that you
20 believe that are unsupported. That also is something
21 that you've seen in your practice, correct?

22 A. Correct.

1 Q. And, again, it's because the providers are
2 maybe having a little less attention to detail on the
3 diagnosis codes if it's not impacting their pay,
4 correct?

5 A. Yes.

6 Q. Would you agree with me that it's
7 beneficial from a patient management standpoint to
8 have an accurate capture of what the patient's
9 diagnoses are?

10 MS. KRIEG: Object to form.

11 A. What do you mean by patient management
12 perspective?

13 BY MR. BAAK:

14 Q. Just care for the patient, to have an
15 accurate picture of which diagnosis codes have
16 actually been assigned. Does that help the care of
17 the patient?

18 A. Care of the patient by their provider?

19 Q. By the provider or by the plan.

20 MS. KRIEG: Object to form.

21 A. It's two very different circumstances. So
22 for the provider having an accurate list of the

1 MS. KRIEG: Object to form.

2 A. Yes. My certified coders are expected to
3 get it right almost all the time, and they do nicely.

4 BY MR. BAAK:

5 Q. So you used the phrase in your opinion
6 that there should be little variance between two
7 coders.

8 What does almost 100 percent mean in your
9 view? Do you have a benchmark you use internally
10 that you grade your coders against?

11 A. As a small organization -- you know, as
12 you can imagine, we don't have a big formal program
13 -- everybody is -- is counseled on any errors, and
14 any errors or disagreements are extremely rare.

15 So if I had to create a benchmark, I'd
16 probably use for diagnosis coding the 95 percent.

17 Q. So just to make sure I understand that,
18 you don't have a numerical internal benchmark for
19 measuring whether your coders should agree with one
20 another that you use internally at Acevedo
21 Consulting?

22 A. No. As part of a formal program, no.

1 Q. Are you aware of any formal studies that
2 show that two experienced coders when looking at the
3 same medical record should reach the same conclusion
4 about the appropriate diagnosis codes 95 percent of
5 the time?

6 A. Formal studies, no.

7 Q. Not aware of any studies showing that
8 that's realistic or that -- or any CMS guidance
9 saying that's the requirement, correct?

10 MS. KRIEG: Object to form.

11 A. Not that I'm aware of.

12 BY MR. BAAK:

13 Q. I want to talk about some of the reasons
14 that two coders reviewing the same medical record --
15 and I'm going to set aside circumstances where
16 they're reviewing different medical records and come
17 back to that.

18 So I want to talk about the circumstances
19 where two experienced coders reviewing the same
20 medical record might disagree about the appropriate
21 diagnosis codes. Okay?

22 A. Okay.

1 Q. You've touched on one of these already.

2 But one reason two medical -- two coders might reach
3 different conclusions about what diagnosis codes to
4 assign to a given medical record could be impacted by
5 the particular coder's level of experience, correct?

6 A. Correct.

7 Q. Another reason that two experience coders
8 could reach different conclusions about what
9 diagnosis codes to assign to a given medical record
10 is the particular skill of the coder, correct?

11 MS. KRIEG: Object to form.

12 A. I would put skill and experience in the
13 same bucket.

14 BY MR. BAAK:

15 Q. But you can be experienced and bad at
16 life, unfortunately. So just -- I want to separate
17 them for a second.

18 A. Aha.

19 Q. So some people are just better at the
20 coding exercise than others, right?

21 A. Oh, I'm sure.

22 Q. So that's what I mean by skill. So in

1 addition to experience, skill is another factor that
2 can affect whether -- sorry -- can create a
3 circumstance where two coders might disagree on
4 whether to assign a diagnosis code, right?

5 A. I'm sure that would be the case, a good
6 reason for certification.

7 Q. I noticed that you have a certification
8 specific to ENT; is that correct?

9 A. Correct.

10 Q. What is ENT?

11 A. Otolaryngology. Did that help? Ear,
12 nose, and throat.

13 Q. Ear, nose, and throat. Okay. What was
14 the purpose of obtaining your certification in ear,
15 nose, and throat?

16 A. So, actually, the AAPC had reached out to
17 me when they wanted to develop a certification for
18 ENT coders because I have quite a bit of experience
19 in that specialty area.

20 And I was one of the members of the
21 steering committee that then wrote the national exam.
22 So I didn't desire or have an intent or a goal to

1 become certified as an ENT coder. But I was
2 understandably, I think, given the designation since
3 I couldn't take the test that I helped to write.

4 Q. Does the AAPC, the coding organization we
5 talked about earlier -- does it offer certification
6 specific to other medical clinical subspecialties?

7 A. Yes.

8 Q. How many, approximately, certifications
9 for particular areas of medicine do they offer
10 certifications?

11 A. So it's a fairly lengthy list. I'm going
12 to say conservatively probably ten.

13 Q. Why does AAPC offer these certifications
14 that are specific to particular clinical specialties?

15 A. So I've not been part of their thought
16 process, but I do know that I have actually
17 recommended to some single specialty practices that I
18 work with who want to get one or more of their coders
19 who are not yet certified certified.

20 I've recommended that they not take a CPC
21 exam, that maybe they take if it's an orthopedic
22 practice an orthopedic coding exam because they

1 wouldn't have the depth of knowledge or experience to
2 pass the CPC.

3 So I'm sure that was part of the thought
4 process in the AAPC in having specialty designations
5 in addition to the CPC.

6 Q. Coming back to my scenarios where two
7 experienced coders might reach a different conclusion
8 on whether to assign a diagnosis code, you agree, I
9 think based on what you said in your report, that
10 experience in a particular clinical specialty can
11 impact why two coders might reach different
12 conclusions, right?

13 MS. KRIEG: Object to form.

14 A. Yeah, because the one in a specialty that
15 isn't what he or she is looking at wouldn't have the
16 experience for that.

17 BY MR. BAAK:

18 Q. I think you touch on this, if you want to
19 look at paragraph 55 of your report. You say at the
20 end of paragraph 55: "Coders should be exposed to
21 different medical specialties during training if they
22 previously only worked in one specialty."

1 Do you see that?

2 A. Yes.

3 Q. And why is -- why do you think that's
4 preferable?

5 A. So that they gain experience and as part
6 of their training if they have questions, and you can
7 more closely check their accuracy. I do that myself
8 since -- if I have someone that's working and has not
9 worked with, say, just to use orthopedics again, an
10 orthopedic practice.

11 Even if they're an experienced coder but
12 they have not worked with an orthopedist, they're
13 going to be closely monitored and mentored until they
14 have the knowledge necessary to be on their own.

15 Q. Whether the particular coder has expertise
16 in a particular clinical area can impact whether or
17 not they assign the appropriate diagnosis codes,
18 right?

19 MS. KRIEG: Object to form.

20 A. Yeah, it could. It could, because even
21 though the rules are the same, regardless of what
22 area of the code book they're looking at, they may

1 experienced coders might assign different diagnosis
2 codes based on the same medical record, another
3 reason is the ability to read the handwriting on a
4 medical record, right?

5 A. Correct.

6 Q. Do you agree, Ms. Acevedo, that we can
7 have a circumstance where you might be able to read
8 someone's handwriting but I cannot?

9 A. Oh, yes.

10 Q. A coder in a provider group who has
11 familiarity with a doctor's handwriting might be more
12 able to read the handwriting than someone who does
13 not have that familiarity, correct?

14 A. Yes.

15 Q. A coder in a doctor's office might also
16 have greater familiarity with the particular
17 abbreviations that a doctor uses, correct?

18 MS. KRIEG: Object to form.

19 A. They might.

20 BY MR. BAAK:

21 Q. For example, if I'm a coder in a doctor's
22 office and I know that the particular doctor always

1 uses PE to mean physical exam, that familiarity might
2 allow me to understand what a particular abbreviation
3 meant, correct?

4 MS. KRIEG: Object. Object to form.

5 A. That familiarity will allow you to assume
6 what that meant in that instance and you might be
7 correct because of your knowledge.

8 BY MR. BAAK:

9 Q. Well, it might not necessarily be an
10 assumption. If I know the doctor always uses PE to
11 be physical exam, that might allow me to understand
12 that the medical record reflected that a physical
13 examination occurred, correct?

14 MS. KRIEG: Object to form.

15 A. So I'm going to assume that the PE then
16 has a colon after it and is followed by the actual
17 physical exam and that, yes, she might make a correct
18 assumption that the PE in that instance relates to a
19 physical exam.

20 BY MR. BAAK:

21 Q. So ability to read handwriting is another
22 reason that two experienced coders might reach

1 different conclusions based on the same medical
2 record, correct?

3 A. Correct.

4 Q. We've talked a little bit about judgment
5 calls. You agree that judgment calls for what I
6 think you referred to as difficult cases also might
7 be another reason that two experienced coders assign
8 different diagnosis codes based on the same medical
9 record, right?

10 A. Different levels of experience of the
11 coders, yes.

12 Q. Human error, the fact that people make
13 mistakes, is another reason that two experienced
14 coders could assign different diagnosis codes based
15 on the same medical record, right?

16 A. Of course.

17 Q. Everybody makes mistakes, right?

18 A. Yes.

19 MS. KRIEG: Object to form.

20 BY MR. BAAK:

21 Q. That's true of experienced certified
22 coders, correct?

1 MS. KRIEG: Object to form.

2 A. Yes.

3 BY MR. BAAK:

4 Q. Coders encounter situations that require
5 in-depth research and take more time to code
6 correctly on occasion, correct?

7 A. I'm sure, yes. Um-hum.

8 Q. Even among the more commonly used codes
9 are significant gray areas open for examination among
10 coders, right?

11 MS. KRIEG: Object to form.

12 A. I don't think I agree with that. Can you
13 give me an example of a significant gray area?

14 BY MR. BAAK:

15 Q. Well, you know what the phrase "gray area"
16 means, right?

17 A. Yes.

18 Q. So let me just ask my question again. How
19 would you define gray area?

20 A. So I really don't find gray areas in
21 diagnosis coding. That's why I asked and I couldn't
22 agree with your question. I was hoping that maybe

1 there was something else that you could add to that.

2 So to me the requirements -- the
3 guidelines are pretty straightforward and objective.
4 The gray areas have to do with clinical
5 documentation, the handwriting that's illegible that
6 you just mentioned, et cetera.

7 Q. Let me come back to my question: Even
8 among the more commonly used codes are significant
9 gray areas open for examination among coders.

10 Do you agree?

11 MS. KRIEG: Object to form.

12 A. No.

13 BY MR. BAAK:

14 Q. With very complex or unusual cases, coding
15 guidelines may be confusing to interpret --

16 MS. KRIEG: Object to form.

17 BY MR. BAAK:

18 Q. -- correct?

19 A. To an inexperienced coder who hasn't come
20 across that before, quite possibly sure.

21 BY MR. BAAK:

22 Q. What about to an experienced coder?

1 that does not mean the code is, in fact, unsupported
2 in the medical record, right?

3 MS. KRIEG: Object to form.

4 A. So I don't agree with the totality of your
5 -- how you're phrasing it. So from my perspective as
6 all the guidelines are really clear, it has to be
7 documented in the medical record for anybody to see
8 it. Any coder should be able to find it.

9 One coder may have missed it for one
10 reason or another, but if it's not in the medical
11 record, then it's not been missed and it should not
12 be coded.

13 BY MR. BAAK:

14 Q. I may have made my hypothetical more
15 confusing than I intended it to be, in part because
16 people make mistakes as we talked about a second ago.
17 Also because of potential errors of disagreement.
18 But just because a diagnosis code isn't found by a
19 coder in a blind review that doesn't mean with 100
20 percent certainty that the code is, in fact, not
21 supported in the medical record, right?

22 MS. KRIEG: Object to form.

1 A. Yeah, because in the way you phrase it now
2 the coder missed it.

3 BY MR. BAAK:

4 Q. Have you ever been involved in your
5 consulting practice doing chart retrieval, whether
6 it's for plans or for providers?

7 A. Define "chart retrieval."

8 Q. The act of obtaining medical records from
9 providers.

10 A. So electronically we do that all the time
11 now. I have access to more electronic medical
12 records, as do my team, than we care to ever have.
13 And we often are the ones that will go in and find
14 the records.

15 There haven't been many paper records
16 since about 2011, but I can picture myself standing
17 in a primary care office and literally going and
18 pulling the charts off the shelves myself, so yes.

19 Q. In what context does Acevedo Consulting do
20 the actual retrieval of the medical records? Is this
21 in advance of your chart audits?

22 A. So it's part of the chart audit.

1 Q. When you go to retrieve medical records as
2 part of the chart audit, it is not always possible to
3 obtain a complete set of the medical records, right?

4 MS. KRIEG: Object to form.

5 A. It depends on how you define a complete
6 set of the medical records.

7 BY MR. BAAK:

8 Q. Right. You talked about the difficulty of
9 paper records. But sometimes providers don't
10 respond. Sometimes they don't have the full record.
11 These are all things that can happen in the real
12 world when you try to go retrieve medical records,
13 right?

14 A. Yes, any of that could happen.

15 Q. If a blind -- if in a blind review a coder
16 is only looking at a portion of the patient's medical
17 records, would that allow them to draw any
18 conclusions about what was in other medical records
19 that are not in front of them?

20 A. No.

21 Q. In a blind chart review if the coder only
22 has a portion of the patient's medical records in

1 front of them, that would not allow them to draw a
2 conclusion about the totality of the appropriate
3 diagnosis codes for that given patient, correct?

4 A. Correct. They could only assign diagnosis
5 codes for the medical records they had at hand.

6 Q. Do you have any experience with what -- or
7 do you track what percentage of time in the chart
8 retrieval process you're able to obtain a complete
9 set of the patient's medical records?

10 A. I don't track it, but I will tell you that
11 it's the overwhelming majority of the time with
12 electronic medical records.

13 Q. When did most practices switch to
14 electronic medical records?

15 A. Beginning in 2011, probably the majority
16 of -- because that's when the meaningful use program
17 and some government funding for implementing
18 electronic medical records started. And the adoption
19 -- I'm trying to think when seeing paper charts at
20 all for medical records was suddenly so very uncommon
21 for us. I can't picture when.

22 Q. Can you estimate just approximately when

1 -- you know, the transition started in 2011 -- but
2 when most providers had moved from paper records to
3 electronic medical records in your experience?

4 A. So by most you mean more than half. Yes?

5 Q. Yes.

6 A. So I'm going to hazard a pretty probably
7 informed guess that by 2015, 2016 more than half of
8 providers were on electronic medical records. If
9 we're talking hospital providers, it's probably
10 higher. But for physician -- community-based
11 physician practices, probably sometime around there.

12 Q. If you look at your opening report -- give
13 me a second to find the right section. Paragraph 8,
14 the scope of your assignment, you state that the
15 relevant time period from the report covers dates of
16 service 2008 through 2016, correct?

17 A. Yes.

18 Q. Given the testimony you just gave me about
19 the adoption of medical records, it sounds --
20 electronic medical records, rather, for most of the
21 relevant time period for your report paper medical
22 records were more commonly used than electronic

1 medical records, right?

2 MS. KRIEG: Object to form.

3 A. Well, I mean in the community-based
4 provider setting that I really referred to, so from
5 2008, 2011 would be three years, another two, five,
6 11 -- so it's about half and half -- no, no. No, no.
7 I take it back. Bad math. Bad math.

8 So, yeah, probably the last maybe three
9 years would have been more EMRs, around 2013, yeah.

10 Q. You said as late as 2015 or 2016 in the
11 provider space it was still around -- was it around
12 50/50 between paper and electronic?

13 A. No. By 2015 and '16 most providers were
14 on electronic medical records.

15 Q. But having done the math again it sounds
16 like that paper records were predominant -- more than
17 half --

18 A. Yeah, a little more than half --

19 Q. -- for the relevant period for your report
20 in this case, right?

21 A. Yes, um-hum.

22 Q. In your experience is it more difficult to

360

Timothy Hargadon, Optum Associate General
Counsel (remotely)

1 A. Yes.

2 Q. Okay. And how is Optum
3 affiliated with UnitedHealth Group?

4 MS. MADDUX: Objection. Form.
5 You can answer.

6 THE WITNESS: Sorry. I just --
7 it is a subsidiary of UnitedHealth
8 Group.

9 BY MS. ZUPAC:

10 Q. And before Ingenix purchased
11 Aim, so actually I'm going back to your time at
12 Aim, did you work for UnitedHealth Group or any
13 United subsidiaries?

14 A. Like, can you -- meaning, like,
15 was I employed by them?

16 Q. No. I just mean did you do any
17 work for United and any United subsidiary as a
18 client of yours when you were employed by Aim?

19 A. I don't recall personally
20 working on any UHC subsidiaries, but Aim had UHC
21 business.

22 Q. Okay. All right. So then
23 turning back to Exhibit 261. So your LinkedIn
24 profile states that you were the vice president,
25 risk adjustment and STARS operations from

1 December 2004 to February 2016. So I just want to
2 make sure that we're all on the same page. That
3 particular entry covers your work with Aim,
4 Ingenix, and Optum during those years, correct?

5 A. It does. And it only signifies
6 that last role versus all of the roles --

7 Q. Right.

8 A. -- that I had at the time.

9 Q. Okay. So focusing on the first
10 paragraph under that entry, though, the middle of
11 page 2, it mentions here responsible for 800
12 million dollar plus global coding operation with
13 \$150 million plus expense budget. Lead, 2300 plus
14 global resources including FTEs and contractors.

15 Is that right?

16 A. That is what it states.

17 Q. Is this referring to Optum's
18 medical coders?

19 MS. MADDUX: Objection. Form.

20 BY MS. ZUPAC:

21 Q. You can answer.

22 A. It -- in part.

23 Q. Okay. So I guess I'll ask it a
24 different way. What -- what are you referring to
25 here with the \$800 million plus global coding

1 operation?

2 A. I can't recall the \$800 million
3 plus, what that tied to.

4 Q. What about the global coding
5 operation?

6 A. That would be the having coders
7 in US, India, and Philippines.

8 Q. Okay. And did the coders in
9 India and Philippines, were they also referred to
10 as offshore coders?

11 A. Yes.

12 Q. And did they include medical
13 coders employed directly by Optum as well as by
14 vendors?

15 MS. MADDUX: Objection. Form.

16 BY MS. ZUPAC:

17 Q. You can answer.

18 A. Yes.

19 Q. And what were the vendors that
20 employed certain of those coders?

21 A. PI International.

22 Q. Okay. Is PI the only one?

23 A. It's the only one -- it's the
24 only one I recall.

25 Q. Do you recall working with a

1 vendor or contractor called "iCodify"?

2 A. Yes.

3 Q. Okay. And were you responsible
4 for overseeing Optum's relationship with iCodify?

5 A. No.

6 Q. Do you recall who was
7 responsible for that relationship?

8 A. I do not.

9 Q. So we'll come back to discussing
10 this role, but I just want to quickly address the
11 other more recent entries on your LinkedIn.

12 So it looks like it states that
13 you were the senior director of compliance program
14 operations from February 2016 to July 2021,
15 correct?

16 A. Correct.

17 Q. Okay. And what was the nature
18 of that role at Optum?

19 A. I led the external audit team
20 for regulatory or client audits, the internal
21 compliance audit team in the risk assessment
22 program.

23 Q. And in this role, did you have
24 oversight over Optum's risk adjustment programs?

25 A. No.

1 Q. And it looks like your current
2 role at Optum, which you began in August 2021, is
3 vice president, risk adjustment operations and
4 transformation, correct?

5 A. Correct.

6 Q. Is that, in fact, your current
7 role at Optum?

8 A. Yes.

9 Q. And what are your
10 responsibilities in this role?

11 A. I manage the retrospective chart
12 review program, lead, I should probably say, the
13 national coding team for risk adjustment, and the
14 AS submissions team.

15 Q. And how is this role different
16 from the one you served in previously, the vice
17 president of risk adjustment and STARS operations?

18 A. It's in a different business
19 unit, and so, you know, it's kind of a
20 different -- it's on the provider's side, and it's
21 a broader role from the perspective that working
22 with coders that do more than just retrospective
23 chart review. They're doing other types of
24 programs.

25 Q. All right. And who do you

1 report to now?

2 A. Jon Bird.

3 Q. Jon Bird?

4 Okay. All right. So as
5 promised, I'm going to go back to your prior role.
6 So at some point in your prior role, this 2004 to
7 2016 role, did you begin working with Optum's
8 chart review operations?

9 A. Yes.

10 Q. Okay. So we've been using the
11 term "chart review" or discussing it, so I just
12 want to stop and ask what your understanding of
13 the term "chart review" is.

14 A. It's retrospective chart review
15 of a member's chart where you retrieve and code
16 the chart.

17 Q. And what is the purpose of doing
18 chart review?

19 MS. MADDUX: Objection. Form.

20 BY MS. ZUPAC:

21 Q. You can answer.

22 A. It is to code diagnosis codes
23 that are documented within the medical record that
24 were previously not submitted.

25 Q. Would you agree that the purpose

1 of chart review is to provide a complete and
2 accurate recording of a member's diagnosis codes
3 to CMS?

4 MS. MADDUX: Objection. Form.

5 THE WITNESS: That is not my
6 understanding.

7 BY MS. ZUPAC:

8 Q. Okay. So can you go back to
9 Exhibit 258.

10 A. I am there.

11 Q. Okay. All right. Can you go to
12 PDF page 8. And you can get there by clicking on
13 the gray box at the bottom.

14 A. Mm-hmm.

15 Q. And typing it "8." That might
16 be easier than scrolling.

17 A. I am there.

18 Q. Okay. And so I am on deposition
19 page 24, and you'll probably see a highlighted
20 section which starts on line 11 reading "Q: Okay.
21 What is your understanding of the purpose of chart
22 review?"

23 "Answer: Chart review is to
24 provide a complete and accurate reporting of a
25 member's diagnosis codes to CMS."

1 Do you recall previously
2 testifying that the purpose of chart review was to
3 provide a complete and accurate recording of a
4 member's diagnosis codes to CMS?

5 MS. MADDUX: Objection. Form.

6 BY MS. ZUPAC:

7 Q. You can answer.

8 A. I see it written in this
9 document.

10 Q. Okay. And is your testimony
11 today that you disagree with your prior testimony?

12 A. I think my thoughts on that is
13 that there should have been additional words after
14 "to CMS."

15 Q. Okay. And what are those
16 additional words?

17 A. It's to provide a complete and
18 accurate recording of member diagnosis code to CMS
19 that have been coded from the retrospective chart
20 review.

21 MS. MADDUX: And, Wendy, the
22 yellow highlighting, are you
23 representing this was added --

24 MS. ZUPAC: Yes.

25 MS. MADDUX: -- by the

1 frame in which you worked in operations, so I'm
2 focusing on 2012 to 2014.

3 A. It depends. Like, meaning at
4 that time we had a dependency on vendors, PI, like
5 we referenced earlier.

6 Q. Sure.

7 A. And then I was given the
8 instruction to start building out an internal
9 coding competency. And so if you ask me the
10 question of during that time frame did Optum
11 employ coders, it would be yes and no.

12 Q. Okay.

13 A. Or maybe, more importantly, no
14 and yes --

15 Q. Okay. Sure, sure.

16 A. -- to some the extent.

17 Q. Sure.

18 A. So it kind of depends.

19 Q. Yeah, so I can step back and
20 just ask it a different way.

21 At different points in time,
22 Optum utilized coders employed by vendors,
23 correct, including PI, correct?

24 A. Correct.

25 Q. And then at other points in

1 time, Optum also directly employed coders,
2 correct?

3 A. Yes.

4 Q. Okay. And are you aware if at
5 any point Optum used coders either employed by a
6 vendor or internally that were not certified
7 medical coders?

8 A. I don't recall that
9 specifically, but I do recall having conversations
10 around making sure that the coders were certified.

11 Q. Okay. And did you believe that
12 Optum's medical coders, whether the ones employed
13 internally or by a vendor, were skilled medical
14 coders?

15 MS. MADDUX: Objection. Form.
16 Calls for speculation.

17 BY MS. ZUPAC:

18 Q. And to be clear, I'm asking for
19 your belief.

20 A. Skilled in what?

21 Q. Skilled in medical coding.

22 A. They -- if a coder is certified
23 and met the requirements of certification, so,
24 yes.

25 Q. And did you believe that the

1 coders that Optum used, whether employed by a
2 vendor or by Optum directly, had the appropriate
3 level of training?

4 MS. MADDUX: Objection. Form.

5 BY MS. ZUPAC:

6 Q. You can answer.

7 A. Our coders were given training,
8 and our training was consistent with our policies
9 and practices, and so yes.

10 Q. Okay. And did you have
11 confidence in Optum's coders' ability to code
12 charts accurately?

13 MS. MADDUX: Objection. Form.

14 BY MS. ZUPAC:

15 Q. You can answer.

16 A. Can you repeat the question
17 again, please?

18 Q. Sure.

19 Did you have confidence in
20 Optum's coders' ability to code charts accurately?

21 MS. MADDUX: Same objection.

22 THE WITNESS: I had confidence
23 that every coder was competent in doing
24 their role. Does that mean that every
25 coder was right 100 percent of the

1 3:49.)

2 THE VIDEOGRAPHER: The time is
3 now 3:49 and we are back on the record.

4 E X A M I N A T I O N

5 BY MS. MADDUX:

6 Q. So, Ms. Baker, we have a few
7 questions for you. Earlier today do you recall
8 testifying about claims verification?

9 A. Yes.

10 Q. What was your involvement in
11 designing the scope of Optum's claims verification
12 program?

13 A. I did not have involvement in
14 designing it.

15 Q. What was your involvement in
16 managing Optum's claims verification program?

17 A. I had people within my hierarchy
18 that worked on the claims verification program,
19 but I was not necessarily involved day to day in
20 it.

21 Q. What was your involvement in
22 making decisions about Optum's claims verification
23 program?

24 A. I had no decision-making in
25 that.

1 Q. What was your involvement in
2 making decisions about whether to submit deletes
3 from Optum's CV program?

4 A. I made no decisions regarding
5 that.

6 Q. What was your involvement in
7 decisions regarding whether a claims verification
8 program should be implemented?

9 A. I was not involved in those
10 conversations or decisions.

11 Q. Earlier today do you recall that
12 you testified that you used chart retrieval
13 vendors to retrieve charts for Optum's
14 retrospective chart review program?

15 A. Yes.

16 Q. In your experience, did these
17 chart retrieval vendors retrieve all charts for a
18 member for a given date of service year?

19 A. No, that's not possible.

20 Q. When you say it's not possible,
21 what do you mean?

22 A. Meaning there's just so many
23 charts for members. So, like, you know, if we go
24 back to, like, my -- well, actually, where we're
25 positioned right now, like, my cancer diagnosis is

1 that, you know, a member can have multiple charts
2 across different locations, across different
3 providers. So, like, here we sit in -- you know,
4 I had services done at Saint Thomas Ascension that
5 also has a private ambulatory surgery center that
6 also houses a medical -- a medical building that
7 housed my breast surgeon and my plastic surgeon,
8 and then also Vanderbilt where I had some
9 procedures done.

10 You know, even if I just go back
11 to the date where I had, you know, surgery done at
12 the ASC, I would have, you know, four different
13 visits from separate doctors regarding my date of
14 service that day, but they're all different charts
15 or, you know, Vanderbilt's in their charts. If I
16 would go to one location to grab a chart, it
17 doesn't mean I would have grabbed all charts for
18 that member because it would've only been what was
19 available that day. But even if I -- you know,
20 for instance, for Vanderbilt or maybe personal
21 experience, we've all been to doctors, where
22 Monday -- well, here, I mean, I'll say Vanderbilt,
23 like, Monday and Wednesdays they're here downtown
24 or Midtown here at Vanderbilt. But then on, you
25 know, Tuesdays and Thursdays, they're out in

1 Franklin office location. And so depending upon
2 how their medical charts are, those could be
3 different locations for charts for that member.
4 And so, you know, it's just charts -- a chart for
5 a member doesn't contain every single encounter
6 that that member has had, nor is it possible to
7 say whether or not it's always a complete chart
8 because it's based upon what was available at that
9 time or if the provider sent it and what the
10 provider sent to us.

11 Q. Did Optum review all of the
12 charts for a member in a particular date of
13 service year in its retrospective chart review
14 program?

15 A. Did we review all? No, it's
16 not -- I mean, we didn't have all of the data. We
17 didn't have all of the medical charts for them.

18 Q. Earlier today do you recall
19 testifying about blind -- blind chart reviews?

20 A. Yes.

21 Q. Do you know what a blind chart
22 review is?

23 A. Yes.

24 Q. What is it?

25 A. It's when the coders are not

1 given any information about that member at a
2 member level.

3 Q. So does the coder conducting a
4 blind review of a chart know what diagnosis codes
5 the provider reported on the claim for that
6 beneficiary?

7 A. No. It's not possible to tie it
8 back because we don't know what the chart
9 contains.

10 Q. So, hypothetically, a provider
11 submits diagnosis codes A, B, and C on the claim
12 for a beneficiary, the coder conducting a blind
13 review of the chart for that beneficiary
14 identifies codes B, C, and D. Do you understand
15 the hypothetical?

16 A. I do.

17 Q. If a coder conducting a blind
18 review of the chart identifies diagnosis codes B,
19 C, and D, does that mean that code A is not
20 documented in the medical record?

21 MS. ZUPAC: Object to form.

22 BY MS. MADDUX:

23 Q. You can answer.

24 A. No. I mean, it means -- it
25 could mean that we don't have all of the pages in

1 that chart. It could be that that chart -- that
2 chart was in circulation and, therefore, what we
3 were -- that what we had is not complete. It
4 could be that that happens to be a practice where
5 it multiple chart locations. And so, you know,
6 out of convenience, sometimes you go to the 100
7 Oaks location, and another time you go to the
8 Franklin Road location. It's just kind of
9 dependent upon where that chart is. And so
10 it's -- it's possible to not have the full chart
11 when you're reviewing it.

12 Q. What would Optum need to do to
13 determine whether or not code A may, in fact, be
14 documented in the medical record?

15 MS. ZUPAC: Object to form.

16 BY MS. MADDUX:

17 Q. You can answer.

18 A. To be able to take a look at --
19 say that again, please.

20 Q. What would Optum need to do to
21 determine whether or not code A may, in fact, be
22 documented in the medical record?

23 MS. ZUPAC: Object to form.

24 Calls for speculation.

25

1 BY MS. MADDUX:

2 Q. You can answer.

3 A. You know, a lot of research, a
4 lot of rework, being able to open up the chart to
5 see do we have the right rendering provider,
6 did -- do we have the right -- does that provider
7 have any other locations, does that provider
8 have -- going through an EMR transition, do we
9 think we have all that information. I mean,
10 it's -- it's -- you got to be able to do a lot of
11 research and opening up that chart, none of which
12 is insignificant tasks.

13 Q. Earlier today do you recall
14 Ms. Zupac asked you some questions about
15 completeness as it relates to retrospective chart
16 reviews?

17 A. Yes.

18 Q. Do you recall testifying about
19 how chart review coders may not identify every
20 diagnosis code that is documented in the medical
21 record?

22 A. Yes.

23 Q. In your experience, what are
24 some reasons for this?

25 A. Some reasons for that just have

1 to do with specialties in terms of what you're
2 coding. Like, you may have the right -- may have
3 all the same training, but, like, you're all, I
4 think, litigators here, you wouldn't necessarily
5 go to an environmental lawyer for litigation,
6 right? So -- or it could be experience. It could
7 be coding direction or coding policy applications.
8 It could be skill sets, you know, because there is
9 a variation of coding across 95 percent accuracy,
10 right? But, you know, a lot of it has to do with
11 how you look at the application.

12 Again, I'd go back to my example
13 where I was diagnosed with cancer. I had the same
14 set of data presented to two oncologists, and I
15 got one answer from one oncologist that didn't
16 have something, we can't -- with the same
17 training, everything. Another one had more
18 experience doing it and interpreted it another way
19 for me to be able to say that the application of
20 what the chemotherapy I needed had to be X, Y, and
21 Z.

22 In case you're wondering, this
23 is 16 months of hair growth, so...

24 Q. In your experience, how does the
25 legibility of a medical record impact whether a

1 coder may miss a diagnosis code that's supported
2 in the medical record?

3 MS. ZUPAC: Object to the form.

4 Calls for speculation. Ms. Baker
5 testified that she has no training in
6 medical coding.

7 BY MS. MADDUX:

8 Q. You can answer.

9 A. I mean, legibility, forms,
10 templates. I mean, a lot of times if a doctor --
11 I mean, we've all heard the joke about, you know,
12 a doctor's handwriting signature and it being
13 rough to read, right? But, like, it's really --
14 you know, if you're looking at the differences in
15 medications and trying to understand when the one
16 adherence, you know, the difference between having
17 an E there or an A there, you know, and being able
18 to look at what type of wording it is is really
19 important. And so, again, depending upon an
20 individual's skill set being able to read
21 handwritten charts, it would certainly make a
22 difference.

23 Q. In your experience, how does the
24 length of the medical record impact whether a
25 coder may miss a diagnosis code that is supported

1 on medical record?

2 MS. ZUPAC: Object to form.

3 Calls for speculation. Again,

4 Ms. Baker testified that she does not

5 have training in medical coding.

6 BY MS. MADDUX:

7 Q. You can answer.

8 A. I mean, operationally, I would
9 say, and we -- just like we would do anything is,
10 like, as you read a document that maybe is, you
11 know, ten pages, that's different that reading a
12 document that's 200 pages, that by the time you
13 get to -- you know, midway, a quarter way, you get
14 some level of fatigue in there. And so, you know,
15 the length of a medical record does have to do
16 with it. I mean, we -- we all probably personally
17 experience reading longer documents and -- and
18 remember what that fatigue looks like.

19 Q. And in your role working in
20 chart operations, did you oversee medical record
21 coders?

22 A. Yes, I had medical coders on my
23 team.

24 Q. And did you through overseeing
25 the medical record coders, did you learn of

1 different reasons that coders may miss diagnosis
2 codes that are supported in the medical records?

3 MS. ZUPAC: Object to form.

4 BY MS. MADDUX:

5 Q. You can answer.

6 A. Yes.

7 Q. Earlier today do you recall
8 testifying regarding informed coding?

9 A. Yes.

10 Q. What do you understand informed
11 coding to mean?

12 MS. ZUPAC: Objection. Asked
13 and answered.

14 BY MS. MADDUX:

15 Q. You can answer.

16 A. Informed coding means diagnosis
17 codes collected from multiple or any data sources
18 that we had that were at a member level, so not at
19 a provider level or not a provider date of service
20 level, but a member level and presenting that to
21 the coder in order to improve efficiency and
22 productivity.

23 Q. So when you say they're not at a
24 provider date of service level, what do you mean
25 by that?

1 A. The information is aggregated
2 across from multiple data sources and presented.
3 It's not -- I mean, when you open up a chart, you
4 don't know what's in the chart. I mean, you don't
5 know what date of service it is there. You don't
6 know what information was there exactly. And so
7 when we're looking at it, we're trying -- when
8 we're doing informed coding from a productivity
9 perspective, we're trying to provide a large data
10 set to the coders in order to improve their
11 productivity.

12 Q. Earlier today do you recall
13 testifying about a CAT form?

14 A. Yes.

15 Q. What do you understand the CAT
16 form to be?

17 MS. ZUPAC: Objection. Asked
18 and answered.

19 BY MS. MADDUX:

20 Q. You can answer.

21 A. The CAT form was a template that
22 we used to -- for the coders to handwrite in their
23 coding results because ChartSync was slow.

24 Q. Do you recall testifying that
25 the CAT form was used for the recode project

1 conducted for charts in 2012 and 2013?

2 A. Yes.

3 Q. Can you describe how the coders
4 were instructed to use the CAT form as part of the
5 recode project?

6 A. They were instructed to -- well,
7 we gave them informed coding, and they were
8 instructed to not have to document those HCCs on
9 the form in order to speed them up from a
10 production perspective, and then they were to
11 document the dates of services and HCC or
12 diagnosis codes that they saw in there.

13 Q. Earlier today do you recall
14 testifying that the CAT forms included information
15 regarding previously reported HCCs for a member?

16 A. As part of that informed coding,
17 yes.

18 Q. Were the HCCs listed on the CAT
19 forms specific to the chart being reviewed?

20 A. They were not. It wouldn't be
21 possible to know everything that was in that
22 chart.

23 Q. And is that for the reason you
24 gave earlier, that you don't know what information
25 is in the chart?

1 A. Correct.

2 MS. ZUPAC: Object to form.

3 BY MS. MADDUX:

4 Q. Were the diagnosis codes listed
5 on the CAT forms specific to the date of service
6 being reviewed in the chart?

7 A. I'm sorry. Can you repeat that
8 question?

9 Q. Were the diagnosis codes listed
10 on the CAT forms specific to the date of service
11 being reviewed in the chart?

12 A. The coders would -- would
13 document the dates of services that were in the
14 chart. But when you open the chart, you have no
15 idea what's in there until you go through it.

16 Q. So did the HCCs provided to the
17 coder on the CAT form before they started coding
18 the chart, were they specific to a date of service
19 that was also in the chart?

20 MS. ZUPAC: Object to form.

21 THE WITNESS: No.

22 BY MS. MADDUX:

23 Q. Why did you provide the
24 previously reported HCCs to the coders?

25 MS. ZUPAC: Object to form.

1 STATE OF TENNESSEE)
2 COUNTY OF DAVIDSON) SS:

3 I, Gary Schneider, TLCR No. 676, in and
4 for the State of Tennessee, do hereby certify:

5 That, prior to being examined, the
6 witness named in the foregoing deposition was by
7 me duly sworn to testify the truth, the whole
8 truth and nothing but the truth;

9 That said deposition was taken down by
10 me stenographically at the time and place therein
11 named, and thereafter transcribed via
12 computer-aided transcription under my direction,
13 and the same is a true, correct and complete
14 transcript of said proceedings;

15 Before completion of the deposition,
16 review of the transcript was not requested. If
17 requested, any changes made by the deponent (and
18 provided to the reporter) during the period
19 allowed are appended hereto.

20 I further certify that I am not
21 interested in the outcome of the action.

22 Witness my hand this July 15, 2022.

VOLUME I
VIDEOTAPED RULE 30(b)(6) DEPOSITION OF
OPTUMINSIGHT, INC. AND UNITEDHEALTHCARE, INC.,
BY THEIR DESIGNEE, KATHLEEN O. BAKER

Washington, D.C.
May 30, 2023

Reported by:
Misty Klapper, RMR, CRR
Job No.: 982005

1 are you referring to?

2 A. UnitedHealthcare's risk adjustment
3 health plan members, Medicare Advantage health
4 plan members.

5 Q. And you're here today to testify
6 about certain aspects of Optum's chart review
7 program; is that right?

8 A. The retrospective chart review
9 program, yes.

10 Q. Okay. So broadly speaking, what is
11 Optum's retrospective chart review program?

12 A. Optum's retrospective chart review
13 program is a program where we submit a more
14 complete health status from medical records
15 collected on a member for appropriate payment
16 from CMS.

17 Q. Okay. So what is the purpose of
18 Optum's chart review program?

19 A. To submit more complete health
20 statuses to CMS on risk adjustment members.

21 Q. Okay. And what do you -- what do you
22 mean when you say more complete risk adjustment

1 information?

2 A. So members, Medicare Advantage
3 members, can see multiple different providers,
4 either in network, out of network,
5 fee-for-service, non-fee-for-service.

6 Data can be submitted to CMS, you
7 know, through various different channels, claims,
8 encounter. And all of that data from different
9 sources at different points of time, you know,
10 potentially at different health plan memberships
11 with different providers are consolidated by CMS
12 to create a full health status. But that health
13 status is never, ever fully complete. So with
14 retrospective chart review, we're trying to
15 provide more complete health status for
16 appropriate payment.

17 Q. Okay. And when you see -- when you
18 say more complete health status, do you mean that
19 Optum tries to submit all of the risk
20 adjustment -- risk adjusting diagnosis codes
21 supported by the member's medical record?

22 MS. MADDUX: Objection, form.

1 THE WITNESS: So in my personal
2 opinion, when I say more complete health
3 status, it's the recognition that
4 there's -- we may not ever be able to
5 submit 100 percent of a person's medical
6 status, but it's -- in context of the
7 retrospective chart review program, it's
8 being able to say based upon a chart that
9 we have on a member, knowing that a member
10 may have multiple charts from different
11 providers that contain different providers
12 within those charts on different dates of
13 services that we're, you know, attempting
14 for one of those charts to provide
15 information.

16 BY MS. ZUPAC:

17 Q. So Ms. Baker, you understand that
18 you're here today to testify on behalf of Optum
19 and UnitedHealthcare, Inc., correct?

20 A. Yes.

21 Q. And you understand that one of the
22 topics that you've been designated on to testify

1 on behalf of these entities is the purpose of the
2 chart review program, correct?

3 A. Yes.

4 Q. Okay. When I'm asking you questions
5 about the purpose of Optum and UnitedHealthcare
6 Inc.'s chart review program, you understand that
7 you need to answer on behalf of the entities,
8 correct?

9 A. Yes.

10 Q. Okay. So let's try this question
11 again.

12 Was the purpose -- was one of the
13 purposes of Optum's chart review program to
14 submit complete diagnosis data for Medicare
15 Advantage members to CMS?

16 A. No.

17 Q. Okay. Why not?

18 A. It's not possible to do so for
19 several reasons. And some of the reasons include
20 things such as when we are looking at a medical
21 record, a coder could have different experiences,
22 different levels of ability to be able to code

1 that chart.

2 They may have a background in
3 cardiology, but they're looking at an oncology
4 chart. They could be looking at a chart that is
5 handwritten in cursive and font smaller than
6 college ruled paper and are unable to be able to
7 be able to make all those connections.

8 There could be other components of
9 the chart where it is, again, based upon a
10 coder's experience and decision making,
11 potentially unable to be able to make those
12 connections. It could be that, you know, when
13 we're looking at the chart itself, we're only
14 looking at the pieces of information that are in
15 front of them at that time.

16 And there's -- you know, on that
17 piece of paper it could have been a three-page
18 date of service and it may not have had all the
19 pieces of data from that date of service in front
20 of them.

21 Q. All right. So Ms. Baker, you've
22 offered a laundry list of reasons why a member's

1 health information may not be 100 percent
2 complete, correct?

3 MS. MADDUX: Objection,
4 mischaracterizes testimony.

5 THE WITNESS: I've offered some
6 reasons that I can recall right now on --
7 on when we're looking at a chart why
8 not -- why not 100 percent of what's on
9 that chart could be captured.

10 BY MS. ZUPAC:

11 Q. Okay. But that's not quite getting
12 at the -- my question, which my question is
13 whether it was the purpose of Optum and
14 UnitedHealthcare's Inc.'s chart review programs
15 to submit complete diagnosis data for Medicare
16 Advantage members.

17 MS. MADDUX: Objection, asked and
18 answered.

19 BY MS. ZUPAC:

20 Q. You can answer.

21 A. I would refer back to my prior
22 statement then, where we -- it, as part of

1 retrospective chart review, look to -- look to be
2 able to collect more complete health status on a
3 member to -- for submission.

4 Q. Okay. And when you say more complete
5 health status information, what are you referring
6 to?

7 A. The recognition that it may not be
8 100 percent complete. I mean, from the
9 perspective that even from an industry standard,
10 we say that coders should be 95 percent accurate.
11 Right? And that's a standard that is permeated
12 throughout the industry and it's just part of the
13 going in position when looking at work.

14 Q. Okay. Was one purpose of Optum's
15 chart review program to submit accurate diagnosis
16 data for Medicare Advantage members to CMS?

17 A. For retrospective chart review our QA
18 program is designed around what the QA of what
19 our coders coded from that and it would never be
20 100 percent -- was the term used complete or
21 accurate?

22 Q. Accurate.

1 A. -- accurate, again with the
2 understanding that the industry standard is
3 95 percent.

4 Q. Okay. So is it fair to say that
5 Optum's purpose in its retrospective chart review
6 program is to submit accurate data to CMS, but
7 there may be reasons why the information
8 submitted may not be 100 percent accurate?

9 MS. MADDUX: Objection, form.

10 THE WITNESS: I think, as I was
11 stating previously, you know, the -- did
12 you say purpose?

13 BY MS. ZUPAC:

14 Q. The purpose, yes.

15 A. The purpose of retrospective chart
16 review is to submit more complete health statuses
17 on our members from medical records.

18 Q. So is it your testimony on behalf of
19 Optum and UnitedHealthcare, Inc. today that the
20 purpose of these entities' chart review programs
21 does not include the submission of accurate
22 diagnosis information to CMS?

1 MS. MADDUX: Objection,
2 mischaracterizes testimony.

3 THE WITNESS: As part of the
4 retrospective chart review program we have
5 quality assurance's programs that look at
6 what our coders code and ensure -- to
7 ensure or to work towards a 95 percent
8 industry standard, which is what we all
9 do.

10 BY MS. ZUPAC:

11 Q. A 95 industry -- a 95 percent
12 industry standard in terms of accuracy?

13 A. Correct.

14 Q. Okay.

15 A. For what our coders code.

16 Q. Okay. I just want to make sure that
17 we're operating under the same definition of
18 accurate.

19 What is -- what is Optum's
20 understanding of the term accurate?

21 A. For -- for -- well, it -- it would
22 vary. And if I could go to my --

1 Q. Sure.

2 A. -- binder, if that's okay.

3 Q. Just let me know what tab you're
4 going to --

5 A. Yep.

6 Q. -- look at.

7 A. Okay. Just for expediency, accurate
8 can mean different things in different levels.
9 And so in risk adjustment, you know, depending
10 upon the time -- and this is just an
11 approximate -- you know, there were about, like,
12 15,000, I think, like ICD-9 codes that mapped to
13 approximately 70-something HCC codes at some
14 point in time, right? So just using that kind of
15 as my example.

16 And in doing that, we were looking at
17 QA. There are different ways to look at QA. And
18 so you could look at QA on an HCC level where,
19 you know, our coder may have said something like
20 the -- said a diagnosis code that mapped an HCC
21 to a -- or with a diagnosis code to, like, the
22 lower arm, but really, when they're looking at

1 Q. Right.

2 A. -- it -- it's approximate. About
3 15,000 ICD-9 codes map to 70-something HCC codes.

4 Q. Okay.

5 A. But not all ICD-9 codes map to a risk
6 adjustment code.

7 Q. Okay. And so then I'm focusing now
8 on the HCC accuracy piece that you testified
9 about. Okay?

10 A. Okay.

11 Q. Okay. So is it fair to say that an
12 HCC submitted to CMS is accurate if the HCC maps
13 to an ICD-9 diagnosis code that is, in fact,
14 supported by that member's medical record?

15 MS. MADDUX: Objection, form.

16 THE WITNESS: Can you please
17 restate that.

18 MS. ZUPAC: Can you read back my
19 question, please.

20 (The record was read as requested.)

21 MS. MADDUX: Same objection.

22 THE WITNESS: From -- I'm sorry.

1 Can you just read the last part of that
2 again.

3 MS. ZUPAC: Yes.

4 (The record was read as requested.)

5 MS. MADDUX: And same objection.

6 THE WITNESS: So our chart review
7 program and its quality assurance program
8 is designed around our looking at what our
9 coders are coding at 95 percent accuracy.
10 It's not designed around looking at what
11 the provider may have coded within that
12 medical record itself.

13 So when we're looking at
14 submissions as result chart review, our
15 quality assurance program is looking at
16 a -- is designed for looking at the codes
17 that our coders are looking at to make
18 sure that we're meeting the 95 percent
19 HCC.

20 BY MS. ZUPAC:

21 Q. All right. So I don't believe that
22 that was responsive to my question. So let me

1 try to --

2 A. Okay.

3 Q. -- rephrase this.

4 You testified earlier that one
5 measure of accuracy is the accuracy of HCCs; is
6 that right?

7 MS. MADDUX: Objection,
8 mischaracterizes testimony.

9 THE WITNESS: That one measure for
10 our chart review program and the codes
11 that our -- that our coders code from the
12 chart is HCC accuracy, yes.

13 BY MS. ZUPAC:

14 Q. So then what are you measuring
15 when -- what is Optum measuring when it is
16 measuring HCC accuracy?

17 A. It is measuring whether the diagnosis
18 code that our coder inputted into our coding tool
19 is accurate at the HCC level based upon their
20 understanding of how they're looking at the
21 chart.

22 Q. And what does it mean for a code to

1 Then, when we send it over to the
2 retrieval provider, the retrieval -- or the
3 retrieval vendor, the vendor will -- could
4 further consolidate. They could find that maybe
5 this chart, as far as we knew, belonged to three
6 locations, but really, as part of a supergroup
7 that had seven other locations for ten locations.
8 So then they combined them into a site ID. So
9 then all of a sudden you have this provider
10 consolidation effect, where you keep rolling up
11 charts associated with the retrieval of a chart
12 underneath one provider, right, but you just keep
13 consolidating because you just know it's there
14 and typically it is.

15 And then as you're retrieving the
16 chart, what the vendor will do is they'll call up
17 the provider. They'll do some sort of provider
18 verification, like asking are there X number of
19 providers and their ID there to make sure they've
20 got the right area. Then they'll go through a
21 member verification to say hey, do you have these
22 members with this information.

1 And then once we get validation from
2 there, typically we either fax or we would secure
3 E-mail the complete list of the members. And
4 then, based upon the number, we'd work with them
5 to schedule either on site or they could
6 themselves decide to send us the charts them --
7 back because they don't want people -- or they
8 wouldn't want somebody on site or various
9 permutations of that.

10 Q. Okay. And prior to this retrieval
11 process that you just described, there is a chart
12 targeting process, correct?

13 A. Correct.

14 Q. Okay. So Optum began by targeting
15 certain charts to pull, correct?

16 A. Began chart review?

17 Q. Yes.

18 A. We would -- actually, as part of the
19 targeting -- targeting was one of the first
20 steps, yes, not the -- not the first, first step,
21 because there's suspecting that you have to do
22 and then out of suspecting you go into targeting.

1 But, yes, it was part of that.

2 Q. Okay. So we can actually go
3 backwards in time.

4 You mentioned that the first step
5 that Optum did was suspecting.

6 A. Um-hmm.

7 Q. And what is suspecting?

8 A. You know, part of suspecting was just
9 taking a look at the whole universe of -- of
10 members. And so you think about that, it's like
11 the whole universe and then targeting as you're
12 picking specific ones, right?

13 And so, like, from a suspecting
14 perspective, we'd take a look at information that
15 we have from CMS on -- on -- like, for instance
16 from the MOR, the Model Output Report, or other
17 CMS documentation that would tell us what health
18 statuses a member has, had either in the prior
19 year or the current year.

20 We would look at lab information.
21 We'd look at medications. We'd look at encounter
22 information or claims information if we had it,

1 knowing that, again, this information, especially
2 if it comes from an MOR, could have come from
3 other health plans, right, because the member
4 could have not been in our health plan the prior
5 year.

6 You know, we take a look at
7 information such as, like, disease management
8 programs that our members belong to. So, like,
9 you know, if someone was in diabetes, they would
10 probably be in a diabetes program; cancer, an
11 oncology program. You know we take a look at
12 certain information like that.

13 And then, you know, as we look at
14 information regarding the different types of --
15 of health statuses that member either previously
16 had or currently has or how they interact with
17 one another, we would then compare that to the
18 claims information that we would have.

19 Or, in some cases, if we didn't have
20 claims information -- because, again -- I mean,
21 again, we -- we may not -- get a capitated
22 provider, a provider that -- or somehow we don't

1 have information on that member, we may have just
2 made a request to a -- an assigned provider
3 panel, if that makes sense, patient panel to a
4 provider.

5 And then once we get to the universe
6 of what member-provider combinations there could
7 be, then we would go through a -- a -- you know,
8 a targeting process of saying okay, let's look
9 for these member-provider combinations based upon
10 health statuses, based upon their -- their health
11 risk status.

12 Q. Okay.

13 MS. ZUPAC: I'm going to pull up a
14 new exhibit, Tab 4. So this exhibit will
15 be marked 608.

16 (Exhibit 608 was marked for
17 identification.)

18 THE WITNESS: Thank you.

19 BY MS. ZUPAC:

20 Q. So this exhibit was produced in
21 native, so the individual slides don't have Bates
22 numbers. But the Bates number of the document is

1 MAPL000684019.

2 And I'll give you a chance to review
3 the slide deck, but I'll be directing you to
4 specific pages. And for the record, I'll go
5 ahead and identify that this is a slide deck with
6 the cover slide showing the Optum logo and the
7 title Risk Adjustment Team Introductions and
8 Services to M&R, dated February 12th 2014. And
9 my first question is simply a clarification:

10 Does M&R refer to Medicare and
11 Retirement?

12 A. It does.

13 Q. And what was Medicare and Retirement?

14 A. Medicare and Retirement is the
15 business unit within UnitedHealthcare that
16 provides health insurance benefits to Medicare
17 Advantage or Medicare patients.

18 Q. And that included Medicare Advantage
19 members?

20 A. Yes.

21 Q. Okay. So I'll direct your attention
22 to slide 17. So the slide number is on the

1 Q. Okay. And so go ahead and look at
2 that chart on the right. This lays out the
3 percentage of charts that fall within each chart
4 score group, correct?

5 A. Yes. That's what it says.

6 Q. And then there is a heading on --
7 under the next -- or over the next column stating
8 Average Value Per Chart, 1 Year Date of Service,
9 correct?

10 A. That is what is written, yes.

11 Q. Okay. So what is this average value
12 per chart, 1 year date of service measuring?

13 A. It -- it's measuring the -- once
14 HCCs -- it's measuring the -- the -- all of the
15 different HCCs on a member and after hierarchical
16 conditions are -- are taken into account.

17 And so it's the average number of
18 HCCs and their corresponding value.

19 Q. And by value, do you mean the payment
20 that the Medicare Advantage organization receives
21 for that member from CMS?

22 A. The -- the appropriate reimbursement

1 from CMS.

2 Q. And we've been discussing Optum's
3 suspecting and targeting processes, correct?

4 A. Yes.

5 Q. Okay. Did -- did UnitedHealthcare,
6 Inc. -- was UnitedHealthcare, Inc. aware that
7 Optum was using suspecting logic to target
8 particular charts for retrieval?

9 A. We would have conversations with
10 UnitedHealthcare on the logic we would use and
11 targeting to make sure we were generally aligned.

12 Q. Okay. And did UnitedHealthcare, Inc.
13 sign off on or approve the suspect logic that
14 Optum used?

15 A. We would have conversations with them
16 and we would generally receive their approval on
17 the -- on the logic that we would deploy.

18 Q. Okay. And did Optum decide which
19 charts to target for retrieval based on their
20 chart score group?

21 A. Chart score group was a consideration
22 on doing retrievals, but it was not the only

1 consideration.

2 So, for instance, timing was a
3 consideration, like meaning -- the way the risk
4 adjustment program works, you have only until
5 January of the following year after the year that
6 the data collection period ended to submit that.
7 So you have about 13 months, you know, to submit
8 it.

9 And so with claims, if we're using it
10 for targeting and claims lag and -- and run out,
11 sometimes targeting wouldn't start until May of a
12 year and retrievals wouldn't start until summer.
13 So you had less time to do retrievals. Right?
14 So just the timing of things would have had a
15 consideration. Other things would have been
16 operational capacity.

17 So, you know, you could retrieve all
18 the charts you want, but if you can't code the
19 charts, then there's no -- you can't -- you can't
20 code them. And so we would also have to take a
21 look at seeing if we only had the ability to code
22 1,000 charts, you know, you know, which 1,000

1 does it make sense for us to look after.

2 And there could have been other
3 constraints, such as onshore/offshore
4 restrictions. So not all charts could be sent
5 offshore for coding. And so there is kind of
6 business rules that we had to take a look at, if
7 that makes sense.

8 So there's other things that we took
9 a look at as well.

10 Q. Um-hmm. The one thing you mentioned
11 is that Optum may have limited resources or
12 certain resources to code charts, correct?

13 A. We have -- we had operational
14 considerations when you're looking at it,
15 production plans and operational capacity plans,
16 yes.

17 Q. Okay. So did Optum use the chart
18 score group information as part of its
19 consideration for which charts to retrieve?

20 A. We -- chart score group was one of
21 the considerations, but not the only
22 consideration.

1 Q. And was that true for the entirety of
2 the period for 2008 to 2016 date of service chart
3 review?

4 A. No. Chart score group generally came
5 into consideration around this time frame of this
6 presentation.

7 Q. Meaning February 2014?

8 A. We piloted it in, like, 2013 and --
9 and took a look at it, but 2013, 2014.

10 Q. Okay. And what date of service
11 years, then, was -- did chart score groups start
12 to be a -- a consideration for chart retrieval?

13 A. In a kind of rudimentary form in
14 20 -- in 2012 we -- which is -- ran into that
15 January time frame, if we -- kind of
16 December/January would have been 2011 dates of
17 services and then 2013 would have been 2012. And
18 I think these here are -- yeah. Actually, that's
19 what it says. It's 2013 project/2012.

20 Q. So then before the 2012 date of
21 service chart review, did Optum use suspect
22 logic?

1 A. In a -- yes. But, again, you -- you
2 evolve suspect logic over time but recapture.

3 So again, using this example of Mary,
4 it could have been that Mary's information from
5 the prior year said she was diabetic, right? And
6 so in the current data collection period, the
7 suspect logic was more like a recapture, if that
8 makes sense, and that's the predominant.

9 Q. Okay. So was the policy before the
10 2012 date of service chart review to review a
11 chart for each member every two years?

12 A. Can you restate that? I -- I -- I
13 think I know what you're saying, but I just want
14 to make sure I understand, so ...

15 Q. Okay. So before the chart review for
16 the 2012 date of service, was Optum's policy to
17 review member charts every two years?

18 A. And so I -- I believe that we started
19 changing the targeting approach -- so really, the
20 targeting approach of looking at a member once
21 every two years -- sorry, just saying it a little
22 bit differently -- like starting in 2011-ish.

1 So -- so we would -- we -- we started
2 making that change then.

3 Q. And I just want to clarify, since we
4 are obviously talking about date of service years
5 and calendar years.

6 A. Yeah. Yeah.

7 Q. So when you say 2011-ish, are you
8 referring to the 2011 date of service or are you
9 referring to the 2011 calendar year?

10 A. I'm -- the -- talking about the --
11 about the 2011 -- as -- as I recall, about the
12 2011 project year, which would have been 2010
13 dates of services.

14 Q. Okay. So what was Optum's approach
15 for targeting charts for the 2008 to 2011 date of
16 service chart reviews?

17 A. It -- it was what you just described,
18 which was looking at about half of the membership
19 every other year.

20 Q. Okay. And so then is it accurate to
21 say that for the 2012 date of service, Optum
22 shifted to an approach that used suspect logic?

1 MS. MADDUX: Objection, form.

2 THE WITNESS: So we always use
3 suspect logic. It just evolves over time,
4 you know, if you would. So, you know,
5 here we're taking a look at -- as you can
6 see, back in 20, on slide 20, looking at
7 specialties and encounters.

8 BY MS. ZUPAC:

9 Q. Um-hmm.

10 A. And so it's, you know, based upon the
11 fact that we were seeing information that -- that
12 members that maybe would have only been looked at
13 every other year were still being looked at
14 within that same -- sorry -- would -- had an
15 encounter in the data collection period in
16 question for that submission year and so there
17 was information here to say it would make sense
18 to retrieve a chart.

19 Q. So then am I understanding you
20 correctly that the sorting of charts into --
21 chart into the seven chart score groups that
22 we've been discussing started with the 2012 date

1 of service chart review?

2 A. That is where I'd say it was
3 productionalized.

4 Q. Okay. And so then can you describe
5 the -- the way suspect logic was used from the
6 2008 to 2011 date of service chart reviews?

7 A. Sure. It -- you know, it was -- you
8 know, suspect logic is a very wide term. Right?

9 Q. Um-hmm.

10 A. So, you know, it would have included
11 things such as, you know, membership in the
12 current year, membership in the data collection
13 period year. It could have included information
14 such as -- and you're only asking suspecting now,
15 right?

16 Q. Yes.

17 A. Okay. Suspecting.

18 You know, if we had information on
19 a -- again, a -- some sort of CMS report saying
20 that the member had a disease condition the prior
21 year and looking to see if there is any other
22 information that had that disease progression or

1 correlation. So, like, some diseases happen in
2 correlation with one another. And so -- and
3 those are listed also on the -- on the actual HCC
4 categories, the interactions, I think.

5 Q. Are you referring to comorbidities?

6 A. I would refer to them as
7 interactions.

8 Q. And then is it accurate that for each
9 of the years, each of the date of service years
10 from 2008 to 20 -- to 2016, UnitedHealthcare was
11 aware of the suspect logic that Optum was using
12 to target charts?

13 MS. MADDUX: Objection, form.

14 THE WITNESS: We would discuss with
15 UnitedHealthcare our suspect logic that we
16 used and, you know, generally talk about
17 process improvements or -- and then we
18 would get general approval on what we were
19 going to implement for that current year.

20 BY MS. ZUPAC:

21 Q. Okay. And did ever -- did Optum ever
22 proceed with a suspect logic program that

1 UnitedHealthcare did not agree with?

2 MS. MADDUX: Objection, form.

3 THE WITNESS: Not that I recall,
4 but let me research that and get back to
5 you on that.

6 BY MS. ZUPAC:

7 Q. You're not aware of an instance in
8 which -- sitting here today, in which Optum
9 proceeded with a --

10 A. I am not. Your -- the way you asked
11 that question I was like, I -- no, I -- I am not
12 aware of that.

13 Q. Okay. And so at any point was the --
14 at -- at any point between the 2008 and 2016 date
15 of service years, was the chart targeting process
16 in the -- that Optum used seeking charts
17 randomly?

18 A. Can you say that one more time?

19 Q. Sure. I can try to rephrase.

20 At any point did -- between the 2008
21 to 2016 date of service years did Optum use chart
22 targeting to target charts at random?

1 MS. MADDUX: Objection, form.

2 THE WITNESS: It is retrieval
3 provider information that has been
4 consolidated to avoid provider abrasion
5 based upon the provider information that
6 we had on hand.

7 MS. MADDUX: Counsel, we've been
8 going for a little over an hour, so I
9 don't know if there's a good breaking
10 point soon.

11 MS. ZUPAC: Yeah, I can --

12 Ms. Baker, do you need a break
13 right now?

14 THE WITNESS: Sure.

15 MS. ZUPAC: Okay. Why don't we
16 take a five-minute break.

17 MS. MADDUX: Okay.

18 VIDEO OPERATOR: Off the record.
19 The time is 11:20.

20 (Thereupon, a brief recess was
21 taken.)

22 VIDEO OPERATOR: On the record.

1 The time is 11:35.

2 MS. ZUPAC: Okay.

3 BY MS. ZUPAC:

4 Q. So, Ms. Baker, we were talking about
5 the -- about Optum's consolidation process with
6 respect to provider ID, correct?

7 A. In respect to retrieval provider
8 associated with a chart.

9 Q. Yes. And all of my questions today
10 about this topic are -- are related to the
11 retrospective chart review program, to be clear.

12 A. Okay.

13 Q. Okay. So as a result of Optum's
14 consolidation process for that retrieval --
15 retrieval provider ID, was it possible to collect
16 charts for members that included encounters with
17 multiple providers?

18 MS. MADDUX: Objection, form.

19 THE WITNESS: So after we -- after
20 we released the charts to the retrieval
21 vendor and they did their consolidation
22 and they did their validation and we

1 retrieved the chart under that method, it
2 could include multiple providers. But we
3 don't know which providers they are --

4 BY MS. ZUPAC:

5 Q. Um-hmm.

6 A. -- and we also can't tell you if it's
7 complete.

8 So, like, for example, you know, if
9 it was a -- a site that had paper-based charts
10 and we only went to, you know, Site 1 and it was
11 a two-site one, we would only receive the part of
12 the chart that was there for the doctors that saw
13 there -- there. But that doctor, let's say --
14 call it Dr. A, could have been at Site 1 on
15 Monday, Wednesday, Friday but went to Site 2 on
16 Thursday -- Tuesday and Thursday and we didn't
17 have that component of the chart.

18 Or, you know, another example could
19 be that the provider themselves, the
20 representative at the provider, right, could have
21 said I want to send you the chart. And so at
22 that point in time we catch the ball of whatever

1 information that they send --

2 Q. Um-hmm.

3 A. -- right?

4 And so it -- the chart itself could
5 have multiple information, but we also wouldn't
6 know for sure if it was complete.

7 Q. Sure. Sure. But the -- my question
8 basically was whether or not that -- whether or
9 not a chart retrieved for a particular member
10 could include encounters with, for example,
11 Dr. A., as you noted, but also Dr. B. and maybe
12 also Dr. C.

13 MS. MADDUX: Objection, asked and
14 answered.

15 THE WITNESS: To -- to clarify on
16 that one, we wouldn't know if the chart
17 was supposed to have Drs. A, B and C in
18 your example in that one. But, you know,
19 if -- if we, you know, retrieve the chart
20 or if they sent us a chart, it could
21 contain multiple providers. But, again,
22 we wouldn't be able to tell you if that

1 chart should be A, B or C.

2 BY MS. ZUPAC:

3 Q. Okay. But the -- the chart that
4 included the encounters with potentially multiple
5 providers would all be -- would be assigned one
6 retrieval provider ID, correct?

7 A. It would be assigned one retrieval
8 provider ID for that specific member-provider
9 group location, but that member could have seen,
10 you know, five different doctors. So, like, for
11 instance, like in Nashville, you could see
12 Vanderbilt Health group, which is distinctly
13 different than the -- you know, the St. Thomas
14 Health group, right, which is distinctly
15 different than the Heritage Medical group.

16 And so that example, that's three
17 different charts, but within Vanderbilt you could
18 have seen, you know, five doctors. At Heritage
19 you could have seen two. At St. Thomas you've
20 seen seven. So you have had consolidation within
21 those three, but you'd still have three different
22 charts --

1 QA coders provided?

2 A. The -- again, it -- it -- it was date
3 of service, the chart information, the member
4 information, the date of service, the diagnosis,
5 any E0 codes. But, you know, rendering provider
6 wasn't picked up, so there -- no information on
7 rendering provider.

8 Q. The QA coders were informed, though,
9 or given information about what the production
10 coder had coded, correct, the ICD-9 and E0 codes
11 that the production coder had coded?

12 MS. MADDUX: Objection, form.

13 THE WITNESS: The QA coder --
14 coders were given the coding results from
15 a production coder.

16 BY MS. ZUPAC:

17 Q. QA coders were not informed of what
18 diagnosis codes had been submitted by the
19 provider for a particular member, correct?

20 A. That's not possible as part of the
21 retrospective chart review program because, for
22 most of those years described, rendering provider

1 was not picked up. It wasn't a -- it was not
2 a -- a data element for -- for RAPS and the -- I
3 mean, closer to, I think, the 2013 -- or no.
4 Actually, I think it was more like the 2014 year
5 we started saying does rendering provider equal
6 retrieval provider and then we started building
7 that out.

8 Q. Um-hmm.

9 A. But most of those years there's no
10 way -- we didn't pick up rendering provider.

11 Q. So I just have a couple more
12 questions. Then we'll take a break.

13 A. Okay.

14 Q. So we have been talking about
15 ChartSync a lot. ChartSync's gotten a lot of
16 attention. But at some point ChartSync was
17 phased out, correct?

18 A. Yes.

19 Q. Okay. And it was replaced with a
20 tool called the Medical Record Manager or MRM?

21 MS. MADDUX: Objection, out of
22 scope.

1 THE WITNESS: Um-hmm.

2 BY MS. ZUPAC:

3 Q. And was MRM also referred to as
4 Emerald?

5 MS. MADDUX: Objection, out of
6 scope.

7 THE WITNESS: In the beginning,
8 yes.

9 BY MS. ZUPAC:

10 Q. Okay. So what date of service years
11 was the Medical Record Manager operational?

12 MS. MADDUX: Objection, out of
13 scope.

14 THE WITNESS: MRM was implemented
15 in the 2014 calendar year and so that
16 would have contained some 2013 dates of
17 services.

18 BY MS. ZUPAC:

19 Q. Okay. And then was it operational
20 for the 2014, 2015 and 2016 dates of service?

21 MS. MADDUX: Objection, out of
22 scope.

1 You can answer.

2 THE WITNESS: Yes.

3 BY MS. ZUPAC:

4 Q. Okay. And did MRM have certain
5 features that were unavailable in ChartSync?

6 MS. MADDUX: Objection, out of
7 scope.

8 THE WITNESS: It started off with
9 being able to collect information on
10 rendering provider. It had some
11 additional work queues where -- I think
12 earlier I gave the example you'd give them
13 a member ID and say go do this. Like we
14 were able to do that. It had some
15 additional capabilities regarding coding
16 organizations to be able to say who was
17 going to code the chart, who's going to
18 retrieve the chart.

19 So a lot of the capabilities were,
20 like, kind of systematic like that. Also
21 the ability to save a chart -- no, that
22 was on -- yeah. No, that was the -- a

1 summary of some of them.

2 BY MS. ZUPAC:

3 Q. Okay. And did MRM include the
4 capability of conducting Q -- QA processes within
5 MRM?

6 MS. MADDUX: Objection, out of
7 scope.

8 MS. ZUPAC: So I'll just note for
9 the out-of-scope objections related to
10 questions about QA that one of the
11 subtopics that this witness is designated
12 on is additional reviews of charts
13 reviewed in the program, including recode,
14 second level review, quality assurance and
15 overread.

16 MS. MADDUX: And I'll also note
17 for the record that the government
18 actually noticed separate topics around
19 databases and use of databases. I mean,
20 they also have a topic around databases
21 used for specific programs but did not
22 include that in the scope of the quality

1 assurance topic, so it is clearly out of
2 scope.

3 MS. ZUPAC: Okay. So it's the --
4 it's defendants' position that a topic
5 about quality assurance cannot include any
6 questions about any programs used to
7 conduct quality assurance?

8 MS. MADDUX: The government knows
9 how to write a topic when it wants to ask
10 about databases or --

11 MS. ZUPAC: That's a yes or --

12 MS. MADDUX: -- programs used.

13 MS. ZUPAC: -- question, Counsel.

14 MS. MADDUX: I'm answering your
15 question, Ms. Zupac.

16 The government knows how to write a
17 topic. When they want to ask about the
18 database of the programs used for a
19 program, they did it in topic 12 slash --
20 or I guess 13 slash 18 from the combined
21 notice and they didn't do it here.

22 MS. ZUPAC: Okay. So I'm asking

1 about QA processes and certain QA
2 processes are different, depending on the
3 date of service here. And the -- that is
4 in part because the programs used for
5 those date of service years were
6 different. So I'm trying to get
7 clarification so that the record is clear
8 as to which program was in effect for a
9 date of service year and, therefore, how
10 that affected the QA processes used for
11 that date of service year.

12 MS. MADDUX: Except you're asking
13 very broad questions about what different
14 databases are without tying it to QA and
15 then trying to tie it to QA. They're out
16 of scope.

17 MS. ZUPAC: I am currently asking
18 the witness whether Medical Record Manager
19 included the ability to conduct QA within
20 Medical Record Manager.

21 MS. MADDUX: And I will maintain
22 my objection out of scope.

1 MS. ZUPAC: Okay. And we disagree.

2 BY MS. ZUPAC:

3 Q. Go ahead.

4 MS. MADDUX: You can answer.

5 THE WITNESS: We tried to build out
6 QA within Medical Record Manager. But
7 ultimately it wasn't possible to do in a
8 timely manner, so we continued with new --
9 because at that -- by that point in time
10 we were moving to new and unique QA --
11 unique QA outside of --

12 MS. REPORTER: Moving to what?
13 Sorry.

14 THE WITNESS: New and unique QA
15 outside of MRM.

16 BY MS. ZUPAC:

17 Q. Okay. So let's go on a break and
18 when we come back we will discuss new and unique
19 QA.

20 VIDEO OPERATOR: Off the record.

21 The time is 2:57.

22

1 (Thereupon, a brief recess was
2 taken.)

3 VIDEO OPERATOR: On the record.
4 The time is 3:21.

5 BY MS. ZUPAC:

6 Q. Okay. Welcome back, Ms. Baker.

7 So certain of the topics that you are
8 designated on relate to blind coding versus
9 informed coding, correct?

10 A. Yes.

11 Q. And so I asked you earlier about your
12 understanding of the term blind coding, correct?

13 A. Yes.

14 Q. Okay. And what -- what is your
15 understanding of the term blind coding?

16 A. It's where a coder codes a -- the
17 medical record in front of them.

18 Q. And that coder is not provided with
19 any information about that member outside of
20 what's in the chart, correct?

21 A. They're -- about that member?

22 Q. Um-hmm.

1 A. I mean, the member name and that --
2 that -- correct. I mean, it's industry standard
3 to start with blind coding.

4 Q. But I just want to make sure I
5 understand what exactly blind coding entails.

6 A. Um-hmm.

7 Q. So -- so in blind coding a coder
8 would not be informed, for example, about
9 diagnoses that the member is suspected to have,
10 correct?

11 MS. MADDUX: Objection, form.

12 THE WITNESS: The -- in blind
13 coding a coder's given no additional
14 information, other than the image of the
15 chart to -- to code to the best of their
16 ability.

17 BY MS. ZUPAC:

18 Q. And in blind coding a coder would not
19 be informed about diagnosis codes previously
20 submitted by a provider for that member, correct?

21 A. The -- the -- in blind coding a
22 coder's is given no information.

1 Q. And so in contrast to blind coding,
2 there's informed coding, correct?

3 A. Yes.

4 Q. Okay. And so what is your
5 understanding of the term informed coding?

6 A. I just want to read the definition,
7 if that's okay. See if I can find it.

8 Q. Are you referring to a particular
9 tab, Ms. Baker?

10 A. I will be.

11 Q. Okay. Just let me know the tab --

12 A. Yep.

13 Q. -- when you get to it.

14 A. Still looking. Sorry.

15 Q. Okay. Are you by any chance looking
16 for United's first supplemental responses and
17 objections to the sixth set of interrogatories --

18 A. I -- I think --

19 Q. -- Tab 23?

20 A. Is it Tab 23? Thank you.

21 Q. If that's what you're looking for.

22 A. Let me look.

1 Q. Suggesting.

2 A. I -- I may be too far back.

3 Yes. Thank you very much.

4 Q. All right.

5 MS. ZUPAC: So I'll go ahead and
6 reveal that as -- or mark that as
7 Exhibit 611.

8 (Exhibit 611 was marked for
9 identification.)

10 BY MS. ZUPAC:

11 Q. And are you on page 10 of
12 Exhibit 611?

13 A. I am.

14 Q. Okay. And so what part are you
15 looking at now?

16 A. Line 21, starting with line 21.

17 Q. Okay. So I'm looking -- I'm looking
18 at line 20 where it states, For the purposes of
19 responding to this interrogatory, UnitedHealth
20 interprets the term informed manner to refer to
21 an informed coding process whereby the coder
22 conducting a review of a medical record as part

1 of UnitedHealth's chart review program was
2 provided with diagnoses previously coded or
3 received from an acceptable data source across
4 all providers associated with the member and/or
5 non-UnitedHealth MA plan submissions for the
6 member associated with the appropriate data
7 collection period.

8 Do you see those lines?

9 A. I do.

10 Q. Is -- is that what you were referring
11 to?

12 A. That was what I was -- thank you very
13 much.

14 Q. Good, because it was a very long
15 sentence to read if that wasn't what you were
16 referring to.

17 Okay. So --

18 A. I mean, I would maybe also just
19 continue that further informed coding, as
20 UnitedHealth uses the term to respond to this
21 interrogatory was not specific to the rendering
22 provider or date of service as the charts

1 denotes whether a chart was coded in
2 UnitedHealth's chart reviewing using informed
3 coding, as UnitedHealth interprets this term.

4 Correct?

5 A. I see that.

6 Q. Okay. And so is it your
7 understanding that the only charts that were
8 coded in the defendants' chart review program
9 using informed coding are those that are marked
10 with the recode flag discussed in this response?

11 A. Yes.

12 Q. Okay. And so you're not aware of any
13 other instances of charts coded using informed
14 coding that have not been marked with the recode
15 flag discussed in this response?

16 A. As part of the chart -- retrospective
17 chart review program?

18 Q. Correct.

19 A. We tried to do it in the -- to do it
20 again in the project year 2013, but it was not
21 successful.

22 Q. Right. And so the -- so the charts

1 that you're mentioning that you tried to do
2 informed coding on in the 2013 date of service
3 year were not ultimately coded using informed
4 coding, correct?

5 A. Correct.

6 Q. Okay. So then -- so then I -- I
7 guess I can modify my question to ask, are there
8 any other instances of charts successfully coded
9 using informed coding in the retrospective chart
10 review program that have not been marked with the
11 recode flag?

12 MS. MADDUX: Objection, form.

13 THE WITNESS: Not that I'm aware of
14 in regards to the retrospective chart
15 review program.

16 BY MS. ZUPAC:

17 Q. Okay. Okay. So aside from the
18 charts marked with the recode flag discussed
19 here, Optum coded charts for UnitedHealthcare's
20 chart review program using blind coding for the
21 2008 to 2016 dates of service, correct?

22 A. Yes.

1 Q. Okay. And why is that? Why were
2 the -- why were charts other than those subject
3 to the recode program coded using blind coding?

4 A. It's just how it organically evolved.
5 I mean, from the very beginning, there weren't --
6 there wasn't tools or processes or even claims
7 information available to be able to provide that
8 information from a blind -- or sorry -- from a --
9 from a -- a -- from a non-blind perspective.

10 And then as chart review --
11 retrospective chart review became industry
12 standard, it also just became industry standard
13 to do blind coding as part of its natural method
14 for doing it.

15 Q. I believe you testified about --
16 at -- at the beginning there wasn't -- there
17 weren't other data sources to -- used to use
18 informed coding, correct?

19 MS. MADDUX: Objection, form.

20 THE WITNESS: There weren't --
21 there wasn't an ability to tie, you know,
22 a -- like a -- a claim to a -- a chart,

1 because when you do a chart, you don't
2 know what's in the chart until you, you
3 know, see what's in the chart. And even
4 then, once we saw it, you're -- we didn't
5 have the ability to pick up a rendering
6 provider information until further on in
7 the program.

8 BY MS. ZUPAC:

9 Q. Okay. So what date of service years
10 are your -- are -- are you referring to, during
11 that time period when it wasn't possible to pick
12 up this information?

13 MS. MADDUX: Objection, form.

14 THE WITNESS: What information?

15 BY MS. ZUPAC:

16 Q. The information that you testified to
17 as being required to perform informed coding.

18 MS. MADDUX: Objection, form.

19 THE WITNESS: Informed coding where
20 its diagnosis previously coded or received
21 from acceptable data source across all
22 providers?

VOLUME II
CONTINUATION OF VIDEOTAPED
RULE 30(b)(6)DEPOSITION OF
OPTUMINSIGHT, INC. AND UNITEDHEALTHCARE, INC.,
BY THEIR DESIGNEE, KATHLEEN O. BAKER

Washington, D.C.

May 31, 2023

Reported by:
Misty Klapper, RMR, CRR
Job No.: 982006

1 P R O C E E D I N G S

2 VIDEO OPERATOR: We are on the
3 record. This begins videotape number 1 in
4 the deposition of Katie Baker in the
5 matter of United States of America,
6 ex rel. Benjamin Poehling, Plaintiff,
7 versus UnitedHealth Group, Inc., et al.
8 Defendants, Case Number CV 16-08697-FMO,
9 in the United States District Court for
10 the Central District of California,
11 Western Division.

12 Today's -- is May 31st 2023, and
13 the time on the monitor is 9:13 a.m.

14 This deposition is being taken at
15 555 11th Street, Northwest, Washington,
16 D.C. 20004, at the request of Department
17 of Justice. The videographer is Robyn
18 Ellis of Magna Legal Services and the
19 court reporter is Misty Klapper of Magna
20 Legal Services.

21 Counsel appearances will be on
22 stenographic record only.

1 Will the court reporter please
2 swear in the witness.

3 MS. REPORTER: One moment.

4 KATHLEEN O. BAKER, AS DESIGNEE

5 The witness herein, called for
6 further examination by counsel for the
7 Plaintiffs, having been duly sworn, was
8 further examined and further testified as
9 follows:

10 FURTHER EXAMINATION BY COUNSEL FOR PLAINTIFFS

11 BY MS. ZUPAC:

12 Q. All right. Welcome back, Ms. Baker.

13 I'm going to start by following up on
14 some items that we discussed yesterday, starting
15 with the question of whether coders were
16 instructed to record all RxHCCs in the medical
17 records.

18 Do you recall that we discussed this
19 yesterday?

20 A. I do.

21 Q. Okay. And do you recall that you did
22 not remember at the time whether or not that

1 instruction changed over the years for the chart
2 review projects for dates of service 2008-2016?

3 MS. MADDUX: Objection, form.

4 THE WITNESS: I -- I wanted to
5 clarify.

6 BY MS. ZUPAC:

7 Q. Sure. Go ahead and give that
8 clarification.

9 A. So we did not do RxHCCs during recode
10 and for part of 2013, but then we started doing
11 RxHCCs again.

12 Q. Okay. So let's start with the recode
13 project. So this is the recode project that we
14 discussed yesterday that covered dates of service
15 2011?

16 A. Yes.

17 Q. Okay. And so during the recode
18 project were the recode coders instructed not to
19 record ICD-9 diagnosis codes that mapped only to
20 an RxHCC?

21 A. They were instructed to pick up --
22 well, they -- they could write down RxHCCs.

1 If, in fact, the factual basis
2 underlying the denial includes facts drawn
3 from the medical records, then I am
4 entitled to know that. And so I'm asking
5 as a yes or no question whether the
6 factual basis underlying the denial
7 includes any review of the underlying
8 medical records. I'm not asking for the
9 details of -- of that review. I'm just
10 asking the yes or no question.

11 MS. MADDUX: And we -- we'll still
12 instruct the witness not to answer. It's
13 outside the scope and premature expert
14 discovery and it is not properly within
15 the topic that you noticed nor within the
16 parties' agreement.

17 MS. ZUPAC: Okay.

18 BY MS. ZUPAC:

19 Q. So are you going to follow
20 instruction -- your counsel's instruction not to
21 answer my question?

22 A. I am.

1 Q. Okay. And so then I believe that you
2 do have some information underlying the factual
3 basis for the denial or refutation by you of the
4 United States' contention that the diagnosis
5 codes identified by the United States in its
6 response to UHC of California's interrogatory
7 response -- Interrogatory 1 are not supported by
8 charts, correct?

9 A. I have information, yes.

10 Q. Okay. And so would you like to
11 provide that information now?

12 A. Please.

13 Q. Go ahead.

14 A. Okay. Thanks.

15 You know, there are several parts of
16 the process where there -- about completeness and
17 about whether or not we have adequate data
18 elements.

19 So, for instance, within the chart
20 targeting process, we talked about the fact that
21 providers are consolidated at different levels.
22 And so the retrieval providers' information gets

1 consolidated based upon locations, groups, the --
2 based on number of providers, and then when we
3 send that information over to the provider
4 vendors, that there could be further provider
5 consolidations.

6 And so charts could be located at
7 multiple different locations. Charts could be --
8 for different providers could be at different
9 locations. Some charts may be provider specific.

10 And when we go to retrieve that
11 chart, not all dates of services or encounters
12 for that provider or provider group are able to
13 be picked up. When the -- some other items could
14 also include if the provider themselves sent us
15 the chart, they could have not included all of
16 the dates of services. And a member has multiple
17 different charts across different locations and
18 we may not have all that information.

19 You know, if we also just step -- as
20 we talked about in this process, just within
21 coding that coders have different types of skill
22 sets and different types of experiences, that

1 they have -- you know, that they have different
2 levels of problem-solving skills and ability to
3 make connections within chart.

4 Coders could have, again, different
5 background experiences. They could have a -- one
6 type of specialty experience like cardiology.
7 They could be looking at an oncology chart. And
8 those personal experiences do also influence the
9 type of different problem-solving and ability to
10 look at the chart.

11 We also have, you know, other
12 information that, you know, coding clinics have
13 changed over time, that we, you know, looked at
14 that information and that we also look at, you
15 know, other metrics such as RADV results and
16 other types of audits like that where our overall
17 results have been generally aligned with the
18 expectations of the government.

19 Q. Okay. And so, Ms. Baker, is that a
20 complete description of the factual basis
21 underlying any denial or refutation by you of the
22 United States' contention that the diagnosis

1 CERTIFICATE OF NOTARY

2 I, MISTY KLAPPER, the officer before whom
3 the foregoing deposition was taken, do hereby
4 certify that the witness whose testimony appears in
5 the foregoing deposition was duly sworn by me; that
6 the testimony of said witness was taken by me in
7 shorthand and thereafter reduced to typewriting by
8 me; that said deposition is a true record of the
9 testimony given by said witness; that I am neither
10 counsel for, related to, nor employed by any of the
11 parties to the action in which this deposition was
12 taken; and, further, that I am not a relative or
13 employee of any attorney or counsel employed by the
14 parties hereto, nor financially or otherwise
15 interested in the outcome of this action.

CONFIDENTIAL - SUBJECT TO PROTECTIVE ORDER

Volume 1
DEPOSITION OF JON H. BIRD
As 30(b)(6) Designee 2 of
OptumInsight, Inc.
UnitedHealthcare, Inc.
Washington, DC
June 22, 2023

Reported by: John L. Harmonson, RPR
Job No. 988356

1 you abstracted. Can you clarify what you mean by
2 that?

3 MR. QURESHI: Objection to form. This
4 continues to be outside the scope.

5 THE WITNESS: The actual diagnosis/date
6 of service combinations would have been documented
7 based on a review of the medical record.

8 BY MR. MASON:

9 Q. But is abstracting -- when you're saying
10 abstracting, is that different than the activity
11 done by the coder?

12 A. No, it's the same thing. It's just a
13 term that's used.

14 Q. And so you're saying that for a period
15 of time, the coders were instructed not to identify
16 all of the diagnoses documented in the medical
17 record but only to identify diagnosis codes that
18 were new for that six-month period for that
19 beneficiary?

20 MR. QURESHI: Objection to form.
21 Mischaracterizes testimony. And remains out of
22 scope for this designee.

23 You can answer in your personal
24 capacity, Mr. Bird.

25 THE WITNESS: Not necessarily new. I

1 mean the way the payment process works, as you
2 know, it's really every six months. So one code
3 per six months is sufficient. So if a -- if an
4 individual saw the doctor ten times and had
5 diabetes documented ten times during the six-month
6 period, you would only need one code to be
7 submitted to CMS for that to map to an HCC.

8 So in the early stages of the program,
9 which I think was the early stages -- and again
10 this is my personal capacity and is based upon my
11 recollection -- it wasn't a requirement to code
12 everything that was in the medical record.

13 BY MR. MASON:

14 Q. Okay. And when you're saying that this
15 was in the early stages of the chart review
16 program, what time period are you talking about?

17 A. I can't remember when everything
18 changed. You know, I think -- and I think the
19 scope covers what, 2008 through 2016. So probably
20 in that 2008 to 2010, '11 time frame.

21 Q. During that three-year time period,
22 you're saying the coders were instructed to only
23 find a code once per six months?

24 MR. QURESHI: Objection to form.

25 Mischaracterizes testimony. And outside of scope

1 for this designee.

2 You can answer in your personal
3 capacity.

4 THE WITNESS: For some of that period.
5 I don't know exactly what, whether it was our
6 coders or whether it was external coders. But I
7 just recall that being part of the program for a
8 period of time.

9 BY MR. MASON:

10 Q. And so -- why don't we move on.

11 But just to recap, aside from those two
12 clarifications, then, my description previously
13 about the chart review program is accurate; right?

14 MR. QURESHI: Objection to form.
15 Mischaracterizes testimony, and ignores the last
16 five minutes of responses. Outside the scope as
17 well.

18 THE WITNESS: Subject to the corrections
19 that I made, then I think the rest of your
20 description around retrieve, codes, that is -- it's
21 fair.

22 BY MR. MASON:

23 Q. Okay. And Optum performed the chart
24 review program for its clients which were MAO --
25 Medicare Advantage organizations; is that right?

1 A. For certain clients, correct.

2 Q. Okay. Optum didn't perform it for all
3 of its clients, but it did perform it for some of
4 its Medicare Advantage organization clients?

5 A. Correct.

6 Q. And one of those Medicare Advantage
7 organization clients was UnitedHealthcare; right?

8 MR. QURESHI: Objection to form.
9 Outside of scope.

10 THE WITNESS: That's correct.

11 BY MR. MASON:

12 Q. And during what time period did Optum
13 perform the chart review program for
14 UnitedHealthcare?

15 MR. QURESHI: Objection to form.
16 Outside of scope for this designee.

17 You can answer in your personal
18 capacity, Mr. Bird.

19 THE WITNESS: I know it does today. I
20 don't know which year it started doing that. I
21 mean the earliest I saw in my personal capacity,
22 chart review results, would have been around the
23 2008 date of service time frame. That's not to say
24 that it wasn't done prior to that, but that's when
25 I started with the organization.

1 workstream owner of this attribution process;
2 right?

3 MR. QURESHI: Objection to form.

4 THE WITNESS: My name is listed in
5 "Workstream Owner," correct.

6 BY MR. MASON:

7 Q. And the target completion dates for the
8 retrospective attribution dataset analysis is
9 October 29th, and then the target completion date
10 for the attribution logic validation analysis is
11 November 2nd. Do you see that?

12 A. I do.

13 Q. And is that consistent with your
14 testimony about when the attribution process was
15 developed and implemented?

16 A. I don't see a year. What year is this?

17 Q. Fair enough. Let's go back to 713A,
18 which is the cover email. Do you see that this was
19 sent on October 29, 2012?

20 A. I see that.

21 Q. And so is this essentially a task
22 manager for the process of developing the
23 attribution logic and attribution analysis that
24 you've testified about?

25 MR. QURESHI: Objection to form.

1 THE WITNESS: Yeah, I think I indicated
2 earlier the process evolved over time. So it looks
3 like there was additional analysis and logic being
4 developed in this time frame of October of 2012. I
5 think the documentation that we looked at earlier
6 indicated that that began earlier in 2012.

7 BY MR. MASON:

8 Q. Okay. And then for the -- following the
9 development of the attribution process, attribution
10 analysis was done consistently since then?

11 MR. QURESHI: Objection to form.

12 THE WITNESS: You mean that attribution
13 process we described has continued in some form
14 since then?

15 BY MR. MASON:

16 Q. Yeah.

17 A. Yeah, I believe so. Yes.

18 Q. And you're saying in some form. Are you
19 referencing that it's changed?

20 A. You have a culture of continuous
21 improvement, so I'm sure the platforms have
22 probably changed since this early time. There's
23 perhaps different kinds of features and functions
24 that are part of the product. But I think the
25 essence of establishing valuation related to

1 programs continues.

2 Q. Okay.

3 MR. MASON: Why don't we go off the
4 record and take a break.

5 THE VIDEOGRAPHER: Going off the record
6 at 11:53.

7 (Recess taken.)

8 THE VIDEOGRAPHER: We are back on the
9 record at 12:11.

10 BY MR. MASON:

11 Q. Mr. Bird, another risk adjustment
12 program that Optum performed for UnitedHealthcare
13 was called claims verification; right?

14 A. Correct.

15 Q. Can you explain what the claims
16 verification program is?

17 A. It was a program that we operated during
18 a certain time frame that identified and reviewed
19 exclusive HCCs that were submitted by providers
20 that were part of the chart review program.

21 Q. And Optum performed that program for
22 UnitedHealthcare?

23 A. That's correct.

24 Q. When?

25 A. The program was in phases. The first

1 phase of the program was 2010 calendar year for
2 2009 dates of service that was limited to Ovations,
3 which was UnitedHealthcare population, and also
4 limited to one member one provider.

5 The second phase was a similar one
6 member one provider. It was moved from a manual
7 process into one that was within a system, and that
8 was in 2011 for 2010 dates of service.

9 And then Phase 3 of CV was for 2011 and
10 '12 dates of service. And that was looking at
11 multiple provider as opposed to one member one
12 provider criteria.

13 Q. And when was Phase 3 conducted?

14 A. Phase 3 -- and I may need to refer to
15 kind of a timeline on that. But typically it would
16 be done on a retrospective basis. So if we're
17 looking at 2011 dates of service, we would have
18 commenced that in 2012. And then it was ongoing
19 for 2011 and in 2012 until the program was
20 suspended and ultimately discontinued, which was
21 the spring of 2014.

22 Q. When specifically was it suspended?

23 A. There was -- so there was operational
24 suspensions from time to time based upon -- but in
25 terms of suspension leading to discontinuation of

1 the program, my understanding is it was around the
2 middle of April that there was -- I think I've seen
3 within the documentation I reviewed some
4 notification for the delete process to be put on
5 hold around April of -- on or around April 18th of
6 2014.

7 Q. And when you say suspended, you just
8 said that you suspended the delete process. Did
9 you suspend all of CV, or just the delete process?

10 A. The notification that I saw was in
11 relation to deletes. But my understanding is the
12 entire CV process was suspended at or around that
13 time.

14 Q. And it was terminated when?

15 A. The decision for termination, which is
16 based on the memorandum that came from Steve Nelson
17 to Scott Theisen, I think that was dated on
18 June 11th, and he references in there the decision
19 for termination of the program was made on
20 May 27th.

21 Q. And so is that your testimony as the
22 designee for UnitedHealthcare and Optum, that the
23 suspension of CV went into place on April 18, 2014,
24 and the termination of CV went into place on
25 May 27, 2014?

1 A. Yeah, my testimony is on or around
2 April 18th is when I saw notification of delete
3 processing, and I believe the program was also
4 suspended on or around that date.

5 And yeah, based upon the -- we have the
6 exhibit in here which is Steve Nelson's email or
7 memorandum to Scott Theisen. He indicates in there
8 that the decision was made to terminate on
9 May 27th, and then that memorandum was dated with
10 notification to Scott and others that was on
11 June 11th.

12 Q. And the dates that you were just
13 speaking of are in regards to the CV program that
14 Optum performed for UnitedHealthcare; right?

15 A. That's correct.

16 Q. Optum also performed CV for other MAO
17 clients; right?

18 A. That is correct.

19 Q. During what time period?

20 A. I don't actually -- within the materials
21 that I kind of reviewed, I didn't look at the
22 specific timelines related to commercial customers
23 or non-UHC customers. There were claims
24 verification processes in place for some MAO
25 clients as well as some HHS, you know, ACA risk

1 adjustment services also. Unfortunately, I don't
2 think I have materials that set out the time frame
3 of which those services were provided to
4 commercial.

5 Q. Okay. And to be clear, today I'm not
6 asking you anything about ACA -- you're referring
7 to the Affordable Care Act -- plans or services
8 that were performed for any of those plans. I'm
9 only talking about Medicare Advantage. Okay?

10 A. Okay.

11 Q. So with that in mind, can you tell me
12 during what time period Optum performed claims
13 verification for MA organization clients other than
14 UnitedHealthcare?

15 MR. QURESHI: Objection to form. And
16 it's also outside the scope of the designated
17 topics for this particular witness.

18 THE WITNESS: I don't have exact dates.
19 And I did, through the process of my review, I did
20 look at some internal presentations to external
21 customers, I think one of which was Aetna at the
22 time. I just can't say with any certainty at what
23 point, if any, the services were actually delivered
24 to that customer.

25 I've also seen reference in my research

1 on Health Net of California as one of the clients
2 that at least the service was discussed with.

3 But unfortunately, I can't determine for
4 what time frame and what dates of service the
5 service would have been provided to those external
6 clients.

7 BY MR. MASON:

8 Q. Do you know whether Optum ever actually
9 performed CV for any commercial -- when I say
10 commercial clients, I mean MA organizations other
11 than UnitedHealth?

12 MR. QURESHI: Same objection. This is
13 outside the scope of the topics on which this
14 witness has been designated.

15 THE WITNESS: I believe we did.

16 BY MR. MASON:

17 Q. And what can you tell me about when that
18 occurred?

19 MR. QURESHI: Objection; asked and
20 answered. And this is outside the scope.

21 THE WITNESS: Yeah, I don't --
22 unfortunately, I don't know the dates.

23 BY MR. MASON:

24 Q. Okay. Did Optum stop offering claims
25 verification as a service at some point?

1 MR. QURESHI: Objection to form. To
2 United or to other commercial clients?

3 BY MR. MASON:

4 Q. Do you understand my question?

5 A. I understand your question. You know,
6 it's not part of the review I did and I wasn't
7 personally involved in selling services to external
8 customers. So yeah, I know it was an offering for
9 a period of time. Yeah, I believe at least one
10 commercial client took those services. I don't
11 know how those services evolved when I was not part
12 of that organization.

13 Q. So you don't know the answer to my
14 question?

15 A. I don't know --

16 MR. QURESHI: Objection to form.

17 THE WITNESS: I don't know the answer.

18 MR. QURESHI: Objection to form. Your
19 question, if you were asking about commercial
20 clients, is outside the scope.

21 BY MR. MASON:

22 Q. You don't know the answer to my
23 question?

24 A. I don't know the service offering to
25 commercial clients at this time.

1 Q. What's the purpose of the claims
2 verification program?

3 A. The purpose is to identify exclusive
4 HCCs and review those that were submitted by
5 providers that were part of the chart review
6 program.

7 Q. What do you mean, and review them?

8 A. They would be subject to medical coder
9 review. So the CVA people that we spoke about
10 earlier, CV analysts.

11 Q. And when you say the purpose was to
12 identify exclusive -- did you say exclusive HCCs or
13 exclusive codes?

14 A. Exclusive HCCs.

15 Q. And what do you mean by that?

16 A. It would be an HCC or diagnoses that
17 mapped to an HCC and that HCC is submitted by one
18 and only one provider.

19 Q. So why?

20 MR. QURESHI: Objection to form.

21 BY MR. MASON:

22 Q. I was asking the purpose; right? And
23 you're telling me what CV did. CV looked at
24 exclusive codes and then had a CV analyst review
25 the chart associated with it to determine if it was

Videotaped Deposition of
JON HARVEY BIRD
Given Remotely
Wednesday, August 10, 2022

Reported by: Karen K. Kidwell, RMR, CRR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 piece in here which -- I probably wouldn't use
2 exactly the same words today -- is for accounts
3 to be acceptable for risk adjustment, the
4 documentation needs to meet certain standards.

5 The -- I think, for risk adjustment
6 purposes, you know, with information encounters
7 received directly from providers, they need to
8 meet submission criteria, which is a
9 face-to-face encounter with an acceptable
10 provider, and we develop filter logic in our
11 submission platforms to ensure that.

12 I think in the context of the claims
13 verification program, we are looking for the
14 appropriate support in the -- in the medical
15 record. And to the extent that it was not
16 found, and we concluded that the condition was
17 not supported in the medical record, we did
18 process deletes.

19 BY MR. MASON:

20 Q. So you agree that -- that the claims
21 verification program, when you say "validated," it
22 was looking to see whether the conditions were
23 appropriately documented in the medical record.
24 Correct?

25 MR. QURESHI: Objection. Asked and

1 answered.

2 THE WITNESS: The way the claims
3 verification program was designed was to look
4 for the appropriate documentation in the medical
5 record, and feel certain we would be able to
6 conclude that that document -- documentation
7 does not exist. And to the extent that it
8 didn't, then deletes were processed.

9 BY MR. MASON:

10 Q. Okay. In other words -- well, I won't say
11 another word. Strike that.

12 So if Optum determined that it had
13 submitted diagnosis codes that were not appropriately
14 documented in the medical record, it -- it deleted
15 them from CMS's risk adjustment system; is that what
16 you're saying?

17 MR. QURESHI: Objection to form.
18 Mischaracterizes testimony.

19 THE WITNESS: I say a year through to
20 process, if Optum was able to conclude that the
21 record is not -- that diagnosis is not supported
22 in the available -- in all the medical records.

23 You know, so there's -- yeah, there's
24 complexity, right, in terms of whether you got
25 the right medical record, whether you got the

1 entire medical record, you know, and
2 obviously -- you know, to process a delete,
3 we're overturning what a provider has actually
4 submitted for their patient.

5 So that's why I use the word "conclude."
6 You know, there's a -- a level of diligence
7 required to draw that conclusion. But when that
8 conclusion is drawn, then the delete is
9 processed.

10 BY MR. MASON:

11 Q. Okay. And throughout the deposition, I
12 might refer to that type of delete as a "CV delete,"
13 or a "claims verification delete." Do you understand
14 that terminology?

15 A. I do.

16 Q. And you've described the claims
17 verification process. Do you have any understanding
18 of -- of why Optum submitted claims verification
19 deletes?

20 A. It was not part of the decision to
21 implement the program or to design the initial
22 program.

23 And I apologize, but could you repeat the
24 second -- so any understanding of --

25 Q. Yes. Sorry.

1 A. I -- I don't -- yeah, was it why we
2 implemented the program, or why we processed the
3 deletes?

4 Q. Let's start with -- do you have any
5 understanding of why Optum implemented the claims
6 verification program?

7 A. Yeah. Yeah. Like I previously testified,
8 I was not involved in the decision to implement the
9 program. But, you know, my understanding is we were
10 operating, you know, in an environment of -- a
11 regulatory environment that was unclear and
12 ambiguous. And you know, to err on the side of
13 caution, United decided to implement the CV program.

14 I think, as far as processing deletes
15 related to the CV program, it was our policy to do
16 so. So, you know, our policy is when we concluded
17 that a code was not supported in the medical record,
18 we would delete. And we did in this program along
19 with other programs as well.

20 Q. And do you have any understanding of why
21 that was the policy?

22 A. Yeah. I'm no lawyer, and I don't read the
23 regulations or determine obligations, but I do
24 understand the policy that we had in place at that
25 time.

1 Q. So is the answer you don't -- you don't
2 have an understanding of why it was the policy?

3 MR. QURESHI: Objection. Asked and
4 answered.

5 THE WITNESS: I don't.

6 BY MR. MASON:

7 Q. And when you said that your understanding
8 for why the claims verification program was
9 implemented was related to your understanding that
10 you were operating in a regulatory program that was
11 unclear and ambiguous -- did I hear that right?

12 MR. QURESHI: Objection to form.

13 BY MR. MASON:

14 Q. Sorry. I didn't hear your answer.

15 A. You did hear that correctly.

16 Q. And what was the basis for that
17 understanding?

18 A. It was kind of general vibe within the
19 organization, discussions with people that -- that
20 may have been associated with compliance, or people
21 discussing, yeah, requirements for the organization.

22 Q. Did you say it was the "general vibe"?
23 Did I hear that right?

24 A. Correct.

25 Q. So you can't remember specifically anybody

1 telling you that, but it was something that you just
2 generally understood?

3 A. I'd say something I generally understood.

4 Q. And -- okay. And can you explain how
5 CV deletes reduced the amount of revenue that
6 MA plans received from CMS?

7 MR. QURESHI: Objection to form.

8 THE WITNESS: So CV deletes don't always
9 impact the revenue that the health plan will
10 receive. CV deletes are taken into
11 consideration with all other submission data by
12 CMS in order to calculate a risk score. And the
13 risk score is the basis for the payment to the
14 health plan.

15 So some CV deletes will have no impact.
16 They could be nonrisk-adjusting diagnoses. They
17 could be multiple diagnosis of whatever the HCC
18 is seeing. There could be other HCCs in the
19 hierarchy that trump the deleted code.

20 So really, it just depends on -- on the
21 data, and how the data impacts the model.

22 BY MR. MASON:

23 Q. So it's not as simple as saying if
24 there's, you know, X number of deletes, and each
25 delete costs Y dollars, so then the total reduction

1 in revenue is X times Y dollars; it's not that
2 simple?

3 MR. QURESHI: Objection to form.

4 THE WITNESS: It's not that simple to do
5 a -- an accurate calculation of the impact of
6 the program. There could be models created that
7 might estimate potential impacts used in a more
8 simplistic approach.

9 BY MR. MASON:

10 Q. At OptumInsight, you and your team had a
11 way of -- of doing that type of modeling, right?

12 MR. QURESHI: Objection to form.

13 THE WITNESS: My team developed models
14 that we designed to try and estimate impacts for
15 the purpose of informing accrual estimates with
16 M&R.

17 BY MR. MASON:

18 Q. Did anyone at -- did anyone at M&R ever
19 express concern about the revenue that M&R was losing
20 due to the claims verification deletes?

21 MR. QURESHI: Objection to form.

22 THE WITNESS: I don't recall.

23 BY MR. MASON:

24 Q. You don't recall anyone at M&R ever
25 expressing concern about the revenue that it was

1 In the meantime, I'd ask that no one look
2 at this document, and for us to take it off the
3 screen.

4 But with that, yes, may we go off the
5 record?

6 MR. MASON: We'll go off the record.

7 VIDEOGRAPHER: We are off the record at
8 1:50 p.m.

9 (A recess transpired from 1:50 p.m. until
10 1:55 p.m.)

11 VIDEOGRAPHER: We're back on the record
12 at 1:55 p.m.

13 MR. QURESHI: After conferring, Mr. Mason,
14 the Defendants are clawing back the document
15 that had been designated Exhibit 404, on the
16 basis of it's privileged; and as I remarked
17 before the break, we believe that the United
18 States should have alerted to its existence as a
19 potential clawback.

20 MR. MASON: And -- and as I said during
21 the break, we disagree with United's position,
22 and -- and we'll reserve rights to handle this
23 after the deposition. And if -- if we need to
24 leave it open after this deposition, then we
25 will.

1 MR. QURESHI: Okay. Well, I understand.

2 MR. MASON: Okay.

3 BY MR. MASON:

4 Q. Mr. Bird, we've testified a little bit
5 about the CV program -- or, sorry, "we've testified";
6 sorry about that.

7 You've testified a little bit about the CV
8 program, and we've talked about the CV financial
9 projections that you did. I'd like to ask you if you
10 can explain, as best you can, how the CV program
11 worked.

12 A. Any particular aspects of the program?

13 Q. Just -- why don't you start with just a
14 high level of how the CV program worked, from start
15 to finish.

16 A. So my -- you know, my understanding -- I
17 didn't, you know, design the program; I was involved
18 in certain operational analytic components, so I can
19 provide, you know, my understanding.

20 There -- it's -- for the providers that
21 were engaged in the chart review program, we -- the
22 organization sought to identify claims that were --
23 and encounters that were submitted by those same
24 providers.

25 There was a very complex process to try

1 and link provider information from a -- chart review
2 data and from the provider data, the existed -- the
3 claim data that existed -- that existed within the
4 various claim systems.

5 When that process was -- you know, when
6 the -- the match was attempted, there would be a
7 comparison of what was in a claim to what was in the
8 initial chart review information. Anything that met
9 a certain criteria around not matching would go
10 through a process of review with medical coders, and
11 an expert level of review also.

12 And then, after the expert-level review
13 was complete, any codes where the organization
14 concluded that support was not in the medical record,
15 a delete would be processed.

16 Q. When you said "anything that met a
17 criteria of not matching," you're referring to
18 diagnosis codes there; is that right?

19 A. The -- I don't recall actually whether the
20 matching process was at the diagnosis or the HCC
21 level.

22 Q. Okay. You don't recall if it was at
23 the -- the dx level or the HCC level, but in -- but
24 in either case, it was matching the conditions shown
25 on both sides. Is that right?

1 A. Correct.

2 Q. Okay. Can I show you the next exhibit.

3 MR. MASON: This is Tab N, Jesse. And so
4 I suppose this will be -- I don't know if this
5 is going to come up -- okay. Exhibit 405. So
6 we have a -- we have a blank there, due to the
7 clawback document from before.

8 BY MR. MASON:

9 Q. So Exhibit 405 should now be in front of
10 you. Let me know when you see that.

11 (Exhibit 405 was marked for identification.)

12 MR. MASON: And -- and Tab N1 can go up,
13 too, which will be Exhibit 405-1.

14 (Exhibit 405-1 was marked for identification.)

15 BY MR. MASON:

16 Q. And do you see Exhibit 405, Mr. Bird?

17 A. I do.

18 Q. And this is an e-mail from Chris Webb to
19 yourself, dated February 20th, 2014, with the subject
20 "Claims Verification Overview for MBM." Right?

21 A. Yeah.

22 Q. And Mr. Webb was one of your team members
23 at OptumInsight who reported to you at the time?

24 A. He was, yes.

25 Q. And "MBM" there, do you understand that to

1 Q. And if we look at the attachment, and in
2 407 -- sorry, 407-1 is the attachment. And do you
3 see there were some changes to the "Overview"
4 section, at the top?

5 MR. QURESHI: Objection to form.

6 THE WITNESS: I'd need to read and
7 compare.

8 BY MR. MASON:

9 Q. Yeah, can you compare this with
10 Exhibit 405-1, and see if there are any differences
11 in the "Overview" section?

12 You don't need to look at the whole
13 document; I'm just asking about the "Overview"
14 section.

15 A. I didn't review it word for word, but I
16 can see where there's differences.

17 Q. And one of the differences is that in
18 407-1, the section ends by saying, "Claims associated
19 with exclusive HCCs not supported in the
20 corresponding medical record are deleted." Right?

21 That was an addition that was made after
22 your feedback; is that correct?

23 MR. QURESHI: Objection to form.

24 THE WITNESS: So, I mean, the original
25 document said, "This service will also include a

1 submission of deletes to CMS, where
2 appropriate."

3 BY MR. MASON:

4 Q. Right. The original document said it will
5 include submission of deletes wherever appropriate;
6 but the final document, that was sent to Marybeth
7 Meyer, after your feedback, says, "Claims associated
8 with exclusive HCCs not supported in the
9 corresponding medical record are deleted."

10 Is that correct?

11 MR. QURESHI: Objection to form. Document
12 speaks for itself.

13 THE WITNESS: Yeah, that's what the
14 document says.

15 You know, what I can't determine from the
16 previous exhibit, if I was the only person to
17 provide feedback. You know, or how that
18 feedback was delivered, whether it was me or
19 inclusion of other people.

20 I can see the -- the language has changed
21 in the second version.

22 BY MR. MASON:

23 Q. And -- and the language being changed, you
24 agree that that sentence is -- is different?

25 MR. QURESHI: Objection to form. The

1 document speaks for itself.

2 MR. MASON: Withdrawn.

3 BY MR. MASON:

4 Q. Another thing, you'll notice that in
5 Exhibit 405-1, you drew attention to the language
6 that gave you some pause, I think you said, which was
7 where it says, "in accordance with CMS guidelines."

8 Do you see that that language is still
9 in 407-1?

10 A. I see that.

11 MR. QURESHI: Objection to form.

12 Mischaracterizes testimony.

13 THE WITNESS: I see that.

14 BY MR. MASON:

15 Q. Do you see --

16 And is it fair to conclude, then, that in
17 2014, when you reviewed this document, you didn't
18 have any concerns with the language "in accordance
19 with CMS guidelines"?

20 MR. QURESHI: Objection to form.

21 THE WITNESS: I don't know what I can
22 conclude from -- from that. You know, reading
23 it today, I think there's lack of clarity around
24 what "CMS guidelines" would mean, whether that's
25 coding or something other. So I don't know

1 whether I had those same -- exact same concerns
2 back in 2014, or whether I would have voiced
3 them.

4 But I can see that the document didn't
5 change.

6 MR. MASON: We -- you know, we've been
7 going for a little over an hour. Why don't we
8 go off the record for a break?

9 MR. QURESHI: Okay. Thank you.

10 VIDEOGRAPHER: We are off the record at
11 2:25 p.m.

12 (A recess transpired from 2:25 p.m. until
13 2:37 p.m.)

14 VIDEOGRAPHER: We are back on the record
15 at 2:37 p.m.

16 BY MR. MASON:

17 Q. Mr. Bird, you're familiar with a group at
18 UHG referred to as the UHG Risk Adjustment Advisory
19 Board?

20 A. I am.

21 Q. What is it?

22 A. In my understanding, recollection of that
23 group was it was a kind of legal-led organized group
24 of people that were involved in risk, and it also
25 included individuals that were involved in risk

1 MR. MASON: We need to go off the record
2 so that the witness can discuss an issue of
3 privilege with counsel.

4 VIDEOGRAPHER: We are off the record at
5 2:42 p.m.

6 (A recess transpired from 2:42 p.m. until
7 2:44 p.m.)

8 VIDEOGRAPHER: We are back on the record
9 at 2:44 p.m.

10 BY MR. MASON:

11 Q. Mr. Bird, do you remember my pending
12 question?

13 A. Could you repeat it for me, please?

14 Q. Sure. And I wasn't asking about any
15 specific request, but just trying to understand the
16 general nature of your role on the board.

17 And is it accurate to say that the board
18 would ask you specific requests for information; you
19 would use your data and analytics at OptumInsight to
20 provide information to inform the board in response
21 to those requests?

22 A. So from my recollection, there was no role
23 and responsibility specifically assigned to people
24 within the -- within the group. It's my
25 understanding I was invited to attend the meetings

1 based upon my knowledge of risk adjustment, and --
2 yeah, the programs that we ran, and analytics.

3 I -- you know, I believe the request would
4 have come -- come to me, but I don't recall any
5 specific request that came to me during that period,
6 or whether indeed any request came to me during that
7 period.

8 Q. Will you agree that your role on the board
9 was to use data and analytics to respond to specific
10 requests for information from the board? Right?

11 MR. QURESHI: Objection. Asked and
12 answered.

13 THE WITNESS: I don't -- we didn't have --
14 I didn't have a role description provided. My
15 understanding is, you know, the knowledge and
16 skills I brought to the -- the team was around
17 analytics and program knowledge.

18 BY MR. MASON:

19 Q. Analytics and program knowledge regarding
20 risk adjustment?

21 A. That's correct.

22 Q. And whether you had a specific defined
23 role or not, the way that you understood your role
24 was it to use those data and analytics related to
25 risk adjustment to respond to specific requests from

1 the board?

2 MR. QURESHI: Objection to form. Asked
3 and answered.

4 THE WITNESS: That -- that sounds very
5 specific, and I -- I don't recall that they had
6 any specific description of role.

7 BY MR. MASON:

8 Q. Okay. Can we go back to Exhibit 399,
9 which you'll recall was your CID transcript? And I'd
10 like you to go to page 52. And you recall you can do
11 that just by punching in the number "52" in that
12 little box?

13 And I'd like you to go to line 22.

14 Oh, I might be on the wrong -- sorry, it
15 should be on page -- oh, you know, it's confusing,
16 because -- it's page 52 of the transcript, but you
17 actually have to type in -- you have to type in the
18 number "53." There's an extra page in the PDF.

19 So if you type in 53, you'll see it says
20 "page 52" at the very top. Do you see that?

21 A. Yeah.

22 Q. Yeah. And then if you scroll down to
23 line 22.

24 And it says: "Did you have any particular
25 responsibilities on the board?"

1 MR. QURESHI: I'm sorry. United's counsel
2 has some redirect, please.

3 VIDEOGRAPHER: Apologies.

4 EXAMINATION

5 BY MR. QURESHI:

6 Q. Good afternoon, Mr. Bird.

7 A. Good afternoon.

8 Q. Earlier today you discussed your
9 background briefly. Please remind us how long you've
10 worked for the UnitedHealth Group group of companies.

11 A. So I -- I commenced an appointment with
12 Ingenix in October of 2008, so approximately
13 14 years.

14 Q. And in the time period that has been under
15 focus of the government's questions, 2010 to
16 approximately 2015, what role did you hold?

17 A. So, you know, my role changed over time.
18 Initially it was a -- a financial role, including
19 kind of some pricing exercises. And, you know, over
20 time, I took on additional responsibility for kind of
21 program analytics and some kind of operational
22 responsibility also.

23 Q. And in these various responsibilities that
24 you have described, how have you approached these
25 responsibilities throughout your tenure?

1 A. You know, with -- really doing the best
2 job I can, you know, with integrity. My background,
3 chartered accountant; we have strong, you know,
4 professional ethics, and I abide by them, and I
5 definitely take them seriously and -- into the --
6 into work I do.

7 Q. Throughout the day you testified about a
8 few different risk adjustment programs. I'd like to
9 understand what role you played in each of those
10 programs.

11 I'll start with chart review: What is
12 chart review?

13 A. So chart review is a -- a program that
14 involves the retrieval of medical records, the
15 extraction of codes from those medical records, and
16 submission of those codes to CMS.

17 Q. In your role at Ingenix, and later Optum,
18 what was your understanding of the purpose of chart
19 review?

20 A. So my -- my understanding of the -- the
21 purpose of chart review was to enable us to report
22 the complete health status of the member.

23 Q. And in order to report the complete health
24 status of the member, what process was used by
25 individuals involved in chart review?

1 A. Typically we would target certain medical
2 records for retrieval. You know, once those medical
3 records are retrieved, they would be reviewed by
4 certified coders. There would be QA processes in
5 place to ensure the -- the codes are appropriately
6 supported in the medical record. And then those
7 codes would be submitted.

8 Q. You talked about certified coders who
9 abstracted medical records. What was the entire
10 universe of information provided to the certified
11 coders who abstract the medical records?

12 A. Yeah, those reviews would have been --
13 yeah, so the information that would have been
14 provided to the -- the coders at the time would be an
15 image of the -- the medical record, so it is what we
16 would refer to as a blind interview, you know, where
17 we're not getting any additional information related
18 to codes that were previously submitted; just a blind
19 abstraction, looking at the documentation provided in
20 the record, and assigning the appropriate ICD
21 diagnosis codes to that documentation.

22 Q. In this chart review process that you've
23 described, what attempt was made to compare diagnoses
24 codes abstracted by certified coders with diagnoses
25 codes that might have been identified by a coder

1 working for a hospital or a provider?

2 A. That -- that comparison would not have
3 been completed at, you know, through the chart review
4 program, but, you know, as we, you know, as I
5 testified earlier, there was a claims verification
6 process, you know, where there was an attempt to
7 match the diagnosis submitted by providers; they're
8 also part of the chart review program.

9 You know, I call it an attempt because it
10 a very complex process; it has, you know, several
11 challenges, you know, in particular related to the
12 quality of data around the provider IDs across
13 various systems. And also, you know, the
14 completeness of the medical records that would have
15 been reviewed as part of the chart review process.

16 Q. You talked a little bit about the
17 complexity of the process. What additional
18 information would be required in order to undertake a
19 comparison between diagnoses codes identified by
20 United's certified coders with codes that might have
21 been identified by coders working for a hospital or a
22 provider?

23 MR. MASON: Objection to form.

24 Foundation.

25 THE WITNESS: So, you know, the first

1 thing is understanding that you have a match
2 between the -- you know, the same provider in
3 the claims system is the same provider in the
4 medical record review system.

5 And that's always a challenge within the
6 industry around the quality of provider data, in
7 particular with, you know, providers; they may
8 be assigned an ID. They could have multiple
9 IDs, based on where they may -- which locations
10 they practice in, or which IPA they're part of,
11 or which provider group they may be part of.
12 Those IDs would typically change over time.
13 They may not be unique.

14 And then the same applies in the health
15 plan side. You know, typically health plans
16 grow through acquisition. There's multiple
17 claims platforms. The same providers may
18 have -- they may need to present in multiple
19 systems, you know, with different IDs.

20 So that's the -- that's the big -- you
21 know, one of the big challenges, you know,
22 related to matching, you know, the data.

23 BY MR. QURESHI:

24 Q. Mr. Bird, what conclusions, if any, would
25 you draw from a circumstance in which a certified

1 CERTIFICATE

2

3 I, KAREN K. KIDWELL, Registered Merit Reporter,
4 and Certified Realtime Reporter, do hereby certify
5 that prior to the commencement of the examination,
6 the deponent was remotely sworn to testify to the
7 truth, the whole truth under penalty of perjury.

8 I DO FURTHER CERTIFY that the foregoing is a
9 verbatim transcript of the testimony as taken
10 stenographically by me at the time, place and on the
11 date hereinbefore set forth, to the best of my
12 ability.

13 I DO FURTHER CERTIFY that I am neither a
14 relative nor employee nor attorney nor counsel of any
15 of the parties to this action, and that I am neither
16 a relative nor employee of such attorney or counsel,
17 and that I am not financially interested in this
18 action.

DEPOSITION OF BARBARA BLAIR
WEDNESDAY, APRIL 3, 2024
9:48 a.m. - 7:37 p.m.

TWO SOUTH BISCAYNE BOULEVARD, SUITE 1850
MIAMI, FLORIDA

- - -

Reported By:
Katiana Louis
Notary Public, State of Florida
Miami Office #1100998
Magna Legal Services
866-624-6221
www.MagnaLS.com

1 others at FTI in publications related to any of
2 these topics?

3 A. I may have. I may have been asked about
4 a specific subject, but I can't specifically
5 point to any publisher.

6 Q. And you also did not list any
7 presentations from the past 10 years relevant to
8 the issues in your expert report; is that
9 correct?

10 A. That is correct.

11 Q. So, in the past 10 years, you have not
12 made or drafted any presentations related to
13 diagnosis coding; is that correct?

14 A. I performed internal presentations to
15 clients pretty regularly, but they are all under
16 privilege.

17 Q. But no external presentations?

18 A. No external.

19 MS. LIKOFF: Okay. I think we can
20 go ahead and take a break.

21 (A brief break was had.)

22 BY MS. LIKOFF:

23 Q. Ms. Blair, in connection with the
24 opinions you're offering in this case, you have
25 not reviewed any medical records; is that

1 correct?

2 A. That is correct.

3 Q. So, I'd like to now turn back to
4 Exhibit 812, which is a copy of your expert
5 report. We can keep this out because we'll spend
6 time going through it now.

7 You offer two main opinions in your
8 report; is that correct?

9 A. That is correct.

10 Q. And we'll discuss them in detail, but I
11 just want to start off with making sure I
12 understand at a high level the two opinions that
13 you are offering. You first opine that the
14 identification of diagnosis codes supported by
15 documentation in a medical record is a complex
16 process, informed by a variety of coding guidance
17 dependent on the coder's training, experience,
18 and judgment; is that correct?

19 A. That is correct.

20 Q. And what is the basis for this opinion?

21 A. My 25-plus years of working in the
22 diagnosis and coding space, as well as my
23 education and experience that I've had in the
24 industry.

25 Q. Is there anything else that you're

1 relying on as the basis for this opinion?

2 A. The resources as I've quoted them.

3 Q. We'll discuss some of those as we go
4 throughout the day.

5 And then you offer a second opinion;
6 correct?

7 A. I do.

8 Q. And I think that appears on -- that
9 appears on page 27 of your report; correct?

10 A. Correct.

11 Q. And what's the basis for this second
12 opinion that you offer?

13 A. This is based on my 25 years of
14 experience in looking at many, many medical
15 records.

16 Q. Is it based on anything else?

17 A. No, it is not.

18 Q. And I think we may have covered this,
19 but I just want to make sure the record is clear,
20 what information were you given in order to form
21 your opinions in this case?

22 A. These are my opinions.

23 Q. Were you given any information or
24 resources on which to base your opinions?

25 A. No. The resources are mine and this is

1 education, but I don't believe I talk about
2 undercoding or overcoding. I talk about
3 potentially missed because of their background
4 or, you know, that -- that's the reason for the
5 additional reviews. But undercoding, overcoding,
6 that is all just part of my discussion on the
7 complexity of coding.

8 Q. Well, I recognize that, I don't believe,
9 you used the words "undercoding" or "overcoding"
10 in your report, but as we just talked about, I
11 believe there are a number of examples, but I'll
12 point to the one again in paragraph 24 you do
13 ultimately describe a scenario in which
14 undercoding might take place due to coder
15 experience and training?

16 A. They may be less effective, yes, in
17 identifying all the diagnosis codes.

18 Q. So, I'm just trying to understand
19 whether you believe that those same concerns with
20 respect to coder experience, coder training could
21 lead to overcoding or miscoding?

22 A. Again, in my report, I do speak to that.
23 I speak to human error. I speak to miscoding. I
24 speak to that.

25 Q. Do you agree that coder certification,

1 ongoing coder training and quality control
2 results in coding that is more accurate?

3 A. I can opine to training, certifications
4 that may -- as you can see, that may assist a
5 coder in being more proficient in their job. As
6 to accurate, I can't truly assign what accuracy
7 is, but I can say that training and certification
8 does assist the coder as a rule into better being
9 able to identify diagnoses in the record.

10 Q. I'd like to move on to the next sort of
11 six points that you make which relate to the
12 availability, legibility, and variability of
13 provider documentation. In paragraph 26 you
14 state, "In addition to varied coder backgrounds,
15 the provider documentation available to coders
16 during chart review varies greatly."

17 Is that your opinion?

18 A. It is.

19 Q. And what is the basis for your opinion
20 that provider documentation during chart review
21 varies greatly?

22 A. In any type of chart review, I will say
23 that in my experience, that's been one of the
24 more challenging aspects of chart review is
25 getting a complete record and all the record that

1 you request.

2 Q. Are you basing your opinion on anything
3 other than your experience?

4 A. No, that is my experience.

5 Q. Can you point to any studies or
6 published articles that support your opinion that
7 provider documentation available to coders during
8 chart review varies greatly?

9 A. No, I cannot.

10 Q. So, I'd like to specifically focus for a
11 couple of minutes on paragraph 29 in which I
12 believe you discuss the legibility and clarity of
13 available documentation. And you opine that this
14 can also "affect a coder's ability to identify
15 diagnosis codes." Is that correct? Is that your
16 opinion?

17 A. Yes, that is my opinion.

18 Q. And what is the basis for your opinion
19 that "the legibility and clarity of documentation
20 can affect a coder's ability to identify
21 diagnosis codes"?

22 A. As you can see, a coder who can't read a
23 provider's handwriting may not identify the
24 diagnosis code during a chart review. But
25 another coder who is in the provider's office is

1 familiar with that documentation and knows that
2 that says "diabetes" and they assign the diabetes
3 code.

4 Q. Do you believe that there is any
5 requirement for documentation to be legible to
6 the extent that it is readable to any coder
7 looking at the documentation?

8 A. I believe, based on the role of a coder,
9 is if you know what that documentation is, you
10 assign the code appropriately. If someone else
11 is unable to read that record, that coder that
12 assigned that code who can, assigned it
13 appropriately.

14 MS. LIKOFF: All right. I'd like
15 to take a look at another exhibit. And
16 I think this will be Exhibit 815.

17 And Lauren, this is Tab 11. And
18 I'll note that there is some yellow
19 highlighting -- it's not even
20 highlighting. It's yellowness that
21 appears on the document. And just on
22 the courtesy copy that we're going to
23 provide on hard copy, but this is not
24 highlighting that we made and it does
25 not have any significance and I don't

1 believe it appears on the official
2 exhibit on AgileLaw.

3 MS. SOBEL: So just to confirm, the
4 exhibit in AgileLaw is the same as the
5 exhibit that we're seeing here?

6 MS. LIKOFF: It is.

7 MS. SOBEL: Just without the yellow
8 highlights?

9 MS. LIKOFF: It is, yes. And I
10 believe it's now up in AgileLaw as 815,
11 if you want to take a look at it.

12 (Defendant's Exhibit No. 815 was
13 marked for identification.)

14 BY MS. LIKOFF:

15 Q. So, I'm handing you, Ms. Blair, an
16 article from AAPC entitled, "Medical Record
17 Entries: What Is Timely and Reasonable?" And I
18 believe this was cited in footnote 16 of your
19 report.

20 MS. SOBEL: Take your time to
21 review it.

22 BY MS. LIKOFF:

23 Q. My first question will just be: Whether
24 this article is familiar to you?

25 MS. SOBEL: You said it was

Videotaped Deposition of
MARY BONNER
Given Remotely
Friday, May 13, 2022

Reported by: Karen K. Kidwell, RMR, CRR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 Q. Is this often referred to as "MA"?

2 A. Yes.

3 Q. What is Medicare Advantage?

4 A. It's Part C of the Medicare program.

5 Q. And how did you learn about Medicare
6 Advantage?

7 A. I learned about it just before I worked at
8 CMS, just through general awareness of Medicare
9 programs. And then I've learned about it directly
10 through my work on the RADV project.

11 Q. And while at CMS, did you receive any
12 specific training related to Medicare Advantage and
13 how it worked?

14 A. No. Not formal training, no.

15 Q. So you -- more of a learn-on-the-job type
16 thing?

17 A. Yes. About the program, yes.

18 Q. And what is your current job title at CMS?

19 A. I'm a communications specialist.

20 Q. And how long have you had that position?

21 A. Since 2013.

22 Q. Okay. And if you scroll back up to page 1
23 of Exhibit 1196, next to "Work Experience," it lists
24 "Communications Specialist." Is that your current
25 position?

1 A. Yes.

2 Q. And what do you do in this role?

3 A. I do writing and editing related to
4 Medicare, and marketplace messaging, mainly for
5 beneficiaries and consumers, those programs.

6 Q. And is it related to Medicare Advantage?

7 A. There are references to Medicare Advantage
8 in the work that I do, yes.

9 Q. Is it also related to the Affordable Care
10 Act?

11 A. Yes.

12 Q. Is it related to the RADV project that you
13 mentioned earlier?

14 A. No.

15 Q. Okay. And who do you report to now?

16 A. Valerie Perkins is the director at the
17 Division of Content Development.

18 Q. And just -- did you say "Perkins"?

19 A. Yes. Valerie Perkins.

20 Q. Okay. Great. Thank you. I wanted to
21 make sure I heard correctly.

22 Did anything that you -- does anything in
23 your current role relate to audits of Medicare
24 Advantage plans?

25 A. No.

1 Calls for speculation.

2 THE WITNESS: Could I ask you to repeat
3 the question again?

4 BY MS. MADDUX:

5 Q. Would the senior coder review 100 percent
6 of the additional HCCs because the primary coder may
7 have erroneously identified it during their review?

8 MS. OBEREMBT: Objection. Foundation.
9 Calls for speculation.

10 THE WITNESS: No, I think that it would be
11 for -- they would be reviewing for an IC- -- you
12 know, a missing ICD-9 code -- an ICD-9 code that
13 wasn't identified.

14 BY MS. MADDUX:

15 Q. So the senior -- yeah, go ahead.

16 A. No, no, go ahead.

17 Q. The senior coder was conducting a review
18 of 100 percent of both the discrepant and additional
19 HCCs to check the primary coder's work?

20 MS. OBEREMBT: Objection. Foundation.
21 Calls for speculation.

22 THE WITNESS: That's not my memory, that
23 they were checking their work. They were --
24 they were checking to see -- they were checking
25 to see if there was an ICD-9 code present that

1 would validate an HCC, requested HCC.

2 BY MS. MADDUX:

3 Q. The senior coder was?

4 A. Yes.

5 Q. So if the primary coder had not identified
6 it, the senior coder was doing a second review to
7 confirm if it was in fact there?

8 A. Correct.

9 MS. OBEREMBT: Objection. Foundation.
10 Calls for speculation.

11 BY MS. MADDUX:

12 Q. Number 5 on page 25 of Exhibit 1197 says,
13 "Initial review of approximately 25 medical records
14 prior to beginning 'live' review of medical records
15 for any coders." Do you see that?

16 A. Yes.

17 Q. A few sentences later, it says, "An IRR
18 report generated by the Tool will indicate
19 proficiency at 95 percent or greater; in the event
20 that the coder achieves less than 95 percent
21 proficiency, that coder shall be restricted from
22 coding of the live medical records until a subsequent
23 review of another 25 medical records results in
24 proficiency of 95 percent or greater."

25 Do you see that?

1 A. I do.

2 Q. Is this the IRR process we discussed
3 earlier?

4 A. Yes.

5 Q. It then says, "The contractor shall
6 continue to monitor IRR of all coders and provide
7 appropriate remediation or dismissal."

8 Do you see that?

9 A. Yes.

10 Q. Did the IRR evaluation take place on a
11 continual basis throughout the medical record review
12 process?

13 MS. OBEREMBT: Objection. Vague.

14 THE WITNESS: I'm taking a minute just to
15 reread this and try to remember if it -- if it
16 did continue.

17 BY MS. MADDUX:

18 Q. Take as much time as you need.

19 A. I -- I clearly remember the initial IRR
20 period. I believe that it continued throughout, you
21 know, a specific coding period, but I can't remember
22 details about that.

23 Q. And what is a 95 percent proficiency?

24 A. My memory is that -- that coders would
25 accurately code the record 95 percent of the time.

1 Q. Do you know why the standard was
2 95 percent?

3 A. No.

4 Q. The IRR activity described here, would
5 that involve comparing the diagnosis codes identified
6 by the primary coder to the diagnosis codes
7 identified by the senior coder?

8 A. I don't remember that.

9 Q. Does it involve a situation where one
10 coder said the -- the other code was not supported by
11 the medical record, but the senior coder said that
12 the code is supported by medical record?

13 MS. OBEREMBT: Objection. Foundation.
14 Calls for speculation.

15 THE WITNESS: That's a reasonable way to
16 describe the -- that check.

17 BY MS. MADDUX:

18 Q. Does the 95 percent threshold acknowledge
19 that coders may not agree about whether a diagnosis
20 code is supported by medical record?

21 MS. OBEREMBT: Objection. Foundation.
22 Calls for speculation.

23 THE WITNESS: I don't know the answer to
24 that.

25

1 BY MS. MADDUX:

2 Q. In your experience as the government task
3 leader or contracting officer's representative, were
4 you aware that coders did not always agree about what
5 other diagnosis code was supported by medical record?

6 A. Yes.

7 Q. Does the 95 percent threshold acknowledge
8 that coders may make mistakes?

9 MS. OBEREMBT: Objection. Foundation.
10 Calls for speculation. Asked and answered, too.

11 THE WITNESS: I don't remember that
12 definition, that the IRR step acknowledges that
13 coders might make mistakes. But it's -- so I
14 kind of don't have more to say there.

15 BY MS. MADDUX:

16 Q. Why not have a 100 percent standard?

17 MS. OBEREMBT: Objection. Foundation.
18 Calls for speculation.

19 THE WITNESS: I don't remember ever
20 talking about -- or talking to my colleagues
21 about the percent -- the acceptable percentage
22 for the standard.

23 BY MS. MADDUX:

24 Q. What are some reasons why a primary
25 coder's IRR may be 95 percent or less?

1 Do you see that?

2 A. Yes.

3 Q. If you skip to the second paragraph, it
4 says, "The contractor's team of certified trained
5 medical record reviewers shall" -- excuse me. Strike
6 that.

7 Do you see -- do you see the paragraph
8 that starts, "The contractor's team of certified
9 trained medical record reviewers"?

10 A. Yes.

11 Q. Midway through this paragraph, it says,
12 "There shall be one lead (senior coder) reviewer for
13 every five primary reviewers, and the lead reviewer
14 shall be qualified to mediate coding decisions as
15 appropriate between senior and primary coders."

16 Do you see this?

17 A. Yes.

18 Q. What does "mediate coding decisions" mean?

19 A. So the record would go to the senior coder
20 if the primary review didn't show the ICD-9 code.
21 And so if the senior coder could find it and the
22 primary coder would disagree, there would be an
23 opportunity to -- to mediate that decision.

24 I think that's one example of the
25 mediation of a coding decision. And that's not

1 something that I would have -- yeah, I -- and -- and
2 that would be work that's happening on their end. So
3 that's my memory of it.

4 Q. So one scenario may be -- one scenario
5 necessitating a mediation of coding decision may be
6 where the two coders, the primary and senior coder,
7 disagreed about whether it was supported by the
8 medical record?

9 A. Yes.

10 Q. In your experience as the contracting
11 officer's representative, or the -- the government
12 task leader provide the audit, did you have an
13 understanding that coding was subjective?

14 MS. OBEREMBT: Objection. Vague.

15 THE WITNESS: I don't know that that's a
16 term I would have heard used to describe coding,
17 but -- yeah, I -- I don't know -- I don't know
18 the answer to that, but it's not -- I don't
19 remember it being a term that would be used.

20 BY MS. MADDUX:

21 Q. In your experience as the contracting
22 officer representative or government task leader
23 provide the audit, do you agree that two coders may
24 have different interpretations of the coding
25 guidance?

1 MS. OBEREMBT: Objection. Calls for
2 speculation.

3 THE WITNESS: I think that's accurate, to
4 say that coders could have different
5 interpretations of the coding guidance.

6 BY MS. MADDUX:

7 Q. In your experience working with trained
8 coders, did you think it was not uncommon for two
9 certified coders to disagree on whether or not a
10 particular diagnosis code was supported by a medical
11 record?

12 MS. OBEREMBT: Objection. Foundation.

13 THE WITNESS: I don't remember that it was
14 common. But again --

15 BY MS. MADDUX:

16 Q. Do you recall --

17 A. Sorry. I was going to say, again, it's
18 been a long time since I've worked on that. But I
19 don't remember that it was common.

20 Q. Do you recall that disagreements among two
21 certified coders occurred?

22 MS. OBEREMBT: Objection. Foundation.

23 THE WITNESS: I don't remember specific
24 instances, but I do know that, yes, there could
25 be disagreements about coding.

1 BY MS. MADDUX:

2 Q. And do you know why two certified coders
3 could reach different results?

4 MS. OBEREMBT: Objection. Foundation.
5 Calls for speculation.

6 THE WITNESS: No. It's something that I
7 would have been more aware of when I was working
8 on this project, and I -- I don't remember that
9 right now.

10 BY MS. MADDUX:

11 Q. In situations where two certified coders
12 disagreed, would the mediation exercise work to
13 resolve those disagreements?

14 MS. OBEREMBT: Objection. Calls for
15 speculation.

16 THE WITNESS: I -- I don't remember the
17 outcome of that kind of mediation.

18 BY MS. MADDUX:

19 Q. In the situation where two certified
20 coders have a difference of opinion, would you agree
21 that neither one is right or wrong?

22 MS. OBEREMBT: Objection. Vague. Calls
23 for speculation. Lack of foundation.

24 THE WITNESS: Sorry, can you repeat the
25 question?

1 BY MS. MADDUX:

2 Q. In a situation where two certified coders
3 have a difference of opinion about whether or not a
4 diagnosis code is supported by the medical record,
5 would you agree that neither one is necessarily right
6 or wrong?

7 MS. OBEREMBT: Repeat the objections.

8 THE WITNESS: I -- I don't think I know
9 enough about coding to answer that question. I
10 think it would depend on the coders and the code
11 in question.

12 BY MS. MADDUX:

13 Q. The last sentence --

14 MS. OBEREMBT: We've been -- excuse me.

15 We've been going another hour, and I think
16 it's time for a break.

17 MS. MADDUX: Yeah, I just have one more
18 question on this document. If we can just
19 finish this page, it should take less than two
20 minutes --

21 MS. OBEREMBT: Sure.

22 MS. MADDUX: -- if that's okay, Laurie.

23 MS. OBEREMBT: Yeah. Sounds good.

24 BY MS. MADDUX:

25 Q. So the last sentence of -- if you turn --

1 A. Yes.

2 Q. Do you know if this document was submitted
3 to you as the contracting officer's representative,
4 or COTR, for HMS's contract for payment year 2009
5 RADV audit?

6 MS. OBEREMBT: Objection. Asked and
7 answered.

8 THE WITNESS: We -- we saw an earlier
9 document that showed Sam Jenkins as the COR for
10 the contract. I -- I don't remember if this
11 predates or -- predates that.

12 BY MS. MADDUX:

13 Q. Under the "Submitted By," it says it was
14 submitted by Jeanne Cress, or Jeanne Cress, at HMS.
15 Do you see that?

16 A. I do, yes.

17 Q. And then this is a monthly progress report
18 for the time period August 1st, 2011, to August 30th,
19 2011, correct?

20 A. Yes.

21 Q. Do you know what the purpose of this
22 document is?

23 A. The progress report for the work that HMS
24 had done in August.

25 Q. Were you responsible for reviewing the

1 monthly progress report?

2 A. Yes. I usually shared them with others on
3 our team as well.

4 Q. I want to direct you to page 4 of
5 Exhibit 1198.

6 A. Mm-hmm.

7 Q. In the last row, it says "3.B.5." Do you
8 see that?

9 A. I do.

10 Q. And that says "Medical record review
11 (second level initial validation review) including
12 weekly IRR testing, coding discussions, and findings
13 reports." Do you see that?

14 A. I do, yes.

15 Q. And then in the next box, if you scroll to
16 page 5, the box continues, and it says, "The final
17 overall HMS IRR is 94.97 percent for the national
18 2009 audit." Do you see that?

19 A. I do.

20 Q. Does this suggest that the IRR was lower
21 than the 95 percent threshold we talked about
22 earlier?

23 A. It's not 95 percent. I don't know -- yes,
24 it's a different number than 95 percent.

25 Q. Does the fact that the agreement rate is

1 lower than 95 percent surprise you?

2 A. Does it surprise me? It's -- it's notable
3 here that it's different. But I -- I don't remember
4 how -- how it was addressed in 2011.

5 MS. MADDUX: And we're going to post a
6 new document to AgileLaw: Tab 37, please. And
7 this document, for the record, is Bates-labeled
8 USBP000045745.

9 And this will be Exhibit 1199.

10 (Exhibit 1199 was marked for identification.)

11 BY MS. MADDUX:

12 Q. Do you see this document up on the screen?

13 A. I do.

14 Q. And this appears to be a June 22nd, 2010,
15 e-mail from you to Lateefah Hughes, copying Jennifer
16 Harlow and Bryant Hall at HMS. Is that correct?

17 A. Yes.

18 Q. And the "Subject" line reads, "Primary
19 coder inability to view coversheet." Do you see
20 that?

21 A. Yes.

22 Q. Do you know what the coversheet is?

23 A. I don't remember now. I -- I would
24 have -- I don't remember now, and in this context.
25 It's something I would have known then.

1 Q. In the second paragraph of your e-mail, it
2 says, "Primary coders have no access to coversheets,
3 which may otherwise help lead them to the HCC being
4 validated." Do you see that?

5 A. Yes.

6 Q. Do you recall if the coversheets included
7 information about what HCC the plan had submitted?

8 A. I don't recall what the coversheet
9 displayed.

10 Q. Do you remember this issue with the
11 primary coders not having access to the coversheets?

12 A. I don't recall it.

13 Q. You then write: "Example: At first
14 glance, a record was illegible to the primary coder,
15 escalation reviewer, and senior coder. However, when
16 the senior coder checked the cover sheet she or he
17 was able to locate the HCC on the record." Do you
18 see that?

19 A. I do.

20 Q. Do you recall what you mean by this?

21 A. I don't recall this specific episode.
22 I -- I think the sentence seems self-explanatory.

23 Q. So does this mean that the primary coder,
24 doing their blind review of the record, was unable to
25 find the diagnosis code in the medical record?

1 CERTIFICATE OF REPORTER

2 I, Karen K. Kidwell, Registered Merit Reporter
3 and Notary Public for the State of Maryland at Large,
4 do hereby certify:

5 That the foregoing deposition was taken
6 remotely before me on the date and at the time stated
7 on page 1 of this transcript; that the deponent was
8 duly sworn to testify to the truth, the whole truth
9 and nothing but the truth; that the testimony of the
10 deponent and all objections made at the time of the
11 examination were recorded stenographically by me and
12 were thereafter transcribed; that the foregoing
13 deposition as typed is a true, accurate and complete
14 record of the testimony of the deponent and of all
15 objections made at the time of the examination to the
16 best of my ability.

17 I further certify that I am neither related to
18 nor counsel for any party to the cause pending or
19 interested in the events thereof.

20 Witness my hand this 17th day of May, 2022.

VIDEOTAPED DEPOSITION OF PATRICIA BRENNAN
(Taken Virtually by Plaintiff)
Tuesday, September 12th, 2023
11:34 a.m. EDT

Reported Stenographically by

1 Q. What is IRADS?

2 A. It was Optum's submission system for
3 RAPS submissions.

4 Q. And was this also the system to which
5 providers would submit claims data to Optum?

6 A. I don't think that's accurate. I think
7 the claims data that providers submitted went to
8 the plan, and then the plan submitted that data to
9 Optum, which then got put into IRADS.

10 Q. Okay. And then Optum would use IRADS
11 to submit that data through RAPS to CMS?

12 A. Correct.

13 Q. And you never would refer to these as
14 "provider-reported diagnosis codes"; is that
15 correct?

16 A. I don't know what that refers to.

17 Q. Okay. Beyond diagnosis codes that came
18 to the plan from providers, were there other
19 sources of diagnosis codes submitted by Optum on
20 behalf of M&R?

21 A. Yes.

22 Q. And what other sources of -- what were
23 the other sources of diagnosis codes that Optum
24 submitted on behalf of M&R to CMS?

25 A. Codes that came from retrospective

1 chart review and codes that came from prospective
2 programs.

3 Q. Okay.

4 MS. LIKOFF: Since we promised our
5 videographer that we would take a break, and
6 I don't want to sort of move into a whole new
7 topic, this may be a good time for us to
8 break for lunch. So if we could go off the
9 record.

10 THE VIDEOGRAPHER: Off the record,
11 2:54 p.m.

12 (Recess taken.)

13 THE VIDEOGRAPHER: On the record,
14 3:42 p.m.

15 MS. LIKOFF: Thank you.

16 BY MS. LIKOFF:

17 Q. Welcome back, Ms. Brennan.

18 We were just starting -- before the
19 break, I was just starting to ask you about Optum's
20 chart review program.

21 Is it correct that chart review is a
22 process that Optum employed to collect medical
23 records from providers, employ coders to review
24 those medical records to identify all diagnoses
25 documented in those medical records, and then

1 submit additional diagnoses to CMS for risk
2 adjustment payments?

3 Is that an accurate description of the
4 chart review process?

5 A. Yes.

6 Q. And throughout our conversation this
7 afternoon, I may refer to the chart review program
8 as "CR." You'll understand that I'm talking about
9 the chart review program?

10 A. Yes.

11 Q. Great.

12 And you'd agree that the goal of the
13 chart review program was to identify additional
14 diagnosis codes in beneficiaries' medical records
15 to submit to CMS?

16 A. Yes.

17 Q. And it's correct that those additional
18 diagnosis codes would lead to increased
19 reimbursement from CMS to the MAO?

20 A. In some instances, yes.

21 Q. Were there instances in which those
22 additional diagnosis codes would not increase
23 reimbursement to the MAO?

24 A. Yeah. Sometimes you could find a code
25 and it would already be reported somewhere else, so

1 then it wouldn't generate any additional revenue.

2 Q. Okay.

3 A. Only if it was new.

4 Q. And Optum performed the chart review
5 program for its clients; is that correct?

6 A. Yes, if a client purchased that
7 service, yes.

8 Q. And one of those clients was M&R,
9 correct?

10 A. Correct.

11 Q. Do you remember what time period Optum
12 performed the chart review program for M&R?

13 A. I mean, since I started until I left.

14 Q. Okay. And did Optum perform chart
15 review for any non-UnitedHealth claims?

16 A. Yes.

17 Q. I know that when we were speaking about
18 your background earlier this morning, you explained
19 that there was a time period in which you had
20 involvement with the chart review program.

21 Can you explain in a little bit more
22 detail what your involvement with the chart review
23 program was?

24 A. You mean when I was leading
25 retrospective chart review, is that what you're

1 referring to?

2 Q. Let's start there.

3 A. Yes. So my involvement was, you know,
4 as I mentioned earlier, like working with our
5 existing clients on launching their program because
6 it was an annual program that happened every year,
7 and I would work with them on launching, talk to
8 them about what they wanted to achieve, and present
9 options to them. They would select what they
10 wanted to pursue, and then we would launch the
11 program. And then I would monitor the program to
12 see if it was in line with what we expected it to
13 be and report out to them periodically on the
14 program performance.

15 Oh, sorry.

16 Q. No, no, please finish your answer.

17 A. That was for existing clients that
18 already purchased the service.

19 And then I would also go out with our
20 sales team to prospective clients and explain the
21 program to them, how it worked, because they were
22 interested in potentially purchasing the program.

23 Q. I'd like to break down what you just
24 said a little bit. When we were talking about your
25 work with respect to existing clients, you

1 recall for sure.

2 Q. Okay. During your time at Optum, did
3 you come to have any understanding regarding the
4 general rate of unsupported codes and diagnostic
5 data submitted by providers?

6 MR. ABASCAL: Object to form.

7 THE WITNESS: I think that the general
8 error rate was published by CMS as part of
9 the national sample of the -- what they call
10 the "IPM audit" that they did across plans.
11 So I remember being aware of that at the
12 time.

13 BY MS. LIKOFF:

14 Q. Do you recall what that sort of
15 published rate was?

16 A. I don't recall what the rate was.

17 Q. Do you recall whether there were any
18 other sources for your understanding regarding the
19 general rate of unsupported codes in diagnostic
20 data submitted by providers?

21 A. No, I don't recall.

22 Q. Another one of the risk adjustment
23 programs that Optum performed, at least for a
24 period of time, was a program called "claims
25 verification," correct?

1 A. Correct.

2 Q. And you're familiar with claims
3 verification?

4 A. Yes.

5 Q. And today I may refer to the claims
6 verification as "CV." If I refer to it as "CV" or
7 the "CV program," you'll understand that I'm
8 referring to claims verification?

9 A. Yes.

10 Q. Great.

11 And claims verification was a program
12 that was implemented to identify diagnosis codes
13 that were previously submitted to CMS but were not
14 documented in the medical record for that
15 corresponding date of service for charts reviewed
16 as part of the chart review program. Is that an
17 accurate description?

18 A. Yes.

19 Q. And ultimately, if a code, a diagnosis
20 code went through the CV process and a CV coder did
21 not find support for the code in the medical
22 record, then Optum would submit those codes as "CV
23 deletes"; is that correct?

24 A. Correct.

25 Q. I'd like to understand a little bit

1 more about what your role was with respect to the
2 claims verification program.

3 A. So I participated in the development
4 and enhancements that came with Phase II and III,
5 and then discussing it with clients, reporting out
6 on the results and monitoring the program.

7 Q. Would you describe yourself as the
8 leader on CV during at least some period of time?

9 A. I would say I was working with our
10 legal team on developing the program, continuing to
11 enhance and develop the program.

12 Q. Do you recall who from the legal team?

13 THE WITNESS: Can I answer that?

14 MR. ABASCAL: You can just provide the
15 names. Just don't provide any substance of
16 communications.

17 THE WITNESS: So Tim Trujillo,
18 Keith Dobbins, Dave Thomas.

19 BY MS. LIKOFF:

20 Q. Were there nonlawyers that you were
21 working with in developing the CV program?

22 A. Not in developing it, but in
23 communicating, you know, the approach. Once we
24 finalized an approach, then I would work with our
25 other teams to develop the process and what needed

CONFIDENTIAL

Videotaped Rule 30(b)(6) Deposition of United States
Designee 5 by CHRISTOPHER GILES BRESETTE

Given Remotely

Wednesday, May 31, 2023

10:34 a.m. Eastern

Reported by: Karen K. Kidwell, RMR, CRR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 Q. Okay. And you're prepared to testify
2 about Topic 19 on behalf of the government today?

3 A. Yes.

4 Q. If you move down to page 27 of the PDF, I
5 want you to take a look at Topic 22, please.

6 And do you recognize Topic 22 as one of
7 the topics you've been designated to testify on
8 behalf of the OIG today?

9 A. Yes.

10 Q. And you're prepared to testify on that
11 topic on OIG's behalf?

12 A. I am.

13 Q. So, Mr. Bresette, you have not been
14 deposed in this litigation -- or at all, correct?

15 A. Correct.

16 Q. Just want to do a little bit -- get a
17 little bit of background on your -- your role. What
18 is your -- what is your current role, your current
19 position?

20 A. My current role with OIG, I am the
21 director of Medicare Part C audits.

22 Q. And who are your -- what are your
23 responsibilities as it relates to the topics that
24 you're prepared to testify about today?

25 A. I have to ask you --

1 MS. OBEREMBT: Objection. Vague.

2 BY MS. SCHEFFLER DO:

3 Q. What are some of your responsibilities as
4 the OIG director of Medicare Part C audits at OIG?

5 A. All of the audits for Medicare Part C,
6 from beginning to end. I hope --

7 Q. That would -- I'm sorry. Go ahead.

8 A. No, I got ahead of myself. My apologies.

9 Q. And that would include the OIG RADV,
10 audits as that's term's been defined in Exhibit 1435?

11 A. Yes.

12 Q. Who are your direct reports, if any?

13 A. You said director before me?

14 Q. I'm sorry. Your direct reports?

15 A. And my apologies. I honestly have bad
16 ears, so I do not mean any offense. Could you
17 rerepeat that question again, please? We're going to
18 turn up the volume a little too.

19 Q. Sure. And I'll try to keep my voice up as
20 well.

21 Who are your direct reports, if any?

22 A. Who I report to?

23 Q. Who reports to you?

24 A. Reports to me? Steve Garrison reports to
25 me.

1 am not aware of any CMS requirement to -- for
2 the MAOs to review all of the diagnosis codes
3 prior to submission.

4 BY MS. SCHEFFLER D0:

5 Q. Let's move on to Topic 18. And if it's
6 helpful, you can look at Exhibit 1435, which is again
7 the amended notice, 30(b)(6) notice that you are
8 testifying pursuant to today.

9 Topic 18 is on page 25 of the PDF of
10 Exhibit 1435.

11 A. Okay.

12 Q. Okay. Are you prepared to testify on
13 behalf of OIG on Topic 18 today?

14 A. Is your understanding that Topic 18
15 conforms to the relevant time period of 2004 to May
16 of 2017? May 16th of 2017?

17 Q. It does, yes.

18 A. Yes, I am prepared to testify on that.

19 Q. You understand what Topic 18 covers?

20 A. I believe I do.

21 Q. We've already confirmed that "MAOs" stands
22 for Medicare Advantage Organizations, right?

23 A. Could you repeat that, please? My bad
24 ears again, please. Sorry.

25 Q. We've already established that "MAOs"

1 refers to Medicare Advantage Organizations, right?

2 A. Yes. Yes.

3 Q. And do you understand that "diagnosis
4 codes" refers to ICD-9 or ICD-10 diagnosis codes?

5 A. I'm -- I thank you for your patience.
6 It's -- I'm having -- there's a -- it's on me; it's
7 on my ears. Could you say that question one more
8 time, please? I don't mean any offense.

9 Q. No problem.

10 Do you understand that "diagnosis codes,"
11 as used in Topic 18, refers to ICD-9 or ICD-10 --

12 A. Yes, I do.

13 Q. -- diagnosis codes?

14 A. Yes.

15 Q. So outside of the audits discussed
16 earlier, has the OIG analyzed whether the diagnosis
17 codes reported by providers, the MAOs, are supported
18 by medical records in the relevant time period?

19 A. Outside of the audits that we performed,
20 that we've discussed, am I aware -- is the OIG aware
21 that -- about the accuracy of diagnosis codes as
22 reported by providers? In order to do that, we would
23 have to review the medical records supporting them to
24 determine whether they are accurate or not. And
25 outside of those audits, we did not perform reviews

1 of medical records to determine whether diagnosis
2 were supported or not.

3 At least I'm not aware of any.

4 Q. Okay. So the answer to my question
5 is "no," then?

6 A. The answer to your question is -- is no.

7 Q. Okay.

8 A. Based upon the answer -- the qualification
9 that I provided.

10 Q. And apart from, again, the audits we've
11 already discussed, the RADV audits we've already
12 discussed, did OIG consider any analysis of whether
13 the diagnoses codes reported by providers to MAOs are
14 supported by medical records?

15 A. Did we consider -- did you ask, did we
16 consider whether the -- the diagnosis were reported
17 by MAOs -- reported by providers to MAOs were
18 accurate?

19 Q. I asked whether OIG considered any
20 analysis of whether the diagnosis codes reported by
21 providers to MAOs are supported by medical records.

22 A. Make sure I answer this correctly, and all
23 questions.

24 Q. Appreciate that.

25 A. -- regarding the accuracy.

CONFIDENTIAL - SUBJECT TO PROTECTIVE ORDER

Volume 2
DEPOSITION OF CHRISTOPHER BRESETTE
As 30(b)(6) Designee 5 of
The United States

(Via Zoom Videoconference)
August 9, 2023

Reported by: John L. Harmonson, RPR
Job No. 1001591

1 coder to take another look to determine whether
2 they agreed with the first senior coder who
3 identified a new HCC that had not been submitted by
4 the MAO; correct?

5 A. Correct.

6 Q. Why was the second senior coder -- why
7 wasn't that reviewed blind as well?

8 A. This was a process that we believed was
9 reasonable to accomplish our audit objective.

10 Q. Would you agree that coders can
11 sometimes miss diagnosis codes on a blind review?

12 MS. OBEREMBT: Objection; calls for
13 speculation.

14 THE WITNESS: I would have to speculate
15 on that. We've asked the senior coders to
16 determine whether they believe something is -- if a
17 diagnosis is supported or not.

18 BY MS. SCHEFFLER DO:

19 Q. In your preparation for today and
20 reviewing all of these audits, you're not aware of
21 any instances where the first senior coder
22 conducting a blind review determined that an HCC

1 was not validated but OIG ultimately determined
2 that it in fact was validated?

3 A. I'm not going to say that it did or did
4 not happen. It very well may have happened. I did
5 not study the results of the first senior coder and
6 the second senior coder.

7 Q. We can go back to that and look at some
8 specific examples to refresh your recollection.

9 A. Absolutely.

10 Q. So if the second senior coder determines
11 that the HCC that the first senior coder -- let me
12 restart that.

13 If the second senior coder determines
14 that a particular HCC is validated despite the
15 first senior coder determining that it was not
16 supported, then it escalated to a physician to
17 independently review the medical record and make a
18 final determination. Is that right?

19 A. It's mostly correct. There were
20 oftentimes where the senior coders -- I shouldn't
21 say often. There was the opportunity and there
22 were times that existed that either the first

1 senior coder or the second senior coder asked for
2 assistance with that physician reviewer to make the
3 determination.

4 There were, as you say, instances in
5 which the physician reviewer would review that. I
6 believe independently, but I don't want to say that
7 it was exclusively independently. A lot of times I
8 believe it was in consultation with the senior
9 coder to make that determination.

10 Q. So are you saying that the example that
11 I gave, that's not the only time a physician would
12 weigh in?

13 A. Correct.

14 Q. But you're not -- you're agreeing that
15 if the second senior coder found support in that
16 example, then a physician would independently
17 review the medical record to make the final
18 determination?

19 A. I would agree with that.

20 Q. Was the physician review blind as well?

21 A. No, it was not. And independently is
22 correct. So my apologies. I see "independently"

1 written in the report. There's a lot of steps to
2 this, and so I did not want to mislead you by any
3 means. So my apologies.

4 Q. No problem.

5 Okay. I'm going to shift gears just a
6 little bit. So in May, you had testified that for
7 each OIG audit, OIG issues a draft report to the
8 MAO being audited. Is that correct?

9 A. That is correct.

10 Q. And OIG permits the MAO to point to
11 documentation that it believes supports the HCCs at
12 issue. Is that right?

13 A. That is correct.

14 Q. And OIG also allows the MAOs to submit
15 additional medical records or documentation that it
16 believes supports the HCCs. Is that right?

17 A. Yes, that is correct. They can
18 submit --

19 Q. And is it correct --

20 A. I'm sorry. I did not mean to speak over
21 you.

22 Yeah, it is correct that we allow the

CONTAINS PORTIONS OF ATTORNEYS' EYES ONLY

Videotaped Deposition of
SEAN CAVANAUGH
Given Remotely
Thursday, February 17, 2022
9:02 a.m.

Reported by: Karen K. Kidwell, RMR, CRR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 Medicare Advantage plans?

2 A. No.

3 Q. Nothing to do with what's known as the
4 coding intensity adjustment, the -- or the
5 fee-for-service adjustment for the RADV audits? None
6 of that was within your purview at the Innovation
7 Center?

8 A. No.

9 Q. How long were you at the Innovation
10 Center?

11 A. February 2011 to March or April of 2014.

12 Q. What was your next role -- what was the --
13 what was the role that you took in March or April of
14 2014 at CMS?

15 A. I became deputy administrator and director
16 of the Center for Medicare.

17 Q. What is the Center for Medicare?

18 MS. KRIEG: Object to form.

19 THE WITNESS: Center for Medicare is one
20 of several centers within CMS. It specifically
21 has responsibility for the rule-making around
22 payment and regulation of Part A, B, C, and D of
23 Medicare.

24 BY MR. GALLAGHER:

25 Q. Who was your predecessor as the director

1 of the Center for Medicare?

2 A. Jon Blum.

3 (Reporter requests clarification.

4 A. Jon Blum, J-o-n, B-l-u-m.

5 Q. And did you take over directly for him, or
6 was there an interim director between you?

7 A. I believe the -- a woman named Elizabeth
8 Richter, who was a career civil servant, acted as the
9 acting center director between when Jon was appointed
10 and when I was appointed.

11 Q. Okay. Explain how it is you made the move
12 to be the director of the Center for Medicare. What
13 was the reason for that change in position?

14 A. Jon had been promoted from his position at
15 the Center for Medicare, so it created a vacancy. As
16 I said, it is common, if there isn't an immediate
17 successor -- these are political -- excuse me --
18 politically appointed positions. If there's not an
19 immediate successor, it's often common to have a
20 career civil servant fill in, which is what happened.

21 I threw my name in the hat, and I
22 interviewed with the administrator, Secretary's
23 Office with the White House, and I was selected for
24 the position.

25 Q. So your position as the director of the

1 Center for Medicare was a political appointment,
2 essentially, from the president, right?

3 A. That's correct. The presidential --
4 Presidential Personnel Office had to approve it, yes.

5 Q. And then you were confirmed by the Senate?

6 A. No, it's not a Senate confirm. It's
7 political, but not Senate confirm.

8 Q. As the director for the Center for
9 Medicare, were you responsible for overseeing the
10 regulation and payment of Medicare fee-for-service
11 providers, privately administered Medicare health
12 plans, and the Medicare prescription drug program?

13 A. Yes.

14 MS. KRIEG: Object to form.

15 THE WITNESS: Sorry.

16 Yes.

17 BY MR. GALLAGHER:

18 Q. And basically -- I listened to a podcast
19 you did at Aledade, and I think you described your
20 job as essentially running Medicare. Is that how you
21 would describe it?

22 A. That's how I describe it to lay people.
23 Technically, there are other aspects of the program.
24 There's a Center for Program Integrity, a Center for
25 Clinical Standards and Quality. But what most people

1 perceive as Medicare was mostly under my
2 jurisdiction.

3 Q. And as the director for the Center for
4 Medicare, there you did have responsibility for
5 regulation and oversight of the payment mechanisms
6 for Medicare Advantage plans, that's the subject of
7 this litigation. Right?

8 A. Yes.

9 Q. Things like risk adjustment, and the
10 models that are used to achieve it?

11 A. Yes.

12 Q. When did you leave government employment
13 at the Center -- at CMS?

14 A. January of 2017, whatever date was
15 inauguration date. Noon on the day of inauguration
16 date, January 2017.

17 Q. As a -- as a political appointment, your
18 appointment ended with the administration?

19 A. That's correct.

20 Q. So some of your colleagues have returned
21 to CMS under the new administration. Have you
22 considered doing that? Or do you have any plans to
23 do that?

24 A. I did consider it. I no longer have
25 plans.

1 Q. So you're happy at Aledade, and that's
2 where you are going to stay for the near term?

3 A. Yes.

4 Q. When you took the position as the -- as
5 the director for the Center for Medicare, did you
6 receive any kind of transition briefing on things
7 like the -- the risk-adjustment audits that are
8 conducted by the Center for Medicare, or CMS, or --
9 or the coding intensity, or coding intensity
10 adjustment, or things like that?

11 MS. KRIEG: Object to form.

12 THE WITNESS: Yes.

13 BY MR. GALLAGHER:

14 Q. What was the nature of that -- that
15 transition briefing? Who gave it to you, and what
16 form did it take?

17 A. Specifically on those issues you
18 enumerated? Because I had numerous transitional
19 briefings.

20 Q. Yes. Specifically on issues around the
21 payment programs for Medicare Advantage plan and --
22 and things associated with risk adjustment.

23 MS. KRIEG: Object to form.

24 THE WITNESS: They would have been
25 organized by my back then acting deputy director

1 on that side, Cynthia Tudor. So she would have
2 scheduled and arranged them and prepared them.

3 Most things related to Medicare Advantage
4 payment, the actual briefing would have been
5 conducted by Cheri Rice, or one of her staff
6 under her direction.

7 BY MR. GALLAGHER:

8 Q. And would the briefing -- or did the
9 briefing involve, you know, PowerPoint presentations,
10 or written briefing memos?

11 A. I have no specific recollection, but it --
12 yes.

13 Q. Just to get a sense of the -- of the
14 organizational structure you had at the Center for
15 Medicare, you were the director, and then you had
16 some deputy directors who served with you that had
17 specific areas of responsibility; is that right?

18 A. Yes.

19 Q. And you mentioned Cynthia Tudor. What was
20 her area of responsibility at the deputy director?

21 A. Everything under Part C and Part D.

22 Q. So that would include everything that had
23 to do with payment programs for Medicare Advantage
24 plans under Part C?

25 A. Yes.

1 Q. And then you mentioned that Cheri Rice is
2 somebody who had some responsibility for payment
3 programs for Medicare Advantage plans. What was her
4 role?

5 A. She was a group director for MPPG,
6 which -- I don't remember what it stands for exactly,
7 but it's Medicare Plan Payment Group, or something
8 like that -- under Cynthia Tudor.

9 Q. So in terms of direct responsibility for
10 payment programs, that really fell to Cheri Rice?

11 A. Yes.

12 Q. While you were at CMS, did you have any
13 responsibilities in connection with lawsuits like
14 this one?

15 MS. KRIEG: Object to form.

16 THE WITNESS: I'm not sure what you
17 meant -- what you mean. Did I have
18 responsibilities for them? I'm not an attorney,
19 if that's what you're asking.

20 BY MR. GALLAGHER:

21 Q. Well, while you were at CMS -- and in
22 particular, I'll focus on your -- your tenure as the
23 director of the Center for Medicare -- did you have
24 any responsibility for coordinating with the lawyers
25 who are pursuing this litigation on behalf of the

1 government?

2 A. Again, I'm not sure I understand the
3 question. I didn't -- I did -- I was informed of the
4 litigation by counsel.

5 Q. And as the director for the Center for
6 Medicare from 2014 to early 2017, did you coordinate
7 with the lawyers handling this litigation for the
8 government?

9 MS. KRIEG: Object to form.

10 THE WITNESS: Yeah. I apologize. I'm
11 struggling with the word "coordinate." I'm not
12 an attorney. I would not have coordinated a
13 litigation strategy, if that's what you're
14 asking.

15 BY MR. GALLAGHER:

16 Q. Let me ask a related question, then.

17 As the director for the Center for
18 Medicare from 2014 to early 2017, did you meet with
19 the lawyers who were handling this litigation for the
20 government?

21 A. I do recall having met with attorneys from
22 DOJ to be informed of this litigation, yes.

23 Q. And did you provide support or materials
24 to the lawyers handling this litigation for the
25 government?

1 A. I -- I believe -- so I don't --

2 MS. KRIEG: I'm just going to again
3 caution you not to reveal any privileged
4 information that was sought or received from
5 counsel.

6 THE WITNESS: Thank you.

7 I will solely say that my understanding
8 was any records I had were to be made available,
9 to be retained and made available for the
10 litigation. But I didn't need to do anything in
11 that regard. I never destroyed records, so I
12 never had to provide things. I think they
13 had -- they or the agency had access to them
14 without me -- my -- my intervening.

