IN THE UNITED STATES DISTRICT COURT
FOR THE SOUTHERN DISTRICT OF FLORIDA
WEST PALM BEACH DIVISION

CASE NO. 9:25-cv-80526

GOOD SAMARITAN MEDICAL CENTER, INC., DELRAY MEDICAL CENTER, INC., PALM BEACH GARDENS COMMUNITY HOSPITAL, INC. D/B/A PALM BEACH GARDENS MEDICAL CENTER, ST. MARY'S MEDICAL CENTER, INC., AND WEST BOCA MEDICAL CENTER, INC.,

PLAINTIFFS,

v.

THE LEAPFROG GROUP,

DEFENDANT.

COMPLAINT AND DEMAND FOR JURY TRIAL

Plaintiffs Good Samaritan Medical Center, Inc. ("Good Samaritan"), Delray Medical Center, Inc. ("Delray Medical Center"), Palm Beach Gardens Community Hospital, Inc. d/b/a Palm Beach Gardens Medical Center ("Palm Beach Gardens Medical Center"), St. Mary's Medical Center, Inc. ("St. Mary's"), and West Boca Medical Center, Inc. ("West Boca Medical Center") (collectively, "Plaintiffs" or "the Plaintiff Hospitals"), by and through their attorneys for their Complaint against The Leapfrog Group ("TLG"), allege as follows:

PRELIMINARY STATEMENT

Hospitals are trusted pillars of their communities, responsible for safeguarding the lives of patients in their most vulnerable moments. The integrity of information guiding patients' healthcare decisions must be beyond reproach. Yet Defendant TLG, under the guise of public service, has corrupted that trust—weaponizing fear, distorting facts, and misleading the public to

serve its own craven financial interests. Through a brazen pay-to-play scheme, TLG pressures hospitals to participate and pay, or else suffer devastating and misleading public "safety" grades. Plaintiffs bring this action not because they fear evaluation, but because TLG's false and reckless conduct endangers patients, undermines public health, and cannot go unchallenged.

INTRODUCTION

1. Defendant TLG holds itself out as an honest and credible public service organization devoted to hospital safety. In reality, it operates a brazen pay-to-play scheme that distorts the truth, misleads patients, and inflicts serious harm on hospitals and the communities they serve. Hospital participation drives TLG's revenue and enriches this so-called "non-profit" to the tune of many millions of dollars—including exorbitant compensation for its Chief Executive Officer. Through its "Hospital Safety Grades," TLG assigns A, B, C, D, and F letter grades to hospitals nationwide and prominently displays them on its website, www.hospitalsafetygrade.org. These "grades" are based, in material part, on easily manipulatable, self-reported data submitted by hospitals that choose to dedicate the time and resources to respond to TLG's sprawling 100+ page data requests. TLG then aggressively broadcasts these so-called grades directly to patients, caregivers, and healthcare workers, orchestrating a sweeping media campaign—including by embargoing grades with reporters nationwide—to maximize public exposure. The message TLG pushes is alarmist and clear: Patients must "*always* decide on where to receive care based on a hospital's current Safety Grade," because they are "twice as likely to die of a preventable problem at a 'C,' 'D,' or 'F' hospital than at an 'A' hospital." (emphasis added). But TLG's "safety grades" are a fraud. Far from protecting patients, they present a clear and present danger to public health across Palm Beach County and beyond.

2. Four years ago, the five Plaintiff Hospitals made a deliberate choice to stop responding to TLG's excessive data requests. During the height of the COVID-19 pandemic,

Plaintiffs prioritized their administrative resources toward achieving specialty-specific accreditations and certifications that directly respond to patient needs. Until last year, TLG continued to assign grades to Plaintiffs based on how similarly situated participating hospitals performed on standard metrics, and notably, Plaintiffs were never assigned F grades under that system.

3. That changed in 2024. Facing declining hospital participation, escalating expenses, and intensifying pressure to drive up revenue—including hefty consulting and advertising fees from participating hospitals along with revenue from insurers—TLG abruptly rigged its methodology. Under its new policy, any hospital declining to provide data would automatically fail on the affected metrics, leading to inevitable Ds and Fs for Plaintiffs for the first time. TLG openly admitted the change was designed to punish non-participating hospitals and ensure they would not "inadvertently benefit" from positive scores—regardless of the truth. Tomorrow's anticipated release of new grades continues TLG's reckless campaign. Instead of simply choosing not to grade Plaintiffs, TLG will deliberately misrepresent these trusted hospitals as dangerous facilities, undermining the doctors, nurses, and healthcare workers on whom the community depends.

4. The reality could not be further from TLG's false narrative. Plaintiffs' five hospitals form the backbone of urgent and critical healthcare services in the Palm Beach community. They serve vulnerable populations—especially children and the elderly—with award-winning care. St. Mary's, for example, is the only children's hospital between Fort Lauderdale and Orlando, providing critical care to high-risk pregnancies and fragile newborns in a low-income community where infant mortality risks are tragically high. Plaintiffs' collective

impact is enormous: Together, they treated approximately 470,000 patients in 2024 through emergency, critical care, and outpatient services.

5. TLG's misinformative "Safety Grades" have been repeatedly condemned by leading healthcare organizations and academic researchers for precisely the dangers they pose. The American Hospital Association ("AHA") has warned that "no one should use [TLG's Hospital Safety Grades] to guide their choice of hospitals," because they are "neither fair nor accurate."[1] Academic studies have confirmed that TLG's methodology consistently misrepresents hospital quality nationwide, misleading patients into healthcare decisions that increase mortality risks and worsen outcomes.[2] TLG has even awarded its highest possible safety grades to a facility the federal government determined in a 384-page report had "quality of care . . . so bad that it had 'caused—or is likely to cause—serious injury, harm, impairment, or death to a patient.'" Multiple patients died at that facility, despite its pristine TLG ranking. For nearly a decade, healthcare professionals and scholars have sounded the alarm about TLG's dangerous practices. Those practices are even worse today as a result of TLG's 2024 move to punish non-participating hospitals.[3] But TLG refuses to fix its reckless model. So long as hospitals are willing to pay to

escape failing grades. TLG has no incentive to reform—and every incentive to perpetuate its deceptive scheme.

6. Plaintiffs do not fear scrutiny. Their healthcare leaders and frontline providers have devoted their lives to advancing patient safety and clinical excellence. Several of Plaintiffs' Chief Executive Officers began their careers as bedside nurses, rising through the ranks through hard work, dedication, and an unwavering commitment to quality care. Plaintiffs welcome evaluations based on objective, accurate, and verifiable standards applied fairly across the healthcare industry. They embrace real accountability and rigorous performance measurement. And like all hospitals, they are continuously working to improve the patient experience and achieve the highest possible quality of care. What they will not accept—and what no patient should accept—are reckless, misleading, and commercially motivated "safety grades" that endanger public trust and patient lives.

7. Plaintiffs did not bring this action lightly. Before commencing this case, Plaintiffs asked TLG to cease and desist its deceptive grading practices. Plaintiffs made clear that TLG's conduct was not only wrong, but dangerously harmful—driving patients away from some of the region's safest hospitals and toward objectively riskier facilities. TLG refused. Hiding behind a self-serving and legally unsupportable invocation of the First Amendment, TLG claimed a "free speech right" to deceive the public. It then doubled down: embargoing its false grades with the press, orchestrating a media blitz, and further misleading patients in Plaintiffs' communities—all while knowing the devastating consequences of its campaign.

8. There is no First Amendment protection for deceptive practices. That is exactly why the Florida Deceptive and Unfair Trade Practices Act ("FDUTPA") exists: to protect consumers from modern-day snake oil salesmen like TLG. TLG's supposed "mission" is a sham.

Its true mission is self-enrichment. A material percentage of TLG's "non-profit" budget goes directly to compensating its Chief Executive Officer, who has pocketed many millions of dollars in recent years at the expense of the very patients TLG claims to serve. TLG's business model is as simple as it is sinister: prey on public fear, distort the truth, and profit from deception. Enough is enough. This lawsuit seeks to put an end to TLG's dangerous practices and to protect the patients and communities who deserve honest, reliable information about their healthcare choices.

PARTIES

9. Plaintiff Delray Medical Center is an accredited hospital with 536 licensed beds. Delray Medical Center is incorporated in Florida, and its principal place of business is at 5352 Linton Blvd., Delray Beach, Florida 33484. As both a general hospital and a Level I Trauma Center for both pediatric and adult patients, Delray Medical Center provides a variety of high-quality, specialized services to the community.

10. Plaintiff Good Samaritan is the first hospital built in Palm Beach County. It has served the community for over 100 years. Good Samaritan is incorporated in Florida, and Good Samaritan's principal place of business is 1309 N. Flagler Dr., West Palm Beach, Florida 33401. It has 333 licensed beds. Good Samaritan is an accredited acute care hospital that is focused on offering premier and comprehensive oncology services with its robust medical and surgical programs.

11. Plaintiff Palm Beach Gardens Medical Center is an acute care hospital with 199 licensed beds. Palm Beach Gardens Medical Center is incorporated in Florida, and its principal place of business is 3360 Burns Road, Palm Beach Gardens, Florida 33410. Palm Beach Gardens Medical Center focuses on providing comprehensive cardiovascular care, including open heart surgeries and structural heart procedures. It also provides the community with access to a broad

range of other important medical services, including 24-hour emergency care, general surgery, various orthopedic surgery services, and specialty services such as urology.

12. Plaintiff St. Mary's houses the only children's hospital between Orlando and Fort Lauderdale. St. Mary's is incorporated in Florida, and its principal place of business is 901 45th St., West Palm Beach, Florida 33407. St. Mary's is an accredited acute care hospital that is a Level I adult and pediatric Trauma Center, certified Comprehensive Stroke Center, and has a Level III neonatal intensive care unit ("NICU"). St. Mary's has 413 licensed beds of which 45 are in the NICU. St. Mary's is a Centers for Medicare & Medicaid Services ("CMS") designated Regional Perinatal Intensive Care Center ("RPICC")—one of only 11 RPICC hospitals in Florida.

13. Plaintiff West Boca Medical Center is an accredited hospital with 195 licensed beds and primarily serves women and children. West Boca Medical Center is incorporated in Florida, and its principal place of business is 21644 State Road 7, Boca Raton, Florida 33428. West Boca Medical Center is the only Level III NICU in southern Palm Beach County.

14. Defendant The Leapfrog Group is a not-for-profit corporation incorporated in the District of Columbia, with its principal place of business at 1775 K Street, NW, Suite 400, Washington, D.C. 20006.

JURISDICTION AND VENUE

15. This Court has subject matter jurisdiction pursuant to 28 U.S.C. § 1332. Plaintiffs are all citizens of Palm Beach County, Florida, and TLG is a citizen of Washington, D.C. The amount in controversy is in excess of $75,000 given Plaintiffs seek greater than $75,000 in damages and seek to recover injunctive and declaratory relief valued in excess of $75,000.

16. This Court has personal jurisdiction over TLG pursuant to Fla. Stat. Ann. § 48.193(1)(a)(2) because TLG "submit[ted itself] . . . to the jurisdiction of the courts of this state for any cause of action arising from [TLG] . . . [c]ommitting a tortious act within this state." TLG

is also subject to this Court's jurisdiction as TLG is operating, conducting, engaging in, or carrying on a business or business venture in this state. To the extent the alleged injury to persons in this state arises out of an act or omission by TLG outside of this state, this Court has jurisdiction over TLG because it engaged in solicitation or service activities within Florida.

17. Plaintiffs' claims arise out of TLG's contacts with and purposeful availment of Florida—including but not limited to its misleading "Hospital Safety Grades" of Plaintiffs on its website. TLG's false and misleading "Hospital Safety Grades" were directed at residents of Florida, accessed by residents of Florida, pertained to Plaintiffs (all residents of Florida), harmed Plaintiffs in Florida, and harmed consumers in Florida. TLG has publicly commented on its Hospital Safety Grades for Plaintiffs with Florida publications like Stet News Palm Beach County designed to drive more attention to the Safety Grades in Florida. TLG has also affirmatively "embargoed" its "Safety Grades" about Plaintiffs with members of the press, including members of the press in Florida, confirming TLG has knowingly and intentionally targeted the Florida healthcare market and Florida healthcare consumers with its "Safety Grades" about Plaintiffs.

18. This Court also has personal jurisdiction over TLG pursuant to Fla. Stat. Ann. § 48.193(2) because TLG is "engaged in substantial and not isolated activity within [Florida]" and Plaintiffs' claims arise out of that substantial, not isolated, activity. For example, for its Fall 2024 Survey, TLG solicited data from 621 health facilities in Florida, embargoed safety grades as to 192 of them with the media in Florida, and widely publicized the safety grades of those 192 Florida facilities to patients in Florida.

19. Venue in the Southern District of Florida is appropriate under 28 U.S.C. § 1391(b) because it is the district in which a substantial part of the actions giving rise to the claims occurred.

FACTUAL ALLEGATIONS

A. The Plaintiff Hospitals Are High-Performing Florida Hospitals.

20. Plaintiffs are five hospitals in the Palm Beach region. Collectively, they have 1,676 licensed beds and treated approximately 470,000 patients in 2024. Plaintiffs have reputations for being high-quality healthcare systems that put patient care first. Many well-regarded industry commentators that compare hospitals consistently rank Plaintiffs' performance well above their peers'. The quality of Plaintiffs' care has been confirmed, validated, and acclaimed by objective third parties following rigorous vetting and assessment from accreditors, commercial insurers, and experts like the American College of Surgeons.

21. ***Delray Medical Center*** has received numerous awards and accolades. For example, Delray Medical Center was awarded the Resuscitation Center of Excellence award for 2025, becoming the first hospital in Palm Beach County to be named a Florida Resuscitation Center of Excellence. To achieve that accolade, Delray Medical Center met approximately 15 criteria for patient care that were established by the Florida Resuscitation Center Committee, including intensive neurological monitoring, strong collaboration with Emergency Medical Services partners, and community outreach programs to promote health and lifestyle modifications to decrease the prevalence of cardiac disease. Additionally, the American College of Surgeons awarded Delray the Metabolic and Bariatric Surgery Accreditation and Quality Improvement Program ("MBSAQIP") Surgery Center of Excellence award, which is dedicated to enhancing the safety and quality of care for bariatric patients in the United States and Canada. MBSAQIP accreditation promotes uniform standards and continuous quality improvement.

22. Delray Medical Center also earned a DNV GL Comprehensive Stroke certification, which means Delray Medical Center gives the highest quality of care to most complete patient cases and offers evidence-based treatments with cutting-edge research protocols. Delray Medical

Center earned the VQI (Vascular Quality Initiative) Carotid Care Champion this year, which honors participants that are dedicated to improving the safety and effectiveness of vascular care. Delray Medical Center also earned a Certification for the American Association of Cardiovascular and Pulmonary Rehabilitation ("AACVPR") Program. Delray Medical Center is also accredited by the Joint Commission, the nation's largest hospital accreditor that evaluates hospitals' quality performance standards through an objective evaluation process. This accreditation is peer-reviewed and designed to review individual facilities.

23. The American Heart Association honored Delray Medical Center with "Get with the Guidelines" Gold Plus awards in three specializations. First, Delray Medical Center earned the Target Stroke Honor Roll Elite, meaning Delray Medical Center is able to achieve door-to-needle times of within 60 minutes for at least 85% of applicable patients. Second, Delray Medical Center earned the Target Stroke Honor Roll Advanced Therapy, meaning that 50% of applicable patients are able to achieve door-to-device times of 90 minutes or less in the case of directly arriving patients, and 60 minutes or less for transfer patients. Third, Delray Medical Center earned the Target Type II Diabetes Honor Roll, meaning that Delray Medical Center met numerous requirements, including qualifying for a Silver level or higher Achievement Award in the "Get with the Guidelines-Heart Failure, Stroke, and/or Coronary Artery Disease" modules.

24. Earlier this year, Delray Medical Center was named "one of the best 250 hospitals in the country" by Healthgrades, one of the top sites Americans use when searching for a doctor or hospital.[4] In total, Delray Medical Center earned 25 accolades from Healthgrades, including the 2025 Critical Care Excellence Award and the 2025 Pulmonary Care Excellence Award. Delray

[4] To assess and evaluate hospitals, Healthgrades relies on data from Medicare medical claims records and states' data on Medicare and commercially insured patient outcomes to determine patients' actual clinical outcomes when visiting a given hospital.

Medical Center has received countless five-star awards from Healthgrades, including Five-Star Recipient for Valve Surgery for two years in a row (2024-2025), Five-Star Recipient for Treatment of Heart Attack for two years in a row (2024-2025), Five-Star Recipient for Treatment of Heart Failure for twenty-three years in a row (2003-2025), Five-Star Recipient for Defibrillator Procedures for three years in a row (2024-2025), Five-Star Recipient for Treatment of Stroke for eighteen years in a row (2008-2025), Five-Star Recipient for Coronary Interventional Procedures (2024), Five-Star Recipient for Treatment of Pneumonia for two years in a row (2024-2025), Five-Star Recipient for Treatment of Sepsis for twenty-two years in a row (2004-2025), Five-Star Recipient for Treatment of Respiratory Failure for three years in a row (2023-2025), Five-Star Recipient for Upper Gastrointestinal Surgery for three years in a row (2022-2024), Five-Star Recipient for Small Intestine Surgeries for five years in a row (2017-2021, 2024), and Five-Star Recipient for Cranial Neurosurgery (2024).

25. ***Good Samaritan*** has received numerous awards and accolades, including many that are directly relevant to patient care for the community it serves. As a full-service cancer hospital, it is important to Good Samaritan that it is accredited by the Commission on Cancer ("CoC"). In order to be accredited, Good Samaritan has to undergo an on-site visit on a triennial basis, in which a trained CoC reviewer visits Good Samaritan and reviews its required cancer program activity documentation to ensure compliance with the standards.

26. The American College of Surgeons has designated Good Samaritan a National Accreditation Program for Breast Centers ("NAPBC") for 13 years in a row. The American College of Radiology designated Good Samaritan a Breast Imaging Center of Excellence, which it received only after accomplishing the highest level of care in breast imaging, including being committed to patients, providers, and payers. Good Samaritan has been recognized as an

Accredited Comprehensive Center by the Metabolic and Bariatric Surgery Accreditation and Quality Improvement Program ("MBSAQIP®"), a joint Quality Program of the American College of Surgeons ("ACS") and the American Society for Metabolic and Bariatric Surgery ("ASMBS").

27. Good Samaritan is accredited by the Joint Commission. Good Samaritan has been accredited by Joint Commission for specialization certifications for Gold Seal of Approval for Total Hip and Knee Replacement, Shoulder Replacement and Spine Surgery—these certifications are designed for hospitals providing the critical elements to achieve long-term success in improving critical medical outcomes—which signifies its services have delivered evidence-based proof of clinical quality sought by patients and payers alike. The entities that award and assign these accreditations and certifications visit the healthcare facility and perform regular periodic in-person reviews, surveys and assessments of the facility.

28. Good Samaritan has also recently been awarded the Florida Department of Health and Florida Agency for Health Care Administration Excellence for Maternal Care Award, which highlights hospitals that surpass Florida Department of Health's goal of reducing the rate of C-sections among first-time mothers with low-risk pregnancies. Good Samaritan was recognized by BlueCross BlueShield as a Blue Distinction Center for Bariatric Surgery designation, as part of the Blue Distinction Specialty Care program. Good Samaritan earned this recognition by providing a full range of bariatric surgical care services, including inpatient care, postoperative care, follow-up, and patient education that operate to standards set by BlueCross BlueShield, in partnership with physician experts and medical organizations. Good Samaritan is also recognized as a Blue Distinction Center for Knee and Hip Replacement. Aetna has also designated Good Samaritan as an Aetna Institute of Quality orthopedic facilty for total joint replacement and spine surgery, which it earned by consistently delivering safe and effective orthopedic care.

29. Good Samaritan was the only hospital in South Florida to earn recognition as one of "America's 100 Best for Spine and Outpatient Orthopedic Excellence Award" in 2025. Good Samaritan has also received countless five-star awards from Healthgrades, including Five-Star Recipient for C-Section Delivery for four years in a row (2022-2025), Five-Star Recipient for Vaginal Delivery for twelve years in a row (2014-2025), Five-Star Recipient for Outpatient Back and Neck Surgery (except Spinal Fusion) (2025), Five-Star Recipient for Spinal Fusion (2025), and Five-Star Recipient for Treatment of Gastrointestinal Bleed (2024).

30. ***Palm Beach Gardens Medical Center*** has received numerous awards and accolades, including many that are especially relevant to patient care for the over-65 patient community that makes up over half of the patients Palm Beach Gardens Medical Center serves. Palm Beach Gardens Medical Center is accredited by Joint Commission as an Advanced Primary Stroke Center—a certification designed for hospitals providing the critical elements to achieve long-term success in improving stroke outcomes—and Total Joint Hip/Knee Certification—which signifies its services have delivered evidence-based proof of clinical quality sought by patients and payers alike. Additionally, it has a lab accreditation from the College of American Pathologists—a requirement to perform testing on specimens from human beings—and was selected as a certified program with the AACVPR—the only peer-reviewed accreditation process designed to review individual facilities for adherence to standards and guidelines developed and published by the AACVPR. These accreditations and certifications are only awarded after in-person visits to Palm Beach Gardens Medical Center where its health care professionals are interviewed and patient care is reviewed firsthand. Palm Beach Gardens Medical Center is also subject to regular periodic in-person reviews, surveys, and assessments of the facility.

31. Palm Beach Gardens Medical Center has also received numerous awards that exemplify its quality such as Blue Distinction Center+ Designation for Quality and Cost-Efficiency in Knee and Hip Replacement Surgeries by BlueCross BlueShield, the Joint Commission's Gold Seal of Approval for Hip and Knee Replacement, an Aetna Institute of Quality Orthopedic Facility for Total Joint Replacement and Spine Surgery, Get with the Guidelines Gold Plus Stroke Recognition Award from the American Heart Association for 10 years straight, and the Gold Plus Diabetes Recognition Award for the last three years, among several other awards.

32. Healthgrades named Palm Beach Gardens Medical Center among the nation's top 10% for pulmonary services. It has also been awarded five stars by Healthgrades for many services, including Five-Star Recipient for Valve Surgery (2023, 2025), Five-Star Recipient for Treatment of Heart Failure for three years in a row (2023-2025), Five-Star Recipient for Carotid Procedures for three years in a row (2023-2025), Five-Star Recipient for Respiratory Failure for two years in a row (2024-2025), Five-Star Recipient for Colorectal Surgeries (2025), Five-Star Recipient for Treatment of GI Bleed (2024), Five-Star Recipient for Treatment of Stroke (2025), Five-Star Recipient for Treatment of Pneumonia for three years in a row (2023-2025), and Five-Star Recipient for Treatment of Chronic Obstructive Pulmonary Disease (2024).

33. ***St. Mary's*** has several accreditations that demonstrate the high quality of care it provides to pregnant women and children in the community. For example, it is an accredited acute care hospital that is a Level I adult and pediatric Trauma Center. A Level I Trauma Center is a healthcare facility that is central to the trauma system and capable of providing the highest level of care for every aspect of injury for both adults and children. St. Mary's is also a Level III NICU, meaning it provides lifesaving care for babies born before 32 weeks' gestation and / or weighing less than 1,500 grams (approximately 3.3 pounds) or babies with specific medical conditions that

require surgery or specialized pediatric care. Additionally, St. Mary's is one of only 11 designated hospitals by the Florida Department of Health as a RPICC that provide obstetrical services to women who have a high-risk pregnancy and care for newborns with special health needs, such as critical illness or low birth weight. St. Mary's is also certified by the American College of Surgeons for the Verified Pediatric Surgery Program, which recognizes hospitals that properly address the surgical care of infants and children.

34. St. Mary's is also a Commission on Accreditation of Rehabilitation Facilities ("CARF") accredited facility for its stroke, brain injury and amputation specialty services. Achieving CARF accreditation means that St. Mary's meets CARF's standards and has demonstrated a commitment to being among the best available to patients. St. Mary's is also a Certified Comprehensive Stroke Center, which signifies its dedication to raising the bar for evaluating and evolving the care of patient at every part of the stroke care continuum.

35. St. Mary's is accredited by the Joint Commission. St. Mary's has been accredited by the Joint Commission for specialization certifications for Spine Surgery and Total Joint Replacement for Hip and Knee—a certification designed for hospitals providing the critical elements to achieve long-term success in improving critical medical outcomes—which signifies its services have delivered evidence-based proof of clinical quality sought by patients and payers alike.

36. These accreditations and certifications are particularly important given St. Mary's patient population. With its accreditation and specialties, St. Mary's provides patients care they are not able to receive at other facilities. St. Mary's sees more transfers to its facility from nearby hospitals who are unable to provide patients with the care they need than any other Palm Beach County hospital. Also, due to its location in a low-income community, St. Mary's treats a

significant number of high-risk pregnancies in which infant mortality is a serious risk and heartbreaking reality.

37. St. Mary's has also received numerous awards. St. Mary's has been awarded multiple Get with the Guidelines awards, including Stroke Gold Plus Award 2024 (13th Consecutive Year); Stroke Elite Plus Honor Roll; Stroke Advance Therapy Honor Roll; and Type 2 Diabetes Honor Roll. The Get with the Guidelines Stroke program is designed to improve stroke care by promoting consistent adherence to the latest scientific treatment guidelines.

38. Additionally, St. Mary's has been recognized by BlueCross BlueShield with a Blue Distinction Centers for Knee, Hip Replacements, Spine Surgery and Maternity Care designation, as part of the Blue Distinction Specialty Care program. The Blue Distinction Specialty Care is a national designation program that recognizes health providers that demonstrate expertise in quality and affordable health care to meet consumers' specialty care needs.

39. St. Mary's has also received numerous awards that recognize the high-quality care it provides to pregnant women and children in particular. For example, it has recently been awarded the Florida Department of Health and Florida Agency for Health Care Administration Excellence for Maternal Care Award, which highlights hospitals that surpass Florida Department of Health's goal of reducing the rate of C-sections among first-time mothers with low-risk pregnancies. Similarly, the Florida Hospital Association also recently awarded St. Mary's the Excellence in Maternity Care designation, which is awarded to a hospital that demonstrates exceptional dedication to maternal health care.

40. *The Palm Beach Post* has awarded St. Mary's with Community Choice Awards for Best Hospital, Best Orthopedic/Sports Medicine 2024 and Best Maternity and Childbirth Center

2024 & 2025. The Palm Beach County Community Choice Awards celebrate the best business and organizations in the area, with people in the community voting on these designations.

41. St. Mary's has been awarded several five-star awards from Healthgrades, including for its spinal fusion surgery and hip fracture treatment for five years in a row; knee replacement surgery; and, for the eleventh year in a row, for both vaginal and C-section delivery.

42. ***West Boca Medical Center*** has received numerous awards and accolades, including many that are directly relevant to patient care for children and women that it serves. For example, West Boca Medical Center is the only Level III NICU facility in southern Palm Beach County. Level III NICUs provide lifesaving care for babies born before 32 weeks' gestation and / or weighing less than 1,500 grams (approximately 3.3 pounds) or babies with specific medical conditions that require surgery or specialized pediatric care. The American College of Radiology accredited West Boca Medical Center for Imaging Modalities including Nuclear Medicine, Ultrasound, MRI, CT—which provides it the ability to care for the Level III NICU children and at-risk pregnancy mothers that it treats and ensures it is using best practices. Relatedly, West Boca Medical Center has an accredited education program in radiology through Joint Review Committee on Education and Radiologic Technology ("JCERT"), which is the only agency recognized by the United States Department of Education ("USDE") and the Council for Higher Education Accreditation ("CHEA") for the accreditation of traditional and distance delivery educational programs in radiography, radiation therapy, magnetic resonance, and medical dosimetry. This program provides West Boca Medical Center's clinical staff with the educational opportunities to ensure its patients receive quality care.

43. West Boca Medical Center is accredited by the Joint Commission. West Boca Medical Center has also been accredited by Joint Commission for specialization certifications for

Joint-Replacement – Hip, Joint Replacement – Shoulder, and Joint Replacement – Knee—a certification designed for hospitals providing the critical elements to achieve long-term success in improving critical medical outcomes—which signifies its services have delivered evidence-based proof of clinical quality sought by patients and payers alike.

44. West Boca Medical Center has also received numerous awards that exemplify its quality such as Get with the Guidelines Silver Plus Stroke Recognition Award and Diabetes Honor Roll. In addition, as a facility that primarily treats mothers and children, it is important to it that it implements the American Academy of Pediatrics ("AAP") best practices and have been recognized for doing so by receiving the Silver designation from the Cribs for Kids' National Safe Sleep Hospital Certification program, which signifies its facility's commitment to infant safe sleep to reduce the risk of Sudden Unexpected Infant Death ("SUID"), Accidental Suffocation and Strangulation in Bed ("ASSB"), SIDS, and unsafe sleep injuries.

45. West Boca Medical Center earned two Healthgrades Excellence Awards, one for gastrointestinal care and the other for gastrointestinal surgery, and it placed in the top 10% of hospitals in the nation for overall GI services and gastrointestinal surgery. West Boca Medical Center has also received many five-star awards, including Five-Star Recipient for Treatment of Sepsis for four years in a row (2022-2025), Five-Star Recipient for Colorectal Surgeries for three years in a row (2023-2025), Five-Star Recipient for Treatment of Bowel Obstruction (2025), Five-Star Recipient for C-Section Delivery for eleven years in a row (2015-2025), Five-Star Recipient for Vaginal Delivery for eleven years in a row (2015-2025), and Five-Star Recipient for Treatment of Respiratory Failure for three years in a row (2023-2025).

B. TLG's Safety Grade Methodology Punishes Non-Participating Hospitals Like Plaintiffs And Conceals that Penalty From Consumers.

46. TLG conducts an annual "Hospital Survey" in which TLG "asks hospitals to report quality and safety data and then publicly reports that information by hospital." In connection with the Hospital Survey, TLG assigns a "Hospital Safety Grade" to nearly 3,000 general acute-care hospitals across the nation every spring and fall. TLG posts its safety grade on one of its websites, www.hospitalsafetygrade.org, and it markets, references and links to the Hospital Safety Grade website on another website, www.leapfroggroup.org.

47. TLG admits it assigns hospitals Safety Grades to influence where consumers and patients decide to receive care. TLG explicitly tells consumers, "Patients should *always* decide on where to receive care based on a hospital's current Safety Grade." (emphasis added). TLG even tells consumers that choosing a hospital "could be a life or death decision" and amplifies this threat by misleading consumers into thinking they're "twice as likely to die of a preventable problem at a C, D, or F hospital than at an A hospital."

48. The Safety Grade uses CMS data, TLG's Hospital Survey responses, and information from other supplemental data sources to produce a single letter grade that purports to represent a hospital's "overall performance in keeping patients safe from preventable harm and medical errors." "A" represents the best TLG Hospital Safety Grade, followed in order by "B," "C," "D," and "F." The Safety Grade aggregates up to 22 national patient safety measures. For hospitals who participate in TLG's Hospital Survey, TLG uses the hospitals' answers to TLG's Hospital Survey for 12 of the 22 measures. In other words, a majority of the grade for participating hospitals is based on their self-reported survey responses.

49. When a hospital does not participate in TLG's Hospital Survey, TLG uses other sources for those 12 measures. For five measures, TLG uses government data. TLG abandons three measures entirely. And for the last four measures, TLG uses its "imputation model."

50. According to TLG, that "imputation model" is how it assigns a value for a measure when it lacks any data pertaining to it. If a hospital does not provide TLG data, TLG assigns an "imputed" value. Prior to Fall 2024, TLG's imputation model assigned hospitals that did not participate in its survey a score based on the average score applicable to similarly situated hospitals. Beginning in Fall 2024, however, TLG modified its imputation model. It now assigns the lowest possible score to non-participating hospitals. In other words, TLG now punishes non-participants for their lack of participation. TLG has admitted its new model imposes a penalty. It specifically explained its 2024 change was designed to prevent non-participating hospitals from "inadvertently benefit[ing]" compared to hospitals that self-report, even though TLG has no data to show how non-participation could benefit a hospital.

51. The four measures for which TLG "imputes" scores are: Computerized Physician Order Entry ("CPOE"), Bar Code Medication Administration ("BCMA"), ICU Physician Staffing ("IPS"), and Hand Hygiene Score. CPOE measures whether a hospital has implemented a system to record medication prescriptions via computer. BCMA measures whether a hospital confirms medication via bar code process. IPS measures a hospital's use of intensivists in an intensive care unit. A Hand Hygiene score measures hospitals' policies for monitoring hand washing and glove usage.

52. TLG's imputation model deceives consumers by inventing negative data about hospitals that TLG wishes to punish for declining to participate in its survey. For the four imputed measures (CPOE, BCMA, IPS, and Hand Hygiene), if a hospital does not participate in TLG's

survey, TLG assigns "a point value that is equivalent to receiving 'Limited Achievement' for this measure"—its lowest possible score—without any factual basis. The result is that hospitals who elect not to participate in TLG's survey receive only 60 out of 400 possible points in these four categories—resulting in artificially deflated overall grades with no basis in fact and no correlation to a hospital's actual safety performance. For example, TLG assigns a hospital the lowest possible value for the Hand Hygiene measure even if it has the best possible Hand Hygiene policy just because the hospital doesn't participate in TLG's Hospital Survey. TLG has no basis to assign that low value.

53. TLG's "imputation" model for ranking non-participating hospitals directly conflicts with TLG's own National Expert Panel's guidance. As TLG explains, "not all hospitals have enough data publicly available to be eligible for a grade." "As per the National Expert Panel guidance, [TLG] has requirements for the minimum amount of data [it] need[s] to issue an accurate grade." Accordingly, "[h]ospitals missing more than **six** process measures" are "not graded." Non-participating hospitals should fall easily into that "not graded" bucket, because their decision not to participate in TLG's survey necessarily means TLG is missing ***seven*** process measures that rely on voluntary submission of hospital data.[5] The responsible thing to do based on TLG's own Expert Panel guidance, therefore, would be to *not* provide a safety grade for a non-participating hospital. But TLG cooks the books. Of those seven missing measures, TLG "imputes"—or gins up—scores for four of them, using those concocted scores to justify ranking non-participating hospitals.

[5] Those seven include CPOE, BCMA, IPS, Safe Practice 1: Culture of Leadership Structures and Systems; Safe Practice 2: Culture Measurement, Feedback & Intervention; Total Nursing Care Hours per Patient Day; and Hand Hygiene.

54. TLG's statements about its imputation model mislead consumers and misrepresent its own model. One Frequently Asked Question on its website asks whether "a hospital get[s] a better Safety Grade if it reports to the [TLG] Hospital Survey." In response, TLG falsely states, "The Hospital Safety Grade reflects how well a hospital does on safety, not whether they complete the [TLG] Hospital Survey." Given the nature of TLG's imputation model, which involves inventing data with no objective source, that's a clear lie. TLG relies on invented data for some hospitals but not others, and it applies a different methodology to determine Hospital Safety Grades for non-participating hospitals as compared to participating ones—all despite its claims that it meaningfully compares all hospitals regardless of participation.

55. Another way TLG's deceptive methods punish non-participating hospitals is by rewarding participating hospitals with grade inflation. The data provided by hospitals that do participate in the TLG Hospital Survey is self-reported, biased, and subject to manipulation. Median responses for hospitals that report their own scores show that those hospitals inflate their performance. TLG lacks appropriate auditing mechanisms to ensure self-reported data is accurate, and it factors measures into its grading methodology that are unverifiable. TLG assumes the data it relies on is accurate without adequately verifying it.

56. Participating hospitals are not receiving strong TLG grades because they are achieving better results on an objective basis. In one illustrative example, TLG assigned a grade of "A" or "B"—its highest possible safety scores—to Mission Hospital in Asheville, North Carolina, for seven consecutive review cycles between Spring 2021 and Spring 2024. During this same time period, investigators with the North Carolina Department of Health and Human Services conducted a survey at Mission Hospital to evaluate its compliance with Medicare standards. On February 1, 2024, CMS designated Mission Hospital as in "immediate jeopardy [of losing federal

funding]"—the most severe sanction possible—because the investigators "determin[ed] that the quality of care at Mission was so bad that it had 'caused – or is likely to cause – serious injury, harm, impairment or death to a patient.'"[6] According to the 384-page report from CMS, at least three patients died in 2022 and 2023 following "significant delays and lapses of care in the emergency department and other areas"[7]—two years in which TLG awarded Mission Hospital four consecutive "A" Hospital Safety Grades.

57. Hospitals in Florida that have participated in TLG's survey are similarly receiving high TLG grades that do not reflect their performance, which damages their higher-performing but non-participating competitors. Participating hospitals have received high grades (A's and B's) in recent years despite investigative reports that a participating hospital had cockroaches in operating rooms, dirty and broken medical equipment, inadequate monitoring of ICU patients, an overcrowded emergency department, staffing deficiencies of telemetry technicians—those responsible for monitoring changes in vital signs in patients with electronic devices—that resulted in deaths related to telemetry, patients attacking nurses, and even a misplaced patient who died after staff was unable to locate him or her.

58. The flaws in TLG's methodology reveal themselves through a simple comparison between TLG's rankings and CMS data. CMS provides its own hospital safety rankings—rankings that are the product of data hospitals are required to submit to the federal agency in order

---

[6] Andrew R. Jones, *Mission Hospital's Leapfrog, Healthgrade scores and rankings don't tell the whole story, draft report says*, Asheville Watchdog (Feb. 12, 2024), https://avlwatchdog.org/mission-hospitals-leapfrog-healthgrade-scores-and-rankings-dont-tell-the-whole-story-draft-report-says/.

[7] Andrew R. Jones, *'The patient was subsequently found unresponsive in a hallway bed': CMS report on Mission Hospital details deaths of patients, significant delays in care*, ASHEVILLE WATCHDOG (Feb. 17, 2024), https://www.northcarolinahealthnews.org/2024/02/17/plan-of-correction-report-mission-hospital/.

to qualify for the Centers for Disease Control's National Healthcare Safety Network incentive programs. There are numerous examples throughout the country where TLG's grade for a hospital is two grades removed from the rating CMS provides—for example, where CMS considers a hospital a 5-star (the highest CMS rating) and TLG assigns the hospital a C, and where CMS considers a hospital a 2-star (the second lowest) and TLG assigns the hospital an A.

Examples of Leapfrog Advantaging Hospitals Who Provide It Free Data and Disadvantaging Hospitals Who Don't			
Hospital	**Participates in Leapfrog Survey?**	**Leapfrog Safety Grade (Fall 2024)**	**CMS Overall Star Rating**
Examples of Grade Deflation for Non-Participating Hospitals			
Uintah Basin Medical Center	No	C	5
University of Utah Hospital and Clinics	No	C	5
Examples of Grade Inflation for Participating Hospitals			
UVA Health Culpeper	Yes	A	1
Twin County Regional	Yes	A	2
Sentara Northern Virginia	Yes	A	2
Iredell Memorial Hospital	Yes	A	2
Maria Parham Medical Center	Yes	A	2
Vidant/ECU Health Edgecombe	Yes	A	2

59. Similarly, in 2023, TLG awarded nine hospitals who participated in its survey passing grades (A–C) when the government had assigned them "immediate jeopardy" warnings because the hospitals' "noncompliance with one or more requirements of participation has caused, or is likely to cause, serious injury, harm, impairment, or death[.]" In other words, TLG assigned failing hospitals an A and directed patients to go there at the same time the government was concerned with patients' safety at that hospital.

60. These discrepancies exist because TLG rewards participating hospitals and penalizes non-participating hospitals.

C. TLG Has Been Subject To Significant Industry And Academic Criticism.

61. For more than a decade, industry experts and academics have been sounding the alarm that TLG's methodologies are inaccurate, misleading, or inconsistent based on who participates in the surveys and who does not.

62. The Journal of the American Medical Association ("JAMA") published an article in 2009 titled *Association Between Hospital-Reported Leapfrog Safe Practices Scores and Inpatient Mortality*. That article concluded that in the "sample of . . . hospitals . . . that completed the [2006] Safe Practices Leap" survey, "survey scores were not significantly associated with risk-adjusted inpatient mortality."

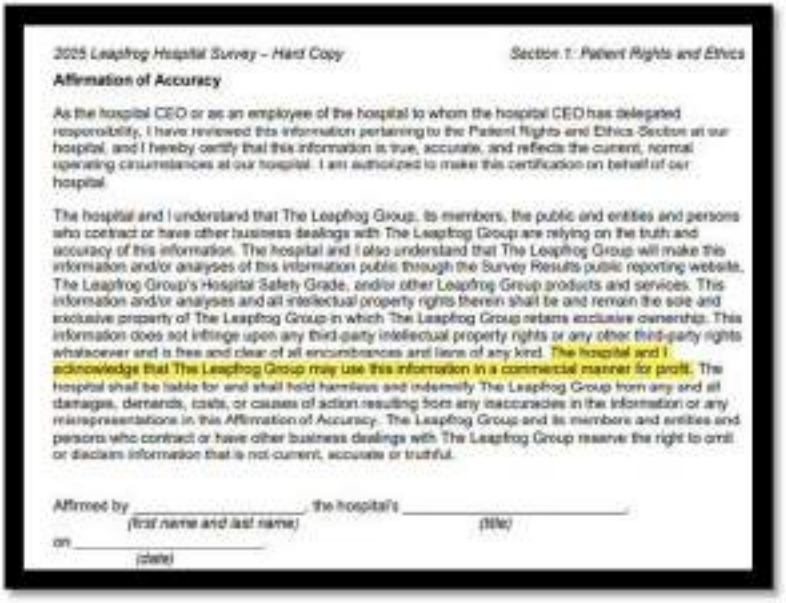
63. On June 22, 2012, Richard J. Umbdenstock, President and CEO of the American Hospital Association ("AHA") sent a letter to Leapfrog declaring that the Leapfrog Hospital Safety Grade "was neither fair nor accurate," and he outlined "several methodological shortcomings in the survey." The flaws included "an unfair bias toward responding to the survey, the use of unreliable measures, significant variation in the weights applied to measures for different groups of hospitals, and significant errors in the data." Umbdenstock's letter detailed three major criticisms of TLG's hospital safety score: (1) a minority of U.S. hospitals participate in TLG's voluntary reporting program, while those that do not receive lower imputed scores; (2) more than 80% of the outcome measures have been shown to be unreliable; and (3) there are errors in the TLG data. AHA expressed its "disappointment that the [TLG] scorecard's assessment was neither fair nor accurate"—leading AHA to conclude that "no one should use [TLG's Hospital Safety Grades] to guide their choice of hospitals, unless and until, a more accurate assessment method is used."

64. In 2017, the peer reviewed journal Medical Care published an article titled: *Dissecting Leapfrog: How Well Do Leapfrog Safe Practices Scores Correlate with Hospital Compare Ratings and Penalties, and How Much Do They Matter?* The authors, a team of researchers from the University of Michigan, concluded that participation in TLG's survey consistently inflated the participant's TLG Hospital Safety Score because self-reported information overwhelmingly "skew[ed] towards positive self-report." For example, over 50% of participating hospitals reported perfect scores in their surveys for all but one safe practice measure, and nearly 20% reported perfect scores for all safe practices.

65. The University of Michigan study further found that TLG's heavy reliance on self-reported data had the effect of "artificially deflating the mean of the distribution" to which non-reporting hospitals were compared. In other words, non-participating hospitals are subject to "large grade penalties for less-than-perfect self-reported Safe Practices compliance" because they are graded on the same curve as participating hospitals with inflated self-reported data.

66. The authors determined that "Leapfrog's current methodologies, in combination with strongly positively skewed self-reports of [Safe Practices Scores ('SPS')] measures, punish low SPS reports substantially more than they reward high SPS. These concerns cast doubt on the utility of SPS and, more generally, the [Hospital Safety Score] and grades." In addition, the TLG Hospital Safety Scores were not positively associated with patient outcomes reported by Hospital Compare or Medicare penalties for readmissions or complications.

67. Jennifer Meddings, M.D., M.Sc.—the senior author of the Michigan study—said the Hospital Safety Grade is "based on whether a hospital self-reports that it has adopted certain protocols, and not whether those protocols are actually followed"—meaning the Hospital Safety Grades offer little indication of a hospital's actual safety metrics in practice. Indeed, participating



hospitals that reported high levels of self-compliance for TLG's safe practices did not have correspondingly lower hospital-acquired infection rates or lower federal penalties for readmissions, demonstrating the ineffectiveness and misleading nature of TLG's methodology.

68. In 2019, The New England Journal of Medicine Catalyst ("NEJM") published a peer reviewed article criticizing the methodology used by rating agencies, including Leapfrog. The authors said "[t]he greatest concerns were with [TLG's] internally developed and modified Safety Survey." The NEJM authors noted that TLG "had only done a formal audit for approximately five hospitals of about 2,600 in the past year, and only 72 hospitals underwent an electronic audit." In addition, the authors also reported concerns that the survey "may not truly reflect patient safety efforts or be currently meaningful to stakeholders (e.g., computerized physician order entry)." And "[a]nother major area of concern was how Leapfrog assesses hospitals that do not answer their Safety Survey. When hospitals do not report the survey, the missing data are filled in from other secondary sources. However, hospitals that answer the survey and those that do not are assessed in the same way despite not having the same measures upon which to base the ratings. Approximately 50% of hospitals answer their survey, so a good deal of the rankings are based on missing or inconsistent data."

D. TLG Reaps Substantial Rewards From Its Pay-to-Play Scheme.

69. TLG heavily tilts its grading in favor of hospitals that participate in TLG's scheme in a quid-pro-quo arrangement: Hospitals provide TLG free data, which it can then monetize, and in return hospitals receive better TLG grades while their competitors are penalized for not supplying TLG free data. And though it pretends to be a non-profit, TLG also rakes in millions of dollars from the data it obtains from participating hospitals incentivized to keep TLG happy, so it keeps inflating grades.

70. Between 2019 and 2023, TLG collected millions in revenue from hospitals that it later rewarded with inflated grades. TLG also has collected troves of data from hospitals who complete its survey so it can financially benefit from such data. Participants in the TLG survey are specifically required to sign an acknowledgment that "[t]he Leapfrog Group may use this information in a commercial manner for profit":

2025 Leapfrog Hospital Survey – Hard Copy *Section 1: Patient Rights and Ethics*

Affirmation of Accuracy

As the hospital CEO or as an employee of the hospital to whom the hospital CEO has delegated responsibility, I have reviewed this information pertaining to the Patient Rights and Ethics Section at our hospital, and I hereby certify that this information is true, accurate, and reflects the current, normal operating circumstances at our hospital. I am authorized to make this certification on behalf of our hospital.

The hospital and I understand that The Leapfrog Group, its members, the public and entities and persons who contract or have other business dealings with The Leapfrog Group are relying on the truth and accuracy of this information. The hospital and I also understand that The Leapfrog Group will make this information and/or analyses of this information public through the Survey Results public reporting website, The Leapfrog Group's Hospital Safety Grade, and/or other Leapfrog Group products and services. This information and/or analyses and all intellectual property rights therein shall be and remain the sole and exclusive property of The Leapfrog Group in which The Leapfrog Group retains exclusive ownership. This information does not infringe upon any third-party intellectual property rights or any other third-party rights whatsoever and is free and clear of all encumbrances and liens of any kind. The hospital and I acknowledge that The Leapfrog Group may use this information in a commercial manner for profit. The hospital shall be liable for and shall hold harmless and indemnify The Leapfrog Group from any and all damages, demands, costs, or causes of action resulting from any inaccuracies in the information or any misrepresentations in this Affirmation of Accuracy. The Leapfrog Group and its members and entities and persons who contract or have other business dealings with The Leapfrog Group reserve the right to omit or disclaim information that is not current, accurate or truthful.

on _____
(date)

71. TLG collects revenue from participating hospitals in multiple ways. For instance, TLG charges hospitals—including ones TLG rates—over $25,000 annually to join its Partners Advisory Committee to influence the TLG Board of Directors four times a year. TLG thereby creates a structure for hospitals to pay for access to its decision-makers and curry favor with them

to ensure TLG's system benefits hospitals who participate in TLG's scheme and punishes those who do not. Some of TLG's paying members own some of its highest-rated hospitals.[8]

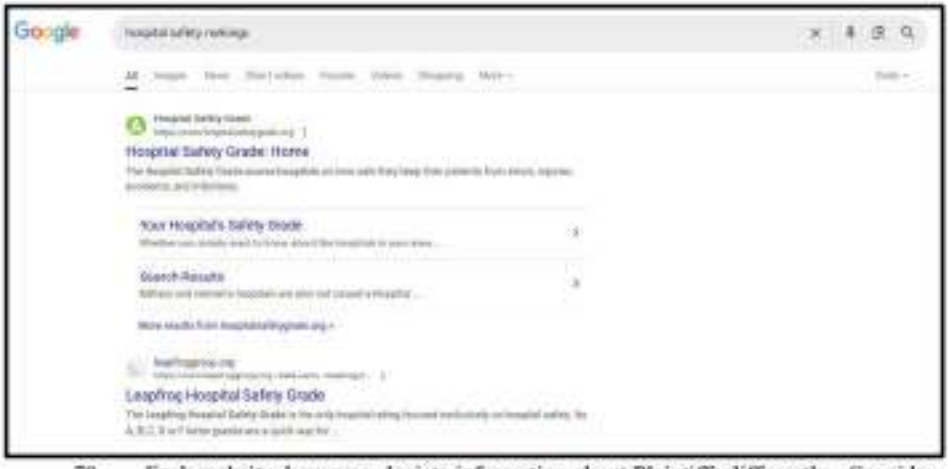
72. TLG also charges hospitals between $6,700 and $29,900 per year to advertise their TLG safety grade. That creates an incentive for TLG to rate higher the hospitals willing to pay, as opposed to those who do not. No hospital would pay $29,900 to advertise a failing grade.

73. TLG also encourages hospitals to sponsor its annual meetings and awards ceremony. In 2024, TLG's platinum executive sponsorship required $44,750—yet another way TLG reaps financial rewards from its scheme.

74. TLG monetizes the data it receives from hospitals who participate in its Hospital Survey. TLG is therefore incentivized to set up its methodology to reward participating hospitals, so that it gets more data, which it can use to make more revenue. TLG has used the tens of millions of dollars of revenue it has collected from participating hospitals and other sponsors in its pay-to-play system to pay exorbitant salaries to its owner and executives. Between 2019 and 2023, TLG has paid over three million dollars in salary and benefits to Leah Binder—its CEO.

75. TLG also licenses its safety grades to insurers, which integrate TLG's grades into websites patients use to determine whether particular healthcare facilities are covered. Insurers are even able to use TLG's logos and intellectual property—displayed prominently in a drop-down called "Hospital Safety & Accreditation":

[8] Gretchen Morgenson et al., *Roaches in the operating room: Doctors at HCA hospital in Florida say patient care has suffered from cost cutting*, NBS News (Feb. 15, 2023), https://www.nbcnews.com/health/health-care/roaches-operating-room-hca-hospital-florida-rcna69563.

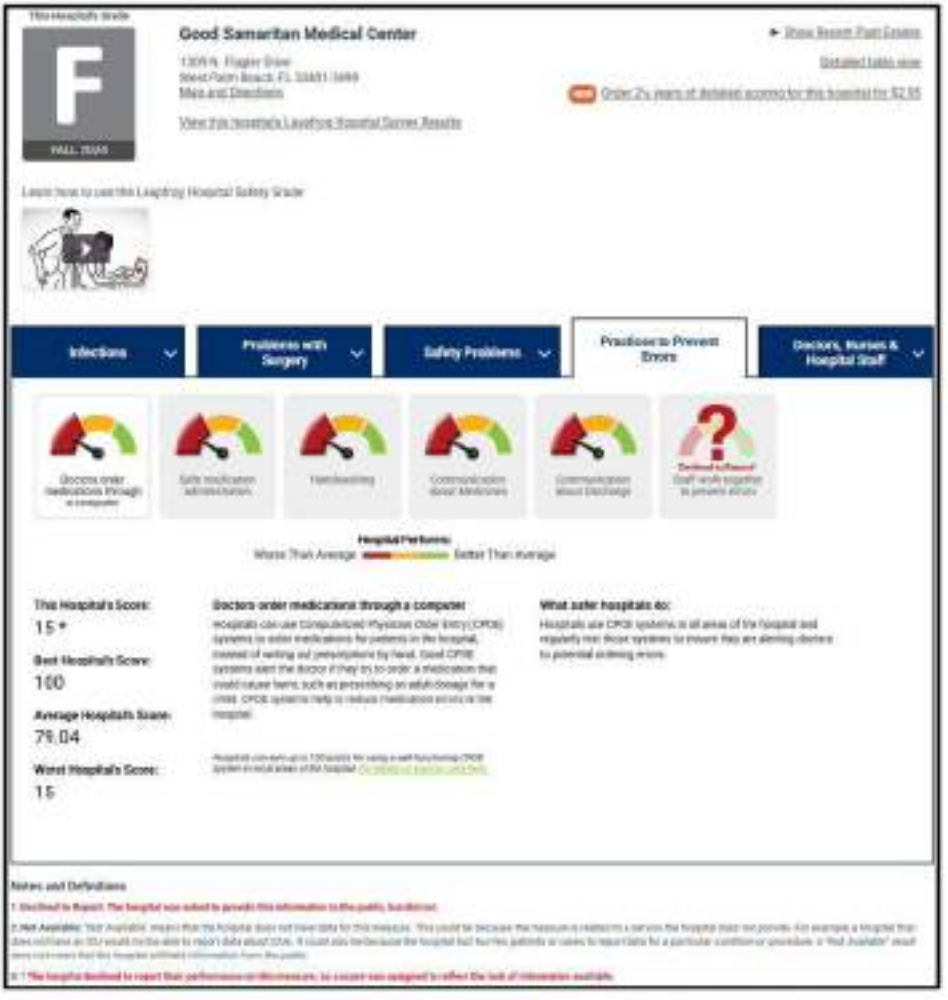


TLG receives compensation from insurers to allow those insurers to use TLG's safety grades and logos. That means TLG has yet another incentive to rank as many hospitals as possible so as to convince insurers TLG's ratings have value and to drive even more revenue to TLG through penalizing non-participating hospitals and trying to coerce them into providing data.

E. TLG's Websites Confirm TLG Is Knowingly Deceiving Patients.

76. TLG has two websites for its hospital safety rankings—www.leapfroggroup.org and www.hospitalsafetygrade.org. They each reference TLG's safety grades, but they do so in inconsistent ways that confirm not only that TLG knows it is misleading patients but also that it intends to do so.

77. When a potential patient or even an existing patient Googles "hospital safety rankings," the top two results are TLG's websites, www.hospitalsafetygrade.org and www.leapfroggroup.org:



78. Each website, however, depicts information about Plaintiffs differently. Consider the consumer experience looking for safety grades on the first Google hit—www.hospitalsafetygrade.org. Clicking that link brings a patient to TLG's Hospital Safety Grade website, where TLG encourages users to search for their local hospital by asking, "How Safe is Your Hospital?"

79. Once a patient searches her hospital's name, she is immediately confronted with the following image—a disturbing "F" grade, the meaning of which even an elementary school student would understand:

80. When a patient clicks on "View the full Score" she sees a plethora of inaccurate and misleading information about the hospital (explained *infra* Section F):

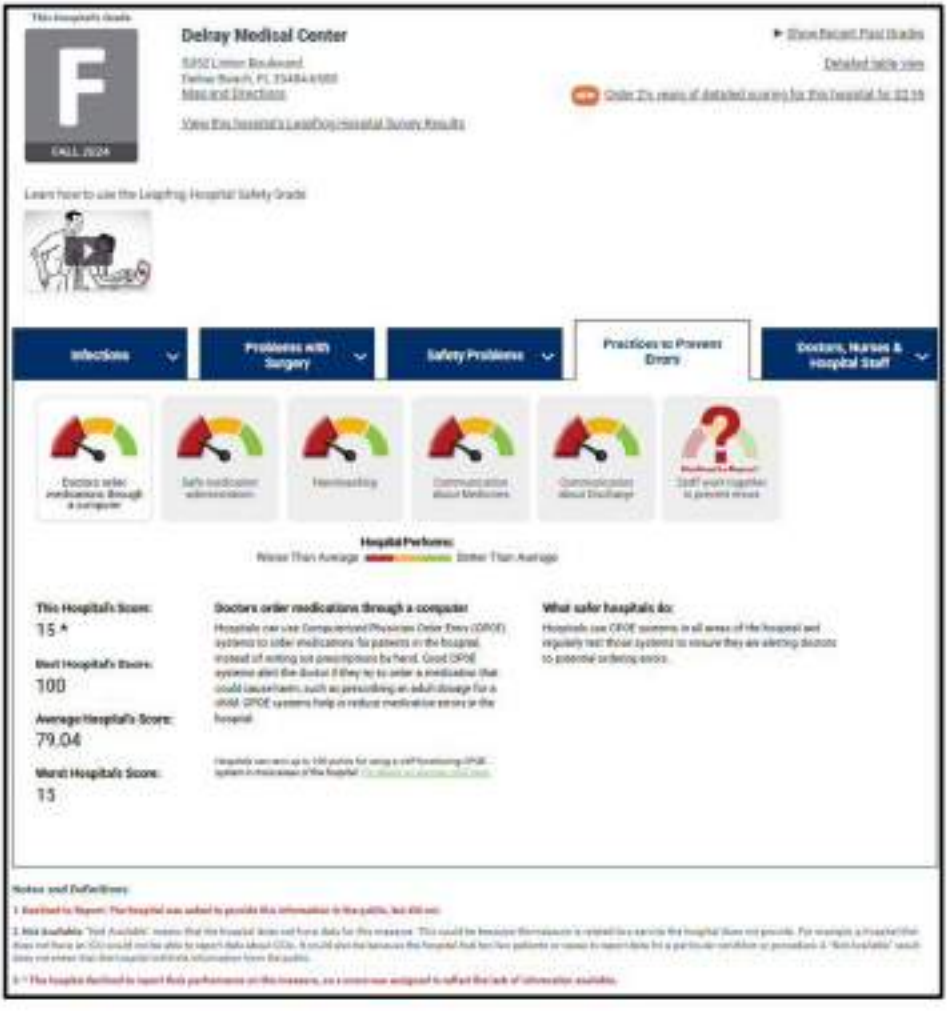
81. Only at the bottom of the page—in a small font and in footnotes consumers won't read—does TLG disclose that the hospital did not provide data to TLG.

82. TLG's approach on www.hospitalsafetygrade.org is inconsistent with how it depicts information about Plaintiffs on its other website, www.leapfroggroup.org. On leapfroggroup.org, searching for Good Samaritan Medical Center, for example, does *not* result in

any grade at all. Instead, on *that* website, TLG states that the hospital did not provide data to TLG sufficient to rate the hospital:

83. TLG's leapfroggroup.org rating website also accurately discloses that TLG has inadequate information to rate the hospital as to every metric:

84. The differences in TLG's websites confirm TLG knows exactly what message it is communicating to consumers. TLG clearly understands how to tell patients that it can't grade Plaintiffs because it lacks data. TLG decided not to do that, though, on www.hospitalsafetygrade.org: Even after admitting on www.leapfroggroup.org that it *can't* rate Plaintiffs, it purports to fail Plaintiffs with a big, bold "F" on www.hospitalsafetygrade.org.



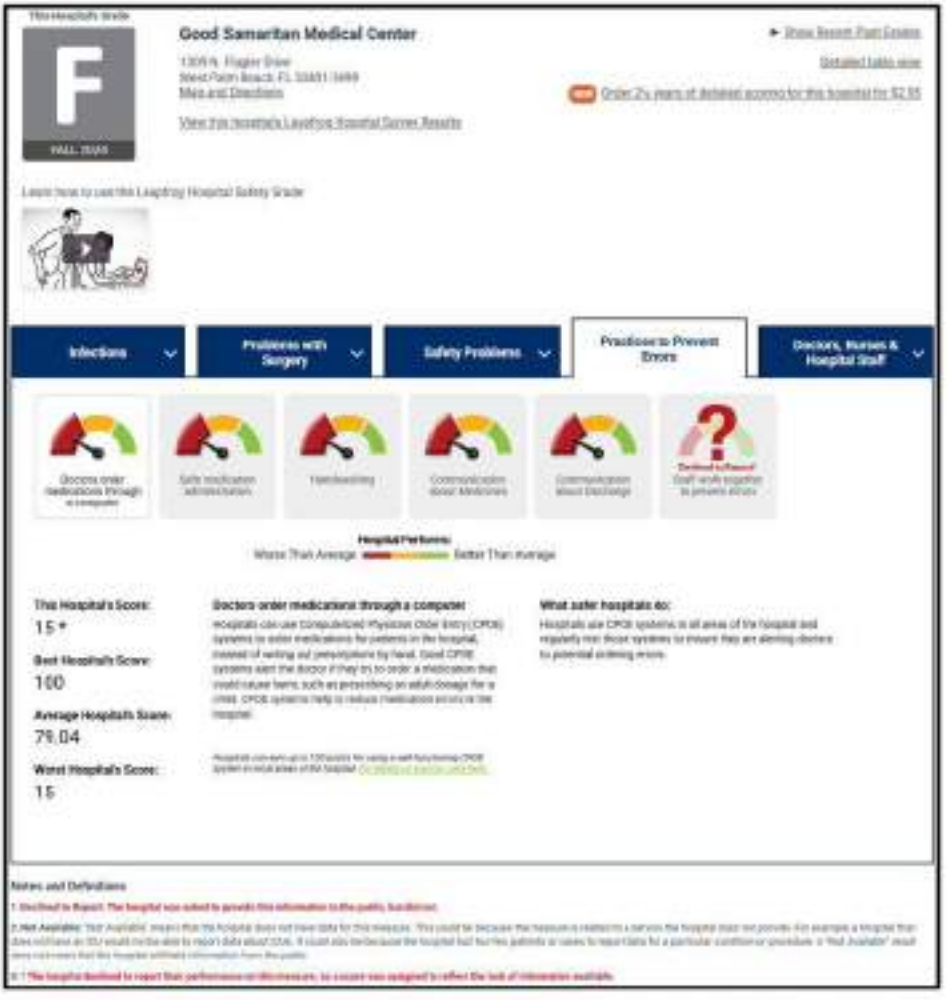
F. TLG Assigned Plaintiffs Misleading And Deceptive Low Grades.

85. Plaintiffs are among the many hundreds of hospitals across the country who choose not to participate in TLG's Survey. Given that non-participation, TLG could easily have told consumers—as it does on www.leapfroggroup.org—it lacks sufficient data to provide safety grades for Plaintiffs. Instead, it "imputed" scores to Plaintiffs and gave them failing or near-failing grades on www.hospitalsafetygrade.org. As a result, TLG has intentionally and recklessly released misleading and deceptive information about Plaintiffs' health safety performance.

86. TLG assigned Plaintiffs "Limited Achievement" scores, and corresponding low Safety Grades just as it did with other non-participating hospitals.

87. ***Delray Medical Center.*** TLG assigned Delray Medical Center an "F" grade for Fall 2024. Under its flawed methodology, TLG assigned Delray Medical Center the lowest possible score on multiple criteria for which TLG had no information—including "Handwashing," "Doctors order medications through a computer," "Safe medication administration," and "Specially trained doctors care for ICU patients."

88. TLG's consumer-facing Hospital Safety Grade pages misleadingly suggest that Delray Medical Center performed poorly on each of these categories. Although the "Staff work together to prevent errors" category is labeled with "Declined to Report," the remaining categories all misleadingly reflect that the "Hospital Performs" "Worse Than Average"—even though TLG has no basis to say so:

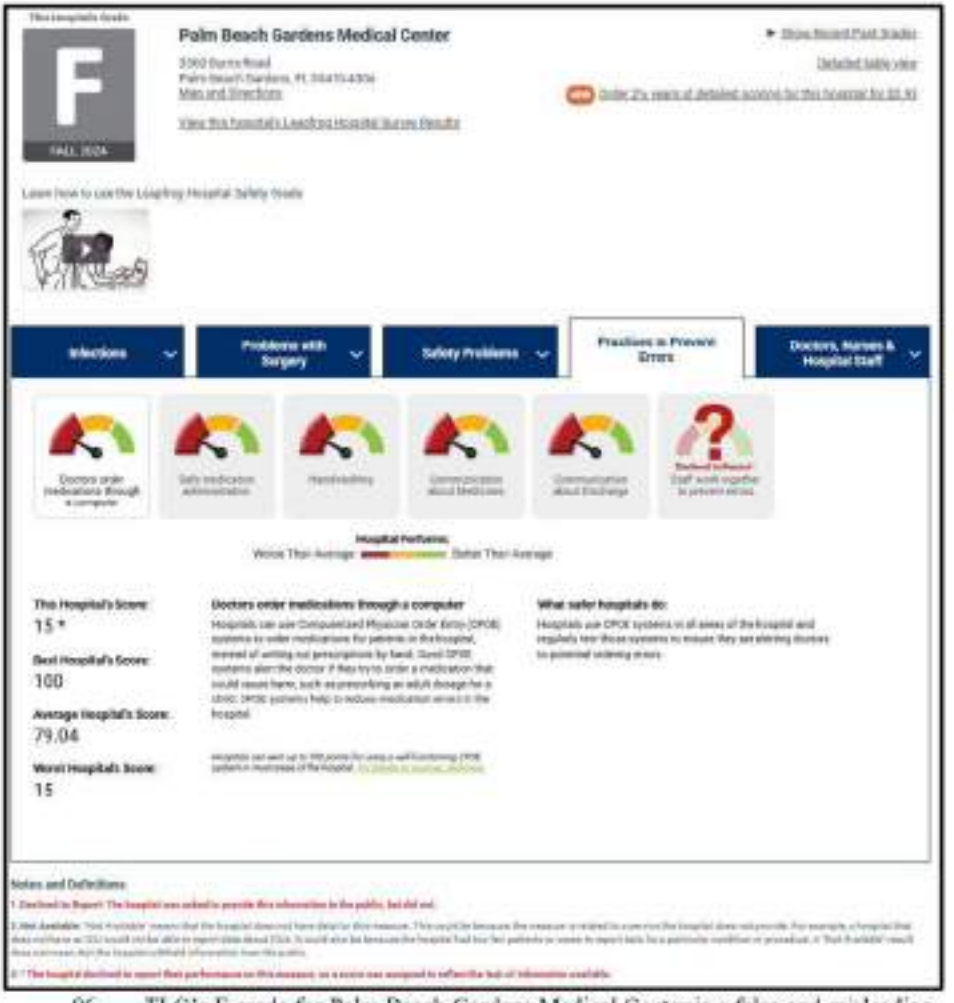


89. In other words, TLG is deceptively communicating to consumers that Delray Medical Center doctors and nurses don't adequately wash their hands, among other false statements—with no data whatsoever to support that conclusion.

90. TLG's F grade for Delray Medical Center is a false and misleading statement that TLG intentionally and recklessly released—and refused to pull down.

91. ***Good Samaritan.*** TLG also assigned Good Samaritan an "F" grade for Fall 2024. Under its flawed methodology, TLG assigned Good Samaritan the lowest possible score on the same criteria for which TLG had no information—"Handwashing," "Doctors order medications through a computer," "Safe medication administration," and "Specially trained doctors care for ICU patients."

92. TLG's consumer-facing Hospital Safety Grade pages misleadingly suggest that Good Samaritan performed poorly on each of these categories. Although the "Staff work together to prevent errors" category is labeled with "Declined to Report," the remaining categories all misleadingly indicate that the "Hospital Performs" "Worse Than Average"—even though TLG has no basis to make these deceptive statements:

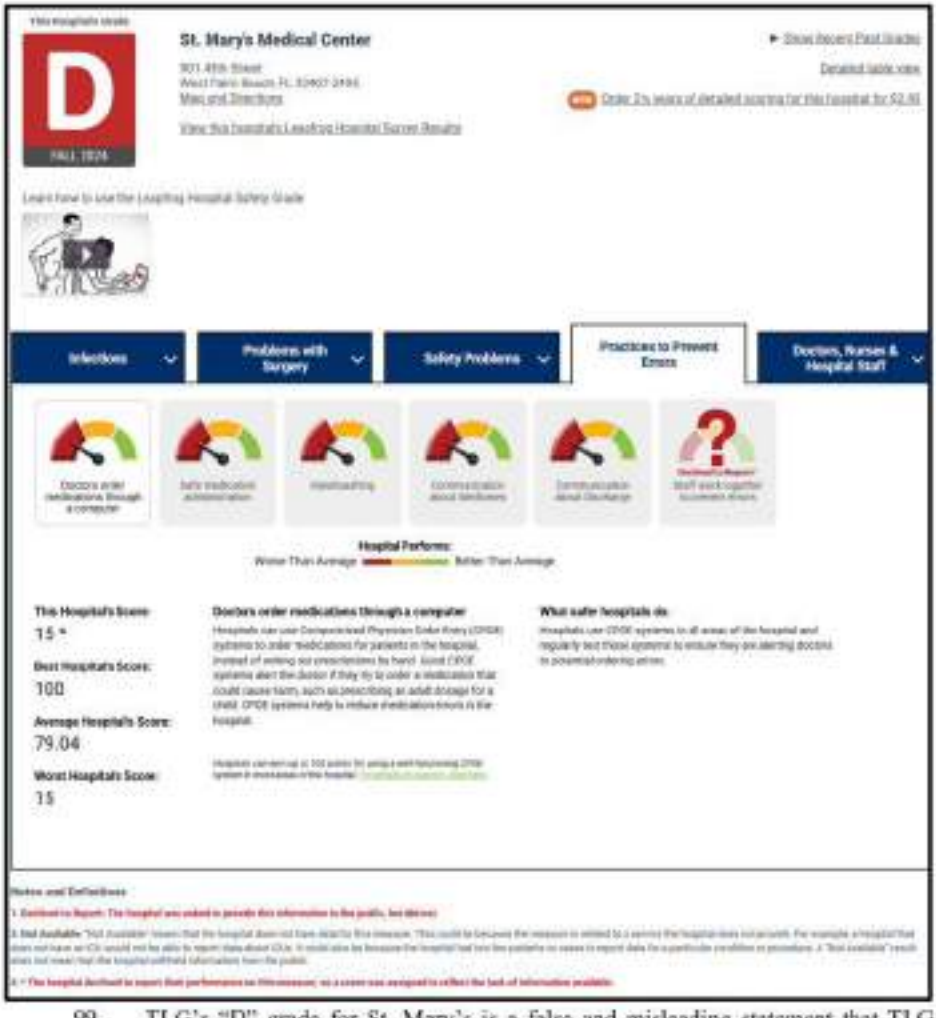


93. TLG's "F" grade for Good Samaritan is a false and misleading statement that TLG intentionally and recklessly released—and refused to pull down.

94. ***Palm Beach Gardens Medical Center.*** TLG also assigned Palm Beach Gardens Medical Center an "F" grade for Fall 2024. Under its flawed methodology, TLG assigned Palm Beach Gardens Medical Center the lowest possible score on the same criteria for which TLG had

no information—"Handwashing," "Doctors order medications through a computer," "Safe medication administration," and "Specially trained doctors care for ICU patients."

95. TLG's consumer-facing Hospital Safety Grade pages misleadingly suggest that Palm Beach Gardens Medical Center performed poorly on each of these categories. Although the "Staff work together to prevent errors" category is labeled with "Declined to Report," the remaining categories all misleadingly indicate that the "Hospital Performs" "Worse Than Average"—even though TLG has no basis to make these deceptive statements:

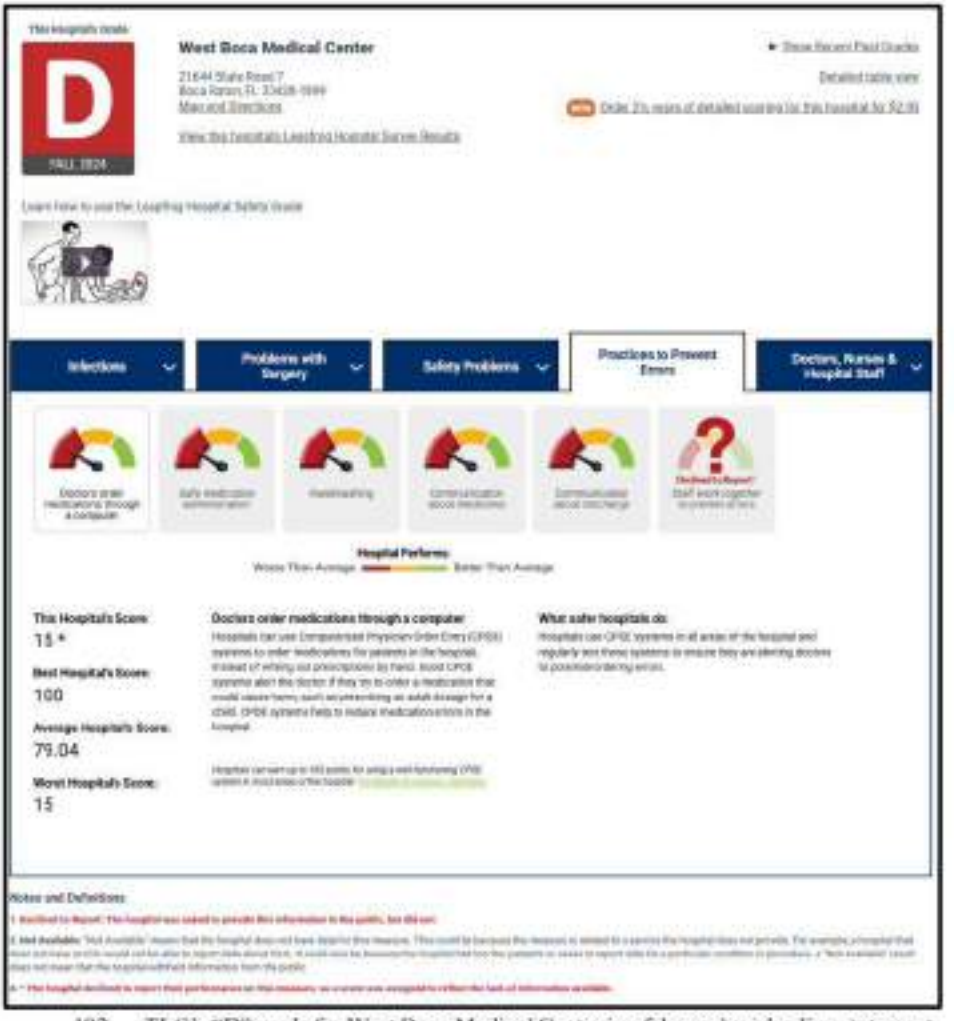


96. TLG's F grade for Palm Beach Gardens Medical Center is a false and misleading statement that TLG intentionally and recklessly released—and refused to pull down.

97. ***St. Mary's.*** TLG assigned St. Mary's a "D" grade for Fall 2024. Under its flawed methodology, TLG assigned St. Mary's the lowest possible score on the same criteria for which

TLG had no information—"Handwashing," "Doctors order medications through a computer," "Safe medication administration," and "Specially trained doctors care for ICU patients."

98. TLG's consumer-facing Hospital Safety Grade pages misleadingly suggest that St. Mary's performed poorly on each of these categories. Although the "Staff work together to prevent errors" category is labeled with "Declined to Report," the remaining categories all misleadingly indicate that the "Hospital Performs" "Worse Than Average"—even though TLG has no basis to make these deceptive statements:



99. TLG's "D" grade for St. Mary's is a false and misleading statement that TLG intentionally and recklessly released—and refused to pull down.

100. ***West Boca Medical Center.*** TLG also assigned West Boca Medical Center a "D" grade for Fall 2024. Under its flawed methodology, TLG assigned West Boca Medical Center the lowest possible score on the same criteria for which TLG had no information—"Handwashing."

"Doctors order medications through a computer," "Safe medication administration," and "Specially trained doctors care for ICU patients."

101. TLG's consumer-facing Hospital Safety Grade pages misleadingly suggest that West Boca Medical Center performed poorly on each of these categories. Although the "Staff work together to prevent errors" category is labeled with "Declined to Report," the remaining categories all misleadingly indicate that the "Hospital Performs" "Worse Than Average"—even though TLG has no basis to make these deceptive statements:

102. TLG's "D" grade for West Boca Medical Center is a false and misleading statement that TLG intentionally and recklessly released—and refused to pull down.

G. TLG's Deceptive And Misleading "Safety" Grades Have Severely Harmed Plaintiffs, Their Patients, And The Public.

103. TLG's misleading safety grades have caused severe, ongoing, and irreparable harm to Plaintiffs, their patients, and the public. The grades have caused Plaintiffs' patients to move their procedures from Plaintiffs to Plaintiffs' competitors, damaged the goodwill that Plaintiffs worked hard to build with their patients over the years, harmed Plaintiffs' relationships with key business partners, and risked serious consumer harm. Plaintiffs' elective patient admissions dropped following TLG's release of its Fall 2024 Hospital Safety Grades. The harm has been significant and widespread, given TLG's efforts to encourage the media to report on the misleading and deceptive grades TLG assigned Plaintiffs. Indeed, TLG has specifically admitted that it embargoed Plaintiffs' safety grades with the press weeks before those scores went public specifically to generate broad public attention to those false and misleading scores. TLG's safety grades are even available on insurer websites for patients to rely on when they look up whether certain hospitals fall under insurance coverage.

104. Each Plaintiff has suffered harm from TLG's deceptive practices. Plaintiff Delray Medical Center's Medical Executive Committee, which is comprised of the medical leadership that oversees each department within the hospital, has received direct inquiries from patients regarding their concerns about TLG's grades and related public reports. Physicians were approached by patients who expressed that they did not want to go to Delray Medical Center for surgeries after seeing TLG's grade and associated reports. Plaintiff Delray Medical Center has also received reports from patients and from doctors that patients have planned to drive past Delray Medical Center to a more distant medical facility due to the grade TLG gave to Delray Medical Center.

105. Plaintiff Good Samaritan's Medical Executive Committee has also received direct inquiries from patients regarding their concerns about TLG's grades and related public reports. TLG's grades are even impacting Good Samaritan's hiring efforts. Plaintiff Good Samaritan's Chief Nursing Officer reported that a nursing candidate questioned the quality of care of the hospital in her interview for a job opening. Good Samaritan has also received reports from patients that they decided not to use its facility because of TLG's misleading grades.

106. Plaintiff Palm Beach Gardens Medical Center has received reports from patients that they decided not to use the Medical Center due to the misleading grade TLG assigned the hospital. This is particularly harmful to the Palm Beach Gardens community given that the majority of patients are 65 years old and older, and travel time risks exacerbating their health issues before receiving care, particularly if they are stroke victims. The Palm Beach Gardens Medical Center's Medical Executive Committee has also received direct inquiries from patients regarding their concerns about TLG's grades and related public reports.

107. Plaintiff St. Mary's medical leadership has received direct inquiries from patients regarding their concerns about TLG's grades and related public reports. As a Level I adult and pediatric Trauma Center, Joint Commission Comprehensive Stroke Center, Level III NICU, and RPICC—among other certifications—St. Mary's is a facility people need to go to receive specialized medical care. TLG's safety grades misleadingly make patients think that they should go to "A" hospitals even though those hospitals do not have the objective accreditation, certification, and facilities—like St. Mary's—needed to treat certain high-risk patients.

108. When TLG assigns a hospital an A, patients think that facility is where they should receive care. Objective data debunks that impression. As just one example, another hospital in the Palm Beach County area that TLG has graded an "A" regularly transfers patients to St. Mary's

for critical, higher-level care services—despite St. Mary's purported TLG "D" safety grade. In 2024, that A-ranked hospital transferred 600 patients to St. Mary's. Since 2022, that A-ranked hospital transferred 1,800 patients to St. Mary's. Why? Because only St. Mary's had the right specialists, technology, accreditations, and certifications necessary to provide the required care. Whether a hospital can or should treat a given patient depends on far more than TLG's superficial and misleading marks, but TLG intentionally deceives consumers into thinking otherwise.

109. Plaintiff West Boca Medical Center's Medical Executive Committee has also received direct inquiries from patients regarding their concerns with TLG's grades and related public reports. TLG's inaccurate grades have also harmed West Boca Medical Center's relationships with physicians and patients who have chosen alternative options as reflected through West Boca's drop in patient encounters since Fall 2024.

110. TLG's Hospital Safety Grades have also harmed Plaintiffs' relationships with physicians. Medical professionals have expressed concern about working with Plaintiffs due to the grades assigned by TLG, especially when patients have requested to schedule their surgeries at alternative facilities.

111. Attempting to counteract the inaccurate, negative picture created by TLG in the community has required Plaintiffs to devote time and resources that could have otherwise been spent continuing to improve patient care. The harm is particularly pronounced given that negative safety ratings are particularly "sticky" with consumers—*i.e.*, once a consumer sees a failing safety ranking it is exceedingly difficult to convince them the grade is wrong.

112. The deceptive Hospital Safety Grades TLG releases about Plaintiffs—and other non-reporting hospitals—mislead consumers to make commercial decisions to purchase healthcare

services that are not in their best interest. By putting hospitals on unequal footing in its evaluation just to make more money for itself and for its "partners," TLG achieves the opposite of its purported non-profit objective: It risks patient harm and causes potential patients to make unsafe decisions with potentially life-or-death implications.

113. TLG's misleading safety grades have resulted in patients delaying medical care. That's a material public safety problem. Increased time to get to a hospital following an acute health incident materially increases the risk of mortality for emergency patients. Increased time from incident to the hospital also materially increases the risk of worse outcomes, infection, and other dangerous and harmful health outcomes. It is for this reason that Florida law requires ambulances to drive emergency patients to the closest hospital. *See* Fl. Code § 395.1041(3)(e) ("Except as otherwise provided by law, **all medically necessary transfers shall be made to the geographically closest hospital** with the service capability, unless another prior arrangement is in place or the geographically closest hospital is at service capacity." (emphasis added)).

114. TLG's methodology and public statements contradict this public health principle engrained in Florida law by deceiving patients into thinking they are better off driving longer distances to hospitals based on TLG's misleading grades. The vast majority (~80%) of emergency patients are transported to emergency rooms by non-ambulatory vehicles. TLG is putting emergency patients' lives at risk by undermining their trust in local hospitals and encouraging them to delay the care they need based on deceptive information TLG is releasing. TLG's Hospital Safety Grades cause patients to make commercial decisions to drive past deceptively graded hospitals to another hospital farther away. This is a dangerous result particularly because the low grade by TLG is false and misleading.

115. TLG intends these results to encourage non-participating hospitals to participate in its deceptive scheme by warning patients they are "*always* decide on where to receive care based on a hospital's current Safety Grade," because they are "twice as likely to die of a preventable problem at a C, D, F hospital than at an A hospital." (emphasis added).

116. This has directly caused Plaintiffs loss of revenue and harm to their reputation and goodwill.

CLAIMS FOR RELIEF

COUNT I
(FLORIDA DECEPTIVE AND UNFAIR TRADE PRACTICES ACT)

117. Plaintiffs reallege and incorporate the preceding paragraphs as if fully set forth herein.

118. By virtue of its solicitation of information from Florida healthcare facilities, publication of information and Hospital Safety Grades for Florida hospitals, and commission of deceptive acts and unfair practices against Plaintiffs and the residents of Florida, TLG is subject to the Florida Deceptive and Unfair Trade Practices Act. Fla. Stat. § 501.201 et seq.

119. TLG's actions described herein constitute unfair or deceptive trade practices substantially affecting trade or commerce in the state of Florida in violation of FDUTPA.

120. In the course of its business, TLG releases its Hospital Safety Grades, which contain deceptive and misleading statements about hospital quality and patient safety.

121. TLG has made misleading representations about how its scheme penalizes non-participating hospitals, including, but not limited to, its representation that non-participating hospitals are not disadvantaged compared to hospitals who participate in its deceptive scheme.

122. TLG's entire grading system, including its imputation model, misleads Florida consumers—and national consumers—into thinking that healthcare decisions should be made by looking to an oversimplified letter grade and by penalizing non-participating hospitals.

123. TLG abuses the trust of the consumer by intentionally jiggering its Hospital Safety Grades to benefit the hospitals that fund it (through donation and the provision of valuable data), participate in its surveys, and serve on its committees. TLG's Hospital Safety Grades have harmed Florida consumers by causing them to make dangerous decisions to forego the nearest hospital based on misleading information. This harm to consumers has harmed Plaintiffs through loss of goodwill, reputation, and revenue.

124. TLG's misrepresentations are knowing and intentional. TLG on www.theleapfroggroup.org accurately describes when hospitals have declined to participate in TLG's survey, making clear that TLG has insufficient data with which to assign a safety grade. At the same time, TLG purports to assign "safety grades" based on that same inadequate data on www.hospitalsafetygrade.org.

125. TLG intends that patients, purchasers, consumers, regional and national health plans, insurers, and researchers will rely on its oversimplified grading system and representations regarding the Plaintiff Hospitals' safety and the safety of all hospitals reported on throughout Florida and the country. TLG specifically tells patients to "*always* decide on where to receive care based on a hospital's current Safety Grade," because they are "twice as likely to die of a preventable problem at a C, D, F hospital than at an A hospital." (emphasis added).

126. The representations made by TLG to consumers and the methodology TLG employs to calculate the Hospital Safety Grades constitute a deceptive act or practice in trade, and both Plaintiffs and patients have been aggrieved by the deceptive act or practice.

127. TLG's deceptive acts and practices cause harm to consumers by misleading consumers regarding the quality and safety of the hospitals it grades, including Plaintiffs.

128. TLG's deceptive acts and practices mislead consumers, causing them to make decisions about their healthcare that are not in their best interests. These deceptive acts and practices cause actual damages to Florida consumers, including by increasing the incident-to-hospital time for misled patients and causing patients to choose hospitals that do not provide the types of critical care the Plaintiff Hospitals provide.

129. As a result of TLG's deceptive acts and practices, Plaintiffs suffered damages far in excess of $75,000.

130. Pursuant to FDUTPA, Plaintiffs demand damages, injunctive relief, declaratory relief, and attorneys' fees and costs.

COUNT II
(DECLARATORY JUDGMENT)

131. Plaintiffs reallege and incorporate the preceding paragraphs as if fully set forth herein.

132. Pursuant to the Declaratory Judgment Act, 28 U.S.C. § 2201, a court may declare the rights and other legal relations of any interested party in the case of an actual controversy within its jurisdiction.

133. There exists a substantial justiciable controversy between the parties as to whether TLG's grading of Plaintiffs violates FDUTPA. More specifically, Plaintiffs believe that TLG's grading of Plaintiffs constitutes a deceptive practice under FDUTPA, and TLG disagrees and refuses to abate the deceptive practice. This Court is thus vested with the power to declare the rights and liabilities of the parties and to grant such other and further relief as may be necessary. Declaration of the parties' rights in these regards will clarify the rights and interests of the parties.

134. Given the prior and ongoing harm caused by TLG's deceptive practice, the controversy between the parties is actual and of sufficient immediacy to warrant the issuance of a declaratory judgment. As alleged in the preceding paragraphs, TLG's continued grading of Plaintiffs causes substantial harm to Plaintiffs, patients, and the community such that there is a bona fide, actual, present need for the declaration.

135. Declaratory relief will resolve the legal issues between the parties regarding whether TLG's grading of Plaintiffs constitutes a deceptive practice under FDUTPA.

136. Plaintiffs have attempted to engage with TLG as to the issues with its recently-adopted methodology, including explaining in writing that the methodology results in grades that are deceptive and harmful to patients, but TLG has nevertheless continued to assign its harmful, inaccurate grades.

137. Therefore, pursuant to the Declaratory Judgment Act, 28 U.S.C. § 2201, Plaintiffs request a judgment declaring that TLG's grading methodology and its application to Plaintiffs, in both the Fall 2024 grading cycle and forthcoming Spring 2025 grading cycle, is a deceptive practice under FDUTPA.

138. Given that the Fall 2024 Hospital Safety Grades present ongoing harm to Plaintiffs and to each future potential patient who is misled by those grades, pursuant to Federal Rule of Civil Procedure 57, Plaintiffs request a speedy hearing of this claim.

JURY TRIAL DEMAND

139. Plaintiffs demand a jury trial on all issues so triable.

PRAYER FOR RELIEF

WHEREFORE, Plaintiffs respectfully request that this Court:

a) Preliminarily enjoin TLG from purporting to safety grade Plaintiffs during the pendency of this case and requiring TLG to remove Plaintiffs from its recent Hospital Safety Grades;

b) Permanently enjoin TLG from including Plaintiffs in its Hospital Safety Grades;

c) Speedily declare pursuant to Federal Rule of Civil Procedure 57 that TLG's grading methodology and its application to Plaintiffs, in both the current Spring 2025 grading cycle and in recent prior cycles, violates FDUTPA;

d) Award Plaintiffs damages in an amount to be proven but in excess of $75,000;

e) Award Plaintiffs their attorneys' fees and costs;

f) Grant such other and further relief as it may deem just and equitable.

Dated: April 30, 2025

Respectfully submitted,

By: /s Michael Pineiro

The Leapfrog Group,

Defendant(s)

Civil Action No. 9:25-cv-80526

SUMMONS IN A CIVIL ACTION

To: *(Defendant's name and address)* The Leapfrog Group
1775 K Street, NW, Suite 400
Washington, DC 20006

A lawsuit has been filed against you.

Within 21 days after service of this summons on you (not counting the day you received it) — or 60 days if you are the United States or a United States agency, or an officer or employee of the United States described in Fed. R. Civ. P. 12 (a)(2) or (3) — you must serve on the plaintiff an answer to the attached complaint or a motion under Rule 12 of the Federal Rules of Civil Procedure. The answer or motion must be served on the plaintiff or plaintiff's attorney, whose name and address are: Michael A. Pineiro
Marcus Neiman Rashbaum & Pineiro LLP
2 South Biscayne Boulevard
Suite 2530
Miami, Florida 33131

If you fail to respond, judgment by default will be entered against you for the relief demanded in the complaint. You also must file your answer or motion with the court.

v.	)	
THE LEAPFROG GROUP,	)	
Defendant.	)	

DEFENDANT THE LEAPFROG GROUP'S MOTION TO DISMISS PURSUANT TO FEDERAL RULE OF CIVIL PROCEDURE 12(b)(2) AND 12(b)(6) AND INCORPORATED MEMORANDUM OF LAW IN SUPPORT OF THE SAME

NOW COMES Defendant, The Leapfrog Group ("Leapfrog") by and through its attorneys, Kimberly E. Blair and Thomas K. Duff of Wilson Elser Moskowitz Edelman & Dicker LLP, and for its Motion to Dismiss Plaintiffs' Complaint pursuant to Federal Rule of Civil Procedure 12(b)(2) and 12(b)(6) and incorporated memorandum of law in support of the same, states as follows.

INTRODUCTION

Leapfrog is an independent national nonprofit driving a movement for giant leaps in patient safety. Among its initiatives is the biannual "Leapfrog Hospital Safety Grade" which assigns letter grades to hospitals based on its assessment of their ability to protect patients from avoidable harm and errors. The current dispute arises from Plaintiffs' dissatisfaction with the Safety Grades they received in Leapfrog's Fall 2024 and, now, Spring 2025 publications. In an attempt to impermissibly interfere with Leapfrog's free speech, stifle Leapfrog's opinion of their hospitals, and prevent future publication of their grades, Plaintiffs now claim that Leapfrog's publication of Safety Grades for their hospitals violates the Florida Deceptive and Unfair Trade Practices Act ("FDUTPA"). This Court can swiftly dismiss this case with prejudice for any of three reasons: (1) Leapfrog's opinions are protected under the free speech clause of the First Amendment; (2) this Court lacks personal jurisdiction over Leapfrog; and (3) Plaintiffs' Complaint fails to state a claim for relief under the FDUTPA.

First, with regard to the First Amendment, Plaintiffs' claims in this lawsuit are incompatible with an avalanche of case law in which courts have upheld the free speech right of ratings organizations to publish their ratings opining on topics such as quality and safety. Leapfrog's Hospital Safety Grades and related representations are protected opinion under the First Amendment because they are not readily provable as true or false. They are also protected as "pure opinion" in light of Leapfrog's publication of the full grading methodology and data that form the basis for the Hospital Safety Grades and Leapfrog's representations related thereto.

Second, Leapfrog is not subject to personal jurisdiction in Florida. Leapfrog is incorporated and headquartered in Washington, D.C. Although Leapfrog publishes its Safety Grades (including those for Florida hospitals) online, Plaintiffs' claims do not arise out of Leapfrog's purchase or sale

of products or services in Florida or any other significant contacts Leapfrog has within Florida.

Third, the FDUTPA does not apply to Leapfrog's conduct due to the non-commercial nature of Leapfrog's Safety Grades and their lack of a commercial nexus to Florida. Leapfrog does not compete with these hospitals in any way. The Complaint also fails to sufficiently allege how Leapfrog's Safety Grades or related representations qualify as a "deceptive act" or "unfair practice" under the FDUTPA. There is nothing deceptive about the Safety Grades, which – it bears repeating – are supported by Leapfrog's publication of the full grading methodology and data upon which they are based, information that most ratings organizations do not disclose. Even regardless of this, Plaintiffs fail to plead the requirement of "actual damages" incurred by their hospitals or consumers.

The reality is that Plaintiffs have filed this lawsuit in an attempt to suppress Leapfrog's publication of its opinion on patient safety in hospitals – a vitally important matter of public concern – rather than confront the patient safety issues in their hospitals. This meritless lawsuit violates Florida's "Anti-SLAPP" statute prohibiting Strategic Lawsuits Against Public Participation ("SLAPP"). In the event this Court grants this Motion, Leapfrog respectfully requests leave to seek its fees and costs incurred defending this meritless litigation pursuant to the statute.

LEGAL STANDARD

Federal Rule of Civil Procedure 12(b)(2) allows for dismissal of a claim when the court lacks personal jurisdiction over a defendant. *See* Fed. R. Civ. P. 12(b)(2). The plaintiff "has the burden of establishing a prima facie case of personal jurisdiction." *Stubbs v. Wyndham Nassau Resort & Crystal Palace Casino*, 447 F.3d 1357, 1360 (11th Cir. 2006).

A motion to dismiss under Rule 12(b)(6) challenges the legal sufficiency of a complaint. *See* Fed. R. Civ. P. 12(b)(6). To satisfy the pleading standard of Rule 8(a)(2), a complaint "must . . . contain sufficient factual matter, accepted as true, to 'state a claim to relief that is plausible on its

face.'" *Am. Dental Ass'n v. Cigna Corp.*, 605 F.3d 1283, 1289 (11th Cir. 2010) (quoting *Bell Atlantic Corp. v. Twombly*, 550 U.S. 544, 580 (2007)). Dismissal is therefore permitted "when on the basis of a dispositive issue of law, no construction of the factual allegations will support the cause of action." *Glover v. Liggett Grp., Inc.*, 459 F.3d 1304, 1308 (11th Cir. 2006).

On a Rule 12(b)(6) motion to dismiss, the Court must consider the complaint in its entirety, as well as documents incorporated into the complaint by reference, and matters of which a court may take judicial notice. *Tellabs, Inc. v. Makor Issues & Rights, Ltd.*, 551 U.S. 308, 322 (2007). Under the "incorporation by reference" doctrine adopted by the Eleventh Circuit, the court may consider a document attached to a motion to dismiss without converting the motion into one for summary judgment if the attached document is: (1) central to the plaintiff's claim; and (2) of undisputed authenticity. *Horsley v. Feldt*, 304 F.3d 1125, 1134 (11th Cir. 2002).

FACTUAL BACKGROUND

I. Preliminary note on incorporation by reference of Leapfrog's websites:

Leapfrog respectfully requests that this Court consider certain webpages from its two websites, www.hospitalsafetygrade.org and www.leapfroggroup.org, as incorporated by reference in the Complaint. (See Webpages attached hereto as **Exhibits 3-38**). These websites are central to Plaintiffs' claims because Leapfrog publishes its Hospital Safety Grades on www.hospitalsafetygrade.org and "references and links" to the Hospital Safety Grades on www.leapfroggroup.org. (*See* Complaint (**Ex. 1**) at ¶46). These two websites are discussed by Plaintiffs throughout the Complaint. (*See, e.g., id.* at ¶¶1, 46, 76-84, 85-102).

The webpages attached hereto as Exhibits 3-38 are of undisputed authenticity because each of them has previously been filed by Plaintiffs in this case along with an affidavit specifically attesting to the authenticity of each one. (See Affidavit of Lee Crain (**Ex. 2** (ECF No. 21)) at ¶¶3-

25, 33-37, 45, 60-65, 67; and Webpages (**Ex's 3-38** (ECF Nos. 21-1 through 21-23, 21-31 through 21-35, 21-43, 21-58 through 21-63, and 21-65)). These webpages are therefore properly considered as incorporated by reference in the Complaint. *See Horsley*, *supra*, 304 F.3d at 1134.

II. Background on The Leapfrog Group:

Leapfrog is an independent national 501(c)(3) nonprofit driving a movement for giant leaps in patient safety. Leapfrog is incorporated and headquartered in the District of Columbia. (**Ex. 1** at ¶14). Among its initiatives is the biannual "Leapfrog Hospital Safety Grade" which uses publicly available data from the federal Centers for Medicare and Medicaid Services ("CMS") as well as self-reported data from the Leapfrog Hospital Survey, when available, to assign letter grades to general acute care hospitals.[1][2] Hospital Safety Grades provide informed analysis of the safety of individual hospitals as a public service at no cost to patients, potential patients, or hospitals themselves. (*See id.* at ¶47; FAQ Webpage (**Ex. 3** at pp. 1-2)). Leapfrog's "How to Use the Grade" webpage on www.hospitalsafetygrade.org summarizes proper use of the Safety Grade: "You should never refuse care in an emergency because of a hospital's Safety Grade, but use this website as a guide for planned events and a research tool for potential emergencies." (**Ex. 17** at p. 4).

III. Leapfrog's Hospital Safety Grades:

Leapfrog assigns A, B, C, D, and F letter grades to nearly 3,000 hospitals nationwide every spring and fall, and publishes these Hospital Safety Grades on its website, www.hospitalsafetygrade.org. (**Ex. 1** at ¶¶1, 46). Leapfrog also references and links to its Hospital Safety Grades on www.leapfroggroup.org. (*Id.* at ¶46). The format of the Hospital Safety Grade is "a single letter grade" that "represent[s] a hospital's 'overall performance in keeping patients safe

[1] This Court may properly take judicial notice of Leapfrog's nonprofit designation which is available as a public record on the District of Columbia's corponline.dcra.dc.gov website at https://corponline.dcra.dc.gov/BizEntity.aspx/ViewEntityData?entityId=2668442. *See Tecnoglass, LLC v. RC Home Showcase, Inc.*, 301 F. Supp. 3d 1267, 1270 n.1 (S.D. Fla. 2017).

from preventable harm and medical errors.'" (*Id.* at ¶48). Leapfrog awards an "A" to hospitals that it assesses as among the highest performing, followed in order by "B", "C", "D", and "F". (*Id.*).

These Safety Grades are the product of Leapfrog's own grading methodology, the current version of which Leapfrog makes publicly available on its www.hospitalsafetygrade.org website. (*See* Spring 2025 Methodology (**Ex. 5**); Fall 2025 Methodology (**Ex. 31**)).

Leapfrog's methodology considers up to 31 patient safety measures in determining a Safety Grade for each hospital graded. (**Ex. 5** at 6-10; **Ex. 31** at 6-9). In assessing a hospital's performance on these measures, the methodology considers publicly available data from CMS as well as quality and safety data from hospitals submitted through Leapfrog's own annual "Leapfrog Hospital Survey". (**Ex. 1** at ¶48). The Hospital Survey is free for hospitals to complete. (*Id.* at ¶46; *see* 2025 Leapfrog Hospital Survey (**Ex. 21**); **Ex. 5** at 17; **Ex. 31** at 16). All data submitted undergoes thorough review and verification. (*See* **Ex. 21** at 18-19). Leapfrog's grading methodology provides Hospital Safety Grades for all general acute care hospitals regardless of their participation in its Survey. (*See* **Ex. 1** at ¶49).

Leapfrog receives responses to its Survey from hospitals nationwide including hospitals located in Florida. (*See* **Ex. 1** at ¶¶17-18). Leapfrog also publishes Hospital Safety Grades on its website for hospitals nationwide including hospitals in Florida. (*See id.*). Leapfrog shares Hospital Safety Grades and provides public comments regarding the Safety Grades to media publications, including publications in Florida. (*See id.*).

Like any grading or rating system, Leapfrog's methodology includes instruction on how to score missing data. (*See, e.g.*, **Ex. 5** at 25; **Ex. 31** at 23). For instance, if a hospital does not have an Intensive Care Unit ("ICU"), some measures that assess ICU safety do not apply to that hospital. (*Id.*; **Ex. 1** at ¶¶80, 88, 92, 95, 98, 101). For hospitals that participate in Leapfrog's Hospital Survey,

Leapfrog's methodology uses the hospitals' answers to the Survey for 12 of the 31 measures. (**Ex. 1** at ¶48). Due to the voluntary nature of the Survey, however, data for these 12 out of 31 measures may be unavailable for hospitals that choose not to submit a Survey. (**Ex. 5** at 17; **Ex. 31** at 16). Where data is unavailable for more than six of these 12 measures (known as "Process/Structural measures") due to a hospital's inability to report such data, Leapfrog does not issue a Safety Grade for that hospital. (**Ex. 5** at 5, 27; **Ex. 31** at 5, 24). Otherwise, to address this gap in available data, Leapfrog's grading methodology relies on alternate publicly available CMS data for five of those measures. (**Ex. 5** at 17; **Ex. 31** at 16). For three of the 31 measures, the methodology reassigns the weight of those measures to other measures and thus removes them from consideration. (**Ex. 1** at ¶49; **Ex. 5** at 25-26; **Ex. 31** at 23).

Plaintiffs' lawsuit revolves around their disagreement with how Leapfrog's grading methodology deals with missing data for the remaining four out of 31 measures, which are: Computerized Physician Order Entry ("CPOE"), Bar Code Medication Administration ("BCMA"), ICU Physician Staffing ("IPS"), and Hand Hygiene Score. (**Ex. 1** at ¶51). For missing data for these four measures, the methodology uses a hospital's most recent score from the past two rounds of grades. (**Ex. 5** at 17; **Ex. 31** at 16). Where there is no such historical data from the past two rounds of grades, the methodology assigns a point value equivalent to receiving "Limited Achievement" for that measure as a conservative methodological approach to avoid overstating performance. (*See* **Ex. 1** at ¶¶50, 52; **Ex. 1** at 17; **Ex. 31** at 16). Leapfrog has updated its grading methodology in consultation with researchers at Johns Hopkins Medicine and an internal team of experts over the course of its 25-year history to yield more accurate, informative grades that favor the needs of patients making profound decisions about hospital care. (*See* Fall 2024 Methodology Updates (**Ex. 38**) at 3). Leapfrog releases planned changes months in advance to seek public comment, which

typically yields many comments from hospitals and the public. (*See id.* at 2, 4-5). These are often helpful to Leapfrog in revising or fine-tuning its methodology. (*See id.*).

IV. Publicly Accessible Data and Grading Methodology on Leapfrog's Websites:

Leapfrog maintains two public websites related to the publication of its Hospital Safety Grades: www.hospitalsafetygrade.org and www.leapfroggroup.org. (**Ex. 1** at ¶76). These websites encourage users to view its full grading methodology as well as the data and analysis used to grade each hospital. Leapfrog's mission is to improve patient safety through full transparency, and that mission is only achieved when there is full transparency in its ratings programs. (*See* **Ex. 3** at 8-9). Leapfrog's www.hospitalsafetygrade.org website reflects that Safety Grades are "100% transparent and free to the public" (*Id.* at pp. 2-3)); provides links to the full grading methodology in multiple places. (*See id.* at pp. 5-6; "About the Grade" Webpage (**Ex. 4**) at p. 4 (see "Quick Links"); **Ex. 5**; **Ex. 31**); and explains the Fall 2024 methodology update and the preceding public comment period. (*See* **Ex. 38**).

On www.hospitalsafetygrade.org, searching a hospital's name brings up that hospital's Safety Grade for the most recent grading period. (**Ex. 1** at ¶79). From here, clicking on a link entitled "View the full Score" displays further information detailing Leapfrog's basis for the hospital's letter grade, including the scores that Leapfrog's grading methodology has assigned to the hospital for each of the 31 measures considered and a description of each measure. (*Id.* at ¶¶80, 88, 92, 95, 98, 101).

Importantly, this webpage includes a section entitled in bold text, "Notes and Definitions", which explains how and why Leapfrog would assign a score for designated measures where data is unavailable, as is the case for the four out of 31 measures upon which Plaintiffs base their claims. (*Id.*). The first such entry explains in bold, red text that "Declined to Report" means: "The hospital

was asked to provide this information to the public, but did not." (*Id.*). The second such entry explains in bold, red text that an asterisk ("*") means: "The hospital declined to report their performance on this measure, so a score was assigned to reflect the lack of information available." (*Id.*). Notations for these designations appear throughout the webpage. (*Id.*). The "Notes and Definitions" section also clarifies the methodological distinction between data that a hospital has "Declined to Report" compared to data that is "Not Available" because the hospital itself does not have data for this measure. (*Id.*; *see also* **Ex. 5** at 27; **Ex. 31** at 24).

This webpage highlights the sources relied on by Leapfrog's methodology. The webpage features a bright green hyperlink entitled, "For details on sources, click here.", a hyperlink offering a "Detailed table view" for the scoring behind a hospital's Hospital Safety Grade, and a hyperlink entitled "View this hospital's Leapfrog Hospital Survey Results". (**Ex. 1** at ¶¶80, 88, 92, 95, 98, 101).

Following this third hyperlink for a hospital that chose not to participate in Leapfrog's Survey leads to a message on www.leapfroggroup.org which states in relevant part, "[This hospital] has DECLINED TO RESPOND". (*See* **Ex. 1** at ¶¶82-84; Hospital Results Landing Pages (**Ex's 22-25, 37**); Hospital Survey Results (**Ex's 32-36**)). The same message appears next to each measure where the hospital declined to respond to the Survey. (*See id.*). Although Plaintiffs allege that this webpage states that "[Leapfrog] states that the hospital did not provide data to [Leapfrog] sufficient to rate the hospital", "discloses that TLG has inadequate information to rate the hospital as to every metric", and "admits" that "[Leapfrog] can't rate Plaintiffs", the webpage includes no such language. (*See id.*).

V. Plaintiffs' Hospital Safety Grades:

Plaintiffs are five hospitals in the Palm Beach, Florida region. (**Ex. 1** at ¶20). Plaintiffs' hospitals decline to submit data to Leapfrog via its Survey. (*See id.* at ¶¶2, 85). Plaintiffs' Hospital Safety Grades are poor. In Fall 2024, Delray Medical Center, Good Samaritan, and Palm Beach Gardens each earned an "F" (*id.* at ¶¶87, 91, 94), while St. Mary's and West Boca Medical Center each earned a "D" (*id.* at ¶¶97, 100). In Spring 2025, Delray Medical Center, Palm Beach Gardens, and West Boca Medical Center each earned an "F" (**Ex's 27, 29-30**), while Good Samaritan and St. Mary's each earned a "D" (**Ex's 26, 28**).

VI. Plaintiffs' Claims in this Case:

Plaintiffs' 54-page Complaint presents its allegations in the form of unsupported, sensationalistic rhetoric. (*See, e.g.*, **Ex. 1** at pp. 1-2, ¶¶1, 8). Leapfrog does not profit from the fact these hospitals decline to participate in its Survey and gains nothing financially from the hospitals' poor grades. Of course, however, the Court need not consider the falsity of these allegations for purposes of this Motion.

In any event, the thrust of Plaintiffs' case is identifiable: they allege that Leapfrog's Safety Grade for each of their hospitals "is a false and misleading statement" about their patient safety performance because they choose not to submit data to Leapfrog via its Survey. (*Id.* at ¶¶85, 90, 93, 96, 99, 102). Plaintiffs argue that the Safety Grades violate the FDUTPA as a result. Specifically, Plaintiffs disagree with Leapfrog's grading methodology insofar as it imputes conservative scores on four of the 31 measures discussed above (CPOE, BCMA, IPS, and Hand Hygiene) where self-reported data for these measures is not made available by the hospital. (*Id.* at ¶52). Plaintiffs assert that because of this methodological approach, Safety Grades for hospitals with imputed scores on these four measures are deceptive to patients. (*See id.*). Plaintiffs further imply that the First

Amendment does not protect Leapfrog because its motivation is financial gain. (*Id.* at ¶8). That is not the case.

Plaintiffs allege that their poor Safety Grades have harmed their reputation with patients, physicians, and business partners. (*Id.* at ¶¶103-09, 110-11, 116, 123). Plaintiffs allege that their poor Safety Grades have harmed patients by motivating them to choose to receive emergency care at hospitals located further away from them than Plaintiffs' hospitals. (*Id.* at ¶¶111-15, 123, 128).

VII. Procedural History:

Plaintiffs filed their Complaint on April 30, 2025. (**Ex. 1**). Count I alleges that Leapfrog's Safety Grades violate the FDUTPA. (*Id.* at ¶¶117-30). Count II seeks a declaratory judgment pursuant to the Declaratory Judgment Act, 28 U.S.C. § 2201, that Leapfrog's Safety Grades violate the FDUTPA. (*Id.* at ¶¶131-38). Plaintiffs seek to permanently enjoin Leapfrog from publishing its Safety Grades for Plaintiffs. (*Id.* at p. 53). Plaintiffs also filed a motion for preliminary injunction on May 17, 2025 seeking to suppress Leapfrog's publication of Fall 2025 Safety Grades for their hospitals. (ECF No. 20). However, Plaintiffs withdrew this motion on May 27, 2025. (ECF No. 34).

ARGUMENT

I. Leapfrog's Hospital Safety Grades are protected opinion under the First Amendment of the U.S. Constitution and Article I, Section 4 of the Florida State Constitution.[2]

A. Statements are protected under the First Amendment if they are either unverifiable or statements of "pure opinion".

Federal constitutional law is clear that in addition to true statements, the First Amendment protects "statements that are not readily capable of being proven false" and "statements of pure opinion". *See Turner v. Wells*, 879 F.3d 1254, 1262 (11th Cir. 2018). Courts universally

[2] "The scope of the protection accorded to freedom of expression in Florida under article I, section 4 of the Florida State Constitution is the same as is required under the First Amendment." *Department of Education v. Lewis*, 416 So. 2d 455, 461 (Fla. 1982).

acknowledge that a letter grade rating based on the subjective weighting of objective data – like Leapfrog's Hospital Safety Grades – cannot be proven true or false. In *Home Performance Alliance v. Better Business Bureau of West Florida*, 354 So. 3d 1165 (Fla. Dist. Ct. App. 2023), the Florida Second District Court of Appeal affirmed the dismissal of plaintiff's claims of tortious interference, libel, and defamation where all of the plaintiff's claims were based on the BBB's "D+" rating of plaintiff, which the court held was "a nonactionable opinion of the BBB". *Id.* at 1166-67.

In so holding, the Second District cited a slew of case law in which courts have protected letter grade ratings under the First Amendment, including: *Castle Rock Remodeling, LLC v. Better Bus. Bureau of Greater St. Louis, Inc.*, 354 S.W.3d 234, 242-43 (Mo. Ct. App. 2011) (holding that the BBB's "C" rating of the plaintiff was a protected opinion because it was "based on 'an evaluating process' and 'subjective opinion'" and was "not sufficiently factual to be susceptible of being proved true or false"); *Better Bus. Bureau of Metro. Hous., Inc. v. John Moore Servs., Inc.*, 441 S.W.3d 345, 357 (Tex. Ct. App. 2013) (holding that the BBB's "F" rating of a company could not be defamatory "because it [was] the Bureau's self-described 'opinion' of the quality of [plaintiff's] services, which lacks a high degree of verifiability"); and *U.S. Structural Plywood Integrity Coal. v. PFS Corp.*, 524 F. Supp. 3d 1320, 1334 (S.D. Fla. 2021) (explaining that business ratings are nonactionable "subjective assessments by third-party entities").

Consistent with this principle, the Circuit Court of Cook County, Illinois in the similar case of *Saint Anthony Hospital v. The Leapfrog Group*, Case No. 2017CH14420 (Ill. Cir. Ct. June 25, 2018), granted Leapfrog's motion to dismiss on the basis of Leapfrog's First Amendment right to publish its Hospital Safety Grades. That the First Amendment demands the same result in this case is underscored by additional similar cases including *Perfect Choice Exteriors v. Better Bus. Bureau of Central Ill.*, 2018 IL App (3d) 150864; *Browne v. Avvo, Inc.*, 525 F. Supp. 2d 1249, 1252 (W.D.

Wash. 2007); and *Aviation Charter, Inc. v. Aviation Research Group*, 416 F.3d 864, 870-71 (8th Cir. 2005). As discussed below, this wealth of case law makes clear that Leapfrog's Hospital Safety Grades and related statements are protected opinion because they cannot be proven true or false.

A statement may alternatively be protected as "pure opinion" when the defendant "makes a comment or opinion based on facts which are set forth in the publication or which are otherwise known or available to the reader or listener as a member of the public." *Turner*, 879 F.3d at 1262. "Whether a particular statement constitutes fact or opinion 'is a question of law for the courts, to be decided based on what the average person hearing or reading the communication would take it to mean.'" *Michel v. NYP Holdings, Inc.*, 816 F.3d 686, 695 (11th Cir. 2016). "In addition, the court must give weight to cautionary terms used by the person publishing the statement." *Morse v. Ripken*, 707 So. 2d 921, 922 (Fla. Dist. Ct. App. 1998). "Finally, the court must consider all of the circumstances surrounding the statement, including the medium by which the statement is disseminated and the audience to which it is published." *Id.*

B. Leapfrog's representations are protected opinion.

Leapfrog's Hospital Safety Grades and its related representations are protected opinion under the First Amendment. As an initial matter, Plaintiffs' FDUTPA claim (*see* **Ex. 1** at ¶¶117-30) is "wholly derivative of the uncontested fact that [Leapfrog] assigned [Plaintiffs] an unfavorable safety rating". *See Aviation Charter*, 416 F.3d at 869. Related representations complained of by Plaintiffs are, therefore, "subsumed by [Plaintiffs'] challenge to [Leapfrog's] rating[s]". *See id.*

Plaintiffs frame their attack on their poor Hospital Safety Grades around four related representations by Leapfrog; however, each of these constitutes Leapfrog's protected opinion. **First,** Plaintiffs assert that Leapfrog's Hospital Safety Grades are deceptive because they are the product of an imperfect grading methodology. They contend that the methodology's imputation of scores for four of the 31 measures used in the Grade (CPOE, BCMA, IPS, and Hand Hygiene) is

deceptive because it "result[s] in artificially deflated overall grades with no basis in fact and no correlation to a hospital's actual safety performance." (**Ex. 1** at ¶52). Plaintiffs also assert that the methodology produces deceptive Safety Grades due to a lack of adequate auditing mechanisms to ensure the accuracy of self-reported data from hospitals. (*Id.* at ¶¶55, 58-60).[3] While Plaintiffs allege that the methodology is geared to produce profit for Leapfrog, nothing about the methodology or Plaintiffs' allegations supports that conclusion. (*See id.* at ¶¶60, 69-75; *see generally* **Ex. 5**; **Ex. 31**).

But regardless of Plaintiffs' methodological disagreements, their "D" and "F" Safety Grades simply cannot be proven true or false. *See, e.g., Home Performance*, 354 So. 3d at 1166-67. Moreover, the Safety Grades are pure opinion because Leapfrog publishes on its websites all of the information relied upon in producing the Safety Grades, including: its updated grading methodology (**Ex. 3** at 5-6; **Ex. 4** at 4; **Ex's 5**; **Ex. 31**; **Ex. 38**); the basis for each Safety Grade and links to data sources including the hospital's Survey results (**Ex. 1** at ¶¶80, 88, 92, 95, 98, 101); clear indications where hospitals declined to respond to Leapfrog's Survey (*see id.* at ¶82; **Ex's 22-25; Ex's 32-37**); and the fact that all of this information is "100% transparent and free to the public" (**Ex. 3** at 2-3). Leapfrog's Hospital Safety Grade webpages also include specific notes, designations, and disclaimers aimed at clarifying the Safety Grade and data sources for each hospital. (*See* **Ex. 1** at ¶¶80, 88, 92, 95, 98, 101; **Ex's 26-30**)).

Second, Plaintiffs argue that Leapfrog's Safety Grades are deceptive because Leapfrog does not adhere to its own grading methodology. Plaintiffs contend that by grading hospitals by imputing

[3] Although Plaintiffs allege that "discrepancies exist" between Leapfrog's Safety Grades and CMS's hospital safety ratings for certain hospitals, they notably do not assert that any discrepancies exist between Leapfrog's Safety Grades and CMS hospital safety ratings ***for their hospitals***. Nor could they; Plaintiffs' poor Hospital Safety Grades from Leapfrog are wholly consistent with Plaintiffs' poor "Star Ratings" from CMS (*see* CMS Star Ratings for Good Samaritan, Delray, West Boca, Palm Beach Gardens, and St. Mary's on the CMS website), of which this Court can properly take judicial notice. *See Tecnoglass, supra*, 301 F. Supp. 3d at 1270, n.1.

scores for four of 12 identified "Process/Structural" measures where data is unavailable for seven of those measures, Leapfrog's methodology conflicts with its own requirement to not grade hospitals missing data for more than six "Process/Structural" measures. (**Ex. 1** at ¶53). This contention fails for two reasons. First, this ignores Leapfrog's published methodological distinction between data that a hospital has "Declined to Report" compared to data that is "Not Available" because the hospital itself does not have data for this measure. (*See* **Ex. 5** at 27; **Ex. 31** at 24; *see also* **Ex. 1** at ¶¶80, 88, 92, 95, 98, 101 ("Notes and Definitions")). Second, Leapfrog's published grading methodology fully explains its approach to missing data, including when scores are imputed for certain measures; in other words, the methodology must be considered as a whole and cannot conflict with itself. (*See id.*; **Ex. 5** at 17-18; **Ex. 31** at 16). Leapfrog's published methodology represents its opinion of how Safety Grades should be determined and cannot be proven true or false. And since this methodological approach is explained extensively by the published materials referenced above, it must be protected as pure opinion.

Third, Plaintiffs argue that Leapfrog has made deceptive statements reflecting that its Safety Grades represent a hospital's patient safety performance rather than whether a hospital participates in Leapfrog's Survey. (**Ex. 1** at ¶¶54, 121). However, Leapfrog's opinion of a hospital's performance on patient safety, though based on verifiable data and a transparent methodology, is nonetheless ultimately an opinion on the significance and weight of each element of data used in the calculation of a grade. For instance, "Process/Structural Measures" and "Outcome Measures" each account for 50 percent of the Safety Grade, and this is based on a consensus opinion among Leapfrog patient safety experts that this weighting is the best way to characterize safety performance. (*See* **Ex. 4** at 2-6; **Ex. 5** at 6; **Ex. 31** at 6). Others may certainly disagree with this opinion about weighting of measures, which is why Leapfrog discloses its full grading methodology

and the hospital's performance on each measure so that a viewers can form her own opinion of what an "A" or an "F" Safety Grade rating (as the case may be) represents.

Finally, Plaintiffs argue that Leapfrog's Safety Grades are misleading to patients because Leapfrog's www.hospitalsafetygrade.org and www.leapfroggroup.org websites provide inconsistent messaging relating to the Safety Grades. (**Ex. 1** at ¶¶76, 82). As noted, although Plaintiffs allege that www.leapfroggroup.org states that "[Leapfrog] states that the hospital did not provide data to [Leapfrog] sufficient to rate the hospital" and "admits" that "[Leapfrog] can't rate Plaintiffs" (¶84), the webpage does not include any such language. (*See id.* at ¶¶82-83; **Ex's 22-25**, **Ex's 32-37**). And regardless, as discussed, Leapfrog's websites highlight the basis for each Safety Grade, link to data sources including the hospital's Survey results, clearly indicate where a hospital declined to respond to the Survey, and feature specific notes, designations, and disclaimers aimed at clarifying the Safety Grade and its data sources. This level of transparency is exceptional for ratings organizations and is anything but "deceptive." As such, Leapfrog's Safety Grades are protected opinion and Plaintiffs' claims must be dismissed.

II. Leapfrog is not subject to personal jurisdiction in the Southern District of Florida.

A federal court sitting in diversity undertakes a two-step inquiry in determining whether personal jurisdiction exists: the exercise of jurisdiction must (1) be appropriate under the state long-arm statute and (2) not violate the Due Process Clause of the Fourteenth Amendment to the United States Constitution. *United Technologies Corp. v. Mazer*, 556 F.3d 1260, 1275 (11th Cir. 2009). The Eleventh Circuit applies the due process test for specific personal jurisdiction, examining: (1) whether the plaintiff's claims "arise out of or relate to" at least one of the defendant's contacts with the forum; (2) whether the nonresident defendant "purposefully availed" himself of the privilege of conducting activities within the forum state, thus invoking the benefit of the forum state's laws; and

(3) whether the exercise of personal jurisdiction comports with "traditional notions of fair play and substantial justice." *Louis Vuitton Malletier, S.A. v. Mosseri*, 736 F.3d 1339, 1355 (11th Cir. 2013).

In *Louis Vuitton*, purposeful availment existed where the defendant "purposefully solicited business from Florida residents" through its "interactive, commercial website", received orders from multiple Florida residents to ship goods into Florida, and shipped those goods into Florida. *Id.* at 1357. By contrast, in *Toll v. Levi North*, 644 F. Supp. 3d 1050 (S.D. Fla. 2022), the Court held that there was no purposeful availment where "[t]he sole relevant contact" between the defendant and Florida was "his alleged online activity visible in Florida". *Id.* at 1055-56 (citing *DCS Real Estate Invs., LLC v. Bella Collina Events, LLC*, No. 5:14-678-CIV, 2015 U.S. Dist. LEXIS 17282, at *3 (M.D. Fla. Feb. 12, 2015)).

Plaintiffs' claims in this case do not arise from Leapfrog's purposeful availment of itself of the privileges of doing business in Florida. *See Louis Vuitton*, 736 F.3d at 1357. Leapfrog's Safety Grades and related statements are published on its websites (**Ex. 1** at ¶46) and thus are accessible in Florida just as they are anywhere with Internet access. But these publications do not serve any commercial purpose, as the Safety Grades and the Survey are both freely accessible to the public. (*See id.* at ¶46; **Ex. 5** at 17; **Ex. 21**; **Ex. 31** at 16).

Although Plaintiffs assert that Leapfrog's Safety Grades are a "pay-for-play scheme" (**Ex. 1** at ¶1), the Complaint fails to allege any "commercial purpose" for Leapfrog's issuance of their "D" and "F" Safety Grades such as "advertising, selling, [or] distributing" goods or services in Florida or to Florida residents. *See Louis Vuitton*, 736 F.3d at 1356; *Toll*, 644 F. Supp. 3d at 1055-56. Nor do Hospital Survey participation or poor Safety Grades benefit Leapfrog financially. Rather, Leapfrog would incur added costs if the five Plaintiff hospitals participated in the Survey as Leapfrog would need to review their Survey responses, and hospitals that earn poor grades do

not license the right to advertise their Grade. The result is that personal jurisdiction does not exist as to Leapfrog in Florida and dismissal is required.

III. Plaintiffs' Complaint fails to state a claim upon which relief can be granted based on the Florida Deceptive and Unfair Trade Practices Act.[4]

The three elements of a consumer claim under FDUTPA are: "(1) a deceptive act or unfair practice; (2) causation; and (3) actual damages." *Marrache v. Bacardi U.S.A., Inc.*, 17 F.4th 1084, 1097 (11th Cir. 2021). Plaintiffs' claim that Leapfrog's Safety Grades and related representations constitute unfair or deceptive trade practices fails for the following reasons.

A. Leapfrog's Hospital Safety Grades are not subject to the FDUTPA.

i. Leapfrog's alleged conduct lacks a sufficient nexus with Florida for FDUTPA to apply.

The FDUTPA applies only to actions that occur within Florida. *Five for Entertainment S.A. v. Rodriguez*, 877 F. Supp. 2d 1321, 1330 (S.D. Fla. 2012); *W.W. Sports Importadora Exportadora E Comercial LTDA v. BPI Sports, Ltd. liability Co.*, No. 0:16-cv-60147-WPD, 2016 U.S. Dist. LEXIS 192427, at *16 (S.D. Fla. Aug. 10, 2016). Here, the Complaint fails to plead any conduct by Leapfrog in Florida. Despite its receipt of Survey responses from Florida hospitals, online publication of Safety Grades, and communications with Florida media publications, Leapfrog operates in Washington, D.C. (**Ex. 1** at ¶¶14, 17-18). The result is a lack of a nexus to Florida.

ii. The Complaint fails to plead commercial speech.

For the FDUTPA to apply, the alleged violation must also have taken place "in the conduct of any trade or commerce," which is defined as "the advertising, soliciting, providing, offering, or distributing" of goods, services, property, "or any other article, commodity, or thing of value." *Bongino v. Daily Beast Co., LLC*, 477 F. Supp. 3d 1310, 1321 (S.D. Fla. 2020). Where the action

[4] This argument section addresses the Complaint's failure to state claim in Count I and II as Count II as both counts are premised entirely on Leapfrog's alleged liability under the FDUTPA.

at issue is the publication of information, the statute applies only to "expression related solely to the economic interests of the speaker and its audience." *Id.* at 1321. Leapfrog's publication of its Safety Grades is not made "in the conduct of any trade or commerce" because the Safety Grades and the Survey are both free to the public. (*See* **Ex. 1** at ¶46; **Ex. 5** at 17; **Ex. 21**; **Ex. 31** at 16). As stated, Leapfrog has no economic interest in awarding Plaintiffs' poor grades, and if anything has more of an economic interest in awarding these hospitals with excellent grades. Accordingly, Plaintiffs' FDUTPA claims fail on this basis alone.

B. The Complaint fails to plead a "deceptive act" or an "unfair practice".

To violate the FDUTPA, an act or practice must be "one that offends established public policy and one that is immoral, unethical, oppressive, unscrupulous or substantially injurious to consumers." *Marrache*, 17 F.4th at 1098. The plaintiff must show that the practice "was likely to deceive a consumer acting reasonably in the same circumstances." *Id.* at 1098.

The holding in *Caribbean Cruise Line, Inc. v. Better Business Bureau of Palm Beach Cty., Inc.*, 169 So. 3d 164, 166-67 (Fla. Dist. Ct. App. 2015) is instructive here. In *Caribbean Cruise*, the plaintiff received an "F" grade from the Better Business Bureau of Palm Beach County. *Id.* at 166. The trial court dismissed plaintiff's causes of action for defamation and under the FDUTPA, and the appellate court summarily affirmed dismissal of the defamation claim. *Id.* But the appellate court reversed with respect to the FDUTPA claim and, in doing so, clarified the type of allegations necessary to state a statutory claim and the context. *Id.* The Court's opinion reflects that a letter grade and a speaker's related opinions cannot be deceptive under the FDUTPA. The Court in *Caribbean Cruise* emphasized that there, the plaintiff's claim was not based on the defendant's opinion. *Id.* at 167. Instead, the Court emphasized that its holding was based on the fact that the plaintiff alleged that BBB concealed information about the basis for the grade from the public. *Id.*

Here, by contrast, Plaintiffs do not allege that Leapfrog conceals its grading methodology from the public. Nor are Leapfrog's Safety Grades or related representations because, as discussed above, they are accompanied by a thorough publication of the basis for Safety Grades. (*See, e.g.*, **Ex. 1** at ¶¶80, 88, 92, 95, 98, 101; **Ex. 5**; **Ex. 31**). *See Marrache*, 17 F.4th at 1098. Indeed, Leapfrog's commitment to full transparency precludes any deception in the grading process since any deception would be easily identifiable by hospitals and viewers alike. Notably, Leapfrog's commitment to full transparency extends beyond the calculation of the Safety Grades themselves. Prior to each update of the Safety Grade, hospitals may review the data and methodology used to calculate their grade. (*See* **Ex. 21** at 17-20). This allows hospitals ample opportunity to raise any disputes or discrepancies with Leapfrog's team. Leapfrog also publishes any planned changes to its methodology months in advance and welcomes public comments which are considered in refining the changes. (*See generally* **Ex. 38**). Finally, Plaintiffs' position that Leapfrog's imputation of scores on four out of the 31 measures used to calculate Plaintiffs' Safety Grades is a deceptive practice readily fails in light of the fact that government entities implement a similar methodological approach to missing data.[5]

C. The Complaint fails to plead "actual damages" as required under the FDUTPA.

"Lost profits, competitive harm, lost sales, and harm to goodwill or reputation are deemed consequential damages which are ineligible to establish actual damages under a FDUTPA claim." *Casa Dimitri Corp. v. Invicta Watch Co. of Am.*, 270 F. Supp. 3d 1340, 1344 (S.D. Fla 2017). While "[a] plaintiff need not be a consumer to assert a FDUTPA claim", the plaintiff must still prove "an injury or detriment to consumers." *Ounjian v. Globoforce, Inc.*, 89 F.4th 852, 860 (11th Cir. 2023).

[5] See, e.g., data imputation models implemented by the U.S. Census Bureau, the U.S. Bureau of Labor Statistics, and the U.S. Bureau of Justice Statistics ("Guidelines for Data Transparency, Analysis, and Processing")); each of which this Court can properly take judicial notice. *See Tecnoglass, supra*, 301 F. Supp. 3d at 1270, n.1.

While Plaintiffs allege that Leapfrog's Safety Grades have harmed their reputation with patients (**Ex. 1** at ¶¶103-09, 111, 116, 123), this fails to establish actual damages for an FDUTPA claim. *See Casa Dimitri*, 270 F. Supp. 3d at 1344. Plaintiffs also fail to plead "an injury or detriment to consumers", claiming only – and without support – that their poor Safety Grades have harmed patients by motivating them to choose to receive emergency care at hospitals located further away from them than Plaintiffs' hospitals. (*Id.* at ¶¶113-14, 123, 128). Critically, while patients may seek care wherever they choose, Leapfrog expressly warns viewers that "***[y]ou should never refuse care in an emergency because of a hospital's Safety Grade***". (**Ex. 17** at 4). Accordingly, the Complaint is properly dismissed with prejudice for its failure to state a claim under the FDUTPA.

IV. Dismissal is further required (and fees and costs may be awarded) under Florida's Anti-SLAPP statute.

Florida law prohibits Strategic Lawsuits Against Public Participation ("SLAPP") lawsuits, which are suits filed "without merit" and "primarily" because the person against whom the suit was filed "exercised the constitutional right of free speech in connection with a public issue". *Bongino*, 477 F. Supp. 3d at 1321 (citing Fla. Stat. § 768.295(3)). The statute awards a defendant fees and costs if a plaintiff files a forbidden suit. *Id.* (citing Fla. Stat. § 768.295(4)). The fee-shifting provision may apply in a federal court exercising diversity jurisdiction. *Id.* at 1324.

Plaintiffs' claims arise entirely from Leapfrog's Hospital Safety Grades – online, public commentary on the matter of patient safety in hospitals – which is undeniably a matter of public concern. For the reasons set forth above, Plaintiffs' claims constitute precisely the type of meritless, retaliatory action the Anti-SLAPP statute seeks to deter. Accordingly, to the extent this Court grants its Motion, Leapfrog requests leave of Court to move for its fees and costs pursuant to Fla. Stat. § 768.295(4), which mandates an award to prevailing defendants in Anti-SLAPP proceedings.

CONCLUSION

WHEREFORE, Defendant The Leapfrog Group respectfully requests that this Court (1) grant its Motion; (2) dismiss Plaintiffs' Complaint in its entirety, with prejudice; (3) grant Leapfrog leave to file a motion for recovery of attorneys' fees and costs pursuant to Fla. Stat. § 768.295(4); and (4) for such further relief as this Court deems just and proper.

Date: June 27, 2025

UNITED STATES DISTRIC COURT
SOUTHERN DISTRICT OF FLORIDA

CASE NO. 25-80526-CV-MIDDLEBROOKS

GOOD SAMARITAN MEDICAL CENTER, INC., DELRAY MEDICAL CENTER, INC., PALM BEACH GARDENS COMMUNITY HOSPITAL, INC. D/B/A PALM BEACH GARDENS MEDICAL CENTER, ST. MARY'S MEDICAL CENTER, INC., AND WEST BOCA MEDICAL CENTER, INC.,

Plaintiffs,

v.

THE LEAPFROG GROUP,

Defendant.
_____/

ORDER ON MOTION TO DISMISS

THIS CAUSE is before the Court on Defendant's Motion to Dismiss,[1] filed on June 27, 2025. (DE 39). Plaintiffs filed a Response on July 11, 2025. (DE 40). No Reply has been filed, but I find no Reply to be necessary. For the following reasons, the Motion is denied.

BACKGROUND

This matter arises from numerous claims of false and deceptive trade practices in hospital safety ratings. (DE 1). Because this cause comes before the Court on a Motion to Dismiss, I accept all facts in the Plaintiff's Amended Complaint as true and construe them in the light most favorable to the Plaintiff. *See Jackson v. BellSouth Telecomms.*, 372 F.3d 1250, 1262 (11th Cir. 2004).

[1] I note that for purposes of this Order, I do not consider the exhibits attached to the instant Motion or the Response, as both Parties have attempted to interject documents that fall outside the four corners of the Complaint. *See Boyd v. Peet*, 249 F. App'x 115, 157 (11th Cir. 2007). The Parties' efforts effectively seek to transform this matter from one of dismissal to one of summary judgment, and I decline at this stage to parse through the voluminous exhibits submitted on that basis.

Plaintiffs are a coalition of hospitals operating in south Florida (the "Hospitals"). They claim that Defendant The Leapfrog Group ("Leapfrog" or "TLG"), a registered non-profit with its headquarters in Washington, D.C., operates a "brazen pay-to play scheme that distorts the truth, misleads patients, and inflicts serious harm on hospitals and the communities they serve." (DE 1 at 2). The core allegations involve Leapfrog's online "Hospital Safety Grades," which it publishes on its website www.hospitalsafetygrade.org, and advertises through a secondary website www.leapfroggroup.org. (*Id.* ¶ 46). The safety grades, which include standard assignments of "A," "B," "C," "D," and "F" distinguish hospitals from best to worst care quality, using an aggregate of 22 national patient safety measures. (*Id.* ¶ 48). For at least 12 of these measures, Leapfrog relies on hospitals' self-reported answers to a hospital survey, which involves a lengthy questionnaire spanning over 100 pages. (*Id.* ¶¶ 1, 48).

The trouble underlying Plaintiffs' claims concerns what happens when a hospital fails to participate in Leapfrog's hospital survey. According to Plaintiffs, in the absence of self-reported information from hospitals, Leapfrog finds alternative methods to calculate the values of the 12 safety measures that ordinarily rely on survey data. Leapfrog uses government data for 5 measures, and discards 3 measures entirely from its overall grading. (*Id.* ¶ 49). The crux of Plaintiffs' Complaint focuses on the remaining 4 measures, for which Leapfrog employs an "imputational model" to assign values. Prior to Fall 2024, Plaintiffs assert this "imputational model" relied on an "average score applicable to similarly situated hospitals." (*Id.* ¶ 50). Beginning in Fall 2024 however, Leapfrog allegedly began automatically assigning the lowest possible value to non-participating hospitals in its imputational model, deflating scores across the 4 metrics. (*Id.*). Plaintiffs claim this change was designed to punish hospitals for not participating in TLG's survey, from which it collects and monetizes data for a substantial profit. (*Id.* ¶¶ 70-75).

Plaintiffs filed their Complaint on April 30, 2025, asserting two counts for violations of the Florida Deceptive and Unfair Trade Practices Act ("FDUTPA"), Fla. Stat. § 501.201 et seq. (Count I) and declaratory relief under the Declaratory Judgment Act, 28 U.S.C. § 2201, (Count II).

LEGAL STANDARD

A motion to dismiss under Rule 12(b)(6) challenges the legal sufficiency of the allegations in a complaint. *See* Fed. R. Civ. P. 12(b)(6). In assessing legal sufficiency, the Court is bound to apply the pleading standard articulated in *Bell Atlantic Corp. v. Twombly*, 550 U.S. 544 (2007) and *Ashcroft v. Iqbal*, 556 U.S. 662, 678 (2009). That is, the complaint "must … contain sufficient factual matter, accepted as true, to 'state a claim to relief that is plausible on its face,'" *Am. Dental Ass'n v. Cigna Corp.*, 605 F.3d 1283, 1289 (11th Cir. 2010) (quoting *Twombly*, 550 U.S. at 570). "Dismissal is therefore permitted when on the basis of a dispositive issue of law, no construction of the factual allegations will support the cause of action." *Glover v. Liggett Grp., Inc.*, 459 F.3d 1304, 1308 (11th Cir. 2006) (internal quotations omitted) (citing *Marshall Cty. Bd. of Educ. V. Marshall Cty. Gas Dist.*, 992 F.2d 1171, 1174 (11th Cir. 1993)).

When reviewing a motion to dismiss, a court must construe the complaint in the light most favorable to the plaintiff and assume the truth of the plaintiff's factual allegations. *See Erickson v. Pardus*, 551 U.S. 89, 93 (2007); *Christopher v. Harbury*, 536 U.S. 403, 406 (2002); *Brooks v. Blue Cross & Blue Shield of Fla., Inc.*, 116 F.3d 1364, 1369 (11th Cir. 1997). However, pleadings that "are no more than conclusions, are not entitled to the assumption of truth. While legal conclusions can provide the framework of a complaint, they must be supported by factual allegations," *Iqbal*, 556 U.S. at 678; *see also Sinaltrainal v. Coca-Cola Co.*, 578 F.3d 1252, 1260 (11th Cir. 2009) (stating that an unwarranted deduction of fact is not considered true for purposes of determining

whether a claim is legally sufficient). "[A] formulaic recitation of the elements of a cause of action will not do." *Twombly*, 550 U.S. at 555 (citation omitted).

Separately, a motion to dismiss brought under Rule 12(b)(2) challenges the court's personal jurisdiction over a party. The plaintiff ordinarily has the burden of establishing a *prima facie* case of personal jurisdiction over a nonresident defendant. *Meier ex rel. Meier v. Sun Int'l Hotels, Ltd.*, 288 F.3d 1264, 1268–69 (11th Cir. 2002).[2] "A federal court sitting in diversity undertakes a two-step inquiry in determining whether personal jurisdiction exists: the exercise of jurisdiction must (1) be appropriate under the state long-arm statute and (2) not violate the Due Process Clause of the Fourteenth Amendment to the United States Constitution." *United Techs. Corp. v. Mazer*, 556 F.3d 1260, 1274 (11th Cir. 2009). Sometimes, a court need not analyze both steps, as each step may prove dispositive. *See id.*; *Lawson Cattle & Equipment, Inc. v. Pasture Renovators LLC*, 139 F. App'x 140, 142 (11th Cir. 2005).

Under the first prong of the analysis, "it must be determined that the complaint alleges sufficient jurisdictional facts to bring the action within the ambit of" Florida's long-arm statute. *Venetian Salami Co. v. Parthenais*, 554 So.2d 499, 502 (Fla. 1989). "Florida's long-arm statute is to be strictly construed." *Sculptchair, Inc. v. Century Arts., Ltd.*, 94 F.3d 623, 627 (11th Cir. 1996) (citing *Oriental Imports & Exports, Inc. v. Maduro & Curiel's Bank, N.V.*, 701 F.2d 889, 891 (11th Cir. 1983)). "When a defendant raises through affidavits, documents or testimony a meritorious challenge to personal jurisdiction, the burden shifts to the plaintiff to prove jurisdiction by

[2] "A prima facie case is established if the plaintiff presents enough evidence to withstand a motion for directed verdict." *Madara v. Hall*, 916 F.2d 1510, 1514 (11th Cir. 1999). If a plaintiff submits evidence supporting his jurisdictional position, the Court must still accept the facts alleged in the complaint as true, to the extent they are uncontroverted by the defendant's affidavits. *Meier*, 288 F.3d at 1269 ("Where the plaintiff's complaint and supporting evidence conflict with the defendant's affidavits, the court must construe all reasonable inferences in favor of the plaintiff.").

affidavits, testimony or documents." *Id.* (quoting *Jet Charter Serv., Inc. v. Koeck*, 907 F.2d 1110, 1112 (11th Cir. 1990)). Florida's long-arm statute provides in relevant part:

> (1) (a) Any person, whether or not a citizen or resident of this state, who personally or through an agent does any of the acts enumerated in this subsection thereby submits himself ... to the jurisdiction of the courts of this state for any cause of action arising from the doing of any of the following acts:
>
> 1. Operating, conducting, engaging in, or carrying on a business or business venture in this state or having an office or agency in this state.
>
> 2. Committing a tortious act within this state. . . .

Fla. Stat. § 48.193. Under the statute's plain terms, each enumerated action constitutes a sufficient basis for the exercise of jurisdiction, subject to demands of constitutional due process.

DISCUSSION

Defendant seeks dismissal of the Complaint on three general grounds: (1) that its online grading and methodology are protected by the First Amendment, (2) that it is not subject to personal jurisdiction in Florida, and (3) that Plaintiffs have failed to state a claim under FDUTPA. I find none of these contentions persuasive.

First, Defendant claims its online grades and methods are protected as unfalsifiable, purely opinionated speech. The First Amendment protects "statements that are not readily capable of being proven false" and "statements of pure opinion." *Turner v. Wells*, 879 F.3d 1254, 1262 (11th Cir. 2018). Some courts have recognized that these principles extend to online grading services, which often rely on a subjective weighing of objective data. *See, e.g., Home Performance Alliance v. Better Business Bureau of West Florida*, 354 So. 3d 1165, 1166 (Fla. 2nd DCA 2023) (finding a D+ rating of plaintiff's business to be a nonactionable opinion). However, as is evident in several of the cases Defendant cites, a claim brought pursuant to the FDUTPA is not barred by the First Amendment when it involves a challenge to false or misleading statements made about the rating

process itself. *See id.* at 1167 ("In addition to disputing its rating, Home Performance also alleges that the BBB makes false statements about its ratings process."); *see also Caribbean Cruise Line, Inc. v. Better Bus. Bureau of Palm Beach Cnty., Inc.*, 169 So. 3d 164, 167 (Fla. 4th DCA 2015) ("These are not disputes with opinions issued by BBB, but instead, are disputes with the representations that BBB makes, and the methods it employs, in conducting its own business." (citing *From v. Tallahassee Democrat, Inc.*, 400 So.2d 52, 57 (Fla. 1st DCA 1981))). Here, Plaintiffs' action arises from a challenge to Defendant's representations about its methodology, which they claim mislead consumers by failing to distinguish between absent data and damning data, and professing that grades are not influenced by a hospital's lack of survey participation. (*Id.* ¶¶ 49–54, 55, 63). Defendant's First Amendment defenses are thereby inapplicable.

Second, Defendant contends this Court lacks personal jurisdiction under both Florida's long-arm statute and the Constitution's "minimum contacts" test, as its website is a national publication, and its primary business activities occur within the District of Columbia. This argument is also unavailing. Subsection (1)(a)(2) of Florida's long-arm statute creates specific jurisdiction over actions arising out of tortious acts committed in Florida, which extends to allegations that a Florida resident suffered injury from violations of the FDUTPA. *See Execu-Tech Business Sys., Inc. v. New Oji Paper Co. Ltd.*, 752 So. 2d 582, 585 (2000) (holding that violation of FDUTPA is a tortious act for purposes of Fla. Stat. § 48.193(1)(b)); *Posner v. Essex Ins. Co., Ltd.*, 178 F.3d 1209, 1217 (11th Cir. 1999); *Becker v. Hooshmand*, 841 So. 2d 561, 562 (Fla. 4th DCA 2003). Because Plaintiffs have alleged harm to Florida consumers, the statute is plainly satisfied. Further, this finding comports with the demands of due process, as the Complaint establishes minimum contacts between Leapfrog and Florida. Beyond the mere publication of its website, Leapfrog solicits data from Florida hospitals, markets itself through Florida media, and

communicates with Florida consumers. (DE 1 ¶¶ 17–18, 46). As such, there are sufficient contacts between Leapfrog and Florida, from which this action arises, to conclude that Leapfrog has availed itself of the privilege of conducting activities within Florida, thereby invoking the benefit of its laws. *See Louis Vuitton Malletier, S.A. v. Mosseri*, 736 F.3d 1339, 1355 (11th Cir. 2013).

Third and finally, Defendant insists Plaintiffs have failed to state a claim under FDUTPA. To state a claim of deceptive or misleading trade practices, a plaintiff must allege "(1) a deceptive act or unfair practice; (2) causation; and (3) actual damages." *Marrache v. Bacardi U.S.A., Inc.*, 17 F.4th 1084, 1097 (11th Cir. 2021). Defendant challenges the Complaint in several ways, including by asserting that the FDUTPA only applies to actions that occur in Florida, that the violation must have taken place "in the conduct of any trade or commerce," that the practice must be likely to deceive a consumer acting reasonably in the same circumstances, and that actual damages of lost profits or sales are required. (DE 39 at 18-20). Defendant contends that the Complaint fails on one or all of these grounds. I am not convinced.

The Florida legislature has instructed that "unfair" or "deceptive" conduct under the FDUTPA is to be "liberally construed." Fla. Stat. § 501.202(2). Here, Plaintiffs have alleged that Defendant arbitrarily assigned poor safety ratings to hospitals, then lied to consumers about how it calculates overall grades. (DE 1 ¶¶ 49–54, 87–101). At this stage, taking all allegations as true, this qualifies as a deceptive act or unfair practice. *See Caribbean Cruise*, 169 So. 3d at 167. Moreover, this conduct was directed at Florida consumers and involved Florida hospitals, plainly falling within the ambit of the FDUTPA. Defendant's actions also implicate "trade or commerce," in that Plaintiffs allege Defendant provides a clear service from the publication of safety grades. *See* Fla. Stat. § 501.203(8) (defining "trade or commerce" as "the advertising, soliciting, providing, offering, or distributing, whether by sale, rental, or otherwise, of any *good or service*, or any

property, whether tangible or intangible, or any other article, commodity, or thing of value," including "any non-profit or not-for-profit person or activity" (emphasis added)). Finally, Plaintiffs have pled actual damages in the form of reputational harm. *See Marco Island Cable v. Comcast Cablevision of S., Inc.*, 312 F. App'x 211, 214 (11th Cir. 2009). This amounts to a full claim.

CONCLUSION

Having fully considered the three grounds cited in Defendant's Motion to Dismiss, I find that none compel dismissal under Federal Rules 12(b)(6) or 12(b)(2). Accordingly, it is **ORDERED AND ADJUDGED** that the Motion to Dismiss (DE 39) is **DENIED**.

SIGNED in Chambers at West Palm Beach, Florida, this the 15th day of July, 2025.

Donald M. Middlebrooks
United States District Judge

IN THE UNITED STATES DISTRICT COURT
FOR THE SOUTHERN DISTRICT OF FLORIDA
WEST PALM BEACH DIVISION

CASE NO. 9:25-cv-80526

GOOD SAMARITAN MEDICAL CENTER, INC., DELRAY MEDICAL CENTER, INC., PALM BEACH GARDENS COMMUNITY HOSPITAL, INC. D/B/A PALM BEACH GARDENS MEDICAL CENTER, ST. MARY'S MEDICAL CENTER, INC., AND WEST BOCA MEDICAL CENTER, INC.,

PLAINTIFFS,

v.

THE LEAPFROG GROUP,

DEFENDANT.

AMENDED COMPLAINT

Plaintiffs Good Samaritan Medical Center, Inc. ("Good Samaritan"), Delray Medical Center, Inc. ("Delray Medical Center"), Palm Beach Gardens Community Hospital, Inc. d/b/a Palm Beach Gardens Medical Center ("Palm Beach Gardens Medical Center"), St. Mary's Medical Center, Inc. ("St. Mary's"), and West Boca Medical Center, Inc. ("West Boca Medical Center") (collectively, "Plaintiffs" or "the Plaintiff Hospitals"), by and through their attorneys for their Complaint against The Leapfrog Group ("TLG"), allege as follows:

PRELIMINARY STATEMENT

Hospitals are trusted pillars of their communities, responsible for safeguarding the lives of patients in their most vulnerable moments. The integrity of information guiding patients' healthcare decisions must be beyond reproach. Yet Defendant TLG, under the guise of public service, has corrupted that trust—weaponizing fear, distorting facts, and misleading the public to

serve its own craven financial interests. Through a brazen pay-to-play scheme, TLG pressures hospitals to participate and pay, or else suffer devastating and misleading public "safety" grades. Plaintiffs bring this action not because they fear evaluation, but because TLG's false and reckless conduct endangers patients, undermines public health, and cannot go unchallenged.

INTRODUCTION

1. Defendant TLG holds itself out as an honest and credible public service organization devoted to hospital safety. In reality, it operates a brazen pay-to-play scheme that distorts the truth, misleads patients, and inflicts serious harm on hospitals and the communities they serve. Hospital participation drives TLG's revenue and enriches this so-called "non-profit" to the tune of many millions of dollars—including exorbitant compensation for its Chief Executive Officer. Through its "Hospital Safety Grades," TLG assigns A, B, C, D, and F letter grades to hospitals nationwide and prominently displays them on its website, www.hospitalsafetygrade.org. These "grades" are based, in material part, on easily manipulatable, self-reported data submitted by hospitals that choose to dedicate the time and resources to respond to TLG's sprawling 100+ page data requests. TLG then aggressively broadcasts these so-called grades directly to patients, caregivers, and healthcare workers, orchestrating a sweeping media campaign—including by embargoing grades with reporters nationwide—to maximize public exposure. The message TLG pushes is alarmist and clear: Patients must "*always* decide on where to receive care based on a hospital's current Safety Grade," because they are "twice as likely to die of a preventable problem at a 'C,' 'D,' or 'F' hospital than at an 'A' hospital." (emphasis added). But TLG's "safety grades" are a fraud. Far from protecting patients, they present a clear and present danger to public health across Palm Beach County and beyond.

2. Four years ago, the five Plaintiff Hospitals made a deliberate choice to stop responding to TLG's excessive data requests. During the height of the COVID-19 pandemic,

Plaintiffs prioritized their administrative resources toward achieving specialty-specific accreditations and certifications that directly respond to patient needs. Until last year, TLG continued to assign grades to Plaintiffs based on how similarly situated participating hospitals performed on standard metrics, and notably, Plaintiffs were never assigned F grades under that system.

3. That changed in 2024. Facing declining hospital participation, escalating expenses, and intensifying pressure to drive up revenue—including hefty consulting and advertising fees from participating hospitals along with revenue from insurers—TLG abruptly rigged its methodology. Under its new policy, any hospital declining to provide data would automatically fail on the affected metrics, leading to inevitable Ds and Fs for Plaintiffs for the first time. TLG openly admitted the change was designed to punish non-participating hospitals and ensure they would not "inadvertently benefit" from positive scores—regardless of the truth. Tomorrow's anticipated release of new grades continues TLG's reckless campaign. Instead of simply choosing not to grade Plaintiffs, TLG will deliberately misrepresent these trusted hospitals as dangerous facilities, undermining the doctors, nurses, and healthcare workers on whom the community depends.

4. TLG's misinformative "Safety Grades" have been repeatedly condemned by leading healthcare organizations and academic researchers for precisely the dangers they pose. The American Hospital Association ("AHA") has warned that "no one should use [TLG's Hospital Safety Grades] to guide their choice of hospitals," because they are "neither fair nor accurate."[1] Academic studies have confirmed that TLG's methodology consistently misrepresents hospital

[1] Rich Umbdenstock, *Letter to Leah Binder (The Leapfrog Group)* (June 22, 2012), https://www.leapfroggroup.org/sites/default/files/Files/AHALettertoLeah.pdf.

quality nationwide, misleading patients into healthcare decisions that increase mortality risks and worsen outcomes.[2] TLG has even awarded its highest possible safety grades to a facility the federal government determined in a 384-page report had "quality of care . . . so bad that it had 'caused—or is likely to cause—serious injury, harm, impairment, or death to a patient.'" Multiple patients died at that facility, despite its pristine TLG ranking. For nearly a decade, healthcare professionals and scholars have sounded the alarm about TLG's dangerous practices. Those practices are even worse today as a result of TLG's 2024 move to punish non-participating hospitals.[3] But TLG refuses to fix its reckless model. So long as hospitals are willing to pay to escape failing grades, TLG has no incentive to reform—and every incentive to perpetuate its deceptive scheme.

5. Plaintiffs did not bring this action lightly. Before commencing this case, Plaintiffs asked TLG to cease and desist its deceptive grading practices. Plaintiffs made clear that TLG's conduct was not only wrong, but dangerously harmful—driving patients away from some of the region's safest hospitals and toward objectively riskier facilities. TLG refused. Hiding behind a self-serving and legally unsupportable invocation of the First Amendment, TLG claimed a "free speech right" to deceive the public. It then doubled down: embargoing its false grades with the

Smith et al., *Dissecting Leapfrog: How Well Do Leapfrog Safe Practices Scores Correlate With Hospital Compare Ratings and Penalties, and How Much Do They Matter?*, 55(6) Med. Care 606, 611-12 (June 2017), https://pmc.ncbi.nlm.nih.gov/articles/PMC5517312/pdf/nihms851990.pdf.

press, orchestrating a media blitz, and further misleading patients in Plaintiffs' communities—all while knowing the devastating consequences of its campaign.

6. There is no First Amendment protection for deceptive practices. That is exactly why the Florida Deceptive and Unfair Trade Practices Act ("FDUTPA") exists: to protect consumers from modern-day snake oil salesmen like TLG. TLG's supposed "mission" is a sham. Its true mission is self-enrichment. A material percentage of TLG's "non-profit" budget goes directly to compensating its Chief Executive Officer, who has pocketed many millions of dollars in recent years at the expense of the very patients TLG claims to serve. TLG's business model is as simple as it is sinister: prey on public fear, distort the truth, and profit from deception. Enough is enough. This lawsuit seeks to put an end to TLG's dangerous practices and to protect the patients and communities who deserve honest, reliable information about their healthcare choices.

PARTIES

7. Plaintiff Delray Medical Center is an accredited hospital with 536 licensed beds. Delray Medical Center is incorporated in Florida, and its principal place of business is at 5352 Linton Blvd., Delray Beach, Florida 33484. As both a general hospital and a Level I Trauma Center for both pediatric and adult patients, Delray Medical Center provides a variety of high-quality, specialized services to the community.

8. Plaintiff Good Samaritan is the first hospital built in Palm Beach County. It has served the community for over 100 years. Good Samaritan is incorporated in Florida, and Good Samaritan's principal place of business is 1309 N. Flagler Dr., West Palm Beach, Florida 33401. It has 333 licensed beds. Good Samaritan is an accredited acute care hospital that is focused on offering premier and comprehensive oncology services with its robust medical and surgical programs.

9. Plaintiff Palm Beach Gardens Medical Center is an acute care hospital with 199 licensed beds. Palm Beach Gardens Medical Center is incorporated in Florida, and its principal place of business is 3360 Burns Road, Palm Beach Gardens, Florida 33410. Palm Beach Gardens Medical Center focuses on providing comprehensive cardiovascular care, including open heart surgeries and structural heart procedures. It also provides the community with access to a broad range of other important medical services, including 24-hour emergency care, general surgery, various orthopedic surgery services, and specialty services such as urology.

10. Plaintiff St. Mary's houses the only children's hospital between Orlando and Fort Lauderdale. St. Mary's is incorporated in Florida, and its principal place of business is 901 45th St., West Palm Beach, Florida 33407. St. Mary's is an accredited acute care hospital that is a Level I adult and pediatric Trauma Center, certified Comprehensive Stroke Center, and has a Level III neonatal intensive care unit ("NICU"). St. Mary's has 413 licensed beds of which 45 are in the NICU. St. Mary's is a Centers for Medicare & Medicaid Services ("CMS") designated Regional Perinatal Intensive Care Center ("RPICC")—one of only 11 RPICC hospitals in Florida.

11. Plaintiff West Boca Medical Center is an accredited hospital with 195 licensed beds and primarily serves women and children. West Boca Medical Center is incorporated in Florida, and its principal place of business is 21644 State Road 7, Boca Raton, Florida 33428. West Boca Medical Center is the only Level III NICU in southern Palm Beach County.

12. Defendant The Leapfrog Group is a not-for-profit corporation incorporated in the District of Columbia, with its principal place of business at 1775 K Street, NW, Suite 400, Washington, D.C. 20006.

JURISDICTION AND VENUE

13. This Court has subject matter jurisdiction pursuant to 28 U.S.C. § 1332. Plaintiffs are all citizens of Palm Beach County, Florida, and TLG is a citizen of Washington, D.C. The

amount in controversy is in excess of $75,000 given Plaintiffs seek injunctive and declaratory relief valued in excess of $75,000.

14. This Court has personal jurisdiction over TLG pursuant to Fla. Stat. Ann. § 48.193(1)(a)(2) because TLG "submit[ted itself] . . . to the jurisdiction of the courts of this state for any cause of action arising from [TLG] . . . [c]ommitting a tortious act within this state." TLG is also subject to this Court's jurisdiction as TLG is operating, conducting, engaging in, or carrying on a business or business venture in this state. To the extent the alleged injury to persons in this state arises out of an act or omission by TLG outside of this state, this Court has jurisdiction over TLG because it engaged in solicitation or service activities within Florida.

15. Plaintiffs' claims arise out of TLG's contacts with and purposeful availment of Florida—including but not limited to its misleading "Hospital Safety Grades" of Plaintiffs on its website. TLG's false and misleading "Hospital Safety Grades" were directed at residents of Florida, accessed by residents of Florida, pertained to Plaintiffs (all residents of Florida), harmed Plaintiffs in Florida, and harmed consumers in Florida. TLG has publicly commented on its Hospital Safety Grades for Plaintiffs with Florida publications like Stet News Palm Beach County designed to drive more attention to the Safety Grades in Florida. TLG has also affirmatively "embargoed" its "Safety Grades" about Plaintiffs with members of the press, including members of the press in Florida, confirming TLG has knowingly and intentionally targeted the Florida healthcare market and Florida healthcare consumers with its "Safety Grades" about Plaintiffs.

16. This Court also has personal jurisdiction over TLG pursuant to Fla. Stat. Ann. § 48.193(2) because TLG is "engaged in substantial and not isolated activity within [Florida]" and Plaintiffs' claims arise out of that substantial, not isolated, activity. For example, for its Fall 2024 Survey, TLG solicited data from 621 health facilities in Florida, embargoed safety grades as to

192 of them with the media in Florida, and widely publicized the safety grades of those 192 Florida facilities to patients in Florida.

17. Venue in the Southern District of Florida is appropriate under 28 U.S.C. § 1391(b) because it is the district in which a substantial part of the actions giving rise to the claims occurred.

FACTUAL ALLEGATIONS

A. TLG's Safety Grade Methodology Punishes Non-Participating Hospitals Like Plaintiffs And Conceals that Penalty From Consumers.

18. TLG conducts an annual "Hospital Survey" in which TLG "asks hospitals to report quality and safety data and then publicly reports that information by hospital." In connection with the Hospital Survey, TLG assigns a "Hospital Safety Grade" to nearly 3,000 general acute-care hospitals across the nation every spring and fall. TLG posts its safety grade on one of its websites, www.hospitalsafetygrade.org, and it markets, references and links to the Hospital Safety Grade website on another website, www.leapfroggroup.org.

19. TLG admits it assigns hospitals Safety Grades to influence where consumers and patients decide to receive care. TLG explicitly tells consumers, "Patients should *always* decide on where to receive care based on a hospital's current Safety Grade." (emphasis added). TLG even tells consumers that choosing a hospital "could be a life or death decision" and amplifies this threat by misleading consumers into thinking they're "twice as likely to die of a preventable problem at a C, D, or F hospital than at an A hospital."

20. The Safety Grade uses CMS data, TLG's Hospital Survey responses, and information from other supplemental data sources to produce a single letter grade that purports to represent a hospital's "overall performance in keeping patients safe from preventable harm and medical errors." "A" represents the best TLG Hospital Safety Grade, followed in order by "B," "C," "D," and "F." The Safety Grade aggregates up to 22 national patient safety measures. For

hospitals who participate in TLG's Hospital Survey, TLG uses the hospitals' answers to TLG's Hospital Survey for 12 of the 22 measures. In other words, a majority of the grade for participating hospitals is based on their self-reported survey responses.

21. When a hospital does not participate in TLG's Hospital Survey, TLG uses other sources for those 12 measures. For five measures, TLG uses government data. TLG abandons three measures entirely. And for the last four measures, TLG uses its "imputation model."

22. According to TLG, that "imputation model" is how it assigns a value for a measure when it lacks any data pertaining to it. If a hospital does not provide TLG data, TLG assigns an "imputed" value. Prior to Fall 2024, TLG's imputation model assigned hospitals that did not participate in its survey a score based on the average score applicable to similarly situated hospitals. Beginning in Fall 2024, however, TLG modified its imputation model. It now assigns the lowest possible score to non-participating hospitals. In other words, TLG now punishes non-participants for their lack of participation. TLG has admitted its new model imposes a penalty. It specifically explained its 2024 change was designed to prevent non-participating hospitals from "inadvertently benefit[ing]" compared to hospitals that self-report, even though TLG has no data to show how non-participation could benefit a hospital.

23. The four measures for which TLG "imputes" scores are: Computerized Physician Order Entry ("CPOE"), Bar Code Medication Administration ("BCMA"), ICU Physician Staffing ("IPS"), and Hand Hygiene Score. CPOE measures whether a hospital has implemented a system to record medication prescriptions via computer. BCMA measures whether a hospital confirms medication via bar code process. IPS measures a hospital's use of intensivists in an intensive care unit. A Hand Hygiene score measures hospitals' policies for monitoring hand washing and glove usage.

24. TLG's imputation model deceives consumers by inventing negative data about hospitals that TLG wishes to punish for declining to participate in its survey. For the four imputed measures (CPOE, BCMA, IPS, and Hand Hygiene), if a hospital does not participate in TLG's survey, TLG assigns "a point value that is equivalent to receiving 'Limited Achievement' for this measure"—its lowest possible score—without any factual basis. The result is that hospitals who elect not to participate in TLG's survey receive only 60 out of 400 possible points in these four categories—resulting in artificially deflated overall grades with no basis in fact and no correlation to a hospital's actual safety performance. For example, TLG assigns a hospital the lowest possible value for the Hand Hygiene measure even if it has the best possible Hand Hygiene policy just because the hospital doesn't participate in TLG's Hospital Survey. TLG has no basis to assign that low value.

25. TLG's "imputation" model for ranking non-participating hospitals directly conflicts with TLG's own National Expert Panel's guidance. As TLG explains, "not all hospitals have enough data publicly available to be eligible for a grade." "As per the National Expert Panel guidance, [TLG] has requirements for the minimum amount of data [it] need[s] to issue an accurate grade." Accordingly, "[h]ospitals missing more than **six** process measures" are "not graded." Non-participating hospitals should fall easily into that "not graded" bucket, because their decision not to participate in TLG's survey necessarily means TLG is missing ***seven*** process measures that rely on voluntary submission of hospital data.[4] The responsible thing to do based on TLG's own Expert Panel guidance, therefore, would be to *not* provide a safety grade for a non-participating hospital. But TLG cooks the books. Of those seven missing measures, TLG "imputes"—or gins

[4] Those seven include CPOE, BCMA, IPS, Safe Practice 1: Culture of Leadership Structures and Systems; Safe Practice 2: Culture Measurement, Feedback & Intervention; Total Nursing Care Hours per Patient Day; and Hand Hygiene.

up—scores for four of them, using those concocted scores to justify ranking non-participating hospitals.

26. TLG's statements about its imputation model mislead consumers and misrepresent its own model. One Frequently Asked Question on its website asks whether "a hospital get[s] a better Safety Grade if it reports to the [TLG] Hospital Survey." In response, TLG falsely states, "The Hospital Safety Grade reflects how well a hospital does on safety, not whether they complete the [TLG] Hospital Survey." Given the nature of TLG's imputation model, which involves inventing data with no objective source, that's a clear lie. TLG relies on invented data for some hospitals but not others, and it applies a different methodology to determine Hospital Safety Grades for non-participating hospitals as compared to participating ones—all despite its claims that it meaningfully compares all hospitals regardless of participation.

27. Another way TLG's deceptive methods punish non-participating hospitals is by rewarding participating hospitals with grade inflation. The data provided by hospitals that do participate in the TLG Hospital Survey is self-reported, biased, and subject to manipulation. Median responses for hospitals that report their own scores show that those hospitals inflate their performance. TLG lacks appropriate auditing mechanisms to ensure self-reported data is accurate, and it factors measures into its grading methodology that are unverifiable. TLG assumes the data it relies on is accurate without adequately verifying it.

28. Participating hospitals are not receiving strong TLG grades because they are achieving better results on an objective basis. In one illustrative example, TLG assigned a grade of "A" or "B"—its highest possible safety scores—to Mission Hospital in Asheville, North Carolina, for seven consecutive review cycles between Spring 2021 and Spring 2024. During this same time period, investigators with the North Carolina Department of Health and Human Services

conducted a survey at Mission Hospital to evaluate its compliance with Medicare standards. On February 1, 2024, CMS designated Mission Hospital as in "immediate jeopardy [of losing federal funding]"—the most severe sanction possible—because the investigators "determin[ed] that the quality of care at Mission was so bad that it had 'caused – or is likely to cause – serious injury, harm, impairment or death to a patient.'"[5] According to the 384-page report from CMS, at least three patients died in 2022 and 2023 following "significant delays and lapses of care in the emergency department and other areas"[6]—two years in which TLG awarded Mission Hospital four consecutive "A" Hospital Safety Grades.

29. Hospitals in Florida that have participated in TLG's survey are similarly receiving high TLG grades that do not reflect their performance, which damages their higher-performing but non-participating competitors. Participating hospitals have received high grades (A's and B's) in recent years despite investigative reports that a participating hospital had cockroaches in operating rooms, dirty and broken medical equipment, inadequate monitoring of ICU patients, an overcrowded emergency department, staffing deficiencies of telemetry technicians—those responsible for monitoring changes in vital signs in patients with electronic devices—that resulted in deaths related to telemetry, patients attacking nurses, and even a misplaced patient who died after staff was unable to locate him or her.

[6] Andrew R. Jones, *'The patient was subsequently found unresponsive in a hallway bed': CMS report on Mission Hospital details deaths of patients, significant delays in care*, ASHEVILLE WATCHDOG (Feb. 17, 2024), https://www.northcarolinahealthnews.org/2024/02/17/plan-of-correction-report-mission-hospital/.

30. The flaws in TLG's methodology reveal themselves through a simple comparison between TLG's rankings and CMS data. CMS provides its own hospital safety rankings—rankings that are the product of data hospitals are required to submit to the federal agency in order to qualify for the Centers for Disease Control's National Healthcare Safety Network incentive programs. There are numerous examples throughout the country where TLG's grade for a hospital is two grades removed from the rating CMS provides—for example, where CMS considers a hospital a 5-star (the highest CMS rating) and TLG assigns the hospital a C, and where CMS considers a hospital a 2-star (the second lowest) and TLG assigns the hospital an A.

Examples of Leapfrog Advantaging Hospitals Who Provide It Free Data and Disadvantaging Hospitals Who Don't			
Hospital	**Participates in Leapfrog Survey?**	**Leapfrog Safety Grade (Fall 2024)**	**CMS Overall Star Rating**
Examples of Grade Deflation for Non-Participating Hospitals			
Uintah Basin Medical Center	No	C	5
University of Utah Hospital and Clinics	No	C	5
Examples of Grade Inflation for Participating Hospitals			
UVA Health Culpeper	Yes	A	1
Twin County Regional	Yes	A	2
Sentara Northern Virginia	Yes	A	2
Iredell Memorial Hospital	Yes	A	2
Maria Parham Medical Center	Yes	A	2
Vidant/ECU Health Edgecombe	Yes	A	2

31. Similarly, in 2023, TLG awarded nine hospitals who participated in its survey passing grades (A–C) when the government had assigned them "immediate jeopardy" warnings because the hospitals' "noncompliance with one or more requirements of participation has caused, or is likely to cause, serious injury, harm, impairment, or death[.]" In other words, TLG assigned

failing hospitals an A and directed patients to go there at the same time the government was concerned with patients' safety at that hospital.

32. These discrepancies exist because TLG rewards participating hospitals and penalizes non-participating hospitals.

B. TLG Has Been Subject To Significant Industry And Academic Criticism.

33. For more than a decade, industry experts and academics have been sounding the alarm that TLG's methodologies are inaccurate, misleading, or inconsistent based on who participates in the surveys and who does not.

34. The Journal of the American Medical Association ("JAMA") published an article in 2009 titled *Association Between Hospital-Reported Leapfrog Safe Practices Scores and Inpatient Mortality*. That article concluded that in the "sample of . . . hospitals . . . that completed the [2006] Safe Practices Leap" survey, "survey scores were not significantly associated with risk-adjusted inpatient mortality."

35. On June 22, 2012, Richard J. Umbdenstock, President and CEO of the American Hospital Association ("AHA") sent a letter to Leapfrog declaring that the Leapfrog Hospital Safety Grade "was neither fair nor accurate," and he outlined "several methodological shortcomings in the survey." The flaws included "an unfair bias toward responding to the survey, the use of unreliable measures, significant variation in the weights applied to measures for different groups of hospitals, and significant errors in the data." Umbdenstock's letter detailed three major criticisms of TLG's hospital safety score: (1) a minority of U.S. hospitals participate in TLG's voluntary reporting program, while those that do not receive lower imputed scores; (2) more than 80% of the outcome measures have been shown to be unreliable; and (3) there are errors in the TLG data. AHA expressed its "disappointment that the [TLG] scorecard's assessment was neither

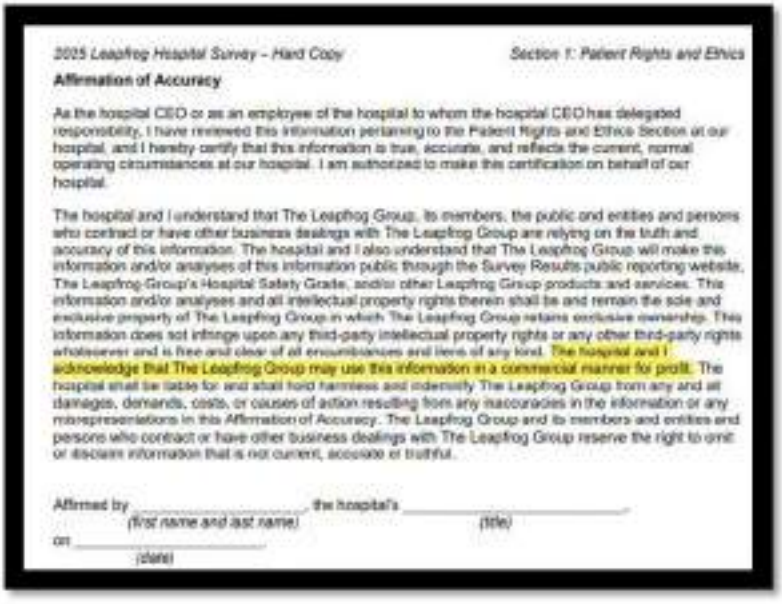
fair nor accurate"—leading AHA to conclude that "no one should use [TLG's Hospital Safety Grades] to guide their choice of hospitals, unless and until, a more accurate assessment method is used."

36. In 2017, the peer reviewed journal Medical Care published an article titled: *Dissecting Leapfrog: How Well Do Leapfrog Safe Practices Scores Correlate with Hospital Compare Ratings and Penalties, and How Much Do They Matter?* The authors, a team of researchers from the University of Michigan, concluded that participation in TLG's survey consistently inflated the participant's TLG Hospital Safety Score because self-reported information overwhelmingly "skew[ed] towards positive self-report." For example, over 50% of participating hospitals reported perfect scores in their surveys for all but one safe practice measure, and nearly 20% reported perfect scores for all safe practices.

37. The University of Michigan study further found that TLG's heavy reliance on self-reported data had the effect of "artificially deflating the mean of the distribution" to which non-reporting hospitals were compared. In other words, non-participating hospitals are subject to "large grade penalties for less-than-perfect self-reported Safe Practices compliance" because they are graded on the same curve as participating hospitals with inflated self-reported data.

38. The authors determined that "Leapfrog's current methodologies, in combination with strongly positively skewed self-reports of [Safe Practices Scores ('SPS')] measures, punish low SPS reports substantially more than they reward high SPS. These concerns cast doubt on the utility of SPS and, more generally, the [Hospital Safety Score] and grades." In addition, the TLG Hospital Safety Scores were not positively associated with patient outcomes reported by Hospital Compare or Medicare penalties for readmissions or complications.

39. Jennifer Meddings, M.D., M.Sc.—the senior author of the Michigan study—said the Hospital Safety Grade is "based on whether a hospital self-reports that it has adopted certain protocols, and not whether those protocols are actually followed"—meaning the Hospital Safety Grades offer little indication of a hospital's actual safety metrics in practice. Indeed, participating hospitals that reported high levels of self-compliance for TLG's safe practices did not have correspondingly lower hospital-acquired infection rates or lower federal penalties for readmissions, demonstrating the ineffectiveness and misleading nature of TLG's methodology.



40. In 2019, The New England Journal of Medicine Catalyst ("NEJM") published a peer reviewed article criticizing the methodology used by rating agencies, including Leapfrog. The authors said "[t]he greatest concerns were with [TLG's] internally developed and modified Safety Survey." The NEJM authors noted that TLG "had only done a formal audit for approximately five hospitals of about 2,600 in the past year, and only 72 hospitals underwent an electronic audit." In addition, the authors also reported concerns that the survey "may not truly reflect patient safety efforts or be currently meaningful to stakeholders (e.g., computerized physician order entry)." And "[a]nother major area of concern was how Leapfrog assesses hospitals that do not answer their Safety Survey. When hospitals do not report the survey, the missing data are filled in from other secondary sources. However, hospitals that answer the survey and those that do not are assessed in the same way despite not having the same measures upon which to base the ratings. Approximately 50% of hospitals answer their survey, so a good deal of the rankings are based on missing or inconsistent data."

C. TLG Reaps Substantial Rewards From Its Pay-to-Play Scheme.

41. TLG heavily tilts its grading in favor of hospitals that participate in TLG's scheme in a quid-pro-quo arrangement: Hospitals provide TLG free data, which it can then monetize, and in return hospitals receive better TLG grades while their competitors are penalized for not

supplying TLG free data. And though it pretends to be a non-profit, TLG also rakes in millions of dollars from the data it obtains from participating hospitals incentivized to keep TLG happy, so it keeps inflating grades.

42. Between 2019 and 2023, TLG collected millions in revenue from hospitals that it later rewarded with inflated grades. TLG also has collected troves of data from hospitals who complete its survey so it can financially benefit from such data. Participants in the TLG survey are specifically required to sign an acknowledgment that "[t]he Leapfrog Group may use this information in a commercial manner for profit":

2025 Leapfrog Hospital Survey – Hard Copy *Section 1: Patient Rights and Ethics*

Affirmation of Accuracy

As the hospital CEO or as an employee of the hospital to whom the hospital CEO has delegated responsibility, I have reviewed this information pertaining to the Patient Rights and Ethics Section at our hospital, and I hereby certify that this information is true, accurate, and reflects the current, normal operating circumstances at our hospital. I am authorized to make this certification on behalf of our hospital.

The hospital and I understand that The Leapfrog Group, its members, the public and entities and persons who contract or have other business dealings with The Leapfrog Group are relying on the truth and accuracy of this information. The hospital and I also understand that The Leapfrog Group will make this information and/or analyses of this information public through the Survey Results public reporting website, The Leapfrog Group's Hospital Safety Grade, and/or other Leapfrog Group products and services. This information and/or analyses and all intellectual property rights therein shall be and remain the sole and exclusive property of The Leapfrog Group in which The Leapfrog Group retains exclusive ownership. This information does not infringe upon any third-party intellectual property rights or any other third-party rights whatsoever and is free and clear of all encumbrances and liens of any kind. The hospital and I acknowledge that The Leapfrog Group may use this information in a commercial manner for profit. The hospital shall be liable for and shall hold harmless and indemnify The Leapfrog Group from any and all damages, demands, costs, or causes of action resulting from any inaccuracies in the information or any misrepresentations in this Affirmation of Accuracy. The Leapfrog Group and its members and entities and persons who contract or have other business dealings with The Leapfrog Group reserve the right to omit or disclaim information that is not current, accurate or truthful.

Affirmed by _____, the hospital's _____
(first name and last name) *(title)*

on _____
(date)

43. TLG collects revenue from participating hospitals in multiple ways. For instance, TLG charges hospitals—including ones TLG rates—over $25,000 annually to join its Partners Advisory Committee to influence the TLG Board of Directors four times a year. TLG thereby creates a structure for hospitals to pay for access to its decision-makers and curry favor with them

to ensure TLG's system benefits hospitals who participate in TLG's scheme and punishes those who do not. Some of TLG's paying members own some of its highest-rated hospitals.[7]

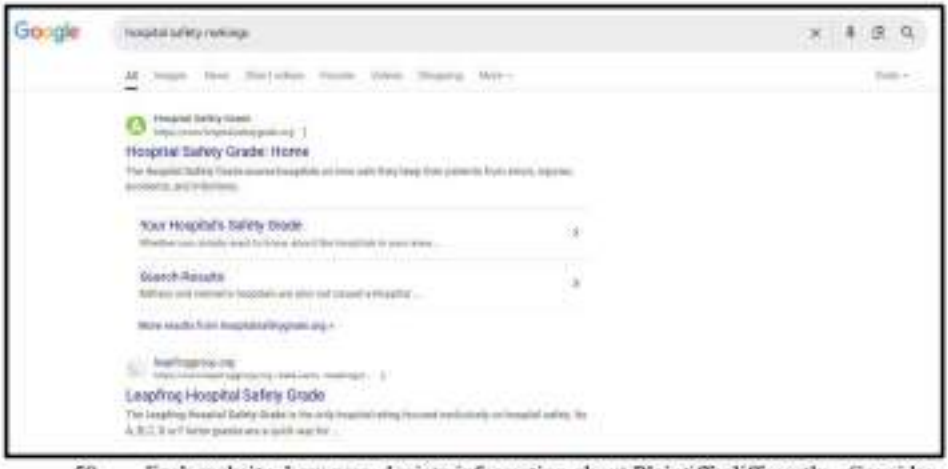
44. TLG also charges hospitals between $6,700 and $29,900 per year to advertise their TLG safety grade. That creates an incentive for TLG to rate higher the hospitals willing to pay, as opposed to those who do not. No hospital would pay $29,900 to advertise a failing grade.

45. TLG also encourages hospitals to sponsor its annual meetings and awards ceremony. In 2024, TLG's platinum executive sponsorship required $44,750—yet another way TLG reaps financial rewards from its scheme.

46. TLG monetizes the data it receives from hospitals who participate in its Hospital Survey. TLG is therefore incentivized to set up its methodology to reward participating hospitals, so that it gets more data, which it can use to make more revenue. TLG has used the tens of millions of dollars of revenue it has collected from participating hospitals and other sponsors in its pay-to-play system to pay exorbitant salaries to its owner and executives. Between 2019 and 2023, TLG has paid over three million dollars in salary and benefits to Leah Binder—its CEO.

