THE COURT: Would you pull the microphone closer.
MR. CRAIN: Pauline, am I okay?
BY MR. CRAIN:
Q. I would like to put up JX 31.1.
This is an email chain between you and a colleague. If we go to the top. Ms. Campione, do you see that?
A. Yes, I do.
Q. I want to go to page Bates ending 868, that should be at the bottom.

If you see -- if we zoom in and highlight the text -- on May 29th, you are sending Ms. Lider what you say is a final mockup and description. Do you see that?
A. Yes.
Q. There is a draft of the footnote and it says, "The hospital declined to report data for this measure so a score was imputed for the measure." Do you see that?
A. Yes.
Q. The final footnote does not keep the word imputed, correct?
A. Correct.
Q. Later, if we go to page 865, Ms. Lider writes to you and says, "My only call out," talking about your draft, "is that the language seems a bit off to me as a lay person to know what imputed means." Do you see that?
A. Yes.
Q. If we go further up on the screen you respond, "That was the language that Missy wanted, but Leah wants something else that makes it sound like the data we imputed was not random."
Do you see that?
A. Yes.
Q. Leah refers to Ms. Binder, the CEO of Leapfrog?
A. Yes.
Q. Ms. Danforth, her title is vice-president?
A. Yes.
Q. She is your boss?

A. Vice-president of health care ratings. Senior vice-president.
Q. And she is your boss?
A. Yes.
Q. Now, you say at the end of that, so let me know LMK if you have any ideas, correct?
A. Correct.
Q. Now, your colleague then responded to you with ideas. If we could move up. Do you see that?
A. Yes.
Q. And she has five bullet points. Do you see that?
A. Yes.
Q. They are ideas, correct?
A. Yes.
Q. And two of them say -- they include the phrase, "a score was calculated with external data sources using imputation model," and two say, "a score was calculated using external data sources."
Do you see that?
A. Yes.
Q. You then reply -- go up one more, and you say, "Thanks for doing this, but we can't say external data sources." Do you see that?
A. Yes.
Q. And you explain why. "We can't say external data sources

because we are arbitrarily assigning them the points associated with the bottom scoring category, limited achievement."

Do you see this language?

A. Yes.

Q. And then you continue and say Leah -- that is Ms. Binder, correct?

A. Yes.

Q. "Leah wanted us to make it sound like the expert panel approved it and the assigning of these points was legitimate."

Do you see that language?

A. Yes.

Q. You conclude and you say at the end, "I think leaning to the methodology would be neat, but I don't think Leah or Missy care to do so. We could ask." Correct?

A. Yes, I can read.

Q. Fantastic.

I want to transition to another document.

A. Sorry, why did you show those to me if I can't respond to it?

Q. You have plenty of opportunity on redirect. I have certain documents I want to go through with you.

A. Okay.

Q. If we go to JX 26, also in evidence.

We heard a lot about Leapfrog changing its methodology in fall of 2024?

A. Yes.
Q. You know what I refer to?
A. Yes.
Q. We talked about it in your deposition?
A. Yes.
Q. Now, before Leapfrog implemented that change it issued a request for public comment, right?
A. Yes.
Q. This document shows one of those comments; is that correct?
A. Yes.
Q. And it was sent to you, your name is at the top. It says, to Ms. Campione. Do you see that?
A. Yes.
Q. I would like to go down to the comment and it says, Wenthold, Becky. Do you recall which health system Ms. Wenthold is with?
A. No, I do not.
Q. We'll come back to it.
Ms. Wenthold says, "I am disappointed with the 2024 proposed changes. These changes will penalize hospitals that do not submit a Leapfrog survey. The public will not understand or dig into the methodology of these grades and hospitals will be falsely represented with a lower grade because they choose not to complete the survey. The survey is extremely time intensive and in a time when hospitals are

barely breaking even financially they do not have the resources to commit to this survey."

Do you see that?

A. Yes.

Q. If you go to the last sentence, it says, "A hospital with excellent outcomes will no longer be able to receive an A grade because limited achievement is assigned to process measures that actually --

Do you see that?

A. Yes.

Q. Now, you read this comment; is that correct?

A. Yes.

Q. You prepared responses?

A. Yes.

Q. You were aware that at least some hospitals were expressing concerns that the changes were penalizing hospitals that don't complete the survey?

A. Yes, but a lot of the statements in here I don't agree with.

Q. All right. You were also aware there were concerns that the public would not understand or dig into the methodology, correct?

A. I'm sorry, what is the question?

Q. You were aware from this comment that there were concerns expressed by hospitals, or at least one hospital, that the

public would not understand or dig into the methodology; is that right?
A. This is Becky Wenthold's opinion. I don't know what Becky Wenthold's credentials are for evaluating that. I read this email and responded to it, yes.
Q. You also understood that hospitals had expressed concerns that they didn't have the resources to commit to the survey, correct?
A. That is a common complaint we get. Any time we make a methodology change that might result in more work for the hospital that is a common complaint.
Q. You heard Dr. Romano testify that Leapfrog, at least he thinks, factors the burden into changing the methodology, right?
A. Yes.
Q. And you agree that the hospitals that do complete the survey put a tremendous amount of resources into it, right?
A. I think so, yes.
Q. That is what you told the Philadelphia Inquirer in fall 2024, right?
A. I think time is valuable, my time is valuable, your time is valuable, the Judge's time is valuable, so, tremendous.
Q. Let's look at JX 32.1 at page three. This is the comment response we were talking about. You drafted this document, right?

A. Yes.
Q. And it was to respond to some of the comments Leapfrog was getting, correct?
A. Yes.
Q. You see there you refer to Ms. Wenthold. Do you recall now she is from Humana Health?
A. Yes.
Q. It notes, you list under Mount Sinai Health System Alana Noble, and the text says, "The survey is very resource intensive outside resisting regulatory quality operations and quality improvement efforts. Hospitals who do not have the resources to do the survey annually should not be so adversely punished, especially in the post COVID era where resources are increasingly hard to come by and retain."
Do you see that?
A. Yes.
Q. You are aware at least two hospitals responded to Leapfrog's change by referencing the burden, right?
A. Yes.
Q. Let's see how you responded. On page seven you wrote that -- at the top from you say, two commentators expressing concerns about step two imputation. Do you see that now?
A. Yes.
Q. "Misrepresenting the current procedures or infrastructure of the hospitals to the public?"

A. Yes.
Q. You wrote these steps, right?
A. Yes.
Q. And to be clear, when they talk about step two imputation, in the change that is the assignments of the limited achievement score automatically, right?
A. Yes.
Q. And what you say, I draw your attention to this language, "We recognize that hospitals eligible for step two imputation may score higher if they complete a Leapfrog hospital survey. However, we cannot ensure that this is the case. We do not have the data and our analyses have shown that performance among hospitals that intermittently complete the annual survey is lower than those hospitals that completed the most recent survey."
Do you see that?
A. Yes.
Q. Do you recall I asked you about that in your deposition?
A. Yes.
Q. I asked you whether you could verify the accuracy of that sentence. Do you recall that question?
A. Yes, but I will remind you that I am a middleman here. I draft things after hearing input from other people, so it is not necessarily that I would have seen that data.
Q. Absolutely, and you told me, I can't testify to that. I

haven't seen the analysis that backs up that sentence, right?
A. Yes, my bosses shared that information with me.
Q. And you said you trust Missy and Matt, right?
A. Yes.
Q. Are you aware that we asked Ms. Danforth and Dr. Austin about this type of analysis, right?
Have you reviewed the deposition transcripts?
A. I have not reviewed theirs.
Q. You are not aware of whether they have seen any of this analysis either, right?
A. They told me that they had.
Q. They told you during this litigation?
A. They had previously, because I wrote this, had been told that they did study this, to this effect.
Q. You would be surprised if they testified that they didn't have this analysis to support this sentence?
A. I was under the impression that they did.
Q. You heard Dr. Romano say Leapfrog takes into account -- we talked about this a second ago -- the burdens of the survey?
A. Yes.
Q. Go to the language on page seven. "Four commentators opposed penalizing hospitals that choose not to devote resources to completing a voluntary survey each year and be allowed to opt out of the hospital safety grade."
Do you see that?

A. Yes.
Q. That refers to the burden concerns we have seen in the comments?
A. Yes.
Q. What you see is, the last sentence of the paragraph -- I want to focus on that. You write, "The choice to not participate should not excuse a hospital from being graded, nor should they be given a score that unfairly awards them points."
Do you see that?
A. Yes.
Q. This is an example of what Dr. Romano said, Leapfrog taking into account the burdens, right?
A. I think this is an additional statement to that.
Q. Okay.
A. I don't think that is a direct -- this is an additional statement.
Q. Okay. All right.
Let's proceed with PX 23.1 at three, and I want to focus on the language "what measures are most important." Do you recognize this page from Leapfrog's website?
A. Yes.
Q. It says: What measures are most important. Do you see that?
A. Yes.
Q. The first one says hand washing. Do you see that?

A. Yes.
Q. It says: Does your hospital have a hand washing policy to ensure all staff members are washing their hands before and after patient contact?
A. Yes.
Q. This is the first measure on Leapfrog's website under what measures are most important; is that right?
A. This is the FAQ page?
Q. Go one page back so she can see.
A. It is one of many links.
Q. Yes.
A. It is giving consumers an idea of where to look, and it begins with, every person will have different ideas about what is most important to them.
Q. It says: What measures are most important?
A. It says, we suggest checking out these things. It is just kind of a guide so somebody doesn't spend all day looking for this stuff. I didn't write this.
Q. Leapfrog did?
A. Yes.
Q. It is Leapfrog's website, right?
A. Yes.
Q. So you are aware that Leapfrog tells patients that hospitals, like the Plaintiffs, the community hospitals, they get the worst score on these measures, right?

A. Sorry, what is your question?
Q. Are you aware that for nonparticipating hospitals that Leapfrog assigns its step two scores, it tells consumers that those hospitals get the lowest performance on hand washing, right?
A. That is not how the hand washing measure works. It says, does your hospital have a hand washing policy to ensure all staff members are washing their hands. It is asking about a policy. If you are assigned to the bottom category likely you are not measuring, you don't have a policy in place.
Yes, part of creating the imputation model was making the assumption they weren't measuring. Whether they had a policy or not, they may have been lagging.
Q. Well, you just said it signifies whether a hospital has a policy or not?
A. Yes.
Q. My client, Ms. Havericak, the CEO of Delray, she has the lowest score on hand washing for Delray. You understand that, right?
A. Yes.
Q. Do you have any idea whether Delray has a hand washing policy?
A. I think it was clear that they weren't keeping up with it.
Q. Why do you possibly think that was clear?
A. There was an exhibit that was produced, but everyone can

decide for themselves.
Q. Does Leapfrog have any data about hand washing from Delray Medical Center, I am not talking about this case, that Leapfrog scored?
A. No. That is why we have an imputation policy in place.
Q. You have no idea whether the Delray hospital workers follow the policy, right?
A. No, because that is not how imputation works. You use imputation when you don't have data, when data is missing, the definition of imputation.
Q. Do you recall when I asked you whether the lowest achievement scores are accurate depictions of performance the measures, do you recall what you said?
A. No, I don't.
Q. You said if you don't --
MS. BLAIR: Objection, improper impeachment.
THE COURT: Overruled.
BY MR. CRAIN:
Q. If you don't have data, you don't have data. Do you remember that?
A. Yes.
Q. Then I asked you, but you don't know either way, right? You agreed, correct?
A. That is correct. With imputation you don't know either way.

Q. You just told -- Ms. Campione, you just testified the lowest score communicates to consumers that Delray doesn't have a hand washing policy, correct?

MS. BLAIR: Objection, mischaracterizes her testimony.

MR. CRAIN: She can answer yes or no.

THE COURT: Do me a favor, do not respond back and forth. It is overruled.

THE WITNESS: Can you ask the question again?

BY MR. CRAIN:

Q. You just testified that the lowest score communicates to consumers that Delray doesn't have a hand washing policy, correct?

A. No, I didn't.

Q. You did not testify to that three minutes ago, right?

A. I said did not measure or does not have the policy of measuring. Did not measure is a different thing. If they don't measure, then they don't know and we don't know.

Our expert panel is saying if we don't know, then what are we going to do with that? We have to use reasoning, and in imputation you can use reasoning. Imputation is the assignment of a point value based on an inference, and that inference can be based either on evidence or reasoning.

Evidence would be perhaps past performance, so like last year, what did they do on the survey; or reasoning, and the reasoning being that if you are not reporting, you are likely

not measuring, and you may not be keeping up with that measuring.

Q. Let's break that down. You have no evidence about Delray's hand washing performance, correct?

A. Correct.

Q. In terms of reasoning, your only assumption is that they are not participating because they have something to hide, right?

A. That is the assumption.

Q. Even though Dr. Romano, who we saw two hours ago, his hypothesis at least at the time was that hospitals were not participating because of a burden, right?

A. I think --

Q. Was that his hypothesis at the time?

A. That was the hypothesis that he presented in that email.

Q. I want to talk about expert panels and meetings and talk about the development of the change.

I would like to put up PX 238.1.

This is another document we talked about together five months ago. This is a Slapchat between you and Page Lisco. Do you see that?

A. Yes.

Q. It is dated October 4, 2023. Do you see that as well?

A. Yes.

Q. And at this time, in late 2023, HCA, a large hospital

system, decided not to participate in the Leapfrog survey, correct?
A. Yes.
Q. And you testified in your deposition that Leapfrog CEO Ms. Binder was upset about that, right?
A. Yes.
Q. And let's see what you said about HCA.
If we go down to the next page, and if we look at the top there, 11:31 a.m., October 4, 2023, you say, "We were talking about changing scoring methodology to penalize HCA." Do you see that?
A. Yes.
Q. Ms. Lipsco responds --
MS. BLAIR: Objection, your Honor, hearsay to the extent he is trying to bring it in for the truth of the matter asserted.
THE COURT: Overruled.
BY MR. CRAIN:
Q. She said, "What in the world? I hate that we just don't do our thing like we manipulate everything," correct?
A. Correct what?
Q. That it is in the document, right?
A. Yes, she said that. You haven't provided any context to this conversation.
Q. I read it right, correct?

A. Yes.
Q. You respond further down, "Banana land?"
A. Yes. That is a joke.
Q. And "Leah keeps grudges," right?
A. Yes.
Q. I asked you about banana land in your deposition, right?
A. I believe we went on right after that laughing.
Q. There was a lot of laughing in that deposition.
I want to direct your attention now to PX 241, that is 605.
This is an email a number of weeks later from Ms. Danforth. Do you see that?
A. Yes.
Q. And Ms. Danforth writes to you along with one of your colleagues and says, "I would like to get a sense of the number of licenses that don't submit surveys, each facility represent the past two years last four rounds. Can the two of you work together on this?"
Do you see that?
A. Yes.
Q. She says at the end, "I would like to understand how financial risk if we make changes for display grades for hospitals that don't submit?"
A. Yes.
Q. You gathered data in response to this?
A. Yes, I probably did what she asked.

Q. And you prepared a slide show?
A. The slide show is not from this request.
Q. You testified in your deposition that it was from this request?
A. I don't think that I did.
Q. Let's look at it, PX 247.1, and you wrote this -- you testified in your deposition -- Your Honor, I am happy to refresh the witness.
A. This PowerPoint is from January, that conversation was what, November?
MR. CRAIN: Your Honor, if I may refresh the witness?
THE COURT: Sure.
BY MR. CRAIN:
Q. "Question: Did you create this deck in response to Ms. Danforth's email asking you for the licensing data and accolades that we looked at a few moments ago?
"Answer: Yes, of course."
A. I definitely misspoke then because I -- upon going through this PowerPoint, it has nothing to do with whatever the request was there. However, I would have responded to that email probably, it actually would be like a percentage, a single data point. It wouldn't have been a PowerPoint like this.
I probably didn't realize the timing of it. I trusted that if you were showing me one after another that it was related, but I really don't think it was.

Q. At other times in your deposition you said, I don't know, I think so. This time you said, yes, of course, right?
A. Yes, I guess so. But --
Q. I want to show you from this document, page 570.
This is a depiction of Leapfrog's revenue going from 2018 through the fall of 2024?
A. Yes. Well, it's --
Q. Spring of 2024?
A. Yes. That drop off there is not accurate.
Q. It reflects only half of the year, correct?
A. Yes, and I think that something is off in this display. I just want to point this out.
Q. Something is off in the display?
A. We wouldn't have how the PowerPoint looked.
Q. You are saying now something is wrong with the document?
A. I mean, I wouldn't very have one that goes all the way down, because that is not the what was happening.
Q. Let's go to 573 as well, and I want to draw your attention -- two more, 573 -- sorry, 573, there we go.
I want to draw your attention to survey participants are ten times more likely to license. Do you see that?
A. Yes.
Q. In your deposition you testified that this was written in response to Ms. Danforth's email, right?
A. I would like to amend my deposition obviously because I was

wrong.
Q. You got it wrong then?
A. She was making a lot of requests during this time because she was taking over for the first time this whole accolades program thing. The person who was running the accolades program used to be independent, on his own thing, and she was taking him under her wing around that time. She was doing sort of these exploratory things, and I am pretty sure -- I know she made a lot of requests during this time.
When looking at the PowerPoint, the point is, it is very exploratory and it was just to give a profile of the hospitals who have already received an A, and then went on to license, what did they look like, and most of them are survey participants. It is no surprise they are engaged in Leapfrog.
Q. I don't men to cut you off, but we don't have a lot of time. You will have plenty of time on direct. I want to focus you on my questions. You will have plenty of time with your counsel.
If you pull this down, I want to talk about the April 12, 2024 expert panel meeting. Do you know what I am talking about?
A. Yes.
Q. In that expert panel meeting Leapfrog presented a proposal to change the methodology, right?
A. Yes.

Q. The proposal you presented was not a proposal that Leapfrog ultimately adopted, it was based on slides, right?
A. That is correct.
Q. We talked about this in your deposition?
A. Yes.
Q. The meeting went from 4:00 o'clock to 5:00 o'clock?
A. Yes.
Q. I want to direct your attention to JX 11.1. It is in evidence, and this is another Slack thread this time between you and Ms. Danforth. Do you see that?
A. Yes.
Q. If we can go down to 5:03 p.m., and you say, "The step two means are so high, what if we use step one limited to only two round then assign them to the bottom performance category."
Do you see that?
A. Yes.
Q. At the time step one referred to the historical imputation going back four rounds, right?
A. Yes. What we presented to the expert panel was removing step one imputation and just relying on step two. In that expert panel what they were saying is, is that enough.
Q. I am not asking about what happened in the expert panel, I am asking about what you wrote.
A. I am explaining it.
Q. You presented the expert panel the option of retiring step

one and using step two, an average a approach based on other hospitals?
A. Yes.
Q. After the meeting, you come up with this idea, right? You say, "What if we use step one limited to only, say, two rounds then assign them to the bottom performance category."
Do you see that?
A. I see that. To be very clear, the expert panel had no objection to completely retiring step one imputation at all. Dr. Romano is the only one who objected to it. What I am doing is my job, which is to be an analyst, hear both sides and present a compromise.
Q. You are proposing a different solution?
A. It is not a different solution. We listened to them, they had no objections to it, and I didn't think they would object to this one based on what I heard from Dr. Romano and the others.
Q. They had no objection to you getting rid of, when you say step one, the historical approach, right?
A. Right, but Dr. Romano did.
Q. Dr. Romano did because you met with him earlier that day?
A. Yes.
Q. And Ms. Danforth responds to you and she says, "That would be drastic, but let's talk about it. LOL?"
A. Yes.

Q. LOL is laugh out loud?
A. Yes.
Q. And you give it a thumbs up, correct?
A. Yes.
Q. You agree with her, right?
A. That is the least amount of points.
Q. And you say it would be addressed, right?
A. Yes.
Q. You give it a thumbs up, you agree with her, and then you proceed to prepare what becomes the 2024 methodology change, correct?
A. I present here what ends up being the methodology change.
Q. Now, I want to shift gears and move forward ahead. Let's go to PX -- JX 22.1 in evidence and you heard Dr. Romano testify about this document. You recall this document, right?
A. Yes.
Q. And we looked at this document in your deposition?
A. Yes.
Q. Just to remind you what it says, Dr. Romano says things like, "I like the simpler and more direct approach here." Do you see that language?
A. Yes.
Q. That is referring to what became the fall 2024 methodology, correct?
A. Yes.

Q. You, Ms. Danforth, Mr. Austin and others were asking for feedback on that, correct?
A. Yes.
Q. It says, "If the goal is to penalize nonparticipants you might as well do so in a clear and unmistakable manner while allowing for hospitals to manage their burden."
Do you see that?
A. I see that.
Q. And he says that his hypothesis is that most hospitals stop reporting to Leapfrog because it is too burdensome and because they only find market value in an A grade that is impossible to obtain and maintain?
A. My hypothesis was.
Q. I messed it up.
A. You might say.
Q. The gist is there, right?
Now, he testified that no one at Leapfrog told him that the goal was punitive, right?
A. Yes.
Q. No one had to tell him, right?
A. I am sorry, I don't understand.
Q. Let's go to your response. If we go up.
You responded to his email later that day, and if you go -- Justin, before you go there, go back down one.
The original note to Dr. Romano was to you and Ms. Danforth

and Dr. Austin. Do you see that?
A. Yes.
Q. On your response, if you go back up, you drop Ms. Danforth, your boss, you drop Dr. Austin, and you have a one on one exchange with Dr. Romano?
A. I had a quick reply and sent an email. I should have articulated which points I would hit, but I didn't picture us being here today.
Q. And you said, "Patrick, thanks for your feedback. I completely agree," correct?
A. That is what that says.

MR. CRAIN: I pass the witness.

THE COURT: Cross examination. I guess cross and direct given the agreement that you have.

CROSS-EXAMINATION

BY MS. BLAIR:
Q. Ms. Campione, can you please tell the judge what your background is?
A. Sure. I went to the University of Florida, my undergraduate degree was in biology and medical geography. I worked in a spatial lab. Shortly after I moved to D.C. to receive my Master's in public health. While there I worked at the NIH in their HIV department. I then moved to Boston to work at the Massachusetts Department of Public Health as an epidemiologist before starting at Leapfrog in 2022.

Q. Is it fair to say that your entire adult career has been as a data analyst with respect to infectious disease?
A. Yes.
Q. And you serve as the director of ratings. Is that your title?
A. No.
Q. What is your title?
A. Program manager.
Q. Program manager. And there has been a lot of focus on the April 12, 2024 expert panel meeting where the methodology change was discussed, and Mr. Crain just talked to you about that.

I want to talk about your understanding of the history of imputation modeling at Leapfrog prior to the fall -- prior to April 12, 2024, okay?

Can you basically describe what --

MR. CRAIN: Objection, your Honor, this calls for speculation and hearsay. Anything she would know would be from her colleagues, which is not a party opponent, it is hearsay.

MS. BLAIR: She can testify about what she knew about an imputation methodology in 2022 while she worked there.

THE COURT: That is what you are asking her?

MS. BLAIR: Yes.

THE COURT: Go ahead.

BY MS. BLAIR:
Q. Can you explain what the imputation methodology for non-reporting hospitals was for these four measures?
A. Step one and step two. Step one used the past four rounds which equated to the past four cycles, not the current cycle because we weren't using the correct survey. And then step two we were calculating essentially the mean of the cohort, and assigned hospital space on their characteristics.
Q. In 2023, was there a change to the imputation methodology with respect to the ITS measure?
A. In 2023 there was a change. We moved -- with the phasing out of the old data we, in response to this change where we assigned hospitals to the category of limited achievement if they had an ICU, and that was reported in their CMS cost report.
Q. For clarity for the Court, that would be a nonparticipating hospital who had an ICU who wasn't reporting would automatically be assigned limited achievement?
A. Yes, and that would be about 500 hospitals or so.
Q. And were you with Leapfrog when that change was discussed with the expert panel?
A. Yes.
Q. Having participated in that expert panel meeting in 2023, did any of the expert panelists, including Dr. Romano, express any concern about assigning limited achievement for the ITS

measure in 2023?
A. No. Not at all.
Q. Was that change to the ITS measure put out for comment?
A. Yes.
Q. Were there any comments that occurred in 2023?
A. No. I don't think we heard anything.
Q. That measure change was in fact put into place in 2023, correct?
A. Yes, it was.
Q. Then we get to the spring of 2024, and there is a discussion -- well, do you have any discussions with your boss, Missy Danforth, about recommending a change to the imputation modeling around the spring of 2024?
A. Yes.
Q. Can you tell the Court what that was?
A. Going into that panel we started discussing this phasing out step one, the concern being that basically step one, hospitals were relying on this -- I should say it was overstating performance, that was our concern. We heard from several concerned individuals and hospitals --
MR. CRAIN: Objection, Your Honor, hearsay.
THE COURT: Overruled.
THE WITNESS: -- that essentially it was overstating performance, and that hospital -- actual processes that were in place at the hospital, it was no longer a reflection of those

processes.
BY MS. BLAIR:
Q. As a data analyst at Leapfrog, do you look at the statistical means of all these categories on almost a daily basis?
A. Yes, I do.
Q. Is there anything you are noticing in spring 2024 with respect to step two imputation?
A. Yes. Ever since I joined that mean was rising, getting closer and closer to a hundred, that was the cause of concern.
Q. As a data analyst, did you bring that concern to Ms. Danforth?
A. Yes. They were aware.
Q. And when -- the slide deck that Mr. Crain showed you that was presented to the expert panel, where you were going to retire step one, not use any historical data, and step two would be the imputation of the cohort going forward?
A. Yes.
Q. When that was created did you personally have concerns about keeping step two going?
A. Yes, I didn't think that it was valid and did a good job of approximating what those hospital's actual performance was on these measures.
Q. Dr. Romano couldn't be there; is that correct?
A. Yes.

Q. Did you have a pre-meeting with Dr. Romano?
A. We did. He was unable to meet with us at 4:00 o'clock, so we met earlier.
Q. Who is we?
A. Missy Danforth and Dr. Austin.
Q. What do you recall about the conversation you had with Dr. Romano?
A. Basically, he was concerned about phasing out step one. He felt that step one was the best approximation of the hospital's performance, last year's data specific to the hospital, and he had spoken with the hospital that he is affiliated with, and they expressed concerns, or they were not a fan of how long it took them to do the survey.
Q. And in that conversation that you recall with Dr. Romano, had there been any decision yet about assigning limited achievement to BCMA, CPOE, and hand hygiene in the pre call?
A. In the pre call, no. We didn't get to that because it was very focused on step one.
Q. Mr. Crain talked to you about the April 12, 2024 expert panel meeting. Did you attend that meeting?
A. Yes.
Q. In what capacity do you attend an expert panel meeting?
A. I may present a section of the meeting, some of the slides since I am familiar with the data, but I pretty much listen in and try to distill what the overall takeaways are and

consensus.
Q. Did you present at the April 12, 2024 meeting?
A. Yes.
Q. Did you present on the imputation model?
A. No, I did not.
Q. Did you make any statements during the expert panel meeting on April 12, 2024 regarding the imputation model?
A. No.
Q. At any time during the April 12, 2024 meeting, did anyone from Leapfrog mention that the purpose of changing the imputation model from the fall of 2024 was to penalize hospitals?
A. No. In fact, I believe Missy chimed in and made it clear to the expert panel that was not our intent. We were more focused on this issue of overseeing a hospital's performance.
Around that time, Stuart's hospital system was in the spotlight and a lot of the hospitals were having the step one imputation coming in, and there was a lot in the media about how terrible those hospitals were doing.
Q. Can you expand on that, what was going on at Stuart hospitals?
A. We were imputing their scores from two years ago when they completed the survey. They had stopped for financial reasons and for restraints in their hospital, and from many reports the services they were providing had greatly deteriorated.

Q. What do you recall about the general tone of the April 12, 2024 meeting?
A. The general tone was positive in the direction of assigning -- not giving any points that were not earned, and assigning these hospitals to the bottom category.
Q. And you had a chance to watch that video in preparation for trial here today of the expert panelist discussing the imputation change?
A. Yes. Previously at my deposition I had never reviewed it, but I did in preparation for this.
Q. Having worked with the expert panel for many years, what was your impression of what they wanted to do with respect to step two?
A. My impression has not changed.
Q. What is that impression?
A. That impression is that they were positive toward going the direction with step two.
Q. Mr. Crain showed you a message between yourself and Missy Danforth marked as Joint Exhibit 11. Do you recall seeing that?
A. Yes.
Q. That was the same day as the expert panel meeting?
A. Yes.
Q. When you were messaging Ms. Danforth about your ideas, the potential change, what was the impetus for you suggesting that

we do a step one with only two rounds and a score of limited achievement for step two?

A. I heard what Dr. Romano said and I heard what the panel had said, and they expressed no concerns about phasing out one -- step one. And so what I did is a compromise, I am an analyst, and suggested to her what if we did this -- went this route with it where we still brought in last year's survey through step one imputation.

Q. If you could pull up Joint Exhibit 15, please.

Ms. Campione, I am going to show you what is marked Joint Exhibit 15, brought into evidence in this case already. This is the email from yourself to Missy Danforth and Dr. Austin and Leah Binder regarding the imputation changes. Do you see that?

A. Yes.

Q. If you can scroll up. You don't just implement this change, you actually are setting forth a multitude of different potential changes, correct?

A. That is correct. At the end of the panel meeting Dr. Austin ended the discussion by saying, look, Leapfrog will consider the guidance given here today and we will put this out for public comment if they choose to go the direction you are recommending.

What we are looking at here is going in that direction, which we know is going to be controversial, and to a lesser degree what we could do.

Q. In fact, you didn't make the ultimate decision of what the methodology would look like, correct?
A. No.
Q. In all the discussions you had around what the final methodology would look like, did anybody at Leapfrog ever talk to you about the need to make a change to increase revenue?
A. Absolutely not.
Q. In all the time you have been at Leapfrog, have you ever had any discussions that you should manipulate data to increase revenue for Leapfrog?
A. No. I would not be comfortable with that. Never.
Q. And if you could pull up Joint Exhibit 22, please.
Ms. Campione, Mr. Crain showed you Exhibit 22, this is the I completely agree email that you sent to Dr. Romano, correct?
A. Yes.
Q. Mr. Crain didn't allow you to elaborate on what you by I completely agree. I would like to give you that opportunity. Mr. Romano sends an email to you, Missy Danforth, and Dr. Austin expressing his concerns, and we heard him talk about how he used the word penalizing, and you say, I completely agree.
As a data analyst, could you explain what you meant when you said, I completely agree to this email?
A. Yes, absolutely. So the definition of imputation is assigning a point value based on an inference, and that could be based on evidence or reasoning.

The overall message here, first of all, is that he likes this direction we are going, so he is agreeing with the methodology we put forth.

Second, is this like kind of justification for the direction of reasoning with step two, because I agreed what we were doing before with step two, calculating these means, was not enough of an approximation of hospital performance, and I really like what he is getting at here about being straight forward and having reasoning behind this. Saying, well, we have to make this assumption that you are not measuring or not being transparent, and ultimately our goal is transparency.

So, while I do not agree with his two statements about penalizing, I don't think that is their motivation at all, I do like the direction he is going with this, and the thought process, that is why I sent a personal email to him. I don't get to choose the terminology.

Q. And then we talked about public comment. In fact Leapfrog sends out the methodology change to the public at large so they could comment. Do you recall that?

A. Yes.

Q. Can you tell the Court, how many comments in total did you get from the 3,000 hospitals that are going to be affected by the methodology change, how many comments did you get in total?

A. In total like 13 or 14.

Q. Okay. Do you remember approximately how many were in favor

of the change versus how many were against the change?
A. Four were positive, and one was asking that we at least denote it on our website, and then I think that leaves like eight that were negative.
Q. And having been at Leapfrog for multiple methodology changes, was that an overwhelming amount of public comment?
A. No, not at all. We just released something for the 2026 methodology and we received ten.
Q. And in fact, Leapfrog provides that public comment and the responses to the expert panel, correct?
A. Yes, we do.
Q. And this all happened in May and June 2024, correct, the public comment?
A. Yes.
Q. And the methodology change is not implemented until November 2024, correct?
A. Yes.
Q. At any time between June 2024 and the implementation of the methodology change in November 2024, did any expert panelist, Dr. Romano included, reach out to you and say we disagree with this methodology change?
A. No. Not at all.
Q. And I want to talk a little bit about you just mentioned the wording of the asterisk. If you could pull up JX 31, please.

Mr. Crain talked to you about this email you may recall with Paulina Lider?
A. Uh-hum.
Q. For context, who is Paulina Lider?
A. She is a former employee who was stepping in as a comps person after as had lost our last communication person.
Q. Is she a data analyst?
A. No.
Q. Does she know anything about methodology?
A. No.
Q. If we look at -- if we can scroll down all the way to the bottom. Thank you very much.
She is working on this asterisks from the com side?
A. Yes.
Q. And you are working on the asterisks from the data analyst rating side?
A. Yes.
Q. If you could scroll up. Keep going, sorry. Keep going. Right here.
Paulina gives you a bunch of different possibilities for what the asterisk on the website should say. In each one of them Paulina, an assistant in the com department, is telling you that maybe you should use words like calculated. Each one says calculated, calculated, calculated. Do you see that?
A. Yes.

Q. If you scroll up more. To her at some point you cannot use the word calculated, correct?
A. Yes.
Q. Why did you tell her she can't use the word calculated?
A. Because imputation is the assigning of points.
Q. Were you trying to be transparent in this?
A. Yes. I wanted it to be as accurate as possible while also being understandable to a lay person.
Q. And there is some references to Ms. Binder in the email chain. Do you recall having any discussions with Ms. Binder about the wording of this?
A. Yes. So that original footnote where we use the word imputed, and Missy signed off on it -- I love the word imputed because I am a math person, and I understand not everyone understands that, and this is Ms. Binder's job to look at this and say are people going to understand it, are we hitting these points. And I use this word sound like, and I don't mean it as the expert panel didn't sign off on it, or it is random. I don't believe that at all.

I was trying to communicate to Paulina that Leah wants to hit these points. If I want to write it myself, oh, well, that is the panel approved this, and the assignment wasn't random, but I am trying to get her to put it in the words that make it easy for a lay person.

Q. The last thing I want to ask you about is PX 241, the slide

show you did on the accolades revenue. Do you recall that?
A. Yes.
Q. While he is pulling that up, you testified about this, but I want to make sure that you got to answer these questions fully.
What do you recall about what was going on staffing wise at Leapfrog in and around this time when you were asked to provide this kind of analysis on the accolade?
A. This is the first time I ever looked at any sort of accolades, data revenue type thing, and Missy, my boss, had just taken us under her wing. I was trying to understand the data.
Q. Does Leapfrog make every effort to make sure revenue is not intertwined with the data analyst and ratings team?
A. Yes. We never really discussed revenue, especially not in the context of score methodology. When I was involved in the development of that methodology, we never once mentioned revenue.
MS. BLAIR: Nothing further.
THE COURT: Redirect.
MR. MARCUS: Recross, Your Honor. Your Honor, to the extent that he said it is redirect, it is recross. He said I am going to cross-examine this witness.
THE COURT: We appreciate your help. Let's proceed.

REDIRECT EXAMINATION

BY MR. CRAIN:
Q. Would you look at 31.1. Do you recall that email?
A. Yes.
Q. You mentioned your colleague, Ms. Lipsco, was working on the come side, correct.
MS. BLAIR: No. Objection, that was Ms. Lider.
MR. CRAIN: Ms. Lider, I am sorry.
BY MR. CRAIN:
Q. You mentioned that your colleague, Ms. Lider, was working on the com side, correct?
A. She was filling in at the time, might have been a period of a few weeks or month.
Q. And her job is to communicate to the public, right?
A. She was taking on this -- I wouldn't say she does that regularly, no.
Q. So she doesn't have a coms role?
A. I said she did for a week or so, maybe as much as a month.
Q. The assignment of limited achievement for nonparticipating hospitals is not random or arbitrary because the score was assigned; is that right?
MS. BLAIR: Outside the scope of my examination, Your Honor.
THE COURT: Overruled.
THE WITNESS: It's not --

BY MR. CRAIN:
Q. The assignment of limited achievement for nonparticipating hospitals, that is step two, correct?
A. Yes.
Q. You talked about that with your counsel.
Is it your testimony that the assignment of limited achievement for nonparticipating hospitals is not random or arbitrary because the score was assigned?
A. I want to be very clear, there are two definitions of arbitrary, one is mathematical, and one is probably the one you are referring to based on your narrative. If we are using your definition of arbitrary, then no.
Q. You testified at your deposition that it was mathematically arbitrary, right?
A. Yes.
MR. CRAIN: No further questions.
THE COURT: Do you have redirect?
MS. BLAIR: I don't, I am going to let Pauline go home.
THE COURT: All right. See you tomorrow morning at nine o'clock.
(Thereupon, the Court was recessed.)
* * *

I certify that the foregoing is a correct transcript from the record of proceedings in the above matter.

Date: January 22, 2026

TRIAL TRANSCRIPT

VOLUME 3

UNITED STATES DISTRICT COURT
SOUTHERN DISTRICT OF FLORIDA
WEST PALM BEACH DIVISION

CASE NO. 25-CV-80526-MIDDLEBROOKS

GOOD SAMARITAN MEDICAL CENTER, INC. et al,

Plaintiffs,

vs.

THE LEAPFROG GROUP,

Defendant.

West Palm Beach, FL
January 21, 2026

BENCH TRIAL PROCEEDINGS
BEFORE THE HONORABLE DONALD M. MIDDLEBROOKS
UNITED STATES DISTRICT JUDGE

APPEARANCES:

FOR THE PLAINTIFFS:

MARY BETH MALONEY, ESQ.
KEVIN SIMMONS, ESQ.
SYDNEY A. SCOTT, ESQ.
LEE R. CRAIN, ESQ.
SCOTT K. HVIDT, ESQ.
Gibson, Dunn & Crutcher LLP
1700 M Street NW
Washington, DC 20036

JEFFREY E. MARCUS, ESQ.
Marcus Rashbaum Pineiro & Meyers LLP
2 S Biscayne Boulevard
Suite 250
Miami, FL 33131
305-400-4260

FOR THE DEFENDANT:	**KIMBERLY E. BLAIR, ESQ.** **COURTNEY WOOD, ESQ.** **JURA ZIBAS, ESQ.** **MAXWELL BILLEK, ESQ.** **Wilson Elser Moskowitz Edelman & Dicker LLP** **161 N Clark Street** Suite 4500 **Chicago, IL 60601** 312-704-0550
Official Court Reporter:	**Pauline A. Stipes** West Palm Beach/Ft. Pierce, FL HON. DONALD M. MIDDLEBROOKS 561-803-3434

THE COURT: Okay, please be seated.

Good evening. Let's continue.

By the way, I have a couple hearings at 11:30 and 11:45, so we will probably recess for you all from 11:30 to 12:30, so you can get an early lunch and we will be back on schedule. But let's proceed.

MS. BLAIR: Thank you, Your Honor. I would like to introduce my colleague, Kevin Riley, who will be introducing the Austin deposition designations and this is first appearance. Thank you very much.

MR. RILEY: Good morning, Your Honor.

THE COURT: Good morning.

MR. RILEY: We will start with Plaintiffs' designated testimony of Dr. Matt Austin, he is a professor at Johns Hopkins University, he serves as a grant lead for the grant between Johns Hopkins and Leapfrog Group. We have affirmatively designated ten minutes and the opposing side has counter designated with 11 minutes.

THE COURT: All right. Great.

(Video played.)

MR. RILEY: Your Honor, we call Karen Jupiter.

MS. MALONEY: That is my fault, I am so sorry.

(Witness sworn.)

MR. CHUNG: May it please the Court.

THE COURT: Please proceed.

DIRECT EXAMINATION.

BY MR. CHUNG:

Q. Good morning, Ms. Jupiter.

You have been Leapfrog's Vice President of Development since 2021; is that correct?

A. Correct.

Q. And in that role, you believe Leapfrog's primary strategy, the donor admissions, special events and overall communications; is that correct?

A. Yes, though my role in communications is pretty limited, they focus on development.

Q. Now let's start with a document. Mr. Chauncey, would you put Plaintiffs' Exhibit 354.1 which has been admitted already.

Now Mr. Jupiter, this is Leapfrog's long range strategic intent plan for fiscal year 2026 through 2032; is that correct?

A. Yes.

Q. And you and I went over this document during you deposition back on September 5, 2025; do you recall that?

A. Yes.

Q. All right. So, the document or the plan lists the most important goals for Leapfrog's long range strategy, correct?

A. Yes.

Q. Now if we turn to page two of the document, the very first goal, the first objective of the document is expand revenues, correct?

A. Yes.
Q. That is expand Leapfrog's revenues; is that right?
A. Yes.
Q. And again, based on this document, expanding revenue includes expanding revenue from existing sources, correct?
A. Yes.
Q. And among those existing sources is licensing, right?
A. Yes.
Q. Talking about Leapfrog's licensing program, correct?
A. Yes.
Q. Now if we turn to page four, again the same document, Leapfrog's long term strategic plan, Leapfrog also wants more hospitals to participate in its hospital survey, right?
A. Yes.
Q. And, so, in order to reach -- in order for Leapfrog to raise revenue, Leapfrog needs more hospitals to respond to the survey, correct?
A. No.
Q. Your answer is no today?
A. No. Hospital solicitation doesn't correlate to revenue.
Q. All right. Do you recall testifying during your deposition when I asked you in order to achieve these objectives to raise revenue, you responded yes; do you recall that?
A. No.
MR. CHUNG: Your Honor, I would like to read from

deposition transcript of Ms. Jupiter for purposes of impeachment.

THE COURT: All right.

BY MR. CHUNG:

Q. So turning to your deposition back on September of 2025, transcript pages 130, pages five to 11, I asked you:

In order to achieve these objectives, right, to raise revenue, to have purchasers and health plans tie the hospital safety grades to payment decisions and in order to achieve these objectives that Leapfrog needs more hospitals to respond to the surveys, correct? And you answered yes.

MS. BLAIR: I'm going to object to improper impeachment. This is different question than what he asked her.

THE COURT: Overruled.

THE WITNESS: Yes, I mean, that is a different question. This says in order to achieve these objectives and there is a law with said objectives. That is not what you asked me.

Q. That was your testimony, correct?

A. Yes.

Q. All right.

Now, your responsibility for overall communications, and you mentioned that, it is more limited, right?

A. Right.

Q. Includes the hospitalsafetygrade.org website, correct?
A. Yes.
Q. And that website shows the consumers the safety grades that Leapfrog assigns to hospitals, correct?
A. Yes.
Q. And Leapfrog wants consumers to check the safety grades of their hospitals; is that right?
A. Yes.
Q. And leapfrog wants consumers to use those safety grades when they choose a hospital; is that right?
A. Yes.
Q. Leapfrog also wants visitors to the website to believe that the information on that website is accurate and transparent, right?
A. Yes.
Q. The website is designed to discourage visitors or consumers from going to another hospital, correct?
A. No, not necessarily.
Q. Okay. Do you recall, again, going back to your deposition in September of last year, testifying that, when I asked you the question:

Is the method designed here to discourage consumers from going to these types of hospitals, your answer was, to going to low grade hospitals, yes. Do you remember that testimony?
A. Not specifically.

MR. CHUNG: All right. Your Honor, impeachment again, I would like to read from the deposition transcript.

THE COURT: Proceed.

BY MR. CHUNG

Q. I am going to read from, again, your deposition transcript from September 5 of last year, transcript page 252, line 18 to transcript page 253, line five.

I asked you the question: Is the message designed here to discourage consumers from going to these types of hospitals, your answer was, yes, to going to low grade hospitals, yes. Do you remember that testimony?

A. I don't, I mean, there is more to that question, that's not what you're asking me. It says, is the message designed here, I don't know what that was referring to.

Q. But that was your testimony, correct?

A. That is what you just read.

Q. Okay. Now, leapfrog wants consumers to think that visiting a hospital with an F grade could seriously injure or even kill them, right?

A. That is what the information from Johns Hopkins is, yes.

Q. Well, was that your testimony in your deposition back in September, Ms. Jupiter?

A. What is your question?

Q. The question was, does Leapfrog want consumers visiting a hospital with an F grade could seriously injure or could kill

them?
A. Visiting any hospital when you are sick is a problem.
THE COURT: Hold the microphone toward you. Thank you.
MR. CHUNG: Your Honor, again, impeachment, I am just going to read, if I may, from the transcript again.
THE COURT: All right. I am unfamiliar with you having to ask my permission. Read the question as you see fit.
BY MR. CHUNG:
Q. So, from your deposition transcript, again, from September, page 253, lines 11 to 15, I asked you: Does Leapfrog want consumers to think that visiting a hospital with a C, D or F grade could seriously injure or even kill them. And your answer on that during your testimony was yes. Do you remember that?
A. I don't know what is that part of the message here is.
Q. Let's look at another document, Plaintiffs' Exhibit 850, which has been previously admitted. Ms. Jupiter, understanding your testimony earlier that your responsibility with respect to communications might be more limited, right, but you were involved in the press campaign around the release in the fall of 2024 for safety grades, right?
A. Depends on what was involved.
Q. Okay. Well, let's look at the document here. So this is Cure Strategies is Leapfrog's public relations form, correct?

A. Yes.
Q. And we are looking at an email from November '22 to 2024, from a Sarah Farinelli, at CURA Strategies, to you, Lauren Bailey, who I understand is your communications director, right?
A. Yes.
Q. And Nate Longmore who is a communications coordinator, correct?
A. He was, he's not now.
Q. But back then, at that time, he was a communications coordinator, correct?
A. Yes.
Q. And Sarah Farinelli is at CURA Strategies, correct?
A. Yes.
Q. So turn to page two of -- CURA is updating you, Ms. Gataray [sp] and Mr. Longmore on the first week of media coverage surrounding the fall 2024 --
A. Yes.
Q. And the executive summary, you are seeing increases across the board in online articles, print placements, dry task placements and press release pickups, correct?
A. Yes.
Q. And Ms. Farinelli or CURA collected all of this information, correct?
A. Correct.

Q. All of this intelligence information from out here in the media of coverage of the release of the fall safety grades, correct?
A. Yes.
Q. Fall of 2024, correct?
A. Yes.
Q. And it shows that 722 online articles from 435 different publications with a reach of 11.2 billion people had coverage on that first week; is that right?
A. Yes.
Q. And was the 160 print placements across several media markets; do you see that?
A. Yes.
Q. And then you actually see compared to the spring of 2024 safety grade with respect to the online articles, CURA is telling you there has actually been 6.4 percent increase, right?
A. Yes.
Q. And with respect to the unique printed placements, there has been so far two percent increase from that, correct?
A. Yes.
Q. And then just going on, 239 broadcast placements including 205 television placements across 55 stations and 34 radio placements across 16 stations and that is a 39 percent increase from the last cycle, correct?

A. Yes.
Q. All right. And then 444 press release pickups with a total potential audience of 162 million people; do you see that.
A. Yes.
Q. That is a 25 percent increase with this fall safety grade release relative or versus the last cycle in the spring of 2025, correct?
A. Yes.
Q. 2024?
A. Yes, right.
Q. Thank you. So, it is clearly, Ms. Jupiter, with this fall safety -- fall 2024 safety grade release, the media coverage, at least in the first week is significantly higher and broader than what it was for the previous cycle in the spring of 2024, correct?
A. It is higher, I don't know if you define it significantly.
Q. Okay. Can we go down just a bit. And one of the key message that then picked up that is getting mentioned more than in the previous cycle is hand hygiene. Do you see that? One of the bars, it has been highlighted here, hand hygiene, correct?
A. Yes.
Q. All right. And turning to page three under the heading Reach Insights, the highest number of articles covering these fall 2024 safety grades is in the State of Florida, correct?

A. Florida is always one of our highest.
Q. Okay. But including for this particular cycle, correct?
A. Yes.
Q. All right. So we can take that down.
You were also involved in Leapfrog's communications campaign after this particular lawsuit was filed, correct?
A. Again, depends what you mean by involved.
Q. Okay. Well, why don't we look at a document just to illustrate it.
Let's look at Plaintiffs' Exhibit 439.
So, Ms. Jupiter, during the course of your work at Leapfrog, you were using a messaging service called Slack to often communicate with your Leapfrog colleagues, correct?
A. Yes.
Q. And it is somewhat of a texting, would you say?
A. Yes.
Q. And you often messaged with your Leapfrog colleagues through the Slack platform at the same time you were participating in Zoom meeting conferencing, right?
A. Sometimes.
Q. Sometimes, correct. And what we are showing here, Plaintiffs' Exhibit 439.0 is a Slack messaging conversation between you, Mr. Longmore and Ms. Bailey who you already referenced on May 12, 2025, right?
MS. BLAIR: And Your Honor, we object to hearsay of

this document only to the extent for any comments made by Nate Longmore who is not here in court today.

THE COURT: All right. I overrule the objection with the same analysis as the previous objections with respect to the conversations between people including this declarant.

MS. BLAIR: Thank you, Your Honor.

MR. CHUNG: So, Your Honor, I move to admit Plaintiffs' Exhibit 439.0 in evidence.

THE COURT: 439 is admitted over objection.

(Whereupon Plaintiffs' Exhibit was admitted for Evidence.)

BY MR. CHUNG:

Q. So just to be clear, you, Ms. Bailey and Mr. Longmore were working for Leapfrog at the time of this conversation, correct?

A. Yes.

Q. Just to set the stage some more, this is a Slack conversation you had with just Ms. Bailey and Mr. Longmore, correct?

A. Yes.

Q. At the same time you are participating in a Zoom video conference; is that right?

A. I don't know, this is all I see here.

Q. Okay. Well, why don't we toggle through. Does that kind of refresh your recollection that there is a Zoom video conference going on at the same time you were texting with these folks, right?

A. I think so.
Q. Okay. But Ms. Binder is not on this slide, correct?
A. Correct.
Q. And is Ms. Binder on the video Zoom conference that you are participating in at the same time?
A. I think so.
Q. Now, if we turn to the bottom of page two of this chat, Ms. Bailey wrote to you and Mr. Longmore, Leah says she wants to know if we can do ads where someone search those five hospitals. It shows an ad with their safety grade label, right, you see that?
A. Yes.
Q. So Leah here is Ms. Binder; is that correct?
A. Yes.
Q. The President and CEO of Leapfrog, correct?
A. Right.
Q. So Ms. Binder wanted it so that if anyone searched any of the community hospitals here, Plaintiffs' hospitals on Google an ad showing their failing safety grade would pop up, correct?
A. It's nothing that she wanted, but she wants to know if that was something that can be done.
Q. Okay. She wants to know if that is something than can be done, correct?
A. Yes.
Q. And this was because Ms. Binder wanted to publicize the

hospital safety grades, correct?
A. You have to ask Ms. Binder.
Q. Okay. And by doing this, you wanted the public to believe that the community hospitals were not safe, correct?
MS. BLAIR: Objection to form, calls for speculation as to Ms. Binder.
THE COURT: Overruled.
THE WITNESS: Yes, not that I really know.
BY MR. CHUNG:
Q. Well, I am asking you what you know. I do envision that you wanted the public to know the hospitals were not safe?
A. That is not something that I wanted to do.
Q. Well, do you remember testifying during your deposition when I asked you: What did you understand the strategy behind this to be and you answered: We wanted to publicize their F grades and I asked you: For what purpose, and you answered: Because these hospitals were not safe and we wanted the public to know that. Do you recall that testimony?
A. I don't.
Q. Now, moving to the top of page two, when you first heard about Ms. Binder's wish, right, or plan, you wondered what the point of this was, right?
A. I was trying to understand it, yes.
Q. You wrote to your colleagues again, Ms. Bailey and Mr. Longmore, "Why, what would be the point", right?

A. Correct.
Q. And then Ms. Bailey agrees, right, she writes "I don't get it", right?
A. You are putting a lot of emphasis on those words.
Q. I'm just asking you is that what she said?
A. She said that I don't get it.
Q. And then Mr. Longmore chimes in and says, "Good question". You see that?
MS. BLAIR: Objection, hearsay.
THE COURT: Overruled.
THE WITNESS: That's what it says.
BY MR. CHUNG:
Q. Okay. And you continue, "Why", again, this time with two question marks, right, and "What for", right?
A. Yes.
Q. But you knew why because you then wrote that Ms. Binder, or you asked, "So she just wants to harass them", correct?
A. I am still trying to understand.
Q. Okay. But that is what you wrote, correct?
A. I wrote a question.
Q. And then Mr. Longmore writes back, "I love the strategy is to become a Disney villian", right? That is what he wrote, correct?
A. Yes.
Q. He is telling you that by targeting the community hospitals

with this Google ads tactic, Leapfrog is no better than a Disney villain, right?

MS. BLAIR: Your Honor, this is the exact hearsay that I objected to. Mr. Longmore is not here in court today, to the extent that he is asking for the truth of the matter asserted and then asking Ms. Jupiter to interpret that, I object to that as hearsay, that comment by Mr. Longmore.

THE COURT: Overruled.

BY MR. CHUNG:

Q. Is that correct?

A. You'll have to ask him.

Q. Okay. Leapfrog actually executed on this, correct?

A. On what?

Q. On this Google ads tactic, correct?

A. I need more specifics.

Q. Well, leapfrog actually followed through on what Ms. Binder was proposing here in this chat, correct, to put up whenever someone visits, whenever someone searches for one of these hospitals on Google that a ad would automatically pop up with the D or F grade, right?

A. That is not exactly how we got it to work.

Q. I am asking you, is that Leapfrog actually executing on that, correct?

A. I don't know specifically what we executed on.

Q. Okay. Well, let's take a step back. Google gives Leapfrog

a grant, correct?
A. Correct.
Q. And that grant, Leapfrog is supposed to spend on advertising, right, supposed to promote its non-profit mission, correct?
A. Correct, it is to support our mission.
Q. And then Leapfrog spent this non-profit grant, right, at least some of it from Google to put up these ad, right, that targeted the community hospitals, right?
A. I think we did that for a short time.
Q. Right. So I am now going to show you another exhibit, Plaintiffs' Exhibit 454.1, which is preadmitted. This is an email chain from a Noah Shelldren[sp] at Non-profit Megaphone?
A. Yes.
Q. And Mr. Shelldren and Non-profit Megaphone is the vendor that you used, right, to put your ads on Google, right?
A. Correct.
Q. That is the vendor that actually manages Leapfrog's Google ads, correct?
A. Correct.
Q. Now if we turn to page three, Mr. Longmore, your former colleague, writes, again, this is on May 12, "We would also like to set it up so that when someone searches for any of the five specific hospitals, it shows an ad displaying their hopsital safety grade", right?

MS. BLAIR: Your Honor, same hearsay objection with respect to Mr. Longmore's comment coming in for the truth of the matter.

THE COURT: Overruled.

BY MR. CHUNG:

Q. Right?

A. I mean, this is an email from Nate.

Q. That is what he wrote, correct?

A. I assume this is correct.

Q. So just to be clear, Leapfrog targeted the five specific hospitals here, our community hospitals, and no others, right?

A. I don't know about and no others.

Q. All right. We can go down here --

A. And we are always --

Q. Ms. Jupiter, are there any other hospitals listed here?

A. No, but that doesn't mean that there weren't other hospitals, I mean, we have a $10,000 a month Google grants, that is what we do, we are advertising the hospitals and their safety grade.

Q. But Ms. Jupiter, in this email chain with your vendor that handles your Google ads, these are the only hospitals, the community hospitals that are listed, correct? I am not asking about other hospitals, these are the only ones identified, correct?

A. This is what you have highlighted in the email from me.

Q. All right. We can move on. On top of that, if we look at page five, Leapfrog intentionally configure these ads to insure that customers here in South Florida would see them, right?
A. I don't know, I don't know what this is.
MR. CHUNG: All right. I pass the witness.

CROSS-EXAMINATION

BY MS. BLAIR
Q. Good morning, Ms. Jupiter.
A. Hi.
Q. I want to talk just a little bit about -- your entire adult career has been in non-profit, correct?
A. Correct.
Q. And have you served as a fundraising lead for multiple not-for-profits?
A. My whole career.
Q. And all of those not-for-profits, can you tell the Court, have they had revenue raising as part of their mission?
A. Yes. We have to exist, and that is how we exist is by getting revenue.
Q. And by way of foundation, can you just briefly talk about your non-for-profit history for the Court?
A. Sure, I started actually during college. I interned at the not-for-profit William and Mary and then I went into development after that, Boston Symphony Orchestra, and then the Museum of Finance and then I worked for 13 years for a homeless

charity and then I worked for six years for a cancer charity and then I came to Leapfrog.
Q. And any of those not-for-profits that you worked for ever not raise revenue?
A. No. I worked for the Boston Symphony, we sold tickets, and that was one way of fundraising.
Q. And in all of your experience as a not-for-profit fund raising executive, have you ever been involved in an organization who did not have the goal of raising revenue?
A. No. I mean, that is literally my job forever.
Q. And why do not-for-profits raise revenue?
A. So we can perform our mission.
Q. And having served in the Vice President role at Leapfrog, in your opinion, has Leapfrog put the revenue that it's raised back into its mission?
A. Yes.
Q. And you were shown some website messaging questions that were asked at your deposition by Mr. Chung, do you recall that?
A. Yes.
Q. What is your involvement in drafting the website messaging in your role at Leapfrog?
A. I have no role in messaging.
Q. But you know what the messaging is, correct?
A. Yes, I see it.
Q. Do you believe in the messaging that Leapfrog puts out?

A. Yes, I would never work there if I didn't believe in what I do.
Q. And in your role as the Vice President of fundraising, are you involved in determining the strategy of the messaging that goes out to the public for Leapfrog?
A. I am not involved in the strategy.
Q. And who would be the determiner of that messaging strategy?
A. Lauren Bailey, our director of communications.
Q. And does she do that along with the CEO of the company?
A. Yes, she works with Leah.
Q. And there are documents shown to you about CURA. Can you tell the Court, what is CURA?
A. CURA is our public relations firm.
Q. And in your role, what do you understand CURA to be doing for Leapfrog?
A. They pitch to media about Leapfrog and hospital safety.
Q. Do you believe CURA's role in pitching to media about public safety to be consistent with the Leapfrog mission?
A. Yes. That is our mission is transparency and let the public know about patient safety.
Q. How many employees are at Leapfrog?
A. We have 20.
Q. Twenty employees. Does Leapfrog have the ability to promote patient safety in the media without CURA being involved?

A. No. That would be -- we just don't have enough people for that.
Q. And going back to the revenue that Mr. Chung asked you about, I want to make sure the Court understands your answer. You testified that the revenue goals of Leapfrog are not tied to survey participation. Can you explain what you meant by that answer?
A. Sure. I mean, we have revenue goals to -- when I work on our annual meeting sponsorships, and fundraising doesn't have anything to do with survey participation. There is a firewall of tools between survey and revenue participation. I work on revenue and it has nothing to do with survey participation.
Q. And do you understand that one of the goals of the not-for-profit mission of Leapfrog is to get every hospital in America to participate in the survey in order to publicize patient safety?
A. That is our mission is transparency.
Q. And there are some Slack messages, this is PX 439, that Mr. Chung showed you between yourself, Lauren Bailey, the director of communications and Nate Longmore; do you recall that?
A. Yes.
Q. And in or around the time would have been May or June of 2025, can you tell the Court, what was Nate Longmore's role?
A. He is our communications coordinator.
Q. And in terms of orienting everybody to where we were in the

timeline of events, what was occurring at Leapfrog in May or June of 2025?
A. That was not a great time. We were being attacked in the media, we were being called unethical, there are articles in the paper about how we were unethical and not truthful. It varies, it was a very stressful time. I also had former employees call me and told me that --
MR. CHUNG: Objection, hearsay.
MS. BLAIR: Your Honor, she is talking about what is going on at Leapfrog and the resources that are being diverted and in its contract --
THE COURT: Is that really an issue in this case?
MS. BLAIR: It is an issue in the case, the application of harm.
MR. CHUNG: That's not --
THE COURT: All right. I will overrule the objection.
MS. BLAIR: Thank you, Your Honor.
THE WITNESS: Private investigators were visiting our former employees at their home and work and asking them --
MR. CHUNG: Objection, Your Honor, it's a standing objection on hearsay, relevance, lacks foundation as well.
THE COURT: All right. Overruled.
BY MS. BLAIR:
Q. And I think you just told me there are 20 of you, right?
A. Yes.

Q. And were any resources of Leapfrog being diverted from the mission in light of the PR campaign that Tenet had put out against Leapfrog?
A. Yes, absolutely.
Q. Can you tell the Court a little bit about how resources were being diverted from Leapfrog's mission in light of the smear campaign?
A. Sure. We were on meetings trying to counteract the messages going out about Leapfrog when I should have been working on our annual meeting, and communicating with donors but instead, I was trying to overcome the messages saying we were unethical.
Q. And that Slack message we saw saying, "Why, why though, does she just want to harass them"? Do you recall Mr. Chung showed you that message?
A. Yes.
Q. Why were you so confused about what the strategy was?
A. That is just not how we work. Generally, we promote top hospitals, good grades and we want people to go to A hospitals, so it was really a different way of doing it.
Q. Was this the first time in your tenure at Leapfrog that it was necessary to sort of go on the defensive to a smear campaign of this magnitude?
A. Yes, we never had this happen.
Q. And Mr. Chung asked you about the grant from Google Ads.

Do you recall that?
A. Yes.
Q. And his PX 454.1, can you just describe for the Court to the extent you know, what the Google Ads grant is that Leapfrog has?
A. Yes. I think it is $10,000 a month from Google to put ads up to support our mission. So we put up a lot of messaging, patient safety, questions you should ask your doctor, we have a diabetes initiative telling people about ads.
Q. You do that through this company called Megaphone?
A. Correct, non-profit Megaphone.
Q. And do you recall whether Leapfrog reached out to non-profit Megaphone to ask whether or not your Google grant could be used to place these ads?
A. I don't know.
Q. And do you have an opinion about whether or not fighting the negative press that Leapfrog was experiencing was also promoting the mission of Leapfrog?
A. Yes. That is the mission of Leapfrog, we want to be transparent and trustworthy which is really important to what we do, and so we wanted to make sure consumers and patients knew that we were trustworthy.
MS. BLAIR: I have no further questions, Your Honor.
THE COURT: Redirect.
MR. CHUNG: No, Your Honor.

THE COURT: Thank you, Ms. Jupiter.

MR. CHUNG: We next call Leah Binder, President of Leapfrog Group.

(Witness sworn.)

MR. CHUNG: May it please the Court.

DIRECT EXAMINATION

BY MR. CHUNG:

Q. Good morning, Ms. Binder.

A. Good morning.

Q. So, already announced you, but you are the President and CEO of Leapfrog; is that correct?

A. That is correct.

Q. You have been the CEO since about 2008?

A. That is correct.

Q. And as president and CEO, you are the highest ranking officer or executive of Leapfrog, correct?

A. Highest ranking executive.

Q. And Leapfrog has a Board of Directors; is that right?

A. Yes.

Q. And you report to that board, correct?

A. Correct.

Q. And this is a Board of Directors that governs Leapfrog Group, correct?

A. Correct.

Q. I'm going to direct your attention to a document marked for

identification, Plaintiffs' Exhibit 323.2 and it will show up on the screen in just a moment.

A. If you would make it a little bigger.

Q. We can. This is an email dated July --

MS. BLAIR: Your Honor, we have an objection to this document per your request that we identify objections to documents before they are seen. Our objection to this document is relevance and undue prejudice. I don't know how it is relevant to this situation that she had a conversation with Paul Alva [sp] about Leapfrog.

MR. CHUNG: Paul Alva is a consultant at Leapfrog, and this conversation, if you look toward the bottom of the email, Ms. Binder describes a methodology change at issue here and describes an incentive to report to the survey which, of course, relates to the community hospitals' position that participation of hospitals safety grades.

THE COURT: I will overrule the relevance objection and the 403 objection.

MS. BLAIR: Thank you.

MR. CHUNG: Thank you, Your Honor, so I move to admit at this time PX-323.2 in evidence.

THE COURT: Admitted over objection.

(Whereupon Plaintiffs' Exhibit 323.2 was admitted for Evidence.)

BY MR. CHUNG:
Q. Rewind a little bit. This email is dated July 15, 2024 from you to Paul Alva, correct?
A. Yes.
Q. And Mr. Alva is a consultant or at least has been a consultant to Leapfrog?
A. He was, yes.
Q. So if you look at the final bullet point on page one, you inform Mr. Alva, Paul Alva about the fall 2024 change and what you call here the methodology, correct?
A. Yes.
Q. Okay. And you point out that under this change, the hospitals that don't report to the Leapfrog survey this year or last year will be imputed with the lowest score on hand hygiene, correct?
A. Um-m-m, the part highlighted doesn't say that, but it may be elsewhere. Oh, I see it now.
Q. Do you see that?
A. Yes.
Q. And you point out, just moving along in the same email, you point out further that the change is, in your words, a very big deal to hospitals, right?
A. Yes.
Q. I am sorry, you have to answer audibly otherwise our Court Reporter is going to go --

A. I know, I don't want to make your job harder.
Q. And then you tell him that this change is a major incentive for the hospitals to report to the survey, correct?
A. Yes.
Q. It is a major incentive because hospitals would be assigned the lowest score on hand hygiene if they did not report to the survey, right?
A. Could you ask the question again, please?
Q. Sure. It is a major incentive because hospitals would be assigned the lowest score on hand hygiene if they did not report to the survey, right?
A. That is not the only reason it's a major incentive to report to the survey.
Q. Well, isn't that what you told the board of directors?
A. This isn't to the board of directors.
Q. No, I understand, but isn't that something you told the board of directors that these hospitals would -- that the update here would dramatically lower imputed scores for certain measures for hospitals that declined to report to the hospital survey.
Isn't that something you --
A. I told the board --
Q. Let me finish the question. You as the CEO told the board, correct?
A. I told the board about the change in methodology, and I was

clear and blunt about what that meant.
Q. Okay. Let's go to what you told the board of directors in June of 2024. Put up PX 304.1. All right. This has been preadmitted.
A. Again -- thank you.
Q. All right. So, this is your CEO report in June 2024 to the group -- to the Leapfrog Group board of directors, correct/
A. Yes.
Q. And in that highlighted section, you write the update dramatically lowers imputed scores for certain measures for hospitals that decline to report to the hospital survey, correct?
A. I did say that, yes.
Q. Okay. We can take that down.
All right. The first email you were discussing with Mr. Alva hand hygiene, so let's go back again for hand washing those terms can be used interchangeably.
I would like to use hand washing at one of our community hospitals, Good Samaritan Medical as an example. Okay.
A. Okay.
Q. You heard testimony yesterday from Sheri Montgomery, the CEO of Good Samaritan Medical Center about the hand washing, correct?
A. Yes.
Q. You were here for that testimony?

A. Yes.
Q. And you heard Ms. Montgomery testify the last time Good Samaritan participated in the survey was in or about 2021, correct?
A. Yes.
Q. And that they scored a hundred on the hand hygiene metric or measure at that time, correct?
A. Correct.
Q. And that was based on the data with a response based on -- in response to your survey, correct?
A. Correct.
Q. And that was based on actual data and responses that Good Samaritan sent in, correct?
A. Relative to 2021, yes.
Q. Okay. And you heard Ms. Montgomery testify that in fall of 2021, and based on that submitted response, their grade was a C, correct?
A. She testified to that, yes.
Q. But then in the fall of 2024, you dropped them from a hundred to a 15, correct, on hand washing or hand hygiene, correct?
A. I believe so, yes.
Q. And that 15 is not based on actual facts, correct?
A. It's an imputation.
Q. Right. And we just heard video testimony from Dr. Austin

to that effect. He testified in his deposition that the imputed scores, right, are not based on actual facts, we just heard it maybe half an hour ago, correct?
A. They are based on a imputation --
Q. I am asking you whether you recall seeing Dr. Austin's video testimony.
A. Yes, I recall seeing Dr. Austin's testimony.
Q. Let's put it another way. This 15, again, we are focusing on 15, right, for hand washing?
A. Yes.
Q. That is an arbitrary number, correct?
A. No. I wouldn't say the word "arbitrary".
Q. Well, your own program manager, Alexandra Campione said that these scores were assigned arbitrarily, right?
MS. BLAIR: Objection to form, I know you don't like this objection, Your Honor, but it mischaracterizes Alex Campione's testimony.
THE COURT: Overruled. It is not that I don't like it, this is typical and permitted cross-examination. Go ahead.
MR. CHUNG: Thank you, Your Honor.
BY MR. CHUNG:
Q. Let's put it another way. So arbitrarily is one way. Let's put it another way. Ms. Campione testified yesterday, you were here for that, correct?
A. Yes.

Q. And she testified that this 15, the limited achievement scores is based on inference that non participating hospitals performed poorly on this and the other measures, correct?
A. You are asking if she testified to that?
Q. Yes?
A. Yes, I believe so.
Q. And that they are hiding -- these non participating hospitals are hiding that poor performance by not responding to the survey, correct?
A. Are you asking if she testified to that.
Q. Yes.
A. I believe so.
Q. That is what the inference is based on, correct, her testimony, correct?
A. I think so.
Q. So, again, this 15 is an arbitrary number where you are assuming the worst about the hospital, is that right?
A. No. It is not an arbitrary number.
Q. But, Ms. Binder, are you -- by inferring that they are not submitting a survey, submitting to your survey because they were trying to hide their poor performance, you are assuming the worst about this hospital; is that right?
A. We are assuming that the hospital has a reason for not reporting this data to Leapfrog, and with actually 25 years of experience, that's the case.

Q. And based on what you are claiming, your 25 years of experience, you are assuming that these --
A. Leapfrog's experience, I don't have 25 years experience.
Q. With Leapfrogs' experience, you are assuming the worst by not giving these responses, correct?
A. I am assuming they are in the lowest category because of the expert panel suggested that that is appropriate given the non-response bias.
Q. Let's take a look at Good Samaritan's safety grade page on Leapfrog's website. Plaintiffs' Exhibit 33.5 which is already in evidence. Okay.
Now, Ms. Binder, do you recognize this as the safety grade site for Good Samaritan Medical Center?
A. Yes.
Q. You were in the courtroom yesterday during Dr. Berger's testimony, correct?
A. Yes.
Q. You heard from his testimony that it takes more than 20 clicks for a visitor to the website from the moment she sees the D or the F to get to this footnote four that has been testified to. Do you remember that testimony?
A. That was his testimony, yes.
Q. Okay. So, for those few folks who get over the shock of seeing first the D and F for their hospital and then somehow make the journey and scrolls and clicks down to this footnote

four, your claim that this footnote four clears everything up, correct?
A. You are asking if my claim is that footnote four clears everything up?
Q. Yes.
A. I don't know if I would put it exactly that way.
Q. Okay. Well, this footnote four, let's pull up the footnote four briefly.
It has already been testified to a number of times. This is supposed to refer on this page in particular to the 15 for achievement score for hand washing, correct?
A. Yes.
Q. And we can take that down. And that is the lowest available score for hand washing, correct?
A. Right, and that is clear on this as well.
Q. And again, you assign the lowest available score without any data from the hospital itself, right?
A. It is imputed data.
Q. And nowhere in this footnote does it say that the 15 number is a penalty, right?
A. That is right because it is not.
Q. Nowhere in this footnote does it say that a 15 number is an inference that they're bad performers, right?
A. It says in the footnote and referenced by a pretty clear asterisk. And the experts didn't recognize the asterisk, I

don't know how that happened, but it is an asterisk.
Q. So you are saying that that footnote, the asterisk and the footnote says that the 15 number is an inference that this hospital has bad performance; is that what you are saying?
A. The asterisk refers to a clearly articulated line that explains that the score was assigned.
Q. So the testimony is no, we don't see that language in this footnote, correct?
A. Which language?
Q. That there is an inference here that they have bad performance? It's not in this language, right?
A. You are saying the footnote doesn't say there is an inference here of bad performance, no, it doesn't say that there is bad performance.
Q. You want consumers to believe that this hospital has earned, right, this 15 for hand washing, correct?
A. They erned the grade.
Q. And they earned this 15 score; that is what you want the website to convey, correct?
A. They've earned the grade, we talked about the grades being earned.
Q. I'm talking about the score of 15, the lowest available score?
A. We want them to understand that the 15 was assigned.
Q. Let me put it another way. Anyone reading this and seeing

this score, the 15, o lowest available score and the D or the F, right, whatever the case may be, anyone reading those would think no one washes their hands in the hospital; is that right?

MS. BLAIR: Objection, calls for speculation.

THE COURT: Overruled.

BY MR. CHUNG:

Q. I am asking you.

A. Okay. So we explained what we mean by it.

Q. So my question is, right, any consumer that sees the grade, the D and the F, and that somehow makes their way down scrolling the 20 clicks down to this score, right, the 15, anyone reading this, the average consumer, right, reading this, no one washes their hands at this hospital, right?

A. I don't think so.

Q. But that wouldn't be true, correct?

A. I have no way of knowing if any individual hospital whether or not people are washing -- how much -- the hospitals often don't know that.

Q. Ms. Binder, but you knew that if a consumer saw that the hospital flunked on hand washing, right, like we see here, there is no way they would go to that hospital?

A. That is not flunked, that is 15.

Q. Right. But when they see the score of 15, the consumer saw that, there is no way they would go to that hospital, right?

A. People go to hospitals that don't do well in hand hygiene a

lot, actually lots of hospitals have all grade levels, sometimes that poor performance is in general measure, and people go to those hospitals, and the good news is, most hospitals improve on it.

Q. Well, on top of that, we will go on the website, you say that hand washing is one of the most important factors in assessing the safety of the hospital; is that right?

A. I probably said that at one point.

Q. Let's put up PX-283.0 which is already in evidence.

You have seen this section of the website already in the trial. This he is from how to use the grade part of that page. Are you familiar with that section?

A. Yes.

Q. And this section reads: What measures are most important, right?

A. Um-m-m -- can you remove the highlighted part so I could see the context of this?

Q. It says, we're going to read here, what measures are most important is the question, right, and then we see the hand washing is the first bullet point; is that right?

A. It is the first bullet point, but I don't see the rest of the bullet point.

Q. But that is the first measure listed here, correct?

A. It is the first measure listed, yes.

Q. In the fall of 2024, did you or any member of the staff

call Good Samaritan to ask them whether they had a hand washing policy?
A. No.
Q. Did you anyone on you staff call anyone at Good Samaritan for data on hand washing?
A. We asked them to report to the survey. They could have told us about it.
Q. You didn't independently verify, you assigned the survey, right, whether they had data or a hand washing policy, right?
A. Why would I put aside the survey; that is exactly what the survey is supposed to do is to ask them formally and in a way that can be verified, you know, tell them to do scrutiny against their peers, and that's why we do the survey.
Q. Independently, putting aside the survey, a call or communication to anyone at Good Samaritan --
A. Repeated communications requesting that they participate in the survey.
Q. Okay, but not specifically with the hand washing?
A. Hand washing is part of the hospital survey.
Q. Let's go to another part of the website, Plaintiffs' Exhibit 413, already in evidence.
This is the explanation of the grade section, if we can go to page five. You recognize this section, Ms. Binder?
A. I recognize it, I'm not in the weeds.
Q. Not in the weeds, but the title is explanation of hospital

safety grades, correct?
A. Yes.
Q. We just saw that Good Samaritan received a D in the fall of 2025, correct?
A. Yes.
Q. And that puts Good Samaritan in the worst, let's say, seven to eight percent of hospitals, correct?
A. For this cycle.
Q. And you are aware that the other community hospitals, the other four, received Ds and Fs, correct?
A. Yes.
Q. So you are convincing people through the website that Plaintiff hospitals are among the worst seven to eight percent hospitals in America, correct?
A. I don't know about convincing, but we are certainly putting them in the category of Ds and Fs.
Q. And by showing the percentages here, the percentage of hospitals, F hospitals are less than one percent of the hospitals, Ds are about seven percent of the hospitals, you are communicating to the consumers who read this chart that our hospitals, community hospitals are among the worst hospitals in America, correct?
A. We are saying that they are in the lowest category on patient safety for this time period.
Q. You did this in order to force these hospitals to

eventually submit to the survey, correct?
A. No.
Q. You made it so that they could not afford not to participate, correct?
A. No. That is not the intention.
Q. Well, whatever your intention was, it worked, correct, participation in the hospital shot up from 69 to 79 percent in the fall of 2024, correct?
A. It didn't shoot up, it went up by 160 or something like 160 hospitals, which all of them were grade A hospitals.
Q. Let's put up PX 426. Go to page two. We see here, does this refresh your recollection that from the spring of 2024 to the fall of 2024, that survey participation jumped from 69 to 70 percent; do you see that?
MS. BLAIR: Your Honor, this is a document that we've objected to, and per your order, we would like to see the -- I am happy to tell you what my objections are, but hearsay, lack of foundation, this is an email from Holly Salati [sp]to Lauren Bailey, not to Leah Bailey at all --
THE COURT: At this point we have a question, we don't have a request of --
MS. BLAIR: He pulled up the document.
MR. CHUNG: My understanding is this document is pre admitted.
MS. BLAIR: No, we have an objection on foundation,

relevance, undue prejudice, hearsay and lack of knowledge, that is one of the only ones we do.

MR. CHUNG: Well, Your Honor --

MS. BLAIR: I'm sorry, my objection.

BY MR. CHUNG:

Q. So, I'm going to ask you -- my previous question was that survey participation increased or shot up from 69 to 79 percent?

A. Well, this he is participation as a percent of hospitals that are issued a hospital safety rate.

Q. Right.

A. What I typically look at with my board is the number of hospitals that participate, and that is what I was referring to just now when I said that we did see an increase of almost entirely HCA coming back into the survey. These numbers are n not ones that follow so closely.

Q. Understood. But you have no reason to doubt that these percentages are accurate, correct?

A. I really don't know. I have not seen this.

Q. In fact, hospital survey participation in the fall of 2024, the time period we are focused on when this methodology change went into effect, wasn't it?

A. It is record breaking every year. We have seen increases in participation every year with the exception of the one year when HCA decided not to participate.

Q. All right. But you told the board that this in the fall of 2024 that this was an all time record for participation, correct?
A. I tell them that pretty much every year.
Q. All right. Now after the Plaintiff hospitals filed this lawsuit, you engaged in a media campaign, right, we heard the testimony from Ms. Jupiter on this topic, correct?
A. Yes, uh-hum.
Q. Let's take a look at, again PX-439.
We can put that down for now.
In May of last year, after the lawsuit had been filed, you directed your staff, right, to look into whether if someone searches any of the five hospitals on Google, an ad will pop up with their F or D grade, right? Is that correct?
A. Yes.
Q. And just with that F or D grade --
A. I don't recall if I said pop up the F or D grade, actually. Maybe I did.
Q. So your own people said that we wonder whether you were just out to harass these hospitals. Did you see that message?
A. I saw the message, yeah. I don't blame them. We don't do things like that, normally, it is very unusual, extraordinary, I never actually had a campaign where we aimed at any kind of publicity for hospitals, we usually try to avoid that, but not this time.

Q. You don't want to act like a Disney villian, correct?
A. I didn't really understand that line. I guess I am too old to understand what Disney villain is.
Q. Now, you testified earlier, again, that you report to Leapfrog's board of directors, correct?
A. Yes.
Q. All right. And you delegated approval of changes to how Leapfrog's scores hospitals to yourself, correct?
A. What? I'm sorry, I don't understand that. I delegated to myself something.
Q. Yes. So with respect to this change in the scoring methodology, did the board -- the board did not approve the scoring methodology, correct?
A. The board expressly does not get involved in approving methodology issues, and only one time have they gotten involved in methodology and that was when we launched the hospital safety grade.
Q. Okay. You, in your deposition testimony, you testified that you delegated or the board delegated that responsibility to you; is that right?
A. They delegate all responsibilities of methodology approval to me, and I informed them when there was something major which I did in this case.
Q. And you testified in your deposition the delegation is not memorialized anywhere, correct?

A. The delegation, it is included in the by-laws that the CEOs delegate responsibilities and that is what I do.
Q. Okay. But responsibility with respect to changing the scoring methodology and the grade?
A. Methodology is the very operational core to Leapfrog's operations.
Q. All right. So it is core to Leapfrog's operation but it is not changes in those core of Leapfrog's operations, you are testifying it is not subject to approval by the board; is that right?
A. If the board wanted it to be a particular change in the methodology, they wanted that authority, they would take it.
Q. Okay. Now, the board only gets involved in decisions about the methodology when you believe it is necessary, correct?
A. No. I tell the board any changes or updates to the methodology and how those came about, and then if the board wanted to get more involved in the decisions, they would -- and they would tell me, I do not have a shy board.
Q. Okay. And isn't it true that in the spring of 2024, you chose not to inform Leapfrog's board members about how the imputation methodology changed?
A. Are you talking about the orientation?
Q. Yeah. You chose not to inform Leapfrog's new board members about how the imputation methodology changed, right?
A. They get informed of the entire thing, but the orientation

for the three new board members, a packet of 30 slides we had to do in an hour, we needed to do an overview and highlight the key issues that will then be scored while they continue their board service, this is when they were just about to start on the board.

Q. Okay. So you did not share the details or how the new methodology works with the new board members, correct?

A. I shared the important highlights of it and then -- but that is just the orientation of the new board members.

Q. Okay. And I think you testified during your deposition that these new board members would not see the forest from the trees and they would not understand what was important about that methodology; do you remember that testimony?

A. In the -- in the 30 slides --

Q. I'm asking -- I'm asking --

THE COURT REPORTER: Hold on, hold on a minute, you have to pause when, you know, when he ends the question, the you can -- it's very difficult to get both of you at the same time.

THE WITNESS: Oh, sorry about that.

BY MR. CHUNG:

Q. So let me rewind. I am asking you, do you recall your deposition testimony in this case that you did not share how the new methodology works because these new board members will not see the forest for the trees; do you recall that testimony?

A. At the orientation.
Q. Do you recall that testimony?
A. I recall that testimony was about the orientation.
Q. Okay. And do you recall the testimony that you did share how the methodology works with these new board members because --
A. I --
Q. I am asking the question.
A. Sorry, okay.
Q. All right. Do you remember at your deposition testimony that you did not share how this methodology works with the new board members because, in your words, they won't understand what is important about the methodology; do you recall that testimony?
A. At the orientation, yes, they were asking about the orientation and I did say that.
Q. Let's go back to the safety grade page for Good Samaritan Medical Center, PX-30.5.
Scroll down to page seven of the document.
You have a got a measure here that has a question mark over it; do you see that?
A. Yes.
Q. And that question mark is over the measure, staff work together to prevent errors, correct?
A. Yes.

Q. That is one of the several measures that goes into the safety grade, correct?
A. Correct.
Q. In addition to hand washing and various others, correct?
A. Yes.
Q. And you have got that question mark there because Good Samaritan did not participate in the survey, right?
A. Right.
Q. And this meant that Leapfrog did not have data from Good Samaritan or responses from Good Samaritan for purposes of this particular metric, correct?
A. Right, and we didn't feel the imputation was appropriate for this measure.
Q. That is not my question. All right. Correct. That is what the question mark is, correct?
A. It is the same practice staff put together for many years.
Q. But there is no question mark over hand washing, correct?
A. Correct.
Q. Instead, for hand washing, you have the gas gauge set all the way to the left, right?
A. Yes.
Q. You could have put NA or not available, correct, you could have?
A. We could have, but we didn't.
Q. But you did not, right?

A. Right.
Q. You are again trying to convince the consumer here that this score of 15 is based on real data, correct?
A. We are showing them the lowest performance on hand washing.
Q. So once again, you are convincing the consumer here that this 15 for hand washing, that this hospital's earned that 15, correct, that is what you are showing the consumer, correct?
A. Yes.
Q. So just to sum up, for the metric, staff work together to prevent errors, we have the question mark, and for hand washing, we have the gas gauge all the way to the left, right?
A. Yes.
Q. Now, you heard the testimony from Dr. Peter Romano from yesterday?
A. Patrick.
Q. And he is a member of Leapfrog's expert panel, correct?
A. His name is Dr. Patrick Romano.
Q. I am sorry, Dr. Patrick Romano.
And he testified yesterday that this penalty, and we saw the emails yesterday, right, where he used the word "penalty" in connection with the change in methodology, his testimony was that a penalty was a predictable temporary and specific consequence to a particular action or choice. Do you remember that testimony?
A. Yes.

Q. All right. And he also testified that this penalty is something that non participating hospitals can make up, right, if they just -- if they just submit the survey, correct?
A. I can't remember the exact wording of how he said it, but something like that.
Q. Okay. And then his words, again, his testimony, as soon as that hospital chooses to participate again, the penalty goes away. Do you remember that testimony?
A. Yes.
Q. Now, Dr. Romano, Patrick Romano, also wrote in the email to his U C Davis colleagues that this methodology change was just business, it was a simple business change. Do you remember that email?
A. I saw that email, yes.
Q. Now speaking of business, Leapfrog was going through something of a cash crunch in early 2024, right?
A. Um-m-m, I think so.
Q. Okay. Let's go to PX-275.4, which is in evidence.
Now, I understand that the font is a bit small, so we will amplify as we go through this.
So this is an email chain between you and Ben Troy [sp], from April 25, 2024, correct?
A. Yes.
Q. And Mr. Troy was a financial adviser; is that right?
A. Yes.

Q. Was he kind of operating as a temporary CFO?
A. A senior finance executive.
Q. Okay. And in this email, he is telling you that Leapfrog is forecast into falling short by about $540,000, correct?
A. Yes.
Q. All right. In fact, he tells you that the deficit that Leapfrog had to make up was about $900,000 more than what was originally budgeted, correct?
A. Yes.
Q. Yeah. And in his words, he says, "It is a very steep hole to climb out of; you see that?
A. Uh-huh.
Q. And then you respond to Mr. Troy, "Let's not lose focus on what managers should be thinking about 24/7 which is revenues"; do you see where you wrote that?
A. Yes.
Q. Okay, take down the document.
One of the biggest sources of revenue for Leapfrog is from these data licensing products; isn't that correct?
A. It's one of the largest sources, not the largest.
Q. The largest is the accolade licensing program, right?
A. Yes.
Q. And let's focus on -- I just want to ask you a few questions about the data licensing products.
That data for those type of licensing products comes from

hospitals who participate in the survey, correct?
A. No. Not all, no.
Q. Not all of it, correct, but a good portion of the data that hospitals submit to the survey, right, makes its way in some form to the data licensing products, correct?
A. What we license is Leapfrog's proprietary interpretation of the data submitted and also the hospital safety grades.
Q. Okay, perfect, thank you.
In fact, Leapfrog requires hospitals who participate in the survey to allow Leapfrog to use that information in a commercial manner for profit, right? Do you recognize that language?
A. Oh, God, yes.
Q. Yes. That language comes directly from the survey that the hospitals respond to, correct?
A. No offense, but it's --
Q. The question is: Does that language come directly from the survey?
A. Yes.
Q. All right. So let's take a look at some of the customers that are purchasing Leapfrog's data licensing products. Let's put up PX-324.1, and turn to 18. This is a presentation or a slide deck entitled Leapfrog Data Licensing Pricing and Fee Analysis from March of 2024. Now, just looking down the left-hand column, Ms. Binder, these are some of Leapfrog's data

licensing customers, at least as of 2024, correct?
A. I believe so.
Q. All right. And they are health plans, right?
A. The ones on this slide, I think so.
Q. Yes. So we are going to focus on this slide, all right?
A. Uh-hum.
Q. And these health plans are purchasing data licensing products from Leapfrog, right?
A. Yes, they are.
Q. Right. And when we look under the license column, there are a number of entries, and for the most part, we are seeing survey and HSG, correct?
A. For this group of --
Q. For this group of companies?
A. Yes.
Q. And that is licenses, this is data licenses of data that comes from the survey, that is what the survey denotes, correct?
A. That the ratings come from the survey, yes.
Q. Yes, exactly, right.
So just going down the line here, Humana's 2024 contract was for about $39,400, right? We are highlighting to kind of help it along?
A. Yes.
Q. And Health Net, another health plan, their contract was for

almost $57,000?
A. Yes.
Q. Blue Cross Blue Shield of North Carolina, almost $67,000, right?
A. Yes.
Q. Cigna is a little bigger, $79,000, right?
A. Yes.
Q. And Humana Government Business in 2024 was for -- looks like among the largest, almost $160,000, right?
A. Yes.
Q. All right. We can take that down.
Let's put up Plaintiffs' Exhibit 205.0, which is in evidence.
Now, this is a Business Development Discovery report for Leapfrog prepared by Steven Gause [sp], and Steven Gause was at the time in 2018, Leapfrog's Director of Business Development; is that correct?
A. That is correct.
Q. If we flip to page two, the very first page of the document, he writes, "To maximize the value of the Leapfrog Group's data for licensing purposes, the level of participation should continue to be increased so it can be perceived as the most complete data set and thus allowing defense of our pricing model and its price points"; do you see that?
A. Yes.

Q. All right. So the more hospitals that participated in the survey, the more complete Leapfrog's data set is, correct?
A. That is what this says.
Q. Okay. And the more complete the data set is, the more valuable Leapfrog's data is to potential data licensing customers, correct?
A. We never marketed it that way, and that is why he pointed it out in the memo.
Q. Okay. And the more valuable Leapfrog's data is to potential data licensing customers, the more you can, as Mr. Gause writes here, defend the prices you charge to those customers for data, correct?
A. No.
Q. Well -- and that allows you to sell more of your data licensing products, correct?
A. It has not been a factor in our sales process.
Q. So do you disagree with what Mr. Gause wrote here as your Director of Business Development? You disagree with that?
A. Disagree with what part of it? Are you asking me if I disagree with --
Q. The statement here?
A. Certainly having more hospitals report would be good, but good for transparency mostly. We have never marketed the data set based on how many hospitals are in the survey.
Q. I am not asking, Ms. Binder, about how you market it.

A. All right.
Q. Do you disagree with what Mr. Gause wrote here?
A. That it would be the level of participation could continue to increase to be perceived as the most -- sure.
Q. Okay. And your own expert panelist, Dr. Patrick Romano, said the data are not valuable if the participation is low, correct?
A. Doctor Romano is not involved at all in --
Q. That is not my question, Ms. Binder. Your own expert panelist, Dr. Romano, wrote in an email to his UC Davis colleagues that the data are not valuable is participation is low. Do you remember seeing that?
A. I saw that, yes.
Q. Okay. And, again, Dr. Romano said that your business model depends on producing data that add value for health plans and employers, and that data are not valuable if participation is low. Do you remember that language?
A. I remember seeing that language.
Q. Okay. And that penalizing non participating hospitals with that fall of 2024 change was, hence, a simple business decision, right?
A. I saw him write that. I don't agree with that at all.
Q. Now, Ms. Binder, we are going to put up -- we are going to use our next exhibit, Plaintiffs' Exhibit 322.2, and this is a memo on your compensation that you prepared for Leapfrog's

executive committee on July 12, 2024, correct?

MS. BLAIR: Your Honor, we did object to this document on relevance and we waive that objection.

THE COURT: 322 is admitted without objection.

MS. BLAIR: Thank you.

BY MR. CHUNG:

Q. Ms. Binder, do you remember the question?

A. No.

Q. So this document, PX-322.2, this he a memo on your compensation that you prepared for the executive committee of Leapfrog's board on July 12, 2024, correct?

A. Correct.

Q. And you testified during your deposition that you prepared this memo to give that executive committee time to think about your compensation in connection with your renewal of your contract, correct?

A. Yes.

Q. And this executive board of the committee of the board of directors determines compensation for you and any other executives, correct?

A. Me.

Q. You?

A. Uh-hum.

Q. All right. Directing your attention to paragraph two, you wrote, "Over the past decade, we have grown Leapfrog's visitor

influence while also growing our revenues by an average of ten percent per year". Do you see that?
A. Yes.
Q. All right. And you also recommended that Leapfrog set a goal in your contract that the executive committee include organizational revenues as a criteria for bonuses, correct?
A. Yes. We had --
Q. "I would recommend we set a goal in a contract that the executive committee include organizational revenues as a criteria for the bonus", that's the language you used, correct? And as such, you asked for, at least in this memo, for a compensation package with a base salary of $675,000, right? Correct?
A. Yes.
Q. And a retirement contribution of about ten percent of it, which would be another $67,500, right?
A. The salary here included the fringe.
Q. Okay. And that in terms of the bonus target, it would be 15 to 25 percent of the base, correct?
A. Yes.
Q. And that you asked, just to loop back, you recommended the executive committee for purpose of the bonus that they consider organizational revenues as one of the criteria for that bonus, correct?
A. Yes.

Q. All right. So the more revenues, the higher percentage bonus, correct?
A. Yes.
Q. Okay. So the package here in total would be as you set out here, $742,500 plus a bonus of anywhere from $100,000 to $116,750, correct?
A. Including fringe.
Q. Okay. Now, in terms of the penalizing the hospitals, this wasn't the first time, with our community hospitals, this isn't the first time that you penalized hospitals for not participating in the survey, right?
A. We don't penalize hospitals, that is not my job.
Q. Well, in fact, you hold a grudge against hospitals that's not participating in the survey, right?
A. No.
Q. You don't hold a grudge?
A. No.
Q. Okay. You are familiar with HCA, right?
A. Yes.
Q. Right. And they operate anywhere from 160 to 180 hospitals at any point in time, correct?
A. Correct.
Q. Right. And those hospitals had been participating in your survey until a certain point, correct?
A. They participated almost for the almost entire history, a

hundred percent participation.
Q. And in 2023, they notified you that they were no longer going to participate in the survey, right?
A. They said they were suspending participation for one year.
Q. And that got you upset and we heard that testimony yesterday, correct?
A. I was very unhappy with it and had a lot of conversations with them.
Q. Okay. And you recall that Slack messaging conversation between Ms. Campione and Ms. Cohn [sp] from yesterday; you remember her testimony?
A. Yes.
Q. All right. And you recall that Ms. Campione wrote in that Slack messaging, we were talking about changing the scoring methodology that penalized HCA; do you remember that message?
A. Not -- we weren't talking about penalizing.
Q. All right. But that was what they were talking about, correct, in that Slack message?
A. I wasn't a part of that Slack message, I don't know what they were talking about exactly.
Q. Okay. Well then, she wrote that Leah keeps grudges, correct?
A. She wrote that, yes.
Q. And that Leah was you, right?
A. Yes.

Q. But the HCA eventually did come back and so did your survey, right?
A. That's right.
Q. They gave in to the grudge, right.
MS. BLAIR: Objection, argumentative.
THE COURT: Sustained.
BY MR. CHUNG:
Q. Now, let's look at the University of California Davis where, again, Dr. Patrick Romano is a professor. Your own expert panelist, Dr. Romano, admitted that how you are treating hospitals that don't respond to the survey and gets blackmailed. Do you remember that email?
A. I saw the email, yes.
Q. All right. He tells his UC Davis colleagues you can call it blackmail if you want. You remember that?
A. I saw that email, yes.
Q. All right. Now, Ms. Binder, according to public statements, at least one public statement that you made, millions of people have used Leapfrog to make decisions without where they get their health care, correct?
A. Where did you see that?
Q. Yeah. Do you recall that you made a statement in connection with Leapfrog's Green Light Gala?
A. Oh, that was a long time ago. That is not something I would have said, let me put it that way.

Q. Now, Leapfroghospitalsafetygrade.org website, like the one we've seen kind of pieces of, received two and a half million views from September of 2024 to September 2025; is that right?
A. That sounds right.
Q. So fair to say, Ms. Binder, you are familiar with Leapfrog's websites, correct?
A. I am familiar, but I'm not a liaison, but I am familiar.
Q. Okay. And it has been your position throughout this case that those websites are transparent and accurate, right?
A. They are always as transparent and as accurate as possible. But we are always updating them because one never knows, so always, always getting better and better, we are always on an improvement journey.
Q. And this includes the hospitals safety grade website, correct?
A. Yes.
Q. And you are involved in changes made to that website, correct?
A. Sometimes.
Q. Well, let's put up one page of that website, PX-21.0 which is in evidence. And this is the frequently asked question section of the hospital safety grade website, correct?
A. Looks like it.
Q. And I can represent to you that this version of the website is as it existed around August 6, 2025.

I want to direct your attention to page two, okay, and you have the frequently asked question here, does a hospital get a better safety grade if it reports to the Leapfrog's hospital survey. Do you see where it says that?
A. Yes.
Q. And you told visitors to this version of the website that the hospital safety grade reflects how well a hospital does on safety, not whether they complete the Leapfrog hospital survey. Do you see that?
A. I said more than that.
Q. More than that, but that is how it starts out, correct?
A. That is the first sentence, that is not what was said.
Q. Ms. Binder, you changed this part of the website very recently, correct?
A. I don't know. We update and change our website quite frequently, but I don't know.
Q. Okay. Well, let's put up PX-30.0.
Same part of the website, right, frequently asked questions, right?
A. That looks like it.
Q. And I can represent to you that this is how the website looked as of November 26 2025, correct?
A. Okay.
Q. And now you are telling consumers, if we go back to the same question; does a hospital get a better safety grade if

they reports on a public hospital survey. The answer, has changed, correct?
A. The first sentence looks different.
Q. Okay. Are you -- were you involved in making that change?
A. No.
Q. Do you know who was?
A. It would have been someone on our communications team, probably, I don't know.
Q. And let's move on to the --
THE COURT: Find a convenient time for our break.
MR. CHUNG: Your Honor, I think I have maybe ten minutes more.
THE COURT: Are you going to have questions?
MS. BLAIR: Yes, we are calling Ms. Binder in our case in chief.
THE COURT: You want to do it now or in your case in chief as well?
MS. BLAIR: I can do it in my case in chief.
THE COURT: I am trying to figure out our break. I'm not asking you about preference.
MR. CHUNG: Your Honor, I think the agreement was we would do it all now.
THE COURT: Okay. The Court Reporter needs a break. We have other hearings, so let's take our 15-minute break and return at 11:00 o'clock.

(Thereupon, a short recess was taken.)

THE COURT: Okay, please be seated and please continue.

MR. CHUNG: Thank you, your Honor.

BY MR. CHUNG:

Q. Ms. Binder, before the break we were locking at a section of the hospital safety grade, the website, and we will put up 21 again.

Looking at another of the frequently asked questions, that question is: Should patients avoid a C, D or F hospital? What should people do if the only hospital in our community is a C, D or F hospital? Do you see that?

A. Yes.

Q. This is on the original -- or the previous version of the website.

Now, you put this on the website to discourage consumers from going to hospitals with these particular grades, correct?

A. No.

Q. The first thing you tell people is that the hospital safety grade should be the first tool to choose a hospital?

A. When they have a choice, the hospital safety grade is the first tool a patient should use to select a hospital.

Q. All right. Taking a step back from the document for a moment, isn't it true that Leapfrog rarely conducts on-site visits to verify survey responses it receives from hospitals?

A. We do on-site verifications for some hospitals, but rarely otherwise.
Q. Your testimony during the deposition was you conduct on-site visits for four or five out of the thousands of hospitals that submit survey responses, correct?
A. We have a team that we hire to do that.
Q. Okay. Four or five out of the thousands, correct?
A. Yes.
Q. Here you are telling patients that they should use Leapfrog's guidance and Leapfrog's resources to choose a hospital, right?
A. I'm sorry, can you say the question again.
Q. Yes. Here you say patients should use Leapfrog's guidance and Leapfrog's resources to choose a hospital?
A. No, we are saying they should use the hospital safety grade as a tool and go on to explain that.
Q. All right. But you -- this part of the website has changed, correct? Are you aware of that?
A. I am not specifically aware of what changes were made. We update the website a lot.
Q. Let us put up PX 30, which is the new version of the website.
I will direct you to the bottom of page five, which has the same frequently asked question: Should patients avoid a C, D or F hospital. Doo you see that?

A. Yes.
Q. You see the language there has changed, correct, at least the first sentence?
A. The question itself has slightly changed in wording, I think.
Q. How about the first sentence?
A. I am just reading this.
Q. Ms. Binder, are you aware -- let me get to the point. Are you aware that a change was made during the course of this litigation to the response of this frequently asked question?
A. I am not aware of the specific change. As I said, we update our website frequently.
Q. Let's talk about a different part of the website. Put up PX 66.3.
This is the about the grade section. Are you familiar with that section?
A. Yes.
Q. I represent to you this is the page as it existed on August 6, 2025. I want to direct your attention to the second paragraph which reads, "The Leapfrog hospital safety grade uses up to 30 national performance measures from the Centers for Medicare and Medicaid Services, CMS, the Leapfrog hospital survey and information from other supplemental data sources."
Do you see that?
A. This should have been updated. Yes.

Q. I direct your attention to the bottom of page one. You tell consumers that the Leapfrog safety grade methodology has been peer reviewed and published in the Journal of Patient Safety, at least on this version of the website, correct?
A. Yes.
Q. Speaking of the methodology, it is laid out in a 26-page document, correct?
A. I don't know the exact page number, but yes.
Q. It is very long?
A. Yes.
Q. You admitted during your deposition that this methodology document was not accessible to the average consumer, right?
A. It is not meant to be used by the average lay person who probably would not be interested in reading all 26 pages.
Q. In fact, it is really meant to be understood by hospital personnel, correct?
A. Researchers, hospitals, anyone who has a deep interest in the topic.
Q. And can understand what is in the methodology document?
A. Consumers can understand the content, they just aren't going to be interested in reading all 26 pages.
Q. Your testimony is that the average consumer can understand the content of the methodology?
A. They can understand the concept, yes, and how hospitals perform with the measures, the gas gauges, et cetera.

Q. The methodology document itself, the 26, 27-page document, is not meant for the average person?
A. Correct.
Q. I next show you Plaintiffs' Exhibit 203.
This is a document we saw earlier with Dr. Romano, the document entitled Expert Panel's Guiding Principles on the Development of Composite Leapfrog Hospital Safety Grade for U.S. Hospitals.
Do you remember seeing this document yesterday?
A. Yes, from 2011.
Q. And I can represent to you we retrieved this document from the hospital safety grade website on July 17, 2025.
This document sets out the principles that the Leapfrog safety grade expert panel follows in recommending how Leapfrog should calculate the grade, right?
A. It's principles that they laid out in the beginning of the safety grade.
Q. One of those principles is: Do not grade hospitals that are missing a large number of performance measures, right?
If we could highlight that section here.
A. It is principles that we laid out 14 years ago.
Q. And it says, if a hospital -- I am just going to read it. It says, "If a hospital is missing data for a large number of performance measures then a grade cannot be reliably calculated. In this situation no grade should be issued to the

hospital."

Do you see that?

A. Yes.

Q. Now, this document used to be accessible on the safety grade website, correct?

A. I don't know. Probably. I don't know.

Q. Is it still on the website?

A. I don't know.

Q. Okay. In fact, let's put up PX 29.0, which is in evidence.

When you look for those principles, that document on the website, now this is what shows up. Have you seen that?

A. No.

Q. Ms. Binder?

A. I don't follow every single change on the website.

Q. You are not aware that the expert panel guiding principles, this document, was removed from the website during the course of this litigation. Is that your testimony?

A. That is my testimony.

MR. CHUNG: I pass the witness.

CROSS-EXAMINATION

BY MS. BLAIR:

Q. Good morning, Ms. Binder. I want to talk about a few things that Mr. Chung went over. Mr. Chung showed you what was previously marked as PX 304.1, which was the board CEO report. Do you remember him showing you that document?

A. Yes.
Q. In that document you provide information to the board about the methodology change, correct?
A. Yes.
Q. And has the board ever expressed any issue to you as the CEO of Leapfrog about the fall 2024 methodology change?
A. No.
Q. And as you sit here today, do you believe your board members fully understand the fall 2024 methodology change?
A. Yes.
Q. And is it your testimony here today that you have fully informed your board of not only the fall 2024 methodology change, but the impact it would have on non-participating hospitals?
A. Repeatedly.
Q. If we could pull up PX 33.5, please.
And this is going to be the hospital safety page, I believe, and do you recall that Mr. Chung asked you questions about Good Samaritan, in particular Good Samaritan's hospital safety page, correct?
A. Yes.
Q. And he kept asking you about whether or not Good Samaritan earned their grade. Do you recall that?
A. Yes.
Q. Is it important to Leapfrog that this grade is a composite

score of multiple measures?
A. Very important.
Q. Can you explain to the Court what it means that this grade is a composite measure?
A. It incorporates 32 measures of patient safety and it puts them together so that we can evaluate a hospital's safety record on a whole variety of factors and no one factor would outweigh another. You have to look at the full picture of patient safety, and that is why we are careful to include the best publicly available measures that can give us the well-rounded picture.
Q. Is this grade solely reflective of the four imputed measures that we have been talking about for days now?
A. Absolutely not.
Q. What other information does Leapfrog have in order to calculate the composite score?
A. Most of what we use are measures from the Centers for Medicare and Medicaid Services, CMS. That is the majority of the measures that we look at.
Q. One other thing. Can you scroll down. If we go to hand washing, I want to emphasize this. If we go to the hand washing -- right here, okay.
We're on doctors order medications through a computer, do you see that?
A. Yes.

Q. That would be the BCMA -- no, CPOE measure.
If you scroll down to the actual numerical score, it says 15, and the worst score there is 15?
A. Correct.
Q. Mr. Chung asked you if that number was earned, if that 15 was earned, correct?
A. Correct.
Q. And is it the position of Leapfrog that how this hospital performs on hand hygiene is in relation to the Leapfrog standard for hand hygiene? Do you understand what I mean by that?
A. Right. We are evaluating whether they meet Leapfrog's standards for the measures that are here.
Q. Is it enough -- to get a hundred out of a hundred points on the Leapfrog for this measure, CPOE, is it enough to simply have a CPOE policy in place?
A. No. It is a much higher and tougher standard.
Q. In fact, is there a test that Leapfrog requires hospitals to perform in order to get more points than this 15?
A. Yes. We are very proud of the test that is on the Leapfrog hospital survey that allows hospitals to test whether or not an order entered by a physician would harm the patient.
So, there are -- medication orders are the most common error made by hospitals, and it is very easy to do, the wrong dose, the wrong medication that interacts with another

medication badly, harms the patient.

Lots of problems can happen with medications. Our test says to the physician are you properly alerted when you have ordered something that would be dangerous to the patient.

Q. And that test was developed by a separate expert panel on the CPO measure?

A. Literally --

MR. CHUNG: Your Honor, there is a fair amount of leading.

MS. BLAIR: I understand. I will cut it down, I agree. If you could take that down and pull up PX 23.

BY MS. BLAIR:

Q. This is a website page, how to use the grade. Do you see that?

A. Yes.

Q. If we scroll down, Mr. Chung showed you this portions, what measures are most important. Do you see that?

A. Yes.

Q. And your testimony -- I want to make sure that you read -- he didn't let you read that. Is there anything in the first paragraph that you would like to talk about in terms of how Leapfrog presents the hand washing factor to the public?

A. Yes. We say, does your hospital have a hand washing policy. We do not say do all of your staff wash their hands, we ask if they have a policy, and we also list other kinds of

examples of measures that could be very important.
Q. You were here for Mr. Romano's testimony?
A. Yes.
Q. He pointed out the phrase "every person will have different ideas about what is most important to them." Do you see that?
A. Yes.
Q. What do you recall about Dr. Romano's testimony on that issue?
A. Sorry, I don't recall.
Q. Do you agree with the statement that every person has different ideas about what is most important to them?
A. Absolutely. That is why we provide so much information on each hospital.
Q. If you'd pull that down, thank you. If you could pull up PX 33.5.
This is the staff works together to prevent errors. Do you see the decline to report?
A. Yes.
Q. Decline to report and a question mark?
A. Yes.
Q. We talked a lot about this icon on your website.
Do you have an understanding as to why certain measures have a question mark on the icon and then other measures like BCMA -- other structural measures like BCMA, CPOE, hand hygiene, and IVS do not?

A. Because some measures -- this measure in particular is our process measures, the other measures are structural measures. We have reason to know that the hospital has in place structural measures and that is why they are subject to imputation, but for the process measures the expert panel didn't think it was a good idea to use them.
Q. Mr. Chung asked you some questions about Dr. Romano's testimony with respect to a penalty. Do you recall that?
A. Yes.
Q. Does survey participation automatically equal an A or a B grade?
A. Absolutely not.
Q. Are there hospitals that participate in the Leapfrog survey that receive Ds and Fs?
A. Yes.
Q. Is Dr. Romano right that while it may be a penalty, it is something you could make up --
MR. CHUNG: Objection, leading.
THE COURT: I am having a hard time sorting out which part is cross and which is direct. That part is probably cross, so I will overrule the objection.
Maybe you could do it in terms of segments.
MS. BLAIR: I am trying to go through some things quickly. I apologize.
MR. CHUNG: Your Honor, I believe these questions are

direct examination.

THE COURT: I thought she was doing both.

MS. BLAIR: I will try to keep the leading to a minimum. I am trying to move this along.

THE COURT: All right.

MS. BLAIR: Thank you, your Honor.

BY MS. BLAIR:

Q. Do you believe that a hospital that earns limited achievement for nonparticipation for the four BCMA measures can still earn an A or B under the composite score development of this methodology?

A. Yes, they do.

Q. If we look at 275.4, this is the email between you and Ben Choi. Do you recall seeing this?

A. Yes.

Q. At that time, Ben Choi, what was his position with Leapfrog?

A. He was an adviser on finance, serving an executive function.

Q. If we go down to the part highlighted by Mr. Chung, you say, "We can address incremental spending, but let's not lose focus on what managers should be thinking about 24/7, which is revenues.

Do you see that?

A. Yes.

Q. What happens if a CEO of a small not for profit corporation like yourself takes its focus away from revenue?
A. The entire mission is in danger. We have a very small budget, very small staff, everybody has to be working to ensure that we are able to preserve the mission.
Q. You can take that down, thank you.
I want to pull up this document, but Mr. Chung showed you PX 324, which was the health plan licensing fees. Do you recall that?
A. Yes.
Q. It had some insurers on there. Do you recall that?
A. Yes, yes.
Q. I want to be very clear for the Court, I want you to explain to the Court what is Leapfrog selling when it sells a data license for the survey or the safety grade?
A. We are selling Leapfrog's intellectual property. We are selling our interpretation of the data we received from hospitals or the data that we have taken from CMS.
We score hospitals through this expert panel process that we talked about, and we -- but we score them and we set standards on the survey for how we expect hospitals to perform, and then we score them on how well they do at meeting those very high standards.
So, what we license are our -- our interpretation of the grades, whether they met our standards.

Q. Does Leapfrog sell a hospital's raw data to anyone?
A. No. Sorry.
Q. That's okay.
A. No.
Q. You were shown also PX 205, which is the February 13, 2018 business develop discovery report that was made by Darren Goust. Do you remember that?
A. Yes.
Q. Mr. Chung showed you a part of that which he interprets as you can increase prices for data sales based on the number of hospitals in the survey. Do you recall that?
A. I think Mr. Goust was suggesting we could do that.
Q. And Mr. Chung showed you that between 2023 and 2024 participation increased between 69 percent and 79 percent. Do you recall that?
A. Yes.
Q. Despite that increase in survey participation of ten percent between 2023 and 2024, did the price of licensing a data set increase in any way?
A. Not to my knowledge.
Q. So, to your knowledge, does the price of a data set depend on how many -- the price of the Leapfrog data, not the hospital data, that you are selling in a data set, does it depend in any way on the number of hospitals that participate in the survey?
A. No. The only price increases have been inflation, but it

has never been based on anything to do with the number of hospitals.
Q. And remember Mr. Chung talked to you about Dr. Romano's testimony where Dr. Romano talked to his UC Davis colleagues about the value of the data was in increased participation. Do you recall those questions?
A. Yes.
Q. And do you recall whether or not -- do you recall what Dr. Romano said about what he thought the value of that data was?
A. Yes.
Q. And what do you recall about that testimony?
A. The value was to our mission, and that I agree with him entirely.
Q. Do you have any reason to believe that when Dr. Romano wrote that email he even knew that data sets were being sold?
A. No. We never discussed anything like that with him.
Q. Do you recall Dr. Romano's testimony about his email where he said to his UC Davis colleagues it is a simple business decision? Do you recall him testifying to that?
A. Yes.
Q. What do you recall Dr. Romano describing as what he believed the business of Leapfrog was?
A. Transparency. He talked about transparency in the mission and that is why he is volunteering to do the work for us. He is a significant researcher in this space, we are very, very

fortunate to have his volunteerism.
Q. And Mr. Chung asked you some questions about website changes. Do you recall that?
A. Yes.
Q. If we could pull -- let me ask you this.
In PX 21, do you recall him showing you some language in the -- in response to the question, the FAQ: Does the hospital get a better safety grade if it reports the Leapfrog survey? Do you recall him calling that page up?
A. Yes.
Q. The first version of it says that people should avoid C, D or F hospitals and they should use the safety grade as a "first tool." Do you recall that?
A. I don't think it said they should avoid C, D, F.
Q. Fair enough. Do you recall it said they should use the safety grade as a first tool?
A. Yes.
Q. And then he showed you a second version, which he claims is a new version, and the new version now says that a patient -- or a consumer should use the hospital safety grade as a, quote, resource and guidance, correct? He showed that to you?
A. Yes.
Q. In your mind as the CEO of Leapfrog, is there any distinction between a tool on the one hand and a resourcing guidance on the other?

A. No.
Q. Thank you. Can you, Ms. Binder --
MS. BLAIR: Judge, I am going to get into my direct examination. I know you have something at 11:30.
THE COURT: So this is a convenient time to stop is what you're saying?
MS. BLAIR: Yes.
THE COURT: We will stop now and return at 12:30. At that table will be some in-custody people and Marshals so --
MS. BLAIR: We need to move our things. Jeannie told us.
THE COURT: I can always count on Jeannie.
(Thereupon, a luncheon recess was taken.)
THE COURT: Okay, please be seated and please continue.
MS. BLAIR: Thank you, Your Honor.
BY MS. BLAIR:
Q. Ms. Binder, how long have you been the President CEO of Leapfrog?
A. Eighteen years.
Q. When you started as the CEO of Leapfrog, was the CR in place?
A. Yes.
Q. Was the safety grade in place when you started?
A. No.

Q. Could you just sort of explain to the Court what your duties are as the CEO and what are some of the first things you did when you became CEO?

A. My responsibility is a reporting to the board to manage operations of The Leapfrog Group and carry out the strategic plan and be the strength of the organization and be the face of the organization externally as well.

When I started at Leapfrog, one of the first things that I did was testify in Congress. There was interest in the hospital-acquired infections, and I was asked to testify about Leapfrog's perspective on behalf of our founders, who were and are employers and other purchasers and how to benefit Leapfrog and what was the perspective of purchasers on hospital-acquired infections, and what I testified to as Leapfrog has done many times since then, is that we wanted those to be publicly reported by the hospital, and we wanted CMS to require that.

At the time when I testified that, it was considered -- that it was not considered something that was never going to happen. People had called for it in the past, and Leapfrog has been a consistent voice on transparency and wanted public reporting on a mandatory basis by a hospital on real critical issues like hospital-acquired infections, and so I testified and two years later, it happened, we actually did get public reporting.

Q. And so just to orient everybody, we have been talking about

CMS data here for a very long time. When you testified before Congress, was CMS publicly reporting the data that we now see in 18 of these 22 measures that we have been talking about?

A. No. They were not, it was very little.

When Leapfrog was founded in 2000, we had nothing at all that were publicly reported, virtually nothing on how hospitals were doing on safety and quality by a hospital, we had virtually nothing.

The hospitals themselves were monitoring many of those data points, but they weren't required to make it public and weren't making it public and that is why Leapfrog was founded.

Q. Do you consider CMS or do you consider Leapfrog to be a catalyst in CMS publicly reporting data?

A. Absolutely. And a lot of that happened before I started at Leapfrog. The founders of Leapfrog were instrumental in being a voice for transparency publicly by hospitals in the early 2000s. That was Leapfrog's core mission actually and was advocating for that transparency and continues to be a major advocacy point for Leapfrog. It is part of our mission, it is part of our work is to make sure transparency is primary in this country.

Q. Ask who founded Leapfrog.

A. There were a group of employers, they come from companies like Boeing, Marriott, and several auto makers were very actively involved.

And then after these individuals founded Leapfrog, they were then given funding from the business round table, which is a non-profit that represents CEOs of Fortune 500 companies and that group supported Leapfrog for its first two, three years as well as a grant from the Howard Johnson Foundation and it was -- but it continued to be driven by the purchasers of health benefits.

Q. And in your own words as the CEO of Leapfrog, why do you believe in the mission of Leapfrog?

A. Hospital care is extraordinarily important to me personally as a citizen, as a mother, it is extremely important to me. Hospitals are something that any of us could be there right now, something could happen to any of us right now and we all have an urgent need for hospital care. And if that happens, we all want the reassurance that where we go, they will treat us with dignity and they will treat us with the highest regard for our safety and quality of our life. And so it is just deeply important to me that we have excellent hospital care in this country, and I believe that Leapfrog has had an enormous influence on seeing true improvements on patients' safety in this country.

Q. So I want to talk a little bit about the structure of Leapfrog. The Court saw some video testimony of Karen Bonsolillo played in the Plaintiffs case in chief and she is part of the board of directors, correct?

A. Correct.
Q. And she is also the President of the Florida Health Alliance, correct?
A. Yes.
Q. And as the Florida Health Alliance, are they members in some way with Leapfrog?
A. We call them a regional leader. We have about 35 regional leaders, these are business coalitions on health like Libertta Covagen [sp] that are really Leapfrog and they represent us in their region. We have members who they represent us in their region on behalf of their members who are employers and other purchasers. They ask hospitals and ASCs to report to the survey and they use the data often to, for instance, give awards when hospitals do well, show improvement, you know, they really want to give feedback to hospitals and their performance.
Q. And Leapfrog has several advisory committees, correct?
A. Yes, we do.
Q. Why do you have advisory committees?
A. Because we have some many constituents with a strong interest in everything that Leapfrog is doing, and also we rely on the advice from a variety of people to make sure that we are doing what we need to be doing in terms of driving for improving patient safety.
Q. And you have a Patient and Safety Expert Panel, correct?

A. Yes, we do.
Q. What does the Patient and Safety Expert Panel do for Leapfrog?
A. That is actually the Patient and Family Expert Panel.
Q. Sorry, Patient and Family Expert Panel, my apologies.
A. Well, they advise us on quality and safety measures that we should be considering and standards that we should be setting for how patients are -- how from a patient's perspective, quality and safety are occurring in the hospital.
So they give us advice. For instance, they gave us a lot of advice on a standard we put in the survey around patient consent, and they helped us to understand from a patient perspective how best practices should be, and we consider that an expertise that patients bring to the table.
Q. And do you consider patients to be the consumers of Leapfrog products?
A. Definitely.
Q. And I just want to talk a little bit about the hospital survey that we heard about for days.
Can you just tell the Court just very briefly about how and why the survey was conceived back in 2001?
A. Well, again, back in 2001, you had virtually no information at all about how hospitals are doing on very important issues, like infections. We just didn't know how good a job they were doing, and we had nothing publicly reported, and that was done

after, I mean, I think the hospital industry traditionally has not embraced transparency, that has not been one of the cultures among hospitals.

I think Leapfrog changed that, you know, it was a very significant force in changing the culture of health care to say, consumers deserve to know how you are doing and what we have seen is leadership from hospitals and actually made that happen as well.

So, anyway, that is a result of that lack of transparency, and employers said what can we do, and that is when Leapfrog was born.

Q. And we talked a lot about a lot of expert panels over the course of the last few days. Are there separate and distinct expert panels for the survey measures that occurs in the hospitals --

A. Yes, there are.

Q. And do you know approximately how many expert panels Leapfrog puts together for those various survey numbers?

A. I think something like ten.

Q. And are those expert panel members also volunteers?

A. Yes, they are all volunteers.

Q. And do those expert panel members, and I want to talk specifically about expert panel members that oversee CMA, COE, hand hygiene, the ICU physician standard, are those volunteer expert panels independent of let's say like the Dr. Ramonos

that sit on the Safety Grade Expert Panel?
A. Yes, they are all.
Q. And what is the ultimate goal of the survey?
A. Transparency and striving for improvement.
Q. And is the survey free for hospitals?
A. Absolutely free.
Q. And does Leapfrog provide any other free services to hospitals who complete the survey?
A. It is a considerable investment to us to provide those kinds of support and services, programs, webinars, and we do offer a help desk, we offer significant resources to help them in completing the survey.
Q. And I believe you testified earlier that participation in the survey has steadily grown over time, correct?
A. Yes.
Q. And as participation in the survey has gotten larger, has Leapfrog had to add resources?
A. Absolutely.
Q. And why have you had to add resources with respect to a growing number of participants in the survey?
A. Well, the survey is our most expensive asset, it is very, very expensive, because we want to do a first class job on the survey, so we have a help desk, we have all those resources from hospitals completing the survey, so the tools of programming. We also have a lot of research that goes behind

the survey, so when hospitals go into the survey, there are a lot of resources that are evidence based, everything that we have in our survey so that hospitals become aware. Many hospitals, I have been told, many hospitals use the survey as actually kind of a checklist, you know, what are the best practices that are out there in the broader world for improving our safety. And so all of those resources, research, and education adds to the surveys itself, it is a very expensive resource and we're proud of it.

Q. And Leapfrog uses its revenue to pay for those resources to put out these free products to your hospitals and consumers?

A. Yes.

Q. And there has been a lot of discussion in this case about Leapfrog not having any verification process over survey results. You heard that as we sat here for the last few days?

A. I think I have, yes.

Q. Does Leapfrog have a verification process for its survey data?

A. Yes, it is extensive verification.

Q. And why is it important for Leapfrog to have a verification process surrounding the survey data?

A. Well, first of all, people make mistakes. Let start there. When you are submitting data to the Leapfrog survey, people make mistakes and we catch those mistakes. There has to be a whole series of processes, programming, et cetera, in place to

be able to make sure we are catching them, so there are mistakes. And sometimes there's misinterpretation of our questions. We want to make sure all hospitals are reliably interpreting questions so that it is apples to apples comparison once we rate them based on the data they have given us, so we check for a whole variety of the areas where there may have been questionable responses.

And then we look for things where it just doesn't make sense or things just don't work. And then we also get documentation. Frankly, there might be somebody who is deliberating giving us the wrong information. That can happen, and so we have extensive documentation requiring that we impose on a handful of hospitals.

Q. And you recall Mr. Chung in his examination talked to you about the attestation at the end of the survey; do you recall that?

A. Yes.

Q. Mr. Moddy, if you could hold that up, I don't have the exhibit number in front of me, we will have it in a second.

While we are waiting for that, why is it important for Leapfrog to have hospitals who participate in the survey sign an attestation?

A. We want them to stand behind what they report to us.

Q. And this is Exhibit DX-470, it has already come into evidence. Is this the attestation that Mr. Chung was asking

you about?
A. Yes, it is.
Q. And is it a fairly lengthy couple of paragraphs, correct?
A. Yes.
Q. And we will talk about the one sentence that Mr. Chung pulled out of this.
What is the intent of this attestation on the survey?
A. For the hospital to stand behind us and also to assure they are aware that the rates that we derive from the data that they give us will be used by us.
Q. And you say here, you know, it says, "As the hospital CEO, or an employee of the hospital to whom the hospital CEO has delegated responsibility, I have reviewed this information pertaining to", you see that?
A. Yes.
Q. And is this the first part of the verification process that saw?
A. Yes, this is where the CEO was actually presenting to it.
Q. And does Leapfrog expect the CEOs of hospitals to be truthful when they sign this attestation?
A. Absolutely.
Q. Now, I want to bring your attention to the sentence that Mr. Chung had, I'm trying to find it here. Buried somewhere -- would you highlight it for me Mr. Moddy, I apologize.
"The hospital and I acknowledge that the Leapfrog Group may

use this information in a commercial manner for profit". Do you see that?
A. Yes.
Q. And that is the line that Mr. Chung pointed out to you, correct?
A. Yes.
Q. Can you tell the Court, has Leapfrog ever used hospital data for -- in a commercial manner for profit?
A. No.
Q. And, in fact, Leapfrog -- is Leapfrog a not for profit organization?
A. We are not for profit, we are not doing anything for profit, this is --
Q. When is the first time you saw that sentence?
A. In this litigation is when I first noticed it.
I mean, honestly, this is in a courtroom, but this is over lawyering. We had a lawyer who over wrote this. This is not what we do. But it is in the interest of full disclosure, I'm trying to say, that the ratings that we derived from our data can be used by organizations that themselves are for profit. You saw some of those health plans that can use our ratings, but the wording of this was a little much.
Q. You can take that down, Mr. Moddy, thank you very much.
And you just talked a little bit about how your expenses increase as hospital participation in the survey increases.

And so my question is, in the fall of 2024, was Leapfrog hoping to expand hospital participation to increase revenue?
A. No. Not to increase revenue, you always want more hospital participation.
Q. Is the mission of Leapfrog to increase hospital participation?
A. Yes. We want hospitals to be fully transparent and the best tool we have for that is the Leapfrog hospital survey.
Q. And as the President and CEO of Leapfrog, what do you say to the criticism of these five hospitals that the survey is just too burdensome to complete?
A. Well, hospitals in this country are asked to do a lot of things to demonstrate and to honor their own quality of care.

We talked a lot in the last few days about the Joint Commission. All five of the hospitals in this case are Joint Commission accredited, and that is an extensive amount of work to be accredited by the Joint Commission. And they do other things, registries, all kinds of different programs that they produce and there are lots of them out there.

Leapfrog has one purpose and that is transparency. Most hospitals have no other quality or safety work they are doing directly tied to the purpose of transparency to the public they serve.

So Leapfrog is 48 hours of staff work, maybe more, maybe less, depending, but it's about two weeks of staff time once a

year for the express purpose of public reporting by hospitals, and that is why I get that that can be burdensome, but it is also the only thing they are doing for transparency. And so we stand by and congratulate and we are grateful to the hospitals that are that committed to transparency.

Q. And in 2012, after the survey had been in place for about ten, 11 years, did the board of Leapfrog decide to watch the hospital safety grade?

A. Yes, they did.

Q. And I want to talk about the board.

What can you tell the Court about the organization and the board being involved in the concept of the hospital safety grade and why it came into being?

A. In 2010, there was a lot of conversation nationally in the country about patient safety because it was the ten year anniversary of a report that had come out called "To err is human". That report broke open the patient safety movement, it was done by -- and it was front page in the New York Times that a hundred thousand people were dying of preventable -- that up to a hundred thousand people were dying of preventable medical errors in hospitals and it changed nationally around patient safety and became a major issue, it got to the White House level, actually.

And so Leapfrog was founded because of that, the call to action around patients saying how can we be better. And the

employers of Leapfrog felt that we needed to have an open marketplace so that hospitals would publicly report how they were doing that safety and their employees would be able to compare hospitals when they were making decisions about where to seek care, and then that would create a better marketplace. The founders were people like the auto makers who said, our products and services are held up to a high level of scrutiny, we are in Consumer Reports, all over the place, our products and services are compared against our competitors in a very open and transparent market and that made us better, so let's try that for hospitals. That was the whole purpose and so ten years later, we are saying, well, have we seen progress on patient safety, ten years in, ten years in into this movement around patient safety and the answer was there were several different studies done that year, again, to let us know, no, no progress at all. In fact, there was some evidence it was worse than we thought, we could measure patient safety better by then, so it was very bad, and it really was very frustrating to the members of our board, and certainly to everyone, I mean, the hospital themselves were frustrated.

And, so, Leapfrog's board really took this to heart and said are we going in the wrong direction? Is this whole idea of an open transparent market among hospitals allowing people to know how hospitals are doing, not just a failure or what, what do we need to do.

And what they concluded was, it is a process that works, an open competitive market works, but the reason it is not working in this case is because it is not mandatory to make public how you are doing on patient safety as a hospital. It is not mandatory, so that means that the hospitals that aren't willing to report to the survey aren't having to make their data public, that's its function and it is not working. At the time, we were advocating strongly for mandatory reporting by CMS and then that happened to enable us to launch the hospital safety grade.

Q. Okay. And so by the time 2012 comes around, Leapfrog has CMS data at this point, correct?

A. Yes.

Q. And we talked about it earlier, Leapfrog's Hospital safety Grade is a composite grade, correct?

A. Yes.

Q. And just briefly, very briefly, it consists of what different kind of measures?

A. Well, really two buckets. One is process structural, and then the other is outcomes. So outcomes are incidents, complications, infections, deaths from preventable problems in surgery, things like that. So really all in the bucket of safety, but things that you just don't ever want to have happen when you are in the hospital. That is half of the grade.

Then the other half are what we call process structural

measures. So those are whether or not the hospital has in place the kinds of mechanisms that are needed structurally to prevent these and to sustain any -- to sustain their performance on improving safety in the hospital, so for instance, if they have a low infection rate, we also want to know, do you have in place the mechanisms necessary to sustain that.

Q. And I skipped over this earlier, but your background, what is your background in, in terms of your former experience?

A. I have -- I work mostly in health policy, that's where I got my start, National League for Nursing, doing health policy on nursing shortage, that's a specialty, and then I worked in Government for awhile in the City of New York, and then I worked for a hospital system in a rural part of Maine. So I went from New York City to Maine, but people are people everywhere, it is amazing. And that is where I learned a lot how hospitals are run and graded.

Q. And turning back to the safety grade, was it important to the Leapfrog board that there was transparency with hospitals and consumers around the calculation of the safety grade?

A. Yes, absolutely, extremely important.

Q. And did that remain true today?

A. Yes.

Q. And what are some steps you take with the public, we've heard in testimony previously about the methodology and changes

are published, specifically the fall 2024 changes. Can you just talk very briefly about the communications that you sent out to keep transparency alive with both hospitals and patients, and employers?
A. Well, we do, we have a series of communications that we send routinely, like a monthly news letter and I do a routine as letter, things like that. So just sort of send general updates to our constituents who sign up and say they are interested. And then we also do press releases, press announcements, and we have all of our educational programs, what's called the -- education that we run.
Q. And are those things you just talked about, are those free to the public?
A. Yes.
Q. And I want to talk about some of the --
A. I should say, sometimes we charge registration for like our annual meeting for some things, yeah.
Q. I'm sorry. Thank you for that clarification.
So we heard some things said like hospitals that don't participate in the Leapfrog survey automatically get an F or it's pay to play.
I know those are in this litigation, but as President and CEO of Leapfrog, have you heard those sorts of tropes before?
A. Before this litigation, I heard them about 12 years ago when we first launched the safety grade. The first year or

maybe two years of the safety grade, we would hear it is pay to play operation, you get an A or something like that. We used to hear those kinds of things.

That stopped happening, and at first, we heard it all the time, but then they stopped. The reason they stopped is because we simply discredited those because they were not true. It is not true. Nobody pays to do a survey, and we don't get paid to give someone and A, that never happened, and we simply discredited it with the media which in turn led to some hospitals, they didn't want that with their own reporters that they had told a deliberate -- or they told something that wasn't true.

So it wasn't a good press strategy, put it that way, and eventually we stopped hearing that and then this litigation came back, and all of it came back.

Q. And if we could pull up DX-402. I believe this is already in evidence. Ms. Binder, I'm showing you the technical overview of the hospital safety score for 2012. Do you see that?

A. Yes.

Q. And fall of 2012 was the year that hospital safety grade was first launched.

MR. CHUNG: Objection, Your Honor, this is not admitted.

MS. BLAIR: I thought it was.

MR. CHUNG: If counsel can lay a foundation first.
MS. BLAIR: Sure.
BY MS. BLAIR:
Q. Ms. Binder, let me just ask this, in 2012, were you CEO and President of Leapfrog.
A. Yes.
Q. And have you ever seen this document before?
A. Yes.
Q. And do you recall that the presenter here is Missy Danforth, Senior Director; do you see that?
A. Yes.
Q. And do you have a recollection that you were involved, at least in creating part of this document, as related to these tropes that we were just discussing?
A. Yes.
Q. And in 2012, you were intimately involved with regard to the hospital safety grade and communicating to the board regarding issues surrounding the first launch of the safety grade?
A. Absolutely.
MS. BLAIR: And Your Honor, I would ask that this document, DS-402 be admitted into evidence.
MR. CHUNG: No objection.
THE COURT: 402 is admitted.
(Whereupon Defendant's Exhibit 402 was admitted

for Evidence.)
BY MS. BLAIR:
Q. And if we could go to page 25, please. Just scroll up so we can see the heading here. Questions, do you see that, answers to frequently asked questions?
A. Yes.
Q. We have seen other frequently asked questions that have been shown to you in your examination by Mr. Chung.
Clearly, this could have been frequently asked questions that Leapfrog basically just launched, correct?
A. Correct, but it is a term of art.
Q. Okay. And that was my question. So by this point in time, 2012, had you heard a lot of different things at this point regarding the safety grade survey?
A. I can't remember the exact date in 2012 when this happened, but I can say that after the original launch of the safety grade, we had so much attention to it that we definitely heard everything.
Q. Okay. And then in 2012, Leapfrog is hearing, you have to complete a hospital survey to get an A. Do you see that?
A. Yes.
Q. Was that true in 2012?
A. No. Never true.
Q. Is that true today?
A. No.