15 BY MR. GALLAGHER:

16 Q. I'm asking a slightly different question,
17 and it may be that I -- that I wasn't -- wasn't clear
18 about it.

19 What I'd like to know is, you know, during
20 your tenure as the director for the Center for
21 Medicare, did you meet with the lawyers who are
22 pursuing this litigation on behalf of the government
23 and provide them with support, whether it was
24 briefings on the underlying payment programs, or CMS
25 policies and procedures, or CMS plans for

1 rule-making, or anything to support them in the
2 litigation effort?

3 (Instruction not to answer.)

4 MS. KRIEG: I'm going to object and
5 instruct him not to answer any privileged
6 information sought or received with counsel.

7 And object to form also.

8 THE WITNESS: So I'm going to answer the
9 first half again, and on advice of counsel not
10 answer the second half.

11 Yes, I met with counsel. But as far as
12 what we discussed or provided, I'm going to
13 follow my counsel's advice and not to go
14 further.

15 BY MR. GALLAGHER:

16 Q. Did you have -- as the director for the
17 Center for Medicare, did you have any decision-making
18 authority with respect to this litigation, positions
19 that would be taken or arguments that would be made?

20 A. No, not that I was aware of.

21 Q. You indicated that you were briefed, while
22 you were at CMS as the director for the Center for
23 Medicare, on the nature of the case and the claims
24 being asserted. Is that correct?

25 MS. KRIEG: Object to form. Misstates

1 A. Yes.

2 Q. So to walk through how the program works,
3 at a high level, am I right that CMS first
4 establishes a benchmark, the highest monthly payment
5 that CMS will pay for an average fee-for-service
6 beneficiary?

7 A. I'd characterize it somewhat differently.
8 It is -- it is a benchmark up against which health
9 plans will -- Medicare Advantage plans will bid.

10 Q. And is that benchmark based on -- is it in
11 fact the highest monthly payment that CMS will pay
12 for an average beneficiary, using the fee-for-service
13 data as the basis for that determination?

14 A. Yes.

15 Q. And then plans bid. And does that bid
16 establish their base rate per beneficiary?

17 A. Yes. I mean, we're simplifying here, but
18 yes.

19 Q. And then the -- and then the plans are
20 paid either the base rate or the benchmark, whichever
21 is lower, right?

22 A. Well, they're paid their bid plus the --
23 you know, there's a rebate function, or -- skipping
24 that part, or --

25 Q. Let me be more specific. Before taking

1 into account risk adjustment or rebates or other
2 considerations, the plans are paid a base rate --

3 A. Okay.

4 Q. -- that is equal to their base rate or the
5 benchmark, whichever is lower, right?

6 A. Correct.

7 Q. I'm sorry. I couldn't hear you.
8 "Correct"?

9 A. Correct.

10 Q. Okay. And then CMS makes some adjustments
11 to that base rate, including an adjustment to reflect
12 enrollees' risk scores. Right?

13 A. That's correct.

14 Q. So there are various risk adjustments that
15 are taken into account, including demographic
16 information and where people live. But what we're
17 going to be talking about here is the adjustment
18 that's made based on diagnostic coding.

19 Is that one of the risk adjustments that
20 CMS makes to the base rate?

21 A. It is.

22 Q. Okay. And that risk adjustment, based on
23 diagnostic coding, is meant to ensure that Medicare
24 Advantage plans are paid more for beneficiaries with
25 conditions that are -- that make them riskier or

1 higher-cost, and less for beneficiaries that are
2 relatively less risky than the average
3 fee-for-service beneficiary. Is that a fair
4 statement?

5 A. That is.

6 Q. And the risk adjustment, the diagnostic
7 coding risk adjustment, is based on the hierarchical
8 condition categories that we discussed earlier,
9 right?

10 A. Correct.

11 Q. So just to use some examples, a
12 beneficiary with diabetes is likely to require more
13 medical care, and therefore will cost more than
14 someone who does not have diabetes; and they would
15 therefore have a higher risk score and a higher
16 risk-adjustment factor in the model. Right?

17 A. Yes.

18 Q. And the same thing would be --

19 A. All -- all other things held equal, yes.

20 Q. Right. So there would be a factor, a
21 risk-adjustment factor, associated with just the fact
22 you have diabetes. And then you would add that
23 factor to all the others for the beneficiary to come
24 to their total risk score. Right?

25 A. That's right.

1 Q. And the same thing is true for other
2 conditions that signal higher health care costs for a
3 beneficiary, like hypertension, or cancer, or heart
4 failure, or the fact that they're a quadriplegic.
5 Right?

6 MS. KRIEG: Object to form.

7 THE WITNESS: That's correct.

8 BY MR. GALLAGHER:

9 Q. All of those things would have a
10 risk-adjustment factor associated with them, if that
11 condition existed for a beneficiary and was actually
12 included in their records. Right?

13 A. That's correct.

14 Q. Or associated with them in the -- in the
15 database at CMS, right?

16 A. I'm not sure what you mean by "associated
17 with them in the database."

18 Q. Well, there's two steps that are involved,
19 right? First, somebody has to -- has to determine
20 that the beneficiary has the condition, whether it be
21 diabetes or hypertension or cancer, and actually code
22 that in the claims data that's submitted for the
23 beneficiary, right?

24 A. Yes. First, it -- it should be reflected
25 appropriately in the medical record. Then make

1 fee-for-service providers and Medicare Advantage
2 plan?

3 MS. KRIEG: Object to form.

4 THE WITNESS: I did.

5 BY MR. GALLAGHER:

6 Q. And did you understand that both the
7 fee-for-service claims data and the Medicare
8 Advantage plans submitted data that was -- was
9 incomplete, because providers missed diagnostic codes
10 that were appropriately associated with the
11 beneficiary?

12 MS. KRIEG: Object to form.

13 THE WITNESS: Are you asking in the
14 traditional Medicare side, or the Medicare
15 Advantage side at this point?

16 BY MR. GALLAGHER:

17 Q. I'm asking both, basically, unless there's
18 a difference between them, in your recollection.

19 A. Yes, I'm sure I was aware at the time that
20 there were often omitted diagnoses. I think I was
21 also aware that at times, since we're talking about
22 both sides of the diagnosis that had been supported,
23 that submitted that maybe could not be supported in
24 the medical record.

25 Q. And that was true for both the

1 fee-for-service, traditional claims data, and the
2 Medicare Advantage plans data, right?

3 A. Well, I think it was much more common, if
4 it was unsupported, to be on the side where it drove
5 financial advantage and Medicare Advantage. And if
6 it was omitted, it was much more likely to happen on
7 the fee-for-service side, where it didn't cause any
8 financial harm.

9 Q. Setting aside your belief about the extent
10 to which it occurred, you agree that both fee for
11 service and Medicare Advantage, you know, submitted
12 data included codes that were not supported by the
13 medical records, and omitted diagnostic codes that
14 would be supported by the medical records? Right?

15 MS. KRIEG: Object to form.

16 THE WITNESS: Yes, it was my understanding
17 that that was true.

18 BY MR. GALLAGHER:

19 Q. And you could refer to that as overcoding
20 and undercoding, right? Overcoding being assigning
21 codes that are not supported by the medical record,
22 and undercoding being omitting codes that would be
23 supported by the medical records. Fair?

24 A. Yes. They frequently -- they are
25 frequently referred to that way.

1 Q. And it was your understanding, as the
2 director for the Center for Medicare in 2014, 2017,
3 in that time frame, that overcoding and undercoding
4 was to some degree an issue with both traditional,
5 fee-for-service data and the data submitted by
6 Medicare Advantage plans. Right?

7 MS. KRIEG: Object to form.

8 THE WITNESS: Yes.

9 BY MR. GALLAGHER:

10 Q. Bear with me one second. I have an
11 outline, and I've covered some of it already. I
12 don't want to waste time, so -- just bear with me one
13 second.

14 So I want to direct your attention to the
15 article that we've marked as Exhibit 1002, and in
16 particular to page 5, at the top.

17 Are you on page 5?

18 A. I am.

19 Q. So do you see at the top, where
20 Mr. Kronick and Mr. Welch write in their article that
21 "However, fee-for-service coding is known to be both
22 incomplete and variable." Do you see that?

23 A. Yes.

24 Q. And this article was written in two
25 thousand -- or published in 2014. Do you agree with

1 their statement?

2 MS. KRIEG: Object to form.

3 THE WITNESS: Yes, that's my
4 understanding, fee-for-service coding.

5 BY MR. GALLAGHER:

6 Q. And did you understand that back in 2014,
7 when you were the -- after you were the director for
8 the Center for Medicare?

9 A. Yes.

10 Q. All right. Now, the article gives an
11 example that I'd like to ask you about. It's on
12 page 3.

13 Actually, before we go to page 3, stay on
14 page 5. I apologize.

15 A. Uh-huh.

16 Q. So on page 5 of the Kronick and Welch
17 article, under the statement we just looked at, where
18 it says: "Fee-for-service coding is known to be both
19 incomplete and variable" --

20 A. Uh-huh.

21 Q. -- they write: "For instance, among
22 Medicare beneficiaries diagnosed with quadriplegia in
23 one year, only 61 percent had a diagnosis of
24 quadriplegia reported in the subsequent year."

25 Do you see that?

1 A. Yes.

2 Q. And that would -- that would have the
3 effect of ensuring a complete record of diagnostic
4 codes, and also increasing the risk score for
5 beneficiaries and payment under the program, right?

6 A. Well, I want to be clear that that's the
7 only thing that happened. The question is, you know,
8 in my mind, were they looking to make sure things
9 were not just complete, but complete and fully
10 accurate?

11 So yes, if the only thing they found was a
12 condition that hadn't been properly documented, and
13 they did document it, that would be appropriate. If
14 they found things that had -- had been
15 inappropriately documented and -- and didn't follow
16 through on that, I don't think it would be
17 appropriate.

18 Q. On your example there, first just let me
19 break it down. If the medical record review
20 conducted by a Medicare Advantage plan found a
21 diagnostic condition that was not reflected in the
22 claims data, there was no code reflected in the
23 claims data, perfectly appropriate to supplement with
24 that diagnostic code in order to have a complete
25 record of supported conditions for the beneficiary,

1 right?

2 A. Yes.

3 Q. And what you're talking about is a
4 situation where in conducting that review, if a
5 Medicare Advantage plan discovered that there were --
6 there were codes that were not supported, you had
7 questions about what they should do in that
8 situation. Right?

9 A. No, I had no questions. I think they had
10 an affirmative obligation to correct the records and
11 not be paid inappropriately.

12 Q. Right. So if they knew that the code was
13 not supported, they should withdraw it, right?

14 A. Yes.

15 Q. When you took over as the director for the
16 Center for Medicare, was there any rule or regulation
17 in place that affirmatively required Medicare
18 Advantage plans to proactively review medical
19 records, to audit them, and determine which, if any,
20 codes were not supported?

21 A. Not that I'm aware of.

22 Q. So what you're talking about is if they
23 did review the medical records and discover that the
24 codes were not supported, then the plans had an
25 obligation to withdraw them. Right?

1 A. If in any way a plan was aware of
2 inaccurate data, they had an obligation, because
3 their obligation was to submit complete and accurate
4 data.

5 Q. Well, everyone knew -- including you,
6 right? -- that the data submitted for fee-for-service
7 under traditional -- traditional model, and for
8 Medicare Advantage plans, had some errors and
9 inaccuracies in it, right?

10 MS. KRIEG: Object to form.

11 THE WITNESS: Yes.

12 BY MR. GALLAGHER:

13 Q. That was your baseline understanding at
14 CMS when you took over as the director for the Center
15 for Medicare, and it was widely understood that the
16 data had inaccuracies in it, because of the way
17 coding is done at the point of care. Right?

18 MS. KRIEG: Object to form.

19 THE WITNESS: Yes, we understood that.

20 BY MR. GALLAGHER:

21 Q. So it wasn't the case that -- that if you
22 had some idea that there might be a code in there
23 somewhere that was not supported, that you, as a
24 Medicare Advantage plan, had to do something. It was
25 that if you knew that a specific code was not

1 the -- at the -- at the administrator's office level?

2 A. Yes.

3 Q. Did anybody on your team have input on
4 whether to finalize this rule? Like Cheri Rice or
5 Cynthia Tudor, who we discussed earlier?

6 A. I wouldn't think so.

7 Q. Can you describe the purpose and intent of
8 this proposed rule, as you understood it?

9 MS. KRIEG: Object to form.

10 THE WITNESS: When I was briefed on the
11 provision, it seemed redundant to me, as why are
12 we doing this? You know. Don't the plans
13 already have an affirmative obligation to attest
14 that the data are complete and accurate?

15 And I was told this is being done in an
16 excess of -- "caution" is the wrong word -- you
17 know, to go above and beyond on clarity. And I
18 thought that seemed harmless enough.

19 BY MR. GALLAGHER:

20 Q. So you're saying you thought that this
21 rule specifically requiring that any medical record
22 review conducted by an organization must be designed
23 to determine the accuracy of diagnoses -- diagnoses
24 submitted, you're saying you thought that was
25 redundant --

1 A. Yeah, it was --

2 Q. -- to the attestation requirement?

3 A. At that time, I'm not sure I would have
4 cited necessarily the attestation requirement. My
5 belief at the time, and it was not contradicted by
6 the staff, that they must have an obligation to
7 make -- you know, to -- to affirm that to the best of
8 their belief and knowledge, these data are accurate,
9 and they're like, "They do."

10 And I said, "Okay. I'm not sure why we're
11 doing this, but it's out there. It's fine with me."

12 Q. Can you point to any existing regulation
13 or rule that predates this proposed rule that
14 specifically dictated the form of the medical record
15 review that Medicare Advantage plans would conduct?
16 Or had to conduct?

17 A. No, I can't do that.

18 Q. Is there anything in the attestation
19 requirement that creates a proactive obligation for a
20 Medicare Advantage plan to audit the claims data
21 provided -- the coding provided in the claims data
22 that providers have keyed in?

23 A. Just to be clear, my thinking at the time,
24 and remains to be so today, is that if they're
25 engaged in any activity where they come upon

1 knowledge of something that's inaccurate, to be
2 compliant with their attestation, they have to
3 correct that. It just seemed plain on its face.

4 Q. Well, so let's -- let's explore that.

5 We discussed earlier that everybody knew
6 that the data submitted by Medicare Advantage plans
7 and by fee-for-service providers and the claims data,
8 everybody knew that there was some degree of
9 inaccuracy in that data. Right?

10 MS. KRIEG: Object to form.

11 THE WITNESS: Yes.

12 BY MR. GALLAGHER:

13 Q. You certainly knew it, as the director of
14 the Center for Medicare, that that was the case,
15 right?

16 A. We understood it. But everything we did
17 sought to eliminate it. And, you know, I used to
18 work in a hospital. We submitted cost reports. We
19 made an attestation that we did the best we could,
20 that -- you know, not that -- that everything we were
21 submitting was true and accurate, and we tried hard
22 to make sure that was true.

23 Q. When you say that there was a requirement
24 of attestation that -- that if you came across
25 knowledge that a code was not supported, or that it

1 was inaccurate, you had to do something, what did you
2 mean by "came across that knowledge"?

3 A. If by any mechanism, whether it's medical
4 record review or other -- I don't want to run through
5 hypothetical scenarios. I don't know everything that
6 goes into how they run their plans and their audits
7 and so forth. But they had an affirmative obligation
8 to make it correct.

9 Q. So are you saying that an affirmative
10 obligation, if they knew, from whatever mechanism,
11 that a code was not supported, to withdraw it?

12 A. Absolutely if they knew. I'm
13 less conversant in law and regulation on if they had
14 an affirmative obligation to take reasonable steps to
15 find out.

16 Q. Sitting here today, you can't identify any
17 rule or regulation that created an affirmative
18 obligation to audit the claims data submitted by
19 providers, or to proactively review medical records,
20 to ensure that the codes selected by providers were
21 supported?

22 A. I cannot. But I'm not an expert in the
23 area and don't work in that area.

24 Q. This rule that we're looking at in
25 Exhibit 1006, the medical records review rule that

1 was proposed and withdrawn, that would have created a
2 proactive obligation on the part of Medicare
3 Advantage plans to conduct medical record reviews in
4 a particular way. Right?

5 A. I mean, it -- to my reading of it is
6 that -- yeah, that you had to -- you had to be, you
7 know, looking for "adds and deletes," is the
8 shorthand we used. You couldn't turn a blind eye to
9 data just because it disadvantaged you.

10 Q. And you say you withdrew; that one of the
11 reasons that this was withdrawn is that you believed
12 it was redundant?

13 MS. KRIEG: Object to form. I think that
14 misstates prior testimony.

15 THE WITNESS: Yeah. I was going to say, I
16 didn't say that. What I said was my
17 understanding, from the directions I received
18 from the administrator's office, was the rule
19 writ large, meaning all the other -- not just
20 this, but all the other provisions had drawn
21 significant flak, and that a decision had been
22 made to pare it down significantly and only
23 finalize certain provisions.

24 And that's the -- those are the marching
25 orders that I executed.

1 specifically comply with the law, that's more
2 appropriately posed to your own counsel.

3 Q. Do you recall that there was -- there were
4 actually a couple of issues raised by United about
5 their -- about what the rule -- what the rules were;
6 that it wasn't just whether the medical record review
7 rule would be finalized, but also what to do with
8 their as-yet-not-completed medical record review that
9 they had been conducting for the 2012 year?

10 A. I -- in the vaguest sense, I do recall
11 something like that, yes.

12 Q. So you recall that there was discussion
13 about how United had been -- unlike other plans, had
14 been conducting medical record reviews and looking
15 for deletes, that they had a whole process around
16 that, and that they had not yet really completed it?

17 MR. LANGHAM: Objection. Form.

18 BY MR. GALLAGHER:

19 Q. Do you recall that?

20 A. I have a recollection that they did
21 describe their medical record review process in
22 some -- I forget how much detail, but they were
23 describing it.

24 Q. If you would look at Exhibit 1060, which
25 is the exchange you had with Cynthia Tudor and

1 Cheri Rice in advance of the meeting on April 28th,
2 2014.

3 Do you see where in her e-mail in the
4 middle of the page on page 1, Cynthia Tudor says,
5 "However, we now have a disclosure that says they
6 have wrongly sent some diagnoses. So legally I think
7 they need to carry through on this regardless of the
8 rule, if the attestation does not give them an out."

9 Do you see that?

10 A. I see that.

11 Q. And do you recall that what she was
12 referring to there was United's disclosure, in
13 Mr. Renfro's e-mail on page 2 of this exhibit, that
14 they had a medical record review under way that had
15 looked for deletes and not just things to add?

16 MS. KRIEG: Object to form.

17 THE WITNESS: I would not say, then or
18 now, that I knew that that's what she was
19 referring to.

20 BY MR. GALLAGHER:

21 Q. All right. And so -- and we talked about
22 this earlier, but to refer you to Ms. Rice's e-mail,
23 where she says that there's an obligation for
24 correcting data that they know is wrong, did you
25 understand that to be a reference to the disclosure

1 by Mr. Renfro, in his opening e-mail on this topic,
2 that United had conducted medical record reviews,
3 looked for deletes, and at some stage of the
4 proceedings, found some things that might need to be
5 deleted?

6 MS. KRIEG: Object to form.

7 THE WITNESS: That's how I read Cheri's
8 e-mail.

9 BY MR. GALLAGHER:

10 Q. Right. So there was on the one hand the
11 issue of what to do, given that United had
12 conducted -- had conducted a medical record review
13 looking for deletes for the 2012 year, and a separate
14 question about whether they were required to conduct
15 that type of medical record review under the rules.

16 Do you recall that being a distinction
17 drawn in the conversation you had with United?

18 MS. KRIEG: Objection. Form.

19 THE WITNESS: I do not have a
20 recollection.

21 BY MR. GALLAGHER:

22 Q. Do you recall that in the meeting, United
23 did describe its medical record review program that
24 it had been following for the 2012 year, specifically
25 in response to questions from Cheri Rice?

1 A. I do recall them describing the program.
2 I do not recall whether it was in response to Cheri's
3 questions or whether they volunteered.

4 Q. Do you recall that United described for
5 you the status of their medical record review,
6 including, you know, how many documents had
7 progressed to the final stage and how many were still
8 being -- how many medical records had progressed to
9 the final stage and how many were still being
10 reviewed at the various levels of review that were in
11 place?

12 A. I don't recall.

13 MS. KRIEG: Object to form.

14 THE WITNESS: I don't recall.

15 BY MR. GALLAGHER:

16 Q. Do you recall you or Ms. Rice saying, in
17 sum and substance, that under current rules, you
18 don't have to delete diagnostic codes unless you know
19 they are inaccurate?

20 A. I don't recall anybody saying that. And
21 again, we had agreed ahead of time to stay -- say the
22 thing I've been telling you, so that seems
23 inconsistent with what we agreed to say.

24 Q. So you deny saying that?

25 A. I certainly did not say it.

1 Q. And you deny that Cheri Rice said that?

2 A. I -- yes. I deny that she said that. It
3 seems -- it's totally inconsistent with the approach
4 we took into that meeting, and what we agreed to say.

5 Q. So you claim that rather than saying that,
6 you stuck to the script that you gave us earlier, and
7 just repeated that mantra?

8 A. When it came to articulating any
9 obligation and duty, or duty they had, that was the
10 response we gave.

11 Q. Did you give that response more than once
12 in the meeting? Like multiple times?

13 A. Oh, yes. Yes.

14 Q. So it was a mantra that you repeated, you
15 claim, multiple times in response to questions from
16 United?

17 A. Yes.

18 Q. And you deny saying anything else besides
19 the mantra on the subject of what United's
20 obligations were before finalization of the medical
21 record review rule?

22 MR. LANGHAM: Objection. Form.

23 THE WITNESS: I deny saying anything else
24 about what their obligations were under either
25 the probes reg or existing requirements.

1 BY MR. GALLAGHER:

2 Q. Did you or Ms. Rice say, in the meeting
3 with United, that until the proposed rule on medical
4 record review is finalized, Medicare Advantage plans
5 do not have a -- any proactive obligation to confirm
6 whether diagnosis codes submitted by physicians are
7 correct?

8 A. I don't recall anybody saying that.

9 Q. Do you deny that that was said by you or
10 Ms. Rice?

11 A. I deny it was said by me, certainly. And
12 I'll stop just short of denying Cheri said it. It
13 just seems so inconceivable. But I -- my
14 recollection of the meeting is, you know, eight years
15 ago.

16 Q. You don't -- you don't actually recall one
17 way or the other whether Ms. Rice said it?

18 A. Not with certainty.

19 MR. GALLAGHER: Let's -- let's share

20 Tab 22.

21 (Exhibit 1061 was marked for identification.)

22 BY MR. GALLAGHER:

23 Q. Do you have that, Document 13?

24 I'm sorry, Mr. Cavanaugh. I think you're
25 on mute.

1 A. I'm sorry. By accident.

2 Yes, I have the document.

3 Q. Okay. So Exhibit 1061 is a two-page
4 document that has Bates number starting with MARA and
5 ending with 57039. It's a set of notes entitled "CMS
6 Meeting Notes," dated -- and has the date in the
7 upper right-hand corner, under attorney stamp
8 April 29th, 2014. Do you see that?

9 A. I see that.

10 Q. Do you recall or -- or could you tell,
11 during the meeting you had over video with United,
12 could you tell whether they, the United participants,
13 were taking notes?

14 A. I do recall someone on the United side was
15 taking notes.

16 Q. You don't recall anybody on your side
17 taking notes, but you do recall folks on the United
18 side taking notes during the meeting, right?

19 MS. KRIEG: Object to form.

20 THE WITNESS: That is -- that is how I
21 recall. I do not recall whether someone on our
22 side took notes. I do specifically recall
23 seeing someone on their side taking notes,
24 though.

25

CERTIFICATE

I, KAREN K. KIDWELL, Registered Merit Reporter, and Certified Realtime Reporter, do hereby certify that prior to the commencement of the examination, SEAN CAVANAUGH was remotely sworn to testify to the truth, the whole truth and nothing but the truth.

I DO FURTHER CERTIFY that the foregoing is a verbatim transcript of the testimony as taken stenographically by me at the time, place and on the date hereinbefore set forth, to the best of my ability.

I DO FURTHER CERTIFY that I am neither a relative nor employee nor attorney nor counsel of any of the parties to this action, and that I am neither a relative nor employee of such attorney or counsel, and that I am not financially interested in this action.

www.MagnaLS.com

1 approximately three years and eight months; is
2 that correct?

3 A. That's correct.

4 Q. Can you please describe at a general
5 level what kind of work is handled by the Division
6 of Payment Validation?

7 MR. BULAND: Object to form.

8 THE WITNESS: This was one of the
9 divisions that made up the Medicare Plan
10 Payment Group, and it was responsible for a
11 number of items related to payment
12 validation for Medicare Advantage and the
13 Part D program.

14 BY MS. KOPPEL:

15 Q. By Medicare Advantage, you mean
16 Medicare Part C?

17 A. Medicare Part C.

18 Q. And you said it was responsible for a
19 number of items relating to payment validation.
20 Can you describe those items? What was the
21 Division of Payment Validation responsible for?

22 MS. KRIEG: Object to form. Vague.

23 THE WITNESS: So one of the items was
24 validating through a process called
25 beneficiary payment validation. It was

1 recalculating at a beneficiary level agreed
2 prospective payments that we were going to
3 make that was routine work that recurred
4 every month.

5 That division at that time was
6 responsible for two types of risk
7 adjustment data validation activities. It
8 was responsible -- and this is going back a
9 number of years now. And it was
10 responsible for coordinating and
11 collaborating with the -- with the other
12 divisions in the group or, you know, as
13 needed outside of the group as well in the
14 agency.

15 BY MS. KOPPEL:

16 Q. You said the division at that time was
17 responsible for two types of risk adjustment data
18 validation activities. What were those
19 activities?

20 A. One was a contract-level RADV audit
21 and the other one was for the purpose of
22 calculating a national error estimate for the
23 Part C and the Part D program.

24 Q. What is a RADV audit?

25 A. I'm sorry. So which RADV activity are

1 you referring to?

2 Q. You said one of the activities of the
3 Division of Payment Validation was responsible for
4 was a contract-level RADV audit. And I'm
5 wondering what you meant by contract-level RADV
6 audit.

7 A. Sure. So the contract-level RADV
8 audits were the primary corrective action in order
9 to address the Part C payment error.

10 Q. What do you mean by the Part C payment
11 error?

12 A. So from what I recall there's an
13 improper payment reporting statute. So by law,
14 CMS is required to estimate what a payment error
15 rate is every year and -- and to report that
16 amount. So that's what I was referring to.

17 Q. We're going to come back to RADV
18 audits in a bit. But I'm wondering as the
19 director of this division, what were your
20 responsibilities?

21 MS. KRIEG: Object to form.

22 THE WITNESS: So I was responsible for
23 managing the team of people who was in my
24 division. So doing all of that managerial
25 work. And then whatever items were in

1 my -- in my portfolio. I was also, you
2 know, responsible for managing and
3 shepherding the work to help further that
4 work.

5 BY MS. KOPPEL:

6 Q. What items were in your portfolio?

7 A. Some of the main ones that I recall
8 are the ones that I just mentioned, the
9 beneficiary payment validation work, payment error
10 work, contract-level RADV work.

11 Q. Thank you.

12 So you meant beneficiary payment
13 validation work. By payment error work, you mean
14 the national payment error?

15 A. Yes.

16 Q. As director, who did you report to?

17 MS. KRIEG: Object to form.
18 Foundation.

19 BY MS. KOPPEL:

20 Q. You can answer.

21 A. My -- I reported to Cheri Rice.

22 Q. And she was your direct report? There
23 was no one in between you and Ms. Rice?

24 A. I was her direct report. There was
25 nobody between me and her.

1 Q. Thank you. Thank you.

2 How long did you work directly for
3 Ms. Rice?

4 A. Directly, it would have been from 2015
5 until I left that position.

6 Q. Okay. So the entire time you were
7 director of division -- of the Division for
8 Payment Validation, Ms. Rice -- you reported to
9 Ms. Rice directly?

10 A. That's correct.

11 Q. You said you were responsible for
12 managing your team as the Division of Payment --
13 at the Division of Payment Validation. Who was
14 your team? What were their names?

15 A. I'm not going to be able to remember
16 all of them, and over the course of that time
17 people came and went as well. So I don't -- I
18 don't recall all of their names.

19 Q. Do you recall some of their names?

20 A. Yes.

21 Q. Who do you recall being a member of
22 your team?

23 A. Okay. So at some point during my time
24 managing that division I remember Sue Billet,
25 David Winchell, Carolyn Kapustij, Mary Anne

1 Brewer, Esmail Essajee.

2 Q. I'm sorry, I'm getting a video error.
3 Is anyone else seeing that as well?

4 A. No.

5 MS. KRIEG: I think there's a little
6 bit of a delay.

7 MS. KOPPEL: Okay. If the --

8 THE VIDEOGRAPHER: I have her frozen on
9 my screen.

10 THE WITNESS: It looks like my
11 connection -- my video connection came out,
12 but it sounds like you can hear me okay.

13 MS. KOPPEL: Yeah. Can we go off the
14 record while we see if we can get
15 Ms. Chaudhuri's video back?

16 THE VIDEOGRAPHER: Sure. The time is
17 11:01 a.m. We're going off the record.

18 (Recess taken from 11:01 a.m. until 11:06 a.m.)

19 THE VIDEOGRAPHER: The time is
20 11:06 a.m. We are back on the record.

21 MS. KOPPEL: While we were off the
22 record, defendants asked the government to
23 produce Ms. Chaudhuri's notes, and I
24 understand that they are objecting on the
25 basis of privilege. Is that correct,

1 Ms. Krieg?

2 MS. KRIEG: That's correct. The notes
3 are attorney-client privileged, and we are
4 not going to produce the notes taken during
5 Ms. Chaudhuri's meeting with her attorneys.
6 So they are attorney-client privileged and
7 we are not going to produce them.

8 MS. KOPPEL: Thank you for your
9 objection. That's noted. Just objecting
10 on the basis of privilege is fine.

11 MS. KRIEG: Okay.

12 BY MS. KOPPEL:

13 Q. Ms. Chaudhuri, before we popped off
14 the record for the technical problem, you were
15 listing the individuals who worked for you when
16 you were a director of the Division of Payment
17 Validation. I think the last name I was able to
18 get was Esmail Essajee?

19 A. Yes, that's right.

20 Q. Who else worked for you while you were
21 a director of the Division of Payment Validation?

22 A. Ron Thompson, Ronald Thompson. I
23 think Maricruz Bonfante, Joanne Davis. I may have
24 said that already. I don't recall. Those are the
25 names that are coming to mind right now.

1 Q. That first name I think you said was
2 Dew Billet -- Drew Billet, is that correct?

3 A. Sue. S-u-e.

4 Q. S-u-e. Thank you for that.

5 Okay. And before you were the
6 director for Division of Payment Validation, you
7 were the deputy director of the Division of
8 Payment Policy; is that correct?

9 A. That's correct.

10 Q. How long did you work as the deputy
11 director for the Division of Payment Policy?

12 A. From 2012 to 2015.

13 Q. So three years? Two, three years?

14 A. Yes.

15 Q. Can you describe what kind of work is
16 handled by the Division of Payment Policy?

17 A. They are responsible for the risk
18 adjustment payment policy.

19 Q. What do you mean by risk adjustment
20 payment policy?

21 A. So for both the Part C and the Part D
22 programs, they're paid based on risk adjustment,
23 and the Division of Payment Policy oversees that
24 work.

25 Q. What is risk adjustment?

1 MS. KRIEG: Object to form.

2 THE WITNESS: It's a payment
3 methodology.

4 BY MS. KOPPEL:

5 Q. Okay. Payment methodology based on
6 what?

7 MS. KRIEG: Object to form.

8 THE WITNESS: Yeah, could you make that
9 question a little more specific, please?

10 BY MS. KOPPEL:

11 Q. Sure. You said that the Division of
12 Payment Policy is responsible for the risk
13 adjustment payment policy. And I am trying to
14 figure out what you mean when you say risk
15 adjustment.

16 MR. BULAND: Objection. If that's a
17 question.

18 MS. KRIEG: Yeah. I join that
19 objection.

20 BY MS. KOPPEL:

21 Q. What do you mean by risk adjustment?

22 MS. KRIEG: Object to form. Vague.

23 THE WITNESS: I mean it's a broad
24 question. It's a payment methodology
25 that's used in many areas including in

1 Part C and D.

2 BY MS. KOPPEL:

3 Q. How is it used in Medicare Part C?

4 MS. KRIEG: Object to form. Vague.

5 THE WITNESS: Really broadly speaking,
6 it's -- it's used to calculate how payments
7 are made to Medicare Advantage plans and
8 Part D sponsors.

9 BY MS. KOPPEL:

10 Q. How does it calculate payment for
11 Medicare Advantage plans?

12 MR. BULAND: Objection.

13 MS. KOPPEL: You can answer.

14 THE WITNESS: So, sorry, can you repeat
15 or specify what -- what exactly you're
16 asking?

17 BY MS. KOPPEL:

18 Q. Yeah. So you said the risk
19 adjustment -- risk adjustment is used to calculate
20 how plans -- how payments are made to Medicare
21 Advantage plans and Part D sponsors. And I'm
22 asking you how does it calculate payment?

23 MS. KRIEG: Object to form.

24 THE WITNESS: Yeah, I mean, it's a
25 really big question that, you know, one --

1 one could take years to study and to
2 explain. So I'm unsure how to like answer
3 that question completely right now.

4 BY MS. KOPPEL:

5 Q. Okay. Let me try a different way.
6 What is your understanding of the methodology used
7 to pay Medicare Advantage organizations in the
8 risk adjustment system?

9 MS. KRIEG: Object to form.

10 THE WITNESS: Well, again, that's --
11 that's a hard question to answer in a sound
12 byte. Every single year CMS proposes the
13 specific payment policies for a particular
14 year and then finalizes them. So --

15 BY MS. KOPPEL:

16 Q. Okay.

17 A. The broad parameters are set out in
18 statutes, you know, the specifics of the
19 methodology are laid out every single year.

20 Q. Okay. Sorry for stepping on you
21 there. I didn't realize you hadn't finished your
22 question.

23 I'm going to ask my colleague to pull
24 up what's been previously marked as Exhibit 1174.
25 I'm going to state for the record that

1 Exhibit 1174 is Bates Stamped USBP069103470.

2 Let me know when that's visible to
3 you.

4 A. Yes, I can see it.

5 Q. Okay. And that's -- that first page
6 of Exhibit 1174, you see your name listed there?

7 A. Yes, I do.

8 Q. And do you recognize this document?

9 A. I recognize some of the content of it.
10 I don't know about like the specific, you know,
11 version of the specific document.

12 Q. Sure. What is it?

13 MS. KRIEG: Object to form.

14 THE WITNESS: The -- the title reads
15 "Medicare Part C Payment Training."

16 BY MS. KOPPEL:

17 Q. Do you recall providing trainings when
18 you were the deputy director of the Division of
19 Payment Policy?

20 A. I do.

21 Q. Was this -- to whom was this training
22 directed?

23 A. Give me a second. Let me see if it
24 says.

25 I flipped through the slides quickly,

1 and I don't see that the slides specify to whom
2 this training was directed.

3 Q. Well, when you provided trainings as
4 the deputy director of the Division of Payment
5 Policy, who did you provide those trainings to?

6 A. I don't recall specifically the
7 trainings, but, generally speaking, we would train
8 internally to the division, to the group, other
9 areas in the agency. We would train -- we would
10 conduct like learning type sessions, I don't know,
11 training sessions I suppose is fine, to, you know,
12 others also in the plan community.

13 Q. When you say others in the plan
14 community, who do you mean?

15 A. Plans primarily.

16 Q. I'm going to ask you to turn to
17 slide 14 of Exhibit 1174.

18 A. Yes.

19 Q. And the slide is titled "Risk
20 Adjustment," and it says, "A method used to adjust
21 payment based on the health status and demographic
22 characteristics of an enrollee."

23 Do you see that?

24 A. Yes.

25 Q. Is that true? Risk adjustment is a

1 method used to adjust payment based on the health
2 status and demographic characteristics of an
3 enrollee?

4 A. Yes.

5 Q. Okay. And CMS uses diagnoses to
6 measure health status; is that accurate?

7 MR. BULAND: Objection.

8 MS. KRIEG: Objection. Object to form.

9 BY MS. KOPPEL:

10 Q. You can answer.

11 A. Yes, CMS does use diagnostic data.

12 Q. It does use diagnostic data to measure
13 the health status of enrollees?

14 A. Yes. I mean, on this slide I just
15 think it's -- I'm not entirely sure what is
16 entirely encapsulated by health status. So what I
17 can say for sure is that diagnostic data is used
18 in risk adjustment.

19 Q. To adjust payment?

20 A. To calculate the payment, yes.

21 Q. Okay. Thank you.

22 What is a risk score?

23 MS. KRIEG: Object to form.

24 THE WITNESS: A risk score is a sum of
25 individual coefficients that is roughly --

1 the text as it's written that there is a
2 documentation standard of the medical
3 record, it's set forth in the regulation,
4 it's consistent with other Medicare
5 prospective payment systems. And that the
6 number of diagnoses may not indicate --
7 what does it say? Are not sufficient for
8 indicating the plan has undertaken the risk
9 of incurring expected costs.

10 BY MS. KOPPEL:

11 Q. So that's in MA. And the next
12 sentence starts with "In FFS Medicare, the actual
13 risk of providing a benefit is assumed regardless
14 of its -- of the diagnosis indicated by the
15 claim -- or on a claim"; is that correct?

16 A. That's what it says, yes.

17 Q. And "Providers are reimbursed for the
18 services provided, which are dictated by the
19 beneficiary's actual condition"; correct?

20 A. That's what it says, yes.

21 Q. Okay. This is what we were discussing
22 earlier the differences between the payment
23 mechanisms between Medicare Advantage and
24 fee-for-service Medicare; is that correct?

25 A. Yes.

1 Q. Okay. So the next paragraph says
2 "Study Approach" -- or actually --

3 A. Yes.

4 Q. Sorry. I want to go up for a second.
5 After this paragraph discusses how fee-for-service
6 claims are paid, it says, "The claim may or may
7 not indicate the diagnosis code for which the
8 beneficiary was treated, but regardless, the
9 annual cost of treating the beneficiary is
10 accurately captured."

11 Do you see that?

12 A. I see that, yes.

13 Q. Do you agree with that statement?

14 A. I had a little bit of trouble
15 following it. So "Providers are reimbursed for
16 services provided which are dictated by the
17 beneficiary's actual conditions. The claim may or
18 may not indicate the diagnosis code for which the
19 beneficiary was treated, but regardless, the
20 annual cost of treating the beneficiary is
21 accurately captured."

22 Yeah, I mean I understand this to
23 say -- when it's talking about the claim, I'm
24 understanding it to mean the claim from the
25 provider to the plan. I'm not 100 percent sure

1 I'm interpreting the way that the author intended.
2 That's the way I would interpret this.

3 Q. So this is in FFS Medicare, so this
4 would be from the provider to CMS?

5 MS. KRIEG: Object to form.

6 THE WITNESS: Okay. So read in that
7 way seem -- yeah, that the claim may or may
8 not -- this is -- again, I have some
9 limitations in terms of my understanding in
10 how things work in fee-for-service. But
11 the way I understand the sentence is that
12 when the provider is seeking reimbursement
13 in fee-for-service that the diagnosis code
14 may or may not be on there, but their costs
15 are.

16 BY MS. KOPPEL:

17 Q. And that's because they're reimbursed
18 for the actual services, so the services have to
19 be represented on the claim?

20 A. That makes sense to me.

21 Q. Okay. The next sentence says, "Thus,
22 we can assume that the CMS risk adjustment model
23 is predicting the average cost for beneficiary
24 accurately."

25 Do you see that?

1 A. I do.

2 Q. Do you agree that the CMS risk
3 adjustment model is predicting the average cost
4 for beneficiary accurately?

5 A. I think that the CMS risk adjustment
6 model does what it is intended to do of predicting
7 the average cost per beneficiary, and I do believe
8 that it does -- it does that accurately.

9 Q. Okay. Says, "Any variation in cost
10 not explained by the HCCs and interaction terms
11 will be explained by the demographic factors -- or
12 sorry -- demographic components of the model."

13 Do you see that?

14 A. I do.

15 Q. Says, "By changing the documentation
16 standards for FFS data from claim to the medical
17 record, the expected costs of each model component
18 would change, but the annual cost for beneficiary
19 would not change."

20 Do you see that?

21 A. I do.

22 Q. Do you agree with that statement?

23 A. I'm not 100 percent sure here in terms
24 of what model component is being referred to.
25 I -- I do agree -- to the extent that this

CERTIFICATE OF REPORTER

I, Christine A. Taylor, Certified Court Reporter within and for the State of Georgia, do hereby certify:

That the foregoing deposition was taken before me on the date and at the time and location stated on Page 1 of this transcript; that the deponent was duly sworn to testify to the truth, the whole truth and nothing but the truth; that the testimony of the deponent and all objections made at the time of the examination were recorded stenographically by me and were thereafter transcribed; that the foregoing deposition as typed is a true, accurate and complete record of the testimony of the deponent and of all objections made at the time of the examination to the best of my ability.

I further certify that I am neither related to nor counsel for any party to the cause pending or interested in the events thereof. Witness my hand, this 14th day of August, 2022.

Christine A. Taylor, RPR

SUBJECT TO PROTECTIVE ORDER

Volume 1

DEPOSITION OF SEAN CREIGHTON

Washington, DC

March 23, 2022

Reported by: John L. Harmonson, RPR

Job No. 798205

1 services akin to what was happening at Verscend?

2 A. No. They're very different companies.
3 Avalere is -- I don't know -- more akin to a think
4 tank than an operational organization.

5 Q. Got it.

6 A. You know, it only has 240 employees.
7 It's a very different organization than Verscend.

8 Q. So when you mention a think tank,
9 Avalere from time to time would produce work
10 product that was designed to advise the industry
11 or provide commentary associated with issues that
12 were relevant to the Medicare Advantage insurance
13 plans, for example?

14 A. Sure. There's a couple ways that
15 happens. A primary one is on a routine basis we
16 produce something called Avalere insights which
17 are publicly available, they're on the website,
18 where we will have looked at a particular issuance
19 from the government, a policy pronouncement or
20 proposed rule or so on. We would offer our
21 summary of it, and then some indication of what it
22 might imply for those businesses on a go-forward
23 basis. And generally the purpose of that is to
24 elicit further conversation and more in-depth
25 conversation.

1 But then, of course, the second part is
2 when that actually happens with our clients, we do
3 dive pretty deep into those issues and advise them
4 on the impact of regulatory events on their
5 business.

6 Q. Got it.

7 So let's circle back now and talk a
8 little bit about your time at CMS. Okay? And
9 we're going to get in a few moments to some of the
10 concepts that you talked about when you were
11 giving us your background before. But I really
12 just want to start with some structure.

13 During that time frame from 2000 to
14 2012, I think I heard you say that you were the
15 director for payment policy and risk adjustment.
16 Was that your title?

17 A. The division went through a number of
18 title changes during my time there. First we were
19 the Division of Risk Adjustment Operations, DRAO I
20 believe. And then at some point we became the
21 Division of Payment Policy and Risk Adjustment or
22 something like that. So we had a variety of
23 titles.

24 But the bottom line was from -- I don't
25 remember the exact date. Sometime around 2006 or

1 2007 I became the division director, and we were
2 given responsibility for putting together the
3 advance notice, which is the governing document
4 for payment to MA and Part D plans for the
5 forthcoming year. And at that point, yeah, I
6 suppose that defined the job from there on out.

7 Q. Okay. And as director, who did you
8 report to?

9 A. I reported to the director of our
10 group, which is the Medicare Plan Payment Group.

11 Q. And who was the director of the
12 Medicare Plan Payment Group?

13 A. Initially in that formulation, it was
14 Tom Hutchinson, and then later on Cheri Rice.

15 Q. And I gather that either Mr. Hutchinson
16 or Ms. Rice in turn reported up.

17 A. Sure. All the group directors report
18 directly to the center director for the Center for
19 Medicare which is responsible for both
20 fee-for-service and Medicare Advantage.

21 Q. Okay. And you mentioned the expression
22 "fee-for-service." And for purposes of the court
23 and jury, what do you mean by fee-for-service?

24 A. Fee-for-service, sometimes referred to
25 as traditional Medicare or original Medicare, is

1 the system which Medicare started out with,
2 essentially where CMS is the direct payer to
3 providers, hospitals, physicians, durable medical
4 equipment, you know, the whole gamut, hospice and
5 so on, home health.

6 So in that instance, typically the
7 government puts out a fee schedule which these
8 providers agree to abide by. They provide
9 services to beneficiaries who are enrolled in
10 Medicare. They bill the government directly, and
11 those bills are paid directly by the government.

12 Q. And so when you say "fee-for-service,"
13 is it fair to say that what you're referring to is
14 the fact that providers are paid for a particular
15 service rather than based upon the illness that
16 the particular patient might have?

17 A. Yes.

18 MS. McMAHON: Objection; vague.

19 You can answer.

20 THE WITNESS: Yes. I mean the way the
21 system evolved is that each -- excuse me. Each
22 procedure is codified that the providers do, I
23 suppose for want of a better term, and then a
24 payment rate that's associated with that procedure
25 once it's conducted during the course of a visit

1 and doing procedures on their various parts.

2 Q. What are the other advantages to the
3 Medicare Advantage, to the MA plan program as a
4 whole that you are familiar with?

5 A. My understanding, it's gone -- it's a
6 historical arc. Right? So in the early days, the
7 advantage for companies like Kaiser in the West
8 or --

9 Q. Let me stop you. I want to focus on
10 advantages to patients as well.

11 A. Yeah, that's where I was going.

12 The idea was obviously you are looking
13 after your enrolled population holistically and
14 providing all the services, and you could do that
15 in a more coordinated way within this managed care
16 environment. And there were companies on the East
17 Coast doing the same kind of thing too.

18 I think at that point managed care was
19 relatively small but it had a model of looking
20 after the whole patient and providing all these
21 services, sometimes at the same site. They would
22 have everything available so the person didn't
23 have to run all over the place going to 20
24 different procedures and testing facilities and so
25 on and so forth.

1 I think at some point the managed care
2 model grew or it became more, I would say,
3 insurance-oriented. It was more a risk-taking
4 exercise where the companies were, I think to be
5 frank, more in the business of controlling
6 utilization than holistically managing care. I
7 think now it's evolved again to where the
8 companies have become pretty sophisticated in
9 terms of analytics around the patient. Right?
10 How is the patient interacting with the
11 organization? Has the patient interacted with the
12 healthcare system? They've become sophisticated
13 in analytics in terms of signaling where things
14 might be going wrong and closing gaps for people.
15 And they provide a whole range of supplemental
16 services that you can't get in fee-for-service.

17 So I would say there has been an arc
18 here. We're not quite at the end of the patient's
19 interest of the arc yet but we're getting there,
20 you know.

21 Q. So if you were going to identify for us
22 the advantages to the patients, you mentioned the
23 fact that there are some services that are
24 available on the Medicare Advantage side that are
25 not available in fee-for-service. What are some

1 other advantages?

2 A. Yeah, there are lots of other ones
3 beyond that. One of the big ones, obviously, from
4 the early days was paperwork. Right? Simple as
5 that. You know, people were getting all sorts of
6 statements and explanations of benefits and so on
7 and so forth, getting bills they didn't understand
8 from multiple providers and so on and so forth.
9 Typically that doesn't happen in the managed care
10 environment. So the healthcare company -- so
11 that's one major advantage.

12 Another one is Medicare Advantage has a
13 concept called the maximum out-of-pocket, which
14 means that in any given year the amount that a
15 beneficiary can spend out of pocket is capped. It
16 was around 6,800 recently, like that; it might be
17 a little higher now.

18 That does not exist in fee-for-service.
19 There's unlimited liability. So in
20 fee-for-service, Medicare people either have to
21 buy a supplemental insurance to cap their
22 liability, or a lot of people in traditional
23 fee-for-service still have supplemental insurance
24 through either a Medicaid program or an employer
25 program. So about 80 percent of

1 fee-for-service -- people in fee-for-service have
2 or must have -- you know, kind of have to have
3 some other program to control the cost. You don't
4 need that in Medicare Advantage because of this
5 concept of the maximum out-of-pocket.

6 Q. Got it.

7 A. The other advantage is obviously that
8 the medical and the drug benefit are integrated
9 typically in Medicare Advantage. So these plans
10 are both Part C, meaning Part A plus B equals C
11 plans, and Part D plans. And within that there is
12 a whole other level of advantage, too, because the
13 Part C plans can use their rebate to reduce cost
14 sharing for drugs under Part D, and generally do,
15 and generally have better -- they typically have
16 co-pays rather than coinsurance for drugs under
17 Part D, particularly for preferred drugs, generics
18 or preferred brands.

19 So there's a whole range of additional
20 benefits that accrue from joining a Medicare
21 Advantage plan for a beneficiary.

22 Q. So senior citizens will potentially get
23 their drugs at a cheaper cost under the MA plan?

24 A. Absolutely.

25 Q. Okay. Any other advantages to the

1 patients that you can think of as you sit here?

2 A. Well, the other big one in more recent
3 times has been an explosion in what are called
4 supplemental benefits. There are different
5 categories of supplemental benefits ranging -- so
6 supplemental benefits can be categorized in a
7 number of different ways. So there's five
8 different types of supplemental benefit that
9 people get access to.

10 The first one is a reduced Part C
11 premium, but to actually activate this Part C
12 plans typically don't have any premiums so that's
13 not a biggy.

14 You can also use the -- Part C plans
15 can use their money to reduce Part D premium.

16 They can provide Part C supplemental
17 benefits, which means in addition to everything
18 else, they can provide preferential cost sharing
19 for medical benefits relative to fee-for-service.
20 In fee-for-service, typically cost sharing, unless
21 it's capped in some other way, is typically
22 20 percent. That could be a coinsurance rate. So
23 they can reduce that.

24 They can, as I said, do the Part D
25 cost-sharing reductions. And then there are other

1 supplemental benefits which can be mandatory or --
2 mandatory or optional supplemental benefits which
3 can comprise things such as transportation to
4 medical visits, housing, gym membership. There's
5 social isolation programs. But the big ones, the
6 three biggies which people take advantage of
7 typically are dental, vision and hearing, which
8 are not provided in traditional fee-for-service
9 and are routine at this point. I mean some kind
10 of dental benefit is almost table stakes for a
11 Medicare Advantage plan.

12 Q. Okay. So just to summarize,
13 beneficiaries or senior citizens who participate
14 in Medicare Advantage programs have an array of
15 additional benefits that are not available to them
16 in fee-for-service, and a number of those include
17 reduced costs and additional benefits that you
18 have been describing to us. Is that a fair
19 summary, Mr. Creighton?

20 A. That is. And if I have time to put
21 notes together, I could lay it out more
22 systematically, but I think I covered most of
23 them.

24 Q. Thank you. Okay.

25 Now, sticking with your time at CMS,

1 you mentioned that part of your responsibility was
2 developing something called the risk adjustment
3 model. And if you could explain to us, what do
4 you mean by the risk adjustment model?

5 A. Sure. Risk adjustment models are
6 models that essentially predict a number of
7 outcomes. Right? So you can have risk adjustment
8 models that predict mortality, probability of a
9 hospital visit, or cost, right, among other
10 outcomes.

11 So any model that's used to predict
12 some level of risk in the population can be
13 referred to as a risk adjustment model. So the
14 ones that we're talking about here, right, there
15 are a range of risk adjustment models that are
16 constructed or calibrated to estimate predicted
17 cost, healthcare cost. Right? And there are a
18 variety of these models. Some of them are used
19 more commonly in one sphere rather than another.

20 So there is one called CDPS that's most
21 common in Medicaid. There's an ACG model that's
22 sometimes used in Medicaid as well. There's the
23 DXCG which is the parent of the CMS HCC model
24 that's used in Medicare. 3M has a model.

25 So there are a variety of these models

1 this fact that in the fee-for-service side there
2 is not as an incentive to find and report all of
3 the diagnoses associated with a particular
4 patient. Is that a fair statement?

5 A. That's fair.

6 Q. And he goes on to write: "If, for
7 example, a fee-for-service patient with
8 quadriplegia and a urinary tract infection has an
9 office visit for treatment of the UTI, the payment
10 to the physician will be no more if the UTI and
11 quadriplegia are reported on the claim than if
12 only the UTI is reported. Coding guidelines
13 specify that the quadriplegia can legitimately be
14 coded if it contributes to the complexity of care,
15 but unlike the situation for MA plans, in
16 fee-for-service there is no incentive to report
17 more than one diagnosis."

18 Do you agree with that?

19 A. Correct.

20 Q. Okay. It goes on to say: "In
21 contrast, MA plans have a strong incentive to do
22 so." And it says that "In addition to the
23 incentives to report more completely, the method
24 of collecting diagnostic information also provides
25 MA plans additional opportunities to increase risk

1 scores."

2 Do you agree with that proposition?

3 A. If you incorporate sort of what he's
4 written below. You know, MA plans may also review
5 medical records and can report all diagnoses that
6 are supported in the record.

7 So I think what it really probably
8 should say is that the allowed methods of
9 collecting the allowed and sort of, if you like, I
10 don't know, routine methods of collecting
11 diagnoses. But yeah, obviously these mechanisms
12 are actually available in fee-for-service too. So
13 a physician could potentially review a medical
14 record and submit an amended claim even if their
15 first claim only said UTI. If they wanted to put
16 in paraplegia on it, they could submit an amended
17 Part B claim too, but there is no incentive to do
18 so.

19 Q. Okay. And you were going exactly to
20 the portion of this paragraph that I wanted to get
21 to, Mr. Creighton, which is that the notion that
22 MA plans may also review medical records and can
23 report all diagnoses that are supported in the
24 record, including those that were not reported by
25 physicians on any healthcare claim or Encounter

1 record. Right?

2 A. Correct.

3 Q. And there is nothing illegal or
4 improper about that, is there?

5 A. No.

6 Q. Okay. And in fact, when you were at
7 Verscend, I think you were testifying earlier that
8 part of the coding review that Verscend provided
9 to its clients was that exact exercise, reviewing
10 medical records to report additional diagnosis
11 codes that appeared on those medical records;
12 correct?

13 A. Correct.

14 Q. Okay. And nothing fraudulent about
15 that exercise, was there?

16 A. No, it's standard. It's fairly
17 standard industry procedure.

18 Q. Okay. Now, if we go to the next page,
19 E4, Dr. Kronick writes: "As noted" -- on the top
20 of E4. "As noted, payment to MA plans is
21 calibrated based on coding patterns in
22 fee-for-service. If, for example, Jane Doe would
23 have a risk score of 1.0 if she were in
24 fee-for-service, the implicit assumption in the
25 design of the MA payment system is that she would

1 therefore the pattern, the relationship between
2 particular factors in the model, particularly
3 diseases, and the incremental cost would be the
4 same in MA as in fee-for-service.

5 BY MR. SCHINDLER:

6 Q. Okay.

7 A. Yeah.

8 Q. And he goes on to say in that second
9 paragraph on that left column there on page E4, if
10 you go towards the bottom, the last sentence,
11 Dr. Kronick writes: "The goal of the risk
12 adjustment system is to assure that MA plans that
13 enroll sicker-than-average beneficiaries are paid
14 appropriately, but not to increase payment for an
15 average beneficiary."

16 Do you see that?

17 A. Yes.

18 Q. And would you agree with that, that the
19 goal of the risk adjustment system is to do what
20 Dr. Kronick has outlined here?

21 A. Except that I would say it's not just
22 to ensure that plans that enrolled
23 sicker-than-average beneficiaries are paid
24 appropriately, it's to ensure that plans that
25 enroll any beneficiary whether they're sicker or

1 healthier are paid appropriately.

2 Q. Okay, that's fair. And that's based
3 upon what you've testified earlier, that part of
4 the goal of this whole risk adjustment model was
5 designed to achieve; correct?

6 A. Correct.

7 Q. Okay. Now, if you note over on
8 page E5, at the top of E5, at the very beginning
9 there is a sentence that begins: "However,
10 fee-for-service coding is known to be both
11 incomplete and variable."

12 Do you see that?

13 A. Yes, indeed.

14 Q. Okay. And that's consistent with what
15 you testified about earlier, that you discovered
16 at CMS that this fee-for-service coding was in
17 fact both incomplete and variable. That's what
18 you told us about earlier; correct?

19 A. Correct.

20 Q. Okay. And he noticed -- he notes that
21 "Incomplete coding is evidenced by lack of
22 persistence in coding of chronic conditions." And
23 he gives an example that "For instance, among
24 Medicare beneficiaries diagnosed with quadriplegia
25 in one year, only 61 percent had a diagnosis of

1 quadriplegia reported in the subsequent year."

2 Do you see that?

3 A. Yeah.

4 Q. What he's saying is that a person who
5 was a quadriplegic in one year likely does not
6 magically not become a quadriplegic in the next
7 year, that nevertheless, only 61 percent of them
8 end up with that diagnosis in the following year;
9 correct?

10 A. Correct.

11 Q. And in the context of this
12 fee-for-service model we've been talking about,
13 what would be the payment impact in terms of --
14 for the MA plan that insured this population of
15 quadriplegics if in the subsequent year 61 --
16 almost 40 percent of them effectively no longer
17 appeared as quadriplegics? What would that impact
18 be?

19 MS. McMAHON: Objection; calls for
20 speculation.

21 THE WITNESS: So when the model is
22 calibrated, it's calibrated on the 61 percent of
23 fee-for-service beneficiaries who are coded.
24 Right? So that means that the costs associated
25 with that incremental coefficient, you know,

1 really are the costs for this 61 percent and the
2 other 39 percent aren't there. Right? Their
3 costs are not -- they're there, they're in the
4 model, they're just somewhere else. They're in a
5 different coefficient, they're in a different
6 disease.

7 So really the answer to that question,
8 it's a rate question. So if you've got a health
9 plan, and let's say it's got a thousand
10 quadriplegics, which would be a lot but let's say
11 it did. If 610 of them are diagnosed as
12 quadriplegics, that plan would generally be okay.

13 So it's not just the coefficient. It's
14 the proportion of -- you know. Now, if the
15 implied rate -- as I say, it's just not that
16 incremental coefficient. It's the implied
17 proportion of quadriplegics. If the health plan
18 essentially has the same proportion in reality as
19 fee-for-service and codes more than 61 percent,
20 they will do better. If they find less than that
21 rate, they will do worse.

22 BY MR. SCHINDLER:

23 Q. Okay. So let's talk about this in the
24 context of over-coding.

25 A. Sure.

1 those available to the public. Okay? So
2 obviously the advance notice is one. The rate
3 announcement itself. Sometimes prior to that,
4 based on consultation with industry or depending
5 on whether we want to -- we at the time being
6 CMS -- elicit comment, there might be white papers
7 put out in advance, so on and so forth.

8 In this case, what had happened here I
9 believe is that we had gone out with a proposal
10 for coding intensity I believe in 2008, '09. We
11 did not finalize that if memory serves me
12 correctly.

13 But the purpose of this paper would
14 have been to fully elucidate the methodology
15 behind the development of the coding intensity
16 factor and let people know -- give people more
17 detail on how it was done.

18 And publishing this type of
19 information, the Healthcare Financing Review,
20 which previously had been in paper format as well
21 as electronic, was sort of just a fairly standard
22 way of doing this, the same as any number of
23 articles in this journal over the years, just
24 elaborating on methodological changes.

25 Q. Okay. Got it.

1 If you turn to what's been marked at
2 the bottom, the last three digits 588, the
3 introduction page.

4 A. Okay, here we go.

5 Q. And this is the introductory paragraph
6 of this paper. And you wrote, or you and your
7 colleagues wrote: "Payments to Medicare Advantage
8 plans are risk adjusted to account for the
9 relative health resources needed to provide care
10 for each beneficiary." And there is a citation
11 there to somebody named Pope. I take it, is that
12 Greg Pope?

13 A. That is Greg Pope.

14 Q. And who was Greg Pope?

15 A. Greg Pope worked for a company I
16 mentioned earlier, RTI, which back in the day was
17 called Health Economics Research. He is one of
18 the original developers of the DXCG model which is
19 the forerunner of the CMS HCC model and a major
20 figure in risk adjustment, pay-for-performance,
21 all things payment-related when it comes to the
22 fee-for-service system.

23 Q. Got it.

24 And you go on to write: "Payment for
25 MA enrollees is based on the diagnoses that are

1 reported for them by the plans in which they are
2 enrolled. If an MA plan reports more or more
3 serious diagnoses for a beneficiary, the plan is
4 paid more than if fewer or less serious diagnoses
5 are reported."

6 I take it you agree with that
7 statement.

8 A. That is correct in general.

9 Q. Okay. And then you write: "The
10 Medicare payment system provides strong incentives
11 for MA plans to identify and report diagnostic
12 information as completely as possible."

13 Now, you and your colleagues recognized
14 that the MA plans had an incentive to ensure that
15 all diagnoses for the beneficiaries they insured
16 were captured; right?

17 A. Absolutely.

18 Q. And you understood that the MA plans
19 were engaged in these reviews of medical records
20 to look for additional diagnoses codes; right?

21 A. True.

22 Q. And that was something that was
23 generally known within your division at CMS; is
24 that correct?

25 A. Yes.

1 MS. McMAHON: Objection; calls for
2 speculation.

3 BY MR. SCHINDLER:

4 Q. And there was nothing illegal or
5 improper about plans looking for additional codes
6 to ensure that the risk scores for the
7 beneficiaries accurately reflected their true
8 medical conditions; right?

9 MS. McMAHON: Objection to extent it
10 calls for a legal conclusion.

11 BY MR. SCHINDLER:

12 Q. You can answer.

13 A. The activity on its face is not
14 contrary to statute or regulation as far as I
15 could tell. Whether every element of it was
16 proper or not, I couldn't opine on.

17 Q. Okay. Well, for purposes of the jury
18 and laymen right here, when you say that "the
19 activity on its face is not contrary to statute or
20 regulation as far as I could tell," is that just
21 another way of saying that the conduct was not
22 illegal as far as you knew?

23 MS. McMAHON: Objection; calls for a
24 legal conclusion.

25 THE WITNESS: I think it's another way

1 of saying that doing this -- or engaging in these
2 type of activities was perfectly proper. However,
3 I have no knowledge at that time that every aspect
4 of what each company out there in the marketplace
5 was doing was either legal or proper.

6 BY MR. SCHINDLER:

7 Q. Okay, fair enough. You weren't privy
8 to all the different review exercises?

9 A. Correct.

10 Q. But the concept itself of MA plans
11 looking for additional diagnosis codes for the
12 beneficiaries to augment their risk scores itself
13 was not improper, to use your words?

14 A. No, it was not improper, and it was
15 most likely a foreseeable consequence of the
16 incentives built into the model.

17 Q. Just give me one second here.

18 If you turn to page 589, the next page,
19 this is a carryover of the "Background" section of
20 the paper, if you will, that starts on 588.

21 A. Sure.

22 Q. And I will start on page 588,
23 Mr. Creighton. You'll see that last paragraph
24 says: "The critical question in determining
25 whether MA risk scores are calculated

3 DISTRICT OF COLUMBIA

4 I, JOHN L. HARMONSON, a Notary Public
5 within and for the District of Columbia, do hereby
6 certify that SEAN CREIGHTON, the witness whose
7 deposition is hereinbefore set forth, was duly
8 sworn by me and that such deposition is a true
9 record of the testimony given by such witness.

10 That before completion of the
11 proceedings, review and signature of the
12 transcript was requested.

13 I further certify that I am not related
14 to any of the parties to this action by blood or
15 marriage; and that I am in no way interested in
16 the outcome of this matter.

17 IN WITNESS WHEREOF, I have hereunto set
18 my hand this 29th day of March, 2022.

19

EXHIBIT D-100

UNITED STATES DISTRICT COURT
FOR THE CENTAL DISTRICT OF CALIFORNIA
WESTERN DIVISION

United States of America, ex rel.

Benjamin Poehling,

Plaintiffs,

vs.

No. 16-08697

UnitedHealth Group, Inc., et al.,

Defendants.

DEPOSITION

of Sean Creighton, taken pursuant to
notice to take oral deposition, given
remotely on the 4th day of October,
2022, before Nathan D. Engen, a notary
public in and for the State of
Minnesota.

1 Fee-for-Service Adjuster accounts for
2 difference in documentation
3 standards..." Do you see that?

4 A Yes.

5 Q All right. And that's the -- it is
6 your summary of what the
7 Fee-for-Service Adjuster accounts for;
8 is that correct?

9 MS. MCMAHON: Objection.

10 THE WITNESS: That is
11 correct.

12

13 By Mr. Schindler:

14 Q And as you note here, "Because
15 Fee-for-Service claims data are not
16 audited to determine if the diagnosis
17 are supported by medical record, there
18 are undocumented errors in
19 Fee-for-Service data as research
20 shows." Do you see that?

21 A Yes.

22 Q And that's something that you believed
23 in 2019; correct?

24 A That is correct.

25 Q And still believe today; correct?

1 A That's correct.

2 Q Okay. And you indicate that, "Absent
3 an adjuster to account for such errors,
4 RADV audits would be contrary to the
5 statutory requirements."

6 And then you cite to statute
7 provision of Title 42 the United States
8 Code. And I'm quoting you here,
9 "...which states that risk adjustment
10 must achieve actuarial equivalence
11 between Fee-for-Service and Medicare
12 Advantage." Correct?

13 A That's correct.

14 Q All right. And you still believe that
15 today; correct?

16 A Yes.

17 Q Okay. And at the -- toward the top of
18 Page 3 of your article, it's a carry-on
19 paragraph from the bottom of Page 2
20 which talks about the revised payment
21 methodology that would remove the
22 Fee-for-Service Adjuster -- if you look
23 on the carry-on.

24 A (Indicating).

25 Q And at the top of Page 3 you note that

1 "...that you, we..." this is in the
2 context of this article at Avalere
3 "...have previously critiqued." Is
4 that correct?

5 MS. MCMAHON: Objection.

6 THE WITNESS: So...

7 MR. SCHINDLER: Let me
8 correct.

9 THE WITNESS: Yeah.

10

11 By Mr. Schindler:

12 Q Let me rephrase. Let me rephrase.
13 Let's go back to the bottom of Page 2,
14 to make this easier.

15 At the bottom of Page 2 you
16 wrote, "CMS has proposed that the
17 Fee-for-Service Adjuster is not
18 warranted based on the study." Then
19 there's a long citation --

20 A Sure.

21 Q -- for the study. And it continues,
22 "That we," and the 'we' here is
23 Avalere; correct?

24 A (Indicating).

25 Q "...have previously critiqued." And

1 there's citations to some other Avalere
2 publications. Is that an accurate
3 description?

4 MS. MCMAHON: Objection --

5 THE WITNESS: Give me one
6 moment.

7 MS. MCMAHON: -- vague.

8 THE WITNESS: (Witness
9 reading to self). (Chuckling). It's
10 actually correct. What I don't see is
11 where it says, "We previously
12 critiqued." I may be --

13

14 By Mr. Schindler:

15 Q -- it's at the bottom of --

16 A -- missing that.

17 Q -- Page 2.

18 A Bottom of Page 2.

19 Q "The revised payment methodology..."

20 Do you see the paragraph at the bottom
21 of Page 2?

22 A Yeah, yeah.

23 Q Okay. "The revised payment

24 methodology..." continues, "CMS has

25 proposed that the Fee-for-Service --

1 A Correct.

2 Q -- is not warranted based on a study,"
3 that's in bold. Do you --

4 A Yeah, yeah.

5 Q -- see that?

6 A Sure.

7 Q And there's a reference to the -- to
8 the --

9 A Yep.

10 Q -- and then at the bottom, "That we,"
11 and it carries over to Page 3, "...have
12 previously critiqued."

13 A I'm gonna show you Page 2 and if you
14 would be so kind to show me where it
15 says, "We," because I am missing it
16 entirely.

17 REPORTER'S NOTE: Whereupon,
18 a discussion is conducted
19 off the record.

20 MS. MCMAHON: I'm actually
21 missing it, too, in fairness.
22 (Laughing).

23

24 By Mr. Schindler:

25 Q In -- in your -- okay. It's because --

1 I'm sorry, if you look a little further
2 up in the paragraph --

3 A Okay. Got it.

4 Q -- it's not a carryover to Page 2 or 3.
5 For some reason my version of the
6 printout is printed differently.

7 A Okay.

8 Q At the bottom full paragraph on Page 2.

9 A Okay.

10 Q Okay? And it starts with, "The revised
11 payment methodology..." Right?

12 A Yep.

13 Q Are we together now?

14 A We have been except for the bit about
15 the, "We."

16 Q (Laughing).

17 MS. MCMAHON: (Laughing).

18

19 By Mr. Schindler:

20 Q I'm the one -- I'm one who wasn't
21 there, so apologies, Mr. Creighton.
22 All right.

23 So you indicate there that
24 Avalere has previously critiqued that
25 study; is that an accurate description

1 of what you wrote there?

2 A It's an accurate description; I don't
3 know what I wrote there because it's
4 not on the piece of paper. (Laughing)
5 Sorry to be a pain. (Laughing).

6 Q (Laughing).

7 A Oh, geez.

8 Q All right. Let's get to the same
9 place. If you go to --

10 A (Indicating).

11 Q -- bottom paragraph, Paragraph 2?

12 A (Indicating).

13 Q The first sentence, "The revised --

14 A Yeah.

15 Q -- methodology..."

16 A Yeah, yeah. Got all that.

17 Q Okay. And it continues in the middle
18 there, "The revised payment
19 methodology --"

20 A -- ah, "that we have previously
21 critiqued." Okay. Got it. We're on
22 the same page.

23 REPORTER'S NOTE: Whereupon,
24 a discussion is conducted
25 off the record.

1 By Mr. Schindler:

2 Q Let's slow down and though we've had
3 confusion, let's clear it up.

4 You wrote at the bottom of
5 Page 2 that, "The revised payment
6 methodology removed the Fee-for-Service
7 Adjuster, CMS has proposed that the
8 Fee-for-Service Adjuster is not
9 warranted based on the study," which
10 you cite there, "that we, and the 'we'
11 here is Avalere, have previously
12 critiqued," and that's in bold, in
13 reference to some other studies.

14 Is that an accurate
15 description of what you wrote?

16 A Absolutely.

17 Q Okay. All right. Now, you go on to
18 write that, "CMS suggests that it
19 assessed" -- sorry. Let me start
20 again.

21 "CMS suggests it assessed
22 the difference in risk scores that
23 would occur from a model based on
24 unaudited Fee-for-Service data (the
25 current model), versus a model

1 group HCCs, and the costs; right?

2 So you would expect, at a
3 minimum, if you -- the -- the general
4 expectation would be if you take out
5 diagnosis that are in error, you have
6 the true population.

7 So the co -- the -- the
8 prediction for the true population
9 should differ from the prediction with
10 the population that says, "Error
11 embedded."

12 Q Okay. Can I stop you? Because I want
13 to break that down. When you say 'if
14 you remove the errors --

15 A Right.

16 Q -- and have the true population,' is
17 what you're saying that if you remove
18 the errors, you will have the true
19 population of the beneficiaries who
20 suffer from that condition?

21 A Correct.

22 Q And you, therefore, would have the
23 accurate population upon which to
24 distribute the cost associated -- the
25 incremental costs associated.

1 A Ab -- absolutely, yeah.

2 Q Okay. And -- go ahead and continue.

3 A So when that happens you expect either
4 (chuckling), you're gonna take out
5 people most likely who differ from the
6 population with the error.

7 And there's all sorts of
8 reasons for that, but, you know. So it
9 can cause coefficients to either go up
10 or go down, but the chances they stay
11 more or less exactly the same seems
12 pretty low; right?

13 Q And going back to that notion of
14 removing from the population the
15 erroneous diagnosis codes so that you
16 have the true population that suffer
17 from the conditions, you would expect
18 the costs, the incremental costs, of
19 caring for that condition to rise?

20 A That has --

21 MS. MCMAHON: -- objection
22 to form. You can go ahead.

23 THE WITNESS: That -- that
24 has been my expectation. The -- our
25 study showed that it was a bit more

1 complicate than that.

2 So, yeah, that's normally
3 the expectation. If you think about a
4 population who actually have cancer,
5 you know, and you measure them very
6 accurately and you look of the cost
7 versus somehow you've got a bunch of
8 miscodes and they really have something
9 else.

10 Cancer is expensive, so you
11 would expect the coefficients for the
12 true population to be higher than one
13 with a bunch of other miscellaneous
14 stuff mixed in there.

15 However, it turns out it's
16 not, like a lot of statistical stuff,
17 it's not quite as simple as that. So
18 we found in our studies, sometimes they
19 rise, sometimes they go down.

20 But on -- on average what
21 you do know is they're gonna be
22 different, they're... You know. So I
23 agree with your initial hypothesis, it
24 was my hypothesis, too.

25 Turns out it's not true for

1 all conditions across the model.

2 MR. SCHINDLER: Okay.

3

4 By Mr. Schindler:

5 Q But -- but fundamentally the concern
6 you had here with the study that CMS
7 had conducted is that ultimately the
8 methodology they employed seemed to be
9 flawed to you; correct?

10 A That is correct.

11 MS. MCMAHON: Objection.

12 THE WITNESS: And I can tell
13 you why.

14 MR. SCHINDLER: All right.

15 THE WITNESS: If you want.

16

17 By Mr. Schindler:

18 Q In fact, I want to -- if you go a
19 couple pages back, you'll get to a -- a
20 section, and unfortunately your -- it's
21 -- it's not numbered.

22 But if you continue back to
23 probably about the 6th page, you'll get
24 to a section where the header that says,
25 "The methodology includes steps that

1 minimize the impact of the
2 Fee-for-Service Adjuster regardless of
3 the error rate in the underlying data."

4 A Right.

5 Q Tell me when you're there.

6 A I'm there.

7 Q Okay. And you wrote here that, "CMS
8 applied the IPARS adjustment factor."

9 And let's stop for a moment.

10 What -- what is IPARS adjustment factor
11 in -- in plain English?

12 A That is a great question. I'm not sure
13 that even to this day I can explain
14 what it is in plain English, or any
15 other language really. Um...
16 (Laughing).

17 You know, essentially it was
18 an adjustment factor that once the
19 initial study had been critiqued, CMS
20 went back and, you know, they had to re
21 -- reestimate their initial study
22 because they'd lost the initial data
23 sets.

24 But they went back and they
25 did that. And then they came up with

1 this other factor which is based on
2 some theory I still, for the life of
3 me, don't understand.

4 Um... But, basically, there
5 needed to be a correction to the model
6 coefficients that essentially removed
7 their own finding of the necessity for
8 a Fee-for-Service Adjuster.

9 And they called this thing
10 the IPARS. I'm -- I'm gonna tell you
11 this is some differential between the
12 corrected and uncorrected models.

13 I still don't understand
14 what this thing is. All I know is that
15 it basically mathematically reversed
16 the finding that they had just created,
17 magically, and they called it the IPARS
18 adjuster.

19 Q Okay. Let's go on and talk more about
20 that. You wrote that the IPARS
21 adjustment factor -- that, "CMS applied
22 the IPARS adjustment factor to the
23 coefficients of each of the 50 model
24 simulations, normalizing them such that
25 the average predicted risk from each of

1 whatever number you pick, but to 1.0
2 typically, you just divide through by
3 the mean.

4 You divide everything -- all
5 these coefficients through by the
6 average and then it turns the dollars
7 into, you know, they're based on 1 and
8 if something's higher than 1 it's
9 bigger and if it's lower than one it's
10 smaller; right?

11 So it's normal -- it's
12 called normalization. So doing
13 something like that is quite normal
14 with model coefficients; it's not
15 unheard of.

16 Sometimes you have to make
17 adjustments; right? After you've done
18 the model to normalize to whatever
19 population you might want to normalize
20 to; right?

21 That's, again, not totally
22 unheard of, there's lots of techniques
23 for doing that kind of thing, you know
24 to make sure you've got your 1.0.

25 This is very important when

1 it comes to actuarial equivalence and
2 that sort of thing.

3 However, what CMS was doing
4 here essentially was saying,
5 (chuckling), "We're gonna normalize
6 everything back to the -- the costs on
7 the theory that somehow or other the,"
8 I still don't get this one honestly,
9 "On the theory that somehow or other if
10 you normalize everything back to the
11 actual cost" -- which should be the
12 same as the prediction from the model,
13 then I don't know what the heck they
14 were trying to do honestly. But that's
15 -- that's essentially what they did.

16 The problem is, the cost
17 doesn't vary whether you've corrected
18 data or uncorrected data; right?

19 So they just basically
20 normalized this corrected model back to
21 the uncorrected model. And I'm like,
22 "Okay. Well, why?" Right?

23 It's still under -- like
24 let's -- sure you can do this, but like
25 it makes no sense and all you're doing

1 is eliminating the results you just
2 found; right?

3 So you've corrected it and
4 now you've normalized it back and
5 uncorrected it again, so...

6 Q Well, let's try to break that down a
7 little bit if we can and put it into --

8 A Sure.

9 Q -- to -- to English if we can.

10 A (Laughing).

11 Q If you go to the -- it continues, or
12 you continue, you wrote in -- in the
13 next paragraph down, it starts with,
14 "CMS describes the IPARS adjustment..."
15 Do you see that paragraph?

16 A Yes.

17 Q Okay. Then you go down to the bottom
18 there you wrote, "The implementation of
19 the IPARS -- of the IPARS, amounts to a
20 complete negation of the findings of
21 the study because CMS normalized the
22 coefficient resulting from audited data
23 by using the mean expenditures of the
24 uncorrected data set."

25 A Correct.

1 Q Okay. And is that essentially a
2 summary of what you were just
3 explaining to us a moment ago?

4 A Yes, it is.

5 Q And is it fair to say, Mr. Creighton,
6 that before application of the IPARS
7 adjuster, the CMS study found that
8 about 80 percent, or at least a
9 substantial majority of the
10 coefficients, had gone up when
11 calibrating --

12 MS. MCMAHON: Object.

13

14 By Mr. Schindler:

15 Q -- a data set with the errors removed?

16 MS. MCMAHON: Objection --

17 THE WITNESS: I --

18 MS. MCMAHON: -- calls for
19 speculation.

20 THE WITNESS: And I actually
21 at this point in time, without
22 reviewing it, do not recall the
23 percentages or the results of their
24 study in that level of detail.

25 MR. SCHINDLER: Okay.

1

2 By Mr. Schindler:

3 Q But, in fact, the majority of them had
4 gone up even if you don't recall the
5 exact percentage?

6 A That --

7 MS. MCMAHON: Objection.

8 THE WITNESS: -- would not
9 surprise me. I don't recall the exact
10 percentage right now.

11 MR. SCHINDLER: Okay.

12

13 By Mr. Schindler:

14 Q So just to be clear, you were talking
15 over --

16 A Oh.

17 Q -- Ms. McMahon so, again, I just want
18 to make clear for the record that, even
19 if you don't recall the exact number
20 whether it was 80 percent or 70
21 percent, the substantial majority or a
22 majority of the coefficients had gone
23 up when calibrating on a data set with
24 the errors removed; right?

25 MS. MCMAHON: Objection.

1 THE WITNESS: I could
2 confirm that if I had the numbers in
3 front of me right now, but I do not,
4 so...

5
6 By Mr. Schindler:

7 Q If you go down to the very next
8 paragraph, it begins with, "The IPARS
9 formula produces..." Do you see that?

10 A Yeah.

11 Q All right. You say, "The IPARS formula
12 produces a factor that, when applied,
13 reduces the risk score produced from
14 the audited model on average to be
15 equal to the risk score --

16 A Yeah.

17 Q -- from the unaudited model.

18 With such an adjustment in
19 place, the revised model will never
20 show a difference from the original
21 model.

22 Indeed, as the result of the
23 IPARS adjustment, even extraordinarily
24 high Fee-for-Service error rates would
25 be effectively negated and would have

1 no impact on the model CMS used for its
2 study." Do you see that?

3 A Yes, I do.

4 Q And do you agree with what you wrote in
5 2019?

6 A I do.

7 Q And so as a practical matter, even if
8 there were 90-percent error rates in
9 the Fee-for-Service population data set
10 under -- using this IPARS formula that
11 was employed in the CMS study, there
12 would be no need for Fee-for-Service
13 Adjusters; is that correct?

14 A That is my opinion, yes.

15 Q Now on -- you indicated that you knew
16 that Mr. Smith and others within CMS
17 had undertaken the study and had
18 published the study.

19 After you published your
20 2019 critique, that we're looking at
21 here, Exhibit 1111, did anyone at CMS
22 ever reach out to you to discuss your
23 critique?

24 A No.

25 Q Did anyone associated with the study

1 ever contest your findings that the
2 study was flawed?

3 A No.

4 Q Did anyone at CMS ever present you with
5 any evidence to suggest that your
6 criticism was unwarranted?

7 A No.

8 Q Okay. Nobody at CMS called you up and
9 said, "Mr. Creighton, you just don't
10 understand the -- the underlying --

11 A (Chuckling).

12 Q -- statistical analysis"? Or, "Mr.
13 Creighton, you -- you don't understand
14 what we did; here's the explanation"?

15 MS. MCMAHON: Objection --

16 THE WITNESS: No.

17 MS. MCMAHON: -- asked and
18 answered.

19 THE WITNESS: (Laughing).

20 No -- no, they did not.

21 MR. SCHINDLER: Okay.

22

23 By Mr. Schindler:

24 Q And you stand by your critique of the
25 study to this day; do you not?

1 A Absolutely.

2 Q Are you aware of any further studies
3 being conducted by CMS on whether a
4 Fee-for-Service Adjuster is necessary
5 to account for the errors in the
6 Fee-for-Service claims data that CMS
7 uses to calibrate the risk adjustment
8 model?

9 MS. MCMAHON: Objection;
10 calls for speculation.

11 THE WITNESS: I am not aware
12 of such studies. The -- the revised
13 study and -- and data sets were
14 published.

15 I'm not aware of anything
16 from CMS since then.

17 MR. SCHINDLER: All right.

18

19 By Mr. Schindler:

20 Q Let's see if we can switch gears. All
21 right. You can put those to one side.

22 Now, do you recall
23 testifying last time, that you were
24 aware that Medicare Advantage plans
25 were performing reviews of medical

1 A Yes.

2 Q Okay. And is this the proposed medical
3 record review rule that you were just
4 talking about?

5 A Just give me one second.

6 Q Sure.

7 A (Witness reading to self). Yes, it is.

8 Q Okay. And is it fair to say you
9 reviewed this proposed rule when it
10 came out in January of 2014?

11 A That is not correct because at that
12 time I was working on the ACA.

13 And actually, yeah, given
14 this particular case, I absolutely did
15 not review this. I was aware of this
16 however.

17 Q Okay. And to be clear, prior to
18 January of 2014, CMS had no such rule
19 in place for Medicare Advantage plans
20 conducting medical record reviews;
21 correct?

22 A That is correct.

23 MS. MCMAHON: Objection;
24 vague.

25

1 By Mr. Schindler:

2 Q And ultimately the medical record
3 review ruled that was proposed in
4 January of 2014 was withdrawn by CMS;
5 correct?

6 A That is correct.

7 Q It never went in effect -- into effect;
8 did it?

9 A It was not finalized.

10 Q Okay. And as you sit here today, is it
11 fair to say that you're unaware of any
12 other regulation that CMS promulgated
13 that would've directed Medicare
14 Advantage plans to determine the
15 accuracy of diagnosis codes being
16 submitted by the MA plans?

17 MS. MCMAHON: Objection.

18 THE WITNESS: That's
19 interesting. The -- there's no direct
20 regulation that says thou shalt confirm
21 the accuracy of all codes being
22 submitted.

23 However, that being said,
24 there are multiple regulations and laws
25 covering a governing payment; right?

1 That, you know, clearly
2 indicate that a health plan has got to
3 have a, you know, a comprehensive
4 compliance rating.

5 There's the requirement that
6 the -- that what is submitted is
7 documented in the medical record.

8 However, there is certainly
9 not a requirement that MA plans
10 validate every code that is passed
11 across the CMS because literally there
12 are billions of them.

13 And it would be technically
14 unfeasible -- infeasible, not feasible.
15 You know, so... You know, so there's
16 kind of a layer of the law regulation,
17 sub-regulatory guidance, that governs
18 this.

19 But there's no specific
20 regulation that says you must look, you
21 know, validate every code.

22 It's -- it's assumed that
23 the providers -- that it's the
24 providers job.

25 It's done at hospitals; it's

1 done at provider offices and what comes
2 from those sources on the record is --
3 unless there's some reason to suspect
4 otherwise, represents the provider's
5 evaluation of the diagnosis.

6 MR. SCHINDLER: Okay.

7

8 By Mr. Schindler:

9 Q But to be clear as it relates to the
10 proposed medical record review that we
11 were looking at a moment ago, which
12 essentially says that if -- if a
13 Medicare Advantage plan undertakes a
14 medical record review, chart review --
15 A (Indicating).

16 Q -- that it must confirm the diagnosis,
17 the accuracy of the diagnosis, that had
18 been submitted; correct?

19 There was no regulation, no
20 sub-regulatory guidance, no guidance,
21 no specific provision that CMS put out
22 that specifically directed an MA plan
23 that if it was gonna conduct a chart
24 review, it was required to undertake to
25 determine the accuracy of the diagnosis

1 codes that had previously been
2 submitted?

3 MS. MCMAHON: Objection --

4 THE WITNESS: That is
5 correct.

6 MS. MCMAHON: -- asked and
7 answered. Sorry. Objection; asked and
8 answered. And compound.

9

10 By Mr. Schindler:

11 Q You can answer.

12 A That's a -- that is correct.

13 Q Okay. Now, you -- I want to switch
14 gears with you for a moment because you
15 -- you mentioned the fact that during
16 this time in 2014, for example, you
17 were working on the Affordable Care
18 Act --

19 A Correct.

20 Q -- side of CMS. So I want to talk a
21 little bit about that. I want to talk
22 about the health plans that
23 participated in the Affordable Care
24 market; okay?

25 A (Indicating).

1 Q And, again, for purpose of
2 nomenclature, if I talk about health
3 plans that participated in the ACA
4 exchange --

5 A (Indicating).

6 Q -- do you know what I'm talking about?

7 A Yes, I do. (Chuckling).

8 Q Okay.

9 MS. MCMAHON: Objection.

10

11 By Mr. Schindler:

12 Q All right. Now, in addition to
13 administering the Medicare Advantage
14 plans, CMS was also responsible for
15 overseeing the health plans that were
16 participating in the ACA exchange;
17 correct?

18 A Correct.

19 Q In fact, you were working on that;
20 right?

21 A (Indicating).

22 Q I think you told us between 2012 and
23 2015 you were working on the --

24 A -- correct.

25 Q We have to make sure, we don't talk

1 over each other --

2 A Yeah.

3 Q -- or the court reporter is gonna get
4 mad at both of us.

5 All right. Between 2012 and
6 2015 you were working on the ACA
7 exchange program; correct?

8 A That's correct.

9 Q All right. And there were a whole
10 series of requirements that health
11 plans participating in the ACA exchange
12 were required to follow; is that
13 correct?

14 A Yes, there were.

15 Q And those requirements included
16 provisions regarding data submission;
17 right?

18 A Correct.

19 Q All right. And those provisions also
20 included provisions pertaining to
21 compliance and (inaudible) maintaining
22 a compliance plan; correct?

23 A Correct.

24 Q All right. Now among other things, do
25 you recall that the ACA health plans

1 codes in the Fee-for-Service claims
2 data do not have a meaningful impact on
3 risk adjustment model estimation and,
4 further, do not bias MA plan payment."
5 Right?

6 A Correct.

7 Q Okay. Now in that last paragraph you
8 go on, you and your colleagues at
9 Avalere, go on to summarize that a,
10 "New analysis from Avalere suggests
11 that certain key assumptions embedded
12 in the CMS's analysis do not
13 appropriately capture the full
14 variation in the data and minimized the
15 impacted documentation error."
16 Correct?

17 A Correct.

18 Q And Avalere performed -- tested three
19 alternatives; correct?

20 A Yes.

21 Q And, "Avalere's analysis finds that
22 audit miscalibration bias yields under
23 payments of nearly 8 percent."

24 Correct?

25 A Correct.

1 Q All right. So at least as of 2019 the
2 work that you and your colleague had
3 done at Avalere had indicated under
4 payments of nearly 8 percent; correct?

5 A Correct.

6 Q All right. Now going back to the IPARS
7 adjustment that CMS employed in the
8 context of the study; okay? Do you
9 have that in mind?

10 A Yes.

11 Q The IPARS adjustment was a downward
12 adjustment; correct?

13 MS. MCMAHON: Objection.

14 THE WITNESS: Correct.

15 MR. SCHINDLER: Okay.

16

17 By Mr. Schindler:

18 Q And in fact CMS's own analysis had
19 determined that when using --
20 correcting for the errors in the
21 audited data, it would've resulted in a
22 higher coefficient; correct?

23 MS. MCMAHON: Objection;
24 calls for speculation.

25 THE WITNESS: So the --

1 yeah, the audited model produced
2 different coefficients than the
3 unaudited model.

4 MR. SCHINDLER: Right.

5
6 By Mr. Schindler:

7 Q And it produced higher coefficients
8 before application of that IPARS
9 adjustment; correct?

10 MS. MCMAHON: Objection.

11 THE WITNESS: Again, I have
12 no specific recollection of the exact
13 table of results, so I'm gonna take
14 your word for that.

15 MR. SCHINDLER: Okay.

16
17 By Mr. Schindler:

18 Q But going back your own Avalere
19 analysis had produced -- (inaudible)
20 the results of the own -- of your own
21 Avalere analysis had -- had indicated
22 that a correction for the errors in the
23 data used to calibrate the model
24 would've resulted in under payment --
25 A -- yes, of higher risk cores and...

1 Yes.

2 Q All right. And, in fact, the fact that
3 the IPARS adjustment was a downward
4 adjustment tells you that the results
5 CMS originally came up with would've
6 resulted in a higher coefficient;
7 correct?

8 A Correct.

9 MS. MCMAHON: Objection;
10 calls for speculation.

11 MR. SCHINDLER: All right.

12

13 By Mr. Schindler:

14 Q Let's switch gears. Do you recall
15 testifying last time about something
16 called the, "Coding intensity
17 adjustment"?

18 A I do.

19 Q Okay. You recall that the coding
20 intensity adjustment was a way to
21 account for the fact that MA plans have
22 a differential rate of increasing
23 coding relative to Fee-for-Service
24 plans -- relative to Fee-for-service;
25 correct?

1 A Correct.

2 Q And you agree that the Medicare
3 Advantage plans had a greater incentive
4 to code more completely than the
5 Fee-for-Service providers; correct?

6 A Yes.

7 Q And did you participate in attempting
8 to calculate the coding intensity
9 adjustment while you were at CMS?

10 A Yes, I did.

11 Q All right. And did the rate of the
12 coding intensity adjustment change over
13 time?

14 A (Chuckling). So there's two different
15 things there. The differential in the
16 rate of coding between Fee-for-Service
17 and MA changes over time; it fluctuates
18 slightly.

19 The coding intensity --
20 intensity adjuster, which is in the
21 payment system, is determined by law
22 and by regulation.

23 So it has been statutorily
24 -- sort of there's a statutory minimum
25 that has been in place for -- I can't

1 A Correct.

2 Q And is -- is that what you understand
3 the standard to continue to be?

4 A That is correct.

5 Q Okay. And if we can just move to one
6 other page here. If you go back to
7 Page 85 in this document -- oops.

8 Page 86; I'm sorry. Page
9 86. Which is Section 4.16, "MA
10 Organization Responsibility Regarding
11 Deletions Slide 21."

12 A Okay.

13 Q Okay. And that -- the indication Slide
14 21 next to that heading, is that what
15 you were referring to that CMS would
16 put together training slides for the MA
17 industry?

18 A Yeah; correct. So the -- so what the
19 participant guide is, if you can
20 imagine a auditorium or space, so we're
21 up there on the stage presenting the
22 slides which, you know, help present
23 the information we want the plans to
24 have.

25 There's lots of people in

1 the audience. And this is a sort of a
2 read along, if you like, with the
3 slides. So when it refers to Slide 21,
4 there's a slide deck that accompanies
5 this.

6 Q I see. Okay. And if you look at the
7 first bullet under Section 4.16 it
8 says, "MA organizations must submit
9 delete records when an erroneous
10 diagnosis cluster has been accepted by
11 RAPS and stored in the RAPS data base."
12 Correct?

13 A (Indicating). That's correct.

14 Q And it is -- it's you're understanding
15 that that's an accurate statement of
16 what CMS's rules were?

17 A It's a plan to become aware of the
18 diagnosis that was incorrect. They're
19 required to delete it using the
20 instructions provided here.

21 Q Okay. Great.

22 MS. MCMAHON: All right.
23 Let's go -- let's go to a different
24 document. We're going to pull up --
25 Martha, if you can pull up Exhibit 164,

1 previously marked 164.

2 THE WITNESS: Okay.

3 MR. SCHINDLER: You have --
4 okay.

5

6 By Ms. McMahon:

7 Q And this is a Federal Register dated
8 June 29th, 2000. Are you -- just
9 looking at these -- just looking at the
10 cover of this, are you familiar with
11 this particular Federal Register?

12 A Now that I see it in front of me I
13 can't say that I've been holding it in
14 my memory since then.

15 Q That's fine. Okay. Let's -- well, I
16 guess, if you could just turn to the
17 second page?

18 A Sure.

19 Q And if you just look -- you see that
20 it's dated June 29th, 2000; correct?

21 A Correct.

22 Q And if you just look at the -- the
23 summary the -- the very first entry on
24 the left-hand column in this document?

25 A (Indicating).

1 Q And just -- if you could like just
2 glance through it just to remind
3 yourself what this might be?

4 A (Witness reading to self). Sure. So
5 it refers to CFR 422 and -- which is
6 our favorite section, so...

7 Q Okay. Understood. And this is -- is
8 -- do you understand this to be just
9 the -- the implementing regulation of
10 the Medicare Advantage program?

11 A Sure. For that time period.

12 Q Okay. And did you -- are you aware
13 that initially the Medicare Advantage
14 program was referred to as the Medicare
15 Plus Choice program?

16 A Yes, I'm aware.

17 Q Okay. And are you also aware that CMS
18 at this time used to be referred to as
19 the Health Care Financing
20 Administration?

21 A Indeed.

22 Q Yes. And that's when you first started
23 working for CMS; correct?

24 A Yeah, it was HCFA for a number of
25 months after I joined it. And then our

1 good friend, Tom Skully, decided it
2 needed a re-branding so we became CMS.

3 Q (Laughing). All right. Okay. And
4 let's see here... If you can turn to
5 Page 100 of this document.

6 A Okay.

7 Q Okay. All right. And I think earlier
8 when Mr. Schindler was asking you some
9 questions about certifications, are you
10 -- are you aware that Medicare
11 Advantage organizations were required
12 to submit certifications or
13 attestations attesting to the
14 truthfulness, accuracy and completeness
15 of the data they're submitting?

16 A I am.

17 Q Okay. And do you understand that this
18 Point 9, it starts on the left hand
19 column, titled, "Certification of Data
20 That Determine Payment/Certification of
21 the Accuracy ACR Information."

22 That that is referring to
23 the -- the attestation that we just
24 mentioned?

25 A In fact it refers to more than that

1 STATE OF MINNESOTA)
2) ss.
3 CROW WING COUNTY)

5 I, Nathan D. ENGEN do hereby
6 certify that the foregoing transcript in
7 the matter of United States of America,
8 ex rel. Benjamin Poehling vs.
9 Unitedhealth Group, Inc., et al is true,
10 correct and accurate:

11 That said transcript was prepared
12 under my direction and control from my
13 stenographic shorthand notes.

14 That I am not related to any of
15 the parties in this matter, nor am I
16 interested in the outcome of this
17 action.

19 Witness my hand and seal this 6th day of
20 October, 2022.

CONFIDENTIAL
Videotaped Deposition of
JOANNE DAVIS
Given Remotely
Thursday, September 8, 2022
9:02 a.m. Eastern

Reported by: Karen K. Kidwell, RMR, CRR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 Q. As -- we previously saw that the cover
2 e-mail was dated September 14th, 2016; that's the
3 date on Exhibit 1315. Do you have any reason to
4 believe that this document was not accurate as of
5 September 14th, 2016?

6 A. No, I don't.

7 Q. I believe you mentioned you started
8 at the -- at the predecessor to CPI in 2008; is that
9 right?

10 A. That's correct.

11 Q. What were your job responsibilities at
12 that time?

13 A. At that time I worked in Medicaid. There
14 were -- started out on the audit resolution team. I
15 would look at audit findings conducted by people in
16 field offices. In 2010, when the Affordable Care Act
17 passed, the responsibility for writing a reg and --
18 and doing the outreach for the rollout of that reg
19 and that -- the implementation of the -- that
20 particular program.

21 Q. When you say "that particular program,"
22 are you speaking exclusively about Medicaid?

23 A. Yes.

24 Q. What was your job title when you started
25 at the predecessor to CPI in 2008?

1 A. I was a health insurance specialist.

2 Q. Did your title remain health insurance
3 specialist for the entire time that you worked at CPI
4 or its predecessor?

5 A. Yes.

6 Q. At some point while you were working in
7 CPI, did your role involve Part C Medicare Advantage?

8 A. So there was a break in between. I left
9 CPI in 2013 to go work in CM, which was Medicare
10 Advantage. Prior to 2013, I worked exclusively on
11 Medicaid issues.

12 Q. Was that October of 2013 that you moved?

13 A. Yes.

14 Q. In October of 2013, did you join the
15 Medicare Plan Payment Group?

16 A. Yes.

17 Q. Will you understand if I refer to the
18 Medicare Plan Payment Group as "MPPG"?

19 A. Yes.

20 Q. Did you join the Division of Payment
21 Validation at that time?

22 A. Yes, I did.

23 Q. Was your title health insurance specialist
24 when you joined MPPG?

25 A. Yes.

1 Q. How long did you work with MPPG?

2 A. I was there from October 2013 through
3 January 2017.

4 Q. Did your title remain health insurance
5 specialist throughout that time?

6 A. Yes, it did.

7 Q. Where did you go in January 2017, with
8 respect to your career?

9 A. I was reassigned --

10 MS. GLOVER: Go ahead.

11 THE WITNESS: I was reassigned to CPI.

12 BY MS. BLAKEMAN:

13 Q. In January 2017, when you were reassigned
14 to CPI, what was your job title?

15 A. Was health insurance specialist.

16 Q. When did you leave CPI following your
17 transition there in January of 2017?

18 MS. GLOVER: Objection. Asked and
19 answered.

20 THE WITNESS: I left CPI in October 2019.

21 BY MS. BLAKEMAN:

22 Q. Let's focus on your role at MPPG from
23 October 2013 to January of 2017 for now. Could you
24 describe your job responsibilities at that time?

25 A. I joined CM -- or I joined MPPG, or DPV,

1 to be on the RADV legal appeals team.

2 Q. What does the RADV legal appeals team do?

3 A. It was anticipated that -- that the team
4 would litigate the Medicare Advantage organization
5 appeals that would result as a -- as a -- that would
6 come as a result of the RADV audits.

7 Q. Is that what the team ultimately did?

8 A. Yes.

9 Q. What was your particular role on the RADV
10 legal appeals team?

11 A. To litigate the appeals that came in front
12 of the Office of Hearings and Inquiries.

13 Q. Were you litigating those appeals in your
14 capacity as an attorney?

15 MS. GLOVER: Objection. Form. Asked and
16 answered.

17 THE WITNESS: I was a trained attorney;
18 however, my official classification was health
19 insurance specialist.

20 BY MS. BLAKEMAN:

21 Q. So is it fair to say you were not
22 litigating in your capacity as an attorney?

23 MS. GLOVER: Objection. Asked and
24 answered.

25 THE WITNESS: I have legal training, but I

1 was classified as a health insurance specialist.

2 BY MS. BLAKEMAN:

3 Q. What did you do as a health insurance
4 specialist with respect to litigating the appeals?

5 A. I wrote briefs. I argued cases in front
6 of the administrative law judge. I did -- I held
7 prehearing conferences with the administrative law
8 judge and other parties. I sent communications to
9 the attorneys involved, and managed the case load
10 docket. And I tried the cases.

11 Q. Do you know whether or not a person must
12 have a license to practice law to appear before an
13 administrative law judge?

14 A. I don't know that.

15 Q. Did you litigate any RADV appeals with
16 respect to UnitedHealth?

17 A. Yes.

18 Q. How many times?

19 A. I don't remember.

20 Q. Could you give me a ballpark?

21 A. Under the United umbrella, there may have
22 been between four and eight contracts that had
23 numerous appeals within their contracts.

24 Q. Turning to -- turning back to your résumé,
25 I'm on the first page of Exhibit 1315-1. And I'm

1 up, you know, audio lines. So there -- there were a
2 number of activities that -- that needed to -- to be
3 completed in order to -- to put on a -- a successful
4 teleconference.

5 Q. The third bullet on the first page begins:
6 "CY 2011 Contract-Level RADV." Do you see that?

7 A. Yes.

8 Q. What did you do for CY 2011 Contract-Level
9 RADV?

10 A. So again I was a government task lead,
11 which is not the same as a contractor office
12 representative. And we met with the medical record
13 review contractors and the analytic contractors,
14 doing the same type of production activities,
15 preproduction, post production activities, to put on
16 a teleconference.

17 Q. Is the CY 2011 contract-level RADV
18 sometimes referred to as "CON11"?

19 A. Yes.

20 Q. The first sentence in that third bullet
21 reads: "Serves as GTL for the contract-level RADV
22 reconsideration/appeals process, overseeing the work
23 of medical record review contractors, coordinating
24 industry training logistics, preparing instructions,
25 slides, and other written materials."

1 Did I read that correctly?

2 A. Yes.

3 Q. What is meant by "reconsideration/appeals
4 process"?

5 A. So in the RADV regulation, there is an
6 opportunity for MAOs to dispute their medical record
7 findings, called reconsideration. And it's a
8 precursor to the appeals process.

9 Q. Did your role involve both reconsideration
10 and the appeals process?

11 A. Yes.

12 Q. Was that true just for CON11, or was that
13 true for other RADV audits as well?

14 A. CON11 was the first year that the
15 reconsideration step was -- was -- was in -- in reg.
16 Prior to CON11, would have been the 2007 audits, it
17 was a process called "medical record dispute." The
18 reconsideration became a separate step.

19 Q. And you had involvement in the medical
20 record dispute step for the 2007 RADV audits; is that
21 right?

22 A. Yes.

23 Q. While you were at MPPG, what role did you
24 have in overseeing the work of medical record review
25 contractors?

1 MS. GLOVER: Objection. Vague.

2 THE WITNESS: I was a GTL, which is
3 government task lead. So I, with others, met
4 with the medical review contractors weekly, and
5 on an ad hoc basis.

6 BY MS. BLAKEMAN:

7 Q. Did your work in overseeing the medical
8 record review contractors relate solely to
9 reconsideration appeals or medical record dispute, or
10 did it also relate to the RADV audits themselves?

11 A. So I was on the legal team, so my role
12 would have been primarily limited to medical record
13 dispute and the appeals. On a general basis, the
14 team did meet with the -- the MRRCs. But my work was
15 limited to the appeals.

16 Q. What contractors did you work with while
17 at MPPG?

18 A. All of them? Do you want me to list all
19 of them?

20 Q. Yes.

21 A. There was the -- the Signature. There was
22 Deloitte. I'm not remembering the names of the
23 medical record -- the MRRCs at the time. There were
24 two. There was Deloitte, and there was NewWave.
25 Yes.

VIDEOCONFERENCE VIDEOTAPED DEPOSITION OF
TAMMY DICKEY

(Taken virtually)

9:02 a.m. Eastern

Tuesday, May 24, 2022

REPORTED BY: Christine A. Taylor, RPR

Magna Legal Services

866-624-6221

www.MagnaLS.com

1 may be documented, but it doesn't mean that it
2 should be coded according to guidelines.

3 Q. So is the distinction that you're
4 making that it has to be documented in accordance
5 with guidelines?

6 A. In order to make the code assignment
7 for the diagnosis that is documented, it has to be
8 documented in a way that meets the guideline to
9 code that diagnosis.

10 Q. Is there a way that you can phrase
11 that that kind of going forward throughout the day
12 that you and I will both understand what you mean
13 by documented in a way that, you know, meets the
14 guidelines?

15 A. Is there -- I'm sorry, is there a way?

16 Q. Is it fair for us to say going forward
17 throughout today, based on the explanation that
18 you just gave, to say documented in the medical
19 record in accordance with guidelines?

20 A. I'm not sure because -- we're not --
21 the providers document the way they document. So
22 it's the coder's review of the record and
23 interpretation of that to make the code
24 assignment.

25 Q. So what you're saying is that in chart

1 review a coder is making code assignments based on
2 what's documented in the medical record, but those
3 coding assignments are made in accordance with
4 guidelines?

5 MS. MADDUX: Objection. Form.

6 THE WITNESS: I believe that sounds
7 correct.

8 BY MS. GLOVER:

9 Q. Okay. So is it your -- is it your
10 understanding that in chart review coders were
11 tasked or are tasked with identifying or making
12 coding assignments for a medical record in
13 accordance with guidelines?

14 MS. MADDUX: Objection. Form.

15 THE WITNESS: I would say that is
16 generally correct.

17 BY MS. GLOVER:

18 Q. Okay. Ms. Dickey, are you familiar
19 with the term "blind review" as the term was used
20 at Optum?

21 A. I am.

22 Q. What is blind review of a medical
23 record?

24 A. So at Optum a blind review means the
25 coder opens the record and assign -- you know,

1 reviews and assigns codes without any information
2 or knowledge of what that member may previously
3 have had.

4 Q. And when you say have had, do you mean
5 have had in previous date of service years?

6 A. In previous date of service years or
7 even that date of service year, I guess. They
8 just have no information. They're not informed
9 that maybe the patient had a knee amputation the
10 year before. They don't know that.

11 Q. So in that -- in a blind review, is a
12 coder -- they're looking at a medical record, but
13 they have no additional information about what the
14 beneficiary has had previously or even information
15 about diagnoses that a provider has submitted for
16 the current date of service year; is that right?

17 A. That's correct.

18 Q. And they -- and their task then is
19 to -- is to assign codes based on guidelines and
20 see what is documented in the medical record based
21 on those guidelines?

22 MS. MADDUX: Objection. Form.
23 Confusing.

24 THE WITNESS: Their -- will you repeat
25 that?

1 BY MS. GLOVER:

2 Q. Why don't we just move on. I think --
3 in Optum's blind chart review -- scratch that.

4 Does Optum -- since you've been at
5 Optum, has Optum used a blind chart review
6 approach?

7 MS. MADDOUX: Objection. Form.

8 THE WITNESS: All -- for certain time
9 frames or like -- so they're, I think,
10 during -- if something is privileged, am
11 I -- I can't --

12 MS. MADDOUX: Need to take a break?

13 MS. GLOVER: Do you need to consult
14 with your attorney?

15 THE WITNESS: I think so, yes.

16 MS. GLOVER: Okay. Why don't we go off
17 the record.

18 THE VIDEOGRAPHER: Time is now
19 10:58 a.m. We are going off the record.

20 (Recess taken from 10:58 a.m. until 11:06 a.m.)

21 THE VIDEOGRAPHER: The time is now
22 11:06 a.m. We are back on the record.

23 BY MS. GLOVER:

24 Q. And, Ms. Dickey, are you able to
25 answer my question?

CERTIFICATE OF REPORTER

I, Christine A. Taylor, Certified
Court Reporter within and for the State of
Georgia, do hereby certify:

That the foregoing deposition was
taken before me on the date and at the time and
location stated on Page 1 of this transcript; that
the deponent was duly sworn to testify to the
truth, the whole truth and nothing but the truth;
that the testimony of the deponent and all
objections made at the time of the examination
were recorded stenographically by me and were
thereafter transcribed; that the foregoing
deposition as typed is a true, accurate and
complete record of the testimony of the deponent
and of all objections made at the time of the
examination to the best of my ability.

I further certify that I am neither
related to nor counsel for any party to the cause
pending or interested in the events thereof.
Witness my hand, this 26th day of May, 2022.

Christine A. Taylor

CONFIDENTIAL
Videotaped Deposition of MARK DUGGAN, Ph.D.
Given Remotely
Friday, March 29, 2024
8:31 a.m. Pacific

Reported by: Karen K. Kidwell, RMR, CRR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 into the model using -- I forget what the function is
2 that he used in Excel to introduce the randomness.
3 But he did introduce some randomness for sure, but it
4 was thoughtfully introduced.

5 Q. Okay. You'll have no disagreement from me
6 on the thoughtfulness of Dr. Ingber's work.

7 So is your -- the point that you pointed
8 out here where Dr. Ingber said: "Essentially,
9 Lambert and Duggan's analysis is misleading because
10 it fails to recognize the different impacts
11 unsupported codes have in the TM data versus the MA
12 data." And then he explains -- the following
13 sentence he explains what he opines is the
14 difference.

15 Are -- well, I'm just going to ask you
16 straight up. Do you -- do you agree with Dr. Ingber
17 that you failed to recognize the different impact
18 unsupported codes have in the TM data versus the MA
19 data or do you disagree with Dr. Ingber on that
20 point?

21 A. I disagree with him in the sense that I --
22 as I -- I'm drawing on my many years of experience
23 studying Medicare and Medicare Advantage and so
24 forth, I recognize that in one case, the thought --
25 the quote "thought experiment" -- I don't know if

1 that's the exact phrase that he uses -- but of
2 removing a code from someone in MA or deleting an HCC
3 for someone in MA, that will mechanically lower
4 reimbursement by the government to that -- on behalf
5 of that person. Whereas, in the -- and suppose you
6 did that same deletion in the traditional Medicare
7 case, that would not influence reimbursement for that
8 person. Traditional Medicare is fee for service and
9 reimbursement is based on services, not on diagnoses.
10 So it would -- it would not influence reimbursement
11 for that person, but it would estimate -- influence
12 model coefficients.

13 And those model coefficient estimates
14 might be small, but aggregated across a big
15 population of people, it's not just affecting that
16 one person. It's not affecting that person's
17 spending actually at all. It's affecting spending
18 for this different group of people in MA and
19 that's -- that is a big -- that's a potentially big
20 effect. And so it is, I think, the -- I recognize
21 that there's those two things aren't identical by any
22 means.

23 In one case it affects reimbursement for
24 the individual with the unsupported code. And in
25 one -- and in the other case, it would not for that

1 person. It would affect it for many other people
2 potentially.

3 Q. Right. Okay. Understood. I understand
4 your point.

5 So -- so you don't have any disagreement
6 that where he states that -- that: "The effective
7 added unsupported codes in MA data when a TM
8 estimated model is being applied to determine payment
9 to the MA is quite different and increases payment.
10 There is no averaging out or redistribution of costs
11 to other HCCs or demographic factors."

12 You would agree with that statement?

13 MR. BAAK: Objection. Mischaracterizes
14 prior testimony. Form.

15 THE WITNESS: That is -- I -- I agree that
16 it is different, but not for the -- the things
17 that I would flag when I was talking about why
18 it is different would be what I just described
19 with which is in one case it affects payment for
20 one individual. In another case it affects
21 payment for many -- not that individual but many
22 other people. And aggregating that out -- it
23 tends to be the case that if you're removing
24 HCCs from the model used to estimate fee for
25 service, it tends to be the case not in every

CONFIDENTIAL INFORMATION, SUBJECT TO PROTECTIVE ORDER

VIDEOTAPED VIDEOCONFERENCE ZOOM DEPOSITION OF
KAREN ERICKSON

August 2, 2022

9:32 a.m. Eastern Standard Time

Magna Legal Services
(866) 624-6221
www.MagnaLS.com

Prepared by:
Marcella Daughtry, RPR, RMR
CA CSR 14315
GA No. 6595-1471-3597-5424

1 to become -- just started to work with that business. I
2 talked to a lot of the experts and staff that we had in
3 that area.

4 Q Who did you talk to?

5 A I don't recall everyone's name at the time. I
6 would say -- I'm sure I talked to Jeff Dumcum, Jon Bird,
7 Katie Baker. I'm not sure -- I'm not sure who else.

8 Q Did you talk to Stephanie Will?

9 A I don't recall.

10 Q Have you ever heard the term "blind chart
11 review"?

12 A Yes, I have heard the term.

13 Q Do you have an understanding of what a blind
14 chart review is?

15 A My understanding of a blind chart review, it
16 would be a review by a coder without an understanding of
17 anything that might have been coded from that chart
18 before.

19 Q And when you say "anything that might have been
20 coded by that chart before," what do you -- what do you
21 mean by "coded from that chart before"?

22 A Well, providers -- providers send the codes in,
23 so providers provide services to the patients, and then
24 the provider's office submits the codes related to the
25 diagnosis that the provider -- and that -- that visit,

1 what codes were there. So those would be codes submitted
2 by a provider.

3 Q Okay. And so in the blind chart review, the
4 coders don't know what codes were already submitted by
5 the provider; is that right?

6 A That's my understanding.

7 Q And earlier I asked you a question about
8 whether providers submit codes, and I was unclear on your
9 answer. So it sounds like we agree that providers do
10 submit codes from their visits with beneficiaries; is
11 that right?

12 MS. SOBEL: Objection to form. Vague.

13 THE WITNESS: I don't -- I don't recall the
14 exact processes, and I'm not sure -- I'm not sure you can
15 say all providers submit all codes and to whom. I don't
16 know that I can put all of that together.

17 Q BY MS. KRIEG: Uh-huh. So some providers,
18 then, submit risk adjusting codes from their visits with
19 beneficiaries to Optum?

20 Do you agree with that?

21 MS. SOBEL: Objection to form.

22 THE WITNESS: I don't know the answer to that.

23 Q BY MS. KRIEG: Sitting here today, you don't
24 know the answer to that?

25 A Sitting here today, I don't know the answer to

1 that.

2 Q Okay. But you agree that in a blind chart
3 review at least, that coders don't have access to
4 information about diagnosis codes that providers have
5 previously submitted for a beneficiary?

6 A Yes. In my -- in my recollection in a blind
7 coding, the coders would not know what has previously
8 been submitted.

9 Q Have you ever heard the term "informed chart
10 review"?

11 A I don't know if I have heard "informed chart
12 review." I'm going to say no, I don't -- I'm not sure if
13 I understand the meaning of that term.

14 Q Okay. Have you ever heard of a chart review
15 where the providers -- strike that.

16 Have you ever heard of a chart review where the
17 coders are told to code only codes that have not already
18 been submitted by a provider?

19 MS. SOBEL: Objection to form.

20 THE WITNESS: No, I don't think so, because I'm
21 not -- I don't know how they would have known that.

22 Q BY MS. KRIEG: Okay. Are you familiar with --
23 okay, let me ask you this. When you became familiar with
24 Optum's chart review in the fall of 2012, did you gain an
25 understanding of whether the Chart Review program was a

1 blind chart review?

2 A Yeah, it was my understanding it was a blind
3 Chart Review program.

4 Q And is it correct that the charts were reviewed
5 retrospectively?

6 MS. SOBEL: Objection to form.

7 THE WITNESS: I don't understand that word,
8 when you say "retrospectively."

9 Q BY MS. KRIEG: So the charts that were reviewed
10 were not from the contemporaneously date of service; it
11 was, you know, previously, previous year's date of
12 service.

13 MS. SOBEL: Objection to form.

14 THE WITNESS: I think I would have understood
15 that at the time, but at this point I don't remember how
16 the calendar part of it worked.

17 Q BY MS. KRIEG: Okay. Because you haven't
18 worked in this area for so long?

19 A Yes.

20 Q Are you familiar with something called the
21 recode project?

22 THE COURT REPORTER: Recode?

23 MS. KRIEG: Recode. R-e-c-o-d.

24 THE WITNESS: Yes.

25 Q BY MS. KRIEG: What is the recode project?

1 MS. SOBEL: And I just want to caution the
2 witness not to reveal any aspect of the project that you
3 are familiar with that's privileged, but to the extent
4 you are able to answer and not reveal privileged
5 information, go ahead.

6 THE WITNESS: Can we -- can we consult for a
7 minute?

8 MS. SOBEL: Yeah, can we go off the record for
9 one minute?

10 MS. KRIEG: Of course. Yes. Take your time.

11 THE VIDEOGRAPHER: The time is 12:27 p.m. We
12 are off the record.

13 (The deposition was at recess from 12:27 p.m.
14 to 12:34 p.m.)

15 THE VIDEOGRAPHER: The time is 12:34 p.m., and
16 we are on the record.

17 MS. KRIEG: I don't -- I actually don't
18 remember the last question before the break. Could we
19 have it read back.

20 (The requested portion of the record was read
21 by the court reporter as follows: "What is the recode
22 project?")

23 MS. SOBEL: I will just give the same
24 cautionary language not to reveal the content of any
25 privileged conversations you had, but to the extent you

Videotaped Deposition of
DANIEL FARMER
Given Remotely
Friday, March 18, 2022
10:04 a.m.

Reported by: Karen K. Kidwell, RMR, CRR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 BY MS. BLAKEMAN:

2 Q. Yes. I believe you stated that you
3 worked -- well, I'll just restart.

4 Can you describe the typical work that you
5 would -- that Ms. Bella would do, for which you would
6 support her logistically?

7 A. Ms. Bella did something different every
8 day. If your question is about what work she did day
9 to day, there's not a single answer to that question.
10 I could speak broadly about some of the work of the
11 Medicare-Medicaid Coordination Office during that
12 time, but I -- I can't characterize Ms. Bella's work
13 day to day.

14 Q. Did any of the work that Ms. Bella
15 performed while you were her special assistant touch
16 upon or relate to Medicare Advantage?

17 A. Yes.

18 Q. What about risk adjustment?

19 A. Yes.

20 Q. I believe you became the special assistant
21 to Sean Cavanaugh in May of 2014; is that right?

22 A. I believe that's correct.

23 Q. Why did you change positions from being
24 the special assistant to Ms. Bella to being the
25 special assistant to Mr. Cavanaugh?

1 MS. LIKOFF: Object to form.

2 THE WITNESS: I was interested in getting
3 a different experience during my time at CMS.

4 BY MS. BLAKEMAN:

5 Q. Did you become the special assistant to
6 Mr. Cavanaugh immediately upon his taking the
7 position of deputy administrator and director?

8 MS. LIKOFF: Object to form. Vague.

9 THE WITNESS: Can you clarify?

10 BY MS. BLAKEMAN:

11 Q. Certainly. What position did
12 Mr. Cavanaugh hold at CMS when you became the special
13 assistant to Mr. Cavanaugh?

14 A. When I became Mr. Cavanaugh's special
15 assistant, he was the deputy administrator at CMS and
16 the director of the Center for Medicare.

17 Q. How long had he held those positions when
18 you became his special assistant?

19 A. I don't know.

20 Q. What were your job duties in your position
21 as special assistant to Mr. Cavanaugh?

22 A. My responsibilities for Mr. Cavanaugh as
23 his special assistant were primarily logistical. I
24 was responsible for making sure the day-to-day, his
25 calendar was up to date for meetings that he had

1 planned on the calendar, making sure that the correct
2 staff were included and were able to attend. If
3 there were external meetings, making sure that
4 Mr. Cavanaugh had received materials that the
5 external folks would have submitted. Some -- or
6 excuse me -- that wasn't specific to external
7 meetings. That would have been all meetings. Making
8 sure that Mr. Cavanaugh had materials for those
9 meetings before he attended.

10 If we were going to be using video
11 teleconferencing, I was responsible for making sure
12 the video teleconferencing was working. If we were
13 having an audio-only call, making sure that the
14 conference call was working.

15 Was also responsible for making sure that
16 Mr. Cavanaugh was notified if other parts of CMS were
17 looking to get in touch with him on an urgent or --
18 on an urgent matter, if need be.

19 So, again, helping to coordinate
20 Mr. Cavanaugh's day and his schedule.

21 Q. Were you responsible for drafting any
22 briefing materials for Mr. Cavanaugh at that time?

23 MS. LIKOFF: Object to form. Vague.

24 THE WITNESS: Could you clarify what you
25 mean by "briefing materials"?

1 BY MS. BLAKEMAN:

2 Q. Certainly. Were you responsible for
3 drafting for Mr. Cavanaugh any background materials
4 or policy summaries for Mr. Cavanaugh in advance of
5 the meetings that you helped coordinate?

6 A. No.

7 Q. Were you responsible for writing any first
8 drafts for Mr. Cavanaugh, that he would then adopt as
9 his own?

10 MS. LIKOFF: Object to form. Vague.

11 THE WITNESS: First drafts of -- of what,
12 exactly?

13 BY MS. BLAKEMAN:

14 Q. Well, I'm starting broad because I'm not
15 sure, so I'm trying to get that information from you.

16 Were you responsible for drafting any
17 documents that Mr. Cavanaugh would then edit?

18 MS. LIKOFF: Same objection.

19 THE WITNESS: So I would first say I was
20 never responsible for drafting policy documents
21 that were intended to inform Mr. Cavanaugh.
22 Those responsibilities -- that responsibility
23 for drafting that material rested with other
24 staff and policy experts within the Center for
25 Medicare, and those documents were routinely

1 provided to him in advance of internal meetings.

2 Does that answer your question?

3 BY MS. BLAKEMAN:

4 Q. I -- it answers an earlier question.

5 The next question is whether or not you
6 would draft for Mr. Cavanaugh documents that he would
7 then send out to colleagues.

8 MS. LIKOFF: Object to form.

9 THE WITNESS: So can you clarify what you
10 mean by "colleagues"?

11 BY MS. BLAKEMAN:

12 Q. Other CMS employees.

13 A. So, broadly, I had a responsibility at
14 times to draft summaries of the work of Center for
15 Medicare, either representing policy decisions or
16 policy recommendations for other parts of CMS and
17 HHS. When I would draft those materials, they had to
18 be reviewed, typically by Mr. Cavanaugh, and also
19 policy staff within the Center for Medicare, to
20 verify accuracy and narrative description.

21 Q. Did any of those summaries that you
22 drafted relate to Medicare Advantage?

23 MS. LIKOFF: Object to form.

24 THE WITNESS: I don't know.

25

1 BY MS. BLAKEMAN:

2 Q. Did any of the summaries you drafted
3 relate to risk adjustment?

4 MS. LIKOFF: Object to form.

5 THE WITNESS: I don't know.

6 BY MS. BLAKEMAN:

7 Q. Who did you report to as special assistant
8 to Mr. Cavanaugh?

9 A. I reported to Mr. Cavanaugh.

10 Q. Did you report to anyone else?

11 A. No.

12 Q. Did anyone report to you while you were in
13 that position?

14 A. No.

15 Q. Who else besides Mr. Cavanaugh at CMS
16 would you work with regularly -- I'll say weekly
17 again -- while you were in this position?

18 A. Say there were many, many people. Within
19 the Center for Medicare, I would have worked
20 regularly with other special assistants; again, for
21 coordinating materials and scheduling purposes.
22 Outside of the Center for Medicare, I would again be
23 working with representatives from other offices, when
24 Mr. Cavanaugh needed to have conversations or
25 meetings with them. I would have been in touch with

1 the press office, the legislative office, the Office
2 of Strategic and Regulatory Affairs. Those are a few
3 examples.

4 Q. Would you take notes in meetings that
5 Mr. Cavanaugh attended while you were in that
6 position?

7 A. I don't -- I don't know. No, I don't
8 know. I would say typically not.

9 Q. In April of 2016, you became the director
10 of division of payment services in the Medicare Plan
11 Payment Group at CMS. Is that right?

12 A. Yes.

13 Q. Why did you change from being the special
14 assistant to Mr. Cavanaugh to being the director of
15 division of payment services?

16 A. It was an opportunity to do different
17 work.

18 Q. And what did your work entail in that
19 position?

20 MS. LIKOFF: Objection to form. Vague.

21 THE WITNESS: Could you be more specific?

22 BY MS. BLAKEMAN:

23 Q. Sure. What does the Medicare Plan Payment
24 Group do?

25 A. The Medicare Plan Payment Group, broadly,

1 MS. LIKOFF: Object to form.

2 THE WITNESS: I didn't know that she
3 didn't attend.

4 BY MS. BLAKEMAN:

5 Q. Are you aware of any other CMS employees
6 who attended the meeting, other than yourself,
7 Mr. Cavanaugh, and Ms. Rice?

8 A. No.

9 Q. So is it fair to say there were no other
10 CMS attendees of the meeting?

11 MS. LIKOFF: Object to form.

12 Mischaracterizes the witness's testimony.

13 THE WITNESS: It's not correct. I don't
14 recall any other CMS employees attending the
15 meeting.

16 BY MS. BLAKEMAN:

17 Q. Do you remember why the meeting was held?

18 MS. LIKOFF: Object to form. Vague.

19 THE WITNESS: No.

20 BY MS. BLAKEMAN:

21 Q. What do you recall was said in the
22 meeting?

23 MS. LIKOFF: Object to form. Vague.

24 THE WITNESS: Could you be more specific?

25

1 BY MS. BLAKEMAN:

2 Q. Do you recall anything that was discussed
3 at this meeting?

4 A. I do not.

5 Q. Do you recall any questions posed to CMS
6 from United or Optum?

7 MS. LIKOFF: Object to form. Vague.

8 THE WITNESS: No.

9 BY MS. BLAKEMAN:

10 Q. Do you recall any statements from United
11 or Optum at this meeting?

12 MS. LIKOFF: Object to form. Vague.

13 THE WITNESS: No.

14 BY MS. BLAKEMAN:

15 Q. Do you recall any questions from yourself,
16 Mr. Cavanaugh, or Ms. Rice to the United/Optum folks
17 on the line at this meeting?

18 A. No.

19 Q. Do you recall any statements that
20 yourself, Mr. Cavanaugh, or Ms. Rice said at this
21 meeting?

22 MS. LIKOFF: Object to form. Vague.

23 THE WITNESS: No.

24 BY MS. BLAKEMAN:

25 Q. Do you recall any topics that were

1 discussed at this meeting?

2 MS. LIKOFF: Object to form. Vague.

3 THE WITNESS: No.

4 BY MS. BLAKEMAN:

5 Q. Do you recall whether anyone at United or
6 Optum asked yourself, Mr. Cavanaugh, or Ms. Rice for
7 clarification about whether United or Optum had a
8 proactive obligation to review diagnoses codes --
9 diagnosis codes, excuse me.

10 MS. LIKOFF: Object to form. Lacks
11 foundation. Vague.

12 THE WITNESS: Would you repeat that
13 question?

14 BY MS. BLAKEMAN:

15 Q. Do you recall at the meeting whether
16 anyone at United or Optum asked yourself, Ms. Rice,
17 or Mr. Cavanaugh for clarification about whether
18 United or Optum had a proactive obligation to review
19 diagnoses codes -- diagnosis codes -- that were
20 submitted?

21 A. No.

22 MS. LIKOFF: Object to form. Lacks
23 foundation. Vague. Compound.

24 THE WITNESS: No.

25

1 BY MS. BLAKEMAN:

2 Q. Do you recall any indication from
3 yourself, Mr. Cavanaugh, or Ms. Rice that United had
4 no proactive obligation to confirm whether diagnosis
5 codes submitted by physicians are correct?

6 MS. LIKOFF: Object to form. Lacks
7 foundation. Vague. Compound.

8 THE WITNESS: No.

9 BY MS. BLAKEMAN:

10 Q. Do you recall any indication from
11 yourself, Mr. Cavanaugh, or Ms. Rice that United did
12 have a proactive obligation to confirm diagnosis
13 codes submitted by physicians that -- excuse me --
14 that diagnosis codes submitted by physicians are
15 correct?

16 MS. LIKOFF: Object to form. Vague.
17 Compound. Lacks foundation.

18 THE WITNESS: Could you repeat that
19 question?

20 BY MS. BLAKEMAN:

21 Q. Do you recall whether yourself,
22 Mr. Cavanaugh, or Ms. Rice indicated to United at
23 this meeting that United did have a proactive
24 obligation to confirm whether diagnosis codes
25 submitted by physicians are correct?

Videotaped Deposition of
MELISSA FERRON
Given Remotely
Wednesday, July 27, 2022
11:13 a.m. Eastern

Reported by: Karen K. Kidwell, RMR, CRR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 together into an HCC?

2 A. Yes. A subgroup of diagnostic codes are
3 grouped into HCCs, yes.

4 Q. So a single HCC, that's composed of
5 several ICD-9 or ICD-10 diagnosis codes?

6 A. Correct.

7 Q. I want to back up for a minute and talk
8 about where these codes are documenting, how they're
9 documented, and where they come from.

10 So I'm going to use an example. Let's say
11 there's a primary care doctor who has a patient who
12 comes in for her annual checkup. How does that
13 primary care doctor memorialize the medical
14 conditions that that patient has?

15 MS. CHEN: Objection.

16 BY MS. SOBEL:

17 Q. You can answer.

18 A. The provider would document in the medical
19 record, in a somewhat standardized form, for the
20 medical record, various components of the patient's
21 health and social status, and the diagnosis would be
22 documented in the medical record and then signed by
23 the provider.

24 Q. So would you agree with me that medical
25 providers record their findings about their patients

1 in their medical record?

2 A. Yes.

3 MS. CHEN: Objection. Leading.

4 BY MS. SOBEL:

5 Q. Historically, was this done by hand, by
6 the medical providers? In other words, they make the
7 medical records by writing -- you know, with a pen or
8 pencil in an actual chart?

9 A. Yes. There's a combination of handwriting
10 as well as dictation.

11 Q. And in more recent times, is this all done
12 electronically? In other words, medical records are
13 now done by doctors or medical providers with a
14 computer and in an electronic format?

15 A. Yes, that's more common now.

16 MS. CHEN: Ms. Sobel, I'm actually having
17 a really hard time hearing you. It's a little
18 bit fuzzy. Is there any way you could speak a
19 little bit closer to your microphone?

20 MS. SOBEL: Yeah. Let me figure out where
21 my microphone is. We're in a room where that's
22 not clear.

23 Yeah, let me -- let me switch places here.
24 I think I can make this better. Hold on, okay?

25 MS. CHEN: Thank you.

1 Yeah, you're -- you're sounding kind of
2 like you're on a speaker phone. I'm having a
3 hard time differentiating.

4 MS. SOBEL: No problem.

5 Is this better?

6 MS. CHEN: Can you say something else?

7 MS. SOBEL: Can you hear me?

8 MS. CHEN: I think it's a little bit
9 better. I'll let you know if I'm still having
10 the same problem.

11 MR. McNAMARA: Okay.

12 MS. CHEN: Please proceed.

13 MR. McNAMARA: Okay.

14 BY MS. SOBEL:

15 Q. We talked about this a little earlier,
16 Ms. Ferron. How does the information from a
17 patient's medical records get transformed into these
18 diagnosis codes, which we've been talking about most
19 of today?

20 MS. CHEN: Objection. Form.

21 THE WITNESS: The -- in context of what
22 we've been talking about today, a coder would
23 review the medical record and assign codes that
24 are documented in the medical record. That's
25 one way.

1 Other ways, you talked about the
2 electronic medical records. Often the physician
3 assigns the codes as they're documenting in the
4 medical record.

5 BY MS. SOBEL:

6 Q. So within a doctor's office, either the
7 physician or medical provider themselves provides the
8 actual diagnostic coding, or a coder in their office
9 does that?

10 A. Yes.

11 MS. CHEN: Object to form.

12 BY MS. SOBEL:

13 Q. I want to switch now and talk about coding
14 guidelines, which we touched upon earlier.

15 What are the various sources for coding
16 guidelines that coders like yourself use when coding
17 medical records?

18 A. Okay. They are the three that I mentioned
19 earlier: The actual ICD-10 or ICD-9 books has rules
20 for coding. And then there's the official guidelines
21 for coding and reporting that the CDC publishes. And
22 then there's Coding Clinic that the American Hospital
23 Association publishes.

24 Q. In the course of your career in coding
25 over the last 45 years, have you encountered

1 instances where these three sources, these three
2 guidelines, don't address the coding issue in medical
3 record?

4 A. All the time.

5 MS. CHEN: Object to form.

6 BY MS. SOBEL:

7 Q. Your answer was "all the time"?

8 A. All the time.

9 Q. Can you explain to me how this happens?

10 You can use examples, whatever would best explain how
11 this happens, that these three guidelines don't
12 provide a clear answer to a coding issue in the
13 medical record.

14 MS. CHEN: Object to form.

15 THE WITNESS: The -- the official -- so
16 let me just sort of describe what each of the
17 guidelines do for coding.

18 So the books themselves have conventions,
19 they're called coding conventions, that when
20 you -- gives you instruction how to look up a
21 code, and also gives you information on when an
22 additional code might be needed, when a -- a
23 code might be needing additional digits to be a
24 complete code. So that's what the ICD-10 book
25 would give you.

1 Then the official guidelines for coding
2 and reporting from the CDC -- it's only about --
3 I don't even know now, a 110-page document, so
4 it's very -- it's not very detailed. It gives
5 high-level guidelines.

6 And then Coding Clinic, which first
7 started providing guidelines in 1984, is more of
8 a question/answer type of publication, published
9 quarterly, where Coding Clinic decides what
10 questions they will answer and publish in their
11 publication.

12 But unfortunately, between all of those
13 three documents, there is not clear guidance for
14 many -- most scenarios. Only the easiest
15 scenarios can be coded.

16 Not only are they, in my opinion,
17 insufficient for the documentation in today's
18 world -- and what I mean by that, the verbiage
19 used by -- excuse me -- the verbiage used by
20 physicians aren't always in alignment with
21 the -- the coding -- the words in the coding
22 books. So they don't stay on top of changing
23 medical terminology.

24 As medical terminology evolves and
25 diseases evolve, the coding guidelines don't

1 either coded on that chart within previous years and
2 what may be a suspected condition.

3 Q. So when a coder is conducting a blind
4 coding review of a medical chart, she doesn't know
5 what codes the provider submitted on a claim to that
6 for a beneficiary?

7 A. Correct.

8 MS. CHEN: Objection. Form. Leading.

9 BY MS. SOBEL:

10 Q. I want to --

11 MS. YEVTUKHOVA: Objection. Form.

12 BY MS. SOBEL:

13 Q. I want to use another example.

14 Now, assume a provider has submitted
15 diagnosis codes for a beneficiary for diabetes and
16 heart failure. This is for a Medicare Advantage
17 beneficiary. Okay?

18 Now, in a blind review, as part of a chart
19 review program, the coder would not know that those
20 diagnosis codes were submitted, correct?

21 A. Correct.

22 MS. CHEN: Objection. Form. Leading.

23 BY MS. SOBEL:

24 Q. Assume the coder reviews the medical chart
25 and -- medical record, I should say -- and identifies

1 diabetes and hypertension as two diagnosis codes
2 documented in the medical record.

3 A. Okay.

4 Q. If the coder conducting his blind review
5 does not identify heart failure, does that mean that
6 heart failure is not documented in that patient's
7 medical record?

8 A. No.

9 MS. CHEN: Objection. Form.

10 MS. YEVTUKHOVA: Object to form.

11 BY MS. SOBEL:

12 Q. What would that coder need to do to
13 determine whether or not heart failure is in fact
14 documented in the patient's medical record?

15 A. The coder would need to know to go back to
16 the record, re-review the record, and look for the
17 diagnosis of congestive heart failure, do a more
18 thorough review of the medical record for congestive
19 heart failure.

20 Q. And have you seen instances in the course
21 of your career where a coder doesn't identify a
22 diagnosis code in a blind review, but other coders
23 subsequently find a code in a patient's medical
24 record?

25 A. It happens --

1 MS. CHEN: Object to form.

2 MS. YEVTUKHOVA: Object to form.

3 THE WITNESS: It happens all the time.

4 MS. SOBEL: Thank you, Ms. Ferron. I have
5 no more questions.

6 MS. CHEN: All right. I have a couple
7 follow-up questions, but -- can we take a quick
8 break?

9 MS. SOBEL: Sure. Yes.

10 VIDEOGRAPHER: We're now going off the
11 record. It's 6:19 p.m.

12 (A recess transpired from 6:19 p.m. until
13 6:27 p.m.)

14 VIDEOGRAPHER: We're back on the record.
15 It's 6:27 p.m.

16 FURTHER EXAMINATION

17 BY MS. CHEN:

18 Q. All right, Ms. Ferron, I just had a few
19 follow-up questions on the topics you discussed with
20 counsel for United.

21 First, you discussed your opinion that
22 there are gray areas in coding. Do you remember
23 that?

24 A. Yes.

25 Q. And so given these gray areas, how do

Videotaped Deposition of
RICHARD SHAW FOSTER
Given Remotely
Thursday, March 31, 2022
11:01 a.m. Eastern Time

Reported by: Karen K. Kidwell, RMR, CRR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 to -- pardon me, to depose you in this case?

2 A. Oh, I guess it would have been last summer
3 sometime.

4 Q. And how did you learn about that?

5 A. Through a call from Martha Glover.

6 Q. When did you first learn about this
7 litigation?

8 A. I remember reading about it in the
9 newspapers some time back. I don't remember exactly
10 when.

11 Q. And have you discussed this deposition
12 with anyone other than your counsel?

13 A. My wife understands that I'm being deposed
14 in a case, but we never discussed the specifics or
15 what it's about or anything.

16 Q. All right. I should have said putting
17 aside your wife or your counsel, have you talked to
18 anyone else about the fact that you're being deposed
19 today?

20 A. No.

21 Q. Have you talked to anyone other than your
22 wife and counsel about this litigation?

23 A. No.

24 Q. Other than your wife and counsel, does
25 anybody else know that you're being deposed today, to

1 your knowledge?

2 A. No. Nobody knows.

3 Q. Mr. Foster, I'd like to go over your
4 background briefly. Could you tell us your
5 educational background?

6 A. Sure. I went to the College of Wooster in
7 Ohio and majored in mathematics. Then I went to the
8 University of Maryland at Baltimore County, to
9 graduate school in applied mathematics. Then I
10 undertook a series of national examinations to become
11 a member of the Society of Actuaries. Those exams
12 are educational in nature. They require substantial
13 studying to learn the information that you are then
14 tested on. I've studied various things on my own
15 from time to time, particularly statistics, some
16 economics.

17 I think that sums it up.

18 Q. And what was your first job after the
19 University of Maryland?

20 A. I got a job as a -- as an entry-level
21 actuary at the Social Security Administration.

22 Q. And when was that?

23 A. Either late January 1973 or early
24 February. I don't remember exactly.

25 Q. How long did you work at the Social

1 Security Administration?

2 A. Until February 1995.

3 Q. And you rose to the level of deputy chief
4 actuary there, correct?

5 A. That's correct.

6 Q. Did you leave the Social Security
7 Administration to join CMS -- or HCFA at the time?

8 A. Yes, HCFA at the time.

9 Q. And what job did you obtain at HCFA
10 in '95?

11 A. The position of chief actuary became open,
12 and I applied for that and was selected for that
13 position.

14 Q. And you served as chief actuary for
15 17 years, right?

16 A. I think it was actually 18 years.

17 Q. I didn't mean to chop off that 18.
18 Through December 2012, correct?

19 A. Through January 2013, approximately.

20 Q. Now, during your time, you prided yourself
21 on your independence, correct?

22 A. Yes. You've been doing your homework, I
23 can see. That's correct.

24 Q. In fact, you had some political pressure
25 from both sides of the aisle. Wouldn't that be

1 accurate?

2 A. Yes, that's fair.

3 Q. And in each case, you tried to do the
4 right thing?

5 A. Yes.

6 Q. Tell us how big the Office of the Actuary
7 was when you worked there.

8 A. When I first started, in 1995, the office
9 had a -- I think about 90 people in it. And
10 subsequently one -- one component of the office,
11 during a reorganization of CMS -- well, HCFA back
12 then, at large -- was broken off, and that group went
13 to the Office of Research and Demonstrations. So the
14 office size went down to maybe 70 or 75, in that
15 neighborhood. And it generally varied, while I was
16 there, between 70 and 90, over time.

17 Q. And how were those people organized within
18 the office?

19 A. Well, the office itself -- and it didn't
20 start this way immediately, but it -- before long, it
21 became the way I'll describe -- has three groups.
22 There's the Medicare and Medicaid Cost Estimates
23 Group. There is the Parts C and D Actuarial Group.
24 And there is the National Health Statistics Group.
25 And there is no further subdivision, no

1 formal subdivision within the groups.

2 Q. Approximately how large was each group
3 during your tenure there?

4 A. Well, I don't remember exactly, but each
5 group would have been in the range of 20 to
6 25 people.

7 I should add that the Parts C and D
8 Actuarial Group was not formed until after the
9 legislation that -- the Medicare Improvement Act in
10 2003.

11 Q. So Parts C and D were not in place during
12 the Balanced Budget Act of '97?

13 A. Part D was not. Part C was in place
14 already before then, or the equivalent of it; in
15 other words, a private sector managed-care operation.
16 And Part D didn't come along until the Improvement
17 Act.

18 Q. Fair enough. My question maybe wasn't
19 clear. I meant to say the Parts C and D Actuarial
20 Group within the Office of the Actuary didn't come
21 into place in '97. It first came into place in 2003.
22 Is that correct?

23 A. Technically it came into place as a result
24 of that legislation, and that happened in 2004.

25 Q. Understood. Okay.

1 There will be claims that have not yet been
2 processed or paid, and we won't know about those
3 until two or three or six months later.

4 BY MR. ABASCAL:

5 Q. But one method or one characteristic that
6 may be incomplete in fee-for-service data is the
7 diagnosis of the patient, correct?

8 A. I would say yes, there can be incomplete
9 records.

10 Q. And that's in part because in a
11 fee-for-service environment, the provider is paid
12 based on a procedure, correct?

13 A. Yes, that's right.

14 Q. And so that provider may not have the
15 incentive to code every diagnosis that that patient
16 has, when they're not being paid based on a
17 diagnosis, correct?

18 A. I would like to think that providers, as a
19 rule, follow the guidelines about what a claim has to
20 include, which includes a diagnosis.

21 And we do a pretty good job of it. Do
22 they always do a perfect job? Obviously the answer
23 is no.

24 Q. But you understood that the provider in
25 the fee-for-service environment was not obligated to

1 code every diagnosis that the patient has, correct?

2 MS. ZUPAC: Objection. Vague as to the
3 time frame you're referring to.

4 THE WITNESS: Did you want to clarify
5 that, Manny? Or should I go ahead?

6 BY MR. ABASCAL:

7 Q. Well, if you understand the question, you
8 can answer, or if you -- if you don't, I'm happy to
9 clarify it for you.

10 A. Well, would you mind just repeating the
11 question for me, please?

12 Q. Sure. You understand that a provider in
13 the fee-for-service environment is not obligated to
14 code every diagnosis that the patient has when
15 submitting a claim?

16 A. Well, that's correct. They're not only
17 not obligated to do that, but they're not supposed to
18 do that. They're supposed to include the diagnosis
19 that relates to the service that they performed on
20 that particular visit.

21 Q. Correct. So one of the pluses and
22 minuses -- a minus, if you will -- of using
23 fee-for-service data, is that it may not capture all
24 of the diagnoses that a patient has, correct?

25 MS. ZUPAC: Object to form.

1 THE WITNESS: I wouldn't call it a plus or
2 minus. It's more of a fact of life. They're
3 trying to set up a risk-adjustment model that
4 will reflect diagnoses from the prior year. And
5 you work with the data you have.

6 And then the results of that model, when
7 it's applied to calculate risk scores for
8 whatever group of beneficiaries is relevant, you
9 then also use the diagnoses you have, which
10 hopefully the completeness and the accuracy
11 would be very or fairly similar to the case, as
12 in the fee-for-service source of the data. So
13 that's the process, how it's intended to work.

14 If you end up with a more complete record
15 or a less complete record when calculating some
16 individual's risk score, that could adjust or
17 affect the calculated risk score up or down
18 accordingly. But the hope would be that on
19 average, over a sizeable group of people, those
20 kinds of differences in coding practice would
21 average out compared to fee-for-service.

22 BY MR. ABASCAL:

23 Q. But the fact of life is that the model is
24 calibrated on data that may be incomplete or
25 inaccurate with respect to the diagnoses of the

VIDEOCONFERENCE VIDEOTAPED DEPOSITION OF
JANET FRY

(Taken virtually)

9:02 a.m. Eastern

Thursday, June 2, 2022

REPORTED BY: Christine A. Taylor, RPR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 Q. You are also a certified professional
2 coder, or CPC, through the AAPC; correct?

3 A. Yes.

4 Q. You've been a CPC since 2009; correct?

5 A. That's correct.

6 Q. And did you also end that when you
7 retired?

8 A. Yes.

9 Q. What is AAPC?

10 A. American Association of Professional
11 Coders.

12 Q. And what is a certified professional
13 coder?

14 A. That, again, is a certification that --
15 a test that shows you're competent in the skills of
16 coding, particularly physician records. So there's
17 not the emphasis of inpatient rules and Medicare
18 rules that there is in the clinical -- the CCS. So
19 the CPC is more physician related.

20 Q. You're also an AHIMA approved ICD-10
21 trainer; correct?

22 A. Correct.

23 Q. What does this entail?

24 A. So this was a certification and mostly
25 online classes and the ICD-10, the change to ICD-10

1 from ICD-9. So it was a complete overhaul of the
2 coding system, so I took the course to not only
3 learn the system, but be able to teach it.

4 Q. And to make sure we're on the same
5 page, ICD-10, does that refer to the International
6 Statistical Classification of Diseases?

7 A. Yes, International Classification of
8 Diseases, 10th revision.

9 Q. And what is ICD-10?

10 A. ICD-10 is the coding system that is
11 approved for use in all environments through the
12 World Health Organization and also the CMS. So
13 it's the only coding system that is approved for
14 use. 10 is the more recent reiteration of it,
15 whereas ICD-9 is mostly what has covered my
16 particular involvement in RADV. 10 didn't start
17 until after -- pretty much after I had already
18 retired. Because of the way audits are, you're
19 reviewing one, two, or three years after the fact.
20 So that was one reason I retired when I did because
21 there was this change that there was a good
22 stopping point.

23 Q. Understood. And are ICD-10 a set of
24 diagnosis codes?

25 A. Yes.

1 Q. So if you turn to page 3 of the
2 Exhibit 1212 in front of you, there -- at the
3 bottom of the page, there are sort of underlined
4 text. The second underlined line reads, "Member
5 American Health Information Management Association,
6 AHIMA."

7 Do you see that?

8 A. Yes.

9 Q. How long have you been a member of
10 AHIMA?

11 A. Since 1981.

12 Q. Are you still a member?

13 A. No.

14 Q. The next underlined line reads "Member
15 American Association for Professional Coders."

16 Do you see that?

17 A. Yes.

18 Q. How long have you been a member of
19 AAPC?

20 A. Just since -- was it 2009 that I took
21 their test? Yes.

22 Q. And are you still a member?

23 A. No.

24 Q. Okay. Do you have any degrees or
25 certificates that are not listed on your resum??

1 A. No.

2 Q. Do you have any other training in
3 medical coding?

4 A. Any other training in medical coding?

5 Q. Yes.

6 A. Just what I have mentioned. Just in
7 order to maintain your RHIA, you have to take
8 continuing education credits every two years. So
9 yes, I've kept up with the industry, but as far as
10 a formal like college course, I taught coding, but
11 I didn't take coding.

12 Q. Understood. Do you have any medical
13 training?

14 A. No.

15 Q. Are you familiar with the term
16 "Medicare Advantage"?

17 A. Yes.

18 Q. Is this term often referred to as MA?

19 A. Yes.

20 Q. What is Medicare Advantage?

21 A. Medicare Advantage is Part C of the
22 options that are available for Medicare
23 participants. A being the inpatient care, B being
24 medical, and then C is a combination of those two
25 which is a contracted organization, insurance

1 company, if you will, that contracts with Medicare
2 to cover their patients in a combined manner for
3 inpatient and outpatient services.

4 Q. How did you learn about Medicare
5 Advantage?

6 A. I was one of the original trainers for
7 Medicare Advantage back in 2000 when I worked for
8 Aspen Systems. So Medicare taught us Aspen and we
9 taught the industry. So I don't know. That's how
10 I learned from it, directly from Medicare.

11 Q. Got it. So I want to walk through your
12 different roles as a subcontractor or contractor
13 for CMS. So before you retired, were you
14 contractor for CMS?

15 A. Subcontractor, yes.

16 Q. Subcontractor, okay. If you can turn
17 back to page 1 of Exhibit 1212, there's a section
18 titled "Employment Experience." Do you see that?

19 A. Yes.

20 Q. So under employment experience on the
21 first page, it says, "Self-employed contractor,
22 Janet Fry, RHIA, LLC." Do you see that?

23 A. Yes.

24 Q. Was Janet Fry, RHIA, LLC, your company?

25 A. Yes.

1 Q. Were you the sole employee?

2 A. Yes.

3 Q. Did your company Janet Fry, RHIA, LLC,
4 contract with CMS?

5 A. I contracted with Signature Consultant
6 and different contractors for CMS, but I also had a
7 period of time where I was directly a contractor
8 with CMS.

9 Q. Did your company ever contract with any
10 other federal government agencies?

11 A. Federal government? No.

12 Q. Did you do any sort of subcontracting
13 with an entity that did contract with other federal
14 government agencies?

15 A. No, I don't think so.

16 Q. So under this, as you pointed out, it
17 says Signature Consulting Group. What is Signature
18 Consulting Group?

19 A. That is a -- how can I say this? It's
20 a group, a organization that does various work for
21 different clients. So it's like -- it's a
22 consulting group that does work for various
23 clients.

24 Q. And did you have a subcontract with
25 Signature Consulting Group?

1 A. Yes.

2 Q. Were you ever an employee of Signature
3 Consulting Group?

4 A. No.

5 Q. Under this it says "Independent
6 Statistical Consulting, ISC, contract." Do you see
7 that?

8 A. Yes.

9 Q. What is the independent statistical
10 consulting contract?

11 A. That was a portion of the total RADV
12 picture that CMS contracted with Signature to
13 provide services.

14 Q. So this contract was between CMS and
15 Signature Consulting?

16 A. Yes.

17 Q. And you were a subcontractor under this
18 contract?

19 A. Yes.

20 Q. This says next to it "August 2013 to
21 present." Do you see that?

22 A. Oh, yes.

23 Q. Do you recall this starting or starting
24 this role in August 2013?

25 A. Yes.

1 Q. Do you know when this role ended?

2 A. That would be January 2020.

3 Q. Okay. Did you have any other roles as
4 a contractor or subcontractor to CMS with Signature
5 Consulting Group?

6 A. No.

7 Q. So then the next -- or under the
8 independent statistical consulting it says,
9 "Independent coding contractor (ICC) providing
10 subject matter expertise (SME) and training in
11 medical documentation, project guidance, ICD-9-CM
12 and CMS-HCC coding for the CMS Risk Adjustment
13 Validation medical record review team and Medicare
14 Advantage, MA, organization participants."

15 Do you see that?

16 A. Yes.

17 Q. What is an independent coding
18 contractor, ICC?

19 A. That is a term that CMS came up with to
20 describe a person who is -- would help them with
21 official coding guidance, documentation. The
22 statement of work that I have, it talks about the
23 ICC will conduct training, facilitate discussions,
24 develop written communication, guidance and
25 briefing material to document and assist CMS in

1 making decisions.

2 Q. And were you the ICC?

3 A. Yes.

4 Q. What did -- in addition to what you
5 just mentioned, is there anything else that you did
6 in this role?

7 A. That pretty much covers everything.

8 Q. Okay. Who did you report to in this
9 role?

10 A. The -- let's see, I had a couple of
11 different supervisors. The last one was Cora
12 Hutchinson.

13 Q. And -- go ahead.

14 A. Project manager, yes.

15 Q. And is she at CMS?

16 A. I'm sorry. She's with Signature, yes.

17 Q. Okay. So did you report to CMS at all
18 as the ICC?

19 A. I did communicate with them directly,
20 yes.

21 Q. How long were you the ICC related to
22 this contract? It was 2013 to 2020; is that
23 correct?

24 A. Related to the Signature portion of the
25 contract, yes.

1 Q. Okay. When you say subject matter
2 expertise here, was the subject matter expertise in
3 coding?

4 A. Coding and documentation and medical
5 record guidance.

6 Q. Did you consider yourself a subject
7 matter expert in coding?

8 A. Yes.

9 Q. And then I know you've mentioned this a
10 few times, but just so it's clear, CMS Risk
11 Adjustment Data Validation here refers to RADV
12 audits?

13 A. That's correct.

14 Q. What are RADV audits?

15 A. RADV audits are the method by which CMS
16 validates that the information they receive from MA
17 organizations can be tracked back to documentation
18 that was made in a medical record at or near the
19 time of the service that was provided.

20 Q. And who is the medical record review
21 team referred to here?

22 A. Okay. So there's -- in order to
23 conduct these RADV audits, there's two -- one, two,
24 or three different teams of contractors, medical
25 record review contractors, sometimes abbreviated

1 MRRC, that are working to review medical records
2 independently, and then -- but the decisions in all
3 of that CMS needs to make and policies that are
4 need to make were filtered through the independent
5 coding contractor so that everybody was kind of
6 doing things the same way on the same page. That's
7 the team.

8 Q. Go ahead. So the medical record review
9 team, were those other contractors to CMS?

10 A. Yes. They would include other
11 contractors and CMS representation.

12 Q. And do you remember the names of any of
13 the other -- the medical record review contractors?

14 A. We've had a few over the years.
15 Strategic was one. Rely Group was one. They used
16 to be called BDS. So there's different names have
17 changed over the course of the project as the
18 contracts are released. Organizations sometimes do
19 some shifting around to get the contract to fit
20 what they're currently doing. So that makes sense.

21 Another team member would be the group
22 that does all the technical work. The -- we had a
23 tool in order to review records. So that tool had
24 to be developed by another contractor, but we
25 needed -- they needed our input as coders to

1 develop that tool. That's why we call it a team
2 because it was a lot of different contractors
3 working together to get the best result.

4 Q. Understood. If you can turn back to
5 page 1 of Exhibit 1212 on your screen, there's a
6 position midway down, it says Centers for
7 Medicaid -- Medicare and Medicaid. Do you see
8 that?

9 A. Yes.

10 Q. And underneath it reads, "Independent
11 coding contractor, ICC, providing consulting
12 services for Risk Adjustment Data Validation team
13 including SME, MA organization, and review
14 contractor project training, resource development,
15 abstraction tool development, consultation and
16 testing."

17 Do you see that?

18 A. Yes.

19 Q. This states you were in this role from
20 August of 2009 to July 2013; is that correct?

21 A. That's correct.

22 Q. Is the ICC role here the same as the
23 one we just discussed?

24 A. Yes.

25 Q. Were there any differences?

1 A. Just said I was reporting directly to
2 CMS instead of through a contractor.

3 Q. So did you contract with CMS directly
4 to be the ICC?

5 A. Yes. During that time period the
6 vehicle for the contract allowed for direct
7 contracting with CMS. And when that changed, then
8 I went and moved to Signature.

9 Q. Who did you report to at CMS related to
10 this role?

11 A. At this point of time I think it was
12 Carolyn Kapustij. Maybe Lateefah Hughes may have
13 been involved too. I had several different task
14 people over the years. So that's -- those are a
15 couple of names I recall.

16 Q. And when you say consulting services
17 for the RADV team including SME, you're referring
18 to the same RADV audits we talked about earlier?

19 A. Yes.

20 Q. And does SME also still refer to
21 subject matter expertise?

22 A. Yes.

23 Q. Was the subject matter expertise also
24 coding here?

25 A. Yes, coding and documentation.

1 Q. Okay. What does review contractor
2 project training refer to?

3 A. I was tasked with providing training to
4 the review contractors regarding each year's review
5 that we were doing, whether it was 2007 or 2008,
6 whatever the year was. So each year, each time we
7 got a new review cycle started, there would be a
8 training. So the coders from each of the MRRCs,
9 medical record review contractors, each of them
10 would come together and we would conduct a
11 training. It would be an overview of what the
12 project was about, any new coding changes that
13 occurred nationally, any lessons learned from the
14 prior audit, and then we would typically -- again,
15 it changed over the years, but typically we would
16 end with some kind of an assessment that the coders
17 understood the instructions. And then they would
18 go to their own MRRCs and continue internal
19 training from there. So it was kind of bringing
20 everybody together and then they could go and
21 adjust the information on their own. And if they
22 had any questions, then they could -- we would meet
23 fairly regularly, almost weekly or biweekly, we
24 would meet fairly regularly to discuss any
25 questions they had, any project concerns. And I

1 would, you know, help with any particular coding
2 question that came up or documentation issue that
3 came up that couldn't be answered in their own --
4 you know -- they had professional coders, so they
5 could answer their own questions. But sometimes
6 just odd things came up that they wanted another
7 opinion on, so that's where I came in.

8 Q. Got it. Okay. And the review
9 contractors were the MRRCs, as you called them, the
10 medical record review contractors?

11 A. Yes.

12 Q. And did the medical record review
13 contractors review medical records as part of the
14 RADV audits?

15 A. Yes.

16 Q. The abstraction tool that's mentioned
17 here, is that the tool you mentioned earlier that
18 would be used to review the medical records?

19 A. That's correct.

20 Q. So if you look at the very bottom of
21 the exhibit on page 1 of Exhibit 1212, it says
22 "Ascellon Corporation" and then September 2006 to
23 August 2010. Do you see that?

24 A. Yes.

25 Q. And then if you skip to page 2, it

1 Meanwhile or subsequently -- so, again,
2 different projects we did it differently -- a
3 secondary validation contractor was reviewing that
4 record and doing the same process, coding it first,
5 sending it to a senior coder if there was a
6 discrepancy. And, you know, finding the -- the
7 tool doing the work behind the scenes to do the
8 comparisons. And, yeah, so that's -- that's the
9 process -- the initial process.

10 Now, along the way there's a -- what's
11 called an escalation process in most of the review
12 years. And that would be when a coder comes across
13 a record that, for some reason, they question
14 whether that record should be coded because it
15 doesn't fit the guidelines set for the risk
16 adjustment program. It might be out of the year.
17 It might not be signed. There's no credential.
18 There's different evaluation things that happen
19 while you code.

20 So those are the type things they would
21 escalate to a senior coder and that coder could
22 then escalate it to the QA panel which I was in
23 charge of. So basically it's escalating it to me.

24 Other types of questions that could
25 come up, each of the medical record review

1 organizations had their own internal experts. So,
2 you know, they tried to handle anything they could
3 on their own based on the professional coders that
4 they had hired. But, again, there comes times when
5 there's questions. So those -- if a coding
6 question came up with how do we handle this
7 particular code in relation to this project or this
8 particular document or some kind of a discrepancy
9 of some kind, those could also get escalated to the
10 QA panel, me basically with -- you know, I would
11 look at the question and then we would talk about
12 it in the panel.

13 Q. Got it.

14 A. So that's kind of the process. Does
15 that help?

16 Again, there's different ways it was
17 done, but bottom line is at least four professional
18 coders were looking at every record. Likely more
19 than that if a supervisor is involved or myself.
20 So the run of the mill records, ones that were just
21 easy straight up coding, this is what the person
22 has, it's well documented, it's signed. Boom, it's
23 done. Those went through bought trouble.

24 But there was a percentage of records,
25 I don't know what percentage, but that for whatever

1 reason, those reasons I've mentioned, had to be
2 escalated and looked at by yet another set of eyes
3 or a physician or if the -- if it was a overarching
4 policy kind of thing, then I would need to bring
5 the whole issue up to CMS. So those were the kind
6 of things that happened during a regular medical
7 record review audit. Okay. Sorry.

8 Q. Very helpful. So one follow-up
9 question on the -- so you mentioned a percentage of
10 the records would need multiple years of review and
11 you didn't know a percentage. Do you have a sense
12 of how often that occurred?

13 MS. ZUPAC: Object to form.

14 BY MS. MADDUX:

15 Q. You can answer.

16 A. Okay. I don't have that information
17 right in front of me. I mean, just from memory,
18 the code -- the panel met in the heighth of a
19 review project. We met almost weekly reviewing
20 maybe 10 records. So we're talking 10 out of
21 thousands that were being reviewed that week. So
22 it wasn't a huge percentage.

23 Q. And I think we'll show some documents
24 in a little while. We can talk through more pieces
25 of the explanation you just provided. But do

1 but to make it the most correct review
2 possible.

3 BY MS. MADDUX:

4 Q. What is an additional HCC?

5 A. That would be a -- a HCC that was never
6 reported for that particular patient client member
7 for the whole year of review. Risk adjustment is
8 something that's not reported each time the person
9 goes to the hospital but it's more of like a
10 quarterly reporting or such. So if they've never
11 reported that particular diagnosis that triggered
12 that particular HCC, that would be -- and we found
13 it during the audit, that's an additional HCC.

14 Q. So the additional HCC is the diagnosis
15 code that the primary coder identified but had not
16 been submitted to CMS by the MA plan?

17 A. Yes. Primary or it could be the senior
18 also. It could be either one that identifies
19 something new.

20 Q. So the next paragraph in this section
21 reads, "MRRC senior level coders and/or other
22 designated coding supervisors monitor the IRR and
23 make recommendations to the project manager
24 regarding corrective action, workflow coordination,
25 and continuing education based on trends observed

1 during the review.

2 Do you see that?

3 A. Yes.

4 Q. How does the senior coder monitor the
5 IRR?

6 A. Again, this is up to each individual
7 MRRC, how they've set up their quality control
8 program. So we didn't -- I didn't give them
9 direction on how to do that. That's -- that was
10 their choice on how to monitor it.

11 Q. The next paragraph in this section
12 reads, "Senior coders have the option to reverse --
13 refer situations in which they disagree with either
14 the primary or another senior coder to the ICC for
15 another opinion. The ICC coding advice often will
16 result in clarification or addition to the coder
17 guidance document."

18 Do you see that?

19 A. Yes.

20 Q. Why would a senior coder disagree the
21 primary coder or with another senior coder?

22 MS. ZUPAC: Object to form.

23 THE WITNESS: The coders' opinions
24 could differ because of the documentation
25 that was presented. The coding is a

1 discipline that is based on multiple --
2 multiple documentation by multiple people in
3 the medical record. So one coder may have
4 seen something in a particular note that he
5 or she felt was important to pick up whereas
6 another coder might either just decided that
7 wasn't appropriate to code at that point or
8 maybe was a historical condition that the
9 person doesn't have anymore.

10 So there's these types of decisions
11 that are made every time you open up a
12 medical record to determine whether to
13 include the condition or not.

14 BY MS. MADDUX:

15 Q. So this situation is describing a
16 scenario where the senior coder may disagree about
17 whether a medical record documentation supported a
18 diagnosis code or HCC?

19 A. Yes.

20 Q. And in addition to the reasons you just
21 gave, are there any other reasons two certified
22 coders may disagree about whether a medical record
23 documentation supports a diagnosis or HCC?

24 MS. ZUPAC: Object to form.

25 THE WITNESS: Just in general. I don't

1 have any specific examples to give you, but
2 that's just a known fact. That's why we do
3 audits, because people disagree with the
4 information that's in the medical record.

5 BY MS. MADDUX:

6 Q. In your experience working with trained
7 coders, do you think it was not uncommon for two
8 certified coders to disagree on whether or not a
9 particular diagnosis code is supported in the
10 medical record?

11 MS. ZUPAC: Object to form.

12 THE WITNESS: I can't really put a
13 percentage whether to say it's common or not
14 common. I believe I mentioned before that
15 we only saw a -- we didn't see the whole --
16 100 percent of the records did not come
17 through as discrepant. So, therefore, some
18 did, but I don't have numbers as far as
19 which ones -- what the numbers were to give
20 you.

21 BY MS. MADDUX:

22 Q. While you were the ICC, do you recall
23 senior coders raising situations with you where the
24 senior coder disagreed with a primary coder or
25 senior coder?

1 A. Yes.

2 Q. Do you know how often this occurred?

3 MS. ZUPAC: Object to form.

4 THE WITNESS: Same response. I don't
5 have a percentage or a number for you.

6 BY MS. MADDUX:

7 Q. How would you resolve the disagreement?

8 A. The case would be discussed with the
9 es- -- the -- how do I say it?

10 The -- I would review the medical
11 record and look at what both -- the notes that both
12 coders gave to say what the problem was, where were
13 they having issues, you know, why did they
14 disagree, that sort of thing. And then, again,
15 since I was kind of the -- at the top as far as the
16 buck stops here, I would -- we would make a
17 decision on the guidance that we have. I'd either
18 agree with the primary or agree with the senior.
19 We may have to bring in a physician if we wanted to
20 look at it a little further, if it was a clinical
21 issue that they were disagreeing on. But primarily
22 between discussion of the -- myself plus other
23 professional coders that were on the QA panel, we
24 could typically come up with a good decision as far
25 as what the medical record documented.

1 Q. Did you ever need to reach out to the
2 Coding Clinic or another coding expert for
3 guidance?

4 A. Yes, absolutely. Yeah, the Coding
5 Clinic was in -- I'm not sure if it was in our tool
6 this early. But later on we actually could --
7 while we were reviewing records, we could look up
8 things on Coding Clinic. And so what I did before
9 that time was when these particular kind of cases
10 came up, I would see if there's any Coding Clinic
11 information on that particular condition, and I
12 kept like a spreadsheet of that information. So
13 that coders would have it for the next time that
14 particular issue came up. So it's all part of our
15 ongoing training.

16 Q. And is that the coder guidance document
17 mentioned here?

18 A. Yes. That's part of it, yes.

19 Q. So we've also been going about an
20 another hour, if we can maybe take another
21 five-minute break and go off the record.

22 THE VIDEOGRAPHER: We are going off the
23 record. The time is 11:06 a.m.

24 (Recess taken from 11:06 a.m. until 11:13 a.m.)

25 THE VIDEOGRAPHER: We are back on the

1 record. The time is 11:13 a.m.

2 BY MS. MADDUX:

3 Q. So if you can look back at Exhibit 1213
4 in AgileLaw, and we're still on page 10, but now if
5 you can sort of scroll to the right-hand side of
6 the page.

7 A. Okay.

8 Q. And the top header says "4.4.2 coder
9 guidance document"?

10 A. Correct.

11 Q. The second sentence of this section
12 reads "RADV experience has shown that provider
13 documentation varies widely in legibility, clinical
14 terminology, format, and authentication practices."

15 Do you see this?

16 A. Yes.

17 Q. Can you explain what this means?

18 A. So the documentation that is submitted
19 to support the HCCs, again it varies widely.
20 They're coming from different physician offices,
21 outpatient facilities, inpatient facilities, parts
22 of inpatient records. So there's lots of documents
23 that are coming in with -- some are electronic. At
24 this early stage, a lot of them were handwritten.
25 The formats differed. Some would have a lovely

1 summary with all of the diagnoses neatly listed.
2 Some would have no summary and you would have to
3 sort through 100 pages of progress notes to find
4 the diagnoses. Format, kind of self explanatory.
5 And then authentication practices, we want to make
6 sure that all of the medical records that came in
7 were actually from a -- they were from a provider
8 that was a Medicare supported provider, so a
9 physician or a physician extender. It couldn't
10 just be a lab report because that's not a supported
11 specialty for this -- for the RADV projects.