47. TLG also licenses its safety grades to insurers, which integrate TLG's grades into websites patients use to determine whether particular healthcare facilities are covered. Insurers are even able to use TLG's logos and intellectual property—displayed prominently in a drop-down called "Hospital Safety & Accreditation":

[7] Gretchen Morgenson et al., *Roaches in the operating room: Doctors at HCA hospital in Florida say patient care has suffered from cost cutting*, NBS News (Feb. 15, 2023), https://www.nbcnews.com/health/health-care/roaches-operating-room-hca-hospital-florida-rcna69563.

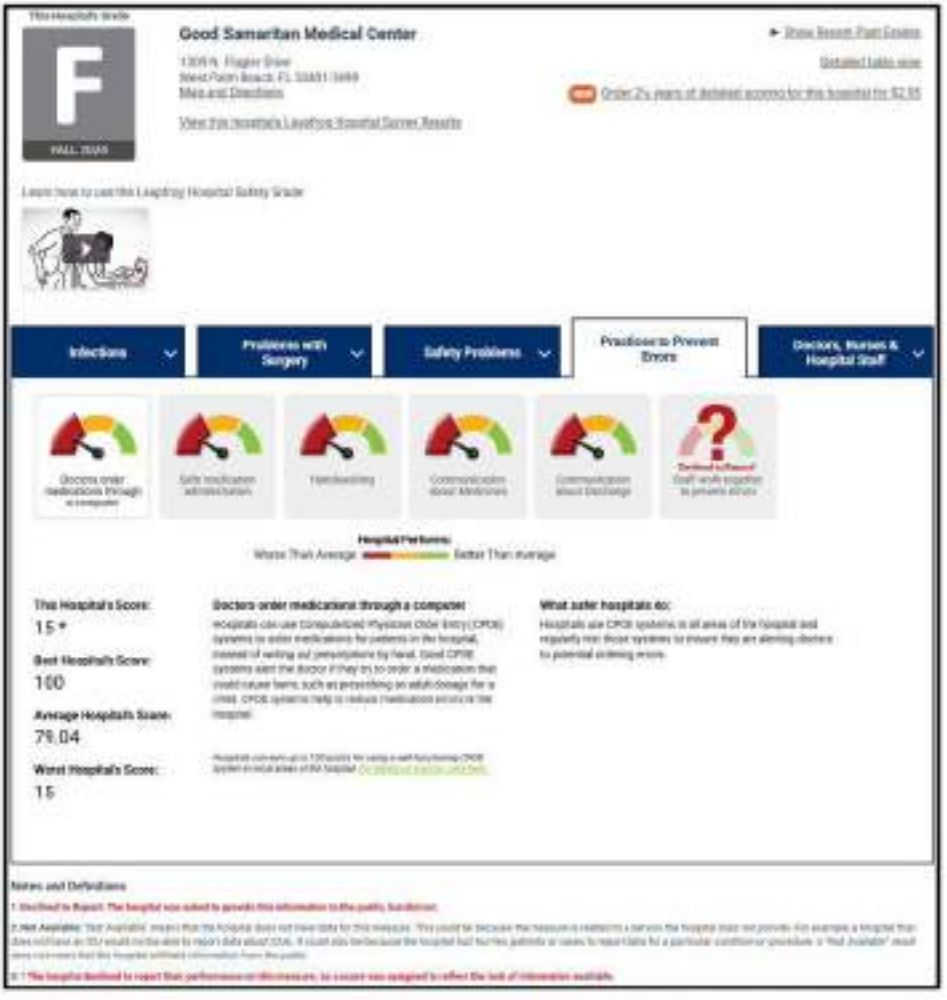


TLG receives compensation from insurers to allow those insurers to use TLG's safety grades and logos. That means TLG has yet another incentive to rank as many hospitals as possible so as to convince insurers TLG's ratings have value and to drive even more revenue to TLG through penalizing non-participating hospitals and trying to coerce them into providing data.

D. TLG's Websites Confirm TLG Is Knowingly Deceiving Patients.

48. TLG has two websites for its hospital safety rankings—www.leapfroggroup.org and www.hospitalsafetygrade.org. They each reference TLG's safety grades, but they do so in inconsistent ways that confirm not only that TLG knows it is misleading patients but also that it intends to do so.

49. When a potential patient or even an existing patient Googles "hospital safety rankings," the top two results are TLG's websites, www.hospitalsafetygrade.org and www.leapfroggroup.org:



50. Each website, however, depicts information about Plaintiffs differently. Consider the consumer experience looking for safety grades on the first Google hit—www.hospitalsafetygrade.org. Clicking that link brings a patient to TLG's Hospital Safety Grade website, where TLG encourages users to search for their local hospital by asking, "How Safe is Your Hospital?"

51. Once a patient searches her hospital's name, she is immediately confronted with the following image—a disturbing "F" grade, the meaning of which even an elementary school student would understand:

52. When a patient clicks on "View the full Score" she sees a plethora of inaccurate and misleading information about the hospital (explained *infra* Section E):

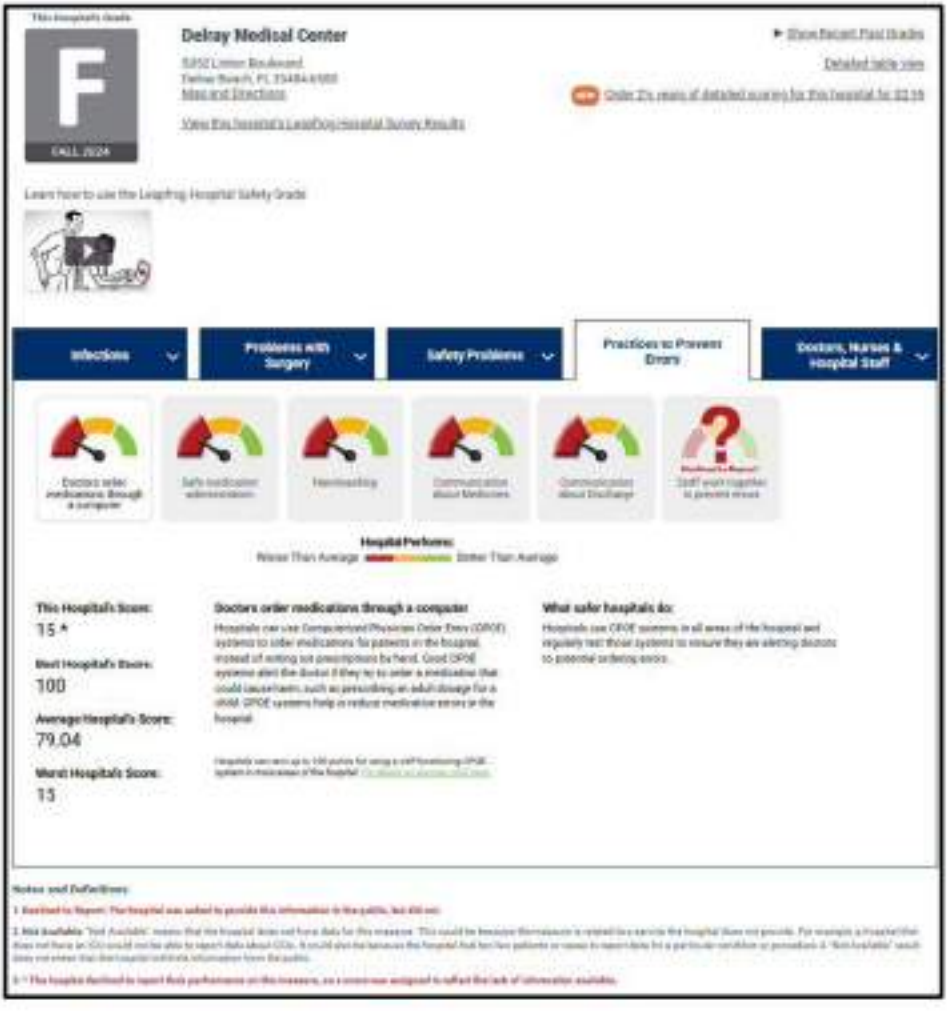
53. Only at the bottom of the page—in a small font and in footnotes consumers won't read—does TLG disclose that the hospital did not provide data to TLG.

54. TLG's approach on www.hospitalsafetygrade.org is inconsistent with how it depicts information about Plaintiffs on its other website, www.leapfroggroup.org. On leapfroggroup.org, searching for Good Samaritan Medical Center, for example, does *not* result in

any grade at all. Instead, on *that* website, TLG states that the hospital did not provide data to TLG sufficient to rate the hospital:

55. TLG's leapfroggroup.org rating website also accurately discloses that TLG has inadequate information to rate the hospital as to every metric:

56. The differences in TLG's websites confirm TLG knows exactly what message it is communicating to consumers. TLG clearly understands how to tell patients that it can't grade Plaintiffs because it lacks data. TLG decided not to do that, though, on www.hospitalsafetygrade.org: Even after admitting on www.leapfroggroup.org that it *can't* rate Plaintiffs, it purports to fail Plaintiffs with a big, bold "F" on www.hospitalsafetygrade.org.



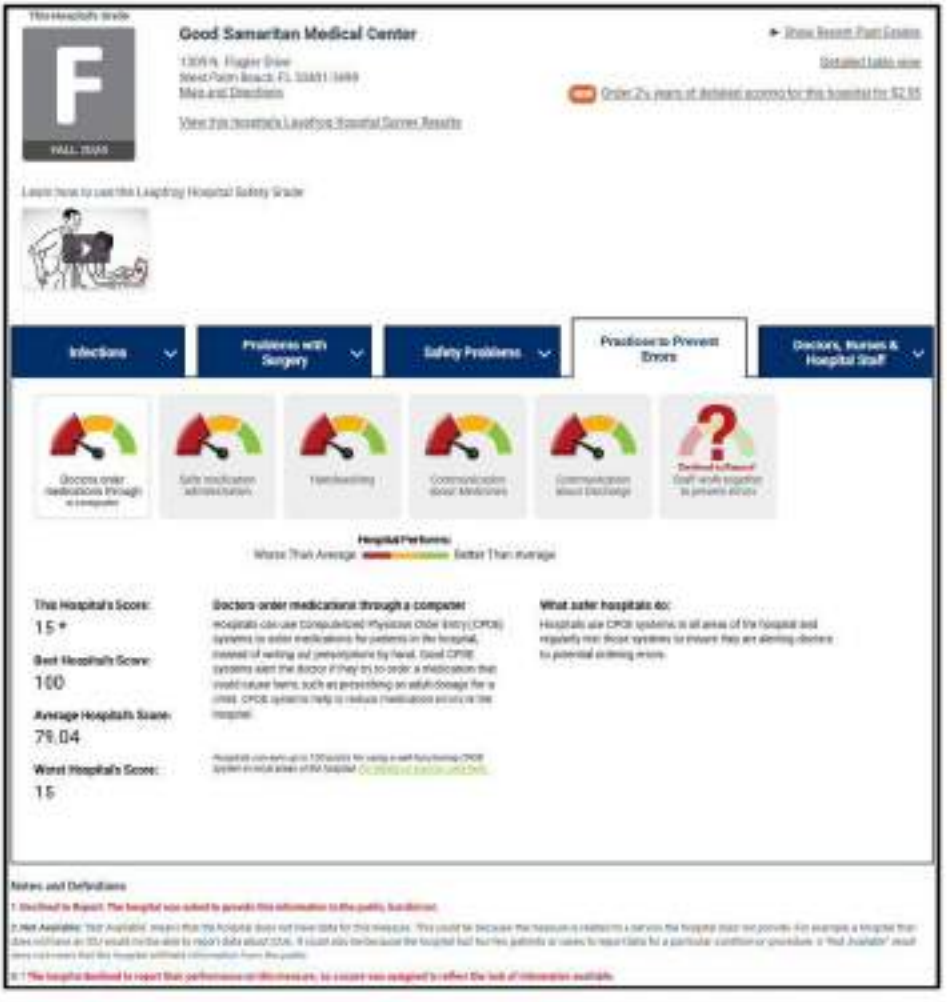
E. TLG Assigned Plaintiffs Misleading And Deceptive Low Grades.

57. Plaintiffs are among the many hundreds of hospitals across the country who choose not to participate in TLG's Survey. Given that non-participation, TLG could easily have told consumers—as it does on www.leapfroggroup.org—it lacks sufficient data to provide safety grades for Plaintiffs. Instead, it "imputed" scores to Plaintiffs and gave them failing or near-failing grades on www.hospitalsafetygrade.org. As a result, TLG has intentionally and recklessly released misleading and deceptive information about Plaintiffs' health safety performance.

58. TLG assigned Plaintiffs "Limited Achievement" scores, and corresponding low Safety Grades just as it did with other non-participating hospitals.

59. ***Delray Medical Center.*** TLG assigned Delray Medical Center an "F" grade for Fall 2024. Under its flawed methodology, TLG assigned Delray Medical Center the lowest possible score on multiple criteria for which TLG had no information—including "Handwashing," "Doctors order medications through a computer," "Safe medication administration," and "Specially trained doctors care for ICU patients."

60. TLG's consumer-facing Hospital Safety Grade pages misleadingly suggest that Delray Medical Center performed poorly on each of these categories. Although the "Staff work together to prevent errors" category is labeled with "Declined to Report," the remaining categories all misleadingly reflect that the "Hospital Performs" "Worse Than Average"—even though TLG has no basis to say so:

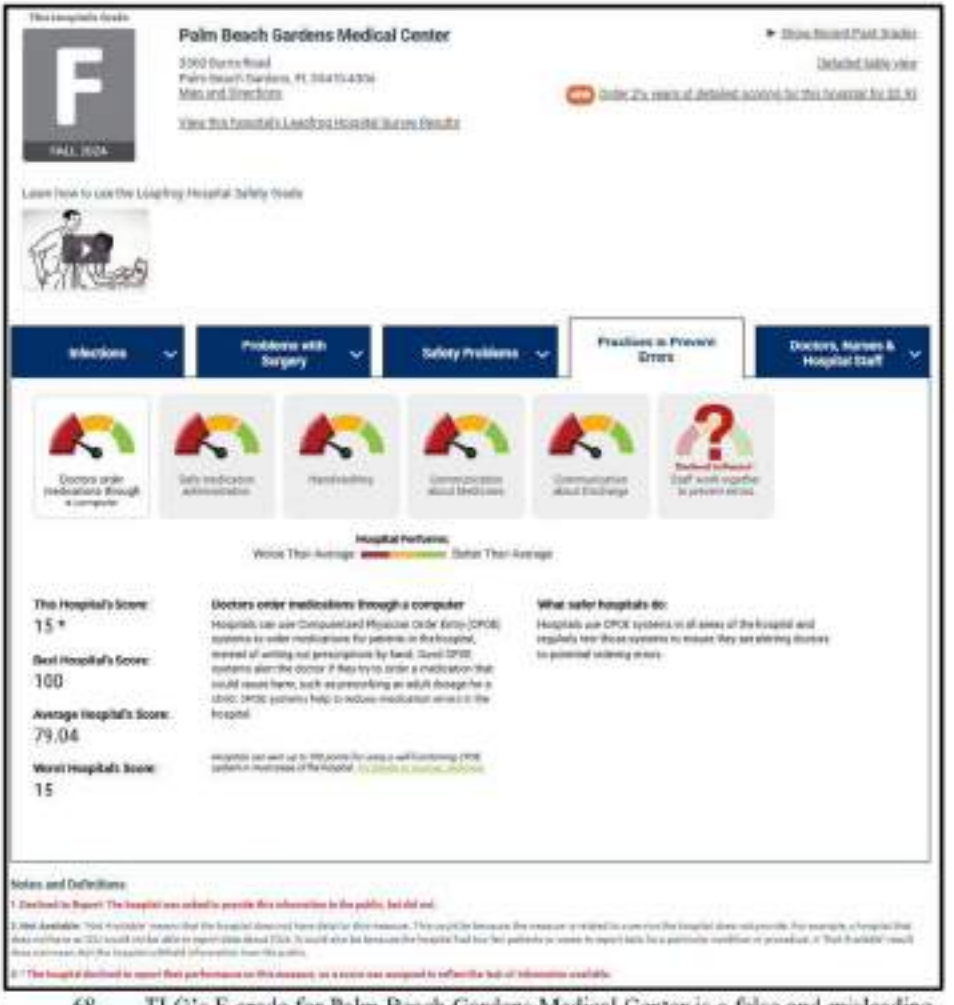


61. In other words, TLG is deceptively communicating to consumers that Delray Medical Center doctors and nurses don't adequately wash their hands, among other false statements—with no data whatsoever to support that conclusion.

62. TLG's F grade for Delray Medical Center is a false and misleading statement that TLG intentionally and recklessly released—and refused to pull down.

63. ***Good Samaritan.*** TLG also assigned Good Samaritan an "F" grade for Fall 2024. Under its flawed methodology, TLG assigned Good Samaritan the lowest possible score on the same criteria for which TLG had no information—"Handwashing," "Doctors order medications through a computer," "Safe medication administration," and "Specially trained doctors care for ICU patients."

64. TLG's consumer-facing Hospital Safety Grade pages misleadingly suggest that Good Samaritan performed poorly on each of these categories. Although the "Staff work together to prevent errors" category is labeled with "Declined to Report," the remaining categories all misleadingly indicate that the "Hospital Performs" "Worse Than Average"—even though TLG has no basis to make these deceptive statements:

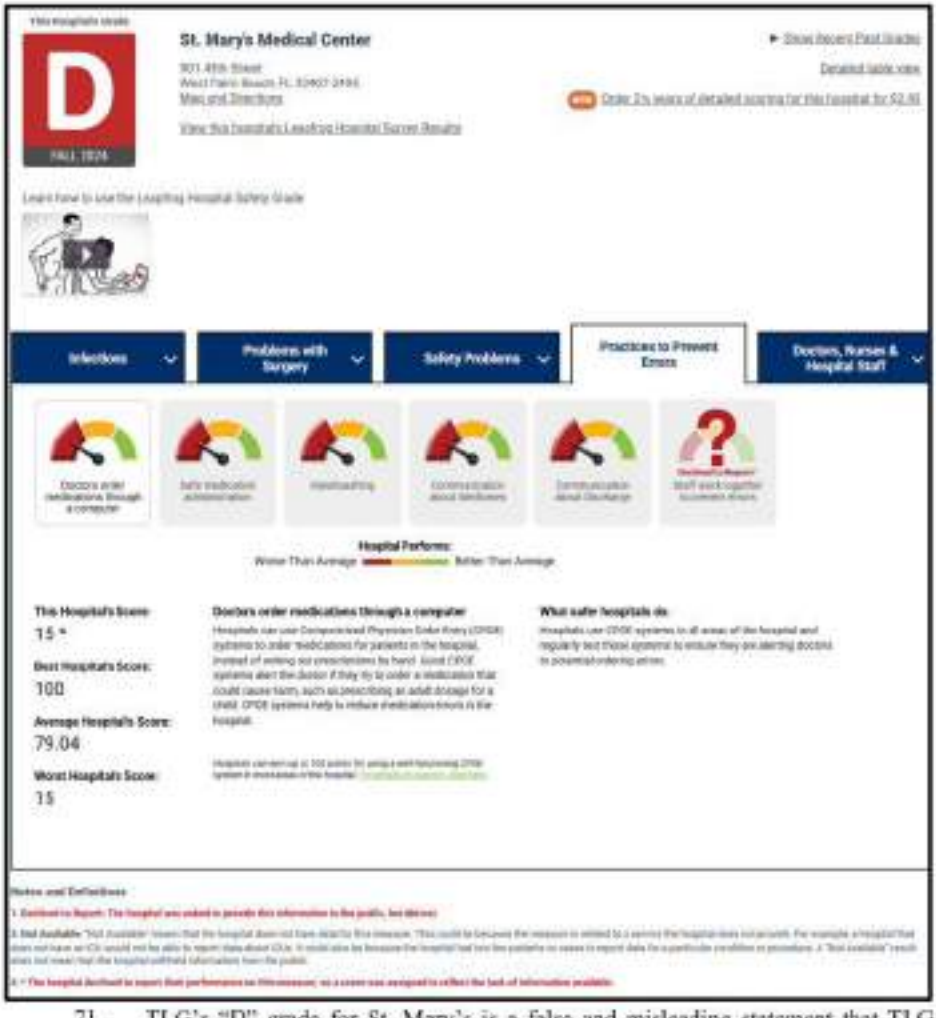


65. TLG's "F" grade for Good Samaritan is a false and misleading statement that TLG intentionally and recklessly released—and refused to pull down.

66. ***Palm Beach Gardens Medical Center.*** TLG also assigned Palm Beach Gardens Medical Center an "F" grade for Fall 2024. Under its flawed methodology, TLG assigned Palm Beach Gardens Medical Center the lowest possible score on the same criteria for which TLG had

no information—"Handwashing," "Doctors order medications through a computer," "Safe medication administration," and "Specially trained doctors care for ICU patients."

67. TLG's consumer-facing Hospital Safety Grade pages misleadingly suggest that Palm Beach Gardens Medical Center performed poorly on each of these categories. Although the "Staff work together to prevent errors" category is labeled with "Declined to Report," the remaining categories all misleadingly indicate that the "Hospital Performs" "Worse Than Average"—even though TLG has no basis to make these deceptive statements:

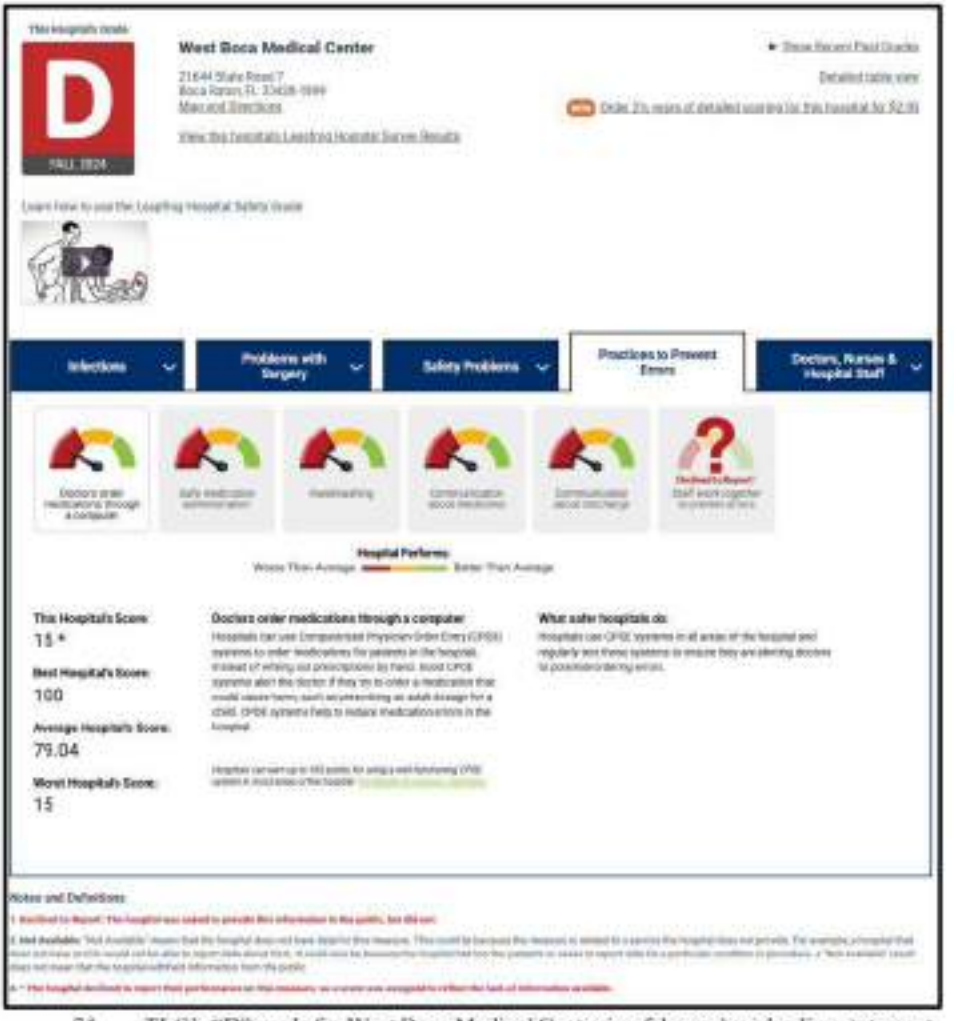


68. TLG's F grade for Palm Beach Gardens Medical Center is a false and misleading statement that TLG intentionally and recklessly released—and refused to pull down.

69. ***St. Mary's.*** TLG assigned St. Mary's a "D" grade for Fall 2024. Under its flawed methodology, TLG assigned St. Mary's the lowest possible score on the same criteria for which

TLG had no information—"Handwashing," "Doctors order medications through a computer," "Safe medication administration," and "Specially trained doctors care for ICU patients."

70. TLG's consumer-facing Hospital Safety Grade pages misleadingly suggest that St. Mary's performed poorly on each of these categories. Although the "Staff work together to prevent errors" category is labeled with "Declined to Report," the remaining categories all misleadingly indicate that the "Hospital Performs" "Worse Than Average"—even though TLG has no basis to make these deceptive statements:



71. TLG's "D" grade for St. Mary's is a false and misleading statement that TLG intentionally and recklessly released—and refused to pull down.

72. ***West Boca Medical Center.*** TLG also assigned West Boca Medical Center a "D" grade for Fall 2024. Under its flawed methodology, TLG assigned West Boca Medical Center the lowest possible score on the same criteria for which TLG had no information—"Handwashing."

"Doctors order medications through a computer," "Safe medication administration," and "Specially trained doctors care for ICU patients."

73. TLG's consumer-facing Hospital Safety Grade pages misleadingly suggest that West Boca Medical Center performed poorly on each of these categories. Although the "Staff work together to prevent errors" category is labeled with "Declined to Report," the remaining categories all misleadingly indicate that the "Hospital Performs" "Worse Than Average"—even though TLG has no basis to make these deceptive statements:

74. TLG's "D" grade for West Boca Medical Center is a false and misleading statement that TLG intentionally and recklessly released—and refused to pull down.

F. TLG's Deceptive And Misleading "Safety" Grades Have Severely Harmed Plaintiffs, Their Patients, And The Public.

75. TLG's misleading safety grades have caused severe, ongoing, and irreparable harm to Plaintiffs, their patients, and the public. The grades have caused Plaintiffs' patients to move their procedures from Plaintiffs to Plaintiffs' competitors, damaged the goodwill that Plaintiffs worked hard to build with their patients over the years, harmed Plaintiffs' relationships with key business partners, and risked serious consumer harm. Plaintiffs' elective patient admissions dropped following TLG's release of its Fall 2024 Hospital Safety Grades. The harm has been significant and widespread, given TLG's efforts to encourage the media to report on the misleading and deceptive grades TLG assigned Plaintiffs. Indeed, TLG has specifically admitted that it embargoed Plaintiffs' safety grades with the press weeks before those scores went public specifically to generate broad public attention to those false and misleading scores. TLG's safety grades are even available on insurer websites for patients to rely on when they look up whether certain hospitals fall under insurance coverage.

76. Each Plaintiff has suffered harm from TLG's deceptive practices. Plaintiff Delray Medical Center's Medical Executive Committee, which is comprised of the medical leadership that oversees each department within the hospital, has received direct inquiries from patients regarding their concerns about TLG's grades and related public reports. Physicians were approached by patients who expressed that they did not want to go to Delray Medical Center for surgeries after seeing TLG's grade and associated reports. Plaintiff Delray Medical Center has also received reports from patients and from doctors that patients have planned to drive past Delray Medical Center to a more distant medical facility due to the grade TLG gave to Delray Medical Center.

77. Plaintiff Good Samaritan's Medical Executive Committee has also received direct inquiries from patients regarding their concerns about TLG's grades and related public reports. TLG's grades are even impacting Good Samaritan's hiring efforts. Plaintiff Good Samaritan's Chief Nursing Officer reported that a nursing candidate questioned the quality of care of the hospital in her interview for a job opening. Good Samaritan has also received reports from patients that they decided not to use its facility because of TLG's misleading grades.

78. Plaintiff Palm Beach Gardens Medical Center has received reports from patients that they decided not to use the Medical Center due to the misleading grade TLG assigned the hospital. This is particularly harmful to the Palm Beach Gardens community given that the majority of patients are 65 years old and older, and travel time risks exacerbating their health issues before receiving care, particularly if they are stroke victims. The Palm Beach Gardens Medical Center's Medical Executive Committee has also received direct inquiries from patients regarding their concerns about TLG's grades and related public reports.

79. Plaintiff St. Mary's medical leadership has received direct inquiries from patients regarding their concerns about TLG's grades and related public reports. As a Level I adult and pediatric Trauma Center, Joint Commission Comprehensive Stroke Center, Level III NICU, and RPICC—among other certifications—St. Mary's is a facility people need to go to receive specialized medical care. TLG's safety grades misleadingly make patients think that they should go to "A" hospitals even though those hospitals do not have the objective accreditation, certification, and facilities—like St. Mary's—needed to treat certain high-risk patients.

80. When TLG assigns a hospital an A, patients think that facility is where they should receive care. Objective data debunks that impression. As just one example, another hospital in the Palm Beach County area that TLG has graded an "A" regularly transfers patients to St. Mary's

for critical, higher-level care services—despite St. Mary's purported TLG "D" safety grade. In 2024, that A-ranked hospital transferred 600 patients to St. Mary's. Since 2022, that A-ranked hospital transferred 1,800 patients to St. Mary's. Why? Because only St. Mary's had the right specialists, technology, accreditations, and certifications necessary to provide the required care. Whether a hospital can or should treat a given patient depends on far more than TLG's superficial and misleading marks, but TLG intentionally deceives consumers into thinking otherwise.

81. Plaintiff West Boca Medical Center's Medical Executive Committee has also received direct inquiries from patients regarding their concerns with TLG's grades and related public reports. TLG's inaccurate grades have also harmed West Boca Medical Center's relationships with physicians and patients who have chosen alternative options as reflected through West Boca's drop in patient encounters since Fall 2024.

82. TLG's Hospital Safety Grades have also harmed Plaintiffs' relationships with physicians. Medical professionals have expressed concern about working with Plaintiffs due to the grades assigned by TLG, especially when patients have requested to schedule their surgeries at alternative facilities.

83. Attempting to counteract the inaccurate, negative picture created by TLG in the community has required Plaintiffs to devote time and resources that could have otherwise been spent continuing to improve patient care. The harm is particularly pronounced given that negative safety ratings are particularly "sticky" with consumers—*i.e.*, once a consumer sees a failing safety ranking it is exceedingly difficult to convince them the grade is wrong.

84. The deceptive Hospital Safety Grades TLG releases about Plaintiffs—and other non-reporting hospitals—mislead consumers to make commercial decisions to purchase healthcare

services that are not in their best interest. By putting hospitals on unequal footing in its evaluation just to make more money for itself and for its "partners," TLG achieves the opposite of its purported non-profit objective: It risks patient harm and causes potential patients to make unsafe decisions with potentially life-or-death implications.

85. TLG's misleading safety grades have resulted in patients delaying medical care. That's a material public safety problem. Increased time to get to a hospital following an acute health incident materially increases the risk of mortality for emergency patients. Increased time from incident to the hospital also materially increases the risk of worse outcomes, infection, and other dangerous and harmful health outcomes. It is for this reason that Florida law requires ambulances to drive emergency patients to the closest hospital. *See* Fl. Code § 395.1041(3)(e) ("Except as otherwise provided by law, **all medically necessary transfers shall be made to the geographically closest hospital** with the service capability, unless another prior arrangement is in place or the geographically closest hospital is at service capacity." (emphasis added)).

86. TLG's methodology and public statements contradict this public health principle engrained in Florida law by deceiving patients into thinking they are better off driving longer distances to hospitals based on TLG's misleading grades. The vast majority (~80%) of emergency patients are transported to emergency rooms by non-ambulatory vehicles. TLG is putting emergency patients' lives at risk by undermining their trust in local hospitals and encouraging them to delay the care they need based on deceptive information TLG is releasing. TLG's Hospital Safety Grades cause patients to make commercial decisions to drive past deceptively graded hospitals to another hospital farther away. This is a dangerous result particularly because the low grade by TLG is false and misleading.

87. TLG intends these results to encourage non-participating hospitals to participate in its deceptive scheme by warning patients they are "*always* decide on where to receive care based on a hospital's current Safety Grade," because they are "twice as likely to die of a preventable problem at a C, D, F hospital than at an A hospital." (emphasis added).

88. This has directly caused Plaintiffs harm to their reputation and goodwill.

CLAIMS FOR RELIEF

COUNT I
(DECLARATORY AND INJUNCTIVE RELIEF UNDER THE FLORIDA DECEPTIVE AND UNFAIR TRADE PRACTICES ACT)

89. Plaintiffs reallege and incorporate the preceding paragraphs as if fully set forth herein.

90. By virtue of its solicitation of information from Florida healthcare facilities, publication of information and Hospital Safety Grades for Florida hospitals, and commission of deceptive acts and unfair practices against Plaintiffs and the residents of Florida, TLG is subject to the Florida Deceptive and Unfair Trade Practices Act. Fla. Stat. § 501.201 et seq.

91. TLG's actions described herein constitute unfair or deceptive trade practices substantially affecting trade or commerce in the state of Florida in violation of FDUTPA.

92. In the course of its business, TLG releases its Hospital Safety Grades, which contain deceptive and misleading statements about hospital quality and patient safety.

93. TLG has made misleading representations about how its scheme penalizes non-participating hospitals, including, but not limited to, its representation that non-participating hospitals are not disadvantaged compared to hospitals who participate in its deceptive scheme.

94. TLG's entire grading system, including its imputation model, misleads Florida consumers—and national consumers—into thinking that healthcare decisions should be made by looking to an oversimplified letter grade and by penalizing non-participating hospitals.

95. TLG abuses the trust of the consumer by intentionally jiggering its Hospital Safety Grades to benefit the hospitals that fund it (through donation and the provision of valuable data), participate in its surveys, and serve on its committees. TLG's Hospital Safety Grades have harmed Florida consumers by causing them to make dangerous decisions to forego the nearest hospital based on misleading information. This harm to consumers has harmed Plaintiffs through loss of goodwill and reputation.

96. TLG's misrepresentations are knowing and intentional. TLG on www.theleapfroggroup.org accurately describes when hospitals have declined to participate in TLG's survey, making clear that TLG has insufficient data with which to assign a safety grade. At the same time, TLG purports to assign "safety grades" based on that same inadequate data on www.hospitalsafetygrade.org.

97. TLG intends that patients, purchasers, consumers, regional and national health plans, insurers, and researchers will rely on its oversimplified grading system and representations regarding the Plaintiff Hospitals' safety and the safety of all hospitals reported on throughout Florida and the country. TLG specifically tells patients to "*always* decide on where to receive care based on a hospital's current Safety Grade," because they are "twice as likely to die of a preventable problem at a C, D, F hospital than at an A hospital." (emphasis added).

98. The representations made by TLG to consumers and the methodology TLG employs to calculate the Hospital Safety Grades constitute a deceptive act or practice in trade, and both Plaintiffs and patients have been aggrieved by the deceptive act or practice.

99. TLG's deceptive acts and practices cause harm to consumers by misleading consumers regarding the quality and safety of the hospitals it grades, including Plaintiffs.

100. TLG's deceptive acts and practices mislead consumers, causing them to make decisions about their healthcare that are not in their best interests. These deceptive acts and practices cause harm to Florida consumers, including by increasing the incident-to-hospital time for misled patients and causing patients to choose hospitals that do not provide the types of critical care the Plaintiff Hospitals provide.

101. As a result of TLG's deceptive acts and practices, Plaintiffs seek injunctive and declaratory relief valued in excess of $75,000.

102. Pursuant to FDUTPA, Plaintiffs demand injunctive relief, declaratory relief, and attorneys' fees and costs.

COUNT II
(DECLARATORY JUDGMENT)

103. Plaintiffs reallege and incorporate the preceding paragraphs as if fully set forth herein.

104. Pursuant to the Declaratory Judgment Act, 28 U.S.C. § 2201, a court may declare the rights and other legal relations of any interested party in the case of an actual controversy within its jurisdiction.

105. There exists a substantial justiciable controversy between the parties as to whether TLG's grading of Plaintiffs violates FDUTPA. More specifically, Plaintiffs believe that TLG's grading of Plaintiffs constitutes a deceptive practice under FDUTPA, and TLG disagrees and refuses to abate the deceptive practice. This Court is thus vested with the power to declare the rights and liabilities of the parties and to grant such other and further relief as may be necessary. Declaration of the parties' rights in these regards will clarify the rights and interests of the parties.

106. Given the prior and ongoing harm caused by TLG's deceptive practice, the controversy between the parties is actual and of sufficient immediacy to warrant the issuance of a

declaratory judgment. As alleged in the preceding paragraphs, TLG's continued grading of Plaintiffs causes substantial harm to Plaintiffs, patients, and the community such that there is a bona fide, actual, present need for the declaration.

107. Declaratory relief will resolve the legal issues between the parties regarding whether TLG's grading of Plaintiffs constitutes a deceptive practice under FDUTPA.

108. Plaintiffs have attempted to engage with TLG as to the issues with its recently-adopted methodology, including explaining in writing that the methodology results in grades that are deceptive and harmful to patients, but TLG has nevertheless continued to assign its harmful, inaccurate grades.

109. Therefore, pursuant to the Declaratory Judgment Act, 28 U.S.C. § 2201, Plaintiffs request a judgment declaring that TLG's grading methodology and its application to Plaintiffs, in both the Fall 2024 grading cycle and forthcoming Spring 2025 grading cycle, is a deceptive practice under FDUTPA.

110. Given that the Fall 2024 Hospital Safety Grades present ongoing harm to Plaintiffs and to each future potential patient who is misled by those grades, pursuant to Federal Rule of Civil Procedure 57, Plaintiffs request a speedy hearing of this claim.

PRAYER FOR RELIEF

WHEREFORE, Plaintiffs respectfully request that this Court:

a) Permanently enjoin TLG from including Plaintiffs in its Hospital Safety Grades;

b) Speedily declare pursuant to Federal Rule of Civil Procedure 57 that TLG's grading methodology and its application to Plaintiffs, in both the current Spring 2025 grading cycle and in recent prior cycles, violates FDUTPA;

c) Award Plaintiffs their attorneys' fees and costs;

d) Grant such other and further relief as it may deem just and equitable.

Dated: August 28, 2025

Respectfully submitted,

By: */s Michael Pineiro*

Attorneys for the Plaintiff Hospitals

IN THE UNITED STATES DISTRICT COURT
FOR THE SOUTHERN DISTRICT OF FLORIDA
WEST PALM BEACH DIVISION

GOOD SAMARITAN MEDICAL CENTER, INC., et al.,	)	
Plaintiffs,	)	Case No.: 9:25-cv-80526-DMM
v.	)	
THE LEAPFROG GROUP,	)	
Defendant.	)	

DEFENDANT THE LEAPFROG GROUP'S ANSWER TO PLAINTIFFS' AMENDED COMPLAINT

Defendant, The Leapfrog Group ("Leapfrog") by and through its attorneys, Wilson Elser Moskowitz Edelman & Dicker LLP, and for its Answer to Plaintiffs' Amended Complaint pursuant to Fed. R. Civ. P. 12, states as follows:

PRELIMINARY STATEMENT

Hospitals are trusted pillars of their communities, responsible for safeguarding the lives of patients in their most vulnerable moments. The integrity of information guiding patients' healthcare decisions must be beyond reproach. Yet Defendant TLG, under the guise of public service, has corrupted that trust—weaponizing fear, distorting facts, and misleading the public to serve its own craven financial interests. Through a brazen pay-to-play scheme, TLG pressures hospitals to participate and pay, or else suffer devastating and misleading public "safety" grades. Plaintiffs bring this action not because they fear evaluation, but because TLG's false and reckless conduct endangers patients, undermines public health, and cannot go unchallenged.

ANSWER: Leapfrog denies all allegations contained in Plaintiffs' preliminary statement.

INTRODUCTION

1. Defendant TLG holds itself out as an honest and credible public service organization devoted to hospital safety. In reality, it operates a brazen pay-to-play scheme that distorts the truth, misleads patients, and inflicts serious harm on hospitals and the communities they serve. Hospital participation drives TLG's revenue and enriches this so-called "non-profit" to the tune of many millions of dollars—including exorbitant compensation for its Chief Executive Officer. Through its "Hospital Safety Grades," TLG assigns A, B, C, D, and F letter grades to hospitals nationwide and prominently displays them on its website, www.hospitalsafetygrade.org. These "grades" are based, in material part, on easily manipulatable, self-reported data submitted by hospitals that choose to dedicate the time and resources to respond to TLG's sprawling 100+ page data requests. TLG then aggressively broadcasts these so-called grades directly to patients, caregivers, and healthcare workers, orchestrating a sweeping media campaign—including by embargoing grades with reporters nationwide—to maximize public exposure. The message TLG pushes is alarmist and clear: Patients must "*always* decide on where to receive care based on a hospital's current Safety Grade," because they are "twice as likely to die of a preventable problem at a 'C,' 'D,' or 'F' hospital than at an 'A' hospital." (emphasis added). But TLG's "safety grades" are a fraud. Far from protecting patients, they present a clear and present danger to public health across Palm Beach County and beyond.

ANSWER: Leapfrog admits that it "holds itself out as an honest and credible public service organization devoted to hospital safety." Further, Leapfrog admits that "[t]hrough its 'Hospital Safety Grades,' TLG assigns A, B, C, D, and F letter grades to hospitals nationwide and prominently displays them on its website, www.hospitalsafetygrade.org." Leapfrog denies all remaining allegations contained in Paragraph 1 of the Amended Complaint that are otherwise not expressly admitted.

2. Four years ago, the five Plaintiff Hospitals made a deliberate choice to stop responding to TLG's excessive data requests. During the height of the COVID-19 pandemic, Plaintiffs prioritized their administrative resources toward achieving specialty-specific accreditations and certifications that directly respond to patient needs. Until last year, TLG continued to assign grades to Plaintiffs based on how similarly situated participating hospitals performed on standard metrics, and notably, Plaintiffs were never assigned F grades under that system.

ANSWER: Leapfrog admits only that it never published an F grade to any of the five Plaintiff Hospitals prior to the year 2024. Leapfrog denies the allegations that "[u]ntil last year, TLG continued to assign grades to Plaintiffs based on how similarly situated participating hospitals performed on standard metrics." As to the remaining allegations contained in Paragraph 2, Leapfrog lacks knowledge or information sufficient to form a belief as to the truth of the allegations, and therefore denies the same.

3. That changed in 2024. Facing declining hospital participation, escalating expenses, and intensifying pressure to drive up revenue—including hefty consulting and advertising fees from participating hospitals along with revenue from insurers—TLG abruptly rigged its methodology. Under its new policy, any hospital declining to provide data would automatically fail on the affected metrics, leading to inevitable Ds and Fs for Plaintiffs for the first time. TLG openly admitted the change was designed to punish non-participating hospitals and ensure they would not "inadvertently benefit" from positive scores—regardless of the truth. Tomorrow's anticipated release of new grades continues TLG's reckless campaign. Instead of simply choosing not to grade Plaintiffs, TLG will deliberately misrepresent these trusted hospitals as dangerous

facilities, undermining the doctors, nurses, and healthcare workers on whom the community depends.

ANSWER: Leapfrog denies the allegations contained in Paragraph 3 of the Amended Complaint.

4. TLG's misinformative "Safety Grades" have been repeatedly condemned by leading healthcare organizations and academic researchers for precisely the dangers they pose. The American Hospital Association ("AHA") has warned that "no one should use [TLG's Hospital Safety Grades] to guide their choice of hospitals," because they are "neither fair nor accurate."[1] Academic studies have confirmed that TLG's methodology consistently misrepresents hospital quality nationwide, misleading patients into healthcare decisions that increase mortality risks and worsen outcomes.[2] TLG has even awarded its highest possible safety grades to a facility the federal government determined in a 384-page report had "quality of care . . . so bad that it had 'caused—or is likely to cause—serious injury, harm, impairment, or death to a patient.'" Multiple patients died at that facility, despite its pristine TLG ranking. For nearly a decade, healthcare professionals and scholars have sounded the alarm about TLG's dangerous practices. Those practices are even worse today as a result of TLG's 2024 move to punish non-participating hospitals.[3] But TLG refuses to fix its reckless model. So long as hospitals are willing to pay to

Smith et al., *Dissecting Leapfrog: How Well Do Leapfrog Safe Practices Scores Correlate With Hospital Compare Ratings and Penalties, and How Much Do They Matter?*, 55(6) Med. Care 606, 611-12 (June 2017), https://pmc.ncbi.nlm.nih.gov/articles/PMC5517312/pdf/nihms851990.pdf.

escape failing grades. TLG has no incentive to reform—and every incentive to perpetuate its deceptive scheme.

ANSWER: To the extent Plaintiffs' have pled accurate recitations of the documents referenced in Paragraph 4 of the Amended Complaint, Leapfrog asserts that those documents speak for themselves. To the extent Plaintiffs' have not pled accurate recitations of the documents referenced in Paragraph 4 of the Amended Complaint, Leapfrog denies all allegations that refer to each respective document. Leapfrog denies the remaining allegations contained in Paragraph 4 of the Amended Complaint.

5. Plaintiffs did not bring this action lightly. Before commencing this case, Plaintiffs asked TLG to cease and desist its deceptive grading practices. Plaintiffs made clear that TLG's conduct was not only wrong, but dangerously harmful—driving patients away from some of the region's safest hospitals and toward objectively riskier facilities. TLG refused. Hiding behind a self-serving and legally unsupportable invocation of the First Amendment, TLG claimed a "free speech right" to deceive the public. It then doubled down: embargoing its false grades with the press, orchestrating a media blitz, and further misleading patients in Plaintiffs' communities—all while knowing the devastating consequences of its campaign.

ANSWER: With respect to the allegations contained in Paragraph 5, Leapfrog admits Plaintiffs sent a cease-and-desist correspondence, and Leapfrog did not agree to refrain from publishing Plaintiffs' grades. Leapfrog lacks knowledge or information sufficient to form a belief as to the truth of the allegations that "Plaintiffs did not bring this action lightly," and on that basis denies this allegation contained in Paragraph 5. Leapfrog denies the remaining allegations contained in Paragraph 5 of the Amended Complaint.

6. There is no First Amendment protection for deceptive practices. That is exactly why the Florida Deceptive and Unfair Trade Practices Act ("FDUTPA") exists: to protect consumers from modern-day snake oil salesmen like TLG. TLG's supposed "mission" is a sham. Its true mission is self-enrichment. A material percentage of TLG's "non-profit" budget goes directly to compensating its Chief Executive Officer, who has pocketed many millions of dollars in recent years at the expense of the very patients TLG claims to serve. TLG's business model is as simple as it is sinister: prey on public fear, distort the truth, and profit from deception. Enough is enough. This lawsuit seeks to put an end to TLG's dangerous practices and to protect the patients and communities who deserve honest, reliable information about their healthcare choices.

ANSWER: Leapfrog denies the allegations contained in Paragraph 6 of the Amended Complaint.

PARTIES

7. Plaintiff Delray Medical Center is an accredited hospital with 536 licensed beds. Delray Medical Center is incorporated in Florida, and its principal place of business is at 5352 Linton Blvd., Delray Beach, Florida 33484. As both a general hospital and a Level I Trauma Center for both pediatric and adult patients, Delray Medical Center provides a variety of high-quality, specialized services to the community.

ANSWER: Upon information and belief, Leapfrog admits to the allegations that "Plaintiff Delray Medical Center is an accredited hospital with 536 licensed beds. Delray Medical Center is incorporated in Florida, and its principal place of business is at 5352 Linton Blvd., Delray Beach, Florida 33484." Leapfrog lacks knowledge or information sufficient to form a belief as to the truth of the remaining allegations contained in Paragraph 7 of the Amended Complaint, and on that basis denies the allegations contained therein.

8. Plaintiff Good Samaritan is the first hospital built in Palm Beach County. It has served the community for over 100 years. Good Samaritan is incorporated in Florida, and Good Samaritan's principal place of business is 1309 N. Flagler Dr., West Palm Beach, Florida 33401. It has 333 licensed beds. Good Samaritan is an accredited acute care hospital that is focused on offering premier and comprehensive oncology services with its robust medical and surgical programs.

ANSWER: As for the allegations that "Plaintiff Good Samaritan is the first hospital built in Palm Beach County" and "Good Samaritan is an accredited acute care hospital that is focused on offering premier and comprehensive oncology services with its robust medical and surgical programs," Leapfrog lacks knowledge or information sufficient to form a belief as to the truth of these allegations contained in Paragraph 8 of the Amended Complaint, and on that basis denies the allegations contained therein. Upon information and belief, Leapfrog admits to the remaining allegations contained in Paragraph 8 of the Amended Complaint.

9. Plaintiff Palm Beach Gardens Medical Center is an acute care hospital with 199 licensed beds. Palm Beach Gardens Medical Center is incorporated in Florida, and its principal place of business is 3360 Burns Road, Palm Beach Gardens, Florida 33410. Palm Beach Gardens Medical Center focuses on providing comprehensive cardiovascular care, including open heart surgeries and structural heart procedures. It also provides the community with access to a broad range of other important medical services, including 24-hour emergency care, general surgery, various orthopedic surgery services, and specialty services such as urology.

ANSWER: Upon information and belief, Leapfrog admits to the allegations that "Plaintiff Palm Beach Gardens Medical Center is an acute care hospital with 199 licensed beds. Palm Beach Gardens Medical Center is incorporated in Florida, and its principal place of business

is 3360 Burns Road, Palm Beach Gardens, Florida 33410. Palm Beach Gardens Medical Center focuses on providing comprehensive cardiovascular care, including open heart surgeries and structural heart procedures." Leapfrog lacks knowledge or information sufficient to form a belief as to the truth of the remaining allegations contained in Paragraph 9 of the Amended Complaint, and on that basis denies the allegations contained therein.

10. Plaintiff St. Mary's houses the only children's hospital between Orlando and Fort Lauderdale. St. Mary's is incorporated in Florida, and its principal place of business is 901 45th St., West Palm Beach, Florida 33407. St. Mary's is an accredited acute care hospital that is a Level I adult and pediatric Trauma Center, certified Comprehensive Stroke Center, and has a Level III neonatal intensive care unit ("NICU"). St. Mary's has 413 licensed beds of which 45 are in the NICU. St. Mary's is a Centers for Medicare & Medicaid Services ("CMS") designated Regional Perinatal Intensive Care Center ("RPICC")—one of only 11 RPICC hospitals in Florida.

ANSWER: Leapfrog lacks knowledge or information sufficient to form a belief as to the truth of the allegations contained in Paragraph 10 of the Amended Complaint that state, "St. Mary's is a Centers for Medicare & Medicaid Services ('CMS') designated Regional Perinatal Intensive Care Center ('RPICC')—one of only 11 RPICC hospitals in Florida," and "Plaintiff St. Mary's houses the only children's hospital between Orlando and Fort Lauderdale," and on that basis denies those allegation contained therein. Upon information and belief, Leapfrog admits to the remaining allegations contained in Paragraph 10.

11. Plaintiff West Boca Medical Center is an accredited hospital with 195 licensed beds and primarily serves women and children. West Boca Medical Center is incorporated in Florida, and its principal place of business is 21644 State Road 7, Boca Raton, Florida 33428. West Boca Medical Center is the only Level III NICU in southern Palm Beach County.

ANSWER: Leapfrog lacks knowledge or information sufficient to form a belief as to the truth of the allegations contained in Paragraph 11 of the Amended Complaint that states, "West Boca Medical Center is the only Level III NICU in southern Palm Beach County," and on that basis denies that allegation contained therein. Upon information and belief, Leapfrog admits to the remaining allegations contained in Paragraph 11.

12. Defendant The Leapfrog Group is a not-for-profit corporation incorporated in the District of Columbia, with its principal place of business at 1775 K Street, NW, Suite 400, Washington, D.C. 20006.

ANSWER: Leapfrog admits to the allegations contained in Paragraph 12 of the Amended Complaint.

JURISDICTION AND VENUE

13. This Court has subject matter jurisdiction pursuant to 28 U.S.C. § 1332. Plaintiffs are all citizens of Palm Beach County, Florida, and TLG is a citizen of Washington, D.C. The amount in controversy is in excess of $75,000 given Plaintiffs seek injunctive and declaratory relief valued in excess of $75,000.

ANSWER: With respect to the allegations contained in Paragraph 13 of the Amended Complaint which set forth conclusions of law, no response is required. To the extent a response is deemed required, Leapfrog admits that the cited federal statutes confer subject matter jurisdiction and respectfully refers all questions of law to this Honorable Court. All allegations not expressly admitted are denied.

14. This Court has personal jurisdiction over TLG pursuant to Fla. Stat. Ann. § 48.193(1)(a)(2) because TLG "submit[ted itself] . . . to the jurisdiction of the courts of this state for any cause of action arising from [TLG] . . . [c]ommitting a tortious act within this state." TLG

is also subject to this Court's jurisdiction as TLG is operating, conducting, engaging in, or carrying on a business or business venture in this state. To the extent the alleged injury to persons in this state arises out of an act or omission by TLG outside of this state, this Court has jurisdiction over TLG because it engaged in solicitation or service activities within Florida.

ANSWER: With respect to the allegations contained in Paragraph 14, Leapfrog admits that the Court's July 15, 2025 Order (Dkt. #41), *inter alia*, found that Florida's long-arm statute creates specific jurisdiction over the allegations contained in Plaintiffs' Amended Complaint. As to the remaining allegations of Paragraph 14 which set forth conclusions of law, no response is required. Leapfrog denies all allegations not expressly admitted contained in Paragraph 14 of the Amended Complaint.

15. Plaintiffs' claims arise out of TLG's contacts with and purposeful availment of Florida—including but not limited to its misleading "Hospital Safety Grades" of Plaintiffs on its website. TLG's false and misleading "Hospital Safety Grades" were directed at residents of Florida, accessed by residents of Florida, pertained to Plaintiffs (all residents of Florida), harmed Plaintiffs in Florida, and harmed consumers in Florida. TLG has publicly commented on its Hospital Safety Grades for Plaintiffs with Florida publications like Stet News Palm Beach County designed to drive more attention to the Safety Grades in Florida. TLG has also affirmatively "embargoed" its "Safety Grades" about Plaintiffs with members of the press, including members of the press in Florida, confirming TLG has knowingly and intentionally targeted the Florida healthcare market and Florida healthcare consumers with its "Safety Grades" about Plaintiffs.

ANSWER: Leapfrog admits to the allegations that "TLG has publicly commented on its Hospital Safety Grades for Plaintiffs with Florida publications like Stet News Palm Beach County." Leapfrog further admits that it "embargoed" its "Safety Grades" about Plaintiffs

with members of the press, including members of the press in Florida. Leapfrog denies the remaining allegations contained in Paragraph 15 of the Amended Complaint.

16. This Court also has personal jurisdiction over TLG pursuant to Fla. Stat. Ann. § 48.193(2) because TLG is "engaged in substantial and not isolated activity within [Florida]" and Plaintiffs' claims arise out of that substantial, not isolated, activity. For example, for its Fall 2024 Survey, TLG solicited data from 621 health facilities in Florida, embargoed safety grades as to 192 of them with the media in Florida, and widely publicized the safety grades of those 192 Florida facilities to patients in Florida.

ANSWER: With respect to the allegations contained in Paragraph 16, Leapfrog admits that the Court's July 15, 2025 Order (Dkt. #41), *inter alia*, found that Florida's long-arm statute creates specific jurisdiction over the allegations contained in Plaintiffs' Amended Complaint. As to the remaining allegations of Paragraph 16 which set forth conclusions of law, no response is required. Further answering, Leapfrog admits it requests participation from health care facilities in Florida, embargos safety grades, and publicizes safety grade in Florida. Leapfrog denies all allegations not expressly admitted contained in Paragraph 16 of the Amended Complaint.

17. Venue in the Southern District of Florida is appropriate under 28 U.S.C. § 1391(b) because it is the district in which a substantial part of the actions giving rise to the claims occurred.

ANSWER: With respect to the allegations contained in Paragraph 17 which set forth conclusions of law, no response is required. To the extent a response is deemed required, Leapfrog admits that the cited federal statutes relate to venue, and Leapfrog respectfully refers all questions of law to this Honorable Court. All allegations not expressly admitted are denied.

FACTUAL ALLEGATIONS

A. TLG's Safety Grade Methodology Punishes Non-Participating Hospitals Like Plaintiffs And Conceals that Penalty From Consumers.

18. TLG conducts an annual "Hospital Survey" in which TLG "asks hospitals to report quality and safety data and then publicly reports that information by hospital." In connection with the Hospital Survey, TLG assigns a "Hospital Safety Grade" to nearly 3,000 general acute-care hospitals across the nation every spring and fall. TLG posts its safety grade on one of its websites, www.hospitalsafetygrade.org, and it markets, references and links to the Hospital Safety Grade website on another website, www.leapfroggroup.org.

ANSWER: Leapfrog admits to the allegations contained in Paragraph 18 of the Amended Complaint. Leapfrog denies allegations contained in the headlined titled, "B. TLG's Safety Grade Methodology Punishes Non-Participating Hospitals Like Plaintiffs And Conceals that Penalty From Consumers."

19. TLG admits it assigns hospitals Safety Grades to influence where consumers and patients decide to receive care. TLG explicitly tells consumers, "Patients should *always* decide on where to receive care based on a hospital's current Safety Grade." (emphasis added). TLG even tells consumers that choosing a hospital "could be a life or death decision" and amplifies this threat by misleading consumers into thinking they're "twice as likely to die of a preventable problem at a C, D, or F hospital than at an A hospital."

ANSWER: With respect to the allegations contained in Paragraph 19 of the Amended Complaint, Leapfrog asserts that its website speaks for itself. Leapfrog denies the allegations contained in Paragraph 19 as it fails to provide a full and accurate recitation of its website. All allegations not expressly admitted in Paragraph 19 of the Amended Complaint are denied.

20. The Safety Grade uses CMS data, TLG's Hospital Survey responses, and information from other supplemental data sources to produce a single letter grade that purports to represent a hospital's "overall performance in keeping patients safe from preventable harm and medical errors." "A" represents the best TLG Hospital Safety Grade, followed in order by "B," "C," "D," and "F." The Safety Grade aggregates up to 22 national patient safety measures. For hospitals who participate in TLG's Hospital Survey, TLG uses the hospitals' answers to TLG's Hospital Survey for 12 of the 22 measures. In other words, a majority of the grade for participating hospitals is based on their self-reported survey responses.

ANSWER: With respect to the allegations contained in Paragraph 20 of the Amended Complaint, Leapfrog asserts that its methodology considers up to 31 patient safety measures in determining a Safety Grade for each hospital, and Leapfrog's methodology uses the hospitals' answers to the Survey for 12 of the 31 measures. Leapfrog admits to the allegations that the Safety Grade uses CMS data and Hospital Survey responses to produce a letter grade. Leapfrog denies the remaining allegations contained in Paragraph 20 of the Amended Complaint.

21. When a hospital does not participate in TLG's Hospital Survey, TLG uses other sources for those 12 measures. For five measures, TLG uses government data. TLG abandons three measures entirely. And for the last four measures, TLG uses its "imputation model."

ANSWER: Leapfrog admits to the allegations contained in Paragraph 21 of the Amended Complaint.

22. According to TLG, that "imputation model" is how it assigns a value for a measure when it lacks any data pertaining to it. If a hospital does not provide TLG data, TLG assigns an "imputed" value. Prior to Fall 2024, TLG's imputation model assigned hospitals that did not

participate in its survey a score based on the average score applicable to similarly situated hospitals. Beginning in Fall 2024, however, TLG modified its imputation model. It now assigns the lowest possible score to non-participating hospitals. In other words, TLG now punishes non-participants for their lack of participation. TLG has admitted its new model imposes a penalty. It specifically explained its 2024 change was designed to prevent non-participating hospitals from "inadvertently benefit[ing]" compared to hospitals that self-report, even though TLG has no data to show how non-participation could benefit a hospital.

ANSWER: Leapfrog admits that for the four measures set forth in Paragraph 22 above, the allegation that "[a]ccording to TLG, that 'imputation model' is how it assigns a value for a measure when it lacks any data pertaining to it. If a hospital does not provide TLG data, TLG assigns an 'imputed' value." Defendants further admit that "[b]eginning in Fall 2024, however, TLG modified its imputation model." Leapfrog denies the remaining allegations contained in Paragraph 22 of the Amended Complaint.

23. The four measures for which TLG "imputes" scores are: Computerized Physician Order Entry ("CPOE"), Bar Code Medication Administration ("BCMA"), ICU Physician Staffing ("IPS"), and Hand Hygiene Score. CPOE measures whether a hospital has implemented a system to record medication prescriptions via computer. BCMA measures whether a hospital confirms medication via bar code process. IPS measures a hospital's use of intensivists in an intensive care unit. A Hand Hygiene score measures hospitals' policies for monitoring hand washing and glove usage.

ANSWER: Leapfrog admits to the allegations contained in Paragraph 23 of the Amended Complaint.

24. TLG's imputation model deceives consumers by inventing negative data about hospitals that TLG wishes to punish for declining to participate in its survey. For the four imputed measures (CPOE, BCMA, IPS, and Hand Hygiene), if a hospital does not participate in TLG's survey, TLG assigns "a point value that is equivalent to receiving 'Limited Achievement' for this measure"—its lowest possible score—without any factual basis. The result is that hospitals who elect not to participate in TLG's survey receive only 60 out of 400 possible points in these four categories—resulting in artificially deflated overall grades with no basis in fact and no correlation to a hospital's actual safety performance. For example, TLG assigns a hospital the lowest possible value for the Hand Hygiene measure even if it has the best possible Hand Hygiene policy just because the hospital doesn't participate in TLG's Hospital Survey. TLG has no basis to assign that low value.

ANSWER: Leapfrog denies the allegations contained in Paragraph 24 of the Amended Complaint.

25. TLG's "imputation" model for ranking non-participating hospitals directly conflicts with TLG's own National Expert Panel's guidance. As TLG explains, "not all hospitals have enough data publicly available to be eligible for a grade." "As per the National Expert Panel guidance, [TLG] has requirements for the minimum amount of data [it] need[s] to issue an accurate grade." Accordingly, "[h]ospitals missing more than **six** process measures" are "not graded." Non-participating hospitals should fall easily into that "not graded" bucket, because their decision not to participate in TLG's survey necessarily means TLG is missing ***seven*** process measures that rely on voluntary submission of hospital data.[4] The responsible thing to do based on TLG's own Expert Panel guidance, therefore, would be to *not* provide a safety grade for a non-participating hospital.

[4] Those seven include CPOE, BCMA, IPS, Safe Practice 1: Culture of Leadership Structures and Systems; Safe Practice 2: Culture Measurement, Feedback & Intervention; Total Nursing Care Hours per Patient Day; and Hand Hygiene.

But TLG cooks the books. Of those seven missing measures, TLG "imputes"—or gins up—scores for four of them, using those concocted scores to justify ranking non-participating hospitals.

ANSWER: Leapfrog admits to the allegations contained in Paragraph 25 that state "[a]s TLG explains, 'not all hospitals have enough data publicly available to be eligible for a grade'" and "'[a]s per the National Expert Panel guidance, [TLG] has requirements for the minimum amount of data [it] need[s] to issue an accurate grade.' Accordingly, '[h]ospitals missing more than six process measures' are 'not graded.'" Leapfrog denies the remaining allegations contained in Paragraph 25.

26. TLG's statements about its imputation model mislead consumers and misrepresent its own model. One Frequently Asked Question on its website asks whether "a hospital get[s] a better Safety Grade if it reports to the [TLG] Hospital Survey." In response, TLG falsely states, "The Hospital Safety Grade reflects how well a hospital does on safety, not whether they complete the [TLG] Hospital Survey." Given the nature of TLG's imputation model, which involves inventing data with no objective source, that's a clear lie. TLG relies on invented data for some hospitals but not others, and it applies a different methodology to determine Hospital Safety Grades for non-participating hospitals as compared to participating ones—all despite its claims that it meaningfully compares all hospitals regardless of participation.

ANSWER: Leapfrog admits to the allegation contained in Paragraph 26 that states, "One Frequently Asked Question on its website asks whether 'a hospital get[s] a better Safety Grade if it reports to the [TLG] Hospital Survey.'" Leapfrog denies the remaining allegations contained in Paragraph 26 of the Amended Complaint.

27. Another way TLG's deceptive methods punish non-participating hospitals is by rewarding participating hospitals with grade inflation. The data provided by hospitals that do

participate in the TLG Hospital Survey is self-reported, biased, and subject to manipulation. Median responses for hospitals that report their own scores show that those hospitals inflate their performance. TLG lacks appropriate auditing mechanisms to ensure self-reported data is accurate, and it factors measures into its grading methodology that are unverifiable. TLG assumes the data it relies on is accurate without adequately verifying it.

ANSWER: Leapfrog denies all the allegations contained in Paragraph 27 of the Amended Complaint.

28. Participating hospitals are not receiving strong TLG grades because they are achieving better results on an objective basis. In one illustrative example, TLG assigned a grade of "A" or "B"—its highest possible safety scores—to Mission Hospital in Asheville, North Carolina, for seven consecutive review cycles between Spring 2021 and Spring 2024. During this same time period, investigators with the North Carolina Department of Health and Human Services conducted a survey at Mission Hospital to evaluate its compliance with Medicare standards. On February 1, 2024, CMS designated Mission Hospital as in "immediate jeopardy [of losing federal funding]"—the most severe sanction possible—because the investigators "determin[ed] that the quality of care at Mission was so bad that it had 'caused – or is likely to cause – serious injury, harm, impairment or death to a patient.'"[5] According to the 384-page report from CMS, at least three patients died in 2022 and 2023 following "significant delays and lapses of care in the emergency department and other areas"[6]—two years in which TLG awarded Mission Hospital four consecutive "A" Hospital Safety Grades.

---

[5] Andrew R. Jones, *Mission Hospital's Leapfrog, Healthgrade scores and rankings don't tell the whole story, draft report says*, Asheville Watchdog (Feb. 12, 2024), https://avlwatchdog.org/mission-hospitals-leapfrog-healthgrade-scores-and-rankings-dont-tell-the-whole-story-draft-report-says/.

[6] Andrew R. Jones, *'The patient was subsequently found unresponsive in a hallway bed': CMS report on Mission Hospital details deaths of patients, significant delays in care*, ASHEVILLE WATCHDOG (Feb. 17, 2024), https://www.northcarolinahealthnews.org/2024/02/17/plan-of-correction-report-mission-hospital/.

ANSWER: Leapfrog denies the allegations contained in Paragraph 28 of the Amended Complaint. In further answering, Leapfrog asserts that the illustration above fails to take into account the lag in available CMS data.

29. Hospitals in Florida that have participated in TLG's survey are similarly receiving high TLG grades that do not reflect their performance, which damages their higher-performing but non-participating competitors. Participating hospitals have received high grades (A's and B's) in recent years despite investigative reports that a participating hospital had cockroaches in operating rooms, dirty and broken medical equipment, inadequate monitoring of ICU patients, an overcrowded emergency department, staffing deficiencies of telemetry technicians—those responsible for monitoring changes in vital signs in patients with electronic devices—that resulted in deaths related to telemetry, patients attacking nurses, and even a misplaced patient who died after staff was unable to locate him or her.

ANSWER: Leapfrog denies the allegations contained in Paragraph 29 of the Amended Complaint.

30. The flaws in TLG's methodology reveal themselves through a simple comparison between TLG's rankings and CMS data. CMS provides its own hospital safety rankings— rankings that are the product of data hospitals are required to submit to the federal agency in order to qualify for the Centers for Disease Control's National Healthcare Safety Network incentive programs. There are numerous examples throughout the country where TLG's grade for a hospital is two grades removed from the rating CMS provides—for example, where CMS considers a hospital a 5-star (the highest CMS rating) and TLG assigns the hospital a C, and where CMS considers a hospital a 2-star (the second lowest) and TLG assigns the hospital an A. [Omits Photo]

ANSWER: Leapfrog admits to the allegations contained in Paragraph 30 that states "CMS provides its own hospital safety rankings— rankings that are the product of data hospitals are required to submit to the federal agency in order to qualify for the Centers for Disease Control's National Healthcare Safety Network incentive programs." Leapfrog denies to all remaining allegations contained in Paragraph 30 of the Amended Complaint.

31. Similarly, in 2023, TLG awarded nine hospitals who participated in its survey passing grades (A–C) when the government had assigned them "immediate jeopardy" warnings because the hospitals' "noncompliance with one or more requirements of participation has caused, or is likely to cause, serious injury, harm, impairment, or death[.]" In other words, TLG assigned failing hospitals an A and directed patients to go there at the same time the government was concerned with patients' safety at that hospital.

ANSWER: Leapfrog lacks knowledge or information sufficient to form a belief as to the truth of the allegations contained in Paragraph 31 of the Amended Complaint, and on that basis denies the allegations contained therein.

B. TLG Has Been Subject To Significant Industry And Academic Criticism.

32. These discrepancies exist because TLG rewards participating hospitals and penalizes non-participating hospitals.

ANSWER: Leapfrog denies the allegations contained in Paragraph 32 of the Amended Complaint, including the heading titled "C. TLG Has Been Subject To Significant Industry And Academic Criticism."

33. For more than a decade, industry experts and academics have been sounding the alarm that TLG's methodologies are inaccurate, misleading, or inconsistent based on who participates in the surveys and who does not.

ANSWER: Leapfrog denies the allegations contained in Paragraph 33 of the Amended Complaint.

34. The Journal of the American Medical Association ("JAMA") published an article in 2009 titled *Association Between Hospital-Reported Leapfrog Safe Practices Scores and Inpatient Mortality*. That article concluded that in the "sample of . . . hospitals . . . that completed the [2006] Safe Practices Leap" survey, "survey scores were not significantly associated with risk-adjusted inpatient mortality."

ANSWER: With respect to the allegations contained in Paragraph 34 of the Amended Complaint, Leapfrog asserts that the article referenced therein speaks for itself to which no response is required. To the extent a response is deemed required, Leapfrog denies the allegations contained in Paragraph 34 to the extent it is not an accurate recitation of the article referenced therein. All allegations not expressly admitted are denied.

35. On June 22, 2012, Richard J. Umbdenstock, President and CEO of the American Hospital Association ("AHA") sent a letter to Leapfrog declaring that the Leapfrog Hospital Safety Grade "was neither fair nor accurate," and he outlined "several methodological shortcomings in the survey." The flaws included "an unfair bias toward responding to the survey, the use of unreliable measures, significant variation in the weights applied to measures for different groups of hospitals, and significant errors in the data." Umbdenstock's letter detailed three major criticisms of TLG's hospital safety score: (1) a minority of U.S. hospitals participate in TLG's voluntary reporting program, while those that do not receive lower imputed scores; (2) more than 80% of the outcome measures have been shown to be unreliable; and (3) there are errors in the TLG data. AHA expressed its "disappointment that the [TLG] scorecard's assessment was neither fair nor

accurate"—leading AHA to conclude that "no one should use [TLG's Hospital Safety Grades] to guide their choice of hospitals, unless and until, a more accurate assessment method is used."

ANSWER: With respect to the allegations contained in Paragraph 35 of the Amended Complaint, Leapfrog asserts that the article referenced therein speaks for itself to which no response is required. To the extent a response is deemed required, Leapfrog denies the allegations contained in Paragraph 35 to the extent it is not an accurate recitation of the article referenced therein. All allegations not expressly admitted are denied.

36. In 2017, the peer reviewed journal Medical Care published an article titled: *Dissecting Leapfrog: How Well Do Leapfrog Safe Practices Scores Correlate with Hospital Compare Ratings and Penalties, and How Much Do They Matter?* The authors, a team of researchers from the University of Michigan, concluded that participation in TLG's survey consistently inflated the participant's TLG Hospital Safety Score because self-reported information overwhelmingly "skew[ed] towards positive self-report." For example, over 50% of participating hospitals reported perfect scores in their surveys for all but one safe practice measure, and nearly 20% reported perfect scores for all safe practices.

ANSWER: With respect to the allegations contained in Paragraph 36 of the Amended Complaint, Leapfrog asserts that the article referenced therein speaks for itself to which no response is required. To the extent a response is deemed required, Leapfrog denies the allegations contained in Paragraph 36 to the extent it is not an accurate recitation of the article referenced therein. All allegations not expressly admitted are denied.

37. The University of Michigan study further found that TLG's heavy reliance on self-reported data had the effect of "artificially deflating the mean of the distribution" to which non-reporting hospitals were compared. In other words, non-participating hospitals are subject to "large

grade penalties for less-than-perfect self-reported Safe Practices compliance" because they are graded on the same curve as participating hospitals with inflated self-reported data.

ANSWER: With respect to the allegations contained in Paragraph 37 of the Amended Complaint, Leapfrog asserts that the article referenced therein speaks for itself to which no response is required. To the extent a response is deemed required, Leapfrog denies the allegations contained in Paragraph 37 to the extent it is not an accurate recitation of the article referenced therein. All allegations not expressly admitted are denied.

38. The authors determined that "Leapfrog's current methodologies, in combination with strongly positively skewed self-reports of [Safe Practices Scores ('SPS')] measures, punish low SPS reports substantially more than they reward high SPS. These concerns cast doubt on the utility of SPS and, more generally, the [Hospital Safety Score] and grades." In addition, the TLG Hospital Safety Scores were not positively associated with patient outcomes reported by Hospital Compare or Medicare penalties for readmissions or complications.

ANSWER: With respect to the allegations contained in Paragraph 38 of the Amended Complaint, Leapfrog asserts that the article referenced therein speaks for itself to which no response is required. To the extent a response is deemed required, Leapfrog denies the allegations contained in Paragraph 38 to the extent it is not an accurate recitation of the article referenced therein. All allegations not expressly admitted are denied.

39. Jennifer Meddings, M.D., M.Sc.—the senior author of the Michigan study—said the Hospital Safety Grade is "based on whether a hospital self-reports that it has adopted certain protocols, and not whether those protocols are actually followed"—meaning the Hospital Safety Grades offer little indication of a hospital's actual safety metrics in practice. Indeed, participating hospitals that reported high levels of self-compliance for TLG's safe practices did not have

correspondingly lower hospital-acquired infection rates or lower federal penalties for readmissions, demonstrating the ineffectiveness and misleading nature of TLG's methodology.

ANSWER: With respect to the allegations contained in Paragraph 39 of the Amended Complaint, Leapfrog asserts that the article referenced therein speaks for itself to which no response is required. To the extent a response is deemed required, Leapfrog denies the allegations contained in Paragraph 39 to the extent it is not an accurate recitation of the article referenced therein. All allegations not expressly admitted are denied.

40. In 2019, The New England Journal of Medicine Catalyst ("NEJM") published a peer reviewed article criticizing the methodology used by rating agencies, including Leapfrog. The authors said "[t]he greatest concerns were with [TLG's] internally developed and modified Safety Survey." The NEJM authors noted that TLG "had only done a formal audit for approximately five hospitals of about 2,600 in the past year, and only 72 hospitals underwent an electronic audit." In addition, the authors also reported concerns that the survey "may not truly reflect patient safety efforts or be currently meaningful to stakeholders (e.g., computerized physician order entry)."And "[a]nother major area of concern was how Leapfrog assesses hospitals that do not answer their Safety Survey. When hospitals do not report the survey, the missing data are filled in from other secondary sources. However, hospitals that answer the survey and those that do not are assessed in the same way despite not having the same measures upon which to base the ratings. Approximately 50% of hospitals answer their survey, so a good deal of the rankings are based on missing or inconsistent data."

ANSWER: With respect to the allegations contained in Paragraph 40 of the Amended Complaint, Leapfrog asserts that the article referenced therein speaks for itself to which no response is required. To the extent a response is deemed required, Leapfrog denies the

allegations contained in Paragraph 40 to the extent it is not an accurate recitation of the article referenced therein. All allegations not expressly admitted are denied.

C. TLG Reaps Substantial Rewards From Its Pay-to-Play Scheme.

41. TLG heavily tilts its grading in favor of hospitals that participate in TLG's scheme in a quid-pro-quo arrangement: Hospitals provide TLG free data, which it can then monetize, and in return hospitals receive better TLG grades while their competitors are penalized for not supplying TLG free data. And though it pretends to be a non-profit, TLG also rakes in millions of dollars from the data it obtains from participating hospitals incentivized to keep TLG happy, so it keeps inflating grades.

ANSWER: Leapfrog denies the allegations contained in Paragraph 41 of the Amended Complaint, including the heading titled "D. TLG Reaps Substantial Rewards From Its Pay-to-Play Scheme."

42. Between 2019 and 2023, TLG collected millions in revenue from hospitals that it later rewarded with inflated grades. TLG also has collected troves of data from hospitals who complete its survey so it can financially benefit from such data. Participants in the TLG survey are specifically required to sign an acknowledgment that "[t]he Leapfrog Group may use this information in a commercial manner for profit": [Omits Photo].

ANSWER: With respect to the allegations contained in Paragraph 42 of the Amended Complaint, Leapfrog admits participants sign an "Affirmation of Accuracy" which speaks for itself. All allegations not expressly admitted are denied.

43. TLG collects revenue from participating hospitals in multiple ways. For instance, TLG charges hospitals—including ones TLG rates—over $25,000 annually to join its Partners Advisory Committee to influence the TLG Board of Directors four times a year. TLG thereby

creates a structure for hospitals to pay for access to its decision-makers and curry favor with them to ensure TLG's system benefits hospitals who participate in TLG's scheme and punishes those who do not. Some of TLG's paying members own some of its highest-rated hospitals.[7]

ANSWER: With respect to the allegations contained in Paragraph 43 of the Amended Complaint, Leapfrog admits it has a Partners Advisory Committee open to any hospital who wishes to participate. Leapfrog denies the remaining allegations contained in Paragraph 43 of the Amended Complaint.

44. TLG also charges hospitals between $6,700 and $29,900 per year to advertise their TLG safety grade. That creates an incentive for TLG to rate higher the hospitals willing to pay, as opposed to those who do not. No hospital would pay $29,900 to advertise a failing grade.

ANSWER: Leapfrog admits it "charges hospitals between $6,700 and $29,900 per year to advertise their TLG safety grade." Leapfrog denies the remaining allegations contained in Paragraph 44.

45. TLG also encourages hospitals to sponsor its annual meetings and awards ceremony. In 2024, TLG's platinum executive sponsorship required $44,750—yet another way TLG reaps financial rewards from its scheme.

ANSWER: With respect to the allegations contained in Paragraph 45 of the Amended Complaint, Leapfrog admits "TLG also encourages hospitals to sponsor its annual meetings and awards ceremony. In 2024, TLG's platinum executive sponsorship required $44,750." Leapfrog denies the remaining allegations contained in Paragraph 45 of the Amended Complaint.

[7] Gretchen Morgenson et al., *Roaches in the operating room: Doctors at HCA hospital in Florida say patient care has suffered from cost cutting*, NBC News (Feb. 15, 2023), https://www.nbcnews.com/health/health-care/roaches-operating-room-hca-hospital-florida-rcna69563.

46. TLG monetizes the data it receives from hospitals who participate in its Hospital Survey. TLG is therefore incentivized to set up its methodology to reward participating hospitals, so that it gets more data, which it can use to make more revenue. TLG has used the tens of millions of dollars of revenue it has collected from participating hospitals and other sponsors in its pay-to-play system to pay exorbitant salaries to its owner and executives. Between 2019 and 2023, TLG has paid over three million dollars in salary and benefits to Leah Binder—its CEO.

ANSWER: With respect to the allegations contained in Paragraph 46 of the Amended Complaint, Leapfrog admits that Leah Binder's salary and benefits are publicly available as she is the CEO of a not-for-profit company and therefore Leapfrog denies any allegations of Paragraph 46 inconsistent with that public information. Leapfrog denies the remaining allegations contained in Paragraph 46 of the Amended Complaint.

47. TLG also licenses its safety grades to insurers, which integrate TLG's grades into websites patients use to determine whether particular healthcare facilities are covered. Insurers are even able to use TLG's logos and intellectual property—displayed prominently in a drop-down called "Hospital Safety & Accreditation": [Omits Photo]. TLG receives compensation from insurers to allow those insurers to use TLG's safety grades and logos. That means TLG has yet another incentive to rank as many hospitals as possible so as to convince insurers TLG's ratings have value and to drive even more revenue to TLG through penalizing non-participating hospitals and trying to coerce them into providing data.

ANSWER: With respect to the allegations contained in Paragraph 47 of the Amended Complaint, Leapfrog admits "TLG also licenses its safety grades to insurers" and that "TLG receives compensation from insurers to allow those insurers to use TLG's safety grades and logos." Leapfrog lacks knowledge or information sufficient to form a belief as to the truth of

the allegations that the insurers "integrate TLG's grades into websites patients use to determine whether particular healthcare facilities are covered," and that "[i]nsurers are even able to use TLG's logos and intellectual property—displayed prominently in a drop-down called "Hospital Safety & Accreditation," which is pled in Paragraph 47 of the Amended Complaint, and on that basis denies the remaining allegations contained therein. Leapfrog denies the remaining allegations contained in Paragraph 47.

D. TLG's Websites Confirm TLG Is Knowingly Deceiving Patients.

48. TLG has two websites for its hospital safety rankings—www.leapfroggroup.org and www.hospitalsafetygrade.org. They each reference TLG's safety grades, but they do so in inconsistent ways that confirm not only that TLG knows it is misleading patients but also that it intends to do so.

ANSWER: With respect to the allegations contained in Paragraph 48 of the Amended Complaint, Leapfrog admits it "has two websites for its hospital safety rankings—www.leapfroggroup.org and www.hospitalsafetygrade.org." Leapfrog denies the remaining allegations contained in Paragraph 48 of the Amended Complaint, including header titled "E. TLG's Websites Confirm LTG Is Knowingly Deceiving Patients."

49. When a potential patient or even an existing patient Googles "hospital safety rankings," the top two results are TLG's websites, www.hospitalsafetygrade.org and www.leapfroggroup.org: [Omits Photos].

ANSWER: Upon information and belief, Leapfrog admits to the allegations contained in Paragraph 49 of the Amended Complaint.

50. Each website, however, depicts information about Plaintiffs differently. Consider the consumer experience looking for safety grades on the first Google hit—

www.hospitalsafetygrade.org. Clicking that link brings a patient to TLG's Hospital Safety Grade website, where TLG encourages users to search for their local hospital by asking, "How Safe is Your Hospital?"

ANSWER: To the extent Plaintiffs' have pled accurate recitations of the website referenced in Paragraph 50 of the Amended Complaint, Leapfrog asserts that the websites speak for themselves. To the extent Plaintiffs' have not pled accurate recitations of the websites referenced in Paragraph 50 of the Amended Complaint, Leapfrog denies all allegations that refer to each respective document. Leapfrog denies the remaining allegations contained in Paragraph 50 of the Amended Complaint.

51. Once a patient searches her hospital's name, she is immediately confronted with the following image—a disturbing "F" grade, the meaning of which even an elementary school student would understand: [Omits Photo].

ANSWER: Leapfrog denies the allegations contained in Paragraph 51 of the Amended Complaint.

52. When a patient clicks on "View the full Score" she sees a plethora of inaccurate and misleading information about the hospital (explained *infra* Section E): [Omits Photo].

ANSWER: Leapfrog denies the allegations contained in Paragraph 52 of the Amended Complaint.

53. Only at the bottom of the page—in a small font and in footnotes consumers won't read—does TLG disclose that the hospital did not provide data to TLG.

ANSWER: Leapfrog denies the allegations contained in Paragraph 53 of the Amended Complaint.

54. TLG's approach on www.hospitalsafetygrade.org is inconsistent with how it depicts information about Plaintiffs on its other website, www.leapfroggroup.org. On leapfroggroup.org, searching for Good Samaritan Medical Center, for example, does *not* result in any grade at all. Instead, on *that* website, TLG states that the hospital did not provide data to TLG sufficient to rate the hospital: [Omits Photo].

ANSWER: Leapfrog denies the allegations contained in Paragraph 54 of the Amended Complaint.

55. TLG's leapfroggroup.org rating website also accurately discloses that TLG has inadequate information to rate the hospital as to every metric: [Omits Photo].

ANSWER: With respect to the allegations contained in Paragraph 55 of the Amended Complaint, Leapfrog admits the website indicates "Decline to Respond" when applicable. Leapfrog denies the remaining allegations contained in Paragraph 55 of the Amended Complaint.

56. The differences in TLG's websites confirm TLG knows exactly what message it is communicating to consumers. TLG clearly understands how to tell patients that it can't grade Plaintiffs because it lacks data. TLG decided not to do that, though, on www.hospitalsafetygrade.org: Even after admitting on www.leapfroggroup.org that it *can't* rate Plaintiffs, it purports to fail Plaintiffs with a big, bold, "F" on www.hospitalsafetygrade.org.

ANSWER: Leapfrog denies the allegations contained in Paragraph 56 of the Amended Complaint.

E. TLG Assigned Plaintiffs Misleading And Deceptive Low Grades.

57. Plaintiffs are among the many hundreds of hospitals across the country who choose not to participate in TLG's Survey. Given that non-participation, TLG could easily have told

consumers—as it does on www.leapfroggroup.org—it lacks sufficient data to provide safety grades for Plaintiffs. Instead, it "imputed" scores to Plaintiffs and gave them failing or near-failing grades on www.hospitalsafetygrade.org. As a result, TLG has intentionally and recklessly released misleading and deceptive information about Plaintiffs' health safety performance.

ANSWER: Leapfrog admits that "Plaintiffs are among the many hundreds of hospitals across the country who choose not to participate in TLG's Survey." Leapfrog denies the remaining allegations contained in Paragraph 57 of the Amended Complaint, including the headline titled "F. TLG Assigned Plaintiffs Misleading And Deceptive Low Grades."

58. TLG assigned Plaintiffs "Limited Achievement" scores, and corresponding low Safety Grades just as it did with other non-participating hospitals.

ANSWER: Leapfrog admits that it "assigned Plaintiffs 'Limited Achievement' scores, and corresponding low Safety Grades." Leapfrog denies the remaining allegations contained in Paragraph 58 of the Amended Complaint.

59. ***Delray Medical Center.*** TLG assigned Delray Medical Center an "F" grade for Fall 2024. Under its flawed methodology, TLG assigned Delray Medical Center the lowest possible score on multiple criteria for which TLG had no information—including "Handwashing," "Doctors order medications through a computer," "Safe medication administration," and "Specially trained doctors care for ICU patients."

ANSWER: Leapfrog admits that it "assigned Delray Medical Center an 'F' grade for Fall 2024." Leapfrog denies the remaining allegations contained in Paragraph 59 of the Amended Complaint.

60. TLG's consumer-facing Hospital Safety Grade pages misleadingly suggest that Delray Medical Center performed poorly on each of these categories. Although the "Staff work

together to prevent errors" category is labeled with "Declined to Report," the remaining categories all misleadingly reflect that the "Hospital Performs" "Worse Than Average"—even though TLG has no basis to say so: [Omits Photo].

ANSWER: Leapfrog denies the allegations contained in Paragraph 60 of the Amended Complaint.

61. In other words, TLG is deceptively communicating to consumers that Delray Medical Center doctors and nurses don't adequately wash their hands, among other false statements—with no data whatsoever to support that conclusion.

ANSWER: Leapfrog denies the allegations contained in Paragraph 61 of the Amended Complaint.

62. TLG's F grade for Delray Medical Center is a false and misleading statement that TLG intentionally and recklessly released—and refused to pull down.

ANSWER: Leapfrog denies the allegations contained in Paragraph 62 of the Amended Complaint.

63. ***Good Samaritan.*** TLG also assigned Good Samaritan an "F" grade for Fall 2024. Under its flawed methodology, TLG assigned Good Samaritan the lowest possible score on the same criteria for which TLG had no information—"Handwashing," "Doctors order medications through a computer," "Safe medication administration," and "Specially trained doctors care for ICU patients."

ANSWER: Leapfrog admits that it "assigned Good Samaritan an 'F' grade for Fall 2024." Leapfrog denies the remaining allegations contained in Paragraph 63 of the Amended Complaint.

64. TLG's consumer-facing Hospital Safety Grade pages misleadingly suggest that Good Samaritan performed poorly on each of these categories. Although the "Staff work together to prevent errors" category is labeled with "Declined to Report," the remaining categories all misleadingly indicate that the "Hospital Performs" "Worse Than Average"—even though TLG has no basis to make these deceptive statements: [Omits Photo].

ANSWER: Leapfrog denies the allegations contained in Paragraph 64 of the Amended Complaint.

65. TLG's "F" grade for Good Samaritan is a false and misleading statement that TLG intentionally and recklessly released—and refused to pull down.

ANSWER: Leapfrog denies the allegations contained in Paragraph 65 of the Amended Complaint.

66. ***Palm Beach Gardens Medical Center.*** TLG also assigned Palm Beach Gardens Medical Center an "F" grade for Fall 2024. Under its flawed methodology, TLG assigned Palm Beach Gardens Medical Center the lowest possible score on the same criteria for which TLG had no information—"Handwashing," "Doctors order medications through a computer," "Safe medication administration," and "Specially trained doctors care for ICU patients."

ANSWER: Leapfrog admits that it "assigned Palm Beach Gardens Medical Center an 'F' grade for Fall 2024." Leapfrog denies the remaining allegations contained in Paragraph 66 of the Amended Complaint.

67. TLG's consumer-facing Hospital Safety Grade pages misleadingly suggest that Palm Beach Gardens Medical Center performed poorly on each of these categories. Although the "Staff work together to prevent errors" category is labeled with "Declined to Report," the remaining

categories all misleadingly indicate that the "Hospital Performs" "Worse Than Average"—even though TLG has no basis to make these deceptive statements: [Omits Photo].

ANSWER: Leapfrog denies the allegations contained in Paragraph 67 of the Amended Complaint.

68. TLG's F grade for Palm Beach Gardens Medical Center is a false and misleading statement that TLG intentionally and recklessly released—and refused to pull down.

ANSWER: Leapfrog denies the allegations contained in Paragraph 68 of the Amended Complaint.

69. ***St. Mary's.*** TLG assigned St. Mary's a "D" grade for Fall 2024. Under its flawed methodology, TLG assigned St. Mary's the lowest possible score on the same criteria for which TLG had no information—"Handwashing," "Doctors order medications through a computer," "Safe medication administration," and "Specially trained doctors care for ICU patients."

ANSWER: Leapfrog admits that it "assigned St. Mary's a 'D' grade for Fall 2024." Leapfrog denies the remaining allegations contained in Paragraph 69 of the Amended Complaint.

70. TLG's consumer-facing Hospital Safety Grade pages misleadingly suggest that St. Mary's performed poorly on each of these categories. Although the "Staff work together to prevent errors" category is labeled with "Declined to Report," the remaining categories all misleadingly indicate that the "Hospital Performs" "Worse Than Average"—even though TLG has no basis to make these deceptive statements: [Omits Photo].

ANSWER: Leapfrog denies the allegations contained in Paragraph 70 of the Amended Complaint.

71. TLG's "D" grade for St. Mary's is a false and misleading statement that TLG intentionally and recklessly released—and refused to pull down.

ANSWER: Leapfrog denies the allegations contained in Paragraph 71 of the Amended Complaint.

72. ***West Boca Medical Center.*** TLG also assigned West Boca Medical Center a "D" grade for Fall 2024. Under its flawed methodology, TLG assigned West Boca Medical Center the lowest possible score on the same criteria for which TLG had no information—"Handwashing," "Doctors order medications through a computer," "Safe medication administration," and "Specially trained doctors care for ICU patients."

ANSWER: Leapfrog admits that it "assigned West Boca Medical Center a 'D' grade for Fall 2024." Leapfrog denies the remaining allegations contained in Paragraph 72 of the Amended Complaint.

73. TLG's consumer-facing Hospital Safety Grade pages misleadingly suggest that West Boca Medical Center performed poorly on each of these categories. Although the "Staff work together to prevent errors" category is labeled with "Declined to Report," the remaining categories all misleadingly indicate that the "Hospital Performs" "Worse Than Average"—even though TLG has no basis to make these deceptive statements: [Omits Photo].

ANSWER: Leapfrog denies the allegations contained in Paragraph 73 of the Amended Complaint.

74. TLG's "D" grade for West Boca Medical Center is a false and misleading statement that TLG intentionally and recklessly released—and refused to pull down.

ANSWER: Leapfrog denies the allegations contained in Paragraph 74 of the Amended Complaint.

F. TLG's Deceptive And Misleading "Safety" Grades Have Severely Harmed Plaintiffs, Their Patients, And The Public.

75. TLG's misleading safety grades have caused severe, ongoing, and irreparable harm to Plaintiffs, their patients, and the public. The grades have caused Plaintiffs' patients to move their procedures from Plaintiffs to Plaintiffs' competitors, damaged the goodwill that Plaintiffs worked hard to build with their patients over the years, harmed Plaintiffs' relationships with key business partners, and risked serious consumer harm. Plaintiffs' elective patient admissions dropped following TLG's release of its Fall 2024 Hospital Safety Grades. The harm has been significant and widespread, given TLG's efforts to encourage the media to report on the misleading and deceptive grades TLG assigned Plaintiffs. Indeed, TLG has specifically admitted that it embargoed Plaintiffs' safety grades with the press weeks before those scores went public specifically to generate broad public attention to those false and misleading scores. TLG's safety grades are even available on insurer websites for patients to rely on when they look up whether certain hospitals fall under insurance coverage.

ANSWER: Leapfrog admits only that its safety grades are available on insurer websites. Leapfrog lacks knowledge or information sufficient to form a belief as to the truth of the allegations that patients rely on safety grades that are available on insurer websites when they look up whether certain hospitals fall under insurance coverage and therefore deny the same. Leapfrog denies the remaining allegations contained in Paragraph 75 of the Amended Complaint, including the headline titled "G. TLG's Deceptive And Misleading 'Safety' Grades Have Severely Harmed Plaintiffs, Their Patients, And The Public."

76. Each Plaintiff has suffered harm from TLG's deceptive practices. Plaintiff Delray Medical Center's Medical Executive Committee, which is comprised of the medical leadership that oversees each department within the hospital, has received direct inquiries from patients regarding their concerns about TLG's grades and related public reports. Physicians were

approached by patients who expressed that they did not want to go to Delray Medical Center for surgeries after seeing TLG's grade and associated reports. Plaintiff Delray Medical Center has also received reports from patients and from doctors that patients have planned to drive past Delray Medical Center to a more distant medical facility due to the grade TLG gave to Delray Medical Center.

ANSWER: Leapfrog denies the allegations contained in Paragraph 76 of the Amended Complaint, which states "[e]ach Plaintiff has suffered harm from TLG's deceptive practices." Leapfrog lacks knowledge or information sufficient to form a belief as to the truth of the remaining allegations contained in Paragraph 76 of the Amended Complaint, and on that basis denies those remaining allegation contained therein.

77. Plaintiff Good Samaritan's Medical Executive Committee has also received direct inquiries from patients regarding their concerns about TLG's grades and related public reports. TLG's grades are even impacting Good Samaritan's hiring efforts. Plaintiff Good Samaritan's Chief Nursing Officer reported that a nursing candidate questioned the quality of care of the hospital in her interview for a job opening. Good Samaritan has also received reports from patients that they decided not to use its facility because of TLG's misleading grades.

ANSWER: Leapfrog lacks knowledge or information sufficient to form a belief as to the truth of the allegations contained in Paragraph 77 of the Amended Complaint, and on that basis denies the allegation contained therein.

78. Plaintiff Palm Beach Gardens Medical Center has received reports from patients that they decided not to use the Medical Center due to the misleading grade TLG assigned the hospital. This is particularly harmful to the Palm Beach Gardens community given that the majority of patients are 65 years old and older, and travel time risks exacerbating their health issues

before receiving care, particularly if they are stroke victims. The Palm Beach Gardens Medical Center's Medical Executive Committee has also received direct inquiries from patients regarding their concerns about TLG's grades and related public reports.

ANSWER: Leapfrog lacks knowledge or information sufficient to form a belief as to the truth of the allegations contained in Paragraph 78 of the Amended Complaint, and on that basis denies the allegation contained therein.

79. Plaintiff St. Mary's medical leadership has received direct inquiries from patients regarding their concerns about TLG's grades and related public reports. As a Level I adult and pediatric Trauma Center, Joint Commission Comprehensive Stroke Center, Level III NICU, and RPICC—among other certifications—St. Mary's is a facility people need to go to receive specialized medical care. TLG's safety grades misleadingly make patients think that they should go to "A" hospitals even though those hospitals do not have the objective accreditation, certification, and facilities—like St. Mary's—needed to treat certain high-risk patients.

ANSWER: Leapfrog denies the allegations that its "safety grades misleadingly make patients think that they should go to 'A' hospitals even though those hospitals do not have the objective accreditation, certification, and facilities—like St. Mary's—needed to treat certain high-risk patients." Leapfrog lacks knowledge or information sufficient to form a belief as to the truth of the remaining allegations contained in Paragraph 79 of the Amended Complaint, and on that basis denies the allegation contained therein.

80. When TLG assigns a hospital an A, patients think that facility is where they should receive care. Objective data debunks that impression. As just one example, another hospital in the Palm Beach County area that TLG has graded an "A" regularly transfers patients to St. Mary's for critical, higher-level care services—despite St. Mary's purported TLG "D" safety grade. In 2024, that

A-ranked hospital transferred 600 patients to St. Mary's. Since 2022, that A-ranked hospital transferred 1,800 patients to St. Mary's. Why? Because only St. Mary's had the right specialists, technology, accreditations, and certifications necessary to provide the required care. Whether a hospital can or should treat a given patient depends on far more than TLG's superficial and misleading marks, but TLG intentionally deceives consumers into thinking otherwise.

ANSWER: Leapfrog denies the allegations that "[w]hether a hospital can or should treat a given patient depends on far more than TLG's superficial and misleading marks, but TLG intentionally deceives consumers into thinking otherwise." Leapfrog lacks knowledge or information sufficient to form a belief as to the truth of the remaining allegations contained in Paragraph 80 of the Amended Complaint, and on that basis denies the allegation contained therein.

81. Plaintiff West Boca Medical Center's Medical Executive Committee has also received direct inquiries from patients regarding their concerns with TLG's grades and related public reports. TLG's inaccurate grades have also harmed West Boca Medical Center's relationships with physicians and patients who have chosen alternative options as reflected through West Boca's drop in patient encounters since Fall 2024.

ANSWER: Leapfrog denies that its grades are inaccurate or that they have harmed West Boca Medical Center's relationships. Leapfrog lacks knowledge or information sufficient to form a belief as to the truth of the allegations contained in Paragraph 81 of the Amended Complaint, and on that basis denies the allegation contained therein.

82. TLG's Hospital Safety Grades have also harmed Plaintiffs' relationships with physicians. Medical professionals have expressed concern about working with Plaintiffs due to the

grades assigned by TLG, especially when patients have requested to schedule their surgeries at alternative facilities.

ANSWER: Leapfrog lacks knowledge or information sufficient to form a belief as to the truth of the allegations contained in Paragraph 82 of the Amended Complaint, and on that basis denies the allegation contained therein.

83. Attempting to counteract the inaccurate, negative picture created by TLG in the community has required Plaintiffs to devote time and resources that could have otherwise been spent continuing to improve patient care. The harm is particularly pronounced given that negative safety ratings are particularly "sticky" with consumers—*i.e.*, once a consumer sees a failing safety ranking it is exceedingly difficult to convince them the grade is wrong.

ANSWER: Leapfrog denies the allegations contained in Paragraph 83 of the Amended Complaint.

84. The deceptive Hospital Safety Grades TLG releases about Plaintiffs—and other non-reporting hospitals—mislead consumers to make commercial decisions to purchase healthcare services that are not in their best interest. By putting hospitals on unequal footing in its evaluation just to make more money for itself and for its "partners," TLG achieves the opposite of its purported non-profit objective: It risks patient harm and causes potential patients to make unsafe decisions with potentially life-or-death implications.

ANSWER: Leapfrog denies the allegations contained in Paragraph 84 of the Amended Complaint.

85. TLG's misleading safety grades have resulted in patients delaying medical care. That's a material public safety problem. Increased time to get to a hospital following an acute health incident materially increases the risk of mortality for emergency patients. Increased time from

incident to the hospital also materially increases the risk of worse outcomes, infection, and other dangerous and harmful health outcomes. It is for this reason that Florida law requires ambulances to drive emergency patients to the closest hospital. *See* Fl. Code § 395.1041(3)(e) ("Except as otherwise provided by law, **all medically necessary transfers shall be made to the geographically closest hospital** with the service capability, unless another prior arrangement is in place or the geographically closest hospital is at service capacity." (emphasis added)).

ANSWER: With respect to the allegations contained in Paragraph 85 which set forth conclusions of law, no response is requires. To the extent a response is deemed required, Leapfrog admits that it cites to Fl. Code § 395.1041(3)(e), and Leapfrog respectfully refers all questions of law to this Honorable Court. Leapfrog denies the remaining allegations contained in Paragraph 85 of the Amended Complaint.

86. TLG's methodology and public statements contradict this public health principle engrained in Florida law by deceiving patients into thinking they are better off driving longer distances to hospitals based on TLG's misleading grades. The vast majority (~80%) of emergency patients are transported to emergency rooms by non-ambulatory vehicles. TLG is putting emergency patients' lives at risk by undermining their trust in local hospitals and encouraging them to delay the care they need based on deceptive information TLG is releasing. TLG's Hospital Safety Grades cause patients to make commercial decisions to drive past deceptively graded hospitals to another hospital farther away. This is a dangerous result particularly because the low grade by TLG is false and misleading.

ANSWER: As to Plaintiffs' allegations that "[t]he vast majority (~80%) of emergency patients are transported to emergency rooms by non-ambulatory vehicles," Leapfrog lacks knowledge or information sufficient to form a belief as to the truth of these allegations contained in Paragraph 86 of the Amended Complaint and therefore denies the same.

Leapfrog denies the remaining allegations contained in Paragraph 86 of the Amended Complaint.

87. TLG intends these results to encourage non-participating hospitals to participate in its deceptive scheme by warning patients they are "*always* decide on where to receive care based on a hospital's current Safety Grade," because they are "twice as likely to die of a preventable problem at a C, D, F hospital than at an A hospital." (emphasis added).

ANSWER: Leapfrog denies the allegations contained in Paragraph 87 of the Amended Complaint.

88. This has directly caused Plaintiffs harm to their reputation and goodwill.

ANSWER: Leapfrog denies the allegations contained in Paragraph 88 of the Amended Complaint.

CLAIMS FOR RELIEF

COUNT I
(DECLARATORY AND INJUNCTIVE RELIEF UNDER THE FLORIDA DECEPTIVE AND UNFAIR TRADE PRACTICES ACT)

89. Plaintiffs reallege and incorporate the preceding paragraphs as if fully set forth herein.

ANSWER: Leapfrog realleges and incorporates its answers as fully set forth herein.

90. By virtue of its solicitation of information from Florida healthcare facilities, publication of information and Hospital Safety Grades for Florida hospitals, and commission of deceptive acts and unfair practices against Plaintiffs and the residents of Florida, TLG is subject to the Florida Deceptive and Unfair Trade Practices Act. Fla. Stat. § 501.201 et seq.

ANSWER: Leapfrog denies the allegations contained in Paragraph 90 of the Amended Complaint.

91. TLG's actions described herein constitute unfair or deceptive trade practices substantially affecting trade or commerce in the state of Florida in violation of FDUTPA.

ANSWER: Leapfrog denies the allegations contained in Paragraph 91 of the Amended Complaint.

92. In the course of its business, TLG releases its Hospital Safety Grades, which contain deceptive and misleading statements about hospital quality and patient safety.

ANSWER: Leapfrog denies the allegations contained in Paragraph 92 of the Amended Complaint.

93. TLG has made misleading representations about how its scheme penalizes non-participating hospitals, including, but not limited to, its representation that non-participating hospitals are not disadvantaged compared to hospitals who participate in its deceptive scheme.

ANSWER: Leapfrog denies the allegations contained in Paragraph 93 of the Amended Complaint.

94. TLG's entire grading system, including its imputation model, misleads Florida consumers—and national consumers—into thinking that healthcare decisions should be made by looking to an oversimplified letter grade and by penalizing non-participating hospitals.

ANSWER: Leapfrog denies the allegations contained in Paragraph 94 of the Amended Complaint.

95. TLG abuses the trust of the consumer by intentionally jiggering its Hospital Safety Grades to benefit the hospitals that fund it (through donation and the provision of valuable data), participate in its surveys, and serve on its committees. TLG's Hospital Safety Grades have harmed Florida consumers by causing them to make dangerous decisions to forego the nearest hospital based

on misleading information. This harm to consumers has harmed Plaintiffs through loss of goodwill and reputation.

ANSWER: Leapfrog denies the allegations contained in Paragraph 95 of the Amended Complaint.

96. TLG's misrepresentations are knowing and intentional. TLG on www.theleapfroggroup.org accurately describes when hospitals have declined to participate in TLG's survey, making clear that TLG has insufficient data with which to assign a safety grade. At the same time, TLG purports to assign "safety grades" based on that same inadequate data on www.hospitalsafetygrade.org.

ANSWER: Leapfrog admits to the allegations that "TLG on www.theleapfroggroup.org accurately describes when hospitals have declined to participate in TLG's survey." Leapfrog denies the remaining allegations contained in Paragraph 96 of the Amended Complaint.

97. TLG intends that patients, purchasers, consumers, regional and national health plans, insurers, and researchers will rely on its oversimplified grading system and representations regarding the Plaintiff Hospitals' safety and the safety of all hospitals reported on throughout Florida and the country. TLG specifically tells patients to "*always* decide on where to receive care based on a hospital's current Safety Grade," because they are "twice as likely to die of a preventable problem at a C, D, F hospital than at an A hospital." (emphasis added).

ANSWER: With respect to the allegations contained in Paragraph 97 of the Amended Complaint, Leapfrog asserts that its website speaks for itself to which no response is required. To the extent a response is deemed required, Leapfrog denies the allegations contained in Paragraph 97 to the extent it is not an accurate recitation of Leapfrog's website. All allegations not expressly admitted are denied.

98. The representations made by TLG to consumers and the methodology TLG employs to calculate the Hospital Safety Grades constitute a deceptive act or practice in trade, and both Plaintiffs and patients have been aggrieved by the deceptive act or practice.

ANSWER: Leapfrog denies the allegations contained in Paragraph 98 of the Amended Complaint.

99. TLG's deceptive acts and practices cause harm to consumers by misleading consumers regarding the quality and safety of the hospitals it grades, including Plaintiffs.

ANSWER: Leapfrog denies the allegations contained in Paragraph 99 of the Amended Complaint.

100. TLG's deceptive acts and practices mislead consumers, causing them to make decisions about their healthcare that are not in their best interests. These deceptive acts and practices cause harm to Florida consumers, including by increasing the incident-to-hospital time for misled patients and causing patients to choose hospitals that do not provide the types of critical care the Plaintiff Hospitals provide.

ANSWER: Leapfrog denies the allegations contained in Paragraph 100 of the Amended Complaint.

101. As a result of TLG's deceptive acts and practices, Plaintiffs seek injunctive and declaratory relief valued in excess of $75,000.

ANSWER: Leapfrog denies the allegations contained in Paragraph 101of the Amended Complaint.

102. Pursuant to FDUTPA, Plaintiffs demand injunctive relief, declaratory relief, and attorneys' fees and costs.

ANSWER: Leapfrog denies the allegations contained in Paragraph 102 of the Amended Complaint.

COUNT II
(DECLARATORY JUDGMENT)

103. Plaintiffs reallege and incorporate the preceding paragraphs as if fully set forth herein.

ANSWER: Leapfrog realleges and incorporates its answers as fully set forth herein.

104. Pursuant to the Declaratory Judgment Act, 28 U.S.C. § 2201, a court may declare the rights and other legal relations of any interested party in the case of an actual controversy within its jurisdiction.

ANSWER: With respect to the allegations contained in Paragraph 104 which set forth conclusions of law, no response is required. To the extent a response is deemed required, Leapfrog admits that the Plaintiffs cite the Declaratory Judgment Act, 28 U.S.C. § 2201, and Leapfrog respectfully refers all questions of law to this Honorable Court. All allegations not expressly admitted are denied.

105. There exists a substantial justiciable controversy between the parties as to whether TLG's grading of Plaintiffs violates FDUTPA. More specifically, Plaintiffs believe that TLG's grading of Plaintiffs constitutes a deceptive practice under FDUTPA, and TLG disagrees and refuses to abate the deceptive practice. This Court is thus vested with the power to declare the rights and liabilities of the parties and to grant such other and further relief as may be necessary. Declaration of the parties' rights in these regards will clarify the rights and interests of the parties.

ANSWER: Leapfrog admits "[t]here exists a substantial justiciable controversy between the parties as to whether TLG's grading of Plaintiffs violates FDUTPA" and Leapfrog generally denies the allegations contained in the Amended Complaint and in support of Plaintiffs'

claims. With respect to the allegations contained in Paragraph 105 which set forth conclusions of law, no response is required. To the extent a response is deemed required, Leapfrog admits that Paragraph 105 in short pleads Plaintiffs' position in support of Count II, and Leapfrog respectfully refers all questions of law to this Honorable Court. All allegations not expressly admitted are denied.

106. Given the prior and ongoing harm caused by TLG's deceptive practice, the controversy between the parties is actual and of sufficient immediacy to warrant the issuance of a declaratory judgment. As alleged in the preceding paragraphs, TLG's continued grading of Plaintiffs causes substantial harm to Plaintiffs, patients, and the community such that there is a bona fide, actual, present need for the declaration.

ANSWER: Leapfrog denies the allegations contained in Paragraph 106 of the Amended Complaint.

107. Declaratory relief will resolve the legal issues between the parties regarding whether TLG's grading of Plaintiffs constitutes a deceptive practice under FDUTPA.

ANSWER: Leapfrog denies the allegations contained in Paragraph 107 of the Amended Complaint.

108. Plaintiffs have attempted to engage with TLG as to the issues with its recently-adopted methodology, including explaining in writing that the methodology results in grades that are deceptive and harmful to patients, but TLG has nevertheless continued to assign its harmful, inaccurate grades.

ANSWER: Leapfrog denies the allegations contained in Paragraph 108 of the Amended Complaint.

109. Therefore, pursuant to the Declaratory Judgment Act, 28 U.S.C. § 2201, Plaintiffs request a judgment declaring that TLG's grading methodology and its application to Plaintiffs, in both the Fall 2024 grading cycle and forthcoming Spring 2025 grading cycle, is a deceptive practice under FDUTPA.

ANSWER: Leapfrog denies the allegations contained in Paragraph 109 of the Amended Complaint.

110. Given that the Fall 2024 Hospital Safety Grades present ongoing harm to Plaintiffs and to each future potential patient who is misled by those grades, pursuant to Federal Rule of Civil Procedure 57, Plaintiffs request a speedy hearing of this claim.

ANSWER: Leapfrog denies the allegations contained in Paragraph 110 of the Amended Complaint.

AFFIRMATIVE DEFENSES

Defendant, The Leapfrog Group ("Leapfrog") by and through its attorneys, Wilson Elser Moskowitz Edelman & Dicker LLP, and for its Affirmative Defenses to Plaintiffs' Amended Complaint pursuant to Fed. R. Civ. P. 8, states as follows:

FIRST AFFIRMATIVE DEFENSE
(Anti-SLAPP)

1. Florida Statute Section 768.295, Florida's Anti-SLAPP statute, prohibits such suits and "protect[s] the right in Florida to exercise the rights of free speech in connection with public issues." Fla. Stat. § 768.295(1).

2. The withdrawal of Plaintiffs' claim for monetary damages crystalizes the fact that the Amended Complaint is directed solely at silencing Leapfrog's free speech in connection with a public issue.

3. The Amended Complaint is a classic strategic lawsuit against public participation, or SLAPP suit.

4. Thus, the Amended Complaint is barred under Florida's Anti-SLAPP statute.

SECOND AFFIRMATIVE DEFENSE
(Avoidable Consequences)

5. Plaintiffs' claims are barred, in whole or in part, or, at a minimum, recovery should be reduced pursuant to the doctrine of avoidable consequences.

6. Plaintiffs' own actions, inactions, or otherwise Plaintiffs' own misconduct is an avoidable consequence.

7. For example, if Plaintiffs' improved their own patient safety, then each Plaintiff Hospital would receive higher scores with regard to each measure Leapfrog uses to calculate Plaintiffs' Safety Grades; thus, Plaintiffs would have incurred any of their alleged damages.

8. Plaintiffs safety grades are a result of their own conduct, which is an avoidable consequence and to the extent Plaintiffs have not attempted to improve their own patient safety, they have failed to mitigate the very damages alleged in this lawsuit.

THIRD AFFIRMATIVE DEFENSE
(Good Faith)

9. Plaintiffs' claims are barred in whole or in part by the good faith conduct by Leapfrog.

10. Leapfrog consults with a world-renowned expert panel to review and provide guidance on the methodology leading to the hospital Safety Grades.

11. Leapfrog transparently requested public comment with respect to the changes to be made to the fall 2024 methodology as approved by the expert safety grade panel.

12. Furthermore, Leapfrog transparently publishes its methodology including but not limited to a breakdown on the various measures included in the hospital Safety Grade's methodology.

13. In addition, Leapfrog developed its consumer facing website taking into account the digital literacy of its reasonable consumers to ensure consumer comprehension.

14. As such Leapfrog's conduct was made in good faith thereby wholly barring Plaintiffs' claims.

Leapfrog reserves the right to assert such additional affirmative defenses as may be necessary based on its ongoing investigation of the Amended Complaint and the claims asserted by Plaintiffs therein.

WHEREFORE, Defendant, The Leapfrog Group respectfully requests that this Court (1) dismiss Plaintiffs' Amended Complaint in its entirety, with prejudice; (2) grant Leapfrog leave to file a motion for recovery of attorneys' fees and costs pursuant to Fla. Stat. § 768.295; and (3) for such further relief as this Court deems just and proper.

Dated: September 3, 2025

Respectfully submitted,

WILSON ELSER MOSKOWITZ EDELMAN & DICKER LLP.

I. INTRODUCTION

The five (5) Plaintiff hospitals, owned by multiple billion-dollar corporation Tenet Healthcare, brought this case under the guise of protecting the public. But, the record reveals the Plaintiffs' true purpose: Preventing the public from exposure to fair, honest speech with which the plaintiffs disagree. The Leapfrog Group is a non-profit that meticulously – and transparently – provides the consuming public with its data-driven assessment of the safety of hospitals across the Country. That assessment is well respected and used not only by consumers, but also by hospitals – including the Plaintiff Hospitals – to benchmark their performance against peers and set goals for improvement.

Displeased with the grades assigned to them through Leapfrog's Safety Grade methodology (which is disclosed in its entirety online, and provided directly to the Plaintiffs months before the grades become public), the Plaintiff Hospitals have chosen meritless litigation intended to silence Leapfrog rather than addressing their poor patient safety. Specfically, the Plaintiff Hospitals seek to "[p]ermanently enjoin TLG from including Plaintiffs in its Hospital Safety Grades." (ECF Doc. No. 74, p. 41). In other words, the Plaintiffs Hospitals argue that the communities they serve should never see Leapfrog's assessment of their safety.

Beneath the Plaintiffs' obfuscations and lip service is the reality that the Plaintiffs are plainly unconcerned about the public and instead seek only to protect *themselves*. Here, too, lies a fatal problem with the Plaintiffs' case: the Plaintiffs have not – and cannot – present this Court with a shred of evidence that Florida *consumers* have been harmed by Leapfrog's purported conduct. If the Plaintiffs were truly advancing this case to protect the consuming public consistent with FDUTPA's legislative intent, then it would stand to reason that *consumers* would be at the forefront of the Plaintiffs' case. But, they are not. Instead, the Plaintiffs try to sidestep this fatal flaw in their FDUTPA case through table-pounding, legal acrobatics, and speculation that consumers are "likely" to be deceived by Leapfrog's Safety Grades. However, tactics are not evidence, and only evidence can defeat summary judgment.

Indeed, summary judgment for Leapfrog is warranted here. First, Plaintiffs cannot identify a single instance of actual consumer injury, as FDUTPA requires; conjecture and hearsay cannot defeat summary judgment. Second, Leapfrog's methodology and disclosures are transparent, publicly available, and prominently explained, foreclosing any claim of deception under an objective reasonable-consumer standard. Third, Plaintiffs cannot prove an "unfair" practice

because there is no consumer injury, let alone one that outweighs the substantial public benefits of Leapfrog's ratings. Fourth, Plaintiffs are not "aggrieved;" their alleged harms are speculative, contradicted by their own admissions, and untethered to any actionable conduct. Fifth, Plaintiffs lack Article III standing, having failed to show a concrete, particularized injury fairly traceable to Leapfrog and redressable by the requested relief. Finally, because this retaliatory suit targets speech on a matter of public concern, summary judgment is likewise warranted on Leapfrog's Anti-SLAPP defense. This Motion should be granted.

II. FACTUAL BACKGROUND

A. BRIEF HISTORY OF LEAPFROG & ITS MISSION

In 1998, a group of employers came together to address a critical, complex public safety issue – medical errors, accidents, injuries, and infections causing preventable harm and death to thousands of patients every year. (SOF ¶1). A report by the Institute of Medicine (now the National Academy of Medicine) estimated that nearly 100,000 people died annually from these problems. (SOF ¶2). Leapfrog was founded to address this by advocating for more transparency to allow consumers to compare hospitals' safety records before choosing where to treat. (*Id.*). By fostering a transparent market, employers aimed to see "giant leaps forward in patient safety." (SOF ¶3).

One of Leapfrog's first steps in its mission was the launch of its Hospital Survey in 2001. (SOF ¶5). The Hospital Survey is a free, voluntary benchmarking tool developed by Leapfrog in consultation with leading researchers and clinicians, and more than 2,400 hospitals participate regardless of their eligibility for a Hospital Safety Grade. (SOF ¶6). Indeed, hospitals and other medical service providers nationwide use the Hospital Survey to assist and guide their patient-safety operations. (SOF ¶14). In 2012, a separate and distinct program was launched – the Leapfrog's Hospital Safety Grade, an A, B, C, D, or F grade assigned to every general hospital in the United States regardless of whether they voluntarily participated in the Leapfrog Hospital Survey. (SOF ¶15). The Plaintiff Hospitals in this case take issue with Leapfrog's Hospital Safety Grades. (ECF Doc. No. 74).

1. The Hospital Safety Grade & Methodology

Leapfrog's Hospital Safety Grade ("Hospital Safety Grade") provides consumers with patient safety information in a consumable format specifically designed to be used by patients and potential patients. (SOF, ¶16-17). Despite receiving grades twice annually for years, it was not until Leapfrog changed its Hospital Safety Grade methodology (the "Methodology") in 2024 that

the Plaintiff Hospitals took issue with the Methodology and the Safety Grades. (SOF ¶18-19). It is notable that the Fall 2024 methodology change is not the first. (SOF ¶21). Rather, Leapfrog reviews its methodology annually based on new developments in clinical science, measurement science, and publicly available data; announces changes well in advance; and solicits public comment before putting them in place. (SOF ¶22).

In Fall 2024, Leapfrog made a change to its Safety Grade Methodology, in consultation with its renowned Safety Grade Expert Panelists. (SOF ¶20). Before the Fall 2024 Methodology change, Leapfrog utilized a 2-step imputation model for four (4) of the 22 measures used to calculate the Safety Grade – Computerized Physician Order Entry (CPOE), Bar Code Medication Administration (BCMA), ICU Physician Staffing (IPS) and Hand Hygiene (HH) – for hospitals that did not complete the Survey. (SOF ¶23). The pre-fall 2024 imputation method used historical data for the hospital if the hospital had participated in a Survey within the last 4 rounds (Step 1) and if no historical data was available for that hospital, the hospital would be assigned the mean score for those measures achieved by similar, "cohort" hospitals (Step 2). (SOF ¶23, 27). Over time, the pre-fall 2024 imputation model became biased in that it conferred a benefit on non-participating hospitals by raising the "cohort mean" scores as participating hospitals improved. (SOF ¶28). Thus, Leapfrog met with its Hospital Safety Grade expert panel to discuss proposed changes to the imputation model, and with the panel's guidance the 2024 Methodology change was published and circulated for public comment and input (including to the Plaintiff Hospitals), and implemented. (SOF ¶20, 29).

The fall 2024 Methodology change addressed the unintended consequences of prior Step 2 "cohort" method by proscribing that if a hospital "does not have historical data from the last two rounds…of the safety grade, the hospital is assigned a point value that is equivalent to receiving 'Limited Achievement' for this measure on the Leapfrog Hospital Survey." (SOF ¶29). "Limited Achievement" scores vary by measure, but they are the lowest scores available for each measure. (*Id.*). Imputation is a well-settled and reliable methodology in such circumstances (*i.e.*, where a hospital does not provide the data itself *via* the Hospital Survey) and is consistently applied. (SOF ¶31).

Besides the foregoing adjustment to the imputation model, the scoring Methodology remained the same. (SOF ¶32). The Methodology continued to include the same performance categories ("Achieved the Standard," "Considerable Achievement," "Some Achievement," and

"Limited Achievement") and the associated measure scores for those performance categories[1] (*e.g.*, measure score of 15 for "Limited Achievement"), which were determine by the Safety Grade Expert Panel relying on peer-reviewed literature and subject matter expertise. (SOF ¶33, 34).

Months in advance of the implementation of the fall 2024 Methodology change, the Plaintiff Hospitals were aware and informed of the proposed Methodology change and the impact, if any, the proposed Methodology change could have on their grades. (SOF ¶22, 46, 35). Plaintiffs knew of their forthcoming Safety Grades prior to Nov. 15, 2024 release, understood impact of Survey participation, and requested authority to participate from Tenet's Home Office. (*Id.*).

2. Leapfrog's Transparency

Contrary to the Plaintiff Hospitals' allegations, Leapfrog's thoroughly discloses its Methodology and other material information, for free, on its websites. (SOF ¶8, 10, 12, 13, 14, 22, 25-26, 36-46). Leapfrog maintains its website (www.leapfroggroup.org), and a site specifically for the Safety Grades (hospitalsafetygrade.org). (SOF ¶42). Leapfrog prominently disclosed its proposed fall 2024 changes months in advance, and invited comment. (SOF ¶45-46). The Hospital Safety Grade website allows users to search for specific hospital, and detailed explanations of the Safety Grades is contained on the landing page for each hospital. (SOF ¶36). The approach for handling Safety Grades for Hospitals that do not participate in the Hospital Survey is prominently explained. (SOF ¶38-40). In fact, the *entire* 29-page methodology is accessible on the same page as the Safety Grade, and contains the Dealing With Missing Data" section how non-reporting hospitals Grades are determined, including, *inter alia*, an explanation of the Four Imputed Measures, imputation, and scoring methodology. (SOF ¶40). Leapfrog further explains this, among other things, on its "About the Grade" page and in all materials shared with hospitals. (SOF ¶43).

Leapfrog's FAQ page also explains how Leapfrog handles Safety Grades for non-participating hospitals. (SOF ¶45). The Safety Grade pages include a link to a "Detailed table view" providing a measure-by-measure breakdown of a given hospital's data underlying the Safety Grade, and also includes red, bolded statements: "**Declined to Report: The hospital was asked to provide this information to the public, but did not.**" and "**"The hospital declined to report their performance on this measure, so a score was assigned to reflect the lack of information available.**" followed by a legal disclaimer. (SOF ¶38).

[1] The measures scores associated with each performance category (both of which were unchanged) re determined by an expert panel in consideration of peer-reviewed literation and subject matter expertise. (SOF ¶34).

B. THE PLAINTIFF HOSPITALS' GRADES AND RELEVANT ALLEGATIONS

1. The Plaintiff Hospitals Track Their Safety Grades

The Plaintiff Hospitals complain that the Hospital Safety Grade is deceptive, and that the methodology is unfair (*see generally*, ECF Doc. No. 74). Yet, the Plaintiff Hospitals understand Leapfrog's scoring methodology, and the Methodology is available online for all to view. (SOF ¶35). The Plaintiff Hospitals track their own Hospital Safety Grades and in discussed what grades they could earn if they responded to the Hospital Survey. (*Id.*). Indeed, as discussed, Leapfrog goes to extraordinary lengths to publish for the public and hospitals the detail about calculating its Grades. Despite this extraordinary transparency, the Plaintiff Hospitals claim "deception."

2. The Plaintiff Hospitals' Safety Grades & Underlying CMS Data

For years, the Plaintiff Hospitals have received Safety Grades. (SOF, ¶35, 49). West Boca's Safety Grade did not change after the revised Methodology was implemented for the fall 2024 Safety Grades (it remained a "D"). (SOF ¶18, 49). For the others, from spring 2024 to fall 2024: Palm Beach went from a C to an F; Delray went from a D to an F; Good Samaritan went from a C to an F and St. Mary's went from a C to a D. (*Id.*).

Prior years' Safety Grades reflect that the Plaintiff Hospitals' Grades were declining even before 2024; however, they only complain about post-fall-2024 Safety Grades, ostensibly using the methodology change as pretext to sue. (SOF ¶18; citing Ex. 27 (Historical Safety Grades)).

Leapfrog's assessment of the Plaintiff Hospitals' performance is consistent with other reputable ratings publicly available. In the CMS five-star rating program assessing quality and safety, each of the Plaintiff Hospitals receive one- or two-stars. (SOF ¶50-52). Only West Boca receives a two-star overall rating from CMS; the rest receive one-star. (*Id.*) The Mayo Clinic recently began comparatively rating hospitals across the nation. (SOF ¶53). According to the Mayo Clinic, the Plaintiff Hospitals' "overall hospital score[s]" as compared to all hospitals are as follows: (i) Palm Beach - bottom 1%; (ii) Delray - bottom 6%; (iii) Good Samaritan - bottom 6%; (iv) St. Mary's - bottom 15%; and (v) West Boca - bottom 29%. (*Id.*).

Despite lower ratings from other services and despite no other reputable ratings program being as transparent as Leapfrog in revealing the performance of hospitals on each of the measures used in their assessment and in the precise methodology, the Plaintiffs Hospitals complain of deception and unfairness as it relates only to Leapfrog.

3. There is No Evidence of Consumer Harm

The Amended Complaint alleges, in conclusory fashion, that Leapfrog's purported conduct harmed consumers. (ECF Doc. No. 74, ¶¶15, 75, 84, 95, 99-100). In the Plaintiff Hospitals' Statement of Facts ("PSOF," at ECF No.: 87, Nos.: 56-61), the Plaintiff Hospitals purport to identify evidence of consumer harm. (*See*, Resp. to PSOF, #56-61); (*see also*, SOF ¶54-82).

"Consumer harm" for purposes of a FDUTPA claim "parallels consumer harm under the Sherman Act, which requires 'specific damage done to consumers in the market.'" *State Farm Mut. Auto Ins. Co. v. At Home Auto Glass LLC*, 2024 WL 4349246 *12-13 (M.D. Fla. Sep. 30, 2024); citing, *Tymar Distribution LLC v. Mitchell Grp. USA, LLC*, 558 F. Supp. 3d 1275, 1289 (S.D. Fla. 2021). The purported evidence of consumer harm on which Plaintiff Hospitals rely is plainly not evidence of consumer harm, and the PSOF uses misleading citations to depositions and documents containing wholly irrelevant testimony and statements that are inadmissible hearsay. The testimony often even reflects the *opposite* of consumer harm. (*See, e.g.*, Haverciak and McCauley testimony, *infra*, about patients purportedly being "pleasantly surprised" with care quality at SOF ¶61, 79).

III. ARGUMENT

A. Summary Judgment Standard.

Summary judgment is appropriate when there is "no genuine issue as to any material fact [such] that the moving party is entitled to judgment as a matter of law." *Novo Nordisk, Inc. v. Brooksville Pharms., Inc.*, 785 F. Supp. 3d 1123, 1132 (M.D. Fla. May 12, 2025); quoting, *Celotex Corp. v. Catrett*, 477 U.S. 317, 322 (1986). An issue of fact is "material" if it might affect the outcome of the case under the governing law. *See, Anderson v. Liberty Lobby, Inc.*, 477 U.S. 242, 248 (1986). It is "genuine" if the evidence could lead a reasonable factfinder to find for the non-moving party. *Id.*

B. The Tenet Hospitals' Claim Fails as a Matter of Law.

1. There is No Evidence of Any Consumer Injury, Harm, or Detriment.

"While a Plaintiff need not be a 'consumer' under FDUTPA to file suit ***, 'Florida case law requires a plaintiff to **prove harm to a consumer or consumers**.'" *Id.*; citing, *State Farm Mut. Auto Ins. Co.*, 2024 WL 4349246, *4 (M.D. Fla. Sep. 30, 2024) (emphasis added); *see also, Qunjian v. Globoforce, Inc.*, 89 F. 4th 852, 860 (11th Cir. 2023) (finding that plaintiff brining a FDUTPA claim must "prove there was an injury or detriment to consumers"); quoting, *Caribbean Cruise Line, Ind. v. Better Bus. Bureau of Palm Beach County, Inc.*, 169 So. 3d 164, 169 (Fla. 4th

DCA 2015); *CMR Constr. & Roofing, LLC v. UCMS, LLC*, 2022 WL 3012298, *3 (11th Cir. 2022) ("[I]n order to satisfy the first element for a claim for both damages and injunctive relief under FDUTPA…the plaintiff must allege that the relevant act or practice was **harmful to a consumer**"); *see also, Stewart Agency, Inc. v. Arrigo Enters.*, 266 So. 3d 207, 214 (Fla. Dist. Ct. App. 2019) (FDUTPA claim for injunctive relief requires showing of injury to both claimant and Florida consumers) (emphasis added).

The Plaintiff Hospitals' conclusory assertions that Leapfrog's purported conduct has "harmed consumers in Florida" is insincere and without factual support. (*See, e.g.*, ECF No. 74, ¶95) ("[Leapfrog's] Hospital Safety Grades have harmed Florida consumers by causing them to make dangerous decisions to forego the nearest hospital based on misleading information"). The Plaintiffs have not identified a single consumer, let alone a specific instance where Leapfrog's purported conduct harmed a consumer (*i.e.*, a patient or prospective patient). (SOF ¶57, 61, 69, 71, 73-74, 79-82). This is representative of the Plaintiffs' true motivation here: They are not concerned with harm to Florida consumers, they are concerned with bad press and are using this lawsuit as a pretext to silence Leapfrog and stifle the service that Leapfrog provides to consumers. Summary judgment on this issue proper.

The Plaintiff Hospitals have identified only a smattering of hearsay statements and documents wherein their CEOs (and Rule 30(b)(6) representatives, *see*, SOF ¶80-81, citing NOD Riders at 1, 13-14) state that patients reported complaints to doctors, or expressed to doctors and to others that they were disinclined to use the Plaintiff Hospitals as a result of the Safety Grades. (*See, supra*; citing, ECF No. 87, ¶¶57-62). The Tenet Hospitals even cite instances where patients express *pleasure* with their experiences at the Plaintiff Hospitals. (*Id.* at ¶¶57, 60); (SOF, ¶61,79).

But, this purported "evidence" does not reflect consumer injury or harm. None of the foregoing, inadmissible statements supports Plaintiffs' conclusion that "[Leapfrog's] deceptive acts and practices mislead consumers, causing them to make decisions about their healthcare that are not in their best interests," nor is it proof that "[Leapfrog's] Hospital Safety Grades have harmed Florida consumers by causing them to make dangerous decisions to forego the nearest hospital based on misleading information." (ECF No. 74, ¶¶95, 100).

For one, all of the foregoing is plainly hearsay (out of court statements offered for the truth of the assertion). *Macuba v. DeBoer*, 193 F.3d 1316, 1322 (11th Cir. 1999); quoting, *Garside v. Osco Drug, Inc.*, 895 F. 2d 46, 50 (1st Cir. 1990) ("[I]nadmissible hearsay 'cannot be considered

on a motion for summary judgment'"). Next, the Plaintiffs have never identified any of these purported consumers (let alone obtained their testimony or disclosed any consumer as a trial witness), nor have the Plaintiffs alleged that these mystery "patients" ever even encountered Leapfrog's website. *See, Harrod v. Express Scripts, Inc.*, 2019 WL 8273650, *13-14 (M.D. Fla. Aug. 16, 2019) (FDUTPA claim failed where there was no proof that the consumer encountered the purported misrepresentation and, thus, no proof the consumer suffered a loss as a result of the alleged violation). Finally, none of the foregoing (nor anything else in the record) is evidence of "'**specific damage done to consumers** in the market.'" *State Farm Mut. Auto Ins. Co.*, 2024 WL 4349246 *12-13[2]; citing, *Tymar Distribution LLC v. Mitchell Grp. USA, LLC*, 558 F. Supp. 3d at 1289 (noting that consumer harm under FDUTPA parallels consumer harm under the Sherman Act, which requires "specific damage done to consumers in the market").

Therefore, summary judgment on this issue is proper; there is no genuine dispute of material fact that the Tenet Hospitals' claim fails for lack of consumer injury.

a. *Novo Nordisk v. Brooksville is Particularly Instructive.*

Novo Nordisk is instructive on this issue. In *Novo Nordisk*, the plaintiff (Novo), a Dutch pharmaceutical company that produces semaglutide drugs such as Ozempic®, sued defendant Brooksville Pharmacy (Brooksville) under FDUTPA. *Novo Nordisk*, 785 F. Supp. 3d at 1129, 1131.[3] Brooksville sells compounded drugs containing semaglutide. *Id.* at 1129. As in this case, Novo's operative amended pleading contained a FDUTPA claim seeking only injunctive relief. *Id.*, 1132. Novo alleged that Brooksville's sale of "adulterated and misbranded drugs" violated

[2] In *State Farm Mut. Auto Ins. Co. v. At Home Auto Glass LLC*, State Farm sued defendant (an auto glass repair company) alleged that the defendant's representations to consumers that it would replace windshield damage at no cost to the consumer (the defendant would obtain assignments of insurance reimbursement rights from the car-owners and seek reimbursement from State Farm) violated FDUTPA. 2024 WL 4348246, *4-6. Defendant was granted summary judgment on the "harm to consumer" element of State Farm's FDUTPA claim because there was no evidence that: (i) defendant did not honor the "at no cost" promise; nor that (ii) any consumer had any problem with defendant's service. *Id.*, *13-14, 16. The Middle District also rejected State Farm's alternative argument on this issue that the defendant's having the car owners sign contracts that made them responsible if their insurer did not pay satisfied the consumer-harm element, explaining that absent any actual proof of defendant not honoring its "no cost" promise or some other "actual harm [inflicted] on at least one consumer," this argument was a "purely hypothetical possibility of some kind of injury in the future based on possible future actions…" which was insufficient. *Id.* at *14.

[3] After the decision discussed herein, the Middle District of Florida granted Novo's Rule 59(e) motion and amended the judgment to be a dismissal of Novo's amended complaint without prejudice for lack of subject matter jurisdiction, finding that its prior finding of mootness/implied preemption of Novo's FDUTPA claim should have been its only finding. *Novo Nordisk, Inc. v. Brooksville Pharms. Inc.*, 2025 WL 2306505, *2-4 (M.D. Fla. June 30, 2025). However, the Middle District did not state that its merits-based findings on Novo's FDUTPA claims (which are discussed herein) were erroneous, and noted that the Eleventh Circuit may consider those findings on the merits in the event the Eleventh Circuit disagreed with the subject matter jurisdiction holding. *Id.*, *4, 6, 9.

FDUTPA, citing Novo's analyses showing Brooksville's products were less potent than advertised and contained impurities. *Id.* 1130-32. Novo alleged Brooksville caused Novo "to suffer injury, including economic harm due to lost sales and 'harm to [Novo's] goodwill and reputation.'" *Id.*, 1132. The Middle District of Florida granted Brooksville's motion for summary judgment on the merits of the FDUTPA claim. *Id.*, 1144.

Relevant here, Brooksville argued that Novo had "failed to establish the consumer injury element of FDUTPA since [Novo] cannot identify 'a single instance in which a patient was injured from the use of Brooksville's compounded semaglutide.'" *Id.*, 1145. In response, Novo "point[ed] to **a handful of email complaints** from Brooksville customers who reported that their prescriptions were 'ineffective.'" *Id.* (emphasis added). Novo further argued that it was "required to prove only that Brooksville's actions are 'likely to cause consumer harm.'" *Id.* The Court rejected both of Novo's arguments. *Id.*

As to the first argument, the Court rejected Novo's position that it should not bear the burden of providing of consumer injury, stating "[t]hat's why parties in a lawsuit conduct discovery." *Id.*, 1146. The Court further held that Novo's presentation of some "hypothetical possibility of some future injury to Florida consumers" was insufficient to survive summary judgment, and that Novo's identification of 5 Brooksville-customer complaints (out of 24,000 customers) about "ineffective" prescriptions did not constitute "evidence that a Florida consumer suffered actual harm from Brooksville's misbranded semaglutide." *Id.*, 1146; *see also, Id.*, 1147 ("After extensive discovery and exhaustive briefing, [Novo's] failure to provide any evidence of consumer harm entitles [Brooksville] to summary judgment on [Novo's] FDUTPA claim"). Similarly, here, "after extensive discovery," the Plaintiff Hospitals can only identify second- and third-hand hearsay accounts of purported complaints from a few purported consumers (patients), despite the Plaintiff Hospitals having thousands of patients. As explained, a consumer who expresses concern about a hospital's Safety Grade is not complaining about being harmed. To show harm, Plaintiffs would need evidence that consumers experienced adverse health outcomes or were charged an inflated fee because they erroneously relied on the Safety Grades. No such evidence exists even though "**actual patient harm is the proper standard at the summary judgment stage.**" *Id.*, 1145 (emphasis added). Thus, summary judgment is proper.

As to Novo's second argument, the Court rejected the assertion that "likely" harm to consumers was the relevant inquiry. *Id.* Again, "actual patient harm is the proper standard at the

summary judgment stage," not "likely" consumer harm. Since the Plaintiff Hospitals have no evidence of actual consumer harm, there is no genuine dispute of material fact on this issue.

2. Leapfrog's Purported Conduct was *Not* Deceptive.

Leapfrog reiterates that for a dispute of fact to be a *genuine* dispute, the evidence must be capable of leading a reasonable juror to find for the non-moving party. *Novo Nordisk*, 785 F. Supp. 3d at 1132 (collecting cases). Considering the comprehensive, publicly available, and easily understood disclosures and explanations of, *inter alia*, Leapfrog's Methodology, the Plaintiff Hospitals cannot set forth a *genuine* dispute that Leapfrog's purported conduct was deceptive. Moreover, the fall 2024 Methodology adjustment about which that Plaintiffs complain is not deceptive and, in fact, the purportedly "deceptive" portions thereof were in place *before* the fall 2024 Methodology adjustment. (*See, supra*). Indeed, the fall 2024 Methodology adjustment is simply the pretext upon which the Hospital Plaintiffs have brought this action.

To establish a deceptive practice, plaintiffs must establish that the act or practice is "likely to mislead the consumer acting reasonably in the circumstances, to the *consumer's detriment*." *See Caribbean Cruise Line*, 169 So. 3d at 169 (emphasis in original). Thus, this is a two-part inquiry. As discussed, the "to the consumer's detriment" part cannot be satisfied, and summary judgment on this basis alone is warranted.

There is no genuine dispute of material fact on the "likely to mislead the consumer acting reasonably in the circumstances" inquiry, either. Plaintiffs are required to show "'probable, not possible, deception' that is 'likely to cause injury to a reasonable relying consumer.'" *Piescik v. CVS Pharm., Inc.*, 576 F. Supp. 3d 1125, 1132 (S.D. Fla. 2021) (internal citation omitted). Courts use an objective test to "determine whether 'the alleged practice was likely to deceive a consumer acting reasonably in the same circumstances.'" *Id.* (citation omitted).

Piescik is instructive. In *Piescik*, a putative class action alleged that the defendant's hand sanitizer's claim that it kills "99.99% of germs" violated FDUTPA as misleading and deceptive because a reasonable consumer would take that as fact. *Id.*, 1128, 1132. The amended FDUTPA claim sought injunctive relief, seeking "'…to prevent Defendant from continuing to lie to its customers in the future.'" *Id.*, 1130.

The defendant (CVS) moved to dismiss, arguing that the plaintiff's belief that a reasonable consumer would take the "99.99%" claim as fact was objectively unreasonable based on common knowledge, and also because of the asterisk next to the 99.99% claim led to a disclosure on the

back label. *Id.*, 1132. Relying on *Moore v. Trader Joe's Co.*[4], the Southern District granted the motion to dismiss. *Id.* at 1132-34. The Court held that all the information available to consumers and the context in which that information is provided must be considered, and that claims of deception resting on unreasonable or fanciful interpretations of labels or other advertising fail. *Id.* at 1132-33 (collecting cases). The Court explained that the "information available" to consumers informing the reasonable-consumer inquiry is not limited to the label itself, and that "true information or a disclaimer can rebut a claim of deception." *Id.* at 1133; citing *Freeman v. Time Inc.*, 68 F. 3d 285, 289-90 (9th Cir. 1995). The Court held that a reasonable consumer would not assume that a hand sanitizer product with such a label encompassed "all conceivable disease-causing microorganisms, regardless of whether they are commonly found on the hands," and noted "the asterisk on the back of the hand sanitizer clearly discloses to the consumer that it does not kill 99.99% of *all* germs, and a reasonable consumer would not be expected to ignore the asterisk and the information it leads to." *Id.* at 1133. The claim was dismissed with prejudice. *Id.*, 1133-36.

The *Piescik* Court cited numerous authorities on the above propositions, finding *Moore v. Trader Joe's Co.* instructive. *Id.* at 1132-33; citing, 4 F. 4th 874, 882 (9th Cir. 2021). *Moore* is relevant here as well. There, the Ninth Circuit affirmed dismissal of the plaintiff's charge that Trader Joe's labeling of honey as "100% New Zealand Manuka Honey" and listing "Manuka Honey" as the sole ingredient was misleading to a reasonable consumer. *Moore*, 4 F. 4th. at 876-77, 879-80. The Ninth Circuit explained that a reasonable consumer of a niche product like the Trader Joe's honey would know that it is impossible to produce "pure" batches of honey derived solely from the Manuka flower, and that the relatively cheap price would further signal a **reasonable consumer of that honey** that the jar does not contain 100% Manuka honey. *Id.* at 881 (emphasis added). Indeed, the inquiry is whether a reasonable consumer of the *subject product* would be misled considering all the information available to him or her. *See, Id.* at 884 (consumers of "a niche, specialty product, are undoubtedly more likely to exhibit a higher standard of care").

Here, Leapfrog's provides substantial transparent, free, readily accessible, and comprehensive information and explanations to consumers related to its Hospital Safety Grade produc. (SOF ¶8, 12-13, 14, 22, 25-26, 36-46). Indeed, it is far more than the information available to the consumers in *Piescek* and *Trader Joe's* and, thus, the undisputed facts here present *even stronger* grounds to hold that Leapfrog's purported conduct was not deceptive to a reasonable

[4] *Moore v. Trader Joe's Co.*, 4 F. 4th 874, 882 (9th Cir. 2021).

consumer of its products. Leapfrog reiterates and incorporates by reference its detailed disclosures discussed *supra* and in the SOF, including that: (i) the imputed score for non-participating hospitals is shown as equivalent to the worst score; (ii) Navigation of the Grades and measure-by-measure scores leads to a link allowing access to the full, 29-page Methodology; and (iii) Non-reporting hospitals' Grades feature, *inter alia*, bold and red disclosures with an asterisk. (SOF ¶38).

As in *Piescik*, any potential to deceive a reasonable consumer of Leapfrog's products is ameliorated by additional information denoted by an asterisk, and by the substantial additional material provided. A reasonable consumer is not expected to ignore this asterisk. *Piescik*, 576 F. Supp. 3d at 1133. Whether a reasonable consumer would be deceived is a totality-of-the-information inquiry, and must account for the type of consumer. A reasonable consumer of health care information such as the Hospital Safety Grade would exhibit a higher standard of care and awareness when choosing where to receive their medical treatment, and Leapfrog's provision of substantial and transparent information (including delineating between absent data and imputed data) allows these consumers to fully and comprehensively inquire and educate themselves about the material that they are consuming. *Moore*, 4 F. 4th at 884; quoting, *Danone, US, LLC v. Chobani, LLC*, 362 F. Supp. 3d 109, 123 (S.D.N.Y. 2019) ("Consumers of Manuka honey, a niche, specialty product, are undoubtedly more likely to exhibit a higher standard of care than 'a parent walking down the dairy aisle in a grocery store, possibly with a child or two in tow,' who is 'not likely to study with great diligence the contents of a complicated product package'").

Consumers of health care are presumed reasonable and aware that many considerations go into choosing where to receive medical treatment. To this point, red, bold disclaimers (among other things) clearly identify to a consumer that a score is *assigned* for certain measures because of a lack of information. (SOF ¶38). Further, among other disclosures, Leapfrog distinguishes between absent data and imputed data. (Motion to Dismiss Ruling, ECF No. 41, p. 6); (SOF ¶36-43). Indeed, Leapfrog's grading system is intentional. (SOF ¶8, 12-13, 42).

In this era, rating systems are common across all consumer interests. Consumers use Yelp to rate restaurants, Google Reviews to rate businesses, TripAdvisor to rate experiences, and so on. Likewise, rating healthcare providers is not unique to Leapfrog. Many similar organizations rank healthcare providers on various measures – CMS, Healthgrades, HealthLocator (SOF ¶53), Lown Institute, U.S. News & World Report, to name a few. Consequently, consumers are (and, for purposes of this inquiry, presumed to be) familiar with rating websites, and considering all the

information available, reasonable consumers of rating systems are aware that each system only considers certain criteria. Thus, a consumer of Leapfrog *Safety* Grades can reasonably conclude that the grade itself measures aspects of patient *safety* and *not* whether the hospital has, for example, a highly ranked, top performing NICU. Interestingly, the Tenet Hospitals publicly highlight their "Healthgrades," but filed this instant lawsuit against Leapfrog alleging deceptive Safety Grades. (SOF ¶83). Plaintiffs ulterior purpose is blatant.

There can be no genuine dispute that – considering the vast world of detailed, transparent information that Leapfrog provides to a particularized consumer base – the alleged conduct is not deceptive. The Plaintiff Hospitals' conclusory, false, and unreasonable assumption that it *is* deceptive, and that the Methodology is not based on real data, does not suffice for this inquiry. *Moore*, 4 F.4th at 882. Summary judgment is proper on the claim of deceptive practices.

3. Leapfrog Does Not Engage in "Unfair" Practices.

The Florida Supreme Court defines an unfair practice as "one that 'offends established public policy' and one that is 'immoral, unethical, oppressive, unscrupulous or substantially injurious ***to consumers***." *PNR, Inc. v. Beacon Prop. Mgmt.*, 842 So. 2d 773, 777 (Fla. 2003) (citation omitted; emphasis added). To establish an unfair act or practice, plaintiffs must establish that the act or practice inflicts "***consumer injury*** that is: (1) substantial; (2) not outweighed by any countervailing benefits to consumers or competition that the practice produces; and (3) that consumers could not reasonably have avoided." *SMS Audio, LLC v. Belson*, 2017 WL 11631378, *10 (S.D. Fla. April 24, 2017). (emphasis added). Plaintiffs fail to offer any evidence to prove the three elements of unfairness. *Id.*

First, as discussed, the Plaintiffs have no proof of *any* consumer injury; let alone one that is "substantial." The Plaintiffs have never identified a single consumer injured by a Leapfrog practice that is allegedly unfair. Further on the point of "substantial consumer injury," there is an obvious flaw in the Plaintiffs' premise. Even if patients were refusing to treat at an "F" hospital, like Good Samaraitan, the Plaintiffs fail to show how a patient treating at an "A" hospital harms the consumer in any way. Notably, the Plaintiff Hospitals do not allege or otherwise provide proof showing that patients are refusing to treat at the Plaintiff Hospitals because of the Safety Grades, nor any evidence that those patients are then harmed when treated at a competitor hospital. Simply alleging that patients choose to treat at a competitor hospital rather than one of the Plaintiffs is not enough to show consumer injury. *See Cmty. Health Ctrs., Inc. v. DiamondDog Servs., Inc.*,2024

WL 3278579, *10 (M.D. Fla. July 2, 2024) (dismissal of plaintiff's FDUTPA claim after determining that plaintiff only alleged harm to *plaintiff* that the defendant caused, but failed to plead consumer injury); *see also, SMS Audio*, *10 (defendant granted judgment as a matter of law because plaintiffs did not prove detriment or injury to consumers).

Second and ignoring (for purposes of this argument) that the Plaintiffs cannot establish consumer injury, any purported injury is outweighed by the substantial benefit that Leapfrog provides to consumers navigating the labyrinthian American healthcare system. In fact, as just discussed, patients would *benefit* from treating at a competitor hospital (at bottom, Plaintiffs offer no proof that treating at a competitor hospital would cause a detriment to consumers).

Plaintiffs have no evidence on the requirement that the injury "not be outweighed by any countervailing benefits to consumers or competition that the practice produces." *Id.* at *3. The purpose of the Safety Grade is to "educate and encourage consumers to consider safety when selecting a hospital for themselves or their families." (SOF, Ex. 20 (Methodology) p. 3). Further, the Safety Grade fosters market incentives for hospitals to prioritize safety. (SOF ¶1, 6, 14, 28). Next, Leapfrog has received feedback over the years from hospitals advising that they use the Hospital Survey as a benchmarking tool on how to improve on their patient safety measures. (SOF ¶14). In fact, the Plaintiff Hospitals themselves used the Survey as an internal tool to benchmark their patient safety progress. (SOF ¶14, 18, 35). Next, the fact that year-over-year improvements to mean "cohort" scores for Survey-participant hospitals occurred also proves the benefit that Leapfrog's purported conduct conferred. (SOF ¶28). Thus, not only do patients benefit from receiving access to hospital's patient safety data, but the Hospital Survey also provides a free tool for hospitals to improve patient safety. (SOF ¶6). Stated differently, "unfair practices" generally offend public policy and are immoral, unethical, oppressive and unscrupulous. *Alhassid v. Nationstar Mortg.* LLC, 771 Fed. Apps. 965, 969 (11th Cir. 2019). The Plaintiff Hospitals cannot set forth a genuine dispute of material fact that Leapfrog, a non-profit providing substantial information to the public about healthcare facilities' safety, engaged in conduct fitting any of those categories. The Plaintiff Hospitals have not provided any evidence of any consumer injury, let alone how any such consumer injury outweighs the benefits that Leapfrog's conduct confers on the public. Summary judgment is thus warranted.

Third, there is no genuine dispute of material fact that any purported injury could be reasonably avoided. For one, it bears repeating that no actual consumer injury can be identified.

Regardless, to the extent the Plaintiffs stand by their unsupported conclusion that consumers have been injured because Leapfrog has "caus[ed] them to make dangerous decisions to forego the nearest hospital based on misleading information," (ECF No. 74, ¶95), the Plaintiffs offer no explanation nor evidence as to how or why the consumers could not avoid this purported "injury."

As shown, consumers (*e.g.*, prospective patients) could easily avoid this purported injury by navigating Leapfrog's various webpages and explanations of its Methodology contained therein. More specifically, at the bottom of each page of its websites, Leapfrog expressly states, *inter alia*, "Individuals are solely responsible for any and all decisions with respect to their medical treatment. Neither Leapfrog nor its affiliates are responsible for any damages or costs that may be incurred with respect to use of this site. **Never disregard, avoid or delay in obtaining medical advice from a doctor or other health care professional because of material on this site, as the site is not intended to be a substitute for professional medical advice**." (SOF, ¶44 (full disclaimers) (*see also*, full terms of use at SOF, Ex. 39) (emphasis added). Further, Leapfrog is clear that when deciding on where to receive health care, "people should consider other aspects of hospital performance in the decision-making process, such as whether the hospital delivers a high level of care for the health concern the patient has, i.e., if the hospital has high-quality obstetrics or orthopedics." (SOF ¶45; citing, Ex. 10 (FAQ page))[5]. Finally, the Complaint does not identify what purported conduct was "unfair" to consumers; it merely cites a purported warning from the American Hospital Association stating that the Safety Grades are not fair *to hospitals*. (*See, e.g.*, ECF Doc. No. 74, ¶35). This alone is grounds for summary judgment.

As shown, there is no genuine dispute of material fact that Leapfrog did not engage in "unfair" conduct because any purported injury can be reasonably avoided. Leapfrog's transparent disclosure of its methods cannot be genuinely described as "unfair." *See, e.g., Medmoun v. Home Depot U.S.A., Inc.*, *14-15 (M.D. Fla. May 7, 2022) (where documents that Home Depot provided to the consumer informed the consumer of the very information that was allegedly unfair under the FDUTPA, dismissal was proper as the harm could have been reasonably avoided); *see also, Donoff v. Delta Air Lines, Inc.*, 2020 WL 1226975, *22-24 (S.D. Fla. Mar. 6, 2020) (summary

[5] Leapfrog further acknowledges that in "some cases, the only hospitals available in a community are not highly rated." (SOF ¶43). Further, Leapfrog "offers guidance and resources on [its] website for patients and family members to protect themselves during a hospital stay, which is important no matter the hospital's grade." (SOF, Ex. 10 (FAQ)). Leapfrog's website contains a dedicated "Resources and Tools" page for patients, wherein numerous additional resources and information centers are provided, including a section dedicated to a discussion of, and materials related to, digital care. [https://www.leapfroggroup.org/hospital-choice/resources-and-tools].

judgment for defendant granted on plaintiff's claim that Delta's website violated FDUTPA because Delta does not expressly disclose that it is not licensed to sell insurance because: (i) Delta's website advised that terms and conditions related to travel insurance applied; and (ii) that advisement was followed by a link to Allianz's website and, therefore, "Delta's identification of Allianz as the licensed producer and link to the Allianz website is not only true, but desirable and necessary…," and finding that "[t]he notion that truthfully telling the consumer that Allianz is the licensed producer and administrator and providing a link to its website is somehow deceptive is just sophistry"). Summary judgment on the "unfair practices" claim is proper.

4. The Tenet Hospitals Cannot Prove That They Were "Aggrieved"

Assuming, *arguendo*, the Plaintiff Hospitals could show a "deceptive or unfair act or practice," each Plaintiff fails to prove that they were "aggrieved" by the Safety Grade. "[T]o state a claim for equitable relief, an entity must show (1) that it is aggrieved, in that its rights have been, are being, or will be adversely affected, by (2) a violation of FDUTPA, meaning an unfair or deceptive practice which is injurious to consumers." *Stewart Agency, Inc.*, 266 So. 3d at 214.

To be aggrieved, "'the injury claimed to have been suffered cannot be merely speculative.'" *Id.*; citing *Ahearn*, 180 So. 3d at 173; *see also Macias v. HBC of Fla., Inc.*, 694 So. 2d 88, 90 (Fla. 3d DCA 1997) ("The clear intent of [FDUTPA] as expressed by its plain language is to provide both equitable and legal remedies to private consumers who are aggrieved parties and/or have sustained **actual losses** because of a violation(s) under FDUTPA") (emphasis added). Because the Tenet Hospitals are business entities and do not "share the characteristics of humans, such as being 'angry or sad'" the following definition of "aggrieved" applies: "'having [their] legal rights [] adversely affected; having been harmed by an infringement of legal rights.'" *Stewart Agency, Inc.*, 266 So. 3d at 213-14. "[A] plaintiff is 'aggrieved' under FDUTPA when the deceptive conduct alleged has caused a **non-speculative injury** that has affected the plaintiff beyond a general interest in curbing deceptive or unfair conduct.'" *Cravens v. Garda CL Se., Inc.*, 2024 WL 5058304, *36; quoting, *Farmer v. Humana, Inc.*, 582 F. Supp. 3d 1176, 1190 (M.D. Fla. Jan. 25, 2022); *Superior Consulting Servs., Inc. v. Shaklee Corp.*, 2017 WL 2854783, * (M.D. Fla. June 30, 2017) (emphasis added). In other words, the Plaintiffs must show that they were suffered a direct, non-speculative and actual harm as a result of the alleged conduct. They cannot do so.

In *Stewart Agency, Inc.*, Florida's Fourth District of Appeals affirmed summary judgment for the defendant on the plaintiff-entity's FDUTPA claim. *Stewart Agency*, 266 So. 3d at 215. Both

the plaintiff (Stewart) and defendant (Arrigo) were car dealers. *Id.* at 210. Both accepted vehicles containing defective airbags from the manufacturer, but Stewart did not sell those vehicles and alleged that Arrigo did. *Id.* at 211. Stewart claimed that Arrigo's purported "bait and switch" tactics toward consumers in selling those cars violated FDUTPA. *Id.* However, Stewart admitted that his decision not to sell those cars was not impacted by Arrigo's contrary decision, and that Stewart would not have sold those cars regardless of whether Arrigo sold them. *Id.* Therefore, Stewart could not show that it was adversely affected (*i.e.*, aggrieved) by Arrigo's alleged conduct, and summary judgment for Arrigo was affirmed. *Id.* at 214-15. The Fourth District rejected Stewart's argument that he was aggrieved because Arrigo's sales equated to sales that Stewart could not make. *Id.* The Court explained that it "would be entirely speculative [to hold this equated to being "aggrieved"] and require building an inference upon an inference." *Id.* at 214.

Likewise, here, the Plaintiff Hospitals' allegations that they were aggrieved are wholly conclusory (*see, e.g.*, ECF Doc. No. 74, ¶95), and the "evidence" that the Plaintiffs were aggrieved is, at best, speculative. The Plaintiffs' conclusory and often contradictory claims of adverse impacts do not suffice and would require this Court to engage in an impermissible level of speculation. All five of the Plaintiff Hospitals' CEO's signed declarations early in this litigation, averring that the Safety Grades have harmed their Hospital's reputation and goodwill, but at their depositions none of them could identify any non-speculative or admissible evidence in support. (SOF ¶53-81). Likewise, none of these CEOs (who are the Plaintiffs' Rule 30(b)(6) representatives) could identify any actual financial harm suffered beyond a speculative level. In fact, Delray and West Boca have seen increased revenue, and Palm Beach has seen increased patient admissions during the relevant timeframe. Similarly, St. Mary's and Good Samaritan could not verify any revenue loss. (*Id.*). West Boca's Safety Grades did not change after the new, purportedly deceptive/unfair Methodology was implemented. (SOF, ¶49; citing Ex. 27 (historical Grades)). All five Plaintiff Hospitals understand that they can participate in the Hospital Survey, but do not do so. (SOF ¶35). Plainly, the Plaintiffs' conclusory, speculative, often contradictory and plainly self-serving claims of being "aggrieved" are insufficient to create a genuine dispute of material fact on this issue and summary judgment is warranted.

C. THE PLAINTIFF HOSPITALS LACK ARTICLE III STANDING.

Article III standing requires plaintiffs to demonstrate that: (1) they suffered an "injury-in-fact," (2) there is a causal connection between the asserted injury-in-fact and the challenged action

of the defendant, and (3) "the injury will be redressed by a favorable decision." *Shotz v. Cates*, 256 F.3d 1077, 1081 (11th Cir. 2001) (citation omitted). Injury-in-fact is established when a plaintiff "shows that he or she suffered an invasion of a legally protected interest that is concrete and particularized and actual or imminent, not conjectural or hypothetical." *Spokeo, Inc. v. Robins*, 578 U.S. 330, 339 (2016) (citation and quotations omitted). A concrete injury is "real, and not abstract." *Id.* at 340. A particularized injury "affect[s] [a] plaintiff in a personal and individual way." *Id.* at 339. Claims for injunctive relief, moreover, require a "real and immediate…threat of *future* injury." *Shotz*, 256 F.3d at 1081 (emphasis in original) (citation omitted). In response to a summary judgment motion challenging Article III standing, "'the plaintiff…must 'set forth' by affidavit or other evidence specific facts' showing that the defendant injured [them]." *Novo Nordisk*, 786 F. Supp. 3d at 1133; citing, *Ga. Republican Party v. Secs. & Exch. Comm'n*, 888 F.3d 1198, 1201 (11th Cir. 2018); quoting *Lujan*, 504 U.S. at 561.

First, for the reasons discussed above and in the SOF, the Plaintiff Hospitals cannot show any concrete injury that is fairly traceable to Leapfrog that would be redressed by a favorable judicial outcome. Second, given the Plaintiff Hospitals' lack of testimony and failure to produce any documents showing financial harm, they cannot show that there is an amount in controversy in excess of $75,000. (SOF ¶54-82). Third, as set forth *supra*, the Plaintiff Hospitals have failed to identify a single lost patient or physician who dissociated with them, proving: a lack of: (i) concrete and particularized (as opposed to conjectural or hypothetical) invasion of a legally protected interest; (ii) a real and immediate threat of future injury; and (iii) sufficient amount-in-controversy. Finally, especially in light of the Plaintiffs' acknowledgement and understanding that participating in the Hospital Survey would offer them control over the Four Imputed Measures, and given that the Plaintiff Hospitals have failed to articulate how a favorable ruling in this matter would redress their (speculative and undefined) harm, there is no genuine dispute of material fact as to the third requirement of Article III standing. Indeed, summary judgment is proper.

D. SUMMARY JUDGMENT ON THE ANTI-SLAPP DEFENSE IS WARRANTED.

Florida's Anti-SLAPP statute prohibits "fil[ing]…any lawsuit… against another person or entity [1] without merit and [2] primarily because such person or entity has exercised the constitutional right of free speech in connection with a public issue…as protected by the First Amendment to the United States Constitution and s. 5, Art. I of the State Constitution." Fla. Stat. §758.295(3). Leapfrog pleads anti-SLAPP as an affirmative defense. (ECF Doc. No. 43, p. 47).

A cause of action is "without merit" if it fails to state a claim or if the defendant(s) prevail on a motion for summary judgment. *See, e.g., Flynn v. Wilson*, 398 So. 3d 1103, 1115 (Fla. 2d DCA 2024) (affirming grant of defendant's motions for summary judgment on both the merits of plaintiff's defamation claim and anti-SLAPP; the anti-SLAPP summary judgment grant was warranted because the plaintiff's claim "lacked merit" as shown by the merits failing in the face of summary judgment and upon demonstration that the case was brought "primarily" because of defendant's exercise of his free-speech rights); *Bongino v. Daily Beast Co., LLC*, 477 F. Supp. 3d 1310, 1322 (S.D. Fla. Aug. 6, 2020) (suit was without merit because it failed to state a claim, and because the suit also arose out of an exercise of free-speech, the anti-SLAPP motion was granted).

Florida's anti-SLAPP statute broadly defines "free speech in connection with public issues" to include "any written or oral statement that is protected under applicable law and . . . is made in or in connection with a play, movie, television program, radio broadcast, audiovisual work, book, magazine article, musical work, news report, or other similar work." Fla. Stat. § 768.295(2)(a). "Speech deals with matters of public concern when it can be fairly considered as relating to any matter of political, social, or other concern to the community." *Snyder v. Phelps*, 562 U.S. 443, 453 (2011).

Leapfrog's mission is premised on free speech in connection with a public issue; it is intended to assist the public in assessing their healthcare options and healthcare safety. Thus, if this Court grants Leapfrog's Motion, summary judgment on its anti-SLAPP defense is also warranted because both requirements of the statute will be satisfied. Indeed, this case is nothing more than a deep-pocketed hospital system trying to silence a non-profit in retaliation for what they perceive as negative press; it is the Plaintiffs Hospitals' filing of this case, which amounts to prior restraint on free-speech, that harms the public, not Leapfrog's alleged conduct.

WHEREFORE, Defendant, The Leapfrog Group, respectfully requests that this Honorable Court enter an ORDER granting this Motion and Judgment in its favor as set forth in the Proposed Order, and award any and all other appropriate relief.

Date: November 12, 2025

Respectfully submitted,

INTRODUCTION

Leapfrog's business rests on a promise of "honest[y]." ECF 99 at 1 ("Mot."). It publicly professes that its mission is to promote "transparency and accountability in health care," ECF 102 at 2, and calls itself a "watchdog" for patients, claiming to help them decide which hospitals are safe and which are not, SOF ¶¶ 2-3. Its 'Hospital Safety Grades"—the A-through-F scores that Leapfrog promotes nationwide—are marketed as peer-reviewed, data-driven assessments of patient safety. In reality, they are none of those things.

The record indisputably shows that in 2024, Leapfrog rewrote its grading formula to punish hospitals that decline to fill out its proprietary, 350+ page Hospital Survey. Those hospitals are automatically assigned the lowest possible scores on critical measures, *regardless of actual safety performance*. Leapfrog's own witnesses admitted the new methodology is "arbitrar[y]," its purpose is "not accuracy," and its effect is to "penalize" non-participants. SOF ¶¶ 34, 38-39; OSOF ¶¶ 20, 29. And the "Expert Panel" that Leapfrog touts to the public never approved the change.

Leapfrog's motive was simple: money. Survey participation is the lifeblood of Leapfrog's revenue, so low participation in recent years presented a concern. Internally, a member of Leapfrog's Expert Panel called the Fall 2024 methodology change a "simple business decision." SOF ¶ 38. By assigning failing Grades to nonparticipating hospitals, Leapfrog pressured them to comply—threatening reputational ruin to those that resisted. SOF ¶¶ 37, 39. In short, Leapfrog redesigned its grading system not to inform consumers, but to drive participation and boost revenue.

But Leapfrog carried on as usual, pretending it was all about the public interest, and never alerted consumers to the consequences of the "[d]rastic [c]hange" in its methodology. SOF ¶ 29. It falsely asserted that participation does not affect Grades, that hospitals lacking sufficient data "are not graded," and that its methodology is "peer reviewed" and data-based. SOF ¶¶ 17, 45; OSOF ¶¶ 15, 22. Leapfrog then amplified those falsehoods by proclaiming that "patients are twice as likely to die of a preventable problem at a 'C,' 'D,' or 'F' hospital than an 'A' hospital"—a claim that Leapfrog admittedly has no basis to assert under its current methodology. SOF ¶¶ 10, 48.

Floridians justifiably took Leapfrog at its word, saw failing Safety Grades, and concluded their local Community Hospitals were unsafe. Patients canceled surgeries, diverted to other facilities, and even left the emergency room "against medical advice" after seeing Leapfrog's ratings. SOF ¶ 60. This was deception by design, and its impact is undeniable. Leapfrog's deception denigrated the Community Hospitals' hard-won reputations. Patients and physicians questioned the

Hospitals' safety. An insurer raised concerns. And the Hospitals were forced to devote significant time and resources to correcting misinformation and reassuring their patients. These are not speculative injuries; they are the intended outcome of Leapfrog's deception.

The Florida Deceptive and Unfair Trade Practices Act ("FDUTPA") analysis is straightforward. To prevail, a plaintiff must show that: (1) the defendant engaged in a deceptive or unfair act or practice; and (2) the plaintiff was aggrieved. *SMS Audio, LLC v. Belson*, 2017 WL 1533941, at *4 n.6 (S.D. Fla. Mar. 9, 2017) (Middlebrooks, J.). And to defeat summary judgment, a party must demonstrate only a genuine dispute of material fact. *See* Fed. R. Civ. P. 56. Here, however, the undisputed record shows that deception and unfairness permeated Leapfrog's operation—and that concrete reputational and operational harm to the Community Hospitals was its direct result.

In support of its Motion for Summary Judgment, Leapfrog argues that there is no genuine issue of material fact regarding the absence of deception, unfairness, or harm, and that the Community Hospitals, despite being the direct objects of negative Safety Grades, lack standing. All of these arguments depend on the factual premise that no one was affected by Leapfrog's conduct. But Leapfrog was *created* to influence consumer behavior. It tells consumers that its Safety Grades are "trusted," "transparent," the "gold standard measure of patient safety," used by millions, and that consumers should "always decide" which hospital to visit based on those Grades—since if consumers ignore the Grades and visit a low-scoring facility, they are "twice as likely to die." Yet with its veneer of expert credibility stripped away, Leapfrog now glibly compares its "gold standard" Safety Grades to Yelp restaurant reviews and says no one actually takes Leapfrog at its word. That is not a credible position. In reality, Leapfrog robs patients of the ability to make properly informed choices regarding where to seek essential care. Removing safe choices from the marketplace, in a context as deadly serious as healthcare, is the very definition of consumer harm.

Leapfrog cannot have it both ways. It cannot maintain that its Safety Grades are essential to making vital healthcare choices, yet then insist, after the Grades' façade of legitimacy has collapsed, that no one ever relies on them for their stated purpose. The undisputed record not only precludes judgment for Leapfrog; it compels judgment for the Community Hospitals.

FACTUAL BACKGROUND

A. Leapfrog Urges Consumers To Rely On Its Hospital Safety Grades

Leapfrog presents itself as a nonprofit organization devoted to leveraging "transparency" to "support informed [consumer] health care decisions." SOF ¶ 3. It tells consumers they "should

always decide on where to receive care based on a hospital's current Safety Grade"—displayed on its website hospitalsafetygrade.org and measured grade-school-style from "A" to "F." SOF ¶ 8 (emphasis added). And it maintains that patients are "*twice as likely to die* of a preventable problem" at hospitals rated "C," "D," or "F," than those with an "A" rating. SOF ¶ 10 (emphasis added).

Consumers take Leapfrog at its word. Leapfrog trumpets the story of a patient who drove 400 miles—a distance nearly as long as the north-south length of the State of Florida—to reach an "A" hospital after seeing poor local Grades. SOF ¶ 43. And its internal materials assert that its Safety Grades are "widely used" "by the public [and] insurance companies," including in "transparency tools used by employers and purchasers reaching virtually all Americans." ECF 88-36 at 518. As Leapfrog's CEO Leah Binder has noted, "millions of people have used Leapfrog to make decisions about health care." CH-ASOF ¶ 84.

But contemporaneous internal documents and deposition testimony show that Leapfrog's professed "transparency" is a smokescreen. Leapfrog is not a public-spirited watchdog for hospital safety; rather, it operates as a commercial ratings vendor focused on raising revenues by maximizing participation in its "burdensome," "resource intensive," 350+ page Hospital Survey. SOF ¶¶ 4, 6, 19-21. As one hospital noted, hospitals feel compelled to participate "to avoid taking the blackmail-like reputational hits" that result from the artificially depressed Safety Grades Leapfrog otherwise assigns. SOF ¶ 39. Hospitals then must grant Leapfrog permission to use the data from their Survey responses "in a commercial manner for profit." SOF ¶ 20. Leapfrog conducts on-site audits at only *four or five* hospitals annually. CH-ASOF ¶ 85. Nonetheless, it licenses that data to insurers and employers and markets data products to third-party purchasers. SOF ¶ 19-20. Thus, when Survey participation declined in 2023, Leapfrog's licensing revenue did too. SOF ¶ 25.

Leapfrog's own records show it recognized the decline in Survey participation as a serious business problem. A December 2024 "Long Range Strategic Intent" document described increasing Survey participation as a critical strategy to grow revenues. SOF ¶ 22; OSOF ¶ 28-29. And a 2024 Board update candidly identified Leapfrog's focus as "growing revenues," explaining that "improving patient safety [wa]s not central" at that time. SOF ¶ 23. Expert Panel member Dr. Patrick Romano confirmed that penalizing hospitals that decline to participate was "a simple business decision," because "Leapfrog's data are not valuable if participation is low." SOF ¶¶ 20, 38; OSOF ¶ 29. CEO Binder likewise recognized that the methodology change would provide "a major incentive" for hospitals to respond to the Survey. SOF ¶ 39.

B. The Fall 2024 Grade Methodology Was Designed To Penalize And Coerce Nonparticipants, Not Measure Safety

In early 2024, after revenue dropped, Leapfrog internally adopted a "strategic objective" to "penaliz[e] [Survey] nonparticipants." SOF ¶ 30; OSOF ¶ 29. Leapfrog says each Safety Grade uses "up to 22 national patient safety measures," derived from participating hospitals' Survey responses, Centers for Medicare and Medicaid Services ("CMS") data, and other "supplemental data source[s]." OSOF ¶¶ 25, 43. Twelve of these measures depend on data self-reported by the hospital through the Hospital Survey. For non-participants in the Survey (592 hospitals in Spring 2025), Leapfrog uses alternative methods for those measures: it substitutes CMS data for five, throws out three, and applies its "imputation model" to assign values to the remaining four: Computerized Physician Order Entry, Bar-Code Medication Administration, ICU Physician Staffing, and Hand Hygiene (the "Four Measures"). SOF ¶ 13-15. Leapfrog's methodology *automatically* assigns the *lowest score* available on the Four Measures to non-participating hospitals like the Community Hospitals. SOF ¶ 15; OSOF ¶ 29. Yet Leapfrog has continued to tell the public that its Safety Grades reflect "how well a hospital does on safety"—omitting that many such Grades are arbitrarily and punitively assigned to support Leapfrog's own commercial purposes. SOF ¶¶ 45-47.

In prior years, Leapfrog had imputed values for missing measures by drawing on alternative data sources, historical Survey results, or peer averages—external data sources it believed offered a reliable proxy for the hospitals' true safety. OSOF ¶ 23. The new methodology, by contrast, automatically and punitively assigns the lowest possible score on the Four Measures to every hospital that declines to complete the Survey, regardless of actual performance. OSOF ¶¶ 29. These low scores resulted in artificially low overall Safety Grades for nonparticipating hospitals.

Leapfrog's full Expert Panel never approved that change: The slideshow presentation, video recording, transcript, and draft minutes from the relevant April 2024 meeting all confirm no discussion or vote occurred. SOF ¶¶ 28, 46; ECF 88-84 (Austin) at 144:8-145:1. *After* the meeting, Leapfrog staff internally proposed the "drastic" idea of assigning nonparticipating hospitals the lowest scores on key measures. CH-ASOF ¶ 87; *see also* SOF ¶ 29. Only a month later did a member of the team run by Leapfrog science advisor Dr. Matthew Austin circulate notes stating—contrary to every contemporaneous record—that the Expert Panel had discussed and supported the change at the April 2024 meeting. *See* CH-ASOF ¶¶ 88-89. Meanwhile, Leapfrog's witnesses internally acknowledged the "[d]rastic" methodology change was "arbitrar[y]," "random," and "not accuracy" driven. SOF ¶¶ 29, 34, 38. And Dr. Austin admitted that the "imputation model" was

never peer-reviewed. SOF ¶ 45; ECF 88-84 (Austin) at 306:15-17. Externally, though, Leapfrog continued telling the public that its Safety Grades are based on a "peer-reviewed" methodology "calculated" by "top patient safety experts under the guidance of a National Expert Panel," and reflect "how well a hospital does on safety." SOF ¶¶ 45-47.

Leapfrog's internal communications confirm the redesign was about revenue, not rigor. Dr. Romano testified that the changes "achieve[d] [the] strategic objective of penalizing nonparticipants." SOF ¶ 30. And Alexandra Campione, the program analyst who helped implement the change, "completely agree[d]." SOF ¶ 30. Leapfrog achieved that objective: Each Community Hospital, for example, saw its Safety Grade fall by at least one letter by Spring 2025—some from "B" or "C" to "D" or "F"—despite no change in actual safety performance. SOF ¶¶ 49-50.

C. Leapfrog's Public Messaging Misleads Consumers

From the homepage of Leapfrog's website, consumers can navigate directly to an "About the Grades" webpage describing the methodology. That page includes several unqualified representations about the Grades. *First*, Leapfrog claims that a "Safety Grade is the gold standard measure of patient safety" and "represent[s] a hospital's overall performance in keeping patients safe from preventable harm and medical errors." SOF ¶ 48. But Leapfrog's chief science advisor, Dr. Austin, admitted that Leapfrog has not "conducted any analysis" supporting this statement. SOF ¶ 48. *Second*, Leapfrog claims that "where a hospital's information is not available for a certain measure, Leapfrog uses a supplemental data source." But Leapfrog uses no "supplemental data source[s]" for non-participants lacking recent historical scores. OSOF ¶ 43. *Third*, Leapfrog says "[a] hospital must have enough safety data available to our experts to issue them a letter grade. Hospitals missing more than **six** process measures … are not graded." SOF ¶ 17. But Leapfrog graded the Community Hospitals despite missing data for seven measures—filling the gaps with the lowest-possible "imputed" scores on the Four Measures. SOF ¶¶ 11-16, 34-36. *Fourth*, Leapfrog says its "Safety Grade methodology has been peer reviewed," which is false. SOF ¶ 45.

Leapfrog's webpage for each specific hospital amplifies these representations. It displays the hospital's overall letter grade and, below, depicts the hospital's score on the different measures. SOF ¶ 40. For each measure, Leapfrog includes a "gas-gauge" graphic indicating hospital performance. *Id.* There, Leapfrog displays red bars and "Worse Than Average" indicators for three of the imputed measures for each of the Community Hospitals, visually implying real safety data where none exists. SOF ¶¶ 14-16, 40-42, 44. The site shows these red, low-score bars in parallel

with a measure labeled "Declined to Report"—falsely suggesting hospitals declined to report data for only one measure and performed poorly on the other "imputed" measures depicted. SOF ¶ 40.

SOF ¶ 40. (red circle emphases added). But the Community Hospitals did not provide data for *any* circled measure. *E.g.*, SOF ¶¶ 14-16, 44, 49. A footnote—visible only after scrolling—further states "a score was assigned to reflect the lack of information available." SOF ¶ 42; OSOF ¶¶ 30, 38. Leapfrog's own staff recognized "the public may misinterpret the assigned measure scores" and believe they reflect estimated or neutral calculations, not an automatic penalty. SOF ¶ 33. Nevertheless, Leapfrog never amended the disclaimer to reveal that nonparticipants automatically receive *the lowest possible score*. To the contrary, another disclaimer on the same pages falsely says Leapfrog "scores hospitals on their overall performance in keeping patients safe." RSOF ¶ 6.

The only place on its website that Leapfrog hints at the consequence of nonparticipation on Grades is a 28-page "Scoring Methodology" document. To view the imputation discussion, users must click through two small hyperlinks on separate pages, then scroll to page 15 of that document. SOF ¶ 11; CH-ASOF ¶¶ 90-92. Only about *three percent* of those who have visited the Community Hospitals' Safety Grade pages even downloaded that document, and CEO Binder conceded that it "is not that accessible to the average layman." RSOF ¶ 7.

D. Leapfrog's False Safety Grades Cause Concrete And Ongoing Harm

Leapfrog's false Safety Grades have inflicted serious reputational harms upon the Community Hospitals. Each Hospital's CEO testified that patients, physicians, and insurers reacted immediately to the failing Grades. Patients canceled surgeries and diverted to competitors. SOF ¶¶ 56-61. Physicians sought privileges elsewhere, and an insurer questioned the Hospitals' safety. SOF ¶¶ 56-61. Births at St. Mary's fell roughly 2 percent, elective and emergency visits at Good Samaritan declined 5 percent, Palm Beach Gardens' emergency-room visits dropped 6 percent, West Boca's emergency-room volume decreased 17 percent year-over-year, and Delay experienced "a significant dip in admissions" when a viral video emerged recounting Leapfrog's Safety

Grades. SOF ¶ 57-60. The resulting economic harms have been substantial, given that the Community Hospitals typically generate nearly $2 billion of net revenue annually. CH-ASOF ¶ 98-99.