Q. And if we scroll down, Mr. Moddy, thank you very much.
Leapfrog charges thousands of dollars for its survey and/or to participate in the hospital safety score. You see that?
A. Yes.
Q. And, in fact, Leapfrog responds that surveys have always been and continues to be free of charge to participating hospitals. You see that?
A. Yes.
Q. Is that true today in 2026?
A. That has always been true.
Q. And the next bullet point: Hospitals receive hospital safety scores at no charge. Is that true today?
A. That is true and has always been true.
Q. If a hospital wants to use their safety score commercially in a paid advertisement, for example, then there is a licensing fee. Do you see that?
A. Yes.
Q. And there has been some discussion in this Court about accolades licensing? Do you recall hearing that?
A. Yes.
Q. And is the accolade licensing that we've all been discussing, did that correspond with that bullet point there?
A. Yes.
Q. And are you aware of any other health care rating, health care ratings organizations that also charge for the use of

their logos?
A. Yes, it is common practice, like Health Grades, U.S. News.
Q. And if you could scroll down, Mr. Moddy. Here's the next one. Leapfrog manipulated the data and did not allow hospitals or others to confirm the accuracy of the data. Do you see that?
A. Yes.
Q. And we heard that here today in this case, right, that hospitals who participate manipulate their data because there is no verification, correct?
A. I think they imply the thing is no good, yeah, something like that.
Q. But that wasn't true in 2012?
A. That wasn't true and isn't true now.
Q. And if we can scroll down, Mr. Moddy. And then it just say, what to expect, right? You see that?
A. Yes.
Q. You can take that down.
And so many of those same things are things that you had to defend against since 2012, correct?
A. Absolutely.
Q. I want to talk a little bit about revenue. We already covered that just a little bit.
Can you tell the Judge what the various sources of revenue are for Leapfrog that make up the eight million dollars per

year that you have in non-profit revenue?
A. Sure. We have -- some of our revenue, about three million of it comes from what I would call standard non-profit fund raising, so sponsorships, donations, registrations for our meetings, et cetera.

So those are standard practice for non profits. We also derive some income from selling reports based on what we are seeing for trends in the data and patient safety, and then we license our data, we talked about that a lot, we have health plans and others that want to incorporate our ratings, not the data we got from hospitals, but out ratings into their own report.

So for instance, a health plan that wants to put Leapfrog ratings of different hospitals into their finder tools that they did their own growing, they will pass a fee for that, and then we also -- our top source of revenue is accolade sales, so those are the A logo that hospitals would earn or other types of top hospital logo. Logo only. We also give -- they can use it for free.

So, if a hospital wants to use their top hospital designation from us, they can use that for free, we give them a press release, we give them a tool kit, if they want to use the logo, we do charge for that.
Q. Why do you allow hospitals to advertise those grades even if it is for free?

A. Because it really meets our mission. We want hospitals to take pride in improving their safety, we want a market for patients' safety, we never had that until Leapfrog came along and said, you know what, we want you to get a pat on the back if you are good in patient safety. Up until now, they have got nothing, there is no transparency and there is nothing, a hospital does a great job and puts a lot of attention to hand hygiene and anything else, there is no response from the market, they get paid the same, health community never pays attention to them, everything was tough, too bad, you did that.

And that is not how you run a functional market. So we wanted to say, we will give you accolades for that, and we want them to tap those accolades, we want them to showcase to the community they serve that they are doing a good job.

Q. Is another source of revenue for Leapfrog fund raising, and we heard from Ms. Jupiter, yeah?

A. Yes.

Q. And Leapfrog gets grants, correct?

A. Yes.

Q. And there has been an allegation in this case and I want to be very clear, does Leapfrog generate any revenue from selling consulting services to help hospitals get better grades?

A. No. Absolutely not, and we never have.

Q. Is there an incentive, financially, to Leapfrog in giving hospitals failing grades?

A. The opposite. If we really wanted to make a lot of money, which we do a lot of things that are solely at mission and not at finance, if we wanted to make a lot of money, we would never give Ds or Fs, we would only give high grades. What other rating organizations will do is go to the top performers and that's it and then you saw it on the accolade, that is how they make a lot of money, a lot of money. And we don't do that, we lists all performance category, we call it like we see it.

Q. There was some discussion with Mr. Chung about the money that Leapfrog, the revenue that Leapfrog generates from data licensure. Do you recall that?

A. Yes.

Q. The only types of data licensure that you sell survey and hospital safety grade data?

A. No. We have some other reports and analyses that we do, we have something called value base purchasing program, where we help health plans with composite scores and things like that that will help them to structure payments incentives and things like that.

Q. I want to talk about the creation of the hospital safety grade website. Very briefly. You understand that the hospital safety grades are displayed on the website called hospitalsafetygrades.org, correct?

A. Yes.

Q. And could you tell the Court how that website came into

being. What did Leapfrog do to make sure it had a fully functional useable website in or around 2012?
A. Well, when we first launched the safety grade in 2012, we prepared a website which was just what we thought internally with a very small staff would convey the grades appropriately, but we heard back from our own constituents as we do always, our constituents are very active in Leapfrog, they tell us everything. And they come back to us and said we don't think your website is understandable to the public, it is just not good enough. And so I was very fortunate to be able to get a grant from the Robert Wood Johnson Foundation for $200,000 right away because we needed to move quickly to change the website and we didn't have a lot of -- Leapfrog didn't have a lot of money and we certainly didn't have it then and we got this grant to bring in an expert on communications to help us to structure our website so it could be understood by people with a six to eighth grade reading level, and that is how we ended up developing the platform that we really still have today.
Q. And I am going to show you what has been marked as DX-317.
MS. BLAIR: I believe there is an objection to this document, Your Honor.
MR. CHUNG: Just one moment, Your Honor.
Your Honor, once counsel lays a foundation.
MS. BLAIR: Fine, Your Honor.

BY MS. BLAIR:
Q. Ms. Binder, right in front of you on the screen, is a contract for consulting services, educating the public on patient safety. Do you see that?
A. Yes.
Q. If we can scroll to the bottom, full disclosure to the Court, this document is not signed because it is 14 years old, but we tried to get what we could.
In looking at this document and preparing for your testimony for trial, do you recall signing this contract?
A. Yes, I did.
Q. Okay. If we scroll up to the top of this document, it says that the purpose was to engage the services of contractors rather than strategies for usability and navigability of the hospitals' AT score website and app. Do you see that?
A. Yes.
Q. Is that consistent with what you just testified to, to the Court, that you got a grant and used that $200,000 grant money to design a website that was user and consumer friendly?
A. Yes, with Chris Zarcadoolas, the health agency expert.
Q. And in seeing this document here today, does this document represent the contract that Leapfrog entered into with Chris Zarcadoolas?
A. Yes.
MS. BLAIR: Your Honor, I ask that DX-317 be admitted

into evidence.

MR. CHUNG: No objection. Your Honor.

THE COURT: What was the number again?

MS. BLAIR: I'm sorry, DX-317.

THE COURT: All right. 317 is admitted.

(Whereupon, Defendant's Exhibit 317 was admitted For Evidence.)

BY MS. BLAIR:

Q. With respect to this scope of work, Ms. Binder, you will see that it says, "Working under the direction of Leah Binder, the contract will perform the following": And it's a report and full analysis of website app and media messaging as it pertains to literacy load and active communication in diverse populations, correct?

A. Yes.

Q. Do you recall whether or not in respect to this contract that Ms. Zarcadoolas performed any user experience testing with respect to the website that was going to be rolled out?

A. Yes, we did considerable testing.

Q. And it does refer to an app. Do you see that, it says website app and media messaging?

A. Yes.

Q. Did Leapfrog ever have an app?

A. We had an app for awhile, but we don't anymore.

Q. Okay. And if we continue to scroll down under the scope of

work, the period of performance was October 15th, 2013, through October 2014, correct?
A. Correct.
Q. And the payment for these services, if we go down, $30,000, correct?
A. Correct.
Q. And there's the name right here, Dr. Christina Zarcadoolas, correct?
A. Yes.
Q. And in connection with this contract, do you recall Dr. Zarcadoolas provided you with her CV regarding her experience in user testing and designing a fully functional website?
A. I guess she did.
Q. And if we can pull up DX-318, excuse me.
MS. BLAIR: There is also an objection to this document, Your Honor. This is a biographical sketch that was submitted with the contract to Ms. Binder.
MR. CHUNG: Your Honor, we object on hearsay grounds.
THE COURT: This was part of the contract initially?
MS. BLAIR: It was, Your Honor.
THE COURT: Objection overruled. What is this number?
MS. BLAIR: This number, Your Honor, is DX-318.
THE COURT: 318 is admitted over objection.
(Whereupon, Defendant's Exhibit was admitted for Evidence.)

BY MS. BLAIR:
Q. And Dr. Zarcadoolas says that she is a sociolinguist with over 35 years of study in health communication and public understanding of health and science. Do you see that?
A. Yes.
Q. When you interviewed Dr. Zarcadoolas, was that your understanding of her background?
A. Yes, at the time, I was searching for the right expert, this was really important to us, and so she was a super star.
Q. And when you say "this was really important to us", can you tell the Court what was really important to you in the designing of this consumer facing website?
A. That we could communicate with the lay public, people who don't know much about health care, but certainly have an interest in it as a patient. We wanted to be able to communicate to effectively with them and explain to them and be able to show them what the safety grade really was and how they could use it.
Q. And after Dr. Zarcadoolas finished her user experience testing and created the website, is it functional and similar to what we see today?
A. Similar, yes.
Q. And were you required to provide a report to the Robert Wood Johnson Foundation regarding how you utilize their money in the creation of this website?

A. Yes.
Q. Did you, with the help of Dr. Zarcadoolas, in fact prepare a report to the Robert Wood Johnson Foundation with respect to the design of this website?
A. Yes, I worked with Chris on that.
Q. And could you pull up DX-319.
MS. BLAIR: Your Honor, there is an objection to this document --
MR. CHUNG: No objection, Your Honor.
THE COURT: 319 is admitted.
(Whereupon Defendant's Exhibit 319 was admitted for Evidence.)
BY MS. BLAIR:
Q. Ms. Binder, this is the final narrative report dated -- I don't know if it has a date, but it says the grant date was October 15th, 2013 to November 15th, 2014, and the grant amount, $199,503, correct?
A. Correct.
Q. And you'll see here on the front page, it says, the goals, the project goals were research on strategies to best communicate about safety in a way that is most useable by the public, recognizing diverse levels of health literacy. Do you see that?
A. Yes.
Q. And is that, in fact, what you did?

A. Absolutely.
Q. And, again, that was very important to Leapfrog?
A. The top priority.
Q. And if we scroll down just a little bit in this report, that second paragraph, do you see the project pivoted around Leapfrog Hospital Safety Score Website, the same website we are all talking about here this week, right, hospitalsafetyscore.org or -- no, hospitalsafetygrade.org?
A. Yes, we changed the name.
Q. Which assigns a letter grade of A, B and C, assessing how safe individual hospitals are for patients. Do you see that?
A. Yes.
Q. And this report, and I won't bore the Court with it, it will go into evidence, but do you recall anything about this report that stood out to you about discussions with consumers about how they were interacting with the website as you were writing the user testing?
A. There were a lot of surprises in user testing, but the number one surprise to all of us was that consumers that we tested with really wanted a lot of detail, that actually, they were not satisfied by just looking at the grades. We thought the grades would be enough, but you show them the grades, and a few of them might want to know, but it was the opposite. You show them the grades, they immediately wanted to dig into the grades. That was pretty surprising I think to us, but it

wasn't surprising to Chris. She said if you want to build trust, people want to see how you did it.

MR. CHUNG: Objection, Your Honor, I move to strike, hearsay.

THE COURT: Overruled.

THE WITNESS: I was in the room while this was taking place, I observed all of the tests.

BY MS. BLAIR:

Q. And at the end of the day, were you, as the CEO of Leapfrog, satisfied that the website that had been designed by Dr. Zarcadoolas with the Robert Wood Johnson Foundation grant was designed to provide the medical type of information at an eighth grade reading level for the consuming public?

A. Yes.

Q. I want to talk a little bit about the fact that you publicized the Leapfrog grades.

Why does Leapfrog embargo its grades with the media?

A. So, it is really important to us that we are not surprising anyone, and that all the constituents who have an interest in the safety grade are prepared to have a conversation with the media about their grade. So, for instance, hospitals, number one, we want to make sure hospitals know well in advance about public release of the updated grades, they know about it, they have time to gather their PR operations and strategy, whatever it is they want to be able to do in order to answer questions

that will come from the media. We never want to have the hospitals surprised by a call from a journalist about something they don't know anything about.

We want them to be aware of it and have time to -- and also have time to talk to us. We spent a lot of time before the announcement about the grade talking with hospitals and others about who are interested in understanding better about the grade so that they are prepared for the media.

Q. And other than some of the documents we've seen with respect to this lawsuit, other than this lawsuit, has Leapfrog ever made it its actual position to publicize D and F grades?

A. Never.

Q. In --

A. Oh, except for this lawsuit.

Q. Was the purpose of the methodology changed in the fall of 2024 to punish hospitals who refused to participate in the survey?

MR. CHUNG: Objection, Your Honor.

THE COURT: Basis?

MR. CHUNG: Leading.

THE COURT: Overruled.

THE WITNESS: No, it was not.

BY MS. BLAIR:

Q. Mr. Chung brought up your compensation and, in fact, he showed you PX-322.2, your CEO review. Do you recall that?

A. Yes.
Q. And he showed you a salary that you had put into that document. Do you recall that?
A. Yes.
Q. Did you get that salary?
A. No, I didn't ask for it. I had written out as per a request from my executive committee, I had written out an overview and performance, essentially, my performance and competitive analysis based on tax laws on my compensation compared to others in a similar line of work, but I did not -- I asked them not to provide me with that increase.
Q. Was there a period in time when you went six years without a raise?
A. I am currently in any sixth year without a raise.
Q. And why?
A. I wanted to reserve the funding that is available for my executives, and we, you know, we have had a lot of progress at Leapfrog, and I wanted to be able to invest our revenues in more progress, so I have not actually had a raise.
Q. Have you ever communicated with the CEO of Tenet Healthcare, Saum Sutaria?
A. I attempted to reach out to him.
MR. CHUNG: Objection, Your Honor.
THE COURT: Basis?
MR. CHUNG: Relevance.

THE COURT: Overruled.

THE WITNESS: I attempted to reach out to him because he had contacted the head of the Johns Hopkins where Matt Austin is employed, he had contacted Matt's boss to ask --

MR. CHUNG: Objection, Your Honor, hearsay, again, relevance.

THE COURT: Overruled.

THE WITNESS: And so Matt's boss had called me and said I heard from Saum and so I reached out to Saum.

BY MS. BLAIR:

Q. Did he ever respond to you?

A. No.

MS. BLAIR: Thank you, I have no further questions.

THE COURT: Cross-examination.

MR. CHUNG: Yes, Your Honor, pretty briefly.

CROSS-EXAMINATION

BY MR. CHUNG:

Q. Now, Ms. Binder, toward the beginning of your direct examination by Ms. Blair, you testified about how the regional leader organization, the regional leader groups, are principally made up of employers, right, companies in these regions, correct?

A. Most of them, yes.

Q. Yes, most of them. And one example of a regional leader group is the Florida Alliance that Ms. Van Caulil, whose video

testimony we saw, where she is a board member, a leader of that particular region, correct?
A. Correct.
Q. I think you testified that employers within these groups more generally are consumers of health care, right?
A. I don't think I testified exactly that.
Q. Okay. But employers, for purpose of their employees, are interested in, I think you said, patient safety at hospitals located in their region, correct?
A. Very interested, yes.
Q. And so the hospitals -- so these employers look at the hospital safety grades that Leapfrog gives, correct?
A. Yes.
Q. And they rely on those hospital safety grades in making purchasing decisions with respect to their employees, correct?
A. Some may, but I don't know about that.
Q. But for those that do make purchasing decisions for their employees, it would be important for the safety grades that these employers rely on for those safety grades to be accurate, correct?
A. Well, to the extent a employer relies on it, yes.
Q. It would be important for those safety grades to be accurate, correct?
A. Yes, it is always important for the safety grades to be accurate.

Q. Now, Ms. Blair asked you some questions about the sentence or the provision in the hospital survey, right, in the attestation portion, right, where the CEO or the representative of the hospital attests to the accuracy of the information that is submitted, right?
A. Right.
Q. And we have been going back and forth about that sentence or sentences about how the attestor acknowledges, right, that the information in the survey can be used by Leapfrog for commercial profit, right, you had some back and forth about that?
A. It is not the information in the survey that we say can be used for commercial profits.
Q. Okay. But you testified that your -- that that particular provision or that language, you don't agree with it; is that your testimony?
A. Well, if you want to bring up the language, we could look at it, we don't sell the information inside the survey, we sell our scores of the hospitals.
Q. And you testified that you only became aware or saw that language during the course of this litigation? That is your testimony, right?
A. Yes.
Q. Now, the hospital survey, those are under review on a regular basis, correct?

A. Yes.
Q. So it undergoes revisions annually, correct?
A. Yes.
Q. And that provision, the commercial profit language, has been in the annual survey for several years, correct?
A. I am not sure how long.
Q. But it is not -- this year is not the first time that that provision had been in the survey, correct?
A. Correct.
Q. All right. Ms. Blair also asked you about the language of "pay for play", whether you encountered or heard that language at various points in time, but you have heard the word "blackmail", right, to be used to describe the fall of 2020 methodology change, correct?
A. As part of this litigation, yes.
Q. And from your own expert panelist, Dr. Pat Romano, correct?
A. I didn't see that. I wasn't on Patrick's -- Dr. Ramono's email, so I hadn't seen that until this litigation.
Q. Why don't we put up PX-293.
We have seen this email before, but now you have seen in connection with the fall of 2024 the methodology change. Dr. Pat Romano, himself, your expert panelist has said, again, responding to this UC Davis call, "you can call it blackmail if you want, but pay for reporting or penalty for non-reporting is a common theme across many programs". You see that?

A. Yes.
Q. Now we see this language as recently as May 15, 2024 in connection with the fall of 2024; is that correct?
A. Yes, he's referring to other programs across other programs.
Q. Well, he continues to say, "Leapfrog has no choice but to use the only carrot sticks available". He's referring to Leapfrog there, correct?
A. Yes.
Q. Ms. Blair asked you questions about the low literacy of website review, that if the Dr. Zarcadoolas, I pronounced it better than Mr. Blair, went as far back as 2013, correct?
A. Correct.
Q. Low literacy review.
Now, the website, the hospitalsafetygrade.org website, and its prior iterations, I understand there was a different name for the website before, but that website has not been reviewed by Dr. Zarcadoolas or any literacy expert since then, correct?
A. As part of --
Q. Yes or no?
A. Well, yes, as part of this litigation.
Q. As part of this litigation, but before, but in connection with the fall of 2024 methodology change, was there any low literacy done of the website after the website was changed as part of the fall 2024 methodology change?

A. So --
Q. Yes or no, Ms. Binder?
A. I don't know. I can't answer that question.
Q. Okay, so you don't know whether, let's take for example, the footnote score that we have been discussing has undergone low literacy review, correct?
A. Right.
Q. You don't know whether it would be the 15 number that we focused on during the earlier cross-examination and the asterisk, and the limited achievement language has undergone a low literacy review, correct?
A. Correct.
Q. You don't know whether the 26 or 27-page methodology document that is linked somewhere on the left side has undergone a low literacy review, correct?
A. No, it has not.
Q. That has not, all right.

Now, I want to go back to the compensation memo that we discussed and Ms. Blair raised again in your direct examination.

Now, understanding that you eventually did not receive that salary, is it correct at the time, right, you put together the memo, you believed that your bonus, some part of your compensation should be tied to the revenue generated under your leadership?

A. Yes.

MR. CHUNG: Okay. No further questions, Your Honor.

THE COURT: Do you have questions on his cross?

MS. BLAIR: Very quickly.

THE COURT: Redirect.

REDIRECT EXAMINATION

BY MS. BLAIR:

Q. Ms. Binder, Mr. Chung just asked you about the Federal Health Alliance, correct?

A. Yes.

Q. And the fact that they are regional leader for Leapfrog, correct?

A. Correct.

Q. Are you familiar with the letters that the Florida Health Alliance sent out to hospitals encouraging them to interact with Leapfrog? Are you familiar with that?

A. Yes.

Q. And isn't it the case that those letters asked the hospitals to participate in the survey to get transparency for these employers' patients?

A. Yes, that is exactly what the letters say.

Q. And Mr. Chung asked you some questions about had there ever been a low literacy review of the current website. Do you recall that question?

A. Yes.

Q. And are there any expert panels that Leapfrog has that are for patients and families of patients that you ask questions to about the readability of this website?
A. Yes, we have a patient and family expert panel and they review all of our materials and we checked and I couldn't answer the question because they have experts on that panel as well.

MS. BLAIR: Thank you. No more questions, Your Honor.

THE COURT: All right. Thank you.

MS. MALONEY: Your Honor, one point of clarification on PX-426 in Mr. Chung's examination of Ms. Binder. Docket 141 at page two of nine reflects a revised joint pretrial stipulation in which PX-426 was agreed to as admitted and I think there is an outstanding question on that.

Next step, we have Lauren Bailey, she is the director of communications for The Leapfrog Group for which we designated approximately six minutes of testimony and Defendants have also designated counter designations totaling approximately four -- they have informed us that they will affirmatively designate 18 minutes. Those designations have not yet been filed, thankfully, because there are things in them that we have notified them on multiple occasions are not appropriate. Since this will be the end of our case, the playing of the Bailey designations and presumably the start of theirs, I would ask Your Honor if we may have argument, which

we have attempted to avoid, but if we may have argument on the furtive designations they intend to make in the Bailey deposition.

THE COURT: What is this issue about?

MS. MALONEY: The issue is about the statement that was made in opening statements by Defense counsel in which I was identified as spreading lies, me, Mary Beth Maloney, counsel for the five hospitals, and a partner at Gibson Dunn.

They have now decided to put in as evidence, not merely statements or arguments, but to put in as evidence Ms. Bailey's statements to the same effect, in fact, they go further.

So we would like to argue and we have asked them multiple times to withdraw this, and my partner, on behalf of the hospitals as well as my firm, our firm would appreciate the opportunity to argue this if they continue to refuse to stand down and not put this statement in the record as evidence.

THE COURT: You think this is somehow related to the case?

MS. BLAIR: It is, Your Honor. As you've heard today, there were a lot of questions to Ms. Binder and others about Leapfrog's reaction to the filing of this lawsuit and media campaign. What we're talking about is one question and one answer in a sworn deposition of Lauren Bailey and they asked her about why Leapfrog decided to take a proactive approach

against the five hospitals, and her sole answer was we saw Mary Beth Maloney on TV and we felt like we needed to defend ourselves. That's it.

MR. CRAIN: Objection, Your Honor, that is not the quote.

MS. BLAIR: Well, let's hear the quote because I don't have it in front of me.

MR. CRAIN: Your Honor, I would prefer not to have it put in the record. I believe it is so outrageous.

MS. MALONEY: You can hand it up to --

MR. CRAIN: Yeah. The quote in their designations which they have not filed is Leapfrog, quote, saw Mary Beth Maloney saying a lot of very untrue things in the press, and refers to, quote, an attack on Leapfrog, end quote, that, quote, Mary Beth Maloney did, end quote. And, Your Honor, it is a question not only of relevance, but it's also a question of decorum and inductive and ad hominem attacks and Ms. Maloney is right, I am here not only on behalf of the community hospitals, but also on behalf of my firm, and my mentor and colleague, Ms. Maloney, because this is an episode of a broader pattern that we have seen in this case. We have seen them specifically target and attack Ms. Maloney in cease and desist letters, in opening statement the other day. We have cases, we are happy to provide Your Honor, about whether it is proper and it is not, to specifically name opposing lead counsel and the

evidence for argument in trial is a question of ethics and it's a question of professional responsibility. It is totally irrelevant to this case, and Your Honor, the specific issues that they have referenced for Ms. Maloney's statements to the press are exactly the types of issues Your Honor said in a motion in limine, we clearly have evidence to support the challenge they are making, you recall, Your Honor, the pay to play motion in limine that Your Honor dispensed with at docket 151 of three, they take issue with statements that my colleague and mentor made on CBS interview of point by point in May in which Ms. Binder appeared on television on CBS, Ms. Maloney appeared simply to recount the allegations in the complaint and responds to certain questions for reporters and one of the questions that they now say is untrue is this pay to play allegation, which Your Honor dealt with when you said, quote, the Plaintiffs clearly have some form of testimony of expert evidence in the record that they intend to use to corroborate their claim.

And so we think it is to the extent they want to argue about response to allegations to the public, to the extent that they want to argue about articles, and to that extent, that to us is a separate issue, but to name lead trial counsel by name, not only in opening, but also in evidence is we believe a gross violation of rules, norms, decorum, and we can cite United States Supreme Court case law, Eleventh Circuit case law and

Southern District case law.

So we think that specific testimony should be stricken, we think counsel should be instructed to cease attacking my colleague and mentor, Ms. Maloney, and we think they should be instructed to sort of cease this effort at the risk of potential sanction.

THE COURT: All right. I'm going to overrule the objection, you need to make your own decisions about whether you think it advances your case.

MS. BLAIR: Thank you, Your Honor.

THE COURT: Both bodies have a view about that. Proceed.

MR. CRAIN: Your Honor, if we could submit briefing on the questions, we would be glad to do so.

THE COURT: I don't think it is necessary. I think it is untoward to do that. On the other hand, I don't think it rises to the level of extreme prejudice or anything of great significance.

I don't view it as a serious -- I mean, it is a comment about opposing counsel, and I don't see it as harmful or very harmful, frankly. I am always disappointed when lawyers do it, but compared to what I hear on a daily basis, it's not the worst I ever heard.

MS. BLAIR: And, Your Honor, for the record, I want to be very clear, in my opening statement, I did not use Ms.

Maloney's name, and these aren't my statements, these are sworn testimony of Lauren Bailey.

THE COURT: All right. We will take it for whatever weight I think to Ms. Bailey merits.

MR. CRAIN: Your Honor, if I could correct one point they did have Ms. Maloney's face on the slide.

MS. BLAIR: From her website.

MR. CRAIN: Incorrect, you pulled it from the CBS interview of Ms. Maloney. You pulled my other colleague's face from his -- that was slide two. Thank you.

THE COURT: All right. Let's precede.

MS. MALONEY: Thank you, Your Honor. You previously have given the opportunity for briefing, I would just appreciate it, the mind has not changed on the other side of the aisle and they'd like to continue to put in sworn testimony from a fact witness or other testimony and if you will give us the opportunity to brief because while I understand it may be relatively silly, and I did think it was silly for counsel to use my name and face and et cetera in opening, I personally don't think it is silly for sworn testimony to be given in which I am actually accused of spreading lies. In fact, I believe there is actually a name for that under the law, but we'll restrain from saying that.

Let's play Ms. Bailey's designations.

(Video of Lauren Bailey played.)

MS. MALONEY: Okay, Your Honor, our case is now closed. We reserve the right for rebuttal. Thank you.

THE COURT: All right. Thank you.

MS. BLAIR: Your Honor, at this point in time, for the record we would like to make a Rule 50(a) motion for judgment as a matter of law in this case.

MS. MALONEY: I am prepared, Your Honor, if she wants to argue.

THE COURT: Go ahead, if you'd like.

MS. BLAIR: Sure. Your Honor, briefly, as you know, this is a single FDUTPA case with an accompanied declaratory judgment matter. As Your Honor pointed out in your order on motion for summary judgment FDUTPA prohibits unfair or deceptive acts or practices in the conduct of any trade or commerce, and in order for the Plaintiffs here to get the injunctive relief they request they must prove that all five of these Plaintiffs are aggrieved by an unfair practice or a deceptive practice. Simply put, Plaintiffs have failed to meet their burden.

I want to start with the unfair practice. As Your Honor knows and as you have pointed out with respect to the case law, a practice is unfair if it is one that offends established public policy, and one that is immoral, unethical, oppressive, unscrupulous, or substantially injurious to consumers. Per the Court's order on summary judgment, that

would be ECF 139, at page nine, you found that a showing of consumer harm is required when we are looking at the unfair practice prong.

There has simply been no evidence presented by Plaintiffs in this case that the mission or the hospital safety grade offends public policy, is immoral, unethical, oppressive, or unscrupulous. In fact, the evidence has shown just the opposite. It has shown the careful and thoughtful way in which Leapfrog has gone about putting together the Leapfrog safety grade with expert panelists, consultation, thoughtfulness.

Dr. Romano testified that the purpose of the safety grade is to protect consumers against preventable harm and is transparent to both hospitals and the public. He testified there was no intent by Leapfrog to punish hospitals. He explained clearly to this Court what he meant when he was using the word penalized in terms of looking at measurement.

You heard from Dr. Austin that the methodology was changed because the issues that Leapfrog was facing with the cohort mean creeping in a way that it was representing nonparticipating hospitals as perfectly performing on those four measures. Hospitals were telling Leapfrog that the creeping mean was deincentivizing them.

You heard from Alex Campione that at no time had Leapfrog's team ever sought to penalize nonparticipating hospitals, and she further testified that the work of the team

is in no way connected to revenues. Dr. Nicholson, their own expert, admitted that the methodology was -- none of the CEOs presented any evidence that Leapfrog takes money for better grades and unscrupulous conduct that has been alleged.

There has been no evidence that a non-responding hospital automatically receives a failing grade. There has been evidence to the contrary presented by Dr. Romano and Ms. Campione.

Those two individuals also have demonstrated that the methodology was reviewed and considered by a panel of experts in the field of patient safety measurement and the expert panel, including Dr. Romano, support the scientific nature of the current methodology.

Dr. Romano further testified that the new step two methodology is based on scientific principles, and you heard a lot about this is a composite score, not made up of only the four measures from the survey, but publicly available CMS data. There has been no evidence that the methodology is substantially interest to consumers.

In order on case law, S and S Audio versus Belson, to establish that the Plaintiffs must establish inflicts consumer injury that is substantial, consumer injury, not outweighed by any countervailing benefits to consumers or competition that the practices produced, and that consumers could not reasonably have avoided it.

The only consumers in this action are the patients.

THE COURT: Why is that? Why aren't hospitals consumers?

MS. BLAIR: Each one of the CEOs said they received no value or benefit from the Leapfrog survey. Ms. McCauley testified under oath that she does not consider St. Mary's to be a consumer of the Leapfrog group services.

Nor have hospitals demonstrated what would be a reasonable consumer in light of -- that they would be a reasonable consumer.

THE COURT: Why aren't hospitals consumers?

MS. BLAIR: The case law is such that in order to be a consumer under the statute you must receive a benefit or value.

THE COURT: The A people do, don't they? They buy all these logos and plaster these hospitals with grades. Maybe the people who didn't participate -- they would still be consumers, I would think.

MS. BLAIR: They can't be consumers of a survey they never took and from which they have no value from it.

THE COURT: Is the consumer issue only related to the Plaintiff or do you look at a consumer in a broader sense as anybody who is a consumer of a product?

MS. BLAIR: I look at it as anybody who is a consumer of the product.

THE COURT: Again, if Jupiter Hospital buys tons of

Leapfrog placards that say we are an A hospital, are they a consumer?

MS. BLAIR: That is the survey. The grade is not for the hospitals.

THE COURT: You have to be a consumer of the survey?

MS. BLAIR: You have to be a consumer of the grade, and there is a stipulated fact in this case that the purpose of the safety grade, not the survey, the safety grade is for consumers, for patients.

THE COURT: On the pages where -- I was curious about that and I don't think it has come up so far. There is something on the website that says you pay $2.95 for something.

MS. BLAIR: Yes, Cornerstone ordered thousands of those.

THE COURT: What do you get for the $2.95?

MS. BLAIR: You get a printout of the grade page, the D, and the gas gauge, the measurements.

THE COURT: Who buys those?

MS. BLAIR: Vendors, we call them solution providers, to try to figure out what hospitals need help with hand hygiene, not hospitals themselves. They are provided their grades for free.

THE COURT: Unless they want the logo.

MS. BLAIR: They pay for it. As Ms. Binder testified, they can advertise their grades for free, they are not required

to buy the logo.

THE COURT: They do, though, don't they? I think I heard maybe Jupiter has it all over.

MS. BLAIR: Jupiter does.

THE COURT: Probably a lot of the A ones do. Probably not any of the Fs buy it.

MS. BLAIR: I don't think anybody is buying an F logo.

THE COURT: Doesn't that make them consumers?

MS. BLAIR: No, not of the safety grade itself.

THE COURT: You can disconnect the two?

MS. BLAIR: Yes.

THE COURT: You can say you are only buying the logo even though it has the safety grade next to it?

MS. BLAIR: Correct, because you can advertise your grade for free. They give hospitals a free tool kit, a free press release. They are not consuming it, it is free. If you want to buy a logo, sure, but the safety grade is not for the hospitals. They are sophisticated consumers of whatever it is they do, but they are not consumers of this patient safety grade, and they have admitted as much. They don't pay for anything for it, they don't care about it, they don't report to it. They do nothing with respect to it.

We have had these arguments before in connection to the motion to dismiss and motion for summary judgment to the effect that they have standing to bring a FDUTPA claim without

being a consumer, but they are not a consumer of the hospital safety grade and they are not a consumer of the survey.

So, patients are the consumers.

And here, there has been no demonstration of what these consumers have been substantially harmed by. We have heard the CEOs' testimony over our objection about -- for the first time I heard these anecdotes about people coming in with finger lacerations or armpit infections and not wanting to stay at these hospitals allegedly because the Leapfrog grade had been cited.

There has been no evidence of consumer harm, no evidence that any of these patients had bills they had to pay. They said they sent a bill. They don't know if they paid the bill. They don't know where they went, they don't know what the outcome was.

To your point about Jupiter, if they left West Boca and they went to Jupiter, and they didn't have to pay their bill at Good Sam and they had a wonderful outcome, how is that harm? Patients have a choice of where they get their medical care. There has been no evidence of any harm to a single patient or a single consumer who reviewed the Leapfrog grade, and certainly no indication that it has been substantial, which is the requirement under the unfair prong.

The other issue is one of these needs to not only be substantial, but it needs to not be outweighed by the

countervailing benefits to consumers or competition that the practice produced. There has been lots of testimony from Dr. Romano, from Alex Campione, from Ms. Binder about the countervailing benefits to consumers of having this patient safety information, of having direct access to the publicly reported data on infections, to having direct access to HCAP scores that we talked about here today.

That clearly opens up a countervailing weight to the five hospitals not being graded. That is the relief they are seeking, no changes to the website, they just don't want to be graded.

That does not outweigh the benefit to the patients of South Florida in having easy access to see what these hospitals' outcome measures are, and whether or not these hospitals are being transparent with respect to reporting the data.

There has been no evidence that Leapfrog hides in any way that these hospitals are not participating in the survey. There is the footnote we talked about, but I showed a page where if you go to the survey results it pops up huge and says they don't do the survey. No consumer has been harmed, and the public good of what Leapfrog does far outweighs any consumer harm.

In terms of, Your Honor, the burden of deceptive practice -- so the Plaintiffs are moving on both unfair and

deceptive practice. With respect to deceptive practice, the Plaintiffs have to establish, as your Honor as set forth in your ruling on the motion summary judgment, that the active practice is likely to mislead the consumer, the patient, acting reasonably in the circumstances to the consumer's detriment.

We know these hospitals were not likely misled, they knew exactly what was going on. We are taking about patients. The hospitals all testified that in May of 2024, five months before the methodology change went into place, Regina West is doing what if calculations, the hospitals are talking about should we participate or not.

The question is whether or not the consumers were deceived by the website, by the Leapfrog website. The only testimony they proffered, at least the anecdotes we have heard, unsubstantiated by any documentation or ant reliability, as we passed the case up to your Honor earlier this week.

The only testimony is Dr. Berger, their expert, and he testified he has done a thousand consumer perception surveys as a researcher. He testified, incredibly quite frankly, that the only way to truly measure whether consumers, patients -- he wasn't talking about hospitals -- whether patients are likely to understand the Leapfrog website was anonymous Google analytics.

He does not dispute that a consumer survey could have been done. He testified he has spent between 100 to 200 hours

in this litigation, further testified that he has a bevy of research assistants at Cornerstone that help him with his opinions. Those same Cornerstone assistants asked us to open up our Google analytics website. Dr. Berger wasn't there, the Cornerstone people were. We opened up --

THE COURT: So you think consumers understand that the F grade was earned as opposed to being assigned because they didn't respond? You think consumers understand that?

MS. BLAIR: Me? No, I think the opposite.

THE COURT: Does Leapfrog think that consumers understand these grades are assigned and don't reflect the realities of the hospital's treatment, the hand washing and the others, the consumers understand that?

MS. BLAIR: We do think consumers understand that, and that was evidenced by the testimony of Alex Campione and --

THE COURT: What about the witness who said it was too much in the weeds to explain it?

MS. BLAIR: First they look at the metrics and if they want to go to the full scoring methodology, they can go there. There is nothing deceptive.

THE COURT: Only 3 percent do according to the Google analytics.

MS. BLAIR: Apparently, but we disagree with the reliability of those.

THE COURT: I thought she also said the methodology is

not important to consumers. Didn't she say that was for the hospitals?

MS. BLAIR: Ms. Binder testified to the opposite. She said that --

THE COURT: So I am supposed to pick and choose between the witnesses?

MS. BLAIR: No, I don't think she said that. I think she was talking about the asterisk, which is a bold red disclosure on the website page. It clearly says this hospital has declined to respond and therefore a grade was assigned to reflect the lack of data. It says 15 is this hospital's score, asterisk, and it says worst hospital score 15.

A consumer at an eighth grade level, which this website was designed to effect, is able to see this hospital was assigned a score and they are able to see they were assigned the worst hospital score.

What Dr. Berger testified to and what they argue is, they don't know how. You haven't told them about limited achievement, that is way too in the weeds.

That is the point of the expert, she tried to communicate very difficult medical data to a consumer at an eighth grade level. There is a bevy of cases about asterisks and disclaimers, and those cases are much, much different than the case here, and summary judgment was denied in those cases.

So this asterisk does what it is supposed to do. It

is clear, it is concise, it is conspicuous.

Does it tell the reader every single nuance of a 22 composite score? No, it doesn't.

Does it clearly tell the reader that it is not based on any data from that particular hospital? It does.

The nature of the F grade is not just these four measures, it is a composite score made up of 22 measures, CMS publicly reported data and --

THE COURT: 18 are publicly reported CMS data. These four are just made up.

MS. BLAIR: I don't think they are made up.

THE COURT: Well, they are assigned the lowest score possible. Isn't that making it up?

MS. BLAIR: No. Dr. Romano testified that just like the IPS measure that was changed in 2023, in 2024, we know from literature and from these five CEOs that these hospitals have in place bar code medicine administration, they have in place computerized physician order entry, they have in place hand hygiene policies. We know that, they are structural. The scientific expert community says, and this was Dr. Romano's testimony, that we know the missingness is not at random. We know they have these policies, we know they measure it.

What we don't know, and I am not a scientist, but what the scientists say is what we do know is that the scores at these hospitals are not missing at random.

Remember, this is Leapfrog's methodology. They are entitled to say what they think is important and why, as long as they disclose it to the consuming public, and they do. What the expert panel has said, we are an expert panel for Leapfrog, and this is what we think is important, and they think transparency is important.

THE COURT: You keep talking about transparency. It is hard for me to see how transparent it is if you hide how you give them the lowest score available because they didn't respond.

MS. BLAIR: It is not hidden.

THE COURT: Now we are going around in circles.

MS. BLAIR: No, I think it is right there on the web page.

THE COURT: That 3 percent of the people look at.

MS. BLAIR: No, it's right there, your hospital score 15, asterisk; worst hospital score, 15. This hospital declined to respond and therefore a score was assigned to reflect the lack of data.

THE COURT: But assigned, normally you would think it is based on some sort research, maybe they looked at some sort of health care information, not just made it up.

MS. BLAIR: They didn't make it up. Dr. Romano testified extensively that it wasn't made up.

THE COURT: I think he said it was because there was a

penalty at least at one point.

MS. BLAIR: He said we know these measures exist and so we know the data is not missing at random.

THE COURT: So you can assume if they didn't respond it is because they didn't have hand washing policy.

MS. BLAIR: No, no. You are assuming they do have a hand washing policy.

THE COURT: Then why not give them credit for it?

MS. BLAIR: Because the survey doesn't just ask you about the hand washing policy. The levels are limited achievement, somewhat achievement, considerable achievement, and achievement. They have to have 200 hand hygiene observations per month per unit, they have to log that data and provide it. This is the verification stuff we have been talking about.

What we are saying is if you are not willing to provide your data, that is the voluntary business decision, we get it, and we are going to give you credit for having a hand hygiene policy. There are hospitals participating, so it is scientific. We know there are hospitals in the survey that provide Leapfrog all of their data and they still get a 15.

What the experts have said is why would we give -- we have been giving -- this is what they said in the spring of 2024, we have been giving non-responding hospitals a hundred out of a hundred points because their cohort mean -- those

hospitals that do take the time to track the hand hygiene and do take the time to report it and want to be transparent with their patients, those hospitals, some of them are getting 15.

We gave them the lowest score of a participating hospital. We didn't make it up. We said let's look at how participating hospitals do. They all had hand hygiene policies. Some of them don't make enough effort to get to the next level. The expert panel said we know missingness is not at random. We now know there are actual participating hospitals that get a 15 on this measure because they have a hand hygiene policy, and they are not doing it.

So to give these hospitals a hundred out of a hundred points because they happen to be large hospitals and their cohort means are large hospitals who are doing the observations, the expert panel said we are not doing a service to the public good by telling consumers these hospitals are a hundred out of a hundred simply because that is what their cohort is doing.

And this has been going on, the testimony was, since 2017 at the expert panel level for Leapfrog and --

THE COURT: Wasn't the concern that the numbers were creeping upwards to almost a hundred for the mean?

MS. BLAIR: Correct, for the participating hospitals.

THE COURT: Doesn't that point to some sort of grade inflation? I thought that is what they were trying to solve.

MS. BLAIR: No. If you look at the exhibit, the slide deck presented to the expert panel on April 12, 2024, what they were trying to solve for was that hospitals committed to patient safety, and I will take hand hygiene for an example, and are logging a hand hygiene, they are scoring at like 88.7. If you are at 88.7 you get a hundred points out of a hundred points because they are showing a commitment to doing better for their patients.

What Leapfrog was saying before then, the way the imputation worked, we will give you the same score that those committed hospitals are getting, a hundred out of a hundred. And then it became clear, if you haven't done the survey in three, four years, these hospitals hadn't done the survey in four years, does it seem right that we should just assume that these hospitals are getting a hundred out of a hundred?

The scientific methodology allows for imputation. You have not heard anybody say that it doesn't. In fact, Dr. Nicholson said I think this is an assignment, and that is exactly what we tell consumers on the website.

You heard Alex Campione testify that imputation can either be an estimation, so this is the scientific data measurement, you can either estimate it or you can use reasoning. There are two different methods of imputation, and she said we were using the estimate. Dr. Romano said you can't estimate for nonparticipating hospitals at this point because

the cohort mean is getting too high. Now we are using reasoning and --

THE COURT: What is the reasoning? Is the reasoning if you don't participate in our survey you are not committed to hand washing?

MS. BLAIR: The scientific reasoning is non-response bias.

THE COURT: That is a fancy word for something, but is it that you are not committed to doing the survey? The reason is they didn't do the survey.

MS. BLAIR: Yes. We don't have their actual data, so we have the imputation methodology backed by science that says at this point --

THE COURT: Is there any other science other what you said that supports that? You give somebody the worst score because they don't fill out a survey, is that done anywhere else?

MS. BLAIR: Sure. I think it is.

THE COURT: Where?

MS. BLAIR: I don't know, but we have nine experts on this panel who --

THE COURT: Is there any evidence that they didn't approve this? There was evidence they didn't disagree with it, but they never did approve it.

MS. BLAIR: It is not a voting panel. That is

correct, there was no vote.

THE COURT: So the fact that they didn't object means that these experts somehow blessed this?

MS. BLAIR: Correct. They are all still on the panel today. They were provided with the public comments. The expert panel was provided with all ten of the public comments in June 2024. The methodology change went into place in November 2024. There were no objections by any of the nine to the methodology change, and the transcript shows many of the experts agreed with it on the record and ultimately the imputation methodology was put into place.

And all nine, Dr. Romano testified to it, are still on the volunteer expert panel for Leapfrog. They believe it is scientifically backed and they believe it is transparent, and so do we. That is why there is no deception here.

THE COURT: The assumption is, if you don't fill out the survey, that means that your practices are such that you should be assessed at the lowest level of any hospital in the country. That is the assumption behind your methodology.

MS. BLAIR: Correct. The assumption is that you have the data, you are choosing not to share it, and instead of imputing you the best participating hospital, that's what we were doing, we should look at the participating hospitals that are trying, what is the score they are earning, and that is what you are going to get.

That is Leapfrog, that is how they believe it should work. Different rating systems do things differently.

THE COURT: Do you know of any other entity that does that, if you don't take the test you get the lowest score of anybody that took it?

MS. BLAIR: I have a lot of education and if you took a hundred question test, or let's say a 22 question test and you didn't answer four of the questions, your teacher doesn't say, well, Bobby next to you got a hundred percent so I am giving you a hundred percent. The teacher gives you a zero. Yes, I think it is common sense, reasoning, and it is scientifically backed.

THE COURT: If you get a zero, it is pretty easy to say I got a zero because I didn't take the test.

MS. BLAIR: No, they are saying I got a zero because I didn't fill out those questions.

THE COURT: Let me see what -- your example was somebody takes the test, one person gets 20, the other one gets 16. You think the person that gets 16 gets a zero?

MS. BLAIR: No, no, it's a composite score. Say you have a 20 question test, you answer 16 of those questions, you leave four blank. Your teacher does not give you a zero. We don't give them a zero. They don't automatically fail, they don't. Your teacher takes a composite score of how you did on the 16, gives you the zero for the four and gives you a grade.

If you got a hundred out of a hundred on the first 16, you might still get an A.

THE COURT: Assuming you gave Jupiter the 15s or the 25s on those four questions, what would they end up? Would they still be an A?

MS. BLAIR: I think they are a B.

THE COURT: What would the Mayo Clinic be?

MS. BLAIR: I haven't run those numbers, but their CMS scores, we have seen charts -- if you look at the five star analysis, they have Jupiter's CMS scores on there, DX 813. You can see every one of their HCAP scores which makes up -- for non-reporting hospital makes up about 27 percent of that domain are clearly in the negative and significantly below the mean.

We heard Mr. Hanlon testify that Press Ganey -- they had to hire Press Ganey to get the HCAP scores up. On that analysis you can also see each one of these five hospitals has CMS data, infection data collected by the U.S. Government that is below the national for the most part.

So their publicly reported data on their composite score is bringing down their grade. It is just like the test you and I were taking about, 20 questions, if you get perfect scores on the 16, you might still get an A. If you get -- on the 16 questions if you do poorly --

THE COURT: On the other 18, does Leapfrog contribute anything or do they just report publicly available scores?

MS. BLAIR: Publicly available scores.
THE COURT: The four safety scores, is that the only thing Leapfrog adds to the analysis?
MS. BLAIR: We have the proprietary scoring methodology. We have a proprietary scoring methodology that takes all 22 measures into a composite score, recalculates them to grade hospitals across the entire United States. No, that is not the only thing, and for --
THE COURT: Is what you just told me, you do some sort of massaging of the 18?
MS. BLAIR: No, we do not. We calculate them in a composite score along with the other four. I didn't want you to think that is all we did.
THE COURT: In terms of the 18 that are publicly available, does Leapfrog do anything?
MS. BLAIR: We decide which of those are measures that go directly to patient safety.
THE COURT: So you pick the 18 CMS ones.
MS. BLAIR: That is right.
THE COURT: For those you use their actual data and it's only these four that you come up with your assignment system.
MS. BLAIR: I wouldn't call it assignment system. For nonparticipating hospitals, yes, it is an assessment. For participating hospitals we have data.

THE COURT: All right.

MS. BLAIR: So we believe that the website, after this long conversation, clearly tells consumers how the methodology works for the four measures. We have full and complete access on the disclosure system to the full methodology.

The hospitals even say they get a free calculator, everything is free. You can go on the website and see everything. Even the data we sell is on the website, we don't sell anything different. Everything is free, transparent, there is no deception, and we are really talking about one asterisk, one footnote, and it doesn't say we calculated that score; it says we assigned it.

With respect to Dr. Berger about whether or not the website is likely to cause injury to a reasonable consumer, because as you pointed out at ECF 139 that is the standard, Dr. Berger did not provide any comprehension test for the website to prove -- it is their burden to prove, not mine -- to prove that any consumers were deceived.

Even the patients they talk about that come into the hospitals, they don't know whether those patients understood the methodology, they have no idea. They did no consumer perception testing, none. They didn't talk to a single consumer. There is simply no reliable evidence of consumer confusion even if you look at the anecdotes we heard throughout this trial.

And we provided your Honor with Florida Virtual School versus K-12 Inc, an eleventh Circuit and District Court case, we think, while not exactly on point, we think that is informative to the Court as to what needs to be looked at.

While Your Honor noted that these kind of hearsay statements may be able to come in for consumer confusion, the Court must also look at whether those anecdotes are reasonably reliable, and there was nothing that we heard from these CEOs that was reasonably reliable that any consumer was actually confused.

And then we talk about the aggrieved, they must be aggrieved by the unfair or deceptive practice. Revenues are up, market share is up, brand recognition is up. They don't have any nurse retention problems. They all testified at their deposition no physician retention problems.

What they argue is our OR admissions are down and some of our elective admissions are down, and they have to be aggrieved by Leapfrog's alleged deceptive or unfair practices. There is no causal connection to a downturn in OR and a downturn in elective admissions. Their expert, Dr. Nicholson, testified he has not done any causal analyses.

I asked each one of the five CEOs, they did no survey, they didn't commission any survey to try to figure out why their trends were down. We saw evidence from West Boca, we saw four different med exec and governing board meeting notes where

Mr. Hanlon tells them those are down because seasonal issues as well as construction issues on his operating rooms and his OR, and talks about the fact that certain surgeons have left.

There is no causal connection and what they are saying is they are aggrieved because patients are asking them questions about their patient safety. Yet their mission is that they are transparent and accountable with their patients. I don't disagree with them. My guess is patients ask questions when they are in hospitals. That is not because of Leapfrog, it is because people don't like to be in hospitals.

There is simply no connection to the fact that any aggrievement by these hospitals -- and they are corporations, they can't just say I feel sad, hurt, angry, frustrated. These are corporations, so they have pled their aggrievement is impact to reputation and loss of goodwill. It doesn't exist. They have not put on any evidence of that.

For those reasons we would ask this Court enter an order granting judgment in favor of the Defendant at this time.

THE COURT: All right. Thank you.

MS. MALONEY: Your Honor, Christine Buzzard, my colleague, will give a brief argument on this. She told me yesterday and last night that I needed to be prepared on this. Unfortunately she is -- or fortunately she is much more prepared on this, so I would like her to handle this argument.

MS. BUZZARD: Christine Buzzard for the Plaintiff

hospitals.

Your Honor, the Defendants have moved under Rule 50(a). As you know very well, the standard is taking the evidence in the light most favorable to the Plaintiff hospitals that no reasonable fact finder could conclude that we could prevail on this action. I will check down the elements and explain why it is that we have clearly met them. I will be happy to answer any questions Your Honor has on your mind.

Among other things, Leapfrog behaves deceptively when it claims its so-called safety grades measure the actual safety of hospitals. They simply don't.

Dr. Nicholson testified that Leapfrog's safety grade methodology departs from guiding principles for measuring hospital quality, systematically penalizing nonparticipants and failing to reliably predict patient outcomes. This distorts patients' choices in a harmful manner.

Dr. Berger explained that DNF safety grades likely negatively impact consumers' perceptions of the Plaintiff hospitals' quality, and he further testified that failing safety grades likely have negative long-term effects on consumer perceptions because negative impressions can be very hard to overcome.

Voluminous documents and testimony confirm that Leapfrog's safety grades impose a nonparticipation penalty in a, quote, arbitrary, that is Ms. Campione's word, scheme that

stems from a, quote, simple business decision, not my words, Dr. Romano's words.

Leapfrog's fall 2024 methodology is not peer reviewed, and contrary to Leapfrog's representations, and it was not generated by the expert panel, as Ms. Campione admitted on the stand. Leapfrog's practice is also unfair as its safety grade methodology is entirely made up, designed to coerce participation.

False statements are always unfair, Your Honor.

THE COURT: What is wrong with the fact that you don't answer means your numbers are bad, and that they are entitled to assume that?

MS. BUZZARD: I frankly don't understand that, your Honor. They refer to non-response bias. The only testimony I heard -- there has been no expert testimony on that point. Dr. Romano mentioned it briefly, but he is not an expert witness in this case. In any event, non-response bias merely tells you that there might be something different in your survey to the people who respond and the people who do not.

Let's say I decide to host a hiking party on Superbowl Sunday and only a few people show up. I would not be right to assume that the people who didn't show up didn't do so because they don't like me, maybe they just like football.

Your Honor, that doesn't mean that Leapfrog is entitled to assume that that somehow means the nonrespondents

are poor performers. The evidence makes clear that is not the case. The Plaintiff hospitals -- I can't remember precisely which one, but one of the CEOs testified contrary to Leapfrog's representation that individuals are twice as likely to die at a poorly rated hospital, were in fact twice as likely to live at his hospital. It is simply not true that non-response bias justifies the methodology.

I believe one of the CEOs, perhaps Ms. Montgomery, testified that the methodology that Leapfrog uses is like giving you an F on a test that you didn't take. It is worse than that, Your Honor. It is like giving you an F on a test you didn't take and then your teacher goes and tells the world that you didn't know the subject and had only gotten 15 points on it. That is unfair.

Also, we heard some argument about who the consumers are in this matter. Plaintiffs' patients are consumers. You heard testimony from the CEOs at the Plaintiff hospitals that a number of the patients have experienced anxiety and reflected that anxiety --

THE COURT: Do you contend the hospitals are consumers in this case?

MS. BUZZARD: It is certainly unfair as to the hospitals. The statute --

THE COURT: The statute talks about consumers. Is it your position that the hospitals are consumers or only the

patients?

MS. BUZZARD: I believe the hospitals could be consumers, Your Honor. We discussed accolades. The hospitals purchase accolades from Leapfrog and, of course, the scheme is unfair with respect to the hospitals. The hospitals are also employers.

I would go back to the statute again, Your Honor. The statute is very -- includes businesses, and here there would be a number of segments about safety grade. There are the patients about which you heard a lot of testimony, the anxiety that they experience. You heard about an individual who left against medical advice, which is a very drastic decision to have made.

THE COURT: Wouldn't a consumer survey be better evidence?

MS. BUZZARD: No, Your Honor. Dr. Berger made very clear that he didn't think a consumer survey is the appropriate methodology here. He had real data from real people making real choices in the world about how they were going to perceive the Leapfrog safety grade. He had the Google analytics data that --

THE COURT: Google analytics only when to how many people went to the methodology page, but it didn't talk at all about the impact of these grades on consumers in South Florida or the patients of these hospitals.

MS. BUZZARD: He also relied on extensive peer reviewed literature, the fact that hospitals and health care in general can be a very difficult thing to assess. He talked about the idea of information being below the fold and the footnote is below the fold of the information that is presented, and he talked about the fact that consumers having seen an F would be very concerned that a hospital would receive an F on something that is so important to them, namely their safety.

There are also a number of other types of consumers. There are also employers. Ms. Binder testified how these safety grades are created for the use of employers. There are physicians, we had a cardiologist, I believe, whose patient didn't want to go to one of the hospitals because of the F grades. We had the surgeons for the HSS group, the orthopedic group, who were required to get on the staff at Jupiter Medical Center instead of --

THE COURT: We didn't hear from them, did we?

MS. BUZZARD: No, we did not, but we have extensive documents about that and business records.

THE COURT: We have a cancellation notice, but nothing that ties their decision to leave Good Sam and go to Jupiter due to the Leapfrog scores.

MS. BUZZARD: We have the CEO's testimony.

THE COURT: That is what someone told her.

MS. BUZZARD: And also that they did in fact move to Jupiter.

THE COURT: We know they moved. What is the tie to the Leapfrog scoring?

MS. BUZZARD: For example, the letter that was sent to the CEO of Good Samaritan.

THE COURT: It doesn't refer to Leapfrog, does it?

MS. BUZZARD: It circles the --

THE COURT: You mean the anonymous letter.

MS. BUZZARD: Yes, the scribbled letter.

THE COURT: We don't know even who that is.

MS. BUZZARD: It does reflect the sentiment of the community, and we have the CEO's testimony about the statements from I believe the doctor -- I can't recall exactly -- making clear how upset --

THE COURT: I would have to consider that for the truth of the matter asserted.

MS. BUZZARD: He was also upset that he needed to get on staff at Jupiter, so it would be state of mind, I believe.

Your Honor, we do have extensive evidence of patient harm, and patients are consumers. We have evidence of insurers being --

THE COURT: What is the evidence of patient harm?

MS. BUZZARD: The patient who left against medical advice who cited the Leapfrog safety grade.

THE COURT: You have two at West Boca and what else?

MS. BUZZARD: We also have the testimony of the CEOs on their various rounds and how the encountered several patients who were upset and concerned that they would be harmed. We have Ms. Havericak referencing a woman she had spoken with in her room who was very grateful not to have had a negative event given the negative press she had seen in light of the Leapfrog safety grade.

And there are also insurers, Your Honor. The Humana letters specifically indicate concern about potentially continuing -- about the safety at the various hospitals.

And finally the patient transfers. You heard evidence of individuals going to the wrong hospital effectively, hospitals that couldn't serve their needs, and the transfers are up from, I believe, Jupiter to the Plaintiff hospitals, that is --

THE COURT: The transfers would just be they have too many patients, right? Isn't that a reason for transfers as it was explained. Was any of it that they didn't have the resources?

MS. BUZZARD: I believe it had to do with whether or not the patient could be properly served at that hospital. If you went to a hospital that couldn't handle a level one trauma you would have to be transferred. That is why transfers occur. There is evidence of that in this case about that. The CEO

testified to that. That is evidence of patient harm.

THE COURT: Do you think you have to show actual harm or likelihood of harm?

MS. BUZZARD: Under your summary judgment order, likelihood of harm is the standard. With respect to unfairness, Your Honor indicated it might be the case that we would need to show actual consumer harm. We would ask that you reconsider that citing an Eleventh Circuit case that --

THE COURT: Should I pay attention to that case?

MS. BUZZARD: Of course, Your Honor, you should always pay attention to the Eleventh Circuit.

THE COURT: When I got that case from you I looked at the FTC Act, and the legislature occasionally amends it. The last time they amended it they said we should consider Federal law existing at 2017.

MS. BUZZARD: The Eleventh Circuit case refers to the longstanding understanding of --

THE COURT: You think it relates back to prior 2017 law.

MS. BUZZARD: Right, and it reflects an understanding of the general case law about what substantial injury should be interpreted to mean.

Moving on to the final element, your Honor, the Plaintiff hospitals seek only injunctive and declaratory relief here and therefore do not need to show actual damages and

merely that they were aggrieved. The hospitals are indisputably aggrieved.

THE COURT: What is the relief you seek?

MS. BUZZARD: We seek an injunction preventing them from putting up grades for the Plaintiff hospitals. If you don't have data don't grade.

THE COURT: What you want is that they can't publish any grade for the Plaintiff hospitals?

MS. BUZZARD: Yes, Your Honor.

THE COURT: They have 18 scores that don't depend on this type of measurement.

MS. BUZZARD: 15 out of the 22 measures, four are the ones for which they assign the failing scores and for three additional ones they marked them NA.

THE COURT: So you think there are seven?

MS. BUZZARD: Correct.

THE COURT: How many CMS measure are there?

MS. BUZZARD: 15.

THE COURT: I thought it was 18. You think there are less than that?

MS. BUZZARD: Correct.

THE COURT: In any event, you think they should not grade you at all, even on the published scores for data.

MS. BUZZARD: That is not what they are doing, your Honor. I suppose, we have to -- if they are willing to totally

overhaul their entire business model such that they are no longer conducting this deception, that might be a different matter.

We ask them to adhere to their own rule of conduct. Their expert said that if the hospital is missing more than six measures, they shouldn't be graded. Here they are missing seven, they shouldn't grade the hospitals.

THE COURT: Okay, thanks.

MS. BUZZARD: If Your Honor is at all inclined to grant the motion for the other side we ask for the option to do a briefing.

THE COURT: I will deny the motion, I think it is helpful to hear evidence.

MS. BLAIR: Thank you, Your Honor.

Do you want to take an afternoon break or would you like me to start with my case in chief?

THE COURT: We ought to take a break, we have been at it for awhile. Usually I can count on Pauline. We will take a break.

(Thereupon, a brief recess was taken.)

THE COURT: Okay, please have a seat. I look forward to hearing your case.

MS. BLAIR: Thank you, your Honor. We call Missy Danforth to the stand.

MELISSA DANFORTH, DEFENDANT'S WITNESS SWORN.

THE WITNESS: Melissa Danforth, D-A-N-F-O-R-T-H.

DIRECT EXAMINATION

BY MS. BLAIR:

Q. Good afternoon, Ms. Danforth. Can you briefly tell the Court about your qualification -- I am sorry, about your educational background?

A. Sure. I have a Bachelor's Degree from the University of Maine.

Q. In terms of your employment history, where did you start?

A. I started in Maine at a child abuse and neglect agency. My first roles were grant writing and teaching education classes for patients who couldn't afford to attend them and implementing an anti-bullying program in high school.

Q. And at some point, did you begin working with Leah Binder in Maine?

A. Yes, when working at the child abuse neglect agency I met Leah. She needed support with grant writing so I transferred from small community grants to multi-year Federal grants, mostly focused on public health, breast feeding to rural areas. While in that role, it expanded to include other special projects ranging from putting together the annual report to doing branding, actually helping to implement the network's first electronic health record.

She came to Leapfrog in 2008. She asked me to join her in 2009 and here I stay.

Q. All right. Thank you for that. We talked about the mission of Leapfrog. Well, let me step back for a minute.

What is your current role at Leapfrog after all of these years?

A. I was accidentally demoted through the testimony. I am senior vice-president of health care ratings at the Leapfrog Group.

Q. In terms of how you have you the mission of Leapfrog from the perspective of vice-president of ratings, can you tell the Court, how do you see the mission of Leapfrog?

A. We are a relatively small non-profit with a big and important mission, to reduce harm to patients, specifically death from medical errors.

Q. How do you advance the message in your role as senior vice-president of ratings?

A. I do a few things. I will keep it brief.

Q. Thank you.

A. First and foremost, I am responsible for helping to guide the strategic direction of Leapfrog. In that capacity, we expanded our mission by developing an ambulatory surgery center survey. Harm happens in hospitals, but 70 percent of surgeries are occurring on an outpatient basis, many of those in free-standing ambulatory centers, so we extended our work to that.

Additionally, I oversee our hospital and ratings programs,

that includes the Leapfrog hospital survey, the hospital safety grade, our value based purchase program, the ambulatory surgery center survey, and public reporting period, our partnership with the American Diabetes Association to recognize hospitals who provide exceptional care, and a new partnership with the American College of Surgeons to recognize hospitals who represent outstanding geriatric care, or surgery for older adults.

Q. And is it fair to say -- we have been talking a lot about hospital safety grade and the survey?

A. Yes.

Q. Is it fair to say those are not the only programs that Leapfrog does?

A. Those are not the only programs. I oversee five separate and distinct programs, and one of them focuses entirely on ambulatory surgery centers.

Q. There was some testimony from Ms. Binder that the entire staff of Leapfrog is about 20 people. Do you agree with that?

A. Yes.

Q. Of those 20, how many are on the ratings team?

A. Ten.

Q. Half of the staff?

A. Yes.

Q. I want to make a distinction between the survey and the hospital safety grade. Let's talk first about the survey.

A. Okay.
Q. Can you explain to the Court what is the survey and how is it separate and distinct from the safety grade?
A. The survey is why we were founded. As Leah Binder explained, Leapfrog was founded 25 years ago to bring transparency to the safety and quality of hospital care and we do that through administering the Leapfrog hospital survey.

What makes it distinct and separate from the safety grade is that it is annual, we ask hospitals to do it once a year, whereas the hospital safety grades are issued biannually. Hospitals have to choose to submit the survey. As we have been taking about it a lot, we issue safety grades to hospitals if we have enough publicly reported data.

The survey includes a broad range of measures covering various aspects, so things like maternity care, C sections, inpatient and outpatient surgery, billing ethics, and health care equity.

The safety grade is focused entirely on measures of preventable harm, so it has a very narrow focus. When I talk to people about the survey and the safety grade I always say survey is once a year, safety grade is twice a year, survey is very broad, safety grade is very focused.

Another distinguishing factor between them are the hospitals who participate in each of the two programs. The Leapfrog hospital survey since its inception in 2001 targets

pretty much all hospitals in the United States that provide general health care, including free-standing pediatric hospitals like Children's Hospital of Philadelphia, critical access hospitals, a special designation by the Federal Government for very small rural hospitals that have 25 beds or less, surgical specialty hospitals, women and children hospitals, cancer hospitals.

Pretty much any hospital, they can do the survey, they do the survey. The safety grade only generates grades for hospitals with CMS data that is only available for certain general acute care hospitals.

Q. And those different types of hospitals that aren't part of the grade, do they get graded in their own category? Do you have grades for pediatric hospitals?

A. No. In order to calculate the hospital safety grades, we have 12 measures, all focused on reducing preventable harm. Almost all of that data is coming from CMS. That data is not available for cancer hospitals, they don't participate in CMS in the same way. We can't calculate safety grades for certain types of hospitals because we don't have enough of that publicly available data from CMS.

Q. Have you ever talked to hospitals that don't qualify?

A. Uh-hum.

Q. Have you ever talked to the hospitals about why they do the survey if there is no grade to it?

A. I talk to lots of hospitals, especially pediatric and often rural hospitals. For two reasons in particular this comes up, first and foremost, pediatric hospitals, they would like a Leapfrog to calculate a grade, they like a single letter grade representing safety. I have to tell them, help me find the patient safety measures and we will take it to the expert panel.

Another reason we talk to them about this, for pediatric hospitals there is almost no public quality information available unless they participate in Leapfrog. For them it is the only vehicle they have to tell their community about their safety and quality. They can't tell CMS, CMS will not put on care and they value that survey.

Q. Do you know what percentage from the survey these four imputed measures make up of the survey questions?

A. Right now the hospitals has nine sections, patient ethics to outpatient surgery, about 50 measures covering the major aspects of hospital care. In the hospital safety grade only seven measures come from the Leapfrog survey, and of those seven, we only impute four. So less than ten percent used in any aspect of the safety grade. It is quite a small percentage.

Q. I want to talk about hand hygiene. I want -- you oversee the survey, right?

A. I do.

Q. In terms of the hand hygiene measure, what are the questions asked on the survey and what must the hospital do from the minimum requirement to the maximum? There have been a lot of issues about, well they have the policies, so why are they low scoring?

A. Our hand hygiene standard was developed by an independent voluntary national expert panel. I am not an epidemiologist, I did not develop the standard. They use the WHO, Word Health Organization, guidelines, as well as guidelines by other national academic research organizations, including APICS, which is the Association of Preventive Infection Control Specialists.

They developed the standard which includes five different areas of hand hygiene that is important based on the evidence to actually reduce the spread of infection in the hospitals, all different kinds of infections in hospitals.

One domain is focused on education, so making sure staff, including new and returning staff, have continuing education and that includes a physical demonstration of proper hand hygiene.

The second domain is focused on what we call monitoring, so the hospital is observing whether or not proper hand hygiene is happening. In some cases it might be soap and water. If it is a patient with CETA the hygiene technique is gloves, wear gloves. The second is alcohol based hand sanitizer.

So, it includes training, physical demonstration of those things. The monitoring includes monitoring to make sure people are doing the right thing in the right situation and monitoring environments in specific units of the hospital.

The third domain is feedback and is focused on using the collected data to develop an informed quality improvement program and also do something called real time coaching. If there's a person observing someone doing it wrong, they are not just collecting the data point, they do some real time coaching.

Two more, sorry. The third one -- the third one I gave.

The fourth one is infrastructure, and so do the hospital units have sinks in every room so people can wash their hands, and alcohol based hand sanitizer.

And the last one is culture, are hospitals making it clear and safe for patients to ask the doctors and nurses to wash their hands, and are hospital executives being held accountable for their performance on hand hygiene. I realize it is a lot because it is a lot.

Q. When you talk about hand hygiene and the Leapfrog standard, does that apply only to nurses and doctors?

A. No. It actually applies -- you will love how long this is -- to anyone who touches patients or touches equipment that will touch patients.

Q. Food services?

A. Yes.
Q. Okay. We heard a lot of testimony that these hospitals have hand hygiene policies, correct?
A. Yes.
Q. If a hospital has a hand hygiene policy and they report to the survey, and that is all they report, how would they score on the survey?
A. Depending on the elements of that policy, they would score on the bottom, which is limited achievement. There are only two opportunities to earn achievement standard. One of those is to perform 200 hand hygiene observations per unit per month and use that data in all of the ways we outline it in the feedback and monitoring section.

They have to say yes to the question on the education domain and the infrastructure domain and the culture domain.

The other option is to do one hundred hand hygiene opportunities per unit per month. You have to say yes to every single question in that subsection, so the bar is quite high.
Q. And the limited achievement, and I will stick to hand hygiene, the numerical score that is limited achievement for hygiene is 15. Are you aware of that?
A. Correct.
Q. And we saw an email in Plaintiffs' case in chief where Alex Campione is communicating with Karen Lider about what they are

going to say about the infamous footnote and Alex uses the word arbitrary to refer to the 15 points. Do you recall seeing that email?

A. I do.

Q. As the senior vice-president of ratings, is the score of 15 that is associated with limited achievement for purposes of calculating the score on a safety grade is it arbitrary?

A. It is not. When you asked me to introduce myself one of the programs was the Leapfrog validating participating program, this was developed around 2006 or 7, before Leah or myself came to Leapfrog.

The program is designed to use the measures on the Leapfrog hospital survey in a way that could be useful to health plans. We take performance category that we use to publicly fill out the results, achievement into numerical scores.

The concept of that value based purchasing was to group the various measures on the Leapfrog survey into domain. I believe today there are five maternity care measures on the survey. Through the value based purchasing program we calculate what we call maternity care domain scores. We take the five measures and calculate it in the maternity main score.

In the process of developing that in 2006 and 7, a health care consulting firm led by a health care economist was hired, at that time in Baltimore, Maryland to convene a national independent expert panel specifically for the purpose of

developing a methodology to assign numerical scores to the text based performance categories that we use in survey public reporting.

It is that independent expert panel that used a scientific process to determine the various numerical scores assigned to each category.

That is why, for example, for some of the measures like ICU staffing the second highest score is 50, whereas for a computerized entry the second highest score is 70. They took into account the evidence of the measure in terms of actual patient harm, impact to a patient, how many patients could possibly be harmed. Also opportunities, things like is there a lot of variation on the measures if everyone is doing the same.

So that expert panel for that program developed those numerical scores for those four performance categories, and when we convened the safety grade expert panel in 2011 and started exploring the development of the composite, we recalled that we already had a methodology to do so. They reviewed it and decided to adopt it into the hospital safety grade.

Q. Ms. Campione would not have been around when that occurred?

A. No. I had been at Leapfrog for 16 years.

Q. In talking about the survey, are there free tools to hospitals that Leapfrog provides so that hospitals can ease their burden in figuring out how to respond to the survey?

A. I wouldn't describe it as how to respond to the survey. I

am one of the free tools. We want hospitals to be able to report accurately and efficiently to the survey. The best way to help them do that is to make sure they know, one, where to find the information on the website, the fact that we have a hard copy, calculators, data collection tools, other publications that they can use all to make data collection more efficient and their responses more high quality and standardized.

There are the materials themselves. In addition to that, we offer free one on one orientation calls with hospitals. As I mentioned, half of the Leapfrog staff, of the team, they are offering to do so. We operate and I oversee a dedicated help desk. We use something called Zen desk where hospitals, ambulatory surgical centers, anybody could ask questions, including measure specifications, scoring algorithms.

Additionally, on an annual basis Dr. Matt Austin and I do free town hall calls talking about the changes to the survey, what is new in the survey.

In addition, through our regional leaders, I am requested to do one on one calls with the hospitals. For the help desk I do one on one calls. The last thing I did before getting on a plane to get here is was a one on one call with a health system to answer questions about the Leapfrog survey.

Q. We have discussion -- we have had some testimony that the CEOs believe Leapfrog has no verification process in place.

Have you heard that testimony in this case?
A. I believe I did.
Q. I want you to briefly tell the Court what are the steps of data verification that you oversee as the senior vice-president of ratings to make sure the survey results that Leapfrog is getting are accurate?
A. There are five, I will be brief. The first we talked about and looked at is CEO attestation, this is a reliable source of data verification. CMS uses it for several of their measures.

The second is online warnings built into the survey tool. The survey tool is almost like Turbo Tax, if you put in responses that don't make sense you get a warning.

The third is a monthly extensive data verification where we review every response submitted on line via the survey tool, compare both highs and lows, previous years responses and external data sources if available.

The fourth is monthly random documentation request. Much of the hospital survey is focused on structures they have in place. It easy for them to document whether those things are there or not there. On a monthly bases we randomly select hospitals and ask them to verify their responses by submitting documentation to us.

The final thing is on-site documentation, where we use Medistar, a 50 year old health care consulting firm, and they go on site.

These same five steps are utilized for our ambulatory surgery center survey as well.
Q. And I want to get in a little bit to the hospital safety grade which we are all here for.
A. Yes.
Q. In your opinion as the senior vice-president of ratings, who is the hospital safety grade made for?
A. Consumers.
Q. Who are the consumers?
A. Patients, caregivers, potential patients, people in the community, people who might use the hospital.
Q. And were you at Leapfrog when the hospital safety grade was developed?
A. I was.
Q. What is your understanding of the purpose of the hospital safety grade?
A. I will be brief. I won't go into the full history, Ms. Binder did that.
It was to develop a composite utilizing as many publicly available measures focused on patient safety as possible to give patients a better understanding specifically of the concept of freedom from harm, keeping them safe from preventable harm that they could use to make informed decisions.
Q. You might have been in the room when I was arguing before

the judge, but when you why the word composite, or Leapfrog uses the word composite, what does that mean?
A. I will tell you how I use it and Leapfrog. We take different kinds of measures, all with a singular focus on patient safety, and using a methodology to combine those measure into a singular numerical score which gets translated into a letter grade.
Q. Is it possible that if your CMS data is significantly above the national average and you are a non-reporting hospital, is it possible to still be an A hospital without reporting to the survey?
A. It is more than possible, it happens.
Q. When we talk about the composite nature of the grade, I want to talk about cut points. You and I have talked about cut points, but can you explain what you mean by cut points?
A. As I mentioned, as part of developing a composite we start with 22 measures, developed by Patrick Romano, that includes ten individual and distinct measures of complications.

We take those individual measure scores, and use our Z score and weighting methodology to calculate an overall numerical score. That overall numerical score has a range from say zero to four, just to simplify it. That is not perfect, but to simplify it.

Cut points are determined where if you are above a certain cut point you would be an A. If you are between that cut point

and the next cut point you be a B.
Q. To dumb it down, is this the equivalent of on a test if you get a 90 or a hundred you are A. That is where you cut it off?
A. Our ranges are pretty broad, there are only five of them. Basically hospitals went into standardization above the means, it is probably more generous than that.
Q. There is a range of Z scores that are graded an A, and a range of Z scores that are graded an F; is that correct?
A. Yes, that is correct. In the very beginning when we implemented the hospital safety grade one question we got quite a bit was whether or not hospitals were trying to game the grade, and I repeatedly would be having the conversations and explaining to various people that given the composite nature of the measure and all the things at play, it is very difficult to game a composite.

Additionally, there are so many combinations of measure scores and performance on these measures that come into play in order to get any of these grades.

Additionally, because each measure has their own weight, it is a multifactor approach, and so what I commonly say is if you are an A, that means you are better than average on more measures than you are worse than average. If you are a D or F, it means you are worse than average on more measures than you're better than average.
Q. One of the allegations in this case is that if you don't

participate in the Leapfrog survey, you automatically receive a failing grade. Are you aware of that?
A. Yes.
Q. Can you tell the Court in your own words why that is not true?
A. It is simply not true because as recent as spring 2025, when this case was first brought, I personally looked at the data, I testified to this in my deposition, I made very clear that hundreds of hospitals who had the same step two imputation applied had a grade higher than the five Plaintiff hospitals, As, Bs, and Cs. I looked at that nationwide and also specifically in Florida.
Q. And also, I want to ask about the -- is it possible to participate in the Leapfrog hospital survey and get a D or an F?
A. Yes. Because of the nature of the composite, and we haven't talked about domain weighting, but we have two buckets of measures and each is weighted at 50 percent. You could be perfect on processes and structure, but if the outcome is terrible, that would be reflected, and we have hospital surveys that perform at the D and F letter.
Additionally, we consistently have had hospitals who have a B or C, and they are under the impression that if they just fill out the survey, I am putting air quotes around that, they will get an A. That is a myth, that is not true. They can see

that by filling out the survey their grade goes down.

Those are tough calls, and I have to remind them, we never said that it is performance on this is measures as we talked about it in hygiene, if you go through the online survey and you say no, no, no, no to all of the questions you are going to be scored as limited achievement and that will be reflected in the hospital safety grade.

If you are doing all of those things, you can document all of those things and say yes to all of the questions that will also be reflected in the calculation of your hospital safety grade.

Q. One of the questions the Court had for me is, why does Leapfrog grade hospitals that don't report the survey, why is that necessary?

A. When we first formed our expert panel specifically for the hospital safety grade back in 2010, 2011, at that point it was a slightly different composition than it is now. Those leading researchers, it was their job to define patient safety. It may seem it is so simple. No, there was an intellectual debate on how are we going to define patient safety for the safety grade composite.

Finally they decided to focus on this definition of freedom from harm, they didn't vote on it, but that is how they came out of the meeting, freedom from harm, things like accidents, errors, injuries, infections. It is notable these things don't

have to happen to you if people are doing the right things.

In defining patient safety in that way, their next conclusion was patient safety applies to pretty much everything in the hospital, so we can't exempt hospitals focused on patient safety. If the composite was focused on maternity care we wouldn't include hospitals that don't perform maternity care services.

In this case every patient is at danger for having the things happen to them that we include in the grade. It might sound simplistic, but actually it was a debate, and they feel the same way today, patient safety applies to every hospital and no one should be exempted.

Q. As to the safety grade, when it was first launched is it fair to say you did not have a hundred percent hospital participation in the survey?

A. No. Of course we didn't.

Q. Was the idea that data would be missing for some hospitals who weren't reporting to the survey, was that idea discussed at the very inception of the hospital safety grade?

A. Absolutely for two distinct reasons. As I described, the safety grade is made up of process and structural measures, and outcome measures. We knew we would have a missingness problem on the outcome measures side because all of that data comes from either CMS or the CDC in the case of infections, and they have established minimum sample size requirements for each of

these measures.

They do this to protect patient privacy if it is a small hospital, and two, specifical liability, and each one has different sample size requirements. So we knew some hospitals would be missing measure scores by virtue of not meeting the sample size requirements. The decision was made for outcome measures we should not include the measure when calculating the grade. We wouldn't impute, we wouldn't give a score of a zero or a hundred if an outcome measure score was missing.

For the process and structural measures they had a different thought. Because some measures came from the Leapfrog hospital survey, and it is voluntary, they explored multiple imputation methodologies at that time to deal with that missing voluntary data.

Q. Is it fair to say that imputation that we are talking about here has been part of the Leapfrog hospital safety grade since its inception?

A. Correct.

Q. And I want to go back to the expert panel and make sure I clear a few things up.

The hospital safety grade expert panel does not vote on methodology changes?

A. No expert safety panel ever votes on the survey measures, hospital safety grade, and I failed to mention when I introduced myself because I was so focused on getting my title

right that in my role I am a participant and considered a subject matter expert on expert panels.

I participated on numerous supported panels, and most recently the use of artificial intelligence in patient safety.

Additionally, I participated on numerous other respected national measurement committees, CMS nasal measurement committing. The voting hands up yes, hand up no do not occur when I am participating on a panel our expert panels that we administer.

MS. MALONEY: Your Honor, in the event counsel is intending to qualify her on expert panels, she does have testimony that she was an observer on the panel that reviewed and did not vote on and didn't actually approve the change in methodology in 2024.

I would appreciate it if she is not used as an expert in the manner that Dr. Romano was, and I don't want to be late in objecting, which is why I stood up as she was giving the explanation of her experience on expert panels.

THE COURT: All right, let's proceed.

BY MS. BLAIR:

Q. I want to move forward in the history. Oh he this he we have now established that imputation --

THE COURT: Can I ask a question? Why would you not use imputation on the outcome measures and use it for process and structure?

THE WITNESS: That is a great question. I probably did a bad job explaining it. I am under some pressure to be fast and I have a problem deciding how to do that best.

The reason the measure score is missing, and again these are CMS measures or the Center for Disease Control, is because the hospitals didn't have a large enough sample size for either CMS or the CDC to be willing to calculate a measure score for those hospitals.

Can I give you one example?

THE COURT: Sure, although that is a reason why it is missing, but it doesn't explain why -- the fact that it is missing, does that mean you can't impute?

THE WITNESS: Correct. We don't have a good basis on what the score would have been because the measure developer, the CDC or CMS, are saying that they don't have confidence that they should calculate a measurement score.

THE COURT: Why would you impute the other because there is not confidence that it is there, the structure?

THE WITNESS: In the case of outcome measures, it is things like the number of catheters associated central line infections that a hospital had, so there are very large hospitals who probably do central lines every year, there are very small rural hospitals that might only do a hundred lines every year. Because of the way those measures are calculated it would be difficult to impute the number of infections based

on the number of central lines when that information is unknown.

We are talking about actual infection. It is not the case every time you have a central line in place you get an infection. If we had evidence to support that the panel may have been willing to impute that outcome measure. We don't have evidence that, for example, every time you have a central line placed you get an infection. If there is a large hospital that placed 10,000 central lines, we don't have enough evidence to say, well, how does -- what would we expect them to have in terms of number of infections.

Am I doing a bad job explaining it?

THE COURT: You are doing a good job of explaining why you don't do it there, but what is the difference?

Why can't you impute on number of hand washings and whether or not somebody has infrastructure? If the information is missing, it seems like it is the same, you just don't have the information.

THE WITNESS: For structural measures, how the panel has advised us is to think of it in the following way, computerized infusion order entry, the presence of that has been ubiquitous probably for the past decade.

So we know with assurity because that has been published in purity literature, all hospitals are using some sort of computerized prescriber order entry.

If you came into our survey and said we use computerized prescriber order entry, this is how many medications we ordered, this is how many medications were ordered through the CPOE system, your score would be limited achievement, exactly what we are assigning today.

The only way to get a higher score, I believe I was here when one or two of the Plaintiff CEOs testified to this, is to take what we call the CPOE test. It is a simulation that allows hospitals to enter test patients in their system and test medication orders.

They have a licensed prescriber order those test medications for those test patients and they record what advice or information the prescriber received. In some cases those test orders if they actually reached a patient would have resulted in death.

We see tremendous variation in the functionality of those systems. In some cases we know based on these results that all drug age alerts are shut off.

If someone ever tries to order a medication for an adult that is dangerous, they will never get an alert because that functionality is shut off. In some cases all drug diagnosis functionality is shut off. If you are there because you had a stroke and it would be dangerous, no one will see that alert.

That is why we have the test. It is not just are you

using CPOE for medications, sure, probably everybody is, but how well is that system working in trying to prevent those bad things from happening to patients.

Did I do a bad job explaining that?

THE COURT: No, I followed that. Why do you assume that hospitals that don't respond don't do that?

THE WITNESS: The only way to access that CPOE test today is through the Leapfrog hospital survey.

THE COURT: You mean the only way for you to get that information.

THE WITNESS: So the test was developed by a group of researchers at Brigham and Women's Hospital and the University of Utah and it is administered through the Leapfrog survey, and there wouldn't be another way for a hospital to have access to that data.

THE COURT: Thank you.

MS. BLAIR: Thank you, Your Honor.

BY MS. BLAIR:

Q. So I want to move to the methodology change that occurs in 2024. Briefly I want to ask you why did Leapfrog believe it needed to reconvene the expert panel in April 2024 to discuss the imputation for BCMA, CPOE, hand hygiene, and IVS? Can you hear me?

A. I can hear you. For this time period it actually probably would have started in the fall of 23, we met in spring 2024.

One big thing was happening in the news, and that big thing is that a large national health system was going to be filing for bankruptcy because they were having problems. Those problems were trickling down to impacting patient care, patient safety. At least one of those hospitals is here in Florida.

In this time -- prior to declaring bankruptcy, which was public, these hospitals had been annually submitting Leapfrog hospital surveys. When they ran into these troubles they stopped submitting surveys.

Due to our imputation methodology, this is fall 2023, we were still imputing four rounds back, more than two years ago at this point, of their survey data.

We were getting help desk tickets, emails from other hospitals in these communities, as well as patients basically saying, you know, these hospitals grade because you are using old data that aren't accurate.

These hospitals are in the news that they are going bankrupt, there is photos of their ORs, and other evidence coming out that where they are today is not reflective of whatever they told you in the last surveys that were submitted over two years ago.

I took this concern really seriously. One of the things I really tried to do in my role as vice president the Leapfrog is make sure we are always putting patients first. I think all at Leapfrog do that. It is difficult when you are taking about

ratings and doing all of this math and technical work. You need to try to keep the patients in mind, and I really try to do that, and I hope that comes out in my work.

I talked to Matt Austin, and I said, Matt, I am very concerned about the use of imputation allowing in this very old data, we are getting concerns from patients and hospitals in the communities. I am seeing it myself in the news. We need to talk to the expert panel about this, and we need to consider not imputing old data anymore. I don't think we can trust what was in place is frankly still in place.

Again, these are structures and processes that you do need to be monitoring in a standard formalized way to know whether it is still working or not, and if that is not habitual, we could easily see slippage, and I was very concerned about misleading patients about their potential risk.

Patients pay the highest price when something goes wrong. We talked about the patient and family care giver panel, but what Leah didn't say is it is made up of families who have either experienced medical error or lost a family member to an error. I take these things seriously and that is why I asked Matt to convene the panel.

Q. DX 436 are the panel slides that the Judge has seen. The imputation model that was implemented in the fall 2024 is not the imputation model that you as senior vice-president of ratings brought to the panel in 2024, correct?

A. Correct.
Q. A slide was added. Mr. Austin, we saw his video earlier, he added this slide, and he said, what are we solving for, what is the problem to solve. Do you see that?
A. I do.
Q. Did you work with Matt to put this together?
A. I didn't.
Q. He says part of what they are solving for is -- this is the last bullet point -- hospitals using step one imputation using historical data as a reason not to report to the current survey. Do you see that?
A. Yes.
Q. Is that consistent with what you just testified to?
A. Yes, this is the national health system that filed for bankruptcy, that is correct.
Q. Scroll down, keep going, keep going. Right there, proposed future methodology.
This is what you, Ms. Danforth, were bringing to the hospital expert panel for consideration; is that correct?
A. That is correct. My focus was on retiring step one, not allowing hospitals to have the older data imputed calculated in the hospital safety grade.
Q. Was there anything about bringing this new methodology which has nothing about limited data -- when you put this before the hospital panel in 2024, was there anything in your

mind about increasing revenues?
A. No.
Q. And we talked a lot -- basically you wanted to say, I don't want to use historical data anymore?
A. Yes.
Q. And prior to the meeting -- Patrick Romano couldn't make that expert panel meeting, correct?
A. Correct.
Q. Do you recall what Mr. Romano's issue was with this methodology that you were putting forward?
A. Only from reviewing the documents for this trial. My understanding is that he was concerned about retiring step one because he wanted hospitals who were doing the survey to have the opportunity to do the survey every other year instead of every year.
Q. Okay. You can take that down.
And the hospital --
THE COURT: Was that step two your proposal?
MS. BLAIR: Yes.
THE WITNESS: No. My proposal is to retire step one, retire step one imputation for all measures. That is when we allow hospitals to get credit for surveys they submitted in the past.
THE COURT: So, what was your proposal?
THE WITNESS: That was my proposal.

THE COURT: What was going to replace that, retiring it?

THE WITNESS: Any hospital that didn't have current Leapfrog surveys, they would be assigned what was at this time step two, which were the means of the cohort they had been assigned to based on various hospital characteristics.

THE COURT: So your step two was to impute -- what does that mean, means of the cohort?

THE WITNESS: So how we were calculating the values to impute for step two at this time is that we would take all of the hospitals and we would see are they teaching or nonteaching, urban or rural, more or less than 500 beds. The other category we looked at, are they safety hospitals. We would put all those hospitals in one of those groups, and then we would use their survey results, we would calculate a mean score.

So the mean scores were based on performance of hospitals that had submitted surveys to Leapfrog and had those various hospital characteristics.

Let's say there was a group of women under 5-foot two that had two kids, they all went in one group, and however we were performing at that time we calculate the mean value. The scores that hospitals were being assigned were at this point still based on the work that Leapfrog reporting hospitals were doing.

THE COURT: Wouldn't that be fairer than giving everybody the lowest score that didn't report?

THE WITNESS: That is what I am suggesting we do at this meeting, get rid of step one. I could live with step two. I don't love step two, but I can live with step two. I am a moderate in all things. Remove step one, we will stick with step two. I don't love it, but that is what I am proposing that we do.

It is only after the slides are presented that members of the expert panel -- we have all heard from Dr. Patrick Romano, but he is one of a much larger expert panel. There are other members including the deputy director of the CDC at that time, researchers from other institutions. They get the opportunity to weigh in on this as well, and through their deliberations -- I believe this is reflected in another exhibit, but I don't have my JX number in front of me.

Their deliberations indicate a couple things: One, they are getting concerned because of things that they are hearing. They are out in the community talking to hospital leaders, CEOs. They are hearing from the hospital leaders, CMOs, that hospitals have figured this imputation methodology out, they are figuring out that if they aren't doing a good job in one area where we have an imputation model, they can just not report to Leapfrog and they will have that mean score assigned based on Leapfrog reporting hospitals that is quite

high.

Can I give you one example I know?

THE COURT: Please do. You are saying what they would do is report on some and not others, or not report?

THE WITNESS: It is only a handful of measures, they won't do a survey.

At this time, spring 2023 -- spring 2024 -- no, spring 2023, going into this meeting, the average hospital score for CPOE from hospitals that were doing that test we talked about, but also actually had all of that clinical decision support working was something like a 93, say. The imputed score the hospitals were getting for not taking the test, having no idea how the clinical decision worked, if it worked at all, was almost identical. It was really high. From an expert panel perspective, and these are researchers in their own right, that idea these reporting hospitals have an average score of this and non-reporting hospitals have an almost identical score started to lose their face validity. There are hospitals that do the test and fail the test, and through failing the test get assigned limited achievement for CPOE and 15 points, and they are starting to hear that. That is one thing.

The other thing that is happening in the meeting as they have their independent conversation is that they start talking about in some way is this methodology disincentivizing hospitals that were otherwise transparent, submitting a survey

to stop submitting a survey. Now we are giving them a benefit of not being transparent. They are going to get the high scores no matter what, and that was concerning.

As we talked about today, we are getting current up to date data, not only on this, but the C-section rate. From an academic perspective, morally that didn't sit well with them. They are hearing hospitals have figured this out and using it to their advantage. They are starting to think through, are we disavowing transparency. That is not something we want to do.

They are having an active transparent dialogue on some things we can do, and through that conversation they suggest what if we did something different, what if we put them at the bottom, the bottom score. They are suggesting this. You will not find that language on these slides, you will not find in that transcript anyone from Leapfrog suggesting this.

What you will see is they have an organic discussion among academic intellectuals about a problem they are recognizing and talking about how we as Leapfrog and they as a panel may want to handle it. It is not their job to then work out all of the detail, that is our job.

Does that make sense?

THE COURT: Okay, thank you.

MS. BLAIR: Your Honor, for the record, this is PX -- there is a video in evidence, PX 261.1, and the transcript of this meeting that Ms. Danforth just described at DX 439.

BY MS. BLAIR:
Q. Ms. Danforth, you had an issue with step one?
A. Correct.
Q. Step two, that was the step two that was in place for spring of --
A. Yes.
Q. So these five hospitals who complained that their grade was one thing in the spring of 2024 and something different in 2025, they were getting this step two at that time, correct?
A. I haven't looked at this.
Q. This would have been step two?
A. This is step two at this time. What I am saying is I am concerned about step one, I will live with step two.
Q. Got it. Did you have a conversation with Alex Campione about what her concerns were as the data analyst seeing the data?
A. Yes. So Alex had been concerned about step two.
She does two things. She obviously calculates the mean, but we also put together the scoring methodology document that has been shown. That scoring methodology document, and in that document we publish the means every round. She is calculating the means and physically putting them into the document, and in the act of doing such, she is the first to tell me these means are getting really high. She has been doing this for two years and wherever they start they are going up and up and up, and

that has all kinds of impacts. It is complex.

I am basically thinking at that time thank you for letting me know, I really want to focus on the step one problem.

Q. You are her boss, and we can see from the slides you went out, you don't bring any issue with step two?

A. Correct.

Q. Ultimately, after listening to the expert panel, which all is in evidence, you change your mind. Is that a fair statement?

A. I don't instantly change my mind.

Q. How does that process go from you offering this to the expert panel to the imputation that we have been here a week about?

A. We offered moving all hospitals to step two. The expert panel has a lengthy detailed discussion. Through that discussion they suggest moving hospitals to bottom categories, bottom, bottom would be the theme there. We -- certainly I had not considered that, but in hearing their conversation about disincentivizing transparency, risk of misleading patients -- one in four patients are harmed in the hospital, it is not a small risk being that we are misleading them about. I start to consider the idea, but I don't immediately support the idea.

Q. And ultimately, what happens is the methodology change gets put into place that we are here for today?

A. Yes.

Q. Really quick, the public comment period, do you put those changes, the proposed fall 2024 methodology changes, do you put those out for comment?
A. Yes, of course.
Q. It is public comment?
A. Yes.
Q. What do we mean by public comment?
A. We send out newsletters, emails, we have other organizations that send them out as well. Every hospital that has ever signed up for the newsletter gets a copy of them. It is an expansive process because we benefit from receiving public comment.
Q. The expert panel, do they get that request for comment? Are they aware of it?
A. Matt Austin would send them. I don't know if he did in this case or not. I know we always send them what we call a summary of changes. So once we put out the proposal, receive the public comments, we publish a second document. That includes we said we are going to do this, you all said this, we are going to do this, here are our responses to your comment. They do always get that, correct.
Q. The time frame, you put that out, the document is in evidence, May 2024?
A. Correct.
Q. The methodology change is implemented in November 2024?

A. Correct.
Q. Did you as the senior vice president of ratings at Leapfrog get any comments that they disagreed with the methodology changes proposed?
A. No, and I haven't since.
THE COURT: You said you started to consider it, and you didn't embrace it, so whose idea was it? Was this your idea or somebody else's?
THE WITNESS: I would say it was a product of group think. I came with one piece of it and --
THE COURT: I got what you have said so far. You started to consider it.
THE WITNESS: At the panel meeting they say we don't think this is enough, we are seeing a problem of disincentivizing, we are seeing a problem with hospitals saying I am not going to be transparent. I am going to ride on the coattails. So they suggest other things.
We reviewed a number of different scenarios that were presented in an exhibit that would be potential changes to step one as well as potential changes to step two. Ultimately, we take a different approach than what I wanted to take for step one and a different approach that what I had thought about for step two.
Who decided to move forward this, I would take responsibility for that in terms of recommending it to our CEO

Leah Binder.

THE COURT: Was it your idea or something that you thought was the right way to go?

THE WITNESS: Ultimately, I did think it was the right way to go. Patrick was concerned about us completely eliminating step one. So we kept step one, but we went from imputing four rounds of data to only two. The panel was concerned with the rising means and hospitals taking away current data in order to ride on the coattails of their peers, so they wanted to put them in bottom scores and so we addressed that as well.

I do truly believe as I sit here today that what we did reflected -- followed the feedback we received from the expert panel. I have no reason to believe that is not the case as we have met with the expert panel since then.

THE COURT: Isn't step one basically your step two but only one year?

THE WITNESS: No.

THE COURT: Step one was their previous data?

THE WITNESS: Yes.

THE COURT: All right.

BY MS. BLAIR:

Q. For clarification, it might be helpful to the Court if we could pull up DX 445.

If we go down, Ms. Danforth, this is a series of emails

between yourself, Alex Campione, and Matt Austin, and there is a chart in this document. Do you see that this chart?
A. Yes, that is the chart I was referring to.
Q. At this point in time -- and the date on this email is April 22, 2024?
A. Yes.
Q. This is 12 days after --
A. Ten days.
Q. Thank you for my math. After the expert panel meeting.
If you would scroll down so we can see this chart. Can you make it smaller so it is all on one page.
Can you explain to the Court what is going on in this chart, what the discussions are, and why you are talking to Ms. Campione and Dr. Austin?
A. Because this is what we do, we bring a proposal to the expert panel and the expert panel has been meeting twice a year since 2011. We bring a proposal, they weigh in on it through their discussions, we take it back and do some work on the idea, and then we move forward putting something out for public comment.
As we have done in the past, this is the sixth methodology change we have made to the safety grade. We have been doing this for years with this panel. This chart is in the normal course of the work we would do for any change related to the aspects of the hospital safety grade.

You can see in the chart this is step one imputation, and there are options for no change, small change, moderate change, large change. The bottom of the chart is step two, and there are options for no change, small change, moderate change, large change.

Note here because it is important, ICU staffing or IPS is not included in the list of measures in the second column to the left of the step two section of the table. We had a different imputation methodology for ICU staffing that had been in place since 2023.

You can see for step two there are no change, small change, moderate change, large change.

Q. Just to orient everybody, in the no change that was what it was like in the spring of 2024, correct?

A. Correct.

Q. Step one was imputing four rounds of historical data and step two was to assign the cohort mean, correct?

A. Correct. Step one applied to a slightly different group of measures.

Q. All right. Ultimately, what is adopted is the moderate change for step one?

A. Correct.

Q. Do you recall that imputing one round, that was Patrick Romano's issue, right, he wanted historical data to still be available?

A. We actually chose the small change.
Q. I'm so sorry. Right. You adopted the small change?
A. Correct.
Q. In terms of step two, which had been the cohort mean, you adopt the large change?
A. The large change, correct.
Q. Which is imputing limited imaging?
A. Yes.
Q. And that was the result, the ultimate imputation change was the result of discussions between yourself, Ms. Campione, Dr. Matt Austin, as well as -- who else was involved in that?
A. So, ultimately, when we worked on this and drafted this, we also showed it to Dr. Romano and Dr. Piembros, (phon) who were on the expert panel, before putting it out for public comment.
Q. Do you have any doubt in your mind, Ms. Danforth, that the expert panel endorses the current fall 2024 imputation methodology?
A. I have no doubt.

MS. BLAIR: No further questions, Your Honor. We can leave this up it you'd like.

MS. MALONEY: May I take down the exhibit?

CROSS-EXAMINATION

BY MS. MALONEY:
Q. Ms. Danforth --
A. Yes.

Q. -- I don't think we met, Mary Beth Maloney.
I understand congratulations are in order on a new grandchild?
A. Yes, thank you, she is perfect. Please put that on the record.
Q. Everything is on the record, perfection and other things.
So, your responsibilities also include handling licensure and accolade sales?
A. I precede the director of licensing sales.
Q. It is accurate to say -- I want to make sure you are hearing my question. It is accurate to say that you -- your responsibilities include licensure and accolade sales?
A. Yes.
Q. You are familiar with some of the promotional materials related to the licensing of the Leapfrog safety grade, aren't you?
A. I would be familiar with them from mid fall 2023 on. This is a new responsibility for me, it started August, September, 2023.
Q. Okay. If we could put up PX 7.
Now, this is one of the promotional materials that Leapfrog has about promoting your designation. You see here it says in what I think is incredibly teeny writing below the big writing, "and the benefits to a community are maximized when an organization chooses to license their designated logo and share

the good news of their designation."

Do you see that?

A. I do see that.

Q. At the bottom of the page it says essentially, review our collection of template ads your hospital or surgery center can adapt and display proudly. Do you see that?

A. I do see that.

Q. If you'd flip to page five of seven.

"Why should you promote your designation?" Then it says in the second sentence, "Your facility will maximize the visibility of your trusted reputation in the community and enhance your ability to recruit and retain."

Do you see that?

A. I do.

Q. So, Leapfrog sells licenses for the safety grades based in part on taking the position that the grade itself enhances a hospital's reputation and enhances its ability to recruit and retain, correct?

A. Leapfrog licenses its designated logos. I want to be clear, if you go back to the original screen shot, Leapfrog licenses its designated logos to organizations that earn those designations, yes.

Q. I am so sorry. Again, I don't think you heard my question.

So, it is true that Leapfrog is of the view that its grade enhances the reputation of the hospital who receives it when it

is an A or a B, at least to the extent that they would want to license it in order to enhance that hospital's ability to recruit and retain, right?

A. That very well may be the case. To be clear, in my responsibilities that I described I don't write website content for this website. It may be the view of the hospitals who license the designated logo, and my understanding is how some of this was derived --

Q. I didn't ask that question, but I suppose you can answer that when your counsel comes up. We talked about you give lengthy answers, and we have a lot to get through, we want to get to Friday.

I still think we don't have the answer to my question, but that is okay, we can move on. It doesn't matter whether you drafted it or not. You have been at Leapfrog since you were first recruited at the beginning by Leah Binder.

What was it you said when you first got on? You have been demoted so many times you have been put in virtually everything. It is fair to say Leapfrog believes the reputation of the hospital can be enhanced, including its ability to recruit and retain by the Leapfrog grade, right?

A. It definitely can be.

Q. Okay. And then you made the comment, and your counsel did as well, that all it is is the logo, right, the designated logo that you are licensing; is that right?

A. That is right.
Q. Okay. So the logo, is that a frog or something?
A. If you bring your exhibit back up I can tell.
Q. I think we might have it here. It is something more -- it is the grade, though, it is the actual A, right? Because why with you pay money to promote something other than the A?
A. We license several designated logos.
Q. And so it is The Leapfrog Group with the A, right?
A. It is literally the image that is displayed on the website you showed me.
Q. Right.
A. This is the data licensing, this is the data accolade licensure website. Examples of the designated logos are on the website. That is what we license.
Q. Let's go to PX 407.
This is an email from March of 2025, and it is -- the top of it is a price, that the total revenue is going to be $44,600, and I guess that is for a license. And if you go to the -- if you go to the third page, third of seven, it's the Leapfrog designated logo license, and then if we look right there where it is checked, spring 2025 hospital safety grade, eg. A or B logo.
I asked you before it says Leapfrog safety grade and the grade, the actual A or the B?
A. Yes. Designated image, but --

Q. Thank you. That is all on that, we have a lot to get through.

Did you see the deposition testimony of Ms. Van Caulil the other day?

A. The video?

Q. Yes. You were in court?

A. Unfortunately I am not sitting where I can see or hear very well when the videos are played.

Q. You should move up because they are very interesting.

What she said in response to the following question: Did Leapfrog communicate to you that they were trying to portray Jupiter -- and that is the hospital that we just saw that bought that Leapfrog logo, the A grade, licensed it for $44,000.

A. Correct.

Q. -- trying to portray Jupiter in contrast with Plaintiff hospitals in the media and with employers? And she said, I would say yes.

Do you disagree with Ms. Van Caulil or do you have no knowledge?

A. I have no knowledge of that.

Q. Okay, thank you.

You talked a lot today about those comments from various hospitals in response to change in methodology. If we could pull up JX 32. I believe you may have seen this, or maybe you

were too far in the back, but it has been presented to Ms. Caulil, so it is admitted.

If we go to the third page, there is a list of comments here, right?

A. Correct.

Q. And let's see. You are responsible for responding to the comments, right?

A. I don't personally draft the responses, I review them before they go out.

Q. If a response is wrong, whose responsibility is that?

A. If the response is wrong, I would take responsibility for that.

Q. Are you responsible for responding to the comments, and the answer to that is yes, right?

MS. BLAIR: Objection, argumentative.

BY MS. MALONEY:

Q. You work with the Leapfrog team to respond to comments from the hospitals, including Ms. Binder, right?

A. Sure.

Q. Is that a yes? I don't know what sure means.

A. I don't remember if I was working with Ms. Binder in responding to comments.

Q. That wasn't my question. We are having trouble with hearing. My question was: Did you work with Ms. Binder -- do you work with Ms. Binder to prepare responses to comments from

hospitals?
A. The ones you have on the screen or in general?
Q. My question was in general.
A. I wasn't clear because you are showing me something.
Q. Understood.
A. Yes, in general, yes.
Q. You do. And so, you don't know whether or not you worked with her on these responses?
A. I wouldn't know based on the document you have up.
Q. How about your memory?
A. I don't remember.
Q. It was a pretty big deal, the change in methodology, right?
A. Responding to public comments I would have reviewed an initial draft by Alex Campione. She is responsible to get it signed off by Ms. Binder. I would not consider these comments unlike comments we have received in the past related to other areas of the survey or safety grade.
Q. That is interesting. Let's look at the comments. The second to the last commenter, Alana Noble at Mt. Sinai Health System -- God bless them, they are my health system in New York City -- says, "we strongly disagree with the proposed false 2022 imputation. If Leapfrog is going to implement this change they need to offer hospitals the option to opt out from being graded rather than penalize the hospital for not submitting the resource intensive survey."

Do you see that?
A. I do.
Q. And if we turn to the next page, page four, and if someone would be kind enough to let me know if we are not there because I can't see out of this side.
So Providence System at the bottom there, Susan Boardman --
A. Wrong slide.
Q. Thank you. Page four.
A. Yes, right slide.
Q. "The proposed changes to the imputation model would result in an inaccurate portrayal of the status of patient safety structures and processes in place for the Leapfrog grade." Ms. Boardman goes on, "Rather, if 2023 or 2024 were not submitted more accurate options would include, one, not assigning a grade for hospitals that did not submit either a 2023 or a 2024 survey, or at least allowing these hospitals to opt out of the fall 2024 Leapfrog hospital safety grade."
Do you see that?
A. Yes.
Q. You recall being asked at your deposition, why can't hospitals just opt out, right?
A. I don't recall it. I trust I was.
Q. You testified that opting out is not an option because Leapfrog believes that it should grade as many hospitals as possible.

Do you recall that testimony?
A. Yes, and I said the same thing today.
Q. If you are a hospital -- it is your view that if you are a hospital in the United States, and we'll talk about hospitals, not ambulatory centers, one of the four thousand or so hospitals in the United States, you should participate in the Leapfrog survey?
A. Yes.
Q. That is because you believe the survey is the best source of safety data available to consumers, correct?
A. It is the best source of a variety of data. I think I explained that in detail, it's safety, quality, maternity care. So, it is a very, very good source of data on a variety of aspects of hospital care not limited to safety.
Q. That is great. It is also your view and Leapfrog's view that it is the best source of safety data available to consumers, right?
A. It is not limited to safety.
Q. The question didn't say it was limited. I want to know if you think it is the best source of safety data about hospitals available to consumers?
A. I would not say the Leapfrog survey on its own is the best source of safety data for consumers.
Q. When I say consumers, I want to be clear who we are taking about.

So, Leapfrog's grades are directed to a lot of different consumers, right?
A. Are we now talking about the survey or the safety grade?
Q. I understand your testimony. Part of what goes into the survey they use for the grade, right?
A. I am asking so when you ask me your question --
Q. I asked you a question. My question was grades. Let's try it again.
When Leapfrog's -- when customers are directed toward Leapfrog's grades, there are a lot of different customers directed towards the grades to use them, right?
A. Our publicly reported safety grade website is designed for consumers, our effort to bring consumers to the website.
Q. I am not asking the question specific to the website.
I will try again. The Leapfrog safety grade, the Fs and Ds, those are directed toward consumers, right?
A. Patients and patient families, that is correct.
Q. Those are all what you consider to be consumers?
A. Yes, in this context.
Q. Do you consider hospitals themselves to be consumers of the Leapfrog safety grade?
A. I don't.
Q. Even though they license the logo with the grade; is that correct?
A. That is correct.

Q. You don't view a hospital that -- you don't view Jupiter as a consumer of the hospital safety grade?
A. No.
Q. You do view the hospital safety grade as directed to patients?
A. Yes.
Q. Whether the patient actually attended the hospital that is graded or not?
A. Any patient.
Q. Anyone who could be a patient in Florida, where we are at, is a consumer of the hospital safety grade, correct?
A. Sure.
Q. What about employers?
A. I would say that the covered lives where employers provide their insurance, those covered lives are a part of the consumer group.
Q. Ms. Van Caulil said she thought employers were consumers. Did you hear that?
A. I never considered the safety grade and use of the word consumer in that context. The safety grade was devised, developed, published for patients, family members, people who go to hospitals.
Q. It is also directed to insurers, correct?
A. The safety grades can be used by insurers, though it is designed for patients, family caregivers, people that might go

to hospitals.
Q. Okay, fair enough. It is fair to say that insurers also use the safety grades, right?
A. Some insurers use the safety grades.
Q. Some employers use the safety grades, right?
A. Some employers use the safety grade.
Q. Anybody else I am missing?
A. Researchers.
Q. Researchers, outside the scope of being patients, use the safety grades?
A. In their research.
Q. Do any Government agencies rely on the safety grades?
A. We have a group of Government hospitals called military treatment facilities, they provide care, unlike the veterans hospitals, to active duty military. They have safety grades assigned to them.
Q. A lot of those men or women who have served are covered by Humana?
A. These are active duty military.
Q. Are they covered by Humana or -- when they go into rehabilitation, for example, are they covered by the Government or are they covered by an insurer with a contract with the Government, do you know?
A. I know the Government issues contracts to various health plans to administer Tricare. Specifically some of those active

duty military would be covered by Humana on Tricare, correct.
Q. Some of them are also covered by Medicare, aren't they?
A. I am not sure that there are other health plans that cover Tricare. For example, where I live in Maryland Trinity Health administers Tricare for Maryland.
Q. You also put -- I know you like to split between the survey and the grade, but the survey information that we are interested in that has become what we believe is the reason why we now have Ds and Fs comes from the survey and then is used as part of the grade.
You look confused, but isn't it true that if I don't give you hand hygiene data in the survey, then you don't have any data for it, and you are going to give me a 15, right?
A. As I just testified, it is recently known, and that is what others testified all hospitals today have some hand hygiene policy in place. It is a requirement of the Joint Commission of which I believe all of the Plaintiffs are accredited by the Joint Commission. It is reasonably known --
Q. You are not listening to my question.
A. That is a piece of data.
Q. Let's try the question again, otherwise I am going to have to move to strike your answer.
If my hospital does not fill in the survey, and does not give you information about our hand hygiene practices, whether we have sinks, which are required by regulations, audits,

whether we do your 200 checks, all the things you have to have for hand hygiene, if my hospital does not give that information to you, you will give it the score of 15, correct?
A. Yes.
Q. Thank you. It would be much easier if you listen to the question and --
MS. BLAIR: Your Honor, objection, argumentative.
BY MS. MALONEY:
Q. You put a high value on integrity and data accuracy, correct?
A. I do.
Q. You put such a high value on it because you need to be able stand in front of a hospital CEO at the end of the day and defend all of the measures, not some of the measures, right?
A. Correct.
Q. Okay. So, Leapfrog relies on imputation to present an accurate portrait of hospital performance. Is that fair?
A. Sure.
Q. They rely on imputation to provide an accurate portrait of hospital performance of hospitals that don't participate in its survey, correct?
A. I've never said it or heard it said the way you are asking. That is why I am making a confused face.
Q. The only change to the question I made is specifically asking if it is true for nonparticipating hospitals?

A. Let's go with correct.
Q. You believe in the imputation methodology?
A. I do.
Q. You believe it is a fair and accurate portrayal of hospital safety?
A. I do.
Q. You heard Ms. Campione's testimony yesterday, and the four measures are based on assumptions, right?
A. I don't remember her saying that.
Q. Are the four measures based on assumptions?
A. I said the four measures are based on what is reasonably known.
Q. You don't recall Ms. Campione saying they are based on assumption?
A. I don't recall the exact quote.
Q. So, if you don't participate in the survey you get a five for ICU physician staffing, right?
A. If the CMS report says you operate an ICU.
Q. We will get to that. Let's try it again.
If you don't participate in the survey you get a five for ICU physician staffing?
A. The way you say it is wrong.
Q. If you don't participate in the survey you are awarded a limited achievement for ICU physician staffing and that data point is a five?

A. Still incorrect.
Q. All right.
A. Until you make the distinction between hospitals that we know operate an ICU or don't operate an ICU I can't accurately answer your question.
Q. Let's do this, your contract with respect to all hospitals is not on trial here, it is with respect to the five hospitals represented by the CEOs seated behind me. I know it seems funny to you, but this is their professional lives that are --
MS. BLAIR: Your Honor, I am going to object to the testimony by counsel and the argumentative nature of --
THE COURT: Let's just have questions, please.
BY MS. MALONEY:
Q. For the hospitals that are nonparticipating, let's stick to the five, is it accurate that they are awarded five points for ICU physician staffing?
A. Yes.
Q. That is true after the fall 2024 methodology change, correct?
A. Yes. It may have been true before.
Q. And they are awarded 15 for computerized physician order entry after the 2024 methodology change, correct?
A. Yes.
Q. And they are awarded 15 for hand hygiene, correct?
A. Yes.

Q. And a 25 for bar code medication administration, correct?
A. Yes.
Q. You testified earlier that CPOE is computerized prescription something entry?
A. Yes.
Q. And you testified that in 2026 everyone has a CPOE system, right?
A. Yes.
Q. So, what is the basis, if everyone has a CPOE system, for only awarding a 15 for CPOE?
A. As I described to His Honor, we don't know how well that system is doing in alerting prescribers to serious medication errors. We do know that there are hospitals who do the survey and take the test, they also get a 15.
Q. Have you ever audited any of the five hospitals?
A. I wouldn't know that off the top of my head.
Q. You made a reference to hiring a company who assisted with audits. Do you recall that?
A. I do.
Q. You heard Ms. Leah Binder's testimony as well?
A. Correct.
Q. She said that there are five or six hospitals that are audited of the thousands of hospitals that are graded?
A. Correct.
Q. None of the Plaintiff hospitals have been audited for ICU

physician staffing, computerized physician order entry, hand hygiene, or bar code medication administration by Leapfrog, correct?

A. Several of the measures you named are not included in on-site verification because we verify them thoroughly through the other four methods I named. I am not being difficult, but I want to be accurate.

Q. That wasn't my question. My question was: It is true that none of the five hospitals have been audited by Leapfrog for ICU physician staffing, for computerized physician order entry, for hand hygiene, or for bar code medication administration as those measures exist within Leapfrog, right?

A. Correct.

Q. Nonparticipating hospital scores are at this incredibly low level because they are based on the assumption that when a hospital is not participating it must be hiding something, right?

A. In my view, it is based on two things.

Q. What is the first thing?

A. As I described, or tried to describe earlier, if we know that a hospital has CPOE, we know they do and they came and gave us that information their score would be the same.

It is based on the fact that it is reflective of hospitals that do report to the survey and give us the base level of information. It is also based on our expert panel's view that

the missingness is not random. Both things.
Q. Dr. Romano testified that it is partly based on an assumption that when a hospital is not participating they must be hiding something. Do you remember his saying that?
A. Yes. I mentioned two things, and his is one of them.
Q. And he testified and Ms. Campione testified to the same thing, right?
MS. BLAIR: Your Honor, do you mind if I hand the witness the water?
THE COURT: Sure. Go ahead.
THE WITNESS: I don't remember Ms. Campione's testimony word for word. At this point I will say sure.
BY MS. MALONEY:
Q. Do you disagree with Dr. Romano?
A. I agree that is one of the two factors I also considered as part of the imputed score.
Q. So the second factor for making the determination that the five hospitals should receive five, 15, 25, five is based on the belief that those hospitals must be hiding something, correct?
A. Correct.
Q. You assume limited achievement, as you call it, on the four measures -- strike that.
You have no data that tells you one way or the other whether any one of the five hospitals since the time of the

methodology change actually deserves the score of 25 out of a hundred for bar code administration; is that correct?
A. Based on what you just described as our rationale for imputation, I am not sure. You said we use imputation for the two reasons I just said.
Q. No, I asked you what your reason was for using -- actually, that wasn't my question. I said: Do you agree with Dr. Romano, and I asked you -- it doesn't matter.
The point is, do you have any data that underlies the 25 out of a hundred for bar code medication administration for the five hospitals?
A. Yes.
Q. You do? Okay. So, for a non-participating hospital you now say Leapfrog has data on their actual BCMA performance?
A. The first question for BCMA is: Do you have it? If you say yes and no to the other question your score is limited achievement. Based on what you told me, they would say yes to that first question. Not knowing what they would answer to the other question that score is accurate and correct.
That is why I tried to emphasize it has always been performance, are you actually doing all of the things we ask you to do that I describe in detail for hand hygiene and CPOE. Another way to say it is, it is the answers that matter.
Q. Are you finished?
A. I am.

Q. You testified in September. Do you recall that?
A. I do.
Q. And you testified under oath. Do you recall that?
A. I do.
Q. You are testifying under oath today, correct?
A. I am.
Q. My colleague asked you in September, is it accurate to say that for nonparticipating hospitals as we just defined it Leapfrog has no data on their actual BCMA performance, and your response was correct.
Do you recall that testimony?
A. I do.
Q. Thank you. Leapfrog also has no data for nonparticipating hospitals measuring the actual performance of a hospital's CPOE; is that correct?
A. Yes, I remember that. That is what I said.
Q. Thank you. Leapfrog also has at least some missing data with respect to participating hospitals' IPS; is that correct?
A. Yes.
Q. And Leapfrog also has no data on these hospitals with respect to, at the time they grade them -- I know you have learned things in trial, but at the time you grade them and at the time you testified for nonparticipating hospitals Leapfrog doesn't have any data measuring their performance for hand hygiene; is that correct?

A. That is correct.
Q. When a hospital is missing data, the weight of the missing measures are redistributed, aren't they?
A. I don't want to argue semantics, but it is confusing to me answering these questions when you ask about data versus performance because those are two different things. Based on what I think you mean, I will say yes.
Q. When a hospital is missing information because it hasn't shared it with Leapfrog, Leapfrog chooses to reweigh the other measures for which it does have information, correct?
A. Again, your use of terms is very confusing to me. I want to answer correctly. We describe them as measure scores. When Leapfrog is missing measure scores the weight for that score is redistributed to other measures, that is correct.
Q. Your testimony in September was, due to a variety of reasons a hospital may not have a measure score for all 22 measures. If a hospital is missing a measure score for any measure the standard weight for that measure is redistributed to the other measures in the same measure domain.
That was your testimony, is that clear?
A. That is true. I used the term measure score in that testimony and was trying to make that clarification here.
Q. You actually used the term measure score, measures in the same measure domain. I will try to use your language.
For the five hospitals there are three measures for which

Leapfrog awards them an NA?
A. Correct.
Q. They then take the scores and redistribute what -- let me stop. There are 22 measures, right?
A. Yes.
Q. Yes. Right. And you've got how many that are on -- I like to think of it as a circle split down the middle and how many are on one side of the circle?
A. Twelve.
Q. How many are on the other side?
A. Ten.
Q. What is on the side that is 12?
A. Process and structural measures.
Q. And what is on the side that is ten?
A. Outcome measures.
Q. For the missing measures, the three that they give it an NA to, what side is that on?
A. Process and structural measures.
Q. Now the 12 side has gone down to nine, right?
A. Correct.
Q. And the weight has been redistributed for weighing the process measure to the remaining nine?
A. Correct.
Q. And the remaining nine are sitting there, and among the remaining nine we have the four measures, right, for which you

have no information except for the limited information you have for IVS staffing for my five hospitals, right?
A. I don't know what --
Q. You don't like that. We'll get there. There is a reason she doesn't like that, we will get to it.
MS. BLAIR: Objection, your Honor, argumentative and testifying.
BY MS. MALONEY:
Q. No, no, you used the word data as the word to describe five, 15, 15 and 25?
A. No. Those are measure scores. I used data to describe what is reasonably known, which is that hospitals have CPOE and BCMA. Yes, on that first question.
Q. Yes, it is true for the four measures, for which you will be imputing scores, their weight goes up, right, because there is three measures for which you have no information, and so the weight of those gets distributed back?
A. Correct.
Q. I don't know if you know the specifics of it. Is it fair to say the weight of the process measures goes from being 24 if you are a reporting hospital, that is, if you have any score, measure score for any of those 12 measures, and the weight goes down or the weight -- excuse me -- goes up from 24 to 31 in the circumstance of the five hospitals we don't have four measures?
A. That is close to correct.

Q. Thank you.

If the hospitals were given a zero for those four measures, that weight would get even higher, right, on the process measure side?

A. No. That zero would be weighted higher. Zero is a measure score.

Q. Zero is a measure score?

A. On the outcome side zero is preferred because those are actual incidents of harm happening to patients. You see zero as a measure score for CLABSI, and that is really good.

Q. Okay. So, is it your belief that Leapfrog is the best source of accurate data about St. Mary's even though St. Mary's doesn't provide you with information about these four measures or any -- or a lot of other information?

A. I believe they are one accurate source.

Q. What would be another accurate source?

A. CMS.

Q. CMS. Does CMS actually report on hand washing?

A. I thought you said accurate source of information.

Q. Um-hum, I did. Now I am asking: Does CMS report on hand washing?

A. They do not.

Q. They do not. So, the only source -- is it accurate to say the only source about hand washing is the Leapfrog grade and the information related to it?

A. The Leapfrog hospital survey would also be a source of information.
Q. The Leapfrog hospital survey and the grade from which hand washing data is derived is the only source of information to consumers about hand washing; is that correct?
A. Nationally that is publicly reported by hospitals, that is all I know of.
Q. St. Mary's has not provided Leapfrog with any information about its hospital since 2021, right?
A. They haven't submitted a survey since 2021.
Q. They haven't submitted any information to you even outside the survey since 2021, right?
A. They haven't submitted information, that is correct.
Q. And you still believe this is the best source of information, the Leapfrog grade and all the information that we have seen in the various, you know, exhibits, and expert reports, about St. Mary's and the hand hygiene even though they haven't provided you any information since 2021?
A. That is a very good source of information.
Q. You said it was the only source of information for hospitals in the United States?
A. Are you specifically asking just about hand hygiene?
Q. That is what you said it was the only source for.
A. Can you repeat your last question?
Q. I don't know if it is my last question. I will move on.

Limited achievement means the hospital did not achieve the standard set by Leapfrog, right?
A. Yes.
Q. And in your words, limited achievement means the hospital is working on it, they are starting, but they are not there yet?
A. Yes.
Q. But you have no information from any of the five hospitals as to whether they are working on it with respect to hand washing, that they are starting on it, or that they are not there yet in terms of your standards, right?
A. I believe that was to describe what was reasonably known, which we have been taking about, they have BCMA. That is what I consider working on it. They at least have CPOE, that is what I consider working on it.
Q. So the data you have about nonparticipating hospitals is the generalized knowledge that hospitals in the United States in 2026 have BCMA computers; is that right?
A. Yes.
Q. And something else about CPOE, what is that?
A. That is electronic order.
Q. No, what is the information that you have -- so, is your generalized knowledge about a bar code medication administration computer at the hospitals the basis for the 25 score?

A. One of two bases, yes.
Q. And the other basis is that you think they are hiding something, right?
A. Yes.
Q. And is the 15 that has been awarded for computerized physician order entry for the five hospitals also based on the fact that you just assume they must have it?
A. Yes.
Q. And then also because you think they are hiding something, right? I mean, you testified to that?
A. I testified that that is what Patrick Romano said. In the spirit of Patrick Romano's theory on nonrandom missing data that was a criteria.
Q. Now, you did testify to my colleague that the score of 15 is data. Do you recall that testimony?
A. I don't. I hope I said it was a measure score. That is the technical term we use.
Q. He said, I want to make sure I am understanding this, the 15 score, the limited achievement, you are saying that is data and you said, that is correct?
A. I misheard the question. It is a measure score.
Q. Okay. You said it is data that Leapfrog can use?
A. It is a measure score that Leapfrog can use.
Q. And you testified previously it is data?
A. I have no idea what I said. I had a very long deposition.

I am not trying to doubt Mr. Crain, we had a long day. It is a measure score that we can and do use.
Q. Now, for hand hygiene, it could be 12, right?
A. Based on the current methodology there is no measure score that is the number 12.
Q. The measure score is 15, isn't it?
A. Correct.
Q. It could be 12?
A. It couldn't be. As I described, the assignments of five, 50, a hundred, are not random. They were developed by 2006, 2007 by another expert panel. It would be 12 in 2006. We did not revisit the measure scores associated with those poor performance categories since they were originally established. So under the current methodology, it could not be 12.
Q. Mr. Crain asked you, it could be 12, it could be 20, it is still data. And you responded, an imputed score is a data point we can use, correct?
A. I have no context for what you are describing right now.
Q. Assigning 15 points for hand washing is a choice, isn't it, it is not a calculation?
A. The measure score is associated with each of the four performance categories assigned by a separate national expert panel, adopted by this expert panel to use in calculating the safety grade.
Q. Since the change in methodology no participating hospital

has received limited achievement across the board, that is five, 15, 15, 25, or 60 out of 400 from Leapfrog. You heard that from Dr. Nicholson, correct?
A. I am sorry, what day did Dr. Nicholson testify?
Q. He testified maybe Friday.
A. I wasn't here on Friday.
Q. Isn't it true that since the change no participating hospital has achieved limited achievement totals of five, 15, 25, five, that is 60 out of what could be 400 points?
A. I have never looked at that.
Q. You don't know?
A. I don't.
Q. Since the change in methodology zero nonparticipating hospitals to receive the 60 out of 400 have received an A; isn't that correct?
A. I didn't know the answer to the first question. I think the second question is based on the first question, so I also wouldn't know.
Q. Okay. Because you have been saying that nonparticipating hospitals can achieve more than limited achievement, they can achieve an A. So in the spring of 2025, zero participating hospitals received an F; isn't that right?
A. I don't know off the top of my head.
Q. Okay. Um-m-m, you have data for the five participating hospitals from 2021, don't you? When they participated in the

survey last?
A. We have survey results for the five hospitals in 2021.
Q. You have data that was put into, what did you call it, the measures?
A. Step one methodology.
Q. No, you called it the measure, the system measure?
A. No.
Q. Okay. In 2021, hospitals like Good Samaritan scored a hundred for hand hygiene?
A. I don't know.
Q. I will represent to you in 2021 Good Samaritan scored a hundred for hand hygiene, and that is based on PX 5.2, and now they score 15, right? Correct?
A. Yes.
Q. That is because they don't participate in the survey so you have no information from them, correct?
A. That is because all we know currently is what could be reasonably known.
Q. So they dropped a hundred points to 15 points. That is an 85 point drop between 2021 and 2024, based on Leapfrog's assumptions, period?
A. Based on the change to methodology, correct.
Q. Based on the change to your methodology. 85 points is a lot. It seems reasonable you would say it is a drastic change?
A. Four years ago seems like a lot. That many points. So

much changes, and I actually think some of the CEOs testified that something was not in place, ICU physician staffing, and now is in place. Yes, in four years a lot changes.
Q. You think in the four years between 2021 and 2024, that the five hospitals that received one hundreds in 2021 and received 15 after the change in methodology had such changes to their hand washing protocols that they are deserving of the 15?
A. I just don't know. If the data were available I would be happy to review that and answer that question based on our standard.
Q. Your standard is 15, but that 15 is not based on 15 percent of the folks in the hospitals washing their hands, right?
A. No. Our hand hygiene standard is the collection of the five domains and all of the components of that.
Q. The score, the measure, the 15 you give them, that is not based on awarding -- claiming that 15 percent of the folks who work in that hospital actually washed their hands?
A. The numerical score of 15 has nothing to do with the percentage of people in the hospital.
Q. It has nothing to do with the percentage of people in the hospital washing their hands, right?
A. Correct.
Q. It has nothing to do with whether by regulation they are required to have a hand washing station in every room, right?
A. I am not aware of the regulation.

Q. It is not based on anything other than what you told me, which is it is based on your new methodology, right?

MS. BLAIR: Objection, asked and answered, your Honor.

THE COURT: Can you give me a sense of your timing?

MS. MALONEY: Yes, I have about ten more minutes and I will be done.

THE COURT: And you will have questions?

MS. BLAIR: I have about three questions.

(There was a brief discussion off the record.)

BY MS. MALONEY:

Q. We heard a lot about the use of CMS scores by Leapfrog. CMS regulates all hospitals that participate in Medicare, right?

A. Yes.

Q. Am I correct that participation in CMS IPPS program, that hospitals participating in that program are required to report their infections into a data base called NHSN; is that correct?

A. It is.

Q. And you testified that -- so you can't choose to do it or not; is that right?

A. If you are participating with CMS, you have to do it, that is right.

Q. CMS gets that data directly from NHSN, correct?

A. Yes.

Q. And then CMS later publicly reports it on its Care Compare

the website, right?
A. Yes.
Q. Part of what the survey achieves is that you learned that as a national not for profit you can administer an NHSN hospital group similar to CMS, right?
A. Correct.
Q. If you participate in the survey, you are a hospital that participates in the survey, you get the data that is going to in CMS in what -- is it real time essentially?
A. No.
Q. Is it delayed by what?
A. We get the data for 2025, at least the calendar year.
Q. You said where instead of -- by administering NHSN in hospital group, instead of waiting for CMS to publish the data on their website, hospitals could give us rights to the same reports?
A. Correct.
Q. Is that correct?
A. Yes.
Q. So, you are not receiving the reports from the five hospitals, correct?
A. Correct.
Q. All you are getting from the five hospitals are CMS scores that are publicly available, correct?
A. Correct. It is the same data.

Q. One of the CEOs' testified, I believe Ms. Havericak, that there is an 18 month to 21 month delay in the publication of CMS data. Do you recall that?
A. I don't.
Q. You are getting CMS data much more quickly than it is going to the general public?
A. There is a three month difference.
Q. Between what?
A. Between the reporting period and CMS --
Q. I'm asking about your access to data and whether there is a delay in the access to data that you have from participating hospitals versus nonparticipating hospitals because the nonparticipating hospitals have not given you access to their CMS data.
A. My answer is no. CMS obtains data through the CDC on a quarterly snapshot basis. Leapfrog only gets to download the data in an aggregated once a year time. CMS is getting the data much faster than Leapfrog.
Q. And the publication by CMS is delayed by 18 to 24 months, is lagging data, and what you have to report is not lagging data or not lagging as much for the participating hospitals; is that correct?
A. That is --
Q. Isn't that correct?
A. The way you asked it, I can't answer it.