12 So all of this when we did the intake
13 of the medical records was -- was quite an
14 undertaking. So what we did -- well, go ahead.
15 You can go with your next question then. Does that
16 help?

17 Q. Yes. So how would legibility impact
18 medical record review?

19 A. Oh, quite a bit. Legibility and the
20 date; legibility and the diagnosis; legibility and
21 physician's signature, credential; very --
22 legibility is always an issue when you're coding
23 both currently and -- but especially
24 retrospectively since you can't go back and ask the
25 physician to interpret their handwriting.

1 Q. So the legibility of a medical record
2 may impact whether a primary or senior coder was
3 able to identify a diagnosis?

4 A. Yes.

5 Q. Could legibility be a reason that two
6 coders may review the same medical record and reach
7 different results?

8 A. Yes.

9 Q. How would variances in clinical
10 terminology impact medical record review?

11 Wendy, sorry, I think you're on mute.
12 I want to make sure --

13 A. There she is.

14 MS. ZUPAC: Thanks. Sorry.

15 BY MS. MADDUX:

16 Q. So I can repeat the question.
17 How would variance in clinical
18 terminology impact medical record review?

19 MS. ZUPAC: Object to form. Thank you.

20 THE WITNESS: The differences in
21 clinical terminology again based on the type
22 of record we received, it may be very
23 detailed or it may be not, or it could be an
24 abbreviation form or some kind of truncated
25 form. So the clinical terminology for a --

1 like a heart center teaching facility would
2 be different than the terminology used for a
3 physical done by someone who doesn't even
4 know the patient.

5 So there's different terminology that
6 could be listed. And so, again, there's
7 differences that typically these type things
8 would get escalated to a senior person to
9 sort out as would legibility actually.

10 BY MS. MADDUX:

11 Q. Would variances in clinical terminology
12 be one reason why two coders reviewing the same
13 medical record may reach different results?

14 MS. ZUPAC: Object to form.

15 THE WITNESS: Yes.

16 BY MS. MADDUX:

17 Q. So then the next section on this page
18 of Exhibit 11 -- excuse me, 1213 states in part,
19 "In addition to documentation issues, the Coder
20 Guidance summarizes selected official coding
21 guidelines for ICD-9-CM and AHA Coding Clinic for
22 ICD-9-CM sources for consistent interpretation
23 across RADV coders. These issues have been raised
24 by RADV coders as challenging coding situations
25 that impact common conditions in the Medicare

1 A. Yes.

2 Q. Why would the medical record review
3 contractor do an IRR evaluation on a test sample
4 prior to reviewing actual project records?

5 MS. ZUPAC: Object to form.

6 THE WITNESS: This would be part of the
7 hiring process. These are contractors that
8 have -- they could have several other
9 contracts going on. So in order to select
10 the coders best qualified, they do some
11 internal assessment and this is one of it.
12 They do a test sample of records to see that
13 that -- that coder is -- fully understands
14 inpatient, outpatient, physician coding
15 rules, and compare it to the -- like a gold
16 standard of records that they have set up,
17 like a test you would take for employment.

18 BY MS. MADDUX:

19 Q. Why does the primary coder need to meet
20 a 95 percent reliability score?

21 MS. ZUPAC: Object to form.

22 THE WITNESS: This would be -- the
23 number itself, I'm not sure exactly where
24 that came from. I assume it's in the
25 medical record review contractor's contract.

1 But, again, it's just showing that the
2 most -- the best coders are one that agree
3 to the gold standard of coding. So it's
4 keeping the most experienced coders that
5 understand the project the best in the --
6 for consistency purposes.

7 BY MS. MADDUX:

8 Q. Does the 95 percent threshold
9 acknowledge that coders may not agree about whether
10 a diagnosis code is supported by a medical record
11 100 percent of the time?

12 MS. ZUPAC: Object to form.

13 THE WITNESS: That's correct.

14 BY MS. MADDUX:

15 Q. Does this 95 percent threshold
16 acknowledge that coders may make mistakes and miss
17 diagnosis codes that are, in fact, supported in the
18 medical record?

19 MS. ZUPAC: Object to form.

20 THE WITNESS: True.

21 BY MS. MADDUX:

22 Q. What are some reasons why a primary
23 coder's IRR may be 95 percent or less?

24 MS. ZUPAC: Object to form.

25 THE WITNESS: All of the examples I've

1 given you previously with the documentation
2 issues, the coding, interpreting the coding
3 rules differently, experience, those are all
4 things that can contribute to the
5 95 percent.

6 BY MS. MADDUX:

7 Q. Was one reason the primary coder may
8 have missed a diagnosis code that was supported by
9 the medical record because the primary coder was
10 conducting a blind review?

11 MS. ZUPAC: Object to form.

12 THE WITNESS: I -- I don't really -- I
13 can't really answer that yes or no.

14 BY MS. MADDUX:

15 Q. If a primary coder did not identify a
16 diagnosis code in their blind review, does that
17 mean that a diagnosis code is not supported in the
18 medical record?

19 MS. ZUPAC: Object to form.

20 THE WITNESS: Well, I think we pretty
21 much already answered that with there's a
22 secondary review by a senior coder, so yes.

23 BY MS. MADDUX:

24 Q. What are coding errors?

25 A. Coding error would be one that -- in an

1 Q. Then it says two bullets later,
2 "conflicting documentation within the same record,"
3 what does that refer to?

4 A. That would be the example I gave you
5 earlier where like a specialist might say the
6 person has one thing, but the attending physician
7 doesn't feel that that's important or hasn't
8 included that in his final list of -- his or her
9 final list of diagnoses. That's where there's some
10 disagreement.

11 Q. How are coders supposed to resolve
12 conflicting documentation within the same record?

13 A. Our instructions were that the -- for
14 instance, in the inpatient record, the attending
15 physician has the final say of what the condition
16 is. So if they've included it in their final
17 progress note or summary, that would be -- that
18 would trump anything that happened earlier in the
19 process of determining the condition.

20 Q. And then why would coder education and
21 experience contribute to coder disagreement?

22 A. The coders, of course, were hired for
23 different projects and different -- they had
24 different abilities and years of experience. They
25 all met the minimum requirements. But,

1 particularly, if they had a lot of experience in
2 the hospital where the regulations are much more
3 strict, and there's a lot of use of Coding Clinic
4 whereas a physician-based coder whose -- most of
5 their career has just worked for physicians
6 wouldn't have that same level of experience with
7 coder clinic -- Coding Clinic because it's not
8 really used in physician offices, which is more of
9 a service-based coding instead of a diagnosis-based
10 coding. So theirs have levels of difference.

11 They all met the minimum requirements,
12 but through education and training, we get them all
13 up to the same speed. But there could be -- this
14 could be, as I said, this was just a subjective
15 maybe this could be a problem that the MRRCs could
16 identify and add to their quality control.

17 Q. And then the couple later it says coder
18 fatigue productivity standards. Why would coder
19 fatigue contribute to coder disagreement?

20 A. This again was just a guess on industry
21 standards and industry, you know, doing research to
22 find different reasons for coder disagreement and
23 coder fatigue is one of them.

24 Q. And why would productivity standards
25 potentially lead to coder disagreement?

1 A. Again, if it's potentially they -- and
2 I don't even know if there were productivity
3 standards at the MRRCs. But, again, if the coder
4 felt stressed to work faster, they might forget or
5 miss a particular diagnosis, which is why we have
6 the various levels so that the next person could
7 pick it up.

8 Q. And looking at this list today, are
9 there any other factors that you can think of that
10 may contribute to coder disagreement?

11 A. No. I think it's pretty -- you know,
12 can pretty much generalize because of documentation
13 and signatures and guidance. That's pretty much
14 what the -- subjectively, what we think causes
15 differences in coding.

16 MS. MADDUX: So I think if we can go
17 off the record.

18 THE VIDEOGRAPHER: We are going off the
19 record. The time is 12:09 p.m.

20 (Recess taken from 12:09 p.m. until 12:40 p.m.)

21 THE VIDEOGRAPHER: We are back on the
22 record. The time is 12:40 p.m.

23 (Exhibit 1215 marked for
24 identification.)

25 BY MS. MADDUX:

1 Q. Okay. So I'm going to direct your
2 attention back to AgileLaw. We're going to load a
3 new document. Tab 7. This will be Exhibit 1215.
4 And for the record, it is Bates stamped
5 USBP001210260. Do you see a document up on your
6 screen?

7 A. Yes.

8 Q. If you can take a minute to scroll
9 through and if you need to zoom, do that.

10 And this be appears to be an e-mail
11 chain dated April 1, 2010, between you Linda Small,
12 you, and others; is that correct?

13 A. Yes.

14 Q. Who is Linda Small?

15 A. She was a senior coder at -- or maybe
16 project manager, I'm not sure, at BDS, one of the
17 MRRCs.

18 Q. And, now, you can scroll to the bottom
19 of page 1 of Exhibit 1215, her e-mail starts there,
20 and it says, "In reviewing the 25 national CY 08
21 sample of records to be used for generating IRR
22 data on our coders, we had some difficulty with
23 three of the records," and then it continues to
24 page 2, "in establishing the final answers due to
25 gray areas, that can create inconsistency among

1 even the best coders. This coder interpretation
2 and discretion to weigh in on code assignment could
3 influence their final IRR score and ultimately
4 could result in falling below 95 percent. Since
5 coding -- code guidance instructs primary coders to
6 seek senior coder guidance in these situations.
7 The primary coder is denied their right in the IRR
8 sample test. We would like to get your input on
9 these records before they are forwarded to the rest
10 of the coders for IRR review."

11 Do you see that?

12 A. Yes.

13 Q. Is the IRR referred to here the same
14 inter reliability -- inter-rater reliability we
15 discussed earlier?

16 A. Yes. At the MRRC level, yes.

17 Q. And when Ms. Small says -- refers to
18 coding gray areas that can create inconsistency
19 even among the best coders, are those the same gray
20 areas you testified about earlier?

21 MS. ZUPAC: Object to form.

22 THE WITNESS: Yes.

23 MS. ZUPAC: Calls for speculation.

24 BY MS. MADDUX:

25 Q. Do you --

CERTIFICATE OF REPORTER

I, Christine A. Taylor, Certified Court Reporter within and for the State of Georgia, do hereby certify:

That the foregoing deposition was taken before me on the date and at the time and location stated on Page 1 of this transcript; that the deponent was duly sworn to testify to the truth, the whole truth and nothing but the truth; that the testimony of the deponent and all objections made at the time of the examination were recorded stenographically by me and were thereafter transcribed; that the foregoing deposition as typed is a true, accurate and complete record of the testimony of the deponent and of all objections made at the time of the examination to the best of my ability.

I further certify that I am neither related to nor counsel for any party to the cause pending or interested in the events thereof. Witness my hand, this 6th day of June, 2022.

1 Q. Did anyone direct you to pioneer the chart
2 review program at PacifiCare?

3 MS. DO: Object to form.

4 THE WITNESS: I don't recall specifically,
5 but in my role, I -- I would have received
6 direction around that.

7 BY MS. KRIEG:

8 Q. Okay. Who did you report to during the
9 period that you worked on the chart review program at
10 PacifiCare?

11 A. I -- I believe Jim Higgins and Jeff
12 Dumcum.

13 Q. During the period that you worked at
14 PacifiCare on chart review, did you ever have a
15 conversation with anyone at CMS about the chart
16 review program?

17 A. I don't recall.

18 Q. Do you have an understanding of the term
19 "blind chart review"?

20 A. Yes.

21 Q. What do you understand a blind chart
22 review to mean?

23 A. My understanding is in a blind chart
24 review, you would have coders looking at charts
25 without any other -- any information as to what was

1 already found in those charts.

2 Q. Do you have an understanding that in a
3 blind chart review, the coders would not have any
4 information about what a provider has already
5 submitted in terms of --

6 A. Yes.

7 Q. Okay.

8 A. Sorry.

9 Q. And do you have an understanding of what
10 an informed chart review is?

11 A. Yes.

12 Q. And what is your understanding of what an
13 informed chart review is?

14 A. An informed chart review would be one
15 where the coders have information as to what was
16 previously submitted by the physician.

17 Q. Did PacifiCare's chart review program go
18 out and collect medical records from providers to
19 review?

20 A. Yes. The PacifiCare program collected
21 medical records from providers.

22 Q. Did PacifiCare's chart review program use
23 vendors to review medical records from providers?

24 A. That's my recollection, yes.

25 Q. Okay. At the time PacifiCare -- strike

1 that.

2 Did PacifiCare's chart review program
3 review medical records for completeness?

4 MS. DO: Objection. Objection to form.

5 THE WITNESS: I'm sorry, could you repeat
6 the question?

7 BY MS. KRIEG:

8 Q. Did PacifiCare's chart review program
9 review medical records for completeness?

10 A. That's my understanding.

11 Q. And using the definitions of
12 "completeness" and "accuracy," as we discussed
13 earlier, did PacifiCare's chart review program review
14 medical records for accuracy?

15 MS. DO: Objection to form.

16 THE WITNESS: My recollection is that as a
17 blind coding chart review program, it did not
18 review records for accuracy.

19 BY MS. KRIEG:

20 Q. Okay. At the time you were involved in
21 developing the PacifiCare chart review, were you
22 involved in any discussions that discussed doing a
23 chart review for completeness, but also creating a
24 process that would review medical records to review
25 whether a provider's submitted codes were correctly

VIDEOTAPED DEPOSITION OF CRAIG GARTHWAITE, PH.D.

CONFIDENTIAL TRANSCRIPT

---000---

REPORTER: BALINDA DUNLAP, CSR 10710, RPR, CRR, RMR

1 work done searching and comparing data across large
2 datasets, from claims data, chart review data,
3 different databases over eight different years and
4 different sources and different formats.

5 Was there work that had to be done to get 09:14:58
6 that material into a form where you could, you
7 know, do your analysis on -- with that data?

8 A. Certainly there's data processing and
9 cleaning and things like that. I am not sure
10 exactly what you're asking about the work done to 09:15:18
11 get the data in the process to do the analysis. It
12 was all -- the project is done together, but
13 certainly there were steps taken to clean and
14 process the data into our servers.

15 Q. Did you have to create a comprehensive 09:15:31
16 database of your own that integrated all the
17 materials into one place?

18 A. They all exist on a server. They are not
19 all in a single database. They refer to each other
20 in query in the code. 09:15:47

21 Q. Did you have to normalize and standardize
22 the data in some fashion?

23 A. There were certainly instances where the
24 data had to be normalized to compare across.

25 Q. And did you have to write code to search 09:15:57

1 across these different datasets on the server to
2 get the information out of it that you wanted to?

3 A. I should note up front that I directed the
4 sort of writing of the code. I did not write the
5 code. But yes, there was code written to sort of 09:16:12
6 search across and compare different tables as we
7 described in the report and the type of walk-on
8 effects.

9 Q. So that sort of precisely gets at my
10 question. What role did you play in the 09:16:23
11 collection, normalization of data, standardization
12 of data, construction of consolidated databases and
13 writing of code to do the analysis that's required
14 for your report?

15 MR. MASON: Objection to form. 09:16:38

16 Q. BY MR. GALLAGHER: As opposed to Analysis
17 Group?

18 MR. MASON: Objection to form.

19 THE WITNESS: So working with a team at
20 Analysis Group, I got -- I sort of instructed what 09:16:45
21 I wanted to be done. And then not dissimilar from
22 sort of how we work with -- or how I work with and
23 other academics work with research assistants and
24 predoctoral students, sometimes postdoctoral
25 students, had that work completed by them under my 09:17:02

1 direction.

2 And then it is sort of an iterative
3 process back and forth as we look at the sort of
4 results to make sure things are operating in the
5 way we want in the model.

09:17:13

6 Q. BY MR. GALLAGHER: Did you get to see
7 interim results?

8 A. When you say "interim results," what do
9 you mean?

10 Q. Well, you said that it was an iterative
11 process and we look at the results to make sure
12 things are operating in the way we want in the
13 model. Did you get to actually look at results of
14 searches on an interim basis as you were preparing
15 your report?

09:17:19

09:17:34

16 A. So I guess that's where I was asking this
17 phrase "results" I want to be clear. As we are
18 looking through, there were times where we did a
19 number of rechecks to make sure that things were
20 happening in the way that we want.

09:17:45

21 I was very involved in that process, both
22 requesting what checks I would want to see to see
23 that things were working well. And also sort of
24 discussing how we were going to move forward with
25 that.

09:17:57

1 Q. Did you get to see interim results, for
2 example, of the final deletes list that you -- let
3 me ask that more clearly.

4 Did you see a deletes list that was the
5 result of your -- all the searching and comparing 09:18:17
6 that you did as part of your analysis before the
7 final version that was attached to your expert
8 report?

9 A. I don't know if we compiled what would be
10 sort of the final version, but throughout the 09:18:34
11 process there were steps where we were thinking
12 about the technique and thinking about ways we
13 could develop it, and I was involved in every step
14 of that process.

15 Q. So did you run searches, see the results, 09:18:45
16 and then refine the searches?

17 A. I think that the distinction where we
18 might be talking past each other a bit here is the
19 idea of seeing the results. There wasn't sort of a
20 focus on sort of what an end number was to look 09:18:59
21 like. It was more sort of interim steps. So are
22 we able to replicate the CMS risk score using sort
23 of the data we have to match the actual risk score.
24 Like that's a place where we are trying to think of
25 a validity check. 09:19:17

1 codes and ran the analysis -- and ran risk
2 adjustment with those codes deleted, right?

3 A. We identified those codes that lack
4 support in United's chart review and risk

5 adjustment data. If those were removed, we figured 10:08:19
6 out what the payment would be from them being
7 removed at the time period that we looked at it,
8 compared that to the actual payment and then
9 calculated the difference.

10 Q. So you conceptually, as well as actually, 10:08:31
11 did not calculate the effect of deleting the
12 potential deletes list, or codes that meet your
13 definition in your report of a potential delete?

14 MR. MASON: Objection to form.

15 THE WITNESS: What we did is we deleted 10:08:55
16 those codes that we believe lack support in the
17 chart review and risk adjustment data. As part of
18 that process, we identified those that were not
19 initially supported in chart review, and then set
20 at the same sort of time remove codes that had 10:09:12
21 other support in United's data it looked like, and
22 we wanted to sort of be as cautious and careful as
23 we could to remove those codes.

24 Q. BY MR. GALLAGHER: I am asking just a more
25 like just definitional question. The flow of -- 10:09:26

1 the opinion you're offering about the flow of funds
2 is not an opinion about what would happen if you
3 took a list that corresponds to what you describe
4 as the potential deletes and were to delete that?

5 A. By definition, we remove things -- we 10:09:48
6 don't -- there are some things that initially lack
7 support from chart review that we are giving United
8 credit for. We are not saying that they have
9 support. We are saying there's enough evidence
10 there in United's data that could have been relied 10:10:01
11 upon for support that we don't feel comfortable
12 saying that those are unsupported codes in United's
13 chart review and risk adjustment data.

14 Q. I think my question is simpler. You are
15 not offering an opinion about what -- how the flow 10:10:12
16 of funds would change if you took a list of codes
17 that corresponds to what you call potential deletes
18 in your report and deleted them? That's not the
19 analysis you're offering?

20 MR. MASON: Objection; asked and answered. 10:10:26

21 Q. BY MR. GALLAGHER: Right?

22 A. It is -- it's -- everything on --
23 everything that we do delete is identified in that
24 unsupported data. So it would be sort of a related
25 but not identical exercise. 10:10:37

1 Q. It's not the exercise you undertook?

2 A. No. We gave credit to United for codes

3 that they had evidence for that they also, I would

4 note, could have identified in their data or could

5 have said the reason why we're not going to delete 10:10:52

6 that code is that there's other evidence.

7 So it is not a question of them changing

8 their behavior, but a question about sort of the

9 knowledge they had at the time.

10 Q. And you also are not offering an opinion 10:11:03

11 on what would traditionally be called but-for

12 damages, right?

13 MR. MASON: Objection to form.

14 THE WITNESS: Or answering the question as

15 of what would have happened as of 2019 -- I 10:11:14

16 shouldn't say 2019. The time period I am sort of

17 looking at this question, which is given the sort

18 of COVID and the length of this from '19 to '23,

19 pick a date in there, what would happen if the

20 codes were removed. 10:11:29

21 Q. BY MR. GALLAGHER: That's not a -- you are

22 not offer -- sorry. Let me clarify.

23 You are offering an opinion about what

24 would happen if after the fact, in like 2019 or

25 2020, you removed the codes, what the flow of funds 10:11:40

1 would look like in that -- that scenario?

2 A. If it is a question about as of 2019 what
3 would happen if we removed the codes then, yes.

4 Q. You are not offering an opinion about what
5 would happen if United had done something different 10:11:58
6 in 2008 or 2009 or 2010 or 2011 at the time?

7 A. Yeah, I'm not offering an opinion about
8 how contemporaneously they would have changed their
9 other behavior.

10 Q. And you are not offering an opinion about 10:12:15
11 what would happen in a but-for world where United
12 had done the analysis you did in 2008, 2009, 2010
13 and had changed its submission of codes accordingly
14 in those years at the time?

15 MR. MASON: Objection to form. 10:12:31

16 THE WITNESS: No, I think we are very
17 clear in the report that the question we are trying
18 to answer is how would the flow of funds have
19 changed if as of the time period we're asking the
20 question, the code that lacks support in United's 10:12:41
21 chart review and risk adjustment data were removed
22 from the system.

23 Q. BY MR. GALLAGHER: Effectively giving away
24 the payments on contract years, you're effectively
25 offering an opinion about what would happen if you 10:12:54

1 were to remove the codes today or at the time you
2 testify at trial?

3 A. Yes.

4 Q. I want to step aside and ask a question
5 about just your compensation. 10:13:13

6 What is your hourly rate?

7 A. The time I worked on the report it was
8 \$900 an hour.

9 Q. And was it more than that or less than
10 that before you started working on the report? 10:13:23

11 A. I think it went up incrementally during
12 that time, a period of five years.

13 Q. What was it when you started in 2018?

14 A. I don't remember. It might have been 850
15 or something like that. 10:13:35

16 Q. Do you charge a different hourly rate for
17 testimony than you do for reading materials and
18 writing a report?

19 A. No.

20 Q. You also get 20 percent of the billings 10:13:41
21 that are submitted by Analysis Group, do you not?

22 A. Yes, I do.

23 Q. And do you get a cut of everything that
24 Analysis Group bills for their work in relation to
25 this matter, or is it some defined portion of it? 10:13:54

1 A. I believe it's for everything related.

2 Q. So if there was work done by Analysis
3 Group at the direction of the DOJ, you would get 20
4 percent of the billings for that?

5 A. I believe so, but there could be other 10:14:10
6 relationships between United and the DOJ related to
7 the case that I am not aware of.

8 Q. What we are talking about here is your
9 relationship between you and Analysis Group, right?

10 A. I don't believe that's what you were 10:14:21
11 talking about, no.

12 Q. You get 20 percent of the billings by
13 Analysis Group. Under what agreement are you
14 entitled to that 20 percent? Is it an agreement
15 with the DOJ or is it an agreement with the 10:14:31
16 Analysis Group?

17 A. So it is an agreement with Analysis Group.
18 The question I was answering was you said if
19 Analysis Group did other work for DOJ on this
20 matter, would I get 20 percent of that. I believe 10:14:41
21 so, though I don't know if there are instances
22 where AG has done work for DOJ on this that I did
23 not get 20 percent of.

24 Q. Right. Your entitlement to your 20
25 percent would be something that would be defined by 10:14:55

1 your agreement with Analysis Group, right?

2 A. Yes.

3 Q. And whether or not you get 20 percent of
4 what they are billing the DOJ or relaters' counsel,
5 you know, whether or not you get that 20 percent
6 would depend on whether it qualifies for, you know,
7 under your agreement with Analysis Group for what
8 you get 20 percent of?

10:15:08

9 MR. MASON: Objection to form.

10 THE WITNESS: Yes, I believe so.

10:15:19

11 Q. BY MR. GALLAGHER: So do you or do you not
12 get 20 percent of the work that Analysis Group has
13 done, for example, on the first interrogatory
14 response?

15 A. I believe I did.

10:15:33

16 Q. And how is that paid to you, that 20
17 percent cut of Analysis Group's billings?

18 A. I'm confused. Do you mean like how it's
19 paid?

20 Q. Do you get a check from Analysis Group?

10:15:47

21 A. I get a direct deposit from Analysis
22 Group.

23 Q. And how often do you get that payment? Is
24 it calculated monthly, quarterly, yearly?

25 A. It's, I believe, whenever payment is

10:15:59

1 Q. BY MR. GALLAGHER: Let me go back to
2 something you said. In your prior answer you said
3 it is my understanding that experts would say if
4 you have two blind reviewers that both say the code
5 doesn't exist, it would lack support. What expert 11:05:12
6 are you referring to there?

7 A. So in preparation for the deposition, I
8 read the deposition of -- I believe it is a
9 Mr. Renjilian from FTI who also wrote a rebuttal
10 report. 11:05:27

11 Q. So you're referring to Mr. Renjilian as
12 the support for your statement that experts would
13 say that if you have two blind reviewers that both
14 say that the code doesn't exist, it would lack
15 support? 11:05:39

16 A. Yes.

17 Q. And by the way, the blind reviewers,
18 again, in this process of chart review, they are
19 not being asked whether there is or is not support
20 for a particular code; they're being asked to 11:05:53
21 simply code what they think is there, right?

22 MR. MASON: Objection; form, compound,
23 asked and answered.

24 THE WITNESS: So blind reviewers are
25 supposed to create a full and accurate record -- 11:06:05

1 representation of the medical record. That is what
2 they are doing.

3 Q. BY MR. GALLAGHER: Is there an error rate
4 to that for the blind reviewers in chart review?

5 MR. MASON: Objection to form. 11:06:23

6 THE WITNESS: I would imagine that like
7 all processes in life, there are error rates. If
8 United believed there were an error made when their
9 chart review didn't find support for a diagnosis
10 code, they had the ability to go back and 11:06:39
11 investigate it further. Second-level review would
12 be an example of that.

13 The claims -- the CV program would also be
14 an example of that. So United had the ability if
15 it wanted to to investigate further the record that 11:06:51
16 was created by their trained, certified medical
17 coders.

18 Q. BY MR. GALLAGHER: So the answer is yes,
19 there is an error rate for the blind reviewers
20 doing chart review? 11:07:02

21 MR. MASON: Objection to form;
22 argumentative, asked and answered.

23 THE WITNESS: Much like our earlier
24 conversation about error rates, I would believe
25 that it is possible that a certified coder would 11:07:12

1 both add codes inappropriately if they made an
2 error and find a lack of support for codes if they
3 made an error.

4 Q. BY MR. GALLAGHER: What is the error rate
5 for the line reviewers in chart review as it 11:07:24
6 relates to, you know, missing codes that are, in
7 fact, supported?

8 A. I can't remember. I know I have seen it
9 at some point.

10 Q. Where do you think you saw an error rate 11:07:38
11 for blind reviewers missing code?

12 A. I believe it's possibly in the Renjilian
13 -- Mr. Renjilian's rebuttal report, but I read that
14 at a pretty high level. So it's possible I saw it
15 in that or in other conversations. 11:07:52

16 Q. Do you have any basis to dispute
17 Mr. Renjilian's, you know, statements in his report
18 about what the error rate would be?

19 MR. MASON: Objection to form; vague,
20 foundation. 11:08:05

21 Q. BY MR. GALLAGHER: Do you have any
22 opinions about that?

23 MR. MASON: Objection to form; vague,
24 compound, foundation.

25 THE WITNESS: I don't have a particular 11:08:12

1 databases, yes.

2 Q. And risk adjustment database, remind us if
3 that includes the claims databases or is that
4 limited to the data from which submissions were or
5 were not made?

11:43:03

6 A. So I would ask that we go from Paragraph
7 37 and then skip forward to Paragraph 40. It came
8 to our attention during deposition testimony -- I
9 will just read it. "Deposition testimony indicates
10 that a technical issue may have impacted
11 transmission of data from certain Provider-Reported
12 Claims Databases to IRADS during the at-issue
13 period. I therefore also check the

11:43:19

14 Provider-Reported Claims Databases to ensure that
15 there is just one provider associated with the date
16 of service in those databases before I match a
17 provider-reported encounter from IRADS to chart
18 review using this method."

11:43:32

19 Q. Okay. So you took steps to ensure that,
20 in fact, there was only one provider-reported --
21 there's only one provider-reported codes on that
22 day in any of the databases?

11:43:45

23 A. That was our intent, yes.

24 Q. In terms of validation other than what
25 might be inherent in your methodology for defining

11:44:19

1 a match in the first place, you mentioned looking
2 at whether there are overlapping codes in the
3 databases on that day. Is there anything else you
4 did by way of validation of a match?

5 A. I don't recall a specific example right 11:44:39
6 now. What I will say is this was a consistent
7 focus of our effort, to look at places where the
8 data were lining up correctly.

9 Q. By "our effort," you mean work done by
10 Analysis Group? 11:44:55

11 A. Work done by my team under my direction.

12 Q. So what other directions did you give in
13 terms of validation besides looking for overlapping
14 codes for your match methodology?

15 A. I guess I would turn back to my answer 11:45:05
16 from a minute ago, which I can't recall a specific
17 example, but I do remember multiple conversations
18 with the team together thinking about ways that
19 this might fail, but I don't remember the specific
20 validations. 11:45:19

21 Q. As part of the validation process, you
22 never asked to look at any sample charts to
23 determine whether there was, in fact, a
24 correspondence between what was reviewed in chart
25 review and the -- what -- that what was reviewed in 11:45:51

1 chart review was the same medical records for the
2 same encounter from which the code was submitted?

3 A. I did not look at any medical records.

4 Q. So I think we established, but I'll just
5 confirm. You agree that there would be some error 11:46:14
6 rate to United's chart review, and in particular
7 some error rate where coders doing that review
8 missed codes that were, in fact, supported by a
9 chart?

10 A. I think that there are error rates that 11:46:28
11 exist. I don't know if there's a specific estimate
12 of a United error rate with respect to their
13 coders, whether that would be the average, it would
14 be above or below average. I think of United as a
15 sophisticated organization, one of the largest 11:46:48
16 health insurers -- the largest health insurer in
17 the country.

18 So I wouldn't want to extrapolate from
19 known error rates to what they have, but the idea
20 that there could be some error in this process I 11:47:02
21 think is possible.

22 It's also, I would note, something that
23 United would also see in their data, and they had
24 the ability to go and investigate, and at times
25 did, right. So they did the claims verification 11:47:13

1 program where they did match things together. They
2 did second-level review. There were times where
3 United tried to solve these problems. With respect
4 to deletes I would know, not as much with respect
5 to adds.

11:47:30

6 Q. Now, the only way to know if there's an
7 error rate to a -- to either a provider-reported
8 code, the system of having provider-reported codes,
9 or a chart review system, the only way to know if
10 there's an error rate to that would be to go and
11 see if you could validate, by looking at the
12 charts, whether the code is or is not supported,
13 right?

11:47:51

14 MR. MASON: Objection to form.

15 THE WITNESS: When you say the only way to
16 know there's an error rate?

11:48:06

17 Q. BY MR. GALLAGHER: Right. When we are
18 talking about error rate -- I am just talking
19 conceptually here. If we are going to define an
20 error rate for -- let's start with
21 provider-reported codes. If we wanted to define --
22 or determine the rate at which providers missed
23 codes that were, in fact, supported by medical
24 records, one way to do that would be to review the
25 medical records with an eye toward validating

11:48:17

11:48:44

1 THE WITNESS: I will be offering an
2 opinion as to whether there is support in United's
3 chart review and risk adjustment data for that, and
4 that will include evidence from their second-level
5 review. It will include evidence from their claims 12:22:44
6 verification. It will include evidence from
7 unsubmitted charts, and it will be an estimate of
8 what United knew at the time when it made its claim
9 to CMS or failed to reverse its claim to CMS.

10 Q. BY MR. GALLAGHER: What percentage of 12:23:00
11 codes on your potential deletes list would be found
12 supported in the relevant medical record if you
13 were to go and look at that record?

14 MR. MASON: Objection to form; asked and
15 answered. 12:23:26

16 THE WITNESS: To be clear, and really I do
17 apologize we are having this sort of back and forth
18 again and again. When you say "relevant medical
19 record," do you mean the record from that
20 face-to-face encounter, that it went through chart 12:23:37
21 review?

22 Q. BY MR. GALLAGHER: I am trying to avoid
23 the mouthful. I am using "relevant" to what you
24 consider to be relevant medical records.

25 So what percentage of codes on your 12:23:45

1 potential deletes list would be found supported in
2 the relevant medical record, what you consider to
3 be a relevant medical record, if you were to go and
4 look at that record?

5 A. As an academic, my life is full of 12:23:55
6 mouthfuls. So I'll stick with the discussion of
7 the relevant medical record being the record from
8 that face-to-face encounter. And I think that's
9 what we're going to limit our testimony to.

10 Q. So tell me the percentage. 12:24:08

11 A. The percentage what?

12 Q. Well, what percentage of the codes on your
13 potential deletes list will be found supported in
14 the relevant medical record, as you defined it, if
15 you were to go and look at that record? 12:24:24

16 MR. MASON: Objection to form; asked and
17 answered.

18 THE WITNESS: I don't have an opinion to
19 that, but I do know that United had the ability and
20 at times undertook the ability to go and answer 12:24:32
21 that question at the time. So my opinion is
22 limited to what United knew at the time in their
23 risk adjustment and chart review data.

24 Q. BY MR. GALLAGHER: So to get to the
25 question we started this on, you don't have an 12:24:45

1 opinion and you're not going to be testifying to
2 the percentage of the codes on your potential
3 deletes list that would be found supported in the
4 relevant medical record as you defined it if you
5 were to go and look at that record, do you? 12:25:00

6 MR. MASON: Objection. Objection to form;
7 misstates the testimony.

8 THE WITNESS: I will testify to what
9 United knew through the variety of ways in which
10 they tried to find information about the level of 12:25:11
11 support for those codes.

12 Q. BY MR. GALLAGHER: Do you have an opinion
13 on that topic or not?

14 MR. MASON: Objection to form; asked and
15 answered, argumentative. 12:25:20

16 MR. GALLAGHER: We can move on. I'll
17 withdraw it.

18 Q. I want to look at Appendix D,
19 Paragraph 44, and then what I want to understand is
20 your definition of "support," okay. 12:25:52

21 This section of your appendix talks about
22 identification of supported diagnosis codes. Do
23 you see that?

24 A. Yes, I see that.

25 Q. And you say, "I consider an instance of a 12:26:02

1 beneficiary, yes.

2 Q. It was -- the encounters and the codes
3 identified in chart review, those were both by
4 beneficiary, specific to a beneficiary?

5 A. Yes.

01:52:09

6 Q. And the identification of codes that were
7 submitted to CMS, that was also specific to a
8 beneficiary, right?

9 A. Yes.

10 Q. So the deletes list is specific -- when it
11 references codes, it's specific to a beneficiary?

01:52:20

12 A. I'm not sure what you mean by "specific."
13 It is a diagnosis for a beneficiary.

14 Q. It's an instance associated with a
15 particular beneficiary?

01:52:43

16 A. It is a record of a face-to-face,
17 risk-adjustment-eligible encounter for a
18 beneficiary that lacks support in United's chart
19 review and risk adjustment data.

20 Q. And that delete on your deletes list is
21 specific to that beneficiary and does not apply to
22 other beneficiaries, does it?

01:52:54

23 A. I believe, yes.

24 Q. Deleting the code for -- that's on your
25 deletes list will only have an impact on the risk

01:53:07

1 score for that beneficiary and not anybody else,
2 right?

3 A. At the time period in which these deletes
4 are happening, it would -- those that are on the
5 list would affect that because that list does take 01:53:26
6 into account things like risk orders and things
7 like that, which then could have an effect on not
8 the diagnosis for someone else, but the payment for
9 someone else.

10 Q. Risk corridors is a concept that only 01:53:41
11 applies for the part D element of your analysis,
12 right?

13 A. In the program, yes. Because it only
14 applies in the part D program.

15 Q. And are you saying that -- let me make 01:54:09
16 sure I ask the question correctly.

17 How would deleting a code for, you know,
18 one beneficiary affect the risk score for another
19 beneficiary?

20 MR. MASON: Objection to form; misstates 01:54:41
21 testimony.

22 THE WITNESS: I did not say it would
23 affect the risk score for another beneficiary.

24 Q. BY MR. GALLAGHER: Maybe you misread my
25 question because I said deleting the code that's on 01:54:50

1 your deletes list will only have an impact on the
2 risk score for that beneficiary and not anybody
3 else, right?

4 A. Yeah, sorry. I didn't interpret you meant
5 the risk score for anybody else, just an impact on 01:55:03
6 anybody else. The risk score, yes, I believe so.

7 Q. So if your -- deleting -- at least with
8 part D, the way you've taken into account risk
9 corridors, deleting the code for one beneficiary
10 might have some impact on the payment associated 01:55:34
11 with another beneficiary?

12 A. Well, it could have a payment -- effect on
13 the payment at the plan level.

14 Q. The risk corridors is only -- that only
15 has an impact at the plan level? 01:55:48

16 A. Yeah, and then it could filter down. You
17 said any impact on anyone is how I heard it. So I
18 was trying to be complete and accurate.

19 Q. Risk corridors, that concept when it comes
20 to calculating payments, that's something that's 01:56:01
21 taken into account at the plan level, not the
22 individual level?

23 A. Yes.

24 Q. In that regard, it is like the medical
25 loss ratio for part C, which is also taken into 01:56:10

1 account at the plan level, right?

2 A. There are some important differences, but
3 the plan level point is a similarity.

4 Q. You did not take into account the medical
5 loss ratio in your calculations? 01:56:28

6 A. At the time period -- for the question I'm
7 answering, which is at the time period of the
8 report, let's say, what would be the effect of
9 removing risk codes on the flow of funds between
10 the parties, medical loss ratio would not have been 01:56:42
11 an issue.

12 Q. The reason you didn't take into account
13 medical loss ratio is that you're calculating the
14 financial impact as if though you submit deletes as
15 of the date of your report, September 29, 2023, not 01:56:56
16 a but-for world back in the day like 2008, 2009,
17 right?

18 A. I don't want to talk about -- you use the
19 term "but-for world." Because as of 2019 I am
20 accounting for those things that could change at 01:57:09
21 that point, and the medical loss ratio is not
22 revisited at that point.

23 Q. Had you looked at the impact of deleting
24 the codes as if though they had been deleted at the
25 time in during the contract year, you would have 01:57:28

1 around that.

2 Again, I don't mean to upset you. I know
3 it's late in the day, but I am trying to be as
4 complete and accurate as I can think about with the
5 data -- with the terminology we are using and don't 06:01:51
6 want to sort of give an inaccurate answer because
7 we are not being precise about the language.

8 Q. BY MR. GALLAGHER: Okay. So I will be as
9 precise as I can be. You can't tell us what
10 percentage of instances of diagnostic -- of 06:02:05
11 diagnosis codes not reported in chart review or not
12 found in chart review, what percentage of those
13 were removed in the generation of your final
14 deletes list --

15 MR. MASON: Objection. 06:02:22

16 Q. BY MR. GALLAGHER: -- because you're
17 giving credit for other instances in United's data
18 where there could be evidence around that code,
19 either submitted or unsubmitted?

20 MR. MASON: Objection to form -- 06:02:34

21 Q. BY MR. GALLAGHER: Right?

22 MR. MASON: -- vague, compound, confusing.

23 THE WITNESS: Given that the purpose of
24 what we were doing there was not to sort of have an
25 opinion about whether the codes that we don't 06:02:44

1 include on the final deletes list were supported,
2 but instead just trying to give United credit, that
3 is not a calculation that we created.

4 We also don't want to give the impression
5 that a removal of a diagnosis code instance that 06:02:56
6 showed such that it does not appear on the final
7 deletes list would be a part of my opinion that
8 that code has support in United's chart review and
9 risk adjustment data in the time period we're
10 speaking about. 06:03:12

11 Q. BY MR. GALLAGHER: At what point in your
12 analysis for any given code that ends up on your
13 final deletes list, at what point in that analysis
14 can you say that deleting the code would have an
15 impact on payment? 06:03:35

16 A. So to definitively say it has an impact on
17 payment, I think you would need to input it into
18 the CMS risk adjustment model. Though I'll note
19 that importantly I think this is the point that if
20 United were to delete the list of codes that I had, 06:04:17
21 and as we talked about, there's 1.9 million codes
22 that I identify lack support in their data, if they
23 were to remove those codes, the change of funds
24 would automatically be done -- the change in the
25 flow of funds would automatically be calculated by 06:04:34

1 CMS. And it's reasonable to assume, given the
2 number of codes that we're talking about, that
3 there would be an overpayment there.

4 And as evidence of that first, we would
5 note that given this large number of codes, it 06:04:47
6 almost certainly affects payment as determined at
7 the HCC level.

8 In United's own behavior, as we talked
9 about earlier with the CV program, was to withhold
10 revenue back with the idea that because they would 06:04:59
11 be removing codes as part of CV, then we would end
12 up having a reduction in payments from CMS.

13 Q. Do you remember what my question was?

14 A. You asked what I believe -- it would be
15 great if you just read it back, I guess. 06:05:14

16 Q. I just want to know what question do you
17 think you were answering there?

18 MR. MASON: Objection to form;
19 argumentative.

20 THE WITNESS: I don't think I want to 06:05:22
21 characterize your question. I am happy to have it
22 read back to me if you'd like.

23 Q. BY MR. GALLAGHER: You gave a long answer,
24 and I just want to know what question do you think
25 you were answering? 06:05:31

1 DEPOSITION OFFICER'S CERTIFICATE
2 (Civ.Proc. § 2025.520(e))

3 STATE OF CALIFORNIA)
4) Ss.
5 COUNTY OF SAN FRANCISCO)

6 I, Balinda Dunlap, hereby
7 certify:

8 I am the deposition officer that
9 stenographically recorded the testimony in the
10 foregoing deposition.

11 Written notice pursuant to Code of Civil
12 Procedure, Section 2025.520(a), having been sent,
13 the deponent took the following action within the
14 allotted period with respect to the transcript of
15 the deposition:

16 () In person, at the office of the
17 deposition officer, made the changes set forth on
18 the original of the transcript. (The parties
19 attending the deposition have been notified of said
20 changes.)

21 () Approved the transcript by signing
22 it.

23 () Refused to approve the transcript by
24 not signing it.

25 () By means of a signed letter, made the
 changes and approved or refused to approve the

1 transcript as set forth therein. (Said letter has
2 been attached to the original transcript and copies
3 thereof mailed to all parties attending the
4 deposition.)

5 () Failed to approve the transcript
6 within the allotted time period.

7 Dated _____.

CENTRAL DISTRICT OF CALIFORNIA

- - - - -	+	
UNITED STATES OF AMERICA		
et rel. BENJAMIN POEHLING,		
Plaintiffs,		Case No.
vs.		CV 16-08697 FMO (SSx)
UNITEDHEALTH GROUP, INC.,		Hon. Fernando Olguin
et al.,		
Defendants.		
- - - - -	+	

Thursday, March 10, 2022

Remote Videotaped Deposition of RONNIE GROWER, a Witness herein, called for examination by counsel for Plaintiffs in the above-entitled matter, pursuant to notice, the witness being duly sworn by MICHELE EDDY, RPR, CRR, a Notary Public in and for the District of Columbia, taken virtually with the witness located in Nevada, at 11:31 a.m. Eastern Standard Time.

1 A That's what it says, yes.

2 Q And that means that roughly 40 percent
3 of the codes subject to this audit were not
4 validated, correct?

5 MS. MADDUX: Objection.
6 Mischaracterizes the document. Calls for
7 speculation.

8 A I can only go by what it says, that 60
9 percent were validated. I don't know about the
10 other 40 percent.

11 Q Well, do you have any reason to believe
12 that this is an inaccurate representations of the
13 results of a 2009 audit of California providers?

14 A Objection, form.

15 Q And do you recall discussing the results
16 of a 2009 audit of California providers with
17 anyone at Ingenix?

18 MS. MADDUX: Objection, form.

19 A I don't remember. I think in 2009 my
20 role had moved on to market consultation more, so
21 I don't know that I would have been involved with
22 the results of that. And California was not my --
23 was not my region that I represented.

24 Q And do you recall who at Ingenix did
25 cover the California region?

1 MS. MADDUX: Objection, form.

2 A I believe it was Pam Leal.

3 Q Okay. So going back to the chart review
4 program, was chart review a program that Ingenix
5 sold to health plan clients?

6 MS. MADDUX: Objection, form. Calls
7 for speculation.

8 A I wasn't really involved in the sales of
9 Ingenix's services to clients that I can remember.

10 Q Well, focusing less on the sale part, I
11 suppose was chart review a service that was
12 offered by Ingenix?

13 MS. MADDUX: Objection, form.
14 Ambiguous.

15 A I believe chart review was offered as a
16 service by Ingenix.

17 Q And what were the benefits of chart
18 review for Ingenix's clients?

19 MS. MADDUX: Objection, form. Vague.

20 A I think particularly in areas where
21 capitation resulted in encounter data not being
22 fully reported for every single date of service
23 and every code reported, that chart review was an
24 opportunity to go back and look in the middle
25 record and validate that there were diagnosis

1 codes that represented the patient's conditions in
2 the medical record that could be submitted to the
3 CMS.

4 Q So specifically chart review was a
5 program that looked for additional diagnosis codes
6 in the medical records that had not yet been
7 previously submitted to CMS?

8 MS. MADDUX: Objection, form.
9 Misstates prior testimony.

10 A Could you repeat the question?

11 Q Sure. I asked, so specifically chart
12 review was a program to review medical records for
13 additional diagnosis codes that had not previously
14 been submitted to CMS?

15 MS. MADDUX: Objection, form.

16 A I believe the intent was to get an
17 accurate view of the medical record for
18 particularly primary care providers and all the
19 encounters with their patients for the reporting
20 year so you would have an accurate picture of what
21 was being -- what should have been submitted from
22 the medical record.

23 Q Okay. And so was the purpose to
24 identify all diagnosis codes that could be
25 supported by a medical record?

1 MS. MADDUX: Objection, form.

2 A I was not intimately involved with the
3 chart review program at Ingenix, and I can't speak
4 to all the details associated with it.

5 Q Sorry, I'm trying to pull up a document,
6 but my -- okay, sorry.

7 I think we might have crossed wires with
8 our Q&A there for a second, so let me make sure I
9 actually understand what we're -- what we're
10 discussing.

11 Was the -- was it your understanding
12 that the intent of chart review was to identify
13 all diagnosis codes in a patient's medical record?

14 MS. MADDUX: Objection, form. Lack of
15 foundation.

16 A I think the intent of chart review, the
17 best I know, was to accurately capture codes that
18 were in the medical record.

19 Q And were you involved with advising a
20 strategy for the chart review program?

21 MS. MADDUX: Objection, form.

22 A I don't believe so, no. I think the
23 chart review program was established before I came
24 to work in Ingenix.

25 Q And did you have any understanding of

1 A I think claims verification was making
2 sure that what was reported via an encounter could
3 be documented in the medical record. And then the
4 other side of that is, if what's in the medical
5 record was not previously reported, to have that
6 reported.

7 Q So was it your understanding that chart
8 review and claims verification were two sides of
9 the same coin?

10 MS. MADDUX: Objection, form. Lack of
11 foundation. Calls for speculation.

12 A I don't know enough about how the claims
13 verification process was going to be implemented
14 or how it would work to respond to that.

15 Q So you mentioned that individuals within
16 Ingenix were discussing claims verification with
17 Ovations; is that accurate?

18 MS. MADDUX: Objection. Misstates
19 prior testimony.

20 A I believe that I remember some of that.

21 Q And do you recall who from Ovations was
22 involved in those discussions?

23 A The only people I remember involved in
24 that type of discussion would be Stephanie Will
25 and Jeff Dumcum.

1 Q And were -- okay. Thanks. Strike that.

2 MS. ZUPAC: So I'm just seeing what I
3 have left, which is a good sign that the
4 deposition is perhaps nearing to a close. Why
5 don't we go off the record briefly so I can just
6 review what I have left and we can come back on
7 and hopefully wrap up.

8 VIDEO TECHNICIAN: This ends Media Unit
9 No. 5 in the deposition of Ronnie Grower. The
10 time is 3:34 p.m. We're going off the record.

11 (A brief recess was taken.)

12 VIDEO TECHNICIAN: This begins Media
13 Unit No. 6 in the deposition of Ronnie Grower.
14 The time is 3:50 p.m. We are back on the record.

15 BY MS. ZUPAC:

16 Q Welcome back, Ms. Grower.

17 I just want to go back and make sure I
18 understand your testimony about the chart review
19 process. So was it your understanding that
20 when -- staff in chart review was to collect
21 medical records or charts from providers?

22 MS. MADDUX: Objection, form.

23 A Yes, they would collect medical records
24 from providers.

25 Q And then Ingenix would conduct a

1 thorough review of those medical records for any
2 diagnosis codes that were supported by those
3 medical records, correct?

4 MS. MADDUX: Objection, form. Lack of
5 foundation.

6 A Basically they were going in to look to
7 report the diagnoses that were in the medical
8 records.

9 Q And was it your understanding that
10 Medicare Advantage plans -- Medicare Advantage
11 organizations could only submit codes that were
12 supported by the medical records?

13 MS. MADDUX: Objection, form. Calls
14 for a legal conclusion. Lack of foundation.

15 A So Medicare Advantage plans submitted
16 codes that should be supported by the medical
17 record.

18 Q So in the chart review process when
19 Ingenix had the chart and was reviewing it for
20 codes, were there times when Ingenix -- strike
21 that.

22 So during the chart review process when
23 Ingenix had the medical records and were reviewing
24 it for codes, was it your understanding that
25 Ingenix had to delete any codes that it identified

Videotaped Deposition of
MARY ROSE GUY
Given Remotely
Wednesday, March 30, 2022
9:01 a.m. Eastern Time

Reported by: Karen K. Kidwell, RMR, CRR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 MR. LEE: Objection. Vague.

2 THE WITNESS: Yeah, I -- I agree.

3 BY MS. MADDUX:

4 Q. Any certifications -- any like specific
5 certifications in a field of study?

6 A. I maintain a license within the State of
7 Maryland for clinical social work.

8 Q. And how long have you had that license?

9 A. Since about nineteen-eighty- -- well, at
10 this level, since about 1984 or '85.

11 Q. Do you have any training in medical
12 coding?

13 A. No.

14 Q. Are you a certified medical coder?

15 A. I am not.

16 Q. Do you have any specific
17 risk-adjustment-related certifications?

18 A. No.

19 Q. What is your current job title at CMS?

20 A. Health insurance specialist.

21 Q. And what is a health insurance specialist?

22 A. It's a generic label for people who are
23 working within the health insurance field at CMS.

24 Q. And what component of CMS are you
25 currently in?

1 A. I work in the Centers for -- the Center
2 for Consumer Information and Insurance Oversight.

3 Q. And is that sometimes abbreviated "CCIIO"?

4 A. That's correct.

5 Q. And what is CCIIO?

6 A. The Center for Consumer Information and
7 Insurance Oversight.

8 Q. What do they do?

9 A. We work on the marketplace --

10 MR. LEE: (Simultaneous speaking)

11 Objection. Vague.

12 THE WITNESS: -- facilitated.

13 BY MS. MADDUX:

14 Q. So is this a -- related to the Affordable
15 Care Act?

16 A. It is.

17 Q. Does your current role involve Medicare
18 Advantage?

19 A. It does not.

20 Q. How long have you been in this role?

21 A. I've been with CCIIO since 2012.

22 Q. And since 2012, have you been working on
23 the Affordable Care Act?

24 A. Predominantly.

25 Q. And has any of your work since 2012

1 related to Medicare Advantage?

2 A. No.

3 Q. Are you familiar with Medicare Advantage?

4 A. Yes.

5 MR. LEE: Object to form. Vague.

6 BY MS. MADDUX:

7 Q. What is it?

8 A. It's a -- it's Medicare Part C.

9 MR. LEE: Objection. Vague.

10 Mary -- Ms. Guy --

11 THE WITNESS: I'm sorry, John.

12 MR. LEE: -- make sure --

13 THE WITNESS: I need to pause.

14 MR. LEE: Give me a chance to insert an
15 objection.

16 THE WITNESS: Okay. Thank you.

17 MR. LEE: I'll try not to speak over you,
18 but . . .

19 Go ahead.

20 BY MS. MADDUX:

21 Q. Is Medicare Advantage often referred to
22 as "MA"?

23 A. Yes.

24 Q. So if I refer to "MA" throughout the
25 deposition, you'll understand that I'm referring to

1 Medicare Advantage?

2 A. Yes.

3 Q. Is -- sorry. Strike that.

4 If you can turn back to the exhibit on
5 your screen and look at the second page of the
6 résumé.

7 A. Uh-huh.

8 Q. Under "Health Insurance," the bolded
9 underlined text "Health Insurance Specialist/Project
10 Officer"? Do you see that?

11 A. Yes.

12 Q. This states that you were in this role
13 from December 2000 to July 2004. Is that correct?

14 A. Yes.

15 Q. Is this the first role that you had when
16 you started at CMS?

17 A. No.

18 Q. What was the first role that you had when
19 you started at CMS?

20 A. I worked in the Office of Strategic
21 Operations and Regulatory Affairs as a health
22 insurance specialist, a reg writer.

23 Q. And in this current -- excuse me. Strike
24 that.

25 In this health insurance specialist role

1 that you were in from December 2000 to July 2004, was
2 this related to Medicare Advantage?

3 A. Not that I recall.

4 Q. Was it specific to Medicaid?

5 A. Not that I recall.

6 Q. Is the "Health Insurance Specialist" here
7 the same generic title you described earlier?

8 A. Yes, with the exception of here I've
9 listed "Project Officer," so I was working on a
10 grants program.

11 Q. Now, if you can turn back to page 1 of the
12 document.

13 A. Uh-huh.

14 Q. Under "Employment," it has a bolded and
15 underlined text that says "Social Science Research
16 Analyst/Project Officer." Do you see that?

17 A. Yes.

18 Q. This states that you were in this role
19 from August 2004 to present. Do you see that?

20 A. Yes.

21 Q. Given what you testified to earlier, it
22 sounds like you moved out of this role, and you're no
23 longer -- it's not a present role; is that correct?

24 A. Correct.

25 Q. When did you leave this role?

1 A. I would have to look back, but I think it
2 was 2010.

3 Q. This also states from July 2004 to
4 February 2006, you were in the Medicare Drug Benefit
5 Group, Division of Program Analysis and Performance.
6 Do you see that?

7 A. I do.

8 Q. What is the Medicare Drug Benefit Group?

9 A. That was a label that we were given.

10 Q. What did the Medicare Drug Benefit Group
11 do?

12 A. That was the group under which I was
13 working. They had Medicare drug benefit, and we also
14 had risk adjustment under that.

15 Q. What is the Division of Program Analysis
16 and Performance?

17 A. That was a division that was managed by
18 Jeff Grant.

19 Q. And who is Jeff Grant?

20 A. It was risk adjustment data validation.

21 Q. And is that sometimes abbreviated RADV, or
22 R-A-D-V?

23 A. Yes.

24 Q. It says here that you reported to Jeff
25 Grant in this role. Is that correct?

1 A. Yes. Well, as a supervisor.

2 Q. Was -- did you have a more direct
3 supervisor?

4 A. Lateefah Hughes was our team leader.

5 Q. This also states that from February 2006
6 to present, you were in the Medicare Plan Payment
7 Group, Division of Risk Adjustment Operations. Do
8 you see that?

9 A. Yes.

10 Q. What is the Medicare Plan Payment Group?

11 A. They split the -- they took us out of the
12 Medicare Drug Benefit Group and moved us over to
13 Medicare Plan Payment Group. This was part of a
14 reorganization.

15 Q. Is it sometimes referred to as "MPPG"?

16 A. Correct.

17 Q. And what did MPPG do?

18 A. A little bit of everything. We had risk
19 adjustment under it. I don't remember all the
20 different divisions. That's been a long time ago.

21 Q. Did they have roles related to Medicare
22 Advantage?

23 MR. LEE: Objection. Vague as to time.

24 THE WITNESS: Yeah. Thank you.

25

1 BY MS. MADDUX:

2 Q. Did they oversee aspects of the Medicare
3 Advantage program?

4 MR. LEE: Objection. Vague.

5 You can answer, Ms. Guy, to the extent
6 that you think you can understand the question.

7 THE WITNESS: Thank you, John.

8 BY MS. MADDUX:

9 Q. Did MPPG oversee aspects of the Medicare
10 Advantage program?

11 A. Yes.

12 Q. Which aspects?

13 A. Risk-adjustment model. There was so
14 much -- I don't remember all the different aspects.

15 Q. And when you refer to "the model," are you
16 referring to the CMS HCC risk-adjustment model?

17 A. Yes.

18 Q. And what is your understanding of what the
19 model is?

20 MR. LEE: Objection. Lacks foundation.
21 Vague.

22 BY MS. MADDUX:

23 Q. You can answer.

24 THE WITNESS: John, are you okay with
25 that?

1 MR. LEE: Yes. To the extent that you
2 think you can understand the question, you --
3 you may answer.

4 THE WITNESS: Okay.

5 The Medicare Advantage payment model was a
6 method by which Medicare Advantage organizations
7 were paid for their patient population and the
8 diagnosis codes that were submitted.

9 BY MS. MADDUX:

10 Q. And in this role, it says you reported to
11 Sean Creighton. Is that correct?

12 A. Yes.

13 Q. I now want to direct your attention to --
14 there's a paragraph in the middle that starts with
15 the word "Developed." And this states: "Developed
16 and implemented technical aspects of risk adjustment
17 data validation (RADV) projects to ensure the
18 integrity of risk adjustment data and validate the
19 accuracy of risk adjusted payments made to Medicare
20 Advantage organizations. Activities include
21 sampling, data analysis, medical record, developing
22 medical record review methodology, and evaluation of
23 qualitative aspects of the data. Identified the
24 payment error rate for the Medicare Advantage
25 program." Do you see that?

1 A. Yes.

2 Q. Is this an accurate description of your
3 responsibilities when you were a social science
4 research analyst/project officer?

5 A. Yes.

6 Q. Does this describe your responsibilities
7 while you were in both the Medicare Drug Benefit
8 Group and MPPG?

9 A. Yes and no. Yes, but I was just learning
10 it as I started in '04.

11 Q. So would this be more what you were doing
12 while you were at MPPG?

13 A. Correct.

14 Q. Is there anything else that you remember
15 from your time at the Medicare Drug Benefit Group
16 that is not described here?

17 A. No.

18 Q. What are risk adjustment data validation
19 projects?

20 MR. LEE: Object to form. Vague. Lacks
21 foundation.

22 BY MS. MADDUX:

23 Q. Ms. Guy, you may answer.

24 MR. LEE: You may answer, Ms. Guy.

25 THE WITNESS: So the projects were

1 Q. What are discrepancies in the diagnoses?

2 MR. LEE: Objection. Lacks foundation.

3 Vague.

4 THE WITNESS: So if a payment diagnosis
5 was submitted by the MA organization, and then
6 the medical record did not support that payment
7 diagnosis, that would have resulted in the
8 discrepancy.

9 BY MS. MADDUX:

10 Q. I'm going to direct you to page 8 of
11 Exhibit 1156. And then in the middle of the page, it
12 says -- there's a bolded section header that says
13 2.1, "Staffing the Medical Record Review." Do you
14 see that?

15 A. Yes.

16 Q. Under this header, the second sentence
17 states: "BearingPoint manages the contract, prepares
18 the analysis and sampling plans, analyzes the results
19 of the medical record review, identifies the records
20 to be sent to the SVC, and prepares the final
21 report." Do you see that?

22 A. I see that sentence, yes.

23 Q. Does "SVC" stand for second-level
24 validation contractor?

25 A. I'd have to look how it's defined up

1 above, but we could look through for the acronym.

2 Q. If you look at page 6 of Exhibit 1156
3 there, in the bulleted point list above Figure 1,
4 there is -- fourth bullet from the -- the bottom of
5 the list, it says: "Identifying and sending records
6 to CMS's independent second validation contractor
7 (SVC) to confirm discrepancies." Do you see that?

8 A. I see that.

9 Q. Does "SVC" stand for second validation
10 contractor?

11 A. Yes.

12 Q. Was the SVC a different medical record
13 review contractor?

14 A. It was.

15 Q. What was their role?

16 A. So the role of the SVC was to look at the
17 record -- and code, to determine if they got an
18 answer or same code as the initial validation
19 contractor.

20 Q. The SVC would review the medical record
21 after the IVC; is that correct?

22 A. Correct.

23 Q. Why would the IVC send records to the SVC?

24 A. So the IVC would send records to the SVC
25 to -- if you had an instance where the IVC's code did

1 not match that which was submitted for payment, that
2 was one thing. So we -- we weren't -- wanted to have
3 two medical record reviewers say it didn't match.
4 It's a validation. It's a quality control.

5 Another thing that we did was we sent
6 records to the SVC to verify coding, to make sure
7 that they were coming up -- we sent a sample, medical
8 records, to verify that they both got the same codes,
9 and -- you know, if they were particularly complex
10 patients, that was another thing that we did to
11 ensure that the codes would be accurate.

12 So the idea was that we wanted to make
13 sure that we didn't have false negatives and false
14 positives. We wanted to have the diagnosis verified.
15 So if one of the contract -- my recollection is that
16 if one of the contractors found the code that was
17 submitted for payment, then there was no discrepancy.
18 If both of them found it, there was no discrepancy.
19 But if neither of them found it, there was a
20 discrepancy.

21 Q. What about if one of them found it and one
22 of them did not?

23 A. That would have not resulted in a
24 discrepancy, if I recall correctly.

25 Q. And what are false positives?

1 A. We had false positives where you had like
2 the first coder would have said one thing and the
3 other one said the other. So you had -- let me
4 think. How did that work?

5 Well, I don't -- I don't remember how we
6 did it. But we had -- we wanted to make sure that we
7 didn't code a record that otherwise would have -- and
8 given them the -- the code -- it's basically a
9 quality assurance thing, false positives, false
10 negatives, just like we have now with COVID. You
11 have some tests that give you false positives and
12 some tests that give you false negatives. That's why
13 you repeat it. You have more than one person looking
14 at it.

15 Q. So the primary coder reviews the medical
16 record first; is that right?

17 A. Correct.

18 Q. And in this scenario, your -- just to make
19 sure I understand the scenario that you're
20 discussing, a primary coder may look at the medical
21 record and not identify a diagnosis code. The
22 secondary coder may look at the record and identify
23 the diagnosis code; is that correct?

24 A. Correct.

25 MR. LEE: Object to form.

1 BY MS. MADDUX:

2 Q. And would that be considered a false
3 positive or a false negative?

4 A. I think it would -- the first instance it
5 would be a false negative, because it was found by
6 the second.

7 Q. Okay. So back to page 8 of 1156. And
8 again we're under the bolded section, 2.1, "Staffing
9 The Medical Record Review Process." The paragraph
10 provides that IPRO, or IPRO, "provides the following
11 staff."

12 Do you see that? It's at the -- it's at
13 the end of the first paragraph.

14 A. "Provides the following staff." Yes, I
15 see that.

16 Q. There's then a bulleted list. The third
17 bullet from the bottom of the list reads: "Certified
18 medical record coders (primary coders) -- abstract
19 diagnoses from each medical record."

20 Did I read this correctly?

21 A. Correct.

22 Q. What does "abstract diagnoses" mean?

23 A. That means they're basically --

24 MR. LEE: Objection. Lacks foundation.

25

1 CERTIFICATE OF REPORTER

2 I, Karen K. Kidwell, Registered Merit Reporter
3 and Notary Public for the State of Maryland at Large,
4 do hereby certify:

5 That the foregoing deposition was taken
6 remotely before me on the date and at the time stated
7 on page 1 of this transcript; that the deponent was
8 duly sworn to testify to the truth, the whole truth
9 and nothing but the truth; that the testimony of the
10 deponent and all objections made at the time of the
11 examination were recorded stenographically by me and
12 were thereafter transcribed; that the foregoing
13 deposition as typed is a true, accurate and complete
14 record of the testimony of the deponent and of all
15 objections made at the time of the examination to the
16 best of my ability.

17 I further certify that I am neither related to
18 nor counsel for any party to the cause pending or
19 interested in the events thereof.

20 Witness my hand this 7th day of April, 2022.

21

Reported by:
Marceline F. Noble
CSR No. 3024
Job No. 821137

1 A. Somewhere around the due diligence
2 quotation.

3 Q. Yes.

4 So it says:

5 "We believe the Medicare -- or Medicare Plus
6 Choice organization have an obligation to undertake
7 due diligence to ensure the accuracy, completeness
8 and truthfulness of encounter data submitted to HCFA
9 or CMS, and they will be held to a best knowledge,
10 information and belief standard."

11 Do you see that?

12 A. I do. And this, sort of at a high level,
13 defines what you've got in the other document, which
14 is a little more specific.

15 Q. Understood.

16 But -- but it's your understanding it's --
17 they're using the same phrasing, "best information,
18 knowledge and belief as to the accuracy, completeness
19 and truthfulness of the data"; is that right?

20 MS. DO: Object to form and lacks
21 foundation.

22 THE WITNESS: I think so. But I, yeah, did
23 not write this so I don't -- I can't say for certain
24 what they meant.

25 ///

1 BY MS. GLOVER:

2 Q. All right. And -- so how did you ensure --
3 of your best knowledge, information and belief, how
4 did you at PacifiCare -- and this could be you or
5 your team or others at PacifiCare -- ensure that --
6 that it would -- that you submitted risk adjustment
7 data that was accurate, complete and truthful?

8 MS. DO: Object to form. Compound and lacks
9 foundation.

10 THE WITNESS: As it applied to signing the
11 EDI agreement, I knew pretty much what we were doing
12 in the process of extracting, formatting, submitting
13 data. And from that process, I would say, yes, my
14 knowledge, information and belief was that all the
15 data was true and accurate.

16 I think that from the point of view of
17 externality coming in from the provider organization,
18 I think --

19 (Reporter clarification.)

20 THE WITNESS: From the provider
21 organization, that there may be reason to believe
22 that the attestation on the claim form or the
23 encounter form would be sufficient.

24 BY MS. GLOVER:

25 Q. So the attestation that the provider signs

1 about the accuracy, completeness and --

2 A. On the HIPAA 1500, yeah.

3 Q. Okay. And because they're signing that
4 attestation, it was your understanding that that --
5 that that satisfied PacifiCare's obligations to
6 submit accurate, complete and truthful data; is that
7 right?

8 MS. DO: Objection. Mischaracterizes prior
9 testimony.

10 THE WITNESS: It identifies very specific
11 penalties, severe penalties for them not to do that.

12 BY MS. GLOVER:

13 Q. And what were those penalties --

14 A. Perjury.

15 Q. -- to your recollection?

16 Perjury. Okay.

17 A. That, you know, they could be rounded up,
18 arrested. You try them for -- for perjury.

19 Q. Okay. And, Mr. Higgins, are you familiar
20 with something called a "risk adjustment data
21 validation audit"? Sometimes called a RADV audit?

22 A. A RADV, yeah. I am familiar that they
23 occurred. I had peripheral knowledge of them going
24 on, just because, you know, a conference room was
25 commandeered and kept for weeks or months. And files

1 would pile up in there. And we would have a
2 certified coder going through them, looking at -- at
3 the medical records.

4 Q. And why was a certified coder going through
5 and looking at the medical records, in conjunction
6 with a risk adjustment data validation audit?

7 MS. DO: Objection. Lacks foundation.

8 THE WITNESS: Independent verification of
9 what was found.

10 BY MS. GLOVER:

11 Q. Independent of -- of who?

12 A. CMS.

13 Q. So in a risk adjustment data validation
14 audit, or known as a "RADV audit," is it your
15 understanding that -- that CMS was reviewing medical
16 records to assess whether diagnosis codes submitted
17 by a Medicare Advantage organization, were, in fact,
18 supported by that documentation, that medical record?

19 MS. DO: Objection. Lacks foundation.

20 THE WITNESS: I couldn't say that. I
21 wasn't -- I wasn't in the room, didn't know what they
22 were doing or what they were saying. I knew some of
23 the people that were involved, but...

*** CONFIDENTIAL ***

VIDEOCONFERENCE VIDEOTAPED DEPOSITION OF

ANNE HORNSBY

(Taken virtually)

10:03 a.m. Eastern

Wednesday, May 18, 2022

REPORTED BY: Christine A. Taylor, RPR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 that.

2 Q. And approximately how long was each
3 session?

4 A. Session with John Lee?

5 Q. Yeah.

6 A. First one was about an hour. Second
7 one was a couple hours. The Agile meeting was
8 about an hour.

9 Q. I'd like to shift gears a little bit
10 to understand generally what positions and
11 responsibilities you had while you were employed
12 at CMS as well as more recently.

13 Are you currently employed anywhere?

14 A. No, I'm retired.

15 Q. Retired.

16 A. Yea.

17 Q. And -- but you previously worked at
18 the Centers for Medicare & Medicaid Services; is
19 that correct?

20 A. Yes, that's correct.

21 Q. And if I refer to that as CMS, will
22 you understand what I'm talking about, the Centers
23 for Medicare & Medicaid Services?

24 A. Yes, I will.

25 Q. Great. Over what time period did you

1 work at CMS?

2 A. From 2 -- February 2000 to March 2019.

3 Q. So you worked for CMS for a little
4 over 19 years; correct?

5 A. Correct.

6 Q. And what was your most recent position
7 at CMS?

8 A. Technically, my title was always
9 health insurance specialist for all those years.
10 You know, I was -- from 2010 onward, I worked in
11 the front office of the -- what is now the
12 Medicare Plan Payment Group assisting the managers
13 in work across the five divisions in that group.
14 I was --

15 Q. Okay.

16 A. -- technical specialist.

17 Q. So you said that was from 2010 until
18 March 2019 you worked in the front office of what
19 I will refer to as MPPG, will you understand what
20 I mean?

21 A. I will.

22 Q. That refers to Medicare -- okay.

23 And you said you worked in the front
24 office working across all five divisions. What
25 were those five divisions that you helped work

1 across?

2 A. Oh, goodness, let's see. There was --
3 they've changed so many times with
4 reorganizations. There was one that was
5 running -- that was payment policy for Part C and
6 Part D. Another that was the risk adjustment
7 division, which also did policy and model
8 calibration. There was one that was -- later on
9 was an encounter data division, but also worked on
10 Part D -- elements of the Part D program. And
11 then there was -- let's see, the fourth one -- oh,
12 my goodness, I'm kind of blanking on the other
13 two.

14 Q. Why don't we actually pull up an
15 exhibit?

16 A. Okay.

17 Q. Can we get Tab 40, please, see if that
18 maybe helps?

19 A. All I see is Document 1203. Oh, here
20 we go. There it is.

21 Q. A slight delay. You should see now
22 Exhibit 1105 previously marked.

23 A. Yes. Let me try to -- well, this is a
24 risk score development illustration.

25 Q. Yeah. So I'm going to direct your

1 attention to page 2, I'll represent -- of the PDF.
2 I'll represent to you that this was part of the
3 copy --

4 A. Oh, yes. Okay.

5 Q. Part of a hard copy collection of
6 documents that the government produced to us.
7 And, yeah, have you focus on the second page,
8 which should be Bates Number on the bottom right
9 there, USBP000507083. Do you see that?

10 A. I see the organization chart.

11 Q. Okay. And do you recognize this as an
12 organizational chart for the MPPG or Medicare plan
13 payment group within CMS?

14 A. Yes.

15 Q. You see a date there, November 1st,
16 2013. Is this consistent with your recollection
17 of how MPPG was organized at that time?

18 A. I mean --

19 MR. LEE: Objection. Vague.

20 THE WITNESS: Do I still answer?

21 BY MS. SCHEFFLER DO:

22 Q. Yeah, you can still answer.

23 A. Well, it's vague in the sense --

24 MR. LEE: If you know what she means.

25 THE WITNESS: Yeah. I don't know what

1 consistent with. I mean there were many
2 reorganizations. But the bottom line is
3 that MPPG was responsible for Part C and
4 Part D, payment policy and payment
5 operations. So that's the bottom line.
6 And the shifting combinations of divisions
7 changed over time.

8 BY MS. SCHEFFLER D0:

9 Q. Okay. Do you see where your name is
10 handwritten there on sort of the right-hand side
11 next to the top box?

12 A. I do see that.

13 Q. And this was a time when you were
14 working in the front office of MPPG; correct,
15 November 1st, 2013?

16 A. Yes.

17 Q. Did you have a supervisor at that
18 time?

19 A. Yes. Cheri Rice and Jennifer Harlow.

20 Q. And did you have any anybody that
21 reported to you at that time?

22 A. No. I was a technical 15. I was not
23 a manager.

24 Q. I can see Whitney Johnson written --
25 her name is just above yours. Was she also in the

1 front office with you at MPPG at this time?

2 A. Yes.

3 Q. So did the two of you work together on
4 projects?

5 A. Probably. I don't recall exactly.
6 She tended -- my recollection is that Whitney
7 tended to work at that time on contracting issues
8 with MPPG's contracts with various parties and
9 budget. She was really working on budget issues,
10 which I never did. And I tended to do more
11 payment policy activities.

12 Q. Okay.

13 A. Whitney's responsibilities changed
14 over time, but that's what I remember right then.

15 Q. So prior to working in the front
16 office for MPPG in 2010, what were the previous --
17 where did you fit previously as a health insurance
18 specialist for CMS?

19 A. I -- the names were changed many
20 times, but I always stayed with the same group
21 conceptually from the beginning on because I loved
22 payment policy. So I stayed in the group that did
23 Part C payment policy. And then Part D was
24 created in 2006.

25 Q. And were Cheri Rice and Jennifer

1 Harlow always your supervisors?

2 A. No.

3 Q. What other supervisors did you have
4 prior to --

5 A. Let's see.

6 MR. LEE: Objection. Vague. At what
7 point in time?

8 BY MS. SCHEFFLER DO:

9 Q. We can start with the first supervisor
10 that you remember upon starting at CMS in
11 February 2000.

12 A. Tim Love hired me. He's long gone. I
13 mean, he's retired. Then Tom Hutchinson and then
14 Bob Donnelly for a short period and then Tom
15 Hutchinson again. And I think to the best of my
16 recollection after that in 2010, Tom left and
17 Cheri took over.

18 Q. Okay. And during that entire period
19 you were in that same group conceptually working
20 on payment policy for Part C and then in --
21 starting in 2006 also Part D; is that correct?

22 MR. LEE: Objection. Vague.

23 THE WITNESS: I was not --

24 MR. LEE: Objection. Vague. When you
25 say entire period, are you talking about

1 20 -- 2000 to 2019 or some other more
2 limited period?

3 MS. SCHEFFLER D0: 2000 to 2019.

4 MR. LEE: Can you be a little more
5 clear on that? Okay.

6 THE WITNESS: So what was the question?

7 BY MS. SCHEFFLER D0:

8 Q. During that entire period while you
9 were at CMS from 2000 to 2019, you were working
10 with the same group conceptually working on Part C
11 payment policy and then eventually Part D starting
12 in 2006; is that correct?

13 A. Well, the group was working on Part D.
14 I really did not do much of anything with Part D.
15 I would just dip in and help edit or something.
16 But I really was Part C, payment policy. But the
17 group did both.

18 Q. Understood. But you personally were
19 more focused on Part C payment policy through that
20 entire time period; correct?

21 A. Yes.

22 Q. And I believe you said that you
23 started working -- or Cheri started -- was your
24 supervisor starting around 2010; is that correct?

25 A. That's my best recollection is when

1 MR. LEE: You go ahead and answer. I
2 stated my -- you can go ahead. I withdraw
3 the objection. You can go ahead and
4 answer.

5 THE WITNESS: I just think that's not
6 accurate. We require them to have an
7 effective compliance program. Who defines
8 effective as only looking for new diags?
9 You know, go figure. You could argue that
10 this amendment really does fall under the
11 general requirement for an effective
12 compliance program because, otherwise, how
13 are you going to certify that the data --
14 risk adjustment data you submit is
15 accurate, complete, and truthful.

16 Well, you know, looking both ways
17 should be conceptualized as part of an
18 effective compliance process. But if it's
19 not, then it seems like there might be a
20 need to add something in writing.

21 BY MS. SCHEFFLER D0:

22 Q. So CMS never specified this in writing
23 prior to this proposal; is that right?

24 MR. LEE: Objection. Vague.
25 Ambiguous. Argumentative.

1 THE WITNESS: I don't know the answer
2 to that question. I believe that we had a
3 lot of training, a lot of sub-regulatory
4 discussion with the industry in the annual
5 trainings and planned guidance sessions
6 about what is an effective compliance
7 process. But I was never part of those, so
8 I don't know.

9 BY MS. SCHEFFLER D0:

10 Q. CMS never specified in regulation
11 prior to this proposal that MA plans were required
12 to design their medical record review rules to
13 look for or identify overpayments?

14 A. Over and under, correct.

15 Q. Otherwise, why would you be proposing
16 this new regulation; right?

17 A. Right.

18 MR. LEE: Objection. Argumentative.

19 BY MS. SCHEFFLER D0:

20 Q. So turning to page 2, there's --
21 underneath "recommendation" there's some text for
22 adding a new paragraph to Section 422.310. Is
23 this consistent with your recollection of the new
24 requirement that CMS was considering proposing in
25 June 2013?

1 A. I don't understand. What does this
2 have to do -- this is the G2 amendment. What does
3 this have to do with the over and underpayment
4 look both ways proposal?

5 Q. Are you on page 2 of 1206-1?

6 A. Hold it. I'm trying to get to -- oh,
7 sorry. The one that has a big redacted.

8 Q. Yeah. Underneath the redacted.

9 A. Okay. Let me go full screen on that.

10 Q. For the record, this is USBP076134077.

11 A. Okay. So what's the question.

12 Q. I was asking if this is consistent
13 with your recollection of the new requirement that
14 CMS was considering proposing in June 2013?

15 A. It's consistent. I don't recall if
16 this is the actual language that actually ended up
17 in the proposed -- in the NPRM. I don't recall.
18 But this paragraph, it was something similar to
19 this. I would have to look at the reg text, the
20 NPRM.

21 Q. Let's go ahead and go to the next
22 exhibit, please. Let's go ahead and skip to
23 Tab 41.

24 And this is going to show up as
25 Exhibit Number 1115 because it's been previously

1 are you?

2 MS. SCHEFFLER DO: Page 84 of the PDF,
3 second column, last paragraph underneath
4 number 6, risk adjustment data
5 requirements.

6 THE WITNESS: Okay. I've looked at
7 that.

8 BY MS. SCHEFFLER DO:

9 Q. And do you recognize this as the rule
10 CMS first proposed in January 2014 regarding
11 medical record reviews?

12 A. I do.

13 Q. So this is the proposed rule that
14 relates to the 2A looks amendment that you
15 referenced earlier, the same thing?

16 A. Yes.

17 Q. And the proposal was to require MA
18 organizations to design medical record review
19 methodologies to "identify errors in diagnoses
20 submitted to CMS as risk adjustment data"; right?

21 A. Yes.

22 Q. Do you see --

23 A. I see that, yeah.

24 Q. So this proposed rule would have given
25 those MA organizations specific guidance and set

1 specific requirements about how to design those
2 medical record reviews, there was no existing
3 regulation on this at the time; correct?

4 MR. LEE: Objection. Vague.
5 Argumentative.

6 THE WITNESS: There was no -- again --

7 MR. LEE: You can answer.

8 THE WITNESS: I mean, again, as I said,
9 the requirement to have an effective
10 compliance process should be perceived as
11 an existing regulation on this, but to the
12 extent it was not by some MAOs, then it
13 seemed important to have further specific
14 guidance.

15 BY MS. SCHEFFLER DO:

16 Q. And at the memo we just looked at
17 previously, Exhibit 1206-1, you stated, "under
18 existing regulation there is no requirement to
19 counter the incentive for MA Organizations to
20 conduct medical record reviews, only for the
21 purpose of identifying underpayments"; right?

22 A. Right. Right.

23 Q. Do you recall receiving comments on
24 the proposed medical record review rule after this
25 was published in January of 2014?

1 A. Yes. I know we received comments and
2 there was a general uproar and the industry
3 lobbied hard against it.

4 Q. Do you recall what the arguments were
5 or what -- for lobbying hard against it, what were
6 some of the arguments for not finalizing this?

7 A. I don't remember very well. I
8 remember one argument was that there are some good
9 reasons for an MAO to conduct targeted reviews.
10 So having this requirement would be a huge burden
11 and a great expense to have to review an entire
12 medical record and --

13 Q. Okay. Anything else? I didn't mean
14 to interrupt you if you were still answering.

15 A. There were other arguments. Maybe we
16 could look at the preamble and see. I don't
17 recall other specific objections, but I knew it
18 got yanked.

19 Q. In other words, it was not finalized.
20 This proposed rule was not finalized; correct?

21 A. Correct.

22 Q. Let's go ahead and take a look at the
23 next exhibit. This is 29A and B. This is another
24 e-mail and attachment. So it's going to be
25 document -- or Exhibit Number 1207 and 1207-1.

1 (Exhibits 1207 and 1207-1 marked for
2 identification.)

3 We'll again start with the e-mail. So
4 1207. It's short.

5 A. Okay.

6 Q. This is an e-mail from you to Jennifer
7 Harlow with the subject "please review chart"
8 dated March 11, 2014. Do you recognize this
9 e-mail?

10 A. I don't have any specific memory of
11 this e-mail, but it has my name on it.

12 Q. Does this help refresh your
13 recollection of the nature of some of the comments
14 received in response to the proposed medical
15 record review rule?

16 A. Yes. The first sentence says "that
17 commenters said it was confusing and unclear.
18 This seemed to be put unfair restrictions."

19 Well, I had given an example earlier
20 of an unfair restriction that is an MAO wants to
21 conduct targeted review and only look at part of
22 the record. But confusing and unclear is an
23 additional set of comments, I guess.

24 Q. And MRR, do you take that to refer to
25 the proposed medical record review rule that we

CERTIFICATE OF REPORTER

I, Christine A. Taylor, Certified
Court Reporter within and for the State of
Georgia, do hereby certify:

That the foregoing deposition was
taken before me on the date and at the time and
location stated on Page 1 of this transcript; that
the deponent was duly sworn to testify to the
truth, the whole truth and nothing but the truth;
that the testimony of the deponent and all
objections made at the time of the examination
were recorded stenographically by me and were
thereafter transcribed; that the foregoing
deposition as typed is a true, accurate and
complete record of the testimony of the deponent
and of all objections made at the time of the
examination to the best of my ability.

I further certify that I am neither
related to nor counsel for any party to the cause
pending or interested in the events thereof.
Witness my hand, this 22nd day of May, 2022.

Christine Taylor

CONFIDENTIAL
CONTAINS ATTORNEYS' EYES ONLY PORTIONS
Videotaped Deposition of
ANNE HORNSBY
VOLUME I

Friday, May 19, 2023

Reported by: Traci M. Mertens, RDR, CRR, CSR

MAGNA LEGAL SERVICES
866-624-6221
www.MagnaLS.com

1 means that the payments to MAOs under the CMS-HCC
2 model are overpayments without the coding intensity
3 adjuster to bring them -- the risk scores down, so
4 that's the impact.

5 In terms of the reliance on audited or
6 unaudited fee-for-service claims data, that cannot
7 be known until you actually run the numbers through
8 the model. I mean, it's just a fact of life. You
9 cannot predict that. You can guess that this
10 percent of HCCs will get higher dollar
11 coefficients, and that percent of HCCs will get
12 lower dollar coefficients, and -- and the age-sex
13 factors will jump up a little bit, but it's all
14 hypotheses until you actually run the numbers.

15 Q. Ma'am, respectfully, I'm not entitled --
16 I'm not asking for CMS' position. I am asking for
17 what you did to testify about facts related to how
18 errors in the fee-for-service claims data that's
19 unaudited impacts payments.

20 And other than the position that you've
21 just stated, is there anything further that you're
22 able to offer or testify about on behalf of the
23 government on topic 1D?

24 MS. KRIEG: Object to form; object to
25 government.

1 A. The last thing I'll say is I am very
2 prepared to testify in this deposition, and CMS has
3 been using 100 percent of fee-for-service claims
4 data to calibrate the model for a number of years.
5 So this distinction of audited versus unaudited,
6 it's just not that clear.

7 Q. I'm going to hand you what's been marked
8 Exhibit 1342 and Exhibit 1343-1 which is an email
9 and an attachment to that email.

10 A. Okay.

11 Q. And if you'd just take a minute to look
12 through the document.

13 MS. KRIEG: And take your time to look
14 through it.

15 THE WITNESS: Yeah.

16 Q. (By Mr. Jones) Now, Ms. Hornsby, what's
17 been marked as Exhibit 1342 is an email from
18 Jennifer Harlow to a group of folks including
19 Jonathan Smith, Cheri Rice, Carolyn Kapustij, and
20 Stacey Dieter.

21 Do you see that?

22 A. Yes, I do see that.

23 Q. And who is Ms. Harlow?

24 A. She was division director of the Division
25 of Payment Validation at this time, and then later

1 she became the deputy director of MPPG under Cheri
2 Rice.

3 Q. And you reported for periods of time to
4 Ms. Harlow, didn't you?

5 A. Well, once I was in the front office and
6 she was deputy to Cheri, yes.

7 Q. And I noticed on your list of folks that
8 you have called and consulted with that Ms. Harlow
9 isn't on the list. Is there a reason why you didn't
10 talk with her?

11 A. Oh. I thought I -- oh. Did I forget to
12 put her on? I mentioned her this morning. That's
13 -- that's my mistake. I'm sorry.

14 Q. Okay. Did you have a phone call --

15 A. Yes, I did.

16 Q. -- with Ms. Harlow?

17 A. I had a -- a brief phone call with her.

18 Q. And what did you talk to Ms. Harlow about?

19 A. Just getting her recollection on the
20 medical record review proposal and wondering if she
21 knew what MAs were doing with chart reviews which
22 she really didn't. Yeah.

23 Q. Did you talk to Ms. Harlow at all about
24 the efforts that she and others made over the course
25 of some fee-for-service adjuster discussions related

1 United's practices were in order to decide whether
2 to continue contracting with United and the Medicare
3 Advantage program?

4 A. No, because that would have been an
5 inappropriate continuation of this email
6 conversation with United.

7 Q. Why would it have been inappropriate to
8 ask for clarity if --

9 A. Because --

10 Q. -- if United is giving notices about its
11 practices?

12 A. It's because CMS requires a compliance
13 program but is not prescriptive with a
14 one-size-fits-all design for how MAOs have to go
15 about making sure their risk adjustment data is
16 accurate, complete, and truthful.

17 So to keep talking with United, bantering
18 back and forth ideas about prescribing your
19 practices, that's not what CMS would do. CMS was
20 listening in this meeting.

21 Q. Well, you -- you know that United went to
22 CMS asking for guidance, right?

23 A. That's what I'm saying.

24 MS. KRIEG: Object to form.

25 A. You go to -- for guidance in a meeting?

1 CMS is not going to do that.

2 Q. And so instead of giving guidance to
3 United about these practices that are in Exhibit 330
4 and -- and United stopping of the claims
5 verification program, CMS is suing through the
6 Department of Justice?

7 MS. KRIEG: Object to form; argumentative.

8 A. I'm sorry; what are the two sides again,
9 instead of what, then what?

10 Q. Instead of giving guidance --

11 A. Oh, okay.

12 Q. -- CMS is going through this lawsuit.

13 MS. KRIEG: Object.

14 Q. Is that your -- your view?

15 MS. KRIEG: Object to form; argumentative.

16 A. I don't understand the link between the
17 two.

18 Q. Well, United went to CMS in 2015 asking
19 for guidance, told CMS that it was stopping this
20 program, and CMS didn't give guidance or ask clarity
21 as to what United was doing, did it?

22 MS. KRIEG: Object to form; argumentative
23 and outside the scope.

24 A. Wasn't there an email from Cheri Rice that
25 stated CMS' requirements in response to Steve

1 Nelson's email?

2 Q. Did Ms. Rice say anything in that email
3 with respect to guidance about how the claims
4 verification or chart review programs needed to be
5 done?

6 MS. KRIEG: Same objections.

7 A. No, because CMS doesn't do that. CMS does
8 not prescribe to MAOs how they have to ensure or
9 certify that their data is accurate and supported in
10 the medical record. CMS does not do that because
11 MAOs differ in size. They differ in complexity.

12 There's no one-size-fits-all for a review
13 program, and CMS won't tell one MAO how to do it
14 when the conversation has not been available to all
15 of the other MAOs.

16 Q. Well, shouldn't CMS tell all of the
17 Medicare Advantage plans the rules of the road and
18 how these chart reviews should be done?

19 MS. KRIEG: Object to form; scope and
20 argumentative.

21 THE WITNESS: I'm sorry.

22 A. CMS disagrees with that statement. CMS
23 believes that the appropriate approach is to provide
24 a broad framework for what MAOs should do for
25 effective compliance actions, and that includes a

1 risk assessment. It includes monitoring and
2 internal audits.

3 There are a whole range of -- of --
4 there's seven basic elements, but CMS does not go
5 into further prescription about how to do it because
6 MAOs differ in what kinds of contracted provider
7 networks they have. They differ in the types of
8 enrollees they have. So there's just -- there is no
9 one-size-fits-all.

10 Q. So your testimony is that CMS shouldn't
11 tell Medicare Advantage plans the rules of the road
12 and how chart reviews should be done?

13 MS. KRIEG: Object to form; misstates her
14 prior testimony, object to scope, and argumentative.

15 A. I mean, there's two parts to that. CMS
16 puts out clear guidance in telling MA plans what the
17 broad framework is for having accurate data, and --
18 I'm sorry. What was the second part?

19 Q. My question was your testimony is that
20 CMS, when asked for guidance, it would have been
21 inappropriate for CMS to have told United whether
22 stopping the practice that it was doing was
23 appropriate.

24 MS. KRIEG: All the same objections.

25 A. Yeah. CMS wants all MAOs in the industry

1 to have access to the same guidance. So in a
2 meeting like this? That -- CMS would not create new
3 guidance in a meeting like this.

4 Q. Okay. Well, I think some of the topics to
5 be discussed next week have to do with some of that
6 guidance.

7 You can't -- when you talked a bit ago
8 about MAOs having different structures and different
9 sizes and different complexities, are there
10 different rules with respect to how chart reviews
11 and claims verification programs need to be done for
12 different Medicaid -- Medicare Advantage
13 organizations?

14 A. No.

15 MS. KRIEG: Object to form.

16 THE WITNESS: Oh. I'm sorry.

17 MS. KRIEG: Go ahead.

18 A. No. That's exactly the point. There are
19 no specific rules about how to do claims validation
20 because we have the seven steps of the compliance
21 program, and that gives the broad framework for how
22 MAOs should be organizing their own process for
23 validating their risk adjustment data, so that's
24 exactly the point.

25 Q. (By Mr. Jones) Should CMS be transparent

1 MR. JONES: Okay. No further questions.

2 THE WITNESS: Okay.

3 MS. KRIEG: No further questions.

4 THE VIDEOGRAPHER: This concludes today's
5 video deposition. We are officially off the record
6 at 7:06.

7 (Whereupon, the deposition was adjourned.)

Videotaped Deposition of
United States' 30(b)(6) Designee 1
CONTAINS ATTORNEYS' EYES ONLY PORTIONS
At the Law Offices of Latham & Watkins
Thursday, May 25, 2023
10:24 a.m. Eastern

1 BY MR. GALLAGHER:

2 Q And -- and when -- when responding to
3 inquiries from plans, providing your expectations or
4 interpretations of the rules, you have an obligation
5 in that context, whether it's a phone call or a
6 telephonic communication or an email, you have an
7 obligation to be responsive and clear and unambiguous
8 in your instructions to them; right?

9 MS. LIKOFF: Object to form. Compound.
10 Vague.

11 THE DEPONENT: What do you mean by
12 "interpretation"?

13 BY MR. GALLAGHER:

14 Q Can you answer my question?

15 A Well, I think you had the word
16 "interpretation" in the question.

17 Q Do you not understand what the -- what
18 interpretation means?

19 A It means many different things in the
20 context.

21 Q What is the --

22 A So what's an example of interpretation in

1 the MA program rule?

2 Q Why don't you tell me the different
3 understandings of interpretation that you think might
4 apply here.

5 A If you are talking operations,
6 interpretation could be different understandings of
7 the CMS companion guide for how certain special fields
8 should be populated in order to get something
9 communicated correctly to CMS. Sometimes the -- the
10 wording of those operational instructions are hard to
11 get really precise. It could be a different
12 interpretation of how certain adjustments to the
13 benchmarks are made and then questions come in and
14 they need to be answered. So I'm not sure how to
15 answer your question.

16 Q Some- -- sometimes it's the case that --
17 that -- that CMS has general rules or rules of general
18 applicability and there might be a question in
19 interpreting that general rule about how it would
20 apply in a specific case; right?

21 MS. LIKOFF: Object to form.

22 THE DEPONENT: Okay. So that -- that will

1 make sense to me as a specific definition of
2 interpretation, how a particular rule applies in a
3 certain case. Like, the clinical trials policy for
4 Medicare Advantage Organizations, that has had to have
5 different levels of interpretation as they apply to
6 different circumstances.

7 BY MR. GALLAGHER:

8 Q It -- it's pretty widely the case that you
9 have rules of general applicability where it require
10 some active interpretation to understand how that rule
11 might apply in a particular case; fair?

12 MS. LIKOFF: Object to form.

13 THE DEPONENT: It's not fair. It's a
14 general statement. It depends on the context
15 honestly.

16 BY MR. GALLAGHER:

17 Q Well -- so -- so one way in which CMS might
18 be asked to provide an interpretation of what the
19 rules require might be a situation where a plan comes
20 to CMS and says, "Hey, we're doing something, and it's
21 not clear to us what the rules require in this
22 particular situation. Can you help us understand what

1 your interpretation is and whether the rule applies?"

2 That's one thing that might happen in these

3 communications Ms. Rice is talking about?

4 MS. LIKOFF: Objection to form.

5 BY MR. GALLAGHER:

6 Q Yes?

7 A That -- could an MAO do that? Yes. That

8 could happen. That -- it is possible that that

9 happens, that an MAO asks that.

10 Q And -- and Ms. Rice is -- has testified here

11 that -- that -- that -- that CMS would, in fact, be

12 responsive to such an inquiry, right, would provide

13 their expectations and interpretation of what the

14 rules require?

15 MS. LIKOFF: Object to form. Compound.

16 THE DEPONENT: That is not how I read her

17 statement. And I have spoken with her, and, really,

18 the goal in those situations is to restate existing

19 guidance because, depending on which rules you are

20 talking about, CMS has, on purpose, not been

21 prescriptive and has not told plans, "Oh, here you

22 have to follow the following five steps." CMS has not

1 MS. LIKOFF: Respectfully, Counsel --

2 BY MR. GALLAGHER:

3 Q Just give me a list of every document where
4 you claim that requirement you say exists is written
5 down so we can see it.

6 THE DEPONENT: Okay. I'm -- I'm going to --

7 MS. LIKOFF: Same objection. Counsel, I
8 would just respectfully state that it's the United
9 States's position that your question is beyond the
10 scope of Topic 21.

11 THE DEPONENT: The foundational requirement
12 was -- was written in 2000. And so Page 40268, we
13 believe that M+C organizations have an obligation to
14 undertake due diligence to ensure the accuracy,
15 completeness, and truthfulness of encounter data
16 submitted to HFCA. Therefore, they will be held to a
17 best knowledge, information, and belief standard.
18 Therefore, M+C organizations will be held responsible
19 for making good faith efforts to certify the accuracy,
20 completeness, and truthfulness of encounter data
21 submitted.

22

1 BY MR. GALLAGHER:

2 Q So if --

3 A We don't need a list. We've got that.

4 Q So that's the only document that you would
5 put on the list, or are there others? Because all I'm
6 asking for here -- I'm not asking you to read from the
7 documents or tell me your position about the
8 documents. I just want disclosure of the list of
9 documents that you claim support -- or that -- pardon
10 me. Let me -- let me back up and ask this
11 differently.

12 I'm not asking for you to tell me what the
13 documents say. Right now all I want is for you to
14 give us a list of every document that you claim sets
15 forth the requirement that you've testified about that
16 there exists some requirement to investigate if you
17 have any information that a set of codes is not
18 supported.

19 MS. LIKOFF: Objection. Outside the scope
20 of the notice.

21 BY MR. GALLAGHER:

22 Q So -- so you understand, the first document

1 I'll put on that list is the June -- the response to
2 the comment in June of 2000, which is in Exhibit 164
3 at, you know, Page 40286.

4 Are there any other documents that should go
5 on this list that --

6 MS. LIKOFF: Object to --

7 BY MR. GALLAGHER:

8 Q -- you say support the rule you say exists?

9 MS. LIKOFF: Object to form. Objection.

10 Outside the scope of Topic 21. Topic 21 did not ask
11 the witness to prepare to identify all instances of
12 any communications.

13 THE DEPONENT: I would say that CMS has been
14 very clear, including in Ms. Rice's deposition, that
15 CMS does not provide recipes about how MAOs should
16 conduct their chart review programs. So CMS is not
17 going to provide a threshold for what information is
18 or a threshold for what best knowledge is. That is
19 the responsibility of the MAO when designing an
20 effective compliance program that ensures that it --
21 that the -- the organization is fulfilling all program
22 requirements including the payment ones and that

1 A CMS has not put in writing a requirement to
2 conduct medical record reviews. CMS believes that is
3 the MAO's responsibility to determine how it is they
4 can truthfully certify to their risk adjustment data.

5 Q Right.

6 And you have in the proposed medical record
7 review rule a -- a prescriptive rule -- a prescriptive
8 rule to the effect that if you do a medical record
9 review, then you have to look for deletes; right?

10 MS. LIKOFF: Objection to form.

11 BY MR. GALLAGHER:

12 Q The rule is, basically, if you conduct a
13 medical record review, then it must be designed in a
14 particular way to, quote, determine the accuracy of
15 diagnosis; right?

16 A Well, if --

17 MS. LIKOFF: Objection to form.

18 THE DEPONENT: I mean, you could design a
19 medical record review in many ways that would include
20 determining the accuracy of diagnosis. But it also
21 could have other activities going on like checking
22 provider -- checking patterns of diagnosis submitted

1 by certain provider types.

2 BY MR. GALLAGHER:

3 Q Right. So my -- my point is just that the
4 medical -- the proposed medical record review rule,
5 which was never finalized, was specific and
6 prescriptive with respect to the nature of the medical
7 record review a -- an MA organization must conduct if
8 it is going to be conducting a medical record review
9 at all.

10 MS. LIKOFF: Objection to form. Vague.

11 BY MR. GALLAGHER:

12 Q Right?

13 A I don't -- CMS would not agree with the word
14 "prescriptive" but would agree that this was a more
15 specific development of a requirement that had li- --
16 existed for a long time, which is accurate data.

17 Q Right.

18 And -- and -- and in addition to not having
19 a rule that required plans to conduct a medical record
20 review before this rule --

21 A Mm-hmm.

22 Q -- you never had any rule that told plans

1 how a medical record review must be conducted or how
2 it must be designed --

3 MS. LIKOFF: Objection to form.

4 BY MR. GALLAGHER:

5 Q -- right?

6 A As I've said, CMS never told MAOs how to
7 design their medical record reviews. They -- the MAOs
8 are responsible for developing their own protocols.

9 Q And not -- not counting the protocol, you
10 had never told MAOs before this rule that medical
11 record reviews had to be, quote, designed to determine
12 the accuracy of diagnosis, had you?

13 MS. LIKOFF: Objection to form. Asked and
14 answered.

15 THE DEPONENT: Well, because CMS never had a
16 rule about requiring the con- -- the conducting of
17 medical record reviews, CMS never -- I'm sorry. I
18 lost the last half of the question.

19 Could you restate it, please?

20 BY MR. GALLAGHER:

21 Q Sure.

22 You never told MAOs before this proposed

1 medical --

2 A Mm-hmm.

3 Q -- record review how a medical record review
4 needed to be designed, what they had to do in a
5 medical record review?

6 MS. LIKOFF: Objection to form.

7 MR. GALLAGHER: I get that.

8 THE DEPONENT: That is correct. Because as
9 I've said, CMS never tells MAOs how to conduct medical
10 record reviews. That is the MAO's responsibility.

11 BY MR. GALLAGHER:

12 Q And that -- so -- so that's true to this
13 day, right, neither before nor after this proposed
14 medical record review rule has CMS, you know,
15 prescribed any requirements for MAOs as to how a
16 medical record review must be conducted?

17 A That is correct.

18 MS. LIKOFF: Objection to form.

19 THE DEPONENT: Oh, I'm sorry.

20 That is correct. CMS never set out any
21 guidance telling MAOs how to design medical record
22 reviews.

1 BY MR. GALLAGHER:

2 Q Let me hand you Exhibit 1206 and 1206-1.

3 A Thank you.

4 Oh, thanks. Okay.

5 Q Okay. So Exhibit 1206 is a -- an email that
6 you sent to Cheri Rice copying others in June of 2013.
7 And Exhibit 1206-1 is a memo that I believe you were
8 asked about at your personal deposition that is from
9 your files.

10 Do you recognize these?

11 A Let's see.

12 MS. LIKOFF: Counsel, can you clarify
13 whether the highlighting on these two documents is
14 your highlighting or if it was produced to you with
15 the highlighting?

16 MR. GALLAGHER: I don't actually know
17 because I just got a copy of the exhibit. And I -- I
18 believe, but I'm not certain, that that is language
19 that was highlighted in the original, but I don't -- I
20 can't -- I can't specify that. And the only reason
21 I -- the -- I'd say that is that it says on the first
22 paragraph of the email "in yellow on Page 1 of the

1 Honestly, I don't remember writing this
2 paper, but, you know, I certainly, at least, took part
3 in it.

4 Q All right. So let's start with the email,
5 the last paragraph. You -- of the -- of the first
6 email on the page, which actually is from June 2013
7 and carries over to the -- the second page of the
8 document.

9 So the last paragraph of that email says,
10 "We really think we should do 6B requiring any MAO
11 that conducts medical record review to look for both
12 over- and underpayments."

13 Do you see that?

14 A Yes, I do.

15 Q Okay. And that's a reference to the medical
16 record review rule that was proposed in -- in January
17 of 2014; correct?

18 A Yes, that is.

19 Q And then if you look at the memo, which is
20 1206-1, it -- it has Issue 6B. And then the bold
21 reads, "Amend Section 422.310 to require MA
22 organizations conducting medical record reviews to not

1 focus only on identifying underpayments."

2 Do you see that?

3 A Yes, I do see that.

4 Q And so you agree, at this point in time, CMS
5 understood that at least some MA organizations were
6 conducting medical record reviews that only focused on
7 identifying underpayments; right?

8 A Well, first of all, this is an internal memo
9 to MPPG. So, you know, I guess that was understood
10 within MPPG.

11 In general, CMS understood, through informal
12 networks, that looking just for additional in medical
13 records was going on, but CMS does not have that
14 information from MAOs, unless the MAOs choose to
15 volunteer it. So it was not a fact for CMS. It was
16 something that was known on informal networks.

17 Q In describing the medical record review rule
18 that was being proposed in this internal memorandum,
19 you described it as a rule that would require MA
20 organizations conducting medical record reviews to not
21 focus only on identifying underpayments because you
22 understood that at least some MA organizations were

1 doing precisely that.

2 MS. LIKOFF: Objection to form.

3 THE DEPONENT: Within MPPG, at this time, we
4 did talk about this a lot. And so that statement
5 reflects the understanding within this group.

6 BY MR. GALLAGHER:

7 Q Right.

8 The -- the -- within MPPG, which is the
9 Medicare Plan Payment Group, focus on MAO's, you know,
10 payments and the risk adjustment methodology --

11 A Yes.

12 Q -- used for that, you understood and, in
13 fact, talked about a lot the fact that plans were --
14 some plans were conducting medical record reviews to
15 look for just -- just to look for underpayments?

16 MS. LIKOFF: Objection to form.

17 THE DEPONENT: We talked a lot about -- I
18 hate to use the word "gossip," but we talked a lot
19 about what we heard on informal networks that -- that
20 the search for additionals was becoming more common.

21 BY MR. GALLAGHER:

22 Q Right.

1 And you were sufficiently concerned about
2 that, that you really wanted the medical record review
3 rule to address it --

4 MS. LIKOFF: Objection to form. Vague.

5 BY MR. GALLAGHER:

6 Q -- didn't you?

7 A Well, we wanted the medical record review
8 proposal to say that reviews should look for -- and I
9 lost the language of the proposal. Here it is -- that
10 reviews should be designed to determine the accuracy
11 of diagnosis, because in our minds, accuracy meant
12 documented in the medical records.

13 So how could you validate it without looking
14 at the medical record and checking the diagnosis
15 submitted for payment against the diagnosis in the
16 medical record? That is the discussion that was
17 happening inside MPPG. How can anybody certify
18 accuracy without actually checking the diagnosis
19 submitted for payment and -- against what was coded in
20 the medical record?

21 So it was kind of surprising that that
22 definition of accuracy wasn't widely accepted because

1 would be sent up to Cynthia.

2 Q Right. So the -- when we were looking
3 earlier at -- at Exhibit 1206-1, that was a draft of a
4 portion of this memo that you were sharing with Cheri
5 Rice. Ultimately, what would happen is, you would get
6 all of those portions pulled together in one memo.
7 And once it was cleared by her, it would go up to the
8 deputy director of the Center for Medicare?

9 MS. LIKOFF: Objection to form.

10 THE DEPONENT: Well, it -- it really would
11 depend on the rule and what Cheri decided as to
12 whether M- -- all of MPPG's provisions in a rule --
13 okay. I will wait to --

14 BY MR. GALLAGHER:

15 Q It's okay. I just forgot my mic.

16 A Okay. It may not all be rolled up into one
17 memo is what I was trying to say. Sometimes it would
18 go up in a series of separate memos depending on what
19 else was on management's plate at the time. Because
20 these are usually -- and this was -- both of these
21 provisions were part of what we call the plan year
22 rule, which would have many provisions across CM.

1 Q Right.

2 And this -- this memo, at least in the
3 heading, is talking about a particular set of those
4 that concerned the reporting and returning of
5 overpayments by Medicare Advantage organizations and
6 Part D sponsors rules; right?

7 A Yes, that's what the topic --

8 Q Yeah.

9 A -- of this memo is.

10 Q Now, there's parts of this that are
11 redacted, and I'll just represent to you that on the
12 privilege log, you are identified as the author of
13 this document.

14 A Oh, okay.

15 Q Do you recall writing it or compiling it?

16 A I do not recall what I wrote ten years ago.
17 I will say that this is the kind of thing that I --
18 that I often wrote.

19 Q All right. So let me ask you to turn to the
20 second-to-last page of Exhibit 1460, the draft options
21 memo that you wrote and the section that concerns
22 Issue 6B --

1 A Oh, okay.

2 Q -- which is the same 6B we were looking
3 at --

4 A 6B.

5 Q -- earlier, amend Section 422.310 to require
6 MA organizations conducting medical record reviews to
7 focus not only on identifying underpayments.

8 Do you see that?

9 A Yes, I do see that's Issue 6B.

10 Q All right. And -- and this Issue 6B
11 corresponds to the same discussions of the medical
12 record review rule that we had earlier in
13 Exhibit 1206-1; right? Same heading, same title?

14 A It's -- correct, but it's -- it's revised
15 text. It is definitely not the same text as in that
16 early MPPG memo.

17 Q Right. So if you look at 1460, the
18 second-to-last page --

19 A 1460.

20 Q -- in the discussion, this is the -- this is
21 the --

22 A Okay.

1 Q -- one we are looking at, the options memo.

2 A Okay.

3 Q The language here that you write is you say,
4 "Under existing regulation, there is no requirement
5 for" -- "to" -- "for plans to audit medical records
6 for overpayments."

7 Do you see that?

8 A I do see that.

9 Q And this is something that -- that's
10 something you wrote in the -- in a June 4, 2013 draft
11 of an options memo that if finalized, would go to the
12 deputy director of the Center for Medicare; right?

13 A Well --

14 MS. LIKOFF: Object to form.

15 THE DEPONENT: Yeah. I want to explain that
16 I was often the coordinator of work products like
17 this, so I would have run this by a number of people
18 within MPPG before I sent the version to Cheri for her
19 review.

20 BY MR. GALLAGHER:

21 Q Right.

22 But -- but you wouldn't have come up with

1 this on your own. It would reflect the input of the
2 entire group?

3 A Including my input, but the input of the
4 group or the people who worked on this issue, yes.

5 Q Right.

6 So this language here about how under
7 existing regulation there is no requirement for plans
8 to audit medical records for overpayments, that would
9 reflect not just your views and input but Jennifer
10 Harlow's and others within MPPG?

11 A Yes, because, as I've said today, CMS
12 doesn't have a requirement to -- for MAOs to conduct
13 medical record reviews.

14 Q So this is a true statement that as of
15 June 2013, under existing regulation, there is no
16 requirement for plans to audit medical records for
17 overpayments?

18 MS. LIKOFF: Objection to form.

19 THE DEPONENT: That's what the sentence
20 says, yes.

21 BY MR. GALLAGHER:

22 Q And that's a true statement?

1 A Yes. As I said, CMS has no requirement for
2 MAOs to audit medical records.

3 Q And then the next sentence says, "If a plan
4 is" -- "is conducting medical record reviews to
5 identify underpayments, we recommend that they be
6 required to audit as well for overpayments"; right?
7 That's the next sentence?

8 A That is what it says.

9 Q And that's a description of what you were
10 going to be recommending be made a rule through the
11 medical record review rule; right?

12 A That is correct.

13 Q At the time you wrote this with input from
14 others at MPPG -- actually, let me -- let me say this
15 differently. I apologize.

16 When you wrote with input from others at --
17 at MPPG, that group, that under existing regulation
18 there is no requirement for plans to audit medical
19 records for overpayments, all of the alleged source of
20 obligations that we talked about earlier in -- in
21 Section -- in -- in Document 1457, all of those things
22 were already in existence; right?

1 THE DEPONENT: I've already said that CMS
2 doesn't have a re- --

3 (Interruption.)

4 THE VIDEOGRAPHER: Someone is not on mute.

5 MR. BAAK: I just --

6 THE DEPONENT: As I've said, CMS doesn't
7 have a requirement that tells MAOs they must audit
8 medical records. CMS expects MAOs to develop their
9 internal procedures for validating the data on which
10 they have been paid.

11 BY MR. GALLAGHER:

12 Q All right. So you don't have a requirement
13 that requires plans to audit medical records for
14 overpayments.

15 By logic then, the requirement for accurate
16 and complete risk adjustment data does not require
17 plans to audit medical records for overpayments, does
18 it?

19 MS. LIKOFF: Objection to form. Vague.

20 THE DEPONENT: I need just a minute to
21 finish reading the rest of this memo.

22 (Deponent reviews document.)

1 THE DEPONENT: Yeah. The Medicare advantage
2 risk adjustment guidelines specify that -- as I've
3 said, that an MAO has got to be submitting accurate
4 data, accurate, complete, and truthful. So while MAOs
5 are developing their compliance plans, which is --
6 which will be a process they are putting together that
7 would include how to manage their risk adjustment data
8 submissions. While they're putting that together,
9 they are subject to the overpayment rule is -- if they
10 identify overpayments in the process of -- of managing
11 their risk adjustment programs and conducting medical
12 record review, then they do need -- then that does
13 fall under this regulation.

14 BY MR. GALLAGHER:

15 Q Was that a yes or a no?

16 MS. LIKOFF: Object to form. Asked and
17 answered.

18 BY THE DEPONENT: The overpayment
19 regulation -- it -- it's -- it's more complicated than
20 a yes or a no. I know you always want yes or no
21 answers, but it's more complicated than that.

22

1 BY MR. GALLAGHER:

2 Q Does the overpayment rule in CMS's view
3 create an obligation to investigate whether codes are
4 supported by medical records? Is that a source of the
5 obligation you say exists?

6 MS. LIKOFF: Object to form.

7 THE DEPONENT: The overpayment rule does not
8 specifically speak to risk adjustment data. I should
9 say the regulation doesn't.

10 BY MR. GALLAGHER:

11 Q Right. Because there's a difference between
12 an overpayment and an unsupported code.

13 A Yes.

14 MS. LIKOFF: Objection to form.

15 BY MR. GALLAGHER:

16 Q Just because you have an unsupported code
17 does not mean that you have an overpayment; right?

18 A That is correct.

19 Q You can have an unsupported code for lots of
20 reasons and still not have an overpayment.

21 MS. LIKOFF: Object to form. Vague.

22

1 BY MR. GALLAGHER:

2 Q Like, for example, you can have a -- an
3 unsupported code because one record doesn't support
4 it, but it's supported in another.

5 MS. LIKOFF: Object to form.

6 THE DEPONENT: No. That is not correct. If
7 you find a diagnosis code is not supported in the
8 record, it doesn't matter if it appears in another
9 medical record. It is CMS that makes the
10 determinations about overpayments. It is the MAO's
11 responsibility to delete unsupported code, so they
12 need to delete one that is not supported. And then if
13 there's another medical record that has it, that's
14 great.

15 BY MR. GALLAGHER:

16 Q MAOs don't know whether there's an
17 overpayment.

18 All they know is whether the code is or is
19 not supported; right?

20 MS. LIKOFF: Object to form. Calls for
21 speculation.

22

1 REPORTER'S CERTIFICATE

2 DISTRICT OF COLUMBIA

3

4 I, Jeaninn Y. Alexis, a Notary Public of the
5 District of Columbia, do hereby certify that the
6 with-named witness personally appeared before me at
7 the time and place herein set out, and after having
8 been duly sworn by me, according to law, was examined
9 by counsel.

10 I further certify that the examination was recorded
11 stenographically by me, and that this transcript is a true
12 record of the proceedings.

13 I further certify that I am not of counsel to any of
14 the parties, nor an employee of counsel, nor related to any of
15 the parties nor in any way interested in the outcome of the
16 action.

17 As witness my hand and seal this 5th day of June, 2023.

CONFIDENTIAL - SUBJECT TO PROTECTIVE ORDER

Volume 3
DEPOSITION OF ANNE HORNSBY
As 30(b)(6) Designee 1 of
The United States

Washington, DC
November 21, 2023

Reported by: John L. Harmonson, RPR

1 Exhibit 1520: "RADV audits are intended to confirm
2 the presence of risk adjustment conditions (that
3 is, diagnoses that map to HCCs) as reported by MAOs
4 in medical record documentation."

5 Do you see that?

6 A. I do see that sentence.

7 Q. And then the next sentence begins:

8 "RADV audits confirm the presence of the diagnoses
9 related to the enrollee's HCC profile through the
10 review of certain categories of medical records
11 submitted by the MAOs for the purpose of a RADV
12 audit."

13 Do you see that, Dr. Hornsby?

14 A. Yes, I do see that sentence.

15 Q. And are those sentences consistent with
16 your understanding of how the RADV process works in
17 terms of CMS validating HCCs submitted by MAOs in
18 the medical records?

19 A. Yes, that's consistent with my
20 understanding of the CON14 and CON15 medical record
21 review methodology.

22 Q. If CMS confirms in RADV a diagnosis code
23 submitted by an MA plan, that code cannot result in
24 an overpayment to the plan; correct?

25 A. I'm sorry --

1 MS. LIKOFF: Objection to form. Vague.

2 THE WITNESS: What was that, Amy?

3 MS. LIKOFF: Oh, I just made an
4 objection. Objection to form. Vague.

5 BY MR. MARTINEZ:

6 Q. Do you need me to repeat my question?

7 A. Well, I lost the if. I looked up and
8 lost the if.

9 Q. I'm asking you a question just about
10 what CMS means when it says "confirm."

11 A. Oh, I thought you were reading. Okay,
12 sorry.

13 Q. So I'll repeat it.

14 If CMS confirms in RADV a diagnosis code
15 submitted by an MA plan, that code cannot result in
16 an overpayment to the plan; correct?

17 MS. LIKOFF: Objection to form. Vague.

18 THE WITNESS: When the medical record
19 coders code a diagnosis in a medical record that
20 matches to the HCC on which the MAO has been paid,
21 then it's steady state. No change.

22 BY MR. MARTINEZ:

23 Q. Right. And by "steady state," you mean
24 CMS is determining when it validates a diagnosis
25 code or an HCC submitted by an MA plan in RADV,

1 that that code or HCC cannot result in an
2 overpayment to the plan; correct?

3 MS. LIKOFF: Objection to form. Vague.

4 THE WITNESS: If the HCC that's being
5 audited for a beneficiary is confirmed by the
6 coder, there is no change in payment.

7 BY MR. MARTINEZ:

8 Q. Right. So if CMS confirms the HCC
9 that's being audited in RADV for a beneficiary
10 sampled from an MA plan, there is no change in
11 payment, meaning there has been no overpayment to
12 the MA plan as a result of that code or HCC;
13 correct?

14 MS. LIKOFF: Objection to form. Vague.
15 And again, I just want to make clear that the
16 witness has been designated to speak for the time
17 period post July 2021.

18 THE WITNESS: If an HCC is confirmed,
19 there is no change in the payment. So there would
20 be no overpayment.

21 BY MR. MARTINEZ:

22 Q. Let's take a look at the page ending in
23 6651 of Exhibit 1520.

24 MS. LIKOFF: Counsel, which page did you
25 say?

1 MR. MARTINEZ: 6651.

2 And for the folks on Zoom, this should
3 be the ninth page of Exhibit 1520.

4 BY MR. MARTINEZ:

5 Q. Dr. Hornsby, are you on that page?

6 A. 6651. Yes, I'm on that page.

7 Q. All right. So I would like to draw your
8 attention to a statement by CMS in the right-hand
9 column under the "Response" subheading. Do you see
10 the paragraph that begins "Response: As previously
11 explained"?

12 A. Yes, I do see that sentence.

13 Q. Okay. So I would like to direct your
14 attention a couple of sentences down to the one
15 that begins "Our initiatives."

16 Do you see that, Dr. Hornsby?

17 A. I'm reading the paragraph above. I need
18 it in context.

19 Q. Okay.

20 A. So "Our initiatives"?

21 Q. Yes. Are you there?

22 A. Yes.

23 Q. Okay. What CMS is saying here on 6651
24 of Exhibit 1520 is: "Our initiatives are designed
25 to ensure fair and accurate recovery efforts by

1 focusing on the areas at highest risk of improper
2 payments."

3 Do you see that?

4 A. I do see that sentence.

5 Q. CMS designed RADV to focus on the areas
6 of the MA program with the highest risk of improper
7 payments; correct?

8 MS. LIKOFF: Objection to form. And
9 objection. I would just like to make it clear that
10 this particular rule is not a topic in
11 UnitedHealth's 30(b)(6) notice, and so it's our
12 view that this is out of scope.

13 THE WITNESS: Yeah, so I can speak on
14 behalf of CMS for CON14 and CON15. The sampling
15 frame that was developed for those two audits does
16 take into account an estimate of risk for
17 overpayments and also takes into account health
18 conditions that previous audit experience suggests
19 could also be associated with higher overpayments.
20 And for CON14 that was diabetes. For CON15, that
21 was urinary conditions.

22 BY MR. MARTINEZ:

23 Q. Why does CMS design its RADV audits to
24 focus on variables that have a higher risk of
25 overpayments?

1 MS. LIKOFF: Objection to form. Vague.
2 And again, I'm just going to make it clear that the
3 witness' testimony is confined to the time period
4 post July 2021.

5 THE WITNESS: Speaking about CON14 and
6 CON15 on behalf of CMS, as the reg says at 422.311,
7 the point is to ensure payment accuracy. That's
8 the point of RADV audits. And to best approach
9 that with the methodology for the sampling frame
10 would be, for example, to try to come up with
11 methodologies for focusing on areas of high risk
12 for overpayment.

13 BY MR. MARTINEZ:

14 Q. Is one reason why CMS might want to
15 focus on areas of high risk for overpayment to
16 increase the payment recoveries that CMS obtains
17 through the RADV program?

18 MS. LIKOFF: Objection to form. And
19 again, I just want to object to the extent that
20 this witness is only designated to speak beyond --
21 or the time period post July 2021.

22 THE WITNESS: Speaking about CMS's view
23 for CON14 and CON15, I did ask this question; and
24 Dave said no, that's really not a focus. ROI is
25 just not a focus.

1 The point is trying to have accurate
2 payments made to MAOs. And the best way to do that
3 is to try to target enrollees who are at risk for
4 improper payments. You know, payment error.

5 BY MR. MARTINEZ:

6 Q. Would you agree with me that payment
7 accuracy requires consideration of whether an MA
8 plan has either been overpaid, underpaid, or
9 accurately paid for a given payment year?

10 MS. LIKOFF: Objection to form. Vague.
11 Again, this witness is designated to speak only to
12 the post July 2021 time period. Counsel, you've
13 had seven hours to ask another witness about
14 general questions on RADV and its purpose. Again,
15 I just want to reiterate, this witness is only here
16 to talk about the time period post July 2021.

17 MR. MARTINEZ: I understand. I'm just
18 trying to get more information about what
19 Dr. Hornsby means when she refers to payment
20 accuracy in her response.

21 BY MR. MARTINEZ:

22 Q. Do you remember my question?

23 A. Would you say it again?

24 Q. Sure.

25 Would you agree with me that payment

1 was designated to speak to that earlier time frame.
2 And again, this February 2023 rule is also outside
3 the scope of the noticed topics.

4 MR. MARTINEZ: So the problem with that
5 is --

6 THE WITNESS: Yeah.

7 MR. MARTINEZ: Let me finish.

8 I wanted to ask Carolyn Kapustij these
9 questions about the February 2023 final rule but I
10 couldn't because of her cutoff of July 2021.

11 So now I finally have a witness in front
12 of me who is designated to testify about Topic 5
13 after July 2021, and I expect that she's going to
14 do so. And this final rule is all about the RADV
15 audits for payment years at issue in Topic 5.

16 So yes, we expect that the witness is
17 going to be prepared on this issue. And I know she
18 says she hasn't reviewed the document. But that's,
19 from my perspective, an issue with her preparation
20 and not an issue with the scope of the topic as
21 noticed.

22 MS. LIKOFF: Well, counsel, we disagree.
23 I believe the witness has shown that she is
24 adequately prepared to testify on the topics that
25 are in UnitedHealth's notice. This rule is not a

1 topic in that notice. We've received no
2 correspondence following this notice to suggest
3 that UnitedHealth intended for this witness to be
4 prepared to speak about this. And so the United
5 States maintains its position that these questions
6 are out of scope.

7 MR. MARTINEZ: And we, of course,
8 disagree with that position. But I don't think we
9 need to belabor it further.

10 I do believe there is a pending
11 question, though.

12 BY MR. MARTINEZ:

13 Q. Do you remember my question,
14 Dr. Hornsby?

15 A. No.

16 Q. Would you like me to repeat it?

17 A. I don't know. I'm really not prepared
18 to testify on behalf of CMS about that 2012
19 extrapolation memo, which was a proposed policy
20 that was never finalized. So I'm not going to
21 testify on that.

22 I don't know about the audits from 2011
23 to '13 because I prepared to testify on CON14 and
24 CON15. And there is nothing -- I did ask Dave
25 Gardner that one question about whether anything

1 has been released about the '11 to '13 results and
2 he said no, and that was it. That was all the
3 preparation I needed to do.

4 Q. That was all the preparation that you
5 did with respect to payment years 2011 through
6 2013?

7 A. Right. I've done a lot of
8 preparation --

9 MS. LIKOFF: Objection.

10 THE WITNESS: Oh, sorry. I've done a
11 lot of preparation for CON14 and 15.

12 BY MR. MARTINEZ:

13 Q. Let's go back to the second page of
14 Exhibit 1520. This is the page ending in 6644.
15 And I would like to direct your attention to the
16 top left portion of the page. Actually, the
17 sentence begins on the bottom right of the first
18 page of the document. So I'll go ahead and read
19 that as well.

20 Are you there, Dr. Hornsby?

21 A. Yes, I'm there.

22 Q. So the bottom right of 6643, CMS writes:
23 "Rather than applying extrapolation beginning for
24 payment year (PY) 2011 audits as we proposed, we
25 are finalizing a policy whereby we will not

1 extrapolate RADV audit findings for PYs 2011
2 through 2017 and will begin extrapolation with the
3 PY 2018 RADV audit."

4 And then it says: "As a result, CMS
5 will only collect the non-extrapolated overpayments
6 identified in the CMS RADV audits," and then it
7 goes on to reference the HHS OIG audits as well.

8 Do you see that written here in the
9 February 2023 final rule?

10 A. Yes, I see it.

11 Q. And when CMS refers to collecting the
12 non-extrapolated overpayments for payment years
13 2011 through 2017, that's a reference to any
14 enrollee level overpayments that CMS may have
15 calculated in the RADV audits for those payment
16 years; correct?

17 MS. LIKOFF: Objection; outside the
18 scope of the noticed topics. And again, this
19 witness is only designated to testify with respect
20 to audits and activities taking place after
21 July 2021.

22 THE WITNESS: Yeah, for CON14 and CON15,
23 when they complete the results and are ready to
24 move to the stage of payment recovery for those two
25 years, they will be doing beneficiary-level

1 he said no, and that was all I asked.

2 Q. What did you understand him to mean --
3 well, strike that.

4 Did you ask him whether the results for
5 payment years prior to CON14 were final?

6 A. That's the one question I asked,
7 speaking as Anne Hornsby. Yeah.

8 Q. When you used the word "final" in your
9 question to Mr. Gardner, what did you mean?

10 A. Are all calculations done, all quality
11 assurance checks done, all review up the line with
12 CMS approval at the top.

13 Q. When you used the word "final" in your
14 question to Mr. Gardner, did you have in mind that
15 the appeals process related to those RADV findings
16 would have been concluded?

17 A. Speaking as Anne Hornsby, I was focused
18 on CON14 and CON15 where there aren't any
19 preliminary results. So I asked that one quick
20 question about the earlier years, and I did not
21 probe.

22 Q. Since July 2021, has the appeals process
23 for any of the RADV audits covered by Topic 5
24 begun?

25 A. I'm prepared to testify on CON14 and

1 CON15 on behalf of CMS. And appeals have not
2 begun.

3 Q. Are you familiar with how the appeals
4 process is supposed to work for CON14 and 15?

5 A. CMS has set forth the appeals process in
6 422.311. And I don't have it with me; otherwise I
7 would read it to you.

8 Q. So is the answer to my question yes or
9 no?

10 A. I've given you the citation where CMS
11 sets it out. And it's a detailed -- it's a very
12 long regulatory section which starts with hearing
13 officers and ends with administrative law judges.
14 So I am generally familiar, but I'm not -- I'm here
15 to testify on CON14 and 15 where it's not anywhere
16 near the appeals process.

17 Q. With respect to CON14 and 15, has CMS or
18 Deloitte prepared any documents as of today
19 summarizing the medical record review results for
20 those audits?

21 MS. LIKOFF: Objection to form. Vague.

22 THE WITNESS: Dave said that the results
23 of each contract's audits for '14 and '15 are
24 available to the contract in CDAT through the
25 continuous reporting process. So there is no need

1 at this early stage to have any other results.

2 There are no preliminary results for CON14 and 15.

3 BY MR. MARTINEZ:

4 Q. And neither CMS nor Deloitte has
5 prepared any documents summarizing the audit
6 results for CON14 and 15; is that right?

7 MS. LIKOFF: Object to form.

8 THE WITNESS: He said there are no
9 preliminary findings for CON14 or 15.

10 BY MR. MARTINEZ:

11 Q. And there's no preliminary findings code
12 for -- CMS has not created any document summarizing
13 the medical record review results for CON14 and 15?

14 MS. LIKOFF: Object to form. Asked and
15 answered.

16 THE WITNESS: Yeah. I mean CMS does not
17 have any preliminary findings on CON14 and CON15.

18 BY MR. MARTINEZ:

19 Q. So do I have it right that CMS not only
20 does not have any final audit results for CON14 and
21 15, it doesn't even have preliminary findings for
22 those two RADV audits. Is that right?

23 MS. LIKOFF: Objection to form. Asked
24 and answered.

25 THE WITNESS: Yes. CMS does not have

1 preliminary findings for CON14 nor CON15.

2 BY MR. MARTINEZ:

3 Q. When does CMS expect to have preliminary
4 findings for CON14 and CON15?

5 MS. LIKOFF: Objection; outside the
6 scope of the time frame. The witness is not here
7 to testify about what may take place in the future.

8 BY MR. MARTINEZ:

9 Q. You can answer.

10 A. Oh, okay. I asked that question, and
11 they said they just don't know. They do not have
12 dates. It's just not set.

13 Q. When did the medical record reviews for
14 CON14 begin?

15 A. Oh, my gosh. I can't remember that
16 date. But it takes at least a year to get through
17 them because each -- for each beneficiary, an MAO
18 can submit up to five records. And with 6,000
19 beneficiaries, you could have a maximum of 30,000
20 records. So it's a huge undertaking.

21 I don't know how many came in, but it
22 takes, you know, a chunk of time to finish the
23 medical record review.

24 Q. Is it your understanding that the
25 medical record review for CON14 began after

1 July 2021?

2 A. I remember when they ended. So first
3 there is the intake window opening for MAOs to
4 submit medical records, and that goes on for a
5 number of months.

6 And then the medical record intake
7 starts, which is a validity process where they're
8 checking a number of things -- I don't have to go
9 into all that detail.

10 And then finally starts the abstraction
11 process, which is where your coders -- experienced,
12 qualified coders are doing coding of the medical
13 records.

14 So I apologize. I cannot remember the
15 date it started, the actual medical record review.

16 Q. And I take it the same answer for CON15?

17 A. Yeah. I just -- I can't remember. I
18 apologize, I cannot remember those dates. There
19 are like four dates, and I remember the last one --
20 the last two.

21 Q. For CON14 or 15, has CMS calculated any
22 HCC discrepancy rates for the MA plans that it
23 audited?

24 MS. LIKOFF: Objection to form. Asked
25 and answered.

1 behalf of CMS that CMS was unaware that the
2 diagnosis data that came from providers and was
3 then submitted to CMS includes errors?

4 MS. LIKOFF: Objection; asked and
5 answered.

6 THE WITNESS: Yeah. I mean, CMS does
7 not have access to the data inside an MA0. When
8 CMS sees delete records come into the system,
9 that's when they are aware of errors. So yes, CMS
10 is aware of errors in MA data because they see the
11 deletes that come in.

12 BY MR. BAAK:

13 Q. Would you agree with Cheri Rice -- Cheri
14 Rice was your boss; right?

15 A. Yes.

16 Q. Would you agree with Cheri Rice when she
17 testified that CMS had some reason to know that
18 there was a level of diagnosis coding that was
19 unsupported in a Medicare Advantage plan's data?

20 MS. LIKOFF: Objection to form.

21 THE WITNESS: I would like to see that.
22 So let me turn to my Cheri Rice deposition copy,
23 which is Binder 3, Tab 7.

24 What page are you on, Mr. Baak?

25 BY MR. BAAK:

1 Q. Turn to page 71 of her transcript.

2 A. Okay. Where?

3 Q. Starting at line 25.

4 A. Oh, at the bottom. Okay.

5 Q. Without identifying a specific percent,
6 when you were at MPPG, you understand from the RADV
7 audit process that there was some error rate, some
8 percentage of diagnosis codes of Medicare Advantage
9 data that were unsupported?

10 A. Yes. In addition to deletes, of course,
11 the RADV audit results would tell CMS that there
12 were diagnoses that were not supported in the
13 medical record. Yeah.

14 Q. So you agree with this testimony that
15 CMS was aware that the diagnosis codes that were
16 coming from providers to MA plans and then coming
17 to CMS included some unmeasured error rate; right?

18 A. Yes.

19 MS. LIKOFF: Objection; misstates -- the
20 document and misstates the witness's testimony.

21 THE WITNESS: Keep in mind that about 30
22 MA contracts were audited a year until CON14. So
23 we're not talking about a large volume. But yes,
24 from the RADV audit process, CMS understood that
25 there was some error rate because that would be a

1 typical result of the audit process. For each
2 contract audited, there would be a payment error
3 amount.

4 And in addition, as I had been talking
5 about, CMS was aware that parent organizations were
6 deleting records that they had been paid on because
7 they found errors in the diagnosis codes.

8 BY MR. BAAK:

9 Q. You mentioned -- Dr. Hornsby, you
10 mentioned an error where a plan submits a diagnosis
11 code and then subsequently determines for some
12 reason that that code ought to be deleted. That
13 was an example you gave me a little bit earlier.

14 A. That was one example I gave, yes, that
15 CMS has seen.

16 Q. CMS is also aware that there are errors
17 where in fact a provider does document a diagnosis
18 code on a medical record but fails to submit it;
19 right? CMS knows that from the RADV process?

20 MS. LIKOFF: Objection to form. Vague.
21 Beyond the scope.

22 THE WITNESS: CMS did not have evidence
23 of that. You know, around the time of the 2014
24 rule, CMS had anecdotal evidence that MAOs were
25 conducting medical record reviews to find what

1 everybody calls additional to find diagnoses that
2 had not been submitted before that appear to be
3 supported by the medical record. CMS was not aware
4 of that as a fact, as clear knowledge. It was all
5 through professional networks and, you know, that
6 level of knowledge.

7 BY MR. BAAK:

8 Q. Just to make sure I understand,
9 Dr. Hornsby, you're testifying that over time CMS
10 became aware through professional discussions,
11 industry conferences and the like that Medicare
12 Advantage organizations were conducting medical
13 record reviews to add diagnosis codes that the
14 provider had failed to submit. Is that what you
15 just testified to?

16 A. Yes. Over time CMS became aware, around
17 2014 as a tipping point.

18 Q. It had knowledge that CMS obtained about
19 what plans were doing. That obviously predated the
20 proposed medical record review, right, since that
21 was targeted at Medicare Advantage organization's
22 chart review activities?

23 MS. LIKOFF: Object to form. Vague.
24 Misstates the witness's testimony.

25 THE WITNESS: CMS did not propose a

1 like, 80 percent? I mean, what do you mean by
2 "well known"?

3 BY MR. BAAK:

4 Q. Dr. Hornsby, you have a PhD from
5 Harvard.

6 A. That's right.

7 Q. Have you used the phrase "well known" in
8 your life before?

9 A. I'm not going to --

10 MS. LIKOFF: Objection.

11 THE WITNESS: Testifying as Anne
12 Hornsby, I'm not falling in this trap. So, you
13 know, I want to know what "well known" means to
14 you.

15 BY MR. BAAK:

16 Q. Okay. Your testimony for the jury is
17 you don't understand what the phrase "well known"
18 means without me defining it?

19 MS. LIKOFF: Objection to form.

20 THE WITNESS: My testimony is I'm asking
21 you what you mean by "knowledge" and "well known."
22 Because I have explained that that usually means
23 throughout the organization with many people and
24 all the way up the leadership chain. And CMS is
25 just not going to testify to that.

1 There was anecdotal knowledge.
2 Anecdotal knowledge. So as a social scientist, I
3 know what "anecdote" means. It's not systematic.
4 So anecdotal knowledge that MAOs were not
5 submitting diagnoses and were not deleting
6 diagnoses that needed to be deleted, and that were
7 focusing on finding additional diagnoses that had
8 not been submitted. That's what the anecdotal
9 knowledge was.

10 BY MR. BAAK:

11 Q. I'll use your phrase, then.

12 So, Dr. Hornsby, there was anecdotal
13 knowledge in CMS that the diagnosis codes that
14 providers were submitting to MA plans that was in
15 turn were getting submitted to CMS did not include
16 all diagnosis codes that were supported by the
17 patient's medical record; right?

18 MS. LIKOFF: Objection; outside the
19 scope.

20 THE WITNESS: CMS assumes that the
21 reason MAOs began to engage in identifying
22 additional was because that was your discovery --
23 MAO's discovery inside their organizations, and
24 they would be in the best position to know because
25 they're the one who have the contracts with the

1 providers. CMS does not contract with the
2 providers.

3 BY MR. BAAK:

4 Q. Dr. Hornsby, my question was: There was
5 anecdotal knowledge in CMS that the diagnosis codes
6 that providers were submitting to MA plans that in
7 turn were getting submitted to CMS did not include
8 all diagnosis codes that were supported by the
9 patient's medical records; right?

10 MS. LIKOFF: Objection; outside the
11 scope. Asked and answered.

12 THE WITNESS: I've answered that so many
13 times. I've answered that many times.

14 BY MR. BAAK:

15 Q. The answer is yes, isn't it,
16 Dr. Hornsby?

17 A. The answer is --

18 MS. LIKOFF: Objection; mischaracterizes
19 the witness's testimony.

20 THE WITNESS: The answer is CMS does not
21 contract with providers, so it doesn't know for
22 sure what providers are up to. I mean, that's just
23 reality. CMS did have anecdotal knowledge that
24 MAOs, some MAOs, were not submitting deletes they
25 should, and others were conducting medical record

1 reviews to identify additional. Well, that means
2 that the MAOs had discovered that their providers
3 were not coding completely. That's what the MAO
4 discovery is.

5 BY MR. BAAK:

6 Q. Dr. Hornsby, I want to ask about a third
7 category of potential error. So we've talked about
8 errors where the MA plan submits a diagnosis code
9 that's not reflected on a medical record. Right?
10 And I'll add to that where the patient doesn't
11 have -- does not have the diagnosis. And then we
12 just talked about another category where the
13 patient has the diagnosis but it doesn't get
14 submitted.

15 So are you with me so far, those first
16 two categories of errors?

17 MS. LIKOFF: Objection to form.

18 THE WITNESS: Yes.

19 BY MR. BAAK:

20 Q. There is also a third potential category
21 of error, isn't there, Dr. Hornsby, where the
22 patient has the medical condition and it's not
23 reflected in the medical record but it is in the
24 diagnosis data. So the medical record is in fact
25 in error; right? That's also a potential source of

1 error in the system?

2 MS. LIKOFF: Objection to form.

3 THE WITNESS: CMS does not accept that.

4 That is unacceptable because CMS, as does every

5 other healthcare transaction entity, follows the

6 guidelines of the national committee, ICD-9 and

7 ICD-10. An accurate diagnosis is defined as one

8 that is documented in the medical record. And if

9 there is no documentation in the medical record,

10 then there cannot be an accurate diagnosis.

11 BY MR. BAAK:

12 Q. I'm not asking what CMS considers the

13 basis to validate a code. I'm just asking in the

14 real world, there can be patients who have a

15 condition. It might not end up on the medical

16 record but it might be in the claims data and gets

17 submitted. You're saying, well, then that would be

18 unsupported in CMS's view. But I'm just saying

19 that there is some set of those patients that in

20 fact have the condition; right?

21 MS. LIKOFF: Objection; vague. Calls

22 for speculation.

23 THE WITNESS: CMS would not -- you know,

24 the doctor is responsible for creating the medical

25 record with complete, clear documentation. That's

1 the starting point. And that's in, you know --
2 that's what -- MAOs have the right through CMS
3 regulation to put into their contracts with their
4 providers. And so if that happens when there is no
5 note in the medical record of a diagnosis, then it
6 cannot be submitted for payment.

7 BY MR. BAAK:

8 Q. Dr. Hornsby, maybe I'm making my
9 question unclear. I'm not asking about what CMS
10 considers a valid basis for payment. I'm asking is
11 it possible that a patient has diabetes, it's
12 included as a diagnosis code in the claims data,
13 but it is not on the medical record but in the real
14 world the patient has the condition. That's
15 something that can happen; right?

16 MS. LIKOFF: Objection; outside the
17 scope of the notice. Calls for speculation.

18 THE WITNESS: CMS knows that a patient
19 can have diabetes and the doctor did not write it
20 in the medical record. But that means that that
21 can't be submitted to CMS.

22 BY MR. BAAK:

23 Q. Whether it can be submitted or not,
24 that's a mistake that could happen; right?

25 MS. LIKOFF: Object to form.

3 DISTRICT OF COLUMBIA

4 I, JOHN L. HARMONSON, a Notary Public
5 within and for the District of Columbia, do hereby
6 certify that ANNE HORNSBY, the witness whose
7 deposition is hereinbefore set forth, was duly
8 sworn by me and that such deposition is a true
9 record of the testimony given by such witness.

10 That before completion of the
11 proceedings, review and signature of the transcript
12 was reserved.

13 I further certify that I am not related
14 to any of the parties to this action by blood or
15 marriage; and that I am in no way interested in the
16 outcome of this matter.

17 IN WITNESS WHEREOF, I have hereunto set
18 my hand this 27th day of November, 2023.

REMOTE VIDEOCONFERENCE DEPOSITION OF

LATEEFAH HUGHES, DrPH

February 4, 2022

Reported by:

Anne E. Vosburgh, CSR-6804, RPR, CRR

Job No. 789846

1 L. Hughes DrPH

2 doctorate in public health from

3 Morgan State University.

4 Did you obtain that doctorate before

5 beginning your employment at CMS?

6 A. No.

7 Q. When did you obtain that doctorate?

8 A. In 2013.

9 Q. Were you working on the doctorate
10 while employed at CMS?

11 A. Yes.

12 Q. When did you begin the course of
13 study for that doctorate?

14 A. In 2003.

15 Q. Did you have a particular area of
16 focus in your doctorate work?

17 A. No. It was general.

18 Q. Did you complete a dissertation?

19 A. I did.

20 Q. What was the topic of the
21 dissertation?

22 A. Exploring the impacts of adherence
23 outcomes for HIV AIDS in Kenya and Zambia.

24 Q. What was your position at CMS when
25 you joined in 2002?

1 L. Hughes DrPH

2 A. I was a social science research
3 analyst.

4 Q. Were you assigned a particular area
5 of research analysis?

6 A. Yes.

7 Q. What was that area?

8 A. I was assigned to adjustments,
9 operations, and risk adjustment data
10 validation.

11 Q. How long did you hold the position as
12 social science research analyst?

13 A. Two years, I think, or three years.
14 Two or three years.

15 Q. What position did you take next?

16 A. Health insurance specialist.

17 Q. And what were your responsibilities
18 as a health insurance specialist while at CMS?

19 A. More of the same of what I was
20 working on, but doing -- adding more
21 coordination to the title.

22 Q. Coordination with who?

23 A. Coordination of team tasks and
24 coordination with -- on -- on industry
25 communication and activities -- outreach and

1 L. Hughes DrPH

2 communication.

3 Q. Did your responsibilities in that
4 role include risk adjustment data validation
5 audits?

6 A. Yes.

7 Q. Are you familiar with the term
8 "RADV," Dr. Hughes?

9 A. Yes.

10 Q. What do you understand it to mean?

11 A. It's a data validation that takes
12 place by CMS to validate the accuracy of risk
13 adjustment data that Medicare Advantage plans
14 submit to the agency for payment on their
15 beneficiaries, their members that are enrolled
16 in the plans.

17 Q. Okay. So if I use the shorthand
18 "RADV audit," you'll understand that I'm
19 referring to a risk adjustment data validation
20 audit?

21 A. Yes.

22 Q. What position did you take next with
23 CMS?

24 A. That was pretty much my position
25 until I left the Medicare risk adjustment work

1 L. Hughes DrPH

2 and moved to management in the Affordable
3 Care -- under the Affordable Care Act.

4 Q. And Dr. Hughes, in what year did that
5 occur?

6 A. 2012.

7 Q. At some time prior to 2012 did you
8 hold the title Team Leader for Risk Adjustment
9 Data Validation?

10 A. Yes. That was part of the broad
11 title of health insurance specialist.

12 Q. Do you recall how long you held that
13 title?

14 A. I think it was from 2006 through
15 2012, but I can confirm when I look at my
16 resume.

17 Q. Understood.

18 And when you transitioned to work on
19 Affordable Care Act issues, did you continue
20 to have responsibility for risk adjustment?

21 A. No. Not Medicare risk adjustment,
22 no.

23 Q. Did you continue to have
24 responsibility for RADV audits?

25 A. No.

1 L. Hughes DrPH

2 routine trainings to the industry, so I would
3 be responsible for coordinating information
4 for the RADV or the data collection components
5 of the training manuals that CMS put out for
6 the training.

7 Q. And during the RADV audit process,
8 what information was being evaluated?

9 A. The diagnosis data and the
10 hierarchy -- that contributed to the
11 hierarchical condition categories that are
12 used for -- assigned to beneficiaries from the
13 Medicare data. So that information was being
14 reviewed.

15 Q. When you referenced hierarchical
16 condition categories, are those sometimes
17 abbreviated HCCs?

18 A. Yes.

19 Q. So I understand you to say that the
20 information evaluated during a RADV audit
21 included diagnosis data and HCCs that were
22 assigned to beneficiaries from submitted data.

23 A. Yes.

24 Q. And how were diagnosis data
25 evaluated? Who did that?

1 L. Hughes DrPH

2 A. We had contractors that were
3 credentialed in conducting medical record
4 review in ICD-9 -- in ICD-9 coding extraction
5 for medical records.

6 Q. And did you interact with these
7 contractors?

8 A. Yes.

9 Q. Do you recall any of the
10 organizations who were credentialed in
11 conducting medical record review?

12 A. Yes.

13 Q. Okay. Would you list those for me,
14 please.

15 A. The ones I recall were Aspen -- I'm
16 just trying to go in order from when I
17 started, if I can recall that.

18 Aspen, Health Services Advisory
19 Group, HSAG, Buccaneer, IPR0. Those are ones
20 that I recall but there may have been others.

21 Q. When you reference Buccaneer, is the
22 full name Buccaneer Data Services?

23 A. Maybe. I don't know if that was
24 their name back then, but maybe.

25 Q. And the organizations that you listed

1 L. Hughes DrPH

2 performed medical record coding?

3 A. They do -- they did. And I don't
4 think that those were all, but I just can't
5 remember all, I'm sorry, the acronyms.

6 Q. And are you familiar with the process
7 as to how these organizations would evaluate
8 medical records to make determinations on
9 diagnosis data?

10 A. Yes.

11 Q. Could you please describe that
12 process.

13 A. Sure.

14 So based off my recollection, the
15 Medicare health plans would submit the
16 required medical records from their providers
17 to these organizations for beneficiaries that
18 were selected in their sample.

19 The medical record review
20 organizations would have the records reviewed
21 by a -- by what's considered a first-level
22 review or primary coder. And then that
23 record -- some records were also re-reviewed
24 by like a senior coder based off of certain
25 criteria for either quality assurance in the

1 L. Hughes DrPH

2 process.

3 And there was also a -- the process
4 was set up such that there was also a second
5 review organization that reviewed a subset of
6 some sort from the primary -- from the first
7 organization.

8 And that was used -- put in place to
9 mitigate the known issues of coder agreement
10 or levels of coder disagreement to get --
11 given that it's a pretty subjective activity
12 that -- so to be able to kind of in some way,
13 shape, or form, identify where the agency
14 could kind of err on the side of the plan when
15 there is any level of doubt that the record
16 could be accurate.

17 So there, that's kind of like an
18 interrater reliability type of activity for
19 agreement.

20 Q. Okay. The interrater reliability
21 activity that you described, would that involve
22 comparing the diagnosis codes identified by one
23 coder with the diagnosis codes identified by
24 another coder?

25 A. Yes.

1 L. Hughes DrPH

2 Q. And what was the purpose of doing
3 that?

4 A. The purpose was to, for one, in the
5 process, it's pretty known that coders
6 don't -- they may not have a high level of
7 agreement on coding.

8 So in order to -- if you look at the
9 first level of coding, it may have a pretty
10 high error rate, if you will, and then by
11 introducing maybe another layer of coding,
12 there may be something to bring that error
13 down. And to also determine their level of
14 agreement on codes.

15 So it's a measure of quality
16 assurance in the process.

17 MR. QURESHI: Okay. Dr. Hughes, if
18 I may, I'd like to take a short restroom
19 break, if that's okay with your lawyer.

20 May I propose like a five-minute
21 break?

22 MS. GLOVER: Sure. That's fine.
23 And we'll just go off the record then.

24 MR. QURESHI: Okay. Thank you.
25 We're off the record.

1 L. Hughes DrPH

UNITED STATES OF AMERICA		
et rel. BENJAMIN POEHLING,		
Plaintiffs,		Case No.
vs.		CV 16-08697 FMO (SSx)
UNITEDHEALTH GROUP, INC.,		Hon. Fernando Olguin
et al.,		
Defendants.		
- - - - -	+	

Wednesday, January 26, 2022

Remote Videotaped Deposition of THOMAS HUTCHINSON, a Witness herein, called for examination by counsel for Defendants in the above-entitled matter, pursuant to notice, the witness being duly sworn by MICHELE EDDY, RPR, CRR, a Notary Public in and for the District of Columbia, taken virtually with the witness located in Washington, D.C., at 10:13 a.m.

1 I would also ask that you please allow me to
2 finish my question before you answer it.
3 Oftentimes you might know what my question is
4 before I complete it, but please refrain from
5 answering it until I finish my question. I will
6 absolutely extend you the same courtesy and will
7 allow you to finish your answer before I ask my
8 next question or my follow-up question.

9 Remote depositions make this a little
10 difficult to implement, but I will certainly do my
11 best not to step on you and, if I do, I apologize
12 in advance.

13 If you need to take a break at any time,
14 sir, to -- for any reason, just let me know and we
15 can certainly go off the record. I would request,
16 however, that you not ask to take a break while a
17 question is pending unless you need to confer with
18 your counsel on an issue involving privilege. If
19 that's the case, just let me know. Is that
20 understood?

21 A It's understood.

22 Q As the deposition is occurring remotely,
23 I am unable to see what you have in front of you.
24 I would ask that you not read from any preprepared
25 notes or access any text messages or emails while

1 we're on the record. Is that clear?

2 A Yes.

3 Q Do you currently have any papers in
4 front of you, sir?

5 A I have an empty notebook or a clear
6 notebook to take notes if I need to but -- I can
7 move it if you would like.

8 Q If it's empty, you don't need to move
9 it, sir.

10 Are there any other documents in front
11 of you?

12 A No.

13 Q I would request that you not communicate
14 with anybody by computer, phone, or email, or some
15 -- some other mechanism while we are on the
16 record. Of course, if you need to confer with
17 your counsel, you can -- you can do that audibly,
18 and we can take a break as appropriate.

19 Mr. Hutchinson, are you aware of any
20 reason your deposition should not go forward
21 today?

22 A No, I -- no.

23 Q Have you taken any medication or
24 substance that might interfere with your ability
25 to testify truthfully and accurately here today?

1 A No.

2 Q Mr. Hutchinson, do you understand that
3 you are appearing here today pursuant to a
4 subpoena issued by the defendants in this
5 litigation?

6 A Yes.

7 Q When did you become aware of that
8 subpoena?

9 A I believe last fall.

10 Q The fall of 2021, sir?

11 A Correct.

12 Q Were you employed by the Centers for
13 Medicare and Medicaid Services from 1991 through
14 2010?

15 A Yes, 1991 to 2010, yes, that's correct.

16 Q And from September of 2006 through June
17 of 2010, were you the director of the Medicare
18 Plan Payment Group known by the acronym MPPG?

19 A Yes.

20 Q And did you leave CMS in June of 2010,
21 sir?

22 A Yes.

23 Q Most of my questions throughout the day,
24 Mr. Hutchinson, will focus on the time when you
25 were at CMS. If I'm interested in another time

1 period, I will specify that, but I am largely
2 interested in your tenure at CMS. Is that clear?

3 A Yes.

4 Q Mr. Hutchinson, are you familiar with
5 the term Medicare Risk Adjustment Program?

6 A Yes.

7 Q What do you understand it to mean?

8 A The risk adjustment program is the
9 payment method that CMS uses to calculate
10 individual beneficiary risk scores, which are
11 multipliers for the base bid rate that Medicare
12 Advantage plans bid to cover Medicare Part A, Part
13 B, and supplemental benefits.

14 Q In your role as director of the Medicare
15 Plan Payment Group or MPPG, did you have any
16 responsibilities for the Medicare Risk Adjustment
17 Program?

18 A Yes.

19 Q What were those responsibilities?

20 A To design and implement the payment
21 system using the risk adjustment data.

22 Q And when did you begin to design and
23 implement the payment system using the risk
24 adjustment data?

25 A And when you say -- refer to "you," is

1 that me in particular or you as a plural?

2 Q I meant you in particular, sir.

3 A I probably started designing,
4 implementing in, I guess, 2006, when MPPG was
5 created.

6 Q And, sir, are you able to describe
7 generally what process you followed to design and
8 implement the payment system using the risk
9 adjustment data?

10 A I don't understand your question.

11 Q I would like to understand generally
12 what you did in connection with your
13 responsibility to design and implement the payment
14 adjustment system. How did you go about
15 fulfilling your responsibility?

16 A Again, I guess I'm just not quite sure
17 on the question. I don't mean to be difficult,
18 but are you asking what did I in particular do or
19 what did -- what process did I lead? I -- I'm
20 just not sure of your question in the sense of how
21 to answer it.

22 Q Sure, Mr. Hutchinson. And I appreciate
23 you asking clarifying questions. I'm not assuming
24 you're being difficult. I asked you to do that
25 and you're doing exactly that and so thank you.

1 A We had a couple of processes, you know.
2 Some obviously you're more interested in than
3 others, but one thing is monthly payments -- you
4 know, the Part C and Part D program, which we were
5 responsible for, monthly payments went out to the
6 plans, and we basically had -- you know, part of
7 the responsibilities of this group was, you know,
8 in effect run a shadow payment system such that we
9 could check the accuracy of the MARx reports we
10 got regarding the amounts that the MARx, which was
11 the official payment system, calculated for each
12 plan.

13 And we could, you know -- through this
14 sort of shadow payment system, we would be able to
15 tell if there was any, you know, material
16 discrepancies in terms of what MARx calculated as
17 payments and what our shadow system did. And
18 essentially that required us to monthly, you know,
19 calculate 36 million risk scores and calculate,
20 you know -- make sure those were matched up to 36
21 million bids. You know, really it's 19 million
22 bids at that point to figure out what the MA
23 payments are, but we would kind of monthly run
24 those calculations. And that's what that group
25 did.

1 The other kind of thing they did is they
2 ran a national RADV program and process and,
3 again, as, you know, you well know, started the
4 plan level RADV process in 2007.

5 Q Anything else that comes to your mind
6 regarding the tools this group used to check the
7 accuracy of payments?

8 A Nothing in terms of tools per se, but
9 the other thing this group -- and Ann Hornsby was
10 also a part of that group -- was to work with OMB
11 to determine and publish the IPIA, the improper
12 payments annual report. Geez. But it's an annual
13 number every year that we had to put out as to how
14 accurate our payments were.

15 Q Mr. Hutchinson, would you like some
16 water?

17 A I just grabbed it.
18 Go ahead.

19 Q With respect to the calibration or
20 recalibration of the model we were discussing
21 earlier, I believe you explained that
22 fee-for-service data was used in connection with
23 those exercises. Is that correct?

24 A Correct.

25 Q During your time as head of MPPG, did

1 you have any concerns about the accuracy of the
2 fee-for-service data used for either calibration
3 or recalibration?

4 A Yes.

5 Q What were those concerns?

6 A Originally I was very concerned that the
7 fee-for-service data probably under-reported
8 diagnoses. Meaning, fee-for-service providers,
9 especially Part B providers, would see patients
10 but not necessarily document and record all the
11 diagnoses that a patient had because, again, there
12 are incentives for fee-for-service, they're a
13 little different, and it's not to provide any
14 different care, but it's -- you know, the
15 documentation you need, there -- there wasn't a
16 lot of diagnosis documentation needed in
17 fee-for-service. So originally I was concerned
18 that fee-for-service data under-reported
19 diagnoses. Originally I was not that concerned
20 about the accuracy of the fee-for-service data.

21 After we did some investigation on the
22 fee-for-service data, I, as well as others, I
23 believe, were surprised at not inaccurate -- that
24 the documentation for a lot of the fee-for-service
25 diagnoses was not as good as we had thought it

1 would be and actually rivaled kind of -- you know,
2 it was fairly similar to the documentation that we
3 had seen in MA, and I think we were surprised at
4 that.

5 Q And, sir, are you able to approximate
6 the time frame during which you had the
7 realization regarding the -- the observation you
8 just discussed?

9 A That would be in 2009 when we first
10 looked at the CERT data.

11 Q In your response you used the plural we.
12 Are you referring to MPPG or CMS or some other
13 group of individuals?

14 A MPPG. I'm sorry.

15 Q In response to one of my earlier
16 questions about the different tools used to check
17 payment accuracy, I believe you mentioned the term
18 "RADV." Do you recall that?

19 A Yes.

20 Q And when you used the term RADV,
21 R-A-D-V, do you mean risk adjustment data
22 validation?

23 A Yes.

24 Q Are you able to describe generally what
25 RADV means?

1 A Yes. So since even -- I think going
2 back to 2001, maybe 2002, CMS had always done sort
3 of a national program RADV process or audit in a
4 sense, which entailed, you know -- you know, at
5 least by the time I was running it, we had a
6 sample size of I think about 1600-odd
7 beneficiaries that we would collect medical
8 records from the approximately, you know, 350
9 different plans. And we would determine an error
10 rate of those diagnostic codes submitted through
11 RAPS based on a documentation that we would
12 receive, and we would determine the national error
13 rate.

14 Subsequently and in 2007 -- or 2009 for
15 the 2007 year was when we started looking into
16 possibly doing plan-level RADV audits, which, you
17 know, are much more specific and much more plan
18 specific, and the results could be used to
19 extrapolate a payment recovery from the plan. So
20 there had been a national one -- a national RADV
21 for years. We started, you know, a pilot project
22 doing the plan-level ones in 2009.

23 Are you still there?

24 Q Yes, I am, sir. I am working to
25 formulate my next question.

1 don't know.

2 Q That's fine, Mr. Hutchinson. Other than
3 client work and conferences, are there any other
4 contexts in which you had occasion to discuss the
5 recommendations contained in Exhibit 1024A?

6 A Again, I'm sure I've had informal
7 conversations with lots of folks about all of
8 these, you know, whether it's coding intensity or
9 whether it's the need for a fee-for-service
10 adjuster, et cetera, that would not necessarily be
11 client work or formal presentation at a
12 conference, but I don't recall any, you know,
13 exact -- what the -- who the people were, you
14 know, the exact issue, but it's not like I
15 completely forgot all this stuff as soon as I
16 walked out the building.

17 Q Understood.

18 Mr. Hutchinson, in connection with the
19 coding intensity adjuster, did you understand in
20 the spring of 2010 that MA plans would have more
21 diagnoses codes than fee-for-service for the same
22 population?

23 MR. MASON: Objection. Calls for
24 speculation. Vague and ambiguous as to would
25 have.

1 A Yeah, the Medicare Advantage program as
2 a whole had more coding and more people being
3 coded and more diseases and higher severity of
4 diseases coded than the same population in
5 fee-for-service would have had.

6 Q And did you have an understanding as to
7 why that was the case?

8 A Yeah, I think we have a pretty good
9 idea. A lot of it was severity, that Medicare
10 Advantage plans, you know, worked very hard and,
11 you know, captured oftentimes a higher level of
12 severity in a lot of diseases, whereas
13 fee-for-service a lot of times just kind of went
14 for the basic lower code and didn't really
15 determine whether they, you know, should, you
16 know, look to a more severe level of diagnoses.

17 Q Other than severity, did you have any
18 other understanding as to why MA plans would have
19 more -- would have more codes?

20 A Well, I mean, the simple fact, you know
21 -- MA plans have a much higher, you know,
22 incentive to make sure they code very completely
23 than fee-for-service providers in many cases. So,
24 you know, if you're measured on something, you're
25 going to be really good at it, and they got really

1 good at it.

2 Q Were you aware of any activities MA
3 plans engaged in to realize the incentive you just
4 described?

5 A Sure, you know, we knew about chart
6 reviews, you know. Yeah, certainly chart reviews
7 is probably the biggest factor back then. And
8 then, you know, we heard about various folks that
9 figured out how they could RADV proof things by
10 doing in-home visits, but, you know, we knew of
11 those things, yeah.

12 Q And when you say "we" --

13 A I knew those things. We knew those
14 things, so yeah.

15 Q I'm sorry, I stepped on you,
16 Mr. Hutchinson.

17 A Yeah.

18 Q When you say "we," are you referring to
19 MPPG?

20 A I am. That's what -- yes, I knew about
21 it and our whole group knew about it, you know.

22 Q And you used the phrase "chart review."
23 What did you understand the word "chart review" to
24 mean?

25 A Chart review is, you know, the process

1 -- well, when I -- when I was referring to it,
2 it's plans would target various, you know, of
3 their members with the idea that, you know,
4 either, geez, I spent a lot of money on these
5 people and there haven't been many diseases
6 reported or I know this person in the past has
7 been diagnosed with diabetes, but I don't have a
8 diabetes code for him in this year. And it's the
9 process where Medicare Advantage plans would
10 request medical records from their providers, and
11 then they would have their coders review the
12 medical record to determine if there was any codes
13 that indeed were documented in the medical record
14 but were not either part of the claim or whatever
15 or for whatever reason were not sent in to CMS
16 through the RAPS system.

17 Q As you described it, Mr. Hutchinson, did
18 you believe chart review was improper?

19 A No.

20 Q Did you believe it was fraud?

21 A No.

22 Q The coding intensity adjuster that we
23 discussed, would the calculation of that figure
24 depend on why MA plans have more codes than
25 fee-for-service?

1 A Yes.

2 Q And earlier you testified that you, when
3 you were at MPPG, you were aware that some plans
4 were doing one-way chart reviews. Is that
5 correct?

6 A Yes.

7 Q Did you know that UnitedHealth had a
8 chart review program when you were at MPPG?

9 A I don't recall if I knew any specific
10 plans that had, you know, a chart review. I mean,
11 we knew more of the chart review vendors.

12 Q So did you know any of the specifics of
13 how UnitedHealth conducted its chart review
14 program?

15 A I don't have any of the specifics for
16 how United did their program.

17 Q No, but my question wasn't just whether
18 you have those specifics now but that you didn't
19 know of those specifics when you were at MPPG; is
20 that right?

21 A That is correct, I didn't.

22 Q Did others at MPPG know the specifics of
23 the UnitedHealth Part B program, as far as you
24 know?

25 MR. QURESHI: Objection to form.

1 A I have no idea who knew or may not
2 have -- who may have known or who did know or
3 didn't know. I don't know.

4 Q You don't have any knowledge that anyone
5 at MPPG knew anything about the specifics of
6 UnitedHealth's chart review program, correct?

7 MR. QURESHI: Objection to form.

8 A That is correct.

9 Q And when you were at CMS, did CMS tell
10 MA plans that if they were reviewing charts in a
11 chart review program to look for additional codes
12 that they also had to examine whether diagnosis
13 codes submitted by providers were in fact
14 supported by a medical record?

15 MR. QURESHI: Objection to form.

16 A Not to my knowledge.

17 Q Did you ever tell -- let me rephrase
18 that.

19 When you were at CMS, did CMS ever tell
20 an MA plan that they did not have to assess
21 whether diagnosis codes submitted by providers
22 were supported by a medical record when they were
23 conducting a chart review to add diagnoses?

24 MR. QURESHI: Objection to form.

25 A I don't know if some folks may have told

1 people that or not. I don't know.

2 Q Do you have any knowledge one way or the
3 other?

4 A No.

5 Q Mr. Hutchinson, you currently work as a
6 strategic advisor at Epstein Becker Green; is that
7 correct?

8 A That's correct.

9 Q And Epstein Becker Green is a law firm?

10 A Yes.

11 Q You joined Epstein Becker Green in 2013?

12 A I think that's right.

13 Q And you've been working for Epstein
14 Becker Green since that time?

15 A Yes.

16 Q And your role as a strategic advisor
17 includes advising Medicare Advantage plans; is
18 that correct?

19 A Yes.

20 Q And Medicare Advantage organizations?

21 A Yes.

22 Q Medicare Advantage plans and
23 organizations are your clients?

24 A Oftentimes, yes.

25 MR. MASON: Can we take a short break?

1 CERTIFICATE OF SHORTHAND REPORTER

2

3 I, Michele E. Eddy, Registered Professional
4 Reporter and Certified Realtime Reporter, the court
5 reporter before whom the foregoing deposition was
6 taken, do hereby certify that the foregoing transcript
7 is a true and correct record of the testimony given;
8 that said testimony was taken by me stenographically
9 and thereafter reduced to typewriting under my
10 supervision; and that I am neither counsel for,
11 related to, nor employed by any of the parties to this
12 case and have no interest, financial or otherwise, in
13 its outcome.

14 IN WITNESS WHEREOF, I have hereunto set my
15 hand and affixed my notarial seal this 3rd day of
16 February, 2022.

17

18 My commission expires July 20, 2022

VIDEOCONFERENCE VIDEOTAPED DEPOSITION OF
MELVIN INGBER
(Taken virtually)
10:02 a.m. Eastern
Tuesday, June 14, 2022

REPORTED BY: Christine A. Taylor, RPR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 Q. Are you aware of anyone doing so on
2 your behalf?

3 A. I'm not quite sure what you mean. Why
4 would I need any documents for a deposition, I'm
5 confused.

6 Q. Oh, not specifically for this
7 deposition, but in the context of this litigation.

8 A. I know that there was a request for us
9 to retain all e-mails and other electronic
10 documents and keep them just in case they were
11 needed, but that's the extent of it. We did not
12 participate in collection of documents per se.

13 Q. Okay. Thank you. All right. So I'd
14 like to start by going over your educational and
15 employment background and then we can talk more
16 specifically about some of your work at CMS and
17 RTI. Does that sound good?

18 A. Yes.

19 Q. Okay. Please describe any
20 undergraduate or graduate degrees you have
21 obtained including where you obtained them.

22 A. I went to Queens College in New York,
23 which is now part of City University, got a
24 Bachelor of Science in Physics. I went to Cornell
25 University and got a master's degree in physics.

1 I went to Stony Brook University and got a
2 master's degree and Ph.D. in economics.

3 Q. All right. Any other degrees or
4 certificates?

5 A. None that I can think of.

6 (Exhibit 1219 was marked for
7 identification.)

8 Q. All right. I'm going to ask my
9 colleague to introduce as Exhibit -- should be
10 1219, Tab 5.

11 A. It hasn't shown up on my screen yet.
12 Okay.

13 Q. All right.

14 A. I see it now.

15 Q. All right. Do you recognize this
16 e-mail?

17 A. I have to really read it because it
18 doesn't exactly pop out as a familiar e-mail. It
19 seems to be from 2016, so I will have to take a
20 look at it.

21 Okay. This is a chain of e-mails. Do
22 you want me to go down the whole chain here?

23 Q. Well, let's focus on the May 31, 2016,
24 e-mail, 2:35 p.m.

25 A. Okay. That's the top one that I can

1 see. It seems to be a blurb to write the
2 background of me. And I don't see anything --
3 except I see it. I don't recognize it having been
4 written, but yeah, it looks like a description of
5 my background. That's it. Yes.