Behind the scenes, Leapfrog activated its media machine to maximize the impact of its Safety Grades. Leapfrog's Director of Communications, Lauren Bailey, confirmed that Leapfrog sought one "negative" story "at minimum every three days about Tenet [the Community Hospitals' parent company] or one of the plaintiff hospitals." CH-ASOF ¶ 100. Leapfrog's goal was to "hurt Tenet." SOF ¶ 53. Leapfrog even purchased ads ensuring that the Community Hospitals' failing Safety Grades appeared any time web users searched those Hospitals. CH-ASOF ¶ 101. The Safety Grades generated national and local headlines—including "Tenet Gets an F." SOF ¶ 52; ECF 88-32 at 5138. The amplified publicity reached more than a million consumers. SOF ¶¶ 51-53. In fact, Leapfrog continues to blast its Safety Grades to Florida consumers, most recently in support of its Fall 2025 Safety Grades released on November 13, 2025. CH-ASOF ¶ 102.

E. After This Suit Was Filed, Leapfrog Quietly Edits Its Website To Remove Some Deceptive Claims, Yet Replaces Them With Other Evasive Language

In the wake of this suit, Leapfrog has continued to disseminate its false Safety Grades. Leapfrog has also quietly edited its website to remove some of the statements challenged here, only to replace them with other evasive and misleading language. Specifically, some time after October 24, 2025, Leapfrog altered its "FAQ" page to remove the statement that a "Safety Grade reflects how well a hospital does on safety, not whether they complete the Leapfrog Hospital Survey." SOF ¶ 47; CH-ASOF ¶¶ 103-105. The page now says that "[r]eporting to the Leapfrog Hospital Survey doesn't automatically improve a hospital's Safety Grade"—which still deceptively omits the critical fact that nonparticipation *harms* Safety Grades. CH-ASOF ¶ 105. The FAQ page also no longer states that "if a hospital does not report to the Leapfrog Hospital Survey, other sources of data are used to calculate a Grade." SOF ¶ 44. Instead, it represents that "[m]ost of the data used to calculate the Grade comes from the Centers for Medicare and Medicaid Services (CMS), the federal agency that runs Medicare. If a hospital voluntarily reports to the Leapfrog Hospital Survey, some of that data is used to calculate a Safety Grade." CH-ASOF ¶¶ 106-108. Again, however, this text does not disclose that Leapfrog simply assigns low scores to nonparticipants based on no data. Leapfrog also removed its claim that "patients are twice as likely to die of a preventable problem at a 'C,' 'D,' or 'F' hospital than an 'A' hospital," SOF ¶ 10, though its site elsewhere still claims that a 2019 Johns Hopkins analysis "found that D and F hospitals carry nearly twice the risk of mortality of A hospitals," CH-ASOF ¶ 111. To the Community Hospitals'

knowledge, Leapfrog has never informed the Court of these changes, which the Community Hospitals discovered only recently. Despite those changes, Leapfrog admitted (apparently incorrectly) in its statement of facts opposing the Community Hospitals' summary-judgment motion that each of the statements above continues to appear on Leapfrog's website. *See* R-PSOF ¶¶ 10, 44, 47.[1]

ARGUMENT

I. THE SAFETY GRADES ARE INDISPUTABLY DECEPTIVE AND ARBITRARY

The undisputed record shows that (1) Leapfrog's Safety Grades and associated representations are deceptive and misleading; (2) Leapfrog's "imputation" model is arbitrary, punitive, and unfair; (3) Leapfrog's deceptive and unfair practices have imposed concrete harm on consumers; and (4) Leapfrog has now engaged in selective post-litigation edits to its website, destroying any pretense that Leapfrog's status quo disclosures are "comprehensive," Mot. 10, 11, and "as transparent as possible," ECF 88-91 (Danforth) at 540:3-4. Because nothing in Leapfrog's own opposition, ECF 102, or its squabbles about expert testimony, ECF 111, creates a genuine dispute, it is the Community Hospitals—not Leapfrog—that are entitled to summary judgment.[2]

A. The Record Establishes Consumer Deception Beyond Any Genuine Dispute

Leapfrog cites *no* evidence disputing the falsity of its public statements about how its Safety Grades are calculated and what they represent; its lack of data for the Four Measures; the absence of Expert Panel approval of the new methodology; the lack of peer review of that methodology; or the concrete harms that Leapfrog's practices are inflicting on consumers.

1. Leapfrog Deceives Consumers Through Multiple False Claims

Leapfrog's effort to show that its representations are non-deceptive addresses everything *but* those representations. Mot. 10-13. The reason why is obvious: The concessions of Leapfrog and its witnesses inescapably show that Leapfrog's practices are deceptive as a matter of law.

First, Leapfrog falsely represents that "[t]he Hospital Safety Grade reflects how well a hospital does on safety, not whether they complete the Leapfrog Hospital Survey." SOF ¶ 47. Leapfrog's brief ignores this representation and does not defend it as true. In fact, uncontroverted evidence has proven it false as a matter of law, given that Leapfrog undisputedly assigns the lowest

[1] On November 24, the Community Hospitals received a generic email from a Leapfrog "help desk" email account discussing various changes to Leapfrog's *Survey*, none of which are relevant to this litigation. CH-ASOF ¶¶ 112-114.

[2] Leapfrog's Statement of Material Facts is replete with statements that are unsupported, *see* LF-SOF ¶¶ 6, 9, 15, 20, 23-24, 28, 31, 34-35, 38, 40-41, 43-46, 48, 50, 53, 58, 62, 69, 71-72, 78, 81, dependent on inadmissible hearsay, ¶¶ 1-7, 9-10, 14, 20, 34, 47, and/or vague or confusing, ¶¶ 4, 15, 17-20, 22, 28-32, 39.

score to non-participating hospitals on the Four Measures simply because they do not participate. SOF ¶ 15; OSOF ¶ 29. Indeed, Leapfrog has conceded that "[s]ome hospital[s'] Safety Grades *may feel negative effects* from receiving limited achievement scores"—*i.e.*, the scores assigned to non-participants. ECF 102 at 9 (emphasis added). And it is uncontroverted that each Community Hospital's Grade dropped by a full letter from Spring 2024 to Spring 2025. SOF ¶¶ 49-50.

Second, Leapfrog falsely claims that "[a] hospital must have enough safety data available for our experts to issue [it] a letter grade," so "[h]ospitals missing more than six process measures … are not graded." SOF ¶ 17. In reality, Leapfrog grades nonparticipants despite lacking data on *seven* measures. Leapfrog witnesses admitted as much. *See* SOF ¶ 13; ECF 88-88 (Campione) at 72:15-19 (agreeing "Leapfrog has no data for any of those seven measures if a hospital does not participate"). Leapfrog's *own Answer* admits the same—that Leapfrog "abandons three measures," uses imputation for four, and that imputation is how Leapfrog assigns "a value for a measure when [Leapfrog] *lacks any data pertaining to it.*" Answer ¶¶ 21-22 (emphasis added). That judicial admission is "beyond the power of evidence to controvert," *Cooper v. Meridian Yachts, Ltd.*, 575 F.3d 1151, 1178 (11th Cir. 2009), and thus places Leapfrog's deception beyond debate.

Third, Leapfrog falsely asserts that "[t]he Hospital Safety Grade uses a public, peer-reviewed methodology." R-PSOF ¶ 46. That is false, because the new imputation methodology implemented in Fall 2024 has *never been* peer-reviewed. Leapfrog's science advisor, Dr. Matthew Austin, admitted this. ECF 88-84 (Austin) at 306:15-17 ([Q:] "The imputation model, has that been peer reviewed?" [A:] "No."). Leapfrog elsewhere has admitted that concession. ECF 102 at 11. Unable to defend its actual representation to the public (that its Safety Grades use a peer-reviewed methodology), Leapfrog's motion now shifts to the claim that its Safety Grades are based on "peer-reviewed literation [*sic*] and subject matter expertise." Mot. 4 n.1. That is irrelevant. Leapfrog tells the public that its operative *methodology* is peer-reviewed—not that the methodology is based on *other* literature that purportedly was peer-reviewed.

Fourth, Leapfrog falsely claims through its "gas gauge" graphics that a "Hospital Performs … Worse Than Average" on the Four Measures. SOF ¶ 40. Leapfrog does this even though it is now uncontroverted that the failing gas-gauge visuals are based solely on imputation, SOF ¶¶ 35, 40, which rests on no underlying data, SOF ¶ 16. Leapfrog's Motion ignores the gauges, other than to mention two disclaimers found on the same pages (that a "hospital was asked to provide this information to the public, but did not," and that a "score was assigned to reflect the lack of

information available"). Mot. 4. Yet those disclaimers nowhere explain *how* Leapfrog "assigned" the scores—that it arbitrarily awarded "Limited Achievement" even though it has no supporting data. SOF ¶ 16; OSOF ¶¶ 38, 43. Moreover, Leapfrog's own Motion mentions (at 4), but then deceptively omits, the third relevant disclaimer on those webpages—which falsely asserts that Leapfrog "scores hospitals on their overall performance in keeping patients safe." RSOF ¶ 6.

Leapfrog's caselaw discussion (Mot. 10-12) is irrelevant. Leapfrog's website is not akin to a bottle of hand sanitizer that "clearly discloses" on the back which germs it kills. *Piescik v. CVS Pharmacy, Inc.*, 576 F. Supp. 3d 1125, 1133 (S.D. Fla. 2021). The one place Leapfrog purports to describe how its Safety Grades work (the Scoring Methodology document) requires clicking through various links; only about *three percent* of those who view the Community Hospitals' Safety Grades download the document; and that document concededly is "not that accessible to the average layman." RSOF ¶ 7. Nor is this a case about a "niche, specialty product" where users "would likely know more" than typical consumers about why Leapfrog's unqualified representations are false. *Moore v. Trader Joe's Co.*, 4 F.4th 874, 884 (9th Cir. 2021). Leapfrog markets its Grades as a way to "quickly assess" hospital safety, urges "[p]atients [to] always" rely on them, and indiscriminately blasts those Grades to the public. SOF ¶¶ 8-9, 51; *see also* SOF ¶ 52. Finally, this case has nothing to do with Yelp reviews—where unvetted third parties blow off steam about poor service. Leapfrog portrays itself as a singularly "trusted" and "transparent" source about where to receive care. SOF ¶ 5; OSOF ¶ 7. The notion that consumers treat Safety Grades like Yelp reviews is unevidenced and baseless. Thus, Leapfrog has not even attempted to identify evidence refuting its deception, and its cases simply confirm that Leapfrog *perpetrates* deception.

2. Leapfrog Misleads Patients, Physicians, Insurers, And Hospitals

a. Leapfrog's "consumer harm" argument is also wrong as a matter of law and, even if it were correct, is factually baseless. Leapfrog says FDUTPA embraces a "two-part" inquiry for deception claims, Mot. 10, so that a plaintiff must show a challenged practice is "likely to mislead" a reasonable consumer, but then must *also* show that the deception actually worked to some specific consumer's "detriment"—that is, a particular consumer "erroneously relied on the Safety Grades," and then suffered "specific damage," which Leapfrog defines as "adverse health outcomes" or being "charged an inflated fee," *id.* at 8, 9. Leapfrog further suggests that even if FDUTPA embraces a "likelihood" standard at the *pleading* stage, the burden shifts to demonstrate *actual* consumer reliance and harm whenever it comes to obtaining an injunction. *See id.* at 9-10.

Those assertions have no basis in FDUTPA's plain text or Florida precedent. Section 501.211(1) of the statute specifically provides that a plaintiff can enjoin a defendant who is "likely to violate" FDUTPA. Fla. Stat. § 501.211(1). That language would be meaningless if plaintiffs were required to show that individual consumers *already* had actually relied on, and been injured by, a deceptive representation; the violation by then would be consummated, not merely "likely." Leapfrog's contrary reading makes no practical sense and would neuter FDUTPA's "remedial" scheme "to protect consumers." *Fonte v. AT&T Wireless Servs., Inc.*, 903 So. 2d 1019, 1024 (Fla. 4th DCA 2005). If Leapfrog were correct, courts could never enjoin new misrepresentations, no matter how harmful, until an individual consumer actually suffered injury. For example, a snake-oil salesman could offer free samples of a "life extending elixir" in fact filled with poison, yet no one (according to Leapfrog) could enjoin that misrepresentation until a consumer dropped dead. Leapfrog never explains why the Florida Legislature would have drafted the statute to contain that remedial loophole—presumably because the Legislature in fact wrote the opposite.

That is also why the Florida Supreme Court, the "true and final arbiter" of Florida law, *In re Cassell*, 688 F.3d 1291, 1292 (11th Cir. 2012), adopted the *opposite* reading of Leapfrog's in *PNR, Inc. v. Beacon Property Management, Inc.*, 842 So. 2d 773, 777 (Fla. 2003). There—after a full-blown jury trial, not merely a decision on the pleadings—that court expressly endorsed the legal standard set out in *Millennium Communications & Fulfillment, Inc. v. Office of the Attorney General*, 761 So. 2d 1256, 1263 (Fla. 3d DCA 2000). *Millennium Communications*, in turn, made clear that FDUTPA's standard is the "Federal Trade Commission standard for deceptive advertising," 761 So. 2d at 1263, which merely requires "probable, not possible, deception," and "deceptions *that are likely to cause injury* to a reasonable relying consumer," *id.* (emphasis added). For that reason, *actual* "reliance by an individual consumer is not necessary in the context of FDUTPA," *Turner Greenberg Assocs., Inc. v. Pathman*, 885 So. 2d 1004, 1009 (Fla. 4th DCA 2004), and thus "[a] likelihood of consumer confusion is a sufficient basis for injunctive relief" under the statute, *Ghostbed, Inc. v. Casper Sleep, Inc.*, 2016 WL 4145909, at *3 (S.D. Fla. July 19, 2016). That is exactly how the FTC Act (which FDUTPA tracks) also functions: There is no requirement to show *actual* individualized reliance and harm.[3]

[3] *See, e.g., FTC v. Pointbreak Media, LLC*, 376 F. Supp. 3d 1257, 1282 (S.D. Fla. 2019) ("[T]he FTC need only show that the representation had 'a tendency to deceive,' as 'proof of actual consumer deception is unnecessary.'"); *FTC v. Fylah Tec LLC*, 2018 WL 3656474, at *7 (M.D. Fla. Aug. 2, 2018) ("[I]t is not necessary for the FTC to show actual reliance by each individual consumer.").

Leapfrog's principal response is to cite *Novo Nordisk, Inc. v. Brooksville Pharmaceuticals, Inc.*, 785 F. Supp. 3d 1123 (M.D. Fla. 2025), but that decision is much too flimsy a basis on which to overhaul Florida's entire consumer-protection regime. The decision's FDUTPA analysis is vacated, "*dicta*," and never confronted the Community Hospitals' arguments above. *Novo Nordisk, Inc. v. Brooksville Pharms., Inc.*, 2025 WL 2306505, at *2, *4 (M.D. Fla. June 30, 2025); *United States v. Sigma Int'l, Inc.*, 300 F.3d 1278, 1280 (11th Cir. 2002) (vacated decisions "are officially gone" and "have no legal effect whatever"). And the decision is wholly inapposite. There, Novo Nordisk (the maker of a brand-name drug) sued Brooksville (the maker of a generic version) on the theory that the generic was impure—even though sales of the generic were FDA-authorized and the purported "impurities" in the generic were "within Novo Nordisk's own drug product specifications." *Novo Nordisk, Inc.*, 785 F. Supp. 3d at 1129, 1131. Novo Nordisk's claim thus hinged entirely on the "hypothetical possibility of some future injury to Florida consumers based on [the] impurities," *id.* at 1146—not a practice inflicting deception upon consumers in the here-and-now. It thus has nothing to do with Leapfrog's *ongoing* deception of consumers.

Leapfrog's other cases are similarly misdescribed. Leapfrog selectively quotes the Eleventh Circuit's decision in *Ounjian v. Globoforce, Inc.*, 89 F.4th 852, 861 (11th Cir. 2023), but ignores its clear statement that liability turns on whether there were "deceptive or unfair actions in the conduct of trade or commerce that injured *or were likely to injure* consumers." *Id.* (emphasis added). That accords with the Eleventh Circuit's recognition that FDUTPA liability does "not" hinge on whether consumers "actually relied on the illegal misrepresentation." *Carriuolo v. Gen. Motors Co.*, 823 F.3d 977, 986 (11th Cir. 2016). Leapfrog also plucks stray lines from other cases that, in context, are not supportive. *Caribbean Cruise Line, Inc. v. Better Business Bureau*, for example, says plaintiffs must show "an injury or detriment to consumers," but does not purport to require individualized reliance or harm (beyond the deception itself). 169 So. 3d 164, 169 (Fla. 4th DCA 2015). Indeed, the opinion cited *PNR* for the controlling standard, *id.*, and *PNR*'s test asks whether deception is "likely to injure" consumers. *Supra* 11. *Stewart Agency, Inc. v. Arrigo Enterprises, Inc.*, 266 So. 3d 207, 214 (Fla. 4th DCA 2019), did not (and had no reason to) examine whether individualized actual reliance and harm are required because it simply found "no evidence" of "any misrepresentations." Finally, *CMR Construction & Roofing, LLC v. UCMS, LLC*, 2022 WL 3012298, at *5 (11th Cir. July 29, 2022), and *State Farm Mutual Automobile Insurance Co. v. At Home Auto Glass, LLC*, 2024 WL 4349246, at *5 (M.D. Fla. Sept. 30, 2024), also do not

purport to require individualized evidence of actual reliance and harm. The claims in those cases failed because the plaintiffs alleged only that *they* (a roofing company and an insurer, respectively) were "consumers," but failed to show that *they* consumed roofing and insurance services.

b. In any event, Leapfrog's argument is factually baseless even under its preferred standard. FDUTPA protects "consumers," a term that broadly includes any "individual," "business," "corporation," "or any other group or combination," Fla. Stat. § 501.203(7), at least when those entities are not themselves the "provider" of the challenged service (*i.e.*, the Grades), *State Farm Mut. Auto. Ins. Co.*, 2024 WL 4349246, at *5. Under that standard, the Community Hospitals have established (and at minimum have shown genuine disputes as to) multiple categories of consumers. Leapfrog's only response is to call (some of) that evidence "hearsay," Mot. 7, which is false.

First, patients were deceived into switching hospitals. The Community Hospitals' CEOs consistently testified to declining admissions in multiple categories of care shortly after Leapfrog disseminated the Grades throughout Florida. *See, e.g.*, OSOF ¶¶ 74, 77. That "temporal" proximity itself is "'powerful evidence'" of causation. *In re Stand 'N Seal Prods. Liab. Litig.*, 623 F. Supp. 2d 1355, 1374 (N.D. Ga. 2009). The Hospitals also put on evidence that "patients" were "voicing complaints about the hospital's low safety score." ECF 88-90 (Cazares) at 89:20-21. Those patient complaints are not offered for "the truth of the matter asserted," Fed. R. Evid. 801(c)(2) (*i.e.*, that the Hospitals in fact are unsafe), but instead show that Leapfrog deceived consumers into believing the Hospitals are unsafe. Thus, those patient complaints "are not hearsay." *Lincare Holdings Inc. v. Doxo, Inc.*, 2024 WL 865881, at *2 (M.D. Fla. Feb. 29, 2024) (collecting cases). And Leapfrog's assertion that the Community Hospitals must *also* show that those patients suffered "adverse health outcomes" at competitor institutions (Mot. 9) is false. Deceiving consumers into using a service violates FDUTPA even when consumers ultimately "were happy with" the service. *Latman v. Costa Cruise Lines, N.V.*, 758 So. 2d 699, 702 (Fla. 3d DCA 2000). *Second*, physicians were also harmed, as they chose to sign up with competitors after the Grades were released. SOF ¶¶ 57, 60. *Third*, a prominent insurer (Humana) was deceived into believing the Hospitals are unsafe, and thus sent letters to two Hospitals imploring them to address their "performance on safety measures." SOF ¶ 56, 60. Those letters likewise are not offered for the truth of the statements therein (that the Hospitals *in fact* need to address purportedly failing safety performance), but to show that Leapfrog deceived Humana into believing the Hospitals are unsafe. *Finally*, the Hospitals are themselves injured consumers of Leapfrog's Safety Grades. *See infra* 14. Despite

Leapfrog's claim that only patients are "consumers," Mot. 9, Leapfrog itself argues that hospitals likewise consume its products, *id.* at 14 (asserting that "hospitals," including "the [Community] Hospitals," use its "Survey"). That the Hospitals were not themselves deceived about their own quality of care is irrelevant, since "subjective reliance" is not required under FDUTPA. *Webber v. Exquire Deposition Servs., LLC*, 439 F. App'x 849, 851 (11th Cir. 2011) (per curiam).

B. Leapfrog's Arbitrary Penalties Are Unequivocally Unfair

Leapfrog's conduct is also indisputably unfair. Leapfrog's witnesses admitted that the new imputation methodology is an "arbitrar[y]" and "random" "penalty" imposed on non-participants—intended to "sound" "legitimate" despite lacking support in either data or peer review—the "purpose" of which is "not accuracy" but to provide "a major incentive to report to the Survey." SOF ¶¶ 16, 34, 38, 39. As Dr. Romano summed up Leapfrog's ploy, "It's just business, folks!" SOF ¶ 38. If *that* conduct is not unfair under FDUTPA, nothing is.

Leapfrog responds first by mischaracterizing the relevant legal inquiry. It claims that the newer, three-factor unfairness test is how unfairness is shown under the older test described in *PNR, Inc.*, 842 So. 2d at 777. *See* Mot. 13. That is false. The *PNR* test and the three-factor test are *two different tests* promulgated years apart by the FTC. *PNR*'s test derives from the FTC's 1964 policy statement—which is framed in the disjunctive ("… *or* [is] substantially injurious to consumers") and thus does not "definitively requir[e] consumer injury." *See SMS Audio, LLC*, 2017 WL 11631378, at *4. By contrast, the three-factor test is a "newer definition" from the FTC's 1980 policy statement. *Id.* Because *PNR*'s endorsement of the 1964 approach is "the latest statement of state law by the state supreme court," *World Harvest Church, Inc. v. Guideone Mut. Ins. Co.*, 586 F.3d 950, 957 (11th Cir. 2009), it controls. In any event, Leapfrog's conduct violates both tests.

Under *PNR*'s 1964 test, Leapfrog's conduct "offends established public policy" and is "oppressive" and "unscrupulous." *PNR, Inc.*, 842 So. 2d at 777. Leapfrog witnesses' own admissions establish that the Safety Grades are an "arbitrarily assign[ed]" "penalty" "based on a lack of data," the "purpose" of which "is not accuracy." SOF ¶¶ 16, 34, 38. Arbitrarily penalizing hospitals without supporting data to create "a major incentive to report to the Survey," SOF ¶ 39, is the sort of "deceptive and bullying conduct" that violates Florida public policy. *Marco Island Cable v. Comcast Cablevision of S., Inc.*, 312 F. App'x 211, 214 (11th Cir. 2009). That conduct is also "oppressive" because it imposes an illegitimate penalty for non-participation—particularly because it is tied to Leapfrog's own revenues. *See* R-PSOF ¶ 21 (conceding that "more organizations … using"

Leapfrog's data results in "increased revenues"). And it is "unscrupulous" because Leapfrog dishonestly represents how it calculates its Safety Grades and what they represent—publicly claiming that participation does not affect Grades, that Grades measure real-world performance, that the methodology is peer-reviewed, and that Leapfrog does not grade hospitals when it lacks sufficient data, SOF ¶¶ 17, 45, 47-48, 51, even though none of that is true.

For those reasons, Leapfrog's undisputed conduct is "unfair" as a matter of law under the Florida Supreme Court's test. That conclusion accords with a vast body of law applying the FTC Act, which FDUTPA tracks. The FTC has long held that "deceptive practices are always unfair." *In re Figgie Int'l, Inc.*, 107 F.T.C. 313, 373 n.5 (1986), *aff'd*, 817 F.2d 102 (4th Cir. 1987). And the Eleventh Circuit has recognized the same point. *Jeter v. Credit Bureau, Inc.*, 760 F.2d 1168, 1172 (11th Cir. 1985) ("An act or practice is … unfair … if it has the tendency or capacity to deceive."). Thus, the Community Hospitals—not Leapfrog—merit summary judgment.

Leapfrog's conduct is also unfair as a matter of law under the 1980 three-factor test.

First, Leapfrog claims there is no evidence of consumer injury, which is factually false, *see supra* 13-14, and that even if there were, those injuries are not "substantial," which is legally erroneous. Mot. 13. The reference to "substantial" injuries in the FTC's 1980 policy statement is merely intended to weed out "trivial" or "speculative" claims; for example, based on "[e]motional impact" or allegations that "the tastes or social beliefs" of "some viewers" were offended. *Porsche Cars N. Am., Inc. v. Diamond*, 140 So. 3d 1090, 1101 (Fla. 3d DCA 2014). By contrast, the same policy statement makes clear that businesses may *not* "withhol[d] … performance data" so as to leave consumers "with insufficient information for informed comparisons"—a tactic "properly banned as an unfair practice." *Id.* at 1102. Because Leapfrog deprives consumers of precisely those "informed comparisons," the deception it inflicts upon consumers is plainly "substantial."

Second, Leapfrog's claim that its practices have countervailing benefits is unsubstantiated. The relevant question is not whether Leapfrog's *Survey* in the abstract has some beneficial use, but whether its "unfair or deceptive *acts or practices*" *themselves*, Fla. Stat. § 501.204(1) (emphasis added), "produc[e]" the countervailing benefit, *SMS Audio, LLC*, 2017 WL 1163137, at *3. There is "no countervailing benefi[t]" to "intimidating, threatening, and coercing consumers." *FTC v. World Patent Mktg., Inc.*, 2017 WL 3508639, at *16 (S.D. Fla. Aug. 16, 2017). The closest Leapfrog comes to suggesting that its coercive *practices* pose a benefit is to suggest that hospitals actually "improve patient safety" and patients gain greater access to "patient safety data" from

increased participation. Mot. 14. But Leapfrog *does not even audit* virtually all of the data it receives, SOF ¶ 12; CH-ASOF ¶¶ 85-86, so has no way to say with confidence whether safety *actually* is improving, or whether, instead, hospitals are simply *reporting* better outcomes. Leapfrog thus failed to meet its burden to identify evidence showing a countervailing benefit.

Third, Leapfrog offers no evidence that consumers could reasonably avoid its practices. It simply ignores that hospitals are "consumers" under FDUTPA, *see supra* 13-14, and thus never explains how hospitals could reasonably avoid Survey participation when Leapfrog imposes a "penalty" for non-participation. SOF ¶ 38. Leapfrog instead claims that *patients* could reasonably avoid its deceptive practices, which is also false. Leapfrog runs a sophisticated media operation to ensure that its Safety Grades are widely publicized throughout Florida, SOF ¶ 51, and even purchases ads to "hurt" the Community Hospitals by ensuring their failing Grades appear whenever they are searched, SOF ¶ 53. All Leapfrog offers in response are disclaimers found in small print at the bottom of the Safety Grade pages or elsewhere on its site. Mot. 15. But Leapfrog cites no evidence showing that patients read or understand those inconspicuous disclaimers. And the disclaimers are irrelevant on their face. For example, if a patient were choosing between two equidistant hospitals (one an "A" and the other an "F"), she would not be "avoid[ing]" or "delay[ing]" medical care by visiting the "A" hospital—but she *would* have been deceived into believing the "F" hospital is an unsafe option. Mot. 15. Thus, the FTC's 1980 unfairness test is satisfied as well.

C. The Community Hospitals' Injuries Put Aggrievement Beyond Dispute

The Community Hospitals also satisfy FDUTPA's capacious "aggrieve[ment]" requirement. A plaintiff seeking injunctive relief need only show an identifiable, non-speculative injury, *Ahearn v. Mayo Clinic*, 180 So. 3d 165, 173 (Fla. 1st DCA 2015), which may include reputational harm and damage to "good will," ECF 41 at 8; *Wyndham Vacation Resorts, Inc. v. Timeshares Direct, Inc.*, 123 So. 3d 1149, 1152 (Fla. 5th DCA 2012); operational disruption; and "consumer confusion" regarding the "quality of service," *Colonial Van Lines, Inc. v. Colonial Moving & Storage, LLC*, 2020 WL 6700449, at *4 (S.D. Fla. Oct. 20, 2020).

The Community Hospitals' evidence easily clears that threshold. All Community Hospitals were subject to a media firestorm ignited by their "failing" Safety Grades. SOF ¶¶ 51-52. And all five CEOs testified to the same ensuing pattern: patient confusion, diverted procedures, insurer concern, and reputational injury amplified to over a million Florida consumers. *See* ECF 88-90 (Cazares) at 89:19-21 (Palm Beach CEO Cazares testifying that "patients" were "complaining

about the hospital's low safety score"); SOF ¶ 56 & OSOF ¶ 61 (Delray CEO Havericak testifying to reputational injury); ECF 88-53 (letter from Humana to Delray imploring hospital to address "performance on safety measures"); SOF ¶ 60 (decline in emergency-room admissions at West Boca after Grades were released); ECF 88-52 (similar Humana letter sent to West Boca); SOF ¶ 57 & OSOF ¶¶ 55-56 (noting Good Samaritan's declines in admissions, observation cases, and emergency-room visits; top surgeons got on staff at competitor); SOF ¶ 59 & OSOF ¶ 77 (decline in number of births, outpatient surgeries, and emergency admissions at St. Mary's).

Leapfrog's legal objections are baseless. None of that evidence is "hearsay"; it relies either on objective evidence within the CEOs' own knowledge or consists of statements showing confusion, not the truth of the matter asserted. *See supra* 13. Leapfrog's citation of *Stewart Agency, Inc. v. Arrigo Enterprises, Inc.*, 266 So. 3d at 207, is similarly misplaced. The *Stewart* plaintiff admitted the defendant's sales of defective airbags had *no impact* on its own sales. *Id.* at 211. Here, by contrast, operational impact is uncontroverted. Leapfrog also objects that the Community Hospitals' revenue did not decline. Mot. 17, which is irrelevant. Injunctions by definition do not require proof of damages, *see supra* 16, and a general increase in revenues does not negate the existence of discrete, cognizable harms like falling admissions for *some* procedures or resource diversion to handle complaints. Indeed, that a plaintiff "generated a net profit" "does not demonstrate that [it] suffered no harm." *Wyndham Vacation Ownership, Inc. v. Slattery, Sobel & Decamp, LLP*, 2024 WL 5703196, at *11 (M.D. Fla. Aug. 14, 2024); *Pals Grp., Inc. v. Quiskeya Trading Corp.*, 2017 WL 5598721, at *4 (S.D. Fla. Nov. 20, 2017) (no "contradiction" that plaintiff was "profitable" when it could "have earned *more* profits" absent defendant's wrongdoing).

II. LEAPFROG'S JURISDICTIONAL AND CONSTITUTIONAL DEFENSES FAIL

A. The Community Hospitals' Standing Is Self-Evident

Leapfrog's belated challenges to standing and the amount-in-controversy requirement each fail. "If there is a genuine issue of material fact as to whether the [Community Hospitals] have standing, summary judgment against them on standing grounds is inappropriate." *Fort Lauderdale Food Not Bombs v. City of Fort Lauderdale*, 11 F.4th 1266, 1286 (11th Cir. 2001).

Leapfrog has not come close to *disproving* a genuine issue, and the undisputed record in fact *confirms* the Community Hospitals' standing. *First*, reputational harms, diversion of resources, and loss of customers are all well-recognized injuries-in-fact—all of which will continue as Leapfrog continues to disseminate its false Safety Grades to the public. *TransUnion LLC v.*

Ramirez, 594 U.S. 413, 425 (2021); *Common Cause/Georgia v. Billups*, 554 F.3d 1340, 1350 (11th Cir. 2009); *Ferrero v. Associated Materials, Inc.*, 923 F.2d 1441, 1449 (11th Cir. 1991). *Second*, the undisputed record precludes any challenge to traceability. Insurer letters raising concerns specifically due to Leapfrog's Safety Grades, resource diversion to address complaints based on those Safety Grades, and newfound declines in admissions closely corresponding to the release of the Safety Grades are all harms directly traceable to Leapfrog. *Third*, redressability is easily established as well. An order providing that the Community Hospitals no longer may be included in Leapfrog's deceptive Safety Grades plainly would redress injuries flowing from those Grades.

Aside from its baseless "no harm" argument on injury-in-fact, Leapfrog appears to assert that the Community Hospitals' injury is self-inflicted because they could submit to the Survey and thus gain "control over the Four Imputed Measures." Mot. 18. But the Supreme Court has "never recognized a rule of this kind under Article III," *FEC v. Cruz*, 596 U.S. 289, 297 (2022), instead explaining that injuries "remai[n] fairly traceable" to unlawful conduct "even if the injury [is] in some sense … willingly incurred," *id.* Here, the Community Hospitals did not "willingly" embrace Leapfrog's deceptive aspersions, so the case for traceability is even stronger than it was in *Cruz*. Indeed, it is incoherent to say that a plaintiff lacks standing to challenge a practice as coercive simply because he could "submit to the very [act]" that "he complains" is coercive. *Williams v. Albemarle City Bd. of Educ.*, 508 F.2d 1242, 1244 (4th Cir. 1974).

B. The Amount-In-Controversy Requirement Is Plainly Satisfied

Leapfrog's objection to the amount-in-controversy requirement is also baseless. The amount in controversy is assessed when a suit is *filed*—not thereafter. *See PTA-FLA, Inc. v. ZTE USA, Inc.*, 844 F.3d 1299, 1306 (11th Cir. 2016). Here, the Community Hospitals plausibly pleaded over $75,000 in damages, ECF 1, which Leapfrog never questioned, ECF 39, so the content of later "testimony" and "documents," Mot. 18, is irrelevant. In any event, the "value" of injunctive relief here well exceeds $75,000. *See Cohen v. Off. Depot, Inc.*, 204 F.3d 1069, 1077 (11th Cir. 2000). The Community Hospitals typically earn around $2 *billion* in net revenue per year. CH-ASOF ¶ 98. It is thus a "reasonable inferenc[e]" that halting Leapfrog's deception would save them at least $75,000 in lost admissions and resource diversion. *Pretka v. Kolter City Plaza II, Inc.*, 608 F.3d 744, 754 (11th Cir. 2010). A hospital that typically earns $250 million annually, for example, plainly suffered at least a $75,000 loss from a *17% decline* in emergency admissions, CH-ASOF ¶¶ 96, 99, and such losses will continue until Leapfrog's deceptive and unfair conduct

is halted. Thus, even if the Court entertained Leapfrog's improper request to assess the amount in controversy based on the state of the case after its inception, that argument would fail anyway.

C. Leapfrog's Repackaged First Amendment Defense Fails

Leapfrog's purported "affirmative defense" of anti-SLAPP should also be rejected. Mot. 18. Leapfrog has established *none* of the elements of that defense: that the Community Hospitals' claims are "[1] without merit and [2] primarily because such person or entity has exercised [3] the constitutional right of free speech in connection with a public issue." Fla. Stat. § 768.295(3).

First, this suit is not "without merit," Fla. Stat. § 768.295(3), because the Community Hospitals are entitled to summary judgment, *see* ECF 86, 107, and because at minimum Leapfrog itself is *not* entitled to summary judgment. What in fact is without merit is Leapfrog's purported "affirmative defense" of anti-SLAPP, which is procedurally improper. "An affirmative defense is established only when a defendant *admits the essential facts* of a complaint and sets up other facts in justification or avoidance." *Wyndham Vacation Ownership, Inc. v. Square One Dev. Grp., Inc.*, 2022 WL 21374382, at *1, *4 (M.D. Fla. Feb. 2, 2022) (striking anti-SLAPP "affirmative defense"). Here Leapfrog at least purports to *dispute*—not admit—the essential facts of the Community Hospitals' case. *See* ECF 102. Leapfrog thus seeks summary judgment on a supposed "affirmative defense," Mot. 18, that was improperly asserted in the first place.

Second, Leapfrog does not even *attempt* to show that the Community Hospitals filed suit "primarily" to retaliate against Leapfrog's exercise of purported constitutional rights. Fla. Stat. § 768.295(3). The reason is obvious: The Community Hospitals filed this suit "primarily" (indeed, exclusively) in response to the operational and reputational harms Leapfrog's unlawful conduct is inflicting. Leapfrog musters *no* evidence showing a different (much less primary) purpose.

Third, this case does not implicate Leapfrog's asserted "right of free speech." Fla. Stat. § 768.295(3). Leapfrog says its statements implicate "matters of public concern," and thus the First Amendment. Mot. 19. That is wrong, as this Court has recognized. Leapfrog has no right to "mislead consumers" "about its methodology." ECF 41 at 6; *accord Caribbean Cruise Line, Inc.*, 169 So. 3d at 167 (false "representations" about "the methods [a company] employs, in conducting its own business," are not protected). Leapfrog's argument also fails on its own terms. Addressing a matter of purported "public concern" does not bar liability—it simply would require clear evidence that Leapfrog knew its representations are "false" or "reckless[ly] disregarded" the risk of falsity. *Hunt v. Liberty Lobby*, 720 F.2d 631, 642 (11th Cir. 1983); *see id.* at 645–46 (publisher "knowingly

chose language" open to false interpretation, despite "sufficient time" to confirm assertion's accuracy). Here, the Community Hospitals have shown that Leapfrog's personnel *admittedly* knew its methodology is "arbitrar[]y," "random," a "penalty," not peer-reviewed, and based on no data—readily establishing subjective knowledge of falsity. SOF ¶ 34, 38; *see also* OSOF ¶ 29. Leapfrog's claim that this suit would impose a "prior restraint," Mot. 19, is equally baseless. There is no constitutional prohibition on restricting future speech already adjudicated to be unlawful—which would be the case if the Community Hospitals are granted judgment. *See Pittsburgh Press Co. v. Pittsburgh Comm'n on Human Relations*, 413 U.S. 376, 391 (1973); *Lucero v. Trosch*, 121 F.3d 591, 601 (11th Cir. 1997). The First Amendment is thus no bar to relief.

D. Leapfrog's Post-Litigation Website Edits Do Not Affect Jurisdiction—And Only Further Confirm The Need For Relief

Finally, Leapfrog's last-minute effort to surgically alter its website only confirms the deceptive nature of its practices. While Leapfrog and its witnesses were boasting to this Court that Leapfrog's extant disclosures are "comprehensive," show "extraordinary transparency," Mot. 5, 10, and are "as transparent as possible," ECF 88-91 (Danforth) at 540:3, Leapfrog was quietly modifying some of the *same* representations. Those stealth edits squarely "impeac[h]" Leapfrog's "superlative" assessment of its pre-litigation disclosures—showing that Leapfrog in fact was *not* exhibiting the transparency it claimed. *Wood v. Morbark Indus., Inc.*, 70 F.3d 1201, 1208 (11th Cir. 1995). And those revisions pose no mootness obstacle to relief. Leapfrog's new language is equally slippery and avoids the real problems with the methodology; Leapfrog's *other* deceptive misstatements remain; the false Safety Grades themselves are still being propagated and imposing harm; and Leapfrog has not shown it is "absolutely clear" it will not reinstate the specific representations it modified. *Friends of the Earth, Inc. v. Laidlaw Env. Servs. (TOC)*, 528 U.S. 167, 189 (2000). To the contrary, it "vigorously defends" those same misrepresentations as lawful. *Parents Involved in Cmty. Schs. v. Seattle Sch. Dist. No. 1*, 551 U.S. 701, 719 (2007). In any event, it also admitted (inexplicably) that its withdrawn statements continue to be present on its website—which is binding for jurisdictional purposes. *See Eng'g Contractors Ass'n of S. Fla. Inc. v. Metro. Dade Cnty.*, 122 F.3d 895, 905 (11th Cir. 1997). Leapfrog's new and similarly evasive disclaimers merely confirm that Leapfrog will continue deceiving consumers while failing to address the core issue: a fabricated, punitive methodology and the alarmist "Safety Grades" it produces.

CONCLUSION

The Court should deny Leapfrog's motion for summary judgment.

Dated: November 26, 2025

Attorneys for The Leapfrog Group

PROPOSED FINDINGS OF FACT AND CONCLUSIONS OF LAW

This matter is set to come before the Court for bench trial on January 12, 2026 on Count I of Plaintiffs' Amended Complaint alleging violations of the Florida Deceptive Unfair Trade Practices Act ("FDUTPA") and Count II for Declaratory Judgment. (ECF No. 74). Defendant, The Leapfrog Group ("Leapfrog"), answered the Amended Complaint and served affirmative defenses, including but not limited to, Anti-SLAPP. (ECF No. 75).

Pursuant to this Court's scheduling order, Defendant hereby submits its Proposed Findings of Fact and Conclusions of Law. (ECF No. 36, ¶10). The Court hereby makes the following findings of fact and conclusions of law as to Count I and II of the Amended Complaint and Defendant's affirmative defense of Anti-SLAPP.

I. SUMMARY OF FINDINGS

1. The Court finds in favor of Defendant, The Leapfrog Group, on Count I.

2. The Court finds that there is no evidence of consumer harm, injury, or detriment caused by Leapfrog, its conduct or practices.

3. The Court also finds that Leapfrog's alleged acts and practices are not deceptive because the website provides transparent information and emphasized disclosures that eliminate the likelihood that a reasonable consumer acting under the circumstances would be deceived.

4. The Court also finds that Leapfrog's alleged acts and practices are not unfair because there is no evidence of substantial consumer harm, the public benefit outweighs any purported consumer harm, and the alleged consumer harm can otherwise be reasonably avoided.

5. The Court also finds that in light of Leapfrog publishing all of its information to the public, including but not limited to its Safety Grades, underlying scored data and methodology, free Survey and other fee tools, Leapfrog's acts and practices do not offend public policy and are not immoral, unethical, oppressive, unscrupulous nor substantially injurious to consumers.

6. The Court also finds that there is no evidence that Plaintiffs were, are or will be aggrieved by Leapfrog, its conduct or practices.

7. Good Samaritan Medical Center is not entitled to injunctive nor declaratory relief.

8. Delray Medical Center is not entitled to injunctive nor declaratory relief.

9. Palm Beach Gardens Medical Center is not entitled to injunctive nor declaratory relief.

10. St. Mary's Medical Center is not entitled to injunctive nor declaratory relief.

11. West Boca Medical Center is not entitled to injunctive nor declaratory relief.

12. The Court finds in favor of Defendant, The Leapfrog Group, on Count II.

13. The Court finds in favor of Defendant, The Leapfrog Group, on its affirmative defense under Florida's Anti-SLAPP statute.

14. Defendant, The Leapfrog Group, is awarded reasonable attorney's fees as the prevailing party on Count I. Fla. Stat. § 501.2105(1).

15. Defendant, The Leapfrog Group, is awarded reasonable attorney's fees as the prevailing party on its affirmative defense for Anti-SLAPP. Fla. Stat. Ann. § 768.295(4).

II. FINDINGS OF FACT

A. PARTIES

16. The Leapfrog Group is an independent, national not-for-profit organization that files annual 1099 tax forms.

17. Leapfrog is incorporated in the District of Columbia, with its principal place of business at 1775 K Street, NW, Suite 400, Washington, D.C. 20006.

18. Delray is incorporated in Florida, with its principal place of business at 5352 Linton Blvd., Delray Beach, Florida 33484. (ECF No. 74 at ¶7).

19. Delray is an accredited hospital with 536 licensed beds. (ECF No. 129 at ¶2).

20. Good Samaritan is incorporated in Florida, with its principal place of business at 1309 N. Flagler Dr., West Palm Beach, Florida 33401. (ECF No. 74 at ¶8).

21. Good Samaritan is an accredited hospital with 333 licensed beds. (ECF No. 129 at ¶6).

22. Palm Beach Gardens is incorporated in Florida, with its principal place of business at 3360 Burns Road, Palm Beach Gardens, Florida 33410. (ECF No. 74 at ¶9).

23. Palm Beach Gardens is an accredited hospital with 199 licensed beds. (ECF No. 129 at ¶9).

24. St. Mary's is incorporated in Florida, with its principal place of business at 901 45th St., West Palm Beach, Florida 33407. (ECF No. 74 at ¶10).

25. St. Mary's is an accredited hospital with 413 licensed beds. (ECF No. 129 at ¶12).

26. West Boca is incorporated in Florida, with its principal place of business at 21644 State Road 7, Boca Raton, Florida 33428. (ECF No. 74 at ¶11).

27. West Boca is an accredited hospital with 195 licensed beds. (ECF No. 129 at ¶15).

B. JURISDICTION

28. The Court has jurisdiction under 28 U.S.C. § 1332. (ECF No. 75 at ¶13).

C. SUMMARY OF ALLEGATIONS

29. Plaintiffs allege Leapfrog solicits healthcare information and then publishes it to consumers while commissioning "deceptive acts and unfair practices against Plaintiffs and the residents of Florida." (ECF No. 74 at ¶90).

30. Specifically, Plaintiffs claim Leapfrog made misleading representations about its Hospital Safety Grades and underlying scoring methodology. (*Id.* at ¶91).

31. Plaintiffs allege Leapfrog accepts money in exchange for "intentionally jiggering its Hospital Safety Grades to benefit the hospitals." (*Id.* at ¶92).

32. Plaintiffs allege Florida consumers harmed by being misled regarding the quality and safety of the hospitals because consumers make decisions about their healthcare that are against their best interests. (*Id.* at ¶99-100).

33. Florida consumers are allegedly harmed by "increasing the incident-to-hospital time" and "causing patients to choose hospitals that do not provide the types of critical care the Plaintiff Hospitals provide." (*Id.* at ¶100).

34. Plaintiffs are allegedly aggrieved due to weakened relationships with physicians, drop in-patient admissions, and complaints from patients. (*Id.* at ¶59-82).

D. FACTUAL BACKGROUND OF LEAPFROG

i. Leapfrog History

35. Leapfrog is a is a not-for-profit organization that was founded in 2000 by a group of employers who came together to address critical, complex public safety issue "severe dysfunction in the health care marketplace." (*See,* Leapfrog History webpage, https://www.leapfroggroup.org/about/history); (Joint Pre-Trial Stipulation, ECF No. 129 at ¶ 19); (ECF No. 101-3, Binder, at 29:2-31:1, 34:9-34:17); (ECF No. 101-4, Danforth, at 35:1-36:1).

36. It is Leapfrog's mission to "trigger giant leaps forward in the safety, quality and affordability of U.S. health care by using transparency to support informed health care decisions and promote high-value care." (*See,* Leapfrog "Mission and Vision" webpage, https://www.leapfroggroup.org/about/mission-and-vision).

37. Leapfrog utilizes 13 separate and distinct expert panels to review and provide guidance on respective sections of the Leapfrog Hospital Survey ("Survey") and a separate expert

panel presides over Leapfrog's Hospital Safety Grades ("Safety Grades"). (*See*, Leapfrog Expert Panelist webpage, https://www.leapfroggroup.org/about/expert-panelists); (Joint Pre-Trial Stipulation, ECF No. 129 at ¶ 19); (ECF No. 101-3, Binder, at 29:2-31:1, 34:9-34:17); (ECF No. 101-4, Danforth, at 35:1-36:1).

38. Dr. Matt Austin of the Armstrong Institute at Johns Hopkins works with Leapfrog through a grant to assist in developing the Survey and Safety Grades. (ECF No. 133-2, Dr. Austin Dep., at 39:7-42:15).

ii. Leapfrog Hospital Survey

39. In 2001, Leapfrog launched its Survey. (*See*, Joint Pre-Trial Stipulation, ECF No. 129 at ¶30).

40. The Survey was developed in consultation with leading researchers and clinicians, and more than 2,400 hospitals participate in the Survey regardless of their eligibility to receive a Safety Grade. (ECF No. 101-3, Binder, at 74:2-4, 287:1-5, 415:15-19); (ECF No. 101-4, Danforth, at 190:1-13, 513:9-14, 550:3-6).

41. The Survey is free, publicly available on Leapfrog's website, and hospital participation is voluntary. (ECF No. 129 at ¶30); (JX-042.0, Survey).

42. The Leapfrog Survey was created to "collect and transparently report hospital and ASC performance, empowering purchasers to find the highest-value care and giving consumers the lifesaving information they need to make informed decisions." (*See*, "Innovators for Leapfrog" Launching webpage, https://www.leapfroggroup.org/news-events/%E2%80%9Cinnovators-leapfrog%E2%80%9D-launching-fuel-investment-patient-safety).

43. Leapfrog reviews its Survey annually and publishes proposed changes to the Survey on its website for public comment before the change is finalized. (ECF No. 101-4, Danforth, at 193:15-195:6, 365:6-365:13); ECF No. 101-3, Binder, at 368:368:2-16).

44. The Survey consists of the following nine sections: Patient Rights and Ethics; Medication Safety; Adult and Pediatric Complex Surgery; Maternity Care; Physician and Nurse Staffing; Patient Safety Practices; Managing Serious Errors; Pediatric Care; and Outpatient Procedures. (ECF No. 101-4, Danforth at 190:4-13); (ECF No. 129, Schedule C, JX-042 at PBHN0000002652-PBHN0000002658).

45. Each section of the Survey includes various measures that are scored individually, but the Survey, as a whole, is not given an overall composite score. (*See e.g.*, https://ratings.leapfroggroup.org/facility/details/10-0253/jupiter-medical-center-jupiter-fl).

46. Leapfrog's scoring methodology for the Hospital Survey is published on its website for consumers to view and download as a pdf. (ECF No. 129 at ¶71); (ECF No. 129, Schedule C, JX-034.0; JX-041.1).

47. Consumers can access published findings from the Leapfrog Hospital Survey by hospital, location or other guided searches on https://ratings.leapfroggroup.org/. (*See*, Amended Complaint, ECF No. 74 at ¶54-55).

48. Hospitals, including the Plaintiffs, use the Survey as a benchmarking tool to monitor and improve performance on various measures. (ECF No. 129 at DX-557, DX-559, DX-564, DX-644).

iii. Leapfrog Hospital Safety Grade

49. In 2012, Leapfrog launched its Hospital Safety Grades, a separate and distinct program from the Survey. (ECF No. 101-4, Danforth, 55:6-8).

50. Safety Grades are assigned to eligible general acute-care hospitals across the United States by using a Scoring Methodology. (JX-014.1 at LEAPFROG00036147); (ECF No. 101-3, Binder, at 381:5-20).

51. Leapfrog's Safety Grade methodology is focused on providing a Safety Grade to all eligible hospitals, regardless of whether the hospital voluntarily reports to the Leapfrog Survey.

52. Leapfrog's rationale for grading all hospitals is two-fold: (1) the mission of Leapfrog is to provide a public service in make hospital safety performance data publicly available to all purchasers regardless of whether a hospital refuses to voluntarily provide that data; and (2) the use of Leapfrog's Safety Grade z-score methodology. (ECF No. 101-4, Danforth, at 354:22-355:5).

53. Pursuant to Leapfrog's eligibility requirements, hospitals that are ineligible for Safety Grades include, but are not limited to, critical access hospitals, rural emergency hospitals, long term care and rehab facilities, mental health facilities, federal hospitals, some specialty hospitals, free standing pediatric hospitals, hospitals in U.S. territories, and hospitals that are missing scores for more than six (6) process/structural measures, or more than five (5) outcome measures or missing PSI 90. (ECF No. 129 at JX-014.1 at LEAPFROG00036146).

54. Eligible hospitals receive either an A, B, C, D, or F Safety Grade twice a year, once in the spring and fall. (ECF No. 129 at ¶40).

55. The Safety Grades, measure scores, and the underlying Scoring Methodology are all publicly available for consumers on Leapfrog's website hospitalsafetygrade.org. (ECF No. 129 at ¶¶ 37, 51-54, 67-71).

56. Leapfrog reviews its Scoring Methodology annually and publishes proposed changes to the Scoring Methodology/Safety Grades on its website before the change is finalized.

57. Leapfrog's Scoring Methodology inevitable changes as measures are either developed or retired from CMS and as the healthcare field evolves. (ECF No. 101-4, Danforth at 190:9-13, 300:9-301:22).

58. All hospitals are assigned Safety Grades by using the most recent Scoring Methodology. (ECF No. 129 at ¶ 35).

59. Since Fall 2021, the Safety Grade is made up of 22 measures in total, 12 process/structural measures and 10 outcome measures. (ECF No. 129 at ¶¶ 73-76).

60. The 12 process and 10 outcome measures each make up 50% of the Safety Grade composite score. (ECF No. 129 at JX-014.1 at LEAPFROG00036147).

61. Since the inception of the Safety Grades, the underlying Scoring Methodology uses "primary" and "secondary" data sources. (ECF No. 129 at ¶¶ 76, 78); (ECF No. 101-4, Danforth at 89:2-20).

62. Secondary data sources are used if a hospital chooses not to respond to the Leapfrog Survey. (ECF No. 101-4, Danforth, at 97:21:98-4).

63. Secondary data is sources have changed over time as Leapfrog has either gained or lost access to publicly available data for hospitals. (ECF No. 101-4, Danforth at 98:5-100:8, 101:1-18, 105:20-106:12).

64. Since the inception of the Safety Grade in 2012, Leapfrog has discussed and considered utilizing an imputation method in its Scoring Methodology to solve for missing data. (*See generally*, ECF No. 129 at DX-401); (ECF 88-97, Romano, at 45:13-46:6); (ECF No. 129 at JX-001 at LEAPFROG3088994- LEAPFROG3088995).

65. Leapfrog has historically used an imputation method in the Scoring Methodology to solve for missing data, but the cause of "missing data" has changed over time as Leapfrog either gained or lost access to publicly available data for hospitals. (ECF No. 129, JX-001 at

LEAPFROG3088994- LEAPFROG3088995); (Leapfrog's Deposition Designations, ECF No. 133-2, Dr. Matt Austin at 81:10-83:16, 115:6-121:5, 86:19-87:19); (ECF No. 129, PX-202.0 at LEAPFROG3100668); (ECF No. 101-4, Danforth at 236:18-237:15).

66. For example, from 2012 to 2020, if a hospital chose not to respond to the Survey, Leapfrog used American Hospital Association ("AHA") data as its secondary source to impute a score based on an analysis comparing hospital performance on the Leapfrog Survey and AHA surveys. (ECF No. 129, PX-202.0 at LEAPFROG3100668, LEAPFROG3100670); (DX-401 at LEAPFROG3046954).

67. However, in 2020, Leapfrog lost access to AHA data and explored alternative imputation methods for secondary data sources on the applicable measures. (ECF No. 101-4, Danforth at 236:18-237:15).

68. In Spring 2021, Leapfrog implemented a two-step imputation method as its secondary data source for three of the 22 process/structural measures: Computerized Physician Order Entry ("CPOE"), Bar Code Medication Administration ("BCMA"), and ICU Physician Staffing ("IPS"). (ECF No. 129, Schedule C, DX-427).

69. In Fall 2022, Leapfrog implemented the same two-step imputation method as its secondary data source for the Hand Hygiene measure.

70. Thus, Leapfrog has used a two-step imputation method as its secondary data source for four of the 22 process/structural measures from Fall 2022 to the present: CPOE, BCMA, IPS, and Hand Hygiene (collectively, the "Four Imputed Measures").

1. Spring 2024 Methodology

71. The Spring 2024 Scoring Methodology used 22 measures (12 process/structural and 10 outcome) to calculate the Spring 2024 Safety Grades. (ECF 129, JX-014.1 at LEAPFROG00036147- LEAPFROG00036149).

72. Ten of the 22 measures used data a hospital submitted to the Centers for Medicare & Medicaid Services ("CMS") as the primary data source. (*Id.* at LEAPFROG00036148-LEAPFROG00036149).

73. Twelve of the 22 measures used a hospital's most recent Leapfrog Survey data as the primary data source; however, five of those 12 measures is a hospital's most up to date National Healthcare Safety Network ("NHSN") data that is otherwise publicly available through CMS. (*Id.* at LEAPFROG00036155, LEAPFROG00036157).

74. Thus, only 7 of the 22 measures used in the Spring 2024 Safety Grade relied on Survey data ("Survey Measures") and the other 15 measures used publicly available CMS data. (*Id.* at LEAPFROG00036147- LEAPFROG00036149).

75. The seven "Survey Measures" were: (1) CPOE, (2) BCMA, (3) IPS, (4) Hand Hygiene, (5) Safe Practice 1, (6) Safe Practice 2, and (7) Total Nursing Care Hours per Patient Day. (*Id.* at LEAPFROG00036147- LEAPFROG00036148).

76. If a hospital did not respond to the Survey, then Leapfrog did not consider three of the seven "Survey Measures" when calculating the Spring 2024 Safety Grade—Safe Practice 1: Culture of Leadership Structures and Systems, Safe Practice 2: Culture Measurement, Feedback & Intervention, and Total Nursing Care Hours per Patient Day—and historically Leapfrog has never imputed scores for these three "Survey Measures." *Id.* at LEAPFROG00036147-LEAPFROG00036148, LEAPFROG00036153- LEAPFROG00036154; (Plaintiffs' Deposition Designations, ECF No. 134-1, Matt Austin at 253:13-255:10).

77. Leapfrog used the two-step imputation model for the remaining four "Survey measures," which are the Four Imputed Measures: CPOE, BCMA, IPS, and Hand Hygiene. (ECF No. 129 at JX-014.1 at LEAPFROG00036157- LEAPFROG00036160).

78. The Four Imputed Measures were scored by using performance categories ("Achieved the Standard," "Considerable Achievement," "Some Achievement," and "Limited Achievement"). (*Id.* at LEAPFROG00036151- LEAPFROG00036152, LEAPFROG00036154).

79. Each performance category is associated with a measure score. (*Id.*).

80. Since the inception of the Safety Grade, the measure scores associated with each performance category have not changed. (ECF No. 101-4, Danforth Dep., at 412:11-20).

81. The performance categories and associated measure scores were determined by an expert panel in consideration of peer-reviewed literature and subject matter expertise. (ECF No. 101-4, Danforth Dep., at 257:15-259:21).

82. Under the Spring 2024 Scoring Methodology, in Step 1, if a non-responding hospital had a score assigned by Leapfrog in the previous four rounds of grades for CPOE, BMCA, IPS, and Hand Hygiene, excluding imputed scores, the hospital was assigned the most recent score on that measure in their current Safety Grade. (ECF No. 129 at ¶88).

83. If Step 1 was inapplicable, then in Step 2 for CPOE, BCMA, and Hand Hygiene, Leapfrog assigned the hospital to a cohort of similar hospitals using three or four hospital

characteristics obtained from the most recent CMS Impact File and the previous year's Survey. (ECF No. 129 at ¶89).

84. Under Step 2, Leapfrog then assigned the non-responding hospital the lower of the two possible mean scores based on the hospital's cohort's performance for CPOE, BCMA and Hand Hygiene. (ECF No. 129 at ¶89).

85. Under Step 2 for IPS, Leapfrog used the CMS Cost Report to determine whether a hospital had one or more medical, surgical, and/or pediatric ICU beds, and if so, the hospital was assigned the associated "Limited Achievement" score. (ECF No. 129 at ¶90).

2. The Proposed Fall 2024 Methodology Change

86. By Spring 2024, Leapfrog's monitoring and analysis of the cohort means indicated that hospitals who participated in the Survey were improving on the Four Imputed Measures.

87. Prior to Spring 2024, Hospitals that participated in the Survey complained to Leapfrog that hospitals who did not respond to the Survey were receiving an undeserved benefit by imputing the cohort means of hospitals who showed a commitment to patient safety and transparency by participating in the Survey for CPOE, BCMA, and Hand Hygiene. (ECF No. 101-4, Danforth at 315:1-316:4); (ECF No. 129, JX-008, at PBHN000018001).

88. Most of the cohort mean scores had crept up so high that hospitals who received Step 2 for CPOE, BCMA, and Hand Hygiene were receiving scores equivalent to "Achieved the Standard" or 100 out of 100 points. (*See generally*, ECF No. 129 at PX-204); (ECF No. 101-4, Danforth at 361:1-362:17); (ECF No. 133-2, Dr. Matt Austin at 117:17-118:21).

89. On April 12, 2024, Leapfrog went to its Hospital Safety Grade Expert Panel to propose and develop a solution to solve for this inequity. (ECF No. 129 at ¶ 91).

90. The Expert Panel confirmed there was no evidence to support imputing perfect or nearly perfect scores on the Four Imputed Measures for hospitals that do not respond to the Survey. (ECF No. 133-2, Austin Dep., at 192:17-193:12); (ECF No. 101-4, Danforth Dep., at 361:1-7).

91. Under the guidance of the Expert Panel, Leapfrog published the proposed changes to the Fall 2024 Scoring Methodology for public comment. (ECF No. 101-41).

92. Leapfrog received both positive and negative feedback regarding the change. (ECF No. 129 at JX-032).

93. Leapfrog published its final changes to the Fall 2024 Scoring Methodology, which included addressing the most common public comments or inquiries. (*See generally*, ECF No. 129 at PX-319); (PX-520.0).

94. Leapfrog extended the time for hospitals to submit a 2024 Survey in light of the changes. (ECF No. 129 at DX-464).

95. Under the guidance of the expert panel, Leapfrog implemented its Fall 2024 Scoring Methodology. (ECF No. 129 at DX-464).

96. No expert panelist contested the final changes to the Fall 2024 Scoring Methodology. (ECF No. 101-4, Danforth, at 69:20-70:15, 244:13-15).

97. The purpose of the Fall 2024 Scoring Methodology change was not to drive revenue nor to penalize hospitals. (ECF No. 101-4, Danforth, at 458:1-21, 568:1-20, 569:3-571:11).

3. Fall 2024 Scoring Methodology

98. The Fall 2024 Scoring Methodology encompassed two thoughtful, targeted changes.

99. First, under Step 1, if a non-responding hospital had a score assigned by Leapfrog in the previous two (rather than four) rounds of grades for CPOE, BMCA, IPS, and Hand Hygiene, excluding imputed scores, the hospital was assigned the most recent score on that measure in their current Safety Grade. (ECF No. 129 at ¶ 82).

100. Second, if Step 1 was inapplicable, then in Step 2 for CPOE, BCMA, and Hand Hygiene, hospitals were assigned the associated "Limited Achievement" score (like IPS under the Spring 2024 Scoring Methodology). (ECF No. 129 at ¶ 85).

101. Aside from these two targeted changes, eligibility, weighting, measures, and performance categories remained unchanged.

102. Leapfrog imputes "Limited Achievement" for the Four Imputed Measures because they are considered structural measures for which Leapfrog can determine the hospital has the structure in place, but is purposefully choosing not to be transparent with its data. (ECF 88-97, Romano Dep., at 120:17-121:22).

103. "Limited Achievement" scores account for and give credit to hospitals for having a CPOE and BCMA system, Hand Hygiene Policy, and ICU. (ECF No. 101-4, Danforth, at 256:1-257:20).

iv. Leapfrog Survey Website

104. Leapfrog owns and operates the website leapfroggroup.org. (ECF No. 129 at ¶45).

105. Consumers can navigate through https://www.leapfroggroup.org/ to access a hospital's Survey scores at https://ratings.leapfroggroup.org/ ("Survey Website).

106. On the Survey Website a consumer can search for a hospital by facility name, location, or a more targeted and guided search. (*See*, https://ratings.leapfroggroup.org/).

107. The Survey Website reflects a "hospital's progress" on "Leapfrog's standard" for each measure in its respective category, including patient safety, specialty care, and surgery. (*See e.g.*, https://ratings.leapfroggroup.org/facility/details/10-0253/jupiter-medical-center-jupiter-fl).

108. Every measure on the Survey Website provides a description of "Leapfrog's Standard." (*Id.*).

109. If a consumer searches for a hospital that did not respond to the Survey, the consumer is greeted with a red pop-up that indicates that hospital "DECLINED TO RESPOND" and an explanation stating "Thousands of hospitals nationwide report to the Leapfrog Hospital Survey to help patients and purchasers make better health care decisions. This hospital did not participate." (ECF No. 74 at ¶54); (*See e.g.*, https://ratings.leapfroggroup.org/facility/details/10-0268/west-boca-medical-center-boca-raton-fl).

110. After dismissing the pop up, the consumer can view each of the measures, but under "Hospital's Progress" it states "DECLINED TO RESPOND" in red. (ECF No. 74 at ¶55); (*See e.g.*, https://ratings.leapfroggroup.org/facility/details/10-0268/west-boca-medical-center-boca-raton-fl).

111. The Survey Website does not "rate" hospitals. (https://ratings.leapfroggroup.org/).

112. The Survey Website does not display Safety Grades. (ECF No. 129 at ¶48).

113. The Survey Website reflects a "hospital's progress" on "Leapfrog's standards" for measures that are not included in the Safety Grades. (*Id.*).

v. Leapfrog Hospital Safety Grade Website

114. Leapfrog owns and operates hospitalsafetygrade.org. (ECF No. 129 at ¶45).

115. Leapfrog publishes its Safety Grades on https://www.hospitalsafetygrade.org/ ("Safety Grade Website).

116. On the Safety Grade Website, consumers can search for a hospital by city, state, zip code, or hospital name. (*Id.* at ¶49); (ECF No. 129, Schedule B- Leapfrog Trial Exhibits at DX-300).

117. After searching a hospital, a consumer is greeted with a "Terms of Use" pop up that notifies a consumer that the data available is for personal use only. (*See e.g.*, https://www.hospitalsafetygrade.org/search?findBy=hospital&zip_code=&city=&state_prov=&hospital=West+Boca+Medical+Center).

118. After dismissing the pop up the consumer is shown that hospital's Safety Grade with a hyperlink to "view the full score." (ECF No. 74 at ¶51); (*See e.g.*, https://www.hospitalsafetygrade.org/search?findBy=hospital&zip_code=&city=&state_prov=&hospital=West+Boca+Medical+Center).

119. If a consumer clicks or taps on a hospital's name, assigned Safety Grade, or "View the fully score," the consumer is brought to that hospital's profile webpage. (ECF No. 129 at ¶51 and DX-300).

120. A hospital's profile webpage on the Safety Grade Website displays the hospital's most recent Safety Grade at the top of the page. (*Id.* at ¶52 and DX-300).

121. When a consumer clicks or taps on "Show Recent Past Grades" at the top of a hospital's profile webpage, the last seven rounds of that hospital's Safety Grades (Spring 2022 to Spring 2025) appear. (*Id.* at ¶53 and DX-300).

122. When a consumer clicks or taps on "View this hospital's Leapfrog Hospital Survey Results" at the top of a hospital's profile webpage, a new webpage opens up bringing the user to that hospital's Survey scores on ratings.leapfroggoup.org. (*Id.* at ¶54).

123. On the hospital profile webpage, there are five tabs titled "Infections," "Problems with Surgery," "Safety Problems," "Practices to Prevent Errors," and "Doctors, Nurses & Hospital Staff." (*Id.* at ¶55 and DX-300).

124. When a consumer clicks or taps on one of the five tabs, they are shown measures included in the tab category and a corresponding red, yellow, and green "gas gauge" for each measure. (*Id.* at ¶56 and DX-300).

125. The "gas gauge" visually represents how Leapfrog has scored a hospital's performance on a measure. (*Id.* at ¶57 and DX-300).

126. Red conveys that Leapfrog has scored a hospital "Worse Than Average" performance; yellow conveys that Leapfrog has scored a hospital average performance; green conveys that Leapfrog has scored a hospital "Better Than Average" performance. (*Id.* and DX-300).

127. Beneath the "gas gauges" is a legend that states the gas gauges depict how the "Hospital Performs" on the Leapfrog standards based on a scale of "Worse Than Average" to "Better Than Average." (*Id.* at ¶58 and DX-300).

128. A consumer can view a hospital's measure score by clicking or tapping the corresponding "gas gauge" graphic. (*Id.* at ¶59 and DX-300).

129. Each measure webpage shows "This Hospital's Score," "Best Hospital's Score," "Average Hospital's Score," and "Worst Hospital Score"; describes the measure; and includes "Notes and Definitions" footnotes beneath the measure descriptions. (*Id.* at ¶60 and DX-300).

130. The scores for the Four Imputed Measures, CPOE, BCMA, Hand Hygiene, and IPS, can be found by clicking or tapping into the respective measures "Doctors order medications through a computer," "Safe medication administration," "Handwashing," and "Specially trained doctors care for ICU patients." (*Id.* at ¶61 and DX-300).

131. If a hospital does not respond to the Leapfrog Survey but is still assigned a Safety Grade, every measure webpage for a non-responding hospital includes a red, bolded footnote under "Notes and Definitions," stating that hospital "**Declined to Report: The hospital was asked to provide this information to the public, but did not.**" (*Id.* at ¶62 and DX-300).

132. When a user clicks or taps on one of the Four Measures for a non-participating hospital, an asterisk (*) appears next to the measure score underneath "This Hospital's Score." (*Id.* at ¶63 and DX-300).

133. The asterisk (*) is associated with a red, bolded footnote stating, "***The hospital declined to report their performance on this measure, so a score was assigned to reflect the lack of information available**" that is reflected in the "Notes and Definitions." (*Id.* at ¶64 and DX-300).

134. The additional footnote stating "***The hospital declined to report their performance on this measure, so a score was assigned to reflect the lack of information available**" does not appear for any measure for which the imputation method was not used. (*See e.g.*, https://www.hospitalsafetygrade.org/h/west-boca-medical-center?findBy=hospital&hospital=West+Boca+Medical+Center&rPos=0&rSort=grade).

135. If a hospital does not respond to the Survey, measures "Effective leadership to prevent errors," "Nursing and Bedside Care for Patients," and "Staff work together to prevent

errors," show a question mark displayed with "Declined to Report" over the respective gas gauge on these measures for that hospital. (ECF No. 129 at ¶66 and DX-300).

136. Clicking a link at the top of a hospital's profile webpage that says "Detailed table view" takes a consumer to a new webpage that contains two tables displaying the hospital's most recent numerical score on each measure. (*Id.* at ¶67).

137. Each table has seven columns: "Measure," "The Hospital's Score," "Worst Performing Hospital," "Avg. Performing Hospital," "Best Performing Hospital," "Data Source," and "Time Period Covered." (*Id.* at ¶68 and DX-300).

138. Each "Measure" listed in the table includes a tooltip titled "What's This?" that provides a description of that specific measure when a user hovers over the tooltip. (*Id.* at ¶69 and DX-300).

139. Under the second table (process measures) of a hospital's "Detailed table view" webpage, there is a hyperlinked text that reads, "For a full description of the methodology, click here." (*Id.* at ¶70 and DX-300).

140. Clicking or tapping the link takes the consumer to a PDF version of Leapfrog's current "Scoring Methodology" document. (*Id.* at ¶71 and DX-300).

141. Consumers can read the publicly available methodology document to see the measure scores associated with each of the performance categories for the Four Imputed Measures. (ECF No. 129, Schedule C-The Parties Joint Exhibits, at JX-034.0; JX-041.1).

vi. Statements on Leapfrog's Safety Grade Website

142. Access to Leapfrog's websites is free for all consumers.

143. Leapfrog explains to consumers the difference between the Survey and the Safety Grade. (*See*, https://www.hospitalsafetygrade.org/frequently-asked-questions).

144. Leapfrog explains to consumers that reporting to the Leapfrog Survey "doesn't automatically improve a hospital's Safety Grade. If a hospital does well on the Leapfrog Hospital Survey that can improve their Grade, but if they do poorly it can hurt their Grade." (*Id.*).

145. Leapfrog explains to consumers that the "Hospital Safety Grade website gives people free access to all the information used to evaluate each hospital, so people should study the Grade as well as other ratings and information and decide for themselves where to seek care." (*Id.*).

146. Leapfrog explains to consumers that some hospitals do not receive a Safety Grade because there is not enough data publicly available to be eligible for a Safety Grade, but the "absence of a Grade does not mean a hospital is unsafe." (*Id.*).

147. Leapfrog explains to consumers that "[m]ost of the data Leapfrog uses comes from CMS, and in some cases, CMS does not publish adequate safety data on an individual hospital. Sometimes the hospital is too small to issue reliable numbers, or the hospital does not offer services relevant to the safety data. For instance, a hospital without an Intensive Care Unit (ICU) cannot report ICU safety measures." (*Id.*).

148. Leapfrog's website explains to consumers "How to Use the Grade." (*See e.g.*, https://www.hospitalsafetygrade.org/how-to-use-the-grade); (ECF No. 129 at p. 71, DX-305).

149. Leapfrog advises consumers that instead of relying on past grades, "[p]atients should always decide on where to receive care based on a hospital's current Safety Grade. However, past grades can tell you a lot about that hospital's track record in keeping its patients safe from errors, injuries, accidents and infections." (*Id.*).

150. Leapfrog explains to consumers "About the Grade" including how it was developed. (*See e.g.*, https://www.hospitalsafetygrade.org/about-the-grade); (ECF No. 129 at p. 71, DX-304).

151. Leapfrog explains to consumers "How the Leapfrog Hospital Safety Grade is produced" including descriptions of the domains, eligibility requirements, and where data comes from. (*Id.*).

152. Leapfrog encourages consumers to look at both the Safety Grades on hospitalsafetygrade.org and the Survey scores on leapfroggroup.org. (ECF No. 129 at p. 71, DX-306); (*See e.g.*, https://www.hospitalsafetygrade.org/choosing-the-best-hospital).

153. Leapfrog provides consumers links for helpful resources, contacts for Leapfrog, the scoring methodology, explanation of grades, planned changes, and a key for the measures. (*See e.g.*, https://www.hospitalsafetygrade.org/for-hospitals); (ECF No. 129 at p. 71, DX-307).

154. Leapfrog explains to consumers that the "Safety Grade provides data and research to help you make informed decisions about a critical aspect of your hospital stay – safety" and that the "goal of the Leapfrog Hospital Safety Grade is to reduce preventable deaths from hospital errors and injuries by publicly recognizing safety and exposing harm." (ECF No. 129 at p. 71, DX-308); (*See*, https://www.hospitalsafetygrade.org/why-the-hospital-safety-grade-works).

155. In effort to explain the Safety Grades, Leapfrog publishes its cut points for each grading cycle. (ECF No. 129 at p. 71, DX-310); (*See*, https://www.hospitalsafetygrade.org/media/file/ExplanationofSafetyGrades_Spring2025.pdf).

156. Leapfrog explains its "Licensure" and "Permissions" for data users. (ECF No. 129 at p. 71, DX-309); (*See*, https://www.hospitalsafetygrade.org/Licensure).

157. Leapfrog's website references a white paper written by Johns Hopkins. (*See e.g.*, https://www.hospitalsafetygrade.org/LivesLost).

158. To date, Dr. Matt Austin stands by the findings in the white paper. (ECF No. 133-2, Austin Dep., at 106:2-107:1).

vii. Leapfrog Revenue

159. Leapfrog's two main revenue sources are data and accolade licensing. (ECF No. 101-3, Binder Dep., at p. 32:16-33:1); (ECF No. 88-68, Banerjee Dep., at p. 82:1-6).

160. Accolade licensing allows a hospital to purchase the right to use a Leapfrog trademark to promote their Safety Grade, Diabetes Recognition, or Top Hospital Award. (ECF No. 129 at DX-309).

161. Data licensing allows a purchaser access to the most recent available data that is available on the each of Leapfrog's respective websites, hospitalsafetygrade.org and/or the ratings on leapfroggroup.org. (ECF No. 129 at DX-309); (ECF No. 101-3, Binder Dep. at 272:16-273:3).

162. Data licensing does not provide or allow the licensee access to any hospital's raw data that was provided in response to the Leapfrog Survey. (ECF No. 88-86, Banerjee Dep., at 54:11-21; 211:4-16).

163. Datasets are not priced by the number of hospitals that participate in the Survey nor by the number of Safety Grades published by Leapfrog. (ECF No. 88-86, Banerjee Dep. at 82:4-20).

164. Leapfrog's value-based purchasing program reports are a series of reports that reflect a zero to 100 composite score for facilities using the Survey. (ECF No. 88-86, Banerjee Dep. at 209:5-18).

165. Leapfrog currently has one customer in the value-based purchasing program. (ECF No. 88-86, Banerjee Dep., at 236:2-8).

166. Leapfrog encourages hospitals to promote their Safety Grades by providing hospitals with free tools like template ads, announcements, and press releases. (ECF No. 88-86, Banerjee Dep., at 34:3-34:13).

167. A hospital need only pay for an accolade license if it wishes to use Leapfrog's intellectual property, i.e. logos, in connection with its advertising of its Hospital Safety Grade. (ECF No. 88-86, Kush Dep., at 34:3-34:13).

168. Leapfrog data sets are free for regional leaders, the partner advisory committee members, and academic researchers. (ECF No. 88-86, Banerjee Dep. at 68:3-13; 216:10-17).

169. Leapfrog is a not a "pay for play."

170. There was no evidence presented that hospitals pay money to Leapfrog in exchange for better grades.

171. Leapfrog does not provide or charge money for consulting services. (ECF No. 101-3, Binder Dep, at 87:11-21).

172. Leapfrog does not accept money in exchange for better Safety Grades.

viii. Hospitals Use Leapfrog

173. All Plaintiff hospitals historically participated in the Leapfrog Survey. (ECF No. 129 at ¶ 93).

174. In 2021, all Plaintiff hospitals made a conscious, informed business decision to stop participating in the Survey.

175. The Plaintiff hospitals' participation in the Leapfrog Survey is not allowed by Tenet Corporate office. (Leapfrog's Deposition Designations, ECF No. 133-1, Gina West at 157:5-22, 224:4-16).

176. After the Plaintiff hospitals stopped responding to the Survey, they still used the Survey and the Safety Grade measures to benchmark themselves internally. (ECF No. 129 at DX-557, DX-559, DX-564, DX-644).

177. The Plaintiff hospitals use the Safety Grade calculator to project grades based on improving or declining on different measures. (ECF No. 129 at DX-526; DX-524; DX-527).

178. The Plaintiff hospitals communicated to staff and boards what their grades will be or could be if they participated in the Survey. (ECF No. 129 at DX-624).

179. Despite the use of the Survey for benchmarking purposes, all five of the Plaintiff hospitals testified they receive no benefit from the Leapfrog Survey. (ECF No. 88-95, McCauley

Dep, at 136:22-137); (ECF No. 88-96, Montgomery Dep. at 202:19-24); (ECF No. 88-93, Havericak Dep., at 90:18-24).

ix. Leapfrog Safety Grade Statistics

180. In Spring 2025, Leapfrog assigned 2,829 hospitals Safety Grades and of those hospitals that received a grade only 592 of them did not respond to the Survey. (PX-426 at p. 2).

181. In Spring 2025, only 8.09% of graded hospitals received either a "D" or "F" Safety Grade. (*Id.*).

182. In Spring 2025, only 19 of 2,829 graded hospitals received an "F" Safety Grade. (*Id.* at p. 3) and three of those 19 were the Plaintiffs (Delray, Palm Beach, and West Boca). (X-Grades).

183. When comparing Fall 2024 and Spring 2025 scores, the overall means improved on 17 measures. (PX-426 at p. 8).

184. In Spring 2025, Leapfrog graded 191 Florida hospitals and 70 of those hospitals received an "A" Safety Grade. (*Id.* at p. 13).

185. Florida has one of the highest Survey participation rates in the country. (Missy)

186. Of the 191 hospitals in Florida that received a Spring 2025 Safety Grade, only 10 did not submit a Survey and five of those are the Plaintiffs. (ECF No. 129, Schedule C, DX-101; PX-426).

187. Of the 10 that did not submit the Survey, all 5 non-plaintiff hospitals received a C and all used Step 2 imputation. (ECF No. 129, Schedule C, DX-101; PX-426).

188. The non-plaintiff Florida hospitals that did not submit a Survey had the same scores imputed for the Four Imputed Measures as the Plaintiff hospitals, but the non-plaintiff hospitals received "C" Safety Grades rather than "D" or "F" Safety Grades like each of the Plaintiff hospitals. (ECF No. 129, Schedule C, DX-101; PX-426).

E. THE PLAINTIFF HOSPITALS ARE POOR PERFORMERS

i. DELRAY MEDICAL CENTER

189. In Spring 2024, Delray Medical Center received a "D" Safety Grade. (ECF No. 129 at DX-314).

190. In Fall 2024, Delray Medical Center received a "F" Safety Grade. (ECF No. 129 at DX-314).

191. Delray had a failing Safety Grade before the Fall 2024 Methodology change.

192. In 2025, Delray Medical Center received a 1 Star (out of 5) CMS rating overall. (ECF No. 129 at DX-203).

193. In 2025, the Mayo Clinic rated Delray Medical Center in the bottom 5% when compared to all hospitals. (ECF No. 129 at DX-707).

194. In April 2023, Delray was below the national average on, including but not limited to, several PSI measures, HAI outcomes, and Patient Experience data. (ECF No. 129 at DX-803).

195. In April 2024, Delray was below the national average on, including but not limited to, several PSI measures, HAI outcomes, and Patient Experience data. (ECF No. 129 at DX-813).

196. Delray Medical Center did not present any evidence that it would have scored higher than "Limited Achievement" on the Four Imputed Measures.

197. Delray Medical Center did not present any evidence that its Safety Grades are undeserved or otherwise unfair.

198. Delray Medical Center admits Leapfrog provides it no benefit or anything of value. (ECF 88-93, Havericak Dep., at 90:18-24).

ii. WEST BOCA MEDICAL CENTER

199. In Spring 2024, West Boca Medical Center received a "D" Safety Grade. (ECF No. 129 at DX-312).

200. In Fall 2024, West Boca Medical Center received a "D" Safety Grade. (ECF No. 129 at DX-312).

201. The Fall 2024 Methodology Change had no impact on West Boca's Hospital Safety Grade. (ECF No. 129 at DX-312).

202. In 2025, West Boca Medical Center received a 2 Star (out of 5) CMS rating overall. (ECF No. 129 at DX-203).

203. In 2025, the Mayo Clinic rated West Boca Medical Center in the bottom 25% when compared to all hospitals. (ECF No. 129 at DX-705).

204. In April 2023, West Boca was below the national average on, including but not limited to, several PSI measures, HAI outcomes, and Patient Experience data. (ECF No. 129 at DX-803).

205. In April 2024, West Boca was below the national average on, including but not limited to, several PSI measures, HAI outcomes, and Patient Experience data. (ECF No. 129 at DX-813).

206. West Boca Medical Center did not present any evidence that it would have scored higher than "Limited Achievement" on the Four Imputed Measures.

207. West Boca Medical Center did not present any evidence that its Safety Grades are undeserved or otherwise unfair.

208. West Boca Medical Center admits Leapfrog provides it no benefit or anything of value.

iii. ST. MARY'S MEDICAL CENTER

209. In Spring 2024, St. Mary's Medical Center received a "C" Safety Grade. (ECF No. 129 at DX-316).

210. In Fall 2024, St. Mary's Medical Center received a "D" Safety Grade. (ECF No. 129 at DX-316).

211. In 2025, St. Mary's Medical Center received a 1 Star (out of 5) CMS rating overall. (ECF No. 129 at DX-203).

212. In 2025, the Mayo Clinic rated St. Mary's Medical Center in the bottom 11% when compared to all hospitals. (ECF No. 129 at DX-709).

213. St. Mary's Medical Center did not present any evidence that it would have scored higher than "Limited Achievement" on the Four Imputed Measures.

214. In April 2023, St. Mary's was below the national average on, including but not limited to, several PSI measures, HAI outcomes, and Patient Experience data. (ECF No. 129 at DX-803).

215. In April 2024, St. Mary's was below the national average on, including but not limited to, several PSI measures, HAI outcomes, and Patient Experience data. (ECF No. 129 at DX-813).

216. St. Mary's Medical Center did not present any evidence that its Safety Grades are undeserved or otherwise unfair.

217. St. Mary's Medical Center admits Leapfrog provides it no benefit or anything of value. (ECF No. 88-95, McCauley Dep., at 136:22-137).

iv. PALM BEACH GARDENS MEDICAL CENTER

218. In Spring 2024, Palm Beach Gardens received a "C" Safety Grade. (ECF No. 129 at DX-315).

219. In Fall 2024, Palm Beach Gardens received a "F" Safety Grade. (ECF No. 129 at DX-315).

220. In 2025, Palm Beach Gardens received a 1 Star (out of 5) CMS rating overall. (ECF No. 129 at DX-203).

221. In 2025, the Mayo Clinic rated Palm Beach Gardens in the bottom 4% when compared to all hospitals. (ECF No. 129 at DX-708).

222. In April 2023, Palm Beach Gardens was below the national average on, including but not limited to, several PSI measures, HAI outcomes, and Patient Experience data. (ECF No. 129 at DX-803).

223. In April 2024, Palm Beach Gardens was below the national average on, including but not limited to, several PSI measures, HAI outcomes, and Patient Experience data. (ECF No. 129 at DX-813).

224. Palm Beach Gardens did not present any evidence that it would have scored higher than "Limited Achievement" on the Four Imputed Measures.

225. Palm Beach Gardens did not present any evidence that its Safety Grades are undeserved or otherwise unfair.

226. Palm Beach Gardens admits Leapfrog provides it no benefit or anything of value.

v. GOOD SAMARITAN MEDICAL CENTER

227. In Spring 2024, Good Samaritan received a "C" Safety Grade. (ECF No. 129 at DX-313).

228. In Fall 2024, Good Samaritan received a "F" Safety Grade. (ECF No. 129 at DX-313).

229. In 2025, Good Samaritan received a 1 Star (out of 5) CMS rating overall. (ECF No. 129 at DX-203).

230. In 2025, the Mayo Clinic rated Good Samaritan in the bottom 12% when compared to all hospitals. (ECF No. 129 at DX-706).

231. In April 2023, Good Samaritan was below the national average on, including but not limited to, several PSI measures, HAI outcomes, and Patient Experience data. (ECF No. 129 at DX-803).

232. In April 2024, Good Samaritan was below the national average on, including but not limited to, several PSI measures, HAI outcomes, and Patient Experience data. (ECF No. 129 at DX-813).

233. Good Samaritan did not present any evidence that it would have scored higher than "Limited Achievement" on the Four Imputed Measures.

234. Good Samaritan did not present any evidence that its Safety Grades are undeserved or otherwise unfair.

235. Good Samaritan admits Leapfrog provides it no benefit or anything of value. (ECF 88-96, Montgomery Dep., at 202:19-24).

F. NO EVIDENCE OF CONSUMER HARM

236. Delray Medical Center did not present evidence of a single consumer or patient that was deceived by its Safety Grades. (ECF No. 129 at pp.103-104).

237. Delray Medical Center did not present evidence of a single consumer or patient that was harmed by its Safety Grades. (ECF No. 129 at pp.103-104).

238. West Boca Medical Center did not present evidence of a single consumer or patient that was deceived by its Safety Grades. (ECF No. 129 at pp.103-104).

239. West Boca Medical Center did not present evidence of a single consumer or patient that was harmed by its Safety Grades. (ECF No. 129 at pp.103-104).

240. St. Mary's Medical Center did not present evidence of a single consumer or patient that was deceived by its Safety Grades. (ECF No. 129 at pp.103-104).

241. St. Mary's Medical Center did not present evidence of a single consumer or patient that was harmed by its Safety Grades. (ECF No. 129 at pp.103-104).

242. Palm Beach Gardens did not present evidence of a single consumer or patient that was deceived by its Safety Grades. (ECF No. 129 at pp.103-104).

243. Palm Beach Gardens did not present evidence of a single consumer or patient that was harmed by its Safety Grades. (ECF No. 129 at pp.103-104).

244. Good Samaritan did not present evidence of a single consumer or patient that was deceived by its Safety Grades. (ECF No. 129 at pp.103-104).

245. Good Samaritan did not present evidence of a single consumer or patient that was harmed by its Safety Grades. (ECF No. 129 at pp.103-104).

G. NO EVIDENCE OF PLAINTIFF HARM

246. The market share for these five hospitals has increased since the Fall 2024 Leapfrog Hospital Safety Grades was released in November 2024. (ECF No. 129 at DX921).

i. DELRAY MEDICAL CENTER

247. Delray Medical Center did not lose any physicians because of its Safety Grades. (ECF No. 88-93, Havericak Dep, at 254: 10-12; 261:14-17).

248. Delray Medical Center did not identify any patient who refused to treat at Dleray because of its Safety Grades. (ECF No. 88-93, Havericak Dep, at 253:1-15).

249. Delray's revenue has increased. (ECF No. 88-93, Havericak Dep, at 66:5-7).

250. Nursing retention has not declined at Delray due to its Safety Grades. (ECF No. 88-93, Havericak Dep, at 38:3-19; 51:3-13; 261:18-21).

251. Transfer rates from other hospitals to Delray have been consistent since January 2024. (ECF No. 88-93, Havericak Dep, at 61:2-62:9).

252. Delray has had no issues recruiting board members as a result of its Safety Grades. (ECF No. 88-93, Havericak Dep, at 41:2-4).

253. Delray's Google Reviews have increased from 1.7 stars in September 2024 to 4.5 stars as of September 2025. (ECF No. 88-93, Havericak Dep, at 49:4-12.

254. The Delray brand has increased since January 2024. (ECF No. 88-93, Havericak Dep, at 51-15:53-16.

255. Admissions at Delray are up in all areas. (ECF No. 129 at PX-466); (ECF No. 88-93, Havericak Dep, at 257:22-25).

ii. WEST BOCA MEDICAL CENTER

256. West Boca Medical Center did not lose any physicians because of its Safety Grades. (ECF No. 88-92, Hanlon Dep., at 88:9-18).

257. West Boca Medical Center did not identify the name any patient who refused to treat at Dleray because of its Safety Grades.

258. West Boca Medical Center's revenue has increased. (ECF No. 88-92, Hanlon Dep., at 87:16-19).

259. West Boca Medical Center's Google Reviews have increased. (ECF No. 88-92, Hanlon Dep., at 116:9-11).

260. The West Boca Medical Center brand has increased since January 2024. (ECF No. 88-92, Hanlon Dep., at 116:2-16).

iii. ST. MARY'S MEDICAL CENTER

261. St. Mary's Medical Center did not lose any physicians because of its Safety Grades.

262. St. Mary's Medical Center did not identify any patient who refused to treat at Delray because of its Safety Grades. (ECF No. 88-95, McCauley Dep., at 231:13-233:5).

263. St. Mary's revenue has increased. (ECF No. 88-95, McCauley Dep., at 105:10-12).

264. Nursing retention has not declined at St. Mary's due to its Safety Grades. (ECF No. 88-95, McCauley Dep., at 74:11-24).

265. St. Mary's has had no issues recruiting board members as a result of its Safety Grades. (ECF No. 88-95, McCauley Dep., at 56:4-6).

iv. GOOD SAMARITAN MEDICAL CENTER

266. Good Samaritan did not lose any physicians because of its Safety Grades. (ECF 88-96, Montgomery Dep., at 297:16-18; 299:23-300:7).

267. Good Samaritan did not identify any patient who refused to treat at Good Samaritan because of its Safety Grades. (ECF 88-96, Montgomery Dep., at 296:9-14; 296:15-23; 299:9-14).

268. Good Samaritan's revenue is not down as a result of its Safety Grades. (ECF 88-96, Montgomery Dep., at 66:13-18).

269. Good Samaritan's EBITDA was not down from 2024 to 2025. (ECF 88-96, Montgomery Dep., at 66:13-18).

270. Nursing retention has not declined at Good Samaritan due to its Safety Grades. (ECF 88-96, Montgomery Dep., at 67:24-68:5).

271. Good Samaritan has had no issues recruiting board members as a result of its Safety Grades. (ECF 88-96, Montgomery Dep., at 80:19-85:7).

272. Good Samaritan's Google Reviews have not been impacted by its Safety Grades. (ECF 88-96, Montgomery Dep., at 95:11-13).

v. PALM BEACH GARDENS MEDICAL CENTER

273. Palm Beach Gardens Medical Center did not lose any physicians because of its Safety Grades. (ECF 88-90, Cazeres Dep. at p. 56:2-4).

274. Palm Beach Gardens Medical Center did not identify any patient who refused to treat at Palm Beach Gardens because of its Safety Grades. (ECF 88-90, Cazeres Dep. at p. 34:10-35:11).

275. Palm Beach Gardens Medical Center revenue is not down as a result of its Safety Grades. (ECF 88-90, Cazeres Dep., at 56:2-4).

276. Nursing retention has not declined at Palm Beach Gardens Medical Center due to its Safety Grades. (ECF 88-90, Cazeres Dep. at p.58:16-21).

III. CONCLUSIONS OF LAW

A. COUNT I, FDUTPA, ELEMENTS OF THE CLAIM AND BURDEN OF PROOF

277. The Florida Deceptive Unfair Trade Practices Act ("FDUTPA") prohibits "unfair or deceptive acts or practices in the conduct of any trade or commerce." Fla. Stat. § 501.204(1).

278. Through FDUTPA, the Florida legislature intends to "protect the consuming public and legitimate business enterprises from those who engage in unfair methods of competition, or unconscionable, deceptive, or unfair acts or practices in the conduct of any trade or commerce." Fla. Stat. § 501.202(2).

279. Florida Courts have held that "an entity does not have to be a consumer in order to have standing to bring a FDUTPA claim." *Caribbean Cruise Line, Ind. v. Better Bus. Bureau of Palm Beach County, Inc.*, 169 So. 3d 164, 169 (Fla. 4th DCA 2015). "[I]n order to satisfy the first element for a claim for both damages and injunctive relief under FDUTPA…the plaintiff must allege that the relevant act or practice was **harmful to a consumer**." *CMR Constr. & Roofing, LLC v. UCMS, LLC*, 2022 WL 3012298, *3 (11th Cir. 2022) (emphasis added); *see also, Stewart Agency, Inc. v. Arrigo Enters.*, 266 So. 3d 207, 214 (Fla. Dist. Ct. App. 2019) (FDUTPA claim for injunctive relief requires showing of injury to both claimant and Florida consumers).

280. To establish a deceptive practice, plaintiffs must establish that the act or practice is "likely to mislead the consumer acting reasonably in the circumstances, to the *consumer's detriment*." *See Caribbean Cruise Line*, 169 So. 3d at 169 (emphasis in original).

281. Plaintiffs must "prove that *there was an injury or detriment to consumers* in order to satisfy all elements of a FDUTPA claim." *Id.* (emphasis in original).

282. Plaintiffs are required to show "'probable, not possible, deception' that is 'likely to cause injury to a reasonable relying consumer.'" *Pieszik v. CVS Pharm., Inc.*, 576 F. Supp. 3d 1125, 1132 (S.D. Fla. 2021) (internal citation omitted).

283. Courts use an objective test to "determine whether 'the alleged practice was likely to deceive a consumer acting reasonably in the same circumstances.'" *Id.* (citation omitted).

284. The Florida Supreme Court defines an unfair practice as "one that 'offends established public policy' and one that is 'immoral, unethical, oppressive, unscrupulous or substantially injurious ***to consumers***." *PNR, Inc. v. Beacon Prop. Mgmt.*, 842 So. 2d 773, 777 (Fla. 2003) (citation omitted: emphasis added).

285. To establish an unfair act or practice, plaintiffs must establish that the act or practice inflicts "***consumer injury*** that is: (1) substantial; (2) not outweighed by any countervailing benefits to consumers or competition that the practice produces; and (3) that consumers could not reasonably have avoided." *SMS Audio, LLC v. Belson*, 2017 WL 11631378, *10 (S.D. Fla. April 24, 2017). (emphasis added).

286. Although FDUTPA does not require an entity to be a consumer to have standing to sue, "all claimants must 'prove…an injury or detriment to consumers in order to satisfy all of the elements of a FDUTPA claim.'" *S. Broward Hosp. Dist. V. ELAP Servs., LLP*, 2023 U.S. Dist. LEXIS 177407 (S.D. Fla. September 29, 2023); quoting *Caribbean Cruise Line*, 169 So. 3d at 169 (citation omitted).

287. "[I]n order to satisfy the first element for a claim for both damages and injunctive relief under FDUTPA…the plaintiff must allege that the relevant act or practice was harmful to a consumer." *CMR Constr. & Roofing, LLC v. UCMS, LLC*, 2022 WL 3012298, *3 (11th Cir. 2022).

288. "[T]o state a claim for equitable relief, an entity must show (1) that it is aggrieved, in that its rights have been, are being, or will be adversely affected, by (2) a violation of FDUTPA, meaning an unfair or deceptive practice which is injurious to consumers." *Stewart Agency, Inc.*, 266 So. 3d at 214.

289. To be aggrieved, "'the injury claimed to have been suffered cannot be merely speculative.'" *Id.*; citing *Ahearn*, 180 So. 3d at 173; *see also Macias v. HBC of Fla., Inc.*, 694 So. 2d 88, 90 (Fla. 3d DCA 1997) ("The clear intent of [FDUTPA] as expressed by its plain language is to provide both equitable and legal remedies to private consumers who are aggrieved parties and/or have sustained **actual losses** because of a violation(s) under FDUTPA") (emphasis added).

290. The following definition of "aggrieved" applies to companies: "'having [their] legal rights [] adversely affected; having been harmed by an infringement of legal rights.'" *Stewart Agency, Inc.*, 266 So. 3d at 213-14.

291. "[A] plaintiff is 'aggrieved' under FDUTPA when the deceptive conduct alleged has caused a **non-speculative injury** that has affected the plaintiff beyond a general interest in

curbing deceptive or unfair conduct.'" *Cravens v. Garda CL Se., Inc.*, 2024 WL 5058304, *36; quoting, *Farmer v. Humana, Inc.*, 582 F. Supp. 3d 1176, 1190 (M.D. Fla. Jan. 25, 2022); *Superior Consulting Servs., Inc. v. Shaklee Corp.*, 2017 WL 2834783, * (M.D. Fla. June 30, 2017) (emphasis added).

292. "The FDUTPA 'is designed to protect not only the rights of litigants, but also the rights of the consuming public at large.'" *Gastaldi v. Sunvest Cmtys. USA, LLC*, 657 F. Supp. 2d 1045, 1057 (S.D. Fla. 2009).

293. Plaintiffs who are "*aggrieved by a violation of FDUTPA* may seek declaratory and/or injunctive relief under the statute." *Id.* (emphasis added).

B. PLAINTIFFS ARE NOT CONSUMERS OF LEAPFROG AND PLAINTIFFS FAIL TO DEMONSTRATE CONSUMER HARM.

294. The Plaintiff hospitals are neither a reasonable consumer of the Safety Grades nor a consumer of the Safety Grades at all. *See, e.g., S. Broward Hosp.* at *29-31 (finding the plaintiff hospital not to be a consumer of defendant's services after plaintiff's corporate representative testified that plaintiff "received no 'benefit or anything of value' from defendants").

295. Likewise, here, every one of the Plaintiff hospital's corporate representatives (CEOs) testified that Leapfrog does not provide a benefit or provide value to the hospital.

296. The Court therefore concludes that each Plaintiff is not a consumer of Leapfrog.

297. "Plaintiff has standing to pursue FDUTPA claims so long as it can demonstrate 'an injury or detriment to consumers.'" *S. Broward Hosp.*, at *30 (quoting *Caribbean Cruise Line*, 169 So. 3d at 169).

298. Plaintiffs have otherwise not established consumer harm or substantial likelihood of consumer harm to reasonable consumers of Leapfrog's Safety Grades. *Id.* at *31.

299. Plaintiffs' inability to show actual or likely consumer harm is fatal to its FDUTPA claim. *See, Tymar Distribution LLC v. Mitchell Grp. USA, LLC*, 558 F. Supp. 3d 1275, 1289 (S.D. Fla. 2021) ("plaintiffs must point to specific damages done to consumers in the market" to allege consumer harm under FDUTPA) (cleaned up); *see also, Qunjian v. Globeforce, Inc.*, 89 F. 4th 852, 860 (11th Cir. 2023) (finding that plaintiff brining a FDUTPA claim must "prove there was an injury or detriment to consumers"); quoting, *Caribbean Cruise Line, Ind. v. Better Bus. Bureau of Palm Beach County, Inc.*, 169 So. 3d 164, 169 (Fla. 4th DCA 2015).

300. Since Plaintiffs are non-consumers, they must demonstrate actual consumer harm but have not.

301. Plaintiffs evidence of consumer harm is not convincing. *See e.g., S. Broward Hosp.* at *32 (evidence of billing members and emails showing that the defendant "could" or "would" bill patients but did not is inadequate to prove consumer harm); *see also, Novo Nordisk, Inc. v. Brooksville Pharms., Inc.*, 785 F. Supp. 3d 1123, 1132 (M.D. Fla. May 12, 2025) (the Court held that plaintiffs handful of email complaints were insufficient to prove actual consumer harm and that plaintiffs are required to show more than a hypothetical that the purported conduct is "likely to cause consumer harm," which is the motion to dismiss standard).

302. In *Novo*, the Court further held that Novo's presentation of some "hypothetical possibility of some future injury to Florida consumers" was insufficient to survive summary judgment, and that Novo's identification of 5 Brooksville-customer complaints (out of 24,000 customers) about "ineffective" prescriptions did not constitute "evidence that a Florida consumer suffered actual harm from Brooksville's misbranded semaglutide." *Id.*, 1146; *see also, Id.*, 1147 ("After extensive discovery and exhaustive briefing, [Novo's] failure to provide any evidence of consumer harm entitles [Brooksville] to summary judgment on [Novo's] FDUTPA claim").

303. The Plaintiff Hospitals have identified only a smattering of hearsay statements and documents wherein their CEOs state that patients reported complaints to doctors or expressed to doctors and to others that they were disinclined to use the Plaintiff Hospitals as a result of the Safety Grades.

304. The Plaintiff Hospitals even cite instances where patients express pleasure with their experiences at the Plaintiff Hospitals.

305. The Court therefore concludes that Plaintiffs cannot prove this Court's first inquiry on element one, consumer injury or detriment, and a judgment for Leapfrog is warranted on this basis.

C. LEAPFROG'S ACTS AND PRACTICES ARE NOT DECEPTIVE.

306. Leapfrog's acts and practices are not deceptive because it provides substantial transparent, free, readily accessible, and comprehensive information and explanations to reasonable consumers as it relates to Leapfrog's Hospital Safety Grades.

307. Judgment for Leapfrog on Count I, FDUTPA, is therefore warranted on element two, a deceptive practice is "likely to mislead the consumer acting reasonably in the circumstances, to the *consumer's detriment*." *See Caribbean Cruise Line*, 169 So. 3d at 169 (emphasis in original).

308. Element two, deception, is a two-party inquiry for which Plaintiffs cannot prove either (1) likely to mislead a consumer acting reasonably; and (2) consumer detriment.

309. In *Piescik*, the Southern District held that all the information available to consumers and the context in which that information is provided must be considered, and that claims of deception resting on unreasonable or fanciful interpretations of labels or other advertising fail. 576 F. Supp. 3d at 1132-33 (collecting cases).

310. In *Piescik*, the defendant (CVS) moved to dismiss, arguing that the plaintiff's belief that a reasonable consumer of hand sanitizer would take the "99.99% of germs" claim as fact was objectively unreasonable based on common knowledge, and also because of the asterisk next to the 99.99% claim led to a disclosure on the back label. *Id.* at 1132.

311. The Court further explained that the "information available" to consumers informing the reasonable-consumer inquiry is not limited to the label itself, and that "true information or a disclaimer can rebut a claim of deception." *Id.* at 1133; citing *Freeman v. Time Inc.*, 68 F. 3d 285, 289-90 (9th Cir. 1995).

312. The Court held that a reasonable consumer would not assume that a hand sanitizer product with such a label encompassed "all conceivable disease-causing microorganisms, regardless of whether they are commonly found on the hands," and noted "the asterisk on the back of the hand sanitizer clearly discloses to the consumer that it does not kill 99.99% of *all* germs, and a reasonable consumer would not be expected to ignore the asterisk and the information it leads to." *Id.* at 1133. The claim was dismissed with prejudice. *Id.*, 1133-36.

313. Since the *Piescik* case was dismissed with prejudice, a judgment for Leapfrog is warranted.

314. Leapfrog provides far more than the information available to the consumers in *Piescek* and, thus, the undisputed facts here present *even stronger* grounds to hold that Leapfrog's purported conduct was not deceptive to a reasonable consumer of its products.

315. Leapfrog's hospitalsafatygrade.org website that publishes the Safety Grades included, *inter alia*, that: (i) the imputed score for non-participating hospitals is shown as equivalent to the worst score; (ii) non-reporting hospitals' Grades feature, *inter alia*, bold and red

disclosures with an asterisk stating "***The hospital declined to report their performance on this measure, so a score was assigned to reflect the lack of information available.**"; (iii) a detailed table view of all the underlying scores that go into the Safety Grade for that hospital, comparison to other hospitals, the data source, and the time period covered; (iv) navigation of the Grades and measure-by-measure scores leads to a link allowing access to the full, 29-page Methodology; and (v) various other tools that show "how to use the Leapfrog Hospital Safety Grade," frequently asked questions, and "About the Grade."

316. As in *Piescik*, any potential to deceive a reasonable consumer of Leapfrog's products is ameliorated by additional information denoted by an asterisk, and by the substantial additional material provided. A reasonable consumer is not expected to ignore this asterisk. *Piescik*, 576 F. Supp. 3d at 1133.

317. Whether a reasonable consumer would be deceived is a totality-of-the-information inquiry, and must account for the type of consumer.

318. Thus, Leapfrog uses various pages on its website for varying comprehension levels, including the "gas gauge" pages for reasonable lay consumers, detailed table view for an intellectually curious consumer, and the detailed methodology page for an advanced consumer.

319. The *Piescik* court relied on *Moore v. Trader Joe's Co.*, wherein the Ninth Circuit affirmed dismissal of the plaintiff's charge that Trader Joe's labeling of honey as "100% New Zealand Manuka Honey" and listing "Manuka Honey" as the sole ingredient was misleading to a reasonable consumer. 4 F. 4th 874 at 876-77, 879-80 (9th Cir. 2021).

320. The Ninth Circuit explained that a reasonable consumer of a niche product like the Trader Joe's honey would know that it is impossible to produce "pure" batches of honey derived solely from the Manuka flower, and that the relatively cheap price would further signal a **reasonable consumer of that honey** that the jar does not contain 100% Manuka honey. *Id.* at 881 (emphasis added).

321. Indeed, the inquiry is whether a reasonable consumer of the *subject product* would be misled considering all the information available to him or her. *See, Id.* at 884 (consumers of "a niche, specialty product, are undoubtedly more likely to exhibit a higher standard of care").

322. A reasonable consumer of health care information such as the Safety Grades would exhibit a higher standard of care and awareness when choosing where to receive their medical treatment, and Leapfrog's provision of substantial and transparent information (including

delineating between absent data, damning data, and imputed data) allows these consumers to fully and comprehensively inquire and educate themselves about the material that they are consuming. *Moore*, 4 F. 4th at 884; quoting, *Danone, US, LLC v. Chobani, LLC*, 362 F. Supp. 3d 109, 123 (S.D.N.Y. 2019) ("Consumers of Manuka honey, a niche, specialty product, are undoubtedly more likely to exhibit a higher standard of care than 'a parent walking down the dairy aisle in a grocery store, possibly with a child or two in tow,' who is 'not likely to study with great diligence the contents of a complicated product package'").

323. Consumers are familiar with rating websites, and considering all the information available, reasonable consumers of rating systems are aware that each system only considers certain criteria.

324. The Court finds the qualifications of Michael Vredenburgh sufficient to qualify him as an expert in the field of website design, digital low literacy and user experience. (ECF No. 96-5).

325. The Court finds that Michael Vredenburgh's expert opinion that the Leapfrog Hospital Safety Grade Website (www.hopsitalsafetygrades.org) ensures high clarity and transparency for reasonable consumers to be reliable, persuasive and unrebutted. (ECF No. 96-5).

326. The Court finds that Michael Vredenburgh's expert opinion that the scores for BCMA, CPOE, Hand Hygiene and ICU Physician Staffing are readily clear to users with basic reading comprehension to be reliable, persuasive and unrebutted. (ECF No. 96-5).

327. The Court finds that Michael Vredenburgh's expert opinion that in evaluating the clarity, transparency, and usability of the Leapfrog Hospital Safety Grade website, a reasonable consumer with at least an 8th-grade reading level would understand from reviewing the BCMA, CPOE, Hand Hygiene and ICU Physician Staffing measures that a minimum value was assigned when hospitals declined to provide data to Leapfrog. (ECF No. 96-5).

328. Thus, a consumer of Leapfrog *Safety* Grades can reasonably conclude that the grade itself measures aspects of patient *safety*.

329. The Court therefore concludes that Plaintiffs cannot prove this Court's first inquiry on element two (deception), likely to mislead a consumer acting reasonably in the circumstances and a judgment for Leapfrog on Count I should therefore be entered on this basis.

330. Plaintiffs are otherwise not a consumer of Leapfrog and there is no evidence of this Court's second inquiry on element two (deception), consumer detriment.

331. Plaintiffs have not offered evidence of a single consumer (or patient) that considered or relied on their Safety Grades to their detriment or caused consumer harm.

332. The Court therefore concludes that Plaintiffs cannot prove this Court's second inquiry on element two (deception), consumer detriment, and a judgment for Leapfrog on Count I should therefore be entered on this basis.

D. LEAPFROG'S ACTS AND PRACTICES ARE NOT UNFAIR.

333. Leapfrog's acts and practice are not unfair because the underlying Scoring Methodology treats all hospitals the same based on the informed business decision the hospital makes and consumers are otherwise fully informed on how the Safety Grades are calculated.

334. Leapfrog's practices are transparent and far from "one that 'offends established public policy' and one that is 'immoral, unethical, oppressive, unscrupulous or substantially injurious ***to consumers***." *PNR, Inc. v. Beacon Prop. Mgmt.*, 842 So. 2d 773, 777 (Fla. 2003) (citation omitted; emphasis added).

335. Leapfrog's practices likewise have not caused any substantial consumer injury and even if any consumer injury were demonstrated, it would be outweighed by any countervailing benefits to consumers or competition that the practice produces, which can otherwise be reasonably avoided by consumers.

336. Judgment for Leapfrog on Count I, FDUTPA, is therefore warranted on element three, an unfair act or practice inflicts "***consumer injury*** that is: (1) substantial; (2) not outweighed by any countervailing benefits to consumers or competition that the practice produces; and (3) that consumers could not reasonably have avoided." *SMS Audio, LLC v. Belson*, 2017 WL 11631378, *10 (S.D. Fla. April 24, 2017). (emphasis added).

337. First, Plaintiffs have never identified a single consumer injured by a Leapfrog practice that is allegedly unfair.

338. Even if patients were refusing to treat at an "F" hospital, like Delray Medical Center, the Plaintiffs fail to show how a patient treating at an "A" hospital, like Jupiter Medical Center, harms the consumer in any way.

339. The Plaintiff Hospitals do not allege or otherwise provide proof showing that patients are refusing to treat at the Tenet Hospitals because of the Safety Grades, nor any evidence that those patients are then harmed when treated at a competitor hospital.

340. Simply alleging that patients choose to treat at a competitor hospital rather than one of the Plaintiff Hospitals is not enough to show consumer injury. *See Cmty. Health Ctrs., Inc. v. DiamondDog Servs., Inc.*, 2024 WL 3278579, *10 (M.D. Fla. July 2, 2024) (dismissal of plaintiff's FDUTPA claim after determining that plaintiff only alleged harm the defendant caused the *plaintiff* but failed to plead consumer injury).

341. The Court therefore concludes that Plaintiffs cannot prove this Court's first inquiry on element three (unfair), substantial consumer injury, and a judgment for Leapfrog on Count I should therefore be entered on this basis.

342. Second, Plaintiffs have no evidence on the requirement that the injury "not be outweighed by any countervailing benefits to consumers or competition that the practice produces." *SMS Audio* at *3.

343. The purpose of the Safety Grade is to "educate and encourage consumers to consider safety when selecting a hospital for themselves or their families." (ECF No. 129 at JX-041.1).

344. Safety Grade fosters market incentives for hospitals to prioritize safety. (ECF No. 101-4, Danforth Dep., at 61:21-62:7); (ECF No. 88-97, Romano Dep., at 29:1-7, 235:14-25).

345. Leapfrog has received feedback over the years from hospitals advising that they use the Hospital Survey as a benchmarking tool on how to improve on their patient safety measures. (ECF No. 133-2, Dr. Matt Austin, at 387:4-15, 390:7-21); (ECF No. 101-3, Binder, at 369:1-370:13).

346. The Plaintiff Hospitals themselves used the Survey as an internal tool to benchmark their patient safety progress. (ECF No. 129 at DX-557, DX-559, DX-564, DX-644).

347. The mere fact that year-over-year improvements to mean "cohort" scores for Survey-participant hospitals occurred also proves the benefit that Leapfrog's purported conduct conferred.

348. Thus, not only do patients benefit from receiving access to hospital's patient safety data, but the Hospital Survey also provides a free tool for hospitals to improve patient safety. (SOF ¶6).

349. "Unfair practices" generally offend public policy and are immoral, unethical, oppressive and unscrupulous. *Alhassid v. Nationstar Mortg. LLC*, 771 Fed. Appx. 965, 969 (11th Cir. 2019).

350. But the Plaintiff Hospitals cannot set forth a single fact that Leapfrog, a non-profit providing substantial information to the public about healthcare facilities' safety, engaged in conduct fitting any of those categories.

351. The Court therefore concludes that Plaintiffs cannot prove this Court's second inquiry on element thee (unfair), consumer injury is not outweighed by any countervailing benefit to consumers, and a judgment for Leapfrog on Count I should therefore be entered on this basis.

352. Third, Consumers (*e.g.*, prospective patients) could easily avoid this purported injury by navigating Leapfrog's various webpages and explanations of its Methodology contained therein.

353. More specifically, at the bottom of each page of its websites, Leapfrog expressly states, *inter alia*, "Individuals are solely responsible for any and all decisions with respect to their medical treatment.

354. Disclosures note that neither Leapfrog nor its affiliates are responsible for any damages or costs that may be incurred with respect to use of this site.

355. Leapfrog advises consumers to "never disregard, avoid or delay in obtaining medical advice from a doctor or other health care professional because of material on this site, as the site is not intended to be a substitute for professional medical advice."

356. Leapfrog is clear that when deciding on where to receive health care, "people should consider other aspects of hospital performance in the decision-making process, such as whether the hospital delivers a high level of care for the health concern the patient has, i.e., if the hospital has high-quality obstetrics or orthopedics."

357. Leapfrog's transparent disclosure of its methods cannot be genuinely described as "unfair." *See, e.g., Medmoun v. Home Depot U.S.A., Inc.*, *14-15 (M.D. Fla. May 7, 2022) (where documents that Home Depot provided to the consumer informed the consumer of the very information that was allegedly unfair under the FDUTPA, dismissal was proper as the harm could have been reasonably avoided).

358. The Court therefore concludes that Plaintiffs cannot prove this Court's third inquiry on element thee (unfair), consumer injury could not be reasonably avoided, and a judgment for Leapfrog on Count I should therefore be entered on this basis.

E. PLAINTIFFS ARE NOT AGGRIEVED.

359. Each Plaintiff fails to prove that they were "aggrieved" by the Safety Grade.

360. Judgment for Leapfrog on Count I, FDUTPA, is therefore warranted on element four, Plaintiffs were not "aggrieved by" the Safety Grades.

361. "[T]o state a claim for equitable relief, an entity must show (1) that it is aggrieved, in that its rights have been, are being, or will be adversely affected, by (2) a violation of FDUTPA, meaning an unfair or deceptive practice which is injurious to consumers." *Stewart Agency, Inc.*, 266 So. 3d at 214.

362. Because the Tenet Hospitals are business entities and do not "share the characteristics of humans, such as being 'angry or sad'" the following definition of "aggrieved" applies: "'having [their] legal rights [] adversely affected; having been harmed by an infringement of legal rights.'" *Id.* at 213-14.

363. Plaintiffs must show that they were suffered a direct, non-speculative and actual harm as a result of the alleged conduct but have not. *See e.g., Cravens v. Garda CL Se., Inc.*, 2024 WL 5058304, *36 (finding that an "aggrieved" plaintiff must prove non-speculative injury).

364. The Court may look no further than Delray Medical Center and West Boca Medical Center who both received a failing "D" Safety Grade *before* and *after* the alleged "unfair" Fall 2024 Scoring Methodology change.

365. All five of the Plaintiff Hospitals' CEO's signed declarations early in this litigation, averring that the Safety Grades have harmed their hospital's reputation and goodwill, but then could identify any non-speculative or admissible evidence in support.

366. None of the Plaintiffs' CEOs (who are the corporate representatives) could identify any actual financial harm suffered beyond a speculative level and all even admit revenue is up.

367. Plaintiffs' complaints of lost goodwill and/or reputational harm is wholly unsupported by evidence of a loss of business value.

368. The Court finds the qualifications of Mark Rule sufficient to qualify him as an expert in the field of economics, specifically regarding what must be shown by a corporation to substantiate lost good will or reputational harm. (ECF No. 96-4).

369. The Court finds that Plaintiffs have failed to perform any necessary causal analysis between purportedly lost business value and TLG's actions and thus Plaintiffs have failed to demonstrate that they have suffered any injury as a result of the alleged actions of TLG. (ECF No. 96-4).

370. Four of the five Plaintiff hospitals received a 1 Star overall CMS rating with only one Plaintiff hospital receiving a 2 Star overall CMS rating.

371. According to the Mayo Clinic, not a single Plaintiff hospital is rated above the bottom 29% overall when compared to all hospitals with some of the Plaintiff hospitals not even achieving above the bottom 7% overall.

372. Since Plaintiffs fail to offer any evidence that they were aggrieved *by* a violation of FDUTPA, Plaintiffs are not entitled to injunctive relief. *Gastaldi*, 657 F. Supp. 2d at 1057.

373. Since the "FDUTPA 'is designed to protect not only the rights of litigants, but also the rights of the consuming public at large,'" there is no evidence of any consumer harm, and Leapfrog's practices outweigh any purported consumer harm, Plaintiffs claim for injunctive and declaratory relief is unwarranted. *Gastaldi*, 657 F. Supp. 2d at 1057.

374. The Court therefore concludes that Plaintiffs cannot prove this Court's inquiry on element four, whether each Plaintiff is "aggrieved", and a judgment for Leapfrog on Count I should therefore be entered on this basis.

375. West Boca Medical Center is not entitled to injunctive relief.

376. Delray Medical Center is not entitled to injunctive relief.

377. Good Samaritan Medical Center is not entitled to injunctive relief.

378. St. Mary's Medical Center is not entitled to injunctive relief.

379. Palm Beach Gardens Medical Center is not entitled to injunctive relief.

F. COUNT II, DECLARATORY JUDGMENT, ELEMENTS OF THE CLAIM AND BURDEN OF PROOF.

380. Pursuant to Declaratory Judgment Act, 28 U.S.C. § 2201, a court may declare the rights and other legal relations of any interested party in a case of an actual controversy within its jurisdiction. (FAC, ¶104).

381. Since Plaintiffs fail to offer any evidence that they were aggrieved *by* a violation of FDUTPA, Plaintiffs are not entitled to declaratory relief. *Gastaldi*, 657 F. Supp. 2d at 1057.

382. Since Plaintiffs failed to prove Count I, FDUTPA, a judgment for Leapfrog on Count II should therefore be entered on this basis.

G. AFFIRMATIVE DEFENSE, ANTI-SLAPP, ELEMENTS OF THE CLAIM AND BURDEN OF PROOF.

383. Florida's Anti-SLAPP statute prohibits "fil[ing]…any lawsuit… against another person or entity [1] without merit and [2] primarily because such person or entity has exercised

the constitutional right of free speech in connection with a public issue…as protected by the First Amendment to the United States Constitution and s. 5, Art. I of the State Constitution." Fla. Stat. §758.295(3).

384. A cause of action is "without merit" if it fails to state a claim or if the defendant(s) prevail on the claim at trial. *See, e.g., Flynn v. Wilson*, 398 So. 3d 1103, 1115 (Fla. 2d DCA 2024).

385. Florida's anti-SLAPP statute broadly defines "free speech in connection with public issues" to include "any written or oral statement that is protected under applicable law and . . . is made in or in connection with a play, movie, television program, radio broadcast, audiovisual work, book, magazine article, musical work, news report, or other similar work." Fla. Stat. § 768.295(2)(a).

386. "Speech deals with matters of public concern when it can be fairly considered as relating to any matter of political, social, or other concern to the community." *Martin*, at *3, 8, citing *Snyder v. Phelps*, 562 U.S. 443, 453 (2011).

387. A judgment for Leapfrog on Count I, FDUTPA, proves Plaintiffs cause of action is "without merit;" therefore, the Court finds element one of Leapfrog's Anti-SLAPP affirmative defense is satisfied.

388. The evidence shows that Leapfrog's mission is premised on free speech in connection with a public issue, is intended to assist the public in assessing their healthcare options and healthcare safety and provides a public benefit; therefore, the Court finds element two of Leapfrog's Anti-SLAPP affirmative defense satisfied.

389. Leapfrog first raised its Anti-SLAPP defense in its motion to dismiss, which was not ruled on by the Court. (*See*, motion at ECF No. 39, p. 21; and Court Order on the motion at ECF No. 41).

390. After Plaintiffs withdrew its claim for monetary damages through the operative Amended Complaint, Leapfrog renewed its Anti-SLAPP defense in its Answer. (ECF No. 75 at pp. 47-48).

391. The Court therefore concludes that Leapfrog proved its Anti-SLAPP affirmative defense and a judgment for Leapfrog should therefore be entered on this basis.

392. The Court awards Leapfrog its attorney's fees. Fla. Stat. §758.295(4).

UNITED STATES DISTRICT COURT
SOUTHERN DISTRICT OF FLORIDA

CASE NO.: 25-CV-80526-MIDDLEBROOKS

GOOD SAMARITAN MEDICAL CENTER, INC., DELRAY MEDICAL CENTER, INC., PALM BEACH GARDENS COMMUNITY HOSPITAL, INC. D/B/A PALM BEACH GARDENS MEDICAL CENTER, ST. MARY'S MEDICAL CENTER, INC., AND WEST BOCA MEDICAL CENTER, INC.,

Plaintiff,

v.

THE LEAPFROG GROUP,

Defendant.
_____/

ORDER ON CROSS MOTIONS FOR SUMMARY JUDGMENT

THIS CAUSE comes before me on the Parties' respective Motions for Summary Judgment. (DE 86; DE 99). The Motions are fully briefed. For the following reasons, I will deny both Motions.

I. UNDISPUTED FACTS[1]

Plaintiffs—Good Samaritan Medical Center, Inc., Delray Medical Center, Inc., Palm Beach Gardens Community Hospital, Inc., St. Mary's Medical Center, Inc., and West Boca Medical Center, Inc.—are five South Florida hospitals (the "Community Hospitals"). Defendant The Leapfrog Group ("Leapfrog") is a non-profit hospital ratings "watchdog" based in Washington, DC. As Leapfrog claims, it was founded to address what it views as severe dysfunction in the healthcare marketplace by advocating for more transparency to allow consumers to compare

[1] The facts here are derived from the Parties' respective Statement of Material Facts, as well as their attached exhibits. The facts provided here are undisputed unless otherwise indicated.

among hospitals their safety record before choosing where to seek care. (DE 100 at ¶ 1, 2). In support of its mission, Defendant established the Hospital Survey in 2001. (DE 100 at ¶ 5). Defendant characterizes this Survey as a "free, voluntary benchmarking tool" whereas Plaintiffs suggest that although hospitals do not pay a fee to Defendant to submit the Survey, it nevertheless requires hospitals to expend significant financial resources and personnel time to complete it, sign over rights to their data, and face marketing blackmail. (DE 116 at ¶ 6). Meanwhile, in 2012, the Defendant introduced a Hospital Safety Grade program, assigning an A, B, C, D, or F grade to hospitals—regardless of whether they participated in the Defendant's Survey. (DE 100 at ¶ 15). Among other hospitals, Plaintiff Hospitals had been receiving Safety Grades for multiple years. (*Id.* at ¶ 18).

At issue in this case is Defendant's hospital grading system, specifically following a change to the methodology in Fall 2024. (DE 116 at ¶ 19). The methodology change involves the two-step imputation model implemented when scoring a non-reporting hospital. (DE 100 at ¶ 23).[2] To be sure, Defendant utilized the model both before and after the Fall 2024 change—the significant difference, however, is whether a non-reporting hospital would be assigned a score that mirrored partner hospitals or otherwise gave a static score purely based on non-response. As described by the Defendant, when a hospital did not complete the survey, the model would "impute" a score to four of the 22 measures used to calculate the safety grades. (*Id.*). The measures were Computerized Physician Order Entry, Bar Code Medication Administration, ICU Physician Staffing, and Hand

[2] A central dispute here is whether imputation is a well-settled and reliable methodology in circumstances where the Hospital does not provide data itself through the Survey. (DE 100 at ¶ 31, DE 116 at ¶ 31).

Hygiene. (*Id.*).[3] Before the Fall 2024 change, Defendant describes the methodology as Step 1, using the hospital's historical data if it had participated in a Survey within the last 4 rounds; where no historical data was available for that hospital, Defendant applied Step 2, assigning the mean score for those measures achieved by similar "cohort" hospitals. (*Id.*). Plaintiffs dispute that the hospitals were assigned "the mean score" of similar, cohort hospitals under Step 2, clarifying instead that hospitals were "assigned the lower of two possible mean scores." (DE 116 at ¶ 23; DE 101-30 at 16).

Defendant, however, claims that Step 2 – imputing cohort scores – "incentivized hospitals to not report to the [S]urvey, and instead, to take the imputed score." (DE 100 at ¶ 28 (internal quotation and citation omitted)). To address this concern, the Defendant introduced a new two-step methodology. (*Id.* at ¶ 29). Defendant describes this model as follows:

> Step (1) if a (non-reporting) hospital "had a score assigned by Leapfrog in the previous two rounds of grades…excluding imputed scores…the hospital is assigned the most recent score on that measure in the current Hospital Safety Grade," and if Step 1 is not applicable, the: Step (2) proscribes that if a hospital "does not have historical data from the last two rounds…of the safety grade, the hospital is assigned a point value that is equivalent to receiving Limited Achievement for this measure on the Leapfrog Hospital Survey."

(*Id.*). "Limited Achievement" is the lowest score available for each measure. (DE 100 at ¶ 29).

With regards to transparency, the change in methodology was disclosed to both the public and hospitals. Defendant's scoring methodology document is publicly available online. (DE 30). The Plaintiffs also were aware of and informed of the proposed Fall 2024 Grade methodology change. (DE 116 at ¶ 35). Moreover, when viewing a score under the relevant categories, the tab includes the following language "Declined to Report" with a large question mark and a footnote.

[3] Plaintiffs dispute whether the two-step imputation applied to the ICU Physician Staffing measure. (DE 116 at ¶ 23).

(DE 100 at ¶ 38; DE 101-38 at 2). The footnote, in red bolded text, states "Declined to Report: The hospital was asked to provide this information to the public, but did not." (DE 100 at ¶ 38; DE 101-38 at 3). Once one of the scores' sub-categories is selected, for example Computerized Physician Order Entry, additional text indicated with an asterisk – also in red bolded text – appears, stating "[t]he hospital declined to report their performance on this measure, so a score was assigned to reflect the lack of information available." (DE 116 at ¶ 38; DE 101-38 at 3). On the Defendant's website, there is also an "About the Grade" page which explains that "[i]n some cases where a hospital's information is not available for a certain measure, Leapfrog uses a supplemental data source. In cases where a hospital's information is not available from any data source, Leapfrog has outlined a methodology for dealing with the missing data." (DE 100 at ¶ 43).

Following this change to the Methodology, Plaintiffs represented that they have suffered various harms. One of Plaintiffs' CEOs attested that the "Medical Center has received reports from patients that they decided to not use our facility because of [Defendant's] misleading grades" and that Defendant's grades "have also damage[d] the Medical Center's relationships with physicians." (DE 100 at ¶ 55). The same CEO, however, did not identify those patients by name. (*Id.* at ¶ 57; DE 116 at ¶ 57). Several other representatives of the Plaintiffs similarly attested that they have fielded concerns from patients and physicians and have experienced repatational damage and loss of goodwill, and will further lose patients, practices, revenue, and other business opportunities. (DE 100 at ¶¶ 60-73).

Thus, on April 30, 2025, Plaintiffs filed suit against Defendant in this Court, bringing two counts. Count I alleges a violation of Florida Deceptive and Unfair Trade Practices Act (FDUTPA). Fla. Stat. § 501.201 *et seq*. Count II requests relief under the Declaratory Judgment Act, 28 U.S.C. § 2201. (DE 1 at 49, 51). Plaintiffs request that I enjoin the Defendant from including Plaintiffs in

its Hospital Safety Grades and award damages. On August 28, 2025, Plaintiffs filed an Amended Complaint, removing their request for damages and incorporating a request for equitable relief under FDUTPA. (DE 74).

II. LEGAL STANDARD

"The court shall grant summary judgment if the movant shows that there is no genuine dispute as to any material fact and the movant is entitled to judgment as a matter of law." Fed. R. Civ. P. 56(a). "A fact is material for the purposes of summary judgment only if it 'might affect the outcome of the suit under the governing law.'" *Kerr v. McDonald's Corp.*, 427 F.3d 947, 951 (11th Cir. 2005) (quoting *Anderson v. Liberty Lobby, Inc.*, 477 U.S. 242, 248 (1986)). "Genuine disputes are those in which the evidence is such that a reasonable jury could return a verdict for the non-movant. For factual issues to be considered genuine, they must have a real basis in the record." *Ellis v. England*, 432 F.3d 1321, 1325–26 (11th Cir. 2005) (citation omitted). "Credibility determinations, the weighing of the evidence, and the drawing of legitimate inferences from the facts are jury functions, not those of a judge at summary judgment. Thus, [the Court] do[es] not determine the truth of the matter, but instead decide[s] only whether there is a genuine issue for trial." *Barnett v. PA Consulting Group, Inc.*, 715 F.3d 354, 358 (D.C. Cir. 2013) (citation omitted).

Under the summary judgment standard, the moving party "bears the initial responsibility of informing the district court of the basis for its motion, and identifying those portions of 'the pleadings, depositions, answers to interrogatories, and admissions on file, together with the affidavits, if any,' which it believes demonstrate the absence of a genuine issue of material fact." *Celotex Corp. v. Catrett*, 477 U.S. 317, 323 (1986). In response, the non-moving party must "go beyond the pleadings and by [its] own affidavits, or by the 'depositions, answers to interrogatories, and admissions on file,' designate 'specific facts showing that there is a genuine issue for trial.'"

Id. at 324. If the non-moving party fails to "establish the existence of an element essential to that party's case, and on which that party will bear the burden of proof at trial[,]" summary judgment is warranted. *Id.* at 322. The party moving for summary judgment bears the burden of establishing that there is insufficient evidence to support the non-moving party's case. *Id.* at 325. Moreover, "[t]he court must view all evidence in the light most favorable to the non-movant and must resolve all reasonable doubts about the facts in favor of the non-movant." *United of Omaha Life Ins. Co. v. Sun Life Ins. Co. of Am.*, 894 F.2d 1555, 1557–58 (11th Cir. 1990) (citation omitted).

III. DISCUSSION

FDUTPA prohibits "[u]nfair competition, unconscionable acts or practices, and unfair or deceptive acts or practices in the conduct of any trade or commerce." Fla. Stat. § 501.204(1). Fla. Stat. 501.211 sets out the individual remedies available against a party that has been shown to violate FDUTPA. The remedies include actual damages and equitable relief, albeit requiring different elements.

Fla. Stat. 501.211(2) permits any person "who has suffered a loss" to recover actual damages. The Eleventh Circuit has explained that to obtain damages under FDUTPA, a plaintiff must prove "(1) a deceptive act or unfair practice; (2) causation; and (3) actual damages."[4] *Carriuolo v. Gen. Motors Co.*, 823 F.3d 977, 983 (11th Cir. 2016); *accord Rollins, Inc. v. Butland*, 951 So. 2d 860, 869 (Fla. 2d DCA 2006). Relevant for purposes of this Order is the third element, actual damages, and under applicable caselaw, the requirement has been explicit: "to satisfy all of the elements of a FDUPTA claim [for actual damages] it must show that a consumer was injured

[4] "Actual damages" under the FDUTPA is a term of art meaning "the difference in the market value of the product or service in the condition in which it was delivered and its market value in the condition in which it should have been delivered according to the contract of the parties." *Carriuolo v. Gen. Motors Co.*, 823 F.3d 977, 986 (11th Cir. 2016) (citing *Rollins, Inc. v. Heller*, 454 So.2d 580, 585 (Fla. Dist. Ct. App. 1984)).

or suffered a detriment." *Caribbean Cruise Line, Inc. v. Better Bus. Bureau of Palm Beach Cnty., Inc.*, 169 So. 3d 164 (Fla. Dist. Ct. App. 2015). It is therefore a fairly straightforward proposition that consumers are the ones who must be harmed, and that harm must have already occurred.

Fla. Stat. 501.211(1), on the other hand, permits "anyone aggrieved" to seek injunctive relief against "a person who has violated, is violating, or is otherwise likely to violate this part." Caselaw expounding the requirements for equitable relief explains that an entity must show (1) that it is aggrieved, in that its rights have been, are being, or will be adversely affected, by (2) a violation of FDUTPA, meaning an unfair or deceptive practice which is injurious to consumers. Further, "for someone to be aggrieved, the injury claimed to have been suffered cannot be merely speculative." *Stewart Agency, Inc. v. Arrigo Enterprises, Inc.*, 266 So. 3d 207 (Fla. 4th DCA 2019). For our purposes, the relevant inquiry to obtain equitable relief is two-fold, and in my view less straightforward than to obtain actual damages or than the Parties seem to suggest. The inquiry here is whether a consumer must nevertheless be harmed, and, if so, whether that injury may be not yet have occurred.

The Parties propose different answers. Defendant primarily relies upon *Novo Nordisk, Inc. v. Brooksville Pharmaceuticals Inc.*, for the proposition that actual patient harm – rather than likely harm - is the proper standard at summary judgment. 785 F.Supp.3d 1123, 1145 (2025). Plaintiffs argue that the Defendant's practices are "unfair" as a matter of law, and critically, do not "definitively requir[e] consumer injury." (DE 115 at 21). Both are incorrect.

To begin, it is important to assess the terms "unfair" and "deceptive" as analytically distinct concepts. Relevant caselaw has offered distinct definitions of "unfair practice" and "deception" in conjunction with a FDUTPA claim. The Florida Supreme Court has defined "unfair practice" as "one that offends established public policy and one that is immoral, unethical, oppressive,

unscrupulous or substantially injurious to consumers." *PNR, Inc. v. Beacon Prop. Mgmt., Inc.*, 842 So.2d 773, 777 (Fla.2003) (emphasis added) (citations omitted) (internal quotation marks omitted). Conversely, it has defined "deception" as "a representation, omission, or practice that is likely to mislead the consumer acting reasonably in the circumstances, to the *consumer's detriment.*" *Id.* (emphasis added).

Defendant's reliance on *Novo Nordisk* is misplaced. To be sure *Novo Nordisk* does make reference to the distinction between an "unfair" practice and a "deceptive" practice. 785 F.Supp.3d at 1145-46. But as I see it, *Novo Nordisk* simultaneously quashes the significance of that distinction. An "unfair" practice requires substantial injury to consumers—i.e., actual patient harm. A "deceptive" act, on the other hand, incorporates the "likely to mislead" standard. *Novo Nordisk* does away with this distinction and finds that the plaintiffs in that case failed to advance a FDUPTA claim because under either an unfair practice or deception claim, the plaintiff failed to "show[] any evidence that a Florida consumer suffered actual harm from Brooksville's misbranded semaglutide." It is for that same reason that I find the argument that summary judgment requires actual harm unavailing. *See Novo Nordisk*, 785 F.Supp.3d at 1145. (stating that "while Plaintiff is correct that under a *motion to dismiss* standard, a plaintiff only needs to allege that the conduct in question is 'likely to cause consumer harm,' under a *motion for summary judgment* standard, Florida law requires" proof of actual harm "on at least one Florida consumer, that is, committed an unfair or deceptive trade practice that injured a consumer").

In a similar vein, Defendant's broader argument that Florida law requires proof of harm to a consumer is misguided. Defendant relies on *State Farm Mut. Auto. Ins. Co. v. At Home Auto Glass LLC*, 2024 WL 4349246 at *4 (M.D. Fla. Sept. 30, 2024) for the following statement: "While a plaintiff need not be a consumer to pursue a claim under FDUTPA, Florida case law requires a

plaintiff to prove harm to a consumer or consumers." This language is taken from *Ounjian v. Globoforce, Inc.*, 89 F.4th 852, 860 (11th Cir. 2023), which draws on *Caribbean Cruise Line, Inc. v. Better Bus. Bureau of Palm Beach Cty., Inc.*, 169 So. 3d 164, 169 (Fla. 4th DCA 2015). The key issue with this principle is that, across all of the cited cases, it is applied in the context of actual damages, rendering its applicability questionable in the context of equitable relief under FDUTPA. To hold otherwise would diminish the significance between the two remedies.

Altogether, a deception claim under FDUTPA need not require actual harm and instead requires "deceptions that are likely to cause injury to a reasonable relying consumer." *Millennium Commc'ns & Fulfillment, Inc. v. Off. of Att'y Gen., Dep't of Legal Affs., State of Fla.*, 761 So. 2d 1256, 1263 (Fla. Dist. Ct. App. 2000).

As it relates to an "unfair" practice, Plaintiffs advance a similarly problematic interpretation. Plaintiffs argue that an "unfair" practice need not require consumer injury because of the disjunctive: "or substantially injurious to consumers." (DE 115 at 21) (*contra SMS Audio, LLC v. Belson*, 2017 WL 11631378 at *3 (S.D. Fla. Apr. 25, 2017) (adopting the newer definition of an "unfair practice" issued by the FTC in its 1980 policy statement, which more definitively requires consumer injury). Plaintiffs misread my opinion in *SMS Audio*. In saying that the newer definition definitively requires consumer injury, that does not lead to a conclusion that the definition adopted in *PNR* therefore does not require consumer injury. The plain text of the *PNR* definition still includes "or substantially injurious to consumers" and I decline to read this "disjunctive" as creating a standard where consumer harm is a supplemental showing rather than a required one to advance a FDUTPA claim.[5]

[5] On this point, it is unclear how they intend to present evidence to support an unfair practice, given the dearth of evidence of actual consumer harm. I also see potential hearsay issues underlying some of the proffered testimony. (DE 115 at ¶ 13; DE 116 at ¶ 57). Plaintiffs argue that "the CEOs

Plaintiff also advances the argument that "hospitals are 'consumers' under FDUTPA" because the term broadly includes any "individual," "business," "corporation," "or any other group or combination." (DE 115 at 20, 23) (citing Fla. Stat. 501.203(7)). This argument is misplaced given the facts of the case. Of course, any of these entities *can* be consumers for purposes of FDUTPA, but that determination is dependent on who the unfair practice or deception is aimed at misleading. Given Defendant's patient-facing Hospital Safety Grades, it is not clear to me that the hospitals would be "consumers" of the Safety Grades; nor does it seem that insurers who may have implored Plaintiffs to address the safety grades can be considered "consumers" of the grades.[6]

Taking this preliminary understanding of the law, it becomes evident that the factual disputes at hand are material and, consequently, summary judgment is not warranted for either party. First, the Parties' factual disputes about the reliability of the methodology are, alone, enough to warrant denial of their cross motions for summary judgment. The Parties disagree about whether imputation is a well-settled and reliable methodology, the relevant measures in dispute, the free nature of the Survey, the scope of public comment, the accessibility of the scoring methodology, whether the methodology change constituted a penalty or an incentive, the existence of consumer harm, among others. Each of these material issues animate the relevant inquiries under a FDUTPA claim. On the record before me, I cannot decide the truth of these matters or the weight to ascribe to any piece of evidence in favor of the Plaintiff or the Defendant.

---

also directly testified that … patients were voicing complaints about the hospital's low safety score," and this testimony does not go towards the truth of the matter asserted that the hospital actually performs poorly on patient safety. (DE 107 at 12) (internal quotations omitted). But a statement can be offered for multiple assertions, and the key assertion here is that it is being offered for the truth of the matter that patients were voicing complaints or cancelling appointments.

[6] I need not reach a determinative finding here, as the facts asserted at trial may color the nature of the insurer's claims.

IV. CONCLUSION

Accordingly, it is **ORDERED AND ADJUDGED** that:

1) Plaintiffs' Motion for Summary Judgement (DE 86) is **DENIED.**

2) Defendant, The Leapfrog Group's Motion for Summary Judgment (DE 99) is **DENIED.**

SIGNED in Chambers in West Palm Beach, Florida, this 6th day of January, 2026.

CERTIFICATE OF COMPLIANCE RE ADMITTED EVIDENCE

I, Jura C. Zibas, as counsel for the Defendant, The Leapfrog Group, hereby certify the following:

Check the applicable sections:

☒ ALL EXHIBITS E-FILED: All documentary exhibits and photographs of non-documentary physical exhibits offered or introduced into evidence have been electronically filed in CM/ECF.

☒ EXHIBITS NOT E-FILED: The following is an itemized list of exhibits that are exempt from mandatory electronic filing pursuant to Local Rule 5.3(b)(3):

1. The Leapfrog Group's Designated Portions of Matt Austin's Deposition Testimony from his Deposition on September 25th, 2025

2. The Leapfrog Group's Designated Portions of Lauren Bailey's Deposition Testimony from her Deposition on September 10th, 2025

Any original exhibits that have been returned to or retained by the filing party after electronic filing shall be kept for safe keeping until the conclusion of any appeals. Upon order of court, the filing party agrees to return the original exhibits to the Clerk of Court.

This Certificate shall be filed within ten (10) days of the conclusion of a hearing or trial. Failure to timely comply with the requirements of Local Rule 5.3(b) may result in the imposition of sanctions.

Re: Tenet Healthcare Corporation Cease and Desist

Dear Ms. Binder and Ms. Blair:

We represent Tenet Healthcare Corporation ("Tenet"), a leading health system and services platform that provides high-quality, compassionate care for patients in its hospitals and other medical facilities throughout the United States. It has come to our attention that The Leapfrog Group ("Leapfrog") has published false and misleading information about a number of Tenet facilities on its website, including on the Leapfrog Ratings list and its Hospital Safety Grade list. We write to demand that Leapfrog immediately remove all Tenet hospitals from these lists and cease and desist further publication of false and misleading information about Tenet hospitals on its website.

As you are undoubtedly aware, Tenet is among the more than 20% of hospitals ranked by Leapfrog that have declined to participate. As a result, Tenet has provided Leapfrog with no information regarding the performance of its facilities—a fact that Leapfrog admits.[1] Although Tenet fully supports the goals of patient transparency and informed decision-making, it declines to participate in Leapfrog's pay-to-play rankings.

Leapfrog nevertheless has published false statements about Tenet hospitals to its websites based on incomplete and incorrect information. The Leapfrog Ratings pages, for example, misleadingly depict four empty bars for the "Hospital's Progress" of many Tenet hospitals—suggesting poor performance, when in fact Tenet has simply elected not to participate in Leapfrog's rankings. Even more egregiously, Leapfrog's Hospital Safety Grade website purports to publish safety data

[1] *See, e.g.* https://ratings.leapfroggroup.org/facility/details/10-0287/good-samaritan-medical-center-west-palm-beach-fl (Leapfrog Ratings page for Good Samaritan Medical Center in West Palm Beach, noting that the facility "Declined to Respond").

DX 931

regarding the performance of Tenet hospitals and assigns them safety grades—even though Leapfrog admits that it does not have data from these hospitals to substantiate those grades. The result is that Leapfrog's ratings are false, wildly inaccurate, and defamatory. For example, Leapfrog assigned an "F" to Good Samaritan Medical Center—a facility that has consistently received national recognition for its superior patient outcomes, ranking as a "High Performing" facility for Procedures/Conditions, and receiving the "America's 100 Best Hospitals for Spine Surgery Award" and "Outpatient Orthopedic Surgery Excellence Award."

Leapfrog holds itself out as a "watchdog organization that serves as a voice for health care consumers and purchasers." But its apparent practice of smearing medical facilities that decline to participate in Leapfrog's rankings and pay fees to Leapfrog is both disturbing and actionable. In fact, we are aware that other hospitals have been forced to pursue legal action to redress Leapfrog's unsavory practices.[2] And Leapfrog's misconduct here has already caused harm to Tenet's business and goodwill—including negative (and erroneous) press coverage and other negative impacts to the operations of Tenet's hospitals. Tenet therefore demands that Leapfrog immediately, and by no later than January 13, 2025, remove from its website all references to Tenet hospitals—including in the Leapfrog Ratings and its Hospital Safety Grade List.[3]

Our investigation of the facts is ongoing, and Tenet reserves all rights to take appropriate legal action against Leapfrog, including seeking damages and other relief. These include potential claims for defamation, business disparagement, unfair and deceptive business practices, and any other causes of action available in law or equity. In addition, if we were to engage in any formal dispute related to this matter, please be advised that any and all documents and records, including emails, text messages, letters, calendars, voicemails and other electronic or hard copy documents that relate in any way to your Leapfrog Ratings page, Hospital Safety Grade list, published statements about Tenet hospitals, and the subject matter of this letter may be subject to discovery. Please consider this letter formal notice of your obligation to retain all such documents.

Sincerely,

Mary Beth Maloney

HOSPITAL SAFETY GRADE

WHAT IS THE HOSPITAL SAFETY GRADE?

Leapfrog Hospital Safety Grades are assigned to nearly 3,000 general acute-care hospitals across the nation twice annually. The Safety Grade uses up to 22 national patient safety measures from the Centers for Medicare & Medicaid Services (CMS) and the Leapfrog Hospital Survey, and information from other supplemental data sources, to produce a single letter grade representing a hospital's overall performance in keeping patients safe from preventable harm and medical errors. The Safety Grade methodology has been peer reviewed and published in the Journal of Patient Safety.[1]

With the Safety Grade, The Leapfrog Group aims to educate and encourage consumers to consider safety when selecting a hospital for themselves or their families. In addition, we believe the Safety Grade will foster strong market incentives for hospitals to make safety a priority. Safety Grades are publicly reported at www.HospitalSafetyGrade.org.

ELIGIBLE HOSPITALS

Due to the limited availability of public data, Leapfrog is not able to calculate a Safety Grade for every hospital in the U.S., including the following types of hospitals:

- Critical access hospitals (CAH)
- Rural emergency hospitals (REH)
- Long-term care and rehabilitation facilities
- Mental health facilities
- Federal hospitals (e.g., Veterans Affairs, Indian Health Services, etc.)
- Some specialty hospitals, such as surgery centers and cancer hospitals
- Free-standing pediatric hospitals
- Hospitals in U.S. territories
- Hospitals that are missing scores for **more than six** (6) process/structural measures, or **more than five** (5) outcome measures, or **missing PSI 90**

[1] The Leapfrog Hospital Safety Grade uses the below-described data and reflects expert opinion as to the relative importance of each category.

HOSPITAL SAFETY GRADE

MEASURES

The Safety Grade utilizes up to 22 national patient safety measures from the Centers for Medicare & Medicaid Services (CMS) and the Leapfrog Hospital Survey, and information from other supplemental data sources.

The measure set is divided into two domains: (1) Process/Structural Measures and (2) Outcome Measures. Each domain represents 50% of the Safety Grade. The following table lists the 22 measures included in the Safety Grade, as well as the data source and reporting period for each measure. In some cases where a hospital's information is not available for a certain measure, Leapfrog uses a secondary data source (as indicated in the table). In cases where a hospital's information is not available from any data source, Leapfrog has outlined a methodology for dealing with the missing data.

PROCESS/STRUCTURAL MEASURES (12)

Measure Name	Primary Data Source	Reporting Period	Secondary Data Source	Reporting Period
Computerized Physician Order Entry (CPOE)	2024 Leapfrog Hospital Survey	2024	Imputation Model Applied*	N/A
Bar Code Medication Administration (BCMA)	2024 Leapfrog Hospital Survey	2024	Imputation Model Applied*	N/A
ICU Physician Staffing (IPS)	2024 Leapfrog Hospital Survey	2024	Imputation Model Applied*	N/A
Safe Practice 1: Culture of Leadership Structures and Systems	2024 Leapfrog Hospital Survey	2024	N/A	N/A
Safe Practice 2: Culture Measurement, Feedback & Intervention	2024 Leapfrog Hospital Survey	2024	N/A	N/A

HOSPITAL
SAFETY GRADE

PROCESS/STRUCTURAL MEASURES (12)

Measure Name	Primary Data Source	Reporting Period	Secondary Data Source	Reporting Period
Total Nursing Care Hours per Patient Day	2024 Leapfrog Hospital Survey	01/01/2023 - 12/31/2023	N/A	N/A
Hand Hygiene	2024 Leapfrog Hospital Survey	2024	Imputation Model Applied*	N/A
H-COMP-1: Nurse Communication	CMS	10/01/2022 - 09/30/2023	N/A	N/A
H-COMP-2: Doctor Communication	CMS	10/01/2022 - 09/30/2023	N/A	N/A
H-COMP-3: Staff Responsiveness	CMS	10/01/2022 - 09/30/2023	N/A	N/A
H-COMP-5: Communication about Medicines	CMS	10/01/2022 - 09/30/2023	N/A	N/A
H-COMP-6: Discharge Information	CMS	10/01/2022 - 09/30/2023	N/A	N/A

*See Leapfrog's Imputation Method for CPOE, BCMA, IPS and Hand Hygiene for more information on the imputation methodology used for hospitals that did not submit a Leapfrog Hospital Survey by the Data Snapshot Date (August 31, 2024).

HOSPITAL SAFETY GRADE

OUTCOME MEASURES (10)

Measure Name	Primary Data Source	Reporting Period	Secondary Data Source	Reporting Period
Foreign Object Retained	CMS	07/01/2021 - 06/30/2023	N/A	N/A
Air Embolism	CMS	07/01/2021 - 06/30/2023	N/A	N/A
Falls and Trauma	CMS	07/01/2021 - 06/30/2023	N/A	N/A
CLABSI	2024 Leapfrog Hospital Survey	01/01/2023 - 12/31/2023	CMS	10/01/2022 - 09/30/2023
CAUTI	2024 Leapfrog Hospital Survey	01/01/2023 - 12/31/2023	CMS	10/01/2022 - 09/30/2023
SSI: Colon	2024 Leapfrog Hospital Survey	01/01/2023 - 12/31/2023	CMS	10/01/2022 - 09/30/2023
MRSA	2024 Leapfrog Hospital Survey	01/01/2023 - 12/31/2023	CMS	10/01/2022 - 09/30/2023
C. Diff.	2024 Leapfrog Hospital Survey	01/01/2023 - 12/31/2023	CMS	10/01/2022 - 09/30/2023
PSI 4: Death rate among surgical inpatients with serious treatable complications	CMS	07/01/2020 - 06/30/2022	N/A	N/A
CMS Medicare PSI 90: Patient safety and adverse events composite*	CMS	07/01/2020 - 06/30/2022	N/A	N/A

* CMS calculates PSI 90 using the ten (10) component PSIs. While scores for each of the 10 component PSIs are not used to calculate fall 2024 Hospital Safety Grades, they will be publicly reported on the Hospital Safety Grade website.

HOSPITAL SAFETY GRADE

**COMPONENT PSIs (SCORES NOT USED TO CALCULATE THE HOSPITAL SAFETY GRADE)

Component PSI	Primary Data Source	Reporting Period	Secondary Data Source	Reporting Period
PSI 3: Pressure ulcer rate	CMS	07/01/2020 - 06/30/2022	N/A	N/A
PSI 6: Iatrogenic pneumothorax rate	CMS	07/01/2020 - 06/30/2022	N/A	N/A
PSI 8: In-hospital fall with hip fracture rate	CMS	07/01/2020 - 06/30/2022	N/A	N/A
PSI 9: Postoperative hemorrhage or hematoma rate	CMS	07/01/2020 - 06/30/2022	N/A	N/A
PSI 10: Postoperative acute kidney injury requiring dialysis rate	CMS	07/01/2020 - 06/30/2022	N/A	N/A
PSI 11: Postoperative respiratory failure rate	CMS	07/01/2020 - 06/30/2022	N/A	N/A
PSI 12: Perioperative pulmonary embolism or deep vein thrombosis rate	CMS	07/01/2020 - 06/30/2022	N/A	N/A
PSI 13: Postoperative sepsis rate	CMS	07/01/2020 - 06/30/2022	N/A	N/A
PSI 14: Postoperative wound dehiscence rate	CMS	07/01/2020 - 06/30/2022	N/A	N/A
PSI 15: Abdominopelvic accidental puncture or laceration rate	CMS	07/01/2020 - 06/30/2022	N/A	N/A

Note: CMS calculates PSI 90 using the ten (10) component PSIs listed above. While scores for each of the 10 component PSIs are not used to calculate fall 2024 Hospital Safety Grades, they will be publicly reported on the Hospital Safety Grade website.

HOSPITAL SAFETY GRADE

MEASURE & SCORING DESCRIPTIONS

PROCESS/STRUCTURAL MEASURES

For Process/Structural Measures, a higher score is always better because these are measures of compliance with best practices in patient care.

COMPUTERIZED PHYSICIAN ORDER ENTRY (CPOE)

The CPOE measure is collected by The Leapfrog Group on the Leapfrog Hospital Survey. It measures a hospital's progress toward implementing a CPOE system to reduce medication ordering errors. Through participation in the Leapfrog Hospital Survey, hospitals are placed in one of several performance categories: "Achieved the Standard," "Considerable Achievement," "Some Achievement," "Limited Achievement," or "Unable to Calculate Score." For the purposes of calculating the Safety Grade, a numerical score is assigned to each performance category:

Leapfrog Performance Category	Measure Score
Achieved the Standard	100
Considerable Achievement	70
Some Achievement	40
Limited Achievement	15
Unable to Calculate Score	Not Available (See Scoring Terms)

For hospitals that did not submit a 2024 Leapfrog Hospital Survey by August 31, see Using Secondary Data Sources for more information on Leapfrog's imputation methodology.

BAR CODE MEDICATION ADMINISTRATION (BCMA)

The BCMA measure is collected by The Leapfrog Group on the Leapfrog Hospital Survey. It measures a hospital's progress toward 1) implementation of BCMA throughout the hospital, 2) compliance with patient and medication scans during administration, 3) use of decision support, and 4) structures to monitor and reduce workarounds. Through participation in the Leapfrog Hospital Survey, hospitals are placed in one of several performance categories: "Achieved the Standard," "Considerable Achievement," "Some Achievement," "Limited Achievement," or "Does Not Apply." For the purposes of calculating the Safety Grade, a numerical score is assigned to each performance category:

Leapfrog Performance Category	Measure Score
Achieved the Standard	100
Considerable Achievement	75
Some Achievement	50
Limited Achievement	25
Does Not Apply	Not Available (See Scoring Terms)

For hospitals that did not submit a 2024 Leapfrog Hospital Survey by August 31, see Using Secondary Data Sources for more information on Leapfrog's imputation methodology.

ICU PHYSICIAN STAFFING (IPS)

The IPS measure is collected by The Leapfrog Group on the Leapfrog Hospital Survey. It measures a hospital's use of intensivists in ICUs. Through participation in the Leapfrog Hospital Survey, hospitals are placed in one of several performance categories: "Achieved the Standard," "Considerable Achievement," "Some Achievement," "Limited Achievement," or "Does Not Apply." For the purposes of calculating the Safety Grade, a numerical score is assigned to each performance category:

Leapfrog Performance Category	Measure Score
Achieved the Standard	100
Considerable Achievement	50
Some Achievement	15
Limited Achievement	5
Does Not Apply	Not Available (See Scoring Terms)

For hospitals that did not submit a 2024 Leapfrog Hospital Survey by August 31, see Using Secondary Data Sources for detailed information on Leapfrog's imputation methodology.

NATIONAL QUALITY FORUM (NQF) SAFE PRACTICES

Two (2) NQF Safe Practice measures are collected by The Leapfrog Group on the Leapfrog Hospital Survey. They measure a hospital's progress toward implementing endorsed processes and protocols to reduce and prevent adverse events. Through participation in the Leapfrog Hospital Survey, hospitals can earn up to 120 points for each Safe Practice. For the purposes of calculating the Safety Grade, individual scores for each Safe Practice are used:

NQF Safe Practice	Possible Measure Score
Safe Practice 1: Culture of Safety Leadership Structures and Systems	0 - 120
Safe Practice 2: Culture Measurement, Feedback and Intervention	0 - 120

There is no secondary data source for the NQF Safe Practices. Therefore, hospitals that did not submit a 2024 Leapfrog Hospital Survey by August 31 will not have these measures included in their Safety Grade and the measure will be reported as "Declined to Report." See Dealing with Missing Data for more information.

TOTAL NURSING CARE HOURS PER PATIENT DAY

The Total Nursing Care Hours per Patient Day measure is collected by The Leapfrog Group on the Leapfrog Hospital Survey. It measures the hospital's total number of productive hours worked by employee or contract nursing staff (i.e., RNs, LPNs, and UAPs) with direct patient care responsibilities per patient day across three unit types: medical, surgical, and med/surg. Through participation in the Leapfrog Hospital Survey, hospitals are placed in one of several performance categories: "Achieved the Standard," "Considerable Achievement," "Some Achievement," "Limited Achievement," or "Does Not Apply." For the purposes of calculating the Safety Grade, a numerical score is assigned to each performance category:

Leapfrog Performance Category	Measure Score
Achieved the Standard	100
Considerable Achievement	70
Some Achievement	40
Limited Achievement	15
Does Not Apply	Not Available (See Scoring Terms)

There is no secondary data source for the Total Nursing Care Hours per Patient Day measure. Therefore, hospitals that did not submit a 2024 Leapfrog Hospital Survey by August 31 will not have this measure included in their Safety Grade and the measure will be reported as "Declined to Report." See Dealing with Missing Data for more information.

HAND HYGIENE

The Hand Hygiene measure is collected by The Leapfrog Group on the Leapfrog Hospital Survey. It measures processes and protocols that hospitals have in place regarding monitoring hand hygiene practices, fostering a culture of good hand hygiene, offering training and education, and providing equipment. Through participation in the Leapfrog Hospital Survey, hospitals are placed in one of several performance categories: "Achieved the Standard," "Considerable Achievement," "Some Achievement," "Limited Achievement." For the purposes of calculating the Safety Grade, a numerical score is assigned to each performance category:

Leapfrog Performance Category	Measure Score
Achieved the Standard	100
Considerable Achievement	70
Some Achievement	40
Limited Achievement	15

For hospitals that did not submit a 2024 Leapfrog Hospital Survey by August 31, see Using Secondary Data Sources for detailed information on Leapfrog's imputation methodology.

HOSPITAL CONSUMER ASSESSMENT OF HEALTHCARE PROVIDERS AND SYSTEMS (HCAHPS) COMPOSITES

The Hospital HCAHPS survey responses are collected by CMS via the Inpatient Quality Reporting Program. Linear mean scores calculated by CMS incorporate the full range of survey response categories into a single metric for each HCAHPS composite. Five of the six composites are used in the Safety Grade. For the purposes of calculating the Safety Grade, a hospital's linear mean score for each of the five composites is used:

HCAHP Composite	Possible Measure Score
H-COMP-1: Nurse Communication	0 - 100
H-COMP-2: Doctor Communication	0 - 100
H-COMP-3: Staff Responsiveness	0 - 100
H-COMP-5: Communication about Medicines	0 - 100
H-COMP-6: Discharge Information	0 - 100

HOSPITAL
SAFETY GRADE

OUTCOME MEASURES

For Outcome Measures, a lower score is always better because these are measures of harm experienced by patients (e.g., central line-associated blood stream infections).

HOSPITAL-ACQUIRED CONDITIONS

Three hospital-acquired condition measures are calculated by CMS through the DRA HAC Reporting Program: Foreign Object Retained after Surgery, Air Embolism, and Falls and Trauma. Hospital-acquired condition rates are calculated by CMS based on Part A Medicare Fee-for-service (FFS) claims and publicly reported as a rate per 1,000 Part A Medicare FFS discharges. No age restrictions are applied. For the purposes of calculating the Safety Grade, the rate is used. More information is available in the DRA HAC methodology.

HEALTHCARE-ASSOCIATED INFECTIONS

Five healthcare-associated infection measures are collected by The Leapfrog Group on the Leapfrog Hospital Survey: Central line-associated bloodstream infections (CLABSI) in ICUs and select wards, Catheter-associated urinary tract infections (CAUTI) in ICUs and select wards, Surgical site infections from colon surgery (SSI: Colon), Facility-wide inpatient MRSA Blood Laboratory-identified Events, and Facility-wide inpatient C.diff. Laboratory-identified Events. Through participation in the Leapfrog Hospital Survey, hospitals were required to 1) join Leapfrog's NHSN group, 2) provide an accurate NHSN ID in the Profile section of the Online Survey Tool, and 3) submit a Survey by August 31. For the purposes of calculating the Safety Grade, the standardized infection ratio (SIR) is used:

As Reported by Leapfrog	Measure Score	Notes
Standardized Infection Ratio (SIR)	SIR	Measure is **included** in calculating the Safety Grade
Does Not Apply	Not Available (See Scoring Terms)	Measure is **not included** in calculating the Safety Grade. No use of Secondary Data.
Unable to Calculate Score	Not Available (See Scoring Terms)	Measure is **not included** in calculating the Safety Grade. No use of Secondary Data.
Declined to Respond	See Using Secondary Data	Secondary Data source is used.

For hospitals that did not join Leapfrog's NHSN group, provide an accurate NHSN ID, or submit a 2024 Leapfrog Hospital Survey by August 31, see Using Secondary Data Sources for more information on Leapfrog's use of CMS data.

HOSPITAL
SAFETY GRADE

AHRQ PATIENT SAFETY INDICATORS (PSI)

Two AHRQ Patient Safety Indicators are calculated by CMS through the Inpatient Quality Reporting Program and the HAC Reduction Program: PSI 4 Death Rate among Surgical Inpatients with Serious Treatable Conditions and PSI 90 Patient Safety and Adverse Events Composite. PSI rates are calculated by CMS based on Medicare Fee-for-Service claims and publicly reported as a rate per 1,000 inpatient discharges. CMS only includes claims from patients 18 years or older. For the purpose of calculating the Safety Grade, the smoothed rate is used for both measures. More information on calculating PSIs is available on the Patient Safety Indicators (PSI) 2024 Resources website.

Note: CMS calculates PSI 90 using the ten (10) component PSIs that are listed in the PSI 90 Components table above. While scores for each of the 10 component PSIs are NOT used to calculate fall 2024 Hospital Safety Grades, they will be publicly reported on the Hospital Safety Grade website. Additional information about the PSI 90 measure and how it is calculated by CMS can be found here.

USING SECONDARY DATA SOURCES

Twelve (12) of the 22 measures included in the Safety Grade are derived from the Leapfrog Hospital Survey. The Leapfrog Hospital Survey is voluntary, and as such, hospitals may choose not to submit a Survey. To address this gap in available data, the Safety Grade methodology utilizes secondary data when available. For information on how to complete a free Leapfrog Hospital Survey, visit www.leapfroggroup.org/survey.

IMPUTATION METHOD FOR CPOE, BCMA, IPS, AND HAND HYGIENE

Leapfrog has worked closely with statisticians at Mathematica, Leapfrog's National Expert Panel, and our scientific partners at Johns Hopkins Armstrong Institute for Patient Safety and Quality to develop a new two-step imputation approach for determining scores for CPOE, BCMA, IPS, and Hand Hygiene if they are missing from our publicly reported Survey Results.

STEP 1: USE A HOSPITAL'S MOST RECENT SCORE ON THE MEASURE (APPLIES TO CPOE, IPS, AND HAND HYGIENE ONLY)

If the hospital had a score assigned by Leapfrog in the previous two rounds of grades (i.e., spring 2024, fall 2023), excluding imputed scores, the hospital is assigned the most recent score on that measure in the current Hospital Safety Grade (i.e., fall 2024).

STEP 2: USE IMPUTATION POINT ASSIGNMENT (APPLIES TO CPOE, BCMA, IPS AND HAND HYGIENE)

If the hospital does not have historical data from the last two rounds (i.e., spring 2024, fall 2023) of the Safety Grade, the hospital is assigned a point value that is equivalent to receiving "Limited Achievement" for this measure on the Leapfrog Hospital Survey:

Measure	Leapfrog Hospital Survey Performance Category	Corresponding Safety Grade Measure Score
CPOE	Limited Achievement	15
BCMA	Limited Achievement	25
IPS	Limited Achievement	5
Hand Hygiene	Limited Achievement	15

Note about IPS: Only hospitals that operate an adult or pediatric medical and/or surgical ICU or neuro ICU are eligible for Step 2 imputation of the IPS measure. A hospital's ICU designation (i.e., operating a medical ICU, surgical ICU, or pediatric ICU) is determined from the number of medical, surgical and/or pediatric ICU beds reported in Worksheet S-3 Part 1 of the hospital's most recent CMS Cost Report. If your hospital does not operate an ICU, but shares a CMS Certification Number with a hospital that does, please contact the Help Desk immediately if an IPS score was imputed.

CMS DATA FOR HAIS

CMS is **the secondary data** source for healthcare-associated infections. For the purposes of calculating the Safety Grade, the standardized infection ratio (SIR) published by CMS is used:

Hospitals That Did Not Join Leapfrog's NHSN Group and Submit Section 7: Managing Serious Errors of the 2024 Leapfrog Hospital Survey by August 31

As Reported by CMS	Measure Score	Notes
Not Available (no locations or low volume)	Not Available (See Scoring Terms)	Measure is **not included** in calculating the Leapfrog Hospital Safety Grade.
Standard Infection Ratio (SIR)	SIR	Measure is **included** in calculating the Leapfrog Hospital Safety Grade.

If a hospital does not have available data from the Leapfrog Hospital Survey or CMS (e.g., no locations or low volume), the hospital is reported as "Not Available." See Dealing with Missing Data for more information.

HOSPITAL
SAFETY GRADE

SCORING METHODOLOGY

WEIGHTING INDIVIDUAL MEASURES

Each measure included in the Leapfrog Hospital Safety Grade is assigned a standard weight. The methodology to assign standard weights includes four criteria: (1) Impact, (2) Evidence, (3) Opportunity, and (4) Number of Component Measures. These four criteria are then combined using the equation below, which results in a standard weight for each measure that represents the measure's relative importance within the Hospital Safety Grade.

[Evidence + (Impact x Opportunity x Number of Component Measures)]

EVIDENCE

The Evidence Score for each individual measure is assigned a value of one (1) or two (2) using the following criteria:

- 1 = Supported by either suggestive clinical or epidemiological studies or theoretical rationale
- 2 = Supported by experimental, clinical, or epidemiological studies and strong theoretical rationale

OPPORTUNITY

The Opportunity Score for each individual measure is based on the Coefficient of Variation (Standard Deviation/Mean) of that measure, using the following formula: **[1 + (Standard Deviation/Mean)]**. The Opportunity Score is on a continuous scale that is capped at three (3). Any measure with an Opportunity Score above three (3) is assigned a three (3).

IMPACT

The Impact Score for each individual measure is comprised of two (2) parts, each of which is assigned a value from one (1) to three (3):

1. Number of patients affected
2. Severity of harm

The *number of patients affected* score is determined by the following:

- 0 = Extremely rare event (e.g., Air Embolism)
- 1 = Rare event (e.g., Foreign Object Retained After Surgery)

- 2 = Some patients in hospital affected (e.g., ICU Physician Staffing)
- 3 = All patients in hospital affected (e.g., Hand Hygiene)

The *severity of harm* score is determined by the following:

- 1 = No direct evidence of harm or harm reduction (e.g., Patient Experience)
- 2 = Clear documentation of harm or harm reduction; adverse events (e.g., Foreign Object Retained After Surgery)
- 3 = Significant mortality reduction (more than 1,000 deaths or a 10% reduction in hospital wide mortality) (e.g., ICU Physician Staffing)

The values from each part are then added together to arrive at the overall Impact Score using the following criteria:

- 1 = Score of 2 (Low Impact) (e.g., Air Embolism)
- 2 = Score of 3-4 (Medium Impact) (e.g., Patient Experience)
- 3 = Score of 5-6 (High Impact) (e.g., ICU Physician Staffing)

NUMBER OF COMPONENT MEASURES

The number of component measures refers to how many measures are included within the measure. For PSI 90, the number of component measures is 10 (PSI 3, PSI 6, PSI 8, PSI 9, PSI 10, PSI 11, PSI 12, PSI 13, PSI 14, and PSI 15). For all other measures included in the Hospital Safety Grade, the number of component measures within the measure is one (1).

HOSPITAL
SAFETY GRADE

STANDARD MEASURE WEIGHTS

Measure	Evidence Score	Opportunity Score	Impact Score	Number of Component Measures	Standard Measure Weight
Process/Structural Measure Domain (50%)					
CPOE	2	1.44	3	1	6.2%
BCMA	2	1.39	3	1	6.0%
IPS	2	1.68	3	1	6.9%
SP 1	1	1.06	2	1	3.0%
SP 2	1	1.13	2	1	3.2%
Total Nursing Care Hours per Patient Day	2	1.42	2	1	4.7%
Hand Hygiene	2	1.51	2	1	4.9%
H-COMP-1	1	1.03	2	1	3.0%
H-COMP-2	1	1.03	2	1	3.0%
H-COMP-3	1	1.05	2	1	3.0%
H-COMP-5	1	1.06	2	1	3.0%
H-COMP-6	1	1.04	2	1	3.0%
Outcome Measure Domain (50%)					
Foreign Object Retained	1	3.00	2	1	4.2%
Air Embolism	1	3.00	1	1	2.4%
Falls and Trauma	2	2.05	3	1	4.9%
CLABSI	2	1.82	3	1	4.5%
CAUTI	2	1.88	3	1	4.6%
SSI: Colon	2	1.85	2	1	3.4%
MRSA	2	1.79	3	1	4.5%
C. Diff.	2	1.79	3	1	4.5%
PSI 4	1	1.13	2	1	2.0%
PSI 90	1	1.19	2	10	15.0%

CALCULATING Z-SCORES

Z-Scores are used to standardize data from measures with different performance scales and allow for comparisons (e.g., a linear mean score of 90 on H-COMP-1: Nurse Communication and a CLABSI SIR of 0.870). In addition, Z-Scores can indicate to a hospital whether their measure score is above, below, or equal to the average hospital.

In the Scoring Methodology, a Z-Score is calculated for each available measure score. A Z-Score is calculated using a hospital's actual measure score, the national mean for that measure, and the standard deviation for that measure. The Z-Score for each measure is calculated using the following formulas:

- **For Process/Structural Measures: [Hospital Score – Mean) / Standard Deviation]**
- **For Outcome Measures: [(Mean – Hospital Score) / Standard Deviation]**

The following table includes the national mean and standard deviation for each measure used to calculate a hospital's Z-Score. For display, means and standard deviations are displayed rounded to two or three decimal places. For scoring, these values are not rounded.

Process and Structural Measures	Mean	Standard Deviation
CPOE	79.04	34.62
BMCA	80.51	31.02
IPS	64.45	43.96
SP 1	117.40	6.66
SP 2	116.60	15.20
Total Nursing Care Hours per Patient Day	76.10	31.78
Hand Hygiene	72.43	36.61
H-COMP-1	90.04	2.56
H-COMP-2	89.80	2.48
H-COMP-3	81.48	4.41
H-COMP-5	74.33	4.16
H-COMP-6	85.14	3.78

Outcome Measures	Mean	Standard Deviation
Foreign Object Retained	0.014	0.050
Air Embolism	0.002	0.055
Falls and Trauma	0.385	0.404
CLABSI	0.687	0.566
CAUTI	0.577	0.505
SSI: Colon	0.852	0.722
MRSA	0.746	0.588
C. Diff.	0.418	0.330
PSI 4	168.34	21.85
PSI 90	1.01	0.19

HOSPITAL
SAFETY GRADE

A NOTE ABOUT EXTREME VALUES

For hospitals that have an "extreme" value for a particular measure (i.e., a value that exceeds the 99th percentile) Leapfrog "trims" the reported value to the 99th percentile. For example, a rate of 0.500 per 1,000 patient discharges for Foreign Object Retained after Surgery is "trimmed" to 0.327 (e.g., the 99th percentile). Only "trimmed" rates are displayed on the Leapfrog Hospital Safety Grade website. The table below includes the "trim" values for the fall 2024 Leapfrog Hospital Safety Grade. The PSI 90 measure score represents an observed to expected ratio that has already been risk adjusted at both the component PSI level and at the composite level; therefore, the measure is not "trimmed" by Leapfrog.

Measure	99th Percentile
Foreign Object Retained	0.327
Air Embolism	2.890
Falls and Trauma	1.942
CLABSI	2.534
CAUTI	2.550
SSI: Colon	3.534
MRSA	2.696
C. Diff.	1.699
PSI 4	222.68

Note: Percentiles are rounded to reflect the precision of the raw data.

DEALING WITH MISSING DATA

Due to a variety of reasons, a hospital may not have a measure score for all 22 measures. If a hospital is missing a measure score for any measure (except PSI 90; hospitals missing PSI 90 are not graded), the standard weight of that measure is redistributed to the other measures in the same measure domain. The new weight for each measure within the domain is calculated by re-apportioning the standard weight assigned to the measure with the missing score to other measures within the same domain. For example, if a hospital is missing a measure score for ICU Physician Staffing because the hospital does not operate an adult or pediatric medical and/or surgical ICU, the standard weight of 6.9% will be re-apportioned to the remaining 11 measures within the process/structural measure domain.

To calculate the new weight of each of the remaining 11 measures in the process/structural measure domain, hospitals can use the formula below or use the Leapfrog Hospital Safety Grade Calculator®, which can be found on the Safety Grade Review Website. Note that each domain contributes to 50% of the overall letter grade.

(Standard measure weight / (sum of standard weights for the remaining 11 measures in the process/structural measure domain))*50% = updated measure weight

For more information about how the measure weight redistribution is calculated and affects the overall score, please see the Leapfrog Hospital Safety Grade Calculator, which can be found on the last page of the Safety Grade Review Website.

CALCULATING WEIGHTED MEASURE SCORES

To calculate a hospital's numerical safety score, multiply the Z-Score of each process/structural measure by the standard weight assigned to that measure to get the weighted process/structural measure score. If a hospital is missing any process/structural measure scores, see Dealing with Missing Data to determine the updated measure weight. Then, sum all weighted process/structural measure scores. This is the hospital's overall weighted process/structural measures score.

Multiply the Z-Score of each outcome measure by the standard weight assigned to that measure to get the weighted outcome measure score. If a hospital is missing any outcome measure scores, see Dealing with Missing Data to determine the updated measure weight. Then, sum all weighted outcome measure scores. This is the hospital's overall weighted outcome measures score.

To calculate the overall Safety Grade for a hospital, add the overall weighted process/structural measures score and the overall weighted outcome measures score. Add 3.0 to your score; this is done to normalize scores to a positive distribution. This final numerical score (typically between 1.0 and 4.0) is then assigned to a letter grade. To assist hospitals in calculating their numerical score, a calculator is available on the Safety Grade Review Website. Letter grade cut-points are published during the Letter Grade Embargo Period.

HOSPITAL SAFETY GRADE

ADDITIONAL SCORING INFORMATION

TERMS USED IN SCORING AND PUBLIC REPORTING

"Not Available" means that the hospital does not have a score for this measure. This could be because the measure is related to a service the hospital does not provide or because the hospital had too few patients or cases to report data for a condition or procedure. A "Not Available" result does not mean that the hospital withheld information from the public.

In the case of healthcare-associated infections, a SIR is reported as "Not Available" if one of the following applies:

- The number of predicted infections is less than 1.
- The number of observed infections present on admission (community-onset prevalence) was above a pre-determined cut-point.

For more information about NHSN's SIR models, please visit https://www.cdc.gov/nhsn/pdfs/ps-analysis-resources/nhsn-sir-guide.pdf.

"Declined to Report" means that a hospital did not voluntarily provide information to the Leapfrog Hospital Survey. Measures scored as "Declined to Report" will not be used in calculating the overall score (see Dealing with Missing Data).

SHARED CMS CERTIFICATION NUMBERS

All hospitals that share a CMS Certification Number (CCN) will be assigned the same source data as reported by CMS. Affected measures include the HCAHPS, Hospital-Acquired Conditions, Healthcare-Associated Infections (if secondary data source is used), and Patient Safety Indicators.

HOSPITAL SAFETY GRADE

UPDATES TO DATA USED IN THE LEAPFROG HOSPITAL SAFETY GRADE

The Leapfrog Hospital Safety Grade relies on publicly available data that hospitals have had the opportunity to review for accuracy. Therefore, Leapfrog does not allow hospitals to make updates to their data following the Data Snapshot Date. In January of each year, Leapfrog publishes the Data Snapshot Dates for each of the two Leapfrog Hospital Safety Grade public releases at https://www.hospitalsafetygrade.org/for-hospitals/key-dates-and-information. Leapfrog publishes these dates to give hospitals and other stakeholders advance notice so they can be prepared to submit a Leapfrog Hospital Survey and monitor their performance on CMS measures used in the Safety Grade.

In addition, Leapfrog holds a Courtesy Review Period to give hospitals an additional opportunity to review the data that will be used to calculate their hospital's Safety Grade. The Review Period is an opportunity for hospitals to review the data for accuracy (i.e., identify recording errors, hospital name and address changes, etc.) on a secure website and review changes to the scoring algorithm.

DATA FROM THE LEAPFROG HOSPITAL SURVEY

During the Safety Grade Review Period (September 25 – October 15), Leapfrog will only make corrections to a hospital's data from the 2024 Leapfrog Hospital Survey if a recording error is identified (i.e., we have recorded a different measure score than what is posted on our Survey Results website) or a scoring error is identified (i.e., Leapfrog has calculated an incorrect measure score based on the submitted responses and Leapfrog's published scoring algorithms). Updates to Leapfrog Hospital Survey data that are submitted after the Data Snapshot Date will not be included in the current Leapfrog Hospital Safety Grade. Hospitals submitting a Leapfrog Hospital Survey are urged to take advantage of the opportunity to review their Survey Results for accuracy and completeness prior to each of the two published Data Snapshot Dates.

HOW HOSPITALS CAN REVIEW LEAPFROG HOSPITAL SURVEY RESULTS PRIOR TO THE DATA SNAPSHOT DATE

The Leapfrog Hospital Survey is open from April 1 to November 30 of each year. Following the Submission Deadline (June 30), Survey Results are published monthly on a secure 'Hospital Details' page and a public website (ratings.leapfroggroup.org). Hospitals are urged to review their Survey Results immediately. Hospitals that identify any reporting errors are instructed to log back into the Survey to submit a correction. Hospitals can correct and re-submit a previously submitted Survey until the Survey closes for the year. Note that corrections submitted after the Data Snapshot Date (August 31 for the fall Safety Grade and January 31 for the spring Safety Grade) are not included in the current Leapfrog Hospital Safety Grade. Leapfrog has several automated processes in place to prevent hospitals from making data entry errors in the Online Survey Tool and to enhance the overall accuracy of the Survey Results. Learn more at http://www.leapfroggroup.org/survey-materials/data-accuracy.

DATA FROM THE CENTERS FOR MEDICARE & MEDICAID SERVICES (CMS)

During the Safety Grade Review Period (September 25 – October 15), Leapfrog will only make corrections to a hospital's data from CMS if the correction is issued by CMS and posted to the Data.CMS.Gov website. If a hospital has identified an error with a measure score published by CMS, and CMS cannot post a correction within the review period, the measure score will not be used in calculating the hospital's Safety Grade, provided that the hospital can document that CMS has agreed to publicly issue a correction or remove the measure score from public reporting. Hospitals participating with CMS are urged to take advantage of the opportunity to participate in the CMS 30-day review periods.