Q. You can't answer whether CMS is publicly reporting information about hospitals that is 18 to 24 months old while you have more current information for from the hospitals that participate in your --
A. That is not correct.
Q. Now, you said the bases for -- in your testimony, the basis for the imputation data points -- I will call it the five, 15, 15, 25, was -- that it was developed by a technical expert panel, right?
A. Correct.
Q. That technical expert panel was 2006?
A. I believe 2006, 2007, correct.
Q. That technical panel's recommendation for the five, 15, 15, 25, was that peer reviewed?
A. I don't know. I was not here.
Q. Do you know if the expert panel that Matt Austin serves on also reviewed that five, 15, 15, 25?
A. I'm sorry, could you repeat the question?
Q. Did the expert panel we have been discussing with Matt Austin and Mr. Romano and at which you were an observer, did they actually sit down or not, or be on the phone, or stand up and discuss five, 15, 15, 25 for changing the fall 2024 methodology?
A. The adoption of the methodology scores occurred in 2011, and they have not changed since. They have been carried

forward, so by virtue of that fact, I still do not understand your question.
Q. So, the five, 15, 15, 25 as data points for the four measures was adopted in 2011. Hand hygiene as a report -- what you are reporting for the grade, that wasn't adopted until five or six years ago?
A. That is right.
Q. Ten years after adopting the five, 15 through this technical panel, Leapfrog adapted hand hygiene as a standard?
A. Yes.
Q. Five years or so after that they adopted five, 15, 15, 25 as the standard by which nonparticipating hospitals would be graded?
A. Right.
Q. There is no discussion of five, 15, 15, 25 --
A. Because they didn't --
Q. I didn't finish my question. There is no discussion of those numbers four in the April 12th meeting, correct?
A. Correct.
Q. And there is no discussion of it in -- that it came from this technical panel back in 2006 by Mr. Austin, right?
A. Correct.
Q. And in fact, you talked a lot about a gentleman by the name Agensovasia (phon) who was on the expert panel and he suggested zero, right?

A. Not at this panel meeting.
Q. At some point he suggested zero, right?
A. Correct.
Q. There was another expert that also suggested zero?
A. Yes.
Q. Those were rejected?
A. Correct.
Q. There is no documentation that I have seen where the zeros were rejected in favor of five, 15, 15, 25?
A. It was two different meetings.
Q. There are meeting minutes reflecting the five, 15 --
A. No. The suggestion of zero was a different meeting.
Q. There are minutes reflecting the adoption of the five, 15 in connection with the fall 2024 methodology change, correct?
A. Correct.
Q. You testified that Leapfrog has never talked about penalizing hospitals that do not fill out their surveys, right?
A. I did.
Q. But you testified about the incentive to submit a survey every year?
A. I reiterated that is what the expert panel discussed.
Q. If we could go back to that exhibit with the comments. If we look at two -- at the third page, Athena Health, Becky Winhold: These changes will penalize hospitals that do not submit to a Leapfrog survey. The public will not understand

nor dig into the methodology of the grades and hospitals will be falsely represented with a lower grade because they choose to not complete a survey.

Do you see that?

A. I do.

Q. If you continue, Mr. Moman at Piedmont Health Care, on the next page, and you go down to the red: We feel like this model is unnecessarily punitive. We often skip survey submissions because the responses provided for IVS, hand hygiene, BCMA, and CPOE are largely unchanged in the two year period that was allotted before negatively impacting grades.

Do you see that?

A. I do.

Q. Do you think Piedmont Health Care is also trying to hide something if they don't participate?

A. I don't know how they know it was largely unchanged if they aren't doing the measurement identical to the survey.

Q. Do you think Cedar Sinai would be hiding things?

A. I don't know what it is.

Q. Cedar Sinai also commented on the change and said they would opt out.

A. I apologize, I can't see it. I can't comment on it.

Q. Let's talk about in 2021, if we could put up JX 4.1. This is an exchange with you and Matt Austin. You said Leapfrog does not utilize a penalty. In 2021 Matt said to you,

penalizing hospitals -- this is in regard to an HSC expert panel call and talking through the agenda items.

Go to four, penalizing hospitals that don't report, is that part of the agenda item two and is Leapfrog really open to the idea? If not, I don't want to keep asking their opinions.

Do you see that?

A. I do.

Q. The prior page, an email from Matt Austin on September 1, the last line: Do we need to provide any sort of update on the idea of penalizing hospitals that don't report?

Do you see that?

A. I do.

Q. Penalizing hospitals was a question asked by Matt Austin, one of the members of the expert panel, as far back as 2021?

A. Matt Austin is not a member of the expert panel. He is the researcher that we have a contract with providing oversight. He is not a member of Leapfrog, he is a consultant.

Q. You testified to -- with my colleague that you and Mr. Austin -- that anything related to any of the measures in any of our ratings programs would be me, Matt Austin, Leah Binder in response to the question anybody particular internally at Leapfrog making the decision whether or not we add or follow the panel's expert guidance, right?

A. I am sorry, I didn't follow all of that.

Q. Matt Austin, you, and Ms. Binder are the ones who determine

whether or not to follow the expert panel's advice, right?
A. Yes.
Q. And then we have, of course, Mr. Romano, and we don't need to necessarily look at that again, except to show -- let's look at PX 495.2. He has been copying you on this email with Alex Campione and he says, it is a goal to penalize nonparticipants, and then he says at the bottom -- go down to the last paragraph.
He has a number of ideas and he ultimately says, but it does not achieve your strategic objective of penalizing nonparticipants.
Do you see that?
A. I see the sentence.
Q. He was a member of the expert panel, right?
A. Yes.
Q. He would have known what was discussed in the expert panel, if penalizing was being discussed, right?
A. He would know.
Q. Okay. Is it fair to say that a penalty has a negative connotation?
A. It is fair to say that, yes.
Q. You don't understand a penalty as being something positive, right?
A. No.
Q. Okay. And so, what is positive about assigning five, 15,

15, 25 to nonparticipating hospitals for these measures?
A. It is better than zero.
Q. It is better than zero because zero is, in your view, a number, and if you put zero on them, then you wouldn't have enough measures to actually give them a grade, would you?
A. Zero is a measure score that was floated early on by the expert panel.
Q. Right. If it were adopted, it would be the equivalent of NA, and you wouldn't be able to --
A. Then the measure would be assigned a zero as it is in the outcome measure score.
Q. So zero you believe is different from not reporting, right?
A. Correct.
Q. When my 13 year old takes a test and doesn't even put his name on it he gets a zero, right?
A. I don't know.
Q. Well, he either didn't show up for it, and he is getting a zero, so he didn't participate in a test or he's getting a zero because he didn't participate in the test, right?
A. I'm sorry, I am losing this.
Q. Is there a difference between NA and zero?
A. Yes. The mathematical calculation, and it is transparent in the calculator, there is a big difference between a zero and NA.
Q. Now, if we go back to the comments, in the comments you

say, and this is -- go to page seven. You essentially explain that under the prior methodology, it is the last sentence, the choice to not participate should not excuse a hospital from being graded nor should they be given a score that unfairly awards them points.

Do you see that?

A. I do.

Q. That was your language, right, that it would be unfair to give a nonparticipating hospital a score that would give them points?

A. I agree with it.

Q. You agree with it. The reason you believe it is unfair is that Leapfrog had no information about what the hospitals were actually doing?

A. The reason it would be unfair is because hospitals we know change, and what we are doing here is not wanting to assure a patient something is happening that might not be happening because their risk that they are assuming is quite substantial.

Q. When you testified in September and were asked, why is it unfair, you responded, because we have no information to indicate, and just going back to the hand hygiene example, we have no reason to believe that hospitals that aren't participating in a Leapfrog hospital survey are doing those things.

Do you recall that?

A. I don't recall the context of that.
Q. Going back to the hand hygiene example, you had no information about what the nonparticipating hospitals were actually doing, they could have been best in class for hand hygiene, or not a single person in the operating room was washing their hands, but Leapfrog imputed a score that concluded it was too high, right?
A. We previously made the decision that the imputed scores from spring 2024 were too high given that we didn't know, or in some cases we did know, things had changed.
Q. That is because Leapfrog believed it unfairly rewarded what could be or could not be the absence of hand washing because Leapfrog just didn't know?
A. Leapfrog is here to protect patients, and our goal here is to protect patients.
MS. MALONEY: Move to strike as nonresponsive.
MS. BLAIR: Your Honor, she answered the question.
THE COURT: Let's finish, if we could.
BY MS. MALONEY:
Q. Under the new methodology you still have no information about what the nonparticipating hospitals are actually doing, but now you impute the lowest score, right?
A. I still know what is reasonably known.
Q. So whether what nonparticipating hospitals are doing is good or bad, the hospitals haven't changed between spring 2021

and fall 2004, right?
A. I am sorry, you said that question too fast.
Q. I will move on.
You decided in fall 2004 that it must be unfair to award higher scores to nonparticipating hospitals and you never considered whether it was also unfair to take points away, did you?
A. There was a full discussion about lowering the imputed scores by the expert panel in the transcript provided.
Q. Because the expert panel and Leapfrog wanted to replace what it thought was an unfair methodology, right?
A. They wanted to, in their words, replace a potentially misleading methodology.
Q. It is your view that the current methodology, even though it just substituted more points for less points, is actually fair?
A. It is.

REDIRECT EXAMINATION

BY MS. BLAIR:
Q. Very quickly, Ms. Maloney just went through the public comments for the fall 2024 methodology change. Do you recall that?
A. Yes.
Q. She showed you this document in JX 33. Do you remember seeing that?

A. Yes.
Q. She showed you another document with only the negative comments on it. Do you recall that?
A. Yes.
Q. Does this document refresh your recollection that Leapfrog also received positive comments from hospitals in favor of the change?
A. It also quantifies them. We received four comments supporting the change, one comment expressing concern about the public not realizing the score was imputed, six comments on the exhibit of hospitals opposing the change, and I think an important consideration here is the one commenter that expressed concerns about the public that was responded to through the placement of the asterisk.
Q. Exactly. I know you have been at Leapfrog for a long time. You have gone through the public comment methodology several times?
A. Yes.
Q. Is ten comments, four in favor, six against, significant, I think is the word that Ms. Maloney used?
A. Not in my experience.
Q. Have you had other methodology changes where you received public comment?
A. Yes.
Q. Could you describe for the Court and Pauline, briefly, when

you get a significant public comment on methodology change what does that look like in Leapfrog?

A. So, 2022, 2023, we proposed moving new nurse staffing measures, of which there were four, and that met the criteria established by the expert panel to be included into the safety grade. We met with the expert panel to review those four measures and get their feedback, and my recollection is they supported including three of the measures, but not all four.

We put that out for public comment and we got an overwhelming number of public comments, such so that it resides in my memory. One negative comment was a death threat. We had an overwhelming number of comments from hospitals about adding three nursing staffing measures to the grade. There has been some sensitivity around the nurse staffing ratios.

We reviewed that with our nursing expert panel to get from their view which of the three measures had the strongest impact on patient safety, the strongest impact to patient safety outcomes, then brought that feedback to the expert panel to review the feedback from the nursing expert panel.

Ultimately, the combination of hospital comments, consultation with the nursing staff, discussion with the expert panel led us to only a single staffing measure in the Leapfrog hospital safety grade.

Q. So Leapfrog reads these public comments?

A. Very carefully.

Q. The other question she asked was whether or not you audited these five hospitals that are Plaintiffs in this litigation with respect to the four imputed measures. Do you recall that?
A. I do, and I believe she was talking about on-site data verification. I don't believe we have done on-site data verifications for the five hospitals. I was trying to explain that we verify many of those measures through other methods, of which I explained to you since the burden of on-site data verification is considerable to hospitals, so if we can do it in a way that is accurate, valid and easy, we do often.
Q. Would you ever audit a nonparticipating hospital?
A. We don't do any kind of data verification specific to the hospital safety grade. By that point the data has already been made public. CMS or the CDC or Leapfrog has reviewed that data, publicly reported that data, and hospitals know what that data is, and then it gets moved to the safety grade.
Q. Ms. Maloney asked you about Dr. Shrinivasen, and quickly, one sentence, who is he -- what does he do for a living?
A. He was most recently the deputy director for the CDC.
Q. Ms. Maloney talked to you about the fact that he believed at some point in time that hospitals that didn't participate in the survey should receive a zero, correct?
A. Correct.
Q. And the score that you give these hospitals is not a zero, is it?

A. Correct.
Q. Leapfrog was never supportive of giving a zero score to hospitals?
A. Correct.
Q. To the extent we heard in the media campaign against Leapfrog that the assignment of a limited achievement is a zero score, is that accurate?
A. It is inaccurate.
Q. Would you pull up JX 4.
This is where Ms. Maloney showed you that Matt Austin had used the word penalizing. Bullet point four, penalizing hospitals if they don't report, and is Leapfrog really open to this idea?
Do you see that?
A. I do.
Q. Was Leapfrog ever open to that?
A. We were not. I wanted the agenda to focus on number two, how to score hospitals and looking at additional imputation methods.
Q. Was it your understanding that Matt Austin was bringing up the fact that members of the expert panel had in the past talked about assigning zero to nonparticipating hospitals, and Leapfrog is not one of them, correct?
A. I really don't know. I reviewed this document in detail in my deposition. Matt and I have worked together for years I was

basically telling him what to do. We don't talk about penalizing hospitals. It is on the record in the April 12 expert panel transcript where I stopped the conversation and say we are not taking about penalizing hospitals. I don't care about increasing survey participation.

Q. Last question. We talked about the nature of the composite score, and that the hospital safety grade is a composite score?

A. Yes.

Q. Do you understand that both Delray and West Boca received D grades in the spring of 2024, and in the fall of 2024 continued to receive failing grades? Do you understand that?

A. Yes.

Q. Can you explain whether or not you believe that is a function of the composite score, that your score can be lowered for these four measures, as Ms. Maloney pointed out, they went form 400 points down to 60, Delray did at least, but we know West Boca didn't have anything in this program.

Is that the function of the score -- I am sorry, the composite nature of the score and the grade cutoffs that your score could be lowered by that many points and your grade remain the same?

A. Yes, because the composite is a very well thought out complex mathematical calculation the opposite is also true. Your score on those measures can be, as we have discussed ad nauseam in step two, and you can do well on the other measures

that are 50 percent of the hospital safety grade and receive an A or even a B and hospitals do that.

MS. BLAIR: Thank you, your Honor. No further questions.

MS. MALONEY: I have three questions on redirect --

MS. BLAIR: Recross.

THE COURT: No questions on recross. We have covered everything.

Tell me what you plan to do.

MS. BLAIR: I am dropping an expert, we have Dr. Ferokki, he is from Seattle and he can't get here in time. I can finish tomorrow. I have three experts in the morning, two videos they previewed. Matt Austin will be played in the case in chief, as well as Loren Bailey, and late afternoon we could close, Your Honor, and I have one --

THE COURT: You think you will finish tomorrow? Do you want to present closings now or after -- what are your thoughts on closings? At the beginning you both wanted to do it.

MS. MALONEY: We are happy to do it now. I am not sure we will have time to do it at the end of the day tomorrow. We can also brief it and then close at a later date if that is better for Your Honor. We do whatever is your preference.

THE COURT: All right. If we can finish tomorrow, maybe we will have closings Friday morning. Will that work?

MS. MALONEY: Yes.

THE COURT: All right. Have a good night. See you tomorrow morning.

(Thereupon, the Court was recessed.)

* * *

I certify that the foregoing is a correct transcript from the record of proceedings in the above matter.

Date: January 26, 2026

TRIAL TRANSCRIPT

VOLUME 4

UNITED STATES DISTRICT COURT
SOUTHERN DISTRICT OF FLORIDA
WEST PALM BEACH DIVISION

CASE NO. 25-CV-80526-MIDDLEBROOKS

GOOD SAMARITAN MEDICAL CENTER, INC. et al,

Plaintiffs,

vs.

THE LEAPFROG GROUP,

Defendant.

West Palm Beach, FL
January 22, 2026

BENCH TRIAL PROCEEDINGS
BEFORE THE HONORABLE DONALD M. MIDDLEBROOKS
UNITED STATES DISTRICT JUDGE

APPEARANCES:

FOR THE PLAINTIFFS:

MARY BETH MALONEY, ESQ.
KEVIN SIMMONS, ESQ.
SYDNEY A. SCOTT, ESQ.
LEE R. CRAIN, ESQ.
SCOTT K. HVIDT, ESQ.
Gibson, Dunn & Crutcher LLP
1700 M Street NW
Washington, DC 20036
202-887-3729

JEFFREY E. MARCUS, ESQ.
Marcus Rashbaum Pineiro & Meyers LLP
2 S Biscayne Boulevard
Suite 250
Miami, FL 33131
305-400-4260

FOR THE DEFENDANT:	**KIMBERLY E. BLAIR, ESQ.** **COURTNEY WOOD, ESQ.** **JURA ZIBAS, ESQ.** **MAXWELL BILLEK, ESQ.** **Wilson Elser Moskowitz Edelman & Dicker LLP** **161 N Clark Street** Suite 4500 **Chicago, IL 60601** 312-704-0550
Official Court Reporter:	**Pauline A. Stipes** West Palm Beach/Ft. Pierce, FL HON. DONALD M. MIDDLEBROOKS 561-803-3434

THE COURT: Good morning. Please be seated and please continue.

MS. BLAIR: Your Honor, we call Mark Rule to the stand.

MARK RULE, DEFENDANT'S WITNESS, SWORN

THE COURT: Good morning.

DIRECT EXAMINATION

BY MS. BLAIR:

Q. Good morning, Mr. Rule. Thank you for the fire drill and flying in yesterday. Could you please describe for the Court your educational background?

A. Sure. I went to -- I have a Bachelor's of Business Administration degree from the University of Notre Dame, an MBA from the University of Chicago, as well as I have a CFA and ABB and accredited business evaluation credentials.

Q. What is your current employment?

A. I am a partner and managing director at AlixPartners.

Q. Do you provide expert testimony in your capacity as a partner at AlixPartners?

A. I do.

Q. What are the type of expert assignments that you perform analysis in?

A. They could be across industries, including health care, but primarily there are five areas that I typically engage. The first is issues of corporate harm or economic damages, issues

of valuation, forensic accounting, solvency, and in some cases issues of corporate veil piercing or alter ego.

Q. How many expert retentions have you had in your career in those five areas?

A. As an expert witness and a consulting expert, hundreds.

Q. How many times have you testified at trial on those areas?

A. Over 15.

Q. All of those in an expert capacity?

A. Yes.

Q. Have you ever been qualified as an expert in court?

A. Yes.

Q. How many times have you been qualified?

A. In each one of those instances where I testified I was qualified.

MS. BLAIR: Your Honor, I read your order on the Daubert motions, and I'd ask that Mr. Rule be qualified as an expert on the topic of harm as it relates to this case.

THE COURT: Do you have objection?

MR. TAKAGAKI: No objection, your Honor.

THE COURT: Please proceed.

BY MS. BLAIR:

Q. Mr. Rule, what was the scope of the opinions that you are at trial here today to give?

A. At a high level, I was asked to review three expert reports that the Plaintiffs put in, one by Dr. Berger, one by Mr.

Chakurda, and one by Dr. Nicholson, and I was asked to provide any opinions as it related to their views on the concept of harm to the Plaintiffs.

Q. You also gave a rebuttal opinion, did you not, to Dr. Nicholson's counter factual?

A. Yes, I did.

Q. I want to stick to the opinions you have right now with respect to harm.

What were the documents that you reviewed in coming to your conclusions about whether or not these hospitals had been harmed in this matter?

A. Well, I initially reviewed the complaint and the reports and the limited information that was contained therein as it related to admissions statistics, which ultimately, if one was to quantify or demonstrate harm, one would need sufficiently more information to do so.

Q. Do you recall what information was provided in the documents, if any, about the reputational harm and harm to goodwill that the Plaintiffs are alleging in this case?

A. The only information I saw was admission statistics and maybe some revenue numbers.

Q. Can you explain to the Court in your own words what your opinions are on your but for analysis related to the harm being alleged by these Plaintiffs to their reputation and goodwill?

A. Sure. If one wants to quantify or demonstrate that the

Plaintiffs have been harmed there are standard analyses that one could undertake. You referenced the but for analysis, where one can look at certain information such as historical financials, projections of financial performance, information related to industry specific stuff such as competition, new hospitals, macro statistics such as demographics or the economy overall.

It would be all those types of information that I or someone else that would like to quantify or demonstrate harm here would apply to a standard methodology such as a but for, which is simply a comparison, if you will, of what was the financial performance or expectation of future financial performance before the alleged harm and what was it afterwards, and assuming causation, that comparison could demonstrate a negative financial impact to the Plaintiffs.

Q. Have you ever been provided with any projections of what these hospitals were projecting their admissions rates to be either from ER visits or elective surgeries?

A. I have not seen any projections.

Q. Is that seminal to the opinions you were giving -- if you needed to give an opinion about harm would you need to see what those projections were versus how it turned out?

A. Yes, and projections are the ordinary course of business documents that exist. Yes, to be able to begin to demonstrate potential harm a comparison of the expectations before and

after would be an important consideration in that effort.
Q. Would you anticipate -- let me lay some foundation here. You have some expertise in evaluating the financial impact to health care systems, correct?
A. Yes, I do.
Q. Would you explain to the Court what that is?
A. I would describe it in a couple of different buckets. The first bucket is, over the course of my career I have been engaged as part of hospital consolidations, transactions in the health care space for regulatory purposes to effectively do financial viability analyses, which is looking at the finances of the hospitals individually and on a combined basis, both on a historical basis and gong forward basis, basically tell the regulator that combining the hospital systems from a financial perspective is a good idea. That is number one.

Number two, in the course of various litigation in the hospital space there has been similar efforts to evaluate potential harm. What I mean by that is, I did a series of cases related to failed enterprise resource planning systems or software systems for hospital systems where it wasn't working correctly, so I had to quantify the harm. The types of analyses I described earlier were the types of work I did there.

In addition to that, there have been cases, also disputes, breach of contract with suppliers and hospital systems, payer

disputes. That would be the gamut, if you will, of the type of health care hospital work I have done that again the quantification of harm or looking at financials of the hospital would be important.
Q. In your experience in looking at those types of documents in the engagements that you discussed, is it your understanding that hospitals like the five for profit hospitals would keep those types of documents in their ordinary course of business?
A. Yes. These are the types of documents you need to be able to manage the business of the hospital effectively.
Q. And again, you have not seen any of those documents in this case?
A. I have not.
Q. Is it your expert opinion that it would be difficult, if not possible, to evaluate harm to these five hospitals without also evaluating those sort of financial documents you just described?
A. To be able to evaluate from a financial perspective the harm, yes, these are critical documents. If they were available, one could definitely do it, but it is my understanding those documents are not available.
Q. And you understand the Plaintiffs have dropped their demand for damages, correct?
A. That is my understanding.
Q. Do you have an understanding that the Plaintiffs are now

stating under an injunctive standard that they have been aggrieved?
A. That is my understanding.
Q. Can you describe for the Court how a for profit corporation would provide an analysis as to whether or not they have been aggrieved, corporation versus an individual?
A. From my perspective, for a corporation to be aggrieved, or harmed, or injured, it would have to be from a financial perspective, so that would be the lens through which one wold have to evaluate it.
Q. Your report talks about substantial harm -- or substantial injury, excuse me, correct?
A. Correct.
Q. Would that same analysis apply to a determination as to whether or not a corporation has been aggrieved in your opinion?
A. From my understanding, yes.
Q. I am not asking for a conclusion.
A. It would be the same type of analysis. To be able to demonstrate harm, or damages, or aggrievement, it would have to be from a financial perspective, the same type of analysis and information that I described earlier.
Q. I want to drill down on the two types of harm that these Plaintiffs allege occurred to them in their complaint.
The first is they claim that they have damage to their

reputation. Do you understand that?
A. Yes.
Q. And can you briefly describe for the Court, as an expert in the field of evaluating damages to health care corporations, what would be relevant in terms of documents to an analysis of whether or not these five for profit hospitals experienced reputational harm?
A. It would be the same type of documents and analysis I described because if there is reputational harm in theory that should have a negative impact on the finances of the hospitals.
Q. Would you still need those projections you talked about?
A. I would, in addition to historical financials, because the projections are important to establish a baseline of expectations on a go forward basis, meaning if there is a set of projections the day before the alleged harm, what were they thinking, how would they perform over the next couple of years, and then how did it change afterwards. That comparison is important.
Q. Did you find in your analyses any markers establishing loss of reputation for any of the five for profit hospitals that are Plaintiffs in this case?
A. I have not seen any.
Q. As an expert in the area of harm to health care systems, what would you expect to be able to conclude with respect to reputational harm if you had the documents that you need to do

your analysis?
A. Well, again, it is the comparison that I described, and if there is an indication of a negative financial impact, that could be an indication of harm, obviously subject to causation because there could be a variety of factors that could be attributed to a negative financial impact above and beyond the Leapfrog adjustments and methodology.
Q. Is it your opinion to a reasonable degree of professional certainty that there have been no markers for any of these five hospitals of reputational harm based on your analysis?
MR. TAKAGAKI: Objection. The scope of his report does not cover reputational harm, whether it could be quantified economically. His report simply concluded that Plaintiff's experts did not do that.
THE COURT: Ask him not to do that, but the objection is overruled.
BY MS. BLAIR:
Q. In your expert opinion, to a reasonable degree of professional certainty is it your opinion, based on what you have seen in evaluating the documents that you were provided, that none of these five hospitals have demonstrated any of the markers to establish loss of reputation in this case?
A. Yes, that is my opinion because the only information that is potentially relevant that I have seen is admissions statistics, and that is insufficient in my opinion to even

demonstrate potential reputational harm.
Q. Why is it insufficient? Why can't they just say to the Judge, look, my admissions are down?
A. It is incomplete. Admissions is just one data point, it doesn't get to revenues, expenses, cash flow, value. It is a very incomplete picture from the financial perspective. Then there are all kinds of issues with what is causing this statistics to go down. There could be a variety of factors above the and beyond the methodology of Leapfrog.
Q. What are the other factors that could be contributing to a loss in admissions?
A. It could be a number of factors. It could be competition. It could be also that the hospital expected admissions to go down even before the alleged harm. It could be a variety of factors that could be contributing to a downward trend in admissions.
Q. In the expert report that you reviewed of Mr. -- Dr. Berger, in the expert report you reviewed of Dr. Berger, did he do any such analysis of impact to the reputation of these hospitals from a financial analysis?
A. No.
Q. Very quickly, the other element that they claim they have been aggrieved by is a loss of goodwill. Maybe I will get a repetitive answer, but I will ask you, what are the markers that someone in your industry would look at to determine

whether there was a loss to goodwill?
A. It is similar to what I described. Goodwill at a high level is an asset on a balance sheet, it is the amount of the corporation's value that can't be attributed to individual assets. Reputation can be part of that goodwill.
So it is the same type of analysis to be able to understand if the goodwill has been impaired, the same type of analysis I described and the same type of documents that one would need to evaluate to understand if the goodwill has been impaired.
Q. Would you need the same sort of financial documents to make that analysis you described to the Court?
A. Yes, quite honestly, corporations undertake a goodwill testing every year, and it is the same type of documents and the same type of information they use to be able to do that.
Q. So, based on your expert -- based on your expertise in evaluating goodwill for health care companies, would you expect that these five for profit hospitals would have that type of goodwill analysis?
A. I would expect it. At minimum, they would have the information to be able to undertake that analyses.
Q. You have not seen it in this case?
A. I have not.
Q. Is it your expert opinion to a reasonable degree of professional certainty that you have seen no indication of markers from any of the five for profit hospitals that they had

an impact to their goodwill as a result of the Leapfrog grade?
A. That is correct, I have not seen sufficient information to make that determination.
Q. I want to turn to your rebuttal opinion with respect to Dr. Nicholson. Can you explain to the Court what that opinion is with respect to Dr. Nicholson's counter factual and how you come to that conclusion?
A. Yes. Dr. Nicholson took issue with, as I understand it, the four imputed inputs that go into the scoring methodology or the grading methodology, effectively saying that they are only getting credit for 60 points out of 400. He makes an adjustment and basically assumes that if they would have reported for those statistics, the average value that was reported, that those imputed amounts would be much, much higher.

And so I undertook an analysis that looked at it from the opposite view, saying that if one doesn't assign any value or weighting to the four imputed, does that really change the grading at all. I undertook an analysis where I placed no weight on the four imputed and let all the other inputs within the model get re-weighted, if you will. The grades are very, very similar.

So, the conclusion from my perspective is those four imputed inputs are not what is driving the grades ultimately.
Q. As part of your analysis, did you take into consideration

the fact that the Leapfrog hospital safety grade is a composite score? Is that what you're testifying to?
A. Yes, that is effectively what I am saying. There are 22 different inputs that are weighted different weights, so it is a mathematical model that ultimately has one composite grade.
My analysis simply said if I pull out the four imputed inputs that the Plaintiffs take issue with, does that really materially change the grading? The conclusion is it doesn't. So what does that mean? Those four imputed grades are not what is driving the overall grade.
Q. To be clear, you just did a statistical mathematical analysis, not any sort of scientific -- from a medical science health care view, just a mathematical statistical analysis?
A. That is correct. It is a very similar analysis to what Dr. Nicholson did, but instead of assuming certain grade levels, I simply said let's take those out and see if it anything materially changes.
Q. In reviewing Dr. Nicholson's report, did you see any evidence that Dr. Nicholson took into account the cut points?
In other words, Dr. Nicholson said every hospital in the United States that didn't participate, I am going to assume they all participated and they all got the national average score on all seven measures. Did you understand that was his analysis?
A. Yes, I did.

Q. Did you see any evidence in Dr. Nicholson's report that he accounted for the fact that the cut points, the grade cut points would need to be redistributed?
A. Said differently, the grade scale if you will. No, I didn't see any indication that after adjusting his calculations that he then gave further consideration to how those could impact the grading scale.
Q. And are you familiar with these -- through your work in this case, these hospitals' CMS measures?
A. I am.
Q. Are you familiar with their star ratings?
A. I am.
Q. And the analysis you undertook, since you took out all the survey, was based on solely their CMS data?
A. Yes.
Q. Are the results of your findings and expert opinions mathematically consistent with the low ratings from CMS?
A. Both before and after. With the imputed grades in there the grades are consistent with CMS and when you pull them out they are consistent with the CMS grades.
Q. Your counter opinion of Dr. Berger that the imputed values, the four values we have been here talking about, are not significant drivers of the overall grade, that opinion, is that to a reasonable degree of professional certainty?
A. Yes.

MS. BLAIR: No further questions, your Honor.

THE COURT: Cross examination.

MS. MALONEY: Your Honor, Marc Takagaki for Plaintiffs is making his first appearance before the Court.

CROSS-EXAMINATION

BY MR. TAKAGAKI:

Q. I want to be clear, the scope of your opinion is as a rebuttal expert in this case?

A. Yes. It is in response to the three expert reports that I described earlier.

Q. I believe -- first, you have two opinions in this case as we discussed, right?

A. Yes.

Q. I will refer to the first opinion as regarding damages, what you were talking about with Ms. Blair. Do you understand?

A. Yes.

Q. And I will refer to your opinion regarding the safety grade methodology calculation as your second opinion. Is that fair?

A. Yes.

Q. So, for your first opinion, it was to determine whether someone could quantify damages in this case, correct?

A. I would describe it a little differently. If one could quantify the harm or demonstrate that there is actual harm. Whether or not that issue is for damages could be a different matter, but the analysis is the same.

Q. And do you recall that you sat for a deposition in this case in early September of last year, September 2025?
A. I do.
Q. I took your deposition, right?
A. That is correct.
Q. Do you recall I asked you about your opinion one here, and do you recall answering that your opinion was if one wanted to, one could quantify the damages here. That's opinion number one. Do you recall saying that?
A. I do.
Q. And I believe your opinion number one is really focused on quantification, is that right, as opposed to qualitative analysis or any other type of analysis?
A. I think the way I described it in my report is to quantify and demonstrate, but yes, it is from my perspective that one could quantify or demonstrate from a financial perspective potential harm here or potential damages.
Q. I believe it is -- is it your opinion that in order to show any type of harm it must be quantified?
A. I don't believe I say that. My opinion is what my opinion is, that in this case it is quantifiable. In quantifying it you can demonstrate harm or damages.
Q. So your opinion is that it is quantifiable, but is your opinion that in order to show harm it must be quantified -- without quantification there can be no harm?

A. I think you might be asking me a legal conclusion. From my perspective in doing these types of cases, the quantification itself is a demonstration, assuming causation, that there is harm.

Said differently, if your expectation was you are going to have a hundred million dollars here, but afterwards you had 80, that is a quantification of the harm subject to a determination of causation.

From my perspective the quantification is the question of harm.

Q. That is not my question. Is it your opinion that in order for harm to exist it must be quantified; yes or no?

A. I will give you the same answer, yes from a financial perspective, but there is a legal determination in your question.

Q. All right. I want to talk about your second opinion regarding hospital grading, and just a little bit of background first. I don't think we got into this with Ms. Blair's questions.

You are a damages expert; is that right?

A. I am frequently asked to quantify damages, yes.

Q. In the context of litigation, correct?

A. Yes.

Q. You are not a health care economist; is that right?

A. I do a fair amount of health care work, but no, I do not

hold myself out as a health care economist.
Q. You do not have an MD?
A. I do not.
Q. You don't have a Ph.D.; is that right?
A. I do not.
Q. You never graded a hospital before; is that right?
A. I don't think I am grading one now.
Q. So you never graded a hospital.
But for your second opinion you do have a grade in the exhibits that you provided to the Court that comes out of your analysis; is that right?
A. The grade comes out of the workbook that Leapfrog uses to grade. Yes, there is a grade that is a result of my corrections or adjustments to the calculation.
Q. I see. So, I guess what you are saying is the grade that comes out of that, that is not part of your opinion, so we should disregard the grades in that?
A. That is not what I am saying. If you pull out, or assign no weight to the four imputed inputs, the grade does not materially change. What is the upshot of it or the conclusion there? Those four inputs are not what is driving the grades themselves.
Q. That wasn't my question. My question was: Have you ever graded a hospital? And you said, I am not even grading one now. And I said, I see a grade listed in the exhibits.

Is that grade not part of your opinion? You are not grading them and we should just disregard that grade?
A. That is not what I am saying. I am saying there is a grade that is an output of Leapfrog's methodology. I am adjusting the methodology, and there is sill a grade that is similar, if not the same that it is the output when you adjust the methodology. It is a Leapfrog grade that I am adjusting the methodology and the resulting grade is still the same or worse.
Q. You are not issuing them a grade?
A. It is a function of the workbook and my adjustments to the workbook to demonstrate if you pull out the four imputed the grade is similar.
Q. And you have never developed -- I assume if you haven't given a hospital grade, you have never developed a hospital grading methodology, right?
A. I have not, no.
Q. You have never advised a hospital administrator or hospital personnel on how to improve hospital quality, right?
A. I have not, no.
Q. And you have no specialized knowledge of Leapfrog's grading methodology, correct?
A. I wouldn't say that. I have studied, analyzed, and tested their methodology. Yes, I have a deep understanding of how the calculation, the algorithmic calculation works.
Q. So you took the safety grade calculator that Leapfrog sends

to hospitals that want to do the work you did, and you deleted the four scores for the four imputed numbers and you entered NA for the 50, 15, 15, 25?
A. As an initial matter, yes.
Q. And that is all you did to create the exhibits to your report, right?
A. There was more work around that, but to be able to adjust the model, that is the primary thing. We checked it to make sure that statistically it still made sense. Again, it was in response to Dr. Nicholson saying, hey, instead of assuming a grade, let's just take them out.
Q. If somebody wanted to replicate your analogy, they would take the grade calculator, open a computer, type NA and hit enter?
A. At a high level, to get the regrade, yes. There was a lot more that went into it to make sure that was a reliable result.
Q. That work was just making sure when you hit enter the formulas in Excel, the math, were correct and didn't delete themselves or go haywire?
A. Make sure the statistics, the mean, the standard deviation, the weighting, the re-weighting, that it all worked properly, yes.
Q. Did it work properly?
A. Yes. We took the efforts to make sure they did.
Q. You didn't make any modifications to the Excel?

A. No, I did not.
Q. You hit NA, you hit enter, and then you pdf'd the Excel and submitted it to the Court?
A. Subject to the qualifications I gave you, yes.
Q. You didn't provide the Excel to the Court, did you?
A. I don't believe that is true.
Q. We didn't receive it. We will move on.
My understanding is what you did, entering NA, hitting enter and then making no other changes, that is also something that hospital administrators can do, correct?
A. I suppose they could.
Q. And so, what specialized knowledge do you have about entering NA and hitting enter that you bring to this case that those administrators don't?
A. Again, it is from a harm perspective, it is in response to Dr. Nicholson. So in reviewing his report and his unsupported assumptions that they would automatically get a certain grade, I wanted to demonstrate for the Court that it is not those imputed grades that are driving the grades.
Q. My question is just what specialized knowledge do you have of the grading methodology beyond there is an Excel, enter NA, press enter and be done? What other specialized knowledge do you have of the grading methodology?
A. I think we just talked about it, I got intimately familiar with it from a statistical perspective to ensure the

information is reliable.
Q. Your specialized knowledge is, once you hit enter and the scores change you review them and make sure the math is correct. That is your specialized knowledge of the grading methodology?
A. Statistical knowledge, math, make sure the output was reliable, everything was getting re-weighted correctly, the statistics were correct such that at the end of the day the conclusions I have drawn that those four imputed inputs are not the driver of the overall grade is reliable.
Q. Do you have any specialized knowledge of the Leapfrog imputation model?
A. I am not sure I understand the question.
Q. Well, do you understand that -- do you understand what imputation is?
A. Yes.
Q. Do you understand in this case Leapfrog has what it calls an imputation method where it imputes the scores for four measures? Do you understand that?
A. Yes, I do.
Q. Do you have any specialized knowledge of the imputation model beyond what we just discussed?
A. It would be consistent with what we just discussed, my review and analysis based on my experience of the information and documents related to that model in this case.

Q. Do you recall I asked you at your deposition if you have any specialized knowledge of Leapfrog's imputation model, and your response was, I don't?
A. That is what I might have said to that question.
Q. So, how did you develop your specialized knowledge of Leapfrog's grading methodology? Isn't it true you reviewed the Excel and nothing else?
A. That is not true. I reviewed the excel and the related documents and how they arrived at it.
Q. What related documents?
A. One that comes to mind, at least one that comes to mind is a 30-page scoring methodology document that provides the description and the background of how the model works.
Q. And that is available to the public, right?
A. I don't know as I sit here right now if it is or isn't.
Q. And I want to turn back to your opinion one. The community hospitals no longer have a claim of damages in this case, right?
A. That is my understanding, they are no longer to be seeking to be compensated.
Q. You were not aware of that when you submitted your report on September 4th; is that right?
A. I don't know when I became aware of it, if it was before or after.
Q. You don't cite the notice of withdrawal of damages in your

report, correct?
A. I would have to see my report.
Q. You don't cite the amended complaint in your report where there is now no damages claim?
A. I would have to review my report.
Q. And at your deposition, which took place I believe September 29th, so a few weeks after your report, I asked if you had seen Plaintiffs' notice of withdrawal of damages. Do you recall your response was, I don't recall seeing this document?
A. I believe that was my answer.
Q. And for opinion one, you do not quantify damages in this case, correct?
A. I do not because there is insufficient information to do so.
Q. I believe your opinion was you reviewed the Plaintiff's expert reports and your opinion was that they did not quantify damages; is that right?
A. They definitely don't quantify damages or harm.
Q. You are not offering an opinion on whether the safety grades assigned to the community hospitals produced a substantial injury, correct?
A. I do not have an affirmative opinion on that.
Q. That is because substantial injury is a legal determination; is that right?

A. It's my understanding is it is part of the applicable law here.
Q. And you do not have an opinion on whether there was harm to the Plaintiffs in this case that satisfies the legal standard for substantial injury; is that right?
A. I do not have an affirmative opinion, no.
Q. I want to turn to Leapfrog's imputation model that we have been discussing.
Leapfrog uses imputation to effectively assign grades when data doesn't exist, correct?
A. That is my understanding.
Q. And it is your understanding that the scores for the four imputed metrics, 15, 15, 25 and five, are basically a default score when Leapfrog doesn't have data from the hospital; is that right?
A. I don't know if I agree with the default, but yes, it is the score they would assign if in their process, and it is a multi step process, they actually get to imputation.
Q. I asked you in your deposition, what is your knowledge of he term imputation as it is used in your report? You said, it is my understanding imputed grades is basically a default, if you will, if you don't have the data from the hospitals. Do you recall saying that?
A. I do.
Q. You don't have any knowledge for how Leapfrog developed

their grading methodology, do you?
A. When you say grading methodology, are you talking overall methodology?
Q. Let's talk about the imputation model. Specifically, they have an imputation model that we have been discussing for the four metrics. You have knowledge about how they developed that model, right?
A. I have some knowledge.
Q. And you have no opinion -- let me put it this way: Do you have an opinion as to the fairness of that grading model?
A. I do not have an opinion.
Q. You have no opinion as to which measures -- when I say measures I am referring to there is 22 measures, I believe, in Leapfrog's grading calculator that you used?
A. That is correct.
Q. You have no opinion as to which of the 22 measures should be used to grade a hospital's quality, correct?
A. I do not have a specific opinion.
Q. And Leapfrog didn't use the NA method that you used for the imputed metrics to issue an actual safety grade to hospitals?
A. They used the NA method, but not for the four imputed. That is the point of why they are imputing them. There are inputs of the 22 that are NA.
Q. There are 22 measures, and when a hospital doesn't report to the survey Leapfrog doesn't get information on seven of

those measures, correct?

MS. BLAIR: Your Honor, I think this is outside the scope of the opinion.

THE COURT: Overruled.

THE WITNESS: Could you repeat that.

BY MR. TAKAGAKI:

Q. Yes. In the past Leapfrog has used the NA to grade a hospital for three other measures, not the imputed measures, correct?

A. That is correct.

Q. There are 22 measures that Leapfrog uses, and when a hospital doesn't respond to the survey Leapfrog doesn't have data from the hospitals on seven of the 22 measures, right?

A. No. They have data from the hospital on 12 of the 22. The process is a multi-step process before they get to the imputation. They have secondary sources for some of them.

Q. Of the 22 measures, they don't have data from hospitals on 12 of the 22. I believe your testimony is on the current model for three of those they use NA?

A. That is correct.

Q. And in your analysis -- strike that.

In your calculations that you do in your opinion you leave those three NAs, and then add four additional NAs for the imputed measures; is that right?

A. That is correct.

Q. Leapfrog has never issued a grade with all seven of the NAs as you did in your report; is that right?
A. I don't know one way or the other.
Q. And Leapfrog's website tells consumers that hospitals are not graded when Leapfrog is missing data on more than six process measures. Are you aware of that?
A. I am.
Q. And that is because when a hospital is missing more than six process measures, their experts do not have enough safety data to assign that safety grade being, correct?
A. If that is what the document represents.
Q. You don't disagree with that?
A. I don't.
Q. But your method does assign a safety grade even when seven process measures are missing?
A. There is an output of a grade, yes, there is. To my earlier testimony, that is not the primary point of my analysis.
Q. I am not asking about the primary point here, I just -- strike that.
Under Leapfrog's current methodology, they also issue a safety grade even though they are missing seven process measures, correct?
A. I am sorry, I don't if I'm following you. I guess I would say no.

Q. Don't they issue a safety grade when it is missing data for seven data processing measures?
A. Again, I apologize, I am not sure I follow your question.
Q. Well, so, I think you testified that Leapfrog's current methodology, not your report, but their actual methodology, they have NA listed for three measures?
A. Correct.
Q. For four measures, in Leapfrog's imputation, they don't have data on those, right?
A. They don't have data for the hospital. That is why they use imputed scores.
Q. They issue a score despite the fact that they have three NAs for three measures and then they have four imputed measures for which they don't have data from hospitals, correct?
A. They don't have data from hospitals for five other ones as well.
Q. Understood.
Your second opinion on the grading methodology does not tell the Court whether Leapfrog should have graded the community hospitals, right, if they were missing this data?
A. The point is they have the imputation, I assume for a reason, so that is why they did issue a grade. I can't speak for how they would or wouldn't grade a hospital if they didn't impute those four scores.
Q. No, I am asking if your expert opinion in this case is

whether Leapfrog should have issued grades to the community hospitals in the case despite the data they don't have.

MS. BLAIR: Objection, outside the scope of his opinion.

THE COURT: Overruled.

THE WITNESS: I don't have an opinion on it.

BY MR. TAKAGAKI:

Q. You don't have an opinion on whether it is fair to assign default scores when no data exists, right?

A. Again, I don't have an opinion. That is outside the scope of my analysis.

Q. You don't have an opinion on whether consumers are misled by those grades, right?

A. I'll give you the same answer, outside the scope of my analysis.

Q. You don't have an opinion as to whether Leapfrog's grading practices should continue, right?

A. Same answer, no, I don't.

Q. Your second opinion, that is a hypothetical exercise, right?

A. It is a sensitivity analysis at the end of the day.

Q. It says if you change the current rules of Leapfrog's methodology you get a different result, right?

A. I would characterize it a little differently. It simply says the weights assigned to those four measures are not what

is driving the overall grade. So with them or without them the grade is basically the same.
Q. I want to turn back to opinion one, your opinion about quantification of damages. Your report was served on September 4, 2025; is that right?
A. That sounds about right.
Q. You have not submitted a supplemental report?
A. I have not been asked to, no.
Q. In your deposition I noted to you that after your report on September 4th, document productions had been made by the Plaintiffs in this case and I asked you if you had reviewed those. Do you recall that question?
A. Not specifically.
Q. Your deposition was on September 29th, right?
A. Again, that sounds correct.
Q. And I represented to you the Plaintiff hospitals had produced -- after your report on September 4th, they produced revenue data, market share data, branding data, and transfer and admissions data, and you responded that you were aware of those productions, but you have not reviewed them?
A. I said I was aware there was ongoing productions, but I don't know if I recall then or now what was in them.
Q. And I know you weren't -- I believe you weren't in the court for previous days of trial; is that correct?
A. That is correct.

Q. Are you aware that Ms. Montgomery, the CEO of Good Samaritan Hospital, testified that her hospital recently lost a contract with an orthopedic group?
A. I am not aware.
Q. She testified that eight surgeons who performed around 1300 surgeries a year at her hospital and generated about eight million dollars of income each year were not renewing their contract at the hospital. Are you aware of that?
A. I was not.
Q. She testified that those -- that whole surgeon group, those eight surgeons with the 1300 surgeries per year, were signing a contract with Good Samaritan's major competitor, Jupiter Medical Center.
Is that evidence of economic harm?
A. I'd need a lot more information to make that determination. It could be, it could not be. It could be they got a better deal somewhere else. Just based on what you told me, I can't give you an opinion one way or the other.
Q. And I believe she testified they had, those surgeons, that surgeon group had a contract with her hospital, Good Samaritan, that had been in place for the last five years, and they canceled that contract, or it terminated, and they signed a new one at Jupiter.
Would that not be the sort of historical analysis and present and future analysis that you mentioned with Ms. Blair?

A. It could be, but you need further evaluation of it. My understanding is, groups of hospitals -- physicians or surgeons move hospitals frequently. So, again, that in isolation is not necessarily, without additional information, dispositive of harm. It could be or could not be.
Q. Is your opinion that losing eight million dollars a year of income because those physicians went to your competitor not evidence of economic harm?
A. It may be, may not be. From my perspective, I would need a lot more information.
Q. I want to talk about admissions data at a hospital such as walk-ins. You believe that historical data on the number of walk-ins and current data on the number of walk-ins, that can go in a before and after an analysis for lost profits or economic harm, right?
A. It would be one of the pieces of information I'd want to evaluate.
Q. You believe that market share analysis is also an element of economic harm, right?
A. Again, not necessarily in isolation, but it would be another factor that I would want to evaluate.
Q. Right. So, if the hospital loses admissions in a certain sector, and those admissions go to a competitor, wouldn't that factor into a market share approach for economic harm?
A. Again, it could be a factor of many that go into that type

of analyses. Just in isolation alone it is not dispositive to me that that necessarily is economic harm, particularly related to the issue at hand here.

Q. Just a few final questions.

Is your methodology using the grading calculator, has that been peer reviewed?

A. It is a mathematical model, I don't know that it needs to get peer reviewed. I am simply adjusting the math behind an existing model.

Q. So it has not been peer reviewed.

A. In a similar fashion as Dr. Nicholson. I don't know why it would be peer reviewed. I believe it has given my understanding of who developed it, between the company, Johns Hopkins and all the other advisers. I don't know if that is considered peer reviewed. For the purposes of what I am doing and the conclusions I am drawing, as I testified in my direct, it is at a level of reasonable certainty.

Q. Is it your testimony that Johns Hopkins developed the safety grade Excel that you used in this case?

A. I don't -- I understand they were involved in this whole process. That's all I'm saying.

Q. You understand that Johns Hopkins was involved in creating the safety grade calculator that is used?

A. My understanding is that they were involved in the methodology.

Q. I am asking about the safety grade calculator that goes out to nurses at hospitals to see how the grades can change. Is it your testimony that Johns Hopkins developed that?
A. I think we are talking past each other.
Q. Is it your testimony that Johns Hopkins developed that Excel?
A. I am not specifically talking about the Excel. No, that is not my testimony.
Q. Is it your testimony that Mathematica developed that Excel?
A. I know they were involved in the methodology, and the calculator is a byproduct of the methodology. That is all I am saying.
Q. Aside from Johns Hopkins, Mathematica -- my question to you still is has anyone peer reviewed your methodology beyond the two entities you were involved in, has anyone peer reviewed your methodology using NA for metrics?
A. I am not aware of anybody. It is a sensitivity analysis to an existing model, that is all it is.
MR. TAKAGAKI: No further questions.
THE COURT: Redirect.
MS. BLAIR: Thank you, your Honor.

REDIRECT EXAMINATION

BY MS. BLAIR:
Q. Mr. Rule, Mr. Takagaki asked you how you could know -- in your expert opinion can the Court determine whether a for

profit corporation is harmed if there is no basis to make that conclusion?
A. Not from a financial perspective.
Q. Thank you.
There was just a discussion about the calculation of the grades. Do you recall that?
A. Yes.
Q. And counsel just asked you whether or not your sensitivity analysis was peer reviewed. Do you recall that?
A. I do.
Q. Did you see anything in Dr. Nicholson's report that his counter factual was peer reviewed?
A. No.
Q. Is that something they do, are they usually peer reviewed?
A. No, they are not. I was wondering why it would need to be peer reviewed.
Q. In your review of Dr. Nicholson's report, did you see any mathematical support for his assumption that every non-responding hospital across America would have scored at the national median for all of the seven measures?
A. No.
Q. He just makes that assumption?
A. Yes. It is an unsupported assumption.
Q. Counsel asked you about the fact that you issued your report on September 4th, and you gave your deposition on

September 29th. Do you recall that?
A. Yes.
Q. Does the fact that the Plaintiffs made the decision halfway through this litigation to withdraw their claim for damages affect in any way the opinions that you are giving this Court today about how harm should be looked at and measured?
A. No, it does not because my opinions, whether it is demonstrating harm or actually requesting for that harm to be compensated, it is the same type of analysis to make.
Q. Thank you.
Counsel asked you some questions about imputation. Do you recall that?
A. Yes.
Q. Is imputation a mathematical concept within your regularly accepted area of expertise that is used often?
A. Yes.
Q. Do you consider imputed data to be data?
A. Yes.
Q. He asked you some questions about the testimony we heard, and you weren't here, from Ms. Montgomery and several of the CEOs that they have some evidence that their admissions have decreased. Do you recall him asking you those questions?
A. I do.
Q. In your expert opinion, what other factors should be considered in determining whether the impact to admissions was

in any way related to the Leapfrog grade?
A. A number of factors that I discussed on my direct, the historical trends, expectations. There could be an expectation that, yes, admissions overall are going down. There could be a variety of factors that one would want to consider in trying to estimate or demonstrate that there is actual financial loss.
Q. And what about the saturation of the market with competitors, would that have an impact?
A. Yes. Competition is a critical factor to consider.
Q. For example, if new hospitals or ambulatory surgical centers are being built and opened in the same areas in which these hospitals are attempting to compete, would that have an effect on admissions?
A. Yes.
Q. You see no evidence in this case and none has been provided of what their expectation was on admissions versus what they actually were after the Leapfrog grade was released, correct?
A. Correct.
MS. BLAIR: I have no further questions, your Honor, thank you.
THE COURT: All right. Thank you, sir.
THE WITNESS: Thank you.
MS. BLAIR: At this time we call Dr. Anthony Harris to the stand.
THE COURT: Let me interrupt you for a second. I need

to step out for a second. I drank too much coffee this morning. Why don't we take ten minutes. Sorry.

(Thereupon, a short recess was taken.)

THE COURT: Okay, please have a seat and please continue.

ANTHONY HARRIS, DEFENDANT'S WITNESS, SWORN

DIRECT EXAMINATION

BY MS. BLAIR:

Q. Good morning, Dr. Harris. Can you describe for the Court what is your current profession?

A. I am a professor at the University of Maryland, I am a hospital infectious disease physician and an epidemiologist.

Q. How long have you worked in the field of hospital epidemiology?

A. For over 25 years.

Q. And what year did you graduate from medical school?

A. 1993.

Q. And can you briefly describe your education and training after you graduated from medical school in 1993, and where did you graduate from medical school?

A. I went to McGill University, did internal med residency from 1992 to 1996 at McGill in Montreal. Then I did an infectious disease fellowship at Harvard, and during those three years I also obtained a Master's of public health in Harvard with a focus on statistics and epidemiology, and I have

been at the University of Maryland since 1999.
Q. At the University of Maryland are you a researcher, a professor and a clinician?
A. Yes. Since I am a Canadian it is difficult for me to brag, but in this area I think I am qualified. For 25 years I have seen patients as an infectious disease physician, I see patients on a consult, and as a hospital epidemiologist, which is a fancy term for no one knows what we do, but it is very relevant to this case. I was an epidemiologist, we try to prevent patients from getting infections, central line associated bloodstream infections or CLABSI.
Q. You have to slow down.
A. Catheter associated urinary track infections, CAUDI, surgical site infections, SSI. Part of my job for 25 years has been working with quality officers, working with the CMO, working with a team of people basically to try to prevent infections and in the era of national reporting, also being cognizant how that affects Leapfrog grades, and reporting.
Q. And these infections that you just talked about, CAUDI, CLABSI and SSI, are those some of the outcome measures that go into the Leapfrog composite grade?
A. Yes.
Q. In your work in epidemiology, have you had the opportunity to concern yourself with the measurement and interpretation of health outcomes?

A. Yes. My area of research focuses on antibiotic resistance and infections and I published specifically in this area related to the infectious outcomes and reported to the CDC and National Health Safety Network and HHM, part of the CDC, and that is relevant to this case because those are some of the outcomes that are part of the 32 outcomes published on ways of making those metrics fairer in terms of better risk adjustment.

I have published on the development of new metric, HOB, that is very complimentary to CLABSI, and I sat on CDC advisory boards as they have sought to improve their methodology in terms of fairness to the hospital, to the patient, and closer to the ultimate truth, which is metrics that help hospitals improve outcomes and safety.

Q. When you talk about the CDC advisory board, is that similar to the expert panels that Leapfrog has?

A. Yes, it's very similar. The two I sat on that are parallel to infectious disease, I sat on an advisory board to what is called the CDC's HICPAC. The major area was an infection C.DIFF, where they were discussing how does it affect hospitals' rankings, what is the best way to transparently discuss the changes and how it could effect, and then I was supposed to be on the CDC HICPAC board in 2022 and 2024 before it was disbanded.

Q. One of the issues in the case is about whether or not the Leapfrog hospital safety panel voted the methodology change,

and I am going to ask a different question.

In your role on these advisory panels, like for the CDC, do you vote?

A. No. The ones I was on in the CDC, we did not vote, we gave opinions. We had a series of meetings on this and we'd give opinions. The CDC would take our opinion and make decisions, sometimes it was presented to a higher level. I don't know if there was voting at that level, but not in the advisory groups I was on.

Q. Can you briefly explain what happens in terms of the intellectual sparring, my word, on the panels on infectious disease measures with the CDC? How does it work?

A. Using your terminology, there is a lot of sparring. There are a lot of great people who are experts in the field who disagree on the best approach.

There is no perfect approach. If there were a perfect approach the meetings would be brief. In a lot of safety health care grading we are trying to get the science better and better and closer to the truth, but we are not there yet. That leads to a fair amount of opinions and discussions about what the best compromise is, or what the best incremental step forward is.

Q. In terms of your research and publications, you are an active researcher?

A. I have over 350 publications. In my field the H index is

what matters. I have an H index of 363. I published over a hundred papers on infectious disease related outcome, such as CLABSI, CAUDI, and 15 papers on risk adjustment related to improving hospital outcomes and about five on hand hygiene.
Q. You were in the courtroom when there were questions asked of Mr. Rule about peer review. Do you recall those questions?
A. Yes. Today is my first day in the courtroom.
Q. Of your articles, the hundreds of them, are they peer reviewed?
A. All of them.
Q. How many leadership roles in national professional organizations?
A. In my small world the eminent organization is the Society of Healthcare Epidemiology of America, which has 1500 members, consists of physicians. I was president of that society in 2015, and have held other -- counselor, but they are leadership roles in that organization, and I have been a member of that organization for over 20 years.
Q. In your role, did that role involve engagement with hospital performance metrics and pay for performance metrics for hospitals?
A. Yes, relevant to this case, yes, in the following way. So, for years, I am going to use the acronyms now since I defined it, CLABSI, CAUDI, and SSI, bloodstream infections, hospital epidemiologists were trying to control these for years, trying

to improve things before they were pay for performance metrics, and our SHEA membership was very much concerned and alarmed, needed understanding whether it was helping them or hurting them or what they should be doing.

Yes, as president of SHEA I responded to members' concerns routinely as part of our policy group of members concerned about changes in definitions, changes in adjustment methodology, and the organization interacted often with groups such as the CDC. We had regular meetings about what definitions were coming down the pipeline, how we could inform our members, and similar to what is relevant in this case, we had open discussion when metrics were developed.

There was an open discussion where we would get comments from our members and try to respond and summarize that information and present it to organizations like the CDC.

Q. The Society of Healthcare Epidemiology of America, that was a not for profit?

A. Yes.

Q. I want to rewind. You talked in your answer about pay for performance, and one of the phrases that has been used was pay to play.

What do you mean when you say pay for performance measures? What does pay for performance mean in your world?

A. With one caveat in Maryland, the CMS pay for performance is not applicable for the state of Maryland. Pay for performance

for epidemiology as is related to in my area, once infection rates, surgical site infections were higher than the norm you would receive penalties, or if your performance was above the norm you would receive incentives.

That exists in Maryland as well but in most states it is driven by CMS. Pay for performance gets at the idea that outcome and process measures now are driving potential hospital reimbursement and put a spotlight on hospital epidemiologists.

Q. Once this shifted to pay for performance, how were hospitals being paid prior to that?

A. I am not familiar with that.

MR. HVIDT: Objection, your Honor. Oh.

THE COURT: He didn't know, so you probably don't need to object, do you?

MS. BLAIR: Your Honor, I would like to qualify Dr. Harris as an expert in the area epidemiology, patient safety measurement and outcomes.

MR. HVIDT: Your Honor, we object, first as relates to relevance. We don't doubt that Dr. Harris is an epidemiologist and experienced in that, but lot of what you heard is focused on CMS outcome measures. There is 50 percent of the Leapfrog grade that relate to outcome measures. Those are not at issue. We are not challenging the accuracy of the scores on that side of the circle.

It is not relevant whether Leapfrog's methodology is

deceptive and harms consumers and harms the hospitals. Dr. Harris did not audit these hospitals, he did not visit them, he did not review their accreditations, review the documents that they produced in response to Leapfrog's request. He simply refers to the CMS measures that are not relevant to what the Court has to decide. That is the first objection.

The second objection is, it is not clear to us what he is being qualified as an expert to testify to beyond that that is relevant to this case.

THE COURT: His testimony as to the outcome measures may impact on whether any distortion in the process measures makes a differences, so I will permit his testimony.

MR. HVIDT: Thank you, your Honor. May I have a standing objection?

THE COURT: Sure.

BY MS. BLAIR:

Q. Dr. Harris, in the area in which you practice both as a clinician and epidemiologist and researcher, have you evaluated the strengths and weaknesses of health care methodologies previously?

A. Yes.

Q. Can you briefly describe for the Court in what way have you done that?

A. I am sorry, in which capacity?

Q. Whatever capacity you have done it.

A. So, as I alluded to on the advisory boards for the CDC I evaluate changes in metrics definitions and give opinions, basically, if that was a better way moving forward, a better solution or a worse solution, what the advantages and disadvantages of the definitions were.

As a hospital epidemiologist they would have routine metrics with the CMO and CEO where we look over our infection rates and go over where our infection rates fit in the bigger picture. They would tell me as an example, the PSI 90 accounts for this amount of our reimbursement in Maryland, and we'd run sensitivity analysis and say if you cut your infection rates by this amount, this is the amount of reimbursement you would have.

I would sit at the table with other experts in quality and we would have to decide where we allocate our resources to best improve patient outcomes, but also best drive potential reimbursement and performance on metrics, Leapfrog metrics and CDC metrics.

Q. You just heard counsel say you are not qualified to talk about the structural measures?

A. Yes.

Q. I believe you testified that you have published at least 15 peer reviewed articles on the issue of hand hygiene?

A. At least ten. In my day-to-day role as a hospital epidemiologist we consistently monitor important process and

structural metrics. A perfect example, I hope I can explain clearly, is for central line bloodstream infection, we were one of the first hospitals to endorse a structural change which is to get antibiotic coated catheters. I had to explain why that change would cut our rate. Even though process outcomes were not being recorded, I had to argue why process metrics were important.

We were reporting were the patients getting the right antibiotics before surgery to cut down the infection rate. That is a process metric that leads to an outcome improvement, but not a process metric that any of the scoring agencies require. I pushed to have those process metrics incorporated and evaluated by nurses and some of the quality team.

We would frequently have discussions, here is what is the score card, nut here is what really matters from a structural outcome point of view.

Q. Thank you.

Can you briefly tell the Court what the scope of your opinions are, what you were asked to opine on in this case?

A. Sure. I need a bit of a refresher, but I will do it a little bit.

One, I was asked to give my opinion on Dr. Nicholson's report, and specifically related to the methodology he used for the seven score imputation. I was also asked to give my opinion on the Plaintiffs' performance and under performance

related to the methodology and potential alternative methodologies.

One of the key things I am giving an opinion on is that non-response bias is real, used in epidemiology and in medical literature. It was appropriate for Leapfrog's new methodology to try to account for that.

And lastly, I had to rereview some of Leapfrog's mission statements to get the opinion that they created and ethical scoring methodology based on the strengths of the advisory panel.

MR. HVIDT: Objection to these opinions to the extent that completes the listing of the opinions. If counsel is about to list another opinion, I am happy to wait.

MS. BLAIR: I am not offering any other opinions, your Honor.

MR. HVIDT: Dr. Harris' opinions are not relevant to whether Leapfrog's methodology are harmful and deceptive to consumers. Leapfrog's witnesses and testimony show that Leapfrog did not try to estimate non-participating scores in an optimal way, instead assigned the worst possible score.

Dr. Harris' opinions one, three, four -- on the screen it is one, two, four -- contradict Leapfrog's own documents and testimony, and discussion is not based in data documents in the record. Nothing relates to the approach they use is deceptive.

And the third goes to the CMS outcome measures for

which Dr. Harris did no causal analyses to try to connect them to the four missing measures that are at issue here before the Court.

THE COURT: All right. The objection is overruled.

MS. BLAIR: Thank you, your Honor.

BY MS. BLAIR:

Q. DR. Harris, in coming to your opinions in this case, did your assignment require you to review the fall 2024 methodology that Leapfrog had in place?

A. Yes.

Q. Did you review that methodology in coming to your opinions in this case?

A. Yes. I reviewed the transcript from the April 12th meeting, the slides, and the new scoring methodology on the Leapfrog website.

Q. In coming to your opinions today, did you review the outcome measures for each of the five hospitals? I mean the CMS data with respect to the infection rates.

A. Yes, I tried to get a firm understanding of 32 outcomes, one incorporated ten, as we heard about, the seven down to the four with the three not applicable.

Q. In coming to your conclusion, did you review the five hospital Plaintiffs HCAP scores?

A. Yes, I did.

Q. Those are process structural measures in the Leapfrog's

rating system, correct?
A. Yes.
Q. Were you able to evaluate the actual data for the five hospitals for BCMA, CPOE, hand hygiene and IVS?
A. I was not.
Q. Why were you not?
A. Prior to the deposition I didn't have any of that data.
Q. And the opinions that you are going to offer today in trial, those are the same opinions that are in your report, correct?
A. Correct.
Q. Have you reviewed any additional documents since you were deposed in this case, I believe it was October 4, 2025?
A. When I was deposed there were a couple of exhibits I did not see prior to the deposition. What I tried to do between the time of the deposition and today was to review all of the exhibits in the deposition.
Q. Did you have Dr. Romano's deposition transcript?
A. I reviewed it quickly.
Q. In reviewing those documents, had it changed your opinion since you were deposed?
A. It has not.
Q. Before we get into the dispute we are here about, could you at a high level explain how hospital safety grading systems like Leapfrog's are generally developed in your opinion?

A. What do you mean by generally developed?
Q. Outcome -- let me ask it this way: Do you understand Leapfrog's hospital grading system contains outcome measures, process measures, and structural measures?
A. Yes.
Q. In reviewing the methodology of those three types of measures, do you have an opinion about whether or not including outcome, process, and structural measures are appropriate?
A. I feel moderately strongly about that and have for years. There is a focus on outcome metrics by most of the ranking systems and I argued that process and structural outcomes are also very important and complimentary to outcome measures, especially when events are rare. This is a more complicated principle, but yes, I am aware, and that is the strength of the current methodology.
Q. Are you aware in the research that you perform as part of your job that methodologies like Leapfrog's evolve over time?
A. Yes, that has been the frustration in our field, both the plus and minus. The field has come a long way in grading and it is continually evolving and improving. At times we go four steps forward and two steps back, but it is a never-ending challenge to try to get closer to the truth, which relevant to this case is which are better performing hospitals so the patients can be better informed, and more so hospitals can improve areas that they are poor performers on and they care

better for patients.
Q. If we talk about your first opinion, Leapfrog has created a reasonable and ethical scoring methodology based on the expertise of the expert panel. Do you see that?
A. Yes.
Q. What is the basis of that opinion?
A. When I had to review the members of that safety panel, it is really a who's who in this field. Some of them I knew, some I did not. When I looked up the ones I didn't, I said, wow, I should really know this person, this person is a real giant in this field. They have all aspects of physicians, nurses. These are excellent -- it is an outstanding expert panel that is helping to advise Leapfrog on difficult decisions that we have alluded to.
Q. In your expert opinion, based on what you do for a living, is it reasonable for Leapfrog to rely on at least the guidance and instructions of the expert panel as currently constituted in making changes in the methodology?
A. Yes, I completely agree with that. It is parallel to what the CDC did, you try to get people on the front line and people who are experts in the field to help advise you.
Q. One of the issues in this case, Dr. Harris, is the imputation methodology itself. Are you aware of that?
A. Yes.
Q. Are you aware of the change that took place in the fall of

2024?
A. Yes.
Q. Are you aware that five hospitals in this litigation take issue with the fact that if step one using their historical data is no longer available their imputed limited achievement for the four structural measures, BCMA, CPOE, hand hygiene, IVS?
A. Your question is, are you aware?
Q. I am trying to set the stage for what we are going to talk about.

One of the central issues from our perspective, Dr. Romano testified this, is that the step two imputation modeling of limited achievement, that it was a reasonable methodology to include non-response bias in the step two methodology.

Do you agree with that?
A. Yes, I agree, but I want to explain that.
Q. Please do.
A. This is the crux that is really important.
Q. Thank you.
A. When I teach medical students epidemiology and the goal is to have them understand the literature so they can be better doctors, when I teach Ph.D. students it is the same thing, we want them to design better studies to get better outcomes.

In short, there are two major threats, okay, to the truth, and it is bias and confoundment, so we spend for Ph.D. students

hours and hours talking about bias and confoundment. For the med students it is a bit of a joke, I get all of six hours to teach them, so it is not a lot. I have to teach them statistics and epidemiology. To give you an idea how important bias is I get a half hour, I have 25 minutes to teach bias, we specifically talk about non-response bias.

The reason bias is important, is that it affects the truth. It affects you being able to conclude drug A is better than drug B if you are doing a large study, or in this case it affects your ability to say this is the truth grade that this hospital deserves.

When I reviewed the transcript and the slides, they basically were getting at the central issue that hospitals that were not responding to the survey are biased in the way that they are different. Bias just means they are different. There is a reason they are not reporting that is different than the hospitals that are reporting.

The same way if you handed out a survey to 200 people on the street and only a hundred respond, you can't say the responses of the hundred that did not respond would be the same as the hundred that responded.

So the advisory committee's transcript was dealing with the issue of those that choose not to respond to the Leapfrog survey are different, and they are different because they are choosing not to respond. They are likely choosing not to

respond because they know their data.

Hence the old methodology, which I had not reviewed extensively, imputed the meaning previously was biased. It was giving the hospitals too high a score than they deserved, that the advisory committee thought was closest to the truth.

And the series of discussions in the transcript and slides then get at how do we get closer to the truth, how do we get back, one of my favorite terms, the counter factual. How do we get back the closest to the truth what the hospitals would have scored on the four metrics if they had responded. Non-response bias is what leads to this complicated discussion of how best to overcome this non-response bias to get closest to the truth.

Q. And is imputation based on non-response bias, in your expert opinion, something that scientists like yourself use to solve for missing data regularly?

A. Yes. We use imputation all the time. Imputation is -- it is not a tangent that is applicable -- it is used most often in cohort studies, case control studies and surveys.

In large data base studies, we routinely impute numbers for data that is messing, and this is done routinely and there are thousands of scientific papers on imputation models and methodology trying to get at closer to the truth and talking about the pros and cons of the various imputation analogies.

Q. Dr. Romano testified, that you weren't here for, about the concept of missingness not at random. Is that a phrase in your

expert field of epidemiology and measurement of safety that you understand when he uses that term?
A. Yes, it's missing completely random, missing not at random, and missing at random.
Q. Do you have an opinion whether the BCMA, CPOE, hand hygiene and IVS data in the Leapfrog survey for non-responding hospitals is missing not at random?
A. I think it would be important that I not say something wrong.
If the non-responders were just -- they didn't respond by random chance, which is not what I am saying, then their data would be missing completely at random and the old method of giving them the mean would be fine.
That is clearly not the -- they are choosing not to fill out the survey, in essence the data is not missing completely at random, which gets at how do you impute the data. Then gets at do you impute the data by reasoning, which is what the advisory committee chose to do, or impute the data based on other variables which is often used -- I am not sure Dr. Romano used the terminology week, but that is used when it is missing not at random.
Q. In the fall of 2024, does the literature suggest that the hospitals have these structures in place?
A. Yes.
Q. Such that the missingness would not be at random, correct?

A. Yes, I think --

MR. HVIDT: Objection, leading. Please bring it back to non-leading questions, please.

THE WITNESS: I want to answer the question more clearly and more simplistically.

BY MS. BLAIR:

Q. Sure.

A. The answer is, if the hospitals choose not to respond by random chance, if that is the case, then the old method would have been fine. As the advisory committee correctly points out, these hospitals chose not to fill out the survey for a number of reasons likely, of which more likely than probability it is because they knew their data and they knew that the data would not help them to report it.

THE COURT: Where do you come up with that assumption?

THE WITNESS: These are the discussions we have all the time.

THE COURT: Discussion is fine. What is the basis for that assumption?

THE WITNESS: The basis for the assumption was that I was at the hospital that filled out the survey, we did not ever entertain not filling out the survey. We knew how much time it took and the personnel. In general, decisions were made by if we were performers and we had three to four months to say Leapfrog is changing their methodology, if we don't fill out

this survey we will get limited achievement, I can tell you at my hospital and hospitals I represented they would complain, but they with basically allocate resources to complete it.

As a concrete example, 200 observations and a hundred observations for hand hygiene is often the area of push back that Leapfrog gets. Most hospitals sat I get limited achievement if I don't do it, they assign the resources, if you choose not to seen the resources and fill out the survey to know you are going to get assigned a limited achievement, it is purposeful, it is cognizant of what the outcomes would be.

THE COURT: There could be other reasons. You just ignore those, maybe you don't think it is worth it?

THE WITNESS: That is an excellent point which I agree with in the following ways.

There were instances where, as a hospital epidemiologist, I have a limited amount of resources, and I can choose to allocate it to something that is not an outcome metric or use it to something more meaningful. Occasionally we would make those decisions, but I would tell you most of the time when a reimbursement changed their rules we would and reallocate our resources because it was in our best interest to do that.

THE COURT: I guess these hospitals do face that pay for play methodology, so there is an incentive now under CMS to do it.

THE WITNESS: That is my understanding. I am not familiar with Florida pay for performance, but yes.

THE COURT: If you have a student, one of those students you talked about, who doesn't show up to take your test, do you assume they couldn't have passed it?

THE WITNESS: Yes. That is an excellent example, an excellent example. If a student last minute doesn't show up for my test, and they come to me, there are multiple alternatives. One, they weren't ready for the test and they probably weren't going to do well.

Another alternative, depending on what they told me, why didn't they show up for the test, they could say I have a medical problem, this and this. My job as a teacher at that point is probably to assess -- again, I would not know the truth, definitively parallel to this, is listen to the options, figure out which option I think most likely and similar to the advisory board try to come up with a ruling on which option I thought most likely or a compromise.

I can tell you at my institution, in most cases if you miss an exam you don't get an A grade.

THE COURT: Do you get an imputed grade? They give you a grade of need achievement, and what if you determine they were sick or transferred and decided to take a different course?

I would think -- I can see your point about

non-response bias, but it seems like maybe it is capable of measurement.

THE WITNESS: Maybe it is capable of what?

THE COURT: Measurement, for some other reason, too much trouble, we are already getting accredited by accreditation boards, we don't want our information used in a commercial way.

There are other reasons. Couldn't you sort that out?

THE WITNESS: Well, this is the problem with epidemiology unfortunately is, you can never -- you can never determine exactly which with certainty is the reason the student didn't show up for the test, or the hospital didn't fill out the survey, which is exactly why you have advisory boards like this that help guide the various options.

I do strongly feel that based on my review of the Leapfrog survey, and based on hundreds of my colleagues who fill out the Leapfrog survey, that by far the highest probability reason is they knew that if they filled out the survey their scores were going to be poor. They were benefiting in the prior four years where they didn't report, meaning they were getting the mean score which was benefiting them, and to me, the most likely thing is they knew they were under performers, and they didn't want to go to the hassle for months to fill out the survey because they knew they were under performing.

That is my opinion and that is probably the highest probability causal reason.

BY MS. BLAIR:

Q. In finding the highest probable reason you discussed, is that the purpose of imputation, you don't know the data, and what are you trying to solve for?

A. It is very relevant to the Judge's point. One of the exhibits we will get to, I tried to look at alternatives to limited achievement. It is sensitivity analyses allow you to calculate alternatives and look what the scores would have been under the different alternatives.

Q. Right. And in all of the research that you do, is imputation to solve for missingness not at random based on reasoning, a scientifically acceptable method when evaluating a composite score where you have a limited amount of missing measures, but a significant amount of measures that exist?

A. Absolutely. So, what is happening -- we will get to this, it is in my report and in Mr. Nicholson's report. The four metrics account for 24 percent of the outcome. 76 percent of the outcome is based on other scores.

So imputing data for that smaller 24 percent is, yes, a scientific method that I completely agree with.

Q. And with respect to the question that was asked of you by the Judge about the taking of a test, I want to ask a different analogy.

If you are teaching a class and you give a test with 20 questions, and a student answers 16 of the questions and leaves the last four blank, as a professor, what do you assume the student knew about the last four questions?
A. It is a perfect parallel and that I would assume that those four questions more than likely that they did not know the answers to that, not that they would perform at the level that everyone else answered those four questions.
Q. Moving on slightly, you were talking about the -- you mentioned a minute ago your critique of Dr. Nicholson's recalculation. I will move there for now.
A. Yes.
Q. You have an opinion about flaws in Dr. Nicholson's counter factual, correct?
A. Yes.
Q. Can you explain to the Court what those flaws are?
A. Exactly as the Judge alluded to, there are different methods to handle these seven data points, right.
What Dr. Nicholson proposes is I think by far the least logical method, which is, he recalculates their scores, incorporates all seven of their metrics even though the Leapfrog methodology only includes four of them, and he assigns them the mean score.
So, to break it down, he is giving them a higher score than they probably have based on non-response bias, which I could

understand maybe on maybe four of the metrics, but he does it on all seven.

It leads me to conclude that was the only way he could come up with a way to make their grades look better. It would be my last imputation option. Are there multiple options? Yes, that would be by far the last one.

One of the ones I didn't do, I heard about this morning, which is a respectable one as well, you calculate the score with none of this.

Q. There is a discussion about the three measures that Leapfrog designates as decline to respond, safe practices measures?

A. I was distracted. Can you repeat the question please.

Q. You were taking about Dr. Nicholson rescoring all seven measures at the national mean?

A. Yes.

Q. We talked about the four structural measures for which imputation is used by Leapfrog because, at least in Leapfrog's opinion, the missingness is not at random, correct?

A. Yes.

Q. And Leapfrog does not assign a grade for the three measures, correct?

A. Yes.

Q. What is your understanding of why Leapfrog does not impute data like Dr. Nicholson attempted to do for the three process

measures?
A. Well, I think, based on the advisory board, they thought that was not optimal for the three process measures versus for the four because they were structural. It was closer to the truth. For the three they chose to leave out, they thought the imputation method would be more of a guesstimate or less accurate which is why they left it out.
Q. In reviewing Dr. Nicholson's opinion, did you see any scientifically reliable methodology that he relies on for assigning these five hospitals the national median for all four structural measures?
A. I don't.
Q. And your counter factual, which we see here, not only took into account those four measures, but you did a regrading, if you will, of the four measures if these hospitals had even achieved one level higher, correct?
A. Yes. Along the line of the questioning of the Judge, which was very perceptive, I tried to get to the thing, okay, we are never going to know exactly where the truth lies. One extreme is Dr. Nicholson's method where he gives them the mean on all seven, then the Leapfrog methodology, the limited, five, 15, 25, and then what I said is, let's say by -- I still think the limited achievement is the closest to the truth. I agree with the advisory board on the Leapfrog methodology.
I said let's give them some achievement, one notch up, and

so the middle category of this is we gave them some achievement, which I think gives them the benefit of the doubt.

That is why I think this exhibit makes an important point, what you see is, in my opinion, which isn't surprising because the scores only count for 24 percent, that their grades do not change much. Even if you give them a better version than Leapfrog gives them, the second column, there are still Ds and Fs, and that is because basically 74 percent of the grade is from metrics that they are not performing well on.

Q. Does that confirm your conclusion to a reasonable degree of scientific certainty, just like Mr. Rule, that the driver of the Leapfrog hospital safety grade is not the four structural measures, but the other measures?

A. I wholeheartedly agree with that based on the analysis I did, yes.

Q. You had another opinion about the performance of these hospitals independent of imputation, correct?

A. Yes.

Q. You looked at these hospitals' performance on the CMS measures that make up the largest percentage of these hospitals' grades, correct?

A. Can you show the one with the Z scores. You had that.

So, basically in my day-to-day job I look at Z scores, I look at raw rates. I was involved in the advisory panels related to SIRs, standardized incident ratios. All of these

are efforts to summarize data in easier and more understandable ways.

For the five hospitals I reviewed their raw data, their Z scores, their SRI scores, and what I did in this exhibit, I tried to do what many CMOs and CEOs like, which is a yellow, red, green dashboard, with red being you are one of the bottom third performing hospitals, green means you are a higher performer, and yellow.

What I analyze in -- the rows represent the hospitals with the first five rows being the hospitals for the Plaintiffs, the bottom five rows represent comparative hospitals in Florida also that did not complete their survey. Okay.

And then on the columns represent a number of these outcome metrics that I am familiar with, so CLABSI, CAUDI, MRSA, CBIFF, PSI 90, all of which have years and years of experience.

With that background of explaining this figure, it is obvious at a quick glance the five Plaintiff hospitals have a lot of red, very little green. The comparator hospitals that also did not fill out the survey and thus were subject to the same imputation of limited achievement have an overall score that has a lot of greens and a lot of yellows, which gets at the same conclusion that these hospitals are poor performers on the outcome metrics no matter what you impute for their four structural measures.

Q. And just one thing about this slide to orient the Judge,

why did you use these ten hospitals in the State of Florida?
A. Well, so invoking the counter factual, you are trying to get the hospitals most comparable to these, they are not in the same state and they also did not fill out the survey.
Q. I want to make sure, are you aware in the State of Florida whether there are any other hospitals other than these ten that did not fill out the Leapfrog hospital survey and were provided a grade?
A. I am not aware, I think we included all of them.
Q. So, it is your understanding there were ten hospitals in the entire State of Florida that didn't participate in the hospital survey?
A. Yes.
Q. And these would be those ten?
A. Yes.
Q. Dr. Harris, in terms of your opinions that you provided here today to the Court, are all of those opinions to a reasonable degree of scientific certainty based on your expert and professional experience?
A. Yes.
MS. BLAIR: I pass the witness, your Honor. Thank you.
THE COURT: Cross-examination. I had a question. On your last chart, did that that reflect all the non-imputed scores or just some of them?

THE WITNESS: Good question, I would have to look at it again. The last column, PSI 90X. judge, it is important to know that is a composite outcome of ten outcomes. I can't remember how many columns they have, but it is more -- that is how you get from 22 to 32.

The PSI 90 has ten outcomes, so when someone tries to look at one, that slide is very revealing, and if you look at the five hospitals we used as a comparison there were a lot of greens in the PSI 90 and very few greens in the Plaintiff hospitals in the PSI 90.

THE COURT: There are a lot of NAs in the five non-Plaintiff hospitals and it didn't look like it covered all of the CMS metrics.

THE WITNESS: It may not. I reviewed the raw data and SIRs, and the Z scores, and as was discussed this morning, I tried to get at exactly where the data source was coming from.

THE COURT: Go ahead.

MR. HVIDT: Thank you, your Honor. Justin, pull up Exhibit 6 to Dr. Berger's report, that is 570, the demonstrative on the screen. Thank you.

CROSS-EXAMINATION

BY MR. HVIDT:

Q. Dr. Harris, looking at this exhibit, it is your theory that it is okay for Leapfrog to assume that both sets of five hospitals deserve 60 out of 400 on the four measures simply

because they did not respond to the survey; is that right?
A. It is my feeling that all ten of these hospitals chose not to respond to the survey, hence there is a non-response bias, hence in a standardized way they should give each of the hospitals the same score of achievement.
Q. Set aside your theory for a second. Both sets of hospitals in spring 2025, Leapfrog is telling the public they got 60 out of 400 on four measures without survey answers to back that up; is that right?
A. Yes.
Q. Looking at the 14 boxes and CMS metrics for the five hospitals that are not the Plaintiff hospitals, that say not applicable, those boxes are not applicable because CMS does not have data for those hospitals; is that right?
A. I don't see 14.
Q. If you count up the nonapplicable, my count was 14.
A. You are counting up the nonapplicable. So, I would have to look at the exact definition, but the nonapplicable occurs -- the easiest way to explain it, what if a hospital doesn't perform colon surgery, they get a not applicable. Similarly for CLABSI and CAUDI they probably got a nonapplicable because their expected rate is so low.
The lines, the amount of foley catheters they would have would be so low that they would either have zeroes or ones. You can't calculate a rate if your expected number is so low.

Q. The expected number of instances is so low because these hospitals have less than one hundred beds; is that correct?
A. I don't know all the exclusions, but the expected number is so low, which is exactly why you need process and structural outcomes in instances where events are so low.
Q. You mentioned the SSI. These hospitals are NA because, as you said, they are small enough hospitals they don't do colon surgeries?
A. Most likely.
Q. Look back at the community hospitals, starting with CLABSI and moving towards PSI 90, do you see those six columns, Dr. Harris?
A. Yes.
Q. If you add up the boxes in yellow and green, 20 out of 30 are yellow and green for these community hospitals?
A. Say the last sentence again.
Q. 20 hospitals out of the six outcome measures for the Plaintiff hospitals are green or yellow, so they are performing at or better than the national average on those measures; is that right?
A. The last six columns for the five hospitals, that is 30 outcomes. You are saying how many are green and yellow?
Q. 20.
A. You are probably right. I got 19 on this quick calculation.

Q. At your deposition we talked about factors related to a hospital might impact CMS measures that they can get or achieve on this. For example, a trauma center can impact how a hospital performs on measures like colon SSI?
A. Yes.
Q. The fact that a hospital is a cancer specialist center can impact how it might perform on measures like CLABSI; is that right?
A. I cannot answer that question yes or no.
Q. All right. I will move on.
A. I can give an answer. Can I give an answer to that that answers his question and leads to a yes or no answer?
THE COURT: If he asks one that leads to a yes or no, start with that and then if you need more explanation go on after that.
THE WITNESS: I need more explanation. He is saying for the last six columns does a trauma status --
BY MR. HVIDT:
Q. That is not my question.
A. What is the question?
Q. The fact that a hospital is a cancer specialist center can impact how it might perform on measures like CLABSI, right?
A. Yes, it can perform it, but it is adjusted in CMS. That is the area of research I do and published on, is how do you take these outcome metrics in the last six columns and adjust for

those types of variables and the CDC and HHN already does that.

That is what they have done and evolved over the years so that their rates in this thing are adjusted for whether they are a trauma center, whether they are a cancer center, a teaching hospital, the size of their hospital. It is already adjusted for. That has been the evolution in this field for the last 15 years.

Q. CMS is not -- (inaudible)

A. That is what -- (inaudible)

Q. You agree that room sharing can affect a patient's perception of their satisfaction at a hospital, and that can be impacted by a busy trauma center; isn't that right?

A. Since we are now focusing on the first five columns, the HCAP scores, which is basically a series of questions that a random set of patients get assessing doctor communication, nurse communication, staff responsiveness, communications of meds, and discharge information, I just like to point out that there is a sea of red.

Using the same criteria we now have five times five, 25 outcome metrics of which they are in red for all of them. They are poor performing across all of their HCAP outcomes.

Yes, a double bedded room could affect that, but unlikely to affect 25 of 25 poor performing HCAP scores.

Q. But all those on the left all relate to patient experience; isn't that right?

A. It all reflects an HCAP questionnaire that a patient fills out.
Q. Those five are all related to outcome measures; is that correct?
A. Process measures.
Q. Those measures for nonparticipating hospitals account for approximately 19 percent of their grade; isn't that right?
A. I have to look back.
Q. If you take Dr. Rule's example where he excludes entirely the four measures that are at issue here and the three measures that are already removed, that means 50 percent of the grade in his scenario is all based on those HCAP scores; is that right?
A. Say that again.
Q. I apologize. Dr. Rule's analysis that you were sitting in the courtroom for, he excludes the seven measures entirely that are on the process structural side of the Leapfrog grade.
The result is that 50 percent of the hospitals that are graded on his scenario is entirely attributed to the HCAP scores; isn't that right?
A. In my opinion, the methodology that Dr. Mark Rule used is one of a standardized method of imputation. There are multiple imputation methods.
The method he uses is let's not assume anything, let's go with the data we absolutely know. That is a standardized method. Then there is an imputation method, which we are

getting at, do you impute four, do you impute seven. That is another methodology. Then there is Nicholson's method --
Q. Dr. Harris.
A. Yes, your point is correct in that his method eliminates all of them, but I want to clarify that it is a standardly accepted method.
Q. Dr. Harris, if we could focus on the questions I am asking it will go more efficiently and I won't talk over you for the sake of Pauline. You got to the answer there, but if we could do it in a more concise manner that would help.
Look at the screen, look at St. Vincent's, St. Johns County. Do you see that?
A. No. St. Vincent?
THE COURT: The third one in the second group.
THE WITNESS: I am sorry. Yep.
BY MR. HVIDT:
Q. And you are aware of what the current Leapfrog grade is, right?
A. No. I am not aware of their overall grade. You mean their letter score?
Q. Yes. Are you aware of their current Leapfrog grade?
A. No.
MR. HVIDT: Your Honor, may I approach?
THE COURT: Yes.
MR. HVIDT: Justin, if we could put on the screen the

letter grade for St. Vincent's.

MS. BLAIR: Your Honor, I would like to point out this is not their letter grade from the time frame in which Dr. Harris has provided his opinion.

THE COURT: You can point that out on redirect.

MR. HVIDT: Yes, thank you.

BY MR. HVIDT:

Q. Dr. Harris, do you see Leapfrog has not graded St. Vincent's in fall 2025?

A. Yes.

Q. They were graded a letter grade in the spring 2025; is that right?

A. I believe so. Yes.

Q. But now they are not graded. They are not graded because Leapfrog doesn't have sufficient data to grade them; is that right?

A. That would be my assumption, yes.

Q. Justin, go back to slide seven, Exhibit 6, please.

Do you see the second hospital underneath DeSoto, Keralty Hospital, Miami?

A. Yes.

Q. Do you know what their current Leapfrog grade is?

A. No.

MR. HVIDT: Your Honor, may I approach?

THE COURT: Yes.

BY MR. HVIDT:
Q. The Keralty Leapfrog grade is not graded?
A. Yes. Fall 2025.
Q. And Keralty is not graded because Leapfrog is missing sufficient data to grade them; is that right?
A. That would be my assumption, yes.
Q. Leapfrog's website tells consumers that hospitals won't be graded when Leapfrog is missing more than six process measures. Even thought Leapfrog is missing seven for the community hospital here, it still grades them; is that right?
A. Could you repeat that question.
Q. You look here it says: Due to limited availability of public data Leapfrog is not able to calculate a safety grade for every hospital in the U.S., including -- the last bullet reads, hospitals missing scores for more than six process structural measures.
Do you see that?
A. Yes, I see that, but the --
Q. No, Dr. Harris, there is not an outstanding question now. Do you see that?
A. Yes, I see that.
Q. Leapfrog grades these hospitals with a letter grade even though it is missing more than six process measures; isn't that right?
A. No, because imputed data is not missing data.

Q. Are you saying the made up data for the four measures, to get around the rule that it can't grade a hospital if it is missing more than seven measures; is that right?
A. It is not made up data. Go to the website, they say how they got those four pieces of data. It is not missing, and it is not made up.
It is imputed based on the methodology that the advisory committee thought was best to handle this voluntary non-response bias of involuntarily not filling out the survey.
Q. You have no opinion about what decisions consumers might make after seeing a failing grade based on the fact that Leapfrog is grading these hospitals even without sufficient data to grade them; is that right?
A. I was not asked to give an opinion on that.
Q. Thank you. We can pull that down.
Dr. Harris, it is your opinion that Leapfrog is trying to get closer to the truth in assigning community hospitals failing scores on four measures even though Leapfrog lacks actual survey answers on them for the four measures?
A. Yes, I definitely feel that way.
Q. There is not -- you can explain that with your counsel on redirect.
MR. HVIDT: Your Honor, we prepared demonstratives for cause to help guide this. They are using documents in evidence.

THE COURT: Sure.
BY MR. HVIDT:
Q. They will also appear on the screen. Justin, if you'd go to slide two.
Leapfrog's safety grade data produced in this litigation that has been admitted into evidence, PX 412, shows when the community hospitals last participated in the survey in 2021, they earned an average of 370 out of 400 on these four measures. Do you see that?
A. Yes.
Q. Assume that is correct for me.
It is your testimony to try to get closer to the truth to assign failing scores of 60 out of 400 when they received an average of 370 out of 400 when they last participated in 2021?
A. Absolutely because they chose not to respond for the last four years. They filled out a survey, got 370 out of 400 in 2021, then they choose not to respond the next four years.
You know your data as a hospital, so you know that you were not at 370, you were going to get a higher mean score, so you don't respond. You completely supported my nonresponse bias argument. Thank you.
Q. Dr. Harris, you recall you said that you have no basis to say that these hospitals knew what their performance was on these measures. Do you recall that testimony?
A. I have to see the wording. I do not remember saying that.

Leapfrog safety grade data Leapfrog 412 --
Q. Hold on a second.
Dr. Harris, you testified that before the change, these hospitals were getting the benefit of the cohort meeting. Do you recall that?
A. Yes.
Q. Do you understand that these hospitals were the hospitals were never assigned the cohort meeting --
A. I -- what I thought was, they didn't report for four years.
Q. You had Leapfrogs step -- step one of Leapfrog's old methodology, none -- apply for four second else after they stopped participating. The 2021 still applied for spring 2004. You understand that?
A. You are absolutely correct, I made a mistake, but it doesn't change my overall opinion that they weren't assigned a mean, they were assigned the oldest score card forward.
Q. You weren't here for the testimony from the CEOs to hear the reason why they are not responding to the survey; is that correct?
A. That is correct.
Q. You have no bases to claim the testimony they provided under oath was not truthful; is that correct?
A. That is correct.
Q. You didn't study at all or have any awareness what their data was on the measures for the years when they didn't answer

the survey; is that correct?
A. That is correct.
Q. So, looking to the next slide, Leapfrog safety data, PX 412, shows the bottom one percent of participating hospitals in spring 2025 received 280 out of 400 on the four measures.
Assume for me that is correct.
It is your testimony assigning hospitals 60 out of 400 on the scores is the closest to the truth when the bottom one percent participating hospitals receive 280 out of 400?
A. Could you repeat that question. This is the first time I have seen this data. Go ahead.
Q. You didn't study the hospital safety grade data we produced coming into this?
A. I don't understand that.
Q. Leapfrog produced the safety grade data on measures they assign for the various scores. You didn't analyze that data in coming to the opinions you are here for the Court?
A. No. I looked at the scoring methodology, I didn't look at the raw data for every hospital.
Q. Looking at this slide, barring the participating hospitals, they received scores 280 out of 400, Leapfrog assigns nonparticipating hospitals 60 out of 400 simply because they didn't respond to the Leapfrog survey; isn't that right?
A. But the only one person is people who responded to the survey, right?

Q. That is correct.
A. So, what is the question?
Q. The question is: Simply looking at this data, the effect of the penalty that Leapfrog and nonparticipating hospitals the score they receive is one fifth of the participating hospitals receive; is that right?
A. Yes, and I said --
Q. Doctor, you can do that on redirect. Right now stay focused on questions at hand so we can get through this.
You are not aware of any survey for any nonparticipating hospitals that the 60 out of 400 is actual assignment that the community hospital would receive from the survey?
A. No. If you are a hospital figuring this out, you know if you answer questions you would have gotten the lowest grade of 282, you know that.
Q. But -- you just said you have no basis to understand that these hospitals knew what they would have received on the survey measures had they answered it; isn't that right?
A. I can just tell you with my experience as an epidemiologist, they know what the answers are going to be to these questions. That is my honest answer.
Q. Did you do a survey of all of the hospitals to assess and ask them the reasons why they didn't participate in the survey?
A. No.
Q. Thank you.

Dr. Harris, given the stark difference between the bottom one percent of the hospital scores on these measures, and Leapfrog approach in nonparticipating hospitals, it is no surprise that zero nonparticipating hospitals have received an A of nonparticipation penalties since the change, correct?

A. I disagree with that reasoning because its a difference of 282 minus 60 over 24 percent of the grade.

The hospitals that didn't get an A, it is not because of those four questions, it is because of the 76 percent. That was my opinion through multiple exhibits, so I don't agree with that causal conclusion.

Q. Dr. Harris, you keep talking about 24 percent and 76 percent. I am confused by that. Can we go to slide three of your own demonstrative, please. Slide six, actually. Let's zoom in here if we can.

Dr. Harris, this is your own demonstrative?

A. Yes.

Q. This is copied from Exhibit 1 of your own report; is that correct?

A. I don't know if it is Exhibit 1. Yes, it is in my report.

Q. It says Exhibit 1.

Looking on the left-hand side, you see the blue -- royal blue part of this graph?

A. Yes.

Q. And what is the number there in the royal blue part of the

graph?
A. 31.6 percent, that is when they fill out the survey. If they don't fill out the survey they get the secondary scores from CMS and drops it down to 24 percent, which is in Dr. Nicholson's report. He says that as well.
Q. Your testimony is Leapfrog's assignment of these four measures for non-participating hospitals is 24 percent even though your report shows it is 30 percent for the community hospitals who are not participating hospitals?
A. Well, I am getting a little confused now. The 31.6 percent in this exhibit relates to a hospital that fills out the survey and then -- I'm not sure.
Q. Dr. Harris, the last of the five hospitals, those are hospitals that didn't submit the survey?
A. Right.
Q. It is putting a 34 percent after that. That is the percentage that applies to them, correct?
A. I made a mistake. The first answer to this question is correct. I am confused now to be honest. I am confused how I got from 24 percent to 30 percent.
Q. I am happy to tell you where you got confused. If you look back to the pie diagram, on the right-hand side is process measures for participating hospitals, 24 percent of the score of participating hospitals comes from the four measures. When you remove the three measures for nonparticipating hospitals,

that percentage that went to those three measures is adjusted and re-weighted to the HCAP scores and the four measures that are at issue here. Do you understand that?
A. To be honest, I am confused how we get from 24 to 30. You are saying because you eliminate the three out of seven.
Q. I am applying Leapfrog's own process here in trying to explain to you here that when Leapfrog's methodology is applied to nonparticipating hospitals it doesn't assign three measures for 50 percent of the grade and takes that 11 percent and re-weights it to the HCAP scores and to the four measures at issue.
Do you understand that?
A. Yes.
Q. Thank you. And so the opinions in your report, when you say they might have a limited effect on the outcome, talking about it being 24 percent, it is actually 30.46 percent; isn't that right?
A. My exhibits had the proper calculations and you see the grade. It doesn't change my opinion, my overall opinion.
Q. We will get to that. We showed that nonparticipating hospitals had received limited achievement, five, 15, 15, 25, four measures since Leapfrog made the change.
Do you understand that?
A. I do not.
Q. Leapfrog is treating nonparticipating hospitals unlike and

far worse than any hospital; is that right?
A. Based on non-response bias.
Q. And Dr. Harris, you are aware that no participating hospitals received an F in spring 2025; isn't that right?
A. In the spring of 2025, no, I haven't reviewed that data. I wasn't asked to give an opinion on it.
Q. Justin, would you pull up JX 22.
What you saw in your deposition, Dr. Harris -- I am going to focus in on the last paragraph to Missy Danforth and Alex Campione.
If you look at the last line. Dr. Romano says, if you want to penalize nonparticipants don't pretend you are imputing statistical values in an optimal way. Do you see that?
A. Yes.
Q. So, Leapfrog is assigning those scores in a statistical way; is that right?
A. Repeat that question, please.
Q. Is it your testimony the non-response bias theory means it is okay for Leapfrog to assign 60 out of 400 on the four measures to non-participating hospitals trying to get closer to the truth in your words?
What I am trying to understand is that Dr. Romano in the ordinary course told Leapfrog that it shouldn't pretend that Leapfrog assigned those scores in a statistically optimal way. That is what your testimony is; isn't that right?

A. I disagree with the sentence you highlighted and stand by my opinion of the methods we discussed now and in my report, Leapfrog chose the optimal way that is closest to the truth.
Q. And if we look up to the top of this email chain, Alex Campione replied, as she testified before the Court, to Dr. Romano, I completely agree. Do you see that?
A. She is responding to the whole email, not just to one sentence. Yes, I see what you have highlighted.
Q. Thank you. If we could move on to JX 31 now please, Justin.
If you can highlight it there. Ms. Campione's email in which she is talking about how to design the footnote that references -- that is near where the measure is that is assigned to these hospitals, she says that they can't say external data sources because Leapfrog is arbitrarily assigning the points associated with the bottom category, limited achievement.
Do you see that?
A. Yes.
Q. Similar to my last question, what I am trying to understand is Leapfrog says here 60 is arbitrarily assigned and it is your testimony that they are trying to get them closest to the truth by assigning 60 out of 400; is that right?
A. They are trying on get closest to the truth, probably where they got the outcome metrics they didn't respond on the survey,

but come from the external sources, and may not apply just for the four survey questions. You are taking this out of context of the whole email message.
Q. Dr. Harris, you copied and pasted the support safety principles into your report; is that correct?
A. Yes. I had help from my legal counsel.
Q. Did legal counsel copy and paste the support safety principles into your report?
A. They helped me draft it.
Q. Dr. Harris, you are aware, are you not, those safety principles had been removed from Leapfrog's website; is that correct?
A. I am not aware of them.
Q. You accessed them by accessing the website; isn't that right?
A. Correct.
Q. And you are not aware since you weren't here they were pulled down, Leapfrog pulled those safety principles down?
A. Correct.
Q. Dr. Harris, you referenced the expert safety panel meeting that occurred in April 2024 in your examination. Do you recall that?
A. Yes.
Q. You said you reviewed the slides for that before preparing your report. Do you recall that?

A. I reviewed the slides and the transcripts. What happened in the deposition was there was some confusion over the exhibits you gave me, and whether they were the same ones I reviewed. There were multiple conversations and it seemed to be duplicates. Yes, I had reviewed the slides and the verbal transcript.

Q. You mentioned the transcript there, so you are familiar with the transcript, the transcript of Dr. Singer. The transcript is in evidence.

Dr. Singer references how adjusting the methodology might penalize high performing organizations that choose not to participate in the survey. Do you recall reading that in the transcript?

A. I don't recall that exact sentence.

Q. Dr. Kathy McDonald had a concern about how this assigned -- how the adjusting methodology could impact safety in hospitals in the survey. Do you recall that?

A. Yes, I do.

Q. Dr. Provose (phon) in the transcript mentioned the reason for some hospitals not participating in the survey is a resource thing and explicitly cited COVID being a resource restraint.

Do you recall reading that in the transcript?

A. Yes, but you have to read the rest of what Dr. Provose wrote. He is exceedingly important.

Q. Dr. Provose referenced he didn't have any data analyses to show that the hospitals that weren't responding to the survey were poor performers. It was a hunch and an anecdote that he provided; isn't that right?
A. I don't remember that sentence. This ties into the issue, yes, imputation is the best way to deal with that. I don't remember the whole sentence, but I would be surprised if Dr. Provose wouldn't think that is not an approved method. He used it in many of the papers he published.
Q. We can turn to your opinion of Dr. Nicholson. If we could pull up Dr. Harris' last slide, please.
Do you recall that?
A. I didn't do the overall -- what is that total, please. That is relevant to the exhibit you had given me before.
Q. That is why I provided them.
If we could pull up the slide, the demonstrative that goes over Leapfrog's approach.
Dr. Harris, your opinion is that it is more appropriate to assign community hospitals 60 out of 400 -- strike that.
Your testimony is that Leapfrog is getting closest to the truth by assigning 60 out of 400; isn't that right?
A. Yes.
Q. And then you said, what if I do a counter factual where I give them some achievement, I give them 120 out of 400. Do you see that?

A. Yes.
Q. In your counter factual -- go back to Dr. Harris' last slide -- adjusting the four measures for the nonparticipating hospitals, the Plaintiffs here, it impacts three of their grades to give them a little more credit than 60 to 120, which is still 160 some-odd points less than the bottom one percent of participating hospitals. Do you see that?
A. Yes.
Q. And as you testified earlier, you didn't review Leapfrog's safety grade -- assigning 120 out of 400. You are guessing as much as Leapfrog is at what the hospitals actually would have received had they participated in the survey; is that right?
A. I did review their methodology. I disagree with that part of the statement. The purpose of imputation, which we spent the last hour and a half talking about -- I don't change my opinion, which is non-response bias is voluntary and the closest to the truth is limited achievement, or the closest to the truth is some achievement, and one person is farthest from the truth, and Dr. Nicholson is farthest from the truth.
Q. Justin, go to the next slide.
You just mentioned Dr. Nicholson's approach, Dr. Harris. Looking at these slides here, you see how the average score the community hospitals received in their last participation is here in Dr. Nicholson's approach --
A. The last row --

Q. -- correct?
A. The second to the last row?
Q. I am referring to the last row here. The last time the hospital participated in the Leapfrog survey, 370 out of 400; is that right the?
A. Right. Hospitals know their data. Why were they not reporting and get a 60 if they are going to get a 300? They know they are going to get less than 60.
Q. You testified you have no basis to explain why the hospitals chose not to participate in the survey. And you also testified you have no basis to claim they knew what they would have received had they participated?
A. I said I didn't see that data. Someone who sits in meetings like this all the time with the CMO and CEO, they know what the data shows on this. Those five hospitals know what they would have scored, which is why the closest to the truth is the Leapfrog approach.

They know whether they have bar codes, they know whether they have CPOE, they know whether they are doing hand hygiene observations. You know this as a hospital.
Q. Let's get into knowing this as a hospital for a second.

If I could bring up PX 528, please.

Now, Dr. Harris, you testified earlier you didn't review the -- Dr. Harris, you didn't review the documents that the community hospitals produced in this litigation in response to

Leapfrog's request for information that the hospital would have provided to Leapfrog had they participated in the survey, isn't that right?
A. Yes.
Q. At your deposition we walked through this document here on the slide; isn't that right?
A. Yes.
Q. And you are aware that the hospitals in this litigation, in response to their requests, undertook the enormous effort to collect information that they didn't already have put together to provide Leapfrog in discovery the answers they would have provided, the information they would have provided to Leapfrog had they answered the survey relating to these four measures. Do you understand that?
A. I am a physician epidemiologist, this is a real legal issue. I did not see this exhibit before my deposition. At the deposition I tried to point out, where is this data coming from. I have no idea where it is coming from, I have no idea of the validity of it.
After the deposition I still have no idea whether this data is accurate or not accurate, how it corresponds to what they would have done if they responded to the survey. I have no opinion on this data.
I don't understand this data, I don't. I don't know where it is coming from.

Q. At your deposition you testified that this was the actual data from the community hospitals as relates to BCMA and CPOE that might affect your opinion.
A. Yes. If this was the actual data, yes, that is what I testified.
MR. HVIDT: Your Honor, we move 528 into evidence.
MS. BLAIR: Your Honor, we have an objection to the document. To the extent he used it as a demonstrative we had no objection. There is no data to back up where these numbers come from.
It is a compilation document with no trustworthiness behind it. It is a hearsay document created in the anticipation of litigation and there is no trustworthiness of this document being entered into evidence in this case.
MR. HVIDT: In this litigation Leapfrog served discovery requests of the hospitals asking if they would take the effort to provide the information to Leapfrog that hospitals provide to Leapfrog in responding to the survey as relates to all of the scores.
There was a hearing before Magistrate Judge Middlebrooks --
THE COURT: Matthewman.
MR. HVIDT: Excuse me, Matthewman as to the request for production and community hospitals would undertake the effort, and it was an effort, to collect the information the

response they would have had to provide to Leapfrog if they answered the survey.

They undertook that effort, we produced that two weeks before Dr. Harris provided his report. Contrary to what was in opposition to the motion in limine, they have chosen to not cite it rely on it or reference it in the course of this investigation.

This was compiled in trying to be responsive to the survey, and they keep trying to reference throughout the case what the hospitals would have or would not have done if they participated in the survey. This is the information that was collected and produced to try to answer that question.

So, from a standpoint of this information is highly relevant and collected in response to the discovery request, and efforts have been made throughout to mischaracterize the actual truth. We think it is important.

THE COURT: An interrogatory comes in as an admission here you don't have that. You might have been able to do this with the CEOs and apparently chose not to.

MR. HVIDT: The CEOs were not the ones involved in doing that. We are doing this here because of the representations that were made.

THE COURT: I am going to sustain the objection. You can question the witness about it, but I don't think it comes in under any evidentiary rule I know of.

The fact that something is produced in discovery doesn't make it admissible.

MS. BLAIR: Thank you, your Honor.

BY MR. HVIDT:

Q. Now, turning to your theory unsupported by data or data analyses, your theory is that these community hospitals must be treated five times worse than the worst one percent of participating hospitals simply because they didn't participate in the survey; is that right?

A. I wouldn't phrase that it way. I disagree.

THE COURT: Let me ask you, you keep asserting that this is non-response bias, but there has to be some parameters to non-response bias. How can you assume the non-response bias would result in information worse than one percent of all participating hospitals? That seems like an irrational assumption to me.

THE WITNESS: It is not one percent of all the hospitals, it is the lowest one percent of all the participating hospitals.

THE COURT: I don't know what that number would be. In Florida it is ten. I think we saw something about 69 percent or something on one of the slides in terms of participating hospitals in the United States.

THE WITNESS: It is an excellent question, Judge. What I tried to do since the deposition, I tried to look over

the actual survey because obviously as a physician I never filled out the Leapfrog survey myself, and it is true that the survey has over 300 pages. When I looked at the questions pertaining to these four metrics, and I looked at the number of optional questions, it actually led me to conclude the survey was much less burdensome than I imagined it to be.

So the logical alternative, which I think you are getting at, is that filling out the survey is way too burdensome.

THE COURT: For whatever reason. You can dismiss the reason for not doing it. I am trying to get to the rationality of imputing a non-response bias by a big factor than the worst responding hospital, one percent in the country.

THE WITNESS: When you look at -- I can't imagine the five hospitals didn't look at the survey, didn't estimate how they would answer the questions, and they know their score.

You are saying is it seems illogical statistically that it would be that low. I agree with you, that it seems bizarre that it would be less than one percent, but I think -- it doesn't negate my overall opinion which is the hospitals know roughly what score they would get if they were to fill out the survey and hence, there is a purposeful reason. It is not random that they are not filling out the survey. They are not filling out the survey because they know they are going to be scored poorly.

I never had this discussion at my hospital about filling out the survey, but we had these trade off discussions all the time, which is like, oh my God, they are requiring a hundred observations now, they only required 50. You sit down and say, what is the burden, what are we going to score, what is the benefit of doing it. The CEOs and CMOs routinely know the pros and cons and this is the exact discussion we would have.

The implication they choose not to fill out the survey and their scores are good, but there is a reason they choose not to fill out the survey, I strongly disagree with that.

THE COURT: Okay, thank you. Go ahead.

BY MR. HVIDT:

Q. Dr. Harris, during your examination by counsel and your Honor, you were asked what would happen in a scenario where a student didn't take a test in a classroom enrolled before you. Do you recall that?

A. Yes.

Q. In that example, that student is trying to get credit for that?

A. Yes.

Q. Taking a test is a requirement and you have to get ready for that test?

A. Yes.

Q. The Leapfrog survey is voluntary; is that correct?

A. Yes.
Q. Now, going back to your CMS measures for a second, you have no actual community hospital survey answers on the four measures to claim they are poor performers on the four measures; is that right?
A. Say that again, please.
Q. You have no actual answers that you reviewed for your opinion that community hospitals would have received poor performance on the four measures?
A. The community of the five?
Q. Yes.
A. Yes, that is correct.
Q. And you did no causal analysis to connect their performance on the CMS outcome measures to how they would have performed on those four measures; isn't that right?
A. I think I understand that question, but I would like you to repeat it again, please.
Q. You did no causal analysis to link the performance metrics that are listed in the CMS outcome measures that were the six columns on the right to how the community hospitals would have performed on the four measures had they answered the survey; isn't that right?
A. Correct, but I would argue that is what Mark Rule basically did. If you exclude the four things -- you are waiting and saying, I can't use -- this is what I assume Dr. Romano may

have testified, there is a missingness at random X, a category of missingness. The best way to get at that data is take variables that we already know, for example, in the trauma --
Q. Doctor, you can explain that with your counsel on redirect. I am trying to understand, you did know causal analysis linking the CMS outcome measures to the four imputed measures; is that right?
A. I did no causal analyses.
Q. Mr. Rule did no causal analysis to see what the outcome measures -- what the hospitals would have gotten on the four measures either; is that right?
A. I don't disagree with that. You take the data you know which is the data you have, and you say here is how they would have performed with the data we know, and they are poor performers.
That is a sensitivity analysis. It may be not a causal analysis, it is a sensitivity analysis. The same way -- that is why I have exhibits showing how poorly they did on the metrics we have measured, that is how they may or may not have done on the measures you don't have using reasoning.
Q. Leapfrog did not conduct any data analyses of nonparticipating hospitals to assess whether they were less safe than the hospitals that do; is that right?
A. That is correct.
Q. A moment ago I was talking about hand hygiene. I would

like to pull up the last slide for a second.

Dr. Harris, looking at the last slide, you see the community hospital example on the screen, and the bottom shows Good Samaritan when they last participated in the survey got a hundred out of a hundred on hand hygiene. Do you see that?

A. Yes.

Q. And you have no analyses or no data or no -- nothing to say that Good Samaritan has just simply stopped washing their hands in 2021; isn't that right?

A. The one thing I would say is, you are comparing 2021 to 2024. I know for a fact Leapfrog changed its terminology on how it scored hand hygiene in that period.

Yes, I have no data that they stopped washing their hands, but I would more than likely say that the hospital knew that the criteria for how they were going to be scored on hand hygiene changed from 2021 to 2024, and that affected their decision not to fill out the survey.

Q. Leapfrog has no data from Good Samaritan or the other community hospitals on the hand washing and hand hygiene performance since 2021; isn't that right?

A. That is correct.

Q. You looked at no data, no information how the hand -- how their hand washing or hand hygiene practices, if they changed at all since 2021; isn't that right?

A. Correct. I have no data.

Q. They assume community hospitals are failing at hand washing when Leapfrog lacks the hand washing data?
A. No. I don't agree with that.
Q. Is it your testimony that the hospitals agree to be treated worse than any hospital despite no data on the score measures?
A. I don't agree with that. I looked over the specific questions for hand hygiene and there are five domains. Three of the domains require you just answering questions, okay. If that has changed, the hospital that chooses not to answer 15 questions, they know what their data is.

Does Leapfrog know what their data is? No. Do I know what their data is? No. Does the hospital know what the score would have been on this exhibit? Absolutely. They know exactly what their score is.

So the Judge knows how I know this, you don't know how many hours I heard people complaining about the number of observations and new rules that are required. We knew what responding to that would have done to our score and we chose to follow the advisory committee's rules relating to hand hygiene. We knew the impact on how to fill it out.

That is why I feel so strongly about non-responsive replies. I sat in so many meetings where they chose not to respond and it is because you don't know the data or because you absolutely know the data of your hospital.

Q. Again, Dr. Harris, just because -- you have no basis to

claim that Good Samaritan knew what the score is they would have gotten from Leapfrog on the hospital survey answers; isn't that correct?
A. I don't know what they would have had, but I know the decisions of many of my hospitals and as president of SHEA, they knew what the scores would have been when they chose not to participate in the survey or not.
Q. My question is different.
You have no evidence or testimony that you can cite to know that the community hospital Good Samaritan knew what they would have received on the survey had they participated; is that right?
A. Can you say the question again. The wording is important.
Q. You do not know if the community hospital Good Samaritan knew what they would have received on the Leapfrog survey in the years that they didn't participate?
A. I don't know that definitively.
Q. In coming to your opinions you excluded the other reasons that a hospital might choose not to respond to the survey in coming to the opinion that non-response bias is the only reason; is that right?
A. I did not exclude it. I considered all of the options.
I considered them, it ties into the reasoning. There are multiple ways to impute, I heard them all. In my opinion the Leapfrog approach is the best and closest to the truth with

perhaps the Harris being second, the Mark Rule being close and Nicholson's approach being poor.
Q. Dr. Harris, you did not consider in coming to your opinions Leapfrog's documents that show the list of common objections that hospitals have to the survey; isn't that right?
A. Are you talking about the public forum document?
Q. I am talking about a document that Leapfrog has from hospitals participating in the survey. You did not review that document, did you?
A. That is correct, I didn't review the document.
Q. If we could pull up PX 406. This is admitted into evidence, 2025 regional year, communications tool kit. Justin, go down to the comment.
MR. HVIDT: Your Honor, if I could have one minute.
(Pause.)
BY MR. HVIDT:
Q. Looking at this slide here, Dr. Harris, do you see where it says above the middle bar, common objections to participating in Leapfrog surveys? Do you see that?
A. I see that heading, yes.
Q. What I am going to do here is count through the number here. One is, we do not; two, Leapfrog data; three, our effort to promote quality; four, all the information available; five, reconcentrate our data; six, we already have performance data; seven, Leapfrog is rarely used by the public; eight, we believe

something; nine, we disagree.

Do you see those?

A. Yes.

Q. Your opinion is that despite the fact that Leapfrog labels common objections, the objection, your theory that they are not performing because they are poor performers are the only ones that should be considered; is that right?

A. No. First of all, I was not asked to give my opinion on this document. Two -- what is the last one, exclude any of these reasonings. No, I would not exclude these reasonings.

I think these comments were some of the reasons places choose not to participate. They tie into multiple themes that are accurate, but it still doesn't have an effect.

If a hospital is -- I mean, like one of the statements there is a perfect example. You say Leapfrog is rarely used by the public or insurance companies any more.

If you are a hospital that believes that, fine, you don't respond to the survey. You focus efforts on other things, you make that choice. You make that choice full well knowing what your grades are going to be on the Leapfrog survey. You know what the ramifications are.

I was trying to relate to the Judge why I think I am a semi decent expert on this. I have these discussions all the time with the CMO, CEO, chief quality officer, and we have these discussions all the time and they will say, you know we are not

reporting because we are poor performers. Isn't this -- that is the major driver. It is not that you don't know what the implications of not reporting are.

Yes, we sit with them and say this is how much time it is going take to do this, to get this thing up. You make decisions based on knowing what the implications are going to be. Yes, these are viable things, but they are still, in my opinion, less weighted than them knowing what non-response bias was going to happen to their rating.

Q. You know there are multiple reasons a hospital does not choose to take the survey?

A. Yes.

Q. You testified that you can never determine with certainty that reason; isn't that right?

A. Correct.

Q. Thank you.

THE COURT: Is there redirect?

MS. BLAIR: Yes, your Honor.

REDIRECT EXAMINATION

BY MS. BLAIR:

Q. Dr. Harris, you were shown some comment objections to the hospital survey. Is there any reason those couldn't be excuses for hospitals that are poor performers for not participating.

A. Yes, there are valid reasons in some settings and there are excuses in others. They would be excuses for not filling out

the survey.
Q. In your expert opinion and based on the science, is imputed data data?
A. Yes.
Q. Why is imputed data data?
A. Well, this case gets at some of my frustration in research over 25 years to be honest with you. I take -- there are days I wish I was a cardiologist. I would have 350 publications which the majority would be randomized trials and we wouldn't be talking about imputation because in a randomized trial you more conclusively know is this drug A better than B. In my field we never have enough money to do randomized trials, so we became experts in bias, confounding imputation.

Unfortunately over my career I read a lot, interact a lot on how to deal with bias, non-response bias, imputation as a valid method. In fact, related to the peer review publication, if you submitted a manuscript where you don't try to impute data and you have a lot of missing data, there is no way that manuscript is going to be accepted.

Whether you call it sensitivity analysis or not, you have to have those variants in your peer reviewed publication so that your peers, which would be people on that advisory committee as an example, would weigh the multiple options and come to conclusions.

So, papers in this exact area, people on the advisory

committee would come back and say, I would like you to run this additional imputation method before I accept the paper. If you submitted a paper that had no imputation and a lot of missing data there is no way it would get in a journal.

Q. Are there peer reviewed articles based on reasoning using non-response bias as an acceptable reliable scientific method for using missing not at random data?

A. Yes, absolutely.

Q. And in fact, I think you testified in your deposition that you teach non-response bias and these types of imputation to medical students, correct?

A. Yes. This is a really important point. When you have med students and doctors reading studies, often the studies can control for all of the bias, but you want them to go through this other side. You teach them non-response bias, you teach them what the plausible alternatives are, you teach them in an intellectual way to come up with the one most plausible and work through how much that affects their results.

That is basically the basis of my opinion, trying to explore all of these options and giving an opinion of what I think the closest to the truth is.

Q. Remember Mr. Hvidt showed you all of the red on these measures?

A. Yes.

Q. If you could pull up Exhibit 7.

You actually prepared a slide, Dr. Harris, if you recall on how the hospitals do on the HCAP measures against all of the hospitals in the State of Florida, right?
A. Yes.
Q. Would you agree with me if you look at the slide the HCAP scores have been decreasing year after year and below the Florida and national average; isn't that true?
A. Yes.
Q. And these CEOs testified, well, that is because we have only seven to nine response.
In your role as an epidemiologist is it typical that hospitals have low response on the HCAPs?
MR. HVIDT: Objection, it is beyond the scope of cross and not covered in direct examination.
THE COURT: Overruled.
THE WITNESS: Well, this is a difficult question for me to answer. I think what you are getting at is the methodology in how the HCAP score is administered. I am not an expert in that, but here is what I know.
They randomly take a sample of patients, and it is voluntary for the patients to fill out the 19 or 29 questions, your seven to nine. I can't -- I don't know how many people it goes out to, what percent of the hospital admissions. What percent the average completion rate is, I don't know that.
The only research I have done is to try to study the

HCAP questions, the quality and association between that.
Q. Let me ask it another way. Why was it important for you to create this exhibit in connection with your opinion?
A. It is very important, esoteric, but important in the form of the outcome measures, structural measures. As I alluded to, me and others are fans of structural metrics. We believe they -- the other thing that has changed over the last ten or 15 years is numerous people think the voice of the patient becomes more and more important.

I believe the voice of the patient is important. As a physician, I really want what is best for my patient, whether I am seeing it as a patient doing research, whether I am evaluating HCAP metrics.

What is important is the voice of the patient, how they perceive their care, right, and it is a questionnaire that this HCAP group thinks is complimentary to the outcome measures and the CDC infection measures, which is what I know, and I agree with that.

So I am not an expert on HCAP and patient experience metrics, but this is an area that is really important and it is emerging, and as you can see, their scores are poor.

As an example, my hospital when I first showed up there did not have a physician in charge of the patient experience. They have an adviser and a physician at every single one of our hospitals in charge of the patient experience because of the

HCAP scores and the increasing perspective that the patient voice matters. That is why I felt this is an important exhibit.

Q. Thank you. Mr. Hvidt asked you questions about your recollection of what occurred on your review of the transcript of the expert panel meeting where they discussed the 2004 methodology. Do you recall that?

A. Yes.

Q. He didn't let you fully answer that. What else do you remember the panel said at that meeting that informed your expert opinion here today that non-response bias and imputation based on reason was followed with respect to the ultimate methodology change?

A. I want to clarify for the Judge the exact documents I reviewed and did not review.

Q. Sure.

A. Let me explain why time chronology becomes important.

Prior to my deposition I had an attachment, which was the slides that Matt Austin sends to the advisory panel prior to the meeting. I then had a transcript of the meeting which I reviewed, which is relevant, the public comments related to the final ruling.

I am pretty certain that I did not read the email exchange between Dr. Provense and Dr. --

Q. Romano?

A. Sorry, it has been a long time -- at the deposition. I then had the email exchange, and what I did since the deposition, I reviewed those documents again and perhaps more thoroughly.

Similar to what happened today, the advisory committee starts with a review of what the old methodology is, they have a proposed methodology by Matt Austin, and exactly as counsel suggested, a fairly heated discussion and multiple opinions of where to go.

The discussion was basically we are probing, we are giving them scores they don't deserve, what is a better methodology that is closer to the truth. There is a discussion about what the methodology is.

After the meeting there is a series exchanges between the advisory group and leaders of Leapfrog to basically continue the discussion, exactly relevant to my testimony, what are the different options and where are we getting closer to the truth. That is where they get to the methodology put in place in 2024.

After that they open -- I am not going to get the term correct -- public discussions on the proposed changes. That is my understanding of how they got to this new methodology.

Q. Do you recall in reviewing the transcript -- you gave testimony today about the discussions that you have had with CMOs about participating in different surveys. Do you recall that testimony?

A. Yes.
Q. Do you recall whether or not Peter Provose stated in the transcript that he was hearing anecdotal stories about hospitals being disincentivized to be in the survey?
A. That is exactly why I tried to make the point to counsel, he was taking that one sentence of Dr. Provose out of context. My interpretation from Dr. Provose, and it was clear, more and more hospitals are not filling out the survey, they are not filling out the survey because they get a high score.

They were leading that type discussion of we are hearing that it is not in the hospitals interest to fill out the survey. I have been part of the institutions and I say the right thing to do is X, let's do X. The CMO and CEO will say, well, if we do the right thing our grade is going to go down or we are better off doing this option.

Yes, they were looking for ways to decrease the workload if they didn't get a better score.

THE COURT: You didn't like the last part. Denied.

Are you nearly finished?

BY MS. BLAIR:
Q. Your counter factual -- Dr. Nicholson gives a high median score, thinks they are one of those, or were interpreted to take into account the score would have gone up, correct?
A. Correct.
Q. Dr. Harris, if the evidence in this case shows that these

five hospitals knew about the methodology change in advance, tracked their data for all four of those measures, used the Leapfrog calculator in advance of the fall 2024 grade change to estimate their grade and have admitted they can do it with no cost and minimal effort, would that reinforce your non-response bias opinion in this case?

A. Absolutely.

MS. BLAIR: Thank you. No further questions, Doctor.

THE COURT: Thank you, Doctor. What is next?

MS. BLAIR: Would you like to take a lunch break?

THE COURT: I would like to know what is next.

MS. BLAIR: We have a live witness and then two videos to play.

THE COURT: How much more time do you think you need?

MS. BLAIR: It depends on the crosses. I think I have an hour 20 of videos and one live witness.

THE COURT: Okay. I agree with you. It is a good time to break for lunch. Let's return at 1:30.

(Thereupon, a luncheon recess was taken.)

THE COURT: Okay, please be seated, and please continue.

MS. BLAIR: Your Honor, I want to call Isis Zambrana to the stand and I want to see if she and her lawyer are out in the hallway.

THE COURT: All right.

MS. BLAIR: Your Honor, Ms. Zambrana is with her lawyer, not outside. We'll play the video of Lauren Bailey, who you have seen the testimony of.

THE COURT: All right.

MS. BLAIR: Eighteen minutes. No, I will call her to the stand.

Your Honor, we will call Isis Zambrana to the stand.

THE WITNESS: Good afternoon, Your Honor.

(Witness sworn.)

DIRECT EXAMINATION

BY MS. BLAIR:

Q. Good afternoon, Ms. Zambrana, thank you so much for coming.

Could you provide the Court with a little bit about your background and training. Who are you?

A. Good afternoon, everyone. I'm Isis Zambrana, I always like to say that my first job is being a mom, but anyway, but I serve as the Vice President and Chief Quality Officer for Jackson Health System in Miami, Florida. My official training and background is actually i nursing. I was a clinician for many years, specializing in ED and critical care and I transitioned over into policy and patient safety, and then had a career for quite sometime, 13 years, with actually Tenet Health Care, and I oversaw their quality program at two of the Tenet Hospitals in Miami County, and then I returned to Jackson 'cause I had started my nursing career at Jackson, so returned

to Jackson to serve as the corporate director in 2013.
Q. And are you still the corporate director or have you gotten promoted --
A. No, actually, in 2017, I was promoted to Associate Vice President of quality and patient safety, and in 2018, to Vice President and Chief Quality Officer which is the role I serve in now.
Q. And when you say you are Senior Vice President of quality, is that over just Jackson Memorial Hospital or the whole health system?
A. No, the health system. We are comprised of seven hospitals.
Q. And of those seven hospitals, how many are adult acute care hospitals?
A. Four of them.
Q. And do those four adult acute care hospitals participate in the Leapfrog survey?
A. They do.
Q. And do you recall when Jackson Health System started participating in the Leapfrog hospital survey?
A. I do, very well. So I got there in 2013 and I asked why we didn't participate, I came from, like I said, Tenet Health Care where all the hospitals were participating, so in 2015 was the first time that we actually participated as the Administrator of our hospital.

Q. And in your opinion, how does participating in the Leapfrog survey, and I don't want to talk about safety grade just yet, how does participating in Leapfrog's survey impact your hospital's safety performance across the system?
A. So, how is it impacted or -- for Jackson Health, it aligns with our improvement journey. So when you look at the Leapfrog framework, many of the measures or the standards that are included and measured in the survey as well as the safety grade aligns with we we're trying to improve. So you look at the reduction of infections, the reduction of complications, improvement in the patients' experience of care. When you look at the survey, it goes into depth into different maternal care outcomes. It goes into looking at CT, CT radiation in pediatric patients.

So these are things at not only Jackson Health, I would think any health system in any hospital would want to be focused on improvement. Does that answer your question?
Q. It does, thank you, I appreciate it.

And so other than the Leapfrog survey, what other tools does Jackson Health System use as a way to measure and improve hospital safety?
A. Well, there are the differentials. Obviously, the public facing tools, like the safety grade, but also CMS ratings, CMS data that is publicly reported to hospital care. We also utilize our own internal benchmarking. We utilize their

critical analytics tool called Deviance Clinical Database and it has, I don't know, 800 hospitals and they're segregated by academic medical centers, community hospital trauma one level, you know, level one trauma, we look at internal and benchmark using that. We purchase this data from multiple registries, team put for trauma, misfit for general surgery, STS for cardiovascular surgery, the American Heart Association, look at the guidelines. We have designations in a multitude of disease processes, bariatrics, stroke. There is a lot of tools out there that hospitals utilize.

Q. And why does Jackson Memorial find it important to participate in a multiple of differentials?

A. I'm sorry, can you repeat?

Q. Sure. So you just listed all these different tools, many of which I don't know. Why does Jackson Memorial find it important to participate in a multitude of different types of tools instead of just picking Joint Commission and call it a day?

A. And I'll talk about, thank you for mentioning, and we're going through commission accredited, right, so a lot of these different tools are specific to the patient population or to the program. If you look at, for example, CMS and Leapfrog, there are some measures that cross over, so it just makes sense to participate across the board.

Q. And are you tracking with all of those different tools as a

health system hand hygiene, for example?
A. Oh, absolutely.
Q. And are you tracking BCNA, bar code --
A. (Unintelligible.) Counsel and witness speaking over each other.)
Q. Yes, thank you.
And are you tracking CPOE? Do you know what I mean when I say CPOE?
A. Yes.
Q. And what about your ICU physician staffing? Is that something you track?
A. Yes, we look at all of that.
Q. And we've heard in this case and I know you haven't been here in the last couple of days, about hospitals being survey ready for the Joint Commission.
A. Correct.
Q. Did --
A. I'm sorry to interrupt you. I don't call it survey, I call it location ready, right. So we are ready all the time, and I know there's ramp up at all hospitals and health care systems for an accreditation visit, but if we are ready and meeting standard every time for every patient that walks into any of our doors, then we take the focus away from the survey and we really put it on the patient who is our true customer.
Q. And is that the same thing about Leapfrog? Are you kind o

survey ready for Leapfrog at all times?
A. Well, you know, Leapfrog was a process for us, right, so we have been doing it for ten years, and we have been submitting surveys for all of our hospitals and be on board at a new hospital, I guess now, Jackson West is going on three years.

And let me say this: For us, it has been a journey. We share a single license, a single Medicare provider number, and Jackson Memorial Hospital, like you referenced early, is our flag ship hospital, it's a level one trauma, one of the largest transplant programs in the country, a certified burn center, comprehensive stroke, so there is really nothing we don't do at Jackson Memorial Hospital.

But since we share that Medicare provider number, it is shared amongst all of our facilities. So it's not really a true representation of what that facility's performance is, which is a frustration for our hospitals, right.

So that being said, we had to really look at our internal data. We put the standards for what is asked for in a different subsection of the nine sections in the survey into practice in the way we deliver care. So it is not a ramp up when Leapfrog, you know, releases April 1st their survey, we have already if audits are required, to evidence compliance with a specific measure or standard that is ongoing. Month after month, we are collecting that data, we're looking for opportunities on how to improve it, so when Leapfrog says

provide the last three months, six months, we already have that data.

Now, that would be different and was different when we first started. When we first started submitting, we had to run reports, we had to actually look at our data, understand the patterns in our outcomes. Does that answer your question?

Q. It does. And one of the issues, and I know you are not involved in inputting information, is that Leapfrog does no verification process over its survey data. Has that been your experience?

A. Yes, there is a verification process, which I think is great, it validates what we are submitting 'cause a lot of it is voluntary data that we are submitting besides what they pull from CMS and secondary sources as well. Leapfrog has Estes to verify, and we submitted documentation to evidence the data or the outcomes that we have provided, the answers we provided.

Q. And do you recall, you told me in your deposition, there was a situation where Leapfrog actually does a CPOE audit of Jackson Memorial. Do you recall that?