6 MS. MCMAHON: Is this a document that
7 was produced in this case?

8 MS. BARNETT: Yes, this was produced by
9 RTI. Bates Number is RTI00259418.

10 MS. MCMAHON: Thank you.

11 THE WITNESS: It appears to be an
12 extraction from my resum?. It looks
13 like --

14 BY MS. BARNETT:

15 Q. Oh, no, I'm sorry.

16 A. I recognize it in that context, most
17 of it, yes.

18 MS. BARNETT: I'm sorry. I just gave
19 you the wrong Bates Number. It's
20 RTI00396783.

21 MS. MCMAHON: Thank you.

22 BY MS. BARNETT:

23 Q. All right. So does this profile
24 accurately represent your work experience?

25 A. Yes, I've done more, but -- since this

1 was written in 2016, but it's accurate as of the
2 date.

3 Q. Okay. And you currently work at
4 RTI International; is that right?

5 A. I do.

6 Q. And you're currently a principal
7 scientist at RTI?

8 A. It's a title.

9 Q. Is that right?

10 Have you held any other job titles
11 during your time at RTI?

12 A. No. That was when I walked into RTI,
13 the title, I asked somebody there who was
14 relatively senior what job title I should use.
15 Principal scientist was the title they said I
16 should use, and I've been using it ever since. I
17 was fairly senior when I came in, so it seemed
18 appropriate.

19 Q. And when did you join RTI?

20 A. 2006. Approximately June or July, I
21 don't remember which month.

22 Q. All right. And what do you do as a
23 principal scientist?

24 A. I have a range of responsibilities.
25 Some of which are to be the director of projects

1 and which is to say I lead a set of analysts for
2 working on a project, usually for the government.

3 I am also the -- a senior scientific
4 advisor to many projects that I work on without
5 being the direct leader. That's where I generally
6 fit in.

7 Q. All right. Then according to this
8 bio, you participated in projects developing and
9 maintaining risk adjustment methods for the
10 Medicare Advantage Program; is that right?

11 A. Yes.

12 Q. What were those projects?

13 A. Well, one project was the development
14 of the CMS risk adjustment project used to pay
15 managed care plans. Then -- that's the main
16 project. Then I worked on the one that -- similar
17 for ESRD beneficiaries, project to develop the
18 risk adjustment for the drug plans and the project
19 for the AHA risk adjustment projects for health
20 exchanges outside of Medicare. Those are the
21 projects -- they don't have necessarily titles
22 that make any sense, but that's the substance of
23 the work.

24 Q. All right. And for the project you
25 mentioned, CMS risk adjustment project used to pay

1 managed care plans, can you tell me more about
2 what you did for that?

3 A. At which stage are we speaking? At
4 RTI our CMS.

5 Q. Currently we're speaking about RTI.

6 A. Oh, at RTI, okay. When I came to RTI,
7 I worked on that project for -- just as a staff
8 member, then I became a project director of the
9 project for a few years. Then I reverted back to
10 being a member of the analytical staff on the
11 project, which I have been and continue to be on
12 the project in that capacity.

13 Q. All right. And specifically what were
14 you doing in that project?

15 A. Well, I -- as a basically scientific
16 advisor, I do a lot of things that are involved in
17 guiding the development of the models. It is
18 statistical models that we work with, and it
19 amounts to looking at data, understanding data,
20 analyzing data, scientifically producing reports,
21 and I work on all of these things. And my work
22 has been deep and extensive. I can't positively
23 tell you all the little things I might have done.

24 Q. All right. Did you work on a project
25 involving the calculation of a fee-for-service

1 adjuster for the risk adjustment model?

2 A. I had only a very brief acquaintance
3 with that work. That is -- I'm aware it was being
4 done. I was not a principal part of that project.
5 That piece of the main project, that is.

6 Q. And can you tell me more about what
7 that project involved?

8 A. Frankly --

9 MS. MCMAHON: Objection. Vague. You
10 can answer.

11 THE WITNESS: I don't know all the
12 parts of the project. I do know that there
13 was something involving trying to predict
14 diseases from characteristic of people to
15 see that -- whether that would fit in
16 somehow to making it clear -- making
17 adjustments to data, to actually change
18 data in some way. But I don't know the
19 details. The people who worked on it, I
20 was not working on it much, and CMS had a
21 part that I don't know in it. So I'm not
22 that deeply into that.

23 BY MS. BARNETT:

24 Q. All right. Do you know when that
25 project was implemented?

1 MS. MCMAHON: Objection. Ambiguous.
2 Go ahead.

3 THE WITNESS: I -- I don't know, I've
4 been working on this main project for so
5 many years that it's a bit of a blur. I'm
6 sorry. I don't know the dates that would
7 apply to this.

8 BY MS. BARNETT:

9 Q. Can you tell me who worked on that
10 project, the fee-for-service adjuster project?

11 MS. MCMAHON: Objection. Ambiguous.
12 Go ahead.

13 THE WITNESS: There are many people who
14 might, but the one person who I can
15 identify was named Echo Liu. I know she
16 was working on it. But as to others, I
17 don't know for sure.

18 BY MS. BARNETT:

19 Q. All right. Now before you were at
20 RTI, according to this bio, you worked for CMS for
21 16 years in several different roles. When did you
22 join CMS?

23 A. 1990.

24 Q. And what was your role at that time?

25 A. Initially I -- well, I was working in

1 the office of demonstrations, that's my initial
2 position there, and I was the government -- one of
3 government staffers on a project that was going to
4 analyze outpatient data for development of a
5 payment system.

6 Q. All right. And when did you become
7 director of the Division of Payment Research?

8 A. That would be much, much later. It
9 would be roughly -- let's see I left 2000.
10 Roughly around the year 2000, 2001. I'm not
11 positive.

12 Q. All right. And what were your
13 responsibilities in that role?

14 A. Well, as a manager I was basically
15 overseeing the work of people who are actually
16 actively being the government side of the project
17 and the project managers from the government side.
18 And so there were a number of people in the
19 Division of Payment Research that I was in. But I
20 also had to participate in management activities
21 such as budgeting, deciding what research we were
22 going to be doing the next year. And I also
23 consulted for other parts of CMS on statistical or
24 other relevant topics that they thought I could be
25 of use on.

1 Q. And can you tell me more about the
2 work that was done by the Division of Payment
3 Research?

4 A. Division of Payment Research, we did a
5 number of activities of which the risk adjustment
6 model development was one. And there were -- was
7 also work going on in development of payment
8 systems for psychiatric hospitals, for home
9 healthcare providers. I'm just trying to remember
10 how many there were. The managed care part of
11 risk adjustment was a fairly large piece of it,
12 but I don't remember all the other work that
13 everybody was doing in that particular division at
14 the time, but those are things I do remember.

15 Q. All right. And did you work on risk
16 adjustment prior to joining that department?

17 A. Before I became director of that
18 division, I was in that division, and I was
19 working on development of risk adjusters.

20 Q. Okay. When did you begin working on
21 the development of risk adjusters?

22 A. 1992 or 1993, something around that
23 time.

24 Q. All right. And what specifically was
25 your role in the development of the risk adjuster

1 for managed care?

2 A. I would be a person who managed
3 contracts and/or grants at the time. When this
4 work was being done early on, we did it through
5 those two mechanisms of funding. That was the
6 early -- the early work. I also did hands-on work
7 as well.

8 Q. And what did that hands-on work
9 entail?

10 A. After the main risk adjustment models
11 were developed, I had to work on developing the --
12 as I mentioned earlier, the model for Part D drugs
13 and for the ESRD population. Those are two that I
14 directed internally at CMS.

15 Q. So you would say the hands-on work
16 that you did was for Part D, drugs, and ESRD
17 population?

18 A. Yes.

19 Q. All right. And who did you work with
20 on the risk adjustment model for Part C?

21 A. There were many contractors and
22 grantees involved. We had Health Economics
23 Research, which was a company involved early on.
24 I think we had an earlier grant with Boston
25 University. We also contracted with 3M who had

1 their own model. We contracted with Johns Hopkins
2 University. They had a model called ACGs. We
3 worked with -- let's see Rick Kronick. He was
4 developing risk adjusters. I worked with all
5 these people who are all developing models for
6 risk adjustment for Medicare.

7 Q. And who else did you work with at CMS
8 on the risk adjustment model for Medicare Part C?

9 A. Do you mean directly or indirectly?
10 Because we in the research division did our own
11 development work for the most part and RTI became
12 a part of that work when it bought Health
13 Economics Research. So they were part of it. And
14 ultimately who else -- ultimately, when we finally
15 became part of the operations of CMS, we had to
16 communicate a lot with the -- what is now called
17 Centers for Medicare who actually implement the
18 payment system on their side. But the development
19 work is what our side mostly did, and those are
20 the people I work with. I can name some
21 individuals if you want those in the research
22 division. But not that -- they were not so much
23 involved in the Part C you're talking about. They
24 were involved in the drug and the ESRD population,
25 so they may not be relevant to your question.

1 Q. All right. Yes. Is there anyone that
2 you can remember in the Division of Payment
3 Research who worked with you on the risk
4 adjustment model for Medicare Part C?

5 A. I was the principal leader in that
6 area in the Division of Research. So, I mean,
7 obviously, I had a manager, but it was basically
8 my area in working with the contractors, of
9 course.

10 Q. All right. So you've said that you
11 were involved in the development of the risk
12 adjustment model for Medicare Part C; right?

13 A. Yes.

14 Q. Can you tell me what data was used to
15 calibrate that model?

16 MS. MCMAHON: Objection. Vague.

17 THE WITNESS: The data we used depended
18 on the stage of what we were working on,
19 but in the main it would have been
20 Medicare, fee-for-service claims data, and
21 eligibility data. That was the source.

22 BY MS. BARNETT:

23 Q. And, to your knowledge, was that data
24 audited before it was used in the model?

25 MS. MCMAHON: Objection. Vague.

1 We do an audit. We find sometimes things are not
2 supported by the medical record. That's the
3 extent of my knowledge of the differences.

4 Q. Was the RADV audit of fee-for-service
5 data?

6 A. The RADV audit was of data being
7 submitted by managed care plans and not
8 necessarily on claims per se. There were many
9 stages of the way data were submitted to CMS for
10 payment. So I -- whereas it was not the
11 fee-for-service data, the method being used was
12 not claims early on and only became claims in the
13 most recent years. So it varied as to the nature
14 of the data being audited. But it was managed
15 care data.

16 Q. Did you ever read any studies about
17 errors in fee-for-service data?

18 A. I am aware of CMS running general
19 estimates of over- and underpayments that they do.
20 I didn't -- that's a standard process that they do
21 that is not used in particular for auditing a
22 particular facility. It's to get the overall
23 error rates in Medicare.

24 I am -- I can't remember the names of
25 all these kinds of statistical studies that were

1 done. There are others that are facility specific
2 that would audit hospitals and -- I don't know the
3 error rates. I just know that these audits do go
4 on, and the statistical project I work on also was
5 to do audits of outpatient procedure codes. They
6 weren't always audits of diagnoses, by the way.
7 When I say audits, it is very general. Sometimes
8 it's diagnoses, sometimes it's procedure codes.
9 But there were many audits of one sort or another
10 on fee-for-service data for different purposes,
11 but it wasn't in my area.

12 Q. All right. And based on your
13 knowledge of those audits, it was found that there
14 were some errors in the fee-for-service data?

15 A. I would be just, you know, saying
16 something that I know from general reports that
17 they found errors in both directions missing --
18 sometimes missing data. And sometimes it wasn't
19 always missing data, it was about data that was
20 found to be false. There were all kinds of
21 reasons you would find errors in data. I can't
22 speak to the rates of data of errors or anything
23 like that.

24 Q. All right. Are you familiar with the
25 traditional Medicare fee-for-service payment

1 model?

2 A. The traditional fee-for-service model
3 is not a single model except that it pays for
4 individual services, but it pays for them in very
5 different ways. So I can't answer beyond that
6 unless you clarify the question.

7 Q. All right. Under the fee-for-service
8 payment model are providers paid based on claims
9 for medical services they provide?

10 A. Yes.

11 Q. How does that differ from the Medicare
12 Advantage model that we talked about?

13 MS. MCMAHON: Objection. Vague.

14 THE WITNESS: I'm trying to think how
15 to approach this. In one case in managed
16 care, payment is made globally since for
17 the probable cost of a particular
18 beneficiary per month and over a year
19 without regard to the individual services
20 actually rendered. In the fee-for-service
21 side depending on which provider you're
22 talking about, only specific services are
23 compensated and the picture -- the profile
24 of the patient is not what goes into the
25 payment amount so much as what services

CERTIFICATE OF REPORTER

I, Christine A. Taylor, Certified Court Reporter within and for the State of Georgia, do hereby certify:

That the foregoing deposition was taken before me on the date and at the time and location stated on Page 1 of this transcript; that the deponent was duly sworn to testify to the truth, the whole truth and nothing but the truth; that the testimony of the deponent and all objections made at the time of the examination were recorded stenographically by me and were thereafter transcribed; that the foregoing deposition as typed is a true, accurate and complete record of the testimony of the deponent and of all objections made at the time of the examination to the best of my ability.

I further certify that I am neither related to nor counsel for any party to the cause pending or interested in the events thereof. Witness my hand, this 16th day of June, 2022.

Christine A. Taylor

WWW.MAGNALS.COM

1 fee-for-service Medicare data applies to Part C and
2 Medicare Advantage plans in a minute.

3 But just so that the jury understands,
4 when I say traditional Medicare or fee-for-service
5 Medicare, do you understand that I'm referring to the
6 same thing?

7 A. Yes.

8 Q. Okay. And those are both terms that
9 you've used in your work at CMS and still at RTI?

10 A. The word "traditional Medicare" is a newer
11 term for fee-for-service that's become used more, but
12 they are in effect the same thing.

13 Q. As the head of the Division of Payment
14 Research at CMS you helped make the decision about
15 what model CMS would use to calculate a risk
16 adjustment payment for Medicare Advantage plans,
17 right?

18 A. I was part of that decision-making
19 process, yes.

20 Q. And as part of that process you examined
21 potential risk adjustment models and recommended what
22 would ultimately be selected by CMS as the HCC model

1 to your superiors; is that right?

2 A. Yes.

3 Q. And the leadership at CMS accepted your
4 recommendation and implemented the CMS HCC model for
5 the purpose of calculating risk adjustment payments
6 for Medicare Advantage plans?

7 A. I made a recommendation. There were many
8 other people in the chain who had to make decisions.
9 There is one more thing I should say, is that
10 choosing the model is not the same as the
11 implementation of the model, which was made by
12 another group.

13 So as long as we understand what we're
14 talking about is model development, not
15 implementation, which was done via a different area,
16 not in the research area.

17 Q. What group worked on the implementation of
18 the CMS HCC model?

19 A. The Center for Medicare. They change
20 their names all the time. But there is the -- part
21 of CMS that makes payments to hospitals, physicians,
22 that actually does to the implementation work of all

1 of this also implemented for the risk adjustment
2 systems.

3 Q. While you were at CMS you worked with
4 folks at a company -- what became RTI to publish
5 articles and other literary papers; is that right?

6 A. The phrasing -- I'm sorry -- is not
7 correct. Those of us who worked on the development
8 of the system, including the company -- HER is the
9 initials that were used at the time, and I was
10 supervising them and made a lot of decisions.

11 And our names were all on some of the
12 publications, but I was not working in any sense for
13 HER, which is what I was hearing you say.

14 Q. I did not mean to suggest that.

15 When did you start working with or
16 supervising the individuals at HER that were doing
17 work on risk adjustment systems for CMS?

18 A. Probably 1993 or 1994 there was a sequence
19 of people working on it. It wasn't always HER, but
20 HER picked up the development after the initial work.
21 So there's a change of hands at some point, but it
22 was '93 or '94.

1 Q. What does HER stand for?

2 A. Health Economics Research.

3 Q. When did Health Economics Research end up
4 becoming RTI?

5 A. It was before I left CMS, but I just do
6 not remember.

7 Q. What does RTI stand for?

8 A. Research Triangle Institute.

9 Q. Okay. So from 1993 until the CMS HCC
10 model was adopted and implemented you had been
11 working with individuals on this project, and at some
12 point the individuals who were working -- you were
13 working with were at Health Economics Research?

14 A. Yes.

15 Q. And at least by 2000 you were publishing
16 papers with some of the individuals there at Health
17 Economics Research about the project that you were
18 supervising and working on, right?

19 A. Yes. This is not an unusual practice for
20 companies who are contractors, and CMS jointly take
21 authorship of papers. This is very common.

22 Q. Sure. And who are the folks that you were

1 of the transcript of your videotaped deposition taken
2 on June 14th, 2022?

3 A. That's what the title says it is, yes.

4 Q. And have you reviewed this deposition
5 transcript since you gave the deposition?

6 A. I did not actually.

7 Q. And you -- when you gave this deposition
8 you took the same oath you took today, right?

9 A. Yes.

10 Q. Okay. If you would turn to page 22 of
11 this deposition, page 84 of the transcript. This
12 deposition is structured -- this printout is
13 structured so it's got four pages on each page of the
14 PDF.

15 Do you see that, sir?

16 A. Yes. I'm sorry. But I'm trying to figure
17 out which ones you're referring to. 82 is the one
18 with the page number at the bottom?

19 Q. Yes. That's correct.

20 A. I'm sorry. That's page -- on top of the
21 page I'm looking at there is page 82 and a page 83.
22 Is that where I should be?

1 Q. Yes, sir. So if you look at the bottom of
2 the page 84, which is the bottom left corner page --

3 A. Yes.

4 Q. -- you were asked the question:

5 "QUESTION: But do you have a sense when
6 you talk about this (sic) fee-for-service lapses in
7 accuracy what you're referring to?"

8 And you answer:

9 "ANSWER: Coding is always potentially
10 subject to error. Sometimes people forget to write
11 something down. Sometimes people write something
12 that they shouldn't write down. We are aware of this
13 because we know how coding is done in practice in
14 offices. And it's just a question of practical
15 knowledge."

16 Do you see that?

17 A. Oh, yes. Okay.

18 Q. Okay. And do you stand by that testimony
19 today?

20 A. This is my personal belief, yes.

21 Q. Yeah. And so your personal belief that
22 you knew at the time you were developing the model is

1 that there were fee-for-service lapses in accuracy
2 because sometimes people forget to write something
3 down and sometimes people write something they
4 shouldn't write down, right?

5 A. That's not -- that is true, but it's not
6 quite the same as what you said about things not
7 being supported in the medical record.

8 I'm just opining that, yeah, probably
9 because human beings do this there's probably stuff
10 that's not right in there. That doesn't affect the
11 decision I make with respect to how to develop the
12 model, but yes.

13 Q. Sure. And I'm not impugning anything
14 about the decision to develop the model. But
15 something that you knew when you were developing the
16 model is that there are errors in data?

17 MS. MCMAHON: Objection.

18 A. When you say I knew, I knew just -- not
19 from analysis, per se. I knew because people are
20 people when they go (sic). That's all.

21 BY MR. JONES:

22 Q. Right. So your understanding when you

1 were developing the model is that there would be
2 errors in coding on the fee-for-service side and in
3 the MA side because people are people and they make
4 mistakes, right?

5 A. People make mistakes. However, that does
6 not change one's way of doing something just because
7 you know that in the background, yes.

8 Q. Did you do any work on evaluating Ms.
9 Lambert's mathematical work in terms of the
10 recalibration effort she did such that you disagree
11 with any of the math that went into her recalibration
12 as opposed to the conclusions she draws from it?

13 A. I, of course, could not see through all
14 the math. But having read the description of it, it
15 seemed that for what she wanted it was a reasonable
16 thing to do, yes, for which she was trying to get to.

17 Q. Okay. And that the -- what was described
18 was a reasonable way of potentially recalibrating the
19 model based upon what her parameters were described
20 as, right?

21 MS. MCMAHON: Objection.

22 A. Recalibrating the model could be done, but

1 it would have required -- it couldn't -- it could not
2 -- I'm sorry.

3 It could not be done practically and was
4 not what was in the law basically at the time. So it
5 could be done, yes. Mathematically, those results
6 would happen. It doesn't still mean anything about
7 the conclusion, however, of underpaid.

8 BY MR. JONES:

9 Q. Right. Leaving aside the conclusion of
10 underpayment, you don't dispute any of the math that
11 Ms. Lambert used to get to the conclusion of how
12 unsupported codes being taken out of the
13 fee-for-service model would affect the average
14 relative factors or average coefficients, right?

15 MS. MCMAHON: Objection. Form.

16 A. I don't have any objections to the
17 mathematics she did.

18 MR. JONES: Okay. Exhibit No. 1568.

19 (Exhibit Number 1568 was marked for
20 identification and was attached to the deposition.)

21 BY MR. JONES:

22 Q. Dr. Ingber, I've just handed you what's

1 been marked Exhibit 1568. Is Exhibit 1568 a copy of
2 Ms. Lambert's report to which you were responding?

3 A. It appears to be, yes.

4 Q. And if you would turn to page 23 of this
5 report. At the bottom of page 23 Ms. Lambert quotes
6 a CMS publication in 2014 that has an article written
7 by Dr. Kronick and Welch.

8 Do you see that?

9 A. On page 23 in the footnotes or someplace
10 else?

11 Q. So next to the Number 3 --

12 A. Oh, next.

13 Q. -- at the bottom.

14 A. Oh, okay. Not the reference down below,
15 but okay.

16 Q. And Ms. Lambert quotes this Kronick and
17 Welch article saying: "As noted, payment to MA plans
18 is calibrated based on coding patterns in
19 fee-for-service.

20 "If, for example, Jane Doe would have a
21 risk score of 1.0 if she were in fee-for-service, the
22 implicit assumption in the design of the MA payment

1 system is that she would have the same risk score of
2 1.0 if she were enrolled in MA."

3 Do you see that?

4 A. Yes.

5 Q. Do you agree with Dr. Kronick and Welch
6 that that is part of the implicit design of the MA
7 payment system that you developed?

8 A. I think there are some words missing from
9 that statement that would make it more correct.

10 Q. Okay. What are the words that are missing
11 from that statement that would make it more correct?

12 A. The coding would have to be -- that we're
13 talking about when we're coding people and developing
14 these risk scores, the coding that she's describing
15 and the data that's in fee-for-service -- which is
16 done without any incentives to code diagnoses at all
17 because that's the nature of coding and
18 fee-for-service. Payment is based on procedures.

19 So one of the things about this or the
20 assumption is that if the other coding were done with
21 no incentives for the coding of the diagnoses more
22 thoroughly and that the same pattern of coding people

1 right?

2 A. Yes.

3 Q. And so page -- the next page that says --
4 that has -- is titled, Costs of Unsupported Codes
5 Distributed to Demographic Factors if Removed, I
6 think part of your point is that the costs of
7 treating these patients stays in the model but then
8 is -- they are otherwise shifted around to what the
9 coefficients and relative factors are for either the
10 demographic factors or other codes that are still in
11 the model?

12 A. Yes.

13 Q. And if you go to the next page, which is
14 slide 17 of Exhibit 1571, part of your point here was
15 that --

16 A. I'm sorry. Are we skipping a page here?
17 I mean, I have a paper page 15 and a screen page 16
18 that match. But where are we on 17? Which version?

19 Q. I'm looking at -- it is the 17th page, but
20 because the first -- in the hardcopy version you've
21 got it counted page zero as the first one. The one
22 online is page 17.

1 But what I'm talking about, sir, is the
2 slide that has regression for coefficients on either
3 side, one showing your regression for one tab and the
4 other showing your regression for 2 tab.

5 Are you with me?

6 A. Yeah. I've coordinated both versions at
7 this time. There was some skipped, but you did that
8 intentionally. I wanted to make sure.

9 Q. All right. Dr. Ingber, looking at the
10 page comparing the regression coefficients for your
11 first version of the model with unsupported codes and
12 your second regression for supported codes only, your
13 -- part of your opinion was that the coefficients and
14 expected costs for treating various conditions go --
15 some go up and some can go down when you redistribute
16 the costs that the model had previously associated
17 with codes that are unsupported.

18 Is that fair?

19 A. Yes.

20 Q. And your differences tab in your Exhibit
21 1, turning to the next page, the 18th page of Exhibit
22 1571 in Agile Law, made that comparison explicit,

1 right?

2 You did the --

3 A. Yes. I did the subtraction to show the
4 differences.

5 Q. Great. And then the final slide of
6 Exhibit 1571 is designed to kind of depict the -- the
7 fact that, in your opinion and as you calculated in
8 your model, certain of the coefficients or relative
9 factors, the predicted costs for diagnoses might go
10 up, might go down, and the demographic factors might
11 go up or might go down.

12 But, ultimately, the model is distributing
13 the costs overall to that same group of factors,
14 right, the markers?

15 A. Yes.

16 Q. Dr. Ingber, I'm going to go back to
17 sharing -- and I guess I would ask that in your
18 computer you move to the spreadsheet.

19 MS. MCMAHON: Dr. Ingber's spreadsheet?

20 MR. JONES: We're going to go to the
21 share.

22 THE WITNESS: I'm sorry. So this is the

1 one that's basically in Zoom?

2 BY MR. JONES:

3 Q. This is the version that's in Zoom that
4 I'm controlling.

5 A. Yes, okay.

6 Q. And I want to add a few calculations --

7 A. Yes.

8 Q. -- to the spreadsheet with you.

9 A. Yes.

10 Q. And as a -- as an economist, Dr. Ingber,
11 you've used Excel quite a bit in your work?

12 A. I use it occasionally. It's not my main
13 tool, but I do use it.

14 Q. Okay. And you think you're fairly skilled
15 in Excel and can try to follow along?

16 A. Oh, yes, reasonably so.

17 Q. Great. And have you -- did you calculate
18 what would happen to the weighted average of the
19 relative factors in your model when you take the
20 unsupported codes out of the data on which the model
21 is calibrated?

22 MS. MCMAHON: Objection. Form.

1 A. I did not calculate the weighted average
2 given the weights of this particular population, is I
3 presume what you mean?

4 BY MR. JONES:

5 Q. Right.

6 A. Yeah.

7 Q. Okay. I'd like to go ahead and do that
8 with you. And so up on the screen can you see the
9 Exhibit 1 that I'm manipulating here?

10 A. I see it.

11 Q. Okay. And if we need to take a break for
12 you to look at any of the formulas that I've done and
13 confirm them, I'm happy to do that.

14 But first, let's do kind of a total count
15 of markers for each of the unsubmitted unsupported
16 codes, regression, supported codes regression, and
17 then your supported and unsubmitted regression.

18 Are you with me?

19 A. Yes. I thought I had done that, in fact,
20 on the last page on the differences page. The counts
21 are in there.

22 Q. I think -- you have the individual counts.

1 I'm just going to sum them up to help us with the
2 calculation. Okay?

3 A. Oh, okay.

4 Q. It's not pasting for me.

5 A. When you say you're adding them up, is
6 this just the total number of HCCs flagged, period?
7 That's what we're talking about?

8 Q. Yes. That's what we're talking about.

9 A. Okay.

10 Q. I need to save a new version of this. I'm
11 in -- what we're going to do, we're going to save a
12 new version of this Excel that we'll ultimately put
13 on as an exhibit here.

14 MS. MCMAHON: We can't see what you're
15 doing right now.

16 MR. JONES: Yeah. I've taken it down. I
17 need to get out of protected view somehow.

18 A. I'd be happy to stipulate that when you
19 take codes out the total number of codes goes down.

20 BY MR. JONES:

21 Q. Okay. Dr. Ingber, are you able to see
22 Exhibit 1 again?

1 A. I see it, yes.

2 Q. Okay. And all I've done since we were off
3 is to enable editing so that I can save the file and
4 then edit it. But this still shows last modified by
5 Mel in January of 2024. Okay. So I'm going to put
6 this on the desktop as Ingber Exhibit 1, deposition
7 version.

8 And so let's go -- you've got the count of
9 markers in each of the various regressions that you
10 run down at the bottom. I just want to have them in
11 a convenient place.

12 And what I'm going to do, Dr. Ingber, and
13 if you can help me remember I'm going to mark
14 everything that we do together today here in the
15 deposition with a different color so that it can be
16 distinguished when this is an exhibit from kind of
17 what was your original and what was in the -- what
18 we've done here in the deposition.

19 So I'm going to make it this tan color, if
20 that's okay. Okay. So to do total markers here is
21 the -- is what I'm putting in column F and I'm going
22 to sum under unsupported codes the markers that you

1 have and the count that you have in your population
2 with unsupported codes included, count of people with
3 HCC.

4 Is that -- are you with me so far?

5 A. Yes.

6 Q. And that should get the total markers that
7 were included in your population that went through
8 the regression with unsupported codes, right?

9 A. Yes.

10 Q. Okay. And then we'll do the same thing
11 for the group with unsupported codes removed and then
12 the same thing for the group with supported and
13 unsubmitted.

14 And I can slow down --

15 MS. MCMAHON: Is that a question?

16 MR. JONES: Yes.

17 MS. MCMAHON: No. I wasn't sure if you
18 were asking questions or trying to get Dr. Ingber to
19 confirm what you're doing. I'm not sure.

20 BY MR. JONES:

21 Q. All right. Are you with me, so far, Dr.
22 Ingber?

1 A. I am, but that last equation didn't
2 happen.

3 Q. That's true. Something happened with it.

4 A. But I am pleased that the number went down
5 when codes were removed, so I expect to see something
6 different.

7 Q. Okay. And, Dr. Ingber, can you agree with
8 me that what I've got in these equations would -- is
9 a count of the total markers that you have in this
10 regression or in each of your different models with
11 unsupported codes, supported codes only, and then
12 when you add back in supported but unsubmitted codes?

13 A. Yes. Indeed, the count got smaller when
14 codes are removed and then got bigger again when
15 codes were added. So it looks logical.

16 Q. Okay. And by the same token of the count
17 of markers going down when codes are removed, that
18 necessarily is a matter of math means that the cost
19 per marker that the regression is assigning to the
20 various markers is going to go up when you take out
21 unsupported codes, right?

22 A. You mean the average cost per marker or

1 something else? I'm not sure.

2 Q. Yes.

3 A. Because some went up and some went down.

4 So you're saying if we just look on average, which

5 way did they go, okay. This is a -- so far you

6 mentioned weighted. I'm not seeing any weighting

7 going on here, but that's okay.

8 Q. Sure. First I want to do a total cost per

9 marker and then we'll do a weighted average. Okay?

10 A. Okay.

11 Q. So I'm going to calculate -- your total

12 cost here for the population is the same in each of

13 the different iterations of your model, right?

14 A. I'm sorry. I'm not quite sure what you're

15 doing. b12 is the total cost in the population and

16 --

17 Q. And then if I do cost per marker in your

18 --

19 A. There's a typo there now -- okay.

20 Q. So if you divide the total cost associated

21 with treating the population, which is b12, by the

22 total markers in your regression with unsupported

1 codes, you'll get a cost per marker of essentially
2 treating the patients, right?

3 A. Yes.

4 Q. And if you are spreading the same costs
5 across fewer individuals -- or fewer markers, then
6 the cost per marker will go up from your regression
7 with -- if you've taken out unsupported codes, right?

8 A. Yes.

9 Q. And what I calculate your model as showing
10 and calculating is a cost per marker after taking
11 codes out of \$1,915 as opposed to a cost per marker
12 with unsupported codes of being \$1,812.31.

13 A. So far the math is right. The question is
14 where it goes, but we're getting there.

15 Q. Great. So then let's -- let's just go
16 ahead and do the same -- do a similar calculation but
17 with a weighted average of the individual -- of the
18 individual relative factors.

19 And so what I'm going to do is -- here
20 you've calculated the relative factors by dividing
21 the coefficient by average spending as we've talked
22 about.

1 I'm going to put here in row 51 the
2 weighted average. And, Dr. Ingber, how do you
3 calculate a weighted average?

4 A. Well, you would need the counts for each
5 one of codes, which is elsewhere in this table.

6 Q. Great. And so what I'm going to do is --
7 are you familiar with the SUMPRODUCT --

8 A. I am.

9 Q. -- formula in Excel?

10 A. Yes.

11 Q. And so if we sum the product of the
12 relative factors for the -- with unsupported codes
13 with the count of HCCs for those same factors --

14 A. Yes.

15 Q. -- and then divide by the total -- let's
16 see. You don't need to divide -- let's see. Divide
17 by the number -- by the total count of HCCs is what
18 I'm meaning to do. Then that gets at a weighted
19 average of the relative factors for the -- for your
20 regression with unsupported codes, right?

21 A. Well, it should. I'm just looking at it.
22 It seems fairly small looking at what most of the

1 factor sizes are. But it may be computed correctly.

2 Let's see -- I mean, I'd have -- if you
3 click on it, it will highlight all the data you used.
4 But I'm just saying that to me it looks a little
5 small just --

6 Q. Okay. So I've highlighted the data. So
7 I'm summing the product of b36 to 50 with c101 to 115
8 and then dividing by a count of HCCs for that version
9 of the model, right?

10 A. Okay.

11 Q. And that's a correct formula for
12 calculating a weighted average relative factor,
13 right?

14 A. Yes. It appears to be correct.

15 Q. Okay. And then let's do the same thing
16 for supported codes only and then -- so I'm summing
17 the product of c36 through 50, the count of people
18 with HCCs for the population with unsupported codes
19 removed, which is c122 through 136, and then dividing
20 by the total count of HCCs for that version of the
21 model.

22 And that would be an accurate mechanism

1 for calculating a weighted average of the diagnosis
2 codes -- or the weighted average of the relative
3 factors for the various markers in your model with
4 the -- for the version of your regression when you've
5 taken out the supported -- the unsupported codes?

6 MS. MCMAHON: Objection. Form.

7 A. It should be, yes.

8 BY MR. JONES:

9 Q. And so here you understand that the --
10 that the weighted average of the relative factors
11 goes up when you take the unsupported codes out of
12 the model on which you've calibrated the expected
13 costs, right?

14 A. Yes, it does.

15 Q. And what that means is that on average
16 each of the relative factors, each of the markers is
17 compensated less in the version where the model is
18 calibrated with unsupported codes than in the version
19 where the model is calibrated with supported codes
20 only, right?

21 A. I would agree with your remark except I
22 would take out the word "each." You would say the

1 factors on average, not each on average because that
2 implies something different.

3 Q. Sure. So the factors as a whole on
4 average are compensated or calculated as being worth
5 less in the version where unsupported codes are
6 present in the calibration of the model than when
7 they are taken out?

8 A. Yes. We're not doing the third version
9 then, I gather, or are we?

10 Q. We can go ahead and do it.

11 A. No. If this is the only point you want to
12 make about those two, fine.

13 MR. JONES: Exhibit No. 1572.

14 (Exhibit Number 1572 was marked for
15 identification and was attached to the deposition.)

16 BY MR. JONES:

17 Q. Dr. Ingber, I've just handed you what's
18 been marked Exhibit 1572. And these are
19 demonstratives that are intended to depict the
20 calculations that you and I just went through.

21 So if you look at the first page of this
22 exhibit the -- this shows the total cost of treatment

1 that your model is attributing across diagnosis codes
2 and demographic factors. It's the same in both
3 versions of your regression, right?

4 A. I'm sorry. I missed something you said.

5 Q. Sure. So in both the version of your
6 regression that include unsupported HCCs and the
7 version of your model where you're taking unsupported
8 HCCs out of the data on which the model is
9 calibrated, you're attributing the same total cost of
10 treatment across the markers in both instances,
11 right?

12 A. Yes.

13 Q. And then if you turn to the second page of
14 Exhibit 1572, this exhibit shows the weighted average
15 coefficient -- let's go back.

16 We actually haven't done the weighted
17 average coefficient yet.

18 A. We've only done the relative factors.

19 Q. Right.

20 A. I mean, I would assume for the moment that
21 you've done the math properly. The direction is
22 correct. I just -- yeah.

1 Q. And would you agree with me that
2 calculating the cost per marker overall is going to
3 be equivalent to the sum of the weighted average
4 coefficients or the -- it would be the same as the
5 weighted average of the coefficients?

6 MS. MCMAHON: Objection. Form.

7 A. Yes. That's sounds like a reasonable
8 conclusion.

9 BY MR. JONES:

10 Q. Okay. And, Dr. Ingber, you and I
11 calculated the cost per marker as \$1,812.31 with the
12 unsupported codes and then the cost per marker of
13 \$1,915.82 once the supported codes are -- unsupported
14 codes are removed.

15 So you would agree with me that what is
16 here on page 2 of Exhibit 1572 would be a calculation
17 of the weighted averages of the coefficients in those
18 two versions of your regression?

19 A. Yes. And we have to just recall for a
20 moment that the dollars are an intermediate step
21 because you calculate it in terms of relative
22 factors, where this goes, because we don't ever pay

C E R T I F I C A T E

I do hereby certify that I am a Notary Public in good standing, that the aforesaid testimony was taken before me, pursuant to notice, at the time and place indicated; that said deponent was by me duly sworn to tell the truth, the whole truth, and nothing but the truth; that the testimony of said deponent was correctly recorded in machine shorthand by me and thereafter transcribed under my supervision with computer-aided transcription; that the deposition is a true and correct record of the testimony given by the witness; and that I am neither of counsel nor kin to any party in said action, nor interested in the outcome thereof.

WITNESS my hand and official seal this

_____ day of _____, 2024.

Videoconference Videotaped Deposition OF
CAROLYN KAPUSTIJ
(Taken virtually)
9:03 a.m. Eastern
Thursday, August 25, 2022

REPORTED BY: Christine A. Taylor, RPR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 Q. Did you review any documents during
2 any of the prep sessions?

3 A. I wouldn't say we reviewed them. You
4 know, some were shown to me.

5 Q. Do you recall how many?

6 A. No.

7 Q. Did any of the documents you looked at
8 refresh your recollection about the events or
9 information displayed in the documents?

10 A. No.

11 Q. And do you typically work from home,
12 Ms. Kapustij, since the pandemic?

13 A. Yes, I have been working home -- from
14 home since the pandemic.

15 Q. And home as in Baltimore, Maryland?

16 A. Yes.

17 Q. Have you gone into the office at all
18 since the pandemic began?

19 A. I have gone in -- I think I've gone in
20 maybe twice.

21 Q. And I believe you said earlier that
22 you work for the government. Are you with the
23 Office of Inspector General for HHS?

24 A. I am.

25 Q. And prior to joining the Office of

1 Inspector General, you were with CMS?

2 A. Correct.

3 Q. And you were with CMS for about
4 12 years from 2009 through 2021?

5 A. Yes. Yes. 12 years.

6 Q. Okay. And during the period when you
7 were at CMS, you worked on a research matter
8 looking into a potential fee-for-service adjuster
9 in the context of RADV?

10 A. I was involved in that during
11 different time periods at CMS.

12 Q. And can you tell us a little bit about
13 that? What is a fee-for-service adjuster?

14 MS. YEVTUKHOVA: Objection. Form.

15 THE WITNESS: So the fee-for-service
16 adjuster was a concept that was put forward
17 by the MA industry and taken up by CMS as a
18 means to offset recoveries for risk
19 adjustment data validation audits.

20 BY MR. QURESHI:

21 Q. And when you say it was taken up by
22 CMS, what do you mean by that?

23 A. I mean the industry contacted Tom
24 Hutchinson about it and then he kind of directed
25 his staff to calculate it.

1 Q. And when you say Tom Hutchinson, is
2 that a CMS official who was with the Medicare Plan
3 Payment Group?

4 A. At the time Tom Hutchinson was the
5 group director of the Medicare Payment Plan Group.

6 Q. And during your tenure at CMS, did you
7 work with the Medicare Plan Payment Group?

8 A. I did.

9 Q. What does the Medicare Plan Payment
10 Group do?

11 A. The Medicare Plan Payment Group
12 operationally makes the plans to payments through
13 the various payment systems. It develops payment
14 policy. It develops risk adjustment policy. It
15 develops policy around Part D. It makes the Part
16 D payments. And then it also, at the time I was
17 there, did payment validation activities through
18 audits and also measured the improper payment
19 rates for Part C and Part D.

20 Q. And when you say payment validation
21 activities, are you referring to the risk
22 adjustment data validation audits?

23 A. Those and there were other activities.
24 I think there were some -- there was a monthly
25 payment validation that occurred before the

1 payments went out, and then there were also some
2 retiree drug subsidy audits going on, among
3 others. I don't know the whole scope of the
4 validation activities that were occurring
5 group-wide.

6 Q. Okay. We'll certainly return to that
7 topic later, but I want to talk a little more
8 about the fee-for-service adjuster. When did you
9 begin your involvement in that research project?

10 A. It was quite a while ago, but I
11 believe probably in the spring of 2009 shortly
12 after I started at CMS.

13 Q. And what did you understand your role
14 to be in connection with that project?

15 A. I mainly was kind of -- I was a junior
16 staffer, so I had a support role. I attended
17 meetings. I reviewed some materials. I believe I
18 worked with some of the medical review contractors
19 and the analytic contractors on some of the work.

20 Q. And if we focus us on this period of
21 time, who did you report to in the spring of 2009
22 while working on the fee-for-service project?

23 A. Jennifer Harlow. Jennifer Harlow was
24 the division director. And I believe Lateefah
25 Hughes had kind of a lead role.

1 Q. And the division you're referring to
2 is the Division of Payment Validation or DPV?

3 A. Yes.

4 Q. During the spring of 2009, did you
5 work with a gentleman named Jonathan Smith on this
6 research project into the fee-for-service
7 adjuster?

8 A. I did.

9 Q. Do you recall anyone else that you
10 worked with on this project during that time
11 frame?

12 A. I do not. I'm sure there were other
13 people involved, but I do not.

14 Q. And during this time, spring of 2009,
15 did you form any opinions about the competency of
16 the people you were working with?

17 A. No, I did not form any opinions. I
18 generally believe them to be competent.

19 Q. They didn't do anything that raised
20 doubts about the quality of the work they were
21 doing?

22 A. No.

23 Q. And prior to joining this research
24 project on the fee-for-service adjuster in the
25 spring of 2009, did you have any background on

1 Medicare risk adjustment?

2 A. I had completed the previous year in a
3 master's degree in public health, so I had general
4 knowledge of different payment systems.

5 Q. And this was a degree in public health
6 from the University of Michigan School of Health?

7 A. Yes.

8 Q. And you completed that work in 2008?

9 A. Correct.

10 Q. Other than the -- the work you did in
11 connection with your master's degree in public
12 health, did you have any other formal training or
13 background on Medicare risk adjustment?

14 A. No.

15 Q. Can you describe some of the
16 responsibilities you had in the spring of 2009
17 relating to the research into the fee-for-service
18 adjuster?

19 A. Again, as I previously stated, I -- I
20 attended meetings, I reviewed materials, and I was
21 involved with the contractors doing the analysis
22 and the medical record review work.

23 Q. The meetings you attended, were those
24 with other CMS personnel?

25 MS. YEVTUKHOVA: Objection. Form.

1 MS. YEVTUKHOVA: Objection. Form.

2 THE WITNESS: She did. She did years
3 later.

4 BY MR. QURESHI:

5 Q. Did she change her mind about the
6 appropriateness of the fee-for-service adjuster?

7 A. I don't know.

8 Q. Did you ever talk to her about it?

9 A. I recall one conversation, I don't
10 recall what year, where she said something like,
11 you know, in terms of the recoveries, you know,
12 you're paying back money that you were paid out.
13 It doesn't kind of matter what the amount was
14 paid. It could be with a random number generator.
15 If you were paid that amount and it was erroneous,
16 it should be paid back.

17 Q. And you understand her to be
18 discussing RADV payment recoveries?

19 A. Yes.

20 Q. Other than that conversation, do you
21 recall any other instance in which you and
22 Ms. Paul talked about the appropriateness of the
23 fee-for-service adjuster?

24 MS. YEVTUKHOVA: Objection.

25 THE WITNESS: I don't recall.

1 BY MR. QURESHI:

2 Q. Okay. I'd like to explore your
3 understanding of the CMS-HCC risk adjustment
4 model. What do you understand that to be?

5 MS. YEVTUKHOVA: Objection. Form.

6 THE WITNESS: So the risk adjustment
7 model is the means by which CMS makes a
8 capitated payment to the plans based on a
9 monthly basis based on the health status of
10 the beneficiaries enrolled in the plan.

11 BY MR. QURESHI:

12 Q. And do you have an understanding as to
13 the source of the data that is used to calibrate
14 the model?

15 A. Yes. Yes. It's my understanding that
16 it's fee-for-service claims data.

17 Q. Okay. Sometimes called FFS claims
18 data?

19 A. Yes.

20 Q. And do you have an understanding as to
21 whether there are diagnoses coding errors in that
22 fee-for-service claims data?

23 MS. YEVTUKHOVA: Objection. Form.

24 THE WITNESS: There potentially could
25 be.

1 BY MR. QURESHI:

2 Q. Well, are there or aren't there?

3 A. I don't know. You would have to audit
4 100 percent of the data and see if there were any
5 errors in it -- undertake that and see if there
6 were any errors in it.

7 Q. Well, while you were working on the
8 research into the fee-for-service adjuster
9 project, didn't you audit a sample of
10 fee-for-service claims data?

11 MS. YEVTUKHOVA: Objection.

12 THE WITNESS: We did audit a sample of
13 fee-for-service claims data, but I can't be
14 positive about -- positive about this
15 because different sets of data were used at
16 different times to calibrate the model. We
17 did not attempt to link the data that we --
18 that we audited, the fee-for-service data
19 to the actual data that was used to
20 calibrate the model.

21 BY MR. QURESHI:

22 Q. The audits that you did perform on
23 fee-for-service claims data, what did those audits
24 show you about the rate of diagnoses coding errors
25 in that data?

1 MS. YEVTUKHOVA: Objection. Vague.

2 THE WITNESS: To the best of my
3 recollection, it did show that there was
4 some diagnoses coding error.

5 BY MR. QURESHI:

6 Q. Okay. And so do you have any reason
7 to believe that the fee-for-service claims data
8 that's used to calibrate the risk adjustment model
9 would have no errors?

10 MS. YEVTUKHOVA: Objection. Form.

11 THE WITNESS: I don't have any reason
12 to believe that it would have no errors.
13 But I can't, you know, speak to the exact
14 amount. This is all assumptions.

15 BY MR. QURESHI:

16 Q. I'm not asking for an exact amount,
17 Ms. Kapustij. My question was does the
18 fee-for-service claims data used to calibrate the
19 risk adjustment model have diagnoses coding
20 errors?

21 MS. YEVTUKHOVA: Objection. Asked and
22 answered.

23 THE WITNESS: As I said before, I can't
24 speak to the exact amount of error that was
25 used in the data set to calibrate the

1 CMS-HCC model.

2 BY MR. QURESHI:

3 Q. Understood. And, once again, I'm
4 going to repeat my question because I think you're
5 missing part of it or I'm not explaining it well
6 enough. I'm not interested in the exact number.
7 We'll put that to one side. We'll cover that
8 later. I'm just interested in the general
9 concept.

10 Are there diagnoses coding errors in
11 the fee-for-service claims data used to calibrate
12 the risk adjustment model?

13 MS. YEVTUKHOVA: Same objection.

14 THE WITNESS: I -- I answered that
15 question to the best of my ability. I
16 can't speak to the exact data used to the
17 calibrate the CMS-HCC model. I can speak
18 to the -- I can't speak to that. I don't
19 know -- we did not look at -- make a
20 one-to-one link between the records that we
21 got to evaluate and the records that were
22 used to calibrate the model.

23 BY MR. QURESHI:

24 Q. Why were you auditing fee-for-service
25 claims data in the fee-for-service adjuster

1 project? What was the point of that?

2 A. Well, the --

3 MS. YEVTUKHOVA: Objection. Form. You
4 can answer, Ms. Kapustij.

5 THE WITNESS: Oh, sure. I'm trying
6 to -- I'm sorry, I'm just gathering my
7 thoughts.

8 Well, that was the whole assertion that
9 was being put forward by the industry is
10 that the error in claims data caused a --
11 would cause -- eventually cause an inequity
12 in -- or cause some kind of problems when
13 there were RADV recoveries.

14 BY MR. QURESHI:

15 Q. And what were the results of those
16 audits of fee-for-service claims data that you
17 worked on?

18 A. I don't recall the exact results.

19 Q. I'm not interested in the exact
20 results. Did those audits reveal the existence of
21 diagnoses coding errors in fee-for-service claims
22 data?

23 MS. YEVTUKHOVA: Objection. Asked and
24 answered.

25 THE WITNESS: Yes. The -- I'm sorry.

CERTIFICATE OF REPORTER

I, Christine A. Taylor, Certified
Court Reporter within and for the State of
Georgia, do hereby certify:

That the foregoing deposition was
taken before me on the date and at the time and
location stated on Page 1 of this transcript; that
the deponent was duly sworn to testify to the
truth, the whole truth and nothing but the truth;
that the testimony of the deponent and all
objections made at the time of the examination
were recorded stenographically by me and were
thereafter transcribed; that the foregoing
deposition as typed is a true, accurate and
complete record of the testimony of the deponent
and of all objections made at the time of the
examination to the best of my ability.

I further certify that I am neither
related to nor counsel for any party to the cause
pending or interested in the events thereof.
Witness my hand, this 29th day of August, 2022.

Christine A. Taylor, RPR

CONFIDENTIAL - SUBJECT TO PROTECTIVE ORDER

DEPOSITION OF CAROLYN KAPUSTIJ
As 30(b)(6) Designee 6 of
The United States

Baltimore, Maryland
August 25, 2023

Reported by: John L. Harmonson, RPR
Job No. 1011736

1 testimony yesterday besides yours?

2 A. No.

3 Q. None this week?

4 A. No.

5 Q. Was there any deposition testimony that
6 you wanted to review before testifying today?

7 A. No. I did not think about that.

8 Q. Why did you review your own deposition
9 testimony before today?

10 A. To refresh my recollection on certain
11 events.

12 Q. And did it accomplish that goal?

13 A. A bit.

14 Q. Did any of the other documents that you
15 reviewed refresh your recollection about any events
16 related to Topic 5?

17 A. To some extent, yes.

18 Q. Which ones?

19 A. Probably the partner training documents.

20 Q. Any others?

21 A. Not that I can point to offhand.

22 Q. You said you met with your counsel in
23 preparation for today. How many times did you meet
24 with them?

25 A. I don't exactly recall.

1 Q. Was it more than once?

2 A. More than -- I would say more than once,
3 to the best of my recollection, and less than five.

4 Q. Do you recall when was the last time you
5 met with your counsel before today?

6 A. Yesterday.

7 Q. What about before yesterday? When was
8 the last time you met with counsel regarding your
9 testimony today?

10 A. Earlier this week.

11 Q. Did you meet with counsel last week to
12 discuss your testimony today?

13 A. I don't recall. I may have.

14 Q. So you recall at least two meetings that
15 happened this week?

16 A. Yes.

17 Q. How long were those meetings for, the
18 ones that happened this week?

19 A. Less than an hour.

20 Q. Were they in person?

21 A. No.

22 Q. Were they by Zoom?

23 A. Yes. They were via phone.

24 Q. Via phone.

25 Did you review any documents during

1 those conversations?

2 A. Not that I recall.

3 Q. So you met with counsel yesterday; is
4 that right?

5 A. Correct.

6 Q. Do you recall yesterday if you reviewed
7 any documents with counsel?

8 A. We did -- I did not.

9 Q. And what about in the meeting earlier
10 this week?

11 A. I don't recall.

12 Q. What day was that meeting?

13 A. I believe it was Monday.

14 Q. And you don't recall whether on Monday
15 you reviewed any documents with counsel?

16 A. I don't recall.

17 Q. Did you go to work on Monday?

18 A. I did.

19 Q. Did you go to work yesterday?

20 A. I did.

21 Q. How much time in total would you say you
22 spent preparing for your testimony today?

23 A. That is a difficult number to estimate.
24 I would say maybe 40 hours.

25 Q. And the 40 hours would include any

1 documents -- any time you spent reviewing
2 documents, your conversations and communications
3 with others in preparation for today, and your
4 communications and conversations with counsel; is
5 that right?

6 A. Correct.

7 Q. Is there anything else that you did to
8 prepare for today that we haven't talked about?

9 A. No.

10 MR. MARTINEZ: We've been going for
11 about 50 minutes. Do you want to take a quick
12 break?

13 THE WITNESS: Yeah, that would be great.

14 MR. MARTINEZ: Let's go off the record.

15 THE VIDEOGRAPHER: We're going off the
16 record at 10:20.

17 (Recess taken.)

18 THE VIDEOGRAPHER: We are back on the
19 record at 10:34.

20 BY MR. MARTINEZ:

21 Q. Ms. Kapustij, you understand you're
22 still under oath?

23 A. Yes.

24 Q. RADV is the primary mechanism by which
25 CMS identifies and recovers alleged overpayments

1 made to MA plans; correct?

2 A. Yes.

3 Q. Including alleged overpayments due to
4 diagnosis codes or HCCs that are not supported by
5 medical records; correct?

6 A. Correct.

7 Q. And when I use the term "HCCs," you
8 understand I'm referring to hierarchical condition
9 categories?

10 A. Yes.

11 Q. As part of the RADV process, CMS
12 conducts medical record reviews to verify the
13 accuracy of diagnosis codes or HCCs submitted by MA
14 plans for payment; correct?

15 A. Correct.

16 Q. RADV is unique to the Medicare Advantage
17 program; correct?

18 MS. OBEREMBT: Objection; vague.

19 BY MR. MARTINEZ:

20 Q. Do you understand my question?

21 A. I understand your question. There is
22 also an exercise called HHS RADV which is performed
23 in the health insurance exchanges.

24 Q. Okay. And the HHS RADV, is that also
25 specific to the Medicare Advantage program?

1 A. No. It's to the exchange program.

2 Q. To the exchange program. Understood.

3 So the RADV -- I should clarify. RADV
4 audits that CMS performs is unique to the Medicare
5 Advantage program; correct?

6 MS. OBEREMBT: Objection; vague.

7 THE WITNESS: Technically, another area
8 of CMS does the HHS RADV audits for the exchanges
9 that are involved in that.

10 BY MR. MARTINEZ:

11 Q. And which component of CMS does that?

12 A. CCIIO.

13 Q. So I'm clear, the RADV audits
14 that -- strike that.

15 There are no RADV audits in
16 fee-for-service Medicare; correct?

17 A. Could you be more -- there are no audits
18 called risk adjustment data validation audits in
19 fee-for-service.

20 Q. CMS does not perform RADV audits on
21 fee-for-service data; correct?

22 A. It does not, because fee-for-service
23 payment is not based on risk adjustment.

24 Q. And fee-for-service Medicare has
25 different types of audits that it might conduct,

1 BY MR. MARTINEZ:

2 Q. Okay. Where did you get that
3 understanding from?

4 A. I got that from both Deloitte Consulting
5 and Hans Dutt.

6 Q. What is that one difference?

7 A. 2014, the basis for it is diabetes
8 cohort. And 2015, the basis is a renal cohort.

9 Q. Okay. I want to come back to that, but
10 I want to go back to your testimony regarding
11 payment years 2011 to 2013.

12 I believe you testified that in each of
13 those payment years, there were 30 MA plans that
14 were selected for RADV auditing. Is that correct?

15 A. Correct.

16 Q. Do you know what percentage of the total
17 MA plans that number 30 represents?

18 A. I don't know offhand.

19 Q. Is it a small percentage or a large
20 percentage?

21 A. Define large or small.

22 Q. Whether you would consider it to be a
23 large or a small percentage of the total number of
24 Medicare Advantage plans.

25 A. In the context of total plans, it's not

1 a large percentage.

2 Q. For payment years 2011 to 2013, how did
3 CMS determine which MA plans to audit through the
4 RADV program?

5 A. CMS based it on a measure of their
6 increase in coding from year to year. And the
7 plans were split into three groups -- high, medium
8 and low -- with a certain number being selected
9 from each year.

10 Q. And how was the increase -- let's start
11 with, say, payment year 2011, for example. How was
12 the increase in coding from year to year measured?

13 A. Oh, it was calculated by the growth of
14 the average enrollee risk score.

15 Q. For which time period?

16 A. I don't recall.

17 Q. And so when you refer to the high,
18 medium and low buckets, is that a reference to
19 levels of coding intensity in general, or is it a
20 reference to the size of the increase in coding
21 from year to year that CMS observed?

22 MS. OBEREMBT: Objection; compound.

23 THE WITNESS: I believe it's a measure
24 of the size of the increase.

25 BY MR. MARTINEZ:

1 Q. And why did CMS develop a methodology
2 for selecting Medicare Advantage plans for its RADV
3 audits based on an increase in -- a plan's increase
4 in coding from year to year?

5 A. I believe there was a hypothesis that an
6 increase in coding might be indicative of larger
7 probability for an error.

8 Q. So in selecting Medicare Advantage plans
9 for the 2011 to 2013 RADV audits, was it CMS's goal
10 to identify plans that were more likely to have
11 payment errors?

12 MS. OBEREMBT: Objection; vague.

13 THE WITNESS: I'm not sure, and none of
14 the documentation confirmed that.

15 BY MR. MARTINEZ:

16 Q. Do you have an understanding as to what
17 CMS's purpose was in designing the MA selection
18 process for the RADV audits 2011 to 2013?

19 MS. OBEREMBT: Objection; vague.

20 THE WITNESS: The objective was to get a
21 selection of contracts to audit.

22 BY MR. MARTINEZ:

23 Q. Okay. Well, you testified earlier to a
24 hypothesis that an increase in coding might be
25 indicative of a larger probability for a payment

1 error; correct?

2 A. Correct.

3 Q. So is it your understanding that CMS --
4 the reason why they were selecting plans using this
5 methodology was to try and identify plans that were
6 more likely to have higher rates of payment errors?

7 A. That was the hypothesis and that was the
8 research question. But plans were selected from
9 all three groups, high, medium and low.

10 Q. And of the 30 plans selected for each --
11 let's start with payment year 2011. How many were
12 from the high increase group?

13 A. I am going to have to look at that. I
14 do not recall offhand. I'm trying to...

15 Q. Are you searching for Tab 18 by chance?

16 A. 18 and perhaps 19. I'll start with 19.
17 And so for 2011, it was 20 from the high group,
18 five from medium, and five from low.

19 Q. So two-thirds of the plans selected for
20 payment year 2011 came from the high coding
21 increase group; is that right?

22 A. Correct.

23 Q. What about for payment year 2012? And I
24 think to help you answer that question, I've marked
25 what's in your binder as Tab 18 as Exhibit 1498.

1 (Exhibit 1498 marked for identification
2 and attached hereto.)

3 THE WITNESS: Okay.

4 BY MR. MARTINEZ:

5 Q. And I think if you look at -- you may
6 already be there. What's numbered in the bottom
7 right as page 20.

8 MS. OBEREMBT: There are no numbers.

9 MR. MARTINEZ: There is an easier way to
10 look at this.

11 BY MR. MARTINEZ:

12 Q. If you look at the third page of
13 Exhibit 1498, I think you'll see for -- you'll see
14 the breakdown for payment year 2012 in the middle
15 column.

16 A. Yes.

17 Q. And so for that year, just like with
18 payment year 2011, two-thirds of the MA plans that
19 were selected for RADV audits for payment year 2012
20 were in the high coding intensity group; correct?

21 A. Correct.

22 Q. And then for payment year 2013, that
23 number actually increases; right?

24 A. Correct.

25 Q. It goes up to 25 MA plans from the high

1 Q. Why not?

2 A. Because there was some discussions I had
3 in preparation that referenced Topic 5.

4 Q. Discussions with counsel?

5 A. Yes.

6 Q. And to be clear, I'm not asking for any
7 of the substance of those conversations. I'm just
8 asking for who is the person who is determining
9 what is within and without the scope of Topic 5 for
10 purposes of your testimony today.

11 MS. OBEREMBT: Counsel, the witness
12 already testified that she took the topics at face
13 value the way they're written. I think we've spent
14 enough time on this.

15 BY MR. MARTINEZ:

16 Q. You can answer my question.

17 A. I don't know that I considered it, you
18 know, who has primary responsibility for this.

19 Q. But in answering my question about
20 return on investment, your position is that even if
21 it was a consideration for CMS in designing its
22 RADV methodology, it's outside the scope of Topic 5
23 because the term "return on investment" was not
24 used in the notice?

25 A. Yes.

1 Q. And is that the same standard that you
2 applied in interpreting the rest of Topic 5?

3 MS. OBEREMBT: Objection; vague.

4 THE WITNESS: I cannot say. I don't
5 know.

6 BY MR. MARTINEZ:

7 Q. All right. I want to move on and talk
8 about the RADV methodology at a high level first to
9 make sure that we're on the same page. Okay?

10 A. Okay.

11 Q. So we've been talking about plan
12 selection and the sampling of enrollees. That's
13 more or less the first step in the process; right?

14 A. Correct.

15 Q. Okay. And then after the sample has
16 been ascertained, there is a medical record request
17 and submission process that takes place. Is that
18 right?

19 A. Correct.

20 Q. And then after those records have been
21 submitted, there is a medical record review process
22 that CMS oversees. Correct?

23 A. Correct.

24 Q. And that includes coding and abstracting
25 HCCs and those sorts of activities. Correct?

1 A. Yes.

2 Q. And I should clarify. By abstracting
3 HCCs, I mean reporting them or coding them into the
4 system. You understand that?

5 A. Yes.

6 Q. And then once the medical record review
7 happens, then there is a process by which payment
8 errors, if any, are calculated at the beneficiary
9 level. Correct?

10 A. Correct.

11 Q. And then there is then a calculation
12 that happens where those beneficiary-level payment
13 errors are extrapolated for the entire plan that's
14 being audited for that payment year. Correct?

15 A. Correct.

16 Q. And at the end of that process, at the
17 end of the extrapolation process, there is supposed
18 to be a preliminary audit report of findings that
19 is produced by CMS and transmitted to the plans.
20 Is that right?

21 A. Correct.

22 Q. And then once that report is
23 communicated, there is an opportunity for I believe
24 what's called medical record dispute where the
25 plans can identify specific HCCs that CMS did not

1 validate and essentially ask for reconsideration of
2 those particular HCCs. Is that right?

3 A. Correct.

4 Q. And at the end of that medical record
5 dispute process, that's when payment recovery
6 happens on the part of CMS. Is that right?

7 A. I believe so, yes.

8 Q. Okay. And then payment recovery
9 essentially would be reducing a plan's capitated
10 payments by the amount of overpayment that CMS
11 calculated for that payment year. Is that right?

12 A. Not exactly. It wouldn't reduce future
13 payments they receive. The plans would return the
14 overpayment.

15 Q. Okay. So the mechanism for payment
16 recovery is the plans returning any overpayments
17 that CMS claims to have found; right?

18 A. Correct.

19 Q. Okay. And then after that, there is a
20 mechanism for appeals that could happen that could
21 also change the results that CMS had determined in
22 the RADV process. Is that right?

23 A. Correct.

24 Q. Do I have the order generally right?

25 A. I believe so.

1 Q. Okay. All right. And as I understand
2 it, that's how the RADV audits were supposed to
3 work throughout payment years 2009 through 2017.
4 Is that right?

5 A. Yes.

6 Q. Now, we talked a little bit about that
7 first plan selection piece. But I just want to
8 confirm. So CMS does not audit every diagnosis
9 code or HCC submitted by an MA plan for payment in
10 a given payment year; correct?

11 A. It audits every HCC diagnosis for the
12 sampled beneficiaries.

13 Q. Right. It audits all of the diagnosis
14 codes or HCCs that the MA plan submits for the
15 purpose of the RADV audit; correct?

16 A. That the plan submits for the purpose of
17 payment.

18 Q. Okay. But isn't it true that CMS is
19 only taking a sample of those diagnosis codes or
20 HCCs that have been submitted for payment by the
21 plan for that year?

22 A. It's taking a sample of enrollees. So
23 it does not cover every enrollee's every diagnosis
24 code.

25 Q. Got it. So CMS is auditing every HCC

1 submitted for a particular enrollee for a
2 particular payment year; correct?

3 A. Correct.

4 Q. But it's not -- CMS is not auditing
5 every diagnosis code or HCC that the MA plan
6 submitted over the course of that payment year for
7 all of its enrollees; correct?

8 A. Correct.

9 Q. And CMS has never required MA plans to
10 do their own RADV audits; correct?

11 MS. OBEREMBT: Objection; outside the
12 scope.

13 THE WITNESS: CMS requires that plans
14 submit accurate information. It doesn't dictate
15 the method by which they determine it's accurate.
16 BY MR. MARTINEZ:

17 Q. Okay. So CMS has never required MA
18 plans to conduct their own RADV audits prior to
19 submitting data for risk adjustment payment;
20 correct?

21 MS. OBEREMBT: Objection; outside the
22 scope. And asked and answered.

23 THE WITNESS: Again, it requires
24 accurate information. It does not say you need to
25 conduct your own RADV audit.

1 BY MR. MARTINEZ:

2 Q. Okay. So I want to focus on the second
3 part of your answer because that's what's
4 responsive to my question.

5 So just so I'm clear, CMS has never
6 required MA plans to conduct their own RADV audits;
7 correct?

8 MS. OBEREMBT: Objection; outside the
9 scope. And asked and answered twice now.

10 THE WITNESS: To the best of my
11 knowledge, that is not a requirement.

12 BY MR. MARTINEZ:

13 Q. And CMS samples from an MA plan's
14 population of enrollees because there's simply too
15 many enrollees in the plans to audit all of the
16 HCCs for all of the enrollees in each given payment
17 year; correct?

18 A. Correct. With current new methods, yes.

19 Q. The volume would just be too large;
20 right?

21 A. Correct.

22 Q. Okay. So once we're past the sampling
23 portion of the RADV process, then we move to
24 medical records submission; right? Request and
25 submission?

1 A. Correct.

2 Q. And as I understand it, the MA plans
3 must submit medical records supporting all of the
4 HCCs represented in their sampled enrollees' risk
5 scores for the given payment year under audit;
6 correct?

7 A. Yes.

8 Q. Now, originally, as I understand it, CMS
9 had what it called its one best medical record
10 policy. Is that right?

11 MS. OBEREMBT: Objection; vague.

12 THE WITNESS: That's prior to the --
13 that would be prior to payment year '09.

14 BY MR. MARTINEZ:

15 Q. Okay. So was that for '07?

16 MS. OBEREMBT: Objection; outside the
17 scope.

18 MR. MARTINEZ: Fair enough.

19 BY MR. MARTINEZ:

20 Q. Prior to '09?

21 A. Yes.

22 Q. Okay. So that rule did not apply for
23 payment year 2011; right?

24 A. It did not.

25 Q. Okay. And my understanding is that

1 prior rule had been that MA plans could submit only
2 one supporting record per HCC per enrollee. Is
3 that correct?

4 MS. OBEREMBT: Objection; outside the
5 scope.

6 THE WITNESS: To the best of my
7 recollection.

8 BY MR. MARTINEZ:

9 Q. Okay. And then CMS changed that policy
10 and, for example, payment year 2011 allowed plans
11 to submit up to five medical records to support a
12 particular HCC for a particular sampled enrollee.
13 Is that right?

14 A. Yes.

15 Q. And CMS made that change because it
16 understood that even if a particular HCC is not
17 supported by one medical record, it might be
18 supported by another; correct?

19 A. Correct.

20 Q. I want to talk now about the medical
21 record review process in some more detail.

22 So we had kind of a brief exchange
23 earlier about initial validation contractors and
24 secondary validation contractors, and I think you
25 said at one point that that wasn't really the

1 nomenclature that CMS used at the time you were
2 there. Is that -- do I have your testimony
3 correct?

4 A. Yes.

5 Q. So how did CMS describe the different
6 contractors who were involved in the medical record
7 review process?

8 A. At different times, it was different
9 ways. They either called them by name or said this
10 is the contractor doing focused review. This is
11 the one doing discrepant confirmation. At one
12 point they were referred to as MRRC A and MRRC B.

13 Q. So they had different names at different
14 times over the years?

15 A. Yes.

16 Q. And when we're talking about these
17 medical record review contractors, these are all
18 folks who did not work at CMS; correct?

19 A. Correct.

20 Q. They are contracted with CMS; right?

21 A. Correct.

22 Q. And CMS oversees their work?

23 A. Correct.

24 Q. In the RADV context.

25 And CMS provided trainings to the

1 discrepant confirmation was there is another
2 medical record review contractor who would review
3 it, and there would be findings from that
4 contractor.

5 Q. Okay. So there is one medical record
6 review contractor that's doing the focused review
7 and a second medical record review contractor doing
8 the discrepant confirmation?

9 A. Correct.

10 Q. What is focused review?

11 A. So the way it evolved is focused review
12 is just a first contractor looking at the medical
13 record and doing a full coding of it.

14 Discrepant confirmation is the second
15 coder looking at it and doing a full review.

16 Q. Okay. And is the person doing the
17 focused review sometimes referred to as a primary
18 coder?

19 A. No. I believe that the person doing the
20 focused review can either be a primary or a senior
21 coder.

22 Q. Okay. And whether a primary or a senior
23 coder, in doing the focused review, they're
24 reviewing all of the medical records that an MA
25 plan has submitted to support the HCCs for a

1 particular sampled beneficiary; correct?

2 A. No. The way it worked was they -- there
3 was a system, and the coder would receive one
4 medical record and code that record. They would
5 not receive -- I do not believe they received all
6 of an enrollee's records.

7 Q. Okay. But in the focused review
8 process, was the -- was the mandate to -- for the
9 coders involved in that process to review all of
10 the medical records that an MA plan had submitted
11 in support of HCCs for sampled enrollees?

12 A. Yeah, the focused review process
13 resulted in a review of all the medical records
14 submitted.

15 Q. And the focused review was a blind
16 review; right?

17 MS. OBEREMBT: Objection; vague.

18 THE WITNESS: Define what you mean by
19 blind.

20 BY MR. MARTINEZ:

21 Q. Well, have you seen the term "blind
22 review" in preparing for your testimony today?

23 A. I have.

24 Q. What do you understand that term to
25 mean?

1 A. It's used different ways. The way I've
2 seen it used in preparing was that the medical
3 record review contractors were blind to one
4 another's findings.

5 Q. And isn't it also true that the
6 individuals doing the focused review were blind as
7 to which HCCs the MA plan had submitted for payment
8 for a given sampled enrollee?

9 A. Based on my conversations, it was my
10 understanding that the coders did have knowledge to
11 see what is called the cover sheet which indicated
12 what HCCs were submitted for payment.

13 Q. And is it your understanding that all of
14 the coders who were doing this first-level review
15 knew which HCCs were being audited?

16 A. I believe that that was the procedure
17 that was eventually adopted.

18 Q. And in preparing to testify today, you
19 didn't review any documents that referred to the
20 blind review method as meaning the coders don't
21 know which HCCs or diagnoses are being audited?

22 A. I am not sure.

23 Q. You're not sure whether you reviewed any
24 materials that defined blind review in the way that
25 I did?

1 plan in support of the sampled enrollee?

2 A. So that record will then go forward to
3 the second coder no matter what, and the second
4 coder will have a set of findings also. So at the
5 end of the review process you have a set of
6 findings from one coder and a set of findings from
7 another coder.

8 Q. And CMS understands that sometimes one
9 of those coders might miss the HCC in the medical
10 records and yet the second coder would find it to
11 be supported; correct?

12 MS. OBEREMBT: Objection; vague.

13 THE WITNESS: I would not necessarily
14 say that the coder misses it. Working with coders,
15 there are some gray areas and some things are open
16 to interpretation. But there are circumstances
17 where one coder would find evidence for it and the
18 other coder would feel no, that that was not
19 sufficient.

20 BY MR. MARTINEZ:

21 Q. Right. Medical record review coding
22 involves gray areas; right?

23 A. Yes.

24 Q. And lots of things in medical record
25 reviews are subject to interpretation; right?

1 MS. OBEREMBT: Objection; vague.

2 THE WITNESS: Yes.

3 BY MR. MARTINEZ:

4 Q. So I want to drill down on this a little
5 bit. Did CMS understand, then, that sometimes an
6 initial coder, as part of the RADV process, would
7 not abstract an HCC that a different coder perhaps
8 later in the process would abstract?

9 MS. OBEREMBT: Objection; vague.

10 THE WITNESS: That's why there were
11 two -- always two reviews.

12 BY MR. MARTINEZ:

13 Q. Right. And it was important to CMS to
14 have those multiple layers of review; right?

15 A. Correct.

16 Q. To make sure that they were getting the
17 most accurate results that they could in terms of
18 reviewing the medical records for supportable HCCs;
19 right?

20 A. Yes.

21 Q. Because obviously CMS would not want to
22 come out with even a preliminary finding that an
23 HCC is not supported by a medical record if it
24 hadn't done its best to make sure that that's
25 actually the case; right?

1 A. Correct.

2 Q. And so kind of in the same vein, CMS
3 understood when it was conducting its audits, RADV
4 audits for payment years 2011 through 2015, that
5 sometimes the coders that CMS oversaw would
6 disagree about whether or not an HCC was supported
7 by medical records; right?

8 A. Yes.

9 Q. And in fact, CMS I believe instructed
10 the medical record review contractors to develop
11 protocols for handling those very situations in
12 which one coder might disagree with the judgment of
13 another coder. Is that right?

14 A. I'm not sure what you're referring to.

15 Q. Have you heard of the concept of quality
16 assurance protocols in the context of the RADV
17 audits that CMS oversaw?

18 A. Medical record review contractors, it
19 was contingent on them to monitor the quality of
20 their coders.

21 Q. And that was a requirement that CMS
22 imposed on the medical record review contractors;
23 right?

24 A. Yes.

25 Q. And as one of those quality control

1 mechanisms that the medical record review
2 contractors had to have in place was a process for
3 resolving disagreements between coders about
4 whether an HCC was in fact supported by the medical
5 records?

6 A. I believe something like that did exist.
7 When I talked to Michelle Atkins to kind of
8 understand how they implemented this, when you have
9 focused review and discrepant confirmation, when
10 you have one MRRC coding it and then it goes to
11 another coder rather than a primary and senior at
12 each organization looking at it, she said that her
13 process was to -- for those HCCs that were not in
14 agreement, they would internally have someone look
15 at it and see if the coder needed additional
16 training.

17 Q. So in that instance that Michelle Atkins
18 was talking to you about, there would be a third
19 layer of review to kind of assess --

20 A. No.

21 Q. -- or remediate the disagreement?
22 No?

23 A. No, it was an internal practice by the
24 medical record review contractors. There were two
25 layers of review, and the HCC was considered

1 Q. And CMS published this -- its final
2 methodology after carefully reviewing hundreds of
3 public comments; correct?

4 A. Correct.

5 Q. And CMS had previously published what it
6 called a proposed methodology in I believe 2010.
7 Is that right?

8 A. I believe that's correct.

9 Q. And in the February 2012 publication,
10 CMS confirmed that its final methodology will be
11 applied to the payment year 2011 RADV audit;
12 correct?

13 A. Yes.

14 Q. And CMS confirmed that its RADV audit
15 findings for payment year 2011 would be
16 extrapolated using the final methodology
17 articulated in that publication; correct?

18 A. Correct.

19 Q. And by extrapolation, what we mean is
20 taking enrollee-level payment error rates and using
21 a statistical methodology to determine the payment
22 error for the entire MA plan that's being audited;
23 right?

24 A. Correct.

25 Q. So let's take those two things step by

1 step. So let's start with the beneficiary-level
2 error rate.

3 So for each sampled enrollee, CMS
4 calculates a corrected risk score and payment based
5 on the HCCs found to be supported by its medical
6 record reviewers; correct?

7 A. Correct.

8 Q. And then CMS defines enrollee-level
9 payment errors as the difference between the
10 original payment to the plan and the RADV corrected
11 payment. Is that right?

12 A. Correct.

13 Q. And so if the original payment to the
14 plan was higher than the corrected payment, CMS
15 believes the plan has been overpaid with respect to
16 that enrollee; correct?

17 A. Say that again.

18 Q. Sure.

19 If the original payment to the plan was
20 higher than the corrected payment, CMS believes the
21 plan has been overpaid for that enrollee.

22 A. Generally, that is the case.

23 Q. And conversely, if the original payment
24 is lower than the corrected payment, CMS believes
25 the MA plan has been underpaid with respect to that

1 enrollee; correct?

2 A. It does not.

3 Q. CMS does not believe that?

4 A. It says here representing a net
5 underpayment.

6 Q. Okay.

7 A. So in terms of how the RADV methodology
8 is being applied, it's considered an underpayment
9 in the calculation. As to generally whether you
10 would say something like that is an underpayment, I
11 would not say so.

12 Q. Okay. So let's break that down. And is
13 the document you're referring to, are you on the
14 first page of Tab 10 or the third page?

15 A. Third page.

16 Q. Third page of Tab 10 in Exhibit 1497.

17 And I believe your testimony was that
18 CMS considered there to be a net underpayment with
19 respect to that enrollee if the original payment is
20 lower than the corrected payment. Is that right?

21 A. For the purpose of calculating a RADV
22 payment recovery, yes.

23 Q. Okay. And then you stated that you
24 would not say it's an underpayment. Do I have that
25 right?

1 collection, CMS went with a very conservative
2 approach and offset those overpayments by what it's
3 calling underpayments for additional diagnoses.

4 BY MR. MARTINEZ:

5 Q. And that's CMS's own terminology; right?

6 A. I believe so, yes.

7 Q. And I think you said that whenever a
8 diagnosis code cannot be validated by the medical
9 records, that is an overpayment. But isn't it true
10 that not all diagnosis codes or HCCs actually
11 impact payment?

12 A. I believe all HCCs by definition impact
13 payment. All diagnosis codes do not. You can have
14 two HCCs.

15 Q. And you understand that multiple
16 diagnosis codes could support the same HCC; right?

17 A. Yes.

18 Q. And so I guess what I'm wondering is,
19 then, just because the CMS medical record review
20 contractors find that there is a certain percentage
21 of unsupported HCCs in an MA plan's submitted data
22 for a particular payment year, that does not mean
23 that the MA plan has been net overpaid as CMS
24 defines it for that payment year; correct?

25 MS. OBEREMBT: Objection; vague.

1 THE WITNESS: It's not in the terms of
2 the RADV payment recovery context.

3 BY MR. MARTINEZ:

4 Q. Is there a different context that you're
5 thinking your answer might be different?

6 A. Yes. In the payment context, plans have
7 a firm deadline for the date by which they must
8 submit diagnoses for payment.

9 Q. And so how does that deadline inform
10 your answer to my question?

11 A. Plans would not be allowed -- diagnoses
12 would not be considered that were not submitted
13 within the data submission period.

14 Q. So it's possible that a plan might just
15 submit a code or an HCC too late to be paid in a
16 certain payment year; right?

17 A. It's possible, yes.

18 Q. Is that what you're referring to?

19 A. Yeah, that's one example.

20 Q. Okay. Are there other examples?

21 A. No. Just RADV is not kind of considered
22 a forum to introduce new diagnoses into the
23 payment.

24 Q. Okay. And I want to understand that a
25 little bit. Just because in performing the medical

1 record reviews as part of the RADV program, as we
2 established, the medical record review contractors
3 also report additional HCCs that were not submitted
4 by the plans for payment; correct?

5 A. That is correct.

6 Q. And because of those additional HCCs
7 that are found by CMS's own coders, that's why you
8 get sometimes net underpayments to MA plans for a
9 particular year?

10 MS. OBEREMBT: Objection; misstates
11 prior testimony.

12 THE WITNESS: You get an enrollee net
13 underpayment.

14 BY MR. MARTINEZ:

15 Q. And then when you extrapolate to the
16 entire contract as a whole taking account of any
17 additional HCCs, that also leads to net
18 underpayments for the plan as a whole in the RADV
19 context; right?

20 A. Well, in the RADV methodology, the
21 payment recovery amount is constrained to zero. So
22 it's not a forum for plans to receive additional
23 payment.

24 Q. Right. And so what that means, it's
25 constrained to zero -- well, it means a couple of

1 things, but one thing it means is that if a
2 particular plan has a net underpayment that CMS has
3 calculated for a given payment year, there is no
4 payment recovery for CMS for that particular plan;
5 correct?

6 A. Correct. That was the methodology.

7 Q. Using the extrapolated methodology;
8 right?

9 A. Correct.

10 MS. OBEREMBT: Counsel, we've been going
11 an hour now. Can we take a break, please? We
12 started at 1:15.

13 MR. MARTINEZ: Would you like a break?

14 THE WITNESS: Uh-huh.

15 MR. MARTINEZ: Sure. We can go off the
16 record.

17 THE VIDEOGRAPHER: We are off the record
18 at 14:23.

19 (Recess taken.)

20 THE VIDEOGRAPHER: We are back on the
21 record at 14:35.

22 BY MR. MARTINEZ:

23 Q. Ms. Kapustij, I would like to dig a
24 little deeper now into the extrapolation
25 methodology that CMS published in February of 2012.

1 list is "Change methodology to recover at lower
2 bound of 95 percent confidence interval"?

3 A. I do.

4 Q. So in fact, was CMS considering as one
5 of the menu of options to change its methodology to
6 lower the confidence interval it was using to
7 extrapolate payment recovery amounts for the RADV
8 program?

9 MS. OBEREMBT: Objection; vague.

10 THE WITNESS: I did not review any
11 documents that indicated that.

12 BY MR. MARTINEZ:

13 Q. You did not review any documents
14 indicating that in preparation for your testimony
15 today?

16 A. Correct.

17 Q. So is the answer to my question that you
18 don't know?

19 A. This is an internal document you've
20 presented me with. I don't know that this went
21 beyond the Division of Payment Validation or
22 Medicare Plan Payment Group.

23 Q. And within the Division of Payment
24 Validation -- start there -- does this document
25 refresh your recollection that that division was

1 having some discussion about potentially lowering
2 the confidence interval to 95 percent as a means of
3 increasing payment recoveries through the RADV
4 program?

5 A. It does not.

6 Q. Seeing this document now, do you have
7 any reason to believe that that issue about
8 lowering the confidence interval to increase
9 payment recoveries was never discussed within the
10 Division of Payment Validation?

11 MS. OBEREMBT: Objection; vague.

12 THE WITNESS: I do not recall. I don't
13 know.

14 BY MR. MARTINEZ:

15 Q. So on the subject of payment recovery,
16 at what point in the process does -- is payment
17 recovery by CMS supposed to happen?

18 MS. OBEREMBT: Objection; vague.

19 BY MR. MARTINEZ:

20 Q. Do you understand my question?

21 A. I do. Just give me one moment.
22 Following the first level of appeal, the
23 reconsideration step.

24 Q. And I think previously you made
25 reference to the nomenclature "medical record

1 dispute" and that having changed over time. Did
2 that change into reconsideration?

3 A. Correct.

4 Q. Can you briefly describe what the
5 reconsideration process is?

6 A. The reconsideration process as designed
7 was a coder not involved in looking at the medical
8 record originally would review it based on -- plans
9 would be allowed to dispute -- if the HCC was
10 discrepant, plans would be allowed to dispute one
11 medical record and be required to point out where
12 in the medical record there was proof that the
13 patient did have that HCC.

14 Q. So I have this right -- and this was the
15 process for payment year 2011 through 2015?

16 A. This has not actually occurred for any
17 of those years.

18 Q. Okay. So the reconsideration process
19 has not occurred for even payment year 2011?

20 A. Correct.

21 Q. But how it's supposed to work is it
22 introduces a third layer of review of the medical
23 records to see if in fact a record supports a
24 particular HCC in dispute. Is that right?

25 A. Give me a moment. I want to make sure I

1 have the correct description.

2 Could you ask -- what was the question
3 again?

4 Q. The question was how reconsideration is
5 supposed to work is by introducing a third layer of
6 review of the medical records to see if in fact a
7 particular HCC is supported by the record submitted
8 by the MA plan.

9 A. Yes, it's another -- it is in effect --
10 it's supposed to be another review.

11 Q. Okay. And it's CMS's understanding that
12 through the reconsideration process, those
13 preliminary RADV findings of whether or not an HCC
14 is supported by the medical records, that those
15 could be overturned in reconsideration; right?

16 A. Correct.

17 Q. And so I just want to walk through what
18 that process would look like in practice. But
19 before I do, I want to confirm that this has not
20 happened yet; right? And by "this," I mean
21 reconsideration.

22 A. Reconsideration has not occurred for any
23 of the audits during the time period.

24 Q. Okay. And is that through July 2021, or
25 is that up until today, as far as you know?

1 A. It's through July -- I can speak to
2 July 2021. I don't think it's happened to date.

3 Q. So as I understand, the way it's
4 supposed to work is an MA plan will submit medical
5 records to support HCCs for a sampled enrollee;
6 right? Just starting at the beginning.

7 A. Correct.

8 Q. And then there's two layers of review by
9 well-trained, well-qualified RADV coders that
10 happens next. Right?

11 MS. OBEREMBT: Objection; vague.

12 THE WITNESS: There are two levels of
13 review by RADV coders.

14 BY MR. MARTINEZ:

15 Q. Okay. And then sometimes the RADV
16 coders, both of them agree that an HCC that was
17 submitted by an MA plan is not supported by the
18 medical records that have been submitted; right?

19 A. Correct.

20 Q. And then CMS presumably alerts the MA
21 plan through that preliminary audit report of that
22 finding; right?

23 A. The plan would be alerted through that
24 preliminary audit report. However, that has not
25 been issued.

1 Q. That report has not been issued for
2 payment year 2011 even?

3 A. Correct.

4 Q. So let's assume it has -- let's assume
5 that CMS alerts a plan about the HCCs that CMS
6 claims are unsupported by the medical records. Now
7 we move to the reconsideration process. And in
8 that process, an MA plan can say: No, wait a
9 minute. Take a look at this one record and that's
10 where we think it is in fact supported. Is that
11 right?

12 MS. OBEREMBT: Objection; calls for
13 speculation.

14 THE WITNESS: It would have to be a
15 record that was already submitted.

16 BY MR. MARTINEZ:

17 Q. So it's a record that's already
18 submitted; right?

19 A. Correct.

20 Q. And the plan can only point to one
21 record in the reconsideration context, not the
22 five, or up to five; right?

23 A. I believe it's one per each HCC.

24 Q. And so once the plan identifies that one
25 medical record for that one HCC, then there is a

1 third layer of review by a third coder who then
2 makes an assessment as to whether or not that
3 record supports the HCC that has been submitted for
4 payment; correct?

5 A. That was the process as designed.
6 Again, these results have not been issued, so I'm
7 being kind of speculative.

8 Q. Well, you're not being speculative, but
9 you're just explaining how the process is supposed
10 to work; right?

11 A. Based on my knowledge, yes.

12 Q. And based on your having been designated
13 as the government's representative to testify on
14 Topic 5.

15 And so if CMS's findings were in fact
16 overturned with respect to a particular HCC, that
17 would mean that this third coder would have found
18 support in the medical record submitted for that
19 HCC that two previous well-trained, well-qualified
20 coders did not report; correct?

21 MS. OBEREMBT: Objection; vague. And
22 calls for speculation.

23 THE WITNESS: That is one option.
24 Another reason a lot of records were found not to
25 support the HCC was not because of a disagreement

1 in the coding but was due to what we call invalid
2 issues such as lack of a signature, not being from
3 the correct data collection year.

4 BY MR. MARTINEZ:

5 Q. So not every discrepant finding is
6 because there is an unsupported HCC; correct?

7 A. Correct. It's unsupported in that
8 it's -- there is something that makes the medical
9 record invalid.

10 Q. Okay. And what you're saying is there
11 are multiple reasons why a medical record -- or why
12 there might be a discrepant finding. One of those
13 reasons could be that there is no support in the
14 medical record submitted for the HCC being audited;
15 right?

16 A. Correct.

17 Q. And so I'm only concerned about that
18 scenario. And so in that scenario, in the
19 reconsideration circumstance where reconsideration
20 results in overturning the previous findings, you
21 have a third coder who in that case would have
22 found the HCC to be supported by the medical record
23 when two previous well-trained, well-qualified
24 coders did not report that HCC?

25 MS. OBEREMBT: Objection; vague. Calls

1 A. I did not.

2 Q. Did you ask to review any of those
3 reports in preparation for your testimony today?

4 A. I did not.

5 Q. Why not?

6 A. I don't know.

7 Q. But you understand -- your understanding
8 is that those reports do exist and they do contain
9 information specific to plans that were audited for
10 payment years 2011, 2012 and 2013; is that right?

11 A. Yes.

12 Q. And your understanding is that -- well,
13 strike that.

14 Have you seen any of these reports
15 previously?

16 A. I have not.

17 Q. So where did you get that understanding
18 from?

19 A. I believe on the RADV public website
20 there's a presentation about it.

21 Q. Did you review that presentation in
22 preparation for your testimony today?

23 A. I do not recall. If I did, it was a
24 while ago.

25 Q. And that presentation is not in the

1 binder you have in front of you; correct?

2 A. It is not.

3 Q. All right. So let's -- I believe we
4 already established that for the payment year 2011
5 audit there were 30 MA plans that were selected for
6 auditing. Is that right?

7 A. Correct.

8 Q. And CMS audited four UnitedHealth plans
9 for payment year 2011; is that right?

10 A. That appears to be what the presentation
11 indicates.

12 Q. Okay. So if we go to page 5 of
13 Exhibit 1187-1, do you see that there are four
14 UnitedHealth Group plans listed here? The first
15 one is contract ID H0543. The second is H2226.
16 The third is H4522. And the last is H4590.

17 A. I do.

18 Q. And if I use the acronym UHG, will you
19 understand that I'm referring to the UnitedHealth
20 Group plans?

21 A. Okay.

22 Q. So looking here at the four UHG plans
23 that CMS selected for auditing for payment year
24 2011, do you see that two of those plans, H0543 and
25 H4590, are the two largest plans that were audited

1 in terms of total PY 2011 contract payment?

2 A. I'm sorry, which plans are you referring
3 to?

4 Q. I'm referring to UHG plan H0543 and
5 H4590.

6 A. Yes, those appear to be the largest in
7 terms of contract payments.

8 Q. Those are the only two plans audited for
9 PY 2011 that had contract payments for that year in
10 excess of \$2 billion; is that right?

11 A. That is what this chart indicates.

12 Q. And -- excuse me. Both of those plans
13 were in the high coding intensity bucket that we
14 talked about earlier today; right? Would you like
15 to refresh --

16 A. I don't know. I need to refresh my
17 memory on that.

18 Q. Let's go back to Exhibit 1498. And if
19 you go to, let's see, it's got 19 on the bottom
20 right of it. So let's look first for H0543. Which
21 coding intensity group is that in? It's at the
22 bottom.

23 A. High.

24 Q. Okay. And then the next one I asked
25 about was UHG plan H4590, which is the second from

1 the bottom. What coding intensity group is that
2 in?

3 A. That is also high.

4 Q. So does that refresh your recollection
5 that the two largest plans that were audited for
6 payment year 2011 were both from the high intensity
7 coding group?

8 A. That is what the document says.

9 Q. And you have no dispute the accuracy of
10 those documents?

11 A. I have no reason to dispute it.

12 Q. All right. And in fact, a third of the
13 four UHG plans was also from the high coding
14 intensity bucket. That would be H2226. Do you see
15 that in comparing Exhibits 1187-1 and 1498?

16 A. I do.

17 Q. CMS -- well, let me pause there.

18 Do you know why these four specific UHG
19 plans were selected for auditing in payment year
20 2011?

21 A. They were selected as they were part of
22 the high intensity -- coding intensity payment
23 group.

24 Q. And as far as you know, was that the
25 only criteria that was used for selecting those

1 four UHG plans for payment year 2011?

2 A. I believe so, unless it was in a,
3 quote-unquote, OIG plan, which I do not know.

4 Q. CMS's RADV results have not shown a
5 correlation between coding intensity and payment
6 error; correct?

7 A. That is correct.

8 Q. And so MA plans like these UHG plans can
9 be coding more intensely yet still be coding
10 accurately; right?

11 MS. OBEREMBT: Objection; calls for
12 speculation.

13 THE WITNESS: That is possible.

14 BY MR. MARTINEZ:

15 Q. And I think we've been over this before,
16 but the total recovery amount that CMS calculated
17 for payment year 2011 was roughly \$98 million;
18 right?

19 A. Correct.

20 Q. And the existence of -- let's take other
21 plans besides the UHG plans here. But the
22 existence of a contract-level overpayment that CMS
23 has identified, that does not mean that an MA plan
24 has engaged in fraud; correct?

25 MS. OBEREMBT: Objection; calls for

1 speculation.

2 THE WITNESS: That determination either
3 way cannot be made from the RADV audits.

4 BY MR. MARTINEZ:

5 Q. Well, just because CMS determines that
6 an MA plan, say at the contract level, has a net
7 overpayment does not by itself mean that CMS
8 believes the MA plan has committed fraud; right?

9 MS. OBEREMBT: Objection; calls for
10 speculation. And asked and answered.

11 THE WITNESS: This exercise was not
12 designed to identify fraud.

13 BY MR. MARTINEZ:

14 Q. So the answer to my question is yes?

15 MS. OBEREMBT: Objection; calls for
16 speculation. Asked and answered.

17 THE WITNESS: Please restate your
18 question.

19 BY MR. MARTINEZ:

20 Q. My question was: Just because CMS
21 determines that an MA plan at the contract level
22 has a net overpayment does not by itself mean that
23 CMS believes the MA plan has committed fraud?

24 MS. OBEREMBT: Same objection.

25 THE WITNESS: Again, this exercise was

1 speculation.

2 THE WITNESS: That determination either
3 way cannot be made from the RADV audits.

4 BY MR. MARTINEZ:

5 Q. Well, just because CMS determines that
6 an MA plan, say at the contract level, has a net
7 overpayment does not by itself mean that CMS
8 believes the MA plan has committed fraud; right?

9 MS. OBEREMBT: Objection; calls for
10 speculation. And asked and answered.

11 THE WITNESS: This exercise was not
12 designed to identify fraud.

13 BY MR. MARTINEZ:

14 Q. So the answer to my question is yes?

15 MS. OBEREMBT: Objection; calls for
16 speculation. Asked and answered.

17 THE WITNESS: Please restate your
18 question.

19 BY MR. MARTINEZ:

20 Q. My question was: Just because CMS
21 determines that an MA plan at the contract level
22 has a net overpayment does not by itself mean that
23 CMS believes the MA plan has committed fraud?

24 MS. OBEREMBT: Same objection.

25 THE WITNESS: Again, this exercise was

1 not designed to determine fraud. CMS can't make
2 that determination whether or not it has committed
3 fraud.

4 BY MR. MARTINEZ:

5 Q. But you understand that CMS has said in
6 the RADV context that neither payment errors nor
7 coding differences are fraud; right?

8 A. Correct. In and of themselves, no.

9 Q. Right. So in and of themselves, the
10 plans on here, not the UHG plans but the other
11 plans that have contract-level overpayments, that
12 fact alone does not mean that CMS believes they
13 have all committed fraud; right?

14 MS. OBEREMBT: Objection; calls for
15 speculation. Asked and answered.

16 THE WITNESS: Correct. But CMS is not
17 conducting this exercise to determine if there is
18 fraud.

19 BY MR. MARTINEZ:

20 Q. So staying on page 5 of Exhibit 1187-1,
21 all three -- excuse me, all four of the UHG plans
22 that were audited, CMS determined that they had no
23 recovery amounts at any of the three confidence
24 intervals listed in this chart. Is that right?

25 A. That is correct.

1 Q. In fact, CMS calculated that all four
2 UHG plans that were audited for payment year 2011
3 had net underpayments; correct?

4 A. No. H0543 had a payment error of
5 32 million, in excess of \$32 million.

6 Q. So I'm going to direct your attention to
7 page 7 of this presentation. Do you see where the
8 four UHG plans appear in this chart?

9 A. I do. But that's the confidence
10 interval calculation.

11 Q. Right. And to be clear, the confidence
12 interval calculation is the published methodology
13 that CMS disclosed that it would be using for
14 determining whether a plan at the contract level
15 had been net overpaid or underpaid; right?

16 A. Again, that was -- the confidence
17 interval was the way to determine the payment
18 recovery, whether there would be a payment recovery
19 or if it would be zero.

20 Q. Let's stay on page 7 here. But do you
21 agree with me that all four of the UHG plans, based
22 on CMS's calculations, show net underpayments at
23 the 99 percent confidence interval?

24 MS. OBEREMBT: Objection; asked and
25 answered.

1 see both exhibits report a net underpayment of
2 \$2,068,360?

3 A. Yes.

4 Q. So Exhibit 1498, which is in your
5 binder, is dated December of 2017. Is that right?

6 A. Correct. This is the same one that's
7 identical to the one in the binder except printed
8 on bigger paper?

9 Q. Yes. And so the numbers -- the point is
10 the numbers in the December 2017 version in terms
11 of net underpayments for the four UHG plans audited
12 by CMS for payment year 2011 are the same; right?

13 A. That is what it appears.

14 Q. The numbers didn't change between
15 May 2016 and December 2017; right?

16 A. They do not appear to, based on what you
17 had me look at.

18 Q. Since December 2017, has CMS amended
19 these net underpayment calculations that it made
20 for the four UHG plans audited in payment year
21 2011?

22 A. I did not review any documents that
23 showed that.

24 Q. So as far as you understand it, these
25 net underpayment amounts that CMS calculated with

1 respect to the UHG plans for payment year 2011 are
2 not going to change?

3 MS. OBEREMBT: Objection; calls for
4 speculation.

5 THE WITNESS: That calls for
6 speculation. I can't tell what will happen in the
7 future.

8 BY MR. MARTINEZ:

9 Q. Okay. So I want to turn your attention
10 to the second page of the slide deck, 1187-1. And
11 do you see in the last bullet CMS refers to the
12 recovery amounts for CON11 as preliminary?

13 A. I do see that.

14 Q. And then do you see how CMS defines
15 preliminary, which means "before a FFSA and before
16 appeals"?

17 A. That is correct.

18 Q. And FFSA refers to the fee-for-service
19 adjuster; correct?

20 A. That's my assumption.

21 Q. Okay. So if that's what preliminary
22 means according to CMS, then the recovery amounts
23 that are listed in Exhibit 1187-1, those recovery
24 amounts are only going to decrease through the
25 application of a fee-for-service adjuster or any

1 appeals process; right?

2 MS. OBEREMBT: Objection; calls for
3 speculation.

4 THE WITNESS: That would seem to be the
5 case.

6 MR. MARTINEZ: Have we been going for an
7 hour?

8 MS. OBEREMBT: No.

9 THE WITNESS: Where are we at?

10 MS. OBEREMBT: We started at 3:51.

11 (Off the record.)

12 BY MR. MARTINEZ:

13 Q. So let's go back to page 7 of
14 Exhibit 1187-1. This is the page of the CMS slide
15 deck for payment year 2011 that shows the net
16 underpayments for each of the UHG plans.

17 A. I'm sorry, what page?

18 Q. Oh, I'm sorry. Page 7.

19 A. Okay.

20 Q. Do you see there is a column on the far
21 right that says "HCC Discrepancy Rate"?

22 A. I do.

23 Q. And I think as we talked about earlier,
24 built within that discrepancy rate is some number
25 of unsupported -- strike that.

1 Built within the HCC discrepancy rate
2 reported here by CMS is some number of HCCs that
3 CMS's medical record review contractors found were
4 not supported by the medical records; correct?

5 A. Yes, according to -- yes.

6 Q. So what this chart is indicating is that
7 even though each of these four UHG plans that CMS
8 audited had HCC discrepancy rates of -- exceeding
9 10 percent in all cases, those four plans still,
10 according to CMS, had net underpayments for payment
11 year 2011; correct?

12 A. In the context of the RADV calculation.

13 Q. Right. So the answer to my question is
14 yes?

15 MS. OBEREMBT: Objection; misstates what
16 the witness just said.

17 THE WITNESS: In the case of the RADV
18 calculation and the nomenclature in the slide deck,
19 the RADV.

20 BY MR. MARTINEZ:

21 Q. Okay. So what this slide deck is
22 reporting in the RADV context for payment year 2011
23 is that all four of the UHG plans that were audited
24 and that CMS determined had net underpayments for
25 that year, each of them also had at least an

1 Q. And do you understand that parent
2 organization is essentially referring to the large
3 Medicare Advantage organizations that had plans
4 that were sampled -- that were selected for the
5 RADV audits for payment years 2011 to 2013?

6 A. The way I would phrase it is the parent
7 organization is the highest level, and under the
8 parent organizations are the contracts, and RADVs
9 were kept at the contract level.

[REDACTED]

22 Q. And then lastly, it says the
23 UnitedHealth Group plans account for 0.0 percent of
24 total recovery amount. Do you see that?

25 A. I do.

1 Q. And so according to this document that
2 was in your reliance binder, UnitedHealth Group --
3 the four UnitedHealth Group plans had the lowest
4 percentage of total recovery amount relative to the
5 other parent organizations whose plans were
6 audited?

7 A. That is what this is highlighting. But
8 it's not -- I don't believe this is inclusive of
9 all parent orgs that had plan sampled.

10 Q. Okay. And is this inclusive of parent
11 orgs that are considered peers in the Medicare
12 Advantage industry?

13 MS. OBEREMBT: Objection; vague.

14 THE WITNESS: I believe that it's of the
15 large parent orgs.

16 BY MR. MARTINEZ:

17 Q. Okay. So maybe we'll refer to the
18 information conveyed on this page as -- with
19 respect to the large parent organizations in
20 Medicare Advantage. Is that fair?

21 A. Sure.

22 Q. Okay. So among the four large parent
23 organizations that had plans that were audited by
24 CMS for payment year 2011, UnitedHealth Group
25 accounted for the lowest percentage of the total

1 recovery amount that CMS calculated for that year;
2 correct?

3 A. That's what's indicated here.

4 Q. And that's the case -- if you flip now
5 to two pages down.

6 A. What page number?

7 Q. So it's page 4. You see there are three
8 bar charts on this page?

9 A. I do.

10 Q. So let's stick with payment year 2011
11 which is in the top left. Do you see that bar
12 chart?

13 A. Yes.

14 Q. And the recovery amount is indicated by,
15 I guess, what appears to me to be an
16 orangish-reddish circle on the bar chart. Do you
17 see that?

18 A. I do see that. Give me a minute. This
19 chart has two axes. One is population and the
20 other is the recovery amount, it appears.

21 Q. And so this bar chart on the top left
22 is -- one of the things it's indicating is that,
23 again, as we know, the UnitedHealth plans audited
24 for that year, CMS calculated a zero recovery
25 amount; right?

1 A. Just give me a second to look at the
2 numbers here and put this in a little context.

3 Correct.

4 Q. And you alluded to this already, but
5 there is another axis that refers to the eligible
6 population in the thousands. Is that right?

7 A. Correct.

8 Q. And what do you understand the eligible
9 population to refer to?

10 A. I believe that refers to the population
11 to whom the sample results would be extrapolated.

12 Q. And so what this bar chart on the top
13 left for payment year 2011 is telling us is that
14 the four UnitedHealth plans that were audited that
15 year by CMS had by far the largest number of
16 eligible population members; correct?

17 A. When combined. When combined, the UHG
18 plans had the largest population.

19 Q. Okay. And looking at this chart, just
20 eyeballing it, by a significant margin it was the
21 highest population; right?

22 A. It appears so.

23 Q. And so even though the four UHG plans
24 that were audited when combined had by far the
25 largest eligible population, those UHG plans still

1 had the lowest recovery amount of any of the large
2 parent organizations that were audited for payment
3 year 2011; correct?

4 A. I do not know this. All of these seem
5 to be very close to the zero axis.

[REDACTED]

23 Could you rephrase your question?

24 Q. Sure.

25 My question is: Even though the

1 UnitedHealth Group plans had by far the largest
2 eligible populations of the large parent
3 organizations whose plans were audited for payment
4 year 2011, the UHG plans also had the lowest
5 percentage of payment recovery based on CMS's
6 calculations for that year. Correct?

7 MS. OBEREMBT: Objection; vague.

8 THE WITNESS: That is what this slide
9 deck seems to indicate, that it accounts for zero
10 percent of total recovery.

11 BY MR. MARTINEZ:

12 Q. All right. And going back to the slide
13 that you're currently on, which I believe is the
14 third page of Exhibit 1498, UHG also had the most
15 plans audited among the large parent organizations
16 for payment year 2011. Is that right?

17 A. It did.

18 Q. It had four plans audited, Aetna had
19 three, Cigna had three and Humana had one.
20 Correct?

21 A. That is what this indicates.

22 Q. And so even though UnitedHealth Group
23 had the most plans audited and the largest
24 population for payment year 2011, it had the lowest
25 percentage of total recovery amount for that year;

1 correct?

2 A. At the parent org level, that's what
3 this says.

4 Q. Let's go back to the May 2016 slide
5 deck, Exhibit 1187-1. And I would like to direct
6 your attention to page 10 of that exhibit.

7 Do you see that the title for this slide
8 is "HCC Discrepancy Rates for Major Parent Orgs"?

9 A. I do.

10 Q. And do you see that there is a column
11 for it appears to be five parent orgs, one of which
12 includes UHG?

13 A. Yes.

14 Q. And then there is another column that
15 reports the payment year 2011 HCC discrepancy rate
16 that CMS calculated for the plans that are part of
17 each of those parent organizations. Is that right?

18 A. I do see that.

19 Q. And in that column, do you see that the
20 HCC discrepancy rate for the four UnitedHealth
21 Group plans audited was 12.3 percent?

22 A. I do.

23 Q. And that figure is the lowest of any of
24 the parent organizations audited for payment year
25 2011; correct?

1 A. I cannot say that. I can say it was the
2 lowest of these five parent organizations.

3 Q. And these are the parent organizations
4 that CMS is referring to as the major parent
5 organizations?

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

10 Q. Well, CMS, in the slide deck that we're
11 looking at now, is referring to these five parent
12 organizations as the major parent organizations;
13 right?

14 A. Right.

15 Q. And among those five major parent
16 organizations that CMS has identified, UnitedHealth
17 Group has the lowest HCC discrepancy rate for
18 payment year 2011; correct?

19 A. That's what this slide shows.

20 Q. And you have no reason to dispute the
21 accuracy of this slide; correct?

22 A. I do not.

23 Q. And on the 12.3 percent number, is
24 another way of saying that that CMS validated
25 roughly 88 percent of the HCCs that the UHG plans

1 submitted as part of the RADV audit for payment
2 year 2011?

3 MS. OBEREMBT: Objection; vague.

4 THE WITNESS: Could you be more
5 specific?

6 BY MR. MARTINEZ:

7 Q. Is another way of communicating the
8 12.3 percent figure that's shown on this slide that
9 CMS, through the RADV audit, validated roughly
10 88 percent of the HCCs that the UHG plans submitted
11 as part of the RADV audit for payment year 2011?

12 MS. OBEREMBT: Objection; vague.

13 THE WITNESS: Yes, that's kind of
14 putting it another way. It's a little less than
15 88 percent.

16 BY MR. MARTINEZ:

17 Q. Okay. So a little less than 88 percent
18 is what we'll call the HCC validation rate for the
19 UHG plans for payment year 2011. Is that fair?

20 A. Okay.

21 Q. Is that a yes?

22 A. Yes.

23 Q. So what that nearly 88 percent number
24 means is that for 88 percent of the HCCs that the
25 four UnitedHealth plans submitted as part of the

1 2011 RADV audit, CMS was able to validate those
2 HCCs as being supported by the medical records that
3 the UHG plans submitted; correct?

4 A. Correct.

5 Q. Would you agree with me that these
6 results that we've looked at both in this exhibit
7 and the prior one demonstrate that when it comes to
8 the large or major MA parent organizations,
9 UnitedHealth Group is the industry leader when it
10 comes to submitting accurate risk adjustment data
11 as part of the RADV process?

12 MS. OBEREMBT: Objection; vague.

13 THE WITNESS: Could you ask that another
14 way?

15 BY MR. MARTINEZ:

16 Q. Sure.

17 Would you agree with me that
18 UnitedHealth Group is, according to CMS's own
19 calculations, performing better than its peers, all
20 of its peers, when it comes to submitting accurate
21 risk adjustment data for validation?

22 MS. OBEREMBT: Objection; vague.

23 THE WITNESS: Again, it appears on this
24 limited chart that just lists the other large
25 parent organizations, that it does have the lowest

1 discrepancy rate in that comparison.

2 BY MR. MARTINEZ:

3 Q. Okay. So we see on this chart it has
4 the lowest HCC discrepancy rate, and we saw in
5 Exhibit 1498 that it also had the lowest percentage
6 of any recovery amount for payment year 2011;
7 right?

8 A. Yes. Out of what this deck here in
9 slide 10 calls the, quote-unquote, major parent
10 orgs.

11 Q. So in that respect, would you agree that
12 UnitedHealth Group is performing better in the 2011
13 RADV audits than any of the other large or major
14 parent organizations that had plans audited for
15 that payment year?

16 MS. OBEREMBT: Objection; vague.

17 THE WITNESS: I don't know that I would
18 characterize it as performing better. [REDACTED]

[REDACTED]
20 BY MR. MARTINEZ:

21 Q. But 12 percent is lower than 15 percent;
22 right?

23 A. It is.

24 Q. And --

25 A. I don't know if it's significantly

1 THE WITNESS: I don't know if I would
2 characterize it as a good partner type of exercise.
3 And again, without getting more detailed about each
4 United contract that was audited, I can't tell.
5 Did they submit records for all of their enrollees?
6 This is a blunt number. I can't really tell.

7 BY MR. MARTINEZ:

8 Q. Did any of the UHG plans that were
9 audited refuse to participate in the process in any
10 way?

11 A. That was not indicated in any of the
12 information I reviewed.

13 Q. So as far as you know as the
14 government's designee to testify on Topic 5, you
15 have no information that any of the UHG plans that
16 were audited for payment years 2011 to 2013 refused
17 to participate in any way in any of those audits;
18 correct?

19 MS. OBEREMBT: Objection; outside the
20 scope. And vague.

21 THE WITNESS: I did not review any
22 information or receive any information that
23 indicated that.

24 BY MR. MARTINEZ:

25 Q. So I want to transition now to the

1 results for the 2012 and 2013 audits that CMS
2 conducted. To assist us in that endeavor, I'm
3 going to mark an exhibit. This will be
4 Exhibit 1500.

5 (Exhibit 1500 marked for identification
6 and attached hereto.)

7 BY MR. MARTINEZ:

8 Q. So let me give you a little bit of
9 background as to what Exhibit 1500 is. So what it
10 is is it's a printout of an Excel that took the
11 information from the last three pages of
12 Exhibit 1498 but only extracted the information in
13 that exhibit related to the UHG plans that were
14 audited by CMS for payment years 2011 to 2013.

15 Okay? Do you understand that?

16 A. Let me just double-check.

17 Okay. That's what it appears to be.

18 Q. So you've gone through and checked the
19 numbers to make sure that they tie out?

20 A. I did a spot-check, one for each year.

21 Q. Did all of the ones that you checked
22 look accurate?

23 A. Yes. Of the three I checked, yes.

24 Q. So again, what this document
25 Exhibit 1500 is showing is it's just isolating the

1 UHG plans from the spreadsheets that are included
2 at the back of Exhibit 1498. And it includes the
3 contract ID, the year in which that contract was
4 audited, the fact that these are the UHG plans, the
5 coding intensity group that CMS categorized them
6 into, and then the recovery amounts that CMS
7 calculated for each of those plans for each of
8 those years.

9 Do you see that?

10 A. I do.

11 Q. Okay. So for -- so we've already walked
12 through the net underpayments for payment year
13 2011. So I want to move now to 2012. Is that
14 okay?

15 A. Okay.

16 Q. So for payment year 2012, the first UHG
17 plan that was audited is ID number H5420.

18 A. Okay.

19 Q. And for that plan, in 2012 CMS reported
20 a recovery amount of \$15,735,769. Is that right?

21 A. That's correct.

22 Q. Okay.

23 A. That's what it indicates.

24 Q. And then for the next plan audited for
25 payment year 2012, ID R7444, for that UHG plan CMS

1 determined a net underpayment of \$3,962,831. Is
2 that correct?

3 A. That's what it indicates.

4 Q. And when you say that's what it
5 indicates, what do you mean?

6 A. That is what is on the chart, and I'm
7 assuming, based on my spot-check, that that is from
8 the slide deck produced, which I have no reason to
9 believe is incorrect.

10 Q. Okay, great.

11 And then moving on to the third UHG plan
12 audited in payment year 2012, H5652, CMS calculated
13 a net underpayment of \$4,740,216. Is that correct?

14 A. Yes, that's what it says.

15 Q. And then for contract ID H0251, a United
16 plan CMS audited in payment year 2012, CMS
17 calculated a net underpayment of \$69,295,194. Is
18 that correct?

19 A. Repeat the contract number again.

20 Q. I'm sorry. I may have messed that up.
21 I did.

22 So this is contract number R5287.

23 Strike that.

24 Let's -- strike that.

25 Going back to contract ID H0251, the net

1 underpayment that CMS reported is \$10,348,919.

2 Right?

3 A. Yes.

4 Q. My apologies for that.

5 And then for the last, the fifth and
6 final UHG contract CMS audited for payment year
7 2012, ID R5287, CMS calculated a net underpayment
8 of \$69,295,194. Is that correct?

9 A. That's what is indicated.

10 Q. Okay. So a quick summary of payment
11 year 2012, CMS audited five UHG plans for that
12 payment year; correct?

13 A. Correct.

14 Q. And all five of those plans CMS
15 classified as being in the high coding intensity
16 group?

17 A. Yes, that's what's indicated.

18 Q. And four of those five plans had net
19 underpayments according to CMS's calculations for
20 payment year 2012; correct?

21 A. For calculations in the RADV context, a
22 net underpayment was the lower bound calculation.

23 Q. Okay. And that was the case for four of
24 the five plans that CMS audited in payment year
25 2012?

1 A. Yes, that's what the information
2 indicates.

3 Q. All right. Let's transition now to
4 payment year 2013. And you can see that CMS
5 audited six UHG plans for payment year 2013. Is
6 that right?

7 A. Yes.

8 Q. And all six of those plans CMS
9 classified as being in the high coding intensity
10 group?

11 A. It appears so, yes.

12 Q. Let's go through them briefly one by
13 one. So the first plan listed for 2013 is R9896,
14 and for that plan CMS reported a recovery amount of
15 \$4,065,269. Is that right?

16 A. Yes.

17 Q. Okay. Moving on to plan H3107, a UHG
18 plan that was audited by CMS in 2013, CMS reported
19 a net underpayment of \$1,581,972. Is that correct?

20 A. Yes.

21 Q. And for UHG contract ID H0151 audited by
22 CMS in payment year 2013, CMS reported a net
23 underpayment of \$7,790,780. Is that correct?

24 A. Yes.

25 Q. For UHG contract ID H4514, CMS

1 calculated a net underpayment for that plan in
2 payment year 2013 of \$9,302,996. Correct?

3 A. Yes.

4 Q. For UHG plan H2931 which CMS audited in
5 payment year 2013, CMS calculated a net
6 underpayment of \$10,078,497. Is that correct?

7 A. Yes.

8 Q. And then finally, for UHG plan R5342
9 which CMS audited for payment year 2013, CMS
10 calculated a net underpayment of \$14,309,264. Is
11 that correct?

12 A. Correct, it indicates that information.

13 Q. So we've gone through all the recovery
14 amount information for the 15 UHG plans that CMS
15 audited during payment years 2011, 2012 and 2013;
16 right?

17 A. Yes.

18 Q. And of those 15 plans that CMS audited
19 during those payment years, 13 of them had net
20 underpayments according to CMS's calculations;
21 correct?

22 A. Correct. That's what's indicated.

23 Q. Okay. And then if you do a sum of all
24 of those overpayments and underpayments that CMS
25 calculated, that's reflected in the number on

1 Exhibit 1500 beneath the right-hand side column,
2 and that comes out to \$261 million -- sorry.
3 \$261,202,498 in total net underpayments for the 15
4 UHG plans that CMS audited in the years 2011 to
5 2013; correct?

6 A. That is what this says. I've never
7 seen -- none of the documents I reviewed had
8 information presented this way.

9 Q. And if you would like, I can show you
10 the Excel that sums this information.

11 A. Sure, that would be great.

12 MR. MARTINEZ: Okay. Let's go off the
13 record briefly so we can set that up.

14 THE VIDEOGRAPHER: Going off the record
15 at 17:37.

16 (Off the record.)

17 (Recess taken.)

18 THE VIDEOGRAPHER: We are back on the
19 record at 17:46.

20 BY MR. MARTINEZ:

21 Q. Okay. Are you able to see the Excel
22 that was used to generate Exhibit 1500 on the
23 screen?

24 A. I am.

25 Q. So I just want to draw your attention to

1 box E18. And do you see where in that box --
2 that's the box that contains the \$261 million
3 figure -- that it refers to the sum of the previous
4 entries that are listed on Exhibit 1500?

5 A. Yes.

6 Q. And if we can move up there, you can see
7 that when you sum the overpayment and underpayment
8 amounts for the 15 UHG plans that CMS audited for
9 payment years 2011 to 2013, that the results in
10 total is a net underpayment to those plans of
11 \$261,202,498?

12 A. Yes.

13 Q. So what I would like to do now is my
14 colleague is going to sort the recovery amounts by
15 size in the Excel. So he's sorting them from
16 smallest to largest. So what that means is that
17 the most negative amount is going to appear on the
18 top, and then the two plans with overpayments that
19 CMS calculated will appear at the bottom.

20 A. Okay.

21 (Exhibit 1501 marked for identification
22 and attached hereto.)

23 BY MR. MARTINEZ:

24 Q. And so what I would like to do is I'm
25 going to hand you what's been marked as

1 Exhibit 1501, which includes the same -- the exact
2 same data, it's just sorted this time for ease of
3 everyone's review.

4 A. Uh-huh.

5 Q. And then it's been color coded so that
6 the net underpayments are shown in green and the
7 net overpayments that CMS calculated are shown in
8 red.

9 Do you see that?

10 A. Yes.

11 Q. And does that match up with what you're
12 seeing on the screen?

13 A. It does.

14 Q. And so does Exhibit 1501 confirm that
15 for payment years 2011 to 2013, of the 15 plans
16 that CMS audited it calculated net underpayments
17 for 13 of those plans; correct?

18 A. In the context of RADV, yes, that is
19 what this is showing.

20 Q. Okay. Let's -- I'm going to have you
21 keep Exhibit 1501 -- I'm sorry. If you could go
22 back to Exhibit 1500. I'm just going to have you
23 keep this exhibit handy. I'm not going to ask you
24 any more questions about the numbers on the
25 exhibit, but I just want to use it as a reference

1 A. Yes, that is what the information in
2 this deck indicates.

3 Q. But you don't have the exact number that
4 CMS calculated?

5 A. I do not believe I reviewed any
6 information that has the exact number, nor do I
7 think it's in either of these two presentations
8 we've looked at.

9 Q. In preparing to testify today, did you
10 ask for the precise HCC discrepancy rates that CMS
11 calculated for the plans it audited in payment
12 years 2012 and 2013?

13 A. I did not. I do not believe I did.

14 Q. All right. So I take it, then, for the
15 remaining contract IDs listed in Exhibit 1500, for
16 purposes of today you would be able to estimate
17 what CMS calculated the HCC discrepancy rate to be
18 for those plans but you couldn't give me the exact
19 number. Is that right?

20 A. That is correct.

21 Q. And you have no reason to dispute the
22 accuracy of the information being conveyed in the
23 bar charts on what's labeled page 8 of
24 Exhibit 1498; correct?

25 A. I do not have any reason to dispute

1 that.

2 Q. Okay. So I want to direct your
3 attention to another example from payment year
4 2012. Do you see the bar corresponding to contract
5 ID H5652?

6 A. I do.

7 Q. And that was one of the UHG plans that
8 CMS audited for payment year 2012; correct?

9 A. Yes.

10 Q. And looking at this bar chart here in
11 Exhibit 1498, does it appear that the HCC
12 discrepancy rate that CMS calculated was roughly
13 10 percent?

14 A. It does.

15 Q. And so that means that for 90 percent of
16 the HCCs that were submitted by this UHG plan for
17 auditing in payment year 2012, that CMS was able to
18 validate the HCC as being supported by the medical
19 records; correct?

20 MS. OBEREMBT: Objection; vague.

21 THE WITNESS: That is an alternate way
22 of expressing a 10 percent discrepancy rate.

23 BY MR. MARTINEZ:

24 Q. So the answer to my question is yes?

25 MS. OBEREMBT: Objection; vague.

1 THE WITNESS: Yes.

2 BY MR. MARTINEZ:

3 Q. And if we were to do the same exercise
4 with the remaining contract IDs for the remaining
5 UHG plans that CMS audited for payment years 2011
6 to 2013, would your answer be the same, that when
7 these bar charts are indicating an HCC discrepancy
8 rate, another way of looking at that is a
9 percentage of the HCCs that CMS was able to
10 validate based on the submissions by the plans for
11 those payment years?

12 MS. OBEREMBT: Objection; vague.

13 THE WITNESS: That is another way of
14 putting it. It's typically not -- we typically
15 talk about a discrepancy rate. But that is kind of
16 the converse of the discrepancy rate.

17 BY MR. MARTINEZ:

18 Q. Okay. And that nomenclature would apply
19 to any other contract ID that we might go through
20 that's listed on these bar charts in Exhibit 1498;
21 right?

22 MS. OBEREMBT: Objection; vague.

23 THE WITNESS: Could you be more -- what
24 nomenclature?

25 BY MR. MARTINEZ:

1 Q. The sort of HCC discrepancy rate being
2 the converse of the -- what I'll call an HCC
3 validation rate?

4 MS. OBEREMBT: Objection; vague.

5 THE WITNESS: Yes. If you want to
6 phrase it that way.

7 BY MR. MARTINEZ:

8 Q. Okay. And that would apply to any other
9 contract ID that we might look at that CMS audited
10 for these payment years; right?

11 A. Yes. For the purpose of this exercise,
12 if you want to refer to it that way.

13 Q. All right. So if you go to the cover
14 page of Exhibit 1498, there is an indication that
15 it was produced in native format. Does that mean
16 that there's -- and I assume that means this was
17 produced as a native PowerPoint. Well, you may not
18 know the answer to that.

19 A. I don't know what that means.

20 Q. So I guess my question is -- and this
21 may be more a question for your counsel. Do you
22 know if there's an underlying Excel that would
23 contain the precise numbers that are represented in
24 the bar charts on what's labeled as page 8 of
25 Exhibit 1498?

1 C E R T I F I C A T E

3 STATE OF MARYLAND

4 I, JOHN L. HARMONSON, a Notary Public
5 within and for the State of Maryland, do hereby
6 certify that CAROLYN KAPUSTIJ, the witness whose
7 deposition is hereinbefore set forth, was duly
8 sworn by me and that such deposition is a true
9 record of the testimony given by such witness.

10 That before completion of the
11 proceedings, review and signature of the transcript
12 was reserved.

13 I further certify that I am not related
14 to any of the parties to this action by blood or
15 marriage; and that I am in no way interested in the
16 outcome of this matter.

17 IN WITNESS WHEREOF, I have hereunto set
18 my hand this 28th day of August, 2023.

Case No.
16-08697 FMO

---o0o---

MONDAY, MARCH 25, 2024

VIDEOTAPED DEPOSITION OF DANIEL KESSLER, PH.D.

CONFIDENTIAL TRANSCRIPT

---o0o---

REPORTER: BALINDA DUNLAP, CSR 10710, RPR, CRR, RMR

1 Q. BY MR. THOMSON: So would that not result
2 in a higher coding intensity level for the MA
3 population in the overall pool as compared to the
4 MA population in the sample pool that was used to
5 calculate the CIA?

10:49:10

6 MR. MARTINEZ: Object to form.

7 THE WITNESS: Yes. The answer to that
8 question is yes. That's -- that's different from
9 the earlier question, but that question, yes.

10 Q. BY MR. THOMSON: And you understand that
11 one purpose of retrospective chart reviews
12 performed on behalf of MA plans is to reduce the
13 incidence of type II errors, right?

10:49:29

14 MR. MARTINEZ: Object to form.

15 Foundation. Calls for speculation.

10:49:43

16 THE WITNESS: I don't know.

17 Q. BY MR. THOMSON: You don't know one way or
18 the other whether the purpose of retrospective
19 chart review programs is to reduce the incidence of
20 absent supported codes, which you refer to as type
21 II errors?

10:49:56

22 MR. MARTINEZ: Object to form.

23 THE WITNESS: Yeah, I mean, I don't know
24 all the purposes of -- well, I mean, first of all,
25 I am not sure exactly what "retrospective chart

10:50:13

1 review programs" refer to, but I also -- I just
2 don't know what the -- why MA plans, you know, make
3 all the decisions that they make. I just don't
4 know.

5 Q. BY MR. THOMSON: What is your 10:50:31
6 understanding of why MA plans conduct chart review?

7 MR. MARTINEZ: Object to form.

8 THE WITNESS: I mean, I just don't -- I
9 just don't know the motivations of the plans. I
10 mean, I know overall. I mean, as I talked about in 10:50:56
11 my report, I understand the motivation of the plans
12 is to -- to have diagnoses that reflect the patient
13 -- better reflect the patient's true medical
14 records.

15 But I don't know in particular about any 10:51:18
16 program that plans implement, why they do what they
17 do. I don't have an opinion about that.

18 Q. BY MR. THOMSON: You're not aware of any
19 -- technically you're not aware of any MA
20 retrospective chart review programs that existed in 10:51:44
21 the 2004 to 2007 period, are you?

22 MR. MARTINEZ: Object to form.

23 THE WITNESS: I don't know one way or the
24 other.

25 Q. BY MR. THOMSON: To the extent that there 10:51:55

1 were type I or type II errors in any of the cohorts
2 studied in the '04 to '05, '05 to '06, and '06 to
3 '07 pairs of years included in the study described
4 in the GAO report, those errors were included in
5 the calculation of the CIA; is that right? 10:52:14

6 MR. MARTINEZ: Object to form. Vague as
7 to time.

8 THE WITNESS: Could you repeat the
9 question?

10 Q. BY MR. THOMSON: To the extent that there 10:52:24
11 were type I or type II errors in any of the cohorts
12 studied in the '04 to '05, '05 to '06, and '06 to
13 '07 pairs of years included in the study described
14 in the GAO reports, those errors were included in
15 the calculation of the CIA, right? 10:52:46

16 MR. MARTINEZ: Object to form.

17 THE WITNESS: Those -- those would be
18 errors in fee-for-service, right, not MA? Is that
19 what you're referring to? Because the cohorts were
20 all fee-for-service cohorts, right? 10:53:12

21 Q. BY MR. THOMSON: Do you know?

22 A. Yeah. I mean, that's my understanding.
23 I'm sorry. I'm just not -- maybe I'm just not
24 getting your question. I'm sorry.

25 Q. So your understanding is that those 10:53:38

1 calculate what the fee-for-service level of coding
2 intensity was. It is just not something United
3 couldn't conduct medical record reviews on a random
4 sample of fee-for-service claims to which it didn't
5 have the right to see.

12:10:18

6 Q. BY MR. THOMSON: But you didn't talk to
7 anybody at United to determine what United knew
8 about its level of coding intensity at any time,
9 did you?

10 A. I didn't, but just knowing -- United just
11 knowing its own coding intensity wouldn't answer
12 the question here. I mean, they'd have to either
13 know the MA industry average coding intensity plus
14 presume that the coding intensity adjuster was
15 correct. Or they would have had to have known the
16 fee-for-service coding intensity and those facts.
17 I mean, I just don't -- I have no way to believe
18 that they could have access to the information
19 necessary to do that.

12:10:38

12:10:55

20 But I haven't spoken with everyone who
21 worked at United at that time to determine that.
22 It's just -- I just don't -- I am not aware of how
23 it could possibly occur. That's all I'm trying to
24 say.

12:11:13

25 Q. Did you review any of United's documents

12:11:28

1 on this point to determine what it tracked or knew
2 about its own coding intensity adjustment at any
3 point in 2018 -- from 2008 to 2016?

4 MR. MARTINEZ: Object to form.

5 THE WITNESS: I mean, I certainly looked 12:11:41
6 at a lot of documents, but again, even if United
7 knew its own coding intensity, that wouldn't be
8 sufficient to determine whether they were overpaid
9 or underpaid. Because you'd have to know either
10 relative to the MA industry average or the 12:12:04
11 fee-for-service to get that.

12 But I don't -- I don't know what United
13 did to calculate its own coding intensity, no, I
14 don't.

15 Q. BY MR. THOMSON: Do you know whether 12:12:17
16 United had an estimate of the industry average
17 coding intensity for MA plans?

18 A. Not that I've seen.

19 Q. Did you request documents related to
20 whether United had access to that information? 12:12:37

21 MR. MARTINEZ: Object to form.

22 THE WITNESS: I mean, I -- to actually
23 calculate that, they would have had to have had
24 access to their competitors' records. It wouldn't
25 even make sense. 12:12:54

1 Q. BY MR. THOMSON: So is that a no?

2 MR. MARTINEZ: Object to form.

3 THE WITNESS: I didn't ask if they had

4 access to their competitors' records because it

5 wouldn't make sense -- it didn't make any sense to 12:13:06

6 me. So yeah, I guess I didn't ask that.

7 Q. BY MR. THOMSON: Okay. So the next

8 paragraph, Paragraph 50 --

9 A. Yes.

10 Q. -- "Second, the presence of unsupported 12:13:20

11 codes in any particular plan's data is insufficient

12 to establish that CMS has 'overpaid' or 'underpaid'

13 it. Correct calculation of the presence and extent

14 of 'overpayment' must also account for the plan's

15 level of absent supported codes and the industry 12:13:36

16 average level of present unsupported and absent

17 supported codes."

18 Can you explain the logic of this

19 paragraph to us? I am not sure I totally follow

20 it. 12:13:55

21 A. Sure, of course. I mean, the fact that

22 there are unsupported -- so the fact that there are

23 unsupported codes in Medicare Advantage doesn't

24 tell you whether Medicare Advantage plans in

25 general are overpaid or underpaid because the goal 12:14:18

1 of -- I mean, what overpaid means is paid more than
2 that needed to achieve payment neutrality. And
3 payment neutrality is this population-based concept
4 comparing aggregate payments to MA plans to what
5 the people would have cost in fee-for-service,
6 okay.

12:14:39

7 So the fact that you see an unsupported
8 code in MA in general doesn't mean MA plans in
9 general were overpaid. Because as long as the
10 relative rates of supported and unsupported codes
11 in MA mirrors that in fee-for-service, then people
12 were paid -- the plans were paid correctly.

12:14:56

13 So that same reasoning applies on a
14 plan-specific basis. And that's -- all I'm doing
15 in Paragraph 50 is carrying that reasoning down to
16 the plan level. Is that helpful?

12:15:15

17 Q. I think so. So we talked about
18 overpayment and underpayment --

19 A. Yes.

20 Q. -- that is MA plan payments in aggregate
21 as compared to fee-for-service, the estimated cost
22 for the same beneficiaries and Medicare
23 fee-for-service?

12:15:28

24 A. Yep.

25 Q. So the absent supported code -- I guess

12:15:40

1 what I am not following is why an unsupported code
2 in MA would not just be an unsupported code that
3 increases the cost beyond what that same patient
4 would have cost in fee-for-service because -- well,
5 sorry, go ahead. Go ahead.

12:16:04

6 A. No, I see what you're asking. I mean, the
7 reason that the presence of an unsupported code
8 doesn't imply overpayment is that fee-for-service
9 also has some unsupported codes in it, almost
10 surely, just as -- because both MA and
11 fee-for-service are going to have some present
12 unsupported and some absent supported codes.

12:16:20

13 And to get, you know, overpayment is
14 relative to payment neutrality, which is this
15 population-based concept.

12:16:37

16 To get payment neutrality, what you want
17 is the rates of absent -- absent supported and
18 present unsupported codes in MA to mirror that in
19 fee-for-service.

20 So if -- suppose that the rates of present
21 unsupported and absent supported codes in MA were
22 exactly the same as fee-for-service, right, then
23 you wouldn't -- you wouldn't even need a coding
24 intensity adjuster because you would have payment
25 neutrality.

12:16:58

12:17:17

1 Q. Assuming that there was the same health
2 risk among each population groups, right?

3 MR. MARTINEZ: Object to form.

4 THE WITNESS: No. I mean, you could --

5 they could have different -- they could have 12:17:36

6 different illness scores and different

7 demographics, and you would have adjusted for that.

8 And the adjustment would be exactly correct.

9 Because the rates of present support -- present

10 unsupported and absent supported codes in the two 12:17:55

11 populations were identical.

12 So if that were true, then we have no --

13 we have no problem.

14 Q. So the risk adjustment data is calculated

15 on fee-for-service -- 12:18:13

16 A. Yes.

17 Q. -- payments, right?

18 MR. MARTINEZ: Object to form.

19 THE WITNESS: Yes.

20 MR. MARTINEZ: You said data. I think you 12:18:18

21 meant model.

22 MR. THOMSON: Can you read the question

23 back? I'm sorry.

24 THE WITNESS: Go ahead.

25 (Reporter read back as requested.) 12:18:39

1 is a true record of the testimony given. (Civ.
2 Proc. § 2025.540(a))

3 I have not, and shall not, offer or
4 provide any services or products to any party's
5 attorney or third party who is financing all or
6 part of the action without first offering same to
7 all parties or their attorneys attending the
8 deposition and making same available at the same
9 time to all parties or their attorneys. (Civ.
10 Proc. § 2025.320(b))

11 I shall not provide any service or product
12 consisting of the deposition officer's notations or
13 comments regarding the demeanor of any witness,
14 attorney, or party present at the deposition to any
15 party or any party's attorney or third party who is
16 financing all or part of the action, nor shall I
17 collect any personal identifying information about
18 the witness as a service or product to be provided
19 to any party or third party who is financing all or
20 part of the action. (Civ. Proc. § 2025.320(c))

GA No. 6595-1471-3597-5424

1 right?

2 A Yes.

3 Q Please tell me a little bit about your roles
4 and responsibilities at AHIP as it relates to MA payments
5 and risk adjustment.

6 A I was the lead policy support person within the
7 policy group at AHIP responsible for Medicare Advantage
8 risk adjustment and payment policy.

9 Q And so in that role you would lead risk
10 adjustment policy discussions with plan members and
11 external stakeholders?

12 A Yes, in cooperation with other members of
13 the -- of the team. And by policy team, I am referring
14 to -- it may not have been explicitly called that within
15 the organization, but that's how I am referring to the
16 group that I worked in within AHIP.

17 Q And did you also -- you also oversaw research
18 and analyses about the impacts of Medicare Advantage
19 payment and risk adjustment policies; is that right?

20 A Yes.

21 Q All right. Moving back to your time at the
22 Centers for Medicare & Medicaid Services, which I will
23 refer to as CMS, you worked at CMS for over five years in
24 several different roles; is that right?

25 A I worked at CMS a total of ten years. There

1 were two five-year stints.

2 Q Thanks for correcting that.

3 So -- so focusing on your most recent five-year
4 stint, that was from around April 2010 to July 2015; is
5 that right?

6 A Yes.

7 Q And the first job in that second stint was as a
8 health insurance specialist?

9 A Yes.

10 Q What division did you work for at that time as
11 a health insurance specialist?

12 A From 2010 to 2012 I was in the Division of
13 Payment -- I'm sorry, Risk Adjustment and Payment
14 Operations, I believe is what it was called. And then
15 from 2012 to 2014 I was the division director. Before, I
16 believe it was the Division of Payment Systems. I might
17 have the name wrong, but it was -- that was the -- so
18 that was, sorry, from 2012 to 2014.

19 From 2014 to 2015 I was in CMM (sic) -- the
20 Centers for Medicare and Medicaid Innovation, where I
21 believe I was a -- their health insurance specialist, or
22 I don't remember the title.

23 Q Okay. So starting with the health specialist
24 position at the Division of Risk Adjustment and Payment
25 Policy, in that role you analyzed impacts of changes to

1 payment rates and risk scores in support of annual
2 Medicare Advantage payment notice. Is -- is that a fair
3 description from your LinkedIn profile?

4 A Yes.

5 Q So tell me a little bit about what that means,
6 particularly the Medicare Advantage payment notice.

7 A I am sorry, what is -- I don't understand the
8 question.

9 Q Sure. So part of your job was to analyze
10 impacts of changes to payment and risk scores in support
11 of this notice, and so I just wanted you to explain a
12 little bit about what this notice is. Is that -- is that
13 also something known as the final Rate Announcement? Is
14 that what you are referring to here?

15 A There is an Advance Notice and there is a final
16 Rate Announcement. Are you -- are you asking me about --
17 sorry. Can you repeat the question? I am sorry. I lost
18 track of it.

19 Q No problem. So I was just confirming that when
20 you say that you analyzed impacts of changes to payment
21 rates and risk scores in support of an annual Medicare
22 Advantage payment notice, that what you are referring to
23 is what's also sometimes referred to as the Advance
24 Notice and the final Rate Announcement; is that right?

25 A Yes.

1 Q Okay. And so there is an Advance Notice, as
2 you just mentioned, that's published, correct?

3 A Yes.

4 Q And then there is a period of time for MA Plans
5 and other stakeholders to review and provide comments; is
6 that right?

7 A Yes.

8 Q And that gives CMS some time to review the
9 comments before the final Rate Announcement is announced.

10 A Yes.

11 Q Fair?

12 A I am sorry. Can you repeat the question?

13 Q I think -- yeah, I think you said yes. That
14 just gives CMS some time to review comments before the
15 final Rate Announcement is announced?

16 A I didn't understand the question you just
17 asked.

18 Q I asked whether -- so we talked about there is
19 a period of time for MA Plans and other stakeholders to
20 review and provide comments. You said yes, and I said,
21 and that gives CMS some time to review the comments
22 before the final Rate Announcement is announced? And you
23 said yes, right?

24 A Yes.

25 Q Okay. So, for example, in early February of

1 this year, CMS released the calendar year 2023 Advance
2 Notice. Are you familiar with that?

3 A Can you be more specific on familiar? What do
4 you mean by "familiar" in this context, please?

5 Q Were you aware that in February of this year
6 CMS released the calendar year 2023 Advance Notice?

7 A Yes.

8 Q And comments were due by last Friday, I
9 believe, March 4th. Were you aware of that?

10 A Yes.

11 Q And then the final Rate Announcement is
12 scheduled to be published April 4th, 2022?

13 A The final Rate Announcement must be published
14 no -- no later than the first Monday in April.

15 Q Thank you.

16 So given the time that you were in the role of
17 a health insurance specialist working on the rate
18 announcements, is it fair to say that you were involved
19 in the calendar year 2012 and 2013 MA payment notices?

20 MS. KRIEG: Object to form. Vague.

21 THE WITNESS: Can you restate the question,
22 please?

23 Q BY MS. SCHEFFLER DO: Sure. I said, so looking
24 at the time period that you were in the role of health
25 insurance specialist working on the rate announcements,

1 is it fair to say that you were involved in the calendar
2 year 2012 and 2013 MA payment notices?

3 A What do you mean by "involved"?

4 MS. KRIEG: The same objections.

5 Q BY MS. SCHEFFLER DO: You stated earlier that
6 you analyzed impacts of changes to payment rates and risk
7 scores in support of annual rate announcements, correct?

8 A Yes.

9 Q And did you do that for the calendar year 2012
10 and 2013 MA payment notices?

11 A I know I did it for the 2012 notice. I don't
12 remember when -- quite when I -- I made the -- the
13 change. Sorry. Give me a minute, please.

14 Q Sure.

15 A I believe I worked -- yes, I believe the answer
16 is yes.

17 Q Okay. And then from there you became a
18 director within the Division of Payment Systems, Medicare
19 Plan Payment, which sits within the Medicare Plan Payment
20 Group. Did I get that right?

21 A Yes.

22 Q And you took that position in August 2012?

23 A Yes.

24 Q I may refer to the Medicare Plan Payment Group
25 as MPPG. Is that okay with you?

1 A Yes.

2 Q And you stayed in that role until
3 September 2014, correct?

4 A Yes.

5 Q And as a director within MPPG, you developed
6 payment policy for Medicare Advantage and Part D,
7 correct?

8 MS. KRIEG: Object to form. Vague.

9 THE WITNESS: Can you be more specific, please?

10 Q BY MS. SCHEFFLER DO: Sure. What did you mean
11 by developed payments policy for Medicare Advantage in
12 your LinkedIn profile?

13 A I worked on nonrisk adjustment payment policy
14 for Medicare Advantage and Part D.

15 Q Did you state nonrisk adjustment payment
16 policy?

17 A Yes. That --

18 Q What is that?

19 A That was the role of the division.

20 Q What -- what does that mean, nonrisk adjustment
21 payment policy?

22 A It means the rate book. It means Part D, bid
23 analyses. It means Part D payment. That doesn't involve
24 the risk adjustment model, and it doesn't involve the
25 risk adjustment model with Medicare Advantage or Part D.

1 Q Did you have responsibility for other payment
2 mechanisms in Medicare Advantage Plans such as the coding
3 intensity adjustment?

4 MS. KRIEG: Object to form. Vague.

5 THE WITNESS: Can you be more specific, please?

6 Q BY MS. SCHEFFLER DO: During your time at MPPG,
7 did you have any responsibilities for something known as
8 the coding intensity adjustment?

9 MS. KRIEG: The same objection.

10 THE WITNESS: I don't know what you mean by
11 responsibilities.

12 Q BY MS. SCHEFFLER DO: How would you define
13 responsibilities?

14 A I would define responsibilities as someone that
15 was accountable and -- accountable for -- for something,
16 generally speaking. So somebody who was the lead -- I
17 would say the lead person working on a -- on a topic.

18 Q Okay. Were you the lead person?

19 A Not during the time frame we're -- not during
20 the time frame we're talking, no.

21 Q At -- during any time frame.

22 A During 2005, 2006 to 2007, I worked on coding
23 intensity adjustment studies. And then following that
24 time period I -- I no longer had any -- any
25 responsibility on coding intensity. It was done else --

1 done by other members of the -- the division.

2 Q Okay. How about Risk Adjustment Data
3 Validation audits? Were you familiar with those?

4 A Yes.

5 Q Did you have any responsibilities related to
6 Risk Adjustment Data Validation audits during this time
7 period at MPPG?

8 A No.

9 Q How about at any period?

10 A Any period at CMS?

11 Q Yes.

12 A No.

13 Q But you are familiar with those audits?

14 A Yes.

15 Q And are you familiar with the RADV
16 fee-for-service adjuster?

17 A Are we -- can you define familiar, please.

18 Q I will use the same definition you gave
19 earlier.

20 A Can you remind me what that definition was?

21 Q Sure. It may be faster if you -- if you want
22 to provide your definition of familiar. Otherwise, I can
23 look on this.

24 A I just want to make sure it's consistent.

25 Q Sure. How would you define familiar?

1 A Aware of.

2 Q Okay. Are you aware of --

3 (Speaking simultaneously.)

4 THE WITNESS: Yes.

5 Q BY MS. SCHEFFLER DO: I'm sorry, go ahead.

6 A I would say -- I would define familiar as being
7 aware of something.

8 Q Are you aware of the RADV fee-for-service
9 adjuster?

10 A Yes.

11 Q Do you have -- strike that.

12 You mentioned bids, that you analyzed Medicare
13 Advantage bids and payments and changes in MA payment
14 rates. Is that something you did while at MPPG?

15 A Yes.

16 Q What does analyze Medicare Advantage bids mean?

17 A It meant that I would review the bid data after
18 it was submitted to discern any trends in payments or
19 risk scores or additional benefits in the form of rebate
20 dollars that were being offered by Medicare Advantage
21 Plans, and similarly I think for Part -- for Part D, I
22 think it was. Actually, I don't remember much of the
23 details about the Part D analyses as I think about it.
24 Most of the analyses I can think of were more on the
25 Medicare Advantage side. I may have analyzed Part D

1 data. I just don't remember details of what I did.

2 Q Okay. And you said that you would review the
3 bid data after it was submitted. Would that be before it
4 was approved --

5 A Yes.

6 Q -- with CMS?

7 And you were reviewing it, you said, to discern
8 any trends in payments or risk scores or additional
9 benefits in the form of rebate dollars that were being
10 offered to Medicare Advantage. That's a fair summary?

11 A Yes. And differences in bids by geography or
12 other variation that we might see in bids by plan type
13 perhaps.

14 (Court reporter clarification.)

15 Q BY MS. SCHEFFLER D0: Did you have any role in
16 approving the bids?

17 A No.

18 Q Okay. From MPPG you then became a health
19 insurance specialist at the Centers for Medicare and
20 Medicaid Innovation, correct?

21 A Yes.

22 Q And that's sometimes referred to as CMMI or the
23 Innovation Center; is that right?

24 A Yes.

25 Q And am I right that the Innovation Center

1 develops new payment and service delivery models with
2 CMS?

3 A Yes.

4 Q And you were there from September 2014 to
5 July 2015, correct?

6 A Yes.

7 Q In that role, did you have -- you assisted in
8 the development and implementation of alternative ACA
9 Section 2021 funded models to test value-based
10 arrangements. Can you explain what that means?

11 A I am sorry, there were a couple parts of that
12 question.

13 Q Sure. I am just reading from your LinkedIn.
14 It says you assisted in development and implementation of
15 alternative ACA Section 2021 funded models to test
16 value-based arrangements. I am just trying to understand
17 a little bit more what that means.

18 A "That" is vague to me. What -- what is the
19 "that" that you are referring to?

20 Q I am referring to the -- the line on your
21 LinkedIn profile describing what you did at CMMI that I
22 just read.

23 A The work that I did there was on supporting
24 development of models that would test other ways to pay,
25 whether it's Medicare or -- pay Medicare Advantage Plans

1 or pay other provider types within -- within the Medicare
2 program.

3 Q And did you have any responsibilities related
4 to risk adjustment in that role?

5 A Was I -- are we defining responsibil- -- how
6 are we defining responsibility?

7 Q I guess, so you -- you said that you were
8 assisting with the development in implementation of
9 different types of funded models. I am wondering if risk
10 adjustment was one of those models. Did you play any
11 role with respect to risk adjustment during your time at
12 CMMI?

13 MS. KRIEG: Object to form. Vague.

14 THE WITNESS: It's hard for me to remember how
15 risk adjustment was used in the different models. They
16 may have -- they may have had at moments a risk
17 adjustment in some of the models, but I don't recall
18 specific details around how it was -- what -- what my
19 risk adjustment work would have been at that time as --
20 as it relates to the CMMI models. I just -- I don't
21 recall.

22 Q BY MS. SCHEFFLER DO: Okay. And I -- I promise
23 we are not going to go through your entire background
24 because it's pretty lengthy. I did want to ask about one
25 more role, which was your manager -- when you were the

1 Q Were you involved in any decision-making at CMS
2 around this proposed rule?

3 A No.

4 Q Did you have any roles and responsibilities
5 related to this proposed rule?

6 A Not that I can recall.

7 Q Did you attend meetings on this topic with
8 Whitney Johnson?

9 A It's certainly possible.

10 Q Or with Anne Hornsby?

11 A Excuse me?

12 Q Anne Hornsby.

13 A Yes, it's certainly possible. If I had a role
14 it may have been in reviewing, but I wasn't a lead on any
15 of the content for that rule.

16 Q So what's your understanding of what the
17 proposed rule said?

18 A On -- on what topic? I think it may have said
19 multiple things.

20 Q Specific to medical record reviews.

21 A My recollection was that it required plans to
22 do -- if they were going to do medical record reviews,
23 that they would do two-way reviews.

24 Q And so this was being proposed for the first
25 time in January 2014, right, as part of this proposed

1 rule?

2 A That requirement?

3 Q Yes.

4 A Yes. That's my understanding.

5 Q And were you still at MPPG when CMS ultimately
6 decided not to finalize this rule?

7 A What was the date of the final rule?

8 Q May 23rd, I believe, 2014. It was in May.

9 A Yes.

10 Q And do you have an understanding of why CMS
11 decided not to finalize that rule?

12 A You mean that portion of the rule?

13 Q That portion of the rule. Thank you.

14 A I don't really remember. I feel like they had
15 gotten significant pushback from industry and that was
16 why, but that's about all I remember.

17 Q So CMS at this time, in fact, even as of 2005,
18 knew that MA Plans were conducting medical record reviews
19 to add codes, right?

20 MS. KRIEG: Object to form.

21 THE WITNESS: When you say CMS knows -- knows,
22 what does -- I don't know what that means.

23 Q BY MS. SCHEFFLER DO: That CMS was aware --
24 folks at CMS like yourself, including yourself, knew that
25 MA Plans were conducting medical record reviews to add

1 codes?

2 MS. KRIEG: Object to form. It calls for
3 speculation.

4 THE WITNESS: But you said CMS knows. I
5 don't -- I don't -- I can't speak for what CMS knew or
6 didn't know. I can just speak to what I knew and people
7 that I worked with that were involved in it. And, you
8 know, my understanding from working with Sean and Jeff
9 Grant was that plans were submitting medical records -- I
10 mean, excuse me, plans were submitting diagnoses codes
11 from medical records review and that that was permissible
12 and it was allowed. And I knew that from Tom Hutchinson
13 and Cheri Rice.

14 Q BY MS. SCHEFFLER D0: Cheri Rice. Any others
15 within CMS that you knew that from?

16 A Those are the main people I can remember that I
17 would have learned that from.

18 Q So CMS wanted to require MA Plans to look for
19 unsupported codes to read. That was the purpose of this
20 portion of the rule that we were discussing about medical
21 record reviews, right?

22 MS. KRIEG: Object to form. Calls for
23 speculation.

24 THE WITNESS: My understanding is that CMS was
25 saying if a plan conducted a medical record review, they

VIDEOTAPED DEPOSITION OF
JULIA M. LAMBERT, FSS, MAAA
Friday, April 5, 2024; 9:11 a.m. CDT

Reported by: Cindy L. Sebo, RMR, CRR, CLR, RPR,
CCR, CSR, RSA, CA CSR 14409, NJ Certified CR
30XI0024460, NJ Certified RT 30XR00019500, NM CSR
589, NY Realtime Court Reporter, NY Association
Certified Reporter, OR CSR 230105, TN CSR 998, TX
CSR 12778, WA CSR 23005926, Notary Public
Job No. 1101160

1 Q. Right. Yep, yep, I agree.

2 Removal of unsupported codes
3 has an impact on the model and would cause the
4 average relative value to increase; is that
5 correct?

6 A. Yes, I can agree with that
7 statement.

8 Thank you.

9 Q. But wouldn't the addition of
10 unsubmitted codes have the opposite effect on
11 the model?

12 ATTORNEY ABASCAL: Object to form.

13 THE WITNESS: The addition of
14 unsupported codes would have the opposite
15 effect to the model, I agree.

16 BY ATTORNEY VOLDMAN:

17 Q. Unsubmitted, correct?

18 A. Unsubmitted.

19 Q. Yeah.

20 A. Yes, thank you. I --

21 Q. I -- I -- I don't know if we want
22 to think of a different phrase for those,
23 but . . .

24 Okay. So -- and -- and this

1 is where I'm a little confused, because
2 wouldn't, like, an accurate model in your
3 recalibration be based off of both removing
4 unsupported and adding unsubmitted codes?

5 ATTORNEY ABASCAL: Object to form.

6 THE WITNESS: Adding unsubmitted
7 codes would be a different study. If you
8 would do that, presumably you would be
9 creating a -- a new data set from the TM
10 data, where the new data set would have more
11 complete coding, potentially being more
12 similar to what is happening in MA. And if
13 you would do that study, you would then need
14 to consider how the CIA is already adjusting
15 for that more complete coding that's in MA.

16 BY ATTORNEY VOLDMAN:

17 Q. Okay. And if you reran this
18 calibration off of the data set you described,
19 removing unsupported and adding unsubmitted, a
20 lot of other things would change, including the
21 Coding Intensity Adjuster, probably; is that
22 right -- or it could change?

23 A. Yeah, you'd have to --

24 ATTORNEY ABASCAL: Object to form.

1 Go ahead.

2 THE WITNESS: -- you would have to
3 look at it and see. It -- it's a very
4 different payment system and calibration at
5 that point, so evaluating actuarially sound
6 payment would involve looking at the whole
7 system, yes.

8 BY ATTORNEY VOLDMAN:

9 Q. And the normalization factor could
10 change; is that right?

11 ATTORNEY ABASCAL: Same objection.

12 THE WITNESS: I just want to make
13 sure I understand what you mean by "the
14 normalization factor."

15 BY ATTORNEY VOLDMAN:

16 Q. I forget its full name. One
17 second.

18 The FSS normalization factor,
19 which you describe on 16.

20 A. And what -- what was the question
21 that I -- I'm hung up on that. So what was the
22 question, then?

23 Q. If the model was recalibrated with
24 both additions of unsubmitted codes and removals

1 codes, taken away codes, recalculated the CIA,
2 recalculated normalization factor -- for a
3 complete opinion.

4 Is there -- do you have a
5 response for why that wasn't necessary?

6 A. My analysis was evaluating how
7 relative values change, and that was important
8 for me to reestablish. It was not necessary and
9 it was not within scope of my analysis to
10 redesign the entire payment system with all of
11 those factors under this hypothetical
12 assumption. It wasn't necessary to my opinion.

13 Q. Okay. Did you work with Dr. Salve
14 on his design of what he sampled at all?

15 A. No.

16 Q. Okay. What about with Dr. Isaacs
17 on how he did the chart review in his expert
18 report?

19 A. No.

20 Q. Going back to your analysis of what
21 you summarized as how removing unsupported codes
22 would affect the relative factors.

23 Is that a fair
24 characterization?

1 A. I -- I had a moment there that I
2 didn't hear the first part of what you said.

3 Can you just say it --

4 Q. Sure.

5 A. -- what did you say?

6 Q. Like, two questions ago, you
7 testified that your analysis had to do with how
8 the removal of unsupported codes go through the
9 model and affects the relative values; is that
10 correct?

11 A. Yes.

12 Q. Okay.

13 What does that analysis or its
14 conclusions have application to this case?

15 ATTORNEY ABASCAL: Object:
16 foundation.

17 THE WITNESS: ASOP 45 indicates
18 that the application model -- the
19 application data -- sorry -- that the
20 development data and the application --
21 application data needs -- need to be
22 consistent and have consistent patterns of
23 coding.

24 If they do not, we may have a

1 problem -- or we do have a problem,
2 especially if that data impacts -- that
3 difference impacts the development of the
4 model. And my analysis shows that those
5 unsupported codes in the TM data do impact
6 those relative values in the current
7 payment system.

8 So it's important, to me, to
9 establish that there is an impact of the TM
10 unsupported codes to the model --

11 BY ATTORNEY VOLDMAN:

12 Q. Okay.

13 A. -- and because it does, you need to
14 figure out how the differences are -- are
15 impacting overall payment.

16 Q. Okay.

17 So you were hired, you know,
18 to provide an expert opinion in this lawsuit by
19 Latham & Watkins or Bartlit Beck, correct?

20 A. Yes, they were -- they engaged us,
21 correct.

22 Q. And with your expert opinion, what
23 are you trying to help the jury understand or
24 work through?

1 ATTORNEY ABASCAL: Object:
2 foundation and form.

3 THE WITNESS: From an actuarial
4 standpoint, I believe it's important to this
5 case that unsupported diagnoses do not
6 necessarily result in overpayments.

7 BY ATTORNEY VOLDMAN:

8 Q. Okay. And I'm focusing on the word
9 "necessarily."

10 Does the presence of
11 unsubmitted diagnoses in the traditional
12 Medicare data have no bearing on that?

13 ATTORNEY ABASCAL: Object to form.

14 THE WITNESS: It -- it seems to be
15 a -- a very different question, but
16 unsubmitted codes resulting -- that result
17 in MA payment having more complete coding
18 and diagnoses than TM data is, from my
19 perspective, handled as part of the CIA.

20 BY ATTORNEY VOLDMAN:

21 Q. So I understand for MA payment.
22 But, I mean, unsubmitted codes in the TM -- in
23 the calibrating data?

24 A. I'm sorry.

1 Then what -- what's the question?

2 Q. What I'm trying to understand is --
3 you're using the unsupported error rate for many
4 of your analyses, and I am trying to understand
5 why that's appropriate as opposed to using some
6 sort of net error rate that includes both
7 unsubmitted and unsupported codes.

8 A. That sort of statement would
9 require me to do an analysis of the CIA, which
10 -- which would then necessitate access to data
11 that I just don't have.

12 Q. Did you request it of your counsel?

13 A. I was -- I didn't ask -- did not
14 ask for that data from my counsel. But doing a
15 study on unsubmitted diagnoses was not necessary
16 for my opinion, so I didn't ask for it.

17 Q. Okay. Do you know how Dr. Salve
18 pulled HCC markers and what he asked for when
19 doing so?

20 A. I have a general understanding of
21 that but not a detailed understanding.

22 Q. Okay. So he identified some number
23 of HCC markers per HCC and asked the
24 United States for the -- the charts that support

1 those HCCs; is that correct?

2 A. As a general matter, yes. I agree
3 with that.

4 Q. Okay. Do you know if he asked for
5 the complete medical records of those
6 beneficiaries or just the medical records that
7 substantiate the HCC in question?

8 A. I don't know.

9 Q. Okay. If he only asked for the
10 records that substantiate the HCC in question,
11 is it possible that other medical records
12 associated with that beneficiary that have an
13 unsubmitted code mapping to that same HCC?

14 ATTORNEY ABASCAL: Object to form.

15 THE WITNESS: So, sorry, there was
16 a lot there.

17 Can you just reask that question,
18 please?

19 BY ATTORNEY VOLDMAN:

20 Q. Sure.

21 ATTORNEY ABASCAL: Do you need a
22 break soon?

23 THE WITNESS: Yeah. We can
24 probably finish this.

1 I, Cindy L. Sebo, Nationally Certified Court
2 Reporter herein, do hereby certify that the
3 foregoing deposition of JULIA M. LAMBERT, FSS, MAAA
4 was taken before me pursuant to notice at the time
5 and place indicated; that said witness duly swore to
6 tell the truth, the whole truth, and nothing but the
7 truth under penalties of perjury; that said
8 testimony of witness was correctly recorded to the
9 best of my abilities in machine shorthand,
10 thereafter transcribed under my supervision with
11 computer-aided transcription; that deposition is a
12 true and accurate record of the testimony given by
13 the witness; that I am neither counsel, nor kin to
14 any party in said action, nor interested in the
15 outcome; and that a copy of this transcript obtained
16 from a source other than the court reporting firm,
17 including an adversary or co-counsel in the matter,
18 is uncertified and may not be used at trial.

www.MagnaLS.com

1 Q. Great. All right, Ms. Leonard.

2 You understand that you are under oath

3 today?

4 A. Yes.

5 Q. Is there any reason why you

6 cannot testify truthfully today?

7 A. No.

8 Q. Ms. Leonard, because you have not

9 had your deposition taken in this case, I'd

10 like to ask you a few questions about your

11 background so that I can get to know where

12 you fit in the whole architecture.

13 A. Okay.

14 Q. Where do you work currently?

15 A. I work at the Centers for

16 Medicare and Medicaid Services in the Center

17 for Program Integrity. I am the director of

18 the compliance group.

19 Q. Did I hear you say you're the

20 director of the Provider Compliance Group?

21 A. Yes, that's correct.

1 Q. And that is within the Center for
2 Program Integrity?

3 A. Correct.

4 Q. How long have you been the
5 director of the Provider Compliance Group?

6 A. I have been in that current
7 position since November of 2020.

8 Q. What was your job title before
9 you became director of the Provider
10 Compliance Group?

11 A. I was the deputy director of the
12 Provider Compliance Group, and I was that
13 since September of 2013 through November of
14 2020.

15 Q. And before you were deputy
16 director of the Provider Compliance Group,
17 were you with CMS?

18 A. I was, yes.

19 Q. What was your job title before
20 then?

21 A. I was the director of the

1 division of Recovery Audit Operations.

2 Q. Is the division of Recovery Audit
3 Operations part of the Provider Compliance
4 Group?

5 A. It is, yes.

6 Q. And when did you become the
7 division director for the Recovery Audit
8 Operations division?

9 A. 2008.

10 Q. Were you with CMS prior to 2008?

11 A. I was, yes.

12 Q. What was your job title before
13 then?

14 A. Yes, I've been at CMS a long
15 time. Prior to that I was a health
16 insurance specialist in the Financial
17 Services Group.

18 Q. Is the Financial Services Group a
19 different group than the Provider Compliance
20 Group?

21 A. It is, yes, it is.

1 Q. Is it also part of the Center for
2 Program Integrity?

3 A. It is not. It is part of the
4 Office of Financial Management.

5 Q. When did you start as a health
6 insurance specialist in the Office of
7 Financial Management?

8 A. In 1999, and that is when I
9 started at CMS.

10 Q. Can you briefly summarize any job
11 history you had prior to joining CMS in
12 1999?

13 A. I think you're going really far
14 back then. I joined CMS shortly right out
15 of college, so most of my relevant job
16 experience would be at CMS.

17 Q. Where did you go to college?

18 A. I have a Bachelor's from the
19 University of Baltimore and a Master's
20 degree from Loyola College in Maryland.

21 Q. What is your Bachelor's degree

1 we believe the claim is accurate.

2 BY MR. MARTINEZ:

3 Q. And when you say "accurate," even
4 though CMS hasn't reviewed that 99 percent
5 of fee for service claims, is it your
6 testimony that CMS assumes that those
7 diagnosis codes within those claims, the 99
8 percent, have support in the medical record
9 documentation?

10 A. My testimony is that CMS has paid
11 the claim on the face of the claim as passed
12 through the automated edits and the standard
13 claim processing edits, and we have paid the
14 claim with the belief that it is an accurate
15 claim. And that can either be proved true
16 or false upon medical record review, but we
17 are paying the claim on the basis of the
18 claim with the belief that it is accurate.

19 Q. Am I correct that there might be
20 reasons in which CMS pays a claim in the fee
21 for service context that has nothing to do

1 with whether the diagnosis codes are
2 accurate?

3 MS. GLOVER: Objection. Form.

4 THE WITNESS: If I'm interpreting
5 your question correctly, then yes, there
6 certainly could be some claim sites that are
7 not edits, they are algorithms in the
8 automated edits claim processing system that
9 would look at every single diagnosis that
10 would be on every single claim. And so some
11 of those claims could be paid without a
12 review of those diagnosis codes, again on
13 the face of the claim.

14 BY MR. MARTINEZ:

15 Q. Right. So just CMS pays a claim
16 in the fee for service context does not mean
17 that the diagnosis codes in that claims data
18 are accurate?

19 MS. GLOVER: Objection. Form.

20 Out of scope.

21 THE WITNESS: In the provider

1 agreement, providers sign that they are
2 going to submit accurate claims. I am
3 positive that there's more official language
4 than that in the CMS provider agreement, but
5 it boils down to they not only have to
6 submit claims, but they have to keep all
7 necessary documentation.

8 And so there is a belief that
9 providers are doing that when they are
10 submitting claims. And so CMS does take it
11 at face value that providers are, in fact,
12 submitting accurate claims, including
13 diagnosis codes when they're submitting
14 those claims and when we are making payments
15 on them on the face of the claim.

16 BY MR. MARTINEZ:

17 Q. My question was, just because CMS
18 pays a claim in the fee for service context
19 does not mean that the diagnosis codes for
20 that claim are accurate; correct?

21 MS. GLOVER: Objection. Form.

1 Asked and answered. Out of scope.

2 THE WITNESS: I do believe I have
3 answered that question. CMS and the
4 provider have entered into an agreement.
5 Part of that agreement is that they submit
6 accurate information, and CMS is taking them
7 on their word when they go through the
8 claims processing system that these are, in
9 fact, accurate claims, accurate diagnosis
10 codes when they are submitted.

11 BY MR. MARTINEZ:

12 Q. So respectfully, I don't think
13 you've answered my question, because it
14 really calls for a yes or no type of answer.
15 So I'll ask it again.

16 Just because CMS pays a claim in
17 the fee for service context does not mean
18 that the diagnosis codes for that claim are,
19 in fact, accurate; correct?

20 MS. GLOVER: Objection. Form.

21 Asked and answered. Argumentative. You

1 CERTIFICATE OF COURT REPORTER

2 I, BARBARA MOORE, do hereby
3 certify that the proceedings were recorded
4 by me stenographically and electronically at
5 the time and place mentioned on the cover
6 sheet thereof, and, thereafter, transcribed;
7 that said hearing is a true record of the
8 statements made; that I am neither counsel
9 for, related to, nor employed by any of the
10 parties to this proceeding;

11 And further, that I am not
12 financially or otherwise interested in the
13 outcome of this matter.

CONFIDENTIAL

CONTAINS ATTORNEYS' EYES ONLY PORTIONS

The Videotaped, In-Person, Remote deposition of KIRK LIMMER was held on Wednesday, June 21, 2023, commencing at 10:40 a.m., at the Law Offices of DLA Piper, 650 South Exeter Street, Suite 1100, Baltimore, Maryland 21202 before Susan Wootton, Notary Public.

REPORTED BY: Susan Wootton, RPR, CLR

1 A Yes, I am.

2 Q And then Topic 24, as to Finding
3 Number 1 in the OIG report, you are familiar with
4 it as well?

5 A Yes, I am.

6 Q And you're, likewise, prepared to
7 testify on behalf of CMS --

8 A Yes --

9 Q -- as to that topic?

10 A Yes. I am.

11 Q What is your current position, if any?

12 A I am the deputy director in the
13 Parts C and D Actuarial Group.

14 Q Okay. That's what I thought. For
15 some reason, pay.gov had you as former, which --

16 A I --

17 MS. ZUPAC: That might be news.

18 Q -- which confused me.

19 Okay. So you're the deputy director
20 of the Parts C and D Actuarial Group within the
21 Office of the Actuary?

22 A Correct.

23 Q And the Office of the Actuary is
24 sometimes known as OACT?

25 A Yes.

1 Q Yes. And how long -- how many years
2 have you been the deputy in charge of the Parts C
3 and D Actuarial Group?

4 A I believe I took that role on in 2012.

5 Q Okay. So about 11 years.

6 A Yes.

7 Q And what was your role before 2012?

8 A I was an actuary in the Parts C and D
9 Actuarial Group.

10 Q And how many years were you in that
11 position?

12 A From 2002 through 2012.

13 Q Your responsibilities as deputy
14 director of the Parts C and D Actuarial Group
15 involve overseeing the review of Medicare
16 Advantage Part D bids, correct?

17 A Yeah. Yes.

18 Q And was your work as an actuary,
19 between 2002 and 2012, likewise in connection with
20 the review of Parts C and D bids?

21 A From the inception in 2006, when
22 the -- after the passage of the Medicare
23 Modernization Act.

24 Q So the Medicare Modernization Act
25 introduced the Part D benefit, correct?

1 A Correct.

2 Q And it made some modifications also to
3 the Part C program and how Medicare Advantage
4 plans are paid, correct?

5 A That's correct.

6 Q So it's fair to say that in addition
7 to whatever work you did to prepare for today as a
8 designee, you're personally very familiar with the
9 Parts C and D bidding process?

10 A Yes. I'm familiar with the C and D
11 process.

12 MR. MERON: And your answers -- the
13 answers audible to you?

14 THE REPORTER: Yes.

15 (Overlapping speakers.)

16 THE REPORTER: They could be a little
17 louder.

18 THE WITNESS: Okay. I'll try to speak
19 up.

20 MR. MERON: I confess I'm a little
21 hard of hearing. So that's why I asked. I'm not
22 always the best judge, but thank you.

23 Q Prior to 2002, were you at CMS as well
24 or were you still in school? Where were you prior
25 to 2002?

1 A Prior to 2002, I -- I was working at a
2 consulting firm, working in the retirement
3 industry or retirement community industry.