CMS FOOTNOTE 23 POLICY

Leapfrog will notify hospitals that have CMS footnote 23 present for one or more claims-based measure scores (e.g., DRA HAC Rate, PSI 4 rate, or PSI 90 rate) at the start of the Courtesy Review Period. Footnote 23 indicates that "The data are based on claims that the hospital or facility submitted to CMS. The hospital or facility has reported discrepancies in their claims data." Hospital CEOs can request that Leapfrog use the measure score that is accompanied by the footnote. Written requests must be received prior to the close of the Safety Grade Review Period. If written requests are not received by the close of the Review Period, the measure will not be used to calculate the Hospital Safety Grade.

For hospitals that submit a Leapfrog Hospital Survey by the Data Snapshot Date, the CEO, Primary Survey Contact, and Secondary Survey Contact will be notified at the email addresses included in the Hospital's Survey Profile. For hospitals that do not submit a Leapfrog Hospital Survey by the Data Snapshot Date, the CEO will be contacted by certified letter.

HOW HOSPITALS CAN REVIEW CMS DATA PRIOR TO THE DATA SNAPSHOT DATE

CMS administers several hospital-based reporting and payment programs including the Inpatient Quality Reporting Program, HAC Reduction Program, and Value-based Purchasing Program. Several measures collected and calculated by CMS via its various hospital-based programs are used in the Leapfrog Hospital Safety Grade. CMS provides hospitals with a 30-day preview period before publishing measure scores on the Data.Medicare.Gov website and the Data.CMS.Gov website. More information is available at https://qualitynet.org.

HOSPITAL
SAFETY GRADE

HOW TO PARTICIPATE IN THE LEAPFROG HOSPITAL SURVEY

If a hospital did **not** complete a 2024 Leapfrog Hospital Survey by August 31, Survey Results were not used to calculate the fall 2024 Leapfrog Hospital Safety Grade. Hospitals that would like Survey Results included in the spring 2025 Hospital Safety Grade must submit a 2024 Leapfrog Hospital Survey (including the CPOE Evaluation) by November 30, 2024. Hospitals will be able to review their publicly reported Survey Results in December and respond to any issues identified by Leapfrog's Extensive Monthly Data Verification before the Data Snapshot Date for the spring 2025 Safety Grade of January 31. More information is available at https://leapfroggroup.org/survey.

HOSPITAL SAFETY GRADE

WHAT IS THE HOSPITAL SAFETY GRADE?

Leapfrog Hospital Safety Grades are assigned to nearly 3,000 general acute-care hospitals across the nation twice annually. The Safety Grade uses up to 22 national patient safety measures from the Centers for Medicare & Medicaid Services (CMS) and the Leapfrog Hospital Survey, and information from other supplemental data sources, to produce a single letter grade representing a hospital's overall performance in keeping patients safe from preventable harm and medical errors. The Safety Grade methodology has been peer reviewed and published in the Journal of Patient Safety.[1]

With the Safety Grade, The Leapfrog Group aims to educate and encourage consumers to consider safety when selecting a hospital for themselves or their families. In addition, we believe the Safety Grade will foster strong market incentives for hospitals to make safety a priority. Safety Grades are publicly reported at www.HospitalSafetyGrade.org.

ELIGIBLE HOSPITALS

Due to the limited availability of public data, Leapfrog is not able to calculate a Safety Grade for every hospital in the U.S., including the following types of hospitals:

- Critical access hospitals (CAH)
- Rural emergency hospitals (REH)
- Long-term care and rehabilitation facilities
- Mental health facilities
- Federal hospitals (e.g., Veterans Affairs, Indian Health Services, etc.)
- Some specialty hospitals, such as surgery centers and cancer hospitals
- Free-standing pediatric hospitals
- Hospitals in U.S. territories
- Hospitals that are missing scores for **more than six** (6) process/structural measures, or **more than five** (5) outcome measures, or **missing PSI 90**

[1] The Leapfrog Hospital Safety Grade uses the below-described data and reflects expert opinion as to the relative importance of each category.

LEAPFROG
HOSPITAL
SAFETY GRADE

MEASURES

The Safety Grade utilizes up to 22 national patient safety measures from the Centers for Medicare & Medicaid Services (CMS) and the Leapfrog Hospital Survey, and information from other supplemental data sources.

The measure set is divided into two domains: (1) Process/Structural Measures and (2) Outcome Measures. Each domain represents 50% of the Safety Grade. The following table lists the 22 measures included in the Safety Grade, as well as the data source and reporting period for each measure. In some cases where a hospital's information is not available for a certain measure, Leapfrog uses a secondary data source (as indicated in the table). In cases where a hospital's information is not available from any data source, Leapfrog has outlined a methodology for dealing with the missing data.

PROCESS/STRUCTURAL MEASURES (12)

Measure Name	Primary Data Source	Reporting Period	Secondary Data Source	Reporting Period
Computerized Physician Order Entry (CPOE)	2024 Leapfrog Hospital Survey	2024	Imputation Model Applied*	N/A
Bar Code Medication Administration (BCMA)	2024 Leapfrog Hospital Survey	2024	Imputation Model Applied*	N/A
ICU Physician Staffing (IPS)	2024 Leapfrog Hospital Survey	2024	Imputation Model Applied*	N/A
Safe Practice 1: Culture of Leadership Structures and Systems	2024 Leapfrog Hospital Survey	2024	N/A	N/A
Safe Practice 2: Culture Measurement, Feedback & Intervention	2024 Leapfrog Hospital Survey	2024	N/A	N/A

**COMPONENT PSIs (SCORES NOT USED TO CALCULATE THE HOSPITAL SAFETY GRADE)

Component PSI	Primary Data Source	Reporting Period	Secondary Data Source	Reporting Period
PSI 3: Pressure ulcer rate	CMS	07/01/2021 - 06/30/2023	N/A	N/A
PSI 6: Iatrogenic pneumothorax rate	CMS	07/01/2021 - 06/30/2023	N/A	N/A
PSI 8: In-hospital fall with hip fracture rate	CMS	07/01/2021 - 06/30/2023	N/A	N/A
PSI 9: Postoperative hemorrhage or hematoma rate	CMS	07/01/2021 - 06/30/2023	N/A	N/A
PSI 10: Postoperative acute kidney injury requiring dialysis rate	CMS	07/01/2021 - 06/30/2023	N/A	N/A
PSI 11: Postoperative respiratory failure rate	CMS	07/01/2021 - 06/30/2023	N/A	N/A
PSI 12: Perioperative pulmonary embolism or deep vein thrombosis rate	CMS	07/01/2021 - 06/30/2023	N/A	N/A
PSI 13: Postoperative sepsis rate	CMS	07/01/2021 - 06/30/2023	N/A	N/A
PSI 14: Postoperative wound dehiscence rate	CMS	07/01/2021 - 06/30/2023	N/A	N/A
PSI 15: Abdominopelvic accidental puncture or laceration rate	CMS	07/01/2021 - 06/30/2023	N/A	N/A

Note: CMS calculates PSI90 using the ten (10) component PSIs listed above. While scores for each of the 10 component PSIs are not used to calculate spring 2025 Hospital Safety Grades, they will be publicly reported on the Hospital Safety Grade website.

MEASURE & SCORING DESCRIPTIONS

PROCESS/STRUCTURAL MEASURES

For Process/Structural Measures, a higher score is always better because these are measures of compliance with best practices in patient care.

COMPUTERIZED PHYSICIAN ORDER ENTRY (CPOE)

The CPOE measure is collected by The Leapfrog Group on the Leapfrog Hospital Survey. It measures a hospital's progress toward implementing a CPOE system to reduce medication ordering errors. Through participation in the Leapfrog Hospital Survey, hospitals are placed in one of several performance categories: "Achieved the Standard," "Considerable Achievement," "Some Achievement," "Limited Achievement," or "Unable to Calculate Score." For the purposes of calculating the Safety Grade, a numerical score is assigned to each performance category:

Leapfrog Performance Category	Measure Score
Achieved the Standard	100
Considerable Achievement	70
Some Achievement	40
Limited Achievement	15
Unable to Calculate Score	Not Available (See Scoring Terms)

For hospitals that did not submit a 2024 Leapfrog Hospital Survey by November 30, see Using Secondary Data Sources for more information on Leapfrog's imputation methodology.

BAR CODE MEDICATION ADMINISTRATION (BCMA)

The BCMA measure is collected by The Leapfrog Group on the Leapfrog Hospital Survey. It measures a hospital's progress toward 1) implementation of BCMA throughout the hospital, 2) compliance with patient and medication scans during administration, 3) use of decision support, and 4) structures to monitor and reduce workarounds. Through participation in the Leapfrog Hospital Survey, hospitals are placed in one of several performance categories: "Achieved the Standard," "Considerable Achievement," "Some Achievement," "Limited Achievement," or "Does Not Apply." For the purposes of calculating the Safety Grade, a numerical score is assigned to each performance category:

Leapfrog Performance Category	Measure Score
Achieved the Standard	100
Considerable Achievement	75
Some Achievement	50
Limited Achievement	25
Does Not Apply	Not Available (See Scoring Terms)

For hospitals that did not submit a 2024 Leapfrog Hospital Survey by November 30, see Using Secondary Data Sources for more information on Leapfrog's imputation methodology.

ICU PHYSICIAN STAFFING (IPS)

The IPS measure is collected by The Leapfrog Group on the Leapfrog Hospital Survey. It measures a hospital's use of intensivists in ICUs. Through participation in the Leapfrog Hospital Survey, hospitals are placed in one of several performance categories: "Achieved the Standard," "Considerable Achievement," "Some Achievement," "Limited Achievement," or "Does Not Apply." For the purposes of calculating the Safety Grade, a numerical score is assigned to each performance category:

Leapfrog Performance Category	Measure Score
Achieved the Standard	100
Considerable Achievement	50
Some Achievement	15
Limited Achievement	5
Does Not Apply	Not Available (See Scoring Terms)

For hospitals that did not submit a 2024 Leapfrog Hospital Survey by November 30, see Using Secondary Data Sources for detailed information on Leapfrog's imputation methodology.

NATIONAL QUALITY FORUM (NQF) SAFE PRACTICES

Two (2) NQF Safe Practice measures are collected by The Leapfrog Group on the Leapfrog Hospital Survey. They measure a hospital's progress toward implementing endorsed processes and protocols to reduce and prevent adverse events. Through participation in the Leapfrog Hospital Survey, hospitals can earn up to 120 points for each Safe Practice. For the purposes of calculating the Safety Grade, individual scores for each Safe Practice are used:

NQF Safe Practice	Possible Measure Score
Safe Practice 1: Culture of Safety Leadership Structures and Systems	0 - 120
Safe Practice 2: Culture Measurement, Feedback and Intervention	0 - 120

There is no secondary data source for the NQF Safe Practices. Therefore, hospitals that did not submit a 2024 Leapfrog Hospital Survey by November 30 will not have these measures included in their Safety Grade and the measure will be reported as "Declined to Report." See Dealing with Missing Data for more information.

TOTAL NURSING CARE HOURS PER PATIENT DAY

The Total Nursing Care Hours per Patient Day measure is collected by The Leapfrog Group on the Leapfrog Hospital Survey. It measures the hospital's total number of productive hours worked by employee or contract nursing staff (i.e., RNs, LPNs, and UAPs) with direct patient care responsibilities per patient day across three unit types: medical, surgical, and med/surg. Through participation in the Leapfrog Hospital Survey, hospitals are placed in one of several performance categories: "Achieved the Standard," "Considerable Achievement," "Some Achievement," "Limited Achievement," or "Does Not Apply." For the purposes of calculating the Safety Grade, a numerical score is assigned to each performance category:

Leapfrog Performance Category	Measure Score
Achieved the Standard	100
Considerable Achievement	70
Some Achievement	40
Limited Achievement	15
Does Not Apply	Not Available (See Scoring Terms)

LEAPFROG00217522
LEAPFROG00217511

A000366

There is no secondary data source for the Total Nursing Care Hours per Patient Day measure. Therefore, hospitals that did not submit a 2024 Leapfrog Hospital Survey by November 30 will not have these measures included in their Safety Grade and the measure will be reported as "Declined to Report." See Dealing with Missing Data for more information.

HAND HYGIENE

The Hand Hygiene measure is collected by The Leapfrog Group on the Leapfrog Hospital Survey. It measures processes and protocols that hospitals have in place regarding monitoring hand hygiene practices, fostering a culture of good hand hygiene, offering training and education, and providing equipment. Through participation in the Leapfrog Hospital Survey, hospitals are placed in one of several performance categories: "Achieved the Standard," "Considerable Achievement," "Some Achievement," "Limited Achievement." For the purposes of calculating the Safety Grade, a numerical score is assigned to each performance category:

Leapfrog Performance Category	Measure Score
Achieved the Standard	100
Considerable Achievement	70
Some Achievement	40
Limited Achievement	15

For hospitals that did not submit a 2024 Leapfrog Hospital Survey by November 30, see Using Secondary Data Sources for detailed information on Leapfrog's imputation methodology.

HOSPITAL CONSUMER ASSESSMENT OF HEALTHCARE PROVIDERS AND SYSTEMS (HCAHPS) COMPOSITES

The Hospital HCAHPS survey responses are collected by CMS via the Inpatient Quality Reporting Program. Linear mean scores calculated by CMS incorporate the full range of survey response categories into a single metric for each HCAHPS composite. Five of the six composites are used in the Safety Grade. For the purposes of calculating the Safety Grade, a hospital's linear mean score for each of the five composites is used:

HCAHP Composite	Possible Measure Score
H-COMP-1: Nurse Communication	0 - 100
H-COMP-2: Doctor Communication	0 - 100
H-COMP-3: Staff Responsiveness	0 - 100
H-COMP-5: Communication about Medicines	0 - 100
H-COMP-6: Discharge Information	0 - 100

LEAPFROG
HOSPITAL
SAFETY GRADE

OUTCOME MEASURES

For Outcome Measures, a lower score is always better because these are measures of harm experienced by patients (e.g., central line-associated blood stream infections).

HOSPITAL-ACQUIRED CONDITIONS

Three hospital-acquired condition measures are calculated by CMS through the CMS HAC Reporting Program: Foreign Object Retained after Surgery, Air Embolism, and Falls and Trauma. Hospital-acquired condition rates are calculated by CMS based on Part A Medicare Fee-for-service (FFS) claims and publicly reported as a rate per 1,000 Part A Medicare FFS discharges. No age restrictions are applied. For the purposes of calculating the Safety Grade, the rate is used. More information is available in the CMS HAC methodology.

HEALTHCARE-ASSOCIATED INFECTIONS

Five healthcare-associated infection measures are collected by The Leapfrog Group on the Leapfrog Hospital Survey: Central line-associated bloodstream infections (CLABSI) in ICUs and select wards, Catheter-associated urinary tract infections (CAUTI) in ICUs and select wards, Surgical site infections from colon surgery (SSI: Colon), Facility-wide inpatient MRSA Blood Laboratory-identified Events, and Facility-wide inpatient C.diff. Laboratory-identified Events. Through participation in the Leapfrog Hospital Survey, hospitals were required to 1) join Leapfrog's NHSN group, 2) provide an accurate NHSN ID in the Profile section of the Online Survey Tool, and 3) submit a Survey by November 30. For the purposes of calculating the Safety Grade, the standardized infection ratio (SIR) is used:

As Reported by Leapfrog	Measure Score	Notes
Standardized Infection Ratio (SIR)	SIR	Measure is **included** in calculating the Safety Grade
Does Not Apply	Not Available (See Scoring Terms)	Measure is **not included** in calculating the Safety Grade. No use of Secondary Data.
Unable to Calculate Score	Not Available (See Scoring Terms)	Measure is **not included** in calculating the Safety Grade. No use of Secondary Data.
Declined to Respond	See Using Secondary Data	Secondary Data source is used.

LEAPFROG00217524

LEAPFROG
HOSPITAL
SAFETY GRADE

For hospitals that did not join Leapfrog's NHSN group, provide an accurate NHSN ID, or submit a 2024 Leapfrog Hospital Survey by November 30, see Using Secondary Data Sources for more information on Leapfrog's use of CMS data.

AHRQ PATIENT SAFETY INDICATORS (PSI)

Two AHRQ Patient Safety Indicators are calculated by CMS through the Inpatient Quality Reporting Program and the HAC Reduction Program: PSI 4 Death Rate among Surgical Inpatients with Serious Treatable Conditions and PSI 90 Patient Safety and Adverse Events Composite. PSI rates are calculated by CMS based on Medicare Fee-for-Service claims and publicly reported as a rate per 1,000 inpatient discharges. CMS only includes claims from patients 18 years or older. For the purpose of calculating the Safety Grade, the smoothed rate is used for both measures. More information on calculating PSIs is available on the Patient Safety Indicators (PSI) 2024 Resources website.

Note: CMS calculates PSI 90 using the ten (10) component PSIs that are listed in the PSI 90 Components table above. While scores for each of the 10 component PSIs are NOT used to calculate spring 2025 Hospital Safety Grades, they will be publicly reported on the Hospital Safety Grade website. Additional information about the PSI 90 measure and how it is calculated by CMS can be found here.

LEAPFROG
HOSPITAL
SAFETY GRADE

USING SECONDARY DATA SOURCES

Twelve (12) of the 22 measures included in the Safety Grade are derived from the Leapfrog Hospital Survey. The Leapfrog Hospital Survey is voluntary, and as such, hospitals may choose not to submit a Survey. To address this gap in available data, the Safety Grade methodology utilizes secondary data when available. For information on how to complete a free Leapfrog Hospital Survey, visit www.leapfroggroup.org/survey.

IMPUTATION METHOD FOR CPOE, BCMA, IPS, AND HAND HYGIENE

Leapfrog has worked closely with statisticians at Mathematica, Leapfrog's National Expert Panel, and our scientific partners at Johns Hopkins Medicine to develop a new two-step imputation approach for determining scores for CPOE, BCMA, IPS, and Hand Hygiene if they are missing from our publicly reported Survey results.

STEP 1: USE A HOSPITAL'S MOST RECENT SCORE ON THE MEASURE (APPLIES TO CPOE, IPS, AND HAND HYGIENE ONLY)

If the hospital had a score assigned by Leapfrog in the previous two rounds of grades (i.e., fall 2024, spring 2024), excluding imputed scores, the hospital is assigned the most recent score on that measure in the current Hospital Safety Grade (i.e., spring 2025).

LEAPFROG00217526
LEAPFROG00217511

A000370

LEAPFROG
HOSPITAL
SAFETY GRADE

STEP 2: USE IMPUTATION POINT ASSIGNMENT (APPLIES TO CPOE, BCMA, IPS AND HAND HYGIENE)

If the hospital does not have historical data from the last two rounds (i.e., fall 2024, spring 2024) of the Safety Grade, the hospital is assigned a point value that is equivalent to receiving "Limited Achievement" for this measure on the Leapfrog Hospital Survey.

Note about IPS: Only hospitals that operate an adult or pediatric medical and/or surgical ICU or neuro ICU are eligible for Step 2 imputation of the IPS measure. A hospital's ICU designation (i.e., operating a medical ICU, surgical ICU, or pediatric ICU) is determined from the number of medical, surgical and/or pediatric ICU beds reported in Worksheet S-3 Part 1 of the hospital's most recent CMS Cost Report. If your hospital does not operate an ICU, but shares a CMS Certification Number with a hospital that does, please contact the Help Desk immediately if an IPS score was imputed.

Step 2 Imputation Point Assignments

Measure	Leapfrog Hospital Survey Performance Category	Corresponding Safety Grade Measure Score
CPOE	Limited Achievement	15
BCMA	Limited Achievement	25
IPS	Limited Achievement	5
Hand Hygiene	Limited Achievement	15

LEAPFROG
HOSPITAL SAFETY GRADE

CMS DATA FOR HAIS

CMS is **the secondary data** source for healthcare-associated infections. For the purposes of calculating the Safety Grade, the standardized infection ratio (SIR) published by CMS is used:

Hospitals That Did Not Join Leapfrog's NHSN Group and Submit Section 7: Managing Serious Errors of the 2024 Leapfrog Hospital Survey by November 30

As Reported by CMS	Measure Score	Notes
Not Available (no locations or low volume)	Not Available (See Scoring Terms)	Measure is **not included** in calculating the Leapfrog Hospital Safety Grade.
Standard Infection Ratio (SIR)	SIR	Measure is **included** in calculating the Leapfrog Hospital Safety Grade.

If a hospital does not have available data from the Leapfrog Hospital Survey or CMS (e.g., no locations or low volume), the hospital is reported as Not Available "Not Available." See Dealing with Missing Data for more information.

LEAPFROG
HOSPITAL
SAFETY GRADE

SCORING METHODOLOGY

WEIGHTING INDIVIDUAL MEASURES

Each measure included in the Leapfrog Hospital Safety Grade is assigned a standard weight. The methodology to assign standard weights includes four criteria: (1) Impact, (2) Evidence, (3) Opportunity, and (4) Number of Component Measures. These four criteria are then combined using the equation below, which results in a standard weight for each measure that represents the measure's relative importance within the Hospital Safety Grade.

[Evidence + (Impact x Opportunity x Number of Component Measures)]

EVIDENCE

The Evidence Score for each individual measure is assigned a value of one (1) or two (2) using the following criteria:

- 1 = Supported by either suggestive clinical or epidemiological studies or theoretical rationale
- 2 = Supported by experimental, clinical, or epidemiological studies and strong theoretical rationale

OPPORTUNITY

The Opportunity Score for each individual measure is based on the Coefficient of Variation (Standard Deviation/Mean) of that measure, using the following formula: **[1 + (Standard Deviation/Mean)]**. The Opportunity Score is on a continuous scale that is capped at three (3). Any measure with an Opportunity Score above three (3) is assigned a three (3).

IMPACT

The Impact Score for each individual measure is comprised of two (2) parts, each of which is assigned a value from one (1) to three (3):

1. Number of patients affected

2. Severity of harm

The number of patients affected score is determined by the following:

- 0 = Extremely rare event (e.g., Air Embolism)
- 1 = Rare event (e.g., Foreign Object Retained After Surgery)
- 2 = Some patients in hospital affected (e.g., ICU Physician Staffing)
- 3 = All patients in hospital affected (e.g., Hand Hygiene)

The severity of harm score is determined by the following:

- 1 = No direct evidence of harm or harm reduction (e.g., Patient Experience)
- 2 = Clear documentation of harm or harm reduction; adverse events (e.g., Foreign Object Retained After Surgery)
- 3 = Significant mortality reduction (more than 1,000 deaths or a 10% reduction in hospital wide mortality) (e.g., ICU Physician Staffing)

The values from each part are then added together to arrive at the overall Impact Score using the following criteria:

- 1 = Score of 2 (Low Impact) (e.g., Air Embolism)
- 2 = Score of 3-4 (Medium Impact) (e.g., Patient Experience)
- 3 = Score of 5-6 (High Impact) (e.g., ICU Physician Staffing)

NUMBER OF COMPONENT MEASURES

The number of component measures refers to how many measures are included within the measure. For PSI 90, the number of component measures is 10 (PSI 3, PSI 6, PSI 8, PSI 9, PSI 10, PSI 11, PSI 12, PSI 13, PSI 14, and PSI 15). For all other measures included in the Hospital Safety Grade, the number of component measures within the measure is one (1).

Scoring Methodology

Last updated 4/21/2025

LEAPFROG
HOSPITAL
SAFETY GRADE

CALCULATING Z-SCORES

Z-Scores are used to standardize data from measures with different performance scales and allow for comparisons (e.g., a linear mean score of 90 on H-COMP-1: Nurse Communication and a CLABSI SIR of 0.870). In addition, Z-Scores can indicate to a hospital whether their measure score is above, below, or equal to the average hospital.

In the Scoring Methodology, a Z-Score is calculated for each available measure score. A Z-Score is calculated using a hospital's actual measure score, the national mean for that measure, and the standard deviation for that measure. The Z-Score for each measure is calculated using the following formulas:

- **For Process/Structural Measures: [Hospital Score – Mean) / Standard Deviation]**
- **For Outcome Measures: [(Mean – Hospital Score) / Standard Deviation]**

LEAPFROG00217532
LEAPFROG00217511

JX-041.1, page 22 of 29

LEAPFROG

HOSPITAL SAFETY GRADE

The following table includes the national mean and standard deviation for each measure used to calculate a hospital's Z-Score. For display, means and standard deviations are displayed rounded to two or three decimal places. For scoring, these values are not rounded.

Process and Structural Measures	Mean	Standard Deviation
CPOE	80.23	34.14
BMCA	81.87	30.45
IPS	65.15	43.73
SP 1	117.49	6.79
SP 2	116.85	13.98
Total Nursing Care Hours per Patient Day	77.07	51.81
Hand Hygiene	74.40	16.14
H-COMP-1	90.19	2.51
H-COMP-2	89.91	2.48
H-COMP-3	81.63	4.36
H-COMP-5	74.42	4.13
H-COMP-6	85.25	3.70

Outcome Measures	Mean	Standard Deviation
Foreign Object Retained	0.014	0.050
Air Embolism	0.002	0.055
Falls and Trauma	0.384	0.402
CLABSI	0.651	0.552
CAUTI	0.540	0.494
SSI: Colon	0.831	0.689
MRSA	0.719	0.591
C. Diff	0.401	0.326
PSI 4	177.452	24.020
PSI 90	1.002	0.196

LEAPFROG
HOSPITAL SAFETY GRADE

A NOTE ABOUT EXTREME VALUES

For hospitals that have an "extreme" value for a particular measure (i.e., a value that exceeds the 99th percentile) Leapfrog "trims" the reported value to the 99th percentile. For example, a rate of 0.500 per 1,000 patient discharges for Foreign Object Retained after Surgery is "trimmed" to 0.327 (e.g., the 99th percentile). Only "trimmed" rates are displayed on the Leapfrog Hospital Safety Grade website. The table below includes the "trimmed" values for the spring 2025 Leapfrog Hospital Safety Grade. The PSI 90 measure score represents an observed to expected ratio that has already been risk adjusted at both the component PSI level and at the composite level; therefore, the measure is not "trimmed" by Leapfrog.

Measure	99th Percentile
Foreign Object Retained	0.327
Air Embolism	2.89
Falls and Trauma	1.926
CLABSI	1.782
CAUTI	1.512
SSI: Colon	3.094
MRSA	2.85
C. Diff.	1.607
PSI 4	285.51

Note: Percentiles are rounded to reflect the precision of the raw data.

DEALING WITH MISSING DATA

Due to a variety of reasons, a hospital may not have a measure score for all 22 measures. If a hospital is missing a measure score for any measure (except PSI 90; hospitals missing PSI 90 are not graded), the standard weight of that measure is redistributed to the other measures in the same measure domain. The new weight for each measure within the domain is calculated by re-apportioning the standard weight assigned to the measure with the missing score to other measures within the same domain.

For example, if a hospital is missing a measure score for ICU Physician Staffing because the hospital does not operate an adult or pediatric medical and/or surgical ICU, the standard weight of 6.9% will be re-apportioned to the remaining 11 measures within the process/structural measure domain.

LEAPFROG00217534
LEAPFROG00217511

A000378

To calculate the new weight of each of the remaining 11 measures in the process/structural measure domain, hospitals can use the formula below or use the Leapfrog Hospital Safety Grade Calculator®, which can be found on the Safety Grade Review Website. Note that each domain contributes to 50% of the overall letter grade.

*(Standard measure weight / [sum of standard weights for the remaining 11 measures in the process/structural measure domain])*50% = updated measure weight*

For more information about how the measure weight redistribution is calculated and affects the overall score, please see the Leapfrog Hospital Safety Grade Calculator, which can be found on the last page of the Safety Grade Review Website.

CALCULATING WEIGHTED MEASURE SCORES

To calculate a hospital's numerical safety score, multiply the Z-Score of each process/structural measure by the standard weight assigned to that measure to get the weighted process/structural measure score. If a hospital is missing any process/structural measure scores, see Dealing with Missing Data to determine the updated measure weight. Then, sum all weighted process/structural measure scores. This is the hospital's overall weighted process/structural measures score.

Multiply the Z-Score of each outcome measure by the standard weight assigned to that measure to get the weighted outcome measure score. If a hospital is missing any outcome measure scores, see Dealing with Missing Data to determine the updated measure weight. Then, sum all weighted outcome measure scores. This is the hospital's overall weighted outcome measures score.

To calculate the overall Safety Grade for a hospital, add the overall weighted process/structural measure score and the overall weighted outcome measures score. Add 3.0 to your score; this is done to normalize scores to a positive distribution. This final numerical score (typically between 1.0 and 4.0) is then assigned to a letter grade. To assist hospitals in calculating their numerical score, a calculator is available on the Safety Grade Review Website. Letter grade cut-points are published during the Letter Grade Embargo Period.

LEAPFROG
HOSPITAL SAFETY GRADE

ADDITIONAL SCORING INFORMATION

TERMS USED IN SCORING AND PUBLIC REPORTING

"Not Available" means that the hospital does not have a score for this measure. This could be because the measure is related to a service the hospital does not provide or because the hospital had too few patients or cases to report data for a condition or procedure. A "Not Available" result does not mean that the hospital withheld information from the public.

In the case of healthcare-associated infections, a SIR is reported as "Not Available" if one of the following applies:

- The number of predicted infections is less than 1.
- The number of observed infections present on admission (community-onset prevalence) was above a pre-determined cut-point.

For more information about NHSN's SIR models, please visit https://www.cdc.gov/nhsn/pdfs/pscanalysis-resources/nhsn-sir-guide.pdf.

"Declined to Report" means that a hospital did not voluntarily provide information to the Leapfrog Hospital Survey. Measures scored as "Declined to Report" will not be used in calculating the overall score (see Dealing with Missing Data).

SHARED CMS CERTIFICATION NUMBERS

All hospitals that share a CMS Certification Number (CCN) will be assigned the same source data as reported by CMS. Affected measures include the HCAHPS, Hospital-Acquired Conditions, Healthcare-Associated Infections (if secondary data source is used), and Patient Safety Indicators.

LEAPFROG
HOSPITAL
SAFETY GRADE

UPDATES TO DATA USED IN THE LEAPFROG HOSPITAL SAFETY GRADE

The Leapfrog Hospital Safety Grade relies on publicly available data that hospitals have had the opportunity to review for accuracy. Therefore, Leapfrog does not allow hospitals to make updates to their data following the Data Snapshot Date. In January of each year, Leapfrog publishes the Data Snapshot Dates for each of the two Leapfrog Hospital Safety Grade public releases at https://www.hospitalsafetygrade.org/for-hospitals/key-dates-and-information. Leapfrog publishes these dates to give hospitals and other stakeholders advance notice so they can be prepared to submit a Leapfrog Hospital Survey and monitor their performance on CMS measures used in the Safety Grade.

In addition, Leapfrog holds a Courtesy Review Period to give hospitals an additional opportunity to review the data that will be used to calculate their hospital's Safety Grade. The Review Period is an opportunity for hospitals to review the data for accuracy (i.e., identify recording errors, hospital name and address changes, etc.) on a secure website and review changes to the scoring algorithm.

DATA FROM THE LEAPFROG HOSPITAL SURVEY

During the Safety Grade Review Period (February 24 – March 14), Leapfrog will only make corrections to a hospital's data from the 2024 Leapfrog Hospital Survey if a recording error is identified (i.e., we have recorded a different measure score than what is posted on our Survey Results website) or a scoring error is identified (i.e., Leapfrog has calculated an incorrect measure score based on the submitted responses and Leapfrog's published scoring algorithms). Updates to Leapfrog Hospital Survey data that are submitted after the Data Snapshot Date will **not** be included in the current Leapfrog Hospital Safety Grade. Hospitals submitting a Leapfrog Hospital Survey are urged to take advantage of the opportunity to review their Survey Results for accuracy and completeness prior to each of the two published Data Snapshot Dates.

HOW HOSPITALS CAN REVIEW LEAPFROG HOSPITAL SURVEY RESULTS PRIOR TO THE DATA SNAPSHOT DATE

The Leapfrog Hospital Survey is open from April 1 to November 30 of each year. Following the Submission Deadline (June 30), Survey Results are published monthly on a secure 'Hospital Details' page and a public website (ratings.leapfroggroup.org). Hospitals are urged to review their Survey Results immediately. Hospitals that identify any reporting errors are instructed to log back into the Survey to submit a correction. Hospitals can correct and re-submit a previously submitted Survey until the Survey closes for the year. Note that corrections submitted after the Data Snapshot Date are not included in the current Leapfrog Hospital Safety Grade. Leapfrog has several automated processes in place to prevent hospitals from making data entry errors in the Online Survey Tool and to enhance the overall accuracy of the Survey Results. Learn more at http://www.leapfroggroup.org/survey-materials/data-accuracy.

LEAPFROG
HOSPITAL SAFETY GRADE

DATA FROM THE CENTERS FOR MEDICARE & MEDICAID SERVICES (CMS)

During the Safety Grade Review Period (February 24 – March 14), Leapfrog will only make corrections to a hospital's data from CMS if the correction is issued by CMS and posted to the Data.CMS.Gov website. If a hospital has identified an error with a measure score published by CMS, and CMS cannot post a correction within the review period, the measure score will not be used in calculating the hospital's Safety Grade, provided that the hospital can document that CMS has agreed to publicly issue a correction or remove the measure score from public reporting. Hospitals participating with CMS are urged to take advantage of the opportunity to participate in the CMS 30-day review periods.

CMS FOOTNOTE 23 POLICY

Leapfrog will notify hospitals that have CMS footnote 23 present for one or more claims-based measure scores (e.g., DRA HAC Rate, PSI 4 rate, or PSI 90 rate) at the start of the Courtesy Review Period. Footnote 23 indicates that "The data are based on claims that the hospital or facility submitted to CMS. The hospital or facility has reported discrepancies in their claims data." Hospital CEOs can request that Leapfrog use the measure score that is accompanied by the footnote. Written requests must be received prior to the close of the Safety Grade Review Period. If written requests are not received by the close of the Review Period, the measure will not be used to calculate the Hospital Safety Grade.

For hospitals that submit a Leapfrog Hospital Survey by the Data Snapshot Date, the CEO, Primary Survey Contact, and Secondary Survey Contact will be notified at the email addresses included in the Hospital's Survey Profile. For hospitals that do not submit a Leapfrog Hospital Survey by the Data Snapshot Date, the CEO will be contacted by certified letter.

HOW HOSPITALS CAN REVIEW CMS DATA PRIOR TO THE DATA SNAPSHOT DATE

CMS administers several hospital-based reporting and payment programs including the Inpatient Quality Reporting Program, HAC Reduction Program, and Value-based Purchasing Program. Several measures collected and calculated by CMS via its various hospital-based programs are used in the Leapfrog Hospital Safety Grade. CMS provides hospitals with a 30-day preview period before publishing measure scores on the Data.Medicare.Gov website and the Data.CMS.Gov website. More information is available at https://qualityreporting.cms.gov.

LEAPFROG
HOSPITAL
SAFETY GRADE

HOW TO PARTICIPATE IN THE LEAPFROG HOSPITAL SURVEY

If a hospital did **not** complete a 2024 Leapfrog Hospital Survey by November 30, Survey Results were not used to calculate the spring 2025 Leapfrog Hospital Safety Grade. Hospitals that would like Survey Results included in the fall 2025 Hospital Safety Grade must submit a 2025 Leapfrog Hospital Survey (including the CPOE Evaluation) by June 30, 2025. Hospitals will be able to review their publicly reported Survey Results in July and respond to any issues identified by Leapfrog's Extensive Monthly Data Verification before the Data Snapshot Date for the fall 2025 Safety Grade of August 31. More information is available at https://leapfroggroup.org/survey.

Subject: RE: Leapfrog Announcements for Hospitals - December 2024

LOL, thank you Bruce, I appreciate your clinical leadership as well...

Re Leapfrog, methinks you folks are too critical... their decision to increase the penalty for nonparticipation was a simple business decision, just like our decision not to participate. It's just business, folks!
Their business model, as you know, depends on producing data that add value for health plans and employers... and the data are not valuable if participation is low.

Thank you Patrick- this is very helpful information. I'm copying in CMO Galante as well.
Let me again express my appreciation for all that you have accomplished in your career advancing the cause of measuring quality and safety for our profession. You have been an important thought leader for a long time.

With respect to Leapfrog specifically, I think it is irresponsible and reckless of them to deliver incomplete assessments to the public. Despite that personal sense, I am asking Greg and Brenda to assemble more information on what the resource burden would be if we chose to participate (we had planned to do this for Jan 2025 anyway).

Thank you- I hope you have a wonderful holiday!- Bruce

Subject: RE: Leapfrog Announcements for Hospitals - December 2024

Well, friends, we can now see the consequences of our nonparticipation... a D grade, in the same league with Oroville and Manteca, which is embarrassing for an organization that claims to be high-quality...
https://www.sacbee.com/news/local/health-and-medicine/article296787714.html

Although our HAI rates were high (hospital score 1.338 versus average 0.746), and our PSI rates were a bit above average (1.36 versus 1.01), the real killer for us was nonparticipation (15/100 points on safety practices, 0/120 on staffing).
https://www.hospitalsafetygrade.org/h/university-of-california-davis-medical-center
https://www.hospitalsafetygrade.org/table-details/university-of-california-davis-medical-center

According to Google AI,

✦ AI Overview

Yes, the University of California Davis Medical Center (UC Davis Medical Center) received a D grade for hospital safety from the Leapfrog Group:

Reason

UC Davis Medical Center received a D grade for issues with staph infection control, sepsis infection prevention after surgery, and patient falls and injuries.

How the Leapfrog Group rates hospitals

The Leapfrog Group uses a numerical score based on up to 27 measures of patient safety, including rates of infections, injuries, and preventable errors. The numerical score is then converted into a letter grade, with A being the best and F being the worst.

What the grades mean

The numerical score cut-points for the letter grades are:

- **A:** 3.159 or higher
- **B:** 2.972 or higher
- **C:** 2.506 or higher
- **D:** 2.040 or higher
- **F:** Less than 2.040

The Leapfrog Group is an independent, not-for-profit organization founded by private health care experts and employers.

Always happy to meet with anyone to discuss Leapfrog's approach (since I serve on their Expert Panel, https://www.hospitalsafetygrade.org/about-the-grade) or to facilitate UCDH participation

Patrick,

I have brought this up with Dr. Hall. We are both ambivalent about the value of Leapfrog. And I think that ambivalence tilts even more negative when our lack of participation guarantees a lower grade which they still publish, effectively blackmailing centers to participate.

I coped Dr. Hall. Given our competing priorities and staff shortages, I am not sure we should take this on given short timeline for this year's submission, but Dr. Hall, please weigh in, we can follow your guidance.

GM

Your opportunity to reconsider... they are changing their imputation approach so hospitals can get away with responding in alternate years, but if you skip more than one year, you will never get above a C... might even drop to D.

Informational Updates for Hospitals

View this email in your browser

2024 Hospital Survey is Open

GET STARTED ON THE 2024 HOSPITAL SURVEY

The 2024 Leapfrog Hospital Survey opened on April 1. Download a hard copy of the Survey and scoring algorithms, request a 1:1 orientation call, and review deadlines on our website at www.leapfroggroup.org/hospital.

CHANGE SUMMARY ISSUED MAY 14

Section 9C Volume of Procedures: Added four CPT Codes to the Outpatient Procedure CPT Code workbook for Adult General Surgery - Lumpectomy or Quadrantectomy of Breast Procedures. Hospitals are not required to make updates to data already collected and/or reported but have the option to include these additional CPT Codes in their volume if they wish. As a reminder, these data are not used in scoring, but volume of procedures are publicly reported.

You can download an updated copy of the Outpatient Procedure CPT Code workbook from the Survey Dashboard. Instructions for downloading the workbook are available on page 297 of the Survey.

Educational Opportunities

MONTHLY SUPPORT AND GUIDANCE FOR HOSPITAL SURVEY PARTICIPATION

The 2024 Leapfrog Hospital Survey Webinar Series, which is held monthly from March to December, is designed for hospitals that would benefit from more regular support and an interactive presentation of Survey materials and information.

Hospitals that join the Webinar Series will have access to:

- **Monthly office hours with Leapfrog's subject matter experts:** 30-minute sessions to get real-time technical assistance, answers to your questions and help staying on top of upcoming deadlines. Staffed by Leapfrog's subject matter experts.
- **Monthly webinars**: Timely and focused presentations on Survey measures and specifications, scoring information, frequently asked questions and public reporting. Each webinar focuses on a specific topic (e.g., nurse staffing and workforce, barcode medication administration, preparing for data verification,etc.) and concludes with a 20-minute open Q&A session.
- **Archive library**: Slides and recordings from each webinar are archived in an online portal that participants can access from March to January.

Review the 2024 Webinar Series schedule and register now.

In addition to the Webinar Series, Leapfrog offers **free** technical and content-related support to all participating facilities via our electronic Help Desk, which is staffed by dedicated subject matter experts.

Important Dates

JUNE 30 SUBMISSION DEADLINE

The 2024 Leapfrog Hospital Survey Submission Deadline is June 30. Hospitals submitting by June 30 will be able to preview their results on their Hospital Details Page starting July 12 and will have results publicly reported on July 25. Hospitals will also receive a free Competitive Benchmarking Summary Report.

Review key deadlines

HELP DESK HOLIDAY SCHEDULE

The Leapfrog Help Desk is staffed from 9:00 a.m. to 5:00 p.m. ET on all regular business days. The Help Desk is not staffed on federal holidays. Please take note of the following upcoming closures.

Staff Training
May 22 - closed

Memorial Day
May 24 - closing at 2 pm ET
May 27 - closed

Juneteenth
June 19 - closed

Independence Day
July 4 - closed

Other Announcements

RECOGNIZED LEADER APPLICATION OPENS JULY 1

Look out for the next round of applications for the Recognized Leader in Caring for People Living with Diabetes program! The application to be a 2025 Recognized Leader opens July 1, 2024, to all hospitals who have submitted a 2024 Leapfrog Hospital Survey. Details on updates to the program will be available in late June. Applications will be open until November 30, 2024, with Recognized Leaders announced in Spring 2025.

A joint effort from The Leapfrog Group and the American Diabetes Association, this first-ever national inpatient diabetes recognition program honors hospitals providing safe and high-quality health care for people living with diabetes, taking steps such as:

- Making it a policy to work with patients to safely self-manage their diabetes medications
- Implementing blood glucose testing and hypoglycemia protocols as well as additional testing and monitoring before and during inpatient surgeries
- Supporting patients with education they need to manage their care, and connecting them with health care providers after they leave the hospital

Find more information here.

LEARN FROM OTHER LEAPFROG REPORTING HOSPITALS

Earlier this month Leapfrog held a webinar with the Michigan Health Improvement Alliance (MiHIA). MiHIA partnered with The Leapfrog Group and used Leapfrog data to identify hospitals

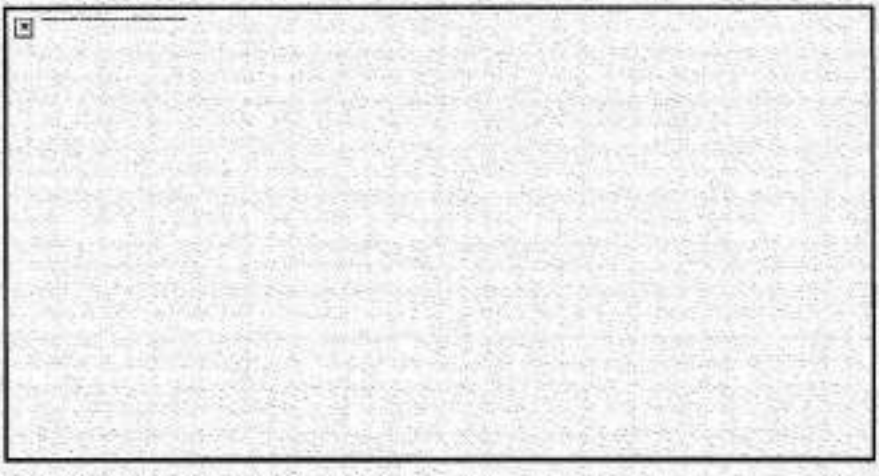
with sustained highest performance in CLABSI, CAUTI, and Falls/Trauma. Leaders at MiHIA and participants in their consortium shared four best practices based on the shared learnings from a collaboration formed between these high performing hospitals and a team of regional safety and quality experts.

View the recording here.
Download a Summary of the Findings here.

SURVEY SUPPORT FOR HEALTH SYSTEMS

Are you responsible for coordinating the Leapfrog Hospital Survey submission for all the hospitals in your health system? Want to make it easier to track submission status, review responses and scored results, and track performance from year to year?

Subscribe to Health System Support and receive all your hospital's 16-digit security codes, Survey responses, and scored Survey Results in an Excel file three times a year: following the June 30 deadline, following August 31 (the deadline for Top Hospital and the Snapshot Date for the fall 2024 Hospital Safety Grade), and following the January 31 year-end deadline.

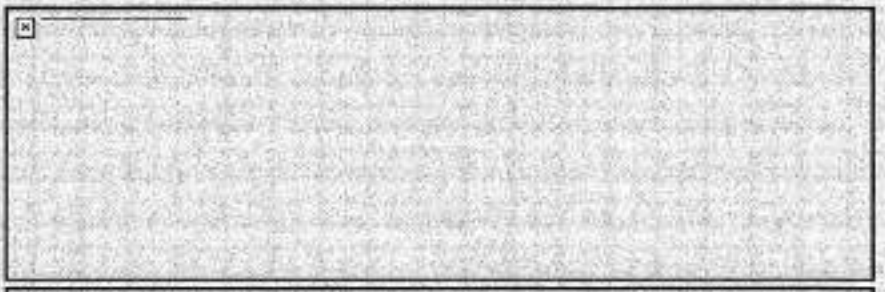


Subscribers also receive a free registration for Leapfrog's monthly webinar series.

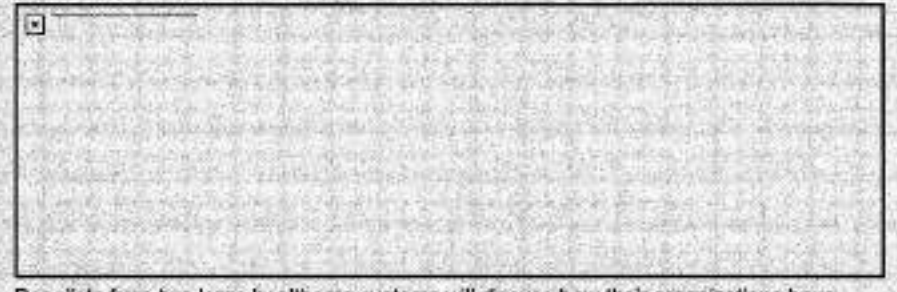
Find more information here.

STRENGTHEN YOUR ORGANIZATION'S CRP WITH THE PACT COLLABORATIVE

Communication and Resolution Programs (CRPs) are gaining support and traction on the national stage. Ensure your organization is ready for the changing health care landscape by joining the PACT Collaborative, a groundbreaking learning community supporting the implementation of highly reliable CRPs founded by Ariadne Labs, the Collaborative for Accountability & Improvement, and the Institute for Healthcare Improvement.



Learn more here.



COME SEE US AT APIC 2024!

The Leapfrog Group will be at booth 638 at the Association for Professionals in Infection Control and Epidemiology (APIC) conference June 5-8. The conference brings together health care professionals, researchers, educators, and industry leaders to connect, collaborate, and shape the future of infection prevention.

Visit us at APIC.

Panelists from two large healthcare systems will discuss how their organizations have aligned employee experience to patient safety culture. They'll discuss internal research demonstrating a link between the two and the steps each organization took to demonstrate this link in a practical way for front-line leaders. They'll also share how they've used new tools and technology to measure, understand, and drive a culture of safety.

This webinar is a program of the Partners Advisory Committee and is sponsored by Microsoft. While The Leapfrog Group does not endorse the products, services, and/or technology showcased on this webinar, we encourage you to explore these offerings that support Leapfrog's work.

Register Now

Exploring the benefits of standardization of chemicals, surveillance for transmittible infections, staff education, and infection prevention basis that apply to all areas to reduce the risk of infections. Reviewing the methods of cleaning and disinfection throughout healthcare, to include acute care, ambulatory surgical centers, long-term acute care, skill nursing, rehab, and senior facilities. Discussing the role of surveillance and changes in regulatory requirements for prevention of healthcare and community-based infection and the importance of communication between staff and care sites. Explore common themes of patient safety and staff engagement to drive better satisfaction results.

This webinar is a program of the Partners Advisory Committee and is sponsored by Steriliz, LLC. While The Leapfrog Group does not endorse the products, services, and/or technology showcased on this webinar, we encourage you to explore these offerings that support Leapfrog's work.

External Email - Use Caution

Based on the expert panel's thoughtful input and guidance, Leapfrog has decided to move forward with updates to imputation methodology used in the Hospital Safety Grade, effective fall 2024.

Attached is a summary of the methodology changes and responses to public comments received on the proposed changes.

Please reach out with any questions or concerns.

We so appreciate your continued support of this work.
Wishing you all a safe (and restful!) summer.

Best,
Matt

Subject: Meeting Notes: Leapfrog Hospital Safety Grade Expert Panel Call

Hi all,

Apologies for the delay in sharing the meeting notes from the Leapfrog Hospital Safety Grade expert panel call. If you notice any glaring errors or omissions with the attached notes, please let us know.

Thanks so much for your continued service on the expert panel; your input is always very much appreciated. We're lucky to have all of you help guide this work.

Best,
Preeti Joshi, MPH

LEAPFROG HOSPITAL SAFETY GRADE A B C D F

Final Updates to the Leapfrog Hospital Safety Grade Methodology for Fall 2024

On May 21, 2024, Leapfrog published planned updates to the Hospital Safety Grade methodology and held a public comment period through June 7, 2024. We received a variety of thoughtful comments with different perspectives, which were helpful in finalizing the methodology. We thank all the commenters for their insights.

This document includes the final updates to the methodology as well as responses to the comments received. Additionally, Table 2 on pages 5-6 includes a summary of data sources and anticipated reporting periods for the fall 2024 Hospital Safety Grades. More information can be found on the Hospital Safety Grade website at https://www.hospitalsafetygrade.org/for-hospitals/key-dates-and-information.

SUMMARY OF CHANGES

Starting with the fall 2024 Hospital Safety Grade update, Leapfrog will update the Imputation Methodology for CPOE, BCMA, IPS, and Hand Hygiene measures for hospitals that do not submit a 2024 Leapfrog Hospital Survey by August 31, 2024. The methodology change comes under the guidance of Leapfrog's national expert panel, the research team at Johns Hopkins Medicine, and in response to stakeholder feedback.

FINAL UPDATE TO IMPUTATION METHOD FOR CPOE, BCMA, IPS, AND HAND HYGIENE

BACKGROUND

The Leapfrog Group aims to ensure that the public has timely, transparent, and trustworthy information about a hospital's patient safety performance. Leapfrog's always commits to using the best and most recent data publicly available to calculate Hospital Safety Grades.

To ensure the Hospital Safety Grade methodology continues to support these goals, Leapfrog's blue-ribbon Expert Panel, researchers at Johns Hopkins Medicine, and our internal team of experts annually review measures and methodology. The review includes research on current evidence and available data, as well as analysis of hospital performance trends and variables. As a result of this, the panel advised that Leapfrog modify the current imputation method, which is used to fill in missing data among hospitals that did not complete the most recent Leapfrog Survey.

Leapfrog published the planned imputation revisions and solicited public comments. After review of comments, Leapfrog is now finalizing the methodology changes effective for the fall 2024 release of the Hospital Safety Grade.

CHANGES TO IMPUTATION METHOD FOR CPOE, BCMA, IPS, AND HAND HYGIENE

1) New Step 1 Imputation (Does not apply to BCMA)

If the hospital had a score assigned by Leapfrog in the previous two rounds of grades (i.e., spring 2024, fall 2023), the hospital is assigned the most recent score on that measure in the current Hospital Safety Grade (i.e., fall 2024). This is a reduction from the previous methodology, which imputed scores from up to four previous rounds of grades. This will help ensure any historical data used in calculating the Safety Grade is reflective of hospital protocols within the past 2 years (e.g., the reporting periods for CPOE IPS, and Hand Hygiene on the 2023 Leapfrog Hospital Survey was 2023).

Note that Step 1 imputation will be temporarily paused for the BCMA measure. In 2024, Leapfrog expanded the BCMA Standard to include pre-operative and post-anesthesia care units in addition to med-surg units, critical care units, and labor and delivery units. Due to these changes, scores from the 2023 Leapfrog Hospital Survey are not an accurate representation of performance on the current measure and thus not suitable for Step 1 imputation.

2) New Step 2 Imputation

For hospitals that do not have historical data from the last two rounds of the Safety Grade (Step 2 imputation then applies), instead of imputing a score based on the cohort mean, hospitals will be assigned a point value that is equivalent to receiving "Limited Achievement" for that measure on the Leapfrog Hospital Survey (Table 1). This category assignment would reflect hospital commitment to transparency as a sign of genuine momentum for improvement. Hospitals that decline to complete the Survey should not inadvertently benefit when compared to hospitals that demonstrate, through transparency, they are on a pathway to achieve Leapfrog's high standards for patient safety.

Step 2 imputation for the IPS measure will only apply to hospitals that operate an adult or pediatric medical and/or surgical ICU or neuro ICU. A hospital's ICU designation will be determined using the most recently available CMS Cost Report. Hospitals that report operating one or more medical, surgical and/or pediatric ICU beds in Worksheet S-3 Part 1 will be eligible for Step 2 imputation.

Table 1. Step 2 Imputation Point Assignments Beginning Fall 2024

	Leapfrog Hospital Survey Performance Category	Corresponding Safety Grade Measure Score
CPOE	Limited Achievement	**15**
BCMA	Limited Achievement	**25**
IPS	Limited Achievement	**5**
Hand Hygiene	Limited Achievement	**15**

PUBLIC REPORTING OF IMPUTED MEASURE SCORES

Leapfrog will denote imputed measure scores, when applicable, on each hospital's Safety Grade page of the public reporting website (https://www.hospitalsafetygrade.org/). Website users will be able to easily identify scores that were imputed.

RESPONSES TO PUBLIC COMMENTS

Four commenters supported the change to the imputation methodology.
We appreciate the feedback and agree that hospital commitment to transparency should be acknowledged as a sign of genuine momentum for improvement. Hospitals that decline to complete the Survey should not inadvertently benefit when compared to hospitals that transparently demonstrate they are on a clear pathway to achieve Leapfrog's high standards for patient safety.

One commenter expressed concerns about the public not realizing a score was imputed on the Hospital Safety Grade website (www.HospitalSafetyGrade.org).
We appreciate this feedback and in response, will add a new denotation to the Hospital Safety Grade website to clearly indicate when a score for a measure has been imputed.

Two commentors expressed concerns about Step 2 imputation misrepresenting the current procedures or infrastructure of the hospital to the public.
Hospitals eligible for Step 2 imputation may or may not score higher if they complete a Leapfrog Hospital Survey, but without the data, Leapfrog will lean toward caution. Our analyses have shown that performance among hospitals that intermittently complete the annual Survey is lower than those hospitals that complete the Survey on an annual basis. The expert panel recognized that hospitals with a drop in performance may be incentivized to not report via the Leapfrog Hospital Survey and scores calculated using participating hospitals would misrepresent their true performance.

We encourage hospitals to complete the Leapfrog Hospital Survey so they can receive credit for implementing processes that protect patients and save lives. The Survey continues to be free and open from April 1 to November 30, with substantial technical assistance available from Leapfrog's dedicated Help Desk.

Two commentors requested that the proposed changes be delayed until spring 2025 to allow hospitals time to complete the Leapfrog Hospital Survey.
While we do strongly encourage hospitals to submit their Survey by the Submission Deadline of June 30, 2024, hospitals that wish to have 2024 Leapfrog Hospital Survey data used in their fall 2024 Safety Grade will have until August 31 to submit or resubmit their Survey. Hospitals that wish to have 2024 Leapfrog Hospital Survey data used in their spring 2025 Safety Grade will have until November 30 to submit their Survey. Meanwhile, hospitals that completed a 2023 Leapfrog Hospital Survey will be eligible for Step 1 Imputation.

Four commenters opposed penalizing hospitals that choose not to devote resources to completing a voluntary Survey each year and suggested that they be allowed to opt out of the Hospital Safety Grade.
The Expert Panel noted that participation in the Leapfrog Hospital Survey has grown exponentially in recent years, with 78% of inpatient beds, at Safety Grade eligible hospitals, represented in recent Leapfrog Survey data. As such, a hospital's choice to decline participation in the Survey is itself a data point. A key element of the Hospital Safety Grade is that all eligible hospitals are compared to hospitals nationwide, and non-reporting hospitals exempt themselves from this peer benchmarking and from the responsibility and recognition in the community that comes with full transparency. Without providing the information their peer hospitals do through Survey submission, evidence does not justify awarding that hospital additional points when calculating the Hospital Safety Grade.

Regarding the suggestion that Leapfrog allow hospitals to opt out of earning a Hospital Safety Grade, this would be contrary to Leapfrog's nonprofit mission. As long as patients entrust their lives to American hospitals, Leapfrog will provide the information patients and families need to get the safe care they deserve.

Table 2. Planned Fall 2024 Leapfrog Safety Grade Measures, Data Sources, And Anticipated Reporting Periods

PROCESS/STRUCTURAL MEASURES (12)				
Measure Name	**Primary Data Source**	**Reporting Period**	**Secondary Data Source**	**Reporting Period**
Computerized Physician Order Entry (CPOE)	2024 Leapfrog Hospital Survey	2024	Imputation Model Applied	N/A
Bar Code Medication Administration (BCMA)	2024 Leapfrog Hospital Survey	2024	Imputation Model Applied	N/A
ICU Physician Staffing (IPS)	2024 Leapfrog Hospital Survey	2024	Imputation Model Applied	N/A

MRSA infection

Staph bacteria are common in hospitals, but Methicillin-resistant Staphylococcus aureus (MRSA) is a type of staph bacteria that is resistant to (cannot be killed by) many antibiotics. MRSA can be found in bed linens or medical equipment and can be spread if providers do not properly wash their hands between patients. MRSA can cause life-threatening bloodstream infections, pneumonia and surgical site infections.

This number represents a comparison of the number of infections that actually happened at this hospital to the number of infections expected for this hospital, given the number of patients they care for on a daily basis and how widespread MRSA infection is in their local community. A number lower than one means fewer infections than expected; a number more than one means more infections than expected. For details on sources, click here.

What safer hospitals do:

Doctors and nurses should clean their hands after caring for every patient. Hospital rooms and medical equipment should be thoroughly cleaned often. Safer hospitals will also keep MRSA patients separate from other patients and require providers and visitors to wear gloves and gowns around these patients.

Notes and Definitions

1. **Declined to Report: The hospital was asked to provide this information to the public, but did not.**

2. **Not Available**: "Not Available" means that the hospital does not have data for this measure. This could be because the measure is related to a service the hospital does not provide. For example, a hospital that does not have an ICU would not be able to report data about ICUs. It could also be because the hospital had too few patients or cases to report data for a particular condition or procedure. A "Not Available" result does not mean that the hospital withheld information from the public.

3. **Straight A:** The hospital has earned an 'A' Grade for five consecutive grading rounds or more, qualifying it for recognition as a "Straight A" hospital.

LEGAL DISCLAIMER: The Leapfrog Hospital Safety Grade scores hospitals on their overall performance in keeping patients safe from preventable harm and medical errors. The grades are derived from expert analysis of publicly available data using up to 31 evidence-based, national measures of hospital safety. No specific representation is made, nor shall be implied, nor shall The Leapfrog Group be liable with respect to any individual patient's potential or actual outcome as a result of receiving services performed at any of these hospitals. Leapfrog Hospital Safety Grades cannot be republished without expressed written permission from The Leapfrog Group.

C. diff infection

Clostridium difficile (C. diff) is a bacterium that can cause diarrhea, abdominal pain, loss of appetite, and fever. Most C. diff cases occur in patients taking or having recently taken antibiotics, and fully killing the bacteria in an infected patient can be very difficult. C. diff can spread via contaminated equipment or by providers who fail to properly wash their hands between patients.

This number represents a comparison of the number of infections that actually happened at this hospital to the number of infections expected for this hospital, given the number of patients they care for on a daily basis and how widespread C. diff infection is in their local community. A number lower than one means fewer infections than expected, a number more than one means more infections than expected. For details on scores, click here.

What safer hospitals do:

Doctors and nurses should clean their hands after caring for every patient. Hospital rooms and medical equipment should be thoroughly cleaned often. Safer hospitals will also keep C. diff patients separate from other patients, and require providers and visitors to wear gloves and gowns around these patients.

Notes and Definitions

1. **Declined to Report: The hospital was asked to provide this information to the public, but did not.**

Average Hospital's Score:

0.586

Worst Hospital's Score:

2.362

Infection in the blood

If a patient is in the hospital, he or she may be given a central line (a tube inserted into the body to deliver medication and other treatments). Patients with a central line are at high risk for developing a dangerous infection in the blood. These serious infections can lead to other complications, increase recovery time, and can often lead to death.

This number represents a comparison of the number of central line-associated infections in the blood that actually happened at this hospital to the number of infections expected for this hospital, given the number of central lines used and other factors like facility type and size. A number lower than one means fewer infections than expected; a number more than one means more infections than expected. For details on sources, click here.

What safer hospitals do:

Hospital staff follows special guidelines when inserting central lines, often including a checklist of steps to follow. They properly maintain a patient's central line to prevent infection.

Notes and Definitions

1. **Declined to Report: The hospital was asked to provide this information to the public, but did not.**

2. **Not Available:** "Not Available" means that the hospital does not have data for this measure. This could be because the measure is related to a service the hospital does not provide. For example, a hospital that does not have an ICU would not be able to report data about ICUs. It could also be because the hospital had too few patients or cases to report data for a particular condition or procedure. A "Not Available" result does not mean that the hospital withheld information from the public.

3. **Straight A:** The hospital has earned an 'A' Grade for five consecutive grading rounds or more, qualifying it for recognition as a "Straight A" hospital.

LEGAL DISCLAIMER: The Leapfrog Hospital Safety Grade scores hospitals on their overall performance in keeping patients safe from preventable harm and medical errors. The grades are derived from expert analysis of publicly available data using up to 31 evidence-based, national measures of hospital safety. No specific representation is made, nor shall be implied, nor shall The Leapfrog Group be liable with respect to any individual patient's potential or actual outcome as a result of receiving services performed at any of these hospitals. Leapfrog Hospital Safety Grades cannot be republished without expressed written permission from The Leapfrog Group.

Infection in the urinary tract

If a patient is in the hospital, he or she may require a urinary catheter. Patients with catheters are at risk for developing a dangerous infection in the urinary tract. These serious infections can lead to other complications, increase recovery time, and can often lead to death.

This number represents a comparison of the number of catheter-associated infections in the urinary tract that actually happened at this hospital to the number of infections expected for this hospital, given the number of catheters used and other factors like facility type and size. A number lower than one means fewer infections than expected; a number more than one means more infections than expected. For details on scoring, click here.

What safer hospitals do:

Hospital staff regularly clean and maintain urinary catheters to prevent infection. They also know when and how to safely remove a catheter.

Notes and Definitions

1. **Declined to Report: The hospital was asked to provide this information to the public, but did not.**

2. **Not Available:** "Not Available" means that the hospital does not have data for this measure. This could be because the measure is related to a service the hospital does not provide. For example, a hospital that does not have an ICU would not be able to report data about ICUs. It could also be because the hospital had too few patients or cases to report data for a particular condition or procedure. A "Not Available" result does not mean that the hospital withheld information from the public.

3. **Straight A:** The hospital has earned an 'A' Grade for five consecutive grading rounds or more, qualifying it for recognition as a "Straight A" hospital.

LEGAL DISCLAIMER: The Leapfrog Hospital Safety Grade scores hospitals on their overall performance in keeping patients safe from preventable harm and medical errors. The grades are derived from expert analysis of publicly available data using up to 31 evidence-based, national measures of hospital safety. Surgical site infection after colon surgery

This infection happens after surgery in the part of the colon where the surgery took place. These infections can be very serious, and may spread throughout the body. A patient with this type of infection often faces a long recovery in the ICU. Some people even die from the infection.

This number represents a comparison of the number of infections after colon surgery that actually happened at this hospital to the number of infections expected for this hospital, given the types of patients they care for and other factors like a patient's age and type of surgery. A number lower than one means fewer infections than expected; a number more than one means more infections than expected. For details on sources, click here.

What safer hospitals do:

The hospital team uses appropriate antibiotics before surgery, cleans the skin with a special soap that kills germs, and closely watches patients during and after major colon surgeries.

Notes and Definitions

1. Declined to Report: The hospital was asked to provide this information to the public, but did not.

2. Not Available: "Not Available" means that the hospital does not have data for this measure. This could be because the measure is related to a service the hospital does not provide. For example, a hospital that does not have an ICU would not be able to report data about ICUs. It could also be because the hospital had too few patients or cases to report data for a particular condition or procedure. A "Not Available" result does not mean that the hospital withheld information from the public.

3. Straight A: The hospital has earned an 'A' Grade for five consecutive grading rounds or more, qualifying it for recognition as a "Straight A" hospital.

LEGAL DISCLAIMER: The Leapfrog Hospital Safety Grade scores hospitals on their overall performance in keeping patients safe from preventable harm and medical errors. The grades are derived from expert analysis of publicly available data using up to 21 evidence-based, national measures of hospital safety. No specific representation is made, nor shall be implied, nor shall The Leapfrog Group be liable with respect to any individual patient's potential or actual outcome as a result of receiving services performed at any of these hospitals. Sepsis infection after surgery

Sepsis is your body's extreme reaction to an infection. All types of surgeries can put a patient at risk of infection that can lead to sepsis. This could be infection where the skin was cut, or an infection that develops after the surgery, like pneumonia. Sepsis requires immediate treatment or the patient may experience lifelong complications including organ failure. Some patients may die if sepsis is not treated quickly.

This number represents the number of surgical patients that experienced a sepsis infection for every 1,000 people who had surgery. For details on sources, click here.

What safer hospitals do:

Hospital staff closely monitor patients for signs of sepsis following surgical procedures, including a high heart rate, low blood pressure, fatigue, confusion, and severe pain.

Notes and Definitions

1. **Declined to Report: The hospital was asked to provide this information to the public, but did not.**

2. **Not Available:** "Not Available" means that the hospital does not have data for this measure. This could be because the measure is related to a service the hospital does not provide. Doctors order medications through a computer

Hospitals can use Computerized Physician Order Entry (CPOE) systems to order medications for patients in the hospital, instead of writing out prescriptions by hand. Good CPOE systems alert the doctor if they try to order a medication that could cause harm, such as prescribing an adult dosage for a child. CPOE systems help to reduce medication errors in the hospital.

Hospitals can earn up to 100 points for using a well-functioning CPOE system in most areas of the hospital. For details on scoring, click here.

What safer hospitals do:

Hospitals use CPOE systems in all areas of the hospital and regularly test those systems to ensure they are alerting doctors to potential ordering errors.

Notes and Definitions

1. **Declined to Report: The hospital was asked to provide this information to the public, but did not.**

2. **Not Available**: "Not Available" means that the hospital does not have data for this measure. This could be because the measure is related to a service the hospital does not provide. Safe medication administration

Using barcodes on medications, nurses can scan the medication and then the patient's ID bracelet to make sure the patient is receiving the right medications. If the bar codes do not match, this signals there is an error, giving nurses and doctors the chance to confirm they have the right patient, right medication, and right dose. Bar code medication administration (BCMA) systems are proven to reduce the risk that a hospital accidentally gives the wrong medication to a patient.

Hospitals earn up to 100 points for using a well-functioning bar coding system for all medication orders, and making sure it is used properly to keep patients safe. For details on scoring, click here.

What safer hospitals do:

When hospitals use bar coding technology effectively for all orders, medication errors happen far less frequently.

Notes and Definitions

1. **Declined to Report: The hospital was asked to provide this information to the public, but did not.**

2. **Not Available:** "Not Available" means that the hospital does not have data for this measure. This could be because the measure is related to a service the hospital does not provide. Handwashing

Healthcare workers can help stop infection and illness by carefully cleaning their hands. When hospital staff does not carefully wash their hands, they can spread germs from one patient to another and cause someone to become seriously ill.

Hospitals can earn up to 100 points for having a handwashing policy and evaluating how hospital workers follow that policy. For details on sources, click here.

What safer hospitals do:

Hospitals provide training and implement policies to make sure that all hospital staff cleans their hands before touching a patient.

Communication about medicines

Patients' perspectives of care are an important part of patient safety. The Communication about Medicines measure reflects patients' feedback on how often hospital staff explained the purpose of any new medicine and what side effects that medicine might have. Effective communication about medicine prevents misunderstandings that could lead to serious problems for a patient.

Based on a scale of zero-100, this number represents a comparison of patients' perspectives of how effectively this hospital communicated with patients about their medications relative to patients' perspectives of how effectively other hospitals communicated with their patients. Higher scores indicate more effective communication than lower scores. For details on scores, click here.

What safer hospitals do:

Hospitals that score well on this measure take time to speak with every patient to ensure that the patient understands the purpose of any new medication they are given, how to take the medication, and the risk of any possible side effects.

Notes and Definitions

1. **Declined to Report: The hospital was asked to provide this information to the public, but did not.**

2. **Not Available**: "Not Available" means that the hospital does not have data for this measure. This could be because the measure is related to a service the hospital does not provide. For example, a hospital that does not have an ICU would not be able to report data about ICUs. It could also be because the hospital had too few patients or cases to report data for a particular condition or procedure. A "Not Available" result does not mean that the hospital withheld information from the public.

3. **Straight A:** The hospital has earned an 'A' Grade for five consecutive grading rounds or more, qualifying it for recognition as a "Straight A" hospital.

LEGAL DISCLAIMER: The Leapfrog Hospital Safety Grade scores hospitals on their overall performance in keeping patients safe from preventable harm and medical errors. The grades are derived from expert analysis of publicly available data using up to 21 evidence-based, national measures of hospital safety. No specific representation is made, nor shall be implied, nor shall The Leapfrog Group be liable with respect to any individual patient's potential or actual outcome as a result of receiving services performed at any of these hospitals. Communication about discharge

Patients' perspectives of care are an important part of patient safety. The Communication about Discharge measure summarizes how well the hospital staff communicated with patients about the help they would need at home after leaving the hospital. The measure also summarizes how often patients reported that they were given written information about symptoms or health problems to watch for during their recovery. Educating patients on the steps they need to take during their recovery at home reduces the chances that a patient will need to be readmitted to the hospital.

Based on a scale of zero-100, this number represents a comparison of patients' perspectives of how effectively this hospital communicated with patients about the help they would need after discharge relative to patients' perspectives of how effectively other hospitals communicated with their patients. Higher scores indicate more effective communication than lower scores.
For details on sources, click here.

What safer hospitals do:

Hospitals that score well on this measure take time with every patient to clarify the patient's responsibilities during her recovery at home, clarify the responsibilities of caregivers at home, and educate the patient on any symptoms that could point to problems in the recovery process.

Notes and Definitions

1. **Declined to Report: The hospital was asked to provide this information to the public, but did not.**

2. **Not Available:** "Not Available" means that the hospital does not have data for this measure. This could be because the measure is related to a service the hospital does not provide. For example, a hospital that does not have an ICU would not be

able to report data about ICUs. It could also be because the hospital had too few patients or cases to report data for a particular condition or procedure. A "Not Available" result does not mean that the hospital withheld information from the public.

3. Straight A: The hospital has earned an 'A' Grade for five consecutive grading rounds or more, qualifying it for recognition as a "Straight A" hospital.

LEGAL DISCLAIMER: The Leapfrog Hospital Safety Grade scores hospitals on their overall performance in keeping patients safe from preventable harm and medical errors. The grades are derived from expert analysis of publicly available data using up to 31 evidence-based, national measures of hospital safety. No specific representation is made, nor shall be implied, nor shall The Leapfrog Group be liable with respect to any individual patient's potential or actual outcome as a result of receiving services performed at any of these hospitals. Leapfrog Hospital Safety Grades cannot be republished without expressed written permission from The Leapfrog Group.

THE LEAPFROG GROUP

The Leapfrog Hospital Safety Grade

The Leapfrog Hospital Safety Grade is a public service provided by The Leapfrog Group, an independent nonprofit organization committed to driving quality, safety, and transparency in the U.S. health system.

120.00

Average Hospital's Score:

117.27

Worst Hospital's Score:

0.00

Staff work together to prevent errors

A hospital that has a strong culture of safety has a well-functioning team with good leaders who catch errors before they can harm a patient. Patients are less likely to experience mistakes if hospital staff works together. Staff should also be comfortable speaking up when they sense an error might happen.

Hospitals can earn up to 120 points for measuring culture of safety, providing feedback to staff, and creating new plans to prevent errors. For details on sources, click here.

What safer hospitals do:

Hospitals regularly survey their physicians, nurses, and other staff on the culture of safety to measure how well staff works together to keep patients safe. Then, hospitals provide feedback on the results to leaders and hospital staff and create plans to improve.

Notes and Definitions

1. **Declined to Report: The hospital was asked to provide this information to the public, but did not.**

2. **Not Available:** "Not Available" means that the hospital does not have data for this measure. This could be because the measure is related to a service the hospital does not provide. PRELIMINARY STATEMENT

1. This case concerns whether the "D" and "F" hospital "Safety Grades" assigned by Defendant The Leapfrog Group ("Leapfrog") to the five plaintiff hospitals are deceptive to consumers—including patients choosing where to seek care, physicians deciding where to practice and refer patients, and insurers and employers that use hospital safety information in contracting and network decisions. These failing, so-called "Safety Grades" purport to reflect hospitals' measured safety performance. In fact, Leapfrog arbitrarily assigned failing safety scores on key safety measures, even though it had no data measuring actual performance in those areas. The five plaintiff hospitals, Good Samaritan Medical Center, Delray Medical Center, Palm Beach Gardens Medical Center, St. Mary's Medical Center, and West Boca Medical Center (the "Community Hospitals"), are long-standing community institutions that provide essential emergency and inpatient care, including high-acuity and specialty services for medically complex and vulnerable patient populations. *See* Proposed Findings of Fact ("Findings") I ("Background"), VII ("Leapfrog's Safety Grades Have Caused Real and Ongoing Harm").

2. Leapfrog holds itself out as a hospital-safety "watchdog." Twice each year, in May and November, Leapfrog disseminates "Hospital Safety Grades," assigning report-card-style letter grades ranging from "A" to "F" to hospitals and urges consumers to "always" rely on the Safety Grades when choosing where to seek care, warning that it can be a "life or death decision." Leapfrog represents that its Grades reflect hospital performance on "process measures"—including basic safety practices such as hand hygiene (i.e., handwashing)—and presents the resulting letter grade as a safety judgment consumers should trust. *See* Findings I.B ("Leapfrog's Safety Grades And Survey"), III.B ("Leapfrog Leads the Public to Believe the Safety Grades Reflect Actual Safety Performance—Not Survey Participation").

3. Leapfrog repeatedly leads consumers to believe (i) that its Safety Grades are supported by sufficient data and that hospitals lacking sufficient data are not graded; (ii) that its Safety Grades reflect how well a hospital performs on safety—not whether it completed Leapfrog's Hospital Survey; and (iii) that its grading methodology is objective, peer-reviewed, and expert-approved. Those representations frame the net impression consumers take away from a "D" or "F" Grade: that Leapfrog measured safety performance and found the hospital to be unsafe. Leapfrog also represents that hospitals missing data—including more than six process measures—are not

graded. But for non-participating hospitals, Leapfrog nevertheless issued Safety Grades while lacking data for seven measures. *See* Findings II.D, III.A–III.C.

4. The proposed Findings below set forth how Leapfrog's Fall 2024 methodology change for non-participating hospitals broke Leapfrog's promises. For participating hospitals, Leapfrog relies heavily on its Hospital Survey (the "Survey")—an annual questionnaire exceeding 350 pages. For hospitals that choose not to complete the Survey, Leapfrog assigned fixed failing scores on four Survey-dependent measures, despite lacking data to measure those hospitals' actual performance on those measures. Leapfrog assigned the lowest possible values in the absence of data—characterizing this practice as "imputation"—and then re-weighted those assigned failing scores so they counted more heavily in the hospital's overall Safety Grade, a "double-whammy" effect that materially drove down the final assigned letter Grade. Leapfrog's own witnesses acknowledged that this approach functioned as a "non-participation penalty" that "goes away" when a hospital resumes participation—confirming that the Safety Grades were materially driven by participation status rather than measured safety performance on the no-data measures. Because non-participation in Leapfrog's Survey does not prevent dissemination of a Safety Grade, hospitals cannot avoid or self-cure the severe reputational effects once the misleading letter Safety Grade is issued. *See* Findings II.A–II.D, VI.

5. Leapfrog did not assign the Safety Grades to the Community Hospitals quietly. The evidence shows that Leapfrog amplified and disseminated the "D" and "F" letter Grades it had assigned to them widely through a coordinated media strategy, including through advertising and third-party channels, such as targeted Google advertising in Florida-specific zip codes that displayed the Community Hospitals' letter Grades when consumers searched hospital names. The letter Safety Grade is what travels: the "D" and the "F." The limited, opaque disclosures Leapfrog points to related to the four artificially assigned safety measures—in buried footnotes and a dense methodology document—do not accompany the media blitz and are not reasonably accessible or understandable to lay consumers in any event. The Findings also show that, even within Leapfrog's website, disclosures are internally inconsistent and confusing: a "Declined to Report" footnote appears across virtually all hospitals' Safety Grade webpages (*including* for participating hospitals) without tying that label to any specific measure or score. At the same time, the Safety Grade webpages for non-participating hospitals include "gas gauge" graphics purporting to signal the hospitals' performance on key measures for which Leapfrog has no data. In that environment, the

evidence showed that consumers encounter and act on the letter Safety Grade as a safety judgment. It also confirms that buried disclosures do not realistically cure the net impression once the Grade is broadcast into the market. *See* Findings IV ("Leapfrog's Purported Disclosures: Hidden Footnotes And Buried Documents"), V ("Leapfrog's Widespread Dissemination And Amplification Of The Community Hospitals' Safety Grades").

6. The record of harm is concrete and consistent. The credible testimony of the Community Hospitals' CEOs as well as contemporaneous business records show reputational and operational injury following dissemination of the Fall 2024 and later Safety Grades: patients declined or delayed care, some left against medical advice, walk-in volumes declined relative to EMS admissions, procedures were canceled, physicians and staff confronted sustained reputational fallout, and insurers and employers referenced Leapfrog's Safety Grades in communications urging responses detailing remedial action. Expert testimony confirms that letter grades—especially "D" and "F"—operate as heuristics in difficult healthcare decisions and are likely to distort consumer choice and cause the types of harm reflected in the record. The evidence also showed that these injuries persist and compound over time and cannot be corrected by the hospitals through their own efforts while Leapfrog continues to disseminate its false and misleading Safety Grades. *See* Findings VII, VIII.

7. FDUTPA prohibits "unfair or deceptive acts or practices in the conduct of any trade or commerce." Fla. Stat. § 501.204(1). In seeking injunctive and declaratory relief, the Community Hospitals must show that Leapfrog's challenged practices are deceptive or unfair and that the Community Hospitals are "aggrieved by" those practices. Fla. Stat. § 501.211(1); *see* Proposed Conclusions of Law ("Conclusions") II.

8. The Proposed Findings of Fact and Conclusions of Law below provide a reliable basis to resolve liability and to enter tailored equitable relief consistent with controlling precedent. They address (i) the mechanics of the Fall 2024 approach for grading non-participating hospitals, including assigned made-up component scores for no-data measures (Findings II.A–II.D); (ii) the consumer-facing representations and net impression created by the Safety Grades (Findings III.A–III.C); (iii) why disclosures do not cure the misleading impression once the Grade travels (Findings IV–V); and (iv) concrete, corroborated harm supporting both likely and actual consumer injury (Findings VII). To the extent any evidence describes third-party reactions, it is offered for admissible purposes (including effect on the listener and state of mind) and is corroborated by

contemporaneous business records, insurer/employer communications, and objective volume data. Even if limited weight is accorded to such testimony, the record independently establishes at least likely consumer harm through Leapfrog's consumer-facing "D" and "F" Safety Grade messaging, widespread dissemination without accompanying methodology, and expert testimony on consumer reliance and predicted market effects—confirmed by objective indicators such as walk-in volume declines and insurer/employer communications. Because Leapfrog's Safety Grades travel without context, disclosure is not a practical cure. Removal and corrective disclosures are necessary to provide complete relief. *See* Findings IV–VII; Conclusions II.A–II.B.

9. The relief requested is tailored to the proven violation and the ongoing nature of the harm, as the law requires. The Community Hospitals seek an injunction requiring Leapfrog to (i) cease assigning Safety Grades to the Community Hospitals under the current methodology or any similar methodology that assigns failing component scores for measures where Leapfrog lacks data to measure actual performance or otherwise reduces Safety Grades due to non-participation; (ii) withdraw from its websites and cease promoting the Fall 2024, Spring 2025, and Fall 2025 Safety Grades as applied to the Community Hospitals; (iii) issue corrective disclosures to entities that licensed those Safety Grades and include targeted, forward-looking disclosures in future licensing materials to address continuing marketplace confusion. The Community Hospitals also seek a corresponding declaratory judgment. *See* Conclusions V.

10. For these reasons, the Community Hospitals respectfully request that the Court adopt the proposed Findings of Fact and Conclusions of Law below, which are grounded in the trial record and provide a tailored, enforceable basis for injunctive and declaratory relief.

PROPOSED FINDINGS OF FACT

I. BACKGROUND

A. The Parties

11. Plaintiffs—Good Samaritan Medical Center, Delray Medical Center, Palm Beach Gardens Medical Center, St. Mary's Medical Center, and West Boca Medical Center—are five Community Hospitals that have provided life-saving and essential care to Palm Beach County and the surrounding area for more than 300 years collectively. *See* ECF 129 ¶¶ 1–17. The Community Hospitals have delivered critical care across diverse service lines, including cardiology, pediatrics, geriatrics, obstetrics, oncology, orthopedics, and emergency care. *See* PX-395.0 at 2. Each Community Hospital is accredited by the Joint Commission and other accrediting bodies, and has

received awards and recognition for patient care. *See id.* The Community Hospitals serve many patients with urgent and acute healthcare needs and significant comorbidities, including older and underserved populations. *See, e.g.*, Day 1 Trial Tr. 54:2–24 (Havericak), 140:2–11 (Cazares).[1] The Community Hospitals are part of the Palm Beach Health Network ("PBHN"), the largest healthcare network in Palm Beach County. *See* PX-395.0 at 2.

12. Defendant Leapfrog is a 501(c)(3) corporation based in Washington, D.C., whose stated "mission" is to "us[e] transparency to support informed health care decisions." PX-824.0 at 2; *see also* ECF 129 ¶ 18. Leapfrog was originally founded by "employers and other purchasers" who decide where to direct members of their health plans for care. Day 3 Trial Tr. 85:11–12 (Binder). Leapfrog's 2024 IRS Form 990 reports annual revenue of nearly $8.4 million. PX-824.0 at 9.

B. Leapfrog's Safety Grades And Survey

13. Leapfrog assigns "Safety Grades"—"A," "B," "C," "D," or "F"—to general acute-care hospitals across the United States twice a year: once in the Spring and once in the Fall. *See* ECF 129 ¶¶ 38–40. Leapfrog typically releases the Spring Safety Grades in early May and the Fall Safety Grades in mid-November, releasing them on an embargoed basis to the press and hospitals in April and October. *See, e.g.*, PX-330.0 at 25 (Spring 2024); PX-398.0 at 3 (Fall 2024); PX-410.0 at 1 (Spring 2025).

14. Leapfrog created a Survey, consisting of a questionnaire exceeding 350 pages that it uses to collect data annually from participating hospitals. *See* JX-042.0 at 1–8.

15. The Survey covers a broad array of measures and requires that hospitals compile and submit extensive information concerning their policies, technologies, clinical processes, reporting mechanisms, leadership structures, staffing models, and other operational areas. *See id.* at 36–314.

16. In addition, Leapfrog requires hospitals participating in the Survey to affirm—nine different times—that Leapfrog may use the hospital's submitted information "in a commercial manner for profit." *Id.* at 46, 68, 99, 158, 194, 232, 265, 278, 315. These authorizations permit Leapfrog to incorporate Survey data into revenue-generating products marketed and sold to third parties. *See infra* ¶ 121.

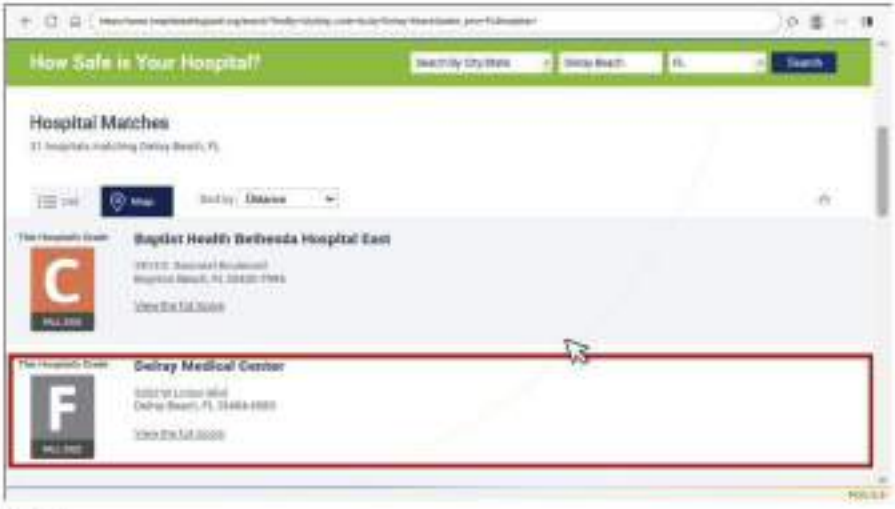
[1] Citations to the trial transcripts correspond to the respective transcripts for each day of trial: Day 1 is January 16; Day 2 is January 20; Day 3 is January 21; Day 4 is January 22; and Day 5 is January 23.

17. Leapfrog conveys to the public that it calculates the Safety Grades using twenty-two measures that rely on data obtained through the Survey, as well as other data sources Leapfrog selects, and results in a single letter Safety Grade. *See* ECF 129 ¶¶ 73–76; JX-041.1 at 5.

18. Leapfrog assigns Safety Grades to hospitals regardless of whether a hospital elects to participate in the Survey. *See* ECF 129 ¶ 36; JX-041.1 at 16; *see also, e.g.*, PX-034.2 (assigning a Safety Grade to non-participating hospital Delray Medical Center).

19. Leapfrog developed the Safety Grade in or around 2011 with the assistance of an Expert Panel convened to design a composite measure of hospital safety. *See* PX-202.0 at 1–2; Day 3 Trial Tr. 177:14–19 (Danforth); Day 3 Trial Tr. 110:1–3 (Binder). The Expert Panel's work, including its approach to handling missing data, was memorialized in a 2013 peer-reviewed publication. *See* PX-202.0. That publication reflected the Expert Panel's judgment that Safety Grades should be based on "the available data," such that "the composite scores were based on what was known about the hospital's performance, with no penalties for missing data" and "to avoid creating a structural bias in favor of Leapfrog-reporting hospitals." *Id.* at 4.

20. Leapfrog materially departed from that framework in Fall 2024 by adopting a new approach that penalizes hospitals that do not complete the Survey. *See infra* ¶¶ 30–68. This revised methodology was not peer reviewed, approved by Leapfrog's Expert Panel, or voted on by its Board of Directors. ECF 163-1 (Austin Tr.) 90:15–17 (testifying the new approach "has not" been peer reviewed), 285:7–15 ("We did not query the [E]xpert [P]anel about whether they approved [the methodology] or not.");[2] Day 3 Trial Tr. 193:22–194:1 (Danforth) (the methodology implemented was "not the imputation model" that was "brought to the [P]anel in 2024"); ECF No. 163-2 (van Caulil Tr.) 105:18–22 ("[T]here was no board vote in June 2024 on whether LeapFrog should change its safety grade methodology.").



21. Leapfrog has a consumer-facing website, hospitalsafetygrade.org, dedicated to Safety Grades. *See* PX-033.0. Each hospital's Safety Grade is prominently displayed on various webpages across the website. *See, e.g.*, PX-033.1 at 1–7; PX-034.2 at 1. The home page of that website invites consumers to search for their hospital by name or location and features a centrally placed search bar to facilitate that process below the question, "How Safe is Your Hospital?" *See* PX-033.0 at 1.

[2] All deposition testimony cited herein was received and played at trial.

PX-033.0 at 1.

22. After consumers enter identifying information relevant to their search, the website displays search results listing hospitals that match the query, each accompanied by a prominently displayed Safety Grade. *See, e.g.*, PX-033.1.

PDX-3.9.

23. When a consumer selects a hospital from the search results, the website navigates to a dedicated Safety Grade webpage for that hospital. At the top of that webpage, Leapfrog prominently displays the hospital's Safety Grade and presents it as a categorization of the hospital's overall safety. *See, e.g.*, PX-034.2 at 1.

PX-034.2 at 1.

24. Leapfrog expects and intends consumers to rely on the Safety Grades. Leapfrog's Vice President of Development, Ms. Jupiter, confirmed that Leapfrog *wants* consumers to rely on the Safety Grades when choosing hospitals. Day 3 Trial Tr. 7:6–11 (Jupiter).

25. Leapfrog's consumer-facing materials make that objective clear. On its website, Leapfrog tells consumers that they should "always" rely on the Safety Grades when making healthcare decisions, PX-023.0 at 4, and describes the Safety Grades as the "first tool patients should use to select a hospital," PX-021.0 at 3.

26. Leapfrog further encourages consumers to rely on the Safety Grades. For example, Leapfrog tells consumers on its website that choosing a hospital can be a "life or death decision," PX-022.0 at 1, and that they are "twice as likely to die" at a "D" or "F" hospital than at an "A" hospital, PX-021.0 at 1; *see also* Day 3 Trial Tr. 8:17–9:16 (Jupiter) (confirming "Leapfrog wants consumers to think that visiting a hospital with an F grade could seriously injure or even kill them"). The Community Hospitals' marketing and consumer choice expert, Dr. Jonah Berger, testified that this type of messaging would "concern" consumers and "shape" their hospital choices accordingly. Day 2 Trial Tr. 33:4–5 (Berger).

27. Consistent with this testimony, Leapfrog's CEO, Leah Binder, confirmed that "millions" of consumers have used Leapfrog's Safety Grades to make healthcare decisions. Day 3 Trial Tr. 63:17–25 (Binder).[3]

28. Leapfrog itself highlights the story of a patient who "needed a hospital" and drove 400 miles to the nearest "A" hospital after realizing "the hospitals closest to him did not perform well" on the Safety Grades. PX-221.0 at 4.

* * *

29. Leapfrog's Safety Grades are understood as measures of hospital safety performance, and Leapfrog expressly instructs consumers to rely on those Grades when making healthcare decisions. For hospitals that do not participate in Leapfrog's Survey, however, Leapfrog assigns Safety Grades using assumed or "imputed" failing scores for key Survey-dependent measures despite lacking hospital-provided performance data for those measures. As a result, the Grades issued to non-participating hospitals reflect Survey non-participation and a non-participation penalty imposed through made-up scores for those no-data measures. Because the Safety Grades are disseminated and relied upon as measures of safety performance, assigning failing scores without hospital-specific data creates a predictable mismatch between what the Grade conveys to consumers about hospital safety and what Leapfrog actually measured.

II. THE REALITY OF LEAPFROG'S GRADING PRACTICES

30. In Fall 2024, Leapfrog adopted a "drastic" new methodology applicable to hospitals that do not participate in its lengthy Survey. JX-011.0 at 3. Under this revised approach, Leapfrog assigns non-participating hospitals the lowest possible scores on four Survey-dependent measures for which it lacks hospital-provided performance data, and re-weights those measures so that they collectively account for nearly one-third of the hospital's overall Safety Grade.

A. The Non-Participation Penalty

31. Under the revised methodology, Leapfrog automatically assigns non-participating hospitals the lowest possible score on four of the measures its uses to assign a Safety Grade (the "Four Measures"). *See* JX-034.0 at 15. The Four Measures are:

a. Computerized Physician Order Entry ("CPOE"), which measures whether a hospital uses an electronic system to record physician orders. *See* PX-034.5 at

[3] The Community Hospitals respectfully submit that the trial transcript incorrectly states Ms. Binder testified that this is "not" something she would have said.

1–2. On its consumer-facing website, Leapfrog describes CPOE as "Doctors order medications through a computer." *See, e.g.*, *id.* at 2.

b. Bar Code Medication Administration ("BCMA"), which measures whether staff confirm medication through bar code scanning. *See id.* at 3–4. On its consumer-facing website, Leapfrog describes BCMA as "Safe medication administration." *See, e.g.*, *id.* at 4.

c. ICU Physician Staffing ("IPS"), which measures intensivist staffing at the ICU. *See* PX-034.6 at 7–8. On its consumer-facing website, Leapfrog describes IPS as "Specially trained doctors care for ICU patients." *See, e.g.*, *id.* at 8.

d. Hand Hygiene Score ("Hand Hygiene"), which measures the policies and training for hand hygiene. *See* PX-034.5 at 7–8. On its consumer-facing website, Leapfrog describes this measure as "Handwashing." *See, e.g.*, *id.* at 8.

32. For hospitals participating in the Survey, the scores on the Four Measures are based on the Survey data they submit. JX-034.0 at 5–6, 9 (CPOE), 10 (BCMA and IPS), 12 (Hand Hygiene).

33. For non-participating hospitals, Leapfrog lacks hospital-provided performance data for these Survey-dependent measures and assigns fixed "Limited Achievement" values instead. *See* JX-034.0 at 15. "Limited Achievement" corresponds to numerical scores of 15 of 100 for CPOE; 25 of 100 for BCMA; 5 of 100 for IPS; and 15 of 100 for Hand Hygiene:

Measure	Leapfrog Hospital Survey Performance Category	Corresponding Safety Grade Measure Score
CPOE	Limited Achievement	15
BCMA	Limited Achievement	25
IPS	Limited Achievement	5
Hand Hygiene	Limited Achievement	15

Id.

34. These "Limited Achievement" values are fixed defaults applied based on Survey non-participation, not hospital-specific measurement or estimation. *See infra* ¶¶ 35–41, 117–40.

35. As Leapfrog witnesses confirmed, the assignment of these scores did not involve any actual measurement of hospital performance. Alexandra Campione, a program manager at Leapfrog, wrote contemporaneously that this new approach involved "arbitrarily assigning" non-participating hospitals the worst possible scores on the Four Measures. JX-031.0 at 1. At trial, Ms. Campione confirmed that the assignment of "Limited Achievement" for non-participating

hospitals is "mathematically arbitrary." Day 2 Trial Tr. 289:13–15 (Campione). Leapfrog personnel discussed how to describe these assigned values on its website, reflecting internal recognition that the values were assigned rather than measured. *See* JX-031.0 at 1–6; *see also infra* ¶¶ 55–64.

36. Contemporaneous documents and witness testimony make clear that this arbitrary assignment was intended as a penalty for non-participation. Dr. Patrick Romano, a member of Leapfrog's Expert Panel, wrote at the time that the purpose of the revised approach was to "penalize nonparticipants" and that the "consequences of nonresponse will become readily apparent." JX-022.3 at 1. He further warned Leapfrog against a "backdoor approach to penalizing nonparticipation": "[I]f you want to penalize nonparticipants, then don't pretend you are imputing missing values in a statistically optimal way. Just be honest about your goal." *Id.* (discussing Leapfrog's "strategic objective of penalizing nonparticipants" and stating that "if the goal is to penalize nonparticipants, you might as well do so in a clear and unmistakable manner").

37. Dr. Romano's statement would prove prescient, including with respect to his own hospital, UC Davis Medical Center. UC Davis made a "business decision" to stop participating in Leapfrog's Survey prior to Fall 2024. Day 2 Trial Tr. 166:24–167:3 (Romano); *see also* PX-501.0 at 1. After Leapfrog implemented the non-participation penalty, Dr. Romano wrote to his colleagues at UC Davis explaining "the consequences of [their] nonparticipation": UC Davis received a "D" Safety Grade—a grade that Dr. Romano called "embarrassing." PX-501.0 at 2. As Dr. Romano explained, the "real killer" of the hospital's Safety Grade was only one thing: its "nonparticipation." *Id.*

38. Dr. Romano confirmed at trial that the revised approach amounted to a penalty for non-participation. As he explained, the approach imposed a "predictable, a temporary, and a specific consequence" for non-participation, and that "as soon as a hospital chooses to participate in the survey program again, the penalty goes away." Day 2 Trial Tr. 180:2–17 (Romano). Dr. Romano further testified "it is very clear that there is a benefit to participation." Day 2 Trial Tr. 156:10–11 (Romano). The consequence is therefore avoidable through Survey participation and turns on participation status, not measured safety performance.

39. The numerical effect of the revised approach functions as a non-participation penalty. Under Leapfrog's methodology, non-participating hospitals automatically receive a total of 60 out of 400 possible points across the Four Measures—the lowest available score on the Four Measures. *See* JX-034.0 at 9–12; JX-041.1 at 10–13; Day 1 Trial Tr. 184:18–25 (Nicholson). By

contrast, in Spring 2025, the bottom one percent of participating hospitals received an average of 282 out of 400 points on those same Four Measures—more than a 400 percent difference based solely on Survey participation. *See* PX-412.0; DX-101; *see also* Day 1 Trial Tr. 188:14–25 (Nicholson) ("This means this nonparticipation penalty gives nonparticipating hospitals literally a worse score than the worst performing participating hospitals"). Moreover, not a single participating hospital has received 60 out of 400 points across the Four Measures, PX-412.0—confirming Leapfrog's "imputation" of "Limited Achievement" for the Four Measures has no connection to actual performance at any hospital nationwide. Day 1 Trial Tr. 187:16–188:2, 188:14–16 (Nicholson). The record evidence showed that the combination of "Limited Achievement" across all Four Measures is unique to non-participating hospitals. *See* PX-412.0; Day 1 Trial Tr. 187:16–188:2, 188:14–16 (Nicholson).

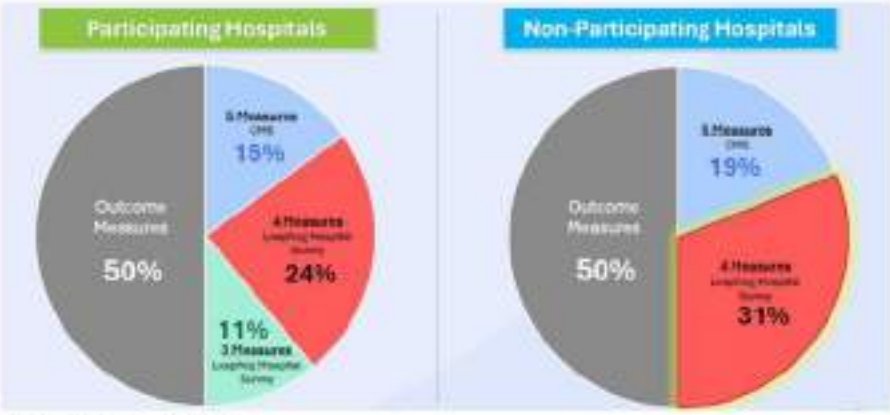
40. Indeed, when the Community Hospitals last participated in the Survey, they averaged 370 out of 400 points across the Four Measures, underscoring the difference between their Survey-based scores and the fixed "Limited Achievement" values automatically assigned to non-participating hospitals. *See* PX-412.0; *see also* Day 1 Trial Tr. 186:16–21 (Nicholson).

PDX-6.39 (citing JX-041.1; PX-412.0; DX-101).

41. Leapfrog's own expert, the epidemiologist Dr. Anthony Harris, admitted that this disparity is "bizarre" and agreed with the Court that "it seems illogical statistically that [the score] would be that low." Day 4 Trial Tr. 99:17–19 (Harris) ("You are saying is [sic] it seems illogical statistically that it would be that low. I agree with you, that it seems bizarre it would be less than one percent[.]"). As the Community Hospitals' health economics expert, Dr. Sean Nicholson,

summarized at trial, the penalty Leapfrog imposes on non-participating hospitals is "severe and substantial." Day 1 Trial Tr. 187:23–24 (Nicholson).

B. The "Double Whammy": Automatic Failing Scores Plus Increased Weighting



42. The non-participation penalty is further magnified by the weight assigned to the Four Measures.

43. Under Leapfrog's Safety Grade methodology, individual measures are assigned weights that determine how much each measure contributes to the composite Safety Grade. *See* JX-034.0 at 19. Participating hospitals are graded using twenty-two total Safety Grade measures. *See id.* at 5–7.

44. For non-participating hospitals, Leapfrog removes three measures[4] from the calculation (reducing the measure set from 22 to 19), and redistributes the weight of the removed measures across the remaining measures. *See id.* at 5–6, 19, 22; Day 1 Trial Tr. 182:20–183:8, 216:18–25 (Nicholson). As a result, the Four Measures for which non-participating hospitals receive automatic and fixed failing scores collectively account for 30.6 percent of the overall Safety Grade (or approximately one-third). *See* JX-034.0 at 19, 22; Day 1 Trial Tr. 182:20–183:8 (Nicholson); Day 4 Trial Tr. 85:25–87:19 (Harris).

45. Expert witnesses agreed that, under the revised approach, the Four Measures collectively account for approximately 31 percent of a non-participating hospital's overall Safety Grade, compared to approximately 24 percent for a participating hospital. *See* Day 1 Trial Tr. 182:20–183:8 (Nicholson); Day 4 Trial Tr. 85:25–87:19 (Harris); Harris Demonstrative at 6.

[4] The three eliminated measures are: (1) "Safe Practice 1: Culture of Leadership Structures and Systems"; (2) "Safe Practice 2: Culture Measurement, Feedback & Intervention"; and (3) "Total Nursing Care Hours per Patient Day." JX-034.0 at 11. For hospitals participating in the Survey, the scores on each of these three measures are based on Survey data. *See id.* at 5–6, 11.

PDX-6.40 (citing JX-034.0).

46. The combined effect of assigning automatic and fixed failing component scores on the Four Measures and increasing their weight for non-participating hospitals is substantial. *See* Day 1 Trial Tr. 198:11–12 (Nicholson) ("There is an enormous difference that comes from the nonparticipation penalty."), 188:17–19 ("[N]onparticipating hospitals literally receive a worse score than the worst performing participating hospital."), 198:7–8 ("96 percent of non-participating hospitals are receiving grades of C, D, or F from Leapfrog."), 198:9–12 (without the non-participation penalty, "71 percent" of non-participating hospitals "get an A or B"), 198:13–17 (the Community Hospitals would have each received at least a "C" without the non-participation penalty).

47. Since Fall 2024, not a single non-participating hospital has received an "A" Safety Grade while subject to the non-participation penalty on all Four Measures. *See* Day 1 Trial Tr. 189:3–5 (Nicholson). By contrast, in Spring 2025, not a single *participating* hospital received an "F" Safety Grade, demonstrating starkly divergent outcomes depending on Survey participation. Day 1 Trial Tr. 189:5–6 (Nicholson).

48. The effect of the non-participation penalty is also reflected in the Community Hospitals' Safety Grade history. Prior to 2021, the Community Hospitals consistently received Safety Grades of "A," "B," or "C." *See* PX-239.0.

C. The Impact The Fall 2024 Penalty Scoring Had On The Community Hospitals' Safety Grades

49. In 2021, during the COVID-19 pandemic, the Community Hospitals stopped participating in the Survey to reallocate staff and resources to patient care and quality initiatives during that period of operational strain. *See, e.g.*, Day 1 Trial Tr. 92:3–9 (Havericak).

50. Since Leapfrog imposed the non-participation penalty in Fall 2024, the Community Hospitals' Safety Grades have dropped to "D" or "F." *See* PX-239.0; PX-412.0. These declines followed Leapfrog assigning fixed "Limited Achievement" scores for the Four Measures and reweighting those measures for non-participating hospitals. *See supra* ¶¶ 30–48; JX-034.0 at 15, 19, 22.

51. By Spring 2025, each Community Hospital's Safety Grade had dropped by at least one letter from its Grade in Spring 2024—the last grading cycle before Leapfrog imposed the non-participation penalty. ECF 129 ¶ 151; PX-412.0. In Spring 2024, before Leapfrog imposed the non-participation penalty, Delray received a "D"; Good Samaritan received a "C"; Palm Beach Gardens received a "C"; St. Mary's received a "C"; and West Boca received a "D." *Id.* In Spring 2025, after the non-participation penalty was imposed, Delray received a "F"; Good Samaritan received a "D"; Palm Beach Gardens received a "F"; St. Mary's received a "D"; and West Boca received a "F." ECF 129 ¶ 151; PX-412.0.

52. The Community Hospitals' CEOs each testified that this drop was directly attributable to non-participation in the Survey. *See* Day 1 Trial Tr. 89:22–24, 110:8–13 (Havericak); Day 1 Trial Tr. 142:21–25, 146:1–11 (Cazares); Day 1 Trial Tr. 242:16–20 (McCauley); Day 2 Trial Tr. 98:1–4, 103:7–10 (Hanlon); Day 2 Trial Tr. 213:14–15 (Montgomery).

53. That testimony is supported by contemporaneous documents, expert testimony, and Leapfrog's own witnesses. In Fall 2024, Regina West, Quality Director of PBHN, used Leapfrog's own score calculator and assumptions (e.g., Leapfrog's own tool) to generate a "What If" analysis showing that all the Community Hospitals would have received a "C" Safety Grade had they participated in the Survey. *See* DX-634 at 2.

54. Dr. Nicholson's counterfactual analysis corroborates Ms. West's contemporaneous calculations. Dr. Nicholson testified that, had the Community Hospitals participated in the Survey, their Safety Grades would have increased by one or two full letter Grades—all to "C" Grades—as reflected in the demonstrative below. Day 1 Trial Tr. 198:13–17 (Nicholson). Dr. Nicholson applied a conservative approach grounded in peer-reviewed principles and Leapfrog's own

methodology materials to test the effect of participation on the Community Hospitals' Grades. *See* Day 1 Trial Tr. 196:18–200:16 (Nicholson). Dr. Nicholson testified that his counterfactual analysis was conservative because participating hospitals commonly receive very high scores on the Four Measures and the Community Hospitals received higher than average Survey-based scores on those measures when they last participated in 2021. *See id.*

PDX-6.50 (citing PX-937.0; PX-412.0).

D. Lack Of Actual Safety Performance Data

55. Under the Fall 2024 approach, Leapfrog's witnesses and experts testified that Leapfrog has no performance data—whether from the hospitals or any other sources—measuring non-participating hospitals' actual performance on the Four Measures. *See* ECF 163-1 (Austin Tr.) 239:19–240:7 (handwashing score "is based on a lack of data"); Day 2 Trial Tr. 261:2–25 (Campione) (confirming that Leapfrog lacks data for non-participating hospitals); Day 3 Trial Tr. 228:7–229:1 (Danforth) (agreeing that Leapfrog "has no data for nonparticipating hospitals measuring the actual performance" on the Four Measures); Day 4 Trial Tr. 103:18–25 (Harris) (agreeing that Leapfrog "has no data" from non-participating hospitals "on hand hygiene performance").

56. Witnesses for both parties also agreed that Leapfrog lacks data for the three Survey-dependent measures it removes from the Safety Grade calculation for non-participating hospitals (i.e., "Safe Practice 1: Culture of Leadership Structures and Systems," "Safe Practice 2: Culture Measurement, Feedback & Intervention," and "Total Nursing Care Hours per Patient Day"), such that Leapfrog lacks data for seven measures in total when it assigns Safety Grades to non-participating hospitals. *See* JX-034.0 at 11.

57. Dr. Romano testified that "[t]here are seven missing measures" and that Leapfrog lacks "underlying data to support those seven measures" while still assigning Safety Grades to non-participating hospitals. Day 2 Trial Tr. 172:21–174:4 (Romano). Dr. Nicholson similarly

testified that because "Leapfrog is missing seven [measures], which is more than six" yet still assigns non-participating hospitals a Safety Grade, Leapfrog is "not adhering to one of their own principles." Day 1 Trial Tr. 195:22–196:17 (Nicholson).

58. Leapfrog's witnesses testified that the Fall 2024 non-participation penalty was not designed to measure or approximate actual hospital performance on the Four Measures. Dr. Romano testified that the purpose "was *not* to improve accuracy" and that the automatically assigned lowest score his hospital received "is not an accurate reflection" of performance but a "natural consequence[]" of non-participation. Day 2 Trial Tr. 154:16–19 (Romano) (emphasis added), 166:17–167:3. Dr. Matthew Austin, who provides strategic guidance on Leapfrog's Survey and Safety Grades, testified the revised approach attempts to "guess" hospital performance on the Four Measures. ECF 163-1 (Austin Tr.) 238:7–9. Ms. Campione testified it rests on an "assumption" that non-participating hospitals perform poorly on the Four Measures. Day 2 Trial Tr. 263:3–9 (Campione). Leapfrog's Senior Vice President of Health Care Ratings, Melissa "Missy" Danforth, confirmed that "the determination that the five hospitals should receive five, 15, 25, five is based on the belief that those hospitals must be hiding something." Day 3 Trial Tr. 226:17–21 (Danforth). Ms. Binder testified that she is "assuming" non-participating hospitals "are in the lowest category." Day 3 Trial Tr. 36:4–8 (Binder). Dr. Nicholson testified that the non-participation penalty does not—and cannot—reliably predict patient safety outcomes at non-participating hospitals. *See* Day 1 Trial Tr. 193:3–21 (Nicholson). He testified that the approach departs from foundational principles of hospital quality measurement because it does not grade participating and non-participating hospitals using the same data sources or measures (i.e., not apples to apples); constitutes a "scientifically [in]defensible" non-participation penalty that lacks "any scientific basis"; does not verify performance through sufficient in-person audits; introduces bias by assigning Safety Grades despite missing the minimum amount of data needed to grade reliably—including for nearly a quarter of the hospitals it grades; and produces unreliable Safety Grades disconnected from actual safety performance and patient outcomes. Day 1 Trial Tr. 189:9–193:21 (Nicholson), 192:7–11 (testifying that in 2019 Leapfrog conducted in-person audits of only ".2 percent of hospitals").

59. Leapfrog witnesses conceded that Leapfrog has no way of knowing how non-participating hospitals—including the Community Hospitals—perform on the Four Measures. Dr. Austin testified that "we don't have any empirical evidence on what a hospital's performance would be when they don't report because we don't actually have those data." ECF 163-1 (Austin

Tr.) 193:18–20. Ms. Danforth confirmed Leapfrog has no data measuring actual performance on the Four Measures for non-participating hospitals. *See* Day 3 Trial Tr. 228:7–229:1 (Danforth). Ms. Campione confirmed that where the "data is missing," "you don't know either way" and "if you don't have the data, you don't have the data" and there is "no evidence." Day 2 Trial Tr. 261:2–25, 263:2–9 (Campione).

60. The Hand Hygiene measure is illustrative. Leapfrog tells consumers Hand Hygiene is among the "most important" measures to assess hospital safety, PX-023.0 at 3, yet Leapfrog witnesses testified that Leapfrog has no way of knowing hand hygiene practices at a non-participating hospital. *See* Day 2 Trial Tr. 261:2–25 (Campione); Day 3 Trial Tr. 33:19–24, 39:15–18 (Binder); Day 3 Trial Tr. 228:20–229:1 (Danforth); Day 4 Trial Tr. 103:18–25 (Harris).

61. By contrast, Dr. Harris testified that hospital leadership "know their data," including how their hospitals perform on key safety practices and whether they are conducting hand hygiene observations. *See* Day 4 Trial Tr. 57:25–58:1, 94:6, 94:13–20, 99:16 (Harris).

62. Each Community Hospital CEO testified that they "know" their hospitals' hand hygiene practices and that their hospitals implement the practices Leapfrog describes as those that "safer hospitals do." *See* Day 1 Trial Tr. 66:6–9 (Havericak); Day 1 Trial Tr. 154:2–15 (Cazares); Day 1 Trial Tr. 241:14–242:9 (McCauley); Day 2 Trial Tr. 78:25–79:18 (Hanlon); Day 2 Trial Tr. 198:1–17 (Montgomery).

63. The evidence also showed that when the Community Hospitals last participated in the Survey they received high (often perfect) scores on the Four Measures—including on Hand Hygiene. *See* PX-412; *see also supra* ¶¶ 39–41. But under the Fall 2024 approach, Leapfrog assigns them the lowest possible values for the Four Measures, placing them below even the worst-performing *participating* hospitals on those measures. Under the Fall 2024 approach, non-participating hospitals receive the lowest possible scores (*400% lower* than the Four Measures totals received by even the *bottom 1%* of participating hospitals) across the Four Measures. *See* PX-412; JX-034.0 at 15; Day 1 Trial Tr. 188:14–25 (Nicholson); Day 2 Trial Tr. 148:24–149:5, 154:16–19 (Romano); Day 4 Trial Tr. 85:12–86:19 (Harris); *see also supra* ¶¶ 39–41.

64. Leapfrog's expert Dr. Harris testified he would have "no bases" to doubt the Community Hospitals' CEOs. Day 4 Trial Tr. 82:21–23 (Harris). Nevertheless, Leapfrog assigns non-participating hospitals the lowest possible scores on the Four Measures in the absence of any data measuring performance on those measures.

* * *

65. Taken together, the record demonstrates that under the Fall 2024 approach, Leapfrog assigns failing measure scores for key Survey-dependent measures about which it has no data measuring actual hospital performance, and re-weights those assigned scores in the Safety Grades for non-participating hospitals.

III. WHAT LEAPFROG LEADS THE PUBLIC TO BELIEVE ABOUT ITS SAFETY GRADES

66. Leapfrog makes extensive representations to the public about what its Hospital Safety Grades mean, how they are derived, and why consumers should trust and rely on them.

67. Leapfrog communicates these representations through its consumer-facing website, including its Frequently Asked Questions ("FAQ") and "About the Grade" webpages, which are directed to consumers, including patients, healthcare workers, employers, hospitals, and others making healthcare decisions.

68. Through these materials, Leapfrog conveys three central messages designed to reassure consumers that the Safety Grades are reliable, data-driven indicators of hospital safety.

A. Leapfrog Leads The Public To Believe The Safety Grades Are Supported By Real Data

69. Leapfrog represents to consumers that its Safety Grades are based on actual hospital data, including data submitted through the Survey and other external data sources Leapfrog selects.

70. On its "About the Grade" webpage, Leapfrog explains that it uses measures of patient safety drawn from CMS data, hospital-reported data from the Survey, and "supplemental data source[s]." PX-066.0 at 3. Leapfrog reinforces this message in its 29-page Safety Grade methodology document, which states "Leapfrog uses a secondary data source" where a hospital's information is unavailable. JX-041.1 at 5; *see also* JX-034.0 at 5 (same).

71. Leapfrog also represents that hospitals lacking sufficient data are not graded. On its "About the Grade" webpage, Leapfrog states that "[h]ospitals missing more than six process measures … are not graded." PX-066.0 at 5; *see also* JX-034.0 at 4 (methodology document) (same). Leapfrog's "Expert Panel Guiding Principles," which were linked on its consumer-facing website until recently, similarly state that "no grade should be issued" when data is missing for a large number of measures. PX-203.0 at 3.

72. These representations convey to consumers that if a hospital receives a Safety Grade, Leapfrog has sufficient data to support that Grade—otherwise, Leapfrog does not issue a Grade.

73. Leapfrog nevertheless issued Safety Grades to non-participating hospitals despite lacking data for seven measures. *See* Day 2 Trial Tr. 172:21–174:4 (Romano); Day 1 Trial Tr. 195:22–196:17 (Nicholson); Day 2 Trial Tr. 29:2–14 (Berger); *see also* ECF 43 (Leapfrog's Answer) ¶¶ 49–50 (admitting that for non-participating hospitals, Leapfrog "abandons *three* measures entirely" and uses "its 'imputation model'" for "*four* measures"—and the "imputation model is how it assigns a value for a measure when it *lacks any data pertaining to it*" (emphases added)).

B. Leapfrog Leads The Public To Believe The Safety Grades Reflect Actual Safety Performance—Not Survey Participation

74. Leapfrog expressly tells consumers that its Safety Grades reflect hospital safety performance, rather than participation in its Survey.

75. On its "Frequently Asked Questions" webpage, Leapfrog states unambiguously: "The Hospital Safety Grade reflects how well a hospital does on safety, not whether they complete the Leapfrog Hospital Survey." PX-021.0 at 2.[5] Leapfrog further represents on its "About the Grade" webpage that the Safety Grade summarizes a hospital's "overall performance in keeping patients safe from preventable harm and medical errors." PX-066.0 at 1.

76. Leapfrog reinforces its performance-based message through visual design elements on each hospital's Safety Grade webpage. *See, e.g.*, PX-034.5. Directly below the letter Grade, Leapfrog displays "gas gauge" graphics for each individual safety measure, ranging from "Worse Than Average"—displayed in red—to "Better than Average"—displayed in green. *See id.*

[5] Leapfrog's webpage was changed during the course of this litigation and now states, "Reporting to the Leapfrog Hospital Survey doesn't automatically improve a hospital's Safety Grade." PX-506.0 at 6. This statement omits the key point that non-participation dramatically affects a hospital's scores. As Dr. Romano explained, "it is very clear that there is a benefit to participation" and that "[r]eward and penalty are two sides of the same coin[.]" Day 2 Trial Tr. 156:10–12.

Id. at 1.

77. Experts for both parties testified that the gas gauges convey information about hospital safety performance. Leapfrog's user experience and low literacy expert, Michael Vredenburgh, testified that the "gas gauge convey[s] something about performance" and "shows a low score" when displayed in red. ECF 180-1 (Vredenburgh Tr.) 167:24–168:3. Dr. Berger testified that a reasonable consumer would likely understand the gas gauge graphics to reflect actual hospital performance data. Day 2 Trial Tr. 13:17–15:2, 18:4–19:8 (Berger).

78. This performance-based message is reinforced by how Leapfrog presents certain measures when data is missing. When Leapfrog lacks data for certain measures, it does not display a gas gauge graphic and instead uses a "Declined to Report" designation accompanied by a prominent question mark. *See, e.g.*, PX-034.6.

PDX-3.16 (citing PX-034.6).

79. Mr. Vredenburgh testified that this question mark presentation is a "good practice" because it clearly communicates to consumers that data is missing and avoids conveying

information about a hospital's performance on a measure where none has been measured. ECF 180-1 (Vredenburgh Tr.) 166:4–10.

80. Leapfrog does not apply this same "Declined to Report" question mark presentation to the Four Measures for non-participating hospitals. Instead, Leapfrog displays them with full gas gauge graphics:

PX-34.5 at 1 (showing gas gauges for three of the Four Measures).

81. Leapfrog's expert Mr. Vredenburgh testified that using the "Declined to Report" question mark presentation for those measures would likewise be a "good practice." ECF 180-1 (Vredenburgh Tr.) 167:4–168:21. Both experts agreed that the use of gas gauge graphics signals to consumers that the measure reflects actual assessed safety performance rather than missing or unavailable data. *See* Day 2 Trial Tr. 18:17–20 (Berger) ("[C]onsumers would be likely to infer there is no decline to report for hand washing, [so] that is based on real data that indicates performance."); ECF 180-1 (Vredenburgh Tr.) 167:24–168:3 (testifying that the "gas gauge convey[s] something about performance").

82. In addition to the gas gauge graphics, Leapfrog displays a numerical score for each specific measure and directly compares the hospital's score to the scores of the "Best Hospital" and the "Worst Hospital" for that same measure. *See, e.g.*, PX-034.5 at 7–8. As an example, for the handwashing measure—one of the Four Measures—Leapfrog displays a score of 15 for each of the Community Hospitals, which is the same score Leapfrog identifies on the webpage as the "Worst Hospital's Score" for that measure. *See id.* at 8. Leapfrog then juxtaposes that score with a section titled "What safer hospitals do," describing hand hygiene practices associated with higher-scoring hospitals. *See id.*

PX-034.5 at 7–8.

83. Leapfrog's user-experience expert, Mr. Vredenburgh, testified that this presentation would lead consumers to understand that the Community Hospitals perform at the lowest end of the safety spectrum for that measure and to infer that they do the "opposite" of what the best hospitals do. ECF 180-1 (Vredenburgh Tr.) 171:5–172:3.

84. Leapfrog further entrenches this performance-based message by stating on the Safety Grade webpage that "[h]ospitals can *earn* up to 100 points for having a handwashing policy and evaluating how hospital workers follow that policy." PX-034.5 at 8 (emphasis added). Ms. Binder confirmed at trial that Leapfrog conveys to the consumer that the Hand Hygiene score is, in fact, "earned" through performance. Day 3 Trial Tr. 38:15–21 (Binder).

85. Taken together, Leapfrog's statements and its presentation of the Safety Grades—through gas gauge graphics, numerical scores, and "best" and "worst" hospital comparisons—communicate to consumers that the Safety Grades reflect measured safety performance, and not Survey participation. For non-participating hospitals, however, Leapfrog assigns failing component scores on key Survey-dependent measures despite having no data measuring actual performance on those measures. *See* ECF 163-1 (Austin Tr.) 193:18–20 ("We don't have any empirical evidence on what a hospital's performance would be … because we don't actually have those data."), 239:19–240:7 (handwashing score "is based on a lack of data"), 415:16–19 ("We are

currently not using secondary data as part of the imputation models."); Day 2 Trial Tr. 261:2–25 (Campione) (confirming that Leapfrog lacks data for non-participating hospitals); Day 3 Trial Tr. 228:7–229:1 (Danforth) (agreeing that Leapfrog "has no data for nonparticipating hospitals measuring the actual performance" on the Four Measures); Day 4 Trial Tr. 103:18–25 (Harris) (agreeing that Leapfrog "has no data" from non-participating hospitals "on hand hygiene performance").

C. Leapfrog Leads The Public To Believe The Safety Grades Are Peer-Reviewed And Expert-Approved

86. Leapfrog represents to the public that the methodology underlying its Safety Grades has been peer reviewed and approved by experts.

87. On its consumer-facing FAQ webpage, Leapfrog states that the Safety Grade "uses a public, peer-reviewed methodology, calculated by top patient safety experts under the guidance of a National Expert Panel." PX-021.0 at 1.

88. On its "About the Grade" webpage, Leapfrog likewise states that the methodology "has been peer reviewed" and that Leapfrog works "under the guidance of an Expert Panel to select appropriate measures and develop a scoring methodology." PX-066.0 at 1-2.

89. Leapfrog presents these statements without qualification. However, Leapfrog's Fall 2024 non-participation approach was not peer reviewed and was not approved by its Expert Panel. *See supra* ¶ 20; *see also* ECF 163-1 (Austin Tr.) 90:15–17 (testifying the Fall 2024 methodology "has not" been peer reviewed), 285:7–15 (testifying that "[w]e did not query the [E]xpert [P]anel about whether they approved [the Fall 2024 methodology] or not"); Day 3 Trial Tr. 193:22-194:1 (Danforth) (testifying that the Fall 2024 methodology "is not the imputation model" that was "brought to the [P]anel in 2024"), 199:16–20 ("It is not [the Expert Panel's] job to then work out all of the detail, that is our job.").

* * *

90. Collectively, these three representations lead consumers to believe that the Community Hospitals' "D" and "F" Safety Grades are supported by data, reflect actual safety performance, and are the derived from expert-approved, peer-reviewed methodology.

IV. LEAPFROG'S PURPORTED DISCLOSURES: HIDDEN FOOTNOTES AND BURIED DOCUMENTS

91. These affirmative representations shape how consumers understand the Safety Grades. Whether consumers learn that Grades for non-participating hospitals are calculated differently depends on what Leapfrog discloses on its website. The trial evidence showed that

Leapfrog's website does not provide consumers with a clear explanation that, as a consequence of Survey non-participation, Leapfrog assigns fixed failing component scores on key Survey-dependent measures despite having no data measuring actual performance on those measures.

92. After Leapfrog adopted the non-participation penalty, Leapfrog employees discussed how to explain it on Leapfrog's website. *See, e.g.*, JX-031.0. While they agreed to include a new footnote, they debated how substantive the language should be. *See id.* For example, Ms. Campione rejected one suggestion because Ms. Binder "wanted us to make it sound like the expert panel approved it and the assigning of these points was legitimate." *Id.* at 1.

93. In the end, Leapfrog added Footnote 4, which states: "'The hospital declined to report their performance on this measure, so a score was assigned to reflect the lack of information available." *See, e.g.*, PX-034.5 at 8.

94. Dr. Berger testified that Footnote 4 is accessible only after a consumer navigates to one of the Four Measures (by clicking through more than 20 other measures) and then scrolls down to where the footnote is displayed—steps a consumer would not take when viewing the letter Grade. Day 2 Trial Tr. 16:3–17:15 (Berger).

95. Even if a consumer accesses Footnote 4, it does not explain the basis for the score that was assigned. Dr. Berger explained that it "says nothing about the score that was assigned," including "why that score was assigned." Day 2 Trial Tr. 21:1–19 (Berger). Mr. Vredenburgh likewise testified that Footnote 4 does not show a consumer "under the hood" of how a score was assigned and does not allow a consumer to determine whether Leapfrog used actual performance data or a default assumption to "assign" the score. ECF 180-1 (Vredenburgh Tr.) 169:5–10, 183:18–184:1.[6] Indeed, Leapfrog's Director of Communications, Lauren Bailey, testified that informing consumers about *how* the score was assigned was "not the purpose" of the footnote. ECF 163-4 (Bailey Tr.) 180:10–17.

96. Leapfrog's Safety Grade webpage contains another footnote—Footnote 1—which states: "Declined to Report: The Hospital was asked to provide this information to the public, but did not." *See, e.g.*, PX-034.2 at 2.

[6] When shown Safety Grade webpages for two different non-participating hospitals, one scored using historical performance data and another that assigned the lowest possible score, Mr. Vredenburgh testified that Footnote 4 did not explain how the lowest score was assigned. ECF 180-1 (Vredenburgh Tr.) 180:14–184:1. He agreed the two webpages were "totally indistinguishable" from each other, and a "typical user will have no idea which is which." *Id.* 183:5–14.

97. Dr. Berger testified that Footnote 1 appears across all Safety Grade webpages, including webpages for participating hospitals, and is not tied to any specific measure or score. *See* Day 2 Trial Tr. 12:19–13:16 (Berger). Footnote 1 also appears across all measures, including those for which Leapfrog does have data; it does not identify what data was missing, what assumption was made, or how any particular score was calculated. *See, e.g.*, PX-034.2 at 2, 5, 8, 11, 14, 17.

98. In addition to the footnotes, Leapfrog includes on its website a document that explains the Safety Grade methodology. *See* JX-034.0 (Fall 2024); JX-041.1 (Spring 2025). After adopting the non-participation penalty, Ms. Campione suggested placing a direct link to the methodology document. *See* JX-031.0 at 1. Ms. Campione explained, however, that neither Ms. Binder nor Ms. Danforth "cared to do so." *Id.*

99. Instead of linking the methodology document directly from the Safety Grade webpage, Leapfrog made the document accessible only through multiple navigation steps requiring a user to click through numerous webpages and scroll through extensive content. *See* Day 2 Trial Tr. 22:2–23:21 (Berger).

100. Leapfrog's website analytics data confirms that very few consumers access the methodology document as a result. Dr. Berger testified that Leapfrog's analytics show that only approximately three percent of visitors to the Community Hospitals' Safety Grade webpages viewed the methodology document. *See* Day 2 Trial Tr. 24:18–25 (Berger). Dr. Berger further testified that the methodology document spans 28 pages and does not explain how Leapfrog scores nonparticipating hospitals on the Four Measures until page 15. *See* Day 2 Trial Tr. 27:4–8 (Berger). Dr. Berger concluded that it is thus likely that fewer than three percent of the visitors that accessed the methodology document actually viewed Leapfrog's description of the non-participation penalty. *See* Day 2 Trial Tr. 24:18–25, 38:11–14 (Berger); *see also* JX-026.0 at 1 (warning Leapfrog that the public "will not understand nor dig into the methodology" after seeing Safety Grades).

101. Even if users did access the methodology document, multiple Leapfrog witnesses testified that it is not designed for a typical consumer audience. Ms. Binder and Leapfrog's user-experience expert, Mr. Vredenburgh, both testified that the methodology document is dense, technical, and not intended to be understood by ordinary consumers. Day 3 Trial Tr. 70:11–18 (Binder) (testifying that the document "is not meant to be used by the average lay person," but is instead for "researchers, hospitals, [and] anyone who has a deep interest in the topic"); ECF 180-1

(Vredenburgh Tr.) 173:15–25 (testifying that the document is "dense" and would not be read by a "typical user").

102. At trial, Ms. Binder testified extensively about the "low literacy" and "user experience" testing that Leapfrog conducted on its consumer-facing website. *See* Day 3 Trial Tr. 110:3–117:14 (Binder). Ms. Binder further testified that this testing focused on whether information on the website was written at approximately an "eighth grade reading level for the consuming public." Day 3 Trial Tr. 117:9–14 (Binder). Ms. Binder explained, however, that this testing occurred between 2013 and 2014 and thus predated the Fall 2024 methodology change by about a decade. *See* Day 3 Trial Tr. 112:25–113:4 (Binder). As a result, it did not—and could not—analyze Footnote 4, the updated gas gauge graphics for the measures for which Leapfrog lacks data, or the current Safety Grade methodology document. Indeed, Ms. Binder testified that she does not know and "can't answer" whether there was any low literacy review conducted "in connection with the fall [] 2024 methodology change," and she confirmed that the 29-page methodology document has not been subjected to any low literacy review. Day 3 Trial Tr. 124:22–125:16 (Binder).

103. In sum, the trial evidence showed that consumers encountering a Safety Grade are not provided a clear disclosure that failing component scores for key Survey-dependent measures are assigned to non-participating hospitals without performance data for those measures.

104. Mr. Vredenburgh, Leapfrog's paid expert, testified that he spent approximately "two hours" browsing Leapfrog's Safety Grade website in what he described as a "fairly deep dive," yet he *still* did not understand how the imputation methodology functioned. ECF 180-1 (Vredenburgh Tr.) 50:18–51:1, 179:3–19. Thus, as presented, the Safety Grade appears as a standalone letter Grade reflecting hospital safety, without explanation of the methodology applied to non-participating hospitals.

V. LEAPFROG'S WIDESPREAD DISSEMINATION AND AMPLIFICATION OF THE COMMUNITY HOSPITALS' SAFETY GRADES

105. Leapfrog's dissemination practices amplify the consumer impact of its Safety Grades. Millions of consumers visit Leapfrog's website (www.hospitalsafetygrade.org) each year, but the website is only the starting point. *See* ECF 163-4 (Bailey Tr.) 104:8–14; PX-420.1 at 11. Once posted on the website, the letter Safety Grade travels widely through media coverage, social media, search results, advertisements, and other third-party channels, reaching consumers without any accompanying explanation of Leapfrog's methodology.

106. Leapfrog pays a press relations firm, CURA Strategies, as well as radio and broadcast televisions vendors, to "get the safety grade out" to a wide audience. ECF 163-4 (Bailey Tr.) 187:8–22. According to Ms. Bailey, a "really important" part of Leapfrog's dissemination strategy is "to get the safety grades out to … local publications" in particular. ECF 163-4 (Bailey Tr.) 198:19–199:4.

107. These outreach efforts generate extensive media coverage. The Fall 2024 Safety Grades alone generated "772 online articles from 435 different publications with a reach of 11.2 billion." PX-350.0 at 2; *see also* Day 3 Trial Tr. 11:7–10 (Jupiter) (confirming "reach of 11.2 billion people").

108. Ms. Jupiter testified that Florida is "always" one of the markets that generates the most media coverage of the Safety Grades, including specifically for the Fall 2024 grading cycle. Day 3 Trial Tr. 12:23–13:3 (Jupiter).

109. Following the release of the Fall 2024 Safety Grades, the Community Hospitals' "D" and "F" Grades were widely disseminated across news, radio, and online media. *See, e.g.*, PX-466.1; PX-467.0; PX-468.0; PX-469.0; PX-390.0; PX-503.0; PX-357.0; PX-346.0; PX-352.0; PX-388.0.

110. For example, the Community Hospitals' Grades were featured in numerous news articles with headlines such as "dangers lurking near you" and "bottom" and "worst South Florida hospitals for patient safety." PX-388.0; PX-390.0; PX-357.0. The Grades were also highlighted in a viral TikTok video that received more than one million views and listed the Community Hospitals alongside their Leapfrog Safety Grades, describing them as among the "worst" hospitals in Florida. *See, e.g.*, PX-466.0; PX-469.0.

111. When Safety Grades are disseminated through channels beyond Leapfrog's website, consumers typically see the letter Grade without accompanying explanation of how it was calculated or what hospital data was available. Dr. Berger testified that the failing Safety Grades are "traveling" alone—without methodology or context. Day 2 Trial Tr. 35:2–11 (Berger). Consumers are exposed only to the single letter signifying whether a hospital is dangerous and unsafe. *See* Day 2 Trial Tr. 8:24–11:2 (Berger).

112. Leapfrog took additional steps to target the Community Hospitals and amplify their Safety Grades after this lawsuit was filed. Leapfrog witnesses admitted that Leapfrog purchased Google advertisements using funds from a non-profit grant from Google to specifically target the

Community Hospitals so that consumers in designated Florida zip codes searching for the Community Hospitals would be shown the failing Safety Grades. *See* Day 3 Trial Tr. 18:25–19:10 (Jupiter); ECF 163-4 (Bailey Tr.) 291:21–292:2, 292:4–292:18; *see also* PX-454.0 at 3 ("We'd also like to set it up so that when someone searches for any of the five specific hospitals, it shows an ad displaying their Hospital Safety Grade.").

113. Internal Leapfrog communications confirm that this advertising strategy was intended to apply pressure to the Community Hospitals. As Ms. Jupiter wrote at the time, Ms. Binder wanted to "harass" the Community Hospitals with this media strategy, with another employee saying, "the strategy is to become a disney villain." PX-439.0 at 3; *see also* PX-454.0 at 1, 3; Day 3 Trial Tr. 17:16–24 (Jupiter).

114. Leapfrog also sought to draw direct comparisons between the Community Hospitals and Jupiter Medical Center—one of their main competitors—"in the media and with employers." ECF 163-2 (van Caulil Tr.) 149:9–12.

115. Leapfrog was founded by employer groups. *See* Day 3 Trial Tr. 86:22–87:7, 90:9–11 (Binder). And Leapfrog Board member Ms. van Caulil testified that, through the Florida Alliance for Healthcare Value ("Florida Alliance"), Leapfrog's Regional Leader in Florida, of which she is CEO, Leapfrog circulated the Safety Grades directly to employers—entities that purchase healthcare and influence patient choice. ECF 163-2 (van Caulil Tr.) 61:3–8, 149:9–12; *see also* Day 3 Trial Tr. 121:7–16 (Binder) (testifying that employers consider Safety Grades and may rely on them when making purchasing decisions); *see also* PX-824.0 at 2 (Leapfrog federal tax forms noting that it "works with *employers* and purchasers of health care to encourage transparency from the health care community" and "to educate" those employers' "employees on the safest and highest quality providers" (emphasis added)). The Florida Alliance also sent letters to hospitals—including West Boca Medical Center—to pressure them into participating in the Survey. *See* PX-415.0.

116. Taken together, Leapfrog disseminates and amplifies the Community Hospitals' Safety Grades through its website, paid advertising, media outreach, and employer communications, increasing the likelihood that consumers will encounter its letter Grades without accompanying methodological context.

VI. LEAPFROG'S MOTIVE: USE THE SAFETY GRADE TO COERCE PARTICIPATION AND INCREASE REVENUE

117. Leapfrog assigns Safety Grades to hospitals regardless of whether they participate in the Survey. Despite Leapfrog claiming that the Survey is "voluntary," hospitals cannot opt out of being graded, cannot prevent being compared to other hospitals, and cannot avoid dissemination of a Safety Grade even when they choose not to participate in the Survey. *See* ECF 163-1 (Austin Tr.) 243:16–245:16; Day 3 Trial Tr. 215:20–216:2 (Danforth). As Dr. Austin testified, Leapfrog's grading system is "nonvoluntary" by design. ECF 163-1 (Austin Tr.) 247:3–8.

118. Under the Fall 2024 approach, Survey participation is the means by which a hospital avoids the non-participation penalty. *See* Day 2 Trial Tr. 151:4–9, 180:2–17 (Romano) (the "penalty goes away" once a hospital resumes participation).

119. The trial evidence showed that Leapfrog adopted the Fall 2024 non-participation "penalty" to increase Survey participation and thereby protect and expand revenue from Survey-based data licensure and related products, rather than to measure and report hospitals' actual safety performance. *See* PX-205.0 at 2; PX-501.1 at 1; Day 3 Trial Tr. 53:18–20 (Binder); PX-323.2 at 1; Day 2 Trial Tr. 154:16–19, 180:2–17 (Romano). Increased revenue would, in turn, increase compensation of Leapfrog's CEO, Ms. Binder. *See* Day 3 Trial Tr. 61:1–3 (Binder) (agreeing that "the more revenues, the higher percentage bonus" she would receive); *see also* PX-248.0 at 3–4; PX-322.2 at 1.

A. Leapfrog Adopted the Non-Participation Penalty to Increase Revenue

120. Leapfrog's marketing materials urge "your hospital or surgery center" to license "designated logos" from Leapfrog to "promote" their Leapfrog Safety Grades to their "employees" and "community." PX-007.0 at 6–7; *see also* PX-508.0. Leapfrog calls these Safety Grade logos "accolades" and markets them as a "remarkable" opportunity for hospitals to show that their "stuff upholds the most rigorous standards," which promotes "recognition" in your "community" and helps hospitals "attract healthcare professionals." PX-508.0 at 4, 6. Indeed, Leapfrog suggests that hospitals specifically should share their "designated logo[s]" on "[j]ob listing websites" and in "[s]ocial media recruitment campaigns" to attract and impress "job candidates." *Id.* at 6; *see also* PX-222.0 at 32 (Safety Grade license would assist with "[r]ecruitment of better doctors and medical professionals," enhance "[j]ob satisfaction," and facilitate "[e]mployee retention"). Under Leapfrog's terms, "hospitals and surgery centers are *not permitted* to create their own version of

Leapfrog's designated logos" and are instead "required" to obtain a "license" from Leapfrog to display the Safety Grades. PX-508.0 at 5. As one example, Leapfrog's marketing materials feature a large mockup of the lobby of a direct competitor of the Community Hospitals (Jupiter Medical Center) with a licensed banner from Leapfrog prominently displaying Jupiter's "A" Safety Grade. *Id.* at 2. Hospitals pay Leapfrog thousands of dollars to license their Safety Grades. PX-407.0 at 1, 3; *see also* Day 3 Trial Tr. 211:15–212:15 (Danforth).

121. Leapfrog also generates significant revenue by selling access to data derived from hospital data collected through the Survey to third parties, including insurers, researchers, and others interested in proprietary hospital data. *See* PX-205.0 at 5; PX-275.0; PX-324.0 at 15–22; *see also* Day 3 Trial Tr. 53:18–22 (Binder) (testifying that data licensing "is "one of the largest sources" of Leapfrog's revenue). Leapfrog states insurers should "[p]artner with Leapfrog" because the "Hospital Safety Grade" provides "proven value." PX-232.0 at 21. Leapfrog's internal records show Leapfrog *licenses* the Safety Grades for use by numerous insurers, sometimes for $30,000 to $125,000. PX-324.0 at 15. Leapfrog also creates price incentives to induce insurers to license and rely on the Safety Grades; for example, when an insurer licenses the Survey *and* the Safety Grades, that insurer can receive a 5% discount on the purchase. *Id.* at 17. And insurers can secure a further "10–20%" discount when they sign a "multi-year contract" to license Leapfrog's data. *Id.* Leapfrog has also explored avenues to induce insurers to purchase the Safety Grades more quickly—for example, by imposing a "30-day quote expiration to speed up contracting time" and offering "[i]ntroductory discounts" that expire if the insurer does not license the Safety Grades within Leapfrog's preferred timeframe. PX-324.0 at 24. As a result of these marketing efforts, Leapfrog's internal records reflect that numerous insurers have elected to license its Safety Grades. *See* PX-225.0 at 8 (listing numerous insurers that licensed the Safety Grades).

122. Internal Leapfrog documents reflect concern that declining Survey participation threatens Leapfrog's ability to market a complete dataset and sustain its revenue model. *See* PX-205.0 at 2 ("To maximize the value of The Leapfrog's Group Data for licensing purposes the level of participation should continue to be increased so it can be perceived as the most complete data set and thus allowing defense of our pricing model and its price points."); PX-501.1 at 1 ("[Leapfrog's] business model … depends on producing data that add value for health plans and employers … and the data are not valuable if participation is low.").

123. As Survey participation declined between 2022 and 2024, Leapfrog employees discussed the need to focus on increasing participation to drive revenues. Ms. Binder wrote during the decline in participation that Leapfrog should focus on revenue "24/7" and made clear that she "want[ed] managers focused on [] areas where they can generate bookable revenues." PX-275.4 at 1. The top priority in Leapfrog's long-term strategic plan for this period was to "expand revenues," including from "data licensure." PX-354.0 at 2; *see also* Day 3 Trial Tr. 4:12–6:21 (Jupiter). Leapfrog also sought to increase hospital participation in the Survey. PX-354.0 at 4.

124. Against that backdrop, Leapfrog employees decided to adopt what they acknowledged at the time was a "drastic" approach by imposing the non-participation penalty. JX-011.0 at 3; Day 2 Trial Tr. (Campione) 270:23–25. Ms. Danforth testified that the decision was a product of "group think," referring to a collective decision-making process in which alternative approaches were not fully explored. Day 3 Trial Tr. 203:6–10 (Danforth).

125. Ms. Binder wrote during this period that the revised grading approach was intended to serve as a "major incentive" for hospitals to participate in the Survey. PX-323.2 at 1.

126. Dr. Romano characterized Leapfrog's adoption of the Fall 2024 changes as a "simple business decision," aptly summarizing that the non-participation penalty was "just business, folks!" PX-501.1 at 1.

127. Following implementation of the Fall 2024 non-participation penalty, Survey participation increased substantially. Leapfrog's internal data reflected a rise of 10 percent in participation in the cycle after the grading changes took effect. PX-397.0 at 2–3; PX-426.0 at 2–3.

128. Hundreds of hospitals resumed Survey participation following implementation of the non-participation penalty. Dr. Romano testified that UC Davis Medical Center restarted participation to avoid the "natural consequences" of non-participation and that he expects the hospital's Safety Grades "will go up in 2025 and 2026" as a result. Day 2 Trial Tr. 166:24–167:3 (Romano).

129. Under the revised Fall 2024 approach, hospitals are graded regardless of participation, but non-participation triggers the scoring and re-weighting penalty across numerous measures. Dr. Romano wrote that the resulting pressure to participate could be described as "blackmail." PX-293.1 at 1.

B. Leapfrog's Explanation For The Non-Participation Penalty Was Not Supported

130. Leapfrog's witnesses and experts repeatedly suggested at trial that the non-participation penalty is warranted because hospitals decline to participate in the Survey to avoid disclosure of poor safety performance—what Leapfrog describes as the "non-response bias." Day 2 Trial Tr. 263:3–9 (Campione) (testifying that "the assumption" is that non-participating hospitals "have something to hide"); Day 2 Trial Tr. 173:8–11 (Romano) (testifying that non-participating hospitals "chose not to participate and therefore they are hiding something"); Day 3 Trial Tr. 35:19–25 (Binder) ("We are assuming that the hospital has a reason for not reporting"); Day 3 Trial Tr. 226:17–21 (Danforth) (confirming that the methodology was "based on the belief that [non-participating] hospitals must be hiding something"); Day 4 Trial Tr. 99:17–25 (Harris) (testifying that non-participating hospitals "are not filling out the survey because they know they are going to be scored poorly").

131. The trial evidence did not support that speculative explanation.

132. Leapfrog's own witnesses acknowledged that the non-participation penalty was not intended to "improve accuracy" of the Safety Grades and that Leapfrog lacks actual performance data for non-participating hospitals. Day 3 Trial Tr. 154:16–19 (Romano); *see also supra* ¶¶ 55–60. Dr. Harris claimed that the 60 out of 400 score on the Four Measures—400% worse than the worst one percent of participating hospitals—was "closest to the truth" simply due to his non-response bias theory but then agreed with the Court that the score "seems illogical statistically that it would be that low." Day 4 Trial Tr. 98:5–99:25 (Harris).

133. As set forth above, unrebutted expert and documentary evidence further established that, had the Community Hospitals participated in the Survey, they would have received higher Safety Grades. *See supra* ¶¶ 62–64. In fact, the evidence showed that the Community Hospitals performed well (370 out of 400 on average) when they last participated in the Survey and they continue to follow the practices addressed by the measures—undermining Dr. Harris's testimony that Survey non-participation indicates poor performance on the Four Measures. Day 4 Trial Tr. 103:18–25, 96:1–5 (Harris); *see supra* ¶¶ 62–64.

134. Further, Dr. Nicholson testified that Leapfrog provided zero "scientific basis for the penalty associated with nonparticipation." Day 1 Tr. 189: 9–13 (Nicholson). Dr. Harris agreed that neither he nor Leapfrog performed any analysis to support the notion that Survey non-participation

or performance on CMS metrics indicates that nonparticipating hospitals perform worse on the Four Measures. Day 4 Trial Tr. 102:4–8, 102:21–24 (Harris).

135. Moreover, the evidence established that hospitals have legitimate reasons for declining to participate in the Survey that are unrelated to safety performance.

136. Hospital executives and quality leaders testified that completing the Survey is extremely burdensome, requiring hundreds of hours of staff time, coordination across departments, and significant involvement from clinical leadership. *See* Day 1 Trial Tr. 59:10–14 (Havericak) ("It would take us about a thousand hours, and there are six or seven people that have to work on that to make sure everything is accurate and complete."); Day 1 Trial Tr. 142:7–11 (Cazares) (the Survey is not "free" because "it takes time [and] resources"); Day 1 Trial Tr. 240:10–13 (McCauley) ("In the post COVID period we diverted our resources."); ECF 163-3 (West Tr.) 88:7–21 ("For myself, just me, between 40 and 60 hours" and for others "it could have taken up to two days").

137. Leapfrog's witnesses acknowledged similar resource burdens. Despite testifying at trial that non-participating hospitals do not complete the Survey because "they are hiding something," Day 2 Trial Tr. 173:8–11 (Romano), Dr. Romano expressly rejected that theory in written communications in May 2024, *see* JX-022.3 at 1. Instead, as he explained, "most hospitals stop reporting because it is too burdensome." *Id.* Ms. Campione testified that completing the Survey demands "a tremendous amount of resources." Day 2 Trial Tr. 254:12–18 (Campione). Ms. Binder testified that the Survey requires "two weeks of staff time." Day 3 Trial Tr. 96:24–97:5 (Binder). Dr. Harris likewise testified that hospitals operate under substantial resource constraints and must make tradeoffs when deciding whether to participate in voluntary reporting programs. Day 4 Trial Tr. 61:11–22, 100:1–8 (Harris).

138. The Community Hospitals' CEOs further testified that participation in the Survey requires hospitals to disclose extensive internal safety and operational data and to agree that Leapfrog may use that data "in a commercial manner for profit," including licensing it to third parties. JX-042.0 at 46; *see also* Day 1 Trial Tr. 142:9–11 (Cazares) ("[W]e [are] providing valuable data to Leapfrog, all that comes at a price."); Day 2 Trial Tr. 73:21–24 (Hanlon) (testifying that Leapfrog attempts to "bully us into submitting data so they could monetize off that data.").

139. The Community Hospitals' CEOs testified that they did not participate in the Survey because it did not provide meaningful value relative to the resources required to complete it.

See Day 1 Trial Tr. 156:9–14 (Cazares) ("We don't find value in the Leapfrog survey and we are not going to shift our resources to participate in a survey we just don't find valuable."); *See* Day 1 Trial Tr. 92:3–9 (Havericak) ("There wasn't a large amount of value in the survey and we wanted to take those resources that were limited."); Day 1 Trial Tr. 251:18–24 (McCauley) (agreeing that the Survey "provides no benefit whatsoever"); Day 2 Trial Tr. 196:23–197:6 (Montgomery) (testifying that she "determined there wasn't any value in the Leapfrog survey"); Day 2 Trial Tr. 104:17–19 (Hanlon) ("I don't believe there is value to the Leapfrog survey.").

140. Taken together, the testimony established that these burdens, data-use concerns, and lack of value—not poor safety performance—were the primary reasons the Community Hospitals declined to participate in the Survey during the relevant period.

VII. LEAPFROG'S SAFETY GRADES HAVE CAUSED REAL AND ONGOING HARM

141. The Court heard extensive testimony and admitted contemporaneous documents showing the harm suffered by the Community Hospitals and the patients they serve following the dissemination of Leapfrog's Fall 2024 Safety Grades. The evidence showed the decline in the Community Hospitals' Safety Grades resulting from the non-participation penalty caused reputational and operational harm, including patients declining and delaying care, physician concerns, inquiries from insurers, and declines in patient volume. ECF 163-3 (West Tr.) 199:9–12 (testifying that the Community Hospitals lost patients "because of" Leapfrog's Fall 2024 methodology change). The evidence also showed that consumers often encountered the letter grades, "D" and "F," through dissemination beyond Leapfrog's website, without accompanying explanation of Leapfrog's methodology, and that the resulting reputational harm persisted despite efforts by the Community Hospitals to address consumer concerns. The Court credits the testimony of the Community Hospitals' CEOs regarding these reputational and operational impacts, which were corroborated by contemporaneous business records and third-party communications admitted at trial (including volume data and insurer letters).

A. Delray Medical Center

142. Leapfrog's Safety Grades caused reputational and operational harm to Delray Medical Center ("Delray").

1. *Dissemination and Consumer Response*

143. Delray CEO Ms. Havericak testified that Delray's drop to an "F" Safety Grade in Fall 2024 (and the ensuing cycles) prompted concerns from patients, physicians, and community

members. She testified that a TikTok video discussing four of the Community Hospitals' Fall 2024 Safety Grades, including Delray's, was shown to her on "numerous" occasions by physicians, patients, and members of the community, many of whom voiced "concern[]" about "what [was] happening at [her] hospital." Day 1 Trial Tr. 72:17–73:19 (Havericak).[7] Ms. Havericak testified that the Fall 2024 "F" was the only "F" Delray ever received. Day 1 Trial Tr. 73:10–19 (Havericak).

144. Ms. Havericak testified that the Safety Grade caused "confusion" among patients and community members and undermined confidence in Delray. She testified that she performs rounds in the hospital daily and speaks with patients in that process. Those conversations confirmed the negative impact of the Safety Grade on Delray's reputation. *See* Day 1 Trial Tr. 84:10–12 (Havericak).

145. She described an encounter with an elderly patient who was "nervous" after seeing the TikTok video and Delray's Safety Grade and later expressed surprise at the quality of care she received, including staff professionalism and hand hygiene practices. Day 1 Trial Tr. 87:2–25 (Havericak).

146. Ms. Havericak also testified regarding a patient who initially declined surgery at Delray because she was concerned about the Safety Grade and feared that she would "die" at the

---

[7] Leapfrog objected to the Community Hospitals' testimony on patient concern and confusion at trial on hearsay grounds. The Court overruled those objections. Out-of-court statements constitute "hearsay" only when offered "to prove the truth of the matter asserted in the statement." Fed. R. Evid. 801(c)(2). It thus follows that "an out of court statement that is offered for a purpose other than proving the truth of the matter … is not hearsay and not subject to exclusion on that basis." *United States v. Kent*, 93 F.4th 1213, 1218 (11th Cir. 2024). For example, a statement may be "offered to show its effect on the listener," in which case it is "not offered 'to prove the truth of the matter asserted.'" *United States v. Starr*, 159 F.4th 901, 909 (11th Cir. 2025). Similarly, "questions … are not 'assertive'" statements, and thus "are not hearsay" because they "are simply incapable of being true or false." *United States v. Rivera*, 780 F.3d 1084, 1092 (11th Cir. 2015). And statements that are hearsay may be admissible if they are subject to an exception, such as where they reflect a declarant's "then-existing state of mind." Fed. R. Evid. 803(3). Courts thus routinely admit statements made and questions asked by consumers that "exhibi[t] confusion" and are offered to "sho[w] the speaker's confusion" on the grounds that they either are "not hearsay" (because they are not offered for their truth) or because they are "subject to the state of mind exception to hearsay." *Lincare Holdings Inc. v. Duzo, Inc.*, 2024 WL 865881, at *2 (M.D. Fla. Feb. 29, 2024) (collecting cases). At trial the Court ruled that the testimony at issue is admissible under at least Federal Rule of Evidence 803(3) as "statements by members of the public indicating their confusion." Day 1 Trial Tr. 86:4–15, 88:14–15. The Community Hospitals later cited the Court to *Lincare Holdings*, discussed above, in support of its ruling. Leapfrog relied on *Florida Virtual School v. K12, Inc.*, 2026 WL 127063 (11th Cir. Jan. 15, 2026). But *Florida Virtual School* does not feature a hearsay determination. *Id.* at *10 (noting the district court had "expressed hearsay concerns" with "twenty-one emails" but "did *not* exclude them on that basis" (emphases added)). Rather, the district court determined that the objected to evidence was not "reliable evidence" under the particular circumstances in that case. *Id.* at *4, *10. The Eleventh Circuit affirmed. *Id.* at *10. The case thus supports the proposition that consumer confusion evidence is not hearsay and may be considered in proper context by the trial court. Subsequent research confirms the point. *See Lyons P'ship, L.P. v. Morris Costumes, Inc.*, 243 F.3d 789, 804 (4th Cir. 2001) (cited by the Eleventh Circuit in *Florida Virtual School* and determining that "actual confusion evidence" was "not hearsay").

hospital. Day 1 Trial Tr. 88:22–89:17 (Havericak). After Ms. Havericak explained that the Safety Grade resulted from Delray's non-participation in the Survey and provided updated information regarding Delray's surgical outcomes, the patient "was grateful for the call and clarification of the information," and she ultimately chose to proceed with the surgery and had a "fantastic outcome." Day 1 Trial Tr. 88:22–89:17 (Havericak).

2. *Operational and Ongoing Impacts*

147. Ms. Havericak testified that she monitors Delray's patient/admissions volumes "daily," including emergency department walk-in volumes and patients transported by emergency medical services ("EMS"). Day 1 Trial Tr. 73:20–74:9 (Havericak). She testified that, "from 2024 through last year," Delray's EMS volume increased by about six percent, while walk-in emergency department volume *decreased* by approximately seven to eight percent. Day 1 Trial Tr. 74:25–75:6 (Havericak); PX-550.0.

148. Ms. Havericak testified that it is part of her responsibilities as CEO to understand the reasons for—and impacts of—declines in admissions. She testified that the population continued to grow and that she was not aware of any new urgent care centers or freestanding emergency facilities during that period, and that she "didn't find anything except the disparaging grade," to explain the decline. Day 1 Trial Tr. 75:17–23 (Havericak). Based on that review, she concluded that the decline was attributable to the Safety Grade Leapfrog "assigned," explaining that walk-in patients "are people that have choices." Day 1 Trial Tr. 75:7–23 (Havericak). Leapfrog did not present empirical or quantified evidence attributing Delray's walk in decline to a specific alternative cause. Ms. Havericak testified that she had not received comparable patient/community feedback about Delray's CMS rating and was not aware of the 'health locator' grade except through this litigation. Day 1 Trial Tr. 132:16–23 (Havericak).

149. Ms. Havericak testified that the reduction in walk-in volume adversely affected Delray's revenues and inpatient admissions. She explained that Delray operates high-acuity service lines and that decreased revenue limits the hospital's ability to invest in complex tertiary services, which, in turn, affects the availability of those services to the surrounding community. *See* Day 1 Trial Tr. 78:24–79:6 (Havericak).

150. Ms. Havericak testified that patients with serious or emergent conditions face increased health risks when they delay treatment or travel farther to seek care because "they are afraid to come to [Delray] because they feel it is unsafe" due to the Safety Grade. Day 1 Trial Tr.

80:2–8 (Havericak). She testified that "minutes matter" and "a delay in care could be life or death" for Delray's aging patient population. Day 1 Trial Tr. 70:19–22; 79:7–80:8 (Havericak).

151. Delray received letters from Humana Military in July and December 2025 referencing Leapfrog's Safety Grade. The letters stated, among other things, "we are providing you this information to encourage your facility to review your Leapfrog hospital safety grade to identify any factors that may have contributed to your performance on safety measures," requested a response "within 30 days," and directed the hospitals to Leapfrog's website and scoring methodology. Day 1 Trial Tr. 80:15–84:5 (Havericak); PX-465.0; PX-549.0. Ms. Havericak testified that approximately 30 percent of Delray's patient population is covered by Humana. Day 1 Trial Tr. 80:10-12 (Havericak). Ms. Havericak testified that the Safety Grade is "impacting [Delray's] reputation that [it] built in the community," and that there is "no way to correct" the public perception created by the Grade "on our own." Day 1 Trial Tr. 89:20–90:2 (Havericak).

B. Palm Beach Gardens Medical Center

152. Leapfrog's Safety Grades caused reputational and operational harm to Palm Beach Gardens Medical Center ("Palm Beach Gardens").

1. Dissemination and Consumer Response

153. Palm Beach Gardens' CEO Erik Cazares testified that it is his "responsibility" as CEO to address the impacts of the Safety Grade to the hospital. Day 1 Trial Tr. 144:11 (Cazares). He was "surprised" and "shocked" by the Fall 2024 "F" grade and was concerned about the implications for perceptions among physicians, patients, the community, and governing board members. Day 1 Trial Tr. 142:23–25, 143:1–3 (Cazares). He testified that, after the Fall 2024 Safety Grade was released, he began receiving complaints and concerns from physicians, staff, and governing board members. Day 1 Trial Tr. 143:9–11, 143:22–144:10 (Cazares). He testified that concerns "came from everybody." Day 1 Trial Tr. 143:22–144:1 (Cazares). And he testified that there was no explanation "other than the Leapfrog negative publicity." Day 1 Trial Tr. 169:1–12 (Cazares).

154. He also testified that multiple doctors—at least five across various specialties—reported that their patients voiced concerns about receiving treatment at Palm Beach Gardens. *See* Day 1 Trial Tr. 173:24–175:5 (Cazares).

155. Mr. Cazares further testified that, prior to the release of the Fall 2024 Safety Grade, physicians did not raise any concerns to him about Leapfrog Safety Grades. *See* Day 1 Trial Tr. 152:21–152:23 (Cazares).

156. Mr. Cazares testified that patients voiced concerns about Palm Beach Gardens' Safety Grade. He described a cardiac-surgery patient who "didn't want to have [] surgery at Palm Beach Gardens because of the failing Safety Grade he had seen from Leapfrog." Day 1 Trial Tr. 145:19–22 (Cazares). He was "scared to go there" and "wanted an explanation as to why the hospital was being highlighted as an unsafe hospital." Day 1 Trial Tr. 145:19–146:7 (Cazares). Mr. Cazares explained Palm Beach Gardens' safety practices and experience and offered to arrange a hospital tour, but Mr. Cazares "never heard back" from the patient, who did not proceed with surgery at Palm Beach Gardens. Day 1 Trial Tr. 145:19–146:7 (Cazares).

157. Mr. Cazares testified that he is frequently approached by individuals asking about Palm Beach Gardens' Safety Grade and that the reputational impact has persisted. He explained that "[t]he damage came on pretty strong when the 'F' came out" and that "it is still there and continues." Day 1 Trial Tr. 153:8–15 (Cazares). He testified that Leapfrog has continued to grade Palm Beach Gardens after Fall 2024 and that the hospital's current grade is a "D." Day 1 Trial Tr. 153:3–7 (Cazares). He testified that he is still approached by individuals (including new individuals) asking about the hospital's Grades, that "it has not eased up." Day 1 Trial Tr. 153:8–15 (Cazares).

2. *Operational and Ongoing Impacts*

158. Mr. Cazares testified that Palm Beach Gardens is widely known in the community for high-quality cardiac care and serves as a comprehensive hospital providing open-heart surgery; advanced emergency services; one of two specialized life support programs in the county; and additional advanced service lines, including orthopedics, neurology, general surgery, and robotic technology. *See* Day 1 Trial Tr. 137:6–17 (Cazares). Palm Beach Gardens' cardiac surgery program has received national recognition, including being named one of the top 50 hospitals in the nation for cardiac surgery and ranking in the top ten percent nationally for performance outcomes. *See* Day 1 Trial Tr. 137:21–138:3 (Cazares). Palm Beach Gardens has also been recognized as a Comprehensive Resuscitation Center of Excellence in Florida, which recognizes hospitals that have the proper infrastructure to care for patients whose hearts stop functioning during a cardiac arrest. *See* Day 1 Trial Tr. 138:4–22 (Cazares). While the national average for survival is 15 percent and the state of Florida's average is below that, Palm Beach Gardens' is at 24 percent. *See* Day 1 Trial Tr. 137:15–22 (Cazares). According to Mr. Cazares, patients experiencing cardiac

arrest are more likely to survive that arrest at Palm Beach Gardens than at any other hospital in Florida. *See* Day 1 Trial Tr. 137:15–22 (Cazares).

159. Mr. Cazares testified that Palm Beach Gardens experienced a decline in walk-in emergency department volume following the release of the Fall 2024 Safety Grades. He testified that Palm Beach Gardens experienced a decline in walk-in emergency patients "despite a lot of efforts" and "extra efforts" to promote the hospital's quality back to the community. Day 1 Trial Tr. 144:21–145:1 (Cazares). He testified that, despite efforts to highlight the hospital's quality to the community, Palm Beach Gardens could not identify any explanation for the decline in walk-in volume other than the negative publicity associated with the Safety Grade. *See* Day 1 Trial Tr. 144:21–145:1, 169:8–10 (Cazares). He further testified that overall hospital revenue increased, but emergency revenue did not. *See* Day 1 Trial Tr. 167:3–9 (Cazares).

160. Mr. Cazares testified that Palm Beach Gardens tracks cancellations of medical procedures and that, when patients decline or delay care, it can adversely affect patient outcomes. He explained that delays in urgent treatment "could have detrimental consequences" for patient recovery. Day 1 Trial Tr. 146:12–13, 152:7–19 (Cazares); *see also* PX-560.0–560.2.[8]

161. Mr. Cazares testified that the Safety Grade also negatively affected staff morale at Palm Beach Gardens because, for people who "spend a majority of [their] time working with patients," "[being] rated a fail on safety … is a huge hit to their morale." Day 1 Trial Tr. 144:2–7 (Cazares). He testified that because the hospital was "rated a fail on safety," leadership had to respond to employees, physicians, and governing board members, and to "give faith" to the community. Day 1 Trial Tr. 144:2–10 (Cazares).

C. St. Mary's Medical Center

162. Leapfrog's Safety Grades caused reputational and operational harm to St. Mary's Medical Center ("St. Mary's").

1. *Dissemination and Consumer Response*

163. St. Mary's CEO, Cynthia McCauley, testified that, following the release of the Fall 2024 Safety Grade, which was a "D," physicians at St. Mary's reacted with "disbelief" and even

[8] PX-560.0–560.2 consists of a cover email and an internal Palm Beach Gardens spreadsheet titled "PBG Cancels Weeks Oct 26," created in the ordinary course of business to track scheduled procedure cancellations during the week of October 26–31, 2025. The spreadsheet reflects that, on October 22, 2025 (after discovery closed in this matter on September 25, 2025), a patient canceled an upcoming scheduled procedure at Palm Beach Gardens Medical Center, with the stated reason recorded as the hospital's "F GRADE." *See* PX-560.1–560.2. The Court admits the document into evidence for the reasons set forth in the Community Hospitals' submission at ECF 168.

"indignation," stating that the Grade did not align with their clinical experience or with the outcomes St. Mary's achieves for patients. Day 1 Trial Tr. 243:8–16 (McCauley). She testified that since the grading changed down to a "D," she discussed the Safety Grade every month with St. Mary's medical executive committee and governing board. *See* Day 1 Trial Tr. 243:4–7 (McCauley).

164. Ms. McCauley further testified that, as a result of the Safety Grade, she has been required to spend substantial time educating physicians, patients, and community members about St. Mary's quality of care and explaining that the Grade resulted from non-participation rather than measured safety performance. Day 1 Trial Tr. 244:2–13 (McCauley).

165. Ms. McCauley testified that public confidence in St. Mary's has been "shaken." Day 1 Trial Tr. 244:19–22 (McCauley). That decline in confidence was measurable. According to a brand analysis that measured the public's perception of St. Mary's from the fourth quarter of 2024 to the second quarter of 2025, the percentage of patients that would choose St. Mary's fell from 78 percent to 55 percent; "the only thing that changed in a year was the Leapfrog rating." Day 1 Trial Tr. 246:25–247:14, 261:2–263:25 (McCauley).

2. Operational and Ongoing Impacts

166. Ms. McCauley also testified that the hospital experienced declines in emergency-department walk-in volume and certain elective procedures following the Fall 2024 Safety Grade. *See* Day 1 Trial Tr. 244:19–247:21 (McCauley); PX-550.0. She testified that her elective walk-in volume and elective physical-therapy volume were down and that outpatient volumes were down, particularly on the pediatric side. *See* Day 1 Trial Tr. 246:25–247:7 (McCauley). She testified that pediatric emergency walk-ins declined by approximately ten patients per day and general emergency walk-ins declined by approximately three to four patients per day. *See* Day 1 Trial Tr. 247:16–21 (McCauley); PX-550.0.

167. Ms. McCauley further testified that, during the same period, emergency department walk-in volume decreased by approximately five percent even as EMS admissions increased by approximately two percent. *See* Day 1 Trial Tr. 251:4–12 (McCauley). She testified that she performed a similar investigation as her peers, including whether any new emergency rooms or free-standing facilities could have redirected patients, and that she was not aware of any such provider. *See* Day 1 Trial Tr. 247:8–14 (McCauley). She stated that "[t]he only thing that changed in a year was the Leapfrog rating." Day 1 Trial Tr. 247:8–14 (McCauley). She further testified that these

declines occurred despite rapid population growth in the West Palm Beach area and that, absent the Safety Grade, she would have expected walk-in emergency-department volume—particularly pediatric walk-ins—to increase. *See* Day 1 Trial Tr. 251:4–12 (McCauley).

168. Ms. McCauley testified that, during the same period in which walk-in emergency department volume declined, the number of patients transferred to St. Mary's increased significantly, particularly from Jupiter Medical Center, a competing hospital. She testified that in her career at St. Mary's she has never seen transfers so high: In 2025, Jupiter Medical Center made 568 requests to transfer patients to St. Mary's, meaning patients are "choosing somewhere else first." Day 1 Trial Tr. 248:17–249:9, 268:18–25 (McCauley).

169. Ms. McCauley further testified that many of these patients initially presented to Jupiter Medical Center, which lacked the capability to treat them, so they had to be subsequently transferred to St. Mary's for care. She explained that approximately half of the transfer requests involved pediatric patients, for whom St. Mary's serves as the region's only children's hospital and maintains 30 to 40 pediatric specialists. *See* Day 1 Trial Tr. 248:17–249:9; 268:18–25 (McCauley).

170. Ms. McCauley explained that such transfers can harm patients by creating the "risk of … delay" in care and by requiring them to incur costs at more than one facility. Day 1 Trial Tr. 238:11–12, 249:10–19 (McCauley). She further testified that delays in care—particularly for emergency or pediatric patients—can increase medical risks, adversely affect patient outcomes, and, in some cases, "result in death." Day 1 Trial Tr. 238:12, 248:13–249:19 (McCauley).

D. West Boca Medical Center

171. Leapfrog's Safety Grades caused reputational and operational harm to West Boca Medical Center ("West Boca").

1. Dissemination and Consumer Response

172. West Boca's CEO, Mr. Hanlon, testified that, following the release of West Boca's "D" Safety Grade in Fall 2024, patients began leaving West Boca against medical advice "based on what they [had] read and seen about the Leapfrog grades." Day 2 Trial Tr. 84:2–4, 123:1–2, 130:2–4 (Hanlon).

173. Mr. Hanlon described a patient identified as J.D. who presented to West Boca with a compound fracture of the finger—an open fracture carrying risks of infection and serious complications, including "loss of limb or life." Day 2 Trial Tr. 86:12–88:6 (Hanlon). Mr. Hanlon

testified that West Boca was well-equipped to treat the injury—it is "one of the few hospitals in the county that [has] a dedicated hand surgery" unit, has "specialized physicians," and "perform[s] better than average" on surgical site infection metrics. Day 2 Trial Tr. 88:8–15 (Hanlon). This patient was initially admitted to West Boca Medical Center for urgent surgery but, as reflected in the contemporaneous record, he then "verbalized" that he "wanted to go to" a different hospital "against medical advice" "due to the leap frog reviews." PX-552.0 at 1. Despite being advised by physicians and nursing staff of the risks of leaving against medical advice, the patient left West Boca after his daughter viewed the Leapfrog Safety Grade. *See* Day 2 Trial Tr. 86:11–88:15 (Hanlon); PX-552.0 at 1. The Court overruled Leapfrog's hearsay objection and admitted PX-552.0 as a business record, and Mr. Hanlon testified that, when a patient leaves "AMA" (against medical advice), the hospital is required to advise the patient of the risks of leaving, but the patient may still choose to leave. Day 2 Trial Tr. 84:5–7, 85:1–24, 86:6–11 (Hanlon).[9]

174. Mr. Hanlon testified that J.D. incurred financial harm as a result of leaving West Boca against medical advice, including receiving a bill for the intake and treatment provided prior to his departure—cost that he would likely incur again at his subsequent treatment facility. *See* Day 2 Trial Tr. 88:16–17 (Hanlon); PX-552.0.

175. Mr. Hanlon testified regarding another patient, identified as F.W., who was admitted and scheduled for surgery at West Boca for an underarm infection but left against medical advice in the early morning hours after seeing media coverage related to West Boca's Safety Grade. *See* Day 2 Trial Tr. 89:15–21 (Hanlon). Mr. Hanlon testified that F.W. also received a bill for care at West Boca, and, like J.D., would likely have been double-billed at a subsequent treatment facility. *See* Day 2 Trial Tr. 89:25–90:1 (Hanlon).

176. Mr. Hanlon testified that, following the Fall 2024 Safety Grade, members of the medical staff and governing board expressed immediate concern. He testified that members of the Medical Executive Committee, including physicians and medical leadership, were "very frustrated," and that members of West Boca's governing board—comprised of physician providers and community representatives—were also concerned. Day 2 Trial Tr. 82:1–83:5 (Hanlon). Mr.

[9] Records of a regularly conducted activity are subject to a hearsay exception under Federal Rule of Evidence 803(6). *See* Fed. R. Evid. 803(6). Thus, the record itself is admissible. Statements within the record are likewise admissible as evidence of consumer confusion. *See supra* note 8.

Hanlon further testified that staff were likewise "frustrated" because the Safety Grade did not "accurately reflect" the quality of care provided at West Boca. Day 2 Trial Tr. 83:6–12 (Hanlon).

177. Mr. Hanlon testified about patient concerns arising from the Safety Grade as well. In particular, he described patients who questioned whether they should seek care at West Boca because of the Leapfrog Safety Grades. *See* Day 2 Trial Tr. 83:24–84:4 (Hanlon).

178. Mr. Hanlon also testified that West Boca monitors Google reviews and that one star-reviews are routed to leadership, and he testified that he has seen negative reviews that mention Leapfrog. *See* Day 2 Trial Tr. 130:16–25 (Hanlon). He testified that he reviewed a July 2025 Google review that "goes on to talk about the Leapfrog D safety grade" and urged readers to "drive out of your way and go[] to Boca Regional or any other hospital." Day 2 Trial Tr. 131:16–24, 132:10–13 (Hanlon).

2. *Operational and Ongoing Impacts*

179. Mr. Hanlon testified that West Boca's emergency-department walk-in volume declined by approximately 15 percent from 2024 to 2025. *See* Day 2 Trial Tr. 90:14–16 (Hanlon). By contrast, EMS volume was down by just three percent. *See* PX-550.0. Mr. Hanlon testified that patients explicitly stated that they were leaving or avoiding West Boca's emergency department because of the Leapfrog Safety Grade. *See* Day 2 Trial Tr. 90:8–91:12, 115:18–21, 121:10–12 (Hanlon). Mr. Hanlon also testified that West Boca had invested $3 million to expand the emergency room to accommodate a forecasted increase in emergency volumes, an increase that was not realized in part because of the Leapfrog Safety Grades. *See* Day 2 Trial Tr. 143:14–17 (Hanlon).[10]

180. The evidence further established that payors expressed concern about West Boca's Safety Grade. Mr. Hanlon testified that West Boca received letters in July 2025 and December 2025 from Humana Military referencing the hospital's Grade. The letters stated, among other things, "we are providing you this information to encourage your facility to review your Leapfrog hospital safety grade to identify any factors that may have contributed to your performance on safety measures," requested a response, "within 30 days" and directed the hospital to Leapfrog's website and scoring methodology. PX-464.0; PX-553.0. As Mr. Hanlon explained, approximately 12 to 14 percent of West Boca's patients use Humana insurance. *See* Day 2 Trial Tr. 92:7–94:11 (Hanlon). Mr. Hanlon also testified that West Boca received a letter from the Florida Alliance

[10] Mr. Hanlon testified that, although there were "variations" in other volumes, he saw a "decrease" in emergency room volume "due to the Leapfrog grade." Day 2 Trial Tr. 120:17–121:12 (Hanlon).

community organization, which "strongly encourage[d]" West Boca to participate in the Leapfrog Survey. Day 2 Trial Tr. 95:1–96:17 (Hanlon). The letter stated that both "[e]mployers and purchasers" consider participation "vital" and that performance metrics would be shared with employees and used as part of purchasers' "value strategies." PX-415.0 at 1.

181. Mr. Hanlon testified that, prior to Fall 2024, he did not recall patients or community members raising concerns about West Boca's Leapfrog Safety Grade. *See* Day 2 Trial Tr. 96:18–97:1 (Hanlon).

182. Mr. Hanlon testified that the harm to West Boca caused by the Safety Grade is ongoing. He testified that West Boca has devoted substantial time and resources to addressing staff concerns, responding to community members, and investing in advertising, like television commercials, to counteract negative public perceptions created by the Safety Grade. *See* Day 2 Trial Tr. 97:5–17 (Hanlon).

183. Mr. Hanlon testified that, if Leapfrog continues to assign Safety Grades to West Boca, the hospital will continue to suffer reputational harm, reduced patient volumes, and increased risk to patients who leave against medical advice. *See* Day 2 Trial Tr. 97:18–23 (Hanlon). He further testified that, Leapfrog is "grading based on information they don't have," and that West Boca is "being penalized until we submit it." Day 2 Trial Tr. 98:1–4 (Hanlon).

184. Mr. Hanlon testified that the Safety Grades "absolutely" harmed West Boca: "We've suffered reputational harm [and] loss of goodwill in the community." Day 2 Trial Tr. 83:22–84:4 (Hanlon).

E. Good Samaritan Medical Center

185. Leapfrog's Safety Grades caused reputational and operational harm to Good Samaritan Medical Center ("Good Samaritan").

1. Dissemination and Consumer Response

186. Good Samaritan's CEO, Ms. Montgomery, testified that the Fall 2024 Safety Grade generated immediate and widespread negative attention—a "fire storm." Day 2 Trial Tr. 199:25–200:4 (Montgomery). She testified that media outlets repeatedly reported on the Grade, including during evening news broadcasts, and that coverage extended across newspapers and social media platforms, including Instagram and TikTok. *See* Day 2 Trial Tr. 199:25–200:4 (Montgomery). Ms. Montgomery testified that when Good Samaritan was participating it typically received a "C",

and that in Fall 2024 the Safety Grade changed and the hospital "should not have received an F." Day 2 Trial Tr. 199:1–3, 201:16–202:2 (Montgomery).

187. Ms. Montgomery testified that the media coverage and dissemination of the Safety Grade immediately affected Good Samaritan's reputation. She testified that physicians began receiving complaints from patients, including one cancer patient who declined to undergo surgery at Good Samaritan—complaining that she believed Good Samaritan was "inept"—a week or two after the Grade came out. Day 2 Trial Tr. 231:23–25 (Montgomery). Ms. Montgomery testified that she explained the Survey process to the patient, but the patient instead sought care at Jupiter Medical Center, a competitor of the Community Hospitals and an "A" rated hospital as determined by Leapfrog. Day 2 Trial Tr. 200:8–17, 231:16–232:5 (Montgomery). She testified that the physician wanted to know "what we are doing about this" and when they were "putting a statement out," and she explained the Survey process to him as well. Day 2 Trial Tr. 200:8–14 (Montgomery).

188. Ms. Montgomery testified regarding a menacing anonymous letter she received that enclosed a newspaper article highlighting Jupiter Medical Center's "A" Safety Grade. The letter contained handwritten comments disparaging Good Samaritan and stating that "Your despicable staff needs to take notes from [Leapfrog "A" graded Jupiter Medical Center]." Day 2 Trial Tr. 209:20–211:19 (Montgomery); PX-548.0. The Court overruled Leapfrog's objection and admitted PX-548. *See* Day 2 Trial Tr. 210:6–14. Ms. Montgomery testified that the envelope holding the letter was made out to her as CEO and appeared to have been sent on December 2 from West Palm Beach, Florida. *See* Day 2 Trial Tr. 210:16–24 (Montgomery).

189. Ms. Montgomery testified that the letter was "clearly very upsetting" because it reflected a belief that Good Samaritan was unsafe and that Jupiter Medical Center was safer, and that the sender did not understand that Good Samaritan's Leapfrog Safety Grade resulted from non-participation in the Leapfrog Survey. Day 2 Trial Tr. 211:20–212:6 (Montgomery). She also testified about the continued dissemination of the Safety Grade—the "fire storm … continues" to foster and exacerbate fear among consumers. Day 2 Trial Tr. 211:20–212:6 (Montgomery); PX-548.0. She testified that the "fire storm keeps going" and that Leapfrog "keeps putting this punitive grading out," which "continues" to "put[] fear into consumers." Day 2 Trial Tr. 211:20–212:6 (Montgomery).

2. *Operational and Ongoing Impacts*

190. Ms. Montgomery testified that as CEO it was part of her role to understand the change in Good Samaritan's Leapfrog Safety Grade, and she investigated the reasons for the change by undertaking a process to "uncover[] what occurred," including speaking with quality leadership and reviewing calculators. Day 2 Trial Tr. 199:13–17 (Montgomery).