A. Yes.

Q. And was, to your understanding, part of the verification process that Leapfrog goes through for the survey?

A. Yes, a hundred percent. Leapfrog, at times, even this last submission, the health desk reached out asking us to clarify a section, I don't recall exactly, but you go back and you submit

what it is, and then they say great, thank you.
Q. What would you say to an allegation, you've been doing this survey for over a decade, at least, for Jackson Memorial, what would you say to the allegation that participating hospitals are allowed to assign themselves the highest score in the Leapfrog survey?
A. Participate -- can you repeat the last part of that and see if I understand it.
Q. Yes. Participating hospitals are allowed to assign themselves high scores on the survey without any verification.
A. I don't really understand the allegation. If you are familiar with the safety grade, and tell me if I am going over time or anything.
Q. No, no, no.
A. Sections of the survey inform or are pulled from the survey into the safety grade, so it does make sense to participate because Leapfrog is going to -- Leapfrog's purpose is to be transparent, okay. Consumers and purchasers of care have a way to understand, right, because health care is complex, I mean, if any of you have navigated health care, it is a mess, right. So the reality is, it is information so that consumers can make an informed decision as to where to go to get care, right, if it an informed consumer. There are people who maybe have never heard of Leapfrog, right, there are customers or patients that have never heard of Leapfrog.

So, when I submit my hospital survey, it behooves me, as the Chief Quality Officer, to know how that is going to impact my score. And if you look at Jackson Memorial's safety grades over the years, we have been Cs, but what the public doesn't see is that that numerical score has been inching up as the data continues to improve, as we continually to move forward in this journey, and as some of these CMS data that is in arrears falls off, right. So CMS has data sometimes two years old, right, and it is not a true reflection of the current performance of your organization. Now that's not public facing, they wouldn't see that, right.

So that being said, I can't assign my letter grade, it he is what it is. Now, I'm going to know because Leapfrog is transparent in everything they do. If they are going to make a change to the scoring or to questions on the survey, they put everything out to public comment, okay. You can opine as a public person, you can opine and say yes, okay, nothing is like secret. They don't pull the rug from under you, right. It is very transparent, so if you have somebody like me at your health system, it behooves them to know, right, what your submission is going to equate and relate to that numerical score and what that numerical score is in that letter grade range. That was long answer, but you understand that. So there is no way for me to assign the letter grade.

Q. Right. And so I was talking about, let's just take a

measure score, let's just talk about ECMA.
A. Okay.
Q. Is there a way -- there is an allegation in the case that participating hospitals, like yourself, can assign themselves the highest measure score for ECMA because Leapfrog doesn't verify anything.
A. There is an honor system, there is a code, right. I think that, you know, if hospitals are truly committed to this work, they are going to be honorable, right, in what they submit. Could a hospital fudge a number, yeah, they could, I mean, but at the end of the day, I mean, they are responsible for the data they submit, and if Leapfrog does do a validation survey, they are going to have to prove that that number is truly what they submitted. Does that answer your question?
Q. It does. And you know from personal experience that Leapfrog does do validation surveys?
A. One hundred percent. It is a random, it's a random, you know, validation, right.
Q. And you talked about consumers in the last couple of answers ago, and I just want to ask you, as the Senior Vice President of Quality for Jackson Memorial Health System, who does your health system consider to be the consumers of that hospital safety grade that you worked so hard to improve year after year?
A. Our patients, our patients and families, at the end of the

day, they are our consumer. I mean, obviously, you could look at physicians, physicians are, you know, consumers, you know, they partner with you, and you have vendors, but at the end of the day, everything we do impacts our patient.
Q. And there has been some discussion in this case about the burdensomeness of filling out the survey, and your hospital is -- well, we've calling it a safety net hospital, is it not?
A. We are a safety net.
Q. And can you just very briefly tell the Judge what do you think everybody is talking about when they talk about safety net hospitals? What does that mean to you?
A. What is a safety net hospital?
Q. Yes.
A. A safety net hospital is an organization that cares for a large majority of unfunded or low insured, vulnerable patients who have limited access to health care.
Q. And even though you are a safety net hospital, with potentially limited resources, do you find there to be value in doing the Leapfrog survey year after year and committing the resources in doing that?
A. Yes, us being a safety net hospital has nothing to do with it, all patients deserve the best quality care, safe care. At the end of the day, we are focused on the prevention of harm, and whether we are safety net, private, not for profit, whomever you are, I mean, I think all hospitals strive to

provide the best care.
Q. And Ms. Zambrana, at the end of the day, why does Jackson Memorial Health System do the survey?
A. Because it aligns with our true goal, which is improving the way we deliver care.
Q. To patients?
A. One hundred percent.
Q. And would you agree with me that a hospital who has put patients at the center of how they deliver care every single day would have less of a burden in participating in a Leapfrog survey than a hospital who doesn't?
A. Yes. You know, I will expand on that a little bit because if you get to a point, right, so now you are talking about we have been submitting the survey for ten years if you get to a point that the standards that you are evidencing or you are being asked to report outcomes on are part of the way you deliver care, right, are engrained in the way the person who is closest to the patient, like is delivering and doing their job is not a burden, this is what they come to work to do, so I believe that answers the question.
Q. It does. And is it important to Jackson, your consumers, your patients, that they have access to Jackson's specific patient's safety records on ECMA, CPOE, hand hygiene, IPF?
A. One hundred percent. So besides patients or consumers having access to hospital compare, having access to the

Leapfrog safety grade and Leapfrog survey, which it is also publicly reported, we at Jackson have a quality website where we share our data. All right. So we share maternal outcomes and we share the good, bad and the ugly. I mean, we don't kind of cherry pick it. Now if the outcome is not hitting the mark, it is also on there.

It is our commitment, right, to the residents of Miami Dade County as a safety net hospital and as a county department to be transparent. So that's why I think our mission aligns very closely with Leapfrog which is bringing transparency so that consumers and patients can make informed decisions about their care.

Q. And you are committed to putting as the Senior Vice President of Quality, you are committed to putting the good, the bad and the ugly out there for you patients?

A. Yes, one hundred percent. Not only am I, I mean our whole executive team.

Q. And at one point in time, Jackson Memorial received a D even though it was participating in the survey?

A. Yes, let me tell why. You know, there are a couple of things that happened, right. When Leapfrog pulls from secondary sources, you know, and then you submit your current data, there may be a difference. And we did slide back into the D category.

Q. And as a health care system, when you received that D, what

was the reaction of the health care level in terms of your commitments to your patients?
A. Well, I knew we were going to get a D, so, I mean, there were conversations that were had explaining why we got that D, and then moving forward, right, so what is the commitment to turning this around, how quickly can we turn this around, you know, being able to explain to customers or to the media, Jackson is in the news a lot, to the media and to really our consumers and our community why we were a D, why we backslide in our commitment to improving.
Q. And when you were trying to turn that D around to increase revenue or admissions or were you trying to turn that D around for the patients that serve?
A. Yes, you know, I am not really sure that we had less admissions when we were a D as opposed to now that, you know, our safety grade for JMA, for Jackson Memorial Hospital, is a C. You know, I am committed to this work. Two of our hospitals in the fall safety grade actually were Bs, right, Jackson Memorial Hospital was very close to being a B, so we continue, you know, to focus on the work, not so much the letter grade, okay. So we focus on the work, not so much the letter grade, we never looked at the financial impact of when we were a D and now that we are a C or now that we are a B, right, because it is not about -- we are still going to open our doors as a safety net hospital and we are committed to this

work, we are still going to open our doors, so we want our patients to trust us, we want our patients to come to us, and you know, it is funny, because you wonder, okay, our -- I shouldn't get on my soap box. I will let you ask the questions.

Q. My last question is, are you aware of when you had that D, when you slipped from a C to a D, whether it had any impact on your organization in terms of patients not coming to Jackson Memorial because you had a D?

A. I am not aware of that. If anything, and I think it fueled us and motivated us, I mean, you know, the 15,000 employees that work for Jackson Health are very committed to the mission, and I think that, you know, when you talk to the hospitals, they were like, we got to fix this, you know, they were very committed to turn that D around.

MS. BLAIR: Thank you. I have no further questions, Your Honor.

THE COURT: Cross-examination.

MS. MALONEY: Your Honor, I am introducing for the record Emily Cardone who will be cross-examining.

Thank you.

CROSS-EXAMINATION

BY MS. CARDONE:

Q. Good afternoon.

A. Hi.

Q. Ms. Zambrana, you had no involvement in the change to Leapfrog's scoring methodology in the fall of 2024, correct?
A. Say again.
Q. You had no involvement in the change of Leapfrog's scoring methodology in the fall of 2024, correct?
A. Correct.
Q. You also had no involvement in the change to the Leapfrog imputation model in the fall of 2024?
A. Correct.
Q. Patients generally want to go to hospitals with good reputations of quality, correct?
A. Yes.
Q. Doctors generally want to work with hospitals with good reputations for quality, correct?
A. Yes.
Q. Ms. Zambrana, you don't know how many hospitals have been audited by Leapfrog, correct?
A. I do not know.
Q. You have not personally visited Good Samaritan Medical Center in the last five years, correct?
A. I have not.
Q. You have not personally visited West Boca Medical Center in the last five years, correct?
A. I have not.
Q. You have not personally visited any of the five community

hospitals in the last five years, correct?
A. The five community hospitals in this case?
Q. Correct.
A. Yes.
Q. You have no personal knowledge of any of the patient safety system the five hospitals in this case have in place, correct?
A. Correct.
Q. You have no personal knowledge of the patient safety policy the five hospitals in this case have in place, correct?
A. Correct.
Q. You have no idea what harm the community hospitals have suffered as a result of Leapfrog assigning them D and F safety grades, correct?
A. Correct.
MS. CARDONE: Your Honor, may I have a moment to confer with my colleague?
THE COURT: Yes.
MS. CARDONE: Ms. Zambrana, I have no further questions.
MS. BLAIR: I have no further exanimation, Your Honor.
THE COURT: All right. Thank you.
MS. BLAIR: Your Honor, at this time, we would like to play the 18-minute video of Lauren Bailey.
MS. MALONEY: (Unintelligible.)
MS. BLAIR: It will.

MS. MALONEY: Before the videos are played, I am experiencing a complication, a health complication with my eye, and I have been advised to seek immediate medical examination for it, so I respectfully ask the Court for permission to step out during the video and return tomorrow for our closing. My colleague, Lee Crain will handle any matters that arise through the rest of the trial, if that is okay.

THE COURT: Sure.

MS. BLAIR: Your Honor, I should let you know them, based on the evidence that we put in, these videos will be the end of the Defense case and we will rest.

MS. MALONEY: And one comment with respect to that. We would exercise our reservation of rights under the pretrial stipulation and our amended list of trial witnesses wherein we reserved our right to call any witness listed on the Defendant's witness list, including but not limited to if Defendant ultimately declines to call any such witness.

Now, Mr. Verndenberg [sp] when he testified had a number -- gave a number of admissions that are actually in support of our case, and so we would ask that we be allowed to designate his testimony. We would put in those designations to opposing counsel later today. She can counter designate and we can get them to Your Honor prior to closings tomorrow, but we think we would suffer prejudice if we are not allowed to examine the witness and given these reservation of rights and

should be allowed to do so.

THE COURT: Is he here?

MS. BLAIR: No, Your Honor, he is not here and he is our expert and we are not offering any of those expert opinions in this case in light of the Plaintiffs' case that came into evidence. That is our right to do. He was our retained expert, we are not calling him, we have the right to withdraw him, which we did, and I don't know how they can put in deposition evidence of our retained expert who we are not calling in trial. It is highly improper.

MS. MALONEY: It is not improper at all. We reserved the right to call, quote, the community hospitals reserve the right to call any witness listed on Defendant's witness list, including but not limited to if the Defendant ultimately declines to call any such witness.

I would say, Your honor, that yesterday was the first time at the end of Court when counsel did not raise Mr. Verndenberg's name when she said he was coming tomorrow. We then immediately sent an email when we got back, or a couple hours later, I apologize, sent an email asking if she would be culling him. We did not get a response and we just learned minutes ago he would not be called. And, again, while she has made representations that he is not relevant to the case that we have put in, his testimony is at the heart of some of the deception issues that have been raised before Your Honor with

respect to the methodology. And so we would ask to simply designate that testimony.

They also sent us demonstratives last night in which they suggested that they would be -- which certainly suggested he would be called. And so we would ask that we be allowed to put in the deposition designations, we have no need to play them, we just want to put them before Your Honor, we think it is particularly important to do so given the fact that Professor Berger made reference to Professor Vandenberg's testimony as part of his examination, including in response to questions from the lead counsel.

THE COURT: I suppose if it is proper rebuttal, you can do it, otherwise, I don't see a mechanism for that, but if it can properly come in as rebuttal, I would think you can do it. You have the deposition, you, I guess, in effect, listed hi as a witness, but it needs to be true rebuttal testimony to be able to do it.

MS. MALONEY: Fair enough, Your Honor. We will designate his testimony, keeping in mind your order --

THE COURT: How long is it?

MS. MALONEY: The designations -- I mean, the cross-exanimation would only be 20 minutes, so I would think that the designations would total no more than 12 or 15.

THE COURT: Well, if you can do it -- let's try to do it this afternoon if we are going to have -- I'm sure your

colleagues can handle it.

MS. MALONEY: Okay, yeah.

MS. BLAIR: Your Honor, for the record, I just want to object.

THE COURT: What is the basis?

MS. BLAIR: He is not a methodology expert.

THE COURT: Well, but she wants to call him in rebuttal, he is a witness that has been identified, they took his deposition, so under what -- what's your basis for an objection?

MS. BLAIR: My understanding is that I have the right to control my case and how I handle --

THE COURT: Well, you do, but they can also call somebody in rebuttal.

MS. BLAIR: And we would ask to designate the testimony of Mr. Chakurda, their expert, who was not called in this case who my experts also provided rebuttal opinions. This is going to go on and on, Your Honor. They had a case in chief to put on, they had proof, and I have the right to decide --

THE COURT: Well, they have an opportunity for rebuttal, and if it is true rebuttal testimony, they can do it. Let's try to move on.

MS. BLAIR: May I ask grace, Your Honor, with respect to Mr. Chakurda?

THE COURT: Not for rebuttal. If you want try and do

in your case, I guess you could.

MS. BLAIR: Thank you, Your Honor. We will file the proper objection.

I call Lauren Bailey by video.

(Video played.)

MR. CRAIN: Objection, Your Honor, this is playing from P.16, it is not on the designations. The designations ended 3:15.

MS. BLAIR: Well, just stop it. At this time, we call Matthew Austin by video.

(Video played.)

Your Honor, on behalf of the Defendant, we rest.

At this time, I would like to renew my motion for judgment as a matter of law that Your Honor denied at the end of the Plaintiffs' evidence, but it is our position now having seen all the evidence in the trial that there's a basis to grant that motion finding that Plaintiffs have not met their burden of proof on the elements of Unfair and Deceptive Trade Practices Act or that the five hospitals have been aggrieved by an unfair deceptive trade practice.

THE COURT: Okay. I again deny your Rule 50 motion.

MS. BLAIR: Thank you.

THE COURT: What are you all going to do?

MR. CRAIN: Your Honor, if I may be heard just first on the designations. There were certain counters that were

played that we have not countered, so we are going to work with counsel to update the filings so the record is clear, we didn't want to interrupt the flow, but I just wanted to note that.

Now that the Defense case has rested, we move for judgment under Rule 52-A. We're moving as a matter of procedure, but because closings are tomorrow, we are happy to do substantive argument tomorrow or we're happy to answer questions from Your Honor.

THE COURT: All right. I deny that as well. I would like to enjoy your closings, so are you going to put on some additional rebuttal or some aspect of this deposition we had some argument about?

MS. CRAIN: We are, Your Honor. We are finishing the cut right now, it might be a good time to take a quick break. I am told, I have not see the cut, but I'm told it is about 13 minutes.

MS. BLAIR: Your Honor, we would like the opportunity to review it and I'd like to renew my objection under --

THE COURT: All right. We will take 20 minutes. We will return at 15 minutes until 4:00.

MS. BLAIR: Are we going to allow objection, I apologize?

THE COURT: For what?

MS. BLAIR: To their counter designations as it goes, I don't even know what it is they are countering.

THE COURT: Why don't you all look at it. It is only 14 minutes.

MS. BLAIR: Thank you.

MR. CRAIN: Thank you.

(Thereupon, a recess was taken.)

MR. CRAIN: Apparently Microsoft is down, we texted the chart over, so they have had it. It is about 13 minutes, Your Honor, directly responsive testimony to Ms. Binder, Ms. Danforth as well as the video we saw about a half hour ago of Ms. Bailey goes particularly to the footnote, to the asterisk, to consumers that use the website the methodology doctrine, everything we've been talking about throughout both parties' case in chief. I also remind you, Your Honor, the testimony from Ms. Binder about the U.S. literacy issue came in their case in chief as proper rebuttal. I have Eleventh Circuit case law on the scope of rebuttal on opening the door if Your Honor would like the cites. I also have a couple documents I'd like to hand up so Your Honor can understand what the witness was looking at.

I think we are able to get the documents on the screen, but it took a little while to get that clip organized for Your Honor to see.

THE COURT: All right. You object?

MS. BLAIR: We do object, Your Honor, we have now had a chance to sort of review the written transcript and the

designations. They are designating expert opinions of our expert, it is not fact rebuttal at all. Michael Rutenberg was designated as a rebuttal expert to Mr. Berger and he is not -- none of what they are about to offer are just opinions that we have withdrawn in this case. I would also like to remind the Court that they filed a Daubert motion wherein they told the Court that Mr. Rutenberg's opinions were unqualified, unreliable, unhelpful and something I can't read -- irrelevant, I'm sorry. And at this point, he is offering nothing but opinions, he has no facts of his own, they are asking him his opinions about how he views these websites, and that is not a factual matter, it is an opinion. He has no --

THE COURT: Is there any rule that you can't elicit opinion testimony in rebuttal?

MS. BLAIR: Yes, Your Honor, I believe Federal Rule 26(e)4(a) is it's not an automatic grant to the right to call an opposing expert as a witness. 26(b)4(d) talks about it being under exceptional circumstances only, the rule protects experts retained in anticipation of litigation or trial were not called as witnesses at trial.

THE COURT: That doesn't apply to a witness who has been deposed, however, does it?

MS. BLAIR: I believe it does, Your Honor.

THE COURT: I thought that was non testifying experts which this fellow wouldn't -- doesn't sound like he would

qualify as that.

MS. BLAIR: Well, if he doesn't -- I'm sorry, Your Honor. If he is a non qualifying expert, is that what you said, Your Honor.?

THE COURT: Non testifying.

MS. BLAIR: Oh, non testifying expert. Yes, Your Honor, he is, obviously, a non testifying expert and we would want him as a trial witness, and respond to the opinion in doing so. They are not trying to offer facts in rebuttal to any of the facts that have been put on by Leapfrog, they are offering him for opinions about the website material. And we heard what Ms. Maloney aid on the record before she had to leave, she said they can have the opportunity to counter designate and we would like to do so, if that is what Your Honor is entertaining. We find it highly prejudicial to have them play at the eleventh hour alleged rebuttal evidence of our expert that we have withdrawn without the opportunity to submit -- well, one, without the opportunity to know if you are going to qualify him as an expert, and two, without the opportunity to submit counter designations. And we object to the use of his testimony as a factual counter designee.

THE COURT: All right. I am looking at Rule 26, and I think the section you related to is when an expert employed only for trial preparation. This fellow was obtained for trial, he was identified as a testifying expert, and he was

deposed by both sides.

So I think they are entitled to call him or call the portions of his deposition that they would want to utilize.

MS. BLAIR: And our objection, then, Your Honor would be he has not been qualified as an expert to offer the opinions you are about to hear and in fact the very people --

THE COURT: I overruled the Daubert motion so that he could testify.

MS. BLAIR: And that is fine, Your Honor, and my second objection then would be I would like to know what facts he is actually rebutting to your point before you left the bench if he is being an actually rebuttal expert which he doesn't appear to be.

THE COURT: The objection is overruled.

How long is it, 14 minutes?

MR. CRAIN: Thirteen minutes, Your Honor.

THE COURT: Okay.

MR. CRAIN: May I approach with just two documents that will help Your Honor.

THE COURT: Sure.

MR. CRAIN: Plaintiffs' Exhibit 31 and Plaintiffs' Exhibit 32 which are not in evidence. The objection is relevance and unfair prejudice. I think he will lay a foundation as to why it is relevant. We would normally like to get it on the screen, but I don't have time.

Your Honor, may we precede?
THE COURT: Yes.
(Video played.)
(Video of Michael Verndenberg played.)
MR. CRAIN: Your Honor, that concludes the video. Thank you.
MS. BLAIR: Your Honor, we have one designation, one question and answer I would like to read into the record. I didn't have time to pull it up on the video, but I can read the counter designation.
THE COURT: All right.
MS. BLAIR: Mr. Lee asked at page 160, lines 12 through 22.
"Would a typical user, in your opinion, come away from the language thinking that the hospital is a poor performer at hand washing or just that they didn't respond to the survey.
Answer: I think that there is different things they can think depending on the person, and again, following the gold standard of actually doing, the user experience testing and finding out from people first hand is honestly what I think should have been done for trying to settle questions like this."
Thank you, Your Honor.
THE COURT: All right.
MR. CRAIN: Your Honor, I just object to that counter

as beyond the scope.

THE COURT: All right, overruled.

MR. CRAIN: And the community hospitals rest rebuttal.

THE COURT: Okay. So 9:00 o'clock tomorrow we will have closings. How long do you want each side?

MR. CRAIN: I think we would prefer around 60 minutes.

THE COURT: How many?

MR. CRAIN: Sixty.

THE COURT: I will give you both the same amount, so if they want 60, you can have 60 unless you want more.

MS. BLAIR: No, I don't want more. Sixty is fine.

THE COURT: All right. Sixty a side, and I guess you have the burden, so you get rebuttal out of that 60.

MR. CRAIN: Thank you, Your Honor.

THE COURT: Okay, see you in the morning, have a good night.

MR. CRAIN: Thank you, Your Honor.

* * *

I certify that the foregoing is a correct transcript from the record of proceedings in the above matter.

Date: January 28, 2026

TRIAL TRANSCRIPT

VOLUME 5

UNITED STATES DISTRICT COURT
SOUTHERN DISTRICT OF FLORIDA
WEST PALM BEACH DIVISION

CASE NO. 25-CV-80526-MIDDLEBROOKS

GOOD SAMARITAN MEDICAL CENTER, INC. et al,

Plaintiffs,

vs.

THE LEAPFROG GROUP,

Defendant.

West Palm Beach, FL
January 23, 2026

BENCH TRIAL PROCEEDINGS
BEFORE THE HONORABLE DONALD M. MIDDLEBROOKS
UNITED STATES DISTRICT JUDGE

APPEARANCES:

FOR THE PLAINTIFFS:

MARY BETH MALONEY, ESQ.
KEVIN SIMMONS, ESQ.
SYDNEY A. SCOTT, ESQ.
LEE R. CRAIN, ESQ.
SCOTT K. HVIDT, ESQ.
Gibson, Dunn & Crutcher LLP
1700 M Street NW
Washington, DC 20036

FOR THE DEFENDANT:	**KIMBERLY E. BLAIR, ESQ.** **COURTNEY WOOD, ESQ.** **JURA ZIBAS, ESQ.** **MAXWELL BILLEK, ESQ.** **Wilson Elser Moskowitz Edelman & Dicker LLP** **161 N Clark Street** Suite 4500 **Chicago, IL 60601** 312-704-0550
Official Court Reporter:	**Pauline A. Stipes** West Palm Beach/Ft. Pierce, FL HON. DONALD M. MIDDLEBROOKS 561-803-3434

THE COURT: Good morning, please be seated.

Okay, we are ready for closing arguments. I hope you are okay. Did things work out for you?

MS. MALONEY: I am here and looking forward to presenting and things will be well.

THE COURT: Okay. Don't try to be too heroic, you have excellent colleagues.

MS. MALONEY: And I have the excellent care from one of the five hospitals covering me. All right, your Honor.

Your Honor, first, thank you so much for taking the time and for your court staff for taking the time to really listen and hear all of the evidence and the testimony that we've offered over the past five days.

You know this case isn't about whether Leapfrog's mission is right or wrong. It is really not about whether transparency is good in theory either. It is about whether hospitals -- it is not about whether hospitals should be evaluated. It is about Leapfrog lying to consumers when it tells them it grades honestly and measures hospital safety honestly.

Leapfrog's mission does not excuse fabricating a method. It does not excuse inventing failing scores and it doesn't give Leapfrog the right to tell patients they are twice as likely to die based on made up numbers.

FDUTPA exists to protect consumers from exactly this

kind of deception and unfair conduct.

Leapfrog wants the Court to see his case as a disagreement about methodology, opinion, or disclosure, but the evidence has shown something else. Leapfrog assigns the most severe safety grades in the marketplace without data and it presents the grades as earned safety performance and it mandates grading even when hospitals do not participate.

This case is about Leapfrog telling the public it is doing one thing while it does something entirely different, misrepresenting what its grades actually reflect, and in doing so causing real ongoing harm.

Once those grades are disseminated to the market, to patients, physicians, employers, insurers, and hospitals that requires immediate and tailored injunctive relief.

Before turning to the evidence of what Leapfrog actually does, it is critical to understand the overall message Leapfrog conveys to consumers about what its safety grades mean. Leapfrog does not present its safety grades as tentative, conditional or incomplete. It presents them as reliable indicators of hospital safety, and in doing so -- and in doing so, it identifies three specific guarantees that frame how consumers understand and rely on the grades.

First, Leapfrog leads consumers to believe that its safety grades are supported by data, and that hospitals lacking sufficient data are not graded.

Second, Leapfrog leads consumers to believe that its safety grades reflect actual hospital safety performance, not whether a hospital completed the Leapfrog survey.

Third, Leapfrog leads consumers to believe that the methodology underlying the safety grades is expert approved, peer reviewed, data driven, and objective. Consumers see each of these guarantees clearly, repeatedly, and unambiguously on Leapfrog's consumer web pages, but each of these guarantees is made up.

Now, let's start with Leapfrog's first false guarantee, and that is that its safety grades are supported by data and that hospitals lacking sufficient data are not graded.

Now, Leapfrog conveys that message in multiple ways, reinforcing it on its consumer facing web page. The message is unmistakable, if a grade appears Leapfrog must have enough data to support it. That is a message critical to cultivating trust in Leapfrog's safety grades. On its quote about the grade page, which is on your screen, Leapfrog tells patients exactly why they should trust the safety grades, that they are using hospital survey responses, CMS data, and information from other supplemental data sources.

Leapfrog goes even further on that same page in its claims about the data it uses for its safety grades. It also tells the public that hospitals missing more than six process measures, well, they are not graded at all. It echoes this

message in its so-called expert guiding principles, which states that no grade should be issued if a hospital is missing data for a large number of performance measures.

Together Leapfrog tells consumers that nonparticipating hospital safety grades are steeped in actual performance data, and that if data is missing hospitals will not be graded.

Leapfrog doesn't stop at telling patients that the safety grades are supported by data. It also affirmatively assures the public the grades measure real world hospital performance and a D or F for a non-participating hospital reflects how safely a hospital actually operates, not whether a hospital completed the Leapfrog survey from which it derives the grade.

Leapfrog states on its consumer facing website in no uncertain terms, this is in the frequently asked question section, that the safety grade, quote, "reflects how well a hospital does on safety, not whether they complete the Leapfrog hospital survey." That statement leaves no room for ambiguity. It tells consumers that the safety grade measures actual safety performance, not survey participation.

Leapfrog repeats the same representation on the easily accessible about the grade page that we see on number one, stating that the safety grade is a single letter grade that represents the hospital's overall performance in

keeping patients safe from preventable harm and medical errors. Again Leapfrog tells patients that the grade reflects real world safety outcomes, how well a hospital protects patients from harm.

Leapfrog takes the data narrative one step further by explicitly equating the community hospitals with the worst hospitals, that is right there, that worst hospital score being 15.

On the safety grade page Leapfrog shows the community hospitals with a hand washing score of 15, the same score Leapfrog identifies as the worst hospital score, and then they contrast that with a score of what the best hospitals do, signaling that there is data showing that the community hospitals fail at basic safety practice, and in fact perform at the very bottom of the safety spectrum.

Now, we heard testimony from Dr. Nicholson that that worst hospital score, the only hospitals that received that 5, 15, 15, 25, are non-participating hospitals, those that do not fill in the survey.

We also saw evidence from prior safety grades from 2021 of these same hospitals that just three years before the methodology was changed they were in fact receiving the best hospital score.

As Michael Vredenburgh testified yesterday in our rebuttal case, consumers would likely think the hospitals do

the opposite of what is best, of what best hospitals do because it is a, quote worst hospital.

Leapfrog reinforces the same data driven narrative through gas gauge graphics. For measures labeled declined to report Leapfrog displays a large question mark accurately signaling the absence of data, but for the four imputed measures Leapfrog displays red gauges and labels the hospital, quote, worse than average on those measures. That is that limited achievement, 5, 15, 15, 25.

That visual contrast communicates to patients that data exists for the imputed measures, performance has been measured, it is red instead of yellow or green, and the hospital performed in the bottom metric. It is one of the worst.

You heard both Dr. Berger and Mr. Vredenburgh testify that reasonable consumers viewing these graphics would understand them to reflect actual measure performance, not missing data or false assumptions.

As a brief aside, cites of the trial transcript, because we have up here characterizations of what Dr. Berger and Mr. Vredenburgh said -- well, Mr. Vredenburgh, that is his actual testimony, we have quotes around it.

We have what we believe is exactly what Dr. Berger said, but we do not have exact transcript cites available as I would like to provide to your Honor in closing, however, you

should expect that every reference I make in this presentation will have a citation in our revised findings of fact and conclusions of law, and we will, of course, also include the JX numbers. The JX, PX numbers are all included on these slides which we will hand up at the end.

To drive home the veneer of scientific legitimacy Leapfrog tells consumers it is their guarantee that the methodology was both peer reviewed and approved by Leapfrog's expert panel.

Those representations were designed to reassure customers that the grades were trustworthy, reliable, validated, and on its consumer facing page, that is the FAQ page again, frequently asked questions that consumers may have, Leapfrog tells them expressly and unambiguously that the safety grade methodology has been peer reviewed and calculated, calculated by top patient safety experts under the guidance of a national expert panel.

In other words, Leapfrog conveys to consumers that the safety grades are grounded in data, reflect real world performance and vetted by experts. Those representations were designed to confer scientific legitimacy and invite consumers to trust. They are false.

That doesn't stop Leapfrog from broadcasting nonparticipating hospitals' D and F grades far and wide. To the contrary, Leapfrog, as we saw, deliberately

amplifies these safety grades, pushing them to consumers, employers, and communities before any explanation that might be available on the website can catch up with them.

You heard millions of consumers visit Leapfrog's website each year. They designed the safety grade so that the first and often the only thing the customer sees -- the consumer sees is a single letter grade reinforced by red gas gauges, and Leapfrog tells consumers to rely on that grade when deciding where to receive care. The website is only the starting point.

You heard Ms. Karen Jupiter, Leapfrog's vice president of development, testify and you saw documentary evidence confirming that Leap Frog actively promotes its grades through media outreach, paid advertising, and digital campaigns.

Ms. Jupiter made clear that this dissemination was targeted, it was not generic. Florida, right here, was the focal point of the rollout for the fall 2024 grades. That is long before the five community hospitals filed this lawsuit.

Lauren Bailey similarly testified that Leapfrog used paid Google advertising tied directly to hospital names so that when someone searched for one of the Plaintiff hospitals, what Leapfrog paid to put in front of them was the grade itself, a D or an F without explanation and without context.

That was the screen that Dr. Berger showed you and when you first do the Google search and what first pops up is a

link to the Leapfrog grade and you click on it and it shows the grade for our hospitals surrounded by better grades for other hospitals.

Even after this lawsuit was filed Leapfrog did not pause, it didn't add context, they continued and intensified, essentially doing what everybody was afraid of who buckled under the fear of the new methodology and decided to participate rather than fight. Those targeted Google ads ensured that the grade appeared first. In other words, the express goal was to use the grade to harass the community hospitals.

Indeed, you heard Karen Van Caulil, she was by video, and she is a Leapfrog board member. She testified also that the board didn't review this methodology, but in this context she explained that through the Florida Alliance for Health Care Value, Leapfrog's regional leader in Florida and the group for which Ms. Caulil is CEO, the grades were circulated directly to employers who she admitted in her testimony were consumers, entities that purchased health care and influenced patient choice, again, without methodology or explanation.

Let's go back to the consumer on the website, the one Dr. Berger testified to, and see how the grades spread in practice. Although the grades are initially pushed on Leapfrog's website once released they then travel on their own. They are picked up by local news, radio, TV, you heard Ms.

Montgomery discuss that, online and spread on social media, including platforms -- that's the radio -- including platforms like TikTok where what goes viral is not a footnote, not a methodology, it is the grade alone, the D and the F, and it is the representation that the five hospitals before you are the worst in Florida.

Leapfrog knows this, the system is built around it, the dissemination strategy depends on it. This wasn't passive publication, it was deliberate amplification, and Leapfrog didn't whisper the grades by just putting them on the website, it broadcast them in a targeted manner through its website, through paid ads, through a Florida specific media campaign and ultimately viral media knowing exactly what the public would see and act on.

That is why the consequences were unavoidable. That amplification matters because it ensured that the representations that Leapfrog made are the representations that consumers have ultimately acted upon and that is what we are seeing the hospitals testifying about.

You heard from the hospitals' expert, Dr. Sean Nicholson, consumers do rely on these grades. Indeed, these grades materially influence where consumers seek care. Consumers rely on letter grades as a proxy for safety.

This should come as no surprise. After all, Leapfrog itself tells consumers explicitly and unambiguously that they

should always rely on the safety grade, their website, when making health care decisions. You heard Leah Binder testify that millions of people, consumers have used Leapfrog's grade to make these critical medical choices.

Leapfrog in its annual report even tells the story of Carl Flatly, a patient who urgently needed a hospital, but drove 400 extra miles based solely on the false safety grade. Leapfrog is proud of this, they are proud that patients are wasting precious minutes avoiding hospitals that they claim are less safe. They tout it on their website, but this reliance is entirely undeserved and more important, it is deeply harmful to the patients Leapfrog claims it wants to protect.

The reality is that Leapfrog's representations to the public above the D and F grades that travel far and wide across airwaves and the internet rests on pseudoscience, unfounded assumptions, and arbitrary penalties.

In fall 2004 Leapfrog made a conscious, and as Leapfrog's own employees acknowledged at the time, a drastic decision.

It decided that if a hospital didn't complete its hundreds of pages of so-called voluntary survey responses Leapfrog would assign the lowest possible scores on four measures. That is the 5, 15, 15 and 25. This assignment involved no estimation, no inference, no clinical basis, no calculation.

In fact, as Ms. Danforth admitted on the stand, it was a choice, not a calculation, contrary to what their website says.

THE COURT: Well, they explain that in terms of the non-response bias. What is your response to that? Doesn't that justify the grading scores that they impute?

MS. MALONEY: No, sir, it does not and the reason it doesn't justify it is because the non-response bias is based on an assumption that has -- the non-response bias that Leapfrog assumes is that the hospitals are not participating because they are hiding something. That is what you heard from Dr. Romano in response to a question on cross-examination, and then Ms. Danforth doubled down on that and said, yes, we think they are hiding something and that is part of the imputation.

We also had Dr. Harris say the same thing, that he thought hospitals that didn't fill in the survey were hiding something.

There is no scientific basis for that. There is no data to support that. In fact, to the contrary, the most recent data Leapfrog has for the hospitals is that they did satisfy to the highest levels, at hundreds the four measures.

This is why all of the admissions about have you ever visited these hospitals, have you ever spoken to anyone at these hospitals, essentially what is the basis for you thinking that everybody is washing their hands, has a policy in place,

is doing audits, has sinks in every room, what is your basis for believing that in 2021, and three years later giving us a grade that suggests that people are washing maybe one hand every Tuesday.

There is zero basis for the non-response bias. It is a scientific theory, but here there is no basis for it.

The second piece of why the non-response bias doesn't apply is that the non-response bias assumes, and you are the one who pointed this out, assumes that kid who missed the test didn't miss it because something happened to him, or because, say, he didn't enroll in the class. It assumes there is some sort of, I don't know, evil reason for not filling it in.

You heard testimony from every single CEO, it started with Gina West, Gina West, who is the quality officer for the entire network. She explained to you that it requires -- I have this, all the specifics of this in a slide, but it requires hundreds of hours of staff time. She identified all the different types of personnel, including physicians, nurses, technical staff and then contract staff to fill in that survey.

Choices have to be made at hospitals. You heard that testimony from the CEOs, where they have focused their attention is on accreditation. You heard from Ms. Zambrana the same thing essentially. She said that they focus on accreditation. She said that there was -- one of the accreditations was the heart accreditation she mentioned which

also our CEOs mentioned because those are measurable, those are known with audits whether or not they actually do the work, and in that way they convey much more strongly and accurately that patients are being cared for in a safe manner.

So that is my view on the non-response bias, it is baseless and debunked by the sworn testimony.

THE COURT: Of course, the grades weren't great before they changed their methodology. Weren't they Cs or Ds before they moved to the Fs based on the non-response, and the decision by Tenet to quit participating.

Wouldn't you agree there is at least some value or virtue or -- I guess, non-response bias is a real thing. I don't know if you can measure it, but it is a real thing.

MS. MALONEY: Your Honor, I am not disputing the fact of the existence of a theory in epidemiology and other science -- social sciences as well of non-response bias. I do not dispute that it exists.

What I dispute is that there is any basis for claiming that the reason for not participating in this case is because of fear of somehow exposing that they aren't safe.

In fact, I think your comment that these hospitals, they weren't performing very well before the Leapfrog safety methodology changed goes to that very point. It's not like the hospitals didn't know that they need to improve in many areas related to patient satisfaction, but you heard testimony that

those HCAP scores that are heavily weighted by the Leapfrog methodology within the 22 measures, those rely on surveys. They are admissions by their own witnesses that they rely on surveys, and you heard testimony about the difficulty in trying to get the surveys filled out.

In fact, the difficulty of getting the surveys filled out is an example of non-response bias, but there is an explanation of that as well. It is not because people are afraid to fill out the survey about what happened in the hospital to them. They simply do not speak the same language or they are unable to fill it out because they didn't get access to it, because it has to be mailed and has to be a piece of paper that they physically fill in, or because they just don't want to relive the experience of being in the hospital at their most vulnerable time.

Look, yes, many of them were Cs before the change in methodology. Yes, one of them was a D at the time of the change in methodology and now has moved into the F grade.

Our point is that the change in the methodology, which is what UC Davis pointed out and is the reason why they had to buckle under the pressure and decided to fill out the survey after the change, the point is when you are at a C, doing okay as far as patients are concerned because they know that is the best NICU unit, it is the best NICU unit, and it may be in a building that is old so it is loud. It is the best trauma unit

and it may have helicopters arriving on the roof that makes the building shake a bit, and the C may reflect the fact that the windows haven't all been replaced.

It is not the most wonderful patient experience when you fill out a survey, but it saves babies, it saves mother. They may get a C on Leapfrog's survey previously, but they sure don't deserve a D or an F that, as Dr. Berger explained, signals to patients do not go there.

As they tell patients, you go to the failing hospital you are twice as likely to die. Mr. Cazares said you go to my hospital, our data shows you are twice as likely to live if you are a heart patient because of our specialty there.

Part of the problem with the non-response bias is not just that it is baseless in terms of the data, and ignores the sworn testimony of our witnesses and the documentary evidence of the real reasons why they stopped participating, part of the problem with the non-response bias, as suggested by them, is that it ignores the fact that these hospitals are actually exceptional in certain unique areas that this community needs.

That is why you had all the transfers from Jupiter. You know, Jupiter doesn't have a surgery clinic for a detached retina; one of these hospitals that got an F does.

Jupiter seems like it is an A, yes, I had a great experience there, but when I go there they can't help me, so I get sent back.

We heard testimony from St. Mary's that she has seen I believe over 500 transfers back from Jupiter, transfers from Jupiter to her hospital that she has never seen at this level. This shows non-response bias. It has nothing to do with whether the hospitals are actually safe and actually good for patients in Florida.

THE COURT: Of course, that argument is an attack on their entire grading system, not particularly their change in 2024, isn't it?

MS. MALONEY: Not just their change in 2024. Look, I think this is something we've talked about a lot as a -- my clients and I have talked about a lot.

They didn't like the grading system before, they didn't think it was fair before. Okay. They didn't think this mean cohort that they had before fall 2024 was fair. They didn't think it was fair to be graded when they didn't submit a survey. That is fundamental no matter what the methodology is.

Once that methodology changed and it became based in, as we have learned and as has been explained so much, a belief the hospitals are intentionally hiding something, and that is their justification to go to 5, 15, 15, 25, once that happened -- and you saw the UC Davis folks say this and in Dr. Nicholson's report, if you are a C hospital there is no way you are getting out of the gutter.

You are going to be a D or an F unless you blow it out

of the park on the patient CMS service reports. They can blow it out of the park on saving lives or infections, but if they don't blow it out of the park on those five or six metrics -- it was in that slide you saw from Dr. Harris, his affirmative slide where he showed all the boxes and explained it is HCAP patient experience. If you can't get those up, and those have nothing to do with whether someone's bone fracture is fixed or whether their life is saved, if you can't get those up, you are not going to get above a C. Okay.

So, we are stuck here because we are focused what is not our hospital's primary focus. Our hospital's primary focus, they are trying, but the primary focus is keeping that ER -- expanding that ER because there is so much demand, we heard tat from Mr. Hanlon, maintaining first in class treatments at St. Mary's, at Good Samaritan with NICU units, the trauma units.

That is where the focus is, and they shouldn't be penalized for focusing on the life saving measures where there is no evidence that, you know, the soft -- I will call them soft, I know they are important, I spent enough time in hospital this year.

I know it is important, but I also know there are certain hospitals in New York City where you never go to sleep at night not because the nurse is bothering you, but you can hear the sirens constantly. That is a patient experience

issue. They are also the best hospitals that is why you heard Mt. Sinai making the comment this is a penalty, this is wrong, and they asked to opt out. You heard Leapfrog say absolutely not. You heard Ms. Danforth and Dr. Austin say they can't let anybody opt out.

So, your Honor, to make sure I have answered your question, yes, I do think there is a fundamental problem personally, and I think our clients do, too, with grading hospitals when they submit no information to them. I think it is fundamentally unfair. The analogy you raised about students applies to the prior methodology and the current methodology.

There is an added element to the current methodology, and all the testimony showed it. It comes from a place of believing the hospitals without any data, without any analysis, without any firsthand knowledge, believing the hospitals are hiding something, that they are bad. It is also a penalty to drive participation.

The penalty wasn't high enough when they were getting the C, when they were being graded, they or anybody else, being graded under the old technology, so they had to drive up the penalty because they knew, they were gambling, most hospitals are not going to fight, they don't have enough resources. The whole network had to come together.

I take issue with the fact that this is Tenet Corporation. This is the five hospitals who have combined

their resources in order to bring this lawsuit.

Yes, it has cost a lot of money because it costs a lot of money to fight this and to win this, and most hospitals said not worth it, just going to participate because the penalty is just too high if we don't.

For hospitals that are on the edge because of those patient experience scores, those are the hospitals that fall in the gutter under the new methodology.

Your Honor, I am not asking for injunctive relief beyond the five hospitals. If you want to discuss injunctive relief and the scope of it, I am happy to do that.

THE COURT: I want to do that at some point. I want to know what you want in terms of relief.

Far from it being a lot of work, which was some of the testimony, I can see why someone locked into a C grade might think this isn't worth it, why participate. I was a little surprised by the Jackson lady. I think Jackson, although it is a great hospital, probably can't get out of the C based on the patient satisfaction scores, that was my guess, but they are still in it and participating.

I can see why you would make a business decision, but on the other hand, from their side Dr. Romano talks about a business decision, if they can't keep up participation the value of whatever they are doing which they believe in suffers.

So, if they explain the penalty, do you think that

would pass muster with the Florida Unfair and Deceptive Trade Practice Act?

MS. MALONEY: If they explain it to who, the hospitals --

THE COURT: On their website. If they put question marks on all these gauges -- they claim that the hospitals would get a D or F anyway based on other CMS measures. So, if they explained what they are doing, would that suffice?

MS. MALONEY: If they explained what they were doing in terms of we are penalizing hospitals and giving them a worse score because they didn't participate, would that be sufficient to solve their deceptive and unfair --

THE COURT: That is my question.

MS. MALONEY: No, because they give an F, and the F and the D are the label. They give a grade. You had Dr. Austin, I believe, giving testimony that it is a lot like the restaurant grades where it is very clear to consumers and they want that, that it is a signal, it is a clear signal. There is language in the website where they say you can rely on the single letter grade. Okay.

Your question, respectfully, your Honor, assumes that the consumer looks beyond the grade and at all the explanation on the website.

I think Dr. Berger very clearly showed that that explanation is too buried, it is not clear. There are

admissions by doctor -- excuse me, by Ms. -- by Ms. Leah Binder herself that the methodology, which is what you are talking about, the methodology is a penalty, that the methodology isn't intended for the lay reader, and it is hard to understand.

Your Honor, respectfully, I don't think they have put on any evidence to show how they could fix this with some sort of disclosures; and, two, I think the evidence we have provided through Dr. Berger, through Dr. Vredenburgh's admissions, through Dr. Harris' admissions, that those show there is an intentionality to what they have done that obscures the truth to consumers.

And we have admissions from the fact witnesses on their side that the methodology was driven by this false belief.

I don't see how you can order them to do something that is going to kind of expose their real motive and purpose when that is their purpose, and so their purpose -- they want the to drive participation and however they do that, however they think is best to do that, that is what they will do irrespective of the message it sends to consumers, and the message it sends to consumers now is single letter, an F or D.

For our hospitals, our hospitals, yes, they are Cs otherwise, but our hospitals, the way this has affected them, it has driven them down to an F or D.

Does that answer your question?

THE COURT: In part. I have two questions.

MS. MALONEY: Okay.

THE COURT: Let me start with the factual one first. They suggested, at least their experts did and some of their witnesses, that even if you took out the safety scores the hospitals would still get a D or F. Presumably, if that is the case, and I don't fully understand the weighting, the 30 percent versus the 26 percent.

MS. MALONEY: 24 percent versus 31 percent.

THE COURT: If that were the case perhaps they could remove these safety measures that they are imputing values to and come to the same conclusion. Would you have a problem if they did that?

MS. MALONEY: Yes, Your Honor, we would have a problem if they did that. What the safety grade tells consumers is that every hospital that gets a safety grade is essentially graded on the same metric, the same methodology. If you just do an NA for the seven measures -- so there are the three measures they do give us an NA for and you are proposing another four NAs for the four measures; is that right.

THE COURT: That is what one of their experts did, I think.

MS. MALONEY: That is what Mr. Rule did in his opinion, too.

First of all, I want to answer your point about they

said they would be Ds and Fs anyway. The first thing is they did say that, but I don't think they put on evidence of that.

The second is, being Ds and Fs anyway under a different methodology than how you are grading the participating hospitals is simply unacceptable.

Now, the reason is different and we have these admissions as well. They keep saying these are just CMS scores, these are just what we get from CMS scores, and they are the same for participating and nonparticipating hospitals. That has been debunked. Remember, they realized that they could become -- they could have access to the data that goes into CMS just like CMS does, and this came out through Ms. Danforth, just like CMS does if the hospitals signed over their right to essentially the data they are giving.

It starts with an H, I don't remember, and I know a bunch of you behind me are really annoyed that I can remember it. The data flows into CMS, and when you are doing the survey and signing over your data, part of what you are doing is you are saying, Leapfrog, you can access the data at the same time I am giving it to CMS.

We heard from Ms. Havericak as well as Ms. McCauley that there is an 18 to 24 month lag on the CMS data, so Leapfrog has the benefit of getting that information much more quickly. I believe Ms. Danforth said it is only a three month lag, but the record is disputed on that.

I think we can show you in our briefing that what they are actually receiving is much more timely, and you heard that testimony from the CEOs. Even if what they are reporting as their CMS scores, and I believe it was Mr. Hanlon and Mr. Cazares -- again, I appreciate the colloquy here, but because of it I don't have them in front of me, we will give them in briefing. I have the answers, I don't have the specific cite.

They explain that what appears on the website for them is lagging CMS scores and those scores have actually improved, and that is not reflected on Leapfrog's website.

It is, however, reflected, if not perfectly, pretty -- a lot better and a lot more current data for those who participate and sign over the rights to access data as it is going to CMS.

THE COURT: The Jackson lady talked about the lag. I thought she still pointed to the CMS lag.

MS. MALONEY: She did.

THE COURT: So wouldn't Jackson then be scored the same as these hospitals if you just looked at the CMS data?

MS. MALONEY: She pointed to the CMS lag, and there is a lag, and that I think is the lag of 18 to 24 months, and then there is still -- the lag is essentially -- it is not an 18 to 24 month lag for what Leapfrog reports, and there is still some lag, but it is certainly more current and that is part of what Ms. Danforth's testimony was.

THE COURT: I don't want to bog you down on that.

What is it that you think you need? You want an injunction against them grading you at all if you don't participate? Is that the request?

MS. MALONEY: Could we go to the slide where we have the injunctive relief.

We put it on a slide. The relief we are seeking is narrow. I know it looks long based on this, but this is the language that we think works and, your Honor, let me take a moment here.

I think at the end of this it would be really helpful for us to agree on a briefing schedule for the revised proposed findings of fact and conclusions of law and as part of that agree that both sides should have some specific briefing on the scope of relief. Would that be acceptable to your Honor?

THE COURT: It might be, and we will talk about it. I still want to get an understanding -- that is why we are having closings today, I want an understanding of what you want. It looks like you don't think they should be able to grade you at all.

MS. MALONEY: Yes, we want a declaration that grading the hospitals based on fabricated data violates the statute, an injunction preventing them from grading these hospitals without data, removal of the false grades already published, and a corrective disclosure regarding their deceptive and unfair

practices targeting the community hospitals.

Now, let's turn to the next slide -- wait, before you turn to that. Leapfrog -- let's give time for the Court to review that. Their old rule says hospitals missing this much data shouldn't be graded, so you put that NA on there. Their own rule says you shouldn't grade it because six out of seven are out of the picture, and they tell consumers those will not be graded. Mr. Takagaki got that admission from Mr. Rule, but he didn't need it. It is on their website.

Holding Leapfrog to its own standards would not be extraordinary relief. It is appropriate and the public interest is unmistakable. Patients deserve truthful safety information, not manufactured fear, and the injunction isn't difficult to implement.

So Leapfrog already knows how to handle hospitals that have so-called missing data. There are two straightforward options.

The first is Leapfrog can simply not grade the hospitals at all, remove them from the safety grade system entirely, exactly as its own rules contemplate when data is missing. Now let's go to the next slide.

Second, if your Honor believes Leapfrog should be allowed to keep the hospitals listed on its safety grade website, then it should be ordered to replace the letter grade with a clear NG, no grade, across the board. When you click on

prior it should also say NG, not graded, for the current grade, for all the prior grades, and have a corrected disclosure explaining the Court's findings for the basis for the NG.

This is a mockup right here. I didn't invent this, all I did is change the name of the hospital and address. This is a mockup of the same screen that you saw for Ascension when Mr. Hvidt was examining Mr. Harris, and Mr. Harris had the five hospital examples and it turned out two of them had not been graded recently, and this is what appears on the website for Ascension.

So, either approach stops the deception, corrects the record, and avoids grading hospitals without data. That is a pretty narrow practical solution and we think it is entirely consistent with Leapfrog's existing framework.

THE COURT: All right. Before I use up all your time let me ask you about harm and what the statute requires, whether there is a difference under the two prongs unfair and deceptive, and what is -- I guess what you have to show and what have you shown, is my question.

MS. MALONEY: Okay. Would it be okay if we go to that section of the presentation?

THE COURT: Sure.

MS. MALONEY: I appreciate that. That is section 7 on page 28 of what you have. Great. Yes, okay.

You heard from every hospital and they explained the

real world consequences. So, every release of the safety grade, that's fall 2024, spring 2025, fall 2025, and soon spring 2026, as the grades go down, whether they went from C to D or D to F, patient -- and then there was promotion of those grades, amplification of the F, of the D, you heard patients canceled care, they went elsewhere, they left against medical advice, they bypassed the facilities only to be transferred back.

Physicians affiliated elsewhere, or simply never wanted to work with our hospitals in the first place. Health care workers, doctors, nurses, administrative staff, they spent and continue to spend hours reassuring anxious patients frightened by the safety grade and that is when they need care most.

And insurers, and that is the Humana letters who stand for the patients they cover, they raised concerns about the safety and quality of our hospitals, not when we were Cs, and not even for Delray when it was a D, but after this change in methodology and the amplification of the scores and the other hospitals hit a D, that is when they sent the letters. That is when they showed their trust in the hospitals had been eroded.

So, that, I think, is clear deception, the reasonable consumer -- you heard from Gina West about that, losing patients and having -- she said, that is Gina West, we started losing patients because of that, we were having physicians

state that they didn't want to come to our hospitals.

You heard from Heather Havericak of Delray that there was confusion and shaken confidence. She explained that the grades have been impacting our reputation and she does not have a way to correct it on her own. She described a patient who told her she had to do something about the grade. Another patient was afraid they would die at Delray based solely on what she saw on social media about the grade. I am afraid I am going to die at your hospital.

You heard from Erik Cazares, that was Palm Beach, and he described how delayed care can lead to directly to bad outcomes. Actually it was Ms. Havericak who talked about time being brain, the delay in care affecting your brain when you have a stroke. That is part of the reason why heart health is so important and the accreditation there.

Mr. Cazares, he explained that the grade -- concerns came from everybody, families, physicians, patients, staff, community members, and he described that it was quite evident that walk-ins had declined and he didn't believe there was any explanation other than Leapfrog's grades. He, like other CEOs, explained that one of their primary jobs was to understand admission rates, and that walk-ins specifically in the ER declined at levels they had never seen before.

I have a slide on that, but I am trying to work around it because I want to get to what you have said, at least in

your summary judgment decision, and I believe we have -- I am hopeful that we have expanded your thinking on what a consumer is beyond just a patient. It is the hospitals, the insurers, the employers who act as proxies for the patient. All of them, to the extent they are deceived by this grade, are protected under the statute.

You, your Honor, you told us, at least this is what we took from it, that you thought the unfairness prong required more specificity with respect to -- with respect to an injury, an injury to individualized patients.

That is what we took from it that may have -- our reading of it may have gone too far, but I think you made a distinction between the reasonable consumer under the deception prong and the injury under the fairness prong.

So, you heard about individualized patients, you saw business records about the gentleman who had the AMA, leaving against medical advice with a bone fracture, a compound fracture that there was concern would result in infection if he left, and he left anyway, and in the notes about why he left it is a reference to Leapfrog.

Now, it is a reference to Leapfrog's grade. Whether that is the grade on the website or the grade through amplification, it is a reference to Leapfrog's grade. And you heard from others who specifically identified individual patients.

Now, I worked very hard to explain to the Court and I hope I was successful because, your Honor, it's my view -- it's my view that these patients -- these individual stories, they are not anecdotal as they have been dismissed by Defendants.

Under the statute there is no safe harbor for deception simply because harm occurs to one patient at a time. If a single patient delays care, refuses treatment, or leaves against medical advice because of a deceptive safety grade, that is one too many, especially for an organization, Leapfrog, that holds itself out as a not for profit with a mission devoted to protecting patients and saving lives.

It is our view, and I believe it is the case law's view, that the law does not tolerate a system that accepts foreseeable patient harm as collateral damage. I believe we have successfully shown that Leapfrog knows, it knows that promoting these grades and assigning these grades, it wants patients to rely on them. It is foreseeable they will rely on them.

We have shown that there is generalized evidence in the form of the change in admission rates with the walk-ins, and in the form of physicians leaving to go to another physician group, an eight million dollar contract.

THE COURT: That is the most dramatic evidence that you have, but it is also problematic in terms of the rules of evidence.

I am hard pressed to see how the HSS thing can be state of mind. It would seem you have to rely on the truth of the matter asserted in terms of the Good Sam CEO saying I was told it was because of the Leapfrog -- it came from New York, it was from Leapfrog, as I understand it. It is hard to put reliability into that just as a general rule in terms of hearsay.

You have shown that that decision was made, although apparently the cancellation came in March. That would have been before the scores, the final result was October.

MS. MALONEY: No, it came in March, I apologize, it came in March 2025. The scores had come out --

THE COURT: I was mistaken then about the dates.

So you have the event happening, but how do you tie that to causation?

MS. MALONEY: You have the notification in March 2025. She testifies about it at her deposition, and she does not say because it has not been absolutely final at that point, and her testimony in her deposition is that this is essentially in the works and, you know, they were fighting it, which is why it wasn't final, trying to convince --

THE COURT: My point is more what is the causation aspect of it. Can I consider her belief or her statement that she was told it came from New York? I am not sure she said it was the grades.

MS. MALONEY: She said that she spoke to the physician representative who said that he did not want to leave her hospital to go to Jupiter. Remember, they had not -- to go to HSS, which is a joint -- he has to get privileges at Jupiter to be part of HSS, and he did not want to do that, but he was directed to do so because in part of the Leapfrog grades.

THE COURT: If I were to accept that, why isn't that an out-of-court statement admitted for the truth? I don't see how state of mind could apply to that entire entity and their decision to leave.

I suspect there are a lot of factors that went into that, and you didn't call anyone from HSS to say, yep, we are leaving because of the Leapfrog grade. It might have been tough to get that evidence, but the -- I guess the question is, you think that fits under state of mind, and if you are going to file something -- I am not going to try to put you on the spot on this here because you both wanted to talk more about that, but before I consider that as a causation you need to have some more case law because I am not -- my inclination is I can't do that.

MS. MALONEY: So the standard that you're setting for us, your Honor, is that I've got to show --

THE COURT: I am not setting it, the hearsay rules set it.

MS. MALONEY: Separate from the hearsay rule, if we

accept the fact that they left, that there was an eight million dollar contract that ended, if we accept the timing of the end of that contract which happened -- formally occurred at the end of 2025, after you have two rounds of -- I believe those were Fs, might have been a D and an F. I will make sure the record is accurate in our filing.

And you have the amplification of those scores throughout 2025 in response to this litigation, if you accept all of that, and you accept that these physicians had been at that hospital and did not have privileges, did not have privileges at the other hospital, which I think you could accept as fact from her testimony as the CEO of the hospital, if you accept that, you accept the timing of it, you accept the fact of the grades and that from their own admissions, from their own admissions, including Ms. Zambrana, doctors don't want to work at F grade hospitals, doctors don't want to work at D grade hospitals -- there was some wonderful testimony from Dr. Harris who acknowledged that.

If you accept those facts, and you accept that we essentially have an atmosphere that these hospitals are operating under, yes, there may very well be other causes, okay, but that does not exclude Leapfrog as a cause. In fact, all of the evidence suggests that the reputation of the hospital was being harmed, physicians are actually influenced by the grades. The Fs and Ds were being promoted. Fs and Ds

specifically influence physicians' choices, not necessarily As, but Fs and Ds. The testimony from their own witnesses was that physicians don't want to work at poorly graded hospitals.

I think you can accept those facts and others, which we will put in the brief, without even getting into the hearsay issue as there is some causal link between the Leapfrog score and the end of the contract. And I would just say I appreciate the opportunity to fully brief and give you additional case law on the hearsay issue because I don't think if you are coming at this as state of mind is not sufficient to show --

THE COURT: I think state of mind -- I think it probably gets the rest of it in, but I don't know that it does that one.

MS. MALONEY: Fair enough, your Honor.

THE COURT: If you all want to talk about that in whatever filings you make.

I took a lot of your time. If you want to summarize or get back to anything -- I have taken all of your time.

MS. MALONEY: You have taken all of my time --

THE COURT: I will probably do the same to your opponent, so don't worry about it.

MS. MALONEY: If I may have a moment with Ms. Scott to make sure that I've answered -- that we have touched on everything or if there is anything specifically that we need to address before counsel addresses the Court.

THE COURT: All right. Go ahead.

MS. MALONEY: One moment, please.

There is one thing, Your Honor. I am told that I did not sufficiently address your question about the standard that you should apply for deception and unfairness. The deception standard requires likely consumer harm and I think we have shown that.

It is very important, this Eleventh Circuit case that came out on the same day as your decision, we moved for reconsideration on that. What that tells you is that the standard of likely consumer harm also applies to the unfairness standard. We ask for reconsideration, or at least -- we do not want to be disrespectful of the Court's order by briefing that Eleventh Circuit case.

THE COURT: I am happy if you do. I think it is an important case, but as I asked your colleague, the Florida Legislature hasn't updated its last statement that I look at law previous to 2017. I asked her and she thought, and she may well be right, that the new decision relates back to the earlier -- the law and it doesn't change the law.

We got bogged down in maybe some of the Florida cases, but we also have to follow them as you know.

MS. MALONEY: Yes, absolutely.

THE COURT: I appreciate anything you have to say about that. You don't have to try to do it off the top of your

head now.

MS. MALONEY: Thank you. I think the Eleventh Circuit has codified longstanding understandings of the statute through this case, and we'll brief it as you have now let us do.

It is also -- this is an injunctive case, we are seeking injunctive relief, not damages. So for remedial purposes that does not require proof of past harm. Injunctions are about the likelihood of future harm, and that is consistent with longstanding principles of remedial case law and I just -- so when you are thinking about, okay, is there sufficient evidence to tie the causation, I think you have to look at the likelihood.

You also have to look at what is going to continue to happen given the direction these scores are going, given the fact that once you are in the gutter, it is very, very, very difficult to get out, and there is ample evidence in the record of likely harm and continuing ongoing harm, and that is -- that is not just the CEOs. That is also Dr. Berger where he explains and contextualizes what we have seen to date and helps give context to what the CEOs explained you will see in the future.

Your Honor, I really appreciate the opportunity to answer your questions, and I sincerely -- you know, I hope you will give me the opportunity to respond for a couple of minutes to rebuttal questions to the extent you have them after their

argument, and then we can discuss scheduling.

I do want to reiterate the relief we are seeking as narrow and practical. It is stop grading without data, correct the public record, and it is prevent the deception from continuing. Leapfrog already knows how to do this. Its own rules say hospitals without data should not be graded.

It is our position all patients deserve truthful safety information. If even one patient is harmed as a result of this deceptive and unfair practice, and we expect more are likely to be harmed, that is enough to justify the relief we are seeking.

Thank you so much, your Honor.

THE COURT: All right. Thank you.

MS. BLAIR: May it please the Court. This case started more than a year ago, on December 10, 2024, with this email that is in evidence, JX 40, and at this point in time these five hospitals are asking Tenet home office to enter the survey.

Ms. Gill, who is the president of PBHN, tells them, I have spoken with several members of the executive leadership team at home office. There are efforts underway to address Leapfrog's ability to score our hospitals. Hold the line.

Weeks later we get a cease and desist letter, not from the five hospitals, from Tenet Healthcare, and they tell us stop grading all 73 hospitals, all 73, or we are going to sue

you for defamation and corporate disparagement. Now they want to hold themselves out as community hospitals trying to protect South Floridians from Leapfrog.

Leapfrog's mission is clearly to protect patients against preventable harm, and when you get a cease and desist letter telling you to stop grading hospitals, which is your entire mission, your entire business, the answer to that question can only be no.

We have seen Tenet Healthcare throughout this litigation contacting UC Davis' health care about Patrick Romano's involvement in Leapfrog, contacting Matt Austin's employer about his involvement in Leapfrog. This entire case is about silencing a watchdog group from doing their job and protecting patients.

I saw for the first time a slide about the relief they want because this is what their complaint says, they want to permanently enjoin us from including Plaintiffs in the hospital safety grade. that is it. Nothing about changing our website, noting about declarations on our page. They want you to speedily declare that the way that we do our methodology is unfair and they want their attorney's fees. That is what they want.

They sent a TRO letter, told us they are going to file a temporary restraining order before we put out the spring grades in April 2025, telling us not to grade their hospitals.

Then they filed a motion for preliminary injunction in front of this Court asking you to prevent us from grading the hospitals. They withdrew it and asked for damages in the case and withdrew it. Then we had a mandatory mediation with Matthewman. That slide you saw, those were not their requests.

They are trying to silence us, and that is what this is all about, and that is how it began.

But it is interesting because all of the time and the money that we have spent in the seven months of this litigation and all of the time you have spent hearing this case, the patients of these five hospitals have been an early casualty of the evidence that you heard. Where are they?

Most importantly, neither the Plaintiffs nor Tenet home office bothered to ask a single patient or a single consumer of South Florida that they allege they care so much about.

This is a FDUTPA claim, not a defamation claim, not a corporate disparagement claim. They brought this claim as a single FDUTPA claim, that was a strategic decision they made, and they have to prove consumer harm, likely consumer harm maybe, depending if they are going down the deceptive route or the unfair route, but FDUTPA cannot be a referendum on whether hospitals like their grades.

That is what this has been about for the last five days, they don't like their grades. It is not a vehicle to

insulate Tenet Healthcare from scrutiny in the marketplace, and it is not a tool to silence simple speech of a non-profit watchdog group.

That is what they are using this FDUTPA case for.

THE COURT: FDUTPA can be used for deceptive speech.

MS. BLAIR: They can. Do you want to get to that? Do you have a question?

THE COURT: Go ahead. I guess I want to understand why you think this safety grade is not deceptive. And as I understand the history, most of the hospitals were grading pretty well, including them.

I think the number was like 85 percent on the safety, came out about an 85 point something percent, and there was a belief that two things were happening, the scores were creeping up as I understand it, and so there was concern that using the mean of the scores was unfair and was causing hospitals to drop out of the participation and relying on their mean score, and so that was a concern to Leapfrog.

Now, it seems to me that -- I can understand the concern, but there are a couple of possibilities for it. One, that hospitals were kind of, I guess, getting a very positive view of their performance on the safety measures and that is why it was creeping up. That is one view.

MS. MALONEY: No evidence of that, but yes.

THE COURT: Another view would be they are doing

better. Is that your position, they are all doing better?

MS. BLAIR: Yes. Ms. Zambrana testified that hospitals that dedicate themselves to patient safety --

THE COURT: If they are getting better there would be no need to worry about this dropping out issue because then the people that dropped out would actually be harmed. The mean would be keep going up and the people that dropped out would be harmed.

MS. BLAIR: I am not following that.

THE COURT: What is the problem with using the mean score? If everybody is doing better why worry about the hospital dropping out and still getting the benefit of the mean score?

MS. BLAIR: Here is the problem with that.

The concern that you heard from Leapfrog, and you heard from Dr. Romano, Ms. Danforth, Alex Campione, Dr. Austin, the problem with that is, if your mission is to make sure you are getting information to patients about patient safety, and you are getting information that is over inflating or telling the consumer public we know that --

THE COURT: Why is it being over inflated?

MS. BLAIR: Because we don't know that they have a perfect score.

THE COURT: I am not talking about these hospitals. I am talking about the example that your experts and your people

talked about as to why we did this. The score keeps going up, so the mean didn't allow you to differentiate in terms of safety grades, and I guess you thought that it gave some hospitals -- they were free riders, they were riding on the mean.

Isn't that the reason after all this?

MS. BLAIR: Sort of. That is the whole point of imputation.

THE COURT: So you decided to use imputation.

MS. BLAIR: We have been using imputation for years.

THE COURT: Well, this was quite a remarkable imputation, isn't it?

MS. BLAIR: I don't think so, and that is what you heard from the experts.

THE COURT: Well, I heard from them the lowest one percent of hospitals across the country were getting 185 out of the 400, right?

MS. BLAIR: The lowest -- there was no evidence --

THE COURT: Lowest one percent.

MS. BLAIR: There was no evidence presented in the record of that. That was a demonstrative that they showed Dr. Harris.

THE COURT: So you disagree with that.

MS. BLAIR: Yes.

THE COURT: What do you think the numbers are?

MS. BLAIR: I think we don't know.

THE COURT: That is why you gave them 75? These hospitals went from a score of what, 385 out of 400 to 75. You think you can justify that by saying, well, they must be hiding something?

MS. BLAIR: Everybody uses that phrase.

THE COURT: Some of your witnesses did and your expert did.

MS. BLAIR: I want to be clear what that colloquial phrase means. Nobody is saying that with a hundred percent certainty every nonparticipating hospital is hiding something.

There are two ways to do imputation. This is the science and --

THE COURT: You have to explain the science. I heard it said, but I didn't see any science behind that.

MS. BLAIR: As Dr. Harris testified, this is the science they teach in medical school. Let me finish. There is two ways to do imputation, there is the estimation and the reasoning route.

The pre fall 2024 methodology was using imputation in terms of estimation looking at cohort means. These scientists, the nine panel members, got together and not at the insistence of Leapfrog, because you asked Ms. Danforth about that -- this is not the idea that Leapfrog brought to the panel, but during that, they started saying imputation based on estimation no

longer appears to be a scientifically viable theory because we have no reason to believe that nonparticipating hospitals are performing at 400 out of 400 on these four measures. Remember these are composite scores. These measures are not significant drivers of the overall grade.

What they did is said, now let's look at imputation based on reasoning because imputation based on estimation is clearly not working.

THE COURT: You don't equate reasoning with rationality?

MS. BLAIR: I do.

THE COURT: Then where are the studies that show that is a fair way to look at non-response bias?

MS.BLAIR: Dr. Harris testified that these hospitals really are the non-response bias hospitals. They have the systems in place, they track their data, they testified to that. They knew about the methodology change in advance, they testified about that. They ran what if scenarios, Regina West testified about that. They knew what the impact would be on their scores before based on their actual data, and then they made a voluntary business choice not to participate.

Dr. Harris said to Mr. Hvidt's questioning, you just proved my non-response bias.

THE COURT: You quoted part of Dr. Romano's statement. Didn't he also say, call it blackmail, if you will, it is a

business decision same as they made?

They may have made a business decision not to participate, but to assume they made a business decision because their real scores are below the bottom of all hospitals in the country, there is no basis for that.

That comes out of -- I don't see how you can justify that.

MS. BLAIR: Dr. Romano testified when he said business decision he was not meaning some revenue related business decision.

THE COURT: It doesn't make any difference.

MS. BLAIR: It does.

THE COURT: You are trying to force participation. Whether it relates to revenue or not, you are imposing a penalty on somebody that doesn't participate to force them to participate.

MS. BLAIR: They don't have to participate.

THE COURT: Let me give you an example. Say I want to start a non-profit and call it Horn Dog or Horn Frog, so I call Jupiter Medical Center and say I am going to grade hospitals and here is my survey. If you participate we will grade you, but if you don't, we'll grade below the lowest hospital in the country. Do you think that would be a problem?

MS. BLAIR: Here is the difference: We have been talking about this test analogy for awhile and Plaintiffs say

it is unfair because I didn't even sign up for this class, I am not trying to get credit for this class. That is their position.

Here is the thing, when you hold yourself out as a community hospital, that you are serving the patients of South Florida, you sign up for that scrutiny. You did, you are in the class --

THE COURT: Scrutiny is different than if you are just making it up. I don't find any scientific basis for penalizing a non-responding hospital and treating them worse than any other hospital in the country, or at least one percent.

If you don't like the one percent, I thought they had some evidence that no one else, no participating hospital got those low scores on those four safety measures. That is what one of their experts said. I don't think you put any evidence in to the contrary.

MS. BLAIR: I think what he said is no one hospital currently gets limited achievement on all four measures. He didn't say limited achievement on one, two, three, on all four measures.

THE COURT: You somehow think that is a rational approach to grading a hospital and telling consumers that's fair?

MS. BLAIR: I do, and here is why. We are grading these hospitals against Leapfrog's standards, all transparent.

We tell people what our standards are.

Let's talk about hand hygiene. When that measure came out, and Ms. Danforth testified about this, there was a lot of uproar because Leapfrog said, we want hospitals to perform at the highest level of excellence. They said in order to achieve the highest level of excellence, four out of four bars, you have to have 200 hand hygiene observations in every unit every month. That is Leapfrog's standards.

The WHO, the World Health Organization, they only say a hundred. So we think this is how these hospitals perform against our measures. We have our own opinion about what matters, what is important, and how we measure it.

And the argument, your Honor, is do we tell consumers what our standards are and what our measures are? The answer to that has been unequivocably, over and over with every witness, including the five CEOs, they know how this works. We are not hiding that these are our standards. We are not saying these are the US Government standards for hand hygiene or the World Health Organization's.

THE COURT: When you measure it against your standards they were at -- what was it, 85 out of a hundred at that point?

MS. BLAIR: Let's talk about that. For BCMA I think that is right.

THE COURT: And they decided not to do it anymore.

MS. BLAIR: In 2021, your Honor -- I want to make sure

we are all talking about their grades. In 2021 a lot of these hospitals were B hospitals because of their CMS data. These four measures are not a significant driver of the overall composite score. We see before the new measures come in they are going from Bs to Cs and Delray and West Boca were Ds, Ds before the methodology changed.

So, when we talk about the causal link -- and you remember Dr. Nicholson testified he never did a causal analysis, the Leapfrog grade versus impact.

The hollowness of their theory that the D grade aggrieved them -- you have to be aggrieved by the deceptive act and the by is the causal link.

THE COURT: So you are arguing that the Ds and Fs don't hurt them?

MS. BLAIR: There is absolutely no evidence of that. Mr. Hanlon got up and testified nobody said a word about his D in the spring of 2024, but when he got another D in the fall of 2024 people started asking questions. You are the trier of fact, not me, and you will weigh that credibility, but we don't think there has been any evidence of a causal link.

Counsel discussed a lot about what evidence I failed to put on to prove something. It is not my burden of proof. FDUTPA has a lot of elements, and as you told us on the 7th of January, it was a little squirrely.

THE COURT: I was talking about some of the -- well, I

won't even say. Some of the Florida decisions don't seem to be consistent to me.

MS. BLAIR: The fact of the matter is, there are elements they have to prove by a preponderance of the evidence, and we sat here for five days and we have seen no -- nothing about deception, we really haven't.

In fact, Dr. Nicholson testified the methodology is acceptable to everyone. That is their testimony, their expert, not mine. You heard from Isis Zambrana. I said, you do the survey, in your view is Leapfrog transparent? Her answer was, a hundred percent.

THE COURT: You explained transparent. I still don't understand how you can justify grading them all at the lowest possible score on those four measures when they didn't provide you data.

They make a point, you have a question mark on staff worked together because they didn't respond, but then you put them at the very bottom of the other measures and so -- with no explanation of why other than -- not even telling people it is because they didn't respond and you assume then they were worse than everybody else in the country.

MS. BLAIR: The footnote says they didn't respond and it does say we assigned them a grade. Dr. Nicholson testified that in fact what we do is an assignment. That is exactly what we tell people.

I want to take a brief moment to talk about the three measures that we don't score versus the four measures that we do.

Again the science. They have Dr. Nicholson, a health care economist, we have had expert after expert, doctors, patient safety experts, and I want to -- one second, your Honor. They have all testified about the difference between structural measures, which are the four we are here in court, BCMA, CPOE, hand hygiene and IVS, structural measures. We know in the year 2026, and we knew in 2024, that every adult acute care hospital has those measures in place.

Your Honor remembers the testimony, we were already doing this with the ICU physician measure. If the CMS report said that an adult acute care hospital had an ICU, we looked at that, and if you are not reporting, we said we are going to give you limited achievement.

Dr. Austin testified about willing to report and he said limited achievement is equivalent to willing to report. That's what we used to be called on the Leapfrog survey. We are saying we are going to give you credit that you would be willing to report, but we don't know what the measurement is.

There was a lot of discussion, Ms. Zambrana testified to this, Ms. Danforth testified to this extensively. On the survey it is not enough to say I have BCMA, I have bar code medication administration. That is not enough to prove on the

Leapfrog standard you are safely administering that medication. That just means that you have it in place, so we will give you limited achievement. If you want considerable achievement there are more things you have to prove and verify. If you want you achieved the standard it is even higher. We tell people that. We tell people.

Everything I know about this case, as a lawyer I can read on this website. That is not deceptive, it is simply not deceptive.

The other element of deception, your Honor, is they have to prove it is likely to deceive a reasonable consumer.

I have been in this case for seven months, I am not really sure who the alleged consumer is, right, but I think we can all agree it is patients that would be the reasonable consumer. Are the hospitals a reasonable consumer? Of course not. They are getting calculators, getting scoring methodologies. They are running what if scenarios. Are insurers reasonable consumers?

THE COURT: Well, you charge them.

MS. BLAIR: Charge who?

THE COURT: You charge the hospitals when you give them their safety grade with your logo and you charge insurers when you sell them data. Why aren't they consumers?

MS. BLAIR: They are not a reasonable consumer under the FDUTPA standard. You have seen this stuff about Humana,

the letters, some of which I saw for the first time. They showed a revenue document, Humana, for a hundred some thousand dollars in data licensing fees, which your Honor is probably talking about. Humana -- and that is Humana military by the way. Humana military, when they buy that data license, we tell them exactly all the scoring methodology, who is participating and who is not, exactly how it works.

This idea that Humana -- that is the only insurer we heard about. This idea that Humana or any insurer that licenses our data doesn't understand what is going on -- that was Ms. Montgomery's testimony that she just assumes Humana doesn't know. There is no evidence of that.

THE COURT: I am not sure what evidence there is that they know or don't know.

So you are saying what, that there is no evidence of harm?

MS. BLAIR: I am saying when we look at who has to be harmed, who the reasonable consumer is under the law, two things, they have to be reasonable, so they can't be a sophisticated consumer like these hospitals or insurers or the employers who are part of the Florida Health Alliance. They have to be a reasonable consumer, and that is the patients.

You heard from ever Leapfrog witness that the patients are the consumers. You heard from Ms. Zambrana that patients and patient families are the consumers. So the question is,

are those consumers the reasonable consumers, the patients, likely to be deceived to their detriment by the activities of Leapfrog?

The only evidence that has been put on to that is Dr. Berger, that is it, his opinions, that is it. There is no consumer survey. There is no consumer comprehension test, no user testing. There is no evidence that anyone that would be qualified as a reasonable consumer was deceived to their detriment.

Interestingly, Mr. Berger testified, this is from the transcript we have from this trial, that he has no opinion. I asked him, are you not offering an opinion in this matter that consumers are likely to be deceived to their detriment by Leapfrog? He said, I don't form an opinion regarding deception. His only opinion is that consumers are unlikely to understand.

I took his deposition and asked him, are they confused? He said, that is not the words I'd use, I am a very careful man.

THE COURT: You think your average consumer who looks at your website or reads the media about these grades understands your imputation model?

MS. BLAIR: No, I don't think they understand every nuance --

THE COURT: Do you think they understand any nuance in

the imputation model?

MS. BLAIR: I do.

THE COURT: Where do they get that from the website?

MS. BLAIR: When this website was rolled out there was extensive user experience testing done under the grant, $200,000 --

THE COURT: Right. That is to make sure it is readable and accessible and people with an eight grade education are going to be moved by it. I didn't see anything other than the Google analytics that showed that the consumers knew your imputation method.

MS. BLAIR: Ms. Binder testified, and that report is in evidence and it contains specific discussions with very specific people. This is what she testified to --

THE COURT: If I look at that I will find some understanding that that foundation said that consumers understand the imputation model?

MS. BLAIR: You will find evidence that that user testing said that consumers don't just stop at the grade, they want to dig into the metrics. That is what it says.

The standard is likely to deceive a reasonable consumer to their detriment, to their detriment. There has been absolutely no evidence of that part of the standard.

THE COURT: If they are simply mislead, you don't think that is enough?

MS. BLAIR: No.

THE COURT: If I convince someone not to go to a hospital that is near their home, why isn't that harm?

MS. BLAIR: Dr. Berger says they are unlikely to understand. I am 50 years old, this morning I took an Advil. I don't understand how it works, but I have no detriment from taking that Advil. Dr. Berger says they might not understand. It doesn't mean that they made a poor decision based on it, or there was any detriment whatsoever.

THE COURT: The label tells you a lot about Advil and its ramifications. It is right there.

MS. BLAIR: So does the website. If I really wanted to turn that bottle over and look down to read the side effects, I would do that. That is progressive disclosure, that is what we do under the FDC statute. FDUTPA talks about using the FDC standards, clear, concise, conspicuous.

THE COURT: What about the testimony that 3 percent of consumers get to that methodology?

MS. BLAIR: The Google analytics is unreliable. Dr. Berger's opinion cited 59 different articles that he relied on. Of those, 32 talked about consumer surveys being the gold standard, and not one of them talked about Google analytics. The other issue is that it is anonymous.

Again, it has to be a reasonable consumer. I am unaware, I could be wrong, of any journal article that Dr.

Berger relied on in coming to his conclusion, and he said this, the best way to inform this Court about whether a consumer was likely to understand the Leapfrog website is Google analytics. That was his testimony.

THE COURT: This is maybe not very reliable either. I asked Google, consumer expectations of an F grade. They said in AI mode: Consumer expectations for an F grade vary significantly depending on whether the grade refers to food safety, product quality, or customer relationship management. Generally an F represents a total failure to meet minimum standards prompting immediate avoidance or termination of a relationship.

If you look at food safety, which I understand Mr. Austin said you were trying to follow the food safety approach, safety warning, consumers view an F as a fair indication of an increased food safety risk often linked to a critical violation like poor hygiene or improper food handling. Most stake holders expect an F to be based on severe or repeated violations and believe these systems should communicate the specific risk of eating at that location. And it says, research shows that restaurant hygiene is a primary driver of consumer choice.

If you tell people they are getting an F and you don't explain how you got there, aren't you harming consumers?

MS. BLAIR: No. Two things, what you said in your

Google review was that the F indicates they are not meeting the standards.

THE COURT: Total failure to meet minimum standards.

These entities that you graded in 1921 (sic) as being at 85 percent on hand washing, my number may be wrong, now because of your imputation model goes to what, a 15?

MS. BLAIR: They went from a hundred points under the cohort median in --

THE COURT: The cohort is the mean of everybody.

MS. BLAIR: No.

THE COURT: When you look at their scores in '21 --

MS. BLAIR: They were at the 88.

THE COURT: They somehow stopped hand washing?

MS. BLAIR: No, no, and that is what Missy Danforth testified to. We are not saying they stopped hand washing. We are saying they stopped logging their hand washing, they stopped doing the observations necessary for the hand washing. We have no evidence that they continued to meet our 200 hand washings per unit --

THE COURT: The grade says F on the hand washing. Your gas gauge, whatever you call that, is basically at the bottom and it says under that hand washing.

MS. BLAIR: Yes.

THE COURT: You don't think that suggests to people that they do a lousy job, in fact an unacceptable job at hand

washing?

MS. BLAIR: Two things about this argument that have perplexed me for many months, your Honor, either consumers don't go to the metrics and just rely on the F grade, which has been their argument all along, so nobody gets to the hand washing to make that determination, or they do get to the hand washing metric and they found an asterisk that explains it.

THE COURT: The asterisk doesn't explain anything about the method, that you give them that score because you assume that they have something to hide.

MS. BLAIR: It actually says, and I have it up on the screen, the hospital declined to report their performance on this measure, true statement. Then it says, a score was assigned, true statement, Dr. Nicholson agreed with that, to reflect the lack of information available.

We are telling the reader at an eighth grade level, I don't have any data for this. We just assigned them a numerical value and that numerical value reflects the lack of information.

THE COURT: And that lack of information causes us to give them a grade worse than all but one percent of the hospitals.

MS. BLAIR: No. Our lack of information allows us to say we are going to assume that you have the minimum amount of -- a minimum amount of standards in place for our Leapfrog

standards limited achievement. We assume you have a hand washing policy, but they are not reporting to us whether they are implementing it, whether they are looking at it, cataloging it or logging it.

THE COURT: Why don't you just put not graded then?

MS. BLAIR: Because that wouldn't be accurate either, your Honor.

Again, this has been lost in the science of all of this, but every doctor has come in here, or patient safety expert, or public health expert has come in here and testified to your Honor credibly that imputed data is data. You heard it from Dr. Matt Austin, Dr. Romano, Dr. Harris, Alex Campione, Missy Danforth.

THE COURT: It is only reasonable data to the degree there is some science that underlies it. You can't make it up.

MS. BLAIR: Nobody is making it up. The science is non-response bias. It is taught in medical school, it is scientifically relied on because, as Dr. Harris explained, what you are trying to do is apples to apples. This is the measurement of patient safety, and no one said it is perfect. I didn't put a single witness on the stand that said we have the perfect methodology.

As we stand here today the science is if data is missing, experts, experts, experts decided is it reasonable, not Kim Blair, I don't know anything about this stuff. A panel

of nine world renowned patient safety experts got in a room and debated is it within scientific reasoning for us to impute data based on non-response bias. And the answer among that panel of nine and among Leapfrog was, yes, we believe it is under our methodology, and they are going to come back up here and say no one voted on it. There wasn't a vote on the expert panel.

THE COURT: There wasn't, was there?

MS. BLAIR: There wasn't a vote, and as Alex Campione testified in her deposition, that is not how science works. Dr. Harris testified there is never a vote. Dr. Romano testified we don't vote. But what Patrick Romano did tell you was he was involved in drafting what went out for public comment. He still sits on the voluntary board today. He believes that the imputation methodology that is in place is fair and reasonable and properly applies the non-response bias.

I am not a scientist, I spent seven months learning this, but those are the experts, Dr. Harris, Alex Campione, and they say you should ignore them. They are asking your Honor just ignore those experts because we have Dr. Nicholson, a health care economist who worked with Cornerstone and did some math and he says, based on a 1966 article from Donnabedian that says a good mathematical grading system includes outcomes, process, and structural methods, exactly what the Leapfrog methodology contains.

He says we have gone too far from these principles. I

am not sure he is qualified to even give that opinion, but that is his opinion. That article that was written in 1966, there was no hospital or patient safety grading methodology to look at, not in 1966. It doesn't come about until we started doing it in 2012.

Leah Binder said the only reason we could do it in 2012, Leapfrog went to Congress and lobbied for CMS to put their data out to the public. Dr. Romano told you until that time there was no publicly reported data for patients as to how these hospitals were doing. Dr. Harris told you that up until this time insurers paid on pay for service, instead of pay for performance. Do you remember that?

He said before we couldn't even measure their public safety data. Insurers just paid. You were in there for your colonoscopy, here is the $2,000. You got readmitted because you got an infection. I'll pay you for the readmission.

What CMS did and Leapfrog did, they convinced insurers, just like the lawyers get paid in this case, I will pay you for how well you do, not for the mere fact you are doing it. That is how contingency lawyers get paid.

Insurers said now I have the publicly reported data and I am going to hold the market accountable. Groups like Leapfrog and CMS now publishing this data, they have made this change in the world so that all of us sitting here can get better care. That is what this is about.

One of the prongs, one of the elements about --

THE COURT: CMS now does it, don't they?

As I understand from somebody, your expert, he says they now structure pay based on patient satisfaction among other things.

MS. BLAIR: CMS does, but private payers do not yet, and that is what Humana is trying to do.

THE COURT: Is do what?

MS. BLAIR: You see these Humana letters and Humana is saying, hey, you got a D -- we saw you got a D on the Leapfrog safety grade. Tell us what are you are doing, what is your patient improvement plan, how are you going to do better?

You heard from the CEOs, one of them, 18 percent of their private payer comes from Humana, seems like a lot. They don't even bother to respond, they don't bother to respond. You talk about non-response bias. They didn't bother to respond saying, hey, here is the problem with the Leapfrog grade, they are grading us on four measures out of 22, it impacts our overall grade.

If that is what they believe, they should have responded and told Humana, who gives them 18 percent of their revenue, what they were doing.

So, that is what is happening here, these 73 hospitals, not these five, these 73 hospitals, they want to put profits over patients. They want to hide the safety data, they

don't have to tell anybody about it, and the CMS -- and if you listen -- and Ms. Maloney went over some slides from Karen Jupiter's testimony. She went over a bunch of slides about how Leap Frog pushes this information into the media. She says, quote, they don't whisper it. They want us to whisper this data to patients. That is what this case is about.

Leapfrog, they don't whisper it. They don't whisper it because it is their mission to make sure you and everybody in the room can drill down on the metrics and see how well these hospitals are doing, and you can hold these hospitals accountable for their patient safety measures.

I think Mark Rule's testimony was so important because what he said is, everybody is losing sight of the fact this is a composite score. They have done a tremendous job of trying to convince everybody that this F is just based on these four measures, right, and we put into evidence just once, I didn't want to belabor the point, we put into evidence the April 5 star market report. It lists all five of the hospitals and they benchmark themselves as to how they are doing against other hospitals.

It is DX 813, and you can look at that. When you look at the composite nature of how these hospitals are performing, they are performing poorly on their CMS measures. Dr. Harris had a chart. They are performing poorly, and they are performing poorly on their HCAP measures, significantly poorly.

And they have excuses for all of that, the CMS data lags. Guess what? It lags for Jackson Memorial, too.

You heard from Missy Danforth that the NHSN data also lags and they say, well, we have an excuse from the HCAPs, they are so poor because we only get a nine percent return. Guess what? Other hospitals, and Dr. Harris had an exhibit, Exhibit 7, we pulled it up, where he monitors their HCAPs against the other hospitals in Florida.

That is what is significantly driving these grades.

THE COURT: But you are not reporting just that. If you are reporting those grades, I'd think they couldn't really argue that you are not basing it on data.

MS. BLAIR: We are reporting those grades in conjunction with the others as a composite score.

THE COURT: Maybe the conjunction part is the problem in this case.

MS. BLAIR: I don't think so. Part of our mission is to advance patient safety. We have heard that no one, not the Joint Commission, no one publicly reports how these hospitals are doing on some of the biggest measures that affect preventable harm in hospitals, medication errors, BCMA, computer physician order entries, hand hygiene, IVS. No one else publicly reports on that data.

To be clear, cannot be lost in this case, what Leapfrog does, exactly what they did at the beginning, is push

and lobby and testify in front of Congress to make the Government publicly report measures that are important --

THE COURT: I think it is great that they do that, but what I don't understand is why they give a grade based on imputing a score that is worse than any other hospital in the country.

MS. BLAIR: It is not worse --

THE COURT: There was is no other hospital that got the bottom on all four.

MS. BLAIR: On all four.

THE COURT: Isn't that remarkable that you wouldn't tell consumers, we are making up a score or giving somebody a score as a composite that is worse than any hospital that reports to us?

MS. BLAIR: I argue we do. If you look at the clear gas gauges that tell you here are 32 measures. Dr. Romano was the architect of this. Every single measure is on that website, and you can see their actual data for all of the CMS measures, all the HCAP measures. You can see that Leapfrog says, hey, we can agree on the nonstructural measures.

We don't know if you have these in place, we are not going to assume that. We know, patients, the consuming population, we know these hospitals have this data. We know it. They know it, we know it, so I am not going to tell you -- it would be deceptive to tell patients -- I am sorry, that is

my phone -- deceptive to tell patients that we don't know, NA, we don't know that these hospitals have the structures in place.

We know these exists, and you, consuming public, should also know these structures exist in all of these adult acute care hospitals. That is what we are telling patients, but we are also telling them because we are honest, make no mistake about it, they declined to report a grade -- not a grade, the score was assigned because we lacked their data.

THE COURT: When you decided to use your Google grant to publicize the scores of those hospitals, which I think you said -- somebody said was, well, we were defending ourselves from a PR campaign.

MS. BLAIR: Everyone said that.

THE COURT: So, what you sent was just the letter grades.

MS. BLAIR: It is embarrassing, and -- they had five clips. The way that would work is, when you Google Delray, they were hoping that -- and they got permission that they could use their grant in this way. I want to be clear about that. That was testified by Ms. Danforth I believe.

When you Google Delray what comes up would be, like the first Google search would be Delray safety grade, you can't see the big F. It says click here for score for Delray. They got five clicks.

An 8 million-dollar a year not for profit with 20 employees, they were trying to combat against news articles, people calling constantly. Karen Jupiter testified that they were getting calls from former Leapfrog employees that private investigators were showing up at their homes and work, and Ms. Binder made a decision that we have to defend ourselves.

I don't know if you have seen this, but the allegations are that they are brazen paid to play, that if you don't participate we automatically give you an F, that other hospitals are paying for their grade.

THE COURT: That one part is probably pretty close to right.

MS. BLAIR: Which one?

THE COURT: If you don't participate, we pretty much give you an F, either a D or an F.

MS. BLAIR: That is absolutely not true. Ms. Danforth was on the stand and told your Honor that there are hospitals, they get As, Bs, Cs that don't participate because it is a composite score. If your CMS data is good, you can get a C, you can get a B, might be hard to get an A, I don't know, I haven't done the calculations.

But there are plenty of hospitals, think about it, if we grade 27 hospitals, 20 percent of them do not participate, your Honor. 8 percent of hospitals, 8 percent of hospitals get a D or an F. That is basic math. If 20 percent aren't

participating and 8 percent get Ds and Fs, then clearly 12 percent are getting better, just basic math, and we know participating hospitals are getting Ds.

Ms. Zambrana said I participated and got a D, and we saw that as an opportunity to recommit to our patients and do better. These five hospitals said we got a D, and we see that as an opportunity to file a lawsuit to shut up Leapfrog. That is why we are today. Look at the relief they are requesting. They never once said can't you be more honest in your disclosures? Can't you be more up front about what is happening? That is why this case is bizarre.

They come in here and say this is a consumer protection statute, we are here to protect patients. We didn't hear from a single patient. Ms. Havericak got up and talked about a red-haired woman in a chair eating lunch and couldn't pull up her TikTok on the phone. And Palm Beach, there is no name of this woman, Palm Beach Network talked about a cardiac surgeon, no name, who talked with a patient, no name, who didn't want to have his surgery, and didn't come to Palm Beach for the surgery. We don't know his outcome, anything, unreliable.

St. Mary's testified patient declined to come to St. Mary's under patient preference, so that works against them. West Boca, we heard about JD with the compound fracture and FW with the armpit infection. On cross-examination Mr. Hanlon

couldn't testify about the who, what, where, when or the outcome of either of those, and most perplexing is he testified he provided documents to his lawyers with all this information, and none of this was presented to your Honor. Again, unreliable.

And Good Samaritan, this is the HSS document, this was created March of 2025, this lawsuit was filed April 30, 2025. If they were going to use that as evidence of their harm they should have produced it. They didn't. It was produced on January 13, 2025, one day after the trial was supposed to begin. Your Honor pointed out that if we look at that document -- it is in evidence, for what purpose we will see it later. If you look at the document, it doesn't excuse Leapfrog at all. What they say is no.

You should weigh that evidence heavily because Ms. Montgomery got on the stand and she talked about text messages she had with Dr. Soma, and phone conversations she had with Dr. Wayne, or Wang is what I heard, and none of that was introduced, none of it was testified to at her deposition. They did testify there was a contract and it hadn't been canceled, but there were questions about it.

She testified she is text messaging with this guy about how the reason they have to leave, and it is coming from New York, the reason they have to leave Good Samaritan is because of the Leapfrog grade. Where is that evidence? I was

never told that, and I went through each one of the CEOs painstakingly, interrogatory number 8, 14, and 18 asked them to provide all of their evidence of harm. None of it.

Your Honor has a scheduling order in the case where they are supposed to list every trial exhibit they are going to use, not on their list. Yet they come in and say you should listen to Sheri Montgomery about the text messages that never came into evidence.

That is what the consumer harm is here, that is their evidence of consumer harm. It is not enough, it is hearsay. If it comes in for some other issue, some other reason, don't know how it can come in for anything other than state of mind, no name, no who, what, where, when. It can't come in for the truth of the matter.

THE COURT: What about the evidence of the decline of walk-ins to the emergency room?

MS. BLAIR: I love that. Mr. Hanlon testified and he said on the stand that he made the determination, again from reasoning, he imputed based on reasoning that the only explanation for the down turn in his walk-ins was the Leapfrog grade. We went through four meetings, and he said in each one of them he reported to his governing board and his medical executive committee that part of the reason this was down was due to infrastructure issues, and more seasonal people going back up north.

And then you heard from Mark Rule, and he said without the projections and the actual data you can't make a determination as to whether a corporation -- they can't just have their feelings hurt, you have to have some sort of financial impact, you have to quantify it. He said you can't do it without the projections. Mr. Hanlon had some projections about how much they were going to lose in light of their construction, they were down 30 percent for walk-ins.

If you look at the emergency room visits in the document they presented to your Honor, also at West Boca, consistent with the infrastructure issues, and we asked Mr. Hanlon about this on the stand, the police, the police bringing patients to West Boca is significantly down.

I asked Mr. Hanlon, is it your testimony today that the reason the police aren't bringing patients to you is because of the Leapfrog grade, and he said no.

THE COURT: That number was something like 43 versus 5,000 -- the number of people the police brought went from 52 to 43, as opposed to the walk-ins which was like 5,000. While the percentage was significant, the number was minuscule. It didn't make any difference, is what I'm saying, what the police did.

MS.BLAIR: I see. My point is, these numbers can be down for other impacts. Mark Rule talked about the saturation of the market here in Florida, Cleveland Clinic. There is lots

of testimony in deposition, not here before you, they didn't testify about that. Mark Rule testified that could be an impact factor, but until we see what they are projecting -- because these five hospitals have the documents, they didn't produce them, but they have the documents.

I asked for them, they didn't produce them, and what those projection documents would have shown is were they expecting already a down turn in admissions, elective admissions and ORs, if they were expecting a down turn because of seasonal issues or new competitors coming to the market, that is what you look at. If you are expecting it to be down by 40 percent and it was only down by 30 percent there is no impact there.

THE COURT: You don't think F grades impact whether a doctor wants to work in a place or morale at a place, or a patient thinks if I am twice as likely to die there I might not want to go to the hospital. You don't think without some empirical data that shouldn't be considered?

MS. BLAIR: There is no evidence of that. Those are anecdotes to this Court for which no evidence has been presented.

THE COURT: Don't you think anybody that ever went to school knows the impact of an F or a D?

MS. BLAIR: Yes, maybe, but it is their burden to come in here and establish that, and they can't establish that

anybody credibly saw these grades and relied on them to their detriment. They have a lady in the chair who was scared, no name patients who wouldn't go to cardiac, they have a finger --

THE COURT: How about your guy that drove 400 miles because he was worried about surgery?

MS. BLAIR: Right, he made a standard business decision to --

THE COURT: You would acknowledge people do make that decision.

MS. BLAIR: Probably.

THE COURT: If the data that they are give is wrong, they are making that decision irrationally, aren't they?

MS. BLAIR: No, I don't think so. Here is what I think: I think if you care enough to figure out what Leapfrog is, and drill down on the data to figure out if you want to go there you have looked at the metrics.

THE COURT: What if you just look at the TikTok video or read the Palm Beach Post story that said the four worst hospitals are here in Palm Beach County; do you think you would go beyond that and go to the methodology page on the Leapfrog website and say, how did they come up with this 15 score on hand washing?

MS. BLAIR: I do. The community hospitals testified that they have been servicing these -- families for generations, Mr. Cazares gave that testimony.

If this is your hospital your grandma was treated there, your parents, and you took the kids there for ear tubes or whatever, you are going to ask why did you guys get an F? My family has been here all the time. These hospitals have testified extensively, these CEOs, that they have a commitment to patients. Their mission statement is to be transparent. Their complaint is people are asking about our patient safety. That is the complaint.

I would argue to your Honor if you hold yourself out as a community hospital dedicated to patient safety and transparency you are going to get questions. Part of your job as a CEO of a community hospital is to answer those questions. The fact that they come in here and say people are asking us questions about their safety grade, interestingly, they testified nobody ever asked them a question about their one star CMS score.

It is not evidence, but we are in oral argument at this point. In September of this year the Mayo Clinic put out a health locator score, they don't do good on that either.

This idea that patients never ask questions, their governing board never asks questions, their medical executive committee never asked questions about the fact that they were a one star overall hospital based on CMS data, which your Honor pointed out to me is a pay for performance standard, you would think from a profit perspective people would be very concerned

about that. If CMS is paying us for performance, and we have one star, nobody asked them, and most incredibly --

THE COURT: Doesn't that say your F has more impact or dramatic impact than the one star?

MS. BLAIR: No.

THE COURT: The one star, at least there is data behind it. Your F, I don't think it does.

MS. BLAIR: I think it is disingenuous the one star that is tied to payment is less impactful than a not for profit watchdog group who can't effect change in your hospital at all.

That has been the testimony, which has been eye opening, your Honor. It is incredible to believe that -- forget about people who don't care about patient safety. It is incredible to believe that a for profit hospital system doesn't care that their CMS -- or their Medicare reimbursement is being impacted by the one star rating.

THE COURT: Why do you think they don't care?

MS. BLAIR: They testified that no one ever asked them about it.

THE COURT: That is a different question than whether they care about changing it.

I don't understand. You are saying they don't care about the one star?

MS. BLAIR: They say no one ever asked questions about their patient safety and quality despite the fact they have

been one stars until the Leapfrog rate came out. I find that incredible that the governing board, who should be concerned about finance, and the medical executive committee, who should be concerned about patient safety, never asked about the one star. Nobody ever asked, that is the testimony.

You are weighing credibility here, that is what they testified to. The more important point on this is that Delray and West Boca had -- if the Leapfrog grade, as your Honor suggested, had such an impact, right, Delray and West Boca had Ds before this and they testified nobody asked any questions even of those Ds until after the fall 2024 methodology change where they stayed -- Delray went to an F, and West Boca stayed as a D.

What they want to say to your Honor is that is the catalyst, that is the causal link, look no further, I had a D before and after, and it was this imputation model change that impacted me. It makes no sense, just not credible.

At the end of the day --

THE COURT: Before you stop, if I believe that the scores are deceptive and were to be inclined to enter an injunction, what type of injunction would allow you to continue your mission, but accommodate their concern?

MS. BLAIR: Just a better footnote. What Dr. Berger testified to was that the footnote doesn't tell a consumer how we got to that grade, you remember, they really emphasized

that. It doesn't tell the consumer how we got to that grade.

The idea that we are somehow going to protect consumers by not grading five hospitals is a wild idea. If they are here to protect consumers against what they believe to be this wildly oppressive, unscrupulous, immoral watch dog group, and we are harming patients all over South Florida, that is what they believe we are doing, we are harming patients all over South Florida, if that is what they believe the relief I showed you where they simply say keep us out, keep us out. You can tell consumers whatever you want about nonparticipating hospitals, here it is, just don't grade us.

THE COURT: What is the harm to you having to reflect them not being graded? As I understand that, you do that if you have insufficient information on seven measures, you put not graded. What is the harm to Leapfrog if you had to do that?

MS. BLAIR: What you would effectively be doing is hiding how the hospitals' benchmark against their competitors.

When we look at the legislative intent of FDUTPA it is protect consumers. When somebody looks and sees Cleveland Clinic is an A, or Jupiter, I've got to go to Jupiter when this is over, Jupiter hospital is an A, then we don't have to compare ourselves against Jupiter. Jupiter could be the best in --

THE COURT: You still have one star -- I don't know if

there was evidence about Jupiter. You have one star, the accreditation bodies, all the other information sources. You would be eliminating one that might not be accurate from their standpoint.

MS. BLAIR: I disagree. These other accreditation bodies, all they put out is that you are accredited. You just get accredited, so that doesn't help the consumer.

The CMS star, they whisper it. That is what they don't like, we don't whisper it, but CMS whispers it.

THE COURT: You don't whisper, but I am not sure that what you're shouting is accurate.

MS. BLAIR: I think it is. What we are saying, Leapfrog has gone to great pains over 24 years to figure out what are the measures that Leapfrog believes and what are the standards for the measures that Leapfrog believes, and this is our opinion. We are not telling them you are not --

THE COURT: Why didn't anyone take seriously the email where Dr. romano says, if you want to penalize hospitals that don't respond why can't we be honest about it instead of doing this?

I didn't see anybody taking that seriously, or the doctor from UC Davis where he says call it blackmail if you will. Why is that not a concern to Leapfrog, that you are using a penalty to make people respond to your survey?

MS. BLAIR: Two things, I had a question like that

myself, and I represent Dr. Romano in this case, and what he told your Honor on the stand, he used a analogy, I am not saying punish, they are using it -- Dr. Romano looked at you and said, when I say penalize I mean you were getting a hundred before we didn't know whether you were getting a hundred. Now you are getting fewer points. He talked about the football analogy and false start. This is not a punishment.

The mirror they are trying to create, which there is zero proof -- Ms. Binder talked to you about it, they are trying to say that we automatically fail if we don't do these four measures, and it is simply --

THE COURT: It is pretty close to true, isn't it?

MS. BLAIR: No, that is not the evidence, that is not the evidence. Plenty of hospitals if you look at the chart --

THE COURT: But no hospital that scored at the bottom of all four got above an F.

MS. BLAIR: No, that is not the evidence.

THE COURT: It is testimony -- Dr. Nicholson claims that he reviewed the scores of every hospital, that was his testimony.

MS. BLAIR: That was Dr. Nicholson's testimony. That is not his testimony. His testimony is we give these five hospitals and all the nonparticipating hospitals limited achievement. There is not one participating hospital that gets achievement on all four.

THE COURT: Right.

MS. BLAIR: What he didn't testify to is you get some achievement on three and four? We don't know.

THE COURT: Take that one statistic that nobody else, no other participating hospital is given the bottom score on each of the four measures.

MS. BLAIR: Okay.

THE COURT: Isn't that telling that what you are doing is using this as a penalty to force hospitals to participate?

MS. BLAIR: There is no forcing hospitals to participate. Why it is not forcing anybody to participate is because they know, and they can make a conscious business decision based on what the calculator that we sent them, the months they have to prepare if they want to participate, they are making that decision. We are not forcing anybody to do anything, not at all. They are making that decision.

We see that in DX 618 where these hospitals -- Regina West, the director of quality over all four hospitals, and Ricky Ramirez, the director of quality over all four hospitals, sent a message to Maggie Deal, the president of all five hospitals, and they say they can participate in the survey with minimal resources and no cost.

How is that forcing? Each one of them said we are survey ready, we are survey ready at any time on all four measures. Mr. Cazares, I asked him, if you are forced to

participate, could you. He said yes.

THE COURT: Why isn't it a legitimate business decision to say, given the parameters they use, we have a hard time getting above a C, and it is just isn't worth it, it is just not worth it? Isn't that a reason, not that it is too much work, it is we don't see the benefit in what you are doing saying we will stick it to you if you don't participate. Isn't that what you are doing?

MS. BLAIR: No, each one of the hospitals with the exception of Delray and West Boca, so Palm Beach Gardens, St. Mary's, Good Samaritan were Cs. Even getting a hundred out of a hundred points for all four of the measures, they got perfect under the old methodology, they were still Cs.

THE COURT: That is my point.

MS. BLAIR: They said they didn't care. Mr. Cazares said that was an okay grade, we didn't care.

THE COURT: Isn't that what Jackson is saying? Jackson is getting Cs and filling out your survey. What if Jackson said, look, we don't see the benefit of it, we think it doesn't the make sense, if you use your imputation method and gave them an F -- I guess it seems to me you are using a penalty to force hospitals to participate. I think I agree with Dr. Romano.

MS. BLAIR: He didn't use the word penalty.

THE COURT: He did. He didn't use the word

punishment.

MS. BLAIR: He said I don't --

THE COURT: So you accept penalty?

MS. BLAIR: It is a reduction in points.

THE COURT: It is a penalty.

MS. BLAIR: You went from a hundred without any data, and now we are going to say we don't have any data.

THE COURT: I thought you had data then when you are getting 85, you had data in '21.

MS. BLAIR: In 2021 we had data, spring of '24, we didn't have data for four years. We didn't have data for three years, getting a hundred out of a hundred.

THE COURT: You don't think taking them from 80 to zero or one --

MS. BLAIR: I think it is a numerical error.

THE COURT: It is a penalty.

MS. BLAIR: No, it is a numerical penalty, but what it doesn't do is automatically deflate your grade. You don't have to trust me on that. We know that because West Boca went from a D to a D. There are numerical grade cutoffs. I want to make sure that message doesn't get lost.

If Ramzy takes a test and he gets 99, and you take that same test and get a 91, you both get an A. That is what the cutoff points are. Just having a reduction in points four of 22 measures which Mark Rule testified are not significant

drivers of the composite score, it doesn't automatically lower your grade, and you don't have to trust me. These hospitals were not performing well before because of the composite nature of the score, because however you do the math, 24 percent or 30 percent, right, are these four measures.

The significant majority of this grade comes from the CMS publicly reported data that each one of them testified to was their actual data, and Mark Rule said to your Honor, these four measures are not a significant driver of your grade.

It is a penalty, a reduction of points, we gave you a perfect now we are not. You are getting your test points. We are saying you answer the question, you have a hand hygiene policy, you didn't show your work. Before we were giving you a hundred points for showing your work and you weren't.

It is a numerical penalty, not a grade penalty. They have done a fantastic job of conflating these two things.

If I leave you with nothing else, that is the message. Leapfrog went to great pains from a scientific methodology to make sure this was a composite score so that no one factor would be the one and only significant driver of the overall letter grade, and that has been proven.

I went way over time.

THE COURT: You both did.

Keep any rebuttal short. You all are roughly at the same amount. The Defendants have had a little more so far. I

probably took up most of your time.

MS. MALONEY: So, I had intended to reserve ten minutes for rebuttal. I am going to try to get this done in seven and. Your Honor, I would welcome you saying Ms. Maloney or counsel move on, but I am trying to answer some of the questions you raised so just let me know. Let's go to slide 39, please.

Dr. Nicholson testified to this. He takes Leapfrog's assigned score, 60 out of a hundred, where does that score fall compared to the actual scores of participating hospitals? The answer, which Dr. Harris yesterday confirmed when he looked at the same slide, is that it falls far below the bottom one percent of participating hospitals whose actual scores, the actual scores of participating hospitals are approximately 282 out of 400.

That is more than a 4 percent increase for them just for participating, okay, and non-comparison doesn't assume for safety, it shows penalty assigning hospitals a score that is worse than the worst hospitals in the country without any data. Okay.

So the bottom one percent of participating hospitals in theory should be the worst in the country, yet because we don't participate we are 400 percent worse than they are.

Now, that is why the question is not whether nonparticipants are less safe, but whether Leapfrog had

rationally assigned a score -- that extreme from 100 to 15, from 100 to five, from 100 to 25 without evidence, without data, and to the extent Defense counsel suggests there is no evidence that F hospitals represent the bottom one percent nationally, that is simply wrong. Leapfrog's own documents show that less than one percent of the hospitals receive an F. It is at PX 97 and 428, they are both in evidence and they say that.

Your Honor also asked about when counsel alleged that there was reliable testimony in the record -- let's go to the next slide -- that this re-weighting doesn't have an effect. This came in through Nicholson, and this also was acknowledged by Dr. Harris in his testimony. You may recall that he had to correct himself regarding the 24 percent versus the 30 percent. When those three measures are taken out that is what happens, you get a re-weighting of the four measures, the five, 15, 15, 25 into the 31 percent. That is the circle I talked with -- that Missy Danforth assented to. She had made an error.

Let's be clear, if you are not imputing the four measures count for 24 percent of your score, if you are a participating hospital they count for 24 percent of your score, approximately a quarter. Once you are a non-participating hospital they account for nearly a third of your score.

Nonparticipating hospitals are hit twice, I called it the double whammy, fake failing scores and increased weight

assigned to the fake scores, and there is no evidence in the record other than what I showed you in the prior slide from Dr. Nicholson they got confirmed by Harris that this double whammy doesn't actually drive the score down from C to D and D to F. She argues this is -- I am trying to move through it quickly.

So this argument confuses outcome with impact. Dr. Nicholson addresses this question, not whether the letter changes in the one instance, but what Leapfrog's nonparticipation penalty does to the score relative to where the hospital would otherwise land.

I want to remind you -- go to the next slide. I want to remind you, yes, West Boca started at a D, it also went down to an F. When it started at that D there was not the amplification of the grades that we saw, one; and two, it is our view and Dr. Berger's view in his testimony that it is that F, the F has an enormous effect on the perception of the hospitals, and at the time -- at the time that the methodology change occurred, you had press that is in the record and I showed in the opening, some of the opening slides that promoted the F of the other Palm Beach Health Network hospitals right alongside West Boca.

Dr. Nicholson addresses the next question, not whether the letter changes, but what the penalty does to the score relative to where the hospital would otherwise land.

Nicholson runs the counter factual using Leapfrog's

own scoring system as opposed to a made up methodology that Dr. Rule used that is inconsistent with their own expert guidance on how to score hospitals. What Dr. Nicholson did, he shows when you remove the automatic scores and re-weighting penalty, the two factors, West Boca's score materially improves.

The fact that it remained at a D in one snapshot in time doesn't mean the penalty is relevant. It means it moves it deeper into the D range, keeps it there rather than allowing it for improvement. Once you are in the gutter with the double whammy and the false four measures you can't climb out without exceptional improvement that isn't required of participating hospitals.

Now, I want to get to the argument that counsel made -- go to the next slide, slide 57 -- with regard to the U.S. testing that she was defending in response to the 3 percent that Dr. Berger referenced.

So there is no evidence that that testing, the Robert Johnson Foundation testing, there is no evidence of what that testing recommended, no evidence of how it was applied, no evidence of any response, especially given that it occurred a decade ago, long before Footnote 4 ever existed. And their point rebounds on them because as Leapfrog designs a website that is easier to read, but that conveys false or misleading content, that is doubly misleading.

We are going to show you how that is the case with the

actual footnotes, but if an eighth grader can read that they are telling them they are twice as likely to die if they go to one of the hospitals, that is the problem and the analytics confirm it.

Ms. Campione suggested linking the methodology to the safety grade page. I am not sure if that would be enough. We don't know, it is not in the record. She explained that Ms. Binder and Ms. Danforth do not care to do so, okay. Instead they buried the document among multiple clicks, and then -- given the fact that only 3 percent of users ever access it, his point is, it doesn't really matter what it says, how complicated it is, nobody is looking at the methodology.

Let's talk about Footnote 4 which she relies on heavily and says solves most of the deception.

Okay. So, Dr. Berger explained, first of all, Footnote 1 is untethered to any specific score or measure. It doesn't tell a patient what data is missing, what assumption is made or hoe any score is calculated. It is meaningless and deepens the confusion. I really think you have to think about -- I want you to be reminded of this testimony, your Honor, because as you are thinking of a remedy, what this testimony and evidence shows from their own website is they are incapable of fixing this. They need to not grade us.

So this is for one of our hospitals, I did this very quickly and you can't tell which one this is, but it is one of

ours. Theirs says declined to report. Here is the crazy thing -- pull up the next slide -- this is Jupiter Medical Center. Can you scroll down.

It also has that footnote, so somehow in putting together their website they included this declined to report on both participating hospitals and nonparticipating hospitals, removing the effect of footnote one. They don't talk about footnote one because they know this is true. Let's go back to the prior one.

Footnote four appears only if the user clicks on four of 32 measures. That was where we went through all the measures, and that is the first and only time it appears, four out of 32 measures going through the gas gauges, and even then it doesn't explain the grade.

Progressive disclosure is not a remedy if there is no actual disclosure in the first place.

Footnote four is not intended, let's to go that, it is not intended to explain how or why participating hospitals are assigned a score. That is not the purpose. Mr. Vredenburgh confirmed that footnote four does not show a customer under the hood of how the score is assigned.

When confronted with a step one hospital, that is the historical performance data, and step two, he admits that he couldn't tell them apart. That matters.

So Leapfrog -- Leapfrog fought to keep him off the

stand, but as we heard in his testimony by video after two horse of browsing the website even he couldn't understand how Leapfrog grades.

THE COURT: All right. You are all at the same time, wrap up your rebuttal.

MS. MALONEY: You got it.

JX 40, which she opened her closing which relies on non-response bias, it is the community hospitals excuse participating, it under cuts their theory entirely. They wanted to important advertise pet to avoid the penalty, they ask, can we participate. Again, they know what the consequences will be. That is not hiding performance, that is a deliberate choice.

Our fighting this was a deliberate force not to cave to the pressure, instead direct resources we hope if an injunction is entered to where patient care matters. Very quickly, but I will speak slowly.

Defense counsel repeatedly suggests that Leapfrog methodology carries scientific legitimacy because it was expert approved. We have Austin, Leapfrog doesn't inquiry the panel about how to adopt the penalty. There is no evidence in the report whatsoever that five, 15, 15, 25 was ever put before the expert panel and Ms. Danforth confirmed the same point. Can we go to that slide.

It was a group thing, not peer reviewed, not

validation and in the expert approval, it is self deception. They believe these hospitals were bad, down turn in admissions they suggest hospitals were expecting a down turn. The evidence is the opposite, and at West Boca the testimony is that the hospital is expanding its emergency room department and expected an increase in patient volume. What it saw was decline in the walk-ins.

Decline does not come from market forces, and the market forces were acknowledged by the CEOs and they still said the big difference was Leapfrog based on their experience in the market.

Defendants elicited no testimony, offered no evidence that competition caused any down turn. The only thing they offered was the speculative opinion of Mr. Rule and counsel saying she had driven around and seen a lot of other hospitals. The only record evidence shows that Leapfrog actively promoted Jupiter Medical Center, who is a competitor, amplifying Jupiter's grades and positioning it against the Plaintiff hospitals.

Now, I've got to do CMS and the last thing I have to do is the business model and injunction. She questions the integrity and the credibility of the CEOs, saying it is incredible to believe it has a greater impact that one star. The record shows that is true. Why star ratings have existed for years without discussing patient care.

THE COURT: Let's wrap this up. Thank you.

MS. MALONEY: Something that wouldn't compromise their business model, it is a fair question, but under the statute and Supreme Court precedent, the legal inquiry is not how to preserve a business model for injunctive relief, it is how to fully remedy deceptive and unfair conduct. It is an equitable remedy and the Supreme Court has said an equitable remedy must provide complete redress to the injury proven, not a partial or cosmetic fix.

That is why the answer can't be a better footnote. The question is not whether an injunction is convenient for Leapfrog; the question is whether the remedy fully corrects the harm. No footnote can fully do that.

What could do it is for them to do what every CEO who testified has asked for, just stop grading us. If your Honor thinks that goes too far, and I believe the case law will show you in our briefing on the remedy that it does not, but if your Honor thinks that goes too far and wants to give Leapfrog grace by being able to claim that they have something on their website for every hospital in the United States, then they know how to do it without grading us.

They put an NG in place of the F, take down the gas gauges and tell consumers the truth, they didn't grade them. And they need to tell the consumers to redress the harm of the past grade and about what we hope will be your ruling on their

deceptive and unfair practices.

Thank you, your Honor.

THE COURT: Thank you. What do you want to do? Would you like to file something else or not?

MS. MALONEY: We think it is important to file something else, which I think we've discussed being a revision to our proposed findings of fact and conclusions of law and as well we think, given the precedent in the Eleventh Circuit, it is important to have specific briefing, even if it is acknowledging that you want specific briefing on the scope of the remedy.

We are happy to do a brief instead of findings of fact and conclusions of law. You tell us what you would prefer and counsel probably has her views as well.

MS. BLAIR: They filed a brief with respect to the case I handed you up from the Eleventh Circuit.

THE COURT: I haven't seen it yet.

MS. BLAIR: We would like a short -- I think it was three pages, and I would like the ability to draft a short reply to that.

I think at the outset of the trial we did talk about revisions to the findings of fact and it would be helpful to have the transcript to make it easier.

THE COURT: Let's do that. Include -- obviously in the conclusions of law you can include briefing, whatever law

you want to put in, put it in that. One document which is an update of your findings of fact and conclusions of law which includes any legal argument you want to make.

When do you want to do it? How long do you want to have?

MS. BLAIR: A certain amount of days after we get the last day of the transcript. Maybe 30 days?

MS. MALONEY: Two to three weeks after we get the final transcript, and the reason for that is they have safety grades coming out in the spring, in April. I am hopeful that your Honor set this trial date when he did in response to our initial complaint in April so that we can avoid more rounds if you made a finding of deception and unfairness.

It would end up being three, four weeks.

THE COURT: Fourteen days, does that work for you all? I was trying to respond to both of you.

MS. BLAIR: I thought 30 days made sense to me, but we will do it in two weeks.

THE COURT: All right.

MS. MALONEY: February 6th we will submit those, no response to theirs, and they receive no response to ours.

THE COURT: Yes.

You can start now. The transcript I guess can come in late, and you can adjust it. You all have pretty good information.

Thank you all. You did an excellent job presenting your cases and I appreciate your skill. Thank you all.

(Thereupon, the proceedings concluded.)

* * *

I certify that the foregoing is a correct transcript from the record of proceedings in the above matter.

Date: January 30, 2026

UNITED STATES DISTRICT COURT
SOUTHERN DISTRICT OF FLORIDA

CASE NO.: 25-CV-80526-MIDDLEBROOKS

GOOD SAMARITAN MEDICAL CENTER, INC., DELRAY MEDICAL CENTER, INC., PALM BEACH GARDENS COMMUNITY HOSPITAL, INC. D/B/A PALM BEACH GARDENS MEDICAL CENTER, ST. MARY'S MEDICAL CENTER, INC., AND WEST BOCA MEDICAL CENTER, INC.,

Plaintiffs,

v.

THE LEAPFROG GROUP,

Defendant.
_____/

ORDER

A failing grade for hospital safety predictably has severe consequences for any hospital in terms of patient avoidance, doctor retention, employee morale, and community reputation.

The Leapfrog Group uses a survey, along with other publicly available data sources, to calculate patient safety scores for hospitals across the United States. Under Leapfrog's scoring

methodology, every hospital is assigned a letter grade (A, B, C, D, F) ostensibly to show where a hospital stands in safety performance. The scores are marketed and disseminated to employers, insurers, and the consuming public.

The Leapfrog survey is voluntary and many hospitals, including the Plaintiff Hospitals here, choose not to participate. For those non-participating hospitals, since survey information is not available, Leapfrog uses alternative measures to calculate the safety score. Non-participants do not fare well in these alternative measures of scoring. Even before this lawsuit, Leapfrog has previously received criticism for its methodology and its tendency to discriminate against non-participating hospitals. *See* Wenke Hwang, Jordan Derk, Michelle LaClair, Harold Paz, Hospital patient safety grades may misrepresent hospital performance. 9 J. Hosp. Med. 111 (2014).

But in 2024, Leapfrog decided to double down on its methodology for assigning scores to non-participating hospitals. Put simply, the alternative scoring measures became punishing. Assuming that "non-response bias" suggested that hospitals choosing not to participate necessarily had something to hide with respect to patient safety, Leapfrog began assigning arbitrarily low scores for several measures. Leapfrog also changed the weighting of those measures for non-participants, rendering it almost impossible for these hospitals to receive a passing grade.

Leapfrog's advisory panel of experts never voted to adopt this significant change in methodology. One of the experts suggested that if Leapfrog wanted to penalize non-participating hospitals, it should be very up front about it. And in response to a colleague at a non-participating hospital who described the change as "blackmail," the advisory panel member wrote: "their decision to increase the penalty for nonparticipation was a simple business decision… It's just business, folks!" (DE 191-3 at 1, 4).

Leapfrog's change in methodology has no scientific basis, unfairly penalizes non-participating hospitals, and misrepresents hospital safety. For the reasons that follow, I find that

Leapfrog's approach constitutes an unfair and deceptive business practice in violation of the Florida Deceptive and Unfair Trade Practices Act. Fla. Stat. § 501.201 *et seq*.

BACKGROUND

Five South Florida Hospitals – Good Samaritan Medical Center, Inc. ("Good Samaritan"), Delray Medical Center, Inc. ("Delray Medical Center"), Palm Beach Gardens Community Hospital, Inc. d/b/a Palm Beach Gardens Medical Center ("Palm Beach Gardens Medical Center"), St. Mary's Medical Center, Inc. ("St. Mary's"), and West Boca Medical Center, Inc. ("West Boca Medical Center") (collectively, "the Plaintiff Hospitals") – brought suit on April 30, 2025, challenging Defendant, The Leapfrog Group's ("Leapfrog") scheme under the Florida Deceptive and Unfair Trade Practices Act (FDUTPA). Fla. Stat. § 501.201 *et seq*. (DE 1). The initial complaint sought both money damages and injunctive relief. On August 28, 2025, however, Plaintiffs filed an Amended Complaint, leaving only their request for injunctive relief. (DE 74). I held a five-day bench trial beginning on January 16, 2025, at which time documentary and testimonial evidence were presented. Based on the evidence adduced at the trial, I make the following findings of fact and conclusions of law. (DE 172).

Leapfrog is an independent, national non-for-profit organization. It was founded in 2000 with an admirable goal – to address "severe dysfunction in the health care marketplace." (DE 135 at ¶ 35). Its mission is a laudable one: to "trigger giant leaps forward in the safety, quality and affordability of U.S. health care by using transparency to support informed health care decisions and promote high-value care." (*Id.* at ¶ 36). As part of this mission, Leapfrog established the Leapfrog Hospital Survey in 2001, which "collect[s] and transparently report[s] hospital and ASC performance, empowering purchasers to find the highest-value care and giving consumers the lifesaving information they need to make informed decisions." (*Id.* at ¶ 42). Separate and distinct from the Leapfrog Hospital Survey is Leapfrog's Hospital Safety Grade ("Safety Grade"), first

launched in 2012. (*Id.* at ¶ 49). Importantly, Leapfrog's Safety Grade methodology is focused on providing a Safety Grade to all eligible hospitals, regardless of whether the hospital voluntarily reports information requested as part of the Leapfrog Survey. (*Id.* at ¶ 51). A comprehensive review of the methodology is therefore warranted.

A. <u>The Leapfrog Hospital Grade Methodology</u>

The Leapfrog Hospital Safety Grade is derived from a collection of various measures. The Safety Grade is the product of information from two sources: first, Leapfrog's Hospital Survey, which collects information on quality and safety from participating hospitals, and second, publicly available data from the Center for Medicare and Medicaid Services (CMS). (DAY 1 Trial Transcript at 181). From this data, Leapfrog develops 22 quality safety metrics, which underlie a letter grade from A to F that Leapfrog Group assigns to hospitals twice a year—once in the spring and once in the fall.

Broadly, these measures are split into what Leapfrog calls domains: "Outcome" measures and "Structural/Process" measures. (DE 195-1 at 5). Dr. Sean Nicholson, a health economist and expert witness for Plaintiffs, offered helpful testimony to contextualize the distinctions between these two domains. Ten of the 22 variables are "Outcome" measures. As he explained it, "[a]n Outcome measure would be a measure of a patient's health, such as whether a patient falls while in the hospital or acquires an infection while they are hospitalized." (DAY 1 at 181). The Leapfrog Hospital Safety Grade Scoring Methodology ("Methodology"), for example, describes these as "measures of harm experienced by patients (e.g., central line-associated blood stream infections)." (DE 195-1 at 13). Meanwhile, the remaining 12 measures are characterized as "Structural and Process" measures. Dr. Nicholson described these measures as "an indicator of a hospital's capability of providing safe and high-quality care such as whether they use computerized physician medication entry." (DAY 1 at 181). Likewise, the Methodology describes these as "measures of

compliance with best practices in patient care." (DE 195-1 at 13). Each domain accounts for 50% of the final Safety Grade.

At a more granular level, it is helpful to understand the data sources underlying Outcome and Structural/Procedural measures.[1] Five of the ten variables that comprise the Outcome measures are derived from CMS data. (DE 129 at ¶ 137; DE 195-1 at 7). The remaining five measures are collected from the Leapfrog Hospital Survey. For Structural/Process measures, on the other hand, five of the 12 measures are derived from CMS data, while the remaining seven are derived from the Leapfrog Hospital Survey. (DE 195-1 at 5, 6).

Leapfrog has various ways of dealing with missing data. For the five Outcome measures derived from the Leapfrog Survey, where that primary data source is unavailable, Leapfrog relies on available CMS data (DE 195-1 at 7). For the remaining five Outcome measures, where primary CMS data is unavailable, there is no secondary data source, meaning that the hospital cannot be scored on that measure. As for the Structural/Process measures, the process is slightly different. Like the Outcome measures, where Structural/Process measures relying on CMS data as the primary data source lack the requisite data, no secondary data source is available. (*Id.* at 6). For three of the remaining Outcome measures, scoring "safe practices" including culture of leadership, feedback & intervention, and the nursing workforce, when Leapfrog Hospital Survey data is unavailable, there is similarly no secondary source available. This leaves us with the final four Structural/Process measures: Computerized Physician Order Entry (CPOE), Bar Code Medication Administration (BCMA), ICU Physician Staffing (IPS), and Hand Hygiene. Each of these measures ordinarily rely on the Leapfrog Hospital Survey as the primary data source. But what distinguishes them is the "imputation" applied to these measures where no Survey data is available

[1] The following information is taken from PX-001.0, which is Leapfrog's Spring 2023 Hospital Safety Grade Scoring Methodology. The information provided is consistent with Leapfrog's 2024 Methodology for purposes of offering background.

– in these situations, the "Secondary Data Source" is simply an assignment or "imputation" of a certain score.

The core issue in the instant case involves the Fall 2024 Methodology change pertaining to this "imputation" of missing data. The Spring 2023 Methodology incorporated a "two-step" imputation approach. (DE 195-1 at 15). "Step 1" used a hospital's most recent score on the measure.[2] Where no data was available for CPOE, BCMA, and Hand Hygiene, Leapfrog would turn to "Step 2" and assign a score reflecting the mean score assigned to other similar hospitals in the U.S. (*Id.*).[3]

In Fall 2024, Leapfrog altered the imputation model to address an understandable issue: Hospitals who did not respond to the Survey were receiving what Leapfrog perceived to be an undeserved benefit by imputing the cohort means of hospitals participating in the Survey for CPOE, BCMA, and Hand Hygiene. (DE 135 at ¶ 87). Now, Step 1 assigns a hospital its most recent score for CPOE, IPS, and Hand Hygiene measures if the hospital had a score assigned by Leapfrog in the previous two rounds of grades. (DE 195-2 at 15). Where no historical data exists for the last two rounds, Step 2 assigns a point value that is equivalent to "Limited Achievement." (*Id.*). Notably, this imputed Step 2 score is not zero. "Limited Achievement" scores account for and give credit to hospitals for having a CPOE and BCMA system, Hand Hygiene Policy, and ICU. (DE 135 at ¶ 103). Instead of zero, each of CPOE, BCMA, IPS and Hand Hygiene have different, seemingly random, Limited Achievement Scores: 15, 25, 5, and 15, respectively. (*Id.*).

[2] The 2023 Methodology explains that for CPOE, BCMA, and Hand Hygiene, if the hospital had a score assigned by Leapfrog in the previous four rounds of grades (*i.e.*, fall 2022, spring 2022, fall 2021, spring 2021). For IPS, it extended to a score assigned by Leapfrog in the previous five rounds, thereby including fall 2020 as a potential data source. (DE 195-1 at 15).

[3] Under Step 2 for IPS, Leapfrog used the CMS Cost Report to determine whether a hospital had one or more medical, surgical, and/or pediatric ICU beds, and if so, the hospital was assigned the associated "Limited Achievement" score. (DE 135 at ¶ 85; DAY 2 at 190).

These scores are "assigned" based on the lowest score of a participating hospital for that measure. Importantly, testimony explained that no single participating hospital received "Limited Achievement" across all four of these measures. (DAY 1 at 187-88).

Focusing only on the 2024 Safety Grade Methodology, and particularly only on the Structural/Process measures, the weights assigned to those measures differed based on whether the hospital participated in the Survey. Drawing on Leapfrog's Methodology, Dr. Nicholson offered testimony that emphasized the weight difference between participating and non-participating hospitals. For a participating hospital, the five CMS-derived Structural/Process scores constitute 15% of the total letter grade. The four Leapfrog Survey-derived measures that would otherwise be subject to imputation account for 24% of the grade. And the three "safe practices" scores account for 11%. (DAY 1 at 182). When grading a non-participating hospital, however, these three "safe practices" scores are excluded from the grading calculation; the 11% weight is then reassigned to the remaining two categories on the structure and process side, the CMS data and Leapfrog Survey-derived data. (*Id.* at 183; DE 195-2 at 22). As a result, the four imputed low scores carried increased weight—from 24% for a participating hospital to 31% for a non-participating hospital.