4 And prior to that I worked for Blue
5 Cross-Blue Shield in Maryland as a -- both of
6 those places -- as an actuary.

7 Q As an actuary? And would your work
8 for the Blue Shield -- Blue Cross-Blue Shield as
9 an actuary have involved, you know, Medicare Plus
10 C or Choice, or whatever name it was currently
11 then known, as Medicare Advantage?

12 A I did not have any role in that -- in
13 that -- those products. My roles were on the
14 commercial products.

15 Q Commercial products. What is your --
16 could you briefly describe to me your post-high
17 school educational history.

18 A Yes. I attended four years at Loyola
19 College here in Maryland, and I have a Bachelor of
20 Science in Mathematics with a concentration in
21 actuarial science.

22 Q Do you have any post-undergraduate
23 degrees?

24 A I've sat for and taken the actuarial
25 exams, and I'm fellow of the Society of Actuaries.

1 I'm also a member of the American Academy of
2 Actuaries.

3 Q And the actuarial exams that you took,
4 were those under the offices of the society or the
5 academy?

6 A Under the society.

7 Q Under the society?

8 A Yes.

9 Q And you're familiar, obviously, with
10 the -- as a member of the American Academy -- with
11 the American Academy's code of conduct, correct?

12 A Correct.

13 Q And one of the principles I know that
14 actuaries have, and are proud of, is that they're
15 required to function with integrity, correct?

16 A That is correct.

17 Q And by that, I mean specifically have
18 some independence from the -- from the goals of
19 the organization they work for, correct?

20 A In general, I don't know if the word
21 "independent" is spelled out in that code of
22 conduct, but yes, we generally act independently
23 and without bias.

24 Q How much time, roughly, would you say
25 you've taken to prepare for the deposition today?

1 population will be, correct?

2 A Yes. A --

3 MS. ZUPAC: Objection to form.

4 A Yeah. Yes. A risk score is
5 calculated from those, from demographic and
6 diagnosis codes.

7 Q So the plan, it might not know what
8 particular conditions a particular beneficiary
9 might have in the -- in the following year, but in
10 order to project its risk score, it must be making
11 some kind of estimation about the health
12 characteristics of the population, correct?

13 MS. ZUPAC: Object to form.

14 A It is making some estimate of the risk
15 scores. I -- I wouldn't classify it as making an
16 assessment of the health conditions.

17 See, the risk score is a product and
18 it's a result of those health conditions. But I
19 wouldn't say that they're -- they're -- they're
20 trying to project the health conditions.

21 They're trying to project the risk
22 scores with the actuary's. So we're talking about
23 the risk score in the Bid Pricing Tool.

24 So the actuary would be focused on
25 what is the calculation of that risk score? So

1 what is the resulting risk score that I expect for
2 that plan, in total?

3 They -- they -- they might not get
4 into assessments of health status or -- directly.
5 I mean, there -- there are -- they do have to make
6 adjustments for population.

7 They may -- I wouldn't know exactly
8 what the particular actuaries, you know, what
9 their focus is. There's a lot of variables that
10 go into that.

11 But I don't think that would be the --
12 that wouldn't be how I would classify it, is
13 they're projecting health status, as much as
14 they're projecting a score.

15 Q Well, the ultimate projection is the
16 total risk score --

17 A Yes. Yes.

18 Q -- correct?

19 A Yes.

20 Q And, as you said, the risk score is
21 going to reflect the sum of both the demographic
22 variables and the health conditions, correct?

23 A Yes.

24 Q So in order to project a risk score,
25 don't I have to be projecting some estimate of how

1 old my population is likely to be, how sick my
2 population is likely to be, all the things that go
3 into what the ultimate risk score is?

4 MS. ZUPAC: Object to form.

5 A So I just want to -- I want to make
6 sure I'm giving the answer that -- that's
7 representative. And I think that also depends on
8 the actuary's model and their choice of model.

9 So the -- the -- I guess it all --
10 what I'm trying to point out is, it depends on the
11 level of detail that they -- they get into on
12 that.

13 They may -- they may choose another
14 population that is similar. If they're -- say,
15 for example, if they're pricing a new population,
16 they could choose another population that's
17 similar.

18 If they -- that -- that population
19 then may or may not require adjustments. And to
20 the degree it requires adjustments, they would --
21 they -- they may need -- yes, they may need to
22 reflect potentially -- you know, potential changes
23 for age and all the other demographic factors that
24 go into it.

25 They -- there -- there's adjustments

1 Q So --

2 A Okay.

3 Q Yes?

4 A So it's basically the plan is
5 representing costs which are lower than the
6 benchmark, and it's the difference between those
7 two.

8 Q And the benchmark essentially
9 represent sort of a -- a cap on how much CMS is
10 going to pay to the plan to cover traditional
11 Medicare benefits, correct?

12 A Essentially, yes.

13 Q I know we covered this before, but
14 just to make sure we're on the same page, and so
15 the plan A/B benchmark is the standardized
16 benchmark times the projected risk score for the
17 plan?

18 A Yes.

19 Q And the plan A/B bid is the
20 risk-adjusted bid?

21 A Yes.

22 Q And then on line 2, it says: Rebate
23 calculated as savings times the rebate percentage.
24 Do you see that? Instructions for line 2.

25 A Yeah. Yes.

1 Q And the rebate percentage, we said, it
2 varies somewhere in the 50 to 75 percent range
3 depending on the year and the quality ratings for
4 the plan.

5 A Yes.

6 Q And if you then turn to page 73,
7 that's Worksheet 6: MA Bid Summary.

8 A Okay.

9 Q On page 74, there's a Section B: MA
10 Rebate Allocation.

11 A Yes.

12 Q And so I think this is what you were
13 talking about before, which is the plan has to
14 take that rebate amount that it calculated and it
15 has to allocate it between these various
16 categories of what we're calling supplemental
17 benefits; namely, reducing A/B cost sharing, other
18 A/B mandatory supplemental benefits; Part B
19 premium buydown, Part B basic premium buydown, and
20 Part D supplemental premium buydown, correct?

21 A Yes. And those are the only options.

22 Q And those are the only options, you
23 said?

24 A Yes.

25 Q Right? And by that, you mean they

1 can't use it for other purposes?

2 A Correct, right.

3 Q And the rebate -- I'm sorry. Strike
4 that.

5 So what the plan needs to do is once
6 it's calculated what the rebate amount is, it then
7 has to -- I'm going to try to get this right -- it
8 has to then design a package of supplemental
9 benefits that has an actuarial value equivalent to
10 the rebate amount it calculated; is that fair?

11 A I don't know if that order or timing
12 would take place. They may design a package --
13 again, this is going to depend on the individual,
14 the plan, and what their goals are in terms of
15 offering benefits and -- and price, of course, it
16 goes out -- those are probably the two biggest
17 considerations for them.

18 But they may develop a package first,
19 then price it through and see what the premium is.
20 In -- in any case there's probably -- and again,
21 this -- I'm not working on their behalf, but
22 there's probably -- it's probably an iterative
23 process of pricing and making adjustments to
24 benefits and/or premiums.

25 Q Okay. Fair enough. So I guess my

1 But the other components of CMS do not
2 extract that information or review it to do their
3 portions of the bid review, correct?

4 A That is correct. I'll just give one
5 stipulation. One thing that I did find is there
6 was -- some of it on the demonstration side,
7 they --

8 There was, at one point, where the
9 demonstration was being implemented -- this is
10 under the Senior Savings Model of 2021 -- so it's
11 out -- I believe it's outside the scope of this
12 time period.

13 But the program was implemented late
14 or -- or close to the bid submission deadline.
15 They did not have a way to collect some
16 information, so some of that information related
17 to that program, under the demonstration, was
18 uploaded to HPMS under -- under pricing supporting
19 documentation.

20 Q I see.

21 A That's -- that's the only thing. But,
22 that was -- again, that was outside of the time
23 period.

24 Q Okay. But within the time period, the
25 material -- the Bid Pricing Tool and the

1 supporting documentation for the Bid Pricing Tool,
2 that material is -- was reviewed only by OACT and
3 not by the other components for purposes of their
4 separate review?

5 A That's correct. That -- that -- that
6 has always been my experience. Plus, in my -- my
7 talking with the other components, I was not able
8 to find anything. I did ask that specific
9 question.

10 Q Okay. Great. So all those different
11 worksheets that we looked at -- that were part of
12 the Bid Pricing Tool -- those are all
13 OACT-specific worksheets that OACT uses as part of
14 its review?

15 A Correct. They are put together by
16 OACT. Helped to -- OACT helps to develop them.
17 OACT prepares the -- the bid instructions that go
18 along with them. And then that's all used
19 strictly in our review.

20 MR. MERON: Let me have the next
21 exhibit. This has already been marked.

22 Q So I'm showing you Exhibit 1076, which
23 is entitled "Care Improvement Plus" of Texas
24 Insurance Company.

25 There's a contract number. And then

1 it says: "MA Supporting Documentation for CY2015
2 Bid, Dated June 2nd, 2014."

3 A Yes.

4 Q Is this one of the documents you
5 reviewed in preparation for today?

6 A This looks -- this looks like the one.
7 I -- I -- I do not recall the word "care
8 improvement," but --

9 I don't know if I looked at that
10 specific part of the title. But this is -- yes.
11 There was a section. Okay. Yes. It looks like
12 it was.

13 Q So before we turn to the substance of
14 it, just so I can understand again the various
15 roles. So on the top of it says: "Index MA
16 Supporting Documentation."

17 And then there's a list of sections.
18 And many of these sections have parentheses after
19 them like WS1, WS4, WS2, WS5, et cetera, right?

20 A Yes.

21 Q So I assume WS is "worksheet"?

22 A That's what I would assume, too.

23 Q Okay.

24 A That -- that is a typical notation
25 that's been -- that's used. WK is also a notation

1 that sometimes --

2 It might not be use in this document,
3 but WK is also a notation we use for -- like,
4 abbreviation for worksheet.

5 Q So looking over the document as a
6 whole -- and if I understand your testimony
7 earlier -- so this is -- this -- to your
8 knowledge, is this MA -- when it says "MA
9 Supporting Documentation," it appears to be MA
10 supporting documentation supporting the
11 information, the pricing information that's part
12 of the Bid Pricing Tool?

13 A Correct. This document here looks
14 very much like what we would see for the
15 supporting documentation of a Bid Pricing Tool.

16 Q So this document -- and, you know, we
17 can spend -- I mean, there's hundreds of MAs --

18 A Yes.

19 Q -- of United plans.

20 A Yes.

21 Q So we submit hundreds of these
22 documents. So we're not going to go through them
23 all.

24 But documents that look like this
25 index, "MA Supporting Documentation" with these

1 A Yes. It's possible. I guess it
2 depends on the circumstances for that particular
3 benefit. I'm not going to say that that's exact,
4 but, yes, that concept is correct.

5 Q Okay. So turning back to 1076. So
6 there's -- on page 6 of the supporting
7 documentation there's a section 9: "Projected
8 Risk for Development WS5." Do you see that?

9 A Section 9? Yes.

10 Q And WS5 is Worksheet 5, correct?

11 A Correct.

12 Q And as we saw, part -- one of the
13 pieces of information you have to supply in
14 worksheet 5 is your projected risk score.

15 A Correct.

16 Q And so what you're looking at are some
17 of the supporting documentation that the plan is
18 submitting to justify its projected risk score,
19 correct?

20 A Yes.

21 Q And then if you turn to page 8, the
22 last paragraph before section 10. Do you see
23 that?

24 A Yes.

25 Q It said: We also adjusted projected

1 risk scores to account for changes in our medical
2 record review processes, specifically based on
3 multiple conversations with CMS and CMS's
4 treatment of medical record review in its
5 reasonable making process.

6 The health plan has decided to cease
7 one of its prior processes that identified and
8 deleted certain diagnosis codes through the
9 medical record review process. Do you see that?

10 A Yes.

11 Q So what this paragraph is saying is
12 that the plan has adjusted its projected risk
13 score to account for cessation of a prior process
14 that identified and deleted certain diagnosis
15 codes, correct?

16 MS. ZUPAC: Object to form.

17 A It says they've decided to cease one
18 of its prior processes that identified and deleted
19 certain diagnoses codes. Yes. It does say that.

20 Q And it also says that it adjusted its
21 projected risk scores to account for that.

22 A It says: We also adjusted projected
23 risk scores to account for changes in our medical
24 review process.

25 Q And then it says: Specifically,

1 we've -- the plan has decided to cease one of its
2 prior processes and delete codes. Correct?

3 MS. ZUPAC: Object to form.

4 A Yes. It does say that.

5 Q And CMS understands, right, that an
6 adjustment to a projected risk score -- to account
7 for cessation of a process to identify and delete
8 diagnosis codes -- would be an upward adjustment
9 in the risk score, correct?

10 MS. ZUPAC: Object to form.

11 Q All else being equal?

12 A So given the -- the brief context of
13 what is provided here, I don't know if I would
14 know the -- the scope of the entire -- the entire
15 change or the magnitude.

16 I think that the -- and there --
17 there's -- there's very little information in here
18 in terms -- to make an assessment on what -- you
19 know, the -- the entirety of what's happening
20 here.

21 This doesn't really state any
22 quantitative assessment. But that's not required.
23 I mean, the Standards of Practice don't
24 necessarily require that the actuary quantify some
25 of these coding things.

Reported by:
Marceline F. Noble
CSR No. 3024
Job No. 835287

1 disagreeing.

2 BY MR. VOLDMAN:

3 Q. How was Optum paid for the chart review
4 program that it provided for its clients?

5 MR. RYDBERG: Objection. Vague and lacks
6 foundation.

7 THE WITNESS: I wasn't responsible for the
8 chart review program. So I only know that a -- for
9 each chart that's retrieved, there is a -- there is a
10 dollar amount that is paid for those charts.

11 BY MR. VOLDMAN:

12 Q. Okay. Do you know who was responsible for
13 the chart review program at Optum?

14 MR. RYDBERG: Objection. Vague.

15 THE WITNESS: My understanding at that time,
16 it was Jim Colhour.

17 BY MR. VOLDMAN:

18 Q. Okay. Anyone else?

19 A. Not to my recollection.

20 Q. Okay.

21 A. He is the main person I work with.

22 Q. Did you work closely with Jim Colhour?

23 A. No.

24 Q. Okay. Did you work with anyone at M&R
25 regarding the chart review program?

1 MR. RYDBERG: Objection to form.

2 THE WITNESS: I don't recall working with
3 anyone there --

4 MR. VOLDMAN: Okay.

5 THE WITNESS: -- no.

6 BY MR. VOLDMAN:

7 Q. So back to CV3, how did it interact with the
8 chart review program? 'Cause that's how we got
9 introduced to chart review.

10 MR. RYDBERG: Objection. Vague.

11 THE WITNESS: Are you trying to understand
12 how -- how it -- how CV functioned with it?

13 BY MR. VOLDMAN:

14 Q. Yes.

15 A. So claims verification is a completely
16 separate process, where after the chart review is --
17 is completed, those charts are then moved into the
18 claims verification queue for evaluation purposes to
19 determine if they're eligible for claim verification.

20 BY MR. VOLDMAN:

21 Q. Okay. And we'll go back to eligibility
22 criteria in a little bit.

23 But what happened to charts once they were
24 determined to be eligible for claims verification?

25 MR. RYDBERG: Objection. Vague.

1 THE WITNESS: Yes. There's multiple steps.
2 It's a complex program. But at a high level, charts
3 would be evaluated for eligibility.

4 And if they had what we called a discrepant
5 HCC, which was an HCC that was found on claims but
6 was not found during the coding review, those charts
7 would then be funneled to a human coder for review.

8 BY MR. VOLDMAN:

9 Q. Okay. What would happen if the human coder
10 then didn't find that HCC?

11 MR. RYDBERG: Objection. Vague.

12 THE WITNESS: If the coder didn't find
13 validation for that HCC, that would then be sent to a
14 separate coder under the QA process for CV.

15 BY MR. VOLDMAN:

16 Q. Okay. And what would happen if that person
17 didn't find validation for that HCC?

18 MR. RYDBERG: Same objection.

19 THE WITNESS: The HCC would be marked for
20 delete, disposition in the system, and then sent
21 downstream to a different department.

22 BY MR. VOLDMAN:

23 Q. Okay. What department was it sent
24 downstream to?

25 A. I think the team was called -- I'm going to

1 call it the deletes team. I don't remember what
2 the -- what the term -- the teams change the names a
3 lot. So I'm going to call it the "deletes team."

4 BY MR. VOLDMAN:

5 Q. Sure.

6 Do -- do you recall who worked on the
7 deletes team? Which individuals?

8 A. I do.

9 Q. Can you name some of them?

10 A. Yeah. To my recollection, I remember
11 Rebecca Martin being the main lead there.

12 Q. Okay. Anyone else?

13 A. Not to my recollection.

14 Q. Okay. Did you ever work with anyone at M&R
15 regarding the claims verification program?

16 A. Not directly.

17 Q. What about indirectly?

18 A. I attended meetings where my managers were
19 the lead in those meetings. I just -- I was just an
20 attendee.

21 Q. Okay. Who from M&R was at those meetings?

22 MR. RYDBERG: Objection. Calls for
23 speculation.

24 THE WITNESS: I don't know all of the
25 meetings, but -- actually -- I don't recall actually.

CONFIDENTIAL - SUBJECT TO PROTECTIVE ORDER

DEPOSITION OF GEORGE MILLS
As 30(b)(6) Designee 3 of
The United States

Washington, DC
September 7, 2023

Reported by: John L. Harmonson, RPR
Job No. 1018234

1 But the question is: How did CMS come
2 up with the 4 percent error rate? And you started
3 the answer by saying I'm putting on my George Mills
4 hat. So I want to get the hats straight here.

5 A. Yeah.

6 Q. Were you describing a conversation you
7 had back in 2009 about this error rate?

8 A. Yeah. They came to me because when I
9 was in PCG, I ran the error rate for Medicare and
10 Medicaid, Medicare fee-for-service and Medicaid.
11 And the error rate the prior year in 2008 was about
12 3.9. That's where they're getting the 4; they're
13 rounding up.

14 Q. So you believe this figure came from a
15 conversation with you where you're describing the
16 Medicare fee-for-service error rate --

17 A. Yeah.

18 Q. -- which you contend is different,
19 apples and oranges as you describe it?

20 MS. McMAHON: Objection.

21 THE WITNESS: It's a lot different.

22 BY MR. ABASCAL:

23 Q. Okay. Do you know who that proposal was
24 made to? "We propose using the FFS error rate."

25 A. I don't know explicitly. I can assume

1 that it was to their group director and other
2 senior leaders above them in CM.

3 Q. Do you believe CMS used the error rate
4 at that time, that 4 percent error rate at that
5 time for any purpose?

6 A. No. And in fact, there is an email from
7 Jennifer Harlow to me talking about their new
8 methodology for figuring out the error rate. I
9 don't know the exact date, but there is an email in
10 2009 from Jennifer to me about it.

11 Q. About this error rate?

12 A. No. About the new --

13 MS. McMAHON: Objection to form.

14 THE WITNESS: -- the new error rate that
15 they're doing.

16 MR. ABASCAL: We've been going about an
17 hour. I usually take breaks every hour. Is that
18 all right with you? I can keep going --

19 THE WITNESS: No, that's fine.

20 MR. ABASCAL: -- but I think everybody
21 probably wants a break.

22 THE WITNESS: Thank you. I appreciate
23 that.

24 MR. ABASCAL: So we'll take maybe a
25 ten-minute break. We'll go off the record.

1 THE VIDEOGRAPHER: Off the record. The
2 time is 10:44.

3 (Recess taken.)

4 THE VIDEOGRAPHER: On the record. The
5 time is 11:02.

6 BY MR. ABASCAL:

7 Q. All right. Mr. Mills, we're going to go
8 on to another exhibit.

9 MR. ABASCAL: This is 2010/1/28, Tab 6.

10 (Exhibit 1505 marked for identification
11 and attached hereto.)

12 BY MR. ABASCAL:

13 Q. So, Mr. Mills, I'm handing you
14 Exhibit 1505. Do you recognize this document?

15 A. I believe I've seen this in the past.
16 Yes, I'm pretty sure.

17 Q. All right. I'm going to draw your
18 attention to the first page of the document, and
19 it's titled "Calendar Year 2007 Risk Adjustment
20 Data Validation, Development of a FFS Adjuster for
21 RADV, Discussion Paper (Draft)." And it's dated
22 January 28, 2010. Do you see that?

23 A. Yes.

24 Q. It says in the top: "Issue. CMS is
25 interested in understanding the difference in

1 ICD-9-CM coding accuracy between Medicare Advantage
2 organizations and Medicare fee-for-service
3 providers. The extent of FFS diagnosis coding
4 error is not known and needs to be established in
5 order to further define payment adjustment
6 estimates."

7 Do you see that?

8 A. Yes.

9 Q. You testified that you had seen this
10 document before. Did you see it in preparation, or
11 do you believe you saw it in the course of your
12 employment?

13 A. No, I'm pretty sure this is one -- it
14 looks very familiar as one of the ones that I was
15 given previously here, not through my own work.

16 Q. Oh, so this would have been for
17 preparation?

18 A. For prep. Not as George Mills, no.
19 This is 30(b)(6).

20 Q. Okay. Looking at the third paragraph,
21 it says: "To accomplish a comparable FFS adjuster,
22 a RADV-equivalent medical record review was
23 conducted to validate risk adjustment diagnosis
24 data reported on Part B FFS claims selected under
25 the CERT audits."

1 Do you see that?

2 A. Yes.

3 Q. Do you believe that took place?

4 A. Yes. I was actually the one that
5 recommended to Jonathan and Jennifer that they use
6 the CERT data to do their study.

7 Q. Why did you recommend that?

8 A. Because the CERT data had already been
9 medically reviewed, and the other advantage is they
10 already had the records in-house and you wouldn't
11 have go out and get it. And they were in
12 electronic format which could be easily provided to
13 the coders that were looking from the RADV -- the
14 risk adjustment perspective. Not getting the
15 records -- not having to go get the records really
16 was a much easier way to do it.

17 The other thing about the CERT sample is
18 it's certified representative of fee-for-service,
19 and it's a systematic random sample and it's
20 representative of the entire fee-for-service
21 population of claims.

22 Q. Okay. Let's draw your attention to the
23 third page of this document. And at the third page
24 it says: "FFS Adjuster Summary. Table 3 below
25 provides different FFS adjusters that resulted from

1 the above-described modeling."

2 Do you see that?

3 A. Yes.

4 Q. And what's described in the chart on
5 page 3?

[REDACTED]

22 MR. ABASCAL: Let's move on to another
23 exhibit, 2010/4/15.

24 (Exhibit 1165 marked for identification
25 and attached hereto.)

1 BY MR. ABASCAL:

2 Q. Mr. Mills, the document we just had gone
3 over was January 28, 2010. I'm handing you now an
4 exhibit three months later which is dated April 15,
5 2010. This is Exhibit 1165. It's an excerpt of
6 the Federal Register.

7 Do you see that?

8 A. Yes. And this is referenced in our
9 chart.

10 Q. And by "chart," you mean it's referenced
11 in the timeline you created?

12 A. The timeline chart, yes.

13 Q. So you had a chance to review it before
14 today's testimony; correct?

15 A. Yeah. The pages referenced here, yes.
16 Yes.

17 Q. Great. We're going to go through those
18 pages, not all of them. Let me start at the
19 beginning. The document is entitled on the
20 left-hand column "Medicare Program; Policy and
21 Technical Changes to the Medicare Advantage and the
22 Medicare Prescription Drug Benefit Programs."

23 Do you see that?

24 A. Yes.

25 Q. And in the "Summary" portion in that

1 first column it says: "This final rule makes
2 revisions..."

3 Do you see that?

4 A. Yes.

5 Q. So this in fact was a final rule issued
6 by HHS; right?

7 A. Yes, that's my understanding.

8 Q. Okay. Let me draw your attention to
9 page 19749 of this final rule.

10 A. Okay.

11 Q. In the middle column, about the center
12 of the page, there is a comment, and I'm going to
13 read from it.

14 "Many commenters from the MA industry
15 recommended that before CMS audit MA organizations
16 under RADV, the agency first account for any error
17 rates inherent in Medicare FFS data that affect MA
18 error rates. These commenters stated that through
19 the proposed RADV audit appeal process, CMS is
20 imposing a set of rules regarding physician
21 recordkeeping that were not anticipated in the
22 ICD-9CM coding guidelines, is not consistent with
23 standard practices and is not enforced on original
24 Medicare claims. The result, they allege, is de
25 facto MA payment adjustments based on recordkeeping

1 discrepancies without an adjustment to original FFS
2 Medicare risk scores for the same recordkeeping
3 discrepancies."

4 Do you see that comment?

5 A. Yes, I see that comment.

6 Q. All right. And could you read for us
7 what HHS responded to that comment in the response?

8 A. Okay. Right under that comment, the
9 response says: "We recognize that there may be
10 potential merit in further refining the error rate
11 calculation. We are currently studying this
12 issue."

13 Q. So you agree that CMS stated publicly
14 that there may be potential merit in the issue
15 described in the comment; correct?

16 A. Yes. On the date that this was written,
17 yes, that was what the thought was.

18 Q. And who approved this statement?

19 A. Well, regs go through a significant
20 internal process where regs are drafted. They're
21 reviewed internally by the component creating it.
22 They go throughout the agency for review. The
23 Office of General Counsel reviews. Then the regs
24 are sent to the department, and then they -- our
25 final approval is through OMB before they're

1 published.

2 Q. So it's a thorough process; right?

3 A. Yes.

4 Q. And it reflects the belief of the agency
5 at the time; right?

6 A. Yes, at the time. Yes.

7 Q. Why did CMS believe that the issue had
8 potential merit at that time?

9 MS. McMAHON: Objection; misstates the
10 document.

11 BY MR. ABASCAL:

12 Q. I didn't mean to misstate the document.
13 So why did HHS believe that the issue
14 had potential merit?

15 MS. McMAHON: Objection; misstates the
16 document.

17 THE WITNESS: Well, it said that we
18 needed to study the issue, that we are currently
19 studying the issue and recognize that there might
20 be merit in the issue. So I don't -- I can only go
21 by what the record shows.

22 BY MR. ABASCAL:

23 Q. All right. When the response says "we,"
24 who is it referring to?

25 A. We, again, as you pointed out, means

1 CMS.

2 Q. And so why did CMS believe it had
3 potential merit?

4 MS. McMAHON: Objection; misstates the
5 document.

6 THE WITNESS: Well, to me, the way I
7 read this is that we're committing to study the
8 issue. I mean, that's exactly what Jon said.
9 That's what Cheri Rice said. That these were
10 comments that they were hearing from the community
11 of stakeholders, and that Jon specifically noted
12 that he thought we had a responsibility to
13 investigate issues that were being raised by the
14 stakeholder community.

15 BY MR. ABASCAL:

16 Q. I understand. But that's not what the
17 document says; right? The second sentence says:
18 "We are currently studying the issue." Right?

19 A. Yeah.

20 Q. But the first sentence says: "We
21 recognize that there may be potential merit in
22 further refining the error rate calculations."

23 My question is why did CMS say that?

24 MS. McMAHON: Objection; asked and
25 answered.

1 THE WITNESS: Well, again, as Jon and
2 Cheri and others had indicated, we recognized that
3 there might be potential merit there, and we were
4 going to study the issue to determine whether or
5 not it really was an issue.

6 BY MR. ABASCAL:

7 Q. So at this point in time, it's fair to
8 say that CMS had not yet decided how to calculate
9 overpayments in RADV; correct?

10 MS. McMAHON: Objection.

11 THE WITNESS: Well, RADV is not -- how
12 the process works in RADV is not something I'm
13 really talking about here today. But potentially
14 the issue was after a RADV audit was completed,
15 whether there should be some discount applied to
16 whatever overpayment is due. That's the concept of
17 the adjuster.

18 BY MR. ABASCAL:

19 Q. Correct. So the concept is when you're
20 doing a RADV audit to determine the amount of
21 overpayment CMS had to determine whether or not it
22 would apply a discount, the FFS adjuster, to
23 determine the overpayments; right?

24 MS. McMAHON: Objection; form.

25 THE WITNESS: Well, yes. That's

1 conceptually the strategy here.

2 BY MR. ABASCAL:

3 Q. And so conceptually, CMS had not yet
4 decided, as you identified, whether or not to apply
5 an FFS adjuster because they said they were
6 currently studying the issue; correct?

7 A. The date here -- yeah, there was study,
8 and we had not made any public statements about
9 whether or not we would actually do one or not.

10 Q. So at this point in time, CMS had not
11 yet settled on the final formula for calculating
12 overpayments under RADV; correct?

13 MS. McMAHON: Objection.

14 THE WITNESS: At this time, there was no
15 final, and at least in my view there wasn't a final
16 one until we did our NPRM in 2018.

17 BY MR. ABASCAL:

18 Q. Okay. So for that entire time period up
19 until 2018, there wasn't a final methodology on how
20 to calculate overpayments under RADV because the
21 FFS adjuster was still pending; correct?

22 MS. McMAHON: Objection.

23 THE WITNESS: The adjuster issue was
24 still pending, and there was a long period of time
25 until the final conclusion was reached, which was

1 in our white paper and subsequent NPRM.

2 BY MR. ABASCAL:

3 Q. And that was in 2018?

4 A. In 2018.

5 Q. So prior to that, it hadn't yet been
6 settled; correct?

7 MS. McMAHON: Objection.

8 THE WITNESS: It hadn't been settled,
9 and there were other issues going on, and even when
10 the white paper was released in 2012 there still
11 was no number or methodology provided.

12 MR. ABASCAL: Let's move on to a
13 different exhibit, 2010/6/22. This is in my Tab 9.

14 Can we go off the record for a second?

15 THE VIDEOGRAPHER: Off the record. The
16 time is 11:18.

17 (Off the record.)

18 THE VIDEOGRAPHER: On the record. The
19 time is 11:19.

20 BY MR. ABASCAL:

21 Q. Mr. Mills, I'm showing you two exhibits,
22 Exhibit 1037 and Exhibit 1348.

23 (Exhibit 1037 marked for identification
24 and attached hereto.)

25 (Exhibit 1348 marked for identification

1 and attached hereto.)

2 BY MR. ABASCAL:

3 Q. I'm going to start with 1037. Do you
4 recognize Exhibit 1037?

5 A. Yes, I'm pretty sure I've seen this
6 before.

7 Q. And would you have seen it in
8 preparation for today, or in the course of your
9 work?

10 A. I'm pretty sure -- well, I know for a
11 fact it's in the course of preparing for today.

12 Q. All right. Exhibit 1037 is a document,
13 a PowerPoint it appears, titled "FFS Adjuster" with
14 the names below that Jennifer Harlow, Lateefah
15 Hughes and Jonathan Smith, dated 6/22/2010.

16 Do you see that?

17 A. Yes.

18 Q. And it appears to be a presentation
19 regarding the fee-for-service adjuster. Do you see
20 that?

21 A. Yes. A PowerPoint presentation, yes.

22 Q. Do you know who this presentation was
23 intended for or presented to?

24 A. I don't know for sure who this was
25 intended for, but I'm assuming that it was somebody

1 above Jennifer Harlow because she's listed as one
2 of the creators.

3 Q. All right. Let's look at Exhibit 1348.
4 If you could turn to that. Do you see Exhibit 1348
5 appears to be the same PowerPoint presentation
6 titled "FFS Adjuster," 6/22/2010? Do you see that?

7 A. Yes.

8 Q. But this version has talking points
9 below that. Do you see that?

10 A. Yes.

11 MS. McMAHON: Objection.

12 THE WITNESS: I see the talking points,
13 yes. And it appears to be the same presentation
14 with PowerPoint notes at the bottom, yes.

15 BY MR. ABASCAL:

16 Q. And I refer to them as talking points.
17 I'll just say they're just words below the slides;
18 correct?

19 A. Yeah.

20 Q. All right. Let me turn your attention
21 to slide 2 on this document. Slide 2, page 2, says
22 "Purpose" at the top. If you look at the second
23 bullet point, it says: "FFS adjuster will be
24 applied to RADV contract-level payment error
25 estimates to address unsupported diagnoses in FFS

1 I stated earlier, I'm assuming that it was somebody
2 above Jennifer Harlow because she was listed as one
3 of the authors so...

4 Q. Do you know what decision -- whether the
5 person above Jennifer Harlow agreed with the
6 recommendation?

7 A. I don't -- I don't have any information
8 one way or another. I didn't see anything that
9 said yes or no. I do know that they did a second
10 study basically using the same methodology but with
11 a much larger universe of claims.

[REDACTED]

[illegible]

[REDACTED]

18 Q. Understood.

19 But this is the methodology that these
20 three individuals at least, Jennifer Harlow,
21 Jonathan Smith and Lateefah Hughes were
22 recommending; correct?

23 A. Yeah. That was the methodology at that
24 time.

25 Q. And you agree that Jennifer Harlow,

1 Lateefah Hughes and Jonathan Smith are honest
2 people; right?

3 A. They're honest people, but they can make
4 mistakes.

5 Q. But they're hardworking; right?

6 A. Yeah, they're all hardworking, very
7 competent people.

8 Q. And they're competent in their jobs;
9 right?

10 A. Yes.

11 Q. And so at the time, these honest,
12 competent people believed the rules should be
13 interpreted to calculate overpayments in the method
14 described on the recommendations page; right?

15 MS. McMAHON: Objection.

16 THE WITNESS: That was the
17 recommendation at the time.

18 MR. ABASCAL: Let's go to 2010/7/27.

19 (Exhibit 1342 and 1343-1 marked for
20 identification and attached hereto.)

21 BY MR. ABASCAL:

22 Q. It's fair to say you believe that was
23 CMS's view at the time; right?

24 MS. McMAHON: Objection.

25 THE WITNESS: That was the

1 recommendation and, from my understanding, that was
2 the belief of a number of people in CM at the time.

3 BY MR. ABASCAL:

4 Q. Not just the three people listed;
5 correct?

6 A. Yeah, I can't give you an exact number,
7 but yes, that would appear to be true.

8 Q. Let's look at another exhibit,
9 Exhibit 1342. Exhibit 1342 is an email from
10 Jennifer Harlow to Jonathan Smith, Cheri Rice,
11 Stacey Deiter and Carolyn Kapustij. Do you see
12 that?

13 A. Yeah.

14 Q. What was Stacey Deiter's role at the
15 time?

16 A. I've never met her, and I've never -- to
17 the best of my knowledge, she wasn't deposed. She
18 appeared to be just a staff member working in DPV.

19 Q. What was Cheri Rice's role at the time?

20 A. I believe at that time Cheri Rice was
21 either the director of the Medicare Plan Payment
22 Group or the deputy director of the Plan Payment
23 Group. Again, I'm not really sure when Tom
24 Hutchinson left; but when he left, Cheri Rice took
25 over that group in CM.

1 Q. If you look at the subject line of the
2 email, it says "RADV FFS Adjuster_MPPGfinal_OFM
3 Briefing." Do you see that?

4 A. Yeah.

5 Q. Was there an OFM briefing around this
6 time?

7 A. I saw documents that there was an email
8 to a gentleman by the name of Ted Doolittle as well
9 as a copy to a gentleman named John Spiegel which I
10 believe had this PowerPoint attached to it. And
11 they were talking about what was going on in the MA
12 world. Well, wait a minute. I'm screwing up.

13 That's OFM. I'm thinking CPI. Sorry.
14 To OFM. Yeah, I'm not sure. It could have been to
15 me when I was in OFM.

16 Q. Okay. Do you remember attending a
17 briefing when you were at OFM on the model
18 calibration packet?

19 A. No. I don't remember ever having a
20 meeting. I remember Jennifer, as we previously
21 discussed, came to me originally and said we're
22 just going to use a fee-for-service error rate as a
23 proxy. And I'm like, well, you're going to have
24 issues.

25 Then they came up with a methodology.

1 And then I remember that she had sent me it. I
2 don't believe I ever responded to it. But I'm not
3 sure who this was to and who they met with.

4 Q. I recall you testifying about Jennifer
5 Harlow coming to you about the fee-for-service
6 error rate as a proxy. But was there a second
7 meeting where Ms. Harlow came to you with a
8 different analysis or methodology?

9 A. It wasn't a meeting. There is an email
10 when they came up with their methodology, that they
11 sent a methodology to me. That's in there. I
12 don't believe I ever responded to it because it was
13 their methodology and I didn't really have any
14 comments on it at the time given my role.

15 Q. Understood.

16 Well, let's look at the presentation
17 that's attached to this July email. The PowerPoint
18 presentation has the same three people listed,
19 correct, Ms. Harlow, Ms. Hughes and Mr. Smith?

20 A. Correct.

21 Q. And the title of it is "Part C Payment
22 Audit: RADV Model Calibration Factor."

23 What is a model calibration factor?

24 A. I've seen this used as another
25 descriptor of the fee-for-service adjuster. To me,

1 to the next page. See "Summary of FFS Error"? Do
2 you see that?

3 A. Yeah.

4 Q. Draw your attention to the last column.
5 It says "998 coded in 2011."

6 Is it possible that the 2011 refers to
7 the same 2009 claims but they were just reviewed
8 again in 2011?

9 A. Carolyn had indicated to me that they
10 had relooked at claims that had been already coded.
11 So that is plausible.

12 Q. But you don't know as you sit here
13 today?

14 A. I didn't get into that detail with them.
15 But yes, that's potentially possible.

16 MR. ABASCAL: Okay. I'm going to turn
17 to another exhibit, Exhibit 1273. It's been
18 previously marked. It's Tab 32.

19 (Exhibit 1273 marked for identification
20 and attached hereto.)

21 BY MR. ABASCAL:

22 Q. I'm handing you now Exhibit 1273. Do
23 you recognize this exhibit?

24 A. Yeah. This is a press release.

25 Q. From February 24, 2012; correct?

1 A. Yes.

2 Q. And the press release is entitled "CMS
3 Takes Steps to Reduce Improper Payments and Save
4 Money for Medicare."

5 A. Yes.

6 Q. All right. I want to draw your
7 attention to that first paragraph. "New audits of
8 Medicare Advantage contracts will reduce the
9 payment error rate for Medicare Advantage program
10 and will recover an estimated 370 million in
11 overpayments for the first audit year."

12 Do you see that?

13 A. Yeah.

18 MR. ABASCAL: And then let's go to the
19 next document which is Exhibit 1005.
20 (Exhibit 1005 marked for identification
21 and attached hereto.)
22 BY MR. ABASCAL:
23 Q. I'm handing you a document from the same
24 date, February 24, 2012.
25 A. Yeah.

1 Q. This is titled "Notice of Final Payment
2 Error Calculation Methodology for Part C Medicare
3 Advantage Risk Adjustment Data Validation
4 Contract-Level Audits."

5 Do you see that document?

6 A. Yeah.

7 Q. And have you reviewed this document
8 before?

9 A. Yes. I've seen it many times.

10 Q. And is this the white paper that you
11 were referring to earlier?

12 A. That's the nomenclature that
13 everybody -- how they described it, that this is
14 our white paper, yes.

15 Q. Okay. Who wrote this document?

16 A. My understanding is this was created by
17 MPPG. And the primary author was the Division of
18 Payment Validation; so Jennifer Harlow and her
19 team.

20 Q. And who approved the document?

21 A. Well, to be released, it would have been
22 approved by Cheri and the director of CM at that
23 time. I'd have to refer back and figure out who
24 that was. And then since there is a press release,
25 the press office as well, because this document was

1 attached to the -- as a link to the press release
2 as well as the office of the administrator.

3 So yes.

4 Q. It had several levels of approval;
5 right?

6 A. Yes. At that time, I believe Jon Blum
7 was the head of CM. And I believe Marilyn Tavenner
8 was the administrator in 2012.

9 Q. And they would have approved of this
10 before it goes out?

11 A. Yeah. I mean, with a press release and
12 the rollout, yes, that would have been approved
13 through all levels of CMS.

14 Q. And this is a paper that was the subject
15 of the White House meeting you referred to earlier;
16 correct?

17 A. Yeah.

18 MS. McMAHON: Objection; calls for
19 speculation.

20 THE WITNESS: The issues discussed in
21 this white paper were part of the presentation we
22 went over earlier.

23 BY MR. ABASCAL:

24 Q. In other words, the meeting -- the
25 purpose of the meeting at the White House was to

1 let them know that this paper would be issued;
2 right?

3 A. Yeah. What the agency's plans were for
4 doing RADV audits and this issue of the adjuster.

5 Q. And to make sure the White House had no
6 objection to it; right?

7 A. Yes. Objection and to give them a
8 heads-up of what was coming down the pike. I'm
9 sure that Jeanne -- you know, it would have been
10 one of the many things that Jeanne would have seen
11 from not just CMS but other parties.

12 Q. All right. So a lot of work was put
13 into the process of issuing this document; right?

14 A. Yes.

15 Q. And the document reflects the work of
16 several qualified people in risk adjustment; right?

17 A. Yes. And as I noted, I believe it was
18 produced by MPPG, Division of Payment Validation,
19 yes.

20 Q. And it reflects a considerable amount of
21 work; right?

22 MS. McMAHON: Objection; asked and
23 answered.

24 THE WITNESS: A considerable amount of
25 work and study, and it was based on what was known

1 at the time.

2 BY MR. ABASCAL:

3 Q. In fact, it was several years of work;
4 right?

5 A. Yes. The one thing that Ilina Chaudhuri
6 wanted me to -- or told me about was that there
7 seemed to be an impression in the MA community
8 that, like, this was like the number one issue
9 going on at the agency. This was just one of
10 hundreds of issues. So it was an important issue,
11 but it wasn't, like, the entire focus of every
12 person working in MPPG working on this. This is
13 one of many issues. So there's probably dozens of
14 other issues of similar or -- impact and where
15 plans had opinions one way or another, yes.

16 Q. That's a fair point. I'm not going to
17 get into all the other work that they did there.
18 But with respect to the work reflected in this
19 document, a lot of work at CMS was put into this
20 before issuing it; right?

21 A. Yes.

22 Q. And then let's go to the last page, the
23 second-to-last page, page 4.

24 A. Okay.

25 Q. It says: "Payment Recovery Amount and

1 the Fee-For-Service Adjuster." Do you see that?

2 A. Yes.

3 Q. I'm going to draw your attention to all
4 the language. Maybe it's easier to do it that way.
5 The first paragraph: "If the CI" -- confidence
6 interval. You understand CI stands for confidence
7 interval?

8 A. Yeah.

9 Q. "If the CI for the point estimate
10 includes zero or is below zero, the contract will
11 have the payment recovery amount constrained to
12 zero."

13 Do you see that?

14 A. Yes.

15 Q. So that's explaining how an overpayment
16 would be calculated; correct?

17 A. Yeah. But it's dealing with the issue
18 of where the adjuster is more than the derived
19 error rate for a plan. And it's saying that if
20 it's below zero that it will just be set at zero.
21 So we won't make a recovery, but we won't be making
22 a payment.

23 Q. In other words, if plans are deemed
24 underpaid, they won't be paid any money from CMS
25 under the RADV process; right?

1 A. Yes.

2 MS. McMAHON: Objection.

3 BY MR. ABASCAL:

4 Q. And then the next paragraph. "If the CI
5 for the point estimate is above zero, the payment
6 recovery amount for the contract will be determined
7 as follows. First, a preliminary payment recovery
8 amount will be set at the lower bound of the
9 99 percent CI" -- confidence interval -- "for the
10 contract's point estimate. Second, to determine
11 the final payment recovery amount, CMS will apply a
12 fee-for-service adjuster (FFS adjuster) amount as
13 an offset to the preliminary recovery amount. If
14 the FFS adjuster amount is greater than the
15 preliminary recovery amount, the final recovery
16 amount is equal to zero."

17 Could you explain what that means?

18 A. It's similar to what we're talking about
19 in the first sentence. But again, if the adjuster
20 is more than the final payment or recovery amount,
21 then the amount due from the plan would be zero.

22 Q. All right. And in addition, above that,
23 it specifies that if there is an overpayment amount
24 calculated, then the fee-for-service adjuster will
25 offset or reduce that overpayment. Correct?

1 A. Yes. So -- yes. So if the error rate
2 was 10 percent and the adjuster was 8.1, then the
3 amount due would be 1.9 percent of the extrapolated
4 amount, if that's what the lower bound of the
5 confidence interval suggested.

6 Q. And it says here that CMS will apply an
7 FFS adjuster. Right?

8 A. Yes, it does indicate that.

9 Q. Now, it later says at the last part of
10 the page: "The FFS adjuster accounts for the fact
11 that the documentation standard using RADV audits
12 to determine a contract's payment error (medical
13 records) is different from the documentation
14 standard used to develop the Part C risk adjustment
15 model (FFS claims)."

16 Do you understand that's the rationale
17 behind the adjuster?

18 A. Yes. Yeah, they said that many times.
19 Yes.

20 Q. And you've seen that reflected in the
21 documents many times?

22 A. Yes. In the talking points as well.
23 Yes.

24 Q. And then it goes on to say: "The actual
25 amount of the adjuster will be calculated by CMS

1 based on RADV-like review of records submitted to
2 support FFS claims data."

3 Do you see that?

4 A. Yes.

5 Q. So that indicates that CMS would
6 calculate an FFS adjuster in the future; right?

7 A. Yes. And we had already calculated
8 several, and we talked about it. But that amount
9 was not shown in this document, nor any other
10 amount. It was that we're still going to study and
11 develop a fee-for-service adjuster.

12 Q. Why didn't CMS announce the 7.8 or the
13 4.88 figure?

14 A. Well, I talked to Cheri -- well, Carolyn
15 and Cheri and Jon Blum and I asked them. And they
16 all felt that this is a very complicated matter and
17 they wanted to be dead sure that whatever number we
18 eventually issued was rock solid and completely
19 supportable.

20 And Jon indicated to me he didn't feel
21 like at that time that it was. And that later
22 turned out to be prophetic because it was
23 completely wrong. And -- the 4.88 and 8.1. So we
24 would really be in a sticky wicket if we would have
25 announced an adjuster at that time and then had to

1 walk it back.

2 MR. ABASCAL: Okay. So let's go to a
3 different document. Tab 35.

4 (Exhibit 2002 marked for identification
5 and attached hereto.)

6 BY MR. ABASCAL:

7 Q. I just want to clarify something. I was
8 just looking at your testimony. Just going back to
9 the prior document --

10 A. Okay.

[REDACTED]

[illegible]

[REDACTED]

23 Q. Was CMS contemplating allowing plans to
24 apply their own FFS adjuster when they're doing
25 their own self-audits as reflected here?

1 A. This is something that I don't believe
2 was ever taken beyond whatever is in this document.
3 I've never seen any comments like that or any kind
4 of verbiage insinuating that. To me, I read it as
5 if the plan verifies the data is accurate, then
6 we'll apply an adjuster to the risk score, as
7 opposed to the plan creating its own risk score. I
8 don't see that here.

9 Q. Fair enough. I wasn't suggesting the
10 plan would create its own FFS adjuster. But what
11 I'm asking is did CMS contemplate the plans doing
12 their own self-audits would apply the FFS adjuster
13 as determined by CMS?

14 A. Well, I'm not exactly sure that that's
15 what this means. I don't read it necessarily that
16 way.

17 Q. Would you read CMS applying the FFS
18 adjuster, then?

19 A. Well, to me, I read this as that the
20 plans have some validation protocol that they do
21 that somehow determines that their submissions are
22 accurate. And if they met that threshold, then a
23 fee-for-service adjuster would be applied against
24 any balance due.

25 Q. Okay, fair enough. And the

1 fee-for-service adjuster would be applied by CMS?

2 A. Yeah. It's part of that.

3 What I don't know is -- I know in other
4 documents, there was discussion about, like,
5 voluntary refunds and deletions and about whether
6 there should be an adjuster applied to them or not.
7 I don't know if this is applicable to that.

8 Q. Could you explain that in more detail?
9 What do those other documents say about applying an
10 FFS adjuster to voluntary refunds and deletions?

11 A. Well, that was a question, like
12 people -- and I can't remember whose it was. There
13 was an issue about if somebody issues a voluntary
14 refund, would there be a fee-for-service adjuster
15 applied to that based on their own -- you discover
16 a problem and then you do it. It's very similar.

17 I think it was in the document that
18 talked about what do we do if the number comes up
19 under zero.

20 Q. Around what time was that concept being
21 considered within CMS?

22 MS. McMAHON: Objection; misstates the
23 witness's testimony.

24 THE WITNESS: Well, off the top of my
25 head, I can't remember the document that I saw it

1 in or where this came up. But I believe it was
2 like post 2012.

3 BY MR. ABASCAL:

4 Q. Post 2012 and before 2018?

5 A. Yes.

6 Q. And was that document in reference to
7 voluntary refunds and deletions?

8 A. I believe it was more towards voluntary
9 refunds, because it's an identified overpayment by
10 the plan being returned and whether or not an
11 adjuster should apply to that.

12 Q. And was there a similar document you saw
13 or other conversation you heard about regarding
14 deletions?

15 A. No, not related to deletions. I don't
16 recall that.

17 Q. So you testified there was an issue
18 about if somebody issues a voluntary refund, would
19 there be a fee-for-service adjuster applied to
20 that.

21 Just to expand on that, so by voluntary
22 refund you mean an overpayment; correct?

23 A. Yeah. If a plan found that they
24 submitted an HCC incorrectly and they wanted to
25 correct it, what would be the outcome and whether

1 there should be an adjuster applied.

2 Q. And so in the plan's return of an
3 overpayment, the issue was whether the adjuster
4 should be applied to that overpayment; correct?

5 A. Yeah, because it's an overpayment. An
6 overpaid in RADV, it's -- that's my understanding
7 that's where it was.

8 Q. And where did CMS come out on that?

9 A. I never saw anything related to that in
10 a final like there was on the negative number, but
11 at the end of the day where we ended up, that's all
12 a moot point anyway.

13 Q. But it was being discussed during the
14 time period between 2012 and 2016 -- 2018?

15 A. Yeah, I remember it coming up in some
16 context, either a document or a deposition.

17 Q. And CMS hadn't settled on that prior to
18 2018; right?

19 A. I didn't see much discussion of that.
20 There was more discussion of the negative number
21 after applying the adjuster when the plan error
22 rate was less.

23 Q. And the discussion of the negative
24 number meaning if there is an underpayment. Is
25 that what you mean?

1 A. Yeah. If the plan's extrapolated
2 overpayment is less than the fee-for-service
3 adjuster, should we make a payment to the plan.

■ [REDACTED]
■ [REDACTED]
■ [REDACTED]

8 Q. Okay. All right. And there was never a
9 decision published that you would not do that;
10 right?

11 MS. McMAHON: Objection; form.

12 THE WITNESS: Not until -- not until we
13 issued the white paper and the NPRM in 2018.

14 BY MR. ABASCAL:

15 Q. 2018.

16 A. We would not do any adjuster, which
17 would make that whole issue moot.

18 Q. Okay. But nothing prior to that 2018
19 NPRM; right?

20 A. No.

21 MS. McMAHON: Objection; form.

22 MR. ABASCAL: Let's move on to a
23 different document, 2017/1/10. This is Tab 46.

24 (Exhibit 1510 marked for identification
25 and attached hereto.)

1 BY MR. ABASCAL:

2 Q. I'm showing you what has been marked as
3 Exhibit 1510, Mr. Mills. This is an email from
4 Monica Reed-Asante to Phillip Steiner. Do you see
5 that?

6 A. Yes.

7 Q. Dated January 10, 2017?

8 A. Yes.

9 Q. Is this a document you reviewed in
10 preparation for today?

11 A. I've seen this, and I talked to Phil
12 Steiner.

13 Q. The attachment -- on the email, the
14 attachment is described as "Reasons for a FFS
15 adjuster." Do you see that?

16 A. Yes.

17 Q. All right. And then the attachment
18 says -- it has a one-page paper with the title
19 "Reasons for a FFS adjuster." Do you see that?

20 A. Yes.

21 Q. I'm going to read from Paragraph 1.
22 "The FFS adjuster is intended to account for
23 payment inequities that result from enforcing a
24 different documentation standard between MA and
25 FFS. While FFS does not audit diagnoses submitted

1 on claims against the medical records, the medical
2 record is enforced as the standard in MA, and total
3 payments in MA are lower than they might be if the
4 claim was used. MA plans are arguing in United
5 States v. Burwell that requiring the medical record
6 to be the standard by which MA plans should
7 identify and return overpayments violates the
8 requirements of actuarial equivalence."

9 Do you see that?

10 A. Yes, I do.

11 Q. What influence did that lawsuit cited,
12 United States v. Burwell, have on CMS's decision
13 regarding the FFS adjuster?

14 MS. McMAHON: Objection; calls for
15 speculation. And to the extent the question calls
16 for any information protected by the
17 attorney-client privilege, I would instruct you not
18 to answer.

19 THE WITNESS: Well, I don't agree with
20 sentence 2 completely, because we do look for
21 diagnoses on claims and compare it to the medical
22 records when we do medical review. Because there
23 are LCDs that require you to have certain diagnoses
24 as requirements for payment. So that's not
25 completely accurate. I mean, it's an

1 correct?

2 A. Yes.

3 Q. And who is that?

4 A. Jenny Koh. Jenny Koh. Sorry. Last name
5 wrong.

6 Q. And -- and you did not discuss this with
7 any other counsel in connection with the deposition?

8 A. No.

9 Q. Okay. If you could start by just
10 describing what post-secondary educational degrees
11 you have.

12 A. I have a juris doctor from the University
13 of Maryland.

14 Q. And so you're -- and then -- and you are a
15 member of the bar, correct?

16 A. No, I am not. Not any longer, no.

17 Q. Were you a member of the bar at one point?

18 A. Yes. I do not -- I have not kept up with
19 my bar license, though. I do not practice at all. I
20 do consulting now.

21 Q. I see. Okay.

22 And then you have an undergraduate degree
23 as well, I assume?

24 A. I do. From Union College.

25 Q. Union College. And what -- what field is

1 that?

2 A. Political science.

3 Q. Political science. Do you have any
4 training as an actuary?

5 A. I do not.

6 Q. Do you have any training in advanced
7 statistics?

8 A. No, I do not.

9 Q. How about in advanced math?

10 A. I do -- I do not.

11 I laugh because I went to law school to
12 avoid math. So no, I do not.

13 Q. I -- I confess to have made the same
14 decision myself, so -- not surprising among our
15 profession. But I guess we'll stumble through it.

16 A. Right.

17 Q. What is your current employment?

18 A. I am the managing director and senior vice
19 president for Mathematica Policy Research, and I run
20 their health policy consulting practice.

21 Q. And how large a company is Mathematica?

22 A. About 1,600 people total.

23 Q. And how large is the health consulting
24 division?

25 A. It's about 700.

1 Q. And you said you run that 700-person
2 division?

3 A. I do.

4 Q. And you've been there since May of 2018;
5 is that correct?

6 A. That's correct.

7 MR. MERON: If we could upload Tab 36,
8 please.

9 BY MR. MERON:

10 Q. I am showing you what we're marking as
11 Exhibit 1278.

12 (Exhibit 1278 was marked for identification.)

13 BY MR. MERON:

14 Q. And this is a printout, I would say -- if
15 that's the right word, since we're looking at it
16 virtually -- of your LinkedIn profile?

17 A. That's correct.

18 Q. The -- under "Mathematica," it says
19 that -- well, the first sentence says, "Jonathan
20 leads all aspects of Mathematica's 400-plus-person
21 health care consulting practice, providing strategic
22 direction, capture priorities, and leading budget
23 development."

24 A. Mm-hmm. That's correct.

25 Q. And that correctly describes your

1 functions, correct?

2 A. That does correct -- that is correct.

3 Q. Mathematica's health consulting practice
4 provides policy expertise and program implementation
5 for federal, state, and private sector clients,
6 including Centers for Medicare and Medicaid Services,
7 and state Medicaid agencies. The division focuses on
8 Medicare and Medicaid data analytics and
9 recommendations, development and implementation of
10 payment reform models, development of quality
11 measures, and technical assistance on a variety of
12 client initiatives." Correct?

13 A. That is all correct.

14 Q. Is CMS a significant client of yours at
15 Mathematica?

16 A. Yes, they are.

17 Q. Do you have a rough sense of the dollar
18 value, of the annual dollar value of the relationship
19 with CMS?

20 A. Yes, it's about \$150 million a year,
21 total.

22 Q. And that's just CMS?

23 A. That is correct. Just CMS.

24 Q. And do you have a rough sense of, if you
25 can, of how much that relates to Medicare versus

1 Medicaid?

2 A. Yeah, we have about -- in terms of dollar
3 value, the Medicaid practice is roughly \$90 million a
4 year. And then Medicare is divided up largely
5 through the Centers for Clinical Standards and
6 Quality and the Center for Medicare and Medicaid
7 Innovations, CMMI. Those two centers at CMS
8 represent probably 40ish million a year each.

9 Q. And what proportion of the work for those
10 two centers involve issues relating to Medicare
11 Part C, or Medicare Advantage?

12 A. None for those two centers. But --

13 Q. Okay.

14 A. -- CCSQ and CMMI don't -- don't really
15 touch MA.

16 Q. Okay. Are the work -- I thought you were
17 saying that the work -- consulting work you do for
18 CMS focuses on those two centers. Do you do any
19 consulting work, does Mathematica do any consulting
20 work for CMS related to Medicare Advantage at all?

21 A. Yes. We have one project that relates to
22 doing studies of beneficiary like outcomes and
23 experience. It's a policy project where, for
24 example, we will look at impacts on, you know, the --
25 the relative impacts on COVID, as people who are

1 experienced -- who are enrolled in Medicare
2 Advantage, as per se people who are in Medicare fee
3 for service.

4 We are currently doing a study for Center
5 for Medicare on health equity issues, you know, and
6 how those relate to enrollees in the Medicare
7 Advantage programs.

8 Q. Got it. And I think you testified that
9 the -- that the dollar value of the CMS relationship,
10 annually, is about 150 million, correct?

11 A. That is correct, yes.

12 Q. And how does that compare to the total
13 value of the -- of the consulting division's overall
14 book of business?

15 A. It -- yeah, it's the vast majority of it.
16 It's about 200 million total, on an annual basis,
17 right now. The practice, I would just say, to be
18 able to get the -- my LinkedIn, just to provide -- I
19 haven't updated my LinkedIn in quite some time. So
20 the -- this is showing 400-plus people, as I'm
21 looking at it right now; we're at about 680 at the
22 moment.

23 So this is -- in the last like three to
24 four -- in the last like three years or so has
25 expanded dramatically, and that work largely has

1 expanded through Centers for Medicaid and CHIP
2 Services. So we are -- the majority of the work
3 comes out of CMCS right now, within -- within CMS,
4 but it is proximal to -- yeah, 150 out of the
5 \$200 million a year, so roughly 75 percent of the
6 work, total.

7 Q. Got it. And the -- it says here on
8 your -- the last sentence of your LinkedIn, that
9 your, you lead the division in key operations,
10 including developing client relationships. Right?

11 A. Yes. That is correct.

12 Q. And that includes what lawyers would call
13 business development?

14 A. That is -- yes, that is exactly right.

15 Q. And so it means, you know, bringing in
16 contracts, securing business. Correct?

17 A. Yes.

18 Q. And your -- is it reasonable to assume
19 that your compensation depends -- or is impacted, at
20 least in part, by your success in developing client
21 relationships?

22 A. My compensation is contingent upon the
23 division's, writ large, performance from year to
24 year. It is not contingent upon my individual client
25 interactions, relationships, work that I personally

1 bring in.

2 It is a -- I don't know, slightly
3 socialist. It is -- you know, it is --
4 proportionally we all benefit from how well the
5 division does as a whole. It is not tied to any of
6 my individual performance in terms of client
7 relationships in business and all that.

8 Q. But the -- it's fair to say the more work
9 you get from CMS, the more --

10 A. The more --

11 Q. -- better off --

12 A. The more work we get through CMS or any
13 other client, the more work we -- the more money we
14 make; kind of like any other -- you know, whether
15 you're an attorney or a consultant. Yes, that's
16 correct.

17 Q. Okay. Does Mathematica do any consulting
18 for the Department of Justice?

19 A. We do not.

20 Q. Do you do any consulting work for any law
21 firms that represent plaintiffs, or --

22 A. We do not.

23 Q. You don't do any -- no law firm clients?

24 A. We -- we do not. The entire -- just for
25 clarification, the company does both Health and Human

1 Services work, and we have a small international
2 practice. So the vast majority of the work that we
3 do -- as, again, in health out of, you know, 1,600
4 people, we've given the administrative staff that are
5 not client-facing; you know, roughly 700 them of
6 are -- are in -- in health care in some way, whether
7 that is for CMS or CDC or state Medicaid agencies.

8 And then we do work for like Department of
9 Labor, Department of Education, foundations. But
10 there is nothing within the Justice Department or --
11 or any kind of law enforcement, you know, arm, or
12 legal cases that we do.

13 Q. Or providing expert services to law firms?

14 A. Correct. That's correct.

15 Q. And according to LinkedIn, before you
16 assumed your current position at Mathematica, you
17 were the -- between December of 2016 and April of
18 2018, you were the acting deputy administrator and
19 center director for the Center for Program Integrity,
20 correct?

21 A. It is. It's a little weird the way
22 LinkedIn -- sorry, I'm just reading this -- going
23 back to do this -- it's a little weird the way
24 LinkedIn allows me to do this, because they -- yes,
25 roughly the dates are right.

1 The political appointee from the Trump
2 administration took over in March of 2018. So at
3 that point between March and May reverted back to
4 being the deputy center director, but -- yes, I mean,
5 the dates are pretty close. That's correct.

6 Q. So you -- you were the -- designated the
7 principal deputy for CPI, and under the Vacancies
8 Act, you assumed the role of acting director --

9 A. That --

10 Q. -- when there was a vacancy in the full --
11 in the full position, in the head position, correct?

12 A. That is correct, yes.

13 Q. And -- and normally the head position is a
14 political appointee?

15 A. In -- yes, although in this administration
16 it is not. In the Biden administration, it is not.
17 Prior to that, it has been, yes.

18 Q. Got it. Now, it says you were also the
19 acting deputy administrator; is the director --

20 A. Yeah, the title -- I'm sorry. The title
21 is -- technically it is acting deputy administrator
22 and center director. And that is -- with -- without
23 regard to which center.

24 So you could be acting deputy
25 administrator for Center for Medicare, Center for

1 Medicaid, Center for Program Integrity. It's
2 just sort of -- it's the full job title.

3 Q. In other words, whoever heads a given
4 center within CMS is -- by virtue of that, also holds
5 the title of a deputy administrator of CMS?

6 A. That is correct, yes.

7 Q. And it says underneath here, one of your
8 functions, reading down, is that you represented the
9 agency "to the White House, members of Congress, and
10 health care stakeholders to address inquiries on
11 program integrity and improper payments." Correct?

12 A. That is correct.

13 Q. And what does the words "program
14 integrity" mean to you?

15 A. Program integrity is -- I'm sorry. I have
16 to toggle back to the screen.

17 Program integrity, for me, is a broad
18 catch-all for sort of fraud, waste, and abuse; like
19 oversight and operations. And so it's sort of any of
20 those -- any of those three.

21 Q. I apologize. My computer has gone to
22 sleep here. Give me a second.

23 A. That's okay.

24 Q. You said it's -- it's a broad catch-all
25 for fraud, waste, and abuse, oversight and

1 operations?

2 A. That's correct. And in -- yes. In the
3 CMS setting, that is -- that is how we -- yes.

4 Q. And how is that distinguished from the
5 phrase "improper payments"?

6 A. Part of.

7 MS. KOH: Objection. Form.

8 Go ahead.

9 THE WITNESS: Sure.

10 The -- the improper payment is a part of
11 program integrity, and a part of sort of broader
12 fraud, waste, and abuse. It is -- you know,
13 part of the duty of the Center is to ensure that
14 the programs and that the federal government are
15 accurately paying, whether it is providers,
16 plans, you know, the -- the stakeholders who are
17 receiving payment from the -- you know, from the
18 Medicare and Medicaid program, or from the
19 marketplace.

20 And improper payments can sort of happen
21 in -- without regard to any -- what's the word
22 I'm looking for? Without regard to attribution.

23 You know, if the payment isn't proper, you
24 know, CMS is -- program -- the department of
25 program integrity role is to ensure that the --

1 the organization, then, is -- is making sure
2 that the payments to the different sort of plans
3 and providers are as -- are as proper as
4 possible.

5 And often those little -- the vast
6 majority of times, that comes under a fraud,
7 waste, or abuse heading, without sort of
8 ascribing one or the other necessarily.

9 BY MR. MERON:

10 Q. Would it be fair to say that a payment
11 that is a result of fraud, waste, and abuse -- or let
12 me -- let me break that down.

13 A payment that is a result of fraud would
14 necessarily be improper, correct?

15 A. Yes, it would.

16 Q. But not all improper payments are a result
17 of fraud, correct?

18 A. Absolutely right. That is the -- in many
19 ways the crux of the entire organization of the
20 Center for Program Integrity, yes. Because the very,
21 very small -- statistically speaking, a very, very
22 small proportion of payments being made by any of
23 these programs are actually attributable to fraud.

24 Q. And so when you said it's the crux of the
25 work that CPI does is to try to ferret out and

1 identify what subset of errors are fraud and what
2 are -- are simple mistakes?

3 A. Actually -- it actually is --

4 MS. KOH: Objection.

5 THE WITNESS: Sorry. Go ahead.

6 MS. KOH: Let me just -- objection. Form.
7 Go ahead.

8 THE WITNESS: Okay. Just to clarify, not
9 exactly. And I think this is -- it is important
10 to distinguish just on the -- for the purposes
11 of the role.

12 Only the Justice Department may -- can
13 make a determination as to whether or not
14 something is fraud. Because fraud involves
15 intent, and that is outside the purview of an
16 administrative agency.

17 So the Center for Program Integrity looks
18 at improper payments, to your point, writ large;
19 and then makes determinations as to like where
20 do they go for -- for their review, if they need
21 to be reviewed in any way beyond that.

22 BY MR. MERON:

23 Q. And in order to do your work of focusing
24 on improper payments, the Center has to be in a
25 position to determine what a proper payment is,

1 correct?

2 A. That is correct, yes.

3 Q. And so in your role of directing that
4 Center, you had a pretty good familiarity with the
5 basic requirements that applied to payments under the
6 various Medicare programs, correct?

7 MS. KOH: Objection. Form.

8 THE WITNESS: Yes, we do.

9 BY MR. MERON:

10 Q. So reading further on in LinkedIn, it says
11 that -- under -- under your description as the acting
12 director, it says, "Specific areas of oversight
13 include Medicare and Medicaid provider enrollment,
14 Medicare and Medicaid improper payments"; so
15 that's -- improper payments is the subject we just
16 talked about, correct?

17 A. That's correct.

18 Q. "Investigations." What was your oversight
19 role with respect to investigations?

20 A. Sure. The Center for Program Integrity
21 has -- a fairly large part of the organization is
22 called the investigations and audits group. And they
23 contract with zone program integrity contractors --
24 or ZPICs, the acronym -- to do investigations on
25 individual providers -- this is all through Medicare

1 fee for service -- where there may be a false
2 storefront. You know, essentially over like data
3 analytics for, you know, billing that is, you know,
4 for social security numbers that have been, you know,
5 made up or stolen.

6 Or schemes of, you know, potentially
7 clusters of billing that are really abnormal, and
8 that sort of show spikes of -- of billings. So
9 there's -- investigations that play out in a -- in a
10 variety of ways, using a variety of tools, whether
11 that is on the ground, and -- you know, somebody
12 knocks on the door, but you're a medical supplier
13 storefront, and it -- there's nothing there; right?
14 But yet they're billing to the Medicare program.

15 And some of it is done behind the scenes,
16 through like data analytics and sort of running
17 algorithms.

18 Q. And I think you said the investigations
19 work you do there, oversee with contractors related
20 entirely to fee for service? There was no --

21 A. That -- for -- for those programs, the
22 investigations in that way is done through Medicare
23 fee for service, because it's sort of the direct line
24 that CMS has into sort of control the program.

25 For -- for Medicaid, Medicaid is -- has

1 broad oversight at the federal level, but it's
2 actually implemented at the state level. So just
3 differentiating, to your -- to make the point, in the
4 Medicaid program, the investigations actually would
5 happen in conjunction and are driven by the states,
6 and are -- then the information is essentially fed
7 or -- or identified by CMS, eventually, through --
8 you know, again, through data.

9 But it's then operationalized or
10 investigated by, you know, the state, the -- what's
11 called the Medicaid fraud control unit. So --

12 Q. I'm sorry to stop you, but this is the --
13 the risk of when we -- when we -- don't let me
14 complete a question. I actually --

15 A. I'm sorry.

16 Q. -- was not interested in asking about
17 Medicaid. I apologize.

18 A. All right. Okay.

19 Q. I was asking -- I was -- when you said
20 "fee for service," I was distinguishing between
21 fee-for-service Medicare versus Medicare Advantage,
22 and asking whether there were any investigations-type
23 work that you oversaw relating to Medicare Part C.

24 A. Not to my knowledge -- not to my
25 recollection, no.

1 Q. And how about Medicare Part D?

2 A. No. Investigations would be -- is not the
3 correct word. I think there was some -- you know, we
4 did some -- I'm trying to think -- this is -- you
5 know, there is -- we had some interaction on Part D,
6 where the program -- you know, the -- or CPI was
7 working with the Part D drug plan to identify
8 potential sort of overpayments in, you know, in the
9 differences between -- you know, basically, we tried
10 to identify sort of overpayments in the Part D
11 program. But they were not investigations. They
12 were self-audits. So the -- "no" to the word --
13 "no," to the investigations.

14 Q. But the -- the work you oversaw relating
15 to improper payments did include Part C, but the work
16 respecting investigations, and the work done by these
17 contractors you mentioned, did not?

18 A. Correct. That's correct.

19 Q. It says here you also oversaw audit
20 strategies. What does that mean?

21 A. So similar to like what I just mentioned.
22 The program -- so CPI conducts audits of individual
23 providers. They will -- will ask either to be
24 self -- you know, release sort of self-audits, based
25 on like abnormal sort of clusters of -- of payment,

1 for example, around specific providers or specific
2 locations.

3 They will audit providers around -- for
4 overall compliance individually. Those are conducted
5 by the administrative contractors or by the ZPICs,
6 either arm of the -- of Medicare will conduct like an
7 actual -- what -- basically a compliance review of an
8 individual provider's medical records.

9 It's a manual process, and those audits
10 are done by nurse practitioners who, you know,
11 review -- they -- basically they review documentation
12 by providers to see if it matches up with what the --
13 what the basis of the payment was or what the claim
14 was being paid for.

15 Q. And what does the phrase "oversight of
16 recovery audit program oversight" mean?

17 A. So the RAC program is a post-payment
18 program where it is a large-scale auditor that
19 reviews certain types of services, writ large, as
20 prescribed by CPI; so looking at, for example, home
21 health services and Medicare.

22 The recovery audit contract program will
23 conduct data analytics, and if they find that there
24 are, you know, sort of abnormal payments, they will
25 then conduct more sort of rigorous individualized

1 audits of providers post payment, where they then
2 sort of try to collect the dollars back from the
3 providers if there is an overpayment that's found.

4 Q. Now, with respect to audit programs
5 designed to recover money, you did have some role to
6 play in audits of Medicare Advantage plans, correct?

7 A. That's correct. During --

8 MS. KOH: Object --

9 THE WITNESS: Sorry. Go ahead.

10 MS. KOH: I was going to say, objection.

11 Vague.

12 Go ahead.

13 BY MR. MERON:

14 Q. Go ahead.

15 A. Oh, sorry.

16 Yes. During my time at CPI, the RADV
17 program moved from the Center for Medicare into the
18 Center for Program Integrity, and that was really
19 the -- the first real sort of interaction I had with
20 Medicare Advantage at that time.

21 Q. And do you recall more specifically when
22 that transfer of responsibility occurred?

23 A. It would have been early 2016.

24 Q. 2016? Not 2017?

25 A. That's correct. It happened during the

1 Obama administration.

2 Q. Okay. We'll take a look at some documents
3 and see whether that refreshes your recollection on
4 that.

5 Are you -- sorry. You referred to RADV
6 previously having been under the Center for Medicare?

7 A. That's correct.

8 Q. Do you recall what unit more specifically
9 within the Center for Medicare was responsible for
10 RADV?

11 A. I honestly don't remember the acronym
12 within Center for Medicare. There's a -- there's
13 a -- there's a group that did oversight, that
14 basically was a Part C, you know, Medicare, but
15 old -- it used to be the Medicare Part C group, but I
16 honestly don't remember what their acronym is.

17 Q. Would you recall whether it was the
18 MPPG --

19 A. Yes.

20 Q. -- the Medicare Plan Payment Group?

21 A. Thank you. That is correct, yes.

22 Q. Okay. And during the time that you were
23 there, do you recall who the director or the head of
24 the MPPG was?

25 A. Offhand, I do not. I do not.

1 Q. Do you recall if it was Cheri Rice?

2 A. I -- so -- yes, I thought that -- I'm
3 sorry, I thought Cheri Rice oversaw the entire Part D
4 and Part C programs. So during my time, I thought
5 that she was actually sitting as a deputy center
6 director rather than a group director. I know these
7 are splitting the differences in this discussion,
8 but -- just -- so yes, I -- I realized that Cheri
9 Rice sits over Medicare at the time, broadly Medicare
10 Advantage, but I also thought over Part D. So -- I
11 could be getting my exact dates wrong for when she
12 moved into that position, though.

13 Q. And your -- prior to being the director,
14 according to the -- acting director, according to
15 your LinkedIn, you were the -- I think you testified
16 you were the principal deputy for the -- for CPI
17 between March '15 and December 2016, correct?

18 A. That's correct.

19 Q. And did your areas of oversight as deputy
20 differ significantly -- were they significantly
21 narrower than your areas of oversight as director?

22 A. Not necessarily. There were a -- there
23 were certain programs -- so the Center for Program
24 Integrity has two deputy center directors. My focal
25 point, as I was deputy center director, was more on

1 Medicaid, Center for Medicare and Medicaid, sort of
2 -- sorry, Center for -- the Innovation Center, CMMI,
3 and over CCIIIO.

4 And the reason for that was the other
5 deputy center director had this long tenure at CMS,
6 and had been working in the Medicare program for
7 many, many years. And the purview of Center for
8 Program Integrity had been grounded in Medicare fee
9 for service since the '90s.

10 And often my goal, when I was there, was
11 really to expand the footprint of the organization
12 and to -- making sure it had other -- that it had
13 oversight over the other programs that CMS was then
14 administering.

15 Q. Now, as part of your role in -- in
16 overseeing CPI, as you testified, was to oversee
17 various audit programs that CPI had, correct?

18 A. That is correct.

19 Q. I know you're -- you're not a
20 statistician, but I see you have some general
21 understanding of -- of the methodologies that are
22 used in audits?

23 A. Yes, I think it -- yes. I mean, in terms
24 of statistical -- statistical valid samples and
25 things like that, yes.

1 codes for every plan, or the same HCCs for each plan.

2 Q. Okay. Sorry. My question was a little
3 unclear.

4 A. I'm sorry.

5 Q. When -- when then -- when it goes then to
6 the medical record reviewer --

7 A. Okay.

8 Q. -- does the reviewer know, effectively,
9 "I'm looking to see whether diabetes is here"? Or
10 are they told, "Look at the chart; code all the
11 conditions that are in the chart, and tell me what
12 they are"?

13 MS. KOH: Objection. Form.

14 BY MR. MERON:

15 Q. Do you know?

16 A. Now I'm speculating. So -- not
17 definitively, no, I believe it is the former. I
18 believe they basically are looking at a specific HCC
19 that is set by CMS.

20 So there is some corridor, or whatever,
21 you know, parameters placed on what kind of reviews
22 are -- what -- what's being reviewed in a given time.

23 Q. Okay. But -- but not -- you're not sure,
24 as you said, about the weeds --

25 A. I'm honestly not. It's been such a long

1 time, it's -- I'm not.

2 Q. Okay. Stepping away from the details of
3 how the coding is done, there -- there is -- as part
4 of the -- the RADV, the -- the medical records were
5 reviewed to see whether the HCCs that were submitted
6 and sampled are substantiated by the medical record.
7 That's one component of the audit, correct?

8 A. Yes, correct.

9 Q. And there's also a look to see whether the
10 reviewers see other HCCs that are substantiated in
11 the medical record but were not submitted in claims,
12 correct? They look for adds?

13 A. Yes. That's right.

14 Q. And then there is a net payment error
15 determination made for each sample beneficiary, where
16 they compute what the actual payment was versus what
17 a correct payment would have been, had the coding all
18 been correct. Correct?

19 A. Yes.

20 MS. KOH: Objection.

21 THE WITNESS: Sorry.

22 Yes.

23 BY MR. MERON:

24 Q. And then the results of the sample
25 beneficiaries are then extrapolated over the whole

1 contract. Correct?

2 MS. KOH: Objection.

3 THE WITNESS: Yes, given whatever year
4 they started extrapolation, right, it talks
5 about that. So 20 -- whatever. Yes, right. At
6 a certain point, they began extrapolation,
7 right.

8 BY MR. MERON:

9 Q. And that was contract year 2011 where it
10 started, correct?

11 A. Yes, that -- right. That's what the --
12 yeah. I believe that's what the paper says.

13 Q. And by necessity, the RADV audits occur a
14 number of years after the contract year in question,
15 correct?

16 A. Yes. That's correct.

17 Q. And in particular, they occur after the
18 final deadline for submitting all the plans risk
19 adjustment data has passed, correct?

20 A. That is -- that's the trigger. That's the
21 signal of the trigger. It has to be at some point
22 after -- after that, yes.

23 Q. And it has to be that, because you've got
24 to know what the final data set is that you're
25 sending?

CERTIFICATE

I, KAREN K. KIDWELL, Registered Merit Reporter, and Certified Realtime Reporter, do hereby certify that prior to the commencement of the examination, the deponent was remotely sworn to testify to the truth, the whole truth under penalty of perjury.

I DO FURTHER CERTIFY that the foregoing is a verbatim transcript of the testimony as taken stenographically by me at the time, place and on the date hereinbefore set forth, to the best of my ability.

I DO FURTHER CERTIFY that I am neither a relative nor employee nor attorney nor counsel of any of the parties to this action, and that I am neither a relative nor employee of such attorney or counsel, and that I am not financially interested in this action.

1 and -- and right.

2 And, you know, I'm -- and not to mention I
3 was the leader of the Medicare business group, so
4 I -- I should do that.

5 Q. Okay.

6 MS. McMAHON: All right. Let's look at
7 Tab 24, which will be Exhibit 324.

8 (Exhibit 324 was marked for identification.)

9 MS. McMAHON: And this is MAPL000497870.
10 Okay.

11 BY MS. McMAHON:

12 Q. So the first e-mail, that starts at the
13 bottom of page 1, is an e-mail from you to Cheri
14 Rice, cc'ing Thad Johnson, Dan Schumacher, Karen
15 Erickson, and yourself. And it's titled "2012
16 Attestation and follow-up from yesterday's meeting."

17 And this is the e-mail response that you
18 sent to Ms. Rice on April 30th. Correct?

19 A. Correct.

20 Q. And I won't ask you to compare this to
21 the -- to the former document; we can all do that off
22 line. But -- but do you have any memory of changing
23 the message that you sent to Ms. Rice from the one
24 that Mr. Johnson forwarded to you earlier that day?

25 MR. SUMMERS: Objection. Form.

1 THE WITNESS: No.

2 BY MS. McMAHON:

3 Q. Okay. And let's go to the paragraph that
4 starts with "Fifth." It's on the second page of this
5 document.

6 And you start that paragraph mentioning
7 the proposed rule, correct?

8 A. Correct.

9 Q. And the way you describe it was the
10 proposed rule, that if finalized would "require MA
11 plans to design any medical record reviews to
12 determine the accuracy of risk adjustment diagnoses
13 associated with those records." Correct?

14 A. Yes.

15 Q. Okay. And I'm paraphrasing, so you might
16 want to -- you can -- you can tell me if you don't
17 like my paraphrasing.

18 But you go on to indicate that you intend
19 to delete diagnosis codes that have gone through a
20 complete review. Right?

21 A. Yeah -- I'm -- just make sure.

22 "We" -- you're referring to, "We currently
23 have a process through which we review certain
24 medical records" -- accuracy -- (reading) -- and this
25 already "resulted in the identification of and, in

1 some instances, the submission of deletes."

2 Q. Yes. "Pursuant to our discussion"?

3 A. Yeah. "Pursuant to our discussion,
4 however, we will soon submit for deletion."

5 Yeah. That's a paraphrasing.

6 Q. Okay. And you did do that, correct?

7 A. That's my understanding, or that's my
8 recollection.

9 Q. Okay. And you also describe, following
10 that, that you were considering discontinuing your
11 review process for the diagnosis codes that were
12 still under review, correct?

13 A. Correct.

14 Q. Okay. Now, if you can -- and by the way,
15 this -- this e-mail communication that you sent to
16 Ms. Rice, you intended it to be -- to be clear and
17 comprehensive of the discussion you had the day
18 before, correct?

19 MR. SUMMERS: Objection. Form.

20 THE WITNESS: I think -- I mean, how I
21 would characterize the intent of this
22 communication was to confirm our understanding
23 of the conversation as we walked out, relative
24 to the proposed rule and our -- and the decision
25 that we wanted to make about continuing or

1 discontinuing the CV program, and what do we do
2 with claims that are in process, and -- and some
3 insight into, you know, the -- how do we think
4 about the proposed rule, the timing, as we think
5 about bids, and other things.

6 So I think all those things were in here,
7 we were trying to confirm what we got out of the
8 meeting. Maybe that's what you said, but that's
9 -- I just wanted to state it in my words.

10 BY MS. McMAHON:

11 Q. Okay. Good. Okay.

12 And Ms. Rice did respond sort of directly
13 to that point, didn't she? She says here, "With
14 respect to your fifth point, I would note that
15 regardless of the effective date of the proposed
16 requirement related to medical record reviews, there
17 are other laws that do impose standards, requirements
18 and responsibilities on MA plans in connection with
19 the federal payments they receive from CMS." Right?

20 MR. SUMMERS: I'm sorry, what's the
21 question, Counsel?

22 BY MS. McMAHON:

23 Q. Is that what she said in this e-mail?

24 A. I -- I read the same thing you do.

25 Q. Okay. And she also -- well, before I --

1 before I go on to that, so -- so did you understand
2 that to mean that regardless of the fate of the
3 medical record review rule, or the proposed rule,
4 that there were other laws that imposed standards,
5 requirements, and responsibilities on MA plans?

6 MR. SUMMERS: Objection. Form.

7 THE WITNESS: I understand it to be
8 exactly what she wrote, which is -- there's a
9 bunch of stuff that, you know, you need to be
10 thinking about as you make decisions, and you
11 guys came in and asked us a very specific
12 question. We gave you an answer in regards to
13 that. There's federal laws. There's all kinds
14 of things you guys should be thinking about.

15 But as far as I'm concerned, this was a
16 confirmatory communication as to our very
17 specific question about the proposed rule and
18 about our claims verification program, how we
19 handle claims that are partway through it or all
20 the way through it.

21 And so that's -- that's how -- that's how
22 we -- that's how I read this. That's how we
23 read it, that it was confirmatory to -- to the
24 impression we walked out of the meeting with,
25 that there was no proactive obligation to -- to

1 run a claims verification program.

2 And -- and pending the proposed rule,
3 finalization of which, of course, it was never
4 finalized.

5 BY MS. McMAHON:

6 Q. Right. But so let me just -- I think
7 you -- you know, you described what she says here as
8 her telling about a bunch of stuff. But let's kind
9 of try to drill down on that a little bit.

10 She tells you that there are other laws
11 that impose standards, requirements, and
12 responsibilities on MA plans. Correct?

13 A. She does state that.

14 Q. And what did you understand that to mean?

15 A. I understood exactly what I just said,
16 which is there's a lot of law -- federal laws. And
17 of course our intention is to stay compliant with
18 every federal law and every regulation, requirement
19 that CMS and, you know, the Constitution asks us to
20 do.

21 I mean, I -- it was a very far-reaching,
22 broad statement, but did not -- was not specific to
23 the topic that we covered, unless, you know -- it was
24 just -- it felt like a very broad statement, kind of
25 a catch-all statement; and we -- we read it as

1 anyone at United --

2 BY MR. HAVIAN:

3 Q. Okay.

4 A. -- specifically. Yeah.

5 Q. Okay. And was it ever your policy, you
6 personally, that United did not have to delete
7 unsupported codes if the error rate fell lower than
8 the error rate in fee-for-service data?

9 MR. SUMMERS: Objection. Form.
10 Foundation.

11 THE WITNESS: Are you asking if that was
12 my personal opinion?

13 BY MR. HAVIAN:

14 Q. No, if that was your practice, ever your
15 practice while you were at United.

16 MR. SUMMERS: Objection. Form.
17 Foundation.

18 THE WITNESS: I don't recall having
19 conversation or being aware of that discussion,
20 so I wouldn't really be able to comment on that.

21 MR. HAVIAN: Okay.

22 So that's -- you should stop the clock.
23 The videographer should stop the clock with that
24 answer. And I'll pass the witness.

25 MR. SUMMERS: Okay. Thank you.

1 We're just going to take a couple minutes
2 to get resituated here. I'm going to go sit
3 across from the witness, so that he's not
4 turning sideways.

5 So just give us a couple minutes. We can
6 go ahead and go off the record.

7 VIDEOGRAPHER: We're now going off the
8 record at 7:07 p.m.

9 (A recess transpired from 7:07 p.m. until
10 7:09 p.m.)

11 VIDEOGRAPHER: We're now back on the
12 record at 7:09 p.m.

13 FURTHER EXAMINATION

14 BY MR. SUMMERS:

15 Q. Good afternoon, Mr. Nelson. I'd like to
16 ask you just a follow-up questions, if that's okay.

17 Earlier today we discussed an April 29,
18 2014, meeting between representatives of United and
19 CMS. I'd like to ask you a few follow-up questions.

20 First, just so the record is clear, why
21 did you want to have that meeting?

22 A. As I mentioned earlier, but to be clear,
23 there's three reasons -- one is there's a proposed
24 rule out; we wanted to get clarification on that
25 as -- because we had bids coming, and so there was a

1 timing issue.

2 We also had, as I said, had a -- some
3 indication from a couple different sources that --
4 that the claims verification process was in fact not
5 needed or not required -- I should say not required.

6 And then the general opportunity to build
7 relationships and -- with CMS in a -- and to set the
8 standard for us to have, you know, transparent and --
9 and really productive dialogue around anything
10 that -- that we were fuzzy about or confused about,
11 ever. And I just wanted to set that standard.

12 And so it was in that spirit that we took
13 that very specific question to them.

14 Q. On the second issue, getting clarity with
15 regard to whether the claim verification procedure
16 was -- was necessary, did you feel that you got a
17 clear understanding or a clear answer from that
18 meeting?

19 A. On the need to continue --

20 Q. On whether you needed to continue with
21 claim verification.

22 A. We felt that we got a very clear answer.
23 And the answer was that we did not need to continue
24 it.

25 Q. Did you feel that you also got clarity on

1 the question of what to do with regard to the patient
2 files that were currently under review, but as to
3 which the review had not been completed?

4 A. Yes. We also got -- I -- you know, we
5 felt like we got clarity on -- if a claim was
6 somewhere in the middle of the process, then it did
7 not need to be deleted; but if it went all the way
8 through, it should be deleted.

9 So that's what we did.

10 Q. And you just said that that's what you
11 did. Did you, following this meeting, do what you
12 felt CMS told you you needed to do?

13 A. Yes.

14 Q. There was some questioning earlier today
15 about a comment by Ms. Rice to the effect that if you
16 knew the codes were not supported, that they should
17 be deleted. Do you recall that?

18 A. Yes.

19 Q. What was -- and I think you mentioned
20 there was a broader context to that discussion. What
21 was the context of that statement?

22 A. The context, as I remember it, was in
23 conjunction with the discussion around claims
24 verification process: How did it work. And as we
25 were trying to figure out, you know, our -- we did

1 MR. HAVIAN: That's okay. It's hard to
2 get used to.

3 THE WITNESS: Yeah. No, I -- I need to
4 wait.

5 BY MR. SUMMERS:

6 Q. Just so the record is clear, was your
7 answer "yes" or "no"?

8 A. Yes. It was "yes."

9 Q. Now, turning back to the meeting on
10 April 29, 2014, what would you have done -- to the
11 best of your knowledge, what would you have done if
12 CMS had said that under current regulation, United
13 was required to conduct claim verification?

14 A. We would have continued with it.

15 Q. Earlier today, counsel for the government
16 asked you a lot of questions about a projected budget
17 shortfall in 2014. Do you recall that questioning?

18 A. Yes.

19 Q. If CMS had told you on April 29, 2014,
20 that United was required to continue with its claims
21 verification program, or something like it, would you
22 have discontinued the program in order to meet
23 financial targets?

24 A. No. Adhering and being consistent,
25 compliant with regulations and rules, always trumps

1 hitting a budget. I mean, that's -- that's just how
2 we have to run our business. There's no way around
3 that.

4 And then you have to find -- you know,
5 continue to run the business in a proper way. But
6 the compliance and consistent with CMS regulations,
7 there's no negotiation on that.

8 Q. After your meeting with CMS on April 29 of
9 2014, after that point in time, did CMS ever come to
10 you and say that you needed to reinstate claim
11 verification or risk being sued?

12 A. Not to my knowledge.

13 MR. SUMMERS: I have no further questions.
14 Thank you for your time.

15 MS. McMAHON: All right. I just -- give
16 me five minutes to see if I have any follow-up.
17 I think we have ten minutes left on record.

18 MR. SUMMERS: I think you only had like
19 two minutes left, according to our count. And
20 the count -- the witness has a -- a flight to
21 catch, so be as fast as you can, please.

22 MS. McMAHON: Well, I will go as fast as I
23 can, but I believe I have ten minutes, and I
24 believe that was made clear at the end of
25 Mr. Havian's --

1 MR. HAVIAN: I couldn't have been --

2 MS. McMAHON: -- testimony.

3 MR. HAVIAN: Yeah, I couldn't have been
4 clearer. The clock stopped when I finished, and
5 I asked one minute worth of questions, and we
6 had ten left on the clock. But we've got -- we
7 can argue about this, and it'll take more than
8 ten minutes --

9 MR. SUMMERS: No, no, no. Let's just
10 figure out if you have any questions. Be fast,
11 please, just because the witness -- we're going
12 to stay right here, because the witness --

13 MR. HAVIAN: Okay.

14 MR. SUMMERS: -- has to catch a flight.

15 MS. McMAHON: Okay. I'm going to go off.
16 I'll be back as quick as I can. I'm going off
17 the record right now.

18 VIDEOGRAPHER: We're going off the record
19 at 7:40 p.m.

20 (A recess transpired from 7:40 p.m. until
21 7:45 p.m.)

22 VIDEOGRAPHER: We're now back on the
23 record at 7:45 p.m.

24 MS. McMAHON: Okay. 7:45.

25

CERTIFICATE

I, KAREN K. KIDWELL, Registered Merit Reporter, and Certified Realtime Reporter, do hereby certify that prior to the commencement of the examination, the deponent was remotely sworn to testify to the truth, the whole truth under penalty of perjury.

I DO FURTHER CERTIFY that the foregoing is a verbatim transcript of the testimony as taken stenographically by me at the time, place and on the date hereinbefore set forth, to the best of my ability.

I DO FURTHER CERTIFY that I am neither a relative nor employee nor attorney nor counsel of any of the parties to this action, and that I am neither a relative nor employee of such attorney or counsel, and that I am not financially interested in this action.

Videotaped Deposition of

REBECCA PAUL

Given Remotely

Wednesday, April 13, 2022

9:02 a.m. Eastern Time

Reported by: Karen K. Kidwell, RMR, CRR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 Q. I had asked you when you began working for
2 CMS, and I understood you to say that in 2005, you
3 began working for the central office of CMS. Where
4 were you working prior to 2005?

5 A. I worked in a nongovernment place, non--
6 not CMS, the year before that. I worked at the
7 regional office before that. My entire time at CMS
8 is about 22 years.

9 (Reporter requested clarification.)

10 A. Regional office, for CMS.

11 Q. Prior to 2005, you worked in the regional
12 office of CMS? Is that correct, Ms. Paul?

13 A. In 2005 I began working at central office,
14 CMS's central office.

15 Q. And prior to 2005 where did you work?

16 A. Just to clarify, are you asking about my
17 CMS history or my work history? Just so I understand
18 what you're asking.

19 Q. Let's focus on CMS.

20 A. From about 1998 to 2003, I worked in the
21 San Francisco regional office of CMS.

22 Q. And where did you work between 2003 and
23 2005?

24 A. The University of California.

25 Q. What was your position at the University

1 of California?

2 A. I was a -- I don't remember my title. I
3 worked for a small program that worked at the state
4 legislature on -- reviewed specific types of
5 legislation.

6 Q. In 2012 you became the director for the
7 Division of Plan Policy in the Medicare Plan Payment
8 Group; is that correct?

9 A. The Division of Payment Policy, in the
10 Medicare Plan Payment Group, in 2012.

11 Q. And you are currently the deputy director
12 of the Medicare Plan Payment Group?

13 A. Correct.

14 Q. When did you become the deputy director of
15 the Medicare Plan Payment Group?

16 A. I believe it was made permanent in 2020.
17 I was acting for about a year before that.

18 Q. And Ms. Paul, is it fair to say that your
19 specialties include Medicare risk adjustment?

20 MR. MASON: Objection. Form.

21 THE WITNESS: Risk adjustment for Medicare
22 Advantage and Part D.

23 BY MR. QURESHI:

24 Q. My question was, Ms. Paul, is it fair to
25 say that your specialties include Medicare risk

1 adjustment?

2 MR. MASON: Same objection.

3 THE WITNESS: I have worked on risk
4 adjustment for the Medicare Advantage and Part D
5 program, which is part of Medicare.

6 BY MR. QURESHI:

7 Q. And would you consider your work for the
8 risk adjustment Part D component of the Medicare
9 program a specialty?

10 MR. MASON: Objection. Form.

11 THE WITNESS: What do you mean by
12 "specialty"?

13 BY MR. QURESHI:

14 Q. Do you -- do you understand what the word
15 "specialty" means?

16 A. I'm asking you what your -- what your
17 standard is for -- what it would mean for me.

18 Q. Yeah, and I'd like to understand what you
19 believe the word "specialty" means.

20 A. Well, I mean, there's a meaning for it,
21 but are you -- are you asking a specific level of
22 knowledge I have, or -- I have -- I'm asking you what
23 it means, what you're asking of the level of
24 knowledge.

25 Q. What level of knowledge do you ascribe to

1 the word "specialty"?

2 A. I have worked on many aspects of risk
3 adjustment.

4 Q. Okay. Ms. Paul, I'm just trying to get an
5 understanding of what your areas of focus are.
6 Perhaps it will be easy if we take a look at a
7 document.

8 MR. QURESHI: I'll ask my colleague to
9 make available a document that we will designate
10 as Exhibit 1070.

11 (Exhibit 1170 was marked for identification.)

12 MR. QURESHI: It is Tab RR for our
13 internal purposes.

14 BY MR. QURESHI:

15 Q. Let me know when it becomes available to
16 you, Ms. Paul.

17 A. Which program am I looking in? Is this
18 AgileLaw?

19 Q. Yes, it is.

20 A. I don't see anything -- Document 1? Is
21 that it?

22 Q. Yeah, we'll designate it as Exhibit 1070,
23 for the record. Let me know when it becomes
24 available for you, Ms. Paul.

25 A. Okay.

1 Q. Have you had a chance to -- to look at
2 Exhibit 1070?

3 A. Uh-huh. 11 -- it's not 1070. But it's
4 here.

5 Q. Okay. Thank you for correcting me. It's
6 Exhibit 1170?

7 A. Uh-huh.

8 Q. What is Exhibit 1170?

9 A. Looks like my LinkedIn page.

10 Q. Who created your LinkedIn page?

11 A. I did.

12 Q. And --

13 MR. MASON: Mr. Qureshi, is there a Bates
14 number associated with this document?

15 MR. QURESHI: There is not.

16 MR. MASON: Thank you.

17 BY MR. QURESHI:

18 Q. Is your LinkedIn page accurate, Ms. Paul?

19 A. Yes.

20 Q. Will you please read into the record what
21 it says under "Summary."

22 A. In the context of the LinkedIn page, under
23 "Summary," it says: "Specialties: Medicare risk
24 adjustment and plan payment."

25 Q. And when you wrote "Medicare risk

1 adjustment" in the "Specialties" section of your
2 LinkedIn page, what information were you intending to
3 convey?

4 A. That these were focuses of what I worked
5 on.

6 Q. And how long have you considered Medicare
7 risk adjustment a specialty?

8 A. I don't know. I don't know when I would
9 have.

10 Q. When did you create your LinkedIn page?

11 A. I don't know. I don't remember.

12 Q. Did you create it this year?

13 A. No.

14 Q. I think you've already addressed
15 components of my next question, but I'll -- I'll ask
16 it again: How do you define "Medicare risk
17 adjustment"?

18 A. That is quite broad. Are you asking what
19 it does, or what its purpose is?

20 Q. When you wrote that one of your
21 specialties was Medicare risk adjustment, what
22 information were you working to convey?

23 A. I don't remember what was in my head at
24 the time I wrote it. I probably just said I worked
25 on it.

1 Q. And what do you consider "Medicare risk
2 adjustment" to mean today?

3 A. And you're looking for a definition of
4 what it is?

5 Q. Correct. As you understand it, Ms. Paul.

6 A. Risk adjustment is a part of payment -- a
7 payment methodology that allows plans that enroll
8 beneficiaries for a part of groups that are expected
9 to be more costly, to be paid more money; and to
10 enroll beneficiaries for a part of groups that are
11 expected to cost less, pay less out.

12 Q. Okay. I'm having some difficulty hearing
13 you, Ms. Paul. I don't know if there's a different
14 phone line we can use, but --

15 MR. QURESHI: Might we go off the record
16 for a moment so we can address this?

17 VIDEOGRAPHER: We're now going off the
18 record. It's 9:21 a.m.

19 (A recess transpired from 9:21 a.m.
20 until 9:24 a.m.)

21 VIDEOGRAPHER: We're now back on the
22 record. It's 9:24 a.m.

23 BY MR. QURESHI:

24 Q. Ms. Paul, before we -- we took our break,
25 I had asked you what you understand the Medicare risk

1 adjustment program to mean. Would you please define
2 that for us?

3 MR. MASON: Objection. Form.

4 THE WITNESS: Risk adjustment in general
5 has the objective -- risk adjustment is one
6 aspect of a payment methodology that provides
7 the ability to calculate higher payments for
8 plans that enroll beneficiaries who are in
9 groups -- who are a part of groups that are
10 expected to have higher costs, and pay less than
11 average for -- to plans that enroll
12 beneficiaries who are part of groups that are
13 expected to have lower costs.

14 BY MR. QURESHI:

15 Q. And is the Medicare risk adjustment
16 payment methodology sometimes referred to as Medicare
17 Part C?

18 A. Medicare Part C is Medicare Advantage,
19 which . . .

20 Q. And does Medicare Advantage use a risk
21 adjustment payment methodology?

22 A. Risk adjustment is part of the payment
23 methodology.

24 Q. What are the other parts?

25 A. There is a rate book that is -- is used

1 for -- in the context of plan bidding. There is a
2 plan bid. And then there are risks, and then there
3 is the risk adjustment aspect of the payment
4 methodology, that -- at a very high level.

5 Q. Can you think of any others?

6 A. Are you looking for the payment formula?

7 Q. No, Ms. Paul. I had asked you whether
8 risk adjustment is part of the Medicare Advantage
9 payment methodology. I believe you said it's one
10 part. So I asked you to identify other parts.

11 Are there any other parts that you have
12 not yet identified?

13 A. It depends how specific you are asking.
14 At a -- there are many parts to payments. It's quite
15 complex. So those pieces are major pieces.

16 Q. The pieces you enumerated are -- are the
17 major pieces?

18 A. They are major pieces.

19 Q. Are there any other major pieces that you
20 can think of?

21 A. It's really more complex than that. Those
22 are major pieces of it. It depends on how detailed
23 you want to discuss, and what you consider major.

24 Q. And we will certainly get into the details
25 throughout the day, Ms. Paul. Right now, I just want

1 to know if there are any other major pieces that you
2 have not yet identified.

3 A. It really depends on how detailed you're
4 going to be and what you consider major. Those are
5 major pieces of how payment -- major pieces of the
6 payment.

7 Q. If we turn back to Exhibit 1170, you list
8 plan payment as among your specialties. What does
9 "plan payment" mean?

10 A. I do not know what I was thinking when I
11 wrote it, but it is a general term for payment
12 policy, payment formulas.

13 Q. Payments to who?

14 A. Plans.

15 Q. Medicare Advantage plans?

16 A. Again, I do not know what I was thinking
17 when I wrote this, but that is what I worked on, so
18 that is possibly what I had in mind when I wrote
19 that.

20 Q. What do you think it means, sitting here
21 today, Ms. Paul?

22 A. Are you asking in the context of what I
23 do, or generically?

24 Q. Exhibit 1170 is a document you created.
25 Isn't that correct, Ms. Paul? It's your LinkedIn

1 page?

2 A. Yes.

3 Q. Okay. When you wrote "plan payment," what
4 information were you trying to convey as part of your
5 specialties?

6 A. I do not know what I was thinking when I
7 wrote it. That's why I'm asking if what you're
8 asking now is what I work on.

9 Q. What do you believe it means?

10 MR. MASON: Objection. Asked and
11 answered.

12 THE WITNESS: What it means here is a
13 general category of knowledge. It is not meant
14 to be specific. But I do not remember what I
15 meant when I wrote it.

16 BY MR. QURESHI:

17 Q. Are you able to testify as to whether
18 "plan payment" refers to payments to Medicare
19 Advantage plans?

20 MR. MASON: Objection. Form.

21 THE WITNESS: That seems like a different
22 question. You're asking what I meant when I
23 wrote this. If you're asking does plan payment
24 include that -- is that the question?

25

1 BY MR. QURESHI:

2 Q. My question was, are you able to testify
3 as to whether "plan payment" refers to payments to
4 Medicare Advantage plans, Ms. Paul?

5 MR. MASON: Same objection.

6 THE WITNESS: Are you asking about the
7 generic term, or what it means here?

8 BY MR. QURESHI:

9 Q. Let's do both, Ms. Paul. What does it
10 mean here, on Exhibit 1170?

11 MR. MASON: Objection. Asked and
12 answered.

13 THE WITNESS: Again, I do not know on the
14 page what I meant when I wrote it. But it
15 was -- appears to be intended to be a general
16 term, and not specific.

17 BY MR. QURESHI:

18 Q. And what do you understand the general
19 term to mean?

20 A. The general term would mean how plans are
21 paid.

22 Q. What plans?

23 A. Given that I was working in the Medicare
24 Plan Payment Group, presumably Medicare plans.

25 Q. Medicare Advantage plans?

1 A. Those are included.

2 Q. What other plans are included?

3 A. Part D plans.

4 Q. What other plans?

5 A. Again, we're addressing the wording as
6 they exist in nature, not what's here. I don't know
7 what I meant when I wrote this.

8 Q. I understand that, Ms. Paul. My question
9 is, the concept of plan payment refers to Medicare
10 Advantage plans and Part D plans, according to you.
11 Are there any other plans that you think it refers
12 to?

13 A. And I'm just clarifying that I mean this
14 today, not what's written here.

15 Q. I'm fine with that clarification,
16 Ms. Paul. I -- I just want your best testimony.

17 When you -- you hear the word "plan
18 payment" as applied to your experience and your work,
19 what do you understand that to mean?

20 A. The vast majority of it is Medicare
21 Advantage and Part D plans. Those are the plan types
22 that the Medicare Plan Payment Group is responsible.
23 There are other plans that get paid similarly that --
24 that would come -- that would be included today;
25 again, not talking about this document -- base

1 organizations, some demonstration plans.

2 Q. Are you finished with your answer?

3 A. Yes.

4 Q. Do you use e-mail in your work at CMS?

5 A. Yes.

6 Q. What is your e-mail address?

7 A. rebecca.paul@cms.hhs.gov.

8 Q. Have you had the same e-mail address
9 throughout your tenure of work at the CMS central
10 office?

11 A. I believe so.

12 Q. Okay. Do you ever use personal e-mail to
13 conduct CMS-related business?

14 A. No.

15 Q. You've never done that?

16 MR. MASON: Objection. Form.

17 THE WITNESS: Years ago, before we had
18 work laptops, I might have sent a file home, but
19 everything would have been in my work e-mail.
20 Nothing exists outside of work e-mail.

21 BY MR. QURESHI:

22 Q. And what e-mail address would you have
23 used to send work home before you had a laptop?

24 A. I don't know which one it was, because
25 they're all . . .

1 Q. How many personal e-mail addresses do you
2 have?

3 A. I have two.

4 Q. What are those e-mail addresses?

5 A. One is rebecca_paul@yahoo.com. That's
6 probably the only one I would have used. The other
7 one is newer.

8 Q. And what is the newer one?

9 A. It's lokipaul94@gmail.com.

10 Q. Focusing on your CMS e-mail address, was
11 it your practice while working at the central office
12 to be truthful in your e-mail communications?

13 A. Yes.

14 Q. Is it your practice to review e-mails sent
15 to you at your CMS e-mail address?

16 A. Are you asking about reviewing e-mails or
17 reviewing them -- I -- the e-mail address -- what
18 you're asking.

19 Q. I'm not sure I understand your
20 clarification, Ms. Paul. I can ask my question
21 again, if that helps.

22 Is it your practice to review e-mails sent
23 to you at your CMS e-mail address?

24 A. Are you asking about the e-mail address,
25 or are you asking do I review e-mails?

1 Q. If someone sent you an e-mail at your CMS
2 e-mail address, would you review the contents of that
3 e-mail?

4 A. I do not read every e-mail I receive.

5 Q. How do you decide which e-mails to look
6 at?

7 A. It depends. Urgency, topical nature of an
8 e-mail, if I work on it, does someone else work on
9 it.

10 Q. And has that been your practice throughout
11 your tenure at the CMS central office?

12 A. I -- if I do not -- if there was -- if I
13 ever didn't read an e-mail, so general criteria are
14 likely what I was taking into account. I can't speak
15 to how I would read an e-mail, you know, a long time
16 ago.

17 Q. Are you familiar with the term "diagnosis
18 code" in the context of the Medicare risk adjustment
19 program?

20 A. Yes.

21 Q. What is a diagnosis code?

22 A. A diagnosis code is a numerical code that
23 is associated with a specific clinical diagnosis, as
24 defined by diagnosis code.

25 Q. And what role do diagnosis codes play in

1 the Medicare risk adjustment program?

2 A. Some diagnosis codes -- specified
3 diagnosis codes are used in the risk adjustment
4 models to assign a specific condition to a
5 beneficiary, and is used to calculate a risk score.

6 Q. Thank you for that, Ms. Paul. We'll talk
7 a little bit more about risk scores in a moment, but
8 first I'll direct you to another exhibit that should
9 be available soon.

10 MR. QURESHI: It's Tab H, Samantha.

11 BY MR. QURESHI:

12 Q. And Ms. Paul, we'll refer to it as
13 Exhibit 1171.

14 (Exhibit 1171 was marked for identification.)

15 BY MR. QURESHI:

16 Q. It should be up in a moment.

17 A. Okay.

18 Q. Please let me know when it is available
19 for you.

20 A. I have it.

21 Q. Might you take a moment to review it?

22 While you're reviewing Exhibit 1171,
23 Ms. Paul, we've also uploaded a document that's
24 designated Exhibit 1171-1, which is the attachment
25 to 1171. So you should have that available to you

1 now as well.

2 (Exhibit 1171-1 was marked for identification.)

3 BY MR. QURESHI:

4 Q. Ms. Paul, I'll represent for the record
5 that Exhibit 1171 is an e-mail chain, where the top
6 e-mail is from you to Ms. Cheri Rice, dated
7 September 2nd, 2014. And it bears the Bates number
8 USBP057358501. Is that correct?

9 A. Are you asking me the number on the e-mail
10 chain?

11 Q. That's right, Ms. Paul. I just want to
12 make sure we're looking at the same document.

13 A. Can you read the number again that's on
14 the e-mail chain? I -- I thought you were talking
15 about the other document.

16 Q. Sure. I'll describe the e-mail in its
17 entirety. It's an e-mail where at the top of the
18 page, you, Ms. Rebecca Paul, are sending a message to
19 Ms. Cheri Rice and others. And that e-mail is dated
20 September 2nd, 2014. The Bates number on the bottom
21 of the first page is USBP057358501. Correct?

22 A. That's what I see.

23 Q. And who is Ms. Cheri Rice?

24 A. At the time of this e-mail she was the
25 group director --

1 do you mean?

2 Q. If it's -- if it's in red text?

3 A. Yes, it's in red.

4 Q. And is there a line through the red text?

5 A. No.

6 Q. Okay. Well, that's what I have in -- in
7 the version that I'm looking at. But regardless of
8 whether it's struck out or not, would you please read
9 Item 11?

10 A. "Exclude diagnostic categories that are
11 most subject to differential coding in MA compared to
12 fee-for-service Medicare."

13 Q. And then does it say "NEW," in
14 parentheses, at the end?

15 A. Yes, yes, it says "NEW."

16 Q. And what do you understand Item 11 to
17 mean?

18 A. That -- that Medicare Advantage plans
19 would report codes -- specific categories, I guess
20 the categories differently than fee for service
21 would.

22 Q. And why would that occur?

23 MR. MASON: Objection. Form.

24 THE WITNESS: It might occur because
25 Medicare Advantage plan payments will increase

1 when they report more diagnoses, more unique
2 diagnoses, than fee for service.

3 BY MR. QURESHI:

4 Q. And why would that occur?

5 MR. MASON: Objection to form.

6 THE WITNESS: It's because there's a
7 payment incentive to report more codes, because
8 the risk score would increase.

9 BY MR. QURESHI:

10 Q. In discussing the phrase "discretionary
11 coding variation," is there a variation in how coders
12 identify diagnoses?

13 MR. MASON: Objection. Form.

14 THE WITNESS: And by "coders," you're now
15 talking about -- you're talking about
16 professionally trained coders, who review --

17 BY MR. QURESHI:

18 Q. Yes.

19 A. -- medical record.

20 Discretionary, in this sense, is a
21 clinical -- of a clinical nature, where the
22 diagnosing may vary by provider, by -- depending --
23 it's a conceptual framework for whether or not a
24 diagnosis made by a clinician may differ what -- the
25 degree to which it may differ.

1 Coding is not diagnosing. It is whether
2 or not the medical record, what is written in the
3 medical record, meets coding guidelines to assign it
4 a specific diagnosis code.

5 Your question about whether coders can
6 differ: They potentially can, but there are rules to
7 follow, which is not the "discretionary" that's
8 referred to here.

9 Q. Understood. And with respect to
10 differences between coders, how are those differences
11 resolved?

12 MR. MASON: Objection. Form. Vague.

13 THE WITNESS: I don't know. It depends on
14 the circumstances. I don't -- I wouldn't have
15 direct knowledge.

16 BY MR. QURESHI:

17 Q. I believe you said you wouldn't have
18 direct knowledge. Do you have any knowledge on this
19 issue?

20 A. I don't -- I don't work with coders. I
21 don't -- it depends on what the -- I mean, I don't --
22 is this a plan program? I don't know. I assume -- I
23 don't know how it's resolved.

24 Q. You might turn to the next page, Slide 4,
25 of Exhibit 1171-1.

1 A. Which page?

2 Q. The next slide, Slide 4.

3 A. Okay.

4 Q. The title of the slide is "NEW SLIDE?
5 Decisions Regarding the Inclusion of Individual
6 HCCs."

7 A. Uh-huh.

8 Q. Do you see that?

9 A. Yes.

10 Q. Okay. The last bullet point states:
11 "Whether diagnosis codes that are subject to
12 discretionary or differential coding should be
13 excluded." Did I read that correctly?

14 A. Yes.

15 Q. What did you understand this last bullet
16 point to mean?

17 MR. MASON: Objection. Form.

18 THE WITNESS: This slide is discussing
19 when we include specific HCCs in a risk
20 adjustment model, and we have principles and
21 decision points about when they are included or
22 not. This last bullet is discussing a decision
23 point about when to exclude an HCC from the
24 model.

25 The discretionary term here, I believe,

CERTIFICATE

I, KAREN K. KIDWELL, Registered Merit Reporter, and Certified Realtime Reporter, do hereby certify that prior to the commencement of the examination, the deponent was remotely sworn to testify to the truth, the whole truth under penalty of perjury.

I DO FURTHER CERTIFY that the foregoing is a verbatim transcript of the testimony as taken stenographically by me at the time, place and on the date hereinbefore set forth, to the best of my ability.

I DO FURTHER CERTIFY that I am neither a relative nor employee nor attorney nor counsel of any of the parties to this action, and that I am neither a relative nor employee of such attorney or counsel, and that I am not financially interested in this action.

UNITED STATES OF

BENJAMIN POEHLING,
Plaintiffs,
vs. No. CV 16-08697 FMO
UNITEDHEALTH GROUP,
INC., et al.,

Defendants.

The videotaped deposition of
BENJAMIN POEHLING, taken pursuant to Notice
of Taking Deposition, taken before
Alexis Jensen, RPR, CRR, and a Notary Public
in and for the County of Dakota, State of
Minnesota, taken on October 18, 2022, at
Dorsey & Whitney LLP, 50 South Sixth Street,
Suite 1500, Minneapolis, Minnesota,
commencing at approximately 9:24 a.m.

1 that you wrote because you thought it or
2 something you heard others at United say?

3 A. It's -- my recollection is it's something
4 that I heard people say at United.

5 Q. And during the time you were -- you were in
6 this role, 2010/2011, did you form a view as
7 to whether it was, in fact, correct that it
8 was unreasonable to ask a Medicare advantage
9 plan to review every medical chart?

10 A. I don't know if I formed an opinion back
11 then, but when you talk about -- when you
12 say "every medical chart," that would seem
13 unreasonable.

14 Q. Well, I'll ask it again a different way.
15 Whether you recall back then,
16 sitting here today, would you agree that
17 it's not reasonable to expect Medicare
18 advantage plans to review every medical
19 chart?

20 MR. HAVIAN: Objection, form.

21 THE DEPONENT: I don't know what
22 "every medical chart," but -- refers to, but
23 literally, if you're asking review every
24 single medical chart, that does seem
25 unreasonable to me.

1 BY MR. BAAK:

2 Q. All right. We're still in the same section,
3 but I want to go over to the next page of
4 your Challenges With CMS Methodology
5 section. And there's two more bullets.

6 The first one is, Doctor -- plans
7 rely on doctors to code correctly.

8 Do you see that?

9 A. I do.

10 Q. Again, was that something you understood at
11 the time you were drafting this summary
12 document in 2011 that plans counted on the
13 doctors to code correctly?

14 A. It was something I heard at United.

15 Q. Was it something you disagreed with?

16 A. Doctors don't always code. They may have
17 coders in their office.

18 Q. "Doctors" meaning doctors' offices?

19 A. Getting -- so, we talked about IRADS
20 earlier. If they're coding things that come
21 through IRADS, we relied on those claims
22 that were coming in through IRADS that were
23 coded by someone at the doctor's office.

24 Q. You previewed the next part of this bullet,
25 which is -- it says, Many doctors do not

1 have an incentive to do so; that is, to code
2 correctly, right?

3 MR. HAVIAN: Objection to form.

4 I'm not sure if you're asking if you read
5 that correctly, or if it's correct.

6 BY MR. BAAK:

7 Q. Let me take the former. Did -- did I
8 describe your -- the bullet -- the next
9 sentence in your CMS methodology section
10 correctly, Many doctors do not have an
11 incentive to do so?

12 A. Yeah, I see those words here.

13 Q. And that's referring to doctors having an
14 incentive to code correctly, right?

15 A. I believe so.

16 Q. And the reason for that is the next
17 sentence, which is, A physician office
18 claims only require one diagnosis code to
19 justify the CPT in a Medicare claim, right?

20 MR. HAVIAN: Objection to form.

21 THE DEPONENT: Yeah.

22 BY MR. BAAK:

23 Q. What's a CPT?

24 A. I don't know what -- I can't remember what
25 it stands for. I believe it's a procedure

1 code.

2 Q. What you're trying to capture here in this
3 bullet is the reason doctors don't have an
4 incentive to completely code accurately
5 diagnosis codes?

6 MR. HAVIAN: Objection.

7 THE DEPONENT: No, this may be one
8 reason. But there may be other reasons as
9 well.

10 BY MR. BAAK:

11 Q. So, what you're capturing here, though, is
12 one reason why risk adjustment diagnosis
13 data may be incomplete?

14 MR. HAVIAN: Objection to form.

15 THE DEPONENT: Where I'm capturing
16 where, in this last sentence?

17 BY MR. BAAK:

18 Q. In this third bullet.

19 A. Can -- can you ask the question again?

20 Q. Sure. I'm just trying to understand the
21 purpose of why you put this bullet in your
22 summary you created in 2011.

23 So, are you trying to capture one
24 reason that doctors don't necessarily have
25 an incentive to code completely when they

1 submit a claim?

2 A. I -- I don't recall specifically why I put
3 it in here. I do agree that doctors' coding
4 may not be correct sometimes, but there's
5 multiple reasons why that could be true.

6 Q. And then you've got your last bullet, Plans
7 have no incentive to police overcoding.

8 And that's what you write right
9 there in the last bullet, right?

10 A. I see those words, yes.

11 Q. Is that something you thought or you heard
12 others say?

13 A. This is something I heard at the -- at the
14 company.

15 Q. And then in the last section, there's a
16 paragraph to wrap up your CMS methodology
17 challenges section. It says, Despite these
18 challenges, plans must ensure face-to-face,
19 appropriate provider type and documented in
20 medical record, right?

21 A. Yes, it says that.

22 Q. Then it says, These are the rules to
23 participate, right?

24 A. Yes, it says that.

25 Q. Did CMS ever put out -- or let me ask it a

CONFIDENTIAL
VIDEOTAPED DEPOSITION OF
CYNTHIA POLICH
September 28, 2022
10:09 a.m.

Via Zoom Videoconferencing

Reported by: Marsi Koehl, CCR-B-2424

1 submit a diagnosis code on an encounter or a claims
2 form, that it was accurate, reflected the health
3 status or conditions of the patients they saw, that
4 it was documented in the medical record. And those
5 standards apply to both Medicare Advantage
6 organizations and Medicare fee-for-service.

7 Q. So was it your understanding that there was
8 a requirement that codes submitted had to be
9 supported by medical record documentation?

10 MR. SCHINDLER: Objection. Vague and
11 ambiguous. Asked and answered.

12 THE WITNESS: It was my understanding
13 that we were required by CMS to accurately
14 submit the codes submitted to us by
15 providers on behalf of their patients.

16 We would submit them to CMS with the
17 presumption that the provider was submitting
18 to us accurate diagnoses that reflected the
19 health status and conditions of their
20 patient and that it would be documented in
21 their medical record.

22 BY MR. LEE:

23 Q. Was there any obligation on the part of the
24 Medicare Advantage organization as to the accuracy of
25 whether or not that code was supported by medical

1 record documentation?

2 MR. SCHINDLER: Objection. Vague and
3 ambiguous.

4 THE WITNESS: As far as I understood,
5 there was no requirement for the Medicare
6 Advantage organization to verify the code
7 submitted by a provider to us on their
8 claims or encounter form, but that if we
9 were -- if the provider informed us that
10 they submitted a code in error, that we
11 would delete that code.

12 BY MR. LEE:

13 Q. Submitted in error meaning, for example, not
14 supported by the medical record? That would be a
15 valid reason to delete that code?

16 MR. SCHINDLER: Objection. Calls for
17 speculation.

18 THE WITNESS: I was referring to an
19 error of they transposed some digits or the
20 coder made a mistake, that those errors --
21 we would delete those codes and not submit
22 them to CMS.

23 BY MR. LEE:

24 Q. By codes that are unsupported by medical
25 record, codes that should be deleted?

1 MR. SCHINDLER: Objection. Calls for a
2 legal conclusion. No foundation. Calls for
3 speculation and vague and ambiguous as
4 framed.

5 THE WITNESS: There was no regulatory
6 requirement for Medicare Advantage plans to
7 verify that the diagnosis codes submitted by
8 the provider were supported.

9 BY MR. LEE:

10 Q. And Ms. Polich, I'm not asking about
11 regulatory requirements, I'm not asking about
12 verification. What I'm asking you, though, is it
13 your understanding that there was a requirement that
14 codes submitted for risk adjustment had to be
15 supported by medical records?

16 MR. SCHINDLER: Objection. Vague and
17 ambiguous. What is requirement then? She
18 just answered your question.

19 MR. LEE: Mr. Schindler, I'm going to
20 admonish you again to abide by Rule 30 --

21 MR. SCHINDLER: I am abiding by
22 Rule 30 --

23 (Simultaneous talkers.)

24 MR. LEE: -- argumentative.

25 MR. SCHINDLER: You are being

1 argumentative. That's the problem. She
2 answered your question and you turned around
3 and said she didn't answer it.

4 BY MR. LEE:

5 Q. Ms. Polich, I'm not asking you about
6 regulatory requirements. I'm not asking about
7 verifying codes. I'm asking you: Is there an
8 obligation, regulatory or not, that codes submitted
9 to CMS need to be supported by the medical records?

10 A. I don't know that.

11 Q. Isn't that what that top line in this
12 PowerPoint by Reden & Anders is trying to train you?

13 MR. SCHINDLER: Objection. Calls for
14 speculation. Asked and answered and no
15 foundation.

16 THE WITNESS: I do not know the -- what
17 they were thinking or anticipating with this
18 and this was not a presentation to us. This
19 was not a training to us. This was a
20 presentation that they would be using with
21 external clients.

22 BY MR. LEE:

23 Q. When you say a minute ago that it was
24 presumed that the codes would be accurate, do you
25 have any understanding as to whether or not there was

Michelle R. Lowe, RPR, CCR-2748

1 beneficiary level payments?

2 MR. JONES: Objection. Form.

3 A No, not during the time period that we're
4 talking about. So I don't believe that CMS did
5 extrapolate results and -- and seek recoupment at
6 all.

7 BY MR. MASON:

8 Q Has CMS ever extrapolated RADV results?

9 A Yes.

10 Q When?

11 A In the CON11 to 13 years. There were
12 extrapolations that were done and reported out.

13 Q You mean that CMS calculated what an
14 extrapolation would look like, but they didn't
15 actually recoup payments based on extrapolated
16 results; right?

17 A That's right. But you asked me if
18 extrapolations had been done and they did calculate
19 extrapolations.

20 Q So, just to be clear, CMS, in your view,
21 has extrapolated RADV results, but they've never
22 recouped payments based on extrapolation?

23 MR. JONES: Objection. Form.

24 A Yeah, they have done extrapolation
25 calculations based on the results of their RADV

1 audits and have not sought to recoup any excess
2 payments or to make whole any underpayments.

3 BY MR. MASON:

4 Q And you mentioned that in RADV the MAOs
5 can submit up to five medical records for each
6 member-HCC that's part of the RADV sample?

7 A That's my understanding, yes.

8 Q And the MAO gets to choose those medical
9 records from the beneficiary's entire medical
10 history throughout the year?

11 A That's my understanding is that they
12 submit what they think are the -- you know, five
13 best records to support that HCC.

14 Q And they can choose any medical record
15 from throughout the year for that beneficiary?

16 MR. JONES: Objection. Form.

17 A That meets the other criteria of being a
18 face-to-face encounter from an appropriate provider.
19 I mean, so there's -- there's more to it than that,
20 but, generally speaking, yes.

21 BY MR. MASON:

22 Q And to -- to be included in a RADV
23 audit -- well, CMS selects a sample of MAO's members
24 to be included in a RADV audit; right?

25 A Yes. They have a -- their methodology was

1 fairly complicated and it's changed over time,
2 but -- but at a sort of basic level, yes, they're
3 reviewing some sort of sample of -- of MAO members.

4 Q Have you analyzed how CMS selects the
5 sample?

6 A Analyzed would probably not be the word
7 that I use. I have reviewed information about that.
8 I -- it -- as I said, it's complicated. I just
9 reviewed it to get a general understanding of -- of
10 how they do things, but I -- I couldn't give you an
11 exhaustive, you know, outline of exactly how they
12 selected their member samples in each year.

13 Q Do you have any expert opinions about the
14 statistical properties of the samples -- the RADV
15 samples?

16 MR. JONES: Objection. Form.

17 A I haven't rendered any statistical
18 opinions.

19 BY MR. MASON:

20 Q Do you -- do you have any expert opinions
21 about -- that relate to how CMS selects the RADV
22 sample?

23 MR. JONES: Objection. Form.

24 A I don't have -- I don't believe I have
25 such opinions, you know, expressed as opinions

1 you know, in particular here is as rebutting the
2 presumption that diagnosis codes not independently
3 identified by a chart reviewer were necessarily
4 unsupported.

5 Q Okay. And, likewise, you're not offering
6 an expert opinion that the 55 percent that you
7 calculated for the Garthwaite RADV overlap should be
8 applied to the entire population of the Garthwaite
9 delete list; right?

10 A Again, I'm using that principally to rebut
11 Dr. Garthwaite's presumption that the codes on his
12 delete list were necessarily unsupported.

13 Q So you agree then that you're not offering
14 an expert opinion that the 55 percent rate that you
15 calculated for the Garthwaite delete list should be
16 applied across the entire Garthwaite delete
17 population?

18 A Well, when you say should be applied, I
19 mean, I think it's -- as I've, I think, termed it in
20 my report -- it's an instructive basis on which to
21 think about that grouping, but it's not a
22 statistically valid extrapolatable [sic] rate that
23 you could say with any sort of mathematical
24 confidence reflects, you know, anything about the
25 larger population of Garthwaite deletes.

1 Q If one were to opine that the validation
2 rate of 55 percent from the Garthwaite RADV overlap
3 that you calculated should be applied to the entire
4 Garthwaite delete list, then that would also mean
5 that 45 percent of the diagnosis codes on
6 Garthwaite's list map to member-HCC combinations
7 that would not be validated in RADV; right?

8 MR. JONES: Objection. Form.

9 A Well, as I've said, I don't think the RADV
10 overlap can statistically or mathematically be
11 extrapolated to any population, which means just as
12 I wouldn't assert that that means that some certain
13 percentage of the codes are supported, it would be
14 inappropriate to conclude that that definitively
15 means that some certain percentage of the codes were
16 not supported. And that's -- I think that's
17 important.

18 Nonetheless, my view, just based on what
19 we have in the RADV overlap, that some of the HCCs
20 to which the questioned diagnoses map were found to
21 be validated definitively rebuts Dr. Garthwaite's
22 presumption that the codes on his list are
23 necessarily unsupported, but you can't do the
24 converse and say, and here's the percentage that is
25 or is not supported.

1 I think the other thing I would just throw
2 in there is that the RADV results, you know, are
3 also subject to appeal. So we don't know whether or
4 to what extent the RADV audit findings might be
5 changed by appeals that United might pursue, and I
6 haven't seen that data.

7 BY MR. MASON:

8 Q In your experience, is 45 percent of a
9 RADV audit not validating considered high?

10 MR. JONES: Objection. Form. Foundation.
11 Misstates the testimony.

12 A I don't -- I don't think there's enough
13 information here to make a judgment about that, one
14 way or the other.

15 I mean, at some level, right, if you did
16 enough work, you could find a population that had an
17 error rate of 100 percent, right, if you went all
18 the way through and did everything you needed to do.
19 That, to me, probably isn't the relevant way to
20 think about an error rate and there's not an
21 absolute standard as to what sort of error is too
22 high or not high enough. There's judgment inherent
23 in those determinations.

24 So I don't have a clear answer for you on
25 that.

1 this litigation?

2 A Well, I think the 1.9 million is this
3 artificial subset that exists only in this
4 litigation so --

5 Q Well, I'm only asking because you said
6 that you're not aware in the context of this
7 litigation and I wanted to make sure that you
8 weren't leaving something out of your answer.

9 So you're not aware of anyone inside or
10 outside of this litigation doing any analysis
11 whether the -- the remaining 1.9 million diagnosis
12 codes on Garthwaite's delete list, other than the
13 375, are supported at the diagnosis code level by
14 any charts?

15 MR. JONES: Objection. Form.

16 And you just interrupted an answer
17 midstream; so I'm going to ask you to let the
18 witness continue his answers.

19 A I am not aware of any such review.

20 BY MR. MASON:

21 Q Thank you. I'm sorry if I interrupted; I
22 thought you were done with your answer.

23 A No offense.

24 Q Great.

25 As to that remainder -- and when I say the

1 remainder, I mean the 1.9 million, approximately,
2 diagnosis codes on Garthwaite's list, less the 375
3 diagnosis codes that you say were validated in RADV.

4 So as to that remainder, can you identify
5 any specific diagnosis codes that are supported
6 either at the diagnosis code level or the member-HCC
7 level by any chart?

8 MR. JONES: Objection. Form.

9 A It's not something I've undertaken; so I
10 can't. And the reason is that it's not germane to
11 my opinion. You know, my understanding is that
12 neither Dr. Garthwaite, nor anybody else on that
13 side of -- of this matter has done that either to
14 demonstrate that these codes are, in fact,
15 unsupported.

16 BY MR. MASON:

17 Q And you don't believe it's appropriate to
18 extrapolate the 55 percent validation rate to that
19 1.9 million remainder; right?

20 MR. JONES: Objection. Form. Asked and
21 answered.

22 A That's correct. As a statistical or
23 mathematical matter, I don't think that's an
24 extrapolatable ratio.

25 BY MR. MASON:

1 Q And of the 375 that you've identified as
2 validated in RADV, how many did RADV determine the
3 same specific diagnosis code that United submitted
4 was supported by any medical chart?

5 MR. JONES: Objection. Form. Asked and
6 answered.

7 A I believe this hearkens back to our -- our
8 discussion before the break that it's -- it's not
9 possible to determine which specific diagnosis codes
10 the RADV auditors -- meaning, in terms of which
11 specific member, provider, date of service
12 combination on a particular chart were reviewed or
13 given what weight or consideration by the RADV
14 auditors. So I don't know.

15 BY MR. MASON:

16 Q And you also can't say whether any of
17 those 375 RADV found support for the specific
18 diagnosis code that United submitted; right?

19 MR. JONES: Objection. Form. Asked and
20 answered.

21 A Well, as we talked about previously, the
22 RADV auditors -- each one of those codes was either
23 found to be supported by the RADV auditors or is
24 moot.

25 BY MR. MASON:

1 A That's correct.

2 Q And so you don't have any information
3 about any specific unsubmitted but valid diagnosis
4 for any of the members on Garthwaite's deletes --

5 MR. JONES: Objection.

6 BY MR. MASON:

7 Q -- right?

8 MR. JONES: Form.

9 A The only information I have specifically
10 on valid but un -- or supported but unsubmitted
11 diagnosis codes would be what's contained within
12 United's systems, specifically those unsubmitted
13 codes with an X19 designation, as -- as one example.

14 BY MR. MASON:

15 Q The ones that Garthwaite accounted for?

16 A Yes.

17 Q In Paragraph 43, you mention -- this is
18 what you wanted to talk about earlier; right -- that
19 13 of the 15 United contracts reviewed in the
20 CON11-13 RADV audits were found to have net
21 underpayments.

22 That's -- that's your statement; right?

23 A That's correct.

24 Q Your understanding is that this was a
25 finding by CMS?

1 A This was the publicly disseminated result
2 of their audits.

3 Q Your understanding is that these results
4 were publicly disseminated?

5 A Well, I know that they were reflected
6 within a RADV audit summary that -- that I have
7 referenced in my report. I don't actually recall
8 whether that was generally publicly available,
9 available only through a FOYA request. I don't
10 recall exactly how it was obtained.

11 Q Why -- why did you refer to it as publicly
12 disseminated?

13 A Well, I apologize if that's a
14 misstatement. My understanding was that that
15 information is available and it's been incorporated
16 into my work.

17 Q Okay. So your understanding is that this
18 was a finding by CMS?

19 A Yes, that the results of their RADV audits
20 showed that 13 of those 15 contracts had negative
21 net recovery amounts or negative recovery amounts.

22 Q And do you have an understanding whether
23 that result was finalized by CMS?

24 MR. JONES: Objection. Form.

25 A I don't know what the current status is or

1 whether any appeals that United may have pursued
2 with respect to the findings of that -- of those
3 audits, you know, may also impact those results. So
4 I don't know.

5 BY MR. MASON:

6 Q You don't know that CMS considers those
7 preliminary results?

8 MR. JONES: Objection. Form.

9 A I do under -- I guess I do understand that
10 they are not final-final. My corresponding
11 understanding would be that they're not likely to
12 get worse from the MAO's perspective, but, rather,
13 that they are open to an appeal process that can be
14 initiated by the MAOs which may reverse some of the
15 adverse findings from those audits.

16 BY MR. MASON:

17 Q So let me just back up.

18 Do -- do you have an under --
19 understanding whether these results were finalized
20 by CMS?

21 MR. JONES: Objection. Form. Asked and
22 answered.

23 A I don't believe that they were
24 final-final.

25 BY MR. MASON:

1 Q You don't believe that they were
2 final-final?

3 A Correct.

4 Q Is final-final different than final?

5 MR. JONES: Objection. Form. Asked and
6 answered.

7 A I -- there are often things that are final
8 and then there's some other process that goes
9 beyond. So what I meant to say is that I don't know
10 that the ultimate adjudication of all of the
11 findings within those audits is fully and once and
12 for all complete.

13 BY MR. MASON:

14 Q And what are you basing it on that -- that
15 the result -- what is the -- what is the basis for
16 your statement that -- about the degree to which
17 these results were finalized?

18 MR. JONES: Objection. Form.

19 A I don't recall specifically and I don't
20 have the document in front of me, but I just -- my
21 recollection from my work is that they were not
22 ultimately final.

23 BY MR. MASON:

24 Q Can you -- is it in your report somewhere
25 that we can reference?

Videoconference Videotaped Deposition OF
JEFF RENSHAW
(Taken virtually)
9:30 a.m. Eastern
Wednesday, August 24, 2022

REPORTED BY: Christine A. Taylor, RPR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 A. Three.

2 Q. Was it in person or remote?

3 A. I didn't meet with all -- sorry. I
4 didn't meet with all three each time, but we met
5 three times.

6 Q. Great. Okay. And how -- for how long
7 would you say total you met?

8 A. 8 hours and 47 minutes.

9 Q. You're precise. Okay.

10 A. I got done -- we got done a little bit
11 early yesterday.

12 Q. Love it. All right. That's memorable
13 when you get to finish up early.

14 A. Yes.

15 Q. Okay. And did you -- when you were
16 preparing, did you review any documents?

17 A. Yes.

18 Q. And did any of them refresh your
19 recollection of events that we may speak about
20 today?

21 A. Certain parts of certain documents did
22 refresh my recollection.

23 Q. Great. And did you speak with anyone
24 else about this deposition?

25 A. I notified my boss and my team that I

1 was being deposed today, but beyond that, you
2 know, I didn't provide any specifics about the
3 subject matter. Just wanted them to know that I
4 wouldn't be available.

5 Q. Great. Okay. And no one else beyond
6 that?

7 A. No.

8 Q. Okay. Where are you currently
9 employed?

10 A. I work for Department of Health and
11 Human Services, Office of Inspector General in the
12 Office of Audit Services. I'm --

13 Q. And is --

14 A. Sorry.

15 Q. No, no, please. I'm sorry to cut you
16 off. Go ahead.

17 A. I was just going to say I'm currently
18 working in Region 5, which is kind of like our
19 Chicago, Midwest region.

20 Q. And is Office of the Inspector General
21 referred to as OIG?

22 A. Yes.

23 Q. So you'll understand today if I say
24 OIG, that's what I'm referring to?

25 A. Yes.

1 Q. And then same thing, is it okay if I
2 say OAS, you'll understand I mean Office of Audit
3 Services?

4 A. I will.

5 Q. Great. And how long have you worked
6 at OIG?

7 A. Since summer of 2002.

8 Q. Wow, okay. So 30 -- 30 years; is that
9 right?

10 A. No. I wish.

11 Q. 20. My math is bad.

12 MS. GLOVER: 20.

13 THE WITNESS: It's about 20 years.

14 BY MS. ZUCKERMAN:

15 Q. You can tell why I'm a lawyer.

16 20 years. Okay. Well,
17 congratulations. That's a long time.

18 A. Thank you.

19 Q. Okay. And what does OIG do, just big
20 picture?

21 A. Well, we do a number of things. I
22 mean, we do audits. We do evaluations. We've got
23 legal counsel. We have investigators. And our
24 mission is to sort of look at fraud, waste, and
25 abuse in HHS programs such as Medicare, Medicaid,

1 and others.

2 Q. Great. Okay. And which -- you said
3 you worked for -- you said you work for OAS;
4 right?

5 A. That's correct.

6 Q. How is OAS organized?

7 MS. GLOVER: Objection. Vague. You
8 can answer.

9 THE WITNESS: Okay.

10 MS. GLOVER: If you're able to, you can
11 answer.

12 THE WITNESS: Sure.

13 MS. GLOVER: Even when I object, it's
14 okay.

15 THE WITNESS: We have a headquarters
16 and we've got regions. Headquarters is --
17 is the question how is -- how is OAS
18 organized; is that correct?

19 BY MS. ZUCKERMAN:

20 Q. Yeah, let me rephrase. The question
21 is just -- is what I'm trying to do is get a sense
22 of so there's the regions and how do they fit
23 together with HQ, just sort of what are the
24 different components that make up OAS?

25 A. Yeah, so there are regions. There's a

1 established by our risk adjustment system. The
2 chart validation tested the provider's deviation
3 from that benchmark, codes found to be inaccurate
4 or incomplete through chart validations were
5 deleted."

6 Did I read that right?

7 A. I believe so, yes.

8 Q. Okay. Is your understanding that here
9 PacifiCare was explaining its chart validation
10 process?

11 A. Yes. This is -- this is a description
12 of the chart validation process.

13 Q. And what was your understanding of
14 PacifiCare's chart validation process?

15 A. So my understanding of the chart
16 validation process was that for providers that
17 PacifiCare paid on a capitated basis, so as
18 opposed to a provider that it would pay on a
19 fee-for-service basis, that -- and providers of a
20 certain size, I believe. And I don't remember
21 right now how to determine that certain size.
22 Some review of diagnosis -- the support for
23 diagnosis codes would be done.

24 So for certain diagnosis codes that a
25 capitated provider submitted to PacifiCare, it

1 would review those diagnosis codes to determine
2 whether they were supported by medical records.

3 Q. Okay. So fair to say you understood
4 that PacifiCare was only performing chart
5 validation for a subset of providers?

6 A. That's correct.

7 Q. And you understood that PacifiCare was
8 not auditing or validating every code that it
9 submitted to CMS?

10 A. Yes. That was -- that was -- that was
11 clear and made -- you know, made sense that they
12 wouldn't review everything.

13 Q. And what do you mean by it made sense?

14 A. Well, I don't think that it would be
15 reasonable to expect a Medicare Advantage
16 organization to determine whether every single
17 diagnosis submitted to CMS is supported to have a
18 good -- I mean, I don't think a good compliance
19 program would require that level of review.

20 Q. And has it ever been your
21 understanding that CMS required plans to conduct a
22 review of every code submitted?

23 MS. GLOVER: Objection. Form.

24 THE WITNESS: I've never --

25 MS. GLOVER: Go ahead.

1 THE WITNESS: I've never seen anything
2 that makes me think that CMS would expect a
3 plan to review every diagnosis that it
4 submits for -- to review medical record
5 documentation in support of every diagnosis
6 that it submits.

7 BY MS. ZUCKERMAN:

8 Q. So continuing in this very long
9 paragraph, it says, "In contrast, a chart review
10 involved review of the diagnoses reflected in a
11 selected provider's patient charts to determine if
12 any documented diagnoses had not been reported to
13 CMS. Following a chart review, we submitted to
14 CMS any new codes documented in the medical chart
15 but did not determine whether the codes previously
16 reported to CMS were documented in the medical
17 record."

18 Do you see that?

19 A. Yeah. Can I just review that real
20 quick? At first I didn't see where you started
21 reading, so I would like to just review that bit
22 myself, if that's okay.

23 Q. Of course. Take your time. Yeah,
24 just tell me when you're ready.

25 MS. GLOVER: And, Naomi, I think you

1 started with "in contrast."

2 MS. ZUCKERMAN: Yeah. Did I get that
3 wrong?

4 MS. GLOVER: No, no, no. I think I
5 also had trouble catching up to where you
6 were in the paragraph. I think maybe you
7 started with "in contrast" if you want to
8 start there, Jeff.

9 MS. ZUCKERMAN: Yeah, "in contrast."
10 It's about halfway through the big block.

11 THE WITNESS: Great. I see it. Thank
12 you.

13 Okay. Right. Thank you.

14 BY MS. ZUCKERMAN:

15 Q. What did you understand PacifiCare to
16 be explaining about its chart review program here?

17 A. I think that what PacifiCare was
18 explaining is that it's possible that there are
19 diagnoses that are relevant to the payment model
20 like I described earlier this morning, that it
21 doesn't specifically receive from the provider.
22 And so this chart review process, the purpose of
23 it would be to determine whether there's any
24 relevant diagnoses that PacifiCare could submit to
25 CMS because it's supported by the medical record

1 despite the fact that a provider had submitted
2 that diagnosis directly to PacifiCare.

3 Q. And stepping away from what PacifiCare
4 said here, did you have an understanding at this
5 time of, I think you said, there might be
6 diagnoses relevant to the payment model but that
7 the provider had not submitted. Were you aware of
8 why it would be that some providers might not
9 submit all of the diagnoses that might exist in a
10 patient's chart?

11 MS. GLOVER: Objection. Calls for
12 speculation.

13 THE WITNESS: And I don't know. I
14 mean, I can imagine there would be
15 circumstances where that would be the case,
16 but I don't really know what they would be.

17 BY MS. ZUCKERMAN:

18 Q. Were you aware of differences between
19 fee-for-service providers and providers that
20 received payment on a capitated basis in terms of
21 the completeness of coding that they would do for
22 a patient's chart?

23 MS. GLOVER: Objection. Form.

24 THE WITNESS: I don't -- I don't know.

25 BY MS. ZUCKERMAN:

1 Q. Okay. And returning to the document
2 here, did you understand PacifiCare to be saying
3 that when PacifiCare did a chart review, they were
4 only looking to add codes that had been missed by
5 the provider rather than also validating any codes
6 that had been previously submitted?

7 A. It was my understanding that this
8 would have been sort of a look for new codes,
9 meaning ones that hadn't been submitted before.

10 Q. Was it clear to you that from this
11 submission that PacifiCare was not conducting
12 validation of codes when it was doing that
13 process?

14 A. Was it clear to me that PacifiCare was
15 not doing validation of codes as part of its chart
16 review process?

17 Q. Yeah.

18 A. I don't know whether this is based on
19 my knowledge or an assumption, but I would assume
20 it was only submitting new codes that it had
21 determined were supported by medical record.

22 Q. And if you look maybe two-thirds of
23 the way down, do you see where the sentence
24 beginning follow a chart -- "following a chart
25 review"?

1 A. Yes.

2 Q. Do you see where it says, "Following a
3 chart review, we submitted to CMS any new codes
4 but did not determine whether the codes previously
5 reported to CMS were documented in the medical
6 record."

7 MS. GLOVER: Objection. Misstates the
8 document.

9 THE WITNESS: I didn't hear the
10 objection. Maybe it doesn't matter.

11 MS. GLOVER: It's okay. I think the
12 court reporter hopefully caught it, but,
13 yeah, you can go ahead and answer.

14 THE WITNESS: Okay. And what was your
15 question about this sentence?

16 BY MS. ZUCKERMAN:

17 Q. My question was whether you could see
18 that it said -- whether you could said that you --
19 PacifiCare had written here, "We did not determine
20 whether the codes previously reported to CMS were
21 documented in the medical record."

22 A. Yes, I see that.

23 Q. So is it fair to say that PacifiCare
24 explained to OIG here that as part of its chart
25 review, it was not also determining whether codes

1 previously reported to CMS were documented in the
2 medical record?

3 MS. GLOVER: Objection to form.

4 THE WITNESS: That's clear -- yeah,
5 that's clear. That's sort of -- that's
6 been my understanding of this all along.

7 BY MS. ZUCKERMAN:

8 Q. Okay. So, in other words, PacifiCare
9 was transparent about that as far as the purpose
10 of its chart review program and what it was or was
11 not doing in terms of validating diagnosis codes?

12 MS. GLOVER: Objection. Asked and
13 answered.

14 THE WITNESS: My understanding of the
15 chart review process is that it was focused
16 on identifying new supported diagnosis
17 codes that are relevant to the payment
18 model for submission to CMS.

19 BY MS. ZUCKERMAN:

20 Q. And that specifically PacifiCare did
21 not determine whether the codes previously
22 reported were documented in the medical record;
23 right?

24 MS. GLOVER: Objection. Asked and
25 answered.

1 THE WITNESS: It's clear from this
2 response to me that CMS wouldn't have been,
3 as part of its chart review process,
4 attempting to validate diagnoses that had
5 already been submitted to CMS.

6 BY MS. ZUCKERMAN:

7 Q. And when you just said "CMS wouldn't
8 have been as part of its chart review process,"
9 did you mean PacifiCare?

10 A. Thank you. Yes, that's what I meant.

11 Q. Okay. Let's -- I'm going to introduce
12 another exhibit that's been previously marked,
13 which is Exhibit 1126-1 and 1126-2. Just let me
14 know when you can see those.

15 A. Sure. I'm looking at the e-mail that
16 Juliet sent to Lisa and me and copied Cheryl on, I
17 guess after we went to Minneapolis.

18 Q. Yeah. So this is a December 8, 2009,
19 e-mail from Juliet Lo to you, Lisa Lara, and
20 Bradley Smith copying Cheryl Blackmon regarding
21 the meeting with Paul Bihm?

22 A. Yes, that's correct.

23 Q. And Ms. Lo writes, "Attached is the
24 write-up from 12/2 with Paul Bihm."

25 "It was good to meet you all last

1 week," she says, also, above.

2 Is this -- is it your understanding
3 that this is referring to the meeting in Minnesota
4 that you referenced earlier?

5 A. The -- when she talks about meeting
6 with us last week, that is what she's referring to
7 as our time in Minnesota on this audit.

8 Q. Okay. And do you recall Juliet Lo
9 taking notes at that meeting?

10 A. I don't specifically remember her
11 taking notes. I would have expected that she was,
12 and it appears that she must have.

13 Q. Do you recall if anyone else took
14 notes during the meeting?

15 A. Again, I don't have specific memories
16 of people taking notes, but I would have expected
17 Lisa and Brad to be taking notes.

18 Q. And do you remember if you would have
19 taken notes?

20 A. So I was -- I'm -- I was doing most of
21 the -- asking most of the questions, as I recall,
22 during the meetings that we had with PacifiCare
23 officials, and I don't -- I don't recall taking
24 notes. You know, I -- it would have been typical
25 for me in a situation like this to remind my team

CERTIFICATE OF REPORTER

I, Christine A. Taylor, Certified Court Reporter within and for the State of Georgia, do hereby certify:

That the foregoing deposition was taken before me on the date and at the time and location stated on Page 1 of this transcript; that the deponent was duly sworn to testify to the truth, the whole truth and nothing but the truth; that the testimony of the deponent and all objections made at the time of the examination were recorded stenographically by me and were thereafter transcribed; that the foregoing deposition as typed is a true, accurate and complete record of the testimony of the deponent and of all objections made at the time of the examination to the best of my ability.

I further certify that I am neither related to nor counsel for any party to the cause pending or interested in the events thereof. Witness my hand, this 28th day of August, 2022.

CONFIDENTIAL
CONTAINS ATTORNEYS' EYES ONLY PORTIONS
Videotaped Deposition of
CHERI RICE
Given Remotely
Wednesday, August 3, 2022
9:01 a.m. Eastern

Reported by: Karen K. Kidwell, RMR, CRR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 A. I have not.

2 Q. Let me turn to your -- your position and
3 your background. Can you -- can you tell us where
4 you currently work and what your position is?

5 A. Sure. I currently work in the Center for
6 Medicare at CMS, so I'm the deputy director in the
7 Center for Medicare, for Medicare Advantage and
8 Part D.

9 Q. To sort of place that in the hierarchy at
10 CMS, do you report to the -- to the director of CMS?

11 A. I report to the deputy administrator for
12 Medicare. So she --

13 Q. Who is that? I was going to ask, who is
14 that person?

15 A. Dr. Meena Seshamani.

16 Q. And how long have you been in the -- in
17 the position of -- of -- I think you said deputy
18 director?

19 A. Five years.

20 Q. Five years. And what did you -- what did
21 you do before that?

22 A. Before that, I was the director of the
23 Medicare Plan Payment Group, which is also in the
24 Center for Medicare.

25 Q. And what -- and what years, roughly, were

1 you the -- the director of the Medicare Payment --
2 Plan Payment Group?

3 A. Seven years. So it was approximately 2010
4 to 2017.

5 Q. And I believe you were with -- you were
6 with that group before you were director, as the
7 deputy director; is that correct?

8 A. That's correct.

9 Q. And how long were you in the role of
10 deputy director at the -- the Plan Payment Group?

11 A. Six years.

12 Q. In your current role as the deputy
13 director, do you have oversight of the -- the Plan
14 Payment Group?

15 A. Yes.

16 MS. McMAHON: Objection. Vague. Sorry.

17 BY MR. GALLAGHER:

18 Q. What is your responsibility with respect
19 to the Plan Payment Group today as the deputy
20 director?

21 A. So the -- my successor in that role, the
22 director of the Plan Payment Group reports to me. I
23 am her supervisor.

24 Q. And who -- I'm sorry. Go ahead.

25 A. So I am responsible for providing them

1 with direction, reviewing work products that they
2 develop, et cetera.

3 Q. When you were in the role of -- of
4 director of the Plan Payment Group, who -- to whom
5 did you report?

6 A. So I reported to -- there were multiple
7 folks in my current role: Tim Hill, Tim Love, and
8 Cynthia Tudor.

9 Q. In the -- like the 2010 to 2015 time
10 frame, was it Cynthia Tudor who was in your current
11 role, that you reported to?

12 A. Yeah, I can't remember exactly when --
13 when Cynthia -- it switched from Tim Love to Cynthia,
14 but certainly in the 2015, 2014 time frame, it was
15 Cynthia.

16 Q. Okay. And I'm going to refer to the Plan
17 Payment Group as "MPPG," because I think that's the
18 abbreviation that you folks use, and it's easier to
19 say.

20 A. Yes.

21 Q. So at -- at MPPG, both as the -- the
22 director and the deputy director, did you have
23 responsibility for administering the risk adjustment
24 payment plan or payment model for Medicare Advantage
25 plans?

1 A. Yes.

2 Q. And did you have responsibility for
3 defining and implementing what's sometimes referred
4 to as the coding intensity adjustment?

5 A. Yes.

6 Q. And did you run the risk adjustment data
7 validation program and -- and have some
8 responsibility for the -- what are called the RADV
9 audits?

10 MS. McMAHON: Objection. Vague.

11 BY MR. GALLAGHER:

12 Q. You can answer the question.

13 A. Yes. So RADV was part of the scope of
14 responsibilities in MPPG until the end of 2016.

15 Q. And then what happened at the end of 2016?

16 A. Then that -- the RADV audits were
17 transferred to the Center for Program Integrity in
18 CMS.

19 Q. I've heard reference to a thing called the
20 Advance Notice. Can you tell us what the Advance
21 Notice is?

22 A. So the Advance Notice is a document that
23 is actually specified in statute, where we propose
24 payment changes and payment updates to the
25 methodologies for Medicare Advantage. And we put

1 that out for public comment, and then issue a final
2 document or rate announcement in early April each
3 year. And so that lays out the payment policies,
4 including risk adjustment and capitation rates for
5 Medicare Advantage plans for the upcoming payment
6 year.

7 Q. So fair to say that the Advance Notice is
8 something that -- that CMS puts out to get comment
9 from Medicare Advantage plans before, you know,
10 setting the final rules for the bid process?

11 A. That's correct.

12 MR. BULAND: Objection.

13 BY MR. GALLAGHER:

14 Q. And as the -- in MPPG, did you have
15 responsibility for some part or all of that Advance
16 Notice?

17 A. All.

18 Q. Did you, at MPPG, have responsibility for
19 reviewing and accepting the bids that were submitted
20 by Medicare Advantage organizations?

21 A. I did not.

22 Q. Whose -- who had that responsibility?

23 A. There's two pieces to the bid, bids.
24 There are the plan benefit packages, where plans lay
25 out what their benefit offerings will be. That

1 MS. McMAHON: Go on.

2 THE WITNESS: All right.

3 No. There -- we have other longstanding
4 requirements in the program, with our compliance
5 program, with the attestations, with our managed
6 care manual, where we -- where we specify that
7 if there's an indication that the -- the
8 diagnosis is not or may not be valid, the plan
9 needs to make sure that they delete it if it's
10 not correct.

11 BY MR. GALLAGHER:

12 Q. So they -- they have to delete it once
13 they determine that it's not correct?

14 MS. McMAHON: Objection.

15 THE WITNESS: Yes. They -- they also have
16 to take steps, reasonable steps, if they have
17 information that would suggest that it's not
18 documented, to follow through on that.

19 BY MR. GALLAGHER:

20 Q. Actually, there's -- there's two things
21 there that I want to unpack.

22 The first is when you have to delete, in
23 your view. And the deletion comes when you know that
24 the code is not supported, right? That's when that
25 obligation arises?

1 MS. McMAHON: Objection.

2 THE WITNESS: Well, our attestation is
3 best information, knowledge, and belief. And if
4 the plan has information that would suggest that
5 it might not be valid, then they either need to
6 delete it or they need to take steps to
7 determine that it is valid, so that they -- it
8 can stay in the system.

9 BY MR. GALLAGHER:

10 Q. So your -- let me ask it this way: Does
11 a -- does a Medicare Advantage plan have to confirm,
12 through record review, that there is specific support
13 for every single code that it submits for risk
14 adjustment?

15 A. No.

16 Q. Okay. And do you contend that in order to
17 implement an effective compliance program, plans are
18 required to ensure that every single
19 provider-reported diagnosis code is supported?

20 A. So no, we have not said that a plan needs
21 to check every diagnosis or medical record
22 documentation. What we have said is that they have
23 to have a good faith effort, reasonable effort,
24 not -- we know that 100 percent is difficult to do.
25 But they have to have a reasonable program to

1 validate the accuracy of the data that they submit.

2 We aren't prescriptive about how they do that.

3 Q. So, but -- but the answer to my question
4 is no; you -- you don't contend that in order to
5 implement an effective compliance program, Medicare
6 Advantage organizations must ensure that every single
7 provider-reported diagnosis code is supported? You
8 don't contend that?

9 A. Unless they have knowledge that they've
10 taken steps, and they have knowledge that there might
11 be an issue and they have to follow up on it, but no,
12 we don't say, "You have to go out and get medical
13 record documentation on every code."

14 Q. But fair to say that everybody knows that
15 there's a certain error rate in provider-reported
16 diagnosis codes?

17 MS. McMAHON: Objection.

18 BY MR. GALLAGHER:

19 Q. All right. That's -- that's sort of a
20 given, in this universe, isn't it?

21 MS. McMAHON: Objection.

22 BY MR. GALLAGHER:

23 Q. You can answer.

24 A. I think -- yes, in -- no data set is going
25 to be perfect in the MA program or in the

1 we don't get into being prescriptive there.

2 Q. Earlier I asked you about the example of
3 sort of RADV audits and whether the knowledge of --
4 of the results of those might create some obligation
5 in subsequent years. If a -- if a plan, for whatever
6 reason, has done its own internal audit for one year,
7 and -- and appreciated from that that there was a
8 certain rate at which their providers had, you know,
9 coded things that were not supported by the medical
10 records, does that, in your view, create an
11 obligation in subsequent years to do something?

12 MR. BULAND: Objection.

13 MS. McMAHON: Objection.

14 THE WITNESS: I think there -- again,
15 the -- there is -- regardless of whether they --
16 what they found in the particular year, there's
17 a general requirement and expectation that
18 they're going to take a good faith effort to
19 validate the validity of the -- of the diagnoses
20 that they submit.

21 BY MR. GALLAGHER:

22 Q. I'm -- I'm sort of setting aside what
23 you've described as a general expectation that --
24 that you believe exists for plans, and I -- I want to
25 ask more specifically: Do you at CMS -- let me put

1 it this way.

2 Have you at CMS ever taken the position
3 with plans that -- that your rules require them to do
4 something in subsequent years if they learned in an
5 earlier year that some set of codes was not
6 supported?

7 MR. BULAND: Objection.

8 THE WITNESS: No, we have not specifically
9 said that.

10 BY MR. GALLAGHER:

11 Q. Do you agree that if a -- if a plan finds
12 that a code is not supported in a particular record,
13 and makes the decision to delete it, but that does
14 not actually result in a change in the amount that
15 the plan was entitled to under your model, do you
16 agree that in that scenario, there wouldn't be an
17 overpayment?

18 MS. McMAHON: Objection. Calls for legal
19 speculation.

20 THE WITNESS: So they definitely need to
21 correct it. The -- but it would not translate
22 into change in payment.

23 BY MR. GALLAGHER:

24 Q. What I'm getting at is that -- is that you
25 can have situations where a particular diagnosis code

1 is not supported for a particular enrollee. But
2 deleting that doesn't affect what the plan is
3 entitled to by way of payment. That can happen,
4 right?

5 A. That can happen if the code -- because not
6 every code feeds into our model --

7 Q. Right.

8 A. -- for payment. There are a number of
9 codes that we don't feel are predictive of future
10 costs, and so they don't -- they don't count as a
11 payment diagnosis. So . . .

12 Q. Right. That would be an example where not
13 every code -- not every diagnosis, I should say --
14 impacts a beneficiary's risk score?

15 A. That's correct. If it doesn't feed into
16 our payment model, then it wouldn't affect their risk
17 score.

18 Q. So Example 1 of a situation where you
19 might have a diagnosis code that is not supported,
20 and therefore might need to be deleted, but would not
21 affect payment, would be one where the code itself is
22 not for something that -- is for something that would
23 not affect the beneficiary's risk score?

24 MS. McMAHON: Objection. Vague.

25

1 BY MR. GALLAGHER:

2 Q. That would be one example?

3 A. Yes.

4 Q. Another example might be if you have a
5 diagnosis code that is supported by multiple records,
6 right?

7 MR. BULAND: Objection.

8 MS. McMAHON: Objection. Vague.

9 BY MR. GALLAGHER:

10 Q. Let me ask it more specifically.

11 You might -- you might have a situation
12 where a -- a diagnosis code is correctly noted in
13 Medical Record A, by Provider A, but incorrectly
14 noted in Record B, by Provider B, for whatever
15 reason. Right? So the -- the patient actually has
16 the condition, but -- you know, the medical record
17 for -- for one of these providers doesn't actually
18 provide support for the diagnosis.

19 That is a scenario I'm -- I'm giving you.
20 Do you understand it?

21 A. Yes, I understand it.

22 So under our rules, a -- a beneficiary --
23 we consider the beneficiary to have the condition for
24 risk adjustment purposes. If there's -- if it's
25 diagnosed in one -- at least one record that meets

1 our risk adjustment requirements, so in that example,
2 say they were diagnosed in a physician setting and
3 then there was a diagnosis in a hospital setting, and
4 the hospital setting didn't meet our risk adjustment
5 requirements, if it's within the right data time
6 period and meets all the other requirements, then
7 the -- we only require one per year, so that would --
8 that would count for risk adjustment purposes.

9 Q. Right. Even though you might have to
10 delete the code from the unsupported setting?

11 A. Yes.

12 Q. You would still have -- it wouldn't affect
13 payment, because even though you have to delete the
14 code because it's not supported by Provider B, you'd
15 still have the diagnosis for that enrollee, and for
16 risk adjustment purposes, from the other provider?

17 A. Yes.

18 Q. Yeah. Another -- another example might
19 be, you might have a diagnosis from like the
20 radiology record, which doesn't count, but it's
21 elsewhere supported by a physician's record or in a
22 hospital setting?

23 MS. McMAHON: Objection. Vague.

24 BY MR. GALLAGHER:

25 Q. Maybe in that situation where you might

1 have to delete it because it's not supported by the
2 radiology record, but it would still be available for
3 risk adjustment purposes?

4 A. Yes.

5 Q. And -- and therefore deleting it wouldn't
6 affect payment?

7 A. Correct.

8 Q. Do you agree that there's a difference
9 between knowing that a code is not supported by a
10 particular set of medical records and knowing that
11 that has resulted in an overpayment?

12 MS. McMAHON: Objection.

13 THE WITNESS: Yes. But our -- our
14 requirements are plans need to correct their
15 diagnosis data regardless of whether there's a
16 payment impact or not. So it's not up to them
17 to decide, "I'm not going to -- I'm not going to
18 correct this one because there's no payment
19 impact."

20 The data need to be corrected, and then it
21 will flow through our payments, and it may or
22 may not change, you know, the payment to the
23 plan. But the -- the plan needs to submit the
24 accurate diagnosis data, and then it flows
25 through our -- you know, our payment

1 methodology.

2 BY MR. GALLAGHER:

3 Q. Right. What I'm getting at is the
4 question that's kind of at issue in this lawsuit,
5 which is whether there's an overpayment. And that's
6 a different issue than whether you need to correct
7 the data, right?

8 MS. McMAHON: Objection.

9 BY MR. GALLAGHER:

10 Q. You can answer.

11 A. So -- I'm sorry, can you state your
12 question again?

13 Q. Yeah. What I'm trying to get at is that
14 there's a difference between whether there's an
15 overpayment, which is the -- which is what is alleged
16 to have happened in this lawsuit, and whether there
17 is simply a data correction that needs to be made for
18 a particular code or -- or set of data.

19 MS. McMAHON: Objection.

20 BY MR. GALLAGHER:

21 Q. Do you understand that, that distinction?

22 A. Yes. So there will be -- there could be
23 some set -- set of codes that get corrected and don't
24 have a payment impact.

25 Q. Yeah. Put another way, you can have data

1 Number 25.

2 A. Okay.

3 Q. And this concerns the -- the reasons for
4 not finalizing the proposed medical record review
5 rule.

6 A. Uh-huh. Yes, I see it.

7 Q. Did you have any personal involvement in
8 the -- first, the -- the decision to propose the
9 medical record review rule?

10 A. Yes. That was a provision that was
11 drafted by my group, the Medical Plan Payment Group.

12 Q. And did -- and you personally oversaw that
13 process, the drafting process?

14 A. Yes.

15 Q. Were you involved in -- in the policy
16 decision, I'll call it, to actually propose a rule on
17 this subject?

18 A. Yes.

19 Q. Who else was involved in that decision,
20 from a policy standpoint?

21 A. Jennifer Harlow. And then we briefed our
22 policy officials. So at the time, I think that would
23 have been Jon Blum, perhaps Sean Cavanaugh; I can't
24 remember exactly the timing. It might -- no, it was
25 Sean Cavanaugh, I believe.

1 And then the administrator's office. So I
2 believe it was -- Don Berwick was the administrator
3 at the time, I believe.

4 Q. And so was the decision to propose a
5 medical record review rule something that originated
6 from your group?

7 A. Yes.

8 Q. And what was the impetus for that? Why
9 were you proposing this?

10 A. To provide plans with some more specific
11 guidance around their -- those general obligations
12 that I described. We were concerned that we had
13 heard that, you know, many plans were doing chart
14 reviews but not -- only looking for additional, what
15 we call additional; diagnoses that hadn't been
16 submitted, but they found in the medical records, but
17 then not; while they're looking at that medical
18 record, checking the accuracy of the -- of the
19 diagnoses that had already been submitted.

20 And that was concerning to us. And so we
21 recommended proposing being more specific about
22 the -- you know, the good faith effort that a plan
23 needed to -- to undertake to live up to their
24 obligations in terms of reporting appropriate payment
25 to CMS.

1 Q. Why, if you had the general obligations
2 that you've talked about from, you know, the
3 compliance program regulation and the subregulatory
4 guidance that you've mentioned before, why propose a
5 rule if you already had that?

6 MS. McMAHON: Objection. Vague.

7 THE WITNESS: We could have left it just
8 the way it was. We felt like it would be
9 helpful to be more specific, to provide some
10 more direction to the plans.

11 But, you know, it wasn't -- like I said,
12 there was this general framework in the
13 general -- general requirement. So this was
14 just providing some more direction to the plans
15 about -- in this specific circumstance, what we
16 meant by that.

17 BY MR. GALLAGHER:

18 Q. Before you proposed the medical record
19 review rule, did you have any specific guidance, or
20 had you provided any specific guidance to plans that
21 they were somehow obligated to look both ways, or to
22 design their medical record review processes to look
23 for deletes as well as adds?

24 MR. BULAND: Objection.

25 MS. McMAHON: Objection. Vague.

1 THE WITNESS: So we -- we do not review or
2 have plans submit to us their internal
3 procedures. So no, we have not provided
4 guidance about what -- if a plan chose to do a
5 medical record chart review, what that had to
6 look like and what the steps were that needed to
7 be taken. We were not specific.

8 BY MR. GALLAGHER:

9 Q. What is the process that you have to go
10 through in order to get an approval, as a policy
11 matter, for proposing a rule like the medical record
12 review rule?

13 A. So --

14 MS. McMAHON: Objection. Vague.

15 THE WITNESS: So the -- this was a
16 provision in a much larger rule. So it was not
17 a stand-alone rule.

18 For our rule-making, the typical process
19 is we brief our -- sequentially, the officials
20 in our chain of command. So we brief the
21 Director of the Center for Medicare, then take
22 recommendations to the Office of Administrator,
23 and then the rule goes to the Department of
24 Health and Human Services, where it's reviewed
25 by the career and policy officials there, and

1 then reviewed by the Office of Management and
2 Budget.

3 BY MR. GALLAGHER:

4 Q. Was it also reviewed by somebody in the
5 Executive Office of the President?

6 A. I do not know. That doesn't always
7 happen.

8 Q. So for you at MPPG, at the time, to get a
9 rule like the medical record review rule approved,
10 you had to go through this chain of command?

11 A. Yes.

12 Q. And then once you had gotten that
13 approval, as a policy matter, to propose this rule
14 and impose these requirements, then you would go
15 through the administrative rule-making process that
16 involves notice, comment, and -- and if -- if you get
17 it, finalization of the rule, right?

18 A. That's correct.

19 Q. And then in that -- in that notice and
20 comment process, you, as the -- as the -- your group,
21 as the -- as the impetus behind the rule, you're
22 involved in reviewing the comments and -- and
23 providing your comments in response, right?

24 A. Yes. So we review public comments, and
25 then draft the final rule providing responses to

1 those comments in the preamble.

2 Q. And -- and to the extent that there is any
3 decision made about whether to finalize the rule or
4 withdraw it, do you have to then go through the same
5 chain of command of policymakers that you went
6 through to propose the rule in the first place?

7 A. So, yes. The final rule then goes through
8 the clearance process, where policy officials are
9 briefed on the comments, and any recommendations for
10 finalizing or modifying or -- however, you know,
11 whatever the scope of options for the final rule are.