191. Ms. Montgomery testified that Good Samaritan experienced a significant decline in emergency-department walk-in volume following the Fall 2024 Safety Grade. She testified that walk-in volume declined by approximately four percent, representing approximately 1,300 patients. *See* Day 2 Trial Tr. 205:9–13 (Montgomery). Ms. Montgomery investigated potential explanations for the decline, including community outreach, meetings with business development personnel, and consideration of new competing facilities, and testified that based on that review, she concluded the decline was attributable to the Safety Grade. She explained that walk-in patients make an elective choice regarding where to seek emergency care, so it was "telling" that "they are not making that choice any longer." Day 2 Trial Tr. 205:9–206:8 (Montgomery); PX-550.0. She testified that EMS is a separate category reflecting ambulance rides into the hospital and is "mandatory," and that for the same period EMS increased by three percent. Day 2 Trial Tr. 205:14–22. She testified that she reviews admissions data "daily." Day 2 Trial Tr. 205:23–24 (Montgomery). She testified that in trying to understand the drop she went out into the community and looked for free-standing emergency rooms in the area, and "there is not really any underlying thing other than walk-ins are elective." Day 2 Trial Tr. 206:1–8 (Montgomery).

192. Ms. Montgomery further testified that Good Samaritan experienced declines in elective procedures in 2025, following the Fall 2024 Safety Grade. She testified that breast imaging volume declined by approximately eight percent and that admissions plus observations declined by approximately 4.2 percent, representing nearly 600 patients. *See* Day 2 Trial Tr. 206:9–207:11 (Montgomery). She testified that Good Samaritan performs approximately 5,000 breast imaging procedures per year. *See* Day 2 Trial Tr. 206:11–12 (Montgomery).

193. Ms. Montgomery testified that these declines occurred despite rapid population growth in downtown West Palm Beach, where Good Samaritan is located. Day 2 Trial Tr. 207:9–11 (Montgomery).

194. Ms. Montgomery testified that Good Samaritan, like Delray and West Boca, received a letter from Humana referencing the hospital's Leapfrog Safety Grade. *See* PX-554.0. The

Court overruled Leapfrog's objection and admitted PX-554.0. *See* Day 2 Trial Tr. 208:1–4. The letter stated, among other things, "we are providing you this information to encourage your facility to review your Leapfrog Hospital Safety Grade to identify any factors that may have contributed to your performance on safety measures," requested a response "within 30 days," and directed the hospital to Leapfrog's website and scoring methodology. PX-554.0. Ms. Montgomery testified that approximately eighteen percent of Good Samaritan's patients are insured by Humana and that the letter caused concern because loss of a Humana contract would be "devastating to the patients," as it would narrow their access to care. Day 2 Trial Tr. 207:12–208:23 (Montgomery). She testified that Humana "does not understand that we are not a D or an F hospital" and that Humana was "just going by what Leapfrog published." Day 2 Trial Tr. 208:16–23 (Montgomery).

195. Ms. Montgomery testified that the Humana letter did not reflect any understanding that Good Samaritan did not participate in the Survey or that the Safety Grade resulted from non-participation, and did not reference Leapfrog's methodology. *See* Day 2 Trial Tr. 209:5–15 (Montgomery). She testified that the letter contained no language reflecting that Humana believed Good Samaritan did not submit data and was penalized for non-participation. *See* Day 2 Trial Tr. 209:5–11 (Montgomery). She testified there was no discussion of the Fall 2024 change in methodology in the letter. *See* Day 2 Trial Tr. 209:13–15 (Montgomery).

196. Ms. Montgomery testified that Good Samaritan's relationship with Hospital for Special Surgery ("HSS") was adversely affected following the Fall 2024 Safety Grade. She testified that HSS physicians obtained privileges at Jupiter Medical Center after release of the Grade and that eight HSS surgeons had performed approximately 1,300 surgeries per year at Good Samaritan and generated approximately $8 million in annual revenue. She testified that HSS and Good Samaritan had maintained a "collaborative agreement" since 2020, and that HSS ultimately canceled that agreement. Day 2 Trial Tr. 200:20–201:18.

197. Ms. Montgomery investigated why HSS physicians were obtaining privileges at Jupiter, and she testified that she understood the contract developments to be related to the Fall 2024 Safety Grade. She testified that she spoke with Good Samaritan's orthopedic medical director, Dr. Sama, who is also an HSS physician, and that he reported HSS patients were "upset" and asked "what is going on" with the Leapfrog Safety Grade. Day 2 Trial Tr. 201:15–202:2, 203:3–5 (Montgomery). Ms. Montgomery testified that she had to undertake "the whole process" of explaining to the HSS physicians that Good Samaritan did not participate in the Survey and that the

grade did not reflect measured safety performance. Day 2 Trial Tr. 201:15–202:2 (Montgomery).[11] In March 2025, several months after issuance of the Fall 2024 Safety Grade, HSS provided notice of contract cancellation, effective October 31, 2025. PX-561.0. Ms. Montgomery testified that she had not received complaints from HSS physicians regarding Leapfrog Safety Grades prior to Fall 2024, but the physicians were "directed by their employer to get privileges at Jupiter Medical," even though "they didn't want to." Day 2 Trial Tr. 202:16–203:23 (Montgomery).

198. Ms. Montgomery further testified that the impact of the Safety Grade extended to individual physicians. She testified that Dr. Sama resigned from Good Samaritan's governing board and from his role as orthopedic medical director and subsequently began providing services in the community associated with Good Samaritan's competitor Jupiter Medical Center. *See* Day 2 Trial Tr. 203:3–10 (Montgomery). Ms. Montgomery testified that Dr. Sama informed her that he was directed by HSS to take those actions. *See* Day 2 Trial Tr. 203:11–13 (Montgomery). Ms. Montgomery also testified that another physician, Dr. Wang, was directed to obtain privileges at Jupiter Medical Center despite not wanting to leave Good Samaritan. *See* Day 2 Trial Tr. 204:5–24 (Montgomery).

199. Ms. Montgomery testified that if Leapfrog continues to assign Safety Grades to Good Samaritan, "[t]hings will just continue to get worse": the hospital's reputational harm will continue unabated, and the notion that Good Samaritan is a "failing hospital" will become more and more entrenched. Day 2 Trial Tr. 212:12–16 (Montgomery). She testified that the Grades come out "every six months" and that consumers will "believe the story" year after year if the hospital is repeatedly characterized as failing. Day 2 Trial Tr. 212:12–16 (Montgomery).

F. Leapfrog Witnesses

200. Leapfrog's own witnesses agree that its Safety Grades can damage hospitals. Dr. Romano testified that poor Leapfrog Safety Grades could "of course" harm a hospital's reputation. Day 2 Trial Tr. 169:18–20 (Romano). He also agreed that if a hospital is assigned an "F," that could harm the hospital's reputation. *See* Day 2 Trial Tr. 169:21–23 (Romano). Dr. Zambrana,

[11] Leapfrog objected to these statements as hearsay at trial. The statements are not hearsay, however, because they contextualize the effect on the listener (the efforts Ms. Montgomery took in response to HSS's concerns), and because they are evidence of confusion. *See supra* note 8. The Court also finds that it is reasonable to attribute HSS's contract cancellation to Leapfrog's Safety Grades based on several indicia of reliability, including: the statements by HSS physicians expressing concern about the failing Safety Grade, the fact that HSS's orthopedic medical director had served on Good Samaritan's governing board, and the timing of the cancellation (after the Fall 2024 Safety Grades were released).

Vice President and Chief Quality Officer for Jackson Health System, similarly testified that patients "want to go to hospitals with good reputations of quality" and that doctors "want to work with hospitals with good reputations for quality." Day 4 Trial Tr. 132:10–15 (Zambrana).

G. Expert Testimony

201. Expert testimony from Dr. Nicholson and Dr. Berger supports the conclusion that the Community Hospitals and their patients were harmed by the Leapfrog Safety Grades—and that the harm will continue if Leapfrog is allowed to continue grading the Community Hospitals.

202. Relying on health care economics and peer-reviewed literature, Dr. Nicholson testified that Leapfrog's Safety Grades likely distort patient choices and are widely used and relied upon in the industry by insurers, employers, hospitals, and patients alike. *See* Day 1 Trial Tr. 186:4–21, 200:17–204:20 (Nicholson) ("substantial literature" "show[s] that patients are relying on hospital ratings when making decisions"). He testified that the harms reflected in the record—including reduced walk-in volume and damages to reputation and physician relationships—are consistent with what the literature predicts when consumers rely on negative quality signals. *See* Day 1 Trial Tr. 202:16–19, 203:21–204:2 (Nicholson).

203. Dr. Nicholson also testified that quality and safety ratings like the Leapfrog Safety Grades affect where patients seek treatment and that unreliable ratings can distort patient choice and cause patient harm. Day 1 Trial Tr. 180:1–5 (Nicholson).

204. Dr. Berger testified that "D" and "F" grades "likely negatively impact consumer perceptions of the [C]ommunity [H]ospitals as well as deter consumers from choosing to receive care from the [Community H]ospitals." Day 2 Trial Tr. 6:22–25 (Berger). He testified that "D" and "F" Safety Grades "suggest[] negative things about [a] hospital's safety" and "likely negatively impact consumer perception" of such hospitals. Day 2 Trial Tr. 10:2–6 (Berger). Dr. Berger further testified that, in a grading system, an "F" signifies "bad performance" and that he was "not aware of anything lower than an F." Day 2 Trial Tr. 71:10–16 (Berger).

205. Dr. Berger also testified that "consumers often use heuristics" like the Leapfrog Safety Grades "to simplify decision making," especially "[w]hen decisions are difficult" or the consumer lacks knowledge. Day 2 Trial Tr. 9:14–18 (Berger). He testified that "negative information" about a hospital's safety—such as a "D" or "F" Safety Grade—causes consumers to "feel betrayed" and would likely "deter them from choosing the graded hospitals." Day 2 Trial Tr. 10:10–20, 30:19–31:1 (Berger).

206. Dr. Nicholson testified that Leapfrog positions itself as an authoritative source for patients and self-insured employers and frames hospital choice as a "life or death" decision, which increases the likelihood that consumers will rely on the Safety Grades. *See* Day 1 Trial Tr. 202:5–15 (Nicholson).

207. Dr. Nicholson testified, "there is ample evidence" that "consumers are using the Leapfrog Group ratings" in that manner and that the Community Hospitals' harms are consistent with what he would expect, including decreases in elective walk-in volume and damage to reputation and physician relationships. Day 1 Trial Tr. 202:16–19, 203:21–204:2 (Nicholson).

208. He also testified that the record reflects patient confusion about the ratings and patients denying recommended care based on what they learned from the Leapfrog rating. *See* Day 1 Trial Tr. 204:3–7 (Nicholson).

209. Dr. Nicholson further testified that other types of consumers in the healthcare ecosystem are affected by the Leapfrog Safety Grades, including "self-insured employers who are using Leapfrog information to determine which … hospitals should be available to the employees" and "private insurers [who] are using the Leapfrog grades in part to run their pay for performance programs," that can affect hospital payments. Day 1 Trial Tr. 202:20–203:6 (Nicholson).

210. Dr. Berger testified that future publication of the Safety Grades will have a "long-term negative impact on these hospitals' perceptions and consumer choice." Day 2 Trial Tr. 35:24–36:5 (Berger); *see also* Day 2 Trial Tr. 7:1–3 (Berger) ("future repeated publication of such grades are likely to have ongoing and further detrimental impacts on the Community Hospitals").

PROPOSED CONCLUSIONS OF LAW

211. Having made these Findings of Fact, the Court turns to its Conclusions of Law. The trial record establishes that Leapfrog's Safety Grades, grading methodology, and related representations satisfy FDUTPA's standards for deceptive and unfair conduct.

I. THIS COURT HAS JURISDICTION OVER THIS ACTION

212. This Court must assure itself of its subject-matter jurisdiction. *Univ. of S. Ala. v. Am. Tobacco Co.*, 168 F.3d 405, 409–10 (11th Cir. 1999). The Court concludes that the Community Hospitals have standing to seek injunctive and declaratory relief, that diversity jurisdiction is satisfied, and that the Court has personal jurisdiction over Leapfrog. The Court therefore rejects Leapfrog's jurisdictional arguments.

213. *Standing.* Plaintiffs seeking prospective relief must demonstrate "a real and

immediate threat of future injury" that is concrete and particularized, fairly traceable to the defendant's conduct, and redressable by the requested relief. *Houston v. Marod Supermarkets, Inc.*, 733 F.3d 1323, 1328–29 (11th Cir. 2013). The Findings establish ongoing reputational and operational injuries caused by Leapfrog's conduct that will continue absent relief. *See, e.g.*, Findings ¶ 165 (McCauley) (noting that brand satisfaction for St. Mary's fell from 78 to 55 percent during the relevant period and attributing the decline to "the Leapfrog rating"). Injunctive and declaratory relief would redress these injuries by stopping Leapfrog from issuing and promoting the challenged Safety Grades for the Community Hospitals, requiring the removal of the Fall 2024 through Fall 2025 Grades, and requiring corrective disclosures to counteract ongoing marketplace confusion. *See infra* ¶¶ 281–95. Indeed, judicial relief would be necessary to redress those injuries, given that Leapfrog's grading system is "nonvoluntary" by design, hospitals cannot opt out, and the non-participation "penalty goes away" only upon participation in Leapfrog's Survey. Findings ¶¶ 117–18.

214. *Diversity Jurisdiction.* This Court has jurisdiction pursuant to 28 U.S.C. § 1332. The Community Hospitals are citizens of Florida, and Leapfrog is a citizen of Washington, D.C. The parties are completely diverse. And the amount-in-controversy requirement is satisfied, as Leapfrog has stipulated. *See* ECF 129 ¶ 168; *see also PTA-FLA, Inc. v. ZTE USA, Inc.*, 844 F.3d 1299, 1306 (11th Cir. 2016).

215. *Personal Jurisdiction.* This Court previously held that it has personal jurisdiction over Leapfrog. *See* ECF 41 at 6–7. Florida's long-arm statute is satisfied. Fla. Stat. § 48.193(1)(a)(1)–(2), because Leapfrog engaged in Florida trade or commerce, *see, e.g.*, Findings ¶ 120 (accolade sales materials featuring a Florida hospital), and committed tortious acts in this State by violating FDUTPA, *see infra* ¶¶ 218–75; *Execu-Tech Bus. Sys., Inc. v. New Oji Paper Co. Ltd.*, 752 So. 2d 582, 585 (Fla. 2000). The "minimum contacts" requirement is also met: Leapfrog purposely directed its conduct toward Florida by soliciting data from Florida hospitals and marketing and disseminating Safety Grades to Florida consumers. *See, e.g.*, Findings ¶¶ 21–26, 105–16.

II. THE COMMUNITY HOSPITALS HAVE ESTABLISHED THAT LEAPFROG VIOLATED FDUTPA

216. FDUTPA prohibits "unfair or deceptive acts or practices in the conduct of any trade or commerce." Fla. Stat. § 501.204(1). A plaintiff may establish a violation by proving either

deception or unfairness. In an action for injunctive or declaratory relief, a plaintiff also must show that it is "aggrieved by" the practice. Fla. Stat. § 501.211(1); *see also SMS Audio, LLC v. Belson*, 2017 WL 1533941, at *4 n.6 (S.D. Fla. Mar. 9, 2017) (Middlebrooks, J.) (citing *Caribbean Cruise Line, Inc. v. Better Bus. Bureau*, 169 So. 3d 164, 166–67 (Fla. 4th DCA 2015)). No proof of damages is required. *Ahearn v. Mayo Clinic*, 180 So. 3d 165, 172 (Fla. 1st DCA 2015). The Community Hospitals must establish their FDUTPA claim by a preponderance of the evidence. *Marco Island Cable v. Comcast Cablevision of S., Inc.*, 312 F. App'x 211, 213 (11th Cir. 2009). For deceptive practices, FDUTPA considers whether the practice is likely to mislead reasonable consumers; proof of actual injury to consumers is not required for injunctive or declaratory relief. For unfair practices, as the Court discusses further below, the record similarly must show at least likely consumer injury from the challenged conduct. *See infra* ¶¶ 235–41.

217. As set forth below and in the Findings, the Court concludes that: (1) Leapfrog's challenged practices are deceptive; (2) those practices are also unfair; (3) the record establishes both likely and actual consumer harm; and (4) the Community Hospitals are aggrieved by Leapfrog's conduct.

A. Leapfrog's "Safety Grades," Safety Grade Methodology, And Surrounding Misrepresentations Are Deceptive Under FDUTPA

218. The Community Hospitals have proven by a preponderance of the evidence that Leapfrog's Safety Grades, Safety Grade methodology, and related misrepresentations are "deceptive … practices" under FDUTPA. Fla. Stat. § 501.204(1).

219. A practice is deceptive when it is "likely to mislead the consumer acting reasonably in the circumstances." *PNR, Inc. v. Beacon Prop. Mgmt., Inc.*, 842 So. 2d 773, 777 (Fla. 2003) (quoting *Millennium Commc'ns & Fulfillment, Inc. v. Off. of Att'y Gen.*, 761 So. 2d 1256, 1263 (Fla. 3d DCA 2000)); *see also Waste Pro USA v. Vision Constr. ENT, Inc.*, 282 So. 3d 911, 917 (Fla. 1st DCA 2019); *Carriuolo v. Gen. Motors Co.*, 823 F.3d 977, 983–84 (11th Cir. 2016). Deception is "construed liberally," Fla. Stat. § 501.202, and encompasses not only "outright false statements" but also "omissions." *State Farm Mut. Auto. Ins. Co. v. Performance Orthopaedics & Neurosurgery, LLC*, 278 F. Supp. 3d 1307, 1327 (S.D. Fla. 2017), and representations that convey a misleading "net impression," *Zamber v. Am. Airlines, Inc.*, 282 F. Supp. 3d 1289, 1299 (S.D. Fla. 2017). Deception claims for injunctive relief do "not require actual harm" to consumers; rather, deceptions simply must be "'likely to cause injury to a reasonable relying consumer.'" ECF139 at 9 (quoting *Millennium Commc'ns & Fulfillment, Inc.*, 761 So. 2d at 1263).

1. *The Fall 2024 Methodology Produced Safety Grades Likely to Mislead Reasonable Consumers*

220. The Community Hospitals have demonstrated that Leapfrog's use of the Fall 2024 methodology to generate "Safety Grades" for non-participating hospitals is deceptive. The Community Hospitals also demonstrated that Leapfrog made related misrepresentations that obscured the nature of the Fall 2024 approach. The Court addresses each in turn.

221. Leapfrog's Fall 2024 methodology is deceptive because the "Safety Grades" it generates do not—and were not meant to—reflect actual safety performance for non-participating hospitals on key Survey-dependent measures for which Leapfrog has no data measuring performance. *See* Findings ¶ 58 (the purpose of the Fall 2024 approach was "not to improve accuracy," and it was "not an accurate reflection" of safety).

222. The Fall 2024 approach was intended to "penalize" non-participation. Findings ¶ 36. Leapfrog adopted a "drastic" change that "arbitrarily assign[s]" fixed failing component scores for non-participating hospitals on the Four Measures and then re-weights those measures to account for approximately one-third of the Safety Grade, despite the absence of data measuring performance on those measures. *See* Findings ¶¶ 124, 31–38, 42–46, 58, 62. Leapfrog attributed the invention of this arbitrary penalty to "group think," rather than any rigorous vetting process. Findings ¶ 124. And documents reveal that Leapfrog ignored Dr. Romano's contemporaneous warning that it could not simply "pretend" to be "imputing missing values in a statistically optimal way" under the Fall 2024 approach. Findings ¶ 36.

223. The record establishes that the Fall 2024 approach was "a simple business decision" designed to increase Survey participation, including through a non-participation penalty that "goes away" when a hospital resumes participation and was tied to Leapfrog's participation-driven business model. *See* Findings ¶¶ 38, 118, 126, 129.

224. Dr. Nicholson's testimony confirms that the Fall 2024 approach constitutes a "scientifically indefensible" non-participation penalty that is unsupported by empirical documentation, deviates from foundational principles of quality measurements, and produces unreliable Safety Grades disconnected from actual safety performance and patient outcomes. *See* Findings ¶ 58 (Nicholson testimony). In fact, Leapfrog's own Guiding Principles indicate that no Safety Grade should issue when data are missing for a large number of measures, and Leapfrog's About the Grade webpage states that "[h]ospitals missing more than six process measures … are not graded. *See* Findings ¶ 71. A reasonable relying consumer would be unlikely to understand the true

meaning of the Leapfrog Safety Grades as applied to non-participating hospitals, as one hospital system warned when commenting on the proposed Fall 2024 methodology. *See* Findings ¶ 100; JX-026.0 at -030 (warning Leapfrog that the public "will not understand nor dig into the methodology").

225. The Findings thus amply support the conclusion that Leapfrog's Safety Grades and associated methodology are likely to mislead reasonable consumers. Indeed, the Findings establish that the Safety Grades and methodology *did* produce evidence of consumer confusion and harm, thus establishing not only likely but actual consumer injury, as discussed more fully below with respect to the unfairness inquiry. *See infra* ¶¶ 246–61.

2. *Leapfrog's Related Representations Were Likely to Mislead Reasonable Consumers*

226. Leapfrog also made a series of representations that obscured the arbitrary and punitive nature of the Fall 2024 non-participation approach—underscoring that consumers were likely to be (and were) misled.

227. *First*, Leapfrog represented that Safety Grades are calculated using Survey responses, CMS data, and "supplemental" or "secondary" data sources. *See* Findings ¶ 70 ("About the Grade" webpage). But the Findings establish that Leapfrog has no data measuring actual performance on key Survey-dependent measures for non-participating hospitals, and that Leapfrog did not use supplemental or secondary data to measure those hospitals' performance on those measures. *See, e.g.*, Findings ¶¶ 59, 85.

228. *Second*, Leapfrog represented that "[h]ospitals missing more than six process measures … are not graded." Findings ¶ 71. This representation clearly implies to consumers that, if a hospital does receive a Safety Grade, then Leapfrog had sufficient data to award that Safety Grade. Findings ¶¶ 71–72. But the Findings establish that Leapfrog in fact issues Safety Grades to non-participating hospitals despite lacking data for *seven* measures. *See, e.g.*, Findings ¶¶ 73, 85. Indeed, for non-participating hospitals, Leapfrog simply discards three measures ("Safe Practice 1: Culture of Leadership Structures and Systems," "Safe Practice 2: Culture Measurement, Feedback & Intervention," and "Total Nursing Care Hours per Patient Day"), and then assigns the lowest-available score on the other Four Measures for which it similarly lacks data. Findings ¶¶ 44 n.4, 73.

229. *Third*, Leapfrog represented that a Safety Grade reflects "overall performance" and "how well a hospital does on safety, not whether they complete the Leapfrog Hospital Survey."

See Findings ¶ 75 ("About the Grade" webpage). The Findings establish that non-participating hospitals were assigned fixed failing component scores on the Four Measures and that those measures were re-weighted to account for approximately one-third of the Safety Grade, producing materially worse Safety Grades as a result of non-participation. *See* Findings ¶¶ 42–48.

230. *Fourth*, the Findings establish that Leapfrog's website presentation—including "gas gauge" graphics showing a needle in the red-zone, best/worst hospital comparisons, and "earned" scores—conveyed to consumers that non-participating hospitals performed worse than average on the Four Measures, even though Leapfrog has no data measuring actual performance on those measures for nonparticipating hospitals. *See* Findings ¶¶ 59, 74–84.

231. *Fifth*, Leapfrog represented that its methodology was peer-reviewed and expert approved, but the Findings establish that the Fall 2024 non-participation penalty was not peer reviewed and was not approved by the Expert Panel (it was developed through "group think"), and that Leapfrog personnel discussed how to present the change to make it "sound" legitimate. *See* Findings ¶¶ 86, 89, 92, 124.

232. Each of these representations is independently sufficient to establish deception under FDUTPA; considered together, their misleading net impression is clear, well beyond a preponderance of the evidence.

233. Leapfrog's buried methodology materials do not cure the deception. The Findings establish that the methodology document was not presented with the Safety Grade webpages, was difficult for consumers to locate, was accessed only by 3 percent or less of visitors, and was dense and not consumer-readable. *See, e.g.*, Findings ¶¶ 98–101. Additionally, Leapfrog's footnotes and webpage presentation did not disclose how assigned scores were generated or allow consumers to distinguish assigned scores from measured performance. *See, e.g.*, Findings ¶¶ 91–96. Two footnotes that appear at the bottom of the Safety Grade webpages do not dispel (and in fact aggravate) the deception. The first footnote reads, "Declined to Report: The hospital was asked to provide this information to the public, but did not," and misleadingly appears on the webpages for non-participating *and* participating hospitals. Findings ¶ 96. The same footnote also applies to all measures—incongruously, even those for which Leapfrog has data—and otherwise fails to explain the missing data, assumptions made, or how scores were calculated. Findings ¶ 97. The second reads, "The hospital declined to report their performance on this measure, so a score was assigned to reflect the lack of information available." Findings ¶ 93. This statement clarifies nothing, as

Leapfrog's Director of Communications and its own expert witness acknowledged. *See* Findings ¶ 95. Indeed, when presented with the Leapfrog webpages for two nonparticipating hospitals—one whose scores were based on available historical data and one whose scores were automatically assigned—Leapfrog's retained expert conceded that the webpages were "totally indistinguishable," and that the footnotes do not show a consumer "under the hood" of *how* the scores were assigned. Findings ¶¶ 95 & n.6, 104.

234. Accordingly, the Community Hospitals have proven that Leapfrog's Safety Grades, methodology, and related representations are deceptive under FDUTPA. *See* Fla. Stat. § 501.204(1).

B. Leapfrog's Safety Grades, Safety Grade Methodology, And Associated Coercive Practices Are Unfair Under FDUTPA

235. While the Community Hospitals need not also prove that Leapfrog's conduct is "unfair," given FDUTPA's disjunctive test, the Court nonetheless also finds that the Community Hospitals have proven by a preponderance of the evidence that Leapfrog's Safety Grades, grading methodology, and grading practices are "unfair" under FDUTPA. Fla. Stat. § 501.204(1). The Court begins its analysis by discussing a threshold dispute between the parties—the standard for substantial injury to consumers for unfairness claims—and then proceeds to analyze the Community Hospitals' unfairness argument under the two unfairness tests courts construing FDUTPA have traditionally applied. For the reasons explained below, the Court finds that the Community Hospitals have established that Leapfrog's challenged practices are unfair under either of those tests.

1. *Unfairness Claims Do Not Require Actual, Only Likely, Consumer Harm*

236. As the Court explained above, deception claims under FDUTPA do not require proof of actual consumer harm. Rather, it is sufficient that "'deceptions … are likely to cause injury to a reasonable relying consumer.'" ECF 139 at 9 (quoting *Millennium Commc'ns & Fulfillment, Inc.*, 761 So. 2d at 1263). The parties disputed whether unfairness claims require actual consumer harm or whether a likelihood of harm suffices. Leapfrog contended that actual consumer harm is required for unfairness claims. *See, e.g.*, ECF 99 at 9–10. The Community Hospitals supplied authority that likely consumer injury suffices for unfairness claims. ECF 152. After further consideration, including in light of further guidance from the Eleventh Circuit, *see FTC v. Corpay, Inc.*, 164 F.4th 807 (11th Cir. 2026), the Court agrees that a likelihood of substantial injury to

consumers suffices for unfairness claims. *See* 15 U.S.C. § 45(n); *Davis v. Powertel, Inc.*, 776 So. 2d 971, 975 (Fla. 1st DCA 2000).

237. The necessary starting point is FDUTPA's text and structure. FDUTPA's purpose is "[t]o make state consumer protection and enforcement consistent with established policies of federal law relating to consumer protection." Fla. Stat. § 501.202(3). FDUTPA defines a "'[v]iolation of this part'" to mean a violation of any of the following, as they existed as of July 1, 2017: "[a]ny rules promulgated pursuant to the Federal Trade Commission [FTC] Act," "the standards of unfairness and deception set forth and interpreted by the [FTC] or the federal courts," and "[a]ny law, statute, rule, regulation, or ordinance which proscribes unfair methods of competition, or unfair, deceptive, or unconscionable acts or practices." Fla. Stat. § 501.203(3)(a)–(c). And FDUTPA reminds courts that "due consideration and great weight shall be given to the interpretations of the [FTC] and the federal courts" relating to the FTC Act "as of July 1, 2017." Fla. Stat. § 501.204(2). These provisions reflect that the analysis of deception and unfairness claims is designed to track the pre-2017 FTC Act and pre-2017 interpretations of that statute promulgated by the FTC and federal courts. FDUTPA is thus a "little FTC Act," *Fonte v. AT&T Wireless Servs., Inc.*, 903 So. 2d 1019, 1024 (Fla. 4th DCA 2005), "patterned after" the FTC Act, *Millennium Commc'ns & Fulfillment, Inc.*, 761 So. 2d at 1260. The Florida Supreme Court's decision in *PNR, Inc. v. Beacon Property Management, Inc.*, 842 So. 2d 773 (Fla. 2003), likewise reflects this incorporation: its description of FDUTPA's deception and unfairness standards tracks the FTC Act's framework, even copying language from cases explaining the standard under the FTC Act. *Id.* at 777.

238. The FTC Act, in turn, does not require proof of actual consumer harm for unfairness claims. Indeed, the Act's "[s]tandard of proof" section for unfairness claims expressly provides that no "act or practice is unfair unless the act or practice causes *or is likely to cause* substantial injury to consumers[.]" 15 U.S.C. § 45(n) (emphasis added). As *FTC v. Corpay* explains, "the proper standard for evaluating 'unfair' practices" is the FTC Act's "statutory text." 164 F.4th 807, 839–40 (11th Cir. 2026).[12] Because the FTC Act has contained the "cause or likely to cause"

[12] Leapfrog suggested that the Court should not consider the Eleventh Circuit's decision in *Corpay* because it was rendered after July 1, 2017, and thus is not incorporated into FDUTPA. *See* ECF 165 at 2–3. The Court finds this argument misplaced. The Community Hospitals' argument was not that *Corpay* changed how the FTC Act directs courts to assess consumer injury. *See* ECF 166 at 1. The decision instead clarifies and reinforces that the standard for unfairness claims derives from the FTC Act's statutory text, which Leapfrog itself concedes is "[l]ongstanding" and was in place well before July 1, 2017. *See* ECF 165 at 4. Accordingly, that federal statutory standard was incorporated into FDUTPA under the latter statute's plain terms. *See infra* ¶ 239.

language since 1994—well before FDUTPA's 2017 cut-off date—*see* Pub. L. 103-312, 108 Stat. 1691, 1695 (Aug. 26, 1994), it falls within FDUTPA's July 1, 2017 incorporation framework, *see Porsche Cars N. Am., Inc. v. Diamond*, 140 So. 3d 1090, 1097 (Fla. 3d DCA 2014).

239. FTC interpretations of the unfairness standard point in the same direction. The FTC Act's "likely to cause injury" language was designed to codify then-existing FTC opinions and policy statements, *see LabMD Inc. v. FTC*, 894 F.3d 1221, 1229 (11th Cir. 2018), which had long made clear that likely injury suffices. In *Matter of International Harvester Co.*, 104 F.T.C. 949 (1984), for example, the FTC explained that "unfairness cases may also be brought *on the basis of likely rather than actual injury*," including unwarranted health and safety risks. *Id.* at 1061 n.45 (emphasis added) (examining the 1980 Policy Statement).[13] As pre-2017 explanations of the standard for unfairness claims, the 1980 Policy Statement and *International Harvester* likewise were "incorporated into Florida law" under FDUTPA. *Porsche Cars N. Am., Inc.*, 140 So. 3d at 1097. Consistent with that approach, courts applying FDUTPA have recognized that "an aggrieved party may pursue a claim for declaratory or injunctive relief under the Act, even if the effect of those remedies would be limited to the protection of *consumers who have not yet been harmed* by the unlawful trade practice." *Davis*, 776 So. 2d at 975 (emphasis added).

240. Leapfrog's contrary arguments are unpersuasive. Leapfrog does not dispute that the FTC Act has included a "likely to injure" standard since 1994 or that FDUTPA directs courts to give great weight to FTC Act standards and federal interrelations as of July 1, 2017. *See* ECF 165 at 3–4. Leapfrog instead relies on cases that do not decide whether *actual* harm is required (as distinct from *likely* harm), and that do not engage with FDUTPA's incorporation of the FTC Act's statutory unfairness standard. *See, e.g., Stewart Agency, Inc. v. Arrigo Enters., Inc.*, 266 So. 3d 207, 214–15 (Fla. 4th DCA 2019) (expressing no view on whether actual versus likely injury is required); *CMR Construction & Roofing, LLC v. UCMS, LLC*, 2022 WL 3012298, at *3 (11th Cir. July 29, 2022) (same).

241. For those reasons, the Court concludes that likely consumer injury suffices for FDUTPA unfairness claims. The Court also concludes that this legal issue is not outcome-determinative here: the Community Hospitals established likely injury to consumers from Leapfrog's

[13] The FTC's opinion noted that it is "not the usual practice" to bring an unfairness claim based on likely rather than actual injury, *Matter of Int'l Harvester Co.*, 104 F.T.C. at 1061 n.45, but this observation is beside the point. While most unfairness cases may happen to involve actual consumer harm, this showing is not legally required for an unfairness claim, as the FTC made clear.

challenged grading practices and dissemination (e.g., by depriving them of information necessary to make informed choices about medical care), but they also established *actual* consumer harm at trial, as discussed below.

2. *Leapfrog's Challenged Practices Are Unfair Under the Modern, Three-Factor Test*

242. Courts analyzing unfairness claims under FDUTPA apply either of two tests. Courts sometimes apply the modern, three-factor unfairness test deriving from the FTC's 1980 Policy Statement, which is codified into Section 45(n) of the FTC Act as discussed above. *See* 15 U.S.C. § 45(n). Alternatively, courts sometimes use the older test from the FTC's 1964 Policy Statement on unfairness, which asks whether the challenged practice "offends established public policy" and is "immoral, unethical, oppressive, unscrupulous or substantially injurious to consumers." *PNR, Inc.*, 842 So. 2d at 777. Because the Court finds that the choice of tests is not outcome-determinative here, it will apply both tests.

243. Conduct under the modern three-factor test is "unfair" when it inflicts "consumer injury that is: (1) substantial; (2) not outweighed by any countervailing benefits to consumers or competition that the practice produces; and (3) … that consumers could not reasonably have avoided." *SMS Audio*, 2017 WL 11631378, at *3 (citing *Porsche Cars N. Am., Inc.*, 140 So. 3d at 1096–97). Here, the Community Hospitals have proved that Leapfrog's practices are "unfair" under this standard.

244. *First*, the Community Hospitals proved substantial consumer injury—both likely and actual. *See SMS Audio*, 2017 WL 11631378, at *3. The Court rejects Leapfrog's attempt to narrow "substantial consumer injury" to "adverse health outcomes" or "inflated fee[s]," ECF 99 at 9, and its attempt to limit "consumers" to patients alone, ECF 102 at 14. As explained below, both positions are inconsistent with FDUTPA's incorporation of the FCT Act's unfairness standard, and the record developed at trial.

245. *Substantial Injury*. Leapfrog's claim that only "adverse health outcomes" or the payment of an inflated fee suffice for substantial injury finds no support in the FTC's 1980 Policy Statement, which is incorporated into FDUTPA, and on which the modern three-factor unfairness test is based. The central premise of the 1980 Policy Statement is that "a well-functioning market" requires "a free and informed consumer transaction." *Matter of Int'l Harvester Co.*, 104 F.T.C. at 1074. The FTC explained that it is "properly banned as an unfair practice" for a defendant to "withhold or fail to generate critical price or performance data," "leaving buyers with insufficient

information for informed comparisons." *Id.* The FTC contrasted that distortion of consumer choice—which is squarely actionable as an unfair practice—with non-actionable "trivial" harms, such as allegations that an advertisement merely "offends … tastes or social beliefs." *Id.* at 1073. Thus, the substantial-injury requirement weeds out trifling claims but captures conduct that deprives consumers of critical performance information and distorts consumer choice.[14] For that reason, the FTC and federal courts applying the FTC Act have routinely recognized that "deceptive practices are always unfair." *Matter of Figgie Int'l, Inc.*, 107 F.T.C. 313, 1986 WL 722111, at *50 n.5 (1986); *accord Jeter* v. *Credit Bureau, Inc.*, 760 F.2d 1168, 1172 (11th Cir. 1985). Withholding or obscuring material information is itself a form of substantial consumer injury; it is not necessary to prove second-order injuries of the type Leapfrog posits, such as adverse health outcomes or an inflated fee. Here, the Findings establish that Leapfrog presented "D" and "F" Safety Grades as measures of safety performance while assigning failing component scores on no-data measures for non-participating hospitals, and that consumers encountered and acted on Leapfrog's Safety Grades in the marketplace. *See* Findings ¶¶ 55–59, 105–10, 201–10.

246. *Scope of Consumer Harm.* "Consumers" under FDUTPA include any "'individual,'" "'business,'" or "'corporation'" at whom the "unfair practice or deception is aimed." ECF 139 at 10 (quoting Fla. Stat. § 501.203(7)). The Findings establish that Leapfrog aims its Safety Grades at patients, employers, insurers, hospitals, and healthcare staff through consumer-facing messaging, paid dissemination, and licensing and marketing practices. *See* Findings ¶¶ 21–28, 115, 120–121.

247. ***Patients.*** The parties agree that patients are consumers of the Safety Grades, *see, e.g.*, ECF 102 at 14, and the Findings establish both likely and actual patient harm. As the Community Hospitals' experts explained, Leapfrog's failing "D" and "F" Safety Grades are likely to impact consumers perceptions of hospital quality and to distort healthcare choices. Findings ¶ 205 (Dr. Berger); *see also* Findings ¶ 203 (Dr. Nicholson). The Findings further establish that consumers encountered "D" and "F" Safety Grades as safety judgments and altered medical

[14] Leapfrog contended the Court should apply consumer-injury principles from Sherman Act precedents. *See* ECF 99 at 6, 8; ECF 102 at 6; ECF 124 at 6. The Court is not persuaded those precedents are informative here. Leapfrog's key case, *Tymar Distribution LLC v. Mitchell Group USA, LLC*, 558 F. Supp. 3d 1275, 1279-80, 1289 (S.D. Fla. 2021), applied antitrust-like principles "in a competition case" involving intrabrand competition. This is not a competition case. Leapfrog does not compete with the Community Hospitals in providing healthcare. In any event, even under antitrust principles, consumer injury is not limited to higher prices. *See FTC v. Ind. Fed'n of Dentists*, 476 U.S. 447, 461–62 (1986) (withholding "information desired by consumers" to make informed comparisons "may be condemned *even absent proof that it resulted in higher prices*" (emphasis added)).

decisions as a result, including declining or delaying medical care; leaving against medical advice; and bypassing the Community Hospitals. Findings ¶¶ 144–46, 150, 156, 166–70, 172–75, 187.

248. After seeing the post-Fall 2024 approach Safety Grades for the Community Hospitals, patients were "afraid" to receive care at the Community Hospitals, postponing needed procedures and even leaving against medical advice. For example, one patient left despite an open fracture and the attendant infection risks after he "verbalized" that he "wanted to go to" a different hospital "against medical advice" "due to the leap frog reviews." Findings ¶ 173. Hospital CEO Mr. Cazares gave another particularly illustrative example at trial when explaining the actions he was forced to take in response to negative publicity from Leapfrog's Safety Grades. After a patient demanded an explanation of Palm Beach Gardens' failing Safety Grade, Mr. Cazares called him to reassure him about the hospital's safety—yet he never heard back from that patient. Findings ¶ 156.

249. Additionally, walk-ins declined at every hospital and the CEOs attributed those declines to the Safety Grades, after investigating other potential causes. Findings ¶¶ 147, 159, 166, 179, 191; *see also* Findings ¶¶ 141, 154. The Findings also establish that patients presented to other hospitals "first" and were later transferred when those hospitals could not provide needed care, creating risks of delay in treatment. Findings ¶¶ 168–70. Meanwhile, patients frequently were transferred to St. Mary's from Jupiter Medical Center, as Jupiter proved unable to care for patients in medical emergencies. Findings ¶ 168 (transfers increased "significantly"). That transfer process resulted in inflated fees due to duplicative bills as well as delays in treatment. Findings ¶ 170 (delays and fees). These patient statements and diversion evidence, together with the timing of the Fall 2024 Safety Grades and the objective admissions indicators, support a causal link between the challenged Safety Grades and consumer deception. *In re Stand 'N Seal*, 623 F. Supp. 2d, 1355, 1374 (N.D. Ga. 2009).

250. ***Hospitals.*** The evidence at trial established that Leapfrog "aim[s]" its Safety Grades at hospitals, rendering them consumers of the Safety Grades under FDUTPA as well. ECF 139 at 10. Leapfrog urges hospitals to pay to license "Designated Logos" prominently featuring the Safety Grades. Findings ¶ 120. Leapfrog markets the Safety Grades to hospitals as a way to "showcase" their commitment to safety, touting that hospital licensure of the Safety Grades, and corresponding placement of the Safety Grades in hospital banners, brochures, and other materials can produce "recognition" of a hospital by its "team and community." Findings ¶ 120. A

competing hospital, Jupiter Medical Center, for example, is prominently featured as a licensee in Leapfrog's marketing materials, which feature a mockup of Jupiter's lobby with a large banner displaying Jupiter's "A" Safety Grade. Findings ¶ 120. This evidence shows Leapfrog expects hospitals to license, rely upon, and consume its Safety Grades.

251. FDUTPA is designed to protect not only members of the public (like patients) from unfair acts, but also "legitimate business enterprises" like hospitals from "unfair methods of competition." Fla. Stat. § 501.202(2). The Findings establish that Leapfrog's Safety Grades create an unfair method of competition for participating hospitals and non-participating hospitals. Leapfrog pressures hospitals into participating in its Survey with its non-participation penalty (thereby generating data that Leapfrog can market and monetize), resulting in higher Safety Grades that those hospitals in turn can use to bolster their reputations in the community. Conversely, non-participating hospitals (like the Community Hospitals) that resist Leapfrog's Survey are tagged with lower Safety Grades that misleadingly imply those hospitals are unsafe, resulting in patient distrust. Hospitals are the direct object of this coercive practice, which is tied to Leapfrog's participation-driven revenue model. *See* Findings ¶¶ 16, 109–12.

252. The trial evidence also establishes that hospitals' reliance on the Safety Grades caused actual deception, and thus harm, to the New York-based Hospital for Special Surgery ("HSS"). HSS relied on the Safety Grades when asking Good Samaritan's CEO to explain why Good Samaritan was awarded an "F" and, notwithstanding the explanation, in canceling its surgical contract with Good Samaritan shortly thereafter. Findings ¶¶ 196–97. Thus, hospitals likewise consume—and are deceived and unfairly injured by—Leapfrog's Safety Grades.

253. ***Insurers and Health Plans.*** The Community Hospitals further showed that Leapfrog's Safety Grades are "aim[ed]" at insurers and other healthcare payors as a supposedly valuable and reliable way for those entities to determine where beneficiaries should obtain medical care. Leapfrog's marketing materials target insurers and urge them to "[p]artner with Leapfrog," touting the Safety Grades as providing "proven value" to insurers. Findings ¶ 121. Leapfrog also designs pricing and discount structures to incentivize insurers to license the Safety Grades, including discounts tied to bundling and multi-year commitments and time-limited pricing; as a result, numerous insurers license Leapfrog's Safety Grades. Findings ¶ 121.

254. Leapfrog's targeting of insurers produced actual deception and resulted in consumer harm. For example, Humana sent concerned letters to Good Samaritan, Delray, and West

Boca referencing Leapfrog's Safety Grades and urging the hospitals to address "their performance on safety measures"—reflecting the misimpression that Leapfrog's Safety Grades measured the Community Hospitals' actual safety performance. *See* Findings ¶¶ 151, 180, 194–95. Thus, insurers likewise consume, and were deceived by, Leapfrog's Safety Grades.

255. ***Employers.*** The evidence at trial establishes that Leapfrog "aim[s]" its Safety Grades at employers, including specifically in Florida. ECF 139 at 10. Leapfrog was founded by employer and purchaser groups and continues to market and disseminate the Safety Grades to Florida employers to influence healthcare purchasing decisions, including through its partnership with the Florida Alliance for Healthcare Value. Findings ¶¶ 12, 115. Leapfrog's CEO Ms. Binder confirmed that employers reference Leapfrog's Safety Grades when making decisions about where employees should seek medical care. Findings ¶ 115. This employer targeting reinforces the participation pressure created by the non-participation penalty: the more employers rely on Safety Grades, the stronger the incentive for hospitals to participate and avoid the penalty, thereby increasing the Survey data Leapfrog is authorized to use "in a commercial manner for profit." Findings ¶ 16, 117–19, 122. Leapfrog therefore distorted Florida employers' choices through the dissemination of false information as well.

256. ***Doctors, Nurses, and Other Healthcare Staff.*** The evidence at trial establishes that Leapfrog "aim[s]" its Safety Grades at doctors, nurses, and other healthcare staff in connection with its licensing and marketing efforts. ECF 139 at 10. Leapfrog's marketing materials tout the Safety Grades' impact on staff recruitment and retention, and even suggest that hospitals should share their Leapfrog accolades on job listing websites and in social media recruitment campaigns. Findings ¶ 120. This evidence shows Leapfrog expects medical staff to encounter and rely on the Safety Grades in making employment decisions, confirming the healthcare staff are consumers of the Safety Grades for FDUTPA purposes.

257. Leapfrog's targeting of medical professionals also produced concrete effects. For example, following the Fall 2024 "F" Safety Grade and ensuing reputational fallout, eight of Good Samaritan's top orthopedic surgeons elected to obtain privileges at Jupiter Medical Center and Good Samaritan lost the HSS relationship. Findings ¶¶ 196–98.

258. Accordingly, these facts satisfy the "substantial consumer injury" prong of the modern three-factor test.

259. *Second*, these injuries are "not outweighed by any countervailing benefits to

consumers." Leapfrog argued that the non-participation penalty increases participation and thereby improves safety, but the Findings establish that Leapfrog conducts virtually no meaningful auditing and offered no record support that the penalty improves safety outcomes. *See* Findings ¶¶ 55–59. Consumer deception and coercion are not "countervailing benefits" under the three-factor test, *FTC v. World Patent Mktg., Inc.*, 2017 WL 3508639, at *16 (S.D. Fla. Aug. 16, 2017), and "'[c]onsumer deception, by its very nature, is against the public interest,'" *Osmose, Inc. v. Viance, LLC*, 2009 WL 10665750, at *10 (N.D. Ga. Mar. 20, 2009) (citation omitted).

260. *Third*, consumers could not "reasonably have avoided" these injuries. *SMS Audio*, 2017 WL 11631378, at *3. Hospitals cannot opt out of being graded; non-participation does not prevent publication, dissemination, or comparison, and the penalty "goes away" only if the hospital participates. *See* Findings ¶¶ 105–13, 118 (Leapfrog widely disseminates Safety Grades through media, purchases targeted ads to "harass" hospitals with low Safety Grades). The record also showed that some viewed the consequences of non-participation as "blackmail" and that Leapfrog amplified its Safety Grades through widespread dissemination, including targeted advertising. *See* Findings ¶ 129 ("penalty" for nonparticipation equivalent to "blackmail"), ¶¶ 105–13. Nor could patients, medical staff, employers, and insurers reasonably avoid the Safety Grades, which reach them through media coverage, employer dissemination, and search-driven targeted advertising, without an accompanying explanation of the methodology. Findings ¶¶ 105–16. Leapfrog points to website disclosures, but the Findings establish those disclosures do not explain how scores were assigned for no-data measures and are not reasonably accessible or consumer-readable for typical consumers. Findings ¶¶ 91–104. Leapfrog also conducted no testing after its methodology change to determine whether average consumers can even understand those disclosures, much less its dense methodology document purportedly explaining the non-participation penalty. *See* Findings ¶ 101. And even if such disclosures were relevant, the record does not show that reasonable consumers broadly read or understood them. *See* Findings ¶¶ 93–97, 100–01.

261. For these reasons, the Court finds that Leapfrog's challenged practices are "unfair" under the modern three-factor test. *See SMS Audio*, 2017 WL 11631378, at *3 (citing *Porsche Cars N. Am., Inc.*, 140 So. 3d at 1096–97).

3. *Leapfrog's Challenged Practices Are Also Unfair Under The 1964 Test*

262. The Community Hospitals have likewise demonstrated that Leapfrog's Safety Grades, Safety Grade methodology, and associated conduct are "unfair" under the alternative 1964

test, which looks to whether conduct "'offends established public policy'" and "is 'immoral, unethical, oppressive, unscrupulous or substantially injurious to consumers.'" *Marrache v. Bacardi U.S.A., Inc.*, 17 F.4th 1084, 1098 (11th Cir. 2021) (quoting *PNR, Inc.*, 842 So. 2d at 777). This definition, which was adopted from the FTC's 1964 Policy Statement and has been embraced by the Florida Supreme Court, is the "latest statement of state law by the state supreme court," *World Harvest Church, Inc. v. Guideone Mut. Ins. Co.*, 586 F.3d 950, 957 (11th Cir. 2009).

263. *First*, these practices evince the kind of "deceptive and bullying conduct" that offends Florida public policy, *Marco Island Cable*, 312 F. App'x at 214, for all the reasons stated above in connection with the "deceptive" prong of FDUTPA. *See supra* ¶¶ 218–34.

264. *Second*, these practices qualify, at minimum, as "oppressive" or "unscrupulous." *Marrache*, 17 F.4th at 1098. They are oppressive because the record shows that Leapfrog uses the threat of arbitrarily assigned Safety Grades to coerce participation in the Survey among hospitals that are unwilling or unable to endure what one member of Leapfrog's Expert Panel described as "blackmail" designed to increase participation. Findings ¶ 129. The Survey is thus effectively involuntary. And these same practices are unscrupulous because the record shows that Leapfrog is not forthcoming to the public about how it calculates its Safety Grades or what they represent. *See supra* ¶¶ 226–34.

265. *Third*, these practices are "substantially injurious to consumers," *Marrache*, 17 F.4th at 1098, for the same reasons as discussed above with respect to the modern three-factor test, *see SMS Audio*, 2017 WL 11631378, at *3; *supra* ¶¶ 242–61.

266. In sum, the Court finds that the Community Hospitals have established that Leapfrog has engaged in "unfair" practices relating to its "Safety Grades" and associated coercive conduct, regardless of whether one applies the modern three-factor test or the older test deriving from the FTC's 1964 Policy Statement.

C. The Community Hospitals Are Aggrieved By Leapfrog's Unlawful Practices

267. The Court concludes that the Community Hospitals have proven by a preponderance of the evidence they satisfy FDUTPA's "aggrievement" requirement.

268. "[A]ggrieve[ment]" under FDUTPA is "expansive," requires merely some "specific … grievance," and, for injunctions and corresponding declaratory judgments, does not require showing economic harm. *Akearn*, 180 So. 3d at 172–73. A plaintiff seeking injunctive and declaratory relief need only show an identifiable injury that is not "merely speculative." *Stewart*

Agency, Inc., 266 So. 3d at 214. Such injury may include reputational harm and damage to goodwill, ECF 41 at 8; operational disruption, *Common Cause/Georgia v. Billups*, 554 F.3d 1340, 1350 (11th Cir. 2009); and "consumer confusion," *Colonial Van Lines, Inc. v. Colonial Moving & Storage, LLC*, 2020 WL 6700449, at *4 (S.D. Fla. Oct. 20, 2020). Aggrievement is a low bar and concerns merely whether Leapfrog's deception has caused, and continues to cause, actual or threatened injury to the Community Hospitals. The Findings establish Leapfrog's challenged practices cause and continue to threaten reputational and operational injury to the Community Hospitals. *See* Findings ¶¶ 141–210.

269. Leapfrog intends its Safety Grades to influence consumer choice and hospital reputation, and the Findings establish wide dissemination of the "D" and "F" Safety Grades through media, advertising, employer channels and search-driven advertising. *See* Findings ¶ 110 ("Tenet Hospitals at Bottom of Local Safety Grades" article), ¶ 25 (website directing consumers to "always" use the Safety Grade when deciding which hospital to visit); ¶¶ 105–07 (Safety Grades covered in hundreds of articles with a reach of over 11 billion); ¶¶ 112–13 (Google ads targeting the Community Hospitals). The reach of the Safety Grades was magnified by a TikTok video that received more than one million views and listed four of the Community Hospitals alongside their Leapfrog Safety Grades, describing them as among the "worst" hospitals in Florida. Findings ¶ 110. Expert testimony and Leapfrog's own witnesses confirmed that poor Safety Grades can harm hospital reputation and drive consumer choice. *See* Findings ¶¶ 202–04 ("substantial literature" supports "that patients are relying on hospital ratings," that "unreliable grades" cause reputational harm, and that Leapfrog's Safety Grades "likely negatively impact consumer perceptions of the Community Hospitals" and "deter consumers" from seeking care there); ¶ 200 (Romano agreeing that "of course" poor Safety Grades can harm reputation).

270. The Findings also establish concrete harms and ongoing effects from Leapfrog's Safety Grades.

271. The Court credits the Community Hospital CEOs' testimony—corroborated by contemporaneous records and objective indicators—of identifiable, non-speculative reputational harm, patient diversion and delay of care, reduced walk-in volumes relative to EMS admissions, insurer inquires, and sustained operational disruption. *See* Findings ¶¶ 141–99.

a. *Delray.* Ms. Havericak, CEO of Delray, testified to numerous harms, including patient confusion and erosion of community confidence caused by the Safety

Grades. *See* Findings ¶¶ 143, 144.

b. *Palm Beach Gardens*. Mr. Cazares, CEO of Palm Beach Gardens, testified to similar harms, including numerous complaints and concerns from physicians, staff, governing board members, and community members in response to Safety Grade. Findings ¶¶ 153–54, 157 ("The damage came on pretty strong when the 'F' came out" and is "still there and continues"). He also testified about a cardiac patient who declined to have a procedure performed at Palm Beach Gardens—despite the hospital's specialty in cardiac care—because of the failing Leapfrog Grade. Findings ¶ 156.

c. *St. Mary's*. Ms. McCauley, CEO of St. Mary's, likewise explained several resulting harms, including patients diverting to other hospitals only to be transferred to St. Mary's when the other hospital could not provide the needed care. Findings ¶¶ 168, 169. She further testified to erosion of St. Mary's brand in the community. Findings ¶ 165 (brand analysis showing that after the Safety Grade came out, the percentage of patients that would choose St. Mary's fell from 78 to 55 percent).

d. *West Boca*. Mr. Hanlon, CEO of West Boca, also testified to reputational injury and patient diversion. *See* Findings ¶ 176. He noted that a patient with a compound fracture left against medical advice in response to West Boca's "F" Safety Grade, and a patient with scheduled underarm surgery left against medical advice after seeing media coverage of the "F" Safety Grade. Findings ¶¶ 173–75.

e. *Good Samaritan*. Finally, Ms. Montgomery, CEO of Good Samaritan, testified to the same reputational and operational harms, explaining that the Safety Grade had caused a "fire storm" and numerous patient and community member complaints. Findings ¶¶ 186, 188, 189. In particular, the HSS orthopedic group "was upset about" the Safety Grade and canceled an $8 million surgery contract, eliminating eight surgeons performing 1,300 surgeries a year. Findings ¶ 196–97.

272. Insurer communications referencing Leapfrog's Safety Grades and urging "performance" responses further corroborate reputational harm and ongoing injury due to the

Grades. *See* Findings ¶¶ 151 (letter directed to Delray), 180 (letter directed to West Boca), 194–95 (letter directed to Good Samaritan).

273. Objective volume evidence—including walk-in declines relative to EMS admissions—corroborates the operational impact of the challenged Safety Grades. *See* Findings ¶¶ 147, 159, 166, 179, 191.

274. Leapfrog's counterarguments do not defeat aggrievement. Leapfrog's contention that the Community Hospitals were not harmed because certain overall metrics remained positive is logically and legally irrelevant. A plaintiff's having "generated a net profit … does not demonstrate that [it] suffered no harm." *Wyndham Vacation Ownership, Inc. v. Slattery, Sobel & Decamp, LLP*, 2024 WL 5703196, at *11 (M.D. Fla. Aug. 14, 2024). Nor does it matter if other factors (such as CMS star ratings) "also contributed" to these injuries, because "proximate cause" does not require Leapfrog to be the "sole cause" of the Community Hospitals' injuries. *Cox v. Adm'r U.S. Steel & Carnegie*, 17 F.3d 1386, 1399 (11th Cir. 1994).

275. Accordingly, the Court concludes that the Community Hospitals are aggrieved by Leapfrog's actions.

III. LEAPFROG'S CONDUCT OCCURS IN TRADE OR COMMERCE IN FLORIDA

276. The Community Hospitals have proven by a preponderance of the evidence that Leapfrog's conduct to solicit Survey responses, distribute its Safety Grades, and advertise those Grades occurs in "trade or commerce" in Florida. Fla. Stat. § 501.204(1). Leapfrog does not dispute that it operates in Florida "trade or commerce," *id.*, and it has stipulated to this effect. ECF 129 ¶ 174.

IV. LEAPFROG'S AFFIRMATIVE DEFENSES FAIL

277. The Court finds that Leapfrog failed to meet its burden on its asserted affirmative defenses: its alleged "good faith conduct," the avoidance-of-consequences doctrine, and anti-SLAPP. *See* ECF 75 at 47–49. Leapfrog did not pursue, or even reference, any of these affirmative defenses at trial.

278. *Good faith.* Leapfrog abandoned its good-faith defense by failing to respond to the Community Hospitals' motion for summary judgment on it. *Rd. Sprinkler Fitters Local Union No. 669 v. Indep. Sprinkler Corp.*, 10 F.3d 1563, 1568 (11th Cir. 1994). Even if the defense is not forfeited, good faith is no defense under FDUTPA. *See In re Schurtenberger*, 2014 WL 92828, at *5 (Bankr. S.D. Fla. Jan. 9, 2014). And even if it were, the Court finds it unsatisfied on the facts

here, which undermine the notion that Leapfrog undertook its deceptive and unfair practices in good faith. *See, e.g.*, Findings ¶¶ 109 (disseminating the Safety Grades in social and traditional media), 112 (targeting the Community Hospitals with ads).

279. *Avoidable consequences.* The doctrine of avoidable consequences is "inapplicable" where the plaintiff is "not seeking damages," *Armstrong v. U.S. Bank Nat'l Ass'n*, 729 F. Supp. 3d 1291, 1307 (M.D. Fla. 2024), like here, ECF 74 (Amended Complaint) at ¶¶ 102, 104, 109, 110. And the undisputed record shows the Community Hospitals acted reasonably to mitigate reputational harm, including by counseling patients concerned about the Leapfrog Safety Grade. *See, e.g.*, Findings ¶¶ 143–45 (Delray), 156–57 (Palm Beach Gardens), 164 (St. Mary's), 172 (West Boca), 187 (Good Samaritan).

280. *Anti-SLAPP.* None of the evidence at trial changes this Court's prior determination that the Community Hospitals' claim does not offend Leapfrog's asserted First Amendment rights. ECF 41 at 6 (motion to dismiss order). Moreover, Leapfrog's anti-SLAPP argument is procedurally foreclosed because it is "not an affirmative defense," but rather a procedural mechanism to seek early resolution of a claim. *Wyndham Vacation Ownership, Inc. v. Square One Dev. Grp., Inc.*, 2022 WL 21374382, at *4 (M.D. Fla. Feb. 2, 2022). And, regardless, Leapfrog failed to establish *any* of the elements of an anti-SLAPP defense at trial. Fla. Stat. § 768.295(3).

V. INJUNCTIVE AND DECLARATORY RELIEF ARE APPROPRIATE

281. The Court now turns to the appropriate remedies for Leapfrog's FDUTPA violation. For the reasons discussed below, permanent injunctive relief and declaratory relief are warranted.

A. A Permanent Injunction Is Warranted

282. The Community Hospitals are entitled to a permanent injunction in response to Leapfrog's past, ongoing, and likely future violations of FDUTPA. A permanent injunction requires (1) actual success on the merits, (2) irreparable injury, (3) a balance of the equities that favors the plaintiff, and (4) consistency with the public interest. *Klay v. United Healthgroup, Inc.*, 376 F.3d 1092, 1097 (11th Cir. 2004). Each element of this test is satisfied here.

283. *First*, the Community Hospitals have established actual success on the merits. The Findings establish that Leapfrog's Safety Grades, methodology, and associated representations are deceptive (by misleading consumers about how Leapfrog calculates its Safety Grades) and unfair (by distorting consumer choice and attempting to coerce hospital participation in Leapfrog's

Survey through threatened reputational injuries). *See, e.g.*, Findings ¶¶ 66–90, 117–40.

284. *Second*, the Community Hospitals have established both ongoing and future irreparable injuries. Irreparable injuries are those that "cannot be undone through monetary remedies." *Ferrero v. Associated Materials, Inc.*, 923 F.2d 1441, 1449 (11th Cir. 1991). The "loss of customers and goodwill" has long been considered "irreparable." *Id.* The Findings establish reputational and operational harm, including patient diversion and delay of care, physician concerns, insurer inquiries, and declines in patient volume. *See* Findings ¶¶ 141–210. Absent judicial relief, these injuries are likely to continue and compound. *See, e.g.*, Findings ¶¶ 155, 199, 210.

285. *Third*, the balance of the equities strongly favors the Community Hospitals. Leapfrog has "no legitimate interest in continuing to engage in unlawful acts and practices." *FTC v. Hispanic Global Way, Corp.*, 2014 WL 12531538, at *4 (S.D. Fla. July 1, 2014). These practices have harmed the Community Hospitals by misinforming the public at large—including patients, physicians, employers, and insurers—about hospital safety, thereby distorting healthcare decision-making and undermining trust in publicly disseminated safety information. Conversely, the Community Hospitals have a pressing need for injunctive relief so that they can provide healthcare in their communities without suffering reputational and operational injuries from Leapfrog's unlawful conduct.

286. *Finally*, relief for the Community Hospitals is clearly in the public interest. There is a "strong public interest in preventing the deception of consumers." *Popular Bank of Fla. v. Banco Popular de P.R.*, 9 F. Supp. 2d 1347, 1364 (S.D. Fla. 1998). FDUTPA likewise recognizes the strong need "[t]o protect the consuming public and legitimate business enterprises" from "deceptive" and "unfair acts." Fla. Stat. § 501.202(2). An injunction will ensure that patients and other consumers will receive non-misleading and truthful information about the safety of the Community Hospitals.

287. Having determined that an injunction is warranted, the Court now turns to the appropriate scope of relief. FDUTPA authorizes courts "to enjoin" a practice that "is violating, or is otherwise likely to violate," the statute. Fla. Stat. § 501.211(1). Any such injunction should be broad enough to ensure that the Community Hospitals are afforded "complete relief." *Califano v. Yamasaki*, 442 U.S. 682, 702 (1979). As a result, courts in the consumer-protection context have authorized broad, multifaceted injunctions where necessary "to ensure future compliance" and that

consumers are treated "fairly." *Corpay, Inc.*, 164 F.4th at 849 (affirming injunction compelling multiple disclosures and business reforms). At the same time, the Court is mindful that the injunction should be "no more burdensome to [Leapfrog] than necessary" to achieve those goals. *Califano*, 442 U.S. at 702. With those principles in mind, the Court finds that the following injunctive provisions are necessary and appropriate in light of the violation established here.

288. *First*, Leapfrog must cease assigning a Safety Grade to the Community Hospitals under the current methodology or any similar methodology that: (i) assigns assumed or imputed values to calculate Safety Grades due to the lack of hospital-provided performance data; (ii) scores non-participating hospitals differently than participating hospitals by using different values or using differently weighted values to calculate Safety Grades; or (iii) that otherwise reduces a hospital's Safety Grade due to the failure to provide performance data.

289. Removing the Community Hospitals from Leapfrog's Safety Grades is expressly authorized by FDUTPA's language permitting the injunction of violative practices. Fla. Stat. § 501.211(1). Including the Community Hospitals in Leapfrog's unlawful Safety Grades is such a practice. Removing them is thus "properly tailored … to the wrong" being remedied. *Corpay, Inc.*, 164 F.4th at 846. Moreover, removal is necessary because enhanced disclosures alone are insufficient to provide complete relief to the Community Hospitals for several reasons. Most fundamentally, Leapfrog's practice of subjecting hospitals to artificially low Safety Grades in the absence of data—indeed, *because of* the absence of data—is itself deceptive and unfair. That differential treatment of participating and non-participating hospitals simply because of the fact of participation represents a core aspect of the violation here. Merely increasing disclosures would not remedy the harm the Community Hospitals suffer from being involuntarily subjected to a deceptive and unfair penalty that they otherwise could avoid only through participation in Leapfrog's Survey. *See* Findings ¶¶ 117–18. Nor would disclosures alone prevent further targeting and "harass[ment]" by Leapfrog through ads designed to highlight the Community Hospitals' failing Safety Grades. Findings ¶¶ 112–13. In addition, the evidence at trial established that few consumers actually read or understand Leapfrog's disclosures, *see* Findings ¶¶ 91–104, and that Leapfrog apparently undertook no low-literacy testing after the Fall 2024 methodology change to discern whether average consumers can understand the company's representations about its new methodology, *see* Findings ¶ 102. And even if Leapfrog instituted enhanced disclosures, it is unclear that consumers would fully appreciate their import. Leapfrog markets its scores as "Safety

Grades," inherently communicating that they measure real-world safety rather than Survey responsiveness. It is thus unlikely that even with further disclosures, reasonable consumers would understand that the so-called "Safety Grades" do not measure safety. And those disclosures would not necessarily accompany redistribution of the Safety Grades by other outlets, such as newspapers and social-media posts. Indeed, as the evidence showed at trial, the Safety Grades are nonvoluntary, travel widely, and often travel alone—without any additional disclosures or context. *See* Findings ¶¶ 105, 107, 111, 117. For those reasons, reputational injuries to the Community Hospitals would likely continue absent removal from the Safety Grades *and* corrective disclosures.

290. The Court rejects Leapfrog's suggestion that removal of the Community Hospitals from the Safety Grades constitutes a "prior restraint on free-speech." ECF 99 at 19. An injunction is squarely "remedial"—not a prior restraint—when it is based on "a judicial determination that the defendant['s] past conduct was … unlawful" and restrains the defendant from continuing to subject the plaintiff to that same unlawful conduct. *Lucero v. Trosch*, 121 F.3d 591, 600–01 (11th Cir. 1997) (rejecting prior-restraint argument). That is precisely what the injunction here does. There is no constitutional issue with restraining the continuation of a practice that this Court has finally adjudicated as unfair and deceptive.

291. The Court also notes that it need not consider at this time whether or how Leapfrog could revise its Safety Grade methodology to cure the violations found here based on the record adduced at trial. Leapfrog has failed to show that it has implemented (or even conceptualized) any modifications to its current methodology, which largely depends on data provided by hospitals. Nothing prohibits Leapfrog from seeking future "modification of the terms of [the Court's] injunctive decree" if Leapfrog can show that "the circumstances, whether of law or fact, obtaining at the time of its issuance have changed, or new ones have since arisen." *Sys. Fed'n No. 91 v. Wright*, 364 U.S. 642, 647 (1961). Leapfrog would "bea[r] the burden of establishing that a significant change in circumstances warrants revision of the decree," *Fla. Med. Ass'n v. Dep't of Health, Educ., & Welfare*, 947 F. Supp. 2d 1325, 1338 (M.D. Fla. 2013), and the Court would have to be "convinced … that existing conditions differ so substantially from those which precipitated the decree as to warrant judicial adjustment," *Hodge v. Dep't of Housing & Urban Dev.*, 862 F.2d 859, 862 (11th Cir. 1989). The Court declines to opine, on a hypothetical state of facts, whether Leapfrog could satisfy that showing.

292. *Second*, within 5 business days of judgment, Leapfrog must withdraw from its

websites and cease promoting the deceptive and unfair Safety Grades assigned to the Community Hospitals for Fall 2024, Spring 2025, and Fall 2025. Requiring Leapfrog to remove the Safety Grades adjudicated to be deceptive and unfair in this action is expressly authorized by FDUTPA, Fla. Stat. § 501.211, and is necessary to remedy the Community Hospitals' ongoing injuries from Leapfrog's deceptive and unfair Safety Grades. Indeed, deception of consumers and harms to the Community Hospitals will continue for as long as Leapfrog's deceptive and unfair Safety Grades remain on its website and in related materials. Leapfrog "'has no equitable interest in perpetuating the false and misleading claims'" it previously has made. *PBM Prods., LLC v. Mead Johnson & Co.*, 639 F.3d 111, 127 (4th Cir. 2011). Moreover, this form of targeted relief clearly presents no overbreadth concern. It simply requires Leapfrog to cease promoting precisely the same representations finally adjudicated to be unlawful in this action. *See Lucero*, 121 F.3d at 600–01.

293. *Third*, within 30 days of judgment, Leapfrog must send corrective disclosures to all entities that paid to license the Fall 2024, Spring 2025, and Fall 2025 Safety Grades, disclosing that those Safety Grades were found to be deceptive and unfair in this action. Leapfrog must file a declaration documenting the reasonable and diligent efforts it has undertaken to accomplish this directive within 45 days of judgment. These corrective disclosures are likewise critical to remedying Leapfrog's deception of consumers (such as insurers) who paid to license the Safety Grades, as well as the reputational injuries that ensued to the Community Hospitals after those consumers were deceived into believing the Safety Grades are the product of a legitimate methodology. *See* Findings ¶¶ 105–16; *see also, e.g.*, Findings ¶¶ 151, 180, 194–95 (discussing letters from insurer Humana). Numerous courts have recognized the need for remedial disclosures in similar cases. *See, e.g.*, *Corpay, Inc.*, 164 F.4th at 849–50 (affirming permanent injunction requiring defendant "to make disclosures 'unavoidable,'" so that "customers" would be treated "fairly"); *MacuHealth, LP v. Vision Elements, Inc.*, 2024 WL 3738489, at *8 (M.D. Fla. Aug. 9, 2024) (finding, in a FDUTPA case, that "a corrective statement is appropriate to remedy lingering confusion caused by Defendants' past and ongoing deception" (internal quotation marks omitted)).

294. *Fourth*, Leapfrog must be required to place the same corrective disclosures in future contracts, print and electronic advertising materials, and other print and electronic documents that promote paid licensure of the next six cycles of Safety Grades accessible to or in the following five zip codes: 33401, 33407, 33410, 33428, and 33484. These targeted, additional disclosures are likewise necessary "to remedy lingering confusion" from Leapfrog's past conduct. *MacuHealth*,

LP, 2024 WL 3738489, at *8. Indeed, Leapfrog targeted consumers in these same zip codes, diverting grant money it received to ensure that consumers "search[ing] for any of the five specific" Community Hospitals would see a Google "ad displaying their Hospital Safety Grade." Findings ¶¶ 112–13 (describing the targeted ads). Absent forward-looking disclosures, consumers in these areas may be further deceived into believing that Leapfrog's deceptive and unfair practices were limited to the Fall 2024, Spring 2025, and Fall 2025 Safety Grades. And such disclosures are necessary to redress the Community Hospitals' ongoing reputational injuries. Without these disclosures, future consumers such as insurers and employers may not understand that the reason the Community Hospitals no longer appear in the Safety Grades is not because of a safety issue or other negative information, but because they prevailed in this action. And, again, if Leapfrog can establish that the disclosures are no longer necessary, it can seek to modify the injunction. *See supra* ¶ 291.[15]

295. *Fifth*, Leapfrog must refrain from taking any action to circumvent the relief set out above. It is well-established that it is "impermissible for the defendant to circumvent an injunction," whether through overt acts in defiance of the decree or through "overly narrow interpretations," *Alley v. U.S. Dep't of Health & Hum. Servs.*, 590 F.3d 1195, 1205 (11th Cir. 2009), and "literal and hypertechnical reading[s]," *AmBrit, Inc. v. Kraft, Inc.*, 812 F.2d 1531, 1548 n.89 (11th Cir. 1986). To ensure that the injunction affords effective and complete relief, the Court makes clear that its scope "is not limited to the precise method[ology]" and practices confronted here, but extends to any similar conduct Leapfrog may take to "achiev[e] the same end[s]" of deceptive or unfair treatment of the Community Hospitals. *Alley*, 590 F.3d at 1206–07.

296. Finally, the Court retains jurisdiction to enforce compliance with the injunction. *See Alderwoods Grp., Inc. v. Garcia*, 682 F.3d 958, 970 (11th Cir. 2012).

B. A Declaratory Judgment Is Also Warranted

297. For similar reasons, the Court also concludes in its discretion that the Community Hospitals are entitled to a declaratory judgment. *See* 28 U.S.C. § 2201(a) (court may declare "the

[15] The Court notes that in light of FDUTPA's disjunctive test, it would impose the same injunction even if Leapfrog's conduct only were deceptive or only were unfair. The Court also would impose the same injunction even if it were to disregard the objected-to statements by patients reflecting confusion and distrust of the Community Hospitals, given that the Community Hospitals independently adduced evidence of patient harm through credible testimony by their CEOs about their own impressions of actual patient confusion, in additional to evidence of actual harm to other types of consumers, such as employers, insurers and health plans, and medical staff. *See supra* ¶¶ 246–59; *see also* Findings ¶¶ 141–210. That evidence of actual harm also renders irrelevant whether FDUTPA requires actual or only likely harm.

rights and other legal relations of any interested party" in any "case of actual controversy within [the court's] jurisdiction"). There is plainly an actual controversy between the parties, this case falls within the Court's jurisdiction, *see supra* ¶¶ 212–15, and a declaratory judgment would usefully clarify the parties' rights by making clear that Leapfrog's practices are deceptive and unfair.

298. Accordingly, the Court will also enter a declaratory judgment that Leapfrog's Fall 2024, Spring 2025, and Fall 2025 Safety Grades as applied to the Community Hospitals, the public representations Leapfrog makes about how it calculates those Safety Grades, and Leapfrog's punitive grading methodology assigning failing "safety" scores in the absence of actual data are deceptive and unfair under FDUTPA.

VI. THE COMMUNITY HOSPITALS ARE ENTITLED TO ATTORNEYS' FEES

299. The Community Hospitals as prevailing parties under FDUTPA are entitled to recover their reasonable attorneys' fees and taxable costs, in an amount to be determined after further proceedings. Fla. Stat. § 501.2105.

300. Once a party prevails under FDUTPA, the Court may award reasonable attorneys' fees and costs after considering the applicable equitable factors. *Chow v. Chak Yam Chau*, 640 F. App'x 834, 838–39 (11th Cir. 2015) (citing *Humane Soc'y of Broward Cnty., Inc. v. Fla. Humane Soc'y*, 951 So. 2d 966, 971–72 (Fla. 4th DCA 2007)).

301. The Court finds those factors strongly counsel in favor of awarding fees and costs to the Community Hospitals. *First*, the litigation was extensive and expedited—commenced and completed in less than ten months. *Second*, based on its annual multi-million dollar revenue, and the multi-million dollar compensation awarded its CEO over the last few years, Leapfrog has the ability to pay a fee award, especially as there is no claim for monetary relief in this action. *See* Findings ¶ 12. *Third*, a fee award is necessary to deter similar FDUTPA violations where plaintiffs obtain only injunctive and declaratory relief. *Fourth*, Leapfrog's conduct was culpable (including post-suit amplification of the Community Hospitals' failing Grades through Google ads to "harass" the five plaintiffs). *See, e.g.*, Findings ¶ 112–13. *Fifth*, the Community Hospitals' claim is meritorious and was brought in good faith. *See Bluegreen Vacations Unlimited Inc. v. Timeshare Lawyers P.A.*, 2024 WL 3738890, at *9 (S.D. Fla. July 18, 2024). *Sixth*, Leapfrog advanced baseless dilatory positions and advanced false accusations that increased litigation burden and cost. *See* ECF 136 ¶ 160 (listing baseless arguments). *Seventh*, this case presented a straightforward

application of FDUTPA such that the "significant legal question," factor is neutral. *See Healthcare Res. Mgmt. Grp., LLC v. EcoNatura All Healthy World, LLC*, 2022 WL 1537757, at *10 (S.D. Fla. May 12, 2022).

302. The Court finds these factors support an award here. The amount of fees and costs will be determined upon a subsequent motion with supporting evidence and briefing.

Attorneys for The Leapfrog Group

AMENDED PROPOSED FINDINGS OF FACT AND CONCLUSIONS OF LAW

The Court presided over a five-day bench trial beginning on Friday, January 16, 2026 and concluding on Friday, January 23, 2026[1]on Count I of Plaintiffs' Amended Complaint alleging violations of the Florida Deceptive Unfair Trade Practices Act ("FDUTPA") and Count II for Declaratory Judgment. (ECF No. 74). Defendant, The Leapfrog Group ("Leapfrog"), answered the Amended Complaint and served affirmative defenses, including but not limited to, Anti-SLAPP. (ECF No. 75).

Pursuant to this Court's request at the conclusion of trial on Friday, January 23, 2026, Defendant hereby submits its Amended Proposed Findings of Fact and Conclusions of Law. . The Court hereby makes the following findings of fact and conclusions of law as to Count I and II of the Amended Complaint and Defendant's affirmative defense of Anti-SLAPP.

I. SUMMARY OF FINDINGS

1. The Court finds in favor of Defendant, The Leapfrog Group, on Count I.

2. The Court finds that there is no evidence of consumer harm, injury, or detriment caused by Leapfrog, its conduct or practices.

3. The Court also finds that Leapfrog's alleged acts and practices are not deceptive because the website provides transparent information and emphasized disclosures that eliminate the likelihood that a reasonable consumer acting under the circumstances would be deceived.

4. The Court also finds that Leapfrog's alleged acts and practices are not unfair because there is no evidence of substantial consumer harm, the public benefit outweighs any purported consumer harm, and the alleged consumer harm can otherwise be reasonably avoided.

5. The Court also finds that in light of Leapfrog publishing all of its information to the public, including but not limited to its Safety Grades, underlying scored data and methodology, free Survey and other fee tools, Leapfrog's acts and practices do not offend public policy and are not immoral, unethical, oppressive, unscrupulous nor substantially injurious to consumers.

[1] "Tr. Vol. 1" references will refer to trial transcripts from Friday, January 16, 2026, "Tr. Vol. 2" references will refer to trial transcripts from Tuesday, January 20, 2026. "Tr. Vol. 3" reference will refer to transcripts from Wednesday, January 21, 2026. "Tr. Vol. 4" references are to transcripts from Thursday, January 22, 2026. "Tr. Vol 5" are references to transcripts from Friday, January 23, 2026.

6. The Court also finds that there is no evidence that Plaintiffs were, are or will be aggrieved by Leapfrog, its conduct or practices.

7. Good Samaritan Medical Center is not entitled to injunctive nor declaratory relief.

8. Delray Medical Center is not entitled to injunctive nor declaratory relief.

9. Palm Beach Gardens Medical Center is not entitled to injunctive nor declaratory relief.

10. St. Mary's Medical Center is not entitled to injunctive nor declaratory relief.

11. West Boca Medical Center is not entitled to injunctive nor declaratory relief.

12. The Court finds in favor of Defendant, The Leapfrog Group, on Count II.

13. The Court finds in favor of Defendant, The Leapfrog Group, on its affirmative defense under Florida's Anti-SLAPP statute.

14. Defendant, The Leapfrog Group, is awarded reasonable attorney's fees as the prevailing party on Count I. Fla. Stat. § 501.2105(1).

15. Defendant, The Leapfrog Group, is awarded reasonable attorney's fees as the prevailing party on its affirmative defense for Anti-SLAPP. Fla. Stat. Ann. § 768.295(4).

II. FINDINGS OF FACT

A. THE PARTIES AND JURISDICTION

16. The Leapfrog Group is an independent, national not-for-profit organization that files annual 1099 tax forms.

17. Leapfrog is incorporated in the District of Columbia, with its principal place of business at 1775 K Street, NW, Suite 400, Washington, D.C. 20006.

18. Delray is incorporated in Florida, with its principal place of business at 5352 Linton Blvd., Delray Beach, Florida 33484. (ECF No. 74 at ¶7).

19. Delray is an accredited hospital with 536 licensed beds. (ECF No. 129 at ¶2).

20. Good Samaritan is incorporated in Florida, with its principal place of business at 1309 N. Flagler Dr., West Palm Beach, Florida 33401. (ECF No. 74 at ¶8).

21. Good Samaritan is an accredited hospital with 333 licensed beds. (ECF No. 129 at ¶6).

22. Palm Beach Gardens is incorporated in Florida, with its principal place of business at 3360 Burns Road, Palm Beach Gardens, Florida 33410. (ECF No. 74 at ¶9).

23. Palm Beach Gardens is an accredited hospital with 199 licensed beds. (ECF No. 129 at ¶9).

24. St. Mary's is incorporated in Florida, with its principal place of business at 901 45th St., West Palm Beach, Florida 33407. (ECF No. 74 at ¶10).

25. St. Mary's is an accredited hospital with 413 licensed beds. (ECF No. 129 at ¶12).

26. West Boca is incorporated in Florida, with its principal place of business at 21644 State Road 7, Boca Raton, Florida 33428. (ECF No. 74 at ¶11).

27. West Boca is an accredited hospital with 195 licensed beds. (ECF No. 129 at ¶15).

28. The Court has jurisdiction under 28 U.S.C. § 1332. (ECF No. 75 at ¶13).

B. SUMMARY OF ALLEGATIONS

29. Plaintiffs allege Leapfrog solicits healthcare information and then publishes it to consumers while commissioning "deceptive acts and unfair practices against Plaintiffs and the residents of Florida." (ECF No. 74 at ¶90).

30. Specifically, Plaintiffs claim Leapfrog made misleading representations about its Hospital Safety Grades and underlying scoring methodology. (*Id.* at ¶91).

31. Plaintiffs allege Leapfrog accepts money in exchange for "intentionally jiggering its Hospital Safety Grades to benefit the hospitals." (*Id.* at ¶92).

32. Plaintiffs allege Florida consumers harmed by being misled regarding the quality and safety of the hospitals because consumers make decisions about their healthcare that are against their best interests. (*Id.* at ¶99-100).

33. Florida consumers are allegedly harmed by "increasing the incident-to-hospital time" and "causing patients to choose hospitals that do not provide the types of critical care the Plaintiff Hospitals provide." (*Id.* at ¶100).

34. Plaintiffs are allegedly aggrieved due to weakened relationships with physicians, drop in-patient admissions, and complaints from patients. (*Id.* at ¶59-82).

C. THE HISTORY OF LEAPFROG

35. Leapfrog is a is a not-for-profit organization that was founded in 2000 by a group of employers (e.g., Boeing, Marriott, and several auto makers) who came together to address a critical, complex public safety issue – public reporting on hospital safety and quality. (Tr. Vol. 3, Binder, 86:5-87:7).

36. Leapfrog was founded to bring transparency to the safety and quality of hospital care which is achieved through administering the Leapfrog hospital survey. (Tr. Vol. 3, Danforth, 170:4-7).

37. In 2001, the Leapfrog Survey was conceived to solve for the lack of publicly reported hospital data and to embrace transparency in hospital culture. (Tr. Vol. 3, Binder, 89:20-90:11); (*Id.*, Danforth, 170:4).

38. When Leapfrog was founded in 2000, there was no publicly reported quality and safety data for hospitals, including no publicly reported Centers for Medicare and Medicaid Services ("CMS") data. (Tr. Vol. 3, Binder, 85:25-86:11).

39. At or around 2008, the CEO of Leapfrog, Leah Binder, testified before Congress to advocate for mandatory public reporting requirements by hospitals on critical issues like hospital-acquired infections ("HAI"), which was subsequently required just two years thereafter. (Tr. Vol. 3, Binder, 85:8-24; 28:13-14).

40. Leapfrog is and always has been a voice for transparency and a key catalyst in the public reporting of patient quality and safety data that is available to consumers today, including CMS. (Tr. Vol. 3, Binder, 86:12-21).

41. In 2012, Leapfrog created its Hospital Safety Grade for consumers: patients, caregivers, potential patients, and community members. (Tr. Vol. 3, Danforth, 180:6-11); (Tr. Vol. 3, Binder, 89:15-17); (ECF No. 186-1, Austin Dep., at 40:3-7, 244:8-245:10).

42. The Hospital Safety Grade is "a composite utilizing as many publicly available measures focused on patient safety as possible to give patients a better understanding specifically of the concept of freedom from harm, keeping them safe from preventable harm that they could use to make informed decisions." (Tr. Vol. 3, Danforth, 180:19-24).

43. Leapfrog assigns Safety Grades to nearly 3,000 general acute-care hospitals across the nation, twice annually, based on its underlying scoring methodology and eligibility requirements. (JX-041.1, p. 2); (ECF No. 186-108, at 2).

44. The Leapfrog Survey is separate and distinct from the Hospital Safety Grade. (Tr. Vol. 3, Danforth, 170:2-171:21); (Tr. Vol. 3, Binder, 90:22-91:2).

45. Some of the notable differences between the Survey and Safety Grade are frequency, participants, measures, number of measures, and purpose. (Tr. Vol. 3, Danforth 170:1-171:21).

46. Leapfrog utilizes 13 separate and distinct expert panels to review and provide guidance on respective sections of the Leapfrog Hospital Survey ("Survey") and a separate expert panel presides over Leapfrog's Hospital Safety Grades ("Safety Grades"). (Tr. Vol. 3, Binder, 88:17-24; 90:12-21).

47. Leapfrog has a Patient and Family Expert Panel, made up of individuals who have experienced or been affected by medical errors, that advises on quality and safety measures that Leapfrog should consider and standards they should be setting from a patient's perspective. (Tr. Vol. 3, Binder, 89:4-14); (Tr. Vol. 3, Danforth, 193:17-21).

48. The expert panels are advisory by nature and do not vote. (Tr. Vol. 3, Danforth, 186:21-187:9); (Tr. Vol. 2, Romano, 182:25-183:1; 184:20-24).

49. Dr. Matt Austin of the Armstrong Institute at Johns Hopkins works with Leapfrog through a grant to assist in developing the Survey and Safety Grades. (ECF No. 186-1, Leapfrog's Designations of Dr. Matt Austin, at 61:2-62:18; 64:15-65:10).

D. THE LEAPFROG HOSPITAL SURVEY

i. What is the Leapfrog Hospital Survey

50. In 2001, Leapfrog launched its Survey. (*See,* Joint Pre-Trial Stipulation, ECF No. 129 at ¶30).

51. The Survey is free, publicly available on Leapfrog's website, and hospital participation is voluntary. (ECF No. 186-106, JX-042.0, Leapfrog Hospital Survey); (Tr. Vol. 3, Danforth, 170:8-9); (Tr. Vol. 3, Binder, 91:3-6).

52. The Survey includes "a broad range of measures covering various aspects" including but not limited to "maternity care, C sections, impatient and outpatient surgery, billing ethics, and health care equity." (Tr. Vol. 3, Danforth, 170:14-17).

53. Any hospital in the United States can participate in the Leapfrog Survey including free-standing pediatric hospitals, critical access hospitals, rural hospitals, surgical specialty hospitals, cancer hospitals, women and children's hospitals. (Tr. Vol. 3, Danforth, 170:24-171:1-7).

54. Some hospitals that participate in the Survey are not eligible for a Safety Grade because they do not have enough publicly available data from CMS. (*See e.g.*, Tr. Vol. 3, Danforth, 171:15-21) (explaining the Safety Grade is made up of mostly CMS data and some hospitals, for example cancer hospitals, do not participate in CMS in the same way so publicly available CMS data for cancer hospitals is too limited to assign a Safety Grade).

55. The Survey was developed in consultation with leading researchers and clinicians, and more than 2,400 hospitals participate in the Survey regardless of their eligibility to receive a Safety Grade. (ECF No. 101-3, Binder, at 74:2-4, 287:1-5, 415:15-19); (ECF No. 101-4, Danforth, at 190:1-13, 513:9-14, 550:3-6).

56. Leapfrog's Survey scoring methodology for the Hospital Survey is published on its website for consumers to view and download as a pdf, and it is accessible from the home page. (Tr. Vol. 2, Berger, 37:2-25).

57. Consumers can access published findings from the Leapfrog Hospital Survey by hospital, location or other guided searches on https://ratings.leapfroggroup.org/. (*See,* Amended Complaint, ECF No. 74 at ¶54-55).

58. Hospitals, including the Plaintiffs, use the Survey as a benchmarking tool to monitor and improve performance on various measures. (ECF No. 188-51, DX-554; ECF No. 185-1, Leapfrog's Revised Regina West Designations, 173:11-175:3; ECF No. 188-85, DX 813, at 1;).

59. Leapfrog provides various free tools to help assist hospitals in efficiently and accurately reporting to the Survey including but not limited to data collection tools, calculators, hard copies, free orientation calls, helpdesk, one on one hospital calls, regional leaders, and free annual town hall calls hosted by Leapfrog staff and partners at Johns Hopkins. (Tr. Vol. 3, Danforth, 177:22-178:23); (Tr. Vol. 3, Binder, 91:9-12).

ii. Leapfrog Hospital Survey Measures

60. The Survey consists of "about 50 measures covering major aspects of hospital care" and includes the following nine sections: Patient Rights and Ethics; Medication Safety; Adult and Pediatric Complex Surgery; Maternity Care; Physician and Nurse Staffing; Patient Safety Practices; Managing Serious Errors; Pediatric Care; and Outpatient Procedures. (Tr. Vol. 3, Danforth, 172:16-18); (*See also*, JX-042, ECF No. 186-106, Leapfrog Hospital Survey).

61. Leapfrog has the right to set its own standards, and not fulfilling all of Leapfrog's requirements means that a hospital may not achieve the Leapfrog standard. (Austin Dep., ECF No. 186-1 at 181:2-20); (*see e.g.*, JX-042.0, ECF No. 189-106 at 180).

62. The Survey includes high standards and complex questions for each of the four imputed measures: Hand Hygiene, CPOE, BCMA, and IPS. (JX-042, ECF No. 186-106); (DX-471, ECF No. 188-44, Leapfrog's Factsheet on Barcode Medication Administration; DX-472, ECF No. 188-45, Leapfrog's Factsheet on Computerized Physician Order Entry; DX-473, ECF No. 188-46, Leapfrog's Factsheet on ICU Physician Staffing).

63. For example, Leapfrog's hand hygiene standard was developed by an independent voluntary national expert panel who considered the World Health Organization ("WHO") guidelines and national academic research when developing the five different evidence-based domains that reduce the spread of infections in hospitals. (Tr. Vol. 3, Danforth, 173:1-16).

64. Leapfrog's hand hygiene standard includes the following five domains: (1) "education" and "demonstration" of proper hand hygiene; (2) "monitoring" observations to determine whether proper the hand hygiene technique is utilized – soap and water, gloves or alcohol based hand sanitizer – in the right situation; (3) "feedback" which focuses on implementing real time coaching and collecting data to develop an information quality improvement program; (4) "infrastructure," including whether the hospital units have sinks and alcohol based hand sanitizer in every room; and (5) "culture" to determine if hospital staff are open to patients who may ask them to wash their hands and if executives are held accountable for their performance on hand hygiene. (Tr. Vol. 3, Danforth, 173:13-174:19).

65. Leapfrog's hand hygiene standard does not only apply to doctors and nurses, but to "anyone who touches patients or touches equipment that will touch patients," including food service workers. (Id., 174:20-175:1).

66. Leapfrog's hand hygiene standard is high and there are only two opportunities for hospitals to earn "achieved the standard." (*See e.g.*, Tr. Vol. 3, Danforth, 175:5-19) (Danforth explains one way is to perform 200 hand hygiene observations per unit per month and use that data as outlined in the "feedback" and "monitoring" domain sections or the second way is to perform one hundred hand hygiene opportunities per unit per month); (*see also* JX-042.0, ECF No. 189-106, at 221-222).

iii. Scoring the Leapfrog Hospital Survey Measures

67. Leapfrog uses five (5) steps to verify hospital Survey data: (1) CEO attestation on the Survey; (2) online warnings built into the survey tool to alert responses that do not make sense; (3) monthly extensive data review comparing highs and lows, previous year responses, and external data sources when available; (4) monthly documentation requests to randomly selected hospitals; and (5) on-site verification. (Tr. Vol. 3, Danforth, 179:7-25); (Tr. Vol. 3, Binder, 92:17-93:23; 94:7-21); (Tr. Vol. 4, Zambrana, 126:18).

68. Each section of the Survey includes various measures that are scored by performance categories: achieved the standard, considerable achievement, some achievement, and limited achievement. (JX-042.0, ECF No. 186-106, Leapfrog Hospital Survey).

69. However, in 2006-2007, Leapfrog developed its "validating participating program" to turn the performance categories into numerical scores that could be useful for health plans. (Tr. Vol. 3, Danforth, 176:8-13).

70. During that process, a health care consulting firm convened "a national independent expert panel specifically for the purpose of developing a methodology to assign numerical scores to the text based performance categories" used in Leapfrog's public survey reporting. (Tr. Vol. 3, Danforth, 176:22-177:3).

71. That same independent expert panel used a scientific process to determine the various numerical scores assigned to each performance category (*e.g.*, measure score 15 for "limited achievement"). (Tr. Vol. 3, Danforth, 177:4-6).

72. The performance categories and associated numerical scores are not arbitrary and rather each is based on evidence of the measure in terms of actual patient harm, impact to a patient, how many patients could possibly be harmed, and opportunities. (*Id.* at 177:7-15).

73. In 2011, under the guidance of its Hospital Safety Grade Expert Panel, Leapfrog adopted the same methodology used in determining the Survey performance category measure scores and applied it to measures used in the Safety Grade. (Tr. Vol. 3, Danforth, 177:14-19).

E. LEAPFROG HOSPITAL SAFETY GRADE

i. The Purpose of the Hospital Safety Grade.

74. When developing the Hospital Safety Grade, the expert panel had an intellectual debate on how to define patient safety for the composite, which ultimately focused on "freedom from harm…accidents, errors, injuries, infections." (Tr. Vol. 3, Danforth, 184:15-25).

75. The Hospital Safety Grade Expert Panel then concluded that since patient safety applies to all hospitals, none should be exempted from the composite Safety Grade. (Tr. Vol. 3, Danforth, 185:2-12).

76. The Expert Panel created the Hospital Safety Grade with the understanding that the "grade will evolve as the science of performance measurement improve" and "the composite grade will be revisited on a regular basis, with structed processes to reassess the current measures and to identify new measures that could be added and/or replace the current measures." (ECF No. 194-6, PX-203, Expert Panel Guiding Principles, p. 3).

77. The composite Safety Grade is intended to be a "'living laboratory' to help push forward the science of patient safety performance measurement." (PX-203, ECF No. 194-6, p. 3); (Tr. Vol. 2, Romano, 178:8-21; 182:14-24).

ii. <u>The Hospital Safety Grade is a Composite.</u>

78. The Leapfrog Hospital Safety Grade is a composite score made up of 22 national patient safety measures that uses a scoring methodology to combine those measures into a singular numerical score that gets translated into a letter grade. (Tr. Vol. 3, Danforth, 181:3-7); (JX-041.1, ECF No. 189-101, Spring 2025 Scoring Methodology).

79. Safety Grades are assigned to eligible general acute-care hospitals across the United States by using Leapfrog's Scoring Methodology. (JX-041.1, ECF No. 189-101, Spring 2025 Scoring Methodology, p. 3).

80. The Safety Grade is made up of 22 measures that are divided into two domains that each represent 50% of the grade: 12 process/structural measures and 10 outcome measures – most of which come from CMS. (JX-041.1, pp. 5-9); (Tr. Vol. 3, Danforth, 183:13-21); (Tr. Vol. 3, Binder, 74:15-19).

81. To calculate a Safety Grade, Leapfrog uses the individual measure scores, z-scores, and weighting methodology to calculate an overall numerical score that is then analyzed at specific cut points (standardization above the means) to determine grades. (Tr. Vol. 3, Danforth, 181:16-182:1).

82. The composite nature and functionality of Leapfrog's Safety Grades was peer reviewed and published in the Journal of Patient Safety in 2013 by several of Leapfrog's expert panelist who still voluntarily serve on the panel today (Dr. Matt Austin, PhD, Dr. Arnold Milstein, M.D., Dr. Peter Pronovost, M.D., PhD, Dr. Patrick Romano, M.D., Dr. Sara Singer, MBA, PhD, and Dr. Timothy Vogus, PhD). (PX-202.0, ECF No. 194-3); (Austin Dep., ECF No. 186-1 at 85:6-21); (JX-010.0, ECF No. 189-22, at p. 1).

83. Because of the nature of the composite, hospitals do not automatically receive failing grades if they do not participate in the Survey. (Tr. Vol. 3, Danforth, 182:25-183:12).

84. For example, a hospital could have perfect process and structural measure scores, but if the outcome measure scores are well below average, that would be reflected in the overall composite grade. (*See e.g.*, PX-429.0, ECF No. 192-47, at 1) (showing 43 participating hospitals received a "D" Safety Grade in Spring 2025); (Tr. Vol. 3, Danforth, 183:16-21).

85. The composite nature of the Safety Grade allows for so many combinations of measure scores so that no few measures can drive the ultimate final grade. (*See e.g.*, PX-429.0, ECF No. 192-47) (showing two non-participating hospitals earned an "A" Safety Grade in the Spring of 2025 under Step-2 imputation, receiving limited achievement on all four imputed measures); (Tr. Vol. 3, Danforth, 182:16-18).

86. Leapfrog's expert, Mark Rule, undertook this analysis by removing the Four Imputed Measure scores from each of the Plaintiff hospitals' grades, redistributed the weights to the remaining CMS measures, and found the Plaintiffs' grades to be the same; thus, Mr. Rule concluded that the "four imputed inputs are not what is driving the grades ultimately." (Tr. Vol. 4, Rule, 14:4-15:17).

87. And, for these reasons, I find that Dr. Nicholson's opinion that Leapfrog's imputation method is a nonparticipation penalty to be of no consequence and rather, a "natural consequence" of the Plaintiffs choice not to participate. (Tr. Vol. 1, Nicholson, 179:17-20); (Tr. Vol. 2, Romano, 166:25-167:3); (Tr. Vol. 3, Danforth, 182:16-183:12).

iii. <u>The History of the Hospital Safety Grade: Solving for Missing Data.</u>

88. Since the inception of the Safety Grades, the underlying Scoring Methodology uses "primary" data sources and "secondary" data sources, when applicable to solve for missing data. (DX 402, ECF No. 188-16, Technical Overview of Hospital Safety Score Fall 2012, at p. 9).

89. Thus, since 2012, Leapfrog has discussed and considered utilizing an imputation method in its Scoring Methodology to solve for missing data. (DX-406, HSG's 2012 Call Notes); (JX-001.0, ECF No. 189-1, Leapfrog 2011 Board Update: Progress on Safety Score, pp. 18-19); (PX-204.0, ECF No. 194-7, 2017 Johns Hopkins slide deck "Unintended Consequences of How We Currently Treat Missing Data, p. 3-6); (Tr. Vol. 3, Romano, 181:18-25); (PX-202.0, ECF No. 194-3, p.4); (Tr. Vol. 2, Campione, 261:8-10).

90. Plaintiffs' expert, Dr. Sean Nicholson, agrees imputation is a scientific methodology that is used when data is missing and admits that "[t]here are different ways to do it." (Tr. Vol. 1, Nicholson, 205:21-25).

91. In 2017, internal expert panel meeting notes reflect Dr. Matt Austin "explained that there are circumstances where there is a disincentive for hospitals to report to the Leapfrog Hospital Survey. This is a function of how the weights are redistributed when there are missing measures." (JX-044.1, ECF No. 189-108, p. 1).

92. In 2019, the expert panel considered assigning non-participating hospitals zero credit and in fact, Dr. Arjun Srinivasan "brought that suggestion several times to the panel." (Tr. Vol. 2, Romano, 185:14-23); (DX-406, ECF No. 188-17, p. 3).

93. Leapfrog and its expert panel have grappled with ideas on how to solve for missing data since the inception of the safety grade. (Tr. Vol. 3, Danforth, 185:17-20; 186:15-18).

94. Leapfrog knew it would face a missingness problem on the outcome measures domain because all of that data came from either CMS or the CDC and both sources have minimum sample size requirements that would create the inability to calculate measure scores for some hospitals. (Tr. Vol. 3, Danforth, 185:20-186:6).

95. Since CMS and the CDC developers require specific sample sizes to affirm confidence in calculating outcome measure scores, Leapfrog's Hospital Safety Grade expert panel followed that guidance and decided not to impute or assign zeros for outcome measures when data is missing. (Tr. Vol. 3, Danforth, 188:1-189:11).

96. For the process and structural measure domains, Leapfrog also anticipated encountering missing data due to the voluntary nature of the Survey. (Tr. Vol. 3, Danforth, 186:10-14).

97. However, peer reviewed literature confirms that the presence of process/structural measures, like CPOE, BCMA, and Hand Hygiene, are ubiquitous – all hospitals have them. (Tr. Vol. 3, Danforth 189:19-190:5).

98. Thus, Leapfrog is able to assign limited achievement scores based on the sole fact that it knows hospitals have these processes or structures or in place (*e.g.*, limited achievement is assigned to reporting hospitals if the use a CPOE system and provide the number of medications ordered). (Tr. Vol. 3, Danforth, 190:1-5).

99. Participating hospitals have the ability to earn a higher score by providing information on how they track or measure the data to confirm whether the systems functionality is proper (*e.g.*, taking Leapfrog's CPOE test shows whether the system alerts staff properly). (Tr. Vol. 3, Danforth 190:1-191:15); (Tr. Vol. 3, Binder, 75:20-76:4).

100. Limited achievement is assigned for CPOE, BCMA, Hand Hygiene and IPS to reflect the hospitals have and use these systems, but since Leapfrog does not know whether the hospitals actually measure or properly use the systems, it cannot, in good faith, impute a higher score that would reflect some level of measurement (*e.g.*, all hospitals have hand hygiene policies, but whether the hospital properly implements that policy and internally measures hand hygiene observations to limit infections is unknown). (*Id.*); (Tr. Vol. 2, Campione, 260:6-13).

101. Under the guidance of its expert panel, Leapfrog first started imputing limited achievement in step-two of the imputation method in Spring 2024 (pre-Fall 2024 methodology change) for the IPS measure by using the CMS Cost Report to determine whether a hospital had one or more medical, surgical, and/or pediatric ICU beds, and if so, the hospital was assigned the associated "Limited Achievement" score. (Tr. Vol. 2, Campione, 275:16-276:6); (JX-014.1, ECF No. 189-36, Spring 2024 Scoring Methodology, pp.15-18).

102. Secondary data sources are used to solve for missing data if a hospital chooses not to respond to the Leapfrog Survey. (JX-041.1, ECF No. 189-101, Spring 2025 Scoring Methodology, pp. 5-9).

103. Secondary data sources have changed over time as Leapfrog has either gained or lost access to publicly available data for hospitals, like American Hospital Association ("AHA") data. (JX-010.0, ECF No. 189-22, p. 7); (DX- 406, ECF No. 188-17, p. 2); (Leapfrog's Deposition Designations of Dr. Matt Austin, ECF No. 186-1, at 115:6-121:5).

104. For example, from 2012 to 2020, if a hospital chose not to respond to the Survey, Leapfrog used American Hospital Association ("AHA") data as its secondary source to impute a score based on an analysis comparing hospital performance on the Leapfrog Survey and AHA surveys. (ECF No. 194-3, PX-202.0 at 4, 6).

105. However, in 2020, Leapfrog lost access to AHA data and explored alternative imputation methods for secondary data sources on the applicable measures. (ECF No. 101-4, Danforth at 236:18-237:15); (JX-003.0, ECF No. 189-5, at 8-10).

iv. Pre-Imputation Change: Spring 2024 Methodology

106. Currently and in the Spring 2024, Leapfrog's Scoring Methodology used 22 measures (12 process/structural and 10 outcome) to calculate the Spring 2024 Safety Grades. (JX-014.1, Spring 2024 Scoring Methodology, pp. 4-8).

107. Ten of the 22 measures used data a hospital submitted to the Centers for Medicare & Medicaid Services ("CMS") as the primary data source. (*Id.*).

108. Twelve of the 22 measures used a hospital's most recent Leapfrog Survey data as the primary data source; however, five of those 12 measures is a hospital's most up to date National Healthcare Safety Network ("NHSN") data that is otherwise publicly available through CMS. (*Id.* at pp.13-15).

109. Thus, only 7 of the 22 measures used in the Spring 2024 Safety Grade relied on Survey data ("Survey Measures") and the other 15 measures used publicly available CMS data. (*Id.* at pp. 5-7).

110. The seven "Survey Measures" were and still are: (1) CPOE, (2) BCMA, (3) IPS, (4) Hand Hygiene, (5) Safe Practice 1, (6) Safe Practice 2, and (7) Total Nursing Care Hours per Patient Day. (*Id.*).

111. Currently and in the Spring of 2024, if a hospital did not respond to the Survey, then Leapfrog did not consider three of the seven "Survey Measures" when calculating the Spring 2024 Safety Grade—Safe Practice 1: Culture of Leadership Structures and Systems, Safe Practice 2: Culture Measurement, Feedback & Intervention, and Total Nursing Care Hours per Patient Day—and historically Leapfrog has never imputed scores for these three "Survey Measures." (*Id.* at pp. 5-6; pp. 11-12).

112. Leapfrog used the two-step imputation model for the remaining four "Survey measures," which are the Four Imputed Measures (CPOE, BCMA, IPS, and Hand Hygiene) and score them by using the performance categories. ECF No. 189-36, pp. 15-18; 10-13).

113. Under the Spring 2024 Scoring Methodology, in Step 1, if a non-responding hospital had a score assigned by Leapfrog in the previous four rounds of grades for CPOE, BMCA, IPS, and Hand Hygiene, excluding imputed scores, the hospital was assigned the most recent score on that measure in their current Safety Grade. (*Id.*, pp.15-18).

114. If Step 1 was inapplicable, then in Step 2 for CPOE, BCMA, and Hand Hygiene, Leapfrog assigned the hospital to a cohort of similar hospitals using three or four hospital characteristics obtained from the most recent CMS Impact File and the previous year's Survey. (*Id.*).

115. Under Step 2, Leapfrog then assigned the non-responding hospital the lower of the two possible mean scores based on the hospital's cohort's performance for CPOE, BCMA and Hand Hygiene. (*Id.*).

116. The cohort means were calculated by grouping the participating hospitals by characteristics (urban/rural, safety net, number of beds, teaching status) to create "cohorts" and then calculating the survey score mean for the hospitals in each cohort. (*Id.*, pp.17-18); (Tr. Vol. 3, Danforth, 196:9-25).

117. Under Step 2 for IPS, Leapfrog used the CMS Cost Report to determine whether a hospital had one or more medical, surgical, and/or pediatric ICU beds, and if so, the hospital was assigned the associated "Limited Achievement" score. (*Id.*).

v. <u>The Proposed Fall 2024 Methodology Change</u>

118. Prior to Spring 2024, hospitals that participated in the Survey complained to Leapfrog that hospitals who did not respond to the Survey were receiving an undeserved benefit by imputing the cohort means of hospitals who showed a commitment to patient safety and transparency by participating in the Survey for CPOE, BCMA, and Hand Hygiene. (JX-032.1, ECF No. 189-89, public comments in favor of the Fall 2024 methodology change, p. 2); (JX-008, ECF No. 189-17, April 12, 2024 HSG expert panel meeting transcript, pp. 22-23); (JX-010, ECF No. 189-22, April 12, 2024 HSG expert panel meeting slides, p. 7).

119. By way of example, at that time, one large national health system was experiencing major patient safety issues that were nationally reported in the media (eventually resulting in bankruptcy) and under to the prior step-one imputation, these hospitals were imputed old survey data that was drastically inaccurate to how that hospital was currently performing. (Tr. Vol. 3, Danforth, 191:19-193:10); (Tr. Vol. 2, Campione, 276:16-277:1, 279:9-25).

120. This particular incident prompted Leapfrog's Senior VP of Ratings, Missy Danforth, to become seriously concerned about the reliability and trustworthiness of imputing scores from a reporting hospitals previous four rounds of grades (spring 2024 Step 1 imputation method). (Tr. Vol. 3, Danforth, 192:22-10); (JX-014.1, ECF No. 189-36, p. 15).

121. For years prior, Leapfrog had also recognized that the cohort mean scores had crept up so high that hospitals who received Step 2 for CPOE, BCMA, and Hand Hygiene were receiving scores equivalent to "Achieved the Standard" or 100 out of 100 points, which was de-incentivizing true transparency of performance. (Tr. Vol. 2, Camione, 277:7-23); (Tr. Vol. 3, Danforth, 200:14-201:1); (JX-010.0, ECF No. 189-22, p. 19); (JX-010.0, ECF No. 189-22, p. 7).

122. On April 12, 2024, Leapfrog convened its Hospital Safety Grade Expert Panel to propose and develop a solution to solve for the disincentive of true transparent performance as it related to both Step 1 and Step 2 imputation. (JX-008.0, ECF No. 189-17, p. 14:5-21); (JX-010, ECF No. 189-22, at pp. 7); (PX-261.1, video recording of the April 12, 2024 expert panel meeting).

123. Plaintiffs' expert, Dr. Sean Nicholson does not question the qualifications of the experts who serve on Leapfrog's Hospital Safety Grade Expert Panel. (Tr. Vol. 1, Nicholson, 220:8-11).

124. VP of Ratings, Missy Danforth was "focus[ed] on retiring step one, not allowing hospitals to have the older data imputed [and] calculated in the hospital safety grade." (Tr. Vol. 3, Danforth, 194:18-22).

125. Expert panelist, Dr. Patrick Romano, only objected to Leapfrog's proposal to completely retire Step 1 imputation because he wanted hospitals to have the opportunity to complete the survey every other year, as opposed to annually. (Tr. Vol. 2, Campione, 270:8-12, 278:8-18); Tr. Vol. 3, Danforth, 195:11-15).

126. During the expert panel meeting, several other members expressed various concerns, for example, Dr. Peter Pronovost reported hospital Chief Medical Officers ("CMO") had

determined their hospitals would score better under step 1 or step 2 imputation, so they were choosing not to report to the Survey and others were concerned about slippage in performance. (JX-008.0, ECF No. 189-17, p. 19, 25); (Tr. Vol 3, Danforth, 198:3-199:9).

127. Dr. Arjun Srinivasan expressed concerns that there is a bias for hospitals that perform below average and suggested assigning these hospitals to the "bottom quartile" based on the assumption that the reason hospitals are not filling out the survey is because they are below average performers who want to use the imputation method to actually boost their scores. (JX-008.0, ECF No. 189-17, p. 25); (Tr. Vol. 3, Danforth, 199:10-20).

128. The purpose of the Fall 2024 Scoring Methodology change was not to drive revenue nor to penalize hospitals. (JX-008.0, ECF No. 189-17, 458:1-21, 568:1-20, 569:3-571:11); (Tr. Vol. 2, Romano, 150:15-20); (*Id.*, Campione, 279:9-15); (Tr. Vol. 3, Binder, 118:15-22, Leapfrog's Designations of Dr. Matt Austin, ECF No. 186-1, at 212:5-17).

129. The expert panel meeting concluded in a positive direction of not giving hospitals points that were not earned and rather assigning non-participating hospitals to the bottom performance category. (Tr. Vol. 2, Campione, 280:3-5, 282:4-11).

130. Leapfrog previously had access to other data for when hospitals did not report on the survey, but the loss of AHA data caused Leapfrog to reevaluate its approach to non-participating hospitals in order to incentivize them to report and provide more information to the public. (Leapfrog's Designations of Dr. Matt Austin, ECF No. 186-1, at 214:10-215:12).

131. Another purpose of the Fall 2024 change was for Leapfrog to feel more confident in its reporting of the data. (Leapfrog's Designations of Dr. Matt Austin, ECF No. 186-1, at 215:14-216:2).

132. Following the meeting, Leapfrog data analyst, Alex Campione (in addition to others) analyzed comments from the expert panel meeting, distilled the overall takeaways and consensus, and presented a compromise to the panel. (Tr. Vol. 2, Campione, 270:10-17, 278:23-279:8); (JX-015, ECF No. 189-37, at 1).

133. On April 22, 2024, Leapfrog met with Dr. Matt Austin to further discuss the proposed changes and ultimately decided to adopt the "small change" for Step 1 and the "large change" for Step 2. (JX-015, ECF No. 189-37, at 1); (Tr. Vol. 3, Danforth, 204:25-207:8).

134. The proposed change kept Step 1 based on feedback from Dr. Romano but limited the time period to account for community complaints and addressed the expert panel's concerns regarding rising means and de-incentivization of true transparency in performance through Step 2. (Tr. Vol. 3, Danforth, 204:2-15); (Tr. Vol. 2, Campione, 270:10-12).

135. Under the guidance of the Expert Panel, Leapfrog published the proposed changes to the Fall 2024 Scoring Methodology for public comment in May 2024. (Tr. Vol. 3, Danforth, 202:1-12, 202:22-24); (DX-463, ECF No. 188-39); (Tr. Vol. 2, Romano, 186:14-18).

136. Leapfrog received both positive and negative feedback regarding the change. (JX-032, ECF No. 189-90, at pp. 2-3); (Tr. Vol. 2, Campione, 283:17-284:8).

137. When considering one of the negative public comments, Senior VP of Ratings, Missy Danforth, proposed adding a symbol next to the gas gauges or scores to indicate to consumers that the score is imputed, which is how footnote 4 was conceived. (JX-026.0, ECF No. 189-67); (PX-034.5).

138. Leapfrog drafted the Fall 2024 proposed methodology changes in conjunction with expert panelist, Dr. Patrick Romano, M.D., and Dr. Peter Pronovost, M.D., PhD, and Dr. Matt Austin, PhD. (JX-047.1, ECF No. 189-114); (JX-021.0, ECF No. 189-50, at 1-3); (Tr. Vol. 2, Campione, 284:9-17); (Tr. Vol. 3, Danforth, 202:13-21; 207:9-14).

139. In June 2024, under the guidance of the expert panel and in consideration of public comments, Leapfrog published its final changes to the Fall 2024 Scoring Methodology, which included responses to public comments. (PX-319, ECF No. 193-42); (PX-520.0, ECF No. 191-19, at pp. 1-2).

140. Leapfrog's Hospital Safety Grade Expert Panel did not vote on the methodology change as that is not a part of this panel's process or generally any expert panel's process at all. (Tr. Vol. 3, Danforth, 186:21-187:9); (Tr. Vol. 2, Romano, 182:25-183:1; 184:20-24).

141. No expert panelist contested the final changes to the Fall 2024 Scoring Methodology and, in fact, Dr. Patrick Romano defends it[2]. (Tr. Vol. 3, Danforth, 207:15-18); (Tr. Vol. 2, Romano, 176:25-177:7).

[2] This Court ruled that all email communications between Dr. Romano and his colleagues at UC Davis may only be used for a limited purpose and none of the comments made by UC Davis individuals may be used for the truth of the matters asserted in their statements. (Tr. Vol 2, 159:6-9); (PX-293.1; PX-293; PX-501; PX-366.1; PX-386).

142. While Plaintiffs heavily rely on emails from Dr. Romano when asserting that the purpose of the methodology change was to punish non-participating hospitals, I find Dr. Romano's testimony that a penalty "is a predictable, a temporary, and a specific consequence to a particular action or choice," which is not synonymous with punishment. (Tr. Vol. 2, Romano, 180:5-21).

143. Dr. Romano's testimony that assigning limited achievement is "only a penalty for the hospitals that would otherwise have received a higher score if they had completed the survey" is likewise credible. (Tr. Vol. 2, Romano, 150:2-4; 151:6-9; 156:10-13).

144. Dr. Romano further explains that when a hospital makes a voluntary business decision not to participate in the Leapfrog Survey, there are "natural consequences," and I find this testimony to be credible. (Tr. Vol. 2, Romano, 166:25-167:3).

vi. Fall 2024 Scoring Methodology

145. Currently and in the Fall 2024 Scoring Methodology, under Step 1, if a non-responding hospital had a score assigned by Leapfrog in the previous two (rather than four) rounds of grades for CPOE, BMCA, IPS, and Hand Hygiene, excluding imputed scores, the hospital was assigned the most recent score on that measure in their current Safety Grade. (JX-034.0, Fall 2024 Scoring Methodology, p. 15).

146. If Step 1 was inapplicable, then in Step 2 for CPOE, BCMA, and Hand Hygiene, hospitals were assigned the associated "Limited Achievement" score (like IPS under the Spring 2024 Scoring Methodology). (*Id.*).

147. Aside from these two targeted changes, eligibility requirements, weighting, measures, and performance categories remained unchanged. (*Compare*, JX-034.0, ECF No. 189-94, Fall 2024 Methodology, and JX-014.1, ECF No. 189-36, Spring 2024 Methodology).

148. The Plaintiff hospitals are not missing seven (more than six) process or structural measures because the imputation method is applied for the Four Imputed Measures and thus, the Plaintiffs are eligible for Safety Grades under Leapfrog's Fall 2024 Methodology. (Tr. Vol. 2, Romano, 172:14-17); (JX-034.0, ECF No. 189-94, p. 15); (PX-053, ECF No. 195-94; PX-055.0, ECF No. 195-95; PX-057.0, ECF No. 195-97; PX-059.0, ECF No. 195-100; PX-061.0, ECF No. 195-102).

F. THE EXISTENCE OF NON-RESPONSE BIAS IS UNDISPUTED[3]

149. Leapfrog's expert, Dr. Anthony Harris opined that Leapfrog was correct in using imputation to overcome non-response bias. (Tr. Vol. 4, Harris, 57:7-58:18).

150. Dr. Harris explained that non-response bias and imputation is taught in medical school and graduate programs to show students and practitioners how biases affect patient outcomes. (Tr. Vol. 4, Harris, 56:20-58:1; 110:9-21).

151. Imputation is scientifically acceptable and regularly used to solve for missing data by researchers and scientific authors. (Tr. Vol. 4, Harris, 58:13-23; 64:12-17; 109:6-110:8).

152. Dr. Harris further explained that there are different types of missing data: missing completely at random, missing not at random, and missing at random. (Tr. Vol. 4, Harris, 58:24-59:21); (Tr. Vol. 2, Romano, 187:20-189:4).

153. Here, the Plaintiff Hospitals' data is missing not at random because they were making the choice of not completing the survey despite the fact that they admit that they track the data, review it, and could submit the data with "minimal effort and no cost." (Tr. Vol. 4, Harris, 59:10-21, 60:8-14); (DX-618, p. 1, internal email "with minimal effort and no cost, we can submit our data); (Tr. Vol. 1, Havericak, 113:16-21); (Tr. Vol. 1, Cazares, 161:14-162:10); (Tr. Vol. 1, McCauley, 241:19-242:12); (Tr. Vol. 2, Hanlon, 79:3-80:22); (Tr. Vol. 2, Montgomery, 198:12-25); (ECF 188-85, DX-813, Plaintiffs' compiled data).

154. Based on Dr. Harris' experience sitting in meetings with his Hospital CEOs and CMOs, he fully understands that an increase in the burden on the Survey may require cost-benefit analyses. (Tr. Vol. 4, Harris, 100:1-8). Yet, that does not negate the fact that the Plaintiff Hospitals surely know their metrics and how they may score. (Tr. Vol. 4, Harris, 99:10-100:11, 104:4-24).

155. Internal Plaintiff hospital documents confirm that their quality coordinators analyze balanced scorecards ("BSC") and kaleidoscope reports when preparing monthly reports for their Quality Improvement and Patient Safety Committees ("QIPSC") and their leaders "review the data, analyze the data, determine opportunities for improvement, initiate PI teams and report to QIPSC as scheduled." (ECF 158-88, DX-610, p. 4).

[3] The parties do not dispute the existence of non-response bias in epidemiology and other appliable sciences. (Tr. Vol. 5, 16:7-17).

156. Dr. Harris' explanation of non-response bias not only perfectly aligns with the testimony of each Plaintiff CEO, but also with Dr. Peter Pronovost's report to the expert panel that he too had spoken with CMOs who admitted their hospitals would score better under the imputation method, so they were choosing not to report to the Survey. (ECF 189-17, JX-008.0, p. 19, 25).

157. Each of these Plaintiff hospitals are a quintessential example of non-response bias in real time and the evidence in this case only confirms that Leapfrog's reasoning for changing the imputation model had merit.

G. LEAPFROG'S METHODOLOGY IS FAIR AND NOT DECEPTIVE

158. Plaintiffs' expert, Dr. Nicholson, opines that there is "no documentation in the record that provides any scientific justification for the penalty of 60," but I do not agree for all the reasons stated *supra*. (*See*, section E(v), "The Proposed Fall 2024 Methodology Change"); (*see also*, section F, "The Existence of Non-response Bias is Undisputed); (Tr. Vol. 1, Nicholson, 186:4-9).

159. Dr. Nicholson's opinion that Leapfrog's grading approach deviates from the foundational principles that underlie proper quality measurement and quality reporting is completely debunked by the fact that "The Development of Leapfrog's Composite Patient Safety Score" is peer reviewed by many of Leapfrog's own expert panelist and published in the Journal of Patient Safety. (Tr. Vol. 1, Nicholson, 179:21-24); (ECF No. 194-3, PX-202.0).

160. Dr. Nicholson admits that Leapfrog's Safety Grade composite follows the primary principles of the Donabedian model insofar as it uses three components: outcome, structure and process measures. (Tr. Vol. 1, Nicholson, 214:4-9).

161. Dr. Nicholson's opinion that Leapfrog's data is unreliable because Leapfrog does not conduct many in-person audits is baseless and disproven by the trial evidence. (Tr. Vol. 3, Danforth, 179:7-25); (Tr. Vol. 3, Binder, 92:17-93:23; 94:7-21).

162. The fact that Dr. Nicholson created his own counterfactual by assigning the mean value from the participants to nonparticipants only furthers his own point that "[t]here are different ways to do" imputation, but regardless imputation is a scientific methodology used when data is missing. (Tr. Vol. 1, Nicholson, 197:11-23; 205:21-25).

163. And Leapfrog's expert, Dr. Harris, opined that Dr. Nicholson's sensitivity analysis is flawed because during his recalculation, he imputes the mean on seven measures when Leapfrog only imputes on four measures. (Tr. Vol. 4, Harris, 65:13-23; 66:21-67:7).

164. Dr. Harris even describes Dr. Nicholson's method is the "least logical" and farthest from the truth. (Tr. Vol. 4, Harris, 65:19-23, 93:9-19). And Dr. Nicholson admits that his counterfactual is not based on the actual data from the Plaintiff hospitals. (Tr. Vol. 1, Nicholson 211:1-6). For this reason, I find Dr. Nicholson's counterfactual to be unreliable.

165. Dr. Harris reviewed how the hospitals performed on various CMS measures, which comprise the majority of the Safety Grade measures and concluded that based on his knowledge of statistics and standardized incident ratios for hospital infections, that the Plaintiffs were worse performers than other non-participating hospitals in Florida. (Tr. Vol. 4, Harris, 68:19-70:15).

166. Outside of infections, the Plaintiff Hospitals also all have much lower patient experience and patient satisfaction scores. (Tr. Vol. 4, Harris, at 75:13-21).

167. Additionally, Dr. Harris testified that the patient satisfaction metrics are structural measures which give a voice to the patient, and Plaintiffs simply do poorly on patient satisfaction. (Tr. Vol. 4, Harris, 112:4-21).

168. Moreover, Dr. Harris's testimony isolates the fact that Plaintiff Hospitals perform poorly on their own and not because of the patients they serve. During cross-examination, he testified that even though a patient may be more vulnerable to infections due to having cancer, CMS adjusts the data to reflect those kinds of outcomes – *CMS already accounts for that bias*. (Tr. Vol. 4, Harris, 74:21-75:7).

169. Leapfrog's expert, Mr. Rule also reviewed Dr. Nicholson's analysis, noting that even without imputing the average value for the four imputed measures, the four imputed measures do not drive the Safety Grade. (Tr. Vol. 4, Rule, 14:8-24).

170. Dr. Nicholson's analysis assumed that the Plaintiff Hospitals received average scores on measures they did not report on, and that assumption was made without ever seeing the Plaintiff Hospitals' actual data, that he never even asked for. (Tr. Vol. 1, Nicholson, 15:3-17; 210:7-212:4). For this reason, I find Dr. Nicholson's counterfactual to be unreliable and likely further evidence of non-response bias.

171. Further, Mr. Rule points out that Dr. Nicholson did not account for the cut points Leapfrog uses to determine whether a numeric score translates to an "A," "B," "C," "D," or "F," which directly impacts the Safety Grade that hospitals receive. (Tr. Vol. 4, Rule, 16:1-7); (DX-603, ECF No. 188-55, at 4). For this reason, I find Dr. Nicholson's counterfactual to be unreliable.

172. I find Mark Rule's analysis and ultimate finding that the "four imputed inputs are not what is driving the grades ultimately" to be credible and for that reason, Dr. Nicholson's opinion that the imputation method is a "nonparticipation penalty" is of no consequence. (Tr. Vol. 4, Rule, 14:4-15:17).

173. For the first time at trial, Dr. Nicholson asserted the following three new opinions[4] that were not previously disclosed in discovery: (1) no participating hospital received limited achievement across all four imputed measures; (2) no nonparticipating hospital has received an A since the new Step-2 imputation process was instituted; and (3) no participating hospital received an F in the Spring 2025 grade cycle. (Tr. Vol. 1, Nicholson, 187:25-188:2; 189:3-5).

174. First, whether or not a participating hospital received limited achievement across all four imputed measures is not evidence that the Step-2 imputation is unfair or unreliable, but rather it furthers Leapfrog's reasoning behind the imputation change. (Tr. Vol. 2, Romano, 173:8-11). Nonetheless, some reporting hospitals did receive limited achievement. (Austin Dep, ECF No. 186-1 at 298:2-8).

175. Second, Dr. Nicholson's new opinion that no participating hospital has received an "A" since the new Step-2 imputation model was implemented is disproven by evidence put forth at trial. (*See*, PX-429.0, ECF No. 192-47, snippet below); (PX-412, ECF No. 192-16).

Step 2 Imputation		Step 1 Imputation		Survey Submitted	
A	2	A	4	A	902
B	15	B	5	B	670
C	363	C	17	C	622
D	155	D	12	D	43
F	19	F	0	F	0

[4] Counsel for Leapfrog objected at trial noting it filed a Motion to Bar these new opinions in light of Plaintiffs' counsel confirming, on the record during his deposition, that Dr. Nicholson was not offering any new opinions. (Tr. Vol. 1, Nicholson, 188:3-11); (*see*, Leapfrog's Motion to Exclude at ECF No. 143). Leapfrog's Motion was not ruled on prior to trial.

176. Third, whether or not a participating hospital received an "F" grade in the Spring of 2025 is not evidence that the Step-2 imputation is unfair or unreliable but rather points out the obvious benefit of participating in the Survey. (Tr. Vol. 2, Romano, 156:10-13).

177. Dr. Nicholson's assertion that there is no "scientific basis for the penalty associated with nonparticipation" is completely undermined by the testimony of expert, Dr. Anthony Harris, M.D. who is both a clinician and a professor of epidemiology who explained how non-response bias is taught to students in medical school. (Tr. Vol. 1, Nicholson, 189:11-13); (Tr. Vol. 4, Harris, 42:2-11; 56:20-58:1; 110:9-21).

178. I decline to consider Dr. Nicholson's opinions.

179. In light of finding that Leapfrog's methodology is fair and not deceptive, I decline to consider Dr. Berger's opinion that D" and "F" "hospital grades likely negatively impact consumer perception of the community hospitals." (Tr. Vol. 2, Berger, 6:22-25).

180. In light of finding that Leapfrog's methodology is fair and not deceptive, I decline to consider Dr. Berger's opinion that the Safety Grades will likely cause detrimental impact, which is further unsupported due to the fact that Dr. Berger did not perform a causal analysis as to whether or not the Leapfrog Safety Grade had any impact on the reputation of the Plaintiff hospitals, including for those Plaintiff hospitals that had failing grades *both before and after* the Fall 2024 methodology change. (Tr. Vol. 2, Berger, 7:1-3; 51:3-6; 53:6-13).

H. LEAPFROG SURVEY WEBSITE

181. Leapfrog owns and operates the website leapfroggroup.org. (Leapfrog's Deposition Designations of Lauren Bailey, ECF No. 183-1 at 157:10-158:7).

182. Consumers can navigate through https://www.leapfroggroup.org/ to access a hospital's Survey scores at https://ratings.leapfroggroup.org/ ("Survey Website). (*Id.*).

183. On the Survey Website a consumer can search for a hospital by facility name, location, or a more targeted and guided search. (*Id.*); (Leapfrog's Deposition Designations of Lauren Bailey, ECF No. 183-1, at 157:19-158:7).

184. The Survey Website does not "rate" hospitals. (https://ratings.leapfroggroup.org/).

185. The Survey Website does not display Safety Grades. (Leapfrog's Deposition Designations of Lauren Bailey, ECF No. 183-1, at 157:17-158:3).

186. The Survey Website reflects a "hospital's progress" on "Leapfrog's standards" for measures that are not included in the Safety Grades. (*Id.*).

I. LEAPFROG HOSPITAL SAFETY GRADE WEBSITE

187. Leapfrog owns and operates hospitalsafetygrade.org. (Tr. Vol. 3, Binder, 109:20-24).

188. Leapfrog publishes its Safety Grades on https://www.hospitalsafetygrade.org/ ("Safety Grade Website), for consumers – patients. (*Id.*); (Tr. Vol. 3, Danforth, 218:4-6); (Leapfrog's Deposition Designations of Lauren Bailey, ECF No. 183-1, at 157:17-158:3).

189. Leapfrog aims for its website to be "[a]s transparent and accurate as possible" but they are always updating the website. (Tr. Vol. 3, Binder, 64:8-13).

190. CEO Leah Binder, describes Leapfrog as "always on an improvement journey." (Tr. Vol. 3, Binder, 64:12-13).

191. Lauren Bailey serves as Leapfrog's Director of Communications, and she oversees communications, public relations, and the content of the Safety Grade website. (*See*, ECF 183-1, Deposition Designation of Lauren Bailey, at 15:11-16:15).

192. Leapfrog's ratings team provides assistance on communications and messaging surrounding Safety Grade changes. (*Id.* at 159:7-160:2).

193. Other parts of the Safety Grade website are updated more frequently. (*Id.* at 160:3-161:13; 206:19-207:18).

194. The Frequently Asked Questions webpage is always updated prior to the release of a Safety Grade. (*Id.* at 206:19-207:18).

i. History of Leapfrog's Website

195. In 2012, Leapfrog listened to consumer feedback and sought to improve its website. (Tr. Vol. 3, Binder, 110:3-10).

196. Leapfrog received a $200,000 grant from the Robert Wood Johnson Foundation to improve its website. (Tr. Vol. 3, Binder, 110:10-18).

197. Leapfrog hired Dr. Christina Zarcadoolas, PhD, an expert in health communication and public understand of health and science, to provide her expertise in health literacy and public understanding of complexity, as well as qualitative research and readability and usability

methodology. (ECF 188-14, DX-318, Biographical Sketch of Dr. Zarcadoolas); (ECF 188-13, DX-317, UX testing contract).

198. Leapfrog worked with Dr. Zarcadoolas to complete considerable user experience ("UX") testing when developing Leapfrog's website. (Tr. Vol. 3, Binder, 112:20-22).

199. The UX testing findings were prepared in a Final Narrative Report to the Robert Wood Johnson Foundation. (ECF 188-15, DX-319, Final Report).

200. Without performing any UX testing, Dr. Berger opined that consumers "don't know which one to collect more information about, but one has a C and one has an F" so they "won't look further," but Ms. Binder testified that Leapfrog's UX testing actually revealed that consumers were not satisfied with just looking at the grades and rather, they wanted a lot more detail. (Tr. Vol. 2, Berger, 9:20-23); (Tr. Vol. 3, Binder, 116:18-25).

201. Before the UX testing, Leapfrog considered only presenting the grades, but based on this feedback the gas gauges were born. (Tr. Vol. 3, Binder, 116:18-25); (ECF 188-15, DX-319, p. 6).

202. The report included three goals: (1) "conduct research on strategies to best communicate to the public about patient safety in a way that is most usable, recognizing diverse levels of health literacy;" (2) "strategically deploy internet communications to exchange awareness of the issue;" and (3) "engage purchasers in patient safety." (ECF 188-15, DX-319, p. 2). And Leapfrog reported it anticipates meeting and exceeding all three goals. (*Id.*).

203. Leapfrog's Patient and Family Expert Panel reviews and advises Leapfrog on the readability of the website. (Tr. Vol. 3, Binder, 127:1-7).

204. Unlike Dr. Zarcadoolas, Plaintiffs' expert, Dr. Berger did not perform a digital low literacy readability analysis on Leapfrog's website to determine whether a reasonable consumer may be able to understand it. (Tr. Vol. 2, Berger, 50:7-10); (ECF 188-13, DX-317); (ECF 188-14, DX-318); (ECF 188-15, DX-319).

205. Unlike Dr. Zacradoolas, Dr. Berger is not an expert in determining how websites should be designed in order to properly provide information to low literacy consumers. (Tr. Vol. 2, Berger, 42:22-43:2); (ECF 188-13, DX-317); (ECF 188-14, DX-318).

206. The only evidence of any consumer or UX testing on Leapfrog's website is by Dr. Zarcadoolas who assisted in the creation of Leapfrog's website as it is currently displayed today. (ECF 188-13, DX-317); (ECF 188-14, DX-318); (ECF 188-15, DX-319).

ii. Leapfrog's Website Display

207. The display of Leapfrog hospitalsafetygrade.org has substantively not changed since working with Dr. Zarcadoolas in its initial development. (*See,* gas gauges in original report, ECF 188-15, DX-319, p. 6).

208. On the Safety Grade Website, consumers can search for a hospital by city, state, zip code, or hospital name. *See e.g.* (PX-034.0, ECF 195-48); (PX-034.1, ECF 195-49).

209. If a consumer clicks or taps on a hospital's name, assigned Safety Grade, or "View the fully score," the consumer is brought to that hospital's profile webpage. (*See e.g.*, ECF No. 195-42, PX-033.2).

210. A hospital's profile webpage on the Safety Grade Website displays the hospital's most recent Safety Grade at the top of the page. (*Id.*).

211. When a consumer clicks or taps on "Show Recent Past Grades" at the top of a hospital's profile webpage, the last seven rounds of that hospital's Safety Grades (Spring 2022 to Spring 2025) appear. (ECF No. 195-94, PX-053).

212. On the hospital profile webpage, there are five tabs titled "Infections," "Problems with Surgery," "Safety Problems," "Practices to Prevent Errors," and "Doctors, Nurses & Hospital Staff." (ECF No. 195-42, PX-033.2, p. 1).

213. When a consumer clicks or taps on one of the five tabs, they are shown measures included in the tab category and a corresponding red, yellow, and green "gas gauge" for each measure. (*Id.* at pp. 1-2).

214. The "gas gauge" visually represents how well a hospital scored on Leapfrog's standards for that measure. (*Id.*).

215. Red conveys that Leapfrog has scored a hospital "Worse Than Average" performance; yellow conveys that Leapfrog has scored a hospital average performance; green conveys that Leapfrog has scored a hospital "Better Than Average" performance. (*Id.*).

216. Beneath the "gas gauges" is a legend that states the gas gauges depict how the "Hospital Performs" on the Leapfrog standards based on a scale of "Worse Than Average" to "Better Than Average." (*Id.*).

217. A consumer can view a hospital's measure score by clicking or tapping the corresponding "gas gauge" graphic. (*Id.*).

218. Each measure webpage shows "This Hospital's Score," "Best Hospital's Score," "Average Hospital's Score," and "Worst Hospital Score"; describes the measure; and includes "Notes and Definitions" footnotes beneath the measure descriptions. (*Id.* at 1-2).

219. The scores for the Four Imputed Measures, CPOE, BCMA, Hand Hygiene, and IPS, can be found by clicking or tapping into the respective measures "Doctors order medications through a computer," "Safe medication administration," "Handwashing," and "Specially trained doctors care for ICU patients." (ECF No. 195-45, PX-033.5 at 1); (ECF No. 195-46, PX-033.6, at 1).

220. If a hospital does not respond to the Leapfrog Survey but is still assigned a Safety Grade, every measure webpage for a non-responding hospital includes a red, bolded footnote under "Notes and Definitions," stating that hospital "**Declined to Report: The hospital was asked to provide this information to the public, but did not."** (*See e.g.*, ECF No. 195-45, PX-033.5 at 1, at 1-2).

221. When a user clicks or taps on one of the Four Measures for a non-participating hospital, an asterisk (*) appears next to the measure score underneath "This Hospital's Score." (*Id.*).

222. The asterisk (*) is associated with a red, bolded footnote stating, "***The hospital declined to report their performance on this measure, so a score was assigned to reflect the lack of information available**" that is reflected in the "Notes and Definitions." (*Id.*).

223. The additional footnote stating "***The hospital declined to report their performance on this measure, so a score was assigned to reflect the lack of information available**" does not appear for any measure for which the imputation method was not used. (*See e.g.*, ECF-189-92, PX-033.1, 1-2).

224. Leapfrog created the "asterisk" to minimize consumer confusion. (ECF No. 183-1, Leapfrog's Designations of Lauren Bailey, 179:7-180:1).

225. Creating the asterisk and bolded text was how Leapfrog sought to clearly disclose to consumers how the data was being assigned. (ECF No. 183-1, Leapfrog's Designations of Lauren Bailey, 179:7-180:1).

226. If a hospital does not respond to the Survey, measures "Effective leadership to prevent errors," "Nursing and Bedside Care for Patients," and "Staff work together to prevent errors," show a question mark displayed with "Declined to Report" over the respective gas gauge on these measures for that hospital. (ECF No. 195-45, PX-033.5, p. 1); (ECF No. 195-46, PX-033.6, p. 1).

227. Clicking a link at the top of a hospital's profile webpage that says "Detailed table view" takes a consumer to a new webpage that contains two tables displaying the hospital's most recent numerical score on each measure. (ECF No. 195-47, PX-033.7, pp. 1-3).

228. Each table has seven columns: "Measure," "The Hospital's Score." "Worst Performing Hospital," "Avg. Performing Hospital," "Best Performing Hospital," "Data Source," and "Time Period Covered." (*Id.*).

229. Under the second table (process measures) of a hospital's "Detailed table view" webpage, there is a hyperlinked text that reads, "For a full description of the methodology, click here," which is one of the many ways to access the methodology. (*Id.*).

230. Clicking or tapping the link takes the consumer to a PDF version of Leapfrog's current "Scoring Methodology" document. (*Id.*).

231. Consumers can read the publicly available methodology document to see the measure scores associated with each of the performance categories for the Four Imputed Measures. (ECF No. 189-94, JX-034.0); (ECF No. 189-101, JX-041.1).

232. Consumers can also access the Scoring Methodology from the Safety Grade Website home page. (Tr. Vol. 2, Berger, 37:2-25).

J. STATEMENTS ON LEAPFROG'S SAFETY GRADE WEBSITE

233. Leapfrog is "the only hospital ratings program focused exclusively on preventing medical errors and patient harm. It is fully transparent, free to the public and updated biannually in the fall and spring." (ECF 188-88, DX-913, p. 6).

234. Leapfrog's goal is to always be transparent with hospitals and consumers. (Tr. Vol. 3, Binder, 100:18-21). Thus, Leapfrog uses a series of communications routinely (monthly new letters, press releases, educational programs) that are all free to the public. (*Id.*, 101:5-14).

235. Leapfrog explains to consumers the difference between the Survey and the Safety Grade. (*See*, ECF No. 195-39, PX-030.0, 1-2).

236. Leapfrog explains to consumers that reporting to the Leapfrog Survey "doesn't automatically improve a hospital's Safety Grade. If a hospital does well on the Leapfrog Hospital Survey that can improve their Grade, but if they do poorly it can hurt their grade." (*Id.*).

237. Leapfrog explains to consumers that some hospitals do not receive a Safety Grade because there is not enough data publicly available to be eligible for a Safety Grade, but the "absence of a Grade does not mean a hospital is unsafe; it means Leapfrog does not have enough data to assign a Grade" (*Id.* at 4).

238. Leapfrog explains to consumers that "[m]ost of the data Leapfrog uses comes from CMS, and in some cases, CMS does not publish adequate safety data on an individual hospital. Sometimes the hospital is too small to issue reliable numbers, or the hospital does not offer services relevant to the safety data. For instance, a hospital without an Intensive Care Unit (ICU) cannot report ICU safety measures." (*Id.*).

239. Leapfrog's website explains to consumers "How to Use the Grade." (*See e.g.*, https://www.hospitalsafetygrade.org/how-to-use-the-grade); (ECF No. 195-31, PX-023.0).

240. Leapfrog advises consumers that instead of relying on past grades, "[p]atients should always decide on where to receive care based on a hospital's current Safety Grade. However, past grades can tell you a lot about that hospital's track record in keeping its patients safe from errors, injuries, accidents and infections." (*Id.* at p. 4).

241. Leapfrog explains to consumers "About the Grade" including how it was developed. (ECF No. 195-107, PX-066.0).

242. Leapfrog explains to consumers "How the Leapfrog Hospital Safety Grade is produced" including descriptions of the domains, eligibility requirements, and where data comes from. (*Id.* at p. 3).

243. Leapfrog provides consumers links for helpful resources, contacts for Leapfrog, the scoring methodology and an explanation of grades. (*Id.* at 3).

244. Leapfrog explains to consumers that the "Safety Grade provides data and research to help you make informed decisions about a critical aspect of your hospital stay – safety" and that the "goal of the Leapfrog Hospital Safety Grade is to reduce preventable deaths from hospital errors and injuries by publicly recognizing safety and exposing harm." (ECF 195-11, PX-011.0,).

245. Leapfrog's website references a white paper written by Johns Hopkins. (*See e.g.*, ECF No. 195-8, PX-008.0).

246. To date, Dr. Matt Austin stands by the findings in the white paper. (ECF No. 186-1, Leapfrog's Designations of Dr. Matt Austin, at 106:16-107:14, 353:11-20).

K. NO EVIDENCE OF CONSUMER DECEPTION

247. I find Dr, Berger's opinion that "it is unlikely that consumer either understand the specific methodology used, so the minimum score was applied, or the impact of that impact of the that minimum score application on the hospital grades and nonparticipating hospitals" to be uncredible. (Tr. Vol. 2, Berger, 6:17-21).

248. Over Leapfrog's objection, Dr. Berger's relies on Leapfrog's google analytics in coming to the conclusion that consumers are "unlikely…to understand," but he also admits that "Google analytics is a well-used methodology for analyzing *website traffic* and *behavior* on websites," which in turn admittedly does not show what consumers may or may not *understand*. (Tr. Vol. 2, Berger, 47:1-2).

249. To be sure, Dr. Berger testified that Google analytics data "is not measure of what people remember or what they thought they would do." (Tr. Vol. 2, Berger, 68:4-7).

250. When asked how trustworthy the google analytics data is in telling what type of people viewed the methodology, Dr. Berger opined "I don't know, it just shows the number of individuals." (Tr. Vol. 2, Berger, 56:19-22).

251. Google analytics data is used to see "whether or not people are exposed to certain types of information, whether or not they went to a particular page" but neither is evidence of whether a consumer understood the information or not. (Tr. Vol. 2, Berger, 47:13:16).

252. When asked whether any of the Google analytics data confirmed the clicks were made by consumers, Dr. Berger testified "I have not seen data that speak to it one way or the other." (Tr. Vol. 2, Berger, 49:11-13).

253. Dr. Berger does not know whether any of the clicks were bots or repeat users. (Tr. Vol. 2, Berger, 57:1-4; 58:15-18).

254. The only thing Dr. Berger did confirm about the alleged users and Google analytics data is that it "is anonymous." (Tr. Vol. 2, Berger, 50:3-6).

255. For all the reasons stated *supra*, I find the Google analytics data to be unreliable and not evidence of whether a reasonable consumer understood Leapfrog's website or whether any consumer was deceived by it or not.

256. Moreover, Dr. Berger's opinions are inconclusive as all are qualified with "likely," some are qualified with what "consumers may do" and others are supported by "I guess it is possible." (Tr. Vol. 2, Berger, 6:17-21; 70:11-13; 11:13-15). The mere possibility of something that could or may happen is an insufficient to prove consumer confusion or deception.

257. Dr. Berger admittedly does not provide an opinion on whether consumers are likely to be deceived to their detriment by the Leapfrog methodology or how Leapfrog displays it on the website. (Tr. Vol. 2, Berger, 41:22-42:2).

258. Since Dr. Berger's opinions are unsupported by any actual evidence of consumer understanding, I decline to consider any of his conclusions related to Leapfrog's website display or the Google analytics data itself. (ECF 192-93 through ECF 192-103, PX-471-480).

259. Dr. Berger opines that consumers are unlikely to make it to the methodology document, but yet also admits that he does not know whether consumers would even understand the methodology document if they did get there. (Tr. Vol. 2, Berger, 22:10-11; 27:11-12).

260. Dr. Berger did not do a consumer survey to determine what any consumer thought, understood or actually considered. (Tr. Vol. 2, Berger, 45:7-15).

261. Despite citing 59 articles in his expert report, Dr. Berger was unable to name a single article that relied on google analytics data in coming to its conclusions. (Tr. Vol. 2, Berger, 46:13-24).

262. Dr. Berger did not perform a digital low literacy readability analysis on Leapfrog's website to determine whether a reasonable consumer may be able to understand it. (Tr. Vol. 2, Berger, 50:7-10).

263. Dr. Berger is not an expert in determining how websites should be designed in order to properly provide information to low literacy consumers. (Tr. Vol. 2, Berger, 42:22-43:2).

264. Dr. Berger has no experience in consulting with companies about meeting FTC standards for websites. (Tr. Vol. 2, Berger, 42:19-21).

265. I decline to consider all of Dr. Berger's opinions regarding footnote 4, "what safer hospitals do," the detailed table view, and the gas gauges as there is no credible or trustworthy evidence of what a consumer saw or did not see, believe or did not believe, considered or did not consider, relied on, or did not rely on – there is no evidence of consumers at all.

266. Rather, the only evidence that confirmed anything about Leapfrog's website is Dr. Nicholson's opinion that he considers Leapfrog's imputation method "to be an assignment," which is exactly how Leapfrog displays the imputation method to consumers on its website: "***The hospital declined to report their performance on this measure, so a score was assigned to reflect the lack of information available.**" (Tr. Vol. 1, Nicholson, 226:14-16); (*see e.g*, PX-034.5, p. 2).

267. When considering one of the public comments, Senior VP of Ratings, Missy Danforth, proposed adding a symbol next to the gas gauges or scores to indicate to consumers that the score is imputed, which is how footnote 4 was conceived. (JX-026.0).

268. Dr. Romano also encouraged Leapfrog "to use the word assign instead of impute with respect to step two B, and they followed that suggestion." (Tr. Vol. 2, Romano, 161:2-4).

269. Leapfrog's data analyst, Alex Campione, worked with a member of Leapfrog's communication team to carefully and thoughtfully craft the language of footnote 4 because Ms. Campione "wanted it to be as accurate as possible while also being understandable to a lay person." (Tr. Vol. 2, Campione, 286:6-8); (ECF 189-67, JX-31.1).

270. Aligning with Dr. Nicholson's opinion, footnote 4 was drafted specifically to reflect that "imputation is the assigning of points." (Tr. Vol. 2, Campione, 286:4-5).

271. The footnote 4 "asterisk refers to a clearly articulated line that explains that the score was assigned," and the intention was for consumers "to understand that the 15 was assigned." (Tr. Vol. 3, Binder, 38:5-6; 38:24).

L. LEAPFROG'S OPERATIONS

i. Leapfrog Board of Directors

272. Leapfrog's bylaws delegate responsibilities of approving the methodology to the CEO, Leah Binder. (Tr. Vol. 3, Binder, 46:18-47:2).

273. Leapfrog's Board "[e]xpressly does not get involved in approving methodology issues, and only one time they [were] involved in [the] methodology and that was when [Leapfrog] launched the hospital safety grade." (Tr. Vol. 3, Binder, 146:14-17).

274. If Leapfrog's Board wanted to be more involved in the methodology, they would express the same. (Tr. Vol. 3, Binder, 47:7-18).

275. Leapfrog's Board is fully aware of the Fall 2024 methodology change and has never expressed any issues with the change. (Tr. Vol. 3, Binder, 73:5-15).

276. Leapfrog's CEO, Leah Binder, went six years without a raise because she wanted to "reserve the funding that is available for [Leapfrog's] executives." (Tr. Vol. 3, Binder, 119:14-19).

ii. Leapfrog's Revenue Sources

277. The survey is Leapfrog's "most expensive asset." (Tr. Vol. 3, Binder, 91:21-23).

278. It is important to Leapfrog to put a lot of resources into the survey because "hospitals use the survey as…a checklist" for improving on patient safety. (Tr. Vol. 3, Binder, 91:21-92:9).

279. Leapfrog's revenue is likewise used to pay for the resources used to publish free products to hospitals and consumers. (Tr. Vol. 3, Binder, 92:10-12).

280. Leapfrog's revenue streams consist of "standard non-profit fundraising," which includes sponsorships, donations and registrations. (Tr. Vol. 3, Binder, 107:2-5).

281. Leapfrog licenses its accolades, which simply allows a hospital to purchase the right to use a Leapfrog trademark to promote their Safety Grade, Diabetes Recognition, or Top Hospital Award. (Tr. Vol. 2, Binder, 107:13-23); (ECF 195-11, PX-010.0).

282. Leapfrog encourages hospitals "take pride in improving their safety" by promoting their Safety Grades regardless of whether they purchase accolades by providing hospitals with free tools like template ads, announcements, and press releases. (Tr. Vol. 3, Binder, 108:1-3); (PX-508.0); (PX-508.1).

283. Leapfrog licenses its "proprietary interpretation" of a hospital's data – its scores. (Tr. Vol. 3, Binder, 54:6-7; 107:6-12).

284. Data licensing does not provide or allow the licensee access to any hospital's raw data that was provided in response to the Leapfrog Survey. (Tr. Vol. 3, Binder, 81:1-2).

285. Data licensing allows a purchaser access to the most recent available data that is available on the each of Leapfrog's websites. (ECF 194-73, PX-247.1); (ECF 191-9, PX-324.1).

286. Datasets are not priced by the number of hospitals that participate in the Survey nor by the number of Safety Grades published by Leapfrog. (Tr. Vol. 3, Binder, 57:22-24).

287. In fact, between 2023 and 2024, survey participation increased by 10%, but the price of licensing a data set did not increase. (Tr. Vol. 3, Binder, 81:9-20). "The only price increases have been inflation." (*Id.*, 81:25).

288. A hospital need only pay for an accolade license if it wishes to use Leapfrog's intellectual property – logos in connection with its advertising of its Hospital Safety Grade. (Tr. Vol. 3, Binder, 108:1-3); (ECF 191-9, PX-508.0); (ECF 191-10, PX-508.1).

289. Leapfrog has never generated revenue from selling consulting services. (Tr. Vol. 3, Binder, 108:20-23).

290. There is no evidence that Leapfrog is a "pay for play."

291. There is no evidence that hospitals pay money to Leapfrog in exchange for better grades.

292. Leapfrog does not accept money in exchange for better Safety Grades.

293. Leapfrog has heard Plaintiffs' tropes throughout time, but none are true. (Tr. Vol. 3, Binder, 101:24-102:15); (ECF 188-16, DX-402, p. 25-38).

M. LEAPFROG SAFETY GRADE STATISTICS

294. In Spring 2025, Leapfrog assigned 2,829 hospitals Safety Grades and of those hospitals that received a grade only 592 of them did not respond to the Survey. (ECF 188-31, PX-426 at p. 2).

295. In Spring 2025, only 8.09% of graded hospitals received either a "D" or "F" Safety Grade. (*Id.*).

296. In Spring 2025, only 19 of 2,829 graded hospitals received an "F" Safety Grade. (*Id.* at p. 3) and three of those 19 were the Plaintiffs (Delray, Palm Beach, and West Boca). (ECF 188-31, PX-412).

297. When comparing Fall 2024 and Spring 2025 scores, the overall means improved on 17 measures. (ECF 188-31, PX-426 at p. 8).

298. In Spring 2025, Leapfrog graded 191 Florida hospitals and 70 of those hospitals received an "A" Safety Grade. (*Id.* at p. 13).

299. Florida has one of the highest Survey participation rates in the country. (ECF 188-31, PX-426); (ECF 192-16, PX-412).

300. Of the 191 hospitals in Florida that received a Spring 2025 Safety Grade, only 10 did not submit a Survey and five of those are the Plaintiffs. (ECF 188-31, PX-426); (ECF 192-16, PX-412).

301. Of the 10 that did not submit the Survey, all 5 non-plaintiff hospitals received a C and all used Step 2 imputation. (ECF 188-31, PX-426); (ECF 192-16, PX-412).

302. The non-plaintiff Florida hospitals that did not submit a Survey had the same scores imputed for the Four Imputed Measures as the Plaintiff hospitals, but the non-plaintiff hospitals received "C" Safety Grades rather than "D" or "F" Safety Grades like each of the Plaintiff hospitals. (ECF 188-31, PX-426); (ECF 192-16, PX-412).

L. THE PLAINTIFF HOSPITALS ARE POOR PERFORMERS

i. DELRAY MEDICAL CENTER

303. Delray's patient population is "very elderly" with an average age of "78 to 82 years old." (Tr. Vol. 1, Havericak, 54:18-21). Delray serves "a little less than 116,000" patients a year. (*Id.* at 55:2). About 30% of Delray's patient population consists of Humana insureds and "[a] lot of Medicare and Medicare Advantage patients." (Tr. Vol. 1, Havericak, 80:10-14).

304. In Spring 2024 under the pre-existing safety grade methodology wherein Delray was receiving an imputed score of 100/100 for all 4 of the imputed measures, Delray Medical Center received a failing grade of "D". (Tr. Vol. 1, Havericak, 91:1-2).

305. In Fall 2024 under the Fall 2024 Methodology Change, Delray Medical Center received a "F" Safety Grade. (Tr. Vol. 1, Havericak, 73:7-9).

306. Delray had a failing Safety Grade before the Fall 2024 Methodology change.

307. Delray admits its Fall 2024 CMS data, specifically HCAP and HAI scores, were significantly lower than the national average. (Tr. Vol. 1, Havericak, 103:14-18).

308. While the CEO of Delray attempted to downplay the accuracy of Delray's CMS data by qualifying it as "a snapshot of some of [Delray's] population," Havericak likewise testified that Delray's patient population is "very elderly" with an average age of "78 to 82 years old" and

consists of "[a] lot of Medicare and Medicare Advantage patients." (Tr. Vol. 1, Havericak, 104:3-6; 54:18-21; 80:10-14). In other words, Delray's own self-reported CMS data is admittedly an accurate reflection of its patient population.

309. In addition, Delray tracks its internal data as compared to national averages. (ECF 188-85, DX-813).

310. Delray's own internal documents confirm that in 2024 Delray performed below the national average on the following measures for which it collects data, and which go in to the composite Leapfrog Hospital Safety Grade:

- Below the national average on 4 of 8 "Safety of Care" measures; notably, PSI-90, SSI Colon and MRSA
- Below the national average on 8 of 9 "Readmission & Unplanned Visits" measures.
- Below the national average on all 9 "Patient Experience" measures (HCAHPS) 5 of these used by Leapfrog.
- Below the national average on 5 of 8 "Timely & Effective Care" measures.

(ECF 188-85, DX-813).

311. With respect to the four imputed measures at issue in this litigation, the CEO for Delray admits it regularly tests its CPOE system to ensure it alerts doctors to potential ordering errors. (Tr. Vol. 1, Havericak, 62:17-23). In fact, Delray keeps "score cards and metrics with the physician providers and that is shared [] in [] monthly meetings." (Tr. Vol. 1, Havericak, 63:6-10). Yet, despite the CEO testifying that these documents exist, no documentary evidence of CPOE policies or tracking was produced as evidence at trial.

312. Havericak admits DX-813 does not report Delray's performance on CPOE. (Tr. Vol. 1, Havericak, 109:2-12). Notably, Havericak admits Delray does not "do the Leapfrog testing" for CPOE and thus she does not know how Delray would have done on Leapfrog's standards. (Tr. Vol. 1, Havericak, 109:22-110:3).

313. Delray further admits all of its "nurses and staff members that administer medication" utilize a BCMA system that is "tracked by [] the chief nursing officer for all of the nursing staff and respiratory therapists to make sure everyone is in compliance." (Tr. Vol. 1, Havericak, 65:1-7). Yet, despite the CEO testifying that these documents exists, no documentary evidence of BCMA policies or tracking was produced as evidence at trial. Havericak admits DX-813 does not report Delray's performance on BCMA. (Tr. Vol. 1, Havericak, 109:2-12).

314. With respect to the Hand Hygiene measure, Delray admits it tracks handing washing and submits internal surveys to the quality department every month. (Tr. Vol. 1, Havericak, 66:10-18). Ms. Havericak, the CEO testified that Delray also uses a surveillance tool to monitor hand washing and that "information is share in [] monthly infection control or prevention meeting[s]" that is then further discussed at monthly quality meetings. (Tr. Vol. 1, Havericak, 66:19-25). Yet, despite the CEO testifying that these documents exists, no documentary evidence of hand hygiene policies or tracking was produced as evidence at trial. Havericak admits DX-813 does not report Delray's performance on hand hygiene. (Tr. Vol. 1, Havericak, 109:2-12).

315. With respect to the IPS measure, Delray has three intensive care units, a trauma ICU, neuro ICU, and cardiac ICU that is allegedly staffed 24/7. (Tr. Vol. 1, Havericak, 68:5-17). Yet, despite the CEO testifying that these documents exist, no documentary evidence of ICU Staffing policies or tracking was produced as evidence at trial. Havericak admits DX-813 (ECF 188-85) does not report Delray's performance on ICU physician staffing. (Tr. Vol. 1, Havericak, 109:2-12).

316. Delray did not present any evidence that it would have scored higher than "Limited Achievement" on the Four Imputed Measures. In fact, Havericak admits she did not personally investigate Delray's Leapfrog scores for Fall 2024. (*Id.* at 61:12-15).

317. Delray pays both the Joint Commission for accreditation and Health Grades to promote its accolades. (Tr. Vol. 1, Havericak, 128:17-129:5). But the underlying data that is submitted to both the Joint Commission and Health Grades is not publicly available. (*Id.*).

318. In 2025, Delray Medical Center received a 1 Star (out of 5) CMS rating overall and a 1 star for patient experience. (Tr. Vol. 1, Havericak, 104:13-18).

319. West Boca Medical Center did not present any evidence that its Safety Grades are undeserved or otherwise unfair.

320. Ms. Havericak admits Delray finds no "value in the survey," does not use "Leapfrog as a benchmarking foundation," and receives no benefit from Leapfrog. (Tr. Vol. 1, Havericak, 92:3-13; 92:25-93:2).

321. In fact, Ms. Havericak confirmed that Delray made a voluntary "business decision" to stop participating in the Leapfrog Survey in 2021. (Tr. Vol. 1, Havericak, 93:3-11).

322. Ms. Havericak likewise admits she is aware that Delray will be assigned a published Safety Grade by Leapfrog regardless of whether it participates in the Survey. (Tr. Vol. 1, Havericak, 111:1-8).

ii. WEST BOCA MEDICAL CENTER

323. In Spring 2024 under the pre-existing safety grade methodology, West Boca Medical Center received a "D" Safety Grade. (Tr. Vol. 2, Hanlon, 98:13-16).

324. In Fall 2024 under the Fall 2024 Methodology Change, West Boca Medical Center remained at a "D" Safety Grade. (Tr. Vol. 2, Hanlon, 98:20-99:1).

325. The Fall 2024 Methodology Change had no impact on West Boca's Hospital Safety Grade. (Tr. Vol. 2, Hanlon, 99:13-15).

326. Mr. Hanlon testified incredibly that no patient ever inquired about West Boca's Spring 2024 "D" Safety Grade and only complained after West Boca received a "D" Safety Grade in Fall 2024. (Tr. Vol. 2, Hanlon, 99:18-100:2).

327. West Boca tracks its internal data as compared to national averages. (ECF 188-85, DX-813). In fact, internal Delray documents show that Delray's quality coordinator analyzes balanced scorecards ("BSC") and kaleidoscope reports when preparing monthly reports for Delray's Quality Improvement and Patient Safety Committee ("QIPSC"). (ECF 188-58, DX-610, p. 4). Delray leaders "review the data, analyze the data, determine opportunities for improvement, initiate PI teams and report to QIPSC as scheduled." (*Id.*).

328. Internal documents confirm that in 2024 West Boca performed below the national average on the following measures for which it collects data:

- Below the national average on 2 of 8 "Safety of Care" measures.
- Below the national average on 4 of 9 "Readmission & Unplanned Visits" measures.
- Below the national average on all 9 "Patient Experience" measures, 5 of which are used in the Leapfrog composite score
- Below the national average on 4 of 8 "Timely & Effective Care" measures.

(ECF 188-85, DX-813).

329. With respect to the four imputed measures at the center of this litigation, the CEO of West Boca testified that West Boca has a hand washing policy, collects and monitors hand washing data, audits the data, and reviews the data in various meetings. (Tr. Vol. 2, Hanlon, 79:3-

12). Yet, despite the CEO testifying that these documents exist, no evidence of hand hygiene policies or tracking was produced as evidence at trial.

330. Similarly, the CEO of West Boca testified that West Boca has a CPOE policy, collects and monitors the CPOE data, audits the data, and reviews it. (Tr. Vol. 2, Hanlon, 79:19-80:3). Joint Commission requires the tracking of CPOE data, which is not publicly reported. (Tr. Vol. 2, Hanlon, 106:8-19) Yet, despite the CEO testifying that these documents exist, no documentary evidence of hand hygiene policies or tracking was produced as evidence at trial.

331. West Boca's CEO also testified that West Boca collects and monitors its BCMA data, audits the data, and reviews it. (Tr. Vol. 2, Hanlon, 80:7-15). Joint Commission requires the tracking of CPOE data, which is not publicly reported. (Tr. Vol. 2, Hanlon, 106:8-19). Yet, no evidence of BCMA tracking was produced in discovery despite Leapfrog's request. However, contrary to Mr. Hanlon's testimony that West Boca would not have scored Limited Achievement on BCMA, the evidence presented shows that West Boca's own Director of Quality confirmed that West Boca's BCMA score placed West Boca "in the category with the lowest score." (ECF 188-48, DX-509; Tr. Vol. 2, Hanlon, 125:24-126:18).

332. Mr. Hanlon also testified that West Boca allegedly has a staffed ICU. (Tr. Vol. 2, Hanlon, 80:20-22). Yes, despite the CEO testifying that these documents exist, no documentary evidence of IPS staffing was produced as evidence at trial. Rather, Hanlon only admits that West Boca has an ICU, which is the very answer that Leapfrog awards limited achievement for. (Tr. Vol. 2, Campione, 275:9-19)

333. In 2025, West Boca Medical Center received a 1 Star (out of 5) for Patient Satisfaction from CMS and 2 Star (out of 5) CMS rating overall. (Tr. Vol. 2, Hanlon,112:24-113:6).

334. West Boca Medical Center did not present any evidence that it would have scored higher than "Limited Achievement" on the Four Imputed Measures.

335. West Boca Medical Center did not present any evidence that its Safety Grades are undeserved or otherwise unfair.

336. Hanlon confirmed West Boca does not "believe there is value to the Leapfrog survey." (Tr. Vol. 2, Hanlon, 104:17-19).

337. Hanlon admits that it was a conscious and voluntary business decision not to participate in Leapfrog because he did not see the value in it. (Tr. Vol. 2, Hanlon, 106:1-3).

iii. **ST. MARY'S MEDICAL CENTER**

338. St. Mary's serves a patient population is "underserved" so they "treat a lot of Medicaid" patients. (Tr. Vol 1, McCauley, 238:15-18). St. Mary's treats approximately 80,000 patients a year. (Tr. Vol 1, McCauley, 238:23-239:1).

339. While St. Mary's also runs a pediatric hospital, Leapfrog does not grade pediatric hospitals and therefore the pediatric data associated with St. Mary's is not relevant to the Leapfrog Hospital Safety Grade. (Tr. Vol. 3, Danforth, 171:12-21)

340. St. Mary's tracks its internal data as compared to national averages. (ECF 188-85, DX-813).

341. Internal documents confirm that in 2024 St. Mary's performed below the national average on the following measures for which it collects data:

- Below the national average on all 9 "Patient Experience" measures of which 5 are used in the Leapfrog Hospital Safety Grade.
- Below the national average on 2 of 4 "Timely & Effective Care" measures.

(ECF 188-85, DX-813)

342. With respect to the four imputed measures at the center of this litigation, the CEO of St. Mary's testified that St. Mary's tracks hand washing observations. (Tr. Vol. 1, McCauley, 242:6-9). Yet, despite the CEO testifying that these documents exist, no evidence of hand hygiene policies or tracking was produced as evidence at trial.

343. Similarly, the CEO of St. Mary's testified that St. Mary's tracks its CPOE data. (Tr. Vol. 1, McCauley, 241:19-25). Yet, despite testimony that these documents exist no evidence of CPOE tracking was produced as evidence at trial.

344. Likewise, St. Mary's CEO testified that St. Mary's tracks its BCMA data. (Tr. Vol. 1, McCauley, 241:25-242:5). Yet, despite testimony that these documents exist no evidence of BCMA tracking was produced as evidence at trial.

345. Furthermore, St. Mary's CEO testified that St. Mary's has a fully staffed ICU. (Tr. Vol. 1, McCauley, 155:18-22). Yet, despite testimony that these documents exist no evidence of ICU Staffing was produced as evidence at trial. Rather, Ms. McCauley only admits that St. Mary's

has an ICU, which is the very answer that Leapfrog awards limited achievement for. (Tr. Vol. 2, Campione, 275:9-19)

346. St. Mary's Medical Center did not present any evidence that it would have scored higher than "Limited Achievement" on the Four Imputed Measures.

347. In 2025, St. Mary's Medical Center received a 1 Star (out of 5) CMS rating overall. (Tr. Vol. 1, McCauley, 258:1-3).

348. St. Mary's Medical Center did not present any evidence that its Safety Grades are undeserved or otherwise unfair.

349. Ms. McCauley, the CEO of St. Mary's, specifically admits that St. Mary's is not a consumer of Leapfrog. (Tr. Vol. 1, McCauley, 251:25-252:2).

350. St. Mary's does not find value in Leapfrog and believe it provides no benefit whatsoever. (Tr. Vol. 1, McCauley, 251:20-24).

351. McCauley admits it was a voluntary decision to stop participating in the Leapfrog Survey in 2021. (Tr. Vol. 1, McCauley, 252:3-5).

iv. PALM BEACH GARDENS MEDICAL CENTER

352. Palm Beach Gardens serves a patient population with a "median age [of] 62 and a half years old, and more than 50 percent of [] patients are 65 and older." (Tr. Vol. 1, Cazares, 140:2-6). The hospital treats "approximately 60,000" patients a year. (Tr. Vol. 1, Cazares, 140:2-6140:12-14). Thus, PBG's CMS data is an accurate reflection of its patient population.

353. PBG tracks its internal data as compared to national averages. (ECF 188-85, DX-813).

354. Internal documents confirm that in 2024 PBG performed below the national average on the following measures for which it collects data:

- Below the national average on 5 of 8 "Safety of Care" measures; notably, PSI-90, SSI Colon and MRSA
- Below the national average on 6 of 9 "Readmission & Unplanned Visits" measures.
- Below the national average on all 9 "Patient Experience" measures, of which 5 are used in the composite Safety Grade.
- Below the national average on 5 of 8 "Timely & Effective Care" measures.

(ECF 188-85, DX-813).

355. Mr. Cazares admitted that the best place to see the hospitals up to date CMS data would be to look on the April 5 Star Market Analysis in evidence at ECF 188-85, DX-813. (Tr. Vol. 1, Cazares, 160:8-10).

356. Mr. Cazares, CEO of PBG, testified that PBG has a hand washing policy, collects and monitors hand washing data, audits the data, and reviews the data in various meetings. (Tr. Vol. 1, Cazares, 154:32-12). Yet, despite the CEO testifying that these documents exist, no evidence of hand hygiene policies or tracking was produced as evidence at trial.

357. Similarly, the CEO of PBG testified that PBG has a CPOE policy, collects and monitors the CPOE data, audits the data, and reviews it. (Tr. Vol. 1, Cazares, 154:18-155:1). Yet, despite the CEO testifying that these documents exist, no evidence of CPOE tracking or monitoring was produced as evidence at trial.

358. Mr. Cazares also testified that PBG BCMA policy, collects and monitors its BCMA data, audits the data, and reviews it. (Tr. Vol. 1, Cazares, 155:5-13). Yet, despite the CEO testifying that these documents exists, no evidence of BCMA policies or tracking was produced as evidence at trial.

359. Likewise, Mr. Cazares testified that PGB allegedly has a staffed ICU. (Tr. Vol. 1, Cazares, 155:18-22). Yet, despite the CEO testifying that these documents exists, no evidence of hand hygiene policies or tracking was produced as evidence at trial. Rather, Cazares only admits that PBG has an ICU, which is the very answer that Leapfrog awards limited achievement for. (Tr. Vol. 2, Campione, 275:9-19)

360. Palm Beach Gardens did not present any evidence that it would have scored higher than “Limited Achievement” on the Four Imputed Measures.

361. In fact, when asked Mr. Cazares admitted that PBG has never taken PBG data for the four imputed measures and actually answered the Leapfrog Survey to see how PBG would have scored on the Leapfrog standards for IPS, BCMA, CPOE or HH. (Tr. Vol. 1, Cazares, 161:4-8). Thus, it is speculation that PBG would have scored better than “Limited Achievement” on the four measures.

362. In 2025, Palm Beach Gardens received a 1 Star (out of 5) CMS rating overall. ((Tr. Vol. 1, Cazares, 160:21-24).

363. Palm Beach Gardens did not present any evidence that its Safety Grades are undeserved or otherwise unfair.

364. Cazares confirmed that PBG does not participate in Leapfrog's Survey because it does not "find value in [] Leapfrog and we are not going to shift our resources to participate in a survey we just don't find valuable." (Tr. Vol. 1, Cazares, 156:9-14).

365. Cazares admits that in 2021 PBG made a voluntary business decision to stop participating in the Leapfrog Survey. (Tr. Vol. 1, Cazares, 158:1-8). But, Cazares admits Tenet has a directive that none of its hospitals may participate in the Leapfrog Survey. (Tr. Vol. 1, Cazares, 158:20-159:1).

v. GOOD SAMARITAN MEDICAL CENTER

366. Good Samaritan treats approximately 73,000 patients a year. (Tr. Vol 2, Montgomery, 194:17-19). Good Samaritan's patient population has an average age of 62 years old. (Tr. Vol 2, Montgomery, 194:22-23).

367. Good Samaritan tracks its internal data as compared to national averages. (ECF 188-85, DX-813).

368. Internal documents confirm that in 2024 Good Samaritan performed below the national average on the following measures for which it collects data:

- Below the national average on 4 of 8 "Safety of Care" measures.
- Below the national average on 8 of 8 "Readmission & Unplanned Visits" measures.
- Below the national average on all 9 "Patient Experience" measures, of which 5 are used in the Leapfrog Hospital Safety Grade
- Below the national average on 5 of 8 "Timely & Effective Care" measures.

(ECF 188-85, DX-813).

369. Sheri Montgomery, CEO of Good Samaritan, testified that Good Samaritan monitors its hand washing data. (Tr. Vol 2, Montgomery, 198:12-17). Yet, despite the CEO testifying that these documents exist, no evidence of hand hygiene policies or tracking was produced as evidence at trial. To the contrary, in February 2025, internal emails show Good Samaritan has not "met the requirement for the month of January…majority of the units have 0 tracers entered." (ECF 188-86, DX-823). Montgomery admits Leapfrog's hand hygiene standard

is 200 observations, which is the very standard Good Samaritan internally tracks for. (Tr. Vol 2, Montgomery, 216:13-15; ECF 188-85, DX-823).

370. Similarly, the CEO of Good Samaritan testified that Good Samaritan collects and monitors its CPOE data. (Tr. Vol 2, Montgomery, 198:18-19). Yet, despite the CEO testifying that these documents exist, no evidence of CPOE policies or tracking was produced as evidence at trial.

371. Likewise, Ms. Montgomery testified that Good Samaritan collects and monitors its BCMA data. (Tr. Vol 2, Montgomery, 198:20-21). Yet, despite the CEO testifying that these documents exist, no evidence of BCMA policies or tracking was produced as evidence at trial.

372. Furthermore, Good Samaritan's CEO testified that Good Samaritan has a fully staffed ICU. (Tr. Vol 2, Montgomery, 198:22-25). Yet, despite the CEO testifying that these documents exist, no evidence of ICU Staffing policies or tracking was produced as evidence at trial. Rather, Montgomery only admits that Good Samaritan has an ICU, which is the very answer that Leapfrog awards limited achievement for. (Tr. Vol. 2, Campione, 275:9-19).

373. In short, Good Samaritan did not present any evidence that it would have scored higher than "Limited Achievement" on the Four Imputed Measures.

374. In fact, Ms. Montgomery testified that she has never done the Leapfrog Survey to determine how Good Samaritan would have scored on the Four Imputed Measures with Good Samaritan's actual data. (Tr. Vol 2, Montgomery, 220:12-19)

375. Interestingly, evidence was presented that under the pre-Fall 2024 imputation model Good Samaritan was receiving higher grades than participating hospitals by virtue of benefitting from the imputation of the cohort mean. Specifically, in 2024, Good Samaritan did not participate in the Leapfrog Survey, and it received a C. (ECF 188-53, DX-565, p. 2). Yet, one of Good Samaritan's competitors, JFK hospital, did report to the Leapfrog Survey and received a D. (ECF 188-85, DX-565, p. 2).

376. Moreover, other ratings organizations like CMS rate Good Samaritan low on patient safety and quality. Good Samaritan is a CMS 1 star overall and 2-star patient experience. (ECF 188-85, DX-565, p. 2).

377. Good Samaritan did not present any evidence that its Safety Grades are undeserved or otherwise unfair.

378. Good Samaritan admits Leapfrog provides it no benefit or anything of value. (Tr. Vol 2, Montgomery, 196:24-197:4).

N. NO EVIDENCE OF CONSUMER HARM OR CONSUMER DECEPTION/CONFUSION

379. For the first time at trial, Plaintiffs attempted to offer new documents and new anecdotes regarding alleged consumer harm to patients. In fact, the evidence at trial established that despite written discovery requests, both requests for production and interrogatories (ECF 188-1-5, DX-205-209), the Plaintiffs never disclosed any names of patients, doctors or nurses who were allegedly involved in giving and/or receiving any information that patients were misled, confused or deceived by the Leapfrog Hospital Safety Grade or Methodology.

380. With respect to several of the documents produced for the first time days prior to trail, counsel for Plaintiff's admitted that it did not produce documents in discovery and "leading up to trial, particularly in light of the Court's ruling on of [sic] summary judgment on the unfairness prong, but leading up to trial we discovered" and produced it to defendants on January 9, just 3 days before trial was set to begin in this matter. (Tr. Vol 1, 147:5 – 151:2) Plaintiffs' counsel further admitted on the record that Plaintiffs did not even search for this type of consumer harm documents during discovery. (*Id.*)

381. With respect to this evidence, Plaintiffs' counsel admitted on the record "We are not offering it for the truth of the statement." Plaintiffs' counsel admitted that the testimony was "limited testimony. It is not coming in for the truth of the statements. It is coming in to show the patient has heard something, this has been published and what is the state of mind at the time, and how they are acting and what does the hospital do in response." (Tr. Vol 1, 85:24-86:3) In other words, the Plaintiffs offered the evidence only show the state of mind of the declarants…confusion evidence." (Tr. Vol 1, 85:2-86:15). Leapfrog's counsel objected to this evidence as both hearsay and lacking foundation and had a standing objection throughout trial on this basis. If this evidence is not coming in for the truth of the matter asserted, there is no evidence of consumer harm. Furthermore, even if the evidence is coming under the "state of mind" hearsay exception (Rule 803(3)), the Court finds the evidence unreliable and untrustworthy and therefore the Court disregards the evidence.

382. Despite the foregoing, the consumer harm evidence presented by the various plaintiffs is outlined below.

(1) Delray's Purported Evidence of Consumer Harm

383. Ms. Havericak revealed for the first time at trial, a story regarding about an unidentified "elderly woman with red hair sitting up eating her lunch" who allegedly expressed that she was nervous to come to Delray because she had "seen that video and…the grade." (Tr. Vol 1, Havericak, 87:2-18). But Havericak admits this alleged patient did not show her the Tiktok video or the "grade" that she was referring to. (Tr. Vol 1, Havericak, 87:12-13). Conveniently, Havericak alleged the patient told her "how wonderful the nursing staff was, people washed their hands." (Tr. Vol 1, Havericak, 87:20-21).

384. Delray did not provide any patient names or stories, including the allegedly story Havericak testified to, in its amended answers to interrogatories. (ECF 188-1, DX-205, ROG 14).

385. Ms. Havericak also testified at trial, although it was not disclosed previously in interrogatory answers, about an unidentified doctor who told her about an unidentified patient who "was concerned about the video she had seen, [and] the failing grade." (Tr. Vol. 1, Havericak, 88:4-8; 88:22-2). (Standing objection, 88:9-18). Ms. Havericak testified she spoke with the unidentified patient who allegedly said "I am afraid that I am going to die at your hospital," but eventually received "a fantastic outcome" at Delray. (Tr. Vol 1, Havericak, 89:3-17). No documents were produced or moved into evidence to support this hearsay testimony. The alleged doctor and patient remain unidentified as well as the purported treatment and outcome. Nonetheless, taking Havericak's testimony as true, the patient was allegedly not harmed and rather had a "fantastic outcome." (Tr. Vol. 1, Havericak, 89:15-17).

386. As noted above, despite Interrogatories propounded on Delary (ECF 188-1, DX-205), Ms. Havericak did not disclose any of the above instances in response to Interrogatory No. 8, No. 14 or No. 22. Based on the failure to disclose these anecdotes in discovery, I find the testimony for the first time at trial to be unreliable and untrustworthy.

387. Based on the forgoing, Delray Medical Center did not present credible, reliable or trustworthy evidence of a single consumer or patient that was deceived by its Safety Grades.

388. Delray Medical Center did not present credible, reliable or trustworthy evidence of a single consumer or patient that was harmed by its Safety Grades.

(2) Palm Beach Gardens Purported Evidence of Consumer Harm

389. Mr. Cazares, CEO of Palm Beach Gardens testified for the first time at trial that an unidentified cardiac surgeon complained that an unidentified patient did not want to have surgery at PBG "because of the failing grade he had seen from Leapfrog." (Tr. Vol 1, Cazares, 145:18-22). Cazares testified that called the unidentified patient and explained the grade, but ultimately the patient never treated at PBG. (Tr. Vol 1, Cazares, 145:23-146:11).

390. Like Delray, PBG did not identify a single patient or describe a single patient complaint in its amended interrogatory answers. (Tr. Vol 1, Cazares, 171:1-20; ECF 188-5, DX-209 at ROG 14). In fact, PBG's answer to interrogatories stated "numerous" patients complained, but yet Cazares only testified to one unidentified patient. PBG did not identify a single physician or physician complaint in its amended interrogatory answers. (Tr. Vol 1, Cazares, 170: 23-25; ECF 188-5, DX-209 at ROG Nos. 8, 14, 22).