In arriving at this methodology change, Leapfrog has consistently relied on their Expert Panels. Leapfrog utilizes 13 separate and distinct expert panels to review and provide guidance on respective sections of the Leapfrog Hospital Survey ("Survey Panel") and a separate expert panel presides over Leapfrog's Hospital Safety Grades ("Safety Grades Panel"). (DE 135 at ¶ 37). The Survey Panels consist of ten experts, who offer guidance on the various measures. (DAY 3 at 90); (DE 195-107 at 2, 3). This includes an expert panel that oversees the CPOE, BCMA, IPS, and Hand Hygiene measures. (*Id.*). The Safety Grades Panel is charged with providing guidance to the Leapfrog Group on its grading methodology. The Safety Grades Panel debated the various approaches to account for missing data. (DAY 1 at 194). As Dr. Patrick Romano, who has served

on the Safety Grades Panel since 2011 explained, the Panel's role was advisory in nature. The Panel did not actually vote in favor or against the methodology change. (DAY 2 at 182-83).

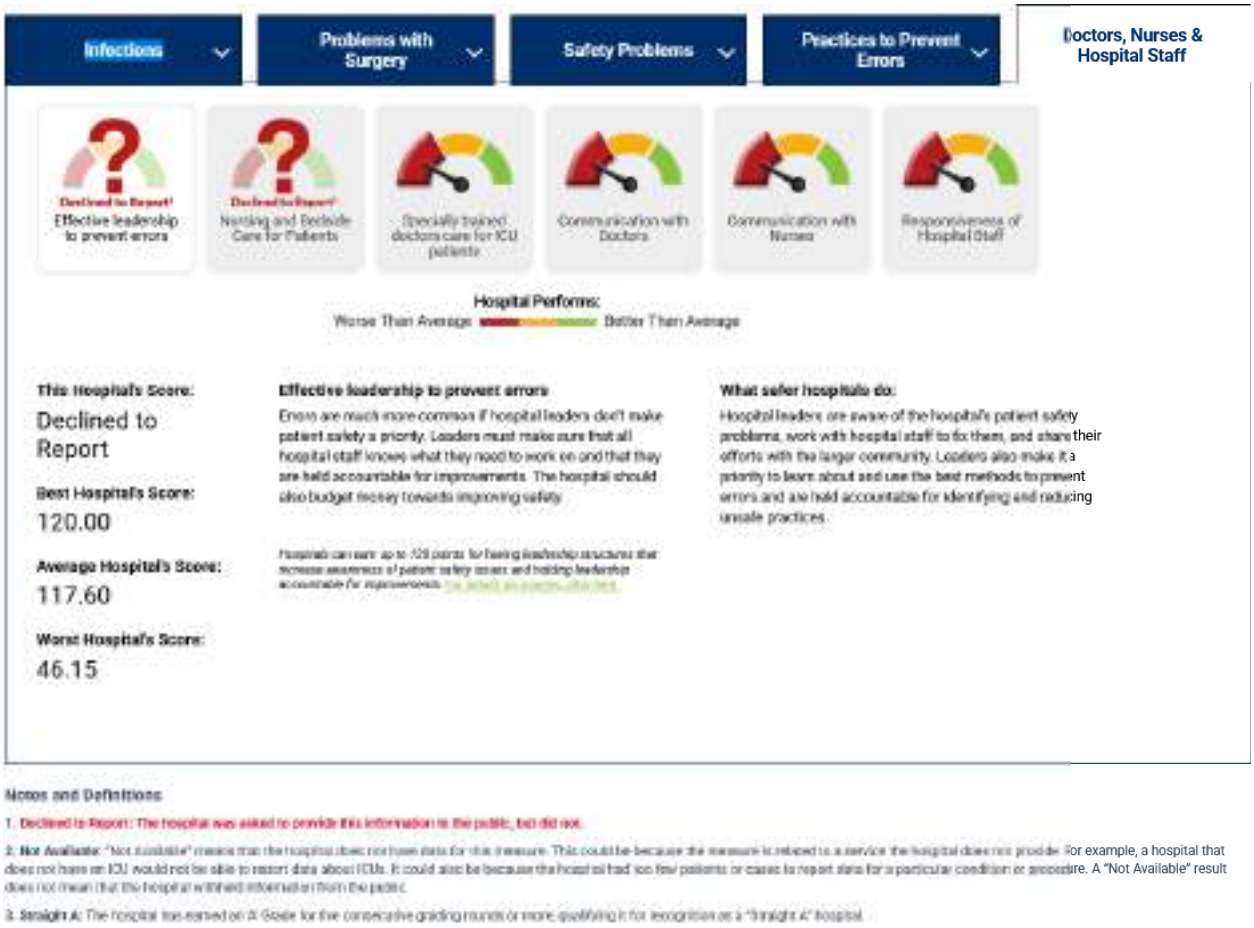
B. The Plaintiff Hospitals & The Leapfrog Website

The five Plaintiff Hospitals, owned and operated by Tenet Health Care, were some of these non-participants in the Leapfrog Survey. The Plaintiff Hospitals first chose to stop participating in the Leapfrog Survey during the COVID-19 pandemic because, as one Hospital CEO explained, they chose to reallocate resources in the face of significant operational strain. (DE 203 at ¶ 49). Following the 2024 methodology change, these non-participating hospitals received imputed scores on the four metrics, accounting for 31% of their total grade. Taking each hospital in turn, and as depicted in the chart below, Good Samaritan received a "C" Safety Grade in Spring 2024, prior to the methodology change and a "D" Safety Grade in Fall 2024, after the change; Delray Medical Center received a "D" Safety Grade in Spring 2024 and an "F" Safety Grade in Fall 2024; Palm Beach Gardens Medical Center received a "C" Safety Grade in Spring 2024 and an "F Safety Grade in Fall 2024, St. Mary's received a "C" Safety Grade in Spring 2024 and an "D" Safety Grade in Fall 2024, and West Boca Medical Center received a "D" Safety Grade in Spring 2024 and an "F" Safety Grade in Fall 2024. (*Id.* at ¶¶ 51, DE 204 at 36, 39).

Plaintiff Hospitals' Leapfrog Safety Grades					
	Delray	**Good Samaritan**	**Palm Beach Gardens**	**St. Mary's**	**West Boca**
Spring 2024	D	C	C	C	D
Fall 2024	F	F	F	D	D
Spring 2025	F	D	F	D	F
Fall 2025	F	D	D	D	D

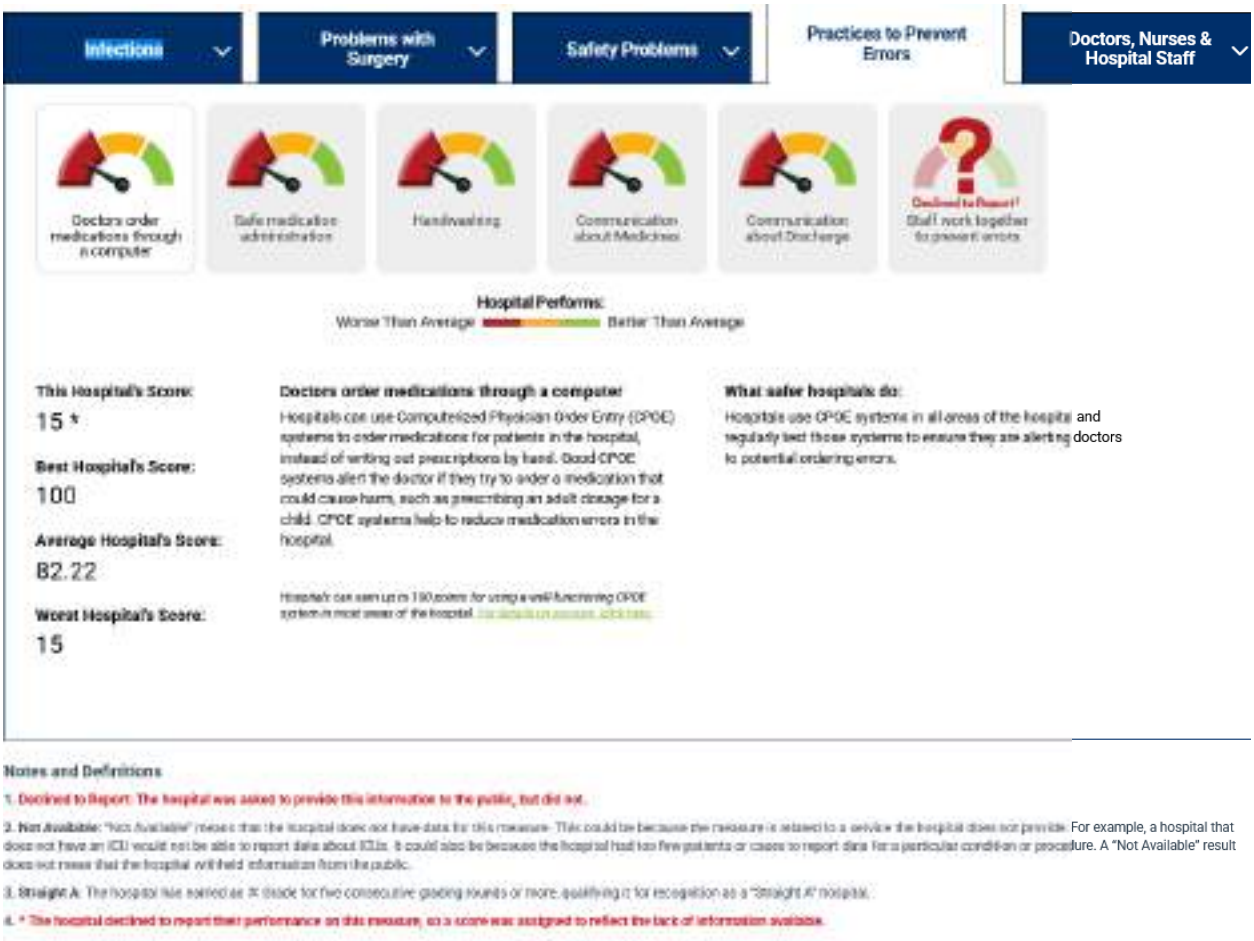
(See DE 129 at 151).

These grades are readily available and apparent on the Leapfrog Hospital Safety Grade website. On the Safety Grade Website, viewers can search for a hospital by city, state, zip code, or hospital name. After entering a search, the viewer is shown that hospital's Safety Grade with a hyperlink to "view the full score." If a viewer clicks or taps on a hospital's name, assigned Safety Grade, or "view the full score," the consumer is brought to that hospital's profile webpage, where the hospital's most recent Safety Grade is displayed at the top of the page. Here, the viewer may review recent past grades, the hospital's Survey results, or the specific measures comprising the hospital Safety Grade.



(*See* DE 203 at 15, 16).

On the hospital profile webpage, there are five tabs titled "Infections," "Problems with Surgery," "Safety Problems," "Practices to Prevent Errors," and "Doctors, Nurses & Hospital Staff." When a viewer clicks or taps on one of the five tabs, they are shown measures included in the tab category and a corresponding red, yellow, and green "gas gauge" for each measure. This gas gauge serves as an "evaluative label" by visually representing how Leapfrog has scored a hospital's performance on a measure. (DAY 2 at 9). Red conveys that Leapfrog has scored a hospital "Worse Than Average" performance; yellow conveys that Leapfrog has scored a hospital average performance; green conveys that Leapfrog has scored a hospital "Better Than Average" performance. A consumer can view a hospital's measure score by clicking or tapping the corresponding "gas gauge" graphic.



Each measure webpage shows "This Hospital's Score," "Best Hospital's Score," "Average Hospital's Score," and "Worst Hospital Score"; describes the measure; and includes "Notes and Definitions" footnotes beneath the measure descriptions. Every measure webpage for a non-responding hospital includes a red, bolded footnote under "Notes and Definitions," stating that hospital "**Declined to Report: The hospital was asked to provide this information to the public, but did not.**"

The scores for the four imputed Measures, CPOE, BCMA, Hand Hygiene, and IPS, can be found by clicking or tapping into the respective measures "Doctors order medications through a computer," "Safe medication administration," "Handwashing," and "Specially trained doctors care for ICU patients." Unlike the other tabs, only when a user clicks or taps on one of the four measures for a non-participating hospital, an asterisk (*) appears next to the measure score underneath "This Hospital's Score." The asterisk (*) is associated with a red, bolded footnote stating, "***The hospital declined to report their performance on this measure, so a score was assigned to reflect the lack of information available**" that is reflected in the "Notes and Definitions." Meanwhile, if a hospital does not respond to the Survey, the "safe practices" measures, "Effective leadership to prevent errors," "Nursing and Bedside Care for Patients," and "Staff work together to prevent errors," show a question mark displayed with "Declined to Report" over the respective gas gauge

on these measures for that hospital.

The scoring methodology can be accessed in two ways. Clicking a link at the top of a hospital's profile webpage that says "Detailed table view" takes a consumer to a new webpage that contains two tables displaying the hospital's most recent numerical score on each measure. After scrolling to the bottom, a user will see a hyperlinked text that reads, "For a full description of the methodology, click here."[4] Clicking or tapping the link takes the consumer to a PDF version of Leapfrog's current "Scoring Methodology" document.

[4] The accompanying demonstrative was taken from the Plaintiff Hospitals' Proposed Findings of Fact and Conclusions of Law (DE 136) that was submitted to the Court before trial, and before the Parties both submitted revised filings following trial.

This Hospital's Grade

(DE 136 at 109).

Alternatively, a viewer may also access the methodology by scrolling to the website footer, wherein a hyperlinked text reading "Methodology" is available under the header "For Hospitals."

DISCUSSION

Plaintiffs assert one claim seeking declaratory and injunctive relief against The Leapfrog Group, alleging a violation of the Florida Deceptive and Unfair Trade Practices Act (FDUTPA). Fla. Stat. § 501.201 *et seq*. (DE 74).

FDUTPA prohibits "[u]nfair competition, unconscionable acts or practices, and unfair or deceptive acts or practices in the conduct of any trade or commerce." Fla. Stat. § 501.204(1). A plaintiff may establish a violation of FDUTPA by proving either unfairness or deception. Fla. Stat. § 501.211 sets out the individual remedies available against a party that has been shown to violate FDUTPA. Notably, the requirements for damages and injunctive relief are somewhat distinct. In an action for injunctive relief, Fla. Stat. 501.211(1) permits "anyone aggrieved" to seek injunctive relief against "a person who has violated, is violating, or is otherwise likely to violate this part."

A. The Plaintiff Hospitals are Aggrieved Parties

As a threshold matter, any plaintiff must be "aggrieved" within the meaning of the statute. Whether the Plaintiff hospitals (as opposed to the consuming public) are "aggrieved" within the meaning of the statute is in dispute. Leapfrog seems to rely on *Macias v. HBC of Florida, Inc.*, in arguing that the Plaintiff Hospitals are not aggrieved. The court in *Macias* held:

> The clear intent of this statute as expressed by its plain language is to provide both equitable and legal remedies to private *consumers* who are aggrieved parties and/or have sustained actual losses because of a violation(s) under FDUTPA. Thus, in order for the *consumer* to be entitled to any relief under FDUTPA, the consumer must not only plead and prove that the conduct complained of was unfair and deceptive but *the consumer must also plead and prove that he or she was aggrieved by the unfair and deceptive act.*

694 So.2d 88, 90 (Fla. 3rd DCA 1997) (emphasis added); (DE 204 at ¶ 491). In effect, Leapfrog attempts to narrow the scope of who might be considered an aggrieved party by requiring that the party must also be a "consumer" in order to pursue injunctive relief.

But this reads language into the statute that simply is not there and undermines the broad reach of the term "anyone aggrieved." Although the term "aggrieved" is not defined in FDUTPA, relevant caselaw has explained it broadly as "being more expansive than 'damaged' or 'suffered a loss.'" *Ahearn v. Mayo Clinic*, 180 So. 3d 165, 172 (Fla. 1st DCA 2015). I agree that as part of this inquiry, all that is required at this step is the ability to "demonstrate some specific past, present, or future grievance." *Id.* at 173. Applicable caselaw has suggested that, just as a claimant need not be a consumer to obtain damages, a claimant seeking equitable relief similarly does not have to be a consumer so long as it may show it has been aggrieved and can establish a violation of FDUTPA. *See Stewart Agency, Inc. v. Arrigo Enters., Inc.,* 266 So. 3d 207, 214 (Fla. 4th DCA 2019) ("We [have] held … that although a claimant does not have to be a consumer to state a claim for actual damages under section 501.211(2), to satisfy all of the elements of a FDUTPA claim, it must show that a consumer was injured or suffered a detriment. Similarly, here, under section 501.211(1), an

entity may bring an equitable claim under FDUTPA, but only if it presents evidence of the required elements." (internal citations omitted)).

In any event, the Plaintiff Hospitals, not just patients, may be considered consumers of the Leapfrog's product. With the benefit of trial, it became clear that hospitals were a specific target of the information disseminated in the Leapfrog Grade. Testimony indicated that the poor scores would be used to "harass" the hospitals who chose not to participate, and that part of the general strategy was to "become a Disney villain," which at the least indicates that a central goal of the Hospital Safety Grade included shaping hospital behavior, like patient decision-making. (DE 203 at ¶ 113). For hospitals who were high performing, on the other hand, Leapfrog's marketing materials offer "designated logos" and licensing structures that enable those hospitals to promote their scores to employees, prospective employees, patients, and the broader community. (*Id.* at ¶ 120). Leapfrog's suggestion that there is a free alternative does not change the calculus here; the mere fact that hospitals may pay for licensed materials is sufficient to classify it as a consumer of that information.

And in my view, so too are various other third-parties who may have been aggrieved as a result of Leapfrog's Safety Grades Methodology. These parties would include the employees of hospitals that received non-participation assignments and the entities (e.g., insurers) who paid for and received data from the Hospital Survey. (*Id.* at ¶ 121). To illustrate why this is so, take for example, a mobile phone app for food delivery. Conceivably, the consumers of the app's functions extend beyond the customers who use the app to view restaurants and order. Various parties presumably alter their behavior in response to the changes to the app. Featured restaurants may offer deals, expedite food preparation strategies, and review their ratings to change behavior; delivery drivers may station themselves near restaurants that the app has identified as "hot spots," accept bundled orders, or operate only during peak windows. Similarly, in the hospital rating

context, changes to Leapfrog's Methodology may influence a range of actors beyond the hospitals. Ultimately, limiting the scope of *who* was a consumer of the Leapfrog Safety Grade improperly diminishes the impact the grade has on the patient and medical community, while undermining the noteworthy harms it imposes on each of them.

B. Leapfrog's Grades for Non-Participating Hospitals are Unfair and Deceptive

An aggrieved plaintiff is next required to prove that the defendant's practice is either "unfair" or "deceptive." Specifically, the aggrieved entity must identify a violation of FDUTPA, meaning "an unfair or deceptive practice which is injurious to consumers." *Stewart Agency, Inc.*, 266 So. 3d at 214. Caselaw has established that "unfair" and "deceptive" practices constitute two different concepts. The Florida Supreme Court has defined "unfair practice" as "one that offends established public policy and one that is immoral, unethical, oppressive, unscrupulous or substantially injurious to consumers." *PNR, Inc. v. Beacon Prop. Mgmt., Inc.,* 842 So.2d 773, 777 (Fla.2003) (cleaned up). Alternatively, the modern, three-factor unfairness test deriving from the FTC's 1980 Policy Statement, which is codified into Section 45(n) of the FTC Act sets out a different standard. *See* 15 U.S.C. § 45(n). Conduct under the modern three-factor test is "unfair" when it inflicts "consumer injury that is: (1) substantial; (2) not outweighed by any countervailing benefits to consumers or competition that the practice produces; and (3) … that consumers could not reasonably have avoided." *SMS Audio, LLC v. Belson, 2017 WL 1533941, at *3 (S.D. Fla. Mar. 9, 2017) (Middlebrooks, J.)* (citing *Porsche Cars N. Am., Inc.*, 140 So. 3d at 1096–97). Courts differ in which to apply, or even apply both. In the instant matter, the choice of tests is not outcome determinative, and it is therefore sufficient to apply both tests.

Separately, the Florida Supreme Court has defined "deception" as "a representation, omission, or practice that is likely to mislead the consumer acting reasonably in the circumstances, to the consumer's detriment." *Id.* In my Order denying the Parties' Motions for Summary

Judgment, I had suggested that past consumer harm could be a *required* showing to demonstrate an "unfair" practice, whereas a deception claim under FDUTPA need not require past harm and instead requires "deceptions that are likely to cause injury to a reasonable relying consumer." *Millennium Commc'ns & Fulfillment, Inc. v. Off. of Att'y Gen., Dep't of Legal Affs., State of Fla.*, 761 So. 2d 1256, 1263 (Fla. Dist. Ct. App. 2000); (DE 139).

On the same day as my decision, the Eleventh Circuit issued its opinion in *FTC v. Corpay, Inc.*, 164 F.4th 807 (11th Cir. 2026). Although "unfairness" and "deception" appear to target different acts or practices, this decision clarifies that the ultimate harm requirements to obtain injunctive relief remain identical. Specifically, the case emphasizes that a practice is "'unfair' if it '[1] causes ***or is likely to cause*** substantial injury to consumers which is [2] not reasonably avoidable by consumers themselves and [3] [is] not outweighed by countervailing benefits to consumers or to competition.'" *Id.* at 839 (quoting 15 U.S.C. § 45(n)) (emphasis added). The existing caselaw across state and federal law has sometimes conflated requirements across damages, injunctive relief, and requirements for deception as opposed to unfairness. However, this case is clear in emphasizing the proper standard for evaluating "unfair" practices. It explains that a practice cannot be "unfair unless the act or practice *causes or is likely to cause substantial injury to consumers* which is not reasonably avoidable by consumers themselves and not outweighed by countervailing benefits to consumers or to competition." *Id.* at 840.[5] In other words, "deception" and "unfairness" analyses under FDUTPA are each satisfied for purposes of injunctive and declaratory relief by a showing that a defendant's conduct is likely to cause injury to consumers.

[5] This case, although post dating the date set forth by Fla. Stat. § 501.203(3)(b) for which based upon the July 1, 2017, the standards of unfairness and deception set forth and interpreted by the Federal Trade Commission (FTC) or the federal courts serve as the operative law, nevertheless relies on interpretations advanced by the FTC as it existed as of July 1, 2017.

In any event, Plaintiffs have brought evidence establishing both past harm and a likelihood to harm consumers in the future. The various harms of non-participation assignments come to light upon review of *why* Leapfrog opted for the non-participation grade assignment, *how* Leapfrog leads the public to interpret and rely upon its data, and the conceivable, and actual, impacts of these practices.

1. *Leapfrog's Motives in Opting for the Assignment Methodology*

To begin, testimony offered at trial made clear why Leapfrog opted for a methodology that would assign non-participating hospitals the lowest score possible. And in determining whether its practices are deceptive or unfair (or both), Leapfrog's intent matters. Leapfrog understood that penalizing hospitals could impact their grades, which they intended consumers to rely on as *accurate* representations of hospital safety, thereby leveraging consumer perception to force hospitals back into participating in the Leapfrog Survey. Upon review, I find that Leapfrog's assignment methodology is punitive in nature.

Leapfrog suggests that the methodology cannot be punitive because of the nature of composite scoring. (DE 204 at ¶ 83). In support, Leapfrog contends that because composite scoring allows for so many combinations of measure scores, the four measures at issue in this case cannot drive the final grade. (*Id.* at ¶ 85). With respect to the four imputed scores, Leapfrog's expert, Mark Rule, a partner and managing director at a global consulting firm, testified that if he were to "pull out the four imputed inputs that the Plaintiffs take issue with" and ask whether "that really materially change[s] the grading" his conclusion is that it does not. (DAY 4 at 15:6—10). The effect of Rule's counterfactual is that by assigning no weight to the imputed scores by assigning each N/A, and instead redistributing those weights across the data points for which Leapfrog does have access to data, the poor scores of each of these hospitals remain the same. (DAY 4 at 20:18—23). In contrast, Plaintiffs' expert, Dr. Sean Nicholson, provides a competing counterfactual, which

he described as follows: "If the non-participants in fact participated, what I do in the counter factual is, I give the nonparticipants the mean score for the seven structure and process measures that are not available for the Leapfrog Group for the nonparticipants… That is the only change I am making." (Day 1 at 197:5—10).

Remarkably, the evidence at trial did not bear out a dispositive answer to whether these four do in fact create a meaningful difference in the Safety Grades. Each expert testified to the result of their counterfactual and ultimately arrives at different conclusions. Broadly, however, a counterfactual suggesting that the hospitals were nevertheless poor performers seems outside the ambit of a FDUTPA claim. Whether the scores are "technically or materially true is not persuasive" when the material implication of Leapfrog's representations is that it constitutes a full and accurate representation of patient safety. *F.T.C. v. Peoples Credit First, LLC*, 244 F. App'x 942 at 2 (11th Cir. 2007). As a general matter, it is the deceptive nature of representations made to the consumers that drives my analysis under FDUTPA.

There are nevertheless several considerations supporting Plaintiff's contention that the low assignments do, in fact, produce worse results. First, Mr. Rule's methodology is inapplicable to this case. Leapfrog *could* have assigned the hospitals "N/A" scores, but as a result would not have been able to grade those hospitals under its own principle preventing hospitals missing more than six measures from being scored. Leapfrog did not adopt this approach. Second, the facts of the case serve as the clearest evidence that grades did decrease following the methodology change, tending to show the adverse impact of the low assignment scores. Third, the testimony at trial suggests that Leapfrog viewed this methodology as a punitive measure, suggesting that Leapfrog *intended* that lower scores would be a result. For example, Dr. Patrick Romano, contemporaneously labeled the assignment penal in nature and wrote in an email to members of Leapfrog's expert panel and Leapfrog members, that: "if the goal is to penalize nonparticipants,

you might as well do so in a clear and unmistakable manner." (DE 189-55). He later continued to state that an alternative approach would not "achieve your strategic objective of penalizing nonparticipants," before characterizing the assignment a "backdoor approach to penalizing nonparticipation." (DE 189-55). Chief Executive Officer of Leapfrog, Leah Binder, had also contemporaneously suggested "imputing… the lowest score" would be a "very big deal to hospitals (and a major incentive to report to the survey)." (DE 193-52 at 1). The incentive was clear: the hospital should participate to avoid non-participation scores that could carry significant consequences.

The nature of this methodology change was also immediately clear to the commentators who responded to Leapfrog's request for comments. Testimony at trial revealed that four commentators opposed penalizing hospitals that choose not to devote resources to completing a voluntary survey each year and, instead, be allowed to opt out of the hospital Safety Grade. (DAY 2 at 257:20—23). Additionally, take for example, Dr. Romano's email to his colleagues at the University of California Davis ("UC Davis"), which received a D-grade. There, Dr. Romano chastised the decision not to participate in the Survey, and emphasized that such nonparticipation was "the real killer." (DE 191-3 at 2). Meanwhile, Plaintiffs proffered evidence that since Fall 2024, not a single non-participating hospital has received an "A" Safety Grade while subject to the non-participation penalty on all four measures. Leapfrog puts forward conflicting evidence, in the form of an email from Dr. Matthew Austin, a scientific advisor for the Leapfrog Group, who "quickly pulled the breakdown of Spring 2025 grades by survey submission status," which indicated that two hospitals that were assigned the penalties nevertheless received "A" grades. (DE 192-47 at 1). Compare this, however, with the 902 hospitals that submitted Surveys and received an "A" Safety Grade. (*Id.*) Or compare it with the fact that in Spring 2025, not a single participating hospital received an "F" failing grade. (DAY 1 at 189:3—6; DE 192-47 at 1). Taken together, it

may not be impossible for a non-participating hospital to score an "A," but it is certainly telling of the divergent outcomes that accompany nonparticipation and participation.

Evidence suggests that Leapfrog's approach worked. Dr. Romano's UC Davis chose to continue participating in the Survey following "peer pressure from other UC hospitals." (DAY 2 Trial at 169:3-17). And they were not alone. Participation following the 2024 change jumped from 73% to 79%; meanwhile, participation in 2023 was only 64%. (DE 193-109).

In sum, the contemporaneous testimony, internal communications, industry reaction, and resulting participation data collectively demonstrate that Leapfrog's lowest-score assignment was deliberately designed to coerce participation through reputational penalty, rendering the Methodology not merely strategic but excessively punitive.

2. *Leapfrog's Representations on How to Use the Grade*

Further deception is evident in how Leapfrog's website encourages consumers to rely on the Hospital Safety Grade both in its (1) descriptions of how to use the grade, and (2) explanations of how the data itself was collected.

On a page titled "How to Use the Grade," Leapfrog represents that it is offering users a "tool [that] can help guide your decision." (DE 195-31 at 1). It further states that "we know 'A' hospitals do a better job at preventing errors." (*Id.* at 2). In distinguishing reliance on historical grades from present grades, the website cautions consumers that patients should always decide on where to receive care based on a hospital's *current* Safety Grade. (*Id.*). It is also worth noting that Leapfrog disclaims to consumers that "[y]ou should never refuse care in an emergency because of a hospital's Safety Grade, but use this website as a guide for planned events and a research tool for potential emergencies." (*Id.*) Altogether, this section of the website clearly intends for consumers to depend on the information presented by Leapfrog in the ordinary course, and that information is based on "known" data.

A separate section of the website, titled "Frequently Asked Questions About The Leapfrog Hospital Safety Grade," explains that "Johns Hopkins Medicine researchers estimate that ***patients are twice as likely to die of a preventable problem at a "C," "D," or "F" hospital*** than an "A" hospital." (DE 195-23 at 1) (emphasis added).

When questioned on cross examination about this ominous language, Leapfrog's own Vice President of Development conceded that "Leapfrog want[s] consumers to think that visiting a hospital with a C, D or F grade could seriously injure or even kill them." (DAY 3 at 8:17—9:16). It does not strain credibility to presume that this type of warning would seriously deter a person from entrusting their health and safety, or their loved one's health and safety, to a D or F rated hospital. It may also cause concern for the various hospitals and employees involved in the health system, who face real reputational harm in the face of failing grades.

3. *Leapfrog's False Representations that the Data was Supported by Real Data and Reflected Actual Performance.*

Next, Leapfrog seeks to persuade the public of the soundness of its methodology, emphasizing on its website that the Safety Grades are supported by real data and reflect actual safety performance, as opposed to being driven by Survey participation of the rated hospitals. However, the assignments are anything but comprised of real data. At the highest level, Leapfrog explains on its Frequently Asked Questions that "the Hospital Safety Grade uses a public, peer-reviewed methodology, calculated by top patient safety experts under the guidance of a National Expert Panel." (DE 195-23 at 1). But this methodology was *not* peer-reviewed. (DE 163-1 at 90:15—17).[6] Moreover, in its "About the Grade" section. Leapfrog represents to website visitors that:

[6] Additionally, the Fall 2024 change in methodology was not approved by Leapfrog's Expert Panel or voted on by its Board of Directors. (DE 163-1 at 285:7–15 ("We did not query the [E]xpert [P]anel about whether they approved [the methodology] or not."; DE 163-2 at 105:18—22

> In some cases where a hospital's information is not available for a certain measure, Leapfrog uses a supplemental data source. In cases where a hospital's information is not available from any data source, Leapfrog has outlined a methodology for dealing with the missing data.

Of course, the central issue here concerns the methodology for dealing with the missing data – it suggests to a reasonable consumer that the grades assigned reflect actual performance when in fact they do not; they reflect nonparticipation. Compelling evidence supports this conclusion. Take Leapfrog's use of gas gauges, for example. They distinguish between a low gauge and a gauge prominently displaying a question mark with the caption "Declined to Report." These graphics signal to consumers that a gas gauge without the question mark reflects something about *actual* performance rather than missing, unavailable, or imputed low scores. Then, Leapfrog appends a ubiquitous footnote to *all* measure webpages, not just those for non-participants, stating "**Declined to Report: The hospital was asked to provide this information to the public, but did not."** The effect of this is to suggest that metrics not linked to this footnote are based on real data, even for non-participating hospitals. Similarly, rather than assigning a score of "zero" for a non-participating hospital – a value that would logically signal such non-participation and therefore a lack of information upon which to base a rating – Leapfrog instead chose arbitrarily low numbers (5, 10, 15 out of 100), the clear implication being that the hospital was graded based on *something,* when in truth it was based on nothing. Compounding the deceptive nature of these representations, Leapfrog also explains that Leapfrog would not grade certain hospitals missing more than six measures juxtaposed with the statement that "The Hospital Safety Grade reflects how well a hospital does on safety, not whether they complete the Leapfrog Survey." (DE 195-23

("[T]here was no board vote in June 2024 on whether [Leapfrog] should change its safety grade methodology.")).

at 2).[7] All of this is intended to create the false impression that Leapfrog's grades reflect actual performance. Or even at least *some* performance! But the grades are not based upon performance. The grades are the result of Leapfrog's acknowledged goal of punishing nonparticipants as a means of forcing hospitals to cooperate in submitting their Surveys. Taken together, there are simply too many suggestive labels implemented by Leapfrog that create the misleading impression that the scores assigned represented real data or performance.

Leapfrog attempted to cast its methodology in different light, but I remain unconvinced. For instance, Leapfrog offered the analogy that a teacher may explain to the student that they have received an "F" because, although you have answered, correctly, the first sixteen questions of a multiple-choice exam, the remaining questions were "short answer" questions. For these questions, you were expected both to answer the question correctly and to "show your work" in arriving at that answer. Here, although you have answered the question correctly, you nevertheless failed to show your work. In Leapfrog's view, the "answer" was Leapfrog's knowledge that the hospitals had *some* system in place for each of the assignment measures. So, for example, by having a handwashing system in place, the hospital was assigned the lowest possible score. Filling out the Survey, or showing your work, could mean a higher score. At first glance, such an example may seem apt, and even fair. But consider this wrinkle: you never took the test to begin with. In fact, you were never even enrolled in the class; and yet, your "F" is broadcasted for your peers, employers, and mentees to see. Here, the Plaintiffs never "enrolled" in Leapfrog's Survey, and they were inevitably punished for that decision. In my view, even a score of "0" would improperly

[7] To be sure, this representation was available in the methodology document, which suggests that if viewers could identify this representation, they also could have identified the assignment methodology. But the great weight of the evidence that any viewer will have already encountered has likely already caused a viewer to assume that the data presented means something more than non-participation before they arrive at the complex assignment methodology.

suggest to viewers that a hospital's performance is inadequate and falls far below its peers, when in fact the simple truth is that the hospital did not participate.

Additionally, there was simply no reason to suggest that the hospitals were actually performing as poorly as suggested by the scores. Several pieces of evidence are significant here. First, past performance by the Plaintiff Hospitals, prior to any potential free riding on the means of participating hospitals, suggested scores are conceivably much higher than the scores assigned following the Methodology change. In 2021, when the Plaintiffs last participated in the Survey, their score across each of the four measures totaled 370 out of a possible 400; compare this with 60 out of a possible 400 following assignment. (DAY 1 at 14:5—8). Second, although no participating hospital was assigned the lowest possible score across *all* four measures, the non-participating hospitals were. The average participating hospital in Spring 2025 obtained a score of 362 out of a possible 400 on these four measures; compare that with the 60 out of 400 obtained by the non-participating hospitals. Third, neither Leapfrog's expert Dr. Harris, nor Leapfrog itself, performed any analysis to support the notion that Survey nonparticipation or performance on CMS metrics could be a reliable indicator of whether non-participating hospitals actually perform worse on the three measures. (DAY 4 at 102:4—8, 102: 21—24). Fourth, in Fall 2024, Regina West, Quality Director of the Palm Beach Health Network, a coalition of the Plaintiff Hospitals, conducted a "What If" analysis indicating that, had scores not been imputed, the Plaintiffs could have received C grades. (DE 188-68). Fifth and finally, each of the Plaintiff Hospital CEOs testified that their hospitals implement the practices Leapfrog describes as those that "safer hospitals do" with respect to the four imputed measures. (DAY 1 66:6—9, 154:2—15, 241:14—242:9, 78:25—799:18; 198:1-17).

One defense proffered by Leapfrog is that the assignment is warranted because hospitals decline to participate in the Survey to avoid disclosure of poor safety performance—what Leapfrog

calls the "non-response bias." (Day 2 at 188-89: 16-7).[8] It is my view that this position is evidence only of a certain hubris on Leapfrog's part. We cannot be blind to the fact that the Survey is reasonably time intensive. Leapfrog's emphasis on non-response bias de-values, against some of their own testimony, the burdens this Survey imposes. It was Dr. Romano's position that the decision not to participate stemmed from that burden. It was Ms. Alex Campione, the program manager, who although she appeared to run away from her deposition at trial, nevertheless testified that completing the Survey demands "a tremendous amount of resources." (DAY 2 at 254:16—18). Finally, Ms. Leah Binder, the Defendant's CEO, testified that the Survey would require "two weeks of staff time." (*Id.* at 96:24—25 – 97:1—5). Testimony at trial made clear that the burdens of the Survey, in conjunction with resource constraints, are more than adequate to explain a hospital's decision not to participate. Leapfrog simply failed to present persuasive evidence of any non-response bias that would operate to justify its decision to change the imputation model to remove the capability of non-participating hospitals to freeride on the scores of participating hospitals,

All of this leads to the conclusion that, although imputation may be a sound methodology as a general matter, *this* method of imputation is neither reliable nor defensible. Ultimately the testimony of Ms. Campione rings true. The assignment is "mathematically arbitrary." (DAY 2 at 289:13—15). The result is grades purporting to represent actual patient safety, when in truth they represent punishment for nonparticipation in the Leapfrog Survey.

[8] In contemporaneous messaging, two Leapfrog employees – Alex Campione and Missy Danforth, Senior Vice President of Healthcare Ratings, who lead the design of the safety grade scoring system – comment that low assignment "would be drastic" but, as Campione notes, "we have to assume at some point that hospitals not reporting likely have poor or lapse in performance." (DE 189-23 at 3).

4. *The Inevitable Outcome of Unreliability.*

The methods used by Leapfrog, and the various representations Leapfrog made to website users, results in a foreseeable outcome: Reviewing the grade, a patient is likely to rely on that information, and this makes the "F" grade much more significant.

As a general principle, ratings matter. This is so in all sorts of contexts – we commonly are asked to submit online reviews for products and services we use on a daily basis: hotels, restaurants, salons, appliances, etc. Consumer expectations of an F-grade likely assume a total failure to meet minimum standards. In the hotel or restaurant context, perhaps a consumer may be willing to take that risk. In decisions about health care, however, the situations can involve life and death situations, thereby prompting immediate avoidance.

At trial, Plaintiff's expert, Jonah Berger, a Marketing Professor at the Wharton School of Business, added an academic lens to common sense conclusions concerning consumer behavior. As Mr. Berger explained, hospitals are recognized as a "good" that is outside the expertise and knowledge of the average consumer, who must rely on outside sources for information about the hospital's quality. (DAY 2 at 7:14—19). Mr. Berger referred to "evaluative labels," which he described as "grades, A through F, colors, like a green, yellow, red, maybe a happy face, neutral face, frowned face," all of which "can help consumers interpret otherwise numerical information." (*Id.* at 9:6—8). Given the difficulty of making decisions on health care, consumers are likely to turn to heuristics that help simplify those decisions. As a result, it stands to reason that a consumer, upon seeing an "F," promulgated by a watchdog organization committed to helping those consumers, would understandably draw nothing but negative conclusions about that hospital's safety and, expectedly, avoid that hospital.

Testimony at trial suggests that a reasonable consumer may not understand that a hospital has been assigned a score, the basis for that assignment, nor would they understand the

methodology itself. Of course, a consumer may access and view the disclaimer footnote, and she may even review the scoring methodology herself, as Leapfrog points out – it's all *technically* there on the website. But a user's ability to access the information does not automatically absolve Leapfrog of liability for deceptive or unfair practices, particularly where the information is difficult to find.

While it may be true that "[t]he presence of true information or a disclaimer can rebut a claim of deception," *Kurimski v. Shell Oil Co.*, 570 F. Supp. 3d 1228, 1246 (S.D. Fla. 2021) (citing cases), no such rebuttal occurred here. Even if true information is available to the Leapfrog user, a reasonable consumer is still deceived if the process of uncovering that truth is an impenetrable series of clicks and scrolls, only to find an obscure reference to the methodology buried in a document consisting of dozens of pages and not even labeled as being intended for consumers.

First, a consumer, upon seeing the "F" grade may not investigate further. Thus, in many cases, the deception may be complete as soon as the grade is viewed. But assuming they choose to investigate, the relevant footnote does not appear until and only when a user clicks or taps on one of the four measures for a non-participating hospital. Only then does an asterisk (*) appear next to the measure score underneath "This Hospital's Score." As mentioned above, the asterisk (*) is associated with a red, bolded footnote and states: "***The hospital declined to report their performance on this measure, so a score was assigned to reflect the lack of information available.**" ("Footnote 4"). Mr. Berger testified at trial that it required 23 clicks to arrive at Footnote 4.

Second, I find that most consumers are unlikely to ever locate Leapfrog's methodology document – the only place where a consumer could discover how Leapfrog's ratings *actually* work in terms of the tendency to cripple non-participating hospitals with failing scores. This is because the methodology document is buried within the Leapfrog website. On this issue, Plaintiffs offered

persuasive evidence in the form of Google Analytics, a service which tracks activity on websites.[9] The Google Analytics data showed that among all visitors to the Plaintiff Hospitals' Safety Grade webpages during the relevant period (between November 15, 2024 to August 4, 2025) approximately three percent accessed the Scoring Methodology document. (DE 203 at ¶ 100). From a hospital's individual Safety Grade webpage, a user must first click small, hyperlinked text located beneath individual measure descriptions stating, "For details on sources, click here," or alternatively click an inconspicuous "Detailed table view" link located at the top right of a hospital's profile webpage. (DE 187 at ¶ 335). From there, the user is met with a table replete with specific data, and to access the Scoring Methodology the user must then scroll to the bottom of the page and click a small, gray-font hyperlink stating, "For a full description of the methodology, click here." (*Id.* at ¶ 337). The Scoring Methodology reveals the imputation process on page 16. And the language describing this process is dense. Ms. Binder, for example, testified that the Scoring Methodology document "it is not meant to be used by the average lay person who would probably not be interested in reading all 26 pages." (DAY 3 at 70:11—14).

In sum, the average consumer is met with evaluative label after evaluative label and hinderance after hinderance before arriving at a complex methodology. In all likelihood, the user scrolled quickly to any non-failing hospital on the Safety Grade webpage. And all of this is what Leapfrog intended.[10] The resultant harms are foreseeable and potentially quite severe. Patient and

[9] Leapfrog argues that the Google Analytics data is unreliable and cannot serve as evidence of whether a reasonable consumer understood Defendant's website or whether any consumer was deceived. (DE 204 at ¶ 55). But this argument extends beyond the purpose of the Google Analytics data. I agree that it would not in itself serve as evidence of confusion or deception. Nevertheless, it certainly tends to show that consumers who have viewed all the initial information previously discussed are unlikely to continue on and review the methodology. In my view, it adds perspective to other testimony detailing how a consumer may access and review the methodology from the hospital's Safety Grade webpage, which requires them to take multiple steps.

[10] I am not persuaded by Leapfrog that its website is accessible to average consumers, insofar as it concerns arriving at and understanding the methodology. (DE 188-13). The UX testing report is

prospective employee views of the Plaintiff hospitals are likely adversely affected in a competitive health industry environment. Patients are likely to delay care and seek other options than the hospitals closest to them, or even the hospitals acutely equipped for the patient's particular needs or ailments. Presumably understanding the power of their ratings and the influence it could have, Leapfrog engaged in a targeted campaign against the Plaintiff Hospitals.[11] Leapfrog witnesses admitted that Leapfrog purchased Google advertisements using funds from a non-profit grant from Google to specifically target the Plaintiff Hospitals so that consumers in designated Florida zip codes searching for the Plaintiff Hospitals would be shown the failing Safety Grades. (DE 203 at ¶ 112); (*see also* DE 192-75 at 3 ("We'd also like to set it up so that when someone searches for any of the five specific hospitals, it shows an ad displaying their Hospital Safety Grade.")).[12] The actual harms faced by the Plaintiff Hospitals, therefore, come as no surprise. Each of the CEO's testified to numerous harms, including patient confusion and erosion of community confidence caused by the Safety Grades.

clearly concerned with communicating the health scores and what they mean for patient safety, and how to use that information. (*Id.* at 3). But this is different from being able to understand how those scores are derived.

[11] Even beyond the marketing efforts discussed above, Leapfrog's Safety Grades natural garner significant attention. Millions of consumers visit Leapfrog's website (www.hospitalsafetygrade.org) each year, but the website is only the starting point. (*See* DE 163-4 at 104:8–14). The Fall 2024 Safety Grades alone generated "772 online articles from 435 different publications with a reach of 11.2 billion." (DE 193-76); (*see also* DAY 3 at. 11:7–10 (confirming "reach of 11.2 billion people")). A coverage report lists the total volume of coverage, including 722 online articles, 160 unique print placements, 239 broadcast placements, 444 press release pickups, and 85 hospital-issued publications. (DE 193-77 at 2). The Plaintiff Hospitals' Grades were featured in numerous news articles with headlines such as "bottom" and "worst South Florida hospitals for patient safety." (DE 193-104 at 1).

[12] It is worth noting here that patients are not the only members of the community who are likely to be harmed as a result of these grades. So too are the doctors, nurses, and other healthcare staff who may reasonably rely on Leapfrog Data in making employment decisions. Meanwhile, insurers and health plans would foreseeably rely on Leapfrog data when determining where beneficiaries should obtain medical care.

- Delray CEO Ms. Havericak testified regarding a patient who initially declined surgery at Delray because she was concerned about the Safety Grade and feared that she would "die" at the hospital. (DE 203 at ¶ 146).
- St. Mary's CEO, Cynthia McCauley, testified According to a brand analysis that measured the public's perception of St. Mary's from the fourth quarter of 2024 to the second quarter of 2025, the percentage of patients that would choose St. Mary's fell from 78 percent to 55 percent; "the only thing that changed in a year was the Leapfrog rating." (*Id.* at ¶ 165).
- West Boca CEO Mr. Hanlon described a patient identified as J.D. who presented to West Boca with a compound fracture of the finger—an open fracture carrying risks of infection and serious complications, including "loss of limb or life." (*Id.* at ¶ 173). Mr. Hanlon testified that West Boca was well-equipped to treat the injury—it is "one of the few hospitals in the county that [has] a dedicated hand surgery" unit, has "specialized physicians," and "perform[s] better than average" on surgical site infection metrics. Yet, this patient was initially admitted to West Boca Medical Center for urgent surgery but, as reflected in the contemporaneous record, he then "verbalized" that he "wanted to go to" a different hospital "against medical advice" "due to the leap frog reviews." (DE 191-36). Despite being advised by physicians and nursing staff of the risks of leaving against medical advice, the patient left West Boca after his daughter viewed the Leapfrog Safety Grade. (DE 203 at ¶ 173). Mr. Hanlon testified that J.D. incurred financial harm as a result of leaving West Boca against medical advice, including receiving a bill for the intake and treatment provided prior to his departure—cost that he would likely incur again at his subsequent treatment facility. (*Id.* at ¶ 174).

- Mr. Hanlon also testified regarding another patient, identified as F.W., who was admitted and scheduled for surgery at West Boca for an underarm infection but left against medical advice in the early morning hours after seeing media coverage related to West Boca's Safety Grade. Mr. Hanlon testified that F.W. also received a bill for care at West Boca, and, like J.D., would likely have been "double-billed" at a subsequent treatment facility. (*Id.* at ¶ 175).
- Good Samaritan CEO Ms. Montgomery testified that she explained the Survey process to the patient, but the patient instead sought care at Jupiter Medical Center, a competitor of the Community Hospitals and an "A" rated hospital as determined by Defendant. In my view, financial obligations aside, each instance of a patient delaying care is a significant and unnecessary harm resulting from the Safety Grades.

In addition to these specific instances, general trends tend to show the detrimental effects of the Hospital Safety Grade. Walk-ins declined at every hospital and the CEOs attributed those declines to the Safety Grades, after investigating other potential causes. (DE 203 at ¶ 249). Ms. Havericak testified that from 2024 through last year, Delray's EMS volume increased by about six percent, while walk-in emergency department volume *decreased* by approximately seven to eight percent. (*Id.* at ¶ 249). Or take West Boca, where Mr. Hanlon testified that emergency-department walk-in volume declined by approximately 15 percent from 2024 to 2025 when EMS volume (measuring instances where patients do not elect which hospital treat them) was down only three percent. (DAY 2 at 90:14—16). This narrative extended across all of the Plaintiff Hospitals.

Testimony also showed that patients presented to other hospitals "first" and were later transferred when those hospitals could not provide needed care, creating risks of delay in treatment. Take, for example, Ms. McCauley's testimony that during the same period in which walk-in

emergency department volume declined, the number of patients *transferred* to St. Mary's increased significantly, particularly from Jupiter Medical Center, a competing "A"-rated hospital. She testified that in her career at St. Mary's she has never seen transfers so high: In 2025, Jupiter Medical Center made 568 requests to transfer patients to St. Mary's, meaning patients are "choosing somewhere else first." (*Id.* at ¶ 168). This is even though, as Ms. McCauley testified, approximately half of the transfer requests involved pediatric patients, for whom St. Mary's serves as the region's only children's hospital and maintains 30 to 40 pediatric specialists. (*Id.* at ¶ 169).

Extending beyond patients, other third parties in the medical community are harmed by Defendant's actions. Insurers, among others, license the Safety Grades data. For example, in 2022 several groups entered into contracts with Leapfrog to obtain data for as low as $7,500 to as high as $252,607. (DE 194-41 at 8).

To be sure, I do not fault Leapfrog for engaging in this licensing structure to support their broader mission. But it is worth noting the relationship between the value of increased Survey participation and the significance of the data Leapfrog licenses. (*See e.g.,* DE 194-11 at 2 ("To maximize the value of The Leapfrog's Group Data for licensing purposes the level of participation should continue to be increased so it can be perceived as the most complete data set and thus allowing defense of our pricing model and its price points.")). It appears that the goal to maximize revenue came at the cost of comprehensive and accurate Safety Grades. The result is that various parties – the hospitals, their employees, the insurers, and of course the patients themselves – were and are foreseeably injured.

Additionally, letters sent by Humana Military to several of the hospitals urge them to address "their performance on safety measures" indicate further confusion. *(See e.g.,* DE 192-90). The Humana letter did not reflect any understanding that these hospitals did not participate in the Survey or that the Safety Grade resulted from nonparticipation, nor did it reference Leapfrog's

methodology. Instead, the letters reflect the misimpression that Leapfrog's Safety Grades measured the Plaintiff Hospitals' actual safety performance.

The outcome of this analysis is that the Methodology in conjunction with the representations made to the viewing public render Leapfrog's practices both unfair and deceptive.

They are unfair because under either test for unfairness – the FTC's 1980 or 1964 test – the record shows that Leapfrog uses the threat of arbitrarily assigned Safety Grades to coerce participation in the Survey among hospitals that are unwilling or unable to endure what one commentator described as "blackmail" designed to increase participation. (DE 194-145 at 1).

As mentioned above, the 1980 test requires me to find substantial consumer injury not outweighed by countervailing benefits to those consumers, who could not have reasonably avoided those injuries. First, as discussed, this produced substantial harm on a wide variety of consumers and is likely to continue producing a range of detrimental outcomes. Second, these injuries are "not outweighed by any countervailing benefits to consumers." *SMS Audio*, 2017 WL 11631378, at *3.[13] In my view, the only benefit of the deceptive methodology accrues to Leapfrog. Third, I find that consumers across the spectrum could not have reasonably avoided these injuries. Hospitals were effectively coerced into participation or else suffer a significant penalty, and their grades are broadcasted to viewers. (DE 163-4 at 187:8—22). Prospective patients are left unlikely to understand the assignment and its impact, nor are they likely to arrive at that explanation. Likewise, medical staff, employers, and insurers could not reasonably avoid the Safety Grades, which reach them through media coverage, employer dissemination, and search-driven targeted advertising, without an accompanying explanation of the methodology. Although these are more

[13] Defendant argued that the non-participation assignment increases participation and thereby improves safety, but a review of the facts establishes that no record supports a contention that the penalty improves safety outcomes.

sophisticated parties, it is my view that the various harms they experience sprawl from the negative feelings patients have or are likely to have as a result of seeing a failing grade.

Under the 1964 test, these same practices offend established public policy and are otherwise unscrupulous. The outcome of these acts is that they are substantially injurious to consumers. *Marrache v. Bacardi U.S.A., Inc.*, 17 F.4th 1084, 1098 (11th Cir. 2021) (quoting *PNR, Inc.*, 842 So. 2d at 777). The record shows that Leapfrog's conduct evinces the kind of "deceptive and bullying conduct" that fits within established Florida public policy. *Marco Island Cable v. Comcast Cablevision of S., Inc.*, 312 F. App'x 211, 213 (11th Cir. 2009). This bullying conduct is oppressive because non-participating hospitals face a severe penalty, and it is unscrupulous because the record shows that Leapfrog is not forthcoming to the public about how it calculates its Safety Grades or what they represent. And, once again, these practices produced real harms and those harms are likely to continue in the future.

C. Remedy

I now turn to the appropriate remedies for Leapfrog's FDUTPA violation. For the reasons discussed below, permanent injunctive relief and declaratory relief are warranted.

A permanent injunction requires (1) actual success on the merits, (2) irreparable injury, (3) a balance of the equities that favors the Plaintiffs, and (4) consistency with the public interest. *Klay v. United Healthgroup, Inc.*, 376 F.3d 1092, 1097 (11th Cir. 2004). Each element of this test is satisfied here. First, the Plaintiff Hospitals have established actual success on the merits. Plaintiffs have establish that Leapfrog's Safety Grades, methodology, and associated representations are unfair (by distorting consumer choice and attempting to coerce hospital participation in Leapfrog Survey) and deceptive (by misleading consumers about how Leapfrog calculates its Safety Grades). Second, the Plaintiff Hospitals have established both ongoing and future irreparable injuries. Irreparable injuries are those that "cannot be undone through monetary remedies."

Ferrero v. Associated Materials, Inc., 923 F.2d 1441, 1449 (11th Cir. 1991). The "loss of customers and goodwill" has long been considered "irreparable." *Id.* Plaintiffs have adequately shown a range of harms including patient diversion and delay of care, physician concerns, insurer inquiries, and declines in patient volume. Third, the balance of the equities strongly favors the Plaintiff Hospitals. As discussed earlier, Leapfrog's practices harm the hospitals, insurers, employees, and patients; the only beneficiary of this methodology is the Leapfrog itself. This trade-off is simply not worth undermining trust in publicly disseminated safety information, even if it has the potential to encourage *some* hospitals to participate. Finally, relief for the Plaintiff Hospitals is in the public interest. The strong need "[t]o protect the consuming public and legitimate business enterprises" from "deceptive" and "unfair acts" emanating from the Florida Statute's description of the purpose of FDUTPA clearly supports Plaintiffs in this action. Fla. Stat. § 501.202(2).

In light of these findings, Plaintiffs request four discrete forms of injunctive relief. They first request that I enjoin Leapfrog from "assigning a Safety Grade to the [Plaintiff] Hospitals under the current methodology or any similar methodology that: (i) assigns assumed or imputed values to calculate Safety Grades due to the lack of hospital-provided performance data; (ii) scores non-participating hospitals differently than participating hospitals by using different values or using differently weighted values to calculate Safety Grades; or (iii) that otherwise reduces a hospital's Safety Grade due to the failure to provide performance data." (DE 203 at ¶ 288). They next request that I order Leapfrog, within five business days of judgment, to "withdraw from its websites and cease promoting the deceptive and unfair Safety Grades assigned to the [Plaintiff] Hospitals for Fall 2024, Spring 2025, and Fall 2025." (*Id.* at ¶ 288). *Third*, Plaintiffs ask that within 30 days of judgment, Leapfrog should be required to send "corrective disclosures to all entities that paid to license the Fall 2024, Spring 2025, and Fall 2025 Safety Grades, disclosing that those Safety

Grades were found to be deceptive and unfair in this action." (*Id.* at 293). Lastly, Plaintiffs request that Leapfrog "be required to place the same corrective disclosures in future contracts, print and electronic advertising materials, and other print and electronic documents that promote paid licensure of the next six cycles of Safety Grades accessible to or in the following five zip codes: 33401, 33407, 33410, 33428, and 33484." (*Id.* at 294).

Any such injunction should be broad enough to ensure that the Community Hospitals are afforded "complete relief." *Califano v. Yamasaki*, 442 U.S. 682, 702 (1979). As a result, courts in the consumer-protection context have authorized broad, multifaceted injunctions where necessary "to ensure future compliance" and that consumers are treated "fairly." *Corpay, Inc.*, 164 F.4th at 849 (affirming injunction compelling multiple disclosures and business reforms). At the same time, the Court is mindful that the injunction should be "no more burdensome to [Defendant] than necessary" to achieve those goals. *Califano*, 442 U.S. at 702.

As a preliminary matter, it is important to identify precisely what concerns me about Leapfrog's behavior. Leapfrog is effectively a watchdog organization which serves as a voice for transparency and a key catalyst in the public reporting of patient quality and safety data that is available to consumers today. (DAY 3 at 86:12—21). But serving as a watchdog does not mean that Leapfrog gains some right to Plaintiffs' private data. Further, recognizing its power and ability to influence consumer decisions as a watchdog, under the guise of patient safety, Leapfrog cannot use this leverage to pressure and penalize hospitals into participating. In other words, Leapfrog does not have a right to the benefit of Plaintiffs' participation; conversely, it does not have the right to punish them when they have not received that benefit.

As a result, any injunctive relief must clearly prevent a framework where Leapfrog may request data from the Plaintiff Hospitals and assign them scores if those hospitals do not participate. Upon review, I find that each of the requested forms of injunctive relief are appropriate,

except for Plaintiffs' fourth request, requiring corrective disclosures for the next six cycles. Although Leapfrog should still be required to provide corrective disclosures, requiring them do so for three years is excessive.

CONCLUSION

In 2011, Leapfrog first embarked on developing the Safety Grade with the assistance of an Expert Panel. (DE 203 at ¶ 19). The Expert Panel's work, including its approach to handling missing data, was memorialized in a 2013 peer-reviewed publication. (*Id.*). That publication reflected the Expert Panel's judgment that the Safety Grades were comprised of composite scores "based on what was known about the hospital's performance, with no penalties for missing data" and to "avoid creating a structural bias in favor of Leapfrog-reporting hospitals." (*Id.* (citing PX-202.0)). The Defendant's Mission, a valiant one, has remained consistent, but it appears as though the Defendant has strayed from these founding principles. Accordingly, it hereby **ORDERED AND ADJUDGED** that Judgment should be entered against Defendant and in favor of Plaintiffs. The declaratory judgment will be entered by separate order.

INJUNCTIVE RELIEF

Leapfrog, and Leapfrog's officers, agents, servants, employees, and attorneys, and all other persons in active concert or participation with any of them who receive actual notice of this Order by personal service or otherwise, whether acting directly or indirectly, comply with the following commands:

1. Leapfrog must cease assigning a Safety Grade to the Community Hospitals under the current methodology or any similar methodology that: (i) assigns assumed or imputed values to calculate Safety Grades due to the lack of hospital-provided performance data; (ii) scores nonparticipating hospitals differently than participating hospitals by using different values or using differently weighted values to calculate Safety Grades;

or (iii) that otherwise reduces a hospital's Safety Grade due to the failure to provide performance data.

2. Within 5 business days of judgment, Leapfrog must withdraw from its websites and cease promoting the deceptive and unfair Safety Grades assigned to the Community Hospitals for Fall 2024, Spring 2025, and Fall 2025.
3. Within 30 days of judgment, Leapfrog must send corrective disclosures to all entities that paid to license the Fall 2024, Spring 2025, and Fall 2025 Safety Grades, disclosing that those Safety Grades were found to be deceptive and unfair in this action. Leapfrog must file a declaration documenting the reasonable and diligent efforts it has undertaken to accomplish this directive within 45 days of judgment.
4. Leapfrog must place the same corrective disclosures in future contracts, print and electronic advertising materials, and other print and electronic documents that promote paid licensure of the next cycle of Safety Grades accessible to or in the following five zip codes: 33401, 33407, 33410, 33428, and 33484.
5. Leapfrog must refrain from taking any action to circumvent the relief set out above. The Court retains jurisdiction to enforce compliance with these commands. *See Alderwoods Grp., Inc. v. Garcia*, 682 F.3d 958, 970 (11th Cir. 2012).

SIGNED in Chambers, at West Palm Beach, Florida, this 6th day of March, 2026.

Donald M. Middlebrooks

cc. Counsel of Record

UNITED STATES DISTRICT COURT
SOUTHERN DISTRICT OF FLORIDA

CASE NO.: 25-CV-80526-MIDDLEBROOKS

GOOD SAMARITAN MEDICAL CENTER, INC., DELRAY MEDICAL CENTER, INC., PALM BEACH GARDENS COMMUNITY HOSPITAL, INC. D/B/A PALM BEACH GARDENS MEDICAL CENTER, ST. MARY'S MEDICAL CENTER, INC., AND WEST BOCA MEDICAL CENTER, INC.,

Plaintiffs,

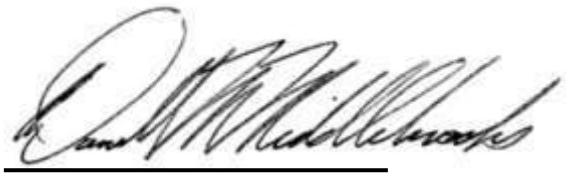
v.

THE LEAPFROG GROUP,

Defendant.
_____/

ORDER

On March 6, 2026, I entered an Order following Bench Trial, finding in favor of Plaintiffs as to their only Count alleging that Defendant violated the Florida Deceptive and Unfair Trade Practices Act (FDUTPA). Fla. Stat. § 501.201 *et seq*. (DE 212). Final Judgment in favor of Plaintiffs is appropriate. Accordingly, it is hereby **ORDERED and ADJUDGED** that:



(1) Final Judgment is hereby **ENTERED** in favor of Plaintiffs and against Defendant as to Plaintiff's FDUTPA claim, in accordance with my Order Following Bench Trial (DE 212).

(2) Pursuant to the request for declaratory judgment, the Court finds as follows: Defendant Leapfrog's Fall 2024, Spring 2025, and Fall 2025 Safety Grades as applied to the Plaintiff Hospitals, the public representations Leapfrog makes about how it calculates those Safety Grades, and Leapfrog's punitive grading methodology assigning failing 'safety' scores in the absence of actual data are deceptive and unfair under FDUTPA.

(3) The Clerk of Court shall **CLOSE this CASE** and **DENY** all pending motions **AS MOOT.**

(4) The Court **RETAINS** jurisdiction to decide any issues with respect to attorneys fees or costs.

SIGNED in Chambers at West Palm Beach, Florida, this 3rd day of April, 2026.

Donald M. Middlebrooks
United States District Judge

WEST PALM BEACH DIVISION

CASE NO. 9:25-CV-80526-DMM

GOOD SAMARITAN MEDICAL CENTER, INC., et al.,	)
Plaintiffs,	)
v.	)
THE LEAPFROG GROUP,	)
Defendant.	)

DECLARATION OF THE LEAPFROG GROUP

I am submitting this Declaration on behalf of the Defendant, THE LEAPFROG GROUP ("Leapfrog"), in accordance with this Court's Order (DE 212) for injunctive relief and hereby state as follows:

1. My name is Leah Binder. I am over 18 years of age, of sound mind, and capable of making this declaration. I make the statements in this declaration based on personal knowledge as a representative of The Leapfrog Group and in communications with my colleagues. If called and sworn as a witness, I could and would testify competently to the facts stated in this declaration.

2. I am the President and Chief Executive Officer of The Leapfrog Group, the Defendant in this action.

3. On March 6, 2026, this Honorable Court entered an Order granting injunctive relief against The Leapfrog Group. (DE 212). Leapfrog has fully and timely complied with this Court's Order. I submit this Declaration on behalf of The Leapfrog Group to document and demonstrate the reasonable and diligent efforts it has undertaken to comply with and accomplish the Court's directive.

4. Even as it complies in good faith and in recognition of its legal obligations, Leapfrog respectfully considers aspects of the injunction to be injurious to its mission and an impediment to providing truthful and legally protected statements that inform the public on matters of deep public concern, including the relative safety and other characteristics of various hospitals.

Nevertheless, Leapfrog understands that the injunction must be complied with so long as it remains in place and has gone to great lengths to comply, as further described below. Leapfrog respectfully reserves rights to seek appropriate relief from this Court and potentially from the United States Court of Appeals for the Eleventh Circuit on appeal.

I. COMPLIANCE WITH PART-ONE OF THE INJUNCTIVE RELIEF.

5. First, Leapfrog was ordered to "cease assigning a Safety Grade to the Community Hospitals under the current methodology or any similar methodology that: (i) assigns assumed or imputed values to calculate Safety Grades due to the lack of hospital-provided performance data; (ii) scores nonparticipating hospitals differently than participating hospitals by using different values or using differently weighted values to calculate Safety Grades; or (iii) that otherwise reduces a hospital's Safety Grade due to the failure to provide performance data." (DE 212, pp. 40-41, ¶1).

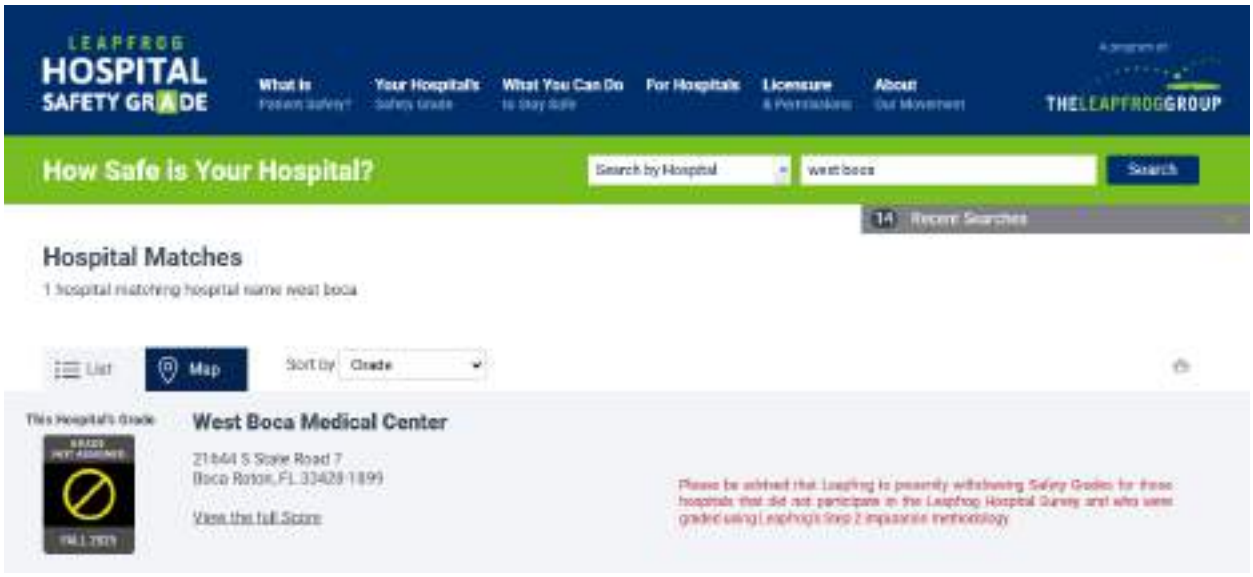
6. In compliance with part-one of this Court's injunctive relief, Leapfrog has ceased assigning Safety Grades, under its current methodology, to each of the Plaintiff hospitals.

7. In further compliance, Leapfrog is not assigning Spring 2026 Safety Grades to any of the Plaintiff hospitals.

8. In addition, Leapfrog has gone above and beyond what this Court's order requires insomuch as Leapfrog has ceased assigning Safety Grades for all non-participating hospitals (477 in total from Fall 2025) that did not submit a Leapfrog Hospital Survey and received Step 2 imputation under Leapfrog's Safety Grade methodology. Leapfrog firmly believes that its principles and methodology should apply equally to all hospitals nationally. Following thorough review and deliberation, Leapfrog has concluded that it cannot fairly comply with the Court's injunction as to only the Plaintiff Hospitals while simultaneously rating other non-participating hospitals in ways that diverge. Accordingly, Leapfrog would be betraying its own values and inflicting even worse injury upon its mission if it continued to assign Safety Grades for non-participating hospitals other than the Plaintiff Hospitals while discontinuing any such assignment for the Plaintiffs Hospitals.

9. Likewise, Leapfrog is not assigning any Spring 2026 Safety Grades for non-participating hospitals that did not submit a Leapfrog Hospital Survey and would have received Step 2 imputation under Leapfrog's Safety Grade methodology.

10. Likewise, Leapfrog is not publishing any Fall 2026 Safety Grades to any of the Plaintiff hospitals or non-participating hospitals that did not submit a Leapfrog Hospital Survey and would have received Step 2 imputation under Leapfrog's Safety Grade methodology.

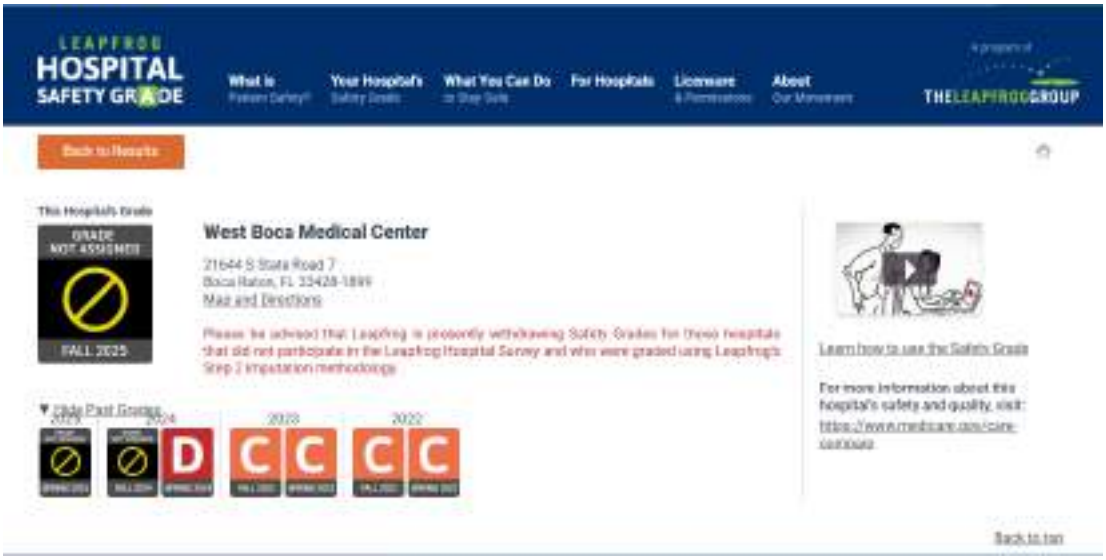


11. Absent further judicial order granting modification or other relief, which Leapfrog respectfully reserves all rights to pursue, including by way of an appeal, Leapfrog has and will continue to comply with part-one of this Court's injunctive relief. (DE 212, pp. 40-41, ¶1).

II. COMPLIANCE WITH PART-TWO OF THE INJUNCTIVE RELIEF.

12. Second, Leapfrog was ordered to "[w]ithin 5 business days of judgment, . . . withdraw from its websites and cease promoting the deceptive and unfair Safety Grades assigned to the Community Hospitals for Fall 2024, Spring 2025, and Fall 2025." (DE 212, p. 41, ¶2).

13. In compliance with part-two of this Court's injunctive relief, on March 13, 2026, within five (5) business days of the injunction order, Leapfrog withdrew each of the Plaintiff hospital's Safety Grades from its public reporting website (www.hospitalsafetygrade.org) for Fall 2024, Spring 2025 and Fall 2025. Leapfrog does not display Safety Grades on any other website other than its public reporting website (www.hospitalsafetygrade.org).



14. When conducting a search of the Plaintiff hospitals, their previously assigned Safety Grade for Fall 2025 now reflects a symbol that states "GRADE NOT ASSIGNED." For example, on www.hospitalsafetygrade.org, a search for each of the Plaintiff hospitals shows the following:

15. Leapfrog removed all gas gauge icons depicting performance on measures used to calculate the Hospital Safety Grade for each of the Plaintiff hospitals from its public reporting website (www.hospitalsafetygrade.org).

16. Leapfrog removed all measure scores for each of the Plaintiff hospitals from its public reporting website (www.hospitalsafetygrade.org).

17. When clicking on "View the full Score" for each of the Plaintiff hospitals, their previously assigned grades for Fall 2024, Spring 2025 and Fall 2025 now reflects the following symbol that states "GRADE NOT ASSIGNED." For example, on www.hospitalsafetygrade.org, a search for each of the Plaintiff hospitals shows the following:

18. In further compliance, Leapfrog removed each of the Plaintiff hospitals from the archival report database where consumers are able to purchase PDF reports that include a hospital's previous Safety Grades and associated measure scores. Archival reports are not available for purchase for each of the Plaintiff hospitals.

19. In further compliance, each of the Plaintiff hospitals' webpages on www.hospitalsafetygrade.org will continue to be displayed consistent with ¶¶14, 17 of this Declaration, absent further judicial order granting modification or other relief from the injunction, which Leapfrog respectfully reserves all rights to pursue.

20. Out of an abundance of caution and to forestall any allegations of noncompliance, Leapfrog went above and beyond, in several respects, to account for part-two of the Court's injunction. First, on March 13, 2026, Leapfrog withdrew Safety Grades for all hospitals that did

not submit a Leapfrog Hospital Survey and received Step 2 imputation under Leapfrog's Safety Grade methodology in Fall 2024, Spring 2025, and Fall 2025 on www.hospitalsafetygrade.org.

21. Second, Leapfrog removed all gas gauge icons depicting performance on each measure included in the Hospital Safety Grade for all hospitals that did not submit a Leapfrog Hospital Survey and received Step 2 imputation under Leapfrog's Safety Grade methodology.

22. Third, Leapfrog removed all measure scores for all hospitals that did not submit a Leapfrog Hospital Survey and received Step 2 imputation under Leapfrog's Safety Grade methodology.

23. Fourth, Leapfrog has modified its website to reflect a "GRADE NOT ASSIGNED" symbol for Fall 2024, Spring 2025, and Fall 2025 for all hospitals that did not submit a Leapfrog Hospital Survey and previously received a Step 2 imputation under the Leapfrog Safety Grade methodology. Users can access the updated information by clicking on a link titled "View the full Score" for these hospitals.

24. Fifth, the webpages for all hospitals that did not submit a Leapfrog Hospital Survey and received Step 2 imputation under Leapfrog's Safety Grade methodology will continue to be displayed consistent with ¶¶14, 17 of this Declaration, absent further judicial order granting modification or other relief from the injunction, which Leapfrog respectfully reserves all rights to pursue.

25. Sixth, Leapfrog removed all hospitals that did not submit a Leapfrog Hospital Survey and received Step 2 imputation under Leapfrog's Safety Grade methodology from Leapfrog's archival report database, whereby consumers can purchase PDF reports that include a hospitals previous Safety Grades and associated scores. These archival reports are not available for purchase for any non-participating hospital who was graded using Step 2.

26. Seventh, Leapfrog sent each of the non-participating hospitals, who were assigned a Safety Grade using Step-2 imputation, a letter notifying them of the changes including but not limited to that their Fall 2024, Spring 2025 and Fall 2025 Safety Grades are withdrawn and that their Spring 2026 Safety Grades are not being assigned. (*See,* example of letter attached hereto as Exhibit A).

27. Absent further judicial order granting modification or other relief, which Leapfrog respectfully reserves all rights to pursue, including by way of appeal, Leapfrog has and will continue to comply with part-two of this Court's injunctive relief. (DE 212, p. 41, ¶2).

III. COMPLIANCE WITH PART-THREE OF THE INJUNCTIVE RELIEF.

28. Third, Leapfrog was ordered to "[w]ithin 30 days of judgment, . . . send corrective disclosures to all entities that paid to license the Fall 2024, Spring 2025, and Fall 2025 Safety Grades, disclosing that those Safety Grades were found to be deceptive and unfair in this action. Leapfrog must file a declaration documenting the reasonable and diligent efforts it has undertaken to accomplish this directive within 45 days of judgment." (DE 212, p. 41, ¶3).

29. In compliance with part-three of this Court's injunctive relief, on March 23, 2026, Leapfrog sent corrective disclosure letters to all data licensees that license Leapfrog's Hospital Safety Grade. (*See*, example attached hereto as Exhibit B).

30. In further compliance and in addition to sending corrective disclosure letters, Leapfrog updated its data files for Fall 2024, Spring 2025 and Fall 2025 to remove all previously assigned letter grades and measure scores related to non-participating hospitals, who were assigned a Safety Grade using Step-2 imputation and included instructions on how to access the updated files via Leapfrog's data licensee portal in both the emails and letters sent to all data licensees.

31. In further compliance, Leapfrog requested and received "read receipts" and/or FedEx certified mailing receipts for each of the corrective disclosure emails and letters that were sent to all data licensees.

32. Out of an abundance of caution and to forestall any allegations of noncompliance, Leapfrog went above and beyond, insomuch as also notifying unpaid data licensees (e.g., regional leaders) the same corrective disclosures.

33. Absent further judicial order granting modification or other relief, which Leapfrog respectfully reserves all rights to pursue, including by way of appeal, Leapfrog has and will continue to comply with part-three of this Court's injunctive relief. (DE 212, p. 41, ¶3).

IV. COMPLIANCE WITH PART-FOUR OF THE INJUNCTIVE RELIEF.

34. Fourth, Leapfrog was ordered to "place the same corrective disclosures in future contracts, print and electronic advertising materials, and other print and electronic documents that promote paid licensure of the next cycle of Safety Grades accessible to or in the following five zip codes: 33401, 33407, 33410, 33428, and 33484." (DE 212, p. 41, ¶4).

35. In compliance with part-four of this Court's injunctive relief, Leapfrog has and will continue to place the same corrective disclosures in future contracts, print and electronic advertising materials, and other print and electronic documents that promote paid licensure of the

next cycle of Safety Grades accessible to or in the following five zip codes: 33401, 33407, 33410, 33428, and 33484.

36. In further compliance, Leapfrog has already updated all data license files with the same corrective disclosures, which will remain in all data license files in the future as applicable and in compliance with this Court's injunctive order. (*See*, screenshot of corrective disclosure included in data licensee portal attached hereto as Exhibit C).

37. Absent further judicial order granting modification or other relief, which Leapfrog respectfully reserves all rights to pursue, including by way of appeal, Leapfrog has and will continue to place the same corrective disclosures in future contracts, print and electronic advertising materials, and other print and electronic documents that promote paid licensure of the next cycle of Safety Grades when applicable and in accordance with this Court's order.

38. In addition, to further show its good faith and to forestall any allegations of noncompliance, Leapfrog has gone above and beyond to take account of this this Court's order. First, on March 20, 2026, Leapfrog met with all its independent third-party regional leaders, who are business coalitions on health comprised of members (employers and purchasers) who operate in designated regions requesting hospitals to participate in Leapfrog's Hospital Survey, across the United States, to advise them of the injunction order and its effect.

39. Second, Leapfrog sent updated data files to all regional leaders, across the United States, and advised them that Leapfrog has modified its website to reflect a "GRADE NOT ASSIGNED" symbol for Fall 2024, Spring 2025, and Fall 2025 for all hospitals that did not submit a Leapfrog Hospital Survey and previously received a Step 2 imputation under the Leapfrog Safety Grade methodology.

40. Absent further judicial order granting modification or other relief, which Leapfrog respectfully reserves all rights to pursue, including by way of appeal, Leapfrog has and will continue to comply with part-four of this Court's injunctive relief. (DE 212, pp. 41, ¶4).

V. COMPLIANCE WITH PART-FIVE OF THE INJUNCTIVE RELIEF.

41. Fifth, Leapfrog was ordered to "refrain from taking any action to circumvent the relief set out above. The Court retains jurisdiction to enforce compliance with these commands." (DE 212, pp. 41, ¶5).

42. Absent further judicial order granting modification or other relief, which Leapfrog respectfully reserves all rights to pursue, including by way of appeal, Leapfrog has and will

continue to abide by this Court's order in full including refraining from taking any action to circumvent the relief set forth in the order. (*Id.*).

43. Out of an abundance of caution and to forestall any allegations of noncompliance, Leapfrog has put in place measures to fully comply with the Court's judgment well in advance of the deadlines for compliance mandated by the Court.

44. On March 20, 2026, Tenet Healthcare Corporation ("Tenet") served Leapfrog with a correspondence requesting, *inter alia*, compliance with the injunction order as applicable to *all* Tenet owned hospitals. (*See*, correspondence attached hereto as Exhibit D).

45. On March 31, 2026, Leapfrog responded to Tenet, advising Tenet of its intent to fully comply with the court's injunction order. Even though Leapfrog does not understand the injunction to cover all Tenet-owned hospitals, Leapfrog notified Tenet that out of an abundance of caution, Leapfrog has withdrawn Safety Grades for all hospitals that did not submit a Leapfrog Hospital Survey and received Step-2 imputation under Leapfrog's Safety Grade methodology in Fall 2024, Spring 2025 and Fall 2025 on www.hospitalsafetygrade.org, which includes all Tenet owned hospitals.

46. On April 14, 2026, Tenet Healthcare Corporation nonetheless sent Leapfrog another correspondence asserting that Leapfrog's survey website (www.leapfroggroup.org), which does not house, or display Safety Grades violates the Court's injunction merely because the website advises consumers—truthfully—which hospitals did not participate in the Leapfrog Hospital Survey. (*See*, correspondence attached hereto as Exhibit E). The website also suggests that users write to non-participating hospitals to encourage them to provide this potentially life-saving information to the public. (*See id.*).

47. Leapfrog has gone to great lengths, incurred great expense, and suffered great pains in its efforts to comply fully and in the utmost good faith with the Court's injunction. Contrary to Tenet's accusations, Leapfrog has taken careful account of the Court's injunction order and done what it understands to be necessary to comply, then added substantial prophylaxis atop that. Leapfrog does not understand the Court's injunction as intending to prohibit Leapfrog from providing consumers with important, truthful information to the effect that non-participating hospitals in fact have not participated in its Survey. Nor does the injunction, by its terms, prohibit Leapfrog from advising patients and their loved ones as to critical facts surrounding hospitals and Leapfrog's protected opinions regarding same.

48. Citing this Court's injunction order, Tenet also demanded in its April 14 letter that Leapfrog make changes to an anticipated rating system for ambulatory surgical centers (ASCs) that it has not yet launched. (*See id.*) Specifically, Tenet demanded that Leapfrog refrain from stating that accreditation information is "Not Available" from ASCs that do not submit accreditation information and from noting that an ASC facility that does not provide an ASC Survey response "Declined to Report." (*Id.*) Again, Leapfrog is taking careful account of this Court's injunction order as it complies with its terms. And Leapfrog does not understand that it is circumventing the Court's injunction when it reports on non-party Tenet-owned ASCs, or when it provides truthful information to consumers about ASCs' accreditation information or survey responses. If anything, Leapfrog would be circumventing its values, its mission, and its consumers if it allowed the Plaintiff Hospitals to silence and censor Leapfrog's ratings going forward under auspices of this Court's injunction order.

49. Absent further judicial order granting modification or other relief, which Leapfrog respectfully reserves all rights to pursue, including by way of appeal, Leapfrog has and will continue to comply with part-five of this Court's injunctive relief. (DE 212, pp. 41, ¶5).

VI. ADDITIONAL EFFORTS BY LEAPFROG

50 Leapfrog has gone to great lengths to comply fully with this Court's, even as it tries in all other respects to stay true to its mission of maximizing transparency for the public's benefit.

51. In short, Leapfrog believes it has gone to extraordinary lengths in order to comply with the Court's injunction order and believes it is fully compliant with that order. In the event that Leapfrog perceives there to be any doubt or persisting dispute about any specific aspect of Leapfrog's compliance, however, Leapfrog may need to seek clarification of the Court's order and it respectfully reserves the right to seek such clarification or other appropriate relief.

Pursuant to 28 U.S.C. § 1746, I declare under penalty of perjury that the foregoing is true and correct.

LEAPFROG

The Leapfrog Group
1775 K Street NW, Suite 400
Washington, DC 20006
LeapfrogGroup.org

Dear CEO,

I am writing to inform you of an important change affecting your hospital's Leapfrog Hospital Safety Grade.

Based on a federal court ruling in Florida, Leapfrog is temporarily withdrawing Safety Grades from our public reporting website (www.HospitalSafetyGrade.org) for hospitals like yours that did not submit a Leapfrog Hospital Survey and therefore received Step 2 imputation under Leapfrog's Safety Grade methodology. Although the court ruling only applied to five hospitals, Leapfrog does not apply programmatic changes to individual hospitals because the Hospital Safety Grade is a national program.

As a result, effective immediately, your hospital's Fall 2025 Leapfrog Hospital Safety Grade will be updated on our public reporting website with an icon indicating "Grade Not Assigned". All related measure scores associated with the Fall 2025 Safety Grade, including the measure "gas gauges," will be removed. The Fall 2024 and Spring 2025 grades will also be updated with the new icon, and consumers will be encouraged to find additional information about your hospital's safety and quality on the CMS Care Compare website and Mayo Clinic's HealthLocator website. Finally, your hospital will not have a Spring 2026 Safety Grade published and will no longer have access to the Safety Grade Review Website during this temporary period.

The Leapfrog Hospital Safety Grade has had a proven and demonstrable impact on improving patient safety in the United States. Our community of patient advocates, employers, purchasers, policymakers, and experts remains fully committed to advancing health care transparency and patient safety. We plan to convene our national expert panel to begin work on an updated methodology and plan to resume grading all eligible hospitals in Fall 2026 in compliance with the Florida court ruling.

If you have questions, please contact us at helpdesk@leapfrog-group.org.

Sincerely,

Leah Binder

March 24, 2026

Hello [redacted]

Please be advised that the U.S. District Court for the Southern District of Florida has ruled that the Fall 2024, Spring 2025, and Fall 2025 Leapfrog Safety Grades for Good Samaritan Medical Center, Inc., Delray Medical Center, Inc., Palm Beach Gardens Community Hospital, Inc. d/b/a Palm Beach Gardens Medical Center, St. Mary's Medical Center, Inc., and West Boca Medical Center, Inc. are deceptive and unfair under the Florida Deceptive & Unfair Trade Practices Act, Florida Statutes § 501.201, *et seq*. based upon how Safety Grades are assigned to hospitals that do not participate in the Leapfrog Hospital Survey. For consistency, Leapfrog is voluntarily taking the immediate step of removing Safety Grades for any non-reporting hospital that received Step 2 imputation in Fall 2024, Spring 2025 and Fall 2025. The Court's ruling was issued in the matter titled *Good Samaritan Medical Center, et al. v. The Leapfrog Group*, No. 25-CV-80526-Middlebrooks (S.D. Fla. Mar. 6, 2026).

Re: Confirmation Regarding Withdrawal and Non-Issuance of Leapfrog Hospital Safety Grades for Non-Participating Tenet-Owned Hospitals

Counsel:

I write on behalf of Tenet Healthcare Corporation ("Tenet") to seek confirmation regarding The Leapfrog Group's ("Leapfrog") current and intended treatment of Safety Grades issued to non-participating Tenet-owned hospitals following Judge Middlebrooks's decision in *Good Samaritan Medical Center, Inc., et al. v. The Leapfrog Group*, No. 9:25-80526-DMM (S.D. Fla. Mar. 6, 2026).

Judge Middlebrooks found that Leapfrog's Safety Grade methodology for non-participating hospitals "has no scientific basis, unfairly penalizes non-participating hospitals, and misrepresents hospital safety," Op. 2, and held that the methodology "constitutes an unfair and deceptive business practice in violation of" the Florida Deceptive and Unfair Trade Practices Act ("FDUTPA"), Op. 3.

While Judge Middlebrooks's decision focuses on the five Florida hospitals that brought the action, the methodology the Court found deceptive and unfair was not unique to those five hospitals. Leapfrog has used that same methodology for other non-participating Tenet-owned hospitals, including the hospitals listed in Appendix A to this letter. For example, the opinion details how Leapfrog's methodology—the same methodology applied elsewhere—is "punitive in nature"; that "Leapfrog understood" it was "penalizing hospitals" even though Leapfrog hoped consumers would rely on the Grades "as *accurate* representations of hospital safety"; and that Leapfrog seeks to leverage reputational harms "to force hospitals back into participating in the Leapfrog Survey." Op. 20 (emphasis in original). The decision also emphasizes Leapfrog's deceptive statements and practices concerning both "how to use the grade" and "how the data itself was collected"—making clear that while Leapfrog claims its Safety Grades "are supported by real data and reflect actual safety performance," Leapfrog in fact lacks "real data" and that its Safety Grades instead are "driven by Survey participation of the rated hospitals." Op. 23–24. The "foreseeable and potentially quite severe" harms that result from this scheme—including delayed and misdirected

care, "patient confusion," and "erosion of community confidence"—logically apply beyond the five Florida plaintiff hospitals as well. Op. 31–32.

That same challenged methodology generated the so-called "Safety Grades" assigned to the non-participating Tenet-owned hospitals listed in Appendix A. The question is now whether Leapfrog intends to continue using, republishing, storing, or replacing Grades used under a methodology the Court found deceptive and unfair. At minimum, the ruling leaves Leapfrog with no justifiable basis to continue using or republishing Grades generated under that same methodology for the non-participating Tenet-owned hospitals listed in Appendix A.

Leapfrog's public statements since the ruling only sharpen the need for confirmation. Shortly after the opinion issued, Leapfrog stated on its website that the "Spring 2026 update of the Leapfrog Hospital Safety Grade will continue as planned, with some modifications based on the injunction[.]" The Leapfrog Group, *Statement from Leapfrog President and CEO Leah Binder on the Tenet Healthcare Lawsuit Decision* (Mar. 8, 2026), https://www.leapfroggroup.org/news-events/statement-leapfrog-president-and-ceo-leah-binder-tenet-healthcare-lawsuit-decision. But on March 16, 2016, Leapfrog told Becker's that it had "recall[ed]" several Grades for U.S. hospitals that had not recently participated in its Hospital Survey, that it "does not apply programmatic changes to individual hospitals because the hospital safety grade is a national program," and that it "expect[s] to resume full grading in fall 2026." Paige Twenter, *Leapfrog Temporarily Limits Hospital Grades to Survey Participants After Court Ruling*, Becker's Hospital Review (Mar. 16, 2026), https://www.beckershospitalreview.com/legal-regulatory-issues/leapfrog-restricts-hospital-grades-to-participation-after-ruling/. These statements do not clearly answer what Leapfrog will do with respect to the non-participating Tenet-owned hospitals listed in Appendix A, whether Spring 2026 Grades will issue for those hospitals, or whether Leapfrog contends Grades now being withdrawn may later be restored or republished.

Additionally, as of the date of this letter, Leapfrog has removed from its Hospital Safety Grades website the Fall 2024, Spring 2025, and Fall 2025 Safety Grades previously issued to the five Florida plaintiff hospitals. The same appears to be true for the other non-participating Tenet-owned hospitals listed in Appendix A. But Leapfrog has not made clear whether those Grades are being permanently withdrawn or merely withheld pending later republication.

Please confirm in writing that:

(1) Leapfrog will not issue Spring 2026 Leapfrog Safety Grades to any non-participating, Tenet-owned hospital listed in Appendix A;

(2) Leapfrog has withdrawn, and will not republish, any Fall 2024, Spring 2025, or Fall 2025 Safety Grade issued to any hospital listed in Appendix A under the methodology found unlawful, and will identify the date on which each such Grade was removed from its website;

(3) Leapfrog has directed its licensees and other third parties to cease displaying or promoting any such Grades, and will identify the date on which each instruction was given;

(4) no such Grades remain available through any Leapfrog-controlled webpage, data feed, licensed asset, promotional material, or other distribution channel; and

(5) if Leapfrog contends otherwise as to any hospital listed in Appendix A with respect to the points identified above, Leapfrog will identify the hospital, the Grade cycle, and the methodology it contends permit publication, and the data sources on which it relies.

In addition, please preserve all documents, communications, website records, data feeds, internal approvals, and third-party instructions relating to the withdrawal, non-issuance, republication, or contemplated future publication of Safety Grades for any hospital listed in Appendix A, including any Spring 2026 or Fall 2026 methodology changes affecting non-participating hospitals.

We respectfully request that you respond to this letter, including the five points set forth above, within five business days. Tenet reserves all rights, including the right to pursue additional relief based on Leapfrog's response or failure to respond.

Sincerely,

GIBSON, DUNN & CRUTCHER LLP

Re: Hospital And Ambulatory Surgery Centers Ratings On Leapfroggroup.org

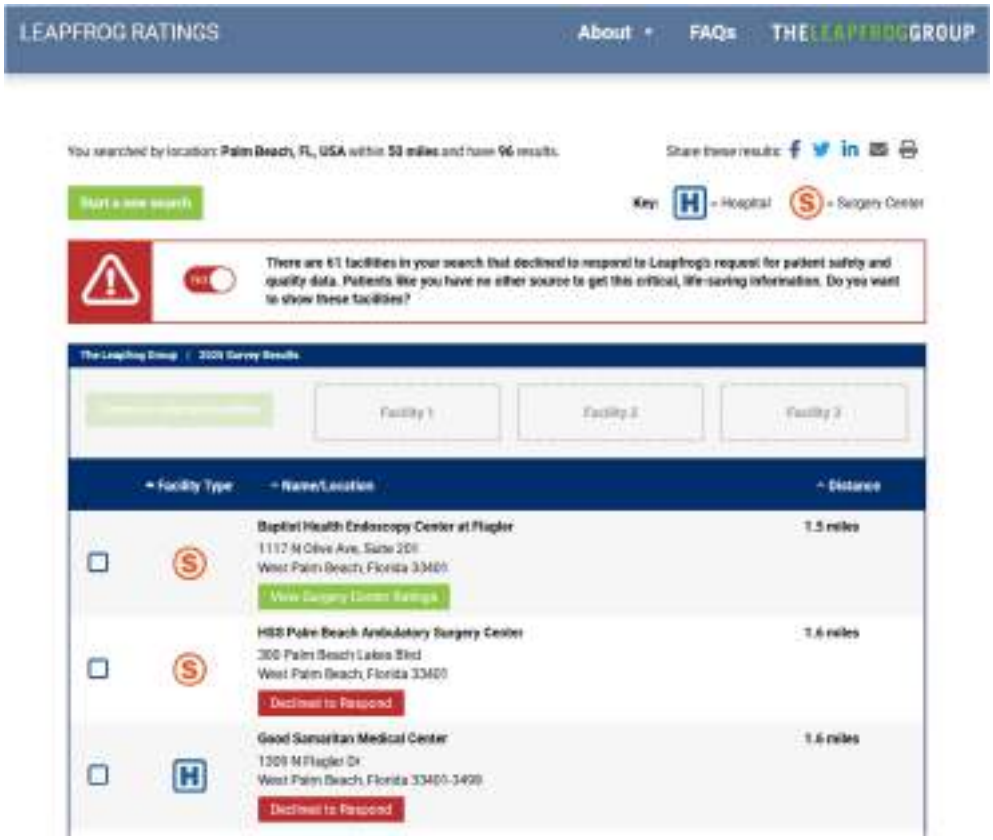
Counsel:

I write on behalf of the Plaintiff Hospitals in *Good Samaritan Medical Center, Inc., et al. v. The Leapfrog Group*, 25-cv-80526 (S.D. Fla.), and their parent company, Tenet Healthcare Corporation, to bring to your attention The Leapfrog Group's noncompliance with the Court's recent injunction and to serve notice that Leapfrog's contemplated "ASC Public Reporting Program"—which would mimic the same deceptive effect of Leapfrog's so-called "Safety Grades"—may result in additional liability under federal and state consumer-protection laws.

I. The Federal District Court Enjoins Leapfrog's Deceptive And Unfair Practices

As you are aware, Judge Middlebrooks recently found that Leapfrog's Hospital Safety Grade methodology "has no scientific basis, unfairly penalizes non-participating hospitals, and misrepresents hospital safety." Op. 2. The Court emphasized that Leapfrog's ratings scheme was "intended to create the false impression that Leapfrog's grades reflect actual performance," when, in fact, Leapfrog itself "acknowledged" that its real "goal [was] punishing nonparticipants as a means of forcing hospitals to cooperate in submitting their Surveys" to Leapfrog. Op. 26. The Court was particularly troubled by Leapfrog's attempts to "pressure and penalize hospitals" into handing over their "private data," even though Leapfrog "does not have a right" to such data, and likewise has no "right to punish [hospitals]" through reputational damage when hospitals refuse to surrender their data to Leapfrog for commercial purposes. Op. 39. The Court thus determined that Leapfrog's practices violate the Florida Deceptive and Unfair Trade Practices Act ("FDUTPA"), Op. 3, and entered a comprehensive injunction that, among other things, prohibits Leapfrog from "scor[ing] nonparticipating hospitals differently than participating hospitals by using different values or using differently weighted values," and specifically prohibits Leapfrog "from taking any action to circumvent" the injunction. Op. 40–41. The Court subsequently entered a declaratory judgment making clear that the assignment of "failing safety scores in the absence of actual data [is] deceptive and unfair under FDUTPA." Judgment 1.

These orders became operative upon entry, *see* Fed. R. Civ. P. 62(c)(1), and Leapfrog has not sought a stay. To the contrary, Leapfrog CEO Leah Binder has publicly represented that "of course" Leapfrog "will comply" with the injunction during the pendency of Leapfrog's contemplated appeal.[1]



II. Leapfrog Violates The Court's Injunction On Leapfroggroup.org

On one of Leapfrog's websites, leapfroggroup.org, Leapfrog currently lists the "2025 Survey Results" for facilities within a 50-mile radius of Palm Beach, Florida. Several of the Plaintiff Hospitals and their affiliated institutions—Good Samaritan Medical Center, St. Mary's Medical Center, Palm Beach Children's Hospital at St. Mary's Medical Center, Palm Beach Gardens Medical Center, and Delray Medical Center—are so listed.[2] Despite the operative effect of the Court's orders and Leapfrog's public representations of compliance, Leapfrog continues to deliberately manipulate how it presents those institutions' lack of a Survey response.

At the top of the page, Leapfrog prominently places a red "hazard" symbol with an exclamation point and a warning that facilities that "declined to respond" to the Survey have deprived patients of "critical, life-saving information." The entries for nonparticipating hospitals carry a red "Declined to Respond" label—in stark contrast to the parallel green "View Hospital Ratings" label affixed to entries for participating hospitals. A Leapfrog pop-up linked to the "Declined to Respond" label recommends users "[a]sk [nonparticipating hospitals] why" they did not report to Leapfrog, implying a nefarious and unjustified lack of transparency on the hospital's part. If consumers click that link, they are taken to a boilerplate letter prepared by Leapfrog for submission to hospitals suggesting that patients have reason to doubt a hospital's "record on quality and safety" when hospitals "decline[ ] to participate" in Leapfrog's Survey.

[1] *See* The Leapfrog Group, *Statement from Leapfrog President and CEO Leah Binder on the Tenet Healthcare Lawsuit Decision*, YouTube at 2:09 (Mar. 9, 2026), https://www.youtube.com/watch?v=8SnSKozVlc4; The Leapfrog Group, *Statement from Leapfrog President and CEO Leah Binder on the Tenet Healthcare Lawsuit Decision* (Mar. 8, 2026), https://www.leapfroggroup.org/news-events/statement-leapfrog-president-and-ceo-leah-binder-tenet-healthcare-lawsuit-decision; *see also* Letter for Mary Beth Maloney, Counsel for Tenet, from Kimberly Blair, Counsel for Leapfrog at 1 (Mar. 31, 2026) ("Leapfrog has also taken steps to comply with the other elements of the court's order. Leapfrog has no intention of failing to comply with the Court's order now or in the future.").

[2] *See* The Leapfrog Group, *Leapfrog Ratings*, https://ratings.leapfroggroup.org/search/results?distance=50&address=Palm+Beach%2C+FL%2C+USA&coords=26.7056206%2C-80.0364297&by=distance&sort=distance&showdeclined=1 (search results for Palm Beach, FL).

This two-track depiction of participating and non-participating hospitals is clearly designed to leave consumers with the net impression that non-participating hospitals (with red warnings and fear mongering pop-ups) are less safe than participating hospitals. This practice "scores nonparticipating hospitals differently than participating hospitals by using different values or using differently weighted values." Op. 40 (injunction text). This differential treatment has the apparent purpose and obvious effect of tending to "coerce participation through reputational penalty," Op. 23, pressuring hospitals to surrender data to which Leapfrog "does not have a right," *id.* at 39. And

it is the very sort of conduct that Judge Middlebrooks recently held to constitute a core FDUTPA violation and which the injunction was meant to stop.

Leapfrog therefore is non-compliant with the plain terms of the Court's injunction, including its express directive that Leapfrog shall not engage in "*any* action to circumvent the relief" provided therein. Op. 41 (emphasis added).

Accordingly, the Plaintiff Hospitals demand that Leapfrog remove them from the relevant "Survey Results" webpages on leapfroggroup.org and identify the date on which their entries were removed. If Leapfrog refuses to do so, the Plaintiff Hospitals are prepared to pursue appropriate enforcement measures under Federal Rule of Civil Procedure 65 and other applicable law.

Tenet further demands that Leapfrog take similar action with respect to all Tenet-owned hospitals described in Appendix A and identify the date on which it did so. The Court's ruling leaves Leapfrog with no justifiable basis to continue drawing adverse inferences and inflicting reputational penalties due to the lack of a Survey response for any non-participating Tenet-owned hospital, given that the logic of the Court's order, as Leapfrog has recognized, applies nationally.[3]

III. Leapfrog Threatens Further Violations With The ASC Public Reporting Program

In addition to perpetuating the unfair and deceptive conduct on leapfroggroup.org that already resulted in liability, Leapfrog now threatens to *expand* the scope of its deception and unfairness through its contemplated "ASC Public Reporting Program" scheduled to launch in late July. Through this initiative, Leapfrog for the first time will rate the "safety and quality" of thousands of ambulatory surgery centers ("ASC"s).[4] Precisely as with its deceptive Safety Grades, Leapfrog intends to draw on a mix of data from the U.S. Centers for Medicare & Medicaid Services and from self-reported (and presumably unaudited) accreditation and survey submissions provided by each ASC facility. Leapfrog will assign a "Not Available" score to any ASC facility that does not submit accreditation information. And it will assign a "Declined to Report" score to any ASC facility that does not provide an ASC survey response—the same score Leapfrog uses for facilities that assertedly "*suppres*[*s*] their data."[5] These scores differ from the "achievement" scores Leapfrog will assign participating ASC facilities.

---

[3] *See* Letter for Mary Beth Maloney, Counsel for Tenet, from Kimberly Blair, Counsel for Leapfrog at 1 (Mar. 31, 2026) ("Although the court ruling only applied to five hospitals, Leapfrog does not apply programmatic changes to individual hospitals because the Hospital Safety Grade is a national program.").

[4] *See* The Leapfrog Group, *New ASC Public Reporting Program*, https://www.leapfroggroup.org/asc-program/new-asc-public-reporting-program.

[5] *See* The Leapfrog Group, The Leapfrog ASC Public Reporting Program Scoring Algorithms: Scoring Details for the 2026 Leapfrog ASC Public Reporting Program at 5, https://www.leapfroggroup.org/sites/default/files/Files/2026ASCPublicReportingProgramScoringAlgorithm_202604012026_v2.0.pdf (emphasis added).

Leapfrog's suggestion that non-participating ASCs must be actively working to "suppress" negative information is a rerun of Leapfrog's discredited theory of "non-response bias." Op. 28. Judge Middlebrooks rejected this theory, deeming the same negative inference when applied in the context of Leapfrog's Hospital Safety Grades to lack any "persuasive evidence." *Id.* Accordingly, Leapfrog's contemplated "reputational penalty" for ASCs—which appears similarly designed to "coerce participation"—would be unlawful under FDUTPA and any other state or federal consumer-protection laws that employ the same standards for deception and unfairness. Op. 23.

Accordingly, Tenet demands that Leapfrog agree that it will not rate or otherwise score any Tenet-owned ASC facility under a methodology that penalizes non-participation, reweights missing information in a punitive manner, or otherwise replicates the conduct that Judge Middlebrooks found deceptive and unfair as applied to hospitals. Please confirm in writing that Leapfrog will not rate or otherwise score any Tenet-owned ASC facility in this manner.

* * *

We respectfully request that you respond to this letter within five business days. The Plaintiff Hospitals and Tenet reserve all rights, including the right to pursue additional relief based on Leapfrog's response or failure to respond. Please preserve all documents, communications, website records, data feeds, internal approvals, and third-party instructions relating to Leapfrog's ratings on leapfroggroup.org and its ASC Public Reporting Program initiative.

Sincerely,

GIBSON, DUNN & CRUTCHER LLP

Attorneys for the Community Hospitals

The Community Hospitals respectfully submit this short response to the Declaration of The Leapfrog Group, ECF 215, filed on April 20, 2026. Toward the end of that declaration, *see id.* ¶¶ 46, 48, Leapfrog references a letter the Community Hospitals sent Leapfrog on April 14 pointing out that Leapfrog's (1) characterization of hospital survey results on leapfroggroup.org and (2) contemplated new grading program for Ambulatory Surgery Centers ("ASCs") violate the letter and intent of this Court's injunction. *See* Ex. A (Community Hospitals' April 14 letter). Leapfrog's declaration dramatically claims that the Community Hospitals' letter deemed Leapfrog noncompliant with "the Court's injunction merely because the website advises consumers—truthfully—which hospitals did not participate in the Leapfrog Hospital Survey." Dkt. 215, ¶ 46. Leapfrog doubled down on that claim with a yet more dramatic letter on April 24, claiming that the Community Hospitals seek "to suppress … accurate reporting of incontestable facts" and "the basic, irrefutable fact that Plaintiffs declined to respond to Leapfrog's Hospital Safety Survey"—a purported attempt "to fault, censor, and muzzle any aspect of Leapfrog's reporting." *See* Ex. B at 1–3 (Leapfrog's April 24 letter).

The Community Hospitals' letter speaks for itself. It objects to Leapfrog's "two-track depiction of participating and non-participating hospitals," which "is clearly designed to leave consumers with the net impression that non-participating hospitals (with red warnings and fear mongering pop-ups) are less safe than participating hospitals," and observes that this differential treatment "has the apparent purpose and obvious effect of tending to 'coerce participation through reputational penalty,' pressuring hospitals to surrender data to which Leapfrog 'does not have a right.'" Ex. A at 3 (quoting Op. at 23, 39) (internal citations omitted).

The Community Hospitals leave it to fair-minded readers to determine whether the letter thus seeks to "censor" the bare reporting of facts or, instead, is concerned with the specific type of misleading conduct this Court deemed deceptive and unfair. If Leapfrog believes it has a "legally unassailable" right, Ex. B at 4, to punish non-responding hospitals or ASCs by claiming that they have a defective record on "safety and quality" or have intentionally "suppressed" their data due to the mere fact of their non-participation, *see* Ex. A at 4–5, then basic aspects of this Court's injunction and the reasoning backing it appear to have escaped the organization.

The Community Hospitals will continue to exhaust all informal means of resolving this dispute before seeking Court intervention, *see* Ex. C (Community Hospitals' April 30 letter)—which the Community Hospitals remain optimistic will be unnecessary.

Dated: April 30, 2026

Respectfully submitted,

Re: Hospital And Ambulatory Surgery Centers Ratings On Leapfroggroup.org

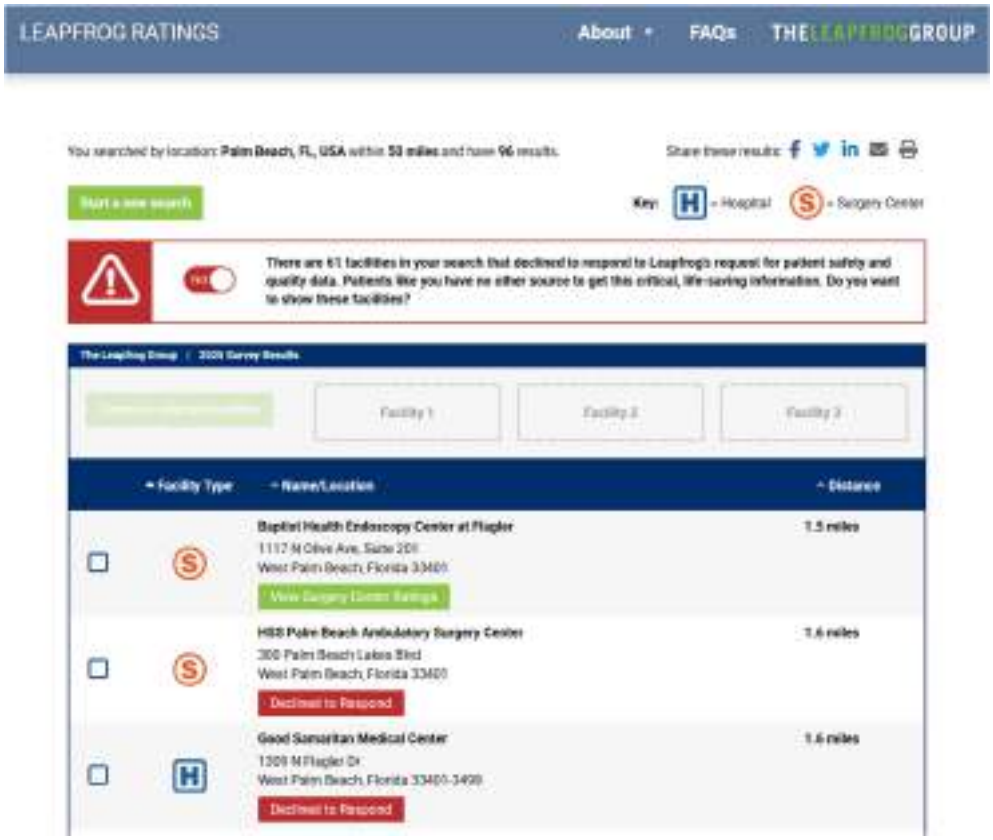
Counsel:

I write on behalf of the Plaintiff Hospitals in *Good Samaritan Medical Center, Inc., et al. v. The Leapfrog Group*, 25-cv-80526 (S.D. Fla.), and their parent company, Tenet Healthcare Corporation, to bring to your attention The Leapfrog Group's noncompliance with the Court's recent injunction and to serve notice that Leapfrog's contemplated "ASC Public Reporting Program"—which would mimic the same deceptive effect of Leapfrog's so-called "Safety Grades"—may result in additional liability under federal and state consumer-protection laws.

I. The Federal District Court Enjoins Leapfrog's Deceptive And Unfair Practices

As you are aware, Judge Middlebrooks recently found that Leapfrog's Hospital Safety Grade methodology "has no scientific basis, unfairly penalizes non-participating hospitals, and misrepresents hospital safety." Op. 2. The Court emphasized that Leapfrog's ratings scheme was "intended to create the false impression that Leapfrog's grades reflect actual performance," when, in fact, Leapfrog itself "acknowledged" that its real "goal [was] punishing nonparticipants as a means of forcing hospitals to cooperate in submitting their Surveys" to Leapfrog. Op. 26. The Court was particularly troubled by Leapfrog's attempts to "pressure and penalize hospitals" into handing over their "private data," even though Leapfrog "does not have a right" to such data, and likewise has no "right to punish [hospitals]" through reputational damage when hospitals refuse to surrender their data to Leapfrog for commercial purposes. Op. 39. The Court thus determined that Leapfrog's practices violate the Florida Deceptive and Unfair Trade Practices Act ("FDUTPA"), Op. 3, and entered a comprehensive injunction that, among other things, prohibits Leapfrog from "scor[ing] nonparticipating hospitals differently than participating hospitals by using different values or using differently weighted values," and specifically prohibits Leapfrog "from taking any action to circumvent" the injunction. Op. 40–41. The Court subsequently entered a declaratory judgment making clear that the assignment of "failing safety scores in the absence of actual data [is] deceptive and unfair under FDUTPA." Judgment 1.

These orders became operative upon entry, *see* Fed. R. Civ. P. 62(c)(1), and Leapfrog has not sought a stay. To the contrary, Leapfrog CEO Leah Binder has publicly represented that "of course" Leapfrog "will comply" with the injunction during the pendency of Leapfrog's contemplated appeal.[1]



II. Leapfrog Violates The Court's Injunction On Leapfroggroup.org

On one of Leapfrog's websites, leapfroggroup.org, Leapfrog currently lists the "2025 Survey Results" for facilities within a 50-mile radius of Palm Beach, Florida. Several of the Plaintiff Hospitals and their affiliated institutions—Good Samaritan Medical Center, St. Mary's Medical Center, Palm Beach Children's Hospital at St. Mary's Medical Center, Palm Beach Gardens Medical Center, and Delray Medical Center—are so listed.[2] Despite the operative effect of the Court's orders and Leapfrog's public representations of compliance, Leapfrog continues to deliberately manipulate how it presents those institutions' lack of a Survey response.

At the top of the page, Leapfrog prominently places a red "hazard" symbol with an exclamation point and a warning that facilities that "declined to respond" to the Survey have deprived patients of "critical, life-saving information." The entries for nonparticipating hospitals carry a red "Declined to Respond" label—in stark contrast to the parallel green "View Hospital Ratings" label affixed to entries for participating hospitals. A Leapfrog pop-up linked to the "Declined to Respond" label recommends users "[a]sk [nonparticipating hospitals] why" they did not report to Leapfrog, implying a nefarious and unjustified lack of transparency on the hospital's part. If consumers click that link, they are taken to a boilerplate letter prepared by Leapfrog for submission to hospitals suggesting that patients have reason to doubt a hospital's "record on quality and safety" when hospitals "decline[ ] to participate" in Leapfrog's Survey.

[1] *See* The Leapfrog Group, *Statement from Leapfrog President and CEO Leah Binder on the Tenet Healthcare Lawsuit Decision*, YouTube at 2:09 (Mar. 9, 2026), https://www.youtube.com/watch?v=8SnSKozVlc4; The Leapfrog Group, *Statement from Leapfrog President and CEO Leah Binder on the Tenet Healthcare Lawsuit Decision* (Mar. 8, 2026), https://www.leapfroggroup.org/news-events/statement-leapfrog-president-and-ceo-leah-binder-tenet-healthcare-lawsuit-decision; *see also* Letter for Mary Beth Maloney, Counsel for Tenet, from Kimberly Blair, Counsel for Leapfrog at 1 (Mar. 31, 2026) ("Leapfrog has also taken steps to comply with the other elements of the court's order. Leapfrog has no intention of failing to comply with the Court's order now or in the future.").

[2] *See* The Leapfrog Group, *Leapfrog Ratings*, https://ratings.leapfroggroup.org/search/results?distance=50&address=Palm+Beach%2C+FL%2C+USA&coords=26.7056206%2C-80.0364297&by=distance&sort=distance&showdeclined=1 (search results for Palm Beach, FL).

This two-track depiction of participating and non-participating hospitals is clearly designed to leave consumers with the net impression that non-participating hospitals (with red warnings and fear mongering pop-ups) are less safe than participating hospitals. This practice "scores nonparticipating hospitals differently than participating hospitals by using different values or using differently weighted values." Op. 40 (injunction text). This differential treatment has the apparent purpose and obvious effect of tending to "coerce participation through reputational penalty," Op. 23, pressuring hospitals to surrender data to which Leapfrog "does not have a right," *id.* at 39. And

it is the very sort of conduct that Judge Middlebrooks recently held to constitute a core FDUTPA violation and which the injunction was meant to stop.

Leapfrog therefore is non-compliant with the plain terms of the Court's injunction, including its express directive that Leapfrog shall not engage in "*any* action to circumvent the relief" provided therein. Op. 41 (emphasis added).

Accordingly, the Plaintiff Hospitals demand that Leapfrog remove them from the relevant "Survey Results" webpages on leapfroggroup.org and identify the date on which their entries were removed. If Leapfrog refuses to do so, the Plaintiff Hospitals are prepared to pursue appropriate enforcement measures under Federal Rule of Civil Procedure 65 and other applicable law.

Tenet further demands that Leapfrog take similar action with respect to all Tenet-owned hospitals described in Appendix A and identify the date on which it did so. The Court's ruling leaves Leapfrog with no justifiable basis to continue drawing adverse inferences and inflicting reputational penalties due to the lack of a Survey response for any non-participating Tenet-owned hospital, given that the logic of the Court's order, as Leapfrog has recognized, applies nationally.[3]

III. Leapfrog Threatens Further Violations With The ASC Public Reporting Program

In addition to perpetuating the unfair and deceptive conduct on leapfroggroup.org that already resulted in liability, Leapfrog now threatens to *expand* the scope of its deception and unfairness through its contemplated "ASC Public Reporting Program" scheduled to launch in late July. Through this initiative, Leapfrog for the first time will rate the "safety and quality" of thousands of ambulatory surgery centers ("ASC"s).[4] Precisely as with its deceptive Safety Grades, Leapfrog intends to draw on a mix of data from the U.S. Centers for Medicare & Medicaid Services and from self-reported (and presumably unaudited) accreditation and survey submissions provided by each ASC facility. Leapfrog will assign a "Not Available" score to any ASC facility that does not submit accreditation information. And it will assign a "Declined to Report" score to any ASC facility that does not provide an ASC survey response—the same score Leapfrog uses for facilities that assertedly "*suppres*[*s*] their data."[5] These scores differ from the "achievement" scores Leapfrog will assign participating ASC facilities.

---

[3] *See* Letter for Mary Beth Maloney, Counsel for Tenet, from Kimberly Blair, Counsel for Leapfrog at 1 (Mar. 31, 2026) ("Although the court ruling only applied to five hospitals, Leapfrog does not apply programmatic changes to individual hospitals because the Hospital Safety Grade is a national program.").

[4] *See* The Leapfrog Group, *New ASC Public Reporting Program*, https://www.leapfroggroup.org/asc-program/new-asc-public-reporting-program.

[5] *See* The Leapfrog Group, The Leapfrog ASC Public Reporting Program Scoring Algorithms: Scoring Details for the 2026 Leapfrog ASC Public Reporting Program at 5, https://www.leapfroggroup.org/sites/default/files/Files/2026ASCPublicReportingProgramScoringAlgorithm_202604012026_v2.0.pdf (emphasis added).

Leapfrog's suggestion that non-participating ASCs must be actively working to "suppress" negative information is a rerun of Leapfrog's discredited theory of "non-response bias." Op. 28. Judge Middlebrooks rejected this theory, deeming the same negative inference when applied in the context of Leapfrog's Hospital Safety Grades to lack any "persuasive evidence." *Id.* Accordingly, Leapfrog's contemplated "reputational penalty" for ASCs—which appears similarly designed to "coerce participation"—would be unlawful under FDUTPA and any other state or federal consumer-protection laws that employ the same standards for deception and unfairness. Op. 23.

Accordingly, Tenet demands that Leapfrog agree that it will not rate or otherwise score any Tenet-owned ASC facility under a methodology that penalizes non-participation, reweights missing information in a punitive manner, or otherwise replicates the conduct that Judge Middlebrooks found deceptive and unfair as applied to hospitals. Please confirm in writing that Leapfrog will not rate or otherwise score any Tenet-owned ASC facility in this manner.

* * *

We respectfully request that you respond to this letter within five business days. The Plaintiff Hospitals and Tenet reserve all rights, including the right to pursue additional relief based on Leapfrog's response or failure to respond. Please preserve all documents, communications, website records, data feeds, internal approvals, and third-party instructions relating to Leapfrog's ratings on leapfroggroup.org and its ASC Public Reporting Program initiative.

Sincerely,

GIBSON, DUNN & CRUTCHER LLP

Re: Hospital And Ambulatory Surgery Centers Ratings On Leapfroggroup.org

Counsel:

I write on behalf of my client, Defendant The Leapfrog Group, in response to Plaintiffs' and Tenet Healthcare Corporation's April 14, 2026 letter concerning the Court's injunction in *Good Samaritan Medical Center, Inc. et al. v. The Leapfrog Group*, No. 25-cv-80526 (S.D. Fla.). The claims in the letter are worse than meritless—they reveal a litigation strategy that is designed to censor and muzzle reporting on matters of public concern. To the extent the injunction could be (mis)read as the letter suggests, it would follow inexorably that the injunction is unconstitutional.

I. Plaintiffs May Not Wield The Court's Injunction And The Threat Of Contempt To Chill Leapfrog's Constitutionally Protected Expression Beyond What The Court Enjoined

For anyone familiar with the First Amendment, Plaintiffs' April 14 letter bids to impose a prior restraint against free expression. Although Plaintiffs style that letter as a demand that Leapfrog comply with the Court's injunction, Leapfrog's full compliance with the injunction has been documented and should be beyond doubt. *See* Decl. of L. Binder (Dkt. 215). Nevertheless, Plaintiffs' letter somehow demands, wielding the threat of contempt, that Leapfrog self-censor or discontinue its protected expression on matters of core public concern that the injunction does not cover. In particular, the letter contends that Leapfrog cannot so much as report the basic, irrefutable fact that Plaintiffs declined to respond to Leapfrog's Hospital Safety Survey. Nor, according to the letter, can Leapfrog initiate an entirely new safety reporting program for

ambulatory surgical centers (ASCs) that the Court has yet to consider, much less adjudicate. Many of the specific messages that Plaintiffs seek to suppress amount to accurate reporting of incontestable facts. Others constitute expert opinions, including ones that encourage patients to pursue their own protected expression by seeking information critical to their safety. By any fair account, every one of the messages identified in Plaintiffs' April 14 letter falls within the heartland of the First Amendment's generous protection.

The federal courts are not properly enlisted as instruments for chilling and punishing protected expression. The injunction says what it says about specific aspects of Leapfrog's reporting that have been challenged and adjudicated, and the injunction is being followed by Leapfrog, as the docket and Leapfrog's attestation reflect. But Plaintiffs' letter ventures far beyond the injunction in seeking to suppress *different* practices, to restrain speech *before* it occurs, and to paint as *contemptuous* straightforward reporting of *facts*. By Plaintiffs' latest account, Leapfrog cannot communicate about these hospitals or their decision not to participate in Leapfrog's safety survey. Such intimidation tactics are out of place and downright dangerous—both to patients and also to "the inalienable right of every individual to decide for himself 'how best to speak.'" *Chiles v. Salazar*, 607 U.S. ----, 146 S. Ct. 1010, 1021 (2026) (quoting *Riley v. Nat'l Fed'n of Blind of N.C., Inc.*, 487 U.S. 781, 791 (1988)). No such suppression campaign will deter Leapfrog from maintaining its commitment to transparency and patient safety, even as it complies with the specific dictates of the injunction. Please know that Leapfrog will vigorously oppose any such attempt by Plaintiffs to embroil the Court in the unconstitutional enterprise of superintending speech of urgent public concern that has not been enjoined and could never lawfully be enjoined. Although the speech that Plaintiffs attempt to silence in their April 14 letter is not even arguably within the scope of the injunction, the very fact that Plaintiffs are leveraging the injunction to threaten contempt proceedings is telling—and disturbing. Indeed, if Plaintiffs sincerely read the injunction so sweepingly, then they would surely recognize that it is anathema to the First Amendment—particularly to freedom of speech and of the press as long celebrated in the United States.

II. Leapfrog's Depiction Of Non-Participating Hospitals On Its Website Is Both Fully Compliant With The Court's Injunction And Constitutionally Protected In Its Own Right

To begin, Plaintiffs' faulting of Leapfrog's survey website, leapfroggroup.org, misapprehends both the Court's order and the factual record. What the injunction addressed was Leapfrog's assignment of imputed Safety *Grades* to non-participating hospitals under a numerical valuation methodology that ostensibly disfavored non-participation. The injunction did not, and could not, prohibit Leapfrog from truthfully informing the public that certain hospitals, like Plaintiffs, declined to respond to its voluntary survey, or from opining that such nonparticipation endangers patient safety. Nor did the Court enter an injunction applying to dozens of non-party hospitals.

Simply reading the Court's injunction order refutes Plaintiffs' account of it. The order's five enumerated commands each concern the assignment, publication, and licensing of Safety Grades derived from Leapfrog's challenged imputation methodology. Nothing in the order purports to restrict Leapfrog's separate survey website, leapfroggroup.org, which does not assign or display Safety Grades at all. As Leapfrog's representative stated under oath in a compliance declaration filed with the Court, leapfroggroup.org "does not house or display Safety Grades," and the injunction does not prohibit Leapfrog "from providing consumers with important, truthful information to the effect that non-participating hospitals in fact have not participated in its Survey." Decl. of L. Binder (Dkt. 215) ¶¶ 46–47. The inapplicability of the injunction is doubly apparent as to Leapfrog's speech about dozens of *non-party* "Tenet-owned hospitals," none of which is covered by the injunction. Pls.' Apr. 14, 2026 Ltr. at 4. Only by stretching the Court's order well beyond its express terms can Plaintiffs contend that leapfroggroup.org violates the injunction when it identifies hospitals that declined to respond and invites patients to ask those hospitals why. By no plausible reading does the Court's order impose such a sweeping, prior restraint on Leapfrog's speech about survey participation.

Nor would the First Amendment abide such an injunction, amounting to a classic prior restraint against accurate reporting of facts and expression of protected opinions on matters of intense public concern. There is no serious dispute that a nonprofit organization's truthful statements about whether a hospital responded to a voluntary public-transparency survey are constitutionally protected. Equally protected are opinions to the effect that hospitals *should* respond to that survey—and that failing to do so "deprive[s] patients of 'critical, life-saving information.'" Pls.' Apr. 14, 2026 Ltr. at 2. The Court itself recognized as much, acknowledging Leapfrog's role as a "watchdog organization" that legitimately serves as "a voice for transparency." Op. (Dkt. 212) at 39. If Plaintiffs truly believe that they have won an injunction against whatever they cast as "fear mongering" or "implying a nefarious and unjustified lack of transparency on the hospitals' part" or "pressuring hospitals" to provide safety data to Leapfrog by criticizing them for failing to do so, Pls.' Apr. 14, 2026 Ltr. at 2-3, then Plaintiffs should be confessing error, conceding that the injunction violates the First Amendment, and stipulating to vacatur as constitutionally imperative.

It is conspicuous, however, that Plaintiffs fail to point to any actual provision of the injunction that Defendants allegedly violated. Instead, they offer only a vague reference to the Court's order not to take "action to circumvent" the injunction. Pls.' Apr. 14, 2026 Ltr. at 4. But that suggests Plaintiffs now take the anti-circumvention provision as a charter to fault, censor, and muzzle any aspect of Leapfrog's reporting that may displease them, just by analogizing it to a distinct methodological practice actually adjudicated. That would transform the injunction from a targeted judicial scalpel into a roving, menacing hatchet—with freedom of speech the obvious casualty. Indeed, by demanding that Leapfrog scrub all references to non-participation from its survey website, Plaintiffs would command that Leapfrog misrepresent the factual landscape of hospital survey participation to the public; the upshot is the opposite of the transparency that Leapfrog is sworn to promote, as the Court recognized. When the Court enjoined Leapfrog from

using an imputed-value methodology, it did not require Leapfrog to equate non-participation with participation, contrary to the facts, nor did it suppress truthful information such that interested patients and purchasers must now be left in the dark.

In short, Leapfrog is in full compliance with the Court's order and will not allow Plaintiffs to censor Leapfrog's public expression or to substitute opacity for transparency.

III. Leapfrog's Anticipated Reporting System For Ambulatory Surgical Centers Is Entirely Lawful, Constitutionally Protected, And Distinct From The Statements That Judge Middlebrooks Addressed

Plaintiffs' second demand concerning Leapfrog's anticipated Ambulatory Surgical Center (ASC) public reporting program is even farther afield. Plaintiffs contend that the new program is "[p]recisely [like]" Leapfrog's Safety Grades and demand that "Leapfrog agree that it will not rate or otherwise score any Tenet-owned ASC facility." Pls.' Apr. 14, 2026 Ltr. at 4–5. That contention is wrong at every step. The forthcoming ASC public reporting program has nothing to do with the injunction or with the trial that preceded it. Beyond that, the anticipated ASC public reporting program is constitutionally protected and legally unassailable.

Notably, Plaintiffs do not even attempt to argue that the Court's injunction applies to the ASC public reporting program. Nor could they. The injunction orders Leapfrog to "cease assigning a Safety Grade *to the Community Hospitals*;" without saying anything about ASCs. Op. (Dkt. 212) at 40–41 (emphasis added). The only plaintiffs before the Court were the five hospitals—not ASCs, "Tenet-owned" or otherwise. And the new program, which was not unveiled until April 1, 2026, was not the subject of any evidence at trial or any of the Court's analysis. Plaintiffs cannot secure additional, unwarranted relief by smuggling a demand about ASCs into a letter purportedly addressing compliance with the existing injunction. *See Trump v. CASA, Inc.*, 606 U.S. 831, 843–44 (2025) (explaining that courts have "consistently rebuffed requests for relief that extended beyond the parties").

What is more, Leapfrog's new ASC public reporting program differs in crucial respects from the aspects of Leapfrog's hospital scoring program addressed by the Court. The Court's order focused on Leapfrog's assignment of "assumed or imputed" numerical values to non-participating hospitals where the Court found Leapfrog "suggest[ed] to a reasonable consumer that the grades assigned reflect actual performance[,]" not "nonparticipation." *See* Op. (Dkt. 212) at 6–7, 24–26, 40–41. In contrast, the new ASC public reporting program will *not* impute numerical values to nonparticipation. Instead, the new program will identify ASCs that "Declined to Report" with the below symbol displaying those exact words:

Progress towards meeting Leapfrog standards:

	Achieved the Standard
	Considerable Achievement
	Some Achievement
	Limited Achievement
DECLINED TO REPORT	Did not submit a Leapfrog Survey, did not report to CMS, or suppressed their CMS data
DOES NOT APPLY	This measure is not applicable to this facility
DID NOT MEASURE	Facility reported not collecting data on this measure
UNABLE TO CALCULATE	Sample size too small to calculate score
NOT AVAILABLE	CMS measure or surgery center accreditation status is not available for the reported facility
PENDING LEAPFROG VERIFICATION	This facility's responses are undergoing Leapfrog's standard data verification process

The Leapfrog Group, The Leapfrog ASC Public Reporting Program Scoring Algorithms: Scoring Details for the 2026 Leapfrog ASC Public Reporting Program, https://www.leapfroggroup.org/sites/default/files/Files/2026ASCPublicReportingProgramScoringAlgorithm_202604012026_v2.0.pdf.

Those words, on their face, are undeniably true as applied to ASCs that decline to report. For the avoidance of doubt, Leapfrog's website transparently defines the term, explaining that the "Declined to Report" label encompasses ASCs that "[d]id not submit a Leapfrog Survey, did not report to [the Centers for Medicare and Medicaid Services (CMS)], *or* suppressed their CMS data." *Id.* There is no denying that non-reporting ASCs truthfully fall within the express ambit of this fully disclosed definition. Nevertheless, Plaintiffs claim that Leapfrog is "suggest[ing] that non-participating ASCs must be actively working to 'suppress' negative information." Pls.' Apr. 14, 2026 Ltr. at 5. But Leapfrog's disjunctive definition expressly refutes any such misconception.

Indeed, that definition reflects the same widely recognized framework for describing survey participation used by the Centers for Medicare and Medicaid Services (CMS).[1] Nothing about that straightforward (and truthful) definition "suggest[s]" the negative inference Plaintiffs are out to impute. Whatever gloss Plaintiffs may try to put on it, however, any such evaluative statement would be within Leapfrog's editorial prerogatives—prerogatives that are squarely protected by the First Amendment and beyond the scope of the Court's injunction.

***

In sum, Leapfrog respectfully declines to comply with the demands of Plaintiffs' April 14 letter, which jarringly depart from the injunction, with which Leapfrog has complied. If any dispute persists on these points, Leapfrog will be taking its cues from the Court; it will not succumb to censorship or surrender its constitutional right to speak freely unless and until a clear and definite order of the Court may so require. In the wake of Plaintiffs' threats, Leapfrog is reserving all of its rights, including to seek reconsideration or clarification of the injunction now that Plaintiffs have telegraphed their intention to wield it as a chilling, censorial device.