12 Q. And you have the opportunity in that
13 process to make a recommendation about whether the
14 rule should be finalized, whether it should be
15 modified, or whether it should be withdrawn?

16 A. Uh-huh.

17 MS. McMAHON: Objection.

18 THE WITNESS: Yes.

19 BY MR. GALLAGHER:

20 Q. In the case of the medical record review
21 rule, what was your recommendation after the comment
22 period?

23 A. So we did not make a recommendation,
24 because a -- a decision was made that -- as I
25 mentioned, this -- this was a provision in a much

1 larger rule that had some provisions that were -- got
2 a lot of stakeholder concern and pushback. And so
3 the direction that we received was that the rule --
4 the final rule needed to include only those
5 provisions that had wide -- you know, widespread
6 stakeholder support.

7 So we did not move forward then with the
8 medical record review provision, not because we
9 didn't think it was the right thing to do or the
10 right policy, but because it had mixed reactions from
11 stakeholders. It didn't meet those criteria, and so
12 we didn't include it in the final rule.

13 Q. So you didn't withdraw -- you didn't make
14 the determination that the rule wasn't necessary?

15 MS. McMAHON: Objection.

16 BY MR. GALLAGHER:

17 Q. You made the determination that -- or
18 somebody made the determination, as a policy matter,
19 that they weren't going to go forward with it because
20 it had faced opposition?

21 MR. BULAND: Objection.

22 MS. McMAHON: Objection.

23 THE WITNESS: So we didn't make a
24 recommendation one way or the other, because of
25 the decision about what the scope of the final

1 rule was going to be.

2 BY MR. GALLAGHER:

3 Q. And -- and in this process, nobody made --
4 the rule wasn't withdrawn because somebody decided it
5 wasn't necessary?

6 MS. McMAHON: Objection.

7 BY MR. GALLAGHER:

8 Q. Right? It was withdrawn because somebody
9 decided, as a policy matter, not to go forward with
10 it?

11 MS. McMAHON: Objection.

12 THE WITNESS: The decision was not based
13 on the merits or lack thereof of the policy
14 itself. It was based on something entirely
15 separate from that provision.

16 BY MR. GALLAGHER:

17 Q. Similarly, the decision wasn't made based
18 on any determination about the need for this
19 particular rule?

20 A. Again, it was based on a decision about
21 only including provisions that were -- had widespread
22 stakeholder support, and that was the reason for not
23 finalizing it.

24 Q. You mentioned that there was some other
25 provisions that -- that had -- that were actually

1 the -- the source of that concern as a policy matter.
2 What were those other provisions?

3 A. The -- the primary one, I believe, was the
4 protected class -- proposed change to the Part D
5 protected classes.

6 Q. So that there was -- there was, in the
7 same rule-making, a provision having to do with
8 protected class under Part D that got a lot of
9 opposition from industry, or other stakeholders?

10 A. I don't know that it was industry, but
11 there was a lot of stakeholder concern about that,
12 about that proposal.

13 Q. And -- and was that the impetus for the
14 policy decision not to go forward with any provision
15 of this overall rule-making that had faced
16 opposition?

17 A. I --

18 MS. McMAHON: Objection. You can answer.

19 THE WITNESS: I do not -- I wasn't party
20 to those conversations. So I do not know.

21 BY MR. GALLAGHER:

22 Q. Were you informed at some point that --
23 I'm sorry. I didn't mean to cut you off.

24 Were you informed at some point that --
25 that a decision had been made not to go forward -- or

1 A. No.

2 Q. Do you recall if you -- if you discussed
3 that with Mr. Cavanaugh in your prep meeting
4 before --

5 A. Yeah, again, I don't remember what we
6 talked about.

7 Q. All right. So I want to -- I want to turn
8 to the actual meeting you had with folks from
9 UnitedHealth on April 29th, 2014.

10 And first, let me just ask what you recall
11 about where you were for the meeting, and who was
12 present.

13 MS. McMAHON: Objection. Compound.

14 THE WITNESS: So we -- we were meeting in
15 the Baltimore CMS headquarters, in Sean
16 Cavanaugh's office. It was myself, Sean,
17 Cynthia, and I believe Julie Uebersax was there
18 as well.

19 United was on Pictel, so they were not
20 there in person. The -- I don't remember who
21 attended from United, other than Steve Nelson.
22 I don't remember who else was there from their
23 team.

24 BY MR. GALLAGHER:

25 Q. Had you met Mr. Nelson before?

1 A. Yes.

2 Q. So that maybe explains why you remember
3 him being there, because he was a familiar face?

4 A. Yes.

5 Q. And -- and the others were not familiar
6 faces to you?

7 A. That's right.

8 Q. And I -- I guess I should ask: They were
9 faces; it was some sort of video conference, right?

10 A. Correct.

11 Q. Do you recall what the topic of
12 discussion -- topics of discussion were at the
13 meeting on the 29th?

14 MS. McMAHON: Objection. Vague.

15 THE WITNESS: So I do not remember the
16 discussion in the meeting, other than knowing
17 that it was on these topics. I don't remember
18 what was discussed.

19 BY MR. GALLAGHER:

20 Q. Did you take any notes during the meeting?

21 A. Huh-uh. I did not.

22 Q. Have you had a chance to review any notes
23 that others took of the meeting to refresh your
24 memory about what happened?

25 MS. McMAHON: Objection. I will object,

1 to the extent you're calling for information
2 discussed while she was meeting with attorneys
3 and attorney-client information that we may have
4 provided her, or she may have given us.

5 But other than that, if you can answer
6 outside of attorney-client communications . . .

7 BY MR. GALLAGHER:

8 Q. Let me ask it differently.

9 Have you reviewed anything that
10 refreshes -- that has refreshed your recollection of
11 the meeting?

12 A. No, not outside of what was provided to me
13 by the attorneys.

14 Q. Well, if it's something that was provided
15 to you by the attorneys but it refreshed your
16 recollection, I'm entitled to -- to know it. So what
17 is it you reviewed that refreshed your recollection?

18 A. I -- I really don't remember what I said
19 in the meeting or what other people said in the
20 meeting. All I see is the notes.

21 Q. So maybe another way I would ask it is:
22 You may have reviewed some things, but it has not in
23 fact refreshed your recollection of the meeting?

24 A. No.

25 Q. Sitting here today, whatever you've

1 reviewed, including notes, perhaps, of the meeting,
2 none of that provides you with a refreshed
3 recollection or independent recollection of what
4 happened at the meeting?

5 A. No.

6 Q. So if there's something in the -- in notes
7 that somebody else took, or testimony that somebody
8 else provides about what happened in that meeting,
9 sitting here today, you don't have an independent
10 recollection to confirm or deny that version of
11 events?

12 MS. McMAHON: Objection.

13 THE WITNESS: Yeah, again, I can't
14 remember specifically what was said in the
15 meeting, so . . .

16 BY MR. GALLAGHER:

17 Q. Do you recall there being, at least as a
18 matter -- as a topic, some discussion of what the
19 UnitedHealth claims verification or chart review
20 program entailed?

21 A. Again, I don't -- I don't recall.

22 Q. Do you recall being curious and asking
23 questions about what it entailed, given the subject
24 matter of the meeting and the request that United had
25 made about having this meeting?

1 MR. BULAND: Objection.

2 THE WITNESS: No, I don't recall.

3 BY MR. GALLAGHER:

4 Q. Let me show you a document and see if it
5 might refresh your memory.

6 MR. GALLAGHER: Can we have Exhibit 1061,
7 which is Tab 11.

8 (Exhibit 1061 was marked for identification.)

9 BY MR. GALLAGHER:

10 Q. So do you have that? It should be
11 Document 15 on the list there.

12 A. Yeah.

13 Q. So this was a set of notes that was
14 prepared by -- by attendees from United. So this is
15 UnitedHealth's notes, typed up.

16 A. Uh-huh.

17 Q. Have you seen this before?

18 MS. McMAHON: Objection. I'm going to
19 object, to the extent that you have -- I'm
20 sorry. I'm going to object, to the extent that
21 your response would entail privileged
22 information.

23 So if you can answer outside of
24 conversations you've had with counsel, I think
25 you've already testified that your recollection

1 was not refreshed with respect to anything
2 counsel may have showed you. So -- ask you not
3 to respond to anything that you have discussed
4 with your counsel.

5 BY MR. GALLAGHER:

6 Q. So with that instruction, can you tell me
7 whether you've seen this document before?

8 A. Yes.

9 Q. So there's a -- a reference -- if I go to
10 the meeting summary on the first page, and there's a
11 fourth bullet down, do you see where it says, "UHG
12 representatives provided a general overview of UHG's
13 claim verification process and explained that UHC had
14 already submitted a number of deletes for 2012 dates
15 of service as a result of that process."

16 Do you recall learning that during the
17 meeting in April of 2014?

18 A. No.

19 Q. Do you recall any discussion about that
20 during the meeting in April of 2014?

21 A. No.

22 Q. Are you in a position to -- to deny that
23 that was discussed?

24 A. No.

25 MS. McMAHON: Objection.

1 BY MR. GALLAGHER:

2 Q. And so it then says that -- here that
3 "Later in the meeting, UHG representatives informed
4 CMS that the number of new and unique diagnosis code
5 deletes already submitted was approximately 13,000."

6 Do you recall the discussion of that
7 during the meeting in April of 2014?

8 A. No.

9 Q. I'm going to show you another set of
10 notes.

11 MR. GALLAGHER: This is Exhibit 1062.

12 (Exhibit 1062 was marked for identification.)

13 MR. GALLAGHER: Which is Tab 23.

14 THE WITNESS: Okay.

15 BY MR. GALLAGHER:

16 Q. And we understand these to be Cynthia
17 Tudor's notes. Do you recognize her handwriting?

18 A. Yes.

19 Q. And do you recognize that as -- so this --
20 do you recognize this Exhibit 1062 as having Cynthia
21 Tudor's handwriting on it?

22 A. Yes.

23 Q. And you see it's -- the date of the -- of
24 this planner document, or calendar, is April 29th,
25 2014, which is the date of the meeting you had with

1 United, right?

2 A. Correct.

3 Q. And do you see that in these notes, in
4 Ms. Tudor's hand, there's a reference on the
5 right-hand side, under the line to something "over"
6 or something "deleted 13K."

7 Do you see that?

8 A. Uh-huh.

9 Q. So that would be 13,000?

10 MS. McMAHON: Objection. Calls for
11 speculation.

12 BY MR. GALLAGHER:

13 Q. You recognize the abbreviation "K" as a
14 common abbreviation for "thousand"?

15 A. Yes.

16 Q. And would you understand that to be a
17 reference to 13,000?

18 A. Yes.

19 Q. The same number that's in the -- the notes
20 that we were just looking at in Exhibit 1061, right?
21 That the deletes already submitted was approximately
22 13,000?

23 MS. McMAHON: Objection. Calls for
24 speculation.

25 THE WITNESS: That would --

1 BY MR. GALLAGHER:

2 Q. I'm not -- I'm not asking you to
3 speculate; I'm asking you to confirm that the number
4 13,000 in one set of notes is the same as the number
5 approximately 13,000 in the other set of notes from
6 the same meeting.

7 MR. BULAND: Object.

8 THE WITNESS: Yes.

9 BY MR. GALLAGHER:

10 Q. Does that refresh your recollection that
11 there was a discussion that included UnitedHealth
12 describing details of its process, including the
13 number of codes that had already been deleted as a
14 result of its claims verification or chart review
15 process?

16 A. No.

17 Q. Does it suggest to you that the notes we
18 just looked from -- in Cynthia Tudor's hand, are in
19 fact notes of the same meeting that is being
20 referenced in -- in the notes we have in
21 Exhibit 1061?

22 MR. BULAND: Objection.

23 MS. McMAHON: Objection. Calls for
24 speculation.

25 THE WITNESS: I believe so.

1 BY MR. GALLAGHER:

2 Q. Now, there's a reference in -- still on
3 Exhibit 1061, on that first page, there's a reference
4 in that same Bullet Number 4, under "Meeting
5 Summary," to UHG representatives indicating that "in
6 light of the proposed rule and other discussions with
7 CMS, UHC had suspended its claims verification
8 process pending a decision by the company of whether
9 it was appropriate to submit additional deletes to
10 CMS that have been identified through the company's
11 claims verification process."

12 You see that?

13 A. Yes.

14 Q. Do you recall being informed by
15 UnitedHealth that they had in fact suspended this
16 program?

17 A. Not in the meeting, no.

18 Q. Do you recall being informed that later?

19 A. So there was an e-mail the next day, that
20 Steve Nelson sent me, where I believe he said that in
21 the e-mail.

22 Q. Right. So if we could have Exhibit 1063,
23 which is Tab 12. I think that's the e-mail you're
24 referring to.

25 (Exhibit 1063 was marked for identification.)

1 BY MR. GALLAGHER:

2 Q. So Exhibit 1063 is an e-mail exchange that
3 starts at the bottom of the first page with an e-mail
4 from Steve Nelson to you, on Wednesday, April 30th,
5 at 9:55 in the morning.

6 Is this the e-mail you're referring to?

7 A. Yes.

8 Q. And if you go to the next page, in the --
9 in the paragraph that starts, "Fifth," is -- is it in
10 this paragraph that you were informed -- or that
11 UnitedHealth had in fact suspended or stopped this
12 program, the claims verification or chart review
13 program looking for deletes?

14 A. Yes. Just rereading it again here.

15 Yes, so we suspended the process, yes,
16 right.

17 Q. So you were aware of that in -- in April
18 of 2014, that whatever process UnitedHealth had, that
19 it was asking for guidance on in this meeting, it had
20 decided to suspend that process?

21 A. Yes.

22 Q. What do you recall learning about what,
23 you know -- actually, let me ask this differently.

24 Do you recall ever learning what
25 UnitedHealth's decision was with respect to claims

1 that were in -- in that process that were -- that
2 were under review at the time it was suspended?

3 MS. McMAHON: Objection. Vague.

4 BY MR. GALLAGHER:

5 Q. Let me be specific. We -- we started off,
6 we talked about the topics of the meeting, and I
7 think you said that there was -- you understood there
8 to be two things in the request for meeting. One,
9 whether they should stop -- whether they could stop
10 the program; and second, what to do with things in
11 process?

12 A. Uh-huh.

13 Q. So what do you recall, if anything,
14 learning about what UnitedHealth decided to do with
15 the code -- codes or charts that were in process of
16 being reviewed?

17 A. I don't recall learning anything after
18 this e-mail exchange with Mr. Nelson about what they
19 ultimately decided.

20 Q. And you don't -- and you don't recall
21 learning anything about that during the meeting
22 itself on the 29th?

23 A. Right.

24 Q. Do you recall any discussion during the
25 meeting on the 29th about what UnitedHealth's

1 we talked about earlier, that includes within it some
2 references to what was discussed at the meeting, does
3 it not?

4 A. Yes.

5 Q. In particular, Mr. Nelson states, "During
6 our conversation yesterday and other recent
7 conversations, CMS confirmed to us that these
8 requirements do not apply until the effective date of
9 the rule, and that MA plans are thus not currently
10 required to design their medical record reviews to
11 determine the accuracy of risk adjustment diagnoses."
12 You see that?

13 A. I do.

14 Q. And I take it from your -- from the
15 discussion we've already had that you don't recall
16 whether there was such a discussion at the meeting on
17 April 29th, because you don't recall what was
18 discussed?

19 A. Right.

20 Q. In your e-mail responding to Mr. Nelson,
21 you don't dispute that characterization of the
22 meeting, do you?

23 MS. McMAHON: Objection.

24 THE WITNESS: So I -- I was very concerned
25 with his e-mail, and that fifth point, and the

1 inference that somehow CMS was blessing this --
2 these next steps that United was suggesting.
3 And so -- I was frankly alarmed by the e-mail,
4 and wanted to make -- respond in writing that we
5 were not blessing what they were suggesting they
6 were doing in Bullet 5, and that there were
7 other laws and requirements beyond the medical
8 record review rule that they needed to be in
9 compliance with.

10 And so I, again, was very, very concerned
11 with this e-mail.

12 BY MR. GALLAGHER:

13 Q. My question was, you don't dispute, in
14 your responsive e-mail, Mr. Nelson's characterization
15 of what was said by CMS and confirmed by CMS at the
16 meeting on the 29th?

17 MR. BULAND: Objection.

18 MS. McMAHON: Objection. Asked and
19 answered.

20 THE WITNESS: I think it is making clear
21 that they should not take away from that meeting
22 that we had said that it was okay to stop the
23 claims verification program, or that it was okay
24 not to continue to review and determine whether
25 those questionable diagnoses were accurate or

1 not.

2 BY MR. GALLAGHER:

3 Q. In April of 2014, had you issued any --
4 had CMS issued any guidance, rules, requirements,
5 subregulatory or otherwise, that required plans to
6 conduct any medical record review?

7 MS. McMAHON: Objection. Asked and
8 answered.

9 THE WITNESS: Again, not specifically. We
10 had general requirements about compliance
11 programs, language in our managed care manual,
12 et cetera. But in terms of a specific procedure
13 that plans were to follow to -- to meet their
14 obligations to submit correct data, no, we did
15 not have specific procedures that we were
16 telling plans to follow.

17 BY MR. GALLAGHER:

18 Q. And in your response to Mr. Nelson, do you
19 identify any rule, regulation, subregulatory
20 guidance, you know, communication from CMS that
21 imposes an obligation to conduct medical record
22 review specifically to look for deletes?

23 A. No.

24 Q. Do you know -- do you identify any
25 requirements with specificity in your response?

1 MR. BULAND: Objection.

2 MS. McMAHON: Objection.

3 THE WITNESS: No.

4 BY MR. GALLAGHER:

5 Q. So when you refer to other laws that do
6 impose standards, requirements, and responsibilities
7 on Medicare Advantage plans, you didn't provide any
8 guidance on what those other laws might be?

9 MS. McMAHON: Objection.

10 THE WITNESS: No. Not in this e-mail. I
11 mean, United signed a contract. They're subject
12 to the regulations. They're subject to the
13 False Claims Act. I think that's all well
14 known.

15 So -- but no, we did not provide a laundry
16 list of all the different requirements here in
17 this e-mail.

18 BY MR. GALLAGHER:

19 Q. Well, you knew that United had -- had come
20 to you asking, specifically with respect to this
21 program they had in place, you know, "What are the
22 requirements? What are you -- what are you going to
23 tell us we have to do?"

24 And you had a meeting about it, and this
25 was the e-mail after the meeting, the specific

1 purpose of which was to inquire about this program
2 and -- and what the rules were, right?

3 MS. McMAHON: Objection. Misstates the
4 witness's testimony.

5 MR. BULAND: Objection.

6 THE WITNESS: And -- and we are saying we
7 are not providing advice to United about --
8 about their next steps, but that they need to be
9 in compliance with federal laws and
10 requirements, and not --

11 BY MR. GALLAGHER:

12 Q. Did you --

13 A. And not to take that meeting as some kind
14 of blessing for what plan of action they -- they
15 might have laid out.

16 Q. Did you tell them that -- that there was
17 any -- did you identify for United any rule,
18 standard, requirement, obligation imposed by you that
19 would make their proposed course of action illegal?

20 MS. McMAHON: Objection.

21 THE WITNESS: No, this was the -- this was
22 the sum total of the response.

23 BY MR. GALLAGHER:

24 Q. And this response was something that was
25 actually something you cleared with the lawyers

1 they could be applicable here.

2 BY MR. GALLAGHER:

3 Q. Let me ask -- I'm going to -- I'm going to
4 show you what was previously marked as Exhibit 330.

5 MR. GALLAGHER: This is Tab 14, Jordan.

6 (Exhibit 330 was previously marked for
7 identification.)

8 BY MR. GALLAGHER:

9 Q. Do you have -- as Document 19, I think --
10 Exhibit 330, which is a June 26, 2015, e-mail from
11 Mr. Nelson to you, with the subject matter "2013 CMS
12 RAF attestation"?

13 A. Yes. I see it.

14 Q. Do you recall receiving this e-mail in
15 connection with United's submission of their
16 certification or attestation for the 2013 service
17 dates?

18 A. I -- I don't recall this specifically, no.

19 Q. If you look at the fifth bullet down, on
20 the -- at the bottom of the e-mail, do you see it
21 says, "CMS issued a proposed rule last year that
22 would have required MA plans to design any medical
23 record reviews to determine the accuracy of risk
24 adjustment diagnoses associated with those records"?
25 You see that?

1 A. Yes.

2 Q. And then it says, "During our
3 conversations last year before the proposed rule was
4 withdrawn, CMS confirmed to us that the proposed
5 requirements would not apply until the effective date
6 of the rule, and that MA plans were thus not required
7 to design their medical record reviews to determine
8 the accuracy of risk adjustment diagnoses."

9 Do you recognize that as basically the
10 same language that was in the 2014 e-mail that you
11 responded to on May 2nd, 2014?

12 A. Yes.

13 Q. And am I right that you never responded to
14 this e-mail from Mr. Nelson disputing that
15 characterization of the advice provided by CMS?

16 A. I don't recall if I responded or not. I
17 don't believe I did, but I don't recall.

18 Q. Right. But you don't recall ever
19 disputing it one way or the other?

20 A. Right. Yeah, that's correct.

21 Q. And then there's a sentence that begins
22 later, "Based on." It says, "Based on our
23 conversations with CMS last year, CMS's withdrawal of
24 the proposed rule, and CMS's ongoing consideration of
25 a fee-for-service adjuster to address diagnoses not

1 supported by a medical record in the context of RADV,
2 we ended this process and informed you of that
3 decision." Do you see that?

4 A. Yes.

5 Q. And then it says, "That decision remains
6 operative for 2013 dates of service."

7 And do you understand that to mean that
8 United is telling you here that they are not
9 conducting the same type of medical record review for
10 the 2013 dates of service that they had started and
11 stopped for the 2012 dates of service?

12 MS. McMAHON: Objection. Calls for
13 speculation.

14 THE WITNESS: Yes.

15 BY MR. GALLAGHER:

16 Q. And they then say, "In particular, we did
17 not use our previous process to determine whether
18 diagnosis codes submitted through claims are
19 unsupported in the medical record."

20 Do you recall learning that United had
21 stopped that program in 2012, and then not done it in
22 subsequent years?

23 A. I don't recall this e-mail specifically,
24 no.

25 Q. Now, around this time, in June of 2015,

1 you were having discussions internally at CMS, and
2 with policy officials, about how you might strengthen
3 the attestation requirement, or impose additional
4 requirements on plans concerning medical record
5 review or confirmation of support for diagnosis
6 codes, were you not?

7 MS. McMAHON: Objection.

8 THE WITNESS: I don't recall.

9 BY MR. GALLAGHER:

10 Q. Let me show you Exhibit 1064, which is
11 Tab 16.

12 MR. GALLAGHER: Jordan?

13 (Exhibit 1064 was marked for identification.)

14 BY MR. GALLAGHER:

15 Q. So do you have Exhibit 1064, which is an
16 e-mail exchange from June 24th, 2015, involving you,
17 Ms. Harlow, Ms. Tudor, and Mr. Cavanaugh?

18 A. Yes.

19 Q. And so just to compare the dates,
20 Mr. Nelson's e-mail, that we were just looking at in
21 Exhibit 330, that's dated June 26th, 2015. Your
22 e-mail at the top of Exhibit 1064 is dated two days
23 prior to that, June 24th, 2015. Right?

24 A. Yes.

25 Q. So this is an exchange that is

Videotaped Deposition of
DANIEL J. SCHUMACHER
Given Remotely
Tuesday, September 20, 2022
9:04 a.m. Eastern Time

Reported by: Cindy A. Hayden, RMR, CRR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 to deal with a technical issue, please.

2 MR. MASON: Sure. Why don't we go off
3 the record.

4 MR. SUMMERS: This will take one
5 second.

6 We're ready to resume.

7 MR. MASON: That was -- that was really
8 quick.

9 THE VIDEOGRAPHER: I'm sorry. We're
10 going off the record. The time is 9:36.

11 THE REPORTER: Jeremy, I think we're
12 supposed to be on the record.

13 THE VIDEOGRAPHER: I apologize for the
14 miscommunication. We're on the record. The time
15 is 9:36.

16 BY MR. MASON:

17 Q. Mr. Schumacher, are you familiar with a
18 risk adjustment program that UHC undertook referred
19 to as "chart review"?

20 A. Yes.

21 Q. What is chart review?

22 MR. SUMMERS: Objection. Form.

23 THE WITNESS: Can you repeat that,
24 please?

25 BY MR. MASON:

1 Q. What is chart review?

2 A. Chart review is a program where we
3 would request medical records and evaluate those
4 medical records for conditions.

5 Q. You understood chart review is a
6 program to, you said, request medical records and
7 review those medical records for conditions?

8 A. Yes. It's a program where we request
9 medical charts, review the medical charts for
10 appropriate diagnoses for our covered members.

11 Q. Okay. And the purpose of reviewing
12 those medical records for diagnoses was to see if
13 there are additional diagnoses to submit that
14 weren't included in the original provider claims?

15 A. One -- one reason.

16 Q. What other reason?

17 A. We get to understand what conditions
18 members have and whether or not they have any, you
19 know, gaps in their medical care that need to be
20 addressed, but -- so we were evaluating diagnoses
21 and ensuring the accuracy of the diagnoses for our
22 members.

23 Q. Okay. And part of the purpose was to
24 generate revenue for UHC?

25 MR. SUMMERS: Objection. Form.

1 THE WITNESS: The purpose was to ensure
2 accuracy of the diagnoses that were submitted to
3 CMS, which informs reimbursement, potentially.

4 BY MR. MASON:

5 Q. Okay. And UHC -- after requesting the
6 medical records, UHC employed coders to review
7 those medical records to -- to ascertain what
8 conditions the beneficiary has as documented in
9 that medical record?

10 MR. SUMMERS: Objection. Form.
11 Foundation.

12 THE WITNESS: Coders would review the
13 medical chart to see what diagnoses were captured
14 in that chart.

15 BY MR. MASON:

16 Q. And those coders were instructed to
17 identify and record every diagnosis that -- that
18 they determined was supported by that chart, right?

19 MR. SUMMERS: Objection. Form.
20 Foundation.

21 THE WITNESS: I don't know the
22 specifics of exactly what they were supposed to be
23 doing. Generally speaking, they looked at medical
24 charts, and with their expertise, evaluated whether
25 or not those -- what diagnoses were -- were

1 THE WITNESS: In the beginning? In the
2 latter stages? Can you --

3 BY MR. MASON:

4 Q. Well, let's --

5 A. Can you --

6 Q. -- let's start in the beginning. You
7 said -- you said there was a high-level explanation
8 of CV and then a more detailed explanation of CV,
9 right?

10 A. Yes.

11 Q. Let's start with the high-level
12 explanation of CV. What was said about -- to CMS
13 about the CV process?

14 A. Well, we articulated that we had a
15 process underway that we had been executing that we
16 had actually suspended once the proposed rule came
17 out.

18 We said -- I don't remember the exact
19 words about the program. But it was -- the essence
20 of what we were trying to accomplish was to look at
21 where we had looked at a medical chart, confirming
22 whether or not the diagnoses reflected in -- if
23 there were any diagnoses in the claim that were not
24 reflected in that.

25 So we had a process that did that. It

1 had various steps. And looking at the proposed
2 rule, that would suggest that that's something, if
3 finalized, we would have to start doing. So our --
4 our question was, well, do we need to be doing a
5 proactive two-way look?

6 Q. Okay. And that was the high-level
7 explanation of CV?

8 A. Yes.

9 Q. And what was the more detailed
10 explanation of CV?

11 A. The more detailed conversation about it
12 went through the various steps. So, first, we do
13 this; then we do that. Then it goes out -- you
14 know, ultimately, to the earlier conversation,
15 expert reviewer is one of the steps. And so it was
16 an articulation of what happens in each of those
17 steps.

18 And then I was applying the
19 quantification around what had gone all the way
20 through all of those steps and had been submitted;
21 what had gone all the way through those steps, not
22 been submitted; and what had not completed all of
23 those steps.

24 Q. Was anything else about the CV program
25 explained to CMS at the meeting?

1 MR. SUMMERS: Objection. Form.

2 THE WITNESS: We -- we gave a
3 high-level review about what we were trying to
4 accomplish with the CV program. And then we sought
5 clarification at the beginning of the conversation
6 as to whether or not, after having heard that,
7 whether we had a proactive obligation to do a
8 two-way look prior to and until which time there
9 was actually a formal rule finalized. And the
10 answer to that was, no, you do not.

11 BY MR. MASON:

12 Q. And when you're talking about -- when
13 you said how you explained to CMS that there were
14 different codes in different stages of the CV
15 process, is that the same as the different stages
16 that were reflected in the spreadsheet we were just
17 looking at, at Exhibit 468-A?

18 A. Yes, with the exception of -- you know,
19 in there, it also had abstracts processed by XL and
20 not yet submitted -- I mean, I don't recall talking
21 about abstracts.

22 Q. Okay. But other than -- other than the
23 hospital abstracts line -- you're referring to
24 Row 22 there, right?

25 A. Yes, I am.

1 Q. Other than Row 22, when you say that
2 you explained to CMS that there was different
3 amount of work in different stages of the CV
4 process, you're referring to the stages in Rows 20
5 through 24?

6 A. 20 to 23.

7 Q. Okay. So just Rows 20, 21 and 23?

8 A. Yes. So the conversation to say,
9 here's what, you know, we -- we've already -- we've
10 already run the whole process and submitted this to
11 CMS. We've run the whole process and not submitted
12 to CMS. And then there's this universe that's at
13 various stages.

14 And then we went through what happens
15 at each stage, you know, the steps, and -- and
16 so -- you know, Karen Erickson did more of that, as
17 I recall.

18 Q. And -- and so the stages that you
19 explained to CMS were the same stages that are
20 referenced on 20, 21 and 23, but -- but instead of
21 telling CMS the dollar amounts, you told them the
22 number of codes?

23 A. We discussed the number of codes.

24 Q. Was there a different spreadsheet that
25 was prepared around this time that had the number

CONFIDENTIAL - SUBJECT TO PROTECTIVE ORDER
(With Redactions)

DEPOSITION OF MELISSA SEDOR
As 30(b)(6) Designee 1 of
OptumInsight, Inc.
UnitedHealthcare, Inc.
Washington, DC
June 29, 2023

Reported by: John L. Harmonson, RPR
Job No. 988356

1 BY MS. GLOVER:

2 Q. Okay. So in this example, instead of
3 the diagnosis code coming by way of the provider
4 through the CPT that's been submitted, it's
5 identified through OptumInsight by way of a medical
6 record review of a medical record that was
7 retrieved from a physician's office or a provider's
8 office?

9 A. That is correct.

10 Q. Okay. And then once that record is
11 retrieved and Optum reviews it, Optum submits the
12 diagnosis codes to CMS that they identified as
13 being supported by the medical record; right?

14 MR. JONES: Objection; form.

15 THE WITNESS: That is correct.

16 BY MS. GLOVER:

17 Q. And in some instances, Optum deletes
18 codes that they identify as being not supported by
19 a medical record and they submit those deletes to
20 CMS; right?

21 MR. JONES: Objection; outside the
22 scope.

23 THE WITNESS: Related to the medical
24 record review, the only time that occurred was in
25 2013 when claims verification was occurring. The

1 remainder of the time in question, deletes did not
2 occur through the medical record review process.

3 BY MS. GLOVER:

4 Q. Okay. And we'll talk a little more
5 about that. I think that's one of your topics, and
6 we can talk more about that.

7 When you say claims verification, what
8 do you mean?

9 A. Claims verification was a risk
10 adjustment program we had in place in 2012 through
11 early 2014. What that program did was to, when a
12 medical record was looked at for chart review
13 purposes to identify diagnosis codes that were not
14 on the claim, it would also utilize those medical
15 records to compare against the claim submitted by
16 the provider to see if there were any codes
17 submitted on the claim that were not supported by
18 the medical records.

19 Q. Okay. So when you say compare, do you
20 mean they would compare like the results of the
21 chart review that they conducted with the claims
22 that had been submitted by the provider to identify
23 which ones -- which ones to review in claims
24 verification?

25 MR. JONES: Objection; form. Outside

1 the scope.

2 THE WITNESS: Yes, the medical
3 reviewer -- the chart review would result in the
4 identification of, let's say, three diagnosis
5 codes. The claim maybe had, for example, four
6 diagnosis codes. So that one diagnosis code that
7 was different would be looked into for claims
8 verification, assuming that the diagnosis code in
9 question was only submitted one time in that year
10 for that member that aligned to the timing of the
11 medical record review, if we had received that
12 diagnosis code for the member six times in a year,
13 it's not going to be subject to the claims
14 verification process.

15 BY MS. GLOVER:

16 Q. Understood.

17 And then if you identified diagnosis
18 codes through claims verification that had not been
19 identified in the chart review, then you would
20 delete -- you deleted those codes through the
21 process that's depicted here. You'd submit the
22 deletes to CMS; is that right?

23 MR. JONES: Objection; form. Outside
24 the scope.

25 THE WITNESS: If through the claims

VIDEOTAPED DEPOSITION OF PAUL IRA SPITALNIC
Wednesday, March 20, 2024; 9:07 a.m. EDT

CSR, RSA, CA CSR 14409, NJ Certified CR 30XI0024460,
NJ Certified RT 30XR00019500, NM CSR 589, NY Realtime
Court Reporter, NY Association Certified Reporter, OR
CSR 230105, TN CSR 998, TX CSR 12778, WA CSR
23005926, Notary Public
Job No. 1097542

1 A. Yes.

2 Q. How long have you been Ms. Lazio's
3 direct supervisor?

4 A. I don't recall exactly when she
5 joined CMS, but I believe I -- I have been chief
6 actuary since 2013. Shortly thereafter, she was
7 selected as the director of Parts C and D Actuarial
8 Group. I've clearly been her supervisor since
9 then.

10 Prior to that, I was in -- the
11 director of the Parts C and D Actuarial Group. I
12 don't recall if she was reporting directly to me at
13 that time or another one of the managers on my
14 team.

15 Q. You also mentioned that you spoke
16 with Kirk Limmer; is that right?

17 A. Yes.

18 Q. How do you spell his last name?

19 A. I spell it L-I-M-M-E-R.

20 Q. Thank you.

21 Why did you speak with Mr. Limmer

1 THE WITNESS: Okay.

2 I am not an expert in the
3 requirements around what -- how CMS has
4 determined what the basis for diagnosis
5 submissions are. Again, my opinions are my
6 own based on my knowledge and experience of
7 the program, and I would not characterize
8 myself -- I'm certainly not providing expert
9 witness testimony to the specific
10 requirements around what MAOs are required
11 or not required to do in the supporting of
12 their codes.

13 BY ATTORNEY MARTINEZ:

14 Q. You're not providing any expert
15 opinions or testimony related to specific
16 requirements around what MAOs are obligated or not
17 obligated to do with respect to submitting
18 diagnosis codes for payment, right?

19 A. Yes.

20 Q. Can you give me a specific law,
21 regulation, piece of subregulatory guidance or

1 contractual provision that obligates MAO plans to
2 investigate whether or not a diagnosis code is
3 supported by the medical records if the plan has
4 any information that the code might not be
5 supported?

6 ATTORNEY ZUPAC: Object to form.

7 THE WITNESS: I -- I -- it sounds
8 like the same question you just asked. I --
9 I'm missing the difference, if there was one.

10 And so I -- I'm, again, not the
11 expert and don't have specific citations as
12 to whatever would lead to whatever the
13 actual requirements are. I'm just sharing
14 what my understanding is of those
15 requirements.

16 BY ATTORNEY MARTINEZ:

17 Q. So the answer to my question is you
18 cannot give me a specific law, regulation, piece of
19 subregulatory guidance or contractual provision
20 that obligates MA plans to investigate whether or
21 not a diagnosis code is supported by medical

1 records if the plan has any information that is --
2 might not be supported, right?

3 A. I cannot provide such reference.

4 Q. Can you provide me a specific law,
5 regulation, piece of subregulatory guidance or
6 contractual provision that obligates MA plans to
7 design their chart reviews to identify and delete
8 diagnosis codes that are not supported by medical
9 records?

10 A. I cannot.

11 Q. Do -- by the way, do you know what
12 "chart reviews" are?

13 A. I'm familiar with the term.

14 Q. You understand that United had a
15 chart review program in place during the period
16 relevant to this case?

17 A. I understand United takes a number of
18 actions with respect to supporting or developing or
19 -- related to the diagnoses they submit for plan
20 payment.

21 Q. And would those actions include a

1 chart review program?

2 A. That is my understanding.

3 Q. When did you first become aware that
4 United had a chart review program?

5 A. I don't think I was ever aware that
6 there was a specific program. I know that United
7 and other MAOs, Medicare Advantage organizations,
8 do various -- have various initiatives in support
9 of their diagnosis submission.

10 Q. So you have no specific information
11 about how United may have conducted its chart
12 review program during the period relevant to this
13 case?

14 A. I do not have any specific
15 information.

16 Q. I want to go back to Page 3 of your
17 report, Mr. Spitalnic. We read the first half of
18 this sentence in Paragraph Number 2. I -- I want
19 to focus now on the second half of the sentence,
20 but I'll -- I'll read the whole sentence so we've
21 got the full context.

1 are audited, right?

2 A. I am not.

3 Q. Let's go back to Page 7 of your
4 report, Mr. Spitalnic. You quote portions of Ms.
5 Lambert's report referencing statements made by
6 United in its annual bid submissions to CMS. And
7 I'm in Paragraph 8.

8 Are you with me?

9 A. I am.

10 Q. You wrote in the last sentence of
11 Paragraph 8 before the bulleted paragraphs, The
12 following assertions cited by Ms. Lambert do not
13 diminish the certifying actuary's and MA
14 organization's responsibility because CMS may, (i),
15 not have reviewed the specific information; or,
16 (ii), only reviewed this information to check
17 compliance with disclosure requirements in the
18 ASOPs.

19 Do you see that?

20 A. I do.

21 Q. As a matter of good governance, do

1 you agree with me that it's important for CMS to
2 review bid submissions by MA plans?

3 A. Yes.

4 Q. You're not suggesting here that CMS
5 should ignore portions of MA plan bid submissions,
6 right?

7 A. I'm suggesting that there may not
8 have been a reliance on certain statements that are
9 included in some aspects of the bid submission.

10 Q. Do you think it's reasonable for
11 MA plans like United to presume that CMS is
12 reviewing the bid submissions that the plans submit
13 to the Agency?

14 ATTORNEY ZUPAC: Object to form.

15 Go ahead.

16 THE WITNESS: I'm sorry. Could you
17 repeat the question?

18 BY ATTORNEY MARTINEZ:

19 Q. Do you think it's reasonable for
20 MA plans like United to presume that CMS is
21 reviewing the bid submissions that the plans submit

1 to the Agency?

2 A. I -- I certainly believe that it's
3 reasonable for a plan to expect that CMS is going
4 to do a thorough review of their bid submission.
5 And I think many of the actuaries that go through
6 the bid review procedure would agree that there is
7 a thorough review of the bid submission -- of their
8 bid submissions.

9 I would also expect that actuaries
10 would not be surprised that every word of their
11 submission is not reviewed or necessarily relied
12 upon in drawing ultimate conclusions and that, as I
13 included in this sentence before you started
14 reading, that there is a specific reliance on the
15 actuary to -- that that's -- that CMS places on the
16 actuary to ensure that there is compliance with the
17 laws, regulations and instructions and the various
18 Actuarial Standards of Practice.

19 Q. CMS does a thorough review of bid
20 submissions from MA plans, right?

21 A. Speaking on behalf of the -- on

1 behalf of the Office of the Actuary, we do as
2 thorough and comprehensive a job in reviewing those
3 bids that have been submitted as possible, given
4 the various time and other constraints placed upon
5 us.

6 Q. And you believe it's reasonable for
7 MA plans to presume that CMS is doing that thorough
8 review that you just spoke about, right?

9 A. Plans are familiar with our review
10 process.

11 Q. And how thorough it is, right?

12 A. Yes.

13 Q. Mr. Spitalnic, on the top of
14 Page 8 -- we're still in -- in Paragraph 8,
15 you -- you also wrote -- and this is in response to
16 a couple of bulleted statements -- quoting from
17 United's bid submissions. You wrote, An actuary
18 cannot disclaim that they are knowingly violating
19 the rules of the program.

20 Do you see that?

21 A. I do.

1 Q. Are you aware of any instance in
2 which CMS responded to the bulleted statements you
3 include in Paragraph 8 by saying that United's
4 decision to cease its prior process of identifying
5 and deleting certain diagnosis codes violated
6 United's obligations?

7 ATTORNEY ZUPAC: Object to form.

8 THE WITNESS: I am not aware of
9 discussions that were related to the subject
10 of those quotations.

11 BY ATTORNEY MARTINEZ:

12 Q. So let -- let's -- let's drill down
13 on one of them. Let's look at the second bullet --
14 sorry to keep flipping back.

15 We're on the bottom of Page 7 --
16 starting with the BPT submissions in 2015. And --
17 and what does "BPT" stand for?

18 A. "BPT" stands for bid pricing tool.

19 Q. All right.

20 -- starting with the bid pricing
21 tool submissions in 2015, quote, We also adjusted

1 projected risk scores to account for changes in our
2 medical record review processes. Specifically,
3 based on multiple conversations with CMS and CMS'
4 treatment of medical record review in its recent
5 rulemaking process, the health plan has decided to
6 cease one of its prior processes that identified
7 and deleted certain diagnoses codes through the
8 medical record review process.

9 Do you see that?

10 A. I do see that.

11 Q. Are you aware of any instance in
12 which CMS responded to that statement by saying
13 that United's decision to cease its prior process
14 of identifying and deleting certain diagnosis codes
15 violated United's obligations under the MA program?

16 A. I am not aware of any such
17 statements.

18 Q. Were you aware of these statements
19 from United in its BPT submissions at the time they
20 were made?

21 A. I do not believe I have -- I -- I do

1 not believe I was aware of these statements at that
2 time.

3 Q. Was anyone else in your office aware
4 of them?

5 A. I do not know of anyone in my office
6 being specifically aware of this specific
7 statement.

8 Q. And after writing your report or
9 during the process of writing your report, did you
10 ask anyone at the Office of the Actuary or at CMS
11 whether they were aware of these statements from
12 United?

13 A. I did not specifically ask anybody
14 about anything going back to 2015.

15 Q. So going -- going back to the top
16 of -- of Page 8, Mr. Spitalnic, where you wrote An
17 actuary cannot disclaim that they are knowingly
18 violating the rules of the program.

19 Are you aware of United ever
20 asserting in this case that it could knowingly
21 violate the rules of the MA program by issuing a

1 I, Cindy L. Sebo, Nationally Certified Court
2 Reporter herein, do hereby certify that the foregoing
3 deposition of PAUL IRA SPITALNIC was taken before me
4 pursuant to notice at the time and place indicated;
5 that said witness duly swore to tell the truth, the
6 whole truth, and nothing but the truth under
7 penalties of perjury; that said testimony of witness
8 was correctly recorded to the best of my abilities in
9 machine shorthand, thereafter transcribed under my
10 supervision with computer-aided transcription; that
11 deposition is a true and accurate record of the
12 testimony given by the witness; that I am neither
13 counsel, nor kin to any party in said action, nor
14 interested in the outcome; and that a copy of this
15 transcript obtained from a source other than the
16 court reporting firm, including an adversary or
17 co-counsel in the matter, is uncertified and may not
18 be used at trial.

TUESDAY, MARCH 12, 2024

VIDEOTAPED DEPOSITION OF PHILIP STARK, PH.D.

CONFIDENTIAL TRANSCRIPT

---o0o---

REPORTER: BALINDA DUNLAP, CSR 10710, RPR, CRR, RMR

1 evidence against the null hypothesis.

2 And a common level to use for unlikely is

3 5 percent. I believe that Dr. Salve uses that

4 level of significance in much of his report, though

5 I think he uses 10 percent in some places as well. 10:22:22

6 So in the usual scenario, the test

7 statistic has some probability distribution. If

8 the null hypothesis is true, we look at that

9 probability distribution and say this is unlikely

10 -- if the observed value is sufficiently unlikely 10:22:41

11 on the assumption that the null hypothesis is true,

12 that's evidence that the null hypothesis is not

13 true.

14 In this particular case, the observed data

15 are impossible if the null hypothesis is true. So 10:22:54

16 it's not an issue of there's a 5 percent chance

17 that I would erroneously reject the null hypothesis

18 on the assumption that the null hypothesis is true.

19 The data gets certainty that the null hypothesis is

20 false. 10:23:13

21 Q. I see. So if the null hypothesis is that

22 -- well, let's use your example here.

23 A. May I interject something else?

24 Q. Sure.

25 A. I just said -- I was a little bit sloppy 10:23:20

1 in my language in talking about whether the
2 observed value of the test statistic is
3 sufficiently unlikely. It's usually a range of
4 values for the test statistic. For example, values
5 that are as extreme or more extreme, and not a
6 single value. Because in many situations, any
7 single value of the test statistic is very
8 unlikely.

10:23:35

9 Q. Understood. Well, to summarize, if a
10 result is impossible, then you would say it's
11 certain, and the raw data provides certainty that
12 the hypothesis is wrong, correct?

10:23:48

13 A. Yes. There's another caveat here, which
14 is I'm assuming that the chart -- the reviews that
15 led to these data were -- had no error in them.
16 That's ascertaining that some particular HCC didn't
17 have support, was a complete -- was correct, and
18 that there, for example, was not support in some
19 chart that was not examined.

10:24:09

20 Q. I understand. So assuming the chart
21 review at issue is correct, if it produces a result
22 that is impossible, then you would say with
23 certainty the hypothesis is false, right?

10:24:39

24 A. Yes, I would.

25 Q. All right. Do you have any reason to

10:24:55

1 doubt whether chart reviews can provide an
2 objective answer like -- like you were describing?

3 A. Well, I understand that coders don't
4 always find the same answer. So it seems that
5 there's some variation and, therefore, some
6 uncertainty.

10:25:18

7 There's perhaps a platonic ideal notion of
8 whether a perfect inspection of, you know, every
9 chart associated with a particular member in a
10 particular year would show support versus whether a
11 perfect inspection of the subset of charts that
12 were examined by the coders behind the data that
13 Dr. Salve relied upon would have found support
14 versus actual human beings doing the work.

10:25:35

15 Q. Fair enough. But based on the work you
16 performed in this case, you saw some variation in
17 the coding, correct?

10:25:57

18 A. I did not look at -- no, I did not.

19 Q. I mean variation in the results, I should
20 say, of people who had reviewed the coding,
21 correct?

10:26:11

22 A. Well, I understand that the -- one of the
23 basic issues in this litigation is that the United
24 chart review coders didn't find some of the
25 submitted codes. And so if the submitted codes

10:26:31

1 were based on reading the charts, then it seems
2 that those charts were read in more than one way.

3 Q. All right. So let's go back to the
4 Paragraph 81 in your report. And here you were
5 discussing whether there was support for HCCs in 10:27:03
6 the study that Dr. Salve had done.

7 And I'll ask you, if a hypothesis were the
8 rate of unsupported HCCs in the population is zero,
9 then a finding of nonzero would prove with
10 certainty that the hypothesis is false, right? 10:27:27

11 A. Yes, sir. Again, subject to uncertainty
12 -- on the assumption that the reading is perfect.

13 Q. On the assumption that -- right, that that
14 particular reading of the coding is correct?

15 A. Yes, sir. Of the charts underneath. 10:27:45

16 Q. Yes, the reading of the charts and the
17 identification of the codes is correct?

18 A. Yes, sir.

19 Q. Okay. Great. Let's go over your opinion
20 on Page 7. Dr. Stark, you analyze whether 10:28:03
21 member-HCC -- actually, let me go to that. Let me
22 go to footnote 6 first. You used the term
23 "member-HCC-year" as a unit of measure in footnote
24 6?

25 A. Yes, sir. 10:28:33

1 Q. Okay. I am going to try to use the same
2 term today, "member-HCC-year," so that we're
3 consistent.

4 A. Thank you.

5 Q. All right. Now, in your -- I am going to 10:28:41
6 call this Opinion II on Page 7 because it's got the
7 Roman II. Your Opinion II found support in RADV
8 for diagnosis instances with no payment impact was
9 higher than those with payment impact, correct?

10 A. I'm sorry. I didn't hear the last part of 10:29:07
11 the question.

12 Q. That you -- in your Opinion II, you found
13 that the RADV validation rate of diagnosis
14 instances with no payment impact was higher than
15 those with payment impact, correct? 10:29:24

16 A. No, sir. I didn't independently examine
17 whether any diagnosis instance had financial
18 impact. I'm relying on Mr. Renjilian's Opinions 2
19 and 3 for that determination. I'm doing
20 calculations based on his labeling of diagnosis 10:29:40
21 instances as potentially having financial impact or
22 not.

23 Q. Fair enough. Let's go into what you did
24 here. Let's look at your Paragraph 24.

25 In Paragraph 24 you write "To evaluate the 10:29:59

1 rates at which RADV audits found support for
2 member-HCC-years that Mr. Renjilian identified as
3 having financial impact if deleted, I replicated
4 and extended portions of Mr. Renjilian's analysis,"
5 right?

10:30:17

6 A. Yes, sir.

7 Q. So you did not verify Mr. Renjilian's work
8 on whether a diagnosis instance had payment impact
9 or not; you just accepted his Opinions 2 and 3,
10 correct?

10:30:32

11 A. I used his determination. I -- "accepted"
12 is a little stronger. I used his determination.

13 Q. Fair enough. You used his determination.
14 And you did the work identified in your Paragraphs
15 25 through 29, correct?

10:30:47

16 A. Yes, sir.

17 Q. All right. After doing that work -- well,
18 I should say in Paragraph 24 you say "I replicated
19 and extended portions of Mr. Renjilian's analysis."
20 And you did that by doing the work in Paragraphs 25
21 through 29, correct?

10:31:28

22 A. Yes, sir.

23 Q. And in Paragraph 30 --

24 A. Some of the extension is not just

25 described there. That's -- Paragraphs 25 through

10:31:41

1 29 are for preparing the database for -- creating a
2 database that I used then for subsequent
3 calculations that are described later in the
4 report.

5 Q. Okay. 10:31:55

6 A. That's not the full extent of the work.

7 Q. Fair enough. You feel confident in the
8 methods you used, correct?

9 A. Yes, yes.

10 Q. And you feel confident in the results you 10:32:07
11 achieved, right?

12 A. Yes.

13 Q. All right. In Paragraph 30 you state the
14 following: "My results match the 2011-2013 counts
15 in the left panel of Figure 15 of the Renjilian 10:32:20
16 report." Do you see that?

17 A. Yes, sir.

18 Q. Is that accurate?

19 A. That's to the best of my recollection,
20 yes. 10:32:32

21 Q. So the independent analysis that you
22 performed matched the same results as Mr. Renjilian
23 on Figure 15 of his report, right?

24 A. The left panel?

25 Q. Yes. 10:32:45

1 A. For 2013 -- from 2011 through 2013, yes,
2 sir.

3 Q. And let's go ahead and look at that left
4 panel in Mr. Renjilian's report. And that's on
5 Page 87 of his report. 10:33:01

6 You're referring, Dr. Stark, to the panel
7 that says at the top "Member-HCCs, 2011-2013"?

8 A. I think it says CON13 -- "CON11-13."

9 Q. Yeah, I think you have a different
10 pagination than I do. So go to Page 86. 10:33:38
11 Member-HCC-years -- member-HCCs 2011-2015. Do you
12 see that?

13 A. I see something that says "CON11-13." Is
14 that --

15 Q. CON11-13? 10:33:57

16 A. Not 2011 through '15. Yes, sir.

17 Q. Great. Okay. And Dr. Stark, you
18 replicated and reached the same result as in that
19 upper left panel, right?

20 A. Our arithmetic agrees, yes. 10:34:12

21 Q. Your arithmetic agrees.

22 A. Yes.

23 Q. All right. So you found, Dr. Stark, that

24 -- I want to go through these numbers in some more

25 detail. You found that for 2011 through 2013, your 10:34:24

1 arithmetic found that there was 1,119

2 member-HCC-years with a diagnosis instance that was

3 on the first interrogatory response, right?

4 A. As I sit here, I can't remember whether

5 this is counting diagnosis instances or HCCs rolled 10:35:05

6 up to the member-year level.

7 Q. Well, you stated in your report you

8 replicated and found the same results, correct?

9 A. Yes.

10 Q. And Mr. Renjilian writes "Member-HCCs" at 10:35:25

11 the top of that chart, correct?

12 A. Yes, sir.

13 Q. So that would suggest these are

14 member-HCC-years, correct?

15 A. It would, although Mr. Renjilian's 10:35:36

16 terminology isn't -- I think he sometimes uses the

17 same phrase to talk about diagnosis instances and

18 sometimes to talk about HCC-years.

19 Q. Okay. Well, assuming this is

20 member-HCC-years for now, and if you discover later 10:35:54

21 it was diagnosis instance, you'll let us know.

22 A. Yes.

23 Q. Okay. So to state it plainly, there were

24 1,119 instances where a provider submitted a code

25 after an encounter, a United chart review coder 10:36:09

1 reviewed the chart and did not identify that
2 submitted code, and then the member-HCC-year was
3 reviewed in RADV, correct?

4 A. That's my understanding, yes.

5 Q. And out of those 1,119 instances, the RADV 10:36:31
6 auditors found 980 of them to be supported, right?

7 A. Not of the diagnosis instances, but of the
8 resulting HCC for that beneficiary for that year.

9 Q. Thank you for correcting that.

10 So in -- let me restate. So in 980 of 10:36:50
11 those instances, the RADV auditors validated the
12 member-HCC-year associated with that diagnosis
13 instance, right?

14 A. That's my understanding. My understanding
15 is that RADV does not look at the diagnosis 10:37:06
16 instances to see whether the diagnosis instances
17 are supported. RADV looks at members and the HCCs
18 that those members were assigned for the year and
19 asks United or whoever the MAO is to provide
20 documentation to support that HCC for that 10:37:29
21 beneficiary for that year.

22 Q. All right. Let me just establish some
23 foundation about RADV. What do you understand RADV
24 to be?

25 A. I understand it to be a review that's done 10:37:40

1 by CMS of some contracts and some years, that it
2 involves sampling beneficiaries and then looking
3 for -- or asking the MAO for support for the HCCs
4 that were assigned to that beneficiary that year,
5 that the MAO is allowed to provide up to five
6 pieces of information -- I think their chart
7 specifically, but five pieces of information to
8 support each HCC, and that support might or might
9 not be from the diagnosis instance that was
10 originally submitted.

10:38:06

10:38:26

11 Q. And you understand that the CMS auditors
12 will then review the charts to determine if the
13 member-HCC-year is supported, correct?

14 A. That's my understanding, yes, sir.

15 Q. All right.

10:38:45

16 A. I have a little bit more detail in the
17 understanding of RADV. I understand that at least
18 in some years the sample -- first of all, I
19 understand that the samples are drawn from contract
20 years.

10:38:59

21 Second, I understand that at least in some
22 years, the sample was a stratified random sample,
23 that it was stratified by a tercile of payment for
24 the beneficiary in question.

25 I have also seen language somewhere that

10:39:14

1 said it was somehow risk -- risk aware, that
2 somehow it was attempting to focus on things that
3 were perceived to have more risk, but I don't
4 understand the detail of that.

5 Q. Okay. Thank you for clarifying that. 10:39:29

6 We are going to assume today, Dr. Stark,
7 that the RADV auditors always get it right.

8 A. I don't know whether the RADV auditors
9 always get it right.

10 Q. Do you have any doubts whether they always 10:39:41
11 get it right?

12 A. I mean, any process involving humans
13 reading printed materials, some error rate. I just
14 don't know -- I haven't seen attempts to quantify
15 it. I don't have an independent basis for knowing 10:39:59
16 what the accuracy would be.

17 Q. Fair enough. Well, let's assume for the
18 purposes of today, I'll give you an assumption,
19 that the RADV auditors are always correct.

20 A. Okay. 10:40:16

21 Q. And I'll -- I'll restate that assumption
22 when I ask you various questions.

23 A. Okay.

24 Q. But if you have any doubts, you can say,
25 "Are you assuming RADV is correct?" 10:40:25

1 A. I'll do my best here.

2 Q. Okay. Great. All right. Going back to

3 Mr. Renjilian's chart that you verified the

4 arithmetic, you agree that there were 980 instances

5 where a provider submitted a code after an 10:40:42

6 encounter, United chart review coders reviewed the

7 chart and failed to find the diagnosis code

8 submitted by the provider, and RADV auditors

9 reviewed the member-HCC-year associated with that

10 diagnosis instance and found it to be supported, 10:41:06

11 right?

12 A. My understanding is that one of -- at

13 least one of the up to five pieces of information

14 provided by United, possibly from different

15 diagnosis instances or even diagnosis instances 10:41:20

16 that were not submitted, provided support for that

17 HCC, or possibly something in the -- higher in the

18 hierarchy for that beneficiary for that year.

19 Q. Okay. Thank you for those caveats. But

20 in summary, in those 980 instances, ultimately the 10:41:41

21 RADV auditors found the member-HCC-year to be

22 supported, correct?

23 A. They found the member-HCC-year to be

24 supported, yes, sir.

25 Q. All right. And then the next line in 10:41:54

1 Figure 15 says "No Overlap." And you understand
2 that to be the member-HCC-years in which the
3 diagnosis instance was not missed by United chart
4 review coders, correct? I can rephrase if this --

5 A. I understand that to be member-HCC-years 10:42:29
6 that didn't intersect those diagnosis instances
7 identified in FIR.

8 Q. Right. So the FIR is the first
9 interrogatory response, right?

10 A. Yes, sir. 10:42:50

11 Q. And that involves diagnosis instances that
12 were submitted by a provider but not found in the
13 United chart review, right?

14 A. That's my understanding, yes, sir.

15 Q. All right. So the second line of 10:43:00
16 Mr. Renjilian's Figure 15 are the member -- the
17 validation rates in RADV of member-HCC-years in
18 which the diagnosis instances were not on the first
19 interrogatory response, correct?

20 A. That's my understanding, yes. 10:43:16

21 Q. All right. And so Mr. Renjilian found,
22 and you confirmed, that the RADV validation rate
23 for codes on the first interrogatory response for
24 member-HCC-years associated with diagnosis
25 instances on the first interrogatory response was 10:43:37

1 higher, 87.6, than the validation rate for
2 member-HCC-years that did not overlap with the
3 first interrogatory response, right?

4 A. Yes. By about 1.1 percent, yes, sir.

5 Q. And you confirmed that with your own 10:44:08
6 arithmetic, right?

7 A. Yes, sir, but again, based on
8 Mr. Renjilian's determination -- sorry. In this
9 instance it doesn't involve Mr. Renjilian's
10 determination. I apologize. Yes. 10:44:20

11 Q. What do you mean it doesn't involve
12 Mr. Renjilian's --

13 A. I was thinking of his Opinions 2 and 3,
14 but this doesn't rely on his Opinions 2 and 3.

15 Q. Right. You confirmed these numbers based 10:44:30
16 on your own work?

17 A. Yes, sir.

18 Q. All right. And by "these numbers," I mean
19 the numbers in Figure 15 of Mr. Renjilian's report,
20 upper left-hand corner, 2011 through 2013? 10:44:39

21 A. Yes. CON11-13, yes, sir.

22 Q. Dr. Stark, tell me whenever you want to
23 take a break. I am happy to keep going. I am
24 going to rely on you and your counsel to tell me
25 when you need a break. 10:45:02

1 A. Thank you.

2 Q. I want to now go to your Opinion II on
3 Page 7. So Dr. Stark, you performed the work you
4 described in this section, and that led you to
5 create a table on Page 11. Can you go to that
6 table, please?

10:45:38

7 A. Yes, sir.

8 Q. And that's called -- you called it "Table
9 2," right?

10 A. Yes, sir.

10:45:54

11 Q. I want to walk through your results here.
12 You have a model -- a column called "Model," V12
13 and V22. Can you explain what those terms mean,
14 "V12" and "V22"?

15 A. My understanding is the CMS model that's
16 used to determine payments to MAOs, it's a
17 regression model calibrated to fee-for-service
18 data. And V12, I believe, is the version of the
19 model that was in use exclusively for a portion of
20 the time at issue in this matter.

10:46:08

10:46:28

21 At some point V22 started to be used as
22 well. I think during some years payments were
23 based on some combination of V12 and V22.

24 Q. And the next column is "Years," which is
25 self-explanatory. The next column says, "RADV

10:46:47

1 supported op 3=1." Can you describe what that
2 column means?

3 A. Yes. So that's looking again at diagnosis
4 instances in FIR. I received a database that was,
5 I think, FIR with additional annotations, 10:47:12
6 additional columns that were added by Mr. Renjilian
7 or his team which included flags, so values that
8 were true or false, zero or one. I don't recall
9 the original coding.

10 Op 3=1 means that according to 10:47:32
11 Mr. Renjilian's Opinion 3, deleting that diagnosis
12 instance would not result in money flowing from --
13 it wouldn't affect the payments.

14 Q. All right. Let me try to restate that
15 last part. 10:47:57

16 So this chart shows that there were 3,082
17 member-HCC-years in which --

18 A. No, sir. That's diagnosis instances.

19 Q. Okay. Fair enough. There were 3,082
20 diagnosis instances in which a provider met with a 10:48:20
21 patient and diagnosed the patient, or had an
22 encounter and diagnosed the patient. And then a
23 United chart review coder reviewed the charts and
24 did not find the diagnosis. And then RADV found
25 the diagnosis instance to be supported, and in all 10:48:46

1 circumstances this is a diagnosis instances that
2 did not have payment, right?

3 A. I'm sorry. My understanding is RADV does
4 not diagnose individual diagnosis instances to
5 determine if they were reported. They examine 10:49:02
6 whether HCC corresponding to that diagnosis or a
7 different HCC higher in the hierarchy in the same
8 branch is supported by at least one of the pieces
9 of the information that the MAO provides RADV.

10 Q. Fair enough. So let me restate it then. 10:49:17
11 So there were 3,082 diagnostic instances in which a
12 provider, after an encounter with a patient,
13 submitted a diagnosis, the United chart review
14 coders reviewed the chart and did not find the
15 diagnosis, and then that encounter was reviewed -- 10:49:36
16 or that member-HCC-year was reviewed in RADV, and
17 then the RADV auditors found it to be supported,
18 correct?

19 A. Again, approximately. My understanding is
20 that the review -- the RADV review might or might 10:49:58
21 not include review of the particular diagnosis
22 instances that were submitted. It's a review of
23 whatever materials the MAO provides RADV to support
24 that HCC for that year.

25 So it is not a quality control check on 10:50:20

1 individual diagnosis instances and the supporting
2 materials provided to RADV that gave support for
3 those HCCs might or might not be the original
4 diagnosis instances that was submitted.

5 Q. I understand. But with that caveat, you 10:50:37
6 agree that there were 3,082 instances in which a
7 provider submitted a diagnosis code after an
8 encounter, United chart review coders did not find
9 that diagnosis, the member-HCC-year associated with
10 that diagnosis was then reviewed in RADV and the 10:50:57
11 RADV auditors found support for it, and the
12 universe being diagnosis codes that had no payment?

13 A. No, sir. The word "it" in your question
14 suggests that it was the diagnosis instance that
15 was reviewed, and it might or might not be the 10:51:16
16 diagnosis instance that was reviewed. The
17 diagnosis instance might, in fact, not support that
18 particular HCC, or that diagnosis -- sorry. The
19 chart might not support that particular diagnosis
20 instance, but there was at least one chart that 10:51:34
21 year that supported the HCC that that diagnosis
22 instance maps to or an HCC that's higher in the
23 hierarchy.

24 Q. Thank you for clarifying. I wasn't trying
25 to be cute or mislead with the word "it." I meant 10:51:51

1 -- by "it" I meant member-HCC-year.

2 A. Yes, sir.

3 Q. But I can restate it so that we are
4 absolutely clear. And thank you for being so
5 careful.

10:52:02

6 You agree there were 3,082 instances in
7 which a provider submitted a diagnosis code after
8 an encounter, United chart review coders did not
9 find that diagnosis, the member-HCC-year associated
10 with that diagnosis was reviewed by RADV auditors, 10:52:18
11 and RADV auditors found support for that
12 member-HCC-year?

13 A. Yes, sir, I agree with that.

14 Q. All right. Now, let's go to the second
15 half of your chart, and you have a column "RADV 10:52:39
16 supported op 3=0." Do you see that?

17 A. Yes, sir.

18 Q. Okay. What does that mean?

19 A. It means that according to
20 Mr. Renjilian -- I don't want to mischaracterizes 10:52:51
21 what he said. I think op 3=1 means that he
22 determined that it would not have -- that that
23 diagnosis code would not have financial impact if
24 it were deleted. Op 3=0 -- I don't know whether he
25 means would have financial impact if deleted or he 10:53:16

1 that diagnosis instance, but that might or might
2 not be on the basis of that diagnosis instance.

3 Q. That's right. And I wasn't asking whether
4 -- I am not trying to suggest it was based on the
5 same diagnostic instance, but I'm saying that RADV 11:20:38
6 auditors found support at the member-HCC-year level
7 3,619 times for member-HCCs associated with
8 diagnosis instances that were missed in chart
9 review, right?

10 A. Well, again, missed in chart review, or 11:20:54
11 chart review didn't find them. Yes, that's
12 correct, I believe, assuming that your arithmetic
13 is correct, yes.

14 Q. All right. So Dr. Stark, I want to
15 present you with a hypothesis. Every time a United 11:21:11
16 chart review coder fails to find a diagnosis code
17 submitted by a provider, a member-HCC-year
18 associated with that code is unsupported.

19 Now, you agree, based on the work you
20 performed, that that hypothesis is false, correct? 11:21:33

21 A. Yes, I -- well, yes. RADV finds support
22 at the HCC level for the HCCs associated with some
23 of the diagnosis instances where chart review did
24 not find the diagnosis, but the diagnosis had been
25 submitted previously. 11:22:07

1 So somewhere in some chart that was
2 presented by United to RADV, there was support for
3 that HCC for that member for that year.

4 Q. I understand that caveat, and you've
5 mentioned it a few times. In understanding that 11:22:24
6 caveat, which I am going to cover in a minute, I
7 just want to restate the hypothesis and make sure I
8 understand your opinion.

9 The hypothesis is every time a United
10 chart review coder fails to find a diagnosis code 11:22:37
11 submitted by a provider, the member-HCC-year
12 associated with that diagnosis code is not
13 supported, that hypothesis is false, correct?

14 A. I agree.

15 Q. Okay. And you agree that that's false to 11:22:56
16 a certainty, right?

17 A. Yes, sir. Well, yes, my -- if by
18 "supported," we mean RADV found support, yes.

19 Q. Fair enough. We talked about that
20 assumption earlier, but you had said that human 11:23:12
21 beings are fallible and so RADV auditors may be
22 fallible, right?

23 A. Yes, I am just worried about the
24 definition of "supported," but yes, I -- yes, RADV
25 finds support for some nonzero fraction of 11:23:27

1 member-HCC-years for which corresponding to some of
2 the diagnoses that were originally submitted but
3 not found in chart review.

4 Q. All right. Fair enough.

5 I want to cover this caveat that you've 11:23:48
6 raised a number of times about a member-HCC-year
7 potentially being supported from another chart.

8 And so if I understand what you're saying,
9 Dr. Stark, is that a diagnosis instance in the
10 first interrogatory response would have involved a 11:24:14
11 provider meeting with a patient in an encounter,
12 having an encounter with a patient, submitting a
13 diagnosis and that mapping to a member-HCC-year;
14 but then another provider, meaning -- or having an
15 encounter with a patient and also submitting a 11:24:35
16 diagnosis.

17 And you're saying that the member-HCC-year
18 in RADV could have been supported by that second
19 encounter, not the first encounter on the first
20 interrogatory response; is that correct? 11:24:50

21 A. That's my understanding, or it could have
22 been a different encounter with the same provider,
23 or it could have been an encounter with the same
24 provider or a different provider with a different
25 diagnosis that mapped to either the same HCC or an 11:25:02

1 HCC higher in the hierarchy.

2 Q. That's correct. So just to put it in

3 plain terms, a provider may meet with a patient and

4 diagnosis a patient as having diabetes and that may

5 not be found in chart review, the diabetes 11:25:19

6 diagnosis; but then a different provider may meet

7 with the same patient, diagnosis diabetes, and then

8 that would be the chart that the RADV auditors

9 would find as supporting the member-HCC-year,

10 right? 11:25:37

11 A. I think it's a little more complicated

12 than that, in that my understanding is that RADV

13 doesn't do its own selection of materials to

14 review, that it's the MAO that provides RADV with

15 materials that they purport support the HCC for 11:25:53

16 that member for that year.

17 So my understanding is that the materials

18 presented to RADV in support of a particular

19 HCC-member-year could be one of the diagnosis codes

20 that chart review -- diagnosis instances that chart 11:26:15

21 review did not find.

22 It could be based on an encounter with the

23 same or a different provider, a different

24 encounter, and it could be support for, for

25 example, a more severe form of diabetes than the 11:26:35

1 particular HCC corresponding to the diagnosis event
2 that was originally submitted but not found in
3 chart review.

4 Q. Fair enough. Okay. Dr. Stark, I want to
5 change the hypothesis a little bit and focus just 11:26:53
6 on payment impact codes.

7 So the -- I want to present to you this
8 hypothesis. Every time a United chart review coder
9 fails to find a diagnosis code with payment impact
10 that had been submitted by a provider, the 11:27:13
11 member-HCC-year associated with that diagnosis
12 instance was unsupported.

13 You agree, based on the work you
14 performed, that that hypothesis is false, right?

15 A. Not quite. I have made no independent 11:27:31
16 determination of whether a diagnosis instance has
17 financial impact. My analysis relies either on --
18 in some cases on Mr. Renjilian's determination of
19 whether it has financial impact, and in some case
20 on Mr. Garthwaite -- Dr. Garthwaite's determination 11:27:51
21 on whether that diagnosis instance has financial
22 impact.

23 But I agree with what I think the gist is
24 of your assertion, which is that there are examples
25 of HCCs that were identified by one or the other or 11:28:04

1 both of Mr. Renjilian and Dr. Garthwaite as having
2 financial impact where RADV found support for that
3 HCC for that member for that year.

4 That determination might or might not have
5 been based on a review of the chart corresponding 11:28:25
6 to that, to the diagnosis event that was explicitly
7 stated.

8 Q. Okay. Dr. Stark, thank you for that
9 clarification. I will make my hypothesis even more
10 precise. 11:28:42

11 A. Okay.

12 Q. Because I am not trying to play gotcha,
13 and I'm glad you're being careful about the
14 wording.

15 So let me present you this hypothesis: 11:28:49
16 Every time a United chart review coder fails to
17 find a diagnosis code that either Mr. Renjilian or
18 Dr. Garthwaite identified as having payment impact
19 that have been submitted by a provider, the
20 member-HCC-year associated with that diagnosis 11:29:10
21 instance was unsupported?

22 A. Again, the word "supported" bothers me.
23 RADV found support for some of them.

24 Q. That RADV found support?

25 A. Yeah. So if you change that to "RADV 11:29:22

1 determined that it was unsupported," then -- then I
2 would agree.

3 Q. Okay. And the reason you have trouble
4 with "found support" is it requires an assumption
5 that the RADV auditors were correct, right?

11:29:41

6 A. Well, I -- RADV reviews -- my
7 understanding is that RADV reviews up to five
8 pieces of information provided by United. There
9 might be other charts that were not presented to
10 RADV -- even though I understand those to be
11 United's best attempt to demonstrate support for
12 that member-HCC-year combination. It's possible
13 that there would be support somewhere else. It's
14 possible that -- it's possible that RADV made a
15 mistake. There's a lot of things that are
16 possible.

11:30:11

11:30:28

17 And I just want to be clear that we are
18 talking about whether RADV found support rather
19 than some more abstract notion --

20 (Clarification by the reporter.)

11:30:46

21 THE WITNESS: Abstract notion of
22 supported. And I want to be also clear about the
23 distinction between whether a particular diagnosis
24 instance is supported by the chart corresponding to
25 that diagnosis instance or the HCC that that

11:31:03

1 diagnosis instance maps to has support somewhere in
2 some chart for that subscriber for that year.

3 Q. BY MR. ABASCAL: Thank you.

4 A. Or something higher in the hierarchy.

5 Q. But assuming the RADV auditors were 11:31:22
6 correct, you would agree that that hypothesis is
7 false, right?

8 A. I have now -- I am no longer holding your
9 statement in memory. Let me try to say it myself.

10 I agree that the hypothesis that when RADV reviewed 11:31:42
11 a member-HCC-year instance that -- for which a
12 diagnosis code had been submitted but not found by
13 the chart reviewers, and that -- and that diagnosis
14 instance had been identified by either

15 Mr. Renjilian and/or Mr. Garthwaite as having 11:32:29
16 financial impact, some fraction of the time that
17 they never found -- with a hypothesis that they
18 never -- that RADV never found support for that
19 HCC. And I agree that that hypothesis is false.

20 Q. All right. Let me try to state this in a 11:32:53
21 little plain terms, which is pretty dangerous.

22 So just because a United chart review
23 coder did not find a provider-submitted code, that
24 does not mean that the associated member-HCC-year
25 is unsupported, assuming RADV is correct? You 11:33:27

1 agree with that, right?

2 A. Yes, the -- just because chart review did
3 not find support for a diagnosis code submitted for
4 a particular diagnosis instance, there might be
5 somewhere -- there still might be somewhere support
6 for the HCC that that diagnosis code maps to or an
7 HCC higher in the hierarchy, possibly in the chart
8 that was reviewed by the United chart reviewers and
9 possibly in some other chart for that member for
10 that year.

11:33:56

11:34:17

11 Q. And you verified that through your own
12 analysis as reflected in Table 2?

13 A. I couldn't hear the last part of your
14 sentence. My analysis of?

15 Q. As reflected in your Table 2?

11:34:32

16 A. Yes, sir.

17 Q. All right. Dr. Stark, you understand that
18 payment to United is based on a member-HCC-year,
19 correct?

20 A. That's my understanding, yes, sir.

11:34:46

21 Q. All right.

22 A. And other characteristics of the members,
23 including demographic information.

24 Q. Fair enough. And you understand that if
25 the RADV auditors find support for the

11:34:58

1 member-HCC-year, then the payment is appropriate,
2 right, that portion of the --

3 MS. GLOVER: Objection; calls for legal
4 conclusion.

5 THE WITNESS: Yeah, I don't know what 11:35:14
6 "appropriate" means in this context. I don't know
7 the terms of the contract between the MAOs and CMS.

8 I understand that as a matter of practice
9 that RADV does not ask to be reimbursed when they
10 find -- if support is found for that HCC, but I 11:35:33
11 don't know the connection between the common
12 practice and RADV and the legal terms of the
13 contract between the MAO and the government.

14 Q. BY MR. ABASCAL: That's fair, Dr. Stark.

15 Do you understand that if a 11:35:54
16 member-HCC-year is unsupported, that would be
17 considered an overpayment?

18 MS. GLOVER: Objection; calls for a legal
19 conclusion.

20 THE WITNESS: I don't know -- I don't know 11:36:08
21 how that word is used in this context. I mean, in
22 lay terms, my understanding is that the practice of
23 RADV is to count that payment against -- against
24 the MAO, but I don't know -- again, I don't know
25 how the term is used. I don't know whether it is a 11:36:30

1 legal term of art. I don't know whether it is a
2 term that appears in the contract.

3 Q. BY MR. ABASCAL: That's fair. I am not
4 trying to play gotcha or suggest a term or trick
5 you with a term of art. So let me rephrase it. 11:36:42

6 Do you understand that if a
7 member-HCC-year is unsupported, then the payment
8 would be inappropriate?

9 A. Again, I don't really know what
10 "inappropriate" means here. And "unsupported," I 11:37:10
11 think you mean if RADV determines that none of the
12 pieces of information provided by the MAO support
13 that HCC for that member for that year. I
14 understand that that's considered some kind of
15 error and that there's some kind of accounting. 11:37:27
16 But I don't know -- I don't know details.

17 I understand informally that RADV allows
18 offsets as well, but, again, this is -- I don't
19 know the rules under which RADV operates. And I
20 don't understand in detail how a RADV audit results 11:37:48
21 in any kind of reconciliation of money between the
22 MAO and the government.

23 Q. I understand you're not an expert in RADV,
24 and I am not trying to suggest that anything you
25 say would bind the government on its interpretation 11:38:04

1 of RADV.

2 I am trying to find the word that would
3 make you more comfortable. And you said the word
4 "improper," so let me try that.

5 A. I'm sorry. I need to answer verbally 11:38:20
6 here. I don't -- I mean, I understand that there's
7 some kind of accounting for HCCs that RADV
8 determines were unsupported, HCC-member-year
9 combinations that RADV determines were unsupported,
10 but I don't know the details of that. 11:38:40

11 Q. Fair enough. Do you understand that
12 payment would be improper to United if the
13 member-HCC-year were unsupported?

14 A. Again, I'm a little hung up on the word
15 "improper." I think that I -- I think that -- 11:38:55
16 yeah, I don't know what to say.

17 Q. That's fair enough. If you're
18 uncomfortable, I don't want to make you
19 uncomfortable.

20 You do not know whether payment would be 11:39:07
21 proper or improper if a United member-HCC were
22 unsupported, correct?

23 A. Again, I don't know the sense of the word
24 "improper." I understand that -- I understand
25 informally that the MAOs don't submit HCCs. They 11:39:35

1 submit diagnosis instances to a government system.

2 And I understand that payments are based on the
3 member demographics and the HCCs that the diagnoses
4 for that member map to for the year that only a

5 single instance of each HCC matters. Multiple 11:40:05

6 instances don't change anything. And that there
7 are hierarchies for some HCCs and only, in some
8 sense, the riskiest of HCC in that hierarchy

9 matters if more than one has been assigned to a
10 given subscriber for the year. 11:40:25

11 I understand that there is some obligation
12 to submit only genuine diagnosis instances and some
13 obligation to correct errors that the MAO is aware
14 of or should be aware of. But beyond that, I don't
15 really know. 11:40:50

16 Q. All right. Fair enough. Well, Dr. Stark,
17 let's move on to a different part of your report.
18 I am going to focus on Section III of your report,
19 and this is where you analyze the member-HCC-year
20 combinations associated with the Garthwaite final 11:41:16
21 delete list, right?

22 I am going to draw your attention to
23 Paragraph 39, Dr. Stark. In Paragraph 39 you state
24 "For the V12 model, overall, RADV found support for
25 41,681 of 49,978 audited member-HCC-year 11:41:45

1 combinations, a rate of 83.4 percent."

2 Then you go on to say, "In contrast, RADV

3 found support for 264 of the 464 member-HCC-year

4 V12 combinations it checked that are among the

5 Garthwaite Final Deletes List, a rate of 56.9 11:42:10

6 percent."

7 Dr. Stark, those are your conclusions,

8 right, based on the work you performed for this

9 report, correct?

10 A. Yes, sir. 11:42:24

11 Q. And do you remain confident in those

12 conclusions?

13 A. Yes.

14 Q. Nothing's changed since you wrote the

15 report? 11:42:34

16 A. I understand that Dr. Garthwaite is

17 submitting another erratum, and it's possible that

18 the numbers in that new version could change this

19 conclusion, but I have not seen that report yet.

20 Q. Other than that caveat, your analysis you 11:42:59

21 still stand by, correct?

22 A. I believe that it's correct, yes.

23 Q. All right. So looking at Paragraph 39,

24 you found 264 circumstances in which a provider

25 submitted a diagnosis code that was not found by 11:43:19

1 United chart review coders, and Dr. Garthwaite
2 added that diagnosis instance to his final delete
3 list, and RADV auditors found support at the
4 member-HCC-year associated with that diagnosis
5 instance, right? 11:43:49

6 A. I am stumbling slightly over the word
7 "added." That diagnosis instance is -- there are
8 -- to the best of my knowledge, 400 -- and at the
9 time that I wrote this report -- 464
10 member-HCC-year V12 combinations that, according to 11:44:21
11 Dr. Garthwaite -- sorry. Let me try again.

12 Among the diagnosis instances that
13 Dr. Garthwaite says should be deleted because the
14 -- the chart review did not support that diagnosis
15 instance, those correspond to 464 member-HCC-year 11:44:58
16 V12 combinations and RADV found possibly based on
17 other diagnosis instances, support for 264 of those
18 member HC year -- HCC-year combinations for the V12
19 model.

20 Q. Understood. And you say RADV found 11:45:27
21 possibly based on other diagnosis instances, but
22 you would agree they may have found, possibly based
23 on the same diagnosis, instances too, correct?

24 A. It could have been based on the chart from
25 the encounter that led to the diagnosis instance 11:45:42

1 that chart review -- sorry. The diagnosis instance
2 that was originally submitted and which chart
3 review did not confirm, did not find, it could have
4 been based on a different chart.

5 Q. So however the member-HCC-year was 11:46:06
6 supported, it remains true that there were 264
7 member-HCC-years that RADV auditors found support
8 for where the diagnosis instance is included in the
9 Garthwaite deletes list, right?

10 A. Yes. 11:46:26

11 Q. All right. So Dr. Stark, I want to
12 present another hypothesis to you. All of the
13 diagnosis instances on the Garthwaite final deletes
14 list are associated with member-HCC-years that are
15 unsupported? 11:46:42

16 MS. GLOVER: Objection; calls for legal --

17 Q. BY MR. ABASCAL: You agree that that is
18 false, right?

19 A. Unsupported by what?

20 Q. Unsupported by RADV auditors. 11:46:51

21 A. Yes.

22 Q. I'll restate it.

23 All of the codes on -- all of the
24 diagnosis instances on the Garthwaite final deletes
25 list are associated with member-HCC-years that are 11:47:02

1 unsupported according to RADV auditors; you agree
2 that hypothesis is false, correct?

3 A. Let me restate it just slightly. RADV
4 found support for the HCC that some of those
5 diagnosis instances map to or an HCC higher in that 11:47:33
6 HCC hierarchy some fraction of the time.

7 Q. I appreciate you restating it, but I'd
8 like to get an answer to the way I've stated it,
9 Dr. Stark. So let me state the hypothesis.

10 All of the diagnosis instances on the 11:47:58
11 Garthwaite final deletes list are associated with
12 member-HCC-years that RADV auditors found to be
13 unsupported. You agree that that hypothesis is
14 false, right?

15 A. Are associated with -- I'd like to change 11:48:18
16 your language to that they map to rather than --

17 Q. Okay.

18 A. -- than associated with. And I'd like to
19 change whether those HCCs were supported to those
20 HCCs were something higher in the hierarchy. 11:48:36

21 Q. Let's try it again.

22 A. And then I agree.

23 Q. All right. All right. Assuming the RADV
24 auditors are correct, with that assumption, all --
25 let me restate. Hold on a second. 11:49:02

1 So here's the hypothesis, Dr. Stark, that
2 I'd like to ask you to opine on. All of the
3 diagnosis instances on the Garthwaite final deletes
4 list map to a member-HCC-year, or one higher in the
5 hierarchy, that RADV auditors found to be
6 unsupported; you agree that that is false, correct?

11:49:45

7 A. I agree that that's false.

8 Q. Let me try to state it in plain language.

9 Just because a diagnosis code is on the Garthwaite
10 final delete list, that does not mean that the
11 member-HCC-year that maps to that code is
12 unsupported; do you agree with that?

11:50:22

13 A. Again, we're talking about support by
14 RADV, and we're talking about that HCC or one
15 higher in the hierarchy. So which way -- shall we
16 try again?

11:50:50

17 Q. Let me try again.

18 Just assuming the RADV auditors are
19 correct, just because a diagnosis code is on the
20 Garthwaite final deletes list, that does not mean
21 that the member-HCC-year mapping to that code or
22 another member-HCC-year higher in the hierarchy is
23 unsupported, right?

11:51:05

24 A. Can we link "support" to "RADV" a little
25 bit more tightly in this statement?

11:51:33

1 Q. You don't like my assumptions. So I will
2 add that to my statement. Fair enough.

3 A. RADV found support for the HCC that -- or
4 a higher HCC in the hierarchy corresponding to some
5 of the diagnosis events on Dr. Garthwaite's list. 11:51:57

6 Q. Thank you for that clarification. I'm
7 going to try my question again and incorporate how
8 you said it --

9 A. Okay.

10 Q. -- so that we're aligned and comfortable. 11:52:23
11 I understand, I think, where you're coming out.

12 So let me phrase it this way. Just
13 because a diagnosis code is on the Garthwaite final
14 deletes list, that does not mean that the RADV
15 auditors failed to find support for that 11:52:48
16 member-HCC-year or another one in the hierarchy,
17 correct?

18 A. Corresponding to that diagnosis.

19 Q. Right.

20 A. Yes, I think that that's correct. I am 11:53:02
21 trying to hold it all in my mind at the moment, but
22 if you could repeat it once more, please, I will
23 try.

24 Q. Sure. Just because the diagnosis code is
25 on the Garthwaite final deletes list, that does not 11:53:19

1 mean that the RADV auditors failed to find support
2 for the member-HCC-year or another one higher in
3 the hierarchy that maps to that diagnosis code?

4 A. Yes. It doesn't necessarily mean that,
5 yes. 11:53:40

6 Q. Because you found 264 instances in which a
7 diagnosis instance was on the Garthwaite final
8 deletes list, yet the member-HCC that mapped to
9 that diagnosis instance was found by RADV auditors
10 to be supported, correct? 11:54:01

11 A. Yes. That one or one higher in the
12 hierarchy, yes.

13 Q. And that conclusion, Dr. Stark, I want to
14 clarify, is based on your own work that you
15 performed in this case on behalf of the plaintiffs, 11:54:29
16 right?

17 A. Yes, sir.

18 Q. Okay. Dr. Stark, you would agree that
19 neither Unitedhealth Care nor the plaintiffs in
20 this case could determine whether a member-HCC-year 11:54:45
21 would be supported simply by knowing if the
22 diagnosis code submitted by the provider was not
23 found by United chart review coders, right?

24 MS. GLOVER: Objection; calls for a legal
25 conclusion. 11:55:07

1 THE WITNESS: So I don't know what you
2 mean by "supported." Again, we had several
3 different notions of support. And it feels like
4 that's, to my ear, a little bit inside out because
5 the diagnosis codes are -- the diagnosis instances 11:55:27
6 are individual events which in some sense are
7 aggregated to an annual level, indicating whether a
8 particular -- whether a particular member has a
9 particular HCC in a particular year.

10 So I would agree that by reviewing the 11:55:46
11 chart behind a single diagnosis event, it is not
12 possible to tell whether the HCC that that -- that
13 the diagnosis maps to is -- if a -- I agree if a
14 particular diagnosis event is not supported by the
15 chart corresponding to that encounter, that is not 11:56:16
16 enough information to know whether there is some
17 other diagnosis event or some other chart that
18 would support the same -- that HCC that that
19 diagnosis event maps to or an HCC higher in the
20 hierarchy. 11:56:37

21 Q. Thanks for that clarification. Let me
22 follow up on that.

23 If the only piece of information you had,
24 Dr. Stark, was that a United chart review coder
25 failed to find a provider-submitted code, you agree 11:56:55

1 that you would not have enough information to know
2 whether a member-HCC-year associated with that code
3 was supported or not supported, right?

4 MS. GLOVER: Objection; calls for a legal
5 conclusion.

11:57:12

6 THE WITNESS: Again, I am worried about
7 the use of the word "supported." But I agree that
8 even if the chart doesn't provide evidence for a
9 particular diagnosis and that diagnosis maps to
10 some particular HCC, that looking at that single
11 chart is not enough -- I can't tell you whether
12 there is some other chart from some other encounter
13 from some other diagnosis event that would support
14 that HCC -- that provides evidence that that member
15 is appropriately labeled with that HCC for that
16 year.

11:57:31

11:57:48

17 Q. BY MR. ABASCAL: You would need more
18 evidence to determine whether or not the chart --
19 the member-HCC-year was supported in that
20 circumstance, right?

11:58:06

21 A. Yes, sir.

22 Q. All right. And the same is true for those
23 codes that were not found by United chart review
24 coders, right? In other words -- let me rephrase
25 that.

11:58:17

1 Again, the fact that a provider submitted
2 code was not found by a United chart review coder,
3 that does not provide you enough information to
4 know whether the associated member-HCC-year would
5 be found to be supported or not in a RADV audit, 11:58:32
6 correct?

7 A. It would not -- it would not be enough
8 information to know whether the materials that
9 United might provide to RADV auditors would show
10 support for that HCC for that member for that year. 11:58:53

11 Q. You would need more information, right,
12 than just knowing whether or not the code is on the
13 first interrogatory response, right?

14 A. Right. So the fact that the coders are
15 unaware of any support for a diagnosis code for a 11:59:08
16 particular encounter does not mean that nowhere in
17 the record is there support for the HCC that that
18 diagnosis code maps to or something higher in the
19 hierarchy.

20 Q. I am going to try to simplify that, which 11:59:44
21 is probably a mistake.

22 Let me say it this way: Simply because a
23 United chart review coder did not find a code
24 submitted by a provider, that does not mean an
25 associated member-HCC-year is going to be found to 12:00:00

1 be unsupported by a RADV auditor, correct?

2 A. So in -- so it is -- there are examples

3 which I have counted here where RADV did find

4 support for the HCC or something higher in the

5 hierarchy that corresponds to a diagnosis event 12:00:24

6 that the chart review did not confirm.

7 Q. And the same is true for the Garthwaite

8 deletes and -- final deletes? In other words, that

9 you found that RADV auditors found support at the

10 member-HCC-year level for several diagnostic 12:00:50

11 instances that were on Dr. Garthwaite's final

12 delete list, correct?

13 A. Not for the diagnostic codes, no, sir.

14 Q. Thank you for being so precise.

15 You found -- you found that RADV auditors 12:01:06

16 found support at the member-HCC-year level for

17 several diagnosis codes that were on

18 Dr. Garthwaite's final delete list, correct?

19 A. No, sir.

20 Q. Well, how would you describe the 264 12:01:23

21 instances that you identified in Paragraph 39?

22 A. Those are not confirmations of diagnosis

23 codes. They are finding support for an HCC, not a

24 diagnosis code.

25 Q. So I thought my question said it supported 12:01:38

1 at the member-HCC-year level. Maybe that was what
2 was confusing. So I can rephrase.

3 You found that RADV auditors found support
4 for member-HCC-years that map to diagnosis
5 instances that were on the Garthwaite final deletes 12:02:04
6 list, right?

7 A. Again, I put the mapping the other way
8 around. The diagnosis instances map to HCC codes,
9 and it's -- I know that you have a background in
10 mathematics. It is sort of a many-to-one mapping. 12:02:20

11 Q. I get it.

12 You found -- let me rephrase.

13 You found diagnosis instances on the
14 Garthwaite final deletes list that mapped to
15 member-HCC-years that RADV auditors found support 12:02:36
16 for, correct?

17 MS. GLOVER: Objection; misstates prior
18 testimony.

19 THE WITNESS: Yes. I found examples of
20 diagnosis instances in Dr. Garthwaite's final 12:02:51
21 deletes list that map to HCCs for which RADV found
22 support or found support for something higher in
23 the hierarchy.

24 Q. BY MR. ABASCAL: Right. So just because a
25 diagnosis instance is on the Garthwaite final 12:03:16

1 deletes list, that does not mean that the
2 member-HCC-year that is associated with that
3 diagnosis instance was found to be unsupported by
4 RADV, correct?

5 A. I'm not sure what "associated with" means 12:03:31
6 here, but there may be -- the materials that United
7 provided to RADV showed support for the HCC or an
8 HCC higher in the hierarchy for that member for
9 that year in some instances that were -- the
10 diagnosis instance -- corresponding to diagnosis 12:04:02
11 codes that were on Dr. Garthwaite's final deletes
12 list.

13 Q. Okay. Dr. Stark, I want to go to FTI's
14 report.

15 A. Sorry. Which report? 12:04:26

16 Q. Mr. Renjilian. I called him FTI. He
17 works for FTI. The Renjilian report, Figure 15,
18 I'd like to clarify some of his analysis and how it
19 compares to your analysis.

20 If you look at the bottom of 12:04:53
21 Mr. Renjilian's report, he quantifies a
22 member-HCC-years for all years CON11-15, and you
23 see the total, 55,730?

24 A. I'm sorry. I'm looking at -- you said
25 Figure 16? 12:05:11

1 Q. 15.

2 A. 15.

3 Q. One five.

4 MS. GLOVER: It is on Page 87.

5 THE WITNESS: Okay. Sorry. Okay. Please 12:05:17
6 start the question again.

7 Q. BY MR. ABASCAL: I am drawing your
8 attention to the bottom chart on Figure 15,
9 CON11-15, member-HCC-years.

10 A. Yes, sir. 12:05:27

11 Q. And do you see that Mr. Renjilian counted
12 55,730?

13 A. Yes, sir.

14 Q. All right. Drawing your attention,
15 Dr. Stark, to Paragraphs 39 and 40 of your report, 12:05:37
16 you also calculated the overall RADV support rate
17 under the V12 model and the V22 model. And in
18 Paragraph 39 you calculated 49,978 audited
19 member-HCC-year combinations under V12. And then
20 48,044 member-HCC-year combinations under V22. Do 12:06:07
21 you see that?

22 A. Sorry, 41,681. I'm sorry. Could you -- I
23 was finding my place in the document. I apologize.
24 Could you repeat?

25 Q. No problem. To give you a high-level 12:06:30

1 summary of my question, you'll see that
2 Mr. Renjilian counted 55- -- approximately 55,000
3 member-HCC-years as the total amount of
4 member-HCC-years that were audited in RADV, yet you
5 have different figures in Paragraphs 39 and 40, and 12:06:54
6 I am trying to reconcile those two.

7 A. Mr. Renjilian's determination of support
8 was some combination of V12 and V22, and I have
9 separated them out.

10 If I understand his code correctly, he 12:07:15
11 considered a diagnosis instance to have been
12 supported by RADV if all of the HCCs corresponding
13 to that diagnosis instance that were reviewed by
14 RADV were found to be supported whether those HCCs
15 were V12 or HCC V22. 12:07:37

16 Q. And how is your analysis different?

17 A. I looked separately at whether HCC V12
18 were supported and HCC V22 were supported. He
19 combined the two in some way on a
20 diagnosis-instance-by-diagnosis-instance level. 12:08:00

21 Q. All right. Dr. Stark, I am presenting you
22 now with another exhibit. What number are we at?

23 MS. RAETHER: We are up to 1552.

24 (Discussion off the record.)

25 (Reporter marked Exhibit No. 1552 12:08:46

1 for identification.)

2 Q. BY MR. ABASCAL: Dr. Stark, I put
3 Mr. Renjilian's Figure 15 totals at the top of this
4 chart, and I put your totals for Paragraphs 39 and
5 40 on the bottom of the chart. 12:08:58

6 And I also took the percentage of RADV
7 support as reflected in your Paragraphs 39 and 40
8 and added the percentages there in the final
9 column, "Percent Supported."

10 I want to give you a minute to look at the 12:09:15
11 exhibit that I presented to you to make sure you're
12 comfortable that I put the figures down correctly
13 from your Paragraphs 39 and 40.

14 A. Okay. I think I see where the numbers
15 come from, yes. 12:10:05

16 Q. All right. Dr. Stark, as you can see,
17 Mr. Renjilian has a different total count than you
18 have. And I think you just provided an explanation
19 of why that difference is. And my question is:
20 Are you still confident that your calculations are 12:10:21
21 correct?

22 A. I believe my calculations are correct,
23 yes, calculated slightly differently.

24 Q. And so the difference is driven by the
25 methodology used for the count and doesn't reflect 12:10:36

1 any error, correct?

2 A. I can't vouch for Mr. Renjilian's work. I
3 am -- an error is always possible, but I believe
4 that my numbers are accurate, yes.

5 MR. ABASCAL: I am going to present you 12:10:58
6 another exhibit.

7 (Reporter marked Exhibit No. 1553
8 for identification.)

9 MS. RAETHER: This will be 1553.

10 Q. BY MR. ABASCAL: Dr. Stark, I am handing 12:11:28
11 you Exhibit 1553, which is a chart that I prepared
12 based on the data in your report.

13 Dr. Stark, what I did here in this chart
14 is I took the data from Table 2 and the data from
15 Table 39 -- sorry. Paragraph 39 of your report, 12:11:49
16 and I combined them into one chart.

17 Take a moment to look at Exhibit 1553 and
18 be comfortable that I put the numbers down
19 correctly.

20 A. Okay. I don't entirely understand. I see 12:14:44
21 where the numbers come from. I haven't verified
22 the combined percentage, but I think that's
23 approximately right.

24 What does -- I don't know what -- oh, one
25 plus zero. Okay. You are saying it is both. 12:15:07

1 Okay. I think I understand what you're
2 representing here for V12.

3 Q. All right. Dr. Stark, I can walk through
4 those last few columns.

5 What I did here is I took the data from 12:15:17
6 Table 2 and the data from your Paragraph 39, and I
7 put them on the chart, and I added two columns at
8 the end of the chart.

9 The first column is "Is the code on the
10 first interrogatory response (1=yes)." And then 12:15:32
11 the last column is "Does the code have payment
12 impact." And I put one for yes and zero for no,
13 which I realize may be confusing because you had op
14 3=1. So you had no payment impact being one in
15 your Table 2. So I switched that a bit to try to 12:15:59
16 be clear.

17 A. Can we agree that that means Mr. Renjilian
18 determined it didn't have payment impact?

19 Q. Correct. Yes. This is -- zero means
20 Mr. Renjilian determined it was no payment impact. 12:16:13
21 So that zero would mean it is actually on Opinion
22 39.

23 A. Understood.

24 Q. I apologize for the confusion. And one is
25 that the code does have payment impact, according 12:16:31

1 to Mr. Renjilian.

2 A. Okay.

3 Q. So Dr. Stark, you found that the overall

4 validation rate for diagnosis instances that had

5 their member-HCC-years reviewed in RADV for V12 to 12:16:48

6 be 88.8 percent, that is 3,619 out of 4,077,

7 correct?

8 A. I'm sorry. I'm trying to understand why

9 -- could you please repeat the question?

10 Q. Sure. Let's -- let me walk you through 12:17:26

11 it.

12 If you look at my third row, "Total from

13 Table 2," there were 4,077 diagnostic instances

14 that you had counted in Table 2 associated with

15 V12, right? 12:17:47

16 A. Yes, sir.

17 Q. And of those diagnostic instances, you

18 found 3,619 of them to be supported at the

19 member-HCC-year level, right?

20 A. Yes, sir. 12:18:00

21 Q. For a total support rate of 88.8 percent,

22 correct?

23 A. Yes, sir.

24 Q. All right. And you found for V12 in

25 Paragraph 39 that there were a total of 49,978 12:18:10

1 audited member-HCC-year combinations, of which 83.4
2 percent were supported, correct?

3 A. I'm sorry. I wasn't paying attention when
4 you read the numbers, but yes, the conclusion I
5 agree with. I believe that's what I state in that 12:18:35
6 Paragraph 39.

7 Q. Right. So Dr. Stark, you found that the
8 RADV validation rate percentage for diagnosis
9 instances that were on the first interrogatory
10 response to be actually higher than the overall 12:18:52
11 validation rate for member-HCC-years of all codes
12 for V12, correct?

13 A. Yes. Without regard to whether they have
14 financial impact or not, yes, sir.

15 Q. That's right. And I prepared the same 12:19:12
16 chart for the V22 --

17 A. I am ready for a break soon. I was
18 wondering --

19 Q. Let's do one now.

20 A. Should we take lunch now instead? 12:19:26

21 Q. Yeah, let's take lunch now.

22 A. Does that make sense?

23 Q. Yeah, whatever you want. I want to make
24 sure you're comfortable.

25 THE VIDEOGRAPHER: This marks the end of 12:19:33

1 media file labeled No. 2. We are off the record at
2 12:19 p.m.

3 (Whereupon the noon recess was
4 taken.)

1 And those are which of the codes in the Garthwaite
2 final delete list are included in Opinion 2 or 3,
3 right?

4 A. Yes, sir. It's, in essence, the overlap
5 -- among other things that one can get from that 01:32:55
6 table is the overlap of diagnosis instances enter
7 -- diagnosis instances reflected that -- listed in
8 Dr. Garthwaite's final deletes list with those
9 diagnosis instances in FIR that Mr. Renjilian --
10 and again, I don't know whether the right way to 01:33:22
11 say it is didn't find, couldn't have financial
12 impact, or found it had financial impact.

13 Q. Right. But the point is you didn't do
14 work either for Mr. Renjilian or Dr. Garthwaite
15 that would allow you to be in a position to say one 01:33:37
16 way or another whether each of them -- either of
17 them -- okay. I am going to start that all over
18 because I put too much in there. I know you want
19 to be precise, so let's start with Renjilian.

20 You cannot, as you sit here today, opine 01:33:53
21 one way or the other whether Mr. Renjilian's
22 Opinion 3 is correct?

23 A. Well, again, I did not check the
24 underlying coding. I did check some of the
25 arithmetic, and I did check the underlying coding 01:34:07

1 against Dr. Garthwaite's opinion.

2 But I did no independent work to determine
3 whether either of them was correct in their
4 flagging of a particular diagnosis instance as
5 having financial impact or not. I just looked at 01:34:26
6 the concordance of the two.

7 Q. Perfect. And when you said "either of
8 them," you meant Mr. Renjilian and Dr. Garthwaite?

9 A. Yes, sir.

10 Q. All right. Great. 01:34:39

11 Let's go through your Table 1, then. I'd
12 like to go through the results on your Table 1,
13 Dr. Stark, and draw your attention to the number
14 that's approximately 28 million.

15 Dr. Stark, you found that there were -- or 01:34:59
16 you confirmed the count of the number of diagnostic
17 instances in the first interrogatory response to be
18 27,937,651, correct?

19 A. Yes, sir.

20 Q. Okay. In plain terms, there were 01:35:26
21 approximately 28 million diagnosis instances in
22 which a provider submitted a code and the United
23 chart review coder did not find that code, correct?

24 A. If by "code," we mean diagnosis code
25 associated with a particular date of service, yes, 01:35:46

1 sir.

2 Q. All right. And then you also counted
3 1,977,921 diagnostic instances in the Garthwaite
4 final delete list, right?

5 A. Yes, sir. 01:36:06

6 Q. And you verified these numbers, correct?

7 A. Yes, sir.

8 Q. In your Opinion II, which is right below
9 your Table 1, you state the following, "RADV found
10 support for those (inconsequential) diagnosis 01:36:26
11 instances at a much higher rate (approximately 96
12 percent) than the instances that have financial
13 impact if deleted."

14 What did you mean by "inconsequential
15 diagnosis instances"? 01:36:48

16 A. I meant according to that -- Mr. Renjilian
17 flagged them in his Opinion 3 as having no
18 financial impact if deleted.

19 Q. And they are inconsequential because they
20 could not have affected payment, correct? 01:37:00

21 A. They are inconsequential only in the sense
22 that Mr. Renjilian claimed that deleting them would
23 not -- would not have any financial consequences.

24 Q. Fair enough. I don't want to suggest that
25 you verified that work. So I like your caveat. 01:37:14

1 Let me restate it.

2 So they're inconsequential because,
3 according to Mr. Renjilian, they did not affect
4 payment, right?

5 A. Deleting them would not have changed the 01:37:27
6 payment, according to Mr. Renjilian.

7 MR. ABASCAL: Okay. Let's show you
8 another exhibit.

9 MS. RAETHER: I think this is 1555.
10 (Reporter marked Exhibit No. 1555 01:37:57
11 for identification.)

12 Q. BY MR. ABASCAL: Dr. Stark, I am showing
13 you Exhibit 1555, which are excerpts of your Table
14 1 with some additional arithmetic.

15 A. You subtracted the 65 -- 63,506 from 1.9 01:38:15
16 million-ish; is that correct?

17 Q. Yes, that is correct, Dr. Stark. I took
18 -- let me go through that in some detail.

19 You found in Table 1 that there were
20 certain diagnosis instances that were not on the 01:38:33
21 first interrogatory response but were on
22 Dr. Garthwaite's final delete list, right?

23 A. Yes, sir.

24 Q. You found 63,506 diagnosis instances that
25 were on the Garthwaite final delete list but not in 01:38:46

1 HCCs that RADV gives very little information about
2 regardless of how the RADV sample is drawn.

3 Q. Well, you raise a good point, Dr. Stark.

4 Why don't I take a step back. Let's go to the

5 first sentence of your opinion. You say "The RADV 02:53:13

6 samples of individual HCCs are very small." Do you

7 see that?

8 A. Yes, sir.

9 Q. All right. And then you then describe in

10 several pages how that small sample size affects 02:53:25

11 whether or not the RADV results can be extrapolated

12 to a larger population, right?

13 A. It -- no. It -- if the sample had been --

14 even if the sample had been drawn in a way that

15 would permit statistical extrapolation, the 02:53:48

16 uncertainty in that extrapolation would be very

17 large because the sample sizes are small.

18 Q. That's right. What I'd asked is you

19 described in several pages how that small sample

20 size makes it difficult to extrapolate without 02:54:08

21 considerable statistic bias?

22 A. No, sir. The bias issue is different.

23 This is about statistical uncertainty under a

24 hypothetical counterfactual assumption that the

25 sample had been drawn in a way that I understand it 02:54:26

1 was not drawn, but in a way that is easier to
2 analyze and that would lead to smaller
3 uncertainties.

4 So this is a -- even in sort of the most
5 optimistic view, the uncertainty in extrapolation 02:54:40
6 due to sampling variability would be large, which
7 is a separate issue from bias, which has to do with
8 the population from which the sample was drawn, the
9 particular design of the sample, the fact that this
10 was a stratified cluster sample of HCCs, not a 02:55:02
11 uniform sample of HCCs and so on. Other sources,
12 for example, that RADV is potentially, if not
13 actually, looking at different underlying charts.

14 Q. I am going to try something different.

15 A. Okay. 02:55:28

16 Q. Let's go to your Paragraph 54.

17 A. Paragraph 56?

18 Q. 54.

19 A. 54.

20 Q. Yeah. I want to draw your attention to 02:55:37

21 the middle of that paragraph. It says, "The raw
22 RADV support rate should not be extrapolated to the
23 Garthwaite Final Deletes List." Do you see that?

24 A. Yes.

25 Q. All right. Could you explain why? 02:55:55

1 A. There's a very long list of reasons. One
2 of them is that in sampling and extrapolation, we
3 draw -- meaning statistics draws a distinction
4 between the sampling frame and the population.

5 The sampling frame is the collection of 02:56:27
6 units from which the sample is drawn, and that
7 might or might not be identical to the population
8 to which one would like to extrapolate.

9 My understanding is that the sampling
10 frame for RADV was a particular collection of 02:56:43
11 contract years that did not comprise every contract
12 year that's relevant to the present matter.

13 So there's a mismatch between the sampling
14 frame and the population that already makes
15 extrapolation impossible without bias of unknown 02:57:09
16 magnitude.

17 Second issue is within each contract year
18 that RADV did examine, the way the sample was drawn
19 was not a simple random sample of HCCs, which is
20 what would be required for -- in order to 02:57:39

21 extrapolate from a sample of HCCs to the contract
22 year from which those HCCs were selected, those
23 member-HCC-years were selected, for the raw rate to
24 be an unbiased estimate, that sample needs to have
25 been drawn in such a way that every HCC-member-year 02:58:06

1 in that contract was equally likely to be selected.

2 That is not how the sample was drawn. The

3 sample was drawn -- I understand the way that RADV

4 works in general -- although I understand there's

5 been some variation from year to year. But I

02:58:25

6 understand in general the way RADV works is by

7 sampling members, not sampling HCCs. Because it is

8 sampling members and then looking at all of the

9 HCCs that go with a given member. Instead of being

10 an equal probability sample, it is a cluster

02:58:40

11 sample. It doesn't sample all the subsets with

12 equal probability.

13 And secondly, even the members are not

14 drawn with equal probabilities -- sorry. The

15 design of the sample, even at the member level --

02:58:56

16 at the level of members is a stratified sample, I

17 understand that it involves first dividing payments

18 -- dividing members into three groups based on the

19 amount that was paid for that member in that year.

20 So terciles of payment.

02:59:20

21 So all of those differences need to be

22 taken into account in extrapolating the sample rate

23 for the RADV sample from a single contract year to

24 that entire contract year. But then the number of

25 the sampling rates, meaning the fraction of the

02:59:52

1 population that each sample represents, I
2 understand may vary from contract to contract that
3 RADV audits. So weights need to be used to adjust
4 for those differences in sampling rates.

5 And beyond that, there's no statistical 03:00:13
6 justification for extrapolating beyond the
7 particular contract years that RADV looked at.

8 So there are a large list of reasons that
9 the raw rate of support has unknown bias in
10 addition to statistical variability if it's being 03:00:38
11 used as an estimate of the overall rate of support
12 for HCCs corresponding to diagnosis instances
13 identified on the Garthwaite final deletes list.

14 Q. Have you completed your answer, Doctor?

15 A. Yes, I think so. 03:01:02

16 Q. All right. Great. I may have to ask you
17 to repeat it again because I am going to change --
18 I am going to change -- it's torture, isn't it --
19 the question slightly.

20 You said in Paragraph 54 "the raw RADV 03:01:17
21 support rate should not be extrapolated to the
22 Garthwaite Final Deletes List."

23 Now I want to be a little bit more
24 specific. In Paragraph 39 you concluded, or you
25 found -- you counted, you counted that RADV found 03:01:33

1 support for 264 of the 464 member-HCC-year V12

2 combinations. By inference, they did not find

3 support for 200 of them, correct?

4 A. Yes, sir.

5 Q. Okay. Would it be appropriate for any of 03:01:55

6 the parties in this case to extrapolate those RADV

7 findings, the support or lack of support rate, to

8 the full Garthwaite final deletes list?

9 A. No, it would not. This is a statement

10 about the RADV sample itself. It's not a statement 03:02:12

11 about the populations from which the RADV sample

12 was drawn.

13 Q. All right. In your Table 2 you found that

14 codes/diagnosis instance with payment impact were

15 supported at 61.3 percent for all years for V12, 03:02:44

16 right?

17 A. In the intersection of the RADV sample --

18 sorry. The 61.3 percent you're pointing out the

19 V12 --

20 Q. Yes. 03:03:05

21 A. -- row?

22 Q. Yes.

23 A. And we're looking at those diagnosis

24 instances that were not flagged by Mr. Renjilian as

25 having -- 03:03:17

1 Q. Right.

2 A. -- financial impact if deleted. Yes, that
3 61.3 percent applies to sort of the intersection of
4 FIR Renjilian's opinion 3=0 and RADV. It doesn't
5 apply more broadly than that. I have no basis for
6 extrapolating that to any larger group.

03:03:37

7 Q. That was going to be my question. It
8 would be inappropriate to extrapolate the findings
9 in Table 2 to any broader population, correct?

10 A. There's no statistical basis for
11 extrapolating it any further.

03:03:53

12 I might need to think about it more. But
13 given that if I knew in detail the design of the
14 RADV sample, it might be possible to take a
15 weighted combination of the underlying data and
16 come up with some percentage that could be
17 extrapolated to the particular contract years that
18 RADV sampled, but it would not be the raw rate, and
19 it would not apply beyond the frame from which RADV
20 drew its sample, meaning contract years that were
21 not audited by RADV.

03:04:25

03:04:50

22 Q. I understand, but you haven't done that
23 work?

24 A. No, I have not. I don't know the RADV
25 design in detail, and it would require -- yes, it

03:05:02

1 would -- that's work I have not done.

2 Q. And Dr. Garthwaite did not do that work in
3 creating his report?

4 A. I don't believe so, no.

5 Q. And neither did Mr. Renjilian? 03:05:12

6 A. No, sir.

7 Q. So to your knowledge, no one's done that
8 work, correct?

9 A. To my knowledge, nobody's done that work.

10 Q. To -- well, let's go to -- let's switch 03:05:24
11 gears a little bit.

12 A. Time for another five-minute break?

13 MR. ABASCAL: Yeah, sure.

14 (Discussion off the record.)

15 THE VIDEOGRAPHER: This marks -- 03:05:37

16 (Discussion off the record.)

17 MS. GLOVER: Real quick before we go off

18 the record, I didn't state an objection earlier

19 that I'd like to state. For Exhibit 1557, I object

20 to the use of this exhibit and questions about it 03:05:51
21 for lack of foundation.

22 MR. ABASCAL: Okay. Fair. Fair enough.

23 THE VIDEOGRAPHER: Off the record?

24 MR. ABASCAL: Yes.

25 THE VIDEOGRAPHER: Okay. This marks the 03:06:01

1 final deletes that would be supported based on the
2 data available here in this case, correct?

3 MS. GLOVER: Objection; form.

4 THE WITNESS: When you say "supported," do
5 you mean had RADV examined every member-HCC-year in 03:53:29
6 every contract?

7 Q. BY MR. ABASCAL: Yes.

8 A. Yes. We did -- there is not appropriate
9 data for doing that. Because there's only data on
10 a subset of contracts and a subset of years and -- 03:53:46
11 there's no way to extrapolate that without sampling
12 from the whole universe.

13 And then in doing that, the design of the
14 sample would need to be taken into account. So in
15 detail I would need to understand how RADV draws 03:54:08
16 its sample and take that into account in doing the
17 extrapolations of each contract year separately and
18 then amalgamating those to get an overall estimate
19 of the rate.

20 Sorry. I'm answering a different 03:54:27
21 question. I apologize. Your question was
22 specifically about the final deletes list. It was
23 not about all contract years or...

24 I agree that there is not -- I'm not aware
25 of any data that speaks to that that would allow 03:54:45

1 one to estimate what fraction of the diagnosis --
2 sorry. What fraction of the diagnosis events in
3 the final deletes list map to an HCC-member-year
4 that RADV would have found support for had it
5 examined every member-HCC-year that intersects
6 Garthwaite's final deletes list.

03:55:05

7 Q. I am going to try to restate that.

8 A. You want me to say it again?

9 Q. No, I am going to try to restate it.

10 A. Okay.

03:55:46

11 Q. Based on the data that you have available
12 and that you have reviewed in your work on this
13 case, there is not a way to reliably estimate the
14 fraction of diagnosis instances in the final
15 deletes -- the Garthwaite final deletes list that
16 map to an HCC-member-year that would be supported
17 by RADV auditors, right?

03:56:03

18 A. I agree with that.

19 Q. And similarly, there's not a way to
20 estimate the fraction that would not be supported,
21 correct?

03:56:32

22 A. I agree with that, too.

23 Q. All right.

24 A. If there were, there would be a way to do
25 it the first time.

03:56:44

1 Q. One minus.

2 In Paragraph 84 of your report, Dr. Stark,
3 you say at the bottom, "However, it is impossible
4 to know how many additional HCC instances would
5 have been supported by the unretrieved charts." 03:57:11
6 What do you mean by that?

7 A. Without retrieving the charts, one doesn't
8 know whether they would have shown support for that
9 member for that HCC for that year.

10 And without retrieving at least a random 03:57:39
11 sample of those charts, there's no reliable way to
12 estimate statistically how many additional
13 instances would have found support.

14 Q. Dr. Stark, you mentioned "response
15 schedule" in your report. Can you explain what is 03:58:04
16 a response schedule?

17 A. "Response schedule" is a term of art,
18 describes a mathematical relationship that, in
19 essence, is how nature generated the data in
20 question. 03:58:26

21 So in order to use a fitted function to
22 make causal inference as a function fitted to data
23 to make a causal inference about what would have
24 happened had there been an intervention and
25 something changed, the relationship needs to be a 03:58:49

1 DEPOSITION OFFICER'S CERTIFICATE
(Civ.Proc. § 2025.520(e))

2 STATE OF CALIFORNIA)
3) ss.
COUNTY OF SAN FRANCISCO)

5 I, Balinda Dunlap, hereby
6 certify:

7 I am the deposition officer that
8 stenographically recorded the testimony in the
9 foregoing deposition.

10 Written notice pursuant to Code of Civil
11 Procedure, Section 2025.520(a), having been sent,
12 the deponent took the following action within the
13 allotted period with respect to the transcript of
14 the deposition:

15 () In person, at the office of the
16 deposition officer, made the changes set forth on
17 the original of the transcript. (The parties
18 attending the deposition have been notified of said
19 changes.)

20 () Approved the transcript by signing
21 it.

22 () Refused to approve the transcript by
23 not signing it.

24 () By means of a signed letter, made the
25 changes and approved or refused to approve the

1 transcript as set forth therein. (Said letter has
2 been attached to the original transcript and copies
3 thereof mailed to all parties attending the
4 deposition.)

5 () Failed to approve the transcript
6 within the allotted time period.

7 Dated _____.

Page 27

1 A I don't know what it's titled, so I 9:19AM
2 can't go there. 9:19AM

3 Q Based on the review of those articles, 9:19AM
4 did you form any opinions about whether this 9:19AM
5 lawsuit has merit? 9:19AM

6 A I did not. 9:19AM

7 Q So let's switch gears a little bit. 9:19AM
8 Can you give me a general background, 9:19AM
9 your education? 9:19AM

10 A Sure. I started -- my first career was 9:19AM
11 in nursing. I went to a three-year diploma school 9:19AM
12 of nursing in Roanoke, Virginia and worked as a 9:19AM
13 nurse for several years while I went back and 9:20AM
14 continued my education, getting a degree in 9:20AM
15 nursing by 1983. 9:20AM

16 Q Okay. 9:20AM

17 A And continued working in nursing and 9:20AM
18 nursing management until the early '90s, by which 9:20AM
19 time I had finished graduate school and moved into 9:20AM
20 administration, hospital administration. 9:20AM

21 Most of my career was with the Hospital 9:20AM
22 Corporation of America, about 25 years' worth, and 9:20AM
23 then I went into public service, working for 9:20AM
24 Governor Tim Kaine. I then moved into federal 9:20AM
25 service, working for President Obama. 9:20AM

Page 28

1 Q And can you tell us, when did you go 9:20AM
2 into federal service? 9:20AM

3 A February of 2010. 9:20AM

4 Q And was that, was that at CMS? 9:20AM

5 A It was. 9:20AM

6 Q Okay, and what was your title at CMS at 9:20AM
7 that point? 9:20AM

8 A At that point it was chief deputy 9:20AM
9 administrator. 9:20AM

10 Q And how long were you the chief deputy 9:21AM
11 administrator? 9:21AM

12 A On and off from February of 2010 until 9:21AM
13 May of 2013. 9:21AM

14 Q Okay. 9:21AM

15 A I had several titles during that time. 9:21AM

16 Q What titles did you have? 9:21AM

17 A I had that title, chief deputy 9:21AM
18 administrator and chief operating officer, and 9:21AM
19 then I also was acting administrator at different 9:21AM
20 points, prior to Don Berwick coming on board and 9:21AM
21 after Don Berwick left -- 9:21AM

22 Q Okay. 9:21AM

23 A -- until I was confirmed in May of 2013. 9:21AM

24 Q And you were confirmed as administrator 9:21AM
25 in May of 2013, and how long did you serve as the 9:21AM

1 administrator?

9:21AM

2 A Until February of 2015.

9:21AM

3 Q Okay, and can you describe your

9:21AM

4 responsibilities as the administrator of CMS?

9:21AM

5 A Well, CMS is a large organization that

9:21AM

6 is located both in -- well, has regions throughout

9:21AM

7 the country, but chief headquarters are in

9:21AM

8 Baltimore, and there's also an office in

9:21AM

9 Washington, D.C.

9:22AM

10 So your first responsibility is to run

9:22AM

11 the organization, so everything from hiring,

9:22AM

12 firing, staffing sort of thing, and second would

9:22AM

13 be you obviously worked -- it was a political

9:22AM

14 position, so you worked at the pleasure of the

9:22AM

15 President and for the Secretary of Health, so a

9:22AM

16 big part of your job was working with the White

9:22AM

17 House and HHS and also with members of Congress.

9:22AM

18 Q Okay.

9:22AM

19 A And then probably the third part was

9:22AM

20 taking the laws that were enacted by Congress and

9:22AM

21 converting those into regulation, policy, kind of

9:22AM

22 taking what was a statute and making it workable

9:22AM

23 for those in the health field.

9:22AM

24 Q Okay. So is it fair to say that you

9:22AM

25 oversaw the development of policies that were

9:22AM

Page 30

1 adopted by CMS while you were the administrator? 9:22AM

2 MR. FREEBORNE: Objection to form. 9:22AM

3 You can answer. 9:22AM

4 THE WITNESS: I think it's fair to 9:23AM

5 say that I oversaw policy development, but I 9:23AM

6 was not involved in the day-to-day policy 9:23AM

7 development. The agency is much too large to 9:23AM

8 have a hands-on CEO, if you will. 9:23AM

9 BY MR. SCHINDLER: 9:23AM

10 Q Understood, but to the extent that a 9:23AM

11 policy was developed within the agency before it 9:23AM

12 was ultimately adopted, is it something that you 9:23AM

13 would have to review and approve before it became 9:23AM

14 agency policy? 9:23AM

15 A If it was a formal policy, that would be 9:23AM

16 yes, and then it would go to the Secretary. There 9:23AM

17 was quite an elaborate approval process. 9:23AM

18 Q And what about regulations that were 9:23AM

19 issued by CMS? 9:23AM

20 A For regulations, again if it was a 9:23AM

21 formal regulation, usually that would go to the -- 9:23AM

22 come to me ultimately after it was developed and 9:23AM

23 went through several departments inside CMS, and 9:23AM

24 then I would sign it, and ultimately the Secretary 9:23AM

25 would sign it before it became a regulation, 9:24AM

Page 31

1 proposed regulation that would then go into the 9:24AM
2 Federal Register for consumers to read and give 9:24AM
3 input. 9:24AM

4 Q Got it, and what about rules? To the 9:24AM
5 extent that CMS would issue proposed rules or 9:24AM
6 actual rules, again understanding that you had 9:24AM
7 people below you who developed them, would they 9:24AM
8 come by you before they would actually be 9:24AM
9 published or issued? 9:24AM

10 A Not always. Not for rules and 9:24AM
11 sub-regulatory guidance. It would be wrong for me 9:24AM
12 to say that I saw all of those. That would not -- 9:24AM
13 it didn't have quite the formal process. 9:24AM

14 Q Could rules then be issued without your 9:24AM
15 approval or without your knowledge? 9:24AM

16 MR. FREEBORNE: Objection to form. 9:24AM
17 You can answer. 9:24AM

18 THE WITNESS: Again, it would 9:24AM
19 probably be more guidance, not rules. 9:24AM

20 BY MR. SCHINDLER: 9:24AM

21 Q Okay. 9:24AM

22 A I'm really talking some pretty technical 9:24AM
23 terms. 9:24AM

24 Q Understood, and you're going to have to 9:24AM
25 help me with some of those, because you know it 9:24AM

Page 32

1 better than I do, but guidance is separate from 9:24AM
2 rules; is that a fair -- 9:25AM

3 MR. FREEBORNE: Objection to form. 9:25AM
4 You can answer. 9:25AM

5 THE WITNESS: So you would propose 9:25AM
6 regulations and they would go through a 9:25AM
7 public process, and then those regulations 9:25AM
8 would be modified, adopted or not adopted. 9:25AM
9 Once the regulations were out and in the 9:25AM
10 public domain, there were usually guidance -- 9:25AM
11 probably "guidance" is a better word than 9:25AM
12 rules -- that went out to help people with 9:25AM
13 their interpretation. 9:25AM

14 BY MR. SCHINDLER: 9:25AM

15 Q But there was something called "rules" 9:25AM
16 as well, right, in the course of your time as 9:25AM
17 administrator of CMS -- 9:25AM

18 A So it's been four years since I was at 9:25AM
19 CMS. If we're going to start to define rules and 9:25AM
20 guidance and policy, I'll probably have to say I 9:25AM
21 can't remember all of that. 9:25AM

22 Q Let me just ask you this: Were there 9:25AM
23 instances as you sit here where you recall rules 9:25AM
24 being issued by CMS during the time that you were 9:25AM
25 administrator? 9:25AM

1 A If by "rules" you mean "regulations"? 9:25AM
2 If you're calling rules and regulations the same 9:25AM
3 thing? 9:25AM

4 Q Well, I'm, I'm asking if you draw any 9:25AM
5 distinction in your mind whether there were 9:26AM
6 instances where there were rules as opposed to 9:26AM
7 regulations. 9:26AM

8 MR. FREEBORNE: Objection to form. 9:26AM
9 You can answer. 9:26AM

10 THE WITNESS: I don't, I don't 9:26AM
11 remember enough detail to talk about the 9:26AM
12 difference. I would say that I was 9:26AM
13 responsible for signing and approving 9:26AM
14 regulations. 9:26AM

15 BY MR. SCHINDLER: 9:26AM

16 Q Okay. 9:26AM

17 A And I'd have to leave it at that level. 9:26AM

18 Q Let me switch gears with you for a 9:26AM
19 moment. 9:26AM

20 Are you familiar with the concept of a 9:26AM
21 "litigation hold"? Have you heard that expression 9:26AM
22 before? Do you know what that means? 9:26AM

23 A I've heard the term "litigation hold" in 9:26AM
24 various -- you'd have to give me the definition 9:26AM
25 you're talking about. 9:26AM

strengthen existing regulations related to the accuracy of risk adjustment data by amending section 422.310 on risk adjustment data validation."

Do you see that?

A I do.

Q Okay, and if you continue reading and go up to the third column on that page, at the top of that third column you'll get to the first sentence that begins, "Under our proposal, medical record reviews conducted by an MA organization cannot be designed only to identify diagnoses that would trigger additional payments by CMS to the MA organization; and medical record review methodologies must be designed to identify errors in diagnoses submitted to CMS as risk adjustment data, regardless of whether the data errors would result in positive or negative payment adjustments."

Do you see that?

A I do.

Q Okay, and this was a proposed rule that you signed off on, correct?

A Correct.

Q And do you recall that, in fact, this

Page 110

1 rule was never finalized? 11:15AM

2 A I do. 11:15AM

3 Q Now, do you recall that in April of 11:15AM

4 2014, you were approached by Larry Renfro of 11:15AM

5 United to discuss whether or not MA plans were 11:15AM

6 required to conduct reviews that would look not 11:15AM

7 only for diagnosis codes to add but for diagnosis 11:15AM

8 codes to be deleted? 11:16AM

9 MR. FREEBORNE: Objection to form. 11:16AM

10 THE WITNESS: I remember being 11:16AM

11 approached by Larry to discuss a concern he 11:16AM

12 had about the process that involved review of 11:16AM

13 charts. 11:16AM

14 BY MR. SCHINDLER: 11:16AM

15 Q And tell me what you recall about that. 11:16AM

16 A That he was asking me about something 11:16AM

17 that was in the proposed rule that related to 11:16AM

18 chart review, and giving me his ideas on what he 11:16AM

19 thought it meant, and I listened to him, and then 11:16AM

20 I referred him to our staff. 11:16AM

21 Q Do you recall telling Mr. Renfro that 11:16AM

22 because this proposed rule was not yet in effect, 11:16AM

23 that there was no requirement for United to go 11:17AM

24 back to look at charts in order to look for codes 11:17AM

25 to delete? 11:17AM

Page 111

1 A No. 11:17AM

2 Q Okay. Do you recall telling him that 11:17AM

3 two-way looks were not required because this 11:17AM

4 proposed rule was not yet in effect? 11:17AM

5 A No. I recall sending him to the staff 11:17AM

6 to ask that question. 11:17AM

7 Q Okay. Well, as you sit here, do you 11:17AM

8 recall whether he, in fact, went to the staff or 11:17AM

9 whether the staff met with Mr. Renfro or anybody 11:17AM

10 at United to discuss this question? 11:17AM

11 MR. FREEBORNE: Objection to form. 11:17AM

12 You can answer. 11:17AM

13 THE WITNESS: So I recall that I 11:18AM

14 recommended that he meet with the staff and 11:18AM

15 ask the staff to make that happen. 11:18AM

16 BY MR. SCHINDLER: 11:18AM

17 Q That you asked the staff to meet with 11:18AM

18 him, okay, and when you asked the staff to make 11:18AM

19 that happen, did they follow your instructions? 11:18AM

20 A I don't know the answer to that, because 11:18AM

21 I handed it off to them to manage, which is the 11:18AM

22 way I handled everything in the agency. 11:18AM

23 Q Okay. 11:18AM

24 (Exhibit 1007 was marked for 11:18AM

25 identification.) 11:18AM

CERTIFICATE OF SHORTHAND REPORTER -- NOTARY PUBLIC

I, Laurie Donovan, Registered Professional Reporter, Certified Realtime Reporter, the officer before whom the foregoing deposition was taken, do hereby certify that the foregoing transcript is a true and correct record of the testimony given; that said testimony was taken by me stenographically and thereafter reduced to typewriting under my supervision; and that I am neither counsel for, related to, nor employed by any of the parties to this case and have no interest, financial or otherwise, in its outcome.

IN WITNESS WHEREOF, I have hereunto set my hand and affixed my notarial seal this 1st day of March, 2018.

My commission expires: March 14th, 2021

DATED: MARCH 2, 2018

www.MagnaLS.com
REMOTELY APPEARING

1 whether anyone collected any handwritten notes from
2 you; is that right?

3 A. Correct.

4 Q. Okay. Do you maintain like a file of
5 these hard copy notes that you keep, or is there a
6 central sort of repository where you store them?

7 A. I wish I were that organized. I just go
8 through notebooks, and then over time, I lose the
9 notebooks.

10 Q. Okay. Great.

11 So we can shift gears a little bit, and I
12 just sort of want to start with a little bit of
13 background on your job history and your roles that
14 you've held at CMS.

15 I understand you currently work for the
16 Centers for Medicare and Medicaid Services; is that
17 correct?

18 A. Yes.

19 Q. Okay. If I call it "CMS," will you
20 understand that I mean the Centers for Medicare and
21 Medicaid Services?

22 A. Yes.

23 Q. Great. Is CMS within -- is CMS a part of
24 the Department of Health and Human Services?

25 A. Yes.

1 Q. Okay. And if I call that "HHS," you'll
2 understand I mean the Department of Health and Human
3 Services?

4 A. Yes.

5 Q. So let's turn back to AgileLaw, please.

6 MR. RYDBERG: I'm going to mark the next
7 document, which I believe should be
8 Exhibit 1426.

9 Nayan, that's Tab 1.

10 (Exhibit 1426 was marked for identification.)

11 MR. RYDBERG: For the record, this
12 document is Bates-stamped USBP006995062.

13 BY MR. RYDBERG:

14 Q. So you know, the Bates stamp is -- is that
15 number in the bottom right-hand corner. It's just a
16 sort of consecutive pagination that lawyers use in
17 litigation.

18 Do you see Exhibit 1426 up on your screen?

19 A. Yes.

20 Q. Okay. Great. Do you recognize this
21 document?

22 A. Yes.

23 Q. It's a copy of your résumé, right?

24 A. From days gone by, yes.

25 Q. That was my next question. The metadata

1 for this document suggests it was created in or
2 around 2014. Does that seem correct to you?

3 A. Yes.

4 Q. Okay. So obviously it's been a few years.
5 But sitting here today, is it an accurate summation
6 of your professional education -- excuse me, of your
7 education and professional history through 2014?

8 A. From 2014, you said?

9 Q. Yeah. So as of 2014, is this sort of an
10 accurate summation of your educational background and
11 your professional experience?

12 A. Yes.

13 Q. And you actually drafted this document; is
14 that right?

15 A. Yes.

16 Q. Let's start with your education. If you
17 turn to page 4 of the résumé, which is the last page,
18 there's a section called "Education." Do you see
19 that?

20 A. Yes.

21 Q. So it looks like you earned a bachelor of
22 science degree in biology from SUNY Albany in May --
23 May 2000; is that right?

24 A. Yes.

25 Q. And then you also earned an MPH, with a

1 concentration in health policy and management.

2 That's again from SUNY Albany, in December 2002; is
3 that right?

4 A. Yes.

5 Q. Okay. Are there any other degrees or
6 certificates that you've earned that aren't listed on
7 this?

8 A. No.

9 Q. Okay. Let's turn, then, to your
10 professional history.

11 You currently work at CMS. What is your
12 current job title at CMS?

13 A. I am currently the director of the
14 division of practitioner services in the Center for
15 Medicare.

16 Q. The division of practitioner services,
17 okay. And what is the division of practitioner
18 services responsible for?

19 A. We are responsible for the development of
20 policy, implementation of what is known as the
21 physician fee schedule, how Medicare pays physicians
22 and nonphysician practitioners.

23 Q. And so that would relate, then, to Part A
24 of the Medicare program; is that correct?

25 A. No. That would relate to Part B,

1 professional services.

2 Q. Part B. Okay. Thank you. That's a good
3 correction.

4 It does not, however, relate to Part C,
5 Medicare Advantage; is that correct?

6 A. Correct.

7 Q. Okay. And how long have you held that
8 role?

9 A. Four years and 55 days, just about.

10 Q. Extremely precise. I appreciate that.

11 So that would be, if my math is correct,
12 October 1st, 2018?

13 A. You know what? Maybe I'm not as precise.
14 Whatever today's date is, back up to September or
15 August, end of August, and -- just say four years.

16 Q. Okay, okay. Sounds good. So late summer,
17 early fall 2018, you take on this role?

18 A. Uh-huh.

19 Q. Okay. And so as the division director,
20 what exactly are your responsibilities?

21 A. Fall guy, leader, cheerleader, analyst,
22 all of those things. But to boil it down, just
23 responsible for managing the work of approximately
24 17 analysts to develop, implement all the different
25 policies that fall into the professional Part B

1 policy space for -- for physicians and nonphysician
2 practitioners.

3 Q. So you have 17 direct reports in that
4 role?

5 A. If I'm counting correctly, yes.

6 Q. Okay. I won't hold you to it.

7 So before that role, were you the director
8 of the department of -- were you the director of the
9 division of encounter data and risk adjustment
10 operations?

11 A. Yes.

12 Q. Okay. And if we turn back to page 1 of
13 your résumé, it lists you as -- January 2013, says
14 "to present," but we'll understand that means to
15 2018 -- as a supervisory health insurance specialist.
16 And then underneath it, it has your I guess
17 functional titles. Is that a fair description?

18 A. Yes.

19 Q. Okay. So you were first the deputy
20 director of the division of encounter data and risk
21 adjustment operations from January 2013 to
22 April 2014; is that right?

23 A. Yes.

24 Q. Okay. And then you assumed the director
25 position, first as acting director, and then I assume

1 no longer acting, in April 2014; is that right?

2 A. Yes.

3 Q. Okay. When you were the deputy director,
4 who did you report to at that time?

5 A. Greg McGuigan.

6 Q. And is that spelled -- how do you spell
7 that?

8 A. M-c-G-u-i-g-a-n, McGuigan. Yes.

9 Q. McGuigan. Okay. I would not have gotten
10 that right. So thank you.

11 So in this role, your position was the
12 director -- first the deputy director and then the
13 director -- of -- how many people did you oversee in
14 the director position? Do you recall?

15 A. I'm going to say eight. Approximately
16 eight.

17 Q. Eight, okay. And were those analysts as
18 well?

19 A. Yes.

20 Q. Okay. And when you were in the director
21 position, who did you report to?

22 A. I reported to the director of the Medicare
23 Plan Payment Group, Cheri Rice.

24 Q. And was that Cheri Rice the entire time
25 that you were the director?

1 A. No. For the last -- for the last year, I
2 reported to Jennifer Harlow, who was the acting
3 director at the time, because Cheri Rice was now the
4 acting deputy center director.

5 Q. Okay, okay. And am I correct that during
6 the time that Cheri Rice was the director of the
7 Medicare Plan Payment Group, Jennifer Harlow was the
8 deputy director?

9 A. Yes. Correct.

10 Q. And is it okay with you if I call the
11 Medicare Plan Payment Group "MPPG"?

12 A. Yes.

13 Q. Okay. So this role that you held within
14 the division of encounter data and risk adjustment
15 operations, that was related to the Medicare
16 Advantage program; is that right?

17 A. Yes.

18 Q. Okay. So you are familiar with the
19 Medicare Advantage program, then?

20 A. "The Medicare Advantage program" is pretty
21 broad. I'm familiar with what I was responsible for
22 in MPPG.

23 Q. Okay. How would you describe Medicare
24 Advantage?

25 A. Medicare Advantage is a program

1 administered by Medicare that involves relationships
2 with private health plans, to enroll Medicare
3 beneficiaries and provide services under the MA
4 program.

5 Q. And it's an alternative to the traditional
6 Medicare program; is that right?

7 A. Yes.

8 Q. Okay. I think you just referred to it
9 as "MA." So I assume that -- it's okay if I refer to
10 it as "MA," you'll understand I mean Medicare
11 Advantage?

12 A. Yes.

13 Q. Okay. And the division of encounter data
14 and risk adjustment operations: That's a long name.
15 Is it okay if I refer to that as "DEDRA0"? Is that
16 what you typically call it, D-E-D-R-A-0?

17 A. No, that's not okay. It's DEDRA0.

18 Q. DEDRA0. Oh, my gosh. I've been
19 pronouncing it wrong this whole time. Okay, DEDRA0.

20 What is DEDRA0 responsible for?

21 A. DEDRA0 is responsible for -- or was
22 responsible for, if I'm to pin it to my specific role
23 there, the capture of encounter data, and also risk
24 adjustment data -- which encounter data is risk
25 adjustment data -- but risk adjustment, RAPS data,

1 processing data, to support the calculation of risk
2 scores that factor into MA payment.

3 Q. So let's drill down a little bit there, if
4 that's okay.

5 You said one of the things that -- that
6 DEDRA0 was responsible for was the capture of
7 encounter data. What is encounter data?

8 A. One can think of encounter data as Part C
9 claims, right? Essentially, what services were
10 furnished to enrollees, plan enrollees, and also the
11 diagnostic information that came along with those
12 services. So the equivalent of Part A, Part B
13 claims.

14 Q. Okay. And you also mentioned something
15 called "RAPS data." What is RAPS data?

16 A. Risk adjustment processing system data is
17 really the capture of diagnostic information for
18 enrollees in -- in the health plan that was used to
19 capture -- that is used to capture that information
20 and calculate risk scores for MA payment.

21 Q. Okay. And how does RAPS data differ from
22 encounter data?

23 A. RAPS data is really just a diagnostic
24 information for those enrollees, versus encounter
25 data being a more robust capture of the services and

1 the diagnostic information related to the services
2 furnished.

3 Q. So is it fair to say that encounter data
4 is similar to RAPS data, but it just includes more;
5 it's got more information than RAPS data does?

6 A. Yes.

7 Q. Okay. You also mentioned that the RAPS
8 data -- and I think encounter data as well -- is used
9 to capture information that's used to calculate risk
10 scores for MA payment. What is a risk score?

11 A. A risk score is a -- a calculated variable
12 that suggests just how healthy or unhealthy an
13 enrollee is relative to -- relative -- that is used
14 to adjust payments to the plans.

15 I can go into more detail if you want, but
16 at a high level, think of it that way.

17 Q. Okay. And how exactly is it used to
18 adjust payment to the plans?

19 A. So payment under the MA program is
20 capitated. In other words, some acknowledgment of a
21 cost per bene per month. The risk scores are really
22 an acknowledgment that not every enrollee is of the
23 same health profile, and so diagnostic information is
24 used to adjust those payments, recognizing where
25 benes are healthier or less healthy relative to the

1 plan's enrollees and -- and what their costs are.

2 Q. All right. And we've used the phrase
3 "diagnostic information" a few times. What exactly
4 does that mean?

5 A. Just diagnoses that are captured in an
6 encounter, or in an interaction between provider
7 and -- and enrollee.

8 Q. Okay. And how does that diagnosis
9 information get to CMS, in the Medicare Advantage
10 program?

11 A. That information is submitted to CMS
12 through the RAPS system, and then processed in -- in
13 subsequent systems.

14 Q. And is it submitted by the provider, or by
15 the MA plan, or -- who is the one doing that
16 submitting?

17 A. Good question. It's submitted by the
18 MA plan.

19 Q. Okay. And presumably the MA plan gets it,
20 then, from the providers?

21 A. Presumably.

22 Q. Okay. Let's turn back to your résumé, if
23 possible. We can talk in a little bit more detail
24 about what you did in the -- the deputy director
25 and -- and director roles at DEDRA0.

1 So if you turn back to page 1 of your
2 résumé, do you see there's a section that says -- and
3 it's in italics -- "Roles and Responsibilities
4 (Summary)"?

5 A. Yes.

6 Q. Okay. Underneath that, it says:
7 "Developed and implemented operational payment policy
8 on highly complex and politically sensitive health
9 care financing issues for Medicare Advantage
10 organizations (MAOs) under the Medicare Advantage
11 program, including risk adjustment of plan payments
12 and the collection and analysis of encounter data."

13 Did I read that correctly?

14 A. Yes.

15 Q. Okay. And that's a little bit about what
16 we were just talking about now, right, that payment
17 under the MA plan is capitated based on the risk
18 scores that are calculated from diagnostic
19 information, in part; is that right?

20 A. Let me say that slightly differently.
21 Payment under the MA plan is capitated, but that
22 payment is adjusted by diagnostic information that
23 are used to calculate risk scores suggesting the
24 health profile of the enrollees.

25 Q. Okay. So you wrote here that the health

1 care financing issues that you developed and
2 implemented were "highly complex and politically
3 sensitive." What does that mean?

4 A. It's -- it's résumé jargon, suggesting
5 that of course we are making payments under the
6 Medicare program, and deliberations that go into
7 those payments are complex and -- and sensitive;
8 i.e., we work through a process to develop those
9 payments and -- and policies, and all of that can
10 have impact.

11 Q. We talked a little bit about the risk
12 adjustment plan payments already. But were you
13 actually, yourself, involved in calculating plan
14 payments?

15 A. Help me understand your question a bit
16 more.

17 Q. Sure. So your résumé says that you
18 "developed and implemented payment policy ...
19 including risk adjustment of plan payments."

20 So what was your involvement in developing
21 and implementing policy for the risk adjustment plan
22 payments?

23 A. So my role was specifically on the
24 operational side of the house. But. Right? If one
25 is to think about plan payment as a continuum,

1 there's certainly role -- there's a role that I
2 played in -- in getting to the end, right? In other
3 words, there's development of payment policies, and
4 then the implementation of those payment policies,
5 which, to a certain extent, means you understand
6 parts of what you are doing versus just blindly doing
7 things, and then ultimately handing off to another
8 component that actually makes those payments.

9 So think of, you know, policy
10 developments, policy operationalizing and then actual
11 implementation, i.e., payment through our systems.
12 The next bullet point -- no, it's not a bullet point,
13 excuse me. The next sentence in that same paragraph
14 says you "Provided oversight and technical direction
15 to division staff responsible for the development,
16 deployment, and maintenance of the encounter data
17 processing system (EDPS) and the risk adjustment
18 suite of systems (RASS)."

19 Did I read that correctly?

20 A. Yes.

21 Q. Okay. What is the encounter data
22 processing system?

23 A. The encounter data processing system,
24 which I actually miss, was CMS's attempt to capture
25 what I described earlier as Part C claims. Right?

1 Really capturing more information than what we had
2 had before, to help inform future policy development,
3 or just frankly have more information on -- on what
4 we were paying.

5 Q. Okay. And -- and the EDPS system, or I
6 guess just EDPS, was implemented sometime in the
7 2014, 2015 time frame; is that right? Or was it
8 earlier than that?

9 A. A little earlier than that. When I came
10 on, it had just been implemented and -- and was just
11 starting to get going.

12 Q. Okay. And so that would have been the
13 2013 time frame?

14 A. Around then. Around then. Maybe earlier.

15 Q. Okay. Risk adjustment suite of systems,
16 RASS, what is that?

17 A. It's a collection of systems -- we talked
18 about RAPS before, the risk adjustment processing
19 system, which falls into RASS, which really captures
20 information and then processes the information to --
21 to get to the risk scores.

22 Q. Okay. So RAPS is one of, but not the only
23 system, within the risk adjustment suite of systems?

24 A. Correct.

25 Q. What are the names of some of the other

1 systems in the -- the suite? Do you remember?

2 A. Well, RASS is really the system, but it
3 has -- let's just call it a front end and a back end,
4 with RAPS being the front end and then RASS just
5 being the collection of processes within a back end.

6 In other words, a plan submits information
7 to RAPS, and then the information goes through a
8 whole bunch of processes that at the end are turned
9 into risk scores.

10 Q. Okay. Have you heard of something called
11 the front end risk adjustment system, FERAS?

12 A. Yes, FERAS.

13 Q. FERAS, okay. Is that also part of the
14 suite, the risk adjustment suite of systems?

15 A. Yes. Yes. So forgive me, my -- my -- the
16 way I normally tell this story is really dated. But
17 FERAS is truly the front end to RAPS, and then RAPS
18 sort of feeds into, right, the processes I described.
19 But it's just a front end for capturing that, the
20 RAPS information.

21 Q. And so we talked a little bit about plans
22 submitting data to RAPS. Do they actually submit to
23 RAPS, or do they submit to FERAS?

24 A. They submit to FERAS. FERAS feeds into
25 RAPS. And then there's a whole bunch of processes

1 after that.

2 Q. Okay. That makes sense.

3 The next sentence in your résumé, the last
4 sentence in that sort of full paragraph there, it
5 then says, "Managing all activities related to the
6 calculation of Medicare Part C and Part D risk
7 adjustment factors that are used to adjust capitated
8 payments to MAOs, including the deployment of
9 resources relevant to this effort."

10 Do you see that?

11 A. Yes.

12 Q. Okay. So we talked a little bit about
13 the -- the ways that risk scores are used to adjust
14 capitated payments to MAOs. Is a -- is a risk
15 adjustment factor the same as a risk score? Or is
16 there a difference there?

17 A. There's a difference.

18 How weedy do you want me to get?

19 Q. As weedy as you think you need to be to
20 help me understand.

21 A. All right. I'll try to stay surface
22 level.

23 Again, remember, my -- my information may
24 be dated. I'm going off of memory, you know, days
25 gone by, but think of information flowing into RAPS,

1 right, diagnostic information, that are then used as
2 inputs to various risk scoring models, right? The
3 idea that you take such information and acknowledge
4 that there are different characteristics that are in
5 play for different sections of a population.

6 Think about folks that have ESRD, folks
7 that don't have ESRD, and other considerations as
8 well, too.

9 Those models are designed to use that
10 information to generate what are called risk factors,
11 right, that are then also processed into risk scores.

12 And now that's a very high generalization
13 of -- of the process, but think of factors as the
14 things that come before the scores.

15 Q. Okay. So the score is sort of the end
16 result of -- of calculations that are done using risk
17 factors; is that right?

18 A. Correct.

19 Q. Okay.

20 A. At a high level, yes.

21 Q. Okay. If I'm ever oversimplifying to the
22 point that you think it's wrong, please jump in and
23 let me know. I'm sure you have much more
24 in-the-weeds knowledge than I do about this.

25 So, you also said here that you manage

1 activities and resources related to the collection
2 and analysis of encounter data. What sort of
3 analyses were you running on encounter data?

4 A. Really working to determine the -- the
5 quantity, the appropriate quantity and quality of the
6 data. CMS did not have Medicare Part C claims in
7 that form or fashion prior to encounter data really
8 getting rolling. So really understanding what we
9 were capturing and -- and what it looked like and
10 felt like was -- was really the basis for the
11 analysis. Or analyses.

12 Q. And let's go back to the -- the risk
13 adjustment factors and the risk scores for a second.
14 Because we've talked about the adjustment of -- of
15 payments to plans, but the -- the way that -- well,
16 let me ask it this: What is your understanding of
17 how the risk scores were used to adjust payments to
18 MA plans?

19 A. At a high level, once you had calculated a
20 risk score for a beneficiary, right? Again, applying
21 that risk score to the capitated payment amount --
22 think per bene per month -- was how -- how it was
23 implemented through our payment systems.

24 Q. Okay. And at a high level, the idea is
25 that MA plans are paid based on sort of historical

1 diagnostic information in a way that's used to
2 predict their future risk score expenses for that
3 particular beneficiary; is that right?

4 A. Let me say it slightly differently. I
5 think you nailed it, but let me just say it slightly
6 differently.

7 MA plans were capturing information on
8 their enrollees that they submitted to CMS, which was
9 used to calculate risk scores that would be used to
10 adjust payment.

11 Q. And the idea behind sort of risk adjusting
12 payments to plans was that if you didn't do this, a
13 plan might not want to enroll sicker beneficiaries,
14 because they may not be paid sufficient -- paid
15 sufficiently to cover their future risks?

16 A. Well, that's a -- that's -- that's a
17 packed statement.

18 That's a tough one. Ask your question
19 again a different way.

20 Q. Okay. Why -- why would CMS risk -- why
21 implement the risk adjustment system for the payment
22 to Medicare Advantage plans? What's the rationale
23 behind that?

24 MR. DYAL: Objection. Form.

25

1 BY MR. RYDBERG:

2 Q. And you can still answer.

3 A. So I would say -- and this is just me
4 riffing -- that CMS was recognizing that, you know,
5 there may be characteristics of the enrollees that
6 should be taken into account, factored into payment,
7 given that, you know, again, the idea of the healthy
8 versus the less healthy enrollee being a true thing.

9 Q. And the characteristics that we're talking
10 about, that includes both demographic characteristics
11 and then also diagnostic coding; is that right?

12 A. That is right.

13 Q. Okay. Let's turn back to your résumé.
14 And we can skip down to -- two bullets -- there's a
15 bullet -- I believe it's the fourth from the top. It
16 says: "Providing oversight of the research,
17 analysis, and plan communication related to the
18 operational aspects of risk adjustment and encounter
19 data." Do you see that?

20 A. Yes.

21 Q. Okay. What sort of plan communication
22 were you responsible for?

23 A. "Related to the operational aspects of
24 risk adjustment and encounter data." So consider
25 submission, communications, announcements of when

1 plans should submit, if plans were having issues,
2 communicating with the plans globally, right, through
3 memos -- communications like that.

4 Q. Okay. And that would be sort of -- that
5 would be both formal communications, like memos that
6 go out to the whole industry, but also if a
7 particular plan was having a problem, you might deal
8 with them one on one and help them with that issue;
9 is that right?

10 A. Yes, that is right.

11 Q. Okay. And then if we turn to the next
12 page of your résumé, the last bullet point above
13 "Health Insurance Specialist," it says: "Maintaining
14 relationships with, and providing technical
15 assistance to internal and external stakeholders
16 including other state and federal government
17 agencies, professional associations, and MAOs on MA
18 risk adjustment and encounter data operational/policy
19 issues."

20 Is that sort of the same thing that we
21 were just talking about, that you would communicate
22 with MA plans on operational and policy issues? Or
23 is this different?

24 A. This -- this goes a little broader. It's
25 the same -- same thought, but the idea that we were,

1 quote/unquote, the operational experts for MA
2 encounter data, and really having to work internally
3 and externally with folks that had questions or, you
4 know, needed -- needed help with -- with technical
5 aspects of what we were doing.

6 Q. And so that obviously, I think it says
7 here, includes other state and federal government
8 agencies, and also professional associations.
9 What -- what professional associations did you -- do
10 you have any specific professional associations in
11 mind when you drafted this?

12 A. There are a couple of professional
13 associations out there. AHIP comes to mind. Again,
14 you know, within the realm of MA, you know, the idea
15 that this is -- an association like AHIP was really
16 representing a collection of MA plans wanting more
17 information on, I don't know, submission timelines,
18 or, you know, if there were an issue with our
19 systems, being able to broadly communicate were
20 really I guess typical conversations that we would
21 have.

22 Q. Okay. That makes sense.

23 And then if we turn down on that same sort
24 of same page of your résumé, you then have another
25 role, that's health insurance specialist CM -- I

1 assume that's "Center for Medicare"; is that right?

2 A. Yes.

3 Q. Okay. And that's November 2004 to
4 January 2013.

5 What did you do in this role? And was it
6 multiple roles within the same -- within that overall
7 time period, or was it just a single role?

8 A. Multiple roles within that time period.

9 Q. Okay. Were any of those roles related to
10 Medicare Advantage?

11 A. These were fun times, and a lot less
12 responsibility.

13 I would say that -- no, there was some
14 overlap in risk adjustment. Let's say, for example,
15 the physician value program. But that was more as an
16 input into how we were thinking about patient
17 profile, but it was really just leveraging risk
18 adjustment scores.

19 Q. Okay. So when you came into the DEDRAO
20 position in 2013, did you have any background with
21 risk adjustment? Did you understand what risk
22 adjustment was?

23 A. At a high level, yes. You know, just the
24 accounting of diagnostic information to suggest a
25 healthy versus a less healthy beneficiary. But that

1 was it.

2 Q. Okay. So how did you go about learning
3 about risk adjustment once you took on that role at
4 DEDRA0?

5 A. Like anyone learns something new, you
6 start from the beginning and try to work your way to
7 the end.

8 Q. And what's the beginning? Is it -- are
9 there documents that you read? Statutes? Did you
10 talk to people?

11 A. Yeah, yeah. You know, you sort of start
12 with, what is a risk score? And, you know, how is it
13 calculated? And what information feeds into it?

14 And, you know, I -- I wasn't the first
15 person to step into that role, so thankfully I -- I
16 had a whole group around that was invested in -- in
17 getting me up to speed.

18 Q. So you -- you relied on your colleagues at
19 DEDRA0 to sort of teach you informally about risk
20 adjustment?

21 A. That's what -- yes. Yes.

22 Q. Okay. Were there any colleagues outside
23 of DEDRA0 that you relied on?

24 A. Well, outside of the DEDRA0, to be -- yes,
25 MPPG, as a whole. Right?

1 VIDEOPHOTOGRAPHER: The time is 9:58 a.m.

2 We're off the record.

3 (A recess transpired from 9:58 a.m. until
4 10:08 a.m.)

5 VIDEOPHOTOGRAPHER: The time is now 10:08 a.m.

6 We're on record.

7 BY MR. RYDBERG:

8 Q. Welcome back, Mr. Tee.

9 I want to shift gears a little bit and
10 just ask you a series of background questions about
11 Medicare Advantage. It's going to be high level but
12 designed to figure out sort of your -- your knowledge
13 and involvement in a variety of different topics.

14 So you talked about this sort of
15 indirectly, I think, but have you heard of something
16 called the "CMS-HCC risk adjustment model"?

17 A. Yes.

18 Q. Okay. CMS, Centers for Medicare and
19 Medicaid Services. What does the "HCC" stand for,
20 though?

21 A. Hierarchical condition categories.

22 Q. Okay. And what is that?

23 A. That's an imposed hierarchy on -- on --
24 how do I -- how do I say this at a high level?

25 You know what? I -- I don't know.

1 Q. Okay. Let me ask it this way: If --
2 let's say you have two diseases, diabetes without
3 complications and diabetes with complications. Would
4 those two diseases fall in the same hierarchical
5 condition category?

6 A. No. There would be a hierarchy imposed.
7 And I -- I didn't want to get into that level of
8 detail, which is why I defaulted to -- you know, my
9 knowledge is stale at this point, so being nuanced
10 and -- and precise are probably not within my
11 capability.

12 Q. And that's okay. It has been a long time,
13 and this isn't a memory test. So -- really just
14 looking for your best recollection as you recall. So
15 no worries there.

16 We talked a little bit about this already,
17 but traditional Medicare is Parts A and B of the
18 Medicare program; is that right?

19 A. Correct.

20 Q. And is that sometimes called
21 fee-for-service Medicare?

22 A. Yes.

23 Q. And is that because the providers, the
24 rendering providers, are paid on a per-service basis
25 by the Medicare program?

1 A. Generally, yes.

2 Q. Okay. Fee for service, is that sometimes
3 called "FFS," as an abbreviation?

4 A. Yes.

5 Q. Okay. Have you heard of -- have you heard
6 the phrase "chart review" before?

7 A. Yes.

8 Q. What does it mean?

9 A. Different concepts for different
10 scenarios, but if we're asking about under the MA
11 program, it's consideration of diagnostic information
12 in an enrollee's chart.

13 Q. Okay. Have you heard the phrase "one-way
14 look" before?

15 A. "One-way look." "One-way look." No.

16 Q. Okay. Did your position at DEDRAO involve
17 chart review in any way?

18 A. Yes.

19 Q. How so?

20 A. Well, we were responsible for capturing
21 information. So there was the idea that the plans
22 were submitting information that they either gathered
23 through their systems for capturing such information,
24 or through some subsequent or concurrent chart review
25 process by which they were also capturing that

1 information to submit to us.

2 Q. Okay. So sometimes plans would submit
3 diagnostic data that flowed directly from a provider,
4 and other times they would submit data that was the
5 result of these chart reviews; is that fair?

6 A. They were submitting data all the time,
7 but it was clear to us in some instances that there
8 was information that was captured as a direct flow,
9 right, of the services being furnished into a system,
10 versus some additional work to capture additional
11 information, or different information.

12 Q. And you said it was clear to you. What --
13 was it a timing thing? Why was it clear to you?

14 A. Maybe that was being overoptimistic, but
15 there was just a cadence to -- well, that's not even
16 true. Because, you know, all the plans did things
17 differently. There were certainly plans that looked
18 the same and others that just looked different, so --
19 who knows exactly when they were capturing
20 information.

21 But there was a lot of work to try to
22 understand the flow and cadence. I don't know if we
23 ever truly got there, and it's been a while, so -- I
24 don't know where those -- that crew got to. But the
25 capture of information was nuanced, and we tried to

CONFIDENTIAL

Videotaped Rule 30(b)(6) Deposition of
UnitedHealthcare, Inc. and OptumInsight, Inc.,
Designee 4, by SCOTT THEISEN
Given Remotely
Tuesday, June 6, 2023
10:08 a.m. Eastern

Reported by: Karen K. Kidwell, RMR, CRR

Magna Legal Services

www.MagnaLS.com

1 did was in complete good faith, and designed to
2 work in a transparent, collaborative way with
3 CMS. So anything and everything we did from a
4 control, and compliance, as well as just our
5 internal controls, our operating controls, the
6 integrity and expectations of our employees, the
7 way in which we behaved, our culture, was all
8 centered around doing the right thing. So we
9 would never intentionally disregard or
10 purposefully, you know, not take sufficient
11 actions to identify errors.

12 BY MS. McMAHON:

13 Q. So if you had some information or belief
14 that some of the diagnosis codes that you had
15 submitted might not be accurate, did you check to see
16 if they were?

17 MR. BAAK: Objection. Form. Way beyond
18 the scope. Incomplete hypothetical.

19 THE WITNESS: Yeah, I think there's -- you
20 know, I think I'd probably want you to define
21 for me what you mean by "knowledge of
22 information," because one could take the
23 position that knowing that there's a material
24 error rate in fee-for-service claims data, as
25 documented by CMS, that depending upon your view

1 of things, one could argue that that is
2 knowledge. Does that -- would that knowledge
3 then imply a requirement to audit every claim
4 and diagnoses back to the medical record? No.
5 So I just want to be careful about the scope of
6 what that question relates to.

7 BY MS. McMAHON:

8 Q. So if you had some information or concern
9 that there were diagnoses codes -- let's say after
10 you had done a chart review, and you had some -- some
11 reason to believe that there were diagnoses codes
12 that -- in those charts that had been reviewed, that
13 you -- that might not be supported by medical
14 records, did you take it upon yourself to check to
15 see if any of those -- to see if those diagnosis
16 codes were, in fact, supported before you submitted
17 these attestations?

18 MR. BAAK: Objection. Form. Beyond the
19 scope of today's topics. We're really far
20 afield here.

21 THE WITNESS: Yeah, I would describe that
22 as the company's practices. For a period of
23 time, we were performing what we call claims
24 verification, and then as part of the
25 discussions with CMS, and the proposed rule and

1 when that rule was rescinded, and the clarity
2 they provided around us, the decision to not
3 perform claims verification, which I think is
4 what you're describing in your question, is a
5 decision that was based on our understanding of
6 CMS's guidance, which was that it was no longer
7 required because the rule itself was not
8 published.

9 And the fact that the rule was published
10 in the first place, proposed rule, you know,
11 from a deductive reasoning standpoint, also
12 would indicate that those specific practices
13 with regard to medical record review would not
14 have been required by CMS prior to that date.
15 Otherwise, there would have been no need to
16 propose a rule.

17 BY MS. McMAHON:

18 Q. Prior to -- prior to May of 2014, did you
19 rely on your claims verification program to -- as
20 part of your knowledge, information, and belief, that
21 your data was accurate, complete, and truthful when
22 you submitted these attestations?

23 MR. BAAK: Objection. Form. Beyond the
24 scope.

25 THE WITNESS: I would say that, no, I did

1 not rely on claims verification as a basis for
2 being able to certify and attest. My view, and
3 the company's view, that claims verification was
4 a business practice we deployed as a result of
5 some ambiguity with regard to what the view of
6 CMS and rules and regulations are, and we
7 deployed it in the interest of being
8 conservative.

9 Did I feel it was necessary and required
10 for me to be able to attest to the accuracy of
11 the information we submitted? No, it was not.
12 And I would say that's because, essentially, we
13 were auditing fee-for-service claims data,
14 which -- back to medical records, which was not
15 a requirement or an expectation of CMS. So, no,
16 I don't believe it was necessary for me to
17 certify, nor do I -- nor does the company
18 believe that.

19 BY MS. McMAHON:

20 Q. That claims verification process did
21 identify a lot of unsupported codes that had been
22 submitted, did it not?

23 MR. BAAK: Objection. Beyond the scope.

24 Linda, I've given you a lot of rope, but we
25 have witnesses on claims verification, and

1 Mr. Theisen is not it, so...

2 MS. McMAHON: But we're talking about the
3 certification of accuracy, which is exactly
4 what's in here. I am sure you will not let the
5 CV witness talk about that because it would be
6 beyond the scope of that topic.

7 MR. BAAK: The last question you asked had
8 nothing to do with certification. It was just
9 claims verification. So I'll give you a little
10 more rope, but we're not -- we're not taking
11 another deposition today.

12 THE WITNESS: We did process some deletes
13 of diagnosis codes as a result of the claims
14 verification process when it was -- when it was
15 being deployed.

16 BY MS. McMAHON:

17 Q. And as part of submitting an attestation
18 to CMS, certifying that the data it submitted was
19 accurate, complete, and truthful, the data that it
20 had submitted was accurate, complete, and truthful,
21 did you consider it important to seek to identify or
22 confirm any potential inaccuracies that might be in
23 the data that you knew about?

24 MR. BAAK: Objection. Form. Beyond the
25 scope. Asked and answered.

CERTIFICATE

I, KAREN K. KIDWELL, Registered Merit Reporter, and Certified Realtime Reporter, do hereby certify that prior to the commencement of the examination, the deponent was remotely sworn to testify to the truth, the whole truth under penalty of perjury.

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 am not at will to tell you that.

2 Q. Did you --

3 A. I was just complaining about it.

4 Q. Understood.

5 Let's talk a little bit about what
6 you're doing today. You are the -- currently, the
7 president of The Tudor Group; is that correct?

8 A. Yes.

9 Q. What is The Tudor Group?

10 A. It's me, myself and I. And I am a
11 consultant for Medicare Advantage Part D plans,
12 some consulting firms, some law firms, some trade
13 associations.

14 Q. Does The Tudor Group have any employees
15 other than yourself?

16 A. No.

17 Q. And do you work at The Tudor Group
18 full-time?

19 A. Not now. I used to.

20 Q. About how many hours a week are you
21 presently consulting through The Tudor Group?

22 A. Somewhere around five.

23 Q. You've been at The Tudor Group since
24 you left the Center for Medicare in 2017; is that
25 correct?

1 A. Yes.

2 Q. Have you done any consulting for the
3 government since you left the Center for Medicare
4 in 2 -- in 2017?

5 A. I believe that I did some consulting
6 for a contract that someone had with the
7 government, yes.

8 Q. Did that contract relate to risk
9 adjustment?

10 A. I -- not that I recall.

11 Q. Have your clients, either current or
12 former, at The Tudor Group included Medicare
13 Advantage plans?

14 A. Yes.

15 Q. What is the nature of the consulting
16 advice, your -- your work you've done for Medicare
17 Advantage plans?

18 A. It's -- can be things related to
19 compliance actions that the government is taking,
20 quality ratings. It can be around risk adjustment,
21 risk adjustment data. But I don't remember any
22 specifics that I've done that. But it could be
23 anything related to Part C and Part D.

24 Q. Do you have any current Medicare
25 Advantage plans that you're advising related to

1 risk adjustment or compliance?

2 A. Yes.

3 Q. Who are those Medicare Advantage plans?

4 A. I have nondisclosure agreements, and I
5 would have to clear that I'm revealing their name
6 to you with each of the clients before I do so.

7 Q. Without revealing the particulars, are
8 these major Medicare Advantage plans that I would
9 have heard of?

10 A. Yes.

11 Q. Are these Medicare Advantage plans that
12 are currently dealing with actions by CMS related
13 to compliance issues?

14 A. Well, these things come up all the
15 time. So I'm not really sure what you're getting
16 at. Over time, there have been issues around
17 compliance. The issues that I talked with these
18 clients about in the last couple of weeks have not
19 been about risk adjustment, encounter data or any
20 of that.

21 Q. Have you provided advice through
22 The Tudor Group to Medicare Advantage plans on what
23 their requirements are related to the submission of
24 risk adjustment data?

25 A. Not that I recall.

1 Q. Have you provided advice through
2 The Tudor Group to Medicare Advantage plans related
3 to the design of their compliance programs?

4 A. Not that I recall.

5 Q. Have you provided advice through
6 The Tudor Group to Medicare Advantage plans related
7 to the design of their medical record review
8 programs?

9 A. I provide -- no. I did provide
10 assistance to a law firm that was being -- that was
11 the -- I forget the relationship of the different
12 parties. But there was a whistleblower that
13 accused a plan of -- of false claims because of
14 their medical record review process in terms of
15 appeals.

16 Q. You were retained by the law firm that
17 represented the whistleblower or the defendant?

18 A. The defendant.

19 Q. What's the name of the law firm?

20 A. Again, I'm under nondisclosure. This
21 was about appeals. This was for services. This
22 was not about encounter data.

23 Q. When you say "appeals," can you explain
24 what you mean?

25 A. Yeah, the -- the patient got denied a

1 service. It went to the plan. The plan used an
2 automated sort of criteria review, denied the claim
3 again, and it went to second-level review.

4 So it was about whether those -- and
5 this was on the Part C side -- whether those
6 denials at that first level were consistent with
7 what Medicare said or not. And, again, these were
8 Part C.

9 Q. Did you provide an expert report in
10 connection with that case?

11 A. I -- I -- no. I was on -- just sort of
12 on the side. I refuse to do expert testimony.

13 Q. Have you ever done expert testimony,
14 Dr. Tudor?

15 A. No.

16 Q. Other than that example you just gave
17 me where you were retained by the defendant's
18 counsel in a whistleblower case, have you done any
19 other litigation consulting?

20 A. Yes. Early on, I did some around
21 Part D, in a whistleblower on the Part D side.

22 Q. Other than that case, are there any
23 other instances where The Tudor Group and you have
24 provided litigation support?

25 A. Not that I recall.

1 Q. In the example you just mentioned on
2 the Part D side, were you retained by the
3 defendant's counsel in that whistleblower case?