391. Like Delray, despite Interrogatories propounded on Palm Beach Gardens (ECF 188-5, DX-209), Mr. Cazares did not disclose the above instance in response to Interrogatory No. 8, No. 14 or No. 22. Based on the failure to disclose these anecdotes in discovery, I find the testimony for the first time at trial to be unreliable and untrustworthy.

392. Based on the forgoing, Palm Beach Gardens Medical Center did not present credible, reliable or trustworthy evidence of a single consumer or patient that was deceived by its Safety Grades.

393. Palm Beach Gardens Medical Center did not present credible, reliable or trustworthy evidence of a single consumer or patient that was harmed by its Safety Grades.

(3) St. Mary's Purported Evidence of Consumer Harm

394. Unlike the other CEOs, Ms. McCauley did not attempt to provide any evidence of specific encounters with patients or doctors regarding references to Leapfrog. She provided no specific patient names or described any incidents where patients declined care at St. Mary's due to the Leapfrog grades. (Tr. Vol 1, McCauley, 254:25-255:19); (ECF 188-4, DX-208 at Rog 8, 14, 22).

395. McCauley admits her interrogatory answers provide no names of board members, doctors, or nurses who allegedly complained about Leapfrog. (Tr. Vol 1, McCauley, 253:22-254:21); (ECF 188-4, DX-208 at Rog 8).

396. McCauley did not provide any doctors, nurses, or patient names. (Tr. Vol 1, McCauley, 265:5-10).

397. Ms. McCauley only generally testified that McCauley generally testified that unidentified physicians were unhappy about St. Mary's grades. (Tr. Vol 1, McCauley, 243:11-16).

398. Based on the forgoing, St. Mary's Medical Center did not present credible, reliable or trustworthy evidence of a single consumer or patient that was deceived by its Safety Grades.

399. St. Mary's Medical Center did not present credible, reliable or trustworthy evidence of a single consumer or patient that was harmed by its Safety Grades.

(4) <u>West Boca's Purported Evidence of Consumer Harm</u>

400. Plaintiff submitted PX-552 (ECF 191-36), which was an August 22, 2025 patient record involving a compound finger fracture of J.D. The note, states that : "PT daughters did not want their faither to have surgery in West Boca Medical Center due to Leapfrog reviews that they read online. Patient was advised by the physician and this nurse at separate times of the risk of infection with an open frature and leaving against medical advice, patient verbalized he understood and wanted to go to Broward." (ECF 189-36, DX-552). The note does not mention the doctor's name or the nurse's name involved in the incident.

401. Mr. Hanlon, CEO of West Boca, testified that the doctor involved in the incident was Dr. Hernandez; however, Mr. Hanlon admits he does not know what the patient's daughter said, what the patient's reaction was, or whether Dr. Hernandez had any additional notes regarding this alleged patient. (Tr. Vol. 2, Hanlon, 135:4-12).

402. Just one month earlier, on July 22, 2025, a member of Tenet's marketing team emailed West Boca advising of a 1-star google review provided by "Tom Daly" who wrote "[if] anything below 1 star was possible that is what this place would be getting." (ECF 188-91, DX-917). Mr. Daley continued to note that West Boca's Leapfrog grades have been dropping since 2021 and U.S. News rates them a 1-star patient experience. (ECF 188-91, DX-917). Mr. Daley further references the fact that West Boca has had 116 malpractice claims filed against it since 1999, 28 involving deaths and 19 over $1 million. (ECF 188-91, DX-917).

403. Mr. Hanlon admits he does not know whether the reference in DX-552 (ECF 189-36) in the "JD" note to "reviews that they read online" was the Tom Daily review that referenced their Leapfrog grade (and various other failures). (Tr. Vol. 2, Hanlon, 134:9-11).

404. For the first time at trial, Hanlon testified that an unidentified patient "F.W." left against medical advice "because of some of the media and things [he] had seen about Boca." (Tr. Vol. 2, Hanlon, 89:17-21). F.W. allegedly received a medical bill from West Boca, but no other information was testified to and the document was not produced in discovery. (89:25-90:1). FW allegedly first came to West Boca in October 2025. (Tr. Vol. 2, Hanlon, 130:5-8). Hanlon does not know what nurse allegedly treated this patient. (Tr. Vol. 2, Hanlon, 136:17-18).

405. During continued questioning Hanlon testified he provided a risk management report that discussed F.W. to his counsel. (Tr. Vol. 2, Hanlon, 136:19-137:1). Halon could otherwise not provide any information about this purported risk management report that was allegedly provided to counsel. (Tr. Vol. 2, Hanlon, 137:10-24). Hanlon likewise knew no information about the alleged bills to these unidentified patients. (Tr. Vol. 2, Hanlon, 138:22-25).

406. Mr. Hanlon also testified that Dr. Quedo allegedly complained that patients asked whether they should go to West Boca. (Tr. Vol. 2, Hanlon, 91:19-21). Hanlon testified he texted with Dr. Quedo about this incident and turned over the texts to counsel, but none were produced. (Tr. Vol. 2, Hanlon, 139:2-11). Hanlon could not provide any additional information regarding these text messages including the date. (Tr. Vol. 2, Hanlon, 139:12-20).

407. Mr. Hanlon also testified that Dr. Campo had "similar concerns." (Tr. Vol. 2, Hanlon, 91:23-25). This interaction was allegedly a phone call and no further information was testified to. (Tr. Vol. 2, Hanlon, 139:21-140:3).

408. West Boca did not list a single specific physician complaint in its amended interrogatory answers. (ECF 188-3, DX-207, ROG 8). When asked why he did not supplement his answer with information related to Dr. Hernandez, Hanlon testified "I gave all of the information to my counsel…timely…I immediately reported it to our counsel" (Tr. Vol. 2, Hanlon, 128:24-129:4).

409. Incredibly, Mr. Hanlon testified that prior to the Fall 2024 Safety Grade release, no patients or community members ever raised concerns about West Boca's "D" Leapfrog Grade, even though West Boca had a "D" both before and after the methodology change. (Tr. Vol. 2, Hanlon, 96:21-97:1; 99:13-15).

410. Like the other CEOs, West Boca did not list a single specific story of a patient who declined medical advice. (ECF 188-3, DX-207, ROG 8, 14, 22).

411. Based on the forgoing, West Boca Medical Center did not present credible, reliable or trustworthy evidence of a single consumer or patient that was deceived by its Safety Grades.

412. West Boca Medical Center did not present credible, reliable or trustworthy evidence of a single consumer or patient that was harmed by its Safety Grades.

(5) Good Samaritan's West Boca's Purported Evidence of Consumer Harm

413. Sheri Montgomery testified that Dr. Goodman told her that an unidentified patient was allegedly refusing to treat at Good Samaritan. (Tr. Vol 1, Montgomery, 200:8-14). Montgomery has no documents to support this story, and she admits that she does not recall how it the conversation was communicated. (Tr. Vol 1, Montgomery, 225:15-17). Montgomery does not know who the allegedly patient was. (Tr. Vol 1, Montgomery, 231:20-21). Montgomery has no evidence of this interaction other than "mentally." (Tr. Vol 1, Montgomery, 232:6-8).

414. Like the other CEO's, Good Samaritan did not list a single specific story of a patient who declined medical advice. (ECF 188-2, DX-206 ROG 8, 14, 22).

415. Based on the forgoing, Good Samaritan Medical Center did not present credible, reliable or trustworthy evidence of a single consumer or patient that was deceived by its Safety Grades.

416. Good Samaritan Medical Center did not present credible, reliable or trustworthy evidence of a single consumer or patient that was harmed by its Safety Grades.

O. TENET HEALTHCARE CORP'S REFUSAL TO ALLOW THE HOSPITALS TO PARTICIPATE IN THE LEAPFROG SURVEY

417. In December 2024, PBHN CEO internally requested to "re-introduce Leapfrog reporting." (ECF 189-99, JX-040, p. 2).

418. On December 12, 2024, PBHN's Chief Nursing Officer emailed PBHN's CEO stating "PBHN would like to resume Leapfrog reporting. Rationale: With minimal effort and no cost, we can submit our data." (ECF 188-61, DX-618, p. 1).

419. However, three days later PBHN CEO notified the Plaintiff CEOs that she has "spoken with several members of ELT about this issue" and "[t]here are efforts underway to address Leapfrog's ability to score us even though we don't participate." (ECF 189-99, JX-040, p. 1). In January 2025, Tenet Healthcare, through counsel, sent a cease-and-desist letter to Leapfrog demanding it stop grading all 73 Tenet hospitals across the country or legal action will be pursued.

(ECF 188-94, DX-931). The cease-and-desist was not authorized by, at least, CEO Havericak. (Jan. 16, 2026 trial trans., 123:15-19). (ECF 188-90, DX-915, Press Release).

P. NO EVIDENCE OF PLAINTIFF HARM OR CAUSAL CONNECTION TO LEAPFROG

i. DELRAY MEDICAL CENTER

420. Revenue is not down at Delray Medical Center. (Tr. Vol. 1, Havericak, 115:2-3).

421. PBHN market share has not declined since the Fall 2024 methodology change. (Tr. Vol. 1, Havericak, 115:22-25).

422. PBHN's net promoter score is up as well as the brand relevance. (Tr. Vol. 1, Havericak, DX-923, p. 6-7).

423. Delray's google star reviews have increased. (Tr. Vol. 1, Havericak, 118:15-20).

424. Delray's nursing retention is unaffected and, in fact, Delray has "the best retention in the whole company." (Tr. Vol. 1, Havericak, 118:21-24).

425. No physicians have left Delray because of the Safety Grades. (Tr. Vol. 1, Havericak, 118:25-119:1). Transfers and admission rates are up. (Tr. Vol. 1, Havericak, 119:2-5).

426. Delray has admittedly not performed any survey or commissioned an investigation to determine whether admission are down. (Tr. Vol. 1, Havericak, 119:8-14).

427. Plaintiffs did not elicit any expert testimony causally linking Delray's Leapfrog Safety Grade to any harm to Delray.

428. Ms. Havericak testified that various physicians" sent her the Tiktok "video via text," but yet no text messages or emails were produced to support his hearsay assertion. (Tr. Vol. 1, Havericak, 72:16-19).

429. Plaintiffs attempted to move the Tik Tok video (ECF 192-91, PX-466.1) into evidence; however, per the Court's ruling at trial the TikTok video cannot be used for the truth of the matter asserted. (Tr. Vol. 1, Havericak, 72:8-10). Moreover, the Court notes that upon review of the Tik Tok video there is no reliability or trustworthiness to the video. The video lacks any hallmarks of authentication or foundation. Furthermore, the Tik Tok video does not mention Leapfrog at any point. Therefore, the Court does not rely on the Tik Tok video as evidence of consumer harm or harm to Plaintiffs.

430. Importantly, as well, is the fact that Ms. Havericak admits the statements made about Delray are true. (Tr. Vol. 1, Havericak, 108:16-108:18). The TikTok video states Delray has

"high surgical infections, sepsis post surgery, and low patient satisfaction," which is confirmed accurate when reviewing Delray's own internal data records. (ECF 192-91, PX-466.1, TikTok; ECF 188-85,DX-813, Delray data as compared to the national average).

ii. WEST BOCA MEDICAL CENTER

431. Mr. Hanlon testified general of "reputational harm and loss of goodwill." (Tr. Vol. 2, Hanlon, 84:1-4).

432. However, Mr. Hanlon admitted that West Boca's "total revenue is up." (Tr. Vol. 2, Hanlon, 114:6).

433. West Boca's EBITDA is up. (Tr. Vol. 2, Hanlon, 114:7-8).

434. West Boca has no nurse retention issues because of the Leapfrog grade. (Tr. Vol. 2, Hanlon, 114:22-25).

435. No physicians have left because of the Leapfrog grades. (Tr. Vol. 2, Hanlon, 115:2-4).

436. Transfers are up at West Boca. (Tr. Vol. 2, Hanlon, 115:8-9).

437. West Boca's google reviews have gone up since the Fall 2024 grade release. (Tr. Vol. 2, Hanlon, 115:5-7).

438. Mr. Hanlon testified that West Boca's ER volumes are down, relying on the summary document PX-550 (ECF 191-35).

439. However, West Boca internal documents show that in November 2024, when the Fall 2024 Safety Grades were released, West Boca had "barriers to meeting target(s)" including "[l]imited number of ORs in the Main OR suite; currently utilized approximately at 68.4%." (ECF 188-62, DX-623, p. 3). The same document does not refer to Leapfrog as a "barrier to meeting targets." (ECF 188-62, DX-623, p. 7).

440. In January 2025, internal meeting minutes show West Boca "is working on shifting volume to other locations as WBMC is tapped out with space. No ability to expand due to infrastructure issue." (ECF 188-76, DX-656, p. 8). West Boca was not only "[m]oving patients and volume, but also internal services to other locations including Outpatient physical therapy, Occupation Therapy and Speech." (ECF 188-76, DX-656, p. 9). West Boca was experiencing decreases in surgeries "due to retirement of two high volume surgeons, closure of OP diagnostic

center, and decease in cosmetic surgical volume due to increase in rates." (ECF 188-76, DX-656, p. 3).

441. In April 2025, West Boca was internally discussing upcoming OR expansion "on major infrastructure." (ECF 188-80, DX-671, p. 10).

442. Hanlon admits that internal meeting minutes reflected that he "advised it will be a tough summer with more seasonal people going back north." (Tr. Vol. 2, Hanlon, 120:12-15).

443. The Court finds that while Mr. Hanlon testified that admissions were down, Mr. Hanlon's testimony is belied by the documentary record explaining the infrastructure and seasonal reasons for a downturn in admissions.

444. Moreover, Mr. Hanlon admitted that West Boca did not conduct a study to determine the cause of the downward admissions. (Tr. Vol. 2, Hanlon, 123:17-25).

445. Mr. Hanlon further testified about a letter received from Humana (ECF 192- 89, PX-464) which he testified was "concerning". (Tr. Vol. 2, Hanlon, 141:16-18) : Mr. Hanlon further testified that between "12 to 14 percent" of West Boca's patients are insured by Humana, which Hanlon describes as "significant." (Tr. Vol. 2, Hanlon, 140:17-24). Hanlon does not recall when he received this letter, and it is otherwise not dated. (Tr. Vol. 2, Hanlon, 140:14-16). Regardless, West Boca did not respond to the letter despite it being "concerning" and representative of a "significant" portion of West Boca's patient population. (Tr. Vol. 2, Hanlon, 141:16-25). There was no evidence presented at trial that any negative consequence occurred as a result of the Humana letter.

446. In addition, the Court finds it notable that West Boca engaged Press Ganey to assist in improving its CMS HCHAP scores. (Tr. Vol. 2, Hanlon, 108:10-15). During a presentation to West Boca, Press Ganey referred to Leapfrog as "the only hospital ratings program focused exclusively on preventing medical errors and patient harm. It is fully transparent, free to the public and updated biannually in the fall and spring. The majority of data used to calculate the Safety Grade comes from CMS publicly reported data." (ECF 188-88, DX-913, p. 6). Hanlon refused to answer whether or not West Boca's executives or board members expressed concerns about working with a company that touts Leapfrog. (Tr. Vol. 2, Hanlon, 112:3-18).

iii. ST. MARY'S MEDICAL CENTER

447. "Revenues are up" at St. Mary's Medical Center. (Tr. Vol. 1, McCauley, 266:2).

448. St. Mary's has no nurse retention issues and has not lost any physicians. (Tr. Vol. 1, McCauley, 266:11-13).

449. McCauley admits that "the number of patients that are being transferred in from Jupiter Medical Center has continue to rise significantly." (Tr. Vol. 1, McCauley, 248:19-21). When asked whether patients were going to Jupiter first because of the Leapfrog grades McCauley testified that she has "not had conversation with the 569 patients," but she knows those patients "declined to come to St. Mary's under patient preference, what that means." (Tr. Vol. 1, McCauley, 263:19-23).

450. Despite document showing that the brand recognition of the hospitals (PBHN) is increasing quarter after quarter, McCauley conveniently testified that "[b]y coincidence" she was provided a brand document the day before her testimony. (Tr. Vol. 1, McCauley, 261:10-12; 244:19-22). Despite the meeting occurring the day before, McCauley did not know the name of the person who provided the document. (Tr. Vol. 1, McCauley, 261:10-12). McCauley admits it was "very opportune" because she had never been that document before. (Tr. Vol. 1, McCauley, 261:17-19). When asked what the score was, she could not recall the number but described is as "how do [patients] feel. (Tr. Vol. 1, McCauley, 262:13-14). McCauley's evidence of brand recognition being down is simply that it decreased by percentage in an unknown category. (Tr. Vol. 1, McCauley, 266:6-8). None of these alleged documents or emails were produced or moved into evidence and therefore the Court disregards Ms. McCauley's statements.

451. McCauley testified her ER walk-ins are down 3-4 patients a day. (Tr. Vol. 1, McCauley, 247:19-21); however, no study was commissioned to draw any causal link between St. Mary's ER admissions and the Leapfrog Safety Grade.

452. Likewise, internal emails confirm that St. Mary's grade is not driven by the imputed measures, but rather St. Mary's "largest area of opportunity remains in the patient experience category." (ECF 188-52, DX-562). If St. Mary's improved its self-reported CMS HCHAP scores, it "would move [them] to an 'A.'" (*Id.*).

453. McCauley presented no evidence that patients were not going to St. Mary's because of the Leapfrog grade and rather she confirmed that all she knows is "ten patients who needed medical care who when given the option of coming to St. Mary's said no." (Tr. Vol. 1, McCauley, 264:13-16). In 2023, St. Mary's grade was already fell to "a 'C' from a 'B.'" (ECF 188-52, DX-

526). PBHN's Quality Director even urged St. Mary's to "talk about Patient Experience as a market soon." (*Id.*).

iv. GOOD SAMARITAN MEDICAL CENTER

454. As purported evidence of harm to Good Samaritan, Good Samaritan relies on PX-561(ECF 191-42) which is a letter dated March 2025 terminating HSS's contract with Good Samaritan. PX-561(ECF 191-42) was never produced in discovery, but Ms. Montgomery testified that she provided PX-561 (ECF 191-42) to her counsel who did not produce in discovery, did not list DX-561 (on their trial exhibit list and only produced PX-561 (ECF 191-42) to opposing counsel on January 13, 2026 – one day *after* this trial was set to begin.

455. Ms. Montgomery testified that based on PX-561 (ECF 191-42) "pretty much the whole orthopedic program" obtained privileges at Jupiter Medical Center. (Tr. Vol. 1, Montgomery, 200:18-23). Montgomery testified eight surgeons left resulting in $8M is lost revenue. (Tr. Vol. 1, Montgomery, 201:1-12).

456. Not only was PX-561 (ECF 191-42) not produced in discovery and only produced to Defendants days before trial, DX-561 does not mention Leapfrog and was produced on January 13, 2026.

457. Ms. Montgomery further testified for the first time in this litigation that she texted and spoke with Dr. Nick Soma about why HSS was terminating the contract with Good Samaritan. Ms. Montgomery testified, over Defendants' hearsay objection, that Dr. Soma was resigning from Good Samaritan's governing board because "he was told by HSS that he had to." (Tr. Vol. 1, Montgomery, 203:11-13). Montgomery admits she "probably" texted Dr. Soma about this but no messages were produced. (Tr. Vol. 1, Montgomery, 226:18-22).

458. Ms. Montgomery also testified for the first time in this litigation at trial, over Defendant's hearsay objection, that she also had conversations with Dr. Wayne of HSS who told her that the HSS contract was cancelled because of Leapfrog. (Tr. Vol. 1, Montgomery, 204:2-8). Montgomery has no proof of this conversation. (Tr. Vol. 1, Montgomery, 227:2-7).

459. Despite testifying to an $8M lost contract with HSS in March of 2025 (prior to this lawsuit being filed) as a result of Leapfrog, Good Samaritan never disclosed anything about this issue in their interrogatory answers (ECF 188-2, DX-206, Rogs 8, 14, 22).

460. Ms. Montgomery also testified that she received a form letter from Humana (ECF 191-38, PX-554) requesting a response from Good Samaritan about steps the hospital is taking to improve its Leapfrog grade. Ms. Montgomery testified that 18% of Good Samaritan's patients are insured with Humana (Tr. Vol. 1, Montgomery, 227:16-20). Yet, Good Samaritan never responded to the Humana letter and thus Ms. Montgomery has no information regarding what Humana understood or didn't understand about Leapfrog's grading methodology. (Tr. Vol. 1, Montgomery, 227:21-25).

461. Ms. Montgomery testified that elective admissions are down 8%. (Tr. Vol. 1, Montgomery, 206:9-16). Ms. Montgomery provided no evidence to substantiate the reason for a decrease in elective admissions was the Leapfrog Safety Grade.

462. Good Samaritan also offered, over Defendant's objection, a newspaper clipping that was sent to Ms. Montgomery anonymously that stated Good Samaritan should be more like Jupiter. (Tr. Vol. 1, Montgomery, 230:18-22; ECF 191-33, PX-548). However, Ms. Montgomery conceded that PX-548 says nothing about Good Samaritan's Leapfrog Safety Grade, she does not know the identity of the individual who sent the letter. (Tr. Vol. 1, Montgomery, 231:12-15)

463. Like the other Plaintiff hospitals, Good Samaritan likewise never provided any of this information in discovery to Defendants and only came to these epiphanies of harm on the eve of trial after the Court's summary judgment ruling. (ECF 188-2, DX-206, Rogs 8, 14, 22; Tr. Vol. 1, Montgomery, 232:21-233:22)

V. PALM BEACH GARDENS MEDICAL CENTER

464. Revue is up at Palm Beach Gardens. (Tr. Vol 1, Cazares, 167:8-9).

465. Market share and brand recognition is up. (ECF 188-93, DX-923; Tr. Vol. 1, Havericak, 115:22-25)).

466. PBG has no nurse retention issue due to the Leapfrog grades. (Tr. Vol 1, Cazares, 168:17-20).

467. No physicians have left PBG because of the Leapfrog grade. (Tr. Vol 1, Cazares, 168:20-23).

468. Cazares testified in general that after the Fall 2024 Leapfrog Safety Grade was published he received complaints physicians, staff, and board members who "wanted an explanation of why the hospital had received an F." (Tr. Vol 1, Cazares, 143:22-144:10).

469. Cazares testified that Palm Beach Gardens experienced a decline in admissions for walk-in patients. (Tr. Vol 1, Cazares, 144:19-22); however, Mr. Cazares admits that he does not know what the cause of the decrease for walk-in patients is nor has the hospital has not conducted a causal study. but it is his opinion that Leapfrog is the reason for the downturn in walk ins. (Tr. Vol 1, Cazares, 169:1-14)

III. CONCLUSIONS OF LAW

A. RELIABILITY OF EVIDENCE

470. Under Fed. R. Evid. 1006, the court may admit as evidence a summary, chart, or calculation offered to prove the content of voluminous admissible writings, but the proponent of the summary "**must** make the underlying originals or duplicates available for examination or copying." Fed. R. Evid. 1006(b) (emphasis added).

471. On January 6, 2026, just ten days before trial, Plaintiffs produced PX-550 for the very first time and Plaintiffs have never produced the underlying originals thereby directly violating the Federal Rules. Fed. R. Evid. 1006(b).

472. At trial, counsel for Plaintiffs stated that PX-550 should be admitted because Plaintiffs "did produce this information but it didn't go through the end of the year," but counsel for Leapfrog denied Plaintiffs assertion. (Tr. Vol. 1 at 76: 23-24; 78:5-6).

473. The only other

474. As testified by Ms. Havericak, the CEO of Delray Medical Center, her hospital has a variety of programs to monitor admissions, but PX-550 only represents a "snapshot." (Tr. Vol. 1, Havericak, 73:20-74:4).

475. In some cases, a witness providing summary testimony of documents that were admitted was proper under Rule 1006 even when the witness only reviewed a subset of the admitted documents. *United States v. Markovich*, 95 F.4th 1367, 1374, 1378 (11th Cir. 2024).

476. However, here, the "snapshot" to which Ms. Havericak testified does not suffice to show the underlying data, making it impossible for the Court to determine the document's accuracy and reliability.

477. Plaintiffs have only ever produced summaries of the data and not the underlying data and therefore, the Court should find PX-550 to be unreliable and inadmissible. *See*, *CE N. Am., LLC v. Certain Underwriters at Lloyds'*, 2023 U.S. Dist. LEXIS 55440, at *14-16, 22 (S.D.

Fla. Mar. 30, 2023) (finding that a spreadsheet is inadmissible "because it is impossible to verify the source, accuracy, and validity of the amounts stated therein, and the absence of any underlying documents" under Fed. R. Evid. 1006).

B. PLAINTIFFS FAILED TO PRODUCE, REQUIRING AN ADVERSE INFERENCE

478. "[W]hen a party has relevant evidence within his control which he fails to produce, that failure gives rise to an inference that the evidence is unfavorable to him." *See, Callahan v. Schultz*, 783 F.2d 1543, 1545 (11th Cir. 1986) (*citing, International Union (UAW) v. NLRB*, 148 U.S. App. D.C. 305, 459 F.2d 1329, 1336 (D.C.Cir.1972)).

479. To that end, Plaintiffs failed to offer evidence within their control related including but not limited to the following: (1) consumer harm to patients; (2) actual patient safety performance on the four imputed measures; and (3) purported reputational harm or loss of goodwill; thus, this lack of evidence shall give rise to an adverse inference unfavorable to each Plaintiff hospital.

C. COUNT I, FDUTPA, ELEMENTS OF THE CLAIM AND BURDEN OF PROOF

480. The Florida Deceptive Unfair Trade Practices Act ("FDUTPA") prohibits "unfair or deceptive acts or practices in the conduct of any trade or commerce." Fla. Stat. § 501.204(1).

481. Through FDUTPA, the Florida legislature intends to "protect the consuming public and legitimate business enterprises from those who engage in unfair methods of competition, or unconscionable, deceptive, or unfair acts or practices in the conduct of any trade or commerce." Fla. Stat. § 501.202(2).

482. Florida Courts have held that "an entity does not have to be a consumer in order to have standing to bring a FDUTPA claim." *Caribbean Cruise Line, Ind. v. Better Bus. Bureau of Palm Beach County, Inc.*, 169 So. 3d 164, 169 (Fla. 4th DCA 2015). "[I]n order to satisfy the first element for a claim for both damages **and injunctive relief** under FDUTPA…the plaintiff must allege that the relevant act or practice was **harmful to a consumer**." *CMR Constr. & Roofing, LLC v. UCMS, LLC*, 2022 WL 3012298, *3 (11th Cir. 2022) (emphasis added); *see also, Stewart Agency, Inc. v. Arrigo Enters.*, 266 So. 3d 207, 214 (Fla. Dist. Ct. App. 2019) (FDUTPA claim for injunctive relief requires showing of injury to both claimant and Florida consumers).

483. To establish a deceptive practice, plaintiffs must establish that the act or practice is "likely to mislead the consumer acting reasonably in the circumstances, to the *consumer's detriment*." *See Caribbean Cruise Line*, 169 So. 3d at 169 (emphasis in original).

484. To establish a deceptive practice, plaintiffs must establish that the act or practice is "likely to mislead the consumer acting reasonably in the circumstances, to the consumer's detriment." *See, Caribbean Cruise Line, 169 So. 3d at 169; see also, Millennium Commc'ns & Fulfillment, Inc. v. Off. Of Att'y Gen., Dep't of Legal Affs., State of Fla.*, 761 So. 2d 1256, 1263 (Fla. Dist. Ct. App. 2000).

485. The Plaintiffs must show probable, not possible, deception ("likely to mislead," not "tendency and capacity to mislead"). Second, the Plaintiffs must show potential deception of "consumers acting reasonably in the circumstances, not just and consumers. Third, the new standard considers as material only deceptions that are likely to cause injury to a reasonable relying consumer. *Millennium Communs. & Fulfillment, Inc. v. Office of the AG, Dep't of Legal Affairs*, 761 So. 2d 1256, 1263 (Fla. Dist. Ct. App. 2000)

486. Courts use an objective test to "determine whether 'the alleged practice was likely to deceive a consumer acting reasonably in the same circumstances.'" *Id.* (citation omitted).

487. The Florida Supreme Court defines an unfair practice as "one that 'offends established public policy' and one that is 'immoral, unethical, oppressive, unscrupulous or substantially injurious ***to consumers***." *PNR, Inc. v. Beacon Prop. Mgmt.*, 842 So. 2d 773, 777 (Fla. 2003) (citation omitted; emphasis added).

488. To establish an unfair act or practice, plaintiffs must establish that the act or practice inflicts "***consumer injury*** that is: (1) substantial; (2) not outweighed by any countervailing benefits to consumers or competition that the practice produces; and (3) that consumers could not reasonably have avoided." *SMS Audio, LLC v. Belson*, 2017 WL 11631378, *10 (S.D. Fla. April 24, 2017). (emphasis added).

489. Although FDUTPA does not require an entity to be a consumer to have standing to sue, "all claimants must 'prove…an injury or detriment to consumers in order to satisfy all of the elements of a FDUTPA claim.'" *S. Broward Hosp. Dist. V. ELAP Servs., LLP*, 2023 U.S. Dist. LEXIS 177407 (S.D. Fla. September 29, 2023); quoting *Caribbean Cruise Line*, 169 So. 3d at 169 (citation omitted).

490. "[T]o state a claim for equitable relief, an entity must show (1) that it is aggrieved, in that its rights have been, are being, or will be adversely affected, by (2) a violation of FDUTPA, meaning an unfair or deceptive practice which is injurious to consumers." *Stewart Agency, Inc.*, 266 So. 3d at 214.

491. To be aggrieved, "'the injury claimed to have been suffered cannot be merely speculative.'" *Id.*; citing *Ahearn*, 180 So. 3d at 173; *see also Macias v. HBC of Fla., Inc.*, 694 So. 2d 88, 90 (Fla. 3d DCA 1997) ("The clear intent of [FDUTPA] as expressed by its plain language is to provide both equitable and legal remedies to private consumers who are aggrieved parties and/or have sustained **actual losses** because of a violation(s) under FDUTPA") (emphasis added).

492. The following definition of "aggrieved" applies to companies: "'having [their] legal rights [] adversely affected; having been harmed by an infringement of legal rights.'" *Stewart Agency, Inc.*, 266 So. 3d at 213-14.

493. "[A] plaintiff is 'aggrieved' under FDUTPA when the deceptive conduct alleged has caused a **non-speculative injury** that has affected the plaintiff beyond a general interest in curbing deceptive or unfair conduct.'" *Cravens v. Garda CL Se., Inc.*, 2024 WL 5058304, *36; quoting, *Farmer v. Humana, Inc.*, 582 F. Supp. 3d 1176, 1190 (M.D. Fla. Jan. 25, 2022); *Superior Consulting Servs., Inc. v. Shaklee Corp.*, 2017 WL 2834783, * (M.D. Fla. June 30, 2017) (emphasis added).

494. "The FDUTPA 'is designed to protect not only the rights of litigants, but also the rights of the consuming public at large.'" *Gastaldi v. Sunvest Cmtys. USA, LLC*, 657 F. Supp. 2d 1045, 1057 (S.D. Fla. 2009).

495. Plaintiffs who are "*aggrieved by a violation of FDUTPA* may seek declaratory and/or injunctive relief under the statute." *Id.* (emphasis added).

D. PLAINTIFFS ARE NOT CONSUMERS OF LEAPFROG AND PLAINTIFFS FAIL TO DEMONSTRATE CONSUMER HARM.

496. The Plaintiff hospitals are neither a reasonable consumer of the Safety Grades nor a consumer of the Safety Grades at all. *See, e.g., S. Broward Hosp.* at *29-31 (finding the plaintiff hospital not to be a consumer of defendant's services after plaintiff's corporate representative testified that plaintiff "received no 'benefit or anything of value' from defendants").

497. Likewise, here, every one of the Plaintiff hospital's corporate representatives (CEOs) testified that Leapfrog does not provide a benefit or provide value to the hospital.

498. The Court therefore concludes that each Plaintiff is not a consumer of Leapfrog.

499. "Plaintiff has standing to pursue FDUTPA claims so long as it can demonstrate 'an injury or detriment to consumers.'" *S. Boward Hosp.*, at *30 (quoting *Caribbean Cruise Line*, 169 So. 3d at 169).

500. Plaintiffs have otherwise not established consumer harm or substantial likelihood of consumer harm to reasonable consumers of Leapfrog's Safety Grades. *Id.* at *31.

501. Plaintiffs' inability to show actual or likely consumer harm is fatal to its FDUTPA claim. *See, Tymar Distribution LLC v. Mitchell Grp. USA, LLC,* 558 F. Supp. 3d 1275, 1289 (S.D. Fla. 2021) ("plaintiffs must point to specific damages done to consumers in the market" to allege consumer harm under FDUTPA) (cleaned up); *see also, Qunjian v. Globoforce, Inc.*, 89 F. 4th 852, 860 (11th Cir. 2023) (finding that plaintiff brining a FDUTPA claim must "prove there was an injury or detriment to consumers"); quoting, *Caribbean Cruise Line, Ind. v. Better Bus. Bureau of Palm Beach County, Inc.*, 169 So. 3d 164, 169 (Fla. 4th DCA 2015).

502. The Eleventh Circuit's recent decision in *Florida Virtual School v. K12, Inc.*, should inform the Court that the CEOs' testimony about their supposed conversations with patients and physicians about their Leapfrog Safety Grades is wholly unreliable. *Fla. Virtual Sch. v. K12, Inc.*, No. 24-10449, 2026 LX 38586, at *29-30 (11th Cir. Jan. 15, 2026).

503. First, if this Court considers the CEOs' hearsay testimony, this Court can and should afford that testimony little weight. The Eleventh Circuit recognized that the District Court acted properly discounted evidence of actual confusion due to its unreliability. *Id.* As some of the Plaintiff CEOs testified, patients spoke to doctors and the CEO then later learned of the patient's statements. This chain of discussion approximates to a game of telephone and is unreliable.

504. Eleventh Circuit caselaw preceding *Florida Virtual* also reinforces that this Court should disregard Plaintiffs' hearsay testimony. In *Florida Intentional University Board of Trustees,* Judge Williams did not give any weight to the "consumer confusion" testimony of Plaintiffs' 30(b)(6) witness, who recounted that some its employees were confused. *Fla. Int'l Univ. Bd. of Trs. v. Fla. Nat'l Univ., Inc.*, 830 F.3d 1242, 1264 (11th Cir. 2016). The Eleventh Circuit

affirmed the District Court's finding that the corporate representative's testimony was hearsay evidence and not persuasive. *Id.*

505. Plaintiffs' citations to the caselaw of this District and other the Middle District of Florida are inapposite. *See Canes Bar & Grill of S. Fla., Inc. v. Sandbar Bay, LLC*, 343 F. Supp. 3d 1236, 1246 (S.D. Fla. 2018) (qualifying that the Court may rely on hearsay evidence at a preliminary injunction proceeding but would not be admissible as evidence at the permanent injunction stage); *see also* ECF No. 74 at 41 (showing that Plaintiffs seek to permanently enjoin Leapfrog's grading of the Plaintiff hospitals).

506. In *Popular Bank of Florida*, Judge Gold acted consistently with *Florida Virtual*. He allowed plaintiff's employee to testify about evidence purporting to show consumer confusion, but that testimony was ***not given substantial weight***. *See Popular Bank of Fla. v. Banco Popular de P.R.*, 9 F. Supp. 2d 1347, 1362 (S.D. Fla. 1998) (emphasis added).

507. Since Plaintiffs are non-consumers, they must demonstrate actual consumer harm but have not.

508. Plaintiffs evidence of consumer harm is not convincing. *See e.g., S. Broward Hosp.* at *32 (evidence of billing members and emails showing that the defendant "could" or "would" bill patients but did not is inadequate to prove consumer harm).

509. The Plaintiff Hospitals have identified only a smattering of hearsay statements and documents wherein their CEOs state that patients reported complaints to doctors or expressed to doctors and to others that they were disinclined to use the Plaintiff Hospitals as a result of the Safety Grades.

510. The Plaintiff Hospitals even cite instances where patients express pleasure with their experiences at the Plaintiff Hospitals.

511. The Court therefore concludes that Plaintiffs cannot prove this Court's first inquiry on element one, consumer injury or detriment, and a judgment for Leapfrog is warranted on this basis.

E. LEAPFROG'S ACTS AND PRACTICES ARE NOT DECEPTIVE.

512. Leapfrog's acts and practices are not deceptive because it provides substantial transparent, free, readily accessible, and comprehensive information and explanations to reasonable consumers as it relates to Leapfrog's Hospital Safety Grades.

513. Judgment for Leapfrog on Count I, FDUTPA, is therefore warranted on element two, a deceptive practice is "likely to mislead the consumer acting reasonably in the circumstances, to the *consumer's detriment*." *See Caribbean Cruise Line*, 169 So. 3d at 169 (emphasis in original).

514. Element two, deception, is a two-party inquiry for which Plaintiffs cannot prove either (1) likely to mislead a consumer acting reasonably; and (2) consumer detriment. *Millennium Commc'ns & Fulfillment, Inc.*, 761 So. 2d 1256.

515. The Plaintiffs must prove and have not proven: (1) probable, not possible, deception ("likely to mislead," not "tendency and capacity to mislead"); (2) the Plaintiffs must show potential deception of "consumers acting reasonably in the circumstances, not just and consumers; *and* (3) the new standard considers as material only deceptions that are likely to cause injury to a reasonable relying consumer. *Millennium Communs. & Fulfillment, Inc. v. Office of the AG, Dep't of Legal Affairs*, 761 So. 2d 1256, 1263 (Fla. Dist. Ct. App. 2000).

516. In *Piescik*, the Southern District held that all the information available to consumers and the context in which that information is provided must be considered, and that claims of deception resting on unreasonable or fanciful interpretations of labels or other advertising fail. 576 F. Supp. 3d at 1132-33 (collecting cases).

517. In *Piescik*, the defendant (CVS) moved to dismiss, arguing that the plaintiff's belief that a reasonable consumer of hand sanitizer would take the "99.99% of germs" claim as fact was objectively unreasonable based on common knowledge, and also because of the asterisk next to the 99.99% claim led to a disclosure on the back label. *Id*. at 1132.

518. The Court further explained that the "information available" to consumers informing the reasonable-consumer inquiry is not limited to the label itself, and that "true information or a disclaimer can rebut a claim of deception." *Id.* at 1133; citing *Freeman v. Time Inc.*, 68 F. 3d 285, 289-90 (9th Cir. 1995).

519. The Court held that a reasonable consumer would not assume that a hand sanitizer product with such a label encompassed "all conceivable disease-causing microorganisms, regardless of whether they are commonly found on the hands," and noted "the asterisk on the back of the hand sanitizer clearly discloses to the consumer that it does not kill 99.99% of *all* germs, and a reasonable consumer would not be expected to ignore the asterisk and the information it leads to." *Id.* at 1133. The claim was dismissed with prejudice. *Id*., 1133-36.

520. Since the *Piescik* case was dismissed with prejudice, a judgment for Leapfrog is warranted.

521. Leapfrog provides far more than the information available to the consumers in *Piescek* and, thus, the undisputed facts here present *even stronger* grounds to hold that Leapfrog's purported conduct was not deceptive to a reasonable consumer of its products.

522. Leapfrog's hospitalsafatygrade.org website that publishes the Safety Grades included, *inter alia*, that: (i) the imputed score for non-participating hospitals is shown as equivalent to the worst score; (ii) non-reporting hospitals' Grades feature, *inter alia*, bold and red disclosures with an asterisk stating "***The hospital declined to report their performance on this measure, so a score was assigned to reflect the lack of information available.**"; (iii) a detailed table view of all the underlying scores that go into the Safety Grade for that hospital, comparison to other hospitals, the data source, and the time period covered; (iv) navigation of the Grades and measure-by-measure scores leads to a link allowing access to the full, 29-page Methodology; and (v) various other tools that show "how to use the Leapfrog Hospital Safety Grade," frequently asked questions, and "About the Grade."

523. As in *Piescik*, any potential to deceive a reasonable consumer of Leapfrog's products is ameliorated by additional information denoted by an asterisk, and by the substantial additional material provided. A reasonable consumer is not expected to ignore this asterisk. *Piescik*, 576 F. Supp. 3d at 1133.

524. Whether a reasonable consumer would be deceived is a totality-of-the-information inquiry, and must account for the type of consumer.

525. Thus, Leapfrog uses various pages on its website for varying comprehension levels, including the "gas gauge" pages for reasonable lay consumers, detailed table view for an intellectually curious consumer, and the detailed methodology page for an advanced consumer.

526. The *Piescik* court relied on *Moore v. Trader Joe's Co.*, wherein the Ninth Circuit affirmed dismissal of the plaintiff's charge that Trader Joe's labeling of honey as "100% New Zealand Manuka Honey" and listing "Manuka Honey" as the sole ingredient was misleading to a reasonable consumer. 4 F. 4th 874 at 876-77, 879-80 (9th Cir. 2021).

527. The Ninth Circuit explained that a reasonable consumer of a niche product like the Trader Joe's honey would know that it is impossible to produce "pure" batches of honey derived

solely from the Manuka flower, and that the relatively cheap price would further signal a **reasonable consumer of that honey** that the jar does not contain 100% Manuka honey. *Id*. at 881 (emphasis added).

528. Indeed, the inquiry is whether a reasonable consumer of the *subject product* would be misled considering all the information available to him or her. *See*, *Id.* at 884 (consumers of "a niche, specialty product, are undoubtedly more likely to exhibit a higher standard of care").

529. A reasonable consumer of health care information such as the Safety Grades would exhibit a higher standard of care and awareness when choosing where to receive their medical treatment, and Leapfrog's provision of substantial and transparent information (including delineating between absent data, damning data, and imputed data) allows these consumers to fully and comprehensively inquire and educate themselves about the material that they are consuming. *Moore*, 4 F. 4th at 884; quoting, *Danone, US, LLC v. Chobani, LLC*, 362 F. Supp. 3d 109, 123 (S.D.N.Y. 2019) ("Consumers of Manuka honey, a niche, specialty product, are undoubtedly more likely to exhibit a higher standard of care than 'a parent walking down the dairy aisle in a grocery store, possibly with a child or two in tow,' who is 'not likely to study with great diligence the contents of a complicated product package'").

530. Consumers are familiar with rating websites, and considering all the information available, reasonable consumers of rating systems are aware that each system only considers certain criteria.

531. The consumer of Leapfrog Safety Grades can reasonably conclude that the grade itself measures aspects of patient safety.

532. The Court therefore concludes that Plaintiffs cannot prove this Court's first inquiry on element two (deception), likely to mislead a consumer acting reasonably in the circumstances and a judgment for Leapfrog on Count I should therefore be entered on this basis.

533. Plaintiffs are otherwise not a consumer of Leapfrog and there is no evidence of this Court's second inquiry on element two (deception), consumer detriment.

534. Plaintiffs have not offered evidence of a single consumer (or patient) that considered or relied on their Safety Grades to their detriment or caused consumer harm.

535. The Court therefore concludes that Plaintiffs cannot prove this Court's second inquiry on element two (deception), consumer detriment, and a judgment for Leapfrog on Count I should therefore be entered on this basis.

F. LEAPFROG'S ACTS AND PRACTICES ARE NOT UNFAIR.

536. Leapfrog's acts and practice are not unfair because the underlying Scoring Methodology treats all hospitals the same based on the informed business decision the hospital makes and consumers are otherwise fully informed on how the Safety Grades are calculated.

537. Leapfrog's practices are transparent and far from "one that 'offends established public policy' and one that is 'immoral, unethical, oppressive, unscrupulous or substantially injurious ***to consumers***." *PNR, Inc. v. Beacon Prop. Mgmt.*, 842 So. 2d 773, 777 (Fla. 2003) (citation omitted; emphasis added).

538. Leapfrog's practices likewise have not caused any substantial consumer injury and even if any consumer injury were demonstrated, it would be outweighed by any countervailing benefits to consumers or competition that the practice produces, which can otherwise be reasonably avoided by consumers.

539. Judgment for Leapfrog on Count I, FDUTPA, is therefore warranted on element three, an unfair act or practice inflicts "***consumer injury*** that is: (1) substantial; (2) not outweighed by any countervailing benefits to consumers or competition that the practice produces; and (3) that consumers could not reasonably have avoided." *SMS Audio, LLC v. Belson*, 2017 WL 11631378, *10 (S.D. Fla. April 24, 2017). (emphasis added).

540. First, Plaintiffs have never identified a single consumer injured by a Leapfrog practice that is allegedly unfair.

541. Even if patients were refusing to treat at an "F" hospital, like Delray Medical Center, the Plaintiffs fail to show how a patient treating at an "A" hospital, like Jupiter Medical Center, harms the consumer in any way.

542. The Plaintiff Hospitals do not allege or otherwise provide proof showing that patients are refusing to treat at the Tenet Hospitals because of the Safety Grades, nor any evidence that those patients are then harmed when treated at a competitor hospital.

543. Simply alleging that patients choose to treat at a competitor hospital rather than one of the Plaintiff Hospitals is not enough to show consumer injury. *See Cmty. Health Ctrs., Inc. v.*

DiamondDog Servs., Inc.,2024 WL 3278579, *10 (M.D. Fla. July 2, 2024) (dismissal of plaintiff's FDUTPA claim after determining that plaintiff only alleged harm the defendant caused the *plaintiff* but failed to plead consumer injury).

544. The Court therefore concludes that Plaintiffs cannot prove this Court's first inquiry on element thee (unfair), substantial consumer injury, and a judgment for Leapfrog on Count I should therefore be entered on this basis.

545. Second, Plaintiffs have no evidence on the requirement that the injury "not be outweighed by any countervailing benefits to consumers or competition that the practice produces." *SMS Audio* at *3.

546. The purpose of the Safety Grade is to "educate and encourage consumers to consider safety when selecting a hospital for themselves or their families." (JX-041.1, ECF No. 189-101).

547. Leapfrog has received feedback over the years from hospitals advising that they use the Hospital Survey as a benchmarking tool on how to improve on their patient safety measures. (Leapfrog's Designations of Dr. Matt Austin, ECF No. 186-1, at 390:7-21); (Tr. Vol. 4, Zambrana, at 119:1-1).

548. The Plaintiff Hospitals themselves used the Survey as an internal tool to benchmark their patient safety progress.

549. The mere fact that year-over-year improvements to mean "cohort" scores for Survey-participant hospitals occurred also proves the benefit that Leapfrog's purported conduct conferred.

550. Thus, not only do patients benefit from receiving access to hospital's patient safety data, but the Hospital Survey also provides a free tool for hospitals to improve patient safety. (SOF ¶6).

551. "Unfair practices" generally offend public policy and are immoral, unethical, oppressive and unscrupulous. *Alhassid v. Nationstar Mortg.* LLC, 771 Fed. Appx. 965, 969 (11th Cir. 2019).

552. But the Plaintiff Hospitals cannot set forth a single fact that Leapfrog, a non-profit providing substantial information to the public about healthcare facilities' safety, engaged in conduct fitting any of those categories.

553. The Court therefore concludes that Plaintiffs cannot prove this Court's second inquiry on element thee (unfair), consumer injury is not outweighed by any countervailing benefit to consumers, and a judgment for Leapfrog on Count I should therefore be entered on this basis.

554. Third, Consumers (*e.g.*, prospective patients) could easily avoid this purported injury by navigating Leapfrog's various webpages and explanations of its Methodology contained therein.

555. More specifically, at the bottom of each page of its websites, Leapfrog expressly states, *inter alia*, "Individuals are solely responsible for any and all decisions with respect to their medical treatment.

556. Disclosures note that neither Leapfrog nor its affiliates are responsible for any damages or costs that may be incurred with respect to use of this site.

557. Leapfrog advises consumers to "never disregard, avoid or delay in obtaining medical advice from a doctor or other health care professional because of material on this site, as the site is not intended to be a substitute for professional medical advice."

558. Leapfrog is clear that when deciding on where to receive health care, "people should consider other aspects of hospital performance in the decision-making process, such as whether the hospital delivers a high level of care for the health concern the patient has, i.e., if the hospital has high-quality obstetrics or orthopedics."

559. Leapfrog's transparent disclosure of its methods cannot be genuinely described as "unfair." *See, e.g.*, *Medmoun v. Home Depot U.S.A., Inc.*, *14-15 (M.D. Fla. May 7, 2022) (where documents that Home Depot provided to the consumer informed the consumer of the very information that was allegedly unfair under the FDUTPA, dismissal was proper as the harm could have been reasonably avoided).

560. The Court therefore concludes that Plaintiffs cannot prove this Court's third inquiry on element thee (unfair), consumer injury could not be reasonably avoided, and a judgment for Leapfrog on Count I should therefore be entered on this basis.

G. PLAINTIFFS ARE NOT AGGRIEVED.

561. Each Plaintiff fails to prove that they were "aggrieved" by the Safety Grade.

562. Judgment for Leapfrog on Count I, FDUTPA, is therefore warranted on element four, Plaintiffs were not "aggrieved by" the Safety Grades.

563. "[T]o state a claim for equitable relief, an entity must show (1) that it is aggrieved, in that its rights have been, are being, or will be adversely affected, by (2) a violation of FDUTPA, meaning an unfair or deceptive practice which is injurious to consumers." *Stewart Agency, Inc.*, 266 So. 3d at 214.

564. Because the Tenet Hospitals are business entities and do not "share the characteristics of humans, such as being 'angry or sad'" the following definition of "aggrieved" applies: "'having [their] legal rights [] adversely affected; having been harmed by an infringement of legal rights.'" *Id.* at 213-14.

565. Plaintiffs must show that they were suffered a direct, non-speculative and actual harm as a result of the alleged conduct but have not. *See e.g., Cravens v. Garda CL Se., Inc.*, 2024 WL 5058304, *36 (finding that an "aggrieved" plaintiff must prove non-speculative injury).

566. The Court may look no further than Delray Medical Center and West Boca Medical Center who both received a failing "D" Safety Grade *before* and *after* the alleged "unfair" Fall 2024 Scoring Methodology change.

567. All five of the Plaintiff Hospitals' CEO's signed declarations early in this litigation, averring that the Safety Grades have harmed their hospital's reputation and goodwill, but then could not identify any non-speculative or admissible evidence in support.

568. None of the Plaintiffs' CEOs (who are the corporate representatives) could identify any actual financial harm suffered beyond a speculative level and all even admit revenue is up.

569. Plaintiffs' complaints of lost goodwill and/or reputational harm is wholly unsupported by evidence of a loss of business value.

570. The Court finds the qualifications of Mark Rule sufficient to qualify him as an expert in the field of economics, specifically regarding what must be shown by a corporation to substantiate lost good will or reputational harm. (ECF No. 96-4). The Court also finds convincing Mr. Rule's experience conducting damages and harm analysis for hospital systems and healthcare entities. (Tr. Vol. 4, Rule, 7:7-8:4).

571. The Court finds that Plaintiffs have failed to perform any necessary causal analysis between purportedly lost business value and TLG's actions and thus Plaintiffs have failed to demonstrate that they have suffered any injury as a result of the alleged actions of TLG. (Tr. Vol. 4, Rule, 5:20-7:1).

572. The Court finds credible Mr. Rule's expert testimony regarding the evidence a corporation must present to quantify harm. Specifically, the Court finds that Plaintiffs have not been shown to be *aggrieved*, notwithstanding harmed.

573. Specifically, the Court finds that the Plaintiff Hospitals have not presented documents showing historical financials, financial projections, industry-specific data related to competition, or macro-statistics related to demographics of the area to conduct a "but-for" analysis, which would show harm. (Tr. Vol. 4, Rule, 5:20-7:1).

574. Because Plaintiffs have not shown a credible baseline, this Court cannot determine whether Plaintiffs' financial performance declined due to factors unrelated to their Leapfrog Safety Grades. (Tr. Vol. 4, Rule, 10:3-18).

575. This Court also finds uncredible Plaintiffs' claims of loss of goodwill.

576. Plaintiffs have not completed an analysis showing harm to goodwill, even though a corporation typically measures the value "goodwill" provides on a yearly basis. (Tr. Vol. 4, Rule, 12:22-13:20).

577. Plaintiffs only presented unpersuasive, hearsay evidence, which purported to show their reputational harm. *See e.g.* (Tr. Vol. 1, Havericak, 88:3-17); (PX-552, ECF No. 199-36). These documents are not the type of support these Plaintiffs would need to show to support their claim of loss of goodwill. *See* (Tr. Vol. 4, Rule, 12:22-13:20); *cf.* ECF No. 74, ¶ 75 (claiming Leapfrog has harmed the goodwill that "Plaintiffs worked hard to build with their patients over the years").

578. Since Plaintiffs fail to offer any evidence that they were aggrieved *by* a violation of FDUTPA, Plaintiffs are not entitled to injunctive relief. *Gastaldi*, 657 F. Supp. 2d at 1057.

579. Since the "FDUTPA 'is designed to protect not only the rights of litigants, but also the rights of the consuming public at large,'" there is no evidence of any consumer harm, and Leapfrog's practices outweigh any purported consumer harm, Plaintiffs claim for injunctive and declaratory relief is unwarranted. *Gastaldi*, 657 F. Supp. 2d at 1057.

580. The Court therefore concludes that Plaintiffs cannot prove this Court's inquiry on element four, whether each Plaintiff is "aggrieved", and a judgment for Leapfrog on Count I should therefore be entered on this basis.

581. West Boca Medical Center is not entitled to injunctive relief.

582. Delray Medical Center is not entitled to injunctive relief.

583. Good Samaritan Medical Center is not entitled to injunctive relief.

584. St. Mary's Medical Center is not entitled to injunctive relief.

585. Palm Beach Gardens Medical Center is not entitled to injunctive relief.

H. COUNT II, DECLARATORY JUDGMENT, ELEMENTS OF THE CLAIM AND BURDEN OF PROOF.

586. Pursuant to Declaratory Judgment Act, 28 U.S.C. § 2201, a court may declare the rights and other legal relations of any interested party in a case of an actual controversy within its jurisdiction. (FAC, ¶104).

587. Since Plaintiffs fail to offer any evidence that they were aggrieved *by* a violation of FDUTPA, Plaintiffs are not entitled to declaratory relief. *Gastaldi*, 657 F. Supp. 2d at 1057.

588. Since Plaintiffs failed to prove Count I, FDUTPA, a judgment for Leapfrog on Count II should therefore be entered on this basis.

I. AFFIRMATIVE DEFENSE, ANTI-SLAPP, ELEMENTS OF THE CLAIM AND BURDEN OF PROOF.

589. Florida's Anti-SLAPP statute prohibits "fil[ing]…any lawsuit… against another person or entity [1] without merit and [2] primarily because such person or entity has exercised the constitutional right of free speech in connection with a public issue…as protected by the First Amendment to the United States Constitution and s. 5, Art. I of the State Constitution." Fla. Stat. §758.295(3).

590. A cause of action is "without merit" if it fails to state a claim or if the defendant(s) prevail on the claim at trial. *See, e.g.*, *Flynn v. Wilson*, 398 So. 3d 1103, 1115 (Fla. 2d DCA 2024).

591. Florida's anti-SLAPP statute broadly defines "free speech in connection with public issues" to include "any written or oral statement that is protected under applicable law and . . . is made in or in connection with a play, movie, television program, radio broadcast, audiovisual work, book, magazine article, musical work, news report, or other similar work." Fla. Stat. § 768.295(2)(a).

592. "Speech deals with matters of public concern when it can be fairly considered as relating to any matter of political, social, or other concern to the community." *Martin*, at *3, 8; citing *Snyder v. Phelps*, 562 U.S. 443, 453 (2011).

593. A judgment for Leapfrog on Count I, FDUTPA, proves Plaintiffs cause of action is "without merit;" therefore, the Court finds element one of Leapfrog's Anti-SLAPP affirmative defense is satisfied.

594. The evidence shows that Leapfrog's mission is premised on free speech in connection with a public issue, is intended to assist the public in assessing their healthcare options and healthcare safety and provides a public benefit; therefore, the Court finds element two of Leapfrog's Anti-SLAPP affirmative defense satisfied.

595. Leapfrog first raised its Anti-SLAPP defense in its motion to dismiss, which was not ruled on by the Court. (*See*, motion at ECF No. 39, p. 21; and Cout Order on the motion at ECF No. 41).

596. After Plaintiffs withdrew its claim for monetary damages through the operative Amended Complaint, Leapfrog renewed its Anti-SLAPP defense in its Answer. (ECF No. 75 at pp. 47-48).

597. The Court therefore concludes that Leapfrog proved its Anti-SLAPP affirmative defense and a judgment for Leapfrog should therefore be entered on this basis.

598. The Court awards Leapfrog its attorney's fees. Fla. Stat. §758.295(4).

TRIAL TRANSCRIPT

VOLUME 1

UNITED STATES DISTRICT COURT
SOUTHERN DISTRICT OF FLORIDA
WEST PALM BEACH DIVISION

CASE NO. 25-CV-80526-MIDDLEBROOKS

GOOD SAMARITAN MEDICAL CENTER, INC. et al,

Plaintiffs,

vs.

THE LEAPFROG GROUP,

Defendant.

West Palm Beach, FL
January 16, 2026

BENCH TRIAL PROCEEDINGS
BEFORE THE HONORABLE DONALD M. MIDDLEBROOKS
UNITED STATES DISTRICT JUDGE

APPEARANCES:

FOR THE PLAINTIFFS:

MARY BETH MALONEY, ESQ.
KEVIN SIMMONS, ESQ.
SYDNEY A. SCOTT, ESQ.
LEE R. CRAIN, ESQ.
SCOTT K. HVIDT, ESQ.
Gibson, Dunn & Crutcher LLP
1700 M Street NW
Washington, DC 20036
202-887-3729

JEFFREY E. MARCUS, ESQ.
Marcus Rashbaum Pineiro & Meyers LLP

FOR THE DEFENDANT:	**KIMBERLY E. BLAIR, ESQ.** **COURTNEY WOOD, ESQ.** **JURA ZIBAS, ESQ.** **MAXWELL BILLEK, ESQ.** **Wilson Elser Moskowitz Edelman & Dicker LLP** **161 N Clark Street** Suite 4500 **Chicago, IL 60601** 312-704-0550
Official Court Reporter:	**Pauline A. Stipes** West Palm Beach/Ft. Pierce, FL HON. DONALD M. MIDDLEBROOKS 561-803-3434

THE COURT: Good morning, please be seated.

This is the case of Good Samaritan Medical Center Inc., et al. versus the Leapfrog Group, case number 25-80526. Could we please have appearances.

MS. MALONEY: Yes, your Honor, Mary Beth Maloney on behalf of the five Plaintiff hospitals. I have with me here today as well Jeff Marcus on behalf of Delray Medical Center, Sidney Scott on behalf of Palm Beach Gardens Medical Center, Lee Crain on behalf of West Boca Medical Center, Kevin Simmons on behalf of St. Mary's Medical Center, and Scott Hvidt behind me on behalf of Good Samaritan Medical Center.

THE COURT: Thank you. Good morning.

MS. BLAIR: Good morning, your Honor, Kimberly Blair from Wilson Elser on behalf of the Defendant Leapfrog Group. With me is Leah Binder, the CEO and President of Leapfrog. I will let my colleagues introduce themselves.

MS. WOOD: Good morning, your Honor, Courtney Wood from Wilson Elser on behalf of Leapfrog Group.

MS. ZIVAS: Jura Zivas, Z-I-V-A-S.

MR. BILLEK: Maxwell Billek on behalf of Defendant Leapfrog.

THE COURT: Good morning.

MS. MALONEY: I'm sorry, your Honor, I was just giving my appearances. We have the five CEOs from each of the five Plaintiffs who are sitting right behind me there. I am happy

to introduce them later on the record at the appropriate time.

THE COURT: Thank you. Well, thanks for being here. We gave you as much notice as we could. As I indicated, things changed in terms of scheduling. The Defendant chose not to present a case. They had initially indicated they were going to need a couple days to do that, but they didn't, and the jury came back yesterday afternoon at 4:00 o'clock, so here we are.

Okay, let's start. I think we are going to start with openings. There were a couple of ripe motions, motions to exclude experts. We will enter orders today denying both sides' motions to exclude experts. We will be happy to hear them, and I think cross-examination can deal with any deficiencies both sides pointed out in the motions.

There was a motion to seal. I don't want to seal documents that are introduced into evidence.

I think if it is medical information you ought to be able to redact the names, or if you need to refer to names in testimony, just use initials. If we need to, we can have a one-page document that explains who the initials relate to, but I don't want to seal documents or testimony introduced into evidence.

It is hard for me to understand without more of a showing why it is necessary in this case. I wouldn't think we would get too deeply into anybody's personal medical information.

Sealing presents particular problems and they are becoming more difficult as time goes on. We now have a policy, the sealed documents can't go into the electronic filing systems because of some hacking that took place. It is hard even for judges and their staff to see these documents, so I think we ought to avoid that to every extent possible.

MS. MALONEY: May I just -- it was our motion for sealing so may I offer a point of clarification. No disagreement with your Honor's order. It was only as to the names of the individual patients we were asking for sealing, and those documents had been fully -- the names had been fully redacted because of HIPAA concerns and we have a protective order that was entered with the other side in this case with respect to -- that includes addressing HIPAA issues.

So, when your Honor issued his decision last week in which it noted that the -- a couple of the Plaintiff CEOs had not provided the names of patients at their deposition testimony, we wanted to make sure you knew we have the names, that was a intentional choice, just as it was an intentional choice not to put the names in the public record because of HIPAA concerns.

I think that is an excellent solution, your Honor, to have a doe one, doe two type list. If that is acceptable to the other side, we could come up with -- we could make reference to documents and testimony and then have Doe One, Doe

Two, Doe Three, etc., so that there is no concern that these names don't exist, but only that we are not identifying them both because of the HIPAA issues and because of the challenges of administratively with dealing with sealing.

Does that sound appropriate?

THE COURT: You all can talk about it, perhaps initials. We tried a case not long ago, it was basically the United States versus State of Florida dealing with the challenges of children who had unusual diseases and infirmities. They were able to refer to those throughout by initial without any problem, and -- so let's try to avoid sealing.

MS. BLAIR: Your Honor, I don't disagree with that, but our motion went a little deeper. As your Honor may recall, there were issues of hearsay raised, and these documents they are now seeking to unseal were never provided to us. We had interrogatories to them asking for names, or initials, or information regarding the patients they allege -- the consumers that they allege were harmed by the conduct of my client.

None of that information was ever provided despite answers to interrogatories, despite amended answers, despite depositions. At a bench trial, we are here to get to the core of the truth. We have had no opportunity to see these patients, to know who they were, to depose them, and that is really at the heart of the issue of the motion to seal.

At the 11th hour, after you issued your summary judgment motion, they now want to tell you names of patients that were never provided to us, initials or anyone, never disclosed. We have never had time to depose them or take any discovery about them.

THE COURT: We will take anything like that up on an individual basis as we proceed.

It is time to try the case. Both sides have filed a flurry of things that aren't ripe. There was a motion for reconsideration based on an Eleventh Circuit case, there are some other filings that have taken place. I think we can try the case and let's start with -- I think you wanted to do opening statements.

MS. MALONEY: Thank you so much, your Honor. Yes, we have an opening statement and we have -- if your Honor will consider it, we have hard copies and hard copies of the slides we will be presenting to the Court.

THE COURT: All right.

MS. MALONEY: Would you like me to hand the hard copies up?

THE COURT: Certainly.

MS. MALONEY: Would you like two or three copies?

THE COURTROOM DEPUTY: I believe two.

THE COURT: Ramzy is the law clerk assigned to this case, the Court Reporter is Pauline, and you probably dealt

with Genevieve Wilner, the courtroom deputy. She will be in and out. We expect you all to deal with exhibits. We don't introduce them through the courtroom deputy, she is usually not in the courtroom.

Okay.

MS. MALONEY: Good morning, your Honor, Mary Beth Maloney for the five Plaintiff community hospitals. This case is not whether hospital safety should be measured; it should. It is not about whether patients deserve transparency; they do.

This case is about something more fundamental, whether an organization that claims to protect patients should be allowed to publish hospital safety data that are not based on real safety information.

The evidence will show Leapfrog has designed safety grades to mislead the public and fracture trust at the precise moment patients and families are frightened, rushed, and desperate for clear and honest information about where to seek care and whom to trust.

As the Court has recognized, the questions here are factual.

Your Honor, one moment, I just want to get my bottle of water.

What Leapfrog actually does is in question, what it tells consumers, how consumers understand it, and how that conduct harms not just the five community hospitals, but also

the patients and communities in which they live.

The Plaintiffs are five hospitals that have served Palm Beach County for decades. You can see them here on the screen. They are essential full service hospitals. They provide level one trauma services, neonatal care otherwise unavailable within hundreds of miles, cardiac and pediatric programs, and each have emergency departments relied upon when minutes matter and where choices are limited.

This case is about Leapfrog's misconduct, an organization that claims to protect patients, but instead publishes safety grades that its own evidence shows are driven by fabricated penalty scores and designed to influence the public.

When you see an F, you know exactly what it means. In school an F means failure. You may not know the details, whether you were sick that day or you missed an exam, but the letter itself dominates. That feeling, the one you get when you see an F grade, never goes away. When people see an F they don't scroll for explanations or footnotes, they just move on. Why waste time learning more when a single letter says so much.

Consider what the reaction means in health care. When patients or families see an F for a hospital where they plan to birth their child, take their sick son, or go themselves in the event of an asthma attack or an injury to their eye, they do not assume there is a technical information buried somewhere to

explain the F. They assume the hospital is unsafe, so they move on. They find another hospital, a hospital they believe is safer simply because Leapfrog granted them a higher grade.

That is the issue before the Court, this F, and how Leapfrog manufactured our hospitals' Fs and Ds by assigning made-up scores that would be weighed more heavily and presented as if they were real safety scores.

They did it to hurt the hospitals and the community, and we are here to defend the community and their patients, and whether that practice was deceptive to reasonable consumers and unfair in its effects on the real world is the question before your Honor.

The evidence will show that patients did exactly what Leapfrog expected them to do when they saw that grade, they just stopped coming, and in some cases they went elsewhere, and to their detriment because, as the evidence will show, this community, these patients, they needed the exceptional services and care that our clients, and oftentimes only our clients can provide.

Now, Plaintiffs have participated in the Leapfrog survey in the past, most recently in 2021. When they participated Leapfrog did not claim they were failing hospitals, which they weren't, and they still aren't, but you will hear that participating in Leapfrog is not without cost. You will hear evidence that the survey was extremely

burdensome, it was hundreds of pages long.

You will hear from Regina West, who was the quality director overseeing all five Plaintiff hospitals. Ms. West, a nurse with decades of experience in patient care, in 2021, the last time the hospitals participated, was also the quality director at Good Samaritan Medical Center.

She will explain that when she compiled the Leapfrog survey in 2021 at least six people were involved, including physicians, infection control, finance, and others. She personally spent 40 to 60 hours compiling that survey, and she will explain that this time had a real cost because it pulled physicians and staff away from patient care.

That is why in 2021 the Plaintiffs' hospitals made a choice to devote their limited resources to patients, not paperwork. The Plaintiffs' hospitals were not alone in deciding not to participate in the Leapfrog survey around this time. I think we all remember 2021 as an exceedingly challenging time in this country and in Florida given the demands on hospitals from COVID.

You will hear about that from our Plaintiffs' CEOs, including one registered nurse who was a CEO during COVID who worked directly with patients.

You will hear that between 2021 and 2023, hospital participation in the Leapfrog survey stagnated, and that is reflected on the chart before you. By 2023, 36 percent of

hospitals were not participating in Leapfrog's survey, choosing, like our hospitals, to use their limited staff and physician resources for patient care rather than survey compliance.

You will learn that it was against that backdrop, declining participation and hospitals choosing to devote their limited staff and physician resources to patient care rather than surveys, that in fall 2024 Leapfrog changed its grading methodology.

You will learn that in May 2024, Leapfrog invented a penalty so draconian that it effectively punishes and turns even good hospitals into hospitals with that ugly F and D grade. In the fall of 2024, Leapfrog made what two Leapfrog employees, Ms. Danforth and Ms. Campione, called "a drastic change" to its grading system.

You will hear from them on the stand, but this is a transcript of a slack conversation between Missy Danforth and Ms. Campione. I will read part of it here. Ms. Campione says, "What if we use step one, assign them to the bottom performance category?" Missy: "That would be drastic, but let's talk about it, LOL." Ms. Campione gives a thumbs up and then responds, "It would be drastic."

The evidence will show you that drastic is an understatement. Instead of simply not grading the hospitals, Leapfrog came up with the idea to fill in information with

made-up scores as a penalty for non-participation, what they euphemistically call, quote, limited achievement, without any hospital specific performance data.

This drastic change involved fabricating scores for four measures which you see on the screen. The 15, 25, 5, and 15 are the lowest possible scores on the four measures, but in an odd twist they don't go to zero. It is as if to suggest to patients looking at these scores they could have been zero, but we gave them something, I don't know. For hand washing maybe 15 means you washed one hand.

Instead, Leapfrog arbitrarily assigned 15, 25, 5, and 15, and I'd appreciate if you'd keep that in mind as you hear lowest possible score that there is just no way to do worse, so why not use zero. We'll get at that.

These four measures alone account for up to 400 points of the total scored used to calculate a safety grade. Enough by themselves, if you score 15, 25, 5, and 15 together and only get 60, to replace the weight of the other scores.

Now, what this slide shows is the lowest scores of fall 2024, that is the 15, 25, 5 and 15 on the left-hand side of the screen. Those are the fabricated scores that were created as a penalty on the four measures.

On the other side it shows that you can hit 100, that is if you participate. Let's put up what average participating hospitals received in the spring of 2025 on those measures. So

their average totals 362 points, pretty good.

For hospitals like our clients who choose not to participate the result was swift and merciless, there it is, 15, 25, 5, and 15.

Here, for our five community hospitals you can compare what they were getting before the change. They were getting an average of 370, actually doing better on average than all of the other participating hospitals in 2021.

But after this change and the arbitrary 15, 25, 5, and 15, look what we are getting now, 60, and we can't do any better because we don't participate.

This penalty would be bad enough, but Leapfrog didn't stop there. As the evidence will show, to make the fabricated scores even more impactful on the final grade they redistributed the value of the made-up scores so that they are counted more heavily in the final grade. You will see on the left participating hospitals have the four measures counting 24 percent. Those are the four measures that they could get up to 400 points on.

On the right-hand side they have removed the three measures, those are the NA that are discussed in summary judgment motion and in the findings of fact and conclusions of law, the three measures they provide NA for get removed, and so for non-participating hospitals the weight of those 60 points is actually significantly higher than it is for the

participating hospitals who have the weight of up to 400.

You will hear from Dr. Sean Nicholson, a health economist from the Wharton School of Business. Dr. Nicholson is going to testify that based on his analysis, had the hospitals participated in the spring of 2025, they would have received no less than a C grade, and the only difference is the draconian double whammy nonparticipation penalty that no consumer, a we will show, knows about.

You will hear Leapfrogs -- from Leapfrog's own witnesses that this non-participation penalty was not based on any scientific judgment. You will hear from Leapfrog's own scientific adviser through video testimony, Dr. Matthew Austin from Johns Hopkins University. He will confirm that Leapfrog did no analysis to assess whether hospitals who did not participate in Leapfrog's survey were actually less safe. He says that. He swears to it.

He will also confirm in his sworn testimony that Leapfrog was trying to estimate or guess an answer to what grade non-participating hospitals would have received on their performance, would have received on the scores for which Leapfrog uses the misleading term impute a score.

Dr. Austin will further admit Leapfrog had no data to support the scores for hand washing. Remember, that was the 15 we saw. Those penalties Dr. Austin admits were based on a lack of data. And that is coming from someone Leapfrog is paying 40

percent of his salary. That will come out, too. Leapfrog did no analysis. They had no data. The scores they imposed, as Dr. Austin admits, were just a yes.

You will hear from Ms. Alexandra Campione that the values assigned to the four measures, that 15, 5, ten, 25, were assigned arbitrarily. As she said, Leapfrog could not accurately say that it relied on external data sources because it was assigning the bottom score without any scientific or actual basis.

She says they were arbitrarily assigning them, and that is with respect to limited achievement, and as she notes here, they were being carefully crafted. "Leah wanted us to make it sound like the expert panel approved it, and the assigning of these points was legitimate."

The scores were made up, and all the Leapfrog insiders knew it. They also knew that for nonparticipating hospitals they were missing seven data points on seven scores. Based on what Leapfrog tells consumers, that means these hospitals shouldn't be graded at all. This is from Leapfrog's website.

Every time I show you something from the website you will see the url numbers so you will know it was from the website, at least it is from the website at the time we pulled it down. You will hear later some things have been changed since the close of fact discovery by Plaintiffs.

Leapfrog tells consumers that hospitals are not rated

if Leapfrog does not have enough data for that hospital. They say if it is missing more than six measures it will not grade that hospital. They make this commitment based on what Leapfrog's experts have recommended. Leapfrog admits they did not have data for seven measures for our hospitals, which under the guidance it shows consumers means Leapfrog should not have assigned a grade at all, but they did. That is why we are here.

We are here because Leapfrog cooked up a plan to penalize nonparticipants circumventing its own rules to grade them anyway by cooking up scores for four of the seven measures.

We have talked a little bit about what they have done, and we will talk more about that in a few minutes. Now let's talk a little bit about why we think they did it and what we believe the evidence will show.

Why did Leapfrog abandon an acceptable rating practice in favor of made-up scores process? Why not just leave non-participating hospitals off the website?

The evidence will show the answer lies in Leapfrog's business model. Survey participation increases the value of the data Leapfrog licenses and sells. While Leapfrog is registered as a 501(c)(3), a not for profit for tax purposes, you will see Leapfrog's leader pushed staff to focus on increasing revenue 24/7, that is this document, and she knew

that participation, which meant access to hospital data that could then be sold was essential to increasing revenue.

So, Leapfrog chose a pressure campaign rather than an alternative fact based and scientifically supported approach.

In 2018 Leapfrog hired an outside consultant whose report makes clear Leapfrog's IP value depends on participation. As he reports, the scope of his report is on his assessment of opportunities to monetize Leapfrog's intellectual property. And he writes -- this is from the first page of the report -- "to maximize the value of the Leapfrog Group's data for licensing purposes the level of participation should continue to be increased so it can be perceived as the most complete data set and thus allowing defense of our pricing model and our price points."

You will see when a hospital participates in Leapfrog's survey it isn't just filling in and submitting hundreds of pages of questions. When a hospital participates, when it affirmatively chooses to be publicly graded, it also chooses to turn over its data to be used in a commercial manner for profit.

That is the last page you have to sign as a hospital after you have filled in the survey and it requires you to attest, to affirm that you would allow the information provided to be used in a commercial manner for profit.

Now, you will hear testimony that this -- what is

given to Leapfrog isn't just this static survey, they are actually given access to data that is consistently updated and that is how they can rightly claim that for participating hospitals they have current up-to-date information. They don't have that for non-participating hospitals.

So, hospitals were originally free to choose whether to participate or not, and Leapfrog is going to claim they still are, but the evidence will show that Leapfrog's new plan was instigated to force participation and contribution to Leapfrog's dataset to prop up its bottom line.

Let's look at what Leapfrog does with its contracts to sell its data.

It sells the data it collects from participating hospitals to insurers and others. In fact, these sales, you will hear, are among the main drivers of Leapfrog's revenue. The evidence will show that is what Leapfrog is actually focused on, not patient safety, but penalizing hospitals, scaring their patients away so they have no choice but to participate in Leapfrog's survey and they have no choice but to give over their data for Leapfrog to sell and profit from.

Dr. Patrick Romano, a Leapfrog insider and member of Leapfrog's own expert panel, will testify in the coming week and he will explain why Leapfrog made this choice. He described the methodology as creating pressure, and he agreed with his colleagues, you can call it blackmail.

He is the one who used the term penalizing nonparticipants. At least -- and after all, it is just business for Leapfrog. That is how Dr. Romano describes it. He explains the fall 2024 change to his colleagues at UC Davis Medical Center, it is just business and its purpose wasn't accuracy.

He will testify that at his own hospital the pressure worked. UC Davis decided it could not withstand it and it ultimately participated rather than taking the hit from the false scores.

You will hear that after Leapfrog imposed the nonparticipation penalty in fall 2024 assigning failing grades by default participation increased by approximately 15 percent. That is at 64 percent and then the upper trajectory to 79 percent. Hospitals didn't suddenly gain resources to spend hours and hours on these survey responses, they responded to pressure.

Dr. Sean Nicholson, who I mentioned earlier, will explain just how these fabricated scores materially drove down the safety grades for these five hospitals causing full letter grades declines, as you can see, over the past three grading cycles.

If you could show the past three grading cycles that would be great.

Those falsely depicted these hospitals as being

deserving of Ds and F. In other words, Leapfrog flunked the five community hospitals because they didn't complete Leapfrog's survey and they didn't grant them the right to their data.

Following issuance of the fall 2024 grades of Plaintiffs' hospitals, they asked not to be graded. Their response, Leapfrog unequivocally refused, and since has issued two more rounds of grades. Those are the spring 2025 and fall 2025 grades.

Along with the grades, since the filing of this litigation, you will hear from Leapfrog's director of communication, Lauren Bailey, she is also by video, that our hospital's failing grades have been intentionally amplified by Leapfrog through a coordinated media campaign of Google ads.

I am going to read this. Google ads directly linking to hospital survey results or safety grade results. We had five of those running towards the Plaintiffs' hospitals.

You will see that Leapfrog's media machine has been effective. As Ms. Bailey will tell you, Leapfrog gets millions of visitors to its website to see that F grade and that D grade. You will see the promotion of Leapfrog's grades.

Well, it has been so effective it inspired a Tiktok video that specifically calls out four of the five hospitals by name and their so-called failing grades. That video alone has generated more than one million views. You will hear from some

of the hospital CEOs that it is being raised to them by the patients in their hospital beds.

The hospitals represented by the women and men and sitting behind me here today have refused to cower in the face of this targeted the campaign, and that brings us before your Honor.

Leapfrog will say consumers should and they will look past the failing grades. Leapfrog itself is the one who tells consumers how to use the grade in what they tell them in the section entitled About the Grade, again from the website. It ensures consumers will look to and rely on a single grade, that easy to understand F or D.

They tell consumers that single letter grade, it represents overall performance in keeping patients safe, preventing harm and medical errors. They are trying to scare our patients, our physicians, our communities referring to harm and errors, saying that only the worst of the worst get an F or a D. In fact, they report that only the worst of the worst get an F.

Look at that, less than one percent of hospitals in the United States receive an F grade, not only the hospitals that don't participate in the Leapfrog survey, but only the worst hospitals, and that is less than one percent.

So, they also go further. As if being in the bottom one percent wasn't enough, Leapfrog tells patients that they

are twice as likely to die at an F or a D or C hospital, scaring anyone who wants to go to these hospitals.

And in its FAQ, Leapfrog poses the question about the safety grade. Does a hospital get a better safety grade if it reports to the Leapfrog hospital survey? Leapfrog's response: The hospital safety grade reflects how well a hospital does on safety, not whether they complete the Leapfrog hospital survey.

The evidence will show the opposite.

After being confronted with this website in our motion for summary judgment and after the motion was fully briefed, Leapfrog changed this language, removing part of it. I think that speaks volumes.

Leapfrog tells us to use the safety grade as the first tool in choosing a hospital because it actually -- reflects actual safety. Again, after being confronted with this website in our motion for summary judgment after that motion was fully briefed Leapfrog took this language off their website as well.

Leapfrog's website tells consumers, including insurers, doctors, for the benefit of consumers, patients, and referring physicians that they should use the grades to make decisions about where to seek care and where to direct patients. You will hear evidence that that is exactly what patients and doctors are doing.

So, let's take a look at what a consumer will see if she searches for a hospital on the Leapfrog website.

Let's start with Google search. Hospital ranking Florida, and let's click on Delray Beach. The link to hospital safety grade, that is one of the Leapfrog websites, primary website with the grades, that appears, and then we go to the search, and let's search for Delray. There we go, search.

Okay. So, Baptist Health comes up first. We passed Delray. There is West Boca with a C and there is Delray Medical Center, so they are immediately met with the F grade for Delray. In contrast to the hospitals around it, Delray failed. It is sitting right below a different C graded hospital.

Seeing this grade, why would any daughter waiting with their father to be treated in the ER for his compound fracture do anything other than walk right out the door and drive to a hospital that Leapfrog says is safer, maybe that C graded hospital that we have right there? You will see hear evidence from one hospital that that is exactly what happened.

The damage is done when you see the F or the D grade. It is no defense at all to say that if you just took 50 more clicks and scrolls you would see the explanation.

You cannot click enough to undo the damage of the F or the D grade and that is what you will hear from our experts if it wasn't already obvious.

Leapfrog will argue that despite telling consumers that F grades are the worst hospitals in America, that

consumers will investigate further to fully understand what that F grade means.

So, let's see what would happen if the daughter with her father clicked on the ER clicked on the F for in Delray. All you see is the F grade. So she would then have to scroll down to the next screen, okay, and what we have here are all of these what are called gas gauges. At the top you've got infections, problems with surgery, safety problems, practices to prevent errors.

Now, I want to stop here. Obviously if this hypothetical consumer were interested enough and digging deeper to understand what I will call it the missing days and the failed quizzes, what the equivalence of those were for the hospital, they would have spent time looking through the infections and the problems with surgery and the safety problems, and then they get to this tab, practices to prevent errors.

It is in this tab that three of the four measures, those 15, 25, and 15 and 5 appear. Let's focus on hand washing. Delray scores right there 15 with an asterisk.

Now, recall, the 15 stands for zero because there is no lower score you can get, and if you don't participate in the Leapfrog survey, you also can't get a higher score than 15.

I am not sure what 15 is trying to indicate here, and how you view as other than really not good.

Let's see that footnote, I like to think of it -- I think Leapfrog refers to it as a cleans go footnote.

They say it explains it all. The footnote says the hospital declined to report their performance on this measure so a score was assigned to reflect the lack of information available.

That is just wacky. If there isn't any information, why wouldn't you give a zero? Why would you give a 15? On its face we will show that is deceptive. If it is not clear from reading it, we have expert testimony from Dr. Jonah Berger, a consumer behavior expert from the Wharton School of Business, explaining how a reasonable consumer would work its way through the website and finally get to and understand these various statements that you have to click and scroll to.

In reality, Leapfrog had no data for hand washing. Evidence will show that in fall of 2021 when Leapfrog -- when Delray participated it received one hundred out of one hundred for hand washing.

You are going to hear from Regina West that they did hand washing audits and she will walk through some of that, so it isn't surprising. You will hear that nothing changed with this hospital between 2021 and fall of 2024 when they got the 15. It is not like they stopped washing their hands, and what would 15 mean anyway.

Leapfrog's methodology changed, that is what it means,

and Delray went from a C in 2021 to an F.

Now, this is from the website, and we saw before how to use the grade on the website, but this one tells you what measures are most important, doubling down on the deception, hand washing. Does your hospital have a hand washing policy to ensure all staff members are washing their hands before and after patient contact.

You will hear from the CEOs that that is absurd. They are medical providers, they are in a hospital, there is obviously a hand washing policy. That is not what the 15 conveys.

You will hear from each of the hospital CEOs and they will tell you the effect of the grades on their hospitals, and that in 2025, following the issuance and decline of Leapfrog's safety grades and the media push that followed their hospitals experienced a measurable decline in walk-in emergency department visits. That is for all of them.

That is not because care changed, but because patient perception changed. The grades themselves had real world effects and that is what Leapfrog intended. The grades change where patients went for care. Patients were diverted to hospitals that could not provide the services they needed triggering transfers that delayed care.

Those delays occurred at precisely the moment when time matters most and they impose duplicative costs on patients

who paid once for a hospital visit that couldn't help them, then to get to the hospital that could help them, one of our hospitals, and again for the return to that hospital at a later time and extra cost.

The CEOs will further testify about patient cancellations and avoidance, about physician and physician group decisions tied directly to the safety grades. In hospitals after hospital patients choose to go elsewhere after seeing these grades even though the services and staffing at these hospitals had not changed.

The evidence shows that the grading practice, and will show, that it did more than shape performance and perception, it reshaped patient behavior, it delayed and care and increased costs. Those harms fall hardest on the various patients you will hear our community hospitals serve.

I will rap up shortly. I would appreciate it if I could tell you what you are going to hear and introduce you to our CEOs.

You will hear first from Heather Havericak, the CEO of Delray Medical Center. She worked her way up over two decades from a bedside nurse in Miami to a hospital CEO. Delray serves patients across southern Palm Beach County and they provide critical access points for acute and emergency care.

She will testify that since Delray received its failing safety grades patients have been apprehensive and

anxious and afraid to come to Delray. That is based on her experience as a medical professional recognizing the state of mind of these patients.

Admissions declined as fewer patients arrived through the emergency department on foot, and we have the data to back that up, and fewer physicians choose to perform procedures there.

She will also describe how Delray received a letter from Humana, a major insurer for veterans in the United States, urging the hospitals to address "performance on safety measures."

And that shows that insurers, like patients, were misled into believing that hospitals were unsafe based on the grade. I am not here to defend insurance companies, but I am here to try to stop this unfair practice and the tentacles it reaches are not just heart hospitals and patients, it is the entire health care community, and the entire health care ecosystem.

You will hear from Eric Cazares, the CEO of Palm Beach Gardens Medical Center. He began his career as a nurse in 2001. He now leads a hospital providing acute inpatient care to a rapidly growing suburban community. Palm Beach Gardens is particularly known for its cardiovascular service. You will hear about some of the incredible accreditations it has earned through audited reviews, not just filling out surveys,

and it performs tens of thousands of open heart surgeries each year. Many patients rely on it as their most practical option when an emergency arises.

He will testify that after his hospital received an F safety grade it immediately generated new complaints and concerns from physicians, from patients, community members, board members. I want to pause for a second here.

We call these community hospitals because they are. Their board members are not the fancy CEO of Amazon, they are people like the Chief of the Fire Department. These are community people who are on their board.

Despite no change in services and care, he will describe how a cardiac patient left Palm Beach Gardens, a hospital known for that care, to seek treatment at a facility that has no specialty in cardiac services.

Your will hear from Jarod Hanlon, the CEO of West Boca Medical Center which serves families in western Boca Raton. West Boca provides emergency and inpatient services, and it places emphasis on care for women and children, it has a state of the art NICU. And he will testify that following the issuance and later decline of the Leapfrog safety grades emergency room walk-in volume declined a patients raised concerns about the grade.

He will describe a patient who left West Boca against medical advice and show you the documents that that patient had

to sign in order to acknowledge that he was leaving against medical advice and risking infection because he didn't want to stay because his daughter was so afraid of our score.

Like Delray, West Boca also received a letter from Humana reinforcing that insurers as well as patients were influenced by the grades.

Fourth, you will hear from Cynthia McCauley. She is a long-time health care executive who has led St. Mary's through multiple changes and challenge. St. Mary's is an all-comer hospital. It means the poorest of the poor and the richest of the rich, the dignitaries and politicians, and then a woman who is 16 years old, has diabetes, is pregnant and is definitely going to have a premature baby who will have the use of their incredible children's NICU unit, pediatric care services.

I think she has approximately 30 pediatric specialists on staff at this hospital to deal with patients just like that. It is the only children's hospital between Orlando and Fort Lauderdale.

I have been enjoying my time here in Florida, but I am not from here so I don't know how long it takes to drive between Orlando and Fort Lauderdale, but I know it is not a quick trip when you are pregnant and your child is in danger.

It is the only level one trauma center in Palm Beach County. Let me emphasize that. That means it was found by the United States Government through its accreditation program to

have the level of services necessary for the most acute dramatic emergencies. That would be someone getting shot, for example, or a knife wound that couldn't be handled at another hospital.

She will testify, Ms. McCauley, that she experienced declines in walk-in emergency room volume. Again, services and staffing didn't change. And she will describe something else, which is an increase in patient transfers from a competitor hospital, Jupiter Medical Center.

Jupiter doesn't have the trauma unit. St. Mary's is the only one in Palm Beach County. It doesn't have the pediatric services, it doesn't have the neonatal services. When Jupiter got patients that it couldn't care for it transferred them back to St. Mary's. She will testify and the documents show that they have never seen this level of transfer back from Jupiter.

The transfers delayed definitive care, it increased costs as patients first incurred charges at Jupiter, which got an A, but a hospital unable to meet their needs and then had to be transferred to St. Mary's for treatment.

Finally, you will hear from Sheri Montgomery. She is the CEO of Good Samaritan Medical Center. It is the oldest hospital in Palm Beach County and it has been around for more than a century. They provide emergency, cardiac, specialty services to a densely populated urban community and they have

significant population that relies on Medicare and Medicaid.

She will testify that after Good Samaritan received a failing Leapfrog safety grade those emergency walk-ins declined, admissions declined, and she will explain that several physicians left Good Samaritan to join Jupiter Medical Center in part because their patients were concerned about Good Samaritan's F grade, further demonstrating how the grade disrupted trust and care relationships.

Your Honor, the community hospitals, we don't seek immunity from critique, we seek to stop a practice that assigns failing grades without real data and presents these grades as so-called, quote, safety warnings. The evidence will show that Leapfrog chose leverage over accuracy, chose pressure over transparency and they chose marketing over patient understanding.

The so-called safety grades were made up, 15, 15, 25, 5, made up, but the consequences are real. The community hospitals have chosen patient care as their highest priority. The evidence will show each of these five hospitals, their patients and their physicians were harmed and continue to be harmed by the Leapfrog conduct.

Leapfrog publishes safety grades every six months purporting to update the public on the most current information even when they have no data for our hospitals. Each publication renews fear and compounds harm. There is nothing

these hospitals can do to stop the repeated assaults. They tried, that is why we are here.

We ask for targeted and imminently reasonable relief happen to these five hospitals right here in Palm Beach. If we don't submit a survey and sign Leapfrog's attestation we shouldn't be graded. It is that simple.

If your Honor finds Leapfrog's practices to have been deceptive, there should be redress. I am not asking for money damages, money can't make up for the harm suffered here. Leapfrog should not be permitted to continue promoting old false grades without consequence. They must be taken to task to own up on their website with its millions of views to their deception.

Absent the injunction we are seeking irreparable harm will fall on the hospitals, their patients, and the communities we serve.

Thank you, your Honor.

THE COURT: Thank you.

MS. BLAIR: May it please the Court, I want to first thank your Honor and Pauline and Ramzy and Ginny for all the time you have spent on this case. My client certainly appreciates this. This is a very important matter for Leapfrog, as your Honor noted last week when we were here.

This case is about transparency and accountability as Ms. Maloney said, and it is about what happens when a 20

billion dollar publicly traded hospital system is asked to live with accountability and transparency.

Simply put, the Tenet hospitals want to create credibility of transparency without the responsibility of accountability. The irony at the heart of this case is that these hospitals operate under a banner of Palm Beach Health Network, and that banner, Palm Beach Health Network, is owned and operated by Tenet Heath Care.

Their mission statement, these five hospitals, is results is delivered through accountability and transparency, but nothing about this lawsuit is transparent and nothing about what these Plaintiffs have done has been in the name of accountability. Contrary to that statement, this entire case is hiding their data and blaming the messenger how they are doing it and gas lighting that they are doing it in the name of public safety for their patients.

They filed a single count for FDUTPA, that is why we are here. The focus of this case had never been about the consumers, it has always been about protecting Tenet Health Care Corporation of which these five hospitals are a part of.

In fact, the lawyers in this very courtroom put on their bios that they are here in this courtroom not for these five hospitals, but Tenet Health Care Corporation. They are here representing Tenet Health Care Corporation in a deceptive and unfair trade practice litigation with Leapfrog. That is

why they are here.

It is important to understand that this did not begin with the five hospitals. These five hospitals did not ask us to take their grades out, Tenet did. They served a cease and desist letter asking us to stop grading 76 of their hospitals. It was a bully tactic and that is how it started, and it is ending here with your Honor next week.

Make no mistake about it -- they are not community hospitals, this is a 20 billion dollar publicly traded health care system with an army of lawyers, who spent $10 million not in the name of patients, but in the name of answering for their own safety record.

While they stand here and say it is about accountability and transparency a bench trial allows us to focus on what really matters. What really matters in a FDUTPA case is conspicuously missing. You will not see any transparency, you will not hear from a single patient that was deceived, misled, confused by the Leapfrog grades. You will not see a single one of their experts having communicated with a single consumer.

These stories that Ms. Maloney just told, none of that is in evidence and none will come into evidence. You will not see a single consumer survey having been performed to prove the FDUTPA claim.

You will from Dr. Jonah Berger that he has conducted

thousands of consumer surveys, but he didn't feel like a consumer survey would provide any information about whether or not Leapfrog deceives its customers. You won't see any focus groups, any testing by the Plaintiffs on our websites, none of that in evidence. You won't see any evidence that any patient was harmed, none.

All the stories Ms. Maloney told, none of that is evidence in this case. In spite of all of this -- the other thing you won't see is any of their actual safety data, despite coming to this Court and alleging the limited achievement assignment on the four measures does not reflect how they do on patient safety. That is in the complaint, that is an allegation. The fact that we assign limited achievement on only four of 32 measures, we will talk about it in a second, they say they doesn't accurately reflect how they do.

What is important there is, the easiest way to prove whether or not we are accurately rating them would have been to provide the actual data. They didn't provide it to Leapfrog in survey, which was their choice. They didn't provide it to us in discovery. They didn't provide it to their own experts and they are not going to provide it in this trial. Why? Because it is not good.

The Center for Medicare and Medicaid Services, which is a public company that grades hospitals with publicly available data, that data coming from the hospitals rates each

of the hospitals, four of them as a one star hospital, and only one of the five hospitals is a two star, with five stars being the best.

That is their own data, this is not our data, and 75 percent of the composite health safety grade that is at issue before your court, 75 percent of that comes from that CMS data. That is undisputed.

Contrary to Ms. Maloney's statement that we arbitrarily give them limited achievement on the four measures, it will be clear that limited achievement is the lowest score that a participating hospital gets. We say transparency is important. If you don't want to be transparent, that is your business decision. If you do that, we will score you at the same score that a participating hospital receives. That is what that is.

They talk about Dr. Nicholson a lot. These hospitals didn't share their data with Dr. Nicholson. That is why the counter factual that he will present later today is based on complete speculation that these hospitals would have scored at the national average. He is an economist, he is not a patient safety expert. He runs the math and goes, if they took the survey, guess what? Their grades would be better. That is speculation, that is not an expert opinion. Dr. Nicholson said that is how he ran his counter factual.

You won't see any of their experts even having talked

to a single patient -- I am sorry, to a single CEO. They didn't talk to anybody at this hospital to come to their conclusion that patients were actually harmed. They relied on a declaration filed at the beginning of this case. They didn't do anything to verify that in fact any patient was ever harmed.

Dr. Berger didn't do a consumer survey. Dr. Nicholson will talk about harm, didn't do a single survey. Tom Chakurda will come in and talk about reputational damage. He didn't do a single survey. They are not transparent, not even with their own experts.

Ms. Maloney talked to you how they had the governing boards and they are firemen and police chiefs. That is true, and these people are dedicating themselves to these hospital boards. They didn't even tell their boards they were filing this lawsuit. Why? As I told you at the top of this, it is not about these five hospitals, it is about Tenet Health Care Corporation trying to silence Leapfrog. That is what the case is about.

You will see no evidence that the hospital were aggrieved, which is one of the elements they have to prove. They are not here on a defamation claim, they are on a FDUTPA claim. Revenues are up at every hospital, market share is up, brand recognition is up. They have no nurse or physician retention issues. They are being asked by patients and doctors questions, that is it, somebody asked them a question.

Interestingly, their own expert, Tom Chakurda, is going to tell you what I just said, revenue, brand, market share. Those are the barometers that this Court should look at to determine whether there has been any impact to the five hospitals. Those are their own expert's barometers. They fail on every barometer because nothing has happened to them. That is not aggrievement.

You will see no evidence of causal link. The only thing they have is a couple of the hospitals have admissions that fluctuate. You will hear from Jarod Hamlin that West Boca's operating room was under construction. In board minutes he talks about the fact that because of the seasonal nature of where we are at in South Florida admissions, elective procedures fluctuate, and significant competition.

You will hear from Isa Sambruna, a third party, who is the vice president of quality at Jackson Memorial, a huge Leapfrog supporter and believer in the survey, and she will talk to you about the saturated market of South Florida in health care. In fact, there are 191 hospitals in Florida that are graded by Leapfrog, only ten don't participate in the survey, which is their right. These are five of them. The other five score much better. Why? Because what I told you, 75 percent of their grade is publicly available CMS data.

You will not see any transparency from these hospitals as we go through the trial or accountability. You will see

excuse after excuse after excuse as to why they don't do better for the patients of South Florida. These excuses have been features prominently in their complaint, the news media and press releases, lawyers on TV. These are the excuses they give, and this is what Leapfrog has heard since 2012. They are recycled lies. The first one you will hear is that responding hospitals simply assign themselves the best scores on survey measures and so they do better.

There is no evidence of that. In fact, these five CEOs all testified when they did the survey they didn't over inflate their survey answers. Dr. Nicholson sits on the board of Atlantic Health. His hospitals don't do it. You will hear from Tom Chakurda, the chief of a hospital, they didn't inflate scores. They tell this lie, they repeat it because they are not taking accountability for their own actions.

They will tell the lie that non-participating hospitals automatically receive failing grades, that has been in the media, in their complaint, everywhere? Ms. Maloney told you one percent, one percent of hospitals get an F.

If every hospital received a failing grade it would be a lot more than one percent, that is just math. 21 percent do not do the survey, how could it be one percent? Mr. Chakurda will tell you he bases his opinions on that assumption. Why? Because the lawyers told him that.

In addition, they will tell a lie that hospitals pay

for better grades. There is no evidence that that is true. That is what they say in the news about Leapfrog, and it is simply not true. There will be no evidence presented at this trial as to that lie.

They say Leapfrog charges for consulting fees in exchange for better grades. Again, lie, not true. You won't see any evidence, another excuse why they are failing the patients of South Florida, and you will hear the lie that Leapfrog has no certification process, that is why the hospitals who take the survey can lie about their data, even though there is no evidence about that either.

Last but not least, their favorite, that Leapfrog is a brazen pay to play scheme. That has been said time and time again in this litigation, but there will be no evidence of it. When that lie started to fail they pivoted and now the brazen pay to play is that you have to take this onerous, burdensome survey and it costs them so much money and time and resources, and that is the pay to play. That is what they are going to say on the stand.

But, your Honor, Exhibit DX 618 is in evidence, and that document is from the director of quality, Regina West, to -- I am sorry, Regina West, the director of quality from Palm Beach Health Network, as well as Ricky Ramirez, the chief nursing officer of Palm Beach Health Network, to the president, when they are asking to retake the survey, and they say to the

president, with minimal resources and no cost we can do this survey.

That is their own document, it is in evidence. So this trope that the brazen pay to play is how much it cost them is untrue, it doesn't exist, and they are all supported by fact.

Heather Havericak will testify that they did no investigation into whether or not the allegations in the complaints were true about all these excuses, but rather, they relied on counsel, the same counsel on TV and up here today, telling the lies with no support. That is the answer.

This was a generated lawsuit by lawyers on January 3, 2025, and now we're standing at trial with no evidence of it.

By contrast, when we talk about accountability and transparency what you will see, your Honor, is you will see transparency and accountability on behalf of Leapfrog.

Leapfrog was born out of the necessity of transparency. In 2001 a group of large employers like Boeing and Marriott had a dinner and they were discussing the fact they knew more about the safety of the company cars they were buying than they did about the health care they were purchasing for the thousands of employees that were in their care, and from that Leapfrog was born. Leapfrog mission is simple, transparency saves lives, not only transparency from Leapfrog that you will see in this trial, but transparency from

hospitals.

In 2001, Leapfrog launched is survey. The survey is separate and distinct from the safety grade. There are 51 different measures in the survey that a hospital filled out, a hospital will do the survey, and those results will be published on the website.

At that time, in 2001, expert panels, volunteer expert panels were created for each one of the survey measures. These are people from Harvard and Stamford, the CDC, they volunteered their time to be a think tank. They are not the decision makers, but a think tank. This is a serious issue in this country, and later, 2001 the survey starts.

Later -- well, I should say the transparency you will see about the survey, it is transparent. Everything about the survey is on leapfrog.org, every hospital, every measure, how we score it, everything. If a hospital does not participate in the survey, we tell consumers this hospital didn't do the survey. We don't lie about it, we tell everybody what is going on. It is right there, even in their complaint.

So everything is free and available to the public, on our website about the survey, and the same is true about the hospital safety grade.

In 2012, Leapfrog launched the hospital safety grade for the benefit of the patients. We all agree to that. The safety grade is a composite score, a composite score.

It consists of 32 measures, the vast majority of which come from the publicly reported CMS data that these hospitals publicly report to the Government. That is where the vast majority comes from.

Everything about the hospital safety grade is transparent, all displayed in our website, the methodology, the scoring, the cutoff points, every measure. Ms. Maloney took you through it. You can see it every measure, and it is a measure we had to put the model in effect, the four measures. We conspicuously, concisely, clearly tell the consumer on the website this hospital declined to report this data so a score was assigned.

We don't tell anybody in the public this is some sort of scientific calculation. We give the hospital a fully functional calculator, we offer a free help desk, we offer free town halls, we put methodology changes out for public comment. The 2024 methodology change, totally transparent. In May '24 when Leapfrog decided to change its imputation the methodology, it didn't happen in a single meeting. She showed the drastic measure, that is not how it happened. The imputation model -- Leapfrog had been using am imputation model since 2017, and it had to change over time as different information became less reliable or unavailable.

A discussion -- so that hospital safety grade has an expert panel as well, 79 members, volunteers from the most

prestigious places in America. They are not expert economists, they are clinicians at the CDC, at teaching institutions, medical doctors, nurses, and Phd.s in public health and they volunteer their time.

They have had meetings for years where they noticed the following: Up until the change in methodology in 2024 we had been reporting to non-reporting hospitals the average of their cohort, teaching hospital, 200 beds, we give you that measure. It became clear -- two things became clear at that point in time. The mean was creeping up so high because the hospitals committed to transparency were doing so much better that it was a false statement to patients to say the non-responding hospitals were doing as well as responding hospitals.

The other thing we saw was that certain hospitals participating in the survey were being incentivized to stop participating because they were figuring out, if I don't participate, I will get a better score because my cohort is getting better. That is what you are going to hear.

What the evidence is going to show is why the change occurred, that is it. It wasn't unscrupulous, it wasn't to make money. We are a non-profit institution, you will see our 990s, that is again transparent. They are all going to come into evidence and you will see, last year Leapfrog made revenue of $8 million, less than what these hospitals are asking in

fees. All of this goes back into its mission.

Going back to the methodology change, you will see evidence that the hospitals saw. They figured out what their grade was going to be and they made a knowing business decision not to participate.

And I say they, there is going to be evidence that Tenet Health Care Corporation told them they couldn't participate. You will see that each of these hospitals wanted them to come back and Tenet Health Care said no, no from home office. Home office only supports the Leapfrog survey if it is tied to payment, contract, or local regulatory requirement.

Tenet Health Care to make this decision to file this lawsuit and stop participating in the survey.

I want to talk briefly about the website.

Our website was designed in 2012 with the assistance of a low literacy user experienced expert, you will hear that evidence, and it was designed to be readable for a reasonable consumer.

Plaintiffs don't even have a low digital literacy expert to come in and inform you about whether or not this website complies with a concise, conspicuous, and clear presentation of Leapfrog's information. We do, they don't. They didn't bother because it is not about the consumer in this case, not about whether the consumer is being misled, it is about them hiding their data.

I want to go back to the finances. We heard a lot about how we sell these hospitals data. That is not true. You will hear what Leapfrog sells is its own intellectual property, we sell our logo. If a hospital gets an A, and they want to use our logo to advertise it they have to pay a fee, just like U.S. News and World Report. We have to do that to keep our IP intact, and we do it, nothing wrong about that, but I will tell your Honor that if a hospital wants to promote its safety grade they can do so for free as long as they don't use our logo. We provide them a free tool kit to do that, again, all on the website.

That is another trope, we are not transparent about our revenue, our data. All we sell to data licensee is what you see on the website, that is what we sell them. We put it in a useable spreadsheet. We don't sell hospital raw data to anyone, that is clear as day in this litigation, yet we are hearing it in opening statement.

Last, your Honor, Leapfrog, they are accountable, their people are accountable. Plaintiffs have called one-third of the Leapfrog staff, approximately one-third to come and testify before your Honor. These are people who have flown in from various parts of the country, and they are here to give to your Honor truthful and credible testimony about what they do and how they do it. You will assess their credibility on that. They give a hundred percent of their time to the mission of

Leapfrog, which is to prevent harm, preventable harm to patients.

The other thing you will see about accountability, is that Leapfrog follow the signs.

Again, they want to create a story in your mind, Your Honor, as we go through this trial that in a 20 minute expert panel meeting on April 12, 2024, this new methodology was born out of apparently a slack message between Missy Danforth and Ms. Campione, that is not true.

You will see minutes from 2017 onward where this issue about what do we do about non-reporting hospitals and the fact that we are assigning them scores that are most likely inconsistent with their actual performance.

Ms. Maloney is right, the only way to know how they actually performed is to provide data. They didn't provide it to Leapfrog, they didn't provide it in discovery, they didn't provide it to their experts and will not provide it in this trial.

Leapfrog is accountable for its mission, unlike the Plaintiffs in this case who profess what they are doing here, $10 million, army of lawyers, they profess they are all doing that for patient safety and the people in South Florida, despite the fact that they didn't speak to a single consumer survey.

Leapfrog is to demonstrate the mission is to stand up

for those same people. That is what they are doing, they do it fully and transparently and they are accountable for it, which is why they are here in the courtroom today.

At its core this case is not about ratings, methodologies, not about a 20 billion dollar corporation suffering at the hands of a 20 employee not for profit.

It is not about asterisks, and it's not about clear and concise disclaimers on web pages. From the Plaintiffs' perspective, it is not even about the patients because we are not going to hear anything about them. It is about accountability, their accountability for a safety record, which CMS, the Government, says is poor.

Accountability to the public and their own accountability for their knowing business decision in choosing, which is their right, not to participate in our methodology, and we tell them up front, we tell the patients, the hospital what happens if you don't participate. To reward hospitals for not being transparent would be contrary to our mission.

We are here because Tenet Corporation wants the credibility of transparency without the responsibility of accountability, and they want this courthouse and this FDUTPA statute to insulate them from that accountability.

We know this because the relief they seek is not a better website for patients, better communication to patients, something that has to do with consumers, that is not the relief

they seek. The relief they seek is that they never be graded so they can compete in the shadows. They don't like the fact that Leapfrog shine a light on their patient safety. They don't like that, and they hope this Court will offer them the opportunity to slide back into the shadows.

That is why we are here. This whole case is nothing more than the bully playing the victim. Leapfrog did exactly what it said it would do, it provided patients with a clear, concise way of looking at patient safety.

And so, in this courtroom it is all about the facts, you can't hide from them. That is the same thing that Leapfrog is doing with what they are doing. It is about transparency, it is about accountability to the patients.

I thank you for your time. I will pass on to the Plaintiffs. Thank you.

THE COURT: Thank you. Why don't we take 15 minutes, and come back at 20 minutes till to start hearing witnesses.

(Thereupon, a short recess was taken.)

THE COURT: Okay, please have a seat.

Okay, what is next?

MR. MARCUS: Your Honor, the Plaintiffs call Heather Havericak.

HEATHER HAVERICAK, PLAINTIFFS' WITNESS, SWORN

THE WITNESS: My name is Heather Havericak, H-E-A-T-H-E-R, H-A-V-E-R-I-C-A-K.

DIRECT EXAMINATION

BY MR. MARCUS:

Q. Ms. Havericak, can you please tell the Court why you began a career in health care?

A. Absolutely. When I was growing up, at the age of 12 my mom was diagnosed with head and neck cancer, and that really sparked my interest in becoming a registered nurse.

Q. Could you give the Court a brief description of your background in health care?

A. I started as a registered nurse at Miami Children's Hospital in 2002, which is now Nicklaus Children's Hospital. I worked there for about five years taking care of children with blood disorders and cancers and bone marrow transplants, and then I went on to work in the pediatric emergency department and trauma center.

After that I transitioned to Broward Health Medical Center where I started as a registered nurse, and really thereafter, for a span of 16 and a half years I was in a variety of positions, moving into the clinical nurse manager of the pediatric -- the clinical manager of the pediatric hematology oncology unit and the pediatric palliative care program. I went on to be the oncology service line director and then the director of all product lines at the facility.

I then moved into associate vice-president of strategy and planning and then chief operating officer, and then chief

Executive Officer at Broward Health Medical Center prior to coming to Delray Medical Center.

I came to Delray Medical Center in January of 2024, where I served as the chief operating officer for a couple months. I became the interim Chief Executive Officer in Delray Medical Center in May 2024, and became the permanent Chief Executive Officer in July 2024.

Q. Do you still hold an active nursing license?

A. I do.

Q. Do you have occasion to still do clinical care directly?

A. I do, in my daily hospital today I round on patients every day to check on the staff members and check on the patients' quality of care.

During COVID, while I was serving as the Chief Medical Officer at Broward Health Medical Center, there were many scarce resources we were all facing because we had had so many patients come in, so I would help in our COVID intensive care unit where I would help turn the patients and we needed to turn the patients. I would also come in quite frequently to help the staff on the units with anything that they needed and did help with postmortem care when we were seeing a high number of patients who were losing their life during the COVID pandemic.

Q. How would you describe your responsibilities as the CEO?

A. I am responsible for the overall patient safety, quality, the financial performance, the strategic planning and the

business development.
Q. Can you tell the Court about your hospital and the community it serves?
A. Absolutely. Delray Medical Center has been a trusted partner for the Delray Beach community for over 40 years. We serve a very much elderly population. If you look at the surrounding area, we have a lot of 55 and over community, so it is definitely a medically complex patient population.
We are one of two level one centers in Palm Beach County, Delray is a level one adult and pediatric trauma center. We are a comprehensive stroke center, so we take of care of the sickest patients that have stroke. We have an advanced additional neuroscience service line. We have a robust spine and orthopedics program and we have a wonderful robotics program as well. On our campus, we also provide behavioral health services in our Fair Oaks Pavilion, and we also have a proton beam center on our campus.
Q. How would you describe your patient population?
A. We serve an very elderly population, our average age is from 78 to 82 years old, so they have a multitude of co-morbidities, meaning they have multiple medical conditions.
Many of the patients in our area are a little bit sicker than some of the other surrounding areas that would be to the south of us.
Q. On average, how many patients a year come to Delray Medical

Center?
A. A little less than 116,000.
Q. How many employees work for Delray Medical?
A. We have about 1600 employees.
Q. We heard about something called about the Palm Beach Health Network. Could you explain that?
A. It is the system or network that all of our facilities belong to, so we have Delray Medical Center in the south, West Boca Medical Center in the south community, and as you move north throughout the community, you have Good Samaritan medical Center, Palm Beach Gardens Medical Center, St. Mary's Medical Center and we just opened another hospital in September, Florida Coast Medical Center.
Q. And what is the purpose of the network?
A. The network is all of our Tenet facilities that are within this area, but it is really important because each of our facilities has different clinical services that they provide.
When we work together as the Palm Beach Health Network we are able to provide for the whole community. Where one hospital may not have those advanced services, we can provide the services within the Palm Beach Health Network so patients do not have to leave the community for their care. We do have a centralized patient transfer center to allow us to keep them in Palm Beach County.
Q. Is Delray Medical an accredited hospital?

A. We are, yes.
Q. Could you explain to the Court what it means to be an accredited hospital?
A. Hospitals are accredited by either the Joint Commission or DNV.

We are credited by the Joint Commission, so the Joint Commission accredits hospitals, they come in every three years for something called a triannual survey. They could come in at any time unannounced during that triannual period, but they come in to look at all of your policies, procedures. They look at all of your quality data and they come in and actually do what we call tracers throughout the hospital.

So they actually follow our teams with surveyors to ensure that the quality of care we are delivering is appropriate and consistent with our policies, procedures, and then the outcomes that we have provided.

Every three years when they come on site, they are there because we are a larger hospital, we are 536 beds. They are on site for four days. We will have anywhere from four to eight surveyors that will be with us throughout that duration. During that duration, when they are out talking to staff members, to physicians, they interview patients as well.
Q. Do the surveyors in the Joint Commission provide the hospital with feedback during their visits?
A. They do provide feedback. Throughout the course each day

typically they will do surveys from eight to nine hours a day. At the end of that day they do something called a summation, that is where all the surveyors come together because each of them are covering a different part of the hospital. That will give the whole team an idea what they have seen for the day, what kind of best practices they may have seen and what they may need to get clarification or more information on.

After that fourth day is done, there is a larger more in depth summation that takes place. It gives us all the findings, applies it on a safer matrix, which tells us if the finding has a higher safety risk and what the priority is going to be. And that report goes to the Joint Commission's home office that is in Chicago, and we typically get the final report within about 14 business days.

Q. Besides from the Joint Commission, does Delray Medical have other accreditations?

A. We have a variety of accreditations. For our the comprehensive stroke program we are accredited by the DND. There were three surveyors that came on site for that visit. All of three of them were advanced practitioners in the neuroscience phase. We are accredited through the Department of Health for our trauma services, so they come on site every three to seven years.

We are accredited through the Surgical Review Corporation for robotic center and an endoscopic robotic center as well.

We just earned that designation, we were the first in the country. And we also have accreditation with the American College of Surgeons as a bariatric center of excellence.
Q. Is the accreditation process for these organizations you mentioned similar to what you described?
A. Yes, each of the bodies come in for site evaluation visits.
Q. During the opening we saw a slide about some of the awards that Delray Medical has won. Are there a few that are significant to you?
A. Yes, for 2024 and 2025 we have continued to earn additional designations. Last year we were one of the 250 best hospitals, this year one of the best surgery hospital, and we won awards in cardiac services, in GI, pulmonary and critical care which we are proud of.
Q. Prior to coming to Delray Medical were you familiar with the Leapfrog Group?
A. I was.
Q. Can you tell the Court how you were familiar?
A. I became familiar when I was in my chief operating officer role and then in my chief executive officer role.
Q. At that time was Broward Health you participating in the survey?
A. We did, yes.
Q. Can you describe what your role was in that participation?
A. I was more involved when I was interim CEO and then CEO.

My responsibility was to ensure that everything being submitted was accurate, the data was accurate. We would match it up to be looking year to year to make sure we didn't have data entry errors.
Q. How lengthy was that survey packet?
A. It is large. It is not the just about filling out the survey, there are multiple people on a team that are filling out components of the survey and ensuring the process and programs are in place.
Q. How many hours did it take Broward Health collectively to complete that?
A. It would take us about a thousand hours, and there are six or seven people that have to work on that to make sure everything is accurate and complete.
Q. Is part of the work to verify the data you are submitting?
A. Yes.
Q. Is that very important for the hospital to do?
A. It is very important. When I was at Broward, I wasn't the CEO yet, one of our team members had an error in what they submitted.
MS. BLAIR: Objection, your Honor, hearsay.
THE COURT: Overruled.
BY MR. MARCUS:
Q. You may answer.
A. There was a data submission error, it was either with the

bar code medication scanning or the entry. That number wasn't correct, and we tried to get that changed during the embargo period because that pulled the score down to a D, and we were not able to get that change.

Q. What effort did you make?

A. Our quality director was trying to get that changed.

Q. And were you successful?

A. We were not.

Q. Did it affect your score?

A. It did, we got a D as in dog.

Q. You came to Delray Medical, when did you first become aware of the Leapfrog survey as it pertains to Delray?

A. My role changed throughout that year, so I became more integrated in what was going on with Leapfrog in the latter part of 2024.

Q. And you became a permanent CEO in July?

A. July 14, 2024.

Q. I want to bring up an exhibit that has been admitted by stipulation, I think it is PX 34.5.

We saw this in the opening slides. Do you recognize this screen?

A. I do.

Q. And this is the grade for Delray Medical from Leapfrog Group?

A. That is the grade.

Q. This is as of the fall of last year?
A. Yes.
Q. It shows an F?
A. Yes.
Q. Could you move down to the gas gauge measures.
Did you become aware after you became CEO of Delray of a change in the methodology for the scoring of this Leapfrog grade?
A. I recall becoming aware of it closer to the time when the grades were going to be released, so that would be sometime in November '24.
Q. Did you do anything to investigate what the scoring was or what it was based on?
A. I didn't personally do a lot of work on that, my quality director did.
Q. As a hospital collectively, did you come to learn anything?
A. Yes. Historically these measures had had a numerical value that was given for non-participating hospitals, but now we would be assigned the lowest performing of all hospitals because we were not going to be submitting data. There was another measure.
Q. There are four measures that were treated that way in the new methodology?
A. Correct.
Q. This screen is showing three of them?

A. Yes.
Q. Let's look at the first one, the doctor's orders.
Do you see this?
A. Yes, computerized order entry.
Q. Justin, can we scan down.
This is the CPO measure. Have you heard of that?
A. Yes.
Q. This was the score Delray was assigned last year?
A. That is correct.
Q. The 15?
A. Uh-hum.
Q. That is the worst score that any hospital achieved on this survey?
A. That is correct, but again, we did not submit data.
Q. The best hospital score is a hundred. Do you see that?
A. I do.
Q. Under the section what safer hospitals do, it says hospitals use CPO systems in all areas of the hospital and regularly test those systems to ensure they are alerting doctors to potential ordering errors. Do you see that?
A. I do.
Q. Does Delray Medical have a system like that?
A. We do.
Q. Has it been in operation since you have been CEO?
A. It has.

Q. Was it in operation before you became CEO?
A. Yes.
Q. Have there been any changes to the system going back to say 2020?
A. Not that I am aware of.
Q. Does Delray Medical take steps to regularly test the system to make sure it is being complied with?
A. We do. We did ongoing testing, and then I have score cards and metrics with the physician providers and that is shared with them in our monthly meetings. We had a meeting yesterday with all our hospitalists, and they have the score for CPOE, and they have to be performing at a specific threshold that is within our medication administration record policy and procedure, and CPOE compliance is noted in the rules and regulations of Delray Medical Center.
Q. And just turning your attention while we have it on the screen, do you see there is a question mark circled? Do you see that?
A. Yes.
Q. That is a different measure, is it not?
A. Yes, it is a different measure.
Q. It is staff working together to prevent errors. Do you see where it says decline to report?
A. I do.
Q. For this fall 2025 year, did Delray Medical provide any

data to Leapfrog Group for that measure?
A. No.
Q. Let's look back at the CPO measure we are discussing. Did Delray Medical provide any data for this measure?
A. We did not.
Q. Did you provide data to Leapfrog Group for any measure?
A. We did not.
Q. Do you know why you received a question mark in this category, but a score in the three to the left of the screen?
A. I don't know why. It doesn't really make any sense. You would think the question mark would be on the others that we didn't submit data on either.
Q. Justin, can we go down to the second measure, safe medication.
Is this measure commonly referred to as the BCMA measure?
A. Yes, the bar code medication scanning.
Q. And you received a 25 in this survey?
A. Yes.
Q. Which was the worst score of any hospital in the country?
A. That is correct.
Q. For this survey, the average score was 85.2?
A. Yes.
Q. And just going down again to what safer hospitals do, when hospitals use bar coding technology effectively for all orders medication errors have been far less frequent.

Does Delray Medical have employees in the BCMA system?
A. We do, and it used for all of our nurses and staff members that administer medication, and it is included in the medication administration policy and procedure, and it is tracked by our the chief nursing officer for all of the nursing staff and respiratory therapists to make sure everyone is in compliance. If they are not, those staff members do go on an action plan or we dig deeper into the areas to ensure the tools and equipment are working properly.
Q. And to your knowledge, you know, through the present day, through today, what is the compliance like for this measure?
A. Our compliance is greater than 90 percent.
Q. You don't have physicians in a regular practice writing prescriptions by hand anymore, do you?
A. No.
Q. Has that been true for many years?
A. Yes.
Q. Justin, could we go to the third measure, the hand washing measure.
Let's look at this one. Again, you received a 15, which was the worst score of any hospital in the country; is that right?
A. That is correct.
Q. The average for hospitals was 76.1?
A. Correct.

Q. Just turning to what it describes for what safer hospitals do, it says hospitals provide training and implement policies to make sure that all hospital staff cleans their hands before touching a patient. Do you see that?
A. I do.
Q. Does your hospital provide training and implement policies to make sure your hospital staff washes their hands before touching patients?
A. We do.
Q. Can you describe your policy and the processes you use to ensure compliance?
A. There is an infection protection compliance policy that incorporates our hand washing guidelines programs. Every new staff member, no matter what part of the hospital, has a training on hand washing. We do hand washing in each nursing unit and those surveys must be turned into quality every month, and those are calculated by unit, by discipline so we can understand trends if people are not washing their hands.

The surveillance tool will show did the person fall in using waterless hand soap or did they use soap and water because different patient conditions might require you to use a different method of hand washing.

That information is shared in our monthly infection control or prevention meeting, and that information rolls up into our monthly quality meeting.

If there are fallouts, meaning people are not having good hand hygiene compliance, they are coached on the spot in a very professional way telling them they missed a moment of hand hygiene.

If there is different disciplines, say people who passed the food trays, if they had trends of not washing their hands properly we do tailored education with hands on where they have to do return demonstrations for us so we make sure that compliance trends upward.

Q. What is your hospital's compliance with this?

A. Right now or our hand hygiene compliance is at 82 percent.

Q. I want to pull up to Plaintiff's 34.6, and I want to direct your attention to the third column, the third measure starting from the left. Do you see that, specialty trained doctors care for ICU patients?

A. I do.

Q. Is that the ICU staffing, the fourth measure?

A. It is the ICU staffing measure.

Q. Okay. Again, next to it, these two measures with question marks that say declined to report, those are also measures for which your hospital did not submit any data to Leapfrog?

A. That is correct.

Q. Justin, could we move down to the description of the ICU measure.

Again, your hospital got a 5, which was the worst score of

any hospital in the country, right?
A. We did.
Q. The average was 67.86 this time?
A. Yes.
Q. Under what safer hospitals do, hospital staff, ICU, have training in critical care medicine. Does your hospital have physicians trained in critical care medicine?
A. We do.
Q. Would you explain it?
A. We have three intensive care units, one is trauma ICU, that is staffed 24/7 by trauma medical care medicine physicians and nurse practitioners that are there on site 24/7. Our neuro ICU, our cardiac ICU are also staffed by critical care board certified physicians 24/7. There are two ICU physicians on site throughout the day and two on night, so they are always on site and they each have a health professional that supports them as well.
Q. You mentioned earlier you are a level one trauma center?
A. Yes.
Q. Is it required for being a level one trauma center to have ICU dedicated staff?
A. It is.
Q. What would happen if your hospital failed in having the requisite ICU staffing?
A. We would be at risk of losing our trauma designation.

Q. Has anything like that ever happened?
A. It has not.
Q. Justin, can you bring up PX 8. This is another exhibit from the Leapfrog website admitted by stipulation.
Ms. Havericak, I want to direct your attention to the sentence starting with -- the last sentence.
Do you see where it says the analysis also found that D and F hospitals carry nearly twice the risk of mortality of A hospitals. Do you see that?
A. I do.
Q. Does your hospital carry twice the risk of mortality of A rated hospitals?
MS. BLAIR: Objection, calls for speculation.
THE COURT: Overruled.
THE WITNESS: It does not.
BY MR. MARCUS:
Q. Is there publicly available data you have been able to look at for that?
A. There is.
Q. Can you describe that?
A. It shows overall that we are 16 percent better than the national average.
THE COURT: You are what better?
THE WITNESS: 16 percent.
THE COURT: Better than?

THE WITNESS: The national average. And that would be in cabbage, pneumonia, and AMI, just to name a few.
BY MR. MARCUS:
Q. Let's go back to November 2024, when you first learned about the failing grade that was coming out from your hospital.
How did you learn about it?
A. Well, I knew the grade was going to be coming out because our quality director had circulated it to us.
Q. And what was the reaction within your hospital?
A. I was very concerned as the CEO that we were going to have a published failing grade.
Q. What actions did you and your hospital take in response?
A. So I personally, I sent an email when Stephanie, my quality director, sent me an email that my grades were going to be published, it would be an F, I said this is unfortunate, and I said, do we have a PR plan in place. I was very concerned about the damage this was going to have on our patients and the community.
Q. What kind of damage were you concerned about?
A. Patients delaying care. We serve a very elderly population, they have a variety of health care issues, and a delay in care could be life or death for them.
It didn't seem fair that we were being assigned this false grade and we needed to do something to offset that and to give the public clarity.

Q. Was there publicity that ensued for this failing Leapfrog grade?
A. There was. There was things on the news stations which we saw this morning, op eds that came out citing our hospital and what it was like in 2014. There were other social media targets, and some things came out later after that as well.
Q. You mentioned social media. Was there any publication on TikTok about your hospital?
MS. BLAIR: I object to hearsay. We previewed this in our motion in limine that there is no foundation or authentication of this TikTok video the Plaintiffs want to offer into evidence.
THE COURT: How do you seek to use it?
MR. MARCUS: Your Honor, it comes in for the significance of the publication and the impact on the community and her hospital. She personally has seen this video, it has been shown to her. We plan to show it to you, it is about 90 seconds.
THE COURT: It doesn't seem they are using it for the truth of the matter asserted.
MS. BLAIR: They are, they using it to say that Leapfrog's grades are what is at issue and Leapfrog is not mentioned in this --
THE COURT: That would be more of a relevance objection.

MS. BLAIR: That is a relevance objection, but there is an authenticity and foundation issue. The TikTok video for which they want to enter how many views the TikTok video had, there have no information about how many AI bots clicked on this and who generated this and for what purpose it was generated for, and it is also prejudicial. So I would say foundation, hearsay and relevance, your Honor.

THE COURT: All right. I am going to overrule the objection with respect to hearsay. I think it is not being introduced for the matter asserted.

It seems relevant. I probably need to see it to have any kind of sense of authenticity, or some description of where she saw it.

BY MR. MARCUS:

Q. I will do that.

How did you become aware of this TikTok video?

A. I had various physicians saying, have you seen the video, sending me the video via text, and they would show it to me when I was in the hallways of the hospital. I was out to dinner with friends and they showed me the TikTok video, they said what is happening at your hospital, it is concerning. You are a level one hospital --

MS. BLAIR: Objection to what the members of the community said to her.

THE COURT: Overruled.

BY MR. MARCUS:
Q. Did anyone show you the video?
A. They did, numerous people.
MR. MARCUS: Can you play it for the Court.
(Video played.)
BY MR. MARCUS:
Q. Ms. Havericak, the video referenced an F grade that your hospital received in the fall of 2024; is that correct?
A. That is correct.
Q. Did you receive an F in the fall of 2024 from the Leapfrog survey?
A. We did.
Q. Has Delray Medical received an F score from any other institution to your knowledge?
A. We did not.
Q. That is the only F grade you received at that time?
A. Correct.
Q. In fact ever; is that right?
A. Correct.
Q. Have you seen any -- as CEO, do you look at admissions data on a regular basis?
A. I look at it every day.
Q. How does your hospital track admissions?
A. We have a variety of different programs. There is one called kaleidoscope and we get a snapshot through that through

the daily admissions portal, so we can see admissions, the type of admissions, inpatient, out patient surgery, what we are doing in the cath lab, all our length of stay and key indicators.
Q. You say you check it daily?
A. I do.
Q. Does it reflect walk-in data to your emergency rooms?
A. It does. It will have ED admissions, and ED or emergency department what we call treated and released patients.
Q. Does it track patients brought to your emergency room by ambulance?
A. That particular data set doesn't the track that, but we track that on a monthly basis to see how many patients are being brought in from our fire rescue partners.
Q. What are the rules with respect to where an ambulance takes a patient in Florida?
A. There is a variety of different municipalities that come to us for fire rescue, most of those are standardized. If it is trauma, they have to go to the closest trauma center. If there is a Plaintiff having a heart attack, they have to have a stable facility, which we are. The same would hold true if they see a stroke patient having a stroke in the field, they are able to bypass a primary center to bring them to the higher level of care.
Q. And from 2024 through last year, was there a decline in

your walk-in admissions data?
A. Our treated release walk in had a seven to eight percent decline.
Q. In that same time period, was there any decline with respect to the ambulance population?
A. There was not. We went up about 6 percent or 1100 runs.
Q. As CEO, is it your responsibility to understand the impact of declines in admissions in the hospital?
A. Yes.
Q. Is it your responsibility to try to understand the reasons why it may be down?
A. Yes, that is an important part of my responsibilities.
Q. What did you find in terms of the reasons that the walk-ins would be down while the ambulance would be up?
A. We didn't find anything except the disparaging grade that we were assigned.
I go out, I meet with all the community physicians that send their patients there, the population growth in our community continued to be very stable and growing. So, really there is no other indication or reason besides the failing grades. Those are people that have choices that can walk in. There were not any other competitors that added urgent care or free-standing emergency departments, so that was not the cause.
Q. What about the population, has that decreased or increased?
A. It has continued to increase.

MR. MARCUS: I would like to introduce at this time Plaintiff's Exhibit 550.

THE COURT: And just in terms of our procedure, when you are introducing these and referring to numbers they are by agreement; is that right?

MS. BLAIR: This document was produced on January 6th to us, so we have not agreed to this document. We don't have any indication of who prepared it, how it was prepared, where it came from, why it wasn't provided to us during the course of discovery or at least supplemented to us. This is an issue with many of the documents we are going to see throughout this trial.

MR. MARCUS: It is a summary of the testimony you just heard about the data for Delray Medical between walk-ins and EMS ambulance admits. I believe Ms. Havericak said this is something that is tracked, kept in the regular course of business, tested for accuracy.

THE COURT: A summary, you have to give notice, and a summary has to represent underlying documents that have been produced or they have some knowledge of. Isn't that the case?

I mean, I heard her testify as to her perception. Did they ask for this before?

MR. MARCUS: We did produce this information, but it didn't go through the end of the year. This is simply updated through the end of 2025, so it was produced in the beginning of

January, but it goes through December 2025. It had similar admissions data through a good part of 2025 that was produced.

THE COURT: The underlying data was produced except for --

MR. MARCUS: The last couple of months.

MS. BLAIR: Your Honor, we have no such data that shows this percentage change.

THE COURT: How about the admission data? Percentage is math.

MS. BLAIR: We received some admissions data, but we were informed recently that they are no longer looking to put it into evidence in this trial. It was on this document.

We have some admissions data, what they pick and choose to attach to various motions they filed. No, I don't have all of the underlying data for all of these hospitals. If I am wrong, I would love to see the backup data, but no, your Honor. I have been working on this case tirelessly for seven months, I don't have this.

THE COURT: You are saying you don't have any data or only --

MS. BLAIR: I have some data, but I do not believe it goes back to 2023, and it certainly does not show the change, and the data we have looks significantly different. They have data that talks about elective surgical and documents, so I don't have anything like this prior to January 6th. It is a

cumulative document that I believe they prepared for this litigation.

THE COURT: A summary is often that.

MS. BLAIR: I don't have the backup.

THE COURT: My question is: Have you seen the underlying data? Have they except for a month or two or not?

MR. MARCUS: The numbers certainly for 2024 and 2025, again. It stopped, they had it as we produced it. We updated it in January for end of year numbers. To your point, the percentage change is simply math.

THE COURT: I am going to overrule the objection. Point to any -- I am not sure it adds that much to her testimony. I will overrule the objection. It sounds like you had at least some of the underlying data. A summary looks like it is largely math at this point.

MS. BLAIR: Your Honor, I want to put on the record that we have never been able to test any of this data, so over my objection. I understand, your Honor.

THE COURT: All right. Go ahead. 550 is admitted.

(Whereupon Plaintiff Exhibit 550 was marked for evidence.)

BY MR. MARCUS:

Q. What impact does this have on your hospital if walk-in admissions to the ER decline?

A. It is going to have an impact on revenues, on our admissions. When the revenues start to decline in a profound

way it becomes very difficult to continue to invest in our complex tertiary services. We have very high level service lines at Delray, and if those revenues go down it is difficult to invest in those things, and that has an impact on the community because those services wouldn't be able to be offered.

Q. The ambulance you talked about earlier, what is the reason why EMS requires ambulances to take an emergent patient to the nearest hospital?

A. For the services offered and the time frame. If it is a patient having a heart attack, they need to be -- minutes matter. They need to be taken to place that has a cath lab to do interventions, get them on the table so we can get the catheter into the patient and help save the patient from a heart attack.

The other thing is stroke. If you don't go to the right hospital that has the capabilities to take care of people with strokes you are going to have bad outcomes and that is not going to be good for patients. We can save the brain, we can get them into interventional radiology because we have all the teams and the services that need to be available to treat the very critical patients.

The same holds true with a trauma, you have to be able to get those patients to a level one trauma center and we know that those patients do far better when they are triaged in the

field by EMS and brought to the appropriate place.
Q. Are those risks magnified? So for patients that live near Delray Medical, if they are afraid come to your hospital because they feel it is unsafe and go to a hospital further away, are those risks that you just described magnified?
MS. BLAIR: Objection.
THE COURT: Overruled.
THE WITNESS: They are.
BY MR. MARCUS:
Q. What about Humana; how much of your patient population have Humana insurance?
A. About 30 percent.
Q. Do you have a lot of Medicare patients?
A. A lot of Medicare and Medicare Advantage patients, yes.
Q. Did you receive a letter from Humana at your hospital based on the grade that was assigned to you?
MS. BLAIR: Objection, hearsay. This is another document we were not provided until January 6th, and it was available in discovery, and it is addressed to whom it may concern.
We object to it as not being produced to us, and we did not have an opportunity to test it.
MR. MARCUS: Your Honor, there are two letters, one was sent to them in the summer, in July 2025, that has been produced. It was timely produced in discovery.

There was a recent letter in December, very similar to the first, that was sent to Delray Medical. That is the one we turned over in January because it was just given to us in December.

It's two different documents, I was going to offer both. We are not offering the letters for the truth of what is in the letter, it is for the fact that Humana has written to them, it is significant. It goes to the state of mind or the belief of the declarant, which would be Humana. It is not being offered for the truth of what is in the letter.

THE COURT: You got the first one, but not the second one?

MS. BLAIR: I got the first one. It is being offered for the truth of the matter asserted because they are trying to offer it to say that Humana is telling them based on Leapfrog's scores basically they need to do better with patient safety. It is certainly being offered for the truth of the matter asserted.

THE COURT: I will overrule the objection. What is this number?

MR. MARCUS: Your Honor, the first one is PX 465.

THE COURT: 465 is admitted over objection.

MR. MARCUS: The second is PX 549.

THE COURT: Also admitted over objection.

(Whereupon Plaintiff Exhibits 465, 549 were marked for

evidence.)

MR. MARCUS: Justin, can we look at the first letter. Can we make it bigger.

BY MR. MARCUS:

Q. You and your hospital received this letter July 15th of last summer?

A. That is correct.

Q. And just looking at the first sentence of the second, Humana wrote to you, "We strive to ensure TriCare beneficiaries receive health care at facilities that provide care in a manner that meets or exceeds the safety measures used in the system."

Do you see that?

A. I do.

Q. The next sentence, "Consequently, we are providing you this information to encourage your facility to review your Leapfrog hospital safety grade to identify any factors that may have contributed to your performance on safety measures."

Do you see that?

A. Yes.

Q. "We ask you to respond to this letter within 30 days of receipt regarding your strategy to improve performance."

What did you do in response to receiving this letter in July?

A. We didn't take action because we were already working on process improvement in our hospital. We didn't participate in

the Leapfrog survey and we were working on the things in the CMS star rating that we had opportunities on. There wasn't anything to provide for them.

Q. In the next paragraph, "If you don't currently have a plan in place to address your performance measures you should consider reviewing the Leapfrog Group's information regarding the Leapfrog hospital safety grade and scoring methodology used on their website."

Do you see that?

A. I do.

Q. Did you receive a second letter late last year?

A. We did. I think the last week of December that one came through.

Q. Okay. And when they tell you, "We look forward to hearing about your improvement strategy," did you take this as a reprimand from Humana?

A. A little bit.

Q. Did you think this was a fair representation of your hospital's safety or quality?

A. No.

Q. Justin, can you pull up the second letter.

This is the more recent letter that came in December?

A. Yes.

Q. It is very similar to the first letter, is it not?

A. It is almost identical, yes.

Q. Again, have you taken specific action since you received the second letter?
A. No, because we already have process improvement and safety plans in place. There is not anything else we need to address with them.
Q. What has been the impact on your hospital -- aside from the admission data, the Humana letter, what other impacts have you identified to your hospital as a result of the publication and publicity surrounding this safety grade?
A. It has caused confusion and has caused our community's confidence to be shaken. I go and I round every day in our hospital, I go to see three to four patients every day. I can tell you in my rounds about two months ago, I was in the med tele unit and --

MS. BLAIR: Objection, your Honor, eliciting hearsay. She is going to talk about patients that she allegedly spoke to. They have never been disclosed, and she is going to talk about conversations she had with patients specifically related to Leapfrog.

We asked interrogatories, we asked for requests for production of patients' names. All of this -- none of the interrogatories were ever disclosed and what she is going to testify is absolute hearsay that we have not been able to test.

THE COURT: What is your response, Mr. Marcus, as to introduction, I guess, of her testimony about when she does

rounds and talks to people?

MR. MARCUS: We are not offering it for the truth of the statement. Again, it is coming in to show the state of mind of the declarants. There are lots of cases. We cited some in other briefing before you. Again, confusion evidence, state of mind of a speaker is an admissible non-hearsay purpose.

So it is not being offered for the truth, but this is their state of mind, they heard something and acting on it and it is being communicated to the hospital. Some of it is in the course of deciding their medical care and treatment, so it would come in under the patient care treatment exception, again, there will be different iterations, again, not being offered for the truth.

With respect to the production, that is really a mischaracterization. Yes, there was discovery served. There were objections lodged by us. There was never a motion to compel before your Honor on this issue.

Obviously, we are not allowed to disclose patient names under HIPAA without a court order, nor are we allowed to troll or try to recruit them to be witnesses in a third party litigation like this. That is the HIPAA, but there is never a motion brought by Ms. Blair to tee this up.

It is limited testimony. It is not coming in for the truth of the statements. It is coming in to show the patient

has heard something, this has been publicized, and what is the state of mind at the time, and how are they acting and what does the hospital try to do in response.

THE COURT: Looking at 803(3), any existing mental, emotional, or physical condition -- I don't have -- my handbook on Federal evidence doesn't have an Eleventh Circuit case, but they point as admissible in a trademark infringement statements by members of the public indicating their confusion as to source of product were admissible. Also, in an antitrust statements by customers of Plaintiffs as to why they were purchasing instead from Defendants is identified as admissible.

That is a Third Circuit case, the other one is Seventh Circuit. Based on that authority, in the absence of researching the Eleventh Circuit, I am going to overrule the objection.

MS. BLAIR: Your Honor, I am going to have a standing objection. Would you like me to object to all --

THE COURT: You can have a standing objection to any discussion with hospital executives or doctors as to what people told them as to their concerns.

BY MR. MARCUS:

Q. Go ahead, you may answer.

A. In one of my rounding days I was on the med tele unit, a 48 bed unit in our hospital has a high turnover of patients because they are there for a short amount of time, so I happen

to go into three or four rooms that day.

The first one I went into there was a nice elderly woman with red hair sitting up eating her lunch. I introduced myself as I am the chief Executive Officer, I am coming around to talk about your hospital experience. I wanted to know how the team was doing taking care of you, how the physicians were communicating, was everyone working together to get you better.

Immediately she said, oh my gosh, I am glad you are here, you are the chief executive officer, you have to do something about your letter grade. I said, what do you mean? She said there is a video that talks about your letter grade. She was elderly, she had her cell phone, she was trying to show me the letter grade, but she wasn't able to pull it up. So I talked with her for a little bit.

She lived in the adjacent community, which was Kings Point, right next to our hospital. She said I had to come by ambulance and I was nervous because I have seen that video and I have seen the grade, and I wasn't sure that I would have a good experience. And she said everyone has done a wonderful job taking care of me. She talked about how wonderful the nursing staff was, people washed their hands. She said the food was really, really good.

So I thanked her and she said, if I have to come back to the hospital this is where I want to come. I am glad the ambulance took me here.

Q. Have you ever had occasion to counsel a patient that was weighing whether to seek medical care at your facility but had reluctance because of the grade?
A. Yes. Over the summer we had onboarded a physician that had privileges at three facilities in our community, and we were excited to bring her over to Delray. She had extensive training in upper extremity and shoulder replacement, so she was going to be moving her cases over to Delray Medical Center.
MS. BLAIR: Your Honor, same objection on hearsay. I understand your ruling previously was with respect to patients and how they reviewed the services. There is no indication in this case that doctors would have the same level as a consumer as your Honor pointed out with your trademark cases.
THE COURT: All right. I am going, at least at this point, overrule the objection.
I will look at more precise argument on this point as you go forward, particularly if anyone can find anything in the Eleventh Circuit.
MS. BLAIR: I appreciate it, your Honor, as it goes to the heart of this case.
THE COURT: All right.
THE WITNESS: She had reached out because was having a hard time talking that patient into having surgery at Delray Medical Center, and she asked me if I could call the patient, but this particular patient was a savvy health care consumer,

and she was concerned about the video she had seen, the failing grade.

I did call this patient. She was a little defensive and upset, rightfully so, when I first started talking to her. She said, no, I am not going to come here. She told me about the letter grade. She said, Heather, I am afraid that I am going to die at your hospital. So I went on to explain the letter grade, where it generated from, that we didn't participate in the survey.

I explained to her our joint replacement program, that is another accreditation we have. I gave her up to date information on our surgical site infections which were greatly improved in the year 2025, and really talked to her about the whole team, and then I did have our navigator followup with her. She went on to have surgery with us. She was grateful for the call and clarification of the information, and she had a fantastic outcome.

Q. In your words, Ms. Havericak, why has Delray Medical filed this lawsuit?

A. Because, as I think it was said earlier, there were attempts made to have these letter grades retracted. That did not happen. We choose not to participate in the survey and we are being inappropriately assigned a failing grade, and it is impacting our reputation that we built in the community.

We have been here to serve our community and it is not

fair. It is false, it is misleading, and shouldn't be happening, and there is no way to correct this on our own.

MR. MARCUS: Your Honor, we pass the witness.

THE COURT: Cross-examination.

MS. BLAIR: Thank you, your Honor.

CROSS-EXAMINATION

BY MS. BLAIR:

Q. Ms. Havericak, for purposes of sort of orienting the Court to where we are, Delray -- well, you consider these five hospitals for purposes of this litigation a failing grade of D or F from Leapfrog, correct?

A. Correct.

Q. So everyone is clear, the methodology change that this lawsuit is about occurred in the fall of 2024, correct?

A. Yes.

Q. Delray received a Leapfrog grade in the spring of 2024, correct?

A. Yes.

Q. That spring of 2024 Leapfrog grade was a different imputation model, correct?

A. Correct.

Q. In the spring of 2024 Delray was given the same grades for BCMA, CBOE and hygiene that the cohort was receiving as a mean, correct?

A. That is correct.

Q. Delray was a D under that old model, correct?
A. Correct.
Q. So you had a failing grade before the methodology change and a failing grade after the methodology change, right?
A. Correct.
Q. But it is your testimony here today that everything bad that has happened to your hospital is a result of the methodology change that occurred at Leapfrog in the fall of 2024?
A. That is not correct.
Q. Aren't you suing Leapfrog because of the methodology change?
A. We are.
Q. Aren't you saying that methodology change caused reputational harm to Delray?
A. It did and it continues to.
Q. Even though you had a failing grade before, right?
A. That is correct.
Q. All right. I just want to make sure we are all on the same page. Delray stopped participating in the Leapfrog survey as a market in 2021, correct?
A. Yes.
Q. And you weren't at Delray in 2021, were you?
A. I was not.
Q. Did you do an investigation as to why Delray stopped

participating in 2021?
A. I talked to my colleagues, yes.
Q. What is your understanding of why Delray stopped participating in the Leapfrog hospital survey in July 2021?
A. Because there wasn't a large amount of value in the survey and we wanted to take those resources that were limited, that was right during the COVID period, and put those resources front and center for patient care and into improving our own quality and safety in our organization.
Q. You weren't receiving any value from Leapfrog because it wasn't helping you benchmark your outcomes?
A. We don't look at Leapfrog as a benchmarking foundation for us.
Q. What do you mean, it was not providing any value to Delray in 2021.
A. Well, I wasn't there in '21. I came in 2024, and when I talked to colleagues their response was there was not any value in it and we wanted to take those resources and put them in places of value.
So we wanted to pursue accreditations where there were validation and verification visits, which we continued to do with our stroke services, our trauma services, with our bariatric center of excellence. Those are the things we wanted to focus on because those provide more value.
Q. Would it be fair to say that Delray received no benefit

from the Leapfrog survey when it participated?
A. In my perspective, I don't think it did. No.
Q. Would you agree with me that Delray made a voluntary business decision to stop participating in the survey in 2001?
A. I don't know what happened in 2001.
Q. I'm sorry, 2021.
A. That is the business decision that was made from my understanding, but I was not there.
Q. To your understanding, it was a voluntary decision made by the hospital?
A. Correct.
Q. All right. And do you have any understanding as to whether or not Delray had any issues with the methodology that Leapfrog was employing in 2021?
A. Not that I am aware.
Q. Do you recall in this litigation you signed a declaration in this case?
A. Yes.
Q. Do you recall you signed that under oath?
A. Yes.
Q. You signed it in connection with a motion for preliminary injunction, correct?
A. Yes.
Q. The hospitals never went through with the preliminary injunction motion, correct?

A. Correct.
Q. If we could look at that, that is DX 12, and I will show you paragraph 13.
You signed this affidavit -- if you can scroll --
THE COURT: Again, I want to make sure I am confirming the way we are going to do it. If things are by agreement, if lawyers say you can show it, it is admissible, fine. If you think there is some debate about it, let me know.
As far as the Court Reporter is concerned, as long as you tell me we are going with Exhibit 4, for example, if you believe that 4 is unobjected to, that is enough. We won't go through anything more than that. If either side thinks there is a debate over it, let me know.
MS. MALONEY: Kim, if it is a JX, we should not have any discussion about it.
THE COURT: You all know those things, I don't. I rely on lawyers as good as you all are to make sure if it is unobjected just refer to it by exhibit number, and we will assume it is in.
MS. BLAIR: Excellent, thank you.
BY MS. BLAIR:
Q. You told me that you had no knowledge if back in 2021 nobody had a problem with Leapfrog?
A. Not that I know of.
Q. You signed this, paragraph 13, and you say under oath,

during the height of the pandemic we concluded TLG's terminology is not reliable. Do you agree with that?
A. No.
Q. All right. Right here, I highlighted it for you, during the height of the pandemic -- you said, "during the height of the pandemic we concluded TLG's methodology, which does not include a facilities visit or any effort to speak directly with patients or providers is not reliable and generates inaccurate and misleading results."
Do you see that?
A. I do. The methodology this is referring to in this statement is similar to what I talked about in site validation. The Leapfrog Group does not come in and do facility assessments, they don't speak with patients and families similar to what the Joint Commission does.
When this is referencing methodology, it is not referencing the four imputed measures.
Q. It says, TLG's methodology was not reliable, generated inaccurate and misleading results that harm our hospital.
You said that, right?
A. I did.
Q. You said that under oath?
A. Yes.
Q. Even though you weren't at Delray in 2021, you signed an affidavit that in 2021 TLG's methodology was not reliable,

generated inaccurate and misleading results that harm our hospital?

You said that, correct?

A. Yes, because that is what I gathered from all of the colleagues. When you come in as a health care executive you have to gather that historical perspective.

Q. I asked you these questions at your deposition and you just testified on the stand that the decision back in 2021 to not participate in the survey had nothing to do with methodology, but you signed a document that it did.

A. You are confusing the methodology in the questions.

Q. I don't think I am. Does that not say during the height of the pandemic you stopped taking the survey, correct?

A. The hospital stopped taking the survey during that time, yes.

Q. All right. So it is your position now, having seen this, that in fact Delray suffered harm from the Leapfrog methodology back in 2021?

A. I can't opine on the exact harm that was suffered in 2021 because I wasn't there.

Q. You signed an affidavit saying your hospital was harmed, correct? I am looking at it.

A. We are being harmed since the fall of '24, and you have to put it all in context and not just pick out pieces.

Q. Am I not reading that sentence in full?

A. You are, but we have to look at the whole document.
Q. Okay. At some point after Palm Beach Health Network made the voluntary decision to stop participating in the survey are you aware that Tenet Health Care gave a directive to all Tenet hospitals that new participation in the Leapfrog survey would not be supported?
A. I learned of that during the discovery process in preparing for this case.
Q. Okay.
MS. BLAIR: If we could pull up -- this is a confidential document, so I don't know how you want to deal with this.
THE COURT: Determinations of confidentiality during discovery don't carry over to trial.
If you wanted to make such an argument as to any of these documents you need to make them now or make them when it comes up. The fact that something was confidential during discovery carries no weight with me at this point.
MS. MALONEY: I am standing because I am the document nerd here. I am sorry, I don't mean to take over from counsel. But I don't know -- she hasn't said what document --
MS. BLAIR: I said 610.
MS. MALONEY: Do you have a copy of it?
MS. BLAIR: I have an electronic copy of it.
MS. MALONEY: Your Honor, this document we

de-designated previously, and we have no objections on confidentiality grounds. Your Honor, at the appropriate time we can address a couple of remaining documents for which I am understanding there is still some confidentiality dispute. I am hoping we can resolve that, but this particular document is not subject to any confidentiality assertion at trial. Thank you.

MS. BLAIR: Just A housekeeping matter, there are several documents that I believe are still marked confidential I understand your Honor's directive. Would you like me to point out --

THE COURT: Why don't you all talk first and see if you can work out the remaining ones that have not been de-designated as confidential.

It is my inclination not to respect those early designations and require a showing at this time if something is going to be introduced into evidence during the trial.

MS. BLAIR: Thank you, your Honor.

BY MS. BLAIR:

Q. If we could look at this. This is quality program management transition and handoff 10/18/2024. Have you seen this document?

A. I have seen it in getting ready for trial.

Q. Did you see it at the time?

A. Not that I recall.

Q. You would have been CEO at Delray Medical the time?
A. Correct.
Q. Who was your quality director?
A. Heather Waymeyer and then it transitioned in the beginning of October to Stephanie Johnson.
Q. Okay. And this would have been part of that transition, correct, between Heather and Stephanie?
A. I would assume so because it looks like those dates line up.
Q. Do you have any reason to believe this is not a business record that you produced to me in this litigation?
A. No.
Q. Do you have any reason to believe that this was not something that was produced for your quality program management?
A. No.
Q. And if we scroll down, we will see -- we will see here that in fact this document your staff knew in October of 2024 that -- that Tenet does not support completing the survey.
My apologies. Courtney is struggling over here, my apologies. She will find it.
Do you have any reason to believe that in October 2024 your quality director was discussing the fact that Leapfrog was not being supported by Tenet home office?
A. She didn't share that with me.

Q. And if we look at Exhibit 612, please. This is an email from -- she will pull it up here -- an email from Stephanie Johnson to you, and Stephanie Johnson was your director of quality, correct?
A. I have to look at the email to see the timing. I don't know if she was at that time or not. It is not up yet.
Q. That is fine. Exhibit 612 is in evidence. We will move on. I don't want to waste time. Here it is, 612. If you scroll down here, this is an email I think you are referring to your counsel, correct?
A. Correct.
Q. If you look Stephanie Johnson says to you, all scores have fallen as we were instructed by corporation not to participate in data participation. All scores across the market have fallen as we were instructed by corporate not to participate in data submission for the rating.
Do you see that?
A. I do.
Q. That is from Stephanie Johnson, November 4, 2024, to you, correct?
A. Correct.
Q. Is this correct that Tenet instructed all Tenet hospitals not to participate in the Leapfrog survey?
A. It appears that way in the email.
Q. Do you have any recollection around this time whether

Delray wanted to participate in the Leapfrog survey going forward?
A. It wasn't a question of wanting to. I needed to look at it with my team because the result of not participating and penalizing us with the imputed model and numbers, I needed to figure out what it would look like. As the CEO I am responsible for the quality of my hospital and the reputation, so I needed to look at what the ultimate measures would be.
Q. Leapfrog provides hospitals with a free calculator to figure that out, correct?
A. They do.
Q. If we go to Exhibit 618, this is an email from Regina West to Ricardo Ramirez.
Regina West at this time was the director of quality for Palm Beach Health Network, correct?
A. Yes.
Q. She is gone?
A. She no longer works there, yes.
Q. Ricky Ramirez was the director -- the chief nursing officer for the Palm Beach Health Network, correct?
A. Yes, as well as the chief nursing officer at West Boca Medical Center.
Q. If we scroll down, you see Maggie Gill writes thanks.
Do you see that?
A. Yes, she writes thank you.

Q. Maggie Gill is the president of Palm Beach Health Network, correct?
A. That is one of the regions that she is responsible for.
Q. Scroll down, Ricky Ramirez sends an email to Maggie Gill that says, PBHN, so that he is all five hospitals, would like to resume Leapfrog reporting.
Do you see that?
A. Yes.
Q. And it says, with minimal effort and no cost.
Do you see that?
A. I do see it.
Q. Do you have any reason to dispute Ricky Ramirez' statement here?
A. I don't agree with his statement here that it would take little resources and little cost.
Q. Do you dispute that he sent this?
A. It looks like it was sent here. I am not on them so I can't opine on them.
Q. We will talk about your outcome data, CMS outcome data. When I say your, I mean Delray.
You track hospital acquired infection data, do you not?
A. We do.
Q. For all of 2025 without any central line blood stream infections is pretty tremendous.
A. It is.

Q. Great. You report that to the Center for Medicaid Services?
A. Correct.
Q. We are going to talk about CMS data as Leapfrog processes it. Do you understand that CMS is publicly reported data from your hospital?
A. I do.
Q. And you also track HCAP information?
A. Yes.
Q. HCAPs are patient surveys that get submitted to CMS?
A. Correct.
Q. CMS gives you a score based on patient surveys?
A. Yes. Right.
Q. I want to focus on the fall of 2024. Your HCAP scores were significantly lower than the national average, were they not?
A. They were.
Q. The same with your hospital acquired infection rates?
A. They had opportunities.
Q. The Leapfrog safety grade uses ten -- tracks ten outcome matters based on CMS data, correct?
A. Correct.
Q. And it also tracks your HCAP scores?
A. Yes.
Q. That is CMS data, right?
A. Yes.

Q. The CMS data that Leapfrog uses is risk adjusted, correct?
A. That is correct.
Q. Do you have any reason to believe that the CMS data that Leapfrog uses in its grades are inaccurate for Delray?
A. I wouldn't say it is inaccurate. It is a snapshot of some of our population, just like HCAP has about a ten percent response rate that we have at the hospital. So it does not demonstrate an accurate reflection of everything we do. We had opportunities in 2024 in those measures that you pointed out.
Q. In fact, CMS, just like Leapfrog provides ratings to hospitals based on patient safety and quality, correct?
A. That is correct.
Q. In 2024, what was Delray's overall CMS rating?
A. It was a one star.
Q. What was Delray's overall CMS rating for patient experience?
A. Also a one star.
Q. It was also a one star.
Internally you track, you being Delray and the other four hospitals that make up Palm Beach Health Network, you track your CMS data in what is called a five star market analysis, correct?
A. I believe that is what it is called, an Excel spreadsheet.
Q. That is a business record that the quality department keeps, correct?

A. Yes.

MS. BLAIR: If we can pull up 18. This is also marked confidential.

MR. MARCUS: No objection.

BY MS. BLAIR:

Q. This email is from Regina West, March 26, 2024. On that date Regina West was the director of quality for the network?

A. She was.

Q. And she signs it here, you can see her signature.

A. Yes. I want to clarify, at this moment in time, 3/26/24, when this was being introduced, I was the chief operating officer, so I wouldn't have been at group meetings evenings and part of this panel.

Q. Understood, but you agree this document is kept in the regular course of business for all five hospitals?

A. Correct.

Q. If we scroll down we could see the spreadsheet here that is attached?

A. Yes.

Q. Is this the spreadsheet you know as the five star analysis?

A. It is very similar to this. We added some additional components to have a predictor model to it to show us how our performance is going to look.

Q. If we scroll down we see PBHN. Do you see that PBHN?

A. Yes.

Q. I submit this document was produced by your hospitals to us and if --

MS. BLAIR: Your Honor, this was objected to. I would like to have this document admitted into evidence. The objection was hearsay previously.

MR. MARCUS: Your Honor, I believe this is one of the confidential documents we haven't --

MS. MALONEY: I waived that. We objected to admissibility.

MR. MARCUS: We have a foundational objection, your Honor, to this witness. She doesn't have personal knowledge as to how the document was prepared and didn't participate in the discussion because she wasn't CEO yet.

THE COURT: She said there are some modifications, but this is something she is familiar with as I understand her testimony.

If that is the objection, it is overruled. What number is this?

MS. BLAIR: This, your Honor, is DX 813.

THE COURT: It is admitted over objection.

BY MS. BLAIR:

Q. Do you see the first column there is Delray?

A. Correct.

Q. If we look over to the right, there is a column that says included in Leapfrog. Do you see that?

A. Yes.
Q. All five of the hospitals in the market, they take notice, correct, of what is going to be included in a Leapfrog hospital survey, correct?
A. I don't believe our tool we have today has anything about Leapfrog in it. This particular one looks like it has it.
Q. If we look at the different measures, right, you see mortality, safety of care, and if we scroll down, you've got patient experience, timely and effective care.
Do you see that?
A. Yes.
Q. If we look at Delray on this page, it is almost all red, correct?
A. Those are, and I will point out that that data runs from April 1, 2021 to March 31, 2022.
Q. Understood. This is the only publicly available data -- forget about Leapfrog. If a member of the public wanted to look at what your patient experience scores were in March of 2024, this is the only thing the public would see, correct?
A. That is correct.
Q. If we scroll up to the outcome measures, you have several below average for HAISS colon, correct?
A. That would be reflective of 20 -- this time period, 2019 to 2021. It doesn't illustrate performance that we have today.
Q. Sure, but it is what would have been available to anybody

in March 2024 that wanted to look at the publicly recorded data for your hospital?
A. That is correct.
Q. If we look at accept sees. Where is sepsis post surgical? Do you see the sepsis bundle compliance?
A. I do.
Q. For Delray, only 36 percent?
A. Yes. Again, that was in 2021 to 2022, yes.
Q. Counsel showed you that TikTok video. Remember that?
A. I do.
Q. In the TikTok video when it is talking about Delray, it noted high surgical infections, sepsis post surgery, low patient satisfaction. That is what that said?
A. It had those elements in it, yes.
Q. Those are the only elements it had for Delray?
A. It did.
Q. If I look at your actual CMS data it is true, right?
A. That is what the performance was during that time, yes.
Q. You talked to your counsel about how you track hand hygiene, CPOE, and BCMA, but there is nothing the five star analysis that would tell me that you are actually tracking it; isn't that right?
A. I don't agree with that.
Q. Did you think it is in this?
A. Hand hygiene is not one of the CMS measures, CPOE is not,

neither is BCMA, so I don't understand your question.
Q. Thank you for the clarification. There is nothing on this document that we are looking at where it tracks all five of the hospitals' hand hygiene performance; is that correct?
A. Correct.
Q. The same question with respect to CPOE, correct?
A. Yes.
Q. Same question with respect to BCMA, correct?
A. That is correct.
Q. Nothing tells you how Delray does on ICU physician staffing, right?
A. It does not.
Q. You talked about CPOB. Do you recall that discussion?
A. Yes.
Q. And you participated in a survey when you were the CEO of Broward, right?
A. Correct.
Q. Do you recall that in order to score higher than limited achievement on the Leapfrog CPOE standard the hospital has to undergo a verified CPOE test of their system?
A. Yes.
Q. Okay. And you don't do the Leapfrog's verified testing; isn't that true?
A. We don't do the Leapfrog testing, but we do our own internal testing with our IT team.

Q. You don't know sitting here today how Delray would have done on Leapfrog's standards for CPOE; isn't that true?
A. We didn't do the testing.
Q. You can take that document down.
Do you agree that the Leapfrog survey is free, no cost to participate?
A. I would agree there is no cost to participate.
Q. It is voluntary, right, you don't have to participate?
A. I would disagree with it being voluntary because we get penalized for not participating.
Q. All right. And that penalty would be the grade that you get, correct?
A. Correct.
Q. And that grade that you get, which is based on in large part this CMS data that we just saw, correct?
A. A portion of it is based on that, yes.
Q. All right. But you are not required to do a Leapfrog survey; is that true?
A. We are not required.
Q. Have you -- strike that.
Before you came here today to testify, you did not review the Leapfrog hospital survey to determine how you would have scored with your actual performance numbers, have you?
A. I haven't personally gone through to do that. My team members have done that.

Q. And you understand that if a hospital chooses voluntarily not to participate in the Leapfrog survey, that Leapfrog still calculates a grade for that hospital, correct?
A. I understand.
Q. You understand that Leapfrog puts that on its website, that they grade all hospitals whether they participate in the survey or not?
A. I do.
Q. That was always known to you not only as the CEO of Delray, but when you were the CEO of Broward, right?
A. Yes.
Q. You talked about limited achievement, that limited achievement score you get for the four measures?
A. Yes.
Q. Do you understand the limited achievement score is the lowest score that a participating hospital received?
A. Correct.
Q. I want to show you document DX 607, Exhibit DX 607.
Ms. Havericak, I will tell you that you are not on the email stream I am about to show you.
If you look again, this is from Regina West to Ricky Ramirez, and we talked previously Regina West was the director of quality for all five hospitals?
A. She was.
Q. And Ricky Ramirez was the chief nursing officer?

A. Yes.
Q. Regina is reporting, "looping you in, HO is not allowing participation in Leapfrog, but they continue to ask for our scores." Do you see that?
A. I do.
Q. Do you have any reason to dispute that Regina sent this email to Ricky Ramirez in her capacity as the PBHN market quality director?
A. I do not.
Q. Do you have any reason to believe the statement Regina West made to Ricky Ramirez was unreliable when she made it in or around September 27, 2024?
MR. MARCUS: Your Honor, I object to that. The witness wasn't sent the email and didn't have a conversation --
THE COURT: Sustained.
MS. BLAIR: I am trying to lay a party opponent exception to hearsay.
THE COURT: I thought this was agreed to be admissible.
MS. BLAIR: It is not.
THE COURT: I think our practice is to let me know that. I don't know how she can answer that question, so the objection is sustained.
BY MS. BLAIR:
Q. Do you have any reason to believe that this document is not

authentic?
A. No.
Q. Moving on. You can take that down.
Palm Beach Health Network could have submitted the data -- well, strike that.
You just talked to your counsel about the fact that you do collect the data for CPOE and hand hygiene and IBS, correct?
A. We don't collect data for ICU staffing. Either you have it or you don't per your contracts. You can look at different timeliness, but our people are on site, it is not like we are using people remote, so there really is not a lot that you have to monitor on ICU staffing.
Q. You have to have documentation that a technician was on site?
A. Yes.
Q. Do you disagree because you collect it, you could have submitted the data to Leapfrog with minimal effort?
A. We made the decision not to submit the data.
Q. Could you have done it with minimal effort since you were tracking it anyway?
A. We could have. But the decision was made that we were not going to.
Q. You could have collected it with minimal effort?
A. I don't agree with minimal effort. It is not just about the data, it is what I talked about before, it takes time to

validate everything and make sure there is accuracy. So it is not minimal time, so I don't agree with what you said.
Q. Okay. Again, we saw Exhibit 618 in evidence where your director of Palm Beach Health Network and the chief nursing officer advised the president of Palm Beach Health Network that they could participate in the Leapfrog survey with minimal resources and no cost, right?
A. I saw that. That is what their perspective is, not mine.
Q. I appreciate that.
As the CEO of Delray, have you ever looked at your health locator ranking?
A. No. I learned about the health locator during our mediation.
Q. Do you have any understanding as you sit here today what Delray's health locator score is?
A. No. I did look at it after the mediation so I could understand what it is.
Q. What do you understand it is?
A. It has a bunch of the same CMS measures, some of the HCAP ratings, some of the similar scores, and a different percentage rating overall, but I am not an expert on it. I haven't spent time on it.
Q. Do you recall what Delray's overall rating was?
A. I don't remember.
Q. There was some discussion during your direct examination

that I found a bit confusing. You said that -- strike that.

The revenues are not down at Delray, are they?

A. No. I said if we continue to have patient visits being down that revenues could go down.

Q. They are not down?

A. They are not.

Q. You said you assumed the low Leapfrog rating must be the reason for the decline in emergency department walk-ins, correct?

A. Correct.

Q. You didn't perform any survey in the community to test your assumption, did you?

A. We did not.

Q. You didn't appoint a commission at the hospital to study why there was a decline in the emergency department walk-ins, correct?

A. I did not.

Q. Delray was a D grade under the old methodology?

A. Correct.

Q. Had a failing grade even then?

A. That is correct.

Q. Would you agree with me that the market share for Palm Beach Health Network has not declined since the fall 2024 methodology came out?

A. I would agree.

Q. Okay. Would you agree with me that brand recognition for Palm Beach Health Network is at its highest?
A. I can't say that it is at its highest. I would need to look at reports to see that.
Q. Well, we'll look at some. Do you know whether or not Palm Beach Health Network tracks its brand recognition?
A. There are some reports that go out, but they go to the group strategy officer and our marketing team.
Q. You don't look at them?
A. They are sometimes brought to some of our CEO meetings.
Q. They are brought to your CEO meetings?
A. On occasion.
Q. Do you understand the -- these brand recognition documents that are provided in your CEO meetings, are those CEO meetings among all five CEOs at the Palm Beach Health Network level?
A. Yes, we have a group CEO meeting.
Q. What do you recall those documents look like?
A. I feel like they are PowerPoints or something.
Q. I am going to pull up DX 923.
Ms. Havericak, I am showing you a document produced by Palm Beach Health Network in this litigation. It says 2Q 225 Tenet brand health tracker. Do you see that?
A. I do.
Q. Would you say this is the thing that you see regarding your brand?

A. I don't know if this is the exact one.
MR. MARCUS: I would interrupt. This is not admitted into evidence. We have objection to it.
THE COURT: Is there an objection?
MR. MARCUS: Yes.
THE COURT: What is the objection?
MR. MARCUS: First, foundation of this witness, she doesn't have personal knowledge of this.
THE COURT: Is this a business record? It seems like it is a business record. Is there some other problem with it?
MR. MARCUS: She can try to lay a foundation. I don't think this witness knows --
THE COURT: It is apparently a type of documents that she sometimes sees at meetings, that is what we know, and it appears to be a business record. I don't think there is an authenticity issue. Why is it not admissible?
MR. MARCUS: We are not making an authenticity objection, simply a lack of foundation with this witness.
THE COURT: The objection is overruled. Let's move on. Whatever this number is, it is admitted over objection.
BY MS. BLAIR:
Q. If we look at this document, I want to go to the executive summary. If we go to the executive summary, you see a net promoter score of 34. Do you see that?
A. I do.

Q. On the next page, right here it says executive summary, and I have highlighted here the brand relevance. Do you see that?
A. I do.
Q. You can see the brand is increasing, correct, each quarter? Quarter over quarter?
A. Yes.
Q. I asked you the question, do you know whether or not the brand of Palm Beach Health Network has increased since the grades came out? You didn't recall. Does this refresh your recollection in any way?
A. I haven't gotten this particular PowerPoint.
Q. Do you have any reason to dispute this?
A. No.
Q. Well, it is in evidence. We will put it in evidence.
Your Google reviews for Delray, do you recall at the time I took your deposition they increased from 1.7 stars in September 2024 to 4.5 stars in September 2025?
A. Yes, correct.
Q. Have those Google review stars decreased in any way?
A. No. They continue to be at 4.5.
Q. Do you recall you testified that nursing retention has not declined?
A. We have not. We have the best retention in the whole company.
Q. No physicians have left the hospital because of the grades?

A. They have not.
Q. Transfer rates are not down because of the grades, right?
A. Not to my knowledge.
Q. And admissions at Delray are in fact up, right?
A. They have been up year to date, but we saw some significant declines in September, October, and November, and they rebounded in December.
Q. Just like we talked about your rates decreasing in the walk-ins, the emergency department walk-ins, you didn't do a survey or have a commission done to determine whether or not that is right, correct?
A. As a CEO I go out and you talk to the CEOs and I did what I needed to do to understand the market, but there was no survey done.
Q. Thank you.
Now, do you have any evidence that the other hospitals that participate in the Leapfrog survey manipulate their data?
A. I do not.
Q. In fact, when you were the CEO at Broward, you testified on direct that you verified your data and you submitted only accurate data, correct?
A. Correct.
Q. And you don't have any evidence that hospitals pay money to Leapfrog in exchange for better grades, do you?
A. I do not.

Q. You don't have any direct evidence that Leapfrog offers consulting services for money to hospitals in exchange for better grades; isn't that true?
A. I have only heard that through my health care leaders which I talked to you about in my deposition.
Q. You have no direct evidence of that?
A. I have no direct evidence.
Q. Is it your belief that non-participating hospitals automatically receive failing grades if they don't engage in Leapfrog's survey under the new methodology?
A. It becomes almost impossible to be not a D or an F when you do not participate.
Q. Would you agree with me that around 2800 hospitals are graded every year?
A. I don't know the exact number.
Q. Do you know the number or the percentage of hospitals that don't participate?
A. I don't know that off the top of my head.
Q. You were here for counsel's opening statement, correct?
THE COURT: Whether she remembers that or not, we are not having a memory test.
BY MS. BLAIR:
Q. Would you agree that one percent of the hospitals receive F's from Leapfrog?
A. That was illustrated today.

Q. Do you have any reason to believe that is not true?
A. No.
Q. Do you have any reason to believe that only one percent of the hospitals don't participate in the survey?
A. No.
Q. Okay. I want to talk a little bit about Exhibit DX 630, JX 640, a joint exhibit dated December 13, 2024.
Do you recall -- before I get there, while she is pulling it up, do you recall after the safety grade came out there were discussions at the Palm Beach Health Network level about participating in the Leapfrog survey?
A. Yes.
Q. Do you agree that Maggie Gill went to Tenet Health Care Corporation about Palm Beach Health Network's Leapfrog grade?
A. I recall she did in December.
Q. In December. This document I am showing is in evidence. Maggie Gill, she is the president of Palm Beach Health Network?
A. She is.
Q. She is sending it to all five of the CEOs and others?
A. Yes.
Q. She says, "All, I have spoken with several members of ELT about the issue. There are efforts underway to address Leapfrog's ability to score us even though we don't participate." Do you see that?
A. I do.

Q. You testified to me at your deposition you didn't have any discussions with the other CEOs about this email, correct?
A. Correct, I didn't.
Q. And you also testified -- strike that.
Then later -- take that down, Courtney.
You are aware there was a cease and desist letter sent on January 3, 2025, correct?
A. Correct.
Q. You have reviewed that cease and desist letter?
A. Yes.
MS. BLAIR: And I am going to pull that up for you. That is Exhibit DX 7931, there is an objection to this document.
THE COURT: There is or isn't?
MR. MARCUS: There is an objection, your Honor.
THE COURT: There is? What is it?
MR. MARCUS: It is not a complete document, that is the first objection.
THE COURT: You mean attachments or what do you mean by that?
MR. MARCUS: Yes, your Honor. It is a laundered document. It is a multi-page document.
MS. BLAIR: I am showing it on the screen, it is a multi-page document.
MR. MARCUS: This was not done by Delray Medical or

Ms. --

THE COURT: It is apparently by the lawyers. I think it is authorized, it is a letter by the lawyers who would be agents.

Is there any real issue? She knows it was sent. I guess they want to ask about it. She didn't write it. What is the issue here?

MR. MARCUS: That is fine, your Honor.

THE COURT: All right. I will admit it over objection.

I wouldn't think there are many questions to ask her.

BY MS. BLAIR:

Q. I want it admitted that she -- you have seen this document?

A. I have.

Q. You authorized it to be sent from on behalf of your hospital?

A. I didn't necessarily authorize it to be sent.

Q. Do you know who authorized it?

A. I don't.

Q. You are aware that at the time this lawsuit was filed in May 2025 a press release was sent out on behalf of all five hospitals?

A. Yes.

Q. Did you see the press release before it went out?

A. I do believe it came around to us to look at it.

Q. Did you have to approve the press release to go out?
A. No, because it was going out on behalf of the Palm Beach Health Network.
MS. BLAIR: I want to pull up DX 915.
MS. MALONEY: Can we see the top of the document, please?
MR. MARCUS: Your Honor, again, just looking at the people copied and sent, I don't see any connection to Ms. Havericak or her hospital.
THE COURT: I think she said something was circulated before it was sent. She didn't approve it because it was sent on behalf of the network.
Is there some issue as to it? Let's argue about things that make a difference. I am going to overrule the objection.
It is 12:30. Apart from this witness, in a normal jury trial we stop around 12:30. We modify that some if we can finish a witness. We usually take an hour. I am not wedded to that. I don't know what you plan to do or want to do in terms of breaking for lunch. It is to everyone's benefit to move as promptly as possible.
What do you want to do? Do you want to talk about this? What do you want to do? What do you want to do as far as lunch generally?
MS. MALONEY: As long as 30 minutes to an hour, I am

happy to do that. We are happy to have it whenever it works for the Court and the Court's staff needs, whatever works.

THE COURT: Today we will break now because I have that half hour meeting.

I think Pauline can work with a half hour next week.

Tell me your thoughts when you want to finish in the afternoon. Everyone is from out-of-town, so talk to each other and let me know what you want to do. We will be back in session at 1:30.

(Thereupon, a short recess was taken.)

THE COURT: Okay, please have a seat. If the witness can take the stand, let's continue.

MS. MALONEY: Your Honor, the witness is in the -- in the doorway.

THE COURT: Have a seat. Welcome back.

THE WITNESS: Thank you.

BY MS. BLAIR:

Q. Ms. Havericak, there is one document I wanted to show you for purposes of getting it in the record. We were talking before the break about market share for the Palm Beach Health Network, correct?

A. Yes.

Q. You testified that it was copied?

A. Yes.

Q. I want to show you what is marked as DX 921. It is a

document produced by Palm Beach Health Network, this was related to Tenet Health market share. Do you see this document?
A. I do.
Q. In your capacity as the CEO of Delray Hospital are you privy to these types of documents?
A. I haven't seen this document.
Q. Do you know who in your organization would have seen this?
A. It looks like it was pulled from the data source of Trillion, so that would have been our strategy team.
Q. You haven't seen this document before?
A. No, I haven't.
Q. If you can show the next page. It is commercial payer market share by hospital system. Do you see that?
A. I do.
Q. Do you see Tenet Health Care here? I have that line highlighted.
A. Yes.
Q. I want to make sure for the record, you have no knowledge of -- do you have any reason to dispute that the 2025 Q2 market share for Palm Beach Health Network is 15.11 percent as compared to 14.27 for the quarter before?
MR. MARCUS: Objection, your Honor.
THE COURT: Sustained.
MS. BLAIR: Your Honor, she testified she knew market

share was up.

THE COURT: I ruled. Sustained.

BY MS. BLAIR:

Q. The Humana letter, PX 459 that was just sent to you in December, that was sent via FedEx, correct?

A. Correct.

Q. Priority overnight mail?

A. I don't remember what the mailing piece looked like.

Q. Let me show you PX 459. Did this come to you?

A. It came to the administrative suite.

Q. It is priority overnight mail?

A. Yes.

Q. Is that how the other Humana letter came to you?

A. I don't know because my assistant had already opened it.

Q. Are you aware that you can order through the Humana Military website this exact letter?

If you can show the letter, Courtney.

You can order this exact letter priority overnight mail. Are you aware of that?

A. No.

Q. You did not respond to this letter, correct?

A. Correct.

Q. So you were not transparent with Humana Military regarding what you were doing to improve, correct?

A. The letter says if you do not have a process improvement in

place, and we did.
Q. You didn't respond to them?
A. We did not.
Q. And you didn't respond to the earlier letter either?
A. Correct.
Q. The CMS star, Delray had one star, correct?
A. Correct.
Q. Has Delray commissioned any studies to determine whether or not the CMS one star rating has impacted at all your admissions?
A. We have not.
Q. We talked about accreditations, the Joint Commission. Do you recall that?
A. Yes.
Q. Delray pays for that on-site visit?
A. Yes.
Q. Do you know how much the fee is?
A. I don't remember off the top of my head. I'd have to see the invoices.
Q. The data collected by the Joint Commission, that is not made public?
A. It is not.
Q. The only thing the public knows is that you are accredited?
A. Yes.
Q. And the same thing with Health Grades, you have to pay for

the logo?
A. Once you are given the accolade you have to pay for it, it is a trademark.
Q. Just like Leapfrog?
A. Correct.
Q. All of the data that Health Grades collect to award you the awards, that specific data isn't made public, is it?
A. It is claims data from all payers.
Q. Can patients, like can I go and see what your claims data is?
A. I don't think so.
Q. I want to talk quickly, you gave some testimony to your lawyers about the woman you met in the bed with the red hair --
A. She was in a chair.
Q. She showed you the TikTok video?
A. Yes.
Q. She had services at Delray, correct?
A. Yes, she was hospitalized.
Q. If I could show you quickly Exhibit 205, your sworn amended interrogatory answers in this case.
Interrogatory number -- let's go to the back. I think these are in evidence, I apologize. If we can go to number 14.
Do you recall signing these interrogatories on behalf of Delray Medical Center?
A. Yes.

Q. Do you recall number 14, Leapfrog asks: State whether you are aware of any specific patients who relied on Leapfrog's grading declining to receive health care services at your hospital. I asked you to identify the patient, why they declined, the date, the type of service they were there for. Your original answer was simply that you received reports.

Do you see that?

A. I do. The patient I am telling you about, I rounded on her two months ago. What is the date on this document?

Q. Your amended answer: Since the release of the TLG false and misleading grades Plaintiff has received numerous reports from doctors that patients considered and decided not to use Plaintiff's facility due to concerns related TLG's misleading grades, correct?

A. Correct.

Q. You didn't provide any patient names with respect to that, did you?

A. I did not at that time.

Q. And you couldn't have because that happened after you signed these interrogatories potentially, correct?

A. What is the date on this?

Q. The date of this document is September 8, 2025.

A. Yes. So the patient I told you about was after this, that is two months ago.

Q. When you signed these on September 8, 2025, according to

your answer to interrogatory number 14 you knew of patients who had declined?
A. Right, but we didn't keep an inventory of a list of names.
Q. You still don't have a list of names?
A. I don't have a list of names for those prior. We do have names of patients.
Q. You never supplemented this interrogatory to give me those names, did you?
A. No.

MS. BLAIR: I have no further questions, your Honor.

THE COURT: Is there redirect?

MR. MARCUS: Very briefly, your Honor.