Very truly yours,

QUINN EMANUEL URQUHART & SULLIVAN, LLP

Re: Hospital And Ambulatory Surgery Centers Ratings On Leapfroggroup.org

Counsel:

I write on behalf of the Plaintiff Hospitals in *Good Samaritan Medical Center, Inc., et al. v. The Leapfrog Group*, 25-cv-80526 (S.D. Fla.), and their parent company, Tenet Healthcare Corporation, in response to your letter of April 24, 2026. Your response fails to deal with the actual problems with Leapfrog's ongoing behavior that continues to harm the Community Hospitals and with the decision that Judge Middlebrooks actually rendered, as explained in my previous letter.

In stratospheric rhetoric, your letter asserts that the Community Hospitals seek to "fault, censor, and muzzle" Leapfrog's "straightforward reporting of *facts*." You suggest that the Community Hospitals believe Leapfrog "cannot so much as report the basic, irrefutable fact that Plaintiffs declined to respond to Leapfrog's Hospital Safety Survey," may not make "truthful statements about whether a hospital responded to a voluntary public-transparency survey," and may not "truthfully infor[m] the public that certain hospitals … declined to respond to [Leapfrog's] voluntary survey." You similarly claim that the Community Hospitals seek to "suppress truthful information" and "accurate reporting of incontestable facts." And you suggest that the Community Hospitals thereby seek to make "freedom of speech" a "casualty."

That caricature of the Community Hospitals' April 14 letter bears no resemblance to its actual content. That letter never asserts that Leapfrog cannot truthfully state a hospital did not respond to Leapfrog's Survey. Instead, the letter identifies targeted conduct that renders Leapfrog's depiction of nonparticipating hospitals highly misleading in context—red hazard symbols, exclamation points, warnings, and suggestions that patients should question non-participating hospitals' "record on quality and safety" simply because of their nonparticipation; admonitions juxtaposed with inviting green labels and no similar disclaimers for participating hospitals. That is not accurate recitation of the fact of nonparticipation. It is a calculated strategy to sow doubt in the minds of patients about nonparticipating hospitals simply because they do not acquiesce to Leapfrog's commercially driven Survey. These attempts "to pressure and penalize hospitals into participating" were the "precis[e]" problem identified in Judge Middlebrooks's order. *See* Op. 39.

And it is beyond doubt that, following "a judicial determination that the defendant['s] past conduct was … unlawful," the Court may restrain the defendant from continuing that same unlawful conduct. *Lucero v. Trosch*, 121 F.3d 591, 600–01 (11th Cir. 1997) (rejecting prior-restraint argument). Tellingly, your letter does not address any of this. That omission speaks far more loudly than its pages of overwrought assault on a strawman of Leapfrog's own creation.

Your treatment of Leapfrog's forthcoming Ambulatory Surgical Center ("ASC") program rests on similar diversion. You contend that when Leapfrog claims nonparticipating facilities have "suppressed their CMS data," Leapfrog is merely acting as a faithful purveyor of CMS's own grading methodology. But CMS itself specifically *permits* hospitals to withhold such data when, for example, "external factors" (like the COVID pandemic) degrade health outcomes "not due to the care provided." *Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals*, 86 Fed. Reg. 44,774, 45,301 (Aug. 13, 2021). Indeed, CMS recognizes that "quality measurement" can be "distorted" if such measures are *not* withheld, and that hospitals should not be "penalize[d] … for performance on measures" outside of their control. *Id.*

Leapfrog's proposed ASC standards provide none of this context—presumably because of Leapfrog's long-expressed ideological disagreement with how CMS administers its own reporting standards. *See, e.g.*, Ron Southwick, *Patient Groups Oppose CMS Plan To Suppress Reporting on Some Safety Measures*, Chief Healthcare Executive (June 8, 2022), https://tinyurl.com/56zc9rcx (statement of Leapfrog CEO Leah Binder objecting to CMS's practice). Leapfrog instead apparently plans to baldly claim that ASCs "suppressed their CMS data"—falsely implying an intent to cover up poor practices—and then leave patients to wonder whether that aspect of "Leapfrog's disjunctive definition" covers the ASC in question. That is far from a "straightforward (and truthful)" approach.

Your letter regrettably betrays Leapfrog's apparent intent to continue disparaging nonparticipating hospitals in its forthcoming Safety Grade methodology. The Community Hospitals will continue to carefully monitor those developments (as well as with respect to leapfroggroup.org and the ASC program) and pursue enforcement as appropriate.

Sincerely,

GIBSON, DUNN & CRUTCHER LLP

INTRODUCTION

As this Court has recognized, Defendant The Leapfrog Group is "a watchdog" nonprofit organization with a "laudable" mission that carries immense public importance—promoting the "safety, quality and affordability of U.S. health care by using transparency to support informed health care decisions" for patients nationwide. (Dkt. 212 at 3, 39.) While performing its work amidst controversy and criticism, Leapfrog relies upon the "First Amendment's jealous protections" of the "right to think and speak freely," just as others reporting on matters of public concern do. *Chiles v. Salazar*, 607 U.S. ----, 146 S. Ct. 1010, 1021 (2026).

Leapfrog now respectfully returns to this Court seeking reconsideration or clarification of the judgment based on considerations that supply compelling grounds for what is, concededly, an exceptional request. Herein, Leapfrog respectfully draws renewed attention to Leapfrog's laudable mission together with the First Amendment's hallowed protections. In addition, Leapfrog respectfully urges the Court to take account of Plaintiffs' post-judgment efforts to anoint themselves as censors who could use the Court's order as a template to warp and silence unfavorable reporting by any healthcare or press organization, even beyond Safety Grades.

In its order denying Leapfrog's motion to dismiss, this Court held that "Defendant's First Amendment defenses" are "inapplicable" to the claims Plaintiffs brought. (Dkt. 41 at 6.) In doing so, however, the Court noted that "[t]he First Amendment protects 'statements that are not readily capable of being proven false' and 'statements of pure opinion.' *Turner v. Wells*, 879 F.3d 1254, 1262 (11th Cir. 2018)." (*Id*. at 5.) It also explained that courts "have recognized that these principles extend to online grading services, which often rely on a subjective weighing of objective data." (*Id.*) Accordingly, the Court ruled that "a claim brought pursuant to the FDUTPA is not *barred* by the First Amendment when it involves a challenge to *false or misleading statements made about the rating process itself*," and it permitted Plaintiffs' action to proceed to the extent "aris[ing] from a challenge to Defendant's *representations about its methodology*." *Id*. at 6 (emphases added). Far from affording Plaintiffs carte blanche and shedding First Amendment constraints, this Court allowed Plaintiffs to proceed down a constitutionally circumscribed path: Plaintiffs' case was necessarily confined to identifying and remedying any *factual misrepresentations* Leapfrog made *about* its methodology. So long as that line remains operative, the judgment cannot stand. Simply comparing the Court's judgment with its ruling denying dismissal establishes that Plaintiffs ventured astray at the trial stage and wound up trespassing on

constitutionally protected terrain. Only by granting reconsideration can this Court restore alignment with the Constitution, and, indeed, with its own prior ruling.

By the time of the Court's injunction order (Dkt. 212), no mention was made of the First Amendment. What is more, the constitutional constraints that the Court had earlier recognized ostensibly fell by the wayside. The Court held Leapfrog liable not just for misrepresentations *about* the grades, but for the grades themselves; it enjoined not only speech pertaining to how Leapfrog's grades are calculated, but also publication of Leapfrog's ultimate, bottom-line safety views themselves. Absent correction, the Court's final judgment would set a worrisome precedent and cast a lasting chill over freedom of speech and of the press for countless speakers nationwide whose missions involve reporting on matters of public concern. Moreover, supervision of the injunction threatens to embroil this Court in the unconstitutional enterprise of censoring wide-ranging, hazily-defined assessments and reports on hospital safety. In these extraordinary circumstances, relief under Rule 59 is more than well warranted—it is constitutionally imperative.

First, the Court's judgment holds Leapfrog liable for protected expression. As the Court previously recognized, the First Amendment's protection of pure opinion "extend[s] to online grading services," like Leapfrog's, that depend on the "subjective weighing" of information. (Dkt. 41 at 5.) Courts have agreed that such ratings are pure opinions, which the First Amendment protects. The same holds for subjective inputs into the grades—like Leapfrog's imputed-value methodology for evaluating certain metrics of hospital safety—none of which is "readily capable of being proven false" (*id.* (quoting *Turner*, 879 F.3d at 1262)), and all of which were indisputably "set forth" on Leapfrog's website and "known or available to the reader or listener as a member of the public," *Turner*, 879 F.3d at 1262. Yet the Court never referenced that constitutional limitation in finding Leapfrog liable for its Safety Grades and for the subjective, fully disclosed imputed-value methodology underlying it. What is more, even assuming that Leapfrog's imputed-value methodology could be deemed provably false, the Court would have had to make a finding of actual malice before imposing liability on this basis.

Second, the contours of the injunction in any event exceed anything the First Amendment could permit. Indeed, the injunction imposes an unconstitutional prior restraint on fully protected expression to the extent the speech could be dubbed "similar"—by opportunistic, self-serving Plaintiffs—to the specific statements that have been adjudicated. Such overbreadth and vagueness violate the First Amendment's historic prohibition on prior restraints, while defying the principle

that such relief cannot extend any further than necessary to remedy the precise speech found to be unlawful. Further still, the injunction compels Leapfrog to profess beliefs antithetical to its own, again in contravention of the First Amendment. Even if liability stands, therefore, the Court should narrow the injunction for the sake of conforming to the First Amendment.

To be clear, the constitutional faults noted herein are not faults of the Court. Plaintiffs veered off the constitutional path they purported to follow, without Leapfrog calling out constitutional excesses with optimal specificity and alacrity. But no one should want to see the Constitution violated, let alone violated at the expense of free expression and the free press. There is still opportunity to set things right. It is especially important and timely to correct course, after Plaintiffs wrote to Leapfrog's counsel threatening to initiate contempt proceedings if Leapfrog does not self-censor or discontinue its protected expression on matters of core public concern that the injunction by its terms does not purport to regulate. (*See* Dkt. 219.) According to Plaintiffs, Leapfrog cannot so much as report the basic, irrefutable fact that Plaintiffs declined to respond to Leapfrog's Hospital Safety Survey—or express the view that hospitals should respond to the survey. Absent the requested relief, this may become a case study in how Florida's law of "unfair trade practices" can be deployed to shut down and penalize candid, incisive public reporting—and how judicial power may be coopted by deep-pocketed, litigious, for-profit corporations so as to bring under heel a nonprofit reviewer whose ratings displease them. For the reasons elaborated below, there is ample warrant for granting reconsideration or, at a minimum, clarification of key aspects of this Court's judgment.

BACKGROUND

A. The Court's Motion To Dismiss Order Recognizes First Amendment Limitations On Plaintiffs' FDUTPA Claims

Early in the litigation, Leapfrog moved to dismiss on the ground that its Safety Grades constitute protected opinion under the First Amendment and therefore cannot form the basis of a FDUTPA claim. (Dkt. 39 at 11-16). The Court denied that motion, acknowledging that courts have recognized First Amendment protection for online grading services that rely on subjective weighing of objective data, but holding that a FDUTPA claim is not altogether barred "when it involves a challenge to false or misleading statements made about the rating process itself." (Dkt. 41 at 5-6.) In support, the Court cited *Home Performance Alliance v. Better Business Bureau of West Florida*, 354 So. 3d 1165, 1166 (Fla. 2d DCA 2023) and *Caribbean Cruise Line, Inc. v.*

Better Business Bureau of Palm Beach County, Inc., 169 So. 3d 164, 167 (Fla. 4th DCA 2015), both of which drew the same distinction between a challenge to a rating itself, which is protected, and a challenge to false or misleading statements about how a rating is calculated, which potentially may not be. (Dkt. 41 at 5-6.) In concluding this portion of its ruling, the Court stated that "Defendant's First Amendment defenses" were "inapplicable" to Plaintiffs' claims as a matter of law, presumably subject to the Court's stated understanding of how Plaintiffs' claims were and would remain limited. (Dkt. 41 at 6.)

B. The Court Enjoins Leapfrog From Publishing Safety Grades For Plaintiffs Using The Assignment Methodology And Compels Leapfrog To Publish "Corrective Disclosures"

Following the ruling on the motion to dismiss, the parties continued to advance competing arguments based on the First Amendment, without further treatment by the Court. Leapfrog moved for summary judgment on the ground that Florida's anti-SLAPP statute prohibits lawsuits targeting a defendant's "exercise[]" of "the constitutional right of free speech in connection with a public issue … as protected by the First Amendment" and the Florida Constitution. (Dkt. 99 at 18 (quoting Fla. Stat. § 758.295(3)).) In opposing summary judgment on that ground, Plaintiffs maintained that this case does not implicate the First Amendment, while recognizing that, to the extent the challenged statements involved matters of public concern, the First Amendment "would require clear evidence that Leapfrog knew its representations were 'false' or 'reckless[ly] disregarded' the risk of falsity"—that is, actual malice. (Dkt. 115 at 19 (citation omitted).) When the Court denied the parties' motions for summary judgment on January 7, 2026, it did not specifically address the parties' First Amendment or anti-SLAPP arguments. (*See* Dkt. 139.)

The parties made similar arguments in their pretrial submissions. Leapfrog again argued that Plaintiffs had sued in violation of the anti-SLAPP statute's prohibition on lawsuits that violate the First Amendment. (Dkt. 135 ¶¶ 383-92.) Plaintiffs, for their part, reiterated their position that the Safety Grades do not "implicat[e] the First Amendment," but also repeated their acknowledgement that, if the First Amendment applied, it would require proof by clear and convincing evidence that Leapfrog published the at-issue grades with actual malice. (Dkt. 136 ¶ 133.) Plaintiffs likewise denied they were seeking a "prior restraint," contending that "[t]here is no constitutional prohibition on restricting future speech already adjudicated to be unlawful." (*Id.* ¶ 134.) Through five days of trial, Leapfrog never wavered from its assertion that its Safety Grades and imputed-value methodology reflected its experts' opinions on hospital safety.

Following a five-day bench trial, the Court on March 6, 2026 issued its findings of fact and conclusions of law, ultimately finding for Plaintiffs and granting injunctive relief in their favor. (Dkt. 212.) The Court determined that Leapfrog had violated FDUTPA by imputing numerical values for certain measures underlying Leapfrog's Safety Grades for hospitals that declined to participate in Leapfrog's annual hospital survey, and it enjoined Leapfrog from "assigning a Safety Grade to [Plaintiffs] under the current methodology or any similar methodology." (*Id.* at 40.) The Court acknowledged that this scoring methodology was available to the public, finding that "[t]he scoring methodology" at issue "can be accessed in two ways," both through Leapfrog's public-facing website. (*Id.* at 13-15.) But the Court nonetheless held Leapfrog liable, reasoning that the methodology was not sufficiently easy to access and that viewers would "likely … assume that the data presented means something more than non-participation before they arrive at the complex assignment methodology." (*Id.* at 26 n.7.) In explaining why and how it was finding Leapfrog liable, the Court did not address the parties' First Amendment or anti-SLAPP arguments.

Upon finding Leapfrog liable, the Court's March 6 order issued an injunction with both prohibitory and mandatory components. First, the Court ordered Leapfrog to "cease assigning a Safety Grade to [Plaintiffs] under the current methodology or any similar methodology that … assigns assumed or imputed values to calculate Safety Grades due to the lack of hospital-provided performance data … or … that otherwise reduces a hospital's Safety Grade due to the failure to provide performance data." (*Id.* at 40-41.) Second, the Court required Leapfrog to "withdraw from its websites and cease promoting the unfair Safety Grades assigned to" Plaintiffs. (*Id.* at 41.) Third, the Court ordered Leapfrog to "send corrective disclosures to all entities that paid to license" the Safety Grades, disclosing "that those Safety Grades were found to be deceptive and unfair in this action." (*Id.*) Fourth, the Court mandated that Leapfrog "place the same corrective disclosures in future contracts, print and electronic advertising materials, and other print and electronic documents that promote paid licensure of the next cycle of Safety Grades" accessible in certain zip codes. (*Id.*) And fifth, the Court ordered Leapfrog to "refrain from taking any action to circumvent" the injunction and retained jurisdiction to enforce the injunction. (*Id.*)

The injunction also required Leapfrog to file a declaration attesting to its compliance with the injunction. (*Id.*) As ordered, Leapfrog on April 24, 2026 filed a declaration by its CEO, Leah Binder. (Dkt. 215.) Ms. Binder attested that Leapfrog took several steps to comply with the injunction, as well as further steps even beyond those required by the Court "out of an abundance

of caution," "to forestall any allegations of noncompliance," and to prevent the unfairness that would result from "simultaneously rating other non-participating hospitals in ways that diverge" from how Leapfrog has been ordered to evaluate the Plaintiff hospitals. (*Id.* ¶¶ 8, 20, 32, 43, 45.)

C. Plaintiffs Invoke The Court's Injunction As A Sweeping, Chilling Prior Restraint On Core Protected Speech

Following entry of the injunction, Plaintiffs and their parent company, Tenet Healthcare Corporation, on March 20 wrote inquiring as to Leapfrog's intent to comply. After Leapfrog responded on March 31 by providing assurance of its intent to comply with the injunction in all particulars, Plaintiffs wrote again on April 14, this time alleging "noncompliance with the Court's recent injunction" based on aspects of Leapfrog's reporting that are nowhere mentioned by the injunction. (Dkt. 219-1 at 1.) After Leapfrog responded on April 24 by calling out Plaintiffs' overreach (Dkt. 219-2), Plaintiffs responded on April 30 to reiterate their stated views and warn that they will "carefully monitor" developments in purportedly policing compliance with an eye towards operations and practices quite distinct from what has been adjudicated. (Dkt. 219-3.)

In their April 14 letter, Plaintiffs demand that Leapfrog remove certain content from its website leapfroggroup.org, specifically faulting a webpage that flags hospitals that "Declined to Respond" with those words and an accompanying symbol. (Dkt. 219-1 at 2-4.) Plaintiffs also object to a pop-up linked to the words "Declined to Respond" that states, "Thousands of hospitals nationwide report to the Leapfrog Hospital Survey to help patients and purchasers make better health care decisions. This hospital did not participate. Ask them why not." (*Id.* at 3.) The letter claims that Leapfrog violates the injunction by truthfully describing hospitals that declined to respond as having "Declined to Respond" and by inviting the public to join the conversation by asking those hospitals "why not." (*Id.* at 3.) The letter also claims that Leapfrog is violating the injunction by opining that facilities that declined to respond "have deprived patients of 'critical, life-saving information'" because that statement (according to Plaintiffs) constitutes "fear mongering," "impl[ies] a nefarious and unjustified lack of transparency on the hospitals' part," and "pressur[es] hospitals" to provide safety data to Leapfrog by criticizing them for failing to do so. (*Id.* at 2-3.) Although nothing in this Court's injunction order even purports to restrict Leapfrog's expression via leapfroggroup.org, which does not assign or display Safety Grades at all, and although the injunction covers only named Plaintiffs themselves, the letter demands relief as to leapfrouggroup.org and as to "all Tenet-owned hospitals." (*Id.* at 4.) The only specific

provision of the injunction that Plaintiffs cite to support their demand is the prohibition against Leapfrog "circumvent[ing] the relief" elsewhere specified. (*Id.* at 4.)

The letter further demands that "Leapfrog agree that it will not rate or otherwise score any Tenet-owned [Ambulatory Surgical Center (ASC)] facility" as part of Leapfrog's anticipated ASC public reporting program. (*Id.* at 5.) Of course, the Court's injunction order did not discuss ASCs because the only plaintiffs before the Court were the five hospitals. Nor could the Court have been adjudicating the new program considering that it was not unveiled until April 1, 2026—*after* the Court had adjudicated the issues before it and entered its injunction order.

LEGAL STANDARD

Federal Rule of Civil Procedure 59(e) authorizes motions to alter or amend a judgment within 28 days of the judgment when a party seeks "reconsideration of matters properly encompassed in a decision on the merits." *Osterneck v. Ernst & Whitney*, 489 U.S. 169, 174 (1989). "The Rule gives a district court the chance 'to rectify its own mistakes in the period immediately following' its decision." *Banister v. Davis*, 590 U.S. 504, 508 (2020) (citation omitted). The grounds for Rule 59(e) relief include newly discovered evidence or clear errors of law or fact. *Arthur v. King*, 500 F.3d 1335, 1343 (11th Cir. 2007). Rule 59(a)(1)(B) allows for a motion for a new nonjury trial if "the verdict … will result in a miscarriage of justice" or "is against the clear weight of the evidence." *Jenkins v. Anton*, 922 F.3d 1257, 1264 & n.7 (11th Cir. 2019) (alteration in original and citation omitted). Independently, a court retains inherent authority to clarify an injunction where its scope is ambiguous or where compliance questions arise. *See, e.g.*, *Hodge v. Dep't of Housing & Urban Dev., Housing Div., Dade Cnty., Fla.*, 862 F.2d 859, 861-62 (11th Cir. 1989).

ARGUMENT

I. THE COURT SHOULD WITHDRAW THE INJUNCTION BECAUSE THE FIRST AMENDMENT PROTECTS LEAPFROG'S SAFETY GRADES AND THEIR UNDERLYING METHODOLOGY

The Court should reconsider or clarify the judgment because it breaks from at least two cornerstones of First Amendment law. First, it imposes liability on Leapfrog for statements of pure opinion that are not actionable. Second, even if certain statements were susceptible to proof of truth or falsity, the judgment imposes liability for purportedly misleading speech even though the Court did not make—and the record does not support—a finding of actual malice. For either

reason or both, the Court should withdraw the injunction and enter judgment for Leapfrog, order a new trial, or conduct further proceedings to revisit these constitutional premises.

A. Leapfrog's Safety Grades And Their Fully Disclosed Underlying Methodology Are Protected Pure Opinion

As an initial matter, Leapfrog's Safety Grades and the underlying imputed-value methodology on which they are partly based are both pure opinion that is unassailable under the First Amendment. Leapfrog cannot properly be held liable for either.

The First Amendment bars the government from "abridging the freedom of speech, or of the press." U.S. Const., amend. I. To ensure the uninhibited marketplace of ideas envisioned by its Framers, the First Amendment affords absolute protection to "statements of pure opinion." *Turner v. Wells*, 879 F.3d 1254, 1262 (11th Cir. 2018). Viewed through the lens of the United States Constitution, there is no such thing as a false idea," no matter "how pernicious it may seem." *Gertz v. Robert Welch, Inc.*, 418 U.S. 323, 339 (1974). Accordingly, the First Amendment protects expression on matters "not readily capable of being proven true or false," *Turner*, 879 F.3d at 1264, and "comment or opinion based on facts which are set forth in the publication or which are otherwise known or available to the reader or listener as a member of the public," *id.* at 1262.

In its motion to dismiss order, the Court correctly recognized both these principles and their application "to online grading services," like Leapfrog's, "which often rely on a subjective weighing of objective data." (Dkt. 41 at 5.) By contrast, the Court isolated claims that "challenge [the] false or misleading statements made about the rating process itself" as not necessarily facing the same First Amendment bar. (*Id.*) On that basis, the Court denied Leapfrog's motion to dismiss and allowed the case to proceed; the Court's essential, express premise was that this "action arises from a challenge to Defendant's *representations about* its methodology." (*Id.* at 6 (emphasis added).) Elucidating the constitutional line it was drawing, the Court cited several cases that applied the same line so as to protect publication of opinions—such as business ratings provided by third parties like the Better Business Bureau, *e.g.*, *Home Performance Alliance, Inc. v. Better Business Bureau of W. Fla., Inc.*, 354 So. 3d 1165, 1166 (Fla. 2d DCA 2023), and comments based on information that is fully disclosed or available to the public, *e.g.*, *From v. Tallahassee Democrat, Inc.*, 400 So. 2d 52, 57 (Fla. 1st DCA 1981). (Dkt. 41 at 6.)

Yet the Court's injunction order proceeded to transgress the constitutional line by faulting Leapfrog's protected opinions. The Court's analysis focused almost entirely on Leapfrog's

imputed-value methodology, not on Leapfrog's representations *about* the methodology and Grades. The injunction similarly ventures beyond merely preventing or remedying any ostensible "representations about [Leapfrog's] methodology." (*Id.*) After all, *misrepresentations* about the *methodology* could not possibly justify enjoining publication of the *grades themselves*—any more than an alleged misrepresentation by *The New York Times* about its policy for handling anonymous sources could ever justify an injunction barring *The New York Times* from publishing articles using anonymous sources. The injunction order nonetheless entirely bars Leapfrog from using the methodology itself, as well as any similar methodologies, and restrains Leapfrog from publishing Safety Grades using the methodology, now or ever, irrespective of how precisely and fulsomely Leapfrog may disclose all relevant particulars to consumers.[1] (Dkt. 212 at 40-41.) Thus, without saying so, the injunction order ostensibly transgresses the acknowledged guardrails.

The upshot is error. Leapfrog should not face liability under FDUTPA for how it chooses to evaluate hospital safety or for the gloss it puts on its evaluation. As Judge Altman has colorfully explained, when it comes to "assessments of a company's 'safety rating'" by third-party websites that review "publicly available data," "there is no *reality*—there's just everyone's opinion." *U.S. Structural Plywood Integrity Coalition v. PFS Corp.*, 524 F. Supp. 3d 1320, 1334-35 (S.D. Fla. 2021). That observation is equally apt and dispositive here. When Leapfrog formulates and conveys its Safety Grades, it is offering pure opinions that are constitutionally protected.

It should be beyond dispute that the Safety Grades themselves are protected opinion. As the Court's injunction order makes clear, evaluating hospital safety is no exact science. To determine its Safety Grades, Leapfrog uses a combination of "22 quality safety metrics," which Leapfrog identifies and must determine how to weigh in determining a hospital's Safety Grade. (Dkt. 212 at 4.) Leapfrog splits these metrics into two categories—ten "Outcome" measures and twelve "Structural/Process" measures—with each category accounting for 50% of a hospital's

[1] Factual representations about Leapfrog's methodology might have included, for example, Leapfrog's suggestion that its Safety Grades reflect "how well a hospital does on safety, not whether they complete the Leapfrog Survey" or that its methodology is peer-reviewed. (Dkt. 212 at 24-25.) But the injunction does not address those representations. Instead, it squarely outlaws the imputed-value methodology and similar methodologies for Safety Grades. That noted, Leapfrog has removed the reference to peer review and made clear that its Safety Grades reflect Leapfrog's perspective on a hospital's safety performance. Although Leapfrog respectfully contends that those statements both deserve First Amendment protection and were truthful, it suffices for purposes of this motion to note that they cannot possibly justify this injunction.

Safety Grade. (*Id.* at 5.) In addition to determining how to evaluate each of these metrics, Leapfrog draws its data from multiple sources, including its own safety survey, and must determine "ways of dealing with missing data." (*Id.*) The end result of Leapfrog's intricate and evaluative process is a letter grade ranging from A to F. As the Court's motion to dismiss order and other decisions recognize, such letter grades can only be said to amount to a "subjective assessment" not susceptible—and certainly "not *readily* capable"—"of being proven true or false." *Turner*, 879 F.3d at 1264 (emphasis added); *see Home Performance*, 354 So. 3d at 1166 (dismissing claims based on the Better Business Bureau's "D+" rating, "which is a nonactionable opinion").

The same is true of Leapfrog's imputed-value methodology. That methodology is a response to "an understandable issue"—namely, the fact that "survey information is not available" for nonparticipating hospitals, such that those hospitals cannot be evaluated for several criteria that Leapfrog deems essential to assessing their safety. (Dkt. 212 at 2, 6.) And Leapfrog's previous method of "imputing the cohort means" of participating hospitals conferred on nonparticipating hospitals "what Leapfrog perceived to be an underserved benefit." (*Id.* at 6.) Leapfrog is a nonprofit dedicated to promoting transparent patient decision-making and, accordingly, has long resolved to "provid[e] a Safety Grade to all eligible hospitals, regardless of whether the hospital voluntarily reports information" in response to Leapfrog's survey. (*Id.* at 4.) So rather than stop grading nonparticipating hospitals, Leapfrog altered its grading methodology to assign or impute numerical values for four metrics—computerized physician order entry, bar code medication administration, ICU physician staffing, and hand hygiene—that Leapfrog could not measure for those hospitals. (*Id.* at 6.) If no historical data on these metrics exists for a nonparticipating hospital, Leapfrog assigned it a score "based on the lowest score of a participating hospital for that measure"—15, 25, 5, and 15 for each of the four metrics, respectively. (*Id.* at 6-7.)

Nonparticipating hospitals might well think they are being "penalized" in the rankings if the imputed metrics do not fairly represent how well they would be scored if they disclosed all their data—dissenters from ranking systems often level just such accusations. *See, e.g.*, David Lat, *Yale and Harvard Law to U.S. News: Drop Dead*, Original Jurisdiction (Nov. 17, 2022), https://davidlat.substack.com/p/yale-and-harvard-law-to-us-news-drop ("[W]hen schools don't play ball with U.S. News, forcing the magazine to use 'placeholder values,' they tend to drop."). But any rater's imputation of numerical values for nonparticipants is ultimately a judgment call—a "subjective assessment" that is not objectively verifiable. *Turner*, 879 F.3d at 1264. Here, there

is no way to prove or disprove whether a hospital deserves a particular numerical score when implementing a subjective framework for metrics designed to measure something as qualitative as hospital safety. And that is all that matters under the First Amendment. "[T]he First Amendment protects subjective evaluations because they are not susceptible of being verified as true or false." *Partington v. Bugliosi*, 56 F.3d 1147, 1158 (9th Cir. 1995). That protection extends to unverifiable assessments of all types—from statements that a production was "fake" and "phony," *Phantom Touring, Inc. v. Affiliated Publications*, 953 F.2d 724, 728 (1st Cir. 1992), to the statement that a professional football coach engaged in "homophobic taunting," *Turner*, 879 F.3d at 1264, to the claim that an employer was "unfair to black employees," *Beverly Hills Foodland, Inc. v. United Food & Commercial Workers Union, Local 655*, 39 F.3d 191, 195-96 (8th Cir. 1994). The assessment of nonparticipating hospitals' safety across four disputed metrics is no more verifiable than any other prototypical opinion. Nor is it any more actionable under the First Amendment.

If anything, the First Amendment's protection of pure opinion applies with added force to Leapfrog's imputed-value methodology, given the incomplete information on which Leapfrog must rely. The First Amendment affords members of the press, like Leapfrog, "the interpretive license that is necessary when relying upon ambiguous sources." *Masson v. New Yorker Magazine*, 501 U.S. 496, 519 (1971); *see Moldea v. New York Times Co.*, 22 F.3d 310, 316 (D.C. Cir. 1994) ("[S]ome materials by their very nature require interpretation, and the First Amendment affords latitude to those engaged in that task."). That protection includes license to weigh the import of missing data in the context of assessing overall safety. This Court in its injunction order acknowledged the inherently evaluative nature of that determination, reasoning that Leapfrog responded to the "understandable issue" of weighing absent data differently at different times, ultimately culminating in an "[a]ssum[ption] that … hospitals choosing not to participate necessarily had something to hide with respect to patient safety." (Dkt. 212 at 2, 6.) That is the definition of an inference drawn from "inherently ambiguous materials or subject matter," and the First Amendment protects such inferences as opinions. *Moldea*, 22 F.3d at 315.

Even if the Court—or a majority of observers, for that matter—would draw a different inference from missing data, the First Amendment protects Leapfrog's imputation of scores all the same. Any "argument that another reader might come to a different conclusion upon review of the facts … does not make [Leapfrog's] assessment … anything other than opinion." *Turner*, 879 F.3d at 1264. Disagreement about how to weigh nonparticipating hospitals' performance using

missing data at most "reflects differing interpretations of the murky facts." *Lane v. Random House, Inc.*, 985 F. Supp. 141, 152 (D.D.C. 1995). It suffices that Leapfrog's "account of inherently ambiguous materials" falls within the "wide range of possibilities." *Partington*, 56 F.3d at 1154 (alterations adopted; quotations omitted). Indeed, that is "precisely when [courts] need and must permit a free press to ask the question." *Id.* (citation omitted). Nor could FDUTPA, consistent with the First Amendment, require Leapfrog to afford veto or opt-out power to nonparticipating hospitals. The Constitution does not abide a legal framework that leaves "no room for expressions of opinion by commentators" or "experts in a field," or where publishers "of every sort would be forced to provide only dry, colorless descriptions of facts, bereft of analysis or insight." *Id.*

But even if the Court disagrees about the verifiability of the imputed-value scores, it should still enter judgment in Leapfrog's favor because there is no dispute that Leapfrog *disclosed* its basis for imputing those scores. It is axiomatic—particularly within the Eleventh Circuit—that "a defendant publishes a 'pure opinion' when the defendant makes a comment or opinion based on facts which are set forth in the publication or which are otherwise known or available to the reader or listener as a member of the public." *Turner*, 879 F.3d at 1262; *accord Partington*, 56 F.3d at 1156-57 ("[W]e join with the other courts of appeals in concluding that when an author outlines the facts available to him, thus making it clear that the challenged statements represent his own interpretations of those facts … , those statements are generally protected by the First Amendment."); *Hay v. Independent Newspapers, Inc.*, 450 So. 2d 293, 295 (Fla. 2d DCA 1984) (holding that statements were protected as opinion because they "were based in part upon facts disclosed in [an] article" and on facts "known or available to the reader"). And Leapfrog unquestionably made its imputed-value methodology available to viewers. (Dkt. 212 at 13-15.) That fully disclosed evaluative method is beyond reproach under the First Amendment.

The Court's injunction order seems to depart from this principle. Multiple times, the order acknowledged that Leapfrog's imputed-value methodology was available on its website. (*Id.* at 13, 14, 15, 26 n.7, 30.) Yet the Court still held Leapfrog liable for the methodology on the theory that Leapfrog's explanation of the methodology was not prominent enough and visited by website users with enough frequency. (*E.g.*, *id.*)

That approach was misconceived. The imputed values reflect an inference based on a fully disclosed and indisputably *truthful* fact—that Plaintiffs and other nonparticipating hospitals had not made their data for those metrics available. For an opinion to qualify as constitutionally

protected, the facts on which it is based may be "set forth in the publication" itself or "otherwise known or available to the reader." *Turner*, 879 F.3d at 1262. Here, Leapfrog's methodology was *both*. And because Leapfrog's "rationale for [its] view … was exposed," the imputed values "reasonably could be understood only as [Leapfrog's] personal conclusion about the information presented, not as a statement of fact." *Phantom Touring*, 953 F.2d at 730; *see also, e.g.*, *ONY, Inc. v. Cornerstone Therapeutics, Inc.*, 720 F.3d 490, 497-98 (2d Cir. 2013) (holding that scientists' "conclusions reached by experiments" are protected by the First Amendment when presented with "an accurate description of the data taken into account and the methods used").

To require more from Leapfrog would expose reviewers and commentators of every stripe to civil lawsuits and injunctions of this sort. Truthful disclosure of methodologies could still be picked apart in court (through multi-day trials) as unduly subtle, obscure, or misunderstood. The inalienable right to free expression becomes alienable once made to depend on proving readers' diligence or satisfying judges' preferences for web design. An author who publishes a lengthy, scathing condemnation of a presidential administration could be sued for failing to disclose her factual sources before readers reach the endnotes hundreds of pages into the book. A controversial blogger could be held liable for her opinion because a jury determined that it took too long and too many clicks to reach a hyperlink bridging to pertinent facts. Such second-guessing of accurate factual disclosures denies the "breathing space" that "First Amendment freedoms need … to survive." *Americans for Prosperity Found. v. Bonta*, 594 U.S. 595, 609 (2021) (citation omitted).

The same error is evident in the Court's injunction order. Notwithstanding Leapfrog's disclosure of its methodology for its imputed-value scores, the Court still holds Leapfrog liable because it took up to "23 clicks" to navigate to the methodology and viewers were "likely" to have already decided that nonparticipating hospitals' Safety Grades relied entirely on available data by the time they reached the disclosure. (*Id.* at 26 n.7, 30.) Courts widely recognize that "providing a link [to source material] can supply the factual disclosure necessary to confer constitutional protection." *Lewis v. Abramson*, 673 F. Supp. 3d 72, 93 (D.N.H. 2023) (citations omitted; collecting cases). And navigating two dozen clicks away is, if anything, easier than reviewing the entirety of a lengthy book or report—such as the 144-page report that the Eleventh Circuit in *Turner v. Wells* held contained protected pure opinion based on various disclosures of underlying facts at various turns. 879 F.3d at 1261, 1264-65. When it comes to matters of public concern like patient safety, the only question is whether the pertinent facts have been disclosed, not whether

the disclosure was prominent or approved by a court. Indeed, courts consistently excuse speakers even from disclosing the facts underlying public commentary, provided the facts are "otherwise … *available* to the reader or listener as a member of the public." *From*, 400 So. 2d at 57 (emphasis added). Needless to say, the facts that Leapfrog was going out of its way to disclose on its public-facing website were thereby "available" to any member of the public who wished to look. Because Leapfrog's imputed-value framework was a disclosed method of evaluating hospital safety under settled law, it cannot give rise to liability under the First Amendment.

B. Even If Leapfrog's Safety Grades And Their Underlying Methodology Were Not Pure Opinion, They Are Protected Absent A Missing, Unsupported Finding Of Actual Malice

There is another, independent reason why the injunction is constitutionally infirm: The Court never made the finding of actual malice that the First Amendment requires before false speech on matters of public concern, like patient safety, may be suppressed or penalized.

Even assuming that Leapfrog's Safety Grades or its imputed-value methodology are provably or were proven false, the First Amendment protects them. The Supreme Court's decision in *United States v. Alvarez*, 567 U.S. 709 (2012), forecloses the assumption that falsity alone justifies suppression of protected speech. As a plurality of the Court explained, "falsity alone may not suffice to bring speech outside the First Amendment." *Id.* at 719.[2] Instead, citing its decision in *New York Times Co. v. Sullivan*, 376 U.S. 254 (1964), the plurality explained that "[t]he statement must be a knowing or reckless falsehood"—that is, made with actual malice. 567 U.S. at 719. While the plurality acknowledged that the First Amendment does not protect certain distinct categories of false speech—such as defamation, fraud, and perjury—it explained that the falsity of such speech alone was not "determinative" in assessing its constitutional status and "reject[ed] the notion that false speech should be in a general category that is presumptively unprotected." *Id.* at 719, 722. More recently, a majority of the Court emphasized that "these exceptional categories" of unprotected speech "are few and narrowly drawn, and all share a long and well-recognized historical pedigree." *Chiles*, 146 S. Ct. at 1021. The Eleventh Circuit has taken the cue, adopting as binding precedent the *Alvarez* plurality's conclusion that courts lack "freewheeling authority to declare new categories of speech outside the scope of the First

[2] Although *Alvarez* was decided by a plurality, six Justices agreed that falsity alone does not justify prohibiting speech. *See* 567 U.S. at 731-32 (Breyer, J., concurring in the judgment).

Amendment." *Otto v. City of Boca Raton*, 981 F.3d 854, 866 (11th Cir. 2020) (citation omitted). That includes speech covered by FDUTPA, an exceedingly broad 1973 state statute that has never been taken as confined to the few delimited, enumerated categories of unprotected speech.

The need to prove actual malice is so well established that Plaintiffs themselves have acknowledged it. In their proposed findings, Plaintiffs recognized that the standard for liability if the First Amendment applies (as it does) "would simply require clear evidence that Leapfrog knew its representations are 'false' or that Leapfrog 'reckless[ly] disregarded' the risk of falsity." (Dkt. 136 at 64 (citing *Hunt v. Liberty Lobby*, 720 F.2d 631, 642 (11th Cir. 1983)).) As Plaintiffs' acknowledgment confirms, actual malice must be found by clear and convincing evidence before liability can be imposed for Leapfrog's Safety Grades or methodology, even assuming their falsity.

No such finding has been made, nor would the record support one. The Court found that Leapfrog acted with "punitive" intent (Dkt. 212 at 20), apparently meaning that Leapfrog adopted the imputed-value methodology in an effort to pressure nonparticipating hospitals into agreeing to participate in Leapfrog's Hospital Safety Survey. So long as speech is not defamatory or fraudulent, however, a consumer-advocacy organization like Leapfrog is entitled under the First Amendment to "pressure" Plaintiffs into participating in its survey. "The claim that the expressions were intended to exercise a coercive impact on respondent does not remove them from the reach of the First Amendment," so Leapfrog is protected even if it "plainly intended to influence [Plaintiffs'] conduct by their activities; this is not fundamentally different from the function of a newspaper." *Org. for a Better Austin v. Keefe*, 402 U.S. 415, 419 (1971). Holding that speech was intended to be "punitive" does not equate to actual knowledge that Leapfrog's assessment of those hospitals' safety was false. Nor does it bear on whether Leapfrog recklessly disregarded the truth. The actual malice test "is subjective,"; the plaintiff must show that the defendant "*in fact* entertained serious doubts as to the truth of his publication." *Berisha v. Lawson*, 973 F.3d 1304, 1312 (11th Cir. 2020) (citation omitted). The defendant must have published the statement "with a 'high degree of awareness' of its 'probable falsity'"—such a high degree that "[e]ven an extreme departure from professional publishing standards does not necessarily rise to the level of actual malice." *Id.* (alteration adopted; citation and internal quotation marks omitted).

This record contains no evidence that Leapfrog in fact or subjectively doubted the truth of its assessment. To the contrary, the Court's findings reflect that Leapfrog's methodology was developed with the involvement of an expert panel, that the panel debated various approaches to

handling missing data, and that Leapfrog, in response to the "understandable issue" of having to grapple with missing data, adopted a non-response-bias rationale for the Fall 2024 change. (DE 212 at 6-8.) While the Court may disagree with that decision and its rationale, a speaker's development of a methodology through expert consultation in pursuit of the legitimate goal of improving data completeness is incompatible with the notion that the speaker acted with "knowledge that [its conclusions were] false or with reckless disregard of whether [they were] false or not." *Sullivan*, 376 U.S. at 279-80. For the avoidance of doubt, Leapfrog respectfully stands behind that methodology, even today, and believes that it represents the best available way to assess safety in the absence of nonparticipating hospitals' survey data.

FDUTPA liability should not be imposed against Leapfrog before actual malice has been found, much less found by clear and convincing evidence. For this reason, too, the Court should reconsider the judgment and withdraw its injunction, or alternatively, order a new trial.

***

For all of these reasons, the Court should reconsider its implicit conclusion that the First Amendment does not protect Leapfrog's Safety Grades or imputed-value methodology. Importantly, reconsideration is warranted even if the Court does not revisit its factual findings that Leapfrog's Safety Grades and methodology caused harm. Leapfrog, to be sure, respectfully disagrees with those findings. Nonetheless, they have no bearing on whether Leapfrog's expression is constitutionally protected. "Speech," of course, "is powerful" and "can … inflict great pain." *Snyder v. Phelps*, 562 U.S. 443, 460 (2011). But courts "cannot react to that pain by punishing the speaker." *Id.* at 460-61. Nor is it plausible that speech in the healthcare context, which "can involve life or death situations" (Dkt. 212 at 29), is less protected. As the Supreme Court reaffirmed shortly after this Court's injunction order, "the dangers associated with censorship … are no less acute in the fields of medicine and public health than they are anywhere else," *Chiles*, 146 S. Ct. at 1025 (quotation marks omitted), and the urgent public importance of patient safety in the healthcare industry counsels for—not against—fully protecting robust expression and expert commentary within this vitally important realm.

Nor would withdrawing the injunction render Plaintiffs speechless or powerless. Many institutions face third-party ranking systems that they criticize. The medicine for that in our country has always been the same as the perceived disease—protected expression. *See supra*, p. 10. Nothing stops Plaintiffs from criticizing Leapfrog or from lobbying to change its approach; as

the Court's order observes, "Leapfrog has previously received criticism for its methodology" (Dkt. 212 at 2), and Plaintiffs are entirely within their rights to join and to cheer those critics. But Plaintiffs here chose a different route—marshalling their formidable resources to retain high-powered counsel, obtain a permanent injunction restraining the speech of their watchdog adversary, and wield the threat of contempt to censor and chill an even broader set of expression prospectively. That approach is anathema to the First Amendment. Plaintiffs' remedy for any harm they claim resides not in "the conscience of judges and juries but [i]n the competition of other ideas." *Gertz*, 418 US. At 339-40. Absent any injunction, Plaintiffs enjoy the same First Amendment rights as Leapfrog and can strive to prevail in the court of public opinion.

II. THE COURT SHOULD WITHDRAW THE INJUNCTION BECAUSE FDUTPA DOES NOT BAR LEAPFROG'S SAFETY GRADES AND THEIR UNDERLYING METHODOLOGY AS A MATTER OF LAW

To avoid these constitutional questions, the Court could alternatively reconsider the judgment on statutory grounds. To be unlawful under FDUTPA, an act or practice must be "unfair or deceptive." Fla. Stat. § 501.204(1). Leapfrog's Safety Grades and fully disclosed methodology do not so qualify under longstanding Florida principles of statutory interpretation.

First, neither Leapfrog's Safety Grades nor its imputed-value methodology is unfair within the meaning of FDUTPA. As the Court's injunction order recognizes, "[t]he Florida Supreme Court has defined 'unfair practice' as 'one that offends public policy and one that is immoral, unethical, oppressive, unscrupulous or substantially injurious to consumers." (Dkt. 212 at 18 (quoting *PNR, Inc. v. Beacon Prop. Mgmt., Inc.*, 842 So. 2d 773, 777 (Fla. 2003)).) Leapfrog's Safety Grades and imputed-value methodology could not have violated this test. The Florida Legislature has declared "that the public policy of this state" is "to protect the right in Florida to exercise the rights of free speech in connection with public issues" and to hasten the dismissal of suits—like this one—that "are inconsistent" with those rights. Fla. Stat. § 768.295(1). That principle alone should preclude liability, but it is bolstered by the constitutional-avoidance doctrine. FDUTPA's concept of unfairness, like the "[o]utrageousness" requirement in intentional infliction of emotional distress claims, "is a highly malleable standard with an inherent subjectiveness about it which would allow a [court] to impose liability on the basis of … tastes or views.'" *Snyder*, 562 U.S. at 458. That ambiguity is doubly dangerous as applied to watchdog organizations like Leapfrog, which exercise both the freedom of speech and of the press. And in Florida, "[i]t is a well-settled principle of statutory construction that when faced with two

reasonable interpretations of a statute," courts should "adopt the one that avoids constitutional questions." *Brito v. Salas*, 2025 WL 3765686, at *9 (Fla. Dec. 30, 2025). Applying that principle here, the Court should avoid interpreting FDUTPA's prohibition on "unfair" practices to apply to a nonprofit's non-commercial, protected speech on a matter of public concern.

The Court should take a like approach to interpreting "deceptive." The Court reasoned that "deceptive" means "a representation, omission, or practice likely to mislead a consumer acting reasonably in the circumstances" and recognized that "Leapfrog's intent matters." (Dkt. 212 at 18, 20.) To avoid any serious constitutional question or unconstitutional application, the Court should interpret FDUTPA to require at least actual malice as applied to press institutions speaking on matters of public concern, and should credit Leapfrog's disclosed methodology for Safety Grades as something a reasonable consumer would review before relying on them.

III. THE COURT SHOULD WITHDRAW, DISSOLVE, OR NARROW THE INJUNCTION BECAUSE THE INJUNCTION IS AN UNCONSTITUTIONAL PRIOR RESTRAINT AND UNCONSTITUTIONALLY COMPELS SPEECH

Even apart from the merits, the Court should reconsider the scope of the relief it ordered and withdraw or narrow the injunction. The injunction violates the First Amendment in at least two separate ways: It is an unconstitutional prior restraint and unconstitutionally compels speech.

A. The Injunction Imposes An Unconstitutional And Overbroad Prior Restraint

The First Amendment's "chief purpose" is to "prevent previous restraints upon publication." *Near v. State of Minnesota ex rel. Olson*, 283 U.S. 697, 713 (1931). "[P]rior restraints on speech and publication are the most serious and the least tolerable infringement on First Amendment rights." *Neb. Press Ass'n v. Stuart*, 427 U.S. 539, 559 (1976). Such restraints quintessentially include "judicial orders forbidding certain communications when issued in advance … such communications.'" *Alexander v. United States*, 509 U.S. 544, 550 (1993) (citation and emphasis omitted). "Temporary restraining orders and permanent injunctions—*i.e.*, court orders that actually forbid speech activities—are classic examples of prior restraints." *Id.* To determine whether an injunction constitutes an impermissible prior restraint, courts look first to whether the injunction is content-based or content-neutral. Content-based injunctions that proscribe speech itself are per se unconstitutional. "Courts typically refuse to grant … injunctions regarding speech in any circumstance, *even where liability … has been found*." *Basulto v. Netflix, Inc.*, 2023 WL 7129970, at *52 (S.D. Fla. Sept. 20, 2023) (emphasis in original); *see also Sindi v. El-Moslimany*, 896 F.3d 1, 30 (1st Cir. 2018) (dissolving permanent injunction against speech

adjudicated to be defamatory and published with actual malice). Although courts apply this limit on relief in defamation cases, it applies equally when the cause of action is a different tort implicating speech. *E.g., Patriot Lending Servs., Inc. v. Amerifirst Fin. Corp.*, 2020 WL 758155, at *2 (M.D. Fla. Feb. 14, 2020) (applying same rule in trade secrets case).

The injunction here is a content-based restraint against speech on particular topics and is thus unconstitutional. Its orders to "cease assigning" Safety Grades and "cease promoting" them directly command Leapfrog to abstain from future publications on the subject matter of Safety Grades as they pertain to Plaintiffs. (Dkt. 212 at 40-41.) Courts consistently deem similar injunctions enjoining defendants from publishing content—even content found to be defamatory—about plaintiffs to be "necessarily a regulation of the subject matter of that speech." *Krapacs v. Bacchus*, 301 So. 3d 976, 980 (Fla. 4th DCA 2020).

And courts specifically recognize that injunctions cannot properly restrain even "untruthful" criticism of a business. As the Supreme Court has explained, there is no justification to "support the claim that the interest of an individual in being free from public criticism of his business practices … warrants use of the injunctive power of a court." *Org. for a Better Austin*, 402 U.S. at 419. Likewise, the court in *Chevaldina v. R.K./FL Mgmt., Inc.* explained that, although a speaker criticizing a business might permissibly be enjoined from "harangu[ing] individual customers, or threaten[ing] violence," only "money damages" would be available for actionable defamation. 133 So. 3d 1086, 1092 (Fla. 3d DCA 2014). Indeed, courts consistently hold that even speech found to be entirely false cannot be subject to a prior restraint. *See Krapacs*, 301 So. 3d at 980 (injunctions "are not available to stop someone from uttering insults or falsehoods"); *Town of Lantana v. Pelczynski,* 290 So. 2d 566, 569 (Fla. 4th DCA 1974) ("Freedom from prior restraint upon speech and press extends to false, as well as true statements."); *Vrasic v. Leibel*, 106 So. 3d 485, 487 (Fla. 4th DCA 2013) (same rule even when defendant derives a commercial gain). Whatever qualms a court may have about false or misleading speech, "[i]njunctive relief to prohibit [it] is another matter altogether." *Chevaldina*, 133 So. 3d at 1090. Plaintiffs' letter threatening contempt against Leapfrog highlights the danger: If Plaintiffs have their way, the Court will become enmeshed in adjudicating, on pain of contempt, what Leapfrog can and cannot say when reviewing hospital safety.

Even if the Court were to conclude that its injunction is content-neutral, the injunction would still be subject to a standard tantamount to "strict scrutiny" that it does not meet. *Madsen*

v. Women's Health Ctr., Inc., 512 U.S. 753, 767 (1994). Even content-neutral injunctions "must be couched in the narrowest terms that will accomplish the pin-pointed objective permitted by constitutional mandate." *Carroll v. President & Comm'rs of Princess Anne*, 393 U.S. 175, 183 (1968). The injunction here does not answer to that description. Even if Leapfrog could be held liable for misleading about its methodology, the injunction should be narrowed to encompass at most any misleading statements about its methodology—not the methodology or Safety Grades themselves, and certainly not any distinct but "similar" methodology. (Dkt. 212 at 40); *see Bull Motors L.L.C. v. Brown*, 152 So. 3d 32, 36 (Fla. 3d DCA 2014) (narrowing injunction in FDUTPA case because "the trial court could have prohibited the conduct identified as violative of FDUTPA, without in effect dictating how this defendant should … communicate in the future").

B. The Injunction Unconstitutionally Compels Speech

In addition, the injunction unconstitutionally compels Leapfrog to speak contrary to its own views. Specifically, the injunction requires Leapfrog to send corrective disclosures to all entities that paid to license the Fall 2024, Spring 2025, and Fall 2025 Safety Grades, "disclosing that those Safety Grades were found to be deceptive and unfair in this action," and to place those same corrective disclosures in future contracts, advertising materials, and other documents promoting paid licensure of the next cycle of Safety Grades in five designated zip codes. (Dkt. 212 at 41.)

Whether a court considers a defendant's speech "sensible and well intentioned or deeply 'misguided,'" it "may not compel a person to speak its own preferred messages." *303 Creative LLC v. Elenis*, 600 U.S. 570, 586 (2023); *see also Wooley v. Maynard*, 430 U.S. 705, 714 (1977); *Janus v. Am. Fed'n of State, Cnty., & Mun. Emps., Council 31*, 585 U.S. 878, 892 (2018). And while government may at times require the dissemination of "purely factual and uncontroversial information" in the context of commercial advertising, "outside that context it may not compel affirmance of a belief with which the speaker disagrees." *Hurley v. Irish-Am. Gay, Lesbian & Bisexual Grp. of Boston*, 515 U.S. 557, 573 (1995) (citation omitted). Because Leapfrog's Safety Grades reflect its "exercise of editorial control and judgment," *Miami Herald Publ'g Co. v. Tornillo*, 418 U.S. 241, 258 (1974), the messaging around them should be Leapfrog's alone.

CONCLUSION

For the foregoing reasons, the Court should alter its judgment by entering judgment for Leapfrog, or else, at a minimum, amend its injunction. Alternatively, the Court should hold a new trial or conduct further proceedings in order to account for constitutional limitations.

LOCAL RULE 7.1(a)(3) CERTIFICATION

Undersigned counsel certifies that on April 29, 2026, Leapfrog's counsel emailed Plaintiffs' counsel requesting Plaintiffs' position on the relief requested herein. Plaintiffs declined to provide their position over email, asked several questions about the bases for this motion over email—all of which Leapfrog's counsel answered—and requested a call to confer on April 30, 2026, which undersigned counsel agreed to. On April 30, undersigned counsel conferred via Zoom with Plaintiffs' counsel about the relief herein requested, and was unable to reach agreement.

DATED: April 30, 2026

Respectfully submitted,

QUINN EMANUEL URQUHART & SULLIVAN LLP

UNITED STATES DISTRICT COURT
SOUTHERN DISTRICT OF FLORIDA

CASE NO.: 25-CV-80526-MIDDLEBROOKS

GOOD SAMARITAN MEDICAL CENTER, INC., DELRAY MEDICAL CENTER, INC., PALM BEACH GARDENS COMMUNITY HOSPITAL, INC. D/B/A PALM BEACH GARDENS MEDICAL CENTER, ST. MARY'S MEDICAL CENTER, INC., AND WEST BOCA MEDICAL CENTER, INC.,

Plaintiffs,

v.

THE LEAPFROG GROUP,

Defendants.

NOTICE OF APPEAL

Notice is hereby respectfully given that The Leapfrog Group, Defendant in the above named case, hereby appeals to the United States Court of Appeal for the Eleventh Circuit from the following orders and judgment entered in the above-captioned case:

(1) The Order on Defendant's Motion to Dismiss (Dkt. 41, entered July 15, 2025);

(2) The Order on Defendant's Motion for Summary Judgment (Dkt. 139, entered January 7, 2026); and

(3) The Order Following Bench Trial and Final Judgment (Dkt. 212 and 214, entered March 6, 2026, and April 6, 2026, respectively)

Defendant files this notice of appeal as a protective matter. Defendant understands this notice to be premature under Federal Rule of Appellate Procedure 4(a)(4)(A) because Defendant has filed a motion to alter or amend the judgment or for a new trial under Federal Rule of Civil Procedure 59, and that motion remains pending. The Court therefore retains jurisdiction to resolve that pending motion, and this notice of appeal will become effective only upon entry of an order disposing of that motion. Fed. R. of App. P. 4(a)(4)(B)(i); *see Stansell v. Revolutionary Armed Forces of Colombia*, 771 F.3d 713, 745–46 (11th Cir. 2014). Defendant respectfully files this

notice of appeal now solely out of an abundance of caution to preserve all appellate rights.

Dated: April 30, 2026

INTRODUCTION

The Community Hospitals brought this case to stop Leapfrog from deceiving consumers about healthcare safety and coercing hospitals into handing over their private data on pain of baseless penalties. After hundreds of pages of briefing and five days of trial, this Court entered a carefully considered, 41-page order finding that Leapfrog "inten[tionally] create[d] the false impression that Leapfrog's grades reflect actual performance," Dkt. 212 at 26, and imposed a tailored injunction to halt Leapfrog's unlawful scheme.

Leapfrog now contends that the Court's injunction should be dissolved, or a new trial ordered, under Rule 59. Those requests defy the well-established standards for Rule 59 relief. Leapfrog's Motion identifies no newly discovered evidence, no intervening change in law, and no manifest error in the Court's factual findings. Instead, Leapfrog asks the Court to decide entirely new constitutional issues that Leapfrog failed to litigate through summary judgment, trial, and post-trial briefing. Rule 59 does not permit that about-face—as Leapfrog's own cases explain.

Leapfrog frames this Court's order as an assault on free speech. But this case has never been about whether Leapfrog may express views on hospital safety. It is about whether Leapfrog may fabricate punitive scoring inputs, present the resulting "Safety Grades" as data-driven measures of actual safety performance, and use those Grades to pressure hospitals into surrendering data to which Leapfrog has no right. This Court correctly found that Leapfrog may not.

Leapfrog now says that its Safety Grades and methodology should be deemed "pure opinion" under the First Amendment. But this Court rejected Leapfrog's attempt to characterize its challenged conduct as categorically protected opinion at the motion-to-dismiss stage. And in any event, Leapfrog never preserved any argument that injunctive relief would cross whatever constitutional line Leapfrog now claims the Court recognized. To the contrary, Leapfrog abandoned its pure-opinion theory at trial, defending its methodology as a scientifically valid way to measure objective facts about hospital safety. It asked the Court to credit the methodology as evidence-based, expert-informed, and tied to actual safety performance. Because the Court rejected those arguments in detailed factual findings, Leapfrog now runs away from its position at trial. But Leapfrog cannot have it both ways.

Leapfrog's Motion next raises a series of new arguments—ranging from actual malice and constitutional avoidance to prior restraint and compelled speech. If Leapfrog wanted these arguments considered, it was required to raise them prior to the entry of judgment "'in such a way as

to afford [this] court an opportunity to recognize and rule on [them].'" *Juris v. Inamed Corp.*, 685 F.3d 1294, 1325 (11th Cir. 2012). But Leapfrog did not. Nor does Leapfrog identify any reason it could not have previously raised such arguments.

Leapfrog's post-judgment change of counsel does not justify a post-judgment change in theory. "[T]he retention of a new attorney able to perceive or draft different or more creative claims" is "no excuse" for the untimely assertion of new arguments. *Rhodes v. Amarillo Hosp. Dist.*, 654 F.2d 1148, 1154 (5th Cir. 1981). Having tried the case on one theory, Leapfrog cannot use a post-judgment Rule 59 motion to litigate another.

BACKGROUND

From the outset, the Community Hospitals alleged that Leapfrog's so-called Safety Grades "are a fraud," that Leapfrog's new "imputation model deceives consumers" by arbitrarily penalizing safety scores when hospitals do not respond to Leapfrog's commercially driven survey, and that Leapfrog's deliberate efforts to cover up its non-participation penalty through false representations about its methodology are "clear lie[s]." Dkt. 1 ¶¶ 1, 52, 54. They thus sought an injunction to prevent Leapfrog from applying this deceptive methodology to their facilities and a declaration that Leapfrog's coercive scheme to extract hospital data violates the Florida Deceptive and Unfair Trade Practices Act ("FDUTPA"). *Id.* Prayer for Relief.

Leapfrog moved to dismiss, contending that its "Safety Grades," "related statements," and "published methodology"—all purportedly "based on *verifiable data*"—nonetheless represent "'pure opinion'" that "cannot be proven true or false." Dkt. 39 at 13, 15 (emphasis added). Leapfrog's motion did not assert any additional First Amendment arguments.

This Court denied the motion to dismiss in full. Dkt. 41. The Court acknowledged Leapfrog's assertion that "its online grades and methods are protected as unfalsifiable, purely opinionated speech," but then rejected that characterization. *Id.* at 6. As it explained, a FDUTPA claim is "not barred by the First Amendment when it involves a challenge to false or misleading statements made about the rating process itself," which can "mislead consumers" about what the ratings and methodology actually measure (*e.g.*, "absent data" rather than "damning data"). *Id.* at 6–7.

Months later, the parties cross-moved for summary judgment. *See* Dkts. 86, 99. Leapfrog's motion for summary judgment focused almost entirely on the merits of Leapfrog's methodology and Leapfrog's contention that FDUTPA plaintiffs must demonstrate "actual consumer injury." Dkt. 99 at 1. The motion did *not* assert any freestanding First Amendment defense. Instead,

it claimed that summary judgment on Leapfrog's anti-SLAPP defense would be warranted "if this Court grant[ed]" the rest of Leapfrog's motion, in which case the various requirements for a statutory anti-SLAPP defense would "be satisfied." *Id.* at 19. In the course of seeking summary judgment on anti-SLAPP grounds, Leapfrog (1) included one sentence stating that its "mission is premised on free speech in connection with a public issue," and (2) mused in one clause of one sentence that "this case" itself "amounts to prior restraint." *Id.* Leapfrog did not develop any argument as to either assertion, both of which appeared in the last paragraph of its brief. *See id.* Leapfrog also did not renew its pure-opinion argument, did not contend that the Community Hospitals were required to demonstrate actual malice, did not argue that actual malice would be unsatisfied, and raised no compelled-speech concerns. Leapfrog's reply similarly omitted any objection under the First Amendment. *See generally* Dkt. 124.

Leapfrog's opposition to the Community Hospitals' own summary-judgment motion was yet more oblique. In one sentence, the motion contended that "Leapfrog is entitled to summary judgment on this front," *i.e.*, anti-SLAPP, yet presented no supporting reasoning and failed to mention the First Amendment or any related doctrine. Dkt. 102 at 18.

The parties later submitted a joint pretrial stipulation wherein they were required to state, among other things, any issues of law or fact that remained for trial. *See* Dkt. 129. Leapfrog's introduction claimed that "anti-SLAPP relief is warranted" because its Safety Grades involve a "public concern," *id.* at 8, but Leapfrog yet again made no mention of pure opinion, actual malice, constitutional avoidance, prior restraint, or compelled speech. The "issues" section of its brief also identified none of these arguments, instead simply copying the text of the Florida anti-SLAPP statute without elaboration. *See id.* ¶ 210.

In advance of trial, the parties submitted proposed findings of fact and conclusions of law ("PFFCL"). *See* Dkts. 135, 136. Leapfrog's PFFCL did not renew or elaborate on its pure-opinion theory and, indeed, did not assert any freestanding First Amendment defense. Instead, like Leapfrog's motion for summary judgment, its PFFCL suggested that Leapfrog should receive judgment on its anti-SLAPP defense. Dkt. 135 ¶¶ 383–92. In so doing, Leapfrog asserted in one sentence that the first element of an anti-SLAPP defense is satisfied because "Leapfrog's mission is premised on free speech in connection with a public issue." *Id.* ¶ 388. Leapfrog did not contend that actual malice was necessary to impose liability, did not contend that actual malice was unsatisfied, did not advance any theory of prior restraint, and did not raise compelled-speech concerns.

After this Court denied the parties' summary-judgment motions, Dkt. 139, a five-day bench trial ensued. At the close of the Community Hospitals' evidence, Leapfrog orally moved for judgment under Rule 50(a), Day 3 Tr. 133:4–6, which this Court denied, *id.* at 166:12–13. At no time during her Rule 50(a) argument did Leapfrog's counsel refer to the First Amendment, pure opinion, actual malice, prior restraint, or compelled speech. *See generally id.* 133:4–156:18.

On the last day of trial, the Community Hospitals in closing arguments extensively previewed the injunctive relief they believed would be appropriate, all while displaying a slide explaining that the Community Hospitals would seek relief against Leapfrog's methodology, Safety Grades calculated pursuant to that methodology or any similar methodology, and various corrective disclosures. Day 5 Tr. 28:5–30:14, 41:2–11. Leapfrog's counsel acknowledged that she had seen the "slide about the relief they want." *Id.* at 42:15–16. When Leapfrog's counsel delivered her own closing argument, however, she raised *no* objections related to pure opinion, actual malice, prior restraint, or compelled speech. To the contrary, Leapfrog's counsel affirmatively conceded in a colloquy with this Court that the Court could impose a requirement for Leapfrog to publish "a better footnote." *Id.* at 80:19–23.

At the end of closing arguments, the Court instructed the parties to include any and all legal arguments they wished to raise in their post-trial PFFCL: "[I]n the conclusions of law you can include briefing, whatever law you want to put in, put in that." Day 5 Tr. at 97:24–98:1. Yet Leapfrog's post-trial PFFCL did *not* develop any First Amendment argument. *See generally* Dkt. 204. It did not address pure opinion, actual malice, prior restraint, or compelled speech. And it did not object to any specific aspect of the Community Hospitals' requested relief, whether on prior restraint, compelled speech, or any other grounds. Instead, Leapfrog simply copied and pasted the same paragraphs about anti-SLAPP found in its pretrial PFFCL. *Id.* ¶¶ 589–598.

One month after the parties submitted their proposed findings, this Court entered its post-trial order imposing liability on Leapfrog under FDUTPA. *See* Dkt. 212. The Court found that "Leapfrog's change in methodology has no scientific basis, unfairly penalizes non-participating hospitals, and misrepresents hospital safety." *Id.* at 2. The Court also found that Leapfrog personnel "intended to create the false impression that Leapfrog's grades reflect actual performance," *id.* at 26; that it was Leapfrog's "central goal" for "poor scores [to] be used to 'harass' the hospitals who chose not to participate," *id.* at 17; that the "decision to increase the penalty for nonparticipation was a simple business decision," *id.* at 2; that "Leapfrog understood that penalizing hospitals

could impact their grades," *id.* at 20; that Leapfrog personnel knew its "expert panel" had not approved the methodology change, *id.* at 24 n.6; and that Leapfrog personnel "want[ed] consumers to think that visiting a hospital with a C, D or F grade could seriously injure or even kill them," even though Leapfrog lacked any "real data" substantiating that claim, *id.* at 24. The Court's order awarded an injunction to the Community Hospitals, adopting the general formulation the Community Hospitals had requested while slightly narrowing the scope of relief. *Compare* Dkt. 203, ¶¶ 282–296, *with* Dkt. 212 at 40–41.

In the intervening months, Leapfrog has not sought a stay from this Court or the Eleventh Circuit. *See* Fed. R. App. P. 8(a). To the contrary, it has publicly represented that it will comply with the injunction, *see* Dkt. 219-1 & n.1, and says it has already begun to do so, *see* Dkt. 215. Paradoxically, Leapfrog now contends that the injunction violates its First Amendment rights and that it is entitled to a new trial or dissolution of the injunction under Rule 59(a) or (e). But Leapfrog premises its purported entitlement to admittedly "exceptional" relief on a mix of arguments this Court either already rejected or was never asked to consider. Dkt. 220 at 1.

LEGAL STANDARDS

Rule 59 of the Federal Rules of Civil Procedure governs requests for a new trial or to alter or amend the judgment. *See* Fed. R. Civ. P. 59(a), (e). Neither form of relief permits a losing party to rehash already-decided issues or to introduce new arguments that could have been previously pressed. As the Eleventh Circuit has explained, "a motion for new trial is not a vehicle for sandbagging an opposing party" after the defendant receives "an unfavorable verdict." *Cummings v. Dep't of Corr.*, 757 F.3d 1228, 1235 (11th Cir. 2014). Nor may the losing party "merely seek to relitigate old issues." *F.W. Woolworth Co. v. Seckinger*, 125 F.2d 97, 98 (5th Cir. 1942). So too with motions to alter or amend the judgment. As Leapfrog's own case explains, courts evaluating Rule 59(e) motions "will not address new arguments or evidence that the moving party could have raised before the decision issued." *Banister v. Davis*, 590 U.S. 504, 508 (2020); *accord Michael Linet, Inc. v. Village of Wellington*, 408 F.3d 757, 763 (11th Cir. 2005) (parties "cannot use a Rule 59(e) motion to relitigate old matters, [or] raise argument or present evidence that could have been raised prior to the entry of judgment"). Discretion to deny a motion to alter or amend the judgment "is 'especially soundly exercised' when a party gives no reason for not previously raising an issue." *Wilchombe v. TeeVee Toons, Inc.*, 555 F.3d 949, 957 (11th Cir. 2009).

The failure to assert a purported constitutional right at the procedurally appropriate stage

forfeits the argument. *See Clement v. U.S. Att'y Gen.*, 75 F.4th 1193, 1202 (11th Cir. 2023) ("mere lack of diligence is sufficient to forfeit a constitutional or statutory right"). The First Amendment is no exception. *See Ferrill v. Parker Grp., Inc.*, 168 F.3d 468, 475 (11th Cir. 1999) (refusing "to consider" the issue when litigant "did not present a First Amendment argument").

ARGUMENT

Leapfrog's Rule 59 Motion should be denied. The old arguments Leapfrog rehashes are squarely barred by the longstanding prohibition against the use of Rule 59 for relitigation. And Leapfrog's new arguments—which Leapfrog itself admits it did not previously "cal[l] out," Dkt. 220 at 3—are likewise barred by the equally basic rule that post-judgment motions may not be used to belatedly assert unpreserved allegations of error.

I. Leapfrog's Pure-Opinion Argument Is Barred, Abandoned, And Meritless

Leapfrog's Motion principally contends that its Safety Grades and methodology constitute "statements of pure opinion" "unassailable" under the First Amendment, Dkt. 220 at 7–8, including because Leapfrog's "imputed-value scores" are not "verifiab[le]," *id.* at 12, and because Leapfrog supposedly adequately "*disclosed* its basis for imputing those scores," *id.* Having already made and lost these arguments, however, Leapfrog cannot revive them with this Court post-judgment. And those arguments are meritless in any event.

1. Leapfrog's primary argument—that its Safety Grades and methodology are non-actionable "pure opinion"—was already litigated at the motion-to-dismiss stage. Leapfrog's motion-to-dismiss brief contended that Leapfrog's "Safety Grades and related representations are protected under the First Amendment because they are not readily provable as true or false," and because Leapfrog allegedly publishes "the full grading methodology and data that form the basis" for the Grades, along with "Leapfrog's representations related thereto." Dkt. 39 at 2. Leapfrog continued in this vein for several pages, arguing that its Safety Grades, methodology, and "related representations" constitute "'pure opinion,'" either because they are "'subjective,'" *id.* at 11–12, or because Leapfrog's "methodological approach is explained extensively" on its website, *id.* at 15.

That framing failed to persuade the Court. The Court's order noted Leapfrog's "claim[that] its online grades and methods are protected as unfalsifiable, purely opinionated speech." Dkt. 41 at 5. Citing the same case Leapfrog's brief now leads with, *Turner v. Wells*, 879 F.3d 1254 (11th Cir. 2018), the Court explained that those grades and methods would enjoy First Amendment protection if they were, indeed, "'not readily capable of being proven false'" or were

"'pure opinion,'" Dkt. 41 at 5 (quoting *Turner*, 879 F.3d at 1262). But, the Court explained, FDUTPA claims are not barred when they involve "false or misleading statements about the rating process itself," including false statements that "mislead consumers" about how the ratings they consume are calculated and what they represent (*e.g.*, "absent" instead of "damning data"). *Id.* at 5–6. The Court thus rejected Leapfrog's pure-opinion argument as "inapplicable." *Id.* at 6.

That spells the end for Leapfrog's Motion. By now contending that its "Safety Grades" and their "underlying imputed-value methodology" are "pure opinion that is unassailable under the First Amendment," Dkt. 220 at 8, the Motion "improperly attempt[s] to relitigate old matters by rehashing arguments" Leapfrog "previously made" and lost. *Allaben v. Howanitz*, 579 F. App'x 716, 719 (11th Cir. 2014). It is thus barred by Eleventh Circuit precedent.

To circumvent that conclusion, Leapfrog tries to recast this Court's motion-to-dismiss holding. According to Leapfrog, this Court—in calling Leapfrog's pure-opinion defense "inapplicable"—in fact imposed constitutional "guardrails" by recognizing a supposed "constitutional line" between Leapfrog's Safety Grades and methodology, on the one hand, and "Leapfrog's representations *about* the methodology and Grades," on the other. Dkt. 220 at 8–9. On Leapfrog's telling, the Court "correctly recognized" that the Grades and methodology are nonactionable opinions, even if Leapfrog's misrepresentations "*about* the methodology" enjoy no such protection. *Id.* Then, according to Leapfrog, the Court apparently forgot about this supposed constitutional holding and "transgresse[d]" the "guardrails" it "acknowledged" with an injunction that violates the First Amendment by including the Safety Grades and methodology. *Id.* at 9.

The Court's order does not support that reading. The Court instead recognized that ratings themselves can be deceptive when they falsely purport to rest on objective information like "damning data," Dkt. 41 at 6, and nowhere restricted the Community Hospitals' case solely to "representations *about* the methodology," *contra* Dkt. 220 at 9. The rest of the order confirms the point. The order recognized that the Community Hospitals' FDUTPA claim concerned not just Leapfrog's "lie[s] to consumers about how it calculates overall grades," but also that Leapfrog "arbitrarily assign[s] poor safety ratings to hospitals" through "publication of safety grades." Dkt. 41 at 7. The Court defined both aspects of "this conduct" as part of the Community Hospitals' "full claim," *id.* at 7–8—language that would not make sense had the Court just deemed assignment and issuance of Safety Grades themselves off-limits.

2. Tellingly, Leapfrog until now has never contended that the Community Hospitals'

evidence and arguments about the methodology and Safety Grades (whether at summary judgment, trial, or in post-trial briefing) exceeded the Court's motion-to-dismiss order. To the contrary, Leapfrog deliberately abandoned its motion-to-dismiss argument that its Safety Grades and methodology are pure opinion by offering a flatly inconsistent position at trial. There, Leapfrog portrayed the penalty for alleged non-response bias (*i.e.*, the notion that non-participating hospitals are hiding adverse information) as based on "the science they teach in medical school" and "within scientific reasoning" purportedly approved—though concededly never voted on—by Leapfrog's expert panel. Day 5 Tr. 47:16–17, 63:23–64:6. Leapfrog's post-trial PFFCL also requested findings that its Safety Grades are based on "a scientific process" and "not arbitrary," but "based on evidence" measuring numerous objective inquiries (like "actual patient harm"). Dkt. 204 ¶¶ 71–72. These arguments cannot be reconciled with Leapfrog's motion to dismiss, reflecting Leapfrog's abandonment of its earlier pure-opinion theory. Imputation cannot be a subjective opinion if, as Leapfrog maintained throughout trial, it is based on the scientifically valid measurement of falsifiable information. *See, e.g.*, *Regions Bank v. Commonwealth Land Title Ins. Co.*, 2012 WL 6553966, at *2 (S.D. Fla. Dec. 14, 2012) ("[A] party, in fairness, ought not be able to argue one thing, lose, and then take a different position later.").

3. Even if Leapfrog's pure-opinion argument were not forfeited, it is meritless. The core relief the injunction's first prong awarded, about which Leapfrog principally complains, *see* Dkt. 220 at 9, focused on Leapfrog's *conduct* in perpetrating a coercive scheme to extract hospital data. The "precis[e]" problem this Court identified was "Leapfrog's behavior" in using the threat of bad Safety Grades imposed pursuant to an arbitrary methodology "to pressure and penalize hospitals into participating" in Leapfrog's Survey, even though Leapfrog has no "right to Plaintiff's private data" that Leapfrog extracts through such coercion. Dkt. 212 at 39. As this Court noted, this threat is a form of "'blackmail,'" *id.* at 36—conduct that goes far beyond the mere expression of an opinion. And the "regulation of conduct does not violate the First Amendment." *Rumsfeld v. Forum for Acad. & Institut. Rts., Inc.*, 547 U.S. 47, 70 (2006); *accord United States v. Irving*, 509 F.2d 1325, 1331 n.5 (5th Cir. 1975) ("blackmail" is "properly punished every day" "without consideration of First Amendment issues").

Nor do Leapfrog's Safety Grades and methodology constitute pure opinions on their own terms. Arbitrarily calling something an "opinion" does not make it so when the statement "implies a knowledge of facts which lead to the conclusion." *Milkovich v. Lorain J. Co.*, 497 U.S. 1, 18

(1990). Leapfrog's Safety Grades and methodology purport to rest on "empirical determination[s] subject to verification," *Michel v. NYP Holdings*, 816 F.3d 686, 697 (11th Cir. 2016), foreclosing their portrayal as merely "'subjective opinion'" under Leapfrog's own precedent, *Home Performance All. v. Better Bus. Bureau of W. Fla., Inc.*, 354 So. 3d 1165, 1166 (Fla. DCA 2d 2023). As this Court's order recognized, Leapfrog's Survey, on which its Grades are based, claims to "collec[t] and transparently repor[t] hospital and ASC *performance*" based on "22 quality safety metrics" that "underlie [the] letter grade" Leapfrog issues. Dkt. 212 at 3–4 (emphasis added). These metrics purport to rest on "data sources," not subjective whim. *Id.* at 5. When Leapfrog is missing data on "imputed" metrics—like whether physicians wash their hands—Leapfrog does not exclude those metrics, but arbitrarily assigns "the lowest score," supposedly reflecting "*Limited Achievement*" on that metric. *Id.* at 6–7 (emphasis added). Leapfrog then issues a "Safety Grade" as "the product of [this] information" (or the lack thereof). *Id.* at 4.

Both the Safety Grade and methodology thus claim to answer factual questions about how hospitals "actually perform" on patient safety. Dkt. 212 at 27. It is not a matter of "editorial … judgment," *Miami Herald Publ'g Co. v. Tornillo*, 418 U.S. 241, 258 (1974), or "differing interpretations," *Lane v. Random House, Inc.*, 985 F. Supp. 141, 152 (D.D.C. 1995), that physicians at the Community Hospitals do not wash their hands. That is an "empirical [claim] subject to verification." *Michel*, 816 F.3d at 697. Similarly, the Safety Grades are not "pure opinions" either, since they claim to be the final summation of those factual questions and "reflect actual safety performance," Dkt. 212 at 24—not a subjective assessment of matters of taste.

Leapfrog's caselaw is either beside the point or merely confirms that its Safety Grades and methodology are not "pure opinion." For example, a statement deeming "a musical-comedy version of 'The Phantom of the Opera'" to be "'fake'" and "'phony,'" *Phantom Touring, Inc. v. Affiliated Pubs.*, 953 F.2d 724, 725, 728 (1st Cir. 1992), *see* Dkt. 220 at 11, plainly concerns a subjective assessment of taste. Such statements have no inherent "factual connotation." *Phantom Touring, Inc.*, 953 F.2d at 727. But they bear no resemblance to Leapfrog's purportedly scientific methodology that claims to answer falsifiable questions, like whether doctors wash their hands. Leapfrog also ignores aspects of its cited cases that undermine its own theory. *Structural Plywood*, for example, did not hold that safety ratings are "just everyone's opinion." *Contra* Dkt. 220 at 9. The decision in fact recognized that by stamping lumber with ratings, the company represented it "had subjected the mills to certain quality-control processes," which "isn't subjective at all." *U.S.*

Structural Plywood Integrity Coal. v. PFS Corp., 524 F. Supp. 3d 1320, 1335 (S.D. Fla. 2021). So too here: Leapfrog's Safety Grades supposedly are the product of objective factual data, even though they are not. Similarly, *Masson* recognized that whatever "interpretive license" an author otherwise might have to interpret data, that license goes out the window when the author simply "fabricate[s]" information. *Masson v. New Yorker Mag., Inc.*, 501 U.S. 496, 511 (1991).

Implicitly recognizing that its Safety Grades and methodology are "verifiabl[e]," Leapfrog invites the Court to nonetheless treat them as pure opinion because there is supposedly "no dispute that Leapfrog *disclosed* its basis for imputing those scores." Dkt. 220 at 12. According to Leapfrog, its Safety Grades and methodology are non-actionable because they are "based on a fully disclosed and indisputably *truthful* fact" (*i.e.*, that non-participating hospitals did not respond to the Survey). *Id.* Leapfrog then accuses this Court of violating Leapfrog's "inalienable right to free expression" because Leapfrog did not satisfy this Court's "preferences for web design" by burying its incomprehensible methodology on its website. *Id.* at 13.

Leapfrog's characterization of this Court's decision misstates the law and ignores the Court's thorough factual findings. Leapfrog cites various cases allegedly supporting its view that bare disclosure of its methodology elsewhere converts its Safety Grades into pure opinion. But those cases are not on-point. They all turned on a reader's ability to easily distinguish commentary from facts themselves, either because the author expressly made that distinction in the same publication or because the interpretive nature of the author's statements would be obvious based on a reader's existing background knowledge.[1]

Leapfrog's Safety Grades and methodology, by contrast, purport to be *conveying facts*—whether hospitals' performance reflects only "Limited Achievement" on objectively falsifiable metrics, like whether doctors use computers to order medication. Dkt. 212 at 6. There is no reason to believe that reasonable consumers of the Safety Grades already know those facts—knowledge which would make consumption of the Safety Grades unnecessary. That is why Leapfrog holds itself out (falsely) as "collect[ing] and transparently report[ing] hospital and ASC performance" in

[1] *See Lewis v. Abramson*, 673 F. Supp. 3d 72, 93 (D.N.H. 2023) ("*clear* that the statements were simply interpretations of the facts disclosed in the links" (emphasis added)); *Turner*, 879 F.3d at 1262 (facts must be "set forth in the publication" or "otherwise known or available"); *Partington v. Bugliosi*, 56 F.3d 1147, 1156–57 (9th Cir. 1995) ("*clear* that the challenged statements represent his own interpretation" (emphasis added)); *Hay v. Indep. Newspapers, Inc.*, 450 So. 2d 293, 296 (Fla. DCA 2d 1984) (facts must be "disclosed in the article" or "known or readily available"); *ONY, Inc. v. Cornerstone Therapeutics, Inc.*, 720 F.3d 490, 497–98 (2d Cir. 2013) (requiring "an accurate description of the data" so readers could evaluate statements' "validity" "on their face"); *From v. Tallahassee Democrat, Inc.*, 400 So. 2d 52, 57 (Fla. DCA 1st 1981) ("everyone … would have known" the fact even absent article).

the first instance—because consumers do not already know those facts. *Id.* at 3.

Nor does Leapfrog's bare posting of its methodology somewhere else make it "clear," as in the above cases, that its Safety Grades and methodology are mere subjective musings. At trial—and certainly to the public—Leapfrog held out its methodology as a "scientific" depiction of "actual performance," *see supra* 8; Dkt. 212 at 2, 26, not a creative interpretation of non-existent data. And that Leapfrog's methodology baselessly extrapolates poor performance from no data was far from "clear" to consumers. As this Court found, the Community Hospitals offered "persuasive evidence in the form of Google Analytics" that only *three percent* of website visitors during the relevant period even "accessed [Leapfrog's] Scoring Methodology document." Dkt. 212 at 31. That is unsurprising: Users had to navigate "hindrance after hindrance," including "small," "inconspicuous," and "gray-font" hyperlinks, to find the methodology document—a "dense" tome that Leapfrog's own CEO conceded "'is not meant to be used by the average layperson.'" *Id.* In fact, "all of this is what Leapfrog intended"—to hide its methodology from consumers to maintain the façade "that the grades assigned reflect actual performance." *Id.* at 25, 31. Leapfrog offers no reason to think those careful factual findings are mistaken. And those findings show that the situation here is far removed from situations where reasonable readers would have readily understood the author was merely offering an opinion rather than attempting to convey objective facts.

Leapfrog plainly disagrees with the Court's factual findings. *See, e.g.*, Dkt. 220 at 14 (insisting Leapfrog went "out of its way to disclose" its methodology). But Leapfrog identifies no error, much less clear error. Thus, Leapfrog's "it's all *technically* there" defense is as wrong now as it was the last time. Dkt. 212 at 30. Simply making the methodology document "*available*," Dkt. 220 at 14, did not make it clear Leapfrog was somehow offering mere opinion, rather than conveying false statements of fact. Thus, Leapfrog's website and methodology document do not transform its Safety Grades or methodology into "pure opinion."

II. Leapfrog's Actual-Malice Argument Is Forfeited And Meritless

In a belated attempt to shore up the record for appeal, Leapfrog also details several new arguments that "could have been raised prior to the entry of judgment." *Arthur v. King*, 500 F.3d 1335, 1343 (11th Cir. 2007). Providing no "reason for not previously raising" them, *Wilchombe*, 555 F.3d at 957, Leapfrog instead admits it permitted the case to proceed "without Leapfrog calling out" these supposed "excesses," Dkt. 220 at 3. The first is Leapfrog's claim that the Court's injunction is "constitutionally infirm" because the Court made no "finding of actual malice." *Id.* at

14. This apparently is an alternative argument to Leapfrog's "pure opinion" theory; whereas opinions definitionally cannot be false, actual malice is relevant only if, as Leapfrog recognizes, statements are capable of being proven false. *Id.* Developed in the context of libel actions, the doctrine requires proof that the defendant was at least "reckless" about statements' falsity. *New York Times Co. v. Sullivan*, 376 U.S. 254, 286 (1964). "Although the erroneous statement of fact is not worthy of constitutional protection," *Gertz v. Robert Welch, Inc.*, 418 U.S. 323, 340 (1974), the doctrine is designed to protect "'breathing space'" for "free debate," *Sullivan*, 376 U.S. at 271–72.

1. Leapfrog's actual-malice argument is forfeited. Leapfrog failed even to *mention* the term "actual malice" across hundreds of pages of briefing and five days of trial, much less present an argument about why and how that standard would apply here. Its Motion suggests the argument was preserved either in Leapfrog's motion for summary judgment or its pretrial PFFCL. Dkt. 220 at 4. But neither document mentions "actual malice." The summary-judgment motion vaguely states that "Leapfrog's mission is premised on free speech in connection with a public issue," Dkt. 99 at 19, but it does not request judgment on that basis or suggest the Community Hospitals failed to establish actual malice (or had the burden to do so). To the contrary, Leapfrog phrased the argument in purely conditional terms, stating that "*if this Court grants Leapfrog's motion* [*i.e.*, for summary judgment], summary judgment on its anti-SLAPP defense is also warranted." *Id.* (emphasis added). Leapfrog's pretrial PFFCL also does not mention actual malice or contend that the Community Hospitals failed to establish it, instead simply rehashing the anti-SLAPP point from its prior brief. Dkt. 135 ¶¶ 383–92. So too with Leapfrog's pretrial stipulation, *see* Dkt. 129, which never claims the Community Hospitals had this burden at trial.

None of that suffices. "'[T]o preserve a claim, argument, theory, or defense,'" the defendant "'must first clearly present it to the district court … in such a way as to afford the district court an opportunity to recognize and rule on it.'" *Juris v. Inamed Corp.*, 685 F.3d 1294, 1325 (11th Cir. 2012). A mere "'passing referenc[e]' to an issue" is insufficient "to preserve it," *NLRB v. Gaylord Chem. Co., LLC*, 824 F.3d 1318, 1333 (11th Cir. 2016), as is the "bare invocation" of a legal concept "without any argument," *United States v. Defilippis*, ---F.4th---, 2026 WL 1067115, at *10 n.9 (11th Cir. Apr. 20, 2026). Leapfrog's conclusory references to its "mission" implicating a "public concern" thus did not present or preserve an actual-malice argument, precluding

consideration of the new defense under Rule 59. *See Arthur*, 500 F.3d at 1343.[2]

Unable to show where Leapfrog preserved its new argument, Leapfrog instead mischaracterizes the Community Hospitals' briefs, claiming that *the Community Hospitals* somehow preserved *Leapfrog's* new argument in their pretrial PFFCL. That argument is a non-starter, as the burden is on the party asserting the error to have preserved it. *See Juris*, 685 F.3d at 1325. It is also nonsensical. According to Leapfrog, the Community Hospitals "acknowledged" and "recognized" that "actual malice must be found" here. Dkt. 220 at 15. Not so. The Community Hospitals said the opposite: the standard was *inapplicable* under this Court's motion-to-dismiss order and "[e]ven if" the standard applied it would be satisfied given the clear evidence Leapfrog's personnel knew the Safety Grades were bogus. Dkt. 136 ¶ 133. Tellingly, over the course of trial and later briefing, Leapfrog never disputed or responded to this point, never mentioned "actual malice," and never contended that the Community Hospitals' actual-malice analysis ("even if" the standard were applicable) was wrong. Leapfrog's silence *even after* the Community Hospitals preemptively knocked down the argument demonstrates forfeiture, not preservation. Indeed, Leapfrog's conduct strongly suggests "a tactical decision to forego [the] objection at trial," about which Leapfrog now "cannot complain." *Francois v. Wainwright*, 741 F.2d 1275, 1282 (11th Cir. 1984).

"'[N]o procedural principle is more familiar … than that a constitutional right may be forfeited in criminal as well as civil cases by the failure to make timely assertion of the right.'" *Clement*, 75 F.4th at 1202 (quoting *Yakus v. United States*, 321 U.S. 414, 444 (1944)). That principle applies with particular force here, as Leapfrog has given "no reason" why it knowingly "failed to raise this new legal theory before judgment was rendered." *Wilchombe*, 555 F.3d at 957. Leapfrog's actual-malice argument is thus forfeited and not cognizable under Rule 59.

2. In any event, Leapfrog's actual-malice argument is also meritless. Actual malice is irrelevant to the specific conduct this Court enjoined. And even if actual malice applied here, the Community Hospitals' evidence amply established that Leapfrog was "highly aware" its Safety Grades and methodology rested on "probably false" information. *Michel*, 816 F.3d at 703.

[2] Leapfrog also did not preserve its actual-malice theory (or any of its other new theories) by raising its pure-opinion defense at the motion-to-dismiss stage. A party does not preserve one issue by asserting a different issue "simply because both fall under the [same] broader rubric," such as the First Amendment. *Flowers v. Comm'r, Soc. Sec. Admin.*, 97 F.4th 1300, 1306 (11th Cir. 2024). Thus, a new issue is forfeited when it relies on "a wholly different legal framework" than the issue actually asserted. *Gould v. Interface, Inc.*, 153 F.4th 1346, 1357 (11th Cir. 2025).

As a threshold matter, Leapfrog's actual-malice argument rests on a false equivalence between the facts of this case and the common-law speech torts that spurred the Supreme Court to develop the actual-malice standard—likely why Leapfrog cites no cases applying actual malice to FDUTPA. The problem here is not that Leapfrog published a false statement negligently, *cf. Sullivan*, 376 U.S. at 288, or merely said something "'disagreeable,'" *Snyder v. Phelps*, 562 U.S. 443, 458 (2011). To the contrary, Leapfrog actively leveraged the threat of intentionally false statements to extract valuable data from hospitals in advance of the publication of Safety Grades. Thus, this case does not concern "falsity alone," but Leapfrog's use of false statements "to gain a material advantage." *United States v. Alvarez*, 567 U.S. 709, 719, 713 (2012) (plurality). It is akin to a reporter demanding a payoff to withhold publication of false, damaging information. That is not a "new category" of unprotected speech, *Otto v. City of Boca Raton*, 981 F.3d 854, 865 (11th Cir. 2020), but a type of conduct that has never enjoyed protection, *see Irving*, 509 F.2d at 1331 n.5.

This Court's order emphasized this commonsense point. "[P]recisely what concern[ed]" the Court was "Leapfrog's *behavior*"—its use of "leverage" through the threat of a non-participation penalty "to pressure and penalize hospitals into participating" in Leapfrog's Survey, and thus to gain access to hospitals' "private data" to which Leapfrog has no "right," so that Leapfrog could "maximize revenue" by monetizing the information. Dkt. 212 at 35, 39 (emphasis added). The injuries here thus arose not from "'the bare fact of publication'" of speech itself, *Sullivan*, 376 U.S. at 262, but from an "unfair or deceptive ac[t] or practic[e]" to improperly extract data from hospitals for commercial gain, Fla. Stat. § 501.204(1). Stamping out unfair conduct may incidentally burden speech. But "a conduct-regulating statute of general application that imposes an incidental burden on the exercise of free speech rights does not implicate the First Amendment." *Church of Am. Knights of the Ku Klux Klan v. Kerik*, 356 F.3d 197, 209 (2d Cir. 2004). Simply put, "the First Amendment does not prevent restrictions directed at commerce or conduct from imposing incidental burdens on speech." *Sorrell v. IMS Health Inc.*, 564 U.S. 552, 567 (2011).

3. Even if actual malice *did* apply here, it would be easily satisfied by the evidence at trial and this Court's findings. That standard does not immunize false speech. Instead, it requires the plaintiff to show clear evidence that the speaker "was highly aware that the [information] was probably false." *Michel*, 816 F.3d at 703. For example, a publisher acted with actual malice when it "knowingly chose language" open to a false interpretation despite having "sufficient time" to confirm an assertion's accuracy. *Hunt v. Liberty Lobby*, 720 F.2d 631, 642, 646 (11th Cir. 1983).

This Court's order is replete with factual findings about Leapfrog personnel's subjective awareness that Leapfrog's Safety Grades and surrounding representations rested on false information. For example, Leapfrog personnel "intended to create the false impression that Leapfrog's grades reflect actual performance." Dkt. 212 at 26. But Leapfrog personnel knew the actual, "acknowledged goal" of the methodology change was "punishing nonparticipants," *id.*, by simply "imputing … the lowest score," *id.* at 22. Indeed, they "*intended* that lower scores" would serve as "a punitive measure." *Id.* at 21. Leapfrog personnel also knew that "assignment" of these artificially low scores was "mathematically arbitrary" and "chose arbitrarily low numbers" to create the impression a "hospital was graded on *something*, when in truth it was based on nothing." *Id.* at 25, 28. And they "intended" to hide Leapfrog's methodology document to conceal how Leapfrog's "ratings *actually* work," so that consumers would continue to be duped into believing the Safety Grades were reliable. *Id.* at 30–31. These repeated and extensive findings confirm Leapfrog's personnel *at minimum* were "highly aware" the Safety Grades "probably" rested on false information, *Michel*, 816 F.3d at 703, and, indeed, confirm that they actually knew of such falsity at the time. Tellingly, Leapfrog even used grant money to "specifically target" consumers in certain Florida zip codes with advertisements to ensure those searching for the Community Hospitals "would be shown the failing Safety Grades"—a tactic Leapfrog personnel characterized as "harass[ing]" and that of "a Disney villain." Dkt. 212 at 17, 32.

Given that Leapfrog apparently seeks to reverse this Court by contending that an actual-malice finding is "missing," Dkt. 220 at 14, this Court could make explicit what its findings already establish by using the magic words "actual malice" to describe its findings in its order disposing of the Motion. Regardless, however, Leapfrog's argument has no basis in this case's record.

III. Leapfrog's Statutory Argument Is Barred, Forfeited, And Meritless

Leapfrog also urges the Court to "reconsider the judgment on statutory grounds," claiming that Leapfrog's representations and behavior do not qualify as "deceptive" or "unfair" practices under FDUTPA as a matter of "statutory interpretation," including because Leapfrog "disclosed [its] methodology." Dkt. 220 at 17. And it tacks on a "constitutional-avoidance" argument, contending that the Court should construe purported "ambiguity" in FDUTPA's text to avoid deciding Leapfrog's forfeited actual-malice defense. *Id.* at 17–18. Each argument fails.

Framed as a statutory argument, Leapfrog's contention that its conduct falls outside of FDUTPA was already rejected by this Court, and Leapfrog may not "relitigate old matters."

Michael Linet, Inc., 408 F.3d at 763. At the motion-to-dismiss stage, Leapfrog argued that its "Safety Grades and related representations" do not "constitute unfair or deceptive trade practices" and accused the Community Hospitals of having failed to "plead a 'deceptive act' or 'unfair practice'" under FDUTPA, including because Leapfrog is supposedly "transparen[t]" in publishing its methodology. Dkt. 39 at 19–20. This Court disagreed. As it explained, the Community Hospitals "alleged that [Leapfrog] arbitrarily assigned poor ratings to hospitals, then lied to consumers about how it calculates overall grades." Dkt. 41 at 7. Taking those allegations as true, the Court found that they qualify "as a deceptive act or unfair practice." *Id.* Indeed, such conduct would "plainly fal[l] within the ambit of the FDUTPA" if proven. *Id.* After the Community Hospitals proved their case at trial, the Court again explained why Leapfrog's conduct falls within FDUTPA's scope as a statutory matter, analyzing text, precedent, and relevant guidance from the Federal Trade Commission. Dkt. 212 at 18, 36–37. Leapfrog offers no reason to depart from these considered holdings as a statutory matter. It simply rehashes (again) the claim that Leapfrog "disclosed" its "methodology," which supposedly should have dispelled deception for the "reasonable consumer," Dkt. 220 at 18—a proposition foreclosed by the Court's extensive factual findings, *see supra* 11.

Framed as a constitutional-avoidance theory, Leapfrog's argument is forfeited and meritless. Leapfrog never previously argued that its conduct should be construed to fall outside of FDUTPA on avoidance grounds, and its Motion does not even attempt to identify how Leapfrog preserved the argument. Constitutional avoidance also applies "only when ambiguity exists." *Iancu v. Brunetti*, 588 U.S. 388, 397 (2019). Yet Leapfrog identifies no relevant ambiguity in FDUTPA's text. "[A] statute is not vague or ambiguous just because it is broad." *Stevens v. Premier Cruises, Inc.*, 215 F.3d 1237, 1240 (11th Cir. 2000). And there is "no constitutional violation to avoid," *McCarthan v. Dir. of Goodwill Indus.-Suncoast, Inc.*, 851 F.3d 1076, 1094 (11th Cir. 2017), given that Leapfrog's constitutional arguments are forfeited and meritless.

IV. Leapfrog's Prior-Restraint Argument Is Forfeited And Meritless

Leapfrog next attacks the "scope" of the injunction as an "unconstitutional prior restraint" on speech. Dkt. 220 at 18. In support of that argument, Leapfrog claims that injunctions "that proscribe speech itself are per se unconstitutional" and that courts may not impose "'injunctions regarding speech in any circumstance, *even where liability … has been found*'"—an argument that, if accepted, would have truly extraordinary implications for consumer-protection regimes nationwide. Dkt. 220 at 18 (emphasis in original). This argument is forfeited and meritless.

Across all of its pretrial briefs, throughout five days of trial, and in its lengthy post-trial PFFCL, Leapfrog failed to articulate—let alone develop—any argument that an injunction here would represent an impermissible prior restraint. Leapfrog never raised the argument even after the Community Hospitals extensively detailed the relief they intended to seek at closing argument (including a slide deck spelling out the remedial request), even after counsel for Leapfrog expressly acknowledged the scope of the Community Hospitals' request in open court, *see* Day 5 Tr. 42:15–22, and even after the Court instructed the parties to include all legal arguments they wished to make in their post-trial PFFCL. *See supra* 4. This silence is deafening—and conclusive.[3]

Even if the scope of the injunction were in error (which it is not), Leapfrog in fact *invited* that error. In a colloquy with the Court about the scope of relief, Leapfrog's counsel asserted that the Community Hospitals were using FDUTPA "to silence simple speech." Day 5 Tr. 44:2. After the Court pointed out that "FDUTPA can be used for deceptive speech," *id.* at 44:5, Leapfrog's counsel responded, "They [*sic*] can," *id.* at 44:6. Having "expressly acknowledged the court could impose" relief for deceptive speech, Leapfrog is "precluded from claiming the court erred" by doing so. *United States v. Love*, 449 F.3d 1154, 1157 (11th Cir. 2006).

In any event, Leapfrog's prior-restraint argument is also meritless even if it were cognizable. The Court's injunction does not prevent Leapfrog from publishing speech "'of any kind,'" *Org. for a Better Austin v. Keefe*, 402 U.S. 415, 419 (1971), but zeroes in on Leapfrog's coercive *conduct* in running an unfair scheme to extract hospital data. It does not purport to dictate the content of the Community Hospitals' Safety Grades or require that the Community Hospitals be issued good Safety Grades. To the contrary, it enjoins the deceptive and unfair practice of applying different metrics to participating and non-participating hospitals, a "narrowly drawn" restriction "precisely" targeting what made Leapfrog's scheme unlawful in the first place. *Carroll v. President & Comm'rs of Princess Anne*, 393 U.S. 175, 184 (1968). That the injunction encompasses use of any "similar" unfair methodology is also appropriate and unsurprising: Injunctions would be "for naught" if they could be evaded through a "program of experimentation with disobedience of the law." *McComb v. Jacksonville Paper Co.*, 336 U.S. 187, 192–93 (1949).

[3] The only reference Leapfrog apparently ever made to prior restraint came in part of one sentence in its summary-judgment brief, where it contended that the "filing of this case"—not the injunction—"amounts to prior restraint on free-speech." Dkt. 99 at 19. This "'single, passing reference' to an issue 'unaccompanied by any discussion or elaboration' does not preserve an argument," *United States v. Horn*, 129 F.4th 1275, 1303 (11th Cir. 2025), particularly when Leapfrog has given "no reason for not previously raising [the] issue," *Wilchombe*, 555 F.3d at 957.

The injunction, of course, also requires Leapfrog to remove existing Safety Grades assigned to the Community Hospitals pursuant to Leapfrog's deceptive and unfair methodology. Dkt. 212 at 41. But the First Amendment does not prohibit narrowly tailored injunctive relief after a final determination that specific conduct and associated representations were deceptive and unfair. As the Supreme Court explained decades ago, it "has never held that all injunctions [affecting speech] are impermissible." *Pittsburgh Press Co. v. Pittsburgh Comm'n on Human Rels.*, 413 U.S. 376, 390 (1973). Rather, "[t]he special vice of a prior restraint is that communication will be suppressed, either directly or by inducing excessive caution in the speaker, *before an adequate determination* that it is unprotected by the First Amendment." *Id.* (emphasis added). The Court in that case thus affirmed an injunction against speech, noting that because "no interim relief was granted," the restraint was imposed only after a "final determination" that the speech was "unprotected." *Id.* The Eleventh Circuit embraced similar reasoning in *Lucero v. Trosch*, 121 F.3d 591 (11th Cir. 1997). As it explained, an injunction against protestors did "not constitute a prior restraint" because "the trial court had made a judicial determination that the defendants' past conduct was harassing and unlawful." *Id.* at 601. In other words, the court was not dealing with "a mere threat of a future violation." *Id.* at 601 n.15; *accord Deligdish v. Bender*, 2023 WL 5016547, at *12 (M.D. Fla. Aug. 7, 2023) (courts have "'previously held that a narrowly tailored injunction prohibiting speech *already found* defamatory by the jury is not an invalid prior restraint when a judgment for monetary damages would not afford the plaintiff effective relief'" (emphasis added)).

Leapfrog's purportedly contrary cases only underscore this distinction. They involve situations where a party either requested preliminary relief absent a prior determination of illegality, or, relatedly, sought to restrain *lawful* speech. *See Basulto v. Netflix, Inc.*, 2023 WL 7129970, at *52 (S.D. Fla. Sept. 20, 2023) ("there has been no determination that the statements are false and defamatory"); *Patriot Lending Servs., Inc. v. Amerifirst Fin. Corp.*, 2020 WL 758155, at *3 (M.D. Fla. Feb. 14, 2020) (preliminary relief); *Vrasic v. Leibel*, 106 So. 3d 485, 486 (Fla. DCA 4th 2013) (preliminary relief); *Chevaldina v. R.K./FL Mgmt., Inc.*, 133 So. 3d 1086, 1088 (Fla. DCA 3d 2014) (preliminary relief); *id.* at 1090 (acknowledging speech can be enjoined if "made in the furtherance of the commission of another intentional tort"); *Town of Lantana v. Pelczynski*, 290 So. 2d 566, 568 (Fla. DCA 4th 1974) (statute prohibiting core political speech); *Krapacs v. Bacchus*, 301 So. 3d 976, 980 (Fla. DCA 4th 2020) (protected speech); *id.* at 981 (acknowledging that

if speech was "not … protected," it "could be addressed through injunctive relief").[4] Similarly, the injunction in *Sindi v. El-Moslimany*, 896 F.3d 1, 34 (1st Cir. 2018), was deemed overbroad because it enjoined use of specific defamatory words that could lawfully be used in different contexts. Yet Leapfrog presents no argument about some future context in which it lawfully could deploy its methodology to extract hospitals' private data on threat of an arbitrary penalty.

V. Leapfrog's Compelled-Speech Argument Is Forfeited And Meritless

Last, Leapfrog briefly attacks the injunction's third and fourth prongs, claiming that they "unconstitutionally compe[l]" speech, Dkt. 220 at 20, by requiring corrective disclosures to entities that "paid to license" the Safety Grades (which Leapfrog represents it has already done, Dkt. 215 ¶¶ 28–33), and to place the same disclosures "in future contracts," "advertising materials," and other materials "that promote paid licensure" of the "next cycle of Safety Grades," Dkt. 212 at 41.

Leapfrog's new compelled-speech argument is forfeited and thus not cognizable under Rule 59. As noted, the Community Hospitals extensively presented at trial on the disclosures they sought, *see supra* 4, and the Court thereafter instructed the parties to include all legal argument—including as to the injunction—in their post-trial PFFCL. Yet Leapfrog failed to raise *any argument* regarding the scope of any eventual injunction in that briefing. *See id.* Leapfrog does not suggest its compelled-speech argument is preserved and provides "no reason for not previously raising" it. *Wilchombe*, 555 F.3d at 957. Moreover, even if there were error here (which there is not), Leapfrog itself invited the alleged error. When the Court asked "what type of injunction would allow [Leapfrog] to continue [its] mission," Day 5 Tr. 80:21–22, Leapfrog's counsel suggested "a better footnote," *id.* at 80:23. This statement is, in fact, the *only* argument Leapfrog offered (until now) regarding the scope of the Court's injunction. Because Leapfrog "expressly acknowledged the court could impose" disclosures as a remedy, Leapfrog cannot now contend that disclosures are impermissible. *Love*, 449 F.3d at 1157. And any challenge to the disclosures Leapfrog already sent is plainly moot. *See Newman v. Alabama*, 683 F.2d 1312, 1317 (11th Cir.

[4] Leapfrog also says the injunction is a prior restraint because of the Community Hospitals' recent letters pointing out that Leapfrog's characterization of Safety Grades on leapfrogroup.org and Leapfrog's contemplated program for grading ambulatory surgery centers ("ASC"s) are inconsistent with the injunction. Dkt. 220 at 3, 6, 19. Leapfrog misrepresents the Community Hospitals' letters by claiming they say "Leapfrog cannot so much as report the basic, irrefutable fact that Plaintiffs declined to respond" to the Survey. *Id.* at 3. The Community Hospitals specifically disclaimed this distortion of their letter *before* Leapfrog filed its Rule 59 Motion. *See* Dkts. 219, 219-3. Leapfrog's continued false characterization of the Community Hospitals' letters is frivolous. Moreover, the Community Hospitals' letters are irrelevant to whether the injunction itself is a "prior restraint." Whether the injunction is properly read to encompass this additional conduct is a determination to be made by this Court in any future injunction enforcement proceedings. The Community Hospitals' position at this juncture does not itself affect the scope of the injunction.

1982) (challenge "moot" when party already "perform[ed] certain discrete acts" required).

Leapfrog's compelled-speech challenge is also baseless. The injunction's disclosure requirements (which this Court carefully tailored, *see* Dkt. 212 at 39–40), target obvious commercial speech—advertisements promoting, and contracts effectuating, paid licensure of the Safety Grades. The Supreme Court for decades has recognized courts' authority to order factual, corrective disclosures in the commercial-speech context, particularly when those disclosures are tied to adjudicated deception. *See, e.g.*, *Zauderer v. Off. of Disciplinary Couns. of Sup. Ct. of Ohio*, 471 U.S. 626, 651 (1985) ("[A]n advertiser's rights are adequately protected as long as disclosure requirements are reasonably related to the State's interest in preventing deception of consumers."); *In re R.M.J.*, 455 U.S. 191, 201 (1982) ("warning or disclaimer" can be "appropriately required" to "dissipate the possibility of consumer confusion or deception"). Leapfrog's own case recognizes the point, noting that in the context of "'commercial advertising,'" courts may "requir[e] the dissemination of purely factual and uncontroversial information." *Hurley v. Irish-Am. Gay, Lesbian & Bisexual Grp. of Boston*, 515 U.S. 557, 573 (1995). And the Eleventh Circuit recently confirmed the point in *FTC v. Corpay*, 164 F.4th 807 (11th Cir. 2026), which Leapfrog's brief ignores, but on which this Court's order expressly relied, Dkt. 212 at 39. *Corpay* affirmed an injunction requiring a company to make future disclosures "'unavoidable'" to consumers, relief warranted by the company's "'intentional'" practice of hiding important information. 164 F.4th at 849–50. This Court made the same finding here: that "Leapfrog intended" for consumers not to be able to locate or understand its methodology, Dkt. 212 at 31, to perpetuate the false belief "that Leapfrog's grades reflect actual performance," *id.* at 26.

Leapfrog's Motion also does not even *try* to object to the content of the required disclosures, which closely tracks disclosures ordered in similar cases. *See, e.g.*, *MacuHealth, LP v. Vision Elements, Inc.*, 2024 WL 3738489, at *9–10 (M.D. Fla. Aug. 9, 2024). The disclosures do not require Leapfrog to abandon its mission or express agreement with the Community Hospitals regarding hospital safety. They require disclosure of a "'purely factual and uncontroversial statement'" concerning the outcome of this litigation to entities that pay to license the challenged Grades—which Leapfrog itself recognizes is permissible, Dkt. 220 at 20.

CONCLUSION

The Court should deny Leapfrog's motion for reconsideration and to alter or amend the judgment, or for a new trial.

S.D. Fla. L.R. 7.3 6

INTRODUCTION

This Court found that Defendant The Leapfrog Group's ("Leapfrog") challenged grading scheme "has no scientific basis, unfairly penalizes non-participating hospitals, and misrepresents hospital safety" and that its Safety Grades and related public representations were deceptive and unfair under the Florida Deceptive and Unfair Trade Practices Act ("FDUTPA"). ECF 212 at 2–3. Each of the five prevailing community hospitals—Delray Medical Center, Good Samaritan Medical Center, Palm Beach Gardens Medical Center, St. Mary's Medical Center, and West Boca Medical Center (the "Community Hospitals")—respectfully seeks an award of approximately $2 million in reasonable attorneys' fees and costs incurred to prosecute this action. Collectively, the Community Hospitals seek an award of $10,499,880.47 in reasonable attorneys' fees and litigation costs. That figure reflects the lodestar for work reasonably required to litigate this expedited five-plaintiff FDUTPA action through discovery, expert proceedings, dispositive and evidentiary motions, a five-day bench trial, post-trial briefing, and final judgment as well as associated costs. The hospitals do not seek a multiplier, premium, or sanction-based enhancement.

An award of fees and costs is not only warranted under FDUTPA; it is necessary to effectuate the statute's purpose of deterring deceptive and unfair practices and encouraging private enforcement. The Community Hospitals brought this action to stop a grading scheme this Court held unlawful. Requiring them to absorb the full expense of doing so would undermine the statute's deterrent and remedial purposes and would leave the victims of that conduct to finance the relief the Court ordered. Fee shifting is especially appropriate here because the Community Hospitals sought only equitable relief.

The amount sought is reasonable. This was a complex case litigated on an expedited schedule—going from filing through trial in approximately eight months. Although filed in a single action, it required counsel to represent five separate plaintiff hospitals, each of which had to prove its own entitlement to relief through hospital-specific evidence, witnesses, and proof of harm, while also litigating common issues concerning Leapfrog's methodology, defenses, experts, and equitable relief. The requested amount reflects an appropriate lodestar, is supported by detailed billing records, and is consistent with prevailing market rates in this District. And the requested amount reflects the exercise of billing judgment, including through the omission of certain timekeepers and time entries.

The amount requested also reflects the burdens imposed by Leapfrog's litigation conduct. On a compressed schedule, Leapfrog served late and overbroad discovery, produced nearly one million documents without a responsiveness review, failed to timely provide an adequate privilege log, forced motion practice to secure basic discovery compliance, and shifted positions and public-facing statements while the case was pending. The resulting fees and costs were reasonably necessary to litigate this case through trial and obtain complete relief. Leapfrog's litigation ploys have continued to drive up costs even after entry of final judgment. Indeed, days before its deadline to appeal, Leapfrog filed a baseless motion for reconsideration asserting a number of barred, abandoned, forfeited, or otherwise meritless arguments that the Community Hospitals were forced to rebut. Though the Community Hospitals continue to incur fees due to Leapfrog's litigation tactics, they do not seek to recover those costs through this Motion.

The Court should therefore award each Community Hospital approximately $2 million in reasonable attorneys' fees and costs, for a total award of $10,499,880.47.

BACKGROUND

The Community Hospitals investigated Leapfrog's methodology, then engaged in extensive correspondence with Leapfrog between January and April of 2025 seeking to avoid litigation in this matter. Leapfrog repeatedly rebuffed these efforts to avoid litigation. *See, e.g.*, PX-562; DX-931. Left with no other choice, on April 30, 2025, the Community Hospitals filed this action against Leapfrog, asserting a single claim of deceptive and unfair trade practices under FDUTPA. *See* ECF 1. The Community Hospitals challenged Leapfrog's publication of Safety Grades that purported to measure actual hospital safety, but as this Court found, relied on a methodology that "has no scientific basis, unfairly penalizes nonparticipating hospitals, and misrepresents hospital safety." ECF 212 at 2; *see also* ECF 1. The Court set an expedited schedule culminating in a January 2026 trial. *See* ECF 32.

Leapfrog moved to dismiss the Complaint, arguing that its Safety Grades and methodology were protected opinion under the First Amendment, that the Court lacked personal jurisdiction over Leapfrog, and that the Complaint failed to state a FDUTPA claim. *See* ECF 39. The Court denied the motion in full. *See* ECF 41. The Community Hospitals later amended their Complaint to withdraw any request for monetary relief and to seek only injunctive and declaratory relief, thereby narrowing the case for discovery and trial. *See* ECF 54, 74.

Extensive and expedited discovery followed. Leapfrog served belated discovery requests, requiring the Community Hospitals to begin preparing document productions before receiving Leapfrog's requests to ensure their ability to meet the discovery deadline. Then, after Leapfrog finally served its requests—on July 11, 2025, less than two weeks before the substantial completion deadline—the Community Hospitals were required to revise and substantially redo their prior work to conform the production to Leapfrog's actual requests, thereby increasing attorney time and effort. Leapfrog ultimately served 64 requests for production and 24 interrogatories on each of the five hospitals, totaling 320 RFPs and 120 interrogatories. ECF 55-4, 55-5–9, 55-10–14.

Leapfrog's discovery requests were also overbroad, seeking extensive information about the Community Hospitals' quality of care—an issue unrelated to the methodology challenged in this case. After negotiations to narrow the discovery requests failed, the Community Hospitals moved for a protective order. *See* ECF 55. The parties negotiated a solution following a hearing before Judge Matthewman. *See* ECF 70, 76.

Ultimately, the Community Hospitals produced approximately 3,300 documents after conducting a responsiveness review. Leapfrog, by contrast, produced nearly *one million* documents in response to the Community Hospitals' 36 narrowly tailored document requests. When questioned regarding the volume of the documents—hundreds of thousands of which were wholly irrelevant—Leapfrog admitted that it had not conducted a responsiveness review. Leapfrog did not offer to re-review the documents, requiring the Community Hospitals to take on the burden of that review. Nor did Leapfrog timely produce a compliant privilege log. Its belated submission included both responsive and non-responsive documents, failed to identify which listed individuals were attorneys, omitted privilege descriptions, and more.

The parties took more than twenty depositions, including both fact and expert witnesses, within less than six weeks. The accelerated schedule was driven in significant part by Leapfrog's delay in serving its requests for production and the overbroad nature of those requests, which required the parties to first resolve document-related issues before proceeding. As a result, multiple depositions had to be postponed and then rescheduled on a compressed timeline once document-production disputes were addressed. The five-plaintiff structure of the case also mattered throughout discovery: each Community Hospital had its own leadership, documents, patient and community feedback, and evidence of harm arising from Leapfrog's Safety Grades.

The case involved extensive third-party discovery as well. The Community Hospitals subpoenaed, among others, Dr. Patrick Romano, a professor at the University of California, Davis School of Medicine and member of Leapfrog's Safety Grade Expert Panel, and Dr. Matthew Austin, principal faculty member of the Armstrong Institute for Patient Safety at Johns Hopkins Medicine and Leapfrog consultant. Leapfrog issued more than a dozen third-party subpoenas of its own, further expanding the scope of discovery.

After the close of discovery, the parties filed numerous substantive motions. These included cross-motions for summary judgment, motions in limine to exclude expert testimony, and Leapfrog's omnibus motion in limine seeking to exclude broad categories of evidence—including several key pieces of evidence the Court relied upon in its post-trial opinion. *See* ECF 86, 96, 97, 98, 99, 212. The motions spanned more than 300 pages, including responses and replies. On November 13, 2025, when motion practice had just begun, the parties appeared for a mediation conference before Judge Matthewman. *See* ECF 106. Again, Leapfrog refused to compromise, and the litigation continued. *Id*. The Court subsequently denied the parties' summary judgment motions and declined to exclude the challenged evidence. *See* ECF 139, 151, 169, 176.

A five-day bench trial followed. The Community Hospitals were required to prove not only Leapfrog's common course of deceptive and unfair conduct, but also plaintiff-specific injury and entitlement to equitable relief as to each of the five Community Hospitals. To do so, the Community Hospitals prepared and presented extensive documentary and testimonial evidence concerning Leapfrog's methodology, public representations, and punitive treatment of non-participating hospitals. They also presented live testimony from the CEO of each Community Hospital, each of whom was cross-examined about the effect of Leapfrog's Grades on his or her hospital. That testimony addressed, among other things, the reputational injury, patient and community reaction and harm, physician and payer concerns, and the operational consequences experienced by each hospital as a result of the challenged Grades. The trial therefore required counsel to litigate both common issues and five separate factual records concerning harm.

Following trial and with the benefit of the parties' lengthy post-trial submissions, the Court ruled in favor of the Community Hospitals and granted injunctive relief. *See* ECF 212. In a detailed opinion, the Court found that Leapfrog's Safety Grades violated FDUTPA because they were based on a methodology that "has no scientific basis, unfairly penalizes nonparticipating hospitals, and misrepresents hospital safety." *Id.* at 2. The Court further found that Leapfrog's

grading system resulted in "the false impression that Leapfrog's grades reflect actual performance." *Id.* at 26. And it held that Leapfrog's practices "produced real harms [that] are likely to continue in the future." *Id.* at 37. Based on these findings, the Court enjoined Leapfrog from continuing the challenged conduct and, on April 6, 2026, entered judgment for the Community Hospitals on their sole claim. *See id*. at 40–41; ECF 214.

LEGAL STANDARD

"To encourage citizens to invoke the protections of FDUTPA and file actions under that statute, the Legislature has provided that a prevailing party in a FDUTPA action may recover reasonable costs and attorney's fees from the nonprevailing party." *Chow v. Chak Yam Chau*, 640 F. App'x 834, 837 (11th Cir. 2015) (quoting *Diamond Aircraft Indus., Inc. v. Horowitch*, 107 So. 3d 362, 367 (Fla. 2013)). Specifically, "the prevailing party, after judgment in the trial court and exhaustion of all appeals, if any, may receive his or her reasonable attorney's fees and costs from the nonprevailing party." Fla. Stat. § 501.2105(1). Under FDUTPA, "[t]he trial judge may award the prevailing party the sum of reasonable costs incurred in the action plus a reasonable legal fee for the hours actually spent on the case as sworn to in an affidavit." *Id.* § 501.2105(3).

ARGUMENT

I. The Community Hospitals Are Entitled To Fees And Costs Under FDUTPA

FDUTPA authorizes fee awards to prevailing parties so that the price of enforcing the statute does not fall solely on those harmed by deceptive and unfair practices. *See Diamond Aircraft*, 107 So.3d at 367–68 (citing Fla. H.R. Comm. on Governmental Operations, HB 1915 (1973), Staff Analysis 3–4 (May 3, 1973); *Standard Guar. Ins. Co. v. Quanstrom*, 555 So.2d 828, 833 (Fla. 1990)); *see also Chow*, 640 F. App'x at 837 (applying the *Diamond Aircraft* framework). This case fits that purpose squarely.

After expedited proceedings and a five-day bench trial, the Court found that Leapfrog's challenged grading methodology is an unfair penalty for nonparticipation that misrepresents hospital safety. ECF 212 at 2. The Court further held that Leapfrog's challenged Safety Grades and related public representations were deceptive and unfair under FDUTPA, entered declaratory relief, and enjoined Leapfrog's continued use of the challenged methodology as to the Community Hospitals. *See id.* at 24–28, 40–41. This motion therefore does not ask the Court to impose a penalty untethered to the statute or the record. It asks the Court to apply FDUTPA's fee-shifting provision in the ordinary way after a complete victory.

An award here is warranted not only because the Community Hospitals prevailed, but because requiring them to absorb the full cost of obtaining that relief would undercut FDUTPA's deterrent and remedial purposes. The Community Hospitals sought no damages. They undertook the burden of stopping a grading scheme this Court held unlawful. FDUTPA does not require the victims of deceptive and unfair conduct to finance the litigation necessary to halt such conduct.

A. The Community Hospitals Are Prevailing Parties

There is no serious dispute that the Community Hospitals prevailed. Under FDUTPA, a party prevails when it succeeds on the significant issues in the litigation and obtains the benefit sought in bringing suit. *Chow*, 640 F. App'x at 839 (citing *Moritz v. Hoyt Enters., Inc.*, 604 So. 2d 807, 810 (Fla. 1992)); *Diamond Aircraft*, 107 So. 3d at 368. That is what occurred here.

Following a five-day trial, the Community Hospitals prevailed on their sole claim and obtained the declaratory and injunctive relief they sought. *See* ECF 212, 214. The Court entered judgment in their favor and declared that Leapfrog's challenged Safety Grades, public representations, and punitive grading methodology were deceptive and unfair under FDUTPA. *See* ECF 212 at 40–41. Because each of the five Community Hospitals obtained that relief, each is a prevailing party under FDUTPA. *See Bluegreen Vacations Unlimited, Inc. v. Timeshare Laws. P.A.*, 2024 WL 3738890, at *1, *5 (S.D. Fla. July 18, 2024) ("*Bluegreen Vacations I*"), *report and recommendation adopted*, 2024 WL 4297089 (S.D. Fla. Sep. 26, 2024) ("*Bluegreen Vacations II*") (finding party that prevailed on all claims at trial, including a FDUTPA claim, to be "prevailing party" under FDUTPA).

This motion is also timely. Local Rule 7.3 requires fee motions to be filed within sixty days of final judgment "regardless of the prospect or pendency of supplemental review or appellate proceedings." S.D. Fla. L.R. 7.3(a)(1). The Community Hospitals therefore advance this motion now to comply with that Rule and submit that the Motion should be heard and resolved. If the Court concludes that the Motion should await the resolution of any appeal, the Community Hospitals respectfully request that the Motion be held in abeyance rather than denied as premature.[1]

[1] Under new Supreme Court precedent, federal—and not state FDUTPA—rules apply to the timing of this motion. Earlier decisions treated FDUTPA's exhaustion-of-appeals language as controlling in federal court. *See M.G.B. Homes, Inc. v. Ameron Homes, Inc.*, 30 F.3d 113, 115 (11th Cir. 1994); *Procaps S.A. v. Patheon Inc.*, 157 F. Supp. 3d 1199, 1200 (S.D. Fla. 2016). But *Berk v. Choy* recently clarified that, when a valid Federal Rule of Civil Procedure answers the disputed timing question, it governs notwithstanding contrary state law. 607 U.S. 187, 191–97 (2026). That is the case here. Federal Rule of Civil Procedure

B. The Equitable Factors Strongly Support An Award Of Fees And Costs

Once a party is found to have prevailed under FDUTPA, the Court has discretion to award attorneys' fees and costs after considering the established equitable factors: "(1) the scope and history of the litigation; (2) the ability of the opposing party to satisfy an award of fees; (3) whether an award of fees against the opposing party would deter others from acting in similar circumstances; (4) the merits of the respective positions—including the degree of the opposing party's culpability or bad faith; (5) whether the claim brought was not in subjective bad faith but frivolous, unreasonable, [or] groundless; (6) whether the defense raised a defense mainly to frustrate or stall; [and] (7) whether the claim brought was to resolve a significant legal question under FDUTPA law." *Bluegreen Vacations II*, 2024 WL 4297089, at *3 (S.D. Fla. Sep. 26, 2024) (quoting *Chow*, 640 F. App'x at 838–39); *see also Humane Soc'y of Broward Cnty., Inc. v. Fla. Humane Soc'y*, 951 So. 2d 966, 971–72 (Fla. 4th DCA 2007) (articulating this test). These factors strongly support an award here.

1. Scope and History of Litigation. This factor strongly favors an award. Courts adjudicating a fees motion first consider the scope and procedural history of the litigation, "focus[ing] on the parties' respective positions and litigation tactics throughout the entire case." *Bluegreen Vacations I*, 2024 WL 3738890, at *6. They assess whether the case progressed to later-stage proceedings and involved significant motion practice; the length of the litigation; whether the FDUTPA claim was an important element of the case; and whether the conduct of the nonprevailing party was unreasonable. *See, e.g., Temurian v. Piccolo*, 2021 WL 1121003, at *4 (S.D. Fla. Mar. 24, 2021); *Democratic Republic of Congo v. Air Cap. Grp.*, 2016 WL 11739606, at *5, *report and recommendation adopted,* 2016 WL 11739605 (S.D. Fla. Sept. 29, 2016); *Chow*, 640 F. App'x at 843. Each supports awarding fees and costs here.

This was a substantial, expedited, five-plaintiff FDUTPA case litigated from Complaint to trial in approximately eight months. It involved a motion to dismiss, expedited and contentious

54(d)(2)(B) supplies the default federal deadline for fee motions, and Local Rule 7.3 requires such motions to be filed within sixty days of final judgment, "regardless of the prospect or pendency of supplemental review or appellate proceedings." S.D. Fla. L.R. 7.3(a)(1); *see also Tire Kingdom, Inc. v. Morgan Tire & Auto, Inc.*, 253 F.3d 1332, 1335 (11th Cir. 2001) (Local Rule 7.3 is an "order of the court" under Federal Rule 54(d)(2)(B)). The Community Hospitals therefore file now to comply with the governing federal rules, notwithstanding FDUTPA's state-law exhaustion language. Should the Court determine the motion is premature, the Community Hospitals request that the Court hold the motion in abeyance pending the conclusion of any appeal. *See Procaps S.A.*, 157 F. Supp. 3d at 1199.

discovery, more than twenty depositions, expert discovery, cross-motions for summary judgment, multiple evidentiary motions, and a five-day bench trial. Although filed in a single action, the case involved five separate plaintiff Community Hospitals. The Community Hospitals were required to prove both common liability and hospital-specific injury and entitlement to relief. At trial, each Community Hospital's CEO testified and was cross-examined regarding the effect of Leapfrog's Safety Grades on his or her hospital. The scope and intensity of the litigation were substantial.

Leapfrog also materially increased the burden and cost of the case. On a compressed schedule, Leapfrog served late and overbroad discovery, and it produced nearly one million documents without performing a responsiveness review, contrary to the parties' ESI Protocol. ECF 38 § 16(a). As a result, Leapfrog produced hundreds of thousands of irrelevant "junk" documents—including more than 100,000 documents outside the relevant timeframe, more than 21,000 image files consisting primarily of logos and icons, several thousand automated or mass emails, and more than 1,000 technical issue slipsheets. This deficient, overbroad production substantially increased the Community Hospitals' litigation expenses by requiring counsel to perform the responsiveness review that Leapfrog had agreed, but failed, to undertake.

Leapfrog also failed to provide a timely or adequate privilege log. Although Leapfrog's privilege log was due on August 8 under the District's Local Rules, Leapfrog did not serve its log until September 17—over a month late. When eventually produced, the log lacked basic information necessary to evaluate the privilege claims and contained numerous errors, including improper assertions of privilege over business communications, incomplete metadata, and privilege claims over third-party communications. These deficiencies required counsel for the Community Hospitals to review the log, identify errors, and confer with Leapfrog to obtain a corrected log.

Leapfrog also forced motion practice to secure basic discovery compliance and shifted positions and public-facing statements—statements central to the Community Hospitals' FDUTPA claim—while the case was pending. Just weeks before trial, Leapfrog substantially altered language on certain of its webpages, including specific language that had been quoted and relied upon in the Community Hospitals' summary judgment briefing. Those were not minor disputes and concerns. They required the Community Hospitals to spend substantial additional time to obtain the discovery and record necessary to present the case.

Taken together, Leapfrog's discovery conduct substantially increased the time and expense required to advance this case to trial and further supports an attorneys' fees and costs award under

the scope-and-history factor.[2] *See, e.g.*, *HRCC, Ltd. v. Hard Rock Cafe Int'l (USA), Inc.*, 2018 WL 1863778, at *4 (M.D. Fla. Mar. 26, 2018) (finding that the first factor favored a fee award where nonprevailing party's conduct resulted in substantial unnecessary discovery costs); *Healthcare Res. Mgmt. Grp., LLC v. EcoNatura All Healthy World, LLC*, 2022 WL 1537757, at *7 (S.D. Fla. May 12, 2022) (same where non-prevailing party "evince[d] a lack of diligence," including during discovery) (alteration in original); *Gov't Emps. Ins. Co. v. Right Spinal Clinic, Inc.*, 2025 WL 1644541, at *3 (M.D. Fla. May 15, 2025) (same where non-prevailing party "failed to follow Local Rules").

2. Ability to Pay. This factor favors an award. The record reflects that Leapfrog is an established national organization with substantial annual revenue, including more than $8 million in 2024 alone, PX-824.0 at 1; Leapfrog has litigation insurance providing coverage of up to $5 million for "[e]ach [e]rroneous [a]ct" during the period from May 1, 2024 through May 1, 2026, *see* Affidavit of Sydney Scott ("Scott Aff.") Ex. F; and that following entry of the Court's decision on March 6, 2026, Leapfrog commenced a national fundraising campaign led by its CEO and in direct response to this litigation. *See id.* Ex. E. It is therefore "reasonable to conclude that [Leapfrog] has the financial ability to pay a fee award." *Tropical Paradise Resorts, LLC v. JBSHBM, LLC*, 2021 WL 2269822, at *7 (S.D. Fla. Apr. 30, 2021), *report and recommendation adopted*, 2021 WL 2024424 (S.D. Fla. May 21, 2021).

The record supports the conclusion that Leapfrog has the ability to pay a reasonable fee award. To the extent that Leapfrog objects to the requested sum, it has only itself to blame. The Community Hospitals waited four months to file their Complaint, engaging in a good faith attempt to resolve their differences without the need for costly litigation. But Leapfrog declined multiple opportunities to resolve this dispute and avoid court, both before and during the litigation. The Community Hospitals offered Leapfrog a second opportunity for resolution during mediation following the close of discovery. ECF 106. And, yet again, Leapfrog refused. Nearly half of the requested fees were incurred following the unsuccessful mediation session. Because the

[2] Leapfrog's gamesmanship did not end with discovery; it continued through trial. For instance, Leapfrog delayed disclosure of Ms. Zambrana—a third party witness—until shortly before fact discovery ended, then refused to make her available for deposition until weeks before trial during the Christmas holiday. Leapfrog similarly disclosed demonstratives for its expert, Mr. Vredenburgh, the night before his testimony, only to withdraw him the next day without prior notice, requiring the Community Hospitals to prepare and present his deposition testimony in rebuttal during trial. This conduct unnecessarily complicated trial preparation and required substantial additional attorney time and resources.