4 A. No.

5 Q. In the Part D example you gave, you
6 were retained by the whistleblower's counsel?

7 A. Yes, sir.

8 Q. Do you know what the ultimate
9 disposition of that case was?

10 A. I got an email about it, but I pretty
11 much ignored it. I -- I think that they won at an
12 early stage. I'm not sure that the whole thing is
13 over with yet.

14 Q. And what about --

15 A. But I'm not involved in it.

16 Q. Sorry for interrupting you.

17 What about the other case where you
18 were retained by the defendant's counsel? Do you
19 know what the ultimate disposition of that case
20 was?

21 A. I believe they won that. I, again --
22 you could read it -- read something about it and
23 say it's not still over, but in my opinion, they
24 won.

25 Q. Your work for The Tudor Group, have you

1 provided any consulting to Medicare Advantage plans
2 related to the submission of their bids?

3 A. You know, it's -- I think there might
4 have been questions that related to bids. I don't
5 remember what the specifics are, though.

6 Q. In your work for The Tudor Group, have
7 you ever advised any of your Medicare Advantage
8 plan clients that a compliance program required
9 them to design their medical record review to look
10 for codes to delete in addition to add?

11 A. Not that I recall.

12 Q. And stepping more broadly, not just
13 your Tudor work, but at any point during your work
14 for the Center for Medicare or The Tudor Group, do
15 you ever recall telling a Medicare Advantage plan
16 that as part of their compliance program they were
17 required to design their medical review -- medical
18 reviews to look for codes -- diagnosis codes to
19 delete in addition to add?

20 MS. CHEN: Object to form.

21 THE REPORTER: I'm sorry. Who was
22 that?

23 MS. CHEN: This is Geng Chen, counsel
24 for relator.

25 BY MR. BAAK:

1 Q. You can answer, Dr. Tudor.

2 A. The answer is: Probably.

3 Q. Can you --

4 A. In general -- in general, I would say
5 that you have to design medical record review to
6 look for both adds and deletes.

7 Q. Dr. Tudor, sitting here today, can you
8 identify any Medicare Advantage plan that you
9 advised that they had to design their chart-review
10 programs to look to delete diagnosis codes in
11 addition to add?

12 A. I don't remember which specific
13 plans --

14 MS. CHEN: Object to form.

15 BY MR. BAAK:

16 Q. The answer to my question, Dr. Tudor,
17 is: Sitting here today, you can't identify any
18 Medicare Advantage plan that you recall telling
19 that they needed to design their chart review to
20 look to delete diagnosis codes in addition to add,
21 correct?

22 A. That's correct.

23 Q. I want to back up in time. When did
24 you first join CMS?

25 A. 1992.

1 Q. And when did you leave CMS?

2 A. 2017.

3 Q. What was your last position at CMS?

4 A. Deputy director for the Center for
5 Medicare.

6 Q. During what period were you the deputy
7 director at the Center for Medicare?

8 A. I was acting from, I think, early 2013
9 to some point in 2014, and I couldn't really tell
10 you when. And then I was the director from that
11 point in 2014 through when I left in July of 2017.

12 Q. Before you were the deputy director at
13 the Center of Medicare, what position did you hold
14 at CMS?

15 A. The one prior to that would have been
16 the director of the Medicare Drug Benefit Group.

17 Q. Is that also the Data -- referred to as
18 the Data Group?

19 A. No. I don't know what the Data Group
20 is.

21 Q. Was the -- your position director
22 Medicare Drug Benefit and C & D Data Group?

23 A. Yes. That probably was -- I think
24 the -- the C & D Data Group probably got dropped
25 later, and it was the Medicare Drug Benefit Group.

1 Q. And how long did you hold that
2 position?

3 A. Well, I don't have my r?sum? in front
4 of me, so I can't really tell you whether these
5 dates are exactly right. But that would have been
6 somewhere from about 2005 in an acting position to
7 when I -- to 2013. So I would have been acting for
8 a while and then permanent director.

9 Q. During your time as the director of the
10 Drug -- Medicare Drug Benefit and C & D Data Group,
11 did you have responsibility for Medicare Advantage
12 plans?

13 A. I would say that the answer to that
14 question is no, that the Medicare Advantage plans
15 were under the Medicare Contract Administration
16 Group, also called MCAG, which had the policy --
17 the policy for Part C. And then there was a
18 Payment Group that had control over the encounter
19 data and ultimately the PDE data for Part D.

20 Q. So just so the jury understands, so
21 when you say "Part C," you're referring to Medicare
22 Advantage, right?

23 A. That's correct.

24 Q. And so during the time you were the
25 director of the Medicare Drug Benefit and C & D

1 Data Group, what responsibilities, if any, did you
2 have related to Medicare Advantage?

3 A. I really -- I couldn't tell you the
4 specifics. I mean, that -- I don't remember the
5 difference between the Medicare Drug Benefit and
6 C & D Data Group and the Medicare Drug Benefit
7 Group.

8 But basically, the division of labor
9 was around policy, which for Part C would have been
10 through the MCAG Group, which I referenced earlier.
11 I would have had control over Part D policy. I
12 also had the Health Plan Management System, HPMS,
13 and -- and the star ratings in my group.

14 Some other groups -- the Plan Payment
15 Group had the encounter data and the PDE data.
16 Another group had compliance, and the other group
17 had sort of enrollment and different policies
18 around that.

19 Q. So during the time that you were the
20 director of the Medicare Drug Benefit and C & D
21 Data Group, it sounds like you had some
22 responsibilities related to Medicare Advantage,
23 including the HPMS and star ratings, but not sole
24 responsibility or overall oversight for Medicare
25 Advantage; is that correct?

1 A. That's correct.

2 Q. Before you became the director of the
3 Medicare Drug Benefit Group, what role did you hold
4 at CMS?

5 A. So I'm not -- I may not get the
6 sequence right, but I was a division director in
7 part there where we were collecting encounter data
8 for risk adjustment.

9 And that -- and then prior to that, I
10 was in something called the Office of Research and
11 Demonstrations. Maybe we just start there. I was
12 hired into the Office of Research and
13 Demonstrations. Worked first on Medicaid
14 financing. And then worked on the demo side where
15 I was special assistant in other things. And then
16 got moved to a position where I was the chief
17 technical in charge of making risk adjustment,
18 getting it into legislation and then get it
19 implemented for Medicare.

20 Q. I want to focus on that last piece.
21 When were you -- when did you first start working
22 on risk adjustment for Medicare?

23 A. You know, it's really hard to remember.
24 But I think it was some point around 1992 or -- I'm
25 sorry -- 1994, something like that.

1 And it was in the Office of Research,
2 which was in the Office of Research and
3 Demonstrations. And it essentially was helping the
4 research group decide which of many risk adjustment
5 methodologies should be -- become the method for
6 payment for managed care plans.

7 Q. Were you involved in the design of the
8 risk adjustment system that's used today by -- by
9 CMS?

10 A. Yes.

11 Q. I meant to cover this earlier, but I
12 want to just briefly discuss your educational
13 background, and then I'm going to come back to your
14 CMS experience.

15 Where is your undergraduate degree
16 from?

17 A. Georgia State University.

18 Q. You have a Ph.D. in sociology from
19 Johns Hopkins University?

20 A. Yes.

21 Q. Do you have any legal training?

22 A. No.

23 Q. Any other degrees beyond the --

24 A. I did a postdoc at University of
25 Maryland Medical School. I have a master's degree

1 from Georgia State as well.

2 Q. What was your master's from Georgia
3 State?

4 A. Also in sociology.

5 MR. BAAK: Let's go ahead and mark our
6 first exhibit today, which, Jordan, let's go to
7 Tab 27 -- 67, rather.

8 MS. MCMAHON: Can I interrupt for one
9 second? Dr. Tudor, are you signed on to AgileLaw
10 yet?

11 THE WITNESS: I don't think so. Let me
12 see if I can find it. Let's see. There's
13 AgileLaw. Let's try to join now.

14 MS. MCMAHON: I did email the PIN to
15 you, but if you need me --

16 THE WITNESS: Yeah. This says "Waiting
17 to be authenticated."

18 MS. MCMAHON: Okay. Perfect.

19 MR. GOLDS: You should be in now,
20 Dr. Tudor.

21 THE WITNESS: It still hasn't given me
22 anything to click on yet. It says on -- it says
23 "Tudor, Cynthia" on it, but it doesn't -- I don't
24 have anything showing up.

25 MS. MCMAHON: Oh, yes, I think they

1 to go through the formal rulemaking procedure as
2 opposed to more informal subregulatory guidance?

3 MS. MCMAHON: Objection. Form.

4 THE WITNESS: I -- I'm -- I'm not
5 really familiar with that. I'm -- and I'm talking
6 about putting out on a website something. I'm not
7 really familiar with what they put out on websites
8 on that issue.

9 BY MR. BAAK:

10 Q. Fair.

11 More generally, during your time at
12 CMS, do you remember any sort of written policy
13 that was administered by CMS that told you we need
14 to go through the formal Administrative Procedure
15 Act route versus something more informal?

16 A. I don't really remember that. I -- I
17 can remember conversations where someone -- and I
18 can't remember the name of the office -- might say
19 you need to put out a rule. And our answer was, we
20 have -- under this statute, we have the right to
21 publish an Advance Notice and then a Final Rates
22 Notice, and then it will go in that.

23 Q. I think you indicated you had some
24 familiarity with the Allina Health case the supreme
25 court issued several years ago. Is it your

1 understanding that that has influenced when CMS
2 thinks it needs to pursue formal regulation as
3 opposed to subregulatory guidance?

4 A. I think that --

5 MS. MCMAHON: Objection. Calls for
6 speculation.

7 THE WITNESS: I -- I don't think I
8 could answer that. That happened, really, when I
9 was leaving -- either after I had left or when I
10 was leaving. So I didn't pay a lot of attention to
11 it.

12 BY MR. BAAK:

13 Q. Understood.

14 I mentioned, Dr. Tudor, earlier -- I
15 asked earlier who you recalled meeting with from
16 UnitedHealth. And you mentioned Steve Nelson as
17 somebody you remember. What do you remember just
18 in general about your interactions with Mr. Nelson?

19 A. He was a pleasant man.

20 MS. MCMAHON: Objection. Vague.

21 BY MR. BAAK:

22 Q. Did you have a good working
23 relationship with Steve Nelson?

24 A. Yes.

25 Q. Do you recall meeting with Steve Nelson

1 and other executives from United in April of 2014?

2 A. No.

3 Q. Can you recall just -- I know it
4 sounded like you met with Mr. Nelson somewhat
5 regularly; is that correct?

6 A. Yes.

7 Q. Do you recall the specifics about what
8 was discussed at any of those meetings with
9 Mr. Nelson?

10 A. No.

11 Q. Do you recall the specifics of any
12 meeting you had with anyone from UnitedHealth,
13 Mr. Nelson or otherwise?

14 A. The specifics, I would say no.

15 Q. Do you recall the subject matters of
16 any of the meetings you had with Mr. Nelson or
17 anyone else from United?

18 A. Well, a lot of times, United would come
19 in and talk to us about clinical programs they had
20 for one purpose or another. Sometimes they would
21 talk about their marketing. Those are -- those are
22 the ones that sort of -- in general, that's what
23 plans talked to us about.

24 Q. I asked about the -- an April 2014
25 meeting with Mr. Nelson, and I think you just said

1 you don't recall the specifics. Do you recall in
2 general the April 2014 meeting you had with Steve
3 Nelson?

4 A. Well, only because people had asked for
5 what was in my Day-Timer at the time. And I looked
6 at my Day-Timer, and it told me that there had been
7 a meeting.

8 Q. You're referring to your Day-Timer.
9 Dr. Tudor, did you take notes at the meeting you
10 had with Steve Nelson and others from United in
11 April of 2014?

12 MS. CHEN: Object to form.

13 THE WITNESS: I don't know about the
14 date, but I know that there was a piece of paper
15 that had something on it.

16 BY MR. BAAK:

17 Q. Was it your practice to take notes of
18 meetings with -- your meetings with Steve Nelson?

19 A. No. Not necessarily. It'd depend upon
20 what the subject of the meeting was. It'd depend
21 upon who else was there, what role I was serving.
22 It's all sort of situational.

23 Q. Did reviewing the notes you took of the
24 April 2014 meeting in your Day-Timer, the meeting
25 with Steve Nelson and others from United, did it

1 refresh your recollection at all about what the
2 subject matter of that meeting was?

3 A. Well, my -- the way I remember that
4 piece of paper, it was pretty vague. And it -- you
5 know, there were other people there who knew more
6 than I did about these subjects. So I -- as my
7 general practice was, those people should take the
8 lead.

9 Q. And the subjects you just referenced,
10 what were the subjects of that April 2014 meeting,
11 as you recall?

12 A. I don't -- I don't --

13 MS. CHEN: Object to form.

14 THE WITNESS: I don't really remember
15 this April '14 meeting, so I don't think I can
16 answer that.

17 BY MR. BAAK:

18 Q. Do you recall how it was determined
19 that you would attend the April 2014 meeting with
20 Mr. Nelson and others from United?

21 A. Well, I was the deputy director, so I
22 was there. Because I'm sure that whoever was the
23 director -- I think it was Sean Cavanaugh at that
24 point -- told me to come, so I came.

25 Q. Do you recall what you said, if

1 anything, at the April 2014 meeting?

2 A. No.

3 Q. Do you recall what Mr. Cavanaugh said
4 at the April 2014 meeting with UnitedHealth?

5 A. No.

6 Q. Do you recall what Cheri Rice said at
7 the April 2014 meeting with UnitedHealth --

8 A. No.

9 Q. -- executives?

10 A. No.

11 Q. Do you remember saying anything at the
12 April 2014 meeting with Steve Nelson and the other
13 United executives?

14 A. No.

15 Q. In your experience, who would have been
16 the person who would normally take a lead in a
17 meeting like that --

18 MS. MCMAHON: Objection. Vague.

19 BY MR. BAAK:

20 Q. -- from the CMS side?

21 A. Well, if Sean Cavanaugh was there, it
22 would have been the -- the director would have
23 started, unless the director said somebody take the
24 lead, and they would have done that.

25 Q. Do you recall anything that Steve

1 Nelson said at the April 2014 meeting that you had
2 with him?

3 A. No.

4 Q. Do you recall anything that anyone from
5 the UnitedHealth -- do you remember any of the
6 other -- let me withdraw that.

7 Do you remember any of the other
8 attendees, beyond Mr. Nelson, at the April 2014
9 meeting you had?

10 A. I don't.

11 Q. Do you recall anything that anyone from
12 the -- the group that came from UnitedHealth said
13 at the April 2014 meeting you had?

14 A. I don't remember the meeting. Again, I
15 remember the piece of paper, but I don't really
16 remember the meeting.

17 Q. Let me show you the meeting invite,
18 which is Tab 26, and it's previously been marked as
19 Exhibit 1059.

20 (EXHIBIT 1059, Appointment dated
21 4/29/14, Subject: Meet with Optum, Bates
22 USBP051354814, was previously marked for
23 identification.)

24 BY MR. BAAK:

25 Q. Tell me when that is in front of you.

1 A. I have it.

2 Q. Great.

3 Exhibit 1059 is Bates-stamped ending in
4 4814. And it is an appointment from Outlook, it
5 appears. And it's to you. It's sent from
6 Alyssa [sic] Simpkins. Do you see that?

7 A. Yes.

8 Q. Who is Alyssa [sic] Simpkins?

9 A. I don't remember. My guess is that she
10 was the -- the administrative assistant for Sean,
11 but I could be wrong.

12 Q. And the recipients include you, Cheri
13 Rice, Jennifer Harlow, Julia [sic] Uebersax and
14 Robert Ahern, correct?

15 A. Ahern, yes.

16 Q. Ahern.

17 Do you recall which of the recipients,
18 other than yourself and Cheri Rice, attended the
19 meeting?

20 A. No. I don't know whether the special
21 assistants were there. That's -- Julie Uebersax at
22 that point and Rob Ahern were both special
23 assistants. I -- I don't know who was there,
24 though.

25 Q. Do you see down below it says meeting

1 That's what it says. I don't know what
2 it means.

3 Q. Do you recall who provided the
4 information that you wrote down in the bottom
5 left-hand corner of your notes about the obligation
6 to stop review or tell us what they found?

7 A. No.

8 Q. Do you recall who -- do you surmise
9 that this is also information that came from
10 United, at least in part?

11 MS. MCMAHON: Objection. Calls for
12 speculation.

13 BY MR. BAAK:

14 Q. Actually, let me withdraw that.

15 Do you recall who at the meeting,
16 whether it was someone from CMS or United, said
17 stop work at the -- at the end?

18 A. I don't -- I don't know who said it.

19 Q. The date 2012 -- so this meeting is
20 taking place in 2014. Did you understand that 2012
21 date to refer to the dates of service for which the
22 attestation was -- was coming up?

23 MS. MCMAHON: Objection. Calls for
24 speculation.

25 THE WITNESS: I don't -- I don't really

1 remember.

2 BY MR. BAAK:

3 Q. And what does -- in your experience,
4 what does "chart review" refer to?

5 MS. MCMAHON: Objection. Vague.

6 THE WITNESS: Well, in general, chart
7 review is looking at a chart to see what's in it,
8 what's documented.

9 BY MR. BAAK:

10 Q. During your time at CMS, did you come
11 to understand that Medicare Advantage plans
12 conducted chart reviews to look for diagnosis
13 codes -- to look for diagnoses that maybe the
14 provider failed to include?

15 MS. MCMAHON: Objection. Vague.

16 THE WITNESS: Well, that's one reason
17 for chart review.

18 BY MR. BAAK:

19 Q. And if I use the -- in part, to keep
20 things simple, if I -- if I use the term "chart
21 review" to that process by which a chart is
22 reviewed to potentially add diagnosis codes, do you
23 understand what I'm referring to?

24 A. Yes.

25 Q. Do you recall who -- who said -- the

1 section on the obligation to stop review or tell us
2 what they found, do you recall whether someone from
3 CMS said that to United?

4 A. No, I don't remember.

5 Q. Based on the context, does that look
6 like something that came from CMS?

7 A. I don't remember.

8 Q. Just stepping back from the notes a
9 little bit, there's a reference to "attestation."
10 What do you understand "attestation" to refer to?

11 A. Well, the attestation is a requirement
12 that either the CEO or the CFO attests to the
13 reliability of the risk adjustment data being
14 submitted to CMS.

15 Q. Is that an annual process?

16 MS. MCMAHON: Objection.

17 THE WITNESS: I believe it's more than
18 an annual process. I believe that monthly they're
19 supposed to do this. But I'd have to go look at
20 what the requirements are.

21 BY MR. BAAK:

22 Q. You can set the notes aside or -- or --
23 electronically or otherwise. I want to just ask
24 the follow-up on your answer on chart review a
25 second ago.

1 Q. Just take a second to review this.

2 A. Okay.

3 (Witness peruses document.)

4 Q. And I'm going to focus just on the top
5 section.

6 A. Okay.

7 Q. And this is under the category of
8 improving payment accuracy, and it says: To
9 strengthen existing regulations on Medicare
10 Advantage organizations' accountability for valid
11 risk adjustment data validation prior to
12 submission, we recommend proposing that -- and then
13 there's a colon. Do you see that?

14 A. Yes.

15 Q. Let's go through. There's two bullets
16 after -- just so we're clear on the context, these
17 are proposals that CMS was thinking about offering;
18 is that accurate?

19 MS. MCMAHON: Objection. Vague.

20 THE WITNESS: I -- I don't know. I --
21 given the time, the date of this presentation, my
22 guess is it was some sort of briefing document for
23 internal CMS use.

24 BY MR. BAAK:

25 Q. Right. I can show you an email later

1 if it'd help refresh your recollection. But, yes,
2 this is an internal -- you understood this is an
3 internal CMS document that's talking about various
4 policy proposals that CMS might adopt, correct?

5 A. Yes.

6 Q. So these are not -- this is
7 forward-looking. These are new rules that CMS is
8 thinking about implementing, correct?

9 A. Yes.

10 MS. MCMAHON: Object.

11 BY MR. BAAK:

12 Q. And one of the new rules -- let's just
13 start with the bullet -- the first bullet here
14 that -- this is what CMS is thinking about
15 proposing.

16 And CMS is thinking about proposing
17 here in 2013 that MA organizations -- that's
18 Medicare Advantage, right?

19 A. Yes.

20 Q. -- Medicare Advantage organizations
21 that conduct internal medical record review for the
22 purposes of submitting risk adjustment data to CMS
23 would have to identify overpayments as well as
24 underpayments, correct?

25 A. Yes.

1 Q. So this is something that CMS is
2 contemplating proposing through regulation in 2013,
3 correct?

4 A. I don't know whether they proposed it
5 in 2013, but yes. They were propose -- they were
6 thinking about proposing.

7 Q. I think it was actually proposed in
8 2014, but we'll get to the rule in a little bit.

9 A. Okay.

10 Q. But as of 2013, CMS is deliberating
11 internally about whether to impose this new
12 requirement on Medicare Advantage plans, correct?

13 A. Yes. Yes.

14 MS. MCMAHON: Objection. Form.

15 BY MR. BAAK:

16 Q. And then the second bullet says -- this
17 is another change that's being contemplated --
18 Medicare Advantage organizations would not be able
19 to submit additional diagnoses for the payment year
20 after payment reconciliation. And then it says, in
21 parentheses, (codifies current practice). Correct?

22 A. Yes.

23 Q. The "codifies current practice"
24 language, that's not in the prior bullet on the --
25 the new proposal for medical record reviews,

1 correct?

2 A. Yes.

3 Q. Does this situate you back in time that
4 in 2013 CMS was contemplating a new proposal -- a
5 new obligation for Medicare Advantage plans on how
6 they conduct chart review?

7 MS. MCMAHON: Objection. Form.

8 THE WITNESS: Well, it doesn't require
9 them to do it, at least the way this is written.
10 It only requires that they do it both ways if they
11 do it.

12 BY MR. BAAK:

13 Q. Thank you for that clarification.

14 So the first bullet I'm just focusing
15 on is just a recognition that Medicare Advantage
16 plans, you know, may conduct chart review, not --

17 A. Right.

18 Q. -- that they have to, correct?

19 A. Right.

20 Q. And the rule -- the new rule in 2013
21 that CMS was thinking about is telling plans that
22 if you do that kind of chart review for risk
23 adjustment, you have to look for overpayments as
24 well as underpayments. That's what was being
25 contemplated, correct?

1 they're unlikely to affect your year two cost
2 because the flu or in a broken arm is gone.

3 BY MR. BAAK:

4 Q. And so if I'm a Medicare Advantage
5 plan, and I learn that a particular code was just
6 submitted in error, I might delete that code, but
7 it might not have any impact on the ultimate risk
8 adjustment payment, correct?

9 A. That's correct.

10 MS. CHEN: Objection.

11 BY MR. BAAK:

12 Q. And another reason that might be true
13 is, let's say I do a chart review and I don't find
14 a particular diagnosis code that was submitted in
15 one record, and so I delete it. But, in fact, it's
16 supported by another record. That's another
17 example, right, where a deletion of a code doesn't
18 impact the risk adjustment payment, right?

19 MS. MCMAHON: Objection. Calls for
20 speculation.

21 THE WITNESS: Yes, generally.

22 BY MR. BAAK:

23 Q. If a Medicare Advantage plan then finds
24 a diagnosis code and deletes it -- actually, let me
25 step back and rephrase that.

1 Another reason that if you delete a
2 particular unsupported code, it might not be --
3 have an impact on risk adjustment payment is that
4 it rolls up into -- that you have another diagnosis
5 that rolls up into the same hierarchical condition
6 code, correct?

7 A. That's -- that's true.

8 MS. CHEN: Objection.

9 BY MR. BAAK:

10 Q. So if I'm a Medicare Advantage plan,
11 and I'm looking at charts and I -- or I get wind
12 from the provider who tells me, "Hey, we made a
13 mistake. This code was wrong," that doesn't
14 necessarily tell me, if I'm the plan, that I've
15 been overpaid, correct?

16 MS. MCMAHON: Objection to form.

17 THE WITNESS: You have enough
18 information to determine whether you've been
19 overpaid, but you have to run that person through a
20 risk adjustment methodology to find out if you
21 have.

22 BY MR. BAAK:

23 Q. Right. The plan might go delete the
24 code, but just knowing that there was a single code
25 that was unsupported, that alone wouldn't tell you

1 you've been overpaid if you're the plan, right?

2 MS. MCMAHON: Objection.

3 THE WITNESS: Probably.

4 BY MR. BAAK:

5 Q. You would need to know, for example, if
6 another record supported the code, correct?

7 A. Yes. Yes.

8 MS. CHEN: Objection.

9 BY MR. BAAK:

10 Q. A few minutes ago, you were talking
11 about, sort of in general, your view of how plans
12 ought to run down areas where they thought they had
13 some indication that the code might be wrong.

14 Do you ever articulate -- do you recall
15 ever articulating kind of what -- what percentage
16 or what degree of suspicion a plan had to have to
17 go investigate a code?

18 A. No.

19 MS. MCMAHON: Objection.

20 MS. CHEN: Objection.

21 BY MR. BAAK:

22 Q. And as someone who continues to consult
23 in the industry, sitting here today, do you have a
24 view as to how much information a plan would have
25 to have that a code might be unsupported to go do

1 further investigation?

2 MS. MCMAHON: Objection.

3 THE WITNESS: You know, if you asked me
4 as -- as somebody who knows how to research topics,
5 I could ponder it. But I haven't really
6 articulated that.

7 BY MR. BAAK:

8 Q. What I'm trying to get at is, given
9 that we know there's a certain number of codes in
10 the data that just are going to be wrong, right, a
11 certain number of diagnosis codes that are going to
12 be unsupported, correct?

13 A. Yes, some number.

14 Q. And CMS has never said you've got to go
15 check every code, correct?

16 A. Correct.

17 Q. In your view, would a plan need to know
18 that it's sort of -- that any given code is more or
19 less -- more likely than not to have resulted in an
20 overpayment to go investigate?

21 MS. MCMAHON: Objection.

22 THE WITNESS: Say again.

23 BY MR. BAAK:

24 Q. Yeah, it was -- it was confusing. Let
25 me try that again.

1 investigate a code or not, would it be appropriate
2 to take into account whether a given code is more
3 likely than any random code to have resulted in an
4 overpayment?

5 A. Well --

6 MS. MCMAHON: Objection.

7 THE WITNESS: -- I think my -- my
8 answer stands. I still think there's other issues
9 they have to look at.

10 BY MR. BAAK:

11 Q. During your time at CMS, did you ever
12 supervise folks that -- for CMS who were doing
13 reviews of medical records to look for diagnosis
14 codes?

15 A. Well, part of the Medicare Plan Payment
16 Group was the national error rate, which was, what
17 is the percentage of payments made incorrectly to
18 Medicare Advantage plans under -- under that
19 system.

20 So they were doing some medical record
21 reviews there, and I supervise -- I -- people who
22 did that reported to people who reported to me.

23 Q. Understood.

24 So, Dr. Tudor, it sounds like you were
25 not reviewing medical records, but --

1 A. Correct.

2 Q. -- somewhere down in the CMS
3 organization, there were folks that were
4 reviewing --

5 A. Yes.

6 Q. -- medical records --

7 A. Yes.

8 Q. -- that reported up to you, correct?

9 A. Yes. And there were studies
10 occasionally of -- of things like Part D
11 prescribing where we got medical records to look at
12 what was going on and various things. But I'm not
13 a physician, so I generally don't review medical
14 records.

15 Q. There was one point I wanted to circle
16 back on. We talked about situations where a
17 Medicare Advantage plan might delete a code that
18 does risk adjust, but there's no overpayment
19 because that code was supported by another provider
20 record. Do you recall those questions?

21 A. Yes.

22 Q. In that scenario, if the plan did not
23 delete the code, there still would be no
24 overpayment, right, because even the deletion of
25 the code did not impact payment?

1 MS. MCMAHON: Objection. Form.

2 THE WITNESS: Yes.

3 BY MR. BAAK:

4 Q. And similarly -- so the plan deletes --
5 if the plan finds a code that if it deleted would
6 not impact payment, it's also the case that the --
7 the identification of that particular unsupported
8 code, the inclusion of that in the risk adjustment
9 data in the first place did not cause an
10 overpayment, right?

11 MS. MCMAHON: Objection. Vague.

12 THE WITNESS: I don't know how to
13 answer that question.

14 BY MR. BAAK:

15 Q. Well, let me just see if I can be a
16 little more precise with the hypothetical.

17 If -- if a plan determines that a
18 particular diagnosis code is not supported --
19 right?

20 A. Right.

21 Q. -- but if they -- but that code is
22 supported, for example, by another record in my
23 hypothetical --

24 A. Right.

25 Q. Do you have me -- with me so far?

1 A. Yes. Yes.

2 Q. -- on those facts, the plan might go
3 ahead and delete the code that they found that was
4 unsupported, but the initial submission of that
5 code did not result in any overpayment because
6 there was no impact on risk adjustment, right?

7 A. Right.

8 MS. MCMAHON: Objection.

9 BY MR. BAAK:

10 Q. I have questions -- a couple questions
11 on chart review, and we won't spend a lot of time
12 on them.

13 But, you know, in your experience,
14 like -- particularly today, if you're advising a
15 plan, if it goes and looks -- it's doing chart
16 review, and it doesn't find a code that was
17 submitted, but it doesn't have the complete medical
18 record, in your view, should the plan delete that
19 code?

20 MS. MCMAHON: Objection.

21 THE WITNESS: Well, I think from a
22 business standpoint, the plan needs to try to get
23 the medical record, whatever part of it they think
24 they're missing.

25 And if they can't, then they need to --

1 I mean, again, I'm protecting the business in the
2 answer to this question -- they should be doing
3 other things to see whether clinically -- it could
4 have disappeared, whether or not there are drugs
5 that indicate the person does have that problem,
6 just other things they could do to validate
7 whether -- in the absence of the right medical
8 record, this could be sustained.

9 BY MR. BAAK:

10 Q. So I guess the way you would approach
11 this, it would depend on the context, right?

12 A. Absolutely.

13 Q. If you can't get the complete medical
14 record, and you know you don't have the complete
15 medical record, the mere fact the diagnosis code
16 isn't there doesn't tell you the diagnosis code is
17 wrong and needs to be deleted. You'd have to look
18 at sort of other information, correct?

19 MS. MCMAHON: Objection.

20 THE WITNESS: Right. But, you know, if
21 you're looking -- if you're missing the -- the
22 dermatologist's record and you're looking for
23 congestive heart failure, my belief is that
24 dermatologist records are not going to help you,
25 and truly, you have the records that are important

CERTIFICATE OF REPORTER

I, Cindy A. Hayden, Registered Merit Reporter and Notary Public for the State of Maryland at Large, do hereby certify that the foregoing transcript is a true, accurate, and complete record.

I further certify that I am neither related to nor counsel for any party to the cause pending or interested in the events thereof.

Witness my hand, I have hereunto affixed my official seal this 26th day of August, 2022.

www.MagnaLS.com

1 the -- like I said, over the years at CMS, and -- and
2 differing -- conversations with differing Department
3 of Justice attorneys over the years.

4 Q. So other than the conversations with
5 Department of Justice attorneys, did those
6 conversations involve discussing the merits of this
7 case?

8 A. Not that I can recall.

9 Q. Is it your testimony that the
10 conversations were more, where does this case stand,
11 for example?

12 A. Correct. Right. It's an ongoing matter.

13 Q. Okay. I'd like to turn to your
14 educational background briefly. Did you graduate
15 from an undergraduate institution?

16 A. I did.

17 Q. Which one?

18 A. Towson. Towson State University.

19 Q. What was your major there?

20 A. Psychology.

21 Q. And when did you graduate?

22 A. 1998.

23 Q. Did you attend graduate school?

24 A. I did.

25 Q. Where?

1 A. University of Baltimore.

2 Q. And what did you study there?

3 A. Law.

4 Q. Did you receive your JD?

5 A. I did.

6 Q. What year?

7 A. 2002.

8 Q. I missed that. Was it 2002? Is that what
9 you said?

10 A. Correct. 2002.

11 Q. Are you currently admitted to any bars?

12 A. I am.

13 Q. Which?

14 A. At the State of Maryland.

15 Q. When were you first admitted to the
16 Maryland bar?

17 A. In 2002.

18 Q. And have you maintained active membership
19 in the Maryland bar since 2002?

20 A. I have.

21 Q. Have you practiced as an attorney at any
22 point in your career after graduating?

23 A. I did.

24 Q. And when was that?

25 A. Immediately following my being sworn in, I

1 was an attorney practicing law until I joined the
2 government in October of 2010.

3 Q. What type of law did you practice?

4 A. I worked at a law firm that I refer to as
5 sort of a boutique firm, where we represented general
6 business clientele, for which we performed services
7 in that nature. So it was kind of a -- I'd say a
8 broad base of contract law, employment law, you know,
9 some real estate, leases, transactions of those
10 nature -- of that nature.

11 Q. And how long were you a practicing
12 attorney?

13 A. From the time I was sworn in, in 2002,
14 until I -- until I left that job and became employed
15 by the government in October of 2010.

16 Q. Have you ever been employed in a legal
17 capacity during your time at the government?

18 A. No.

19 Q. So you don't provide legal advice as part
20 of your job?

21 A. No. Not on the government's behalf. I'm
22 sorry.

23 Q. My apologies.

24 And is it -- is it accurate that you never
25 have, since joining the government?

1 A. That's correct. I do not represent the
2 government.

3 Q. When you first joined the government, did
4 you join CMS?

5 A. I did.

6 Q. And you said that was October 2010, right?

7 A. That's correct.

8 Q. What was your first job at CMS, starting
9 in October of 2010?

10 A. As a health insurance specialist in one of
11 the divisions of the Medicare Plan Payment Group.

12 Q. Is that abbreviated MPPG?

13 A. Correct.

14 Q. Was there a specific division that you
15 were working when you first joined?

16 A. Yes. The acronym was DRAPP. I believe it
17 stood for Division of Risk Adjustment and Payment
18 Policy. It was something like that. DRAPP was the
19 acronym.

20 Q. And how long did you work as a health
21 insurance specialist in DRAPP for?

22 A. For approximately a year and a half to
23 two years.

24 Q. Who did you directly report to, as a
25 health insurance specialist at DRAPP --

1 A. Sean --

2 Q. -- when you first started?

3 A. I'm sorry.

4 Sean Creighton was my immediate supervisor
5 at that time.

6 Q. And what were your job responsibilities at
7 that time?

8 A. So it was -- I was brought on board to
9 facilitate payment -- the development of payment
10 policy. The ACA, the Affordable Care Act, had
11 recently passed, and there were a number of statutory
12 changes being made at that time, so my responsibility
13 was to engage in those activities and the policy
14 development underlying those changes.

15 Q. So your focus was ACA-related work?

16 A. Primarily, yes.

17 Q. What other areas -- you said "primarily,"
18 so what other areas were there that you worked on?

19 A. There was ad hoc -- you know, other
20 related areas of -- being new to the government and
21 new to the work, I was given, you know, broad
22 training and responsibility to sort of learn all
23 the -- the foundational elements of Medicare
24 Advantage, the historical payment policies and such,
25 so . . .

1 Q. Did any of your work involve risk
2 adjustment?

3 A. Some of it.

4 Q. What types of work did you do related to
5 risk adjustment?

6 A. So when I was first coming to the
7 government, one of the areas I was learning was, what
8 is risk adjustment? How does it function generally
9 within the Medicare Advantage program? What is a
10 risk adjustment model? What are the principles of
11 risk adjustment? Some -- you know, some of those
12 basic elements, and how it relates to payment.

13 Q. Do you have any -- can you think of any
14 examples of projects you worked on related to risk
15 adjustment at that time?

16 A. I don't know that I could recall very a
17 specific project. I can say generally that there
18 were pieces of risk adjustment. As I said, sort of
19 learning how the model functions and what -- how it
20 impacts payment. But off the top of my head, I can't
21 remember a specific project, no.

22 Q. What was your next job, after health
23 insurance specialist at DRAPP?

24 A. So after that, there was a brief time that
25 I was on detail as special assistant. That

1 ultimately became a permanent position. Special
2 assistant to Cheri Rice, who was the group director
3 for the Medicare Plan Payment Group.

4 Q. How long did you serve as a special
5 assistant to Cheri Rice?

6 A. From approximately two thousand --
7 sometime in 2012 to sometime -- I want to say in
8 2015, roughly.

9 Q. Had you worked with Cheri Rice before
10 becoming her special assistant?

11 A. She had -- she was the group director at
12 the time that I reported to Sean Creighton, so she
13 has been -- she was in my management chain. So I did
14 not work for her directly, but indirectly, yeah.

15 Q. Had you interacted with her before
16 becoming her special assistant?

17 A. Yes.

18 Q. You said that was approximately 2012 to
19 sometime in 2015, right?

20 A. Right, approximately. I don't remember
21 the specific dates, but that's about right.

22 Q. And why did you -- why did you leave the
23 special assistant role in roughly 2015?

24 A. To take a different position in the
25 Medicare Plan Payment Group, in a different division.

1 And it was a promotion.

2 Q. And what was that new role?

3 A. The title of the job was also health
4 insurance specialist, but it was in, I -- I believe,
5 division of -- I don't remember the name of the
6 division. I apologize. But it was in a different
7 division. One of the divisions in the Medicare Plan
8 Payment Group.

9 Q. Was it Division of Payment Systems?

10 A. Yes, that's correct.

11 Q. And you said that was a promotion from the
12 special assistant role; is that right?

13 A. Correct. Correct.

14 Q. And how long did you work as a health
15 insurance specialist at DPS?

16 A. Until I left the Medicare Plan Payment
17 Group to take a job as Cheri's senior advisor in her
18 current role. I want to say that was approximately
19 sometime in the summer of 2019, I believe.

20 Q. And what did your job responsibilities
21 entail while serving as a health insurance specialist
22 at DPS?

23 A. Sure. I was a senior advisor in -- or a
24 senior technical advisor in that division, where that
25 division has primary responsibility for developing

1 policies, payment policies related to Part C and D
2 payment that are unrelated to risk adjustment.

3 So that's the easiest way I can define it.
4 So it was everything but risk adjustment under Part C
5 in the payment policy.

6 Q. And what types of policies, specifically,
7 were you helping develop?

8 A. So there are a lot of underlying payment
9 mechanisms in the Medicare Advantage in Part D
10 programs. And so in Medicare Advantage, for example,
11 there are the benchmarks that need to be calculated
12 in conjunction with the Office of the Actuary. There
13 are various other payment policies that need to be,
14 you know, considered; how to pay employer group
15 waiver plans, and developing Part D policies, like
16 for the Advance Notice rate announcement process,
17 like the benefit parameters and such.

18 Q. And then you said approximately summer
19 2019, you left that role and became a senior advisor
20 working with Cheri Rice again?

21 A. Correct.

22 Q. Is that your current role as well?

23 A. That's true, yes. That's accurate.

24 Q. What's your official title?

25 A. Health insurance specialist.

1 Q. And what does your current role involve?

2 A. So it's -- it's hard to describe, but I
3 describe it as a lot of strategic planning, which is
4 anything from facilitating policy development to
5 perhaps researching, you know, independent projects,
6 communicating with the office of legislation on
7 technical assistance, things of that nature.

8 Q. So one thing you mentioned was
9 facilitating policy development.

10 A. Yes.

11 Q. What does that entail?

12 A. It's also pretty broad. Some of that is
13 coordinating efforts between our leadership, Cheri,
14 each of the underlying groups, understanding when a
15 question comes down who to ask, how to ask it, how to
16 make sure that we're being responsive. Also things
17 like how to put forward policies in a way that makes
18 sense in, you know, a strategic way, you know, when
19 to talk about certain things and in a -- in a
20 rule-making cycle or an Advance Notice rate
21 announcement-type cycle of our, you know, processes,
22 and how those things operate within the agency.

23 Q. Are you responsible for drafting
24 substantive policies?

25 A. No, not in my current role.

1 Q. Have you previously been responsible for
2 drafting substantive policies?

3 A. In the past I have participated in the
4 development of substantive policies, yes.

5 Q. Which substantive policies have you
6 participated in the development of?

7 MS. ZUPAC: Objection. Vague.

8 You can answer.

9 THE WITNESS: One example would be when I
10 was a health insurance specialist in the
11 Medicare Plan Payment Group in the DPS position.
12 One thing that I worked on was the development
13 of a Part C employer group waiver plan payment
14 policy. That was something that I worked
15 closely with -- with the Office of the Actuary
16 to develop, propose, and finalize.

17 BY MR. ROWE:

18 Q. What other examples can you think of?

19 A. At one point in time I was involved in
20 helping develop the policy with regard to Part D
21 payment, with DIR and pharmacy price concessions, and
22 how that should or could be reported to the
23 government.

24 Q. Any other examples you can think of?

25 A. I mean, there's been a wide range over the

1 years of different policies. I've been involved
2 in -- either ancillary or -- you know, I don't know
3 that I could specifically articulate some -- those --
4 those two that I mentioned are -- are some that are
5 reasonably recent and where I had some significant
6 involvement.

7 Q. Have any of the policies related to risk
8 adjustment?

9 A. Not that I can recall, in having a
10 significant role.

11 Q. Going back to your time as special
12 assistant to Cheri Rice, which you said was
13 approximately 2012 to approximately 2015, right?

14 A. In that range, correct.

15 Q. What did your job as a special assistant
16 entail?

17 A. Again, it's -- it's kind of a hard job to
18 describe; but again, as a sort of a facilitator
19 between Cheri and the divisions, and also as a
20 liaison to our business office staff, and to
21 coordinate, you know, requests that we would get from
22 other areas of the agency or other, you know,
23 higher-ups, if you will, about requests and -- and
24 how to answer requests, and that nature.

25 So it was a role where a lot of -- a lot

1 of items would come through me in order to get
2 coordinated and responded to.

3 Q. Did your responsibilities change over
4 time? Or were they roughly the same during your
5 tenure as special assistant to Cheri Rice?

6 A. I would say roughly the same.

7 Q. Did you attend meetings with Ms. Rice?

8 A. I did.

9 Q. Did you regularly attend meetings with
10 Mrs. Rice -- Ms. Rice?

11 A. Yes. Not every meeting, but regularly.

12 Q. Did you ever attend meetings on behalf of
13 Ms. Rice?

14 A. Occasionally, in -- as special assistant.
15 Not often.

16 Q. When you attended meetings with Ms. Rice,
17 what would your role be in those meetings?

18 A. It would vary. Sometimes it's just to be
19 present and listen. Sometimes it would be to take on
20 follow-up actions as -- as needed.

21 Q. Would you typically take notes during
22 meetings?

23 A. It would depend on the nature or type of
24 the meeting. Sometimes I would, and -- and sometimes
25 it would not be my practice to do so, depending on

1 Q. Did you discuss this meeting with anyone
2 beforehand?

3 A. Not that I recall.

4 Q. Do you recall preparing for this meeting
5 in any way?

6 A. Not that I can recall.

7 Q. Do you recall discussing the meeting with
8 Cheri Rice in advance?

9 A. Not that I can recall.

10 Q. Do you recall preparing Cheri Rice in any
11 way before this meeting?

12 A. No, not that I can remember. No.

13 Q. Do you recall how you first found out
14 about this meeting?

15 A. No. I don't remember.

16 Q. Do you recall whether you knew, heading
17 into the meeting, that the proposed rule was not
18 going to be finalized?

19 A. I don't remember anything about that, no.

20 Q. You said the meeting took place in Sean
21 Cavanaugh's office, correct?

22 A. That's my recollection.

23 Q. Do you recall whether everybody was there
24 in person?

25 A. To the best of my recollection, the CMS

1 people were in person. The United folks were on VTC
2 or television screen at a different location.

3 Q. Do you know why they were in a different
4 location?

5 A. No, I don't know.

6 Q. Do you recall how long the meeting lasted?

7 A. No. I don't remember.

8 Q. During the meeting, United raised various
9 issues, correct?

10 A. As I said, I don't recall specifically
11 much about the contents of the meeting. I generally
12 remember that it was for them to talk about a risk
13 adjustment program that they had.

14 Q. Do you recall them talking about claims
15 verification program?

16 A. I don't remember those specific words, no.

17 Q. Did you understand that United at that
18 time was doing two-way looks?

19 A. I don't --

20 MS. ZUPAC: Objection to form.

21 THE WITNESS: I don't remember anything
22 about that.

23 BY MR. ROWE:

24 Q. Do you recall that United during the
25 meeting was trying to understand whether the "look

1 both ways" rule would be finalized?

2 MS. ZUPAC: Object to form.

3 THE WITNESS: I don't -- I don't remember
4 that level of specificity about the discussion.

5 BY MR. ROWE:

6 Q. Do you recall that they were seeking to
7 understand their current obligations in light of that
8 proposed rule?

9 A. Again, I don't remember that level of
10 detail.

11 Q. Do you recall United describing the risk
12 adjustment program that they had in place?

13 A. Again, I have a general recollection that
14 they were discussing their risk adjustment program.
15 I don't remember any details about their description,
16 the discussion.

17 Q. You don't recall that they told you they
18 were currently doing two-way looks as part of that
19 program?

20 A. I don't recall that level of detail, no.

21 Q. Do you recall United discussing deletes
22 that it had already submitted for 2012 dates of
23 service?

24 A. I don't remember that level of detail.

25 Q. Do you recall that United told CMS that it

1 had suspended its two-way look program?

2 A. I don't remember.

3 Q. Do you recall that Cheri Rice told United
4 that until the proposed rule was finalized, MA plans
5 did not have a proactive obligation to confirm
6 whether diagnoses submitted by providers were
7 correct?

8 A. I don't remember that level of detail of
9 the meeting, no.

10 Q. Do you recall Cheri Rice saying that if a
11 plan had actual knowledge that a specific code
12 submitted by a provider was unsupported, that a plan
13 should delete the code?

14 A. I don't remember that level of detail.

15 Q. Do you recall anyone from CMS telling
16 United that existing rules did not require MA plans
17 to design their chart review programs to identify
18 unsupported codes submitted by providers?

19 A. I don't remember that level of detail.

20 Q. Do you recall anything that anyone from
21 CMS said at that meeting?

22 A. I don't recall any specific phrases,
23 conversations, no.

24 Q. Do you recall generally?

25 A. No.

1 CERTIFICATE

Videotaped Deposition of
MARYBETH MEYER
Given Remotely
Tuesday, June 7, 2022

Reported by: Karen K. Kidwell, RMR, CRR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 and accurate diagnoses, or do you think they can do
2 less than that?

3 A. I think physicians need to comply with
4 what CMS is asking.

5 Q. Okay. That's all I'm asking.

6 Right below, it says, "Physicians must
7 report the ICD-9-CM diagnosis codes to the highest
8 level of specificity and report these codes
9 accurately." Do you see that?

10 A. Yes.

11 Q. Do you agree that physicians must report
12 the diagnosis codes with the highest level of
13 specificity and report these codes accurately?

14 A. Again, this -- CMS is making this
15 requirement. I don't have an opinion on how they
16 define their requirements.

17 Q. Well, as -- as an experienced executive of
18 United, you have some involvement in dealing with CMS
19 requirements, correct?

20 A. In my role, I didn't have direct
21 responsibility for regulatory or CMS requirements.

22 Q. But you did have responsibilities relating
23 to the accurate reporting of diagnosis codes with
24 CMS, correct?

25 A. I had responsibility to ensure that we

1 submitted the codes that we received from the
2 providers.

3 Q. Did you have any responsibility at all
4 with respect to the accuracy of the codes that were
5 submitted to CMS?

6 A. No. I would say my responsibility was to
7 submit the codes as we received them from the
8 provider.

9 Q. If you were to learn that a code that was
10 submitted was inaccurate, you had no responsibilities
11 at all with respect to inaccurate codes?

12 A. If a provider told us that a code was
13 inaccurate, we would delete those codes.

14 Q. Okay. And that was because there was an
15 obligation to delete inaccurate codes, correct?

16 A. Again, I am not the one who defined the
17 obligations or the requirements.

18 Q. Well, you understood that that's what CMS
19 expected?

20 A. Well, I understand that that's what CMS
21 has specified in this technical guide, that providers
22 need to submit accurate diagnosis codes.

23 Q. And it was the responsibility of MAOs and
24 providers to submit accurate codes, right?

25 A. It was the provider's responsibility to

1 submit accurate codes. I think the Medicare
2 Advantage organization's responsibility was to submit
3 the data as they received it from the provider.

4 Q. Did the Medicare Advantage organization
5 have any responsibility at all to check the accuracy
6 of provider-submitted codes?

7 A. That would not have been something within
8 my scope to define.

9 Q. Is it your understanding that MAOs could
10 submit any and all codes that were given by providers
11 without any regard to the accuracy of the codes?

12 A. It's my understanding that MAOs were
13 responsible to submit the codes that we received from
14 the providers.

15 Q. Did MAOs have any obligation to ensure
16 that the codes provided by the providers were
17 accurate?

18 A. Again --

19 MR. MERON: Objection. Asked and
20 answered.

21 THE WITNESS: -- defining that obligation
22 was not something within my scope of
23 responsibility.

24 BY MR. LEE:

25 Q. Right. I'm not asking you to define it,

1 but I'm asking you if you understood it to be an
2 obligation of MAOs.

3 MR. MERON: Asked and answered.

4 THE WITNESS: Have an opinion on that. It
5 was not something that was within my scope of
6 responsibilities.

7 BY MR. LEE:

8 Q. Did -- did United delete inaccurate codes
9 out of the goodness of its heart or because it felt
10 that it was an obligation owed to CMS?

11 A. Again, the process for deleting codes
12 was -- other than -- if a provider came to us and
13 told us they submitted the data inaccurately, we
14 would delete the codes. Other reasons for deleting
15 the codes were outside of my scope of responsibility.

16 Q. Why did United delete inaccurate codes?

17 A. If the provider told us they made a
18 submission error, we would delete those codes.

19 Q. But why? Because it was an obligation,
20 correct?

21 MR. MERON: Objection.

22 THE WITNESS: Again, I am not the one who
23 defined the obligations. I can't answer that
24 question.

25

1 For claim verification --

2 Q. And how -- I'm sorry. Go ahead.

3 A. So for -- and for claim verification --

4 say it was really a lot of the same input factors.

5 We would have received information from Optum on HCCs

6 that they were suggesting be deleted, information on

7 whether or not that was the only instance of that HCC

8 for the member. Those -- those types of inputs would

9 have been provided to -- primarily Mark -- Mark

10 Beckmann was the actuary on my team that would have

11 calculated those analytics.

12 Q. And how often would United obtain those

13 estimates?

14 A. We refreshed our estimates at least, for

15 chart review, monthly. I don't know how often the

16 claim verification estimates were refreshed.

17 Q. Was it -- do you think it was monthly or

18 something less frequent than that?

19 A. I just -- I don't -- I don't recall.

20 Q. Was it every quarterly at least?

21 A. I don't recall.

22 MR. LEE: I'm still not seeing 196 up. Is

23 anybody else seeing 196 up yet?

24 THE WITNESS: No, it's not displayed.

25 MR. LEE: Yeah, let's -- I think we may be

1 having some technical issues. Let's take a
2 quick break and see if we can get this resolved.

3 Go off the record.

4 MR. MERON: Okay.

5 VIDEOGRAPHER: The time is 2:44. We're
6 going off the record.

7 (A recess transpired from 2:44 p.m. until
8 2:47 p.m.)

9 VIDEOGRAPHER: The time is 2:47 p.m. We
10 are on the video report.

11 BY MR. LEE:

12 Q. Okay. Exhibit 196 is an e-mail chain from
13 you to Tim Trujillo, dated August 8, 2014. Do you
14 have that up, Ms. Meyer?

15 A. Yes, I do.

16 Q. Okay. Take a look at that. I'm going to
17 ask you about this e-mail.

18 Have you had a chance to look at the
19 e-mail?

20 A. I'm just about done. I need another
21 minute.

22 Q. Okay.

23 A. Okay.

24 Q. All right. About the middle of the page,
25 it says, under "Chart Review," "The chart review

1 program targets members' charts based on member and
2 provider information. We plan to conduct chart
3 review for over half of M&R's membership during this
4 program year. The selection of the charts is
5 dependent upon chart review selection criteria and is
6 not designed to ensure that a member's chart is
7 reviewed every year." Did I read that correctly?

8 A. Yes.

9 Q. Is that an accurate description of the
10 chart review program?

11 MR. MERON: Objection. Lack of
12 foundation.

13 THE WITNESS: To the best of my
14 recollection, that's accurate for the program.

15 BY MR. LEE:

16 Q. And up at the top, you responded to
17 Mr. Trujillo, who wrote this, and said, "It looks
18 accurate to me; thanks," did you not?

19 A. Yes, I did.

20 Q. Okay. And that was because you felt that
21 it was accurate at that time?

22 A. I don't recall this memo, but that's
23 certainly how I responded.

24 Q. Do you have any reason to believe that
25 it's inaccurate today?

1 A. Today? I -- since I'm no longer an
2 employee, I couldn't comment on what the chart review
3 program is today.

4 Q. No, not -- not what the program is today,
5 but do you today have any reason to believe that that
6 statement was inaccurate when it was written in 2014?

7 A. No.

8 Q. All right. What's the -- what's meant by
9 the selection criteria that's referenced in the
10 second sentence of that paragraph? In other words,
11 what I'm asking, what is the chart review selection
12 criteria that's referenced there?

13 A. Well, the member had to have a clinical
14 encounter during the calendar year in order to be
15 targeted for the chart program.

16 Q. Okay. Anything else involved in the
17 selection criteria for the chart review program?

18 A. Not that I recall.

19 Q. Are you familiar with the phrase "suspect
20 logic"?

21 A. Yes.

22 Q. What does that mean?

23 A. Well, suspect logic is the first -- the
24 first thing in suspect logic is does the member have
25 a clinical encounter during that calendar year. And

1 THE WITNESS: This is saying that \$245
2 would be the incremental risk adjustment revenue
3 that we were forecasting to receive per chart.

4 BY MR. LEE:

5 Q. How is that different from the average
6 yield per chart of \$221?

7 A. I -- I don't know.

8 Q. Does that mean that for every chart that
9 United would review, it was estimating revenues of
10 \$245?

11 MR. MERON: Objection. Lack of
12 foundation. Calls for speculation.

13 THE WITNESS: That's -- that's what this
14 is saying, yes, that we would expect \$245 in a
15 yield per chart.

16 BY MR. LEE:

17 Q. Okay. For every chart on average that
18 United would review, United would generate revenues
19 of \$245, correct?

20 A. Yes. That's what this is saying.

21 Q. Do you know how the yield per chart was
22 calculated?

23 A. Well, when a diagnosis or a HCC was
24 identified in the chart that was new and unique, it
25 had not been received from a claim, that HCC would be

1 worth a certain risk adjustment value. HCCs -- they
2 all have a different value, so this is just saying --
3 and not all charts found new HCCs, so this is
4 saying --

5 Q. Let me direct your attention -- I'm sorry.

6 A. -- take your total number of charts that
7 are reviewed and the total value of the HCCs that
8 you're finding on those charts to arrive at an
9 average value.

10 Q. Okay. Let me direct your attention to the
11 second page toward the bottom under the heading
12 "Deletes." Let me know when you're on that page.

13 A. Yes.

14 Q. Under the fourth bullet point, it says,
15 "Action Item: Provide MBM with proposed 2012 deletes
16 per review (done 12-4)." Is MBM you?

17 A. Yes, it is.

18 Q. Okay. Were you provided with the proposed
19 2012 CV deletes for review?

20 A. I don't remember.

21 Q. Was that customary for you to be provided
22 with deletes for review?

23 MR. MERON: Objection. Asked and
24 answered.

25 THE WITNESS: Yes. I think I testified

1 earlier that towards the end of 2013, Scott
2 Theisen, who was my boss, asked me to review the
3 proposed CV deletes.

4 BY MR. LEE:

5 Q. And in accordance with that instruction
6 from Scott Theisen, you would review deletes and
7 instruct Optum to submit them after you reviewed
8 them?

9 A. We reviewed the -- the CV deletes. Yes.

10 Q. And was that for the purpose of
11 instructing Optum to delete them when appropriate?

12 A. We were asked to review the CV deletes
13 because we were receiving complaints from providers
14 that transactions were being deleted inappropriately.
15 We received those complaints through the RACCR
16 program specifically.

17 So when Scott asked me to start reviewing
18 and approving CV deletes, we were finding the same --
19 we were finding similar logic errors in Optum's
20 proposed deletes. So I don't recall how many deletes
21 were approved for Optum to process.

22 MR. LEE: Okay. Let me ask my colleague
23 to put up Tab 14, which will be Exhibit 198.

24 (Exhibit 198 was marked for identification.)

25

1 BY MR. LEE:

2 Q. I'll ask you to take a look at that. You
3 see 197, Ms. Meyer?

4 A. Yes, I do. Yes, I do.

5 Q. 198, I mean. Do you have 198 up yet?

6 A. Yes, I do.

7 Q. Okay. 198 is an e-mail chain.

8 MR. LEE: For the record it's
9 MAPL001453589.

10 BY MR. LEE:

11 Q. It's series of e-mails. Up at the top, it
12 says Kimberly Fadden, addressed to you, March 24,
13 2014. The subject is "Chart Meeting." Toward the
14 bottom of that first page, there's an e-mail from you
15 to Scott Theisen, dated March 24, 2014. Do you see
16 the e-mail I'm referring to?

17 A. Yes, I do.

18 Q. The second paragraph there says, "We know
19 that we need 2013 DOS chart review to deliver same
20 revenue as we are estimating for 2012 DOS charts."
21 "DOS" refers to date of service?

22 A. Yes, it does.

23 Q. How did you know that you needed the 2013
24 DOS chart review to deliver the same revenues as
25 2012?

CERTIFICATE

EXHIBIT D-148

2023 WL 2241806 (U.S.) (Appellate Brief)
Supreme Court of the United States.

UNITED STATES, ex rel. Tracy Schutte, et al., Petitioners,
v.
SUPERVALU INC., et al.;
United States, ex rel. Thomas Proctor, Petitioner,
v.
Safeway, Inc.

Nos. 21-1326, 22-111.
February 24, 2023.

On Writs of Certiorari to the United States Court of Appeals for the Seventh Circuit

Brief for the United States as amicus curiae supporting petitioners

Elizabeth B. Prelogar, Solicitor General Counsel of Record, [Brian M. Boynton](#), Principal Deputy Assistant Attorney General, [Malcolm L. Stewart](#), Deputy Solicitor General, Benjamin W. Snyder, Assistant to the Solicitor General, [Michael S. Raab](#), [Charles W. Scarborough](#), Joshua Dos Santos, Attorneys, Department of Justice, Washington, D.C. 20530-0001, SupremeCtBriefs@usdoj.gov, (202) 514-2217.

***i QUESTION PRESENTED**

The False Claims Act (FCA), [31 U.S.C. 3729 et seq.](#), imposes civil liability on persons who “knowingly” submit false claims for payment to government programs or “knowingly” make false statements in support of such claims. [31 U.S.C. 3729\(a\)\(1\)\(A\) and \(B\)](#). The FCA defines “knowingly” to mean that a person (i) has “actual knowledge” of the falsity of information in the claim or statement; (ii) “acts in deliberate ignorance of the truth or falsity of” such information; or (iii) “acts in reckless disregard of the truth or falsity of” such information. [31 U.S.C. 3729\(b\)\(1\)\(A\)](#). The question presented is as follows:

Whether a person who submitted a claim or statement that falsely asserted compliance with applicable legal requirements, and who subjectively believed or had strong reason to believe that the claim or statement was false, can establish that he did not act “knowingly” by showing during the FCA litigation that the claim or statement was consistent with an incorrect but objectively reasonable interpretation of those legal requirements.

[Note: Page ii missing in original document]

***iii TABLE OF CONTENTS**

Interest of the United States	1
Statement:	
A. Legal background	2
B. Facts and procedural history	4
Summary of argument	12
Argument:	
The Seventh Circuit adopted an overly demanding standard for proving scienter under the FCA	15

A. The FCA's text, history, and common-law background demonstrate that scienter under the Act turns on the defendant's state of mind at the time of its false claims or statements	16
B. The court of appeals erred in treating respondents' post hoc rationales for their conduct as negating scienter under the FCA	21
1. This Court's decision in <i>Safeco</i> provides no sound basis for the court of appeals' construction of the FCA's scienter requirement	22
2. Additional arguments advanced by the court of appeals and respondents do not support adoption of an "objective reasonableness" standard here	28
C. The court of appeals erred in treating contractual language and warnings from non-governmental actors as irrelevant to the scienter analysis	32
D. Petitioners' evidence demonstrates material disputes of fact regarding knowledge	34
Conclusion	35
Appendix - Statutory provision	1a

*1 INTEREST OF THE UNITED STATES

These cases present important questions concerning the scienter requirements of the False Claims Act (FCA or Act), 31 U.S.C. 3729 *et seq.* The FCA is the primary tool by which the federal government combats fraud in federal contracts and programs. The United States therefore has a substantial interest in proper *2 interpretation of the Act. At the Court's invitation, the United States filed a brief at the petition stage in No. 21-1326.

STATEMENT

A. Legal Background

1. The FCA imposes liability on any person who “knowingly presents, or causes to be presented, a false or fraudulent claim for payment” to a government spending program (whether directly to a federal official or through a third-party contractor or grantee), or who “knowingly makes, uses, or causes to be made or used” a “false * * * statement” material to such a claim. 31 U.S.C. 3729(a)(1)(A) and (B); see 31 U.S.C. 3729(b)(2)(A)(i) and (ii). The Act defines “knowingly” to “mean that a person, with respect to information,” (i) “has actual knowledge of the information”; (ii) “acts in deliberate ignorance of the truth or falsity of the information”; or (iii) “acts in reckless disregard of the truth or falsity of the information.” 31 U.S.C. 3729(b)(1)(A).

Either the Attorney General or a private party (known as a relator) may sue under the FCA. 31 U.S.C. 3730(a) and (b). When a relator files a “qui tam” suit, the government may “elect to intervene.” 31 U.S.C. 3730(b)(2) and (3). If the government declines to intervene, the relator may proceed with the litigation and share in any judgment. 31 U.S.C. 3730(b)(4)(B) and (d).

2. These cases concern claims for payment submitted to government healthcare programs including Medicaid and Medicare Part D.

a. The Medicaid Act, 42 U.S.C. 1396 *et seq.*, establishes a cooperative federal-state program that provides medical assistance to certain low-income individuals. States may offer outpatient prescription-drug coverage as part of their Medicaid plans. *3 42 U.S.C. 1396d(a)(12). Regulations promulgated by the Centers for Medicare and Medicaid Services (CMS) limit reimbursement for many drugs to the lower of (1) a pharmacy's “usual and customary charges to the general public” or (2) the drug's actual acquisition cost plus a reasonable dispensing fee. 42 C.F.R. 447.512(b)(2).

Consistent with those federal regulations, state Medicaid agencies typically calculate reimbursement amounts to be paid to pharmacies as the lesser of various payment amounts, one of which is often the pharmacy's “usual and customary charge” to the general public. See Medicaid.gov, CMS, *Medicaid Covered Outpatient Prescription Drug Reimbursement Information by State, Quarter Ending September 2022* (last updated Nov. 16, 2022), <https://www.medicaid.gov/medicaid/prescription-drugs/state->

prescription-drugresources/medicaid-covered-outpatient-prescription-drugreimbursement-information-state/index.html. State Medicaid agencies may issue program guidance to further define “usual and customary charges.” See 11-cv-3290 D. Ct. Doc. 172-1, at 12 (May 21, 2018).

b. The Medicare Act, 42 U.S.C. 1395 *et seq.*, provides federally funded health-insurance coverage to individuals who are age 65 or older or are disabled. Through Medicare Part D, 42 U.S.C. 1395w-101 *et seq.*, beneficiaries can obtain prescription-drug coverage through private plan sponsors. See 42 C.F.R. 423.30, 423.32. CMS makes ongoing payments to a plan sponsor and at the end of the year reconciles those payments with the sponsor's actual costs to determine whether the sponsor is owed additional funds or instead must return excess payments. See 42 C.F.R. 423.315, 423.329, 423.343.

Part D beneficiaries typically obtain prescription drugs from retail or mail-order pharmacies, which then *4 seek reimbursement from the plan sponsors (or from intermediary organizations known as pharmacy benefit managers). Plan sponsors and pharmacies negotiate the price to be paid for each drug. See 42 U.S.C. 1395w-111(i); 42 C.F.R. 423.100. Plan sponsors often contract to pay the lesser of a negotiated price or the amount that the pharmacy reports as its “usual and customary” price for cash (*i.e.*, non-insurance) sales to the general public, with that term sometimes further defined in the contract. See 21-1326 Pet. App. 8a; 22-111 Pet. App. 4a, 10a-11a.

B. Facts And Procedural History

In these consolidated cases, petitioners filed FCA qui tam suits against respondents, which operate hundreds of retail drug pharmacies nationwide. Petitioners alleged that respondents had submitted to government healthcare programs claims that knowingly overstated respondents' “usual and customary” prices, leading to reimbursements substantially greater than what respondents were lawfully entitled to receive. The cases were assigned to the same district court, which granted summary judgment to respondents in separate decisions. 21-1326 Pet. App. 59a-87a; 22-111 Pet. App. 42a-105a. The court of appeals affirmed both judgments. 21-1326 Pet. App. 1a-58a; 22-111 Pet. App. 1a-41a.

1. Petitioners' allegations pertain to pricing programs that respondents adopted to compete with steep discounts announced in 2006 by other pharmacies such as Walmart, which began offering 30-day supplies of many drugs for just \$4. 21-1326 Pet. App. 6a-7a; 22-111 Pet. App. 5a. Respondents in No. 21-1326 (collectively, SuperValu) adopted a price-match program in which SuperValu's pharmacies would match a competitor's lower price at a customer's request, and would then *5 automatically apply that price to future refills. 21-1326 Pet. App. 7a. Respondent in No. 22-111 (Safeway) adopted a similar price-match program, and also adopted a “membership” discount program that operated during most of the same period. 22-111 Pet. App. 5a-7a. Under Safeway's membership program, customers could receive steeply discounted generic drug prices (typically \$4 for a 30-day supply) by filling out a form with basic information (*e.g.*, name, address, date of birth) that petitioner asserts Safeway usually already had. *Id.* at 6a-7a.

Respondents' discount programs were sufficiently popular that the discounted prices comprised a majority of non-insurance sales for many drugs during the period when respondents offered the discounts. In 2012, a majority of SuperValu's cash sales for 44 of its 50 topselling drugs were made at discounted price-matched prices. 21-1326 Pet. App. 8a & n.3, 35a (Hamilton, J., dissenting). For 30 of those drugs, more than 80% of cash sales were at the lower price-matched prices. *Id.* at 35a. Discounted prices accounted for 75%-88% of cash sales for Safeway's top 20 drugs during the last five years of the program, and 56%-66% of all such sales. 22-111 Pet. App. 35a (Hamilton, J., dissenting). The discounts were substantial, with customers sometimes paying six to 16 times less than respondents' retail prices. 21-1326 Pet. App. 35a; 22-111 Pet. App. 39a.

Despite the widespread use of respondents' discount programs, respondents disregarded sales under those programs when reporting their “usual and customary” cash prices to state Medicaid agencies, Medicare Part D sponsors, and other third-party payors. Respondents instead reported only their higher retail prices, even for drugs for which a majority of sales occurred at

*6 substantially discounted prices. 21-1326 Pet. App. 35a (Hamilton, J., dissenting); 22-111 Pet. App. 38a-39a (Hamilton, J., dissenting). Between 2008 and 2012, for example, Safeway charged just \$10 in 94% of its cash sales for a 90-day supply of lovastatin, a “high-volume drug” used to reduce cholesterol. 22-111 Pet. App. 38a-39a. But rather than reporting \$10 as its “usual and customary” price for a 90-day supply of lovastatin, Safeway instead reported prices ranging from \$81.42 to \$108.99 during that period. *Id.* at 39a (citation omitted).

2. Discovery in both cases revealed evidence that respondents hid their discounted prices from third-party payors (including Medicaid programs and Medicare Part D sponsors) despite respondents' awareness that they were expected to report their discounted prices as their “usual and customary” prices.

a. Petitioner in No. 22-111 identified multiple instances in which third-party payors, including Medicare Part D sponsors and state Medicaid agencies, told Safeway that its “usual and customary” price reporting was required to reflect its discounted prices. In 2006, Safeway received a reminder from Medco Health Solutions, a pharmacy benefit manager working with many Medicare Part D plans, stating that “by contract,” the “usual and customary” price is “the lowest net price a cash patient would have paid on the day that the prescription was dispensed inclusive of all applicable discounts. These discounts include ... a competitor's matched price, or other discounts offered to customers.” 22-111 Pet. App. 10a-11a (brackets omitted).¹ Notices from *7 other pharmacy benefit managers in January and February 2007 conveyed similar messages. *Id.* at 11a; see *id.* at 69a (quoting notice from pharmacy benefit manager stating that “usual and customary” prices included “Promotional Pricing program[s]” such as “membership[s]”); see also *id.* at 32a-33a (Hamilton, J., dissenting), 50a-51a, 72a, 82a. Forwarding one such notice, a Safeway director wrote: “Another Example of how plans are reacting, ie, any modified price needs to be offered to the 3rd party if meets U&C definition. Received a similar [notice] from Medco.” *Id.* at 33a (Hamilton, J., dissenting).

Several state Medicaid agencies communicated the same message. In 2008, one Safeway pharmacy manager told corporate headquarters that Nebraska's Medicaid program had informed him that “by matching a price, it becomes our usual & customary.” 22-111 Pet. App. 33a (Hamilton, J., dissenting) (citation omitted); see *id.* at 52a, 57a (describing similar instructions from other state Medicaid agencies). A few days later, a Safeway executive e-mailed a senior vice president to advise that “[w]e may have some issues with U&C and state medicaid with price matching.” *Id.* at 33a (Hamilton, J., dissenting) (citation omitted). That executive explained that “if you [match a] price offer, that becomes your usual and customary for that day and that pricing needs to be extended to medicaid”—something he acknowledged Safeway was not doing. *Ibid.* (citation omitted; brackets in original).

The evidence suggests that Safeway sought to conceal its discount practices from third-party payors rather than change its price reporting. The executive who *8 expressed concern about “issues with U&C and state medicaid,” for example, indicated that Safeway “need[ed] to keep a low profile” with its discounts, because “[i]f we advertise this price match-it is going to Alert the medicaid programs to start looking.” 22-111 Pet. App. 33a-34a (Hamilton, J., dissenting) (citations and emphasis omitted). Another executive responded to the information about the Nebraska Medicaid program's understanding of “usual and customary price” by asking “how the state of Nebraska will know that we offered to match any price out there.” *Id.* at 33a (citation and emphasis omitted). And consistent with a desire to maintain “stealth” around its discount pricing, *id.* at 29a (citation omitted), Safeway instructed employees not to “put any of this in writing” and not to admit to price-matching “if an unidentified customer calls in,” so that Safeway could “avoid trouble with the media or competitors.” *Id.* at 31a (citation and emphases omitted).

A final example captures Safeway's apparent thinking. In 2009, a Safeway executive inquired about the reason for adopting a membership program rather than simply offering a \$4 price, noting that “it seems like * * * this whole thing revolves @ the insurance angle to get the \$10 per item from them vs the \$4 cash price.” 22-111 Pet. App. 36a (Hamilton, J., dissenting) (citation omitted). A director responded that “[o]ff the record that is exactly the angle,” “getting the maximum we can from the insurance.” *Ibid.* (citation and emphasis omitted).

b. Petitioners in No. 21-1326 presented similar evidence about SuperValu. SuperValu received the same 2006 notice from Medco about SuperValu's contractual obligation to report “all applicable discounts,” including *9 a “competitor's matched price.”

21-1326 Pet. App. 66a. A SuperValu executive forwarded the notice and stated: “Note the comment about price matching. Theoretically, they could audit.” 11-cv-3290 D. Ct. Doc. 169, at 9-10 (May 21, 2018) (citation omitted).

Later, when a different pharmacy benefit manager asked about SuperValu's price-match practices, one of SuperValu's managers stated that she was “concerned about any response where we acknowledge doing it.” 11-cv-3290 D. Ct. Doc. 327, at 7 (Dec. 10, 2019) (citation omitted). An executive replied that “[w]e should not respond unless we know what they are going to do with this information,” and directed the manager to “[m]ake sure [one of SuperValu's attorneys] can defend our price match policy as not being our U and C if they are pressing for a response.” *Ibid.* (citation omitted). And in another exchange, SuperValu executives weighed the risks of running advertisements for its price-match program, noting that “damage control” would be necessary if pharmacy benefit managers saw the ads but determining that it was “[u]nlikely anyone [at a third-party payor] will really see” them. 11-cv-3290 D. Ct. Doc. 191-1, at 39 (June 11, 2018) (citation omitted).

3. The district court granted summary judgment to respondents in both cases.

a. In an initial decision, the district court found that SuperValu's price-matched “prices * * * are the usual and customary prices for their drugs,” and therefore should have been reported with SuperValu's claims for payment from Medicare Part D and Medicaid. 2019 WL 3558483, at *8. But in a subsequent ruling, the court held that SuperValu was still entitled to summary judgment on the ground that it had not acted “knowingly.” 21-1326 Pet. App. 59a-87a. Relying on this Court's *10 decision in  *Safeco Insurance Co. v. Burr*, 551 U.S. 47 (2007), which had interpreted the term “willfully” in the Fair Credit Reporting Act,  15 U.S.C. 1681n(a), the district court construed the FCA to require a showing that SuperValu's submissions were inconsistent with any “objectively reasonable” interpretation of “usual and customary” price. 21-1326 Pet. App. 75a. Because petitioners could not meet that standard, the court held that SuperValu was entitled to summary judgment “regardless of [SuperValu's] subjective beliefs” about the accuracy of its submissions. *Id.* at 83a.

b. The district court applied the same analysis in granting summary judgment to Safeway. 22-111 Pet. App. 42a-105a. The court concluded that, “if a defendant adopts one of multiple reasonable interpretations, its ‘subjective intent’ is legally irrelevant.” *Id.* at 81a (quoting  *Safeco*, 551 U.S. at 71 n.20). Despite the evidence of Safeway's subjective understanding that it should report its discounted prices, the court held that “Safeway is entitled to summary judgment under *Safeco*.” *Id.* at 103a.

4. The court of appeals affirmed in separate divided decisions.

a. The court of appeals decided SuperValu's case first. 21-1326 Pet. App. 1a-58a. The court held that *Safeco* controlled the interpretation of the FCA term “knowingly.” *Id.* at 11a-20a. On that understanding, the court held that an FCA “defendant who acted under an incorrect interpretation” of governing legal requirements will avoid liability “if (1) the interpretation was objectively reasonable and (2) no authoritative guidance cautioned defendants against it.” *Id.* at 12a.

The court of appeals explained that, under its reading of *Safeco*, “a defendant's subjective intent does not *11 matter.” 21-1326 Pet. App. 27a. The court stated that “it is not enough that a defendant suspect or believe that its claim was false” because the standard is “objective” and turns on whether the defendant “*know[s]*” that its claims are false. *Id.* at 26a-27a. The court found it “irrelevant” to that inquiry whether the defendant had actually “held [an objectively reasonable exculpatory interpretation] at the time that it submitted its false claim” or instead was “concocting ‘post-hoc arguments.’” *Id.* at 26a.

Applying its two-step analysis, the court of appeals affirmed the grant of summary judgment. 21-1326 Pet. App. 22a-31a. It first held that SuperValu's conduct was consistent with an objectively reasonable understanding of “usual and customary” price because no statute or regulation squarely foreclosed SuperValu's approach. *Id.* at 22a-26a. It then determined that no authoritative guidance had warned SuperValu away from that understanding. *Id.* at 27a-31a. The court held that, for these purposes, only “circuit court precedent or guidance from the relevant agency” can qualify as “authoritative guidance,” so that the contractual guidance provided by pharmacy benefit managers was “automatically exclude[d].” *Id.* at 28a.

Judge Hamilton dissented. 21-1326 Pet. App. 31a-58a. In his view, the majority's reliance on *Safeco* ignored the FCA's text, history, and common-law background, which he viewed as indicating that "subjective bad faith" can establish the necessary scienter. *Id.* at 42a. Judge Hamilton concluded that the district court's grant of summary judgment should be reversed because the evidence would allow "[a] reasonable jury [to] find that SuperValu either actually knew or deliberately *12 chose to keep itself in ignorance that it was submitting false, hugely inflated claims." *Id.* at 37a-38a.

b. The court of appeals subsequently affirmed the district court's grant of summary judgment to Safeway "[f]or the same reasons" it had identified in SuperValu's case. 22-111 Pet. App. 17a; see *id.* at 1a-41a. The court recognized that "Safeway effectively used its [membership program] as a fig leaf to disguise a Wal-Mart-style generics program without reporting those prices as U&C." *Id.* at 17a. It concluded, however, that no authoritative guidance had rendered that practice "objectively unreasonable at the time." *Id.* at 18a. The court held that the notices from pharmacy benefit managers, as well as definitions in specific contracts, were "irrelevant" to the scienter analysis "because they did not come from the agency." *Ibid.* And because Safeway's actions were consistent with an objectively reasonable understanding of "usual and customary" price, the court refused to consider "evidence of the defendant's subjective awareness that its interpretation might be wrong." *Id.* at 14a-15a (citation omitted).

Judge Hamilton again dissented. 22-111 Pet. App. 25a-41a. In his view, the court of appeals' analysis erroneously disregarded "egregious" facts demonstrating "Safeway's fraudulent intent at the time it was submitting false claims to the government." *Id.* at 26a, 28a (Hamilton, J., dissenting).

SUMMARY OF ARGUMENT

A. The FCA includes a three-pronged definition of "knowingly," which covers a person who (i) has "actual knowledge" of the falsity of information in a claim or statement that the person submits to a government program; (ii) "acts in deliberate ignorance of the truth or falsity of" such information; or (iii) "acts in reckless *13 disregard of the truth or falsity of" such information.  31 U.S.C. 3729(b)(1)(A). The ordinary meaning of those words, along with their statutory context and the historical background of common-law fraud, makes clear that the FCA's scienter standard encompasses circumstances in which persons subjectively believe they are submitting false claims or statements to the government; are subjectively aware of a substantial risk that their claims or statements are false but deliberately avoid taking readily available steps to obtain clarification; or act in reckless disregard of known or objectively obvious facts indicating a high likelihood of falsity.

The court of appeals erred in adopting a narrower scienter standard, under which a defendant's subjective bad faith at the time the defendant acted becomes irrelevant if the defendant (or the defendant's lawyers) can later identify an exculpatory theory that is wrong but objectively reasonable. That approach disregards Congress's three-pronged statutory definition, which focuses on a defendant's subjective state of mind when submitting the false claims or statement. See  31 U.S.C. 3729(b)(1)(A) (referring to "actual knowledge" and "deliberate ignorance"). It likewise ignores common-law principles of fraudulent misrepresentation that Congress drew on in enacting the FCA, which focus on a defendant's subjective bad faith. And it would allow defendants who *intentionally* submit false claims for payment to the government to escape FCA liability based on concededly incorrect post hoc justifications, flouting the principle that "those who seek public funds" must "act with scrupulous regard for the requirements of law."  *Heckler v. Community Health Services of Crawford County, Inc.*, 467 U.S. 51, 63 (1984).

*14 B. This Court's decision in  *Safeco Insurance Co. v. Burr*, 551 U.S. 47 (2007), does not support the court of appeals' result. *Safeco* involved a provision of the Fair Credit Reporting Act that imposed penalties for "willfully" violating that statute's requirements.  15 U.S.C. 1681n(a). In interpreting the "willfully" requirement there to establish an objective-reasonableness defense, *ibid.*, the Court did not address a three-pronged statutory definition, like the one in the FCA, that expressly focuses on a defendant's subjective state of mind. Moreover, the Court relied on common-law standards relating to physical safety, not

the common law of fraud that is relevant here. And *Safeco* concerned a general regulatory requirement, rather than conditions specifically imposed on those who choose to do business with the government. Just as this Court has declined to extend *Safeco* to the patent context, see  *Halo Electronics, Inc. v. Pulse Electronics, Inc.*, 579 U.S. 93 (2016), so too should the Court decline to extend it here to protect those who intentionally submit false claims for payment to the government.

The other arguments put forward by the court of appeals or respondents likewise lack merit. The fact that a defendant who believes she is submitting false claims might not be *certain* about the claims' falsity does not absolve her of culpability under the FCA's statutory standard. Similarly, defendants who intend to submit false claims, or who deliberately avoid inquiries that would confirm whether their claims are false, cannot complain about a lack of fair notice.

C. The court of appeals further erred in holding that only circuit-court precedents or guidance from the relevant agency is sufficiently authoritative to give notice of a claim's falsity. That standard, which the court *15 purported to derive from *Safeco*, would be particularly inappropriate under the FCA. The FCA applies to claims submitted under contracts with non-federal intermediaries who help to administer federal spending programs like Medicare Part D and Medicaid. No sound basis exists for allowing participants in those programs to disregard guidance from, or contracts with, the very entities that Congress has designated to administer their claims.

D. Under the appropriate scienter standard, respondents are not entitled to summary judgment in either case. The evidence petitioners presented would allow a reasonable factfinder to conclude that respondents “knowingly” submitted false claims or statements to government healthcare programs.  31 U.S.C. 3729(a)(1)(A) and (B). The Court therefore should reverse the court of appeals' judgments and remand for further proceedings.

ARGUMENT

THE SEVENTH CIRCUIT ADOPTED AN OVERLY DEMANDING STANDARD FOR PROVING SCIENTER UNDER THE FCA

The FCA imposes liability on those who “knowingly” present false claims for payment to government programs, or who “knowingly” submit false statements in support of such claims.  31 U.S.C. 3729(a)(1)(A) and (B); see  31 U.S.C. 3729(b) (4). Under the Act's definition, construed in light of common-law background principles, that standard is satisfied when a person (1) is subjectively aware that a claim or statement is false; (2) subjectively recognizes a substantial risk that the claim or statement is false but deliberately avoids taking readily available steps to obtain clarification; or (3) acts with reckless disregard of known or objectively obvious *16 facts indicating a high likelihood that the claim or statement is false. See  31 U.S.C. 3729(b)(1)(A).

The court of appeals adopted a substantially narrower view of the Act's scienter requirement, under which a person who submits false claims or statements can categorically escape liability by identifying a post hoc rationale for its prior representations that, while legally wrong, is “objectively reasonable.” *E.g.*, 21-1326 Pet. App. 22a. That standard, which respondents liken to “qualified immunity” for FCA defendants, 21-1326 Resp. Supp. Br. 4, is untethered to the statute's text, context, or history. Under the proper standard, the relators in both cases here presented sufficient evidence that respondents knowingly submitted false claims and statements. The court of appeals' judgments should be reversed.

A. The FCA's Text, History, And Common-Law Background Demonstrate That Scienter Under The Act Turns On The Defendant's State Of Mind At The Time Of Its False Claims Or Statements

1. This Court has “taken [care] to construe” words like “‘knowing,’ ‘intentional,’ or ‘willful’ * * * in their particular statutory context.”  *Jerman v. Carlisle, McNellie, Rini, Kramer & Ulrich, L. P. A.*, 559 U.S. 573, 585 (2010). Until 1986, the FCA imposed liability for “knowingly” presenting “a false or fraudulent claim for payment or approval,” without defining the term “knowingly.”  31 U.S.C. 3729(1) (1982 & Supp. III 1985). Some courts interpreted that provision to require proof of a specific “purpose on the part of [the defendant] to cheat the Government.”  *United States v. Aerodex, Inc.*, 469 F.2d 1003, 1007 (5th Cir. 1972) (citation omitted; brackets in original). As part of wide-ranging FCA amendments, Congress rejected that interpretation as *17 unduly narrow. See False Claims Amendments Act of 1986 (1986 Amendments), Pub. L. No. 99-562, § 2(7), 100 Stat. 3153-3154. The 1986 Amendments stated that “no proof of specific intent to defraud is required,” and added a new three-pronged definition of “knowingly.” § 2(7), 100 Stat. 3154; see  31 U.S.C. 3729(b)(1)(B). Under that definition, a person acts “knowingly” if she (i) has “actual knowledge” of the falsity of information in a claim or statement the person submits to the government or a designated intermediary; (ii) “acts in deliberate ignorance of the truth or falsity of” such information; or (iii) “acts in reckless disregard of the truth or falsity of” such information.  31 U.S.C. 3729(b)(1)(A).

The first two terms within that statutory definition cover distinct species of subjective bad faith. The first, “actual knowledge,”  31 U.S.C. 3729(b)(1)(A)(i), refers to a “state of mind that one considers that he knows.” *Black’s Law Dictionary* 784 (5th ed. 1979) (defining “knowledge”). That generally means that the defendant was subjectively “aware of” a violation.  *Intel Corp. Investment Policy Committee v. Sulyma*, 140 S. Ct. 768, 776 (2020). The second, “deliberate ignorance,”  31 U.S.C. 3729(b)(1)(A)(ii), covers a defendant who is “subjective[ly] aware[ly]” of a substantial risk that his statement may be false, and intentionally avoids taking steps to confirm the statement’s truth or falsity.  *United States v. Ricard*, 922 F.3d 639, 656 (5th Cir. 2019); see  *Global-Tech Appliances, Inc. v. SEB S. A.*, 563 U.S. 754, 769 (2011) (same definition for “willful blindness”); *Black’s Law Dictionary* 672 (5th ed. 1979) (“Voluntary ignorance exists when a party might, by taking reasonable efforts, have acquired the necessary knowledge.”) (emphasis omitted). The third term, “reckless disregard,”  31 U.S.C. 3729(b)(1)(A)(iii), *18 describes circumstances in which a defendant disregards a “high risk” of falsity “that is either known or so obvious that it should be known,”  *Farmer v. Brennan*, 511 U.S. 825, 836 (1994). Unlike the first two clauses, the third clause does not require proof of the defendant’s subjective awareness, but can be satisfied through evidence that the risk of falsity was objectively apparent.

By covering all three states of mind, Congress cast a net broad enough to reach those who act in subjective bad faith with respect to claims that implicate ambiguous legal conditions, as well as those who act with a grossly substandard degree of care. If a defendant believes (correctly) that it is violating a legal requirement that makes its claims false and ineligible for payment, the defendant acts with “actual knowledge” if it submits the false claims—even if its lawyers later identify an objectively reasonable (but incorrect) exculpatory interpretation. See  *United States ex rel. Phalp v. Lincare Holdings, Inc.*, 857 F.3d 1148, 1154-1156 (11th Cir. 2017) (considering evidence of defendant’s belief in illegality). If a defendant is subjectively aware of a substantial risk that its submissions are false, but chooses not to make readily available inquiries that could clarify their accuracy, that defendant acts with “deliberate ignorance” even if the underlying law is ambiguous. *Godecke v. Kinetic Concepts, Inc.*, 937 F.3d 1201, 1212 (9th Cir. 2019). And if a defendant disregards warnings about likely falsity from knowledgeable sources such as attorneys, internal compliance officers, or government contractors, or fails to consult objectively obvious sources that would have provided such warnings, that defendant acts with “reckless disregard” of the truthfulness of its claims. See  *19 *United States ex rel. Polukoff v. St. Mark’s Hospital*, 895 F.3d 730, 744 (10th Cir. 2018), cert. dismissed, 138 S. Ct. 2690 (2019).

2. Each of the three prongs of the FCA’s definition of “knowingly” addresses the “culpability” of the person’s state of mind “at the time of the challenged conduct.”  *Halo Electronics, Inc. v. Pulse Electronics, Inc.*, 579 U.S. 93, 105 (2016). Each prong uses the present tense, with the first prong looking to what knowledge the person “has,” while the second and third

look to whether the person “acts in” the specified mental states.  31 U.S.C. 3729(b)(1)(A)(i)-(iii). Within the Act's operative prohibitions, the adverb “knowingly” modifies such verbs as “presents,” “makes,” and “uses.”  31 U.S.C. 3729(a)(1)(A) and (B). That phrasing makes clear that the state of mind that matters is the person's state of mind when she “presents,” “makes,” or “uses” the false claim or statement. The ability of that person (or her lawyer) to identify wrong-but-reasonable exculpatory theories or interpretations after those events occur cannot retroactively alter the state of mind with which the person engaged in the specified conduct.²

The Act's focus on the defendant's state of mind at the time of the challenged conduct is essential to protect potential defendants from unwarranted FCA liability. After a person submits claims for payment that it reasonably believes are legitimate, new agency guidance or *20 intervening judicial decisions may make clear that the claims rested on an incorrect view of the law. New information likewise may make clear that previously submitted claims rested on factual misunderstandings. If the defendant's knowledge at the time of the FCA litigation were decisive, the government or qui tam relators could seek treble damages and civil penalties in those circumstances. The pertinent FCA provisions are carefully worded to preclude that untoward result. But just as such intervening developments cannot support the imposition of FCA liability on persons who acted without the requisite knowledge, post hoc identification of wrong-but-reasonable exculpatory legal theories cannot negate scienter.³

3. The FCA's primary focus on a defendant's subjective bad faith at the time of the relevant act is consistent with the Act's common-law background. Cf., e.g.,  *Universal Health Services, Inc. v. United States ex rel. Escobar*, 579 U.S. 176, 187 (2016) (construing the FCA term “false or fraudulent claims” to incorporate the common-law rule that “fraud” includes some “misrepresentations by omission”). As Judge Hamilton observed below, “the most authoritative summary of the common law's treatment of fraudulent scienter,” found in Section 526 of the Restatement (Second) of Torts, “makes subjective bad faith central.” 21-1326 Pet. App. 41a-42a *21 (Hamilton, J., dissenting). That summary explains that, for purposes of the common-law tort of fraudulent misrepresentation, a speaker acts with a culpable state of mind if he “(a) knows or believes that the matter is not as he represents it to be, (b) does not have the confidence in the accuracy of his representation that he states or implies, or (c) knows that he does not have the basis for his representation that he states or implies.” *Restatement (Second) of Torts* § 526 (1977) (emphasis omitted); accord, e.g., 1 Joseph Story, *Commentaries on Equity Jurisprudence* § 193 (6th ed. 1853). Each of those categories focuses unmistakably on the speaker's subjective bad faith.

Given the subjective criteria that historically were used to identify “common-law fraud,”  *Escobar*, 579 U.S. at 187, Congress could be expected to speak clearly if it wished to make the defendant's subjective intent irrelevant to scienter under the FCA. See Antonin Scalia & Bryan A. Garner, *Reading Law: The Interpretation of Legal Texts* 318 (2012) (“[S]tatutes will not be interpreted as changing the common law unless they effect the change with clarity.”). By enacting the third (“reckless disregard”) prong of the FCA's definition of “knowingly,” Congress made clear that an extreme lack of due care can provide an *additional* basis for liability, even when subjective bad faith is absent. But nothing in the FCA's text, context, history, or structure suggests that Congress intended to displace the common-law approach altogether.

B. The Court Of Appeals Erred In Treating Respondents' Post Hoc Rationales For Their Conduct As Negating Scienter Under The FCA

The contrary arguments adopted by the court of appeals or advanced by respondents lack merit.

***22 1. This Court's decision in *Safeco* provides no sound basis for the court of appeals' construction of the FCA's scienter requirement**

The court of appeals viewed this Court's decision in  *Safeco Insurance Co. v. Burr*, 551 U.S. 47 (2007), as dictating that a defendant's subjective state of mind is “irrelevant” under the FCA. 21-1326 Pet. App. 26a. Based on its reading of *Safeco*, the

court held that an FCA defendant cannot be found to have acted “knowingly” if its conduct was consistent with an objectively reasonable interpretation that had not previously been rejected by an appellate court or agency guidance—whether or not “the defendant * * * held that view at the time that it submitted its false claim.” *Ibid*. That approach is erroneous.

a. In *Safeco*, several insurers failed to notify consumers that the insurers had taken “adverse action[s]” based on the consumers’ credit reports. 551 U.S. at 52 (quoting 15 U.S.C. 1681m(a)). A provision of the Fair Credit Reporting Act (FCRA), 15 U.S.C. 1681 *et seq.*, imposed penalties for “willfully” failing to provide such notifications. 15 U.S.C. 1681n(a). This Court granted review to decide whether that provision “reache[d] reckless disregard of” FCRA’s requirements and, if so, whether the insurers’ violations had been “reckless.” *Safeco*, 551 U.S. at 52, 56.

Based on “clue[s] in the text” and statutory context, the Court held that FCRA violations committed “willfully” included both knowing and reckless violations. *Safeco*, 551 U.S. at 59. The Court further held that Safeco had not acted recklessly because its interpretation of the notice provisions was “not objectively unreasonable.” *Id.* at 69. The Court stated that Safeco had not had “the benefit of guidance from the courts of *23 appeals or the Federal Trade Commission (FTC) that might have warned it away from the view it took,” and observed that an “informal staff opinion” suggesting that Safeco’s practice was incorrect had explicitly stated it was not “binding.” *Id.* at 70 & n.19 (citation omitted). Under those circumstances, the Court concluded that Safeco had not run an “unjustifiably high risk of violating the statute.” *Id.* at 70 (internal quotation marks omitted).

In a closing footnote, the Court addressed an argument that, “for purposes of [Section] 1681n(a),” “evidence of subjective bad faith must be taken into account.” *Safeco*, 551 U.S. at 70 n.20. The Court stated that “[w]here, as here, the statutory text and relevant court and agency guidance allow for more than one reasonable interpretation, it would defy history and current thinking to treat a defendant who merely adopts one such interpretation as a knowing or reckless violator.” *Ibid*. The Court concluded that “Congress could not have intended such a result for those who followed an interpretation that could reasonably have found support in the courts, whatever their subjective intent may have been.” *Id.* at 71 n.20.

b. As discussed, p. 16, *supra*, terms like “knowing” and “willful” must be “construe[d] * * * in their particular statutory context.” *Jerman*, 559 U.S. at 585; see *Safeco*, 551 U.S. at 68 (emphasizing that a recklessness standard is “not self-defining” and depends on the context in which it appears) (quoting *Farmer*, 511 U.S. at 836). For four reasons, *Safeco*’s analysis of willfulness under FCRA does not support the Seventh Circuit’s holding that a wrong-but-reasonable post hoc exculpatory theory precludes a finding of scienter under the FCA.

*24 First, it is far from clear that such post hoc rationales are sufficient to defeat willfulness even under FCRA. The *Safeco* Court stated that “Safeco did not give [the plaintiffs] any notice because it thought [the notice requirement] did not apply to initial applications.” 551 U.S. at 68. That description indicates that the Court understood Safeco to have actually based its decision not to send notices on the specific legal rationale that the Court described as “not objectively unreasonable.” *Id.* at 69.

Second, and in any event, the FCRA and FCA scienter provisions contain significantly different language. FCRA imposes penalties on anyone who “willfully fails to comply” with the statute’s requirements, without defining the term “willfully.” 15 U.S.C. 1681n(a). The FCA, in contrast, imposes liability on persons who “knowingly” submit false claims or statements, and it defines that term to include mental states that turn on the defendant’s subjective knowledge or intent at the time of those submissions. 31 U.S.C. 3729(b)(1)(A)(i) (“actual knowledge”); 31 U.S.C. 3729(b)(1)(A)(ii) (“deliberate ignorance”); see pp. 17, 19, *supra*. Mechanically importing into the FCA’s scienter provision an approach that incorporates new legal theories

developed after the claims were submitted would disregard that statutory language. Indeed, the *Safeco* Court emphasized the need to give distinct meaning to different terms like “knowing” and “willfully,” and it noted that “knowing” action does “not simultaneously fall within * * * reckless[ness].”  551 U.S. at 59-60.

Third, *Safeco* involved a consumer-protection statute unrelated to the FCA's common-law antecedents. Lacking a common-law tradition directly analogous to FCRA's consumer-protection objectives, this Court *25 looked to the section of the Restatement (Second) of Torts that “define[d] reckless disregard of a person's physical safety.”  *Safeco*, 551 U.S. at 69. The Court concluded that, in that context, “the essence of recklessness at common law” was a “high risk of harm, *objectively* assessed.” *Ibid.* (emphasis added). But as discussed, pp. 20-21, *supra*, common-law decisions addressing fraudulent misrepresentation—the foundation for the FCA—have long recognized the sufficiency of *subjective* intent in the context of that distinct tort. See 21-1326 Pet. App. 41a-42a & n.1 (Hamilton, J., dissenting). The court of appeals' approach does not account for those materially different background legal standards.

Fourth, the FCA applies specifically to claims for government money or property, and accordingly implicates the principle that “those who seek public funds” have a heightened duty to “act with scrupulous regard for the requirements of law.”  *Heckler v. Community Health Services of Crawford County, Inc.*, 467 U.S. 51, 63 (1984). Holding contractors liable when they submit claims in subjective bad faith is thus consistent with “history and current thinking” about the obligations of those who do business with the government,  *Safeco*, 551 U.S. at 71 n.20, in a way that imposing liability for the credit-report-related violations in *Safeco* was not.⁴

*26 c. This Court's decision in *Halo Electronics*, *supra*, confirms that a claimant's wrong-but-reasonable post hoc rationale for its billing practices cannot negate scienter under the FCA.

In *Halo Electronics*, the defendant in a patentinfringement suit had “all-but instructed its design team to copy” existing patented technology, “opting to worry about the potential legal consequences later.”  579 U.S. at 102 (brackets and citations omitted). This Court ultimately considered whether the defendant could be held liable for enhanced damages for “willful” patent infringement.  *Id.* at 103; see  *id.* at 97. Relying on *Safeco*, the Federal Circuit had required plaintiffs seeking enhanced patent-infringement damages to make two distinct showings. The first, which the Federal Circuit had described as a showing of “[o]bjective recklessness,” required “clear and convincing evidence that the infringer acted despite an objectively high likelihood that its actions constituted infringement of a valid patent.”  *Id.* at 100 (citations omitted). The Federal Circuit had made clear that a finding of “objective recklessness” was precluded if the defendant offered a wrong-but-reasonable defense at trial, “even if the defendant was unaware of the arguable defense when he acted.” *Ibid.* “Second, after establishing objective recklessness,” the plaintiff was required to “showagain by clear and convincing evidence—that the risk of infringement ‘was either known or so obvious that it should have been known to the accused infringer.’”  *Id.* at 101 (citation omitted).

Applying that standard in *Halo Electronics*, the Federal Circuit held that enhanced damages were *27 unavailable because the defendant could identify, after the fact, an objectively reasonable argument that the patent-in-suit was invalid.  579 U.S. at 100; see  *id.* at 100-102. This Court reversed, explaining that “culpability is generally measured against the knowledge of the actor at the time of the challenged conduct.”  *Id.* at 105 (citing, *inter alia*, Restatement (Second) of Torts § 8A (1965)). The Court explained that the Federal Circuit had strayed from that principle by allowing “someone who plunders a patent * * * without any reason to suppose his conduct is arguably defensible” to “nevertheless escape any comeuppance * * * solely on the strength of his attorney's ingenuity.” *Ibid.* The Court clarified that, in determining whether a particular defendant's conduct was sufficiently egregious to justify enhanced damages, “[n]othing in *Safeco* suggests that we should look to facts that the defendant neither knew nor had reason to know at the time he acted.”  *Id.* at 106. The Court also rejected an expansive reading of

Safeco's footnote 20, explaining that while “a showing of bad faith” is not relevant under FCRA, courts in patent infringement suits had long recognized that subjective bad faith could warrant “enhancing patent damages.”  *Id.* at 106 n.*.

Respondents attempt to distinguish *Halo Electronics* by arguing that it arose “[i]n the historical context of patent law,” where proof of “bad-faith infringement” was sufficient to establish the necessary scienter. 21-1326 Resp. Supp. Br. 7 (citation omitted). But that argument simply reinforces the oddity of transplanting FCRA's scienter standard into the current statutory setting. As discussed above, pp. 17, 20-21, *supra*, the FCA's text and the traditional contours of common-law fraud strongly indicate that proof of “subjective bad *28 faith” is sufficient to establish scienter under the Act, just as it is in patent cases.  *Halo Electronics*, 579 U.S. at 105.

2. Additional arguments advanced by the court of appeals and respondents do not support adoption of an “objective reasonableness” standard here

a. The court of appeals concluded that, even if a defendant “suspect[s], believe[s], or intend[s]” that its claim is false, the defendant “cannot *know* that its claim is false” unless the position it adopts is objectively unreasonable in light of statutory or regulatory text and “authoritative guidance.” 21-1326 Pet. App. 21a-22a.

That sort of “radical epistemological doubt” provides no defense in “any other areas of law,” and it would be particularly inappropriate in construing a fraud statute. 21-1326 Pet. App. 39a (Hamilton, J., dissenting). A courier who correctly believes he is transporting drugs cannot disprove his knowledge of that fact by showing that he never opened the package (or performed a field test) to be sure. See *ibid.* A chief financial officer who intends to cook the books does not escape liability by insisting that she never double-checked the math herself and therefore “did not ‘know’-not *really-that* the earnings reports were inflated.” *Ibid.*; cf. pp. 20-21, *supra* (discussing common-law fraud). The same principle applies here.

b. At the certiorari stage, SuperValu stated that, under the third prong of the FCA's definition of “knowingly,” a defendant can defeat a showing of recklessness—“the most capacious form of scienter” by establishing that its conduct was “objectively reasonable.” See 21-1326 Resp. Supp. Br. 4. SuperValu argued that a showing of objective reasonableness should likewise be sufficient to disprove the additional forms of *29 scienter (actual knowledge and deliberate ignorance) set out separately in the FCA. *Id.* at 4-5; see 21-1326 Pet. App. 16a (similar). SuperValu described that approach to the FCA's “knowingly” standard as creating a defense “analogous to qualified immunity.” 21-1326 Resp. Supp. Br. 4.

Even under the third prong of the FCA's definition, SuperValu is mistaken in suggesting that a wrong-but-reasonable post hoc rationale can defeat a finding of scienter. That third prong encompasses a claimant who “acts in reckless disregard of the truth or falsity of the information” contained in a claim or statement.  31 U.S.C. 3729(b)(1)(A)(iii). The “reckless disregard” prong is partly objective, since it encompasses circumstances where a reasonable person would perceive a high risk of falsity, even if the actual claimant does not. But the present-tense phrase “acts in,” and the definition's relationship to the Act's operative prohibitions, make clear that “reckless disregard” depends on the information available to the defendant at the time false claims or statements are submitted, not later-acquired information. See p. 19, *supra*; cf. *Black's Law Dictionary* 594 (11th ed. 2019) (definitions of “reckless disregard” that focus on the defendant's actual or constructive knowledge at the time of the relevant act).

The *Halo Electronics* Court drew the term “objective recklessness” from the Federal Circuit's own opinions, see  579 U.S. at 100, and the Court used the term as shorthand to distinguish that requirement from the second prong of the Federal Circuit's two-part test for enhanced patent damages, see  *id.* at 101; p. 26, *supra*. But this Court's reference to (and rejection of) the particular conception of “objective recklessness” that the Federal Circuit had adopted does not suggest that a *30 post hoc rationale for challenged conduct can *generally* preclude a finding of recklessness. To the contrary, the *Halo Electronics* Court observed that “culpability is generally measured against the knowledge of the actor at the time of the challenged conduct.”  579 U.S. at 105.

In any event, extending SuperValu's proposed "qualified immunity" defense to the first two prongs of the FCA's scienter definition would be particularly unsound. In *Halo Electronics*, the Court held that the Federal Circuit was wrong to "require[] a finding of objective recklessness in every case" because "intentional or knowing" conduct can exist "without regard to whether [the] infringement was objectively reckless." 579 U.S. at 104-105. The Court found that subjective bad faith could be a sufficient predicate for enhanced damages even though "such damages are generally reserved for egregious cases of culpable behavior." *Id.* at 104. Where defendants subjectively intend to submit false claims for payment, their conduct is highly culpable even if a later-identified ambiguity in the governing requirements could plausibly be resolved in their favor. The same is true of defendants who submit claims that they strongly (and correctly) suspect are false, rather than invoking readily available avenues for obtaining clarification.

c. Respondents also defend the court of appeals' approach as necessary to force "agencies to speak clearly," contending that "considerations of due process and fair notice" preclude liability for conduct that is consistent with an objectively reasonable reading of the applicable statute, regulation, or contract. 22-111 Br. in Opp. 27-28; see 21-1326 Resp. Supp. Br. 8-9 (similar). That contention fails for two reasons.

*31 First, those who affirmatively believe that they are submitting false claims, or who deliberately avoid inquiries that would either confirm or dispel that suspicion, cannot justifiably complain about a lack of fair notice. Such a state of mind has always been sufficient to establish scienter under the common law of fraudulent misrepresentation, even in circumstances where the falsity of the defendant's representation was not objectively clear at the time of the challenged conduct. And those who act based on a subjective, good-faith belief in a "reasonable interpretation of an uncertain legal obligation later determined to be erroneous," 21-1326 Br. in Opp. 30, will not be liable under any prong of the FCA's "knowingly" definition. Adoption of respondents' proposed defense is thus unnecessary to protect the dueprocess values they invoke.

Second, respondents' argument ignores the specific context in which all FCA claims arise. Respondents object to any standard that would require companies to "affirmatively seek 'clarification' * * * from the government when the law is ambiguous," insisting that dueprocess principles make the government responsible for "proactively clarif[y]ing] regulatory ambiguities." 21-1326 Resp. Supp. Br. 8-9 (citation omitted). But whatever force that objection might have in the context of general regulatory laws, it does not apply to those who request federal funds. "[W]hen a private party seeks to spend the Government's money," it can "expect no less than to be held to the most demanding standards." *Heckler*, 467 U.S. at 63.

Given its limited resources and the administrative complexity of many federal funding programs, the government cannot feasibly address in advance every potential ambiguity that motivated attorneys might later *32 identify. The government therefore relies on its contracting partners to approach the inevitable ambiguities in good faith, following what they understand to be the best interpretation and seeking clarification when necessary. By allowing claimants for government funds to escape FCA liability simply by identifying wrongbut-reasonable post hoc justifications for their conduct if and when litigation occurs, the decisions below substantially reduce contractors' incentives to seek clarification before claims are submitted. That approach cannot be reconciled with this Court's longstanding recognition that "[m]en must turn square corners when they deal with the Government." *Rock Island, Arkansas & Louisiana Railroad Co. v. United States*, 254 U.S. 141, 143 (1920).

C. The Court Of Appeals Erred In Treating Contractual Language And Warnings From Non-Governmental Actors As Irrelevant To The Scienter Analysis

The court of appeals further erred in holding that only "circuit court precedent or guidance from the relevant agency" is sufficiently "authoritative" to give notice of a claim's falsity. 21-1326 Pet. App. 28a; see 22-111 Pet. App. 18a ("[W]e may only consider binding precedent from the courts of appeals or appropriate guidance from the relevant agency."). On the court's view, even "contract definitions" in the very contract under which a defendant seeks payment are apparently irrelevant to the

reasonableness of the defendant's interpretation if they originate from a source other than the agency itself. 21-1326 Pet. App. 28a. The Court should reject that unwarranted limitation on the types of evidence that may bear on whether an FCA defendant acted with a culpable state of mind.

*33 The court of appeals derived its “authoritative guidance” limitation from a single paragraph in *Safeco*. See 21-1326 Pet. App. 27a-28a. There, this Court observed that “no court of appeals had spoken” on the disputed legal question when the defendant insurance companies acted, and “no authoritative guidance ha[d] yet come from the” relevant agency.  *Safeco*, 551 U.S. at 70. “Given this dearth of guidance and the less-than-pellucid statutory text,” the Court held that “Safeco's reading was not objectively unreasonable.” *Ibid*.

That short discussion of the specific circumstances present in *Safeco* provides no basis for categorically foreclosing courts and juries from considering additional materials in assessing scienter under the FCA. The *Safeco* Court did not expressly adopt such limits even with respect to FCRA. And in any event, the FCA differs from FCRA in ways that would make the extension of such a rule particularly inappropriate.

The FCA applies not just to claims submitted directly to federal officials, but also to claims submitted “under a contract or otherwise” to a government “contractor, grantee, or other recipient, if the money or property is to be spent or used on the Government's behalf or to advance a Government program or interest.”  31 U.S.C. 3729(b)(2)(A)(ii). The Act thus contemplates that deceptive conduct vis-à-vis non-federal intermediaries can give rise to FCA liability. Such non-federal actors play an integral role in the implementation of many federal funding programs, including Medicare Part D and Medicaid, in a way that has no usual analogue under ordinary regulatory laws. It would flout the congressional design to grant claimants in such programs *carte blanche* to ignore guidance from, or *34 contracts with, the very entities that Congress has designated to administer their claims.⁵

D. Petitioners' Evidence Demonstrates Material Disputes Of Fact Regarding Knowledge

Under the appropriate standard, the district court should not have granted summary judgment to respondents in either case. As discussed above, petitioners identified evidence indicating that respondents were subjectively aware of a high risk that they were misleading government-funded healthcare programs by submitting false “usual and customary” prices, but chose to hide their conduct for as long as possible rather than make inquiries to ensure compliance. See pp. 6-9, *supra*. Petitioners pointed to emails from executives and managers demonstrating awareness of likely illegality and a desire to keep government-funded programs from learning of their practices. *Ibid*. Petitioners also offered notices from pharmacy benefit managers and contract language strongly suggesting that respondents were reporting false “usual and customary” prices to at least some of those programs. *Ibid*. Finally, petitioners identified a stark disconnect between the amounts that respondents claimed were “usual and customary” prices for cash sales of particular prescription drugs and the amounts that respondents actually charged for most such cash sales. *Ibid*. That evidence would allow reasonable factfinders to conclude that respondents “knowingly” submitted false claims or

*35 statements to government healthcare programs.  31 U.S.C. 3729(a)(1)(A) and (B).

The Court therefore should reverse the court of appeals' decisions affirming the grants of summary judgment as to knowledge, and remand for further proceedings. At a minimum, the Court should vacate and remand for the court of appeals to evaluate petitioners' evidence of scienter under the appropriate legal standard.

CONCLUSION

The judgments of the court of appeals should be reversed.

Respectfully submitted.

Footnotes

- 1 Much of the evidence concerning Safeway's knowledge of its usual-and-customary price obligations was filed under seal at Safeway's request. See 11-cv-3406 D. Ct. Doc. 189 (Dec. 23, 2019). This brief accordingly relies on descriptions of that evidence in the lower courts' opinions.
- 2 The Dictionary Act, 1 U.S.C. 1, provides that “unless the context indicates otherwise * * * words used in the present tense include the future as well.” *Ibid.* Here, however, “context indicates otherwise.” *Ibid.* A defendant who submits a false claim that she reasonably believes to be true, for example, is not subject to FCA liability merely because she later acquires “actual knowledge” that the claim was false, though that defendant may become liable if she then “knowingly conceals” an obligation to return funds.  31 U.S.C. 3729(a)(1)(G) and  (b)(1)(A)(i); see pp. 19-20, *infra*.
- 3 A claimant who intends to cheat the government *can* escape FCA liability if his trial attorney identifies a post hoc legal rationale for the claims that is not only reasonable but correct. Such a showing would mean that the defendant did not submit “false or fraudulent claims” in the first place.  31 U.S.C. 3729(a)(1)(A) (emphasis added). That would preclude FCA liability, even if the defendant in submitting his claims had acted with one of the forms of scienter identified in  31 U.S.C. 3729(b)(1)(A).

- 4 As these cases illustrate, moreover, companies that seek funds from the government (particularly on a recurring basis) often have ready avenues for resolving ambiguity about payment rules—for example, by consulting their contacts in state Medicaid agencies, or contractual intermediaries like pharmacy benefit managers. See, *e.g.*, 21-1326 Br. in Opp. 8-9 (arguing that SuperValu asked for clarification from certain state Medicaid agencies and pharmacy benefit managers). When such avenues for clarification are readily available, a contractor's failure to invoke those mechanisms while seeking public funds may be evidence of deliberate ignorance or recklessness under the FCA.
- 5 More generally, no textual or logical reason exists why the FCA's scienter provisions would preclude a factfinder from considering warnings that a defendant received from other knowledgeable non-governmental sources, such as attorneys, compliance officers, or government-contracting experts.

EXHIBIT D-149

March 28, 2003

NOTE TO: Medicare+Choice Organizations and Other Interested Parties

SUBJECT: Advance Notice of Methodological Changes for Calendar Year (CY) 2004
Medicare+Choice (M+C) Payment Rates

In accordance with Section 1853(b)(2) of the Social Security Act (the Act), we are notifying you of proposed changes in the M+C capitation rate methodology and risk adjustment methodology for CY 2004. Preliminary estimates of the various national per capita M+C growth percentages and the methodology changes for CY 2004 are also attached. For 2004 and 2005, CMS will announce the M+C rates on the second Monday in May before the calendar year concerned, in accordance with Section 532 of P.L. 107-188, the Public Health Security and Bioterrorism Response Act of 2002. This Advance Notice is published 45 days before that date.

Attachment I shows the preliminary estimates of the national per capita growth percentage for both the blend rates and the floor amount. Attachment II of this Notice includes a detailed discussion of the new CMS-HCC risk adjustment model that will be in effect for CY 2004, the new ESRD payment approach, and various implementation issues affecting CY 2004 payments.

We will continue paying M+C organizations in 2004 on a fee-for-service basis for covered clinical trial items and services provided to their members.

Preliminary Estimate of the National Per Capita Growth Percentage for Calendar Year (CY) 2004

Payments to Medicare+Choice (M+C) organizations are based on the highest of three amounts specified in statute for each payment area (generally a county): (1) a “blended rate” based on both national and local data; (2) a “floor” amount specified in statute; and (3) an amount representing 102 percent of the prior year's rate. Both the blended rate and the floor amount are annually adjusted based on the national per capita M+C growth percentage defined in Section 1853(c)(6) of the Social Security Act (the Act), while the blend amount is subject to a separate adjustment under section 1853(c)(5) intended to make aggregate payments the same as they would be if area-specific rates were used. In this notice, we provide preliminary estimates of the national per capita M+C growth percentages in CY 2004, and the increase in the floor payment rates in CY 2004. Each of these estimates reflects the components required by the BBA: an underlying trend change for CY 2004; and an adjustment for changes in the estimates of prior years' growth percentages. The underlying trend change for CY 2004 and the revision to the CY 2003 estimate reflect changes made by the Consolidated Appropriations Resolution, 2003, (Public Law 108-7) enacted on February 20, 2003.

The current estimate of the change in the national per capita M+C growth percentage for aged enrollees in CY 2004 is 9.5 percent. This estimate reflects an underlying trend change for CY 2004 in per capita costs of 3.7 percent and an adjustment for the fact that the current estimate of prior years' cumulative aged M+C growth percentages (for CYs 1998 through 2003) is 5.6 percent higher than the estimates actually used in calculating the CY 2003 capitation rate book that was published March 1, 2002 (as required by Section 1853(c)(6)(C) of the Act).

The table below shows the increases in the national per capita growth percentages for the aged, disabled, ESRD, and the combined aged + disabled.

The preliminary estimate of the floor for aged beneficiaries in CY 2004 is \$592.29 for any area in an MSA within the 50 States and the District of Columbia with a population of more than 250,000, and \$535.88 for all other areas within the 50 States. In both cases this represents a 8.2 percent increase over the respective CY 2003 floors of \$547.54 and \$495.39. As with the estimate of the national per capita M+C growth percentage, this estimate reflects an underlying trend change for CY 2004 in per capita costs of 3.7 percent. The total change for the floors includes an adjustment of 4.3 percent for revised estimates of prior years' aged M+C growth percentages only for 2002 and 2003, since legislation reestablished the base floor amounts in 2001.

The following tables summarize the estimates for the change in the national per capita M+C growth percentage and the floor increase.

National Per Capita Growth Percentage (for Blend)

	Aged	Disabled	ESRD	Aged+Disabled
2004 Trend Change	3.7%	3.8%	2.9%	3.7%
Revision to CY 1998 Estimate	0.1%	-0.4%	-1.8%	0.0%
Revision to CY 1999 Estimate	0.4%	0.8%	-0.9%	0.5%
Revision to CY 2000 Estimate	-0.3%	0.0%	3.7%	-0.3%
Revision to CY 2001 Estimate	1.1%	3.1%	-4.7%	1.3%
Revision to CY 2002 Estimate	2.1%	1.4%	6.2%	1.9%
Revision to CY 2003 Estimate	2.2%	3.4%	1.2%	2.4%
Total Change	9.5%	12.7%	6.3%	9.8%

National Per Capita Growth Percentage (for Floor)

	Aged	Disabled	ESRD	Aged+Disabled
2004 Trend Change	3.7%	3.8%	2.9%	3.7%
Revision to CY 2002 Estimate	2.1%	1.4%	6.2%	1.9%
Revision to CY 2003 Estimate	2.2%	3.4%	1.2%	2.4%
Total Change	8.2%	8.8%	10.6%	8.2%

Note: The above percentages are multiplicative not additive.

These estimates are preliminary and could change before the final rates are announced on May 12, 2003. Further details on the derivation of the national per capita M+C growth percentage will also be presented in the May 12 announcement.

Attachment 2

Changes in Methodology Since Calendar Year (CY) 2003 Rates

There are a number of changes in M+C payment methodology for CY 2004. Section A discusses the new risk adjustment model to be implemented in 2004, Section B describes refinements to this model for the ESRD population, and Section C discusses the frailty adjuster to be introduced in the PACE program and certain other demonstrations. Section D reviews a range of implementation issues. Section E discusses Medicare as Secondary Payer, and Section F describes the new method for estimating costs of National Coverage Determinations and other legislative changes in benefits. Section G provides an overview of public comments on the February 3, 2003 public meeting on risk adjustment.

A. The new CMS-HCC risk adjustment model.

Background. The Balanced Budget Act of 1997 (BBA) mandated that a risk adjustment payment methodology, incorporating information on beneficiaries' health status, be implemented in the Medicare+Choice (M+C) program no later than January 2000. The BBA timelines for data collection indicated that initially risk adjustment of M+C payments should be based only on data from enrollees' inpatient hospital stays, with later implementation of risk adjustment based on data from additional sites of care. CMS (formerly the Health Care Financing Administration) selected the Principal Inpatient Diagnostic Cost Group (PIP-DCG) model as the risk adjustment method to be implemented in 2000. This model recognizes diagnoses for which inpatient care is most frequently appropriate and which are predictive of higher future costs. Until October 2002 M+C organizations submitted to CMS encounter data on enrollees' inpatient hospitalizations only (analogous to claims), which CMS processed through the PIP-DCG model to calculate payments to M+C organizations.

To assist managed care organizations, CMS provided for a gradual phase-in of the effects of risk-adjustment, initially adjusting only a portion of the total payment based on the new PIP-DCG methodology, with the remainder still adjusted under the pre-BBA method based only on demographic information. This element of the risk adjustment methodology provided a safeguard against abrupt changes in payments to M+C organizations. For 2000, the transition schedule called for basing 90 percent of the prospective monthly payment per enrollee on the demographic-only method and 10 percent on the PIP-DCG risk adjustment method. The demographic-only portion of the payment was adjusted for age, gender, Medicaid eligibility, institutional status, and working aged status. The risk adjusted portion of the payment, under the PIP-DCG model, was adjusted for age, gender, Medicaid eligibility, whether originally entitled to Medicare due to disability, and working aged status, as well as health status.

The Balanced Budget Refinement Act of 1999 adopted CMS's "phase in" concept in statutory language, but altered CMS's proposed timing by mandating that the 90/10 blend would continue through 2001. Most recently, the Benefits Improvement and Protection Act of 2000 (BIPA) again modified the phase-in schedule to further soften the financial impact of risk adjustment on M+C organizations. Under BIPA, the 90/10 blend continues through 2003. In 2004 the risk

adjusted portion of the M+C payment increases to 30 percent, in 2005 to 50 percent, in 2006 to 75 percent, and in 2007 to 100 percent.

Although the PIP-DCG model was an improvement over the previous demographic payment model, CMS recognized that its utility was limited by only using inpatient hospital data and providing additional payment for only a small number of high cost seriously ill beneficiaries. Subsequently, BIPA required the implementation of a model using not only diagnoses from inpatient hospital stays, but also from ambulatory settings beginning in 2004. To prepare for implementation in 2004 of a risk adjustment model based on multiple sites of care, in 2001 CMS required M+C organizations to begin submitting data on enrollees' hospital outpatient and physician office encounters. Although these encounters would have provided additional data for quality measures and re-estimation of payment weights for future risk adjustment models, CMS was concerned about the administrative data burden on M+C organizations.

Physician encounter data collection began in October 2000 and hospital outpatient encounter data collection began in April 2001. In response to concerns of M+C organizations, in May 2001 Secretary Thompson suspended the requirement for submission of hospital outpatient and physician office encounter data in order to allow CMS the opportunity to "explore and implement a risk adjustment process for M+C payments that balances accuracy and administrative burden."

As a result, we have selected a new risk adjustment model for 2004 (described below) as well as significantly reducing the administrative burden on M+C organizations. By redesigning our data collection and processing systems, we now require that only a few data elements besides diagnoses be submitted for payment purposes. Fewer diseases will be used by the new model (compared to other comprehensive risk adjustment models) and the requirement to report each encounter has been removed. In addition, CMS requires that relevant diagnoses be submitted for each beneficiary only once during a data collection period. Also, M+C organizations may choose to submit diagnoses on a quarterly basis.

Selection of the new CMS-HCC risk adjustment model . Our goal was to select a clinically sound risk adjustment model that improved payment accuracy while minimizing the administrative data burden on M+C organizations. CMS worked with a number of outside researchers to develop a more comprehensive risk adjustment model using inpatient and ambulatory data. We also sought public input on model selection via consultations with industry trade groups and staff from different M+C organizations, a public meeting (conducted on January 16, 2002), publication of a Federal Register notice, and solicitation of public comments on the meeting and Notice. (For information CMS published during 2002 on the development of the more comprehensive risk adjustment model, see the Risk Adjustment web page at <http://www.cms.hhs.gov/healthplans/riskadj/>.)

The payment models CMS considered used only demographic and diagnosis data to avoid incentives related to tying payment to treatment modalities. CMS chose one of the comprehensive models that would lend itself most easily to necessary modifications that would be clear to analysts and physicians. The resulting model is a CMS modification of the comprehensive model created by Health Economics Research (now a division of RTI), which

also developed the PIP-DCG model currently being used for M+C payment. We will refer to this model as the CMS-HCC model.

CMS-HCC Model Characteristics

The CMS-HCC model is a selected significant disease type of model because it incorporates a selected subset of ICD-9-CM diagnosis codes and places them into approximately 64 disease groups called Hierarchical Condition Categories (HCCs). Each disease group includes conditions that are related clinically and have similar cost implications. (See **Exhibit 1** for a draft list of coefficients for each disease group. A final list of disease groups, their coefficients, and a crosswalk to the required ICD-9 codes will be available in the May 12 Announcement of M+C Payment Rates and on the CMS website. These annual coefficients will be used to calculate per person per month payments to M+C organizations. At that time, CMS will also make available for public use risk adjustment payment software that will appropriately assign diagnoses to CMS-HCC groups to identify relevant disease hierarchies and calculate risk scores for each enrollee.)

The model is prospective in the sense that it uses diagnosis information from a base year to predict costs and adjust payments for the next year. Models of this type are largely driven by the costs associated with chronic diseases, and they capture the systematic risk (costs) associated with Medicare populations. CMS will make available a full report on the CMS-HCC model. For a description of the underlying principles and development methods for the selected model, see the report on earlier versions of the HCC model, “Diagnostic Cost Group Hierarchical Condition Category Models for Medicare Risk Adjustment (Final Report); December 2000”, available from the CMS website at <http://www.cms.hhs.gov/researchers/projects/>.

As in the PIP-DCG model, there are demographic variables for age and sex, Medicaid eligibility, and originally disabled status. There is also an adjustment for working-aged status. The recognition of the additional costliness to the Medicare program of people characterized by Medicaid eligibility is maintained as it was in the PIP-DCG model. Note, however, that this variable has less importance (less incremental cost) in models that recognize health status using disease groups because more of the dollars in the model are associated with specific diseases rather than demographic categories. As in PIP-DCG, the Medicaid payment adjustment is triggered by a beneficiary having Medicaid status any one month in the data collection year.

We also continue to recognize that those eligible for Medicare due to disability continue to be more expensive for their age after 65. There are variables in the model capturing that the original reason for Medicare entitlement was disability.

Unlike the PIP-DCG model, which does not have an institutional status adjuster, the CMS-HCC model has a modification that distinguishes the community-dwelling Medicare population from the long-term institutionalized populations. This long-term institutional adjuster differs from the institutional factor used in the demographic-only payment model. The new institutional adjuster is explained at the end of this section.

Clinical Features of the CMS-HCC Model

HCCs are disease groups broadly organized into body systems, somewhat analogous to the ICD-9-CM major diagnostic categories. Unlike the ICD-9-CM categories, however, the diagnoses within each disease group are related clinically and in terms of cost to the Medicare program.

Whereas the PIP-DCG model places a person in only a single cost group based on his/her principal inpatient diagnosis with the greatest cost implications, the CMS-HCC model is structured so that each disease group contributes its incremental predicted cost to payment amounts. Conceptually, disease groups are not mutually exclusive because unrelated disease processes each contribute to the predicted costs of care. The CMS-HCC model uses diagnoses from physician visits and hospital inpatient and outpatient stays to assign each beneficiary to none, one, or more than one disease group. For example, an M+C enrollee with heart disease, cerebrovascular disease, and cancer would be assigned to three separate disease groups, and CMS's payment for this enrollee will reflect increments for each of these conditions. We refer to this as an additive model because, in general, each additional diagnosis results in an increased payment.

In some cases, however, an additional diagnosis does not trigger an additional payment increment because a more severe diagnosis supercedes a less serious one. That is, the CMS-HCC model also can characterize a beneficiary's illness level within a disease process. In some disease groups the diagnoses are clinically related and ranked by (cost) severity in a hierarchy, since the more severe manifestations of a disease process principally define the impact of that disease group on cost.

An example is the diabetes hierarchy. Diabetes diagnoses are organized into four severity groups, ranked from uncomplicated diabetes to diabetes with renal manifestations (highest cost implications). A person may be coded with diagnoses in any or all of the four severity groups, but only the highest code in the hierarchy is used to increment payment for diabetes. There are similar hierarchies among cancers and cardiac diseases. In short, costs are additive across hierarchies and disease groups, but not within hierarchies. (See **Exhibit 2** for a draft list of the disease groups that have hierarchies.)

CMS-HCC Model Refinement.

In the original HCC model developed by Health Economics Research, there were approximately 5,000 ICD-9 codes grouped into about 100 disease clusters used for payment, which is about a third of the approximately 15,000 possible codes in ICD-9-CM. The developers isolated and excluded codes that were vaguely defined, only represented signs or symptoms, and did not contribute significantly to the predictive power of the model. They made decisions about how to cluster codes and which to exclude in consultation with a panel of physicians using statistical information and clinical input.

CMS was able to reduce further the size of the original HCC model, with only a modest effect on the power of the model to predict costs, by taking into account the clinical and cost significance of various disease groups relative to the model's overall performance and clinical coherence. The CMS-HCC model categorizes a reduced set of ICD-9-CM diagnosis codes (approximately 3,300 codes grouped into a reduced set of about 800 codes) into approximately 64 disease groups

(HCCs). (The draft list of the reduced code set that triggers payment in the CMS-HCC model was published in April 2002 on the CMS website at <http://www.cms.hhs.gov/healthplans/riskadj/>. The final list of codes for 2004 will be published May 12, 2003 in the Announcement of M+C Payment Rates. Each year we will issue a list of required diagnoses to take into account new ICD-9 codes.) CMS analysts used both statistical information and clinical input from physicians to trim the original HCC model. The general principles for trimming the model included: retaining disease categories from each body system; not disrupting hierarchies; removing the categories with the smallest cost and predictive power implications; removing categories with very few people unless very costly; removing marginal categories that require a large number of codes; and including categories based on clinical judgment.

The clear structure of the original HCC model allowed us to associate diseases categories with incremental costs and construct tables to show how often certain disease groups occur in the Medicare population (based on a 5 percent fee-for-service sample of Medicare beneficiaries). We used stepwise regression, a technique that ranks the variables by their predictive power, to identify the disease groups that were weakest from a statistical point of view, i.e., the groups with the least predictive power.¹ Based on the results of this analysis, we produced a range of possible models from one with very few disease groups to a full comprehensive model, and discussed the advantages and disadvantages of each with a panel of physicians from within and outside CMS. Most of the panelists preferred the more comprehensive models because they were more clinically defensible and less subject to gaming. However, they found that a model such as the CMS-HCC version presented here was a reasonable compromise, given the need to balance improved payment accuracy with minimizing administrative data burden.

Since the initial selection of the CMS-HCC model, CMS has continued to refine the model, addressing concerns about coding practices and model performance. CMS contracted with an independent group to study issues of coding practice and its effect on how the model would perform when applied. Based on the findings, CMS modified the cancer and diabetes hierarchies. For example, metastatic (secondary site) cancer codes are not reported as frequently as they should be in fee-for-service claims data, so the distinction between multiple primary sites and metastases is poor in the Medicare data. Reflecting this, the secondary site codes have been merged with other costly primary cancers. For diabetes, further study of the costs and coding resulted in a reordering of the codes within the diabetes hierarchy. We will continue to assess the need for improvements in the model in 2004 and beyond.

CMS also incorporated some interactive terms in the model to capture the combined effects on cost of certain diseases. In most instances, simply adding the incremental costs of multiple diseases captures the combined effect that individual diseases have on costs. However, research

¹ Regression analysis is a technique used to predict outcomes, measure the strength of the association between independent variables (predictors, e.g., demographic variables) and the dependent variable (outcome, i.e. Medicare expenditures), and, to identify the subset of independent variables that are most effective for estimating the outcome. Stepwise regression is a form of this technique that is used to identify the subset of variables that is most effective for estimating the outcome. It works by eliminating those independent variables from the regression that contribute least to explaining the outcome.

has shown that some combinations of diseases are more or less costly to treat than the sum of the costs of individual diseases. Thus, interactive terms representing combined effects are in the model. The diseases involved are diabetes, congestive heart failure, chronic obstructive pulmonary disease, cerebrovascular disease, renal failure, and coronary artery disease. There are also terms in the model that distinguish the costs of the disabled (under 65) from the aged for specific diseases. These are disorders that typically have more expensive treatment patterns in the younger population, e.g., drug and alcohol psychosis and dependence, opportunistic infections, and cystic fibrosis.

See the end of this section for information on another CMS refinement of the HCC model – the addition of an adjuster for long-term institutional status.

Estimation methods. The fee-for-service data used to calibrate the models are from 1999 and 2000. The diagnoses and Medicaid status are from 1999, and the total costs for each beneficiary are from 2000. ESRD patients were excluded from calibration of the CMS-HCC model. They will be paid under an alternative payment methodology to reflect their unique costs, described in Section B.

Decedents in 2000 are included and treated as they were in the previous payment models. First, their costs were annualized, i.e., inflated to correspond to a full 12-month period. Then, when the model was estimated, the decedents were assigned a weight according to the proportion of the year they were alive. M+C enrollees and hospice patients are treated similarly: their costs are included until they enter hospice or enroll in an M+C organization. All claim types were used to compute costs. Hospital inpatient, outpatient and clinical practitioner claims were used to collect diagnoses. Principal and secondary diagnoses were used from institutional bills and the diagnoses from claim headers were used from the practitioner bills. Fully denied claims were not used. However, diagnoses were accepted from claims that had Medicare Secondary Payer as the reason for denial.

The estimation was done using the weighted least squares method. The cost variable was annualized and weights were set to the fraction of the year in months that each person was alive and not in a hospice or M+C organization. Annualization and weighting was also done to reflect a beneficiary's time and expenditures in the community or institutionalized status category. The expenditures in each status were summed separately. Statistical formulations more elaborate than weighted linear regression have been researched but did not improve the performance of risk adjustment models significantly or consistently.

When models are estimated using the regression method, each characteristic (demographic or diagnostic) is estimated to determine its marginal costliness to the Medicare program. Use of the regression method produces a coefficient for each variable (characteristic), which represents the marginal (additional) effect of each variable in predicting program costs. These coefficients are then converted to relative cost factors, because in order to use the model as an adjuster to a base rate, costs must be converted to relative costs – i.e., risk adjustment factors. This is done by dividing the marginal costs by the average per capita costs in fee-for-service Medicare. For example, if the average per capita cost in Medicare is \$5000, a marginal cost of \$1000 for some characteristic becomes a relative risk factor of 0.2. To arrive at a beneficiary's total risk

adjustment factor, add the factors associated with each applicable demographic characteristic and each applicable disease group.

Adjustment for coding intensity and population changes. We believe that there have been sufficient changes in the national average predicted expenditures from 1997 to 2004 that it may not be appropriate to use the 1997 national average predicted expenditures to calculate the relative risk factors for the 2004 CMS-HCC model. These changes are related to changes in fee-for-service-population data attributable to changing demographics, average disease burdens, and coding patterns (i.e., later data tends to reflect more precise coding).

The CMS-HCC risk adjustment model is calibrated on expenditures and disease patterns for 1999 and 2000. When the coefficients from that calibration are used to predict expenditures from earlier or later periods, the model would predict the same mean were it not for the factors above. However, the predicted means from earlier years tend to be lower than those from later years. Fee-for-service coding intensity and specificity, particularly in physician claims, has increased over time. In other words, if we created relative risk factors for our 2004 CMS-HCC model using 2000 claims data on a sample of fee-for-service beneficiaries and then used these risk factors to calculate the risk scores for a 2004 sample fee-for-service beneficiaries with exactly the same demographic and actual disease profile as the 2000 sample, the 2004 group would still have higher risk scores than the 2000 group.

When calculating the ratebook for 1997, we are exploring using the national means from each of three years to compute the relative risk scores for the counties. This method would make the mean relative risk factor for fee-for-service equal to 1.0 for that period. It is desirable that the mean relative score stay at this value, so CMS will consider an actuarial adjustment to the national mean predicted expenditures used to calculate relative risk factors so that the mean relative risk factor in fee-for-service remains close to 1.0 for the payment period. Note that any changes in population demographics and rising coding intensity are happening in the fee-for-service population, which is the basis for the risk adjustment model.

Adjustment for long-term institutionalization. In the course of our research addressing other characteristics distinguishing cost among beneficiaries, we found further evidence for differences in cost between the community population and the long-term institutionalized (defined as those in institutions more than 90 days) within the same disease groups. The direct recognition of health status in the model results in a large overprediction for the long-term institutionalized if not controlled for in the model. We also found that the costs for the short-term institutionalized resemble the costs for beneficiaries with similar health status residing in the community.² These findings do not show that the long-term institutionalized are not expensive to Medicare. What we are recognizing is that people in the community are even more expensive to the program than equally ill people (in the same disease groups) who are long-term institutionalized.

Institutional status is recognized in the payment year, not the prior year. To implement an adjuster without creating burden for the M+C organizations, CMS is using the Minimum Data Set (MDS) collected routinely from nursing homes to identify the population of long-term

² Hereafter, the term “community” will be used to refer to community-based and short-term institutionalized populations.

institutionalized. MDS assessments are sent to the States and CMS on at least a quarterly basis. CMS is using the presence of a 90-day assessment in the payment year to identify the long-term residents for payment purposes. Payment at the long-term rate would start in the month following the assessment. Once persons are so identified, they remain in long-term status until discharged home for more than fourteen days. Note that this marker is different from the institutionalized marker used in the demographic system. That marker largely captured the higher costs of older and sicker people who go into skilled or unskilled levels of care. In the risk adjustment model, the health status markers capture most of these characteristics. We are concentrating on long-term residents and their cost patterns, after controlling for disease.

The CMS-HCC model has been calibrated separately for the community and long-term institutionalized populations. Disease-related incremental payments for the community population are generally higher than those for the institutionalized. The age/sex payments are higher for the institutionalized than the community population. The costs associated with high mortality rates in the long-term institutionalized group are all captured in this calibration, which included only the institutional months for this population. The CMS-HCC model for the institutionalized has been simplified even further than the community model. The same diseases are captured, but many disease groups have been merged to assure stable coefficients. The resulting model is similar to some of the reduced models that were researched for the whole population.

B. New payment methodology for M+C ESRD enrollees.

Simultaneous with the implementation of the CMS-HCC model for risk adjustment, we are implementing a new approach to improve payments on behalf of enrollees with End Stage Renal Disease (ESRD). Section 605 of BIPA required CMS to adjust our approach to computing ESRD payment rates to reflect the method used in the ESRD social HMO (S/HMO) demonstration then in place. We interpret this to mean that ESRD payments to M+C organizations should employ the same basic approach as under the ESRD demonstration referenced in section 605. To implement the BIPA provision for 2002, CMS increased the base rates by three percent and began adjusting payments with age and sex factors, while continuing to review other options. Effective January 2004, M+C enrollees with ESRD will be incorporated into diagnosis-based risk adjustment using a different version of the CMS-HCC model. (See **Exhibit 3** for a draft list of coefficients for each disease group.) The new ESRD payment model will align us further with the method used in the ESRD S/HMO demonstration by allowing us to capture co-morbidity information in addition to demographic information and basic disease markers for ESRD beneficiaries. ESRD status is recognized in the payment year. The data for 100 percent of ESRD beneficiaries were used to develop the model. The three parts of the ESRD CMS-HCC model are:

1. A full risk adjustment model for people on dialysis that is calibrated only on this population, so the payment weights are unique to these beneficiaries. A rescaled state-level ratebook will be created to reflect this population's program costs.
2. A series of lump-sum payments to reflect costs associated with transplant procedures. Transplant costs associated with the month of transplant and two following months are carved out of expenditures for the ESRD population to allow CMS to make larger

transplant-specific payments (outside of the risk adjustment model) over a three-month window.

3. A modified version of the regular CMS-HCC model for people who have successful kidney transplants. The model has an additional term to recognize the extra costs of immunosuppressive drugs and higher intensity of care for this group.

We developed this three-part model in response to our findings on expenditures patterns for ESRD beneficiaries. Dialysis patients have high ongoing costs, while transplant patients incur a very high one-time cost. Functioning graft patients are much more similar to the general population than they are to dialysis patients. Using the same payment weights for all three groups would lead to over- or underpayments to M+C organizations that do not have enough ESRD enrollees to have an average mix. To address this problem, CMS developed separate payment approaches for these three populations.

Risk adjustment model for dialysis patients. The dialysis model has the same HCC categories as the CMS-HCC model for the non-ESRD population, except that HCCs with kidney disease diagnoses are excluded (HCC128 to HCC132). The model is calibrated only on dialysis patients, so the disease weights used for payment recognize disease and expenditure patterns unique to this population.

The data used for calibrating the ESRD models were 1999 (diagnostic) and 2000 (cost) data on fee-for-service ESRD beneficiaries. For example, expenditures for a fee-for-service beneficiary on dialysis from January through August 2000 who received a transplant in September 2000 are included in the dialysis group for eight months, but then are excluded. From September through November 2000, this beneficiary's costs are included in the transplant data to determine estimated average transplant costs. As of December 2000, this beneficiary is included in the functioning graft model.

Transplant patients. To pay more accurately for the high costs of kidney transplants, CMS will make transplant-specific payments to M+C organizations for three months for each member who received a transplant, beginning in the month of transplant. CMS calculated a national average cost for three months (the transplant month and two subsequent months) and divided the average for the three months by three to get the average monthly cost. CMS converted the average monthly cost to a relative factor. The ratio of this monthly cost to the national average monthly cost for dialysis patients is the factor. This factor multiplies the rates in the dialysis ratebook to determine payment. No additional ratebook is needed, as this method produces a payment that is the national rate, geographically adjusted.

For example, assuming that the national average three-month program cost for a transplant is \$40,000 and that the national average monthly cost for a dialysis patient is \$3,500, the relative factor would be 3.81 (i.e., $[40,000/3]/3500$). Payments for a transplant for a resident of a nationally average county would be $3.81 \times 3,500 = \$13,335$ for each of three months. Payments in higher or lower cost counties would vary.

See Section D.6 for information on a new option M+C organizations may choose to adopt for reporting dialysis and transplant status of members.

Functioning graft beneficiaries. The model for functioning graft enrollees is based on the model for the general population, except that HCCs for kidney transplant status, dialysis status and renal failure are excluded. This means that for their members with functioning grafts, M+C organizations will be paid in 2004 based on the diseases reported for functioning graft members recorded in 2003 (the reporting year for 2004). However, CMS also will make an add-on payment for each functioning graft enrollee to recognize the extra costs associated with immunosuppressive drugs and additional intensity of services for this population. The payment model is a slight modification of the regular model; all the coefficients are the same (with the exclusions above) but a term with a factor for the average additional costs of these beneficiaries is included.

The functioning graft payment automatically begins the month after the third transplant payment unless CMS hears from the M+C organization or the CMS data system that the member has returned to dialysis. Anytime a functioning graft patient returns to dialysis, payment is made using that model.

Since Section 605 of BIPA required CMS to adjust our approach to computing ESRD payment rates to reflect the method used in the ESRD social HMO (S/HMO) demonstration then in place, we interpret this to mean that the new three-part model will be implemented at 100 percent of payments for 2004, just as the 2002 changes to the ESRD methodology per BIPA were implemented at 100 percent. See Section E for a discussion of Medicare Secondary Payer status.

C. Changes in Methodology for PACE and certain Demonstrations

Background.

Overview: CMS has developed a Medicare payment approach that adjusts the payment to an organization according to the frailty of an organization's enrollees. The frailty adjustment approach will be applied to the PACE program in 2004. The current PACE demonstrations are expected to transition to PACE program status during 2003. New PACE demonstrations will be paid under the same approach as the PACE program in 2004.

The current social HMO (S/HMO) demonstration is scheduled to end by December 31, 2003. In the absence of a legislative extension, we plan to continue the S/HMO demonstration with the risk adjusted payment methodology incorporating the frailty adjustment approach. The current waiver for the Wisconsin Partnership Program (WPP) demonstration expires on December 31, 2003. Pending a decision on the extension of the waivers, we intend to apply the frailty adjustment approach to the WPP demonstration in 2004. The adjustment approach will also apply to the Minnesota Senior Health Options (MSHO) and the Minnesota Disability Health Options (MnDHO) demonstrations in 2004.

The Balanced Budget Act of 1997 (BBA) mandated that Medicare capitated payments to PACE organizations be based on M+C payment rates, adjusted to account for the comparative frailty of PACE enrollees. The payment approach described herein is a further refinement to risk

adjustment to ensure that capitated payments to organizations that serve frail community-based populations are accurate.

The frailty adjustment approach is to be applied in conjunction with the CMS-HCC risk adjustment model. As mentioned above, the CMS-HCC model has been designed to pay appropriately for the long-term institutionalized population. Therefore, the frailty adjustment approach will apply only to community-based and short-term institutionalized enrollees³ (i.e., the frailty adjustment for long-term institutionalized enrollees is zero). Risk adjustment predicts (or explains) the future Medicare expenditures of individuals based on diagnoses and demographics. But risk adjustment may not explain all of the variation in expenditures for frail community populations. The purpose of frailty adjustment is to predict the Medicare expenditures of community populations with functionally impairments that are unexplained by risk adjustment.

Basic Approach: The first step in the estimation of an adjuster was determining the measures that were candidates for frailty adjustment. Certain measures of functional impairment (such as activities of daily living (ADLs)) were considered to be the most meaningful for purposes of payment. Beneficiary characteristics (such as age and gender) were also considered. In order to develop the frailty adjustor, CMS needed a database that linked measures of functional impairment to Medicare expenditures at the individual level. The Medicare Current Beneficiary Survey (MCBS) included the necessary linked information. Therefore, the candidate functional impairment measures were selected from among those collected by MCBS.

The next step was finding the relationship between the above measures or characteristics and the Medicare expenditures that were unexplained by risk adjustment. For example, the actual Medicare expenditures for each group of people with similar functional impairments were compared to the expenditures predicted by the CMS-HCC model for that group. As described below, the frailty adjustor was designed to explain (or adjust for) the average difference between the predicted and actual expenditures for each group.

The final step in the estimation was to select the appropriate measures from among the candidates. The selection process considered a number of criteria such as face validity, reliability, appropriate incentives, fairness, simplicity, and gameability. The measure(s) that best met the criteria were to be included in the frailty approach. The frailty model was to consist of a set of factors (one factor for each group) for the measure(s) that were selected.

Consistent with the way diagnosis data are used in risk adjustment, the frailty adjuster was designed to be prospective. That is, prior-year functional impairment data were used to predict the next-year's payment adjustment.

Estimating the Frailty Model

Calibration of Frailty Factors: The draft frailty factors were developed using the MCBS cost and use files for 1994 through 1997. Since the model was prospective, information from the "base year" was used to predict payment in the following year. Prior-year diagnosis and functional impairment information were linked to next-year Medicare expenditures to create

³ Hereafter, the term "community" will be used to refer to community-based and short-term institutionalized populations.

three data sets with person-year observations: 1994-95, 1995-96, and 1996-97. These data sets were pooled, and Medicare payments were predicted for these person-years using the CMS-HCC model. The difference of actual payments and predicted payments for each person-year (residual expenditures) was then related to beneficiary functional and institutional status using regression modeling. The frailty factors were derived from these regression coefficients and reflect the mean Medicare payments related to functional status that are not explained by the CMS-HCC model.

The residual expenditures for the MCBS institutionalized population were virtually zero. That is, the CMS-HCC model accurately predicted the average expenditures for this population. Therefore, the frailty adjuster applies only to the community population.

The frailty model was based on Activities of Daily Living (ADLs) as the core measure of functional impairment. Individuals were grouped according to their difficulty with 0 ADLs, 1 to 2 ADLs, 3 to 4 ADLs, and 5 to 6 ADLs. CMS considered whether the frailty model could be improved by including other measures and characteristics interacting with ADLs. Among other things, these included demographics, self-reported health status, chronic conditions, needing help or special equipment with ADLs, and physical measures of impairment (such as walking 2-3 blocks). In general, adding other measures did not appear to improve the frailty model. Some interaction terms were not statistically significant. That is, they did not improve the explanatory power of the model once ADLs were taken into account. Some measures lacked face validity, i.e., greater functional impairment failed to be associated with greater expenditures. Others were not considered reliable in that they could potentially suffer from a large degree of random variation due to small sample sizes. And still others were potentially gameable or provided incentives for inappropriate utilization. Therefore, CMS decided to base the frailty model on ADL groupings only.

Frailty Factor for the Under-55 Disabled: CMS analyzed the residual expenditures for the Medicare disabled population in MCBS. For the 55-and-over population, the residuals were significantly different from zero for all ADL groups. But for the under-55 population, the residuals were not significantly different from zero regardless of the degree of functional impairment. That is, the CMS-HCC model appears to adequately predict the expenditures of the under-55 population without the need for an additional frailty adjuster. Therefore, the frailty factor for this population is zero.

Mortality: The MCBS observations included persons who died in the payment year. The higher expenditures of these persons were included in the frailty model, using the same approach for treating the deceased as was used for the CMS-HCC model. Each ADL group in MCBS has an inherent mortality rate. To test whether the inherent mortality rates were reasonable, CMS investigated whether these mortality rates were representative of the mortality rates for the PACE program. The MCBS mortality rates for each ADL group were applied to the distribution of PACE enrollees by ADL group. This yielded a predicted mortality rate for PACE (i.e., the mortality rate that PACE would have experienced if it had the same rate of mortality as the MCBS population). The predicted mortality was similar to the actual mortality rate across all PACE organizations. That is, once ADLs were accounted for, the PACE mortality rate was

similar to the MCBS mortality rate. Frailty adjustment appears to adequately account for the rate of mortality for frail populations.

Draft Frailty Factors: The draft frailty factors for the 55-and-over community populations are as follows:

<u>Difficulty in ADLs</u>	<u>Frailty Factors</u>
0	-0.14
1-2	0.17
3-4	0.34
5-6	1.09

The final factors will be published in the May 12, 2003 Announcement of M+C Payment Rates.

D. CMS-HCC Model Implementation Issues

CMS will implement the CMS-HCC risk adjustment model following the approach used to estimate the model (as described above). The model will apply to M+C organizations and PACE organizations. The Evercare Demonstration is currently scheduled to end December 31, 2003. Pending a decision on the extension of the waivers, we intend to implement the CMS-HCC model for Evercare in 2004. The CMS-HCC model will also apply to the S/HMOs, WPP, MSHO, and MnDHO demonstrations, as mentioned in Section C. In determining a risk score for a beneficiary, we will determine the status of each variable included in the model based on the same definitions used to estimate the model. For example, in determining a beneficiary's Medicaid status, we will determine whether the beneficiary was eligible for Medicaid for at least one month during the data collection period. Then, the beneficiary's status on each variable in the model (i.e., age, sex, original reason for entitlement, Medicaid eligibility, institutional status (long-term versus community and short-term), and diagnoses) will be used to determine his/her risk factor. The risk factor (and frailty factor, if applicable) is then multiplied by the correct rate book amount to determine the risk adjusted payment. The demographic portion of the payment will continue to incorporate demographic variables such as age, sex, Medicaid eligibility, and institutional status. The final step is to implement the correct transition blend (see section D.7).

1. New Enrollee Factor.

If a beneficiary has less than 12 months of enrollment in Part A and Part B during the data collection period, then he/she will be assigned a new enrollee factor. During the payment year, a new enrollee factor will also be assigned to any beneficiary whose risk score is not available. In this case, the beneficiary's correct risk score will be determined during the next reconciliation. For ESRD payments, the dialysis and functioning graft models will have new enrollee factors for enrollees whose risk scores are not available.

2. Addressing Age Weights

In the past, CMS has recognized that people have birthdays that put them into age groups during a given year by either switching the payment group during the year in the demographic payment model or by paying a weighted average of the 2 groups each month to avoid having to switch age

groups during the year (as the PIP-DCG model does). In response to industry feedback, CMS will now base payments on the age an enrollee attains as of February 1st of each year. This change will help simplify the M+C payment system.

3. Reporting Institutional Status.

As described above, CMS is incorporating institutional status into the CMS-HCC risk adjustment model. Under risk adjustment, institutional status will be determined from information included in the Minimum Data Set (MDS) that is reported by Medicare certified nursing homes. As described in the previous section, presence in the MDS of the 90-day assessment for an individual will be used to determine his/her long-term institutional status.

Under risk adjustment, M+C organizations will not have to report the institutional status of their enrollees monthly as they do for the institutional adjustment under the demographic-only method. Thus, under risk adjustment the reporting burden on M+C organizations will not be increased. Note that M+C organizations may continue to track the institutional status of their enrollees to ensure that CMS correctly identifies institutional status.

Currently, most M+C organizations have a small proportion of long-term institutionalized enrollees. In fact, less than 20 organizations currently have more than 5 percent long-term institutionalized. In order to minimize the number of adjustments to monthly payments, CMS will assume that all enrollees in most M+C organizations are community-based. Payments will be based during the payment year on the community version of the risk adjustment model. The final reconciliation for 2004 will determine the correct institutional status for each enrollee for each month.

For the small number of M+C organizations who have a larger proportion of long term institutionalized enrollees (e.g., between 5 and 75 percent), we will determine the enrollees who are long-term institutionalized as of a point in time in the prior year (e.g. June 30, 2003 for the 2004 payment year). We are still determining the appropriate approach for applying the institutional adjuster for this group of enrollees. We would appreciate comments on this issue.

Finally, for M+C organizations or demonstrations where a majority of enrollees are long-term institutionalized persons, we will assume that all of their enrollees are institutionalized during the payment year. Again, in reconciliation, these M+C organizations will receive an adjustment reflecting the correct monthly institutional status for each person for each month for 2004 as reported through the MDS.

4. Elimination of the Data Lag.

The CMS-HCC risk adjustment model was calibrated using diagnostic data from the prior calendar year to predict resource use for the subsequent calendar year. While CMS's initial PIP-DCG risk adjustment model was calibrated on a calendar year basis, it was implemented with a six month "lag" between the data collection year and the payment year. This implementation approach was preferred (at that time) by M+C organizations. However, risk adjustment models estimated with no lag are more accurate in predicting payments than those models that incorporate a lag because the prediction period is closer to the data collection period. Therefore,

beginning in 2004 CMS will eliminate the lag to improve the accuracy of payments under the CMS-HCC model.

CMS will initially implement payments in 2004 based on diagnoses occurring between July 1, 2002 and June 30, 2003. Beneficiaries' statuses on all variables will also be determined based on that data collection period. Initially in 2004, M+C organizations will be paid based on this lagged data collection period. Then, in order to eliminate the data lag, CMS will recalculate risk factors for all enrollees, moving the data collection period to the immediate preceding calendar year (i.e., for 2004, the immediately preceding calendar year is January 1, 2003 to December 31, 2003). This process will eliminate the lag. During 2004, CMS also expects to reconcile payments back to January 2004 based on these new factors.

5. Reconciliation of Late Risk Adjustment Data.

Because M+C organizations have only three months after the end of a data collection year to submit the diagnostic data that is used to develop risk factors, the final reconciliation for a year allows all the late diagnostic data to be incorporated into the enrollee's risk score. For example, M+C organizations must submit risk adjustment data from the January 1, 2003 through December 31, 2003 data collection period by March 5, 2004 in order for the data to be included in the preliminary risk factor based on non-lagged data for 2004. Diagnostic data submitted after this date will not be incorporated into initial payments based on this data collection period. However, CMS will accept late data for the 2003 calendar year through March 31, 2005. After this date, CMS will no longer accept data for risk adjustment for CY 2004.

The reconciliation incorporates all the diagnoses from the correct data collection period in addition to other changes in enrollee's status (e.g., age, gender, Medicaid eligibility) to be factored into each enrollee's risk factor. Then, adjustments are made to ensure that M+C organizations' final payments for a year are correct. There is a single final reconciliation for each payment year. The final reconciliation for 2004 payments will be conducted in the spring of 2005, with final reconciled payments for 2004 provided to M+C organizations in the August 2005 payments.

6. Reporting Timely End-Stage Renal Disease (ESRD) Status.

In moving to the implementation of the new ESRD risk adjustment method, CMS will utilize the existing systems for identification of enrollees receiving dialysis services. Currently, M+C enrollees are assigned ESRD status as a result of a physician certifying their ESRD status on CMS Form 2728, the End Stage Renal Disease Medical Evidence Report. The ESRD facility sends Form 2728 to the Renal Network, which then transmits the status to CMS systems where various databases are updated to record the ESRD status. Payments for dialysis are triggered by this system.

The ESRD information system would also remain the standard for identifying enrollees who received a transplant. However, M+C organizations would be given the opportunity to notify CMS directly of a transplant in order to receive more timely payments for a transplant. We are examining different ways of implementing more timely reporting of transplant status and will provide information on this process soon. Ultimately, M+C organization-reported ESRD status

will be reconciled against CMS's existing ESRD information reporting system to determine final ESRD status for payment.

7. Transition Payment Blends.

For M+C organizations, in 2004 the CMS-HCC model will be implemented at a 30 percent risk adjusted payment, with the remaining 70 percent being a demographic payment. The portion of risk adjusted payment will increase to 50 percent in 2005, to 75 percent in 2006 and finally to 100 percent in 2007. However, the ESRD models for dialysis, transplant, and functioning graft payments will be implemented at a 100 percent level. See Section B for further information.

The same 30 percent risk adjusted and 70 percent demographic payment schedule will apply to EverCare and S/HMOs, but the non-risk adjusted portion of the payment will be based upon their current payment methodology rather than the demographic payment. For S/HMOs a frailty adjuster will also be applied.

For PACE organizations and certain demonstrations, i.e. WPP, MSHO and MnDHO, an alternative transition payment blend will be used, so that full implementation of risk/frailty adjustment for PACE and these demonstrations will occur in 2008 instead of 2007. In 2004, the CMS-HCC model with a supplemental frailty adjuster will be implemented at a 10 percent risk adjusted payment, with the remaining 90 percent being based on the plan's current payment methodology. The transition blends for PACE and certain demonstrations are discussed in more detail in Section D.9 below. See **Exhibit 4** for a chart summarizing the transition payment blends being used for various plans.

8. Budget Neutrality.

In 2004, risk adjustment will be implemented in a budget neutral manner in an effort to further stabilize the M+C program. The implementation of risk adjustment budget neutral to the M+C program will ensure that risk adjustment does not reduce the aggregate amount of payments to M+C organizations. The Office of the Actuary (OACT) will estimate the amount of adjustment to be incorporated into the rescaling factor, which for 2004 redistributes estimated payment reductions that would result from risk adjustment without this adjustment. The estimate is the difference between the aggregate M+C payments that would be made using the demographic-only method for 100 percent of payments versus the aggregate payments that would be made using 100 percent of risk adjusted payments. The budget neutrality estimate is a multiplier applied to the rescaling factor.

M+C organizations will be required to reflect budget neutrality payments for 2004 in their 2004 Adjusted Community Rate Proposals (ACRPs). The ACRPs for 2004 are due by statute in September 2003. M+C organizations will see payments that reflect this budget neutral approach in the beneficiary-level amounts that are shown on the Monthly Membership Reports (MMR.), beginning in January 2004. The reports for January 2004 will be available for downloading in late December 2003.

9. Application of Frailty Model

To apply the frailty adjuster, it was necessary to develop an approach for collecting functional impairment data for an organization's enrollees. Initially, the Health Outcomes Survey (HOS)

was considered as a potential source of the data for PACE. However, the historical HOS response rates for PACE (generally under 50 percent) have been considered too low to be useful for payment adjustment. Therefore, CMS developed an alternative survey instrument that was much shorter than the HOS. This instrument was pilot tested on a sample of the PACE population in 2002, resulting in substantially higher response rates (68 percent). The PACE Health Survey (PHS) will be administered in 2003 to support PACE payment adjustment in 2004.

9a. PACE

The PHS will be administered in 2003 to support PACE payment adjustment in 2004. The PHS will be administered to PACE organizations that were active as of January 1, 2002. Responses from participants residing in the community will be used to determine the organization-level frailty scores. Once the data are collected, they will be applied to the frailty model to determine a frailty "score" for each organization. The organization-level frailty score will be calculated as the weighted average frailty factor across all community survey respondents for that organization, as follows. The number of community respondents with difficulty in 0 ADLs, 1 to 2 ADLs, 3 to 4 ADLs, and 5 to 6 ADLs will be counted. These counts will be multiplied by the corresponding frailty factor. The resulting products will be summed for each organization. This sum will be divided by the number of community respondents, yielding a weighted average factor (or frailty score) for each PACE organization. The same frailty score will be used for all respondents and nonrespondents who reside in the community. This frailty score will be added to the risk score of each community enrollee in the organization (including only those ESRD beneficiaries in post-transplant status), resulting in a risk+frailty score for each individual. Payments to these plans will be the product of this score and the risk adjusted county rate.

For new PACE organizations not active as of January 1, 2002, the frailty score will be the weighted average factor across all community respondents of all PACE organizations.

Exhibit 5 illustrates how the payment for each PACE organization will be calculated. Each enrollee's risk score will be determined based on demographics, diagnoses and residence (community or institutional). The organization-level frailty score (calculated as above) will be added to each 55-and-over community enrollee's risk score, while zero will be added to the risk score of each institutional enrollee. This "risk+frailty" score will be multiplied by the restandardized county rate to produce the frailty-adjusted payment for each enrollee. This approach will be similarly applied to the demonstrations below.

To lessen the initial negative impact of frailty adjustment on some organizations, the phase-in schedule for frailty adjustment will lag the phase-in of M+C risk adjustment by one year. In 2004, the PACE Medicare capitation payment will be a blended payment consisting of 90 percent of the current payment (i.e., 2.39 times the demographic ratebook amount) plus 10 percent of the frailty adjusted payment. In 2005, the blend will be 70 percent current payment and 30 percent frailty adjustment. The blend will be 50/50 in 2006 and 25/75 in 2007. In 2008, frailty adjustment will be fully phased in for PACE.

Pace Health Survey (PHS) Nonresponse Bias: During the pilot test there was no evidence of significant survey nonresponse bias. Based on assessment data from the medical records, the

functional status of survey respondents was similar to that of nonrespondents. After the 2003 PHS has been administered, CMS will again examine nonresponse bias for PACE. If significant nonresponse bias is detected, PACE payments in 2004 could be adjusted as part of reconciliation.

9b. Other Demonstrations.

S/HMO Demonstrations: CMS intends to collect HOS data in 2003 to support frailty adjustment for Social HMO organizations (S/HMOs) in 2004. The project's 2001 Report to Congress indicated that S/HMO members were not significantly different than beneficiaries enrolled in M+C organizations. Therefore, the phase-in schedule for S/HMOs will be consistent with the M+C program. The blend in 2004 will be 70 percent current payment and 30 percent frailty adjustment. The blend will be 50/50 in 2005 and 25/75 in 2006. In 2007, frailty adjustment will be fully phased in for S/HMOs.

WPP Demonstrations: CMS intends to collect PHS data in 2003 to support frailty adjustment for WPP organizations in 2004. The WPP demonstration has a health care delivery model that is similar to PACE and serves a population that is identical to the PACE population. Therefore, the phase-in schedule for WPP will be consistent with the PACE phase-in schedule. That is, the blend will be 90/10 in 2004 and will continue to lag the M+C phase-in schedule by one year through 2008.

MSHO and MnDHO Demonstrations: CMS intends to collect PHS data in 2003 to support frailty adjustment for MSHO and MnDHO in 2004. These are dual eligible demonstrations that have community-frail populations that are similar to PACE but also serve community-well and institutionalized beneficiaries. We are considering approaches for determining the frailty score for new demonstrations. The phase-in schedule will be consistent with the PACE phase-in schedule. The blend will be 90/10 in 2004, and will lag the M+C phase-in schedule by one year through 2008.

9c. Biases in Survey Responses

The frailty factors were estimated using MCBS. They will be applied to payment using the PHS or the HOS. Differences in survey questions of mode of administration between MCBS and PHS or HOS could result in biased payments. Preliminary research indicates that HOS respondents may report a significantly greater degree of functional impairment than MCBS respondents. This disparity suggests that the organization-level frailty scores should be adjusted downward for HOS respondents to account for this effect. CMS intends to study this issue further, as well as HOS nonresponse bias. We welcome any comments on this issue.

E. Medicare Secondary Payer status in M+C payments.

CMS currently makes beneficiary-level adjustments to M+C payments based on whether members are working aged or not. We will continue to work with the industry on approaches to adjusting for working aged status. For example, we are considering whether to replace the monthly beneficiary level adjustment with an annual, plan-specific prospective factor representing the proportion of working aged in the plan.

We are still determining the appropriate approach for handling Medicare as Secondary Payer (MSP) status for M+C ESRD beneficiaries when calibrating the new ESRD payment models. To date, we have conducted a separate analysis to ensure we did not underestimate average transplant costs. When identifying the population used to calculate average transplant costs, we excluded any beneficiaries with MSP during their transplant period and any beneficiaries with transplant costs that were too low even if they were not identified as MSP in our system.

We would appreciate comments on this issue. After reviewing public comments, we may announce working aged/MSP policies in the May 12 Announcement of M+C rates

F. New approach to accounting for costs of National Coverage Determinations.

When “the Secretary makes a determination with respect to [Medicare] coverage or there is a [statutory] change in benefits required to be provided [by M+C organizations] that the Secretary projects will result in a significant increase in . . . costs,” section 1853(c)(7) of the Act requires the Secretary to “adjust appropriately” M+C payments to reflect these new significant costs. CMS has interpreted what constitutes “significant” costs for these purposes in regulations at 42 C.F.R. §422.109. Under these provisions, the costs of a coverage change are considered significant if the average cost of providing the service exceeds as specified threshold, or if the total cost exceeds an aggregate cost threshold. Currently, the costs of newly covered services are taken into account annually when OACT estimates the M+C growth rate. The costs of new benefits thus are built into the M+C growth rate. However, the growth rate is only used to update the floor rates and blended rates. Changes in the growth rate do not affect payment in counties where the payment amount is based on the minimum two percent update to the prior year’s rate.

CMS has determined that payments in counties in which payment is based on the minimum two percent update rate is not appropriately adjusted to reflect new coverage costs as required by section 1853(c)(7). Historically, most M+C enrollees have lived in counties receiving the two percent rate, and in 2003 all counties in the country but six received the two percent rate.

Beginning in 2004, CMS will apply a “bundled NCD factor” to the two percent minimum update rates each year. OACT would calculate a factor representing the percent of total Medicare costs attributed to the aggregate costs of all significant NCDs and legislative changes in benefits in a given year. For example, for those counties that will be minimum update counties in 2004, we would apply the 2002 bundled NCD factor to the 2003 minimum update rates, and then update the rates by two percent. We expect to provide details on the calculation and application of the NCD factor in the May 12 Announcement of M+C rates. Also, we are considering changing the definition of “significant cost” in the regulation to include all NCDs in the prior year. Should CMS’s definition of significant cost change in 2003, the new policy would automatically apply to M+C payments for CY 2004.

G. Responses to Public Comments

We solicited comments to the proposed approach for 2004 from interested parties via a Federal Register notice (67 FR 79122), posted on December 27 and at our public meeting conducted on February 3. We received 21 comments by the end of the two-week comment period, which ended on February 19. The comments included six from PACE plans, two from SHMO plans, two from WPP plans, one from MSHO, one from EverCare, three from M+C organizations and six from other interested parties.

Most of the comments related to the implementation of a frailty adjustor for PACE, SHMO, and certain other specialty demonstration sites and the proposed payment blend schedule. Many of these comments appeared to indicate the need for more discussions with the affected plans. CMS intends to conduct additional outreach with these plans to provide more information. Three commenters were concerned about the elimination of the lag between the data collection period and the payment year and were concerned about the increased administrative burden of this approach, as well as the possible impacts on plan revenues as the data collection period on which the risk factor was based is moved. CMS will address issues related to the lag at the time of the final notice. Other commenters requested additional information regarding the proposed ESRD payment methodology. We have provided draft coefficients for that model in this notice. Other general issues raised by these commenters (e.g., inclusion of the institutional factor, measurement of Medicaid status) will be addressed in the final notice.

EXHIBIT 1. Draft Community And Institutional Annual Coefficients for the CMS-HCC Model with Constraints And Demographic/Disease Interactions, used in Calculation of Monthly M+C Payments¹

Variable	Disease Group	Community Estimate	Institutional Estimate
Age/Sex Coefficients			
Female0-34		\$600	\$5,500
Female35-44		1,000	5,500
Female45-54		1,100	5,500
Female55-59		1,400	5,500
Female60-64		1,900	5,500
Female65-69		1,600	6,000
Female70-74		2,000	6,000
Female75-79		2,500	5,100
Female80-84		2,900	4,800
Female85-89		3,400	4,500
Female90-94		4,100	4,000
Female95+		4,100	3,000
Male0-34		300	5,700
Male35-44		600	5,700
Male45-54		1,000	5,700

INT2	DM*CVD	600	0
INT3	CHF*COPD	1,200	1,900
INT4	COPD*CVD*CAD	400	0
INT5	RF*CHF ⁴	1,200	0
INT6	RF*CHF*DM ⁴	4,400	

NOTES

¹ The dollar amounts in this table will be converted to relative risk scores for the May 12 Announcement of M+C Rates. That is, these dollar amounts will be divided by the national average predicted expenditures to get relative risk scores we will report May 12.