REDIRECT EXAMINATION

BY MR. MARCUS:

Q. Ms. Havericak, you were asked some questions about Delray's sliding grade over time. Do you recall those questions?
A. Yes.
Q. The last year that Delray Medical provided any data at all to Leapfrog was in 2021?
A. Correct.
Q. What grades was Delray receiving when it was participating in the survey generally?
A. They had a C.
Q. Within the county and other hospitals in your area, what does a C signify?

A. Everyone was performing around that level, so there wasn't a big significance to it.
Q. The measures in dispute in this case, the four imputed measures, do you recall?
A. Yes.
Q. When you were participating in the survey in 2021, what grade did your hospital receive for the CPA?
A. I don't recall that.
Q. Would that be the same for all those four measures?
A. Yes.
Q. You don't recall whether it was a high score?
A. I don't for '21.
Q. Okay. You were asked some questions about your CMS rating; is that right?
A. Correct.
Q. Have you received any -- do patients or anyone in the community, have they ever provided you feedback about your CMS rating?
A. They have not.
Q. What about the health locator grade, have you received any publicity or feedback on that?
A. No. I was not even aware of that until the mediation. Nobody ever talked to me about a health locator grade.
Q. The TikTok video which ranked Delray as the worst possible in Florida, do you recall how many people saw that?

A. From the opening statements, I think it was a million, a million views.
Q. You were asked some questions in terms of the amount of time it takes to complete the survey. When you were in charge of the Broward Health Leapfrog survey, how long did it take your staff collectively?
A. The same as I said before, about a thousand hours, six to seven people worked on that, it is laborious.
Q. As the CEO do you have to make decisions about how you allocate your resources?
A. You do.
Q. You were asked about Health Grades and the ranking you get for that. Does that require the level of effort that the Leapfrog survey requires of the hospital?
A. No, because you are not submitting data to them. They are pulling data from your claims, from your Medicare and Medicaid and all payers' data. You are not submitting it or opting in, they are just pulling the data and assigning the accreditations or awards.
Q. And sitting here today, if you were making the decision about Delray, if you were deciding now, today, whether your hospital should participate in the Leapfrog survey, would that be a good use of the hospital's resources?
A. That would not be.
Q. Why is that?

A. It doesn't add value for us. We have other ways to focus on patients and outcomes and we want to focus on the accreditations that we have been part of. We have more that we are going to be adding to our line of accreditations.

MR. MARCUS: Justin, pull up PX 562. It is the cease and desist letter that is a few months after the one put into evidence during cross.

MS. BLAIR: We don't object.

MR. MARCUS: Can you zoom in.

BY MR. MARCUS:

Q. This was April 17, 2025?

A. Correct.

Q. This was a letter that was sent on behalf of the five hospitals in the Palm Beach Health network?

A. That is correct.

Q. Can you just scroll down.

Have you seen this letter before?

A. I have.

Q. What were you asking the Leapfrog to do on behalf of your hospital in this letter?

A. We are asking them not to publish grades on behalf of our hospitals for the spring ranking because we didn't participate.

Q. You didn't provide any data to them?

A. Correct.

Q. You haven't provided any data since 1921?

A. Right.

MR. MARCUS: Nothing further, your Honor.

THE COURT: Thank you.

MS. SCOTT: Your Honor, the Plaintiffs call Erik Cazares.

ERIK CAZARES, PLAINTIFF'S WITNESS, SWORN

DIRECT EXAMINATION

BY MS. SCOTT:

Q. Good afternoon. Please introduce yourself to the Court.

A. My name is Erik Cazares, I am the CEO of Palm Beach Gardens Medical Center.

Q. When did you become CEO of Palm Beach Gardens?

A. In July 2024.

Q. I want to provide a road map of time, first I want to talk about your background in health care, and I want to talk about the hospital, Palm Beach Gardens, and I want to talk about why you are in court today.

Let's start with your professional background. Could you tell us about where you went to school?

A. Absolutely. I graduated from the University of Texas, El Paso, this was in 2000, and I started working as a registered nurse. I worked as a registered nurse for the first eight years of my career at the bedside. Started off in a department, kidney transplant unit, telemetry floors, recovery room, intensive care unit as well.

In 2008, I transitioned into my first leadership position as the telemetry director, did that for a few years, went back to school. I received my Master's Degree in nursing administration from Texas Tech University. A few years later I transitioned to the role of chief nursing officer, did that for a few years. Then I transitioned to chief operating office, four more years as a chief operating officer, and then transitioned into my first CEO role in El Paso, Texas.

Q. Are you still a licensed nurse?

A. I am.

Q. From time to time, do you ever return to the bedside despite being in hospital administration?

A. I am a nurse, I retained my license. I like to interact with patients, family members, physicians, and everything that has to do with health care. I have been doing that my whole life. I have been in hospitals since I was 18 years old.

Q. Why did you choose a career in health care?

A. It is a rewarding area, that is the first thing. I wanted to do something that has a sense of purpose in my life. Health care checks that box. It is rewarding to be able to work with individuals in their most vulnerable moments, patients, family that come to the hospital and put themselves in our hands, and it is a privilege, but it is also a great responsibility. So it is a very rewarding career, we get to save lives, improve the health and life of many patients and family members.

Even to this day as a CEO, I interact with patients at the bedside, continuously rounding, making sure everybody has the resources they need to be able to deliver high quality care.
Q. Let's talk about the hospital. Can you tell us about Palm Beach Gardens?
A. Sure. Palm Beach Gardens Medical Center was established in 1968, it was one of the first hospitals in the area, and because of that it has been one of the first hospitals to bring all kinds of services, technology, traditionally known for high quality cardiac care. To this day, I consider us to be the leader in the community when it comes to cardiac care. We are a full comprehensive hospital, form open heart surgery, excellent emergency services, one of two eco programs in the county. Cardiology is what we are known for, but we have a very strong orthopedics program, neurology, general surgery, and we are pretty advanced when it comes to technology and robotics as well.
Q. You mentioned a lot of service lines in your background at the hospital. Have any of the service lines received any special recognition?
A. Yes. Specifically in cardiology we have multiple recognitions. One of the most recent ones we are proud of, we were named one of the top 50 hospitals in the nation for cardiac surgery, top ten percent on performance outcomes. We are accredited through the Joint Commission for total hip and

total knee and joint center, and we have recognition for cardiac and pulmonary rehab clinic through the American Association of Cardiac and Pulmonary Rehab.

One we are particularly proud of we recently reserved, comprehensive resuscitation center of excellence in Florida. What this does is acknowledges and recognizes the facility that has the proper infrastructure to be able to care for patients who have cardiac arrest where the heart stops functioning, and we have everything from our partnership with EMS, emergency room services, intensive care, specialists available on call 24/7. So we have that. That is how we received the certification. The certification is important, but what is more important is the outcome of that.

Q. If you could tell us about the outcome?

A. To be a comprehensive center for excellence, we have the infrastructure, but when you look at cardiac arrest, it is a tragic event for the patient to have. National average for cardiac arrest survival is 15 percent, in the state of Florida slightly under that. At our hospital it is 24 percent, which means a patient brought in with a cardiac arrest is more likely to survive that arrest than in any other hospital in the State of Florida.

Q. You mentioned that Gardens is accredited by the Joint Commission for total knee and hip. Is it also accredited by a Joint Commission for overall.

A. Yes, the mandatory mandate, as Heather mentioned, you could use Joint Commission or DNV, that is the main accrediting body. We go through it every three years, and they show up with a team of four to five surveyors. We have 199 beds, medium facility. That team consisted of nurses, physicians, lifesaving technician, and they check the physical infrastructure, emergency response systems, policies, procedures. They talk to patients, they observe surgeries, they follow patients throughout their hospital stay, they talk to staff. They validate we are following all of the rules. It is a strict survey, and that is what drives the majority of our quality programs.

Q. We have heard a little bit about the process.

Can you tell us how does Palm Beach Gardens prepare for such an extensive process, validation and data review?

A. There is no like one-time preparation, that is what drives our day-to-day work. We want to be survey ready so any time survey walks in the community -- Joint Commission is one. They can walk in any moment. Our labs are accredited by the College of American Pathologists, a rigorous survey.

Our goal is to be survey ready. This is an ongoing day-to-day, week in, week out, month in, month out process. We have a continuing process and validation checkpoints to make sure we are meeting all those requirements. In our last survey we did really well, we didn't have any major findings or

conditional findings.
Q. Can you tell us about the patient population that Gardens serves?
A. The majority of our patients are elderly. The median age is 62 and a half years old, and more than 50 percent of our patients are 65 and older. That is the population we see. We do not have a labor and delivery unit or a pediatric wing. We don't deal with the younger population.
Our population is older, multiple comorbidities, and we tend to have our services toward that, cardiac, neurology, orthopedics, emergency services.
Q. How many patients does Gardens serve in a typical year?
A. Through admissions, surgeries, diagnostic testing, emergency room visits, approximately 60,000 or so.
Q. We heard the term community hospital early during openings. What does that term mean to you?
A. Well, a community hospital, you are that institution that the community comes to trust to go for their health care. Like I mentioned earlier, the most vulnerable times, people don't go to the hospital just for fun, they are experiencing trauma, pain, illness that forces them to go to that facility, and at that point they are in the most vulnerable moments, a lot of anxiety.
So a community hospital is that institution they are going to make that better, trust the people to take care of them to

get them back to their normal life, their well-being, and that community has also been there for more than 50 -- the hospital has been in that community more than 50 years.

Throughout all of those years many of the patients that have been there had their parents there, their grandparents there, their children have gone there. That is what a community hospital is. We are he embedded into all the community events that take place. I am out in the community in a public speaking event, sponsoring event or engaging with family members and community members as well.

Q. Can you tell us about what are your roles and responsibilities as a CEO?

A. As CEO I am responsible for everything that happens in that hospital, first and foremost is quality, safety, patient experience. We are responsible for everything that helps our teams deliver on that, which is the operations, regulatory compliance, facility maintenance, making sure we have the proper spaces and tools and equipment for our providers to be able to care of anybody that comes into our hospital.

Q. Let's talk about the Leapfrog survey.

Were you familiar with the survey before joining the Gardens?

A. I was.

Q. And what was your impression of the survey based on your experience?

A. I have never been a big fan of Leapfrog. It's -- we used to participate in other organizations, in other hospitals I have been in. I didn't find it very valuable. Hospitals are surveyed by many different agencies, and I thought it was just another survey we are filling out and checking the box. So that was my take on Leapfrog, still is, I believe.
Q. We heard in opening that it is free to complete the survey. Do you completely agree with that?
A. I don't. I don't think it is free, it takes time, resources, and we providing valuable data to Leapfrog, all that comes at a price. No, I don't believe that it is free.
Q. Let's talk about the grades Leapfrog has assigned to Gardens.
Do you know what grade Gardens received prior to you joining in 2024?
A. I believe it was a C.
Q. And when did that change?
A. In the fall of 2024.
Q. What grade did Leapfrog assign Gardens in the fall of '24?
A. An F.
Q. How did you react when you first learned that Leapfrog assigned Gardens an F grade?
A. I was surprised, I was shocked that a hospital that is not participating in Leapfrog would get nailed with incomplete data. That was my initial reaction, and my following reaction

was what kind of implications this was going to have on the organization, the perception from our physicians, patients, community, governing board members.

So I was extremely concerned about that, and all that came to reality shortly after grades were made public and word got around that we were graded an F on patient safety.

Q. What happened -- what did happen when the grades were actually released?

A. I started receiving a lot of complaints from physicians. They wanted an explanation of why the hospital had received an F on --

MS. BLAIR: Your Honor, if I can renew my standing objection.

THE COURT: Right. It is overruled.

THE WITNESS: They wanted to know why the hospital received an F. I explained to them, we didn't participate, we were disappointed that they were giving us an F, and we wanted to know if we could respond to Leapfrog or are we going to have to start participating again, that would be implications in the hospital.

BY MS. SCOTT:

Q. Were there other people in the hospital that raised concerns?

A. Yes, came from everybody, physicians, and of course our staff, Gardens employees, 900 directly, and a few more

contracted.

As you can imagine, if you work for an organization that is rated a fail on safety, and this is where you spend a majority of your time working with patients, that is a huge hit to their morale. We have to answer to our employees, we have to give them the details of what happened, that we weren't participating.

So, we had to respond to our employees, I have to respond to physicians, governing board members, I have to give faith to the community as well as to why we were being rated as an F.

Q. In your capacity as the CEO of gardens responsible for patient care, is it your responsibility to address impacts on those areas in your hospital?

A. Absolutely it is my responsibility to do that.

Q. Since the fall '24 grade was released, have you observed any other impacts on the operations of the hospital?

A. Yes. I mean, can you elaborate on impact to the operations?

Q. Ms. Havericak mentioned a decline in emergency volume. Did you experience a similar decline?

A. We experienced a decline, specifically for walk-in patients, that was quite effort, despite a lot of efforts we put out there to highlight our quality back to the community. We had to go on extra efforts to promote the hospital, the high quality we deliver. Despite that, we still did see a decrease

in the emergency walk-in volume.
Q. You also -- have you heard any complaints from patients?
A. I have.
Q. And have you had any conversations with patients about their concerns?
A. I have.
Q. Could you provide us an example of a patient who expressed concerns to you?
A. Yes, I can.
So, as physicians would approach me to complain about the Leapfrog grade, I explained the situation. They wanted to know what we were going to do about it. They didn't agree with Leapfrog giving us that failing grade. I told them we were working on a response. In the meantime, if there were any patients that they needed me to talk to, I would be happy to talk to them and reassure them of the care that we deliver at the hospital.
Q. Did any of the doctors give you that information many?
A. Yes, a cardiac surgeon, he had a patient needed surgery. The patient told him he didn't want to have the surgery at Palm Beach Gardens because of the failing grade he had seen from Leapfrog. He was scared to go there.
Q. What was the result of that conversation?
A. He shared that information with me. I called the patient and I explained to him what had happened with the Leapfrog

grades. He wanted an explanation as to why the hospital was being highlighted as an unsafe hospital, and I said we did not participate in Leapfrog, but I reassured him that our hospital has great safety measures when it comes to cardiac surgery. We do a lot of surgeries every day. The hospital has performed more than 20,000 open heart procedures, we have very experienced teams.

I reassured him that it was a good place. I offered to give him a tour of the hospital and meet the staff. He was very appreciative of my call, but I never heard back from him and neither did the cardiac surgeon.

Q. Does the hospital track cancellations?

A. We do.

Q. Do you review that cancellation data?

A. Yes.

Q. How often do you review that data?

A. I look at it at least once a month.

Q (By Ms. Scott) Could you pull up 560, which has not been admitted.

MS. BLAIR: Your Honor, this is a new document that was produced to us on January 9th, just days ago. We never had this document, we didn't have an opportunity to question Mr. Cazares at his deposition. We object to it as late in time being produced having been asked for it in discovery.

In addition to it being hearsay, it comes from people

who have never been identified in this litigation ever before, so we never have had the opportunity to take this discovery.

THE COURT: Can you explain why it was not produced previously?

MS. SCOTT: Yes, your Honor. This is dated November 3, 2025, and the data that is attached to the email which I would like to go over is from October -- the week of October 26th to the 31st 2025. Discovery closed in September of 2025.

So, this is one of those documents, one of the cases where leading up to trial, particularly in light of the Court's ruling on of summary judgment on the unfairness prong, but leading up to trial we discovered, quickly produced to the other side, I believe within 36 hours of finding it, and made them known -- made this known to them.

The idea that there had been cancellations is not new as the CEOs testified to the number of patients that had canceled or declined to have services at their various hospitals as a result of the grade.

I can address the hearsay, your Honor.

THE COURT: What is this? Is this a list of names? All I see is a single email.

MS. SCOTT: Could we go to 560.1. This is the cancellation data that the hospital maintains in the regular course of business. That is attached to the email I would like

to go over with Mr. Cazares. It is not hearsay, it is a business record, something I think the other side acknowledged in their papers. And so --

THE COURT: So, this is just simply cancellation data. Does it explain why they canceled?

MS. SCOTT: It does, and that is going to be in the comments. If we could expand row four, column N.

You can see, your Honor, that there is a comment inputted into this business record reflecting the reason that the patient declined the procedure at the hospital.

THE COURT: Did he refer to the stay, this grade?

MS. SCOTT: The comment states that the patient declined procedure due to the hospital's F grade for infections, wishes to cancel.

THE COURT: Why was it that you didn't know to look -- was this within the scope of their discovery demand?

MS. SCOTT: Your Honor, this document we discovered leading up to trial, and it would not come into our search protocol because discovery had closed. This is why, since this existed well after we had run our search protocol, it did not show up.

THE COURT: What was their request?

What was your request?

MS. BLAIR: We asked for all documents related to harm suffered by these hospitals.

If I could, your Honor, they have a duty to seasonably supplement. This cancellation occurred in October, we heard nothing about it. Mr. Cazares just testified that they regularly track this. We don't have any of this data. They did not produce it pursuant to the ESI protocol. We don't have the metadata as to when this was created, and they just said the only reason they produced it late is exactly why we are hearing a lot of new things, is because of your Honor's ruling on the 7th.

If this is a document that they keep in the ordinary course of business, where was it? We have never seen any document like this in the last seven months. This is the problem we have with a lot of these documents, your Honor.

THE COURT: The question you asked in discovery was what?

MS. BLAIR: Any and all documents referencing the harm to these hospitals.

THE COURT: That is a pretty broad request. You deposed this witness?

MS. BLAIR: We deposed this witness, we had no documents ever about these cancellations. There was no reason to ask him. Interrogatory 14 that we talked about with Ms. Havericak specifically asked about patients declining services. They did not provide an answer. They filed a protective order before Judge Matthewman saying this type of information was

irrelevant to the FDUTPA claim because they didn't have to prove consumer harm.

They filed a motion against us to protect their own data. Judge Matthewman made them produce that data and we didn't see this. This is trial by ambush.

MS. SCOTT: Your Honor, the protective order was about random patient complaints, not complaints about Leapfrog. Besides the point, your Honor, this document arose after the close of discovery. Again, it came out as we were preparing for trial, and really, your Honor, it goes to show the ongoing nature of the harm that these hospitals are confronting on a day-to-day basis.

THE COURT: If it does that, then why wasn't it produced previously when they asked about documents showing harm?

MS. SCOTT: Because, your Honor, it is the time period.

THE COURT: There is a duty to supplement.

MS. SCOTT: There is, your Honor, but we did not find this document until we were preparing for trial. As soon as we became aware of it, we produced it to the other side.

THE COURT: I am going to sustain the objection to this document given that it seems like it squarely fell within the earlier discovery. It should have been supplemented, and also -- discovery doesn't depend on my ruling on summary

judgment as to whether or not a document should have been produced. The objection to -- this one is what number?

MS. SCOTT: 560.2.

THE COURT: -- 560.2 is sustained.

MS. MALONEY: Your Honor, would you permit an extremely short briefing? Ms. Scott was in another trial during discovery, and I think that if the history -- as you pointed out, that was a very broad request. There was a lengthy history of narrowing this request.

It is our position that this document did not hit on any search term within the protocol prior to close of discovery. After the close of discovery we did keep looking and this hit. The words that it hit on up until this were not within the protocol.

I would greatly appreciate -- there have been some statements made about lies being made, that I made during opening. I kept my mouth shut, and I won't dispute that on the record, but I just want to --

THE COURT: All right. If you want to file something in writing, that is fine with me. I will consider -- reconsider it based on those writings if necessary, but it seems to me, at this point at least, I don't think it is admissible.

MS. MALONEY: Thank you, your Honor.

MS. SCOTT: Your Honor, can we reserve our right to

recall Mr. Cazares?

THE COURT: We will see. Apart from the document you can continue to examine him. I am not cutting off your examination.

MS. SCOTT: Understood, your Honor.

BY MS. SCOTT:

Q. When a patient declines to have a procedure at the hospital, could that cause a delay in care?

A. Yes.

Q. How can a delay in care impact a patient's outcomes?

MS. BLAIR: Objection, calls for speculation.

THE COURT: Overruled.

THE WITNESS: Well, it depends on the patient's condition. There are many factors, but if a treatment is needed in an urgent manner and is delayed, that patient could suffer further down, have detrimental consequences in their recovery.

Yes, there is definitely -- the longer you delay care the more likely that patient could have poorer outcomes.

BY MS. SCOTT:

Q. Prior to the release of the 2024 grade, had you heard doctors raise any concern about the Leapfrog rating?

A. No.

Q. What about patients?

A. No.

Q. What about community members?
A. No.
Q. Since fall 2024, has Leapfrog continued to grade the hospital?
A. Yes.
Q. What is the grade now?
A. D.
Q. Despite going from an F to a D, have you continued to see impacts related to the Leapfrog rating?
A. Yes, it has continued. I still get approached from all of the different individuals I mentioned before, especially new individuals I haven't talked to, they are asking me what the status is with the hospital in regards to our grades. It has not eased up. The damage came on pretty strong when the F came out and it is still there and continues.
Q. Can we pull up Plaintiffs' Exhibit 35.5, which has been preadmitted. Thank you.
We did this exercise with Ms. Havericak, so I don't want to belabor the point. I do want to ask you a couple questions about some of the measures that are reflected here on Palm Beach Gardens web page on the Leapfrog website. Do you see that?
A. Yes.
Q. And if we go to practices to prevent errors, we see three of the four imputed metrics, correct?

A. That is correct.
Q. Can we look at -- let's look at the hand washing gas gauge. Does Palm Beach Gardens have a hand washing policy?
A. Yes.
Q. Is it similar to the one Ms. Havericak described?
A. Very similar.
Q. Is data collected and monitored to ensure compliance?
A. Yes.
Q. Is that data audited?
A. Yes.
Q. Do you review that data?
A. I see it in reports and different meetings.
Q. If we look at the gas gauge for hand washing, does that accurately reflect the data that you review?
A. It does not.
Q. What about doctors -- computerized physician order entry?
A. Absolutely not.
Q. Does the hospital have -- does the hospital have a policy on CPOE?
A. Yes.
Q. Is data collected and monitored to ensure compliance?
A. Yes.
Q. Is that data audited?
A. Yes.
Q. Do you review that data as well?

A. I review that as well.
Q. Does the gas gauge on Leapfrog's website accurately reflect the data that you regularly review?
A. Absolutely not.
Q. Let's look at BCMA. Does the hospital collect data -- does the hospital have a policy on using bar code medication?
A. Yes.
Q. Is data collected and monitored to ensure compliance?
A. Yes.
Q. Is that data audited?
A. Yes.
Q. Do you review that data regularly?
A. Yes, I see it in the reports as well.
Q. Does the gas gauge for this metric accurately reflect the data that you regularly review?
A. No.
Q. Can we pull up Plaintiffs' Exhibit 35.6.
If you look here, there is a measure for specially trained doctors caring for ICU patients.
A. Yes.
Q. Does Gardens have doctors staffed in its ICU?
A. We absolutely do.
Q. Does this gas gauge accurately reflect that?
A. No.
Q. Did you submit data to Leapfrog to report on these

measures?
A. No.
Q. Do you know where Leapfrog would have gotten this?
A. No. Nowhere.
Q. There has been a suggestion that community hospitals don't want to be transparent, that they hide their data. Is that true?
A. No.
Q. Why doesn't the hospital just participate in the survey?
A. Well, as I mentioned earlier, the hospital already participates in other surveys that we find more meaningful. We don't find value in the Leapfrog and we are not going to shift our resources to participate in a survey we just don't find valuable.
Q. Has the hospital continued to see impacts to its operations and the patients that it serves?
A. Yes.

MS. SCOTT: I pass the witness.

CROSS-EXAMINATION

BY MS. BLAIR:
Q. Mr. Cazares, I just have a few questions.
You came to Palm Beach Gardens in July of 2024, correct?
A. That is correct.
Q. And I won't torture everybody with a long cross-exam.
You also filed a declaration in this case, correct?

A. I did.
Q. It is admitted into evidence. Do you recall you signed a sworn affidavit as to the reason why Palm Beach Gardens stopped participating in the Leapfrog survey?
A. I do.
Q. Do you recall what you put in that?
A. Yes. We didn't find the data valuable, and we didn't find Leapfrog was an organization worth participating in because of the way that they go about collecting the data. They don't survey the hospital. It is not a true evaluation in my opinion.
Q. Okay. And you signed that declaration under oath, correct?
A. Yes.
Q. You stated that during the height of the pandemic -- exactly like the one I read word for word?
A. Yes.
Q. During the height of the pandemic you concluded that TLG's methodology is not reliable and generates inaccurate and misleading results?
A. Correct.
Q. You signed that?
A. I did.
Q. That goes on to say, misleading results that harm our hospital, correct?
A. Correct.

Q. Okay. So, is it your testimony that in 2021, Palm Beach Gardens stopped participating in the Leapfrog survey because the methodology was harming Palm Beach Gardens?
A. So, I wasn't at Gardens in 2021, but based on my understanding, that is why they stopped.
Q. Do you agree that they stopped because it was a voluntary business decision by the hospital to stop?
A. Yes.
Q. You said Palm Beach Gardens was not receiving any benefit from Leapfrog?
A. Not that I am aware of.
Q. And to this day, receives no benefit?
A. None that I can think of.
Q. Are you aware that at some point after Palm Beach Gardens made the voluntary business decision to stop participating, that Tenet Health Care Corporation had a directive that none of the Tenet Health Care corporation hospitals would participate in the Leapfrog survey?
A. Repeat that.
Q. Are you aware that sometime after your hospital made the decision not to participate in Leapfrog that Tenet Health Care Corporation as an entity made the decision that its 76 hospitals would no longer participate in the Leapfrog survey?
A. Am I aware of that?
Q. Are you aware of that?

A. Yes.
Q. Okay. I think you said you track your CPO, BCMA, IPS and hand hygiene metrics, correct?
A. Yes.
Q. And those are the four metrics for which your hospital is receiving limited achievement scores in the hospital grade?
A. Correct.
Q. You understand the hospital safety grade that Leapfrog puts out is a composite score. Do you understand that?
A. Yes.
Q. Do you understand that in addition to those four measures, Leapfrog pulls your CMS data?
A. Yes.
Q. And I think you testified earlier about who the population of your hospital is, and it is generally an elderly population?
A. That is correct.
Q. Your CMS data is a pretty accurate representation of your patient population. Is that fair?
A. I wouldn't be able to say how accurate it is at this point.
Q. Okay. You were here in the courtroom when I showed Ms. Havericak the five star analysis?
A. Yes.
Q. That is Exhibit DX 18 moved into evidence.
A. Yes.
Q. Do you regularly get that report?

A. I don't regularly get that report. I have seen it once or twice.
Q. Do you agree looking at that report, the one for April 2024, if we look at the report, the hospital acquired infection data is lower than the national average?
A. There are some categories that are slightly below, others above and others on the spot.
Q. The best to see what those were in April 2024 would be that Exhibit 813, correct?
A. I suppose so, yes.
Q. And I can like to show you the document.
A. Yes.
Q. The HCAP scores, that is CMS data as well, correct?
A. Yes.
Q. Are you aware of what your HCAP scores are now?
A. Yes.
Q. What are your HCAP scores?
A. They are a little bit under the national average.
Q. We talked about the CMS star rating. Do you recall that?
A. Yes.
Q. What is Palm Beach Gardens' overall CMS star rating?
A. One star.
Q. What is the CMS patient satisfaction rating from CMS?
A. I believe it is two star.
Q. That is based on your HCAPs, correct?

A. Yes.
Q. For the record, five stars is the best?
A. Right.
Q. In looking at -- excuse me. In preparing for this case, did you ever, as CEO of Palm Beach Gardens, take your data for these four imputed metrics and actually answer the Leapfrog survey to see how you would have done?
A. No.
Q. You talked about Joint Commission. Do you recall that?
A. Yes.
Q. About all the things that happened for, you know, when Joint Commission comes to your hospital. Do you recall that?
A. Yes.
Q. You say you are always survey ready, right?
A. Yes.
Q. Does the Joint Commission collect data on BCMA?
A. They don't collect data, but they see our guide, which has happened.
Q. What about CPOE?
A. Same thing.
Q. And hand hygiene?
A. Absolutely.
Q. ICU physician staffing?
A. They look at all kinds of staffing, including ICU.
Q. If you stand every day to be survey ready for the Joint

Commission, you are monitoring and gathering that data all the time, correct?
A. That is correct.
Q. So, if you had to provide information to Leapfrog on those four measures, you could do that today, couldn't you?
A. We could put a team together to collect it and gather it, yes. If we had to, we would. If we didn't have to, we wouldn't.
Q. You are gathering it every day anyway, right?
A. Yes.
Q. You weren't at Palm Beach Gardens before HCAP?
A. That is correct.
Q. Do you understand as the executive of a hospital system that Leapfrog grades all adult acute care hospitals whether they participate in the survey or not?
A. I do.
Q. And your director -- who was your director of quality at Palm Beach Gardens in or around July of 2024?
A. Kathleen McDonald.
Q. Do you recall that Kathleen McDonald was aware that Leapfrog had put out for public comment the methodology changes they were proposing?
A. I don't know if she was aware or not.
Q. You don't know if she came to you about it?
A. She didn't come to me about it. No.

Q. When was the first time you found out about the methodology change?
A. When the preliminary score came out.
Q. How did you find out about that?
A. She brought it to me.
Q. Kathleen McDonald?
A. Yes.
Q. Do you recall whether or not that was the first time she knew about it?
A. I don't know.
Q. Do you know whether or not Palm Beach Health Network knew in May 2024 that Leapfrog had put out for public comment the changes that were going to occur to the methodology?
A. I don't know.
Q. You never had conversations with anybody about that?
A. Leapfrog didn't come up until that score came out.
Q. And going back -- going back to the CMS star ratings.
A. Yes.
Q. Did anybody ever ask you any questions of you about the fact that you had a one star overall CMS rating?
A. No.
Q. Why not?
A. That is not something they asked me. I don't think it is something that everybody is out there talking about right now.
Q. CMS doesn't publicize its star ratings, right?

A. I don't know. There is a website.
Q. Have you ever had a patient ask you about your CMS star rating?
A. No.
Q. You maintain that one star overall CMS rating?
A. Today, yes.
Q. In a population mostly elderly, do you have any understanding whether or not they know what the CMS star ratings are?
A. I don't know what the patients know or don't know. I would assume some do know.
Q. And you recall that Palm Beach Health Network in or around December 2024 was asking Tenet home office for permission to start participating in Leapfrog's survey again?
A. I did become aware of that.
Q. You did not want to participate in Leapfrog. Is that fair?
A. That is a correct statement.
Q. So, your decision about not participating in the Leapfrog survey, you made the decision even knowing the impact of the new methodology on your grade, correct?
A. Not necessarily. When the Leapfrog grade came out we had to take action, and it is either we participate again or we fight it, we contest the grade. So, I was more on the side of contesting the grade than being forced to participate again.
Q. So you were looking already to file this litigation?

A. Not litigation, but at least ask Leapfrog to stop producing that grade. Don't grade us. We are not participating, we are not giving you all of our data, so why grade us? That is the part I couldn't comprehend.
Q. You don't want to give them the data because it is not good?
A. No, it is not that. I told you why we didn't want to give the data. That is the common sense answer, why are we graded on something that we are not participating in.
Q. Do you recall what your scores were in the spring of 2024 -- before the fall 2024 methodology came out, do you recall how many points you were getting for CPOE, BCMA, hand hygiene and IBS?
A. I don't know the details, but I am sure it was more than what we got in the fall.
Q. It was perfect, a hundred out of a hundred points for all four of those measures.
A. Okay.
Q. You weren't submitting any data to Leapfrog then?
A. Correct.
Q. Did you understand you were getting a hundred out of a hundred points because your hospital cohort was performing at that level?
A. I didn't know how many points was awarded to each of us.
Q. When you had that C rating in the spring of 2024, you were

getting a hundred out of a hundred points for all of those measures even though you were not submitting data to Leapfrog, correct?
A. Yes.
Q. So that C grade was based on a methodology that was being applied to you as well, correct?
A. That is correct.
Q. Not on your actual data?
A. No, but it wasn't detrimental, it wasn't a failing grade, which brings everything to everyone's attention. Nobody cared about a C.
Q. You didn't care about a C?
A. It wasn't relevant because we weren't participating.
Q. Did you care about a C, yes or no?
A. No.
Q. I want to talk about -- we talked about health locator, your counsel did. Have you ever looked at your health locator score?
A. No.
Q. Do you have an understanding what health locator is?
A. No.
Q. You don't know that you score in the bottom one percent of hospitals nationwide?
A. I never looked at it.
Q. In terms of revenue, Palm Beach Gardens has not lost any

revenue, correct?
A. Has not lost any revenue?
Q. Since fall of 2024.
A. I wouldn't say it has not lost any revenue. We have grown our revenue despite some of the challenges, but that is a lot of other work that we put into our organization to continue to grow revenue.
Q. Revenue is up?
A. Overall, yes, not emergency room.
Q. We will talk about that. You were shown the documents, Exhibit 921. Your market share remains stable, doesn't it?
A. Market share for my area he is not as stable as others.
Q. Do you have market share data for Palm Beach Gardens itself?
A. I could tell if my volumes are up or down. That gives me an idea how I am doing.
Q. Do you track that data?
A. My volumes, yes.
Q. Have you produced that data in this litigation?
A. We have.
Q. Oh. And what is your market --
A. You saw some of it.
Q. I am not talking about admissions or --
A. That is data. That is volume.
Q. You are talking about volume?

A. Yes.
Q. Okay. What about brand recognition for Palm Beach Health Network, do you know what that is?
A. I know what it is.
Q. You saw the document I showed Ms. Havericak in the courtroom?
A. Yes.
Q. You saw that it is steadily increasing?
A. I have not analyzed that in detail, but I saw the report you put out there.
Q. Do you have any reason to dispute that?
A. No.
Q. You don't believe that nursing hiring is any more difficult for Palm Beach Gardens than any other hospital, correct?
A. Do I believe it is more difficult? It is extremely challenging.
Q. Sure. You testified in your deposition that you didn't believe you had any nursing retention issues due to the Leapfrog grades, correct?
A. I agree.
Q. No physicians have left your hospital because of the Leapfrog grades, correct?
A. Correct.
Q. You testified earlier about admissions being down?
A. Not admissions, walk-in volume.

Q. Walk-in volume. Have you ever done a survey to determine why your walk-in volume is down?
A. We are always looking to see if we can find out why our volumes are down, absolutely.
Q. Did you do a survey?
A. Me, myself?
Q. Your hospital.
A. We are always looking to see if we can identify trends. We couldn't identify anything other than the Leapfrog negative publicity.
Q. So you couldn't identify anything?
A. With the exception of Leapfrog.
Q. Do you have a study?
A. I don't have a survey study, no.
Q. When you say we identified, who is we?
A. Me, my team. We are looking at data, what can cause our volumes to go down.
Q. You don't know what causes it, but you assume it is the Leapfrog grade?
A. It is a high level assumption. This is what I do every day. I am in the hospital talking to family members, community members. Yes, it is my opinion it has had an impact on my walk-in volumes. I don't have a visual report to --
Q. You don't have a report --
MS. SCOTT: Your Honor, for the benefit of our court

reporter and also common courtesy, I would ask that the witness be able to complete his answers.

MS. BLAIR: That's fine. I am trying to move on.

BY MS. BLAIR:

Q. I would ask you to look at Exhibit DX 209. You testified in response to your counsel's questioning that you know of several different patients that you have spoken to that have expressed concern about the Leapfrog grades, correct?

A. I talked about the one patient I mentioned earlier.

Q. One patient?

A. Yes.

Q. Do you recall answering these interrogatories?

A. Yes.

Q. Put up number 8.

If we look at interrogatory number 8, the question we asked was: Identify any and all persons, whether internal or external, with whom you communicated in any way with respect to the safety grade or the survey.

Go to your first answer, which was communications occurred, you say Plaintiff communicated with the following categories of people, governing board, department directors, physicians and nurses when asked about it.

You didn't list any physicians by name in this answer, correct?

A. I didn't.

Q. And if we go to 14 of these interrogatories I asked: State whether you are aware of specific patients who relied -- state whether you are aware of specific patients who have relied on the Leapfrog safety grade in declining to receive health care services at your hospital. Do you see that?
A. I do.
Q. I asked identify the name, why they declined service. Do you see that? Your answer was, Plaintiff has received reports that patients considered or decided not to use Plaintiff's facilities because of TLG's misleading grades.
Do you see that?
A. Yes.
Q. And you amended your answer and said, Plaintiffs have received numerous reports from doctors that patients decided not to use Plaintiffs. Do you see that?
A. I do.
Q. Again, I asked you for specific information, correct?
A. Correct.
Q. You didn't provide any; is that right?
A. That is right.
Q. You just testified to one?
A. Yes.
Q. This says numerous, and now you are saying there is one, right?
A. That I received reports from physicians that had received

complaints and concerns from their patients. You've got to understand that is the first contact for the patients is going to be their physicians or surgeons, and they come to me. This is an accurate statement because there are multiple reports of different patients from the physicians.

Q. And you didn't tell me -- in the two interrogatories you didn't tell me any of the doctors' names or any of the patients' name?

A. I know the doctors' names, I could give them to you.

Q. No, I don't want them. You didn't give me the names here, correct?

A. I didn't give you the names.

Q. Go to interrogatory 2. I asked you, like I asked all of your colleagues, the following question which is: Identify and describe any complaints, concerns, or comments from patients, community members, or referring physicians that relates to the hospital's reputation or comparisons to other hospitals in the region.

Do you see that?

A. I do.

Q. Your original answerer was Plaintiff has -- it's the same answer. Plaintiffs have received reports that patients or physicians considered not to use the Plaintiff's facility. You go on, but you don't give me any patients' names, doctors' names, nurses' names, governing board members' names, no actual

names?
A. They are not written on this paper, no.
Q. And not until preparing for this trial did you decide that you were going to provide information related to patients and doctors who had issues with the Leapfrog grade, correct?
A. That --
Q. You never supplemented the answers, did you?
A. Did I what?
Q. You never supplemented these answers, did you?
A. I did not.
MS. BLAIR: I have no further questions, your Honor.
THE COURT: Do you have redirect?

REDIRECT EXAMINATION

BY MS. SCOTT:
Q. Very briefly, Mr. Cazares, you were asked questions about doctors' names. Do you recall that?
A. Yes.
Q. You gave a deposition in this case, correct?
A. I did.
Q. Were you asked about doctors' names during the deposition?
A. I was.
Q. Did you provide doctors' names during the deposition?
A. I believe I provided a few names at that time.
Q. Could you just tell us some of the doctors with whom you -- who raised patient concerns after the release of the Leapfrog

grade?
A. Sure, Dr. Patel, a cardiovascular surgeon, Dr. Mascal, a cardiologist, Dr. Richard Price, also a cardiologist, Dr. Suarez, an infectious disease doctor, Dr. Delazabul, he is a pulmonologist. Those are some that come to mind right now.
Q. You were asked questions about your CMS data. Is there a connection between CMS and Joint Commission?
A. Not that I am aware of.
Q. Well, let me ask it differently.
A. Oh, I see what you are saying. So, the connection for us is in order for the hospital to be able to bill for Medicare or Medicaid patients we have to be accredited by either the Joint Commission or by DMV, so it is one of their accrediting models.
Q. Does Joint Commission review some of the same infections data that your hospital reports at CMS?
A. Yes.
Q. And despite this infections data, Joint Commission still accredits the hospital, correct?
A. That is correct.
MS. SCOTT: That is all I have.
THE COURT: Thank you, sir.
MS. MALONEY: We call our next witness, Dr. Sean Nicholson.
MS. BLAIR: Your Honor, I'd like to note that he was sitting in the courtroom. I don't know if your Honor has any

sort of order about witnesses sitting in the room while others were testifying.

THE COURT: No one invoked the rule. If someone invokes the rule I will apply it. I thought you all were happy with people sitting in the courtroom.

MS. MALONEY: We conferred before the trial about trial sequence. This did not come up, so -- thank you.

SEAN NICHOLSON, PLAINTIFF'S WITNESS, SWORN

DIRECT EXAMINATION

BY MR. HVIDT:

Q. Good morning, Dr. Nicholson. Please introduce yourself to the Court.

A. Yes, I am Sean Nicholson.

Q. Did you prepare slides for your testimony today?

A. Yes, I did.

Q. Did you prepare a slide that summarizes your qualifications?

A. Yes, I did.

Q. Is that slide 2 shown on the screen here?

A. Yes, that is correct.

Q. Could you please describe your educational background?

A. Yes. I received an AB in economics, an undergraduate degree, from Dartmouth College, in 1986, and then a Ph.D. in economics from the University of Wisconsin Madison in 1977.

Q. Are you currently employed?
A. I am a professor at Cornell University in the Department of Economics and also the School of Public Policy. I am also a research associate at the National Bureau of Economic Research, which is a coalition of health economists studying health care market policy.
Q. How long have you been a professor at Cornell?
A. I have been on the faculty for 22 years. Prior to joining Cornell I was an assistant professor in the Health Care Systems Department at the Wharton School, University of Pennsylvania.
Q. What are your responsibilities at Cornell?
A. I teach, conduct research, and for ten years I had administrative responsibilities. I was directing the Sloan program in health administration from 2014 to 2024. This is a two-year professional graduate degree that trains health care managers and I focused on that program for ten years.
Q. What would you say is your field of academic research?
A. I am a health economist, so I focus on the economics of health care, and within that I focus on quality measurement and quality improvement.
Q. Have you published any articles on that?
A. I have probably published 60 or 70 peer reviewed articles across all topics, and five or ten of those would be focused on quality improvement.
Q. Do you have any recent publications related to health care

quality measurement and improvement?
A. I do. Last year some coauthors and I published an article in the American Journal of Managed Care, it is a peer reviewed journal, and we developed a novel method of evaluating the quality of medical care received by lower income individuals in the U.S. relative to higher income individuals.
Q. Do you teach any courses at Cornell in health care quality measurement and improvement?
A. I teach a U.S. health care system class and I devote several lectures to the state of quality of medical care in the U.S., how that has changed over time, how quality is measured, the importance of public information on patients' choices.
I developed an assignment in that class where I ask students to consider themselves to be a prospective surgical patient and decide which of two hospitals in New Hampshire to have that and they have to use state and federal information to try to learn what they can about quality.
Q. Do you have any other experience in health care quality management?
A. I do. I currently am a trustee on one hospital board and one health system board.
Since 2009, I have been a trustee on Robert Packer Hospital in Pennsylvania. I also sit on the quality subcommittee of the board. Since 2018 have been a trustees of Atlantic Health System, a six hospital health system in Morristown, New Jersey.

He have a sum of the subcommittees there, and they specifically recruited me because they have a competency based board and they were looking for a health economist with a national reputation.

Q. As a hospital board member and on these committees that you were discussing, do you have any interaction with hospital quality measures and ratings?

A. Yes, absolutely. So, as an example, the quality subcommittee of the Robert Packer board meets monthly, and before each of the meetings the trustees on that ask us to do a dashboard, so we see dozens of different quality measures. We can see what the hospital's goal is for that year and the performance month by month against those goals.

Q. Have you previously served as an expert in other litigation?

A. I have. I have been admitted as a health economics expert in about 20 cases where I testified either at trial or arbitration and I have been deposed about 50 times. All of those cases involved health care organizations, many involved hospitals or health systems.

Q. Given your experience, do you consider yourself an expert on the economics of health care?

A. I do.

Q. Given your experience, do you consider yourself an expert on the economics of health care quality measurement?

A. Yes, I do.

MR. HVIDT: At this point, your Honor, I move to have Dr. Nicholson qualified as an expert.

MS. BLAIR: Your Honor, we submitted Daubert motions, I am not going to voir dire this witness. We'll stand on our papers.

THE COURT: To the degree that was the objection, I overrule the objection. I am not sure we have sent our written order out to you today, but there is one in the works.

MR. HVIDT: I was not aware of it before approaching. Thank you, your Honor.

BY MR. HVIDT:

Q. Dr. Nicholson, have you formed opinions that you are offering in this matter?

A. Yes, I have.

Q. Could you summarize your opinions?

A. I have three opinions. The first is that the Leapfrog Group's grading approach penalizes hospitals like the five community hospitals that choose not to participate in the Leapfrog Group survey.

The second opinion is that Leapfrog Group's grading approach deviates from the foundational principles that underlie proper quality measurement and quality reporting system.

And the third is that there is substantial empirical

research that shows that hospital quality ratings and safety ratings matter, that they affect patient decisions about where they want to be treated. What that means is a grading systems like Leapfrog's that has unreliable grades can distort patient decisions and cause patient harm.

Q. What information did you rely upon in reaching these opinions?

A. I relied on my experience teaching about quality and safety, and my research on those topics. In addition, I had access to the data and the documents disclosed as part of this case, including the Leapfrog Group's underlying raw data, underlying the grades that they assign.

Also, I used publicly available information such as academic literature and such.

Q. And did you submit a report in this litigation?

A. I did.

Q. And did you agree to be deposed in this litigation?

A. Yes.

Q. Did you review any documents and data, any testimony of any witnesses and expert that occurred after you submitted your report and after you were deposed in this litigation?

A. Yes, I did.

Q. Did any of the material you reviewed after you submitted your report or after you were deposed change your opinion?

A. It didn't change my opinions; it strengthened and confirmed

my opinions.
Q. Dr. Nicholson, can you explain your understanding of Leapfrog's current hospital grading approach for the Court?
A. Sure. The Leapfrog Group surveys hospitals, they collect information on quality and safety. They also collect data from the Center for Medicare and Medicaid services, CMS. They develop 22 quality safety metrics which underlie a letter grade from A to F that Leapfrog Group assigns to hospitals twice a year.

There are 22 variables, as I mentioned. Ten of those 22 variables are outcome measures and collectively they account for 50 percent of the Leapfrog rate. An outcome's measure would be a measure of a patient's health, such as whether a patient falls in the hospital or acquires an infection while they are hospitalized. Those ten outcome measures generate 50 percent of the letter grade.

The 12 structural and process measures constitute the other 50 percent of the letter grade. A process measure would be something like physician communication. A structural measure would be an indicator of a hospital's capability of providing safe and high quality care such as whether they use computerized physician medication entry.

So, other than the 50/50 split, the way that the Leapfrog Group determines a grade depends on -- or differs for participating hospitals, those who respond to the survey

relative to nonparticipating hospitals.

For a participating hospital you have the ten outcomes measures that constitute 50 percent of the grade. I will focus more time on the right-hand side of the pie chart here.

For a participating hospital, the Leapfrog Group has five process and structural measures that they obtain from the Center for Medicare and Medicaid Services. Those are the patient survey measures we just heard about.

In red and green here you can see there are seven structural and process measures that for a participating hospital the Leapfrog Group would obtain those variables from the survey.

The numbers here represent the weight, so the five HF scores constitute 15 percent of the letter grade. For a participating hospital, the four structure and process measures in red account for 24 percent of the grade, and the three in green 11. The reason I distinguished the red and the green is because the Leapfrog handles those differently for nonparticipating hospitals.

Q. How does the Leapfrog Group grade nonparticipating hospitals?

A. From the outcomes measures perspective it is not identical, but similar. Focusing on the right-hand side of the pie on the right, they have access to the HCAP scores. What the Leapfrog Group does is, the 11 percent, the three structure and process

measures in green on the left, they exclude those entirely from determining grade for a nonparticipating hospital and reassign that 11 percent weight to the remaining two categories on the structure and process side.

What that means is the four measures remaining that are obtained from the survey for participating hospitals have a weight of 31 percent, the ones in red on the right for a non-participating hospital.

Q. For the nonparticipating hospitals, does Leapfrog have any data from them?

A. They don't because the participating hospitals chose not to complete the voluntary survey.

Q. What are the steps that Leapfrog uses for its current grading approach to assign a score for the four measures for a hospital that does not respond to the Leapfrog hospital survey?

A. The Leapfrog Group proceeds in two steps. The first step in a case where they don't have the data is to see whether that hospital did participate in the prior year.

So, if they did participate in the prior year, the Leapfrog Group would use that prior score for the four structure process measures as the measure for that year, for that grade. That is step one.

If the hospital had not participated in the prior year, Leapfrog Group moves to step two, and what they do in step two is they assign the lowest possible score to a non-participating

hospital for each of those four structure and process measures.

So I refer to this as a nonparticipation penalty, and sometimes refer to it as 60 out of 400, because the lowest possible score across the four quality metrics is 60, and the maximum score is one hundred for each of them, or 400 total.

Q. Can a hospital score zero on these four measures?

A. A nonparticipating hospital can't score a zero because that is not an available score. It is very close to zero.

What you can see are the four structure and process measures that are at issue here or partly at issue here. So doctors order medications through a computer is one of those four, CPOE.

If you look at the right for a participating hospital, they will provide information for Leapfrog Group, and Leapfrog Group with see if they achieved the standard, if so they assign a hundred points, considerable achievement 70, some achievement 40, limited achievement 15.

For the nonparticipating hospitals, what Leapfrog does is to assign 15 points for the CPOE, that is consistent with limited achievement, 25 points for the bar code medication administration, five for the intensive care unit staffing, and 15 for the hand washing -- hand hygiene protocols.

If you sum those lowest possible scores you get a total of 60, 15 plus 25 plus 5 plus 15, and that is therefore the genesis of the 60 out of 400 penalty.

Q. You keep referring to it as a penalty. What is your support for the notion that this assignment is a penalty for nonparticipants?

A. As I mentioned, one of the things I relied on in forming my opinions was data produced in the course of this case, and that includes the underlying data that the Leapfrog Group collects from hospitals.

So, using that data set, what I did was look at for the participating hospitals, for the hospitals that did participate in the survey, what was the average score that they received across all four of these structure and process measures.

What you can see is they are close to, not exactly a hundred, very close to a hundred.

So, on the computerized position or entry, the average score received by the participating hospitals is 96.4, very close to the maximum value of a hundred. For the safe medication administration, for the participating hospitals you average across all of them on that metric it is 96.9, and you can see similarly for the latter two.

If you add up those four, again this is the participating hospitals, you get a total point value of 362 out of 400, which is vastly different than the lowest possible score which is assigned to the non-participating hospitals.

So, instead of a total of 362 for the average participating, the nonparticipants get 60 points. It is a 302

point difference between the average of the participating hospitals and that penalty associated with nonparticipation of 60.

Q. Have you seen anything in the data that Leapfrog has produced to support the notion that the nonparticipation penalty in the red is appropriate for the five community hospitals?

A. No, I haven't seen any documentation in the record that provides any scientific justification for the penalty of 60.

In the data set I have been analyzing, that I cite in my report, and I continue to analyze that data set, in that data set you can see -- when the five community hospitals last participated in the Leapfrog survey, you can see what their average response is, the average across the five community hospitals for each of these four structure measures.

You can see the average is 2021, the last time the five community hospitals participated in the Leapfrog Group survey, were a little bit higher than the overall average for all participants, that 362 that I showed previously.

So the 370 is well above the current nonparticipation penalty that Leapfrog Group is assigning the number of 60.

Q. Have you seen any other evidence in the record consistent with your opinion that Leapfrog's current grading approach penalizes nonparticipating hospitals, like the community hospitals?

A. Yes. The other evidence I saw confirmed what the quantitative analysis showed. For example, Patrick Romano, who is a member of the Leapfrog Group national expert panel, he characterizes the step two penalty as a penalty for non-response. Professor Austin at Johns Hopkins University, at his deposition acknowledged that the step two process is a penalty for nonparticipation.

In a forum where Leapfrog Group was soliciting comments from hospitals nationally, many hospitals characterized this new step two process as a penalty for not participating.

MS. BLAIR: I would object for the record that that mischaracterizes the testimony of those witnesses.

THE COURT: The objection is overruled. You will have cross-examination.

BY MR. HVIDT:

Q. In reviewing Leapfrog's hospital grading data, did you observed whether Leapfrog's grading was affecting non-participating hospitals?

A. Yes. So far I have shown two averages, the average of the participating hospitals and the average of the community hospitals when they last participated.

If you look in the same data set that I used in my expert report and continue to analyze, you can see this penalty is quite severe and substantial.

So, there is not a single participating hospital that

received a limited achievement across all of four of these measures.

MS. BLAIR: Your Honor, these are opinions and analyses not in Dr. Nicholson's original report. They were demonstratives shown at the deposition of our rebuttal witness, Dr. Harris. They go to what Dr. Nicholson is about to testify, and we asked on the record if he would supplement his report t the deposition. Counsel said no, and we filed a motion to bar these new analyses we never heard of and didn't have time to review or analyze with our expert.

THE COURT: The objection is overruled.

BY MR. HVIDT:

Q. Dr. Nicholson, you may continue with your answer.

A. Yes. So, in that data set there isn't a single participating hospital that received limited achievement on all four of the structure and process measures, didn't receive 60.

So, what that means is this nonparticipation penalty gives nonparticipating hospitals literally a worse score than the worst performing participating hospital.

Another way to look at it is, if you take the participating hospitals, look at the bottom one percent, so the one percent that is the poorest performing on the four process measures, one percent, the average score is 282. So that is four times higher than the 60 that is associated with this nonparticipation penalty.

So it just shows the magnitude of the penalty that is being imposed.

Moreover, there is not a single nonparticipating hospital that received an A since the new step two process was instituted, and in the spring of 2025, there was not a single participating hospital that received an F.

So all of these things, I think, highlight the magnitude of the nonparticipation penalty.

Q. And in your expert opinion, is Leap Frog's current grading approach scientifically defensible?

A. No, certainly not on this dimension. There isn't, that i am aware of, any scientific basis for the penalty associated with nonparticipation.

Q. You mentioned that you had a second opinion in this matter. Can you state your second opinion?

A. Yes. The second opinion is that Leapfrog Group's grading approach deviates from the foundational principles that underlie a proper quality measurement system.

What I mean by that is, this field of quality measurement in some sense started in 1966 when a professor at the University of Michigan published an article. He laid out a number of facts and principles. First, he talked about the different ways you could measure quality and safety. It could be outcomes measures, processes measure, structure measures, as we talked about.

He also emphasized the importance of having standardized consistent approaches that were applied across all organizations that were being rated.

And finally, most importantly, he emphasized that a proper quality measurement system should reliably predict patient outcomes. That is really the point of a quality measurement system, trying to direct patients to providers where they have the higher ability receiving excellent care.

In an effort to achieve those goals, there are four principles. The first is to use the same data sources to collect quality measurements across all the organizations, clearly a way to increase the consistency and the fairness.

The second is to apply the method in a consistent way with those data across all the organizations that are being evaluated or rated. You have apples an apples measuring system, you have a level the playing field.

The third is to increase the reliability and confidence in the data by verifying the data with meaningful audits.

And fourth is to collect as much information as possible, ideally complete information on all the entities being evaluated so that you don't create any potential bias from missing data.

The statistics literature considers that if you are missing more than ten percent of data you are likely to have an unreliable and biased measurement system.

Those are the four principles that is the spirit of that article.

Q. In your expert opinion, does Leapfrog's grading system deviate from these principles?

A. In my opinion, they deviate across all four and depart from all four of the principles.

The first is that the Leapfrog Group uses different resources and time periods for participating hospitals versus nonparticipating hospitals. An example of that is the standardized infection rate is one of the five variables that count for 22 percent of the Leapfrog Group's letter grade.

Leapfrog Group collects those data from a different source for the participating versus nonparticipating hospitals. For participating Leapfrog Group collects that data from the National Health Care Safety Network. The data are for a relatively recent time period, and the hospitals have an ability to retroactively edit the underlying data.

By contrast, the nonparticipating hospitals, Leapfrog obtains that data from the Center for Medicare and Medicaid Services for an older time period, and the nonparticipating hospitals, because the data are frozen by CMS, they don't have the ability to retroactively edit the underlying data.

There is literature that demonstrates that the different data sources provide favorable data for the participating hospitals relative to the nonparticipating hospitals, so in

that first foundational principle there is a departure.

In terms of utilizing apples to apples grading methods, I went through the method for missing differs for participating and nonparticipating hospitals. So that is an inconsistency of methods for different types of organization that are being evaluated.

The Leapfrog Group does not conduct many, if at all, in-person audits to ensure the reliability of the data. In 2019 the Leapfrog Group audited in person five out of the 2,500 hospitals. This is well under one percent, .2 percent of hospitals. That is particularly important because, as I show in my report, a majority of hospitals are receiving a perfect one hundred out of one hundred on those seven structure and process measures that come from the Leapfrog Group survey. So that is a situation that would seem to demand more auditing than what is occurring. So, another deviation on that principle.

And finally, remember, when I was describing this I said statistics literature threshold is that if you are missing more than ten percent of a variable it is likely to be unreliable. What you are trying to infer from the remaining 89 percent is likely to be unreliable.

In Leapfrog's case the nonparticipating hospitals are about 23 percent of the total. The Leapfrog Group is missing well over ten percent, 23 percent of the data over those process

measures. That calls into question the reliability of those data.

Q. In your expert opinion, do the deviations you have identified affect the reliability of the grading outputs?

A. Yes, they do.

Remember the goal of a proper quality measurement system is to predict patient outcomes so that a patient looking at the ratings can be confident if they go to a higher rated one, there is a higher probability they will have a better outcome.

What has been shown in the literature in an article by Smith in 2017 and Gonzalez in 2013, is that the Leapfrog Group grades don't reliably predict patient outcomes, and I using the Leapfrog Group's own data conducted similar analyses that corroborated those peer reviewed literature results.

Specifically I took the ten Leapfrog Group outcomes measures and determined statistically does a hospital with a B grade have a statistically better health outcome than a hospital with a C grade, or does a hospital with a C grade have a consistently statistically better health outcome than a D or F, and the answer is not consistently. 50 percent of the time it does and 50 percent of the time it does not.

Q. Does Leapfrog's current grading approach stack up against its founding expert's safety principles?

A. Not in my opinion, no.

One way to see that is to look at the national expert

panel's elaboration of method that was chosen for the Leapfrog Group early on in the Leapfrog Group's organization.

So, what you see on this slide, you start with the upper left, is the 2013 article in the Journal of Patient Safety, and it is authored by Matthew Austin, a professor at Johns Hopkins, and some other members of the Leapfrog Group's national expert panel.

If you move to the right, in this part of the article the expert panel is describing how they determined the best approach to deal with missing data, such as when the Leapfrog Group doesn't have responses from particular hospitals.

The national expert panel considered five different approaches of dealing with missing data. And for the 2010 to 2020 period, the expert panel, the guiding principle shows approach number two, so impute the hospital's performance on the missing measures using other available data. Specifically the other data set was the American Hospital Association survey.

So, if a hospital didn't participate didn't provide a response, they would research that secondary source.

And I should maybe then point out the first highlighted text on the upper left. "In this way we avoid making questionable assumptions about the performance of hospitals with messing data."

I should point out that between 2021 and 2024, Leapfrog's

approach to missing data was the first potential method and that is going to be similar to the way I conduct a counter factual analysis.

In this article the expert panel, if you look at the second highlighted section said, "finally the third and fourth approaches were rejected." The third approach I would consider to be a maybe somewhat light penalty for a nonresponse, so assigning a nonrespondent a score that is one deviation worse than the average for the participants.

The fourth method that was considered and rejected is essentially the current step two approach to missing date, which is to give the hospital zero credit for the measure when the hospital chose not to report data.

So, limited achievement isn't literally zero, but is the lowest possible score.

If you go back to the text, the third and fourth approaches, penalties for non-response, were rejected for creating a structure bias by Leapfrog, and skipping down, no penalties for missing data.

So, in that way, the current approach is at odds with those guiding principles, the founding principles.

Q. Does Leapfrog's current grading approach stack up against its current methodology rules?

A. No. This slide is taken from the Leapfrog Group methodology document, and also a section on the website which

is called About the Grade. So, in reading the yellow here, Leapfrog is not able to calculate a safety grade for every hospital in the U.S., including -- and then there is a number of bullet points for types of specialty hospitals that aren't given a letter grade.

And at the very bottom bullet point in yellow, hospitals that are missing scores for more than six process structural measures, Leapfrog is apparently not able to calculate the safety grade for those hospitals.

For a nonparticipating hospital, from my prior slides you can see Leapfrog is missing seven, which is more than six. They don't have data on more than six of the processing structural measures, yet they are still assigning a grade.

Q. In your expert opinion, should Leapfrog Group grade nonparticipating hospitals?

A. In my opinion they should not. They are not adhering to one of their own principles.

Q. Did you do anything to test the significance of your observations of Leapfrog's safety grade data that it produced in this litigation?

A. Yes. What I did in my report is I conducted a counter factual analysis where I asked the following question: What if the non-participating hospitals in fact decided to participate, and they behaved in a way consistent, similar, identical to the participating hospitals?

This is a way of -- I am not coming up with a new recommended approach, I am just testing the extent to which the current Leapfrog Group method or grading approach, does it penalize nonparticipants and to what extent.

If the nonparticipants in fact participated, what I do in the counter factual is, I give the nonparticipants the mean score for the seven structure and process measures that are not available for the Leapfrog Group for the nonparticipants. I score the every use assign the mean score of the participants. That is the only change I am making.

This has been done in peer reviewed literature, so there is a scientific basis. A study by Wang did something similar, taking the nonparticipants and assigning the mean value of the participants.

It is in fact, if you recall from two slides ago, assigning the mean value from the participants to the nonparticipants, was that step two approach that the Leapfrog Group used between 2021 to 2024, this is consistent with that prior approach.

In fact, I think I am being conservative because I am assigning a mean of the participants to the nonparticipants when in fact a majority of the participants are getting a perfect one hundred. So using the mean is actually conservative.

As I showed, the last time the five community hospitals did participate, their scores across the four process measures were

higher than the overall. So, for all of those reasons, I believe my approach is conservative.

So, I conducted this counter factual for all non-participating hospitals and determined that the grades change substantially for almost all of the hospitals. Nationally, before I show this slide, nationally, currently the non -- 96 percent of the non-participating hospitals are receiving grades of C, D, or F from Leapfrog.

In the counter factual, nationally 71 percent, when I am assigning them the value that is the mean for the participating hospital, 71 percent get an A or B. There is an enormous difference that comes from the nonparticipation penalty.

For the five community hospitals, you can see the letter grade from spring of 2025 for the five community hospitals. They all in the counter factual analysis would have received a C had they participated and behaved in a way similar to the participants.

So it shows the extent, the magnitude of the nonparticipation penalty that is baked into that step two approach.

Q. Dr. Nicholson, opposing counsel called this speculative in her opening. Do you have any reaction to that?

A. I completely disagree. As a start, counter factual analyses are very common in litigation and other types of matters.

The reason that I uses the mean is very defensible, it has been used in peer literature, the Leapfrog Group methodology, had used it before. It is conservative because the majority of hospitals get a perfect score, and I show that the last time that the five community hospitals did participate their scores were above the mean, so that is an indication of being conservative.

For all those reasons, I don't think this is speculative at all. This is the kind of analysis that I do routinely in terms of trying to isolate change that is coming from just changing one factor, nonparticipation to participation, holding everything else constant.

Q. Did Leapfrog's proposed expert have a view on your counter factual?

A. Yes, Dr. Harris, I believe, had two critiques.

The first critique of this counter factual analysis is, he took issue with my assigning the mean value from the participants to the nonparticipants for the seven structure and process measures, arguing that instead I should have done it for the four because three of those that are in green are excluded entirely. I don't think he understood the exercise.

If a nonparticipating hospital is going to participate they are going to behave like the participating hospitals, and the participating hospitals provide information on all seven of those measures. So I stand by my decision to look at all

seven.

His second critique stems from his hypothesis that there is non-response bias, that the hospitals that aren't participating are not being transparent and that transparency indicates that they are somehow worse performers, less safe, lower quality.

I haven't seen any evidence in -- any evidence in this case that has been consistent with that. There have been studies by Smith in 2017, by Wang in 2014, that look at this and don't find that there are differences in outcomes between the participants and the nonparticipants on various important outcome patient measures.

Q. In your expert opinion, does Leapfrog's current grading approach affect the letter grade that the community hospitals receive?

A. Yes, I think you can see it here in the changes from the Ds to the Fs to the C.

Q. In your expert opinion, can the Leapfrog safety grade issue that you have identified have any impact on the market?

A. Yes. If you have unreliable grades, as I believe Leapfrog Group has, that can distort patient decisions, and that can lead to patient harm.

I base that on three different sets of evidence.

The first is, there is substantial literature that shows hospital ratings matter, they matter to patient decisions and they matter to hospitals.

So, for example, Chondra and colleagues published an article in the American Economic Review, and they show that when the hospital's CMS scores improve they subsequently receive more patient volume, and similarly in the other direction. Importantly, they find this is particularly the case in electives, where patients have the ability to review information before they actually select the hospital as opposed to an emergent case.

There is another study by David Cupper and colleagues in the same journal and they are looking at the New York State cardiology hospital ratings, which are public, and they show that when the hospital's rating go down, that hospital loses cardiology volume. And then there is a study by Deven Pope in U.S. News and World Report, and he is looking at specialty specific ratings like obstetrics, or cardiology or rheumatology.

When a hospital's U.S. News and World Report rating goes up it gets more volume as well.

Those are all three showing that patients are relying on hospital ratings when making decisions.

The final one that is important to mention is an article by Hibbard, and what they look at is what happens to hospitals when the hospital ratings worsen, and what Hibbard and colleagues find is that hospital reputation suffers, relationships with patients and doctors and nurses become

strained and it makes it more difficult for hospitals to raise funds through philanthropy.

That is the first set of evidence that hospital ratings affect physicians and hospitals.

The second is, again, the opinion related to destroying patient decisions -- the second has to do with the way in which the Leapfrog Group positions itself on the website as the gold standard for educating patients and self-insured employers regarding hospital safety and quality.

The Leapfrog Group is clearly attempting to -- and they characterize the choice of hospital as something that could affect life or death. You are twice as likely to die at a D or an F versus an A.

It is not just posting information, but positioning it in a way that can influence decisions.

And third set of evidence -- and some of this is based on my experience as a hospital board member, but it goes beyond that -- is there is ample evidence that consumers are using the Leapfrog Group ratings.

So, as a board member, hospital administration will indicate to us how they are fairing on the Leapfrog Group grades. Some hospitals are basing executive compensation in part on the Leapfrog grades. You have self-insured employers who are using Leapfrog information to determine which hospital should be in the network, which hospitals should be available

to the employees.

Private insurers are using the Leapfrog grades in part to run their pay for performance programs, so getting a higher grade might get a higher payment from the health insurers and conversely, one that gets a lower grade might receive a lower payment.

So, all of those, all of that literature and evidence indicates that unreliable grades can distort patient decisions and cause patient harm.

Q. And have you seen any documents or evidence or testimony in this case of harm that is consistent with what you would expect in your expert opinion as possible reputational harm caused by the Leapfrog safety grades here?

A. Yes. So, I did hear one of the two community hospital's CEOs testimony, but I also read their declarations and read some of the other court documents.

I think the evidence on what is occurring at community hospitals is consistent with what one would expect based on the literature I just described, the way the Leapfrog Group is positioning itself, and also the way consumers are using it.

There is evidence that walk-in volume is decreasing. That is elective, that is the type of patient response that is predicted by the literature that I just reviewed. The CEOs are talking about damage to their reputation, strained relationships with physicians and nurses. That is consistent

with the Hibbard article about how low ratings can affect hospitals.

You also -- there is evidence, you heard a little bit about it earlier this afternoon, and I think this morning, patients who were confused about the ratings, who don't want to be treated the way the physicians wanted to treat them based on what they are learning about Leapfrog Group rating.

So, you can see on this slide, if a patient is using a Leapfrog Group grade to seek out care at a C rated hospital versus an F rated hospital under the belief that the C rated hospital will have better patient outcomes, well they may not. Or the true quality and safety might be identical, but patients are traveling further in search of a higher grade hospital, and there is literature that shows that additional travel can be harmful for patients.

I haven't conducted a formal causal analysis, but the evidence that I have seen on what is occurring at the five community hospitals is consistent with and is what would be predicted to occur based on the literature that I have reviewed.

MR. HVIDT: Pass the witness and reserve time.

THE COURT: All right. Let's take our afternoon break and return in 15 minutes. That will take us until five minutes to 4:00.

(Thereupon, a short recess was taken.)

THE COURT: Okay, we are ready to go.

CROSS-EXAMINATION

BY MS. BLAIR:

Q. Dr. Nicholson, my name is Kim Blair. Nice to see you again.

I wanted to go over a few of your qualifications to make sure I understand about the literature that you authored. You never authored any article specifically on patient safety ratings, correct?

A. Nothing where that is the sole focus, but certainly some of my research includes patient safety metrics.

Q. What about articles regarding imputation modeling, you haven't authored any articles specifically on that; is that fair?

A. That is right, I haven't written something in the statistical literature on that.

Q. And you never conducted any research on the propriety of using imputing data in an analysis, correct?

A. Correct. I routinely consider imputation, but I haven't written a peer reviewed article on that topic.

Q. Would you agree with me that imputation is a scientific methodology that is used when data is missing?

A. Yes, it can be. There are different ways to do it, but it is a general method that is accepted.

THE COURT: What is the word you are using?

MS. BLAIR: Imputation.
BY MS. BLAIR:
Q. I am using that word because we have been referring to the four metrics as imputed, imputed metrics. Do you understand we are using it that way in this litigation?
A. Yes, I do.
Q. In terms of your qualifications, you sit on a hospital board, correct?
A. One hospital board, one health system board.
Q. Atlantic Health, correct?
A. Yes.
Q. You have never served as a hospital administrator, correct?
A. Correct. I have consulted two hospitals for four years, but never served as an administrator.
Q. You have never been involved in gathering data to respond to Leapfrog's survey, correct?
A. Correct.
Q. As I understand your opinions in this case, you worked alongside the Cornerstone Group in preparing those opinions, correct?
A. Members of Cornerstone Research formed my team who conducted analyses under my direction.
Q. Do you know how many hours the Cornerstone team put in working with you?
A. I don't know.

Q. You testified in your deposition that Cornerstone staffed the research related to your opinions in this matter?
A. I don't think I would have worded it that way, staffed my team. They did analyses that underlie my opinions.
Q. And they performed the analysis underlying your opinions?
A. Under my direction.
Q. And you have eight workbooks attached to your opinion, correct?
A. To my report, I believe that is correct.
Q. To your report, yes. Cornerstone would have been involved with all of those?
A. Yes.
Q. Did I ask this, do you know how many hours Cornerstone spent?
A. I do not know, no.
Q. Do you know how much money Cornerstone billed for their work on this matter?
A. No, I don't know that.
Q. And do you get any part of -- does any part of your fee come from the work they are doing?
A. So, I bill my client separately from Cornerstone, but I do retain a percentage of what Cornerstone collects for the cases on which they staff my research team.
Q. Do you have any expectation of how much you will collect from Cornerstone in this case?

A. I don't know.
Q. Your rate is 1200 an hour?
A. I think might be 1250.
Q. I want to make sure you are getting paid right. How many hours do you have in this case thus far?
A. I don't know exactly how many.
Q. More than a hundred?
A. Yes, probably close to -- maybe a little under 150. I don't know exactly.
Q. Okay. And you have never spoken to any of the CEOs from any of the five hospitals in putting your opinions together. Is that fair?
A. That is correct. It was not necessary for me to complete my assignment.
Q. Are you aware that in March or April 2025 Cornerstone had a meeting with the five CEOs from the hospitals?
A. I don't know if they did or didn't.
Q. So, if they did, you weren't aware of that?
A. I wasn't -- I certainly wasn't at that meeting.
Q. Did anybody at Cornerstone tell you, well, we spoke to the CEOs and here is data from your opinions.
A. So, no, I have not met with any of the community hospital CEOs. I wasn't aware of that meeting.
Q. Okay. So you didn't give Cornerstone any questions to ask the CEOs in connection with your opinion?

A. On that particular meeting, no, I didn't give them any questions.
Q. What about ever, did you ever give Cornerstone any questions to ask the CEOs?
A. No. I certainly, I do this in all of my cases, once I understand my assignment, I determine the analyses I want to conduct and I direct my research team to conduct those analyses and I review the analyses and the outlook with my team.
Q. I want to make sure you are not aware of Cornerstone speaking to the CEOs?
A. I am not aware --
Q. Are you aware that Cornerstone conducted an analysis of Leapfrog reports in this case?
A. Analyses in this case has been ongoing, so that wouldn't surprise me.
Q. Did they do that at your request?
A. So, certainly I have been working with my Cornerstone research team as I continue to analyze the data that was available to me when I produced the report. I didn't specifically direct them to download a specific number of documents, but they have been working with me to prepare for the testimony that I provided today.
Q. Did you receive archival reports from January 13, 2025 or after?
A. I didn't receive them personally, no. Nobody sent those is

to me, but it wouldn't surprise me. The analyses in this case is ongoing.

Q. Were any of your opinions you offered on your direct examination based on the archival reports that were ordered two days ago?

A. No. No.

Q. And just to close out, and we are going to talk about your counter factual very soon, but your counter factual is not based on the actual data from these five hospitals on the seven measures, correct?

A. Correct. At the time of my report, the time of my deposition, the Leapfrog Group didn't have those -- that information available nor did I have that information available.

Q. That is a good point.

In this litigation in preparing your opinions, you did not receive the actual CPO BCMA, hand hygiene or IBS data from the hospitals to determine whether or not they were really scoring at limited achievement, correct?

A. My understanding is, and I don't know the timing, but my understanding is the Leapfrog Group requested from the five community hospitals for information on how the hospitals would have responded had they responded.

I have seen some of those data, but that was subsequent to filing the report.

Q. So I am clear for the Judge, your counter factual was not based on any empirical data from the five hospitals for those measures, correct?
A. It wasn't because those data were not available to me nor to the Leapfrog Group, which is why one has to address missing data.
Q. Did you ask for the actual data?
A. I didn't or direct my research team to ask for it. It's my understanding it came into the records through the discovery process.
Q. You have not seen it, correct?
A. I have seen the summary of the information that the five community hospitals would have reported had they -- would have provided had they participated.
Q. You have seen that, you have seen empirical data for each of the five hospitals on their hand hygiene models?
A. I have seen the raw inputs that would have go into that survey had they participated.
Q. You never saw the empirical data, for example, you have never seen than hand hygiene logs which show the hospitals were doing 200 hand hygiene observations?
A. No. I had seen what at the level at which it would be reported to the Leapfrog Group. My understanding of that is it generally would have resulted in scores consistent -- similar to the overall average of the participants.

Q. Did you ever take the raw data from the hospitals and fill out the survey for them on these seven measures to see how they actually would have scored if we used their actual data?
A. No. I didn't take that step.
Q. You rely on your -- in your opinions on the 1966 article by Donavedian as the foundational principles, correct?
A. Yes, that is one of them I use.
Q. Would you agree with me that in 1966, when Mr. Donavedian wrote that article, there were no hospital ratings in place at that time?
A. I think that is correct.
Q. And would you agree the title of that article is Evaluating the Quality of Medical Care?
A. Yes, and I consider safety to be a subset of quality.
Q. In fact, you and I had a long discussion about that at your deposition. Do you remember that?
A. Yes.
Q. The article that Donavedian wrote was focused on quality, and not specifically patient safety, correct?
A. Yes. The principles that he articulated are safety as a component of quality.
Q. You saw Leapfrog's expert panel guiding principles in this matter, in connection with this matter, correct?
A. Yes.
Q. Do you recall those guiding principles -- we can pull it

up, I guess, 203. I think it is in evidence.

While we are waiting for that, do you recall the guiding principles were written by the Leapfrog expert panel in 2012?

A. I can't recall the year.

Q. And if we look at this article, and I will find it for you, it talks about the focus of this composite score is patient safety. Right here, yes.

Do you see this?

A. Yes.

Q. All right. It says the focus of this composite score is patient safety, which is being defined as freedom from harm, and we recognize patient safety is a different and narrower construct than hospital quality. Do you see that?

A. Yes.

Q. Do you have any reason to dispute that, unlike other ratings that maybe we do in quality, that Leapfrog rate is reviewing safety? Do you understand that distinction?

A. I agree that safety is narrower than quality. I don't think the principles underlying a proper safety measurement system would be any different than the principles that underlie a proper quality system.

I also see aspects of Leapfrog Group variables that I would put inside the quality sphere, but outside the patient safety sphere. It might focus on that, it has measures I think of as being quality, but broader than patient safety.

Q. You don't disagree with me, this is Leapfrog -- this is how Leapfrog used what they are doing?
A. I am not disagreeing with the words on that page.
Q. Donavedian talks about three components, outcome, structure and process, correct?
A. Yes, this is part of this.
Q. Would you agree with me the measurements that go into it are outcome structure and process, correct?
A. Yes, I would agree with that.
Q. You were talking about an issue that Leapfrog does not have a bold enough verifications process. That is one of your positions, correct?
A. Yes, they don't conduct many in-person audits.
Q. CMS does in-person audits?
A. Correct.
Q. And Leapfrog has the ability to conduct in-person audits?
A. Yes, that is my understanding.
Q. Do you know what percentage of hospitals CMS audits every year?
A. I don't know the percent. I do know Robert Packer was audited from some billing perspective. I don't know how common that is.
Q. So, your criticism of Leapfrog is that they don't go on site and audit enough hospitals, but you don't have a criticism of CMS's auditing or how many audits they perform. Is that

fair?
A. I do know as a board member the last thing you want is CMS to come in and be auditing. There is a lot of revenue and billing wrapped up with CMS payments.
Q. Do you agree the Leapfrog survey is voluntary?
A. Yes.
Q. Do you agree it is free, no payment, no monetary payment?
A. My understanding is there is no out-of-pocket. We heard from one of the CEOs that from an economic perspective, it is a real cost.
Q. You agree Leapfrog does not charge to participate in the survey?
A. Yes, I do.
Q. The Joint Commission does, correct?
A. That is my understanding.
Q. And we talked about the different measures, and there are ten Alpha measures. You agree they all based on CMS data, correct?
A. For a safety matter, technically source --
Q. You have an issue with had -- you agree with me the NHSN data is CMS data?
A. Yes, in terms of how the Leapfrog Group uses it, in terms of what the hospitals can and can't do, but at the end of the day it is both CMS.
Q. The patient experience scores, they also come from CMS,

correct?
A. Yes.
Q. And CMS is data that is risk adjusted, correct?
A. Certainly some of the measures, I don't think all of the CMS measures are.
Q. You don't think they are all at risk adjusted?
A. No. Readmission rates would be, mortality rates would be. I am not sure the infection rates would be. I am not aware of any risk adjustment.
Q. Okay. Your talked with Mr. Hvidt about limited achievement. You agree that it is the lowest score that a participating hospital earned, correct?
A. It is the lowest score a participating hospital could earn based on the response, not for all four.
Q. Hospitals -- participating hospitals do get limited achievement for some of the four measures, correct?
A. That is my recollection, but not for all four, yes.
Q. And you talked about the weights, your pie chart, right. I want to talk about that, the pie chart and how the weights changed depending on whether you are a participating hospital or not.
The reason you can do the math on the weights is because the scoring methodology is right there on the website, right?
A. Yes, part of the methodology document describes how the weights get altered when there is missing value.

Q. Do you agree that Leapfrog makes the scoring methodology transparent to the public if they wanted to read it?
A. I agree they would make it accessible. I don't know the extent to which your typical patient would be able to process it. I agree it is accessible.
Q. Accessible. I want to talk briefly about your counter factual. What you did is you said, I am going to assume all nonparticipating hospitals for the spring of 2025 are now participating and I am going to assume they are all are achieving the national median for all seven measures, right?
A. The mean of the participating hospitals.
Q. One assumption you made is that participating hospitals assign themselves the best score for those seven measures, right?
A. I didn't assume that. First of all, the participating hospitals provide information, Leapfrog converts that information into scores and points at least for some structure process measures.

What I believe I said a majority of participating hospitals get a hundred out of one hundred on all seven of the structure process measures. I am not saying they give themselves a hundred. The response they provide is assignment of one hundred by the Leapfrog Group.

Q. Your report says they assign themselves the highest score. That is what your report says. I am making sure, is that an

assumption you made or you know that for sure?
A. We had a conversation about that in my deposition. If there was any confusion in the text, I apologize, but in the deposition I think I was very clear that I understand the participants provide information. From that information Leapfrog Group produces numeric scores for each variable.
Q. Do you believe participating hospitals over inflate their survey responses?
A. I think there are incentives for participating hospitals to provide information that results in high scores. I think there isn't -- there aren't enough in-person audits to check those incentives.
I do think when you have a situation where 89 percent of participating hospitals end up with a hundred, that is very odd distribution. For an economist, you don't see 89 percent of the observations at the maximum value.
Q. Do you have any empirical data that is true, hospitals over inflate their data the survey?
A. No. I wouldn't go that far. I think the conditions are such that it might happen.
Q. Okay. In fact, you sit on the board of Atlantic Health System, correct?
A. Yes.
Q. I think you are on the quality committee of that health system.

A. That is for the Robert Packer.
Q. All of the hospitals in the Atlantic Health system participate in the Leapfrog survey?
A. I believe that is true.
Q. Several of those hospitals are A hospitals, correct?
A. I believe that is true.
Q. You have no reason to believe as you sit here today that the hospitals for which you are on the board misrepresent their information on the Leapfrog survey, do you?
A. I certainly hope not.
Q. Are you aware Atlantic Hospital put out press releases touting Leapfrog as a peer reviewed rating system?
A. I think I have read some of those.
Q. Have you ever gone to the board of Atlantic Health and told them that you believe their A grade is not accurate because of methodology?
A. No, I have not taken that specific step.
Q. And we talked about the non-response bias that Dr. Harris is going to testify to next week.
In coming to your conclusion that the expert panel never discussed the non-response bias, did you read all of the notes from the expert panel meetings going back to 2012 to come to that conclusion?
A. No. Certainly not.
I certainly recall reading the notes to the meeting, I want

to say in the spring of 2024, where the new step two approach was discussed.
Q. And have you had a chance to look at the members that sit on the hospital safety grade expert panel and their credentials?
A. I believe in Dr. Harris' report he discusses some of the credentials.
Q. Do you have any reason to believe that the nine members of the hospital safety expert panel are not qualified to provide guidance as a think tank for Leapfrog?
A. I am not questioning their qualifications. I am questioning whether they are based on the foundational principles that I believe they should be based on.
Q. Have you looked at the 12 separate and distinct expert panels, and the members of those panels that underlie or that provide guidance to Leapfrog on the survey measures?
A. No. I don't believe I have seen them.
Q. And you didn't review any minutes or notes or anything about how the BCMA expert panel comes to its conclusions, correct?
A. I don't recall reading those notes, in.
Q. You have opinions how hospital ratings can influence patient decisions, right?
A. Yes.
Q. You criticize Leapfrog -- you criticize the fact that

Leapfrog talks about Matt Austin's 2019 white paper, correct?
A. I don't think I am criticizing that the website talks about him, critical of some components of the content.
Q. Are you aware that Matt Austin has testified in this trial through his designated deposition testimony that he stands by that preliminary research and in fact his current findings is that it is perhaps two and a half time more likely a patient would die in a D or F hospital? Are you aware of that testimony.
MR. HVIDT: Your Honor, I object to this. This is outside the scope of the direct testimony. Dr. Nicholson did not talk about the --
MS. BLAIR: I will withdraw the question.
THE COURT: All right.
MS. BLAIR: Sure, fine.
BY MS. BLAIR:
Q. In coming to your conclusions that D and F grades can harm the patients, did you speak to any patients at these five hospitals?
A. No. That wasn't necessary for me to evaluate the Leapfrog Group method.
Q. I am not talking about the method.
I am talking about your opinion that the F and D grades -- hospital ratings influence patient decisions about medical care and misleading hospital grades can distort patient choices

causing substantial harm.

I am talking about your second opinion. In coming to that conclusion, did you perform any consumer surveys to determine whether that was true?

A. No, I am not an expert on consumer surveys. What I did do is to review literature which I described in my testimony associated with how empirically ratings do affect patient decisions.

Q. Your conclusions are based on literature that you have read and applying that literature to these five hospitals in the Leapfrog rating system. Is that fair?

A. Well, first, it is based on whether I believe the Leapfrog Group ratings are reliable or not, and I don't think they are reliable, and combined with three sets of evidence, the literature that you just described, patient choices, as well as how ratings affect hospitals' reputation, and also the way the Leapfrog is positioning the grades, and evidence on how the grades are actually being used.

Q. Okay. Evidence on how the grades are actually being used by consumers?

A. Yes. For example, information about private health insurers and how they use it to pay for performance, how hospitals are using it for executive compensation.

Q. You have not conducted any consumer surveys here in South Florida about whether or not these grades are actually

impacting consumer decisions for these five hospitals?
A. What I am doing is looking at what evidence -- how the five community hospitals are being affected, whether that is consistent with what he would expect. I am coming to the conclusion it is consistent, but I haven't done a causal analysis, but it is consistent.
Q. You have done no causal analysis?
A. That is correct, whether the answer --
Q. The answer to the consumer question is no, you didn't perform a consumer survey?
A. Correct.
Q. You don't have any evidence that any patient has been harmed by the Leapfrog hospital safety grades, correct?
A. Certainly I am not a clinician, I don't have the ability to say clinically whether it is true.
I think some of the descriptions of what occurred from the community hospital CEOs, again, is consistent with what one would expect, and certainly in terms of traveling further, it is consistent with the mechanism by which they can be harmed, but I haven't determined any particular patient was harmed.
Q. Sitting here you can't say Mr. Jones left Delray and went to Jupiter and got an infection and died, actual consumer harm?
A. That is correct. I looked to whether the evidence is consistent with what one would expect.
Q. You talk about the traveling. If you look at these

hospitals and look at a 5 mile radius, these people only had the option to go to a D or F hospital. If you expand that to ten miles, would you agree with me that there is a plethora of hospitals surrounding each of these community hospitals that have a much better grade than D or F, or did you not perform that analysis?

A. I may have performed it. Sitting here I don't know the answers, but inherent in that is traveling more than just traveling five miles. I do cite to two studies in my report about the negative patient consequences associated with travel, both for elective and for emergent care.

Q. And those articles, I read them, don't make a distinction between five and ten miles, do they?

A. I can't recall. It is possible, I can't recall.

Q. I want to make sure the Smith article that you relied on heavily, that was from 2014, correct?

A. I believe 2017.

Q. You are right, 2017.

That article was reviewing a completely different Leapfrog methodology, was it not?

A. I don't know about completely different, but different than what is in place now, yes.

Q. In 2017, Leapfrog was imputing data from AHA sources and that is what the Smith article was looking at?

A. Well, in my testimony I indicated the AHA as an alternate

source. That wasn't the narrow focus of the Smith study. They looked at other things, respondents and nonrespondents in four different patient outcomes and whether letter grades predicted a patient outcome. It wasn't just looking at the AHA issue.

Q. It was looking at the Leapfrog methodology?

A. Yes.

Q. And looking at the grades that resulted from the methodology that was in place at that time?

A. Yes.

Q. That was different from the methodology in place in 2024?

A. I used it in a way that is appropriate.

Q. While I have you here, is it your testimony that all nonparticipating hospitals receive a D or F?

A. No.

Q. Okay. One last thing. You talked about Matt Austin, and I thought you said Matt Austin agrees that the current methodology is penalizing. Did you testify to that? I want to make sure I understood your testimony.

A. Yes. There is a sentence in his deposition is pretty clear on that point.

Q. Matt Austin's testimony, and the Judge will have the benefit of it, was that "the goal of the methodology change was not to assess a penalty; the goal was to improve the accuracy of the data and incentivize survey participation."

Do you recall that?

A. I can't recall that verbatim. That is different than what Patrick Romano was saying.
Q. I am not asking about Patrick Romano, the Judge will hear from him. Do you recall reading that testimony?
A. Sitting here, I don't recall those exact words.
MS. BLAIR: Thank you. I don't have any further questions, your Honor.
THE COURT: Redirect.

REDIRECT EXAMINATION

BY MR. HVIDT:
Q. Dr. Nicholson, during opposing counsel's examination do you recall the questions she asked you about imputation?
A. Yes.
Q. Do you consider the assignment of the 60 out of 400 to be considered an imputation?
A. I consider it to be an assignment, and it is not anything that one would find in conventional literature about appropriate methods of imputation.
Q. And counsel asked a question you about whether actual data was produced in the litigation relating to how they would have answered questions in a Leapfrog survey about the four measures. Do you recall that?
A. Yes.
Q. And you described you had seen some document since your deposition and report. Do you recall that?

A. Yes.
Q. Can you describe for us what you observed in that document?
A. Yes. So, again, my understanding is the Leapfrog Group requested as part of the disclosure process that the five community hospitals indicate how they would have responded on the survey, and maybe it was the four measures, I can't remember, maybe it was for seven, how they responded had they -- how they would have responded had they in fact participated.

What I recall seeing is a series of calculations with numerators and denominators that would determine the input into the survey, so like the number of medication orders done through the computer entry relative to those that aren't. There were similar things for hand hygiene and intensive care unit, staffing and the like.

MR. HVIDT: Justin, can you blow up PX 528. If we could please remove the pink circle?

THE COURT: You can touch it in a way that does it.

BY MR. HVIDT:
Q. Dr. Nicholson, is this a document that is consistent to what you were testifying to?
A. Yes. So, I think what I was referring to, you can see that CPOE, inpatient medications, NUM, numerator, DEN, denominator. Delray is indicating 34,953 of medications that were entered electronically, and I think the denominator would be the total

number of medications. You are getting a percentage to the extent Delray in 2024 was using CPOE to enter medications electronically.

My understanding is that is the input that would go to Leapfrog Group to determine a standard substantial achievement and the like.

Q. After you saw this material produced, did that change your opinions in this matter?

A. No. This is consistent with the 370 that I showed and the 362. The scores that would result from the inputs would be similar to the overall mean that I used in my counter factual analysis.

Q. Thank you. You can pull that one down. Thank you.

If we could -- do you recall during opposing counsel's examination she asked you about the number of audits that CMS conducts?

A. Yes.

Q. Does CMS have any relationships with accreditation groups?

A. Certainly hospitals need to be JCHO certified to participate in Medicare and Medicaid, I think that is true. So I don't know the full nature of that relationship, but that is my understanding.

Q. Do you have an understanding if one of those agencies conducted in-person visits?

A. Yes, my hospitals are always on the ready for a JCHO

in-person audit.
Q. During opposing counsel's examination do you recall her description -- use of the term best score when describing your counter factual?
A. I actually don't recall that. Maybe I misheard something.
Q. In your counter factual, what was the number that you used to estimate the performance of what the community hospitals or nonparticipating hospitals across the country would have received had they participated?
A. So, hopefully I was clear, not jut for the five community hospitals, but all of the participating hospitals, I was using the mean of the participating hospitals which is lower than one hundred, and I think I shared had a slide where, you know, the mean was 96.4 which is lower than a hundred. I was not entering in the best possible score in that counter factual, I was entering in the overall average of participants.
Q. During opposing counsel's examination she talked about non-response bias. Do you recall that?
A. Yes.
Q. Do you recall seeing any documents in this case, emails from experts, safety panels, whether they considered non-response bias to be consistent with what Leap Frog was doing or not?
A. Yes, at least one, there could have been more, one was Patrick Romano in an email with Dr. Austin was saying that

Patrick Romano's was not biased, it is the burden of the survey, that is the reason hospitals are not participating. It is not that the poorer hospitals are not participating, just that some were finding that burden to be too much to handle.

Q. And Justin, if we could pull up DX 298, please.

Doctor, looking in here, do you see PX 298 on your screen?

A. Yes.

Q. Zoom in so we can see the substance. Right there is perfect.

Can you direct us to where you -- where Dr. Romano is writing in the manner which you described?

A. Yes. I believe if you start with the underlying hypothesis in the paragraph that starts, the underlying hypothesis beyond your, Dr. Austin's, the two step approach because the true performance deteriorated relative to the cohort. My hypothesis by comparison was that most hospitals stopped reporting because it is too burdensome, and it goes on.

If my hypothesis is correct then the current two step approach, meaning using the national average, would be more accurate than the penalizing nonparticipants.

Q. Is Dr. Romano saying using --

MS. BLAIR: Objection, calls for speculation, it calls for speculation. Dr. Romano will be testifying.

THE COURT: We didn't quite hear the full question. Go ahead and finish the question.

MR. HVIDT: Absolutely.
BY MR. HVIDT:
Q. Dr. Nicholson, you referenced how Dr. Romano is referring to the prior approach in his email. Do you recall that?
A. Yes.
Q. Does his reference to that prior approach yielding more. Accurate imputations have any impact on your opinion on that matter?
MS. BLAIR: Objection, outside the scope and not in his original opinion.
THE COURT: Overruled.
THE WITNESS: Shall I answer?
BY MR. HVIDT:
Q. Yes.
A. Well, I would agree with Dr. Romano's position that assigning the lowest possible score is worsening the accuracy. I think that is what Patrick Romano is saying, but it is a nonparticipation penalty, which is what Patrick Romano is saying. Again, he is not embracing --
MS. BLAIR: Objection, calls for speculation, your Honor.
THE COURT: Overruled.
MR. HVIDT: You can pull that one down, thank you.
BY MR. HVIDT:
Q. Dr. Romano, (sic) during prior examination, opposing

counsel discussed your reliance on the Smith study for 2017. Do you recall that?
A. Yes.
Q. And you testified that it was appropriate to rely on it. Do you recall that?
A. Yes.
Q. And can you elaborate on why and how you relied on the literature that predated the methodology change?
A. Sure. So, one of the things I do in my report is I examine whether the Leapfrog grades can reliably predict patient outcomes. Using data disclosed, the underlying Leapfrog data, I do my own analysis with the current methodology that Leapfrog group was using and conclude that the grades do not reliably predict patient outcomes.

I reference Smith because I want to know historically was that also the case. So what Smith in part does, because they do several things, is also show that in 2017, using that methodology, the Leapfrog Group grades also did not reliably predict patient outcomes.

I do an analysis using the current method and current data, but I think it is important to understand when it is possible what the trends were in that relationship, and I used the Smith article for that purpose.
Q. Do you recall during your examination how opposing counsel discussed the testimony of Dr. Matt Austin?

A. Yes.
Q. Do you recall any specific testimony that he had that supports your reference to his testimony as being consistent with there being a penalty?
A. I won't get it verbatim, but something to the effect of when asked he, Dr. Austin, didn't disagree that, I don't know if he used the step two method, he didn't disagree that was penalizing, something to that effect.
MR. HVIDT: Thank you, your Honor.
THE COURT: Thank you, sir.
MR. HVIDT: I would like to reserve time for possible rebuttal to bring this witness back. I don't know that we would need to at this time, but we would like to reserve the right.
THE COURT: All right. Thank you, Dr. Nicholson, have a good evening.
It is quarter to 5:00, what would you like to do?
MS. MALONEY: Your Honor, I can play Dr. Austin's video designation. It is about ten minutes.
(There was a discussion off the record.)
THE COURT: Let's call a witness.
MS. MALONEY: Okay. Can you give me two minutes?
THE COURT: Yes.
MS. MALONEY: My colleague Kevin Simmons will be taking the examination of Cynthia McCauley.

Your Honor, is it okay if we do just go until 5:00 because your Honor, when we spoke afterwards during the break about the end of the day, we talk about ending at 5:00, and I must admit I set a appointment I need to get to. Your Honor, I will send a message to cancel it.

THE COURT: Can you push it off a little? Let's try to go to about 5:30, and maybe you can finish with her.

CYNTHIA MCCAULEY, PLAINTIFF'S WITNESS, SWORN

THE WITNESS: Cynthia Albach McCauley. C-Y-N-T-H-I-A, A-L-B-A-C-H, M-C-C-A-U-L-E-Y.

DIRECT EXAMINATION

BY MR. SIMMONS:

Q. Ms. McCauley, could you introduce yourself to the Court?

A. Sure, Cynthia McCauley, the CEO at St. Mary's Medical Center.

Q. Why are we in court today?

A. We are in court today because we object to the misleading grades that are assigned to St. Mary's Medical Center and my sister hospitals.

THE COURT: Pull that microphone closer to you.

BY MR. SIMMONS:

Q. Just to provide a road map, we are going to talk about your time in the health care industry, and then we'll hear about St. Mary's place in the community, and then talk about Leapfrog and more why you are in court today. Does that sound good?

A. Yes.
Q. Let's start with your professional background. Could you tell us about your educational background?
A. I have a Bachelor's Degree from Adelphi University in New York, and an MBA from C.W. post with a specialty in fiance.
Q. How long have you been in the health care industry?
A. Since 1988.
Q. And back in 1988, why did you choose health care?
A. I moved to Florida and I had an opportunity to join the North Broward Hospital District, which is in Broward County. I joined in the finance arena, I was a financial analyst and worked my way up to be the chief financial officer.
Q. What has kept you in the health care industry since 1988?
A. I love the ability to assist patients, to make a difference in our community, and particularly where I serve today and for the past six years at St. Mary's Medical Center. We are in a particularly underserved community, so the care that St. Mary's and the Palm Beach Children's Hospital provides to our community is an invaluable resource. We provide services that they otherwise would not get.
Q. You serve as CEO of St. Mary's?
A. I do.
Q. As CEO, what are your primary responsibilities?
A. Basically quality, safety, finance, strategic vision, business development, that we have a secure medical staff that

are able to be there for our patients at our community.
Q. Taking a brief step back, outside of serving as CEO of St. Mary's, do you serve any other roles in the community?
A. Health care or currently?
Q. Currently.
A. I serve on two different boards. I serve as a community board member of the Quantum House, which is a hospitality house, and I serve on the board for the Boys and Girls Club.
Q. So, let's turn to talking about the background of St. Mary's.
St. Mary's has been in the community a long time. Would you tell us about its history?
A. Absolutely. St. Mary's was founded by the Franciscan Sisters of Allegheny, so we have a long Catholic based mission. The hospital was originally staffed and run by nuns.
Today we are -- we still continue that tradition, we have pastoral care, we have a chapel on site. They used to have a convent on the campus which we no longer have. We do have pastoral care, and we have been known more as a safety net for the uninsured population.
Q. What is a safety net hospital?
A. What a safety net hospital means is that the patients otherwise -- they are the underserved. We are the seventh largest provider of Medicare in the state. Ahead of us are children's hospitals, so children, pediatrics receive Medicaid

so the top Medicaid hospitals in Florida are children's hospitals. But our larger population that we treat, that is why we are number seven in the state.
Q. What are some of St. Mary's main service lines?
A. We are, as I mentioned earlier, a level one adult and pediatric trauma program. We are one of 12 designated par I natal intensive care centers, otherwise known as ripic, one in 12 of the state to provide services to low income high risk maternity patients. We have a level three NICU, so we have a very big OB NICU population. We have the only children's hospital between Orlando and Fort Lauderdale, we have a comprehensive service center and an orthopedic program.
Q. Of than those service lines, what sets St. Mary's apart from some of the other area hospitals?
A. I mean, clearly being one of two trauma programs, we are a critical resource in our county. We treated this past year close to 3500 traumas that happened in Palm Beach County. We will handle the patients in northern Palm Beach County. We have a 45 bed level three NICU where we treat, micro premies, babies that weigh a pound, pound a half, 24 weekers, babies that previously would not have survived and thrived. So that uniquely sets us apart, the children's hospital sets us apart from the community.
Q. And you mentioned trauma a couple times?
A. Uh-hum.

Q. For the Court's benefit, what are some examples that the hospital treats?
A. Motor vehicle accidents. Our interstate here, since you are not from Florida, is quite speedy, so there are a lot of motor vehicle accidents that find their way to St. Mary's. Also a lot of penetrating, say, knife wounds and they are patients presented with this is. Equally, given our geography with a town west of us that is an equestrian, we get a lot of equestrian injuries, so if a person is thrown from a horse or stepped on by a horse.
Q. What is the risk to patients to delay of those treatments?
A. Risk being of delay could result in death.
Q. Could you tell us a little bit about the patients St. Mary's serves?
A. Sure. As I mentioned, we are in an underserved area, so that means the patients in our community are very hard working, but their employment is on the lower earning of the wage scale, so we do treat a lot of Medicaid. It is not a robust payer. We have a very low percentage of Medicare, so our Medicare percentage is ten, we have a unique payer mix that we are serving those who otherwise would have no way to receive care.
Q. How many patients does St. Mary's serve?
A. On the admission side we can do about 18,000 admissions a year, over 55,000 emergency room visits, 7,000 or so surgical visits, and I am trying to think of outpatient visits, maybe

35, 40.
Q. One last question on St. Mary's, what makes you most proud of serving as the CEO?
A. I love our patients. I love that we reach out to the community to patients who really look to us to provide care for them. I am particularly proud of our obstetrical program. We were approached by the state to further our reach out into areas outside of our immediate geography to help the high risk moms to reduce infant mortality.
When you see this is back nice our NICU, because they end up in the NICU, and you watch them discharge or graduate, as we call it, that is super rewarding.
Q. So, turning to the accreditation process, St. Mary's is accredited by the Joint Commission, right?
A. We are.
Q. You recently had the Joint Commission come and evaluate the hospital?
A. Yes, January of last year.
Q. Do you have anything that you would like to add to Mr. Cazares' testimony?
A. It is very intensive, there are thousands of criteria that they investigate. They come on site, four to eight persons, clinical person, live safety, administrator, they divide and conquer and go on the floors, speak to patients, doctors. They test the process to evidence that you are maintaining the

standards that we live by every day.
Q. Standing new to the Leapfrog hospital survey, are you familiar with the survey?
A. Yes.
Q. About how long is that?
A. It is about 300 or so pages.
Q. You were a part of the hospital when St. Mary's decided against continuing to participate in the survey, correct?
A. Yes.
Q. Why did the community hospitals stop participating?
A. In the post COVID period we diverted our resources to those that we felt added more value and those that were required for either a regulatory or payer perspective.
Q. Are there any -- are there any surveys or awards that St. Mary's doesn't participate in beyond Leapfrog?
A. When we get surveys from the Florida Hospital Association, or any other associations, if it is not required, we do not participate.
Q. Okay. Let's turn to the grades that Leapfrog has assigned to St. Mary's.
From 2021 to fall of '24, do you know what St. Mary's grades Leapfrog assigned?
A. We had been a B, and then a C, and then, as we have seen earlier, we are now a D.
Q. What did you think happened when you stop participating in

the survey?
A. It was my impression that if we didn't participate we wouldn't get a grade.
Q. Why is that?
A. Because I don't understand how you apply a grade to a survey or a test you didn't take.
Q. Okay. If we could pull up PX 039.5. I am sorry, 36.5. Right here, Leapfrog's web page.
You saw us go through this with Ms. Havericak and Mr. Cazares?
A. Yes.
Q. Can we highlight the doctor's order medication through a computer, hand washing, those three.
When you see the red dials here, what does that tell you about St. Mary's doctors order medication through computer status?
A. It would leave me as a consumer to think doctors don't order medications through a computer.
Q. At St. Mary's you track whether doctors order medications through a computer?
A. We certainly do.
Q. Do the doctors at St. Mary's order medications through a computer?
A. I believe -- it is somewhere in the 90th percentile.
Q. And safe medication administration, that is BCMA?

A. Yes. We have a computer system, so the orders go to the computer system, the nurse scans the patient. Yes, we safely administer medications through the bar code system. That is transported to therapeutics, what our compliance is to make sure we do it safely.
Q. To complete that, St. Mary's tracks hand washing and hygiene?
A. Same thing with rounds, observation and education, multiple steps.
Q. If we were to go to 35.6 to look at the ICU physician staffing, St. Mary's has full-time ICU staffing, doesn't it?
A. Correct. We have full time board certified critical care, intensive care, and full-time board certified intensivists and we have round the clock neuro critical care, bordered neuro vascular for our neuro ICU.
Q. When did you first learn that Leapfrog had assigned St. Mary's a D?
A. It was sometime in late 2024.
Q. What was your reaction?
A. I was surprised because we hadn't taken the survey.
Q. And did you discuss the grade with your team at St. Mary's?
A. I recall discussing it with my quality director.
Q. Did you discuss it with anyone else?
A. I don't recall, it was a long time ago, but I do recall having a conversation. I would imagine, knowing how we

operate, it was probably also discussed with my NCNO.
Q. Would you have discussed it with your medical executive board or governing board?
A. Absolutely, every month. Even when we did participate we would present that at MEC and the governing board, but certainly every month since the grading changed I discussed it at every meeting.
Q. Did the members of the medical executive board have particular reactions to the news that Leapfrog was assigning you a D?
A. The physicians couldn't correlate the D grade to their experience at St. Mary's with the clinical outcomes we perform.
There was some disbelief and perhaps indignation, and they felt that it was wrong, that it was a false -- they felt it was misleading, they felt it was unfair to patients because they didn't feel -- because we didn't participate.
They, too, didn't understand how we got that grade, but they felt particularly with the imputed grades they couldn't understand how we could score 60 points when we meet those metrics.
Q. So you spoke with the quality director, the executive board, the governing board. Anybody else?
A. Any employee who came by upset --
MS. BLAIR: I renew my standing objection to the hearsay comments.

THE COURT: Overruled.

THE WITNESS: I did a lot of education outwardly. I learned a lot about Leapfrog honestly during this. Yes, anyone who came with a question we provided education, and I continued to provide education. I had to provide education because particularly with the governing board it is important to explain when they get asked a question, so that they can -- so they have been educated and can reiterate and explain the Leapfrog methodology and scoring.

BY MR. SIMMONS:

Q. Do you believe the D grade accurately reflects the quality of care that the patients receive at St. Mary's?

A. Absolutely not.

Q. Do you believe the D grade has harmed St. Mary's reputation?

A. I know that it has.

Q. Okay. How do you believe it has harmed St. Mary's reputation?

A. I believe public confidence has been shaken. As recently as yesterday I had a call with a person who had done that brand marketing that has been presented here before which, honestly, I don't ever remember seeing.

My marketing person put a call on my calendar with them yesterday which I thought was wonderful because I got to ask them lots of questions. I asked that they go back and refine

the data. That data is --

MS. BLAIR: Objection to hearsay. Now we are talking about a conversation that happened yesterday, and obviously it is hearsay.

THE COURT: All right. Overruled. Go ahead.

THE WITNESS: So the data we saw earlier about the brand, which I also validated was never sent to the CEO. I was surprised to see it in the -- during the course of this investigation or this trial.

So, anyway, that data is high level market, we are a very big market in Palm Beach. I asked if they could go and extrapolate data specifically for my primary and secondary zip codes because my experience is that our volume, as my colleagues have said, has decreased so significantly by elective, walk-in volumes, outpatient volumes, particularly on the pediatric side, and late yesterday they sent me the data.

MS. BLAIR: Your Honor, she is going to testify about data --

THE COURT: Isn't she talking about a chart you asked -- she is talking about the brand data chart, you introduced it, and asked the first CEO about it, and she had seen it and apparently she never saw it and now has looked at it.

MS. BLAIR: I thought she was testifying to a different document.

THE WITNESS: It was the same document, but that was

for the network, the one in evidence.
BY MR. SIMMONS:
Q. The one we looked at earlier?
A. The one we looked at earlier, that was for the whole Palm Beach network. I asked for my data, if there was a way they could extrapolate it for St. Mary's.
Q. Is this data you look at as a CEO?
A. I had never seen that report, but I was curious so I could understand that to my volume decrease.
MS. BLAIR: I object to the whole line of questioning about documents in -- they are specific to single hospitals that have never been introduced in the investigation. Clearly I asked for them.
THE COURT: All right. I am going to overrule the objection.
You began this by asking the other CEO about that document. You took the position that that data showed that the brand recognition for the network had improved.
MS. BLAIR: Correct.
THE COURT: She disagrees with that.
MS. BLAIR: She has some document she is looking at that I have not seen.
THE COURT: The objection is overruled. You will get a chance to cross-examine her.
THE WITNESS: Late yesterday I asked them to skinny

the scope so it could be to the patients that come to St. Mary's. That is how I look at the area. So I did receive that, and that data showed that in 2024 our -- the brand -- the brand satisfaction was at 78 percent and by December 2025 it was 75, there is a brief that correlates -- I, like my colleagues, have been trying to find out why is my elective walk-in volume down, elective physical therapy volume down.

I did a similar investigation as to any new emergency rooms, free standing, so there is no provider that would have redirected patients. There had to be reason. The only thing that changed in a year was the Leapfrog rating and the new information that I asked for not as a result of this just so I could understand that report that I had seen made a lot more sense to me.

BY MR. SIMMONS:

Q. So, in that -- in your testimony you mentioned walk-ins to the ER are down. Do you know about how much it is down?

A. On the ped side, about ten patients a day.

Q. You know for the general ER?

A. I recall the decrease was so great in pediatrics, but on the adult side it is three or four a day.

Q. Could you bring up PX 550.

As we are bringing that up, do you remember seeing the Excel from earlier today where it listed EMS volume and walk-ins?

A. Yes.

MS. BLAIR: I object to this document, and you did not bring it into evidence. You sustained my the objection.

THE COURT: That is the case. I believe I sustained the objection to this document, and I think -- if you are going to brief it further, but at this point the objection was sustained.

BY MR. SIMMONS:

Q. Ms. McCauley, a little while ago you mentioned -- you talked about patients being harmed by delay.

Generally, why do you think patients have been harmed by the Leapfrog Group?

A. My opinion is that -- or my observation is that over the past year we have seen, as I mentioned, a decrease in our volume through the emergency room, patients who need medical care but are not coming to our emergency room.

The data would also show the number of patients who are being transferred in to St. Mary's, to our emergency room, is on the rise. Particularly in our service area, the number of patients that are being transferred in from Jupiter Medical Center has continued to rise significantly.

For the year ended in 2025, there were 568 requests from Jupiter Medical Center through our transfer center we have a centralized transfer center, so we had 568 request for transfer from Jupiter.

We are in the same primary service area, so they could have chosen St. Mary's first. They have presented to Jupiter, they don't have the capability to treat those patients. 50 percent of those patient requests were pediatric patients, we are the children's hospital and we have 30 or 40 pediatric specialists. Those patients went to Jupiter, were seen, medically screened. They established they couldn't care for the patients, medical emergency, called our transfer center and arranged for the patients to come to us.

Those patients have two impacts, one economic because they are going to have to pay --

MS. BLAIR: Objection, hearsay, speculation, standing objection.

THE COURT: Overruled.

THE WITNESS: You are going to get a bill from there, and St. Mary's. We have to work you up fully and you will get a bill from St. Mary's. Depending on the injury, if you have to go to the OR, any delay in surgery could potentially be adverse to the patient.

BY MR. SIMMONS:

Q. So, a few more questions wrapping up. As St. Mary's CEO protecting patients' safety was one of your core responsibilities?

A. Absolutely.

Q. You take that seriously?

A. Absolutely.
Q. Do you believe your patients will be safe when they come to St. Mary's?
A. Absolutely.
MR. SIMMONS: Your Honor, may I consult with cocounsel?
THE COURT: Yes. Which one did I sustain? He doesn't think I sustained the objection to 560.
MS. MALONEY: 560.2 and you granted my request for further, but PX 560 you did allow it in.
MS. BLAIR: That is not what my notes say.
MS. MALONEY: I have notes from my colleague here. I don't know if your law clerk knows.
THE COURT: All right. Let me see it again, maybe I -- Ramzy doesn't think I sustained the objection.
MR. MARCUS: There was a supplement at the end of the year.
THE COURT: All right. Let's see it again.
MS. MALONEY: I think he just wants to ask her --
THE COURT: This one I did admit. We had the discussion about summaries and all of that. Go ahead if you want to ask a question about it.
BY MR. SIMMONS:
Q. Ms. McCauley, are you able to read this?
A. Yes.

Q. Do you see St. Mary's Medical Center there, walk-ins and EMS s?
A. Yes.
Q. And in the last two rows you see how your walk-in volume is down 5 percent for the past year and EMS s is up 2 percent?
A. Right 2 percent, it is fairly flat. Walk-in is down, and aside from the raw numbers being down, our population here in West Palm is exploding. You would anticipate, given the population growth here in South Florida, particularly in this area, if all things stayed flat, you would still expect it to increase because of the number of families with children living here continues to grow.

MR. SIMMONS: Thank you, your Honor, pass the witness.

THE COURT: All right. Cross-examination.

MS. BLAIR: Yes, your Honor.

CROSS-EXAMINATION

BY MS. BLAIR:
Q. Ms. McCauley, I just want to run through a few things with you regarding your testimony.
Am I correct that you do not -- as CEO of St. Mary's, you do not find any value in the Leapfrog survey?
A. That is correct.
Q. It provides no benefit whatsoever?
A. That is correct.
Q. You don't consider yourself a consumer of the Leapfrog

survey?
A. Correct, especially now that I understand it.
Q. There was a voluntary decision to stop participating in the survey in 2021, correct?
A. Yes.
Q. You testified earlier that you believed you would stop being graded when you stopped participating. Do you remember that?
A. Yes.
Q. What was that based on?
A. That was based on my understanding that if you do not turn in the paper, the survey, someone can't give you a score on information they don't have.
Q. That was not based on some reading of the Leapfrog website that was confusing to you?
A. No.
Q. You would agree that in fact hospitals that don't participate in the survey do get graded?
A. Yes.
Q. When you stopped in 2021, you got graded up until now?
A. That is correct.
Q. At some point when you stopped the survey in 2021 and today you understood that that wasn't true, that hospitals get graded even if they don't participate?
A. I understand that. It became problematic when Leapfrog

changed its methodology.
Q. You mentioned about the numbers of patients, doctors, community members that have come to you and voiced their concerns about your Leapfrog grade, correct?
A. Yes.
Q. You testified to that on direct examination?
A. Okay.
Q. You also answered interrogatories in this case on behalf of St. Mary's, correct?
A. Yes.
Q. I don't want to go through this again, but do you recall you provided the same answers to interrogatory 8. You have been sitting in courtroom today listening to your colleagues testify?
A. Yes.
Q. I showed each of them the interrogatory answers?
A. Yes.
Q. I could show you yours. Pull up the interrogatory answers.
Again, if we start with -- you don't dispute that you signed those interrogatories under oath, correct?
A. Correct.
Q. If we start with number 8, like all the other CEOs, I asked you to identify all persons with whom you communicated, and I asked to you state the date of the communications, and your answer -- if we scroll up, this is your original answer, no

names, no dates, no communication?
A. Right. It explains the groups I spoke to.
Q. Just groups?
A. Correct.
Q. Then you have an amended answer, and your amended answer is here?
A. I see that.
Q. You don't list of any names of any individuals, what they said, how they said it, when they said it, whether it was on the phone or an email. You didn't provide any of that information, did you?
A. My governing board is on my website, their pictures are in my lobby, we clearly can identify who they are.
Q. What about the physicians, can I identify those clearly from documents you produced?
A. You cannot identify specific physicians, but the governing board.
Q. Nurses, can I figure that out from this answer?
A. No, you cannot.
Q. What about patients, can I figure that out?
A. No, you cannot.
Q. It wasn't until you got on the stand today that we heard about these new patients, right?
A. It is not in this answer.
Q. It is not in this answer. Look at number 14. It says:

State whether you are a specific patients in declining -- do you see that?
A. Yes, I do.
Q. I asked you for detail. Here is your answer and you were asked to amend that answer. Did you provide any of that in your sworn interrogatories?
A. The interrogatories state whether you are aware of specific patients. It doesn't say state the name.
Q. It does. Identify patient, the date, the type of service. Did you provide that answer to interrogatory number 14?
A. I did not.
Q. Interrogatory number 22, I asked you a similar question, identify and describe any complaints, concerns, comments from patients, community members, or referring physicians. Do you see that?
A. Yes.
Q. I asked you to identify and describe it. You identified it on the stand today?
A. Yes.
Q. In your first answer you said you received reports, and in your amended answer you cited to some document. Do you see that down there?
A. Yes.
Q. Do you know those documents don't contain any patient name?
A. Nor should they contain patient names because that would be

HIPAA protected. It does say our board of directors have let me know they have spoken with people. I have said twice my board of directors. You could go to my website and see them. I believe in my deposition I named all of the people that sit on my governing board.

Q. And you testified on direct that every month you discussed Leapfrog with your governing board; is that right?

A. Yes, and my Medi group.

Q. Did you tell the board that one of the reasons you have an F is because hospitals that do not participate have an F?

A. I didn't tell the board that.

Q. Did you tell them you have an F is because competitor hospitals manipulate their grade?

A. I don't believe I said that.

Q. What did you tell them?

A. I said the what you are pulling from is old. My colleague, Ms. Havericak, didn't have a HMI for over a year. My metadata, if you pull it today would be seeing any file can't lie improved, our survey, which was explained earlier by the doctor, our sure rate is better than what CMS puts out there, but it lags. Honestly, next year it may change a little, it will be two years for that to catch up with Medicare.

If I pull the surveys, which I believe my colleague, Ms. Havericak, referenced, we get them, we can see them every day. Like Ms. Havericak, my response rate is particularly low,

between seven and 9 percent. So, if you recall the numbers I gave for how many patients come through St. Mary's, it is an extremely low percentage.

So we are working on trying to get more patients who understand the importance of returning the survey, and with that we have seen a marked increase in our patient satisfaction scores, which again, due to the lag won't be evidenced in CMS for a year and a half or two years.

Q. And that lag in the CMS data, that is data available to the public, correct?

A. Correct.

Q. You are talking about your patient satisfaction score, those are HCAPs?

A. Correct.

Q. That is CMS collected data?

A. Correct.

Q. If you could pull up DX 562 Courtney.

Did you listen to Dr. Nicholson's testimony?

A. A little bit.

Q. He said that for participating -- for nonparticipating hospitals the HCAP scores make up 20 percent of the hospital safety grade. That was his testimony, I'm not saying I agree with it, but 20 percent.

A. Okay.

Q. Do you know what your HCAP scores are?

A. It is a one star currently for the lag data you say.
Q. What is your overall CMS score?
A. It also a one star.
Q. I pulled up Exhibit 526. This is Regina West. Did you see that?
A. Regina West to Andrea Nunez.
Q. She says St. Mary's fell from a C to a D. Do you see that?
A. Yes.
Q. So, in 2023 your score was declining. Do you see that?
A. I see that.
Q. She says, let's talk about patient experience as a market spoon?
A. I see that.
Q. Regna West is not only the director of Palm Beach network, she is for St. Mary's as well at this time?
A. At that time, she was.
Q. Does this refresh your recollection, were you a one star CMS hospital in October 2023?
A. We may have been.
Q. If we pull up DX 562. This is a large part of your Leapfrog safety grade?
A. HCAP is part of the safety grade.
Q. That is not Leapfrog?
A. Correct, but it is significantly less.
Q. This is from Regina West, quality director, and this is

April 2024, so this is before the methodology change we are all here about today. She says to you we remain a C, our largest area of opportunity remains in the patient experience category. Do you see that?
A. Yes.
Q. Does this refresh your recollection that part of the reason ear right is not good is because your HCAP scores are not good?
A. Part of the reason why our patient stat scores are not good is our rate is between seven and 9 percent. I can tell you mathematically, finance is my background, if you have a low rate of return, you do not get a higher grade. That is why our focus has been on encouraging patients to complete that survey, and return it within the time frame. They get up to six weeks by which they have to return the written survey, which I am sure you have seen, fill in the bubbles. We are encouraging them to take that to get the feedback.
Q. This is an exhibit that was objected to. If we go to the top, is this your email address around this time.
MS. MALONEY: We withdraw our objection to this document.
MS. BLAIR: I ask this document be moved into evidence, your Honor.
THE COURT: The number?
MS. BLAIR: DX 562.
THE COURT: That is admitted.

BY MS. BLAIR:
Q. If we look at this grid chart on this page --
A. Can you make it bigger?
Q. Can you make it bigger?
Do you understand what this grid is?
A. The top part looks like the CMS categories.
Q. Do you understand this to be the Leapfrog calculator that Leapfrog freely provides to hospitals?
A. I didn't know that.
Q. If I look at CPOE, do you see your hospital score is one hundred?
A. Yes.
Q. The mean is 91.81?
A. Yes.
Q. At this point in time, April 2024, you are not providing any data to Leapfrog?
A. Correct.
Q. You have not participated since 2021?
A. Correct.
Q. Hospitals that didn't participate were getting one hundred points for CPOE and hand hygiene, correct?
A. Yes.
Q. Do you recall you were getting a hundred out of a hundred points for those four categories on the Leapfrog survey in April 2024, even though you didn't provide any data whatsoever?

A. Yes.
Q. The brand document that you just saw, that was related just to St. Mary's, correct?
A. Correct.
Q. If I understand your testimony, you saw the brand document at this trial and you went and called somebody to get a brand document specific to St. Mary's?
A. No.
Q. How did you get this document?
A. By coincidence truly there was a call with CMRC who produces the brand document. I don't know their name, but I have seen it on the documents.

There was a meeting on my calendar. Often times meetings get put on my calendar not at my request. We will call them MARC because it is close to it.

Q. I think it is MARC?
A. I said to them this is very opportune because I have seen a document I have never seen before, so I want to understand it better. We went through the slide deck because the documents presented might have been Q 225 I had seen her and they had the Q 4225 data.

That is not shared with CEOs, I confirm that I said I have never seen this data. So when we went through and got to the slide deck, I was trying to reconcile in my head the math between the decreases I have seen, forget about birth in

population, with what that document -- what story that document would have presented.

So, at my request, I asked could they just do one extrapolation, not create the whole document, it is pretty long if I remember correctly, and I wanted to know from my TSA what was the perception of St. Mary's specifically as related to. So, they said it would take time. That was yesterday morning.

Last night he sent me an email, there was no graph. He said, here's your numbers. Yes, in 2024 you were 78 percent confidence, and by a year later, Q 425, it was 55 percent.

Q. Is that the net promoter score?

A. That is not the net promoter score.

Q. What score is it?

A. It is on what is patients -- how do they feel. My net promoter score is -- that net promoter score is a sentiment of how patients feel about your hospital. That number improved. I don't have the number because he didn't email it to me. This other number for perception of the brand for St. Mary's had gone down.

That number was an indicator of are the patients who went to St. Mary's are happy, would a patient choose St. Mary's or would they choose Jupiter.

We looked at Jupiter and St. Mary's. For St. Mary's it demonstrated that 78 percent last year would have chosen St. Mary's, that is down to 55, and conversely Jupiter was up.

Q. You all talk about Jupiter a lot. Is that one of your competitors?
A. Probably my competitor.
Q. Jupiter is an A Leapfrog hospital, correct?
A. Yes.
Q. And they are A in the media?
A. They are.
Q. It is a 4 star CMS hospital?
A. I don't know.
Q. They are Leapfrog rated?
A. Yes.
Q. Did you know the Leapfrog rating before the lawsuit?
A. I don't know.
Q. You talk about the patients transferring from Jupiter to your hospital?
A. Correct.
Q. Had any of the transferred patients tell you they went to Jupiter first because of the Leapfrog rate?
A. I have not had conversation with the 569 patients. I do know factually they presented first to Jupiter. I know that ten of those patients who went to Jupiter called to transfer to St. Mary's declined to come to St. Mary's under patient preference, whatever that means. I don't want to go to St. Mary's. I asked if they could get me transcript on those, why those ten patients said, no, I will stay here.

Q. What time frame?
A. I looked at 2025.
Q. A whole year, 2025?
A. Correct.
Q. You believe documents exist that patients didn't want to come to St. Mary's because of the Leapfrog score?
A. I don't think that is what I said.
Q. What did you say?
A. A patient, if you want to transfer me from Jupiter to St. Mary's, if you say I don't want to go to St. Mary's, that is documented. I have not read the notes, but it is a patient preference.
Q. You are not trying to tell this Court that patient didn't come to St. Mary's because of the Leapfrog rate?
A. I am saying it is ten patients who needed medical care who when given the option of coming to St. Mary's said no.
Q. Maybe they liked Jupiter better?
A. Jupiter couldn't provide the care.
Q. It is wholly speculation on your part about why any patient didn't want to be transferred to St. Mary's?
A. I don't think I speculated on why they didn't want to be transferred. I said that was the number of patients documented said I don't want you to transfer me to St. Mary's.
Q. So I am clear, you have information about patients and nurses, doctors who spoke to you about the Leapfrog rating?

A. Yes.
Q. None of it was put into an interrogatory answer, correct?
A. I mentioned it to the board of governors and those define who they are.
Q. You didn't tell me any nurses' names?
A. Correct.
Q. You didn't tell me any doctors' names.
A. Correct.
Q. Patients' names?
A. Correct.
Q. With respect to the ten pediatric -- I think you said ten peds a day that don't come to St. Mary's. Did I understand that correctly?
A. Our emergency room pediatric elective walk-in volume is down approximately ten patients a day.
Q. From when to went?
A. '24 to '25.
Q. Have you produced that information in this case?
A. I note that we just had this -- so the data that previously had volume data was only through whatever time period, might have been April or so. This data that we just had on the screen ten minutes ago was a full year, full calendar year, but the earlier data was presented to the best of my knowledge, but it was through whatever period of time, whether it was through April or Q 1. I don't remember.

Q. Revenues are up at St. Mary's?
A. Revenues are up, but revenues come from many different sources.
Q. And we talked about brand recognition?
A. Yes.
Q. You got this document that said you went from a 78 percent in some category to a 55 percent in another category?
A. Yes.
Q. Your nursing retention has not declined, right?
A. We work very hard on our nursing retention.
Q. And no physicians have left the hospital because of the Leapfrog grade. You didn't testify about that, correct?
A. Correct.
Q. Transfer rates are not down. In fact, we are talking about the fact that they are up?
A. Correct, which means they are choosing somewhere else first.

MS. BLAIR: No further questions, your Honor.

THE COURT: Is there redirect?

MR. SIMMONS: Just a few points, your Honor.

REDIRECT EXAMINATION

BY MR. SIMMONS:
Q. Ms. McCauley, do you recall when you were asked about CMS data?
A. Yes.

Q. You gave an answer that it would take two years to catch up with Medicare?
A. Yes.
Q. You explain CMS data is two years --
A. In arrears a year and a half or so. The current data is '22, '23.
Q. Do you recall your testimony about the HCAP survey?
A. Yes.
Q. Why is that survey data low?
A. So, a couple of reasons. We do get, I don't recall the percentage of return mail because we serve the underserved population. Some of our patients may not get address, they may not have a real address, and we do send the survey out in Spanish and English. We do have a population that only speaks Creole, so they would not understand Spanish or English.

I personally have received the survey, I felt it is burdensome. I can share that I have spoken to people who have been patients, can you please take the survey, and they will apologize, it is all --

MS. BLAIR: Objection, hearsay, your Honor.

THE COURT: Overruled. She is explaining the problems with the survey. Let's finish up.

THE WITNESS: Like the scan tron, you bubble in the circle.

BY MR. SIMMONS:
Q. A few more questions. You were asked about the patient experience. The HCAP survey is patient experience, correct?
A. Correct.
Q. What does patient experience include?
A. Likelihood to recommend, communication with doctors, people work as a team.
Q. Does it include safety?
A. On the patient experience side?
Q. Poor question.
A. I am sorry.
Q. What is included in safety in your experience in the health care field?
A. Safety would be HHI possible infections.
Q. Are there other things that might be included in safety, infections?
A. Infections is a major focus for us.
Q. You testified about patient transfers from Jupiter.
In your experience, have you ever seen transfers at such a high level?
A. They continue to increase. So, to answer your question, they have not been at this level in the past.
Q. So, in all of your experience with seeing transfer data have you ever seen transfer data so high?
A. I have never seen it as high.

Q. The last question: Do you recall being asked about your St. Mary's revenue being higher than the previous year?
A. Correct.
Q. In your experience in finance, could it be even higher but for Leapfrog's grading?
A. Yes, absolutely. Had we not lost the volume through the emergency room, the outpatient physical therapy, outpatient surgery. It depends on the mix of the patients you have. We have worked hard to grow our medical tourism, and that has grown our revenue more so than perhaps and obstetrics patient.
THE COURT: All right. I hope you have a good weekend. We will not be in session Monday, as you remember.
One thing, let's on the exhibit list do some work. Let's have the ones you have agree to admit identified. So before we seek to admit one that hasn't been agreed, somebody tells me that ahead of time.
In terms of witnesses, where are we? Are you going to call everyone on the witness list?
MS. MALONEY: No. We are going to scale some of this back, and we will work on it this weekend and advise our colleagues before we get in to you on Tuesday.
I believe we will be able to drop off one of our experts as well as one -- at least one of our witnesses who are examining. We really have CEOs, the experts, and Regina West who we will be calling in our case by video.

MS. BLAIR: We object to their calling Regina West, she was not listed. They designated her just two days ago. They now want to call her. Obviously, she was their witness. We called her in our case in chief, so we do object to them adding her late, two days ago, to their witness list.

THE COURT: You say you are going to call Regina West.

MS. BLAIR: I was going to call Regina West.

MS. MALONEY: She is by video and we would like to play the designations of her in our case. We reserved the right on December 29th when we filed the pretrial stip, any testimony that has --

THE COURT: Okay. If you are calling her in your case, you can't claim surprise.

They can do it, I need the same thing from you, I need to understand which witnesses and which exhibits if you would. So that we were a little disorganized today. A lot of it is my fault, I jumped into this not using my usual care on the exhibit list. I am relying on you all. If you have agreed on an exhibit, identify the exhibit number, you can use it. If it is not agreed, tell me at the outset.

MS. BLAIR: One question on the Regina West. Is it your position that they can designate additional testimony that was not designated previously?

THE COURT: I haven't looked at any of the designations.

MS. BLAIR: That is my objection, now we will see --

MS. MALONEY: We have 14 minutes of Regina West designations. To contrast that, they have an hour and 50.

THE COURT: Who is she?

MS. MALONEY: Quality manager for the Palm Beach Hospital Network, and she was also the quality person for St. Mary's.

Ms. McCauley just testified about her, and counsel has put up documents about her. We would like to play it in our case in chief, and it sounds like they have about two hours to play that for you. That is how we would like to do it for Ms. West.

THE COURT: All right. I will look forward to hearing from Ms. West by video. Have a good weekend. See you Tuesday at nine o'clock, tell me what you want to do about lunch, and things like that.

MS. MALONEY: Those CEOs, we appreciate you making the point earlier. If they don't have to be here next week as Plaintiffs, they can go back to work. We'll send them back, thank you.

THE COURT: All right. Good. There may be on Wednesday a couple of interruptions. Jeannie will tell you about that.

(Thereupon, the Court was recessed.)

* * *

I certify that the foregoing is a correct transcript from the record of proceedings in the above matter.

Date: January 19, 2026

TRIAL TRANSCRIPT

VOLUME 2

UNITED STATES DISTRICT COURT
SOUTHERN DISTRICT OF FLORIDA
WEST PALM BEACH DIVISION

CASE NO. 25-CV-80526-MIDDLEBROOKS

GOOD SAMARITAN MEDICAL CENTER, INC. et al,

Plaintiffs,

vs.

THE LEAPFROG GROUP,

Defendant.

West Palm Beach, FL
January 20, 2026

BENCH TRIAL PROCEEDINGS
BEFORE THE HONORABLE DONALD M. MIDDLEBROOKS
UNITED STATES DISTRICT JUDGE

APPEARANCES:

FOR THE PLAINTIFFS:

MARY BETH MALONEY, ESQ.
KEVIN SIMMONS, ESQ.
SYDNEY A. SCOTT, ESQ.
LEE R. CRAIN, ESQ.
SCOTT K. HVIDT, ESQ.
Gibson, Dunn & Crutcher LLP
1700 M Street NW
Washington, DC 20036
202-887-3729

JEFFREY E. MARCUS, ESQ.
Marcus Rashbaum Pineiro & Meyers LLP
2 S Biscayne Boulevard
Suite 250
Miami, FL 33131
305-400-4260

FOR THE DEFENDANT:	**KIMBERLY E. BLAIR, ESQ.** **COURTNEY WOOD, ESQ.** **JURA ZIBAS, ESQ.** **MAXWELL BILLEK, ESQ.** **Wilson Elser Moskowitz Edelman & Dicker LLP** **161 N Clark Street** Suite 4500 **Chicago, IL 60601** 312-704-0550
Official Court Reporter:	**Pauline A. Stipes** West Palm Beach/Ft. Pierce, FL HON. DONALD M. MIDDLEBROOKS 561-803-3434

THE COURT: Good morning.

MS. MALORY: Your Honor, we will play the video of Regina West.

(Thereupon, the video of Regina West was played.)

MS. MALORY: Your Honor, that is the end Ms. West, and those are 14 minutes of our designations and the opposing party's 42 minutes of affirmative designations. If you like, we can call our next witness.

THE COURT: Yes, please.

MS. MALORY: We will call Professor Berger. Mr. Lee Crain, who represents Good Samaritan Hospital, will be examining Mr. Berger.

JONAH BERGER, PLAINTIFFS' WITNESS, SWORN

THE COURT: That microphone will move towards you.

MR. CRAIN: Your Honor, I have a set of demonstratives and a list of exhibits contained in the demonstratives.

THE COURT: Okay.

MR. CRAIN: Your Honor, may I proceed?

THE COURT: Please.

DIRECT EXAMINATION

BY MR. CRAIN:

Q. Good morning, Dr. Berger.

A. Good morning.

Q. Can you please introduce yourself to the Court?

A. Sure. My name is Professor Jonah Berger, I am a marketing

professor at the Wharton School, University of Pennsylvania.
Q. Generally, what is your role in this case?
A. I am an expert witness for the community hospitals.
Q. Did you prepare a series of slides to assist in your testimony today?
A. Yes, I did.
Q. Can you see those slides on your screen?
A. Yes.
Q. Did you prepare a slide that summarizes your qualifications?
A. Yes.
Q. Can you introduce yourself to the Court and give him a general background of your qualifications?
A. I am a professor at the Wharton School, University of Pennsylvania. I have been there since 2007, tenured in 2013. Prior to that, I got my Ph.D. in marketing from Stanford Graduate School of Business. I also have an undergraduate degree in human judgment and decision making from Stanford University as well.

In terms of scholarship, I have published over 80 academic peer reviewed articles and publications and journals in both marketing, psychology, as well as broader science outlets. This work has been cited over 28,000 times. It focuses on issues like consumer behavior, information processing, how consumers make decisions, and how the content they consume both

online and off line shapes their judgment and decisions.

I am also an international best selling author, and at this point I have testified as an expert in a number of different cases and deposed at times and gone to trial a number of times on issues related to consumer behavior, information perception and the like.

Q. When you say you have gone to trial, have you been qualified to testify as an expert at trial?

A. Yes, I have.

MR. CRAIN: Your Honor, at this time, Plaintiffs tender Dr. Berger as an expert witness in marketing, consumer behavior and how consumers process information.

MS. BLAIR: Your Honor, to the extent that is the only area in which they are offering Dr. Berger we have no objection. We do have objections to the opinions he is about to give as they don't help the trier of fact, and we believe they are common sense, and to the extent he gives opinions related to Google analytics and how consumers are likely to understand analytics, there is no research cited in Mr. Berger's opinions anywhere that a proper method is Google analytics for that determination in this type of case.

THE COURT: To the degree I dealt with those in the order with respect to the Daubert motions the objection is overruled. If you have a specific objection as he goes forward, please identify it.

MR. CRAIN: Thank you.

BY MR. CRAIN:

Q. Dr. Berger, did you prepare written expert reports in this case?

A. Yes.

Q. Why did you submit more than one?

A. There was some data that was not available at the time I submitted my first report, and so I also submitted a supplemental report.

Q. When you say data, what data?

A. The Google analytics data that was just discussed.

Q. Did you come to certain expert opinions in this case?

A. I did, yes.

Q. Can you please give the Court a general summary of what those are?

A. Sure. So, while the Leapfrog Group purports to disclose information about the imputation methodology, it is unlikely that consumers either understand the specific methodology used, so the minimum score was applied, or the impact of that minimum score application on the hospital grades and nonparticipating hospitals.

Further, DNF hospital grades likely negatively impact consumer perceptions of the community hospitals as well as deter consumers from choosing to receive care from the hospitals.

And further, future repeated publication of such grades are likely to have ongoing and further detrimental impacts on the community hospitals.
Q. Did you prepare a series of slides to walk the Court through how the consumer would access the website?
A. Yes.
Q. Is this one of the slides?
A. Yes.
Q. Can you tell the Court what you are seeing here?
A. This is literally Google's home page, so if a consumer went to Google to look something up, this is where they might start.
Q. And why might a consumer search for health care information?
A. Hospitals are often described as credence good, which means that many consumers don't have the expertise or knowledge to infer quality on their own so they often look to outside sources for that information. In today's age one of the places is the internet, so people may go there for information to help in their decision making.
Q. Professor. What is this slide?
A. This is search results, and if you type in safe hospitals in Florida, the exact result depends on prior search history as well as other things. In this case one of the search results is hospitalsafetygrade.org, and a consumer will click on this website to learn more about the hospital safety grades that are

contained there.
Q. Professor, is this hospitalsafetygrade.org?
A. Yes.
Q. Can you explain to the Court what we are seeing here?
A. This is a website where consumers can look up information about different hospitals and their safety grades. On the right side of the screen it says, how safe is your hospital, and consumers can search below to find out. Some may go by city and state. They may type in Delray Beach, Florida, hit search.

When they do that, a set of results will come up based on that search. In this case 31 different hospitals come up in that area, sorted by distance in this case.
Q. Does this, as you said, show the results when a user searches for Delray?
A. It does, yes.
Q. Can you describe what is on the left-hand side of the screen?
A. Sure. Next to each hospital there is an associated hospital grade. These are the fall 2025 grades, most recent grades. This is the grade that Leapfrog has assigned these hospitals, and in this case Delray Medical Center has received an F grade.
Q. In your opinions, and as an expert in marketing and how consumers process information, what does an F or D convey to

consumers?
A. Sure. Many people are familiar with grades from school, obviously an F grade in school is not a good grade. More generally, these types of grades are an example of what are often called value labels. A bit of research shows that value labels, grades, A through F, colors, like a green, yellow, red, maybe a happy face, neutral face, frowned face, all of these can help consumers interpret otherwise numerical information.

Research finds that when combined with -- added to numerical information, these grades often -- things like these grades, labels impact consumer judgment, and encourage consumers to make certain inferences and drive their perception in a particular way.

I will also add that in situations like this, consumers often use heuristics to simplify decision making. When decisions are difficult or someone does not have a lot of knowledge they often simplify those decisions and apply simple rules.

In this case they may say there are a number of hospitals here, I don't know which one to collect more information about, but one has a C and one has an F, I won't look further. I will use that grade to focus on the hospitals that have better grades.

Q. Do you have an opinion about whether and how D and F grades can impact a consumer's perception of a hospital's reputation

or brand?
A. Yes. As we talked about, one of the opinions in my report is that hospital grades, D and F grades likely negatively impact consumer perceptions of hospitals, whether it is reputation or the brand, because it suggests negative things about that hospital's safety.
Q. Does negative information about a hospital such as a poor grade have a more lasting effect on consumers than positive information?
A. Negative information can do a few things the research shows. One is that it causes people not to look further or look at other options instead. If something has a lot of negative information, I will spend my time looking at something else, and they are less likely to see other positive information.

In a situation like this where the question is safety, consumers are coming because they are expecting hospitals to be safe, and they feel betrayed when there is negative information suggesting the exact opposite. That may be concerning to them and further damage perception.
Q. Is that perception, the effect you are talking about, is that true when grades are published continuously?
A. I talked about the repeated complication of such grades. There is a good deal of research showing that repeated exposure can strengthen the impact of that information. So, repeatedly

seeing the same grade or similar grades over time for a hospital can have further long-term damage on the perceptions.
Q. Thank you, Professor. Turning back to the search results, do you see the line that says, view the full score?
A. Uh-hum.
Q. Where would that take a user?
A. If we click on that, that would take you to the safety grade page. This is Delray Medical Center, and this is the page for Delray Medical Center.
Q. In your opinion as an expert in how a consumers absorb this information, is it likely a consumer seeing that F grade we saw before would click on that?
A. One thing consumers may do is say I am going to focus on the one that has better grades and ignore the ones that have F grades. So many consumers may not even make it to this page.
Q. Can you orient the Court more on what we are seeing on this page?
A. This is the top of the page, there is other information, but consumers can't necessarily see that information without scrolling further down. Some of the information includes a map of directions, address, but prominently featured with a large letter grade associated with it is that hospital grade.
Q. Professor, if we scroll down, could you describe for the Court what we are seeing?
A. We could call these gas gauges in some sense as you see in

a car. This is a label suggesting how to interpret otherwise numerical information. In this case, these are some of the measures that go into the hospital safety grade.

On the infections tab, within this are six measures and each measure is represented by a gas gauge showing whether the hospital scores better than average, worse than average, or around average.

Q. If a consumer is looking at this page, is there any indication that they should scroll down to see footnotes?

A. No. Consumers have not even seen the footnotes yet. Unless they scroll, they don't even know the footnotes are there.

Q. Are there any call letters?

A. I don't see any, no.

Q. If you scroll down, Professor, what do you see at the bottom?

A. These are the footnotes as well as some language associated with them.

Q. Is one of them Footnote 1?

A. Yes.

Q. Footnote 1 states -- do you see it at the top?

A. Yes.

Q. Number 1, declines to report, the hospital was not asked to provide -- the hospital was asked to provide the information to the public, but did not. Did I read that correctly?

A. Yes.
Q. The second time?
A. Second time.
Q. Is this the web page for Delray Medical Center?
A. It is.
Q. Does Delray Medical Center participate in the Leapfrog survey?
A. I believe they did not participate.
Q. Is this Footnote 1 only available on the hospitals that do not participate in the survey?
A. It is also available for hospitals that do participate in Leapfrog. All the participating hospitals I have viewed also have this footnote as well.
Q. With respect to Footnote 1, is there any differentiation between participating and nonparticipating hospitals?
A. Not that I could tell, it appears to be on both.
Q. Do you see a tab on the right that says, doctors, nurses and hospital staff?
A. I do. Yes.
Q. Did you consider that tab in forming your opinions?
A. I did.
Q. So, what do we see here, Professor?
A. Again, this is an example of one of the five tabs under which there are six measures. In this case, two of the measures, rather than having a gas gauge appear, say declined

to report. Not all do, but the first do have a question mark with the language declined to report.

Q. What does that convey, the distinctions between the question marks and the red gas gauge there?

A. Yeah. What is puzzling here is that none of the measures are measures for which they have data from the nonparticipating hospitals. Two are noted declined to report and one is not.

A good bit of academic research shows that in situations like this consumers don't only use information provided to evaluate something, they also use the information omitted. The fact that the third one, specially trained doctors care for ICU patients, does not have declined to report, consumers are likely to make an inference this is based on data, based on data whereas the other two, there is not available data to form an inference for those.

Q. Your opinion about the three blue boxed measures, what is that based on?

A. Based on academic research and deductive reasoning and understanding of the website and my experience in the space.

The third item is one of the imputed measures, one which Leapfrog is imputing score noting a hospital performs worse than average even though for all three of the measures they don't have data from the hospital.

Q. Did you understand from reviewing the case, whether Leapfrog has data for the first three measures?

A. I don't think they have any data for any of those three measures.
Q. Have you reviewed any evidence that has come into records after the report was rendered that may, in fact, affect your opinion?
A. Yes. I reviewed a number of depositions, for example, and they don't change my opinion. Some of the depositions probably corroborate evidence consistent with my opinions.
Q. Is some of that evidence depicted on this slide?
A. Yes, this is Defense's expert Mr. Vredenburgh.
MS. BLAIR: Your Honor, we are going to object. This is the first time we are hearing it today.
THE COURT: Overruled.
BY MR. CRAIN:
Q. You may continue.
A. Their expert, Mr. Vredenburgh, noted that my opinion would be a good practice to be used for the other gas meters as well when the data is missing.
Q. How did that affect your opinion?
A. It does not change my opinion, but it is consistent with my point that it is not clear why those are first two measures they declined to report, and the third is not given they don't have data for the hospital.
Q. Professor, did you also consider another footnote?
A. I did. Yes.

Q. Is that footnote called Footnote 4?
A. It has the number 4 next to it.
Q. Have you prepared a series of slides to demonstrate where to find Footnote 4?
A. Yes.
Q. Are they on the screen?
A. Yes. This is the infections tab, so if a consumer has done no clicking, just scrolling, this is the information they see. Anything else, to go to the other tabs requires clicking and making a choice to do that. If you look down at the bottom of the page the section where we have footnotes, a footnote does not appear on this page at the moment.

What I am going to show you here, I will go through additional measures both on this tab as well as other tabs to see if and when the footnote appears.

If you wouldn't mind slowly clicking. It does not, does not appear here, does not appear here. Click the last few times. There are six measures, for none of the six measures does Footnote 4 appear.

Go to the next tab. Seven measures here, nothing changed on the bottom of the screen, so it is not that exciting. Footnote 4 does not appear for any of the measures. We have been through 13 measure. Click on the third tab. Again, there are seven measures here, but the same thing is going to happen. In none of the seven measures does Footnote 4 appear at

anyplace on the screen.

So, it is not until you get to the fourth tab, practices to prevent errors, clicking on that would lead -- finally, as we see here, Footnote 4 shows up at the bottom of the screen.

Q. Approximately how many times have you had to click that, Professor?

A. I believe it was 23 times.

Q. Are consumers likely to click that much after seeing that?

A. As we talked about it already, consumers may not make it all the way down to the page to begin with. More steps required, would make them less likely to do it. There are multiple ways to get to this page, given the number unlike consumers make it here. To be clear, on four of the 32 measures, 32 of these gas gauge measures, only four of them, a small percentage, does that Footnote 4 appear at the bottom.

Q. On the bottom pages, is there a fourth call out somewhere?

A. No, there is not. There is no, what you want to call it, a sub script or super script, no such number appearing on the page.

Q. Is there another way to identify it?

A. I believe there is a star next to the 4. I don't see a red star, but there is a small black star next to number 15 under the hospital score.

Q. Do you have an opinion how consumers might understand what the safety grade means if they don't see a footnote?

A. Yes. I believe if we go to the next slide -- sorry, I think the slide after this -- maybe we can talk about hand washing first. If you want to go back one. Yes.
Q. So, Professor, can you tell the Court what this is conveying?
A. This is another one of the measures on the practices to prevent errors, hand washing, and it notes what safer hospitals do, provide training, implement policies to make sure that all hospital staff cleans their hands before touching a patient. It notes that hospitals can earn up to a hundred points for having a hand washing policy.
Q. Does this measures have one of the value labels?
A. It does. It uses the gas gauge and it shows Delray Medical Center performs worse than average.
Q. Does that gas gauge contrast to the question mark on the page?
A. Yes. On a different tab here is that declined to report measure again, so consumers would be likely to infer there is no decline to report for hand washing, that is based on real data that indicates performance.
Q. Professor, I want to draw your attention to the hospital score. Do you see that?
A. I do, yes.
Q. Is the score there 15?
A. It is, yes.

Q. It is not zero, right?
A. No. It is 15.
Q. What is conveyed to the consumer on this page about hand washing in your expert opinion?
A. As we talked about already, this is suggesting for this hand washing measure there is not a decline to report, so consumers are likely to infer this is based on data on nonperformance.
Q. Do you have an opinion on what consumers would perceive if they don't see the footnote?
A. Yes. Go to the next slide. This is testimony from Mr. Vredenburgh. He himself notes -- when asked, what if a user does not scroll to the footnote, he notes if the consumer didn't scroll they, the hospital, would likely receive the worst score and they would not necessarily know about the notation. They would think they, the hospital, does the opposite of what best hospitals do, right? He says yes.

He is suggesting himself that consumers would be likely to infer the hospital is not doing what best hospitals do if they don't make it down to the footnote.

Q. Who is Mr. Vredenburgh?
A. He is an expert on the other side in this case.
Q. Before we shift gears, are there other ways that a consumer can interact with the website?
A. Yes. In today's day and age consumers often look

information up on their phones, particularly when they are not at home on their desk top. Whether they are on the go, they are in a car, they may be in a hospital waiting room, a variety of places, consumers often use their phones to consume content online.

Q. Can you describe how the mobile interface differs from the desk top?

A. I have looked at the mobile interface, I don't want to say it is exactly the same, but qualitatively similar.

That F grade, for example, for Delray is prominently featured at the top of the page, they can see that grade, they cannot see the footnotes without scrolling. It requires clicking to get to additional measures, which given the phone interface is smaller, it may be difficult and research shows they may be less likely to engage in additional clicks when going through websites on their phone.

Q. You mentioned that the screen is smaller. Does the F grade take up more real estate on a phone than on a desk top?

A. A portion of the screen, yes, because the screen is smaller.

Q. Professor, I want to talk about Footnote 4 in more detail.

A. Okay.

Q. Is this Footnote 4 we saw through our journey through the website?

A. Yes.

Q. Can you read it into the record?
A. "The hospital declined to report their performance on this measure so the score was assigned to reflect the lack of information available."
Q. Did you enter an expert opinion about what this conveys to consumers?
A. This says nothing about the score that was assigned. There are various ways a score could be assigned, but Leapfrog had a choice and assigns hospitals the minimum score which it calls achievement. There is nothing in the sentence that says anything about lack of achievement or minimum score.

Consumers are unlikely to understand either the exact nature of the imputation methodology used, the score that was assigned, no information here, or the impact, and I should say or the impact on hospital safety grades.
Q. You say a score was assigned. Does the footnote convey how it was assigned?
A. No. It neither says what particular score is assigned nor why that score was assigned.
Q. What is the basis of your opinion in this regard?
A. I have read through the documents in this case. I have looked at academic literature, decades of experience both teaching and doing research on how consumers process information, what language does or does not convey I have a recent book all about the impact of language. I have a good

deal of expertise in that area.
Q. You mentioned footnotes. Footnote 4 does not explain how a score is assigned. Is there another page that explains to some degree how a score is assigned?
A. I wouldn't call it a page, but there is document that consumers may or may not get to. There is another document with more detail about the imputation methodology.
Q. Do you have an opinion about how easy it is for consumers to get to that document?
A. Yes. Most consumers are unlikely to make it to that document given the number of steps required. I have data that shows only a very small percentage make it to that document, let alone reach the page where the relevant information appears.
Q. Professor, have you prepared a series of slides that walk through the steps consumers might take?
A. Yes.
Q. Can you walk us through those.
A. This is the page we have seen, this is the information on top. The consumer has not done any work to scroll down the page.
If you click, please. This is the middle of the page. Going down to the bottom of the page. Click again.
This is a zoomed out version so we can get a sense of what the information on the whole page looks like.

If you wouldn't mind clicking again. We go to the right side, in addition to the various options here, a variety of things consumers can click on, hospital safety grade, a whole bunch of drop downs on top. If someone navigates to the right side, we see the past grades. There is a link that says detailed table view, doesn't say what the detailed table view is. If you click on that link that takes you to the detailed table view page for Delray Medical Center.

Q. Is this that detailed label here?

A. It is.

Q. Is there any link to the document we have been talking about visible here?

A. Not initially, no. It requires the consumer to scroll down a large amount, measures, scores, and if one scrolls all the way down to the bottom of the page, not everyone necessarily will engage in that action, there is a link there that says, for a full description of the methodology click here. If someone decides to scroll all the way down and click there, that would take them to the methodology document.

Q. Is it in that document, Professor?

A. It is, yes.

Q. Did you have access to any data to help form your opinion about how likely or easy it is for consumers to access this document?

A. Yes, I have data on the actual number of consumers that did

access that document.
Q. What is this?
A. This is the Google analytics data we have been talking about.
Q. Is it on the chart?
A. It is.
Q. Could you walk us through what this chart depicts?
A. There are three bars. The first bar is the number of individuals over the period that viewed a community hospital safety grade page. The Delray Medical Center page we saw, that would be counted.

That green bar next to it is the percentage of the consumers who went to a community hospital safety grade page who also then saw the detailed table. Consistent with what we talked about, not all consumers make it there, only 8 percent of individuals who viewed a community hospital safety grade page made it.

We then look at the purple bar, that is three percent of the hundred percent not only made it to the detailed table you but -- to be clear, the information relevant to the imputation, details of the imputation is not on the first page. We will get to it. It is multiple pages in, 15 pages in on a 28-page document, but only three percent of the people that viewed the safety page made it to the document at all, let alone saw the detailed methodology.

Q. How did the data affect your opinion about how easy it is for consumers to access this document?
A. This is consistent with my discussion, they are unlikely to learn from this document because most don't make it there.
MR. CRAIN: Your Honor, may I approach the witness?
THE COURT: Yes.
BY MR. CRAIN:
Q. I hand you Plaintiffs' Exhibits 471 through 480.
They have not been admitted, your Honor.
Professor, what are these documents?
A. These are printouts of the Google analytics data we talked about already. These underlie the analyses on the screen in front of us. There are ten documents, two for each of the five community hospitals. One of those two documents for each hospital shows the proportion of consumers who view that hospital safety grade page, that make it to the detailed table view. That is the green bar we talked about.
And the other document shows the percent that make it to the methodology document, that is the purple bar. Together these ten documents make up the data that underlie this.
Q. Professor, go to the bottom right corner. Do you see what is known as a Bate stamp?
A. I do, yes.
Q. Does that say Leapfrog with a series of numbers?
A. It does, yes.

Q. Do you know who produced these documents?
A. Yes, Leapfrog did.
MS. BLAIR: Your Honor, I object to that because it was a site inspection done --
MR. CRAIN: I am getting there.
BY MR. CRAIN:
Q. To counsel's question, how were these documents produced?
A. My team went on a call with Leapfrog's counsel and inspected Leapfrog's Google analytics account and the data and got this data from that as part of that interaction.
Q. Did Leapfrog's counsel then send that to the community hospital representatives?
A. Yes.
MR. CRAIN: Your Honor, we move to admit Exhibits 471 through 480. The Defendant raised a relevance and unfair prejudice objection which your Honor dealt with --
MS. BLAIR: We waive authenticity, we withdraw our objection.
THE COURT: 471 through 480 are admitted.
BY MR. CRAIN:
Q. Doctor, I would like to return to your slides.
A. Okay.
Q. Going back to this document again?
A. Yes.
Q. How many pages is this document?

A. I believe this is the fall 2025, so I believe it is 28 pages. The spring version which I used in my initial expert report had 30 pages.
Q. You mentioned there is information about imputation. Where is that located?
A. As shown in the table of contents here, there is a lot of information in this document, but the detail about the imputation method doesn't appear until slide 15.
Q. Professor, is it your position that a reasonable website user of Leapfrog would understand in this document?
A. It is not clear to me that a reasonable website consumer would understand this document. As we talked about already --
MS. BLAIR: I object, your Honor, calls for speculation.
THE COURT: Overruled.
BY MR. CRAIN:
Q. You may continue.
A. As we talked about, only a small portion of individuals make it this far to the document itself, and many of them are unclear that they would understand all of the content contained in there.
Q. Earlier we talked about how patients seeking care might come to Leapfrog's website. In your opinion what is the likelihood that a sick patient might get this far?
A. As we talked about already, particularly given the negative

grade up front, and the fact that that information might discourage consumers from collecting additional detail, that alone would make it unlikely that it would make it this far --

MS. BLAIR: Your Honor, I object to these opinions. They are not being given in any degree of likely certainty within his professional capacity. They appear to be individual opinions not based on any support or analysis in his report at this time.

THE COURT: The objection is overruled.

BY MR. CRAIN:

Q. You may continue.

A. I think I was essentially done.

Q. If you need to have it read back --

A. That is okay.

Q. Professor, you reviewed this document to come to your opinions?

A. Yes.

Q. Was there anything notable in this document that drew your attention?

A. Here, this is page four, there is a discussion that is not highlighted which talks about how Leapfrog is not able to calculate a safety grade for every hospital in the United States. One of the bullets which is here expanded to make larger notes that -- suggests that they are not able to calculate safety grades for hospitals that are missing scores

for more than six process measures.
Q. Why did this language draw your attention?
A. It is my understanding as part of this case that the community hospitals are missing seven process measures. It is not clear, based on this logic, why Leapfrog was able to calculate a safety grade.
Q. Is it because they say they cannot calculate a safety grade when they are missing six measures?
MS. BLAIR: Objection to form.
THE COURT: Overruled.
BY MR. CRAIN:
Q. Does that mean they cannot calculate a safety grade because they are missing six process measures?
A. Yes, more than six. Seven is more than six.
Q. I take you to page 15. Scroll down. Can you describe what we are seeing there?
A. Yes. Page 15 has a bunch of information about using secondary data sources as well as imputation method and they have some steps regarding imputation method.
Under step two, it notes if a hospital does not have historical data from spring and fall of 2024, the safety grade is assigned a point value that is equivalent to receiving limited achievement for its measure on the Leapfrog hospital survey.
Q. Does this describe the rationale for assigning the lowest

possible score?
A. This says limited achievement is received, but does not say why.
Q. Did you review any evidence, stepping back, that affects your opinion of how a consumer might access or review this document?
A. It doesn't change my opinion, it corroborates my opinion.
If we go to the next slide, these are further quotes from Leapfrog's own experts testifying that the methodology document is not accessible to the average consumer. Mr. Vredenburgh, when asked: If I recall, this methodology document is dense, right, he says, yeah, it appears that way. When asked: This is not a document a typical user would read, right, he said correct.
Similarly, when the Leapfrog CEO was asked: Do you think the scoring methodology is easy to understand for a layman, she answered, the document on the scoring methodology is not that accessible to the average layman.
Q. Thank you. We are coming to the home stretch.
I want to talk about the impact of Leapfrog's safety grades on consumers and hospitals. Do you have any opinions about the impact of D or F grades on consumers or hospitals?
A. Yes. As we talked about already, D and F hospital safety grades likely negatively impact consumers' perceptions of nonparticipating hospitals as well as deter them from choosing

those hospitals.
Q. Could you describe to the Court what that is based on?
A. On the facts of the case, but also decades of academic research. There are many papers over time showing the impact of things like grades, in the health care context in particular, hospital grades on consumer decision making.
In fact, there is a paper showing that grades based on Leapfrog's own hospital grades, modeled after Leapfrog's grades -- by the way, that is publicized on Leapfrog's website, at least it was -- that paper shows in situations where consumers are choosing between different hospitals, they tend to choose the hospitals that have better grades rather than worst grades even in a variety of cost scenarios.
That combined with my experience, all of that underscores my opinions on the impact of grades.
Q. Did you get access to certain documents after you issued your report that affect or contribute to your opinions?
A. They certainly corroborate those opinions.
Q. Is this one of those?
A. Yes. We talked about large academic literature showing that grades impact consumer choices. This is Leapfrog themselves touting that grades impact such choices. So they describe a gentleman named Carl being out of town for a bike race and woke up with severe back pain, knew he needed a hospital. He quickly looked at the Leapfrog safety grades and

realized that the hospitals closest to him did not perform well. The closest hospital with an A grade was 400 miles away, but he made the drive. He said, "You have to pick the hospital you go to based on competency, not convenience. Leapfrog provides invaluable data that all patients should use."

This does not change my opinion, but is consistent with my opinion.

Q. Did you review other parts of Leapfrog's hospital safety grade website that you came to rely on in forming your opinion?

A. Certainly that are consistent with my opinion. If we go to the next slide, this is Leapfrog's frequently asked questions.

One of the questions: Should patients avoid a C, D or F hospital? What should people do if the only hospital in their community is C, D or F?

The answer that gave was, "When they have a choice the hospital safety grade is the first tool patients should use to select a hospital because safety should come first."

Q. Did you review this page when you were preparing your report?

A. I did, yes.

Q. Did your review this page as well?

A. Yes. This is an info graphic where Leapfrog emphasizes the risk of harm from choosing a D or F hospital. They note your risk of dying depends on the hospital you choose. Compared to an A hospital the risk if dying increases by picking a D or F

hospital.
Q. That risk of dying, how might that impact the negative emotions that a consumer might feel?
A. A risk of dying is scary for many consumers, that would concern them, and may shape the choices accordingly.
Q. Are there other places on Leapfrog's website where it talks about this twice as likely to die concept?
A. Yes, I believe so, yes.
Q. What about this page, explanations about how the safety grade is calculated for nonparticipating hospitals?
A. This is the frequently asked questions page. Here Leapfrog is downplaying the impact of nonparticipation on a hospital safety grade.
They note if a hospital does not report other sources of data are used to calculate a grade. Further: Does the hospital get a better safety grade that reports to the Leapfrog hospital survey? The answer they provide: The hospital safety grade reflects how well the hospital does on safety, not whether they complete the Leapfrog hospital survey.
Q. Did you review each of the three pages that we saw in preparing your report in August?
A. I did, yes.
Q. Are those pages still on the website today?
A. They appear to have been taken down.
Q. Professor, I want to talk about a little bit different

topic.

Do you have any opinions about how other ways a consumer might be exposed to Leapfrog's safety grades?

A. Yes, we talked about the website, hospitalsafetygrade.org. Importantly, they are not the only place the safety grades appear.

The safety grades have gotten a good bit of media coverage, for example. There is an article here, what are Leapfrog's 13 F hospitals? What are the best South Florida hospitals for patient safety? See the rankings. I believe Leapfrog themselves note there are hundreds of these types of articles in a variety of publications that combined have a reach of something like 11 billion, is what they suggested.

In addition to mass media, there is also social media. Here on the screen is one example, a TikTok video talking about the worst hospitals in Florida, and it has over a million views for that video. This is just one example.

In addition to mass media, there are the grades on social media, as well as word of mouth that they talk about as well.

Q. You mentioned the number 11 billion. Where did that come from?

A. That is Leapfrog's own number. When talking about media coverage they note that number.

Q. What does the 11 billion signify?

A. I believe it's the potential reach of the publications in

which those articles appear.
Q. Professor, have you reviewed a number of these articles with the safety grade mentioned?
A. I have viewed some, yes.
Q. Do any of them mention Footnote 4?
A. Neither in the articles themselves nor any pieces of social media that I saw, none of them mention the footnotes, the minimum score being applied or the limited achievement designation. In these cases the grades are traveling beyond the website, but the methodology, the detailed discussion of the imputation methodology is not.
Q. Professor, before we wrap up, can you summarize your opinions for the Court, just generally what we learned here today?
A. Excuse me for the coughing.
Q. No worries.
A. Sure. As I talked about today, consumers are unlikely to understand the imputation method used, that the minimum score was applied -- actually, could I grab another bottle of water? I am getting over a cold.
Either that the minimum score is applied or the impact of that method on the grades that a number of participating hospitals receive.
Further, the fact that hospital safety grades likely negatively affect consumer perceptions of things hospital

safety. Quality, brand, those types of things, as well as deter consumers from choosing those hospitals.

Further, future publication of the grades will further have a long-term negative impact on these hospitals' perceptions and consumer choice.

MR. CRAIN: Thank, you. I pass the witness.

THE COURT: We will take our morning break and return at ten minutes after 11:00.

(Thereupon, a short recess was taken.)

THE COURT: Okay, please have a seat and proceed with cross-examination.

MS. BLAIR: Thank you, Your Honor.

CROSS-EXAMINATION.

BY MS. BLAIR:

Q. Dr. Berger, nice to see you again.

A. Nice to see you.

Q. You are not here as an advocate for the hospitals, you are here to give a fair and accurate opinion to this Court about what consumers are or not likely to experience on the Leapfrog website, correct?

A. Correct.

Q. And as I understood your testimony by Mr. Crain, you believe it takes 27 clicks for a consumer to get the methodology that we follow totally and transparently for that Leapfrog website; is that correct?

A. I don't believe I mentioned the number 27 anywhere.
Q. Okay. Are you aware that the methodology on the home page of the Leapfrog website?
A. When you say "methodology", what do you mean?
Q. You can go ahead and pull up the Leapfrog website. I just want to make sure we all understand what we are talking about here.
You did a Google search, right, and it takes you to the Leapfrog homepage where you typed in Delray Beach?
A. Uh-hum.
Q. And if you go to the top of this page, please. Right, we saw this page on the slide?
A. Yes.
Q. And if we go to the bottom of this page, right here, you see the methodology right there. Do you see that?
A. I do, yes.
Q. Okay. So it is not true that a consumer needs to go through all of the clicks that we just saw on the slides to get to the methodology; isn't that true?
A. I don't think I said anywhere in my testimony that consumers need to go through all of the clicks and all of the slides to get to the methodology.
Q. There are multiple ways a consumer can get to the methodology, correct?
A. There are multiple ways, yes.

Q. And in fact, the Google analytic that Mr. Crain talked to you about, those Google analytics didn't do any analytics for file pages of how consumers might be looking at the methodology from other ways other than going directly to these web pages; isn't that true?
A. No. The data is agnostic into how they got there. That data shows those people that went to community hospital safety grade pages, what percent of them also looked at that methodology document and the answer is three percent. So it doesn't matter how they got clicked to get there, it doesn't matter. What other things they did, as long as they did both of those things, they show up in the data and the answer is only three percent, when even downloaded that document, let alone read the content on page 59.
Q. And if it was a consumer that two weeks ago saw that methodology because it went to Boca Raton Hospital, looked at the methodology and two weeks later went and looked at Delray Beach website, you don't know if that is the same consumer that looked at methodology or not; isn't that true?
A. Websites often contain cookies and things that track users as long as the data knows that somebody went to Boca Community Hospital safety web page and downloaded that document, the methodology document, viewed that document and that is where the three percent number comes from.
Q. And you don't know who those people are; isn't that true,

who went on the website is anonymous.
A. I am not sure what you mean.
Q. Well, for all you know, we talked about this in your deposition, all the lawyers in this room were the people who clicked on analytic pages, I'm sorry, on methodology, correct?
A. As we discussed, three percent is of the people that went to this hospital safety grade page. If a whole bunch of lawyers are inflating that number higher, it is actually one or two percent or potentially less, and so I am not saying three percent are all consumers. You are suggesting that a bunch of those individuals might be lawyers and inflating that number, it's even lower, but that is suggesting an even smaller percentage of consumers that are actually going to that --
Q. Right and we will get to that in a second. In terms of your work in this case, isn't it true that you used the Cornerstone Group to aid you in your opinions, correct?
A. I say almost all of my expert matters, I worked with the team at Cornerstone, yes.
Q. And in fact, the gathering of those analytics that we saw during your direct examination, that was done by Cornerstone, correct?
A. They were on call with counsel from Leapfrog, yes.
Q. You weren't there; isn't that true?
A. I didn't need to be there, I instructed what data we were interested in and to see what might be available.

Q. And are you aware that in March of 2025, the Cornerstone Group had a meeting with the competing hospitals?
A. I am not aware of everything that Cornerstone does one way or the other.
Q. Okay. So nothing that happened at that meeting affected in any way your opinion?
A. I am not aware of the existence of that meeting one way or the other, so I can't speak to it.
Q. Okay. And did you ever meet with any of the CEOs in preparing your information?
A. No, I did not.
Q. And did you talk to a single consumer of the Leapfrog website in coming to your opinion that it likely that a consumer was confused by the Leapfrog website?
A. Which opinion are you referring to?
Q. Well, I used the word "confused" and you and I had a debate about that. You don't have an opinion that consumers are likely confused by the Leapfrog website, correct? That is not one of the opinions you are offering here?
A. That is a broad opinion, it is not clear what you are saying they would be confused about, so I don't know exactly what you are saying.
Q. Your opinion is that consumers are unlikely to understand the Leapfrog website, correct?
A. My opinion is not on the website in general, my opinion is

in regards to the method in which data is being imputed for scores for non-participating hospitals, so I discussed, for example, consumers are unlikely to understand that particular imputation methodology that was used.
Q. And you were very careful about the words that you used in your deposition. And I asked you about that and you said you do not use the word "confused", right, and unlikely to understand, not likely to be confused, right, your opinion?
A. I don't have the deposition in front of me, or my expert report in front of me, so I can't remember exactly what word that I used in my deposition, but if you are reading from my deposition, then that is what I said.
Q. And I just want to make sure, your opinion does not say that consumers are likely confused by the Leapfrog methodology, correct? You expert opinions that you put in your report in this matter?
A. My opinion is they are unlikely to understand either that the minimum score was applied and it is not stated anywhere in the footnote, one has to go to that methodology document and just talk about where can people actually go to or understanding the implication of that for a hospital.
Q. And you are not offering an opinion in this matter that consumers are likely to be deceived to their detriment by the Leapfrog methodology or how it displays it on the website, correct?

A. I don't form an opinion regarding deception one way or the other.
Q. In terms of your qualifications, you are not a website designer by training, correct?
A. As I believe we talked about in my deposition, I am not a website expert on training, but I have consulted for a variety of companies or organizations on issues on website layout.
Q. But you have not done any design work on websites yourself, right?
A. I have done content work and strategy work, how these companies think about how to say things, where to say them and such, but I am not a visual designer, no.
Q. Okay. And you are not putting yourself out as a digital loader or FTC expert, are you?
A. As I believe we've talked about before, I am not putting myself forward as a digital literacy expert, and as I believe we talked about it in deposition, I have done some consulting for organizations in that area.
Q. And you have no experience in consulting with companies about meeting FTC standards for websites; isn't that correct?
A. Yes, that is correct.
Q. And you are not putting yourself forward as an expert in determining how websites should be designed in order to properly provide information to low literacy consumers, are you?

A. I was not asked to form an opinion on that, and so I am not putting forth one in this case.
Q. And you are not putting yourself out as an expert in Google Analytics, are you?
A. I have used Google Analytics both in my academic work and consulting work and prior expert work, and so I have a good deal of expertise on Google Analytics and how it works, and is not my main area of expertise, but I do have a great deal of acknowledge about it.
Q. At this point in your career, you told me that you have done over -- I'm sorry -- you told me that you have done thousands of surveys in combination in your academic and expert work, consumer surveys; isn't that correct?
A. I doubt I put an S on the end of that. I think I said over a thousand; that is different than thousands.
Q. Okay. That is fair enough.
A. No problem.
Q. So you have done over a thousand consumer surveys in connection with your academic and expert work, correct?
A. Correct.
Q. And I looked at your papers and you have done a lot of consumers surveys across your research papers as well, correct?
A. Yes. When I said "thousand", over a thousand in combination with my academic consulting and expert work, yes.
Q. When you do one of those consumer surveys, how many

consumers do you survey at a given time?
A. Depends on what is necessary for the situation.
Q. What do you consider as an expert in the field of marketing to be a statistical leap significant example in size of consumers when doing a consumer survey?
A. It depends. There is not a magic number that I can think of, depends on the context, the particular mean we are considering, a variety of things.
Q. And you are familiar with the survey methodology or of consumer surveys, correct?
A. I'm not sure what you mean by survey methodology, I use surveys a lot, and have thought of taking classes on methods and surveys and those sorts of things.
Q. Have you ever done -- would you agree with me that a consumer survey could mean a consumer comprehension survey; are you familiar with that term?
A. That is not a term that I use in my work.
Q. Have you ever done any consumer surveys in attempting to determine whether or not a consumer can comprehend what is on a website?
A. I would need to go back and look, that is not a question I was asked prior to today, and so I'm not for sure.
Q. Well, you offered an opinion in this case that it is likely that the consumers don't understand the methodology when they go to the Leapfrog website, correct?

A. It is unlikely that the consumers understand, and part of that is we're talking about is the fact that many of the consumers are unlikely to see this information in the first place. So some of the information, if they don't see it, it can't impact them, and as we talked about, even if they do see it, there are a variety of issues as well.
Q. And you performed no survey to determine whether a regular reasonable user of the Leapfrog website went to the website and entered the Delray Beach search that you did, you have done know survey to determine whether or not consumers would have seen that, would have clicked, how they would have clicked through it, what they would have seen and whether they looked at the methodology; isn't that true, you did not do a survey in that regard?
A. So as we talked about, I did not do a survey, but that Goggle Analytics data directly speaks to whether they saw the digital software methodology document and the answer is no, very few individuals have saw the methodology.
Q. We'll get to that. Would you agree with me that a consumer perception survey when trying to understand whether consumers actually understand the content of the website would be the gold standard for somebody here advising the Court about what consumers do or do not understand?
A. No. As we talked about already, individuals have to see information for that information to potentially impact them,

and given the location of the information and data we have available in this case, consumers are not exposed, most consumers are not exposed to certain information.
Q. And did you do any Google Analytics on how many consumers across all 3,000 hospitals that are graded look at the footnote related to the four imputed measures and read that footnote; do you have any proof out there like that?
A. I am not aware that the Google Analytics that was provided has insight into that. I do know its location on page, thought, and given lots of research that I and others have done on how likely it is that individuals make it to that point of the page. We have information about how that occurs.
Q. Let's talk about the research that you have. You cite to over 60 journal articles in between the two reports that you put out in this case; is that correct. Fifty-nine to be exact.
A. I have not counted, so I am not sure.
Q. I have. Thirty-two of those articles that you rely on have consumer surveys at the heart of the research of those articles; are you aware of that?
A. I am not aware one way or the other.
Q. And are you aware that out of the 60 articles that you cite, not a single one relies on Google Analytics in coming to the conclusions, the opinions that you are coming to here in Court today; are you aware of that?
A. I don't remember offhand what different data sources that

articles use, but Google Analytics is a well-used methodology for analyzing website traffic and behavior on websites, so whether or not it appears in specific articles I cited in my reports does not speak one way or the other to whether it is useful data to address that type question available in this case.

Q. Dr. Berger, could you tell the Court as you sit here today one article that you cite in the two expert reports that you put into this case that rely in any way on Google Analytics in coming to the opinion that the consumers are unlikely to understand a website. Is there a single one that you cite to?

A. Sorry. You already said that none of them mention Google Analytics data, so I haven't gone back and looked. But Google Analytics data is used to see whether or not people are exposed to certain types of information, whether or not they went to a particular page or downloaded particular information, and so that data appears as to consumers that potentially even saw the information that the methodology document, let alone related to that marked page in the document where that information was in the document.

Q. And Dr. Berger, you are here in Court today to give your expert opinion to a reasonable degree of scientific certainty and I'm asking you is there a single article that you cite in any of these pages, and these reports are very, very long, is there a single article that you cite to in these reports that

you can show to the Court where it says that it is a scientifically acceptable method to rely Google Analytics in coming to your opinion of consumer information, just one?
A. Sorry, I have not gone back again and looked at all of the references in those reports. As I said already, Google Analytics is often used for methodology to address questions like this.
Q. And you didn't consider any consumer feedback with respect to your opinions today, correct?
A. Consumer feedback in regards to what?
Q. In regards to whether or not a consumer was likely to understand the methodology on the Leapfrog website.
A. If a consumer can't see information and they can't imagine it, so Google Analytics data speaks directly to whether individuals even had the potential to see that information. Only a small percentage of individuals did.
Q. Is it fair to say that you did not feel like data on individual consumers, actual real consumers going to the website, that you did not feel that data on an individual consumer's feedback would be the most appropriate type of data to present to this Court regarding your opinion of whether or not consumers are likely to understand the Leapfrog methodology on the website?
A. As I mentioned already, Google Analytics is for consumers, it is more than one, it is many individuals, so that data says

directly how many actual people engaged in certain actions on the website.
Q. Well, I thought you told me it might not be actual consumers, it could be all the lawyers in this room. You don't know if they are actual consumers, do you?
A. You suggested that a large portion of the three percent were lawyers and if it is, that means that it is much lower than three percent and even fewer individuals that are consumers saw it. But I have not seen any data that suggests that most of those individuals are not consumers.
Q. Have you seen any data that they were consumers?
A. I have not seen data that speaks to it one way or the other.
Q. Thank you.
A. But given the large time window over which that data was collected, I have no reason to believe that most of them would be lawyers.
Q. Do you have any reason to believe that most of them would be quality directors of the hospitals?
A. I didn't see anything to suggest that.
Q. And you don't know whether these people being on the website are physicians, do you?
A. Sorry, I'm a little confused here. Your suggestion is nobody reads the Leapfrog hospital safety grades? That would be surprising. I believe we've addressed that a decent number

of consumers do read their grades, and so the data I believe is those type of individuals.
Q. What I'm saying to you, Dr. Berger, is would you agree with me that the Google Analytics data that you looked at is anonymous?
A. It is anonymous.
Q. Thank you. And just to be clear to the Court, you did not perform a digital logo readability analysis with respect to the Leapfrog website, correct?
A. I did not do a digital logo readability analysis. But again, for an individual, the content of information matters that the individual has to be exposed to it in the first place. So if an individual didn't see something, regardless of whether it is available or not, they have no ability to process it.
Q. And the only evidence you have that a consumer didn't see something is a funnel report from Google Analytics that Mr. Crain just put into evidence as PS-471, correct?
A. That is not the evidence, no.
Q. Do you have any opinions -- well, do you have an opinion in this case that the F grades impact -- or, I'm sorry.
Your expert opinion is that the F grades are likely to impact the reputation of the hospital, correct?
A. I don't have the exact words in front of me, but it's something like hospital grades are likely to negatively impact consumer perceptions.

Q. Okay. And it is couched as likely, correct?
A. I believe that particular expert opinion is yes.
Q. Okay. And you have not performed any causal analysis as to whether or not the Leapfrog safety grade did have the impact on the reputation of these hospitals; is that correct?
A. I, myself, have not performed such an analysis given the great deal of academic literature that shows that things like hospital grades impact both consumer perceptions as well as consumer choices, I didn't feel it was necessary to do that. As I talked about it, even in this context, there is research based on grades modeled after Leapfrog's own grades that shows that those in fact were consumer choices, so I didn't feel the need to collect that information.
Q. And your opinions, just so I am clear, I want to read them from your report. The first one is that CLT deal or at hospital grades for Plaintiffs' hospital likely impact consumers' perceptions, correct?
A. Again, I don't have my report in front of me, so I can't speak to exactly every single word with precision, but here reading from my report, I believe that that is correct.
Q. I want to make sure, you don't say they do for certain, you say they likely impact, right? Is that your opinion?
A. I used whatever words are on that page.
Q. Okay. And you also say that Plaintiffs' hospitals, that the grades for Plaintiff hospital likely negatively impact

consumer perceptions, correct?
A. I believe so.
Q. Okay. And, again, that is a likely opinion, correct?
A. I used whatever word is on the page.
Q. Okay. And the next opinion is that Plaintiffs' hospitals -- the grades for Plaintiffs' hospitals also likely affect consumer choices, correct?
A. Again, whatever it says on the page is what it says.
Q. And you performed no consumer survey to ask consumers whether their choices would, in fact, be impacted having these grades? Your consumer survey for that, correct?
A. I didn't think a consumer survey was necessary given the decades of academic research that shows, many, many academic papers showing grades impact choices in the hospital context, the grades based on Leapfrog's own hospital grades almost always lead consumers to choose hospitals that have been given a better grade that shows very relevant data in this case.
Q. But we are only talking about these five hospitals, what we are in court to report today.
You can't say to any reasonable degree of scientific certainty that, in fact, these grades impacted the reputation of these hospitals, correct?
A. I disagree with that statement.
Q. Okay. And let me ask you this: Are you aware that prior to the fall 2024 methodology change, West Boca and Delray both

had failing grades, and after the fall of 2024 methodology change that we are here for, they continued to have failing grades. Are you aware of that fact?
A. I do not have today's memory of all the grades that all hospitals got at any point in time.
Q. So you performed no analysis with respect to those two hospitals how a failing grade that was calculated using the new methodology could have impacted their reputation when they had a failing grade prior; isn't that true?
A. I believe that Dr. Nicholson discussed the impact of the methodology on the grades, I'm not him, so I don't want to speak for him, but I believe he had some conclusions in regards to how the methodology may have changed the grades.
Q. And when you walk through your 60 slides, and I just want to make sure I understand, the Google search that you performed was safe hospitals in Florida, correct, in that last presentation we walked through?
A. I believe so, yes.
Q. Did you perform any other Google searches to test your theory that the first thing that would come up would be the Leapfrog hospital safe site?
A. Sorry. I am not suggesting it is the first thing that always comes up, as I said, what shows up, I believe I said this already, maybe using different words, but what exactly shows up depends on the exact search history, but in many

different searches I tried, Leapfroghospitalsafetygrade.org is one of the first things that shows up.
Q. Are you aware that if you run certain Google searches with respect to safe hospitals in Florida, CMS scores come up; are you aware of that?
A. Depending on what consumers search for, different sorts of things may come up. I am sure exactly what search stream you put in, but I'm not saying that for every search stream in Google, Leapfrog is the first result, I am merely suggesting that when you Google search for information, it's often one of the first things that comes up, and I evaluate in Court here today what would happen if someone clicked on that link to that website.
Q. And you talked about the valuative labels, correct?
A. The valuative label, yes.
Q. Would you agree with me that CMS stars a one through five is also a valuative label?
A. I'd have to go look to see exactly what CMS is doing, certainly grades and thing like the gas gauges are, but I would have to go look and see.
Q. Well, let's just talk about -- you are aware of star ratings for movie reviews or Uber reviews, correct, star ratings; are you aware of that?
A. Different websites provide star ratings in different visual forms and do different things with that information and I'm

aware of the general difference in star ratings.
Q. And I guess I am asking your expert opinion, are stars, one out of five, three out of five, is that also a valuative label?
A. Well, stars are often just what the data is, right, so there is an average number of stars and sometimes people get that average number that appears, so on Amazon, for example, I read the books when an average star number appears, and so that is not adding any additional information suggesting how someone should perceive that information, that just give the average of a whole bunch of ratings.
Q. So it's your expert opinion that if a consumer sees a one out of five star, they should not have a perception about whether that is good or bad, in your expert opinion as a marketing expert, when a consumer sees a one star out of five stars, that is not a valuative label in your opinion?
A. Sorry. I didn't say what you said I said. All that I said is I have not seen what CMS is doing, particularly with star ratings, so I hesitate to say whether or not they are using a valuative label, but there are different ways that stars could be conveyed.
Q. Just like in our page where just the F comes up, if you pull up a page and just a one star comes up, right, they are not telling you it's the average and they're not telling you how to get there, does that have a valuative label, Dr. Berger?
A. Sorry, the one star could just be the average of some line

measure, so I can't put forward an expert opinion about it.
Q. Sure. And I want to talk about the Google Analytics now.
Are you familiar with the concept of progressive disclosure on websites?
A. I think I've heard that term used in the context of this case, but that is not a term I'm deeply familiar with outside the context of this case.
Q. So you have no educational or experience background about progressive disclosures on the website, right; is that fair?
A. I don't believe so, no.
Q. All right. And you were talking about -- we talked a little bit about the Google Analytics funnel reports, correct?
A. Yes.
Q. And they only tell us the number of people who went to the methodology page from the hospital pages, right?
A. A number of individuals that went to the detailed table view page as well as the number of individuals that went to the methodology document.
Q. And how trustworthy is the Google Analytics in telling us what type of people viewed the methodology?
A. I think we talked about this already. I don't know, it just shows the number of individuals.
Q. Okay. And, so, would you agree with me that Google Analytics does not distinguish between humans or bots or accidental clicks?