Community Hospitals sought no damages, attorneys' fees and costs are the principal monetary consequence of the conduct this Court found unlawful.

3. Deterrent Effect. This factor strongly favors an award. The Court found that Leapfrog's challenged conduct was deceptive and unfair, misrepresented hospital safety to the public, and caused real harm. *See* ECF 212 at 29–37. Courts have recognized that "FDUTPA depends on the encouragement of 'private enforcement,' which is possible through the imposition of attorney's fees to prevailing parties as a deterrent to violations." *Gov't Emps. Ins. Co.*, 2025 WL 1644541, at *3. A fee award ensures that entities engaging in similar conduct cannot shift the cost of stopping their unlawful conduct onto the parties that conduct harmed. That is especially important here, where the Community Hospitals sought only equitable relief. Without a fee award, Leapfrog would bear the burden of complying with the Court's injunction, but the Community Hospitals that proved the misconduct and obtained the relief would still bear the full cost of securing it. That result would undermine FDUTPA's deterrent purpose.

4. Merits of Respective Positions. This factor strongly favors an award. Leapfrog lost at every stage that mattered. The Court denied Leapfrog's motion to dismiss, rejected its dispositive arguments, denied its efforts to exclude key trial evidence, and held that Leapfrog's challenged conduct violated FDUTPA. *See* ECF 41, 139, 151, 169, 176, 212.

This factor favors fees more strongly because Leapfrog repeatedly advanced meritless positions—claiming a lack of personal jurisdiction at the motion to dismiss stage while purposefully availing itself of such jurisdiction by publishing an op-ed in a South Florida newspaper; engaging in a "document dump" discovery strategy; asserting a lack of Article III jurisdiction at the summary judgment stage on the premise that the amount-in-controversy requirement was not satisfied; seeking to exclude evidence as unduly prejudicial in advance of a bench trial; and much more. *See supra* at 7–8; *infra* at 11–12.

Additionally, and as the Court found, shortly after the Complaint was filed, Leapfrog decided to "harass" the Community Hospitals, amplifying the challenged failing Safety Grades while their legality was being litigated before this Court. ECF 212 at 17, 32. At the direction of CEO Leah Binder, Leapfrog used funds from a nonprofit Google grant to purchase targeted Google advertisements designed to display the Community Hospitals' failing Safety Grades whenever users searched for the Community Hospitals online. *Id.* at 32. One Leapfrog staff member internally compared this tactic to that of a "Disney villain," revealing Leapfrog's real-time consciousness of

its bad faith actions. *Id*. at 17. During this litigation, Ms. Binder also published op-eds in local media outlets highlighting the Community Hospitals' failing Safety Grades and insinuating that the hospitals were unsafe and unsanitary. *See, e.g.*, PX-461.0. These pieces repeated claims even after evidence in this case, including Ms. Binder's own contemporaneous emails, demonstrated that Leapfrog lacked a factual basis for those assertions. *See* ECF 212 at 22 (citing CEO Binder's admission that Leapfrog's methodology would be a "very big deal to hospitals (and a major incentive to report to the survey)" as evidence that the methodology was unfairly punitive). Courts have found that the fourth factor favors fees under analogous circumstances. In *Warren Technology, Inc. v. UL LLC*, for example, the widespread distribution of communications to both competitors and consumers disparaging the safety of the prevailing party's products supported fees under this factor. *See* 2020 WL 9219127, at *4, *6 (S.D. Fla. Dec. 17, 2020).

5. Frivolity. This factor is inapplicable or, at minimum, neutral, because the Community Hospitals prevailed on the merits after trial. *See Bluegreen Vacations I*, 2024 WL 3738890, at *9.

6. Defense Raised to Frustrate or Stall. This factor favors an award. Leapfrog repeatedly forced the Community Hospitals to expend resources responding to weak or shifting positions, including unsupported discovery positions, meritless defenses, and last-minute changes to its public-facing statements and website content while those statements were at issue in the case. These baseless arguments and litigation tactics served to frustrate and delay the resolution of this case.

Leapfrog asserted a patently baseless personal jurisdiction argument in its motion to dismiss—an argument refuted by its own actions in publishing an op-ed in a Florida newspaper while Leapfrog's motion was pending. *See* ECF 39 (Leapfrog's motion to dismiss filed June 27, 2025); PX-461.0 (Leapfrog CEO's op-ed published June 30, 2025). It initially contested the amount-in-controversy requirement in its summary judgment motion but ignored the issue in reply and stipulated before trial that the requirement was satisfied. *See* ECF 115 at 18–19; ECF 124. Similarly, Leapfrog asserted several "affirmative defenses," each baseless. Leapfrog declined to defend its "good faith" defense when the Community Hospitals moved for summary judgment on the issue. *See* ECF 86 at 19; ECF 102. Leapfrog's "avoidable consequences" defense was entirely irrelevant to this case seeking only equitable relief. *See* ECF 86 at 18–19; ECF 102 at 17–18; ECF 107 at 10. And Leapfrog's anti-SLAPP defense was plainly foreclosed by precedent. *See* ECF 86 at 18. Leapfrog's motions in limine were also off-base, arguing for example, that evidence was unfairly prejudicial, an inapplicable objection in a bench trial. *See* ECF 98 at 14–16; ECF 118 at 3, 20.

Leapfrog also engaged in gamesmanship on the eve of trial by altering several of the challenged deceptive representations on its website—representations that had occupied dozens of pages of briefing then-pending before this Court—over the course of several days and *without notifying the Court or the Community Hospitals*. Leapfrog deleted or modified its prior statements and substituted new language, forcing the Community Hospitals to identify and track the changes, seek discovery about them, and shift trial strategy based on them. *See* ECF 136 ¶¶ 347–359. Leapfrog even temporarily removed a website footnote it had repeatedly described as central to its defense—only to restore it after the Community Hospitals sought discovery regarding the change. *See* ECF 39 at 9, 16; ECF 99 at 4; ECF 129 ¶¶ 63–64. On an expedited schedule, this conduct materially increased the work required to litigate the case to judgment.

7. Significant Legal Question. This factor favors fees. This case required the Court to address important questions concerning FDUTPA's unfairness standard and the scope of who may seek protection under the statute. *See* ECF 212 at 16–20, 36–37. The Court's post-trial opinion provides meaningful guidance on both issues.

Most notably, the Court resolved the question whether it should apply the modern unfairness framework under FDUTPA in light of the Eleventh Circuit's intervening decision in *FTC v. Corpay, Inc.*, 164 F.4th 807 (11th Cir. 2026). That issue arose during the litigation and was the subject of post-summary judgment briefing, including the Community Hospitals' motion for partial reconsideration. *See* ECF 152. The Court's analysis confirmed that FDUTPA reaches conduct likely to cause substantial consumer injury—even in the absence of actual, completed, and quantified harm—and provided helpful guidance regarding how courts should evaluate FDUTPA (and even FTC Act) "unfairness" claims going forward. *See* ECF 212 at 19.

The case also required the Court to address the scope of who may qualify as a "consumer" under FDUTPA. In resolving Leapfrog's arguments, the Court confirmed that entities such as hospitals—and other market participants affected by deceptive practices—may fall within the statute's protection, and that FDUTPA is not limited to the most direct and obvious form of consumer plaintiffs. *See* ECF 212 at 17–18, 32 n.12.

Accordingly, this case required the Court to address and resolve important issues concerning both the substantive standards governing FDUTPA claims and the scope of parties entitled to relief. This factor weighs in favor of a fee award. *See Bluegreen Vacations II*, 2024 WL 4297089, at *5 (addressing "uncertainty" regarding FDUTPA's scope "qualifies as advancing [the] law").

* * *

In sum, the relevant FDUTPA factors weigh decisively in favor of awarding attorneys' fees and costs here. The Community Hospitals prevailed completely. The litigation was substantial and intensified by Leapfrog's own conduct. Leapfrog can satisfy an award. And awarding fees is necessary to vindicate FDUTPA's deterrent and remedial purposes. *See Marjam Supply Co. of Fla., LLC v. Pliteq, Inc.*, 2021 WL 1200422, at *10 (S.D. Fla. Mar. 5, 2021) (prevailing party "entitled to its attorneys' fees under FDUTPA" when "the equitable [FDUTPA] factors weigh in favor of" the prevailing party); *Healthcare Res. Mgmt. Grp.*, 2022 WL 1537757, at *10 (awarding fees where four of seven factors favored the prevailing party and remaining three were neutral).

II. The Attorneys' Fees Sought By The Community Hospitals Are Reasonable

Once a party establishes entitlement to attorneys' fees, the remaining question is whether the amount requested is reasonable. *See Cable/Home Commc'n Corp. v. Network Prods., Inc.*, 902 F.2d 829, 853 (11th Cir. 1990). It is. The Community Hospitals seek an attorneys' fees award of $9,903,527.50. That amount is supported by contemporaneous billing records, reflects substantial billing judgment, and corresponds to the work reasonably required to litigate and obtain excellent results in an expedited, five-plaintiff FDUTPA case through trial and final judgment. *See* Scott Aff. Exs. A, B (attaching invoices). It is not a multiplier, a premium, or a sanction. It is the reasonable cost of obtaining complete relief in this action. While the Community Hospitals seek a collective lodestar award, that total reflects approximately $2 million in reasonable fees and costs attributable to each prevailing Hospital.

Courts determine a reasonable fee by applying the lodestar method—reasonable hours multiplied by a reasonable hourly rate. *See Norman v. Hous. Auth. of Montgomery*, 836 F.2d 1292, 1299 (11th Cir. 1988); *Herbst v. Am. Orthodontics Corp.*, 2025 WL 3755394, at *3 (S.D. Fla. Jan. 23, 2025) (Middlebrooks, J.). In doing so, courts need not achieve "auditing perfection"; they are permitted to "do rough justice." *Fox v. Vice*, 563 U.S. 826, 838 (2011). Applying the lodestar method here, no reduction is warranted.

A. The Hourly Billing Rates Are Reasonable

In awarding fees, a court must determine whether the requested hourly rate is reasonable. *See Glob. Digital Sols., Inc. v. Grupo Rontan Electro Metalurgica, S.A.*, 2021 WL 7630524, at *2 (S.D. Fla. Aug. 16, 2021). "A reasonable hourly rate is the prevailing market rate in the relevant

legal community for similar services by lawyers of reasonably comparable skills, experience, and reputation." *Norman*, 836 F.2d at 1299.[3] The rates sought fall comfortably within that range.

The Community Hospitals seek rates of up to $975 for partners, $800 for counsel, and $675 for associates. Those rates are significantly discounted from the rates actually billed in this matter, and they are in line with rates approved by this Court and others within the Southern District of Florida in comparable complex litigation. *See, e.g.*, *Sprint Commc'ns, LLC v. Calabrese*, 2025 WL 713048, at *7 (S.D. Fla. Feb. 20, 2025), *report and recommendation adopted*, 2025 WL 708130 (S.D. Fla. Mar. 5, 2025) ($1,077 for partners, $697 for associates); *Epic Sys. Corp. v. Decapolis Sys., LLC*, 2024 WL 5236912, at *1 (S.D. Fla. Nov. 25, 2024) ($860 for partners, $415 for associates);[4] *Trump v. Clinton*, 653 F. Supp. 3d 1198, 1229–37 (S.D. Fla. 2023); *Infogroup Inc. v. Off. Depot Inc.*, 2024 WL 4110526, at *3 (S.D. Fla. Aug. 21, 2024), *report and recommendation adopted*, 2024 WL 4104029 (S.D. Fla. Sept. 6, 2024) ($1,050 for partners, $800 for associates); *U.S. Sugar Corp. v. Com. & Indus. Ins. Co.*, 2023 WL 4953191, at *5, *7 (S.D. Fla. Aug. 3, 2023) ($932 and $1,058 for partners).

The timekeepers whose fees are sought have substantial experience in complex federal litigation, discovery, motion practice, expert work, and trial. But the point is simpler than that: these are market rates for this kind of work in this District. No partner seeks more than $975 per hour. No associate seeks more than $675. Those rates are reasonable, particularly in a case that proceeded on an expedited schedule and required counsel to address complex issues concerning

[3] "[T]he going rate in the community [is] the most critical factor in setting the fee rate." *Maxitransfers LLC v. La Casita Envios Corp.*, 2025 WL 3091153, at *6 (S.D. Fla. July 29, 2025). Courts may also consider "the attorney's customary fee, the skill required to perform the legal services, the attorney's experience, reputation and ability, the time constraints involved, preclusion of other employment, contingency, the undesirability of the case, the attorney's relationship to the client, and awards in similar cases." *Mallory v. Harkness*, 923 F. Supp. 1546, 1555 (S.D. Fla. 1996) (setting forth factors from *Johnson v. Georgia Highway Express, Inc.*, 488 F.2d 714, 717–19 (5th Cir. 1974)). This broader inquiry favors fees as well. The fees requested are substantially discounted from counsel's ordinary billable rates, as the submitted invoices reflect. Counsel is exceptionally qualified. *See* Scott Aff. § III. This was a complicated case, benefitting from experienced counsel specializing in complex commercial disputes. The litigation was expedited, proceeding from Complaint to trial in approximately eight months. Attorneys often worked full time on the matter, particularly during the lead up to trial, to the exclusion of other work. The litigation resulted in a complete victory for the Community Hospitals, culminating in an injunction against Leapfrog's unlawful practices. *See* ECF 212. And courts in this District have awarded fees far exceeding those requested here, including under FDUTPA. *See, e.g.*, *Procaps S.A. v. Patheon*, 2017 WL 3536917, at *2 (S.D. Fla. Aug. 17, 2017) (awarding $18,494,846 in fees and costs in a FDUTPA action).

[4] The underlying hourly fees were not included in the Court's opinion but can be found on the case docket. *See* Supp. Mot. for Att'y Fees, *Epic Sys. Corp.*, 22-cv-80173 (S.D. Fla. Aug. 9, 2024), Dkt. No. 114 at 5.

Leapfrog's methodology, expert evidence, and equitable relief. The requested rates, hours, and total fees for Gibson Dunn attorneys appear below:

Timekeeper	Title	Hourly Rate	Hours Claimed	Total Fees
Mary Beth Maloney	Partner	$975.00	473.8	$ 461,955.00
Daniel P. Chung	Partner	$975.00	623.0	$ 607,425.00
Lee R. Crain	Partner	$975.00	847.3	$ 826,117.50
Scott K. Hvidt	Partner	$975.00	878.0	$ 856,050.00
Sydney Scott	Partner	$975.00	470.6	$ 458,835.00
Helgi C. Walker	Partner	$975.00	128.7	$ 125,482.50
Christine M. Buzzard	Of Counsel	$800.00	888.1	$ 710,480.00
Robert Batista	Associate	$675.00	498.8	$ 336,690.00
Emily Cardone	Associate	$675.00	670.2	$ 452,385.00
Alexander M. Fischer	Associate	$675.00	494.1	$ 333,517.50
Adam Garnick	Associate	$675.00	834.0	$ 562,950.00
Andrew Kuntz	Associate	$675.00	563.3	$ 380,227.50
Mary Otoo	Associate	$675.00	709.4	$ 478,845.00
Kevin Reilly	Associate	$675.00	663.5	$ 447,862.50
Kevin Simmons	Associate	$675.00	731.5	$ 493,762.50
Marc Aaron Takagaki	Associate	$675.00	572.8	$ 386,640.00
Iason Togias	Associate	$675.00	567.8	$ 383,265.00
Karsyn Archambeau	Associate	$500.00	714.6	$ 357,300.00
Noah Delwiche	Associate	$500.00	739.2	$ 369,600.00
Laura Wang	Associate	$500.00	354.8	$ 177,400.00
TOTAL				**$ 9,206,790.00**

The Gibson Dunn litigation team included highly experienced partners. Ms. Maloney served as lead trial counsel and was responsible for the case from its inception, including managing overall litigation strategy, staffing, and supervision. A *Chambers USA* ranked litigator, her practice includes extensive first-chair representation of clients in commercial litigation and government investigations, as well as representing companies, boards, and executives in multi-million-dollar disputes and high-stakes federal litigation. Mr. Chung also played a central role in discovery and

at trial, coordinating factual development and deposing and cross-examining key Leapfrog witnesses, including its CEO Leah Binder. He previously served as an Assistant U.S. Attorney in the Southern District of New York and is a nationally recognized trial lawyer recognized as a Global Elite Thought Leader by *Who's Who Legal*; his practice focuses on complex commercial litigation and defense against civil and criminal regulatory enforcement. Mr. Crain led the Community Hospitals' defensive discovery and document production, deposed and defended depositions of numerous fact, expert, and third-party witnesses, and handled several witnesses at trial. His practice focuses on high-stakes trial and appellate litigation in federal and state courts, with a specialty in First Amendment matters; in 2025, he was recognized as a finalist for Young Litigator of the Year by *American Lawyer.* Mr. Hvidt led offensive discovery, oversaw key aspects of expert discovery, and deposed and cross-examined several key Leapfrog witnesses. He maintains a broad-based trial practice, including litigation in state and federal courts and is recognized by *Best Lawyers: Ones to Watch in America*. Ms. Scott was heavily involved in discovery and trial preparation, especially in developing the factual record, preparing the Community Hospitals' witnesses for their depositions and trial, and conducting their direct examinations at trial. She has been recognized by *Benchmark Litigation* in its "40 & Under List – South" and has extensive experience representing plaintiffs and defendants at every stage of litigation. And Ms. Walker led briefing, playing a substantial role in developing legal strategy leading up to and during trial. Ms. Walker is a *Chambers USA* ranked lawyer specializing in appellate law and complex litigation matters; she has been elected as a Fellow of the American Academy of Appellate Lawyers.

Gibson Dunn's of counsel and associate team was also highly skilled. Ms. Buzzard and Mr. Batista led teams in drafting the Community Hospitals' briefing, with Ms. Buzzard arguing a key dispositive motion at trial. Mr. Takagaki oversaw fact discovery for the Community Hospitals—including managing document review, discovery responses, and factual development across the five hospitals—and took the deposition and trial testimony of Leapfrog expert Mark Rule. Ms. Cardone supported the discovery effort, with a particular focus on offensive discovery efforts. She also took the deposition and trial testimony of Leapfrog witness Isis Zambrana. And Mr. Simmons led the preparation and organization of documentary evidence and presented St. Mary's CEO Cynthia McCauley at trial. Mr. Kuntz and Mr. Reilly assisted in discovery efforts while also playing a central role in preparing the Community Hospitals' expert witnesses for trial testimony. Mr. Reilly also handled oral argument regarding key deposition designations at trial. Mr. Garnick

similarly contributed to document and expert discovery and played a key role in trial preparation, which included developing the opening statement and closing argument. Mr. Fischer, Ms. Otoo, Mr. Togias, Ms. Archambeau, Mr. Delwiche, and Ms. Wang assisted with discovery, supported deposition preparation for key fact and expert witnesses, and contributed to trial preparation.

The firms of Marcus Rashbaum Pineiro & Meyers LLP and Neiman Mays Floch & Almeida PLLC served as local counsel. Mr. Marcus was the primary local counsel on this matter and served as a full member of the trial team. He examined multiple witnesses at trial and participated in core trial preparation and strategy. He is an experienced trial lawyer with substantial experience in complex civil and white-collar litigation, and he has been ranked by *Chambers USA* in the top band for litigation and white-collar defense in Florida. Ms. Meyers, Mr. Pineiro, Mr. Rashbaum, and Mr. Floch are all experienced attorneys in the Florida market. They devoted substantial time to advising on strategy and Florida practice as well as reviewing briefs and other court submissions, essential tasks typically provided by local counsel.

The requested rates, hours, and total fees for local counsel attorneys appear below:

Timekeeper	**Title**	**Hourly Rate**	**Hours Claimed**	**Total Fees**
Jeffrey Marcus	Partner	$975	498.0	$ 485,550.00
Kathryn Meyers	Partner	$975	4.6	$ 4,485.00
Michael Pineiro	Partner	$975	78.8	$ 76,830.00
Daniel Rashbaum	Partner	$975	36.1	$ 35,197.50
Brandon Floch	Partner	$875	108.2	$ 94,675.00
TOTAL				**$ 696,737.50**

Additional information regarding the experience and qualifications of each timekeeper for whom fees are sought in this matter appears in their firm biographies. *See* Scott Aff. Exs. C, D.

B. The Total Hours Expended Are Reasonable

The Court must also evaluate the reasonableness of the total hours expended by the Community Hospitals' counsel. *See Bluegreen Vacations I*, 2024 WL 3738890, at *11. The fee applicant must provide "specific and detailed evidence so that the court can determine the necessity and reasonableness of the time claimed for the task." *Akai Custom Guns, LLC v. KKM Precision, Inc.*, 2025 WL 2663071, at *11 (S.D. Fla. Aug. 29, 2025). The party requesting fees must also exercise "billing judgment," meaning it must exclude from its application "excessive, redundant[,] or

otherwise unnecessary hours." *Norman*, 836 F.2d at 1301 (defining such hours as those "that would be unreasonable to bill to a client and therefore to one's adversary irrespective of the skill, reputation[,] or experience of counsel"). The fee applicant bears the initial burden of submitting evidence sufficient to allow the court to confirm that the requested fees are not excessive, and "'objections and proof from fee opponents' concerning hours that should be excluded must be specific and 'reasonably precise.'" *ACLU v. Barnes*, 168 F.3d 423, 428 (11th Cir. 1999) (quoting *Norman*, 836 F.2d at 1301).

The submitted hours expended by counsel for the Community Hospitals are reasonable and reflect the tremendous effort required to achieve victory. *See Flexiteek Ams., Inc. v. Plasteak, Inc.*, 2016 WL 7497485, at *28 (S.D. Fla. Feb. 4, 2016) (finding hours expended reasonable "based upon the complex and contentious nature of this litigation"); *see also City of Riverside v. Rivera*, 477 U.S. 561, 580 n.11 (1986) ("[A party] cannot litigate tenaciously and then be heard to complain about the time necessarily spent by the [opposing party] in response.").[5] This was not a routine, single-plaintiff matter. It was an expedited case involving five prevailing hospital plaintiffs, extensive fact and expert discovery, cross-motions for summary judgment, substantial pretrial motion practice, and a five-day bench trial. Each of the five Community Hospitals has its own leadership, operations, patient population, and distinct evidence of harm arising from Leapfrog's Safety Grades. The trial record confirms that the Community Hospitals could not prevail through common proof alone; each plaintiff Hospital was required to prove hospital-specific injury through live witness testimony and cross examination, including of its CEO. Counsel had to develop and present both common proof concerning Leapfrog's methodology and five separate factual records.

As required, the Community Hospitals have submitted detailed billing records that contemporaneously record the time spent on the case and describe the subject matter of each task performed to support their reasonable request. Scott Aff. Exs. A, B. These records provide the Court with a sufficient basis to evaluate the necessity and reasonableness of the hours expended. *See Bluegreen Vacations I*, 2024 WL 3738890, at *13. As these records reflect, counsel exercised

[5] That the Community Hospitals did not succeed on every motion does not change the outcome. Indeed, courts in this Circuit routinely reject arguments that fee awards should be reduced because a prevailing party pursued unsuccessful motions or did not prevail on every contention advanced during the litigation. *See, e.g.*, *Eagle Hosp. Physicians, LLC v. SRG Consulting, Inc.*, 346 F. App'x 403, 404 (11th Cir. 2009) ("a prevailing party entitled to attorneys' fees is not to be penalized for failed motions"); *Columbus Mills, Inc. v. Freeland*, 918 F.2d 1575, 1580–81 (11th Cir. 1990) (affirming refusal to reduce fees for "completely unsuccessful" motions where the prevailing party succeeded on virtually every issue before the court).

appropriate billing judgment. All hours sought in this motion have been selected following review to reflect time reasonably necessary to litigate this case and were actually billed to the relevant client.[6] Counsel does not seek reimbursement for excessive, redundant, or unnecessary time and, where appropriate, excluded time to ensure that the requested fees reflect only indisputably reasonable work the opposing party should reimburse. *See Norman*, 836 F.2d at 1301. In fact, the Community Hospitals do not seek reimbursement for every lawyer who billed time to the matter, and certain timekeepers and time entries are excluded from the request.

Counsel also staffed the case efficiently. Associates performed the bulk of the document review, research, drafting, and trial-preparation work, while partners provided strategic oversight and handled tasks requiring partner-level judgment. *See Domond v. PeopleNetwork APS*, 750 F. App'x 844, 849 (11th Cir. 2018) (affirming a fee award without reduction where the district court "concluded that the attorneys efficiently billed work and distributed it to attorneys charging lower rates"). Where partner time became too granular or duplicative given the pace of the case, that time was excluded. This allocation further confirms that the hours sought are reasonable rather than excessive.

In short, the requested hours reflect the reality of the case litigated here: five plaintiffs, expedited proceedings, substantial discovery, expert work, and trial, all intensified by Leapfrog's own litigation conduct. No across-the-board reduction is warranted.

III. The Costs Sought By The Community Hospitals Are Reasonable

"FDUTPA permits the recovery of litigation expenses that are reasonable and related to the litigation." *Unisource Discovery, Inc. v. Unisource Discovery, LLC*, 2023 WL 4187094, at *3 (S.D. Fla. June 9, 2023) (internal quotations omitted), *report and recommendation adopted*, 2023 WL 4188118 (S.D. Fla. June 26, 2023); *Chow*, 640 F. App'x at 836 n.4 ("FDUTPA allows for the award of non-taxable costs, *i.e.* those costs that are not taxable under federal law at 28 U.S.C. § 1920."). While the moving party "must provide supporting documentation to justify a cost award of any kind," *Architectural Ingenieria Siglo XXI, LLC v. Dominican Republic*, 2020 WL 6808856, at *9 (S.D. Fla. Apr. 16, 2020) (internal quotation marks omitted), the opposing party "bears the

[6] The terms of Gibson Dunn's fee agreement state that it will bill the Community Hospitals for legal services and reimbursable expenses on a monthly basis at hourly rates. Gibson Dunn also provides a volume discount in some instances; that discount is not implicated here, as the requested rates fall well below the firm's discounted, effective rates. Marcus, Neiman, Rashbaum, & Pineiro as well as Marcus, Rashbaum, Pineiro & Meyers also bill monthly for legal service at hourly rates.

burden to establish that a cost item is not recoverable," *Bluegreen Vacations I*, 2024 WL 3738890, at *18 (internal quotation marks omitted). The costs sought satisfy the relevant standard.

The Community Hospitals seek only a narrow set of case-specific litigation costs, each supported by invoices and vendor records submitted with this motion. Specifically, the Community Hospitals seek recovery only for: (1) transcript and court-reporting fees for depositions, hearings, and trial; and (2) research expenses. *See* Scott Aff. Ex. A (invoices reflecting these expenses). The Community Hospitals do not seek expert expenses. They do not seek trial-support or demonstrative expenses. And they do not seek travel and lodging-related expenses.

Transcript and court-reporting costs of $137,423.52 were necessarily incurred in this case involving more than twenty depositions, expert proceedings, hearings, and a five-day bench trial. These costs are reasonable and such expenses are routinely awarded in federal cases. *See, e.g.*, *Morrison v. Reichhold Chemicals, Inc*. 97 F.3d 460, 464–65 (11th Cir. 1996).

The Community Hospitals' research costs of $458,929.45 are also reasonable and reflect expenses incurred in this action, which involved extensive briefing and accompanying legal analysis. These costs were paid by Gibson Dunn to third-party providers—largely Westlaw and PACER—and such fees are customarily charged by the firm to its clients. *See Unisource Discovery*, 2023 WL 4187094, at *3 (noting in a FDUTPA case that "courts have found that costs for computerized legal research are recoverable" and awarding research fees); *Env't Mfg. Sol., LLC. v. Peach State Labs, Inc.*, 274 F. Supp. 3d 1298, 1329 (M.D. Fla. 2017) (discussing online legal research fees); *Sprint Commc'ns, LLC*, 2025 WL 713048, at *12 (awarding recovery of Westlaw charges).[7]

The Community Hospitals seek only a narrow set of documented, case-specific expenses that were reasonably incurred to litigate this through trial. Because those expenses are reasonable and related to the litigation, the Court should award them in the amount of $596,352.97.

CONCLUSION

The Court should award the Community Hospitals' attorneys' fees and costs in the amount of $10,499,880.47.

[7] To the extent not recoverable as expenses, the research fees are recoverable as attorneys' fees. *See Trump v. Clinton*, 653 F. Supp. 3d 1198, 1228 (S.D. Fla. 2023) (noting that "costs incurred for electronic legal research are considered a component of attorneys' fees" and considering them as such).

Attorneys for the Community Hospitals

LOCAL RULE 7.3 CERTIFICATE OF CONFERENCE

Pursuant to Local Rule 7.3, I hereby certify that the Community Hospitals, by and through their undersigned counsel, provided a draft of this motion and supporting materials to Leapfrog on May 5, 2026. As contemplated and required by Rule 7.3(b), the Community Hospitals' counsel was prepared to confer in good faith with Leapfrog's counsel in an attempt to narrow any fee disputes by agreement before filing this Motion. On May 7, 2026, and May 11, 2026, undersigned counsel requested that Leapfrog's counsel provide their availability to confer in good faith on the Community Hospitals' Motion. On May 11, 2026, Leapfrog's counsel confirmed that Leapfrog refused to confer in good faith to resolve any disputes by agreement. The parties, therefore, were unable to reach any agreement regarding the Community Hospitals' request for attorneys' fees and expenses.

IN THE UNITED STATES DISTRICT COURT
FOR THE SOUTHERN DISTRICT OF FLORIDA
WEST PALM BEACH DIVISION

CASE NO. 9:25-CV-80526-DMM

GOOD SAMARITAN MEDICAL CENTER, INC., et al.,

Plaintiffs,

v.

THE LEAPFROG GROUP,

Defendant.

AFFIDAVIT OF SYDNEY SCOTT IN SUPPORT OF THE COMMUNITY HOSPITALS' VERIFIED MOTION FOR ATTORNEYS' FEES AND COSTS

I, Sydney Scott, declare and state as follows:

1. I respectfully submit this Affidavit in support of the Community Hospitals' Verified Motion for Attorneys' Fees and Costs (the "Motion"). I am an attorney admitted to practice law in the State of Texas, and I have been granted permission by the Court to appear *pro hac vice* in this case. ECF 49. I am over the age of eighteen and make this affidavit from personal knowledge based on the information and documents referenced in this affidavit and from knowledge conveyed to me by colleagues.

2. I am a partner in the law firm Gibson, Dunn & Crutcher LLP, an international, multi-service law firm with approximately 2,200 lawyers across nearly two dozen offices worldwide, including in New York, Dallas, Houston, and Washington, D.C.

3. I served as trial counsel in this action and, along with my partner colleagues, oversaw all aspects of the case—including strategy, staffing, and supervision.

4. Plaintiffs Delray Medical Center, Good Samaritan Medical Center, Palm Beach Gardens Medical Center, St. Mary's Medical Center, and West Boca Medical Center (the "Community Hospitals") seek attorneys' fees of $9,903,527.50 plus other fees and costs of $596,352.97, for a total requested sum of $10,499,880.47. This requested sum reflects the

substantial work required to litigate this complex and expedited matter, which proceeded from initial filing through a five-day bench trial in approximately eight months and involved extensive motion practice, expansive discovery across five separate hospitals, more than twenty depositions over approximately six weeks, significant expert work, and extensive trial preparation.

5. Nothing in this affidavit, its exhibits or attachments, is intended to be a waiver of the attorney-client privilege or the work product doctrine.

I. Gibson Dunn Invoices

6. For this litigation, the Community Hospitals compensated Gibson Dunn based on the number of hours expended on this matter by each timekeeper at his or her hourly rate, plus out-of-pocket expenses incurred in connection with the litigation. Gibson Dunn invoiced the Community Hospitals monthly, and those invoices reflect the time spent by each attorney or staff member, recorded in tenths of an hour, along with descriptions of the work performed. These invoices also include certain expenses incurred by the Community Hospitals.

7. In recording their time, Gibson Dunn attorneys are required to specify the client and matter number, the nature of the work performed, and the amount of time expended on that task. Gibson Dunn's billing records contain all this information. These billing records also contain the standard hourly billing rates for each attorney who has worked on this matter. Attached as **Exhibit A** are true and correct copies of these invoices from the inception of the case through January 2026.

8. In preparing this fee application, the Community Hospitals, exercising billing judgment, have excluded a number of billing entries to avoid any further disputes and to bring a close to this litigation. The Community Hospitals do not seek reimbursement for those entries. In addition, redactions have been made to the invoices with respect to time entries for timekeepers not claimed in this Motion. The Community Hospitals will submit unredacted versions of any such entries to the Court for *in camera* review upon request.

9. The Community Hospitals incurred transcript and court reporting expenses in connection with depositions, hearings, and trial for this litigation. These expenses are routinely billed to clients and were reasonably necessary to prosecute this case. Transcript and court reporting expenses are reflected in Gibson Dunn's invoices.

10. The Community Hospitals incurred research expenses related to this litigation. The Westlaw and Lexis rates are based on heavily discounted fees Gibson Dunn has negotiated with those services. Research expenses are reflected in Gibson Dunn's invoices.

II. Local Counsel Invoices

11. The Community Hospitals also paid local counsel at the firms of Marcus Rashbaum Pineiro & Meyers LLP and Neiman Mays Floch & Almeida PLLC (formerly of Marcus, Neiman, Rashbaum & Pineiro LLP) based on the number of hours expended on this matter by each timekeeper at his or her hourly rates, plus out-of-pocket expenses incurred in connection with the litigation. The monthly invoices contain descriptions of each attorney's activities for each day invoiced and the time spent by each attorney or staff member, recorded in tenths of an hour, and the standard hourly billing rate for each attorney that worked on this matter.

12. Attached as **Exhibit B** are true and correct copies of local counsel invoices from the inception of the case through January 2026. As with Gibson Dunn's invoices, the Community Hospitals have redacted entries for timekeepers not claimed in this Motion. The Community Hospitals will submit unredacted versions of any such entries to the Court for *in camera* review upon request.

III. Timekeeper Qualifications and Roles

13. Gibson Dunn staffed this case with a team of highly experienced attorneys whose practices focus on complex commercial litigation and high-stakes trial work, including attorneys with substantial experience in multi-party federal litigation, factual development, expert analysis, sophisticated briefing, and trial presentation.

14. Due to the complexity of the issues, the expedited schedule, and the presence of five separate Community Hospitals, it was necessary to staff this case with a coordinated team of attorneys across multiple offices to ensure that the case could be prosecuted thoroughly and efficiently. As described above, this matter effectively required counsel to develop and present multiple distinct factual narratives—for five separate hospitals—within a single proceeding, while simultaneously managing extensive discovery, motion practice, and trial preparation on a compressed timeline. Each Community Hospital had its own leadership, operations, documents, patient population, and evidence of harm, and counsel was required to build and maintain five parallel factual records throughout the litigation—from initial investigation and discovery through

trial presentation—while also litigating the common issues concerning Leapfrog's methodology and defenses.

15. Nevertheless, at every phase of the litigation, the Community Hospitals made every effort to staff the case efficiently and to delegate work to attorneys with lower billing rates whenever appropriate. More labor-intensive tasks—such as legal research, initial document review, and preparation of draft materials—were primarily performed by associates and other legal professionals; while partners focused on overall strategy, supervision, and trial presentation. This allocation of work reduced costs while maintaining the quality and effectiveness of the representation.

16. In addition, the Community Hospitals exercised further billing judgment by eliminating time entries for several attorneys and other legal professionals who worked on the case in more limited capacities, including certain more senior timekeepers who are excluded entirely from the request. The requested rates are thus conservative in light of the work actually performed.

17. In sum, the Community Hospitals staffed this matter with a coordinated team of experienced partners, associates, and other legal professionals, each of whom contributed to the litigation based on their experience and role. This structure ensured that the case was prosecuted efficiently, without unnecessary duplication, while maintaining the level of expertise required to handle a complex, expedited, and high-stakes matter. The qualifications and roles of the attorneys who performed work on this case are described below.

A. Gibson Dunn Partners

18. The Community Hospitals staffed this case with six Gibson Dunn commercial litigation partners, including myself.

19. A number of additional Gibson Dunn partners, highly experienced in commercial litigation, billed to the matter from time to time, serving in an advisory capacity. To avoid any dispute in this regard and to ensure swift resolution of this motion, the Community Hospitals have eliminated their time from this fee request.

20. The six core Gibson Dunn partners were involved in all aspects of litigation requiring partner-level judgment, including making strategic decisions, preparing and defending witnesses and experts at depositions, taking depositions of key Leapfrog personnel and experts, drafting dispositive motions and other significant briefs, participating in court hearings, pretrial

preparations, and trial, and interacting with Leapfrog's counsel. Where partner time became too granular or duplicative in light of the pace of the case, that time was excluded.

1. Mary Beth Maloney

21. Mary Beth Maloney served as lead trial counsel in this matter and was responsible for the case from its inception, including managing overall litigation strategy, staffing, and supervision.

22. Ms. Maloney is a partner in Gibson Dunn's New York office, where she focuses her practice on complex commercial litigation, including high-stakes contract disputes, shareholder disputes, securities litigation, and life sciences matters. Her practice includes extensive first-chair representation of clients in commercial litigation and government investigations, as well as representing companies, boards, and executives in multi-million-dollar disputes and high-stakes federal litigation. She is ranked by *Chambers USA* in its New York Securities Litigation, listed as a "Recommended Lawyer" in *The Legal 500 US* for Securities Litigation: Defense, and recognized by *The Best Lawyers in America* for Commercial Litigation.

23. Before joining Gibson Dunn in 2008, Ms. Maloney served as a law clerk to the Honorable Alicemarie H. Stotler, then Chief Judge of the United States District Court for the Central District of California. Ms. Maloney graduated from the University of Southern California Gould School of Law in 2007. Attached as **Exhibit C** is a true and correct copy of her official firm biography, which contains a list of representative matters.

2. Daniel P. Chung

24. Daniel P. Chung is a partner in Gibson Dunn's Washington, D.C. office. In this matter, Mr. Chung played a central role in discovery and at trial, including coordinating factual development and deposing and cross-examining key Leapfrog witnesses, including its CEO Leah Binder.

25. Mr. Chung is a nationally recognized trial lawyer whose practice focuses on complex commercial litigation and defense against civil and criminal regulatory enforcement. He regularly advises and defends corporate executives, boards, and audit committees, and conducts sensitive internal investigations. His experience spans a broad range of industries, including healthcare, technology, media, and financial institutions. Mr. Chung has been recognized as a Global Elite Thought Leader by *Who's Who Legal*, a "Future Litigation Star" by *Benchmark Litigation*, and a "Rising Star" by the *National Law Journal*.

26. Prior to joining Gibson Dunn, Mr. Chung served for more than four years as an Assistant United States Attorney in the Southern District of New York, where he prosecuted a wide range of complex federal criminal cases and tried eight federal criminal jury trials to verdict. He also briefed and argued numerous appeals before the United States Court of Appeals for the Second Circuit.

27. Mr. Chung previously served as a law clerk to the Honorable Norman H. Stahl of the United States Court of Appeals for the First Circuit and the Honorable Michael B. Mukasey of the United States District Court for the Southern District of New York. Mr. Chung is a 2003 *cum laude* graduate of Harvard Law School. Attached as **Exhibit C** is a true and correct copy of Mr. Chung's official firm biography, which contains a list of representative matters.

3. Lee R. Crain

28. Lee R. Crain is a partner in Gibson Dunn's New York office and has been with the firm since 2016. In this matter, Mr. Crain led the Community Hospitals' defensive discovery and document production, deposed and defended depositions of numerous fact, expert, and third-party witnesses, and handled several witnesses at trial. Mr. Crain played a central role in developing and presenting the testimony of the Community Hospitals' expert Dr. Berger, whose opinions on consumer perception and decision-making were a significant component of the evidentiary record at trial. He further participated in briefing and legal research throughout the case—spanning from Complaint to trial briefing.

29. Mr. Crain focuses on high-stakes trial and appellate litigation in federal and state courts. He represents clients across a range of industries, including healthcare, technology, media and entertainment, energy, and financial services, in complex commercial disputes, First Amendment matters, employment litigation, and cross-border proceedings. In 2025, he was recognized as a finalist for Young Litigator of the Year by *American Lawyer*. He has also been recognized by *Benchmark Litigation* as a "Future Star" and included in its "40 & Under" list, and by *Lawdragon* as a "Global Leader in Crisis Management" and was named among the "500 Leading Global Entertainment, Sports & Media Lawyers," reflecting his experience handling complex and high-profile disputes.

30. Prior to joining Gibson Dunn, Mr. Crain served as a law clerk to the Honorable Paul J. Watford of the United States Court of Appeals for the Ninth Circuit and the Honorable Sidney H. Stein of the United States District Court for the Southern District of New York. Mr.

Crain graduated first in his class and *summa cum laude* from the University of Michigan Law School in 2014. Attached as **Exhibit C** is a true and correct copy of Mr. Crain's official firm biography, which contains a list of representative matters.

4. Scott K. Hvidt

31. Scott K. Hvidt is a partner in Gibson Dunn's Dallas office and has been with the firm since 2016. In this matter, Mr. Hvidt led offensive discovery, oversaw key aspects of expert discovery, and deposed and cross-examined several key Leapfrog witnesses. Mr. Hvidt also worked closely with the Community Hospitals' expert Dr. Nicholson to develop and refine his opinions and played a leading role in preparing and presenting that testimony at trial, which addressed issues at the heart of the case.

32. Mr. Hvidt maintains a broad-based trial practice, including litigation in state and federal courts, and has experience representing clients in a wide range of complex business disputes, including class actions, antitrust claims, securities litigation, contract disputes, and merger-related litigation. He has been recognized by *Best Lawyers: Ones to Watch in America* and by *D Magazine* as a Best Lawyer Under 40.

33. Prior to joining Gibson Dunn, Mr. Hvidt served as a law clerk to the Honorable A. Joe Fish of the United States District Court for the Northern District of Texas. Mr. Hvidt is a 2015 graduate of Columbia Law School, where he was a James Kent Scholar. Attached as **Exhibit C** is a true and correct copy of Mr. Hvidt's official firm biography, which contains a list of representative matters.

5. Sydney Scott

34. I am a partner in Gibson Dunn's Houston office. In this matter, I was heavily involved in discovery and trial preparation, especially in developing the factual record, preparing the Community Hospitals' witnesses for their depositions, and conducting their direct examinations at trial.

35. I have experience representing plaintiffs and defendants at every stage of litigation, from pre-suit demands through trial and appeal, in a wide range of white collar and complex commercial disputes, including in the energy industry. I have been recognized by *Benchmark Litigation* in its "40 & Under List – South" and by *The Best Lawyers in America* for Criminal Defense: White Collar.

36. Prior to joining Gibson Dunn in May 2022, I practiced at leading litigation firms and served as a law clerk to the Honorable Carl E. Stewart of the United States Court of Appeals for the Fifth Circuit and the Honorable James J. Brady of the United States District Court for the Middle District of Louisiana. I graduated from the University of Pennsylvania Law School in 2013. Attached as **Exhibit C** is a true and correct copy of my official firm biography, which contains a list of representative matters.

6. Helgi C. Walker

37. Helgi C. Walker is a partner in Gibson Dunn's Washington, D.C. office. In this matter, she led the Community Hospitals' briefing teams and played a pivotal role in developing legal strategy before and during trial.

38. Ms. Walker is Co-Chair of Gibson Dunn's global litigation practice group, a member of the firm's executive committee, and co-chair of the firm's administrative law and regulatory practice group. Her practice focuses on appellate, regulatory, and complex litigation matters, and she has extensive experience in appellate challenges to agency rulemakings and other high-stakes commercial litigation. She has argued twice before the Supreme Court, was recognized by *Chambers USA* as a leading lawyer, and was elected as a Fellow of the American Academy of Appellate Lawyers.

39. Ms. Walker served in the White House Counsel's Office as Associate Counsel from 2001 to 2003. She previously served as a law clerk to the Honorable Clarence Thomas of the United States Supreme Court and the Honorable J. Harvie Wilkinson III of the United States Court of Appeals for the Fourth Circuit. Ms. Walker is a 1994 graduate of the University of Virginia School of Law, where she was a member of the Order of the Coif. Attached as **Exhibit C** is Ms. Walker's official firm biography, which contains a list of representative matters.

B. Gibson Dunn Of Counsel and Associates

40. Gibson Dunn also staffed this matter with experienced of counsel and associates, who performed substantial work across all phases of litigation. These timekeepers were responsible for many of the core, labor-intensive tasks required to prosecute this case, including managing and conducting document review, preparing discovery requests and responses, coordinating with the five Community Hospitals on factual development, preparing witnesses for deposition, researching and drafting motions and briefs, analyzing expert issues, and assisting with trial preparation and presentation. Work was delegated to these timekeepers in a manner designed

to maximize efficiency and minimize cost, with more complex and high-level assignments handled by more senior associates and more hour-intensive tasks performed by junior associates at lower billing rates.

41. Several additional Gibson Dunn associates billed to the matter. To avoid any dispute in this regard and ensure swift resolution of this Motion, the Community Hospitals have eliminated their time from this fee application.

1. Christine M. Buzzard – Of Counsel

42. Christine M. Buzzard is an Of Counsel in Gibson Dunn's Washington, D.C. office and is a member of the firm's Litigation Department. She led the Community Hospitals' briefing, oversaw the associates in those efforts, and argued a key dispositive motion at trial. Ms. Buzzard has substantial experience representing clients in complex litigation, including challenges to federal agency action and matters involving novel constitutional and other legal issues. She regularly serves as a lead drafter on significant briefing and advises clients on their most consequential litigation and regulatory challenges.

43. Before rejoining Gibson Dunn in 2024, Ms. Buzzard served for five years as an Attorney-Advisor in the Office of Legal Counsel at the United States Department of Justice, where she advised the White House Counsel, the Attorney General, and senior officials across the executive branch on complex legal issues. In that role, she received the Attorney General's Award for Distinguished Service.

44. Ms. Buzzard also served as a law clerk to the Honorable Clarence Thomas of the United States Supreme Court, the Honorable Janice Rogers Brown of the United States Court of Appeals for the District of Columbia Circuit, and the Honorable Richard J. Sullivan, then of the United States District Court for the Southern District of New York. Ms. Buzzard is a 2013 graduate of Yale University Law School. Attached as **Exhibit C** is a true and correct copy of Ms. Buzzard's official firm biography, which includes a list of representative matters.

2. Robert A. Batista – Associate

45. Robert A. Batista is an associate in Gibson Dunn's Washington, D.C. office and a member of the firm's Litigation Department. In this matter, Mr. Batista led the briefing of several key motions and played a central role in trial briefing, while also contributing to broader legal strategy throughout the case.

46. Mr. Batista has experience handling complex litigation and appellate matters, including leading briefing efforts in high-stakes commercial and regulatory disputes. His practice focuses on litigation involving administrative, constitutional, and commercial issues. Prior to joining Gibson Dunn, Mr. Batista served as a law clerk to the Honorable Steven M. Colloton of the United States Court of Appeals for the Eighth Circuit and the Honorable Trevor N. McFadden of the United States District Court for the District of Columbia. Mr. Batista is a 2018 graduate, *cum laude*, from Harvard Law School, where he served as the Supervising Chair of the *Harvard Law Review*. Attached as **Exhibit C** is a true and correct copy of Mr. Batista's official firm biography.

3. Emily Cardone – Associate

47. Emily Cardone is an associate in Gibson Dunn's Dallas office and a member of the firm's Litigation Department. In this matter, Ms. Cardone helped lead offensive discovery efforts on behalf of the Community Hospitals, including developing discovery strategy, drafting requests, and coordinating review of Leapfrog's documents. Ms. Cardone also deposed and examined a third-party witness at trial.

48. Ms. Cardone has experience in complex commercial litigation at both the trial and appellate levels, including assisting with discovery and motion practice in high-stakes disputes.

49. Prior to joining Gibson Dunn, Ms. Cardone served as a law clerk to the Honorable Diane P. Wood of the United States Court of Appeals for the Seventh Circuit. Ms. Cardone is a 2019 graduate from the University of Texas School of Law, where she received the highest honors and served as a Featured Content Editor for the *Texas Law Review*. Attached as **Exhibit C** is a true and correct copy of Ms. Cardone's official firm biography.

4. Alexander M. Fischer – Associate

50. Alexander M. Fischer is an associate in Gibson Dunn's Houston office. In this matter, he assisted with fact discovery, played a key role in preparing the CEOs of the five Community Hospitals for deposition and trial, and conducted legal research and drafting efforts in motion practice.

51. Mr. Fischer's practice focuses on high-stakes litigation and arbitration, particularly matters involving complex contract interpretation and constitutional issues.

52. Prior to joining Gibson Dunn, Mr. Fischer served as a law clerk to the Honorable Wendy Beetlestone of the United States District Court for the Eastern District of Pennsylvania.

Mr. Fischer graduated in 2022 from Yale Law School. Attached as **Exhibit C** is a true and correct copy of Mr. Fischer's official firm biography.

5. Adam J. Garnick – Associate

53. Adam J. Garnick is an associate in Gibson Dunn's New York office and a member of the firm's Litigation Department. In this matter, Mr. Garnick helped oversee fact and document discovery, as well as expert discovery, and contributed to key aspects of trial preparation, including the development of the opening statement and closing argument.

54. Mr. Garnick has experience in complex litigation matters, including assisting with discovery, motion practice, and trial preparation in high-stakes disputes.

55. Prior to joining Gibson Dunn, Mr. Garnick served as a law clerk to the Honorable Patty Shwartz of the United States Court of Appeals for the Third Circuit and the Honorable Naomi Reice Buchwald of the United States District Court for the Southern District of New York. Mr. Garnick graduated in 2021, *magna cum laude*, from the University of Pennsylvania Law School, where he was a Senior Editor of the *University of Pennsylvania Law Review*. Attached as **Exhibit C** is a true and correct copy of Mr. Garnick's official firm biography.

6. Andrew V. Kuntz – Associate

56. Andrew V. Kuntz is an associate in Gibson Dunn's New York office and a member of the firm's Litigation Department. In this matter, Mr. Kuntz helped oversee fact and expert discovery and played a central role in preparing the Community Hospitals' expert Dr. Berger for trial testimony, including working closely on the development and presentation of his opinions.

57. Mr. Kuntz has experience in complex commercial litigation, including matters involving class actions, securities, and regulatory issues, and has contributed to discovery, motion practice, and trial preparation in high-stakes disputes.

58. From 2022 to 2023, Mr. Kuntz served as a law clerk to the Honorable Victor Marrero of the United States District Court for the Southern District of New York. Mr. Kuntz is a 2019 graduate of Columbia Law School, where he was a James Kent Scholar. Attached as **Exhibit C** is a true and correct copy of Mr. Kuntz's official firm biography.

7. Mary Otoo – Associate

59. Mary Otoo is an associate in Gibson Dunn's New York office and a member of the firm's Litigation Department. In this matter, Ms. Otoo assisted with discovery and the deposition of several key Leapfrog fact and expert witnesses, and contributed to trial preparation.

60. Ms. Otoo has experience supporting complex litigation matters, including trial preparation, discovery, and motion practice.

61. Ms. Otoo is a 2022 graduate of Columbia Law School. Attached as **Exhibit C** is a true and correct copy of Ms. Otoo's official firm biography.

8. Kevin Reilly – Associate

62. Kevin Reilly is an associate in Gibson Dunn's New York office and a member of the firm's Litigation Department. In this matter, Mr. Reilly helped oversee expert and third-party discovery and assisted in preparing Dr. Nicholson for trial. He also handled oral argument regarding key deposition designations at trial.

63. Mr. Reilly has substantial experience with motion practice and discovery efforts in complex commercial, securities, and regulatory litigation, and has experience supporting high-stakes matters across a range of industries.

64. Mr. Reilly is a 2020 graduate of New York University School of Law. Attached as **Exhibit C** is a true and correct copy of Mr. Reilly's official firm biography.

9. Kevin M. Simmons – Associate

65. Kevin M. Simmons is an associate in Gibson Dunn's Houston office and a member of the firm's Litigation Department. In this matter, Mr. Simmons led the preparation and organization of trial exhibits and documentary evidence, played a central role in preparing the CEOs of the five Community Hospitals for deposition and trial, and conducted the direct examination of one of those CEO witnesses at trial.

66. Mr. Simmons has significant experience in all phases of litigation, from initial investigation through trial and appeal, in federal and state courts across the country. His practice includes representing clients in complex commercial disputes, including matters involving antitrust, contract, and regulatory issues.

67. Prior to joining Gibson Dunn, Mr. Simmons served as a law clerk to the Honorable Eva Guzman of the Supreme Court of Texas. He is a 2018 graduate of the Duke University School of Law. Attached as **Exhibit C** is a true and correct copy of Mr. Simmons' official firm biography, which includes a list of representative matters.

10. Marc Aaron Takagaki – Associate

68. Marc Aaron Takagaki is an associate in Gibson Dunn's New York office and a member of the firm's Litigation Department. In this matter, Mr. Takagaki oversaw fact discovery

for the Community Hospitals, including coordinating document review, discovery responses, and factual development across the five hospitals. He also deposed and cross-examined one of Leapfrog's key expert witnesses, Mr. Rule, who offered a purported "re-grading" analysis, requiring preparation on complex methodological issues central to Leapfrog's defense.

69. Mr. Takagaki's practice focuses on high-stakes commercial, securities, class action, and white-collar litigation across a wide range of industries, including finance, technology, and life sciences. He has substantial experience in motion practice, witness examination, and civil discovery.

70. Mr. Takagaki is a 2017 graduate from the University of Michigan Law School. Attached as **Exhibit C** is a true and correct copy of Mr. Takagaki's official firm biography, which includes a list of representative matters.

11. Iason Togias – Associate

71. Iason Togias is an associate in Gibson Dunn's New York office and a member of the firm's Litigation Department. In this matter, Mr. Togias helped draft pleadings and briefs, assisted with discovery and the deposition of key witnesses, and assisted with trial preparation, including drafting cross-examination outlines.

72. Mr. Togias has experience in complex litigation matters at both the trial and appellate level. He has assisted with discovery, motion practice, and trial preparation in high-stakes disputes.

73. Prior to joining Gibson Dunn, Mr. Togias served as a law clerk to the Honorable Eric D. Miller of the United States Courts of Appeals for the Ninth Circuit. Mr. Togias graduated in 2022, *cum laude*, from Harvard Law School. Attached as **Exhibit C** is a true and correct copy of Mr. Togias' official firm biography, which includes a list of representative matters.

12. Karsyn Archambeau – Associate

74. Karsyn Archambeau is an associate in Gibson Dunn's New York office and a member of the firm's Litigation Department. In this matter, Ms. Archambeau reviewed and identified key documents for depositions and trial, supported discovery efforts, and assisted with the preparation of witnesses for deposition and trial.

75. Ms. Archambeau graduated in 2024 from Columbia Law School. Attached as **Exhibit C** is a true and correct copy of Ms. Archambeau's official firm biography.

13. Noah J. Delwiche – Associate

76. Noah J. Delwiche is an associate in Gibson Dunn's Washington, D.C. office and a member of the firm's Litigation Department. In this matter, Mr. Delwiche contributed to briefing and legal research and assisted with the preparation of numerous Leapfrog witnesses.

77. Mr. Delwiche's practice focuses on administrative law and regulatory practice, appellate and constitutional law, and labor and employment.

78. Mr. Delwiche graduated in 2024, *magna cum laude*, from Harvard Law School, where he served as a Notes Editor for the *Harvard Law Review*. Attached as **Exhibit C** is a true and correct copy of Mr. Delwiche's official firm biography.

14. Laura Wang – Associate

79. Laura Wang is an associate in Gibson Dunn's New York office and a member of the firm's Litigation Department. In this matter, Ms. Wang reviewed and identified key documents for depositions and trial, supported discovery efforts, and assisted with the preparation of witnesses for deposition and trial.

80. Ms. Wang graduated in 2024 from the University of Southern California Gould School of Law. Attached as **Exhibit C** is a true and correct copy of Ms. Wang's official firm biography.

C. Local Counsel

81. The Community Hospitals retained Marcus Rashbaum Pineiro & Meyers LLP and Neiman Mays Floch & Almeida PLLC as local counsel. Both are leading litigation boutiques in South Florida. To minimize duplication and maximize efficiency, the firms generally performed those tasks customarily performed by local counsel, including advising on local rules and practices, assisting with filings, and providing strategic input on matters before the Court.

1. Jeffrey Marcus

82. Jeffrey Marcus is a partner at Marcus Rashbaum Pineiro & Meyers LLP. Mr. Marcus was the primary local counsel on this matter and served as a full member of the trial team. He examined multiple witnesses at trial and participated in core trial preparation and strategy.

83. Mr. Marcus is an experienced trial lawyer with substantial experience in complex civil and white-collar litigation. He tried more than twenty-five cases to verdict as a federal prosecutor and has extensive experience handling high-stakes litigation, including matters

involving healthcare, securities, and government enforcement. He has been ranked by *Chambers USA* in the top band for litigation and white-collar defense in Florida.

84. Mr. Marcus served as a law clerk to the Honorable Stanley Marcus of the United States Court of Appeals for the Eleventh Circuit and the Honorable Donald M. Middlebrooks of the United States District Court for the Southern District of Florida. Mr. Marcus is a 1999 graduate of Yale Law School. Attached as **Exhibit D** is a true and correct copy of Mr. Marcus' official firm biography.

2. Kathryn Meyers

85. Kathryn Meyers is a partner at Marcus Rashbaum Pineiro & Meyers LLP and served as local counsel in this matter. Ms. Meyers assisted with local practice and procedure issues and coordination with lead counsel.

86. Ms. Meyers has more than two decades of experience handling sophisticated criminal, civil, and regulatory matters. Her practice focuses on white-collar criminal defense, and she has tried numerous cases to verdict. Prior to joining Marcus Rashbaum Pineiro & Meyers LLP, Ms. Meyers worked in the New York office of a global law firm and later at a litigation boutique. She has been recognized by *Chambers USA* in white-collar crime and government investigations in Florida.

87. Ms. Meyers served as a law clerk to the Honorable Thomas Platt of the United States District Court for the Eastern District of New York. Ms. Meyers graduated in 1998 from Washington University School of Law, where she was elected Order of the Coif. Attached as **Exhibit D** is a true and correct copy of Ms. Meyers' official firm biography.

3. Michael Pineiro

88. Michael Pineiro is a partner at Marcus Rashbaum Pineiro & Meyers LLP and served as local counsel in this matter. Mr. Pineiro advised on strategic issues and worked closely with lead counsel on motion practice, discovery, and trial-related matters during this litigation.

89. Mr. Pineiro focuses his practice on complex business litigation, securities and investor fraud, trust and estates disputes, professional negligence, and regulatory litigation. He has been recognized by *Chambers USA* as a leading commercial litigator in Florida. Prior to joining Marcus Rashbaum Pineiro & Meyers LLP, Mr. Pineiro worked at a global law firm representing clients in securities litigation, government enforcement defense, and complex

commercial litigation matters. He has been recognized by *Chambers USA* as a leading lawyer in general commercial litigation in Florida.

90. Mr. Pineiro served as a law clerk to the Honorable Adalberto Jordan of the United States District Court for the Southern District of Florida. Mr. Pineiro graduated in 2007 from Columbia Law School, where he was a Harlan Fiske Stone Scholar. Attached as **Exhibit D** is a true and correct copy of Mr. Pineiro's official firm biography.

4. Daniel Rashbaum

91. Daniel Rashbaum is a partner at Marcus Rashbaum Pineiro & Meyers LLP and served as local counsel in this matter. Mr. Rashbaum advised on litigation strategy and issues related to the proceedings before this Court and devoted substantial time to preparing the Community Hospitals' witnesses for deposition.

92. Mr. Rashbaum is an experienced trial lawyer with substantial experience in white-collar criminal defense, internal investigations, regulatory enforcement, and complex litigation. He served as an Assistant United States Attorney for the Southern District of Florida, where he tried more than thirty cases to verdict, all resulting in convictions, and argued multiple cases before the United States Court of Appeals for the Eleventh Circuit. Mr. Rashbaum has extensive experience handling high-stakes matters involving healthcare fraud, securities and commodities laws, the Foreign Corrupt Practices Act, anti-kickback and anti-bribery statutes, insider trading, money laundering offenses, and government enforcement proceedings. He has been ranked by *Chambers USA* in the top band for litigation and white-collar defense in Florida.

93. Mr. Rashbaum graduated *magna cum laude* from Cornell University Law School in 2000. Attached as **Exhibit D** is a true and correct copy of Mr. Rashbaum's official firm biography.

5. Brandon Floch

94. Brandon Floch is a partner at Neiman Mays Floch & Almeida PLLC and served as local counsel in this matter. Mr. Floch worked extensively with lead counsel throughout the litigation, including by advising on strategy, motion practice, discovery disputes, and hearing preparation.

95. Mr. Floch is an experienced trial lawyer whose practice focuses on high-stakes commercial litigation. He represents individuals, businesses, and investors in complex disputes involving business torts, antitrust, whistleblower actions, and other substantial commercial

matters. He has substantial experience litigating complex cases against sophisticated institutional parties in both federal and state courts and has tried numerous matters on behalf of both plaintiffs and defendants.

96. Mr. Floch served as a law clerk of the Honorable James J. Brady of the United States District Court for the Middle District of Louisiana. Mr. Floch graduated from the University of Pennsylvania Law School in 2016. Attached as **Exhibit D** is a true and correct copy of Mr. Floch's official firm biography.

97. The Community Hospitals seek attorneys' fees of $9,906,370.00. The Community Hospitals have calculated these fees using the lodestar method, which is determined by multiplying a reasonable hourly rate by the number of hours reasonably expended in the litigation. To avoid any dispute over its rates, Gibson Dunn has significantly discounted the standard rates it actually billed in this matter to bring them in line with prevailing rates for complex, commercial litigation within this District. Gibson Dunn has further excluded timekeepers or time entries to minimize any duplication. The rates charged by Gibson Dunn and local counsel and the hours expended were reasonable and necessary for the Community Hospitals to prevail and obtain excellent results in this litigation. The Community Hospitals' requested rates, hours, and total fees for Gibson Dunn attorneys and local counsel are provided below:

Gibson Dunn				
Timekeeper	**Title**	**Hourly Rate**	**Hours Claimed**	**Total Fees**
Mary Beth Maloney	Partner	$975.00	473.8	$ 461,955.00
Daniel P. Chung	Partner	$975.00	623.0	$ 607,425.00
Lee R. Crain	Partner	$975.00	847.3	$ 826,117.50
Scott K. Hvidt	Partner	$975.00	878.0	$ 856,050.00
Sydney Scott	Partner	$975.00	470.6	$ 458,835.00
Helgi C. Walker	Partner	$975.00	128.7	$ 125,482.50
Christine M. Buzzard	Of Counsel	$800.00	888.1	$ 710,480.00
Robert Batista	Associate	$675.00	498.8	$ 336,690.00
Emily Cardone	Associate	$675.00	670.2	$ 452,385.00
Alexander M. Fischer	Associate	$675.00	494.1	$ 333,517.50
Adam Garnick	Associate	$675.00	834.0	$ 562,950.00

Andrew Kuntz	Associate	$675.00	563.3	$ 380,227.50
Mary Otoo	Associate	$675.00	709.4	$ 478,845.00
Kevin Reilly	Associate	$675.00	663.5	$ 447,862.50
Kevin Simmons	Associate	$675.00	731.5	$ 493,762.50
Marc Aaron Takagaki	Associate	$675.00	572.8	$ 386,640.00
Iason Togias	Associate	$675.00	567.8	$ 383,265.00
Karsyn Archambeau	Associate	$500.00	714.6	$ 357,300.00
Noah Delwiche	Associate	$500.00	739.2	$ 369,600.00
Laura Wang	Associate	$500.00	354.8	$ 177,400.00
TOTAL				**$ 9,206,790.00**

Local Counsel				
Timekeeper	**Title**	**Hourly Rate**	**Hours Claimed**	**Total Fees**
Jeffrey Marcus	Partner	$975	498.0	$ 485,550.00
Kathryn Meyers	Partner	$975	4.6	$ 4,485.00
Michael Pineiro	Partner	$975	78.8	$ 76,830.00
Daniel Rashbaum	Partner	$975	36.1	$ 35,197.50
Brandon Floch	Partner	$875	108.2	$ 94,675.00
TOTAL				**$ 696,737.50**

98. The Community Hospitals also seek $596,352.97 in costs incurred in connection with this case. Specifically, the Community Hospitals seek to recover: (1) transcript and court-reporting costs for depositions, hearings, and trial in the amount of $137,423.52; and (2) research expenses in the amount of $458,929.45. These costs were reasonable and necessarily incurred to litigate this case. These costs are reflected in Gibson Dunn's invoices attached as **Exhibit A**.

IV. Leapfrog's Ability to Pay

99. Following entry of the Court's decision on March 6, 2026, Leapfrog began a national fundraising campaign urging financial contributions to help it counteract the "threat" posed by the Court's ruling in this lawsuit. The campaign, led by Leapfrog's CEO, claimed the decision "raises a serious First Amendment issue about the right to public independent information in the public interest" and called on supporters to "show [their] support with a contribution."

Attached as **Exhibit E** is a copy of Leapfrog's website housing this fundraising campaign (https://leapfroggroup.app.neoncrm.com/campaigns/leapfrog-first-amendment-fund) as it appeared on March 9, 2026; the page has since been taken down from the website.

100. As part of its initial disclosures, Leapfrog produced two declaration pages relating to insurance agreements that may "satisfy all or part of a possible judgment in the action or to indemnify or reimburse for payments made to satisfy the judgment." Fed. R. Civ. P. 26(a)(1)(A)(iv). Attached as **Exhibit F** is a true and correct copy of those documents. Each declaration page purports to provide coverage of up to $5 million for "[e]ach [e]rroneous [a]ct" during the periods covering May 1, 2024, through May 1, 2025, and May 1, 2025, through May 1, 2026.

V. Leapfrog's Repeated Refusal to Confer in Good Faith on the Motion

101. On May 5, 2026, the Community Hospitals' counsel served Leapfrog's counsel with a draft of this Motion and supporting materials pursuant to Local Rule 7.3. As contemplated and required by Rule 7.3(b), the Community Hospitals' counsel was prepared to confer in good faith with Leapfrog's counsel in an attempt to narrow any fee disputes by agreement before filing the Community Hospitals' Motion with the Court.

102. On May 7, 2026, Leapfrog's counsel took the position that the Motion should not be heard now, based on, among other things, purported "defects" in the Court's judgement.

103. Later that day, the Community Hospitals' counsel responded that the Community Hospitals intended to proceed with the Motion consistent with the Federal Rules and Local Rule 7.3 and twice requested times for the parties to confer in good faith as required by the Local Rules.

104. On May 11, 2026, Leapfrog's counsel reiterated its prior position and repeatedly confirmed that Leapfrog refused to participate in the mandatory conferral process.

105. Because Leapfrog refused to participate in good faith in the conferral process mandated by Local Rule 7.3(b), the parties were unable to resolve any outstanding fee disputes prior to filing the Motion.

106. Attached as **Exhibit G** is a true and correct copy of the email chain between counsel concerning Local Rule 7.3's mandatory meet-and-confer process.

I declare under penalty of perjury that the foregoing is true and correct.

Executed on May 14, 2026, in Houston, Texas.

Sydney Scott

STATE OF TEXAS §
§

INTRODUCTION

First Amendment concerns loom large in this case and cry out for resolution before it concludes. These concerns surfaced at the dismissal stage, when Leapfrog contended its Safety Grades are protected opinion. (Dkt. 39 at 11–16.) They recurred on summary judgment, when Leapfrog warned against a "prior restraint on free-speech." (Dkt. 99 at 19.) They came back at trial, where Leapfrog opened by decrying Plaintiffs' attempt "to silence Leapfrog" (Dkt. 204-1 at 39:15–18), and closed by arguing FDUTPA "is not a tool to silence simple speech of a non-profit watchdog group." (Dkt. 204-5 at 43:22–44:4.) Plaintiffs recognized these to be First Amendment arguments, which is why they devoted chunks of their submissions to addressing the prior-restraint problem along with the actual-malice standard. (Dkt. 203 ¶¶ 290, 292; Dkt. 136 ¶ 133.) Now that the First Amendment merits are under a spotlight, however, Plaintiffs run away from them.

Especially problematic are aspects of the Court's injunction. Notably, Plaintiffs did not disclose the full scope of their requested relief, including the sweeping "any similar methodology" clause, until their *post*-trial proposed findings, submitted the same day as Leapfrog's. (*Compare* Dkt. 136 *with* Dkt. 203 ¶¶ 9, 288, 295.) Leapfrog had no opportunity to respond before the Court adopted that formulation. Moreover, only post-injunction did Plaintiffs' counsel begin brandishing the hammer of contempt to chill protected speech that the Court never adjudged to be unlawful—including Leapfrog's truthful observation that certain hospitals declined to participate in its survey, and its *new* program for rating *non*-party ambulatory surgery centers. (Dkt. 219-1, 219-3.) Rule 59 enables the Court to "rectify its own mistakes in the period immediately following its decision," *Banister v. Davis*, 590 U.S. 504, 508 (2020) (citation omitted), and a "continuing decree of injunction directed to events to come is subject always to adaptation as events may shape the need," *Hodge v. Dep't of Hous. & Urban Dev.*, 862 F.2d 859, 862 (11th Cir. 1989) (citation omitted). Given constitutional imperatives that are clear from governing precedent and developments post-trial, this is a paradigmatic case—admittedly, rare—for granting the requested relief.

ARGUMENT

I. LEAPFROG'S SAFETY GRADES ARE WITHIN THE HEARTLAND OF THE FIRST AMENDMENT

A. Leapfrog Did Not Forfeit Its First Amendment Defense

As an initial matter, Plaintiffs contend that this Court's motion to dismiss ruling finally resolved Leapfrog's constitutional objections, and that the contours of the judgment align. Neither

is correct. The Court's motion to dismiss order drew a clear, principled line: "[C]hallenge[s] to false or misleading statements made about the rating process itself" may be actionable, while pure opinions, like ratings or the "subjective weighing of objective data" upon which they are based, are constitutionally protected. (Dkt. 41 at 5–6.) The judgment, by comparison, veers astray. It does not limit its reach to Leapfrog's "representations about its methodology." (*Id.* at 6.) It instead holds Leapfrog liable for—and flatly prohibits—"assigning a Safety Grade to the Community Hospitals" under "any" methodology that assigns import to nonparticipation. (Dkt. 212 at 40–41.)

Plaintiffs try in vain to harmonize this Court's threshold ruling with the final judgment. According to Plaintiffs, the Court ruled that the First Amendment's protections for pure opinion were categorically "inapplicable" to Leapfrog's "grades and methods." (Opp. at 6–7.) But Plaintiffs overlook this Court's express assumption, which was that "Plaintiffs' action arises from a challenge to Defendant's representations about its methodology," particularly representations "professing that grades are not influenced by a hospital's lack of survey participation." (Dkt. 41 at 6.) Plaintiffs further overlook that the cases cited by this Court involved "false statements about [the Better Business Bureau's] rating process," *Home Performance Alliance v. Better Business Bureau of W. Fla.*, 354 So. 3d 1165, 1167 (Fla. 2nd DCA 2023), and "representations made by BBB, not the opinions it issues," *Caribbean Cruise Line, Inc. v. Better Bus. Bureau of Palm Beach Cnty., Inc.*, 169 So. 3d 164, 167 (Fla. 4th DCA 2015).

Rule 59(e) exists so that courts can correct precisely this sort of inconsistency. *See Zinkand v. Brown*, 478 F.3d 634, 637 (4th Cir. 2007) (explaining that Rule 59 "in essence, gives the district court a chance to correct its own mistake if it believes one has been made"). Courts grant Rule 59 motions where a judgment deviates from prior rulings or where a court itself belatedly recognizes an error in its judgment. *See, e.g.*, *FDIC v. Chi. Title Ins. Co.*, 2019 WL 1437873, at *9 (N.D. Ill. Mar. 31, 2019) (granting Rule 59 motion to amend the judgment based on the Court's own prior ruling from which subsequent jury award deviated); *Humphrey v. FBI*, 2024 WL 867253, at *3 (D. Alaska Feb. 29, 2024) (granting Rule 59 motion where "the Court's prior holding [wa]s incorrect" because it failed to consider "controlling precedent"). Nor is this a case where, as Plaintiffs suggest (Opp. at 7), a losing party is trying to relitigate an on-point ruling. Rather, Leapfrog merely urges the Court now to restore the constitutional line it so carefully drew at the threshold—differentiating pure opinion ratings, which are necessarily protected by the First Amendment, from falsifiable factual statements about those ratings, which may be actionable.

Plaintiffs also claim Leapfrog abandoned its position that Leapfrog's Safety Grades themselves are opinion by arguing at trial that Leapfrog's Safety Grades are scientifically justified. (Opp. at 7–8.) Contrary to Plaintiffs' suggestion, however, scientific interpretations of evidence can be laden with subjectivity. "[W]hile statements about contested and contestable scientific hypotheses constitute assertions about the world that are in principle matters of verifiable 'fact,' for purposes of the First Amendment . . . , they are more closely akin to matters of opinion, and are so understood by the relevant scientific communities." *ONY, Inc. v. Cornerstone Therapeutics, Inc.*, 720 F.3d 490, 497 (2d Cir. 2013) (recognizing First Amendment distinction between a claim that data were fabricated and a claim that "inferences drawn from those data were the wrong ones"); *see also Torrey v. Infectious Diseases Soc'y of Am.*, 86 F.4th 701, 705 (5th Cir. 2023). Thus, a speaker can simultaneously maintain that its views are protected opinion and that those views are "scientifically valid" (Opp. at 8). Holding otherwise would, perversely, force public speakers to confess to being *un*scientific before invoking their First Amendment rights.

B. Leapfrog's Safety Grades Are Pure Opinion

On the merits, Plaintiffs betray desperation. They now claim their suit is *not* about Leapfrog's *speech*, but only its "*conduct*" in "perpetrating a coercive scheme to extract hospital data." (Opp. at 8 (citation omitted).) Yet Plaintiffs have no answer to Leapfrog's authority squarely holding that "the reach of the First Amendment" extends to "expressions … intended to exercise a coercive impact" and "plainly intended to influence [Plaintiffs'] conduct." (Mot. at 15 (quoting *Org. for a Better Austin v. Keefe*, 402 U.S. 415, 419 (1971)).) Throughout our Nation's history, speakers have been free to criticize and even condemn as they see fit in order to discourage conduct they oppose—that is a defining purpose of the First Amendment and its protection of free expression. The Framers would not have ascribed paramount importance to this right had they *not* envisioned free expression actually changing the *conduct* of those in power.

Assuming that Leapfrog designedly gave lower grades to hospitals that declined to answer the survey *because* they did not answer the survey, that cannot justify denying Leapfrog its First Amendment protections. On this point, Plaintiffs simply substitute the word "blackmail" in lieu of a reasoned argument for muzzling Leapfrog. If Plaintiffs use of their "blackmail" pejorative can jettison First Amendment protections in this case, then a wide spectrum of core protected speech is in peril. It would no less be "blackmail," under Plaintiffs' theory, to "distribute[] leaflets … critical of [a plaintiff's] real estate practices" because he "refused to sign" an agreement not to

"solicit property" in a community. *Org. for a Better Austin*, 402 U.S. at 416-17. It would be "blackmail" for the ACLU to run a campaign "questioning former Vice President Joe Biden's stances on civil rights issues" in the 2020 Democratic Primary in order to "put pressure on the candidate[] to answer [survey] questions."[1] It would be "blackmail" to give candidates "a 0% Pro-Family rating" on a candidate scorecard "seeking to promote traditional marriage" if those candidates "fail[ed] to return their survey."[2] The same holds for an environmental scorecard assigning an automatic "F" for "fail[ing]" to "disclose . . . data"; the Better Business Bureau allocating a "negative impact" on a rating from "[f]ailure to respond" to a complaint; and a Bloomberg ESG "[s]core[]" lowered in consideration of "disclosure of quantitative data as a dimension of performance"—all of that is designed to empower the scoring enterprise, and all of that would be "blackmail" in Plaintiffs' view.[3] Needless to say, Plaintiffs' invented gap in First Amendment protections is nowhere to be found in the Constitution or in caselaw applying it.

Upon addressing Leapfrog's *speech*, Plaintiffs invoke *Michel v. NYP Holdings, Inc.*, 816 F.3d 686 (11th Cir. 2016), and *Milkovich v. Lorain J. Co.*, 497 U.S. 1 (1990), for the proposition that a statement implying objective facts loses First Amendment protection. (Opp. at 9.) But the factual claims that were there cloaked as opinions were "true or false" statements, such as "the assertion that [a performer] was a 'no-show' for the benefit concert," *Michel*, 816 F.3d at 697, or the "that [plaintiff] perjured himself in a judicial proceeding," *Milkovich*, 497 U.S. at 21.

The subjective judgment calls that Leapfrog necessarily makes in measuring performance en route to its Safety Grades are cut from different cloth. Plaintiffs erroneously suggest Leapfrog's Safety Grades imply factual content such as "that physicians at the Community Hospitals do not

---

[3] *Complaints*, Better Business Bureau, https://www.bbb.org/process-of-complaints-and-reviews/complaints; *Scoring Introduction 2023*, CDP, https://cdn.cdp.net/cdp-production/cms/guidance_docs/pdfs/000/000/233/original/Scoring-Introduction.pdf; *Bloomberg ESG Scores* 5 (Dec. 2025), https://professional.bloomberg.com/globalassets/professional/solutions/sustainable-finance/scores/bloomberg-esg-scores-methodology.pdf.

wash their hands." (Opp. at 9.) As this Court specifically noted, however, "[the] imputed Step 2 score is not zero." (Dkt. 212 at 6.) The Safety Grades do not imply the objectively verifiable fact that a hospital either does or does not have a hand hygiene policy (let alone that physicians at the hospital do or do not wash their hands) because providing a non-zero score "giv[es] credit to hospitals for having a . . . Hand Hygiene Policy." (*Id.*) What the Safety Grades do is *subjectively* assess the *quality* of a hospital's hand hygiene policy by placing nonparticipating hospitals at a low, non-zero point on an achievement scale, thereby conveying "Limited Achievement" as compared to participating hospitals. "Limited Achievement" in hand hygiene is not an empirically measurable fact: "limited" reflects a subjective take on the degree of "achievement," another subjective term.

Plaintiffs may disagree with Leapfrog's assessment that nonparticipation is indicative of "Limited Achievement." But the one predicate fact here—that a hospital declined to participate in Leapfrog's survey—is true, and Leapfrog disclosed it. And the evaluative judgment Leapfrog drew from that fact—that non-participation warrants a lower safety score—is precisely the kind of "subjective weighing of objective data" that this Court acknowledged at the motion-to-dismiss stage constitutes protected opinion. (Dkt. 41 at 5.) Plaintiffs identify nothing that might render false either the inference from nonparticipation or the assessment of "Limited Achievement" in safety. Under *Milkovich*, the upshot is complete protection: a statement on a matter of public concern "must be provable as false before there can be liability." 497 U.S. at 19.

Finally, Leapfrog's disclosure of its methodology suffices to vindicate it. Plaintiffs argue that, even if the Safety Grades could otherwise be characterized as opinion, they lose that protection because Leapfrog's readers did not have "existing background knowledge" about Leapfrog's methodology and the methodology was not in "the same publication." (Opp. at 10.) But that misstates the test. "[A] defendant publishes a 'pure opinion' when the defendant makes a comment or opinion based on facts which are set forth in the publication or which are *otherwise known or available to the reader* or listener as a member of the public." *Turner v. Wells*, 879 F.3d 1254, 1262 (11th Cir. 2018) (emphasis added); *see* (Opp. 11 (conceding that "the methodology document" was "*available*").). That standard—which Plaintiffs ignore, after Leapfrog emphasized it repeatedly—depends upon *availability*, not uptake. The First Amendment has never required publishers to demonstrate that readers found or engaged with a disclosure—a rule that would expose commentators, reviewers, and analysts to untold liability depending on how judges and

juries assess their website design and web traffic patterns. Such second-guessing of accurate disclosures is not only anomalous but antithetical to freedom of expression in this context.

C. Actual Malice Is Required

Even if Leapfrog's Safety Grades and imputed-value methodology were not protected pure opinion—and they are—the judgment still cannot stand because the Court never made the finding of actual malice that the First Amendment independently requires.[4]

Plaintiffs first suggest that Leapfrog has drawn a "false equivalence" between a modern statutory cause of action and the "common-law speech torts" considered in landmark Supreme Court cases. (Opp. at 14.) But Plaintiffs here are arguing against the U.S. Supreme Court. A statutory tort is not exempt from First Amendment coverage simply because it covers false statements "to gain a material advantage" in the abstract. (Opp. at 14 (quoting *United States v. Alvarez*, 567 U.S. 709, 723 (2012)).) "Instead, content-based restrictions on speech have been permitted, as a general matter, only when confined to the few 'historic and traditional categories of expression long familiar to the bar." *Id.* at 717 (quotation marks and brackets omitted). Plaintiffs do not analogize to any such category—the closest they come is their misconceived (and dangerous) analogy to extortion, *see supra* pp. 3–4. And when a plaintiff tries to fit a speech claim within the confines of the First Amendment based on "injury upon honor and reputation through false publication," it must meet the constitutional standards for justifying an exception to the protections that otherwise hold sway: a false statement of fact made with actual malice. *Curtis Pub. Co. v. Butts*, 388 U.S. 130, 135 (1967). Any contrary rule would empower a state to thwart the actual-malice standard just by enacting a new cause of action authorizing suit for negligently caused reputational harms.

No finding of actual malice appears anywhere in the Court's injunction order, nor would the record support one. Plaintiffs contend the Court's findings about Leapfrog's "intentional[]" motives satisfy actual malice (Opp. at 14–15), but they are wrong. Finding that a speaker acted to achieve a commercial or strategic goal, as the Court did here, says nothing about whether that

[4] Plaintiffs argue that Leapfrog specifically "forfeited" its "actual-malice argument." (Opp. at 12.) But parties can forfeit only "issues," not "arguments"—and even a "new argument" "inconsistent" with one raised earlier may be made if in service of "the same bottom-line request." *Spurgeon v. Soc. Sec. Admin., Comm'r*, 2024 WL 1395258, at *3 (Apr. 2, 2024). In any event, *Plaintiffs* previously briefed actual malice, recognizing that requirement followed inexorably from Leapfrog's invocation of the First Amendment. (Dkt. 136 ¶ 133.)

speaker harbored subjective doubts about the truth of what it published. Actual malice requires proof specifically that the defendant published "with knowledge that [the statement] was false or with reckless disregard of whether it was false or not." *St. Amant v. Thompson*, 390 U.S. 727, 728 (1968). Reckless disregard demands "sufficient evidence to permit the conclusion that the defendant in fact entertained serious doubts as to the truth of his publication"—not merely that the defendant had a punitive or commercial motive. *Id.* at 731. Leapfrog maintained throughout trial that its non-response-bias rationale reflects legitimate scientific reasoning, and the Court's own findings confirm that Leapfrog *believed* its methodology was defensible. (Dkt. 212 at 27–28 & n.8 (noting Leapfrog's view expressed at trial that accounting for non-participation accurately reflects that non-responsive hospitals "decline to participate in the Survey to avoid disclosure of poor safety performance").) A party that subjectively believes in its methodology has not entertained "serious doubts as to the truth" of its publication. *St. Amant*, 390 U.S. at 731. Nor does *Alvarez*, 567 U.S. 709, fill in the gap. There, the plurality reaffirmed that "falsity alone may not suffice to bring the speech outside the First Amendment" and that "[t]he statement must be a knowing or reckless falsehood." *Id.* at 719. Finally, by no means did this Court come anywhere close to finding, as it would need to, that *clear and convincing* evidence established that Leapfrog was speaking with actual malice relative to the truth. *See Berisha v. Lawson*, 973 F.3d 1304, 1312 (11th Cir. 2020).

II. FDUTPA DOES NOT APPLY

Even if the Court declines to reach Leapfrog's First Amendment arguments directly, it can and should resolve this case on statutory grounds by construing FDUTPA to avoid the serious constitutional questions identified. Plaintiffs argue this argument is forfeited. (Opp. at 15–16.) But the constitutional-avoidance canon is not a freestanding claim requiring independent preservation. Instead, it is a principle of statutory interpretation that courts apply as a matter of their own interpretive "obligat[ion]," *State v. Giorgetti*, 868 So.2d 512, 518 (Fla. 2004), or "duty," *State v. Gale Distribs.*, 349 So.2d 150, 153 (Fla. 1977). Nor are Plaintiffs persuasive in denying any ambiguity. Plaintiffs contend FDUTPA is unambiguous in light of its breadth. The relevant question, however, is not whether FDUTPA is facially ambiguous in the abstract, but whether its application to this particular category of conduct (a nonprofit watchdog's publication of hospital safety grades) is constitutionally problematic. It is, for the reasons explained above. Further, while

denying that vagueness inheres in a broadly worded statute, (Opp. at 16), Plaintiffs cite no authority for categorically exempting a broadly worded statute from the avoidance canon.

A constitutionally sound construction here jumps out. Florida's Legislature has expressly declared that the public policy of this State is to protect the exercise of free speech in connection with public issues. Fla. Stat. § 768.295(1). Applying FDUTPA to a nonprofit's non-commercial publication of evaluative hospital safety grades defies that declared public policy. A court construing FDUTPA's "unfairness" standard in light of that policy, and the serious First Amendment concerns identified above, should conclude that this conduct falls outside the statute's reach. Similarly, FDUTPA's "deceptive" prong, while broadly worded, has never been applied to the editorial judgments of a press organization publishing on a matter of public concern, absent any showing of knowing or reckless falsity. Construing the statute to require at least that showing—as both Plaintiffs and Leapfrog agreed the First Amendment would require if it applies—is a reasonable and available reading that avoids grave constitutional difficulties.

III. THE INJUNCTION IS ITSELF UNCONSTITUTIONAL

A. The Injunction Is A Prior Restraint

Plaintiffs are wrong in arguing (Opp. at 17) that Leapfrog never contended that injunctive relief would constitute an impermissible prior restraint. In actuality, Leapfrog so contended at summary judgment, (Dkt. 99 at 19), in opening at trial, (Dkt. 204-1 at 39:15–18), and in closing, (Dkt. 204-5 at 43:22–44-4; *id.* at 43:6–7), where Leapfrog further protested any remedy that might restrain speech, (Dkt. 204-5 at 81:2–3). And Plaintiffs grasped these arguments well enough to devote substantial ink to engaging Leapfrog's prior-restraint theory. (Dkt. 203 ¶¶ 290, 292.)

Regardless, the very fact that an ongoing injunction is at issue would "cut[] in favor of . . . considering inadequately preserved arguments." *Sindi v. El-Moslimany*, 896 F.3d 1, 29 (1st Cir. 2018). After all, "[a]n injunction is a drastic and extraordinary remedy." *Monsanto Co. v. Geertson Seed Farms*, 561 U.S. 139, 165 (2010). This Court retains jurisdiction to modify its injunction whenever equitable principles so warrant, *see Hodge*, 862 F.2d at 861–62, and, here, the First Amendment problems became starkest post-trial, when Plaintiffs began wielding the injunction to chill protected speech that the Court never ruled to be unlawful, (Dkt. 219-1, 219-3).

Notably, Plaintiffs are hard pressed to defend the injunction on the merits. They assert that the injunction, including its prohibition on "any similar" future methodologies, is "narrowly drawn" to target conduct found unlawful. (Opp. at 17.) But their reasoning, such as it is, does not

bear scrutiny. According to Plaintiffs, injunctions must reach "any similar" conduct or else be "for naught." (*Id.*) By that logic, the requisite "narrow" injunction would become unbounded, as it would need to extend ever-further lest it be "circumvented." Nor is this injunction tailored towards the potentially actionable aspects of Leapfrog's safety grading; it silences the Safety Grades themselves, instead of targeting statements about the methodology.

Plaintiffs cite *Lucero v. Trosch*, 121 F.3d 591 (11th Cir. 1997), to argue that the injunction is not a prior restraint because it remedies adjudicated unlawful conduct. (Opp. at 18.) But *Lucero* applied *Madsen v. Women's Health Center, Inc.*, 512 U.S. 753 (1994), to a content-neutral injunction regulating the time, place, and manner of protestors' conduct surrounding an abortion clinic—the defendants could "still express their message," albeit while standing farther away. *Lucero*, 121 F.3d at 600, 606. Here, by contrast, the injunction completely prohibits Leapfrog from expressing its substantive views about Plaintiffs' safety performance through the medium of Safety Grades. *Lucero* comes nowhere close to authorizing any such content-based ban.[5]

Plaintiffs also cite *Pittsburgh Press Co. v. Pittsburgh Commission on Human Relations* (Opp. at 18), but that case, unlike this one, concerned an injunction issued by a city commission that lacked the power of contempt to punish noncompliance. 413 U.S. 376, 390 n.14 (1973). When it comes to *court*-issued injunctions, the Supreme Court has bracketed the question whether injunctive relief targeting speech may *ever* be appropriate. *See Tory v. Cochran*, 544 U.S. 734, 736–38 (2005) (summarily vacating injunction and declining to reach merits of whether a permanent injunction is a constitutionally permissible remedy in a defamation case where the plaintiff died post-argument). In any event, courts in this circuit and state subscribe to the conventional view that injunctions proscribing speech based on its content are impermissible prior restraints, "even where liability . . . has been found." *Basulto v. Netflix, Inc.*, 2023 WL 7129970, at *52 (S.D. Fla. Sept. 20, 2023); *see, e.g.*, *Grayson v. No Labels, Inc.*, 2023 WL 2919911, at *5 (M.D. Fla. Jan. 17, 2023); *Krapacs v. Bacchus*, 301 So. 3d 976, 980 (Fla. 4th DCA 2020).

This "traditional rule of Anglo-American law" was applied "with remarkable uniformity" by nineteenth- and twentieth-century American courts and endures to this day across state and federal courts. Erwin Chemerinsky, *Injunctions in Defamation Cases*, 57 Syracuse L. Rev. 157,

[5] Plaintiffs omit to note that *Lucero* applied the strict-scrutiny-like standard of *Madsen*—which is the floor, not the ceiling, of constitutional scrutiny that obtains when injunctive relief touches even tangentially upon speech. *Lucero*, 121 F.3d at 605.

158, 167 (2007); *see also McCarthy v. Fuller*, 810 F.3d 456, 466 (7th Cir. 2015) (Sykes, J., concurring). Plaintiffs note that the rule frequently applies in cases involving preliminary injunctions issued "absent a prior determination of illegality." (Opp. at 18–19.) But it applies with equal force in cases involving permanent injunctions, which pose a never-ending restraint on liberty. *Alexander v. United States*, 509 U.S. 544, 550 (1993) (classifying both "[t]emporary restraining orders and permanent injunctions" as "prior restraints"); *see, e.g.*, *Sindi*, 896 F.3d at 30 (permanent injunction following jury trial); *Kinney v. Barnes*, 443 S.W.3d 87, 95, 99 (Tex. 2014) (permanent injunction following trial on the merits); *Krapacs*, 301 So. 3d at 978, 980 (permanent injunction).

B. The Injunction Compels Speech

The injunction also violates the First Amendment by compelling Leapfrog to speak contrary to its own views. Plaintiffs argue the corrective disclosure requirements are permissible because they involve commercial speech. (Opp. at 20.) But requiring Leapfrog to declare to its licensees and in its promotional materials that its Safety Grades were "found to be deceptive and unfair" is neither "commercial" nor a neutral recitation of the litigation outcome. It is a court-mandated recantation of Leapfrog's own expert judgments about hospital safety. The *Zauderer* line of cases on which Plaintiffs rely permits compelled disclosure only of factual, uncontroversial information in the commercial advertising context to prevent consumer deception. Here, the required disclosure does not convey a neutral fact about a product being advertised—it compels Leapfrog to denounce its own editorial judgments. That is categorically different from, for example, requiring disclosure of a product's ingredients or a service's material terms. *See 303 Creative LLC v. Elenis*, 600 U.S. 570, 586 (2023). Because Leapfrog's Safety Grades reflect its "exercise of editorial control and judgment" for the benefit of an external audience focused on hospital safety, *Miami Herald Publ'g Co. v. Tornillo*, 418 U.S. 241, 258 (1974), the messaging surrounding them should remain Leapfrog's alone, and the injunction provisions compelling disclosure should be withdrawn.

CONCLUSION

For the foregoing reasons, the Court should grant Leapfrog's motion.

CERTIFICATE OF SERVICE

I HEREBY CERTIFY that on this 20th day of May, 2026, a true and correct copy of the foregoing document was electronically transmitted to all counsel of record via the CM/ECF system.

INTRODUCTION

This Court found that Leapfrog's Safety Grades "ha[ve] no scientific basis, unfairly penalize non-participating hospitals, and misrepresent hospital safety," awarded declaratory and injunctive relief, and entered judgment in favor of five community hospitals, each of which proved that its patients, employees, and reputations suffered real harm as a result of Leapfrog's misleading F and D grades. Leapfrog's "expedited" motion now asks this Court to devote still more resources to a dispute of Leapfrog's own making. When the Community Hospitals served their draft fee motion on Leapfrog and sought to schedule the conferral Local Rule 7.3 requires, Leapfrog refused to engage, unilaterally declared the motion "premature," and filed its own competing motion, instead of simply responding to the fee motion where it could have made the same arguments. That choice disregarded Local Rule 7.3, which is designed to resolve or narrow fee disputes efficiently without unnecessary judicial intervention, and imposed an avoidable burden on the Court and the Community Hospitals. This Court need not reward it.

The Community Hospitals diligently followed Local Rule 7.3. They served Leapfrog with their draft fee motion and supporting billing materials. They repeatedly sought in good faith to schedule the required conferral. Only after Leapfrog repeatedly refused to engage with the Rule 7.3 process did the Community Hospitals file their fee motion. The Rule is not ambiguous: it sets the filing deadline, prescribes a mandatory conferral process, requires parties to raise and narrow fee disputes, and expressly provides that fee motions must be filed within sixty days of judgment "*regardless of the prospect or pendency of supplemental review or appellate proceedings*." S.D. Fla. L.R. 7.3(a)(1) (emphasis added). Leapfrog did none of it. It made a deliberate choice to bypass the Rule's requirements entirely. Leapfrog admits that it "declined" to incur the "additional burdens" associated with contesting the so-called "suspect aspects" of the Community Hospitals' attorneys' fee motion and detailed accompanying invoices. ECF 227 at 1 n.1. That is not a timing objection. It is an admission of deliberate non-compliance.

Leapfrog's timing rationale for disregarding Local Rule 7.3 rests on a manufactured conflict between federal and state law that does not exist. FDUTPA does not supply a contrary filing rule. Its exhaustion provision addresses only when a prevailing party may ultimately "receive" fees. It says nothing about when a fee motion must be *filed*, when briefing must occur, or whether this Court may enter rulings—including waiver rulings—while an appeal is pending. Even if FDUTPA could be read to conflict with the federal framework, federal procedure would control.

Under *Berk v. Choy*, 607 U.S. 187 (2026), when a Federal Rule of Civil Procedure is on point, state law yields. Rule 54(d)(2)(B) governs fee-motion timing, and Local Rule 7.3—which expressly requires fee motions to proceed notwithstanding any appeal—supplies the court-ordered framework Rule 54 expressly authorizes.

Leapfrog's motion then does exactly what the Local Rule forbids: it attacks the fee request on the merits, calling the amount "grotesquely inflated" and challenging the number of timekeepers and hours expended. Those are precisely the substantive objections Local Rule 7.3 required Leapfrog to raise with reasonable particularity during conferral. Leapfrog cannot raise belated objections to the fees request, all while discarding the Local Rule as inconvenient. Leapfrog's substantive objections are waived. *Elessar v. Verizon Wireless Pers. Commc'ns, LLP*, 2020 WL 6156498, at *5 (S.D. Fla. Aug. 26, 2020) (Middlebrooks, J.).

For these reasons, denial is warranted. Leapfrog's motion is a transparent effort to preempt the fee motion while avoiding the process Local Rule 7.3 requires. The Court need not await the conclusion of any appeal to find that Leapfrog waived all substantive objections to the Community Hospitals' fee request by refusing to participate in the conferral Local Rule 7.3 mandates.[1]

BACKGROUND

On April 30, 2025, the Community Hospitals filed this action against Leapfrog asserting a single claim under FDUTPA. Following discovery, dispositive motion practice, and a bench trial, the Court entered judgment in favor of the Community Hospitals on April 6, 2026. *See* ECF 214. The Court found that Leapfrog's Safety Grades were deceptive and unfair under FDUTPA and granted declaratory and injunctive relief. *See* ECF 212. On April 30, 2026, Leapfrog filed a notice of appeal and a motion for reconsideration. *See* ECF 220, 221.

Pursuant to Local Rule 7.3(b), the Community Hospitals, as prevailing parties, served Leapfrog on May 5, 2026, with a draft motion for attorneys' fees and costs and accompanying billing materials. *See* ECF 226-8 at 16–17.[2] The draft motion with accompanying detailed invoices sought recovery of certain attorneys' fees and litigation costs incurred by each of the five

[1] If the Court is inclined to defer the ultimate fee award pending appeal, it can enter the waiver finding, stay collection pending any appeal, and make clear that no further substantive fee briefing will be required if the appeal concludes in the Community Hospitals' favor.

[2] This email exchange was submitted as an exhibit to the Community Hospitals' affidavit in support of its fees motion. A copy of that email exchange has been attached hereto for the Court's reference. *See* Ex. A.

plaintiffs in this action. Counsel for the Community Hospitals subsequently contacted Leapfrog on multiple occasions to schedule the good-faith conferral required by Local Rule 7.3(b). *See id.* at 9–12.

Leapfrog refused to engage in that process. Instead, Leapfrog stated via email that it intended to argue that any fee motion was "premature" under FDUTPA's state-law exhaustion requirement. *Id.* at 8, 13. Leapfrog further proposed that the Community Hospitals treat the motion as a "placeholder" and refrain from litigating it while the appeal proceeded. *Id.* at 15. The Community Hospitals declined, repeatedly emphasizing the Local Rule's requirements. *Id.* at 12.

On May 15, 2026—thirty-nine days after entry of final judgment, following Leapfrog's refusal to confer, and well within Local Rule 7.3's sixty-day deadline—the Community Hospitals filed their motion for attorneys' fees and costs. *See* ECF 225. Later that day, Leapfrog filed an expedited motion asking the Court to summarily deny the fee motion, hold it in abeyance, or convene a status conference to determine the operative procedure and timeline. *See* ECF 227.

ARGUMENT

I. The Community Hospitals' Fee Motion Is Timely And Ripe Under Governing Federal Law

Procedural matters in federal courts, including the timing of attorneys' fee motions under Federal Rule of Civil Procedure 54, are governed by federal law. This rule applies even where the statutory source of entitlement to fees arises under state substantive law.

Federal Rule of Civil Procedure 54(d)(2)(B) provides that a motion for attorneys' fees "must" be filed within fourteen days after entry of judgment "[u]nless a statute or court order provides otherwise." As the Eleventh Circuit has held, Local Rule 7.3 constitutes such a "court order" that supersedes Rule 54's default filing framework. *See, e.g.*, *Tire Kingdom, Inc. v. Morgan Tire & Auto, Inc.*, 253 F.3d 1332, 1335 (11th Cir. 2001). Local Rule 7.3 expressly governs attorneys' fee motions in this District and requires them to be filed within sixty days of the judgment or order giving rise to the claim for fees, "*regardless of the prospect or pendency of supplemental review or appellate proceedings*." S.D. Fla. L.R. 7.3(a)(1) (emphasis added). That language controls. The Community Hospitals filed their fee motion within sixty days of judgment, notwithstanding Leapfrog's presumptive appeal. Their motion is thus timely under the governing federal and local rules.

Leapfrog's motion never confronts this point—and does not once cite Local Rule 7.3. Leapfrog instead claims that the Community Hospitals' fee motion is "premature" because state

law—FDUTPA—provides that a prevailing party may not "receive" attorneys' fees until after "judgment in the trial court and exhaustion of all appeals." Fla. Stat. § 501.2105(1). According to Leapfrog, that exhaustion provision falls within Rule 54(d)(2)(B)'s "unless a statute … provides otherwise" carve-out, and therefore overrides Local Rule 7.3's filing deadline. *See* ECF 227 at 3–5. That argument fundamentally misreads the applicability of FDUTPA's exhaustion provision and attempts to create a conflict between federal and state law.

But the two provisions are not in conflict. Federal law provides the procedure for when a motion for attorneys' fees may be *filed*. FDUTPA's exhaustion provision is silent on this point and speaks to when the prevailing party may ultimately recover or "*receive*" its attorneys' fees and costs—after exhaustion of all appeals. Fla. Stat. § 501.2105(1) (emphasis added). That distinction is dispositive. Rule 54(d)(2)(B)'s carve-out applies only where another statute supplies an alternative timing rule for *filing* a fee motion. FDUTPA's exhaustion provision does no such thing. FDUTPA therefore falls outside Rule 54(d)(2)(B)'s carve-out concerning the timeline for filing a fee motion. As described in Section III, *infra*, together the provisions promote judicial economy and preservation of resources by requiring filing and resolution of attorneys' fees issues when the dispute is fresh, but do not require receipt or collection of fees until appeals are exhausted.

Because the statute only conditions when a party may "receive" fees, nothing in FDUTPA prevents the Court from determining entitlement and amount of the fee award while appellate proceedings remain pending. In fact, courts in this District consider and decide FDUTPA fee issues while appeals are pending, *see, e.g. Athos Overseas Ltd. v. YouTube, Inc.*, 2024 WL 3431912, at *2, *12 (S.D. Fla. May 2, 2024), *adopted by* 2024 WL 3425763 (S.D. Fla. July 16, 2024), and they, at minimum, require full briefing on FDUTPA fee motions before deciding whether abeyance is warranted, *see, e.g.*, *Marjam Supply Co. of Fla., LLC v. Pliteq, Inc.*, 2021 WL 1200422, at *1 n.2 (S.D. Fla. Mar. 5, 2021); *Caracol Television, S.A. v. Telemundo Television Studios, LLC*, 2022 WL 17583608, at *2 (S.D. Fla. Aug. 4, 2022).

Nor is the Court prevented from entering a fee award until appeals are exhausted. Rather than deny the motion or suspend briefing, as Leapfrog advocates, the Court could enter a fee award (applying its discretion to any reduction) and stay collections until Leapfrog's appeal is resolved. Courts routinely issue fee awards and stay collections, recognizing the distinction between adjudicating a fee request and allowing collection. *See, e.g.*, *Derhem v. Bay House Mia. Condo. Ass'n*, 2026 WL 628233, at *2 n.3 (S.D. Fla. Mar. 6, 2026) (resolving attorneys' fee motion despite

pending appeal while "stay[ing] the collection of the prevailing party fees until [the] appeal is resolved"); *Sheely v. MRI Radiology Network P.A.*, 2006 WL 8432119, at *2 (S.D. Fla. Aug. 21, 2006) ("While the Court may be inclined to stay collection of costs, the Court will not stay the award of costs."). That same distinction gives full effect to FDUTPA's "receive" language here: the Court may decide the fee motion and stay collection or receipt pending appeal.

Even if the Court were to read in a conflict between Rule 54(d)(2)(B)'s carve-out and FDUTPA's exhaustion provision, as Leapfrog suggests, the Court would still have to decide which of two candidates governs: (1) the framework established by the federal and local rules, or (2) FDUTPA, a state statute. As the Supreme Court held in *Berk v. Choy* earlier this year, "when a Federal Rule of Civil Procedure is on point, a federal court bypasses *Erie*'s [choice-of-law] inquiry altogether." 607 U.S. at 192. Federal procedural laws are directly on point and dictate the outcome here. Rule 54 is a valid Federal Rule. Local Rule 7.3 is a "court order" within the meaning of Rule 54(d)(2)(B), *Tire Kingdom*, 253 F.3d at 1335, and itself "ha[s] 'the force of law,'" *Hollingsworth v. Perry*, 558 U.S. 183, 191 (2010); *see also Cheshire v. Bank of Am., NA*, 351 F. App'x 386, 388 (11th Cir. 2009). That Rule is on point as to when a fee motion must be filed in this federal Court. FDUTPA's state-law exhaustion provision therefore cannot override Local Rule 7.3's express directive that fee motions be filed "regardless of the prospect or pendency of supplemental review or appellate proceedings."

Leapfrog seeks to dismiss *Berk* as a mere restatement of *Hanna v. Plumer*, 380 U.S. 460 (1965). ECF 227 at 2–3. But *Berk* meaningfully clarified the doctrine governing conflicts between Federal Rules and state law by making clear that express requirements in the Federal Rules of Civil Procedure impliedly preclude states from adding to or modifying those requirements, even if the state law could be characterized as "substantive." *See* 607 U.S. at 195 n.2, 199. Leapfrog's view that the Supreme Court granted certiorari in *Berk* to merely restate something that has been clear to everyone since 1965 is not a credible position. *Contra* ECF 227 at 3. To the extent pre-*Berk* cases assumed that FDUTPA's exhaustion provision controlled the timing of a federal fee motion without analyzing Rule 54, Local Rule 7.3, and *Erie*/*Hanna*, those cases do not answer the question now presented.

One such case is *Herbst v. American Orthodontics Corp.*, 2025 WL 3755394 (S.D. Fla. Jan. 23, 2025) (Middlebrooks, J.). Aside from pre-dating *Berk*, *Herbst* was decided after appellate proceedings had concluded and without occasion to address whether Rule 54(d)(2)(B) and Local

Rule 7.3 displace FDUTPA's state-law exhaustion provision as a filing rule. Leapfrog's reliance on *M.G.B. Homes, Inc. v. Ameron Homes, Inc.*, 30 F.3d 113 (11th Cir. 1994), is similarly misplaced. *M.G.B. Homes* predates *Berk* by decades and did not consider whether Rule 54(d)(2)(B) and a local rule expressly requiring fee motions shortly after judgment, and despite pending appeals, displace FDUTPA's exhaustion language. Significantly, both decisions focused on when fees may be "receive[d]," not when a fee motion must be filed. *See id.* at 114; *Herbst*, 2025 WL 3755394, at *1. That is precisely the distinction on which Leapfrog's carve-out argument fails: FDUTPA conditions the receipt or collection, not the filing.

The Middle District of Florida cases on which Leapfrog relies to support its FDUTPA position are even further afield. *See* ECF 227 at 2–3 (citing *e.g.*, *Citibank (S.D.) N.A. v. Nat'l Arb. Council, Inc.*, 2006 WL 2691528, at *7 (M.D. Fla. Sep. 19, 2006)).[3] Those cases arose in a different procedural regime given the Middle District has no analog to Local Rule 7.3's express directive that fee motions be filed "regardless of the prospect or pendency of supplemental review or appellate proceedings." *Compare* M.D. Fla. L.R. 7.01, *with* S.D. Fla. L.R. 7.3(a)(1). That distinction is critical—and eminently sensible. *See infra* at 9. At most, the Middle District cases show how courts have applied FDUTPA in the *absence* of a local rule like this one. They do not address—and cannot override—the procedural framework that governs fee motions in the Southern District of Florida.[4]

In sum, Local Rule 7.3 governs the filing deadline for fees motion in this District. The Community Hospitals complied with the Rule's requirements. The Community Hospitals' motion is timely, and Leapfrog's contrary arguments are foreclosed by *Berk*, Rule 54, and Local Rule 7.3's express directive that fee motions should proceed notwithstanding pending appeals.

II. Leapfrog Waived All Substantive Objections To The Fee Request Because It Deliberately Disregarded Local Rule 7.3's Mandatory Conferral Requirements

Local Rule 7.3 governs the process and timing of the Community Hospitals' fee motion. Within that framework, Leapfrog was bound by the conferral process Local Rule 7.3 prescribes. But as Leapfrog concedes, it refused to participate in that process and instead took the hardline

[3] *See also Novo Nordisk, Inc. v. Wells Pharm. Network, LLC*, 2025 WL 1018422, at *3 (M.D. Fla. Apr. 4, 2025); *Am. Registry, LLC v. Hanaw*, 2015 WL 5687693, at *3 (M.D. Fla. Sep. 25, 2015).

[4] Even the Southern District decision Leapfrog relies upon cites the very same *Middle District* cases as Leapfrog does in its motion. *See Procaps S.A. v. Patheon Inc.*, 157 F. Supp. 3d 1199, 1200 (S.D. Fla. 2016).

position that the motion was "premature." ECF 226-8 at 8, 13. The consequence of Leapfrog's conduct is waiver. Leapfrog cannot now raise any substantive objections to entitlement and amount that Local Rule 7.3 required it to raise during conferral. Thus, entering the waiver finding is warranted.

Local Rule 7.3 establishes a mandatory pre-motion process designed to narrow or resolve fee disputes before judicial intervention becomes necessary. The Rule requires the parties to engage in a substantive meet-and-confer process concerning entitlement, hourly rates, billing entries, and related objections before fee litigation proceeds in which the nonmovant is required to provide written objections with reasonable particularity and supporting legal authority. Courts in this District, including this one, strictly enforce Rule 7.3's procedural requirements and find waiver where parties fail to comply with them. *See, e.g.*, *Elessar*, 2020 WL 6156498, at *5 (Middlebrooks, J.) ("By not conferring as required by Local Rule 7.3, [respondent] has waived any objection to [the requested fees]."); *Carruthers v. Israel*, 274 F. Supp. 3d 1345, 1350 n.7 (S.D. Fla. 2017) (Middlebrooks, J.) ("Defendants did not follow the procedures set forth in Local Rule 7.3 in lodging their objections, [which] alone would be a sufficient reason to deny its objections."); *Club Madonna, Inc. v. City of Miami Beach*, 2015 WL 5559894, at *9 (S.D. Fla. Sep. 22, 2015); *In re Chiquita Brands Int'l, Inc. Alien Tort Statute & S'holder Derivative Litig.*, 2024 WL 4932671, at *4–5 (S.D. Fla., Oct. 15, 2024), *adopted by* 2024 WL 4930609 (S.D. Fla. Dec. 2, 2024).

Leapfrog failed to comply with that framework, and its own motion confirms that this refusal was deliberate and flippant. Leapfrog admits that it "declined" to incur the "additional burdens" associated with "contesting all of the suspect aspects" of the Community Hospitals' fee motion. ECF 227 at 1 n.1.[5] That is not compliance with Rule 7.3. It is an admission that Leapfrog knowingly disregarded the substantive conferral process the Rule requires.

Leapfrog's motion only underscores the strategic nature of that choice. While insisting that filing the fee motion is premature, Leapfrog simultaneously launches sweeping attacks on the Community Hospitals' request—calling the fee amount "grotesquely inflated" and challenging the number of timekeepers and hours expended. *See id.* at 1. These are exactly the substantive

[5] Similarly, in Leapfrog's request to extend the deadline for its response to the fee motion, Leapfrog stated it had determined that it would not expend resources on a response while it "awaited [this Court's] ruling on" the instant motion and "has not prepared to respond to the Fee Motion with all necessary rigor." ECF 229 ¶ 2.

objections Local Rule 7.3(b) required Leapfrog to raise in response to the Community Hospitals detailed invoices during the conferral process, and that they could have raised in a response to the fee motion instead of an "expedited" request to cut that process short too. Leapfrog cannot have it both ways. If the request is too premature to file, the merits attacks have no place in Leapfrog's motion. If the merits attacks belong in that motion, Leapfrog was required to raise them—with reasonable particularity, not broad-based attacks—and attempt to narrow them through conferral. Leapfrog's refusal to engage in the conferral process only to raise its objections in a freestanding motion is precisely the conduct that this District forbids. *See, e.g.*, *Fitzgerald v. McNae*, 2025 WL 1546958, at *2 (S.D. Fla. May 30, 2025) (respondent "cannot sidestep the Local Rule's mandatory conferral requirements and reserve her rights to object at a later date").

Implicitly recognizing its own waiver, Leapfrog now asks for a mulligan. In footnote 2, Leapfrog requests the "opportunity to meet and confer specifically on remaining questions of reasonableness" if the Court deems the motion ripe. ECF 227 at 5 n.2. But Leapfrog *already* had the opportunity to meet and confer about the "reasonableness" of the fee request under the plain text of Local Rule 7.3—and it rebuffed the Community Hospitals in favor of standing on its timing argument. If Leapfrog believed the burdens of Rule 7.3 conferral were improper or should be postponed, it could have sought relief from the Court before refusing to participate. It did not. Leapfrog instead made a unilateral decision to pretermit the Local Rule's required process.

Leapfrog should bear the consequences of this choice. The Court can expressly find that Leapfrog waived its objections to the Community Hospitals' request for attorneys' fees. *See Elessar*, 2020 WL 6156498, at *5. Not only is such a waiver finding a natural consequence of Leapfrog's conduct, but it materially advances the efficient resolution of this dispute. That is precisely the efficiency Local Rule 7.3 is designed to secure. The Court need not await the conclusion of any appeal to reach this issue, even if it ultimately decides to hold off a collection order. *See supra* n.1. Leapfrog's deliberate refusal to participate in the mandatory Local Rule 7.3 conferral process warrants a waiver finding now.

III. Judicial Economy Favors Briefing, A Waiver Ruling, and Resolution of the Fee Motion Now

Even under Leapfrog's theory, there is no need for the extraordinary relief it seeks: summary denial or indefinite suspension of all fee proceedings. The Community Hospitals were required by Local Rule 7.3 to timely file their fee motion regardless of any pending appeal. S.D.

Fla. L.R. 7.3(a)(1). Because the Community Hospitals complied with this Local Rule, the Court retains ample discretion to determine when and how to adjudicate the motion.

As noted above, courts routinely permit fee motions to be filed and fully briefed while appeals remain pending and then determine whether to resolve the motion immediately, defer ruling on particular issues, or hold certain aspects of the motion in abeyance pending appellate review. *See supra* at 4 (collecting FDUTPA cases); *see also Derhem*, 2026 WL 628233, at *2 n.3 (determining fee award but staying collection until after appeal); *Pretka v. Kolter City Plaza II Inc.*, 2013 WL 7219294, at *1 (S.D. Fla. Sep. 11, 2013) (denying plaintiffs' request "to stay resolution of the award of costs and attorney's fees pending the appeal of the judgment entered for [d]efendant"); *Belize Telecom, Ltd. v. Gov't of Belize*, 528 F.3d 1298, 1310 (11th Cir. 2008) ("[W]e leave for the district court to determine whether a stay or a hearing on costs and fees is appropriate, given the pending appeal."). Nothing requires the wholesale abeyance of fee motion briefing that Leapfrog seeks here, and indeed Leapfrog now apparently intends to file a response to the fee motion. *See* ECF 229. And there are substantial practical benefits that counsel in favor of briefing fee issues shortly after judgment.

Proceeding with the Community Hospitals' fee motion now, under Local Rule 7.3, allows the parties to preserve objections, narrow disputes, and develop the record while the litigation remains fresh in the minds of both counsel and the Court. Courts in this District have long understood Local Rule 7.3's purpose "to cause the collateral question of fees to be presented and considered within a reasonable time after resolution of the case's merits, while those are still fresh in the judge's mind." *Vanzant v. R.L. Prods., Inc.*, 139 F.R.D. 435, 438 (S.D. Fla. 1991) (internal quotation marks omitted). The scope of the litigation, the complexity of the issues, the necessity of the work performed, and the reasonableness of the time expended are far easier to evaluate now on the heels of the bench trial than they would be following the exhaustion of appellate proceedings.[6] Delaying fee litigation until that point would require reconstructing the record at substantially greater expenditure of judicial and party resources.

[6] This is particularly true given that civil appeals in the Eleventh Circuit are resolved, on average, more than ten months from the filing of a notice of appeal. *See U.S. Court of Appeals—Median Time Intervals in Months for Civil and Criminal Appeals Terminated on the Merits, by Circuit, During the 12-Month Period Ending September 30, 2025* (Sep. 30, 2025), https://www.uscourts.gov/sites/default/files/document/jb_b4a_0930.2025.pdf.

The Court can go ahead and resolve the fee motion upon the conclusion of the briefing cycle on that motion, allowing the Eleventh Circuit to address all issues in this matter in a single, consolidated appeal. *See, e.g.*, *King Cole Condo. Ass'n v. QBE Ins. Corp.*, 2010 WL 3212091, at *1 (S.D. Fla. Aug. 12, 2010) ("The Court's regular practice … is not to stay matters collateral to a final judgment, principally involving fees or costs issues, to avoid piecemeal appeals to the Eleventh Circuit."); *see also White v. N.H. Dep't of Emp. Sec.*, 455 U.S. 445, 454 (1982) ("[O]f course the district courts generally can avoid piecemeal appeals by promptly hearing and deciding claims to attorney's fees. Such practice normally will permit appeals from fee awards to be considered together with any appeal from a final judgment on the merits.").

If the Court is nonetheless inclined to hold off on the ultimate award pending appeal, deferring the waiver determination on the Community Hospitals' fee motion is not warranted. Entering the waiver ruling now based on the current fee briefing cycle is warranted. The actual fee award can then follow without long-after-the-fact briefing regarding entitlement and reasonableness of fees.

CONCLUSION

The Community Hospitals respectfully request that the Court: (1) deny Leapfrog's expedited motion in its entirety; (2) find that Leapfrog waived any substantive objections to the Community Hospitals' fee request because it failed to raise them during the pre-filing conferral process mandated by Local Rule 7.3; and (3) find that the Community Hospital's fee motion is timely and thus resolve it upon the conclusion of the briefing cycle on that motion.

In the alternative, if the Court is inclined to defer the ultimate fee award pending appeal, the Community Hospitals respectfully request that the Court: (1) find that Leapfrog waived all substantive objections to the Community Hospitals' fee request by failing to raise them during the pre-filing conferral process mandated by Local Rule 7.3; (2) stay collection of the fee award pending any appeal; and (3) make clear that no further substantive briefing on the Community Hospitals' fee request will be required if the appeal concludes in the Community Hospitals' favor.

Counsel,

The Local Rules already prescribe the procedure governing requests for attorney's fees. We oppose any procedure outside those established processes.

Thank you,
Sydney

This message came from outside your organization.

Your gloss isn't adding anything, In Leapfrog's respectful view, we've gone as far as is appropriate (likely further) in these circumstances under the Rule 7.3 process. And we've stated our substantive position several times – pellucidly.

As to our forthcoming motion, do the Plaintiffs consent, oppose, or take no position specifically relative to the proposed expedition, requiring a response within two days?

Thanks, and best,

Derek

Subject: RE: Good Samaritan Med. Ctr., Inc. et al. v. The Leapfrog Group, No. 9:25-cv-80526 (S.D. Fla.) - Draft Motion for Attorney's Fees and Costs

Our position is that the meet and confer process has run its course for now, considering that the proposed motion is unripe as a legal matter and wasteful as a practical matter. To the extent your view differs, we think guidance and ruling from the Court are appropriate at this juncture. If the Court, contrary to precedent and its own on-point ruling, proceeds to deem the motion timely and worthy of further treatment at this time, then we can meet and confer further, with Leapfrog respectfully reserving rights to supply additional objections at that time. All of that seems clear enough from my prior email but I'm reiterating it now for the avoidance of any doubt.

Now, as for the meet and confer on Leapfrog's responsive motion, what is your clients' position, please? You seem to have ignored that. Thanks, and best,

Derek

Subject: RE: Good Samaritan Med. Ctr., Inc. et al. v. The Leapfrog Group, No. 9:25-cv-80526 (S.D. Fla.) - Draft Motion for Attorney's Fees and Costs

[EXTERNAL EMAIL from sascott@gibsondunn.com]

Counsel,

Thank you for the response. The Community Hospitals intend to proceed with the Rule 7.3 process and the filing of their fee motion. We do not agree that it is premature or should be held in abeyance. For the reasons already explained, we believe proceeding now is procedurally proper and consistent with Rule 54 and Local Rule 7.3. Leapfrog is free to seek whatever relief they believe appropriate from the Court, and we will respond accordingly.

We also do not agree that the Local Rule's mandatory meet-and-confer requirements may be bypassed based on Leapfrog's preliminary "skimming" review of the records or generalized objections to categories of work. The Local Rules contemplate precisely the sort of granular conferral process Leapfrog now seek to avoid, and the existence of objections is not a basis to dispense with that process altogether.

Nor do we agree that meeting and conferring would impose "daunting costs" or otherwise waste resources. To the contrary, the process is intended to narrow disputes, test positions, and potentially avoid unnecessary motion practice. Leapfrog's suggested course only leads to more disputes—an outcome that the Rules are supposed to guard against.

Your email appears to state that Leapfrog will not participate in the mandatory Rule 7.3 conferral process because doing so would supposedly impose "daunting costs" and waste resources. So there is no doubt, please confirm that Leapfrog is taking the position that it will not participate in the mandatory conferral process. If I'm mistaken, please provide your availability for the required meet-and-confer.

Thank you,
Sydney

Subject: RE: Good Samaritan Med. Ctr., Inc. et al. v. The Leapfrog Group, No. 9:25-cv-80526 (S.D. Fla.) - Draft Motion for Attorney's Fees and Costs

Counsel:

Thank you for clarifying the status of the contemporaneous fee records. Before you flagged that they were accessible as part of the initial transmission, none of our attorneys had been so aware. It was a paralegal who'd accessed them on our end, and my email observation that we'd "need, at a minimum, the opportunity to review all contemporaneous time records" hadn't drawn a response from you. All that said, our skimming of the records had confirmed our stated concerns that the amount requested isn't anything close to reasonable. It includes, among other things, time spent on issues well removed from any alleged factual misrepresentations about methodology, which, as we've noted, is all that might be actionable consistent with the First Amendment; it also includes time spent on damages claims that never materialized; and likewise includes time spent on a preliminary injunction that was abandoned. The list goes on, and we reserve rights to add to our

granular objections when and if the motion becomes ripe – just as you presumably reserve rights potentially to revisit the request in the wake of further proceedings.

Beyond this, however, there would be no benefit and daunting costs associated with meeting and conferring further. Scrutinizing and contesting all of the many particulars would serve only to waste Leapfrog's precious resources – resources that will not be reimbursed by your clients. Much or all of that may be mooted by ensuing developments, including on appeal. If you want to abandon your request as unreasonable and/or premature, we will be glad to learn that. And we remain willing to stipulate to the request being filed and then held in abeyance. Please let us know if you will agree to that.

If not, and you are insistent on filing your motion before appeals are exhausted, then we will respond by asking the Court summarily to deny the motion, to hold it in abeyance, or to convene a status conference. We will seek that relief on an expedited basis, enabling a ruling before Leapfrog's further opposition to the fee motion comes due. Specifically, we would propose that the Plaintiffs have two days to respond to our short motion, which will reflect the same points we've already previewed. If you remain insistent on filing the fee motion, please let us know your position relative to the motion that we'll be filing on the heels of yours.

We're of course glad to discuss any of the above. Thanks, and best,

Derek

[EXTERNAL EMAIL from sascott@gibsondunn.com]

Counsel,

As reflected in our original transmittal, the Community Hospitals already served the supporting billing materials with the draft motion, including hundreds of pages of contemporaneous billing records reflecting the claimed fees. In fact, someone from your office has accessed those records (see attached). And to make it even easier, we are sending you courtesy copies of our fee application (along with the supporting billing records).

Given this compliance, we're not sure what "essential records" Leapfrog believes were withheld. If Leapfrog contends additional materials are required for purposes of the Rule 7.3 process, please identify with specificity what you believe is missing so the parties can address any such issue efficiently during the conferral process.

Your remaining comments appear directed to objections Leapfrog may wish to raise regarding the amount or reasonableness of the requested fees. The Community Hospitals disagree with those assertions, including Leapfrog's characterization of staffing and its position regarding the propriety of proceeding under Rule 7.3 at this stage. Those issues can be addressed during the Rule 7.3 conference and, if necessary, presented to the

Court.

In the meantime, please provide your availability for the Rule 7.3 conference contemplated by the Local Rule.

Thanks,
Sydney

Are you providing the contemporaneous billing records, as expressly requested? Turnover of those essential records should precede the Rule 7.3 conference. Also, please be advised that any fees you may be incurring and then claiming (from all of the many lawyers whom you're copying) will be facially unreasonable given that (a) overstaffing is evident, (b) you're inexplicably withholding the appropriate record surrounding fees, (c) all of

this skirmishing stands to be mooted, or at least better informed, by further rulings that still lie ahead, and (d) you've not identified any prejudice that plaintiffs could possibly suffer from following our suggested approach, consistent with the express terms of the statute under which you're claiming fees. Best,

Derek

Subject: RE: Good Samaritan Med. Ctr., Inc. et al. v. The Leapfrog Group, No. 9:25-cv-80526 (S.D. Fla.) - Draft Motion for Attorney's Fees and Costs

[EXTERNAL EMAIL from sascott@gibsondunn.com]

Counsel,

We disagree with Leapfrog's position and intend to proceed with the fee motion consistent with the Federal Rules and Local Rule 7.3.

As you know, Local Rule 7.3 expressly contemplates that fee motions will be served and litigated notwithstanding the prospect or pendency of appellate proceedings. The Rule further requires the parties to engage in a substantive conferral process regarding the requested fees and expenses before any filing occurs. That process is now underway.

Accordingly, we do not agree that the motion is "premature," nor do we agree that the Community Hospitals should indefinitely defer the Rule 7.3 process or treat the motion merely as a "placeholder." The Community Hospitals intend to preserve and pursue their rights under the governing rules and statutes.

Your correspondence largely addresses legal arguments you may wish to present to the Court regarding the timing or disposition of the motion. The Community Hospitals preserve all contrary arguments, including those reflected in the draft motion. But regardless of those issues, Rule 7.3 requires the parties to confer regarding the substance of the fee request, and we expect Leapfrog to participate in that process in good faith.

You state that Leapfrog perceives "obvious signs of unreasonableness" with respect to the requested fees and staffing. We therefore assume Leapfrog is prepared to articulate those positions concretely during the Rule 7.3 conferral process, including identifying any specific objections to the fees, expenses, billing judgments, or supporting materials.

Please let us know your availability next week for the Rule 7.3 conference. We will continue to include Kim and Courtney on future correspondence.

Thank you,
Sydney

Subject: RE: Good Samaritan Med. Ctr., Inc. et al. v. The Leapfrog Group, No. 9:25-cv-80526 (S.D. Fla.) - Draft Motion for Attorney's Fees and Costs

Counsel,

We understand from your draft motion that you will be filing it now as a precautionary matter. That noted, your filing will be premature according to settled law, judicial and party economy, and common sense. To start, there can be no substantive entitlement to fees at this stage under the express terms of FDUTPA, which does not even open the door to an award of attorney's fees until "after judgment in the trial court and *exhaustion of all appeals*." Fla. Stat. 501.2105(1) (emphasis added). Lest there be any doubt, binding precedent holds that, "[t]o award such fees" in federal as well as state court, "the Court must determine if [litigants] were prevailing parties, *and* ensure that all appeals have been exhausted." *Herbst v. Am. Orthodontics Corp.*, 2025 WL 3755394, at *1 (S.D. Fla. Jan. 23, 2025) (Middlebrooks, J.) (emphasis added); *see M.G.B. Homes, Inc. v. Ameron Homes, Inc.*, 30 F.3d 113, 115 (11th Cir. 1994).

To the extent your motion suggests that this binding precedent has been abrogated, the suggestion cannot withstand scrutiny. In drawing upon *Berk v. Choy*, you'd lean upon its observation that "a valid Rule of Civil Procedure displaces contrary state law even if the state law would qualify as substantive" under *Erie*. 146 S. Ct. 546, 552 (2026). Similarly, you say that *Berk*'s import is

that it "clarified that, when a valid Federal Rule of Civil Procedure answers the disputed timing question, it governs notwithstanding contrary state law." Draft Mot. 6 n.1. But that rule did not come as news; it has been elementary for at least the last six decades, as taught in first-year civil procedure courses. *See Hanna v. Plumer*, 380 U.S. 460, 471 (1965) ("When a situation is covered by one of the Federal Rules, the question facing the court … [is] only [whether] the Advisory Committee, this Court, and Congress erred in their prima facie judgment that the Rule in question transgresses neither the terms of the Enabling Act nor constitutional restrictions."); *see also Berk*, 146 S. Ct. at 552 (citing *Hanna* for Plaintiffs' proposition). Nor did *Berk* even involve "a disputed timing question," Draft Mot. 6 n.1, let alone one analogous enough to FDUTPA to overrule Eleventh Circuit precedent. It held simply that Rule 8 displaced a state-law requirement to pair a complaint with "evidence of the claim" in the form of an affidavit of merit. 146 S. Ct. at 553. No aspect of the Court's holding or reasoning comes close to displacing the express statutory terms and on-point precedent that control here.

In any event, the controlling precedent enforcing FDUTPA's appeal-exhaustion rule controls is irreproachable. The only rule that you identify as supposedly contrary to FDUTPA is Federal Rule of Procedure 54(d)(2)(B). But that rule does not conflict with FDUTPA at all—most obviously, because it expressly says that a motion for attorney's fees must "be filed no later than 14 days after the entry of judgment" "*[u]nless a statute or court order provides otherwise*." Fed. R. Civ. P. 54(d)(2)(B) (emphasis added). To reiterate, FDUTPA expressly "provides otherwise" by insisting appeals be exhausted before fees may be awarded.

Of course, even setting aside all of the above, the Court separately would have wide discretion to dismiss without prejudice or hold in abeyance the fee motion. For reasons too apparent for us to belabor, that approach would make the utmost sense, without posing any prejudice to Plaintiffs. Otherwise, hashing out all of the potential issues surrounding the more than $10.5 million in fees claimed, even before it is finally known whether and to what extent Plaintiffs will prevail at the end of all appeals, would threaten to waste party and judicial resources. Even setting that aside, there would be compelling reason for Judge Middlebrooks (or, if need be, the Eleventh Circuit) to stay any

fee award until grave First Amendment questions are fully resolved. In that light, too, rushing to litigate fees threatens to waste resources and complicate the proceedings without advancing anyone's interests.

Based on the above, should you file the draft motion or any similar motion, we would urge the Court to deny the motion as premature, per the statutory text and precedent. Happily, we perceive room for a possible compromise: if Plaintiffs agree to treat the motion as a placeholder, without moving forward on it at this stage, we would be willing to stipulate that the motion can be held in abeyance until all appeals are exhausted. That approach, as you acknowledge, would allow you to ensure timeliness and preserve your ability to resume litigating any persisting claim to fees post-appeal. We don't think anyone stands to benefit from prematurely launching into the grueling task of scrutinizing and defending timesheets for reasonableness, particularly given that FDUTPA "contemplates situations in which parties who prevailed at the trial level may be nonprevailing after the appellate process is exhausted." *M.G.B. Homes*, 30 F.3d at 115. Answering for the judgment's First Amendment defects should be enough for now.

If your position differs and you're insisting that all the related issues should be litigated here and now, then we'll need, at a minimum, the opportunity to review all contemporaneous time records for all of the 25 timekeepers whose fees are at issue. For now, however, it should suffice to say that Leapfrog perceives obvious signs of unreasonableness—the extent of the claimed fees, the claimed time, and the number of timekeepers far exceed what could qualify as reasonable in this case. But we would propose to leave those and other issues for another day, once everyone knows with certainty the precise contours of the underlying judgment, assuming we can stipulate along the lines suggested above. Please let us know whether our proposed approach works for Plaintiffs and we'll be at your disposal if you want to talk.

Finally, we at Quinn Emanuel are to field outreaches such as this, but Kim and Courtney remain co-counsel and should also be included.

Thanks, and best,

Derek

Counsel,

Pursuant to Southern District of Florida Local Rule 7.3(b) and on behalf of the Community Hospitals in the above captioned action, please see attached a draft motion for attorneys' fees along with supporting documentation, including Exhibits A and C available here. The Community Hospitals reserve the right to revise the draft motion and supporting materials, along with the fees and costs claimed, in response to discussions

during the conferral process provided for under the Local Rule.

Please let us know if you consent to electronic service. If you prefer a mailed copy, we would be happy to provide one.