² All estimates are rounded to the nearest hundred dollars.

³ Beneficiaries with HCC128 Kidney Transplant Status were excluded from the sample because they will be included in the ESRD model sample.

⁴ Beneficiaries with the three-way interaction RF*CHF*DM are excluded from the two-way interactions DM*CHF and RF*CHF. Thus, the three-way interaction term RF*CHF*DM is not additive to the two-way interaction terms DM*CHF and RF*CHF. Rather, it is hierarchical to, and excludes these interaction terms. A beneficiary with all three conditions is not “credited” with the two-way interactions. All other interaction terms are additive.

DM= diabetes mellitus (HCCs 15-19)

CHF= congestive heart failure (HCC 80)

COPD= chronic obstructive pulmonary disease (HCC 108)

CVD= cerebrovascular disease (HCCs 95-96, 100-101)

CAD= coronary artery disease (HCCs 81-83)

RF= renal failure (HCC 131)

Source: RTI Analysis of 1999/2000 Medicare 5% Sample

EXHIBIT 2. Draft List Of Disease Groups (HCCs) with Hierarchies

DRAFT DISEASE HIERARCHIES		
If the Disease Group is Listed in This Column...		...Then Drop the Associated Disease Group(s) Listed in This Column
Disease Group (HCC)	Disease Group Label	
5	Opportunistic Infections	112
7/8	Metastatic Cancer, Acute Leukemia, and Other Severe Cancers	9,10
9	Lymphatic, Head and Neck, Brain and Other Major Cancers	10
15	Diabetes with Renal Manifestations	16,17,18,19
16	Diabetes with Neurologic or Other Specified Manifestation	17,18,19
17	Diabetes with Acute Complications	18,19
18	Diabetes with Ophthalmologic Manifestations	19
25	End-Stage Liver Disease	26,27
26	Cirrhosis of Liver	27
51	Drug/Alcohol Psychosis	52
54	Schizophrenia	55
67/68	Quadriplegia/Paraplegia/Extensive Paralysis	69,100,101,157
69	Spinal Cord Disorders/Injuries	157
77	Respirator Dependence/ Tracheostomy Status	78,79
78	Respiratory Arrest	79
81	Acute Myocardial Infarction	82,83
82	Unstable Angina and Other Acute Ischemic Heart Disease	83
95	Cerebral Hemorrhage	96
100	Hemiplegia/Hemiparesis	101
104	Vascular Disease with Complications	105,149
111	Aspiration and Specified Bacterial Pneumonias	112
130	Dialysis Status	131,132
131	Renal Failure	132
148	Decubitus Ulcer of the Skin	149
154	Severe Head Injury, Coma, Brain Compression/Anoxic Damage	75,155
How Payments are Made with a Disease Hierarchy EXAMPLE: If a beneficiary triggers Disease Groups 148 (Decubitus Ulcer of the Skin) and 149 (Chronic Ulcer of Skin, Except Decubitus), then DG 149 will be dropped. In other words, payment will always be associated with the DG in column 1, if a DG in column 3 also occurs during the same collection period. Therefore, the M+C organization's payment will be based on DG 148 rather than DG 149.		

EXHIBIT 3. Draft Annual Coefficients for CMS-HCC End Stage Renal Disease Model for Dialysis Patients

Variable	Disease Group	Estimates
Age/Sex Coefficients		
Male, 0 to 34		28,600
Male, 35 to 44		28,300
Male, 45 to 54		29,600
Male, 55 to 59		30,200
Male, 60 to 64		31,100
Male, 65 to 69		31,000
Male, 70 to 74		31,300
Male, 75 to 79		32,000
Male, 80 to 84		33,400
Male, 85 to 89		34,800
Male, 90 to 94		33,400
Male, 95 and older		35,900
Female, 0 to 34		30,200
Female, 35 to 44		30,600
Female, 45 to 54		31,400
Female, 55 to 59		32,100
Female, 60 to 64		33,100
Female, 65 to 69		32,500
Female, 70 to 74		33,300
Female, 75 to 79		34,500
Female, 80 to 84		34,400
Female, 85 to 89		34,900
Female, 90 to 94		37,800
Female, 95 and older		33,000
Medicaid & Originally Disabled

DM * CVD	Diabetes and Cardiovascular Disease	1800
CHF * COPD	CHF and chronic obstructive pulmonary disease	1900
COPD*CVD *CAD	COPD, CVD, and Coronary Artery Disease	500

Notes

¹ The dialysis model has the same HCC categories as the CMS-HCC model for the non-ESRD population, except that HCCs with kidney disease diagnoses are excluded (HCC128 to HCC132). The model is calibrated only on dialysis patients, so the disease weights used for payment recognize disease and expenditure patterns unique to this population.

² DM= diabetes mellitus (HCCs 15-19)
 CHF= congestive heart failure (HCC 80)
 COPD= chronic obstructive pulmonary disease (HCC 108)
 CVD= cerebrovascular disease (HCCs 95-96, 100-101)
 CAD= coronary artery disease (HCCs 81-83)

**Exhibit 4. Summary Chart of Transition Payment Blends
For Risk/Frailty Adjustment in 2004**

	Risk adjustment with a frailty adjuster?	Is there a need to further adjust aggregate risk adjusted payments?	Transition Blend-representing the percentage of current versus risk adjusted payment to be used in 2004
Medicare+Choice organizations	No, risk adjustment only	No	70/30%
Program of All-inclusive Care For the Elderly (PACE)	Yes	No, but CMS will evaluate on an annual basis.	90/10%
Wisconsin Partnership Program (WPP)	Yes	No	90/10%
Minnesota Senior Care Options (MSHO) and Disability Health Options (MnDHO)	Yes	No	90/10%
Massachusetts Senior Care Options	Yes	No	90/10%
Social Health Maintenance Organizations (S/HMOs)	Yes	No	70/30%
Evercare	No, risk adjustment only	No	70/30%

**Includes only those ESRD members in post-transplant status

ENTIRETY

EXHIBIT D-151

1. Please provide copies of all policies and procedures (P&P) relevant to obtaining, processing, and submitting risk adjustment data for the CY 2006 data collection period (i.e., the CY 2007 payment period).

Historically, our encounter operations process has been largely automated. We did not have a formal, written P&P for that process during data collection period for 2006 dates of service. Please refer to our response to Question 1 of the second set of questions for a more detailed explanation of our 2006 practices related to obtaining, processing, and submitting risk adjustment data.

2. Please provide any quality assurance policies and procedures relevant to H4590 and H0543's risk adjustment processes.

Please see our response to Question 1.

3. For contracts H4590 and H0543, please provide the names, titles, and locations of personnel responsible for obtaining risk adjustment data from providers, processing data at the plan level, and submitting the data to CMS.

Numerous employees had responsibility in this area over the past four years. Some of the key employees with responsibility in this area include:

Jeff Dumcira
Senior Vice-President and General Manager
Clinical Assessment Solutions
Eden Prairie, MN

Stephanie Will
Vice-President, Program Delivery
Clinical Assessment Solutions
Eden Prairie, MN

Pam Leal
Vice-President, Market Consultation
Clinical Assessment Solutions
Santa Ana, CA

Randy Myers
Associate Director of Encounter Collection, Submission & Controls
Clinical Assessment Solutions
Phoenix, AZ

EXHIBIT

1124-2

4. What systems are used to generate and/or store encounter data at the plan level?

For 2006 dates of service, we used several systems to generate and/or store claims and encounter data, including (i) our core claims transaction system for medical claims, called NICE, (ii) our core claims transaction systems for behavioral health claims, called FACETS, and (iii) our professional encounter system or "PES," which processed encounter data received from capitated providers. We also received encounter data through our provider portal that was subsequently loaded to our risk adjustment processing system.

5. For the current and the CY 2006 data collection periods, please provide your instructions to providers for coding and submitting risk adjustment data.

For the 2006 plan year, we used a provider manual that was implemented in 2005. Attached as Attachment A are the portions related to RAI data submission. Attached as Attachment B are the portions of the current provider manual related to RAF data submission.

6. How do providers submit risk adjustment data to the plan?

For 2006 dates of service, providers submitted risk adjustment data to the plan through (i) claims and/or encounter data sent electronically through a claims clearinghouse, (ii) encounter data sent electronically through a "direct connection" that allowed some capitated providers to submit encounters directly, bypassing a clearinghouse, (iii) claims and/or encounter data sent through paper claims and/or encounter forms submitted by providers not yet able to submit claims electronically, and (iv) risk adjustment data sent electronically via our provider portal.

7. Does the plan participate in the Healthcare Effectiveness Data and Information Set (HEDIS)?

Yes.

8. Do providers submit claims to the plan indicating diagnoses (whether for risk adjustment, HEDIS, or other purposes)?

Yes.

9. Who is responsible for reviewing provider-coded diagnoses for accuracy? What is the process for reviewing these diagnoses?

Providers are responsible for the accuracy of the diagnosis codes they send to the health plan. The plan is not in a position to review such codes for accuracy because it does not have the medical chart for each claim. The plan's automated systems do, however, review provider-submitted codes to ensure such codes correspond to a valid ICD-9 code. Upon this review, any codes that our systems determine do not correspond to a valid ICD-9 code are flagged within our risk adjustment processing system for review and logged in a work queue with an "invalid diagnosis" error.

Codes logged in the "invalid diagnosis" work queue are reviewed by a team of error correction analysts. Error correction analysts determine whether the code can be corrected by either reviewing the original claim image (in case of a keying error in the initial entry of the claim in our system) or by contacting the rendering provider directly. If an error correction analyst is able to identify a valid code through one of the two processes identified above, the analyst corrects the code in the system and removes the error flag, which then clears the code to be sent to CMS. If no valid code can be identified, the error flag is retained and the invalid code is not submitted to CMS. As described more fully below, the plan also reviews codes for accuracy through chart validations.

10. Please describe or provide any documentation you may have in support of provider training or outreach performed with respect to coding diagnoses for risk adjustment.

Please see the information provided by Brian Lund on June 10, 2009, relating to provider training and outreach during the data collection period for 2006 dates of service.

11. Please provide a copy of the standards you have established with providers for maintaining enrollee health records.

Our provider contracts require the retention of medical records. We have numerous agreements with provider groups. Our template California capitated provider agreement contains the following language:

2.7 Medical Records: Medical Group and its Participating Providers shall maintain all patient medical records relating to Covered Services provided to Members, in such form and containing such information as required by the QI Program, Accreditation Organizations and State and Federal Law. Medical records shall be maintained in a manner that is current, detailed, organized and permits effective patient care and quality review by Medical Group and PacifiCare pursuant to the QI Program. Medical records shall be maintained in a form and physical location which is accessible to Medical Group's Participating Providers, PacifiCare, Government Agencies and Accreditation Organizations. Upon request and within the time frame requested, Medical Group and its Participating Providers shall provide to PacifiCare, at Medical Group's or Participating Provider's expense, copies of Member medical records for purposes of conducting quality assurance, case management and utilization reviews, credentialing and peer review, claims processing, verification and payment, resolving Member grievances and appeals and other activities reasonably necessary for the proper administration of the Managed Care Plans consistent with State and Federal Law. If Medical Group or its Participating Providers do not provide copies of Member medical records to PacifiCare within the time frame requested, Medical Group and its Participating Providers shall allow PacifiCare immediate access to such medical records for onsite copying and shall reimburse PacifiCare for the actual copying expense. Medical Group and its Participating Providers shall maintain the confidentiality of all Member medical records and treatment information in accordance with State and Federal Law and maintain

procedures that specify the purpose for which the information will be used within Medical Group's organization and to whom and for what purposes Medical Group may disclose the information outside of Medical Group. Medical records shall be retained by Medical Group and its Participating Providers for at least six (6) years following the provision of Covered Services and as required by State and Federal Law. The provisions of this Section shall survive termination of this Agreement for the period of time required by State and Federal Law.

Our template PCP contract in Texas is largely the same, containing the following language:

2.6 Medical Records. Physician shall maintain all patient medical records relating to Primary Care Services provided to Members, in such form and containing such information as required by the QI Program, Accreditation Organizations and State and Federal Law. Medical records shall be maintained in a manner that is current, detailed, organized and permits effective patient care and quality review by Physician and PacifiCare pursuant to the QI Program. Medical records shall be maintained in a form and physical location which is accessible to Physician, PacifiCare, Government Agencies, and Accreditation Organizations. Upon request and within the time frame requested, Physician shall provide to PacifiCare, at Physician's expense, copies of Member medical records for purposes of conducting quality assurance, case management and medical management, credentialing and peer review, claims processing, verification and payment, resolving Member grievances and appeals, and other activities reasonably necessary for the proper administration of the Managed Care Plans consistent with State and Federal Law. If Physician does not provide copies of Member medical records to PacifiCare within the time frame requested, Physician shall allow PacifiCare immediate access to such medical records for onsite copying and shall reimburse PacifiCare for the actual copying expense. Physician shall maintain the confidentiality of all Member medical records and treatment information in accordance with State and Federal Law and have procedures in place that specify the purpose for which the information will be used within Physician's organization and to whom and for what purposes Physician may disclose the information outside of Physician's organization. The provisions of this Section shall survive termination of this Agreement for the period of time required by State and Federal Law.

"INGENIX Clinical Assessments Solutions Encounter Operations" Follow-up Questions

Please answer the following questions with respect to H4590 and H0543.

1. Please explain the role, responsibilities, and relationship to PacifiCare of INGENIX?

Ingenix is a wholly-owned subsidiary of UnitedHealth Group ("UHG"). PacifiCare of Texas and PacifiCare of California are indirect, wholly-owned subsidiaries of UHG.

Among other things, Ingenix provides an assortment of healthcare related information and technology services to health plans operated by Ovation, one of four business families that constitute UHC. H4590 and H0543 are operated by Ovation and were acquired by UHC in December 2008 as part of UHC's acquisition of Pacificare Health Systems.

Clinical Assessment Solutions ("CAS") is a business unit of Ingenix that provides clinical quality and risk scoring analytic services to Ovation. The services that CAS provides Ovation include:

- a. Provider engagement and education around accurate and complete diagnostic coding
- b. Oversight of encounter collection, submission and reconciliation
- c. Clinical support programs to encourage early assessment and on-going evaluation of chronic disease
- d. Monitoring the appropriateness and accuracy of provider coding
- e. Revenue reconciliation & analysis of payments received from CMS
- f. Annual working aged survey
- g. Financial and risk score projections
- h. Ad hoc reporting and analyses relating to Medicare Advantage revenue and risk scores
- i. Data mining and tool development to support these services

2. Was INGENIX involved in the operations of H4590 and H0543 during the CY 2006 data collection period?

Yes. The personnel group that comprises CAS today was part of Ovation in the beginning of the data collection period for 2006 dates of service. In June or July of 2007, personnel who performed clinical quality and risk scoring analytic services transitioned from Ovation to Ingenix to form the initial CAS team.

3. Where is INGENIX located?

Ingenix is headquartered in Eden Prairie, Minnesota.

4. May we obtain copies of the P&P that were in effect during CY 2006? If these P&P are not available, please explain any differences between the 1/1/2009 revision (version 1.0) and what was in effect during 2006.

As mentioned above, we did not have a formal, written P&P for obtaining, processing, and submitting risk adjustment data to CMS during the data collection period for 2006 dates of service. This process is and has been largely automated and has changed since

2006 because we moved to a new risk adjustment processing system. The system we used for 2006 dates of service was called BLS1. We have since changed to a system called IRADS. The main difference between BLS1 and IRADS is the point in time at which each filters data for bill type, revenue code, CPT code and provider specialties. The Encounter Operations P&P that we provided to you on May 5, 2009 focuses on the process embedded in IRADS.

In other respects, our processes for 2006 dates of service are similar to our current processes. At that time, our encounter operations group submitted risk adjustment data to CMS based on, among other things, (1) chart validations, (2) chart reviews, and (3) other reporting mechanisms. A chart validation involved the review of a provider's patient charts to determine whether they supported certain codes that the provider had reported. We selected a provider for chart validation based principally on whether the provider's coding was unusually high compared to a national benchmark established by our risk adjustment system. The chart validation tested the provider's deviation from that benchmark. Codes found to be inaccurate or incomplete through chart validations were deleted. During a chart validation, we did not seek to verify other codes reported to CMS or to capture other diagnoses that were documented in the chart but not reported to CMS. In contrast, a chart review involved review of the diagnoses reflected in a selected provider's patient charts to determine if any documented diagnoses had not been reported to CMS. Following a chart review, we submitted to CMS any new codes documented in the medical chart but did not determine whether the codes previously reported to CMS were documented in the medical record. Our encounter operations group also received other reports of inaccurate codes from providers and deleted any such code found to be inaccurate. With respect to our current practices, we have begun conducting chart validations for 2008 dates of service on the IRADS system using criteria similar to that used for 2006 dates of service and are conducting chart reviews in substantially the same manner as we did for 2006 dates of service. The P&P we provided to you should not be read to suggest that we follow or have followed a different process.

Finally, we would like to make clear that although the P&P we provided to you reflects current practice as described above, that policy is a working draft. We plan to formally adopt and implement a final policy later this year.

5. The P&P were approved by Randall Myers. Who is Randall Myers? Who would have approved the P&P that were in place during CY 2006?

Randy Myers is the Associate Director of Encounter Collection, Submission, and Controls within CAS. Randy has been in this role since September 2007. As discussed above, there were no written P&Ps regarding encounter collection and submission during the data collection period for 2006 dates of service.

6. Please describe the “core transaction systems” (i.e., the claims and encounter systems; see p. 2). What data are included in each system and how does that data get there?

As discussed above, for 2006 dates of service, our “core transaction systems” included NICT, FACTS, PFS and a provider portal. As mentioned above, during the data collection period for 2006 dates of service, providers submitted risk adjustment data to the plan through (i) claims and/or encounter data sent electronically through a claims clearinghouse, (ii) encounter data sent electronically through a “direct connection” that allowed some capitated providers to submit encounters directly, bypassing a clearinghouse, (iii) claims and/or encounter data sent through paper claims and/or encounter forms submitted by providers not yet able to submit claims electronically, and (iv) risk adjustment data sent electronically via our provider portal.

7. What filter/extract logic is applied to extract data from the core transactions systems before they are submitted to RAPS (see 4.2)?

As discussed above, during the data collection period for 2006 dates of service, the core transaction systems performed filtering on bill types, revenue codes, CPT codes, and provider specialties.

8. Can the systems generate reports showing invalid diagnoses identified during data extraction?

During the data collection period for 2006 dates of service, the BEST system could generate reports showing codes that the BEST system identified as not corresponding to a valid ICD-9 code.

9. Please clarify the data processing described in 4.14: “Diagnosis codes that are determined to be invalid before being submitted to CMS are flagged in our risk adjustment system and are worked through that application. If the code is later found to be valid, it is submitted via the CMS RAPS submission process. If the code is later found to be invalid, the code is never submitted to CMS.”

a. Why would a code be flagged as invalid?

A code would be flagged as invalid if our systems determine that the code does not correspond to a valid ICD-9 code. For example, 250.43 would not be flagged as invalid because it is a valid ICD-9 code, but 250.48 would be flagged as invalid because it does not correspond to a valid ICD-9 code.

b. What does “worked through that application” mean?

As discussed above, codes that our systems determine do not correspond to a valid ICD-9 code are flagged within our risk adjustment processing system for review and logged in a work queue with an “invalid diagnosis” error. Such codes are reviewed by a team of error correction analysts. Error correction analysts determine whether the code can be corrected by either reviewing the original claim image (in case of a keying error in the

initial entry of the claim in our system) or by contacting the rendering provider directly. If an error correction analyst is able to identify a valid code through one of the two processes identified above, the analyst corrects the code in the system and removes the error flag, which then clears the code to be sent to CMS. If no valid code can be identified, the error flag is retained and the invalid code is not submitted to CMS. As described more fully below, the plan also reviews codes for accuracy through chart validations.

10. Do you have a database that includes the diagnosis codes that were changed as a result of chart review? (See 4.15.)

We do not have such a database. As discussed above, for 2006 dates of service, risk adjustment data submitted to CMS was managed and stored on several databases. In order to answer your question, we would have to (i) access those databases, which have been archived, (ii) build custom queries and (iii) manually trace and research the reason underlying each changed diagnosis codes. Because this process is so labor-intensive, we would like to explore with you potentially less-burdensome avenues for us to assist you in this area.

EXHIBIT D-152

Chapter 4: Diagnosis Documentation & Coding

Documentation is the key influence on proper diagnosis code selection. For years we have seen diagnosis codes misused across many levels of care and in various settings. Healthcare professionals have in general become lazy with regard to documentation of diagnoses. In fact, one of the largest drivers of diagnosis code selection in real-world scenarios continues to be those diagnoses that support the procedure codes being billed to show medical necessity.

Diagnosis coding guidelines state that providers should document all diagnoses that are a part of the medical decision making (MDM) for each visit.

Example

A patient comes in for a possible strep pharyngitis and has known diabetic neuropathy; it would be appropriate to choose the pharyngitis as the primary diagnosis code (or main reason for the visit) and include codes for the diabetic neuropathy. Those diagnoses are taken into consideration when treating the presenting problem.

Coding professionals consistently have seen a decline in the accuracy of diagnosis coding. Often the quickest code found on the superbill/encounter form is reported even though it may not accurately describe the patient's condition. Another common error is to only report the primary diagnosis without reporting all the applicable diagnosis codes for the encounter. Providers and coders are equally guilty of choosing generic, non-specific codes because they are memorized and easier to code than stopping to look up a more specific diagnosis code supported by documentation.

Documenting complications and comorbidities is important for risk adjustment purposes. Many providers still do not realize the coding guidelines largely prohibit medical coders from assuming any cause and effect relationships and if these are not clearly documented in the medical record, they are lost in translation.

Diabetes is one of the biggest challenges. Many providers have memorized the basic diabetes code, yet that primary unspecified diabetic code should only be used for diabetics who have no complications from their diabetes. Overall, this is often not the case for many diabetics, and complications of diabetes, which are rated higher in risk adjustment

models, are left undocumented. This not only skews the reality of the state of health of each patient, but it also skews data being collected and how the United States compares by reported diagnosis codes to the health of other nations.

Another example of diagnosis coding challenges is hypertension, which similar to diabetes has potential cause and effect conditions that might lead to a different diagnosis code selection. An example is hypertensive heart disease.

Many providers still are not aware there are coding guidelines for coding a stroke. Once a patient has been discharged from an inpatient treatment for a stroke, it is no longer appropriate to use the stroke diagnosis code. Instead, a history of stroke code and any residual late effect diagnosis should be documented and coded. These examples help support the value of having certified medical coders.

Certified coders are not automatically knowledgeable on every topic, and most coders have particular strengths in certain specialties. There is a slightly different mindset for the risk adjustment coder.

Coders are accustomed to submitting diagnosis codes on claims for the purposes of reimbursement validation for services already rendered. In the risk adjustment models, coders are not submitting codes for services rendered, but instead submitting codes to properly calculate each patient's risk score, which affects the financial and disease management resources that will go toward future treatments necessary to treat the existing diagnoses.

Collecting these diagnoses is not for the purpose of submitting a claim, but rather to send the diagnoses in a supplemental file to account for all the conditions the patient has documented as a current condition each year. These diagnosis codes are converted to a risk adjustment factor (eg, HCC value or CDPS value) and the patient's risk score is steadily and yearly adjusted according to those risk adjustment-associated diagnosis codes. The end result is not the storage of a group of diagnosis codes, but instead, their affiliated diagnosis values, such as HCC value or CDPS value as documented and reported.

As discussed earlier, these values establish the budgeting for the care of each patient for each following year. Some argue that risk adjustment is inflating previously unreported diagnoses; however, the truth is that risk adjustment is finally requiring providers and health plans to pay close

attention to the diagnoses being documented and this has, in turn, caused a surge in more specific diagnosis codes being captured correctly. While coders must use caution to avoid over-coding or up-coding of any diagnoses, they also must ensure diagnosis code selection is as specific as possible. This attention to detail in recent years has created what might appear to be a surge in diagnosis reporting, but in reality diagnosis code selection is becoming more accurate than ever before.

Note that the acronym “ICD” is used here to reference diagnosis codes in general to include ICD-9-CM, as well as the ICD-10-CM codes implemented October 1, 2014. The general coding guidelines that instruct the reporting of all coexisting diagnosis codes for each encounter do not change from ICD-9-CM to ICD-10-CM.

Coding For All Diagnoses Noted in a Date Of Service (DOS)

Medicare defaults much of its risk adjustment diagnosis coding guidance to the official coding guidelines and American Hospital Association (AHA) *Coding Clinic*® determinations. In risk adjustment coding in accordance with the Official Coding and Reporting Guidelines, it is appropriate to document and code for all coexisting conditions in all dates of service for each calendar year.

In DRG coding, which is familiar with many hospital-based coders, diagnosis codes are only selected when they are identified as part of the reason for the visit, treatment, or procedure. Diagnoses not currently being treated are avoided. The focus here is choosing those codes directly related to services rendered to help explain the why of the encounter(s). This rule does not apply to risk adjustment diagnosis coding, where the goal is to correctly capture all diagnosis codes for all current conditions without regard to current treatment, as risk adjustment values will largely apply to future needed treatment related to those diagnoses.

Risk adjustment models tend to shy away from using diagnosis codes for diagnostic testing, and with good reason. Often providers might choose to list a diagnosis he or she is ruling out as the reason for the test instead of the correct selection of the signs and symptoms as the reason for the test. In risk adjustment models, providers are expected to update any diagnostic findings such as a newly confirmed diagnosis from laboratory or X-ray findings in an addendum to the DOS when the test was ordered, or in the next face-to-face encounter with the patient. It is appropriate for coders to capture such diagnostic findings when they

have been updated in the addendum or the next follow-up encounter documentation, not directly from reports.

When reviewing 1995 and 1997 documentation guidelines for E/M services, diagnoses must be documented to include how they have been evaluated or addressed. The focus here is solely on choosing the appropriate level of E/M service. These guidelines are in relation to the procedure code assignment and are not diagnosis coding guidelines or rules, but rather rules to be followed when using diagnoses to support a level of service. A coder should not give credit for the time and attention of a diagnosis not listed on the DOS and certainly not use its existence to bump up the level of service when choosing the E/M procedure code.

When coding diagnoses for risk adjustment purposes, the goal is to honestly report all current diagnoses a patient has in face-to-face encounters by approved provider types during each calendar year (January–December). There is not a justification in only reporting those diagnoses that were treated or addressed or explain a level or service. Following ICD guidelines, it is appropriate to code for all coexisting diagnoses and this should not be curbed by only those addressed or treated in the visit, but all which were a part of the medical decision making of the visit or encounter. Any diagnoses previously treated, no longer existing, or are truly only historical in nature are not coded.

Coders and providers have developed improper diagnosis coding and billing habits derived from the Fee-For-Service (FFS) model and insurance carrier denials. If one were to ask any coder, biller, or provider how a diagnosis code is chosen for a particular visit, the answer will likely be the diagnosis code that will get the procedure code paid, or the diagnosis that exists and is supported in an Local Coverage Determination (LCD). While this has evolved from various payment methodologies across the country, this is not what is instructed in the Official Guidelines for Coding and Reporting. The coding guidelines instruct to select a primary code (main reason for the visit/encounter) and additional codes for other coexisting conditions.

Coders rely on coding guidelines to support coding decisions. Excerpts from the ICD-9-CM and ICD-10-CM Official Coding Guidelines for Coding and Reporting are provided as support for the coding advice covered in this chapter.

Guideline Excerpt

Selection of primary diagnosis and first-listed diagnosis

ICD-9-CM:

Section II. Selection of a Principal Diagnosis

These circumstances of inpatient admission always govern the selection of principal diagnosis. The principal diagnosis is defined in the Uniform Hospital Discharge Data Set (UHDDS) as "that condition established after study to be chiefly responsible for occasioning the admission of the patient to the hospital for care."

The UHDDS definitions are used by hospitals to report inpatient data elements in a standardized manner. These data elements and their definitions can be found in the July 31, 1985, Federal Register (Vol. 50, No. 147), pp. 31038-40.

Since that time the application of the UHDDS definitions has been expanded to include all non-outpatient settings (acute care, short term, long term care, and psychiatric hospitals; home health agencies; rehab facilities; nursing homes, etc).

In determining principal diagnosis the coding conventions in the ICD-9-CM, Volumes 1 & 2 take precedence over these official coding guidelines.

(See Section I.A., Conventions for the ICD-9-CM)

The importance of consistent, complete documentation in the medical record cannot be over emphasized. Without such documentation the application of all coding guidelines is a difficult, if not impossible task. (ICD-9-CM, 2014)

ICD-10-CM:

Section II. Selection of a Principal Diagnosis

These circumstances of inpatient admission always govern the selection of principal diagnosis. The principal diagnosis is defined in the Uniform Hospital Discharge Data Set (UHDDS) as "that condition established after study to be chiefly responsible for occasioning the admission of the patient to the hospital for care."

The UHDDS definitions are used by hospitals to report inpatient data elements in a standardized manner.

These data elements and their definitions can be found in the July 31, 1985, Federal Register (Vol. 50, No. 147), pp. 31038-40.

Since that time the application of the UHDDS definitions has been expanded to include all non-outpatient settings (acute care, short term, long term care, and psychiatric hospitals; home health agencies; rehab facilities; nursing homes, etc).

In determining principal diagnosis the coding conventions in the ICD-10-CM, the Tabular List and the Alphabetic Index take precedence over these official coding guidelines.

(See Section I.A., Conventions for the ICD-10-CM)

The importance of consistent, complete documentation in the medical record cannot be over emphasized. Without such documentation the application of all coding guidelines is a difficult, if not impossible task. (ICD-10-CM, 2014 Draft)

ICD-9-CM:

Section IV. Diagnostic Coding and Reporting Guidelines for Outpatient Services

A. Selection of first-listed condition

In the outpatient setting, the term first-listed diagnosis is used in lieu of principal diagnosis.

In determining the first-listed diagnosis the coding conventions of ICD-9-CM, as well as the general and disease specific guidelines take precedence over the outpatient guidelines.

Diagnoses often are not established at the time of the initial encounter/visit. It may take two or more visits before the diagnosis is confirmed.

The most critical rule involves beginning the search for the correct code assignment through the Alphabetic Index. Never begin searching initially in the Tabular List as this will lead to coding errors. (ICD-9-CM, 2014)

ICD-10-CM:

Section IV. Diagnostic Coding and Reporting Guidelines for Outpatient Services

A. Selection of first-listed condition

In the outpatient setting, the term first-listed diagnosis is used in lieu of principal diagnosis.

In determining the first-listed diagnosis the coding conventions of ICD-10-CM, as well as the general and disease specific guidelines take precedence over the outpatient guidelines.

Diagnoses often are not established at the time of the initial encounter/visit. It may take two or more visits before the diagnosis is confirmed.

The most critical rule involves beginning the search for the correct code assignment through the Alphabetic Index. Never begin searching initially in the Tabular List as this will lead to coding errors. (ICD-10-CM, 2014 Draft)

Guideline Excerpt

Selecting codes for coexisting conditions

ICD-9-CM:

Section IV. Diagnostic Coding and Reporting Guidelines for Outpatient Services

H. ICD-9-CM code for the diagnosis, condition, problem, or other reason for encounter/visit

List first the ICD-9-CM code for the diagnosis, condition, problem, or other reason for encounter/visit shown in the medical record to be chiefly responsible for the services provided. List additional codes that describe any coexisting conditions. In some cases the first-listed diagnosis may be a symptom when a diagnosis has not been established (confirmed) by the physician. (ICD-9-CM, 2014)

K. Code all documented conditions that coexist

Code all documented conditions that coexist at the time of the encounter/visit and require or affect patient care treatment or management. Do not code conditions that were previously treated and no longer exist. However, history codes (V10-V19) may be used as secondary codes if the historical condition or family history has an impact on current care or influences treatment. (ICD-9-CM, 2014)

ICD-10-CM:

Section IV. Diagnostic Coding and Reporting Guidelines for Outpatient Services

G. ICD-10-CM code for the diagnosis, condition, problem, or other reason for encounter/visit

List first the ICD-10-CM code for the diagnosis, condition, problem, or other reason for encounter/visit shown in the medical record to be chiefly responsible for the services provided. List additional codes that describe any coexisting conditions. In some cases the first-listed diagnosis may be a symptom when a diagnosis has not been established (confirmed) by the physician. (ICD-10-CM, 2014 Draft)

J. Code all documented conditions that coexist

Code all documented conditions that coexist at the time of the encounter/ visit and require or affect patient care treatment or management. Do not code conditions that were previously treated and no longer exist. However, history codes (categories Z80-Z87) may be used as secondary codes if the historical condition or family history has an impact on current care or influences treatment. (ICD-10-CM, 2014 Draft)

The CMS Risk Adjustment Participant Guide specifically directs us to follow the Official Guidelines for Coding and Reporting and determinations provided in the AHA Coding Clinic®.

Excerpt from the Medicare/

CMS Risk Adjustment Participant Guide:

6.4.1 Co-Existing and Related Conditions

The instructions for risk adjustment implementation refer to the official coding guidelines for ICD-9-CM, published at www.cdc.gov/nchs/icd9.htm and in the Coding Clinic®. Physicians should code all documented conditions that co-exist at the time of the encounter/visit, and require or affect patient care treatment or management. Do not code conditions that were previously treated and no longer exist. However, history codes (V10-V19 not in HCC model) may be used as secondary codes if the historical condition or family history has an impact on current care or influences treatment.

Co-existing conditions include chronic, ongoing conditions such as diabetes (250.XX, HCCs 15-19),

congestive heart failure (428.0, HCC 80), atrial fibrillation (427.31, HCC 92), chronic obstructive and pulmonary disease (496, HCC 108). These diseases are generally managed by ongoing medication and have the potential for acute exacerbations if not treated properly, particularly if the patient is experiencing other acute conditions. It is likely that these diagnoses would be part of a general overview of the patient's health when treating co-existing conditions for all but the most minor of medical encounters.

Co-existing conditions also include ongoing conditions such as multiple sclerosis (340, HCC 72), hemiplegia (342.9X, HCC 100), rheumatoid arthritis (714.0, HCC 38) and Parkinson's disease (332.0, HCC 73). Although they may not impact every minor health-care episode, it is likely that patients having these conditions would have their general health status evaluated within a data reporting period, and these diagnoses would be documented and reportable at that time.

MA organizations must submit each required diagnosis at least once during a risk adjustment reporting period. Therefore, these co-existing conditions should be documented by one of the allowable provider types at least once within the data reporting period. (CMS Participant Guide, 2008)

Use of "history of." In ICD-9-CM, "history of" means the patient no longer has the condition and the diagnosis often indexes to a V code not in the HCC models. A physician can make errors in one of two ways with respect to these codes. One error is to code a past condition as active. The opposite error is to code as "history of" a condition when that condition is still active. Both of these errors can impact risk adjustment. (CMS Participant Guide, 2008)

Because the purpose is to code for all known diagnoses for each patient in risk adjustment models, diagnoses from any portion of the record should be reported, provided that they are accurately documented as current diagnoses.

Coding Diagnoses from Chief Complaint (CC) or History of Present Illness (HPI)

Entries from the CC and HPI portion of any record should be carefully evaluated for the wording used by the treating provider. All documented diagnoses should be coded and any that are only noted as historical should be left as Past Medical History (PMH) or questionable, which is covered later in this chapter.

In the two examples below, diagnoses highlighted in green would be appropriate to code as current diagnoses and those in yellow would be PMH or questionable.

Example

Example 1: CC: Ms. Jones is a 70-year-old female who comes in today for follow up of her diabetes and COPD. She has a history of DVT and peripheral vascular disease. She has had no issues or complaints since her last visit to the office.

Rationale: The CC clearly states the patient is here for the diabetes and COPD. The DVT and PVD are mentioned as historical in nature and are not clear to be current conditions. Additionally, these two conditions are not known to be permanent and life-long and therefore should not be coded as current.

Example 2: CC: Ms. Jones is a 70-year-old female with a history of diabetes and COPD and she is here today for a follow up on her blood sugar control and to evaluate her inhaler effectiveness.

Rationale: This CC lists both conditions as "historical" yet it also affirms that they are current conditions being treated and therefore are appropriate to code as current. Cardiovascular: Patient reports she had an MI at age 50

Coding Diagnoses from PMH and other Historical Lists

PMH is one of the biggest areas of contention when reviewing medical records. As stated in the Medicare/CMS Risk Adjustment Participant Guide, CMS recognizes that providers may sometimes incorrectly list a current diagnosis as PMH or vice versa. “One error is to code a past condition as active. The opposite error is to code “history of” a condition when that condition is still active” (CMS Participant Guide, 2008).

Coders see a plethora of documentation variations that can be challenging to even the most skilled. While it is evident that one should report all current diagnoses (regardless of treatment), there are some diagnoses, which may only be listed as historical in nature. According to the coding guidelines, as well as CMS guidance, coders cannot code for conditions previously treated and that no longer exist.

PMH is loosely used in clinical documentation, sometimes as a stand-alone listing of diagnoses and sometimes as a separately identifiable true listing of past conditions. Because of varying methods of documentation used by providers across the country, there must be a standardized way to interpret these lists. This is also true when the words *history of* are included in other portions of the documentation.

Coders cannot make assumptions. Even if a diagnosis may be commonly known as a condition that once diagnosed, is life-long and does not go away. If such a condition is not listed as current and only as historical, there must be a way to identify those diagnoses that are still valid separate from those that are truly historical. In an ideal situation, it would be appropriate to query the treating provider for clarification; however, risk adjustment coding work may be done remotely by coders representing the health plan who do not have interactions with the provider. Sometimes risk adjustment coding work is done by trusted vendors who hire coders with no communication with the documenting provider(s).

The Official Coding and Reporting guidelines instruct coders on the appropriate coding of previous or historical conditions for inpatient as well as outpatient settings.

Guidelines Excerpt

Selecting codes for previously treated or historical diagnoses:

ICD-9-CM:

Section IV. Diagnostic Coding and Reporting Guidelines for Outpatient Services

K. Code all documented conditions that coexist

Code all documented conditions that coexist at the time of the encounter/visit and require or affect patient care treatment or management. Do not code conditions that were previously treated and no longer exist. However, history codes (V10-V19) may be used as secondary codes if the historical condition or family history has an impact on current care or influences treatment. (ICD-9-CM, 2014)

ICD-10-CM:

Section IV. Diagnostic Coding and Reporting Guidelines for Outpatient Services

J. Code all documented conditions that coexist

Code all documented conditions that coexist at the time of the encounter/visit and require or affect patient care treatment or management. Do not code conditions that were previously treated and no longer exist. However, history codes (categories Z80-Z87) may be used as secondary codes if the historical condition or family history has an impact on current care or influences treatment. (ICD-10-CM, 2014 Draft)

Many in the coding profession are familiar with the acronym MEAT, which stands for Monitor, Evaluate, Assess, or Treat as a reminder of scenarios where diagnoses can be coded in normal fee-for-service models or when choosing supporting diagnosis codes for procedures or other services already rendered. This acronym does not address all diagnoses that can be reported in risk adjustment coding because there are more scenarios that would qualify a diagnosis code as current or active for risk adjustment purposes. The MEAT acronym supports diagnosis code selection to support E/M services.

IonHealthcare, LLC, has created a new trademarked acronym specifically to address those diagnoses in question. If a coder believes any diagnosis is current, but it is only listed as PMH or historical, coders should ask themselves: “Did the provider TAMPER™ (Treatment, Assessment, Monitor/Medicate, Plan, Evaluate, or Referral) with the

diagnosis on the DOS? If the answer is yes, then the diagnosis can be considered current, and if the answer is no, then do not report the code as current and consider the diagnosis as a PMH (historical) diagnosis which is not normally submitted or shared for risk adjustment purposes.

Some health plans record historical diagnoses that lack ongoing evidence of treatment or medical decision making in an effort to identify additional suspect conditions that may be present elsewhere. These are usually stored for evaluation purposes, but not captured or reported officially for risk adjustment purposes. Some health plans feel uncomfortable reporting any diagnosis not currently being treated or addressed and may choose to only include those diag-

noses that are in the assessment portions of the encounter documentation. This is a very conservative approach, and may become difficult to manage because of the many diagnoses which may never be documented in those areas but are pertinent to risk adjustment such as old MI, amputations, ostomy status, etc.

Because many of these diagnoses are permanent and life-long, many carriers have identified a select listing of diagnoses, which when even if only listed as historical, may be overridden and submitted for risk adjustment purposes. This is at the discretion of the client/carrier and is not recommended as proper coding guidelines for risk adjustment.

Figure 2—TAMPER™ Decision Flow

Source: IonHealthcare, LLC

There are many diagnoses in risk adjustment models that have medication therapy, where those medications are only used for those diagnoses alone, and these are often utilized to establish a diagnosis as current or valid to submit. In such cases, it is important to be sure that the medication is current, and prescribed for the diagnosis to make it a current diagnosis. Medications documented that can be used for several different diagnoses or conditions do not help support an active diagnosis if they are not linked in some manner to the diagnosis itself. Query of the treating provider is the best method to validate the codes; however, coders may justify the codes if self-evident.

Special caution is advised for those records where diagnoses appear to be continually repeated or “cut and pasted” into each subsequent DOS and caution should be taken to only include those diagnoses which meet the TAMPER™ criteria above when diagnoses are listed as historical.

The following diagnoses are examples that are often improperly coded as current. Some organizations utilize a system of code harvesting that allows for a historical or PMH only flagging to identify codes which seem to be unclear as to whether they are current or prior history items. Such practice should be used very carefully as many of these codes should not be reported as historical, or they may have a more specific “history of” code such as a V code that might be more accurate.

- **Fractures**—Fractures are not coded once they are repaired. However, compression fractures of the vertebrae are often not treated in the elderly, and if a vertebral fracture appears to be a current diagnosis, it may be coded.
- **Cancers**—There are ‘history of’ diagnosis codes to express this, and these may or may not risk adjust (they do for some commercial plans, but do not for CMS HCC purposes.).
- **CVA**—Coding guidelines state a CVA may not be coded once a patient is discharged for this problem, instead a history of code should be used.
- **Myocardial Infarction**—There is a specific code for old MI (412) which does risk adjust in most models.
- **HIV**—This diagnosis has no cure and could never be merely historical.
- **Amputations**—Amputated body parts are permanent.
- Anything that is listed as: repaired, resolved, fixed, or managed through prophylaxis.

When PMH is listed as a separately identifiable list of true historical conditions, coders are required to find evidence within that same date of service (DOS) to substantiate that particular PMH diagnosis as actually current unless it is a condition that never goes away, such as HIV infection. This would include medication, which is irrefutable for the condition or shows other evidence of “TAMPER™”, including notation of the condition being current, stable, active, reviewed, unchanged, etc.

When coders are presented with documentation where there are PMH listings separated from another listing noted as active, current, ongoing, etc., they are instructed to treat all those listed as current, active, ongoing, etc. as current, within reason, and to follow the above rule for those listed in the separate PMH only listing. Providers need to be reminded of the importance of list headers and to categorize diagnoses appropriately.

Coding from Lists

Use caution when given diagnosis lists. While it is appropriate to code for all known current diagnoses, exercise caution to avoid improperly coding any diagnosis in a list which could not be current, is not believed to be current, or appears to be mistakenly brought forward from a past visit documentation. Some of these lists have columns designating diagnoses as current or resolved, but even with this level of detail, use caution to avoid coding any old diagnoses no longer present or those which the coder knows could not possibly still be true.

In general, if diagnoses are listed as current, ongoing, active, chronic, etc., they may be coded, especially if there is another specific separate listing of PMH diagnoses. Conditions that resolve and have no additional mention in the record should not be coded unless TAMPER™ guidance is met.

Example: Chronic Problems:

- A-Fib (on Coumadin)
- Acute Pancreatitis (admitted 2002)
- Old MI
- CVA (2000)
- CKD (Followed by Dr. Jones, nephrology)
- Prostate CA

RATIONALE: The above list may be titled as “chronic conditions, but not all of the conditions listed are current. This is a common problem for coders. The A-fib is clearly current as there is medical treatment. The acute pancreatitis appears to be historical only. The old MI may be coded as factual, and the CVA is not only historical (one could code a history of code and any related residual conditions if noted), but an active CVA code cannot be coded once a patient has been discharged for the CVA. CKD is clearly still under treatment, and prostate CA lacks any current ongoing treatment that would be necessary to code a cancer as current.

Coding Diagnoses from Review of Systems (ROS)

Some coders have voiced concerns about coding diagnoses from the ROS portion of the record and this hesitation can be related back to the E/M coding guidelines. When choosing a level of service for E/M purposes, coders are instructed that the ROS area is used in meeting the history taking element toward the E/M selection. This portion of the medical record documentation is intended to document the provider's questioning of the patient for feedback regarding how they are doing by systems. Many providers will document accurate diagnoses in this section of the record. The main warning in this area is to avoid coding for any patient-stated conditions. Conditions or diagnoses that are only reported by the patient as recounting to the current provider are not acceptable without provider validation.

In the two examples below, those diagnoses highlighted in green would be appropriate to code and those in yellow would be PMH or questionable.

Example

Example 1: ROS: Respiratory: COPD, Hypoxia, on inhaler and home oxygen Cardiovascular: no complaints of SOB, no palpitations, MI 1992

Rationale: The above ROS annotates that the patient is on current treatment for the COPD and there is a valid Old MI noted during the ROS as well that is valid.

Example 2: ROS: Respiratory: patient states her PCP told her she has COPD

Rationale: The above ROS merely annotates a patient stated condition that is not confirmed by the current treating provider. It is 'diagnosis hearsay' and should not be coded.

Example

Example 1: Exam: Extremities: Good Lt. pedal pulses; Rt. above knee amputation (2006).

Rationale: In the above exam, the provider merely uses the exam portion to annotate that there is an above the knee amputation. The code for amputation status would be appropriate to code.

Example 2: Exam: Appearance: Appears cachectic.

Rationale: In the above exam, the provider is merely annotating an appearance and not making a diagnosis of cachexia. "Appears" is the same as "likely" which is not a diagnosis.

Coding from Assessment and Plan

The assessment and plan portions of any record are the final portions of documentation for each encounter. The diagnoses documented in the assessment and plan should generally always be coded, with one word of caution-many providers will list items in the assessment, which have resolved or are no longer current.

Examples of assessment documentations that should not be coded:

- **Stroke**—When the patient is not having or being treated for a stroke it is improper to code this diagnosis.
- **Cancers**—Cancers may only be coded when they are current and not current by the above definitions, as they have their own rule. Cancers must only be coded as current when there is evidence of current treatment toward the cancer (or the patient has refused treatment, or "watchful waiting" is being followed). Special caution must be taken by the coder when reviewing records for follow up of old cancers which have resolved, been eradicated, or are no longer being actively treated and avoid coding those incorrectly as current.

Coding Diagnoses from the Exam Portion of a Record

The exam portion of the medical record is where the provider documents the objective findings from the actual physical exam portion of the encounter with the patient. Many providers may list valid diagnoses in this section of the record and any diagnoses documented, as current should be coded appropriately.

Medicare and Medicaid Programs; Policy and Technical Changes to the Medicare Advantage, Medicare Prescription Drug Benefit, Program of All-Inclusive Care for the Elderly (PACE), Medicaid Fee-for-Service, and Medicaid Managed Care Programs for Years 2020 and 2021

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Proposed rule.

SUMMARY: This proposed rule would revise the Medicare Advantage (MA) program (Part C) regulations and Prescription Drug Benefit program (Part D) regulations to implement certain provisions of the Bipartisan Budget Act of 2018; improve quality and accessibility; clarify certain program integrity policies; reduce burden on providers, MA plans, and Part D sponsors through providing additional policy clarification; and implement other technical changes regarding quality improvement. This proposed rule would also revise the appeals and grievances requirements for Medicaid managed care and MA special needs plans for dually eligible individuals to implement certain provisions of the Bipartisan Budget Act of 2018.

DATES: To be assured consideration, comments must be received at one of the addresses provided below, no later than 5 p.m. on December 31, 2018.

ADDRESSES: In commenting, please refer to file code CMS-4185-P. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission.

Comments, including mass comment submissions, must be submitted in one of the following three ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to <http://www.regulations.gov>. Follow the “Submit a comment” instructions.

2. *By regular mail.* You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS-4185-P, P.O. Box 8013, Baltimore, MD 21244-8013.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS-4185-P, Mail Stop C4-26-05, 7500 Security Boulevard, Baltimore, MD 21244-1850.

For information on viewing public comments, see the beginning of the **SUPPLEMENTARY INFORMATION** section.

FOR FURTHER INFORMATION CONTACT:

Jonathan Smith (410) 786-4671, or Joanne Davis, (410) 786-5127, MA RADV Issues.

SUPPLEMENTARY INFORMATION: *Inspection of Public Comments:* All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following website as soon as possible after they have been received: <http://www.regulations.gov>. Follow the search instructions on that website to view public comments.

Comments received timely will also be available for public inspection as they are received, generally beginning approximately 3 weeks after publication of a document, at the headquarters of the Centers for Medicare & Medicaid Services, 7500 Security Boulevard, Baltimore, Maryland 21244, Monday through Friday of each week from 8:30 a.m. to 4 p.m. To schedule an appointment to view public comments, phone 1-800-743-3951.

I. Executive Summary

A. Purpose

The primary purposes of this proposed rule are to: make revisions to the Medicare Advantage (MA) program (Part C) and Prescription Drug Benefit Program (Part D) regulations based on our continued experience in the administration of the Part C and Part D programs and to implement certain

provisions of the Bipartisan Budget Act of 2018. The proposed changes are necessary to—

- Implement the Bipartisan Budget Act of 2018 provisions;
- Improve program quality and accessibility;
- Clarify program integrity policies; and
- Implement other changes.

This proposed rule would meet the Administration’s priorities to reduce burden across the Medicare program by reducing unnecessary regulatory complexity, and improve the regulatory framework to facilitate development of Part C and Part D products that better meet the individual beneficiary’s healthcare needs. Because the Bipartisan Budget Act of 2018 requires the Secretary to establish procedures, to the extent feasible, for integration and unification of the appeals and grievance processes for dually eligible beneficiaries who are enrolled in Medicaid and in MA special needs plans for dually eligible individuals, this proposed rule also includes proposals to revise the appeals and grievances requirements for Medicaid managed care and MA special needs plans for dually eligible individuals. We note CMS plans to release a proposed Medicare rule in the near future to further the President’s agenda of reducing drug costs.

B. Summary of the Major Provisions

1. Requirements for Medicare Advantage Plans Offering Additional Telehealth Benefits (§§ 422.100, 422.135, 422.252, 422.254, and 422.264)

Section 50323 of the Bipartisan Budget Act of 2018 (Pub. L. 115-123) created a new section 1852(m) of the Social Security Act (the Act), which allows MA plans to provide “additional telehealth benefits” to enrollees starting in plan year 2020 and treat them as basic benefits for purposes of bid submission and payment by CMS. The statute limits these authorized additional telehealth benefits to services for which benefits are available under Medicare Part B, but that are not payable under section 1834(m) of the Act and have been identified for the applicable year as clinically appropriate to furnish through electronic information and telecommunications technology (section 1852(m)(2)(A)(i) of the Act). Under this proposal, MA plans would be permitted to offer—as part of the basic benefit package—additional telehealth benefits beyond what is currently allowable under the original Medicare telehealth benefit. In addition, we propose to continue authority for

MA plans to offer supplemental benefits (that is, benefits not covered by original Medicare) via remote access technologies and/or telemonitoring for those services that do not meet the requirements for additional telehealth benefits.

Section 1852(m)(4) of the Act mandates that enrollee choice is a priority. If an MA plan covers a Part B service as an additional telehealth benefit, then the MA plan must also provide access to such service through an in-person visit and not only as an additional telehealth benefit. The enrollee must have the option whether to receive such service through an in-person visit or as an additional telehealth benefit. In addition, section 1852(m)(2)(A)(ii) of the Act excludes from additional telehealth benefits any capital and infrastructure costs and investments relating to such benefits. These statutory provisions have guided our proposal.

We propose to establish regulatory requirements that would allow MA plans to cover Part B benefits furnished through electronic exchange as “additional telehealth benefits”—and as part of the basic benefits defined in § 422.101—instead of separate supplemental benefits. We believe additional telehealth benefits would increase access to patient-centered care by giving enrollees more control to determine when, where, and how they access benefits. We are soliciting comments from stakeholders on various aspects of our proposal, which would help inform CMS’s next steps related to implementing the additional telehealth benefits.

2. Dual Eligible Special Needs Plans Provisions (§§ 422.2, 422.60, 422.102, 422.107, 422.111, 422.560 Through 422.562, 422.566, 422.629 Through 422.634, 422.752, 438.210, 438.400, and 438.402)

Section 50311(b) of the Bipartisan Budget Act of 2018 amends section 1859 of the Act to require integration of the Medicare and Medicaid benefits provided to enrollees in Dual Eligible Special Needs Plans (D–SNPs). In particular, the statute requires: (1) Development of unified grievance and appeals processes for D–SNPs; and (2) establishment of new standards for integration of Medicare and Medicaid benefits for D–SNPs.

The statute specifies a number of key elements for unified D–SNP grievance and appeals processes and grants the Secretary discretion to determine the extent to which unification of these processes is feasible. In particular, the unified processes must adopt the

provisions from section 1852(f) and (g) of the Act (MA grievances and appeals) and sections 1902(a)(3) and (5), and 1932(b)(4) of the Act (Medicaid grievances and appeals, including managed care) that are most protective to the enrollee, take into account differences in state Medicaid plans to the extent necessary, be easily navigable by an enrollee, include a single written notification of all applicable grievance and appeal rights, provide a single pathway for resolution of a grievance or appeal, provide clear notices, employ unified timeframes for grievances and appeals, establish requirements for how the plan must process, track, and resolve grievances and appeals, and with respect to benefits covered under Medicare Parts A and B and Medicaid, incorporate existing law that provides continuation of benefits pending appeal for items and services covered under Medicare and Medicaid. The statute requires the Secretary to establish unified grievance and appeals procedures by April 1, 2020 and requires D–SNP contracts with state Medicaid agencies to use the unified procedures for 2021 and subsequent years.

With respect to the establishment of new standards for integration of Medicare and Medicaid benefits, the statute requires that all D–SNPs meet certain new minimum criteria for such integration for 2021 and subsequent years, either by covering Medicaid benefits through a capitated payment from a state Medicaid agency or meeting a minimum set of requirements as determined by the Secretary. The law also stipulates that for the years 2021 through 2025, if the Secretary determines that a D–SNP failed to meet one of these integration standards, the Secretary may impose an enrollment sanction, which would prevent the D–SNP from enrolling new members. In describing the “additional minimum set of requirements” established by the Secretary, the statute directs the Federally Coordinated Health Care Office in CMS to base such standards on “input from stakeholders.” We intend to use this rulemaking to solicit input from stakeholders on the implementation of these new statutory provisions as well as to clarify definitions and operating requirements for D–SNPs.

3. Medicare Advantage and Part D Prescription Drug Plan Quality Rating System (§§ 422.162(a) and 423.182(a), §§ 422.166(a) and 423.186(a), §§ 422.164 and 423.184, and §§ 422.166(i)(1) and 423.186(i)(1))

In the Medicare Program; Contract Year 2019 Policy and Technical

Changes to the Medicare Advantage, Medicare Cost Plan, Medicare Fee-for-Service, the Medicare Prescription Drug Benefit Programs, and the PACE Program Final Rule (hereafter referred to as the April 2018 final rule), CMS codified at §§ 422.160, 422.162, 422.164, and 422.166 (83 FR 16725 through 16731) and §§ 423.180, 423.182, 423.184, and 423.186 (83 FR 16743 through 16749) the methodology for the Star Ratings system for the MA and Part D programs, respectively. This was part of the Administration’s effort to increase transparency and advance notice regarding enhancements to the Part C and D Star Ratings program. That final rule included mechanisms for the removal of measures for specific reasons (low statistical reliability and when the clinical guidelines associated with the specifications of measures change such that the specifications are no longer believed to align with positive health outcomes) but, generally, removal of a measure for other reasons would also occur through rulemaking.

At this time, we are proposing enhancements to the cut point methodology for non-Consumer Assessment of Healthcare Providers and Systems (CAHPS) measures. We are also proposing substantive updates to the specifications for a few measures for the 2022 and 2023 Star Ratings, and rules for calculating Star Ratings in the case of extreme and uncontrollable circumstances. Unless otherwise stated, data would be collected and performance measured using these proposed rules and regulations for the 2020 measurement period and the 2022 Star Ratings.

4. Preclusion List Requirements for Prescribers in Part D and Individuals and Entities in MA, Cost Plans, and PACE (§§ 422.222 and 423.120(c)(6))

In the April 2018 final rule, CMS removed several requirements pertaining to MA and Part D provider and prescriber enrollment that were to become effective on January 1, 2019. We stated in that final rule our belief that the best means of reducing the burden of the MA and Part D provider and prescriber enrollment requirements without compromising our payment safeguard objectives would be to focus on providers and prescribers that pose an elevated risk to Medicare beneficiaries and the Trust Funds. That is, rather than require the enrollment of MA providers and Part D prescribers regardless of the level of risk they might pose, we would prevent payment for MA items or services and Part D drugs that are, as applicable, furnished or prescribed by demonstrably problematic

process. Risk adjustment discrepancies can be aggregated to determine an overall level of payment error. In turn, payment error for a sample of contract enrollees can be extrapolated to calculate a contract-level payment error estimate. Although we have the authority to extrapolate from a statistically valid sample to calculate a contract-level audit recovery, we have not yet done so.

From 1999 until 2003, our payment validation activity for the MA program had both an educational and audit focus and was intended to improve the accuracy of the risk adjustment data that was being submitted to CMS for payment. Payment adjustments were limited to enrollee-level adjustments for those enrollees sampled in the payment validation audit. At the time, only 10 percent of the MA payment amount was risk adjusted. As a result, payment recovery amounts for the small number of plans audited was very small. Since payment year 2004 was the first year for which MA payments were based on the current HCC risk adjustment model, we considered payment years 2004 through 2006 as pilot years for the purpose of RADV and no payment recovery activity occurred.

Payment recovery resumed for payment year 2007, when we audited 37 MA contracts and recouped \$13.7 million. Payment adjustments were again limited to enrollee-level adjustments for those enrollees sampled in the payment validation audit. (Although we suggested that we would make contract-level payment adjustments for the payment year 2007 audits, we did not ultimately do so.) In the course of that audit process, as in previous years, we reviewed medical record documentation provided by each audited MA organization to substantiate conditions reported by the organization for beneficiaries in each audit sample. After CMS' findings were reported to each MA organization, any organization that disagreed with CMS' determinations could challenge them through a three-stage administrative process established by regulation in 2010. (See 42 CFR 422.311). This dispute and appeals process is currently ongoing.

No payment validation audits were conducted for payment years 2008, 2009, or 2010. In those years, we were considering the development of a methodology for calculating payment adjustments based on statistical RADV MA contract-level payment error audit findings. The development of contract-level RADV audits would enable us to make contract-level payment adjustments rather than simply

adjusting payments for specific enrollees from an audit sample, as we had done previously.

On December 20, 2010, we proposed a methodology on the CMS website for selecting a statistically-valid sample of enrollees from each audited MA contract and extrapolating from the results of that sample audit to calculate a contract-level payment adjustment. We invited public comment on this proposed methodology, and received more than 500 comments, which we carefully reviewed. On February 24, 2012, we published what we described as the final methodology for RADV contract-level payment error calculation.²⁴ That methodology described sampling techniques and the statistical calculation to be used to extrapolate from the sample selected. In brief, up to 201 enrollees from each audited MA contract would be selected according to certain criteria, including their continuous enrollment in the contract for the entire data collection year and January of the payment year; their lack of end-stage renal disease (ESRD) status and hospice status for that entire period; their enrollment in Medicare Part B coverage for the entire data collection year; and their submission of at least one diagnosis during the data collection year leading to at least one CMS-HCC assignment in the payment year. The RADV-eligible enrollees would be ranked by risk score and then divided into three equal strata. An equal number of enrollees would then be randomly selected from each stratum (67 enrollees per stratum in the case of an audit of 201 enrollees). After medical records were reviewed, payment errors would be calculated for each selected enrollee based on the number of months the person was enrolled in the selected MA contract (and was not in ESRD or hospice status) during the payment year. A payment error rate for each stratum would be calculated, and then an overall payment error rate for the audited contract, computed at a ninety-nine percent confidence interval. We stated that this methodology would be applied to the next round of RADV audits, which would be conducted on payment year 2011. Audits for payment years 2011, 2012, and 2013 have been conducted according to this methodology, at a total cost of approximately \$150 million to

the agency, but have not yet been finalized. These audits are in addition to RADV and related MA audits conducted by the Office of Inspector General, which are conducted pursuant to OIG's independent authorities at sections 2(1) and 4(a)(1) of the Inspector General Act.

We also stated in 2012 that, after using this methodology to calculate a preliminary payment recovery amount, we would apply a FFS Adjuster as an offset before finalizing the audit recovery. The FFS Adjuster was intended to account for any effect of erroneous diagnosis codes in the data from Medicare Parts A and B (often referred to as "Fee-For-Service" Medicare) that are used to calibrate the MA risk adjustment model. We stated that the FFS Adjuster would calculate a permissible level of payment error (for example, a percentage of the total payments made on an MA contract in a given year) and limit RADV audit recovery to payment errors above that level. The FFS Adjuster was never intended to set a permissible rate for the submission of erroneous diagnosis codes. We stated that the FFS Adjuster would be calculated based on a RADV-like review of records submitted to support the Medicare Part A and B diagnosis codes. That review is now complete, and will be discussed later.

c. Discussion of Proposals

(1) Extrapolation

The Secretary intends to recover overpayments based on extrapolated audit findings through the use of statistically valid random sampling techniques. Although we described our February 2012 publication as the final methodology to be used to calculate contract-level RADV audit recoveries for payment year 2011, it has never been implemented. As we stated earlier, audits for payment years 2011, 2012, and 2013 have been conducted according to this methodology, but contract-level recoveries have not yet been sought. We are now providing additional notice and again welcoming public input on the agency's methodology for calculating a contract-level payment error in RADV audits, including the sample sizes used in these contract-level audits. CMS is not required to set forth the methodology for calculating an extrapolated payment error through regulatory provisions (it does not do so in Parts A and B, where Medicare Administrative Contractors (MACs) may use any statistically valid sampling and extrapolation methodology they determine to be appropriate), however, in the interest of transparency, we are updating

²⁴ Notice of Final Payment Error Calculation Methodology for Part C Medicare Advantage Risk Adjustment Data Validation Contract-Level Audits, available at <https://www.cms.gov/Research-Statistics-Data-and-Systems/Monitoring-Programs/recovery-audit-program-parts-c-and-d/Other-Content-Types/RADV-Docs/RADV-Methodology.pdf>.

stakeholders on our plans to use various sampling and extrapolation methodologies in RADV audits, as CMS deems appropriate.²⁵ All audits will be based on statistically valid sampling and extrapolation methodologies.

In addition to the contract-level methodology described earlier, we have identified other potential methodologies for sampling and extrapolation, which would calculate improper payments made on the audited MA contract for a particular sub-cohort or sub-cohorts in a given payment year, and the agency may also use such a methodology to calculate improper payments made to the audited MA contract. For example, a sub-cohort could be the enrollees for whom a particular HCC or one of a related set of HCCs (such as the three diabetes HCCs) was reported. After choosing an MA contract and a sub-cohort or sub-cohorts to audit, we would select a statistically significant sample of enrollees for the sub-cohort or sub-cohorts. After reviewing the medical records of those enrollees, we would use statistical extrapolation to calculate and recoup the improper payments made to the audited MA contract for covering enrollees for the sub-cohort or sub-cohorts in that payment year. We would use the same statistical calculation for this sub-cohort-level extrapolation as we do for the contract-level extrapolation (although we welcome comment as to whether to stratify the sample population for the sub-cohort audits, as we currently anticipate doing for the contract-level audits).

We believe that, because any sub-cohort is necessarily a subset of the enrollees covered through a particular MA contract, we could often use a much smaller sample size to calculate a statistically significant extrapolated recovery for a sub-cohort than would be required to calculate a contract-level recovery (up to 201 enrollees, according to our anticipated contract-level methodology). This smaller sample size would allow us to spread our audit resources across a wider range of MA contracts, while still generating statistically significant recoveries. This sub-cohort-based audit methodology would allow us to focus on cohorts of enrollees that appear to raise programmatic concerns.

We invite comment on both the contract-level audit methodology published in February 2012, and our

proposal for an extrapolated audit methodology based on sub-cohorts of enrollees. We also seek comment on whether there are particular situations in which one methodology may be preferable to the other, and whether the agency should revise the contract-level audits that have been conducted but not finalized for payment years 2011, 2012, and 2013. Neither proposed methodology is meant to displace our longstanding authority to audit the medical records of particular enrollees who we believe may be associated with improper payments or to use any statistically valid audit methodology.²⁶

If we finalize one or more sampling and extrapolation methodologies through this rulemaking, we would make any future changes to that methodology (or those methodologies) through the Health Plan Management System.

We are also considering whether to explicitly expand the MA organizations' RADV appeal rights, particularly in light of the upcoming auditing and recoveries in the MA program. One option would be to permit appeal of the RADV payment error calculation methodology used in a RADV audit similar to practices in the Part A and Part B space of Medicare FFS. We invite comments on this matter.

(2) Application to Payment Year 2011 and Subsequent Years

We intend to apply the finalized RADV payment error methodology or methodologies to payment year 2011, and all subsequent years. (However, we do not expect to use a sub-cohort-based methodology, if finalized, for any payment year before 2014). Section 1871(e)(1)(A) of the Act authorizes retroactive application of rules where “(i) such retroactive application is necessary to comply with statutory requirements; or (ii) failure to apply the change would be contrary to the public interest.” We are considering whether application of the finalized methodology or methodologies to payment year 2011, and all subsequent years, would require the exercise of this statutory authority to engage in retroactive rulemaking. We invite comment on the subject.

²⁶ We may begin to conduct RADV audits for payment years 2014 and 2015 before this proposal is finalized, pursuant to our longstanding authority to review the medical records of any MA enrollee and recoup any improper payments identified. Although we would design these audits so that the individuals selected would form a statistically significant sample that would support an extrapolated recovery, we would not seek to recover on an extrapolated basis until the rule is final. At the very least, these audits would support enrollee-level recoveries.

In any case, we believe that failure to apply the finalized RADV payment error methodology or methodologies to those payment years would be contrary to the public interest. The public has a substantial interest in the recoupment of millions of dollars of public money improperly paid to private insurers. The public also has a significant interest in providing incentives for those insurers to claim only proper payments in the future, which would be promoted by the recoupment of funds improperly paid in the past. Given the amount of improper payments identified under the MA program (estimated to be \$14.35 billion in FY 2017,²⁷ the \$650 million in recovered improper payments represents, if this policy was finalized, 3 years improper payment for 30 plans), the interest in determining an accurate recovery amount for each audited MA plan, and the importance of protecting the overall integrity of the program, we believe that it is in the public interest for CMS to apply the RADV payment error methodology or methodologies adopted through this rulemaking to payment year 2011 and all subsequent years. In applying this methodology (or these methodologies) to those payment years, CMS would be acting in compliance with the IPERIA statute²⁸ as

²⁷ CMS has historically reported high levels of payment error in the Part C program. The Part C error rate has ranged between 11 percent and 9 percent between fiscal years (FY) 2011 and 2014, respectively. In FY 2017, the reported Part C error rate was 8.31 percent or \$14.35 billion.

²⁸ Improper Payments Elimination and Recovery Improvement Act of 2012 (IPERIA, Pub. L. 112–248). The RADV program is a corrective audit activity developed by CMS to address provisions included in the IPIA of 2002, as amended by the IPERA of 2010, and further amended by IPERIA. These statutes require that government agencies annually estimate and report improper payments. RADV audits were initiated because Part C payment error was out of compliance with IPIA. The IPERIA requires the Office of Management and Budget (OMB) to annually identify agencies for greater levels of oversight and review, and with that agency “establish annual targets and semi-annual or quarterly actions for reducing improper payments associated with each high-priority program.” In November 2009, Executive Order (E.O.) 13520 was signed in an effort to reduce improper payments by increasing transparency in government and holding agencies accountable for reducing improper payments. In March 2010, OMB issued guidance for agencies regarding the implementation of E.O. 13520 entitled Part III to OMB Circular A–123, Appendix C (Appendix C). Appendix C outlines the responsibilities of agencies, determines the programs subject to E.O. 13520, defines supplemental measures and targets for high priority programs, and establishes reporting requirements under E.O. 13520 and procedures to identify entities with outstanding payments. One of those remedies is payment recapture audits, a requirement that any program that expends at least \$1 million must implement payment recapture audits. A recovery audit, or payment recapture audit, is a review process designed to identify erroneous payments. Additionally, it is a corrective

Continued

²⁵ The Office of the Inspector General, which is required by law to conduct audits and follow generally accepted government auditing standards, does not seek comment on its methodology for risk adjustment audit work that may lead to overpayment recoveries from MA organizations.

well as its own fiduciary responsibility to recover funds due and owing to the Medicare Trust Funds. We note also that our February 2012 publication put MA organizations on notice that CMS expected to calculate a contract-level payment error for payment year 2011 and beyond by extrapolating from its review of a statistically valid sample of enrollees, and that (as explained earlier) MA organizations have never been entitled to receive or retain payments associated with HCCs that cannot be validated by medical records.

Application of the finalized RADV payment error methodology or methodologies to payment year 2011 and all subsequent years therefore would not upset any settled interest.

If the finalized contract-level audit methodology differs from the one we published in February 2012, we will also consider whether to apply the new contract-level payment error methodology to payment years 2011, 2012, and 2013, or to only apply it to payment year 2014 and subsequent years, and to finalize the audits for those earlier payment years according to the methodology published in February 2012. We invite comment on this subject, as well. In any event, and however audits for prior years are ultimately handled, we believe that it is vitally important for the health of the MA program to have extrapolated recoveries available for future audit years.

(3) Implementation

This proposal would announce CMS' intention to recover improper payments based on extrapolation of payment error from RADV audit samples to MA organization specified populations. CMS would calculate and recover improper payments based on extrapolation methodologies. MA organizations would be required to remit extrapolated recovery amounts from audit findings as calculated by CMS through its payment system, Medicare Advantage and Prescription Drug system (MARx). MARx is the CMS system that makes monthly payments and payment adjustments to the MA organizations and Part D sponsors. Overpayment recoveries of all types are considered payment adjustments which are done as offsets to the plans' monthly payments. RADV recovery amounts are included in this category. In the month the plan has been notified that the recovery amount will be offset, the MARx system makes an offset to the

plans monthly payment equal to the amount of the recovery amount. In the event the recovery amount exceeds the payment in 1 month, the recovery will be spread across adjustments for multiple months until the full amount is recovered. CMS may likewise require MA organizations to remit such recovery amounts based upon audit findings by OIG.

(4) Recoupment of Improper Payments in Part C

Improper payments identified by CMS outside of the RADV audit process or self-identified by the MA organization that are not returned in accordance with §§ 422.330, and are identified and/or estimated through extrapolation or other estimation methodologies as a result of CMS audits will be recovered following CMS audit processes including payment offset. We propose that MA organizations be required to remit funds that CMS calculates as improper payments through the extrapolated RADV audit findings in accordance with §§ 422.310(e). RADV audit results can be appealed by MA organizations using the regulatory administrative appeals process outlined in § 422.311.

(5) FFS Adjuster

After our 2012 RADV publication, we conducted an extensive study regarding the presence and impact of diagnosis error in FFS claims data. Our study suggests that errors in FFS claims data do not have any systematic effect on the risk scores calculated by the CMS-HCC risk adjustment model, and therefore do not have any systematic effect on the payments made to MA organizations.²⁹

The study began by auditing 8,630 outpatient claims paid through Medicare Part B in a given year. We reviewed the medical records associated with each claim (a small subset of the medical records associated with each beneficiary) to determine whether the diagnosis associated with the claim was supported by medical record documentation. A discrepancy rate for each CMS-HCC was then calculated. For example, the data set contained 484 claims submitted with a diagnosis of chronic obstructive pulmonary disease, which is CMS-HCC 108. Of those diagnoses, 388 were supported by medical record documentation, and 96 were not, for a discrepancy rate of 19.8

percent. To account for the fact that the data set contained extremely small samples of many CMS-HCCs—for example, one diagnosis of extensive third degree burns and two diagnoses of severe head injury—we calculated a high, low, and baseline discrepancy rate. Each CMS-HCC was assigned one of these three mean discrepancy rates depending on its relationship to the baseline discrepancy rate: CMS-HCCs with a discrepancy rate significantly higher than the baseline were assigned to the high category, and those with a discrepancy rate significantly lower than the baseline were assigned to the low category. All other CMS-HCCs were assigned the baseline discrepancy rate. These rates were 46.2 percent, 33.8 percent, and 20.9 percent.

In a given year, multiple claims are submitted for Medicare Part B services received by a given beneficiary and associated with a given diagnosis. For example, an average beneficiary with metastatic cancer or acute leukemia, which is CMS-HCC 7, has seven claims associated with that diagnosis. Because we were interested in determining whether a given beneficiary had a documented diagnosis in a given year, and not whether any particular claim was associated with medical record documentation, we used the claim-level discrepancy rates described above to calculate beneficiary-level discrepancy rates.³⁰

After calculating this beneficiary-level discrepancy rate for each HCC, we ran fifty simulations in which we removed diagnoses from a data set of more than 1.4 million Medicare Part A and B beneficiaries at the beneficiary-level discrepancy rate.³¹ After removing diagnoses at the indicated rates, we used each simulated "corrected" data set to recalibrate the CMS-HCC risk adjustment model, applied the recalibrated risk coefficients to a data set of MA beneficiaries, and compared their original risk scores to the risk

²⁹ For example, metastatic cancer or acute leukemia was assigned the baseline discrepancy rate of 33.8%. We therefore reasoned that each of the seven claims associated with the average beneficiary for whom such a diagnosis was reported had a 66.2% chance of being supported by medical record documentation, and only one instance of medical record support was necessary to make the diagnosis valid for that year. If each beneficiary with such a reported diagnosis has 7 claims associated with that diagnosis, and each claim has a 66.2% chance of being supported by medical record documentation, then 99.95% of all beneficiaries will have at least one instance of medical record support, and only 0.05% of beneficiaries will lack any medical record documentation of their reported diagnosis.

³¹ For metastatic cancer and acute leukemia, 1 in 2,000 diagnoses was removed (corresponding to an error rate of 0.05%).

control activity designed to identify and recapture erroneous payments, and, as such, is a management function and responsibility.

²⁹ We are aware of the district court's recent ruling in *United HealthCare Insurance Co. v. Azar*, No. 16-cv-157 (D.D.C. September 7, 2018), and the government is reviewing that decision and considering its response. In any event, that ruling was made on the basis of the administrative record before the court, which did not include the results of our study.

scores calculated with the recalibrated model. We found that the difference between the risk scores was very small, and that the recalibrated risk scores tended to be slightly lower than the original risk scores. Therefore, we concluded that diagnosis error in FFS claims data does not lead to systematic payment error in the MA program.

An executive summary of the findings and a technical appendix describing the data and methodology can be found at <https://www.cms.gov/Research-Statistics-Data-and-Systems/Monitoring-Programs/Medicare-Risk-Adjustment-Data-Validation-Program/Resources.html>. Because it appears that diagnosis error in FFS claims data does not lead to systematic payment error in the MA program, we propose not to include an FFS Adjuster in any final RADV payment error methodology.

Moreover, even if we had found that diagnosis error in FFS claims data led to systematic payment error in the MA program, we no longer believe that a RADV-specific payment adjustment would be appropriate. RADV audits are used to recover payments based on diagnoses that are not supported by medical record documentation, which thus should not have been reported to CMS. If a payment has been made to an MA organization based on a diagnosis code that is not supported by medical record documentation, that entire payment is in error and should be recovered in full, because the payment standard has not been met, and the MA organization is not entitled to any payment for that diagnosis. RADV audits do not address issues with the accuracy of payments based on diagnosis codes that are supported by medical record documentation. Consequently, an adjustment to RADV recoveries to remedy payment accuracy concerns is inappropriate. For this reason, we believe that it would not be appropriate to correct any systematic payment error in the MA program through a payment adjustment that was only applied to audited contracts. Doing so would introduce inequities between audited and unaudited plans, by only correcting the payments made to audited plans.

Because our study suggests that diagnosis error in FFS claims data does not lead to systematic payment error in the MA program and because we believe it would be inequitable to correct any systematic errors in the payments made to audited plans only, we would not include an FFS Adjuster in any RADV extrapolated audit methodology. We welcome public comments on this study.

d. Proposed Changes

In this section, we discuss the proposed changes to the regulation in Parts 422 and 423 governing the MA Program. We are proposing to apply extrapolation to plan year audits for payment year 2011 forward.

The following is a summary of the proposed changes included in this proposed revision:

We propose to revise § 422.300 to include “collection of improper payments.”

We propose to amend § 422.310(e) Validation of risk adjustment data, to apply extrapolation to plan year audits for payment year 2011 forward.

We propose to amend § 422.310(e) Validation of risk adjustment data, by adding a requirement to set forth the provision for MA organizations to remit improper payments based on RADV audits and established in accordance with stated methodology, in a manner specified by CMS.

We propose to amend § 422.311, the RADV audit dispute and appeal process section, by adding language to clarify that recovery of improper payments from MA organizations will be conducted according to the Secretary’s payment error extrapolation and recovery methodologies and that CMS will apply extrapolation to plan year audits for payment year 2011 forward.

D. Implementing Other Changes

1. Clarification Regarding Accreditation for Quality Improvement Programs

Section 1852(e) of the Act requires each MA organization to have an ongoing quality improvement program to improve the quality of care provided to its enrollees and establishes the requirements for the quality improvement programs. Section 1852(e)(4) of the Act requires the Secretary to deem that an MA Organization has met all of the requirements for any one out of the six program areas listed in section 1852(e)(4)(B) of the Act if the MA Organization is accredited in that area by an accrediting organization that has been approved by CMS and that uses the same (or stricter) standards than CMS uses to evaluate compliance with the applicable requirements. Section 1852(e)(4)(B)(i) of the Act references the quality improvement programs in section 1852(e) of the Act. Thus, an MA Organization could be deemed to meet CMS’ requirements related to quality improvement programs by a CMS-approved accrediting organization.

Section 722(a) of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (the MMA) revised the quality improvement

program requirements in the Act. Section 1852(e) of the Act was revised by adding a new clause “(2) Chronic Care Improvement Programs” and renumbering the existing clauses accordingly (that is, existing clause “(2) Data” became “(3) Data”). Section 722(a) of the MMA also revised section 1852(e)(4)(B)(i) of the Act. Prior to the MMA, section 1852(e)(4)(B)(i) of the Act indicated that the requirements in clauses (e)(1) (general requirements for quality improvement programs) and (e)(2) (the collection, analysis, and reporting of data related to quality improvement programs) could be deemed. Consistent with the changes made to section 1852(e) of the Act described earlier, section 722(a) of the MMA amended section 1852(e)(4)(B)(i) of the Act to provide, “(i) Paragraphs (1) through (3) of this subsection (relating to quality improvement programs).” However, the printed and online versions of section 1852(e)(4)(B)(i) of the Act continue to cross-reference clauses (e)(1) and (e)(2) erroneously. Therefore, we are clarifying in this proposed rule that the requirements in section 1852(e)(3) of the Act and the subsections of § 422.152 related to section 1852(e)(3) of the Act may be deemed.

2. Delete the Reference to Quality Improvement Projects in § 422.156(b)(1)

Section 1852(e) of the Act requires each MAO to have an ongoing Quality Improvement (QI) Program for the purpose of improving the quality of care provided to its enrollees. Our regulations at § 422.152 outline the QI Program requirements MA Organizations. Section 422.152(a)(3) requires each MA Organization to conduct quality improvement projects (QIPs) for its enrollees, and § 422.152(d) establishes the requirements for the QIPs. Effective January 1, 2019, CMS eliminated the requirements for QIPs in §§ 422.152(a)(3) and 422.152(d) in the April 2018 final rule (83 FR 16440). However, the reference to QIPs was not deleted in § 422.156(b)(1), which says QIPs are exempt from the process for deeming compliance based on accreditation. Therefore, we are proposing a technical correction in this rule that would delete the phrase “the quality improvement projects (QIPs) and” from § 422.156(b)(1).

III. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*), we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a collection of

section, a prescriber who is revoked under § 424.535 of this chapter will be included on the preclusion list for the same length of time as the prescriber's reenrollment bar.

(B) Except as provided in paragraphs (c)(6)(vii)(C) and (D) of this section, a prescriber who is not enrolled in Medicare will be included on the preclusion list for the same length of time as the reenrollment bar that CMS could have imposed on the prescriber had the prescriber been enrolled and then revoked.

(C) Except as provided in paragraph (c)(6)(vii)(D) of this section, a prescriber, regardless of whether the prescriber is or was enrolled in Medicare, that is included on the preclusion list because of a felony conviction will remain on the preclusion list for a 10-year period, beginning on the date of the felony conviction, unless CMS determines that a shorter length of time is warranted. Factors that CMS considers in making such a determination are—

- (1) The severity of the offense;
- (2) When the offense occurred; and
- (3) Any other information that CMS deems relevant to its determination.

(D) In cases where a prescriber is excluded by the OIG, the prescriber must remain on the preclusion list until the expiration of the CMS-imposed preclusion list period or reinstatement by the OIG, whichever occurs later.

(viii) Payment denials under paragraph (c)(6) of this section that are based upon the prescriber's inclusion on the preclusion list are not appealable by beneficiaries.

* * * * *

■ 30. Section 423.153 is amended by revising the section heading and adding paragraph (g) to read as follows:

§ 423.153 Prescription drug plan sponsors' access to Medicare Parts A and B claims data extracts.

* * * * *

(g) *Parts A and B claims data extracts*—(1) *General rule.* (i) Beginning in plan year 2020, a PDP sponsor may submit a request to CMS for the data described in paragraph (g)(2) of this section about enrollees in its prescription drug plans.

(ii) CMS will make the data requested in paragraph (g)(1)(i) of this section available to eligible PDP sponsors, in accordance with all applicable laws. The data will be provided at least quarterly on a specified release date, and in an electronic format to be determined by CMS.

(iii) If CMS determines or has a reasonable belief that the PDP sponsor has violated the requirements of this paragraph (g) or that unauthorized uses,

reuses, or disclosures of the Medicare claims data have taken place, at CMS' sole discretion, the PDP sponsor may be denied further access to the data described in paragraph (g)(2) of this section.

(2) *Data described.* The data that may be requested under paragraph (g)(1) of this section are standardized extracts of claims data under Medicare parts A and B for items and services furnished under such parts to beneficiaries who are enrolled in a plan offered by the PDP sponsor at the time of the disclosure.

(3) *Purposes.* A PDP sponsor must comply with all laws that may be applicable to data received under this provision, including state and federal privacy and security laws, and, furthermore subject to the limitations in paragraph (g)(4) of this section may only use or disclose the data provided by CMS under paragraph (g)(1) of this section for the following purposes:

(i) To optimize therapeutic outcomes through improved medication use, as such phrase is used in paragraph (d)(1)(i) of this section.

(ii) To improve care coordination so as to prevent adverse health outcomes, such as preventable emergency department visits and hospital readmissions.

(iii) For activities falling under paragraph (1) of the definition of "health care operations" under 45 CFR 164.501.

(iv) For activities falling under paragraph (2) of the definition of "health care operations" under 45 CFR 164.501.

(v) For "fraud and abuse detection or compliance activities" under 45 CFR 164.506(c)(4)(ii).

(vi) For disclosures that qualify as "required by law" disclosures at 45 CFR 164.103.

(4) *Limitations.* A PDP sponsor must comply with the following requirements regarding the data provided by CMS under this paragraph (g):

(i) The PDP sponsor will not use the data to inform coverage determinations under Part D;

(ii) The PDP sponsor will not use the data to conduct retroactive reviews of medically accepted indications determinations;

(iii) The PDP sponsor will not use the data to facilitate enrollment changes to a different prescription drug plan or an MA-PD plan offered by the same parent organization;

(iv) The PDP sponsor will not use the data to inform marketing of benefits.

(v) The PDP sponsor will contractually bind its contractors that have access to the Medicare claims data, and any other potential downstream

data recipients, to the terms and conditions imposed on the PDP Sponsor under this paragraph (g).

(5) *Ensuring the privacy and security of data.* As a condition of receiving the requested data, the PDP sponsor must attest that it will adhere to the permitted uses and limitations on the use of the Medicare claims data listed in paragraphs (g)(3) and (4) of this section. ■ 31. Section 423.182 is amended in paragraph (a) by adding the definitions of "Absolute percentage cap", "Cut point cap", "Guardrail", "Mean resampling", "Restricted range", and "Restricted range cap" in alphabetical order to read as follows:

§ 423.182 Part D Prescription Drug Plan Quality Rating System.

(a) * * *

Absolute percentage cap is a cap applied to non-CAHPS measures that are on a 0 to 100 scale that restricts movement of the current year's measure-threshold-specific cut point to no more than the stated percentage as compared to the prior year's cut point.

* * * * *

Cut point cap is a restriction on the change in the amount of movement a measure-threshold-specific cut point can make as compared to the prior year's measure-threshold-specific cut point. A cut point cap can restrict upward movement, downward movement, or both.

* * * * *

Guardrail is a bidirectional cap that restricts both upward and downward movement of a measure-threshold-specific cut point for the current year's measure-level Star Ratings as compared to the prior year's measure-threshold-specific cut point.

* * * * *

Mean resampling refers to a technique where measure-specific scores for the current year's Star Ratings are randomly separated into 10 equal-sized groups. The hierarchical clustering algorithm is done 10 times, each time leaving one of the 10 groups out. The method results in 10 sets of measure-specific cut points. The mean cut point for each threshold per measure is calculated using the 10 values.

* * * * *

Restricted range is the difference between the maximum and minimum measure score values using the prior year measure scores excluding outlier fence outliers (first quartile - 3 * Interquartile Range (IQR) and third quartile + 3 * IQR).

Restricted range cap is a cap applied to non-CAHPS measures that restricts movement of the current year's

REMOTE VIDEOCONFERENCE DEPOSITION OF
BRIAN THOMPSON
March 1, 2022

Reported by:

Anne E. Vosburgh, CSR-6804, RPR, CRR

Job No. 792085

1 B. THOMPSON

2 MR. LEE: How long of a lunch break
3 would you like?

4 MR. QURESHI: 30 minutes, please.

5 MR. PRESTES: At a minimum.

6 MR. LEE: Let's come back at
7 11:15 Pacific, which would be 1:15
8 Central, I think.

9 MR. QURESHI: Okay. We'll work on
10 the math over the break, but we'll see
11 you in 30.

12 THE VIDEOGRAPHER: The time is 1:45
13 p.m. and we are off the record.

14 (Lunch recess taken.)

15 -----

16 AFTERNOON SESSION

17 -----

18 THE VIDEOGRAPHER: The time
19 is 2:35 p.m. and we are back on the
20 record.

21 BY MR. LEE:

22 Q. Good afternoon, Mr. Thompson.

23 Earlier today you testified about
24 certain contradictions and discussions that
25 you had within United I believe starting in

1 B. THOMPSON

2 January 2014 with the medical record rule.

3 Do you remember that testimony?

4 A. Yes.

5 Q. What in particular were the
6 contradictions that you were referring to?

7 A. Yes. Thank you.

8 In January of 2014 a proposed rule
9 came out that to my recollection had a
10 requirement that was similar to that of claims
11 verification as a process, that had a proposed
12 implementation date that was forward-looking,
13 meaning it had not yet been implemented.

14 That led to a lot of confusion on
15 our part inside UnitedHealthcare. As you
16 know, we had a claims verification process in
17 place at the time, and we sought clarity with
18 respect to the proposed rule and whether or
19 not it was required prior to implementation.
20 It seemed contradictory, and we sought clarity
21 from CMS on that in that regard.

22 Q. What in particular was contradictory,
23 the obligation that the proposed rule would
24 impose?

25 A. Yes. In particular, what the

1 B. THOMPSON

2 requirements were prior to the implementation
3 of the rule.

4 Q. And what was your understanding of
5 what the requirements were prior to the
6 implementation of the rule?

7 A. Well, that is specifically the
8 questions by which we sought counsel from CMS.
9 And we specifically said that given this rule
10 is a proposal, it seems to us that it is not
11 yet a requirement.

12 And is it clear to you, like it
13 appears to us, that it is not yet a
14 requirement until implemented.

15 And then we went further to explain
16 our existing process, meaning claims
17 verification, and also got clarity in the
18 affirmative from CMS by the four executives I
19 mentioned that until the implementation date
20 of the proposed rule, the processes associated
21 with claims verification were not required.

22 And that was a clarity that I was
23 seeking as CFO prior to the attestation at the
24 end of April of 2014.

25 Q. So as I understand it, your

1 B. THOMPSON

2 understanding of the contradiction is that
3 there was some belief that the medical record
4 rule as implemented would impose some
5 obligation to look back that was contradictory
6 to United's practice before then?

7 MR. QURESHI: Objection to form.
8 Mischaracterizes testimony.

9 A. Yeah. I'll just summarize it again
10 to try to clarify.

11 We were seeking clarity about the
12 timing of the proposed rule and the
13 requirements to which it promulgated, if you
14 will, prior to implementation of proposed
15 rule.

16 And that was the question that we
17 asked of CMS on several occasions, what are
18 our requirements prior to implementation,
19 specifically informing them of our claims
20 verification process.

21 And it came back in the affirmative
22 from that conversation that until
23 implementation of rule, claims verification
24 was not a requirement.

25 And that was the clarity that I

1 B. THOMPSON

2 sought and we sought as a company prior to
3 attestation.

4 BY MR. LEE:

5 Q. Were there any other areas of
6 inconsistency or contradictions that you saw?

7 MR. QURESHI: Objection to form.

8 A. In that specific meeting, that was
9 the primary focus. There have been many other
10 inconsistencies around the need for an error
11 rate as a comparison to determine overpayment,
12 but the specific contradiction to which I'm
13 referencing related, to my recollection,
14 particularly around this concept of claims
15 verification, as I remember it.

16 BY MR. LEE:

17 Q. Okay. You mentioned a need for an
18 error rate.

19 What exactly do you mean by that?

20 A. Yes. Medicare Advantage is paid on
21 a basis of consistency, actuarial equivalence,
22 with fee-for-service Medicare.

23 The rate structure upon which
24 Medicare Advantage is reimbursed is based on
25 the same processes and protocols of

1 B. THOMPSON

2 fee-for-service. And it's been important that
3 the alignment of processes be consistent with
4 fee-for-service.

5 When a process is introduced to one
6 or the other, fee-for-service or
7 Medicare Advantage, without accommodation in
8 the rate structure, there's no longer
9 consistency and the payment structure upon
10 which it's founded is no longer consistent.

11 Q. And what is that contradictory to?

12 A. To the fee-for-service baseline upon
13 which reimbursement for Medicare Advantage is
14 based and founded.

15 Q. And tell me what your understanding
16 is of contradiction and why it exists.

17 MR. QURESHI: Objection to form.

18 Asked and answered.

19 A. Yes. I just explained error rate
20 and why, if there's a new process introduced,
21 it would create a contradiction. And I just
22 explained the contradiction in the proposed
23 rule with its implementation date being
24 prospective.

25 Those are the two contradictions

1 B. THOMPSON

2 that I'm talking about, sir.

3 BY MR. LEE:

4 Q. All right. Let's take those one at a
5 time.

6 The contradictions relating to the
7 proposed medical records rule, was the
8 contradiction that you didn't know when and if
9 the rule would go into effect or something
10 else?

11 MR. QURESHI: Objection to form.
12 Mischaracterizes testimony.

13 A. I think there were several --

14 BY MR. LEE:

15 Q. Tell me what --

16 A. I'm sorry. I spoke over you, sir.

17 Q. I'm sorry. I spoke over you.

18 Tell me what the contradictions were
19 specifically.

20 A. Yes. I apologize that my
21 recollection might not be as strong, but I
22 will do my best.

23 I remember being confused on at
24 least one topic, and I will explain that
25 first. The topic being, we had a process in

1 B. THOMPSON

2 place called claims verification, to which we
3 spoke earlier.

4 There was a proposed rule that came
5 out in January that suggested the potential
6 for the implementation of a rule that would
7 include requirements very consistent with the
8 processes and procedures that we were
9 deploying at that time in claims verification.

10 So our confusion was around whether
11 or not, before implementation of proposed
12 rule, there was a requirement on behalf of
13 Medicare Advantage plans to do what was in the
14 proposal. That was -- that was where we
15 lacked clarity and sought clarity directly
16 from CMS.

17 Because it was very important to me
18 and to our organization that that confusion
19 not be satisfied only with our own
20 interpretation, but be directly handled
21 through communication with CMS, given our
22 confusion.

23 Q. Was there any discussion of any
24 contradictions before the proposed medical
25 records rule was discussed?

1 B. THOMPSON

2 So, yeah, I would assume that they
3 are potentially linked but, again, I don't
4 recall this document.

5 Q. All right. Let's take a look at the
6 second page. Under 9, it says "Policy Review,
7 necessity of CV, attestations, and chart
8 selection logic."

9 Do you see that?

10 A. I do see that.

11 Q. Okay. What's your understanding of
12 what that means, "necessity of CV"?

13 MR. QURESHI: Objection to form.

14 A. I have no idea, sir. I didn't write
15 this document. I don't recall this document.
16 I can tell you, again, my broad framing of CV
17 and what we talked about, but I didn't write
18 this document.

19 BY MR. LEE:

20 Q. Well, is it your recollection that
21 around April 29th of 2014, some policy review
22 concerning whether CV was necessary was being
23 discussed by management?

24 MR. QURESHI: Objection to form.

25 A. We certainly were seeking clarity

1 B. THOMPSON

2 from CMS around April 29th, as we had
3 discussed, with the four senior leaders who
4 had visited with CMS directly.

5 BY MR. LEE:

6 Q. And this is on the date of the CMS
7 meeting, correct?

8 A. This meeting here or this document?

9 Q. This document.

10 A. I don't know. We'll have to look
11 back to the date that it was sent.

12 Yeah. It appears that it was.

13 Q. Do you agree that the necessity of CV
14 as a policy matter was being considered on
15 April 29th -- at least on April 29, 2014?

16 MR. QURESHI: Objection to form.

17 A. I'm not sure what your question is.
18 I have told you now several times that there
19 were conversations had with CMS around this
20 time. So, yes, of course, these conversations
21 were being had with CMS.

22 Haven't I been clear on that point?

23 BY MR. LEE:

24 Q. Yes, you have been very clear on that
25 point. My point is -- my question is somewhat

1 B. THOMPSON

2 different.

3 And my question specifically is:
4 Would you agree that the prospect of whether
5 CV was necessary was being considered by
6 management as a policy matter, at the latest,
7 by April 29, 2014?

8 MR. QURESHI: Objection to form.

9 Mr. Lee, I think you said that the
10 email was sent on April 29th, but 85A is
11 dated May 2nd. So I'm not sure if you
12 misspoke or if I'm missing something.

13 MR. LEE: Abid, you can just say
14 objection to form.

15 MR. QURESHI: I'm just trying to
16 clarify the date, Mr. Lee.

17 MR. LEE: I'm talking about the date
18 on 85C, which shows April 29th.

19 MR. QURESHI: Okay. I thought you
20 used the word "the date sent" and that's
21 why I looked at the email. I'm sorry.

22 A. What's your question, Mr. Lee?

23 BY MR. LEE:

24 Q. Would you agree that as of
25 April 29th, the necessity of CV was being

1 B. THOMPSON

2 considered by United as a policy matter?

3 MR. QURESHI: Objection to form.

4 A. I can't get specific to the dates.
5 What I can assure you is that as we approached
6 CMS, yes, UnitedHealthcare was assessing the
7 necessity of claims verification. And I've
8 been very clear about that throughout this
9 dialogue today.

10 BY MR. LEE:

11 Q. And it was considered as part of the
12 M&R \$200 million challenge. It was part of the
13 brainstorming ideas that were being thrown
14 around at that time, correct?

15 MR. QURESHI: Objection, asked and
16 answered.

17 A. I would not put claims verification
18 in a category of brainstorming and being
19 thrown around at that time. I would say that
20 our concerted effort to contact CMS was much
21 more formal than that at this time.

22 BY MR. LEE:

23 Q. Well, you may not do it, but this
24 document does, doesn't it? It says
25 "Brainstorming Ideas, M&R

1 B. THOMPSON

2 \$200 Million Challenge." And then number 9 of
3 those ideas is "necessity of CV."

4 Isn't that consistent with your read
5 of this document?

6 MR. QURESHI: Objection to form.

7 A. I didn't put this document together.
8 I can't speak on behalf of why it's on this
9 document. But certainly, if we are talking
10 about our business at this time, clearly we
11 were trying to get clarity on the CV policy.
12 I don't find that out of the ordinary or
13 unusual, sir.

14 MR. LEE: Okay. I'm going to ask my
15 colleague to put up Document 22 --
16 actually, strike that. I think we did
17 look at 22.

18 Okay. I'm going to ask my colleague
19 to put up Document 23, which is going to
20 be Exhibit 119.

21 (05/05/2014 Email chain, beginning
22 Bates MARA1920588, marked as
23 Exhibit 119.)

24 MR. QURESHI: Mr. Lee, if we're
25 going to leave Exhibit 85, I'll just note

1 B. THOMPSON

2 that I think it's incomplete.

3 We have an 85A and C. I don't know
4 if there is a B, but it seems to be
5 lacking from introduction in this
6 deposition.

7 MR. LEE: I think 85B is one of the
8 other attachments that's indicated in the
9 cover memo.

10 MR. QURESHI: And will we be -- do
11 you intend to introduce it?

12 MR. LEE: It's part of Mr. Theisen's
13 transcript, I believe. I think it's a
14 spreadsheet.

15 BY MR. LEE:

16 Q. Mr. Thompson, do you see Exhibit 119
17 in front of you?

18 A. Is it this claw-back button?

19 MR. QURESHI: No. I don't think
20 it's the claw-back button. If you scroll
21 further --

22 THE WITNESS: One moment, sir. I
23 just opened it up.

24 BY MR. LEE:

25 Q. Okay. 119 is an email from you to

1 B. THOMPSON

2 Jay Matushak.

3 Who is Jay Matushak?

4 A. At this time Jay would have been in
5 charge of financial planning and analysis on
6 my team and finance for Medicare and
7 Retirement.

8 Q. Okay. And it says in the body:

9 "Just for clarity, we have not
10 made a final determination to our
11 CV policy. Our RAF counsel" --

12 Is that Risk Adjustment Factor
13 counsel?

14 A. I assume so. I don't recall writing
15 this, sir.

16 Q. Do you know what the RAF counsel is?

17 A. It's been eight years. I don't
18 recall specifics.

19 Q. Do you know who was on that counsel?

20 A. I don't, eight years later.

21 Q. It goes on to say:

22 "Our RAF counsel will make that
23 determination and it will be
24 predicated on several items, one
25 key item of which is our stage of

1 B. THOMPSON

2 progress to date."

3 Do you see that?

4 A. I do.

5 Q. And what were the several items upon
6 which that final determination would be made?

7 A. Sir, I don't remember writing this
8 email. Would you rather I contextualize my
9 memory of the situation? I think I can be
10 more helpful.

11 Q. Yes.

12 A. I do remember that after the
13 affirmative from CMS that we can stop claims
14 verification, that we needed to decide
15 formally how to complete that program and
16 sunset it, and also had discussions with CMS
17 about the program as it was in flight --
18 meaning when we talked to CMS, claims
19 verification was an ongoing program.

20 And we sought clarity from CMS after
21 they were affirmative that we could stop, how
22 we stopped mid-process on those in review.
23 That's my recollection.

24 I can only assume this is related to
25 that, sir.

1 B. THOMPSON

2 Q. When it says "One key item of which
3 is our stage of progress to date," what does
4 that mean?

5 A. I don't know, sir. Again, I just
6 gave you my general recollection. I don't
7 remember writing this email. I thought that
8 would be helpful.

9 Q. Is it your understanding that CV had
10 various stages to it?

11 A. Yes. I think that's a fair
12 representation, sir.

13 Q. And what's your understanding of what
14 the stages were?

15 A. Yes. As I said earlier, I'm not a
16 claims expert. I just know it is a process.

17 Q. And it was a process by which a chart
18 would be looked at multiple times by different
19 coders with different levels of expertise?

20 MR. QURESHI: Objection to form.

21 Asked and answered.

22 A. Yeah. I can't talk to the different
23 levels of expertise. I just know that it was
24 a process that was not just a one-time review
25 that is very black and white. I know it

1 B. THOMPSON

2 included elements of a process. And our
3 questions related to those that had not yet
4 completed the process.

5 If you want specifics on the process
6 itself, sir, I would point to either John Bird
7 or Marybeth Meyer. I certainly don't
8 recollect and believe I probably never knew
9 the specifics of that process.

10 BY MR. LEE:

11 Q. Did your understanding of the
12 generalities of that process include the
13 understanding that there were multiple reviews
14 of the same medical chart by different people?

15 MR. QURESHI: Objection, asked and
16 answered.

17 A. Again, I don't know the elements of
18 the process so I don't want to speak as if I
19 do.

20 What I do know is that there was a
21 process, and my general recollection is that
22 until the process is complete, the claims
23 verification is incomplete.

24 The elements of the process, again,
25 I will state I don't recall or know if I ever

1 B. THOMPSON

2 knew.

3 BY MR. LEE:

4 Q. Okay. But you did have the
5 understanding that claims verification was not
6 complete until all of the stages of the process
7 was completed, correct?

8 A. That is correct, sir.

9 Q. Further down in that email is an
10 email from Jay Matushak to Jeffrey Putnam and
11 others, including yourself.

12 And it says, under "Full Year
13 Implications":

14 "M&R CV delete good guy is around
15 \$250 million for the year."

16 Do you see that?

17 A. I do, sir.

18 Q. And then it says:

19 "Note this is just the M&R piece
20 and there is an incremental
21 component at C&S."

22 Did I read that correctly?

23 A. You did, sir.

24 Q. What does that indicate to you about
25 the \$250 million for the year? What does that

REMOTE VIDEOCONFERENCE DEPOSITION OF
JONATHAN BLUM
March 4, 2022

Reported by:

Anne E. Vosburgh, CSR-6804, RPR, CRR

Job No. 789903

1 J. BLUM

2 MS. LIKOFF: Object to form. Vague.

3 A. The purpose of the audit was to
4 review the individual plan submissions for the
5 risk-adjustment codes.

6 BY MR. SUMMERS:

7 Q. Right. And was the objective to
8 determine the extent to which reported
9 diagnostic codes could not be validated based
10 on the medical record that was submitted?

11 MS. LIKOFF: Object to form.

12 A. The purpose was to review a sample
13 of submitted diagnoses and determine the
14 accuracy based upon that sample.

15 BY MR. SUMMERS:

16 Q. And then through the RADV program,
17 did you seek to make adjustments on a
18 plan-specific basis to adjust the payments
19 provided to each plan?

20 MS. LIKOFF: Objection to form.

21 Vague.

22 A. I thought of it as to collect
23 payments that were made in error to plans.

24 BY MR. SUMMERS:

25 Q. To recover payments that were made in

1 J. BLUM

2 error?

3 A. "Recover" is a better word. Thank
4 you.

5 MR. SUMMERS: Heather, let's go
6 ahead and -- let me ask, Heather, if you
7 can go ahead and start pulling up Tab 7,
8 I'm going to go ahead and ask another
9 question or two while you're doing that.

10 BY MR. SUMMERS:

11 Q. Mr. Blum, by 2010, you were well
12 aware that the data submitted provided by MA
13 plans often contained diagnostic codes reported
14 by the healthcare providers that were not
15 always supported by the underlying medical
16 records, were you not?

17 MS. LIKOFF: Objection to form.

18 Lacks foundation. Vague.

19 A. I was aware that the Agency faced
20 vulnerabilities in its program, part of which
21 being diagnosis codes that were submitted that
22 weren't documented by medical record.

23 BY MR. SUMMERS:

24 Q. And when you say "faced
25 vulnerabilities," you knew that it was an

1 J. BLUM

2 issue, correct?

3 MS. LIKOFF: Objection to form.

4 A. Yes.

5 BY MR. SUMMERS:

6 Q. Okay. Let's go ahead and pull up
7 what Heather has marked as Exhibit 1094.

8 (12/07/2010 Memorandum, Bates
9 USBP000543752, marked as
10 Exhibit 1094.)

11 BY MR. SUMMERS:

12 Q. Mr. Blum, do you have Exhibit 1094 in
13 front of you?

14 A. Not yet. Just pulling up.

15 Yes.

16 Q. Great. Feel free to take a look at
17 it. It's only a two-page exhibit.

18 Can you please tell us what
19 Exhibit 1094 is.

20 A. It's a memo written to me from the
21 OIG documenting their findings of their own
22 audits with the plans' risk-adjustment
23 submissions.

24 Q. Okay. If we look at the top of the
25 memorandum, do you see it's dated December 7,

TRANSCRIPT OF THE VIDEOTAPED DEPOSITION

BY VIDEOCONFERENCE OF:

JENNIFER HARLOW,

TAKEN ON BEHALF OF DEFENDANTS, REPORTED IN THE ABOVE
ENTITLED AND NUMBERED CAUSE BY YOLANDA J. PENA,
CERTIFIED COURT REPORTER FOR THE STATE OF LOUISIANA.

* * * * *

COMMENCING AT 10:03 A.M. EST, ON AUGUST 5, 2022

1 Q. And according to Exhibit 1253, around February
2 of 2007, you became a division director within MPPG.
3 Is that consistent with your recollection?

4 A. So I -- I would caveat that with I did become
5 the division director in the Medicare Plan Policy
6 Group. I don't remember the exact dates, so, you know,
7 I couldn't speak to February 2007. And when we say
8 "MPPG," that would be the Medicare Plan Policy Group.
9 So I became a division director in the Medicare Plan
10 Policy Group to start with.

11 Q. Okay. And at some point in time, did the
12 Medicare Plan Policy Group change its name to the
13 Medicare Plan Payment Group?

14 A. Yes, that's correct.

15 Q. Do -- do you know when that happened?

16 A. I don't remember.

17 Q. Okay. Do you know who -- why it happened?

18 A. I -- I don't -- I don't remember.

19 Q. And what, generally, were the functions of the
20 Medicare Plan Policy Group?

21 A. I -- I would go back to my original answer,
22 which was generally to address policy and Medicare
23 Advantage. I -- I don't remember beyond that, at this
24 point, what the, you know, more specific functions of
25 the group were.

1 Q. And the reference to division director, do you
2 recall what division you were directing in or around
3 February of 2007?

4 A. So I don't remember the exact name. I think
5 it was division of payment validation. So that was it.

6 Q. And sometimes abbreviated as DPV?

7 A. Correct, yes.

8 Q. And at some point, subsequently, you became
9 the deputy director for the Medicare Plan Payment
10 Group?

11 A. Correct, yes. Yeah.

12 Q. Ms. Harlow, you -- you refer to the Medicare
13 Advantage or Medicare Part C program. What's your
14 understanding of what that program does?

15 A. The -- the -- the Medicare Advantage program
16 provides managed care to Medicare beneficiaries.

17 Q. And what's your understanding of the phrase
18 "risk adjustment"?

19 MR. MASON: Objection; vague.

20 A. Could -- could you please provide more framing
21 around "risk adjustment" and what -- where that
22 question is directed?

23 BY MR. QURESHI:

24 Q. Sure. I'm trying to understand what you
25 believe "risk adjustment" refers to in connection with

1 the Medicare Advantage program.

2 A. Risk -- I'm sorry. Are you asking me what the
3 definition of "risk adjustment" is -- or can -- can you
4 just frame it a little bit more?

5 Q. Sure. I'm just trying to ascertain how best
6 you understand that phrase, "risk adjustment," as it
7 applies to the Medicare Advantage program.

8 A. Risk adjustment is a policy that we apply to
9 payments in the Medicare Advantage program.

10 Q. And when you say "payments," you're referring
11 to payments that are made by Medicare to Medicare
12 Advantage plans?

13 A. Correct, yes.

14 Q. How did you familiarize yourself with the
15 Medicare Advantage program during your time with either
16 the Medicare Plan Policy Group or the Medicare Plan
17 Payment Group?

18 MR. MASON: Objection.

19 A. So I'd just like to clarify. Is this question
20 directing -- directed at sort of starting with no
21 understanding of Medicare Advantage when I started
22 working with the Medicare Plan Policy Group?

23 BY MR. QURESHI:

24 Q. I'm trying to understand what your base of
25 knowledge was about the Medicare Advantage program,

1 REPORTER'S CERTIFICATE

2 I, YOLANDA J. PENA, Certified Court Reporter in
3 and for the State of Louisiana, Registered
4 Professional Reporter, and as the officer before whom
5 this testimony was taken, do hereby certify that
6 JENNIFER HARLOW, after having been duly sworn by me
7 upon authority of R.S. 37:2554, did testify as set
8 forth in the foregoing 187 pages.

9 I further certify that said testimony was reported
10 by me in the Stenotype reporting method, was prepared
11 and transcribed by me or under my direction and
12 supervision, and is a true and correct transcript to
13 the best of my ability and understanding.

14 I further certify that the transcript has been
15 prepared in compliance with transcript format
16 guidelines required by statute or by rules of the
17 board and that I have been informed about the complete
18 arrangement, financial or otherwise, with the person
19 or entity making arrangements for deposition services.

20 I further certify that I have acted in compliance
21 with the prohibition on contractual relationships, as
22 defined by Louisiana Code of Civil Procedure Article
23 1434, and in rules and advisory opinions of the board.

24 I further certify that I am not an attorney or
25 counsel for any of the parties, that I am neither
related to nor employed by any attorney or counsel
connected with this action, and that I have no
financial interest in the outcome of this matter.

This certificate is valid only for this
transcript, accompanied by my original signature and
original raised seal on this page.

VIDEOCONFERENCE VIDEOTAPED DEPOSITION OF
MARICRUZ BONFANTE
(Taken virtually)
10:33 a.m.
Monday, March 21, 2022

REPORTED BY: Christine A. Taylor, RPR

Magna Legal Services
866-624-6221
www.MagnaLS.com

1 from occurring.

2 Q. I'm sorry, that last part of your
3 sentence cut out. You said prevent fraud, waste,
4 and abuse in our --

5 A. Oh, from occurring.

6 Q. From occurring, okay.

7 What are your responsibilities?

8 MS. YEVTUKHOVA: Object to form.

9 BY MS. KOPPEL:

10 Q. You may answer.

11 A. My responsibilities, I guess I have
12 several. We have a process in which the different
13 groups within our center for program integrity may
14 bring forward certain areas where they've seen an
15 uptick in fraud, waste, or abuse. And my division
16 basically processes those instances and we triage
17 them. So we basically try to find out more
18 information about each incident, find out, like,
19 what the common denominators are and then try to
20 find out which programs may assist in trying to
21 mitigate or address the different types of
22 vulnerabilities.

23 Q. Okay. And this was for the Medicare
24 Part C program?

25 A. I'm sorry, I couldn't hear you.

1 Q. I'm sorry. This relates to the
2 Medicare Part C program?

3 MS. YEVTUKHOVA: Object to form.

4 THE WITNESS: No. It relates to all
5 programs.

6 BY MS. KOPPEL:

7 Q. All programs including Medicare
8 Part C?

9 A. Yes and no. We haven't really touched
10 on any Medicare Part C issues. We've been most
11 focused on fee for service and Medicare Part D.

12 Q. Ms. Bonfante, who do you currently
13 report to directly?

14 A. Directly, Dennis Sendros and Laura
15 Minassian-Kiefel.

16 Q. How long have you reported directly to
17 those individuals?

18 A. For the last two years.

19 Q. Is there anybody else, since you've
20 held this position, that you've reported directly
21 to?

22 A. They're my direct supervisors. But at
23 one point I was on a detail with -- as a special
24 assistant for Jennifer Dupee and Steven Ferraina,
25 and they're in the front office of the audits and

1 vulnerabilities group.

2 Q. And you said prior to the
3 reorganization you worked in a similar capacity
4 for three years. Who did you report directly to
5 during those three years?

6 A. Reported to Samantha Richardson.

7 Q. Have you held any other positions
8 within CMS?

9 A. Well, the one I held previously when I
10 was working for the Center for Medicare.

11 Q. When was that?

12 A. Well, it would have been between 2010
13 and 2016, I think.

14 Q. Do you recall what your position was
15 at that time?

16 A. It was a health insurance specialist.

17 Q. So it was just for a different
18 division?

19 A. Yes.

20 MS. YEVTUKHOVA: Object to form.

21 BY MS. KOPPEL:

22 Q. And what were your responsibilities as
23 a health insurance specialist while you were
24 working for center for -- you said --

25 A. Well, it depended on the position I

1 was in. I was in two different divisions when I
2 worked for the Center for Medicare. But within my
3 position with the Medicare plan payment group
4 under the Division of Payment Validation, my
5 responsibilities were primarily to help develop an
6 appeals process that would be used when and if we
7 were able to start auditing and issue findings
8 against plans based on any kind of -- of erroneous
9 coding or -- erroneous payment. And then I had
10 several other roles as well. I helped -- I was
11 the contracting officer's representative for two
12 or three different coding contracts during the
13 time that I was with the division of payment
14 validation. And then I left the Division of
15 Payment Validation and started working for the
16 division of -- and the acronym is what sticks out
17 in my head, I don't know if I'm going to get this
18 right, but it's the Division of Encounter Data and
19 Risk Adjustment Operations, yes. And for them, I
20 worked primarily on advising on contracts that
21 they were going to enter into for the front end
22 encounter data system, and I don't remember what
23 that system was called, but -- and then I also
24 handled other things such as systems of record
25 notices, preparing those notifications, and I

1 Q. Yes.

2 A. I may have, but I don't recall.

3 Q. You understood when you e-mailed
4 Ms. Davis and Ms. Kapustij that these were the
5 final slides used for the White House briefing?

6 MS. YEVTUKHOVA: Object to form.

7 THE WITNESS: Well, the e-mail I sent
8 in 2018, I mean, I don't know how I would
9 know personally that these were final. I
10 probably just looked -- I mean, I don't
11 know. I don't remember the circumstances
12 behind that, but I definitely wasn't
13 working in RADV at that time and I may have
14 just, you know, looked for something that
15 said final on it and saw John Scott's
16 e-mail.

17 BY MS. KOPPEL:

18 Q. I'm sorry, I didn't mean to jump on
19 you there. But you used the word "finalized"
20 there?

21 A. That may have been my understanding
22 when I sent the e-mail, but I don't recall the
23 specifics of this.

24 Q. So are you saying that sitting here
25 today you don't know whether these were final, but

1 you believed them to be final when you sent this
2 e-mail in 2018?

3 A. I don't know whether they were final.
4 I can presume that because John Scott sent me an
5 e-mail that had an attachment that said final on
6 it that it was a final document. But I -- I don't
7 recall ever reviewing this.

8 Q. Is it your practice to send along
9 things without reviewing them?

10 A. Well, again, I don't know the context
11 of the discussion or why it was being sent, but --
12 and the circumstances around it being sent, but if
13 I was no longer working in the RADV program and
14 I -- if I had perhaps -- again, this is a
15 hypothetical, this may not explain the
16 circumstances. But if I had to reached out to
17 John Scott who used to be the special assistant
18 for the group director, I would trust that
19 whatever he sent me, if it said final on it, it
20 was probably final. And if all I was doing was
21 taking the document and sending it to the people
22 who are actually working on that program, then I
23 would not reviewed it. I would have just
24 forwarded it to them because it would not have
25 been my -- as someone that works in CPI, that's

1 not part of my role.

2 Q. And trusting that the documents were,
3 in fact, final because you trusted John Scott's
4 work?

5 A. Yes. Absolutely.

6 Q. Okay. So sitting here today, is it
7 your understanding that the slide deck in
8 Exhibit 1147-3 were the final slides that were
9 used for the White House briefing in January of
10 2012?

11 MS. YEVTUKHOVA: Object to form.

12 THE WITNESS: Again, my understanding
13 today based on the e-mail chain that's
14 provided seems to show that this was a
15 final document.

16 BY MS. KOPPEL:

17 Q. And it includes a discussion -- or,
18 rather, a recommendation that CMS apply the
19 fee-for-service adjuster to offset any amounts
20 owed to account for the underlying error in the
21 traditional FFS program; correct?

22 MS. YEVTUKHOVA: Object to form.

23 THE WITNESS: I'm sorry, which slide
24 was that again? I just want to --

25 BY MS. KOPPEL:

CERTIFICATE OF REPORTER

I, Christine A. Taylor, Certified Court Reporter within and for the State of Georgia, do hereby certify:

That the foregoing deposition was taken before me on the date and at the time and location stated on Page 1 of this transcript; that the deponent was duly sworn to testify to the truth, the whole truth and nothing but the truth; that the testimony of the deponent and all objections made at the time of the examination were recorded stenographically by me and were thereafter transcribed; that the foregoing deposition as typed is a true, accurate and complete record of the testimony of the deponent and of all objections made at the time of the examination to the best of my ability.

I further certify that I am neither related to nor counsel for any party to the cause pending or interested in the events thereof. Witness my hand, this 1st day of April, 2022.

Christine Taylor

Prescription Drug Plan Sponsors
Employer/Union-Sponsored Group Health Plans
Programs of All-Inclusive Care for the Elderly Organizations

FROM: Jonathan Blum, Acting Director, Center for Drug and Health Plan Choice

RE: Issuance of the 2010 Call Letter

DATE: March 30, 2009

I am pleased to provide you with the 2010 Call Letter for Medicare Advantage (MA) organizations (MAOs); section 1876 cost-based contractors; prescription drug plan (PDP) sponsors; demonstrations; Programs of All-Inclusive Care for the Elderly (PACE) organizations; and employer and union-sponsored group plans, including employer-union-only group waiver plans (EGWPs). The Call Letter contains information these organizations will find useful as they prepare their bids for the upcoming contract year.

We received approximately 190 comments from plan sponsors and plan sponsor associations; advocacy organizations and consumer groups; pharmaceutical manufacturers and their associations; members of Congress; States and State associations; pharmacists and pharmacy associations; providers and provider associations; and other individuals on the draft Call Letter we issued for public comment on February 23, 2009. We carefully considered all comments we received and have made revisions and clarifications in response to these comments in this final 2010 Call Letter.

In some areas, we received a number of constructive comments which we will consider addressing for future contract years. For example, we requested comments regarding whether, and if so, how we should calculate and disseminate information about plans' medical loss ratios. Given this issue's complexity, we will continue evaluating methodologies for possible future implementation. We will also continue to study the issue of our reassignment processes for low-income subsidy (LIS) eligible individuals for potential future improvements that are consistent with our statutory authority. We will also continue to work with plans that are losing members to identify appropriate ways to reach out to these members to explain how they can remain in their current plan and what their premium liability will be if they choose to do so.

As we indicated in the draft document, the 2010 Call Letter focuses on new guidance necessary for preparing for contract year 2010. Sponsoring organizations continue to remain responsible for familiarizing themselves with statutory requirements, regulations, and guidance governing the MA and Part D programs, including the Medicare Managed Care and Prescription Drug Benefit Manuals. CMS will separately issue technical and procedural clarifications regarding bid and formulary submissions, benefits, HPMS data, CMS marketing models, and other operational issues of interest to sponsoring organizations.

We hope this information helps you implement and comply with CMS policies and procedures as you prepare either to offer a plan for the first time or continue offering plans under the MA and/or Part D programs.

2010 Call Letter

HOW TO USE THIS DOCUMENT4

SECTION A – 2010 MA, MA-PD, AND COST PLAN SECTIONS5

SECTION B – 2010 PRESCRIPTION DRUG PLAN SECTIONS49

SECTION C - MARKETING/BENEFICIARY COMMUNICATIONS88

SECTION D – APPENDICES95

How to Use this Document

The 2016 Call Letter contains information on the Part C, cost-based, and Part D programs combined into one document. Also, we indicate when sections apply to PACF and employer and union-sponsored group health plans. Section A provides MA, MA-PD, and cost plan guidance; Section B provides information for Part D sponsors; Section C contains marketing related information that applies to all plan types; and Section D contains attachments to the material contained in Sections A-C.

If you have questions concerning this Call Letter, please contact Vanessa Duran at Vanessa.Duran@cms.hhs.gov or Rosetta Hicks at Rosetta.Hicks@cms.hhs.gov.

APPENDIX II – Risk Adjustment Implementation**1. Risk Adjustment Data Submission Schedule**

Table 1. Risk Adjustment Implementation Calendar (below) provides the updated submission schedule for all diagnosis data submitted for all risk adjustment models. This includes data for both the Part C CMS-HCC and FSRD models and the Part D Drug risk adjustment model.

Table 1. Risk Adjustment Implementation Calendar

CY	Dates of Service	Initial Submission Deadline*	First Payment Date	Final Submission Deadline
2008	July 1, 2006 through June 30, 2007	September 7, 2007	January 1, 2008	N/A**
2008	January 1, 2007 through December 31, 2007	March 7, 2008	July 1, 2008	January 31, 2009
2009	July 1, 2007 through June 30, 2008	September 5, 2008	January 1, 2009	N/A**
2009	January 1, 2008 through December 31, 2008	March 6, 2009	July 1, 2009	January 31, 2010
2010	July 1, 2008 through June 30, 2009	September 4, 2009	January 1, 2010	N/A**

2010	January 1, 2009 through December 31, 2009	March 5, 2010	July 1, 2010	January 31, 2011
2011	July 1, 2009 through June 30, 2010	September 3, 2010	January 1, 2011	N/A**
2011	January 1, 2010 through December 31, 2010	March 4, 2011	July 1, 2011	January 31, 2012

*March and September dates reflect the first Friday of the respective month.

**All risk adjustment data for a given payment year (CY) must be submitted by January 31st of the subsequent year.

Changes in payment methodology for 2010, including Part C and Part D payment and risk adjustment, are described in the February 20, 2009, *Advance Notice of Methodological Changes for Calendar Year (CY) 2010 for Medicare Advantage (MA) Capitation Rates and Part C and Part D Payment Policies* and the April 6, 2009, *Announcement of CY 2010 MA Capitation Rates and MA and Part D Payment Policies* (which will be available at <http://www.cms.hhs.gov/MedicareAdvSpecRateStats/>).

2. Part A Risk Adjustment Factor Options

Determinations of Risk Status

As stated in the April 3, 2006 Announcement of Calendar Year (CY) 2007 Medicare Advantage Capitation Rates and Medicare Advantage and Part D Payment Policies (available at <http://www.cms.hhs.gov/MedicareAdvSpecRateStats/>), plans subject to risk adjusted payments have the option of treating beneficiaries with 12 months of Part A data but less than 12 months of Part B enrollment in a data collection year.

Table 2. Which Risk Adjustment Factors to Apply to Payment*

Time Period Beneficiary Has Been Enrolled in Part B Medicare**	Time Period Beneficiary Has Been Entitled to Benefits under Part A Medicare**	
	0 – 11 months	≥ 12 months
0 – 11 months	New enrollee factors	Plan's option: New enrollee or full risk adjustment factors
≥ 12 months	Full risk adjustment factors	Full risk adjustment factors

*Applies to Part C and D payments for MA plans, demonstrations, and PACE organizations. Note that MA enrollees must be entitled to benefits under Part A and enrolled in Part B.

**During data collection period (previous calendar year).

Table 2. Which Risk Adjustment Factors to Apply to Payment (above) illustrates that beneficiaries with 12 or more months of Medicare Part B enrollment during the data collection period (previous calendar year) are considered full risk enrollees. The new enrollee factors do not apply.

Beneficiaries with less than 12 months of entitlement to benefits under Part A and less than 12 months of Part B enrollment during the data collection period will be treated as new enrollees, as they are now.

Currently beneficiaries with 12 or more months of entitlement to benefits under Part A and less than 12 months of Part B enrollment during the data collection period (referred to as "Part A only" enrollees) are considered new enrollees for the purpose of risk adjusted payments. Because of concerns expressed by some sponsors of demonstration plans that "Part A only" enrollees are always considered to be new enrollees, CMS has created an option for how the risk adjustment payments for this category of enrollees are determined. Effective as of 2006 payments, organizations may elect to have CMS determine payments for all "Part A only" enrollees using either new enrollee factors or full risk adjustment factors. The organization's decision will be applied to all "Part A-only" enrollees in the plan. Plans may not elect to move some eligible "Part A-only" enrollees into risk adjustment, while retaining others as new enrollees.

Option to Elect Full Risk Option for "Part A-only" Enrollees

EXHIBIT D-159

**Attestations
Internal Approval Form**
Version date: 12.29.09

The management of Qvotons and AmeriChoice is responsible for establishing and maintaining adequate internal controls over completion of attestations. Please refer to the XXX Policy & Procedure for the details of this internal control process.

This form is used to confirm that the appropriate legal, regulatory, and business owners have reviewed the attestation. This completed form and any additional attached documentation provides the needed confirmation that it is appropriate for the designated Executive to sign the attestation (or this form). The final signed document, including the signature sheet below with appropriate signatures from approvers, should be scanned and retained by PSMG Regulatory Affairs.

Attestation Information	
Name of Attestation	Calendar Year 2009 Risk Adjustment Attestation
Brief Description of Attestation	Annually, CMS requires Medicare Advantage Organizations to attest to the previous submitted risk adjustment data for it's complete and accuracy.
Attestation to be Submitted to: (CMS, State, etc.)	CMS
Designated Executive for Signature:	Jack Larson, CEO of PSMG
Segment or Product Line (Qvotons, SecureHorizons, Evercare, AmeriChoice, etc.)	Qvotons, AmeriChoice, Uniserv and Sierra
Due Date for Designated Executive Signature:	March 26, 2010
Due Date for Submissions to Regulating Body:	March 25, 2010
Approver Signoff(s)	
Business Owner(s) – The following business owners have reviewed the content of the attestation and confirmed that the attestation is factually accurate and that the business segment is meeting the stated requirements in the attestation. The attached internal attestations (or emails) serve as approval in place of signature on this form. Name & Title: Sharon Thout, Michigan RPO	Date: 3/26/2010
Signature: See Attached signature	
Notes: Great Lakes Health Plan Business Owner(s) – The following business owners have reviewed the content of the attestation and confirmed that the attestation is factually accurate and that the business segment is meeting the stated requirements in the attestation. The attached internal attestations (or emails) serve as approval in place of signature on this form. Name & Title: Jeff Durnham, General Manager, Clinic Assessment Solutions	Date: 3/26/2010
Signature: See attached electronic signature	
Notes: Ingenix	
Business Owner(s) – The following business owners have reviewed the content of the attestation and confirmed that the attestation is factually accurate and that the business segment is meeting the stated requirements in the attestation. The attached internal attestations (or emails) serve as approval in place of signature on this form. Name & Title: Michael Gifford, Vice President, Operations	Date: 3/26/2010

Signature: See attached electronic signature

Notes: Sierra Health Plans

Legal (Confidential Attorney-Client Communication) Lead- Based on the acknowledgement above from the business owner that we are meeting the stated requirements, the individual signing below acknowledges that he/she has reviewed the content of the attestation to confirm that it complies with applicable legal requirements and determined that it is appropriate for the designated executive to proceed with signature. Please insert any notes.

Good morning,

Attached are two documents.

1. the adjusted language for the CMS Risk Adjustment attestation that ultimately Jack Larsen will be attesting to for your review and
2. the internal attestation that you are attesting to the language in #1 to Jack for the accuracy of the Risk Adjustment data

Please review the language and if you have a sub-attestation prepared please provide that to me to present to Jack as well. I would prefer that we all sign the same internal executive attestation so please wait until I forward you the Attestation with the appropriate order of signers. **We must have this completed before 2pm today because Jack Larsen will be leaving at 3pm.**

-Sharon Threlt please sign first (also please add your title) to get this process rolling

Thank you

ATTACHMENT B

**ATTESTATION OF RISK ADJUSTMENT DATA INFORMATION PROVIDED BY A
MEDICARE SECTION 1876 COST ORGANIZATION**

Pursuant to the contract(s) between the Centers for Medicare & Medicaid Services (CMS) and (INSERT NAME OF MEDICARE SECTION 1876 COST ORGANIZATION), hereafter referred to as the Cost Organization, governing the operation of the following Medicare Cost plans (INSERT PLAN IDENTIFICATION NUMBERS HERE), the Cost Organization makes the following attestation concerning risk adjustment data provided to CMS by the Cost Organization.

The Cost Organization has reported to CMS for the period of January 1, 2008, to December 31, 2008, all risk adjustment data (INPATIENT, OUTPATIENT, if applicable, OUTPATIENT HOSPITAL if applicable, AND PHYSICIAN) available to the Cost Organization as of December 31, 2008, with respect to the above stated Cost plans. Based on best knowledge, information, and belief as of the date indicated below, all information submitted to CMS in this report is accurate, complete, and truthful. The Cost Organization acknowledges that misrepresentations to CMS regarding the accuracy of such information may result in Federal civil action and/or criminal prosecution.

(INDICATE THE FIELD OFFICE or
delegation) on behalf of

(INDICATE COST ORGANIZATION)

DATE: _____

**ATTESTATION OF RISK ADJUSTMENT DATA INFORMATION RELATING TO
CMS PAYMENT TO A MEDICARE ADVANTAGE ORGANIZATION**

Pursuant to the contracts between the Centers for Medicare & Medicaid Services (CMS) and the UnitedHealth Group affiliate listed in Attachment I, hereafter referred to as the MA Organization, governing the operation of the Medicare Advantage and Medicare Advantage- Prescription Drug plans listed in Attachment I, the MA Organization hereby requests payment under the contract and, in doing so, makes the following attestation concerning CMS payments to the MA Organization.* The MA Organization acknowledges that the information described below directly affects the calculation of CMS payments to the MA Organization or additional benefit obligations of the MA Organization and that misrepresentations to CMS about the accuracy of such information may result in federal civil action and/or criminal prosecution.

The MA Organization has reported to CMS for the period of January 1, 2008 to December 31, 2008 all risk adjustment data available to the MA Organization as of December 31, 2008, with respect to the MA and MA-PD plans listed in Attachment I. Based on best knowledge, information, and belief as of the date indicated below, all information submitted to CMS in this report is accurate, complete, and truthful.

John Way, Chief Financial Officer, Securus Horizons
On behalf of the UnitedHealth Group
entities listed in Attachment I

DATE

* This Certification is based on facts reasonably available or made available to the MA Organization as of the date of this Certification and is not to be construed as a representation by the entities listed in Attachment I, their affiliates, officers, representatives, or agents that the data to which the Certification relates may not require subsequent modification should additional information become available. Best knowledge, information, and belief means based on normal business practices. In addition, the scope of this Certification does not include risk adjustment data related to "long-term institutionalized" or "community," which the MA Organization is not required to report to or otherwise verify for CMS. Such designations are made by CMS based on a CMS data source and are subject to reconciliation by CMS in accordance with Section 91.12 of Chapter 7 of the Medicare Managed Care Manual. As previously communicated to CMS, we believe these designations are materially inaccurate. However, we acknowledge CMS' position that such designations are generally accurate.

**ATTESTATION OF RISK ADJUSTMENT DATA INFORMATION RELATING TO
CMS PAYMENT TO A MEDICARE ADVANTAGE ORGANIZATION**

Pursuant to the contracts between the Centers for Medicare & Medicaid Services (CMS) and the UnitedHealth Group affiliate listed in Attachment 1, hereafter referred to as the MA Organization, governing the operation of the Medicare Advantage and Medicare Advantage-Prescription Drug plans listed in Attachment 1, the MA Organization hereby requests payment under the contract and, in doing so, makes the following attestation concerning CMS payments to the MA Organization.* The MA Organization acknowledges that the information described below directly affects the calculation of CMS payments to the MA Organization or additional benefit obligations of the MA Organization and that misrepresentations to CMS about the accuracy of such information may result in Federal civil action and/or criminal prosecution.

The MA Organization has reported to CMS for the period of January 1, 2008 to December 31, 2008 all risk adjustment data available to the MA Organization as of December 31, 2008, with respect to the MA and MA-PD plans listed in Attachment 1. Based on best knowledge, information, and belief as of the date indicated below, all information submitted to CMS in this report is accurate, complete, and truthful.

Justin Kerk, Chief Financial Officer, Evercare
On Behalf of the UnitedHealth Group
entities listed in Attachment 1

DATE 

* This Certification is based on facts reasonably available or made available to the MA Organization as of the date of this Certification and is not to be construed as a representation by the entities listed in Attachment 1, their affiliates, officers, representatives, or agents that the data on which the Certification rests may not require subsequent modification should additional information become available. Best knowledge, information, and belief means based on normal business practices. In addition, the scope of this Certification does not include risk adjustment data related to "long-term institutional and" or "nursing facility," which the MA Organization is not required to report to or otherwise verify for CMS. Such designations are made by CMS based on a CMS data source and are subject to record correction by CMS in accordance with Section 91.4.2 of Chapter 7 of the Medicare Managed Care Manual. As previously communicated to CMS, we believe these designations are materially inaccurate. However, we acknowledge CMS' position that such designations are generally accurate.

No. CV 16-08697 FMO-PVCx

JOINT STIPULATION RE EDI
AGREEMENTS, MA CONTRACTS, MA-
PD ADDENDA, AND ATTESTATIONS
AND RELATED ENTITIES

1 For the purposes of the above captioned case only, the parties hereby agree and stipulate
2 to the following:

3 1. The Medicare Advantage Organizations named as Defendants in this case are
4 identified on Exhibit A to this Stipulation and are referred to as the “UnitedHealth
5 MAOs.”

6 2. Each of the UnitedHealth MAOs executed a Medicare Advantage (“MA”)
7 Contract, Medicare Advantage – Prescription Drug (“MA-PD”) Addendum, and an
8 Attestation, and had an Electronic Data Interchange (“EDI”) Agreement in place with
9 Centers for Medicare and Medicaid Services (“CMS”), for each year in which that
10 UnitedHealth MAO had submitted a diagnosis code to CMS that is listed as a delete on
11 Attachment 1 to Dr. Garthwaite’s expert report, and Optum, Inc. executed an EDI
12 Agreement applicable to that MA or MA-PD plan with respect to each such year.

13 3. Each of the diagnosis codes listed on Attachment 1 to Dr. Garthwaite’s expert
14 report is associated with a UnitedHealth MAO that executed an applicable MA Contract,
15 MA-PD Addendum, EDI Agreement and an Attestation, and for which Optum executed
16 an EDI Agreement.

17 4. Each of the Contract Numbers listed on Attachment 2 to Dr. Garthwaite’s expert
18 report refer to MA Contracts entered into by a UnitedHealth MAO.

19 5. MAPL008081457 is an exemplar of an EDI Agreement executed by the
20 UnitedHealth MAOs. All other EDI Agreements executed by the UnitedHealth MAOs
21 contained identical terms.

22 6. MAPL007637301 is an exemplar of an EDI Agreement executed by Optum, Inc.
23 All other EDI Agreements executed by Optum, Inc. applicable to the other UnitedHealth
24 MAOs contained identical terms.

25 7. Exemplars of the MA Contracts, MA-PD Addenda, and Attestations are included,
26 by year, in the table below. All of the MA-PD Addenda and Attestations executed by
27 the UnitedHealth MAOs contained identical terms to the exemplar from the same year.

With the exception of the specific UnitedHealth MAOs identified in paragraphs 8-10 below, all of the MA Contracts executed by the UnitedHealth MAOs contained identical terms to the exemplar MA Contract from the same year.

Year	MA Contract	MA-PD Addendum	Attestation
2009	MAPL003539599	USBP008083344	USBP060624234 at USBP060624253- USBP060624254
2010	MARA263031	USBP009865279	USBP008083511
2011	USBP009428514	USBP009428508	USBP060623193 at USBP060623193- USBP060623195
2012	USBP009426552	USBP009426546	USBP060623193 at USBP060623223 - USBP060623225
2013	USBP009424556	USBP009424550	USBP009417769
2014	USBP009422773	USBP009422767	USBP009417676
2015	USBP009421065	USBP009421059	USBP009417590
2016	USBP009419597	USBP009419590	USBP009417505
2017	USBP009418488	USBP009418481	USBP009417433

8. For CY 2009-2017, H5435 CARE IMPROVEMENT PLUS SOUTH CENTRAL INSURANCE COMPANY entered into Private Fee-for-Service (“PFFS”) contracts. The PFFS contracts had the terms included in the documents in the table below:

Year	Bates Number
2009	USBP009866901
2010	USBP009866901
2011	USBP009427636
2012	USBP009425668

2013	USBP009423731
2014	USBP009422007
2015	USBP009420324
2016	USBP009419115
2017	USBP009418065

9. For CY 2014-2017, H2531 UNITEDHEALTHCARE COMMUNITY PLAN OF OHIO, INC. entered into Medicare-Medicaid Plan (“MMP”) contracts. The MMP contracts had the terms included in the documents in the table below:

Year	Bates Number
2014	USBP009865290
2015	USBP009865290
2016	USBP009865495
2017	USBP009866017

10. For CY 2015-2017, H7833 UNITEDHEALTHCARE COMMUNITY PLAN OF TEXAS, LLC entered into MMP contracts. The MMP contracts had the terms included in the documents in the table below:

Year	Bates Number
2015	USBP009866581
2016	USBP009866233
2017	USBP009865709

11. For 2013-2017 Contract Years (“CY”), UnitedHealth sent emails to Cheri Rice in conjunction with the execution of its Attestations. CMS employees responded to each of those emails.

- MARA1296257 is an accurate record of the email sent by Steve Nelson in conjunction with UnitedHealth’s 2013 CY Attestation and Cheri Rice’s response to that email from Steve Nelson.

- USBP001354165 is an accurate record of the email sent by Steve Nelson in conjunction with UnitedHealth's 2014 CY Attestation and Cheri Rice's response to that email from Steve Nelson.
- USBP001354107 is an accurate record of the email sent by Steve Nelson in conjunction with UnitedHealth's 2015 CY Attestation and Cheri Rice's response to that email from Steve Nelson.
- USBP058101090 is an accurate record of the email sent by Brian Thompson in conjunction with UnitedHealth's 2016 and 2017 CY Attestations.
- USBP009866579 is an accurate record of the letter sent from Jennifer Shapiro to Brian Thompson in response to Mr. Thompson's email found at USBP058101090.

Related Entities

12. The UnitedHealth MAOs are all owned by UnitedHealth Group, Inc., either directly or through one or more subsidiaries.

13. United HealthCare Services, Inc. is also owned by UnitedHealth Group, Inc., either directly or through one or more subsidiaries.

14. United HealthCare Services, Inc. performed management functions for the UnitedHealth MAOs pursuant to management services agreements with those MAOs.

15. United HealthCare Services, Inc. is a "Related Entity" to the each of the UnitedHealth MAOs, as defined by 42 C.F.R. §§ 422.2 & 422.500.

16. United Healthcare Services, Inc., in turn delegated some management functions for the UnitedHealth MAOs to its subsidiary Optum, Inc., either directly or through OptumInsight, Inc.

17. Optum, Inc. is owned by UnitedHealth Group, Inc., either directly or through one or more subsidiaries.

18. Optum, Inc. is a "Related Entity" to the each of the UnitedHealth MAOs, as defined by 42 C.F.R. §§ 422.2 & 422.500.

19. OptumInsight, Inc. is owned by UnitedHealth Group, Inc., either directly or through one or more subsidiaries.

20. OptumInsight, Inc. is a “Related Entity” to the each of the UnitedHealth MAOs, as defined by 42 C.F.R. §§ 422.2 & 422.500.

3 Plaintiffs,

4 v.

5 UNITEDHEALTH GROUP, INC., *et al.*,

6 Defendants.

No. CV 16-08697 FMO-PVCx

JOINT STIPULATION RE EDI
AGREEMENTS, MA CONTRACTS, MA-
PD ADDENDA, AND ATTESTATIONS
AND RELATED ENTITIES

1 For the purposes of the above captioned case only, the parties hereby agree and stipulate
2 to the following:

3 1. The Medicare Advantage Organizations named as Defendants in this case are
4 identified on Exhibit A to this Stipulation and are referred to as the “UnitedHealth
5 MAOs.”

6 2. Each of the UnitedHealth MAOs executed a Medicare Advantage (“MA”)
7 Contract, Medicare Advantage – Prescription Drug (“MA-PD”) Addendum, and an
8 Attestation, and had an Electronic Data Interchange (“EDI”) Agreement in place with
9 Centers for Medicare and Medicaid Services (“CMS”), for each year in which that
10 UnitedHealth MAO had submitted a diagnosis code to CMS that is listed as a delete on
11 Attachment 1 to Dr. Garthwaite’s expert report, and Optum, Inc. executed an EDI
12 Agreement applicable to that MA or MA-PD plan with respect to each such year.

13 3. Each of the diagnosis codes listed on Attachment 1 to Dr. Garthwaite’s expert
14 report is associated with a UnitedHealth MAO that executed an applicable MA Contract,
15 MA-PD Addendum, EDI Agreement and an Attestation, and for which Optum executed
16 an EDI Agreement.

17 4. Each of the Contract Numbers listed on Attachment 2 to Dr. Garthwaite’s expert
18 report refer to MA Contracts entered into by a UnitedHealth MAO.

19 5. MAPL008081457 is an exemplar of an EDI Agreement executed by the
20 UnitedHealth MAOs. All other EDI Agreements executed by the UnitedHealth MAOs
21 contained identical terms.

22 6. MAPL007637301 is an exemplar of an EDI Agreement executed by Optum, Inc.
23 All other EDI Agreements executed by Optum, Inc. applicable to the other UnitedHealth
24 MAOs contained identical terms.

25 7. Exemplars of the MA Contracts, MA-PD Addenda, and Attestations are included,
26 by year, in the table below. All of the MA-PD Addenda and Attestations executed by
27 the UnitedHealth MAOs contained identical terms to the exemplar from the same year.

With the exception of the specific UnitedHealth MAOs identified in paragraphs 8-10 below, all of the MA Contracts executed by the UnitedHealth MAOs contained identical terms to the exemplar MA Contract from the same year.

Year	MA Contract	MA-PD Addendum	Attestation
2009	MAPL003539599	USBP008083344	USBP060624234 at USBP060624253- USBP060624254
2010	MARA263031	USBP009865279	USBP008083511
2011	USBP009428514	USBP009428508	USBP060623193 at USBP060623193- USBP060623195
2012	USBP009426552	USBP009426546	USBP060623193 at USBP060623223 - USBP060623225
2013	USBP009424556	USBP009424550	USBP009417769
2014	USBP009422773	USBP009422767	USBP009417676
2015	USBP009421065	USBP009421059	USBP009417590
2016	USBP009419597	USBP009419590	USBP009417505
2017	USBP009418488	USBP009418481	USBP009417433

8. For CY 2009-2017, H5435 CARE IMPROVEMENT PLUS SOUTH CENTRAL INSURANCE COMPANY entered into Private Fee-for-Service (“PFFS”) contracts. The PFFS contracts had the terms included in the documents in the table below:

Year	Bates Number
2009	USBP009866901
2010	USBP009866901
2011	USBP009427636
2012	USBP009425668

2013	USBP009423731
2014	USBP009422007
2015	USBP009420324
2016	USBP009419115
2017	USBP009418065

9. For CY 2014-2017, H2531 UNITEDHEALTHCARE COMMUNITY PLAN OF OHIO, INC. entered into Medicare-Medicaid Plan (“MMP”) contracts. The MMP contracts had the terms included in the documents in the table below:

Year	Bates Number
2014	USBP009865290
2015	USBP009865290
2016	USBP009865495
2017	USBP009866017

10. For CY 2015-2017, H7833 UNITEDHEALTHCARE COMMUNITY PLAN OF TEXAS, LLC entered into MMP contracts. The MMP contracts had the terms included in the documents in the table below:

Year	Bates Number
2015	USBP009866581
2016	USBP009866233
2017	USBP009865709

11. For 2013-2017 Contract Years (“CY”), UnitedHealth sent emails to Cheri Rice in conjunction with the execution of its Attestations. CMS employees responded to each of those emails.

- MARA1296257 is an accurate record of the email sent by Steve Nelson in conjunction with UnitedHealth’s 2013 CY Attestation and Cheri Rice’s response to that email from Steve Nelson.

- 1 • USBP001354165 is an accurate record of the email sent by Steve Nelson in
2 conjunction with UnitedHealth's 2014 CY Attestation and Cheri Rice's response
3 to that email from Steve Nelson.
- 4 • USBP001354107 is an accurate record of the email sent by Steve Nelson in
5 conjunction with UnitedHealth's 2015 CY Attestation and Cheri Rice's response
6 to that email from Steve Nelson.
- 7 • USBP058101090 is an accurate record of the email sent by Brian Thompson in
8 conjunction with UnitedHealth's 2016 and 2017 CY Attestations.
- 9 • USBP009866579 is an accurate record of the letter sent from Jennifer Shapiro to
10 Brian Thompson in response to Mr. Thompson's email found at USBP058101090.

11 **Related Entities**

12 12. The UnitedHealth MAOs are all owned by UnitedHealth Group, Inc., either
13 directly or through one or more subsidiaries.

14 13. United HealthCare Services, Inc. is also owned by UnitedHealth Group, Inc.,
15 either directly or through one or more subsidiaries.

16 14. United HealthCare Services, Inc. performed management functions for the
17 UnitedHealth MAOs pursuant to management services agreements with those MAOs.

18 15. United HealthCare Services, Inc. is a "Related Entity" to the each of the
19 UnitedHealth MAOs, as defined by 42 C.F.R. §§ 422.2 & 422.500.

20 16. United Healthcare Services, Inc., in turn delegated some management functions
21 for the UnitedHealth MAOs to its subsidiary Optum, Inc., either directly or through
22 OptumInsight, Inc.

23 17. Optum, Inc. is owned by UnitedHealth Group, Inc., either directly or through one
24 or more subsidiaries.

25 18. Optum, Inc. is a "Related Entity" to the each of the UnitedHealth MAOs, as
26 defined by 42 C.F.R. §§ 422.2 & 422.500.

19. OptumInsight, Inc. is owned by UnitedHealth Group, Inc., either directly or through one or more subsidiaries.

20. OptumInsight, Inc. is a “Related Entity” to the each of the UnitedHealth MAOs, as defined by 42 C.F.R. §§ 422.2 & 422.500.

EXHIBIT P-1A

**CONTRACT WITH ELIGIBLE MEDICARE ADVANTAGE (MA) ORGANIZATION
PURSUANT TO SECTIONS 1851 THROUGH 1859 OF THE SOCIAL SECURITY ACT
FOR THE OPERATION OF A MEDICARE ADVANTAGE COORDINATED CARE PLAN(S)**

CONTRACT (H2226)

Between

Centers for Medicare & Medicaid Services (hereinafter referred to as CMS);

and

UNITEDHEALTHCARE INSURANCE COMPANY
(hereinafter referred to as the MA Organization)

CMS and the MA Organization, an entity which has been determined to be an eligible Medicare Advantage Organization by the Administrator of the Centers for Medicare & Medicaid Services under 42 CFR 5422.503, agree to the following for the purposes of §§ 1851 through 1859 of the Social Security Act (hereinafter referred to as the Act):

(NOTE: Citations indicated in brackets are placed in the text of this contract to note the regulatory authority for certain contract provisions. All references to Part 422 are to 42 CFR Part 422.)

**Article I
Term of Contract**

The term of this contract shall be from the date of signature by CMS' authorized representative through December 31, 2017, after which this contract may be renewed for successive one-year periods in accordance with 42 CFR 5422.505(c) and as discussed in Paragraph A of Article VII below. [422.505]

This contract governs the respective rights and obligations of the parties as of the effective date set forth above, and supersedes any prior agreements between the MA Organization and CMS as of such date. MA organizations offering Part D benefits also must execute an Addendum to the Medicare Managed Care Contract Pursuant to §§ 1860D-1 through 1860D-43 of the Social Security Act for the Operation of a Voluntary Medicare Prescription Drug Plan (hereafter the "Part D Addendum"). For MA Organizations offering MA-PD plans, the Part D Addendum governs the rights and obligations of the parties relating to the provision of Part D benefits, in accordance with its terms, as of its effective date.

**Article II
Coordinated Care Plan**

A. The MA Organization agrees to operate one or more coordinated care plans as defined in 42 CFR 5422.4(a)(1)(ii), including at least one MA-PD plan as required under 42 CFR 422.4(c), as described in its final Plan Benefit Package (PBP) bid submission (benefit and price bid) proposal as approved by CMS and as attested to in the Medicare Advantage Attestation of Benefit Plan and Price, and in compliance with the requirements of this contract and applicable Federal statutes, regulations, and policies (e.g., policies as described in the Call Letter, Medicare Managed Care Manual, etc.).

B. Except as provided in paragraph (C) of this Article, this contract is deemed to incorporate any changes that are required by statute to be implemented during the term of the contract and any regulations or policies implementing or interpreting such statutory provisions.

C. CMS will not implement, other than at the beginning of a calendar year, requirements under 42 CFR Part 422 that impose a new significant cost or burden on MA organizations or plans, unless a different effective date is required by statute. [422.521]

D. If the MA Organization had a contract with CMS for Contract Year 2016 under the contract ID number designated above, this document is considered a renewal of the existing contract. While the terms of this document supersede the terms of the 2016 contract, the parties' execution of this contract does not extinguish or interrupt any pending obligations or actions that may have arisen under the 2016 or prior year contracts.

E. This contract is in no way intended to supersede or modify 42 CFR, Part 422. Failure to reference a regulatory requirement in this contract does not effect the applicability of such requirements to the MA organization and CMS.

**Article III
Functions To Be Performed By Medicare Advantage Organization**

A. PROVISION OF BENEFITS

1. The MA Organization agrees to provide enrollees in each of its MA plans the basic benefits as required under 42 CFR 5422.101 and, to the extent applicable, supplemental benefits under 42 CFR 5422.102 and as established in the MA Organization's final benefit and price bid proposal as approved by CMS and listed in the MA Organization Plan Attestation of Benefit Plan and Price, which is attached to this contract. The MA Organization agrees to provide access to such benefits as required under subpart C in a manner consistent with professionally recognized standards of health care and according to the access standards stated in 42 CFR 5422.112.

2. The MA Organization agrees to provide post-hospital extended care services, should an MA enrollee elect such coverage, through a home skilled nursing facility, as defined at 42 CFR 5422.133(b), according to the requirements of § 1852(l) of the Act and 42 CFR 5422.133. [422.133; 422.504(a)(3)]

B. ENROLLMENT REQUIREMENTS

1. The MA Organization agrees to accept new enrollments, make enrollments effective, process voluntary disenrollments, and limit involuntary disenrollments, as provided in 42 CFR Part 422, Subpart B.

2. The MA Organization shall comply with the provisions of 42 CFR 5422.110 concerning prohibitions against discrimination in beneficiary enrollment, other than in enrolling eligible beneficiaries in a CMAA-approved special needs plan that exclusively enrolls special needs individuals as consistent with 42 CFR 55422.2, 422.4(a)(1)(iv) and 422.52. [422.504(a)(2)]

C. BENEFICIARY PROTECTIONS

1. The MA Organization agrees to comply with all requirements in 42 CFR Part 422, Subpart M governing coverage determinations, grievances, and appeals. [422.504(a)(7)]

2. The MA Organization agrees to comply with the confidentiality and enrollee record accuracy requirements in 42 CFR 5422.118.

3. **Beneficiary Financial Protections.** The MA Organization agrees to comply with the following requirements:

(3.a) Each MA Organization must adopt and maintain arrangements satisfactory to CMS to protect its enrollees from incurring liability for payment of any fees that are the legal obligation of the MA Organization. To meet this requirement the MA Organization must—

(3.a.i) Ensure that all contractual or other written arrangements with providers prohibit the Organization's providers from holding any beneficiary enrollee liable for payment of any fees that are the legal obligation of the MA Organization; and

(3.a.ii) Indemnify the beneficiary enrollee for payment of any fees that are the legal obligation of the MA Organization for services furnished by providers that do not contract, or that have not otherwise entered into an agreement with the MA Organization, to provide services to the organization's beneficiary enrollees.

[422.504(g)(1)]

(3.b) The MA Organization must provide for continuation of enrollee health care benefits-

(3.b.i) For all enrollees, for the duration of the contract period for which CMS payments have been made; and

(3.b.ii) For enrollees who are hospitalized on the date its contract with CMS terminates, or, in the event of the MA Organization's insolvency, through the date of discharge. **[422.504(g)(2)]**

(3.c) In meeting the requirements of this paragraph, other than the provider contract requirements specified in subparagraph 3(a) of this paragraph, the MA Organization may use-

(3.c.i) Contractual arrangements;

(3.c.ii) Insurance acceptable to CMS;

(3.c.iii) Financial reserves acceptable to CMS; or

(3.c.iv) Any other arrangement acceptable to CMS. **[422.504(g)(3)]**

D. PROVIDER PROTECTIONS

1. The MA Organization agrees to comply with all applicable provider requirements in 42 CFR Part 422 Subpart E, including provider certification requirements, anti-discrimination requirements, provider participation and consultation requirements, the prohibition on interference with provider advice, limits on provider indemnification, rules governing payments to providers, and limits on physician incentive plans. **[422.504(a)(6)]**

2. Prompt Payment.

(2.a) The MA Organization must pay 95 percent of "clean claims" within 30 days of receipt if they are claims for covered services that are not furnished under a written agreement between the organization and the provider.

(i) The MA Organization must pay interest on clean claims that are not paid within 30 days in accordance with §§ 1816(c)(2) and 1842(c)(2) of the Act.

(ii) All other claims from non-contracted providers must be paid or denied within 60 calendar days from the date of the request. **[422.520(a)]**

(2.b) Contracts or other written agreements between the MA Organization and its providers must contain a prompt payment provision, the terms of which are developed and agreed to by both the MA Organization and the relevant provider. **[422.520(b)]**

(2.c) If CMS determines, after giving notice and opportunity for hearing, that the MA Organization has failed to make payments in accordance with subparagraph (2)(a) of this paragraph, CMS may provide-

(2.c.i) For direct payment of the sums owed to providers; and

(2.c.ii) For appropriate reduction in the amounts that would otherwise be paid to the MA Organization, to reflect the amounts of the direct payments and the cost of making those payments. **[422.520(c)]**

E. QUALITY IMPROVEMENT PROGRAM

1. The MA Organization agrees to operate, for each plan that it offers, an ongoing quality improvement program as stated in accordance with § 1852(e) of the Social Security Act and 42 CFR §422.152.

2. The MA Organization agrees to develop and operate a chronic care improvement program in accordance with the requirements of 42 CFR §422.152(c).

3. Performance Measurement and Reporting: The MA Organization shall measure performance under its MA plans using standard measures required by CMS, and report (at the organization level) its performance to CMS. The standard measures required by CMS during the term of this contract will be uniform data collection and reporting instruments, to include the Health Plan and Employer Data Information Set (HEDIS), Consumer Assessment of Health Plan Satisfaction (CAHPS) survey, and Health Outcomes Survey (HOS). These measures will address clinical areas, including effectiveness of care, enrollee perception of care and use of services, and non-clinical areas including access to and availability of services, appeals and grievances, and organizational characteristics. **[422.152(b)(1), (e)]**

4. Utilization Review

(4.a) An MA Organization for an MA coordinated care plan must use written protocols for utilization review and policies and procedures must reflect current standards of medical practice in processing requests for initial or continued authorization of services and have in effect mechanisms to detect both underutilization and over utilization of services. **[422.152(b)]**

(4.b) For MA regional preferred provider organizations (RPOs) and MA local preferred provider organizations (LPOs) that are offered by an organization that is not licensed or organized under State law as an HMO, if the MA Organization uses written protocols for utilization review, those policies and procedures must reflect current standards of medical practice in processing requests for initial or continued authorization of services and include mechanisms to evaluate utilization of services and to inform enrollees and providers of services of the results of the evaluation. **[422.152(e)]**

5. Information Systems:

(5.a) The MA Organization must:

(5.a.i) Maintain a health information system that collects, analyzes and integrates the data necessary to implement its quality improvement program;

(5.a.ii) Ensure that the information entered into the system (particularly that received from providers) is reliable and complete;

(5.a.iii) Make all collected information available to CMS. **[422.152(f)(1)]**

6. External Review: The MA Organization will comply with any requests by Quality Improvement Organizations to review the MA Organization's medical records in connection with appeals of discharges from hospitals, skilled nursing facilities, and home health agencies.

7. The MA Organization agrees to address complaints received by CMS against the MA Organization as required in 42 CFR §422.504(a)(15) by:

(7.a) Addressing and resolving complaints in the CMS complaint tracking system; and

(7.b) Displaying a link to the electronic complaint form on the Medicare.gov Internet Web site on the MA plan's main Web page.

F. COMPLIANCE PLAN

The MA Organization agrees to implement a compliance plan in accordance with the requirements of 42 CFR §422.503(b)(4)(vi). **[422.503(b)(4)(vi)]**

G. COMPLIANCE DEEMED ON THE BASIS OF ACCREDITATION

CMS may deem the MA Organization to have met the quality improvement requirements of §1852(e) of the Act and 42 CFR §422.152, the confidentiality and accuracy of enrollee records requirements of §1852(h) of the Act and 42 CFR §422.118, the anti-discrimination requirements of §1852(b) of the Act and 42 CFR §422.110, the access to services requirements of §1852(d) of the Act and 42 CFR §422.112, the advance directives requirements of §1852(i) of the Act and 42 CFR §422.128, the provider participation requirements of §1852(j) of the Act and 42 CFR Part 422, Subpart E, and the applicable requirements described in 42 CFR §423.156, if the MA Organization is fully accredited (and periodically reaccredited) by a private, national accreditation organization approved by CMS and the accreditation organization used the standards approved by CMS for the purposes of assessing the MA Organization's compliance with Medicare requirements. The

provisions of 42 CFR §422.155 shall govern the MA Organization's use of deemed status to meet MA program requirements.

H. PROGRAM INTEGRITY

1. The MA Organization agrees to provide notice based on best knowledge, information, and belief to CMS of any integrity items related to payments from governmental entities, both federal and state, for healthcare or prescription drug services. These items include any investigations, legal actions or matters subject to arbitration brought involving the MA Organization (or MA Organization's firm if applicable) and its subcontractors (excluding contracted network providers), including any key management or executive staff, or any major shareholders (5% or more), by a government agency (state or federal) on matters relating to payments from governmental entities, both federal and state, for healthcare and/or prescription drug services. In providing the notice, the sponsor shall keep the government informed of when the integrity item is initiated and when it is closed. Notice should be provided of the details concerning any resolution and monetary payments as well as any settlement agreements or corporate integrity agreements.

2. The MA Organization agrees to provide notice based on best knowledge, information, and belief to CMS in the event the MA Organization or any of its subcontractors is criminally convicted or has a civil judgment entered against it for fraudulent activities or is sanctioned under any Federal program involving the provision of health care or prescription drug services.

I. MARKETING

1. The MA Organization may not distribute any marketing materials, as defined in 42 CFR §422.2260 and in the Marketing Materials Guidelines for Medicare Advantage-Prescription Drug Plans and Prescription Drug Plans (Medicare Marketing Guidelines), unless they have been filed with and not disapproved by CMS in accordance with 42 CFR §422.2264. The file and use process set out at 42 CFR §422.2262 must be used, unless the MA organization notifies CMS that it will not use this process.

2. CMS and the MA Organization shall agree upon language setting forth the benefits, exclusions and other language of the Plan. The MA Organization bears full responsibility for the accuracy of its marketing materials. CMS, in its sole discretion, may order the MA Organization to print and distribute the agreed upon marketing materials, in a format approved by CMS. The MA Organization must disclose the information to each enrollee electing a plan as outlined in 42 CFR §422.111.

3. The MA Organization agrees that any advertising material, including that labeled promotional material, marketing materials, or supplemental literature, shall be truthful and not misleading. All marketing materials must include the Contract number. All membership identification cards must include the Contract number on the front of the card.

4. The MA Organization must comply with the Medicare Marketing Guidelines, as well as all applicable statutes and regulations, including and without limitation § 1851(h) of the Act and 42 CFR § 422.111, 42 CFR Part 422 Subpart V and 42 CFR Part 423 Subpart V. Failure to comply may result in sanctions as provided in 42 CFR Part 422 Subpart O.

Article IV CMS Payment to MA Organization

A. The MA Organization agrees to develop its annual benefit and price bid proposal and submit to CMS all required information on premiums, benefits, and cost sharing, as required under 42 CFR Part 422 Subpart F. **[422.504(a)(10)]**

B. METHODOLOGY

CMS agrees to pay the MA Organization under this contract in accordance with the provisions of § 1853 of the Act and 42 CFR Part 422 Subpart G. **[422.504(a)(9)]**

C. ELECTRONIC HEALTH RECORDS INCENTIVE PROGRAM PAYMENTS

The MA Organization agrees to abide by the requirements in 42 CFR §§495.200 et seq. and §1853(l) and (m) of the Act, including the fact that payment will be made directly to MA-affiliated hospitals that are certified Medicare hospitals through the Medicare FFS hospital incentive payment program.

D. ATTESTATION OF PAYMENT DATA (Attachments A, B, and C).

As a condition for receiving a monthly payment under paragraph B of this article, and 42 CFR Part 422 Subpart G, the MA Organization agrees that its chief executive officer (CEO), chief financial officer (CFO), or an individual delegated with the authority to sign on behalf of one of these officers, and who reports directly to such officer, must request payment under the contract on the forms attached hereto as Attachment A (enrollment attestation) and Attachment B (risk adjustment data) which attest to (based on best knowledge, information and belief, as of the date specified on the attestation form) the accuracy, completeness, and truthfulness of the data identified on these attachments. The Medicare Advantage Plan Attestation of Benefit Plan and Price must be signed and attached to the executed version of this contract.

(NOTE: The forms included as attachments to this contract are for reference only. CMS will provide instructions for the completion and submission of the forms in separate documents. MA Organizations should not take any action on the forms until appropriate CMS instructions become available.)

1. Attachment A requires that the CEO, CFO, or an individual delegated with the authority to sign on behalf of one of these officers, and who reports directly to such officer, must attest based on best knowledge, information, and belief that each enrollee for whom the MA Organization is requesting payment is validly enrolled, or was validly enrolled during the period for which payment is requested, in an MA plan offered by the MA Organization. The MA Organization shall submit completed enrollment attestation forms to CMS, or its contractor, on a monthly basis.

2. Attachment B requires that the CEO, CFO, or an individual delegated with the authority to sign on behalf of one of these officers, and who reports directly to such officer, must attest to (based on best knowledge, information and belief, as of the date specified on the attestation form) that the risk adjustment data it submits to CMS under 42 CFR §422.310 are accurate, complete, and truthful. The MA Organization shall make annual attestations to this effect for risk adjustment data on Attachment B and according to a schedule to be published by CMS. If such risk adjustment data are generated by a related entity, contractor, or subcontractor of an MA Organization, such entity, contractor, or subcontractor must also attest to (based on best knowledge, information, and belief, as of the date specified on the attestation form) the accuracy, completeness, and truthfulness of the data. **[422.504(l)]**

3. The Medicare Advantage Plan Attestation of Benefit Plan and Price (an example of which is attached hereto as Attachment C) requires that the CEO, CFO, or an individual delegated with the authority to sign on behalf of one of these officers, and who reports directly to such officer, must attest (based on best knowledge, information and belief, as of the date specified on the attestation form) that the information and documentation comprising the bid submission proposal is accurate, complete, and truthful and fully conforms to the Bid Form and Plan Benefit Package requirements; and that the benefits described in the CMS-approved proposed bid submission agree with the benefit package the MA Organization will offer during the period covered by the proposed bid submission. This document is being sent separately to the MA Organization and must be signed and attached to the executed version of this contract, and is incorporated herein by reference. **[422.504(f)]**

4. The MA Organization must certify based on best knowledge, information, and belief, that the information provided for the purposes of reporting and returning of overpayments under 42 CFR §422.326 is accurate, complete, and truthful. The form for this certification will be determined by CMS. **[422.504(f)]**

Article V MA Organization Relationship with Related Entities, Contractors, and Subcontractors

A. Notwithstanding any relationship(s) that the MA Organization may have with related entities, contractors, or subcontractors, the MA Organization maintains full responsibility for adhering to and otherwise fully complying with all terms and conditions of its contract with CMS. **[422.504(l)(1)]**

B. The MA Organization agrees to require all related entities, contractors, or subcontractors to agree that—

1. HHS, the Comptroller General, or their designees have the right to audit, evaluate, collect, and inspect any books, contracts, computer or other electronic systems, including medical records and documentation of the first tier, downstream, and related entities related to CMS' contract with the MA organization;

2. HHS, the Comptroller General, or their designees have the right to audit, evaluate, collect, and inspect any records under paragraph B (1) of this Article directly from any first tier, downstream, or related entity;

3. For records subject to review under paragraph B(2) of this Article, except in exceptional circumstances, CMS will provide notification to the MA organization that a direct request for information has been initiated; and

4. HHS, the Comptroller General, or their designees have the right to inspect, evaluate, and audit any pertinent information for any particular contract period for 10 years from the final date of the contract period or from the date of completion of any audit, whichever is later. **[422.504(f)(2)]**

C. The MA Organization agrees that all contracts or written arrangements into which the MA Organization enters with providers, related entities, contractors, or subcontractors (first tier and downstream entities) shall contain the following elements:

1. Enrollee protection provisions that provide—

(1.a) Consistent with Article III, paragraph C, arrangements that prohibit providers from holding an enrollee liable for payment of any fees that are the legal obligation of the MA Organization; and

(1.b) Consistent with Article III, paragraph C, provision for the continuation of benefits.

2. Accountability provisions that indicate that the MA Organization may only delegate activities or functions to a provider, related entity, contractor, or subcontractor in a manner consistent with requirements set forth at paragraph D of this Article.

3. A provision requiring that any services or other activity performed by a first tier, downstream, or related entity in accordance with a contract or written agreement will be consistent and comply with the MA Organization's contractual obligations. **[422.504(f)(3)]**

D. If any of the MA Organization's activities or responsibilities under this contract with CMS is delegated to other parties, the following requirements apply to any first tier, downstream, or related entity:

1. Each and every contract must specify delegated activities and reporting responsibilities.

2. Each and every contract must either provide for revocation of the delegation activities and reporting requirements or specify other remedies in instances where CMS or the MA Organization determine that such parties have not performed satisfactorily.

3. Each and every contract must specify that the performance of the parties is monitored by the MA Organization on an ongoing basis.

4. Each and every contract must specify that either—

(4.a) The credentials of medical professionals affiliated with the party or parties will be either reviewed by the MA Organization; or

(4.b) The credentialing process will be reviewed and approved by the MA Organization and the MA Organization must audit the credentialing process on an ongoing basis.

5. Each and every contract must specify that the first tier, downstream, or related entity comply with all applicable Medicare laws, regulations, and CMS instructions. **[422.504(f)(4)]**

E. If the MA Organization delegates selection of the providers, contractors, or subcontractors to another organization, the MA Organization's contract with that organization must state that the CMS-contracting MA Organization retains the right to approve, suspend, or terminate any such arrangement. **[422.504(f)(5)]**