A. I have not looked at the most recent data on how they deal with those sorts of things. I have not seen any data in this case that would suggest that any of the clicks were due to bots, but I can't tell you.
Q. Have you seen any evidence that they weren't due to bots?
A. Again, as we talked about, my understanding is that Leapfrog suggested many real consumers review their grades, so my belief is that the data is based on many consumers.
Q. Did you do any analysis as to whether or not any of those clicks were accidental clicks?
A. I am not sure what you mean by "accidental clicks".
Q. Well, I sometimes search a website and click on things I didn't mean to and click back out. Did you do any analysis to determine if that is what happened?
A. What happened for what?
Q. You said 3,300 people clicked on these website pages, correct?
A. Something like that.
Q. And then you say only three percent made it to methodology, correct?
A. I didn't say that, that is what the data shows.
Q. That is what the data shows. That is your opinion based on your analysis of Google Analytics data, correct?
A. That is just what the data shows.
Q. Did you do any analysis on the 3,300 original clicks to

make a determination as to how many were accidental clicks, bots, anything like that, any analysis done?
A. If the notion is that one individual made an accidental click or something, that wouldn't change the conclusions, even a small number of individuals --
Q. So the answer is no?
A. I haven't seen anything that suggests that any of them weren't accurate.
Q. You understand that Google Analytics does have filtering for bots in the data set, correct?
A. Depends on the particular type data, yeah.
Q. Do you know whether or not you filtered this Google Analytics for bots?
A. I don't know offhand.
Q. Okay. And you cannot tell from the Google Analytics data that you reviewed whether these were first time users of the Leapfrog website or repeat users, correct/
A. I don't remember offhand.
Q. Okay. And can you tell by just looking at the Google Analytics whether these users matched a reasonable consumer standard?
A. I am not sure what you mean.
Q. Okay. So you don't know, you didn't undertake that analysis, correct?
A. I'm not sure what analysis you're referring to.

Q. Well, how do you know it is a reasonable consumer that looked at this website, the 3,300 clicks?
A. All the reportings of the percentage of individuals who went to a community hospital safety grade page, the percentage of them went to a detailed page or made it to the methodology document.
Q. Would there be any way for this Court in reviewing the Google Analytics data to determine whether or not these anonymous clickers meet a reasonable consumer standard?
A. Again, I haven't seen any data to suggest that there is any problem with these individuals. My understanding is that these consumers are using the website, so that is what I understand these individuals to be.
Q. But you performed an analysis to determine whether that is true, correct?
A. Determine what's true?
Q. Whether there are actual consumers that are clicking on this website?
A. At least the data --
Q. And you did no consumer survey to figure out whether or not they were, in fact, actual consumers?
A. Who was the individuals?
Q. The clickers, the people who clicked, the 3,300 people that clicked on the website?
A. I am not sure how a survey would tell us that.

Q. Okay. And you don't know, looking at the 3,300 who clicked on these web pages, you don't know whether they were sophisticated or unsophisticated consumers by the derth of information provided in these bar graphs that we see in 471, correct?
A. Sophisticated in what way?
Q. Are they sophisticated consumers of health care services? You can't tell that by these graph bars, can you?
A. Those bars just say what percent of individuals made it to different stages.
Q. In your opinion, as somebody who does this type of marketing work, is 3,300 used as a statistically sufficient sampling?
A. I don't know what you mean.
Q. Well, there are only 3,300 views, correct? Somebody is googling Google Analytics?
A. Somewhere in that ballpark, I don't know the exact number, but ballpark is correct.
Q. If you were going to do a consumer survey, how many consumers would you need to survey in order for the results to be statistically significant?
A. Depends on the exact size you predicted in the situation.
Q. Let's talk about that. If you were to do a consumer survey on the issue that is before the Court today, whether or not consumers of health care ratings actually understand the

Leapfrog methodology when they go to the website, if you were to do that as an expert, if you were to do that consumer survey here today, what would be a statistically significant sampling size for you to do that type of survey?
A. I am not sure, I'd have to understand more about the hypothetical question that you are asking, but given we have data showing that a very small percentage of consumers make it to the place where the only information available describes the exact nature of the methodology, that data shows us that very few consumers are likely to have access to that information.
Q. Dr. Berger, how many hours do you have in putting together your expert report?
A. I am not sure offhand.
Q. What I put together, it says something like 1,600. How many hours have you billed for your expert legal opinion in this case?
A. I don't know, I'd have to guess. I don't have a running total in my head.
Q. More than 100?
A. Probably.
Q. More than 200?
A. I don't know. I'd have to look.
Q. That would include preparing for this trial, somewhere around 200 hours?
A. Again, I don't have a running total of that number, so I

can't answer without precision.
Q. I just am asking you to estimate. Surely you sent bills in this case? How many hours have you spent/
A. I don't keep a running total of the bills and number of hours in my head.
Q. You bill $1,200 an hour?
A. That's my standard rate, yes.
Q. Let's just assume it's 100 hours, $120,000.
At any time during any of those 100 hours that you put into this cases, probably more, did you ever consider doing a consumer survey with respect to the Leapfrog website and whether the methodology was understandable to the consumers?
A. I answered this question a number of times and my answer again, I didn't say that a survey was the best method to help us reach the conclusion --
Q. That is not my question, sorry. My question is: In the hundred hours that you put into your expert opinion, did you ever consider doing a consumer survey so that you could inform the Court actually what consumers understand or don't understand when they go to the Leapfrog website?
A. So I consider all methodologies when I start a project like this and I have been given the data available that speaks to the exact question you mentioned, a survey was necessary.
Q. And you talked a little bit about -- you recall that, the decline that this measure was assigned grade; do you remember

that?
A. Yes.
Q. You had 60 slides and you went through them, and you pointed out that that footnote doesn't appear on several of the first measure pages; do you remember pointing that out to the Court?
A. It's not several, it's most, and it only appears on four of the 32 measure pages.
Q. Isn't that because it only appears on the measures that it applies to?
A. That doesn't completely make sense because if we are talking about footnote one, which is about hospital did not participate in data on this measure, and it appears on hospitals that did participate, so it is not clear why footnote four only appears in certain places and not others.
Q. Do you understand that hospitals that do participate in the survey can also have a question mark decline to report for certain measures as well?
A. I believe I have that understanding, but I also looked at data which there doesn't appear that that is not the case and footnote one still appears.
Q. So your criticism is that footnote one -- but one of your criticisms is that the first footnote appears on all of the pages?
A. No. You asked me should footnote four not appear in

certain places because it's not relevant, there are a bunch of things that are not relevant all the time.
Q. In fact, footnote four in terms of the actual wording, you don't have an opinion about whether -- well you do, you have an opinion about whether that wording is accurate, right?
A. I believe I opined that the consumers are unlikely to understand the nature of the methodology in that footnote because it doesn't provide any information about limited achievement or the minimum score to be applied.
Q. Okay. And if we look at that page, and I guess we can pull that up, if we look at hand washing for Delray, it shows a score of -- we talked about that, right, if you are on the imputed methodology, you get 15 for hand washing; do you recall that?
A. Let's --
Q. Let's go to practices, scroll down just a bit, you see the 15 there, the hospital score?
A. This hospital score, I see 15, yes.
Q. If you scroll up, the other way. And you see the 15 has an asterisk associated with it, you point that out in your direct examination; is that right?
A. I do, yes.
Q. And it says the hospital declined to report this performance on this measure so a score was assigned to affect the lack of information available. You see that?

A. It doesn't say that anywhere near this hospital score, it's down at the bottom.
Q. I am asking about the footnote in reference to the asterisk. Do you see that at the bottom of the screen?
A. I do see footnote four on bottom of the screen, yes.
Q. Let me go back. This hospital score has 15, asterisk, does it not?
A. It has a little star next to the 15.
Q. Is that not an asterisk?
A. I don't actually know what is defined as an asterisk. I am trying to be careful.
Q. If we look at footnote four on the bottom, there is the asterisk. Do you see that?
A. I see a similar icon.
Q. And it does not say that there was a score calculated for this measure, does it? It says it is assigned; do you see that?
A. I do see it, it says the score is assigned, yes.
Q. If we look at, going back to this hospital score, 15, star, right, underneath that it says worst hospital score, 15; do you see that?
A. I do.
Q. So we now know when we look at this page that for hand hygiene, Delray got a 15, we note from the footnote, which is bold red, that the score was assigned to reflect the lack of

information available and a consumer can see that the score assigned is the worst hospital grade; can they not?
A. Sorry. You assume the consumer is doing a lot of scrolling back and forth on this page and finding all of these pieces of information to draw the inferences you are suggesting. And so it is not clear that most consumers would do that.
Q. Dr. Berger, you are assuming they are not doing the scrolling, aren't you?
A. I am not assuming that they are not. The data I looked at relating to this as well as data from this case, underlie my conclusions.
Q. But the best way for this Court to know whether I am right, that a consumer did this, looked at it and understood that the worst score was assigned and understood the asterisk or whether you are right, that the consumer wouldn't understand what is going on, the best way to make that determination would to have been to do a consumer survey and ask the actual consumers what they understood; isn't that true?
A. If I thought that was true, that is what I would have done, I didn't think that was true, didn't think a survey was necessary, and so I did not do it.
Q. Right. And so all of us here in the courtroom today, no one knows whether or not a consumer actually understood that; is that fair?
A. I don't believe that is true, no.

Q. You never talked to the consumer, did you?
A. I talked about it already, there are many factors contained in the data. I did not speak directly to an individual consumer 'cause we are not in this case attributed to just one individual, we used a set of individuals.
Q. Well, we are interested in what the consumers understood and didn't understand, correct?
A. Yes.
Q. It is the burden of proof for these hospitals to prove that; do you understand that?
A. I do, yes.
Q. And as their expert in this case, you thought the best method to determine that would be to not speak to a single consumer about their confusion, but rather to look at the Google Analytics data; is that fair?
A. That's not fair, no.

MS. BLAIR: I have no further questions, Your Honor.

THE COURT: Redirect.

MR. CRAIN: I do.

REDIRECT EXAMINATION

BY MR. CRAIN:
Q. You recall being asked multiple times about conducting a consumer survey in this case?
A. I do, yes.
Q. I would like to give you the opportunity to address that.

Why didn't you think a consumer survey was necessary?
A. There was a variety of data available in this case as well as literature that speak about the issues that we talked about. We already talked about the Google Analytics data that doesn't contain one individual, it contains many individuals and it is not a measure of what people remember or what they thought they would do, not what people we could survey thought, but the actual people during this period did and what many of them did, so it is very useful data. Similarly, there are decades worth of research including research based on Leapfrog hospital grades that shows the impact of those grades on choices. So given all the data in this case as well as my expertise as well as all the academic research that's been conducted on similar topics, I went ahead and used the approaches that I thought was best for this situation.
Q. You touched on it briefly, but were any of the studies that you considered in coming to your opinions specifically modeled after grades just like Leapfrog's?
A. Yes, not exactly modeled after Leapfrog, at least at some point of time, it may still be up, I'm not sure if they are taken down or not, but that was counted on their website as the example, but the grades modeled after Leapfrog's, all situations consumers picked, and the hospital had a better safety grade regardless of cost.
Q. And you were asked have you spoken to any individual

consumers. Do you recall that question?
A. I do, yes.
Q. Can consumers understand what they are not exposed to?
A. If someone hasn't seen something, they can't process that information, so it would be hard for them to speak to whether they understood it one way or the other.
Q. Professor, I want to go back to something earlier in your cross-examination. Do you recall being shown a link to the methodology on hospitalsafetygrade.org home page?
A. Far down on the page, yes.
Q. If we could put that back up on the screen and scroll down to the bottom. Counsel put it up very quickly, so I want to go back.
Do you see where that methodology link is?
A. Well, interesting, it's under the for hospital section.
Q. And why do you say it's interesting?
A. I just took it at face value given the discussion it was somehow consumer facing, and it looks like it is for hospitals, this particular document.
Q. Can you read the top three headers?
A. What is patient safety, those, is that what you are referring to?
Q. Yes.
A. Patient safety, your hospital safety grade, what you can do to stay safe.

Q. Do you have an opinion, Professor, about how likely it is that consumers will get down to the for hospitals tab despite those three hash-looking tabs --

MS. BLAIR: Objection, Your Honor, this isn't based on any previous opinions put out in this case, and it's based on speculation, he clearly is doing an analysis while sitting on the stand.

THE COURT: Overruled.

THE WITNESS: There is nothing in the for hospitals title that suggests it is for consumers. And so it suggests that this information is for hospitals. Is it possible that some consumers chose to click threw some of these, I guess it's possible, that wouldn't be the first logical place that I would think that consumers would go, even if they did go to the bottom of this page, it is not clear why they would go there.

BY MR. CRAIN:

Q. Thank you. Just a few more questions, Professor. You were asked to look again at -- do you recall that?

A. Yes.

Q. And Counsel said a hospital assigns a score; do you recall that language?

A. Scores assign, yes.

Q. And just to make sure I understand, does footnote four explain how a score is assigned?

A. I think we talked about it, neither explains what score is

assigned, it says a score is assigned, doesn't say achievement, it doesn't say new score, certainly doesn't say why that score is assigned.

Q. You were asked questions about valuative labels with respect to stars; do you recall that testimony?

A. I do, yes.

Q. We talked a lot in direct about the valuative labels and about the F, right?

A. Yes.

Q. Does F signify fail to a consumer?

MS. BLAIR: Objection, calls for speculation, not in his report.

THE COURT: Overruled.

THE WITNESS: F certainly suggests a bad grade. On a grading system, I'm not aware of anything lower than an F. That suggests bad performance.

Q. In your opinion, in your expertise in rating systems and their impact on consumers, does a one star similarly convey failure?

A. I think that might depend on the situation. I don't know what other things are out there, in some situations, the average star rating could be high, others could be low. For the purposes of today's conversation, I haven't looked at the data in enough detail to be able to speak to it correctly.

Q. And Professor, you were asked a number of questions about

the word "confusion"; do you recall that testimony?
A. I believe the word "confused", yeah, maybe confusion, I don't remember that offhand.
Q. Fair enough. I just want to clarify. Setting sort of this semantic distinction aside, do you have an opinion on whether consumers are likely to understand that Leapfrog assigns the minimum score on the score of meter measures?
A. Yes, I think as I said a few times today, my opinions are consumers are unlikely to understand the specific imputation that was used for those measures.
Q. And setting aside again the semantic difference aside, do you have an opinion about whether consumers will understand the impact of the Leapfrog's non participation penalty based on your review of Leapfrog's website?
A. Yes, my opinion is that they are unlikely to understand the impact of non participation on hospital grades.
MR. CRAIN: Nothing further.
MS. BLAIR: Your Honor, may I have a few questions.
THE COURT: I don't think it is necessary. I think both sides have had a chance.
Thank you, Professor, have a good day.
THE WITNESS: Thank you.
MS. MALONEY: Thank you, Your Honor. If the Court is prepared to hear another witness before our lunch break, we are prepared to call Mr. Hanlon from West Boca Medical Center.

THE COURT: Okay, good.

MS. MALONEY: And Mr. Hanlon will be examined by my colleague, Ms. Sydney Scott, who you heard from last Friday.

As Mr. Hanlon is taking the stand, as to the Eleventh Circuit case which I still don't have a copy of from counsel, but we were able to pull it up, Ms. Havericak's testimony, we objected on hearsay grounds --

THE COURT: Let's not breakdown -- we may get some more writing on that or I will give you both a chance for some argument, but let's not do it piecemeal.

Okay, please --

(Witness sworn.)

THE WITNESS: Good morning, my name is Jerad Hanlon, I'm the CEO of West Boca Medical Center.

DIRECT EXAMINATION

BY MS. SCOTT:

Q. Thank you, Mr. Hanlon. When did you become the CEO of West Boca?

A. In October of 2023.

Q. Why are you here in Court today, sir?

A. We feel that the false and misleading grades that have been assigned by Leapfrog, the info penalize us and in an effort to bully us into submitting data so they could monetize off that data.

Q. I want to do a little bit of a road map. The Court has

seen several of our CEOs testify before, but we will talk a little bit about your background, sir, and a little bit about your hospital and what brought you here today.

Let's start with your background. Can you walk us through your educational background?

A. Sure. So I come from a family of hospital and health care workers. My mother was a pediatric nurse for 40 some years, my sister is a nurse, my aunt is a nurse, so I was subjected and surrounded with health care at an early age, and I achieved my undergrad degree from James Madison University in health services administration and got my Masters at the Commonwealth University.

Q. Tell us, what was your first -- can you just walk us through your career in health care administration?

A. Sure. So I actually, when I was at James Madison and I volunteered in the emergency department while I was an undergrad and I got exposure to the hospital setting. After my graduate degree, I did an internship or residency and worked at a facility in Tennessee, and then proceeded to be promoted to assistant administrator position in North Carolina on up to chief operating roles, chief administrator officer roles and then ultimately to CEO here in West Boca.

Q. When did you first come down to Florida?

A. 2019.

Q. What was your first position down here in the Palm Beach

health network?
A. Sure. So I was recruited to the health network in '19 as the chief strategy officer of the group of five hospitals.
Q. What role have you had since joining in 2019? What roles have you had with the Palm Beach health networks since joining back in 2019.
A. So in late 2019, just in the first year I was there, we had some leadership turnover at St. Mary's, and I had been a chief operating officer before, so I was asked to take on a dual role on an interim basis as chief operating officer and chief strategy officer at St. Mary's. And I was in that role for about four or five months, and March 2020 happened and the pandemic hit, then my job solely focused on chief operating officer, so I became the full time chief operating officer of St. Mary's from March of 2020 until 2023.
Q. As CEO of West Boca, what are your primary responsibilities?
A. First and foremost, I am responsible for the quality and safety of our patients, staff and visitors. I am also responsible for the overall operations of the 24/7, 365 facility, I'm responsible for the financial and growth of the hospital and meeting the care and community needs.
Q. Let's talk a little bit about West Boca. Can you tell us about the hospital, please?
A. Sure. So West Boca, we are located in the southwestern

part of Palm Beach County, we have 195 beds, we are kind of claim to fame as outside of even being our community hospital, we also have a level three NICU. We are the only pediatric provider in Southern Palm Beach County. We also deliver a lot of babies, we have a very robust maternity program, do a lot of surgery, orthopedics, spine, and we, obviously, as every hospital has, we have an emergency room that handles the emergent needs of our community.

Q. We heard the other CEOs talk about accreditation by joint commission are you also -- is West Boca also accredited by the joint commission?

A. Yes.

Q. And does West Boca have other accreditations?

A. Yes.

Q. What are those?

A. There's a wide variety of accreditations. We are currently accredited by joint commission in our lab, we are going to be applying for cath accreditation, which is more stringent accreditation.

We get with the guidelines, we receive numerous awards from health grades, so we have a wide variety of accreditation and awards.

Q. Could you tell us a little bit about West Boca's patient population.

A. So our primary service area primarily tends to be more

younger population, family focused, you know. We have, as is indicated by our maternity program, we deliver a lot of babies, so we have a lot of younger families in our area.
Q. How many patients does West Boca serve in a typical year?
A. 40,000ish emergency room visits, 60,000 out-patient visits, approximately 9,000 surgeries.
Q. What are you most proud to serve as West Boca's CEO?
A. This -- it is a wonderful hospital. I think one of the things that gives me the most joy is, particularly with the NICU, as an example, we actually care for babies down to 23 weeks gestational age, we had one baby that was lovingly and affectionately referred to as our "Soda Can Baby" that was a very small baby that was able to survive and thrive, so seeing the outcome of what we're able to provide is rewarding.
Q. Let's turn briefly to the Leapfrog survey. Did West Boca stop participating in Leapfrog's survey in 2021?
A. Correct.
Q. We heard through all the trials already in opening that it was tenant directed all of the Palm Beach hospitals not to participate in the Leapfrog survey. Do you recall hearing that throughout the trial?
A. I have heard that testimony.
Q. Is there a policy that is specifically aimed at participation in the Leapfrog survey?
A. No. From what I understand, and obviously, I wasn't the

CEO at the time, but I was involved with the Palm Beach health network, post COVID and especially being the chief operating officer at St. Mary's during COVID, it was a lot of resources, and we spent a lot of money, too, on a wide variety of different accreditation and things, and so it was ultimately left up to the individual hospital. Tenant did ask that we seek approval if there was an accreditation that we wanted to go after or try to obtain, that we would seek approval for that and ultimately it was the decision of the hospital to decide.

Q. So the overall policy was a stop to accreditation and awards that were required or mandated by some sort of --

A. Correct.

Q. All right. Did Leapfrog continue to assign West Boca grades after it stopped participating after 2021?

A. They did.

Q. We heard a lot about Leapfrog's change in approach that has led us here today. When did you learn that Leapfrog had changed in its grading non-participating hospitals?

A. In 2024.

Q. What grade did Leapfrog assign to West Boca in, say, fall of 2024?

A. We received a D.

Q. Mr. Chauncey, could you please pull up Plaintiffs' 37.5? Scroll down a little bit, sir.

While that is coming up, we are -- we have done this

exercise with some of the other CEOs as well, I will make this brief. Let's talk about the four imputed measures, the first being hand washing. Does West Boca have the hand washing policy?
A. We do.
Q. Is data collected and monitored to insure compliance with that policy?
A. Yes.
Q. Is that data audited?
A. Yes.
Q. Do you review that data on a regular basis?
A. Yes.
Q. If we look at the gas gauge that has now been pulled up, hand washing, does that accurately reflect the data that you review on a regular basis?
A. The gas gauge does not.
Q. Do you know what the hand washing score was in 2021?
A. I believe we were assigned 100 in 2021.
Q. Let's talk about computerized condition entry. Does the hospital have what is called a CPO policy?
A. We do.
Q. Is data collected and monitored to insure compliance with that policy?
A. Yes.
Q. Is that data audited?

A. Yes.
Q. Do you regularly review that data?
A. Yes.
Q. As you look at the gas gauge here on the screen, does it accurately reflect the data that you regularly reviewed?
A. No.
Q. What about bar code medication administration? Does the hospital have a policy on CMA?
A. We do.
Q. Is that data monitored and collected to insure compliance?
A. We do.
Q. Is that data audited?
A. Yes.
Q. Do you regularly review that data?
A. Yes.
Q. If we look at the gas gauge for CMA, does that accurately reflect the data that you are regularly reviewing?
A. No.
Q. Finally, Mr. Chauncey, pull up PX-37.6.
We see here it has a gas gauge for specially trained doctors for patients. Does West Boca have doctor staff in ICU?
A. We do.
Q. Does this gas gauge accurately reflect that?
A. No.
Q. Did you submit data to Leapfrog for any of these measures?

A. We did not.
Q. Do you know where Leapfrog got this data if you didn't provide it to them?
A. I do not.
Q. Let's go back to fall of '24. How did you react when you learned that West Boca had been assigned a D?
A. I was concerned.
Q. What did you do when you learned Leapfrog had assigned West Boca a D?
A. I spoke with my quality director and tried to understand why we had received a D, and to understand the history of it as well.

But ultimately, it was based off data that we hadn't submitted and hadn't participated in the survey.
Q. Were there others at the hospital that you discussed the assignment of the D with in the fall of '24?
A. Yes, we had conversations with our -- with some of our leadership team staff at the hospital, with our Med executive committee as well as our board to give them the heads up that these grades would be released and we didn't feel it was accurate because we hadn't participated in the survey.
Q. Who sits on your medical executive committee?
A. It's a combination of physicians and medical leadership for all of the various departments as well as some of the chief of staff and vice chief of staff.

Q. Did members of your medical executive committee have reactions to learning about the Leapfrog rating in '24?
A. Absolutely, they were very frustrated that the quality data that they review on a monthly basis doesn't reflect the score that was being awarded to us.
Q. What about your governing board; who sits on your governing board?
A. It's a combination of -- we have three physician providers, but we also have six community liaison folks that sit on it.
Q. Is it important for West Boca to have folks from the community sit on its board?
A. Yes, absolutely.
Q. Why is that?
A. The board is responsible for overseeing the quality and safety and they act as liaison with us in the community to let us know what they are seeing, what we need to change and the feedback that they are hearing from their respective constituents as well.
Q. Did the governing board members have any reactions to leaning about the Leapfrog rating?
A. Yes.
Q. What were some of those reactions?
A. They were concerned as well. Chief Nemechek is the battalion chief for Battalion Two for Fire and EMS for Palm Beach County. He is on our board, he had expressed some

questions about it. Van Williams, who is the Palm Beach State College Provost for the Boca Raton campus, also had questions that he raised at a board meeting, and Sherry Scarborough who is a property manager in the community also had questions that she was voicing about it.

Q. You mentioned you also spoke with your staff.

What reactions did the staff at West Boca have to learning about the fall '24 Leapfrog rate?

A. Um-m-m, similar frustration just because we had seen -- well, the care that we provide on a daily basis and this grade didn't accurately reflect that quality of carry that we are providing.

Q. After 12/24, did Leapfrog continue to assign grades to West Boca?

A. They did.

Q. What grades were those?

A. We received an F in Spring of '25, and most recently we received a D in the fall of '25.

Q. Do you believe that Ds and Fs accurately reflect the quality of care that your patients receive at West Boca?

A. Absolutely not.

Q. Do you believe the grades have harmed the hospital?

A. Absolutely.

Q. How has the hospital be impacted since the release of the fall '24 grades?

A. We've suffered reputational harm, loss of goodwill in the community, and we've actually had patients that have left AMA against medical advice based off of what they read and seen about the Leapfrog grades.

MS. BLAIR: Your Honor, I would just lodge my standing objection for this based on hearsay and foundation.

THE COURT: Overruled.

BY MS. SCOTT:

Q. Mr. Hanlon, when a patient leaves the hospital AMA, is that something the hospital tracks or keeps track of?

A. Yes.

Q. Is that something that is elevated to you and that you review?

A. In most instances, yes.

Q. Was the instance that you just raised one of the instances that was raised to you?

A. Yes, it was.

Q. How was that instance raised to you?

A. Through our incident reporting system. So similar to what Ms. Gina West attested to, we have a risk management system that incidents can be reported.

Q. When that incidence was reported to you, did you read that report?

A. I did.

Q. Mr. Chauncey, could you please pull up DX-552.

MS. BLAIR: Your Honor, this is a document we have a hearsay objection to.

THE COURT: All right. I will need to see it.

MS. SCOTT: This is a business record, Your Honor, that Mr. Hanlon reviews as CEO at West Boca on a regular basis as the incidences are raised to his attention as this one was.

(Pause.)

THE COURT: So you agree it is a business record. What is your objection then?

MS. BLAIR: Your Honor, it's hearsay as to the trustworthiness. If you look at this document, it is talking about an adult daughter references the Leapfrog grade to her father who is the patient. There is no who, what, why, when or how, it is not signed by the patient. In fact, as I read the State law in the State of Florida, if you are leaving medical advise, a form would be provided to the patient to sign. Also we don't have the name of the patient in addition. So the declarant's daughter, the father of the listener, there is no exception to that, and then it is written by a woman named Jennifer White, this report is put in by her, and there is nothing to determine who she is or whether this document is reliable.

THE COURT: I will overrule the objection and admit 552.

(Whereupon Defendant's Exhibit 552 was marked

for Evidence.)
BY MS. SCOTT:
Q. Mr. Hanlon, is this the record you reviewed about the patient that left AMA?
A. It is.
Q. What does AMA -- what does that stand for?
A. Against medical advice, so obviously, patients can make their own health care decisions. If a patient does leave against medical advise, we are required to share the risk of them leaving against medical advice, and this patient subsequently decided to leave despite being told the risk.
Q. Do you know the initials for this patient?
A. We do.
Q. What are they?
A. J.D.
MS. BLAIR: Your Honor, we would just object, those initials were never provided in discovery, these initials were redacted until today.
THE COURT: Objection is overruled.
BY MS. SCOTT:
Q. Are you familiar with some of the doctors that treated Mr. J.D.?
A. Yes.
Q. And who are the doctors that you recall?
A. Dr. Hernandez is one of our hospitalists that ultimately

cared for this patient.
Q. Now, if we look at this record, does it reflect a reason why the patient left against medical advice?
A. Um-m-m, they left because of seeing the failing grade on -- the D grading on Leapfrog.
Q. That is here in the description?
A. Yes.
Q. Would you read that description for the Court?
A. "Patient's daughter did not want their father to have surgery in West Boca Medical Center due to the Leapfrog reviews that they read online. Patient was advised by the physician and this nurse at separate times the risk of infection of an open fracture and leaving against medical advice. Patient verbalized he understood and wanted to go to Broward."
Q. Do you know the details of the fracture that Mr. J.D. had?
A. It was a open wound --
MS. BLAIR: Objection, no foundation, lack of knowledge, no foundation of how he would know.
THE COURT: Overruled.
THE WITNESS: It was a compound fracture of the finger.
BY MS. SCOTT:
Q. What are some of the risks of when a patient leaves the hospital in such a condition?
A. Well, first and foremost, it is going to be pain,

suffering, up to including infection -- possible infection.

MS. BLAIR: Objection, Your Honor, calls for speculation.

THE COURT: Overruled.

THE WITNESS: Depending on how that infection goes, could be loss of limb or life.

BY MS. SCOTT:

Q. Did West Boca have the doctors and resources to address Mr. J.D.'s compound finger fracture?

A. Absolutely. In fact, West Boca is one of the few hospitals in the county that have a dedicated hand surgery call, so we have specialized physicians that perform surgery on the hand, and as you can see from some of the quality data, too, we also perform better than the average hospital in terms of surgical site infections.

Q. Did Mr. J.D. receive a bill from West Boca?

A. He did.

MS. BLAIR: Objection, assumes facts not in evidence, Your Honor, we are getting far afield.

THE COURT: Overruled.

BY MS. SCOTT:

Q. Are you aware of any other incidences of patients declining to receive care at West Boca?

A. I am.

Q. Do you recall the initials of this patient -- of these

patients who declined to have medical care at West Boca?
A. I do.
Q. What are those initials?
A. F.W.
MS. BLAIR: Objection to form, Your Honor -- I'm sorry, objection to hearsay, we have not been provided any of this information in discovery, interrogatory answers, documents, so my hearsay objection, I lodge it again.
THE COURT: All right. The objection is overruled.
BY MS. SCOTT:
Q. Do you know who brought this patient to the hospital?
A. Which patient?
Q. We can take that down.
Mr. F.W. I will refer to him.
A. Yes, this patient was admitted for am infection in the armpit.
Q. What happened with Mr. F.W.?
A. They were actually admitted and on the floor and scheduled for surgery, and the patient left against medical advice in the early morning because of some of the media and things they had seen about Boca.
Q. How did West Boca do treating infections?
A. We do better than average especially when you look at our MERSA grades, so we did exceptionally well.
Q. Did Mr. F.W. also receive a bill from West Boca?

A. He did.

MS. BLAIR: Objection, assumes facts not in evidence.

THE COURT: Overruled.

BY MS. SCOTT:

Q. We heard a couple of the CEOs talk about a decline in emergency volumes. Do you recall that testimony?

A. Yes.

Q. Have you also seen a decline in your emergency volumes?

A. We have.

Q. Mr. Chauncey, would you please pull up Plaintiff's Exhibit 550. If you scroll down to West Boca Medical Center, we see that the emergency volumes have been broken down into several categories.

In what category -- well, I want to focus your attention on the walk-ins. How much has West Boca declined walk-in volumes?

A. From '24 to '25, we were down 15 percent.

Q. We heard on Friday Dr. Nicholson talk about declines in emergency volumes. Do you recall that testimony?

A. I do.

Q. And one of the things that he says, based on academic literature, he would expect to see the impact of the Leapfrog grades in walk-in admission grades. Do you recall that testimony?

A. Can you say that again.

Q. Yes. So, one of the things that Dr. Nicholson talked about

in his testimony, he talked about emergency volumes that based on his review of the literature, he would expect to see declines in walk-in volumes related to the Leapfrog grade. Do you recall that testimony?
A. I do.
Q. Would you agree with that based on your experience?
A. Yes.
Q. And why is that?
A. I think you can see from the volume the incremental decline, plus, again, we had a patient verbatim tell us that they were leaving against medical advice from our emergency department because of the Leapfrog safety grade.
Q. I want to talk about doctors. Have you heard -- have doctors raised concerns to you following the Leapfrog grades?
A. Yes.
Q. And what has been the nature of those concerns?
A. I have heard comments from obviously medical executive committee members, but also from the community members such as Dr. Cueto, she is an OB/GYN that texted me and was like we saw the grade on Leapfrog, and I have had patients that are asking me, should I go to that facility. This isn't consistent with what we have known West Boca to provide.
Also, I heard from Dr. Marino Campo, a pediatrician with similar concerns and questions that are being raised by her patients.

Q. Are you aware of any insurance companies or payer concerns about the Leapfrog grade?
A. We have received some letters from payers, yes.
Q. Mr. Chauncey, could we pull up Plaintiffs' Exhibit 464. I think it's one of the letters that you received from a payee?
A. It is.
Q. You see this is from Humana, and directed to West Boca Medical Center; do you see that?
A. I do.
Q. Have you reviewed this letter before?
A. I have.
MS. SCOTT: Your Honor, we move to admit 464, it is similar to the letter Ms. Havericak received that the Court admitted on Friday, over objection.
MS. BLAIR: We have the same objection, no date, not addressed to anyone, and our objection is hearsay.
THE COURT: The objection is overruled, 454 is admitted.
(Thereupon, Plaintiffs' Exhibit 454 was admitted for Evidence.)
MS. SCOTT: Thank you, Your Honor.
BY MS. SCOTT:
Q. Let's look at the first paragraph of this letter. It says Humana Military strives to insure the beneficiaries we serve receive the highest quality care available, and the third

sentence says, during a recent review of the Leapfrog hospital safety grades, we have identified your facility -- you see that?

A. I do.

Q. What percentage of West Boca's patients are with Humana.

A. It varies, but somewhere between 12 and 14 percent.

Q. How did you react when you received this letter from one of your payers, Humana?

A. It is very concerning, especially given the fact that we don't agree with the rating Leapfrog assigned to us.

Q. Have you heard anything else regarding that?

A. We received another letter in the fall of '25, actually, fall of '24, after the spring of '25.

Q. Mr. Chauncey, could we pull up Plaintiffs' Exhibit 553.

MS. BLAIR: Your Honor, we have objection to this document. It was not received by us during the normal course of discovery. We first received it on January 6th, and so I understand your overruling on the objection. This is another one of the late produced documents that Mr. Hanlon just testified, he testified he had it since the Spring of 2025.

MS. SCOTT: Your Honor, this letter actually was -- we received it December 30, 2025, and sent it to them shortly thereafter. Mr. Hanlon received it the same time as Ms. Havericak, so it was very recent and we produced it in a timely manner. It is similar to the document -- the followup letter

from Humana that Ms. Havericak received that shows further evidence of the continuing harm and influence and impact that these letter grades are having on all of our community hospitals.

THE COURT: All right. To be consistent, I will overrule the objection, it was promptly provided by counsel once they received it. So 553 is admitted over objection.

(Thereupon, Plaintiffs' Exhibit 553 was admitted for Evidence.)

Also, similar to the earlier one that was produced.

MS. SCOTT: Yes, Your Honor.

MS. BLAIR: Your Honor, if I might for the record, the earlier produced document did have a Fed Ex label showing the date and time. This one is different, just for the record.

THE COURT: All right. It is 12:30. Is this a convenient place to stop?

Let's stop for lunch, one hour, 1:30.

(Thereupon, a short recess was taken.)

THE COURT: Okay, please be seated and please continue.

MS. SCOTT: Thank you, your Honor.

BY MS. SCOTT:

Q. Welcome back from the lunch break, Mr. Hanlon.

When we broke for lunch, we had just wrapped up with the two Humana letters.

I want to show you what has been previously admitted as Plaintiffs' Exhibit 415.

Will you please pull that up.

This is an April 23, 2025 letter addressed to you at West Boca Medical Center from Florida Alliance for Health Care Value. Do you see that?

A. I do.

Q. When you received this letter did you review it?

A. I did.

Q. It says: Dear Jerad, we are writing to strongly encourage you to participate in the 2025 Leapfrog hospital survey which opened on April 1st.

Then we look at the second paragraph. It says: Employers and purchasers feel that your participation is vital to our state so we can track real progress toward a safer, higher quality more transparent health system.

Do you see that?

A. Yes.

Q. This letter concluded: Employers and purchasers in Florida intend to share these results with their employees and use your performance metrics as part of their value strategy.

Do you see that?

A. I do.

Q. If we turn the page, we see there is an intent to submit a Leapfrog hospital survey for 2025, and asks whether or not West

Boca intends to participate.

If we look down in the text above the box there it says: The Florida Alliance for Health Care Value represents employers in the market. The survey is very important to them and they expressly request your participation. If you would like to discuss your decision via a phone call please call us.

Do you see all that?

A. I do.

Q. What was your reaction when you received this letter from the Florida Alliance for Health Care Value?

A. Well, initially I was obviously concerned.

I don't necessarily agree with we are looking for your hospital to commit to transparency because I do feel we participate in our CMS required reporting which publicizes much of this, but it is still concerning to see that they are going to share this with their employees, especially when we didn't feel that it is accurate or correct.

Q. Prior to fall 2024, do you recall any patients raising concerns about West Boca's Leapfrog grade?

A. Could you state that again.

Q. Sure. Prior to fall '24, do you recall any patients raising concerns about West Boca's Leapfrog grade?

A. I am not aware of any.

Q. Are you aware of any community members raising concerns about West Boca's Leapfrog grade prior to fall 2024?

A. Not that I am aware of, no.
Q. Have you continued to observe impacts to the hospital and the business it serves?
A. Yes.
Q. What has Boca West done to respond with these continuing concerns?
A. We have had to have numerous conversations with our staff, with community members. We have had to invest in commercials, for example, to try to change the public perception and to clarify the things that we do very well at our hospital to build back that reputation and good will to our community. So we have spent a lot of time trying to counteract this false narrative that the Leapfrog grades represent.
Q. When was the last time you had to have a conversation with a patient, doctor, community member about the Leapfrog grade?
A. Monthly, as recently as last Tuesday in our medical executive committee meeting.
Q. What do you think will happen if Leapfrog is allowed to continue to grade West Boca?
A. We will continue to suffer reputational harm, our volumes will be impacted, and more importantly, I think patients are going to suffer with increased risk for the patients who left without medical advice.
Q. Will West Boca ever consider participating in the Leapfrog survey?

A. No. They are grading based on information they don't have. Verbatim from one of our medical executive community members he likened it to blackmail that we are having to submit this data and we are being penalized until we submit it.

MS. SCOTT: I pass the witness.

THE COURT: Cross-examination.

CROSS-EXAMINATION

BY MS. BLAIR:

Q. Mr. Hanlon, you just testified that prior to the fall of 2024 methodology change you never had any complaints about your Leapfrog grade, correct?

A. That I am aware of.

Q. Your Leapfrog grade in the spring of 2025, before the methodology change -- I am sorry, spring of 2024 was a D, correct?

A. Correct.

Q. And then Leapfrog announced in the spring, May of 2024, that it was going to change its methodology, correct?

A. Correct.

Q. Its methodology was changed for the November 2024 grade, correct?

A. The fall of 2024, yes.

Q. All right.

A. The methodology changed.

Q. Your grade was a D again?

A. It was.
Q. I want to make sure --
A. Part of -- I'm sorry to cut you off. Part of that was another example of they were imputing the scores from 2021 when we last participated in things like intensivist. We didn't have an intensivist program at the time, we have since implemented that, but they based that in part on information that they didn't have that were incorrect.
Q. We will talk about that in a minute for sure.
We are here about the fall 2024 methodology change, correct?
A. Yes.
Q. West Boca Hospital had a D before that change and a D after that change, correct?
A. We did.
Q. Thank you.
A. Correct.
Q. And it is your testimony today that there was never any complaints about their D grade in the spring of 2024, correct?
A. That I am aware of, other than concern that was raised by our medical executive committee, not from patients that I spoke directly to, but from our medical executive committee, yes.
Q. No complaints until you got the fall Leapfrog grade, correct?
A. From our medical executive committee and the board, yes,

there were concerns expressed. There weren't patient complaints, but there were -- that I am aware of.
Q. So your executive committee and the board complained about your D grade previously and they complained after the fall 2024 methodology change, correct?
A. They questioned it when we reported out what our spring release grades were going to be.
Q. You told the Judge that the spring 2024 grade was based on your actual data that you reported back in 2021?
A. No. I said that part of the reason for the lower grade was in part due to information that Leapfrog did not have from us, they were imputing it -- or using previously reported information, and the situation had changed. Because we didn't participate in the survey, they didn't have that.
Q. Previously reported data, you mean your own data?
A. Back in 2021, the last time we participated in the survey, but again, things had changed since that time.
Q. You talked about that medical executive committee members were upset about the fall 2024 grade, correct?
A. Yes.
Q. Who?
A. Dr. Varsagi, Dr. Herro, several members of the medical executive committee.
Q. What did they say exactly?
A. As I mentioned in my previous statement, Dr. Varsagi

claimed it was blackmail, that he was concerned that we are being negatively penalized because of this.
Q. When did he say this, in what medical executive meeting?
A. I can't recall off the top of my head.
Q. Do you remember what exactly it was that he had concern about, just the grade itself or the actual data?
A. The grade itself and that we were receiving grades on information that Leapfrog didn't have.
Q. Did the doctor have that same concern in spring of 2024, when you had a D?
A. I don't recall when he made that comment, so I am not sure when.
Q. He could have made that comment in the spring of 2024?
A. I don't recall which meeting he made that comment.
Q. And you said the governor board members were also concerned?
A. Yes.
Q. Were they concerned in spring 2024, before it changed?
A. The ones I cited before, that was more recent. That was when we got the F rating in spring of '25.
Q. Okay. I want to make sure, when you said the ones you cited before, I am only talking about fall 2024.
A. Those members were not members of our board at that time.
Q. Do you recall any governing board members in the fall of 2024 complaining about West Boca's D grade?

A. Yes. They weren't complaining, they were expressing concern that our grade had been higher in the past, and we discussed that in a board meeting.
Q. When you say higher in the past, you wouldn't mean spring 2024, because you got a D then?
A. Correct.
Q. Who expressed the concern in 2024?
A. Chuck Stout was our chairman of the board at the time.
Q. What did he say?
A. He mentioned that -- and I believe Dr. Newman -- I am trying to remember from a meeting that occurred several years ago. I believe it was Dr. Newman had also expressed some concerns. He said we have participated in this in the past, why were the grades -- why did it drop?
Q. Did any of the board members and medical executive members ask you questions about why West Boca was no longer participating in the survey?
A. No.
Q. When West Boca stopped participating in the survey, did you get the authority from your medical executive committee or governing board to stop participating in the survey?
A. The decision to stop participating occurred back in 2021. I wasn't there as the CEO.
Q. Let's talk about the spring 2024. Did you ever talk to your medical executive committee or the governing board about

the fact that you did not participate in the Leapfrog survey before the methodology change?
A. Yes.
Q. Did anybody on the medical executive committee or governing board express any concern about the fact that West Boca was not participating in the Leapfrog survey?
A. When I explained the reason for the grade was based in part on the fact that we didn't participate in the survey and they were assigning a grade that didn't reflect what they see on a monthly basis in our reports.
Q. Did any members of the medical executive committee or the governing board express to you as the CEO of West Boca that you should participate in the Leapfrog survey? I'm talking prior to the fall of 2024?
A. Members of the MEC or board?
Q. Correct.
A. Did not express any desire to participate in the survey.
Q. So they expressly told you they didn't want to participate in the survey?
A. I am saying they didn't expressly tell me that we should participate in the survey.
Q. Did they expressly tell you that you shouldn't?
A. No.
Q. Can you recall any discussion whatsoever prior to fall 2024 with respect to participation in the Leapfrog survey with your

medical executive committee or the governing board?
A. Prior to 2024?
Q. Yes.
A. I started in October '23, so I am not sure, other than the one or two board meetings we had at the end of October.
Q. No express recollection of that, correct?
A. No.
Q. And I think you testified on direct examination that the reason -- the reason that -- to your understanding, the reason that West Boca stopped participating in the Leapfrog survey was because the amount of resources that are needed to submit the survey are not there any more, correct?
A. The amount of resources that it takes to submit. We were evaluating all things after COVID, all accreditations, the costs, and making sure there was a value to what we were submitting and spending time and effort on.
Q. Isn't it true you don't think West Boca gets any value from the Leapfrog survey? Is that fair?
A. I don't believe there is value to the Leapfrog survey.
Q. Your counsel asked you whether or not Tenet home office had any directive to West Boca or any of the five hospitals that make up Palm Beach Health Network about participating in the Leapfrog survey. Do you recall that?
A. Could you state that again?
Q. Is it your testimony here today that Tenet corporate home

office had no directive to West Boca about whether or not you could participate in the Leapfrog survey in fall 2024?
A. The decision was up to the local hospitals to make. If they requested to participate in any survey or accreditation we had to present a value proposition to the home office to seek their approval.
Q. In 2023 West Boca went to the home office and asked for permission to engage in the Leapfrog survey; is that true?
A. I did not.
Q. You did not. Let me ask you this: Andrea Nunez was your director of quality, correct?
A. Correct.
Q. She reported to the chief nursing officer of West Boca at that time?
A. Yes.
Q. Who reported to you?
A. In part. He was also the group chief nursing officer.
Q. And that would be Ricky Ramirez, correct?
A. Correct.
Q. As you sit here today, you are unaware that in 2023 there was a request by Andrea Nunez and Ricky Ramirez for West Boca to begin reporting to the Leapfrog survey?
A. They had discussed with me at the time that they wanted to do it, and I made the decision there was no value in it and didn't want to proceed.

Q. That was a conscious and voluntary business decision you made as the CEO of West Boca in 2023?
A. Correct. I didn't see the value added to it.
Q. And West Boca has systems that track these four measures that are at issue in this litigation, CPOE, BCMA, hand hygiene and IBS, correct?
A. We do, yes.
Q. Joint Commission requires the tracking of CPOE and BCMA data. Isn't that true?
A. It is.
Q. Joint Commission does not publicly report that data?
A. They report the hospitals that they credit, which they investigate those things when they come in for the audits.
Q. My question is different. Would you agree with me that the West Boca exact performance on the measures of BCMA and CPOE are not reported to the public?
A. Through Joint Commission?
Q. Correct.
A. No.
Q. Participation in the Joint Commission is voluntary, isn't it?
A. It is.
Q. The same thing about participation in the CMS, that is voluntary?
A. CMS makes up the largest payer source and CMS does require

you to be accredited by either Joint Commission or DMV, so you have to be accredited by one or the other.
Q. You could choose not to publicly report to CMS, you just wouldn't be paid by CMS, correct?
A. I don't know the repercussions of that. I know that the CMS reporting is mandatory.
Q. What happens if you make the business decision not to report to the Joint Commission?
A. Report --
Q. That you don't -- since the joint Commission is voluntary, what if you make the decision I don't want to be part of Joint Commission, I don't want to be accredited?
A. You can choose who you want to be accredited by, either Joint Commission or DMV, if you want to participate in CMS.
Q. How much do you pay the Joint Commission to participate?
A. Participate in --
Q. In --
A. -- their accreditation?
Q. Yes.
A. I don't know the exact number off the top of my head, no.
Q. You track at the hospital, at the Palm Beach Health Network level, and we have saw this in Exhibit 813, you track your HMI at the hospital?
A. Yes.
Q. And you track HCAPs, right?

A. Of course.
Q. And would you agree with me that the HCAP scores for West Boca have historically been below the national average?
A. In terms of what time frame?
Q. Fall of 2024.
A. Fall of 2024, we have room for improvement in our patient satisfaction for HCAPs.
Q. Below the national average?
A. Yes.
Q. In fact, you hired Press Ganey to help you improve your patient satisfaction scores in 2025?
A. We engaged with Press Ganey who administers our HCAP scores to come in and help us identify best practices and tactics for us to improve that. Ultimately, we want our patients to be satisfied.
Q. CMS requires hospitals to use a CMS approved survey vendor?
A. Yes.
Q. Press Ganey is yours, correct?
A. Yes.
Q. And Press Ganey ultimately gave you an improvement plan in connection with how to improve your HCAP scores, correct?
A. They gave us some consultation on the things we could focus on, some best practices that they have seen in other hospitals to improve the satisfaction scores.
Q. And they provided you with a slide deck, correct?

A. I don't recall.
Q. Can we pull up Exhibit DX 913. This has not been admitted, your Honor.
So, Mr. Hanlon, this is a Press Ganey document for West Boca Medical Center. Do you see that patient experience overview? Do you see that?
A. I do.
Q. Yes. And it was done by Mika Joiner, the adviser from Press Ganey. Do you see that?
A. I do.
Q. Does this refresh your recollection that a patient satisfaction overview and on-site prep slide deck was provided to West Boca in connection with Press Ganey?
A. I don't recall specifically reviewing this document, but I remember we engaged with Press Ganey to come in and give us a consultation.
Q. Do you have any reason to believe this is not a business record provided to West Boca with respect to Press Ganey's visit?
A. I don't.
Q. If we scroll down, do you see Press Ganey here has a slide in the slide deck about the Leapfrog safety grade?
A. I do.
Q. And it lists a number of hospitals and their varying grades. Of course, you will see your hospital is listed under

the D grade, correct?
A. I do. I see it.
Q. And if you look at this, it says -- I have it highlighted here -- Leapfrog released its fall 2024 hospital safety grade which evaluates a hospital's ability to prevent medical errors, accidents, and infection. The Leapfrog hospital safety grade is the only hospital ratings program focused exclusively on preventing medical errors and patient harm.
Do you see that?
A. I do.
Q. Do you know of any other hospital ratings program focused exclusively on preventing medical errors and patient harm other than Leapfrog?
A. This is created by Press Ganey, so I can't --
Q. I am asking if you know of any other hospital system that focuses exclusively on preventing medical errors and patient harm?
A. You could argue that Joint Commission is focused on that. The hospitals are constantly focused on preventing medical errors and patient harm.
Q. Do you consider Joint Commission to be a ratings program?
A. An accreditation program, yes.
Q. It says Leapfrog is fully transparent, free to the public, and updated biannually in the fall and spring.
Do you see that?

A. I do.
Q. Do you have any reason to believe that Leapfrog's methodology is not fully transparent and accessible on its website?
A. I disagree with that.
Q. You don't believe the methodology is accessible?
A. I don't agree that it is fully transparent. There are several data points that we are assigned a letter grade based on information that Leapfrog does not have.
Q. Do you see it says Leapfrog is free to the public?
A. That is Press Ganey's comment.
Q. I am just asking you if you think Leapfrog is free to the public.
A. I don't know what Leapfrog charges to the public.
Q. The last sentence says, the majority of data used to calculate the safety grade comes from CMS publicly reported data. Do you see that?
A. Yes.
Q. Do you have any reason to disagree with that?
A. I would say it says the majority of the data used to calculate, but not a hundred percent.
Q. My question is: Do you have any reason to disagree with what Press Ganey, who you hired to give you this, is saying that the majority of the data used to calculate the safety grid comes from CMS publicly reported data?

A. Yes, I would say the vast majority of what Leapfrog assigns a grade is based off of publicly reported data.
Q. Have you expressed to your medical committee or governing board any concerns about working with a company that touts Leapfrog in this way?
A. Our focus on Press Ganey, involving them, was focused on the patient satisfaction, and identifying best practices from across the country that we could implement in order to improve our patient satisfaction scores.
Q. So that is a no, you never expressed any concern to your medical executive committee or governing board about paying for a company that touts Leapfrog this way?
A. Again, we engaged with Press Ganey to help us improve our patient satisfaction scores, best practices from other hospitals. We absolutely want to make sure that our patients are happy.
Q. You are still working with Press Ganey today?
A. We are.
MS. BLAIR: Your Honor, I would ask this document be moved into evidence.
MS. SCOTT: No objection, your Honor.
THE COURT: 913 is admitted.
BY MS. BLAIR:
Q. A lot has been talked about CMS star ratings. Could you tell the Court what are your current CMS star rating for West

Boca?
A. Two star.
Q. What is your patient safety?
A. Patient safety or satisfaction?
Q. Oh, patient satisfaction.
A. Patient satisfaction is one star.
Q. Have you ever had any conversations with your medical executive committee or governing board about their dissatisfaction with the CMS star ratings?
A. We have shared our CMS star ratings with our board and our plans to focus on the various parts of our CMS star rating, which is why we engaged Press Ganey to come in and give us some tidbits to help improve patient satisfaction.
Q. My question is: Have you ever gotten questions from your medical executive committee or your governing board, disappointment or questions from them about your CMS rating?
A. We have gotten questions from our board about our CMS ratings and what we are doing to improve them.
Q. I want to talk about the fact that West Boca has not lost any revenue since the fall 2024 methodology came out, correct?
A. That is not a true statement.
Q. That is not a true statement?
A. No. We have lost outpatient revenue. Our total revenue is up in spite of the reputational harm that we have suffered from this.

Q. Your total revenue is up?
A. Yes, outpatient and emergency room volume has been impacted.
Q. I will get to that. I want to make a clear record. Total revenue is not down, correct?
A. Total revenue is up.
Q. And EVANA is up?
A. Yes.
Q. Market share has not declined, correct?
A. It depends on what market share you are looking at. Certain services we are down and other services we are up.
Q. Overall are you up or down?
A. Hospital market share?
Q. Yes.
A. There is a wide variety of variables. Admission volume is down, emergency room volume is down, our surgeries and certain specialties is up. So it is across the board, there is not one single answer --
Q. You don't know whether the overall market share of the West Boca Medical Center is up or down. Is that fair?
A. It depends on your definition of overall market share.
Q. You have not had any issues with nursing retention due to the Leapfrog grades, correct?
A. I have not heard of any concerns expressed about Leapfrog that have impacted our nursing retention. I know we have

struggled to recruit nurses over the years.
Q. No physicians have left your hospital citing the Leapfrog grades as the reason, correct?
A. That they have cited to me, no.
Q. In fact, your Google star ratings have gone up since the fall of 2024 grade?
A. Absolutely. We are very, very proud of that.
Q. Your transfer rates from other hospitals are up?
A. Yes.
Q. And you talked about elective admissions, correct?
A. Correct.
Q. And emergency -- is it fair to say your position is that emergency room visits are down for West Boca?
A. They are.
Q. You attribute that to Leapfrog grades, correct?
A. In part, yes.
Q. What is the other part?
A. There are a wide variety of variables that could impact it.
When you have patients that are literally leaving AMA from your emergency department and hospital, you can only conclude, yes, it is impacting your volumes.
Q. Why don't we pull up 363.
Mr. Hanlon, I will show you -- I believe there is an objection -- meeting minutes from your medical executive committee dated November 19, 2024.

MS. BLAIR: This is also a confidential document. I understood, your Honor -- take that down for now. I understood your Honor's directive that we were not going to do confidential documents, but we will have a fight about that.

MS. MALONEY: No, we are not.

MS. SCOTT: We are withdrawing our confidentiality designation to these materials, but these are very sensitive board materials that we have tried to negotiate to find a way to balance the interest between the sensitive and confidential nature of these documents and getting in the passing references to Leapfrog that in the board materials.

We conferred with the other side for weeks to try to broker a deal. We offered to stipulate what the documents say that are specifically relevant to Leapfrog. We offered to redact sensitive information to protect. This is very sensitive hospital operational, financial, and other metrics data that are irrelevant to this case.

We would be willing to have the relevant portions of the documents related to Leapfrog, again, it is like a bullet or two that says Leapfrog.

We are happy to do that and happy to take the Court's guidance or suggestions on ways to balance the interests here, but given the sensitive nature of these documents we do not want them to be public.

MS. BLAIR: I am not using the documents for reference

to Leapfrog. I am using them for references in them that West Boca admits that the reason that their surgical volumes and ER volumes are down are for a variety of reasons, including construction in the ER, loss of surgeons.

THE COURT: Well, they went through -- what you are saying is you want to introduce this document, 623, in its entirety?

MS. BLAIR: Yes, sir. I won't show it in open court for its entirety.

THE COURT: All right. 623 is admitted over objection.

MS. BLAIR: I will only show the part of the document that I am going to use.

THE COURT: Well, if some of it is not pertinent you may agree to a redaction of whatever you don't show him.

MS. BLAIR: I believe these are redacted already in some part.

THE COURT: You all figure out how to deal with it. Once it is admitted, it is admitted. So, if you are going to admit a redacted document that is redacted except for what you're using it for, that is fine with me. You need to work that out.

MS. SCOTT: I am happy to work with Ms. Blair and her team to get these documents appropriately redacted.

THE COURT: All right.

BY MS. BLAIR:
Q. If you can show 623.
Do you see this document here, Mr. Hanlon? This is notes from a meeting that occurred 11/19/24, and it says decrease in pediatric ENT surgical volume, decrease in general breast and reconstructive surgery due to the retirement of two high volume surgeons, and goes on and on, and then it says, limited number of ORs in the maun OR suite, currently utilized at 64.8 percent, and then Tenet made a decision to not participate in Leapfrog because it does not produce a value.
First I want to talk about the decrease. Do you see that here?
A. I do.
Q. Nothing talks about a decrease due to the Leapfrog rate, correct?
A. This is focused purely on surgical volume.
Q. If we could move to the same sort of document, DX 565 -- 656, my apologies. Thank you.
These will be meeting minutes from January 28, 2024, and you are reporting to your medical executive committee that West Boca is working on shifting volume to other locations as West Boca is tapped out with space, no ability to expand due to infrastructure issues.
Do you see that?
A. I do.

Q. Was this a correct statement when you made it?
A. This is related to a certain subset of our volume. We, you know, we have had a tremendous amount of growth due in part -- like in our NICU, our NICU volume is up. Our surgical volume on the inpatient side is up because of just increased recruitment of surgeons and things. We needed to expand our infrastructure.
Q. This says that surgical volumes were down, decrease in volume, closure of OP diagnostic center. Do you recall that?
A. We did close our outpatient diagnostic center.
Q. And it goes on to say limited number of ORs.
If we pull up 671, another meeting minutes here.
MS. SCOTT: As long as we have the same agreement on all of these.
THE COURT: I couldn't hear you.
MS. SCOTT: As long as we have the same agreement regarding redactions we have no objection.
THE COURT: 656 and 671 admitted, pursuant to some redaction the parties agree to as to unrelated materials.
BY MS. BLAIR:
Q. This is again another meeting note, the date of which I don't have in my notes, I apologize. Could you scroll to the top. April 22, 2025.
This is after you have gotten the Leapfrog spring 2025 grade, and you say, WBMC to get approval for the two million OR

expansion. This will allow WBMC to better handle an increase in patient surgical volume.

Do you see that?

A. I do.

Q. Does that refresh your recollection that in April 2025 you were having issues with surgical volume as a result of infrastructure issues?

A. Yes.

Q. If we go to DX 690, governing board meeting minutes. Jerad advised West Boca has seen an impact this month on admissions. It has been slow with the emergency room and admissions being down. Jerad advised it will be a tough summer with more seasonal people going back north.

Do you see that?

A. I do see that.

Q. Take that down.

Does that refresh your recollection when you are reporting to the board and the medical executive committee all the way through spring 2025 you never once told them -- told your boards that your admissions were down because of the Leapfrog grade; is that correct?

A. No, that is not correct. All of these statements have been about our inpatient OR volume. We did see variations, we see increase in spine, we did see a decrease in our pediatric ENT, and some of our general surgery volume. A lot of that comes

through the emergency room and because our emergency room volume is down we have seen a decrease in certain subsets of our surgical volume.

The reason for the expansion was because that OR was only 353 square feet and can't accommodate the types of surgeries we are doing in such a small space. We were expanding to accommodate more complex surgery which also results in an increase in our revenue because we are doing more acute services.

But that doesn't address the fact that we have seen a decrease in our volume, in ER volume, things like that due to the Leapfrog grade.

Q. We will talk about the ER volume. If you could pull up PX 550. This was previously admitted.

These are your volumes, do you see that here, West Boca walk-ins?

A. I do.

Q. You looked at this with your counsel when she was questioning you?

A. I did.

Q. Do you see that police is down by 49 percent?

A. I do.

Q. Is it your testimony the police are bypassing West Boca Medical Center based on the Leapfrog grades?

A. The police are required to go to the trauma centers. We

don't do behavioral health, for example. They could have had to take the patients somewhere else. It depends on the mix of the patient's needs.
Q. Every category with respect to unknown, which I don't know what that is, is down, including police as it relates to your ER, correct?
A. Walk-in is down, EMS is down, and in part that could be attributed to the fact that Chief Neil Nemechek, who is a member of our board, shared that some of the paramedics had seen the TikTok video. That is what initiated questions with Chief Nemechek.
Q. Chief Nemechek, what meeting was that at?
A. That was at the board meeting that I shared with him in deposition, too, that Chief Nemechek was the one asking the questions.
Q. What date was that meeting?
A. You can see it in the minutes. I wouldn't know the exact date of the meeting that he expressed that concern.
Q. What did you say in response to that?
A. The same thing we shared with the rest of the board, that the Leapfrog ratings were based off information that Leapfrog didn't have. At that point in time it was based off an imputation model that was not accurate as well.
Q. Has West Boca done any study for the reason, causal of the reason of the downward admissions --

A. I have verbatim patients telling me they were not coming because of the Leapfrog rating.
Q. You talked about two. Has West Boca commissioned any study or survey to determine why elective admissions -- we will get to the ER -- elective admissions are down at West Boca?
A. If I have two patients that are verbatim telling me they are leaving because of Leapfrog, I don't know what other survey or analysis is needed. I have a case in point patients risking infection, increased pain, and going to another facility that could have very well been taken care of at our hospital.
Q. You were telling your governing board that volumes were going to be down because of seasonal residents going back north?
A. That is one reason.
Q. Yes.
A. So is Leapfrog, that is another reason.
Q. You never commissioned a study to actually find out what the cause was, did you?
A. I have patients telling me --
Q. It is yes or no.
A. If I have patients telling me they are going to go elsewhere because of the Leapfrog rating that I feel is inaccurate, and it is inaccurate, I don't need any more substantive information that this is impacting our volume.
Q. Okay. The answer is no.

You made statements in the declaration that Leapfrog is a pay to play organization. Do you recall that?
A. I do.
Q. Do you have any evidence as you sit here today that Leapfrog has taken any money from any hospitals in exchange for better grades?
A. It costs us money to pay the staff to collect all of this information. We are also handing over our data which has been monetized by Leapfrog. So, yes, I do feel we are having to pay to be involved in this survey.
Q. Mr. Hanlon, that is not my question.
Do you have any evidence that my client, Leapfrog, takes money from other hospitals in exchange for a better grade, yes or no?
A. That is not the question you just asked.
Q. I am asking it now.
A. Again, you asked about the pay to play. Can you repeat your question now that it has how that changed.
Q. Are you aware as you sit here today whether or not -- let me ask you this way: Do you have any factual evidence as you sit here today that my client, Leapfrog, takes money from hospitals in exchange for better grades?
A. I don't have any indication of that.
Q. Thank you.
A. Our pay to play scheme was focused on the fact that it does

cost us money and monetary data we are submitting to Leapfrog, so that is the pay to play.

Q. Sure. And you testified your medical center tracks CPOE, BCMA, hand hygiene and IVS, correct?

A. We do.

Q. As I understood your testimony, let me know if I am wrong, if you were to have engaged in a Leapfrog survey back in 2024, you would have scored a hundred out of a hundred points on your BCMA?

A. On BCMA -- I can't confirm. I know it wouldn't have been what we were imputed.

Q. You don't think it would have been limited achievement?

A. No.

Q. Who was the quality director in West Boca in 2023?

A. Who was the director of quality?

Q. Yes.

A. Andrea Nunez.

Q. She reported to Rick Ramirez, correct?

A. Yes.

Q. And he reported to you?

A. Yes, in part.

Q. If you would pull up Exhibit DX 509.

Your Honor, there is an objection to this.

Mr. Hanlon, this document is from Andrea Nunez, the quality director of West Boca in January 2023, to other members of the

West Boca staff and she says: Thank you for working on this. If we submit can we use 2023? She says, in order to achieve the maximum score we need to have less than a .119. The score above shows .25. Unfortunately, this places us in the category with the lowest score.

Do you see that?

A. Again, I wasn't a part of this email chain here.

Q. The attachment -- the subject line is Leapfrog data. Do you see that on the subject line, Leapfrog data?

A. For 2022.

Q. And the attachment says, Leapfrog 2022 gold standard workbook. Do you see that?

A. This was also sent in 2023, in January, and I hadn't started at West Boca until October of that year.

Q. Do you have any reason to believe this is not West Boca's BCMA score in 2023, which would have been the bottom category?

A. I can't speculate to this, I wasn't at this hospital or part of this email and I don't know who Michael Perry is.

MS. BLAIR: I ask to have this admitted as a party opponent admission.

THE COURT: Do you have an objection?

MS. SCOTT: Yes, your Honor, he said he wasn't there at this time, it doesn't even say West Boca.

THE COURT: What is the objection?

MS. BLAIR: This is the BCMA standard.

MS. SCOTT: Your Honor, this is not a record of West Boca. Again, I don't see where it says anything about BCMA. BCMA is not rated based on .19 or .25.

MS. BLAIR: It is right here, West Boca.

THE COURT: It seems to be a West Boca document.

MS. SCOTT: He has been questioned about BCMA, and there is nothing I see about BCMA. BCMA is not even measured as 1.119 or .25. It misrepresents because Mr. Hanlon was not shown anything about BCMA, and misrepresents the testimony. It is confusing and misleading.

THE COURT: That doesn't appear to be an authenticity objection and it is a West Boca document, so I will overrule 509.

MS. BLAIR: Thank you.

BY MS. BLAIR:

Q. You talked a lot about complaints we have from patients, that you have listed off complaints that you heard from patients either directly to you, to members of your governing board, medical executive board or doctors, correct?

A. I discussed two specific AMA.

Q. And you signed interrogatories in this case?

A. Yes.

Q. I won't belabor the Court, DX 207, you signed those interrogatories?

A. Yes.

Q. Do you recall signing interrogatories in this case?
A. Yes.
Q. I asked you all the same questions I asked the other four. If we go to number eight of my interrogatories. I asked you the question about --
A. Can you go to number 10?
Q. I want to go to 8. It's my examination. Identify any and all persons, whether internal or external, with whom you communicated to anybody about the safety grade, the date, communication, etc. Your answer is exactly the same as the others. You said the -- you never once give a patient name, do you, in this answer?
A. I discussed the various individuals and patients are protected by HIPAA.
Q. What about the physicians, are they protected?
A. They are not.
Q. You talked about Dr, Anthony Hernandez?
A. He was the physician that cared for the patient who left AMA.
Q. His name is not here?
A. That incident occurred in October of '25.
Q. Did you supplement --
A. That was post this.
Q. You never supplemented your answer, did you?
A. I gave all of the information to my counsel.

Q. They had it?
A. Timely.
Q. That is good to know.
A. I immediately reported it to our counsel.
Q. Excellent. If you go to number 14, I asked questions of you as the representative of West Boca. I asked the question whether you were aware of specific patients who relied on the Leapfrog safety grade in declining to receive health care. Do you see that? That is my question to you.

And I ask you to identify the patient, the services that were declined, the date, type of service, the median for the conversation, the content. Do you see that?
A. I do.
Q. We scroll down, that is it, since the release of the false and misleading grades we received numerous reports from doctors. You never provided any names, did you?
A. It says here, Plaintiff has have received numerous reports from doctors that patients considered or decided not to use the Plaintiff's facility due to concerns related to the TLG's misleading grades. That is an accurate statement.
Q. You never provided any specific information I requested; is that right?
A. This is an accurate statement.
Q. You are saying that tells me the patient, the type of service, the median and the content of the conversation. Is

that your testimony?
A. Again, the Plaintiffs received numerous reports. I did disclose we received numerous reports from patients who decided not to receive care at our facility because of the grades.
Q. When did FW come to the hospital?
A. October.
Q. 2025?
A. Yes.
Q. You never supplemented that answer; is that right?
A. I reported all of the information to our counsel.
Q. You reported all of the details to your counsel?
A. I reported the AMA report that we reviewed earlier today, yes.
Q. And these were never supplemented?
A. This is an accurate statement.
Q. Okay. We talked about your Google reviews being up. Do you review the Google reviews for West Boca?
A. I do.
Q. Do you review all of the bad Google reviews?
A. I don't personally review all the bad reviews. When we get a one star we do report it to the respective leader that is over that area.
Q. Have you ever seen any negative Google reviews that mention Leapfrog?
A. Yes.

Q. I bring up DX 917.
There is an objection to this, your Honor.
Mr. Hanlon, can you tell the Court who Kathleen Catley is, please?
A. I believe she is one of the individuals that works at our central business office that monitors our social media and Google reviews.
Q. Ricky Ramirez is on this document and he is the chief nursing officer for the Palm Beach Health Network market?
A. And West Boca.
Q. West Boca specifically?
A. Yes.
Q. And Lisa Cook is on here, and she is the marketing director for Palm Beach Health Network?
A. And Delray.
Q. You see Tom Daily gives us his name, and he said, if anything below one star was possible that is what this place would be getting. Do you see that?
A. I do.
Q. Did you review this Google review when it came in around July 2025?
A. We did.
Q. He goes on to talk about the Leapfrog D safety grade?
A. He does.
Q. Then he says, medical malpractice claims, since 1999 there

have been 116 malpractice claims filed against the hospital, 28 involving deaths and 19 over $1,000,000. Do you see that?
A. I do.
Q. Was that true?
A. I don't know. I was surprised where he got that information.
Q. He mentioned to U.S. News one star patient experience. Do you see that?
A. Yes.
Q. This hospital is an absolute disgrace to medicine. I would advise driving out of your way and going to Boca Regional or any other hospital. Do you see that?
A. I see that.
Q. This is July 2025.
MS. BLAIR: Your Honor, I ask this document be moved into evidence as Mr. Hanlon has testified he reviewed the document, it comes from his marketing department and it is in the regular course of business that they would gather these and review them.
MS. SCOTT: Objection, your Honor, hearsay to the statements that had been reproduced from we don't know where, reflected in this document, and also relevance to the discussion of any claims, as well as 403 for unfair prejudice, confusing the issues and misleading, and hearsay as to Tom Daily himself.

THE COURT: All right. I will overrule the objection in terms of relevance and authenticity. Hearsay, I am going to stay consistent and overrule that for both sides until you all give me some legal dissertation telling me I can't.

I am pretty sure it is admissible, but I will look forward to further illumination on that point. I will treat this as I did those that you sought to admit.

MS. BLAIR: Thank you, your Honor.

BY MS. BLAIR

Q. If we look at DX 552.

A. If I could --

Q. There is no question pending.

MS. SCOTT: Your Honor --

THE COURT: I don't think there was a question pending. You may be able to deal with that on redirect.

BY MS. BLAIR:

Q. If we could pull up DX 552.

I show you what counsel showed you on direct examination, the guy with the finger who left against medical advice.

I want to be very clear what this record said. This document is dated, or reported August 22, 2025. So, a month after the document we just saw from Tom Daily, okay.

That document we just saw was from July 2025. This document is from August 2025.

A. Correct, and we hadn't confirmed whether Tom Daily was an

actual patient. That is what I was going to state. We did review it in real time, but we didn't confirm he was a patient.
Q. On 8/22/25, if we really read this, it says the patient's daughter did not want her father to have surgery in West Boca Medical Center due to the Leapfrog reviews that they read online.
Do you see that?
A. I do.
Q. Do you have any way of knowing what this patient, JD, what JD read? Did he read Tom Daily's review? Do you know that?
A. I don't know.
Q. And who spoke to Tom Daily to get this note put into the system?
A. Tom Daily is somebody --
Q. I am sorry, who spoke to JD?
A. The nurse that cared for the patient, and then the AMA documentation was submitted as part of the medical record.
Q. What is the name of the nurse?
A. Jennifer White was the nurse that was submitting it.
Q. Do you know Jennifer White?
A. I don't know her personally, no.
Q. Do you know her to be a nurse at West Boca?
A. I do.
Q. Do you know where this event took place between Jennifer White and JD?

A. The patient came into our free-standing emergency department and was scheduled for surgery and was transferred to the main campus and that is when they decided to leave AMA.
Q. Do you know what exactly was said by the patient's daughter other than what was in this note?
A. I do not.
Q. Do you know what the father's reaction was other than what was in the note?
A. I do not, no.
Q. Did Dr. Harris write down any other medical notes about this incident? I am sorry, Dr. Hernandez.
A. You'd have to check with Dr. Hernandez.
Q. The only information you have is what we are looking at on DX 552?
A. As part of our risk management system, yes.
Q. You don't know what the patient's adult daughter relied on when she talks about the Leapfrog online reviews?
A. The risks were shared with the patient by the physician and this was subsequently reported back to me.
As the CEO of the hospital, I am not immediately involved in every single AMA.
Q. When she says Leapfrog reviews that they read online, you don't know -- as you sit here today, you have no idea what that actually means, you never spoke to this patient?
A. This is Jennifer White's report.

Q. I am asking you if you have any knowledge.
A. I can see it from the event reporting system that that is what the patient claimed.
Q. You only know what Jennifer White wrote down?
A. Since she was the one caring for the patient, yes.
Q. You know nothing more than that?
A. Me personally, no.
Q. And then FW with the armpit infection. You talked about this patient as well, right?
A. Yes.
Q. He was admitted and left the ER against medical advice?
A. Correct.
Q. Who was the doctor treating him?
A. Dr. Hernandez.
Q. The same doctor?
A. Yes.
Q. Who was the nurse treating him?
A. I don't recall.
Q. Is there any note?
A. There was multiple staff that cared for this particular patient, so it is not one specific nurse. We had a similar report through our risk management system.
Q. There is a note that exists?
A. For the patient who left AMA, yes.
Q. Did you provide that to your counsel?

A. Yes.
Q. Do you know --
A. We provided the risk report that someone had left AMA citing the Leapfrog scores.
Q. You presented a document like 5 -- PX 552, you have another document just like that for this other patient?
A. Yes.
Q. You provided that to your counsel?
A. Yes.
Q. Do you know if that document has been provided to the other side in this litigation?
A. You'd have to ask counsel.
Q. Do you know what it says?
A. It is very similar to what we just reviewed on JD.
Q. Do you know who wrote that document?
A. The person that reported, yes.
Q. Who is that?
A. I don't remember off the top of my head.
Q. Do you know what the report says about what FW exactly said about Leapfrog?
A. Yes, it had similar comments. It was reported by the staff and the physician that had to sign the AMA paperwork expressing that they had shared the risks of leaving the hospital against medical advice.
Q. There is a document that says exactly what the patient said

allegedly that we don't have with respect to FW leaving AMA. Is that your testimony today?
A. We got a similar risk report that was raised to me because of citing the patient left due to the Leapfrog score.
Q. The gentleman who presented the finger, do you know what his outcome was of the surgery he had on his finger?
A. I don't know where he sought care.
Q. You don't know if he had a very successful surgery, and did very well as a result of that surgery?
A. He left against medical advice, so I don't know.
Q. Same issues with respect to FW with the armpit infection, do you know what the result was of his ultimate care?
A. I don't. He left against medical advice and I am not able to track where they go.
Q. You testified that he was billed at West Boca. He was billed, correct?
A. Correct.
Q. Was a bill generated?
A. Yes.
Q. Did you produce that bill to your counsel?
A. I don't recall that it was asked for, no.
Q. How much was the bill?
A. I don't know off the top of my head.
Q. Do you know if he paid the bill?
A. I don't know off the top of my head. I don't know if the

insurance paid for it or the patient was responsible for it.
Q. A few more questions. You said there were comments from community members. You specifically talked about Dr. Quedo?
A. Yes, she is one of our doctors.
Q. She sent you a text message about Leapfrog, correct?
A. Her office sent me a text message that the doctor had been approached by a patient that asked questions.
Q. Did you produce that text message?
A. I believe I did to my counsel.
Q. You gave it to your lawyers? What did it say?
A. I would have to look exactly at it so I could be honest.
Q. When did this take place?
A. It would be dated on the text messages.
Q. Ballpark, when does Dr. Quedo text you about Leapfrog?
A. I don't want to speculate.
Q. You provided that text message to your attorneys?
A. Yes.
Q. Do you know if they ever produced it to the Defendants in this case?
A. You'd ave to ask counsel.
Q. I will. You also said there were concerns by Dr. Campo?
A. Yes.
Q. Did she do that in a text message?
A. No.
Q. Email?

A. No.
Q. Any writing whatsoever about her concerns?
A. That was a phone call.
Q. Last but not least, I want to talk about the Humana letter that we have seen. West Boca received multiple Humana letters?
A. Two.
Q. One in the spring 2025, and one in the fall 2025?
A. No. One was based off of the release of the spring records and the other one was based off of the fall release. The second one was received around December 30th. I don't recall off the top of my head when the first one was received.
Q. If you'd pull up PX 464. This is a document your counsel showed you that was entered into evidence from Humana.
Do you recall what date you received this document, Mr. Hanlon?
A. I do not.
Q. And if we go down a little bit -- I think -- before we read that, did you say -- how much of Humana insurers make up your patient population?
A. Give or take, 12 to 14 percent.
Q. Is that a large percentage of your patient population?
A. That is up to interpretation. I consider it significant.
Q. Significant?
A. Yes.
Q. The significant insurer of West Boca says: Consequently,

we are providing you this information to encourage your facility to review your Leapfrog hospital safety grade to identify any factors that may have contributed to your performance on the safety measure.

And then they go on: We ask that you respond to this letter within 30 days from receipt regarding your strategic improvement performance.

Do you see that?

A. I do.

Q. Did you respond?

A. We did not.

Q. Why?

A. We were more focused on impacting inpatient care and safety than responding to Humana payers on a grade that we don't agree with and is not accurate.

Q. For the record, you testified it was "very concerning" to get this letter, correct?

A. It is concerning.

Q. Humana is a payer of your hospital?

A. Yes, they are.

Q. You didn't care enough to even respond to the letter?

A. Because of the contents of the letter, it is based off of a Leapfrog grade that we don't think is accurate. I can't respond to every single complaint with things that are related to things are not of value.

Q. Don't you think it is important to -- you called this very concerning correspondence. You didn't think that was important?
A. Not based on the Leapfrog grades. If I don't have any reason to respond to it, then I am not going to respond.
Q. You will not respond to an insurer that makes up 12 to 14 percent of your revenue for your patient population?
A. Based on a survey that we do not participate in nor find any value to.

MS. BLAIR: No further questions.

THE COURT: Do you have redirect?

MS. SCOTT: Very brief, your Honor.

REDIRECT EXAMINATION

BY MS. SCOTT:
Q. A couple of things. Early on in your cross-examination you were asked about Joint Commission. Do you recall that?
A. I do.
Q. You were asked if Joint Commission is a voluntary business decision. Do you recall that?
A. It is voluntary in that we can select as a CMS provider. They require that we have somebody, be accredited by either DMV or Joint Commission.
Q. Thank you for clearing that up.
You were also asked questions about your CMS star rating. Do you recall that?

A. I do.
Q. Has any patient declined to have care or treatment at West Boca citing your CMS scores?
A. Not that I am aware of.
Q. You were asked a couple questions about your revenue. Do you recall those questions?
A. I do.
Q. Based on your projections, did you expect your revenue would be higher for '24, '25?
MS. BLAIR: Objection, assumes facts not in evidence. There have been no projections presented in discovery or in evidence in this case.
THE COURT: Overruled.
THE WITNESS: We did, we recently invested close to $3 million in expanding our emergency department to treat more patients, and we have subsequently seen a decrease in that volume.
BY MS. SCOTT:
Q. You were also asked question about patients FW and JD, questions about billing and outcomes. Do you recall that line of questioning?
A. I do.
Q. You testified that West Boca sent both of those patients bills. Is that true?
A. Yes. In the normal course of business we do bill patients

that seek care in our facility.
Q. Do you expect that those patients were billed for the treatment they got at other facilities when they left your facility?
MS. BLAIR: Objection, speculation.
THE COURT: Sustained.
MS. SCOTT: May I have a moment, your Honor?
THE COURT: Yes.
MS. SCOTT: Nothing further, thank you.
THE COURT: Thank you, sir.
MS. MALONEY: Your Honor, we understand that Dr. Romano, who we were going to call later in the day, he has a 6:00 p.m. flight and a phone call before that. He needs to take the stand relatively quickly. My colleague will be examining him.
I have three minutes of Ms. Karen Van Caulil testimony by video, she is the CEO of the Florida Alliance for Health Care Value. My colleagues across the aisle have seven minutes of counter. We could play the ten minutes, let Ms. Scott get everything together for Mr. Romano and we will put him on the stand. Dr. Romano.
THE COURT: It's up to you, however you want to proceed. Why don't you just call Dr. Romano.
MS. SCOTT: Your Honor, I need a short break.
THE COURT: Okay.

MS. MALONEY: We will play the three minutes -- ten minutes of Karen Van Caulil.

(Thereupon the video of Karen Van Caulil was played.)

MS. MALONEY: Okay, your Honor, we next call Dr. Romano.

PATRICK ROMANO, PLAINTIFFS' WITNESS, SWORN

DIRECT EXAMINATION

BY MS. SCOTT:

Q. Good afternoon, Dr. Romano. My name is Sidney Scott. We haven't had a chance to meet before. I know you have some prior commitments, I will try to make this brief.

You are employed as a professor of internal medicine and pediatrics at the University of California Davis?

A. Correct.

Q. You have been employed had UC Davis for about 34 years?

A. Yes, almost 34.

Q. You would agree that your colleagues respect you and rely on you in your experience and advice at UC Davis, correct?

A. Generally, yes.

Q. You've also served on Leapfrog's safety grade expert panel, correct?

A. I have.

Q. And you have served on the expert panel since 2011; is that right?

A. Yes.

Q. Leapfrog also respects and -- respects you and relies on you as an expert panelist, correct?
A. I believe they do.
Q. As a member of the expert panel, you were involved in discussions about the change to Leapfrog's grading methodology relating to the fall 2024 change; true?
A. I was.
Q. Let's talk about that change.
Could we please pull up JS 22.3.
Do you see that on the screen?
A. Yes. It could be a little bit larger. That is better, thank you.
Q. Thank you. This is a May 15, 2024 email from you to Mr. Matt Austin, copying Missy Danforth and Alexandra Campione, with the subject line Leapfrog proposed text for imputation change. Do you see that?
A. Yes.
Q. Matt Austin is a paid researcher and consultant for Leapfrog that works with the expert panel; true?
A. True.
Q. And Ms. Danforth and Ms. Campione also work for Leapfrog, correct?
A. They are on Leapfrog's staff, yes.
Q. Ms. Danforth, she sort of leads the design of the safety grade scoring; is that right?

A. Yes.
Q. Ms. Campione is the lead analyst for Leapfrog's hospital safety grade; is that true?
A. Yes.
Q. If we look at page two of JX 22.3, if we go there, Mr. Austin starts out by stating, "Patrick, since our conversation with you a couple weeks ago about changing the imputation approach used in Leapfrog's hospital safety grade we met with the broader expert panel to hear their input and have drafted the attached language to share with hospitals about the proposed changes."
Do you see that?
A. Yes.
Q. It concludes by requesting your feedback on a written proposal regarding that change. Do you see that?
A. Yes.
Q. He says: "We very much value your perspective and expertise and we appreciate any concerns you might have for the proposed." Do you see that?
A. Yes.
Q. The change is assigning non-participating hospitals limited achievement scores on four measures, right?
MS. BLAIR: I object to leading. They called Patrick Romano in their case in chief. He has not been qualified as a hostile witness.

THE COURT: Do you intend him to treat him as that?

MS. SCOTT: Yes. He is a party and an affiliate of Leapfrog, he has published articles on their behalf and made public statements on their behalf, and has been controlled by Leapfrog in this litigation.

THE COURT: What does that mean?

MS. SCOTT: These lawyers represent Mr. Romano, they defended him at the deposition. We would like to speak to Mr. Romano. So he is a condition controlled witness, he is a party, he is an agent, he is an affiliated witness, and we called him adversely in our case.

THE COURT: At this point, I am going to sustain the objection. I am not clear that he is an adverse witness to you, but depending on how we proceed, I may grant you some leeway.

MS. SCOTT: Thank you, your Honor.

BY MS. SCOTT:

Q. Do you understand the change that Mr. Austin is referring to is the change in the methodology to assign non-participating hospitals limited achievement scores on four measures?

A. No, that is incorrect. Part of the change was also to rely on the previous two cycles of reporting, so-called step one imputation followed by step two.

Q. With regard to step two imputation, you understand that was assigning nonparticipating hospitals limited achievement scores

on the four measures?
A. Yes, that was the second step.
Q. Focusing in on the second step, limited achievement, is that the lowest score that a hospital can receive?
A. It is.
Q. If we look at JX 22.3 we see your response. You start off by stating, "I like the simpler and more direct approach here. If the goal is to penalize nonparticipants you might as well do so in a clear and unmistakable way" -- excuse me, "unmistakable manner."
Do you see that?
A. I see it.
Q. Do you agree, sir, that assigning hospitals low scores is a penalty?
MS. BLAIR: Objection, leading.
THE COURT: Sustained. Please restate your question.
BY MS. SCOTT:
Q. Do you believe that assigning hospitals low scores is a penalty?
MS. BLAIR: Objection, that is the same question, leading.
THE COURT: Overruled.
THE WITNESS: Ask the question again.
BY MS. SCOTT:
Q. Do you believe, sir, that assigning hospitals the lowest

score is a penalty?
A. No. It is only a penalty for the hospitals that would otherwise have received a higher score if they had completed the survey.
Q. Sir, you were deposed in this case. Do you recall that?
A. Yes, of course.
Q. When we asked you if most of the hospitals who don't participate are penalized by a low score, you said yes. Do you recall that?
A. Yes. You asked it in a different way, you used the term most. Yes, most of the hospitals do take a penalty with this mechanism, some do not.
Q. Is it Leapfrog's objective to penalize hospitals by assigning the lowest possible score?
A. I'm not a member of Leapfrog's board or a member of Leapfrog's staff, so I can't really speak to Leapfrog's objective. Nobody from Leapfrog's staff has ever said directly they want to penalize hospitals for nonparticipation. We have had discussions of that concept in the expert panel, but I never heard that from Leapfrog directly.
Q. So, we asked you about it in your deposition, and we asked you, you describe the strategic objective of penalizing nonparticipants, you responded yes. Do you recall that?
MS. BLAIR: Objection, improper impeachment.
THE COURT: Overruled.

THE WITNESS: I do not recall the context of your question. Could you restate your question, please.
BY MS. SCOTT:
Q. My question is, Dr. Romano: Do you believe that penalizing hospitals is a strategic objective of Leapfrog?
A. I believe it is appropriate for Leapfrog to encourage participation and to discourage the practice of riding on the coattails of other hospitals, so I think it is consistent with that for Leapfrog to penalize nonparticipants.
Q. Let's look back at this email. Look at the second paragraph. You state, "As I mentioned earlier, your step two B proposal would have led to lower imputed estimates, but not more accurate imputation.
"I find no reason to believe and you didn't present any evidence to suggest that a hospital's unreported data of a current year is better approximated by its cohort mean from the first year of reporting than by its current cohort mean. The underlying hypothesis behind your step two B approach was that hospitals stopped reporting because their true performance deteriorated relative to their cohort."
Do you see that?
A. Yes.
Q. You go on to disagree with that hypothesis, correct?
MS. BLAIR: Objection, leading.
THE COURT: Overruled.

THE WITNESS: I disagree with that hypothesis, yes.
BY MS. SCOTT:
Q. You stated, "My hypothesis by comparison was that most hospitals stopped reporting because it is too burdensome and because they only find market value in an A which proves impossible to attain or maintain."
Do you see that?
A. Yes.
Q. Are you aware of other hospitals stating that completing the Leapfrog survey is burdensome?
A. Yes.
Q. You go on to say, "If my hypothesis is correct, then the current step two approach, cohort would, mean more accurate imputations, but it doesn't achieve your strategic objective of penalizing nonparticipants."
Do you see that?
A. Yes.
Q. So it was Leapfrog's -- as you understand and s written here in this document, it was Leapfrog's objective to penalize non-participating hospitals, correct?
A. I want to be very clear for the record that I never heard anybody from Leapfrog say that their objective was to penalize nonparticipants.
What I heard from Leapfrog is that they were very concerned about a downturn in participation and they were concerned that

the hospitals that were hiding their data, were refusing to participate were essentially riding on the coattails of hospitals that were participating through this cohort imputation.

My understanding of Leapfrog's strategic objective was to an individual that situation, and that naturally requires penalizing nonparticipants.

Q. That is not what you said here, sir, in your email, correct? You state that if it is your strategic objective of penalizing nonparticipants -- you are referring to Leapfrog?

A. I am referring to Leapfrog, but I am also making clear that in this email I never was told by Leapfrog that they have strategic objectives of penalizing nonparticipants.

Q. Do you normally put things in writing that you don't have a basis for?

A. I think it is a common practice in email to state things perhaps a little bit more directly, a little more bluntly than what has been stated elsewhere.

Q. You've reported to others in writing that Leapfrog's staff was determined to more aggressively penalize hospitals. Do you recall writing that, sir?

A. Yes.

Q. Okay. Um-m-m, you go on, "In other words, I wasn't keen on a backdoor approach to penalizing nonparticipation. If you want to penalize nonparticipants then don't pretend you are

imputing missing values in a statistically optimal way, just be honest about your goal."

Do you see that?

A. Yes.

Q. The goal there is to penalize --

A. No. The goal is to maximize participation for the purpose of transparency, to improve patient safety and save lives. That is the goal.

Q. You agree that the purpose of this change to assign hospitals the lowest possible score was not accuracy, don't you?

MS. BLAIR: Objection, leading.

THE COURT: Overruled.

THE WITNESS: Could you ask the question again.

BY MS. SCOTT:

Q. Sure. You agree with me that the purpose of this change to assign non-participating hospitals the lowest possible score was not accuracy, was it, sir?

A. It was not to improve accuracy.

Q. Does Leapfrog tell its consumers that it is penalizing hospitals for nonparticipation?

A. It is visible on the website, as I heard in testimony this morning.

Q. Could we please pull up JX 21.

This is the document -- are you referring to Mr. Berger's

testimony, Dr. Romano?
A. Yes, along with my own review of the website, yes.
Q. This is the FAQ that Dr. Berger went over earlier. If you look at page two, does a hospital get a better safety grade if it reports to the Leapfrog hospital survey? Do you see that?
A. Yes.
Q. Leapfrog tells consumers the hospital safety grade tells consumers how well the hospital does on safety, not whether they complete the Leapfrog hospital survey, correct?
A. That is what it says, yes.
Q. That doesn't say anything about penalizing a non-participating hospital for not participating in the survey, does it?
A. Well, as we heard in testimony earlier, this is not fully in agreement with Footnotes 1 and 4 on the safety grade pages.
Q. My question, focusing here on this documenter, this doesn't tell the consumer that non-participating hospitals are being penalized for not participating in the survey, does it, sir?
A. Actually, it does. If you read lower down the paragraph it says, if a hospital performs well on certain measures, they have the opportunity to earn more points for those measures than they would if they did not report to the Leapfrog hospital survey. It is very clear.
Q. Sir, that is if a hospital participates and there is data for the measures, correct?

A. It says, again, if a hospital performs well on certain measures in the Leapfrog hospital survey, they have the option to earn more points in the hospital safety grade for those certain measures than they would if they did not report to the Leapfrog hospital survey.
Q. Nowhere in this document does it say transparently, as you have urged, that a non-participating hospital will be penalized for nonparticipation, does it, sir? You are not going to see penalized or punished anywhere in this FAQ, are you?
A. I think it is very clear that there is a benefit to participation. Reward and penalty are two sides of the same coin, as I testified previously. It's no difference, it's two sides of the same coin, the opposite of a reward is a penalty.
Q. If we look at JX 22.3, we see that Ms. Campione responds to your email. Do you see that?
A. Yes.
Q. She thanks you for your feedback and she says: "I completely agree." Do you see that?
A. Yes.
Q. We have one Leapfrog staff member who agrees with you, correct?
A. You'll have to ask her.
Q. We will take her at her word.
MS. BLAIR: Objection.
THE WITNESS: I don't understand. You will have to

ask her that question.
BY MS. SCOTT:
Q. Let's look at PX 293.1. Can we pull that up.
This is a May 15, 2024 document, email from you to a Mr. Bruce Hall and Gregory Maynard at UC Davis, with a subject line Leapfrog announcements for hospitals May 2024.
MS. BLAIR: Your Honor, there is an objection to this document for the record by our side. Certainly Mr. Romano's email, that is his word. This document has emails and statements by people who are obviously not here. They are out of court statements that Plaintiff is offering for the truth of the matter asserted from declarants who are not in court today. We object to the second half of this email as hearsay.
THE COURT: Well, I haven't seen it yet. I will rule after I have.
BY MS. SCOTT:
Q. Mr. Romano, you sent this email from your UC Davis account, correct?
A. I did.
Q. And you sent it to some of your colleagues at their UC Davis account?
A. That is correct.
Q. Dr. Bruce Hall is the chief clinical officer at UC Davis health; is that right?
A. He was the chief clinical officer at that time, yes.

Q. Dr. Maynard was the chief quality officer at that time at UC Davis; is that true?
A. Yes, he is still the chief officer.
Q. And there also is a Brenda Inman?
A. Yes.
Q. And she is the quality and safety manager for Dr. Maynard; is that true?
A. Correct.
Q. If we look at page two of this document, it kicks off with an email from you to some of your UC Davis colleagues. Do you see that?
A. Correct.
Q. You are informing these colleagues about Leapfrog's changing their imputation approach, correct?
A. Correct.
Q. You tell them that this is your opportunity to reconsider they -- that's referring to Leapfrog, correct?
A. Correct.
Q. -- are changing their imputation approach so hospitals can get away with responding in alternate years. If you skip more than one year you will never get above a C, might even drop to a D.
Do you see that?
A. Yes.
Q. And if we turn the page, we see that Dr. Maynard responds

to you. Do you see that?
A. Yes.
MS. BLAIR: Objection, hearsay, your Honor.
THE COURT: I beg your pardon?
MS. BLAIR: Hearsay.
THE COURT: I am going to overrule your objection. The comments from the others is available only to show the context of Dr. Romano's statements and aren't to be treated for the truth of the matters asserted in their statements.
BY MS. SCOTT:
Q. If you look at Dr. Maynard's response he says, "Patrick, I have brought this up with Dr. Hall. We are both ambivalent about the value of Leapfrog, and I think that ambivalence tilts even more negative when the lack of participation guarantees a lower grade which they still publish effectively blackmailing centers to participate.
Do you see that?
A. Yes. I think the Court needs to understand that all parties on this email are privy to internal information about our performance on all the other measures that go into the Leapfrog hospital safety grade.
So, that is the basis for my statement and his statement as well, that we are stuck at a C.
Q. The basis of his statement -- well, he states that they believe that a lack of participation guarantees a lower grade

which is still published, effectively blackmails centers to participate. Do you see that?

MS. BLAIR: I object, calls for speculation.

THE COURT: Overruled.

THE WITNESS: That is his view.

BY MS. SCOTT:

Q. It is also Dr. Hall's view. If we look at his response, he says, "Thanks, Patrick, I agree with Greg and wouldn't change course on this day."

Do you see that?

A. Yes.

Q. You respond to both of your colleagues. Do you see that?

A. Yes.

Q. One of the things you say in response is, "You can call it blackmail if you want." Do you see that?

A. Yes.

Q. You go on to say, "From my perspective on their expert panel I am asking them and they have agreed to be honest and transparent, that is, don't say you are imputing missing scores, just say that you are penalizing nonparticipants by assuming they have limited achievement on these domains."

Do you see that?

A. Yes.

Q. You urged Leapfrog to stop calling the methodology or the fall 2024 change imputation, and instead admit that they were

penalizing hospitals, right?
A. Yes. I encouraged them to use the word assign instead of impute with respect to step two B, and they followed that suggestion.
Q. They are not being transparent that they are penalizing hospitals for nonparticipant, are they?
A. I believe they are transparent, yes.
MS. SCOTT: Your Honor, I move to admit PX 293.
MS. BLAIR: Your Honor, we object based on your ruling with respect to hearsay issues. We just want to point that out. Thank you.
THE COURT: 293 is admitted over objection as limited as I suggested.
BY MS. SCOTT:
Q. Can we pull up PX 501.
We see at the top, Dr. Romano, we see you forwarded this email chain to Leapfrog's lawyers, correct?
MS. BLAIR: Your Honor, I object to this document. We were gathering documents to produce pursuant to a subpoena that was provided to Mr. Romano, so that is why it is on here. It is the same hearsay issues. The fact that my name is on it, I don't really care. We object to it for purposes of the hearsay situation. We wanted to be transparent about the fact that they were being forwarded to us.
THE COURT: I don't understand the objection.

MS. BLAIR: It's the same hearsay objection, it contains UC Davis internal documents.

THE COURT: The objection is overruled for the reason I stated for 293.1.

MS. SCOTT: Will this document be moved into the record?

THE COURT: Yes.

BY MS. SCOTT:

Q. Dr. Romano, page two, this chain kicks off with an email from you to Dr. Hall and Dr. Maynard, along with Ms. Inman. Do you see that?

A. Yes.

Q. Here you state, "Well, friends, we now see the consequences of our nonparticipation, a D grade in the same league with Orville and Manteca, which is embarrassing for our organization that claims to be high quality." Do you see that?

A. Manteca, yes. We dropped from a C to a D.

Q. Based on UC Davis' lack of participation it dropped a full grade, correct?

A. That was one of several contributing causes, but, yes.

Q. You mentioned those contributing causes. You talk about infection rates. Do you see that?

A. Yes.

Q. But you say, "The real killer for us was nonparticipation, 15 out of a hundred on safety practices, zero out of 120 on

staff." Do you see that?
A. Yes.
Q. If you look up, we see Dr. Hall's response.
I want to key in on it looks like the second paragraph there.
MS. BLAIR: For the record, same hearsay objection.
THE COURT: Same ruling.
BY MS. SCOTT:
Q. He says, "With respect to Leapfrog specifically, I think it is irresponsible and reckless of them to deliver incomplete assessments to the public."
Do you see that?
A. I see it. Obviously I disagree, but I see it.
Q. You respond to Dr. Hall on page one, do you see that? I will pull that up there for you.
A. Yes.
Q. You say, "Re Leapfrog: We think you folks are too critical. Their decision to increase the penalty for nonparticipation was a simple business decision."
Do you see that?
A. Yes.
Q. You go on to say, "It is just business, folks." Do you see that?
A. Yes.
Q. You say, "Their business model, as you know, depends on

producing data that add value for health plans and employers, and the data are not valuable if participation is low."

Do you see that?

A. I see that, but it needs to be clear that I am not a business professional or a marketing professional.

To me, what makes the data valuable is the fact that it provides transparency which is important to consumers and purchasers of health care. The value that I care about is the transparency of the data.

Q. We are talking about Leapfrog because -- you are talking about Leapfrog's business model?

A. For a nonprofit organization the business model is about how the organization adds social value. Leapfrog is a hundred percent committed to improving patient safety and saving lives. Yes, their business model does depend on producing hospital safety grades and data that value to the market.

Q. Leapfrog licenses its hospital data. You know that, right?

A. Yes.

Q. That is part of Leapfrog's business model, true?

A. I didn't know that before this case, but now I do.

Q. You know that?

A. Yes.

Q. Leapfrog's business model, as you write with your own words before litigation, "Leapfrog's business model depends on producing data that adds value." Do you see that?

A. Yes, but at the time I didn't know they earned revenue by licensing data. All I knew is that they have member organizations and affiliates that are very passionately concerned about improving value in health care for consumers.
Q. And you know that data, as you say here in this document, that data is not valuable if participation is low, correct?
MS. BLAIR: Objection, mischaracterizes this document.
THE COURT: Overruled.
THE WITNESS: Ask it again.
BY MS. SCOTT:
Q. Based on what you state in your own words in this document, data is not valuable if participation is low, correct?
A. Because health plans and employers depend on Leapfrog to produce reliable and valid information about hospital safety, yes.
MS. SCOTT: Let's pull up 366.1, please.
MS. BLAIR: Your Honor, I have the same objection on these emails.
MS. SCOTT: May I proceed, your Honor?
THE COURT: Yes.
BY MS. SCOTT:
Q. This is a different response on that same chain that we looked at on the previous exhibit, but this is from Dr. Maynard?
A. Yes.

Q. He says, "Personally, I think it is embarrassing to Leapfrog for nuking sites that don't participate. They should just write NA. Anything else is not an honest representation of the site in question." Do you see that?
A. Yes.
Q. You would agree that UC Davis is one of the top academic health centers in the country, correct?
A. Maybe not.
Q. I don't know if your friends at UC would like to hear you say that.
A. I am here under oath.
Q. Would you agree with me, sir, that doctors and nurses at UC Davis wash their hands?
A. Generally. We could collectively do better.
Q. You saw that the assigned value for hand washing is 15?
A. Yes.
Q. You would agree that 15 is not an accurate reflection of UC Davis' compliance with hand washing, correct?
A. Correct.
Q. Do you think it is okay for Leapfrog to tell the public that UC Davis doesn't wash their hands?
MS. BLAIR: Objection, mischaracterizes the --
THE COURT: Overruled.
THE WITNESS: Our chief clinical officer, chief medical officer made a business decision not to participate in

the Leapfrog survey. There are natural consequences to that choice that they make. They subsequently reversed that choice, so I am sure the scores will go up in 2025 and 2026.
BY MS. SCOTT:
Q. They reversed that choice because they started to see cancellations in their facilities?
MS. BLAIR: Objection, assumes facts not in evidence.
THE COURT: Overruled. The question doesn't have to assume facts in evidence. That is a repeated objection, but it is a question. If you are able to answer it, go ahead, sir.
THE WITNESS: I am not aware of any specific evidence of canceled surgery or procedures.
BY MS. SCOTT:
Q. When we asked you about that, sir, in your deposition, you were aware of cancellations at UC Davis. Do you recall that?
A. No.
Q. Let's look at PX 386. If you would pull that up.
THE COURT: If you are moving in 386.1 it is admitted for the reasons earlier stated.
BY MS. SCOTT:
Q. Mr. Romano, this is a December 19, 2024 email from a Robert --
A. Curchecko. (phon)
Q. At UC Davis emailing Dr. Maynard and also Brenda Inman. Do you see that?

MS. BLAIR: Your Honor, this doesn't even have Mr. Romano on the email, so I would object to hearsay.

THE COURT: Well, we haven't heard the question yet.

BY MS. SCOTT:

Q. Mr. Romano, we see there is an exhibit sticker on this document, it says, Romano 26. Do you see that?

A. Yes. Just to be -- I am just curious, is there a particular reason you are not referring to me as a doctor?

Q. I am sorry, Dr. Romano, no disrespect. Thank you for --

A. I was just curious.

Q. No, no disrespect. Thank you for the correction.

Dr. Romano, you were shown this document in your deposition?

A. Yes. I never saw it before my deposition.

Q. But you did see it at your deposition?

A. Correct.

Q. If we look at the kickoff email on page two of three, we see that Ms. Monit Galadi at UC Davis sends an email out to the surgery clinics at UC Davis Health. Do you see that?

A. I do.

Q. And she states, "The recent release from Leapfrog results indicated a low quality score for UCH. As a result, unfortunately we have seen some patients canceling appointments and/or procedures." Do you see that?

A. I see it. The first time I saw this was at my deposition.

I have absolutely no knowledge of this or evidence that it is true or false.

Q. Following seeing these cancelations what -- UC Davis ultimately decided to participate in the Leapfrog hospital survey, correct?

MS. BLAIR: Objection, calls for speculation. He testified to that.

THE WITNESS: I would say that, again, to my knowledge, any cancellations were just postponements, rescheduling. The more influential factor was that all of our sister campuses in the UC health system were participating.

BY MS. SCOTT:

Q. You went from knowing nothing about cancellations to now offering all sorts of explanations about cancellations; is that right?

A. I'm saying the factor that caused UC Davis to resume participating was peer pressure from other UC hospitals.

Q. You agree that a hospital's reputation could take a hit for a poor Leapfrog safety grade?

A. Yes, of course.

Q. If a hospital is assigned an F, that could harm the hospital's reputation, too, right?

A. It could.

Q. Dr. Romano, you are familiar with the expert panel's guiding principles, aren't you?

A. I had forgotten them for my deposition, but yes, I was reminded.
Q. You were involved in developing the expert panel's guiding principles, correct?
A. Yes.
Q. You wrote a paper on it?
A. I wrote a paper that mentioned those principles, yes.
Q. Could you please pull up Plaintiffs' Exhibit 203.
This is the expert panel's guiding principles for developing the safety grade, correct?
A. Yes.
Q. These principles represented the views at the time of the expert panel, correct?
A. Back in 2011, 2012, yes.
Q. Let's see what the expert panel said about missing data.
If we go to page -- thank you, sir.
It says, "If data are used from a secondary data source attempts should be made to provide a grade that is equitable to what the hospital would have earned had the data been available from the primary source."
Do you see that?
A. Yes.
Q. Leapfrog no longer considers that it needs to be equitable with missing data to nonparticipating hospitals, correct?
A. No. This highlighted sentence is no longer applicable

because the data from the secondary data source, which was the American Hospital Association, are no longer available. So this entire sentence is no longer applicable.

Q. Can we please go to the top of page three of three.

These expert -- excuse me. "These guiding principles also state that if a hospital is missing data for a large number of performance measures then a grade cannot reliably be calculated."

Do you see that?

A. Yes.

Q. "In this situation no grade should be issued for the hospital." Do you see that?

A. Yes.

Q. You were here for Dr. Berger's testimony where he talked about the six and seven, the missing measures, correct?

A. Yes.

Q. And you heard him say that non-participating hospitals are missing seven measures, right?

A. Yes.

Q. But Leapfrog tells the public in its scoring methodology that hospitals that are missing scores for more than six process or structural measures are graded, correct?

A. I am sorry?

Q. You heard Dr. Berger testify that hospitals, according to Leapfrog, hospitals that are missing scores for more than six

process measures are missing data and they are not graded, correct?
A. Yes, yes, but I guess that -- you know, I am trying to just understand because from the expert panel's perspective, we don't just count in measures. We are looking at each measure has its own weight, and so the four measures under discussion here I think collectively contribute only about 23, 24 percent of the total score.
So, that's I think not -- doesn't qualify as a large number of performance measures because it is well under half the total score.
Q. You agree that seven is more than six, right?
A. Yes, seven is more than six.
Q. Nonparticipating hospitals are missing seven measures, right?
A. Nonparticipating hospitals are not missing seven measures because of the imputation approach.
Q. There is no data to support the four measures, correct?
A. The first step of the imputation is to rely on prior data that these hospitals submitted themselves.
Q. If we focus on step two of the imputation model where step one doesn't apply, there are seven missing measures, correct?
A. There are seven missing measures -- I mean, I have to be reminded of the specific count of the measures, but I think that is correct.

Q. There is no data underlying any of those seven measures because hospitals don't participate and provide the data, right?

MS. BLAIR: Objection, calls for speculation.

THE COURT: Overruled.

THE WITNESS: Ask the question again.

BY MS. SCOTT:

Q. For those seven measures for nonparticipating hospitals, there is no underlying data for those measures, correct?

A. The only data we have is that the hospital chose not to participate and therefore they are hiding something.

Q. That was not my question. That calls for speculation.

For the seven measures, we can agree that if I don't give you my data, you don't have it. There is no underlying data to support those seven measures, right?

A. Only the absence of reporting, yes.

Q. Despite lacking data for the seven measures, Leapfrog still assigns grades to the nonparticipating hospitals, correct?

MS. BLAIR: Objection.

THE COURT: Overruled. Let me ask you, how long are you going to be?

MS. SCOTT: This is my last question, your Honor.

THE COURT: Go ahead.

BY MS. SCOTT:

Q. Despite lacking data, sir, for the seven measures, Leapfrog

continues to assign grades to non-participating hospitals, correct?
A. It is well under half the total weight of the composite, so, yes.
MS. SCOTT: I pass the witness.
THE COURT: Let me ask you, you talked about him having some time pressures. We need to take a break, are you going to be very long?
MS. BLAIR: No, I shouldn't be.
THE COURT: Let's take 12 minutes and start at ten minutes to 4:00, and hopefully you can get him on his way on time.
(Thereupon, a brief recess was taken.)
(Thereupon, trial reconvened after recess.)
THE COURT: Please have a seat and please continue with cross-examination.
MS. BLAIR: Thank you, Your Honor.
BY MS. BLAIR:
Q. Good afternoon, Dr. Romano. I just wanted to go over your background a little bit. Could you describe to the Court what it is you do for a living and specifically how it relates to patient safety management?
A. So I am a professor, I'm board certified in internal medicine. I used to practice pediatrics as well. And my job as a professor involves teaching, research, clinical care and

public service. So my research focus is in health care quality and safety, particularly measurement of quality and safety and using measurement to drive improvement.
Q. And at one point in time, you were the editor of the Health Services Research Journal, correct?
A. That is correct. I was co-editor in chief for five years of the Journal and Health Services Research which is one of the journals in my field.
Q. Do you provide any research support for any Government entity, like CMS or CDC?
A. Yes. We consistently had a series of contracts, subcontracts with the US Agency for Health, Research and Quality as well as the Centers for Medicare and Medicaid Services.
Q. And I heard some people refer to you as one of the architects of the PSI 90 CMS, right? Would you agree with that?
A. Yes, that's correct. My team led the development, testing validation and implementation of the CMS Patient Safety and Adverse Events Composite which is also known as PSI 90. It's also one of the components in the Leapfrog Hospital Safety Rating.
Q. Would it be safe to say that you dedicated your professional career to the study of patient safety and measurement?

A. I think that is a fair statement, yes.
Q. All right. And there is some discussion about your service on the hospital -- Leapfrog Hospital Safety Grade Expert Panel; do you recall that testimony?
A. Yes.
Q. And is that a volunteer position?
A. It is a volunteer position.
Q. Have you ever been paid by Leapfrog?
A. Never been paid except reimbursed for one trip to Alexandria, Virginia.
Q. We might talk about that today. And are you being paid for your testimony here today?
A. I am not.
Q. And do you believe in the mission of Leapfrog?
A. Yes, I believe very strongly of Leapfrog's mission of driving improvements in patients' safety to make health care safer for all Americans and ultimately will allow us to improve patient outcomes.
Q. And despite the fact that we saw this email that opposing counsel showed you that you sent out to Dr. Campione about penalizing, we're going to get to that word in a second, did you ever stop serving on the Leapfrog board after the fall of 2024 methodology come out?
A. No. I remained committed to Leapfrog's mission.
Q. And did you ever express to Leapfrog that as an expert in

patient safety and measurement, you disagree with the two-step imputation model that is currently being -- other than this letter we saw, after it was implemented, did you ever express to Leapfrog that you disagree with the two-step imputation methodology?

A. No, I did not. In fact, you can see in the evidence that I defended the approach with my own hospital administrators.

Q. And Ms. Scott showed you the guiding principles, do you recall that?

A. Yes.

Q. And those guiding principles were put into place in 2011 when the safety grade was coming into fruition; do you recall that?

A. Yes.

Q. And if I could pull that document up, PS-203, really quickly, Dr. Romano.

This is the last page of this document that is already in evidence. If we scroll to the very bottom, and counsel didn't show you this, but if we scroll to the very bottom of this document, I want to remind you right here, the evolution of the composite grade; do you see that?

A. Yes.

Q. Is that consistent with your understanding of what, in fact, has been happening at Leapfrog from 2011 all the way through 2025, that there is an evolution in the measurement of

patient safety?
A. Yes, that is correct. Every year, we typically meet twice over the course of the year, we discuss new measures that are becoming available, older measures that may be retiring. We discuss the rating scheme. There is an active discussion going on right now about various components of the rating scheme, so lots of things get revisited each year.
Q. Can you look at that last sentence on the evolution of the composite grading, it says the composite grade will also ideally serve as a living laboratory to help push forward designs and patient safety performance in measurement. Do you see that?
A. Yes.
Q. And would you agree with me that we have seen the evolution of this hospital safety grade over time?
A. Yes. In fact, some of the very measures that we are discussing today were not part of the original hospital safety grade, so there has been emerging recognition of the importance of bar code administration, for example, the importance of hand hygiene policies, so these have been reflected into the design of the Leapfrog survey as well as the hospital safety grade.
Q. And last but not least, the principles clearly state here the process of developing the score will be transparent to all parties that are interested. The waiting and calculation process will be transparent to hospitals, consumers and others.

Do you see that?
A. Yes.
Q. And as a member of the -- as a volunteer member of the Hospital Safety Grade Expert Panel, do you agree that Leapfrog is transparent to hospitals, consumers and others about its due process board?
A. I do. They publish every year, they publish the planned updates and certainly in 2024, they published the planned updates to the imputation and assignment methodology. A number of hospitals and other stakeholders submitted comments in response and all of that is public.
Q. And if you felt that Leapfrog wasn't transparent to consumers and hospitals, would you still voluntarily serve on the expert panel?
A. I would not because it's central to all of the work I have done. Most of that work has been with publication agencies like HRQ and CMS, and Leapfrog, of course, is a user of that information, those publication agencies as well as information that it collects through its own agency.
Q. And Ms. Scott asked you several questions about an email you had written to Alex Campione where you used the word "penalize", remember that?
A. Yes.
Q. And she used it in one of her questions synonymously with punishment. Do you recall that?

A. Yes.
Q. And as a person -- as a doctor and a person or researcher that studies these patient safety measurment, would you use the word "penalize" and what do you mean by that?
A. Well, I basically mean by penalty that there is a predictable, a temporary, and a specific consequence to a particular action or choice, right. So, the analogy that I use is like playing football, right. So if there is a false start, if somebody crosses the line at scrimmage, it is a five-yard penalty, right. But you could make it up on the next down, right. And so the idea is that this is temporary, right. So as soon as a hospital chooses to participate in the survey program again, the penalty goes away, those data are archived and the new data that comes up on the website reflects that information. So the nature of penalty is that it is predictable, it's a choice that the hospitals made to incur that penalty and it is temporary.
Q. And just to be clear, when you write, if your goal is to penalize non participating hospitals, are you using that word synonymously with punishment?
A. Absolutely not. I am using it in the sense of essentially encouraging hospitals to participate as I mentioned in previous testimony. So it is all about encouraging transparency, that is Leapfrog's mission, that's my mission as a subcontractor to HRQ and CMS and other agencies. So it is all about

transparency and encouraging transparency.
Q. And as an expert who has dedicated his professional careers in management of patients' safety, do you believe that transparency of data increases outcomes for patients?
A. Yes. I think there is a substantial amount of evidence that when markets are aware, when health care providers are aware of what is happening within health care organizations, they tend to respond, they tend to figure out ways to address the problem, just as we heard earlier today, that they tend to respond, they tend to figure out ways to address the problem, just as we heard earlier today, low patient satisfaction experience scores led to changes at one of these hospitals to bring in a consultant, and we see that on patient safety. The organizations bring in consultants to figure out how can we address this problem and how can we improve, and it is driven by transparency because if the data are secret, then there is no pressure to improve.
Q. And in fact, you have been a member of the Hospital Safety Grade Expert Panel since its inception?
A. Yes.
Q. And this idea of having to solve for missing data from, you know, an expert patient safety measurement perspective, is that something that the expert panel has always discussed, even since the beginning?
A. From the very beginning, yes.

Q. And just to orient the Court really quickly, there are other members of the expert panel, correct?
A. Yes.
Q. And is it your opinion that those other eight members of the expert panel are also experts in the field of patient safety and measurement?
A. Yes, we all are.
Q. Have you known those other members for quite some time?
A. Yes, I have.
Q. And do you know those members -- do they express their opinions back and forth? Do you kind of spar with each other?
A. We do. There is a robust discussion with lots of sharing of different perspectives and different views.
Q. And does Leapfrog provide the expert panel a platform to really discuss opinions and hypotheticals and hypotheses without any pressure by Leapfrog management for you to come to some sort of decision that would impact their business?
A. That is correct. Usually, there would be a proposal on the table that we are asked to react to that would have been developed typically by the Leapfrog staff team, and by Matt Austin's team to work together, so they might put a proposal on the table and may ask for reaction. And so we all chime in and offer different opinions and we bounce off each other and try to come towards a consensus view.
Q. There is no vote, is there, no vote?

A. That is correct, there is no vote.
Q. And you talked just a minute ago about the one time you got your plane ticket paid to an expert panel meeting in Virginia and I want to pull that up, that's JS-20, Exhibit 44.1 for the record, from June of 2017. Is this the meeting you were talking about?
A. That is the meeting, yes.
Q. And you were there, correct?
A. I was.
Q. And do you recall during this meeting there was a discussion about the fact that the use of AJ Data was potentially disincentivizing hospitals from participating in the survey because they could choose not to participate and still get some credit. Do you recall there was a discussion at that time?
A. Yes.
Q. If you could get to that part. Right here, unintentional consequences of how we currently treat missing data. Do you see that?
A. Yes.
Q. And the second bullet point there, it says Matt who I believe to be Matt Austin from Johns Hopkins Armstrong Institute explaining that there are circumstances where there is a disincentive for hospitals to report to the Leapfrog survey. Do you see that?

A. Yes.
Q. What do you recall about that discussion as early as 2017 about disincentivizing participation in the survey by signing --
A. Right. We spent a lot of time discussing that we were using this separate data source from the American Hospital Association to impute how hospitals would have performed, for example, on Kim Draw's [sic] position on the order of entry if they had completed the survey. And the questions don't lineup exactly, the Leapfrog survey frankly is more rigorous and more detailed, and so, we had a number of discussions where we tried to figure out how to use the available data in the best way that we could.

This discussion relates specifically to sort of a complex statistical issue related to C-scores and there was some efforts, I think, to cap the C-scores, I don't know all of the details.
Q. And that is kind of my question looking at this, and it is very difficult for someone like me to read.

But is it your testimony that the nine members of the expert panel go to great lengths to try to figure out what the best potential model is for both the greater good of the public and for the hospitals being scored; is that a fair assessment?
A. Yes, that's correct.
Q. And you can take that down and pull up DX-406, which is --

there is a little bit of an issue with this document, Your Honor, I don't know if there is an oversight, but the first two pages are JX-2, but for some reason, the attachment was not attached in the joint exhibit, so I don't know if that is an issue, so I will have to introduce it after I show it to you, Dr. Romano.

Dr. Romano, do you recall that there was a meeting -- I am sorry -- do you recall that in 2019, there was some discussion about a new imputation model being put in place?

A. Right, because of the loss of access to the American Hospital Association data.

Q. Okay. I am sorry, is this 406, yeah, I am sorry, I got my exhibits wrong.

If we look at these call notes, and if you could go down -- do you recall at this point in time Arjun Srinivasan [sp]-- I can't say his name, Dr. Srinivasan --

A. Srinivasan, yes.

Q. -- was discussing the panel imputing a score of zero, actual zero credit to hospitals. Do you recall that?

A. Yes, he brought that suggestion several times to the panel.

Q. Was discussing with the panel a scoring of zero, do you recall that?

A. Yes, he brought that suggestion several times to the panel.

Q. Could you scroll down a little further. We have the actual notes here.

I don't want you to take my word for it. We see impeding data. There he is, a discussion, keep going, no, keep going.

Well, this document is in evidence, I don't want to waste your time or the Court's, but --

A. Number four is to give the hospital zero credit for the measure.

Q. Right. And do you recall that was Dr. Srinivasan's idea?

A. Yes.

Q. And do you recall whether or not Leapfrog supported giving non participating hospitals a zero?

A. I think the Leapfrog staff and the majority of the members of the panel at that time were concerned about the pushback from the hospital community.

Q. Because -- is it your experience as a volunteer on the expert panel that Leapfrog does take into consideration the burden on hospitals when making a determination what measures go into the safety grade and/or the scoring?

A. Very much so, yes.

Q. You can take that down, thank you very much.

I want to talk about -- excuse me -- in 2020, you just talked to me about Leapfrog lost their access to AJ Data, correct? I got the date wrong. Do you recall at some point in time that happened?

A. Yes.

Q. And you led a subcommittee of the expert panel with Matt

Mattica [sp] to try to figure out a two-step invitation model that would make sense, correct?
A. I don't recall whether I specifically led that committee, but I did work on it, yes.
Q. Okay. And ultimately, after a lot of work, there was an invitation model that was put into place, correct?
A. Yes, but it was different from the model that was originally proposed by Matt Mattica, yes.
Q. Yes. And the model that was ultimately put into place, you referred to that as the Pre Fall 2024 Methodology, so I might refer to it as that coming up.
I want to show -- do you recall at some point in time, you started discussing the idea with respect to these four measures that the data was not missing at random? Do you know what I mean when I say that?
A. Yes.
Q. And that is some sort of patient measurement term, I am not familiar with, so could you explain to the Court what that means?
A. Sure. It is a standard term in measurement, it also provides an educational measurement for that matter, but basically, the idea is there are three types of missing, right, so you could be missing at random, and that would be like just occasionally a tube gets dropped, and it's just a random tube, and nobody, again, has any control over that and nobody can

predict which tube will get dropped, it's just totally at random. So that is missing completely at random. Then the next is missing at random, which says that the missing is random but it's conditioned on observed characteristics of the hospital or the responding entity.

So, you know that men are more likely to respond than woman, more people who have college education are more likely to respond than those who don't. So that would be missing at random because you can predict missing based on the known characteristics of the respondents. This is a problem of missing not at random which means that we have no idea why people choose not to participate, why their data is missing. And so we have to presume in this case that it's missing in part because they know things that they don't want us to know, right.

That people -- the classic example is, when you ask people about their income, who doesn't report their income, who doesn't give an honest response. People who have a very high income and people that have a very low income, they know their income and they are either embarrassed about it and don't want to reveal it. So a sense of attrition here. So when we say that the data are missing not at random, well, what we mean is that there are unobserved characteristics at those hospitals that are contributing to the missingness. Every prism, messing, it is logical to assume, that one of those

characteristics is why hospitals know themselves about their performance. They make a strategic decision not to participate because they know the consequences of what their score would look like if they did participate.

Q. Is that what you call the type of measurement non-response --

A. Yes.

MS. SCOTT: Objection, Your Honor, we have given some leeway on this, but we are getting into expert testimony in describing the scientific basis of methodologies, and speculating about what hospitals do or don't do and why they do and don't do them based on research and experience and specialized knowledge, and so I would object to this line of questioning and I would actually move to strike the preceding answer discussing why you know what hospitals do and don't do. That is not disclosed yet, and he has not been disclosed as an expert, it is an undisclosed expert. I'll leave it at that and move to strike.

MS. BLAIR: Your Honor, they called him in their case, he sits on our expert panel and the issue in this case is --

THE COURT: You could have designated him as an expert.

MS. BLAIR: I could.

THE COURT: But you didn't.

MS. BLAIR: I did not --

THE COURT: You did not provide an expert report.
MS. BLAIR: I did not.
THE COURT: Are you going to elicit opinions?
MS. BLAIR: I'm not eliciting -- I am asking him why the expert penalty and change they made to the methodology and what that was based on. Mr. Berger and Dr. Nicholson commented and said there was no --
THE COURT: They were disclosed as experts.
MS. BLAIR: They were, right.
THE COURT: I am going to overrule the objection at this point, although I may put some limits on it to the degree he describes what the panel did, he can do that.
MS. BLAIR: Excellent, thank you.
MS. SCOTT: Thank you, your Honor.
BY MS. BLAIR:
Q. And also in the meeting, Dr. Romano -- well, let me ask this really quick. Do you recall in 2023 what the expert panel -- what change the expert panel made with respect to the ICU Physician Standard?
A. Yes. In 2023, the ICU Physician Standard was changed so that non reporting hospitals that had ICU beds, according to the CMS survey, would get limited achievement scores.
Q. Okay. And then later in the fall of 2024, non-reporting hospitals who have ECMA, and hand hygiene, they also received the methodology change so that non reporting hospitals received

limited achievement for those three measures as well, correct?
A. That is correct.
Q. And I want to talk about -- you were shown a lot of documents from UC Davis. Do you recall that?
A. Yes.
Q. And UC Davis is your employer, correct?
A. Correct.
Q. And at some point in time, did you come to find out that Tenet Healthcare Corporation had contacted your employer about your service on the Leapfrog Expert Safety Panel in the context of this litigation?
MS. SCOTT: Objection, Your Honor, relevance. I don't understand what the relevance is to this line of questioning about Tenet Healthcare and what it may or may not have done.
THE COURT: Overruled.
BY MS. BLAIR:
Q. Do you recall coming to find that out that Tenet Healthcare Corporation had contacted your employer UC Davis Health about your involvement in the trial during this litigation?
A. Yes.
Q. And how did you come to find that out?
A. Well, I think various -- my employer was issued a subpoena in this case separate from my -- the subpoena that was issued to me, and I believe that in response to that subpoena, my employer produced a variety of documents, some of which were

presented at deposition, some of which were presented by counsel.

Q. I show you a document that we marked as DX-918. This is a document from Michael Condren [sp] to Lisa Foo at Tenet Healthcare Corporation, and if you could scroll down to the first email. This is from Lisa Foo, if you could scroll down, Tenet Healthcare, she is the Chief Operations Officer for Tenet Healthcare and it says here, "Our outside counsel has identified that UC Davis health physician, Dr. Romano, serves as a volunteer expert panelist of Leapfrog -- grade panel. Would you be open to connecting your counsel with ours to help understand the association with Leapfrog". Do you see that?

A. Yes.

Q. How did it make you feel when you found out that Tenet Healthcare Corporation was attempting to interfere with your employment at UC Davis?

MS. SCOTT: Objection, Your Honor.

THE COURT: Sustained.

MS. BLAIR: I have no further questions, Your Honor.

THE COURT: Is there any redirect?

MS. SCOTT: No Your Honor.

THE COURT: All right. Thank you, Doctor.

THE WITNESS: Thank you.

THE COURT: Have a good trip home.

MS. MALONEY: Your Honor, we now call Sheri

Montgomery, the CEO of Good Samaritan Medical Center.

(Witness sworn.)

BY MR. MARCUS:

Q. Good afternoon, Ms. Montgomery. Could you briefly describe your educational background for the Court?

A. Sure. I attended Florida Atlantic University for my undergrad in business administration and then went to Nova University for my Masters Degree in business administration with a concentration in finance.

Q. How long have you worked in health care?

A. Twenty-five years, thirty years.

THE COURT: Hold the microphone a little closer to you. Thank you.

THE WITNESS: Since 1994.

BY MR. MARCUS:

Q. And can you briefly describe for the Court your experience in health care management?

A. Sure. I started out in the accounting department at one of our hospitals actually as a staff accountant, and then moved to an accounting manager, controller, assistant CFO to a CFO, and then to a group CFO, and then to the CEO.

Q. When did you start working at Good Samaritan Hospital?

A. In 2020, April.

Q. At that time, what was your position?

A. I was still the group CFO for the five hospitals and then I

was interim CEO at Good Sam.
Q. Can you tell the Court briefing a little bit about Good Samaritan Hospital, the type of hospital it is?
A. Sure. Actually, it was the first hospital built in Palm Beach County in 1920, and it has been here for 106 years or so. It is really an oncology hospital, that is probably our main service line. We have a robust orthopedic service line with the spine as well. We are probably the leading robotic center for all hospitals of Palm Beach County. The last time I checked, we had the most robotic surgeries in Palm Beach County, over 14,000, I believe, to date. Of course, I mentioned robots, we have an OB program, comprehensive breast center and three imaging centers.
Q. How many beds are in your hospital, roughly?
A. 333.
Q. And on average, how many patients does your hospital treat?
A. Say admissions, probably 11,500, somewhere around there. Our emergency room, 55,000 patients, around 7,500 surgeries a year, as well.
Q. Can you briefly describe for us your patient population at Good Samaritan?
A. An average age is around 62 years of age, we serve the tale of two cities at Good Samaritan, we serve the very wealthy and the underserved. At the hospital, there are a lot of homeless population, they come into the emergency room with morbidities

and other health care.
Q. How many patients do you think are admitted to your hospital?
A. 11,500.
Q. We've heard a lot during this case about Joint Commission and them being an accredited hospital. Is Good Samaritan also accredited by the Joint Commission?
A. Yes.
Q. Does Good Samaritan have other accrediting bodies that are accredited?
A. Yes. We're accredited by the American College of Surgeons for our bariatric program, for our comprehensive breast center and for our cancer center. We also have an accreditation from Joint Commission for our orthopedic program, spine, total knee and shoulder.
Q. At first, you mentioned bariatrics. Could you describe that accreditation process? Is it very similar to the Joint Commission process, is it different in any way?
A. Yeah, I would say it is similar. You have surveyors coming to your institution and verifying your procedures and your care plans, they actually go into your operating room, they follow patients' journeys, et cetera.
Q. When they come in to accredit you, do they have full access as to your data?
A. Absolutely.

Q. Do they have full access to your staff?
A. Yes.
Q. What about patients?
A. Yes.
Q. They can ask any questions they want?
A. Yes. They can go into any patient room they want and ask them any question they want.
Q. As part of that process, do you get feedback from them on best practices?
A. Absolutely.
Q. How do they deliver that to you?
A. Particularly, at the end of the survey day, they are normally there four to five days, you will have exits, and probably an hour-long process, and we go over any findings they have, any best practices they have, what they see they really think we are doing a great job on, anywhere we have opportunities, that is the process.
Q. When did you become CEO at Good Samaritan?
A. In July, 2020.
Q. And so you were CEO at the time that Good Samaritan decided to stop participating in the Leapfrog survey in 2021?
A. I was.
Q. How did that decision come about?
A. There were just a lot of conversations about our resources and quality after COVID, things that we needed to concentrate

on, so there was a risk assessment done, the group CNO at the time, Flippo and I had conversations about where we wanted to spend our time and our resources, it was determined that there wasn't any value in the Leapfrog survey, that we wanted to spend our time on accreditations and focus our time on the hospital.

Q. You mentioned group, are you referring to (unintelligible) Health Network?

A. Correct.

Q. And that is the network for the five hospitals that are the Plaintiffs in this case?

A. Yes.

Q. In 2021, when you were still participating, do you recall what score Good Samaritan received for the hand washing that is in dispute in this case?

A. A hundred.

Q. What about for the BCNA score?

A. The same, a hundred.

Q. And what about the CPOE score?

A. A hundred.

Q. And the ICU score?

A. A hundred.

Q. And those scores were based on the actual data that Good Samaritan was submitting at the time to Leapfrog?

A. Correct.

Q. For those four measures, do you have policies in place at your hospital to insure compliance?
A. Absolutely.
Q. Okay. Did you have policies in place going back to 2020 when you became CEO?
A. We did.
Q. And what about for 2021 when you were still participating?
A. Absolutely.
Q. Are those policies, have they been continuously in place through to the present?
A. Yes. Part of our daily processes.
Q. Has anything changed at your hospital with respect to the compliance with these four measures?
A. No, it has not.
Q. Are you still excellent quality, for example, in hand washing?
A. Yes, we do surveillances every month on every unit.
Q. What about for CPO?
A. Same.
Q. BCNA?
A. Yes.
Q. ICU, are you still staffed with that specialized ICU staff?
A. Yes, critical care training, yes.
Q. And that has been in place since 2021?
A. Yes.

Q. What grade was Good Samaritan typically getting from the safety grade survey when it was participating?
A. C.
Q. In the fall of 2024, did that change?
A. It did.
Q. How did you become aware of that change?
A. I believe it was Taylor Poole [sp], my quality director informed me, either her or Gina West. I think it was Poole at that time.
Q. At that time, did you have an understanding as to why the grade was changing so suddenly?
A. I did not.
Q. Did you take efforts as CEO to understand the change?
A. Yes, I had multiple conversations with Gina West, what do you mean we are penalized for these measures, looking at the calculator, having many discussions is how I really uncovered what occurred.
Q. And that was a process?
A. Right.
Q. What about the -- was there publicity attached with the publication of the 2024 --
A. Absolutely.
Q. Could you describe for the Court what that was like for your hospital?
A. Yes, it was absolutely a fire storm, as I recall, all the

media outlets were putting it on the 5:00 o'clock news, 10:00 o'clock, 11:00 o'clock news, all these grades, and -- it was all over the newspapers, and obviously, Instagram, TikTok videos was out there about it, it was all over the place.
Q. In response to that publicity, did you see measurable effects, for example, to the patients that were declining procedures?
A. Yes. Many doctors calling me consistently talking to me about their patients complaining. One specifically, Dr. Goodman called me and told me a patient was refusing to come to our hospital for surgery and was going to Jupiter Medical. He wanted to know what are we doing about this, when are we putting a statement out. I went through and explained everything about the survey to him.
Q. Jupiter Medical, is that an A rated hospital as determined by Leapfrog?
A. Yes.
Q. Have you had any physician groups leave your hospitals as a result of this failing grade?
A. Unfortunately, we had our orthopedic, pretty much the whole orthopedic program is with hospital for special surgery doctors, and they have all gotten privileges now at Jupiter Medical Center.
Q. You mentioned this is your orthopedic service log?
A. Yes.

Q. So how many physicians are we talking about?
A. Eight.
Q. Does that include surgeons?
A. Yeah, they are all surgeons.
Q. How many cases, typically, or surgeries are performed at your hospital by this group?
A. Around 1,300.
Q. That is a year?
A. Yes.
Q. How much revenue does that hospital service line generate for your hospital?
A. Well, income is 8 million.
Q. That is annual?
A. Yes.
Q. You said they have now canceled the contract?
A. Yes. We had a collaborative agreement with HSS starting in 2020, so for five years, they ran our orthopedic service line for us, and we got -- when the fall grade come out, I got numerous calls from the director who also is an HSS physician, he is our orthopedic medical director, he said HSS New York is calling, all their patients are upset, what is going on. So I had to go through the whole process of explaining to them, this is a voluntary survey, we did not respond, we should not have received an F, et cetera. I went through the whole process with him, and then come renewal time for our -- we would be

going for the sixth year of this contract and them running our orthopedic service line, we got a cancellation notice.
Q. When did you receive that notice?
A. In March, 2025, so a few months after the grade.
Q. When did the notice become effective?
A. October was the end of our contract with them, October 31st of 2025.
Q. And you mentioned that this is a group that you had a five-year contract with at your hospital?
A. Yes.
Q. This goes back to 2020?
A. Right.
Q. In that time, from 2020, until the fall of '24 when the Leapfrog safety grade was published, did you have any complaints or problems from that service group?
A. No. I mean, we got the accreditation with them, we have a lot of awards for our orthopedic program, the doctors loved being at Good Sam, I spoke to several of them when I found out that they were getting privileges at Jupiter Medical, but they said they didn't want to get privileges at Jupiter medical, but they were being directed by their employer to get privileges at Jupiter Medical and now this recent legal act we can have unless we intercept and sign a collaboration agreement.
Q. A contract to replace the contract that they had with your hospital?

A. Yes, and it is stated all over the newspaper they previously had a collaboration agreement with Good Samaritan.
Q. You mentioned the orthopedic medical director who's part of this HSS group. What is his name?
A. Nick Soma.[sp]
Q. Does he have any other affiliations with your hospital?
A. Yes, he was on our governing board, and he resigned from our governing board, resigned from being the orthopedic medical director and he's now out in the community doing lectures for Jupiter Medical.
Q. Do you know why he resigned from your governing board and medical director?
A. He was told by HSS that he had to.
MS. BLAIR: Objection, hearsay, Your Honor.
THE COURT: Overruled.
BY MR. MARCUS:
Q. When did he tell you that?
A. I guess around the time he was resigning.
Q. Which was?
A. Probably four months ago or somewhere. He gave notice that his medical directorship would end in October 31st, and then when his renewal was up for governing board, he resigned, I think in November.
Q. Besides Dr. Soma, have you spoken with other physicians of this group?

A. Yes.
Q. Have any of those physicians told you that the reason they have now left for Jupiter Medical is because of the Leapfrog safety grade?
A. Yes, Dr. John Wayne.
Q. What did he tell you?
A. He told me that the contract was canceled between Good Samaritan and he just asked me because of the Leapfrog deal.
Q. When was that conversation; this year?
A. Yes.
Q. Do you recall when?
A. No, it was last year. It was last year.
Q. After the fall 2024 grade was published?
A. Uh-hum.
Q. Did Dr. Wayne express to you any regret that his practice was now having to leave from Good Samaritan?
A. Yeah, I had several conversations with him, you know, the first one, he was telling me that it was about the Leapfrog grade, and it really freaked New York out. He was told he was going to have to get on staff at Jupiter Medical. I have spoken to him several times since then, the same story that I don't want to leave, it just depends on what HSS is going to make us do, and now they all have privileges at Jupiter Medical. He thinks he will have to go there once a month.
Q. This just happened in terms of leaving Jupiter Medical?

A. Yes, because the contract ended October 31st, it takes probably 60 to 90 days to get on staff at another hospital, so they are on staff there now.
Q. Justin, can you pull up Exhibit 550, which is in evidence.
We've heard discussions and testimony in the trial about the declines in admission data.
A. Yes.
Q. You would Zoom in for Good Samaritan.
From the end of 2024, when the F grade, the safety grade was announced by Leapfrog through 2025 calendar year, did your hospital experience a significant decline in walk-ins to your ER?
A. Yes, four percent, or 1,300 patients.
Q. And then the bottom category, the EMS, that's the category and we talked about this, this is the category that shows ambulance rides into your hospital?
A. Correct.
Q. That are mandatory?
A. Yes.
Q. For the same period, the ambulance rides into the hospital have gone up three percent?
A. Yes.
Q. Can you think, though, as CO, you look at your admission data quite frequently?
A. Daily.

Q. Have you taken efforts to understand this drop?
A. Yes. We have gone out into the community, I met with my business development individuals and looked at, are there now, you know, free standing emergency rooms or anything in our area, which there is not, there is not really any underlying thing other than walk-ins are elective, the patient makes a choice to come to your emergency room, so that was telling me they are not making that choice any longer.
Q. Has Good Samaritan seen a decline in other types of elective choices by patients, for example, in 2025?
A. Yes. Actually, all our breast imaging, we do approximately 5,000 a year and we are down eight percent.
Q. Are those breast screenings? What's involved?
A. Breast screenings, or biopsies, breast MRIs.
Q. And you said that is down eight percent?
A. Right.
Q. Any other types of declines in elective procedures?
A. Just our admissions plus our observations are down 4.2 percent for almost like 600 patients.
Q. You mentioned the word "observation", so what is included in that?
A. Those are patients that come to your hospital and they are sick enough to stay in the night. So it's almost like an admission, but the physician thinks that that patient will not spend more than 24 to 48 hours in the hospital, therefore, it's

observation, but they are still there and getting nursing care and they are admitted into your hospital.
Q. You have seen a 4.2 percent decline this year or last year?
A. Last year.
Q. For 2025.
A. Yes.
Q. So very similar to the decline in your walk-ins to the emergency room?
A. Yes. Downtown West Palm is exploding in population, and it would not make sense declining down when we have been growing year over year for some time.
Q. What about with payers. Does Humana, we heard that name, they are a large payer, do a lot of the patients that go to Good Samaritan have Humana as a payer?
A. Eighteen percent.
Q. And we have seen some Humana letters introduced into evidence in this case. Did Good Samaritan receive a similar letter?
A. Yes, I did.
Q. Did that come to your attention?
A. It did.
Q. When did you receive that letter?
A. I would say within the last couple weeks, two weeks or something.
Q. Justin, can you bring up what we have marked as PX-554?

MS. BLAIR: Your Honor, we have the same objection to this document, hearsay exposure.

THE COURT: The objection is overruled, 554 is admitted.

BY MR. MARCUS:

Q. Is this the letter you are referring to?

A. Yes.

Q. In this letter, you are being asked on behalf of your hospital to give an improvement strategy; is that right?

A. Correct.

Q. Because you received a D or below from the Leapfrog grading?

A. That is right.

Q. Are you given any concerns about the potential future impact of this letter from Humana?

A. Yes. Humana is a large payer for us, obviously, after many patients, and for us not to have a contract with Humana would be devastating to the patients, they wouldn't be able to receive the great care we give for all of our hospitals, that would narrow the network for them, that is sure not great for patient care either, and unfortunately, Humana does not understand that we are not a D or an F hospital, they are just going by what Leapfrog published.

Q. The second paragraph, they write to you, "Consequently, we are providing you this information to encourage your facility

to review your Leapfrog Hospital Safety Grade to identify any factors that may have contributed to your performance on safety matters". Do you see that?
A. I do.
Q. Is there any language in this letter reflective that Humana is under a belief that you did not submit data to the Leapfrog Grade and as a result, you were penalized for not participating in --
MS. BLAIR: Objection, calls for speculation.
THE COURT: Overruled.
THE WITNESS: No, not at all.
BY MR. MARCUS:
Q. Is there any discussion of the imputation model in this case?
A. No.
Q. Has you responded yet or has Good Samaritan responded to this letter?
A. I sent this letter to the VP of manage care and I am just waiting for guidance.
Q. Have you received any recent anonymous letters directed to you?
A. Yes, I have.
Q. And did you receive an anonymous letter to discuss the Leapfrog grade?
A. I did, I received a newspaper article on -- that had

Jupiter Medical on it with the Leapfrog grades are now out with an A, circled some of the things in the article, told us that we needed to take lessons from Jupiter Medical and that my staff was despicable.

Q. Justin, please bring up what we have marked as PX-548.

MS. BLAIR: Your Honor, we have an objection to this document.

THE COURT: Your objection?

MS. BLAIR: It is hearsay, undated, we don't know even know who it is from, we don't even know who the declarant is, we don't know when it came, how it came.

THE COURT: 548, the objection overruled.

(Whereupon Plaintiffs' Exhibit 548 was marked for Evidence.)

BY MR. MARCUS:

Q. Ms. Montgomery, directing your attention first to the envelope at the bottom. This was made out to you personally as the CEO. You see that?

A. Yes.

Q. And we just heard about when the date was. If you look up at the top, this was sent on December 2nd of last year?

A. Yes.

Q. From somewhere in West Palm Beach, Florida?

A. Yes, that is what it looks like.

Q. Okay. Can we, Justin, can we go back and Zoom up to the

top of the article.

At the top, someone wrote "Good. A joke! Sam needs to learn from" -- and then underneath, Jupiter Medical Center is underlined. You see that?

A. Yes.

Q. This article is entitled "The Ratings Are In. Jupiter Medical Center receives A for patient safety."

As you just testified, this is an article effectively about Jupiter's grades from the safety survey; is that right?

A. That is right.

Q. There are three paragraphs that were circled by this person?

A. Yes.

Q. Can we scroll down to the bottom.

And whoever this is, says, "Your despicable staff needs to take notes from", and there's two arrows pointing to Jupiter Medical Center.

That is what you were referring to?

A. Yes.

Q. What was your reaction to receiving this letter as CEO?

A. This is clearly very upsetting. This individual obviously is believing that Good Samaritan is a failing hospital, and Jupiter Medical is an A, and it is unfortunate because they clearly do not understand and don't know that we did not respond to that survey, that we were given an F for basically a

test we never took or were required to take. They now believe that we are a failing unsafe hospital, and the fire storm keeps going, this is in December, it's all the time. Leapfrog keeps putting this punitive damage out to all of our hospitals, and this could be a potential patient or someone in the community, it just continues that they are putting fear into consumers.

Q. If Leapfrog is allowed to continue with its imputed method and Good Samaritan still doesn't participate and keeps receiving scores like this that are publicized like they have been last year, what do you think the impact is going to be on your hospital?

A. Things will just continue to get worse because as they come out every six months, and we continue to be a failing hospital, the consumers are going to believe the story and definitely believe the story if they are continuing that we are a failing hospital year over year over year.

Q. Why did Good Samaritan make the decision to bring this lawsuit?

A. Because of the damage that it is doing to all of our hospitals, what it is doing to consumers, putting fear into consumers to deter them not to come to our hospitals because they are likely to die in our hospitals, which is not true at all. It is very reckless and unfair how this has happened and it's a non-profit supposedly transparent organization, but they should not give us a grade. It is a voluntary survey here,

they are not a governing agency, they should just not give us a grade, we don't participate, that is what they should say.

MR. MARCUS: Pass the witness, Your Honor.

THE COURT: Cross-examination.

MS. BLAIR: Yes, Your Honor.

CROSS-EXAMINATION

BY MS. BLAIR:

Q. Ms. Montgomery, do you recall sometime in -- after the fall of 2024, Leapfrog Hospital Safety Grade came out, you were working with Regina West to attempt to re-enter the Leapfrog survey?

A. Re-enter; what do you mean?

Q. To start participating again in the Leapfrog survey?

A. Yes, there was discussion, once we were being penalized, should we just participate so we don't have Fs.

Q. And did you recall that you had a conversation -- if you could pull up DX-639 -- that you had an email discussion with Maggie Gill who is the President of Palm Beach Health Network about returning to the participation?

A. Could I see --

Q. Do you recall that?

A. I briefly remember you maybe showing it to me before.

MS. BLAIR: DX-639, is there an objection to this document, Your Honor?

MR. MARCUS: Your Honor, there is no objection.

MS. BLAIR: I ask that it be admitted, Your Honor.
THE COURT: What is the number?
MS. BLAIR: DX-639.
THE COURT: 639 is admitted.
BY MS. BLAIR:
Q. And you see here, Ms. Montgomery, you say, "Thank you, I appreciate it. Also, Gina did say they could handle without adding resources as well". Do you see that?
A. I do.
Q. Previously to entering this litigation at DX-618, which is an email from Regina West to Maggie Gill, CC'g Ricky Ramirez where she says that they can restart participation in the Leapfrog survey with minimal resources and no cost. Do you recall seeing that as you sat in Court the last few days?
A. I would like to see it again if you are going to question me about it, but I do recall seeing an email about that.
Q. And you don't dispute that you told Maggie Gill about it in a Palm Beach Health Network that Good Samaritan could handle the Leapfrog survey without adding additional resources, correct?
A. That means not adding additional Fs and Ds. The resources that we have would view them in our quality department which they had in the past.
Q. And in fact, just like your colleagues on the board of hospitals were collecting CPOE, BCNA, IPS in hand hygiene

information data every day, correct?
A. We do.
Q. Are you also, like your colleagues, survey ready at any time for the Joint Commission on those four measures?
A. We are.
Q. And is it your testimony -- Mr. Marcus asked you some questions about the fact that you are currently tracking hand hygiene, correct?
A. Correct.
Q. And is it your testimony that if you had reported your hand hygiene measures in 2025, you would have been a hundred out of a hundred?
A. Yes, I believe so.
Q. If you would pull up DX-823, please. There is also an objection to this document, Your Honor.
BY MS. BLAIR:
Q. Ms. Montgomery, was Aaron Britt a quality officer with your hospital in or around February 14th, 2025?
A. Yes.
Q. If we go down, she is saying to several people from Good Samaritan, "As a reminder, the requirement for hand hygiene observations is 200 per in patient unit per month", you see that?
A. I do.
Q. If we look at the chart that she had in the middle here, we

could see that you are non-compliant in several different departments. Do you see that? That chart?
A. I do see that, yes.
Q. And if we scroll down just a little bit more in this email, it says, "Moving forward, all missing tracers must be up, which we are not seeing either. Please input your December as well as January data if you have it ASAP". Do you see that?
A. I do.
Q. The paragraph before it, she says, "Each unit should have at least 200 observations entered for the month". Do you see that?
A. I do.
Q. Are you aware that the Leapfrog standard is 200 observations per month?
A. I believe it is a hundred or 200.
Q. It says here, "Only Two South and Five South have met the requirements for the month of January". Do you see that?
A. Yes.
Q. The majority of units have zero tracers entered, correct?
A. Entered into this system, yes.
Q. And if we scroll down a little bit farther, you will see that is Good Samaritan?
A. Yes.
Q. So this is September of 2025, this is less than a year ago after the fall 2024 methodology was reported, and at least

Aaron Britt is sending a reminder to all the units about hand hygiene and the fact that you are not reporting the 200 required observations per month, correct?
A. That is what it appears to be, yes.
Q. Thank you. Please take that down.
I want to talk about -- we saw a five star marketing analysis report from Regina West in April of 2024. Do you recall that? The spreadsheet.
We can pull it up?
A. That would be helpful.
Q. This has already been entered into evidence.
If you scroll to the attachment here, so this attachment here, Ms. Montgomery, can you see that?
A. I can.
Q. This is a four star market report that lists out all of the different measures that you are tracking, correct?
A. Yes, this is the CMS star report, yes.
Q. And nowhere on this does it list CPOE, BCNA, hand hygiene or IPS, correct?
A. It does not.
Q. If we scroll down to your patients survey result here, Good Sam. Do you see that here?
A. I do.
Q. And that is all below the national average, correct?
A. Correct.

Q. Do you understand for a non-participating hospital on the Leapfrog survey, that makes up a substantial part of the scoring for the process and structural measure domain?
A. The patient experiences?
Q. Yes.
A. Yes.
Q. Do you have any reason to doubt that those were your actual scores around April of 2024?
A. I do not for the period of '21 to '22, but I believe our response rate was 16 percent out of all of our patients.
Q. Right, and do you have any reason to believe that is not also the response rate of other hospitals?
A. I would say if you probably went and looked at four star hospitals, they probably have a much higher response rate.
Q. Because they are four star hospitals?
A. I mean, statistically, whenever you have a non biased rate, when you have a low response rate, so it is not a true sample of our patients, A, it is only Medicare patients, so it is not our entire population, it's only 50 percent, and then now it is only 16 percent, and this is why we choose to push the Google reviews and talk to our patients about completing the survey, and it is a paper survey, it is 30 questions, and we are encouraging them to do it because we want them to respond.
Q. And other hospitals that also have to deal with CMS surveys also have the same issue you have, isn't that true?

A. I would say not everybody has the same issue, but we have definitely improved our patient experience scores, we hired a champion, our survey scores have gone up, it went from a one star to a two star, and that is still a lagging data.
Q. Are you using (unintelligible) as well for your patient safety improvement?
A. Yes.
Q. And we saw that (unintelligible) by Mr. Hanlon?
A. I was.
Q. Do you have a similar presentation?
A. I was not aware of one, no, I haven't seen it.
Q. Would you agree with me that your H CAP scores are very low compared to the national average?
A. Maybe several years ago they were, now they are much better.
Q. At the time of fall of 2024, methodology changed. Do you know whether or not they were exceptionally low compared to the national average?
A. What was pulled off the CMS website, is that what you are referring to?
Q. Right, the public --
A. I don't know if the score was below the national average, but obviously they were not great.
Q. In order for this litigation, in this litigation, you did not take your actual data on CPOE, BCNA, hand hygiene and IPS

and take the Leapfrog survey so we could know what your actual survey would have been under the new methodology?
A. I believe that was done in the background, I don't know if it was Gina West or someone. I saw a comparison that said what we would have been in a calculator, so what we would have been a D. but did I personally go, obviously not.
Q. And we saw the deposition testimony of Regina West via video earlier today and I discussed with her the what ifs scenario, and what if we got a hundred percent on everything. Do you recall that?
A. Yes.
Q. And so I am asking a little different question. I am not asking what if we got a hundred percent, what if our H CAP scores were better, I am asking did you ever go and look at your actual data, performance data, and the Leapfrog survey and say I know putting in our actual data for these measures, we would have been a better hospital in the fall of 2024. Did that ever occur?
A. I did not personally do that.
Q. Thank you.
If you could pull up DX-565, there is also an objection to this document, Your Honor.
This is an email, Ms. Montgomery, would you go to the top, please.
This is an email from Colleen Thielk [sp] to you, it's an

email stream and Taylor Poole, and Colleen Theilk in or around the time of the Chief Nursing Officer at Good Samaritan, correct?
A. Correct.
Q. The date of this document is July 17, 2024?
A. Yes.
Q. This is an email from you, where you say to Taylor, "Thank you", and we go down to Taylor's email, she is compiling a chart for you, and she says, "Sheri, I did a really quick breakdown of different publicly recorded scores for hospitals in Palm Beach County, see below". Do you see that?
A. I do.
Q. Did you ask Taylor to do this exercise?
A. I mean, I don't recall. I don't recall doing that, maybe I did. I am not sure.
Q. Do you have any reason to doubt that this email was sent to you and that you responded, reviewed it and respond, "Thank you" to Taylor Poole?
A. No. I just saw the email that I did respond.
Q. And in and around this time, would Taylor Poole have been the person at Good Samaritan who would have compiled this data?
A. Correct.
MS. BLAIR: Your Honor, I ask that the document DX-565 be moved into evidence.
MR. MARCUS: No objection, Your Honor.

THE COURT: 565 is admitted.
MS. BLAIR: Thank you.
BY MS. BLAIR:
Q. In looking at this, this list of different hospitals, do you consider these hospitals to be your competitors?
A. I mean, not all of them, no. Some of them.
Q. We talked a lot in this litigation about Jupiter Medical Center, correct, you have been here for those discussions?
A. I have.
Q. And, in fact, we just saw that newspaper article where somebody wrote on it, "and you should be as good as Jupiter", correct?
A. Yes.
Q. If we look at this chart that your director of quality put together, Jupiter Hospital was a four star out of five star hospital, correct?
A. Yes.
Q. It has an A in Leapfrog?
A. Yes.
Q. And it had a U.S. News ranking number high performing matters, it has nine. Do you see that?
A. I do.
Q. Do you have any reason to believe Jupiter is not an A hospital?
A. I can't say what Jupiter is, I don't work inside that

institution.
Q. Do you have any idea to believe that Taylor Poole is wrong about the number she is putting on here?
A. I have no reason to believe she would put wrong data into something and send it to me.
Q. If you look at this document and you see JFK there?
A. I do.
Q. They have a one star for CMS, correct?
A. Correct.
Q. They have a one star for patient experience, and they have a Leapfrog D, and they have three CMS ranking for high performing measures. Do you see that?
A. I do.
Q. And if we contrast them against your hospital, Good Samaritan, which is at the top, you are a one star overall CMS hospital and a two star patient for experience in Leapfrog and a two in performing measures, correct?
A. Yes.
Q. At this point in time, July 2024, your hospital was not participating in the survey, correct?
A. Correct.
Q. Do you understand that JFK Hospital was participating in the survey and receiving a D at this time?
A. Okay.
Q. And, so, at this time, if we are looking at your C grade,

you were getting a hundred out of a hundred points for all four measures even though you were not participating in the survey, correct?
A. I believe at that time it was step one that we were going through as a non voluntary hospital, I guess.
Q. That is your belief?
A. Yes, I believe so.
Q. Okay. You can take that down.
We talked a lot today about these new discussions that you had about harm that your hospital is receiving, correct?
A. Yes.
Q. And do you recall I took your deposition on September 15, 2025, correct?
A. I do.
Q. And during that deposition, you never mentioned Nick Soma, right?
A. I don't know, I'd have to go back.
Q. Do you recall if you ever mentioned to me HHS's contract terminated in March of 2025?
A. I remember bringing up HSS, I do.
Q. And in fact, that occurred in March of 2025, correct?
A. What did?
Q. The cancellation of the contract between Good Samaritan and HSS.
A. We got the letter, I think it was in March sometime, yes.

Q. And you never produced that letter in this litigation, correct?
A. I believe the letter was sent, yes, to counsel.
Q. Okay. And if counsel never produced that in this litigation, it wasn't because you didn't send it to them, correct?
A. I sent it.
Q. And in terms of that -- that was an orthopedic group that left?
A. Correct.
Q. And they now have a contact with Jupiter?
A. Yes.
Q. Do you know the terms of the contract with Jupiter?
A. I do not.
Q. Have you produced any of the communications between you and Dr. Nick Soma or Dr. John Wayne regarding HSS's decision to leave or break its contract with Good Samaritan? Have you produced any correspondence?
A. I mean, I have spoke to counsel about the correspondence.
Q. Have you produced any of that correspondence?
A. There is a conversation.
Q. Are there documents?
A. I don't know if I sent it in an email or if was an actual conversation that I had with the physician.
Q. Okay.

A. It's not like they are recorded.
Q. But as I heard your testimony on the stand just now, this was a really big deal in March when they terminated your contract, correct?
A. It was.
Q. Did you have any emails with any of the doctors or HSS about the contract being broken?
A. There were phone calls.
Q. You did send this email to HSS?
A. I sent the email to like maybe Maggie Gill. There was no reason to send it to HSS 'cause my contact is Nick Soma, he is the medical director, he is my contact and he is who I would speak to.
Q. Did you have any meetings with HSS trying to get them to come back to Good Samaritan?
A. I personally did with Nick Soma, it was a directive from New York, and that is what I was told.
Q. Do you text with Dr. Soma?
A. Yes, I do.
Q. Have you texted about this issue about that meeting with Good Samaritan?
A. Probably.
Q. Did you produce those texts in this litigation?
A. I don't recall.
Q. Do you text with Dr. Wang?

A. Not typically, no.
Q. Do you recall if you ever had any written communications with Dr. Wang regarding the fact that they were breaching a contract based on Leapfrog?
A. No. It was a meeting, in person meeting. There was an email or a text, something sensitive of that nature, it is a conversation with an individual, not an email.
Q. So, since March of 2025, when they broke the contract with Good Samaritan, and I think you said the contract expired sometime four months ago?
A. October 31st.
Q. October 31st, 2025, there are no documents produced in this litigation that you could substantiate what you just said on the phone; isn't that true?
A. We have the cancellation letter.
Q. Right, you produced it to me one or two days ago. In terms of the issue with Humana, PX-554, you testified that 18 percent of the patients at Good Samaritan have Humana as an insurer, correct?
A. Correct.
Q. You received a letter, just like you received, a form letter from Humana, correct?
A. Correct.
Q. And did you respond to that letter?
A. I personally would not respond to that letter. I sent it

to our VP of Managed Care.
Q. Do you know if VP of managed care responded to that letter?
A. No, she was pulling the contract, I don't know if she emailed me with an update, no.
Q. Looking at that letter, that Humana letter, is there any way to determine whether Humana understands the Leapfrog methodology as applied to Good Samaritan?
A. They believe that we were a D or an F, and think that we have all these problems on a survey we didn't complete. I am pretty confident they don't know. They did not complete a survey.
Q. How do you know they don't know?
A. If most people knew that all of these hospitals are getting Fs for a survey that is voluntary that they didn't complete, I don't think people would give any relevance to Leapfrog at all. Most people don't understand.
Q. You don't know what Humana does or does not know about the Leapfrog methodology that they feel confident enough about to put in a letter to hospitals to encourage them to do better for their community about patient safety, correct? You don't know?
A. Probably no one in this room probably knows unless Humana told us now and we ask, what do you think of the Leapfrog survey, do you know that we don't participate, and we were still given a failing grade. Maybe that will happen, I don't know.

Q. You understand that whether or not you participate in a Leapfrog hospital survey is fully and transparently, and I am not talking about the hospital safety grade website we have been looking at, there is a separate website, and if you could pull that up, there is a separate website, Leapfroggroup.org, it is just about the survey, and if we look at Good Samaritan, a pop up comes up, this is in your complaint, a pop up comes up and says that you don't participate in the survey. Are you aware of that?

A. On one of the websites, yes.

Q. So it's your understanding that Humana doesn't understand that you don't participate in the survey, even though that is formally and publicly transparent to an insurance company that wants to go on the website to check?

A. The insurance company is not only going to get on and just check, they will probably get a download of some or all of these people and what their grade was, so now they will have to go to the right website. There are two different websites, from my understanding, one says that and one doesn't, so you don't just load up a Leapfrog rating, it will show that Good Samaritan is an F, not necessarily this comes up.

Q. Ms. Montgomery, if you go to just the website that talks about whether or not your hospital participates in the survey, you can see right there, thousands of hospitals nationwide report to Leapfrog Hospital Survey to help patients and

purchasers make it better. This hospital did not participate. That is fully and completely transparent on the Leapfrog website, isn't it?
A. A person would have to actually go there, whatever is published in the paper, I guess.
Q. You don't believe Humana would go to that website, that is your testimony today?
A. I don't know what Humana did.
Q. I want to talk to you about your discussion about the fact that your Leapfrog scores have decreased your admissions. You gave that testimony on the stand earlier, correct?
A. Correct.
Q. And based on your supposition that a hospital with lower Leapfrog scores sees a decline in admissions, is it -- do you have any information that hospitals like Jupiter with A grades get increases in their admissions to their Leapfrog scores?
A. I don't know.
Q. And that newspaper article that we looked at, the PX-548. If you could pull that up, please. PX-548.
Nowhere in this article does it talk about your Leapfrog safety score, does it?
A. It does not.
Q. And they call you despicable, if you scroll down, they call your staff despicable, you see that?
A. I do.

Q. And you don't know if this is just a patient of Good Sam with a bad experience, correct?
A. I don't know the identity of this individual.
Q. And there is no way for you to link your Leapfrog score -- right, you don't know the identity of the individual, neither do I, but there is no way you can link your Leapfrog score to this note that you got, isn't that true? Doesn't match your Leapfrog score anywhere?
A. I am getting an article with an A, I am an F, and they are telling me I am despicable and I need to go learn from the A hospital when I am an F or a D, whatever I am today.
Q. Well that is a lot of speculation on your part when you just told me you don't know who wrote this or why they wrote it, correct?
A. I don't know who this person is.
Q. And you said earlier that Dr. Goodman called you because a patient was complaining and wanted to go to Jupiter. Do you recall that?
A. Yes.
Q. Who was the patient complaining to Dr. Goodman?
A. I don't know.
Q. What was he complaining about?
A. She was complaining about that we were inept and that she was afraid and she didn't want to come to Good Sam, she wanted to go to Jupiter Medical is what she said.

Q. What was she going to Jupiter for?
A. She was a cancer patient, I believe.
Q. When did this happen?
A. December 2024, shortly after the grades came out, like within a week or two, something of this nature.
Q. Did you in any way catalog this conversation with Dr. Goodman regarding this patient?
A. Mentally.
Q. Didn't write it down?
A. I believe I sent an email to Maggie about it.
Q. You sent an email to Maggie about it?
A. Yes.
Q. Maggie Gill being the President of PBHN, correct?
A. Correct.
Q. And Ms. Montgomery, I have asked all of your colleagues this, I sent interrogatories to you and your counsel on behalf of Good Sam asking for the very information that for the first time you got up on the stand and provided. Do you understand that?
A. I understand.
Q. Do you understand that in the interrogatories that I asked about listing all of the patients who have canceled or all the patients who have been harmed or all of the patients who you heard complaints from related to the Leapfrog grade, you didn't tell me any patient name, who they were, why they were

canceling or why they didn't want to come, isn't that true?
A. I personally did not tell you a patient name, no.
Q. In fact, I sent request for production to all five of these hospitals asking for specific documents related to these issues, none of which came, and one document I specifically sent, RFP-38, I asked for documents to support your claim that Leapfrog caused you reputational harm, nothing.
And I asked you to provide me in interrogatory number nine all instances where a party has declined to contract with you where Leapfrog grade was cited. I asked you in interrogatory nine, that is in evidence, and you did not provide anything with respect to this new issue with respect to HSS, which was canceled in May of 2025 before you filed this litigation. Are you aware of that?
A. Yes, I am.
Q. And why didn't you provide me with any information or at least a letter where HSS was canceling the contract with you if it was so important and so damaging to Good Samaritan, and you had it before you filed this lawsuit, and you never provided it. Why?
A. I am not sure why it was not provided. I can't answer your question.
MS. BLAIR: Thank you. I have no further questions, Your Honor.
THE COURT: Redirect.

MR. MARCUS: Yes, Your Honor.

REDIRECT EXAMINATION

BY MR. MARCUS:

Q. Ms. Montgomery, you were asked questions about what your actual grade would be in reference to some of these -- do you follow these questions?

A. I do.

Q. In 2021, we know what your actual grade were, don't we?

A. We do.

Q. You had perfect scores for all four?

A. Yes.

Q. That was the Leapfrog's validated measures by their own survey?

A. Correct.

Q. Those were the best grades offered, right?

A. Yes.

Q. Then you stopped participating in 2021; is that right?

A. We did.

Q. There is this two step, we heard about step one, and step two, essentially the actual data that gave you the best grades for those four measures carried over for a period of time; is that right?

A. That is right.

Q. Eventually in 2024, you got to this step two, right, where that data went away?

A. Right.
Q. And you were assigned for all four of those categories the worst score of any hospital in the country?
A. That is right.
Q. Now, Ms. Blair, she showed you an exhibit where she mentioned JFK and she showed how they had participated actually given and they got a D, right?
A. Yes.
Q. Your F in this case for those four measures is not based on your actual performance, is it?
MS. BLAIR: Objection, leading, Your Honor, all of these questions.
THE COURT: Sustained.
BY MR. MARCUS:
Q. The fall 2024 grade that was assigned to your hospital is not based on any real data, is it?
A. No, not at all.
Q. Do you know how that grade was assigned to you?
A. There were four measures that we were given the lowest score possible, the 15.5, .5 and 5, and I think it is 60 points maybe out of 360 or something of that nature, and not only that, but when you don't complete the survey, the other three measures are given an A which makes it four measures way even more than every other hospital. The patient experience is rated higher for non participating hospitals because they put

an A in these other three measures so everything else goes up.
Q. These four measures, what is the combined weight of those measures?
A. I think 35 percent or something.
Q. So that combined weight is going to be the absolute worst score of any hospital in the country?
MS. BLAIR: Objection, leading.
BY MR. MARCUS:
Q. Is it?
A. Yes.
Q. Now, you were shown some emails about hand washing. Do you recall that on cross-examination?
A. I do.
Q. You were shown an email from Aaron Britt who was a quality person at Good Samaritan?
A. Yes.
Q. In that email, she was sending it out to people at your hospital saying we are missing some data, right, we need to get the actual data?
A. Data was not entered into the system.
Q. Was her email an example of your compliance mechanisms to assure that your hospital in fact does very good hand washing?
A. Yes, they are constantly looking at it all the time, and educating and doing surveillance constantly.
Q. Was there anything in that email that suggested that people

weren't actually washing their hands at your hospital?
A. No.
Q. You were asked some questions about HSS, you recall that?
A. Yes.
Q. Just so it is clear for the record, there was a notice of cancelation in March of last year. Do you recall that?
A. Yes.
Q. That notice did not become effective, though, for many months, isn't that right?
A. Right.
Q. When was the actual cancellation?
A. October 31st.
Q. And you were asked by Ms. Blair, well, how do we know that there was actually a notice of cancelation in March, that you're making it up. Do you recall those questions?
MS. BLAIR: Objection to form.
THE COURT: What is the problem?
MS. BLAIR: I don't think I asked that question.
THE COURT: Objection is overruled.
MR. MARCUS: Can we bring up Exhibit PX-561.
MS. BLAIR: Your Honor, we have an objection to that document.
MR. MARCUS: The door has been opened.
MS. BLAIR: I did not open that door.
MR. MARCUS: She suggested that this was made up.

MS. BLAIR: I did not which is why I objected to the question.

THE COURT: Let's proceed. You have an objection to this document?

MS. BLAIR: Yes.

THE COURT: Let's see what the situation is.

MS. BLAIR: Well, Your Honor, just really quickly, this document was produced to us on January 13, just days before this trial. That is my number one objection to it, dated March 24, 2025, it has never been produced in this litigation, never produced to us, just another example of these type of documents over and over again. I specifically did not open the door.

MR. MARCUS: She did, too. This was produced to her on January 13th, today is January 21st, and she asked questions suggesting that how can we understand if this witness is being truthful about this episode. This is a corroborative document, Your Honor, as to what Ms. Montgomery testified on direct and was crossed, and so she has opened the door, we're just putting it in so you can see there is an actual notice of cancelation.

MS. BLAIR: Your Honor, he asked her questions about that, and I am well within my right to ask, it's within the scope of his direct examination to question her. He has not put the document in.

THE COURT: All right. Objection is overruled.

MR. MARCUS: We move to admit PX-561.
BY MR. MARCUS:
Q. Can you look at the top of the document. Do you see the date of March 24, 2025?
A. I do.
Q. This is sent to your attention?
A. Yes.
Q. Is this the notice of termination that you were testifying about earlier?
A. It is.
Q. And can you scroll down a little bit.
It references an agreement with the hospital for special surgery, that is HSS, the group you were testifying about?
A. Yes.
Q. This goes back. Good Samaritan has contracts going back to 2018?
A. I think so, yes. That was before I was there.
Q. And so the actual contract, the last day of the contract was September 30th, 2025; do you recall that?
A. Right, yes, I thought it was October.
Q. This is when the contract was effectively canceled, on September 30th; is that right?
A. Yes.
Q. Do you recall giving a lengthy deposition in this case?
A. I do.

Q. Do you recall when it was?
A. No.
Q. Was it summer?
A. Maybe.
Q. Did Ms. Blair take your deposition?
A. She did.
Q. Was I in attendance as your lawyer?
A. You were.
Q. Did it last most of the day?
A. It certainly did.
Q. She asked you all sorts of questions?
A. She did.
Q. Was there a single question you refused to answer at the deposition?
A. No.
Q. You were asked about HSS at that deposition, weren't you?
A. Yes, I believe I brought it up.
Q. In fact, you answered every question she asked you that day?
A. Yes.
Q. She would have asked you about patients, you would have answered her question, wouldn't you?
A. Certainly.
Q. You were asked about a separate website, not the Leapfrog website, but you recall the website that has the report, you

remember that?
A. Yes.
Q. If you could assist me, could you bring up what you showed the witness during cross-examination.
So, looking at this other website, this is not the hospitalsafetygrade.org, is it?
A. Right.
Q. You said you had never been to this website?
A. I know about the website, about this lawsuit and discussions.
Q. And this box comes up and says Good Samaritan Medical Center has declined to respond, right?
A. Yes.
Q. You see any grade, do you see your F grade for Good Samaritan anywhere on this?
A. I do not.
Q. If the main website simply had this popping up and you had no rate or not rated, would you have a problem with that?
A. If I did not have a grade and it just said --
Q. You declined to respond?
A. I would not.
MR. MARCUS: Nothing further, Your Honor.
MS. BLAIR: Could I have just one question on recross?
THE COURT: On what?
MS. BLAIR: On this new document.

THE COURT: You did ask her about it. You raised this, didn't you discuss this?

MS. BLAIR: No, I asked her about HSS which was brought up in her direct examination.

THE COURT: Isn't it this?

MS. BLAIR: Well, it is, but I didn't have this document.

THE COURT: I don't think it is necessary. I thought I heard you say you were given the document at least a couple weeks ago.

MS. BLAIR: No. The 13th of January, Your Honor.

THE COURT: All right, a week before. All right. Thank you, Ms. Montgomery.

That it for the day? Or do you have someone else you want to hear from?

MS. MALONEY: We would love to hear from Ms. Campione and we have a short examination of her, she's the project manager, it's a short cross-examination, approximately 20 minutes. But we understand --

THE COURT: Is it a video or --

MS. MALONEY: No, no, no, it's live.

THE COURT: Go ahead. We'll come back at welcome: 30.

MS. BLAIR: Your Honor, I am also calling Ms. Campione, so my examination of her will be longer than ten

minutes, and we are going to go probably at least a full hour with Ms. Campione because she is being called in my case in chief, too, and we agreed to waive scope so you wouldn't have to --

THE COURT: So you are just calling her once?

MS. BLAIR: Yes.

THE COURT: I don't think we want to spend another hour and a half.

Where are we in your case?

MS. MALONEY: In our case, we have 15 minutes of designations of Matt Austin which includes their counter designations, we have Ms. Campione, we will be calling Ms. Jupiter in our case, and they will be examining her, Ms. Jupiter is a Leapfrog witness, and then we have Ms. Leah Binder, and we have also have -- she is live, also their witness we will be taking her in our case initially, and then Ms. Bailey is the other video testimony that is at issue, and so, Your Honor, actually, there is an issue with Ms. Bailey's designations.

Sorry, I couldn't see him. So we could do argument on one of the Bailey designations if you would like to do something at the end of the day.

THE COURT: How long are you going to take?

MS. BLAIR: We may dispose of one expert, but we would have three experts --

THE COURT: Didn't you all tell me five days?
MS. MALONEY: Yeah, we will be done by Friday. I figured we would be done tomorrow and get closings on Thursday.
MS. BLAIR: We have witnesses, Your Honor.
MS. MALONEY: We are putting in a bunch of our witnesses, we should be done by noon, I would think --
THE COURT: I don't see how. Let's take five minutes and we will go ahead and hear from this other witness this evening. We need to make sure we finish this case this week and I'm not optimistic from what I'm hearing. Okay, five minute break.
(Thereupon, a short recess was taken.)
(Thereupon, trial reconvened after recess.)
THE COURT: Okay, please be seated.
MR. CRAIN: Thank you, your Honor. The Plaintiffs call Alex Campione, program manager at Leapfrog.
ALEXANDRA CAMPIONE, PLAINTIFFS' WITNESS, SWORN
MR. CRAIN: May I proceed?
THE COURT: Yes, please.

DIRECT EXAMINATION

BY MR. CRAIN:
Q. You are an employee of Leapfrog, correct?
A. Yes.
Q. Your title is program manager?
A. Yes.

Q. When you joined Leapfrog in 2022, you were immediately assigned to the hospital safety grading program, correct?
A. Yes.
Q. Leapfrog collects hospital survey results; is that right?
A. Yes.
Q. And uses the data from the surveys to assign grades to participating hospitals; is that correct?
A. We use it for a portion of the grade. We also have 17 other measures -- no, about 15 other measures that we use, and it can be from CMS, so publicly available data that is directly from the hospital. So it does make up a portion. It makes them very distinct, our survey and our safety grade.
Q. My question is: You do use the survey responses for the grade, correct?
A. We use some. The survey is not comprehensive.
Q. Employees working on the safety grade like yourself can access that data, right?
A. Yes.
Q. The data is stored in the ordinary cores of Leapfrog's business?
A. Yes.
Q. I want to show you PX 412. Please don't put it up yet, it is not admitted in evidence yet. I know there is a confidentiality objection.
MS. BLAIR: Your Honor, this is the only confidential

document we have on the exhibit list, and it is the proprietary scoring of Leapfrog for all 2800 hospitals across the country for spring of 2025, I believe it is.

So our objection is to the confidentiality of putting it into the record, every single hospital in the United States they are scoring on the Leapfrog survey. I think it is highly confidential to the other hospitals that are not parties to this litigation.

It exists, people talk about it, but we do have a confidential designation.

MR. CRAIN: Your Honor, we are just interested in moving it into evidence. That data is available for purchase as I understand it, so I don't really understand how all of it would be confidential data. We are hoping to get it in evidence as a Leapfrog produced document.

MS. BLAIR: It is not available for purchase. This has been a common misconception. What we have provided is the raw scoring data of my client. What is available for purchase is like whether a hospital gets limited achievement, not the raw Z scores in our proprietary scoring methodology.

THE COURT: Is the scoring for all the hospitals necessary or only this one?

MR. CRAIN: It is important that it is in evidence because it underlies the expert opinions. If counsel can stipulate we can move into evidence, we can move on.

THE COURT: If it is in evidence, it is a publicly available document if anyone was interested.

MR. CRAIN: We are happy to meet and confer and talk about the appropriate redactions, but it is important to get it into evidence.

THE COURT: What kind of redactions do you suggest?

MR. CRAIN: It did have underlying data of the expert opinions. It is a business record. The expert opinions discuss certain trends overall. We also would be willing to discuss stipulating to those. I think there are different ways to handle this. It is a Leapfrog produced document, a business record, we think it is wholly admissible. She testified it is stored in the ordinary course.

THE COURT: I am going to admit it. She is trying to argue for some sort of sealing, which I don't like to do. I will tentatively admit it. You discuss redaction and I will await some final decision on sealing, having expressed my reservations about that as a general rule.

All right. What is the number?

MR. CRAIN: PX 412.

THE COURT: That is admitted pursuant to the discussion we just had.

MR. CRAIN: I can move on, I don't need to publish it.

BY MR. CRAIN:

Q. Ms. Campione, I want to change topics after that exchange.

You were here for Dr. Berger's testimony this morning, correct?
A. Yes.
Q. You heard Dr. Berger testify about Footnote 4 on Leapfrog's website?
A. Yes.
Q. So we are on the same page, Footnote 4 said that the hospital declined to report their performance on this measure so a score was assigned to reflect the lack of information available, right?
A. Yes.
Q. And you heard Dr. Berger testify that it was his opinion that the footnote explains a data score was assigned, but does not explain how, right?
A. Yes.
Q. You had a role in drafting Footnote 4; is that right?
A. Yes.