Regards,
Sydney

INTRODUCTION

Plaintiffs' opposition to Leapfrog's motion underscores why the Court should summarily deny their premature fee motion. While now agreeing that FDUTPA limits when fees may be "receive[d]" (specifically, until after the appellate process concludes), Plaintiffs try to split hairs and differentiate when their motion supposedly is properly "filed." (Dkt. 231 at 1.) But that leaves no good reason, in law or reason, why briefing should barrel forward before the merits ripen. Nor do Plaintiffs come to grips with their prior, unequivocal acknowledgments that "[e]arlier decisions" by the Eleventh Circuit "treated FDUTPA's exhaustion-of-appeals language as controlling." (Dkt. 225 at 6 n.1); *see also M.G.B. Homes, Inc. v. Ameron Homes, Inc.*, 30 F.3d 113, 115 (11th Cir. 1994) (squarely holding that FDUTPA "expressly includes the culmination of the appellate process in its definition of a prevailing party").

The Court should summarily deny Plaintiffs' motion. Briefing the fee award before the predicate judgment comes to rest would accomplish nothing other than waste resources and pose the specter of financial ruin for a watchdog nonprofit. Notably, Plaintiffs hardly even try to justify their insistence that briefing nonetheless be completed now. Instead, Plaintiffs opportunistically advance a spurious waiver theory that defies both the record and the express terms of the very rules on which they rely. If the Court does not deny outright Plaintiffs' motion, then it should hold it in abeyance until the conclusion of Leapfrog's appeal—the very compromise Plaintiffs rejected during the conferral process, even though their own cited cases commend it.

ARGUMENT

I. PLAINTIFFS' MOTION IS PREMATURE UNDER FDUTPA AND BINDING CIRCUIT PRECEDENT INTERPRETING IT

In their fees motion, Plaintiffs conceded that, when it comes to "the timing of this motion," "[e]arlier decisions"—including binding Eleventh Circuit authority—"treated FDUTPA's exhaustion-of-appeals language as controlling." (Dkt. 225 at 6 n.1.) That authority had been superseded, Plaintiffs claimed, by the Supreme Court's recent decision in *Berk v. Choy*, 607 U.S. 187 (2026). (*Id.*) Leapfrog then refuted that account—explaining that *Berk* is inapplicable here and that the passage Plaintiffs cite does no more than restate the *Erie* doctrine. (Dkt. 227 at 2-3.) Unable to respond on those points, Plaintiffs have pivoted. Now, according to Plaintiffs, there is actually no conflict between FDUTPA and federal law at all—and thus no need to resort to binding Eleventh Circuit precedent, or the *Erie* doctrine, or *Berk*—because FDUTPA supposedly controls only when fees are "receive[d]," not when a motion is "*filed*" and "rule[d]" on. (Dkt. 231 at 1.)

That about-face does not help Plaintiffs. Plaintiffs are right now that FDUTPA bars them from "receiv[ing]" fees before appeals have been exhausted. (Dkt. 231 at 1.) But they were equally right the first time, insomuch as Eleventh Circuit precedent prevents them from seeking fees now because they have not yet "prevail[ed]" post-appeal. *M.G.B. Homes*, 30 F.3d at 115. A motion that should not be granted, as both sides agree, should not be briefed before it can be granted.

A. Plaintiffs Agree That They Cannot Receive Fees Now

As a threshold matter, Plaintiffs concede that any *executable* fee award would be premature. Plaintiffs admit that state law allows for a prevailing party to "receive" fees only after exhaustion of all appeals, and on that basis cease perceiving any "conflict" between state and federal law. (Dkt. 231 at 1.) Accordingly, although their motion briefly floats whether this Court would be "inclined to defer the ultimate fee award" (*Id.* at 2 n.1), Plaintiffs concede that no such award can presently be entered and executed. As to that much, Leapfrog agrees.

B. Binding Precedent Requires Summary Denial Or Abeyance

As Plaintiffs previously recognized, under "[e]arlier decisions" both in the Eleventh Circuit and in the Southern District of Florida, "FDUTPA's exhaustion-of-appeals language" is "controlling in federal court" as to "the timing of this motion." (Dkt. 225 at 6 n.1.) Plaintiffs were correct then but are wrong now.

As Plaintiffs continue to recognize, Rule 54 expressly calls for the application of state law "where another statute supplies an alternative timing rule for filing a fee motion." (Dkt. 231 at 4 (emphasis omitted).) Although Plaintiffs tie themselves in doctrinal knots, binding precedent controls the proper timing here. The Eleventh Circuit has held that FDUTPA "expressly includes the culmination of the appellate process in its definition of a prevailing party." *M.G.B. Homes*, 30 F.3d at 115. And under FDUTPA, only a "prevailing party" may seek fees. Fla. Stat. § 501.2105(1). So "[t]o award such fees" under FDUTPA, "the Court must … ensure that all appeals have been exhausted." *Herbst v. Am. Orthodontics Corp.*, 2025 WL 3755394, at *1 (S.D. Fla. Jan. 23, 2025) (Middlebrooks, J.). Because Leapfrog's "appeals" have not "been exhausted," no fees may be "award[ed]" at this time. *Id.*; (*see also* Dkt. 225 at 6 n.1 (citing *M.G.B. Homes*, 30 F.3d at 115; *Procaps S.A. v. Patheon Inc.*, 157 F. Supp. 3d 1199, 1200 (S.D. Fla. 2016))). That clear, controlling precedent is no less clear and controlling now than it was when Plaintiffs

acknowledged that it spoke to the proper timing of their fee briefing no less than to their substantive entitlement.[1]

What has changed, apparently, is that Plaintiffs have come to realize that *Berk v. Choy* affords no colorable basis for evading precedent. An "intervening Supreme Court case" does not abrogate prior Eleventh Circuit precedent unless it "actually abrogate[s] or directly conflict[s] with, as opposed to merely weaken[s], the" Eleventh Circuit's prior holding. *United States v. Kaley*, 579 F.3d 1246, 1255 (11th Cir. 2009). Plaintiffs make no serious argument that *Berk* meets that demanding standard. They now say that *Berk* "clarified" that "express requirements" in the Federal Rules cannot be modified "even if the state law could be characterized as 'substantive.'" (Dkt. 231 at 5.) But *Berk*'s generic restatement of the *Erie* doctrine clarified only what was already crystal clear for decades. In truth, the Eleventh Circuit has long adhered to the rule that *Berk* supposedly "clarified": "Under *Hanna,* the proper question to ask is not whether the state law provision is procedural or substantive; instead, the court must ask whether the state law provision conflicts with a federal procedural rule. If it does, the federal procedural rule applies and the state provision does not." *Cohen v. Off. Depot, Inc.*, 184 F.3d 1292, 1296 (11th Cir. 1999), *vacated in part on other grounds*, 204 F.3d 1069 (11th Cir. 2000); (*compare* Dkt. 231 at 5 (same)).[2] That is black-letter law. "When a situation is covered by one of the Federal Rules, the question facing the court … [is] only [whether] the Advisory Committee, this Court, and Congress erred in their prima facie judgment that the Rule in question transgresses neither the terms of the Enabling Act nor constitutional restrictions." *Hanna v. Plumer*, 380 U.S. 460, 471 (1965).

C. Binding Precedent Is Correct

Even setting aside binding precedent, Plaintiffs' position defies first principles and plain text. Plaintiffs lead by saying that "the timing of attorneys' fees motions" is governed by Federal Rule of Civil Procedure 54. (Dkt. 231 at 3.) But that does not help Plaintiffs because the rule

[1] Plaintiffs cite one (1) case in which a court "considere[ed] and decide[d] FDUTPA fee issues while appeals are pending." (Dkt. 231 at 4 (citing *Athos Overseas Ltd. v. YouTube, Inc.*, 2024 WL 3431912, at *2, *12 (S.D. Fla. May 2, 2024).) But that court had good reason to decide the motion then: That case involved $2.8 million in fees for copyright claims and only $72,000 for a FDUTPA claim. *Athos*, 2024 WL 3431912, at *1. That court did not even cite FDUTPA's appeal-exhaustion provision because only a small fraction of the fees implicated FDUTPA.

[2] Although it is true that the Supreme Court did not "grant[] certiorari in *Berk* merely to restate something that has been clear to everyone since 1965" (Dkt. 231 at 5), it is also true that the specific question occasioning the grant was well removed from the general, longstanding rule.

applies "unless *a statute* . . . provides otherwise." Fed. R. Civ. P. 54(d)(2)(B) (emphasis added). Far from supplanting the "statute," therefore, Rule 54 *expressly defers to FDUTPA*. Nor can Plaintiffs argue that the local rule *itself* preempts FDUTPA. The Federal Rules preempt contrary state law under *Erie* because they are issued under the Rules Enabling Act, which gives the Supreme Court "the power to prescribe general rules of practice and procedure" and render "[a]ll laws in conflict with such rules" of "no further force or effect." 28 U.S.C. § 2072(a)-(b); *see Hanna*, 380 U.S. at 471-72. By contrast, the statute authorizing court rules, including local rules of district courts, lacks any such provision. *See* 28 U.S.C. § 2071. And while Rule 54 allows for a court rule to control the timing question by default, it does not preempt state law: To the contrary, its timing rules operate *unless* a "statute" has provided "otherwise." Fed. R. Civ. P. 54(d)(2)(B).

As for Plaintiffs' reading of FDUTPA, it slices the salami too thin. Again, at the outset, Plaintiffs agree that they cannot receive fees unless and until they are a "prevailing party" after all appeals conclude. Instead, they say that although they cannot be awarded fees now, the Court should nonetheless bless a motion being "*filed*," "brief[ed]," and "rul[ed]" on "while an appeal is pending." (Dkt. 231 at 1.) But that makes no sense. As the Eleventh Circuit has held, FDUTPA "expressly includes the culmination of the appellate process in its definition of a prevailing party," not just in determining who may receive fees. *M.G.B.*, 30 F.3d at 115. That conclusion follows directly from the text of FDUTPA. FDUTPA says that a "prevailing party" is one that is "prevailing" "after judgment in the trial court and exhaustion of all appeals." Fla. Stat. § 501.2105(1). A legal term of art, a "prevailing party" is "[t]he party ultimately prevailing when the matter is finally set at rest." *Lackey v. Stinnie*, 604 U.S. 192, 200 (2025) (quoting Black's Law Dictionary 1352 (rev. 4th ed. 1968)); *see also id.* at 206 (party who has won "conclusive, enduring judicial relief"). For purposes of FDUTPA, the matter is not at rest, and a party has not prevailed, before the "exhaustion of all appeals." Fla. Stat. § 501.2105(1).

Deciding the fees motion now, following costly investigation of reams of billing records, would also be wasteful considering that FDUTPA "contemplates situations in which parties who prevailed at the trial level may" end up being "nonprevailing" as FDUTPA uses that term "after the appellate process is exhausted." *M.G.B. Homes*, 30 F.3d at 115. Courts have taken the "plain language of Fla. Stat. § 501.2105(1) at face value and routinely denied motions for attorney's fees (including motions for entitlement to attorney's fees) under FDUTPA without prejudice, subject to renewal, if appropriate, following the conclusion of an appeal." *Novo Nordisk, Inc. v. Wells*

Pharmacy Network, LLC, 2025 WL 1018422, at *3 (M.D. Fla. Apr. 4, 2025). Because Rule 54 allows for the Court to "deny the motion without prejudice" in order to "avoid piecemeal resolution of fee disputes," courts ruling under FDUTPA, including in this District, regularly "deny [fee motions] without prejudice and with leave to re-file following the conclusion of [the] appeal." *AMG Trade & Dist., LLC v. Nissan N.A., Inc.*, 2019 WL 11583366, at *1 (S.D. Fla. Aug. 7, 2019) (first quoting Fed. R. Civ. P 54(d), Advisory Committee Notes to the 1993 Amendments; second citation omitted). This Court should do the same as a matter of law. In any event, sound exercise of this Court's discretion would lead to the same result. (*See* Dkt. 227 at 4.)

D. Judicial Economy Favors Summary Denial Or Abeyance

Finally, Plaintiffs argue that judicial economy favors Leapfrog and the Court devoting resources now to fully briefing and deciding the fee motion, even though it is still unclear whether and to what extent Plaintiffs will remain the prevailing party. Three outcomes are possible: (1) If this Court grants Leapfrog's pending motion for reconsideration or to alter or amend the judgment, or for new trial, Plaintiffs' fee motion would be mooted; (2) if this Court denies Leapfrog's pending motion, but Leapfrog prevails at the Eleventh Circuit, Plaintiffs' fee motion would similarly be mooted; and (3) even if this Court denies Leapfrog's motion and Leapfrog's appeal is unsuccessful, Plaintiffs may revisit their claimed fees. In any scenario, going through the exercise of briefing and deciding the fee motion now would be premature, inefficient, and a recipe for piecemeal briefing and adjudication. *See Specialized Transp. of Tampa Bay, Inc. v. Nestle Waters N. Am., Inc.*, 2009 WL 1788373, at *1 (M.D. Fla. June 22, 2009) ("If this Court were to resolve the attorney's fees and costs issues while an appeal remains pending, it would likely be asked to repeat the procedure following the appeal. This Court prefers to avoid the piecemeal adjudication of attorney's fees and cost."); *Bluhm v. Wyndham Vacation Ownership, Inc.*, 2023 WL 3121397, at *11 (M.D. Fla. Mar. 13, 2023) (similar).

To argue the contrary, Plaintiffs largely cite cases that either did not concern FDUTPA or whistled past it as peripheral. *See* Part I.B *supra*. But even if Plaintiffs were correct that courts are not *barred* from allowing a FDUTPA fee motion to be briefed while an appeal is pending, the Court would still have *discretion* to conclude, as courts typically do, that judicial economy favors holding the fee motion in abeyance, if not denying it outright. *See, e.g.*, *Democratic Republic of the Congo v. Air Cap. Grp., LLC*, 2014 WL 12634405, at *1 (S.D. Fla. May 8, 2014); *Hunters Run Prop. Owners Ass'n, Inc. v. Centerline Real Est., LLC*, 2020 WL 9160867, at *2 (S.D. Fla. May

26, 2020); *Gonzalez v. Wal-Mart Stores, Inc.*, 2022 WL 18717046, at *2 (M.D. Fla. Dec. 12, 2022). Plaintiffs also argue that Local Rule 7.3 promotes efficiency by enabling adjudication while the case's merits are still fresh in the judge's mind. But FDUTPA reflects the state's different judgment about how best to promote judicial economy in this precise context. As the Eleventh Circuit has acknowledged, failing to wait until the "culmination of the appellate process" to determine prevailing-party status under FDUTPA invites the "perverse result" that "parties who obtain reversals of trial court judgments on appeal could be liable for the attorney's fees of parties who erroneously prevailed in trial court." *M.G.B. Homes*, 30 F.3d at 115.

Finally, Plaintiffs argue it would be preferable to decide fee issues now so that fee issues can be considered alongside the merits by the Eleventh Circuit. But they thereby put the cart before the horse, where a motion remains pending even here for reconsideration or to alter or amend the judgment, and where weighty constitutional questions loom. Regardless, courts flatly reject this argument. *See, e.g.*, *Suntree Techs., Inc. v. Ecosense Int'l, Inc.*, 2011 WL 13137984, at *4 (M.D. Fla. Oct. 28, 2011) ("It does not appear that consideration of the appeal would be better informed if accompanied by a decision on attorneys' fees."); *Novo Nordisk*, 2025 WL 1018422, at *3 (same).

II. PLAINTIFFS' CLAIMS FOR ATTORNEYS' FEES AND COSTS ARE FACIALLY UNREASONABLE

Even if the Court does not summarily deny Plaintiffs' fee motion as premature, it should reach the same result on the merits. Plaintiffs' eight-figure fee claims against a nonprofit watchdog reflect grossly disproportionate billing and are facially unreasonable. That is reason enough for the Court to exercise its discretion to deny Plaintiffs any fee award. Nor can Plaintiffs' mask the defects in their request by manufacturing a waiver argument.

A. Plaintiffs' Fee Claims Are Unreasonably Inflated On Their Face

Plaintiffs seek to recover fees for 13,149 hours billed on a single-claim FDUTPA case. That figure is orders of magnitude greater than the time Leapfrog's counsel spent litigating the same case—a figure that itself includes work on claims the hospitals did not win, including their TRO, preliminary injunction, and later-abandoned damages claims. Having disavowed their damages claims as a means of avoiding discovery into their finances and claimed harm, Plaintiffs may not now derive monetary leverage, from rampant overstaffing and inflated billings, so as to imperil the continued existence of a consumer-advocacy nonprofit that monitors their conduct for

the public good. For that reason alone, the Court should summarily deny Plaintiffs' fee motion for reasons that transcend its improper timing.

Plaintiffs' opposition offers no substantive defense of their putative reasonableness. Instead, Plaintiffs try to avoid scrutiny of their fees by advancing the implausible contention that the Court should summarily deem Leapfrog's objections as though they have been waived. That argument comes with irony given that the "failure to respond to an argument" in a motion "results in waiver." *Redstone Funding, LLC v. Kunkel Real Est. Investments, LLC*, 2017 WL 7798641, at *4 n.9 (S.D. Fla. Mar. 10, 2017) (Middlebrooks, J.). As explained below, it is also wrong.

B. Plaintiffs' Waiver Argument Fails

Despite professing the importance of adhering to Local Rule 7.3, Plaintiffs argue contrary to the Rule's terms. Rather than stopping at requesting assurance that their fee motion "be [deemed] *filed* and *served* within sixty (60) days" of judgment, S.D. Fla. L.R. 7.3(a) (emphases added), which is all the Rule requires, *see supra*, p. 4, Plaintiffs demand the conclusion of all briefing, followed by summary adjudication, lest Leapfrog be held to have waived. From that it would follow that Leapfrog must either (a) incur the formidable burdens and expense of fighting over $10.5 million in fees claimed, while facing the *further* expense of attempted fee-shifting by the Plaintiffs for their side of that, *plus* the risk of *re*-doing much the same fight in the event that the underlying judgment changes or else (b) waiving all substantive objections to fees. That dilemma, as invented by the Plaintiffs, is anomalous, perverse, and untenable.

Indeed, the Local Rule on which Plaintiffs rely expressly refutes their waiver theory. Again, the Rule by its terms contemplates only that such motions be "filed and served"—not fully briefed or finally adjudicated—within sixty days of judgment. S.D. Fla. L.R. 7.3(a). In light of that, Leapfrog offered a sensible compromise: Plaintiffs could file their motion (which would indisputably accomplish full compliance with the Local Rule) while stipulating to holding in it abeyance until the conclusion of Leapfrog's appeal (which would at least approach satisfying FDUTPA and the circuit precedent interpreting it). Having rejected that commonsense solution, without identifying the slightest prejudice they faced from it, the Plaintiffs are in no position to fault *Leapfrog* for supposedly taking a "hardline position." (Dkt. 231 at 6.) Much less can Plaintiffs paint Leapfrog as the "hardliner" even as they claim absolute entitlement to automated entry of an eight-figure fee.

Furthermore, Plaintiffs ignore the express provision of Local Rule 7.3(a) that authorizes "either party [to] move the Court to determine entitlement *prior* to submission on the issue of *amount*." S.D. Fla. L.R. 7.3(a) (emphases added). Here, Leapfrog explained to Plaintiffs at painstaking length, in reference to on-point caselaw and practical considerations, why it would make practical sense to obtain the Court's guidance before the parties potentially incurred unnecessary burdens and expenses disputing issues of "amount," even where the threshold issue of Plaintiffs' "entitlement" would, by any reading of the law, be highly questionable, at best. If anyone violated the letter and spirit of the Rule, including its admonition that any fee motion "shall not be filed until a *good faith* effort to resolve the motion … has been completed," it was the Plaintiffs who committed the violation. S.D. Fla. 7.3(a) (emphasis added).[3]

Even setting aside Leapfrog's express entitlement under the Local Rules to seek threshold adjudication of the entitlement question, however, the Local Rules require only that parties confer with "*reasonable* particularity." S.D. Fla. L.R. 7.3(b) (emphasis added). And Leapfrog's substantive objections to Plaintiffs' fee requests were more than reasonable under the circumstances. Faced with binding precedent requiring the exhaustion of appeals before the adjudication of FDUTPA fee motions and a Local Rule permitting either party to seek determinations on fee-entitlement issues at the threshold, Leapfrog availed itself of the processes authorized by the Rule, moving for summary denial of the fee motion and "describ[ing] in writing" multiple substantive objections to Plaintiffs' fee claims. *Id.* There was nothing unreasonable about Leapfrog trying to conserve party and judicial resources by requesting an initial ruling on entitlement before scrutinizing thousands of pages of overlarded billings. *See, e.g.*, *Rockwell Prop. Inc. v. Century Surety Co.*, 2024 WL 5264411, at *2 (S.D. Fla. Nov. 20, 2024) (finding that determining entitlement first "would economize judicial and party resources").

In multiple respects, therefore, the Rule itself refutes Plaintiffs' notion that Leapfrog committed any knowing waiver here, let alone one that should cost it $10.5 million in fees. By no fair reading of the record did Leapfrog knowingly abandon a known right, which is what Plaintiffs would need to show. *See Glass v. United of Omaha Life Ins. Co.*, 33 F.3d 1341, 1348-49 (11th

[3] Nor is that violation isolated. Even as they pillory Leapfrog for one alleged violation, Plaintiffs yet again flout the rule against "furnish[ing] the Court with copies of correspondence between or among counsel." S.D. Fla. L.R. 7.7; (*see* Dkt. 219-1 (filing correspondence with counsel unrelated to any motion); Dkt. 219-2 (same); Dkt. 219-3 (same); Dkt. 226-8 (filing correspondence with Leapfrog's counsel); Dkt. 231-1 (same).)

Cir. 1994) (holding that no waiver occurred as a matter of law where the defendant "did not knowingly and intentionally waive" the claimed right).

None of Plaintiffs' cases suggests otherwise. In one, Chief Judge Altonaga later endorsed a decision process that contradicts the one that Plaintiffs now propose, ordering the fee motion terminated until the conclusion of an appeal. *See Fitzgerald v. McNae*, No. 22-cv-22171, Dkt. 483 (S.D. Fla. Nov. 12, 2025) ("[T]he Motion for Award of Attorneys' Fees and Costs …, and the Bill of Costs … are TERMED. The Motions are deemed timely filed. Depending on the outcome of the appeal, the Court will direct the Clerk to reinstate the Motions."). And none of Plaintiffs' remaining cases even involved FDUTPA, let alone implicated the threshold timing issue in question here. *See In re Chiquita Brands Int'l, Inc. Alien Tort Statute & Shareholder Derivative Litig.*, 2024 WL 4932671, at *2-3 (S.D. Fla. Oct. 15, 2024) (adjudicating fee claim under charging lien); *Elessar v. Verizon Wireless Personal Commc'ns, LLP*, 2020 WL 6156498, at *3-5 (S.D. Fla. Aug. 26, 2020) (fee claim under offer-of-judgment statute); *Carruthers v. Israel*, 274 F. Supp. 3d 1345, 1349 (S.D. Fla. 2017) (fee claim under consent decree and stipulations); *Club Madonna, Inc. v. City of Miami Beach*, 2015 WL 5559894, at *3-8 (S.D. Fla. Sept. 22, 2015) (fee claim under 42 U.S.C. § 1988).

Plaintiffs' failure to locate a template for their waiver argument is telling. Indeed, it is difficult to overstate their bottom-line ask: Plaintiffs demand an order requiring a nonprofit watchdog to pay an eight-figure fee award *without* considering the merits of the fee claims, *before* the "exhaustion of all appeals" required by the governing statute and binding circuit precedent, Fla. Stat. § 501.2105(1), and *after* the nonprofit has availed itself of the governing Local Rule's express provision permitting it to seek advanced procedural guidance from the Court, S.D. Fla. L.R. 7.3(a). For good reason, that jarring request appears unprecedented here. And Plaintiffs' failure to justify their claimed urgency makes it that much worse. Plaintiffs concede in multiple places that they cannot, in any event, initiate collection proceedings until the exhaustion of Leapfrog's appeal. *See supra*, p. 2. And they struggle (Dkt. 231 at 8-10) even to articulate reasons why their fee motion cannot wait—just as other fee motions under FDUTPA commonly do. *E.g.*, *AMG Trade*, 2019 WL 11583366, at *1.

Whatever path the Court chooses, it should not indulge Plaintiffs' effort to precipitously wipe out a consumer-advocacy nonprofit with a "laudable" mission. (Dkt. 212 at 3.) Even if the Court were not inclined summarily to deny Plaintiffs' fee motion and to adjudicate it before the

exhaustion of Leapfrog's appeal, it should at the very least provide the requested guidance and thereafter afford the parties additional time for a more detailed conferral on the issue.

CONCLUSION

The Court should summarily deny Plaintiffs' fee motion, or alternatively, hold it in abeyance pending the exhaustion of all appeals. The Court may also wish to convene a status conference to supply guidance to the parties on the appropriate process and timetable for further addressing Plaintiffs' fee request.

INTRODUCTION

Plaintiffs, five major local hospitals collectively owned by a publicly traded for-profit corporation, brought this action to muzzle the speech of Leapfrog, a consumer-focused nonprofit watchdog devoted to promoting the safety of patients nationwide. After obtaining a broad injunction that Leapfrog has moved to vacate on First Amendment grounds in the first round of this litigation, Plaintiffs have raced back to court to ram through a $10.5 million attorney's fee award against Leapfrog before it has even had an opportunity to appeal—a right protected by binding state and circuit law alike. That eight-figure amount may be inconsequential for Plaintiffs, whose parent company boasts more than $20 *billion* in annual revenue. For Leapfrog, however, it would represent a financial death sentence—one that would extinguish Leapfrog, along with its lifesaving, constitutionally protected work that has long benefited patients and other stakeholders whose interests far transcend this case.

Plaintiffs' jackbooted effort to pulverize, summarily, their nonprofit opponent turns upside-down Florida's law of unfair trade practices. To begin, Plaintiffs' fee request is premature. The statute requires that Plaintiffs be "the prevailing party" after "exhaustion of all appeals." But Leapfrog's appeal—assuming it proceeds following the Court's resolution of Leapfrog's pending motion to alter or amend the judgment—is far from exhausted. As Leapfrog has explained in its pending, expedited motion for summary denial of Plaintiffs' fee motion (Dkt. 227), the prematurity of Plaintiffs' motion alone warrants that it be denied, or at minimum, held in abeyance.

Timing aside, Plaintiffs' motion should be denied. The motion offends cherished First Amendment values together with Florida public policy. Plaintiffs' requested fee award would destroy a journalistic nonprofit organization that disseminates information of urgent public importance based on its challenged speech about just five local hospitals. That grossly excessive remedy would be punitive towards Leapfrog and *gravely injurious to consumers*. A statute that is meant to protect consumers should not be weaponized at the expense of consumers and the free flow of information and expression on which they rely. This is, therefore, the paradigmatic case on which sound exercise of this Court's discretion should result in the total denial of fees. Straightforward application of the traditional discretionary factors confirms as much.

Finally, even if the Court were to overlook the timing problem and perceive good warrant for some award, Plaintiffs' $10.5-million ask should be massively reduced. Plaintiffs gratuitously overstaffed this case by multiples as compared to Leapfrog, unnecessarily piling a national firm

(complete with multiple offices) atop distinguished local counsel that was fully capable of trying this case on its own. They then compounded that excess by failing entirely to exercise billing restraint, submitting entries for abandoned claims, duplicative work, and inscrutably vague descriptions. As detailed in the accompanying declaration of Paul R. Regensdorf, Esq., Plaintiffs' request is so riddled with overstaffing, duplication, and non-compensable work such that their fee request should be denied entirely or, at minimum, slashed to a fraction of the amount claimed—a conclusion that stands unrebutted, as Plaintiffs chose not to retain a fees expert of their own.

BACKGROUND

A. Plaintiffs Staff Their Legal Team Disproportionately To Leapfrog's And Exceed The Constitutional Limits Set By The Court's Motion To Dismiss

Plaintiffs seek more than a year's worth of fees—13,149.20 hours billed by 25 attorneys spanning more than 1,400 pages of legal bills—dating back to December 2024. (Dkt. 226-1 at 5; Dkt. 226-2 at 811.) Plaintiffs' team of local counsel from Marcus Rashbaum Pineiro & Meyers LLP and Neiman Mays Floch & Almeida PLLC was led by Jeffrey Marcus—a partner nationally recognized by Chambers USA. (Dkt. 226-5 at 1.) Plaintiffs also hired Gibson, Dunn & Crutcher LLP, who staffed the case with more than 20 lawyers from multiple offices. (Dkt. 225 at 15.) As Mr. Regensdorf explains, the addition of more than 20 Gibson Dunn attorneys—layered atop a local counsel team that was itself capable of trying this case—was unnecessary and resulted in structural redundancy throughout the billing record. (Regensdorf Report ¶¶ 30-31, 36.)

The earliest entries in Plaintiffs' bills relate to drafting a letter sent from Plaintiffs' parent company, Tenet Healthcare, to Leapfrog and its counsel in January 2025, conveying demands that far exceeded the relief that Plaintiffs—five local Tenet hospitals—obtained in this litigation. Tenet demanded that Leapfrog "remove from its website *all* references to Tenet Hospitals"—not just the Safety Grades, and not just references to Plaintiffs. (DX-931 (emphasis added).) Plaintiffs likewise threatened to assert causes of action that they never brought in this case and to "seek[] damages," which they later disavowed when pressed to prove their damages in discovery. (*Id.*)

Plaintiffs followed up on their threats with a complaint filed on April 30, 2025. (Dkt. 1.) Plaintiffs' original complaint dated April 30, 2025 included a request for preliminary injunctive relief. (Dkt. 1 at 53.) Plaintiffs filed a motion for a preliminary injunction accompanied by 65 exhibits on May 17, 2025. (Dkt. 20.) But Plaintiffs withdrew their request for a preliminary injunction on May 27, 2025 (just ten days after submitting their voluminous filing), citing the Court's decision to set a trial date for January 2026. (Dkt. 34.)

On the other side of the caption, Leapfrog staffed this case with a small, core team of three attorneys (one partner and two associates) from Wilson Elser Moskowitz Edelman & Dicker LLP, who accomplished the lion's share of the work from start to finish. The defense moved to dismiss, including on First Amendment grounds. (Dkt. 39.) The Court denied dismissal on the basis that claims that "challenge false or misleading statements made about the rating process itself" are constitutionally permissible, while claims that challenge the subjective assessments of online ratings services are not. (Dkt. 41 at 5-6; Dkt. 220 at 8); *see Home Performance Alliance, Inc. v. Better Bus. Bureau of W. Fla., Inc.*, 354 So. 3d 1165, 1166 (Fla. 2d DCA 2023). Thereafter, Plaintiffs disregarded that essential distinction by trying to bar Leapfrog from even expressing its constitutionally protected opinions in developing its Safety Grades—not just its representations about the Grades—compounding the cost of the litigation to no good end. (Dkt. 203 at 72-75.)

B. Plaintiffs Unreasonably Multiply Costs Throughout The Litigation

Plaintiffs' discovery tactics further ballooned their bills. Plaintiffs made far-ranging discovery requests comprising 46 requests for production and 20 interrogatories. (Blair Dec. ¶ 5.) Leapfrog proposed targeted search terms, but Plaintiffs rejected them as "too narrowly constructed." (*Id.* ¶ 6.) Plaintiffs then proposed counter search terms to which Leapfrog acquiesced. (*Id.*) Plaintiffs further expanded their list of search terms on July 9, 2025, on July 16, 2025, and again on July 18, 2025. (*Id.*)

Plaintiffs' search terms hit upon nearly a million pages of documents, as Leapfrog reported to Plaintiffs on July 18 and again on July 25. (*Id.* ¶ 8.) Yet Plaintiffs responded by urging Leapfrog to produce in haste, which Leapfrog endeavored to do as best it could amidst the delays inherent in producing voluminous data in batches, beginning with RFPs Plaintiffs identified as high priority. *Id.* At that point, Plaintiffs began complaining that the documents produced according to their own search terms were unduly burdensome for Plaintiffs to review. (*Id.* ¶ 9.)[1]

By contrast, when due to respond to *Leapfrog's* discovery requests, Plaintiffs devoted their energies to trying withholding responsive documents. Plaintiffs refused to respond to eight of

[1] Plaintiffs continued compounding the discovery burden through eve of trial when Plaintiffs devoted "substantial additional time" to pressing for information about an alleged change to language on Leapfrog's webpages—information that was found in Lauren Bailey's deposition designations, as played at trial. (Dkt. 225 at 8.) Perplexingly, the issue never even made it into Plaintiffs' final proposed findings of fact and conclusions of law. (Dkt. 203.)

Leapfrog's interrogatories and 19 of Leapfrog's requests for production. (*Id.* ¶ 10.) After initially citing "relevance" objections, Plaintiffs belatedly pivoted to dropping their damages claim—which came as a surprise to Leapfrog after several meet and confers lasting more than an hour apiece where Plaintiffs never previewed the maneuver. (Dkt. 62 Ex. 2.) Plaintiffs then devoted resources to seeking a protective order, necessitating a hearing before Judge Matthewman. (Dkt. 55.) Post-hearing, Plaintiffs agreed to provide additional discovery. (Dkt. 76; *see also* Regensdorf Report ¶ 59.) Plaintiffs also exacerbated costs by marking the vast majority of documents they produced as "confidential." (Blair Dec. ¶ 18.) This included communications between Plaintiffs and Leapfrog. (*Id.*) Because this designation made it nearly impossible for Leapfrog to file Plaintiffs' documents, Leapfrog challenged Plaintiffs' spurious confidentiality designations in emails and meet and confers in late October and early November. (*Id.* ¶ 19.) Only after Leapfrog informed Plaintiffs that it would need to challenge Plaintiffs' excessive confidentiality designations did Plaintiffs finally relent. (*Id.* ¶ 20.)

Just as Plaintiffs abandoned their request for a preliminary injunction midstream, they also abandoned the claim for damages set out in their original complaint. (Dkt. 1 at 53.) Plaintiffs' notice of withdrawal was not filed until August 12, 2025, after both sides had already engaged in substantial damages-related discovery. In addition to seeking to avoid reciprocal discovery, Plaintiffs acknowledged that they decided to drop their damages claim in part because Leapfrog's Answer noted Plaintiffs' failure to mitigate damages and the speculative and remote nature of the claimed damages. (Dkt. 54 at 1.) In a similar vein, Plaintiffs engaged, prepared, and then dropped their branding expert, Thomas Chakurda. (*See* Regensdorf Report ¶¶ 49-51.)

Several of the motions Plaintiffs *did* fully brief were meritless and were denied by the Court in their entirety. This included Plaintiffs' summary judgment motion. (Dkt. 139; *see also* Regensdorf Report ¶ 62.) In denying Plaintiffs' motion for summary judgment, the Court noted Plaintiffs' "problematic interpretation" of FDUTPA as not requiring that an "unfair" practice relate to consumer injury and Plaintiffs' "misplaced" argument that hospitals are consumers under FDUTPA. (Dkt. 139 at 9-10.) Plaintiffs' purported *Daubert* motion seeking to exclude four Leapfrog witnesses was similarly denied, as Plaintiffs' arguments "boil[ed] down more to objections on relevance and/or sufficiency of the evidence grounds" that were better saved for trial. (Dkt. 176 at 1, 3; *see also* Regensdorf Report ¶ 62.)

The parties attended a settlement conference before Magistrate Judge Matthewman in November 2025. (Dkt. 106.) The conference resulted in an impasse, though Judge Matthewman expressly found that "[n]egotiations were held in good faith" at the conference. (*Id.*) Plaintiffs contend that the impasse demonstrates Leapfrog's ostensible refusal to compromise, but omit any mention of their own settlement demands and own decision not to compromise. (Dkt. 225 at 4.)

The case proceeded to a five-day bench trial. At trial, Plaintiffs put on a single unified case that did not differentiate among the five hospitals—just as all prior motion practice and discovery had proceeded with Plaintiffs acting as a unit. Never once did Plaintiffs file separate briefs. (*See* Regensdorf Report ¶ 11.)

The Court ruled for Plaintiffs and entered injunctive relief. (Dkt. 212.)

C. Leapfrog Challenges The Judgment On First Amendment Grounds Following Plaintiffs' Threats To Initiate Contempt Proceedings

Following the entry of the injunction, Plaintiffs and their parent company, Tenet Healthcare Corporation, wrote several demand letters to Leapfrog. In an April 14, 2026 letter, Plaintiffs alleged Leapfrog's "noncompliance with the Court's recent injunction" based on aspects of Leapfrog's reporting that the Court's injunction order was silent about. (Dkt. 219-1 at 1.) The letter demanded that Leapfrog remove content from its website, including a page noting that hospitals that declined to respond to Leapfrog's survey had "Declined To Respond," and objected to a pop-up stating that "Thousands of hospitals nationwide report to the Leapfrog Hospital Survey to help patients and purchasers make better health care decisions. This hospital did not participate. Ask them why not." (*Id.* at 2-4.) Plaintiffs' letter alleged that Leapfrog was violating the injunction by using its "Declined to Respond" label and accompanying, fully disclosed definition. (*Id.*) The letter further claimed that Leapfrog violated the injunction by opining that facilities that declined to respond "deprived patients of 'critical, life-saving information.'" (*Id.* at 2-3.) Even though the Court's injunction did not restrict Leapfrog's expression on the relevant website—leapfroggroup.org—which does not display Safety Grades at all, Plaintiffs tried to censor Leapfrog's speech as to "all Tenet-owned hospitals," including dozens that were never joined in this case. (*Id.* at 4.) The letter also demanded that "Leapfrog agree that it will not rate or otherwise score any Tenet-owned [Ambulatory Surgical Center (ASC)] facility" as part of a planned ASC public reporting program never addressed by this litigation. (*Id.* at 5.) Based on these asserted violations of the injunction, Plaintiffs threatened to "pursue . . . enforcement measures under Federal Rule of Civil Procedure 65." (*Id.*) When Leapfrog responded by highlighting the

constitutional offensiveness of these threats, Plaintiffs seemed to backtrack while pledging to "continue to carefully monitor" Leapfrog's speech. (Dkt. 219-3 at 3.)

Leapfrog has moved to alter or amend the judgment on First Amendment and constitutional-avoidance grounds. (Dkt. 220.) As a protective measure, Leapfrog also filed a notice of appeal. (Dkt. 221.) Two weeks later, Plaintiffs filed the instant fee motion even as Leapfrog objected to its prematurity citing FDUTPA's appeal-exhaustion requirement and binding Eleventh Circuit precedent interpreting it, as well as the facial unreasonableness of the fees Plaintiffs claim. (Dkt. 231-1.) Leapfrog accordingly filed a separate expedited motion for summary denial of the fee motion or, alternatively, to hold the fee motion in abeyance or convene a status conference. (Dkt. 227.) That expedited motion is now fully briefed and remains pending.

LEGAL STANDARD

A "fee applicant bears the burden of establishing entitlement to attorney's fees" and the reasonableness of the fees claimed. *Otto v. City of Boca Raton*, 2025 WL 2952783, at *2 (11th Cir. Oct. 20, 2025). FDUTPA "vests the trial court with discretion to award fees and costs" to the prevailing party. *Gonzalez v. Nobregas*, 357 So. 3d 193, 195 (Fla. 3d DCA 2023). District courts likewise have discretion to determine the amount of a reasonable attorney's fee, which they may calculate by "multiplying the number of hours reasonably expended on the litigation times a reasonable hourly rate"—often called the "lodestar method." *Caplan v. All Am. Auto Collision, Inc.*, 36 F.4th 1083, 1089 (11th Cir. 2022) (citation omitted). In applying that method, district courts must "deduct time for excessive or unnecessary hours," "unnecessary motion practice," and unreasonably "litigious" conduct. *Id.* at 1090-91.

ARGUMENT

I. PLAINTIFFS ARE NOT ENTITLED TO FEES OR COSTS

Plaintiffs are not entitled to any fees or costs under FDUTPA. Their motion is premature under FDUTPA's express terms and binding circuit precedent. Beyond that, their requested fee award offends First Amendment values and state public policy. And the traditional multi-factor test for evaluating fee claims under FDUTPA weighs strongly against an award. The Court should deny Plaintiffs' motion in its entirety for any or all of these reasons.

A. Plaintiffs Are Not Prevailing Parties Under FDUTPA And Their Motion Is Premature As A Matter Of Law

For the reasons explained in Leapfrog's motion to summarily deny Plaintiffs' fees motion (Dkt. 227) and reply in support (Dkt. 232), which Leapfrog fully incorporates here, Plaintiffs' motion is premature and defective on that basis alone. As Plaintiffs concede in the instant motion, when it comes to "the timing of this motion," "[e]arlier decisions"—including binding Eleventh Circuit authority—"treated FDUTPA's exhaustion-of-appeals language as controlling." (Dkt. 225 at 6 n.1.) Under Florida Statutes § 501.2105(1), a prevailing party "may" receive a fee award only "after judgment in the trial court and exhaustion of all appeals." (emphasis added). Binding precedent therefore holds that, "[t]o award such fees" in federal as well as state court, "the Court must determine if [litigants] were prevailing parties, and ensure that all appeals have been exhausted." *Herbst v. Am. Orthodontics Corp.*, 2025 WL 3755394, at *1 (S.D. Fla. Jan. 23, 2025) (Middlebrooks, J.) (emphasis added); *see also M.G.B. Homes, Inc. v. Ameron Homes, Inc.*, 30 F.3d 113, 115 (11th Cir. 1994). Courts interpret the "plain language of Fla. Stat. § 501.2105(1) at face value and routinely den[y] motions for attorney's fees . . . under FDUTPA without prejudice, subject to renewal, if appropriate, following the conclusion of an appeal." *Novo Nordisk, Inc. v. Wells Pharmacy Network, LLC*, 2025 WL 1018422, at *3 (M.D. Fla. Apr. 4, 2025). Far from displacing FDUTPA's timing provisions, Federal Rule of Civil Procedure 54(d)(2)(B) incorporates them, specifying a default timeline for filing "[u]nless a statute or a court order provides otherwise." Fed. R. Civ. P. 54(d)(2)(B).

Plaintiffs try, but fail, to dispel that authority by invoking a recent Supreme Court case, *Berk v. Choy*, 607 U.S. 187 (2026). Plaintiffs purport to find revelatory *Berk*'s observation "that, when a valid Federal Rule of Civil Procedure answers the disputed timing question, it governs notwithstanding contrary state law. (Dkt. 225 at 6 n.1.) But that merely restates first-year civil procedure doctrine, as long articulated by the Supreme Court and the Eleventh Circuit. *See Hanna v. Plumer*, 380 U.S. 460, 471 (1965); *Cohen v. Off. Depot, Inc.*, 184 F.3d 1292, 1296 (11th Cir. 1999) ("Under *Hanna,* the proper question to ask is not whether the state law provision is procedural or substantive; instead, the court must ask whether the state law provision conflicts with a federal procedural rule. If it does, the federal procedural rule applies and the state provision does not."), *vacated in part on other grounds*, 204 F.3d 1069 (11th Cir. 2000).

Since filing their original motion, Plaintiffs have shifted positions; now, they claim that they need not resort to *Berk* or the *Erie* doctrine, and are correct under existing precedent, because

there is no conflict between federal and state law. (*See* Dkt. 231.) Plaintiffs are right to now concede, contrary to their fees motion, that there is no conflict between federal and state law. But they were correct the first time about what state law requires: As this Court has expressly recognized, FDUTPA controls when fees can be "award[ed]." *Herbst*, 2025 WL 3755394, at *1. That is because, as the Eleventh Circuit has held, FDUTPA "expressly includes the culmination of the appellate process in its definition of a prevailing party." *M.G.B. Homes*, 30 F.3d at 115. And under FDUTPA, only a "prevailing party" may move for fees. Fla. Stat. § 501.2105(1). Because Leapfrog's "appeals" have not "been exhausted," there is not yet any prevailing party whose fees may be sought and "award[ed]" at this time. *Herbst*, 2025 WL 3755394, at *1; (*see also* Dkt. 225 at 6 n.1 (citations omitted)). At a minimum, judicial economy counsels in favor of deciding the motion after the conclusion of appeal.

B. Plaintiffs Should Not Be Awarded Fees Even Assuming They Properly Qualify As Prevailing Parties

In any event, the motion should be denied whenever it comes. Leapfrog is a consumer-advocacy nonprofit that publishes constitutionally protected speech on issues of urgent public concern. Heaping a substantial fee award atop a broad permanent injunction would undermine—not promote—both the First Amendment and the policy goals enshrined by the Florida Legislature. Moreover, the discretionary factors for FDUTPA fee awards set out in *Humane Society of Broward County, Inc. v. Florida Humane Society*, 951 So. 2d 966 (Fla. 4th DCA 2007), point to the same outcome. The Court thus has ample reason to deny fees on the merits. Mr. Regensdorf, who has lectured extensively on FDUTPA fee awards, likewise concludes that the *Humane Society* factors weigh against any award approaching the claimed amount. (Regensdorf Report ¶¶ 3-8, 78-80.)

1. First Amendment And Public Policy Concerns Alone Warrant Denial Of Any Fee Award

The Court should deny any fee award because any such award would be anathema to both the First Amendment and state public policy as expressed by the Florida Legislature. That is reason enough to deny fees, even setting aside other factors. *See Gonzalez*, 357 So. 3d at 195 (the *Humane Society* factors are "non-exhaustive" and courts "may consider" them).

This Court has recognized that Leapfrog is "a watchdog" nonprofit organization devoted to the "laudable" mission of promoting the "safety, quality and affordability of U.S. health care by using transparency to support informed health care decisions" for patients nationwide. (Dkt. 212 at 3, 29.) That mission is no less laudable, no less urgent, and no less dependent on adequate

financing following the Court's injunction. Even assuming the Court's judgment persists unaltered, the Court's order addressed Leapfrog's publication of Safety Grades as applied to only a small number of local hospitals who decline to report their data in Leapfrog's survey. (*Id.* at 40-41.) Leapfrog's assessments of other hospitals nationwide remain beyond reproach. Those constitutionally protected assessments not only inform consumers but stand to save lives. Yet a fee award—particularly of the size that Plaintiffs now demand—would threaten Leapfrog's very existence and, along with it, Leapfrog's consumer-focused mission. The requested amount of $10.5 million would represent a financial death sentence for Leapfrog; even on Plaintiffs' own account, it exceeds Leapfrog's annual *revenue* (*before* any expenses) by well over a million dollars. (Dkt. 225 at 9-10; *see also* Regensdorf Report ¶¶ 5, 82.)

It would not be a sound exercise of discretion to bankrupt a consumer-advocacy press organization in the name of protecting consumers. "[T]he imposition of attorney's fees and costs is a form of liability, particularly in the First Amendment context, where even their mere potential may have a chilling effect on First Amendment rights." *Publius v. Boyer-Vine*, 237 F. Supp. 3d 997, 1019-20 (E.D. Cal. 2017). Assuming this Court continues to fault specific aspects of Leapfrog's speech about five local hospitals, it by no means follows that the Court should end Leapfrog's vitally important and constitutionally protected work on behalf of patients nationwide. Otherwise, FDUTPA would become a chilling regime under which "would-be critics of official conduct may be deterred from voicing their criticism . . . because of . . . fear of the expense of" litigation. *N.Y. Times Co. v. Sullivan*, 376 U.S. 254, 279 (1964).

The Court should decline Plaintiffs' invitation to set that chilling precedent. The injunction permanently restraining Leapfrog's speech—which, Leapfrog respectfully submits, also transgresses constitutionally sacrosanct ground—more than suffices. There is no good reason why this Court should magnify the obvious threat to free expression.

Even louder alarms should be raised by Plaintiffs' studied disregard of acknowledged First Amendment constraints. The Court denied Leapfrog's motion to dismiss on the premise that the First Amendment permits "a challenge to [Leapfrog's] representations about its methodology," but not to the protected opinions of "online grading services," like Leapfrog's, "which often rely on a subjective weighing of objective data." (Dkt. 41 at 5-6.) At trial, however, Plaintiffs blew past that constitutional limit, insisting on an injunction that enjoined publication of the Safety Grades themselves, the imputed-value methodology underlying them, and any similar

methodology—not just factual representations about the methodology. (Dkt. 203 at 72-75; Dkt. 212 at 40-41.) Although Plaintiffs now bid to avoid scrutiny of their overreach based on procedural arguments (Dkt. 223 at 6-8, 12-13, 15-17, 19), those arguments have no place in this context, where the Court is being asked to exercise its discretion contrary to core constitutional constraints.

Worst of all may be Plaintiffs' post-judgment effort to leverage the injunction and the specter of contempt under it to impose a prior restraint. (Dkt. 219-1; Dkt. 219-3.) As meritless and constitutionally foreclosed as Plaintiffs' effort is, it shows they want to amass every conceivable arrow into their censorial quiver. No sooner had the Court entered judgment than the Plaintiffs threatened, *e.g.*, to pursue contempt proceedings against Leapfrog for speech not even plausibly covered by the Court's injunction, including speech about *non-parties* and a ratings program this Court has never addressed. (Dkt. 219-1.) Since then, Plaintiffs have continued threatening Leapfrog in the same vein. The Court should not endorse, enhance or encourage this heavy-handed, censorial campaign.

FDUTPA's text, history, and purpose lead to the same conclusion. FDUTPA does not provide for automatic fee awards; in 1994, the Florida legislature amended the statute to make any award under it discretionary. *Humane Soc.*, 951 So. 2d at 971. That discretion exists for cases like this one. Leapfrog differs profoundly from the typical FDUTPA defendant that has misled its own customers for profit. It is a nonprofit organization whose mission is to *protect* consumers by publishing information vital to their safety and wellbeing. Plaintiffs are blinking reality when they paint the mechanical entry of a discretionary eight-figure fee award against a consumer watchdog as though it is "ordinary." (Dkt. 225 at 5.) In actuality, such an award would be both extraordinary and perverse: Plaintiffs want to use the prospect of bankrupting a consumer-advocacy nonprofit as means to censor and silence its speech, at the grave expense of patients nationwide and also of freedom of speech and of the press. The Court should decline to assist them.

2. The *Humane Society* Factors Do Not Support A Fee Award

Alternatively or in addition, the Court should deny fees under the *Humane Society* factors. These "non-exhaustive" factors "include: (1) the scope and history of litigation; (2) the ability to pay fees; (3) whether an award of fees would deter future conduct; (4) the merits of the respective positions of the parties; (5) whether the claim was frivolous, unreasonable, or groundless; (6) whether claims or defenses were raised to frustrate or stall; and (7) whether the claim was brought to resolve a significant issue under FDUTPA." *Gonzalez*, 357 So. 3d at 195 (quoting *Humane*

Soc., 951 So. 2d at 971-72). Here, each factor counsels against fees or is neutral. *See Colomar v. Mercy Hosp., Inc.*, 2008 WL 4459383, at *5 (S.D. Fla. Sept. 29, 2008) (denying fee award under FDUTPA to prevailing-party hospital because the *Humane Society* factors were either neutral or favored non-prevailing party), *aff'd*, 335 F. App'x 29 (11th Cir. 2009).

Scope and history of the litigation. This factor weighs against fees or is, at most, neutral. Responsibility for multiplying the cost of this litigation belongs with Plaintiffs, which staffed this case with more than two dozen billers across three law firms even though local counsel was thoroughly capable of handling the case on its own. The predictable result was a gargantuan tab—$10.5 million in fees purportedly resting on 13,149.20 hours billed, the equivalent of 547 full calendar days and triple the number of hours billed by Leapfrog's core counsel team. Leapfrog should not be forced to bear the resulting, gratuitous costs. (*See also* Regensdorf Report ¶¶ 28-33, 35-39.)

The record and Plaintiffs' own invoices drive the point home. Plaintiffs seek to charge Leapfrog with paying for research on causes of action, like defamation (*see, e.g.*, Dkt. 226-1 at 16, 21-22, 49), that Plaintiffs never pursued, a damages claim they pled and forced Leapfrog to defend against in discovery but then abandoned (Dkt. 54), and a withdrawn motion for preliminary injunction (Dkt. 20). Plaintiffs also filed a series of meritless motions that the Court denied in their entirety—including Plaintiffs' summary judgment motion (Dkt. 139) and their motion to exclude four Leapfrog witnesses (Dkt. 176). (*See* Regensdorf Report ¶¶ 60-62.) Plaintiffs' motion (Dkt. 225) is silent about all of their doomed tactics and filings.

Separately, Plaintiffs' skewed recounting of the litigation history (*id.* at 7-8) obscures Plaintiffs' own culpability in causing the expenditures they lament. Plaintiffs complain about the size of Leapfrog's document productions, but omit that they demanded that Leapfrog apply unreasonably broad search terms while ignoring Leapfrog's warnings that their requested discovery parameters were disproportionate. Plaintiffs contend that Leapfrog served discovery requests too close to the deadline, but omit that they unilaterally postponed the deadline without objection from Leapfrog. Plaintiffs insist that Leapfrog modified language on its website before trial, but ignore that they did not even mention these changes in their post-trial proposed findings and conclusions (Dkt. 203). And Plaintiffs invite the Court to draw the adverse inference that Leapfrog "refused to compromise" (Dkt. 225 at 4) from the parties' impasse at a settlement conference, apparently forgetting Judge Matthewman's express finding that Leapfrog

"negotiat[ed] in good faith" and the fact that Plaintiffs obtained substantially *less* relief at trial than they demanded as part of a settlement. (Dkt. 106; *see also* Dkt. 219-2 (refuting Plaintiffs' contentions that they are entitled to more relief than the injunction affords).)

Plaintiffs' unreasonable and disproportionate legal spend on this case by itself warrants counting the first factor in Leapfrog's favor. At worst, however, the factor is neutral, as it frequently is following hard-fought litigation. *See, e.g.*, *Colomar*, 2008 WL 4459383, at *2 (concluding that factor was neutral where litigation "generat[ed] significant amounts of fees and costs" but "was heavily litigated by all Parties").

Ability to pay. This factor weighs strongly against any award. As explained above, a fee award in the amount Plaintiffs demand would likely wipe out Leapfrog. Plaintiffs' assertion that Leapfrog's $8 million in 2024 revenue confirms its capacity to absorb an even larger fee award (Dkt. 225 at 9) ignores the obvious: an award that exceeds an organization's entire annual revenue is not one that it can be expected to pay.[2] As for Plaintiffs' reliance on Leapfrog's post-judgment fundraising campaign (*id.*), that is equally misplaced and actually cuts against them. A solvent organization with deep reserves would not need to raise funds on an emergency basis after a judgment. Plaintiffs' claim that Leapfrog could pay their attorney's fees does not square with the frugality Leapfrog maintained in litigating this case for a fraction of what Plaintiffs spent.[3] (Blair Dec. ¶ 2.)

Unable to muster a credible argument that Leapfrog can pay their desired award, Plaintiffs attempt to change the subject, contending that Leapfrog should be "blame[d]" for the expenditure of all of Plaintiffs' fees. (Dkt. 225 at 9.) Of course, that argument has no bearing on whether Leapfrog can afford an eight-figure fee. It also defies both the record and common sense. At every turn, Plaintiffs multiplied the scope of the litigation. *See supra*, p. 3-5. Especially when considered alongside Plaintiffs' unjustifiable staffing and billing practices, it is quite clear that Plaintiffs have only themselves to blame for their scorched-earth approach.

---

[2] Leapfrog's most recent, publicly available Form 990 reflects total revenue of approximately $8.85 million, before expenses.

[3] Plaintiffs' motion (Dkt. 225 at 9) references Leapfrog's $5 million primary liability insurance policy. Following the Court's entry of the injunction order, however, Leapfrog was alerted by its insurance broker to an excess liability policy affording an additional $2.5 million in potential coverage, the terms of which have been provided to Plaintiffs in parallel with this filing.

Deterrence. This factor counsels strongly against fees. In the context of a nonprofit press organization engaged in constitutionally protected activity nationwide, deterrence is *disfavored* as both a constitutional and state-law matter. As Plaintiffs concede, Leapfrog already "bear[s] the burden of complying with the Court's injunction" (Dkt. 225 at 10), and Plaintiffs have already shown that the injunction equips them all too well to invoke the threat of contempt proceedings to daunting deterrent effect. (Dkt. 219-1.) In urging the Court to pile on, Plaintiffs give the lie to their argument (Dkt. 225 at 5) that their requested award is not punitive. Plaintiffs also mischaracterize FDUTPA's fee provision as authorizing near-automatic cost shifting. (*See* Dkt. 225 at 10 (arguing that non-prevailing parties "cannot shift the cost of stopping their unlawful conduct onto the" prevailing parties).) Assuming prevailing-party status is satisfied—and it is not here—any award is designedly discretionary, and courts frequently exercise their discretion to deny fees to prevailing parties. *See, e.g.*, *Colomar*, 2008 WL 4459383, at *5; *Taviere v. Precision Motor Cars, Inc.*, 2010 WL 557347, at *5 n.10 (M.D. Fla. Feb. 12, 2010). Moreover, as Mr. Regensdorf observes, there appear to be no other entities—for-profit or nonprofit—operating nationally in the hospital safety evaluation space other than the federal government; Leapfrog appears to be the sole provider of this type of publicly available hospital safety information. A fee award exceeding $10,000,000 against the only participant in that market would not calibrate deterrence—it would eliminate the deterred actor entirely and chill any future entrant from occupying the same public-interest role. (*See* Regensdorf Report ¶¶ 5, 79.)

Degree of the non-prevailing party's bad faith. This factor weighs strongly against an award. Plaintiffs contend otherwise only by misstating the relevant inquiry as being whether the non-prevailing party "lost." (Dkt. 225 at 10.) But this factor does not rehash the prevailing-party question. Rather, the question here is whether "the merits of the respective positions" reflected any "degree of the opposing party's culpability or bad faith." *Humane Soc.*, 951 So. 2d at 971. And Plaintiffs offer no serious argument that this demanding standard is met. They primarily recount issues Leapfrog raised and lost, omitting an abundance of unsuccessful arguments that Plaintiffs made themselves. (Dkt. 225 at 10-11.) Such reasoning cannot carry this factor. *See Colomar*, 2008 WL 4459383, at *4 (finding that factor weighs in favor of non-prevailing party where prevailing party "can point to no meaningful evidence that [its opponent] litigated the action in bad faith, other than reiterating the fact that [it] ultimately prevailed").

Recognizing as much, Plaintiffs retreat to an argument having nothing to do with the conduct of the litigation or the "merits of the respective positions" taken in it by the parties: that Leapfrog's CEO, Leah Binder, published and spoke about Plaintiffs' poor Safety Grades. (Dkt. 225 at 10-11.) But that does not evince bad faith. As reflected in Leapfrog's declaration (Dkt. 215) and pending motion to alter or amend the judgment (Dkt. 220), Leapfrog continues to believe that its Safety Grades reflect justified assessments of hospital safety and that such assessments are constitutionally protected. Plaintiffs' lone case on this score, involving a plaintiff that brought suit for improper "anticompetitive purposes and in bad faith," is vastly afield. *Warren Tech., Inc. v. UL LLC*, 2020 WL 9219127, at *6 (S.D. Fla. Dec. 17, 2020).

Plaintiffs' bad faith in bringing suit. This factor weighs in favor of Leapfrog. As outlined in Leapfrog's motion to amend or alter the judgment (Dkt. 220), Plaintiffs' legal theories of liability violate the First Amendment and exceed the Court's motion-to-dismiss ruling. And Plaintiffs' post-judgment threats of seeking contempt sanctions against Leapfrog for speech transgress even further beyond the confines of this litigation. (Dkt. 219-1.) Plaintiffs' tactics betray a bad-faith, patently unconstitutional effort to censor Leapfrog and impose a prior restraint against its protected expression on matters of public concern. Elsewhere, Plaintiffs' own counsel has agreed that invoking the coercive power of the government to "attempt[] to take control of … journalistic outlets" and "attempt[] to influence or control their reporting content" violates the First Amendment. Jessica Jerreat, *Court Injunction Bars USAGM From Editorial Interference*, VOA News (Nov. 21, 2020), https://www.voanews.com/a/press-freedom_court-injunction-bars-usagm-editorial-interference/6198667.html. One wishes that Plaintiffs' counsel actually practiced what counsel preaches. By no stretch of the imagination should Plaintiffs' unconstitutional campaign now be rewarded (and replenished) with an eight-figure fee award against a nonprofit.

Defense raised to frustrate or stall. This factor weighs in Leapfrog's favor. Although Leapfrog asserted defenses that the Court ultimately did not credit, that is not the same thing as raising defenses for the improper purpose to frustrate or stall. To the contrary, Leapfrog litigated this case on the same expedited schedule that Plaintiffs did and cooperated to meet that demanding schedule with far fewer lawyers than Plaintiffs. Plaintiffs' inflammatory and misleading recounting of Leapfrog's unsuccessful defenses (Dkt. 225 at 11) does not persuade. This factor does not duplicate the prevailing-party inquiry; Plaintiffs must instead show that Leapfrog raised defenses for an improper purpose. They cannot. Plaintiffs' own telling confirms that Leapfrog

judiciously dropped defenses at summary judgment. (*Id.*) And while Plaintiffs accuse Leapfrog of "gamesmanship" for ostensibly modifying its website on "the eve of trial," Plaintiffs ignore that they dropped this issue following trial because it was irrelevant. (*Id.* at 12; *see* Dkt. 203.)

Significant legal question. This factor either weighs against a fee award or is neutral. Struggling to identify a significant *legal* question that the Court resolved at trial, Plaintiffs point to the Eleventh Circuit's decision during the litigation in *FTC v. Corpay, Inc.*, 164 F.4th 807 (11th Cir. 2026). But the Court's analysis of that case in its injunction order underscores the *insignificance* of *Corpay*; the Court spent just one paragraph discussing *Corpay*'s effect on the law, and in the next sentence, determined that its ruling did not depend on *Corpay* anyway. (Dkt. 212 at 19-20.) The most significant legal questions in the case are the First Amendment and constitutional-avoidance arguments that now await further treatment post-trial. (Dkt. 220.) But those arguments derive from the Court's motion-to-dismiss order, decades of First Amendment precedent, and well-established Florida law. (*Id.* at 7-20.) Accordingly, the *Humane Society* factors weigh decisively against awarding fees, and the Court should deny Plaintiffs' motion.

II. PLAINTIFFS' CLAIMED FEES AND COSTS ARE UNREASONABLE

Even if this Court were to find that Plaintiffs are entitled to fees under FDUTPA, which they are not, their claimed fees would be wildly excessive. "The fee applicant 'bears the burden of . . . documenting the appropriate hours expended and hourly rates.'" *Herbst*, 2025 WL 3755394, at *3 (citation omitted). Plaintiffs cannot meet that burden because the claimed hours expended—13,149.20 hours for 25 attorneys purporting to bill an average of over 525 hours each—are unreasonable on their face and cannot be justified based on Plaintiffs' submitted bills. Leapfrog's expert, Mr. Regensdorf, has reviewed the billing records and identified multiple independently sufficient—and cumulatively overwhelming—defects requiring a substantial reduction. (Regensdorf Report ¶¶ 72-81.) And Leapfrog's arguments against Plaintiffs' outrageous requested award figure are not waived, as Leapfrog has explained in its reply supporting summary denial of Plaintiffs' fee application. To the contrary, Local Rule 7.3 expressly invites "either party [to] move the Court to determine entitlement *prior* to submission on the issue of *amount*." S.D. Fla. L.R. 7.3(a) (emphases added). Nor is there any requirement that such motions be fully briefed, let alone adjudicated; instead, the contemplation is simply that such motions will be "filed and served" within sixty days of judgment and that the parties will confer with "reasonable particularity," as Leapfrog did by any fair reading of the record. (Dkt. 232 at 7-10.)

A. Plaintiffs' Able Local Counsel Was Capable Of Handling This Case, Which Plaintiffs Grossly Overstaffed Compared to Leapfrog

Plaintiffs engaged multiple law firms: Gibson, Dunn & Crutcher LLP, a national firm, and local counsel from Marcus Rashbaum Pineiro & Meyers LLP and Neiman Mays Floch & Almeida PLLC. "When more than one attorney represents a party, a court must deduct from the fee award any 'redundant hours.'" *Vazquez v. 1052 LLC*, 2016 WL 541432, at *3 (S.D. Fla. Feb. 11, 2016). Here, hiring a national firm on top of highly competent local counsel was itself redundant.

Plaintiffs' own submissions demonstrate that their local counsel was fully capable of leading this litigation. Jeffrey Marcus—a partner whom Chambers USA has ranked in the top band for litigation (Dkt. 226-5 at 1)—served as a "full member of the trial team," "examined multiple witnesses at trial," and participated in "core trial preparation and strategy." (Dkt. 225 at 17.) Together with his experienced Florida colleagues, Mr. Marcus and local co-counsel devoted approximately 726 hours to the case. If this team was capable of examining witnesses at trial and driving core strategy—as Plaintiffs' own fee motion concedes—the question naturally arises why it was necessary to import a team of national-firm attorneys adding 12,423 hours on top of that. (*See also* Regensdorf Report ¶¶ 31, 36.) And regardless of whether a national firm was necessary in addition to Plaintiffs' able local counsel, Plaintiffs fail to justify deploying ***25*** lawyers in a case involving a single cause of action that was tried to completion in under nine months. Indeed, courts in this district have found far fewer attorneys staffed on a single case to be "excessive." *See, e.g.*, *CityPlace Retail, L.L.C. v. Wells Fargo Bank, N.A.*, 2021 WL 3361172, at *1, *9–10 (S.D. Fla. Jan. 12, 2021) (***17*** lawyers in a dispute under a mortgage loan agreement that involved "almost nineteen months of prolonged litigation" and an "eight-day non-jury trial"); *Pretka v. Kolter City Plaza II Inc.*, 2014 WL 12300373, at *1 (S.D. Fla. Sept. 19, 2014) (***13*** lawyers in a class action case); *Mejia v. Com. Driver's License Sch., Inc.*, 2021 WL 1893065, at *1, *5 n.3 (S.D. Fla. Feb. 10, 2021) (***3*** lawyers in a Fair Labor Standards Act collective action). And here, there is no indication that Plaintiffs took any steps to efficiently allocate tasks across offices and teams, so it appears that at a minimum, each of these 25 lawyers duplicated the time required to get up to speed on the entire case. (Regensdorf Report ¶ 30.)

Plaintiffs' overstaffing is particularly egregious in light of the disproportionality here. Leapfrog—a small nonprofit, watchdog group defending its First Amendment rights in a case with existential stakes—enlisted a core counsel team that expended 4,500 total attorney hours defending this litigation through trial compared with Plaintiffs' 13,149.20. (*See* Blair Decl. ¶ 2.) Plaintiffs

point to no justification for spending nearly three times as many hours as Leapfrog litigating the same case with the same legal issues and record. It is also particularly unfair for Plaintiffs to outgun Leapfrog and then seek to burden Leapfrog with the associated fees. The Court can avoid this inequitable result by—at the very least—reducing Plaintiffs' fee award to more closely align with what Leapfrog spent on this case.

The only justification Plaintiffs offer for their overstaffing is that Plaintiffs represented five hospitals, creating "five separate factual records." (Dkt. 225 at 4.) But Plaintiffs never once filed separate briefs on behalf of separate hospitals. No representation agreements have been produced identifying which subset of lawyers agreed to represent any particular hospital. (*See* Regensdorf Decl. ¶11.) Indeed, Plaintiffs' pro hac vice motions were all made with respect to all Plaintiffs. (*See, e.g.*, Dkt. 9.) And the billing records confirm that every Gibson Dunn invoice submitted to the Court carries a single client-matter number—64230-01116, captioned "Leapfrog Dispute"—covering all five hospitals as a single undifferentiated matter. There are no hospital-specific matter numbers and no hospital-specific billing summaries. The billing records are structured as if this were a single-client case; indeed, the invoices were all billed to the same "client"—"Tenet Health System" in "Dallas, TX." (*See, e.g.*, Dkt. 226-1 at 39.)

Plaintiffs' counsel only introduced the "five hospital" frame after Leapfrog disclosed its own fee figure of $1.75 million in the pretrial stipulation. (Dkt. 129 at 30.) Then, at trial, lead counsel introduced the Gibson Dunn attorneys by assigning each one to a specific hospital. (Dkt. 204-1, Trial Tr. at 3.) But Plaintiffs have not disclosed any trial invoices containing any individual hospital attribution for a given attorney's work. Crediting Plaintiffs' own view that the award should be approximately $2 million per hospital (Dkt. 129 at 30; Dkt. 225 at 1), the *total* award should therefore be no more than $2 million or one-fifth of what Plaintiffs seek.

B. Plaintiffs Seek Fees for Work Related to a Preliminary Injunction and Damages That Are Not Recoverable

"[I]n determining reasonable hours the district court must deduct time spent on discrete and unsuccessful claims." *Norman v. Hous. Auth. of City of Montgomery*, 836 F.2d 1292, 1302 (11th Cir. 1988); *see also Med-Stop, Inc. v. Vandutch, Inc.*, 2025 WL 3282528, at *14 (S.D. Fla. Sept. 24, 2025) (cutting fees associated with the preparation of an unsuccessful motion to compel). Here, that requires a reduction to reflect Plaintiffs' hours attributable to their abandoned preliminary injunction, claim for damages, branding expert, and (apparently contemplated) defamation claim. Mr. Regensdorf details these categories of non-compensable work in his report.

(Regensdorf Report ¶¶ 43-51, 65.) Plaintiffs' claimed billing for this work is sizeable. The phrase "preliminary injunction" appears 74 times across the claimed billing entries and "temporary restraining order" appears 27 times. (Regensdorf Report ¶ 45.) Additional entries explicitly referencing the preliminary injunction approach 200 hours. (Dkt. 226-1 at 35-161.) One entry illustrates the absence of billing judgment particularly well: thirty-four days after the preliminary injunction was withdrawn, Kuntz billed 0.90 hours to "Revise draft motion for preliminary injunction." (Regensdorf Report ¶ 46.) No reasonable client would pay for revising a motion withdrawn for over a month, and no adversary should be required to fund it.

Similarly, Plaintiffs' abandoned damages claim generated substantial unrecoverable fees. Though Plaintiffs withdrew the claim on August 12, 2025, it had dominated both parties' discovery through July and August—after expert retention, preparation, and deposition work had already been completed. At least 19 hours of billing entries *explicitly* reference damages, but as Mr. Regensdorf explains, that figure dramatically understates the true total. (Regensdorf Report ¶¶ 48-50.) Plaintiffs likewise retained and then abandoned branding expert Thomas Chakurda only after multiple attorneys billed for preparing him and reviewing his work. (*Id.* ¶ 51.) Finally, Plaintiffs' bills include explicit references to a defamation claim that was never filed. (Regensdorf Report ¶ 65.) That these plainly non-compensable entries survived Plaintiffs' review process casts serious doubt on the diligence of that review across the far larger volume of entries too vague to evaluate independently.

C. Plaintiffs Unreasonably Inflated the Costs of Routine Tasks

The party requesting fees must exercise "billing judgment" and must exclude hours from its fees motion that would be unreasonable to bill a client, and therefore to one's adversary, "irrespective of the skill, reputation, or experience of counsel." *Norman*, 836 F.2d at 1301. When "a fee applicant seeks to recover fees for the work of multiple attorneys, the fee applicant must show that the attorneys are not unreasonably doing the same work, and are being compensated for the distinct contribution of each lawyer." *CityPlace Retail, L.L.C.*, 2021 WL 3361172, at *9.

A review of the billing entries confirms a consistent pattern of billing multiple attorneys—often three to five on a single day—for the same routine tasks, with no explanation of each attorney's distinct contribution. (Regensdorf Report ¶¶ 52-55.) To take one example at each end of the case: between February and April 2025, five attorneys all billed to "draft, review and revise" the same complaint on overlapping days, with no indication of who was responsible for what.

(Dkt. 226-1 at 23-70.) The March 14 entry for one partner alone spans 8.20 hours. (Dkt. 226-1 at 32.) On December 20, 2025, five associates billed a combined 25.5 hours to drafting or revising proposed findings of fact, with no descriptions indicating the work was divided rather than duplicated: Kuntz billed 4.80 hours, Reilly 6.00 hours, Garnick 7.00 hours, Togias 5.40 hours, and Delwiche 2.30 hours—all on the same task, on the same day. (Dkt. 226-2 at 465-67.) This is not isolated slippage, and it warrants a substantial reduction standing alone. *See Norman*, 836 F.2d at 1301.

As stated *supra* pp. 3-5, Plaintiffs also billed heavily for self-inflicted costs that are not chargeable to Leapfrog: time spent briefing a summary judgment motion and *Daubert* motion the Court denied in their entirety in terms that make clear that Plaintiffs' positions were "misplaced" (Dkt. 139 at 9-10); discovery costs generated by Plaintiffs' own overbroad search terms, which hit nearly a million pages, followed by a dispute Plaintiffs then picked with Leapfrog over the resulting production volume; and a protective order motion Plaintiffs filed to avoid their own damages discovery obligations. (Regensdorf Report ¶¶ 56-59.)

Beyond these systemic problems, the billing records contain specific entries that no reasonable client would pay and that no adversary should be required to reimburse. Entries such as "compose memorandum re legal and factual issues" (Togias, 6.40 hours, Dkt. 226-1 at 135), "calls with clients regarding strategy and status of matter and confer internally re same" (Maloney, 1.00 hour, Dkt. 226-1 at 12), and "prepare for client meeting, including developing themes for trial and overall trial strategy" (Maloney, 3.00 hours, Dkt. 226-1 at 135) provide no meaningful description of the subject matter or document worked on. *ACLU of Georgia v. Barnes*, 168 F.3d 423, 427 (11th Cir. 1999). Plaintiffs cannot claim entries are reasonable while withholding the information necessary to assess their reasonableness. *Id.*; (Regensdorf Report ¶¶ 63-65).

D. The Extent of the Unreasonableness Warrants A Large, Across-the-Board Percentage Reduction

Leapfrog should not be required to audit over 1,400 pages of billing records line by line to demonstrate that the request is inflated. Where, as here, the defects are pervasive, an across-the-board reduction is the most straightforward approach. *See, e.g.*, *Loranger v. Stierheim*, 10 F.3d 776, 783 (11th Cir. 1994) ("Where fee documentation is voluminous, . . . an hour-by-hour review is simply impractical and a waste of judicial resources."); *CITGO Petroleum Corp. v. Petroleum Logistics Serv. USA, Inc.*, 2022 WL 17718802, at *6 (S.D. Fla. Nov. 30, 2022) (noting that when overstaffing is apparent, "an across-the-board percentage reduction" is appropriate).

The defects here are numerous and severe. The submission involves over 1,400 pages of billing records that even minimal review demonstrates contain billing for abandoned work, internally duplicated effort, discovery costs inflated by Plaintiffs' own overbroad and ever-expanding demands, and entries so vague they cannot be evaluated. For all the reasons set forth above, Plaintiffs' fee request should be denied in its entirety, or in the alternative, reduced to no more than 20% of Plaintiffs' proposed figure. Reducing Plaintiffs' award to one-fifth of Plaintiffs' requested amount is in line with Plaintiffs' position that a fee award of $2 million per hospital is justified, as this case was in fact litigated as a single unit as if on behalf of a single hospital, not five. (*See* Regensdorf Report ¶¶ 33, 80.)

CONCLUSION

The Court should deny Plaintiffs' Verified Motion For Attorneys' Fees and Costs (Dkt. 225) in its entirety, or at minimum, hold the motion in abeyance pending the exhaustion of any appeals. In the alternative, the Court should substantially reduce the fee awarded.

DATED: June 8, 2026

UNITED STATES DISTRICT COURT
FOR THE SOUTHERN DISTRICT OF FLORIDA

Case No. 25– CV– 80526– MIDDLEBROOKS

GOOD SAMARITAN MEDICAL CENTER, INC., DELRAY MEDICAL CENTER, INC., PALM BEACH GARDENS COMMUNITY HOSPITAL, INC. D/B/A PALM BEACH GARDENS MEDICAL CENTER, ST. MARY'S MEDICAL CENTER, INC. AND WEST BOCA MEDICAL CENTER, INC.,

Plaintiffs,

v.

THE LEAPFROG GROUP,

Defendant.
_____/

DECLARATION AND EXPERT REPORT OF PAUL R. REGENSDORF, ESQ.

I. INTRODUCTION AND BACKGROUND OF THIS REPORT

1. I was retained by the Defendant The Leapfrog Group ("Leapfrog") to review the billing records, time entries, and supporting materials submitted by Plaintiffs in connection with their Verified Motion for Attorneys' Fees and Costs [Dkts. 225 and 226], and to render my professional opinions regarding the claim for fees, its basis, and the reasonableness of the fees and costs sought.

2. As described more fully in Section II below, I am a frequent lecturer to bar associations – and their member judges and lawyers – on the law and practice governing attorneys' fee determinations in Florida litigation. In the last several years I have given six separate lectures on these issues to the Bar Associations of every major County in the Southern District – Miami–Dade County, Broward County, and Palm Beach County, as well as the Orange County Bar. A foundational principle I teach in those seminars is that litigants must fully understand both the legal basis for any fee award and the conditions and limitations that accompany different fee–shifting frameworks. One such framework that I have encountered as an expert witness in multiple cases, and that figures prominently in my classes, is Florida's Unfair and

Deceptive Trade Practices Act [or FDUTPA as it will be referred to in this Report]. FDUTPA fee claims occupy a unique space in Florida law for several reasons that bear directly on the analysis here.

3. First, as an equitable remedy committed to the sound discretion of the trial judge, the test for neither entitlement nor amount is simply "who prevailed." I am aware that there are motions currently pending before this Court asking it to defer or deny the fee request – in part because FDUTPA, Fla. Stat. §501.2105(1), expressly provides that an award can issue only after trial and the exhaustion of all appeals. As an attorneys' fee expert, I take no position on those motions and present this Declaration only in the event the fees motion ultimately comes before the Court for decision. Second, unlike most fee–shifting statutes, FDUTPA provides no statutory guidance on the equitable factors a trial court should weigh beyond the prevailing–party prerequisite. The controlling authority to date traces to a single intermediate appellate decision: Humane Society of Broward County, Inc. v. Florida Humane Society, 951 So. 2d 966 (Fla. 4th DCA 2007). Federal courts in this District and the Eleventh Circuit have adopted the same framework. See Chow v. Chak Yam Chau, 640

Fed. Appx. 834 (11th Cir. 2015) and Bluegreen Vacations Unlimited, Inc. v. Timeshare Laws, P.A. 2024 U.S. Dist. Lexis 174419 (S.D. Fla. Sept. 25, 2024).

4. Treating that intermediate decision (and the others that follow it) as binding precedent or controlling law, it is important for this Court to realize that Humane Society recognizes a nonexclusive list of seven factors a court may utilize in determining questions relating to FDUTPA fees. Two of those factors are particularly significant to my opinions here.

5. Factor 2 – "the ability of the opposing party to satisfy an award of fees" (beyond its possible application to the question of whether to award any fees, which is outside the scope of this Declaration) squarely implicates Leapfrog's financial standing. As its opposition to the fee motion notes [Opp. at 12 n.2], the annual revenue for Leapfrog is approximately $8,850,000.00. The fee and costs request here exceeds that figure by well over $1,000,000. And of course, that number does not take into effect net or dispositive income. Notwithstanding this financial reality, Plaintiffs seek an award of fees and costs that substantially exceeds Leapfrog's annual revenue. I will return to this factor in the conclusion of this

Declaration. Factor 3 – "whether an award of fees against the opposing party would deter others from acting in similar circumstances" – addresses a concept more closely associated with punitive damages than with ordinary fee–shifting. Nevertheless, because FDUTPA addresses generically inequitable conduct, the factor remains part of the analysis. The entities that an award would seek to deter under this factor are not Leapfrog itself, but other businesses – for–profit or nonprofit – operating in the same commercial space. The difficulty in applying this factor is that, as best I can determine from publicly available information, there **are** no other entities – for–profit or nonprofit – that operate nationally in the hospital safety evaluation space other than the federal government (whose limitations were, as I understand it, a principal reason Leapfrog was created). If no viable alternative to Leapfrog has yet entered this niche market, it is difficult to see how deterrence is advanced or served by a fees–and–costs award exceeding $10,000,000 against the sole provider of this otherwise useful public information – an organization whose revenues fall far below the amount of the award. I will apply this factor as well in the conclusion.

6. Finally, all of these unique factors come into play in a statutory construct created by the Legislature of Florida that was anticipated and implemented largely to level the playing field in consumer transaction, where the aggrieved party was expected to be an individual consumer and the much larger commercial enterprise was expected to be the wrongdoer with the resources to pay. The fee–shifting provision was therefore the Legislature's way of equalizing the differential in resources and making it a fair fight. It was the statutory equivalent of giving David a more effective sling against Goliath.

7. Reality, of course, is more complicated: sometimes the defendant Goliath wins. Hence Humane Society. Worth noting is that the principal case cited by the Court in Humane Society – Rosen v. Rosen, 696 So. 2d 697 (Fla. 1997) – was not a FDUTPA case at all, but rather a dissolution of marriage case in which the Supreme Court held that the financial resources of the parties is the primary factor to be used in resolving fee issues.

8. If Rosen was not cited fortuitously but was intended to anchor the equitable framework in FDUTPA cases, then the

financial resources of the parties have a role in this Court's determinations if fees are awarded.

9. That observation brings me to the parties before this Court. At the very outset of the trial, Ms. Maloney – literally in the first words spoken by any lawyer for the plaintiffs – introduced five separate attorneys, each nominally assigned to one of the five plaintiff hospitals [Dkt. 204–1, Trial Tr. at 3]. This is not unusual in a multiparty case and was somewhat consistent with the joint pretrial stipulation [Dkt 129 at 30]. That stipulation included an estimate of fees incurred through trial at $10,000,000.00 for "the Community Hospitals" and then divided that figure equally by five, ascribing $2,000,000 in fees to each named hospital.

10. To complete the financial–resources analysis Rosen contemplates: according to the American Hospital Directory Good Samaritan Medical Center alone had revenues of almost $3,500,000,000.00, or almost three and a half billion dollars, and St. Mary's Medical Center had revenue of almost $3,900,000,000.00, or almost four billion dollars. There are three additional plaintiff hospitals. On the other side of the ledger sits Leapfrog, with annual revenues of approximately $8,850,000.

11. It also may be relevant to the fees issues in this case to identify the true plaintiff in this case. Despite efforts to assign separate counsel to each hospital and to frame this as five separate client engagements, the case was organized, run, and funded by Tenet Healthcare – the common parent of all five plaintiff hospitals – which reported $21.3 billion in revenue in 2025.[1] The billing records support this conclusion in multiple ways:

1. Every notice of appearance or pro hac vice motion by every attorney was entered for all five plaintiffs collectively, not for any individual hospital.
2. Multiple attorneys nominally assigned to a single hospital routinely appeared in proceedings and handled work for all five plaintiffs interchangeably.
3. At trial the work of each of the five lawyers was never focused on his or her announced client, but instead

[1] Tenet Reports Strong Fourth Quarter and FY 2025 Results; Provides 2026 Financial Outlook (Feb. 11, 2026), https://investor.tenethealth.com/press-releases/press-release-details/2026/Tenet-Reports-Strong-Fourth-Quarter-and-FY-2025-Results-Provides-2026-Financial-Outlook/default.aspx.

changed from day-to-day among whoever was on the stand.

4. No representation agreements have been produced in which any subset of lawyers among the 20 or so Gibson Dunn lawyers who billed on this case agreed to represent any particular hospital.

5. During discovery, testimony from hospital administrators reflected that the decision to file this lawsuit was made above the hospital level. Erik Cazares testified that the decision to file was above his pay grade and was not made by his hospital's governing board. (Cazares Dep., 91:10–92:1.) Sheri Montgomery, when asked who made the decision on whether Good Samaritan should file suit, testified that it was "[m]aybe someone at the corporate office. I'm not sure." (Montgomery Dep., 101:11–15.) This testimony is consistent with the conclusion that the litigation was centrally directed by Tenet, not by the individual hospitals nominally identified as plaintiffs.

6. All time records were maintained on a single client–matter number, with no hospital–specific matter numbers or billing summaries.
7. No attempt was made in time entries or in the bill itself to apportion any time to the separate claim of any one hospital.
8. The periodic bills were addressed to a single client at a mailing address in Dallas, Texas – the headquarters of Tenet Healthcare.

12. Now, there is nothing inherently improper about a corporate parent funding litigation on behalf of its subsidiaries. But when the structure of that arrangement is obscured in the fee application, and when the true plaintiff – a $21.3–billion–revenue corporation – is effectively substituted for five "community hospitals" in a one–count FDUTPA case with no preliminary relief pursued and no damages recovered, those facts are material to the Court's equitable analysis under Humane Society.

13. The records I have reviewed strongly suggest that this litigation was not organized to efficiently and professionally manage a single–count FDUTPA matter for five Palm Beach County

hospitals, but rather was centrally managed to apply maximum pressure on the continued existence of the only nonprofit watchdog in this space. As I explain throughout this Report, the billing records are consistent with that conclusion.

II. MY QUALIFICATIONS

14. I am a fifty–three–year Florida civil trial and appellate lawyer, who remains active in both areas of practice. My practice has always been centered in, Broward, Palm Beach, and Miami–Dade Counties, but quickly expanded to a civil trial and appellate practice throughout Florida.

15. For over 42 years I practiced with the then largest firms in Florida – Fleming O'Bryan, Akerman, Stearns Weaver Miller, and finally Holland & Knight. With each I was a lead attorney in both that firm's civil litigation and its appellate practices. My practice included trials and appeals in both the state courts of Florida, as well as the federal district courts and courts of appeals. The scope of my civil trial and appellate litigation was broad and varied and regularly involved complex seven–figure cases in most litigation fields – construction, probate, medical malpractice, commercial and contract litigation, insurance, professional liability, health care,

products liability, personal injury, public utility liability, First Amendment and media litigation and others.

16. I have tried over 100 jury trial cases to verdict, as lead counsel, and have directly handled hundreds of review proceedings throughout Florida and beyond, in the District Courts and Supreme Court of Florida, as well as in three United States Circuit Courts of Appeal and the United States Supreme Court.

17. My work throughout my career has predominantly been based on negotiated hourly rates and, as the lead attorney on hundreds of trials and appeals, I supervised 10's if not 100's of other attorneys and paralegals, as well as their periodic bills. The portion of my practice today as an attorneys' fees expert, which is significant, regularly exposes me to the claimed time records and bills of tens or even hundreds of firms of all sizes and lawyers in South Florida and elsewhere. I am fully familiar with the reasonable hourly rates that are negotiated, billed, and then actually ***paid*** by the client in Florida. I regularly review the billed rates from lawyers throughout south Florida and beyond. The significance, of course, is that a reasonable market rate, actually charged and ***paid***, by real clients in the community for comparable work is the rate standard

for a case such as this. It is not a lawyer's believed worth, rack rate, or value, nor is it what other Courts have awarded.

18. When I left large–firm practice in 2015 and moved back to South Florida, in addition to working for my own clients and doing extensive pro bono work with Legal Aid organizations in Florida, I have spent voluminous hours on Florida Bar rules committees, as I have continuously since 1976. I have just finished a six–year term on Civil Rules [having previously left the Rules of General Practice and Judicial Administration Committee.] I headed up the Civil Rules Committee's work on the new Summary Judgment Rule, the new default rule that was just approved, and considering the attorneys' fees rule [1.525]. More recently I headed up the CRPC's initial response to the Workgroup's proposals to rewrite the Civil Rules in the areas of Case Management and discovery, in hopes of speeding them up, from the time of the Court's referral of the issues to the CPRC through the initial rejection of those proposals following oral argument in December of 2022 that I participated in.

19. When I left large firm practice and the many conflicts that necessarily came with large firm practice disappeared, I began

to be asked by lawyers of every stripe from around the state and beyond, on both sides of virtually all types of cases to be a reviewing expert witness on attorneys' fees and other issues. I will and do work for both plaintiffs and defendants, for both fee claimants and fee opponents, for both insureds and insurers, in both commercial and PI cases and Probate matters, on a wide variety of attorneys' fees issues, including prevailing party fees such as this case, charging liens, sanctions fees of all kinds, and attorney–client disputes.

20. Because many lawyers do not closely study the controlling law on attorneys' fee awards, I am frequently invited by major professional organizations to teach neutral CLE seminars on the subject. Recent engagements include:

- A two– session attorneys' fees course for the Miami–Dade County Bar Association's trial section and its lawyers and judges (late 2024).
- Two classes on attorneys' fees for the Broward County Bar Association, updating my 2020 seminar, for lawyers and judges of all stripes (October and November 2023).
- A one–hour course on attorneys' fees for the Palm Beach County Bar Association Probate Law Section.
- A two–hour class on trial and appellate attorneys' fees for the Orange County Bar Association (Orlando area).

21. These classes cover the gamut of important law in the area of attorneys' fees, both in state courts and federal, on virtually all common areas of the law that generate fee claims–contracts, statutes [including condominiums, FDUTPA, and until recently insurance claims].

22. I also author a periodic email/LinkedIn blog on current legal topics for thousands of Florida lawyers and Judges, usually in the area of awarding reasonable attorneys' fees. I publish my opinions statewide, for public comment, with no personal interest in increasing or decreasing fees in any type of case, but rather in providing education in a badly needed, under–educated area of the law. Since I use the same procedures regardless of the case or for which side I have been retained, and since I do not personally benefit from a higher [or a lower] award in any type of case, my opinions are generally sought by lawyers across the spectrum.

23. Because of work on previous Rules Committees and Supreme Court Commissions, I was one of the few lawyers selected by the Supreme Court to be actively involved for over five years in designing and creating the electronic Court System in Florida to mirror the federal system, with email service and efiling, that we all

use every day today in state and federal courts as practicing lawyers and judges.

24. When the Florida Supreme Court finally issued its revised Civil Rules on Case Management and Discovery to go into effect on January 1, 2025, the state ABOTA chapter in Florida and the Broward Chapter asked me to put together a statewide seminar to explain these important rules changes to Florida's lawyers and Judges. Over 7,000 people signed up to hear about these pivotal rules changes last year, with additional viewings available online.

25. I was also asked by the Legal Aid organizations in Florida and by the Public Interest Law Section of the Florida Bar to set up and run a trial skills series of seminars around the state for younger and less experienced pro bono attorneys.

26. I have attached a CV that gives more background into my 53+ years of practice as a trial and appellate lawyer and the key sheet for my objections.

27. In forming my opinions for this case, I have reviewed the following materials: (1) Plaintiffs' Verified Motion for Attorneys' Fees and Costs [Dkt. 225]; (2) the Affidavit of Sydney Scott in support of that motion [Dkt. 226]; (3) the Gibson, Dunn & Crutcher LLP

invoices attached thereto [Dkts. 226– 1, 226– 2, 226– 3]; (4) the briefing and relevant docket entries in the underlying litigation; (5) the transcripts from the depositions of the Plaintiffs' CEOs; (6) the declaration of Kimberley E. Blair, which provided the total number of attorney hours her firm billed and details about the discovery process; and (7) applicable legal standards governing fee–shifting awards in FDUTPA cases in the Eleventh Circuit and the Southern District of Florida.

III. SUMMARY OF OPINIONS

A. General Description of overbilling:

28. Based upon my review of the materials described above, it is my professional opinion that the total fee and cost award requested by Plaintiffs – $10,499,880.47 in total, comprising $9,903,527.50 in attorneys' fees and $596,352.97 in costs – is substantially unreasonable and must be drastically reduced. The totals do not reflect a measured, efficient set of billing records that could and should have been presented in this case.

29. There is nothing improper about a Florida business hiring a large international law firm and agreeing to pay that firm's national or international rates. There is similarly nothing improper

about a firm throwing many lawyers into a litigation project so long as the paying client is aware of that excess and readily agrees to pay for it. Their contract for representation should reflect that agreement and, although that or those contracts have not been produced to date, I have assumed that Gibson Dunn's staffing of this case with 20 lawyers was fully agreed to if not encouraged by Tenet.

30. And there is little doubt that the controlling real client in this case was Tenet. All counsel for all plaintiffs appeared and worked interchangeably across all five plaintiffs throughout the case. That structure required every lawyer to maintain broad familiarity with the entire case, creating massive built–in duplication of learning time across the twenty Gibson Dunn attorneys working on what was, at bottom, a single–count piece of litigation. All the while Tenet, through Gibson Dunn, had retained local counsel, as is required for non–Florida lawyers. To fulfil that responsibility, the firms of Marcus Rashbaum Pineiro & Meyers LLP and Neiman Mays Floch & Almeida PLLC were hired. Far from being a mail drop or performing perfunctory roles, Jeff Marcus [an experienced litigator of about 25 years and a former clerk to this

Court] and four of his partners joined the large group of lawyers already or soon to be on board, and took an active part in all pre–trial proceedings and discovery, and as this Court well knows, took a lead role in the actual trial itself.

31. The local counsel team demonstrated to this Court that they had the capacity and capability to handle a case of this type by themselves. And if there is any doubt that the five or so local counsel lawyers could have handled this case on their own, the proof in that pudding is that the defense effort [chiefly out of Chicago with Wilson Elser] was principally staffed and tried with about the same number of lawyers as plaintiffs' local counsel team. Tenet may have wanted to gild the lily with 20 more lawyers, but there was no professional necessity to do so.

32. This overstaffing decision – whether it originated with Tenet or with Gibson Dunn and was ratified by Tenet – is why Florida law is clear that a client's agreement with its own lawyer is the client's business, but when the terms and financial consequences of that agreement are sought to be shifted to the losing party, the court will approve and shift only the reduced amount that was efficiently reasonable and necessary. The Florida

Supreme Court expressed this principle in its leading decision on fee shifting, Florida Patients Compensation Fund v. Rowe, 472 So. 2d 1145 (Fla. 1985), emphasizing that attorneys governed by applicable rules must comply with their duties to work "economically, efficiently, and expeditiously" and to keep good, accurate and contemporaneous records of the reasonable and necessary work done on a case. Id at 1149. But Rowe was not a case dealing with a dispute between a client and its lawyer. It was a fee–shifting case in which the prevailing party wanted the loser to pay. In discussing that fee–shifting process, the Court emphasized that lawyers governed their rules and procedures [like Local Rule 11.1 requires of the lawyers in this case] must comply with their efficiency and timekeeping responsibilities not just for their own clients, but "particularly when someone other than the client may pay the fee."

33. As will be discussed in more detail in the conclusion of this report, and to the extent that the Court uses its discretion to award fees, a reasonable fee award in this case, one that could be shifted, should be limited to no more than 20 percent or one fifth of the total amount claimed, or approximately $2,000,000.

B. Summary of Specific Deficiencies

34. The fee request is infected by multiple independently sufficient and cumulatively overwhelming defects, which are described in more detail in Sections IV-VI:

1. ***Radical overstaffing.*** Despite the fact that this case involved one claim and was litigated in 8 months, Plaintiffs deployed twenty–five lawyers across three law firms, claiming bills for 13,149.2 hours of work – nearly three times the number of hours required by Leapfrog to litigate the same record. Plaintiffs' own submissions concede that their nationally ranked local counsel was fully capable of leading this case. The addition of more than twenty Gibson Dunn attorneys was unnecessary and unreasonably inflated the fee claim.

2. ***Fees for abandoned work.*** Plaintiffs abandoned their request for a temporary restraining order and preliminary injunction, their claim for monetary damages, and their retained branding expert – yet they continue to seek compensation for the substantial time spent on all of these. Work on relief that was voluntarily withdrawn without benefit to the litigation is not compensable.

3. ***Pervasive multi– attorney duplication.*** From complaint drafting through post–trial briefing, the billing records show excessive numbers of attorneys billing simultaneously to the same tasks on the same days, with no explanation of each attorney's distinct contribution.

4. ***Self– inflicted discovery costs.*** Plaintiffs propounded unreasonably overbroad discovery, initially marked virtually all of their own productions as "confidential" (requiring reproduction), filed a meritless motion for a protective order that was largely rejected, and then complained about the volume of documents produced in response to their own search–term demands. The fees they generated through this conduct are not chargeable to Leapfrog.

5. ***Fees for meritless motions.*** Plaintiffs' motion for summary judgment and Daubert motion were denied in their entirety. Fees attributable to those motions must be reduced or excluded.

6. ***Vague and unreasonable time entries.*** The billing records are replete with entries too vague to evaluate, entries for non–

FDUTPA work (including research on a defamation claim that was never filed), and pervasive redactions that make it impossible to assess whether any billing judgment was actually exercised.

7. ***The "per hospital" narrative is unsupported post– hoc arithmetic.*** The billing records carry a single matter number for all five hospitals with no hospital–specific allocation, and the $2 million–per–hospital framing appeared in Plaintiffs' submissions only after Leapfrog disclosed its own fee figure – not from any pre–existing hospital–specific billing analysis.

I. OVERVIEW OF BILLING STRUCTURE

35. Before examining the individual defects, it is essential to situate the fee request within the record of the litigation as a whole. That context demonstrates that Plaintiffs – not Leapfrog – bear responsibility for the extraordinary scale of the fees claimed, and that the claimed amounts bear no reasonable relationship to the work actually required to prevail on the single FDUTPA claim at issue.

36. Plaintiffs employed three law firms: Gibson, Dunn & Crutcher LLP, a national firm, staffed with more than twenty lawyers; Marcus Rashbaum Pineiro & Meyers LLP; and Neiman Mays Floch & Almeida PLLC. Plaintiffs' own submissions establish that Jeffrey Marcus – ranked in the top band for litigation by Chambers USA – served as a full member of the trial team, examined multiple witnesses at trial, and participated in core trial preparation and strategy. Together with his experienced colleagues, Mr. Marcus and local co–counsel devoted approximately 726 hours to this matter. If, as Plaintiffs' own fee motion concedes, this team was capable of driving core strategy and examining witnesses at trial, the necessity of importing more than twenty national–firm attorneys adding 12,423 additional hours is not self–evident and has not been explained.

37. As set forth in the Scott Affidavit [Dkt.226, p. 17–18], the total Gibson Dunn fee request is $9,206,790.00, reflecting the following timekeepers and rates:

(1) ***Gibson Dunn Partners (at $975/hr):*** Mary Beth Maloney (473.8 hrs), Daniel P. Chung (623.0 hrs), Lee R. Crain (847.3

hrs), Scott K. Hvidt (878.0 hrs), Sydney Scott (470.6 hrs), Helgi C. Walker (128.7 hrs).

(2) ***Of Counsel (at $800/hr):*** Christine M. Buzzard (888.1 hrs).

(3) ***Gibson Dunn Associates (at $675/hr):*** Robert Batista (498.8 hrs), Emily Cardone (670.2 hrs), Alexander M. Fischer (494.1 hrs), Adam Garnick (834.0 hrs), Andrew Kuntz (563.3 hrs), Mary Otoo (709.4 hrs), Kevin Reilly (663.5 hrs), Kevin Simmons (731.5 hrs), Marc Aaron Takagaki (572.8 hrs), Iason Togias (567.8 hrs).

(4) ***Other Gibson Dunn Associates (at $500/hr):*** Karsyn Archambeau (714.6 hrs), Noah Delwiche (739.2 hrs), Laura Wang (354.8 hrs).

38. Local counsel firms, Marcus Rashbaum Pineiro & Meyers LLP and Neiman Mays Floch & Almeida PLLC, are claimed at $975/hr for partners, except Brandon Floch at $875/hr, totaling $696,737.50.

39. The total combined fee claim is $9,903,527.50. In addition, Plaintiffs seek $596,352.97 in costs, of which $458,929.45 is for online research and $137,423.52 for transcripts.

C. Billing and staffing deficiencies

40. As is evident from the billing records in this case, Tenet's attempt to collect approximately $10.5 million is spread over approximately 1448 pages of bills from Gibson Dunn and another 40 pages from Mr. Marcus' firm for a total fees claim of $10,499,880.47.

41. Within the defined and limited time allowed under the local rules – with a 10-day agreed extension – it has been physically impossible for the undersigned, even with assistance, to review all of the voluminous time records claimed. That process has been made even more difficult by the manner of the redactions. Rather than noting redacted passages while leaving surrounding text and data intact, the redacting party blacked out entries margin to margin, eliminating any contextual value that an unredacted surrounding record could have provided. When I counsel fee claimants before their time records are produced, I always instruct them to note all redactions but to preserve all text and data except truly privileged materials. That approach gives reviewing counsel and the Court a meaningful, complete record with which to work. That was simply not done in this case.

42. Counsel for Tenet/the hospitals had approximately **two months** to prepare their time records and fees motion. The undersigned has had effectively less than two weeks to review the entire case and claimed time entries. The following detailed examples fully populate my opinions expressed in this case, both earlier in this report and in the conclusion. It is interesting to note that, while not required by local rule, Tenet/the hospitals could have retained a reviewing fees expert to support its claim but chose not to do so.

IV. EVIDENCE OF NON– COMPENSABLE OR UNREASONABLE FEES

A. Fees for Abandoned Claims and Relief: Preliminary Injunction, Damages, and Dropped Expert

43. Among the most glaring defects in the fee application is the inclusion of substantial fees for at least three categories of relief that Plaintiffs pursued, at enormous expense, and then abandoned without benefit to the litigation: the preliminary injunction, the damages claim, and the retained–but–dropped branding expert Thomas Chakurda. Fees incurred in pursuit of claims or relief on which a party did not prevail must be excluded unless the work is inextricably intertwined with the successful claim. Plaintiffs bear

the burden of making that showing. They have not attempted to do so.

1. The Temporary Restraining Order and Preliminary Injunction

44. Plaintiffs filed a motion for a preliminary injunction accompanied by sixty–five exhibits on May 17, 2025. The billing records confirm that preparation began months earlier, with entries relating to TRO and preliminary injunction work appearing as early as March 2025 and continuing well after the motion was withdrawn. Plaintiffs withdrew the request on May 27, 2025, just ten days after filing it, citing the trial date as sufficient.

45. The claimed billing for this work is sizeable. The phrase "preliminary injunction" appears seventy–four times across the non-redacted text in the claimed billing entries. "Temporary restraining order" appears twenty–seven times in the non-redacted text. The pattern of multi–attorney billing on these filings is particularly egregious. On May 14, 2025, Maloney billed 6.50 hours to revisions to the preliminary injunction, Crain 3.20 hours, Hvidt 2.40 hours, Reilly 1.3 hours, Togias 3.60 hours, and Cardone 6.50 hours – all to the same filing [Dkt. 226– 1 at 91–93]. On May 15, the same pattern

continued at greater scale: Crain billed 7.50 hours, Hvidt 7.30 hours, Cardone 11.90 hours, and Reilly 6.70 hours, all to the same document [Dkt. 226– 1 at 93–94]. On May 16, Crain billed 7.50 hours, Cardone 2.50 hours, and Reilly 10.20 hours to the same [Dkt. 226– 1 at 95]. That is tens of partner and senior associate hours, across three days, on a single filing that was withdrawn ten days after it was filed.

46. One entry captures the absence of billing judgment that predominates these invoices particularly well: on June 30, 2025 – thirty–four days after the preliminary injunction was withdrawn – Kuntz billed 0.90 hours to "Revise draft motion for preliminary injunction" [Dkt. 226– 1 at 161]. No reasonable client would accept a bill for revising a motion already withdrawn for over a month. No adversary should be required to fund it. This entry, and the broader pattern it illustrates, must be excluded in its entirety.

47. Beyond the *explicit* TRO and PI references, additional entries are almost certainly attributable to the same work but described more generally. All such time should be excluded.

2. The Damages Claim

48. Plaintiffs' original complaint sought monetary damages. That claim was not a minor or early–abandoned issue. It persisted through months of full–scale discovery – including expert retention, preparation, and depositions – before Plaintiffs withdrew it on August 12, 2025 [Dkt. 54].

49. As Leapfrog's counsel noted in the Blair Declaration, they "devoted substantial time and attention to Plaintiffs' damages claim." Blair Decl. ¶ 12. Plaintiffs' own discovery billings during that period were likely substantial as well: multiple attorneys engaged in expert preparation, including preparation of Thomas Chakurda as a branding expert. At least 19 hours of Plaintiffs' entries explicitly reference damages on their face [Dkt. 226– 1 at 152, 252, 297, 329, 364, 375, 426; Dkt. 226– 2 at 256, 263]. For example, Togias billed 6.90 hours to researching and composing a memorandum regarding "damages claims" [Dkt. 226– 1 at 152]. Nonetheless, I do not doubt the figure directly referencing damages drastically understates the true total.

3. The Dropped Branding Expert

50. Plaintiffs retained Thomas Chakurda as a branding expert in connection with the damages claim. Substantial time was devoted to preparing Mr. Chakurda and to related expert work [Dkt. 226– 1 at 477; Dkt. 226– 2 at 550]. When Plaintiffs withdrew the damages claim, they also dropped Mr. Chakurda. All fees associated with retaining, preparing, and working with an expert who was ultimately not called – in connection with a claim that was ultimately abandoned – are not compensable.

B. Pervasive Multi– Attorney Duplication on Routine Tasks

51. A fee applicant seeking compensation for multiple attorneys must demonstrate that each attorney made a distinct contribution to the work and that their efforts were not redundant. The billing records here fail that standard comprehensively and consistently, from the first day of engagement through post–trial briefing.

52. The complaint itself was drafted by a rotating cast of lawyers over several weeks: Hvidt, Maloney, Crain, Togias, and Cardone all appear billing to complaint–related work on overlapping

days throughout February, March, and April 2025, with no distinctions between their contributions apparent from the bills [Dkt. 226– 1 at 23–70]. Between March 13 and March 17, 2025, Maloney, Hvidt, and Cardone – three attorneys – all billed to "draft, review and revise" the same complaint on overlapping days [Dkt. 226– 1 at 31–32]. The March 14 entry for Hvidt alone is 8.20 hours [Dkt. 226– 1 at 32]. Adding multiple layers of senior review with no explanation is precisely the billing inefficiency that courts require fee applicants to exclude.

53. This pattern repeated without interruption throughout the case. On June 8, 2025, both Hvidt (1.70 hours) and Cardone (1.40 hours) billed to "draft, review and revise written discovery" and "review and revise requests for production with L. Crain Edits" – the same document, revised by two attorneys with no breakdown of respective contributions [Dkt. 226– 1 at 122]. On December 20, 2025, five associates billed a combined 25.5 hours to drafting or revising findings of fact, with no descriptions indicating the work was divided rather than duplicated: Kuntz billed 4.80 hours, Reilly 6.00 hours, Garnick 7.00 hours, Togias 5.40 hours, and Delwiche 2.30 hours – all on the same task, on the same day, with nothing in

the billing records to indicate what any one of them contributed that the others did not [Dkt. 226– 2 at 465–67]. This is not an isolated occurrence. It is the structural pattern of this engagement from inception to conclusion.

54. No client in the ordinary commercial marketplace would absorb such charges without demanding a full accounting of each attorney's distinct contribution. Requiring Leapfrog to fund redundant senior review piled on top of redundant senior review – across 1,448 pages of billing records and over thirteen thousand hours – is not reasonable.

C. Self– Inflicted Discovery Costs That Are Not Chargeable to Leapfrog

55. A material portion of Plaintiffs' claimed fees was generated not by legitimate litigation needs but by Plaintiffs' own discovery conduct – conduct that burdened both sides and should not be charged to the opposing party.

56. First, Plaintiffs began discovery by marking the overwhelming majority of the documents they produced as "confidential" – including clearly non–confidential communications between Leapfrog and Plaintiffs and internal hospital

correspondence relating to media requests, branding, and hospital policies with no bearing on trade secrets or other sensitive information. This designation made it nearly impossible to file those documents, forcing Leapfrog to challenge the designations in writing and in meet and confers. Only after Leapfrog indicated it would file a motion did Plaintiffs agree to reproduce their documents without the unjustified confidentiality designations. Plaintiffs' bills for the time they spent managing a confidentiality over designation problem of their own making are not Leapfrog's responsibility.

57. Second, Plaintiffs propounded forty–six requests for production and twenty interrogatories. They rejected Leapfrog's proposed search terms as "too narrowly constructed" and proposed their own counter–terms, which Leapfrog accepted. Plaintiffs then further expanded their terms on July 9, July 16, and again on July 18, 2025. The result was a hit set of nearly one million pages of documents. Leapfrog warned Plaintiffs of this problem on July 18 and again on July 25. Plaintiffs nonetheless pressed for rapid production. Having created the volume, Plaintiffs then complained that reviewing the documents their own search terms generated was "unduly burdensome." (August 7 Email.) The fees Plaintiffs incurred

reviewing documents produced in response to their own overbroad demands – and the fees they incurred disputing Leapfrog's compliance with those demands – are not properly chargeable to Leapfrog.

58. Third, Plaintiffs filed a motion for a protective order to avoid responding to Leapfrog's discovery relating to the damages claim Plaintiffs were then pursuing. But after a hearing before Magistrate Judge Matthewman, Plaintiffs agreed to provide additional discovery [Dkt. 76]. Fees generated litigating a motion Plaintiffs themselves filed and largely lost are not compensable on a fee–shifting claim.

D. Fees for Wholly Meritless Motions

59. Plaintiffs filed multiple substantive motions that were denied in their entirety. Courts must deduct time spent on discrete and unsuccessful motions practice. Two motions stand out here.

60. First, Plaintiffs' motion for summary judgment was denied in full. In denying it, the Court noted Plaintiffs' "problematic interpretation" of FDUTPA as not requiring that an "unfair" practice relate to consumer injury and their "misplaced" argument that hospitals are consumers under FDUTPA [Dkt. 139 at 9–10]. These

are not issues on which Plaintiffs had colorable arguments that were simply resolved against them; the Court's language reflects that the positions were substantively weak. The fees Plaintiffs incurred briefing a failed summary judgment motion are not compensable.

61. Plaintiffs' Daubert motion seeking to exclude four Leapfrog witnesses was similarly denied in its entirety. The Court noted that Plaintiffs' arguments "boil[ed] down more to objections on relevance and/or sufficiency of the evidence grounds" better saved for trial [Dkt. 176 at 1, 3]. A Daubert motion that the Court described as not truly Daubert–appropriate should not be charged to the opposing party.

V. Vague Entries, Pervasive Redactions, and the Absence of Billing Judgment

62. A fee applicant bears the burden of submitting billing records adequate to allow the Court to assess the reasonableness of the claimed hours. The records here fail that standard in two distinct respects: the narrative descriptions are too vague to evaluate, and the pervasive redactions make independent verification of any billing judgment impossible.

A. Vague Time Entries

63. The billing records are replete with entries providing no meaningful description of the subject matter or document worked on. Entries such as "compose memorandum re legal and factual issues" [Togias, 6.40 hours, Dkt. 226–1 at 135], "calls with clients regarding strategy and status of matter and confer internally re same" [Maloney, 1.00 hour, Dkt. 226–1 at 12], and "prepare for client meeting, including developing themes for trial and overall trial strategy" [Maloney, 3.00 hours, Dkt. 226–1 at 135] provide no basis for evaluation. Because these entries do not identify what document was reviewed, what legal issue was researched, or what strategic decision was made, neither Leapfrog nor the Court can assess whether the time was reasonably incurred on the claim at issue. Such entries must be reduced or excluded.

64. The same absence of billing judgment is reflected in entries that are not vague at all, but that are plainly non–compensable. For example, the billing records contain more than six hours of entries explicitly referencing defamation research [Dkt. 226– 1 at 16, 21, 22, 49] – a cause of action Plaintiffs investigated but never filed. The dollar amount associated with these entries is

not large, but their presence in the application is significant: a fee applicant claiming to have exercised careful billing judgment should not be seeking compensation for research into claims that were never asserted. That these entries survived whatever review process Plaintiffs conducted before submitting their application casts additional doubt on the diligence of that review with respect to the far larger volume of entries that are too vague to evaluate independently.

B. Pervasive Redactions Preclude Any Meaningful Assessment of Billing Judgment

65. More broadly, the invoices as submitted are so heavily redacted that it is impossible to conduct any meaningful independent assessment of whether Plaintiffs genuinely exercised billing judgment. Entire time entries – timekeeper, hours, and description all crossed out – appear on virtually every page of the 1,448–page record. This scale of redaction is not consistent with standard practice in fee litigation. Fee applicants routinely redact privileged communications and work product descriptions; that is appropriate. What is not appropriate is redacting complete time

entries en masse in a manner that makes it impossible to determine what work was excluded or why.

66. The practical consequence is that the Court cannot evaluate whether what survives is the product of principled, line–by–line review or simply post–hoc reduction to a more defensible number. Billing judgment is only meaningful if someone can see what was written off and why – whether the excluded time reflected genuinely non–compensable work, or hours that Plaintiffs preferred not to defend. When written–off entries are as numerous and as thoroughly redacted as they are here, there is no basis to conclude that what remains is the product of principled review. A substantial across–the–board reduction is warranted to account for this failure of documentation.

VI. THE PER– HOSPITAL NARRATIVE IS UNSUPPORTED BY THE BILLING RECORDS

67. Plaintiffs suggested, in their pretrial submissions and at trial, that their fee request can be understood as approximately $2 million per hospital – a framing implying each of the five hospitals was served by a dedicated team whose time can be meaningfully

allocated to that hospital's claims. The billing records do not support that characterization.

68. Every Gibson Dunn invoice submitted to the Court carries a single client–matter number – 64230–01116, captioned "Leapfrog Dispute" – covering all five hospitals as a single undifferentiated matter. There are no hospital–specific matter numbers, no hospital–specific billing summaries, and no entries in the invoices that allocate time to a particular hospital as distinct from the others. The billing records are structured as if this were a single–client case.

69. At trial, lead counsel introduced the Gibson Dunn attorneys by assigning each one to a specific hospital: Marcus for Delray Medical Center, Scott for Palm Beach Gardens, Crain for West Boca, Simmons for St. Mary's, and Hvidt for Good Samaritan. [Dkt. 204– 1, Trial Tr. at 3]. The invoices tell a different story. Those same attorneys appear throughout the billing records working on the same tasks, attending the same conferences, and revising the same documents, with no indication that any attorney's work was directed toward one hospital rather than another. Crain's 847.3 claimed hours, Hvidt's 878.0, and Simmons's 731.5 are

presented in a single undivided block with no hospital attribution [Dkt. 225 at 15].

70. The $2 million per hospital figure is simple arithmetic – the total that the Plaintiffs decided on divided by five – not the product of any hospital–specific accounting. It is also revealing that this framing appeared in Plaintiffs' submissions only after Leapfrog disclosed its own fee figure of $1.75 million in the pretrial stipulation [Dkt. 129 at 30], and that Plaintiffs' write–offs seemingly demonstrate no rhyme or reason – other than that they landed near that number. A post–hoc arithmetic division of an undifferentiated billing record into five equal parts totalling a number Plaintiffs arbitrarily decided on when they heard Leapfrog's fee estimate does not satisfy Plaintiffs' burden of establishing that the claimed hours are properly attributable to compensable work on the claim on which they prevailed.

VII. OPINION ON THE APPROPRIATE REDUCTION

71. In my professional opinion, and to the extent that fees are awarded, the Community Hospitals' fee request must be reduced to no more than 20 percent of the total amount claimed.

The independent grounds for this reduction are each substantial; cumulatively, they compel it.

72. First, a substantial portion of the claimed hours was devoted to the TRO, preliminary injunction, damages, and abandoned expert – all of which were voluntarily withdrawn without benefit to the litigation.

73. Second, the consistent pattern of three to five attorneys simultaneously billing on the same tasks – without any explanation of divided labor, from complaint drafting through findings of fact – represents the kind of structural redundancy that warrants a substantial across–the–board percentage reduction standing alone.

74. Third, a reduction is needed to account for the fees attributable to self–inflicted discovery costs, meritless motions, defamation research, and other non–FDUTPA work.

75. Fourth, the $458,929.45 in research charges attributed to unidentified timekeepers must be excluded in their entirety.

76. Fifth, the pervasive redactions and vague entries make it impossible to perform a line–by–line audit confirming the reasonableness of what remains, requiring an across–the–board reduction.

77. Sixth, and independently dispositive, when these massive billing irregularities are reviewed by a Court in light of the Humane Society factors, the claimed award becomes even more indefensible. Most notably, factors two and three weigh heavily against any award approaching the amount claimed. Leapfrog's annual revenues are approximately $8,850,000. The fee and cost request of $10,499,880.47 exceeds Leapfrog's entire annual revenue by over 1.5 million dollars. Asking this Court to shift $10.5 million to an organization that takes in less than $9 million per year is not an application of equitable fee–shifting.[2] The equitable factor recognized in Humane Society exists precisely to prevent that outcome.

78. Factor Three – whether an award of fees would deter others from acting in similar circumstances – cuts equally against the full award, and for reasons that go beyond the financial. The entities that a fee award would deter are not Leapfrog itself, but

[2] Plaintiffs note that Leapfrog has a $ 5 million dollar primary liability insurance policy [Dkt. 225 at 9]. It is my understanding, from Leapfrog's briefing, that the potential maximum insurance is limited to $7.5 million dollars. With that said, I have not seen evidence that the insurance policy will actually cover these fees.

other organizations operating in the same space: nonprofits or businesses that might evaluate and publish hospital safety information for the benefit of the public. As best I can determine from publicly available information, there are no such entities – for-profit or non-profit – operating nationally in this space other than the federal government. Leapfrog appears to be the sole provider of this type of publicly available hospital safety information. An award exceeding $10,000,000 against the only participant in that market would not calibrate deterrence – it would destroy the deterred actor entirely, while chilling any future entrant from ever attempting to occupy the same public–interest role. That is not the kind of deterrence FDUTPA's equitable framework is designed to promote.

79. Taken together, these two factors – combined with the billing irregularities identified throughout this Report – compel the conclusion that no reasonable application of the Humane Society framework could support a fee award anywhere near the amount claimed. In my professional judgment, $2,000,000 represents the outer limit of what the equitable factors and the billing record, taken together, could support.

80. As noted above, the undersigned had less than two weeks to review 1,448 pages of heavily and broadly redacted billing records – records that Plaintiffs' counsel had two months to prepare. What is set out in this Report is not the product of a line–by–line audit. It is the product of a necessarily limited overview. And yet, even from that overview, the deficiencies identified above – categorical exclusions for abandoned claims, unidentified researchers, and non–FDUTPA work, compounded by structural problems of overstaffing, duplication, vague entries, and the obliteration of any meaningful billing judgment through pervasive redaction – are each independently significant and cumulatively overwhelming. In my professional experience reviewing fee records across hundreds of cases, when a brief and incomplete review of a billing record reveals problems of this magnitude and this consistency, a thorough review invariably reveals more. The $2,000,000 figure is not a precise calculation – the redactions make precision impossible, and that is Plaintiffs' doing, not mine. It is instead a conservative professional judgment, informed by decades of experience with fee records in this District, that reflects the outer

limit of what I believe the evidence could support as a reasonable and necessary fee in this case.

VIII. MATERIALS RELIED UPON

81. In forming the opinions expressed in this Report, I have relied upon and reviewed the following materials:

1. Plaintiffs' Verified Motion for Attorneys' Fees and Costs [Dkt. 225].
2. Affidavit of Sydney Scott in Support of Plaintiffs' Verified Motion for Attorneys' Fees and Costs [Dkt. 226].
3. Exhibits A and A–2 to the Scott Affidavit: Gibson, Dunn & Crutcher LLP invoices [Dkt. 226–1; Dkt. 226–2].
4. Exhibit B to the Scott Affidavit: Local counsel invoices from Marcus Rashbaum Pineiro & Meyers LLP and Neiman Mays Floch & Almeida PLLC [Dkt. 226–3].
5. Relevant docket entries and filings in this action.
6. Defendant's Opposition to the Fee Motion and the draft brief supporting it, including Section III thereof.
7. Attorney Declaration of Kimberly E. Blair.
8. Transcripts of the depositions of the Plaintiff hospitals' CEOs.

9. Applicable legal authorities governing attorneys' fee awards under FDUTPA and Eleventh Circuit standards, including authorities cited in Defendant's brief.

10. My own experience as a Florida litigator for over fifty years, including direct familiarity with reasonable attorneys' fee rates in the Southern District of Florida for complex commercial litigation.

I reserve the right to supplement this report upon receipt of any additional materials not yet produced.

I declare under penalty of perjury that the foregoing is true and correct, dated this 8th day of June 2026.

Plaintiffs,

v.

THE LEAPFROG GROUP,

Defendant.
_____/

DECLARATION OF KIMBERLEY E. BLAIR

1. I am a Senior Partner at Wilson Elser Moskowitz Edelman & Dicker LLP ("Wilson Elser"), counsel of record for Defendant, The Leapfrog Group ("Leapfrog"), in this action. I have personal knowledge of the facts set forth herein and submit this declaration in support of Leapfrog's Response in Opposition to Plaintiffs' Motion for Attorneys' Fees and Costs.

2. Wilson Elser defended Leapfrog in this litigation from its inception through trial. The core team consisted of three attorneys who performed the lion's share of the work: myself (Kimberly Blair, Senior Partner), Courtney L. Wood (Senior Associate), and Kavi V. Modi (Junior Associate). Together, these three Wilson Elser timekeepers accounted for approximately 3,267 of the total attorney hours billed—roughly 80% of all attorney time on the matter. In total, Wilson Elser billed approximately 4,500 attorney hours in this matter, for total attorney fees of $1,134,304.

3. The attorney fees reflected above represent the amounts Wilson Elser billed to Leapfrog's insurer through the present.

4. Plaintiffs engaged in discovery and litigation tactics that unnecessarily drove up the cost of litigation.

5. In total, Plaintiffs served 46 requests for production between its first and second set of requests.

6. In regard to Leapfrog's document production, Plaintiffs rejected Leapfrog's proposed search terms as too narrowly constructed. Plaintiffs proposed alternative search terms to which Leapfrog acquiesced, but Plaintiffs continued to expand their list of search terms on July 9, July 16, and July 18, 2025.

7. Plaintiffs, in total, demanded 11 pages of expansive search terms for the requests.

8. Plaintiffs' search terms hit upon nearly a million pages of documents, and Leapfrog reported this fact to Plaintiffs on July 18 and again on July 25. Plaintiffs insisted that Leapfrog nonetheless produce the documents rapidly. Leapfrog endeavored to do so as best it could considering the inherent processing time in producing such voluminous discovery, and began with requests for production that Plaintiffs themselves identified as high priority.

9. Nonetheless, Plaintiffs then took the position that the documents produced according to their own search terms were unduly burdensome for them to review.

10. On the other hand, each Plaintiff initially declined to respond to eight of Leapfrog's interrogatories (40 total interrogatories) and nineteen requests for production, citing, among other things, relevance objections.

11. Plaintiffs and Leapfrog met and conferred several times, each lasting over an hour, regarding in-part Plaintiffs refusal to respond to certain interrogatories and requests for production.

It was Leapfrog's position that the requested discovery was relevant in light of the allegations pled in Plaintiffs' complaint while it was Plaintiffs position that such discovery was, *inter alia,* irrelevant in-part because Plaintiffs filed a notice withdrawing their request for monetary damages.

12. This change in position surprised Leapfrog, which had devoted substantial time and attention to Plaintiffs' damages claim and had previously received no indication that Plaintiffs might drop the claim.

13. It was therefore Leapfrog's position that it would not withdraw certain discovery requests unless Plaintiffs amended their complaint to withdraw various allegations. Plaintiffs declined to amend their complaint and instead filed a motion for protective order.

14. Plaintiffs' motion for protective order sought, *inter alia,* to exclude five (5) of Leapfrog's interrogatories and ten (10) requests for production.

15. On August 26, 2025, the motion for protective order was heard for oral argument before Magistrate Judge Matthewman. Plaintiffs also presented an *ore tenus* motion for leave to amend the complaint, which was unopposed by Leapfrog, and granted by Magistrate Judge Matthewman.

16. Following the filing of the amended complaint, the parties reached an agreement regarding the discovery disputes. Plaintiffs' motion for protective order was granted to the extent agreed to by the parties and other denied as moot.

17. However, when Plaintiffs initially produced their documents nearly every document was produced with a "confidential" designation. For example, Plaintiffs even produced communications between Leapfrog and each Plaintiff with a "confidential" designation.

18. Such designations substantially increased the administrative burden on Leapfrog for filing Plaintiffs' documents, including as exhibits in support of Leapfrog's motion for summary

judgment. Leapfrog accordingly challenged Plaintiffs' improper confidentiality designations in email correspondence and during meet and confers in October and November 2025.

19. After Leapfrog expended resources challenging these designations, Plaintiffs relented and reproduced many documents without confidentiality designations.

UNITED STATES DISTRICT COURT
SOUTHERN DISTRICT OF FLORIDA

CASE NO.: 25-CV-80526-MIDDLEBROOKS

GOOD SAMARITAN MEDICAL CENTER, INC., et al.,

Plaintiffs,

v.

THE LEAPFROG GROUP,

Defendant.
_____/

ORDER ON DEFENDANT'S MOTION FOR RECONSIDERATION

THIS CAUSE comes before the Court upon Defendant's Motion for Reconsideration and to Alter or Amend the Judgment, or for New Trial, filed on April 30, 2026 (DE 220). The Motion is fully briefed. (DE 223; DE 228). For the reasons stated, the Motion is denied.

On March 6, 2026, I entered an Order following Bench Trial, finding in favor of Plaintiffs as to their only Count alleging that Defendant violated the Florida Deceptive and Unfair Trade Practices Act (FDUTPA), Fla. Stat. § 501.201 *et seq*. (DE 212). I entered Final Judgment on April 3, 2026. (DE 214). The record indicates that Defendant has chosen to appeal that decision. (DE 221). Simultaneously, Defendant seeks reconsideration of my findings with respect to their First Amendment defense.

The central contention advanced by the Defendant is that the injunction entered against them transgresses the guardrails set forth by the First Amendment. (DE 220 at 15). The Defendant first argues that the Safety Grades and their Methodology are protected pure opinions. (*Id.* at 14). Second, Defendant argues that actual malice is required before enjoining the Defendant's speech. (*Id.* at 20). Third, Defendant suggests that the injunction amounts to an unconstitutional prior restraint and unconstitutionally compels speech. (*Id.* at 24).

Federal Rule of Civil Procedure 59(e) authorizes motions to alter or amend a judgment within 28 days of the judgment when a party seeks "reconsideration of matters properly encompassed in a decision on the merits." *Osterneck v. Ernst & Whitney*, 489 U.S. 169, 174 (1989). The grounds for Rule 59(e) relief include newly discovered evidence or clear errors of law or fact. *Arthur v. King*, 500 F.3d 1335, 1343 (11th Cir. 2007). Rule 59(a)(1)(B) allows for a motion for a new nonjury trial if "the verdict … will result in a miscarriage of justice" or "is against the clear weight of the evidence." *Jenkins v. Anton*, 922 F.3d 1257, 1264 & n.7 (11th Cir. 2019) (alteration in original and citation omitted).

Upon review, none of Defendant's arguments are convincing. As an initial matter Defendant identifies no newly discovered evidence, no intervening change in law, and no manifest error in the Court's factual findings. I find this to be particularly true with respect to Plaintiff's prior-restraint and compelled speech arguments, both of which the court had adequate opportunity to consider when inviting the Defendant to argue its position on the scope of the injunction. (DE 223 at 24, 26).

Instead, Defendant attempts to relitigate factual and legal findings concerning the methodology and resultant penalty by characterizing them as "subjective assessments" and guising their misleading assessments as "pure opinion." (DE 220 at 16). With respect to Defendant's "pure opinion" contention, I agree with the Plaintiffs that Defendant's approach at trial diverges from the arguments it now presents. At trial, the Defendant attempted to characterize its methodology as sound and objective. As I noted in my Order following the Bench Trial, "[w]hether the scores are 'technically or materially true is not persuasive' when the material implication of Leapfrog's representations is that it constitutes a full and accurate representation of patient safety." (DE 212 at 21 (citing *F.T.C. v. Peoples Credit First, LLC*, 244 F. App'x 942 at 2 (11th Cir. 2007)). On various occasions, the Defendant did not represent that their speech constituted opinion, but instead

constituted known data. Third, as discussed at the motion to dismiss stage, Defendant's grades and methods would enjoy First Amendment protection if they were, indeed, "not readily capable of being proven false" or were "pure opinion." (DE 41 at 5). I held then and continue to hold that FDUTPA claims are not barred when they involve "false or misleading statements about the rating process itself," including false statements that "mislead consumers" about how the ratings they consume are calculated and what they represent. (*Id.*). As the Plaintiffs note, "[a]rbitrarily calling something an 'opinion' does not make it so when the statement 'implies a knowledge of facts which lead to the conclusion.'" (DE 223 at 15, 16 (citing *Milkovich v. Lorain J. Co.*, 497 U.S. 1, 18)).

With respect to the Defendant's actual malice argument, I find that Defendant has forfeited this issue. "[T]o preserve a claim, argument, theory, or defense," the defendant "must first clearly present it to the district court ... in such a way as to afford the district court an opportunity to recognize and rule on it." *Juris v. Inamed Corp.*, 685 F.3d 1294, 1325 (11th Cir. 2012) (cleaned up). At no point did Defendant raise arguments concerning actual malice, and yet, Defendant now pivots to point out to the Court that "no finding of actual malice appears anywhere in the Court's injunction order." (DE 228 at 11). Instead, Defendant suggests that a "new argument inconsistent with one raised earlier may be made if in service of the same bottom-line request." (DE 228 at 11, n. 4). Yet, Defendant attempts to take this principle to an entirely new level. Certainly, it is plausible that a court may assess the record for evidence under the new and inconsistent argument, but that is because the record evidence may nevertheless support such a finding under a different route. Here, however, Defendant's actual malice proposition requires a specialized showing, which it did not attempt to make, and then further attempts to characterize the obvious dearth in the record as to actual malice as a flaw in the Court's adjudication.

Having carefully considered the Parties' submissions, the record, and applicable law, I find

that Defendant has failed to demonstrate that reconsideration of my prior ruling is warranted. Accordingly, it hereby **ORDERED AND ADJUDGED** that Defendant's Motion for Reconsideration and to Alter or Amend the Judgment, or for New Trial (DE 220) is **DENIED**.

SIGNED in Chambers in West Palm Beach Florida, this 17 day of June, 2026.

DONALD M. MIDDLEBROOKS
UNITED STATES DISTRICT JUDGE

cc. Counsel of Record

UNITED STATES DISTRICT COURT
SOUTHERN DISTRICT OF FLORIDA

CASE NO.: 25-CV-80526-MIDDLEBROOKS

GOOD SAMARITAN MEDICAL CENTER, INC., et al.,

Plaintiffs,

v.

THE LEAPFROG GROUP,

Defendant.
_____ /

ORDER ON PLAINTIFFS' MOTION FOR ATTORNEYS' FEES

THIS CAUSE comes before the Court upon Plaintiffs' Motion for Attorneys' Fees, filed on May 15, 2026 (DE 225), and the Defendant's Motion to Summarily Deny or Alternatively Hold in Abeyance Plaintiffs' Motion for Attorneys' Fees, filed on the same day (DE 227). On March 6, 2026, I entered an Order following Bench Trial, finding in favor of Plaintiffs as to their only Count alleging that Defendant violated the Florida Deceptive and Unfair Trade Practices Act (FDUTPA) Fla. Stat. § 501.201 *et seq.* (DE 212). I entered Final Judgment on April 3, 2026. (DE 214). Defendant has appealed that decision. (DE 221).

As exhibited in the briefing on Defendant's Motion, the Parties disagree on whether the Plaintiffs' Motion was timely filed. Plaintiffs filed their Motion in accordance with Local Rule 7.3, which mandates that a motion for attorneys' fees be "filed and served within sixty (60) days of the entry of the final judgment regardless of … appellate proceedings." Defendants, on the other hand, contend that the Motion is premature by virtue of FDUTPA's statutory language permitting a prevailing party to receive fees "after judgment in the trial court and exhaustion of all appeals." Fla. Stat. § 501.2105(1). Nevertheless, I find that this dispute need not be resolved because, in the interest of conserving valuable judicial resources and in the interest of efficiency, the Parties'

dispute regarding attorney fees is best resolved *after* the appeal has concluded. Accordingly, it hereby **ORDERED AND ADJUDGED** that:

1. Plaintiffs' Motion for Attorneys' Fees (DE 225) is **DENIED WITHOUT PREJUDICE** and Plaintiffs may re-file their Motion, if appropriate, upon the conclusion of the appeal.
2. Defendant's Motion to Summarily Deny or Alternatively Hold in Abeyance Plaintiffs' Motion for Attorneys' Fees (DE 227) is **DENIED AS MOOT**.
